This course represents an advanced study of empirical research methods in financial economics. Focus is on the empirical techniques used most often in the analysis of financial markets and how they are applied to actual market data.

OR&IE 474 Statistical Data Mining
Fall. 3 credits. Prerequisites: OR&IE 360 and MATH 294 or equivalent; or permission of instructor. W. Jiang.
This course examines the statistical aspects of data mining, the effective analysis of large data sets. The first half of the course covers the process of building and interpreting statistical models in a variety of settings including multiple regression and logistic regression. The second half connects these ideas to techniques being developed to handle the large data sets that are now routinely encountered in scientific and business applications. Assignments are done

using one or more statistical computing packages.

OR&IE 476 Applied Linear Statistical Models
Spring; weeks 1–7. 2 credits. Prerequisite: ENGRD 270. Staff.
Course topics include: multiple linear regression, diagnostics, model selection, inference, one and two factor analysis of variance. Theory and applications both treated. Use of MINITAB stressed.

OR&IE 480 Information Technology
Fall. 4 credits. Pre- or corequisites: COM S/ENGRD 211, plus either OR&IE 310 or OR&IE 350. M. Eisner.
This course views information technology as the means by which computer science, operations research, and industrial engineering are brought to serve the operational and strategic needs of enterprises. As such, information technology encompasses: communications systems, information architectures, data management, development methodologies, implementation projects (with the attendant organizational design, business process analysis, requirements analysis, systems and organizational design, and implementation planning steps), operations management, electronic commerce, and more. The course takes the perspective of a professional who accesses existing computer data to analyze a problem or opportunity, uses computer tools to manage the data, develops an effective solution, and employs a computer application to implement the solution. This perspective introduces students to the ways in which information technology is currently being used throughout enterprises and how these uses are changing with the explosive growth of the Internet. Includes lectures (including guest lectures by practitioners), cases, and laboratory exercises intended to make the general concepts concrete. The course centers around a design project, in which student teams develop a solution to a business problem of their choosing and prepare a memorandum with supporting technical, financial, and process detail.

OR&IE 481 Delivering OR Solutions with Information Technology
Spring; weeks 8–14. 2 credits. Prerequisites: OR&IE 480. M. Eisner.
Study of ways in which information technology is used to deliver operations research methodology in real applications, including decision support systems, embedded operations research techniques, packaged software, web-based techniques, collaborative software, and expert systems. Several real applications are investigated.

OR&IE 490 Teaching in OR&IE
Fall, spring. Varying credit. Prerequisite: permission of instructor.
This course involves working as a TA in an OR&IE course. The course instructor assigns credits (the guideline is 1 credit per 4 hours/week of work with a limit of 3 credits).

OR&IE 499 OR&IE Project
Fall, spring. Varying credit. Prerequisite: permission of instructor.
Project-type work, under faculty supervision, on a real problem existing in some firm or institution. Opportunities in the course may be discussed with the Associate Director.

OR&IE 512 Applied Systems Engineering I (also CEE 504, COM S 504, ECE 512, M&AE 591)
Fall. 3 credits. Prerequisite: permission of instructor. R. Roundy.
For description, see M&AE 591.

OR&IE 513 Applied Systems Engineering II (also CEE 505, COM S 505, ECE 513, M&AE 592)
Spring. 3 credits. Prerequisite: Applied Systems Engineering I (CEE 504, COM S 504, ECE 512, M&AE 592, or OR&IE 512). Staff.
For description, see M&AE 592.

OR&IE 515 Design of Manufacturing Systems
Fall. 4 credits. Prerequisite: permission of instructor. Limited to graduate students in Engineering and the Business School.
For description, see OR&IE 416. Lab fee $15.

OR&IE 516 Case Studies
Fall. 1 credit. Limited to M.Eng. students in OR&IE. M. Eisner.
Students are presented with an unstructured problem that resembles a real-world situation. They work in project groups to formulate mathematical models, perform computer analyses of the data and models, and present oral and written reports.

OR&IE 518 Supply Chain Management
Spring. 3 credits. Prerequisites: one of the following OR&IE 310, OR&IE 416, OR&IE 525, or OR&IE 562. J. Muckstadt.
A supply chain is the scope of activities that convert raw materials (i.e., wheat) to finished products delivered to the end consumer (i.e., a box of cereal at the local P&C), usually spanning several corporations. Supply chain management focuses on the flow of products, information, and money through the supply chain. An overview of issues, opportunities, tools, and approaches. Emphasis is on business processes, system dynamics, control, design, re-engineering. Covers the relationship between the supply chain and the company's strategic position relative to its clients and its competition. Considers dimensions of intercorporate relationships with partners, including decision-making, incentives, and risk.

OR&IE 520 Operations Research I: Optimization I
For description, see OR&IE 320.

OR&IE 521 Optimization II
For description, see OR&IE 321.

OR&IE 522 Operations Research I: Topics in Linear Optimization
Fall. 1 credit. Pre- or corequisite: OR&IE 520. Students who have already taken OR&IE 321 or 521 should not enroll. Limited to M.Eng. students in OR&IE. Staff.
An extension of OR&IE 520 that deals with applications and methodologies of dynamic programming, integer programming, and large-scale linear programming.

OR&IE 523 Operations Research II: Introduction to Stochastic Processes I
For description, see OR&IE 361.

[OR&IE 524 Design of Manufacturing Systems II
Spring; weeks 8–14. 2 credits. Prerequisites: OR&IE 562, OR&IE 416; or by permission of instructor. Not offered 2001–2002.
This project course focuses on the design and analysis of a global corporation's operations. Working in teams, students examine issues pertaining to a prototype company on the following topics: information system design, marketing, strategy, location of facilities, organization design, manufacturing capacity, planning logistics, production planning, scheduling, inventory control, and financial analysis. Meetings between project teams and faculty are substituted for some lectures or laboratories. Analytical methods appropriate for conducting analysis are discussed in lectures.]

OR&IE 525 Production Planning and Scheduling Theory and Practice
Spring. 4 credits. Corequisite: OR&IE 320, OR&IE 360. R. Roundy.
Topics covered include: production planning, including MRP, linear programming, and related concepts. Scheduling and sequencing work in manufacturing systems. Job release strategies and control of work in process inventories. Focus is on setup time as a determinant of plans and schedules.

OR&IE 528–529 Selected Topics in Applied Operations Research
Fall, spring. Varying credit. Prerequisite: permission of instructor.
Current topics dealing with applications of operations research.

OR&IE 551 Economic Analysis of Engineering Systems
Spring. 4 credits. Prerequisites: OR&IE 320 and OR&IE 350.
Lectures concurrent with OR&IE 451. For description see OR&IE 451.

[OR&IE 552 Revenue Management
Spring; weeks 8–14. 2 credits. Prerequisites: thorough knowledge of OR&IE 360, familiarity and appreciation of time series and regression methods, and graduate standing. OR&IE 320/321 helpful but not required. Others by permission of instructor. Not offered 2001–2002.
Course covers: Revenue Management (RM) concepts, models used in practice, and possible extensions; forecasting techniques, including time series methods, booking curves, and customer preference models; demand uncensoring; overbooking, optimization with emphasis on stochastic models of demand; benefit measurement; computational and technological issues; examples from the airline and other industries.]

OR&IE 560 Engineering Probability and Statistics II
For description, see OR&IE 360.

[OR&IE 561 Queuing Theory and Its Applications
Fall. 3 credits. Prerequisite: OR&IE 361 or permission of instructor. Not offered 2001–2002.
Course covers: basic queueing models; delay and loss systems; finite source, finite capacity, balking, reneging; systems in series and in parallel; FCFS versus LCFS; busy period problems; output; design and control problems; priority systems; queueing networks; the product formula; time sharing; server vacations; and applications to equipment maintenance, computer operations and flexible manufacturing systems.]

OR&IE 562 Inventory Management
Fall. 3 credits. Prerequisite: OR&IE 321, 361, or permission of instructor. J. Muckstadt.
The first portion of this course is devoted to the analysis of several deterministic and probabilistic models for the control of single and multiple items at one of many locations. The second portion of this course is presented in an experiential learning format. The focus is on analyzing and designing an integrated production and distribution system for a global company. Applications are stressed throughout.

OR&IE 563 Applied Time-Series Analysis
Fall. 3 credits. Prerequisites: OR&IE 361 and ENGRD 270, or permission of instructor. G. Samorodnitsky.
The first part of this course treats regression methods to model seasonal and nonseasonal data. After that, Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. Analysis of real data is carried out. Assignments require computer work with a time-series package.

OR&IE 564 Introductory Engineering Stochastic Processes II
Spring. 4 credits. Prerequisite: OR&IE 361 or equivalent. Lectures concurrent with OR&IE 462.
For description, see OR&IE 462.

OR&IE 565 Applied Financial Engineering
Spring. 4 credits. Limited to M.Eng. students. P. Protter.
This course has two components: a sequence of lectures and a project. The course is co-listed with the Johnson School and is co-taught by one faculty member from each school. The lectures are given by the faculty for the course and by invited speakers from the financial industry. The project satisfies the M.Eng. project requirement.

OR&IE 567 Semester in Manufacturing Management (also NBA 650)
Spring. 15 credits. Enrollment limited to OR&IE M.Eng. students only.
For description, see NBA 650.

[OR&IE 575 Experimental Design
Spring; weeks 8–14 (alternates with 576). 2 credits. Prerequisite: OR&IE 476. Not offered 2001–2002.
Course covers: randomization, blocking, sample size determination, factorial designs, 2^p full and fractional factorials, response surfaces, Latin squares, split plots, and Taguchi designs. Engineering applications. Computing in MINITAB or SAS.]

OR&IE 576 Regression
Spring; weeks 8–14 (alternates with 575). 2 credits. Prerequisite: OR&IE 476.
Course covers: nonlinear regression, advanced diagnostics for multiple linear regression, collinearity, ridge regression, logistic regression, nonparametric estimation including spline and kernel methods, and regression with correlated errors. Computing in MINITAB or SAS.

OR&IE 577 Quality Control
Fall. 3 credits. Prerequisites: OR&IE/ ENGRD 270. B. Turnbull.
Course covers: concepts and methods for process and acceptance control; control charts for variables and attributes; process capability analysis; acceptance sampling; continuous sampling plans; life tests; and use of experimental design and Taguchi methods for off-line control.

OR&IE 581 Simulation Modeling
Fall; weeks 1–7. 2 credits. Prerequisites: programming experience and OR&IE 360 or permission of instructor. OR&IE 360 may be taken concurrently. S. Henderson.
Topics include: using models and digital computer programs to simulate the behavior of complex stochastic systems in time. Also covers modeling time and randomness, simulation languages, and generation of stochastic inputs (scalers and processes).

OR&IE 582 Simulation Analysis
Fall; weeks 8–14. 2 credits. Prerequisites: programming experience and OR&IE 360 or permission of instructor. OR&IE 360 may be taken concurrently. S. Henderson.
Course covers probabilistic and statistical methods for design of computer simulation experiments and analysis of their outputs. Also covers initialization issues, analysis of simulation outputs, variance reduction methods, optimization through simulation.

OR&IE 597 Systems Engineering Project
Fall; R grade only; spring, 8 credits. For M.Eng. students.
For M. Eng. Students enrolled in the Systems Engineering Option. A substantial, group-based design project that has a strong systems design component. The project must be approved by an ASE 1 instructor before the student enrolls in the course. (The following projects are pre-approved: FSAE, HEV, Robocup, Brain.) A formal report is required.

OR&IE 598 Master of Engineering Manufacturing Project
Fall. R grade only; spring, 5 credits. For M.Eng. students.
Project course for M.Eng. students enrolled in the Manufacturing Option coordinated by the Center for Manufacturing Enterprise.

OR&IE 599 Project
Fall. R grade only; spring, 5 credits. For M.Eng. students.
Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the OR&IE field. A formal report and oral defense of the approach and solution are required.

[OR&IE 625 Scheduling Theory
Fall. 3 credits. Not offered 2001–2002. R. Roundy.
Scheduling and sequencing problems, including single-machine problems, parallel-machine scheduling, and shop scheduling. The emphasis is on the design and analysis of polynomial time optimization and approximation algorithms and on related complexity issues.]

OR&IE 626 Advanced Production and Inventory Planning
Spring. 3 credits. R. Roundy.
Introduction to a variety of production and inventory control planning problems, the development of mathematical models corresponding to these problems, and a study of approaches for finding solutions.

OR&IE 630 Mathematical Programming I
Fall. 4 credits. Prerequisites: advanced calculus and elementary linear algebra. J. Renegar.
A rigorous treatment of the theory and computational techniques of linear programming and its extensions, including: formulation, duality theory, algorithms; sensitivity analysis; network flow problems and algorithms; theory of polyhedral convex sets, systems of linear equations and inequalities, Farkas' Lemma; and exploiting special structure in the simplex method, and computational implementation.

OR&IE 631 Mathematical Programming II
Spring. 4 credits. Prerequisite: OR&IE 630. L. Trotter.
A continuation of OR&IE 630. Introduction to nonlinear programming, interior-point methods for linear programming, complexity theory, and integer programming. Includes some discussion of dynamic programming and elementary polyhedral theory.

[OR&IE 632 Nonlinear Programming
Spring. 3 credits. Prerequisite: OR&IE 630. Not offered 2001–2002.
Necessary and sufficient conditions for unconstrained and constrained optima. Topics include the duality theory, computational methods for unconstrained problems (e.g., quasi-Newton algorithms), linearly constrained problems (e.g., active set methods), and nonlinearly constrained problems (e.g., successive quadratic programming, penalty, and barrier methods).]

[OR&IE 633 Graph Theory and Network Flows
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 2001–2002.
Topics covered include: directed and undirected graphs; bipartite graphs; hamilton cycles and Euler tours; connectedness, matching, and coloring; flows in capacity-constrained networks; and maximum flow and minimum cost flow problems.]

OR&IE 634 Combinatorial Optimization
Fall. 3 credits. D. Shmoys.
Topics in combinatorics, graphs, and networks, including matching, matroids, polyhedral combinatorics, and optimization algorithms.

OR&IE 635 Interior-Point Methods for Mathematical Programming
Spring. 3 credits. Prerequisites: MATH 411 and OR&IE 630, or permission of instructor. J. Renegar.
Interior-point methods for linear, quadratic, and semidefinite programming and, more generally, for convex programming. Discussion of the basic ingredients—barrier functions, central paths, and potential functions—that go into the construction of polynomial-time algorithms, and various ways of combining them. Emphasis on recent mathematical theory and the most modern viewpoints.

[OR&IE 636 Integer Programming
Spring. 3 credits. Prerequisite: OR&IE 630.
Topics covered include: discrete optimization; linear programming in which the variables must assume integral values; theory, algorithms, and applications; and cutting-plane and enumerative methods, with additional topics drawn from recent research in this area.]

[OR&IE 637 Semidefinite Programming
Spring; weeks 8–14. 2 credits. Pre- or corequisite: OR&IE 635. Not offered 2001–2002.

Course covers: linear optimization over the cone of positive semidefinite symmetric matrices; applications to control theory, eigenvalue optimization, and strong relaxations of combinatorial optimization problems; duality; computational methods, particularly interior-point algorithms.]

[OR&IE 639 Polyhedral Convexity
Spring. 3 credits. Prerequisite: basic knowledge of linear algebra. Not offered 2001–2002.
A comprehensive introduction to the geometry and combinatorics of polyhedral convex sets. Also, linear inequalities, supporting and separating hyperplanes; polarity; convex hulls, facets, and vertices; face lattices; convex cones and polytopes; minkowski sums; gale transforms; simplicial and polyhedral subdivision; and applications to linear programming, combinatorial optimization, and computational geometry.]

OR&IE 650 Applied Stochastic Processes
Fall. 4 credits. Prerequisite: a 1-semester calculus-based probability course. S. Resnick.
An introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include: Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

OR&IE 651 Probability
Spring. 4 credits. Prerequisite: real analysis at the level of MATH 413 and a previous 1-semester course in calculus-based probability. K. Athreya.
Course covers: sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, and conditioning.

OR&IE 662 Advanced Stochastic Processes
Fall. 3 credits. Prerequisite: OR&IE 651 or equivalent. G. Samorodnitsky.
Course topics include: Brownian motion, martingales, Markov processes, and topics selected from: diffusions, stationary processes, point processes, weak convergence for stochastic processes and applications to diffusion approximations, Lévy processes, regenerative phenomena, random walks, and stochastic integrals.

OR&IE 670 Statistical Principles
Fall. 4 credits. Corequisite: OR&IE 650 or equivalent. D. Ruppert.
Topics include: review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t, and F; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; and introduction to linear models.

OR&IE 671 Intermediate Applied Statistics
Spring. 3 credits. Prerequisite: OR&IE 670 or equivalent. W. Jiang.
Course topics include: statistical inference based on the general linear model; least-squares estimators and their optimality properties; likelihood ratio tests and corresponding confidence regions; and simultaneous inference. Applications in regression analysis and ANOVA models. Covers variance components and mixed models. Use of the computer as a tool for statistics is stressed.

[OR&IE 677 Sequential Methods in Statistics
Spring. 3 credits. S-U grades only. Not offered 2001–2002.
The statistical theory of sequential design and analysis of experiments has many applications; including monitoring data from clinical trials in medical studies and quality control in manufacturing operations. Topics in this course include: classical sequential hypothesis tests, Wald's SPRT, stopping rules, Kiefer-Weiss test, optimality, group sequential methods, estimation, repeated confidence intervals, stochastic curtailment, adaptive designs, and bayesian and decision theoretic approaches.]

[OR&IE 680 Simulation
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2001–2002.
An advanced version of OR&IE 581 and 582, intended for Ph.D.-level students.]

OR&IE 728–729 Selected Topics in Applied Operations Research
Fall, spring. Credit TBA.
Current research topics dealing with applications of operations research.

OR&IE 738–739 Selected Topics in Mathematical Programming
Fall, spring. Credit TBA.
Current research topics in mathematical programming.

OR&IE 768–769 Selected Topics in Applied Probability
Fall, spring. Credit TBA.
Topics are chosen from current literature and research areas of the staff.

OR&IE 778–779 Selected Topics in Applied Statistics
Fall, spring. Credits TBA.
Topics chosen from current literature and research of the staff.

OR&IE 790 Special Investigations
Fall, spring. Credit TBA.
For individuals or small groups. Study of special topics or problems.

OR&IE 799 Thesis Research
Fall, spring. Credit TBA.
For individuals doing thesis research for master's or doctoral degrees.

OR&IE 891 Operations Research Graduate Colloquium
Fall, spring. 1 credit. Staff.
A weekly 1-1/2 hour meeting devoted to presentations by distinguished visitors, by faculty members, and by advanced graduate students on topics of current research in the field of operations research.

OR&IE 893–894 Applied OR&IE Colloquium (also M&AE 594)
893, fall; 894, spring. 1 credit each term.
A weekly meeting for Master of Engineering students. Discussion of various topics on manufacturing with faculty members and outside speakers.

THEORETICAL AND APPLIED MECHANICS

Basics in Engineering Mathematics and Mechanics

T&AM 118 Design Integration: A Portable CD Player (also ENGRI 118 and MS&E 118)
Spring. 3 credits.
This is a course in the Introduction to Engineering series. For description, see ENGRI 118.

T&AM 202 Mechanics of Solids (also ENGRD 202)
Fall, spring. 3 credits Prerequisite: PHYS 112, coregistration in MATH 293 or permission of instructor.
For description, see ENGRD 202.

T&AM 203 Dynamics (also ENGRD 203)
Fall, spring. 3 credits. Prerequisite: T&AM 202, coregistration in MATH 294, or permission of instructor.
For description, see ENGRD 203.

Engineering Mathematics

T&AM 190 Calculus for Engineers (also MATH 190)
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry and logarithms.
For description, see MATH 190.

T&AM 191 Calculus for Engineers (also MATH 191)
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry.
For description, see MATH 191.

T&AM 192 Calculus for Engineers (also MATH 192)
Fall, spring, or summer. 4 credits. Prerequisite: MATH/T&AM 191.
For description, see MATH 192.

T&AM 293 Engineering Mathematics (also MATH 293)
Fall, spring. 4 credits. Prerequisite: MATH/T&AM 192 plus a knowledge of computer programming equivalent to that taught in COM S 100.
For description, see MATH 293.

T&AM 294 Engineering Mathematics (also MATH 294)
Fall, spring. 4 credits. Prerequisite: MATH/T&AM 293.
For description, see MATH 294.

T&AM 310 Advanced Engineering Analysis I
Fall, spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent.
Course covers: initial value, boundary value, and eigenvalue problems in linear ordinary differential equations. Also covers: special functions, linear partial differential equations. This is an introduction to probability and statistics. Use of computers to solve problems is emphasized.

T&AM 311 Advanced Engineering Analysis II
Spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent (T&AM 311 can be taken without T&AM 310).

Mathematical modeling of physical and biological systems. Examples range from molecular diffusion, crystal growth, and physiological flows, to bird flight. The mathematics necessary to understand these phenomena is discussed in depth. They include probability theory, PDEs, stability analysis, complex variable analysis, and numerical analysis.

T&AM 610 Methods of Applied Mathematics I
Fall. 3 credits. Intended for beginning graduate students in engineering and science. An intensive course, requiring more time than is normally available to undergraduates (see T&AM 310–311) but open to exceptional undergraduates with permission of instructor.
Emphasis is on applications. Course covers: linear algebra, calculus of several variables, vector analysis, series, ordinary differential equations, and complex variables.

T&AM 611 Methods of Applied Mathematics II
Spring. 3 credits. Prerequisite: T&AM 610 or equivalent.
Emphasis is on applications. Course covers: partial differential equations, transform techniques, tensor analysis, calculus of variations.

T&AM 612 Methods of Applied Mathematics III
Fall. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent.
Course topics include: integral transform, methods, Wiener-Hopf technique, solutions of integral equations and partial differential equations. Problems are drawn from electromagnetics, elasticity, fluid mechanics, heat transfer, and acoustics.

T&AM 613 Methods of Applied Mathematics IV
Spring. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent.
Topics include asymptotic behavior of solutions of linear and nonlinear ODE (e.g., the WKB boundry layer and multiple-scale methods) and symptotic expansion of integrals (method of steepest descent, stationary phase and Laplace methods). Also covers regular and singular perturbation methods for PDE (e.g., method of composite expansions). Other topics (depending on instructor) may include: normal forms, center manifolds, Liapunov-Schmidt reductors, and Stokes phenomenon. The course may also include computer exercises at the option of the instructor.

Continuum Mechanics

T&AM 455 Introduction to Composite Materials (also CEE 475, M&AE 455 and MS&E 555)
Spring. 4 credits.
Course topics include: introduction to composite materials; varieties and properties of fiber reinforcements and matrix materials; micromechanics of stiffness and stress transfer in discontinuous fiber/matrix arrays; orthotropic elasticity as applied to parallel fibers in a matrix and lamina; theory of stiffness (tension, bending, torsion) and failure of laminates and composite plates including computer software for design; and manufacturing methods and applications for composities. There is a group component design and manufacturing paper required, and a group laboratory on laminated component fabrication.

T&AM 591 Master of Engineering Design Project I
Fall. 3–6 credits.
M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

T&AM 592 Master of Engineering Design Project II
Spring. 5–15 credits.
M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

T&AM 655 Composite Materials (also M&AE 655 and MS&E 655)
Spring. 4 credits.
Taught jointly with T&AM 455 using same lecture material, but also includes more advanced material and homeworks through additional lectures. Additional material includes: shear-lag models of stress transfer around arrays of fiber breaks including viscoelastic effects, statistical theories of composite strength and failure; stress distributions around holes and cuts in composite laminates; and compressive strength of composites. Laboratory on effects of holes and notches in composites.

T&AM 663 Solid Mechanics I
Fall. 4 credits.
Rigorous introduction to solid mechanics emphasizing: linear elasticity: tensors; deformations, rotations and strains; balance principles; stress; small-strain theory; linear elasticity, anisotropic and isotropic; basic theorems of elastostatics; and boundary-value problems, e.g. plates, St. Venant's solutions.

T&AM 664 Solid Mechanics II
Spring. 4 credits. Prerequisites: MATH 610 and T&AM 663, or equivalent.
Preparation for advanced courses in solid mechanics. Topics include: singular solutions in linear elasticity; plane stress, plane strain, anti-plane shear, airy stress functions; linear viscoelasticity; cracks and dislocations; classical plasticity; thermoelasticity; and three-dimensional elasticity.

T&AM 666 Finite Element Analysis (also M&AE 680 and CEE 772)
Spring. 3 credits. Prerequisites: T&AM 663 or equivalent.
For description, see M&AE 680.

T&AM 751 Continuum Mechanics and Thermodynamics
Fall. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents.
Course topics include: kinematics; conservation laws; the entropy inequality; constitutive relations: frame indifference, material symmetry; and finite elasticity, rate-dependent materials, and materials with internal state variables.

T&AM 752 Nonlinear Elasticity
Spring. 3 credits. Prerequisites: T&AM 610, 611, and 751 or equivalents. Offered alternate years.
Review of governing equations. Topics include: linearization and stability; constitutive inequalities; exact solution of special problems; nonlinear string and rod theories; phase transformations and crystal defects.

T&AM 753 Fracture
Fall. 3 credits. Prerequisites: T&AM 610 or 611; and 663 and 664 or equivalents. Offered alternate years.
Course covers: fundamentals of linear elastic fracture mechanics: K, small-scale yielding, solutions of elastic crack problems, energy concepts, J-integral. Also covers: nonlinear, rate-independent, small-deformation, fracture mechanics: plastic fracture, J-integral, small-scale yielding, fields for stationary and growing cracks; failure mechanisms of polymers, ceramics, composites, and metals: void growth, load transfer between fibers, crazing; fracture testing; fatigue fracture; computation of stress intensity factors; and plate theory and fracture.

[T&AM 757 Inelasticity
Spring. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Offered alternate years. Not offered 2001–2002.
Course covers: plasticity: dislocation slip systems; early experimental observations; general principles; limit analysis; and solution of boundary-value problems, plastic waves, one- and three-dimensional. Also covers visco-elasticity: general principles, solution of boundary-value problems.]

[T&AM 759 Boundary Element Methods
Fall. 4 credits. Prerequisites: T&AM 610 and 611; and 633 and 644 or equivalents. Offered alternate years. Not offered 2001–2002.
Introduction to boundary element methods. Solutions for potential theory, linear elasticity, diffusion, material and/or geometric nonlinearities. Modern developments: hypersingular integrals, the boundary contour methods, sensitivity analysis.]

Dynamics and Space Mechanics

T&AM 570 Intermediate Dynamics
Fall. 3 credits.
Course topics include: Newtonian mechanics; motion in rotating coordinate systems; introduction to analytical mechanics; virtual work, Langrangian mechanics; Hamilton's principle; small vibration and stability theory. Newtonian-Eulerian mechanics of rigid bodies; and gyroscopes.

T&AM 578 Nonlinear Dynamics and Chaos
Fall. 3 credits. Prerequisite: MATH/T&AM 293 or equivalent.
Introduction to nonlinear dynamics, with applications to physics, engineering, biology, and chemistry. Emphasizes analytical methods, concrete examples, and geometric thinking. Topics: one-dimensional systems; bifurcations; phase plane; nonlinear oscillators; and Lorenz equations, chaos, strange attractors, fractals, iterated mappings, period doubling, renormalization.

T&AM 671 Hamiltonian Dynamics
Spring. 3 credits. Prerequisite: T&AM 570 or equivalent. Offered alternate years.
Course topics include: review of Lagrangian mechanics, Kane's equations; Hamilton's principle, the principle of least action, and related topics from the calculus of variations; Hamilton's canonical equations; approximate methods for two-degrees-of-freedom systems (Lie transforms); canonical transformations and Hamilton-Jacobi theory; KAM theory; and Melnikov's method.

[T&AM 672 Celestial Mechanics (also ASTRO 579)
Fall. 3 credits. Offered alternate years. Not offered 2001–2002.
Course topics include: description of orbits; 2-body, 3-body, and n-body problems; Hill curves, libration points and their stability; capture problems; osculating orbital elements, perturbation equations; effects of gravitational potentials, atmospheric drag, and solar radiation forces on satellite orbits; and secular perturbations, resonances, mechanics of planetary rings.]

[T&AM 673 Mechanics of the Solar System (also ASTRO 571)
Spring. 3 credits. Prerequisite: an advanced undergraduate course in dynamics. Offered alternate years; Not offered 2001–2002.
Course topics include: gravitational potentials, planetary gravity fields; free and forced rotations; Chandler wobble, polar wander, and damping of nutation; equilibrium tidal theory, tidal heating; orbital evolution of natural satellites, resonances, spin-orbit coupling, Cassini states; long-term variations in planetary orbits; dust dynamics; dynamics of ring systems; and physics of interiors, seismic waves, free oscillations. Illustrative examples are drawn from contemporary research.]

[T&AM 675 Nonlinear Vibrations
Fall. 3 credits. Prerequisite: T&AM 578 or equivalent. Offered alternate years; not offered 2001–2002.
Quantitative analysis of weakly nonlinear systems in free and forced vibrations, perturbation methods, averaging method. Applications to problems in mechanics, physics, and biology. Additional topics may include Hopf bifurcation, Invariant manifolds, coupled oscillators, vibrations in continuous media, normal forms, and exploitation of symmetry.]

[T&AM 678 Complex Systems
Spring. 3 credits. Prerequisites: T&AM 578 or equivalent. Offered alternate years; not offered 2001–2002.
Complex systems in physics, biology, engineering, economics, and the Internet. Topics: power laws, percolation, phase transitions, scaling, and renormalization. Self-organized criticality; neural, cardiac, genetic, power grid; and financial networks. Stochastic spatial models. Evolution on rugged landscapes.]

T&AM 776 Applied Dynamical Systems (also MATH 717)
For description, see MATH 717.

Special Courses, Projects, and Thesis Research

T&AM 491–492 Project in Engineering Science
Fall, 491; spring, 492. 1–4 credits, as arranged.
Projects for undergraduates under the guidance of a faculty member.

T&AM 796–800 Topics in Theoretical and Applied Mechanics
Fall, spring. 1–3 credits, as arranged.
Special lectures or seminars on subjects of current interest. Topics are announced when the course is offered.

T&AM 890 Master's Degree Research in Theoretical and Applied Mechanics
Fall, spring. 1–15 credits, as arranged. S-U grades optional.
Thesis or independent research at the M.S. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

T&AM 990 Doctoral Research in Theoretical and Applied Mechanics
Fall, spring. 1–15 credits, as arranged. S-U grades optional.
Thesis or independent research at the Ph.D. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

FACULTY ROSTER

Abel, John F., Ph.D., U. of California at Berkeley. Prof., Civil and Environmental Engineering
Ahner, Beth A., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Agricultural and Biological Engineering
Albright, Louis D., Ph.D., Cornell U. Prof., Agricultural and Biological Engineering
Allmendinger, Richard, Ph.D., Stanford U. Prof., Earth and Atmospheric Sciences
Aneshansley, Daniel J., Ph.D., Cornell U. Assoc. Prof., Agricultural and Biological Engineering
Anton, A. Brad, Ph.D., California Inst. of Technology. Assoc. Prof., Chemical Engineering
Archer, Lynden A., Ph.D., Stanford U. Asst. Prof., Chemical Engineering
Arms, William, Ph.D., U. of Sussex. Prof., Computer Science
Ast, Dieter G., Ph.D., Cornell U. Prof., Materials Science and Engineering
Athreya, Krishna B., Ph.D., Stanford U. Prof., Operations Research and Industrial Engineering
Avedisian, C. Thomas, Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
Baeumner, Antje J., Ph.D., Universitat Stuttgart. Asst. Prof., Agricultural and Biological Engineering
Bailey, Graeme, Ph.D., U. of Birmingham. Prof., Computer Science
Baker, Shefford P., Ph.D., Stanford U. Asst. Prof., Materials Science and Engineering
Ballantyne, Joseph M., Ph.D., Massachusetts Inst. of Technology. Prof., Electrical and Computer Engineering
Barazangi, Muawia, Ph.D., Columbia U. Prof., Earth and Atmospheric Sciences
Bartel, Donald L., Ph.D., U. of Iowa. Prof., Mechanical and Aerospace Engineering
Bartsch, James A., Ph.D., Purdue U. Assoc. Prof., Agricultural and Biological Engineering
Batterman, Boris W., Ph.D., Massachusetts Inst. of Technology. Walter S. Carpenter, Jr. Professorship in Engineering, Applied and Engineering Physics
Berger, Toby, Ph.D., Harvard U. Irwin and Joan Jacobs Professor of Engineering, Electrical and Computer Engineering
Billington, Sarah, Ph.D., U. Texas at Austin. Asst. Prof., Civil and Environmental Engineering
Bird, John M., Ph.D., Rensselaer Polytechnic Inst. Prof., Earth and Atmospheric Sciences
Birman, Kenneth P., Ph.D., U. of California at Berkeley. Prof., Computer Science
Bisogni, James J., Ph.D., Cornell U. Assoc. Prof., Civil and Environmental Engineering
Blakely, John M., Ph.D., Glasgow U. (Scotland). Herbert Fisk Johnson Professor of Engineering, Materials Science and Engineering
Bland, Robert G., Ph.D., Cornell U. Prof., Operations Research and Industrial Engineering
Bojanczyk, Adam W., Ph.D., U. of Warsaw (Poland). Assoc. Prof., Electrical and Computer Engineering.
Booker, John F., Ph.D., Cornell U. Prof., Mechanical and Aerospace Engineering
Brock, Joel D. Ph.D., Massachusetts Inst. of Technology. Director and Assoc. Prof., Applied and Engineering Physics
Brown, Larry D., Ph.D., Cornell U. Prof., Earth and Atmospheric Sciences
Brutsaert, Wilfried H., Ph.D., U. of California at Davis. William L. Lewis Prof. of Engineering, Civil and Environmental Engineering
Buhrman, Robert A., Ph.D., Cornell U. John Edson Sweet Professor of Engineering, Applied and Engineering Physics
Burns, Joseph A., Ph.D., Cornell U. Irving Porter Church Professor of Engineering, Astronomy and Theoretical and Applied Mechanics
Burtscher, Martin, Ph.D., U. of Colorado at Boulder. Asst. Prof., Electrical and Computer Engineering
Cady, K. Bingham, Ph.D., Massachusetts Inst. of Technology. Prof., Theoretical and Applied Mechanics
Callister, John R., Ph.D., Cornell U. Kinzelberg Director of Entrepreneurship in Engineering
Campbell, Mark E., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Mechanical and Aerospace Egineering
Cardie, Claire T., Ph.D. U. of Massachusetts at Amherst. Assoc. Prof., Computer Sciences
Carr, Paul, Ph.D., Virginia Polytechnic Inst. Visiting Prof., Civil and Environmental Engineering
Castillo-Chavez, Carlos, Ph.D., U. of Wisconsin at Madison. Prof., Theoretical and Applied Mechanics, Biometry, Applied Mathematics, Ecology and Evolutionary Biology, Statistics, Epidemiology, Latin American Studies
Cathles, Lawrence M. III, Ph.D., Princeton U. Prof., Earth and Atmospheric Sciences
Caughey, David A., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
Chiang, Hsiao-Dong, Ph.D., U. of California at Berkeley. Prof., Electrical and Computer Engineering
Cisne, John L., Ph.D., U. of Chicago. Prof., Earth and Atmospheric Sciences
Clancy, Paulette, Ph.D., Oxford U. (England). Assoc. Prof., Chemical Engineering
Cohen, Claude, Ph.D., Princeton U. Prof., Chemical Engineering
Coleman, Thomas F., Ph.D., U. of Waterloo. Prof., Computer Science
Colucci, Stephen J., Ph.D., SUNY. Assoc. Prof., Earth and Atmospheric Sciences
Constable, Robert L., Ph.D., U. of Wisconsin. Prof., Computer Science
Conway, Harry D., Ph.D., London U. Prof., Theoretical and Applied Mechanics
Cook, Kerry H., Ph.D., North Carolina State U. Assoc. Prof., Earth and Atmospheric Sciences
Cooke, J. Robert, Ph.D., North Carolina State U. Prof., Agricultural and Biological Engineering
Cool, Terrill A., Ph.D., California Inst. of Technology. Prof., Applied and Engineering Physics

Cowen, E. A., Ph.D., Stanford U. Asst. Prof., Civil and Environmental Engineering
Craighead, Harold G., Ph.D., Cornell U. Charles W. Lake Jr., Prof. of Engineering, Applied and Engineering Physics
D'Andrea, Raffaello, Ph.D., California Inst. of Tech. Asst. Prof., Mechanical and Aerospace Engineering
Datta, Ashim K., Ph.D., U. of Florida. Prof., Agricultural and Biological Engineering
Davidson, Rachael A., Ph.D., Stanford U. Asst. Prof., Civil and Environmental Engineering
Dawson, Paul R., Ph.D., Colorado State U. Prof., Mechanical and Aerospace Engineering
Delchamps, David F., Ph.D., Harvard U. Assoc. Prof., Electrical and Computer Engineering
Demers, Alan, Ph.D., Princeton U. Prof., Computer Science
Derry, Louis, Ph.D., Harvard U. Asst. Prof., Earth and Atmospheric Sciences
Dick, Richard I., Ph.D., U. of Illinois. Joseph P. Ripley Professor of Engineering, Civil and Environmental Engineering
Dieckmann, Rudiger, Ph.D., U. Hannover. Prof., Materials Science and Engineering
Duncan, T. Michael, Ph.D., California Inst. of Technology. Assoc. Prof., Chemical Engineering
Eastman, Lester F., Ph.D., Cornell U. Given Foundation Professor of Engineering, Electrical and Computer Engineering
Elber, Ron, Ph.D., Hebrew U. (Israel). Prof., Computer Science
Engstrom, James R., Ph.D., California Inst. of Technology. Assoc. Prof., Chemical Engineering
Escobedo, Fernando A., Ph.D., U. of Wisconsin at Madison. Asst. Prof., Chemical Engineering
Fan, K-Y Daisy, Ph.D., Cornell U. Asst. Prof., Computer Science
Farley, Donald T., Ph.D., Cornell U. J. Preston Levis Professor of Engineering, Electrical and Computer Engineering
Fine, Terrence L., Ph.D., Harvard U. Prof., Electrical and Computer Engineering
Fisher, Elizabeth M., Ph.D., U. of California at Berkeley. Assoc. Prof., Mechanical and Aerospace Engineering
Fleischmann, Hans H., Ph.D., Technische Hoch., München (Germany). Prof., Applied and Engineering Physics
Gaeta, Alexander L., Ph.D., U. of Rochester. Assoc. Prof., Applied and Engineering Physics
Gebremedhin, Kifle G., Ph.D., U. of Wisconsin. Prof., Agricultural and Biological Engineering; Civil and Environmental Engineering
Gehrke, Johannes, Ph.D., U. of Wisconsin at Madison. Asst. Prof., Computer Science
George, Albert R., Ph.D., Princeton U. John F. Carr Prof. of Mechanical Engineering, Mechanical and Aerospace Engineering
Giannelis, Emmanuel, Ph.D., Michigan State U. Prof., Materials Science and Engineering
Gossett, James M., Ph.D., Stanford U. Prof., Civil and Environmental Engineering
Gouldin, Frederick C., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
Greenberg, Donald P., Ph.D., Cornell U. Prof., Computer Science
Greene, Charles, Ph.D., U. of Washington. Assoc. Prof., Earth and Atmospheric Sciences
Grigoriu, Mircea D., Ph.D., Massachusetts Inst. of Technology. Prof., Civil and Environmental Engineering
Grubb, David T., Ph.D., Oxford U. (England). Assoc. Prof., Materials Science and Engineering
Guckenheimer, John, Ph.D., U. of California at Berkeley. Prof., Mathematics and Theoretical and Applied Mechanics
Haas, Zygmunt J., Ph.D., Stanford U. Assoc. Prof., Electrical and Computer Engineering
Haith, Douglas A., Ph.D., Cornell U. Prof., Agricultural and Biological Engineering
Halpern, Joseph, Ph.D., Harvard U. Prof., Computer Science
Hammer, David A., Ph.D., Cornell U. J. Carlton Ward Sr. Prof. of Electrical and Computer Engineering
Hartmanis, Juris, Ph.D., California Inst. of Technology. Walter R. Read Professor of Computer Science
Healey, Timothy J., Ph.D., U. of Illinois. Prof., Theoretical and Applied Mechanics
Heinrich, Mark A., Ph.D., Stanford U. Asst. Prof., Electrical and Computer Engineering
Hemami, Sheila, Ph.D., Stanford U. Assoc. Prof., Electrical and Computer Engineering
Henderson, Shane, Ph.D., U. of Michigan. Asst. Prof., Operations Research and Industrial Engineereing
Hopcroft, John E., Ph.D., Stanford U. Joseph Silbert Dean of Engineering, Prof., Computer Science
Hover, Kenneth C., Ph.D., Cornell U. Prof., Civil and Environmental Engineering
Hui, Chung Y., Ph.D., Harvard U. Prof., Theoretical and Applied Mechanics and Mechanical and Aerospace Engineering
Hunter, Jean B., Ph.D., Columbia U. Assoc. Prof., Agricultural and Biological Engineering
Huttenlocher, Daniel, Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Computer Science
Ingraffea, Anthony R., Ph.D., U. of Colorado. Dwight C. Baum Prof. in Engineering, Civil and Environmental Engineering
Irwin, Lynne H., Ph.D., Texas A & M U. Assoc. Prof., Agricultural and Biological Engineering
Isaacson, Michael S., Ph.D., U. of Chicago. Prof., Applied and Engineering Physics
Isacks, Bryan L., Ph.D., Columbia U. William and Katherine Snee Prof. of Earth and Atmospheric Sciences
Jackson, Peter L., Ph.D., Stanford U. Assoc. Prof., Operations Research and Industrial Engineering
Jarrow, Robert A., Ph.D., Massachusetts Inst. of Technology. Prof., Operations Research and Industrial Engineering
Jenkins, James T., Ph.D., Johns Hopkins U. Prof., Theoretical and Applied Mechanics
Jewell, William J., Ph.D., Stanford U. Prof., Agricultural and Biological Engineering
Johnson, C. Richard, Jr., Ph.D., Stanford U. Prof., Electrical and Computer Engineering
Jordan, Teresa, Ph.D., Stanford U. Prof., Earth and Atmospheric Sciences
Kan, Edwin C., Ph.D., U. of Illinois at Champaign/Urbana. Asst. Prof., Electrical and Computer Engineering
Kay, Robert W., Ph.D., Columbia U. Prof., Earth and Atmospheric Sciences
Kay, Suzanne M., Ph.D., Brown U. Prof., Earth and Atmospheric Sciences
Kelley, Michael C., Ph.D., U. of California at Berkeley. James A. Friend family Distinquished Prof., Electrical and Computer Engineering
Kintner, Paul M., Ph.D., U. of Minnesota. Prof., Electrical and Computer Engineering
Kleinberg, Jon M., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science
Kline, Ronald R., Ph.D., U. of Wisconsin. Prof., Electrical and Computer Engineering (History of Technology)
Koch, Donald L., Ph.D., Massachusetts Inst. of Technology. Marjorie L. Hart '50 Professor of Engineering, Chemical Engineering
Kornegay, Kevin T., Ph.D., U. of California at Berkeley. Assoc. Prof., Electrical and Computer Engineering
Kostroun, Vaclav O., Ph.D., U. of Oregon. Assoc. Prof., Applied and Engineering Physics
Kozen, Dexter, Ph.D., Cornell U. Joseph Newton Pew, Jr. Professor in Engineering, Computer Science
Krusius, J. Peter, Ph.D., Helsinki U. of Technology (Finland). Prof., Electrical and Computer Engineering
Kulhawy, Fred H., Ph.D., U. of California at Berkeley. Prof., Civil and Environmental Engineering
Kusse, Bruce R., Ph.D., Massachusetts Inst. of Technology. Prof., Applied and Engineering Physics
Lee, Kelvin, Ph.D., California Inst. of Technology. Asst. Prof., Chemical Engineering
Lee, Lillian, Ph.D., Harvard U. Asst. Prof., Computer Science
Leibovich, Sidney, Ph.D., Cornell U. Samuel B. Eckert Prof. of Mechanical and Aerospace Engineering
Li, Che-Yu, Ph.D., Cornell U. Francis Norwood Bard Professor, Materials Science and Engineering
Lindau, Manfred, Ph.D., Technical U. (Berlin). Assoc. Prof., Applied and Engineering Physics
Lion, Leonard W., Ph.D., Stanford U. Prof., Civil and Environmental Engineering
Liu, Philip L.-F., Sc.D., Massachusetts Inst. of Technology. Prof., Civil and Environmental Engineering
Loucks, Daniel P., Ph.D., Cornell U. Prof., Civil and Environmental Engineering
Louge, Michel Y., Ph.D., Stanford U. Prof., Mechanical and Aerospace Engineering
Lovelace, Richard V. E., Ph.D., Cornell U. Prof., Applied and Engineering Physics
Lumley, John L., Ph.D., Johns Hopkins U. Willis H. Carrier Professor of Engineering, Mechanical and Aerospace Engineering
Luo, Dan, Ph.D., Ohio State U. Asst. Prof., Agricultural and Biological Engineering
Malliaras, George G., Ph.D., Rijksuniversiteit Groningen (Greece). Asst. Prof., Materials Science and Engineering
Manohar, Rajit, Ph.D., California Inst. of Technology. Asst. Prof., Electrical and Computer Engineering
Mbwana, John, Ph.D., Cornell U. Instructor, Civil and Enviornmental Engineering
Meyburg, Arnim H., Ph.D., Northwestern U. Prof., Civil and Environmental Engineering
Miller, Matthew, Ph.D., Georgia Tech. Assoc. Prof., Mechanical and Aerospace Engineering
Minch, Bradley A., Ph.D., California Inst. of Technology. Asst. Prof., Electrical and Computer Engineering
Montemagno, Carlo D., Ph.D., U. of Notre Dame. Assoc. Prof., Agricultural and Biological Engineering
Moon, Francis C., Ph.D., Cornell U. Joseph C. Ford Professor, Mechanical and Aerospace Engineering

Morrisett, Greg J., Ph.D., Carnegie Mellon. Asst. Prof., Computer Science
Muckstadt, John A., Ph.D., U. of Michigan. Acheson-Laibe Prof., Operations Research and Industrial Engineering
Mukherjee, Subrata, Ph.D., Stanford U. Prof., Theoretical and Applied Mechanics and Mechanical and Aerospace Engineering
Myers, Andrew, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science
Nozick, Linda K., Ph.D., U. of Pennsylvania. Assoc. Prof., Civil and Environmental Engineering
Ober, Christopher K., Ph.D., U. of Massachusetts. Francis Norwood Bard Professor, Materials Science and Engineering
Olbricht, William L., Ph.D., California Inst. of Technology. Prof., Chemical Engineering
O'Rourke, Thomas D., Ph.D., U. of Illinois. Thomas R. Briggs Professor in Engineering, Civil and Environmental Engineering
Papoulia, Katerina D., Ph.D., U. of California at Berkeley. Asst. Prof., Civil and Environmental Engineering
Parks, Thomas W., Ph.D., Cornell U. Prof., Electrical and Computer Engineering
Parlange, Jean-Yves, Ph.D., Brown U. Prof., Agricultural and Biological Engineering
Peköz, Teoman, Ph.D., Cornell U. Prof., Civil and Environmental Engineering
Phillips, Jr., Alfred, Ph.D., Howard U. Assoc. Prof., Electrical and Computer Engineering
Philpot, William D., Ph.D., U. of Delaware. Assoc. Prof., Civil and Environmental Engineering
Phoenix, S. Leigh, Ph.D., Cornell U. Prof., Theoretical and Applied Mechanics Engineering and Mechanical and Aerospace Engineering
Pingali, Keshav K., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Computer Science
Pollack, Lois, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Applied and Engineering Physics
Pollock, Clifford R., Ph.D., Rice U. Ilda and Charles Lee Prof. of Engineering, Electrical and Computer Engineering
Pope, Stephen B., Ph.D., Imperial College of Science and Technology (England). Sibley College Professor of Mechanical Engineering, Mechanical and Aerospace Engineering
Protter, Philip, Ph.D., U. of California at San Diego. Prof., Operations Research and Industrial Engineering
Psiaki, Mark L., Ph.D., Princeton U. Assoc. Prof., Mechanical and Aerospace Engineering
Rand, Richard H., Sc.D., Columbia U. Prof., Theoretical and Applied Mechanics
Reeves, Anthony P., Ph.D., U. of Kent at Canterbury (England). Assoc. Prof., Electrical and Computer Engineering
Renegar, James, Ph.D., U. of California at Berkeley. Prof., Operations Research and Industrial Engineering
Resnick, Sidney, Ph.D., Purdue U. Prof., Operations Research and Industrial Engineering
Rhodes, Frank H. T., Ph.D., U. of Birmingham (England). Prof., Earth and Atmospheric Sciences
Riha, Susan, Ph.D, Washington State U. Prof., Earth and Atmospheric Sciences
Rosakis, Phoebus, Ph.D., California Inst. of Technology. Assoc. Prof., Theoretical and Applied Mechanics
Roundy, Robin, Ph.D., Stanford U. Assoc. Prof., Operations Research and Industrial Engineering
Ruina, Andy L., Ph.D., Brown U. Prof., Theoretical and Applied Mechanics and Mechanical and Aerospace Engineering
Ruoff, Arthur L., Ph.D., U. of Utah. Class of 1912 Professor, Materials Science and Engineering
Ruppert, David, Ph.D., Michigan State U. Prof., Operations Research and Industrial Engineering
Sachse, Wolfgang H., Ph.D., Johns Hopkins U. Meinig Family Prof. of Engineering, Theoretical and Applied Mechanics and Mechanical and Aerospace Engineering
Saltzman, W. Mark, Ph.D., Massachusetts Inst. of Technology/Harvard U. BP Amoco/H. Laurence Fuller Professor, Chemical Engineering
Samorodnitsky, Gennady, D.S., Technion-Israel Inst. of Technology. Prof., Operations Research and Industrial Engineering
Sansalone, Mary J., Ph.D., Cornell U. Prof., Civil and Environmental Engineering
Sass, Stephen L., Ph.D., Northwestern U. Prof., Materials Science and Engineering
Schneider, Fred B., Ph.D., SUNY at Stonybrook. Prof., Computer Science
Schuler, Richard E., Ph.D., Brown U. Prof., Civil and Environmental Engineering/Economics
Schwartz, David, Ph.D., SUNY at Buffalo. Asst. Prof., Computer Science
Selman, Bart, Ph.D., U. of Toronto. Assoc. Prof., Computer Science
Scott, Norman R., Ph.D., Cornell U. Prof., Agricultural and Biological Engineering
Seshadri, Praveen, Ph.D., U. of Wisconsin. Asst. Prof., Computer Science
Seyler, Charles E., Jr., Ph.D., U. of Iowa. Prof., Electrical and Computer Engineering
Shealy, J. Richard, Ph.D., Cornell U. Prof., Electrical and Computer Engineering
Shmoys, David B., Ph.D., U. of California at Berkeley. Prof., Computer Science and Operations Research and Industrial Engineering
Shoemaker, Christine A., Ph.D., U. of Southern California. Prof., Civil and Environmental Engineering
Shuler, Michael L., Ph.D., U. of Minnesota. Samuel B. Eckert Prof. of Chemical Engineering
Silcox, John, Ph.D., Cambridge U. (England). David E. Burr Prof. of Engineering, Applied and Engineering Physics
Sirer, Emin Gun, Ph.D., U. of Washington. Asst. Prof., Computer Science
Speight, Evan, Ph.D., Rice U. Asst. Prof., Electrical and Computer Engineering
Spencer, Michael G., Ph.D., Cornell U. Prof., Electrical and Computer Engineering
Stedinger, Jery R., Ph.D., Harvard U. Prof., Civil and Environmental Engineering
Steen, Paul H., Ph.D., Johns Hopkins U. Prof., Chemical Engineering
Steenhuis, Tammo S., Ph.D., U. of Wisconsin., Prof., Agricultural and Biological Engineering
Stewart, Harry E., Ph.D., U. of Massachusetts at Amherst. Assoc. Prof., Civil and Environmental Engineering
Strogatz, Steven H., Ph.D., Harvard U. Prof., Theoretical and Applied Mechanics
Suzuki, Yuri, Ph.D., Stanford U. Asst. Prof., Materials Science and Engineering
Tang, Chung L., Ph.D., Harvard U. Spencer T. Olin Professor of Engineering, Electrical and Computer Engineering
Tardos, Éva, Ph.D., Eötvös U. (Hungary). Prof., Computer Science and Operations Research and Industrial Engineering
Teitelbaum, R. Tim., Ph.D., Carnegie-Mellon U. Assoc. Prof., Computer Science
Thomas, Robert J., Ph.D., Wayne State U. Prof., Electrical and Computer Engineering
Thompson, Michael O., Ph.D., Cornell U. Assoc. Prof., Materials Science and Engineering
Thorp, James S., Ph.D., Cornell U. Charles N. Mellowes Professor in Engineering, Electrical and Computer Engineering
Tien, Norman C., Ph.D., U. of California at San Diego. Assoc. Prof., Electrical and Computer Engineering
Timmons, Michael B., Ph.D., Cornell U. Lester B. Knight Director of the Knight Laboratory, Prof., Agricultural and Biological Engineering
Tiwari, Sandip, Ph.D., Cornell U. Prof., Electrical and Computer Engineering
Todd, Michael J., Ph.D., Yale U. Leon C. Welch Prof., Operations Research and Industrial Engineering
Tong, Lang, Ph.D., U. of Notre Dame. Assoc. Prof., Electrical and Computer Engineering
Torrance, Kenneth E., Ph.D., U. of Minnesota. Joseph C. Ford Professor, Mechanical and Aerospace Engineering
Trotter, Leslie E., Ph.D., Cornell U. Prof., Operations Research and Industrial Engineering
Turcotte, Donald L., Ph.D., California Inst. of Technology. Maxwell M. Upson Prof. of Engineering, Earth and Atmospheric Sciences
Turnbull, Bruce W., Ph.D., Cornell U. Prof., Operations Research and Industrial Engineering
Turnquist, Mark A., Ph.D., Massachusetts Inst. of Technology. Prof., Civil and Environmental Engineering
Ünlü, Kenan, Ph.D., U. of Michigan. Adj. Prof., Materials Science and Engineering
Valero-Cuevas, Francisco, Ph.D., Stanford U. Asst. Prof., Mechanical and Aerospace Engineering
van der Meulen, Marjolein C. H., Ph.D., Stanford U. Asst. Prof., Mechanical and Aerospace Engineering
Van Loan, Charles F., Ph.D., U. of Michigan. Joseph C. Ford Professor of Engineering, Computer Science
Vavasis, Stephen A., Ph.D., Stanford U. Assoc. Prof., Computer Science
Voelcker, Herbert B., Ph.D., Imperial College of Science and Technology (England). Charles W. Lake Jr. Prof. of Engineering, Mechanical and Aerospace Engineering
vonEicken, Thorsten, Ph.D., U. of California at Berkeley. Asst. Prof., Computer Science
Walker, Larry P., Ph.D., Michigan State U. Prof., Agricultural and Biological Engineering
Walter, Michael F., Ph.D., U. of Wisconsin. Prof., Agricultural and Biological Engineering
Wang, Z. Jane, Ph.D., U. of Chicago. Asst. Prof., Theoretical and Applied Mechanics
Warhaft, Zellman, Ph.D., U. of London (England). Prof., Mechanical and Aerospace Engineering
Webb, Watt W., Sc.D., Massachusetts Inst. of Technology. Samuel B. Eckert Professor of Engineering, Applied and Engineering Physics
Weber-Shirk, Monroe, Ph.D., Cornell U. Lecturer, Civil and Enviornmental Engineering
White, William M., Ph.D., U. of Rhode Island. Prof., Earth and Atmospheric Sciences

Wicker, Stephen B., Ph.D., U. of So. California. Prof., Electrical and Computer Engineering
Wiesner, Ulrich B., Ph.D., U. of Mainz (Germany). Assoc. Prof., Materials Science and Engineering
Wilks, Daniel S., Ph.D., Oregon State U. Prof., Earth and Atmospheric Sciences
Williamson, Charles, Ph.D., Cambridge U. (England). Prof., Mechanical and Aerospace Engineering
Wise, Frank W., Ph.D., Cornell U. Prof., Applied and Engineering Physics
Yona, Golan, Ph.D., Hebrew U. Asst. Prof., Computer Science
Zabaras, Nicholas, Ph.D., Cornell U. Assoc. Prof., Mechnical and Aerospace Engineering
Zabih, Ramin, Ph.D., Stanford U. Assoc. Prof., Computer Science
Zehnder, Alan, Ph.D., California Inst. of Technology. Assoc. Prof., Theoretical and Applied Mechanics and Mechanical and Aerospace Engineering

GRADUATE SCHOOL

Walter Cohen, dean

Alison G. Power, associate dean

Terry D. Plater, associate dean

Sarah S. Hale, assistant dean

Graduate study at Cornell is pursued through the Graduate School, which administers the many graduate fields of study, or through the various graduate professional schools and colleges.

GRADUATE SCHOOL

The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of Master of Arts, Master of Science, and Doctor of Philosophy, but only such general requirements as best accomplish the aim of graduate study: a period of study in residence, the mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee and usually has the primary responsibility for directing the student's thesis or dissertation research.

REQUIREMENTS FOR ADMISSION

To be admitted to the Graduate School, an applicant should:

1) hold a baccalaureate degree or its equivalent, granted by a faculty or university of recognized standing;
2) have adequate preparation for graduate study in the chosen field of instruction;
3) have fluent command of the English language;
4) present evidence of promise in advanced study and research; and
5) take the Graduate Record Examinations General Test, or other specific examinations, for those fields that require these examinations.

Before admission can be final, all applicants whose native language is not English must provide proof of competency in the English language. Acceptable proof could be

1) a minimum Test of English as a Foreign Language (TOEFL) score of 550 on the paper-based test or 213 on the computer-based test (higher for some fields);
2) evidence of two or more years study in, or a degree from, a college or university in a country where both the language of instruction and the native language is English.

Information on times and places for the TOEFL examination and Graduate Record Examinations and application forms may be obtained from the Educational Testing Service, Princeton, NJ 08541, U.S.A.

Applications for fall admission to the Graduate School should be received by the deadline of the field to which one applies. The earliest deadline is December 1. Many fields, however, have different deadlines. Applicants should consult the Graduate School's application booklet for the specific closing date for each field.

Inquiries regarding admission should be addressed to the specific graduate field office or to the Graduate School Admissions Office, Cornell University, Caldwell Hall, Ithaca, N.Y. 14853–2602.

Inquiries regarding facilities for advanced study and research in a given field, special requirements for such study and research, and opportunities for fellowships and teaching and research assistantships should be addressed to the particular graduate field of interest.

More detailed information is contained in the application for admission to the Graduate School and in the *Graduate School Catalog*. Both may be viewed on the Web at <www.gradschool.cornell.edu/>. An interactive application is available through this site, and application forms may be downloaded and printed directly from the Web. Both the application and the *Catalog* may be received through the mail by contacting either the individual graduate field office or the Graduate School, Caldwell Hall, Cornell University, Ithaca, NY 14853–2602. (The application is mailed world-wide; the *Catalog* is mailed to addresses within the U.S.)

Note: Programs leading to the degrees of Doctor of Law (J.D.), Master of Laws (LL.M.), Doctor of Medicine (M.D.), Doctor of Veterinary Medicine (D.V.M.), and Master of Business Administration (M.B.A.) are not administered by the Graduate School. Information on those programs can be obtained from the Law School, the Weill Medical College of Cornell University (New York City), the College of Veterinary Medicine, and the Johnson Graduate School of Management respectively.

SCHOOL OF HOTEL ADMINISTRATION

ADMINISTRATION

David W. Butler, dean

Leo Renaghan, associate dean for academic affairs

Thomas Cullen, associate dean for industry and international affairs

Cathy A. Enz, executive director, Center for Hospitality Research

Daphne A. Jameson, Richard J. and Monene P. Bradley director for graduate studies

Timothy Hinkin, director of undergraduate studies

Donald C. Bishop, associate dean of students and enrollment management

Margaret Haley Ferguson, director of financial services

James E. Hisle, managing director of the Statler Hotel and J. Willard Marriott Executive Education Center

Cheryl S. Farrell, director of admissions and student services

Neoma Mullens, director of multicultural programs

Katherine S. Margolis, director of library

Philippus Miller III, director of alumni affairs

Timothy J. Durnford, director of instructional support

Millie Reed, director of career services

Glenn Withiam, director of publications

Fred Conner, senior editor of the *Cornell Hotel and Restaurant Administration Quarterly*

Mark Adams, director of communications

DEGREE PROGRAMS

	Degree
Hotel and Restaurant Administration	B.S. M.M.H. M.S. Ph.D.

FACILITIES

Statler Hall. Statler Hall is a unique building designed expressly to meet the needs of the faculty and students of the School of Hotel Administration. The building serves both practical and theoretical instruction, houses classrooms, lecture rooms, laboratories, a library, a computer center, a beverage-management center, an auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. Statler Hall and the Statler Hotel were designed expressly for the school's academic and executive-education programs, providing students with training and work experience in facilities similar to those in which they will work after graduation.

The School of Hotel Administration's Nestlé Library has the largest single collection of hospitality-related materials in the United States. The collection contains approximately 23,000 books, 1,000 videotapes, numerous ephemera and memorabilia (such as photographs, menus, and rare books), and more than 800 journal, magazine, newsletter, and newspaper subscriptions. Materials on lodging, foodservice, travel and tourism, and general business topics comprise the core of the library's collections. Among the library's special features are numerous computerized information resources, including *NEXIS, Dow Jones, ABI/INFORM,* and *The International Hospitality and Tourism Database,* an extensive and unique index to hospitality articles. Information resources and services for the hospitality industry are available for a fee through the library's HOSTLINE service. In addition to offering an excellent collection of materials and a dignified and refined study space, the Hotel School library extends quality service to every student.

Statler Hotel and J. Willard Marriott Executive Education Center. The Statler Hotel comprises 150 guest rooms, an executive education center, restaurants, a lounge, and the university's faculty and staff club. It demonstrates the very finest in hospitality and hospitality-education practices. The Statler is an independent, self-sustaining teaching hotel that provides quality food, beverage, meeting, and lodging services to the local community and campus visitors, including parents and those who visit Cornell as part of the application process. In addition, the hotel is a practice-management facility for certain classes, internships, and independent-study projects. It offers part-time jobs to approximately 300 students each semester with preference given to students in the hotel school.

UNDERGRADUATE CURRICULUM

The School of Hotel Administration offers education in the numerous disciplines required for modern management in the global hospitality industry. Included in the core curriculum are courses in management, human resources, financial management, food and beverage operations, marketing, tourism, property asset management, communications, and law. Students also are encouraged to pursue a broad range of elective courses, including those in the humanities, social sciences, and natural sciences, as preparation for assuming leadership positions in the business and local community. For more complete information about undergraduate program requirements, see the school's student handbook or course supplement (available in room 174 Statler Hall).

Requirements for Graduation

Regularly enrolled undergraduate students in the School of Hotel Administration are candidates for the degree of Bachelor of Science. The requirements for that degree are:

1) completion of eight terms in residence for those who entered as freshmen; terms of residence for transfer students are determined by the amount of transfer credit awarded;
2) completion, with a minimum cumulative grade-point average of 2.0 (including a grade-point average of 2.0 in a full-time schedule of courses on campus in the final semester), of 120 required and elective credits, as set forth in the table on the following page;
3) qualification in one language other than English. This requirement may be met by any one of the following: (1) three years of high school study of one foreign language; (2) score of 560 on Cornell Placement Test; (3) pass language 121 and 122 (eight credits) or the equivalent, and attain a minimum grade of at least C- or "Satisfactory" in each (C or above for transfer credit from other institutions); or (4) pass 123 or the equivalent;
4) completion of two units of practice credit prior to the last two terms of residence, as defined on the following page;
5) completion of the university requirement in physical education.

Suggested course programs appear on the following pages. The core courses account for 72 of the 120 credits needed for graduation, the hotel electives account for 12 credits, and 18 credits are allotted for distributive electives. The remaining 18 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or any other four-year college or university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval of the school in advance. Without advance approval, such credit may not count toward the degree.

Credit earned in military science, aerospace studies, or naval-science courses may be counted in the 18-credit group of free electives. No credit toward the degree is allowed for "0"-level courses, such as Educ 005.

Transfer Credit Policy

Transfer students are required to complete all degree requirements with at least 75 credits at Cornell University, of which a minimum of 60 must be in courses offered by the Hotel School, and nine must be in distributive electives taken outside the Hotel School. Thus, a maximum of 45 hours in transfer credit may be allowed from other accredited colleges or universities as follows:

Core	18
Hotel Electives	0
Distributive Electives	9
Free Electives	18
	45

In the core, transfer credit may be allowed against basic courses only (for example, HA 121, HA 136, Economics). Others generally are waived, and an upper-level course in the area substituted. For instance, if HA 243 were waived, another marketing course would be required in its place. The communication courses (HA 165 and HA 365) are tailored specifically to the School of Hotel Administration, and, thus, communication courses taken elsewhere generally are not accepted against core courses.

Hotel elective courses may not transfer.

Distributive electives ensure that Hotel students are exposed to other courses at Cornell, and, thus, only nine credits may transfer. The remaining nine must be taken at Cornell but may be distributed in any combination of humanities, social sciences, or natural sciences provided at least three credits are taken (at Cornell or transferred from elsewhere) in each area. A maximum of six credits, but no more than four per semester, of distributive electives may be taken on an S-U basis. For more information on the distribution requirement, see the handout available in the student services office, room 178 Statler Hall.

Eighteen credits in free electives may transfer.

Concentration

While completing the hotel elective courses, undergraduates in the school may select a concentration.

When students select a field of concentration, they should consult the coordinator of instruction in that area during the sophomore year to plan the sequence of courses that will best fit their program.

Upon completion, the concentration will be noted on the transcript, provided a cumulative GPA of 3.0 in the concentration was attained.

Foreign Languages

Mastery of a foreign language is particularly desirable for students who are planning careers in the hospitality industry and, hence, the second language requirement for graduation. Further information on foreign language courses at Cornell, and placement in language courses, may be found in this book in the College of Arts and Sciences program description under the Modern Languages, Literature, and Linguistics section, and also under the section Advanced Placement for Freshmen.

Independent Study

Students may conduct independent study projects in any academic area of the school under the direction of a resident faculty member. Credit is arranged on an individual basis. To enroll in an independent study project, students must obtain written permission from the school before the add deadline. See H ADM 499 or 699 for more details.

Practice-Credit Requirement

As part of the degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice-credit requirement and submit verification thereof prior to registering for the last two semesters. Further details are set forth in the *Practice Credit Handbook for Undergraduates in the School of Hotel Administration,* available in the school's Career Services Office, room 255 Statler Hall.

Management-Intern Program

Hotel School juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the management–intern program. Students receive 12 free elective credits and 1 practice credit. While on the internship, tuition is reduced and students receive a salary from the sponsoring organization. Positions are available in the United States and internationally. Sponsors include, but are not limited to, hotels, restaurants, casinos, corporate offices, consulting firms, and clubs. Application should be made one semester in advance. Information meetings are held at the beginning of each semester and are open to all students. See H ADM 493 and 494 for more details. More information about the management intern program also is available in the Career Services Office, 255 Statler Hall.

Study Abroad

All students planning to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of *Courses of Study.*

Programs providing an opportunity to study in a foreign country and develop an awareness of the international component of the hospitality industry can contribute to each student's total educational experience. Students in recent years have studied in Italy, Spain, France, England, Australia, and many other countries. Information on the study-abroad programs operating during the summer and academic year is available at the Cornell Abroad Office (in Uris Hall).

Students should discuss their plans with the school's director of student services so that all petition and credit-evaluation procedures are followed.

Part-Time Study

Generally, part-time study is not allowed. Exceptions may be made for employee degree candidates, students who have medical reasons for a reduced schedule, or other extenuating circumstances. In no event shall a student be allowed to enroll on a part-time basis during the last term of study. Further details on part-time study may be found in the school's student handbook (available in room 174 Statler Hall).

Grading System

Letter grades ranging from A+ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each term average as follows: A is equivalent to 4.0; B to 3.0; C to 2.0; D to 1.0; F to 0. For good standing, the student must maintain a minimum average of 2.0. A maximum of four credits each term may be taken on a "satisfactory-unsatisfactory" (S-U) basis. Students should be aware that a satisfactory grade equals "C-" or above and an unsatisfactory grade equals "D+" or lower.

Students whose term averages are at least 3.3 and who took at least 12 credits of letter grades with no unsatisfactory or incomplete grades are honored by being placed on the Dean's List.

Course Requirements for Graduation

Required courses	*Credits*
Management Operation: Hotel Administration 105, 401	6
Human-Resources Management: Hotel Administration 115, 211	6
Financial Management: Hotel Administration 121, 221, 222, 321	12
Food and Beverage Management: Hotel Administration 136, 236, 335	12
Marketing and Tourism: Hotel Administration 243, elective	6
Property Asset Management: Hotel Administration 255, 355	6
Communication: Hotel Administration 165, 365	6
Operations Management and Information Technology: Hotel Administration 174, 371, 475	9
Law: Hotel Administration 387	3
Economics: Micro and Macro	6
Specifically required credits	72
Hotel Electives	12
Distributive electives	18
Free electives	18
Total credits required for graduation	120

Typical Course Sequences

The following arrangements of courses tend to be more fixed in the freshman and sophomore years, with a greater degree of flexibility characterizing the upperclass years.

Freshman Year

Typically, a freshman schedule will consist of 15 to 16 credits each term, to include the following:

Required courses	*Credits*
H ADM 105, Introduction to Lodging	3
H ADM 115, Organizational Behavior and Interpersonal Skills	3
H ADM 121, Financial Accounting	3
H ADM 136, Introduction to Food Service Operations	4
H ADM 165, Managerial Communication I	3
H ADM 174, Microcomputing	3
H ADM 191, Microeconomics for the Service Industries	3
Macroeconomics	3
Electives	6
	31

Sophomore Year

Required courses	*Credits*
H ADM 211, Human Resources Management	3
H ADM 221, Managerial Accounting	3
H ADM 222, Finance	3
H ADM 236, Culinary Theory and Practice	4
H ADM 243, Principles of Marketing	3
H ADM 255, Hotel Development and Planning	3
Electives	12
	31

Junior Year

Required courses	*Credits*
H ADM 321, Hospitality Financial Management	3
H ADM 335, Restaurant Management	4
H ADM 355, Hospitality Facilities Operations	3
H ADM 365, Managerial Communication II	3
H ADM 371, Hospitality Quantitative Analysis	3
H ADM 387, Business and Hospitality Law	3
Electives	12
	31

Senior Year

Required courses	*Credits*
H ADM 401, Strategic Management	3
H ADM 475, Information Technology in the Hospitality Industry	3
Marketing Elective	3
Electives	18
	27

GRADUATE CURRICULUM

The school's programs for advanced degrees include those of Master of Management in Hospitality, Master of Science, and Doctor of Philosophy. For further information on graduate programs, consult the school's graduate catalog (available in room 172 Statler Hall); contact the school's graduate services office at 255–7245, or see the university's *Announcement* from the Graduate School.

Required Program for Professional Master's Students

Required courses	*Credit*
H ADM 701, Competitive Strategies for the Hospitality Industry	3
H ADM 702, Human Behavior in Organizations	3
H ADM 711, Human Resources Management	3
H ADM 721, Financial Economics	3
H ADM 722, Hospitality Financial Management	3
H ADM 731, Food and Beverage Management	3
H ADM 741, Marketing Management	3
H ADM 751, Properties Development and Planning	3
H ADM 761, MMH Managerial Communication	0
H ADM 771, Quantitative Methods	3
H ADM 772, Information Technology for Hospitality Managers	3
H ADM 791, Creating and Managing for Service Excellence	3
H ADM 793, Industry Mentorship Program	0
H ADM 794, Management Development Component I and II	0

Balance of courses are electives.

Total credits required for the Master of Management in Hospitality program **64**

Course Schedule Information

For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school student services office in room 178 Statler Hall, telephone 255-3076.

MANAGEMENT OPERATION COURSES

[H ADM 100 Principles of Management
Fall and spring. 3 credits. Limited to non-hotel students. Elective. Not offered fall 2001. K. Namasivayam.
An introductory survey course in management with orientation to the hospitality industry. The course is organized around the traditional management functions of planning, organizing, commanding, coordinating, and controlling.]

H ADM 102 Distinguished Management Lectures
Fall. 1 credit. Elective. D. Butler.
The Dean's Distinguished Lecture Series is a long-standing Hotel School tradition that provides a unique opportunity for successful industry leaders to share their experiences with Cornell students. In its 40-year history, the Dean's Distinguished Lecture Series has hosted the most influential and accomplished leaders from every segment of the hospitality industry. Speakers share their views about successful management styles, possible career paths, critical industry-related issues, and qualities conducive to successful business leadership. Students have an unparalleled opportunity to learn and question how hospitality leaders view the current and future status of the industry.

H ADM 105 Introduction to Lodging
Fall and spring. 3 credits. Limited to hotel and sponsored internal transfer division students. Required. R. McCarthy.
Designed to provide students with a comprehensive, fundamental understanding of how hotels are managed from the rooms perspective. Through practical hands-on experiences, students will be exposed to operational line-level positions in the rooms division including housekeeping, reservations, front desk, PBX, and bellstand. Lectures will begin with an overview of the lodging industry and will focus on the managerial aspects of the rooms division. Topics include revenue management, forecasting, budgeting, measuring performance, transient versus group displacement, pricing and inventory management, service quality, ethics, and technology. Students will apply what they have learned in class while operating their own virtual 250-room hotel using a CHESS computer simulation. Guest lecturers will provide students with insight on various career opportunities in the operations or rooms-related areas.

H ADM 303 Club Management
Fall and spring. Fall, second 7 weeks only; spring, first 7 weeks only. 2 credits. Fall, limited to 35 hotel school juniors and seniors; spring, open enrollment. Prerequisite for hotel students: H ADM 105, or equivalent. Elective. R. James.
The study of private membership clubs and club administration. The application of current management principles in a not-for-profit environment is discussed and club management is compared to other areas of the hospitality industry. Topical coverage includes: tournament, facility, and recreation management; legal, financial, and legislative issues; human relations and resource consideration; marketing, pricing policies, and quality standards. The deadline to drop is the mid-point of the course.

H ADM 306 Franchising in the Hospitality Industry
Fall. 3 credits. Not open to freshmen. Elective. M. Noden.
This course looks at relationships between franchisor and franchisee, advantages and disadvantages of franchising, and structure and services offered by franchisors. Case studies of leading lodging and restaurant companies currently offering franchises will be discussed. Guest speakers from the franchising industry.

H ADM 401 Strategic Management
Fall and spring. 3 credits. Prerequisites: H ADM 105, 115, 211, and 321, or equivalents. Required. R. Chase, T. Cullen, C. Enz.
This is a senior management, broadly based and encompassing course. It will incorporate almost all functional areas including, marketing, human resources, finance, rooms operation, accounting, economics, and asset management. The issues of strategic management necessitate total enterprise and competitive perspectives. Strategic skills involve judging how relevant factors affect the business organization. The course will introduce a number of models, methods, and techniques used to develop strategic thought, to generate action plans, and to assess changes. These introductions and the course project will stress the need for continuous review of environmental opportunities to maximize the well being of all stakeholders. Because of the group nature of the course, the absolute drop deadlines are September 7 in the fall and January 25 in the spring.

H ADM 402 Hospitality Management Seminar
Fall. 1 credit. Limited to 30 seniors and graduate students by permission. Students will be expected to register for H ADM 102. Elective. D. Butler.
This course complements H Adm 102 by providing students an opportunity to personally interact with guest speakers, and to actively participate in roundtable discussion

on issues relating to the hospitality industry. The open dialogue provides students with a better understanding of industry trends, challenges, and opportunities.

H ADM 403 Resort and Condominium Management
Fall. Students may enroll in first seven weeks, second seven weeks, or both. 2 credits. Limited to seniors and graduate students, others by permission of instructor. Mandatory attendance in all class periods. Elective. M. Noden.

First Seven Weeks: Resort Management: A lecture course in the development, operations, and management of the resort property. Resorts of various types, seasons, and economic levels are considered. Emphasis is on the financing and environmental considerations of the resort development cycle. Regulatory issues are examined, and relationships with host communities and governmental bodies are explored. Special consideration is given to the promotion of business, the provision of facilities, services and guest entertainment. Contract and noncontract relationships with the travel industry are reviewed.

Second Seven Weeks: Resort Condominium Management: A lecture course in the development, financing, and management of secondary-residential hotel condominiums. Contemporary state statutory requirements, S.E.C. regulations and prospectus rules are reviewed for application in the managerial portfolio. Federal land use controls are examined and explained. Individual financing of units, and management contracts are fully reviewed, and students will be exposed to typical management contract requirements and protocols. Rental pooling and its effects upon management and owners will be fully explored. Applications of the condominium concept, including such by-products as time sharing, will be examined from a managerial perspective.

H ADM 404 Entrepreneurship
Fall and spring. 3 credits. Limited to 40 juniors, seniors, and graduate students. Prerequisite: H ADM 321 or equivalent. Elective. Not offered fall 2001. Faculty.
Emphasizes starting a new business, not franchising or buying an existing business. Topics will cover how to conceptualize an idea, how to evaluate and articulate the plan, and how to sell the plan to investors, customers, partners, and employees. Students work in teams to develop and present a business plan to a panel of judges at the end of the course. Case studies, guest lecturers. **Because of the group project nature of the course, the absolute drop deadline for all students is the last day of the first week of classes.**

H ADM 405 Quality Planning in the Hospitality Industry
Spring. 3 credits. Limited to 25 seniors and graduate students. Prerequisites: all required hotel undergraduate courses at the 100, 200, and 300 levels. Elective. T. Hinkin.
Focuses on the analysis of work processes and examines organizations from three perspectives: the customer, the employee, and management. Provides students with a systematic approach to identifying, prioritizing, and improving key job functions and work processes utilizing the tools of quality management. Readings, case analysis.

H ADM 407 Seminar in Hotel Operations
Spring. 3 credits. Limited to 25 juniors and seniors with permission of instructor. Estimated cost of field trip, $200. Elective. R. McCarthy.
Seminar course applies management theory to actual hotel operations via semester-long interactions and visits with the department heads and general manager of a medium- to large-size hotel. Field trip includes attendance at executive committee meeting, presentations by various department heads, and half-day "shadow assignments."

H ADM 408 Seminar in Casino Operations
Fall. 2 credits. Limited to hotel juniors and seniors. Estimated cost of field trip, $200. Elective. R. McCarthy.
A vital part of the hospitality industry, casino gaming is one of the most exciting and fastest growing industries. This course focuses primarily on the operation and ownership of commercial casinos and the hotels attached to them. The course is designed to introduce students to the internal and external casino environment. The historical development of gaming in America to understand how the industry has evolved to its present form will be examined. By the end of the course students will understand the organizational structure of a casino hotel, how it operates and how it makes money. Students will also gain an understanding of the different companies that own casino hotels and the current issues facing these companies. Casino marketing strategies, player rating systems, the social and economic impact of gaming and the various regulatory environments within which casinos operate will be examined. Students will learn how common casino games are played, and come to understand the mathematics of the various games. Students will build on their food and beverage and hotel knowledge to better understand the specific challenges facing casino hotel operators.

[H ADM 409 Airline Management
Spring. 3 credits. Elective. Offered alternate years. Next offered 2003, 2005. M. Noden.
Focuses on domestic and international airline industries and explores both pre- and post-regulatory climates. Emphasis is on dynamic organizational change in response to fluctuating economic and legal conditions. Topics include airline organization, comparative corporate strategies, marketing and distribution networks, operations and service management, union relations, finance, government regulation, and air transport. Case studies and guest lecturers will be used. Also, using the computer-driven simulation exercise called AIRLINE, student teams will operate a small regional carrier.]

H ADM 603 Managing Across Cultural Boundaries
Spring. 3 credits. First seven weeks of the semester. Limited to seniors with H ADM 121, 165, 321, 401, or graduate student status. The deadline to drop is the midpoint of the course. Elective. J. Katz.
Contributes to the development of knowledge and skills needed to manage effectively in other cultures. Objectives are to develop awareness of the pervasive and hidden influence of culture on behavior, particularly with respect to management and management practices; to develop familiarity with the types of situations and issues that often confront managers working in foreign countries; and to develop an appreciation of the impact on personal behavior of living and working in another culture. Readings, case studies.

H ADM 701 Competitive Strategies for the Hospitality Industry
Fall. 3 credits. Professional master's requirement. Limited to MMH students except by written permission of the instructor in advance of pre-enrollment. T. Cullen.
An integration and application of management concepts, theories, and practices to business situations. Students analyze current problems, formulate strategies, and implement policies.

H ADM 702 Human Behavior in Organizations
Fall. 3 credits. Professional master's requirement. Limited to MMH students except by written permission of the instructor in advance of pre-enrollment. T. Hinkin.
Focuses on manager and member behavior in organizations. Ideas and models about persons, interpersonal relationships, small groups, and organizations will provide the basis for understanding the dynamics of effective organizational behavior. Learning will occur primarily through readings, case discussions, and self-reflective teamwork.

[H ADM 801 Seminar in Hospitality and Service Inquiry
Fall. 3 credits. Elective. Offered alternate years. Next offered 2002, 2004. C. Lundberg.
This seminar introduces academic graduate students to the major alternative ways of conceptualizing and designing research, and acquiring, interpreting, and disseminating findings. The implications and consequences of one's choices and tradeoffs among the alternative philosophical, ideological, and pragmatic perspectives and approaches to inquiry will be emphasized.]

HUMAN RESOURCES MANAGEMENT

H ADM 115 Organizational Behavior and Interpersonal Skills
Fall and spring. 3 credits. Required. C. Lundberg, K. Walsh.
Focuses on managing people in the workplace. Students develop theoretic lenses for understanding people and organizations and practical tools for accomplishing personal and organizational goals. Topics include individual differences, conflict management, problem solving, power and influence, motivation, leadership, coaching and counseling, and group process. Self-assessments, experiential exercises, reading, discussions, papers, and group activities.

H ADM 210 The Management of Human Resources
Fall and spring. 3 credits. Limited to 40 non–hotel students, no freshmen. Elective. Not offered fall 2001. Faculty.
Examines the role of human resources management, starting with an introduction to the personnel function and an analysis of the social, legal, international, and competitive factors. Examines recruitment, selection, training, motivation, development, compensation, performance appraisal, and labor relations. Class discussion and case analysis are emphasized.

H ADM 211 Human Resources Management
Fall and spring. 3 credits. Limited to 60 hotel students per lecture, no freshmen or graduate students. Prerequisites: H ADM 105 and 115 (co-registration in 115 allowed). Required. M. Sturman, B. Tracey.
Provides students with an overview of the human resources management (HRM) field and shows them the link between specific HRM activities and substantive issues/situations they will face as future hospitality managers. Integrates information and knowledge acquired in previous courses. Students will understand the relationship between compensation and benefit activities and job design, motivation, and reward structures. Upon completion, students will (1) understand the interrelationship of HRM activities, as well as the relationship between HRM and other functional areas within hospitality organizations; and (2) understand how to effectively attract, retain, and motivate hospitality employees.

H ADM 313 Training in the Hospitality Industry
Fall. 3 credits. Limited to 24 students. Prerequisite: H ADM 211. Estimated cost of field trip, $200. Elective. B. Tracy.
Training is one of the primary activities for coping with a continuously changing environment. It is also one of the fundamental responsibilities of all hospitality managers. In this course, students learn the major theoretical and practical issues associated with program design, development, implementation, and evaluation. In addition, students apply their knowledge in a semester-long project with one or more hospitality organizations.

H ADM 411 Negotiations in the Hospitality Industry
Spring. 3 credits. Limited to 30 undergraduate students. Prerequisites: H ADM 115, or equivalent. Elective. T. Simons.
Negotiation skills are crucial to business success. This course provides hands-on experience in negotiation in the hospitality field. Writing, role-playing exercises, and discussions are used to develop students' negotiation skills. Students will improve their comfort level with negotiating as well as develop their own personal style. Students will also learn how to adjust their negotiating style to respond appropriately to different personalities and negotiation tactics.

H ADM 412 Managing Organizational Change
Spring. 3 credits. Prerequisite: H ADM 211 or equivalent. Elective. C. Lundberg.
Facilitating and managing change in organizations. Topics include change processes, organizational diagnosis, action planning, and consultancy. Individual and team projects.

H ADM 415 Managerial Leadership in the 21st Century
Spring. 1 credit. Weekend course. Dates TBA. Elective. Required notebook $25. K. Blanchard.
Students become participant observers in their own lives by studying the field of applied behavioral science. Students will be able to use what they learn about human beings and how they function best in groups and organizations on a day-to-day basis to develop quality relationships between themselves and the people they support and depend upon (boss, staff, internal peers/associates, and customers). **Because of the popularity of this class, priority will be given in the following order: seniors, juniors, non-employee extramural students, sophomores, freshmen, and Cornell employees. The absolute deadline for adding or dropping the course is 12:00 noon on the first day of class.**

H ADM 416 Special Studies in the Management of Human Resources: Service Cultures
Spring. 2 credits. Limited to juniors, seniors, and graduate students. Prerequisite: H ADM 211 or equivalent. Elective. C. Lundberg.
First Seven Weeks—Service Cultures. This course will assist students in understanding the creation and maintenance of effective service-driven operations. Emphasis will be placed on the diagnosis and design of human resource initiatives aimed at creating effective service cultures and improving organizational performance. Topics covered include the management of emotions, monitoring and measuring the corporate culture for service, and the linkage of human resource practices to service vision, organizational design, and strategic objectives. Students will develop and conduct a culture audit in a business. The seminar format is intended to encourage class discussion, case analysis, and field experience.

Second Seven Weeks—Service Organization Design. Since the earliest organizations, questions of how to best organize activities and resources have challenged managers. Traditional structures, e.g., those organized by functions, products, territories, seem to work less effectively as time goes on. The contemporary management challenge is to design and use more responsive, and flexible organizations—especially in the service sector. It is important to understand the effects of different organizational designs and systems on behavior and efficiency. This course will therefore carefully explore the components, processes, and issues associated with known and probable design options. We will operate as a seminar with several application classes.

H ADM 418 Innovation and Dynamic Management (also ARME 328)
Spring. 3 credits. Limited to juniors and seniors. Elective. C. Enz.
A university-wide course that investigates the innovation process and how to develop good management practice. Innovative firms are studied via case analyses, and a framework for effective change management is devised by the end of the semester. Emphasis is placed on examining how businesses and managers can build profitable organizations through a process of rethinking, re-evaluating, and discarding existing practices. The class will operate as a seminar with several hands-on experiences in innovation.

H ADM 611 Negotiations in the Hospitality Industry
Spring. 3 credits. Limited to 30 graduate students. Prerequisite: H ADM 702 or equivalent. Elective. T. Simons.
Negotiation skills are crucial to business success. This course provides hands-on experience in negotiation in the hospitality field. Writing, role-playing exercises, and discussions are used to develop students negotiation skills. Students will improve their comfort level with negotiating as well as develop their own personal style. Students will also learn how to adjust their negotiating style to respond appropriately to different personalities and negotiation tactics.

H ADM 614 Leadership and Small Group Processes
Fall. 3 credits. Limited to 30 hotel seniors and graduate students. Elective. T. Simons.
Theoretical and practical applications of organizational behavior will be explored through lectures, case studies, and management games and exercises. Students will participate in experiential labs aimed at enhancing their effectiveness as members or leaders of groups. Topics include leadership, decision making, motivation, power, and organizational change.

H ADM 711 Human Resources Management
Spring. 3 credits. Professional master's requirement. Limited to MMH students except by written permission of the instructor in advance of pre-enrollment. B. Tracey.
Addresses the policies and procedures that are required to attract, develop, and retain quality employees. Attention will be given to both strategies and tactics that influence HR decisions, as well as individual and organizational performance. A variety of learning methodologies will be used and students will have the opportunity to apply knowledge and skills in a semester-long project.

FINANCIAL MANAGEMENT

H ADM 120 Personal Financial Planning
Fall. 2 credits. Limited to non-hotel students. Elective. L. Hensley.
An overview of personal financial planning including money management, tax planning, use of credit, insurance, investing, retirement, and estate planning.

H ADM 121 Financial Accounting
Fall and spring. 3 credits. Limited to hotel students. Required. D. Dittman.
The basic principles of accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

H ADM 123 Financial Accounting Principles
Fall and spring. 3 credits. Limited to non–hotel students. Elective. P. Sinha.
An in-depth introduction to the principles of financial accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

H ADM 125 Finance
Fall and spring. 3 credits. Limited to non-hotel students. Elective. L. Canina.
This course examines in depth corporate finance topics including time value of money, risk and return, valuation models, cost of capital, capital budgeting, capital structure, and dividend policy.

H ADM 221 Managerial Accounting
Fall. 3 credits. Prerequisites: H ADM 121 and 174, or equivalents. Required. G. Potter.
The focus of this course is on the use of accounting information for management decision making and control. Topics include

product costing, management control systems, and performance measurement. There will be one common exam at the end of the semester.

H ADM 222 Finance
Spring. 3 credits. Prerequisite: H ADM 121, 221, or equivalents. Required. S. Carvell.
Provides students with accounting cash flow information for financial planning, capital structure decisions, capital budgeting evaluation, and short-term and long-term financial decision making. Topics include current asset management, short-term financing, capital budgeting, long-term financing, cost of capital, and problems in international finance.

H ADM 321 Hospitality Financial Management
Fall. 3 credits. Prerequisites: H ADM 121, 221, and 222, or permission of instructor. Required. N. Geller.
Integrates the areas of financial accounting, managerial accounting, and finance and applies the interpretive and analytical skills of each to hospitality-industry situations. Topics include uniform system of accounts, revenue and expense tracking and internal control, accounting systems, ratio and comparative analysis, cost-volume-profit analysis, pricing, operational budgeting, project capital budgeting, decision making, equity and debt financing structures, and operating agreement forms.

H ADM 322 Principles of Investment Management
Fall and spring. Limited to non-hotel students. Hotel students or those with a background in economics, quantitative analysis, and computers are advised to enroll in H ADM 424. Elective. C. Gadarowski.
An introductory course covering institutional and analytical aspects of security analysis and investment portfolio management including valuation models and practical strategies for stocks, bonds, and mutual fund selection and trading. Computer-assisted analysis, including students' participation in an investment game, is discussed and applied in a realistic manner.

H ADM 323 Hospitality Real-Estate Finance
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: H ADM 321 or equivalent. Elective. J. deRoos, D. Quan.
Focuses on real estate financing for hospitality-oriented projects. Topics include methods of measuring rates of return; feasibility and appraisal processes; equity and debt financing vehicles to include joint ventures, limited partnerships, construction mortgages, participating, convertible, and seller-financed mortgages; forms of operating agreements to include management contracts, leases, and franchises; and trends in international hotel franchising. Presentations by hospitality industry real estate practitioners will be made.

H ADM 324 International Financial Management
Fall and spring. 3 credits. Prerequisites: H ADM 121, 221, 222, or equivalents, and micro and macroeconomics. Elective. D. Ferguson.
Focuses on the international aspects of financial management important to the hospitality industry with the intention of providing an understanding of and confidence in dealing with the economic issues faced by the multinational corporation. Areas covered are the international financial management environment, the management of foreign exchange risk, international asset management, and international sources of funds.

H ADM 326 Corporate Finance
Fall. 3 credits. Limited to juniors and seniors. Prerequisite: H ADM 321. Elective. S. Carvell.
In-depth analysis of corporate financial management, including financing alternatives and capital structure decisions, cash management, capital budgeting decisions, risk analysis, and working capital management. Although applicable to all businesses, special attention is placed on issues important to the hospitality industry. Emphasizes analytical methods through case studies and an in-depth semester project.

H ADM 421 Internal Control in Hospitality Operations
Spring. 3 credits. Limited to 30 students. Prerequisite: H ADM 321, 722, or equivalents. Elective. N. Geller.
Hotel and restaurant operations are analyzed from the perspective of preventing fraud and embezzlement. The design and distribution of production, accounting, information systems, and supervisory tasks are studied in a manner that will ensure effective internal control and verifiable audit trails. Case studies.

H ADM 422 Taxation and Management Decisions
Fall. 3 credits. Limited to 50 juniors, seniors, and graduate students. Elective. A. Sciarabba.
Introduction to tax advantages and disadvantages of various organizational structures, including corporations, partnerships, and subchapter "S" corporations; financial information reporting to tax authorities and shareholders and how they differ; use of depreciation methods to achieve tax reductions; syndication techniques; and the role tax laws play in promoting private investments and development.

H ADM 423 Financial Management Policy
Fall and spring. 3 credits. Limited to 30 students; non-hotel students by permission of instructor. Prerequisite: H ADM 326 or 721. Elective. S. Gibson.
Covers numerous policy issues in financial management. Each of these issues will affect the potential profitability and survivability of the firm under conditions of uncertainty. The course will concentrate on nine major policy issues including capital structure, dividend policy, lease vs. buy analysis, and working capital financing.

H ADM 424 Security Analysis and Portfolio Management
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: macro and micro economics, introductory course in statistics and/or quantitative analysis, and knowledge of computers beyond word processing. Elective. C. Gadarowski.
An in-depth analysis of financial instruments, investments and portfolio management including fixed income, equity securities, advanced valuation models, risk-return analysis, screening techniques, asset allocation, and active portfolio management and trading. Recent developments in investments research are covered, and large financial databases are used for practical applications of the concepts and techniques presented.

H ADM 525 Securitization and Structured Financial Products
Fall. 3 credits. Limited to seniors and graduate students. Prerequisites: H ADM 222 or 721 and 424, or by permission. Elective. D. Quan.
Deals with the structure and analysis of securitized financial products with an emphasis on residential and commercial mortgage-backed securities (MBS). Intended for those who wish to acquire a working knowledge in the analysis of such securities (such as collateralized securities) and a deep understanding of the securitization process. Necessitates a highly analytic and quantitative approach. Students are required to have a strong background in finance and economics.

H ADM 528 Advanced Topics in Real Estate and Finance
Spring. First seven weeks. 2 credits. Limited to 20 seniors and graduate students or permission of the instructor. Prerequisite: H ADM 323, H ADM 458, or H ADM 621. Elective. D. Quan.
This is an intense seven-week course which takes an analytically oriented approach to understanding advanced real estate finance topics. It is intended for students who are highly motivated to learn advanced techniques and are not afraid of mathematical rigor. The course emphasizes the use of financial and economic principles and makes extensive use of statistics and mathematics. Students are required to have a solid background in the basics of finance, microeconomics, and macroeconomics. Note: the deadline to drop a seven-week course is the mid-point of the course.

H ADM 621 Hospitality Real Estate Finance
Spring. 3 credits. Limited to graduate students. Prerequisite: H ADM 722 or equivalent. Elective. J. deRoos.
For description, see H ADM 323. This graduate course includes the H ADM 323 lectures plus an hour-long discussion session each week which features guest speakers from industry, faculty from other colleges, and case studies.

H ADM 622 Capital Investment Analysis
Spring. 3 credits. Prerequisite(s): a course in principles of corporate finance (for graduate students, HA 721 or its equivalent; for undergraduate students, HA 222 and permission). Elective. S. Carvell.
This course is about how financial managers must make capital investment decisions in order to maximize shareholder wealth. This requires an in-depth understanding of both the investing and financing decision-making process. To understand the former, students learn about the capital budgeting process and acquire specific skills enabling them to evaluate capital projects; e.g., net present value, discounted cash flow and risk analysis. For the latter, students learn how equity and debt securities are priced in a dynamic capital market and how the firm's capital cost and structure are linked with shareholder wealth maximization. Cases are used to illustrate theory and industry guest speakers conduct occasional seminars.

H ADM 624 Reporting and Analysis for Financial Statements
Fall and spring. 3 credits. Limited to 30 seniors and graduate students. Elective. P. Sinha.

This course is designed to provide understanding of the basic accounting model, the underlying concepts for income measurement, and the accounting rules for the valuation of assets, liabilities and owners' equity. Emphasis will be placed on understanding the economic substance of the transactions and the implication of using alternate accounting rules on the resulting numbers, especially in assessing the "earnings quality." Focus is placed on an outsider's view of the company, and the students should be able to evaluate and interpret the published financial information, specifically in the context of valuation, debt and compensation contracts, and credit assessment.

H ADM 721 Financial Economics
Fall. 3 credits. Professional master's requirement. Limited to MMH students except by written permission of the instructor in advance of preenrollment. L. Canina.

Integrates corporate finance with the framework of value maximization and the competitive analysis of product and factor markets in the hospitality industry. Topics include short-term asset management, strategic valuation, capital budgeting analysis, capital structure decisions, leasing, and international financial management.

H ADM 722 Hospitality Financial Management
Spring. 3 credits. Professional master's requirement. Limited to MMH students except by written permission of the instructor in advance of preenrollment. G. Potter.

Covers both managerial accounting and financial management as they are practiced in the hospitality industry. Topics include hospitality accounting systems and internal control, financial statement analysis and interpretation, operational analysis, cost behavior, budgeting and forecasting, pricing, and feasibility analysis.

FOOD AND BEVERAGE MANAGEMENT

H ADM 136 Introduction to Food Service Operations
Fall and spring. 4 credits. Limited to hotel students. Required. G. Norkus, D. Reynolds, A. Susskind.

An introduction to the principles of food and beverage management, beginning with an overview of the food service industry at large. Attention is focused on major industry segments, business practices, and trends. Detailed consideration is given to the components of the food service system: marketing, menu planning, logistical support, production, service, controls, and quality assurance. Product and systems differentiation in various industry segments is emphasized.

H ADM 230 Introduction to Culinary Arts
Fall and spring. 2 credits. Limited to non-hotel students. Priority given to seniors and graduate students. S-U grades only. Attendance at first class is mandatory. Absolute drop deadline for fall is September 7; spring drop deadline is February 1. Elective. There will be a course fee of $60 which includes the cost of a uniform and uniform cleaning. S. Gould, T. O'Connor, R. White.

Studies of food groups, their respective methods of preparation, cooking, presentation, and holding. Designed for non-hotel students who are interested in learning the professional approach to food preparation and service with hands-on practice. Food product identification, preparation and service methods, and professional language of food and cooking.

H ADM 236 Culinary Theory and Practice
Fall and spring. 4 credits. Prerequisite: H ADM 136. Attendance at first class is mandatory. Required. T. O'Connor, R. Spies, R. White.

Designed to introduce the student to food and beverage operations through three major components: fundamental food composition and properties, food products and preparation, and food safety and sanitation. Students will prepare recipes, menus, and production schedules and will develop the ability to recognize properly prepared foods by preparing, tasting, and evaluating foods. They also will plan menus, develop recipes and produce them in a final project.

H ADM 332 Reviewing the Restaurant: The Consumer's View of the Dining Experience
Fall. 3 credits. Field trip $325. Limited to 20 students with written permission. Prerequisites: H ADM 165 and 335, or permission of the instructor. Elective. N. Dahl, G. Pezzotti.

Trains the student to perform a comprehensive analysis of the restaurant dining experience. The role of the restaurant critic/reviewer will be discussed in depth. The student will examine and enhance his or her critical writing skills, as the course will require each student to complete approximately ten restaurant reviews.

[H ADM 333 Current Issues in Food Safety and Sanitation
Fall. 2 credits. Three-credit registration limited to 12 students. Elective. Not offered fall 2001. Faculty.

A study of current issues in food safety and sanitation procedures and regulations that affect managerial decisions in food service and hospitality operations. Topics include risk assessment and hazard analysis; legal responsibilities related to food, food handlers, equipment and facilities; food-borne illness and other public-health concerns; and certification and training. Preparation for NIFI/NRA certification and the Food Protection (ETS) certification exam (optional) is offered.]

H ADM 334 Wine and Food Pairing Principles and Promotion
Spring. 2 credits. Limited to 20 hotel juniors, seniors and graduate students. No out of college registration is permitted. Prerequisite: H ADM 430 or permission of instructor. Elective. G. Pezzotti.

Focuses on the pairing and marketing of wine and food. Students develop an understanding of regional and varietal wine styles; how foods' flavors can change a wine's flavor, and the promotion of wine and food. Topics include wine and food pairing principles, cuisines and their flavor components, food trends in restaurants and in the home, special event planning, and wine list development. Students design and present wine and food tastings to industry guests.

H ADM 335 Restaurant Management
Fall and spring. 4 credits. Limited to 30 hotel school students per lab; others by permission of instructor. Prerequisites: H ADM 136 and 236. Approximate cost of utensils and manual, $85. Once enrolled, students may not drop the course without permission of instructor. Required. D. D'Aprix.

A restaurant-management course in which each student participates as a manager of a full-service restaurant operation. Topics include operational issues, customer satisfaction, restaurant trends and challenges defining a service philosophy, and management development. The laboratory is based on a hands-on managerial component, including the development of a business plan and post-analysis of the operation. Students become familiar with all aspects of a restaurant operation.

H ADM 338 Seminar in Culture and Cuisine
Fall. 3 credits. Limited to 20 students. Prerequisites: H ADM 165 and 236 (or 230), or permission of instructor. Elective. R. Spies.

Explores various cuisines in terms of history, lifestyle, and foods peculiar to a culture. Through readings, research, and meal preparation, students explore various cuisines in depth. The goal of the course is to develop an awareness of several international cuisines, enabling students to make comparisons among the foodways of different cultures. Students prepare research reports and oral presentations, and design menus and orchestrate their preparation.

H ADM 339 Wine in Culture and History
Fall and spring. 2 credits. Limited to 200 students. Fall regions: Germany, Italy, and Champagne. Spring regions: Bordeaux, Burgandy, and California. Elective. A. Nash.

This course provides students a cultural and historical perspective on wine and its place in society. Through lectures, videos, guided discussions, and readings students examine the history, people, culture, and production of wine in the world's great wine regions. Also covered are wine and health issues, wine and food pairing, and retail wine buying and storage strategies. Different regions are covered in the fall and spring so the course may be taken both terms. Neither term is a prerequisite for the other, nor are H ADM 430 Introduction to Wines and H ADM 339 prerequisites for the other. **Students may not add this class after week two**.

H ADM 430 Introduction to Wines
Fall and spring. 2 credits. Wine glass kit and course fee, $30.00. Limited to hotel school juniors, seniors, and graduate students, and seniors and graduate students in all other colleges. **Hotel students encouraged to enroll in the fall.** Students are exempt from the 21-year old age requirement under Section 65 of New York State Law. S-U grades only. Elective. S. Mutkoski, A. Nash.

An introduction to the major wine-producing regions of the world and what the consumer needs to know to purchase wines, spirits, and beers at retail outlets and in a restaurant setting. Topics include flavor components in wine, pairing wine and food, responsible drinking, selecting quality and value wines, and wine etiquette. Samples from a variety of countries, regions, and vineyards are evaluated.

(Preregistered students who do not attend the first class and fail to notify the course secretary in 274 Statler of their absence before the first class are automatically dropped from the course. The student must then follow the normal drop procedure in his or her school. **Because of the high demand for this course and because a product is consumed, the absolute drop deadline for all students is September 14 in the fall and February 1, 2001 in the spring.)**

H ADM 431 Seminar in Independent Restaurant Operations Management
Fall and spring. 3 credits. Five field trips, $325. Limited to 20 students, with written permission of instructor. Elective. G. Pezzotti.
Designed for students who have a strong interest in food and beverage operations and who may be considering a career as an entrepreneur. Students visit and analyze various independently owned restaurant operations. Analysis covers the restaurant's concept (market), organization, ownership, management, physical structure, staff, front- and back-of-the-house operations, and fiscal integrity. Readings relevant to current topics in the restaurant industry are required. Classes alternate weekly between field trips and seminar/case presentations.

H ADM 432 Contemporary Healthy Foods
Fall. 3 credits. Field trip, $50. Limited to 25 seniors and graduate students, or by permission of instructor. Prerequisite: H ADM 335 or equivalent. Elective. M. Tabacchi.
Builds a greater awareness and understanding among nutrition and food service professionals of the origins and manifestations of today's health-conscious and educated food service patron. Topics include the marriage of nutrition and the cuisine demanded by today's consumer, fresh produce, lean meats, and lack of fabricated diet foods. Menu design includes creativity and nutrient density of foods. Major emphasis is on preparation, marketing, merchandising, and selling of healthy menus in Statler's outlets.

H ADM 433 Contract Services Management
Fall. 3 credits. Field trips, $25–50. Limited to 25 juniors, seniors, and graduate students. Prerequisites: H ADM 136 and 236. Elective. D. Reynolds.
Operations in business and industry, healthcare, and education, as well as other on-site segments, represent more than one-fourth of total restaurant industry revenues. Addresses the major differences between on-site food service management and traditional restaurant management with particular focus on organizational structure, competitive challenges, revenue enhancement/cost containment, labor issues, systems design, and branding. Readings, discussions with industry leaders, cases, site visits, and an integrated research project.

H ADM 434 Desserts Merchandising
Spring. 3 credits. Limited to 25 students. Prerequisite: H ADM 230, 236, or permission of the instructor. Elective. R. White.
This course is designed especially for those who want to manage the dessert function of a restaurant or hotel. Lectures emphasize current trends in dessert menus as well as profitability considerations. Lab work concentrates on techniques necessary to produce a high-quality, profitable dessert menu.

H ADM 435 Selection, Procurement, and Supply Management
Fall. 2 credits. Students may enroll in Lecture 1 or Lecture 2, or both. Lec. 1: First seven weeks of the semester: Selection, Procurement and Supply Management I. Limited to 30 Hotel juniors, seniors, and graduate students, others by permission. **First seven weeks of the semester, drop deadline is September 6, 2001.** Lec. 2: Second seven weeks of the semester: Selection, Procurement and Supply Management II. Limited to 12 Hotel juniors, seniors, and graduate students, others by permission. **Second seven weeks of the semester, drop deadline is October 25, 2001.** Prerequisites: H ADM 136 and 236, or 731. Elective. G. Norkus.
Lec 01: Selection, Procurement and Supply Management I. This course deals with contemporary management issues related to the procurement activities of the hospitality industry. The course focuses on both the food distribution industry and the hospitality industry so that students understand the role that the distributor plays in the movement of food and supplies from the producer to the hospitality operator, and how the creation of distributor partnerships serves to improve efficiencies and reduce costs. Topics covered include: distribution channels and intermediaries in the supply chain; food distributor financial statement analysis; evaluation and selection of suppliers; buying strategies, purchase timing and inventory management; and the emerging role of the Internet and e-procurement service providers.

Lec 02: Selection, Procurement and Supply Management II. This course deals with the major "center of the plate" commodities used by the foodservice industry: beef, veal, lamb, pork, poultry, game, and seafood. The course focuses on the selection decisions that students will be faced with when managing the procurement of these products in a foodservice operation. Topics covered include: composition and structure; government inspection and grading activities; product identification; factors affecting palatability and safety; yield tests; cost analysis of fabrication; and sensory evaluation.

H ADM 436 Beverage Management
Fall and spring. 2 credits. Limited to 25 hotel school juniors, seniors, and graduate students. No out of college registration is permitted. Prerequisite: H ADM 430 (co-registration is not allowed). Elective. S. Mutkoski, A. Nash.
Designed for students who intend to pursue food and beverage as a career. Deals specifically with the management of beverage operations. Lectures develop skills in and awareness of dram shop liability; staff training and responsible customer service; beverage pricing; food and wine pairings; wine list development; purchasing, storage, and service; wine regions; cost controls and loss prevention; and creative beverage merchandising. Guest lecturers.

H ADM 437 Specialty Food and Beverage Operations: Guest Chefs
Spring. 3 credits. Limited to 20 juniors, seniors, and graduate students. Prerequisite: H ADM 335 or 731. Elective. G. Pezzotti, H. Winslow.
Designed for students with a strong food and beverage orientation, especially students considering careers in the hotel food and beverage environment, or those who anticipate interacting with current culinary trends. Working in groups, students market, organize, plan, produce, serve, and prepare the financial analysis and accounting relative to four guest chef specialty production nights for the Cornell community, utilizing the Statler Hotel facility. Final project.

H ADM 438 Catering Management
Spring. 2 credits. Field trip, $180. Limited to 25 students. Prerequisite: H ADM 236 or permission of instructor. Elective. R. Spies.
Examines on- and off-premise catering for business and social functions, as well as sports events and office catering. Topics include the organizational structure of catering operations; legal aspects of catering businesses; menu design for special functions and its operational implications; marketing from a caterer's perspective; function planning and management; staff recruitment, training, and supervision; and post-event analysis. Site visits and analyses of actual catering operations.

H ADM 530 Anheuser Busch Seminar in Quality Brewing and Fine Beer
Fall. 1 credit. First 7 weeks of the semester. Prerequisite: H ADM 430. Elective. Local field trip, no cost. The deadline to drop is the mid-point of the course. G. Pezzotti.
Designed for upper-level students who intend to pursue food and beverage careers. Serves to advance one's knowledge about beers in terms of managing such products in a restaurant setting or other food service outlet. Topics include the brewing process, sensory aspects of beer, international beer types and styles, marketing malt products, purchasing and distribution, storage and service, beer and food pairings, staff training and education, cost controls, and third party liability issues.

H ADM 631 Case Studies in Multi-unit Restaurant Management
Spring. 3 credits. Limited to 20 graduate students, seniors by permission. Elective. Faculty.
Case studies of multi-unit restaurant organizations will focus on topics such as: new venture planning, rapid growth and organizational change, market identification, service delivery and design, consumer demand, corporate culture, production planning and operations management, strategic planning and implementation, tactics and market responses, international expansion, breakpoints and breakthrough thinking. Each class period will be spent in student-organized discourse and exchange based upon their assigned written case analysis. Grading will be on individual case presentations, class participation and written case assignments.

H ADM 632 Spa and Spa Hotel and Resort Development and Management
Fall. 3 credits. Limited to 30 seniors and graduate students. Two field trips, $75–100. Prerequisite: previous courses in food and beverage management and marketing. Elective. M. Tabacchi.
This course emphasizes the development management and marketing aspects of spas, health clubs, and spa resorts. Topics include feasibility of success and marketing research necessary to establish new spas, design of menus, mental and physical fitness programs,

stress management, spa medical treatments, complementary medical treatments, and other spa programs. Other topics include required personnel, safety, legal and ethical issues, and integration of nutritious menu items and their marketing and merchandising. Guest speakers.

H ADM 639 Airline In-flight Management and Food Services
Spring. 3 credits. Limited to 30 seniors and graduate students, others by permission. Field trip, $75–100. Prerequisites/ Corequisites: H ADM 136, 236, or permission of the instructor. Elective. M. Tabacchi.
Focuses on the challenge of preparing and distributing 20,000–30,000 meals per day to 20–30 different airline carriers and rethermalizing, serving, and clearing those meals at 30,000 feet in confined space and short periods of time. Examines strategies, planning, and forecasting by airline, airline catering, and sales executives, as well as the effect of the economy and the airline's competition upon the type of meals served.

H ADM 731 Graduate Food and Beverage Management
Spring. 3 credits. Professional master's requirement. Limited to MMH students except by written permission of the instructor in advance of pre-enrollment. A. Susskind.
Focuses on the technical, managerial, and human resource skills needed to be successful in food service management. Topics include market analysis, concept development, menu planning, operations management, marketing, and current and future issues affecting the food service industry.

MARKETING AND TOURISM

H ADM 243 Marketing Management for the Hospitality Industry
Fall and spring. 3 credits. Limited to 80 hotel students per lecture, not open to freshmen. Required. M. Lynn, J. Siguaw.
Helps students acquire the knowledge and skills necessary to get and keep profitable customers in today's competitive business environment. Topics are product quality, branding, pricing, personal selling, advertising, sales promotions, market segmentation, target marketing, product positioning, and marketing research. Class exercises, assignments, and essay exams.

H ADM 343 Marketing Research
Fall and spring. 3 credits. Limited to 32 students. Prerequisites: Introductory principles of marketing or marketing management and an introductory course in quantitative methods for management. Elective. Not offered fall 2001. Faculty.
Introduces students to the basic techniques and practices used to collect, analyze, and disseminate data for decision making in hospitality marketing. The goal is to help future managers develop a level of research competency that will enable them to interact intelligently with marketing research providers when requesting information, assessing proposed research projects, as well as evaluating and using information from completed research.

H ADM 344 Tourism I
Fall and spring. 3 credits. Not open to freshmen. Elective. M. Noden.
An introductory course in the study of tourism. The origins and evolution of contemporary tourism are examined. Students are familiarized with the various supply components of the tourism industrial base and their integration on an international scale. The effects of mass-volume tourist demand on destination development are explored through the use of selected limited case studies. Guest lectures highlight the economic operations and effects of tourism in both the public and private sectors.

H ADM 345 Hospitality Sales
Fall and spring. 3 credits. Limited to 24 students. Prerequsite: H ADM 243, 741, or equivalent. Elective. J. Siguaw.
An in-depth study of the promotional tool of personal selling, with an emphasis on identifying and meeting the needs of the customer. Course material encourages the use of intuition, judgment, logic, problem-solving methodology, and other tools as part of an overall sales mix. Class sessions involve lectures, role playing, videos, presentations, and guest lectures.

H ADM 347 Consumer Behavior
Spring. 3 credits. Limited to 45 juniors and seniors. Prerequisite: an introductory principles of marketing or marketing management course. Elective. M. Lynn.
Helps students become better at understanding, predicting, and influencing consumer behavior. Topics are motivation, perception, learning, decision making, persuasion, compliance, geo-demographics, and psychographics. Applications of the material to hospitality marketing issues such as guest frequency programs, menu design, advertising, personal selling, and promotion strategy will be stressed through class exercises, a term paper, and essay exams.

H ADM 442 Strategic Marketing
Fall. 3 credits. Limited to seniors. Prerequisite: a previous marketing course. Elective. C. Dev.
Offers theoretical and practical approaches addressing strategic marketing challenges in hospitality and service firms. Strategic marketing concepts and principles will be learned through lectures, discussion, case studies, and development of a strategic marketing report.

H ADM 444 Tourism II
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: H ADM 243, 244, or equivalents, or written permission of instructor. Elective. M. Noden.
An advanced course in the study of tourism. Emphasis is placed on the development of the tourism industrial base and development and financing of superstructure and infrastructure. Students are expected to engage in a wide range of discussions and analysis of the effects of tourism on various environments in social and economic terms. Case studies, occasional guest lectures.

H ADM 445 Services Marketing
Fall. 3 credits. Limited to 40 students. Prerequisite: a previous marketing course or permission of instructor. Elective. L. Renaghan.
Students preparing for management positions will develop an understanding of services marketing principles applicable to the hospitality industry. Topics include marketing strategies of service firms, new marketing approaches, and the reformulation of traditional marketing principles from consumers and industrial goods marketing. Case studies, guest speakers.

H ADM 446 Marketing Planning for Hotels
Spring. 3 credits. Prerequisites: H ADM 243, 741, or equivalent. Elective. L. Renaghan.
Students learn about the key variables in property-level management and their proper application in developing a marketing plan, e.g., marketing intelligence, demand analysis, supply and competitor analysis, segment analysis, resource allocation, sales strategies, and measurement of results. Test material, cases, relevant articles, lectures, and key speakers. Upon completion of the course, the student should be able to design, develop, and implement a comprehensive, targeted, and action-oriented marketing plan for a lodging property.

H ADM 447 Channels of Distribution in Tourism
Spring. 3 credits. Prerequisite: H ADM 243. Elective. M. Noden.
Examines the major elements of the structure, arrangement, management, and control of the channels of distribution in the tourism industries. Topics include emerging trends in electronic distribution, organizational structures of distributive consortia, and their effectiveness in service distribution. Significant readings, guest lectures.

H ADM 448 Marketing Communications
Spring. 3 credits. Prerequisite: a previous marketing course. Elective. C. Dev.
Provides students with a managerial understanding of the effective use of a variety of marketing communication media, including advertising, sales promotion, public relations, etc. Hospitality industry emphasized.

[H ADM 641 Marketing Decision Models for Service Firms
Fall. 3 credits. Limited to 20 seniors and graduate students. Prerequisite: a principles of marketing or marketing management course and an introductory course in quantitative methods for management. Elective. Not offered fall 2001. Faculty.
Introduces students to advanced data analysis and modelling methods used for decision making in hospitality marketing.]

H ADM 642 Strategic Marketing
Fall. 3 credits. Limited to graduate students. Prerequisite: a previous marketing course and permission of instructor. Elective. C. Dev.
Offers theoretical and practical approaches to addressing strategic marketing challenges in hospitality and service firms. Strategic marketing concepts and principles will be learned through lectures, discussion, and development of a strategic marketing report.

H ADM 643 Marketing Research
Fall and spring. 3 credits. Limited to 20 graduate students. Prerequisites: introductory principles of marketing or marketing management and an introductory course in quantitative methods for management. Elective. Not offered fall 2001. Faculty.
This course provides an understanding of several analytical tools that can facilitate marketing decision making. Students will learn techniques for segmenting markets, identifying brand positioning, and developing and

revising product concepts. They will also learn how to develop reliable and valid instruments for measuring consumer reactions. The overall goal is to help future managers develop skills that will enable them to interact intelligently with information providers and to be better decision-makers.

H ADM 644 Food and Beverage Marketing Strategy
Spring. 3 credits. Limited to graduate students, seniors by permission. Prerequisite: prior 3-credit marketing course. Elective. Faculty.
Focuses on how to apply marketing, sales, and merchandising techniques to the commercial food and beverage industry. Addresses developing a market segmentation based on understanding the needs and wants of potential target markets, translating needs and wants into a viable food service concept positioning strategy, and marketing strategies used to maintain and increase sales and market share. Recitation and analysis involves substantial use of the Consumer Report on Eating Share Trends (CREST) database.

H ADM 645 Services Marketing
Spring. 3 credits. Limited to graduate students. Prerequisite: previous marketing course, or permission of instructor. Elective. L. Renaghan.
Helps students preparing for ownership or management positions develop an understanding of services marketing principles applicable across the entire service sector. Marketing strategies of service firms from various service industries will be evaluated. New marketing approaches uniquely applicable to services are considered as well as the reformulation of traditional marketing principles from consumers and industrial goods marketing. Case studies, guest speakers.

[H ADM 646 Marketing Planning for Hotels
Fall. 3 credits. Limited to graduate students. Prerequisite: H ADM 243, 741, or equivalent. Elective. Not offered fall 2001. Faculty.
For description, see 446. This course includes the H ADM 446 lectures plus a theoretical paper.]

[H ADM 647 Consumer Behavior
Fall and spring. 3 credits. Limited to 25 graduate students. Prerequisite: introductory marketing principles or marketing management course. Elective. Not offered 2001–2002. M. Lynn.
For description, see H ADM 347.]

H ADM 741 Marketing Management
Spring. 3 credits. Professional master's requirement. Limited to MMH students except by written permission of the instructor in advance of pre-enrollment. C. Dev.
Deals with the management of the marketing function in hospitality enterprises. Primary objectives are to introduce students to the basic concepts and principles underlying marketing decision making and to provide the skills needed to analyze and understand complex marketing situations in order to plan and implement marketing programs.

PROPERTY ASSET MANAGEMENT

H ADM 255 Hotel Development and Planning
Spring. 3 credits. Limited to 20 sophomores, juniors, and seniors per section. Required. R. Penner, S. Robson.
An introduction and management overview of the problems and opportunities inherent in the development and planning of hospitality facilities. Topics include the project development sequence; conceptual and space planning; architectural design criteria, construction management; and the interpretation of architectural design and consultant drawings. Emphasis is on setting appropriate facilities requirements, understanding industry practice, and implementing properties decisions within a balanced design, operations, and financial framework.

[H ADM 350 Real Estate Management
Fall. 2 credits. First 7 weeks of the semester. Elective. Not offered fall 2001. J. deRoos.
Introductory course designed for students interested in learning the principles of property management for residential and commercial real estate. Lectures will provide an overview of the different aspects of property management such as leases and management contracts (including landlord/tenant issues), accounting and finance, staffing, and building operations. Case studies.]

H ADM 351 Hospitality Facilities Design
Fall. 4 credits. Prerequisite: H ADM 255 or 751 or permission of instructor. Elective. R. Penner, S. Robson.
A lecture-studio course dealing with property development, planning, and design by focusing on the interpretation and analysis of hotel plans. Students learn basic graphic techniques and apply them to planning problems for hospitality facilities. Final project.

H ADM 352 Hotel Planning and Interior Design
Spring. 3 credits. Field trip, $250; drawing supplies, $100. Limited to 18 students. Prerequisite: H ADM 351 or permission of instructor. Elective. R. Penner.
A project course in which student teams develop operational criteria and a complete interior design presentation for a new hotel or major renovation. The early semester includes a number of short design exercises. A field trip to a northeastern city introduces students to the particular hotel and its requirements. During the rest of the term, the teams will replan the hotel public areas and guestrooms, develop conceptual designs, establish preliminary budgets, and assemble presentation boards to describe the design.

H ADM 353 Food Service Facilities Design
Fall and spring. 3 credits. Limited to 24 students. Prerequisites: H ADM 335 and 351 (co-registration is allowed) or food service experience or permission of instructor. Elective. S. Robson.
An introduction to the basic concepts of food service facilities design and planning. Students will determine space allocations for kitchens and their support areas; develop basic production work flow in the preparation and service areas; and select equipment utilizing standards for production capability, quality of construction, and ease of maintenance. Students will use studio time for planning, designing, and writing specifications for a medium-size restaurant kitchen.

H ADM 354 Computer-Aided Design
Fall and spring. 2 credits. Limited to 18 students per lecture. Prerequisite: H ADM 351 or equivalent studio experience. Attendance at first class is mandatory. Elective. S. Curtis.
The operation of microcomputer-based computer-aided design (CAD) systems. Using AutoCAD on the IBM PC, the course presents an organized and logical sequence of commands, mode settings, drawing aids, and other characteristics of CAD. Students will learn the program in the school's computer center and will develop a complete graphic presentation. Emphasis is on the use and operation of CAD systems in a commercial document production environment.

H ADM 355 Hospitality Facilities Operations
Fall. 3 credits. Limited to 20 students per section. Prerequisite: H ADM 255. Required. M. Redlin.
An overview of the operation of hospitality facilities, including operating costs for various types of facilities, types and characteristics of major building systems, and the responsibilities of the engineering-maintenance departments. The renovation needs of hospitality facilities are examined and key managerial aspects of renovations considered.

H ADM 356 Hospitality Risk Management
Spring. 3 credits. Limited to sophomores, juniors, seniors, and graduate students. Elective. D. Stipanuk.
A comprehensive look at risk management within the hospitality industry. Addresses issues of loss control for hospitality firms. Using a risk management conceptual framework, issues in fire protection, customer and workplace safety, OSHA, and customer and corporate security are analyzed.

H ADM 357 Insurance and Risk Management
Fall and spring. 3 credits. Prerequisite: an introductory accounting or business course. Elective. G. Shankar.
A comprehensive look at risk management within a general business or institutional environment. Reviews insurance and non-insurance solutions to controlling loss, the general legal environment within which risk management processes work, and the integration of crisis management into the overall corporate risk management plan.

H ADM 450 Principles of Real Estate
Fall. 3 credits. Limited to juniors and seniors. Elective. Faculty.
Approaches real estate from four perspectives: legal, economic, financial, and business. Understanding these perspectives will enable students to make better investment and financing decisions, to use real estate resources wisely, to understand public-policy issues, and to be prepared for additional courses in real estate investment, finance, and development.

H ADM 452 Sustainable Development and the Global Hospitality Industry
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Elective. D. Stipanuk.
A multidimensional course integrating the global sustainability and environmental movements, their impact on the hospitality

industry, and responses to and opportunities associated with the sustainability movement. The course draws upon work in a number of disciplines for the ideas and concepts discussed. Readings will be drawn from the environmental, sustainability, and hospitality literature. Students should be prepared to encounter conflicting views in the readings and in classroom discussions. The course attempts to portray a variety of viewpoints regarding issues of contemporary interest to society and the business community. Discussion of these issues is a key component of the course.

[H ADM 454 Advanced Computer Aided Design

Spring. 3 credits. Limited to 18 students. Prerequisite: H ADM 354 or equivalent introductory AutoCAD course. Elective. Not offered spring 2002. S. Curtis.

Computer aided design has grown beyond its traditional use as a tool to draw contract documents. This course will give students an understanding of the more advanced capabilities of AutoCAD, including raster image support, OLE, 3-D surface and solid modeling, and photorealistic rendering. The availability and capabilities of "third party" plug-ins to AutoCAD will also be explored. There will be weekly projects as well as a final project.]

H ADM 456 Hospitality Facilities Management

Spring. 3 credits. Prerequisite: H ADM 355, 751, or permission of the instructor. Elective. D. Stipanuk.

A managerial approach to hospitality facilities addressing issues of owning and operating, cost management, facilities services and delivery systems management, governmental regulatory compliance, and emerging issues. Emphasis on environmental issues such as indoor air quality, waste management, and energy conservation. Extensive use of the web.

H ADM 457 Advanced Development and Construction

Fall. 3 credits. Overnight field trip, $175. Limited to juniors with permission, seniors and graduate students. Elective. D. Stipanuk.

Focuses on the management structure and systems, laws, regulations, and industry practices that most influence the successful development of commercial and residential real estate, including lodging and eating facilities. Topics include scheduling, budgeting, managing other professionals, and analysis of alternative materials and methods. Guest speakers, case studies, and group project.

H ADM 458 Hospitality Real Estate

Spring. 3 credits. Limited to 40 seniors or graduate students. Prerequisites: H ADM 323, 450, or permission of instructor. Elective. Faculty.

Expands the student's understanding of the role of real estate in individual hospitality businesses and corporations. Designed for those who plan careers in the hospitality industry. Specific objectives are to develop an appreciation of real estate as a factor in the production of income for hospitality businesses; to develop an appreciation of real estate as an asset that can be managed, sold, and otherwise used to increase the wealth of hospitality corporation shareholders; and to understand the importance of valuing real estate, and the approaches to valuation and contemporary hospitality valuation issues.

H ADM 459 International Hospitality Development

Spring. 3 credits. Limited to 30 seniors and graduate students. Elective. J. Clark.

A seminar course covering the strategic development of international hospitality projects. Topics will include corporate expansion strategies; the international development process; viewpoints of public and private stakeholders; and such development challenges as technology, infrastructure, environmental concerns, and public policy issues. Senior corporate guest lecturers will present and discuss new projects in such locations as Hawaii, Mexico, western and eastern Europe, Southeast Asia, and Latin America and contrast these opportunities with development in the United States.

[H ADM 550 Principles of Timeshare Development and Operations

Fall. 2 credits. Second 7 weeks of the semester. Elective. The deadline to drop is the mid-point of the course. Not offered fall 2001. J. deRoos.

Provides an intense introduction to the rapidly growing timeshare and vacation ownership industry. Students will learn who the four major business disciplines of financial management, real estate development, marketing and sales, and resort operations are specifically applied to the industry. Guest speakers, course project, and case studies.]

H ADM 651 Principles of Real Estate

Fall. 3 credits. Limited to graduate students. Elective. Faculty.

This survey course approaches real estate from four perspectives: investment, market, mortgage finance, and legal. Understanding these perspectives will enable students to make better investment and financing decisions, to use real estate resources wisely, to understand public policy issues, and to be prepared for additional courses in real estate investment, finance, and development. This course includes much of the material in H ADM 450 plus special topic sessions that feature guest speakers from the industry, faculty from other colleges, and case studies.

H ADM 658 Advanced Real Estate

Spring. 3 credits. Limited to 40 graduate students. Prerequisites: H ADM 323, 450, 621 or 651. Elective. D. Quan.

Promotes sound real estate investment and finance decision making through the use of advanced theory and techniques in financial economics. Real estate investment decisions are made through applications of the after-tax discounted cash flow model which incorporates prevailing domestic and international economic conditions in real estate markets, tax rules, and government regulations. Financing decisions are made using the techniques of modern financial analysis. A wide array of financing options is considered including convertible, participating, and accrual mortgages. All types of residential and nonresidential real estate are analyzed, including hospitality properties.

H ADM 751 Properties Development and Planning

Spring. 3 credits. Professional master's requirement. Limited to MMH students except by written permission of the instructor in advance of pre-enrollment. J. deRoos, M. Redlin.

Provides an overview of project development, hotel planning, and the construction process, including the role of the development team, feasibility, functional planning and design, interpretation of architectural drawings, architectural and engineering criteria, construction management, contracts, and scheduling. Student teams will prepare the program documentation for a new hotel or one undergoing major rehabilitation in conjunction with other professional master's core courses.

COMMUNICATION COURSES

H ADM 165 Managerial Communication I

Fall and spring. 3 credits. Each lecture limited to 16 students. Note: Students required to take this course generally may not delay it. If extenuating circumstances exist, student must petition to drop the course by the end of the first week of classes. This course must be taken within the first two semesters, including any ITD semesters. Add/drop and section changes must be approved by the chairperson. Required. D. Jameson, S. Jones, Y. Kim, C. Snow, R. Steinacher.

An introduction to the role and importance of effective communication in managerial work, especially in the hospitality industry. Development of abilities in analytical thinking and clear written expression. The process of planning, preparing, and executing professional communications with an emphasis on written documents. Students write a series of business documents and give oral presentations.

H ADM 266 Intermediate French: Le Francais de l'Hotellerie et du Tourisme

Spring. 3 credits. Limited to 15 students. Prerequisite: French 123 or permission of instructor. Elective. A. Grandjean-Levy.

Offers continuing study of the French language with specific emphasis on the hospitality industry. Material presented considers cultural, geographic, economic, historical, political, and social contexts within which the business functions. The course is conducted in French, emphasizing a conversational approach. Specialized situations and vocabulary are used in building general competence in practical usage. Students with special interest in the hospitality industry will be given priority for admission.

H ADM 364 Advanced Business Writing

Fall and spring. 3 credits. Limited to juniors, seniors, or graduate students, or written permission of instructor. Prerequisite for undergraduates: H ADM 165 (for hotel school students) or completion of student's freshman writing requirement. Elective. S. Bryson, Y. Kim, R. Steinacher.

Focuses on communicating challenging messages in business contexts. Writing assignments will emphasize delivering persuasive messages, working with tone and style, and developing different types of documents in professional contexts. Assignments include business letters and memos written for various contexts, procedures and policy statements, promotional materials, negative messages, and analytical reports requiring research.

H ADM 365 Managerial Communication II
Fall and spring. 3 credits. Limited to 22 juniors and seniors per lecture. Note: Students required to take this course generally may not drop it; however, students may be allowed to drop before the first class meets if the area has a wait list and the vacancy can be filled. Students may drop between the first and second class if they (1) check first with the course chair, and (2) can find a replacement for their place in the course. Students may not drop after the second class unless they petition and present a case of extenuating circumstances. It is expected these cases would be rare. Prerequisites: Hotel undergraduates must have completed H ADM 165 and H ADM 115. Required. N. Dahl, Y. Kim, E. Roberts, C. Snow.
A broad study of communication in a management context. Emphasizes the significant role of communication in developing work relationships that enable managers to achieve their goals. It presents the theories and principles of communication that underlie effective performance. Students increase their individual communication abilities by applying these concepts in a variety of managerial contexts, including interacting one-to-one, working in groups, and formally developing and presenting ideas to larger audiences.

H ADM 462 Communication and the Multicultural Organization
Fall and spring. 3 credits. Priority given to hotel students. Elective. S. Bryson.
Influence of culture, perception, and gender on communication in multicultural organizations, including international and domestic businesses with diverse work forces. Focus is on human interaction at work. Special emphasis on the hospitality industry. Topics include values and beliefs, how race and gender affect language use, cultural differences in nonverbal communication, ethnocentrism and stereotyping, intercultural sensitivity and adjustment, cultural variables, persuasion, and ethics of communication in international business. Concepts are applied to practical management situations.

H ADM 463 Persuasive Communication in Organizations
Spring. 3 credits. Limited to 18 students. Prerequisites: H ADM 165 and 365 for hotel undergraduates, or permission of instructor. Elective. Faculty.
Prepares students to communicate effectively in a variety of persuasive speaking contexts. Principles of persuasion will be thoroughly examined as they apply to managerial communication tasks. Emphasis on persuasive speaking; also relationship between written and oral communication. Studies the principles of persuasion, analyzes case studies in the hospitality industry, and applies persuasive strategies in simulated workplace settings.

H ADM 661 Organizational Communication for Managers
Spring. 3 credits. Elective. Faculty.
Provides an in-depth understanding of the theory and practice of organizational communication. Structured around the communication tasks managers must accomplish in order to be effective on the job: communicating to diverse audiences, resolving conflicts, making presentations, and influencing colleagues. Students read and discuss a series of articles to increase knowledge of organizational communication issues and expand their understanding of the political, sociological, and ethical dimensions of problems in organizational communication.

H ADM 761 MMH Managerial Communication
Fall and spring. Variable credits. Limited to MMH students. Elective. N. Dahl, D. Jameson, C. Snow.
Instruction in communication and leadership skills helps MMH students reach their individual professional development goals, enrich their education, perform well on course assignments, and meet the program benchmarks in managerial writing, presentational speaking, and group process and leadership.

OPERATIONS MANAGEMENT, INFORMATION TECHNOLOGY COURSES

H ADM 174 Microcomputing
Fall and spring. 3 credits. Limited to hotel school freshmen and transfers. Limited to 30 students per section. Required. R. Alvarez, P. Clark, M. McCarthy, R. Moore.
This course is designed to aid students in building functional computer literacy. Students will develop their skills in five generic areas: text, graphics, spreadsheet, presentation, and listing processing. This portion of the class is taught in the Binenkorb computer lab, where students work with Microsoft Office and the Internet. In addition, students learn introductory statistical concepts, including descriptive statistics, correlation, and regression analysis. Course material is presented through a combination of lectures and labs.

H ADM 274 Microcomputing
Spring. 3 credits. Limited to 30 non-hotel students per lecture. R. Moore.
An introduction to microcomputing to develop functional computer fluency. Students will develop their skills in five generic areas: text, graphics, spreadsheet, presentation, and file processing. The course is entirely lab-oriented and students work in Windows. Software used is Word, Excel, Powerpoint, and Filemaker.

H ADM 371 Hospitality Quantitative Analysis
Fall and spring. 3 credits. Required. S. Choi, M. Freimer.
Introduces statistical and operations research methods appropriate for the hospitality industry. The overriding goal is to provide students with the skills and understanding necessary for decision making using quantitative data. Students will use computer spreadsheet software extensively. A key element is an ability to communicate the results of the analyses in a clear manner. Topics include probability, decision analysis, modeling, forecasting, quality management, process design, waiting lines, project management, and revenue management.

H ADM 375 Hotel Computing Applications
Spring. 3 credits. Prerequisite: H ADM 174 or equivalent. Elective. R. Moore.
This course exposes students to Internet technology based systems used in the hospitality industry to enhance guest service and support management decision making. Specific topics include global distribution systems, yield management systems, property-management systems, communication networks (LANS and WANS), food service management systems including point-of-sale systems and sales and catering systems, system selection, and cost justification. Laboratories provide students with hands on experience on systems widely used in the hospitality industry that are web based.

H ADM 474 Corporate Information Systems Management
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Elective. R. Alvarez.
Explores 10 key issues in information technology management through use of case studies of companies who have relevant experience with the issues. A basic understanding of information technology, organizational behavior, and general management is advised.

H ADM 475 Information Technology for Hospitality Managers
Fall and spring. 3 credits. Prerequisite: H ADM 174. Required. R. Alvarez, M. McCarthy, R. Moore, M. Talbert.
Composed of two blocks: (1) Lecture—the goal of this block is to provide the students with a broad-base knowledge of Information Technology (IT) management issues. (2) Lab—the goal of this block is to provide the students with advanced Excel model-building skills and concepts.

H ADM 476 Visual Basic for Applications: End-User Programming
Fall and spring. 3 credits. Limited to 25 students. Elective. M. Talbert.
Introductory programming course for end-users (e.g., business managers, consultants, etc.). Students will develop fluency in the popular Visual Basic for Applications (VBA) language. Using VBA, students will learn how to customize and extend the Microsoft Office Suite, with an emphasis on Excel. They also will develop custom information systems using Microsoft Office applications as programmable building blocks. Secondary objectives will be to cover fundamental design and programming principles. Entirely lab-based.

[H ADM 574 Strategies for Internet Business
Fall. 3 credits. Limited to 30 hotel seniors and graduate students. Prerequisite: H Adm 174. Elective. Not offered 2001. G. Piccoli.
Information technologies, and particularly Internet technologies, are revolutionizing business organizations, commerce, and society. This course will explore how such technologies can be leveraged to create shareholder value and can be used to service customers. The fundamental technologies, the economic premises of the new competitive landscape, business strategy in this environment, and the risks these strategies engender will be analyzed. The course will have a managerial orientation but a basic understanding of information technology and a minimum level of proficiency are required. Cases and examples drawn from the hospitality industry will be used, but the topic is more general and a number of applications to other industries will be contemplated as well.]

H ADM 575 Internet Technologies
Fall and spring. 3 credits. Elective. M. Talbert.
This course will introduce students to many of the technical underpinnings of the Internet, such as web browsers, FTP, HTML/DHTML, XML, JavaScript, Java, CGI and multimedia file formats. The primary objectives of the course are to develop an understanding of existing and emerging Internet technologies relevant to business, and to gain proficiency with the implementation of these technologies. Students will select a suitable Internet business model to develop into a business-related web site. The course is entirely lab-based.

H ADM 674 Service Operations Management
Fall and spring. 3 credits. Limited to 25 graduate students. Prerequisite: H ADM 775 or equivalent. Elective. Not offered fall 2001. G. Thompson.
The objective of this course is to improve the understanding of the operations function of service organizations. Focuses on the role and nature of service operations, the relationship of operations to other business functions, and develops skills and provides techniques for the effective management of service operations. Topics include service design, bottleneck and layout analysis, capacity management, work force management, and quality management. Intended for graduate students interested in services management.

H ADM 675 Yield Management
Fall and spring. 3 credits. Limited to 40 students. Prerequisites: H ADM 371, 771, or equivalent. Elective. S. Choi.
Students learn how to effectively apply the principles of yield management. Focuses on the integration of yield management techniques with information technology, internal management issues, and external marketing concerns. Topics include yield management techniques, forecasting, overbooking, group decisions, and management and marketing issues.

H ADM 676 Restaurant Revenue Management
Spring. 2 credits. First 7 weeks. Limited to 30 graduate students, or undergrads with H ADM 335 and 371 by permission of the instructor. Prerequisites: H ADM 731 and 771. Elective. S. Kimes.
Revenue management is a method for profitably managing capacity. The objective of this course is to help students learn how to apply the principles of revenue management to restaurants. The course focuses on methods of managing duration and price with the intent of maximizing revenue per available seat-hour. Topics to be covered include forecasting, overbooking, reservations systems, information technology, process design, pricing, and management and marketing issues.

H ADM 771 Graduate Quantitative Methods
Fall. 3 credits. Professional master's requirement. Limited to MMH students except by written permission of the instructor in advance of pre-enrollment. M. Freimer.
Covers statistical and operations research techniques which can be applied to the hospitality industry. Topics include descriptive statistics, probability, sampling, correlation and regression, forecasting and yield management. The emphasis is on hands-on application to hospitality problems.

H ADM 772 Information Technology for Hospitality Managers
Fall. 3 credits. Professional master's requirement. Limited to MMH students except by written permission of the instructor in advance of pre-enrollment. G. Piccolli.
Familiarizes students with issues surrounding the implementation of information technology in supporting hospitality operations from a guest services perspective and decision making from the viewpoint of management.

LAW COURSES

H ADM 385 Business Law I
Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students outside the hotel school, and hotel students by permission of the instructor. Recommended for hotel students, H ADM 387 preferred. Elective. P. Wagner.
Provides students with a presentation of three substantive areas of business law: contracts, intellectual property, and business organizations. Students will read judicial opinions, learn to identify issues, and analyze the issues by applying legal principles.

H ADM 387 Business and Hospitality Law
Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students. Required. D. Sherwyn.
An integrated presentation of employment discrimination, tort and contract concepts as they apply to the legal aspects of hospitality management. Relevant federal and state cases and statutes are examined. The overall objective is to recognize, analyze, and evaluate legal issues for the purpose of making and articulating appropriate decisions.

H ADM 485 Employment Discrimination Law and Union Management Relations
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: H ADM 387 or permission of instructor. Elective. D. Sherwyn.
Anti-discrimination statutes and union management relations are two of the most pervasive legal issues affecting the hospitality industry. Managers must take these issues into account whenever they make a personnel decision. This course will provide students with: (1) an understanding of the discrimination law; (2) a framework for complying with law; (3) a method for using the law to maintain positive employment relations; and (4) an understanding of how to negotiate and administer a union contract.

H ADM 487 Real Estate Law
Fall and spring. 3 credits. Limited to non-hotel students, and hotel juniors, seniors, and graduate students. Recommended: completion of H ADM 387 preferred. Elective. A. Klausner.
Provides students with an understanding of the legal issues surrounding the ownership, transfer, and use and development of real estate. Students will learn to recognize and evaluate legal issues in order to inform the decision-making process with respect to real estate, whether as a business executive, an entrepreneur, or in personal life.

H ADM 589 The Law of the Internet and E-Commerce
Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students. Elective. A. Klausner.
The Internet has changed how business is done in the hospitality industry. The change has created numerous legal issues that courts and legislatures are grappling with. The purpose of this course is to allow students to identify and understand the rapid developments of the law of e-commerce. Specifically, this course focuses on six topics: how the Internet works; consumer protection; privacy; intellectual property (patent, trademark and copyright); personal jurisdiction in cyberspace; and online contracts and legal disclaimers. This course will introduce students to this emerging area of the law and enable them to identify issues so that they can intelligently seek counsel and understand the law as it continues evolve.

OTHER COURSES

H ADM 191 Microeconomics for the Service Industry
Fall and spring. 3 credits. Limited to 60 hotel students per lecture, others by permission of instructor. Required. J. Wissink.
Introduces the basic principles of microeconomics and teaches students how they apply to managers of enterprises associated with the hospitality industry. Emphasis on methods of market segmentation in the service industries, analyzing economic incentives involved in franchise arrangements, and the nature of competition in various segments of the hospitality industry.

H ADM 490 Housing and Feeding the Homeless
Spring. Variable to 4 credits. Limited to juniors and seniors. Elective. T. O'Connor.
Explores the public and private sector partnership in addressing the issue of hunger and homelessness. Through lectures, class discussions, research, community service work, and a field placement practicum, students will explore the economic, social, and political issues of our country's concern with housing and feeding disenfranchised and homeless people. Students will study the history of homelessness and the strategies to prevent and alleviate the problem. Explores public and private sector approaches to addressing the issue of hunger and homelessness. Through lectures, class discussions, research, community service work, and a field placement practicum, students will explore the economic, social, and political issues of our country's concern with housing and feeding disenfranchised and homeless people. Students will study the history of homelessness and the strategies to prevent or alleviate the problem through public policy, housing programs, food assistance programs, and job training initiatives. This is a service learning course centered around community work experience. There are three options for involvement in this course. Students must choose one of the following options: (1) Four-credit option whereby students work in pairs or small groups with a local area agency that provides services for homeless or disadvantaged people. They will analyze the agency's mission and goals, identify managerial

challenges, and formulate an approach in the form of product or service that is useful to the agency. This field practicum will comprise approximately 60 hours of work during this semester, half of which will be in direct contact with the agency and its clients. (2) Four-credit option whereby students will participate in an ALTERNATIVE SPRING BREAK in an agency(ies) in Washington, DC. Students will work five full days in an agency that serves homeless, hungry, or disenfranchised people such as homeless shelters, community kitchens, or battered women's housing units. Housing and transportation are arranged. On the return trip, students will participate in a reflection and focus exercise in a relaxing setting. This option may cost students up to $280. Students interested in this option MUST see the instructor at preregistration time. (3) Three-credit option whereby students do community work in the Ithaca area with an agency that serves homeless, hungry, incarcerated, or disenfranchised people. Students will work on a regular weekly basis for a minimum of 25 hours during this semester.

H ADM 491 Hotel Ezra Cornell
Fall and spring. Variable to 4 credits. Prerequisite: written permission. Elective. Faculty.
Elected board members of Hotel Ezra Cornell receive credit for academic coursework, and the development, organization, and management of the April "Hotel-for-a-Weekend." Students who are considering a board position may pre-enroll for the course and should speak with the instructor for additional information about board positions and required coursework. Elections will take place in April after Hotel Ezra Cornell Weekend, at which time the HA 491 course enrollment will be finalized. **Students must be in good academic standing and have a GPA of at least 2.0 in the preceding term.** Further information is available in the Student Services Office, 178B Statler Hall.

H ADM 493 Management Intern Program I—Operations
Fall and spring. 6 credits. Limited to hotel juniors and seniors with approval of the MIP faculty committee. Prerequisites: students are expected to have completed H ADM 105, 115, 211, 121, 221, 222, 136, 236, 243, 255, 165, and 174. In addition, completion of the following courses is strongly recommended: H ADM 321, 335, 355, and 365. Additional course work might be required for applicants considering specialized internships. A detailed plan for the completion of all remaining academic requirements must be approved prior to acceptance into the course. Must be taken in conjunction with H ADM 494. S-U grades only, based on six performance evaluations. **Students must be in good academic standing and have a GPA of at least 2.0 in the preceding term.** Elective. R. Chase.

H ADM 494 Management Intern Program II—Academic
Fall and spring. 6 credits. Must be taken in conjunction with H ADM 493. Letter grades only, based on submission of goals and objective statement, four management reports, journals, debriefing, and oral presentation. **Students must be in good academic standing and have a GPA of at least 2.0 in the preceding term.** Elective. R. Chase.

H ADM 495 Implementing Strategies for Tying Wellness Practices to Company Profit
Spring. 3 credits. Limited to 50 juniors, seniors, and graduate students. Elective. M. Tabacchi.
Designed to encourage future managers to evaluate the work environment and to enhance opportunities for diverse worker productivity which should increase the corporation's competitive edge. Emerging fields of complementary and alternative medicines are explored as preventive and cost effective methods of improving workers' health.

H ADM 498–499 Undergraduate Independent Study
Fall and spring. Variable, to 4 credits. Elective. Faculty.
Students are afforded an opportunity to pursue independent study projects under the direction of a resident faculty member. Permission in writing is required prior to course enrollment. Obtain permission form from the Hotel School Student Services Office. Independent study work must be performed in the term for which it is approved, and the usual add/drop policy applies. Retroactive credit for work commenced after an academic term has ended is not allowed.

H ADM 690 Honors Monograph
Year-long course. 4 credits. Limited to professional master's students who: (1) either have a minimum GPA of 3.7 or are in the top 10 percent of the students in the year group in their first-year professional master's courses; (2) have given evidence of being a good writer by meeting all components of the written communication benchmark; and (3) obtained the approval of a brief topic proposal from the potential adviser. Elective. Faculty.
A special integrative course for students who write well and desire to explore in depth a topic of mutual interest to them and a faculty adviser of their choice. The approval of a second reader is required for completion of the course. Special recognition of students who complete the course will be made at graduation. Applications available in the Graduate Office, Room 172 Statler.

H ADM 692 Industry Challenges and Trends
Spring. 3 credits. Limited to 15 seniors and graduate students. Elective. J. Clark.
A seminar approach will be used to discuss readings and case studies selected to illustrate current challenges and future trends such as globalization, consolidation, etc., in the hospitality industry. The view will be futuristic and primarily from that of a multi-unit/corporate perspective. An in-depth analysis of a few specific companies will be included using case studies and guest lecturers when appropriate. Student teams will research new topics and make presentations and final reports.

H ADM 698–699 Graduate Independent Research
Fall and spring. Credit to be arranged. Elective. Faculty.
Student must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Permission in writing is required prior to course enrollment. Obtain permission form from the Hotel School Graduate Office, Room 172, Statler.

H ADM 791 Creating and Managing for Service Excellence
Fall. 3 credits. Professional master's requirement. Limited to MMH students except by written permission of the instructor in advance of pre-enrollment. L. Renaghan.
Covers the complex management practices and concepts necessary to deliver consistent value in the hospitality industry (determining customer expectations; integrating marketing into operations; managing customer satisfaction; and measuring and controlling costs). Cases, lectures, discussion, and industry experts will be used, with emphasis on translating the strategic understanding of value into management practice.

H ADM 793 Industry Mentorship Program
Spring. No credits. S-U grades only. Professional master's requirement. M. Redlin.
Interaction with a senior hospitality industry executive. Objectives are to give the student an overview of the operating dynamics of a segment of the industry, to provide a realistic awareness of day-to-day life working as an executive in the industry, and to develop an awareness of the skills, level of integration, and other factors required for success.

H ADM 794 Management Development
Year-long course. No credits. S-U grades only. Professional master's requirement. N. Dahl, D. Jameson.
All first-year students in the Master of Management in Hospitality program must enroll in H ADM 794 both semesters. This requirement includes participation in the MMH Assessment Center, program benchmarking, team project, and other activities related to students' professional development. Satisfactory completion of the second semester of H ADM 794 documents achievement of all program benchmarks.

H ADM 890 M.S. Thesis Research
Fall and spring. Credit to be arranged.

H ADM 990 Ph.D. Thesis Research
Fall and spring. Credit to be arranged.

FACULTY ROSTER

Alvarez, Roy, M.Ed., Auburn U. Senior Lecturer
Arbel, Avner, Ph.D., New York U. Prof.
Berger, Florence, Ph.D., Cornell U. Prof.
Brownell, Judith, Ph.D., Syracuse U. Prof.
Bryson, Susan, M.A., U. of Chicago. Lecturer
Butler, David W., Ph.D., U. of Wisconsin-Madison. Dean.
Canina, Linda, Ph.D., New York U. Asst. Prof.
Carvell, Steven A., Ph.D., SUNY Binghamton. Assoc. Prof.
Chase, Robert M., M.B.A., Cornell U. Prof.
Clark, John J., Jr., Ph.D., Cornell U. Prof.
Clark, Preston, M.S., Syracuse U. Lecturer
Cullen, Thomas, Ph.D., Cornell U. Assoc. Prof. and Assoc. Dean for Industry and International Affairs
Curtis, Steven, B.L.A., Syracuse U. Lecturer
Dahl, Nicholas, M.A., Oregon State U. Lecturer
D'Aprix, David, B.A., Union College. Lecturer
deRoos, Jan A., Ph.D., Cornell U. Hospitality Valuation Services Professor of Hotel Finance and Real Estate.
Dev, Chekitan S., Ph.D., Virginia Polytechnic. Assoc. Prof.
Dittman, David A., Ph.D., Ohio State U. Herbert E. Westfall Professor of Accounting

Enz, Cathy A., Ph.D., Ohio State U. Prof. and Lewis G. Schaeneman, Jr. Professor of Innovation and Dynamic Management and Executive Director, Center for Hospitality Research
Ferguson, Dennis H., Ph.D., Cornell U. Assoc. Prof.
Geller, A. Neal, Ph.D., Syracuse U. Robert A. Beck Prof. of Hospitality Financial Management
Gould, Shelly, B.S., Cornell U. Teaching Support Specialist
Hinkin, Timothy, Ph.D., U. of Florida. Prof. and Director of Undergraduate Studies
Jameson, Daphne A., Ph.D., U. of Illinois. Assoc. Prof. and Richard J. and Monene Bradley Director of Graduate Studies
Jones, Scott L., M.A., Purdue U. Lecturer
Kimes, Sheryl E., Ph.D., U. of Texas. Prof.
Lang, Barbara, B.S., Cornell U. Lecturer
Lundberg, Craig C., Ph.D., Cornell U. Blanchard Professor of Human-Resources Management
Lynn, Wm. Michael, Ph.D., Ohio State U. Assoc. Prof.
McCarthy, Reneta, B.S., Cornell U. Lecturer
Moore, Richard G., M.B.A., Cornell U. Assoc. Prof.
Mutkoski, Stephen A., Ph.D., Cornell U. Banfi Vintners Professor of Wine Education and Management
Nash, Abby, B.A., Cornell U. Lecturer
Noden, Malcolm A., Senior Lecturer
Norkus, Gregory X., M.S., Cornell U. Senior Lecturer
O'Connor, Therese A., M.S., Elmira College. Senior Lecturer
Penner, Richard H., M.S., Cornell U. Prof.
Pezzotti, Giuseppe G. B., M.P.S., Cornell U. Senior Lecturer
Piccoli, Gabriele, Ph.D., Louisiana State U. Asst. Prof.

COLLEGE OF HUMAN ECOLOGY

ADMINISTRATION

Patsy M. Brannon, dean

D. Merrill Ewert; director of Cornell Cooperative Extension

Jennifer Gerner, associate dean

S. Kay Obendorf, associate dean

Brenda Bricker, director, undergraduate affairs

Teresa DiMagno, director, student and career services

Darryl Scott, director, admissions

Duncan Bell, college registrar

COLLEGE FOCUS

The College of Human Ecology anticipates and responds to human needs in the areas of nutrition and health, economic and social well-being, environmental design and technology; as well as human development through education, basic and applied research, and the extension of knowledge. The college is distinctively characterized by the quality of its research in the natural and social sciences and the design arts, a global perspective in academic programs, a preventive approach to contemporary societal problems, multidisciplinary departments and programs, development of leadership in students and citizens, and a commitment to diverse populations. Faculty and students examine individuals in relation to their family, neighborhood, workplace, and community, seeking a balance between theory and practice that will improve the quality of everyday life.

FACILITIES

The college is housed in Savage, Kinzelberg, and Martha Van Rensselaer Halls. The buildings include administrative and faculty offices, classrooms, auditoriums, galleries, and lecture halls; wet chemistry and biochemistry laboratories for nutrition, food science, and textile science; experimental food laboratories; design studios and computer-aided design laboratories; woodworking shops; experimental observation rooms with one-way vision screens and sound-recording equipment; human factors and infant research facilities; educational television studios; and an audio/visual classroom for distance learning. Also included are learning resource centers for career planning, field and international study, a historical costume collection, a human metabolic research unit, an animal research facility, cold rooms, a constant temperature and humidity laboratory, and an early childhood research and care program.

Specialized equipment for teaching and research includes biochemical and chemical instruments for spectroscopy, chromatography, radioisotope analysis, electrophoresis, microscopy, and ultracentrifugation; physical testing equipment; and cameras, videotape, and sound recording equipment.

DEGREE PROGRAMS

Cornell programs in Human Ecology lead to the degrees of Bachelor of Science (B.S.), Master of Arts (M.A.), Master of Science (M.S.), Master of Professional Studies in Human Ecology (M.P.S.), Master of Health Services Administration (M.H.A.), and Doctor of Philosophy (Ph.D.).

General academic information concerning the Bachelor of Science degree is given here under the heading "Undergraduate Study." Curricula for major studies are described under the various academic areas.

Programs leading to master and doctoral degrees are administered by the Graduate School. They are described in the *Announcement of the Graduate School* and in announcements published by the individual field offices (Design and Environmental Analysis, Human Development, Nutrition, Policy Analysis and Management, and Textiles and Apparel). For information regarding The Sloan Program in Health Services Administration, contact the Department of Policy Analysis and Management.

UNDERGRADUATE DEGREES

Bachelor of Science (B.S.) degrees are offered in the following areas:

Biology and Society

Design and Environmental Analysis

Human Development

Human Biology, Health, and Society

Nutritional Sciences

Policy Analysis and Management

Textiles and Apparel

Individual Curriculum

UNDERGRADUATE AFFAIRS

Persons interested in undergraduate study in human ecology should contact the admissions office, 170 Martha Van Rensselaer Hall (255–5471). Those interested in graduate study should contact the graduate field representative identified among the faculty of each department. Department faculty are listed at the beginning of the course descriptions for each department.

Counselors in the Office of Admission, Student, and Career Services (172 MVR) can help perspective students understand college programs and requirements, as well as college and university resources and services. They provide a broad range of career services and personal support for all matriculated undergraduates. The college registrar (145 MVR) assists undergraduates with questions about academic credit and graduation requirements.

The Student Body

The College of Human Ecology undergraduate enrollment is 1,395. Roughly 390 students graduate each year; last year 250 freshmen and 195 transfer students matriculated. Ninety-five faculty members serve as advisers to undergraduates.

The college's undergraduate admissions committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula. Admission is highly selective. Approximately two-thirds of the student body comes from New York State, with the remainder coming from other parts of the United States and abroad. In 2000, 28 percent were identified as members of minority groups. Approximately 212 graduate students have members of the college's faculty chairing their special committees. The college awarded 44 master's degrees and 34 doctorates last year.

Mature Students

The college recognizes that students who interrupted their formal education and are returning to school have needs different from those of younger undergraduates. To facilitate the education of mature students, defined as those 24 years old or older at first matriculation, the college has adopted certain procedures specifically for that group. Counselors in the Office of Admission, Student, and Career Services (172 MVR) can provide information of interest to mature students. Mature students are permitted to enroll for as few as six credits without petitioning for permission and also are permitted to extend their residency beyond the normal eight terms. To find out about qualifying for prorated tuition, mature students must see the registrar before registration each semester.

Special Students

Students eligible for special status are those visiting from other institutions and interested in particular programs in the college, those with a bachelor's degree who are preparing for graduate study or jobs and careers in human ecology–related fields, or those who have interrupted their education and are considering completing degree programs. Students accepted in the nondegree status of special student may enroll for a maximum of two semesters. During the second semester of attendance, a special student must either apply for admission as a transfer student or plan to terminate studies in the college at the end of the semester. Special students are expected to take a minimum of 12 credits each semester and to take one-half to two-thirds of their work in the statutory divisions of the university. Courses taken while a person is classified as a special student may be counted toward the requirements of the

bachelor's degree. Those interested in becoming special students should make appointments to discuss admissions procedures in the Office of Admission (170 MVR, 255–5471).

Empire State Students

Occasionally a student who is completing requirements for a degree through the Empire State College Program is interested in taking a human ecology course. This can be done by registering through the Division of Summer Session, Extramural Study, and Related Programs (B20 Day Hall, 255–4987). All rules of the extramural division apply, and registrations will be accepted only on a space-available basis and with the written approval of the course instructor. At the time of registration, Empire State College students must provide the extramural division with a completed copy of Empire State College's notification of cross-registration (form number, SA-22, F-031) to verify enrollment in Empire State College. Such students will be charged 25 percent of the standard extramural tuition per credit.

Transfer students

Students who enter the College of Human Ecology after the first semester of their freshman year are considered transfer students. An internal transfer student is one who transfers to Human Ecology from one of the other colleges at Cornell University. An external transfer student is one who transfers to Human Ecology from an institution outside of Cornell University. Internal transfer students should take special care to learn the policies of Human Ecology because each college at Cornell operates under a different set of rules. Staff in the Office of the College Registrar (145 MVR, 255–2235) and in the Office of Admission, Student, and Career Services (172 MVR, 255–5471) are available to answer students' questions. External transfer students may transfer a maximum of 60 credits to the college after admission. Both internal and external transfer students should contact the Office of the College Registrar to discuss how the transfer credits will apply to the various degree programs.

MAJORS

The college requires students to fulfill requirements for a major in order to graduate. Students must declare a major by the end of the sophomore year, and may elect to complete more than one College of Human Ecology major. It is common for students to change interests during their undergraduate careers. Counselors in the Office of Admission, Student, and Career Services (172 MVR) and directors of undergraduate study in each of the academic departments can help students to consider their options and engage in academic planning. All changes of major require submission of the Change of Major form, and are processed through the College Registrar's office, 145 MVR. Change of major will trigger re-evaluation of credit and assignment of a new faculty adviser.

DESIGN AND ENVIRONMENTAL ANALYSIS

The Department of Design and Environmental Analysis (DEA) is concerned with planning, designing, and managing interior environments to satisfy human needs. Most people spend over 90 percent of their lives inside buildings. Those settings have substantial and far-reaching effects on the quality of our lives. The processes for creating and maintaining the built environment face enormous challenges, including frequent social and organizational changes, technological advances, new building methods, and finite resources. The program in DEA is dedicated to preparing professionals who can meet these challenges.

Diverse faculty backgrounds and teaching approaches help students to develop multidisciplinary problem-solving and creative abilities, aesthetic judgment, and analytical thinking. Excellent laboratory, shop, studio, and computer facilities permit exploration of innovative concepts for the design and management of interior environments. The relationship between people and their physical surroundings is explored through a combination of academic courses, field experience, and applied research. Examples of student class projects and faculty work are frequently on display in the MVR gallery. The DEA Resource Center includes books, journals, newsletters, and material samples for student use.

Options

The department offers undergraduate education in three professional areas: interior design, facility planning and management, and human factors and ergonomics. The interior design option is accredited by the Foundation for Interior Design Education Research (FIDER). The Facilty Planning and Management Program at Cornell is an "IFMA Recognized Program." This means that it meets the standards for recognition of programs established by the International Facility Management Association.

To take full advantage of the course sequences and electives, it is important to select an option as early as possible. This is particularly true in the interior design option. Transfer students in the interior design option may need one or two extra semesters to complete the program.

Option I: Interior Design

The interior design option prepares students for professional careers in the planning and design of interior spaces and associated products. The program emphasizes a problem-solving approach based on knowledge of buildings and their associated systems, furnishings and interior products, human-environment relations, and design principles. Some students combine this program with another option.

Careers are available in interior design and space planning, interior architecture, facility planning, interior product design, and housing. This program also serves as an excellent preparation for graduate study in interior design, facility management, architecture, and product design.

Option II: Facility Planning and Management

This option is designed to prepare students for professional careers in facility management. The program focuses on the planning, design, and management of facilities for large, complex organizations such as corporations, health-care institutions, research and development laboratories, and universities. Facility planning and management is a basic management function that coordinates and integrates information and expertise from areas such as planning and design, real estate, and business administration with human factors, ergonomics, environmental psychology, telecommunications, and building operations for the purpose of developing and managing facilities that support individual and organizational effectiveness.

Excellent career opportunities exist in the facility management divisions of private companies, institutions, the health-care industry, and with private consulting firms offering facility management services. The program is also a good preparation for graduate study in business, planning, or one of the design disciplines and for advanced study in facility planning and management.

Option III: Human Factors and Ergonomics

Human factors and ergonomics focuses on the interaction between people and their physical surroundings. This option seeks to expand understanding of how the environment affects human perception, cognition, motivation, performance, health, safety, and social behavior. This knowledge is then used to help architects, planners, interior and product designers, and facility managers to plan, design, and manage safe and effective environments. The effect of human capabilities or characteristics such as family structure, life-style, social class, and stage-in-life cycle on environmental needs and requirements is also a focus of the program. Career opportunities are available in design firms and in urban planning and other public agencies as well as in the facility management and product design division of private companies. Human factors and ergonomics is good preparation for graduate study leading to a Ph.D. degree in the social sciences and a career in academic or other research-oriented settings in either the public or private sector. It can also serve as the basis for graduate study in an environmental planning or design discipline such as architecture, facility planning and management, interior design, landscape architecture, or city and regional planning. Electives in the social sciences and in research methods and statistics are encouraged.

Academic Advising

All DEA majors are matched with a faculty adviser during their first semester by the director of undergraduate studies, William Sims, in E214 Martha Van Rensselaer Hall.

Consultation with faculty advisers about future goals, departmental requirements, sequences of courses, and electives inside or outside the college helps students develop their programs. Students majoring in interior design, especially, must begin early to plan and collect materials for a portfolio of their work, which is necessary for many positions and for application to graduate schools. Faculty advisers can make recommendations on what to include. Students are free to change advisers. Although advisers must sign the

schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that they meet graduation requirements for their major and college.

Ownership and Exhibition of Student Work

All design work dóne in studios as part of an academic program is the property of the department until it has been released by the instructor. The department is not responsible for loss or theft of student work.

HUMAN BIOLOGY, HEALTH, AND SOCIETY

The Human Biology, Health, and Society (HBHS) Program permits you to combine your interests in the biological sciences while exploring human health issues from the perspectives of both the biological and behavioral sciences. HBHS majors select the issues they want to explore in depth from Human Ecology courses that address health and the broad range of factors that influence human well-being. Examples of issues you can explore include: biology and behavior; metabolism, genetics, and health; biology, growth, and development; and food and health policy and health promotion. Most students in this program will proceed to programs of advanced study to pursue careers related to health. This major is offered by faculty in the Division of Nutritional Sciences. More information about this program can be found in a separate section of the catalog that describes the division's programs.

HUMAN DEVELOPMENT

Human Development majors explore the psychological, social, cultural, and biological development of people from conception to old age, focusing on the processes and mechanisms of growth and change over the life course. A wide range of issues are included in the study of human development, including biological, cognitive, and emotional development; the role of family, neighborhood, workplace, and culture in development; and the influence that developing humans have on their environment. The Human Development major provides an excellent foundation for many careers, such as medicine (particularly family medicine, pediatrics, and psychiatry), clinical psychology and other mental health professions, law, business (especially human resources), child and family advocacy, and education (from preschool and elementary school teaching to school administration). The major prepares students for academic careers as professors in human development, psychology, or sociology departments. Learning about human development also helps students understand more clearly their own development and the development of those around them.

The faculty of the Department of Human Development comes from several disciplines, including developmental and clinical psychology, sociology, and history. The diversity of faculty expertise results in a wide-ranging view of human development. The research of the department's faculty is extensive. It includes basic research on issues such as the neurobiology of personality, the role of childhood attachments in the development of adult romantic relationships, the acquisition of language in infants, and the effects of environmental toxins on children's cognitive development. It also includes applied research useful for the creation of public policy, such as studies of the causes and consequences of child maltreatment and studies of the effectiveness of reading programs for Headstart preschoolers, apprenticeship programs for high school students, and support programs for older adults moving into retirement communities.

Curriculum

Human Development is the most flexible major in the College of Human Ecology. While all students learn the fundamentals of human development, each student can focus on one or more areas of particular interest. The flexibility of the major also allows students ample opportunity to meet the requirements for admission to many professional schools, including medical, dental, law, and business schools.

Requirements specified by the College of Human Ecology make up part of each student's curriculum, and include classes in the social and natural sciences, humanities, writing, and communication. In addition, there are requirements for the Human Development major. Students in this major can choose up to 14 elective courses from the broad range of offerings across the Cornell campus.

Special Opportunities

Beyond formal coursework, students have many other opportunities that involve ongoing individual work with Cornell faculty or other professionals. Academic credit can be earned through all of them. These opportunities include the following:

Field Placements. Human Development majors can arrange internships with Urban Semester in New York City, Cornell-in-Washington, and Cornell Abroad programs and in local agencies. These have included hospitals, psychiatric hospitals, juvenile detention centers, retirement homes, and the department's on-campus Early Childhood Program. Students have also participated in projects with the Tompkins County Office of Aging, the Tompkins County Youth Bureau, and the Law Guardian's Office of Tompkins County.

Faculty Research. Many students work as research assistants on faculty projects. Students use research techniques ranging from laboratory procedures to family observations to large surveys. They assist in study design, data collection, and data analysis. Participation in faculty research provides the type of experience that many graduate and professional schools expect from their top applicants. Recent projects have included the study of parent-infant interactions, the transition of high school students into the world of work, and the study of recent trends in the composition of American families.

Independent Research. Under faculty supervision, some advanced students complete an honors thesis in an area of personal interest by designing a study and collecting and analyzing data. Recent thesis topics have included marital quality in Asian and interracial couples, development in families that adopt school-age children, and connections between speed of visual processing in infants and later scores on intelligence tests.

Undergraduate Teaching Assistant. Advanced students can serve as undergraduate teaching assistants. This requires close work with the professor teaching the course as well as with students taking the course.

Teaching Certification. A cooperative education program exists between Human Development and Wells College. This program requires careful planning and course scheduling. It enables students to graduate with a Cornell Bachelor's Degree and New York State Certification to teach nursery school through sixth grade. This certification is honored by most other states.

The program requires a minimum of a three-semester commitment. Cornell HD students take four courses at Wells College and student teach their last semester at Cornell. Although there is van transportation between Cornell and Wells College, it is important for students to have access to a car, especially while student teaching. Students will be registered at Cornell during the entire undergraduate program and usually maintain Ithaca housing. Wells College courses count as Cornell courses and are used as electives, but do not get included in a student's GPA. The one-semester student teaching experience is typically based in the Ithaca area, though not necessarily within the City of Ithaca.

This program is open to HD majors only. You must have at least a 3.0 Cornell cumulative GPA upon application, and must maintain a 3.0 GPA to qualify for student teaching and to complete the program. For more information, contact Judith Ross-Bernstein in G56 MVR at 255–0826.

NUTRITIONAL SCIENCES

A major of Nutritional Sciences (NS) focuses on the complex interrelationships of food patterns, nutritional status, and health. This field draws upon chemistry, biology, and the social sciences to understand questions such as: How are nutrients used by the body? What factors influence human food choice? What nutrients and dietary patterns are recommended to promote growth, maintain health, or reduce the risk of chronic disease? Students in this program may also fulfill the courses required for professional membership in the American Dietetic Association, which will enable them to be employed as nutrition counselors, clinical nutritionists, sports nutritionists, or administrators of food and nutrition services. Students also may prepare for medical school and other types of advanced degree programs through this major. The requirements for this program are outlined in the section of this catalog that describes the division's programs.

Special Opportunities

Dietetics and Clinical Nutrition

Interested students should complete the academic requirements for the American Dietetic Association (ADA). Courses in foods, nutrition and disease, microbiology, management, statistics, and economics are added to the core curriculum (specific requirements). Evaluation of academic credentials for active

membership and registration in ADA should be completed before graduation. Seniors should initiate this academic evaluation process in March if they will graduate in January or in September if they will graduate in May. All students who will complete the academic requirements by graduation should participate in the evaluation process while at Cornell. Students who meet most but not all of the academic requirements are encouraged to have their academic work evaluated while they are at Cornell so that deficiencies can be identified and documented.

Advisers in the dietetics program can also help students plan to meet the experience or supervised practice component required for active membership and/or eligibility to take the Registration Examination to be certified as a registered dietitian (R.D.). For additional information about meeting ADA requirements, contact Marie Kamp (373 MVR, 255–2638).

Exercise Science Minor

Students can complete the Applied Exercise Science Concentration at Ithaca College, which includes courses in fitness measurements, exercise physiology, and biomechanics of human movement. Nutrition courses of special interest relate to growth and development, regulation of body weight, and community nutrition and health. For information about the Applied Exercise Science Concentration, contact the DNS Academic Affairs Office (309 MVR, 255–4410).

POLICY ANALYSIS AND MANAGEMENT

The Policy Analysis and Management (PAM) major produces graduates skilled in policy analysis, program planning, and evaluation and possessing management skills applicable in the public, nonprofit, and private sectors. In addition, the Policy Analysis and Management graduate will have concentrated knowledge in one of three areas: family/social welfare, health, and consumer policy. Graduates are well-qualified for a wide variety of public, nonprofit, and private sector employment emphasizing either program analysis and evaluation or management. The major also attracts large numbers of pre-law students, pre-MBA students, and students intending to pursue graduate education in public affairs and policy analysis programs. The potential exists to pursue a five-year program resulting in a BS and a Master of Health Administration.

The PAM major combines theoretical underpinnings from economics, sociology, psychology, and government to critique and analyze our society's values, laws, policies, and programs. It also gives students the knowledge to build management skills for use in public, nonprofit, and for-profit settings. Ideas of social justice, equity, and efficiency will be studied concurrently with strategic planning, human resources, supervision, and organizational development. Research methods, statistics, and planning and evaluation concepts will be learned and used to direct and aid in program planning, policy analysis, program evaluation, and management.

In addition to learning basic policy analysis and management skills, the student will be expected to apply these skills to a particular concentration—social welfare/family, health, or consumer policy. Social welfare/family policy and management includes a panoply of governmental and private sector income maintenance, social, and human service delivery programs and policies that range from child adoption, neglect, and abuse policies and antipoverty programs to policies and programs that impinge on or regulate marriage, divorce, and fertility. Health programs and policies include such politically sensitive programs and issues as health care access, Medicare, Medicaid, long-term care, health maintenance organizations, public health issues, and substance abuse policies. Consumer programs and policies include the regulation and laws governing advertising, product safety, food and drug safety, nutrition policies, the regulation of credit, insurance, telecommunications, mortgage, housing, and public utility markets and also deal with issues such as the invasion of privacy, Internet security, and children's television. A specific focus in the consumer concentration is the role of marketing and its relationship to consumer well-being and consumer behavior.

In addition to college requirements, all PAM majors are expected to take core courses: Introduction to Management, Introduction to Policy Analysis, Research Methods, Multivariate Statistics, Intermediate Microeconomics, and Public Finance. Students will also be expected to develop a concentration of three courses in either social welfare/family, health, or consumer policy. These concentrations may emphasize either policy analysis or management skills. Finally, PAM majors are encouraged to participate in experiential learning such as Cornell in Washington, the Capital Semester, or Urban Semester. Please check with the undergraduate advising coordinator, Professor Alan Mathios, for further details.

TEXTILES AND APPAREL

The Department of Textiles and Apparel (TXA) focuses on the use of textiles and fibrous materials for apparel, durable and nondurable household goods, composites, geotechnical, and biomedical applications. Programs in the department, in keeping with the overall mission of the college, emphasize the use of materials to meet human needs. The curriculum includes the application of design principles, physical and materials science, economics and marketing, government policy/regulation, management of products and their delivery, and technological developments.

Practical problem-solving skills are developed in the department's laboratories and studios. Academic course work is further enhanced by field and international experiences. Gallery space provides the setting to display design work. In addition, the Cornell University Costume Collection, housed in the department, provides a valuable resource; items from the collection are made available to students for classroom and special study use.

Academic Advising

All TXA majors are matched with a faculty adviser by the director of undergraduate studies, Anita Racine (316 MVR). Students are strongly urged to discuss their goals, course selection and sequence, electives, and career plans with their faculty adviser. Students in apparel design must begin working with their advisers early to develop a professional portfolio of their work. Students are free to change advisers; changes must be recorded with the advising coordinator. Although advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for their major and college.

Ownership and Exhibition of Student Work

All apparel design work done as part of the academic program is the property of the department until it has been released by the instructor. Certain exceptional work may be retained by the department to exhibit for academic purposes. The department is not responsible for the loss or theft of student work.

Course Fees

No grade will be given in a course unless the course fee has been paid by the last week of classes.

Options

Students may select options in apparel design, apparel/textile management, or fiber science. The curriculum is based on manipulation of form, color, and the physical characteristics and structures of fabric to solve functional and aesthetic apparel problems; the application of economic and marketing principles to consumer and industry problems in the textile-apparel sector; and the study of chemical, physical, and engineering properties of fibrous structures and polymers. Depending on previous course work, transfer students may need one or two extra semesters to fulfill the requirements of the major.

Option I: Apparel Design

The study of apparel design includes both aesthetic and functional considerations in the design of body coverings. The program emphasizes a problem-solving approach that enables the student to bring a background in apparel, textiles, and human factors to the design process.

Option II: Apparel/Textile Management

Apparel and textile management combines the fields of apparel and textiles with those of economics, business management, and organizational policy. Students combine theory with case studies to find solutions to everyday problems. Course work is drawn from many interrelated disciplines, including textiles, apparel, economics, business management, and communication, as well as practical field experiences. This provides students with the experience of working with professionals from a wide variety of disciplines. Students often combine this option with either Option I (Apparel Design) or III (Fiber Science).

Option III: Fiber Science

Applications for textile structures include advanced engineering composites, protective clothing for industrial and military environments, and biomedical materials, as well as the more traditional applications found in apparel and home furnishings. The fiber

science option provides a strong base in mathematics and the physical sciences combined with supporting courses in engineering, consumer economics, and the social sciences.

Career Opportunities

Graduates of programs in the Department of Textiles and Apparel have found challenging employment within the textile and apparel sector, in independent and government-sponsored research, and in community organizations. Recent graduates are working in the fields of design, management, new product development, engineering, communications, and marketing. In addition, the program prepares students for graduate or professional study in fiber and polymer science, textile marketing, apparel design, textiles, or business and management.

INTERDEPARTMENTAL MAJOR IN BIOLOGY AND SOCIETY

Biology and Society is a multidisciplinary program for students with special interests in such problems as genetic engineering, environmental quality, food and population, the right to medical care, and the relation between biology, society, and ethics and/or public policy. It is also designed for students who plan postgraduate study in management, health, medicine, law, or other related fields.

Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises, by including courses in the fields of mathematics, biology, humanities, and social sciences. In addition, majors are required to take core courses in biology and society, a set of electives, and a special senior seminar.

Course work in the College of Human Ecology may be selected from concentrations in: human development and the environment, health, or social policy and human services. The other basic requirements of the college must also be met. Programs incorporating those required courses are designed in consultation with a faculty adviser to accommodate each student's individual goals and interests. For further information on the major, including courses of related interest, specific course requirements, and application procedures, see the Director of Undergraduate Studies in MVR 205.

INDIVIDUAL CURRICULUM

A student who has educational and professional objectives that cannot be met satisfactorily within the framework of existing majors in the College of Human Ecology may petition to develop an individual curriculum. To be approved, the curriculum must be within the focus of the college and be interdisciplinary in design, include at least 40 credits in human ecology courses, and not exceed the normal number of credits allowed in the endowed divisions. A student develops an individual curriculum in consultation with faculty advisers from at least two subject-matter fields and the program coordinator, Patti Papapietro, Office of Admission, Student and Career Services (172 MVR).

Such a program of study should encompass a substantial part of the student's undergraduate education and must include at least three semesters. For this reason, a request to follow an individual curriculum should be made after the freshman year and must be made before the second semester of the junior year.

If an individual curriculum seems advisable, the individual curriculum coordinator will provide direction in formally developing a program of study. Although the coordinator must approve the course enrollment schedule during course enrollment each term, it is a student's responsibility to follow the curriculum as planned or to have any necessary revision approved in writing by his or her adviser and the program coordinator before the program change.

SPECIAL OPPORTUNITIES

Several programs allow students to receive academic credit for fieldwork and internship experience, study abroad, study in absentia, college-wide certificate programs, and joint programs with other schools and colleges at Cornell. Students may petition the college registrar to have concentrations that are formally recognized elsewhere within the university noted on their transcripts when accompanied by appropriate documentation from the program.

Study Abroad

Each year nearly 100 Human Ecology students spend a semester or more off campus in places spanning the globe, such as Australia and Zaire. There they supplement their Cornell studies with a wide range of cross-cultural and academic experiences. Study abroad opportunities are available through Cornell Abroad, U.S. college-sponsored programs abroad, and individual applications at foreign universities.

All study abroad students must meet college study abroad requirements and remain registered at Cornell during the overseas study. Credits earned count towards the 60 Cornell credits required for graduation. Study abroad credits do not count toward the maximum number of endowed credits that Human Ecology students are permitted to earn. Typically, students considering study abroad begin their planning at least by September or October of their sophomore year.

To start:

- Carefully consider what it is you hope to get out of a study abroad experience (academically and culturally). The Cornell Abroad Center (474 Uris Hall) houses the largest on-campus collection of materials on programs around the world. The Human Ecology Career Development Center (159 MVR) has additional materials.
- Pick up an application from the Office of the Registrar (145 MVR).
- Meet with the college's study abroad adviser (172 MVR). The adviser, with the college registrar, will help you complete the application, plan for your semester off campus, and secure the necessary signatures.
- Submit your application to the Office of the Registrar. Deadlines are early February for study abroad the following fall term, and early September for study abroad the following spring term. Please note that some programs fill up quickly and applications to these most popular programs should be submitted several months before these deadlines.

Independent Research

Research opportunities for undergraduates are extensive and valued as an important part of the learning experience. The opportunity to engage in substantive research with some of the leading scientists in their fields is so compelling that approximately half of the college's undergraduates conduct research projects. Students may become involved in research with the guidance of faculty members by conducting research assigned in a class, joining a faculty member's research group, completing an independent study research project, or carrying out an honors program project.

For further information, contact individual faculty members or the director of undergraduate studies (DUS) in your department.

Honors Programs

Students interested in college honors programs that lead to the degree "bachelor of science with honors" usually apply to the appropriate honors committee no later than the end of their sophomore year. Generally, a minimum grade point average of 3.3 and demonstrated potential for honors-level research is required. Students take approved courses in research methodology and evaluation, attend honors seminars, complete a written thesis, and defend it in an oral examination.

In addition to the college honors program, special programs are offered by the Department of Human Development and the Division of Nutritional Sciences.

If you are interested in the honors program, it is important to contact the director of undergraduate studies (DUS) in your department or division for information and guidelines.

Field Study and Internships

Field study and internships provide experiential learning opportunities in real-life circumstances where classroom knowledge is tested and applied. Students are able to master new skills, develop and implement plans of action, solve problems, interact in multicultural situations, and build networks for future job opportunities. By applying techniques of research methods, critical thinking, and self-directed learning, students learn to think conceptually while becoming agents of change.

Check with the Director of Undergraduate Studies for major specific information. The Career Development Center (159 MVR) can also provide resources and assistance in finding internships and other experiential opportunities.

Concentration/Certificate in Gerontology

For students interested in pursuing study related to aging, the College of Human Ecology, under the auspices of the

Bronfenbrenner Life Course Center, offers the option of completing an undergraduate concentration in gerontology. This program is designed to develop an understanding of and competence in dealing with the processes and issues of aging. Study in gerontology enriches the practical experience of students and prepares them for professional work in this area. The program draws on the resources of several departments and colleges at Cornell and Ithaca College to shape a curriculum suited to each student's professional goals and interests.

The concentration is available in combination with any major offered by the university. Twelve credit hours of course work must be completed with nine of these taken in the College of Human Ecology. The courses explore aging through biology, psychology, sociology, economics, and design.

Experiential learning opportunities are strongly recommended as a complement to classroom work. With faculty sponsorship, students can participate in experiences in the Ithaca area, the Urban Semester in New York City, Cornell-in-Washington, the Capitol Semester, or in a placement arranged more individually.

Both Cornell and Ithaca College offer courses that incorporate a service-learning component into their curriculum. Cornell's course, "Housing for the Elderly," (PAM 375) has placements in a variety of local agencies (e.g., Office of Aging, Housing Authority, Ithacare) where students gain valuable experience with the different ways communities make it possible for adults to remain independent. This course and others at Ithaca College are sponsored by the Ithaca Partnership for Service Learning in Elder Care. They offer a variety of options for combining volunteer service with classroom experiences. Opportunities for undergraduates to become involved in research projects, such as the Pathways to Life Quality Study, a new Cornell University/ Ithaca College longitudinal study of residential changes and adjustments in the later years are also available. In addition, senior students can apply to work as a teaching assistant for a gerontology course.

Departments and programs have designated academic advisers for the gerontology concentration who will help students plan the sequences of courses and electives needed to complete both a major and the gerontology concentration. Because many gerontology courses have prerequisites, early and careful planning is essential.

Specific program requirements may be obtained in the Office of the College Registrar (145 MVR, 255–2235) or from Donna Dempster-McClain, Bronfenbrenner Life Course Center (G20 MVR, 255–5557).

General Concentration

Students may develop a concentration in additional fields taught at Cornell by taking 12 credits in an approved area. Computer science, Africana Studies, Women's Studies, communications, or business are just a few examples of concentrations that are possible.

THE URBAN SEMESTER PROGRAM IN NEW YORK CITY

Multicultural Issues in Urban Affairs

Sam Beck, Ph.D., director

The Urban Semester Program is a set of courses spanning the entire year. Students choose either Fall or Spring semester and enroll in three classes focusing on the opportunities and barriers that a multicultural society presents and their relationship with professional, community, or public policy settings and concerns (15-credit residential program). They also intern three days each week in placements of their choosing. One day each week, students carry out community service in an inner city school (pre-k to high school). One day each week, students participate in site visits. Seminars are incorporated into these activities. All students reside in the Olin Hall dormitory of the Weill Medical College of Cornell University.

The two-week Winter Session course (two credits) enables students to carry out community service through a reflective practice and problem-solving curriculum. In the eight-week summer semester (one to two credits), students carry out internships in placements of their choosing, including a new summer medical program. Students work with the program staff to locate internship placements. For information, contact the Urban Semester Program staff (159 MVR Hall, (607) 255–1846) or the Urban Semester Program in New York City at (212) 746–2273.

New York City offers a wide variety of internship settings. Many bilingual and bicultural internship settings are available in Chinese, Spanish, Creole, Russian, Yiddish, and other languages. Examples of internships follow:

Health and Medicine—New York Presbyterian Hospital/New York Weill Cornell Center, Queens Medical Center for Women and Children, South Bronx Health Center for Children and Families, Memorial Sloan Kettering Hospital, Hospital for Special Surgery, Montifore Hospital, Bellevue Hospital, Our Lady of Mercy Hospital

Private and Public Law— NOW Legal Defense and Education Fund, Agenda for Children Tomorrow, Skadden Arps, Slate, Meagher, & Flom, Lawyers for Children, DA's Office, Legal Aid Society, AALDEF, Committee Against Anti-Asian Violence, Center for Immigrant Rights, NAACPLDEF, Dorsey & Whitney

Government and community agencies—Cornell University Cooperative Extension, Senator Charles Schumer's office, NYC Housing Authority, Dept. of Aging, Women's Action Alliance, NYC Commission on the Status of Women, NYC Dept. of Consumer Affairs, The Center for Puerto Rican Studies, Manhattan Borough President's office, Central Park Wildlife Center, Attorney General's office, The Parks Dept., Health Dept.

Wall Street firms and other private businesses—Bloomingdales, Prudential Securities, Merrill Lynch, Price Waterhouse, Cairns & Associates, Burson Marsteller, Cushman & Wakefield, AIG-AI Underwriters, Smith Barney, Jane Clark Chermayeff Associates, DDB Needham, KCSA, William M. Mercer Consulting Co., MGM, Madison Square Garden, Gensler Architecture, Niedefhoffer-Henkel Century Group, American Management Association

Private not-for-profit organizations—City Lights Youth, Council on Economic Priorities, Planned Parenthood, Talbot Perkins, FEGS, National. Resources Defense Council, Urban Youth Alliance Inc., Phipps Housing, The Door, Covenant House, Global Policy and International Law, UN International Assoc. of Religious Freedom, Mothers and Others for a Livable Planet, UN Child Care Center, WHEDCO, YAI, Families and Work Institute

Private and public schools—Beginning with Children, Banana Kelly High School, East Harlem School at Exodus House, The Hetrick Martin Institute, Nuestros Ninos, Theodore Roosevelt High School, The Choir Academy of Harlem, El Puente, Genesis RFK Center, River East School, MS 118, Mott Haven Village

Design and arts organizations—Harlem Textiles Works, TADA!, NY Theater Workshop, Cynthia Rowley, Inc., Perry Ellis International, Museum of African Art, SOHO20 Gallery, Lower East Side Tenement Museum, Tommy Hilfiger, Polo, The Gap, Liz Claiborne

Communications and media—Nickelodeon, Do Something magazine, NBC "Dateline", CNN, CBS News-"48 Hours", NBC News, ABC "One Life to Live", MSNBC "The News w/ Brian Williams", The Village Voice, Good Housekeeping, The New Yorker, Essence, Children's Television Workshop, Good Morning America, MTV, HarperCollins Publishing, Maxim Magazine, Nickelodien, MTV Online International

Other Off-Campus Programs

Capital Semester

Combine a full semester of Cornell credit with a three-day-a-week paid internship of $3,000. Students intern directly for New York State legislators in Albany to explore their interests in greater depth, doing research projects, meeting with lobbyists and constituents, writing reports for legislation and publication, and working on legislative hearings. This is great experience for law school, graduate school, and employment. It is available for the spring semester only with preference given to juniors.Visit the Career Development Center (159 MVR) for more information and applications.

Cornell-in-Washington

Students take courses from Cornell faculty, conduct individual research projects, and work as externs while taking advantage of the rich resources of the nation's capital. For more information, visit the program office (471 Hollister Hall).

Courses at Ithaca College and Wells College

Full-time undergraduate students at Cornell may petition to enroll in courses at Ithaca or Wells College. Students pay regular full tuition to Cornell and only special fees to either Ithaca or Wells where applicable. Students are allowed to register for one course per term and a maximum of 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods and practice teaching courses at Ithaca and Wells, and those students pursuing a concentration in exercise science through a specially arranged program with Ithaca College.

Cornell students are eligible to register only for Ithaca and Wells College courses that are relevant to their program and that do not duplicate Cornell courses. Ithaca and Wells College credit counts as Cornell credit, but not as Human Ecology credit. Students are accepted on a space-available basis. Participation in this program is not guaranteed, and both Ithaca and Wells have the right to accept or reject students for any reason deemed appropriate. The program is available only during the fall and spring semesters. For further information, contact the college registrar (145 MVR, 255–2235).

Double-Registration Programs

Five-Year BS/MPS in Health Care Administration

Undergraduates from HBHS and PAM are eligible to apply to the Sloan Program in their junior year for a five-year B.S./M.P.S. degree. During their senior year, students will take first-year Sloan courses which will be counted twice to satisfy both undergraduate as well as graduate requirements. Also during this year, students will complete a graduate school application and take the GRE or GMAT test. At the end of their senior year, students will graduate with a B.S. degree. If the students' grades and test scores are competitive, they will be notified during the spring semester of their senior year that they have been formally accepted into the Sloan Program.

Those students accepted will participate in a health care administration residency during the summer after earning their BS. The following year they will complete the second year of required Sloan courses and earn a Masters in Professional Studies with Cornell certifying completion of requirements in a degree in health administration.

Double-Registration Program for Law

A small number of highly qualified applicants may be admitted to the Cornell Law School after only three years of undergraduate education. The requirements for admission under these circumstances are more stringent than for acceptance after four years of undergraduate study. Applicants must present outstanding qualifications and strong professional motivation. The junior year applicant follows the ordinary application procedures for Cornell Law School admission.

Interested students should contact the Law School director of admissions (Myron Taylor Hall, 255–5141) to discuss the admissions criteria. Because students accepted to this program will be spending their senior year away from Human Ecology, they need to plan ahead to ensure that distribution requirements for the BS degree will be met. Successful applicants need the approval of the college registrar in Human Ecology.

ACADEMIC ADVISING AND STUDENT SERVICES

Faculty Advisers

Students who choose to major in a particular department are assigned an adviser whose special interests match their need. Students may change advisers as their own interests change by working with the director of undergraduate studies (DUS).

Faculty advisers are available to discuss course requirements and sequences, useful electives inside or outside the college, as well as future goals and career opportunities. Although advisers must provide the adviser key number (PIN) during course enrollment each term, it is the student's responsibility to make sure that his or her program meets graduation requirements for the major and the college. Directors of undergraduate studies in each department are available to answer questions about the advising system and the undergraduate major. Students who are exploring alternative majors should work closely with college counselors.

Office of Admission, Student, and Career Services

The Office of Admission, Student, and Career Services (ASCS) (172 MVR) is a center for student orientation activities; academic, personal, and career advising; study abroad; and minority student programs.

Personal counseling, including exploration of problems or concerns of a personal nature, is available to all students. These ASCS counselors, however, are not psychiatrists or therapists; they are available to help you understand and navigate the Cornell system, and to offer support, assistance, and referral. Discussions are completely confidential. Appointments may be made through the receptionist in ASCS or by calling 255–2532.

In addition, ASCS provides support for several student organizations, including Human Ecology Ambassadors, the Mature Students Association, the Association for Students of Color, the Pre-professional Association towards Careers in Health, the Pre-law Undergraduate Society, the Orientation Committee, and Human Ecology Voices. Primary responsibilities of the office are listed below:

Academic advisement. This service is provided to all students as an adjunct to faculty advising. Counselors can assist in course scheduling, academic planning, selection of a major, graduation requirements, and related issues.

Undeclared majors. Students who have not yet declared a major are urged to work closely with student services staff to plan their program of study. For the period a student is undeclared, counselors will provide assistance during course enrollment.

Career counseling. Career counseling is designed to help students clarify the relationship between personal skills, abilities, and career goals. Services are offered on an individual or group basis. Counselors assist in identifying career outcomes of the majors, discuss employment trends in various fields, and suggest course work appropriate to various career goals.

Post graduate advisement. Material pertaining to graduate and professional schools, graduate entrance examinations, courses of study, and career outcomes is readily available.

Students with disabilities. The college is committed to assisting students with disabilities. Students who have special needs are urged to contact the Student Disability Services (420 CCC) when they arrive on campus.

Financial aid. Students who encounter financial difficulty or anticipate running short of funds may discuss their needs with a counselor. Complete information is available from the Office of Financial Aid, 203 Day Hall.

The Human Ecology Alumni Association Cash Award Fund. This fund provides small emergency grants to students in the college who have unexpected financial problems. Applications may be made through ASCS.

Office of the Registrar

The Office of the University Registrar (B7 Day Hall) maintains the official academic records for the university and provides students with their official university transcripts. Additional information is available on the university registrar's web site: www.sws.cornell.edu/our. The college registrar (145 MVR) maintains students' official academic records, including the audit of progress toward the degree. The college registrar also provides services such as adding and dropping classes, correcting student records, issuing letters verifying that a student is registered, and approving the transfer of credit from other institutions.

Minority Programs

The College of Human Ecology at Cornell University believes that a diverse community enriches the educational process for all members of the college community. Consequently, the college focuses particular efforts on a broad range of services for students of color. This includes not only recruitment but also services for students already on campus. Additionally, the college collaborates with university and New York State programs to assure Human Ecology students have access to the vast array of services available here.

The professional staff of Human Ecology's Office of Admission, Student, and Career Services includes a director of multicultural programs who assists in the recruitment, admission, and enrollment of the most qualified and appropriate EOP (a program for New York State residents), African American, Native American, Hispanic American, and Asian American students to the college. All EOP students are invited to a special university-wide pre-freshman summer program that introduces accepted students to the Cornell campus and its classrooms. Services for current students include EOP/COSEP; academic, career, and personal counseling; recommendation letters for employment or graduate schools; and advising and support for student activities and programs.

The Human Ecology Partnership Program provides mentorship through a network of faculty and upper-class students to all incoming students of color, particularly during their first year. In addition, this office serves as a liaison to the Office of Minority Educational Affairs (COSEP), State Programs (EOP), and the Learning Strategies Center. Students are also encouraged to visit the college's Career Development Center to enhance personal career exploration and decision making.

Selected programs include the following:

BBMTA (Black Biomedical and Technical Association). A university organization that provides enrichment activities for minority students interested in pursuing medical careers. For more information, contact Janice Turner (55 Goldwin Smith, 255–5004).

ASC (Association for Students of Color). With the motto "Yesterday's vision, today's reality, and tomorrow's hope," the ASC was created to bring together Human Ecology students to provide a supportive foundation for enrollment, retention, graduation, and career placement for students of color.

The goals of the ASC are to increase communication between students of color, administration, and faculty, to assist in increasing enrollment of students of color in Human Ecology, and assist in increasing the retention of students of color in Human Ecology and in their selected majors.

ASC's four committees are recruitment and retention, student relations, career development, and peer advising. For more information contact Verdene Lee (172 MVR, 255–2532).

Human Ecology Peer Partnership Program helps incoming students of color transition to the college and university. Small groups of freshmen, usually about six to eight students, are paired with faculty and upperclassmen. They meet weekly for discussions, guidance, and explorations of the Cornell campus and the Ithaca community. For more information, contact Verdene Lee (172 MVR, 255–2532); Gary Evans in the Department of Environmental Analysis (E306 MVR, 255–4775); or Lorraine Maxwell in the Department of Design and Environmental Analysis (E310 MVR, 255–1958).

CSTEP. The Collegiate Science and Technology Entry Program is the New York State program of enrichment activities and programs for pre-med and pre-law New York State residents. Services are targeted at populations who are historically underrepresented in scientific, technical, health-related, or licensed professions and/or who are economically disadvantaged and who demonstrate interest in, and potential for, a CSTEP-targeted profession. For more information, contact Verdene Lee (172 MVR, 255–2532).

Multicultural Education

Multicultural education broadens understanding of the world's many different societies as well as the various cultures of this country. Students take courses in the Cornell programs listed below that may be used to meet degree requirements. The college encourages students to incorporate courses from these cultural programs and from study abroad experiences in their degree programs. See information on study abroad opportunities.

Africana Studies and Research Center

American Indian Program

Asian American Studies Program

East Asia Program

Gender and Global Change

Institute for European Studies

Languages and Linguistics

Latin American Studies Program

Latino Studies Program

Peace Studies Program

Program in Jewish Studies

Program for Contemporary Near Eastern Studies

Religious Studies

South Asia Program

Southeast Asia Program

Women's Studies Program

International Students

The International Students and Scholars Office (ISSO, B50 Caldwell Hall, 255–5243) provides a broad range of services to international students. All international students should maintain contact with the ISSO. Counselors in ASCS are also available for assistance.

International students in the College of Human Ecology are encouraged to meet with the college registrar to discuss any questions or concerns that they have about their academic record.

Career Planning, Graduate and Professional School, and Job Search Services

Counseling. The Office of Admission, Student, and Career Services (ASCS, 172 MVR, 255–2532) provides career counselors and resources in the Career Development Center to help students assess possible career outcomes and access educational and extracurricular programs and resources to prepare for those careers. Assistance is available through one-on-one advising or group programming. The office works with the Cornell Career Services (103 Barnes Hall, 255–5221) to facilitate access to larger, university-wide programs.

The Career Development Center (CDC, 159 MVR, 255–2532) is a starting point for students looking for career information. Selected resources about career planning and job search techniques, general directories to begin job or graduate school searches, and information for alumni networking are housed here. Also available are Cornell Career Services handouts and registration forms, graduate and professional school testing booklets and registration packets, study abroad, and Urban Semester program materials. Computer terminals provide access to web-based information regarding internship and employment opportunities, as well as graduate/professional schools.

The CDC is open most weekdays during class hours and closes at 4:00 P.M. on Fridays. Student career assistants are available during these hours to provide résumé and cover letter critiques, conduct mock interviews on video, and help navigate the library resources. Final critiques can be provided by a career counselor once the student review has been completed.

Former Urban Semester Program participants comprise a portion of the CDC student staff and are available daily to answer questions about the program and its application process.

Selected services are listed below. They will help you to investigate your interests, skills, and values as they relate to career options, provide you with useful information and tips for a successful summer or full-time job search, and provide access to employment opportunities. In addition, please refer to the college's career services web site: www.human.cornell.edu/student.

Prelaw or Premed. Students who consider themselves prelaw or premed are encouraged to join a student group affiliated with ASCS. Those interested in a law career can join PLUS (PreLaw Undergraduate Society) where information on applying to law school, preparing for the LSAT, and examining career opportunities in law is provided. Students interested in pursuing a health-related career are welcome to join PATCH (Pre-professional Association Towards Careers in Health) which serves as a link to the university health careers network and provides guidance as students prepare for the MCAT, apply to medical school, and explore the various specialties of medicine.

Extern Program. Spend one day to one week over winter break shadowing an alum in a career field of your choice. Observe day-to-day activities, discuss specific jobs and careers, and sometimes obtain limited hands-on experience. This service is available to sophomores, juniors, and seniors.

Internship and Employer Files. The CDC keeps files of more than 300 internships and hundreds of potential employers for student review.

Student Jobs and Internships. This is an electronic listing of information about internships and career-related summer and academic year employment that is exclusive to Cornellians.

Alumni Career Presentations. Alumni from the college come back to campus throughout the year to discuss their postgraduate or professional experiences. These meetings are ideal for exploring career outcomes of specific majors.

AlumNet. Students have access to Human Ecology alumni who can provide information on their careers and offer suggestions on a job search in their particular field or location. Students can query alumni on a host of variables and review selected alumni résumés to learn more about specific careers.

Job Search Workshops. The college hosts approximately 15 workshops every semester. These workshops are designed to help students market themselves for either summer or full-time job opportunities. Students learn how to conduct an effective job search, write a résumé and cover letter, and interview successfully.

Jobtrak. Exclusively for Cornell students, Jobtrak provides a listing of job opportunities available. Most are full-time jobs, although some summer opportunities are listed. Search by career field, geographic location, or both.

On-campus Recruiting. This service provides access to on-campus interviews with employers interested specifically in Human Ecology students and employers looking for Cornell graduates in general. Interviews occur primarily in banking and financial services, retail sales and management, and consulting, along with a few nonprofit organizations. All activity regarding on-campus recruiting is handled through Interactive, our web-based listing of employers.

New York Recruiting Consortium. Available exclusively to Human Ecology and Arts and Sciences students, the New York Recruiting Consortium happens in New York City over winter break. It offers interviews for full-time employment with employers involved in banking and financial services, retail sales/management, advertising, law, and consulting.

NFP in New York City and NFP in Washington, D.C. Speak with representatives from dozens of New York City or Washington, D.C. not-for-profit/public service agencies about work or internship opportunities in health, education, advocacy, government, and more (occurs only during the spring semester).

Communications Consortium. Interview with organizations in advertising, public relations, film and radio, and print media. National organizations come to Syracuse, New York to meet with you for individual appointments. During the spring semester, a job fair occurs the evening before.

GRADUATION REQUIREMENTS AND POLICIES

It is important for students to track their graduation progress by comparing their current transcript with an appropriate curriculum sheet. Unofficial transcripts and curriculum sheets are available in the Human Ecology Registrar's Office (145 MVR Hall).

Cornell Credit Requirements

- To graduate, a student must earn a minimum of 120 academic credits. An unlimited number of credits may be taken in Cornell's statutory colleges.
- Of the 120 credits required to graduate, at least 60 credits must be earned at Cornell University.

Human Ecology Credit Requirements

- The college divides the 120 minimum required academic credits into four general categories. (*Refer to curriculum sheets for your major for specific details on course selections. These sheets are available in the Office of the Registrar (145 MVR) and in the Office of Admission, Student, and Career Services (172 MVR) as well as on the college web site at www.human.cornell.edu.)*

  a) Category I—College distribution requirements

  Natural sciences

  Social sciences

  Freshman writing seminars

  Humanities

  Quantitative and analytical courses (math and statistics)

  b) Category II—Requirements for a major

  c) Category III—Electives (see definition below)

  d) Category IV—Physical education

- Students must complete a minimum of 40 Human Ecology credits in Category II.
- Within Category II, students must earn nine credits in Human Ecology departments outside the major.
- These Human Ecology courses outside the major may not include HE 100, HE 101, or any 403 course. A maximum of three credits of special studies outside the major (400, 401, and 402), or any internship credit may be applied to this requirement. A maximum of five credits of HE 470, HE 480, HE 490, or PAM 392 may be used.
- Human Ecology courses used to satisfy distribution requirements in Category I:

  1) WILL NOT count towards the 40-credit minimum in Category II.

  2) Will satisfy the nine-credit requirement for course work outside the major.

  (*Exception*: B&S majors must refer to the "NOTE" on B&S curriculum sheets at the end of Category II requirements for appropriate guidelines.)

Elective Credits

- Students have individual objectives in choosing courses beyond the minimum requirements of the major. The university is diverse; the departments, centers, and special programs numerous; the fields of study almost unlimited. Counselors and faculty advisers are available to discuss which courses may interest students and best round out their education.

Students should consult the index in this book to learn where different subjects are taught in the university. Some subjects are taught in more than one division.

Elective credits can be earned in the endowed and statutory divisions of Cornell.

Endowed Colleges

Africana Studies and Research Center

College of Architecture, Art, and Planning

College of Arts and Sciences

College of Engineering

School of Hotel Administration

Johnson Graduate School of Management

Statutory Colleges

College of Agriculture and Life Sciences

College of Human Ecology

School of Industrial Relations

College of Veterinary Medicine

- Students are allowed 21 credits of endowed courses as electives or in their major; they may take more than 21, but will then be billed at the endowed rate of tuition for the extra credits.
- To the extent possible, courses taken in the endowed colleges will be counted to meet distribution requirements in Category I. More than 40 endowed credits taken in Category I, however, will count against the 21 allowed endowed elective credits.
- Endowed credits earned in Category II (even if the endowed courses are required for the major) and Category III will be counted against the 21.
- Required credits listed in the requirements charts for Categories I and II are the minimums; credits taken in excess of those minimums count toward the additional credits required in Category III to make a total of 120 credits (exclusive of physical education). **An unlimited number of credits may be taken in the statutory colleges of Cornell.** Students may choose to take additional statutory credits and graduate with more than 120 credits.
- Elective credits in Category III earned in Cornell's endowed divisions during summer session, study abroad credits, in absentia credits, and transfer credits do not count against the 21 credits allowed in the endowed divisions.

Minimum Semester Requirements

- Students enrolling in the college as freshmen must complete at least 12 credits of Human Ecology courses by the end of the fourth semester, and at least 5 credits of Human Ecology courses must be taken in each of the freshman and sophomore years (ECON 101 and 102 may be used to fulfill this requirement).
- Students must carry 12 credits each semester, excluding physical education, to be matriculated as full-time students (*Exception*: mature students).

Requirements for Majors

- Students must fulfill the requirements specified for a major that are in effect at the time of their matriculation or thereafter.

Grade Point Average

- Students must earn a minimum cumulative grade point average of 1.7 (C-) or better to graduate.
- To be eligible for the Dean's List, students must have a semester GPA of 3.7 with no F or U grades. At least 12 credits of letter grades are required.

S-U Grade Options

- The S-U grading option may NOT be used for courses in Category I or required courses in Category II unless it is the only grade option offered for those courses. S-Us MAY be used for the nine credits of Human Ecology coursework outside of one's major and for electives in Category III.
- Students may apply no more that 12 credits of S-U towards graduation. If a required course is only offered S-U, it will not count towards this limit. Also, Honors Research 499 taken S-U does not count. Students may take more S-Us if they choose, but the additional credit cannot be applied towards graduation.

Special Studies

- Students may use only 12 credits of 400, 401, 402, or 403 courses toward graduation.
- Additional credits of 400, 401, 402, or 403 courses can be taken but will not be applied towards graduation.

"00" Courses

- "00" courses do not count towards graduation requirements but do count towards full-time semester status.

Wells, Ithaca College, and Study Abroad Credits

Any credits earned with the Wells or Ithaca College exchange program are considered Cornell credits for the purpose of fulfilling the 60 Cornell credit graduation requirement. They can not be used for Human Ecology credit. Study Abroad courses may also count as Cornell credit.

Physical Education

- Students must earn two credits of physical education within their first two semesters. These two credits do not count as part of the 60 Cornell credits, or as part of the 120 total credits required for a degree, or towards full-time status. Students who matriculate at Cornell with 12 or more credits must complete only one credit of physical education. Students who transfer more than 25 credits (excluding AP credits) are not required to take physical education at Cornell, regardless of whether they took physical education at their previous college.
- Students must pass the university's swim test. Students who transfer more than 25 credits (excluding AP credits) are exempt. Refer to page 13 of this book for specifics.

Advanced Placement Credit

Students can earn advanced placement credit from one of the following:

1. The requisite score on a departmental examination at Cornell (usually given during orientation week) or on a College Entrance Examination Board (CEEB) achievement test. The requisite scores for the CEEB exams are determined by the relevant department at Cornell, vary by subject, and are listed in the beginning of this book (pages 6 and 7).
2. A regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments have delegated the review of courses to college staff according to guidelines they have formulated. Some departments review each request individually. Some departments accept credit from virtually all accredited colleges; some do not.
3. Credit from the international baccalaureates is evaluated individually.

Note: Cornell does not accept credit for courses sponsored by colleges but taught in high schools to high school students. This is true even if the college provides a transcript of such work. Students who have taken such courses may, however, take the appropriate CEEB test to qualify for credit as in paragraph 1 above. For information and limitations on Advanced Placement credit, see pages 6 and 7 of this book.

Foreign Language Study and Placement

Students who studied a foreign language before coming to Cornell and who want to continue must take either the CEEB test in that language or a departmental language placement test. The latter is given during orientation week in September and again in December, January, and May. Human Ecology students who plan to work with non-English–speaking people in this country or abroad often find it necessary to be proficient in another language. Many study abroad programs in non-English-speaking countries require the equivalent of two years of college-level language study. For more detailed information, see Advanced Placement Credits.

Extramural Credit

Extramural credit is administered by the Office of Continuing Education and Summer Sessions (B20 Day Hall, 255–4987). Extramural credit is charged by the credit hour at the endowed tuition rate. Students may count only 15 credits of extramural credit toward their degree requirements. A student may enroll for extramural credit during the fall or spring semester only if he or she is not registered in the College of Human Ecology. For example, some students enroll for extramural credit before matriculating at Cornell.

An exception to this rule is credit earned in the Ithaca College or Wells College exchange. Students enrolled in these programs simultaneously maintain their status as students registered in the College of Human Ecology.

Humanities

Only certain classes will count for Category I.D, Humanities. To determine eligibility the college uses the following definition: "The humanities include the study of literature, history (including art and design history), philosophy, religion, and archaeology. Critical, historical, and theoretical studies of the arts and design are considered humanities. Languages and creative or performing arts such as the writing of fiction or poetry, painting, sculpting, designing, composing or performing music, acting, directing, and dance are not considered humanities." Additionally, social science courses such as sociology, government, anthropology, and psychology are not considered humanities.

Specifically, courses in the following list will count as humanities:

Africana Studies (literature and history)

Archaeology

Asian American Studies

Asian and Near Eastern Studies (literature and history)

Classics (literature and history)

Comparative Literature

English (literature only)

History

History of Art/History of Architecture

LA 282

Music and Theatre Arts (theory, literature, and history only)

Natural Resources 407, 411

Philosophy

Religious Studies

Rural Sociology 100, 175, 318, 442

S&TS 205, 206, 233, 250, 281, 282, 286, 292, 358,360, 381, 384, 389, 433, 444, 447, 472, 481, 490

PROCEDURES

Registration and Course Enrollment

Registration Requirements

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must complete course enrollment according to individual college requirements; settle all financial accounts including current semester tuition; satisfy New York State health requirements; and have no holds from the college, the office of the Judicial Administrator, Gannett Health Center, or the Bursar.

Individuals must become registered students by the end of the third week of the semester. Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises.

Verification of Registration

Many insurance companies or scholarship funds require verification of full-time registration at Cornell. Should students need such verification, request an official letter from the Office of the University Registrar (B-7 Day Hall). Students who need letters of good standing should contact the Human Ecology Registrar's Office (145 MVR).

Bursar Bill

A bursar bill is sent to each student over the summer and winter breaks; it summarizes what is owed to the university. The bursar bill can also be viewed through Just the Facts. Any questions regarding the bursar bill can be directed to the Bursar's Office (260 Day Hall, 255–2336). Initial New York State residency eligibility is determined during the admissions process, but the Bursar's Office will handle any request for a status change after matriculation.

Late University Registration

A student clearing his or her financial obligations after the deadline date on the bursar's bill is considered late. **Late registrants are assessed a finance charge on the bursar's bill starting from the date the bill is due**. According to university policy, all

students must be registered before the end of the third week of classes. If for any reason a student registers after that time, the Bursar's Office will charge a late fee. **Students who fail to register by the third week of the term may be withdrawn from the university. Should withdrawn students wish to return, they must reapply through the admissions committee.**

Proration of Tuition

Except for mature students, it is seldom possible to have tuition prorated if a student carries fewer than 12 credits during a semester. (See the college registrar or counselors for more information.) Students of mature status may carry 6 to 11 credits without petitioning; but must request that their tuition be prorated. All requests should be made to the college registrar by the first week of classes and no later than the third week of the term.

Course Enrollment

Initiating the process

Students are expected to make course requests for the subsequent semester during a specified time in the current semester. Those dates are advertised publicly and available on the University Registrar's web site (www.sws.cornell.edu/our). CoursEnroll takes place electronically, using software available through Just the Facts. During this time, each student must meet with his or her faculty adviser to discuss academic plans and to obtain the advising PIN code required for finalizing course requests. A student may enter and hold courses prior to entering their PIN. Once the PIN number is entered, however, the schedule is locked and it is not possible to change until the add/drop period of the next term. Information on courses is readily available in this book and in the *Course and Time Rooster* for each semester. Both of these publications can be accessed on the web through CUInfo.

Incoming students will receive tentative schedules upon their arrival to campus, and will meet with faculty advisers during the orientation period.

Course Loads

The normal course load in the college ranges from 12 to 18 credits, although there is no limit to the number of statutory credits a student may take each semester. Nonetheless, students should avoid planning excessive workloads; the time required to keep abreast of courses tends to increase as the semester progresses. Classes cannot be withdrawn from after the seventh week of classes without petitioning and by substantiating extenuating circumstances. Students should avoid the need to drop courses by taking on a reasonable workload and using the drop period to make changes in their program.

Except for those with mature student status, students must carry at least 12 credits (exclusive of physical education) to maintain full-time status. In special cases, a student may petition to carry between 8 and 12 credits. Forms for petitioning and advice on how to proceed are available from the Office of Admission, Student, and Career Services (172 MVR).

Late Course Enrollment

Students who do not complete course enrollment during the CoursEnroll period usually must wait until the beginning of the next semester's add/drop period to enroll. Extensions are rarely granted and usually only for documented illness.

Students who do not meet the deadline for any reason should see the college registrar in 145 MVR as soon as possible. The college registrar can explain available options and course enrollment procedures under such circumstances.

Note: Students can review their course schedule via computer using Just the Facts. Students are responsible for checking their course schedule for accuracy of course numbers, credit hours, grade options, and other data. Errors must be corrected immediately. Procedures for correcting enrollment errors as well as for making any other changes are described below under Course Enrollment Changes.

Course Enrollment Changes

It is to the student's advantage to make any necessary course enrollment changes as early in the term as possible. Adding new classes early makes it easier for the student to keep up with class work. Dropping a class early makes room in the class for other students who may need it for their academic programs.

Ideally, students evaluate their class workload carefully at the beginning of the term. If, in the first week or two, the instructors do not discuss the amount of material to be covered and the extent of student assignments, students need to ask about course requirements.

Some procedures required for course enrollment are also required for course enrollment changes. For example, students must obtain the instructor's permission for a course requiring it, and must complete the same forms for special studies courses. Aside from the procedures listed below for course enrollment changes, all drop/add forms for nutritional science majors must be signed by a faculty adviser.

Deadlines for Add/Drop and Grade Option Changes

- During the first three weeks of the term, courses may be added, dropped, or the grade option changed.
- From the fourth through the seventh week of the term, courses may be dropped. **Grade option changes cannot be made at this point regardless of instructor's permission.**
- From the fourth week of the term, instructors have the right to consider students' requests for course changes on an individual basis or to announce at the beginning of the term a specific date between the fourth and seventh weeks beyond which they will no longer approve course changes.
- **After the seventh week of the term, any requests for course changes must be made through the petition process.**
- After the seventh week of the term, any student granted permission to drop a course after petitioning will automatically receive a grade of W (Withdrawn), and the course will remain on the official transcript, even if repeated in a later term.

Deadlines for Half-Term Courses

Students may drop half-term courses within the first three-and-one-half weeks of the course. Students may add a course after the first week of classes only with the permission of the instructor. After the first three-and-one-half weeks, students must petition to drop the course.

Procedures for Add/Drop and Grade Option Changes

To make course changes during the add/drop period, a student must take the following five steps:

1. Obtain an add/drop form from the Human Ecology Registrar's Office (145 MVR).
2. Complete the form and take it to the appropriate office for a signature: for Human Ecology courses, the forms should be taken to the Human Ecology Registrar's Office; for courses outside the college, the forms should be taken to the appropriate departmental office of the college. **(Students in the Division of Nutritional Sciences must have their adviser's signature on all add/drop forms.)**
3. Make sure their name is added to the list of enrolled students for a course being added, or removed from the class list for a course being dropped. Ask the person recording the change to sign the form.
4. Submit all signed forms to the Human Ecology Registrar's Office, including the forms for out-of-college courses. Changes are not completed until the signed forms are filed in that office. Students who do not drop a course they no longer attend are in danger of receiving an F in the course.
5. Receive carbon copies of each course change form at the time it is submitted. **It is important for students to keep these copies to verify any changes.**

To make course changes after the seventh week of the term, a student must file a general petition form. (See the section, *Petition Process*.) Students are expected to attend classes and to do assigned work until the petition has been formally approved or denied.

Time and Place for Add/Drop and Grade Option Changes

All students may adjust their schedules and grading options during the first three weeks of each semester. The university also holds a course exchange the day before fall classes begin where students have the opportunity to change their class enrollment in centralized locations. The Human Ecology Course Exchange is located in the MVR auditorium. For course exchange location for other colleges check the registration website each semester.

Permission of Instructor

Certain courses may be taken only with the permission of the instructor as indicated in this book. Undergraduates must obtain permission of the instructor to take any graduate course. Students must request the

instructor's permission during the CoursEnroll period by placing their name on a list maintained by the departmental advising assistant.

Students interested in taking a course in the Department of Art in the College of Architecture, Art, and Planning are required to register with the departmental secretary (100 Olive Tjadan Hall) before enrolling in the course. Seniors who want to take an elective course in the Johnson Graduate School of Management are required to obtain permission of the instructor on a course authorization form that the student then files with that school's registrar in Sage Hall.

Course Enrollment while Studying Abroad

Students who plan to study abroad have several options available to enroll for their returning semester at Cornell. Students can consult with their faculty adviser before departure to consider the schedule of classes that they will take upon their return to campus. Once abroad, the student can use the web to access the Cornell University *Courses of Study* and the *Course and Time Roster* for the coming term. The roster is available on the web in approximately the first week of October and the first week of March. Using these resources, the student can e-mail the course requests to the student's faculty adviser for approval; the faculty adviser can then e-mail them to the college registrar. A student who does not have access to the Internet while abroad can wait for the *Course and Time Roster* to arrive via airmail from the Cornell Abroad Office. The student can then e-mail, fax, or mail the course requests to their faculty adviser and ask the faculty adviser to submit the course requests to the college registrar. *The Course and Time Roster* becomes available only the day that pre-enrollment begins; thus, students who depend on receiving the mailed copy will experience some delay in submitting their course requests.

Oversubscribed Courses

Enrollment in many human ecology courses is limited. When a course is over enrolled, students are generally assigned on the basis of seniority or by criteria defined for each course as listed in this book. Students' professional goals may be considered. Those students not admitted to a course may be placed on a waiting list.

Course Wait List

The Human Ecology Registrar's Office maintains waiting lists for selected courses to accommodate students who want to enroll in courses that have been filled. Course instructors are responsible for determining the criteria to fill their classes from waiting lists. Waiting lists are maintained only for the first three weeks of each semester.

Limited Enrollment Classes

Students who do not attend the first two class sessions of courses with limited enrollment may be dropped from the course list. Students can avoid being dropped from a class by notifying the instructor that unavoidable circumstances have prevented their attendance.

Special Studies Courses

Each department in the College of Human Ecology (DEA, HD, DNS, PAM, and TXA) offers special studies courses that provide opportunities for students to do independent work not available in regular courses. One of those courses, designated 300, Special Studies for Undergraduates, is intended primarily for students who have transferred from another institution and need to make up certain course work.

The other special studies courses are 400, Directed Readings; 401, Empirical Research; and 402, Supervised Fieldwork. Junoirs and seniors normally take those courses, and a faculty member in the department in which the course is offered supervises work on an individual basis. It is important for students to use the appropriate course number (300, 400, 401, or 402) for a special project.

To register for a special studies course, a student obtains a special studies form from the departmental office where they plan to take the course. The student discusses the proposed course with the faculty member under whose supervision the study would be done and then prepares a plan of work. If the faculty member agrees to supervise the study, the student completes a special studies form and obtains signatures from the instructor, department chair, and faculty adviser before submitting the form to the Office of the College Registrar (145 MVR). The student must also submit a course registration form (add/drop form) to the Office of the College Registrar. Special studies forms are available in 145 MVR or in departmental offices. Add/drop forms are only available in 145 MVR.

Semester credits for special studies courses are determined by the number of contact hours the student has with the supervising faculty member (or a person designated by the faculty member). To earn one credit, a student must have the equivalent of three hours of contact time per week for 15 weeks (a total of 45 contact hours). For additional credit, multiply the number of credits to be earned by 45 to determine the number of contact hours needed for the course. **A student can only use 12 credits of 400, 401, 402, or 403 courses towards graduation and only three 400-, 401-, or 402-credits can be used to satisfy the nine-credit-outside-the-major requirement**. To register in a special studies course taught in a department outside the college, follow the procedures established by that department.

Changes in status

General Petition Process

The petition process permits students to request exceptions to existing regulations. Petitions are considered individually, weighing the unique situation of the petitioning student with the intent of college and university regulations. In most cases, extenuating circumstances are needed for a petition to be approved if it involves waiving a deadline. These are situations beyond a student's control, such as a documented medical emergency.

Students can avoid the necessity to petition by carefully observing the deadlines that affect their academic program. See the Course Enrollment Changes section above for some of the important deadlines. If unsure of a deadline, check with a counselor in the Office of Admission, Student, and Career Services (172 MVR) or with the Office of Registrar's staff (145 MVR).

A general petition may be needed to carry fewer than 12 credits, withdraw from a class after the seventh week deadline, add a course after the third week deadline, change a grade option after the third week deadline, be exempt from one or more of the college's graduation requirements, substitute a required course in one's major with another course, or stay an additional semester to complete the graduation requirements.

Although many kinds of requests can be petitioned in the college, options other than petitioning may be preferable in some cases. To explore whether a petition is appropriate, the student may discuss the situation with a college counselor or the college registrar.

If a student decides to submit a general petition, the form is available in the Office of the Registrar (145 MVR) and in the Office of Admission, Student, and Career Services (172 MVR) or on the web at www.human.cornell.edu/student/forms/. After completing the form and obtaining the required signatures, the student must turn the form in to the Office of the Registrar. Once a decision is made, a letter is placed in the student's mail folder indicating approval or denial of the petition.

Students may appeal the college registrar's decision to the Committee on Academic Status. Students who elect to appeal have the option of appearing in person before the committee to state their case. A member of the counseling staff can guide a student through this process.

In Absentia Study

Under certain conditions, credit toward a Cornell degree may be given for in absentia study, that is, study done at an accredited institution away from Cornell after the student matriculates in the College of Human Ecology. In absentia study can be done during any term; fall, winter, spring, or summer.

To be eligible for in absentia study, a student must be in good academic standing and must receive permission in advance from the college registrar. Students not in good standing may study in absentia but will not receive transcript credit until the Committee on Academic Status has returned them to good standing. In some cases, students may petition for in absentia credit after the work has been completed, but there is no guarantee that such credit will be awarded without advance approval.

In absentia petition forms are available in the Human Ecology Registrar's Office (145 MVR) or on the web at www.human.cornell.edu/student/forms/. The student completes the form, attaches catalog descriptions for the courses that will be taken, then submits the form to the Human Ecology Registrar's Office (145 MVR). In absentia study during the fall or spring term carries a nominal administrative fee. (Contact the Bursar's Office, 260 Day Hall, for the current amount).

Students will receive a letter in their mail folder from the college registrar notifying them of the petition decision.

A student may take up to 15 credits in absentia as long as the courses do not duplicate courses already taken and the in

absentia courses are applicable to the requirements of the college. Students who study abroad during the summer or winter term are limited to a maximum of nine in absentia credits. Study abroad during the fall or spring semester must be done through the Study Abroad Office and is not considered in absentia study.

On rare occasions a student's petition for more than 15 credits in absentia may be allowed: (1) the work taken represents a special educational opportunity not available at Cornell, (2) it relates to the student's particular professional goals, and (3) those goals are consistent with the focus of the college. The in absentia petition form is used to request more than 15 credits in absentia. Wells and Ithaca College credit are not considered in absentia credit and are not included in the 15 credit limit.

The college registrar requests approval from the appropriate department if a student wants to apply in absentia credit to requirements in his or her major. If in absentia credit is sought for a modern foreign language in which the student has done work, approval by the Department of Modern Languages and Linguistics (College of Arts and Sciences) must be obtained. The department will recommend the number of credits the student should receive and may require the student to take a placement test after returning to Cornell.

The student is responsible for having the registrar of the institution where in absentia study is taken send transcripts of grades to the Human Ecology Registrar's Office at 145 MVR Hall. Only then will credit be officially assessed and applied to the Cornell degree. Credit for in absentia study will be granted **only** for those courses with grades of C- or better. Only credits (not course names and grades) for in absentia study appear on the Cornell University transcript.

A student who holds a Regents' or Children of Deceased or Disabled Veterans Scholarship may claim that scholarship for study in absentia if the study is done in a college in New York State and if it is for a maximum of 15 credits acceptable to the College of Human Ecology.

The rules regarding study in absentia apply to transfer students with the additional stipulation that at least 60 credits must be taken at Cornell. At least 40 of the 60 credits must be in the College of Human Ecology at Cornell unless the student has transferred equivalent human ecology credit. (No more than 20 credits of equivalent credit may be applied to the 40 credits required in human ecology course work.)

Leaves of Absence

A student may request a leave of absence before the beginning of the semester or during the first seven weeks of the semester for which a leave is sought. A leave may be extended for a second semester by making a written request to the Office of Admission, Student, and Career Services. Note that in absentia study status and leave of absence status are mutually exclusive. Students on leave must notify the college registrar in MVR 145, in writing, of their intention to return to campus prior to the beginning of the semester. Those whose leave period has expired will be withdrawn from the college after the seventh week of the semester they were due back.

Students considering a leave of absence should discuss their plans with a counselor in the Office of Admission, Student, and Career Services. The counselor can supply the necessary forms for the student to complete and file with the Human Ecology Registrar's Office (145 MVR). Leaves initiated after instruction begins will be charged a percentage of the semester tuition. (Refer to Bursar Information in this book for a billing schedule.)

Requests for a leave of absence received after the first seven weeks of the semester, or requests for a leave of absence from students who have already had two semesters' leave of absence, will be referred for action to the Committee on Academic Status. The committee may grant or deny such requests, attaching conditions as it deems necessary. Leaves of absence after the first seven weeks are generally granted only when there are compelling reasons why a student is unable to complete the semester, such as extended illness.

A student who requests a leave of absence after the first seven weeks is advised to attend classes until action is taken on the petition. A student whose petition for a leave of absence is denied may choose to withdraw or to complete the semester. If the petition for leave is approved the student's courses will remain on the transcript with "W"s.

The academic records of all students who are granted a leave of absence are subject to review, and the Committee on Academic Status may request grades and other information from faculty members to determine whether the student should return under warning or severe warning or in good academic standing.

Under certain documented medical circumstances a student may be granted a **medical leave of absence**. Medical leaves are initiated by the student with Gannett Health Center. If Gannett Health Center recommends a medical leave for the student, the college registrar may grant the leave. A medical leave is for an indeterminate period of time not to exceed five years. Students who are granted a medical leave of absence are encouraged to maintain contact with a counselor in the Office of Admissions, Student, and Career Services (255–2532) to arrange their return to campus. The counselor will advise the student on procedures to obtain a recommendation from Gannett Health Center to the college registrar for the student's return. The student should plan sufficiently in advance to assure time for Gannett Health Center and the college registrar to consider their request.

Withdrawal

A withdrawal is a termination of student status at the university. Students may voluntarily withdraw at any time by notifying a counselor in the Office of Admission, Student, and Career Services and filing a written notice of withdrawal in the Human Ecology Registrar's Office. A student considering such an action is urged to discuss plans with a counselor in the Office of Admission, Student, and Career Services (172 MVR).

In some instances a student may be given a withdrawal by the college registrar. Students who leave the college without an approved leave of absence, or do not return after the leave has expired will be given a withdrawal after the seventh week of the term in which they fail to register.

A student who has withdrawn from the college or who has been given a withdrawal by the college registrar and who wishes to return at a later date must reapply through the Office of Admissions for consideration along with all other applicants for admission. If the student was in academic difficulty at the time of the withdrawal, the request for readmission will be referred to the Committee on Academic Status for consideration, and that committee may stipulate criteria under which the student may be readmitted to the college.

GRADES AND EXAMINATIONS

Grade Definitions and Equivalents

The official university grading system uses a system of letter grades ranging from A+ to D- with F denoting failure. An INC grade is given for incomplete work and R is given at the end of the first semester of a two-semester class. If a student is given permission to withdraw from a class after the seventh week of the term a W is automatically assigned. Students can view their grades on Just the Facts after the semester has ended. Final spring semester grades are mailed to student's homes during the summer. See the "Grading Guidelines" section in this book for more information on the official university grading policies.

To compute a semester grade point average, first add up the products (credits hours X grade quality points) and divide by the total credit hours taken. Grades of INC, R, S, SX, U, UX, and W should not be included in any GPA calculations. A grade of F has no quality points, but the credits are counted thereby lowering the average. A cumulative GPA is just the sum of all semester products divided by all credits taken. For further help on calculating a grade point average ask at the Office of the College Registrar (145 MVR).

These are the quality point equivalents:

A+ = 4.3	C+ = 2.3
A = 4.0	C = 2.0
A- = 3.7	C- = 1.7
B+ = 3.3	D+ = 1.3
B = 3.0	D = 1.0
B- = 2.7	D- = 0.7
	F = 0.0

S-U Grades

Some courses in the college and in other academic units at Cornell are offered on an S-U basis; that fact is indicated in this book. Courses listed as SX-UX are only available on an S-U basis and may not be taken for a letter grade. University regulations concerning the S-U system require that a grade of S be given for work equivalent to a C- or better; for work below that level, a U must be given. **No grade point assignment is given to S, and S or U grades are not included in the computation of semester or cumulative averages**. A course in which a student receives an S is, however, counted for credit. No credit is received for a U. Both the S and U grades appear on a student's record. A student who is attempting to qualify for the Dean's List must take at least 12 credits of A-F grades. See the section, *Awards and Honors* for more details about the Dean's List.

No more than 12 S-U credits will count towards a student's 120-credit graduation requirement. However, a student may take more than one S-U course in any one semester**. S-U courses may be taken only as electives or in the nine credits required in the college outside the major** unless the requirements for a specific major indicate otherwise. Freshmen enrolled in English 137 and 138 (offered for S-U grades only) are permitted to apply those courses to the freshman writing seminar requirement. If a **required** course is only offered S-U, it will not count toward the 12-credit or four-course limit. To take a course for an S-U grade, a student must check the course description to make sure that the course is offered on the S-U basis; then either sign up for S-U credit during course enrollment, or file an add/drop form in the Human Ecology Registrar's Office before the end of the third week of the term. Forms are available in the Human Ecology Registrar's Office. After the third week of the term, students cannot change grade options.

Note: students considering medical school or law school should discuss selecting any S-U option with the college's pre-med/pre-law adviser, Paula Jacobs (172 MVR).

Grades of Incomplete

A grade of incomplete is given when a student does not complete the work for a course on time but when, in the instructor's judgment, there was a valid reason. A student with such a reason should discuss the matter with the instructor and request a grade of incomplete.

A grade of incomplete may remain on a student's official transcript for a maximum of two semesters and one summer after the grade is given, or until the awarding of a degree, whichever is the shorter period of time. The instructor has the option of setting a shorter time limit for completing the course work.

If the work is completed within the designated time period, the grade of incomplete will be changed to a regular grade on the student's official transcript. **If the work is not completed within the designated time period, the grade of incomplete automatically will be converted to an F**.

When a student wants to receive a grade of incomplete, the student should arrange a conference with the instructor (preferably before classes end and the study period begins) to work out the agreement. A form, called explanation for reporting a final grade of F or incomplete, which must be signed by both the instructor and the student, needs to be submitted by the instructor to the Human Ecology Registrar's Office. This form is submitted with the final grade sheets whenever a grade of incomplete is given. This form is for the student's protection, particularly in the event that a faculty member with whom a course is being completed leaves campus without leaving a record of the work completed in the course. If circumstances prevent a student from being present to consult the instructor, the instructor may, if requested by the student, initiate the process by filling out and signing part of the form and turning it in to the Human Ecology Registrar's Office with the grade sheet. Before a student will be allowed to register for succeeding semesters, he or she must go to the Human Ecology Registrar's Office to fill out and sign the remainder of the form.

If the work is satisfactorily completed within the required time, the course appears on the student's official transcript with an asterisk and the final grade received for the semester in which the student was registered for the course. A student who completes the work in the required time and expects to receive a grade must take the responsibility for checking with the Human Ecology Registrar's Office (about two weeks after the work has been handed in) to make sure that the grade has been received. Any questions should be discussed with the course instructor.

Grade Disputes

Students who find themselves in disagreement with instructor over grades have several options:

1. Meet with the instructor and try to resolve the dispute.
2. Meet with the chair of the department in which the instructor has their appointment.
3. Meet the associate dean for undergraduate studies of the college in which the course was taught.
4. Meet with the university ombudsman (118 Stimson Hall, 255–4321).

A student may also seek advice from their faculty adviser or with a counselor in the Office of Admission, Student, and Career Services (172 MVR).

Repeating Courses

Students are allowed to register a second time for a course they have already passed or have received an "F." If a student has previously passed a course they are taking a second time, the second registration will not count towards their degree requirements and the grade received will not be included in their cumulative GPA.

If a student enrolls in a course in which they previously received an F, the credits from the second registration will count towards their graduation requirements and the grade will be included in their cumulative GPA. The F will also remain on the record and will be included in the GPA.

Examinations

Both the preliminary and final examination schedules are printed every semester in the *Course and Time Roster*. The current exam information is also available on the university web page at www.cornell.edu/Academic/Academic.html#Class.

Final Examinations

The following is quoted from the Cornell University Faculty Handbook, 1990, pages 66–67:

"The University Faculty long ago established, and has never reversed, the policy that each course should require a final examination or some equivalent exercise (for example, a term paper, project report, final critique, oral presentation, or conference) to be conducted or due during the period set aside for final examinations.

"Although not specifically prohibited, it is University policy to discourage more than two examinations for a student in one twenty-four hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a makeup for other valid reasons, i.e. illness, death in the family, etc.

Legislation of the University Faculty governing study period and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the Registrar's Office without prior written permission of the Dean of the Faculty.
2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.
3. Permission will be given by the Dean of the Faculty to reschedule examinations during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time that the examination was originally scheduled. The faculty member requesting such a change will be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the Registrar's Office.
4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) in the final examination period.
5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.
6. Faculty can require students to submit papers during the week preceding the study period.
7. Take home examinations should be given to classes well before the end of the regular term and should not be required to be submitted during study period but rather well into the examination period.

Students have a right to examine their corrected exams, papers, and the like, in order to be able to question their grading. They do not, however, have an absolute right to the return thereof. Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester preferably until the end of the following term, to afford students such right of review."

Preliminary Examinations

The following is quoted from the Cornell University Faculty Handbook (1990), pages 65–66:

"Preliminary examinations are those given at intermediate times during a course. It is common to have three of these in a term to encourage review and integration of major

segments of the course, to provide students with feedback on how well or poorly they are progressing, and to contribute to the overall basis for a subsequent final grade.

The most convenient times and places for "prelims" are the normal class times and classrooms. But many courses, particularly large ones with multiple sections, choose to examine all the sections together at one time and to design an examination that takes more than one class period to complete. In such cases the only alternative is to hold the prelim in the evening. This practice creates conflicts with other student activities, with evening classes and laboratories, and among the various courses that might choose the same nights.

To eliminate direct conflicts, departments offering large multisection courses with evening prelims send representatives annually to meet with the dean of the University Faculty to lay out the evening prelim schedule a year in advance. Instructors of smaller courses work out their own evening prelim schedules, consulting their students to find a time when all can attend. Room assignments are obtained by the faculty member through the contact person in his or her college or the Central Reservations Coordinator.

The policy governing evening examinations is as follows:

1. Evening examinations may be scheduled only on Tuesday and Thursday evenings and only after 7:30 P.M. without prior permission from the Office of the University Faculty.
   a. Such prior permission is not, however, required for examinations or makeup examinations involving small numbers of students (generally 30 or fewer) provided that the scheduled time is acceptable to the students involved and that an alternate examination time is provided for those students who have academic, athletic, or employment conflicts at the time scheduled.
2. Permission from the Office of the University Faculty to schedule on evenings other than Tuesdays and Thursdays or at a time prior to 7:30 P.M. will be granted only on the following conditions:
   a. Conditions such as the nature of the examination, room availability, large number of conflicts, etc., justify such scheduling.
   b. An alternate time to take the exam must be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.
3. If there is a conflict between an examination listed on the schedule developed at the annual evening prelim scheduling meeting and an examination not on the schedule, the examination on the schedule shall have a priority, and the course not on the schedule must provide an alternate time to take the examination for those students faced with the conflict.
4. If there is a conflict between examinations, both of which are on the schedule developed at the annual evening prelim scheduling meeting or both of which are not on the schedule, the instructors of the courses involved must consult and agree on how to resolve the conflict. Both instructors must approach this resolution process with a willingness to provide an alternative or earlier examination.
5. Note that courses using evening examinations are strongly urged to indicate this in the course description listed in Courses and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed."

ACADEMIC STANDING

Criteria for Good Standing

The College of Human Ecology has established a set of minimum academic standards which all students must meet or exceed each semester. These standards are as follows:

1. A student must maintain a semester and cumulative grade point average of 1.7 or higher.
2. A student must successfully complete at least 12 credits per semester, excluding physical education courses.
3. Freshmen and sophomore students must complete at least one human ecology course each semester. (ECON 101 and ECON 102 are considered Human Ecology courses).
4. A student must be making "satisfactory progress" toward a bachelor's degree.

Upon the completion of each semester the Committee on Academic Status (CAS) reviews each student's academic record to ensure the above academic standards are upheld. The committee then takes appropriate action for students whose academic achievement is considered unsatisfactory as defined by the above criteria. The five voting faculty members, along with several nonvoting student services staff, consider each case individually before deciding on a course of action. The committee may take any of the following actions depending on the seriousness of the student's academic difficulties:

1. Take no action.
2. Return the student to **Good Standing**.
3. Place the student on a **Review List**, which means the case will be monitored throughout the semester.
4. Place the student on a **Warning** status.
5. Place the student on a **Severe Warning** status.
6. Place the student on a **Severe Warning with Danger of Being Dropped** status, implying that if the student does not show considerable improvement during the semester the committee will likely drop the student at the end.
7. **Suspend** the student for one or more terms during which the student may not register at Cornell (except in extramural status with CAS approval).
8. Permanently **withdraw** the student from the college and Cornell University.

Students who have been suspended or withdrawn have the right to appeal the decision in front of the committee during the appeals meeting. Students who have been placed on warning due to incomplete or missing grades may request their status be updated to good standing once they have cleaned up their records. These requests should be made with a general petition and submitted to the Office of the Registrar.

All students with a status will automatically be reviewed at the end of the subsequent semester. In most cases, students put on a warning, severe warning, or severe warning with danger of being dropped status will be informed of conditions that they are expected to fulfill in order to return to good standing. In general these conditions are that a student must earn a minimum GPA of 2.0, complete 12 credits, and not have any incomplete, missing, "F", or "U" grades on their semester record.

If a student who has been previously suspended wishes to return to the college he/she must submit a plan of study to the committee before being rejoined.

Students who have been withdrawn by CAS may request reconsideration and ask to be readmitted by the committee. Such students have three years from the date they were withdrawn to make this request. After three years, a former student must apply for admission through the Office of Admission. A student should discuss their situation with a counselor in the Office of Admission, Student, and Career Services (172 MVR). They should also talk with others who may be able to help them—faculty advisers, instructors, or a member of the medical staff. A students may also write directly to the committee (via the committee chair, whose name can be obtained from the college registrar) and present new or previously unknown information. Any information given to the committee is held in the strictest confidence.

Academic Integrity

Academic integrity is a critical issue for all students and professors in the academic community. The University Code of Academic Integrity states that (1) a student assumes responsibility for the content and integrity of the academic work he or she submits, such as papers, examinations, or reports and (2) a student shall be guilty of violating the code and subject to proceedings under it if he or she:

a. Knowingly represents the work of others as his or her own.
b. Uses or obtains unauthorized assistance in any academic work.
c. Gives fraudulent assistance to another student.
d. Fabricates data in support of laboratory or fieldwork.
e. Forges a signature to certify completion of approval of a course assignment.
f. Uses an assignment for more than one course without the permission of the instructor involved.
g. Uses computer hardware and/or software to abuse privacy, ownership, or user rights of others.
h. In any manner violates the principle of absolute integrity.

The Academic Integrity Hearing Board, which consists of a chairperson, three faculty

members, and three students, hears appeals from students who have breached the code. It also deals with cases brought directly to it by members of the faculty.

Academic Records

Students may obtain their Cornell academic record in several ways. The **Cornell transcript**, which is the official record of the courses, credits, and grades that a student has earned can be ordered with no charge at the Office of the University Registrar (B7 Day Hall). For more information call (607) 255–4232. Students who merely want an unofficial working copy of their transcript can request a copy of their **record card** from the Office of the College Registrar (145 MVR). Students may also access their grades and course schedules electronically using **Just the Facts**. **Student should be in the habit of checking Just the Facts by the second week of every semester to confirm that their schedule and grade options are correct**.

The college also maintains a **graduation progress worksheet** for each student showing progress towards the degree. At the beginning of fall term continuing students receive a copy of their worksheet. It is important to check this document and bring any errors to the attention of the staff in the Office of the College Registrar (145 MVR).

Access to Records

The Family Educational Rights and Privacy Act of 1974 assures students of privacy of their records. The law also assures students' access to their records. Information concerning a student's relationship with the university is considered restricted and may be released only at the student's specific written request. Restricted information includes the courses elected; grades earned; class rank; academic and disciplinary actions by appropriate faculty, student, or administrative committees; and financial arrangements between the student and the university. Letters of recommendation are restricted information unless the student has specifically waived right of access.

Students who want additional information on access to their records may contact the Office of the College Registrar (145 MVR) or the Office of the University Registrar (B7 Day Hall). An inventory of those student records maintained by Cornell University offices in Ithaca, their location, and cognizant officer are available in the Office of the Dean of Students (401 Willard Straight Hall).

For specific information, refer to the university's policy, "Access to Student Information," at the following web address: www.univco.cornell.edu/policy/ASI.html, or talk with the college registrar in the Office of the College Registrar (145 MVR).

ACADEMIC HONORS AND AWARDS

The college encourages high academic achievement and recognizes outstanding students in several ways.

Honors

Dean's List. Excellence in academic achievement is recognized each semester by placing on the Dean's List the names of students who have completed satisfactorily at least 12 credits of letter grades and who have a semester grade point average of 3.7 or above. No student who has received an F or U in an academic course will be eligible.

Kappa Omicron Nu seeks to promote graduate study and research and to stimulate scholarship and leadership toward the well-being of individuals and families. As a chapter of a national honor society in the New York State College of Human Ecology, it stimulates and encourages scholarly inquiry and action on significant problems of living—at home, in the community, and throughout the world.

Students are eligible for membership if they have attained junior status and have a cumulative average of not less than B. Transfer students are eligible after completing one year in this institution with a B average.

Current members of Kappa Omicron Nu elect new members. Not more than 10 percent of the junior class may be elected to membership and not more than 20 percent of the senior class may be elected. Graduate students nominated by faculty members may be elected. The president of Kappa Omicron Nu has the honor of serving as First Degree Marshall for the college during May commencement.

Bachelor of Science with Honors recognizes outstanding scholastic achievement in an academic field. Programs leading to a degree with honors are offered to selected students by the Department of Human Development and the Division of Nutritional Sciences. Information about admission to the programs and their requirements may be obtained from the appropriate department or division. Students in other departments who wish to qualify for honors should contact Janet Brown-Aist (N118A MVR) during their sophomore year or the first semester of their junior year. Most honors candidates have a minimum grade point average of 3.3 and have demonstrated potential for honors-level research. To graduate with honors a student must take approved courses in research methodology and evaluation, attend honors seminars, complete a written thesis, and successfully defend it in front of a committee.

Bachelor of Science with Distinction recognizes outstanding scholastic achievement. Distinction is awarded to students in the top 10 percent of the graduating class based on the last 60 credits earned at Cornell. The graduating class includes students who will complete requirements for Bachelor of Science degrees in January or May of the same academic year or the prior August. Names of seniors who meet these requirements are presented to the faculty of the college for approval.

The primary objectives of the honor society, **Phi Kappa Phi**, are to promote the pursuit of excellence in higher education and to recognize outstanding achievement by students, faculty, and others through election to membership. Phi Kappa Phi is unique in that it recognizes scholarship in all academic disciplines. To be eligible for membership students must rank in the top 10 percent of the senior class, or in the top 5 percent of the junior class. Provisions also exist for the election of faculty members and graduate students whose work merits recognition.

Gamma Sigma Delta is an honor society of the faculty in the colleges of Human Ecology, Agriculture and Life Sciences, and Veterinary Medicine. The common bond is promotion of excellence in work related to the quality of our environment and life based on "agriculture and the related sciences." The Cornell chapter recognizes the academic achievements of students, faculty, and alumni of those colleges with nominations for membership and with special awards. To be eligible, seniors must be in the upper 15 percent of their major. Five juniors with the highest grade point average in their college are also nominated.

Class Rank for the junior and senior classes is computed at the end of each semester. The college registrar processes class rank after final grades are issued and will not be adjusted if a student's academic record changes for any reason.

Awards

The Elsie Van Buren Rice Award in Oral Communication is awarded for original oral communication projects related to the college's mission by undergraduate students in the College of Human Ecology. The contest is held each year in February and awards prizes totaling $1,500.

The Flora Rose Prize is given biennially to a Cornell junior or senior whom, in the words of the donor, "shall demonstrate the greatest promise for contributing to the growth and self-fulfillment of future generations." The recipient will receive a cash prize of $500.

The Florence Halpern Award is named for the noted psychologist, Dr. Florence Halpern, in recognition of her lifelong interest in "innovative human service, which betters the quality of life." In that spirit the award is presented to a undergraduate in the College of Human Ecology who has demonstrated, through supervised field work or community service, creativity in the search for solutions to human problems. The award carries a $500 cash prize.

COLLEGE COMMITTEES AND ORGANIZATIONS

Student Groups and Organizations

Following are brief descriptions of some of the organizations that offer valuable experiences to human ecology students. Information about many other student activities on campus may be obtained from the Office of the Dean of Students (401 Willard Straight Hall).

The **American Council on Consumer Interests (ACCI)** offers a student membership for those interested in consumer economics. Contact the department of Consumer Economics and Housing for further information.

The **Cornell Design League** was formed to give students interested in apparel a chance to express their creativity outside of the classroom by producing a fashion show every spring. It has become concerned with all aspects of a professional presentation. Consequently, it also provides a creative outlet for those interested in graphics, photography, illustration, or theater production. Although many of its designers are part of the Department of Textiles and Apparel, the Design League welcomes people of all majors and schools.

Students have opportunities to work throughout the community in a variety of service capacities. They volunteer in day care centers, youth programs, health-related agencies, services for elderly people and people with disabilities, as well as nutrition programs, arts organizations, and Ithaca schools. For further information, contact the **Public Service Center** (200 Barnes Hall). Call 255–1148 for information about volunteer work or 255–1107 for information about work-study arrangements.

Gamma Sigma Delta is an honor society of the faculty in the colleges of Human Ecology, Agriculture and Life Sciences, and Veterinary Medicine. The common bond is promotion of excellence in work related to the quality of our environment and life based on agriculture and the related sciences. The Cornell chapter recognizes the academic achievements of students, faculty, and alumni of those colleges with nominations for membership and with special awards. To be eligible, seniors must be in the upper 15 percent of their major. Five juniors and sophomores with the highest grade average in their college are also nominated.

Human Ecology Ambassadors is a group of undergraduates who assist the Office of Admission, Student, and Career Services by participating in group conferences with prospective students to provide information from a student's perspective, assisting with recruitment and yield activities for potential students, conducting high school visitations, assisting with on-campus open-house programs for high school students and potential transfer students, helping with prospective students and alumni phonathons.

In addition, ambassadors attend regular meetings and serve as coordinators for activities in the Office of Admission, Student, and Career Services.

For information, contact the Office of Admission, Student, and Career Services (172 MVR, 255–5471).

The mission of the **Human Ecology Voices** is to build unity among students, faculty, and staff in the College of Human Ecology. Membership consists of all representatives of all other Human Ecology student organizations and other interested students. Patti Papapietro serves as Voices adviser from the Office of Admission, Student, and Career Services (172 MVR, 255–2532).

The **Human Ecology Mature Students Association** is an organization of students who are 24 years of age or older at the time of matriculation. Many mature students need to balance family, work, and other concerns with their academic efforts. The Mature Students Association strives to help by providing a forum for resource exchange and referral, support, socializing, and special projects depending upon expressed interest. These goals are pursued through seminars and informational meetings, the mature students listserv, supplementary orientation activities, liaison with other university offices, and the encouragement of informal networking. Contact Patti Papapietro in the Office of Admission, Student, and Career Services (172 MVR) for more information.

Students interested in the relationship between the physical environment and human behavior may join the **Human-Environment Relations Students Association (HERSA)**. For more information, contact the Department of Design and Environmental Analysis.

The **International Facility Managers Association (IFMA)** also has a student chapter. Membership information is available from the Department of Design and Environmental Analysis.

The **Association for Students of Color (ASC)** unites human ecology minority students to provide a supportive foundation for their enrollment, retention, graduation, and career placement. ASC members work toward these goals by:

- participating in admissions hosting programs and conducting high school visitations
- sponsoring presentations on career and graduate school outcomes of a human ecology education
- providing volunteer services to the Cornell and Ithaca communities,
- attending regular meetings and hosting annual fall and spring forums.

Contact Verdene Lee in the Office of Admission, Student, and Career Services (172 MVR, 255–2532) for more information.

The **Orientation Committee** consists of students and advisers interested in planning and implementing programs to acquaint new students with the College of Human Ecology. The committee is particularly active at the beginning of each semester and is always eager for new members. For information, contact Patti Papapietro in the Office of Admission, Student, and Career Services (172 MVR, 255–2532).

Membership in the **Sloan Student Association** is open to students interested in health care and related fields. Contact the president of the association (N222 MVR, 255–8013) for more information.

The **Students for Gerontology (SFG)** is composed of students from a wide variety of majors who are interested in career and internship opportunities that contribute to the well-being of our aging population. Programs sponsored by this organization focus on developing linkages with community organizations and other student gerontology groups. SFG meets monthly. Contact Donna Dempster-McClain, faculty adviser, Bronfenbrenner Life Course Center, (259 MVR Hall, 255–5557), for further information.

The **Undergraduate Nutrition Organization (UNO)** promotes nutritional well-being through education, communication, and research. Members of the student chapter organize programs such as Food and Nutrition Day in March, host on-campus speakers in nutrition and health-related fields, and publish NutriNews, a campus-wide nutrition newsletter. The student chapter is open to all students interested in nutrition education. For further information contact Gail Canterbury (302 MVR, 255–5473).

Committees and Councils

Several official organizations exist within the college to deal with matters of policy and to provide leadership in college planning. Most include elected student and faculty representatives; the actions of these various groups affect all students directly or indirectly.

The Educational Policies Committee (EPC) has two student members, one graduate and one undergraduate, who vote along with the faculty members on all matters relating to college academic policy. Recommendations are submitted to this committee regarding revisions in degree requirements, new curriculum changes, and new course approval.

Students also have the opportunity to serve on the **Admissions Policy Subcommittee**, and the **Academic Integrity Hearing Board**.

The Selection Committee for the Chancellor's Award for Excellence in Teaching or Professional Service handles the nomination and selection process for this prestigious yearly award. The committee consists of three teaching faculty members, one professional staff member, and three undergraduate members.

The **Human Ecology Alumni Association Board of Directors** includes two student board members—one junior and one senior. One student is selected each spring to begin a two-year term as student representative. The two students co-chair the board's Student Activities Committee, which works to increase the visibility of the Alumni Association among the student body by funding a variety of activities. The student members also bring an important perspective to board deliberations about programming and annual goals.

The Committee on Academic Status does not include student representatives, but has a faculty representative from each department. This committee is responsible for upholding the academic standards of the college and takes action when appropriate. The committee also hears appeals regarding student petitions and requests to be readmitted.

INTERDEPARTMENTAL COURSES

HE 100 Critical Reading and Thinking
Fall, spring, or summer. 2 credits. Enrollment limited. Priority is given to freshmen and sophomores; juniors and seniors are admitted with permission of the instructor. Letter or S-U grades.
The objective of this course is to enable students to increase critical reading and thinking abilities. Theory and research associated with a wide range of reading, thinking, and learning skills are examined. Emphasis is placed on developing and applying analytical and evaluative skills. Laboratory instruction is individualized and provides the opportunity to focus intensively on increasing comprehension, reading rate, and vocabulary.

HE 101 College Achievement Seminar
6-week summer session. 2 credits. Enrollment limited to and required of pre-freshman Summer Program students. Letter or S-U grades.
The objective of this course is to improve the study and learning skills of incoming freshmen. Emphasis is placed on acquisition of skills necessary to achieve academic success. Topics include time management, note-taking, mapping, textbook comprehension, exam preparation, and exam strategies. The application of theory to the demands of Cornell course work is stressed. In addition, students are introduced to library and

computing resources through hands-on projects.

THE URBAN SEMESTER PROGRAM IN MULTICULTURAL DYNAMICS IN URBAN AFFAIRS

Cornell in New York City provides students with many study options that focus on multicultural dynamics in urban affairs. The options available include internships, individual and group community service projects, research, independent study, collaborative learning, and mentorships. Students must enroll concurrently in the three courses, HE 470, HE 480 and HE 490. Students learn through reflection and action. Program options are possible throughout the academic year, during winter break, and in the summer.

Courses of study enable students to seek out the relationship between theory and practice, apply theory to practice, identify and acquire professional practice skills, and learn about the impact of diversity on New York City. By applying ethnographic research techniques and methods, students learn to think conceptually, reflect on their actions, and be agents of change.

Several majors in the college require internships or encourage field study. Check with the Director of Undergraduate Studies of each major for more information. The Career Development Center in 159 MVR and counselors in the Office of Admission, Student, and Career Services in 172 MVR can help you find internships and provide more information on departmental opportunities and enrolling in Cornell in New York City.

HE 470 Multicultural Practice
Fall and spring semesters.
Students immerse themselves in internship activities three days each week. During small group seminars, students reflect on their internship experiences, focusing on multicultural issues, professional practice, and organizational culture.

HE 480 Multicultural Issues in Urban Affairs
Fall and spring semesters.
This course is a study of multicultural issues in urban affairs. It occurs as students enhance their academic foundations and their career development. Using a historical perspective, students examine issues of diversity (e.g., race, ethnicity, religion, class, gender, sexual orientation) in relationship to (1) professional life in different sectors of the economy; (2) the development of neighborhoods and communities; and (3) the basis of a just and democratic society. Reading focuses on inner-city children and youth under a variety of multiculturally-influenced conditions and contexts. Costs include travel to and from sites by public transportation at about $3.00–6.00 each week.

HE 490 Communities in Multicultural Practice
Fall and spring semesters.
This course provides students with an understanding of community building processes and enables them to interact with children, youth, and their families in school settings. For a full day once each week, students work in inner city schools with teachers, staff, and children, providing community service. Student learning is focused on how to increase children's learning capacities and expand their horizons by teaching them to envision success. Students focus on the assets that inner city children bring to their school environment and learn how to mentor them. They help teach skills, knowledge, values, behaviors, and perspectives that school children must develop in order to enter the working world. Costs include public transportation costs to and from the various sites, about $3.00–6.00 each week.

HE 402 The Winter Session in Community Service and Mutual Learning: The South Bronx-Banana Kelly/Cornell University Project in Community Building
Winter Session.
Over the course of two intensive weeks, students participate in an ongoing community service project in the South Bronx with children of the Banana Kelly community. In carrying out community service, students participate with the director of the Cornell in New York City Program. Since the 1995 intersession, students have mentored children in an after-school program through projects that have documented the community with photographs, models, and stories. Each intersession, seven students mentor 15 ninth graders from Banana Kelly High School.

A photo exhibit was produced and circulated. In 1998, Cornell students and children produced three-dimensional models of their imagined community in future years and a book of essays and photographs.

HE 406 Fieldwork in Diversity and Professional Practice
Summer session.
Over the course of an eight-week summer session, students participate in a community-based medical center, hospital or clinic a member of the New York Presbyterian Hospital and Weill College of Medicine of Cornell University. This is a four-day internship and one day of seminars and site visits.

DESIGN AND ENVIRONMENTAL ANALYSIS

F. Becker, chair; W. Sims, director of undergraduate studies; S. Danko, director of graduate studies; A. Basinger, J. Elliott, P. Eshelman, G. Evans, K. Gibson, R. Gilmore, A. Hedge, J. Jennings, J. Laquatra, L. Maxwell

Note: A minimal charge for photocopied course handouts may be required.

Note: Class meeting times are accurate as of the time of publication. If changes are necessary, the department will provide new information as soon as possible.

DEA 4+1 Masters Degree Program

Outstanding students who complete their four year undergraduate degree in DEA are eligible to complete a Master of Arts/ M.A (Interior Design) or a Master of Science/M.S. (Human Environment Relations) degree in one additional year of graduate study.

Through careful planning many of the courses required in the M.A. or M.S. programs can be taken during the undergraduate years, creating an opportunity to focus the fifth year of study on completing course and thesis requirements. As early as the freshman year, students can plan their curriculum toward completing a fifth year masters. Typically, this means students will take 4 to 5 courses in their fall term as a graduate student, and 2 to 3 courses plus their thesis research in the spring term. Students should expect to complete their thesis by the end of the summer term of their fifth year.

Admission to the 4+1 Masters program is not automatic. Students must meet with their advisers early in their undergraduate programs to plan carefully for this possibility. In the fall of the senior year, interested students must submit an application to the Graduate School. The GRE exam is not required for admissions, but students must submit a statement of intent, letters of reference, and transcripts. Students who have compiled a strong undergraduate record in the department are usually good candidates for admission into the graduate program in Design and Environmental Analysis. Students interested in this program should meet with their DEA adviser as early as possible to discuss and plan for application to this program.

DEA 101 Design Studio I
Fall. 3 credits. Each section limited to 20 students. Permission of instructor required for non-DEA majors. Priority given to interior design majors. Option I majors must take DEA 101 in fall of their first year. Approximate cost of materials, $200. M W 1:25–4:25; or T R 10:10–1:10. J. Elliott.
This studio course introduces the fundamental vocabulary and principles of two- and three-dimensional design. Students experiment with the development of image and form through problem-solving activities. Visit http://instruct1.cit.cornell.edu/courses/dea101/.

DEA 102 Design Studio II
Spring. 3 credits. Limited to Option I DEA majors only. B– or higher in DEA 101 required to register for this course. Option I majors must take DEA 102 and 115 concurrently. Approximate cost of materials, $200; shop fee, $10. T R 1:25–4:25. P. Eshelman.
A studio course in three-dimensional design with an interior design emphasis. Problems in spatial organization are explored through drawings and models.

DEA 111 Making a Difference: By Design
Fall. 3 credits. Limit 130. Lab Fee: $25. M W F 11:15–12:05. S. Danko.
Students from any academic area may examine how design affects their daily lives and future professions. This course focuses on issues of leadership, creative problem-solving, and risk-taking through case study examination of leaders in business, education, medicine, human development, science, and other areas who have made a difference using design as a tool for positive social change. Utilizing a micro to macro framework, students explore the impact of design from the person to the planet. Additional topics include: nurturing innovation, visual literacy, design criticism, design and culture, semiotics, proactive/reflective decision making, and ecological issues.

DEA 115 Design Graphics
Spring. 3 credits. Option I DEA majors only. Prerequisite: DEA 101; must take DEA 102 and DEA 115 concurrently. Minimum cost of materials, $100; technology fee $10. M W F 9:05–11:00. K. Gibson.
A studio drawing course for interior designers. Discussion groups on drawing techniques are held to develop a visual understanding and vocabulary. Students are introduced to the functions of line, shape, and value. Perspective, spatial, and conceptual drawing are emphasized.

DEA 150 Introduction to Human-Environment Relations
Spring. 3 credits. M W F 12:20–1:10. G. Evans.
This course analyzes environment and human behavior. We examine the interface of social and environmental sciences with application for the design and management of built and natural habitats. Topics include environmental effects on health, well-being, moods, aesthetics, performance, interpersonal relationships, and organizational effectiveness as well as the ecological consequences of human attitudes and behaviors. Visit our web site at instruct1.cit.cornell.edu/courses/dea150.

DEA 201 Design Studio III
Fall. 4 credits. Limited to Option I DEA students. Prerequisites: DEA 101,102, and 115 (minimum grades of B–) Recommended: DEA 111 and 150. Coregistration in DEA 251 is required. Minimum cost of materials, $150; lab fee, $40; optional field trip, approximately $120. M W F 1:25–4:25. J. Jennings.
This is the third semester in the studio sequence of eight semesters. The theme and objectives focus on design as critical thinking, introducing means by which students can think, draw, write, and build their way critically through design. Taken concurrently with DEA 251, the course applies historical and theoretical knowledge to design projects. The course also includes a collaborative project with a professor and students from another design discipline.

DEA 202 Design Studio IV
Spring. 4 credits. Each section limited to Option I DEA students. Prerequisites: DEA 201 and 203. Prerequisites or corequisites: DEA 204. Minimum cost of materials, $120; diazo machine fee, $8; field trip fee. T R 12:20–4:25. R. Gilmore.
Interior design studio. Emphasis of the course is on continued development of basic proficiency in design skills through exposure to a selected set of interior design problems of limited complexity. Each problem of three to five weeks duration is structured to emphasize different aspects of the design process.

DEA 203 Digital Communications
Fall. 2 credits. Priority given to DEA majors. Lab fee $10. Sec 01 M 7:30–9:55 P.M., sec 02 W 7:30–9:55 P.M. J. Elliott.
Digital information technologies for designers of the built environment. Students explore issues in relation to text and image and form and content through a series of weekly projects. They work towards the development of a professional web-based portfolio of self-promotional materials. The primary course objective is to reinforce principles of visual communications while learning the rudiments of vector, raster, and html graphic software. Visit http://instruct 1.cit.cornell.edu/courses/dea203/

DEA 204 Introduction to Building Technology
Spring. 2 credits. M 2:30–4:25. W. Sims.
Introduction to building technology for interior designers and facility managers. Emphasis is placed on developing basic understanding of buildings and building systems and their implications for interior design and facility management. Covers basic building types; structural systems; construction materials and methods; HVAC systems; plumbing, electrical, lighting, fire, and security systems; and telephone, computer, and other communication systems. Visit http://courseinfo.cit.cornell.edu/courses/dea204.

[DEA 243 Inside Out: The American Everyday Interior (also WOMNS 243, AM ST 243)
Spring (odd-numbered years). 3 credits. Limited to 65. S-U option. T R 10:10–11:15. Offered 2003. J. Jennings.
A study of late nineteenth and twentieth-century everyday interiors in socio-cultural contexts, with an emphasis on design dissemination, consumer patterns, and gender issues. Topics include women's walls, power in the parlor, photographs as a mirror, and the love of the colonial.]

DEA 250 The Environment and Social Behavior
Fall. 3 credits. Limited to 16. Priority order: DEA seniors, juniors, sophomores, freshmen. Prerequisite: DEA 150 and written permission of instructor. Field trip fee $65. T R 2:55–4:10. G. Evans.
A combination seminar and lecture course for students interested in the social sciences, design, or facility management. Through projects and readings the influence of environmental form on social behaviors such as aggression, cooperation, communication, community, and crime is explored. Also covered are the influences of stage in life cycle, family structure, and social class on environmental needs and purposes. Implications for the planning, design, and management of complex environments such as offices, hospitals, schools, and housing are emphasized.

DEA 251 History and Theory of the Interior
Fall. 3 credits. Limited to 65. Priority given to DEA majors. M W F 9:05–9:55. J. Jennings.
An historic study of interior architecture and design with an emphasis on the concepts of design theory. Overarching themes encompass several time periods from the classical to the twentieth century and isolate cultural patterns, spatial ideas, dialectics, design elements, and theorists. Reading, discussion, analytical exercises, essays, examinations, and a field trip will be included. Visit http://instruct1.cit.cornell.edu/courses/dea251/.

DEA 300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged. Department faculty.
Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the College Registrar's Office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

DEA 301 Design Studio V
Fall. 4 credits. Prerequisites: DEA 111, 150, 201, 202, 203, and 204. Corequisite: DEA 303 and 459. Minimum cost of materials, $150; shop fee, $10; optional field trip, approximately $10. T R 12:20–4:25. P. Eshelman.
Intermediate-level interior design studio. The course is organized around a series of interior and interior-product design problems of intermediate-level complexity, three to five weeks in duration. Focus is on development of design skills and on understanding of a selected set of generic problem types.

DEA 302 Design Studio VI
Spring. 5 credits. Prerequisites: DEA 301 and 303 or permission of instructor. Corequisite: DEA 305. Minimum cost of materials, $150; shop fee, $10. M W F 1:25–4:25. K. Gibson.
Intermediate-level interior design studio with an introduction to computer applications. Emphasis on using the microcomputer as a design tool in the process of creating and planning interior spaces. Continued development of design skills and problem solving in relation to a selection of problem types.

DEA 303 Introduction to Furnishings, Materials, and Finishes
Fall. 2 credits. W 2:30–4:25. R. Gilmore.
Basic understanding of furniture types and systems; interior products and equipment such as work-stations; window, wall, and floor coverings; ceiling and lighting systems; and materials and finishes. Emphasis is placed on criteria for selection of furnishings, materials, and finishes for typical interior design and facility management problems.

DEA 304 Introduction to Professional Practice of Interior Design
Spring. 1 credit. W 2:30–4:25. A. Basinger.
Introduction to organizational and management principles for delivery of interior design and facility management services. Covers basic organizational structures and basic management functions within interior design and facility management organizations, work flow and scheduling, business practices, legal and ethical responsibilities and concerns, contracts, basic contract documents such as working drawings and specifications, supervision of construction and installation, and cost estimation.

DEA 305 Construction Documents and Detailing
Spring. 2 credits. Prerequisites: DEA 301 and DEA 303. Corequisite: DEA 302. Minimum cost of materials $50. Field trips, $50. F 9:05–11:00. R. Gilmore.
Comprehensive study of drafting, detailing, schedules, and specifications. Emphasis on drawing conventions, symbols, dimensioning, detailing of interior elements, terminology, construction methods, and materials.

DEA 325 Human Factors: Ergonomics–Anthropometrics
Fall. 3 credits. Recommended: DEA 150. T R 8:40–9:55. A. Hedge.
Implications of human physical and physiological characteristics and limitations on the design of settings, products, and tasks. An introduction to engineering anthropometry, biomechanics, control/display design, work physiology, and motor performance. Course

includes practical exercises and field project work.

DEA 350 Human Factors: The Ambient Environment
Spring. 3 credits. Recommended: DEA 150. T R 8:40–9:55. A. Hedge.
An introduction to human-factor considerations in lighting, acoustics, noise control, indoor air quality and ventilation, and the thermal environment. The ambient environment is viewed as a support system that should promote human efficiency, productivity, health, and safety. Emphasis is placed on the implications for planning, design, and management of settings and facilities. Course includes a field project.

DEA 400–401–402–403 Special Studies for Undergraduates
Fall or spring. Credits to be arranged. S-U grades optional. Department faculty.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of DEA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the department office. This form must be signed by the instructor directing the study and the department head and filed at course registration or within the change-of-registration period in 145 MVR, College Registrar's Office, along with an add/drop slip. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department head is necessary. Students, in consultation with their advisers and the instructor should register for one of the following subdivisions of independent study.

DEA 400 Directed Readings
For study that predominantly involves library research and independent reading.

DEA 401 Empirical Research
For study that predominantly involves data collection and analysis or laboratory or studio projects.

DEA 402 Supervised Fieldwork
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

DEA 403 Teaching Apprenticeship
For study that includes teaching methods in the field and assisting faculty with instruction. Students must have demonstrated a high level of performance in the subject to be taught and in the overall academic program.

DEA 407 Design Studio VII
Fall. 5 credits. Prerequisites: DEA 302, DEA 303, DEA 304, and DEA 305. Minimum cost of materials, $150. Field trip $50. T R 12:20–4:25. R. Gilmore.
Advanced interior design studio organized around a series of interior design problems, three to five weeks in duration. Focus is on development of design skills and on competence in solving a selected set of generic interior design problem types.

DEA 408 Design Studio VIII
Spring. 5 credits. Prerequisites: DEA 301, 302, 303, and 304. Minimum cost of materials, $150. T R 12:20–4:25. S. Danko.
Design problem-solving experiences involving completion of advanced interior design problems. Problems are broken into five phases: programming; schematic design and evaluation; design development, including material and finish selection; design detailing; and in-process documentation and the preparation of a professional-quality design presentation.

DEA 422 Ecological Literacy and Design (also ARCH 464.02)
Spring. 3 credits. Letter grade only. Field trips approximately $25. T R 10:10–11:40. J. Elliott.
This is a lecture/seminar course for students interested in learning about the effects of designing the built environment of the biophysical world. Course objectives are to develop sensitivities to environmental issues, construct conceptual frameworks for analysis, and demonstrate how ecological knowledge can be applied to the practice of design through participatory approaches to learning. Visit http://instruct1.cit.cornell.edu/courses/dea422/.

DEA 430 Furniture as a Social Art
Spring. 3 credits. Limited to 15. Permission of instructor. Cost of building materials: $150. Students must also sign up for 2 hours of DEA shop time each week for model building. M W 9:05–11:00. P. Eshelman.
This course examines furniture as a design process that emphasizes support of human behavior. Information about specific social issues including health care, aging, child care, and education is the starting point for assignments. Students analyze products currently available and design new furniture. Also covered are furniture materials, fabrication processes, and manufacturing techniques.

DEA 443 Cultural Construction: The Nineteenth- and Twentieth-Century American Interior
Spring (even-numbered years). 3 credits. Enrollment limited to 15 students. S-U option. Field trips $50. T R 10:10–11:30. Next offered spring 2004. J. Jennings.
A topical study of nineteenth- and twentieth-century American vernacular interiors, exploring the relationship between interior design theory and social and cultural values. Sources include historic interiors, literature and art, and architectural and material culture studies. The course includes reading, discussion, comparative analysis, and critical writing.

DEA 451 Seminar on Facility Planning and Management
Fall. 1 credit. Letter grades only. M 3:35–4:25. F. Becker, W. Sims.
Series of seminars led by Cornell faculty and other facility management professionals. Topics include strategic space planning, space standards, office automation, project management, energy conservation, environmental protection, and regulatory issues. Visit http://instruct1.cit.cornell.edu/courses/dea/451_659.

DEA 453 Planning and Managing the Workplace
Spring. 3 credits. Prerequisite: limited to juniors and seniors. Purchase of course packet required. M 7:30–10:30 P.M. F. Becker.
Intended for students interested in the planning, design, and management of facilities for complex organizations. The purpose of the course is to explore how characteristics of the workplace, including building, design, furniture and equipment, and policies governing their use and allocation, affect individual and organizational effectiveness. Special topics, such as the human implications of new information technologies and work at home, are also covered. Visit http://instruct1.cit.cornell.edu/courses/dea/453_653.

DEA 454 Facility Planning and Management Studio
Spring. 4 credits. Prerequisite: DEA 459 or permission of instructor. Letter grades only. Minimum cost of materials, $200. T R 1:25–4:25. W. Sims.
For advanced undergraduates interested in facility planning and management. Purpose is to provide basic tools, techniques, and concepts useful in planning, designing, and managing facilities for large, complex organizations. The course covers strategic and tactical planning for facilities, organizing to deliver facility management services, project management, space forecasting, space allocation policies, programming, relocation analysis, site selection, building assessment, space planning and design, furniture specifications, and moves. Sociopsychological, organizational, financial, architectural, and legal factors are considered. Visit http://instruct1.cit.cornell.edu/courses/dea/454_654.

DEA 455 Research Methods in Human–Environment Relations
Fall. 3 credits. Prerequisites: DEA majors only or permission of instructor, and a statistics course. M W F 1:25–2:15. G. Evans.
The course develops the student's understanding and competence in the use of research and analytical tools to study the relationship between the physical environment and human behavior. Emphasis is placed on selection of appropriate methods for specific problems and the policy implications derived from research. Topics include research design, unobtrusive and obtrusive data-collecting tools, the processing of qualitative and quantitative data, and effective communication of empirical research findings.

DEA 459 Programming Methods in Design
Fall. 3 credits. Letter grade only. Minimum cost of materials $100. T R 10:10–11:25. W. Sims.
Introduction to environmental programming. Emphasis on formulation of building requirements from user characteristics and limitations. Diverse methods for determining characteristics that will enable a particular environmental setting to support desired behaviors of users and operators. Methods include systems analysis, soft system, behavior circuit, behavior setting, and user characteristic approaches. Selection of appropriate methods to suit problems and creation of new methods or techniques are emphasized. Visit http://instruct1.cit.cornell.edu/courses/dea/459_650.

DEA 470 Applied Ergonomic Methods
Spring. 3 credits. Prerequisite: DEA 325. T R 2:55–4:10. A. Hedge.
This course covers ergonomics methods and techniques and their application to the design of modern work environments. Emphasis is placed on understanding key concepts. Coverage includes conceptual frameworks for

ergonomic analysis, systems methods and processes, a repertoire of ergonomics methods and techniques for the analysis of work activities and work systems. This course is the undergraduate section of DEA 670, which will share the same lectures but will meet for an additional hour. DEA 670 will have additional readings and projects.

DEA 499 Senior Honors Thesis
Fall or spring. Variable credit. Prerequisite: permission of thesis advisor and DEA director of undergraduate studies. Letter grades only.
This is an opportunity for DEA majors to undertake original research and scholarly work leading to the preparation of a thesis. Students work closely with their thesis adviser on a topic of interest.

DEA 600–603 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. S-U grades optional. Department faculty.
Independent advanced work by graduate students recommended by their special committee chair and approved by the head of the department and instructor.

600: Special Problems. For study of special problems in the areas of interior design, human environment relations, or facilities planning and management.

601: Directed Readings. For study that predominantly involves library research and independent study.

602: Graduate Empirical Research. For study that predominantly involves collection and analysis of research data.

603: Graduate Practicum. For study that predominantly involves field experiences in community settings.

DEA 643 Cultural Construction: The Nineteenth- and Twentieth-Century American Interior
Spring (even-numbered years). 4 credits. Enrollment limited to 15 students. S-U option. Field trips $50. T R 10:10–11:30. Next offered spring 2004. J. Jennings.
A course intended for graduate students who want a more thorough grounding in the history of vernacular interiors than is provided by DEA 443. Each student is required to attend DEA 443 lectures, meet with the instructor and other graduate students for an additional class hour each week, and do additional readings and projects.

DEA 645 Dancing Mind/Thinking Heart: Creative Problem-Solving Theory and Practice
Spring. 3 credits. Limited to 15 graduate and advanced undergraduate students. Prerequisite for undergraduates: permission of instructor. T 4:30–7:30. S. Danko.
Focuses on thinking processes and techniques that support creative problem solving. Theories of creative behavior and critical thinking are examined. The course is highly participatory and experiential by design. Weekly discussions include hands-on applications of theories on short problems tailored to the backgrounds of the students. The primary goal is to demonstrate perceptual, emotional, intellectual, cultural, and environmental blocks to creative thinking and expand the student's repertoire of creative problem solving strategies for use in day-to-day professional practice. Case studies of creative individuals and organizations from a variety of fields are presented.

DEA 648 Advanced Applications in Computer Graphics
Fall. 3 credits. Limited to 18 graduate and advanced undergraduate students. Prerequisites for undergraduates: DEA 302 or permission of instructor. Minimum cost of materials $150. Lab fee $35. T R 9:05–12:05. K. Gibson.
Advanced use of computer technology to create and analyze interior environments. Emphasis will be on the use of 3-D modeling, animation, photorealistic rendering, and emerging technologies to investigate dynamic design issues.

DEA 650 Programming Methods in Design
Fall. 4 credits. T R 10:10–11:25. W. Sims.
A course intended for graduate students who want a more thorough introduction to environmental programming methods than is provided by DEA 459. Each student is required to attend DEA 459 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. See DEA 459 for more detail.

DEA 651 Human Factors: Ergonomics-Anthropometrics
Fall. 4 credits. Recommended: DEA 150 and a 3-credit statistics course. T R 8:40–9:55. A. Hedge.
A course intended for graduate students who want a more thorough grounding in human factors than is provided by DEA 325. Each student is required to attend DEA 325 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. See DEA 325 for more detail.

DEA 652 Human Factors: The Ambient Environment
Spring. 4 credits. Recommended: DEA 150. T R 8:40–9:55. A. Hedge.
A course intended for graduate students who want a more thorough grounding in human factors considerations than is provided by DEA 350. Each student is required to attend DEA 350 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For detailed description, see DEA 350.

DEA 653 Planning and Managing the Workplace
Spring. 4 credits. Letter grades only. Purchase of course packet required. M 7:30–10:30 P.M. F. Becker.
Intended for graduate students who want a more thorough grounding in the planning, design, and management of facilities for complex organizations than is provided by DEA 453. Each student is required to attend DEA 453 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. See DEA 453 for more detail.

DEA 654 Facility Planning and Management Studio
Spring. 4 credits. Prerequisite: DEA 459/650 or permission of instructor. Letter grades only. Minimum cost of materials, $200. For graduate students in facility planning and management. T R 1:25–4:25. W. Sims.
For description, see DEA 454.

DEA 656 Research Methods in Human-Environment Relations
Fall. 4 credits. Prerequisites: DEA majors only or permission of instructor, and a statistics course. M W F 1:25–2:15. G. Evans.
Intended for graduate students who want a more thorough understanding of the use of research to study the relationship between physical environment and human behavior than is provided by DEA 455. Each student is required to attend DEA 455 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. See DEA 455 for more detail.

DEA 659 Seminar on Facility Planning and Management
Fall. 1 credit. For graduate students interested in careers in facility planning and management. Letter grades only. M 3:35–4:25. F. Becker, W. Sims.
Series of seminars led by Cornell faculty members and other professionals directly involved in facility planning and management. Topics include strategic and tactical facility planning, space standards, project management, computer and facility management, facility maintenance and operations, energy conservation, and building systems. Visit http://instruct1.cit.cornell.edu/courses/dea451_659.

DEA 660 The Environment and Social Behavior
Fall. 4 credits. Prerequisite: DEA 150 and written permission of instructor. Field trip fee $65. T R 2:55–4:10. G. Evans.
Intended for graduate students who want a more thorough understanding of the influence of environmental form on social behavior than is provided by DEA 250. Each student is required to attend DEA 250 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. See DEA 250 for more detail.

DEA 668 Design Theory Seminar
Spring. 3 credits. Enrollment limited to 25 students. T R 10:10–11:40. J. Jennings.
Directed toward advanced undergraduate and graduate students with interest in the theory of design. The purpose is to provide an understanding of major theoretical ideas underlying design movements of the twentieth century. Explores these ideas through readings, lectures by faculty and visitors, student presentations of research papers, and seminar discussions. Visit http://instruct1.cit.cornell.edu/courses/dea668.

DEA 670 Applied Ergonomics Methods
Spring. 4 credits. Enrollment limited to 20. Prerequisite: DEA 651. T R 2:55–4:10. A. Hedge.
Intended for graduate students who want a more thorough understanding of applied ergonomics methods than is provided by DEA 470. Each student is required to attend DEA 470 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. See DEA 470 for more detail.

DEA 899 Master's Thesis and Research
Fall or spring. Credits to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional. Department graduate faculty.

HUMAN DEVELOPMENT

J. Eckenrode, chair; S. Cornelius, director of graduate studies; J. Haugaard, director of undergraduate studies; C. Anderson, U. Bronfenbrenner, J. Brumberg, M. Casasola, S. Ceci, M. Cochran, D. Dempster-McClain, R. Depue, J. Doris, J. Garbarino, K. Greene, S. Hamilton, C. Hazan, B. Koslowski, L. C. Lee, B. Lust, P. Moen, K. Pillemer, H. Ricciuti, S. Robertson, J. Ross-Bernstein, R. Savin-Williams, Q. Wang, E. Wethington, W. Williams

NOTE: Class meeting times are accurate as of the time of publication. If changes are necessary, the department will provide new information as soon as possible.

HD 115 Human Development
Fall or summer. 3 credits. S-U grades optional. M W F 1:25–2:15. C. Schelhas-Miller.
Provides a broad overview of theories, research methods, and current knowledge of human development from conception into adulthood. Course material covers infancy, childhood, and adolescence. Topics include biological, intellectual, linguistic, social, and emotional development as well as the cultural, social, and interpersonal contexts that affect the developmental processes and outcomes of these domains.

HD 116 Exploring Human Development
Fall. 1 credit. Letter grades only. Limited to Human Development freshmen. TBA. HD faculty.
This course is a series of small group discussions with HD freshmen and a HD faculty member. Each faculty member will set the topics and style of discussion. Discussion groups will meet one hour a week, each week of the fall semester. No exams will be given. Grading will be done on attendance, participation, and short written assignments.

HD 216 Human Development: Adolescence and Youth
Spring. 3 credits. Prerequisite: HD 115 or Psychology 101 or permission of instructor. S-U grades optional. T R 11:40–12:55. C. Schelhas-Miller.
Provides a broad overview of theories, research, and issues in the study of human development from early to late adolescence (youth). Attention is focused on the major biological, cognitive, and social changes during adolescence; the psychosocial issues of adolescence, including identity, autonomy, intimacy, sexuality, achievement, and problems; and the contexts in which adolescent development occurs, particularly families, peer groups, schools, work, and popular culture. Empirical research, theories, case studies of the lives of real adolescents, and, to a lesser degree, public policies are discussed.

HD 218 Human Development: Adulthood and Aging
Spring. 3 credits: Prerequisite: HD 115. S-U grades optional. T R 11:40–12:55. S. Cornelius.
Provides a general introduction to theories and research in adult development and aging. Psychological, social, and biological changes from youth through late adulthood are discussed. Both individual development within generations and differences among generations are emphasized.

HD 230 Cognitive Development
Spring. 3 credits. S-U grades optional. Prerequisites: HD 115 or Psychology 101. T R 11:40–12:55. Q. Wang.
This course surveys theories and research in perceptual and cognitive development from infancy through adolescence. Extensive coverage of infant perception, cognition, and learning during the first two years of life forms the foundation of the course. Significant linkages between brain development and behavioral development are covered when possible. Language, memory, concepts, and problem solving are covered in the second half of the semester. The course is intended to serve as a foundation for more advanced study in cognitive development, but also as an overview for students whose primary interests lie in other areas.

HD 233 Children and the Law
Fall. 3 credits. Prerequisites: HD 115 and an introductory statistics course. W 2:30–5:00. Staff.
This course examines psychological data and theories that shed light on the practical issues that arise when children enter the legal arena. It attempts to integrate theories, research, and methodology from several areas of psychology including, developmental, cognitive, social, and clinical. This course also attempts to examine the degree to which basic research can (and should) be used to solve applied issues. The topic of children and the law provides an opportunity to meet all these requirements. Rapid changes involving child witnesses in our legal system have forced social scientists to bring their work into the courtroom. At the same time, bringing this fray into the legal system has changed the course of research and thinking about certain aspects of child development and cognition: it has encouraged researchers to tackle new issues and to develop innovative experimental paradigms. Selected topics to be covered include: memory development, suggestibility, theory of mind, childhood amnesia, expectancy formation, symbolic representational ability, and finally, what can (or should) an expert witness tell the court. Several actual cases involving child witnesses will be presented to illustrate the application of scientific data to the courtroom. Because of the heavy use of case materials; video and textual coverage of actual trials, it is expected that students will devote more than the usual number of hours to this course.

[HD 241 History of Childhood in the United States (also HIST 271, AM ST 241)
Spring. Recommended for sophomores and juniors. 3 credits. M W 8:40–9:55. Not offered 2001–2002. J. Brumberg.
An examination of childhood and adolescence in various historical contexts: Puritan New England, slave plantations, evangelical revivals, the Western frontier, Victorian families, reform schools, early high schools and colleges, the sexual revolution of the 1920s, immigrant communities, the Depression and World War II, the 1950s, and more recent social and cultural changes affecting families. Students will evaluate continuities and changes in the lives of American children as well as changing scientific ideas about children. Students have an opportunity to reflect on and write about their own childhood and adolescence. This course is designed to give students a humanities perspective on approaches to childhood.]

HD 242 Participation with Groups of Young Children
Fall or spring. 4 credits. Limited to 20 students (limit depends on availability of placements and of supervision). Prerequisites: HD 115 and permission of instructor. S-U grades optional. W 1:25–3:30. J. Ross-Bernstein.
This course is designed to integrate developmental theories with supervised experience in child care centers, the intention being to enhance the student's abilities to understand and to relate effectively to young children. This class involves participation, observation, reflection, reading, writing, and sharing of viewpoints. Placements are in local nursery schools, day care centers, Head Start programs, and kindergartens.

HD 250 Families and the Life Course (also SOC 250)
Spring. 3 credits. S-U grades optional. M W 2:55–4:10. E. Wethington.
This course provides an introduction to social scientific research on family roles and functions in American society. Topics include the history of the family, family change over the life course, and the influence of cultural and economic forces on families.

HD 251 Social Gerontology: Aging and the Life Course
Spring. 3 credits. Limited to 60 students. Strongly recommended: HD 250 or equivalent to be determined by instructor. S-U grades optional. T R 8:40–9:55. D. Dempster-McClain.
This course analyzes the social aspects of aging in contemporary American society from a life course perspective. Topics to be covered include: (1) an introduction to the field of gerontology, its history, theories, and research methods; (2) a brief overview of the physiological and psychological changes that accompany aging; (3) an analysis of the contexts (such as family, friends, social support, employment, volunteer work) in which individual aging occurs, including differences of gender, ethnicity, and social class.; (4) and the influences of society on the aging individual. Guest speakers will provide an introduction to various careers in the field of gerontology.

HD 253 Gender and the Life Course (also WOMNS 253)
Fall. 3 credits. S-U grades optional. M 7:30–10:00 P.M. T. Mitrano.
We will examine the complex interplay between gender and age as well as the social construction of the life course. Students explore the relationship between social change and individual lives, observing the significance of two key institutions—work and family—in shaping basic life choices and their consequences throughout the life course. Implications of key life trajectories and transitions for individual lives and for social policy will also be discussed.

[HD 258 History of Women in the Professions, 1800 to the Present (also WOMNS 238 and HIST 238, AM ST 258)
Fall. 3 credits. S-U grades optional. Human ecology students must register for HD 258. Not offered 2001–2002. J. Brumberg.
The historical evolution of the female professions in America (midwifery, nursing, teaching, librarianship, home economics, and social work) as well as women's struggles to gain access to medicine, law, and the

sciences. Lectures, reading, and discussions aim to identify the cultural patterns that fostered the conception of gender-specific work, and the particular historical circumstances that created these different work opportunities. The evolution of "professionalism" and the consequences of professionalism for women, family structures, and American society are also discussed.]

HD 260 Introduction to Personality (also PSYCH 275)

Spring. 3 credits. Recommended: introductory course in psychology or human development. T R 1:25–2:40. D. Bem.

This course is designed as an introduction to theory and research in the area of personality psychology, with special emphasis on personality development. It covers the major influences—including genetic, environmental, and gene-environment interactions—and involves in-depth study of the major theories. The assumptions and models of human behavior that form the basis of each theoretical orientation will be examined and compared, and the relevant empirical evidence reviewed and evaluated. In addition, basic psychometric concepts and the methods for measuring and assessing personality will be covered, as will the major related debates and controversies.

[HD 261 The Development of Social Behavior

Spring. 3 credits. Strongly recommended: HD 115 or Psychology 128. Offered alternate years. Not offered 2001–2002. T R 1:25–2:40. Staff.

Issues in the development of social behavior are viewed from the perspective of theory and research. Likely topics include bases of social behavior in infancy and early childhood, the role of parents, siblings, and peers, the development of prosocial and aggressive behavior, the development and functioning of attitude and value systems, and the function and limits of experimental research in the study of social development.]

HD 266 Emotional Functions of the Brain

Fall. 3 credits. Prerequisite: a biology course. Letter grades only. M 10:10–12:35. R. Depue.

Much of our social behavior, and what we refer to as personality, is related to phylogenetically-old emotional systems, systems that help us to adapt to critical stimuli in the environment. These systems are structured and organized within the brain, but they are also capable of being modified by our everyday experiences. After an overview of the gross anatomy of the primate brain is presented, the focus of the course concerns networks of brain regions that are organized around the integration of processes related to emotion and motivation. First, general features of the brain in relation to emotional evaluation and expression processes are discussed, and then the brain organization is related to several specific types of emotional systems. Neurobiological modulation of emotional processes by neurotransmitters of wide distribution in the brain are detailed as well. The latter helps to lay the groundwork for understanding the nature of individual differences in much of our social and emotional behavior.

HD 281 Foundations of Clinical Practice (also PSYCH 281)

Fall. 3 credits. Enrollment limited to 60 students (30 HD/30 PSYCH). W 1:30–4:30. C. Maxwell Miller.

This course provides an introduction to the theoretical and practical aspects of some basic elements of counseling. Students will develop an understanding of the most current research on the elements of counseling and basic theoretical foundations underlying different approaches. Students will be expected to acquire and demonstrate elementary helping skills. Through role-play, observation of videos, and in-class demonstrations, students will learn such skills as attending and active listening; they will also develop a capacity to recognize internal conflicts and cognitive distortions as well as the similarities between intra-psychic and interpersonal processes. Other topics include issues of transference and countertransference, the multi-axial dimensions of the DSMIV, defensive strategies as they appear in the DSMIV, and ethical considerations and practices. While this course provides an introduction to the applied aspects of psychology, it does not prepare students to provide treatment of any sort.

HD 282 Community Outreach (also PSYCH 282)

Fall and spring. 2 credits. Letter grades only. Prerequisites: HD 115 or Psychology 101. Students may not concurrently register with HD 327 or HD 328 or Psych 327 or Psych 328. T 10:10–11:25. H. Segal.

This course provides students with information and perspectives needed to do volunteer fieldwork with human and social service programs in the community. To gain a practical understanding of what mental health professionals do in the workplace, students will examine problems that emerge in fieldwork settings, which raise ethical, methodological, theoretical, and practical issues in the observation or treatment of clients or patients. They will also be introduced more generally to the Field of Community Psychology, its history, theory, and applications. Although students are not required to volunteer at a local agency, the instructor will assist students in finding sites that may provide appropriate learning opportunities.

[HD 284 Introduction to Sexual Minorities (also WOMNS 285)

Fall. 3 credits. Prerequisite: one social science course. S-U grades optional. M 7:30–10:00 P.M. Not offered 2001–2002. R. Savin-Williams.

This course introduces students to theories, empirical scholarship, public policies, and current controversies with lesbian, gay, bisexual, transgender, sexually questioning, and other sexual minority populations. The major focus is on gay, lesbian, and bisexual development, lifestyles, and communities with additional emphasis on ethnic, racial, gender, and class issues. Videos supplement the readings and lectures.]

HD 300 Special Studies for Undergraduates

Fall or spring. Credit to be arranged. Permission required.

Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the College Registrar's Office. The form, signed by both the instructor directing the study and the coordinator of undergraduate education, is filed at course registration or during the change-of-registration period.

HD 313 Problematic Behavior in Adolescence (also PSYCH 313)

Fall. 3 credits. Prerequisite: HD 115 or Psychology 101; HD 216 recommended. M W 2:55–4:10. J. Haugaard.

This course will explore several problematic behaviors of adolescence, including depression, drug abuse, eating disorders, and delinquency. Various psychological, sociological, and biological explanations for the behaviors will be presented. Appropriate research will be reviewed; treatment and prevention strategies will be explored. An optional discussion section will be available to students who would like an opportunity to discuss readings and lectures in greater depth.

HD 327 Field Practicum I (also PSYCH 327)

Fall. 3 credits. Enrollment limited to 30 students. Students must commit to taking HD 328 in the spring semester. Prerequisites: HD 370 or Psychology 325 and permission of instructor. Letter grades only. M W 8:40–9:55. H. Segal.

This course provides three components, which form an intensive undergraduate field practicum. Students spend three to six hours a week at local mental health agencies, schools, or nursing facilities working directly with children, adolescents, or adults; supervision is provided by host agency staff. Cornell faculty provide additional weekly educational supervision for each student. Seminar meetings cover issues of adult and developmental psychopathology, clinical technique, case studies, and current research issues. Students write two short papers, two final take-home exams, and present an account of their field experience in class.

HD 328 Field Practicum II (also PSYCH 328)

Spring. 3 credits. Enrollment is limited to 30 students. Prerequisites: HD 327 or Psychology 327 taken the previous term, Psychology 325 or HD 370 and permission of instructor. Letter grades only. M W 8:40–9:55. H. Segal.

This course continues the field practicum experience from HD 327. Students spend three to six hours a week at local mental health agencies, schools, or nursing facilities working directly with children, adolescents or adults; supervision is provided by host agency staff. Cornell faculty provide additional weekly educational supervision for each student. Seminar meetings cover issues of adult and family psychopathology, clinical technique, case studies, and current research issues. Students write two short papers, two final take-home exams, and present an account of their field experience in class.

HD 334 The Growth of the Mind

Spring. 4 credits. Open to undergraduate and graduate students. Graduate students should also enroll in HD 635, a supplemental graduate seminar. Prerequisites: a course in human experimental psychology, statistics, or HD 115 or equivalent; or permission of the instructor. S-U grades optional. T R 2:55–4:10. B. Lust.

In this course the fundamental issues of cognition are introduced. Students are asked to consider a number of questions. What is

the nature of human intelligence? How are knowledge and understanding acquired and represented in the human mind? What is the nature of mental representation? What are the cognitive characteristics of the mind at birth? What is the relation of the acquisition of knowledge and understanding to their final representation? What are the relations between language and thought? In the study of those issues, how can epistemology and experimental psychology be related through the experimental method? Basic debates within the study of cognition are introduced and discussed throughout. The course will analyze Piaget's comprehensive theory of cognitive development and experimental results. Current research in cognitive development will be contrasted.

HD 344 Infant Behavior and Development

Fall. 3 credits. Prerequisites: HD 115, a biology course, and a statistics course. Not open to freshmen. M W F 1:25–2:15. S. Robertson.

Behavior and development from conception through the first two years of life will be examined in traditional areas (e.g., perception, cognition, socioemotional theory, language, motor function). The fundamental interconnectedness of these aspects of development will be strongly emphasized, as will their relation to the biology of fetal and infant development. Topics with implications for general theories of development will be emphasized (e.g., the functional significance of early behavior, the nature of continuity and change, and the role of the environment in development). Conditions which put infants at risk for poor development (e.g., premature birth, exposure to environmental toxins, maternal depression) and topics with current social, ethical, or political implications (e.g., infant day care, fetal rights) will also be considered. An emphasis on research methodology in the study of early behavior and development will be maintained throughout the course.

HD 346 The Role and Meaning of Play

Fall. 2 credits. Limited to 30 juniors and seniors. Prerequisite: HD 115. M 7:30–9:25 P.M. J. Ross-Bernstein.

The aim of this course is to examine the play of children ages three through seven. Through seminar discussions, workshops, films, and individualized research the student will explore the meaning and validity of play in the lives of young children, the different ways that children play and the value of each, and the effect of the environment in enhancing and supporting play.

[HD 347 Human Growth and Development: Biological and Behavioral Interactions (also B&SOC 347 and NS 347)

Spring. 3 credits. Prerequisites: Biological Sciences 101 or 109 or equivalent, and HD 115 or Psychology 101. Limited to 150 students. M W F 1:25. Offered alternate years. Not offered 2001–2002. S. Robertson and J. Haas.

This course is concerned with the interrelationships of physical and psychological growth and development in humans during infancy. Intrinsic and extrinsic causes of variations in growth, including various forms of stimulation, are considered. In addition, the consequences of early growth and its variations for current and subsequent behavioral, psychological, and physical development are examined. The interaction between physical and behavioral or psychological factors is emphasized throughout the course.]

HD 348 Advanced Participation with Children

Spring. 4–8 credits. Limited to 20 students (limit depends on availability of placements and supervision). Prerequisites: HD 115 and HD 242; and permission of instructor. Recommended: HD 346. S-U grades optional. T 12:20–2:15. J. Ross-Bernstein.

An advanced, supervised field-based course, designed to help students deepen and consolidate their understanding of children. Students are expected to define their own goals and assess progress with supervising teachers and the instructor; to keep a journal; and to plan, carry out, and evaluate weekly activities for children within their placement. Conference groups and readings focus on the contexts of development and on ways to support children's personal and interpersonal learning. Each student is expected to do a presentation and paper on a self-selected topic within the scope of the class. Participation is in settings that serve typical and/or special needs children from three to eight years of age and provide education, care, or special-purpose interventions for them.

[HD 353 Risk and Opportunity Factors in Childhood and Adolescence

Spring. 3 credits. Enrollment limited to 100 students. Prerequisites: HD 115 and HD 250. S-U grades optional. T R 1:25–2:40. Not offered 2001–2002. J. Garbarino.

This course explores the meaning of risk and opportunity in the lives of children and youth. It begins with understanding risk accumulation and resilience as they relate to social policy, professional practice, and community development. The concept of "social toxicity" is a central theme of the course. Assignments include writing research-based editorials and participating in a simulated public policy debate.]

[HD 359 American Families in Historical Perspective (also WOMNS 357, HIST 359, AM ST 359)

Spring. 3 credits. Prerequisite: HD 250 or one 200-level social science or history course. S-U grades optional. Human ecology students must register for HD 359. Not offered 2001–2002. J. Brumberg.

This course provides an introduction to and overview of problems and issues in the historical literature on American families and the family life cycle. Reading and lectures demonstrate the pattern of American family experience in the past, focusing on class, ethnicity, sex, and region as important variables. Analysis of the private world of the family deals with changing cultural conceptions of sexuality, sex roles, generational relationships, stages of life, and life events. Students are required to do a major research paper on the history of their family, covering at least two generations, and demonstrating their ability to integrate life-course development theory, data drawn from the social sciences, and historical circumstances.]

HD 362 Human Bonding

Fall. 3 credits. Limited to 600 students. Recommended: introductory course in psychology or human development. S-U grades optional. T R 1:25–2:40. C. Hazan.

The science of interpersonal relationships. Examines the basic nature of human affectional bonds, including their functions and dynamics. Covers such topics as interpersonal attraction and mate selection, intimacy and commitment, love and sex, jealousy and loneliness, the neurobiology of affiliation and attachment, and the role of relationships in physical and psychological health.

HD 366 Psychobiology of Temperament and Personality

Spring. 3 credits. Letter grades only. Prerequisite: HD 266. M 7:30–10:00 P.M. R. Depue.

This course is for students who have an interest in the neurobiology of behavior, in general, and in temperament and personality, in particular. The course material is presented within an evolutionary biology perspective, where the development of neurobehavioral systems as a means of adapting to critical stimuli is explored as the basis of emotional traits in humans. The nature of temperament, social affiliation, and personality is explored from psychometric, social, genetic, and biological points of view. There is a focus on the general role played by the biogenic amines (dopamine, norepinephrine, and serotonin) and opiates in determining individual differences in temperament and personality. Implications for several forms of personality disorders and psychopathology are also discussed. Finally, the manner in which environmental influences across the life span may be coded in the brain and influence the development of personality is explored.

HD 368 Children's Development in Different Cultures

Spring. 3 credits. Letter grades only. Prerequisites: HD 115 or Psych 101 and one college-level statistics course. M W 2:55–4:10. K. Greene.

This course will examine the influence of ecological, cultural, and ethnic factors on the social and cognitive development of children in different cultures. Particular attention will be given to research methodologies that guide us in making comparisons about parent-child development across cultures. Topics will include family origin and universality, parental roles, child-family interaction, patterns of kinship, and economic and health issues.

HD 370 Adult Psychopathology (also PSYCH 325)

Spring. 3 credits. Limited to sophomores, juniors, and seniors. Prerequisites: any one course in psychology or human development. M W 2:55–4:10. S. Bem.

A research-based introduction to the biological, psychological, and social (including cultural and historical) aspects of adult psychopathology. The major mental illnesses will be covered, including but not limited to, schizophrenia, mood disorders, anxiety disorders, and personality disorders. Childhood disorders will not be covered.

HD 400–401–402–403 Special Studies for Undergraduates

Fall or spring. Credits to be arranged (1–4). Permission required. S-U grades optional.

For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of HD not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to

undertake, on a form available from the department office in NG14. This form must be signed by the instructor directing the study and the student's faculty adviser and submitted to NG14 MVR, the Office of Undergraduate Education. After the form is approved, the student takes the form to the College Registrar's Office, 145 MVR, along with an add/drop slip. To ensure review before the close of the periods, early submission of the special studies form to the Office of Undergraduate Education is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

400: Directed Readings. Permission required. For study that predominantly involves library research and independent study.

401: Empirical Research. Permission required. For study that predominantly involves data collection and analysis, or laboratory or studio projects.

402: Supervised Fieldwork. Permission required. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

403: Teaching Apprenticeship. Enrollment limited to juniors and seniors with a minimum 3.0 GPA. Prerequisites: either HD 115, 250, and two intermediate level HD courses, or four courses in psychology or sociology. Students must have taken the course or equivalent and received a grade of B+ or higher. Permission required. For study that includes assisting faculty with instruction.

[HD 417 Female Adolescence in Historical Perspective (also WOMNS 438, HIST 458, AM ST 417)

Spring. 3 credits. Limited to 25 students. Prerequisites: HD 216 and at least one 300-level history or women's studies or American studies course. Permission of instructor required. Juniors and seniors only. T 1:55–4:25. Not offered 2001–2002. J. Brumberg.

A reading, writing, and discussion course that will attempt to answer a basic historical question that has consequences for both contemporary developmental theory and social policy: how has female adolescence in the United States changed in the past 200 years? The focus will be on the ways in which gender, class, ethnicity, and popular culture shape adolescent experience. Although the required readings are primarily historical in nature, students are encouraged to think about the interaction of biology, psychology, and culture. Students are required to do a primary source research paper.]

HD 418 Psychology of Aging

Fall. 3 credits. Enrollment limited to 25 students. Prerequisites: HD 115, 250, and 218 or permission of instructor. Letter grades only. Offered alternate years. T R 2:55–4:10. S. Cornelius.

This seminar addresses major issues and controversies in the field of aging. It is designed for upper-level students who wish to pursue an in-depth analysis of concepts such as "successful" aging and wisdom, as well as controversies surrounding issues of generational equity and the right to die. Although these issues are addressed primarily from a psychological viewpoint, interdisciplinary perspectives are considered and incorporated in both readings and discussions. The seminar is designed for advanced undergraduates who have completed an introductory course in adulthood and aging and wish to pursue such issues in more depth. Class time will be primarily devoted to discussion of assigned readings.

[HD 419 Midlife Development

Fall. 3 credits. Enrollment limited to 25 students. Letter grades only. Prerequisites: HD 115, 250 and 218 or permission of instructor. T R 2:55–4:10. Offered alternate years. Not offered 2001–2002. S. Cornelius.

This course examines the burgeoning research literature on adult development during midlife. The focus of the course will be on research and theory examining psychological changes during middle adulthood such as relativistic and dialectical thinking, personality, identity, and sense of control. It also considders the social and physical changes that occur at this time of life especially regarding issues such as empty nest anxieties, divorce, career transitions, menopause, and cardiovascular disease. The course will be conducted in a seminar format for upper-level undergraduates. Oral presentations, class participation, and an integrative paper will be required.]

[HD 436 Language Development (also COGST 436, PSYCH 436 and LING 436)

Spring. 4 credits. Open to undergraduate and graduate students. Graduate students should also enroll in HD/LING 700, a supplemental graduate seminar. Prerequisite: at least one course in developmental psychology, cognitive psychology, cognitive development, neurobiology, biology, or linguistics. S-U grades optional. A supplemental lab course is available (HD 437). T R 2:55–4:10. Not offered 2001–2002. B. Lust.

This course surveys basic issues, methods, and research in the study of first-language acquisition. Major theoretical positions in the field are considered in the light of experimental studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The fundamental issues of relationships between language and thought are discussed, as are the fundamental linguistic issues of "Universal Grammar" and the biological foundations for language acquisition. The acquisition of communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child.]

[HD 437 Lab Course: Language Development (also COGST 450, PSYCH 437 and LING 450)

Spring. 2 credits. Prerequisite: HD/COGST/PSYCH/LING 436 or equivalent. R 1:25-2:40. Not offered 2001–2002. B. Lust.

This laboratory course is an optional supplement to the survey course, Language Development (HD/COGST/PSYCH/LING 436). The lab course will provide students with a hands on introduction to scientific research, including design and methods in the area of first language acquisition.]

HD 438 Thinking and Reasoning

Fall. 3 credits. Prerequisite: HD 115 or Psychology 101. T R 1:25–2:40. B. Koslowski.

The course will examine problem solving and transfer, pre-causal thinking, logical thinking, practical syllogisms, causal reasoning, scientific reasoning, theories of evidence, expert vs. novice differences, and nonrational reasoning. Two general issues will run through the course: the extent to which children and adults approximate the sorts of reasoning that are described by various types of models, and the extent to which various models accurately describe the kind of thinking that is required by the types of problems and issues that arise and must be dealt with in the real world.

HD 439 Cognitive Development: Infancy through Adolescence

Spring. 3 credits. Prerequisites: HD 115 or Psychology 101. Letter grades only. T R 1:25–2:40. B. Koslowski.

The course will be an overview of current and classic issues and research in cognitive development. Central topics of both "hard cognition" (e.g., information processing and neuropsychological functioning) and "soft cognition" (e.g., problem solving, concepts, and categories) will be covered. Selected topics will be linked to methodological issues and to important social issues such as cross-cultural cognitive development and putative racial and social class differences.

HD 440 Internship in Educational Settings for Children

Fall or spring. 8–12 credits. Prerequisites: HD 115, 242, or 243 and 348. Recommended: HD 346. Permission of instructor required. S-U grades optional. J. Ross-Bernstein.

Opportunity to integrate theory with practice at an advanced level and to further develop understanding of children ages 2 to 10 and their families. Interns will function as participants in varied settings and participate in curriculum planning, evaluation, staff meetings, home visits, parent conferences, and parent meetings. Supervision by head teacher and instructor. Students are expected to define their own goals and to assess their progress, to do assigned and self-directed readings, and to keep a critical incident journal.

[HD 451 Nontraditional Families and Troubled Families

Spring. 3 credits. Limited to 30 students. Prerequisites: HD 115 and 250. Letter grades only. T R 8:40–9:55. Offered alternate years. Not offered 2001–2002. J. Haugaard.

This is an advanced course designed to explore the functioning of families. The first part of the course examines family system theory and how it relates to our understanding of all families. Four types of families are then examined: two nontraditional families (e.g., adoptive families) and two troubled families (e.g., families with a chronically ill child).]

HD 456 Families and Social Policy

Spring. 3 credits. Prerequisite: one course in the area of the family or in sociology. S-U grades optional. M 7:30–10:00 P.M. T. Mitrano.

An examination of the intended and unintended family consequences of governmental policies, using case studies in areas such as social welfare, day care, and employment. The policy implications of changes in the structure and composition of families are also considered.

HD 457 Health and Social Behavior (also SOC 457)
Fall. 3 credits. Prerequisites: a course in statistics and one of the following: HD 250, Sociology 101, Sociology 251, or Rural Sociology 101. Letter grades only. T R 10:10–11:25. Offered alternate years. E. Wethington.
This course critically examines theories and empirical research on the relationships among social group membership, social status, and physical and mental health. The lectures focus on social stress, social support, and socioeconomic status, all of which are associated with variations in physical health, mental health, and health maintenance behaviors. Students are expected to read widely from current literature in medical sociology, health psychology, public health, and epidemiology.

HD 458 Parent-Child Development in African-American Families
Fall. 3 credits. Letter grades only. Enrollment limited to 25 seniors and juniors. Prerequisites: HD 115, HD 250, and a college level statistics course. T R 10:10–11:25. K. Greene.
This course will examine parent-child relationships in African-American families. Topics include historical influences on contemporary parenting behaviors, the impact of societal forces on African American families' socialization practices, and the influence of parental child rearing beliefs, strategies, and practices on African American children's development. Particular attention will be given to the relevance of mainstream theoretical formulations of African American's parental and familial functioning.

[HD 459 Disease in American Culture and Society (also AM ST 430)
Fall. 4 credits. Limited to 15 students. Prerequisites: HD 241, or HD 258, or HD 359, or HD 417. Permission of instructor required. Times TBA. Not offered 2001–2002. J. Brumberg.
How a society defines, explains, treats, and tries to prevent disease reveals a great deal about its basic ideals, values, and institutions. Diseases are not simple biological "facts," but the product of a complex amalgam of biological and social forces. This course uses the history of specific diseases to examine: (1) the ways in which the social and cultural environment shape the experience of illness; (2) the ideas that Americans have held about why some people get sick and others do not; (3) how those ideas reflect larger cultural as well as scientific trends; (4) the ways in which power relationships are involved in defining and responding to the threat of disease; (5) and the impact that disease has had on American society. A short response paper must be written for each session. An additional historiographical essay or research paper will be prearranged with the instructor.]

HD 464 Sexual Minorities and Human Development (also WOMNS 467)
Spring. 3 credits. Limited to 15 students. Priority given to seniors and juniors. T R 10:10–11:25. R. Savin-Williams.
This course covers topics selected by students regarding theoretical, research, and applied issues on sexual minorities. In the second half of the course, students lead a class that focuses on a research topic of their choosing. The success of the course depends on students feeling personally engaged and committed to the course content. Students are expected to participate fully in the class discussions. Because of the multidisciplinary nature of the course, students from a variety of backgrounds in academic disciplines, gender, sexual orientation, ethnicity, race, class, and religious affiliation will be in the course.

[HD 468 Stress in Childhood and Adolescence
Fall. 3 credits. Recommended: HD 115, HD 250 and a statistics course. Letter grades only. TBA. Not offered 2001–2002. J. Eckenrode.
This is an advanced seminar that will review research related to the nature and consequences of stressful experiences in childhood and adolescence, particularly those arising in the family. Topics covered represent common stressors in the lives of children (e.g. divorce of parents), which have potentially damaging consequences for development (e.g. child abuse). Topics in which faculty at Cornell have conducted significant research (e.g. children's memory for stressful events) are also covered. In addition to considering the negative affect of stress on development, we will also consider issues of individual differences in stress reactivity, including the concepts of coping and resilience. These topics lead naturally into discussions of practice and policy.]

[HD 471 Child Development and Psychopathology
Fall. 3 credits. Limited to 60 advanced-level students. Prerequisites: HD 115 or Psychology 101. Strongly recommended: a basic course in psychopathology. Letter grades only. M W 8:40–9:55. Not offered 2001–2002. J. Haugaard.
This class will explore the development and process of mental, emotional, and behavioral disorders in children such as mental retardation, autism, and attention deficit disorder. Topics will include: (1) the classification of mental disorders; (2) biological, psychological, and sociological theories regarding the development and maintenance of mental disorders; (3) prevalence and etiology of childhood mental disorders, and (4) therapeutic and preventive interventions. If there is sufficient enrollment, an optional discussion section will be available to those students who would like an opportunity to discuss readings and lecture material in greater depth.]

HD 483 Early Child Care and Education in Global Perspective
Fall. 3 credits. Enrollment limited to 25 juniors and seniors. Prerequisites: HD 115 and HD 250. S-U grades optional. T R 2:55–4:10. M. Cochran.
In this course we examine American child care policies and programs, broadly defined, in the context of policies and programs in Africa, Asia, Europe, and Latin America. Comparison and analysis are guided by several complementary conceptual frameworks. Particular attention is given to relativism and universalism as applied to developmental and educational principles and concepts. Students specialize in the child care policies and programs of another country, work in teams to analyze a contemporary policy issue, and apply course content to an issue of their choice in a final paper.

HD 498 Senior Honors Seminar
Fall and spring. 1 credit. Required for, and limited to, seniors in the HD honors program. S-U grades only. TBA. S. Cornelius.
This seminar is devoted to discussion and presentation of honors theses being completed by the senior students.

HD 499 Senior Honors Thesis
Fall or spring. Credit to be arranged. Prerequisite: permission of thesis adviser and coordinator of honors program. S-U grades optional. Department faculty.

HD 106, 206, 306, 406 Topics in Human Development
2–4 credits. S-U grades optional.
These topics vary each time the course is offered and are taught by advanced graduate students in the field of human development. Descriptions are available at the time of course registration. These courses do not fulfill any requirements for the major; they must be taken as electives.

Topics Courses

Fall or spring. 2–4 credits. Prerequisites and enrollment limits vary with topic being considered in any particular term. Permission of instructor may be required.
This series of courses provides an opportunity for undergraduates to explore an issue, a theme, or research in the areas of departmental concentration. Topics vary each time the course is offered. Descriptions are available at the time of course registration. Although the courses are usually taught as seminars, a subject may occasionally lend itself to lecture, practicum, or other format.

HD 215, 315, 415 Topics in Adolescent and Adult Development

HD 235, 335, 435 Topics in Cognitive Development

HD 245, 345, 445 Topics in Early-Childhood Development and Education

HD 255, 355, 455 Topics in Family Studies and the Life Course

HD 265, 365, 465 Topics in Social and Personality Development

HD 275, 375, 475 Topics in Developmental Psychopathology

HD 285, 385, 485 Topics in the Ecology of Human Development

The Graduate Program

HD graduate courses are only open to undergraduates with instructor's permission.

General Courses

[HD 610 Processes in Human Development: Theoretical Models and Research Designs
Spring. 3 credits. Open to graduate students and juniors and seniors in HD and related fields with instructor's permission. Prerequisite: a minimum of one course in statistics. Letter grades only. W 2:00–4:25. Not offered 2001–2002. U. Bronfenbrenner.
The purpose of the seminar is to acquaint students with selected scientific paradigms being employed at the frontiers of developmental science for investigating the conditions and processes that shape human development over the life course. Particular attention will be given to research models that draw on disciplines (such as evolutionary biology, human genetics, developmental psychology,

sociology, anthropology, history, economics). The principal seminar activities consist of faculty and student development of research questions, critical analysis of these questions in the light of diverse theoretical perspectives, and their corresponding research designs. In this process, the human being is treated as an integrated organism.]

[HD 617 Adolescence
Spring. 3 credits. Not offered 2001–2002. Staff.
Critical examination of seminal theoretical and empirical writings on adolescent development. Empirical research on specific questions chosen by students is considered in the light of these approaches.]

[HD 631 Cognitive Development
Fall. 3 credits. Letter grades only. Not offered 2001–2002. Staff.
Faculty members involved in the course will present their area of specialization in cognitive development. These areas will include perception, attention, memory, language, thinking and reasoning, learning, creativity, and intelligence.]

[HD 640 Infancy
Fall. 3 credits. TBA. Not offered 2001–2002. S. Robertson.
Development in infancy will be examined through a critical review of key research and theory in selected aspects of neurobehavior, perception, cognition, language, emotion, and social relationships. Theoretical issues to be considered include the role of experiences in early development, sensitive periods, continuity and discontinuity in development, and the functional significance of early behavior. Some of the conditions that put infants at risk for poor development will also be considered, such as premature birth, perinatal medical complications, and exposure to environmental toxins. The course will combine perspectives from developmental psychology and psychobiology.]

[HD 650 Contemporary Family Theory and Research
Fall. 3 credits. Not offered 2001–2002. E. Wethington.
Sociological and social psychological theories and research on the family are examined with reference to the relationship between the family and society. Topics change from year to year, but focus on the processes of socialization and social control, the reproduction of gender and social class across generations, changes in family "values" across time, the rise of divorce and single motherhood, family diversity, and the genesis of deviance and psychological disorder.]

[HD 660 Social Development
Spring. 3 credits. S-U grades optional. Not offered 2001–2002. Staff.
This course is designed to provide both broad and in-depth training in the areas of social and emotional development during infancy and childhood. It will cover most of the major topic areas and theoretical orientations. Consideration will be given to basic influences on socioemotional development—biological, social, and cultural. Coverage will include normative development as well as the origins and nature of individual differences. We will explore such fundamental issues and questions as: What are emotions? What role do they play in the development and organization of personality? What are the effects of early social relationships on emotional regulation? When and how does the self-system emerge? Emphasis will be on the processes—both internal and external—that help determine the course and outcome of development.]

[HD 670 Experimental Psychopathology
Spring. 3 credits. Prerequisite: an undergraduate course in abnormal psychology or psychopathology; a course in multivariate statistics; and substantive course work in neurobiology or related biological science. TBA. Not offered 2001–2002. Staff.
Overview of current theories and empirical research on functional and organically based psychological disorders. Topic areas to be covered include autism, schizophrenia, anxiety disorders, affective disorders, and personality disorders. Focus is on the developmental and etiology of psychopathology.]

Topical Seminars

Seminars offered irregularly, with changing topics and instructors. Content, hours, credit, and instructors to be announced. Seminars offer concentrated study of specific theoretical and research issues.

HD 618 Seminar in Adolescence and Adult Development
Topics include peer relations, parent-teen relationships, self-esteem, youth and history, work, and moral development.

HD 633 Seminar on Language Development
Topics include acquisition of meaning in infancy, precursors of language in early infancy, and atypical language development.

HD 635 Seminar in Cognitive Development
Topics include early attention, perception, memory, and communication. Assessment and intervention in relation to these processes will be considered when possible.

HD 645 Seminar on Infancy
Focuses on selected topics in the developmental psychology and psychobiology of infancy (including fetal development). Special topics vary and depend in part on student interests.

HD 646 Seminar in Early-Childhood Development and Education
Topics include analysis of models and settings, design of assessment techniques, program evaluation, and early childhood in a cross-cultural context.

HD 655 Seminar in Family Studies and the Life Course
Topics include the sociology of marital status, the single-parent family, work-family linkages, women and work, and families and social change.

HD 665 Seminar in Personality and Social Development
Focuses on selected issues related to personality and social development. The issues selected vary each year according to current importance in the field and student interests.

HD 675 Seminar in Developmental Psychopathology
Topics include learning disabilities, therapeutic interventions in atypical development, child abuse and maltreatment, family factors in the etiology of functional disorders, and cognitive characteristics of atypical groups.

HD 685 Seminar in Research Methods
This course focuses on quantitative and qualitative research methods frequently used in developmental psychology or life course studies, such as surveys, questionnaires, observations, and interviews.

HD 690 Seminar on Ecology of Human Development
Topics include the institutional setting as a determinant of behavior, the poor family, and the identification and measurement of ecological variables.

Individualized Special Instruction

HD 700–806 Special Studies for Graduate Students
Fall or spring. Credits and hours to be arranged. Credits 1–15 (3 hours work per week per credit). S-U grades at discretion of instructor.
Independent advanced work by graduate students recommended by their Special Committee chair with permission of the instructor.

HD 700 Directed Readings
For study that predominantly involves library research and independent study.

HD 701 Empirical Research
For study that predominantly involves collection and analysis of research data.

HD 702 Practicum
For study that predominantly involves field experience in community settings.

HD 703 Teaching Assistantship
For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

HD 704 Research Assistantship
For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

HD 705 Extension Assistantship
For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

HD 706 Supervised Teaching
4 credits.
For advanced students who assume major responsibility for teaching a course. Supervision by a faculty member is required.

HD 806 Teaching Practicum
4 credits. For advanced graduate students to independently develop and teach an undergraduate topics course under the supervision of a faculty member.

HD 899 Master's Thesis and Research
Fall or spring. Credit to be arranged. Credits 1–15 (3 hours work per week per credit). S-U grades only. Prerequisite: permission of thesis adviser.

HD 999 Doctoral Thesis and Research
Fall or spring. Credit to be arranged. Credits 1–15 (3 hours work per week per credit). S-U grades only. Prerequisite: permission of thesis adviser.

POLICY ANALYSIS AND MANAGEMENT

R. Burkhauser, chair; W. Trochim, Policy Analysis and Management, director of graduate studies; A. Mathios, director of undergraduate studies; D. Kenkel, interim director of Sloan Program; K. Waldron, associate director of Sloan Program; J. Allen, R. J. Avery, R. Battistella, B. J. Bristow, R. Burkhauser, J. S. Butler, J. Cawley, P. Chi, R. Dunifon, J. Gerner, R. Heck, K. Joyner, A. Kabcenell, D. Kenkel, J. Kuder, A. Mathios, L. O'Neill, A. Parrot, E. Peters, P. Pollak, E. Rodriguez, W. Rosen, N. Roufaiel, J. Schultz, K. Simon, S. Tennyson, J. Tiffany, D. Tobias, W. Trochim; R. Babcock, Emeritus; D. Barr, Emeritus; H. Biesdorf, Emeritus; W. K. Bryant, Emeritus; G. Bymers, Emerita; F. M. Firebaugh, Emerita; J. Ford, Emeritus; A. Hahn, Emeritus; E. S. Maynes, Emeritus; C. McClintock, Emeritus; J. Mueller, Emerita; L. Noble, Emerita; J. Robinson, Emerita; C. Shapiro, Emerita; L. Street, Emeritus; K. Walker, Emerita; B. L. Yerka, Emerita; J. Ziegler, Emeritus

NOTE: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

PAM 200 Intermediate Microeconomics
Fall or spring. 4 credits. Prerequisite: Econ 101 or equivalent. Fall: preference to sophomores and juniors. Spring: preference to juniors and seniors. Staff.
Topics include theory of demand and consumer behavior including classical and indifference curve analyses; theories of production and cost; models for the following markets—competitive, monopoly, monopolistic competition, oligopoly, and inputs; general equilibrium; welfare economics; public goods; and risk. A section is mandatory.

PAM 204 Applied Public Finance
Fall or spring. 3 credits. Prerequisites: PAM 200. S-U grades optional. D. Kenkel, K. Simon.
The public sector now spends nearly 2 out of every 5 dollars generated as income in the U.S. economy. A thorough knowledge and understanding of this important sector is an essential part of training in policy analysis and management. This course will provide an overview of the public sector of the U.S. economy, the major categories of public expenditures, and the main methods used to finance these expenditures. The principles of tax analysis and cost-benefit analysis will be presented with a focus on the role of public policy in improving economic efficiency, promoting the goals of equity and social justice, and improving equity by altering the distribution of wealth and income.

PAM 205 Research Methods
Fall or spring. 3 credits. Sections TBA. Staff.
Students will learn the logic and methods of social science research, as well as how to create researchable questions out of their issues of interest. Readings, written assignments, and in-class exercises will focus on stating hypotheses, designing studies and samples to test hypotheses, measuring variables, and simple statistical analysis. PAM majors should take this course no later than their junior year.

PAM 210 Introduction to Statistics
Fall and spring. 4 credits. K. Joyner.
This course introduces students to descriptive and inferential statistics. Topics include hypothesis testing, analysis of variance, and multiple regression. To illustrate these topics, this course examines applications of these methods in studies of child and family policy.

PAM 220 Introduction to Management: Principles and Differences Among Sectors
Fall or spring. 3 credits. D. Tobias, R. Heck.
This course is a basic introduction to major management and related concepts of planning, organizing, controlling, leadership, and special topics within five major management contexts including individual/personal, groups/families, firms, not-for-profit organizations, and governments/communities.

[PAM 223 Consumer Markets I
Fall. 4 credits. Not offered 2001–2002. R. J. Avery.
A study of the structure and functioning of consumer retail markets with emphasis on the marketing activities of firms, changes in demand for goods and services driven by the dynamics of consumer demographics, and government control and intervention in market exchanges. The course teaches market analysis skills and involves group project work consulting with local businesses. Course format is highly audio-visual and incorporates guest lectures from prominent consumer product firms.]

PAM 230 Introduction to Policy Analysis
Fall or spring. 3 credits. R. Avery, J. Gerner.
Policy analysis is an interdisciplinary field that uses theories, concepts, and methods from disciplines such as economics, sociology, and political science to address substantive issues in the public policy arena. Students will be introduced to the functions of and interactions between the major institutions (public and private) at the national, state, and local level involved in the policy making process. The course will focus on public policy analysis in the consumer, health, and family/social welfare areas and will also include an introduction to the technical skills required to undertake policy analysis.

PAM 240 Critical Perspectives
Fall. 3 credits. Staff.
This course presents an overview of different perspectives on U.S. social policies and programs with an emphasis on health, welfare, family, and consumer issues. Historical, political, social science and personal perspectives are contrasted. Students are gain knowledge about the social policy and program topics presented in the course, critically analyze them using conceptual frameworks presented in class, and evaluate policy debates by applying these insights.

PAM 270 Housing and Society
Spring. 3 credits. S-U grades optional. P. Chi.
A survey of contemporary American housing issues as they relate to the individual, the family, and the community. The course focuses on the current problems of the individual housing consumer, the resulting implications for housing the American population, and governmental actions to alleviate housing problems.

PAM 300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged.
Special arrangement for course work to establish equivalency for training in a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the College Registrar's Office. This form, signed by both the instructor directing the study and the head of the department, should be filed at course registration during the change-of-registration period.

PAM 303 Ecology and Epidemiology of Health
Spring. 3 credits. S-U grades optional. Limited to 50 students. E. Rodriguez.
Ecological and epidemiological approaches to the problems which restrict human health within the physical, social, and mental environment. The course introduces epidemiological methods and surveys the epidemiology of specific diseases such as AIDS, hepatitis, Legionnaires' disease, plague, cancer, herpes, and chlamydia. Application of epidemiology to health care will be discussed.

PAM 305 Introduction to Multivariate Analysis
Fall or spring. 4 credits. Prerequisites: ARME 210 or ILRST 210 or equivalent. J. S. Butler, J. Schultz.
The course introduces basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression procedures are discussed. Students are required to specify, estimate, and report the results of an empirical model. Factor analysis and analysis of variance will be covered as well. Section meets once a week.

[PAM 310 Evaluation of Public Policies
Fall. 3 credits. Prerequisites: PAM 200, 330, or permission of instructor. Not offered 2001–2002. Staff.
This is an advanced course in economic policy analysis that builds on the material covered in PAM 330, Intermediate Policy Analysis. The course will use a series of policy examples to demonstrate the economic approach. Special topics in cost-benefit analysis and policy evaluation techniques will be developed when necessary for the example under study. Examples of topics that may be addressed include excise taxation, economic evaluations of health care innovations, environmental policies, traffic regulations, consumer policies, and welfare reform.]

PAM 320 Introduction to Policy Management
Spring. 3 credits. Prerequisite: PAM 205, 220, and 230. W. Trochim.
An intermediate undergraduate course in policy management that will be focused around a single broad policy area that has numerous specific policies and programmatic implementations associated with it and that touches upon the three major substantive areas in PAM: consumer, health, and family and social welfare. Through lectures, intensive readings, case study, in-class discussion, secondary data analysis, and small-group projects, students will develop a deep understanding of what policy management means, and how it draws from a wide variety of disciplines (politics and government, history, sociology, economics, law, manage-

ment) and utilizes a wide range of methods, both quantitative and qualitative.

PAM 323 Consumer Markets II
Spring. 4 credits. R. J. Avery.
This course focuses on the cognitive, behavioral, and environmental forces that drive consumer demand. The first half of the course draws on theories and concepts from psychology and focuses on the cognitive processes whereby consumers interpret market-provided information and other stimuli in the purchase environment. The second half of the course draws on theories and concepts from retail anthropology to explain the behavior of consumers in the in-store environment. Particular emphasis is placed on communication institutions (advertising, television, print media), their impact on consumer decision making, and their control through government regulation. Course format is highly audio-visual and incorporates guest lectures from prominent consumer product firms, advertising agencies, and government regulators.

PAM 326 Personal Financial Management
Spring. 3 credits. Preference given to human ecology students; limit 50; not open to freshmen. S-U grades optional. R. Heck.
The study of personal financial management at various income levels and during different stages of the family life span. Course topics include financial management frameworks and decision-making processes, basic economic and financial principles, returns to human resources, income and wealth analysis, the role of consumer and mortgage credit, financial insolvency and counseling, expenditure and purchase analyses, the use of budgets and record keeping in achieving family economic goals, economic risks and available protection, retirement and estate planning, and alternative forms of savings and investments.

PAM 330 Intermediate Policy Analysis
Spring. 3 credits. Prerequisite: PAM 200. Staff.
Introduction to the tools and techniques of policy analysis. Topics covered include microeconomic concepts such as: consumer and producer surplus; deadweight loss; rationale for public policy; benefit-cost analysis; impact assessments; experimental, quasi-experimental, and nonexperimental designs; and the social ecology of policy analysis.

PAM 340 The Economics of Consumer Policy
Spring. 4 credits. Prerequisites: PAM 200 or permission of instructor. S. Tennyson.
This course is designed to familiarize students with the basic approaches to consumer policy and the economic analysis of consumer policy issues. The course is structured around the major forms of government intervention in consumer markets, and examines a wide variety of economic and social regulations from the economic perspective. Students are required to write a term paper analyzing a consumer policy issue of their choosing.

PAM 341 Economics of Consumer Law and Protection
Fall. 3 credits. Prerequisite: Econ 101 or equivalent. S-U grades optional. A. Mathios.
Economic analysis of the roles played both by the courts and by federal and state regulatory legislation in altering consumer markets, consumer behavior, and consumer welfare. Topics include economic analyses of contract law, product liability, accident law and antitrust law, and the activities of such agencies as the Federal Trade Commission, the Food and Drug Administration, and the Consumer Product Safety Commission.

PAM 346 Economics of Social Security (also ECON 447)
Spring. 3 credits. Prerequisite: PAM 200. S-U grades optional. R. Burkhauser.
This course provides students with an economic perspective on social security policies. The readings illustrate the use of economic analysis to predict the behavioral effects and income distributional consequences of policy. The course primarily focuses on the Old-Age, Survivors, and Disability Insurance Program. But other programs such as, the Supplemental Security Income, and Food Stamps will be discussed.

[PAM 350 Contemporary Issues in Women's Health
Fall. 3–4 credits. Not offered 2001–2002. A. Parrot.
This course deals with the history of women in medicine and the historical and cultural treatment of women's health problems. Health care research and the exclusion of women from research trials and protocols will also be addressed. Reproductive issues, alternative approaches to treatment, medical problems, ethical issues, cancers, factors that contribute to post-traumatic stress disorders, health promotion behaviors, political issues, and routine medical recommendations will also be discussed in depth. Students may take the course for a fourth credit, which will require attending a discussion section every other week and observing seven facilities (i.e., birthing center, mammogram, and ultrasound center, wellness center, hospital labor and delivery unit, LaMaze class, women's self defense class, etc.) that provide a variety of women's health care.]

PAM 371 Demography and Family Policy
Fall. 3 credits. K. Joyner.
This course examines from a demographic perspective family policies that concern children and adults. Toward this end, this course considers the relationships between family policies and demographic behavior. It also addresses the effects of family policies and demographic behavior on the well-being of children. Although this course focuses on the United States, it considers U.S. trends against the backdrop of changes in other industrialized countries.

[PAM 376 Housing, Neighborhood and Community
Spring. 3 credits. Prerequisite: PAM 270 or permission of instructor. S-U grades optional. Not offered 2001–2002. P. Chi.
The course examines the interrelationships of housing conditions, neighborhood transitions, and community development. Both theoretical and empirical perspectives on residential patterns, neighborhood change, and community power will be examined. Special attention is given to government policies that deal with fair housing, residential segregation, neighborhood revitalization, and community development.]

[PAM 380 Human Sexuality
Spring. 3 credits. Limited to 500 students. Prerequisite: an introductory course in human development and family studies, psychology, or sociology (or equivalent social science course). Recommended: one course in biology. Not offered 2001–2002. A. Parrot.
The aim of this course is to provide students with an understanding of the interactions and interrelationships of human behavior that influence sexual development and behavior. The course will focus on the evolution of sexual norms, cross-cultural customs, legislation within changing sociopolitical systems, and delivery of services related to sexual issues, needs, and/or problems. Future trends in sexuality will be addressed.]

[PAM 381 Healthcare Services and the Consumer
Fall. 3 credits. Prerequisite: an introductory course in human services or health or biology. S-U grades optional. Offered alternate years. Not offered 2001–2002. A. Parrot.
This course is an introduction to healthcare services and will present developments in the health field that affect the availability and kinds of health services. Emphasis is placed on the interrelationships of practitioners, institutions, and agencies. The part each can play in prevention, diagnosis, and treatment of disease and disability is also explored. Topics will include historical and current trends, quality health care, consumer issues, cultural concerns, ethical issues, politics and policies, and the contemporary problems of health care.]

PAM 383 Social Welfare as a Social Institution
Fall. 3 credits. J. Allen.
A philosophical and historical introduction to social welfare services. The course reviews the historical, social, and political contexts within which social welfare programs and the profession of social work have evolved. It discusses the political and ideological processes through which public policy is formed and the way policies are translated into social welfare programs. Basic issues in welfare are discussed through present program designs, public concerns, and the interrelationships and support of services in the community.

PAM 392 New York State Government Affairs
Spring semester only. 12 credits, letter grade and instructor permission only. Preference is given to juniors and seniors. PAM 220 or a course in government strongly recommended. Staff.
Students participate in the New York State Assembly Intern Program that includes a seminar and other course work on legislative processes, political party dynamics, and policy analysis and management. Students also participate in a thirty-hour-a-week New York State Assembly internship requiring research on legislation, support for legislator initiatives and pubic hearings, and work on constituent and interest group issues.

PAM 400–401–402 Special Studies for Undergraduates
Fall and spring. Credits to be arranged. S-U grades optional. Staff.
For advanced independent study by an individual student or for study on an experimental basis with a group of students

not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the department field office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration with an add/drop slip in 145 MVR, College Registrar's Office. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department chair is necessary. Students, in consultation with their faculty supervisor, should register for one of the following subdivisions of independent study.

PAM 400: Directed Readings. For study that predominantly involves library research and independent reading.

PAM 401: Empirical Research. For study that predominantly involves data collection and analysis.

PAM 402: Supervised Fieldwork. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

PAM 403 Teaching Apprenticeship
Prerequisite: students must have taken the course (or equivalent) in which they will be assisting and have demonstrated a high level of performance. For study that includes assisting faculty with instruction.

PAM 420 Management Information Systems for the Public Sector.
Spring. 3 credits. L. O'Neill.
This course focuses on managing information systems in the public and nonprofit sector. Its purpose is to present an overview of the management of technology and to develop the computer literacy that is required of today's managers. It will consist of three modules: technology, planning and management, and public/nonprofit applications such as those related to family and social welfare, health care, and consumer policy.

PAM 423 Risk Management and Policy
Spring. 3 credits. Prerequisite: Econ 101 and a course in statistics. Enrollment limited to 80. S. Tennyson.
The objective of this course is to provide students with a broad understanding of risk management problems and solutions, a greater appreciation of the importance of risk and risk regulation in our society, and increased comprehension of the complexities of making decisions about risk. Topics covered include alternative ways to define and measure risk, the importance of risk-tradeoffs, and models of decision making under risk. With this background, alternative approaches to risk management are discussed, including insurance, noninsurance financing alternatives, and loss control. The impact on risk management of the legal liability system and government programs, laws and policies are also considered.

PAM 424 Families in Business
Fall. 3 credits. Prerequisites: introductory statistics or permission of instructor. S-U grades optional. R. Heck.
Offers students the opportunity to explore family business topics such as business formation, growth and expansion, strategic management, professionalization, succession, locational choices, and family dynamics, conflicts, and relationships relative to the business. An overview of families who own businesses and the profiles of their businesses will be presented along with the examination of the course topics relative to the various stages of business activity including feasibility, start-up, ongoing maintenance, expansion or redirection, and exit or transfer. Case studies from the Harvard Business School series will be utilized to examine the course topics listed above. The course also provides an introduction to research on family businesses by surveying the conceptual issues and methodological approaches related to the study of family businesses.

PAM 426 Policy and Management Issues on Foreign Investment in China
Spring. 3 credits. P. Chi.
This course will help students understand the general investment environment in China and learn how social, cultural, political, and economic factors affect decisions on market entry strategies, marketing mix strategies, and other management strategies for foreign-invested enterprises (FIEs) in China. This course will not only examine the growth of FIEs since the 1980s, but also discuss the policy initiatives and institutional barriers for direct foreign investment in China. Both multiplier and linkage effects of foreign investment on China's economy will also be evaluated. Further, the management issues on formation, performance, profitability, and dissolution of FIEs will be systematically examined.

[PAM 427 Complementary Alternative Medicine
Fall. 3 credits. Prerequisites: a health course and intro biology or permission of instructor. Not offered 2001–2002. A. Parrot.
This course will particularly help pre-medical students, health administration students, and health economics students understand the relationship between alternative medicine and western allopathic medicine. The course will cover health and wellness, treatments for specific health conditions, differing philosophies of health care, financing health services, and cross-cultural approaches to these topics.]

PAM 435 The U.S. Health Care System
Fall. 3 credits. R. Battistella.
This course provides an introduction to the health care delivery systems in the United States, and covers the inter-relatedness of health services, the financing of health care, and the key stakeholders in health care delivery including regulators, providers, health plans, employers, and consumers. The course describes the history and organization of health care, behavioral models of utilization, issues of health care reform, and current trends. The course provides an overview of the key elements of the field including ambulatory care services, mental health services, hospitals and clinicians, insurers, the role of public health organizations, and the politics of health care in the United States.

[PAM 454 Contemporary Issues in Human Sexuality and Research
Spring. 4 credits. Permission of instructor required. Not offered 2001–2002. A. Parrot.
An in-depth seminar in theoretical and applied methodology for the study of human sexuality. Topics covered include current and contemporary issues, educational strategies, policy formation, legal jurisdiction, cultural mores, social attitudes, and individual sexual behavior.]

PAM 473 Social Policy
Spring. 3 credits. Prerequisite: PAM 383 or Government 111 or Sociology 141. S-U grades optional. J. Allen.
An examination of the policy-making process and the significance of national policies as they affect the distribution of social services. Frameworks for analyzing social policy are used to evaluate existing social programs and service-delivery systems. Implications for change in policies at the national, state, and local levels are discussed.

PAM 480 Professional Internship in Human Services
Fall or spring. 4–7 credits. Limited to juniors and seniors majoring in human service studies. Prerequisite: PAM 100. Precourse enrollment required. D. Tobias.
Students intern for a minimum of 10 hours a week in a human service organization and attend a weekly seminar or office hours with a focus on integrating classroom and field-based learning. The course is structured as an opportunity for students to learn experientially and, at the same time, provide meaningful services. Interns are expected to take active roles in structuring, monitoring, and assessing their learning under the guidance of a faculty instructor.

PAM 499 Honors Program
Fall or spring.
The honors program provides students with the opportunity to undertake basic or applied research which will be preparation of a thesis representing original work of publishable quality. The program is intended for students who desire the opportunity to extend their interests and efforts beyond the current course offerings in the department. Furthermore, the program is designed to offer the student the opportunity to work closely with a professor on a topic of interest. PAM majors doing an honors program may take PAM 499 for up to 15 credits. See Professor Alan Mathios for more details.

PAM 575 Housing and Long-term Care for the Elderly
Fall. 3 credits. S-U grades optional. P. Chi.
This course focuses on the housing of the elderly, their current housing conditions, and options for alternative housing. Housing is viewed as a resource of long-term care for the elderly, integrating housing with related health and social services. Attention is also given to government housing and long-term care programs for the elderly, analyzing how the residential environment influences the ability of elders to function independently and how it affects their need for long-term care services. Finally, the senior living and long-term care industries are examined.

PAM 600 Special Problems for Graduate Students
Fall and spring. Credits to be arranged. S-U grades optional. Staff.
Independent advanced work by graduate students recommended by their chair and approved by the department chair and the instructor.

[PAM 601 Introduction to Policy Analysis and Management

Fall. 3 credits. Not offered 2001–2002. Staff.
This course presents an overview of perspectives on U.S. social policies and programs with an emphasis on health, welfare, family, and consumer issues. Through readings and class assignments students are expected to demonstrate knowledge of: (1) the history and composition of major social policy and program interventions; (2) the role of political purposes and personal values in policy development, implementation, and analysis; (3) various methodological approaches for conducting policy and program evaluation research; and (4) the policy agenda-setting process and ways in which research findings are used in policy debates.]

PAM 602 Measurement and Validity in Policy Analysis and Management

Spring. 3 credits. E. Rodriguez.
This course provides an introduction to the theoretical foundations of validity in applied social research, basic probabilistic and nonprobabilistic sampling methods, survey research methods (including questionnaires, interviews, and scaling), and other practical inquiry methods are required for valid inferences.

PAM 603 Experimental, Quasi-Experimental, and Economic Evaluation Methods

Spring. 3 credits. E. Peters.
This course focuses on the logic of randomized experimentation, the role of structural experiments, quasi-experimental evaluation methods, nonexperimental regression techniques, issues of sample selection, and cost-benefit analysis.

[PAM 604 Qualitative and Mixed-Method Approaches to Policy Analysis and Management

Spring. 3 credits. Not offered 2001–2002. Staff.
This course introduces qualitative traditions of social inquiry and their roles in policy analysis and management. The course will also address visions of and strategies for mixing different inquiry traditions and approaches in applied policy analysis and management.]

PAM 605 Economics of Household Behavior

Fall. 3 credits. Prerequisite: PAM 604 or Economics 609–610 or consent of instructor. S-U grades optional. E. Peters.
This course examines household decision making in both single agent and multiple agent (e.g., game theoretic or bargaining) frameworks. The first half of the course focuses on: (1) fertility; (2) household production; (3) and time allocation models of behavior—decisions that are usually modeled in a single-agent framework. The second half of the course looks at: (1) marriage markets; (2) family formation and dissolution; (3) bargaining models of resource allocation within the household; (4) and intergenerational transfers across households. These kinds of behaviors are more fruitfully studied using multiple agent models such as contract theory, game theory, and household bargaining. Empirical applications of the theoretical models are presented for both developed and developing countries. Implications for family policies such as child care subsidies, divorce laws, family planning, government subsidies to education, and social security are also discussed. Much of the material covered by this course could also be found in economic demography and economics of the family courses.

PAM 606 Demographic Techniques (also Rural Sociology 608)

Fall. 3 credits. S-U grades optional. Staff.
This course provides an introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort versus period analysis, sources and quality of demographic data, population estimation and projection, and stable population models.

PAM 608 Economics of Consumer Demand (also ARME 670)

Fall. 3 credits. Prerequisite: PAM 200, Economics 313, or concurrent enrollment in one of the 2, and 2 semesters of calculus. S-U grades optional. C. Ranney.
A graduate level introduction to theory and empirical research on household demand, consumption, and saving. Emphasis is on the use of the theory in empirical research. Topics include neo-classical theory of demand, duality, complete demand systems, conditional demand, demographic scaling and translating, consumption, and savings. Becker and Lancaster models of demand will be introduced.

PAM 616 Strategies for Policy and Program Evaluation

Fall. 3 credits. Prerequisites: PAM 612 and 613 or 617 or equivalent. W. Trochim.
This course examines a wide range of approaches to the evaluation of policies and programs in the human services. The approaches are examined with respect to their purposes, key audiences, and methodologies, as well as their philosophical, political, and value frameworks. Analysis of commonalities and differences across evaluation approaches are used to judge the appropriateness of a given strategy for a particular context.

PAM 632 The Intergovernmental System: Analysis of Current Policy Issues

Fall. 3 credits. Open to seniors who have had a course in American government and to graduate students. J. Ziegler.
This course offers advanced policy analysis of current political/social/economic issues in the context of the intergovernmental system. Particular attention is paid to how certain policy and human service issues are played out at the federal, state, and local levels of government, and to the formulation of federal and state budget policy. General public administration theory is considered. Students work in teams on a policy/administrative research project and report to the class.

PAM 647 Microeconomics for Management and Policy

Fall. 4 credits. S-U grades optional. S. Tennyson.
This course introduces microeconomic theory and its application to decision making in the management and policy arenas. Special emphasis will be placed on the economic environment of health care organizations and the problems faced by managers in this environment.

PAM 650 Applications in Health Management Practice, Enterpreneurship and Consulting

Spring. 3 credits. J. Kuder.
Seminars and practica, offered periodically and reflecting faculty and student interest, with changing topics and instructors. Content, time, credits, and instructors to be announced. Seminars and practica offer concentrated study in a specific human service area or in the education, planning, or evaluation processes within human services.

[PAM 652 Health Care Services: Consumer and Ethical Perspectives

Fall. 3–4 credits. Limited to 30 students; undergraduates with permission of instructor. 4-credit option, may be used as Biology and Society Senior Seminar option. Not offered 2001–2002. A. Parrot.
The course will focus on consumer and ethical issues faced by the health care field today. Broad topics to be discussed include ethical standards and guidelines, health care costs and accessibility of services, government role in health care delivery, health care as a right or privilege, private industry role in health care, services for the medically indigent and elderly, practitioner burnout and training, ethics of transplant surgery and funding, reproductive technology, AIDS research and funding, animals in medical research, right to die, and baby and granny Doe cases.]

[PAM 653 Health Economics and Policy

Spring. 3 credits. Prerequisites PAM 604. Econ 609 or permission of instructor. S-U grades optional. Not offered 2001–2002. D. Kenkel.
This course provides an overview of research in health economics and its relevance for health policy. Models of health capital, household production, and insurance are developed and used to address public health policies and health insurance programs and reforms. Major issues in the economics of the health care sector are discussed, including the markets for physician services, hospital care and long-term care. Much of the course focuses on the United States, but it will also review research on other countries, especially developing countries that face a very different set of health policy issues.]

PAM 654 Legal Aspects of Health Care

Spring. 3 credits. Prerequisites: PAM 657 or permission of instructor. Taught in alternate years. H. Allen.
This course introduces principles of the law that are specifically applicable to health-service delivery. Topics considered include: the liability of hospitals and their staff and personnel for injuries to patients; medical records and disclosure of information; consent to medical and surgical procedures; responsibility for patients' personal property; collection of bills; medical staff privileges; and confidential communications.

PAM 656 Managed Health Delivery Systems: Primary-Ambulatory Care

Spring. 3 credits. Prerequisite: PAM 657. J. Kuder.
The concept of primary care is used to enhance understanding of the direction and purpose of ongoing changes in health services organization and financing. Pressures on traditional indemnity insurance and solo fee-for-service medicine are examined in the context of the transition from unmanaged to managed delivery systems. The course is divided into two parts. Part 1 examines the development of health maintenance organizations and related forms of managed care against the backdrop of larger public policy concerns. Part 2 centers on administrative-financial topics associated with the design, marketing, and operation of managed delivery systems in highly competitive markets.

Considerable attention is given to the relationship between physicians and management with respect to such subjects as medical practice styles, productivity, quality assurance, and outcome measurement. Many of the managerial topics are highlighted with field trips and visiting speakers.

PAM 657 Health Care Organization
Fall. 3 credits. Limited to 30 students. Priority given to Sloan students or permission of the instructor. R. Battistella.
The course will provide an introduction at the graduate level to the organization of health providers in the United States, the interrelationships of health services and the major sources and methods of paying for care. The course will describe how health services are structured in the United States and how these different services interrelate along the continuum of care. The course will describe and analyze organization, delivery, and financing issues from a variety of perspectives using specific performance criteria (e.g., equity, quality, efficiency). Innovations by the public and private sectors in the delivery and reimbursement of health care will also be presented.

PAM 658 Field Studies in Health Administration and Planning
Fall or spring. 1–4 credits. Staff.
Students interested in developing administrative and program-planning research skills are given an opportunity to evaluate an ongoing phase of health care agency activity in the light of sound administrative practice and principles of good medical care. In planning and carrying out the research, students work closely with a skilled practicing administrator and with members of the faculty.

PAM 659 Epidemiology, Clinical Medicine, and Management Interface Issues
Spring. 3 credits. E. Rodriguez.
From an empirical and analytical framework this course explores the relationships between epidemiology, clinical medicine, and management. The course will review the epidemiology, policy issues, and treatment of selected diagnoses accounting for a significant percentage of utilization and cost of health care services. In addition, students will have an opportunity to explore issues of resource allocation and continuous quality improvement. The format for the class is lecture, discussion, and case analysis.

[PAM 660 Quality in Health Care Organizations
Fall. 3 credits. Not offered 2001–2002. Staff.
The quality of health services—the extent to which the appropriate and most effective care is properly administered in the least costly manner—is a topic of paramount importance to patients. It is also a central concern of the providers and managers of health services and those who pay for care. It is a cornerstone of health care reform. Through readings, lecture, discussion, and group work, this course will acquaint the student with the basic elements of managing quality in health care organizations including: defining quality from many perspectives; measuring performance and detecting poor quality care; traditional and progressive approaches to managing quality including Continuous Quality Improvement; and the politics of quality, both within and outside the organization.]

PAM 661 Economics of Health and Medical Care
Spring. 3 credits. J. Schultz.
The course is designed for graduate students who seek an understanding of the tools, vocabulary, and means of thinking about economics as it applies to decision making in health services delivery, administration, and policy. This course will examine the special features of medical care as a commodity, the demand for health and medical care services, the economic explanations for the behavior of providers, the functioning of insurance markets, health policy issues, federal health insurance programs, and regulation. In addition, this course will introduce students to methods of analyzing the economic consequences of alternative health care policies.

PAM 662 Health Care Financial Management I
Spring. 3 credits. Staff.
The course is designed to give graduate students an intensive introduction to the issues and techniques in the financial management of health service organizations. Class lectures, readings, guest speakers, problems, case studies, and research for term paper/projects will all be used to demonstrate important points, which will be reinforced by examples and applications. The course emphasizes the internal financial management knowledge and skill necessary for financial success in complex health organizations.

PAM 663 Health Care Financial Management II: Payment Systems
Fall. 3 credits. Prerequisite: PAM 662. J. Kuder.
The purpose of this course is to develop an understanding of the theories on which health care payment and reimbursement systems are based and the techniques by which they operate.

PAM 664 Information Resources Management in Health Organizations
Spring. 3 credits. Recommended: strong basic computer skills. S-U grades optional. L. O'Neill.
Students are expected to have basic computer skills upon entry into the course. This course is a graduate course in Health Services Administration. Students will be exposed to the opportunities and challenges inherent in the use of health management information systems (HMISs) in clinical and nonclinical applications. The course focuses on the manager's role in the application of HMISs to solve problems and address concerns in today's health care service industry. Students will learn how an HMIS can enhance the ability to appraise multiclinical and nonclinical services of care.

[PAM 665 Managing Health and Human Service Organizations I
Fall. 3 credits. Not offered 2001–2002. Staff.
This is the first segment of a six-credit sequence addressing the management and leadership of health and human services organizations. Different perspectives are examined, from that of the first-line supervision to the CEO level. This course begins with a study of the basics of management—communications, motivation, change management, leadership, human resources, organizational design issues, and labor relations. It then looks at the development of technical skills in the areas of problem solving, decision making, productivity measurement, resource allocation and performance measurement. The course is taught with an applied focus and utilizes a case study approach.]

PAM 666 Strategic Management and Organizational Design of Health Care Systems
3 credits. Prerequisite: PAM 665. Staff.
This is the second segment of a six-credit sequence in the management and leadership of health and human services organizations. This course concentrates on strategy issues, marketing, organizational culture issues, development of mission, the management of professionals, and studies the importance of roles, structure, and inter- and intra-institutional relationships within these organizations. The course is taught via a case study approach.

PAM 667 Health and Welfare Policy
Spring. 3 credits. J. Schultz.
This course addresses major health policy issues and the critical processes that influence them. It focuses primarily on the United States, with some coverage of health policy in other countries. Topics that will be discussed include: Medicare, Medicaid, the uninsured, public health, the effect of welfare policy on health care, managed care development and regulation, state and federal health care reform, and many others. The course analyzes the politics of health policy in terms of legislative and executive processes; the forces involved including economic, social, ethical and political factors; and key players in health policy, such as special interest groups, lobbyists, public agencies, the press, elected officials, and legislative staff.

PAM 668 Long-Term Care and the Aged: Alternative Health and Social Service Delivery Systems
Spring. 3 credits. Prerequisite: PAM 657. R. Battistella.
Alternatives for the organization and delivery of long-term care services are examined within the context of public-financing constraints. Progressive long-term care is viewed as a continuum encompassing medical and social services positioned to optimize independent living. Relevant experience from other highly developed countries is presented. Visiting speakers from the public and private sectors are featured. Field trips provide additional insights into the many challenges and opportunities of long-term care policy and management.

PAM 669 Regression Analysis and Managerial Forecasting
Fall. 3 credits. Prerequisite: at least one statistics course. L. O'Neill.
This course teaches various statistical methods for managerial decision making, with a particular emphasis on regression and forecasting. Other topics include: ANOVA, correlation, confounding, interaction, and statistical process control. Applications to health care organizations are emphasized.

[PAM 718 Advanced Seminar in Program Evaluation
Fall, spring. 1–3 credits. S-U grades optional. Prerequisite: permission of instructor. Not offered 2001–2002. Staff.
This advanced course is intended for students with at least three courses in evaluation (PAM 612 series or the equivalent) and statistics through multiple regression. The seminar focuses on analysis and appraisal of current literature on program evaluation and evaluative research. The seminar is topical,

addressing current issues of importance in the field.]

PAM 760 Challenges and Trends in the Health Services Industry
Fall and spring. 1 credit. S-U grades only. Staff.
The goal of the course is to provide students with information and exposure to current and emerging issues in the health services industry. Topics may include such matters as: financial management of health care facilities, human resource management, information systems, cost effective clinical decision making, quality measurement and outcomes, public health, and entrepreneurship in the health services industry.

PAM 799 MPS Problem Solving Project
Fall or spring. Credits to be arranged. For students recommended by their chair and approved by the instructor in charge of independent advanced work. S-U grades optional.

PAM 899 Master's Thesis and Research
Fall and spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.

PAM 999 Doctoral Thesis and Research
Fall and spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.

TEXTILES AND APPAREL

A. Lemley, chair; S. K. Obendorf, director of graduate studies; A. Racine, director of undergraduate studies; S. Ashdown, C. C. Chu, C. Coffman, C. Jirousek, S. Loker, A. Netravali

Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

TXA 114 Introduction to Computer-Aided Design
Fall and summer. 3 credits. It is important for students on wait lists to attend the first class. Limit 23 per lab section. Priority given to all TXA and other freshmen and sophomore students. Not open to those who have taken or are currently enrolled in DEA 115 and 203. Minimum cost of materials $60; lab fee $15. S-U grades optional. Fall, T or R 1:25–4:25. A. Racine.
A studio course that explores the creative potential of microcomputers. The AutoCAD software program is used as a design tool for generating a wide variety of visual images. Basic Photoshop software commands are introduced to enhance AutoCAD drawings. Daily hands-on demonstrations and studio work. Students develop two-dimensional designs based on historical, cultural, and museum sources for portfolios and display.

TXA 117 Drawing the Clothed Figure
Spring. 3 credits. Enrollment limited to 20 students. Prerequisite: a basic drawing course. Priority given to apparel design students. Letter grades only. Minimum cost of supplies $125.00. Lab fee: $30. T R 10:10–1:10. Staff.
The goal of this course is to improve a student's capacity to communicate apparel design ideas visually by drawing clothing on the human body. Emphasis will be placed on development of techniques used to express the human body, materials, and clothing designs quickly and clearly in working sketches and to present clothing designs in finished renderings.

TXA 125 Art, Design, and Visual Thinking
Fall. 3 credits. S-U grades optional. Lecs M W F 12:20–1:10. C. Jirousek.
An introduction to the visual arts and design that explores aesthetic and cross-cultural dimensions of visual experience. Augmented by slide presentations, artifacts, video, and an Internet-based electronic textbook, lectures emphasize the varieties of visual expression seen in works of art and design. Social, cultural, and historic interpretations of visual expression are discussed.

TXA 135 Fibers, Fabrics, and Finishes
Spring. 3 credits. S-U grades optional. Lecs M W F 9:05–9:55. A. Netravali.
An introduction to fibers, fibrous materials, and dyes and finishes. Special emphasis is given to the use of fibrous materials in apparel, residential and contract interiors, and industrial applications. Topics covered include fiber properties, fabric structure, coloration of fibrous materials, dimensional stability, flammability, product specifications, and performance standards.

TXA 145 Introduction to Apparel Design
Spring. 4 credits. Limited to 36 students with 18 students per lab section; priority given to all TXA, other freshmen and sophomore students, and students transferring into TXA; not open to seniors outside of TXA. Letter grades only. Apparel design majors should take course during the first year. Minimum cost of materials, $140. Lec T 1:25–4:25 and lab F 10:10–12:05 or lec R 1:25–4:25 and lab F 12:20–2:15. A. Racine.
Intensive study of principles and processes of flat-pattern design with emphasis on creative expression in children's apparel. Students develop an understanding of the techniques needed to produce apparel from sketches, including patternmaking and garment assembly.

TXA 225 Color and Surface Design of Textiles
Fall. 4 credits. Recommended: TXA 114 and TXA 135. Minimum cost of other materials, $100; lab fee, $75. Preference given to TXA majors. T R 1:25–4:25. C. Jirousek.
Studio experience in the surface design of textiles combined with exercises in color theory. Textile projects will use techniques such as block printing, shibori, batik, silk painting, silk screen, and stitchery to produce a portfolio of textile designs. Studio work will be augmented by lectures on pattern and color theory illustrated by slides and textile examples.

TXA 237 Structural Fabric Design
Fall. 3 credits. S-U grades optional. Prerequisite: TXA 135. Recommended: college algebra. Lecs M W F 9:05–9:55. Staff.
This course covers the elements of technical fabric design with an emphasis on woven and knitted fabrics. Topics include structure of woven and knitted fabrics, openness, manufacturability, equivalence, and color effects.

TXA 264 Draping
Fall. 4 credits. Limited to 26 students; 13 in each lab. Prerequisite: TXA 125 and TXA 145; one drawing course recommended. Minimum cost of materials, $125; lab fee, $10. Lec 01 M 2:55–4:10; lab 01 W 1:25–4:25; lab 02 F 10:10–1:10. S. Ashdown.
This studio course examines the process of creating a three-dimensional garment from the two-dimensional fabric. The principles and processes of draping, advanced flat pattern making, and fitting are studied through projects. Drawing exercises focus on the communication of three-dimensional garments in two-dimensional sketches. Assigned problems require the students to make judgments regarding the design process, the nature of materials, body structure, function, and fashion.

TXA 269 Style, Fashion, and the Apparel Industry
Spring (first 7 weeks of semester). 2 credits. Limited to 40 students. Recommended: TXA 125 and TXA 135. Not open to freshmen. S-U grades optional. Lec M W 2:30–4:25. A. Racine.
Illustrated lectures will focus on changes in the U.S. apparel industry and fashion from the nineteenth century to the present day due to social forces, technological developments, and shifting demographics. The Cornell Costume Collection will be used for discussion. Students will write a term paper on issues relating to the fashion industry.

TXA 275 Photoshop for Portfolio Presentations in Textiles and Apparel
Spring (first 7 weeks of semester). 2 credits. Limited to 23 students. Prerequisite: TXA 114, TXA 217, or TXA 225. Course fee covering CAD lab color printing, $15.00. T R 1:25–4:25. C. Jirousek.
This course will explore the use of Adobe Photoshop as a tool for portfolio development in textile and apparel design. Building on studio work produced in other courses, students will learn the basics of Photoshop and create a design line for a formal portfolio that will involve textile design applied to either apparel or home furnishings use.

TXA 300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged. Staff.
Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the College Registrar's Office. The form, signed by both the instructor directing the study and the department chair, is filed at course registration or during the change-of-registration period.

TXA 331 Apparel Production and Management
Fall. 3 credits. Enrollment limited to 45 students. Prerequisites: Economics 101 and 102 and an upper-division course in either apparel or textiles. M W 12:20–2:15. A. S. Loker.
Introduction to the global textile and apparel industry, particularly the technical and economic aspects of apparel production. Analysis of specific apparel manufacturing and management issues such as international sourcing, Quick Response, mass customization, production and information technology, labor, and logistics.

TXA 332 Designers as Entrepreneurs
Fall. 1 credit. Enrollment limited to 45 students. Prerequisite: any design course. S-U grade optional. T 12:20–1:10. S. Loker.
This course will present issues that are critical to designers who are entrepreneurs, such as product development and maintenance; sourcing materials, assembly, and other services; copyright, trademark, and patents; branding and licensing; mass customization; distribution options including e-commerce; and social responsibility in business. The course will draw extensively on guest speakers and case studies.

TXA 335 Fiber Science
Spring. 3 credits. Limited to 20 students. Prerequisites: college chemistry and physics. Lecs T R 1:25–2:15. Lab T 2:30–4:25. A. Netravali.
This course covers fibers commonly used in various engineering, medical, and apparel applications. Topics include the nature of polymer molecules, the chemical structure of organic fibers, inorganic fibers, micro-macro structure of fibers, fiber dimensions, environmental effects, and mechanical, optical, thermal, and frictional properties of fibers. The following fiber uses will be discussed: composites in aerospace and other structural components, circuit boards, bulletproof vests, sutures, artificial arteries, geotextiles, sporting goods, and others.

TXA 336 Fundamentals of Color and Dyeing
Fall. 3–4 credits. 3 credits for lecture only; 4 credits for lecture and lab. Prerequisite: college Natural Science Requirements. Fiber science students are required to take the lab. Lab fee, $15. Lecs M W F 10:10–11:00; lab M 1:25–4:25. C. C. Chu.
Color is extremely important and useful in daily life. This course will emphasize theories and scientific principles of color, providing a framework for the use of color in design, marketing, or research. How colorants are used to dye fabrics will be addressed. Although fabrics are chiefly used to illustrate color in the class, much of the information and knowledge will be useful to nontextile majors. Guest lecturers from the industry will address the practical aspects of color in business.

TXA 346 Apparel Design Process and Pattern Development
Spring. 4 credits. Enrollment limited to 26. Prerequisite: TXA 135 and TXA 145. Letter grades only. Minimum cost of materials, $125; lab fee, $10. M W 1:25–4:25. Staff.
This studio course applies the principles and processes of advanced pattern making and the theory of functional clothing to the development of sportswear, actionwear, and clothing for active leisure activities. Assigned problems will require students to use the design process to apply information about body structure, user needs (thermal protection and comfort, mobility, and visibility), and the nature of materials to the production of functional, fashionable apparel. Drawing techniques that emphasize the communication of technical information about the design will be taught.

TXA 368 Computer-Aided Apparel Design
Fall. 3 credits. Prerequisite: TXA 114, TXA 145. Pre or co-requisite: TXA 264. Minimum cost of materials, $60. M W 10:10–12:05. A. Racine.
A team-based studio course in which a finished line of apparel is completed with patterns, sketches, flat drawings, and cost sheets created on the computer. This is an appropriate product development course for management students who have taken TXA 114 and TXA 145.

TXA 400–401–402–403 Special Independent Studies for Undergraduates
Fall, summer, or spring. Credits to be arranged. S-U grades optional. Staff.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of TXA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the department office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration along with an add/drop slip in 145 MVR, College Registrar Office. To ensure review before the close of the course registration or change-of-registration period, early submission of the special-studies form to the department chair is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

TXA 400: Directed Readings. For study that predominantly involves library research and independent reading.

TXA 401: Empirical Research. For study that predominantly involves data collection and analysis, or laboratory or studio projects.

TXA 402: Supervised Fieldwork. S-U only. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

TXA 403: Teaching Apprenticeships. Fall or spring. 2–4 credits. Prerequisites: student must have upperclass standing, have demonstrated a high level of performance in the subject to be taught and in the overall academic program, and have permission of the instructor and the department chair. S-U grades optional. Staff. Apprenticeship includes both a study of teaching methods in the field and assisting the faculty with instruction.

TXA 432 Product Quality Assessment
Fall. 3 credits. Enrollment limited to 36 in lecture and 18 in each lab section. Prerequisites: TXA 135 and Statistics. Lab fee, $15. Lecs M W 11:15–12:05; lab M or W 2:30–4:25. N. Breen.
This course covers evaluation of fibers, yarns, fabrics, and garments, with emphases on the meaning of standards, testing philosophy, quality control, and statistical analysis. Day-to-day tests done in textile and apparel industry will be discussed. Laboratory sections will introduce students to various test methods, data generation for analysis, and evaluation.

TXA 436 Fiber Chemistry
Spring. 3 credits. S-U grade optional. Senior and first-year graduate students. Lecs M W F 10:10–11:00. Offered alternate years. C. C. Chu.
The chemical and physical structure of several commercially important fibers, such as cotton, wool, silk, polyesters, nylons, acrylics, polyolefins and spandex, and their polymerization process are discussed. The general chemical and physical properties of each will be given. Degradation reactions for certain fibers such as polyolefins and acrylics will be discussed.

TXA 439 Biomedical Materials and Devices for Human Body Repair
Spring. 2–3 credits. 2 credits meets T only; 3 credits meets T and R. S-U grades only for 2 credits, letter grades only for 3 credits. Juniors and seniors only. Prerequisites: college Natural Science requirement. (Chem. or Biol.). T 1:25–2:40, R 1:25–2:40. C. C. Chu.
Survey of materials and devices for repair of injured, diseased, or aged human tissues/organs. It includes properties of synthetic and biological materials, wound healing processes, medical devices for repair of wounds, blood vessels, hearts, joints, bones, nerves, male impotence, vision/hearing/voice, and drug control/release.

TXA 444 Apparel/Textile Retailing and Distribution
Spring. 3 credits. S-U grades optional. Juniors and seniors only. Prerequisite: TXA 135, TXA 331, and ARME 240 or equivalent. Lec T R 1:25–2:40. N. Breen.
This course provides an overview of the business of design, production, distribution, marketing, and merchandising of apparel and related products from a management perspective. The organization and structure of both domestic and international retailers is included along with pricing strategies, merchandise planning, inventory management, and sales promotion. New uses of computer systems and information technologies will be emphasized throughout.

TXA 465 Apparel Design: Product Development
Fall. 3 credits. Prerequisites: minimum of 2 drawing or art courses, TXA 264, TXA 368, and TXA 225 or permission of instructor. Minimum cost of materials, $250; lab fee, $10. T R 10:10–12:05. S. Ashdown.
Through studio problems in apparel design, students examine the influence of manufacturing technology and cost on apparel products. Garments are developed to various stages from sketches to finished samples. Sketching exercises explore the relationship between technical drawing and illustration. Some portfolio development included.

TXA 499 Honors Thesis Research
Fall and spring. 1–6 credits (maximum 6 credits for graduation). S-U grades optional. Prerequisite: TXA students who have been admitted to college honors program. Staff.
Independent research leading to the honors thesis. College honors program guidelines are to be followed.

TXA 600 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. S-U grades optional. Staff.
Independent advanced work by graduate students recommended by their chair and approved by the department chair and instructor.

[TXA 620 Physical Properties of Fiber-Forming Polymers and Fibers
Fall. 3 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 2001–2002. A. Netravali.

Formation and properties of fiber-forming polymers, rubbery, glassy, and crystalline states and their interconnection. Fiber structure, relationship between chemical structure and physical properties of manufactured and natural fibers. Mechanical, thermal, and viscoelastic properties of fibers and testing methods will be discussed.]

[TXA 626 The Chemistry of Textile Finishes and Dyeing

Spring. 3 credits. S-U optional. Prerequisites: TXA 336 or equivalent and organic chemistry, or permission of instructor. Offered alternate years. Not offered 2001–2002. C. C. Chu.

Chemical aspects of textiles with emphasis on finishes and dyeing are discussed. Industrially important textile chemicals used for dyeing and enhancing fiber and fabric properties, such as durable press, anti-soiling, water repellency will be studied. The emphasis is on the correlation of the observed effect with chemical structure, end-use influences, interaction with fabric and fibers, sources, and synthetic routes. The environmental effect of these textile chemicals and current federal regulation will be briefly discussed.]

TXA 637 Research Seminars in Apparel Design

Fall and spring. 1 credit; S-U only; repeat of course each semester is encouraged for all apparel design graduate students. Available to advanced undergraduate students with permission of individual instructor. Apparel Design faculty.

TXA 639 Mechanics of Fibrous Assemblies

Fall. 3 credits. Prerequisite: solid mechanics or permission of instructor. Offered alternate years. M W F 11:15–12:05. Staff.

A study of the mechanics of fiber assemblies: idealized yarn and fabric models; statistical bundle theories; deformation of yarns and fabrics in tensile, shear, and compressive stress; bending and buckling; and the mechanical behavior of nonwoven textile materials.

TXA 664 Human Factors: Anthropometrics and Apparel

Spring (even-numbered years). 3 credits. S-U grades optional. Prerequisites: course in statistics and permission of instructor. Open to advanced undergraduates. Offered alternate years. T R 10:10–12:05. S. Ashdown.

Seminar course focusing on the human form and its relationship to clothing. Includes discussion of quantification of body sizes and human variation; historical, cultural, and aesthetic concepts of fit; apparel sizing techniques; national and international sizing systems and standards; impact of sizing systems on various populations (elderly, handicapped, etc.).

TXA 666 Formation of Manufactured Fibers

Spring. 3 credits. Prerequisites: Organic chemistry, college physics, TXA 436, TXA 620, or permission of the instructor. S-U grades optional. Offered alternate years beginning 2001. M W F 2:30–3:25. Staff.

This course covers the practical and theoretical analysis of the chemical and physical principles of the methods of converting bulk polymer to fiber; rheology; melt, dry, and wet polymer spinning; fiber drawing; heat setting; and general theory applied to unit processes.

[TXA 675 Aesthetics and Meaning in World Dress

Spring. 3 credits; S-U grades optional. Prerequisites: TXA 125 or course in history of art, costume history, or other history. Offered alternate years. Not offered 2001–2002. C. Jirousek.

An examination of the aesthetic and social/psychological relationship between body and clothing in the context of various cultures. Students will develop a research topic to be presented orally and in a term paper, and they will participate in the development of an exhibition.]

TXA 899 Master's Thesis and Research

Fall or spring. Credits to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional. Staff.

TXA 999 Doctoral Thesis and Research

Fall or spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional. Staff.

DEGREE PROGRAMS

	Degree
Industrial and Labor Relations	B.S.
	M.I.L.R.
	M.P.S.
	M.S.
	Ph.D.

THE SCHOOL

The School of Industrial and Labor Relations at Cornell (ILR) is a small school within a large university. It tries to maintain the small-college atmosphere expected of an institution that has about 750 undergraduates and approximately 150 graduate students, even as ILR students participate fully in the activites of the larger Cornell community.

ILR students study in modern, technologically advanced lecture halls, seminar rooms, and libraries.

Almost half of the school's typical freshman class comes from the greater New York City area. Another 30 percent live in other parts of New York State. Students from other states and a few from foreign countries make up the rest of the class. Women constitute about 50 percent of entering classes, and minority students comprise about 25 percent of new freshmen and transfer students.

Students enrolled in the School of Industrial and Labor Relations at Cornell may take a substantial number of courses in the other six undergraduate colleges and schools of the university, including the College of Arts and Sciences. Cornell students have access to all of the libraries and other services of the university.

The school operates in four areas: (1) resident instruction, (2) extension and public service, (3) research, and (4) publications. It provides instruction to undergraduates and graduate students who are preparing for careers in industrial and labor relations, as well as to men and women already engaged in industrial relations activities and the general public through its Extension and Public Service Division.

The school's Conference Center, part of the extension division, initiates and hosts conferences covering the full scope of industrial and labor relations. The center provides continuing education and information to practitioners and scholars.

The Research Division develops materials for resident and extension teaching and originates studies in industrial and labor relations. The Publications Division publishes and distributes the research results.

GRADUATE DEGREES

More than 150 students on the Cornell campus are enrolled in graduate study in industrial and labor relations, one of the largest graduate fields in the university. Students may work toward the degrees of Master of Industrial and Labor Relations, Master of Professional Studies, Master of Science, and Doctor of Philosophy. For further information on graduate programs, contact the Graduate Office, School of Industrial and Labor Relations, Cornell University, 216 Ives Hall, Ithaca, NY 14853–3901.

DEPARTMENTS OF INSTRUCTION

Courses in the school are organized into six departments:

Collective Bargaining, Labor Law, and Labor History

In the study of workers, employers, and the government policies affecting them, members of this faculty concentrate on subjects of industrial and labor relations best understood by reliance on the fields of administration, economics, history, and law. Courses explore subjects within the framework of American society, stress fundamental forces of change, and analyze texts and empirical data with methods drawn from the social sciences, the humanities, and the legal professions.

Human Resource Studies

This department offers specialization in human resource studies. Human Resources focuses on employer-employee relationships and deals with such topics as human-resource planning, staffing, computer applications to personnel, personnel information systems, training, management development, performance appraisal, compensation administration, organization development, and the sociological environment of human resource management. The study of human resource policy focuses on government efforts to enhance the population's ability to be employed. Although primarily concerned with governmental measures that influence the supply of labor (for example, training, education, health, mobility, and immigration), the subject area also includes policies in private industry that relate to the demands for labor.

International and Comparative Labor Relations

International and Comparative Labor Relations is concerned with industrial and labor relations systems and labor markets in other parts of the world. Countries include those in Western Europe, as well as in Asia, Latin America, and South America.

Labor Economics

Labor Economics deals with labor markets: that is, the institutional arrangements, terms, and conditions under which workers supply their labor and under which firms demand their labor. Faculty members are especially concerned with understanding the workings of labor markets and the effects of various public policies. The topics dealt with in courses and research include the following: analysis of the labor force, employment and unemployment, wages and related terms of employment, income distribution, income security programs, health and safety in industry, retirement, pensions and social security, economic aspects of collective bargaining, and economic demography.

Organizational Behavior

By studying individuals, groups, single organizations, and associations or organizations, persons in the field of organizational behavior understand human behavior within organizations as well as the actions of the organizations themselves. At the individual level of analysis, courses consider motivation, leadership, attitudes, personality, group processes, organizational change, and worker participation. At the organizational level, courses examine occupations, deviance in the work place, conflict, power, organizational design, public policy regarding organizations, and industrial conflict. The department also offers courses on research methods in organizational research and general survey courses in both psychological and sociological research.

Social Statistics

Economic and social statistics includes the principles of statistical reasoning, statistical methods, and the application of statistical tools of analysis.

A full list of required and elective courses is available from the Office of Student Services, 101 Ives Hall.

RESIDENT INSTRUCTION

This division conducts the on-campus programs leading to the degrees of Bachelor of Science, Master of Industrial and Labor Relations, Master of Professional Studies, Master of Science, and Doctor of Philosophy from Cornell.

Office of Student Services

Staff members from the Office of Student Services, 101 Ives Hall, work closely with faculty and faculty committees to administer degree programs for the school and many of the school's support services. The office's responsibilities include the admitting and orienting of new students, maintaining students' personal and academic records, and counseling students on personal and academic problems. The office also works closely with seniors who are planning graduate study.

Counseling and Advising

New students are provided advising on orientation, academic procedures, and course registration by counselors in the Office of Student Services.

Each of the school's academic departments names faculty members to serve as advisers for students who wish to consult with them regarding career possibilities in the field, postgraduate programs, or similar matters. Questions or issues related to graduation requirements, course registration, and related academic procedures should be raised with counselors in the Office of Student Services.

Minority Programs

Cornell University administers a variety of special opportunity programs designed to provide financial assistance and other forms of assistance to (1) minority students and (2) low-income students meeting program guidelines. The purpose of these programs is to provide access to a Cornell education for capable students who otherwise might not secure the admissions consideration, financial assistance, or supportive services necessary for their success at the university. The associate director for minority education in the Office of Student Services provides academic and personal counseling to all ILR minority students. ILR offers a variety of support services to enhance academic achievement.

STUDY OPTIONS

Several study options are open to ILR undergraduates, making it possible to tailor a program to fit special circumstances.

One such option is the five-year ILR master's degree. With early planning, some students may earn the M.S. degree in the fifth year. Using another option, a very few ILR students arrange for dual registration in the Johnson Graduate School of Management, earning their bachelor's degree in ILR and a master's degree in the Johnson Graduate School of Management after five years of study.

Some students elect to spend a semester in New York City, Albany, or Washington, D.C., with a chance to observe actual labor problem solving as interns in congressional offices, labor organizations, personnel offices, and state and federal agencies. For more information, see "Special Academic Programs," below.

Study abroad options are also available at a number of foreign universities. Qualified students may spend a semester or a full year studying abroad.

A number of ILR courses deal directly with today's problems and involve fieldwork in the Ithaca area and elsewhere in New York State.

The ILR program allows juniors and seniors who want to conduct their own research to receive course credit for individually directed studies if the program is supervised by a faculty member.

Study in Absentia

Registration in absentia enables a student to seek admission in another American institution for a semester or a year and transfer credit toward completion of the Cornell degree. This study option requires the development of a plan of study, a statement of appropriate reasons for study away from the university (e.g., availability of courses not offered at Cornell), good academic standing, approval of the plan by the director of student services, and payment of a special in absentia registration fee. Course work taken in absentia is usually not evaluated for transfer credit until the work has been completed and the student has returned to Cornell. Students then submit a course syllabus and other evidence of content to the chairman of the department that might have offered the respective course, or to a counselor in the Office of Student Services if the course is more appropriate as a general elective.

Leave of Absence or Withdrawal

If a student desires to withdraw or to take a leave of absence from the university, an interview should be scheduled with a counselor in the Office of Student Services. Counselors will assist students in petitioning for approval of a leave of absence and in contacting the appropriate offices or departments of the university.

REQUIREMENTS FOR GRADUATION

To earn the Cornell Bachelor of Science degree in industrial and labor relations, the student needs to successfully complete 120 credits. This requires eight terms for an average of 30 credits a year although some students accelerate their studies.

Freshman Year

Fall Semester

Freshman Writing Seminar	3
Introductory Microeconomics (ECON 101)	3
History of American Labor: Nineteenth Century (ILRCB 100)	3
Social and Psychological Foundations of Organizational Behavior II (ILROB 171)	3
ILR Colloquium (ILRID 150)	1
Elective	3
	16

Spring Semester

Freshman Writing Seminar	3
Introductory Macroeconomics 102	3
History of American Labor: Twentieth Century (ILRCB 101)	3
Social and Psychological Foundations of Organizational Behavior I (ILROB 170)	3
Elective	3
	15

Physical Education, Fall and Spring

Sophomore Year

Fall Semester

Statistics I (ILRST 210)	3
Development of Economic Institutions (ILRLE 140)	3
Labor and Employment Law (ILRCB 201)	3
Human Resource Management (ILRHR 260) Fall	3
Elective	3
	15

Spring Semester

Statistics II (ILRST 211)	3
Economics of Wages and Employment (ILRLE 240)	3
Distribution: Cultural Perspectives	3
Distribution: Western Intellectual Tradition	3
Elective	3
	15

Junior and Senior Years

Economic Security (ILRLE 340)	3
Collective Bargaining (ILRCB 300)	3
Distribution: International and Comparative ILRIC	3
Distribution: Upper Division Writing	3
Distribution: Science and Technology	3

ILR and General Electives

ILR Electives—30 credits (one course must be ILRIC)

Minimum of 12 credits of ILR course work including 495 (Honors), 499 (Independent Study) and approved list of courses from the LE Department.

Maximum of 12 credits from foreign languages, advanced math or other non-ILR courses as approved by ILR departments.

9 credits for one semester abroad or 15 credits for a full year.

9 credits for Internships (497: 3 credits; 498: 6 credits S-U).

General Electives—34 credit hours of which up to 22 hours may be freely elected in the university's endowed divisions

Required Courses

(55 credits)

The curriculum prescribes the courses and subjects listed in the table above; some are illustrative. In the senior year, all courses will be electives.

Elective Courses

(65 credits)

From the courses offered by the school, students must select a minimum of 30 credits of ILR elective courses. No more than nine of these credits may be satisfied by ILR 497–498, Internships, or one semester of Study Abroad.

Undergraduates are required to select one intensive writing course (for a minimum of three credits) from a list of designated courses.

The remaining 34 credits may be selected from the courses of any other college at Cornell, but a student who takes more than 34 credits in the endowed colleges (the College

of Architecture, Art, and Planning; the College of Arts and Sciences; the Johnson Graduate School of Management; the College of Engineering; and the School of Hotel Administration) must pay for each credit taken in excess of 34, *whether or not the courses are passed*. For the precise fee per credit, students should call the Office of the Bursar.

The number of credits that may be taken in the endowed colleges at no additional cost to the student may be changed at any time by official action of the school.

ILR Math Requirement

If you took AP calculus in high school and scored a 3 or better on the AB exam or a 2 or better on the BC exam, you have fulfilled the ILR math requirement. If you did not take AP calculus, or if you did not achieve the scores noted above, you will be expected to take and pass the ILR Math Assessment before you may register for required courses in Statistics and Labor Economics. The Math Assessment is based on materials covered in New York State Regents Exams for Courses 2 and 3. (Calculus is not covered in those courses.)

The ILR Math Assessment will be scheduled in August, January, and May. Those who do not pass in the first attempt will be expected to register in an appropriate math course and pass the assessment *before the beginning of their third semester* in the school. Anyone who cannot meet the requirement by the beginning of the third semester may be enrolled for a terminal term and will be expected to leave the school thereafter.

Transfer students will be expected to meet the same standards in math: either present the score required by Cornell University for AP calculus (AB or BC) credit, or pass the ILR Math Assessment before being permitted to register in ILRST 210 or ILRLE 240 with a terminal semester possible after failing the assessment given at the beginning of a third semester as an ILR student.

SCHEDULING AND ATTENDANCE

Schedule Changes

Occasionally it may be necessary for a student to request changes in his or her course schedule either before a term begins or during the semester. Such requests must be directed to the Office of Student Services to avoid possible loss of academic credit.

Class Attendance

It is each student's responsibility to attend all scheduled classes unless excuses have been approved by the faculty. In some courses an instructor may permit a maximum number of class absences without a grade penalty or dismissal from the course. An explanation for absence from class may occasionally be secured from the Office of Student Services in advance of the expected absence. An approved absence may be warranted by:

1) participation in authorized university activities such as athletic events, dramatic productions, or debates;
2) medical problems supported by a record of clinic or infirmary treatment;
3) serious illness or death in the immediate family;
4) other circumstances beyond the student's control.

A request for explanation of an absence should, when possible, be made to the Office of Student Services before the date of expected absence. A reported and explained absence does not relieve a student from fulfillment of academic requirements during the period of absence. The course instructor has the authority to determine what work must be completed. The office can only confirm the explanation for absence. Students should inform the Office of Student Services of any problems they have meeting course requirements.

ACADEMIC STANDING AND GRADES

Academic Integrity

In 1987 the faculty of the School of Industrial and Labor Relations approved a revised code of academic integrity. This code, while based on the Cornell University code, varies somewhat.

Absolute integrity is expected of all Cornell students in all academic undertakings. They must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity. The code specifically prohibits:

1) knowingly representing the work of others as one's own;
2) using or obtaining unauthorized assistance in any academic work;
3) fabricating data in laboratory or field work;
4) giving fraudulent assistance to others;
5) fabricating data in support of laboratory or field work.

Full details on the applications of those prohibitions to course work, term papers, examinations, and other situations are listed in the code. Copies are available from the Office of Student Services, 101 Ives Hall.

Dean's List

A Dean's List is compiled for each of the four undergraduate classes each term on the seventh day following receipt of final grades from the registrar. Eligibility for the Dean's List is determined by applying all of the following criteria:

1) achievement of a term average for freshmen of 3.3 or better; for sophomores of 3.4 or better; and for juniors and seniors of 3.6 or better;
2) a minimum course load for the term of 12 letter-graded credits;
3) completion of all courses registered for at the beginning of the term;
4) satisfaction of all good-standing requirements.

Academic Standing

Good standing requires that all of the following criteria be met at the end of each term:

1) an average of C– (1.7) for the semester's work, including a minimum of eight completed and letter-graded credits;
2) no failing grades in any course, including physical education;
3) a cumulative average of C– (1.7) for all completed terms.

If at the end of any term a student fails to maintain good standing or if overall academic performance is so marginal as to endanger the possibility of meeting school and university degree requirements, his or her record is reviewed by the Committee on Academic Standards and Scholarships. The committee may issue a written warning to the student at that time. If a student does not improve after the written warning, he or she may be denied permission to register for the next term.

Involuntary Separation from the School for Academic Reasons

A student may be denied permission to reregister at the end of any term when he or she has failed:

1) to establish good standing after a semester on warning;
2) to maintain an average of 1.7 in any term after a previous record of warning;
3) to achieve good standing after being on warning any two previous semesters;
4) two or more classes in one term or has a term average of 1.0 or below.

The Academic Standards and Scholarship Committee may decide to permit a student to remain on warning more than one semester if there has been significant improvement even though the cumulative average is still below 1.7.

S-U Grading Policy

An undergraduate may register to receive a final grade of S (Satisfactory) or U (Unsatisfactory) in courses that offer this option—either in the school or in other divisions of the university—subject to the following conditions:

1) the S-U option may be used in ILR and in out-of-college course electives only, not in directed studies;
2) students are limited to registering in *two* S-U courses a term;
3) S-U registration is limited to four credits for each course;
4) students registering for S-U grades must be in good standing;
5) students must fulfill the graduation requirement of 105 letter-graded credits.

ILR faculty members assign a grade of U for any grade below C– and a grade of S for any grade of C– or better. A grade of U is considered equal to an F in determining a student's academic standing, although it is not included in the cumulative average.

No change of grading (from letter to S-U or from S-U to letter) may be made after the first three weeks of class. There are no exceptions to this restriction, and appeals will not be accepted.

Grades of Incomplete

A grade of incomplete is assigned when the course has not been completed for reasons that are acceptable to the instructor. It is understood that the work will be completed later and credit given. Instructors may grant a

grade of incomplete for a limited number of clearly valid reasons, but only to students with substantial equity in a course. A firm and definite agreement on the conditions under which it may be made up must be made with the instructor. The school's policy allows a maximum of two full terms of residence for removal of a grade of incomplete. If it is not made up within this time, the grade automatically becomes an F.

SPECIAL ACADEMIC PROGRAMS

To meet the special academic objectives of some students, the school's faculty has established several special academic programs. For additional information, students should contact a counselor in the Office of Student Services. Counselors will explore the program with students to help them decide if it suits their interests.

Five-Year Master of Science Degree Program

With early planning it is possible to earn the M.S. degree in a fifth year of study. This program is designed specifically for those who wish concentrated study in an area of specialization in the school for a Master of Science degree. Students considering this program should consult a counselor in the Office of Student Services after their freshman year.

Internships

The Credit Internship Program has provided students with a vivid understanding of problems in labor and industrial relations through observation and participation in "real-life" labor problem solving. A number of selected students spend a term of their junior year in Albany, New York City, or Washington, D.C., in close contact with practitioners. Their activities include independent research under direction of ILR faculty members and seminars drawing on fieldwork experience with employers, labor organizations, and government agencies. More information about this program is available from the Office of Student Services.

Honors Program

Undergraduates who are ranked in the top 20 percent of their class at the end of the junior year may propose a two-semester research project, an honors thesis, for review by the Committee on Academic Standards and Scholarships. When approved, the candidate for graduation with honors works for two semesters (for three credits in each term) to research, write, and then defend the thesis.

Study Abroad

Cornell students with strong academic records and the necessary preparation in required and elective courses are encouraged to consider study abroad. The university currently has contact with universities in more than 40 countries that permit undergraduates to register for courses while maintaining Cornell registration and financial aid for a semester or a year. Information about those opportunities may be requested from Cornell Abroad, 474 Uris Hall.

Some study abroad programs require the development of language proficiency and preparation in appropriate courses at Cornell. Students should consult the Office of Student Services and Cornell Abroad in the freshman and sophomore years to be sure that they comply with the academic and procedural requirements for study abroad.

COLLECTIVE BARGAINING, LABOR LAW, AND LABOR HISTORY

N. Salvatore, chair; M. Cook, C. Daniel, I. DeVault, M. Gold, L. Gray, J. Gross, H. Katz, S. Kuruvilla, R. Lieberwitz, D. Lipsky, K. Stone, L. Turner

ILRCB 100 Introduction to U.S. Labor History: Nineteenth Century
Fall. 3 credits. C. Daniel, I. DeVault, N. Salvatore.
This first semster of a two-semester sequence covers the major changes in the nature of work, the workforce, and the institutions involved in industrial relations in the United States through the end of the nineteenth century.

ILRCB 101 Introduction to U.S. Labor History: The Twentieth Century
Spring. 3 credits. Prerequisite: ILRCB 100. C. Daniel, I. DeVault, N. Salvatore.
This second semester of a two-semester sequence covers the major changes in the nature of work, the workforce, and the institutions involved in industrial relations in the United States from the end of the nineteenth century up to the present.

ILRCB 201 Labor and Employment Law
Fall and one section in spring. 3 credits. M. Gold, J. Gross, R. Lieberwitz, K. Stone.
A survey and analysis of the law governing labor relations and employee rights in the workplace. The first half of the course examines the legal framework in which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half of the course surveys additional issues of rights in employment, including such topics as employment discrimination, the developing law of "unjust dismissal," and union democracy. Also serves as an introduction to judicial and administrative systems.

ILRCB 300 Collective Bargaining (200)
Fall and spring. 3 credits. M. Cook, H. Katz, S. Kuruvilla, L. Turner.
A comprehensive introduction to industrial relations and collective bargaining in the United States; the negotiation, scope, and day-to-day administration of contracts; the major substantive issues in bargaining, including their implication for public policy; industrial conflict; the major challenges facing unions and employers today; U.S. industrial relations in international and comparative perspective.

ILRCB 301 Labor Union Administration
Fall. 3 credits. Staff.
Study and analysis of the structure and operations of American unions, including the complicated internal life of the organizations; the varied environments in which unions develop and grow or decline; the relationship of national unions, local unions, and members in the many different sections of internal union government; the ways in which unions are set up to handle organizing, collective bargaining, contract administration, and political activity; and the widespread movement toward merger and consolidation of unions that began in the sixties and continues today. All of these involve a study of union constitutions and other primary documents, in addition to secondary readings. Attention is given to relevant legislation, current problems of unions, and the eternal problems of attaining union democracy.

ILRCB 302 Strangers and Citizens: Immigration and Labor in U.S. History
Fall or spring. 3 credits. I. DeVault.
This course explores immigrant workers' experiences in the nineteenth and twentieth centuries from different perspectives. Students examine what it meant to the immigrants themselves to arrive as strangers in the United States while also examining the ways in which pre-existing American groups defined these immigrants as "strangers." Similarly, students look at U.S. citizens in their roles as greeters of immigrants, detractors of immigrants, and as models for the aspirations of immigrants. Throughout the course our main examples come from the industrial and union realms.

ILRCB 304 Seminar in American Labor and Social History
Fall or spring. 4 credits. Permission of instructor. C. Daniel, I. DeVault, N. Salvatore.
An undergraduate seminar whose topic changes depending on semester and instructor.

ILRCB 305 Introduction to Labor Arbitration and Alternative Dispute Resolution
Fall. 3 credits. J. Gross.
An introductory survey that focuses on the U.S. labor arbitration process in the private and public sectors (legal issues, discipline and discharge, contract language interpretation, remedies, and procedures), and on alternative dispute resolution systems in the United States and other countries. Student participation in class discussion is expected and assignments include an original research paper.

ILRCB 384 Women and Unions (also WOMNS 384)
Fall or spring. 4 credits. I. DeVault.
This course explores women's participation in the United States labor movement in the nineteenth and twentieth centuries. Issues covered include women workers' relations with male-dominated union movements, the role of cross-class alliances of women in organizing women workers, interactions with radical parties and organizations, problems faced by women union leaders and activities, and others.

ILRCB 385 The African-American Workers, 1865–1910: The Rural and Urban Experience
Spring. 3 credits. Prerequisites: junior or senior or permission of instructor. N. Salvatore.
Examines the history of blacks in America from Emancipation through the experience of the first generation born after slavery, with a focus on the work experience. Topics include the restructuring of work during Reconstruction; the relationship between work and black organizational developments; between black and white workers; and the nature of work in the agricultural south and in cities throughout the nation.

ILRCB 386 The African-American Workers, 1910–the Present: Race, Work, and the City

Fall. 3 credits. Prerequisites: junior or senior. N. Salvatore.

Examines the history of blacks in America from the start of the Great Migration through the 1970s, with a focus on the work experience. Topics include the effect of migration and urbanization on black workers; the nature of the relationship between black and white workers as influenced by the depression and the two world wars; and an examination of the effect of the Civil Rights movement on the economic circumstances of black workers.

ILRCB 400 Union Organizing

Spring. 3 credits. Prerequisites: undergraduates, ILRCB 201 and 300; graduate students, ILRCB 500 and 501. K. Bronfenbrenner.

Explores various aspects of unions' attempts to organize workers: including why some workers join unions and others do not; strategy and tactics implemented by unions and management during organizing campaigns; present status of labor law as it affects organizing; creative approaches to union organizing; and the organizing model of unionism.

ILRCB 401 My Brother's Keeper: Volunteerism and Philanthropy

Spring. 3 credits. Prerequisites: junior or senior or permission of instructor. M. Gold.

The philosophy, practice, economics, and law of volunteering labor and donating money. Topics include: altruism versus self interest; why individuals volunteer labor and raise and donate money; the structure and practices of charitable organizations; the economic effects of voluntary labor and philanthropic gifts; and the law of raising and distributing money.

ILRCB 404 Contract Administration

Fall. 3 credits. Prerequisites: ILRCB 300 and 201 or ILRCB 500 and 501. K. Bronfenbrenner.

This course focuses on the practice, nature, and challenges of union representation under collective bargaining agreements. Working with union contracts, constitutions, and by-laws from a diversity of national and local public and private sector agreements, the course examines how U.S. unions represent their members in different industries and different collective bargaining environments. Issues addressed include union representative/steward rights and responsibilities, contract enforcement structures and practice, access to information, new work systems, hours of work and scheduling, contingent staffing arrangements, workplace discrimination, health and safety, promotional opportunities, down-sizing, leadership development, membership involvement and commitment, internal organizing, community coalition building, and decertification campaigns. Students practice hands-on work in interpreting contract language and preparing and presenting grievances and unfair labor practices.

ILRCB 405 Negotiation and Dispute Resolution

Fall and spring. 3 credits. Prerequisites: background in economics and the social sciences, or permission of instructor. D. Lipsky, R. Seeber.

Course deals with three related topics: (1) the theory and practice of negotiation and bargaining, particularly between groups and organizations, with a focus on process, power, and procedures; (2) third-party dispute resolution, with a focus on mediation and arbitration; and (3) alternative dispute resolution (ADR), with a focus on its current use in the corporate sector and in employment disputes. Course also covers the implications of using ADR for our system of justice. ILRCB 405 is a generic dispute resolution course. Focus is not on labor relations or collective bargaining or on any particular class of disputes, but rather the course deals with the use of conflict resolution techniques in a variety of settings. The first half of the course emphasizes conceptual and theoretical principles useful in understanding negotiations. The second half of the course concentrates on the use of third parties in resolving disputes, especially arbitrators and mediators. The course uses simulations and mock bargaining exercises to illustrate theoretical and practical principles and to provide students with opportunities to gain insight and experience in negotiations and dispute resolution.

ILRCB 407 Contemporary Trade Union Movement

Spring. 3 credits. Prerequisites: undergraduates, ILRCB 100, 101; graduate students ILRCB 502. R. Seeber, R. Hurd.

An examination of contemporary trade union issues, including union power, political action, collective bargaining approaches, and organizing efforts. The course covers structural, functional, and strategic aspects of contemporary unions. Speakers from the union movement will address the class.

ILRCB 482 Ethics at Work

Fall or spring. 3 credits. Prerequisites: junior or senior or permission of instructor. M. Gold.

Major theories of ethics are examined, then applied to issues in the employment relationship such as genetic screening of job applicants, random drug testing of employees, affirmative action, discipline for off-duty conduct, whistle-blowing, worker safety and cost/benefit analysis, comparable worth, strikes by employees providing crucial services, and crossing a picket line.

ILRCB 488 Liberty and Justice for All

Fall or spring. 3 credits. Prerequisite: junior or senior or permission of instructor. M. Gold.

Major theories of ethics are examined, then applied to contemporary issues such as affirmative action and reverse discrimination, the right to life (from abortion to capital punishment), comparable worth, and constitutional rights such as freedom of speech.

ILRCB 495 Honors Program

Fall and spring (yearlong course). 3 credits each term. Admission to the ILR senior honors program may be obtained under the following circumstances: (a) students must be in the upper 20 percent of their class at the end of their junior year; (b) an honors project, entailing research leading to completion of a thesis, must be proposed to an ILR faculty member who agrees to act as thesis supervisor; and (c) the project, endorsed by the proposed faculty sponsor, is submitted to the Committee on Academic Standards and Scholarships.

Accepted students embark on a two-semester sequence. The first semester consists of determining a research design, familiarization with germane scholarly literature, and preliminary data collection. The second semester involves completion of the data collection and preparation of the honors thesis. At the end of the second semester, the candidate is examined orally on the completed thesis by a committee consisting of the thesis supervisor, a second faculty member designated by the appropriate department chair, and a representative of the Academic Standards and Scholarship Committee.

ILRCB 497–498 Internship

Fall and spring. 497, 3 credits; 498, 6 credits. Staff.

All requests for permission to register for an internship must be approved by the faculty member who will supervise the project and the chairman of the faculty member's academic department before submission for approval by the director of Off-Campus Credit Programs. Upon approval of the internship, the Office of Student Services will register each student for 497, for 3 credits graded A+ to F for individual research, and for 498, for 6 credits graded S-U, for completion of a professionally appropriate learning experience, which is graded by the faculty sponsor.

ILRCB 499 Directed Studies

Fall and spring. 3 credits.

For individual or group research projects conducted under the direction of a member of the ILR faculty, in a special area of labor relations not covered by regular course offerings. Sophomores, juniors and seniors with a preceding semester of 3.0 term average, are eligible to submit projects for approval by the Academic Standards Committee. Students should consult with a counselor in the Office of Student Services at the time of CoursEnroll in order to arrange for formal submission of their Directed Study.

ILRCB 500 Collective Bargaining

Fall. 3 credits. Open only to graduate students. Recommended: ILRCB 501 taken previously or concurrently. M. Cook, H. Katz, S. Kuruvilla, L. Turner.

A comprehensive introduction to the industrial relations system of the United States. The negotiation, scope, and day-to-day administration of contracts; union and employer bargaining structures; implications of industrial relations issues for U.S. competitiveness and public policy; industrial conflict; and U.S. industrial relations in international and comparative perspective.

ILRCB 501 Labor and Employment Law

Fall. 3 credits. Open only to graduate students. M. Gold, R. Lieberwitz, K. Stone.

A survey and analysis of the law governing labor relations and employee rights in the workplace. The first half of the course examines the legal framework in which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half of the course surveys additional issues of rights in employment, including such topics as employment discrimination, the developing law of "unjust dismissal," and union democracy. Also serves as an introduction to judicial and administrative systems.

ILRCB 502 History of Industrial Relations in the United States since 1865
Spring. 3 credits. Open only to graduate students. C. Daniel, I. DeVault, N. Salvatore.
This introductory survey course emphasizes historical developments in the twentieth century. Special studies include labor union struggles over organizational alternatives and such other topics as industrial conflicts, working-class life styles, radicalism, welfare capitalism, union democracy, and the expanding authority of the federal government.

ILRCB 504 The U.S. Industrial Relations System
4 credits. Offered only in New York City for the M.P.S. Program. Staff.
Examines the development, operation, and outcomes of the U.S. industrial relations system in a comparative context. Specifically, the course contrasts the American experience with industrial relations institutions and outcomes with the experience of several other countries in Europe and Asia. Students look at the process of union formation, the practice of collective bargaining at different levels, the methods of dispute resolution, and the legal regime germane to industrial relations. The course also focuses on both processes and outcomes of different country systems, focusing on the degree of collaboration or conflict, wage levels and wage inequality, and practices in different industries and firms. Finally the role played by industrial relations and human resource policy in economic and social development in these nations is addressed.

ILRCB 602 Arbitration
Fall and spring. 4 credits. Limited to 21 students. Prerequisites: undergraduates, ILRCB 201, 300; graduate students, ILRCB 500 and 501; permission of instructor. J. Gross, R. Lieberwitz.
A study of the place and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of a mock arbitration hearing, and the preparation of arbitration opinions and post-hearing briefs.

ILRCB 603 The Economics of Collective Bargaining in Sports
Fall or spring. 3 credits. L. Kahn.
Surveys economic and industrial issues in the sports industry. Topics include: salary determination, including free agency, salary caps, salary arbitration; competitive balance and financial health of sports leagues; antitrust issues in sports; labor disputes, union history, and contract administration issues in sports leagues; discrimination in sports; and performance incentives.

ILRCB 604 Theories of Equality and Their Application in the Workplace
Fall or spring. 3 credits. R. Lieberwitz.
An examination of the various aspects of equality in the workplace, focusing on issues of race, gender, and national origin, and the ways in which societal discrimination on these bases are institutionalized in the workplace. Theories attempting to define "equality" and specific workplace issues are studied, including the means for achieving equality at the workplace. The course entails a high level of student participation in class discussions, and assignments include a research paper.

ILRCB 605 Readings in the History of Industrial Relations in the United States
Fall. 3 credits. Limited to seniors and graduate students. C. Daniel, N. Salvatore.
An intensive seminar covering original printed sources and scholarly accounts for different periods in American history.

ILRCB 606 Theories of Industrial Relations Systems
Fall or spring. 3 credits. Limited to seniors and graduate students. Prerequisites: seniors, ILRCB 100, 101, 300; graduate students, ILRCB 500. H. Katz.
This course traces the evolution of theory and research on industrial relations. Topics include: theories of the labor movement; institutional models and evidence regarding what unions do; the origins of internal labor markets and their relationship with unionization; models of strikes; empirical assessments of arbitration; research on union decline; and empirical evidence of the impacts of new technology.

ILRCB 607 Values in Law, Economics, and Industrial Relations
Fall and spring. 3 credits. Limited to 21 students. Prerequisites: ILRCB 201, 300, 500, 501. J. Gross.
An examination of the often hidden values and assumptions that underlie the contemporary U.S. systems of employment law, work and business, and industrial relations. Classroom discussions and student research projects use novels and short stories (as well as the literature of industrial and labor relations) to focus on issues such as: discrimination; law, economics, and the state; work and business; power, conflict, and protest; and rights and justice.

ILRCB 608 Special Topics in Collective Bargaining, Labor Law and Labor History
Fall. 3 credits. Prerequisites: ILRCB 201 or 501 or permission of instructor. M. Lieberwitz
Lec 03—An advanced labor law course which builds on the foundation of the study of labor law in the required labor and employment law course. The course is an in-depth study of labor law, with particular focus on the National Labor Relations Act, including issues of organizing across different occupational groups, collective bargaining, strikes, picketing, and contract enforcement. The course also includes a study of legal issues of union democracy and other labor and employment law issues.

ILRCB 608 Collective Bargaining Simulation
Fall. 3 credits. Open only to juniors, seniors, and graduate students. Limited to 14 students. One evening extended bargaining session is required. H. Kramer.
Lec 04—After a brief introduction to negotiations techniques, participants take part in a simulated negotiation, set in a hypothetical company and union environment (for 2001 in the chemicals industry), for a moderately sized bargaining unit, either as members of a management or a union team. The course stresses the process of negotiations over their outcome. Negotiation problems are highly realistic, with attention given to dynamic legal, economic, political, and communication concerns. Participants plan for negotiations, cost proposals, negotiate contract language, and bargain wages, benefits, and other economic items, in the context of a company and union with an established contract, history, policies, and culture (which are supplied by the course leaders). Students are required to read, "Game, Set, Match—Winning the Negotiations Game," but the primary thrust is on using practical methods for managing the negotiation process. **This is a participation based hands-on course**. Students wishing merely to observe should *not* take this program. There is a group planning paper requirement. This course is recommended for graduate and undergraduate students who have taken or who are taking collective bargaining and labor law. Participants are required to adhere to high standards for "completed staff work."

ILRCB 609 Special Topics: Labor Law Policy Seminar
Spring. 3 credits. K. Stone.
The United States' collective bargaining system, which had its origins during the New Deal period, has come under intense attack. The intellectual premises of the system have been challenged by scholars on both the right and the left, and at the same time the decline in the labor movement has undermined its political support. This seminar looks at the theoretical attacks on the New Deal collective bargaining system and at some of the current proposals for its replacement. Among the topics to be discussed are: the theory of regulation embodied in the National Labor Relations Act and its critique; alternative concepts of labor markets and their policy ramifications; the emergence of the global economy and its ramifications for domestic labor regulation. There are also discussions of alternative systems of labor regulation, such as is found in West Germany, Sweden, and Japan.

ILRCB 650 Service Work and Workers in Historical Perspective
Fall or spring. 3 credits. I. DeVault.
Takes a historical perspective on the development of a service economy in the United States. Readings include general and theoretical works, but the main focus is recent historical scholarship on specific occupations and situations in the "nonproductive" workforce. Students explore primary sources for research on the subject and write research papers.

ILRCB 651 Industrial Relations in Transition
Spring. 3 credits. Limited to seniors and graduate students. H. Katz.
Considers whether recent developments such as concession bargaining, worker participation programs, and the growth of nonunion firms represent a fundamental transformation in industrial relations practice. Reviews recent research and new theories arguing that such a transformation is occurring, including the work of Piore and Sabel, Bluestone and Harrison, and Kochan, McKersie, and Katz. Also reviews the counterarguments and evidence put forth by those who believe no such transformation is under way. Course material focuses on industrial relations practice in the private sector in the United States, although some attention is paid to developments in Western Europe, the United Kingdom, and Japan.

ILRCB 655 Employment Law I
Fall. 3 credits. Prerequisites: ILRCB 201, 501, or permission of instructor. Classroom presence and participation are mandatory.

This course can be taken either before or after ILRCB 656. There are considerable reading responsibilities. L. Adler.

The approach taken is similar to ILRCB 656, but the subject matter differs. The subject studied include employment at will and its exceptions; the role of the Constitution in the US workplace; the law of electronic and traditional privacy at work; and the slowly evolving rights of contingent workers in the old and new economies. One study primarily reviews federal and state court decisions and focuses upon the way that employees' rights are advanced or constricted by law.

ILRCB 656 Employment Law II

Spring. 3 credits. Prerequisites: ILRCB 201, 501, or permission of the instructor. Classroom presence and participation are mandatory. This course can be taken either before or after ILRCB 655. L. Adler.

The approach taken is similar to ILRCB 655, but the subject matter differs. The areas covered include the meaning and validity of pre-employment arbitration agreements; the critical distinctions in the status and thus the rights of employees, independent contractors, and contingent workers; what rights the working poor, the homeless, and workfare individuals have on the "job;" and the origin and application of the workers compensation laws that apply when people are injured or contract disease from their work. One study primarily reviews federal and state court decisions and focuses upon the way that employees' rights are advanced or constricted by the law. There are considerable reading responsibilities.

ILRCB 682 Seminar in Labor Relations Law and Legislation

Fall or spring. 3 credits. Limited enrollment. Prerequisite: permission of instructor. R. Lieberwitz.

This course covers legal problems in public employment and other areas of labor relations affecting the public interest.

ILRCB 683 Research Seminar in the History of Industrial Relations

Fall or spring. 3 credits. Prerequisites: undergraduates, ILRCB 100 and 101; graduate students, ILRCB 502. C. Daniel, I. DeVault, N. Salvatore.

Areas of study are determined each semester by the instructor offering the seminar.

ILRCB 684 Employment Discrimination and the Law

Fall or spring. 3 credits. Prerequisite: ILRCB 201/501 or equivalent. M. Gold, R. Lieberwitz.

An examination of the laws against employment discrimination based on race, color, religion, sex, national origin, age, and disability.

ILRCB 685 Research Seminar on Trade Unions

Fall or spring. 3 credits. Prerequisite: ILRCB 300 or 500; permission of instructor. S. Kuruvilla.

Designed to provide an analytical survey of research on trade unions in the United States. Major topics include unions in politics, unions as complex organizations, public opinion and attitudes toward unions, determinants of union growth and decline, economic and noneconomic effects of unions, internal union government, and commitment and participation in trade union activity. This is a research-oriented course.

ILRCB 686 Collective Bargaining in the Public Sector

Fall or spring. 3 credits. Prerequisites: undergraduates, ILRCB 300 and 201; graduate students, ILRCB 500 and 501. Staff.

An examination of the development, practice, and extent of collective bargaining between federal, state, and local governments and their employees. The variety of legislative approaches to such matters as representation rights, unfair practices, scope of bargaining, impasse procedures, and the strike against government are considered along with implications of collective bargaining for public policy and its formulation.

ILRCB 689 Constitutional Aspects of Labor Law

Fall or spring. 3 credits. R. Lieberwitz.

In-depth analysis of the Supreme Court decisions that interpret the United States Constitution as it applies in the workplace. This study focuses on the First Amendment, Fifth Amendment, Fourteenth Amendment, and Commerce Clause, with issues including freedom of speech and association, equal protection, due process, and other issues in the area of political and civil rights. The course entails a high level of student participation in class discussion, and assignments include a research paper.

ILRCB 703 Theory and Research in Collective Bargaining

Spring. 3 credits. Open to graduate students who have taken ILRCB 500 and ILROB 723 or their equivalents. Recommended: a statistics course beyond the level of ILRST 510. Staff.

This is a second-level course in collective bargaining that builds on the institutional research covered in ILRCB 500. The existing literature in the area of collective bargaining is appraised for its theoretical and empirical content. Efforts are made to explore the appropriate role for theory and empirical analysis in moving research in collective bargaining toward a more analytical perspective, and to identify and appraise the underlying paradigms used to study collective bargaining-related issues.

ILRCB 705 The Economics of Collective Bargaining

Spring. 3 credits. Prerequisites: ILRCB 500; ILRLE 540 (or their equivalents) and an understanding of multiple regression analysis; or permission of instructor. Staff.

Focuses on both the economic analysis of unions and collective bargaining in our economy and on the economic forces that affect collective bargaining. The method is to identify and conceptualize the structural determinants of relative bargaining power. On this basis, the course examines both the economic outcomes of collective bargaining and current bargaining trends in a variety of industries. Tentative theoretical analyses of unionism (neoclassical, institutionalist) are compared. The statistical techniques and empirical results of research on the union effect on economic outcomes (wages, prices, inflation, profits, productibility, earnings inequality) are also evaluated. The effect of technology, corporate structures, and public policy on union bargaining power is outlined, and a number of case studies of collective bargaining in the private sector are reviewed. A term paper is required.

ILRCB 708 Negotiations in Practice (also LAW 672)

Fall. 3 credits. S. Kuruvilla.

This course aims to provide opportunities for class participants to develop their negotiating abilities for use in organizational and other settings. The course is premised on the assumption that negotiating concepts are best learned through practice which is grounded in rigorous analysis and reflection. While theoretical principles and concepts from various reference disciplines (such as social psychology, sociology, and economics) are presented through lectures and readings, this course focuses primarily on improving practical skills. Class participants not only learn to enhance their individual abilities in dyadic and group situations, but also learn to analyze contexts for the most effective application of these skills.

ILRCB 783 Seminar in American Labor History (also HIST 683)

3 credits. Graduate students only. Permission of instructor required. A research paper is required. N. Salvatore.

This course explores the relationship of scholarly biographical writing to the field of American social history. More and more historical biographies look to incorporate social analyses at the center of their biographical structures. Students read, discuss, and analyze the varied strengths and weaknesses of a number of these efforts. The author's understanding of the play between biographical subject and the larger social context, and its meaning for the structure of the book, are a point of inquiry that encourage numerous approaches and interpretations.

ILRCB 790 ILR M.P.S. Program

Fall and spring. 1–9 credits. Staff.

Supervised research only for those enrolled in the ILR M.P.S. program.

ILRCB 798 Internship

Fall and spring. 1–3 credits.

Designed to grant credit for individual research under direction of a faculty member by graduate students who have been selected for an internship. All requests for permission to register for ILRCB 798 must be approved by the faculty member who will supervise the project.

ILRCB 799 Directed Studies

Fall and spring. Credit TBA.

For individual research conducted under the direction of a member of the faculty.

ILRCB 980 Workshop in Collective Bargaining, Labor Law, and Labor History

Fall and spring. 2 credits. Limited to M.S. and Ph.D. candidates in the department. S-U grades only. Staff.

Designed to provide a forum for the presentation of current research being undertaken by faculty members and graduate students in the Department of Collective Bargaining, Labor Law, and Labor History, and by invited guests. All M.S. and Ph.D. candidates in the department who are at work on their theses are strongly urged to enroll. Each student in the course is expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of that student's thesis research.

HUMAN RESOURCE STUDIES

P. Wright, chair; R. Batt, J. Bishop, J. Boudreau, V. Briggs, M. Cavanaugh, C. Collins, L. Dyer, G. Milkovich, Q. Roberson, W. Wasmuth

ILRHR 260 Human Resource Management
Fall. 3 credits. Open only to ILR students; others by permission. Q. Roberson.
An overview of the management of human resources in organizations. Topics include human resource decisions dealing with staffing, training and development, performance management, compensation, and employee relations. Emphasis is on: problem-solving and decision-making approaches; operational methods, technologies, and practices; application of relevant behavioral science theory and research; and legislation and other environmental constraints having an important bearing on the effective utilization of human resources by an enterprise.

ILRHR 266 Personal Computer Basics
Fall, spring, and summer. 2 credits. Limited. C. Homrighouse.
Provides basic skills in the use of personal computers using the Windows environment. Course covers the basics of Lexis Nexis, Windows, Microsoft Excel, Access, and Powerpoint. Emphasis is placed on hands-on experience using examples demonstrating human resource issues and PC-based solutions. This course is a prerequisite to several advanced Human Resource Management electives.

ILRHR 360 Human Resource Economics and Public Policy
Fall and spring. 3 credits. Open to sophomores, juniors, and seniors. V. Briggs, J. Bishop.
A review of labor-market trends, data collection systems, and theories pertaining to public efforts to develop the employment potential of the nation's human resources and to combat unemployment. The major segments of the nation's educational training enterprise (e.g. public education, higher education, employer-provided training, apprenticeship, and special training programs for the economically disadvantaged) are examined. The course examines programmatic issues pertaining to such groups as youth and disabled rural workers. It also covers public policies pertaining to welfare reform, direct job creation, worker relocation, economic development, targeted tax credits, and "empowerment zone" proposals. Comparisons are made with other industrialized nations.

ILRHR 362 Career Development: Theory and Practice
Fall, spring. 2 credits. 7 weeks. Limited to 30. S-U only. J. McPherson.
This course covers the components of career management, individual factors and organizational realities in the development of both careers and organized programs for career management. Two complementary learning tasks are required, information-gathering for career decision making based on self-assessment activities, and comprehension of organizational circumstances and practices encountered as careers develop. Grades are based on short writing assignments and a research paper.

ILRHR 363 Leadership Seminar for Fraternities and Sororities
Spring. 2 credits. S-U only. Permission of instructor. Staff.
Provides students with an opportunity to develop their leadership and management skills. The philosophy of the class is that fraternity and sorority houses are small businesses and the leadership must be capable of effective managing and leading in order for them to succeed. The learning method are "hands on" with participants working on weekly assignments that involve the application of lessons learned to their current job duties. Students participate in role plays, class discussions, meetings with guest speakers, and debriefing sessions where they report the results of using the material obtained from class in their current situations.

ILRHR 366 Women at Work
Spring. 3 or 4 credits. Prerequisite: ILRHR 260 or equivalent. J. Farley.
This course covers various aspects of female occupational roles in twentieth-century United States. Historical, social, and legal factors that influence women's choice of careers, work socialization and training, and subsequent labor-market experience are considered. Working women's entry-level jobs, opportunities for advancement, and income are compared to men's.

ILRHR 456 International Human Resource Management
Fall. 3 credits. Staff.
Provides an examination of international human resource management issues in multinational enterprises. The course has two major objectives: to enhance understanding of key strategic and functional issues related to IHRM, and to develop analysis of practical IHRM issues in multinational enterprises. Includes topics such as strategic issues for IHRM, cross-cultural management issues, coordination issues, and expatriate management.

ILRHR 460 Human Resource Strategies for Entrepreneurial Firms
Spring. 3 credits. Open to juniors and seniors. Prerequisites: ILR 260 or permission of instructor. C. Collins.
Explores the human resource problems and solutions specific to start-up firms and growing entrepreneurial organizations. Over the course of the semester, students integrate their knowledge of the functional areas of human resource management with general management, business strategy, entrepreneurship, accounting/finance, marketing, public relations, and small business management. Course material and creative solutions to problems are communicated to the class through lectures, case studies, class and group discussions, and formal presentations. The emphasis for the course is on the integration of concepts, application to real-life business situations, and the acquisition of general management skills and knowledge.

[ILRHR 461 The Design of Work Systems: Comparative and Interdisciplinary Perspectives
Fall or spring. 3 credits. Prerequisite: ILR 260 or equivalent and consent of instructor. Limited to juniors and seniors. Not offered 2001–2002. R. Batt.
Seminar designed to explore the state of knowledge and current research concerning the design and development of alternative work systems. The focus is on understanding alternative approaches to work restructuring and their differential effects on firm competitiveness and employee welfare. The first half of the course considers classic texts on mass production, flexible specialization, sociotechnical systems, diversified quality production, and lean production. It compares these workplace models in their original national contexts and in subsequent transplants. Relevant research from economics, engineering, organizational behavior, human resources, and industrial relations is examined. The second half of the course considers these alternative approaches to restructuring in the context of specific manufacturing and service industries and occupational groups. Students are required to hand in weekly memos covering the readings, actively participate in seminar discussions, and write two research papers on topics relevant to the course.]

ILRHR 462 Staffing, Training, and Development
Spring. 3 credits. Prerequisites: ILRHR 260 or permission of the instructor. C. Collins.
This course provides overviews of the staffing, training, and development functions in organizations. The first half of the semester focuses on the process by which organizations fill positions. Topics include legal issues, job/competency analysis and planning, external selection practices, and internal staffing decisions. The second half of the semester focuses on the process by which organizations train and develop employees. Topics include training needs assessment, program design, training evaluation, and management development practices. Throughout the semester students examine the relationship between the staffing and training/development functions.

ILRHR 463 Employee Relations and Diversity
Fall. 3 credits. Q. Roberson.
Explores the policies, programs and practices used by employers to promote the fair treatment of employees, especially those not covered by collective bargaining contracts. Includes such policies as organizational justice and the protection of employee rights of such programs as work/life balance, and worker health and safety; and elements of such practices as employee communication and conflict resolution. Also examines individual and organization climate factors that are important to the management of diversity in business organizations. Considers variations in employee relations and diversity management practices and the effects of these practices on relevant individual and organization outcomes.

ILRHR 464 Business Strategy
Fall. 3 credits. C. Collins.
Intended to be an integrative course focusing on strategic management. The main purpose of the course is to provide an opportunity for students to study and analyze issues associated with strategic thinking in complex business situations, top management decision making, and the functions of corporations as a whole. Allows students to bring together all of the functional skills they have learned in other business or related classes (e.g., marketing, accounting, finance, human resources, etc.) and to apply this knowledge to business problems faced by top management in existing organizations. Class is comprised of both a lecture and case study format.

[ILRHR 466 Comparative Human Resource Management

Fall. 3 credits. Not offered 2001–2002. Staff.
Provides a survey of human resource management practices in two key regions: Europe and the Asia-Pacific region. Focus of this course is on HRM issues such as selection and staffing, training and development, and appraisal and reward systems. Special attention is given to HRM trends and developments. Issues of transferability of HRM practices, and implications for multinational enterprises operating in those regions, is also discussed.]

ILRHR 468 Human Resources Management Simulation

Spring. 2 credits. Limited to 30 juniors and seniors. Prerequisite: ILRHR 260 or equivalent. 7 weeks. W. Wasmuth.
Uses a simulation model and an open-systems approach as means to enhance students' skills in strategic planning and managerial decision making. Attention is given to the implications and efforts of strategic human resource managerial and supervisory decisions as measured by 10 organizational performance indicators, including quality of work life, employee productivity, customer satisfaction, employee retention, internal control, and the bottom line. Each student is assigned to a group (team) of five members and must be committed to the work of that group. An individual research paper is also required. Regular attendance is required.

ILRHR 469 Immigration and the American Labor Force

Fall and spring. 3 credits. V. Briggs.
Assesses the role that immigration policy plays as an instrument of human resource development in the United States. Immigration policy will be placed in an evolutionary context but primary attention will be given to the post-1965 revival of mass immigration. In addition to legal immigration, policies pertaining to illegal immigration, border commuters, "maquiladoras," refugees, asylees, and nonimmigrant workers are also examined. Comparisons are also made with immigration systems of other nations.

ILRHR 495 Honors Program

Fall and spring (yearlong course). 3 credits each term.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRHR 497–498 Internship

Fall and spring. 3 and 6 credits.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRHR 499 Directed Studies

For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRHR 560 Human Resource Management

Fall and spring. 3 credits. Open to graduate students only. Q. Roberson.
A survey course covering the major areas of the management of human behavior in work organizations. Consideration is given to aspects of strategic human resource management such as: staffing, training and development, performance management, compensation, and employee relations. Emphasis is on exploring these issues from both strategic tactical levels to increase organizational effectiveness.

ILRHR 564 Human Resources Management in Effective Organizations

Fall or spring. 4 credits. Offered only in New York City for the M.P.S. Program. Staff.
This course offers the opportunity to become better prepared to make effective decisions about human resources. Successful organizations depend on people; their human resources. The first module examines strategic human resource management and the effects of HR decisions on organization success and fair treatment of people. The second module focuses on alternative systems used to staff and develop people. The third module focuses on compensating and rewarding people. The final module includes employee relations and alternative work systems. Case and field studies are used throughout the course.

ILRHR 650 Advanced Desktop Applications

Spring. 1 credit. Letter grade only. Prerequisite: ILRHR 266 or significant experience (2–4 years) using office applications. C. Homrighouse.
Explores advanced topics for common desktop applications including Windows, Word, Excel, Access, PowerPoint, and basic HTML. The course is designed based on student input and instructor recommendations, covering those subjects that students feel would be most useful and relevant in the job market. Examples of areas include working with tables, columns or sections in Word, pivot tables in Excel, taking a PowerPoint presentation "on the road" and using join tables to create relationships in Access.

ILRHR 653 Research on Education Reform and Human Resource Policy

Spring. 3 credits. J. Bishop.
State and local efforts to improve K–12 education are employing a variety of (sometimes contradictory) reform strategies. A research seminar that will critically examine the case that is made for (and against) each of the major reform proposals and review studies that provide objective evidence on their effectiveness. The education reform strategies that will be examined include: vouchers, charter schools, site-based decision making by teachers and parents, smaller classes, direct instruction versus discovery learning, extending the school day and year, better preparation and selection of new teachers, better professional development, ending tenure, merit pay, state standards and school accountability, ending social promotion, and externally set end-of-course examinations.

ILRHR 661 Applied Personal and Organization Development

Spring. 3 credits. Seniors and graduate students. C. Warzinski.
An experiential course that deals with OD and its role in the organizational change process. Combines the opportunity for hands-on practice in a workshop setting. Students are responsible for researching and writing a paper that examines a specific method, technique, or critical issue; preparing an in-class demonstration/presentation illustrating applications of a chosen subject; and completing a final project requiring a comprehensive proposal that describes an appropriate and logically supported intervention strategy.

ILRHR 662 People in Agile Organizations

Fall. 4 credits. Prerequisites: ILRHR 260, 560, or equivalent, plus two functional courses in HR management. Enrollment limit, 25. L. Dyer.
Organizational agility is defined as the capacity to be infinitely adaptable without having to change. It is a core competence for organizations operating in rapidly moving marketplaces. Accordingly, an increasing number of organizations are striving to become more agile by inventing new ways of managing all aspects of organizational capability. This course explores the opportunities and challenges posed by organizational agility, with particular emphasis on crafting human resource strategies that support this evolving paradigm. Every effort is made to run the course as an agile organization rather than using a traditional classroom format.

ILRHR 664 "e-HR: Human Resource Management and the WEB in The Information Age"

Fall. 3 credits. J. Boudreau, S. Basefsky.
Designed to teach students skill-based techniques in HR research methodology. Students are taught to act as their own consultants in both a classroom and workforce setting as they access data and find statistical information to support their research topics. The first five weeks of the semester consist of weekly meetings with the reference librarians at the Martin P. Catherwood Library. These meetings cover a different research technique each week, and students are given readings and a hands-on assignment to gain practical experience on these techniques.

ILRHR 665 Business Strategy and Human Resources

Fall. 4 credits. Limited. Prerequisite: ILRHR 260/560 plus 3 other courses in human resource studies and permission of instructor. P. Wright.
As the capstone course in HR studies, students integrate the theories and practices learned in other courses, to explore the linkages between business strategy and HRM. Extensive fieldwork is involved. The field projects are designed to make students explore and understand business strategy and draw upon and integrate their course work in HR planning, staffing, development, compensation and regard, and new work systems.

ILRHR 666 Strategic HR Metrics

Fall. 4 credits. Prerequisites: ILRHR 260/560 or equivalent, on course in statistics, one elective in human resource studies. J. Boudreau.
Explores how to account for the contribution of human resource management programs and decisions to achieving organizational goals. This course emphasizes a systematic decision-making system that organizes the discipline of human resource management and can assist in planning and evaluating programs. Topics include the role of financial-accounting statements in managing human resources, cost-benefit analysis for programs, managing human resources as a profit center, and identifying human resource management constituents to address their goals.

ILRHR 667 Employee Relations and Diversity

Spring. 4 credits. Prerequisites: ILRHR 260/560 or equivalent and permission of instructor. Q. Roberson.
Explores the policies, programs, and practices used by employers to promote the just and

humane treatment of employees, especially employees not covered by collective bargaining contracts. Includes such policies as organizational justice and the protection of employee rights; such programs as work/life balance, worker health and safety; and elements of such practices as employee communication and conflict resolution. Also examines individual and organizational climate factors that are important to the management of diversity in business organizations. Considers: variations in employee relations; diversity management practices; the motives of employers in implementing such practices; and strategies for leveraging these practices to increase organization effectiveness.

ILRHR 668 Staffing Organizations
Spring. 3 credits. Prerequisites: ILRHR 260/560 and one course in statistics or permission of instructor. C. Collins.
Seminar providing an overview of the processes by which organizations staff positions with both internal and external applicants. Because staffing is one of the primary human resource activities, it is critical for human resource professionals to understand how theory, research, and legal foundations can inform staffing decisions. Therefore, this course focuses on theories, research, policies, and practices concerning job recruitment and selection. Topics covered include staffing strategy and context, measurement of staffing effectiveness, job/competency analysis, human resource planning, recruitment and job choice, and internal and external selection practices.

[ILRHR 669 Managing Compensation
Fall. 4 credits. Limited to 30 students. Prerequisites: ILRHR 260/560 or equivalent, ILRHR 266 and basic statistics or permission of instructor. Not offered 2001. G. Milkovich.
Focuses on managing employee compensation in contemporary organizations. The major objectives are: to examine the current state of compensation decision making, to examine how recent theoretical and research developments inform compensation decisions, and to offer an opportunity to develop competencies in making compensation decisions.]

ILRHR 670 Seminar in Manufacturing
Spring. 15 credits. R. Batt.
Semester in Manufacturing ("SiM") is designed to give students a basic understanding of the fundamentals of manufacturing, as well as a broad overview of current issues and trends. The 15-credit immersion format allows development of the linkage of manufacturing to other functions in the enterprise (research and development, marketing, corporate strategy, human resources, etc.). A highlight of SiM is that each student visits more than 20 manufacturing facilities during the semester, representing diverse sets of products, processes, and manufacturing strategies. These visits include extended discussion sessions with management, and often union representatives, as well as a factory tour. Visits bring the "real-world" perspective to the course. SiM is built around five basic themes. The 15-credit immersion format allows each theme to be discussed in depth, and the interrelationships between themes to be developed over the semester, giving students a broad understanding of how an enterprise functions.

[ILRHR 690 Comparative Human Resource Management
Fall. 3 credits. Prerequisites: ILRHR 260/560, or permission of instructor. Not offered 2001–2002. Staff.
Surveys human resource practices in two key regions of the world: Western Europe and the Pacific Rim. The focus is on HR issues related to management of professional and managerial work force, such as selection and staffing, development, and appraisal and reward systems. Special attention is given to current changes and trends in the human resource management area (e.g., unification of Europe, transformation of Japanese firms). Implications for multinationals operating in these countries is also discussed.]

ILRHR 692 Training the Displaced and Disadvantaged
Spring. 3 credits. Prerequisite: permission of instructor. J. Bishop.
Examines public and private efforts to lower unemployment and underemployment of displaced and disadvantaged workers. The seminar examines the scope of the problem, its causes, and why specific programs have worked and others have not. Topics covered include training for displaced workers, rehabilitation of the disabled, job-search training, tax credits for hiring, vocational training, literacy instruction, EEO, public service employment, assisting new business, and industrial policy. The seminar also investigates how the structure of the economy influences the ability of targeted training and job creation to achieve sustained reductions in unemployment and draws lessons from the experience of other societies.

ILRHR 693 Training and Development in Organizations
Spring. 3 credits. Prerequisites: ILRHR 260/560 or equivalent, one course in statistics or permission of instructor. M. Cavanaugh.
The purpose of this course is to acquaint students with aspects of learning in organizations. We begin by discussing organizational learning, and then focus more narrowly on specific ways in which learning is achieved through the training and development functions. Topics throughout the semester include: how learning is linked to organizational strategy, how to determine that training is needed, issues regarding the design of training programs, current training techniques, evaluation strategies, and management development practices.

ILRHR 695 Education, Technology, and Productivity
Fall. 3 credits. J. Bishop.
This seminar investigates the nexus between the education and training in schools and at the workplace and the technological progressiveness, productivity, and competitiveness of firms, individuals, and nations. Students investigate: how technological progress is changing the nature of work and what this implies for reform of education and training; why United States productivity has increased so little in the past two decades; how education and training contribute to growth and competitiveness; why educational achievement has declined; and how the responsibility for education and training should be apportioned among individuals, firms, private nonprofit organizations, and government.

ILRHR 697 Special Topics in Resource Studies
Fall or spring. 3 credits. Staff.
Areas of study are determined each semester by the instructor offering the seminar.

ILRHR 698 International Human Resource Policies and Institutions
Spring. 3 credits. J. Bishop.
A comparative study of human resource policies and institutions in Western Europe, North America, Japan, and East Asia (with special emphasis on math and science education) and of the effects of these institutions on productivity, growth, and equality of opportunity. The institutions studied include primary and secondary education, apprenticeship, employer training, and higher education. Data on the consequences of policies is presented and an effort made to understand how human resource policies and institutions have contributed to the rapid growth and low levels of inequality in Europe, Japan, and the Pacific Rim nations. Another focus of the course is understanding the causes of the low levels of achievement of American high school students relative to their counterparts abroad.

ILRHR 760 Seminar in Human Resource Studies
Fall or spring. 3 credits. Prerequisites: ILRHR 560, ILRST 510/511, and ILRHR 669 and permission of instructor. P. Wright.
A "floating" seminar designed to give faculty and students an opportunity to pursue specific topics in detail, with an emphasis on theory and research. Topics vary from semester to semester. Interested students should consult current course announcements for details.

ILRHR 765 International Compensation
Spring. 4 credits. G. Milkovich.
Seminar focuses on international developments in employee compensation. Recent research, theoretical developments, and specific organizations' practices in a wide variety of countries are considered. Local national practices are the principal focus along with expatriates and others. The course draws upon research and theories from sociology, economics, psychology, and other disciplines. Four operative terms are seminar, comparative, compensation, and organization. Students should come to each session prepared to be active players in discussions. The focus is comparative, including research, theory, and practices of specific enterprises in different countries. Compensation includes all forms of pay including cash, benefits, allowances, and so on. Primary focus is at the organization level of analysis.

ILRHR 769 Topics in International Compensation Theory and Research
Spring. 4 credits. Prerequisite: ILRHR 669. G. Milkovich.
Examines recent developments in theory, research, and practice related to compensation. Discussion emphasizes the relevance of theory and research to compensation decision making. Students examine compensation and reward-related theories and research from supporting disciplines such as economics, psychology, sociology, and organizational behavior and evaluate their relevance to employee, managerial, executive, and international compensation.

ILRHR 790 ILR M.P.S. Program
Fall and spring. 1–9 credits.
Supervised research only for those enrolled in the ILR M.P.S. program.

ILRHR 798 Internship
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRHR 799 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRHR 960 Workshop in Human Resource Studies
Fall and spring. 2 credits. Enrollment limited to M.S. and Ph.D. candidates. S-U grades only. Staff.
The workshop is designed to provide a forum for the presentation and critical discussion of current research being undertaken by graduate students, faculty members, and invited guests in the field of human resource studies. All M.S. and Ph.D. candidates in the Department of Human Resource Studies are urged to enroll; candidates in other departments are cordially invited. Each participant has an opportunity to benefit from the collective wisdom of the others in the formulation, design, and execution of his or her research, as well as to become current on the latest developments in the field.

ILRHR 961 Doctoral Research Seminar in Human Resource Management
Fall. 3 credits. Ph.D. candidates only. P. Wright.
This seminar is aimed at reading, understanding, and conducting research in HRM. Students should obtain thorough understanding of the current research in traditional areas of HRM such as validation, job analysis, EEO, selection, performance appraisal, compensation, and training, and should develop the skills necessary to evaluate, criticize, and contribute to the literature on HRM.

ILRHR 962 Doctoral Research Seminar in Strategic Human Resource Management
Spring. 3 credits. Ph.D. candidates only. P. Wright.
Seminar is aimed at reading, understanding, and conducting research in SHRM. The course should enables students to obtain a thorough understanding of the current research in Strategic HRM, and to develop the skills necessary to evaluate, criticize, and contribute to the literature on SHRM.

[ILRHR 963 Research Methods in HRM/ Strategic Human Resource Management
Spring. 3 credits. Ph.D. candidates only. Not offered 2001–2002. P. Wright.
Designed to build social science research skills, particularly in the area of human resource studies (HRS). Topics include measurement reliability, construct validity, design of studies, external validity, meta-analysis, critiquing/reviewing HRS research, publishing HRS research, and applications of statistical models of HRS issues.]

INTERNATIONAL AND COMPARATIVE LABOR RELATIONS

G. Fields, chair; J. Abowd, R. Batt, J. Bishop, F. Blau, G. Boyer, V. Briggs, M. Cook, I. DeVault, L. Kahn, H. Katz, S. Kuruvilla, L. Turner

ILRIC 333 Europe, United States, and Japan in a Global Economy
Fall. 3 credits (1 additional credit may be arranged). L. Turner.
Offers an introduction to the contrasting political economies of Germany, Britain, the European Union, Japan, and the Unites States in today's changing global economy. Emphasis is on (a) national differences and comparisons, and on the different strategies pursued by labor, business, and government in society in the face of growing world trade competition, political conflicts, production reorganization, and labor movement revitalization efforts.

ILRIC 337 Special Topics:
Fall. 3 or 4 credits. Staff.
Devoted to new topics in the field. The specific content and emphasis vary depending upon the interests of the faculty member teaching the course.

[ILRIC 339 The Political Economy of Mexico
Spring. 3 credits. Not offered 2001–2002. Next offered 2003. M. Cook.
Explores the range of challenges affecting contemporary Mexican politics, society, and economic development—from democratization to immigration to NAFTA. The course provides both an introduction to Mexican political economy for those with no prior background and an opportunity for students with more knowledge of Mexico to explore a research topic in greater depth.]

ILRIC 499 Directed Studies
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILRIC 533 Europe, the United States, and Japan in a Global Economy
Fall. 4 credits. Graduate students. L. Turner.
See description for ILRIC 333. Graduate students attend class, take the midterm, and submit an analytical research paper at the end of the semester.

ILRIC 537 Special Topics
Fall or spring. 3 or 4 credits. Staff.
Devoted to new topics in the field. The specific content and emphasis vary depending upon the interests of the faculty member teaching the course.

ILRIC 630 Building a "Social Europe": Regional Integration in the Global Economy
Spring. 4 credits. Seminar designed for graduate students and seniors with permission. L. Turner.
Central questions addressed include: what have the European Union and its member nations done to develop and reform the social dimension in the 1990s and beyond? How are the major actors—labor, government, and business—positioned to influence social policy and industrial relations reform, and what strategies are they pursuing? How do EMU and enlargement affect the effort of European societies to defend and develop the social dimension of their market economies? What are the prospects for the "Social Europe" in an increasingly deregulated global economy?

ILRIC 631 Comparative Labor Movements in Latin America
Spring. 3 credits. M. Cook.
Examines the historical development of labor movements in Latin America, their role in national political and economic development, and the impact of economic liberalization, authoritarianism, and redemocratization on contemporary labor organizations in the region. Countries examined will include, but are not limited to, Mexico, Brazil, Argentina, Chile, Peru, and Venezuela.

ILRIC 632 Revitalizing the Labor Movement: A Comparative Perspective
Fall. 4 credits. Graduate seminar open to seniors with permission of instructor only. L. Turner.
Examines contemporary efforts in advanced industrial democracies to reform industrial relations. The first half of the course examines contemporary industrial relations' reform efforts in the United States, including innovative organizing strategies; new calls for union militance; business strategies for a "union-free" environment; efforts at labor-management cooperation; and the report of the Dunlop Commission. The second half covers Britain—the Thatcher reforms of the 1980s and the current labor-backed works council movement; France—the Auroux Laws of the 1980s and their effects; and Germany—the transformation of industrial relations in eastern Germany since 1989.

ILRIC 633 Labor, Industry, and Politics in Germany
Fall. 4 credits. Open to seniors with permission and graduate students. L. Turner.
Is the successful postwar "social partnership" model of organized capitalism in the Federal Republic of Germany viable in the twenty-first century? To answer this question, this course covers the works councils and codetermination, the rise of a strong postwar labor movement, the contemporary German version of social partnership, with an emphasis on current events and the new challenges for German industry and labor posed by German unification and the single European market.

[ILRIC 635 Labor Markets and Income Distribution in Developing Countries
Spring. 4 credits. Prerequisite: ILRLE 240 or Economics 313 or permission of instructor. Not offered 2001–2002. G. Fields.
A course analyzing who benefits and how much from economic growth in developing countries and how income distribution would be affected by various public policies. Topics to be covered include: poverty, inequality, social welfare, and economic growth-theory and evidence; poverty profiles, earnings functions, and decompositions; employment, unemployment, wages, and labor markets; and an introduction to benefit-cost analysis, with application to the economics of education.]

ILRIC 636 Comparative History of Women and Work (also WOMNS 636)
Fall. 4 credits. Permission of instructor. I. DeVault.
Explores the similarities and differences between different cultures' assumptions about the work of women as well as women's experiences in varying work circumstances

throughout history. Beginning with theoretical pieces and overviews of the history of women and work, most of the course consists of in-depth examinations of specific work situations or occupations across time and geography. Comparative examples are taken from the United States, Europe, and the Third World.

[ILRIC 637 Labor Relations in Asia
Spring. 3 credits. Permission of instructor required. Not offered 2001–2002. Next offered 2003. S. Kuruvilla.
A comparative survey of the industrial relations systems of selected Asian nations such as Japan, South Korea, Thailand, Malaysia, Singapore, Hong Kong, China, and several others. The emphasis is on economic development strategies and industrial relations policies in these countries. Industrial relations practices, the extent of union organization, and labor force demographics of these countries is examined. The primary objective is to provide students with an introduction to industrial relations systems in Asia. The countries chosen are representative, but not exhaustive.]

[ILRIC 638 Labor, Free Trade, and Economic Integration in the Americas
Spring. 3 credits. Limited. Open to seniors and graduate students; juniors by permission. Not offered 2001–2002. Next offered 2003. M. Cook.
Analyzes the contemporary movements toward free trade and regional economic integration in the Western Hemisphere. Special attention is paid to labor's role in this process. Examines the origins and implications of the North American Free Trade Agreement (NAFTA) and looks at integration schemes in South America (Mercosur), Central America, and the Caribbean, and at hemisphere-wide initiatives. A research paper is required.]

ILRIC 639 Building a Social Europe (also GOVT 736)
Spring. 4 credits. Graduate students or seniors by permission. L. Turner.
This course considers the political, economic and labor challenges of today's European Union, emphasizing efforts to protect and develop a "social market" within the greater deregulated global economy.

ILRIC 730 Research Seminar on Labor Markets and Economic Development
Fall or spring. 3 credits. Prerequisite: open to M.S. and Ph.D. students only. G. Fields.
Research seminar for students writing theses or dissertations on aspects of labor markets and economic development. Addresses research questions, methodologies, and contributions in the areas of employment and unemployment, income and earnings, educational and human resource development, welfare economics, and economic growth. Presentations and written papers are required.

[ILRIC 739 The Political Economy of Mexico
Spring. 3 credits. Not offered 2001–2002. Next offered 2003. M. Cook.
For course description, see ILRIC 339.]

ILRIC 790 ILR M.P.S. Program
Fall and spring. 1–9 credits.
Supervised research only for those enrolled in the ILR M.P.S. Program.

ILRIC 799 Directed Studies
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

Other courses approved to fulfill ILRIC distribution

ILRCB 304 Latin American Labor History
Fall. J. Cowie.
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILRHR 456 International Human Resource Management
Spring. Staff.
For description, see the section, Human Resource Studies.

ILRHR 461 The Design of Work Systems: Comparative and Interdisciplinary Perspectives
Fall or spring. R. Batt.
For description, see the section, Human Resource Studies.

ILRHR 466 Comparative Human Resource Management
Fall. Staff.
For description, see the section, Human Resource Studies.

ILRHR 469 Immigration and the American Labor Force
Fall and spring. V. Briggs.
For description, see the section, Human Resource Studies.

ILRHR 690 Comparative Human Resource Management
Fall. Staff.
For description, see the section, Human Resource Studies.

ILRHR 698 International Human Resource Policies and Institutions
Spring. J. Bishop.
For description, see the section, Human Resource Studies.

ILRLE 444 The Evolution of Social Policy in Britain and America
Spring. G. Boyer.
For description, see the section, Labor Economics.

ILRLE 446 Economy History of British Labor 1750–1940 (also ECON 459)
Spring. G. Boyer.
For description, see the section, Labor Economics.

ILRLE 448 Topics in Twentieth-Century Economic History: The Economics of Depression and the Rise of the Managed Economy
Fall. G. Boyer.
For description, see the section, Labor Economics.

INTERDEPARTMENTAL COURSES

ILRID 150 Freshman Colloquium
Fall. 1 credit. Open only to ILR freshman. S-U only. Staff.
This course is offered to acquaint new freshman students with some of the issues and disciplines in the field of industrial and labor relations, and, establish acquaintanceship among members of the ILR faculty and small, randomly assigned groups of students. The course includes a plant visit and several meetings early in the semester designed to introduce issues encountered in studying the employment relationship.

ILRID 355 Documentary Research Methodology
Fall. 3 credits. P. Sione.
Critical evaluation of evidence is a fundamental skill for every professional engaged in the processing of information. Lawyers, arbitrators, and human resources managers are asked to find, assess, and use the appropriate sources to build their case, for a legal decision or the formulation of a particular policy. This course helps students develop the ability to analyze a broad range of retrospective evidence, critically evaluate it as to pertinence and accuracy, and place it in a well thought-out and coherent context. Designed to provide research methodology training specifically for professionals in the labor field. Topics are selected from relevant studies in Industrial and Labor Relations.

ILRID 450 Workplace Diversity: Stepping into the 21st Century
Spring. 1 credit. S-U grades only. Prerequisite: ILRHR 260 and ILR seniors only. Limited to 50. Staff.
Provides an orientation to diversity in the workplace and to the expectations and challenges presented for future workplace leadership. With an emphasis on hands-on experiential learning, the course begins by familiarizing class participants with current practioner approaches to diversity awareness training and competency building. Course focus then shifts to examine diversity as an issue of organizational change. Class participants consider the range of policies, practices, and procedures being used to create workplaces that are both diverse and inclusive. Dialogues and case study presentations with invited workplace diversity leaders offer participants an opportunity to learn from an insider's perspective about the experiences, successes, and challenges of making diversity work.

ILRID 451 Science, Technology, and the American Economy
Spring. 4 credits. V. Briggs.
The industrial revolution did not begin in the United States, but the nation became the world's first technological society. Attention is given to the evolutionary confluence of science, technology, mathematics, religion, and capitalism in the formation of the U.S. economy, its institutions, and its labor force. Primary attention is given to the post–World War II economic developments. The vantage point is the linkage with employment, unemployment, income, and productivity considerations. Public policy issues (such as the employment impact of the computer, research and development policy, national defense influences, the "agricultural revolution," savings and investment rates, and labor force preparedness) are explored. Critical concerns pertaining to environmental impacts, income polarization, and consumerism are also examined.

ILRID 452 Writing in Industrial and Labor Relations
Fall or spring. 3 credits. J. Farley.
Requires close reading of four or five books related to the term's theme in the field of industrial and labor relations and careful writing about them. Students also have an opportunity to practice writing about the world of work for different audiences.

ILRID 790 ILR M.P.S. Program
Fall and spring. 1–9 credits.
Supervised research only for those enrolled in the ILR M.P.S. program.

LABOR ECONOMICS

L. Kahn, chair; J. Abowd, F. Blau, G. Boyer, R. Ehrenberg, G. Fields, R. Hutchens, G. Jakubson, R. Smith

ILRLE 140 Development of Economic Institutions
Fall. 3 credits. Prerequisite for non-ILR students: permission of instructor. G. Boyer.
Provides students with an understanding of the historical roots of the economic system currently dominant in Western Europe and the United States. The course focuses on the process of European economic growth prior to 1914, the effect of industrialization on labor in Great Britain, and the historical evolution of economic thought from Adam Smith to J. M. Keynes.

ILRLE 240 Economics of Wages and Employment (also ECON 341)
Fall and spring. 3 credits. Prerequisites: Economics 101–102, Economics 313, or permission of instructor.
Applies the theory and elementary tools of economics to the characteristics and problems of the labor market. Considers both the demand (employer) and supply (employee) sides of the market to gain a deeper understanding of the effects of various government programs and private decisions targeted at the labor market. Topics covered include employment demand, basic compensation determination, education and training, benefits and the structure of compensation, labor-force participation and its relation to household production, occupational choice, migration, labor-market discrimination, and the effects of unions.

ILRLE 340 Economic Security (also ECON 451)
Spring. 3 credits. Prerequisites: ILRLE 240 or equivalent.
Considers the economic and social effects of income security measures. Analyzes programs offering protection against economic loss due to industrial accident, temporary and permanent disability, illness, old age, premature death, and unemployment, as well as private efforts to provide security, and the problems of integrating public and private programs. Proposals for amending or modifying economic security measures are also considered.

ILRLE 440 Special Topics in Labor Economics
Fall or spring. 4 credits. Staff.
An undergraduate seminar whose topic changes depending on semester and instructor.

ILRLE 441 Income Distribution (also ECON 455)
Fall. 4 credits. Prerequisite: ILRLE 240 or Economics 341. R. Hutchens.
Explores income distribution in the United States and the world. Topics to be covered include functional and size distributions of income, wage structure, income-generating functions and theories, discrimination, poverty, public policy and income distribution, and changing income distribution and growth. Students who have taken PAM 370 may not receive credit for 441.

ILRLE 442 The Economics of Employee Benefits (also ECON 456)
Fall. 4 credits. Prerequisites: ILR 240 or equivalent. F. Blau.
An in-depth treatment of the economics and financial management and administration of all employee benefits: health care, insurance, retirement income, family-care benefits, executive incentive plans, and other compensation provided as a service or contingent financial package to employees. Detailed international comparisons of health care and retirement systems are included.

ILRLE 444 The Evolution of Social Policy in Britain and America
Spring. 4 credits. Prerequisite: ILRLE 240 or equivalent. G. Boyer.
Surveys the history of social policy in Great Britain and the United States from 1800 to the adoption of the British welfare state after World War II. Topics covered include: the role of poor relief in the early nineteenth century; the changing relationship between public relief and private charity; the adoption of social insurance programs and protective labor legislation for children and women; government intervention in the Great Depression; and the beginnings of the welfare state.

ILRLE 445 Women in the Economy (also ECON 457 also WOMNS 446)
Fall. 4 credits. Prerequisite ILRLE 240 or equivalent.
Examines the changing economic roles of women and men in the labor market and in the family. Topics include: a historical overview of changing gender roles; the determinants of the gender division of labor in the family; trends in female and male labor force participation; gender differences in occupations and earnings; and the consequences of women's employment for the family.

ILRLE 446 Economic History of British Labor 1750–1940 (also ECON 459)
Fall or spring. 4 credits. Prerequisite: ILRLE 240 or equivalent. G. Boyer.
Examines various aspects of British labor history from the beginning of the Industrial Revolution until World War II. Specific topics include: monetary and nonmonetary changes in workers' living standards; internal migration and emigration; the London labor market; the extent of poverty and the evolution of the welfare state; Luddism and Chartism; and the development of trade unions.

ILRLE 448 Topics in Twentieth-Century Economic History: The Economics of Depression and the Rise of the Managed Economy (also ECON 458)
Spring. 4 credits. Prerequisites: ILRLE 240 or Economics 314. G. Boyer.
Topics covered include: the causes of the Great Depression in the United States; the economics of the New Deal; the causes of high unemployment in interwar Great Britain; the rise of Keynesian economics and the development of demand management policies in Great Britain and the United States after 1945.

ILRLE 495 Honors Program
Fall and spring (yearlong course). 3 credits each term.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRLE 497–498 Internship
Fall and spring. 3 and 6 credits.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRLE 499 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRLE 540 Labor Economics
Fall. 3 credits. Prerequisites: Economics 101–102 or Economics 103 or equivalent. Required of graduate students majoring or minoring in labor economics and M.I.L.R. candidates.
Applies the theory and elementary tools of economics to the characteristics and problems of the labor market. The course considers both the demand (employer) and supply (employee) sides of the market to gain a deeper understanding of the effects of various government programs and private decisions targeted at the labor market. Topics covered include employment demand, basic compensation determination, education and training, benefits and the structure of compensation, labor-force participation and its relation to household production, occupational choice, migration, labor-market discrimination and the effects of unions.

[ILRLE 544 Labor Market and Personnel Economics
4 credits. Offered only in New York City for the M.P.S. Program. Not offered 2001–2002. Staff.
A four-module course, in which the first module covers the basic elements of supply and demand in the labor market, the second and third modules cover the "new personnel economics" (emphasizing economic issues in a firm that relate to selecting, training, assigning, motivating, and compensating workers), and the final module covers key institutions and economic security issues (including unemployment, pensions, disability, discrimination, and unions). The goals of this course are to have students learn to analyze both business and public policy problems, taking into account both basic principles of economic theory and the relevant institutional environments.]

ILRLE 642 Economic Analysis of the Welfare State (also ECON 460)
Spring. 4 credits. R. Hutchens.
Uses the tools of public economics to analyze modern welfare states. Although examples are drawn from several countries, the course focuses on the U.S., Canada, and Sweden. What are the rationales for the level of government intervention in these states, and how do these rationales square with notions of market failure? What are the economic costs and benefits of taxes, transfers, and regulations in these states? Can voting models explain the growth and operation of welfare states? The possible answers to these questions are discussed.

ILRLE 648 Economic Analysis of the University (also ECON 342)
Fall. 4 credits.
Seeks to illustrate the complexity of decision making in a nonprofit organization and to show how microeconomic analysis in general, and labor market analysis in particular, can be

usefully applied to analyze resource allocation decisions at universities. Among the topics covered are financial aid, tuition, admissions policies, endowment policies, faculty salary determination, the tenure system, mandatory retirement policies, merit pay, affirmative action, comparable worth, collective bargaining, resource allocation across and within departments, undergraduate versus graduate education, research costs, libraries, athletics, and "socially responsible" policies. Lectures and discussions of the extensive readings are supplemented by presentations by Cornell administrators and outside speakers who have been engaged in university resource allocation decisions or have done research on the subject.

ILRLE 741 Applied Econometrics I
Fall. 4 credits. S-U or letter. G. Jakubson.
Considers methods for the analysis of longitudinal data, that is, data in which a set of individual units are followed over time. Focus is on both estimation and specification testing of these models. Students consider how these statistical models are linked to underlying theories in the social sciences. Course coverage includes panel data methods (fixed, random, mixed effects models, etc.) factor analysis, measurement error models, and general moment structure methods.

ILRLE 742 Applied Econometrics II
Spring. 4 credits. Letter or S-U grades. J. Butler.
Covers statistical methods for models in which the dependent variable is not continuous. Covers: models for dichotomous response (including probit and logit); polychotomous response (including ordered response and multinomial logit); various types of censoring and truncation (e.g., the response variable is only observed when it is greater than a threshold); and sample selection issues. Includes an introduction to duration analysis. Covers not only the statistical issues but also the links between behavioral theories in the social sciences and the specification of the statistical model.

ILRLE 743 Applied Econometrics III
Spring. 4 credits. Letter only. Prerequisites: ILRLE 741–742 or permission of instructor. ILRLE 741, 742, and 743 constitute a Ph.D.-level sequence in applied microeconometrics. G. Jakubson.
Covers topics not covered in ILRLE 741-742, including further development of duration analysis, panel data methods for nonlinear models, quantile regression and related techniques, and an introduction to nonparametric and semiparametric methods. Additional topics as suggested by their use in applied areas of social science. Covers not only the statistical issues but also the links between behavioral theories in the social sciences and the specification of the statistical model. Also develops a general framework for the techniques covered in the ILRLE 741–742–743 sequence.

ILRLE 744 Seminar in Labor Economics I (also ECON 641)
Spring. 3 credits. ILRLE 744, 745, and 746 constitute the Ph.D.-level sequence in labor economics.
Course includes reading and discussion of selected topics in labor economics. Applications of economic theory and econometrics to the labor market and human resource areas are stressed.

ILRLE 745 Seminar in Labor Economics II (also ECON 642)
Fall. 3 credits. ILRLE 744, 745, and 746 constitute the Ph.D.-level sequence in labor economics.
Course includes reading and discussion of selected topics in labor economics. Applications of economic theory and econometrics to the labor market and human resource areas are stressed.

ILRLE 746 Seminar in Labor Economics III (also ECON 643)
Spring. 4 credits. ILRLE 744, 745, and 746 constitute the Ph.D.-level sequence in labor economics.
Course includes reading and discussion of selected topics in labor economics. Applications of economic theory and econometrics to the labor market and human resource areas are stressed.

ILRLE 747 Economics of Education
Spring. 4 credits. R Ehrenbeg.
A survey of the research on a wide variety of issues at the elementary, secondary, and higher education levels. Examples of the issues addressed at the elementary and secondary level are the labor markets for teachers and administrators, educational production functions, class size experiments, financing and voter behavior, special education, and school choice. At the higher education level, issues addressed include public and private funding, financial aid and tuition policies, faculty labor markets and Ph.D. production. While the emphasis is on the American educational system, research from other countries may also be discussed. Interested students other than economics and labor economics Ph.D. students should speak to the instructor before enrolling for the course.

ILRLE 748 Economics of Employee Benefits
Fall. 4 credits.
Students in this course attend the lectures in ILRLE 442 (see description for 442) but have additional course requirements. If enrollment warrants, they will also meet separately at a time TBA for discussion of topics in 442 and additional topics.

ILRLE 749 Economics of Development (also ECON 772)
Fall. 4 credits. Prerequisites: first-year graduate economic theory and econometrics.
Analytical approaches to the economic problems of developing nations. Topics to be covered include: some old and new directions in development economics thinking; the welfare economics of poverty and inequality; empirical evidence on who benefits from economic development; labor market models; project analysis with application to the economics of education; and development policy.

ILRLE 790 ILR M.P.S. Program
Fall and spring. 1–9 credits.
Supervised research only for those enrolled in the ILR M.P.S. program.

ILRLE 798 Internship
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRLE 799 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRLE 940 Workshop in Labor Economics
Fall and spring. 3 credits. Intended for Ph.D. students who have started to write their dissertations.
Presentations of completed papers and work in progress by faculty members, advanced graduate students, and speakers from other universities. Focus is on the formulation, design, and execution of dissertations.

ORGANIZATIONAL BEHAVIOR

P. Tolbert, chair; S. Bacharach, T. Hammer, E. Lawler, M. Lounsbury, W. Sonnenstuhl, R. Stern, L. Williams

ILROB 170 Introduction to Micro Organizational Behavior and Analysis: The Social Psychology of the Workplace
Spring. 3 credits. Staff.
This introductory (survey) course considers the basic individual and group processes in the workplace. At the individual level, students study personality, motivation, perception, attitude formation, and decision making. On the group level, group dynamics, leadership, power and influence, and culture are emphasized.

ILROB 171 Introduction to Macro Organizational Behavior and Analysis
Fall. 3 credits. Staff.
The relationship between industry and the economy as a whole and its implications for other social institutions in American society (including stratification, politics, and American values) is discussed. The course moves from classical sociological theory to the analysis of complex organizations. The central focus of the course is the study of industrial organizations and of complex organizations in general, emphasizing authority relations, goals, the division of labor, bureaucracy, and organizational design.

ILROB 320 The Psychology of Industrial Engineering
Fall. 4 credits. T. Hammer.
A study of the human factors in the industrial engineering of work, workplaces, tools, and machinery. The course examines the aspects of individual and social psychology that operate in the work setting and that should be taken into account in the design of jobs. These include limitations of the human sensory system; individual difference in skills, abilities, motives, and needs; group dynamics; intrinsic motivation; job satisfaction; conflict.

ILROB 321 Group Solidarity (also SOC 311)
Fall. 4 credits. M. Macy.
What is the most important group that you belong to? What makes it important? What holds the group together, and how might it fall apart? How does the group recruit new members? Make and enforce rules? Do some members end up doing most of the work while others get a free ride? This course explores these questions from an interdisciplinary perspective, drawing on sociobiology, economics, and social psychology. Alternative theories of group solidarity are applied to a series of case studies such as: urban gangs, spiritual communes, the civil rights movement, pro-life activists, athletic teams, work groups, and college fraternities.

ILROB 322 Service Learning (also SOC 323)
Fall. 4 credits. M. Lounsbury.
Service-learning is a course-based, credit-bearing educational experience in which students participate in organized service that contributes to community well-being. Students reflect on the service to gain further understanding of course content, a broader appreciation of the discipline, and an enhanced sense of civic responsibility. The course includes a service-learning requirement that is designed to involve students in projects at local governmental and community organizations. Students draw on sociological readings to examine the relationship between organizations, society and social change. Theoretical perspectives learned in class complement field-based activity; students develop a richer understanding of how organizations and their members are connected to society.

ILROB 324 Gender and Work (also SOC 314/514 and WOMNS 314/514)
Spring. 4 credits. M. Brinton.
The purpose of this course is to familiarize students with the field of gender stratification. The first part of the course examines long-term changes in women's labor force participation and the division of labor between the sexes as societies industrialize. Students consider theoretical work as well as empirical case studies of a number of countries ranging from Taiwan to Ireland. The second part of the course focuses on gender and work in highly industrialized societies, and includes empirical studies of the gendered division of labor in households and the labor market of the United States in particular. The structure of the course is lecture one day per week and detailed discussion and critique of selected readings on the second day. Students take a mid-term exam and prepare a research proposal on some aspect of gender and work. During the last two weeks of the course, students present synopses of their research proposals which are discussed and constructively critiqued by their classmates.

ILROB 328 Cooperation, Competition, and Conflict Resolution
Spring. 4 credits. Prerequisite: one course in social psychology or equivalent. Staff.
An examination of theory and empirical evidence relating to the resolution of interpersonal, intergroup, and international conflict. Specific attention is devoted to studying factors that contribute to the development of cooperative or competitive bonds between parties to a conflict. The following topics are studied: the availability and use of threat; the credibility, intensity, and costs of threat; fractioning and escalating conflict. Personality and situational factors that regulate conflict intensification are stressed.

ILROB 329 Organizational Cultures
Fall or spring. 3 credits. Prerequisite: one or more courses in sociology.
W. Sonnenstuhl.
Reviews the concept of culture as it has evolved in sociology and anthropology, applying it to formal organizations in workplaces such as corporations and unions. The course first examines the nature of ideologies as sense-making definitions of behavior, concentrating on the cultural forms that carry these cultural messages, rituals, symbols, myths, sagas, legends, and organizational stories. Considerable attention is given to rites and ceremonials as a cultural form in organizational life that consolidates many of these expressive forms into one. The course examines types of ceremonial behavior such as rites of passage, rites of enhancement, and rites of degradation, including the role of language gestures, physical settings, and artifacts in ceremonial behavior. The presence of subcultures and countercultures in organizational behavior will also receive attention, especially the part played by occupational subcultures in formal organizations.

ILROB 370 The Study of Work Motivation
Fall. 4 credits. Open to juniors and seniors.
T. Hammer.
Designed to acquaint the student with the basic concepts and theories of human motivation with implications for job design and organizational effectiveness. Focus is on theories of worker motivation and on research approaches and results as they apply to the performance of individuals and groups in formal organizations. Readings are predominantly from the field of organizational psychology, supplemented by relevant contributions from experimental and social psychology. Each student designs, executes, and analyzes a research study of his or her own.

ILROB 371 Individual Differences and Organizational Behavior
Fall or summer. 4 credits. Recommended: some acquaintance with the substance and methods of behavioral or social science.
Staff.
Examines personality from a comparative psychodynamic point of view. Social behavior, authority relationships, and work motivation are used to illustrate how various theories could be applied to understand behavior and experience in organizations.

ILROB 373 Organizational Behavior Simulations
Fall. 3 credits. Prerequisites: ILROB 170 and 171 or equivalent. Limited enrollment.
R. Stern.
Basic principles of organizational behavior are studied through readings and participation in simulation games. Simulations model traditional organizations and cooperatives. Games model executive decision making, running a company, assembly work, and cooperative decision making. Organizational design, decision making, conflict, cooperation, and power are the central topics of discussion. The contrasting bases of power in the organizations permits the study of the assumptions underlying organization structure and process.

ILROB 420 Contemporary Organizational Behavior Applications
Fall or spring. 3 credits. Prerequisites: ILROB 170 and 171. L. Gasser.
An exploration of current practical applications of OB theory in organizations. Using a range of contemporary resources, students sift through practitioner articles and research; manage discussions; meet with managers, consultants, and employees; and explore organizational issues and problems from micro and macro perspectives in a political and legal context. Students also develop a toolbox of knowledge and skills to effectively carry out several organizational interventions or development initiatives. Choice of topics may differ to focus on contemporary issues such as: emotional intelligence, influencing organizational climate and morale, engaging strategic planning processes, managing large-scale participative techniques, using job or workplace design concepts, applying SWOT analysis, developing effective teamwork, managing diversity, applying quality management tools, etc.

ILROB 421 Regulating the Corporation
Spring. 4 credits. R. Stern.
Examines public and private power from an organizational perspective. The resource-dependence approach to organization-environment relations provides a framework for interpreting government attempts at the regulation of corporate behavior. Topics cover the structure and functioning of government regulatory agencies and corporate responses to regulation, including corporate strategy, change, and political influence. Business ethics and corporate social responsibility are considered along with the role of interest groups such as consumer or citizen organizations. Research and case materials focus on the implementation of environmental protection, occupational health and safety, equal opportunity, antitrust, securities, and consumer regulations.

ILROB 422 Organizations and Deviance
Fall. 3 credits. Enrollment limited to 60.
W. Sonnestuhl.
Focuses upon the deviant actions of organizations, including such behaviors as price fixing, environmental pollution, illegal campaign contributions, and discrimination in hiring and promotion. Examines the origins of such behaviors in organizations, the processes by which they became institutionalized, and the processes by which they become defined as deviant organizational actions. Within this context, the course examines such contemporary cases as Exxon's Valdez oil spill, Iran–Contragate, drug testing, and the federal savings and loan scandal. These events raise troubling questions about what it means to live and work in an organizational society, and they cannot be dismissed as instances of a few individuals gone bad.

ILROB 425 Sociology of Industrial Conflict
Spring. 4 credits. R. Stern.
The course focuses on the social, economic, and political causes of industrial conflict. The nature of work and the employment relationship provide the foundation for understanding both individual and collective expressions of conflict in work settings. Worker background, psychological contracts and authority relations set the stage for studying conflict expressions including strikes, labor turnover, absenteeism, sabotage, accidents, grievance filing, violence, and other forms of conflict at work.

ILROB 427 The Professions: Organization and Control
Fall. 3 credits. Prerequisite: permission of the instructor. P. Tolbert.
Focuses on the sources of power and control exercised by professional groups in contemporary society. A number of issues are examined in this context including: the role of professions in society, processes through which an occupational group becomes defined as a profession, sources of control that professional associations have over their members, relations between professionals and nonprofessionals in organizations, and the relationship between unionization and professionalization of occupations.

ILROB 429 Organizational Politics and Institutional Change
Spring. 2 credits. 7 weeks. Limited to juniors and seniors with permission of the instructor. Please see instructor before the first class. S. Bacharach.
Examines the market, cultural, political, and structural forces that change the organizational "rules of the game," how those changes affect individuals and organizations, and the distortions that occur as individuals and organizations attempt to adjust to a new unstable order. Issues to be examined include power, corruption, dealmaking, rationality, uncertainty, and competition. Course requirements include completing a major research paper and leading a class discussion.

ILROB 470 Group Processes
Fall. 3 credits. Prerequisites: ILROB 170 and 171 or equivalent. Permission of instructor. E. Lawler.
A review of theoretical approaches and selected research on group phenomena, including the formation of groups, the structure of group relations, and group performance. Specific topics include conformity and obedience, status and power relations, tactics of influence, solidarity and commitment, the management of emotion, the emergence and change of microcultures, and the role of groups in networks and organizations.

ILROB 472 Applied Organizational Behavior
Fall. 3 credits. Prerequisites: ILROB 170 and 171. S. Bacharach.
Introduces students to intermediate theory of organizational behavior. The course specifically concentrates on teaching students to use organizational theories for analytical and applied purposes. Among the issues to be addressed are organizational structure, work processes, organizational politics, organizational design, job design, incentive systems, and quality-of-work-life programs.

ILROB 495 Honors Program
Fall and spring (yearlong course). 3 credits each term.
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILROB 497–498 Internship
Fall and spring. 3 and 6 credits.
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILROB 499 Directed Studies
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILROB 520 Organizational Behavior and Analysis
Fall or spring. 3 credits. Staff.
Survey of concepts, theories, and research from the fields of organizational and social psychology as these relate to the behavior of individuals and groups in organizations. Job attitudes, motivation, performance, leadership and power, group formation, perception, and organizational climate. A preliminary course for advanced work in organizational behavior.

ILROB 622 Sociology of Markets (also SOC 622)
3 credits. M. Lounsbury.
Since World War II, the diffusion of markets in Asia, Eastern Europe, and Latin America as well as changes in the structure of Western economies has reinvigorated questions about how markets are socially structured. Drawing on the literature in economic sociology, this course explores the social, cultural, economic, and political factors that shape the emergence and dynamics of markets. Among the issues addressed are: the social organization of markets, market discrimination, the cooperative aspects of market formation and functioning, the role of government and other institutional arrangements, the relationship of economic change to broader social forces such as social movements, and the shift towards globally market-oriented economies.

ILROB 623 Micropolitics in Organizations
Spring. 3 credits. Prerequisites: ILROB 170 and 171. Limited, permission of instructor. S. Bacharach.
Examines micro-political processes in organizations. Neo-Macchiavellain, Marxian, and Weberian approaches to organizational politics are specifically analyzed. An attempt is made to understand how the micro-political rules of organizational games are institutionalized in change. Among the ideas discussed are the institutionalization of ideology and specification of the relationships among power, tactics, and strategy. Interest groups and coalition politics are examined in terms of conflict and bargaining. Other issues discussed include corruption, dealmaking, and competition. Examples are drawn from both the private and public sectors. Seminar requirements include an in-class presentation and a major paper and/or take-home final exam.

ILROB 624 Groups in Work Organizations
Fall. 4 credits. Enrollment limited. Permission of instructor required. Staff.
This is an experiential learning course designed primarily for advanced students who have a comprehensive background in the theory and methods of the behavioral sciences. Work group members study their roles and relationships to each other, the task, other work groups, and especially authorities. Students write a number of self-reflective papers in which they conceptualize their experiences and relate them to theory and method in organizational behavior and experience.

ILROB 625 Conflict, Power, and Negotiation
Fall. 3 credits. Open to seniors and graduate students. Permission of instructor is required. Limited enrollment. E. Lawler.
Theoretical seminar adopts a power perspective on bargaining and conflict resolution. Examines how power relations and power processes affect tactics in bargaining and also when power relations inhibit or promote conflict resolution. "Power" is viewed in the course as a capability, embedded in a social structure, and tactics are the action based on or using such power. The seminar gives overview of several theoretical approaches to conflict and bargaining (e.g., rational choice, cognitive, social exchange) and places the power perspective in this context.

ILROB 626 Organizations and Social Inequality
Spring. 3 credits. P. Tolbert.
Examines the central role that organizations in industrial societies play in allocating income, status, and other resources to individuals. A variety of theoretical explanations of social inequality are examined, and the social policy implications of each are considered.

ILROB 627 Leadership in Organizations
Spring. 3 credits. Prerequisites: two organizational behavior courses at the 300 level or advanced courses in sociology or psychology. Staff.
An examination of theories and research findings from the behavioral sciences that are relevant to leadership and the influence process in groups and organizations. Personality, situational factors, intergroup processes, interpersonal perception as well as the motivation to both lead and follow are discussed. The implications for leadership training, organization development, and action research are explored.

ILROB 628 Cross-Cultural Studies in Organizational Behavior
Spring. 3 credits. Limited. Permission of instructor before registering in course. Staff.
Designed for students interested in social psychological theory and research in international culture comparisons of behavior and experience in organizations. Variables such as power distance, individualism-collectivism, universalism-particularism, and attitudes toward authority as well as work motivation are examined. Upon completion of the readings and discussion of conceptual materials and consideration of several major international comparison studies, each student prepares and presents a paper on a topic of his/her own choice usually related to his/her country of origin (China, Japan, German, United States, etc.).

ILROB 670 Semester in Manufacturing
Spring. 15 credits. Open to master's and Ph.D. students in Industrial and Labor Relations with permission of instructor.
Intended for students who want to work as professionals or who have a strong interest in the manufacturing industries. The course is taught by an interdisciplinary faculty team from the College of Engineering, the Johnson School of Management, and the School of Industrial and Labor Relations. Course material is based on plant visits and project work with local industry. Student participation is in interdisciplinary teams with members representing the three colleges. Course content concentrates on four major issues thought to make a competitive difference in today's economic environment: the changing environment for product design; rapid-response production systems; organization, management, and compensation of the manufacturing team; and performance measurement.

ILROB 671 Organizations as Social Networks
Spring. 3 credits. Prerequisites: one or more courses in organizational behavior, sociology, psychology, anthropology, or political science. A course in statistics or research methods is helpful. Staff.
Increasing attention has been devoted to the idea that social structures can be fruitfully investigated as social networks. In particular, organizational and inter-organizational structures may be analyzed as patterned relationships among individuals, groups, and even other organizations. Such networks appear to be strong predictors of a variety of social dynamics including attitude similarity, the diffusion of innovation, turnover, and the allocation of organizational resources. A variety of methods for collecting and analyzing network data including: graph

theory, sociometry, clique detection, centrality analysis, blockmodeling, and the quadratic assignment procedures are used. In addition to reading recent published research, this course involves work with actual data sets and relevant computer programs.

ILROB 674 The Social Psychology of Behavior and Experience in Organizations
Fall. 3 credits. Prerequisite: ILROB 170 and 171 or ILROB 520. Staff.
Considers theories that seek to explain behavior at the individual, group, and organizational level. Work motivation, leadership, and the member composition and dynamics of groups are discussed. Harmony, conflict, and other aspects of the relationships among groups in the organization are evaluated.

ILROB 676 Systems of Labor Participation in Management
Fall. 4 credits. Prerequisites: senior standing and permission of instructor.
Examines the theory and practice of worker participation in systems ranging from informal shop-level participation to self-management. Special emphasis is placed on socio-technical systems of job design and work restructuring that give workers control over the labor process. Attention is also given to legislated programs of participation (codetermination) and to participation in employee-owned firms.

ILROB 679 Methods of Observation and Analysis of Behavior
Fall or spring. 4 credits. Permission of instructor required. Staff.
Focuses on qualitative methods and emphasizes learning by doing. The course examines different approaches to the collection and analysis of data. Students learn a variety of data collection techniques for understanding individual and collective behavior including: participant observation, in-depth interviews, and working with archival materials. The course also emphasizes the constant comparative method as a basic technique for data analysis. This technique is the basis of such qualitative computer programs as Ethnograph and Nudist. Students conduct their own research projects. Students, who wish to use qualitative methods either for a senior honors thesis, master's thesis, or doctoral dissertation, are encouraged to take this course. Because of the intensive nature of the course, class size is limited to 25 students.

ILROB 720 Issues of Measurement in Research on Organizations (Instrumentation)
Fall. 4 credits. Staff.
Concerns the study of tests and measures used to assess central variables in organizational behavior and related fields. Students learn where to find measures suitable for their research purposes and examine the theories that define the constructs being measured; the empirical information available about different measures—construction, reliability, and validity; and the ways in which the instruments have been used in research and practice.

ILROB 721 Advanced Micro Organizational Behavior
Spring. 3 credits. Staff.
Examines the historical development of psychological theories of organizational behavior and contemporary issues in micro organizational research. The course emphasizes reading and analysis of primary source material.

ILROB 722 Advanced Macro Organizational Behavior
Fall. 3 credits. Prerequisites: ILROB 520. Staff.
Examines the historical development of sociological theories of organizations and contemporary issues in macro organizational research. The course emphasizes reading and analysis of primary source material.

ILROB 723 Behavioral Research Theory, Strategy, and Methods I
Fall. 4 credits. Designed to meet the needs of M.S. and Ph.D. candidates majoring in organizational behavior, but other graduate students may enroll. Staff.
Materials studied in ILROB 723 and 724 include: theoretical, conceptual, and ethical questions; survey research and attitude-scaling procedures; laboratory research methods; participant observation and interview methods; use of documents and qualitative data analysis. Provides students with important philosophical background for doing research and exposes them to a well-balanced, interdisciplinary set of quantitative and qualitative research tools.

ILROB 724 Behavioral Research Theory, Strategy, and Methods II
Spring. 3 credits. Designed to meet the needs of M.S. and Ph.D. candidates majoring in organizational behavior, but other graduate students may enroll. Staff.
Course covers: analysis and interpretation of quantitative data; traditional problems encountered in the assessment of human and organizational characteristics; the use of different methods of data analysis; and an examination of the limitations imposed on data analysis and interpretation by traditional measures. Examples of topics covered in the course: the use of Chi-square, t-tests, ANOVA, simple and multiple correlation and regression, reliability and validity analyses, causal models, factor analysis, and scale construction.

ILROB 725 Analysis of Published Research in Organizational Behavior (also SOC 725)
Fall. 3 credits. Prerequisites: ILROB 520 and 1 year of statistics. Staff.
An advanced research methods course that critically examines published research papers in the field of organizational behavior in terms of research design and method as well as theory.

ILROB 726 Selected Topics in Organizational Behavior
Fall. 3 credits. Prerequisites: ILROB 520 and permission of instructor.
An advanced proseminar that seeks to develop an interdisciplinary perspective on selected topics in organizational behavior. The topics themselves change from year to year depending on participants' interests. Course is designed to allow students and the instructor to jointly pursue significant scholarly inquiry into one or more arenas of organizational theory. Emphasis is placed on exploring the relevance of tradition in related disciplines (anthropology, linguistics, philosophy, sociology, etc.) that may enrich our understanding of organizational life.

ILROB 727 Work and Industrial Conflict
Spring, weeks 7–14. 2 credits. Staff.
A concentrated examination of the sociology of industrial conflict. The seminar focuses on classic formulations of conflict theory in sociology, then on the social, political, economic causes of industrial conflict. Both individual and collective forms of conflict expression are examined. Some discussion of the implications of various types of worker management of firms for industrial conflict are included.

ILROB 728 Theories of Motivation and Leadership
Spring. 4 credits. Two halves, each lasting 7 weeks. Prerequisite: ILROB 520. Staff.

(1) Theories of Work Motivation.
Course provides an introduction to basic concepts of human motivation in general, with particular emphasis on the theories that explain and predict work motivation. Students examine the empirical research that tests the validity of the theories and shows how and under what conditions different motivation models can be used for practice in work organizations.

(2) Theories of Leadership and Power.
Several current microtheories of leadership and power and related research are examined. The disciplinary perspective employed is social organizational psychology and the level of analysis emphasized is action and experience of individuals in groups.

ILROB 729 Organizational Change and Intervention
Fall. 3 credits. Graduate students only. Staff.
This seminar is concerned with planned and unplanned change in organizations. It is designed to analyze theory in practice. Particular attention is paid to the role of internal and external change agents. Class members are encouraged to analyze contemporary changes such as mergers and acquisitions and work force reductions. Participants submit weekly work force journals.

ILROB 770 The Cultures of Work Organizations
Fall. 3 credits. Open only to graduate students. Staff.
Considers both administrative and occupational cultures in the workplace. The course takes an anthropological perspective, focusing on ideologies as the main ingredient of cultures but emphasizing the role of cultural forms, (myths, stories, sagas, language, rites and ceremonials), and physical settings of meaning. The course pays special attention to the place of subcultures and countercultures in the makeup of administrative culture and to occupations as a major source of subcultures. The role of the environment in which organizations are embedded, and its influence on workplace cultures, is also included. Forms of cultural leadership and approaches to reading and changing cultures are also considered.

ILROB 772 The Social Construction of Economic Life
Spring. 3 credits. M. Lounsbury.
Drawing on the literature in economic sociology, this course emphasizes how economic activities are constituted and shaped by the social, cultural, and historical contexts in which they are situated. This course surveys various empirical and theoretical approaches used to study the genesis and influence of broader scale organizational and institutional arrangements. The course provides students with an opportunity to formulate and refine

their own research questions and perspectives.

ILROB 773 Advanced Seminar in Cross-Cultural Studies of Organizational Behavior
Fall. 3 credits. Permission of the instructor. Staff.
Considers theory and method for the study of cross-cultural and cognitive style variables. Members participate in the conceptualization and conduct of a comparative research project.

ILROB 776 Organizational Implications of World Class Manufacturing
Fall. 4 credits. Staff.
Aimed at helping students develop an understanding of organizations as complex social systems, and at helping students understand the behavioral implications of new manufacturing initiatives. Case studies are used to study the introduction of a variety of innovations in contemporary manufacturing firms, including manufacturing cells and teams, concurrent engineering, total quality management, and just-in-time material flow. Analyses emphasize the impact of such innovations on individuals' role definitions and relationships, organizations' communication requirements and patterns, group dynamics, leadership behaviors, labor relations, and human resource management systems. ILROB 776 is a core course in the Master of Engineering/Manufacturing Option degree program.

ILROB 778 Solidarity in Groups (also SOC)
Fall. 3 credits. E. Lawler.
Examines sociological and social psychological theories about how social solidarity or a "sense of community" comes about and is maintained in groups and organizations. Distinguishes emotional, normative, and instrumental bases for social solidarity and shows how these promote or inhibit subgroup formation in organizations, commitment of individuals to organizations, and organizational citizenship behavior.

ILROB 790 ILR M.P.S. Program
Fall and spring. 1–9 credits.
Supervised research only for those enrolled in the ILR M.P.S. program.

ILROB 798 Internship
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILROB 799 Directed Studies
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILROB 920 Organizational Behavior Workshop
Fall. 2 credits. Limited to M.S. and Ph.D. candidates in the department. S-U grades only. Staff.
This workshop is designed to provide a forum for the presentation of current research undertaken by faculty members and graduate students in the Department of Organizational Behavior and by invited guests. All M.S. and Ph.D. candidates in the department who are at work on their theses are strongly urged to enroll. Each student in the course is expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of that students' thesis research.

SOCIAL STATISTICS

T. DiCiccio, chair; J. Angellotti, J. Bunge, A. Hadi, P. Velleman, M. Wells

ILRST 210 Statistical Reasoning I
Fall, spring, and summer 2001–2002. 3 credits. Attendance at weekly discussion section is required. J. Angellotti, P. Velleman.
An introduction to the basic concepts of statistics and data analysis. Descriptive methods, normal theory models, and inference procedures for univariate and bivariate data. Basic statistical designs, an introduction to probability and applications of the Binomial and Normal distributions are covered. Estimation, confidence intervals, and tests of significance for a single population mean and proportion, the difference in two population means and porportions, simple linear regression, correlation, and two-way contingency tables are also considered. Students are instructed on the use of a statistics computer package at the beginning of the term and use it for weekly assignments.

ILRST 211 Statistical Reasoning II
Fall, spring, and summer 2001–2002. 3 credits. Prerequisite: ILRST 210 or suitable introductory statistics course. M. Wells.
A second course in statistics. Applications of statistical data analysis techniques, particularly to the social sciences. Topics include: statistical inference; simple linear regression; multiple linear regression; logistic regression; and analysis of variance. Computer packages are used throughout the course.

ILRST 310 Statistical Sampling
Spring. 3 credits. Prerequisite: 2 terms of statistics. J. Bunge.
Theory and application of statistical sampling, especially in regard to sample design, cost, estimation of population quantities, and error estimation. Assessment of nonsampling errors. Discussion of applications to social and biological sciences and to business problems. Course includes an applied project.

ILRST 311 Practical Matrix Algebra
Fall. 3 credits. J. Bunge.
Matrix algebra is a necessary tool for statistics courses such as regression and multivariate analysis, and for other research methods courses in various other disciplines. One goal of this course is to provide students in various fields of knowledge with a basic understanding of matrix algebra in a language they can easily understand. Topics include special types of matrices; matrix calculations; linear dependence and independence; vector geometry; matrix reduction (trace, determinant, norms); matrix inversion; linear transformation; eigenvalues; matrix decompositions; ellipsoids and distances; and some applications of matrices.

[ILRST 312 Applied Regression Methods
Fall. 3 credits. Prerequisite: ILRST 211 or equivalent courses. Not offered 2001–2002. T. DiCiccio, P. Velleman.
Matrix algebra necessary to analyze regression models is reviewed. Multiple linear regression, analysis of variance, nonlinear regression, and linear logistic regression models are covered. For these models, least squares and maximum likelihood estimation, hypothesis testing, model selection, and diagnostic procedures are considered. Illustrative examples are taken from the social sciences. Computer packages are used.]

[ILRST 313 Design and Analysis of Experiments
Spring. 3 credits. Prerequisite: ILRST 211 or equivalent. Not offered 2001–2002. J. Angellotti.
This course covers the statistical design and analysis of comparative experiments including completely randomized, factorials, randomized block, latin squares, and split-unit designs including crossover and repeated measures. Application of statistical design to research problems is stressed. Analyses to compare treatment groups including ANOVA, ANCOVA, contrasts, and multiple comparison procedures are considered. Computer packages are used.]

[ILRST 314 Graphical Methods for Data Analysis
Spring. 3 credits. Prerequisite: ILRST 211 or equivalent. Not offered 2001–2002. P. Velleman.
Classical and recently developed graphical methods for analysis and display. Characteristics of effective and honest graphs with comparison of alternative methods for understanding data are covered. Includes study of current computer programs and methods expected to be practical in the near future: graphing of univariate data, bivariate plots, multivariate data, graphical methods of data analysis; the specification, modification, and control of graphs; study of interaction between choice of display and underlying patterns.]

[ILRST 315 Statistical Analysis of Legal Data
Fall. 3 credits. Prerequisite: ILRST 211. Not offered 2001–2002. M. Wells.
Presents a survey of the tools from the social and statistical sciences that have been applied to the proof of facts in the courtroom and to the study of questions of legal importance. Reviews various probability models, design issues, and statistical methodologies. The approach taken is based on the determination of the probability of the evidence under two competing hypotheses. Topics include: the role of uncertainty in legal settings; prosecutor's and defender's fallacies; controlled, observational, and epidemiological studies; sampling and surveys; the likelihood ratio approach for evaluation under conflicting hypotheses; p-values and Bayesian assessment; and analysis of various types of transfer evidence, including blood grouping and DNA profiling.]

ILRST 410 Techniques of Multivariate Analysis
Spring. 3 credits. Prerequisite: ILRST 312 or equivalent. P. Velleman.
Techniques of multivariate statistical analysis discussed and illustrated by examples from various fields. The course emphasizes application, but theory is not be ignored. Deviation from assumptions and the rationale for choices among techniques are discussed. Students are expected to learn how to thoroughly analyze real-life data sets using computer-packaged programs. Participants should have some knowledge of matrix notation. Topics include: multivariate normal distribution; sample geometry and multivariate distances; inference about a mean vector; comparison of several multivariate means, variances, and covariances; detection of multivariate outliers; principal component analysis; factor analysis; canonical correlation analysis; discriminant analysis, and multivariate multiple regression.

ILRST 411 Statistical Analysis of Qualitative Data
Fall. 3 credits. Prerequisite: 2 statistics courses or permission of instructor. T. DiCiccio, M. Wells.
An advanced undergraduate and beginning graduate course. Includes treatment of association between qualitative variates; contingency tables; log-linear models; binary ordinal, and multinomial regression models; and limit dependent variables.

ILRST 499 Directed Studies
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILRST 510 Statistical Methods for the Social Sciences I
Fall, spring, and summer. 3 credits. J. Angellotti, P. Velleman.
A first course in statistics for graduate students in the social sciences. Descriptive statistics, probability and sampling distributions, estimation, hypothesis testing, simple linear regression and correlation are all covered. Students are instructed on the use of a statistics computer package at the beginning of the term and use it for weekly assignments.

ILRST 511 Statistical Methods for the Social Sciences II
Fall, spring, and summer. 3 credits. Prerequisite: ILRST 510 or equivalent introductory statistics course. J. Bunge, T. DiCiccio, A. Hadi, P. Velleman.
A second course in statistics that emphasizes applications to the social sciences. Topics include: simple linear regression; multiple linear regression (theory, model building, and model diagnostics); and the analysis of variance. Computer packages are used extensively.

[ILRST 610 Seminar in Modern Data Analysis
Fall. 3 credits. Prerequisite: 2 statistics courses or permission of instructor. Not offered 2001–2002. P. Velleman.
An advanced survey of modern data analysis methods. Topics include exploratory data analysis, data re-expression, philosophy of data analysis, robust methods, statistical graphics, regression methods, and diagnostics. Extensive outside readings cover recent and historical work. Participants should have some knowledge of multiple regression, including the use of matrices, and some experience using a computer.]

[ILRST 611 Statistical Computing
3 credits. Prerequisites: linear algebra, knowledge of a programming language, and statistics at least through multiple regression. Not offered 2001–2002. Next offered 2003. Staff.
A survey of new aspects of statistical computing. Topics include: basic numerical methods, numerical linear algebra, nonlinear statistical methods, numerical integration and approximation, smoothing and density estimation. Additional special topics may include Monte Carlo methods, statistical graphics, computing-intensive methods, parallel computation, or computing environments. Designed for graduate students in the statistical sciences and related fields interested in new advances. Students may be asked to write programs in a programming language of their choice.]

ILRST 612 Data Mining
Fall. 3 credits. Prerequisite: ILRST 312 or equivalent, or permission of instructor. J. Bunge.
An introduction to a variety of statistical techniques that assign objects to categories on the basis of observed characteristics of the objects. Course topics include: discriminant analysis and its extensions and variations; nearest neighbor methods, classification and regression trees (CART); neural networks for classification; and estimation of error of classification rules.

[ILRST 613 Bayesian and Conditional Inference
3 credits. Prerequisites: graduate level courses equivalent to OR&IE 670 and OR&IE 651 or permission of instructor. Not offered 2001–2002. Next offered 2003. M. Wells.
Covers the following topics: loss functions and utility theory, prior information and subjective probability, coherency, basic Bayesian inference, empirical Bayesian inference, robust Bayesian inference, Bayesian computations, ancilliarity, conditional properties of statistical procedures, and Barndorff-Nielsen's exact likelihood theory.]

ILRST 614 Structural Equations with Latent Variables
Spring. 3 credits. Prerequisites: ILRST 210, 211 or ILRST 510, 511, or equivalent. T. DiCiccio.
Provides a comprehensive introduction to the general structural equation system, commonly known as the "LISREL model." One purpose of the course is to demonstrate the generality of this model. Rather than treating path analysis, recursive and nonrecursive models, classical econometrics, and confirmatory factor analysis as distinct and unique, this course treats them as special cases of a common model. Another goal of the course is to emphasize the application of these techniques.

[ILRST 615 Expert Systems and Probabilistic Network Models
3 credits. S-U only. Prerequisite: OR&IE 560 or an equivalent course in probability and statistics. Not offered 2001–2002. Next offered 2003. Staff.
This is an interdisciplinary course for students in applied mathematics, computer science, statistics, and other related fields of applications such as medical, engineering, and social sciences. Topics include: components of expert systems, rule-based expert systems, probability-based expert systems, uncertainty measures, dependency models, Bayesian and Markov networks, propagation of uncertainties, learning structure from data, and examples of applications. Students use computer software to gain experience.]

ILRST 619 Special Topics in Social Statistics
Spring. 3 credits. Prerequisite: OR&IE 670 or equivalent. Staff.
Areas of study are determined each semester by the instructor offering the seminar. Topics may include: the multivariate normal and Wishart distributions; multivariate sampling; tests of mean and covariance; multivariate regression; principal components; factor analysis; canonical correlation; robustness; and boostrap confidence regions and tests.

[ILRST 711 Robust Regression Diagnostics
3 credits. S-U or letter grade. Prerequisite: ILRST 312 or equivalent or permission of instructor. Not offered 2001–2002. Next offered 2003. Staff.
Regression models are simplifications of reality; we rarely expect the model to be exactly true. In many applications of regression, however, small changes in a model, a model assumption, or a data point can have very large effects on the results. Regression analysis is viewed in this course as a cyclical process, which takes inputs and produces outputs in an interactive or cyclical way; a way in which the outputs can be used to diagnose, validate, criticize, and possibly alter the inputs. This is an attempt to narrow the gap between the theory and practice of regression analysis. We discuss classical methods as well as a recently developed general framework for assessing the sensitivity of the outputs to small changes in the input. Students are expected to be able to perform thorough analyses of real-life data using computer packages. Topics to be discussed include: role of variables in a regression equation, regression outliers and influential observations, robust regression, alternatives to least squares (e.g., LMS, LAV, IRLS) error-in-variables models, and generalized linear models.]

[ILRST 712 Theory of Sampling
Fall. 3 credits. Prerequisite: calculus and at least 1 semester of mathematical statistics. Not offered 2001–2002. J. Bunge.
Sampling theory from the viewpoint of mathematical statistics. The first part of the course focuses on the classical or "design" approach; the second part on the more recent "model-based" approach. Attention is paid to recent progress in the field.]

[ILRST 713 Counting Processes with Statistical Applications
Spring. 3 credits. Prerequisite: a course at the technical level of Math 572 and 574 or permission of instructor. Not offered 2001–2002. M. Wells.
The statistical analysis of life history data is playing an increasing role in the social, natural, and physical sciences. In this course students formulate and solve various practical problems in the statistical analysis of life history data using the modern theory of stochastic processes. Students examine the martingale dynamics for point processes relevant to life history data. Both parametric and nonparametric inference for multiplicative intensity models are considered. The large sample properties of the proposed procedures are discussed in detail using recent extensions of functional central limit theorems for martingales.]

[ILRST 714 Topics in Modern Statistical Distribution Theory
3 credits. Prerequisites: courses equivalent to OR&IE 651 or Math 571, and STATS 409 or OR&IE 670. Not offered 2001–2002. Staff.
Recent research has revealed vast territories of distribution theory that are unfamiliar to most statisticians. This course provides an introduction to three topics underlining this "modern" theory: infinite divisibility, decomposability, and stability; characterization of distributions; and extensions of univariate distributions to multivariate distributions.]

[ILRST 715 Likelihood Inference
3 credits. Prerequisites: graduate courses equivalent to OR&IE 670 and OR&IE 670. Not offered 2001–2002. Staff.
In most statistical models, exact distribution theory for testing hypotheses or constructing confidence intervals is either unavailable or computationally cumbersome. Inferences are routinely performed by using large-sample approximations to the distributions of test statistics. This course provides a survey of some recent higher-order asymptotic approximations for likelihood-based methods of inference.]

[ILRST 716 Statistical Consulting
2 credits. Prerequisite: limited to graduate students. S-U only. Not offered 2001–2002. Staff.
A course in practical consulting on real-world statistical problems. Under the supervision of the instructor, students hear problems presented by clients (usually faculty and graduate students from other fields) and collaborate in proposing a statistical model, analyzing data, and interpreting results. Statistical computing is used as needed.]

[ILRST 717 The Analysis of Discrete Data
Spring. 3 credits. Prerequisites: graduate courses equivalent to OR&IE 670 or permission of instructor. Not offered 2001–2002. T. DiCiccio.
This course concerns statistical models and methods for analyzing categorical data. The key models to be covered are log-linear models for contingency tables and logistic regression models for binary-response and multinomial data. Asymptotic distribution theory necessary for inference in these models is emphasized. Other topics include conditional inference and connections with generalized linear models. Computer packages are used for analyses in practical examples.]

ILRST 799 Directed Studies
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILR EXTENSION

Statewide

The following courses are open to participants in the Extension Division's statewide credit programs in labor studies and management studies. Extension offices are based in Buffalo, Albany, Rochester, Ithaca, New York City, and Long Island. These courses are not open to undergraduate or graduate students matriculated in the Ithaca ILR programs. Courses and course credits earned in Extension Division certificate programs are not automatically accepted as transfer credits or as a basis of admission to the resident ILR undergraduate and graduate programs in Ithaca. Student applications for course transfer are evaluated by the ILR school on an individual basis.

204 Managing Conflict
Fall or spring. 3 credits. Staff.
The purpose of this course is to provide students with opportunities to apply conflict resolution theory to specific situations, based on real-life problems that require resolution. Students will examine situations, analyze the facts and perceptions driving the actors, and engage in applying communication, negotiation, and mediation techniques to reduce or eliminate the conflict.

205 Oral Skills for Conflict Management
Fall or spring. 3 credits. Staff.
This course emphasizes development of oral communications skills required to successfully manage conflict both as a party to a dispute, and as a third party who is charged with helping to resolve a dispute. The course presents simulations to help the participants practice their skills.

206 The Nature of Conflict
Fall or spring. 3 credits. Staff.
The purpose of the course is to provide students with the conceptual foundation to engage in further study of conflict management and conflict resolution. Having taken the course, the students will be able to: identify and describe types of conflict; be able to identify the various sources of conflict; be able to apply a conceptual model of conflict to interpersonal, organizational, and international conflict situations; be able to describe conflict situations in terms of social psychological aspects using a "person perception" or "attribution" theoretical orientation; and be able to identify their personal response styles to conflict.

208 Workplace Negotiations
Fall or spring. 3 credits. Staff.
Covers the theory and practice of negotiation as it applies to workplace and business situations. Students are exposed to theoretical models of negotiation and participate in negotiation exercises. Students participate in two negotiation exercises and are asked to write a paper on their negotiating position in each exercise. More weight is given in grading to the student's ability to present a well-thought-out rationale for positions and tactics than to the outcome of the negotiation itself.

241 Arbitration
3 credits.
A study of the place and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of an arbitration hearing, and the preparation of an arbitration opinion.

242 Public Sector Collective Bargaining
Fall or spring. 3 credits. Staff.
This course is designed as an introduction to collective bargaining in the public sector. The course examines the historical development of bargaining in public employment, the evolution of state and federal and bargaining theory and practices, as well as impasse resolutions techniques frequently found in this sector. Special emphasis is given to developing an understanding of the similarities and differences between public and private sector bargaining and how they have affected tactics and strategies employed by the parties.

243 Growth of American Business and Management History
Fall or spring. 3 credits. Staff.
The growth and cycles of American business enterprise produced significant changes in education, government, work, the family, the ethnic composition of the population, and the landscape. As business and industry expanded, new methods evolved for managing these enterprises. This course examines the development of managerial practices, the relationship of management to the work force, and the social ramifications of capitalist expansion.

245 Public Sector Labor Law
3 credits.
A survey and analysis of the New York State Public Employees Fair Employment Act is made as well as a comparison with other state laws covering public employees. The course examines the extent to which the law protects and regulates concerted actions by employees in the public sector. The intent is to study and understand the law as written, but more importantly to understand how it has been interpreted by the courts of New York State in its application. Major emphasis is in employee and employer rights, including recognition and certification, improper practices, strikes, grievances, and disciplinary procedures of the New York State Public Employment Relations Board.

247 Labor and the American Economy
3 credits.
Helps the student understand how economic theories relate to the economic problems confronting the American citizen in general and the American union member in particular. Emphasis is placed on contemporary economic theories and how their proponents attempt to solve American economic problems.

248 Employment Practices Law
3 credits.
Considers laws and regulations that directly affect managers and employers. Students examine issues and laws such as Equal Employment Opportunity, Employee Retirement Income Security Act, Federal Wage and Hour Laws, Occupational Safety and Health Act, unemployment laws, and other topics. Students focus on the practical application of laws and their impact on the workplace.

250 New York Workers' Compensation Law for Trade Unionists and Injured Workers
Fall or spring. 3 credits. Staff.
There is a collective perception that the Worker's Compensation system in New York compounds an injured personal predicament with Byzantine responses that lead to despair. Unions and injured workers' organizations believe that, if properly empowered, they can be just as effective as lawyers in looking after their injured colleagues' claims. This course is structured to meet both of these realities. Students delve into every nook and cranny of New York Worker's Compensation law. The course is entirely practical. Skills teaching, how to present a case, decorum, ethics, and persuasiveness, are built into the course. Experts on how the system really works are used.

251 Principles and Practices of Management
Fall or spring. 3 credits. Staff.
Presents the theory and processes of management with an emphasis on supervision. Management functions of planning, organizing, staffing, and evaluating are included. Concepts and theories are presented, and case studies are analyzed. Motivating people, exercising leadership, and effectively developing employees are emphasized.

252 Contract Bargaining
Fall or spring. 3 credits. Staff.
Examines the principles of contract bargaining, including bargaining environments and structures as well as standards used in

bargaining. Students learn to prepare bargaining demands, cost economic items, draft noneconomic contract language, negotiate economic and noneconomic issues, and resolve a contract bargaining impasse. The course considers the impact of contract bargaining outcomes on workers, unions, employers, and the public.

253 Contract Administration
Fall or spring. 3 credits. Staff.
Focuses on the role of the steward in administering the union contract in the workplace. Students evaluate grievance and arbitration contract clauses, the grievance procedure in practice, the role of the union steward, the role of local and international unions, negotiation of grievances, and preparation for arbitration. Students analyze the impact of grievance and arbitration procedures on workers, unions, and employers.

254 Labor Law
Fall or spring. 3 credits. Staff.
Examines the principles of labor law by looking at social philosophy and the historical context of federal labor legislation from the 1930s. Students concentrate on major provisions of the National Labor Relations Act, examining how the National Labor Relations Board and the federal courts have interpreted the national labor laws. Discussion includes new directions in labor legislation and interpretation with consideration given to the impact of labor law on workers, unions, and employers.

255 Labor History
Fall or spring. 3 credits. Staff.
Reviews American labor history from the perspective of workers' social dimensions of the development of the working class, reform and revolutionary movements, and the emergence of craft, industrial, and public employee unions. Included is a discussion of the development of trade union institutions and leaders, and the evolution of union political activities and collective bargaining. Special attention is paid to the involvement of women and minority workers with unions.

256 Dispute Resolution
Fall or spring. 3 credits. Staff.
Examines third-party participation in dispute resolution in private and public sector collective bargaining. Development of dispute resolution methods in American labor relations; issues and practices in neutral, binding arbitration of grievances and mediation; conciliation; and fact finding procedures are discussed. Use of exclusive labor-management mechanisms to settle industry disputes is also looked at.

257 Human Resource Administration
Fall or spring. 3 credits. Staff.
Designed to provide an overview of personnel practices in the modern organization. The course focuses on manpower planning, employment, training and development, motivation and compensation, and performance appraisal and communication for students who are currently supervisors or personnel practitioners or for those aspiring to those positions.

258 Organizational Behavior
Fall or spring. 3 credits. Staff.
Designed to illustrate how behavioral science theory leads to research and how theory and research provide a basis for practical application in business, industry, education, and government.

259 Union Administration
Fall or spring. 3 credits. Staff.
Focus is on the principles and practices of effective union administration. Students study the dynamics of democratic organizations and the development of organizational leadership. The course explores alternative methods of decision making and lines of responsibility. The legal obligations of unions and union officials is discussed and analyzed. The course also examines the structure and evolution of relationships inside the labor movement.

262 Project Management
Fall or spring. 3 credits. Staff.
Through the process of restructuring, many companies are "flattening out" the hierarchy of management levels. This means that more responsibilities are shifting downward to employees who may not have the status (authority) of supervisor or manager, but who have the enormous responsibility of completing complex, critical projects within well-defined business constraints. In response to the shift in responsibility downward and with much more to be accomplished with limited resources, the demands for employees with effective project management skills are increasing. Employees who can successfully manage projects are and will continue to be the most marketable individuals in the work force because their skills are transferable to all disciplines, organizations, and situations.

264 Contemporary Labor Problems
Fall or spring. 3 credits. Staff.
A survey of the major challenges that confront the American labor movement. Students are briefed on the background of each problem and discuss and analyze a broad range of solutions proposed by the experts.

266 Professional Writing: The Power of the Written Word in Business
3 credits.
Focuses on the importance of developing effective writing skills and strategies required to be successful in business communities. Students sharpen existing writing skills, correct bad writing habits, and develop new writing habits through "real life" exercises taken from case studies and their own experiences. In addition, students learn the importance of using rhetorical strategies such as defining situations requiring written responses, writing to a specific audience, attending to a specific purpose, choosing the appropriate language, and varying tone and style as the situation demands. Students, upon completing this course, have the confidence and the writing skills to successfully address most situations requiring written communication. Genres include memos, proposal letters, and reports.

267 Speaking and Listening for Business and the Professions
3 credits.
The overall objective is to equip participants with the skills and knowledge they need to speak and listen effectively. By the end of the course, students are able to accurately listen to, and interpret oral communication; identify major causes of listening misunderstandings such as biases, distractions, emotions, etc.; describe and employ techniques for overcoming those listening barriers; speak effectively in front of an audience; describe ways to build rapport with an audience; persuade an audience; use visual aids effectively; introduce speakers, make presentations, and speak extemporaneously.

269 The Evolution of Work in America
Fall or spring. 3 credits. Staff.
Explores the evolution of contemporary business operations. Discussion focuses on historical and present-day theories of work organization, changes in the workplace and workforce, and future trends. The relationships between businesses and the societies in which they exist, in both local and global economies, are also examined.

343 Health in the Workplace
Fall or spring. 3 credits. Staff.
Examines the state and federal laws that affect job safety, and health, and the way workers and their unions can use legislation to promote safe and healthy working conditions. Topics include safety and health standards; the enforcement of laws and standards; the responsibilities of management; the rights of employees and their unions, including rights to information; collective bargaining for safety and health; racial- and gender-based discrimination regarding hazardous work; and drug testing.

344 Union Strategies for Safety and Health
Fall or spring. 3 credits. Staff.
Even with OSHA, the most effective tool for change in the unionized work environment remains the collective bargaining process and collective action. This course explores specific strategies for making the workplace safer through collective bargaining, workers education, safety and health committees, joint labor-management committees, working with COSH groups, union-sponsored medical exams at occupational health clinics, and the OSHA complaint process. Case studies consider integration of occupational health initiatives into broader union strategies such as organizing drives and industrial development planning.

345 Health Hazards Identification and Evaluation in the Workplace
Fall or spring. 3 credits. Staff.
Students learn about the many work site health hazards including toxic chemicals, biological agents, radiation, and electromagnetic fields. Routes of exposure, acute and chronic health effects, and the bases of regulatory exposure limits such as TLV's and OSHA PEL's are discussed. Basic hazard evaluation and information gathering techniques familiarize students with available resources for evaluating work site conditions.

346 Introduction to Industrial Hygiene: Hazard Evaluation and Control
Fall or spring. 3 credits. Staff.
This course builds on the knowledge acquired in both the safety hazard and health hazard courses to provide students with greater mastery of hazard evaluation and control methods. (Students are encouraged to complete the health hazard and safety hazard courses before taking industrial hygiene.) The course provides practical, hands-on training in evaluating potential worksite hazards. Students learn about environmental monitoring methods such as air sampling and become familiar with the commonly used equipment.

They also learn to interpret and evaluate monitoring data provided by professional testers.

347 Safety Hazards Identification and Evaluation in the Workplace
Fall or spring. 3 credits.
Safety hazards (as opposed to health hazards) generally involve harm of an immediate and sometimes violent nature; health effects include burns, electrical shock, broken bones, and the loss of limbs, eyesight, or hearing. With chemicals, the primary concern is their explosive, reactive, or flammable nature rather than with the toxic effects that are the focus of health hazard evaluation. Students become familiar with site inspection and hazard identification methods and learn about control techniques appropriate for a variety of work settings.

364 Labor, Government, and Politics
3 credits.
A survey of the ways the American political system affects labor and how organized labor affects the system through voting, political parties, and interest groups.

367 Safety and Health in the Workplace
Fall or spring. 3 credits. Staff.
This course provides basic education and training in workplace safety and health. The course focuses on applicable federal and state laws, standards for safety and health, industrial hygiene, and such health concerns as asbestos, radon, and AIDS. Practical experience is provided through workplace walk-through safety and health inspections and in use of industrial hygiene equipment to measure noise, temperature, humidity, airflow, and airborne toxins.

FACULTY ROSTER

Abowd, John M., Ph.D., U. of Chicago. Prof., Labor Economics
Angellotti, Jon E., M.S. candidate, Cornell U. Lecturer, Social Statistics
Bacharach, Samuel, Ph.D., U. of Wisconsin. Jean McKelvey-Alice Grant Prof. of Labor Management Relations, Organizational Behavior
Batt, Rosemary, Ph.D., Mass. Inst. of Technology. Asst. Prof., Human Resource Studies
Bishop, John H., Ph.D., U. of Michigan. Assoc. Prof., Human Resource Studies
Blau, Francine D., Ph.D., Harvard U. Francis Perkins Prof. of Industrial and Labor Relations, Labor Economics
Boudreau, John W., Ph.D., Purdue U. Assoc. Prof., Human Resource Studies
Boyer, George R., Ph.D., U. of Wisconsin. Prof., Labor Economics
Briggs, Vernon M., Jr., Ph.D., Michigan State U. Prof., Human Resource Studies
Bunge, John A., Ph.D., Ohio State U. Assoc. Prof., Social Statistics
Cavanaugh, Marci A., U. of Minnesota. Asst. Prof., Human Resource Studies
Collins, Christopher, Ph.D., U. of Maryland. Asst. Prof., Human Resource Studies

JOHNSON GRADUATE SCHOOL OF MANAGEMENT

ADMINISTRATION

Robert J. Swieringa, dean

John A. Elliott, associate dean for academic affairs

Michael J. Hostetler, associate dean for executive education

Thomas B. Hambury, director of EMBA Program

Cathy S. Dove, associate dean for MBA Program and operations

Richard A. Shafer, associate dean for corporate relations

Rosalyn A. Hines, executive director of development

Natalie M. Grinblatt, director of admissions

John D. Nozell, director of career services

Harriet Peters, director of advising and student activities

Sherry L. Canger, assistant to the dean

Ann W. Richards, financial aid director and associate director of admissions

Janet S. Gray, registrar and associate director for MBA Program

The Johnson Graduate School of Management prepares men and women for managerial careers in business. The school offers course work in many disciplines to provide potential managers with an understanding of the complexities of the professional world in which they will operate and of the organizations of which they will become a part.

A bachelor's degree or its equivalent is required for admission to the two-year program leading to the Master of Business Administration (M.B.A.) degree. Nearly half of the students have a background of undergraduate studies in arts and sciences, and about one-quarter in engineering. Five percent of the students begin their graduate training immediately after receiving their bachelor's degrees and the remaining 95 percent following work experience.

Combined degree programs allow highly qualified Cornell students to co-register in the school during their senior year, thereby earning a master's degree in less than the usual time.

The doctoral program, administered through the Graduate School, provides an advanced level of education in business for those who seek careers in teaching and research at leading universities.

More detailed information about these programs is available from the Office of Admissions and Student Affairs, Johnson Graduate School of Management, Room 111 Sage Hall.

Students in other graduate programs and undergraduate students registered with the university are welcome in many classes. Since matriculated MBA students require certain courses for graduation, non-Johnson School students are not allowed to pre-enroll. During the first week of classes, registration of non-Johnson School students occurs on a space available basis.

UNDERGRADUATE ONLY

NBA 300 Entrepreneurship and Enterprise
Fall, spring. 3 credits. D. BenDaniel.
The course uses Cornell-developed case studies and lectures to address entrepreneurial management in start-up ventures and new-business development in existing companies. Among the topics covered are valuation of business, planning, obtaining resources, management of growth, and cashing out. Guest lecturers speak on specialized topics such as corporate and patent law, bankruptcy and workouts, leveraged buy-outs, and valuations of businesses. Students team up to write and present business plans. The course attempts to integrate marketing, finance, operations, and human-resource topics in the context of high-growth business ventures. For non-Johnson School students only. Johnson School students see NBA 564.

NBA 401 Entrepreneurship for Scientists and Engineers
Fall, spring. 3 credits. J. Nesheim.
This course is intended to introduce students to the new business startup process. Small teams will be formed to come up with an idea for a startup and create a business plan that can attract venture capital or other funding for the new enterprise. Guest lecturers are from successful high-technology companies. The course is led by instructors from Silicon Valley and Ithaca who created high-technology businesses.

COURSES FOR NON-JOHNSON SCHOOL STUDENTS

NCC 550 Financial Accounting
Fall, spring. 3 credits. Course intended for non-Johnson School students only. Staff.
An introductory accounting course that examines the subject from the viewpoint of users external to the organization. Topics include transaction analysis; the accounting cycle; financial-statement preparation, use, and analysis; revenue recognition and cost measurement; present value; and problems in financial-accounting disclosure. This course is similar in content to the MBA core course NCC 500.

NCC 553 Marketing Management
Fall, spring. 3 credits. Course intended for non–Johnson School students only. Staff.
The course addresses controllable and uncontrollable marketing variables that managers in multi-product firms face in today's business environment. Topics include customer behavior, product planning, distribution, advertising and promotion, pricing, and competitive strategy. This course is similar in content to the MBA core course NCC 503.

NCC 554 Management and Organizations
Fall. 3 credits. Course intended for non–Johnson School students only. Staff.
This course takes a resource-based approach to management by arguing that organizations should link their strategy to their internal resources and capabilities. This theme is developed by addressing: (1) the strategic value of internal resources and capabilities; (2) the role of human resources and organizational behavior in formulating and implementing strategy; and (3) the importance of structure and the design of organizations in formulating and implementing strategy. Included among the topics are: how firms create sustainable competitive advantage through internal resources and capabilities; what the best practices are for managing people; what effects best practices have on attitudes and behaviors; why putting the customer first is not necessarily best practice from a resource-based perspective; why organizational culture is central to organizational effectiveness; why the formal organizational chart and structure of an organization are important; how organizations innovate; how organizations change through re-architecture and re-engineering; what firms gain and lose through pursuing core competencies; and what firms gain through strategic alliances and networks. The course makes extensive use of case materials. This course is similar in content to the MBA core course NCC 504.

NCC 556 Managerial Finance
Fall, spring. 3 credits. Course intended for non–Johnson School students only. Staff.
An introduction to business finance through theory and case studies. Topics include stock and bond valuation, the capital-budgeting decision, portfolio theory, the asset-pricing models, raising capital, capital structure, mergers and acquisitions, costs of capital, option pricing, and risk management. International applications are considered within each topic area. Letter grade only, based on exam, group case reports, homework and class participation. This course is similar in content to the MBA core course NCC 506.

NCC 558 Production and Operations Management
Spring. 3 credits. Course intended for non–Johnson School students only. Prerequisites: NCC 501 or permission of the instructor. Staff.
Operations management deals with the problems of producing and delivering goods and services, topics that are of strategic importance in almost every organization. Production scheduling is a significant problem for manufacturing firms; smooth work flow and quality control are important in banking operations; inventory control is crucial in large retail establishments; and proper task sequencing is a major problem in the construction industry. The course deals with these problems and others from a managerial

viewpoint. The course is designed around managerial problems in the operations area. Students use case studies to improve skills in problem identification. This course is similar in content to the MBA core course NCC 508.

NBA 553 Accounting and Finance for Engineers
Spring. 3 credits. Course intended for non-Johnson School students only. R. Hilton. This course focuses on basic financial and managerial accounting and the economic and financial concepts that have a bearing on managerial decisions. The goals of the course are: (1) to give students a working knowledge of the accounting process and the value and limitations of the data that comes out of the accounting information system; (2) to familiarize students with key concepts in managerial accounting and the application of cost information to pricing and operating decisions; (3) and to promote an understanding of the use of economic theory in the evaluation of capital investment projects. The teaching methods consist of lectures and cases. Students are evaluated on the basis of exams.

IMMERSIONS

Only at the Johnson School will you find learning immersion courses in manufacturing, managerial finance, investment banking, brand management, and e-business. Immersions offer a semester of continuous focus, real-world problem solving, and site visits to dozens of companies.

MFI —Managerial Finance Immersion

This is a unique immersion course specifically designed for students planning to pursue finance careers. Some students interested in non-finance careers (including consulting) may wish to consider this course, but they should recognize that it is not specifically designed for this purpose. A major objective of this course is to help students make more informed choices about how to launch their finance careers.

NBA 502 Managerial Cost Accounting
3.0 credits.

NBA 549 Managerial Finance—Practicum
2.5 credits.

NBA 506 Financial Statement Analysis
1.5 credits.

NBA 565 Corporate Financial Policy
1.5 credits.

NBA 656 Valuation Principles
1.5 credits.

NCC 508 Managing Operations
2.5 credits.

NCC 509 Strategy
2.5 credits

IBI —Investment Banking Immersion

This course is specifically designed for those students planning to pursue careers in investment banking. The course is inappropriate for students interested in following a finance career in non-financial industry or non-finance careers (including consulting). This course is designed to meld the practical and the theoretical aspects of the field. We will be expecting a great deal of interaction and discussion between students, the participating faculty, and visiting practitioners. While the course is designed to make its students more attractive as candidates for employment in the investment banking profession, and we expect that some of the participating firms will be using their visits to identify candidates for summer internships, obtaining relevant summer internships remains the responsibility of the students. Prerequisite: NCC 506.

NBA 500 Intermediate Accounting
3.0 credits.

NBA 556 Investment Banking—Practicum
2.5 credits.

NBA 506 Financial Statement Analysis
1.5 credits.

NBA 511 Financial Modeling
1.5 credits.

NCC 508 Managing Operations
2.5 credits.

NCC 509 Strategy
2.5 credits.

NBA 656 Valuation Principles
1.5 credits.

SBM —Immersion in Brand Management

This is a full-time program for the semester; students will not be able to take other courses concurrently. The course objective is to begin developing students to think and act like brand managers, some of the best trained and most upwardly mobile professionals in industry. It will provide students with a unique opportunity to begin internalizing the concepts, principles, and tools necessary to achieve success in brand management. While the course focuses on managing traditional consumer brands, high tech products, services, and global branding will also be addressed. In-class methods consist of: (1) academic and industry lecturers; (2) on-site visits with marketing and manufacturing professionals; (3) case and project discussions and presentations; and (4) a brand management simulation. Course requirements consist of: (1) discussion of readings; (2) individual case write-ups and presentations; (3) group projects and presentations (including a capstone simulation); and (4) in-class exams. There will be considerable off-campus travel for field study. Prerequisites: NCC 500, 501, 502, 503, and 506. Restricted enrollment—permission of the instructor required.

NBA 624 Brand Management—Practicum
4.0 credits.

NBA 502 Managerial Cost Accounting
3.0 credits.

NBA 620 Marketing Researching
3.0 credits.

NCC 508 Managing Operations
2.5 credits.

NCC 509 Strategy
2.5 credits.

SIM—Semester in Manufacturing

This is a full-time program for the semester; students cannot take other courses concurrently. The course is concerned with the integration of technological, human-resource, logistical, and financial considerations to produce a manufacturing enterprise that can respond quickly and effectively to market requirements. The class is taught by a team of faculty and industrial practitioners, and much of the student work is team-oriented. There is off-campus travel for field study of various manufacturing plants. Johnson School students should complete NCC 501 and NCC 506 before taking this course. Enrollment limited; permission of instructor required.

NBA 650 Semester in Manufacturing Practicum
10 credits.

NCC 508 Managing Operations
2.5 credits.

NCC 509 Strategy
2.5 credits.

EBI—Electronic Business Immersion

The new E-Business Immersion is unusual in that it is a joint undertaking of the Johnson School and Cornell's Faculty of Computing and Information Science (CIS). Three faculty members from CIS will participate in teaching the course, providing state-of-the-art background in Internet infrastructure and technology. EBI project work will be done by mixed teams of MBA and computer science graduate students. The computer science students will learn about business models and strategy; the MBA students will get a direct understanding of the limited and potential of technology, and both will learn from the approach and perspectives of the other.

The E-Business Immersion is also unusual in that it has a corporate sponsor and partner. Corning Inc., a world leaders in fiber, cable, and photonics, will supply speakers and open its nearby facilities to site visits. In addition, the EBI project teams will join existing projects in various Corning divisions. Corning staff will be invited to attend and participate in EBI classes.

E-business, of course, is a field that has experienced unprecedented growth and, recently, attrition. The immersion will examine the rapid rise and fall of the early phases of the Internet economy and look for patterns and lessons. If the first round of pure-play B2C is somewhat tarnished, there is no doubt that multi-channel B2C activity will become vitally important in many industries. Customized manufacturing will be a significant part of this—a topic that EBI will explore jointly with the Semester in Manufacturing. Also joint with SiM will be examination of procurement and supply-chain coordination. EBI will also assess the next generation of applications that can be supported by wireless, networked Internet appliances.

EBI seeks to prepare students to deal with a world of infinite bandwidth, unlimited storage, and universal wireless connectivity. It will examine the fundamental underlying issues of intellectual property protection, privacy and security, and the challenging economics of zero-marginal-cost goods. It will identify and distinguish the four different levels of

e-business problems: strategy, tactical design, implementation, and execution.

The Internet is inexorably transforming the way the world does business. Cornell's E-Business Immersion is an appropriately innovate way to address preparation for participation in this revolution.

NBA 508 Managing Operations
2.5 credits.

NBA 509 Strategy
2.5 credits.

NBA 613 E-Business Practicum
10 credits.

NCC COMMON CORE COURSES

NCC 500 Financial Accounting
Fall. 2.5 credits. Johnson School core course. Enrollment limited. J. D'Souza, R. Libby.
An introductory accounting course that examines the subject from the viewpoint of users external to the organization. Topics include transaction analysis; the accounting cycle; financial-statement preparation, use, and analysis; revenue recognition and cost measurement; present value; and problems in financial-accounting disclosure.

NCC 501 Statistics for Management
Fall. 2.5 credits. Johnson School core course. Enrollment limited. J. McClain, J. Thomas.
An introduction to decision making under conditions of uncertainty. Topics include descriptive statistics, probability theory, classical statistics, statistical decision theory, and simple and multiple regression analysis. Applications in finance, marketing, and operations management are discussed.

NCC 502 Microeconomics for Management
Fall. 2.5 credits. Johnson School core course. Enrollment limited. M. Waldman.
Microeconomic theory is introduced and applied to problems faced by managers. Specific topics covered include supply and demand, consumer behavior, pricing when a firm has market power, and the role of contracts. The class employs a lecture format and emphasizes problem solving. Grading is based on a midterm and a final exam.

NCC 503 Marketing Management
Fall. 2.5 credits. Johnson School core course. Enrollment limited. D. Stayman.
The course is designed to convey the key concepts of marketing and how they fit into the larger context of management strategy and decisions. Both the practical "how" and the fundamental "why" of marketing activities are presented in the light of contributions from behavioral science, economics, and statistics. The goals are to provide sufficient understanding for those who will need only to interact with the marketing function, as well as communication concepts and developing processes that can provide the foundation for further course work and future experience in marketing. The course makes extensive use of case materials.

NCC 504 Management and Organizations
Fall. 2.5 credits. Johnson School core course. Enrollment limited. D. Sally.
If you think about it, stories are central to how we know and remember events, people, and facts, and to how we communicate knowledge and history. Most of the jobs you aspire to involve a particular form of story-telling—the CEO's vision, the analyst's report, the planner's strategy, the salesperson's pitch, the consultant's analysis, and the manager's brand. What distinguishes these as business stories is that they are often analytical (based on a set of objective facts and statistics) and reflect a deep understanding of the complex interactions of individuals and organizations. This course has two goals: (1) to make you appreciate the complexity of the issues that often arise in organizations, and (2) to develop and refine your analytical story-telling abilities. To achieve these goals, the course will be taught by the case-study method. Cases are an efficient way to expand your experience base with respect to such issues as motivation, power, leadership, ethics, structure, design, and change. We hope to teach you how to make good inferences about what will and won't work in particular situations, and how to learn from your own experiences and those of others.

NCC 506 Managerial Finance
Fall. 2.5 credits. Johnson School core course. Enrollment limited. R. Michaely.
The course objective is to introduce students to the basic concepts of finance. In particular, we address the issue of what type of investments should firms and individuals take on, and how these investments should be financed. Understanding these concepts are essential to financial managers and professional investors, and has important applications to many aspects of financial decisions all of us have to make on a daily basis (e.g., is getting a MBA a good investment?). These issues involve capital budgeting decisions, stock and bond valuation, how to assess and account for risk through the capital asset pricing model (CAPM), option pricing, capital structure and cost of capital, and market efficiency. Letter grade only, based on examinations, quizzes, group case reports, homework, and class participation.

NCC 508 Managing Operations
Spring. 2.5 credits. Johnson School core course. Enrollment limited. Prerequisite: NCC 501 or permission of instructor. M. Lojo, L. Robinson.
This course focuses on managing processes: actions that convert inputs into outputs. Almost any business function can be modeled as a network of processes. The first part of the course examines processes, both individually and as part of a larger system; we see that good process design reflects both the volume and the variety of the product. A common course theme is the deleterious effect of variability (in demand, supply, quality, or capacity) in complex systems. Queuing theory and simulation are particularly helpful for analyzing process capabilities. The second part of the course analyzes how goods and services are produced. After describing the strategic role of operations, we examine forecasting systems, inventory management, and just-in-time and logistic management. Constrained optimization models provide information about managing with finite resources. The final part of the course examines process improvement through quality and productivity management and corporate learning.

NCC 509 Strategy
Spring. 2.5 credits. Johnson School core course. Enrollment limited. V. Kadiyali.
Among the critical tasks facing any senior manager are the creation, implementation, and evaluation of a business unit's strategy. This course seeks to provide the management student with the tools and frameworks essential to carrying out these tasks. Many of these tools and frameworks are based on recent advances in game theory, industrial organization, and organization theory, although the course also draws from the older business policy tradition as well. Students who successfully complete this course will be able to analyze industries, identify areas of strategy advantage and disadvantage, and to devise strategies that exploit advantages and remedy disadvantages.

NBA MANAGEMENT ELECTIVE COURSES

Accounting

NBA 500 Intermediate Accounting
Fall, spring. 3 credits. Prerequisite: NCC 500 or the equivalent. T. Dyckman.
The course is based on the essential concepts and terminologies of financial accounting introduced in the accounting core course. Students learn to evaluate financial statements through the use of case studies drawn from actual corporate financial reports.

NBA 501 Accounting for Mergers and Consolidations
Spring. 1.5 credits. Prerequisite: NBA 500 or permission of the instructor. R. Libby.
The course focuses on accounting problems related to equity financing, including leveraged restructuring, intercorporate investments, leveraged buyouts, consolidated reports, proforma statements for a merger prospectus, and other related financial reporting problems. The method of instruction is lecture mixed with cases. Grading is based on two closed book exams. Course continues in NBA 508, Advanced Accounting, offered second half of semester.

NBA 502 Managerial Cost Accounting
Fall, spring. 3 credits. Prerequisites: NCC 500, NCC 501, and NCC 502, or the equivalent. R. Hilton.
The course is designed both for those responsible for internal accounting information and those who use such information for decision making. Topics include budgeting, accumulating costs for product costing, activity-based costing, standard costs, the analysis of cost variances, cost estimation and prediction, cost-price-volume decisions, performance measurement, nonmanufacturing cost analysis, cost allocation, and transfer pricing. Instruction will be a mixture of lecture and case discussion. Student evaluation will be based on a midterm exam, a final exam, a project, and class participation.

NBA 503 Strategic Cost Management
1.5 credits. R. Hilton.
This course focuses on the role of cost management and related issues in helping a firm compete successfully in the global market. Topics considered include activity-based costing, activity-based management, value chain analysis, the lean enterprise,

confronting competition in an industry dominated by lean enterprises, re-engineering, process value analysis, identification of nonvalue-added activities and costs, target costing, Kaizen costing, continuous improvement, time-based competition, cost versus quality, and benchmarking. The course is almost entirely based on cases, many of them lean enterprises in Japan.

NBA 504 Taxation Affecting Business and Personal Decision Making
Spring. 1.5 credits. Prerequisite: NCC 500 or permission of the instructor. R. Bloomfield.
This course introduces students to the fundamental concepts and techniques of tax planning for individuals and businesses. Planning opportunities considered include changing the timing and nature of income, investments, and expenses; choosing an organizational form; and constructing transactions that allow two or more parties to engage in tax arbitrage. The course also introduces tax research techniques and issues regarding tax compliance. Course continues with NBA 507.

NBA 505 Auditing
Spring. 3 credits. Prerequisite: NCC 500 or permission of the instructor. M. Nelson.
The course examines the process by which financial-accounting systems are audited. Topics include ethics, the meaning of audit reports, the legal liability of auditors, the study and evaluation of internal control systems, and various approaches for testing account balances. Problems, cases, and video simulations are used to illustrate concepts.

NBA 506 Financial Statement Analysis
Spring. 1.5 credits. Prerequisite: NCC 506, NBA 500 (or concurrent enrollment) or permission of the instructor. S. Bhorjraj.
This course develops a set of core skills essential to financial statement analysis. We will cover strategic ratio analysis, cash flow analysis, pro forma financial statements, financial modeling, credit analysis, bond rating and bankruptcy predictions, and firm valuation using discounted cash flow techniques. Emphasis is on practical applications. The course format is a combination of case studies and lectures. The lectures communicate subtler aspects of the material while the cases provide hands-on experience. There will be an exam.

Note: Students who have completed the three-credit version of NBA 506 cannot enroll in this course.

NBA 507 Tax Implication of Mergers and Acquisitions and Other Special Topics
Spring. 1.5 credits. Prerequisite: NBA 504 or permission of instructor. R. Bloomfield.
This course examines special topics in tax planning for businesses, with particular emphasis on capital structure choices and reorganizations (mergers and acquisitions), and intra-entity transactions (transfer pricing issues). Readings include many current research papers examining how large corporations exploit their tax planning opportunities.

NBA 508 Advanced and International Accounting
Spring. 1.5 credits. Prerequisites: NBA 501 or permission of the instructor. J. D'Souza.
The course examines advanced topics in accounting for international transactions and international subsidiaries, including foreign currency translation, price level adjustments and international variation in accounting principles. The method of instruction is lectures mixed with cases. Grading is based on two exams and some written cases. Continuation of NBA 501, Accounting for Mergers & Consol (offered first half of semester).

NBA 509 Advanced Financial Analysis
Fall. 1.5 credits. Prerequisites: NBA 506, a finance immersion course, or permission of the instructor. S. Bhorjraj.
This course builds on the core financial analysis skills developed in NBA 506. Topics covered include equity valuation, residual income models, quality of earnings assessments, earnings manipulation detection, market efficiency issues, fairness opinions in MBO's, and large sample stock screening strategies. The overall focus is on using accounting-based information to make investment decisions. Emphasis is on practical applications and special attention is given to cultivating analytical and communication skills. The course features both lectures and cases. There will be a group term project, but no final exam.

Note: Students who have completed the three-credit version of NBA 506 cannot enroll in this course.

NBA 510 Cornell Equity Research
Fall, spring. 1.5 credits. Prerequisites: NCC 500 and completion of or concurrent enrollment in NBA 506, or permission of the instructor. R. Bloomfield.
Students write and revise equity research reports on companies that are neglected by analysts and preferably undervalued. Class work includes lectures and cases on equity research and valuation, presentations by guest visitors, and presentations by students who must persuade the class to approve their stock recommendations.

NBA 511 Financial Modeling
Fall, spring. 1.5 credits. Prerequisites: NBA 506 or permission of the instructor, and mastery of basic EXCEL skills. Staff.
Financial modeling is the art and science of constructing spreadsheet models of firms' future financial statements. This class, builds on the brief introduction to financial modeling in NBA 506 by modeling the effect on the income statement, balance sheet, and statement of cash flows of more complicated financial transactions such as leveraged buyouts, mergers & acquisitions, and corporate reorganizations. The class meets in the state-of-the-art Parker Center computer lab, and active student participation is emphasized.

NBA 512 Applied Portfolio Management
Fall, spring. 3 credits. Restricted. C. Lee.
An accounting/finance elective course that focuses on the management of an investment fund (see Charles Lee for a full course description). Students enrolled in this course must commit to taking the course for fall and spring semesters. They will receive three credit hours for each semester's work. Strong preference is given to second year MBA students who have successfully completed either NBA 506 or one of the finance immersions. Students need to apply formally. If the number of applicants exceeds 12, admission will be competitive and merit-based.

Economics

NBA 523 Business and Economic Forecasting
Spring. 1.5 credits. Prerequisite: NCC 501 or the equivalent. R. Highfield.
This course focuses on statistical and econometric approaches to forecasting business and economic data series that have a time dimension (time series). The course provides students with a toolbox of time series forecasting methods and teaches them how to choose the appropriate one. Topics include the relationship of forecasting to decision making, univariate methods such as ARIMA modeling, and some multivariate methods such as transfer function, regression, vector autoregression, and neural networks. Applications will usually involve the forecasting of business and economic data. Although statistical theory will be covered as necessary with lecture and supplemental class notes, the emphasis will be on applications and learning by doing. Passing the course requires participation in class discussions and satisfactory performance on both individual and group projects. There are no exams. There is no text for the course but students will be required to use the student version of a sophisticated econometric software package.

NBA 524 Macroeconomics and International Trade
Fall. 3 credits. Prerequisite: NCC 502 or equivalent or permission of the instructor. R. Lind.
The course applies basic macroeconomic theory to such problems as inflation, unemployment, economic growth, and productivity and examines how those problems interact with international trade and finance. Students learn to be informed observers of national and international economic policies and discerning users of economic analyses and forecasts. A lecture/discussion format is used as the method of instruction.

NBA 527 Applied Economic Analysis (also ECON 616)
Spring. 4 credits. R. Frank.
This course will emphasize how economics analysis can help firms and individuals make the most of their opportunities. Of special interest to managers and consultants will be the course's focus on examples that illustrate how faulty economic reasoning leads to inefficient outcomes. The course will also emphasize strategic thinking, and will instruct students in the art of "economic naturalism"—the use of economic reasoning to understand and explain patterns of individual and firm behavior.

Finance

NBA 540 Advanced Corporate Finance (Theory and Practice)
Fall, spring. 3 credits. Prerequisite: NCC 506 or the equivalent. Students who took NBA 540 and/or NBA 548, 1.5 credit version, can not enroll in this course. H. Bierman.
This course is relevant for both investment banking and the treasurer's activities of an operating corporation. Most class sessions are lecture-discussion, but there are several corporate finance cases. The topics include

common stock, preferred stock, debt securities (duration, convexity, inverse floaters, bond refunding, term structure, swaps), hybrids, security design, weighted average cost of capital, basic capital structure issues, cash distribution policy, and the buy versus lease decision. The use of debt to add value, mergers and acquisitions, corporate restructuring, LBO's and MBO's, and Merchant Banking are also covered.

NBA 541 Economic Evaluation of Capital Investment Projects

Spring. 3 credits. Prerequisite: NCC 506 or permission of the instructor.
B. Swaminathan.

This course deals with the evaluation of capital investment projects under uncertainty. The first part of the course focuses on traditional capital budgeting techniques using the discounted cash flow approach. This involves the estimation of cash flows, the treatment of risk and discount rates, the role of inflation and taxes, and the use of single factor and multi-factor asset pricing models in determining discount rates. The second part of the course focuses on the valuation of future investment opportunities of a firm using option pricing techniques. This includes issues such as flexibility options, options on real assets, evaluation of natural resource investments, and evaluation of new product investments. The methods of instruction are lectures, case discussion, spreadsheet exercises, statistical exercises, and seminars by practitioners. Students are evaluated on the basis of mid-term and final examinations, cases, and homework assignments.

NBA 542 Investments and Portfolio Analysis

Fall, spring. 3 credits. Prerequisites: NCC 501, 502, and 506, comfort with quantitative methods. H. Li.

This course deals with several important issues pertaining to investments in securities markets. First it deals with portfolio diversification theory, asset allocation, asset pricing models (e.g. CAPM and APT) and empirical anomalies such as size effect, January effect, and others. Second, the course also deals with the issue of evaluating portfolio performance and mutual fund performance. Third, it deals with investment strategies based on patterns in historical security returns. This may be loosely considered technical analysis. In addition, the course deals with investment strategies based on publicly available information related to accounting and other market statistics and the use of earnings forecasts. This may be considered as falling under fundamental analysis. Finally, the course deals with frictions to trading imposed by the institutional structure of securities markets. The goal of this course is to train students in the latest tools and techniques in portfolio theory and familiarizes them with the latest developments in securities market research and applications. This is a highly quantitative course involving extensive analysis of security market data using regression analysis and other statistical tools. Grades are based on mid-term and final exams, cases, a project, and a trading game.

NBA 543 Financial Markets and Institutions

Fall, spring. 3 credits. Prerequisite: NCC 506 (Finance core). M. O'Hara, W. Bailey.

This course applies principles of finance in order to understand modern financial markets. Central themes are the structure of financial markets, their pricing function, the interaction between financial markets and macroeconomic conditions, and the processes of innovation and regulation in these markets. Students look at the workings of a variety of markets and develop an understanding of the different problems which different types of markets address. The question of market efficiency and the interaction between government policies and financial markets is studied. We analyze issues in innovation and regulation with basic principles of financial economics. Throughout the course, the relevance of these issues for the practical corporate, portfolio, or public sector decision maker is considered. The course includes ideas and evidence from academic research along with historical, institutional, and international perspectives. Recent events are used to illustrate concepts and develop analytic skills. Spreadsheet assignments and a term project requiring data analysis develop research skills and illustrate academic concepts. Exams consist of computational, short answer, and short essay questions.

NBA 545 Corporate Finance

Fall, spring. 1.5 credits. Prerequisite: NCC 506. Staff.

This half-semester course covers some of the more advanced topics in the area of corporate finance, including executive compensation, corporate governance, and bankruptcy law. The course includes lecture/discussion sessions in which the main ideas and the existing evidence (i.e., the theory and the empirics) will be presented and discussed. Cases will be used to illustrate the importance and applicability of these ideas and to provide a "hands on" understanding of the material.

NBA 546 Introduction to Derivative Securities

Fall, spring. 3 credits. Prerequisite: NCC 506 (Finance Core) or permission of the instructor. C. Gukhal, H. Li.

The course introduces students to the pricing and hedging of derivative securities. The course briefly covers forward contracts, futures contracts, and swaps. The primary emphasis is on option contracts. Underlying assets include stocks, currencies, and commodities. Fixed income derivatives are covered in NBA 555. The method of instruction is primarily lectures, supplemented by guest speakers. A midterm and a final exam comprise roughly half the grade, with the remaining half determined by assignments and class participation. The course is a prerequisite for NBA 550, Advanced Topics in Derivative Securities.

NBA 547 Applied Financial Engineering (also OR&IE 565)

Spring. 4 credits. Prerequisites: NCC 506, NBA 546, NBA 555, NBA 542, OR&IE 523, OR&IE 523, COMS 211, permission of instructor. Staff.

This course is designed to integrate students' course work in engineering (computing, stochastic modeling) and finance (options/futures and investment theory) through the completion of a project. The course project will be undertaken via student groups. It will involve the implementation of a financial model to a real world problem. The implementation will include model formulation, computer programming, data collection, and data analysis. The course format will be a mixture of lectures by faculty, industry professionals, and students (project presentations).

NBA 550 Risk Management with Derivatives

Spring. 3 credits. Prerequisites: NBA 546 and NBA 555 (NBA 555 can be taken concurrently). R. Gukhal.

This course studies advanced topics in derivatives and risk management. The first part of the course covers topics in derivatives and develops the tools necessary for analysis and the second part covers their application to risk management. This course is intensive and demanding—about 50 percent more demanding than the Fall NBA 546 course.

NBA 551 Current Topics at the Crossroads of Law and Finance

Spring. 3 credits. M. O'Hara.

This course explores a series of selected topics that involve important issues in law and finance. The premise of the course is that financial institutions of all kinds, whether they are known as insurance companies, banks, investments banks, or pension funds, invest money and advise clients in a wide variety of settings. This agency relationship introduces a number of important dimensions to the intermediary-client relationship. This course will look at these issues from both an economic and legal perspective. Emphasis will be placed on the intersections between modern finance theory and legal analysis.

NBA 552 Cases in Corporate Finance

Spring. 3 credits. Prerequisites: NCC 506 or the equivalent. Recommended: NBA 540. Course is limited to second-year MBA's and Twelve-Month Option (TMO) students. Students who took NBA 535 and/or NBA 536, 1.5 credit version, cannot enroll in this course. H. Bierman.

This course consists of discussions of corporate finance cases dealing with corporate financing. Students will form groups and formally present one case and critique a second. This is in addition to the normal class sessions. The cases in this course deal with mergers, acquisitions, valuation, corporate restructuring, LBO's, MBO's, Merchant Banking, and the financing of corporations. The material applies equally to careers in investment banking and managerial finance. The course does not deal with sales trading or the details of managing an investment banking firm. Several executives working in corporate finance will present cases.

NBA 554 International Finance

Spring. 3 credits. Prerequisite: NCC 506 (Finance core) or permission of instructor. W. Bailey.

This course applies principles of finance to the international setting. International finance is different in two basic respects. First, the existence of multiple currencies adds risk to investment and financing decisions. Second, when corporations and portfolio investors cross international borders, both problems and opportunities arise. We focus on these issues and highlight how finance theory can be extended to address them. Starting with the basic principles of international finance students apply those principles to a variety of problems. The course helps students understand the ideas and research results of international finance and adapt what they learn to the practical problems in the increasingly globalized business world beyond the classroom. The first part of the class outlines three basic themes: exchange rate

volatility, barriers to international capital flows, and the value of international diversification. The second part of the class presents a variety of problems, examples, and applications from the three basic themes. These range from corporate finance applications of capital budgeting to portfolio management strategies. Spreadsheet assignments and a term project requiring data analysis develop research skills and illustrate academic concepts. Exams consist of computational, short answer, and short essay questions.

NBA 555 Fixed Income Securities and Interest Rate Derivatives

Fall, spring. 3 credits. Prerequisites: NCC 506 (Finance core), NCC 501 (Quantitative Methods core). R. Jarrow.

This course is designed to study the pricing, hedging, and risk management of fixed income securities and interest rate derivatives. Topics to be studied include: the term structure of interest rates, interest rate swaps (caps, floors, collars), the risk structure of interest rates, credit risk spreads, and corporate bond valuation. The method of instruction is lectures and discussion, with computer illustrations being an integral part of the class content.

NBA 557 Case Studies in Venture Investment and Management

Fall. 2 credits. Prerequisites: NCC 500 and NCC 506 or concurrent enrollment. W. Thomas.

A series of cases that focus on the venture capital investment process and on the subsequent management of such ventures. The primary perspective is that of the venture capitalist in assembling and evaluating information, preparing forecasts, assessing risks, developing and negotiating investment structure and terms, and deciding whether to invest. Cases also focus on management and financial problems, policy issues, and the relationship between venture capitalists and entrepreneurs. The secondary perspective is that of the entrepreneur and the techniques and skills employed in managing growing enterprises. Presentations by venture capitalists and entrepreneurs will supplement student discussion and analysis of cases. Grades will be based on written reports, quality of classroom participation, and a final exam.

NBA 558 Corporate Financial Policy

Spring. 1.5 credits. Prerequisite: NCC 506 (Finance core). Y. Grinstein.

The course will deal with frontier topics in corporate finance and investment strategy. The financial world is changing at an increasing pace. New financial products are coming to the markets, and the financial structure of many corporations is becoming more and more complicated. Corporate financial officers and investors (such as money managers) need to know the driving forces behind the financial products (debt, equity, and more complicated products) to understand the products themselves. Understanding these issues enable us to estimate firm values more precisely. The course objective is to enable students to better analyze financial situations they may encounter in the future, as well as firms' valuation techniques.

Entrepreneurship

NBA 530 Entrepreneurship Lab

Fall, spring. 3 credits. Prerequisites: NBA 564 Entrepreneurship, or concurrent enrollment, or permission of the instructor. MBA students only. P. Sears.

Students team up with entrepreneurs in the greater Ithaca area on defined projects, which will be integral to the companies' operations, such as production planning, new product launches, or assessing organizational structure. The goal of the course is for students to gain first-hand exposure to the application of functional knowledge in a start-up setting, while bringing real value to the host company.

NBA 531 Startup Forum: Cornell Technologies with New Venture Potential

Fall, spring. 1 credit. R. Holsten.

The course will focus on research at Cornell, which may be a basis for new business ventures. It will address the fundamental ways in which university-based research differs from industrial research. Students will explore and critique the business potential of each concept.

NBA 532 Venture Partnerships—The Corporate Business Development Role, Big Company vs. Emerging Company

Spring. 1.5 credits. P. Sears.

In an era when large corporations are 'downsizing' and 'outsourcing' in order to save on fixed costs, and emerging companies are dependent upon strategic partnerships with large companies as part of their financing strategies. The business development executive can be found at the vortex of this activity. Priorities for the business development executive are distinctly different depending upon the size and history of the enterprise. This course, taught by a venture capitalist who has also served as a Corporate Development Vice President for a Fortune 100 Company, examines the multitude of roles played by managers in business development jobs. A significant amount of attention is paid to planning and managing the merger and acquisition process, as well as key elements in negotiation of the strategic partnership. There will be several guest speakers, each an acknowledged expert in the field. Students will be assigned deal-making tasks in the context of a case study that will be the centerpiece of the course. Class dates to be announced. Students are expected to have read the Big Pharm case study prior to the first class.

NBA 559 The Venture Capital Industry and Private Equity Market

Spring. 0.5 credit. D. BenDaniel.

This course focuses on the industry from the practitioners' perspective. Topics include (1) an introduction to the private equity market focusing on the transactions that define the industry, its structure, participants, history and trends; (2) institutional private equity investing—now an increasingly important and dynamic part of the asset allocation mix; and (3) issues in private equity investing such as concentration in fewer, larger funds and the critical role of a new class of gatekeeper/consultants for limited partners. The course will involve four lectures and a final paper.

NBA 563 Initial Public Offerings and Acquisitions

Spring. 3 credits. J. Shulman.

An in-depth look at initial public offerings (IPOs) and acquisitions from a practitioner's point of view. With respect to IPOs the course will cover: the applicable statutory framework, pre-offering corporate preparation (such as implementation of poison pills and stock option plans), the due diligence process, the implementation of corporate governance policies appropriate for a public company, the offering registration process, liability under federal securities laws, the Securities and Exchange Commission review process, underwriting arrangements, pricing, selection of a trading forum (i.e., NYSE, NASDAQ, or AMEX) and the consequences of going public. Regarding acquisitions, the course will explore: financing alternatives, accounting treatment, due diligence, choosing an appropriate transaction structure (i.e., stock versus asset sale) and crucial aspects of acquisitions, such as letters of intent, continuity of employees, anti-takeover strategies, and non-competition agreements. Mr. Shulman is an attorney with experience in IPOs and acquisitions, and an adjunct professor at the Cornell Law School where he teaches a seminar course on this topic.

NBA 564 Entrepreneurship and Enterprise

Fall, spring. 3 credits. D. BenDaniel.

The course uses Cornell-developed case studies and lectures to address entrepreneurial management in start-up ventures and new-business development in existing companies. Among the topics covered are valuation of business, planning, obtaining resources, management of growth, and cashing out. Guest lecturers speak on specialized topics such as corporate and patent law, bankruptcy and work-outs, leveraged buy-outs, and valuations of businesses. Students team up to write and present business plans. The course attempts to integrate marketing, finance, operations, and human-resource topics in the context of high-growth business ventures.

General Management

NBA 560 Business Law I (also ARME 320)

Fall. 3 credits. Limited to juniors, seniors, and graduate students. D. Grossman.

The course introduces the basic tenets of law as they apply to businesses and their operations. Topics include personal property, contracts, agency, real property, and landlord-tenant concerns. Text readings and case studies are used. All students intending to be professional accountants are required to take the course, and it is strongly recommended for finance students.

NBA 561 Business Law II (also ARME 321)

Spring. 3 credits. Prerequisite: NBA 560 or permission of the instructor. D. Grossman.

The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited liability companies. The second portion of the course will review selected topics in business law, such as employment discrimination, secured transactions, product liability, unfair competition, and international business law.

NBA 562 Estate Planning (also ARME 422)
Fall. 1 credit. Limited to juniors, seniors, and graduate students. D. Grossman.
Fourteen sessions on the various aspects of estate planning. The law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and probate procedures are covered.

NBA 567 Management Writing
Fall, spring. 1.5 credits. B. Mink, A. Pike, M. Hittleman, C. Rosen.
Students learn to write clearly and effectively by focusing on the writing process as well as the finished product. Course topics include audience perspective, style, organization, strategy, and persuasion. There is a writing assignment every week. Students receive instructor and peer feedback. Priority given to MBA students. Open to other graduate students and employee degree candidates if there is room.

NBA 568 Oral Communication
Fall, spring. 1.5 credits. B. Mink, A. Pike, C. Rosen.
This course focuses on improving the presentation skills of management students. The course covers the areas of speaking formats (impromptu, extemporaneous, manuscript), delivery, organization, visual aids, and question/answer. Student speeches constitute the bulk of class time, with each student presenting seven or eight speeches in the seven-week session. The small class size allows for significant individual attention. Students receive feedback from classmates and the instructor, and have the opportunity to review in tutorials the videotapes of most of their presentations. Priority given to MBA students. Open to other graduate students and employee degree candidates if there is room.

NBA 569 Management Consulting
Fall, spring. 3 credits. A. McAdams.
The course is case-study oriented and focuses on strategic consulting. It has multiple objectives. First, it provides students with the opportunity to understand the role of the consultant and to gain indirect experience in that role through dealing with a broad range of practical and real-world issues. Second, it helps students improve their analytic skills through practice with case studies. Third, it provides students with information that they are unlikely to gain in other courses, as well as experience in making group presentations and evaluating them. Students are required to write a comprehensive analytic term paper.

NBA 570 Leadership in Management
Spring. 1.5 credits. MBA students only. R. Peterson, RPW Executive Development, and other Johnson School faculty.
This course is a partnership with RPW Executive Development to provide MBA students with the self-awareness and interpersonal skills required to be effective leaders (the general principles of leadership course is NBA 668). RPW has partnered extensively with the Johnson School Executive Education Department in the past. The course consists of five full-day training sessions. Staff from RPW and Johnson School faculty provide training. The first two days focus on self-awareness and employ several experiential exercises and self-assessment instruments including, the Campbell Leadership Index (CLI), Meyers-Briggs Type Indicator (MBTI), the Fundamental Interpersonal Relations Orientation-Behavior (FIRO-B), the Kirton Adaptation/Innovation inventory (KAI), and the Ambiguity Preference Scale (APS). Class members are also trained in giving and receiving feedback from team members and faculty. Mid-week activities include various leadership and team challenges, including a business simulation. Attendance is required each day of the course to receive credit. NOTE: most of the self-assessment instruments listed above will need to be completed prior to the first day of class to allow for scoring and analysis.

NBA 571 Cornell Management Simulation
Fall, spring. 1.5 credits. Restricted to second-year MBA students. J. Hass, S. Smidt.
This computer-based simulation is played by self-selected teams of four students who make marketing, production, and finance decisions for one of five companies operating competitively in the same industry. After the first week, during which the rules of the simulation are explained and the software used by each team is demonstrated, the teams make periodic decisions (meeting at their own convenience). At the beginning of the simulation, each team writes a Strategic Intent paper and, before the results of the last decision have been determined, each team presents an in-depth analysis of its performance and its strategy for the future in a "board of directors" meeting. Letter grading only, based on the value created for the company's shareholders (relative to other firms in the same industry), the team's Strategic Intent paper and the instructor's evaluation of team's performance at the BOD meeting. Students who have completed NBA 549 cannot take this course. Open to MBA IIs only. Meetings will be periodic throughout the semester.

NBA 573 Seminar in Sustainable Development (also ABEN 673)
Spring, first half of semester. S-U grading only. 1–3 variable credits. A. McAdams.
This seminar-style course will involve readings and discussion of issues in environmental management, and will also feature four significant outside speakers on the subject of environmental management. (Students interested in doing consulting projects in environmental management will be accommodated in NBA 575, Advanced Consulting.)

NBA 575 Field Projects
Fall. 3 variable credits. J. Russo.
The course teaches how to frame unstructured business problems through a hands-on team project. Teams must identify what the central issues are, and then determine the most appropriate tools and concepts to provide insight into these issues. Students also learn to approach business problems from a cross-functional perspective. Specific conceptual content includes: project management; power, politics, and personalities in work groups; managing in for-profit versus not-for-profit organizations; and organizational change. This course is not classroom-based. Although there will be a few class sessions early in the semester, the course structure will revolve around periodic reviews and coaching sessions as needed. The instructor team will contain one regular member of the Johnson School's faculty, an experienced executive, and an administator.

NBA 577 The Political, Legal, and Regulatory Environment of Business
Spring. 3 credits. R. Schuler.
The political climate, laws, regulations, and government arrangements for infrastructure have a profound effect on the nature, operation, and profitability of business. Many of the most important decisions that top management makes are driven by political, legal, and regulatory considerations (e.g., the responses of: Exxon to the Exxon Valdez oil spill; Union Carbide to the Bhopal, India, gas leak; and the decision of AT&T to accept the division of its company in response to an antitrust suit filed by the U.S. government). Environmental and waste-management concerns are leading to new laws and regulations that affect many aspects of business, creating opportunities as well as posing problems. The course begins with a discussion of the political and economic foundations of business regulation. Students examine different areas of application, including economic regulation, environmental regulation, antitrust, and product liability. Guest speakers include leading scholars from throughout the university and business and government leaders.

NBA 578 Business Ethics
Fall. 3 credits. Staff.
Students examine actual situations in business, both in the United States and abroad, that involve ethical issues affecting individuals and organizations. Students are challenged to decide on appropriate ethical positions.

NBA 579 Business Strategy
Fall. 1.5 credits. Enrollment limited to second-year MBA students only. J. Suwinski.
A well-defined strategy is essential for business success—describing where the business is going, how it's going to get there, and then providing a framework for making decisions along the way. Strategy is the responsibility of top executives of a company/business, and the ability to formulate effective strategy is one of the key skills that distinguishes General Managers from functional managers. This course will focus on the process of effective strategy formulation from the perspective of the general manager of a business unit. This perspective also applies to consultants working for clients on business unit strategy. Corporate strategy and its interaction with business unit strategies will be discussed, as will tools for industry and company analysis. Situational analysis will also be covered. This course compliments the core strategy course, with emphasis on understanding and practicing frameworks that are useful in case-based interviews. The course draws heavily on the instructor's experience developing strategy for numerous businesses at Corning Incorporated. Guest speakers from industry and strategy consulting firms and also from industry present their approaches to strategy, and discuss the analytical tools they find most effective in working on business strategy. Students gain experience, via assigned cases, in analyzing business problems/opportunities, using the strategic process to formulate effective business strategies, and in presenting their recommendations in written and oral form. A major case write-up and presentation in a mock board environment at the end of the course gives each student an opportunity to play the role of a strategy consultant working on a real case.

NBA 653 Strategic Alliances: Lessons from Experience

Spring. 1 credit. J. Suwinski.

A wide variety of strategic alliances are being used today as companies try to leverage their resources for competitive advantage. This course gives an overview of the spectrum of alliances, examining the strategic rationale and pros and cons of each major type of alliance. The primary focus of the course is on joint ventures as a specific form of strategic alliance, where the success rate is less than 50 percent. The course develops a set of principles that have contributed to success for Corning Incorporated. The course is taught from the perspective of the general manager of a major business unit.

NBA 665 Managing Technology and Innovation

Spring. 3 credits. Staff.

This course is designed for students who see themselves in settings where they have to develop new products or processes and for students who must implement change in existing products or processes. Major issues involved in managing the introduction of new technology, including competitiveness, technology assessment, R&D strategy, and positioning. We examine how industries are transformed by new technologies and how innovations diffuse among firms. Also considered are internal management issues, including such topics as the structure of innovative organizations, the design of incentive and reward systems that foster risk taking, the way innovation champions manage new-product development through cross-functional teams, and the role of executive leadership. The course uses a combination of readings, lectures, discussions, case analyses, and guest lectures.

International Management

NBA 576 The World Geopolitical Environment of Business

Fall. 3 credits. R. Lind.

The geopolitical face of the world is changing at a pace that few could have envisioned even five years ago. The unification of Germany, the fall of communism, the institution of sweeping economic restructuring in the former Soviet Union, the move toward democracy with market economies in eastern Europe, the movement of Europe toward a unified economy, and the flirtations with reform and its implications in China are just a few of the many examples of the changing world environment of business. This course provides students with a view of those fast-paced worldwide changes. Topics covered include developments in western and eastern Europe, the former Soviet Union, the Pacific Rim, Central and South America and the Middle East and the role and fate of developing countries in the world economy. Guest speakers include leading scholars from Cornell and other universities and leaders in business and government.

NBA 580 Strategies for Global Competitiveness

Spring. 3 credits. A. McAdams.

Initially, students explore the role of government in several private-market industrialized nations—Japan, France, Germany, the United Kingdom, and Italy—for lessons the United States might learn and use. Students investigate the impact in each of those countries of government policies on the global competitiveness of the country's firms. Special emphasis is given to differential policies appropriate to each of a range of industries, from the mature to the high tech (including computers, telecommunications, and electronics), and to stages of development in each economy. Possible lessons are then tested for less developed countries that might include Venezuela and Malaysia and newly emergent countries such as Singapore. Classes are run in a discussion format. This course can be used to fulfill the strategy requirement.

NBA 581 Special Topics—Contemporary Development of Southeast Asian Economies

Spring. 3 credits. I. Azis.

This course analyzes the patterns and processes of Southeast Asian economic development during the last three decades. The five plus two countries in the region that will be the focus of the course include Thailand, Indonesia, Malaysia, Singapore, the Philippines, Brunei, and Vietnam. The topics will be divided into the following categories: Southeast Asian economic development, regional economic cooperation in Southeast Asia, and the financial crisis of the 1990's. The course assesses important factors and consequences of the region's development patterns and uses international comparative analysis to explicate the relative position and uniqueness of the region's performance. Evaluation will be based equally on the student's participation in class discussions and debates and on a term paper.

NBA 584 International Competitive Strategy

Fall and spring. 1.5 credits. This course can be used to fulfill the strategy requirement. J. Katz.

The course focuses on the development of competitive strategies in the global environment—including the identification of internationally relevant strengths and weaknesses, the movement and use of resources to gain competitive advantage, and strategies to confront competitors, both domestic and multinational.

NBA 585 Cross-National Management

Fall. 1.5 credits. J. Katz.

Focuses on the differences in managerial style across countries and develops skills to deal with these differences. Most of the material will be applicable to all countries, though two specific countries will be highlighted each semester.

NBA 586 Global Management Structures

Spring. 1.5 credits. Prerequisites: the new version of NBA 584. J. Katz.

Focuses on the control, communication, and coordination systems within multinational corporations. Design and development of appropriate systems, to ensure enactment of corporate strategy will be addressed.

NBA 587 International Mergers & Acquisitions

Spring. 1.5 credits. J. Hanks.

This course covers issues relating to mergers and acquisitions in an international context. Topics include business due diligence, pricing and negotiation, and other important topics from both the buy and sell side. The course uses both lecture and case formats. Students are evaluated on the basis of group and individual written assignments.

NBA 590 Managing in Developing Countries

Fall. 1.5 credits. J. Katz.

This class centers on the unique features of industrialized and newly industrializing countries as hosts for multinational business operations. It is a case-based course; each class is spent discussing one or two cases. Topics include environmental variation and how to deal with it and concentrated national power structures and their management. A large number of countries spread throughout the world are covered. Students are responsible for providing in-class updates on the countries discussed. Grading is based on the country update presentation, a final case write-up, and class participation.

NBA 592 Experience in International Management

Spring. 1.5 credits. J. Katz.

The objective of this course is to combine classroom sessions and international experience with an increased awareness of business environments outside the United States. NOTE: participation in a faculty approved study trip is required to complete this course (fee charged). On trips, students will visit local businesses, subsidiaries of foreign multinationals, government officials, local business school students, and others. Students must also attend two pre-trip meetings (1 1/4 hours each) and two Saturday meetings during spring semester (2 1/2 hours each). Those meetings will be used to present information on international business conditions, industrial structures, management styles, and also, to develop cross-cultural skills. A final paper, integrating the material learned in the classroom with their experiences, will be required.

Management Information Systems

NBA 601 Electronic Commerce

Spring. 3 credits. Letter/S-U optional grading. L. Orman.

Electronic commerce is the use of information technology in conducting economic transactions and managing businesses over computer networks. It is a phenomenon that has captured the public attention because of its wide-ranging implications for businesses, markets, public institutions, and the general public. Electronic commerce involves a wide variety of cooperating technologies such as communications, networks, databases, expert systems, and multimedia. It also affects a wide variety of managerial issues. Electronic commerce created a new emphasis on information technologies and systems in management. It led to the development of new technologies and new combinations of existing technologies to support management. On occasion, it radically altered business practices and the role of management.

The students in this course learn to conduct economic transactions and manage businesses on the Internet. All major technical and managerial issues are covered through computer exercises on the Internet, and case studies and examples of businesses on the Internet.

NBA 612 Imaging and the Electronic Age

Fall. 3 credits. D. Greenberg.

The advances of computer graphics, computer processing power, network bandwidths, and video compression technologies are forcing the merger of the telephone, television, and computer industries. The influence of these

technologies has created paradigm shifts that will drastically change the way we communicate, how we are educated, the way we work, design, and in essence, how we will live in the next century. We are just beginning to fathom how these changes will influence our modus operandi and greatly modify our traditional patterns of behavior, both personal and organizational. Clearly, business and industry management will have to understand the implications of the advanced technology. This course will start by presenting historical technological advances that created major paradigm shifts for communications. Advances in computer technology emphasizing the fundamentals behind the increases in processing power, video and computer graphics capabilities, and network transmission will be presented. The latter half of the course will cover the effect of these scientific advances on many discipline-specific areas including photography, the film industry, the entertainment and animation industry, television broadcasting, publishing, as well as the computer industry itself. Sessions will be devoted to the social and legal issues rising from the rapid advances in electronic communication. In attempting to predict the disruptive changes of the future, it is best to understand the technologies themselves. Thus, students with technology or science backgrounds are preferred. Although no computer programming will be required, a working knowledge of computers is necessary. The course will be especially tailored to a business school and industrial concerns and will have interactive live demonstrations at the state-of-the-art laboratory of the Program of Computer Graphics. No prior knowledge in computer science is required.

NBA 614 Managing in the Information Age

Fall. 1.5 credits. A. McAdams.

In this course we explore a topic that is just beginning to emerge: the implications of the explosion of the Internet and interactive multimedia communications for the way managers think and manage. We examine the origins of the Internet and some of the forces that have let to its rapid development, noting along the way, why and how it has "blindsided us" as Andy Grove of Intel and Bill Gates of Microsoft candidly stated. We then look at how information is being used today in pioneering applications in organizations of various kinds based, in part, on original case studies and on guest lecturers. Throughout the semester the student is asked to identify new and innovative use of modern information technologies. The course itself will evolve, even in real time, with the development in the field.

NBA 615 Information Technology to Manage Business

Fall. 1.5 credits (variable). A. McAdams.

This course relies on visiting speakers from several technology-based firms. The speakers address how to manage the information technology function as a business and how to use IT to deal with business problems. Speakers come from hardware companies, software companies, and other organizations dealing with large issues of managing the information resource. There are assignments, with student groups interacting with speakers, and a short paper at the end of the course. The course meets approximately 10 times during the semester for up to two hours.

Marketing

NBA 520 Pricing and Strategy

Spring. 3 credits. Prerequisite: NCC 502. V. Rao.

This course extends material introduced in the core microeconomics course, where the focus is on pricing decisions. The course is taught very much like the core microeconomics course; it consists mostly of lectures and problem sets that use the ideas contained in the lectures. Some understanding of calculus is required. The grading for the course is based on a midterm exam, a final exam, and a paper. Specific topics covered include price discrimination, peak-load pricing, product line pricing, and pricing when information is asymmetric.

NBA 620 Marketing Research

Fall. 3 credits. Prerequisites: NCC 501 and NCC 503, or the equivalent. V. Rao.

This course deals with marketing research as a critical support function in corporations. The broad objective is to provide a fundamental understanding of marketing research methods employed by better managed firms or proposed by leading academicians. The course is aimed at the manager, the ultimate user of marketing information, who is responsible for the scope and direction of research activities involved in obtaining, analyzing, and interpreting results of research. The course covers the use of secondary sources of marketing information for designing studies and collecting primary data. Students are exposed to up-to-date methods in research design, qualitative research, measurement, data collection, and analysis. The emphasis is on evaluating research methods and on interpretation and use of results rather than on mathematical derivations. Students are also exposed to the practical side of marketing research through case studies, problem sets, and projects.

NBA 621 Marketing Communications

Fall. 1.5 credits. Prerequisite: NCC 503 (Marketing core). D. Stayman.

The course is designed to give students an understanding of the advertising and promotion management process. It covers the components of a successful advertising campaign and helps students develop an appreciation of the issues involved in advertising planning and decision making. They also learn how recent social-science findings and theory can facilitate advertising management.

NBA 622 Marketing Strategy

Fall. 3 credits. Prerequisite: NCC 503 (Marketing core). V. Rao.

The course balances theoretical and practical approaches to the development and evaluation of marketing strategies for multiproduct firms. It considers various environmental opportunities and constraints in developing and evaluating integrated marketing strategies for new and established products and services. Recent research results are applied to decisions on product-market boundary definition, resource allocation, product positioning, and competitive reactions. It includes selected current topics such as brand equity, acquisitions, and lead-user analyses. Students use case studies extensively to develop skills in strategy analysis and to enhance skills in assessing external threats and opportunities. They employ computer-assisted market strategy simulations to evaluate the effects of competing strategies. Guest speakers from industry provide a view of the operational aspects of marketing strategy.

NBA 623 Customer-Based New Product Development

Fall, spring. 1.5 credits. Prerequisites: NCC 501 and NCC 503.

The successful introduction of new products requires careful planning and systematic screening and testing. This course covers models and methods that are useful to managers in the development and marketing of new products. Heavy emphasis is placed on the measurement of consumer preferences. Students are required to complete a group project, consisting of a measurement instrument, data collection (from at least 30 respondents) and data analysis, for a self-chosen product category. The method of instruction consists of a combination of lectures and discussion of cases and articles. Performance is evaluated primarily based on exams and the group project.

NBA 625 International Marketing

Spring. 1.5 credits. Recommended: NCC 503. J. Katz.

Designed to train students to take a domestic product and expand it into international markets successfully. Market selection, international market research issues, and international marketing strategies are all discussed. The term project (actually submitted in three parts throughout the term) requires that students choose some product and develop a plan for taking it abroad. Each class includes cases, therefore, class preparation is essential. Grading is based on the term project, the final, and class participation. Core marketing provides a useful background, but is not a prerequisite.

NBA 626 Consumer Behavior

Spring. 3 credits. Staff.

Topics include factors that influence response to advertising of various kinds, purchase decisions, product perceptions, response to promotion, consumer satisfaction, and the basic methodologies for understanding consumer behavior.

NBA 627 Affect, Brand Equity, and Internet Marketing

Spring. 3 credits. A. Isen.

The course will focus on concepts central to brand equity, including brand association, brand perceptions, brand loyalty, relationship marketing, and brand extensions and revitalization. Special focus is placed on the role of affect (feelings) in decision-making and thought processes that are fundamental to these and other concepts central to brand equity establishment, maintenance, and management. Additionally the course covers the emerging area of Internet marketing from the consumer perspective relative to brand equity, including consumer response to the Internet as a medium and marketing channel.

NBA 630 Policies for Marketing Channels

Spring. 3 credits. Prerequisite: NCC 503. V. Kadiyali.

Marketing channels are analyzed as a chain of interdependent and interlocking organizations that produce and deliver goods and services to various types of consumers. This course looks at various aspects of these relationships, such as efficiency, conflict, incentives, and government intervention. Instruction consists

of lectures, cases, and guest speakers. Evaluation is based on cases and a final project (presentation and write up) and on class participation.

NBA 631 MARKSTRAT Simulation
Fall. 1.5 credits. Prerequisite: NCC 503. V. Rao.
MARKSTRAT Simulation offers an opportunity for students to make various marketing strategy decisions in a realistic, dynamic, simulated, competitive environment. Students, working in teams, manage a portfolio of a firm's products for several years (periods). They learn how to make long term decisions (introduction of new products) and deal with various cross-functional issues related to marketing management (e.g., research and development, product design, and budgeting). A major portion of the course will be devoted to an understanding of the basic concepts (e.g., competitive positioning, resource allocation, market segmentation and product design) on which the game is based, and to a discussion of suitable methods of analysis of data generated in the game. Students develop an initial strategy statement and strategic marketing plan for their firm. This game has become quite popular in various competitive schools of management. Students develop an initial strategy statement and strategic marketing plan for their firm.

NBA 633 Internet Marketing
Spring. 1.5 credits. V. Rao, D. Stayman, V. Kadiyali.
This class explores the effect of the Internet on marketing. Topics include an overview of the on-line industry, business models for the Internet, advertising and promotions on the Internet, marketing research on the Internet, loyalty programs for Internet marketing, and disintermediation or channel conflict resulting from Internet distribution. The course is comprised of industry speakers from Cendant, CSC, Netcentives, H-P, 1st USA, Catalina marketing, Bausch and Lomb, and others. Course requirements include write-ups on a subset of speakers, and a final report and presentation on an Internet marketing issue of the student's choice. NBA 638 is restricted to MBA II's because the same information is available for MBA I's in the strategy core.

NBA 635 Marketing Models
Fall. 3 credits. Prerequisite: NCC 503. V. Kadiyali.
Students learn to use mathematical models to solve marketing problems. The objective is to develop students' skills in evaluating marketing models and implementing them in management practice.

NBA 637 Direct Marketing
1.5 credits. Prerequisite: NCC 503 Marketing Management, or equivalent. V. Rao, D. Stayman.
The objective of this short course is to expose MBA students to selected contemporary issues in the area of direct marketing. In addition to providing an overview of the direct marketing industry and trends in database technology, the course addresses major strategic and tactical issues in the management of direct marketing. Discussions cover the perspective of a marketer interested in employing the opportunities in direct marketing as an integral element of the marketing mix for a product/service. The course also addresses appropriate ethical concerns with direct marketing. To acquire a flavor of various practices in the industry, students visit one or two direct marketing firms in New York City or its vicinity toward the end of the course.

NBA 638 Analysis of Competitive Decision Making
Spring. 3 credits. Prerequisite: NCC 502 (Microeconomics core course). V. Kadiyali.
This course brings methods of microeconomics analysis to competitive decision making. Specifically, it addresses issues relating to optimal competitive decisions for a firm interacting with current and potential rivals. Discussions cover how firms can, by their choice of appropriate decisions, best signal to rivals their intentions and their degree of commitment. Also considered are sustainability, flexibility, and correction of decision choices. Game theoretic perspectives are used to understand these concepts. The dimensions of competitive strategy considered include product proliferation, R&D and patent policies, choice of compatibility with existing products, bundling of products, investing in capacity, vertical integration, choice of channels of distribution partners, pricing, and promotions. Also discussed are problems caused in the optimal choice and implementation of firm strategies when information is imperfect. Specifically, considered are issues of moral hazard and adverse selection, and how these issues affect firm choices of strategies (e.g., pricing, choice of channel partners, etc.). Instruction includes lectures and cases. Student evaluation is based on cases, class participation, and a final project. This course can be used to fulfill the strategy requirement.

NBA 639 Data-Driven Marketing
Fall. 3 credits. Staff.
Data-Driven Marketing introduces the future brand manager or marketing consultant to the use of market data to evaluate and construct pricing and promotional strategies. The course introduces new sources of data available on product purchases and consumers' reactions to the marketing environment. The course focuses on the practical use of popular data sources. Approximately 70 percent of the course covers panel data on high-volume consumer packaged goods, and 30 percent is devoted to direct or "database" marketing. The goal of this course is to introduce these new data sources and provide a solid foundation for the development of analytic tools. Examples are drawn from the consumer packaged goods industry. This course makes intensive use of EXCEL and the WINDOWS computing environment. The data has been extracted and organized for use in EXCEL; this allows the student to concentrate on learning modeling tools without a large investment in computing or data manipulation methods.

Operations Management

NBA 641 Logistics and Manufacturing Strategy
Spring. 3 credits. Prerequisite: NCC 508, OR&IE 410, or permission of the instructor. L. J. Thomas.
The course is about supply-chain integration, which involves strategic management of the values chain, from materials to customer. Students discuss operations strategy issues that are important to both manufacturing and service. The course emphasizes written and oral communication skills. About a fourth of the classes are spent on case studies, with small groups presenting their analyses of them. There is one mid-term examination, but the majority of the grade is evaluated based on projects and class participation. There is an option of replacing some assignments with a "live case," a project with a local company.

NBA 644 Quality Management
Fall. 3 credits. Prerequisite: NCC 508 or permission of the instructor. L. Robinson.
The theme of this course is the design and improvement of products and processes. The topics covered within this survey course include: (1) principles of process improvement (the formal seven-step improvement process, quality tools); (2) process monitoring (statistical process control, process capability, Motorola's "6 sigma" program); (3) product design (the Kano model, customer satisfaction and delight, issues in survey design, quality function deployment (QFD), design and manufacturability); (4) product delivery and support (quality in service and administration, satisfaction guarantees, and customer loyalty); (5) process design and improvement (kaizen vs. business process reengineering, benchmarking, design of experiments); and (6) issues in implementing quality improvements. The structure of the course emphasizes "hands-on" applications of the principles and learning's from the course. The guest speakers and local plant tour are supplemented with Harvard cases, several exercises (e.g., assuming the role of a Baldridge Examiner, finding and correcting the root causes of problems in a process), and homework assignments (to allow students to work through quantitative problems without any time pressure). A sizeable component of this course is a group project, which applies the formal quality improvement process at a local firm.

NBA 645 Product Development Practicum
Spring. 3 credits. J. Thomas.
This course centers on developing a major new product for firms. It involves training in creativity by a consulting firm and readings in product development. This course provides the opportunity to learn from many different sources, consultants, faculty, and executives.

NBA 646 Managing Knowledge-Based Services
Spring. 3 credits. Prerequisite: NCC 508. Staff.
This course is designed for students who plan to manage technical and high-skill service enterprises. The pros and cons of the "service economy" are discussed, and the unique aspects of producing service products, focusing on high-end, high value-added services are examined. Although some consumer service examples are included, the primary emphasis is on corporate and industrial services that occur between large firms, including technical, financial, and expert services. The use of traditional operations management tools in the context of service industries, as well as concepts from other disciplines such as sociology, psychology, and economics is explored. In addition to managing the efficient provision of services, service design, marketing, evaluation, and improvement are addressed. The course uses a combination of case analyses, discussion, student projects and presentations, guest lectures, and readings.

NBA 652 Integrating Product Design, Marketing, and Manufacturing
Spring. 1 credit. J. Bradley, J. Thomas.
The course makes apparent the necessity of integrating product design, marketing, and manufacturing for a firm's success. Managerial tools and useful concepts that facilitate this integration are introduced. Students have the opportunity, through homework assignments or projects, to make a more in-depth foray into the course topics.

Organizational Behavior

NBA 663 Managerial Decision Making
Fall. 3 credits. J. Russo.
This course presents practical concepts from the behavioral sciences that can serve as guides to managerial action. Lectures, cases, and exercises are used to acquaint students with new perspectives on decision making, critical thinking, problem solving, and group processes. Taken together, these perspectives offer a trouble-shooter's guide to the uncertainty, complexity, and conflict in the business world.

NBA 666 Judgment and Negotiations
Fall, spring. 3 credits. Staff.
Judgment is the art and science of transforming perception into thought or opinion. Negotiation is the art and science of securing agreements between two or more interdependent parties. The purpose of this course is to understand the theory and processes of negotiation as it is practiced in a variety of settings. This course is designed to complement the technical and diagnostic skills learned in other courses. A basic premise of the course is that while a manager needs analytical skills to develop optimal solutions to problems, a broad array of negotiation skills are needed for these solutions to be accepted and implemented. The course highlights the components of an effective negotiation and teaches students to analyze their own behavior in negotiations. The course is largely experiential, providing students with an opportunity to develop their skills by participating in negotiations and integrating their experiences with the principles presented in the assigned readings and course discussions.

NBA 667 Managing Intellectual Capital
Fall. 1.5 credits. B. Nelsen.
As the twentieth century draws to a close, economies long based on manufacturing are giving way to those based on the management of information, the production of knowledge, and the provision of services. Hence, organizational profits will increasingly flow from intellectual rather than material capital. A firm's success will hinge upon the manager's ability to recognize and adapt to the unique challenges presented by managing intellectual capital. This course examines this shift in the business environment and its practical implications for managers. Topics addressed include (1) motivating and managing knowledge workers; (2) employee empowerment and self-managing teams; (3) organizational learning; and (4) leadership for innovation and creativity.

NBA 668 Leading Teams and Organizations
Fall. 3 credits. R. Peterson.
This course focuses on general principles for successfully leading teams and organizations (the personal development course is NBA 570). The course draws on the latest research in team decision making and organizational leadership to address questions such as: what is the difference between leadership and management? how does a leader establish trust and commitment to an organization? and how do leaders transform organizations? The course consists primarily of case studies of leaders, but also includes some experiential and group activities. Course grading is based on class participation, group case analyses, and a final individual case analysis. Priority is given to MBAs.

NMI AND NRE RESEARCH AND ADVANCED STUDIES

NMI 500–502 Directed Reading and Research
Fall, spring. 1, 2, or 3 credits. Staff.
Students undertake special-interest research under the supervision of faculty members. Registration is limited to students who have the approval of their advisers and of the faculty members involved in the research.

NMI 510 Multi-Cultural Work Environments
Spring. 1 credit. C. Rosen, B. Mink.
NMI 510 is a independent study course that is open to students whose summer internships will be in a country other than that of their citizenship or prior work experience. The goal of the course is to promote an understanding of the cultural assumptions we bring to the work environment and the effects of cultural differences on organizational interactions and productivity. Registration for the course occurs in the spring semester prior to the internship, and grades are posted in the following fall semester after completion of the course project (a 10-page paper). Students may register for the course after obtaining an internship offer and completing the paperwork for the course instructors. International students obtain and process work authorization forms with the International Students Office. See Charlotte Rosen (Sage 304) for further details about the academic and immigration requirements for NMI 510.

DOCTORAL SEMINARS

NRE 502 Doctoral Seminar in Marketing
3 credits. Staff.
This class introduces students to empirical research in marketing. There is a strong focus on the historical development of econometric specifications of consumer choice models (with an emphasis on heterogeneity and issues of dynamic consumption patterns), and Bayesian methods in marketing. However, by the very nature of the class, the content is to some extent be driven by the participants in the course. Teaching is interactive, and each participant is expected to present one of the papers studied to the rest of the class. Furthermore, each participant is expected to replicate the results of one of the papers, requiring the participant to write the necessary code and briefly discuss their findings.

Enrollment is by consent of the instructor. Students are required to have taken a graduate level course in either mathematical statistics or econometrics, although this restriction may be waived in special cases. Students are welcome to sit in on parts of the class; for example, the section on Bayesian Methods will be broad enough that students from other areas may find the presentation useful.

NRE 504 Doctoral Seminar in Accounting
3 credits. This course is for Ph.D. students only. Staff.
The seminar provides a rigorous and integrative exposure to those aspects of the literature in accounting, behavioral economics, and psychology that are related to questions of accounting and auditing theory and research.

NRE 507 Doctoral Seminar: Affect and Cognition
Fall. 3 credits. Prerequisites: courses in statistics and experimental design. A. Isen.
The course examines research on some of the ways affect influences such thought processes as memory, decision making (including risk taking), and problem solving (including creative problem solving). Applied topics relevant to management concerns (for example, organizational behavior and consumer behavior) as well as other theoretical and applied topics (among them medical decision making, social interaction, self-concept, and cognitive and affective development) are considered, depending on student interests.

NRE 509 Doctoral Seminar in Research Methods
3 credits. Staff.
This course concerns the fundamentals of scientific research: theory, research design, methods, and criticism. It is designed for doctoral students who wish to undertake research publishable in scholarly journals. Little or no scientific training is assumed. Statistics will not be emphasized; however, familiarity with elementary statistical concepts and inference will prove useful. The course will cover: (1) the principles of theory building; (2) the pros and cons of various general research designs (laboratory and field experiments, surveys, interviews, participant observation, archival studies, simulations, and formal mathematical models); and (3) the structure of research papers and the review process.

NRE 511 Doctoral Seminar in Finance—Corporate Finance
1.5 credits. Staff.
This course covers topics in corporate finance and empirical asset pricing.

NRE 513 Doctoral Seminar in Finance—Market Microstructure
3 credits. Staff.
The course examines recent research in market microstructure, particularly as it relates to theoretical issues. Topics covered include asymmetric information in securities markets, market behavior, and market structure.

NRE 514 Doctoral Seminar in Finance—Asset Pricing Theory
1.5 credits. Permission of instructor required. Staff.
This course covers asset pricing theory as based on either economic equilibrium or the absence of arbitrage. The method of instruction is primarily presentations given by the students on important papers. The presentation and the final exam each comprise about half the grade.

NRE 515 Doctoral Seminar in Behavioral Decision Research

Spring. 3 credits. J. Russo.

This seminar focuses on decision making. The first topic is competing paradigms for research in decision making. A central question of this topic is, "Which paradigms have been most successful or show promise in being most productive in the future?" Other topics will be guided by the interest of participants. They include connectionist approaches, dynamical systems, the interpretation (and distortion) of information, consistency-based theories, biased allocation of attention, and memory—all as applied to the theories and phenomena of decision and judgment.

NRE 517 Doctoral Seminar in Information, Incentives, Games, and Contracts

3 credits. Staff.

An introduction to game theory and information economics for a broad audience—those who will construct (or just consume) game-theoretic models in applied fields of management (including accounting, finance, marketing, and organizational behavior) and applied fields of economics (including industrial organization, labor economics, macroeconomics, and international economics). The course emphasizes applications as much as pure theory; each step in the theory is illustrated by applications from management and economics before the next step in the theory is introduced. The wide variety of applications shows that similar issues arise in different fields and that the same game-theoretic tools can be applied in each setting.

FACULTY ROSTER

Adair, WendiLyn, Ph.D., Northwestern. Asst. Prof., Organizational Behavior

Babbes, George, Ph.D., U. of California at Berkeley. Asst. Prof., Marketing

Bailey, Warren B., Ph.D., U. of California at Los Angeles. Assoc. Prof., Finance

BenDaniel, David J., Ph.D., Massachusetts Inst. of Technology. Don and Margi Berens Professor of Entrepreneurship

Bierman, Harold, Jr., Ph.D., U. of Michigan. Nicholas H. Noyes Professor of Business Administration

Bloomfield, Robert J., Ph.D., U. of Michigan. Assoc. Prof., Accounting

Bradley, James R., Ph.D., Stanford U. Asst. Prof., Production and Operations Management

Conway, Richard W., Ph.D., Cornell U. Emerson Electric Co. Professor of Manufacturing Management, Prof., Management Information Systems, Director, Semester in Manufacturing

D'Souza, Julia, Ph.D., Northwestern U. Asst. Prof., Accounting

Dyckman, Thomas R., Ph.D., U. of Michigan. Ann Whitney Olin Professor of Accounting

Elliott, John A., Ph.D., Cornell U. Prof., Accounting, Associate Dean for Academic Affairs

Frank, Robert, Ph.D., U. of California at Berkeley. Professor of Economics

Greenberg, Donald P., Ph.D., Cornell U. Prof., Management Information Systems

Gukhal, Reddy, Ph.D., Columbia U. Asst. Prof., Finance

Hass, Jerome E., Ph.D., Carnegie-Mellon U. Prof., Finance and Business Strategy

Hilton, Ronald W., Ph.D., Ohio State U. Prof., Accounting

Hribar, S. Paul, Ph.D., U. of Iowa. Asst. Prof., Accounting

Isen, Alice M., Ph.D., Stanford U. S. C. Johnson Prof., Marketing

Jarrow, Robert A., Ph.D., Massachusetts Inst. of Technology. Ronald P. and Susan E. Lynch Professor of Investment Management, Prof., Finance and Economics

Johnson, Justin, Ph.D., MIT. Asst. Prof., Economics

Kadiyali, Vrinda, Ph.D., Northwestern U. Asst. Prof., Marketing and Economics

Lee, Angela, Ph.D., U. of Toronto. Asst. Prof., Marketing

Lee, Charles M. C., Ph.D., Cornell U. Prof., Accounting and Finance, Henrietta Johnson Louis Professor of Management, Director, The Park Center for Investment Research

Li, Haitao, Ph.D, Yale U. Asst. Prof., Finance

Libby, Robert, Ph.D., U. of Illinois. David A. Thomas Professor of Management, Prof., Accounting and Behavioral Science

Lind, Robert C., Ph.D., Stanford U. Prof., Economics, Management, and Public Policy

Mannix, Elisabeth, A., Ph.D., U. of Chicago. Assoc. Prof., Organizational Behavior

McAdams, Alan K., Ph.D., Stanford U. Assoc. Prof., Managerial Economics

McClain, John O., Ph.D., Yale U. Prof., Quantitative Analysis

Michaely, Roni, Ph.D., New York U. Assoc. Prof., Finance

Nelsen, Bonalyn, Ph.D., Cornell U. Asst. Prof., Organizational Behavior

Nelson, Mark W., Ph.D., Ohio State U. Assoc. Prof., Accounting

O'Connor, Kathleen, Ph.D., U. of Illinois. Asst. Prof., Organizational Behavior

O'Hara, Maureen, Ph.D., Northwestern U. Robert W. Purcell Prof., Management, Prof., Finance

Orman, Levent V., Ph.D., Northwestern U. Assoc. Prof., Management Information Systems

Peterson, Randall S., Ph.D., U. of California at Berkeley. Asst. Prof., Organizational Behavior

Rao, Vithala R., Ph.D., U. of Pennsylvania. Deane W. Malott Professor of Management, Prof., Marketing and Quantitative Methods

Robinson, Lawrence W., Ph.D., U. of Chicago. Assoc. Prof., Operations Management

Russo, J. Edward, Ph.D., U. of Michigan. S. C. Johnson Family Prof., Management, Prof., Marketing and Behavioral Science

Sally, David F., Ph.D., U. of Chicago. Asst. Prof., Organizational Behavior

Smidt, Seymour, Ph.D., U. of Chicago. Nicholas H. Noyes Professor of Economics and Finance, Director, Leadership Skills Program

Stayman, Douglas M., Ph.D., U. of California at Berkeley. Assoc. Prof., Marketing

Suwinski, Jan H., MBA, Cornell U. Prof., Business Operations

Swaminathan, Bhaskaran, Ph.D., U. of California at Los Angeles. Asst. Prof., Finance

Thomas, L. Joseph, Ph.D., Yale U. Nicholas H. Noyes Professor of Manufacturing, Director, Executive Development Program

Thomas-Hunt, Melissa, Ph.D., Northwestern. Asst. Prof., Organizational Behavior

Waldman, Michael, Ph.D., U. of Pennsylvania. Prof., Economics, Charles H. Dyson Prof., Management

Zhang, Rachel, Ph.D., Northwestern. Asst. Prof., Operations Management

Lecturers

Katz, Jan, Ph.D., Massachusetts Inst. of Technology. Sr. Lec., International Business and Marketing

Mink, Barbara E., M.A., Cornell U. Sr. Lec., Management Communications

Pike, Alan S., M.A., Cornell U. Sr. Lec., Management Communications

Rosen, Charlotte, Ph.D., Cornell U. Sr. Lec., Coordinator, Management Communications

Adjunct and Visiting Faculty

Grossman, Dale A., J.D., American U. Sr. Lec., Tax and Business Law

Nesheim, John L., MBA, Cornell U. Visiting Lecturer, President, Aladdin Systems, Inc.

Perez, Pedro D., Ph.D., Rochester Polytechnic Inst. Visiting Asst. Prof.

Schuler, Richard E., Ph.D., Brown U. Prof. Economics, Prof. Civil & Environmental Engineering

Sears, Peter A., J.D., Harvard U. Visiting Lecturer, Vice President, Business Investments, Smith Kline Beecham Corporation

Thomas, William, MBA, Harvard. Lec., Management, President, Capital Southwest

LAW SCHOOL

ADMINISTRATION

Lee E. Teitelbaum, dean of the law faculty and professor of law

John A. Siliciano, vice dean and professor of law

Gary J. Simson, associate dean for academic affairs and professor of law

Claire M. Germain, law librarian and professor of law

Harry B. Ash, associate dean for external relations

Richard D. Geiger, associate dean and dean of admissions, financial aid, and information technologies

Anne Lukingbeal, associate dean and dean of students

Karen V. Comstock, assistant dean for career services

Charles D. Cramton, assistant dean for graduate legal studies

John R. DeRosa, assistant dean for student affairs

Richard F. Robinson, assistant dean for administration and finance

Nan A. Colvin, registrar

LAW SCHOOL

The primary function of the Law School is to prepare attorneys for both public and private practice where they will render the highest quality of ethical and professional service to their clients and further legal progress and reform. The curriculum is designed to prepare students for admission to the bar in all American states and territories.

Ordinarily, a student who is admitted to the Law School must have a baccalaureate degree from an approved college or university. The course of study leading to the degree of Doctor of Law (J.D.) covers three academic years. Students may be admitted to a program of study leading to the degree of Doctor of Law "with specialization in international legal affairs." The Law School also offers to a limited number of students an opportunity to earn both a J.D. degree and an LL.M. degree in international and comparative law.

There are combined graduate degree programs with the Johnson Graduate School of Management, the Department of City and Regional Planning of the College of Architecture, Art, and Planning, the School of Industrial and Labor Relations, the graduate divisions in economics, history, and philosophy of the College of Arts and Sciences, the Université de Paris I (Pantheon-Sorbonne), and Humboldt University, as well as a special opportunity for highly qualified undergraduates in the College of Arts and Sciences to register in the Law School during their senior year.

Each year the graduate program of the Cornell Law School admits a limited number of students, generally all from abroad. The LL.M. degree (Master of Laws, Legum Magister) and the J.S.D. degree (Doctor of the Science of Law, Jurisprudentiae Scientiae Doctor) are conferred. A small number of law graduates may also be admitted as special students, to pursue advanced legal studies without seeking a degree.

For further information, refer to the Law School catalog, which may be obtained from the Office of the Registrar, Myron Taylor Hall.

FIRST-YEAR COURSES

LAW 500 Civil Procedure
Fall and spring. 6 credits. K. M. Clermont, B. J. Holden-Smith, F. F. Rossi.
An introduction to civil litigation, from commencement of action through disposition on appeal, studied in the context of the federal procedural system. Also, a detailed consideration of federalism and ascertainment of applicable law; jurisdiction, process, and venue; and former adjudication.

LAW 502 Constitutional Law
Fall. 4 credits. T. Eisenberg, S. L. Johnson, S. H. Shiffrin, G. J. Simson.
A study of basic American constitutional law, including judicial review, some structural aspects of the Constitution as developed particularly in light of the passage of the Civil War amendments, and certain of its rights provisions.

LAW 504 Contracts
Fall and spring. 6 credits. R. A. Hillman, R. S. Summers, W. F. Taylor.
An introduction to the nature, functions, and processes of exchange, contract, and contract law. The course focuses on the predominant rules and principles governing contract and related obligation, including the substantive reasons underlying the rules and principles.

LAW 506 Criminal Law
Spring. 4 credits. S. D. Clymer, S. P. Garvey.
An introductory study of the criminal law, including theories of punishment, analysis of the elements of criminal liability and available defenses, and consideration of specific crimes as defined by statute and the common law.

LAW 508 Legal Methods
Fall and spring. 4 credits. P. S. Anderson, J. B. Atlas, C. D. Bond, E. M. McKee, A. J. Mooney.
Legal Methods is a full-year course designed to introduce first-year students to lawyering skills, with primary emphasis on legal writing, analysis, and research. In the context of a law office, students create some of the essential legal writings that lawyers produce. Students develop their oral and written advocacy skills and start thinking about litigation strategy. At the end of the year, the students argue their case. Instruction occurs in small sections of approximately 37 students and in individual conferences.

LAW 512 Property
Spring. 4 credits. G. S. Alexander, R. E. Atkinson, Jr.
An investigation of the law's protection of ownership, including the beginnings of property, legal and equitable estates, concurrent ownership, and public and private regulation of land use.

LAW 515 Torts
Fall. 4 credits. J. A. Henderson, Jr., D. A. Kysar, J. A. Siliciano.
An introduction to the principles of civil liability in the tort field: intentional wrongs, negligence, and strict liability. Attention is also given to the processes by which tort disputes are handled in our legal system.

GRADUATE COURSE

LAW 621 Contracts in a Global Society
Fall. 3 credits. Limited to graduate students. S. J. Schwab.
This course is designed for foreign-trained lawyers who are familiar with basic contract law in their own country. It surveys the Anglo-American common law of contracts and related civil obligations. The pedagogic approach focuses on the case method and is Socratically based, similar to the traditional first-year course in Contracts.

LAW 676 Principles of American Legal Writing
Fall. 2 credits. Limited enrollment. Limited to graduate students. K. Silverstein.
This course provides foreign-trained lawyers with an introduction to the essential principles of legal writing in the United States and an opportunity to practice some of the forms of writing common to American legal practice. Students prepare such documents as client letters and memoranda in the context of representing a hypothetical client. Students also learn and practice various research strategies.

UPPERCLASS COURSES

LAW 601 Accounting for Lawyers
Spring. 2 credits. J. G. Davis.
This course is designed to introduce students to the basic concepts and fundamentals of financial accounting. It focuses on: accrual accounting concepts, principles and conventions; the presentation of financial statements (balance sheets, income statements, statements of cash flow); the interpretation and analysis of financial statements; and the use and misuse of accounting information. The goal of the course is to enable students to critically review a company's financial statements. The course is intended primarily for students with little or no prior background in bookkeeping or accounting.

LAW 602 Administrative Law: The Law of the Regulatory State
Fall, spring. 3 credits. Limited enrollment. C. R. Farina, D. B. Spence.
An introduction to the constitutional and other legal issues posed by the modern administrative state. Topics include: procedural due process, separation of powers, procedural modes of administrative policymaking; judicial review of agency action; and the oversight and control relationships between agencies and Congress or the President. The course provides a working familiarity with the fundamentals of administrative procedure, as well as a larger inquiry into the role of agencies in our constitutional system—and the effect of legal doctrine on shaping that role.

LAW 608 American Indian Law
Fall. 2 credits. D. T. White.
The class is intended to provide a basic understanding and overview of the fundamental principles of Indian law. It examines the origins of Indian law, historical development of the law, tribal sovereign powers, tribal-state conflicts, Indian water rights, economic development, and hunting and fishing rights. A number of recent cases are discussed in detail. Students are graded on the basis of short papers, rather than a final exam.

LAW 610 Antitrust Law
Spring. 2 or 3 credits. Students who have taken an antitrust course in the Paris Program may take this course for 2 credits. G. A. Hay.
A consideration of the basic antitrust rules enacted by Congress and amplified by the courts to protect competitive markets and limit the exercise of monopoly power. Topics include: price fixing, boycotts, and market allocation agreements among competitors; agreements between suppliers and customers; joint ventures; attempts to monopolize and monopolization; price discrimination; and mergers.

LAW 611 Arbitration
Fall. 2 credits. Limited enrollment. F. K. Moss.
Arbitration is the principal method of resolving disputes between unions and employers, between securities brokers and their clients, and under international business agreements, and is gaining favor in many other areas. This course familiarizes students with arbitration practice in a variety of fields through readings of simulation exercises and other methods.

LAW 613 Bankruptcy
Spring. 3 credits. Prerequisite: Students who have taken Debtor-Creditor Law are ineligible for this course. T. Eisenberg.
Selected topics in the law of bankruptcy. An overview of the various bankruptcy chapters and a detailed study of the bankruptcy provisions of most general applicability. The relationship between the rights of an Article 9–secured creditor and the bankruptcy trustee's power to avoid liens. Related topics in the enforcement of money judgments and the law of fraudulent conveyance.

LAW 615 Children, Parents, and the State
Fall. 2 credits. L. E. Teitelbaum.
This course explores legal and social understandings of the rights of children, parents, and the state with respect to issues such as access to and control over the content of education, authority regarding health care, claims to speech and expression, and procreative decisions. The course also examines the operation of rights in connection with juvenile court jurisdiction over neglect and abuse, delinquency, and status offenses.

[LAW Commercial Law
3 credits. Not offered 2001–2002.
Examines a variety of commercial dealings and focuses on Articles 2 and 3 of the Uniform Commercial Code, with some coverage of other Articles and the Convention on Contracts for the International Sale of Goods. The course is designed to give students an understanding of commercial statutes and to inform them about many of the underlying commercial transactions to which the law relates.]

LAW 617 Comparative Public Law
Fall. 2 credits. Limited enrollment. Y. M. Cripps.
This course focuses on a comparison between the constitutional and administrative law of the United States and the United Kingdom and the structure and influences of the legislative, executive, and judicial branches in those systems. Continental public law concepts such as legitimate expectations and proportionality are among those that are examined in relation to the ways in which they have influenced the development of British and EU public law, and questions are raised as to whether such concepts have a role to play in the constitutional and administrative law of the United States. The course involves presentation and discussion of papers in class in lieu of a final exam. Each student writes a 10–15 page paper that is presented in class as well as very brief written critiques of the other students' papers.

LAW 619 Conflict of Laws
Spring. 3 credits. G. J. Simson.
A study of the methods used by courts to decide the applicable law in cases that, in their parties or events, involve more than one state or country. Attention is given to the due-process limitations on jurisdiction, a state's obligation under the full-faith-and-credit clause to respect sister-state judgments, and conflicts between federal and state law.

LAW 620 Constitutional Law II: The First Amendment
Spring. 3 credits. S. H. Shiffrin.
A comprehensive discussion of freedom of speech, press, and association. The free-exercise-of-religion clause and the establishment clause of the First Amendment are treated less extensively.

LAW 622 Copyright
Fall. 3 credits. P. W. Martin.
This course provides students with a comprehensive overview of the U.S. copyright law. It covers the substantive and procedural requirements for qualifying for copyright protection, then provides an in-depth study of the rights granted to authors under this law, the standards for judging copyright infringement, public policy limitations on the scope of copyright interest (such as the fair use defense), and remedies available to successful litigants. Issues raised by new information technologies and recent amendments addressing them receive special attention. The course also provides some comparative and international copyright law components.

LAW 623 Corporate and White Collar Crime
Fall. 3 credits. S. P. Garvey.
White collar crime is one of the fastest growing areas of specialization in the legal profession. The collapse of the savings and loan industry, rampant fraud in the nation's financial markets, and systemic corruption in the health care industry have contributed to a dramatic increase in federal white collar crime prosecutions over the past twenty years. This course examines some of the principal statutes that are used to prosecute corporate and white collar crime. We consider theories of liability including traditional white collar offenses like mail and wire fraud, insider trading, perjury, obstruction of justice, and bribery. They also include more recent entries into the field such as RICO, money laundering, and laws enacted to combat government contract fraud. The course also provides an introductory look at the Federal Sentencing Guidelines.

LAW 624 Corporate Finance and Emerging Markets
Spring. 3 credits. A. B. Kingston.
The course examines legal aspects of various types of corporate finance transactions in emerging markets, and the role of commercial lawyers in these transactions. The course focuses on corporate finance transactions occurring in the midst of the transformation of former Soviet bloc states from command to market economic systems. Transactions in emerging markets pose different political, economic, social, and legal challenges from those arising from transactions in other, more predictable, legal systems. At the same time, the globalization of the world economy and the profound shortage of capital in many emerging markets make this one of the fastest growing fields of commercial law.

LAW 625 Corporations
Fall or spring. 4 credits. Limited enrollment. J. R. Macey, T. Ruskola.
An introduction to the business corporation laws affecting the rights and roles of corporate boards of directors, senior executive officers, and shareholders, with an emphasis on large, publicly traded firms. Shareholders' economic interests and shareholders' limited participation rights in corporate decision making are examined. The latter part of the course focuses on directors' and officers' fiduciary obligations to shareholders, examining the operation of these duties in a variety of settings and transactions. Issues relating to the roles and functions assumed by corporate attorneys (with respect to their clients) and the role of business corporations within society are also addressed. No previous business knowledge is assumed.

LAW 627 Criminal Procedure
Fall. 3 credits. J. H. Blume.
This course surveys the law of criminal procedure, with emphasis on the constitutional constraints that regulate the pretrial stage of the criminal process. More specifically, the course focuses on the law of interrogations and confessions, the admissibility of evidence, and on the right to counsel throughout all stages of the criminal process.

LAW 629 Current Topics at the Crossroads of Law and Finance (also NBA 551)
Spring. 3 credits. J. R. Macey, M. O'Hara.
Financial institutions of all kinds, whether they are formally known as insurance companies, banks, investment banks, mutual funds, or pension funds, invest money on behalf of clients in a wide variety of investment vehicles. This course looks at the way that these financial institutions are treated from

both a legal and an economic perspective. Emphasis is placed on the intersections between modern financial theory and legal analysis. Topics covered include insurance, bank regulation and reform, securities markets, investment banking, and pensions.

[LAW Death Penalty in America: A Survey
2 credits. Not offered 2001–2002.
The course surveys the law relating to the administration of the death penalty.]

LAW 630 Directed Reading
Fall or spring. 1 or 2 credits. Arrange directly with instructor. See Law School Registrar.
An examination of a topic through readings selected by arrangement between the instructor and an individual student or group of students (not exceeding eight).

LAW 632 Employment Discrimination Law: Past, Present, and Future Approaches to Achieving Equal Opportunity
Fall. 2 credits. J. R. Gaulding.
By now most people know that it is illegal to discriminate in the workplace on the basis of certain factors such as race, sex, religion, age, or disability. But what does this really mean? This course explores this question in historical context, highlighting trends in federal law under Title VII, the Americans with Disabilities Act (ADA), and the Age Discrimination in Employment Act (ADEA). It examines some key doctrinal puzzles (e.g., Why does unconscious bias qualify as "intentional discrimination"? and, Why aren't all persons fired on the basis of their disability protected by disability law?) and considers the impact of economic and cognitive psychology research on our understanding of the scope and purpose of equal opportunity law.

LAW 633 Employment Law
Spring. 3 credits. S. J. Schwab.
Survey of major statutory schemes, constitutional principles, and common law doctrines that affect the employer-employee relationship in the public and private sectors, other than laws regulating union formation and collective bargaining, which are covered in Labor Law. Topics covered include unjust dismissal, drug testing, free speech, privacy, and antidiscrimination laws. In addition, the course provides an overview of major statutory schemes affecting the terms and conditions of employment, such as workers' compensation, the Fair Labor Standards Act, and the Occupational Safety and Health Act.

LAW 636 Environmental Law
Spring. 3 credits. D. B. Spence.
The course surveys the major environmental laws, with a primary focus on federal statutes (CERCLA, RCRA, NEPA, the Clean Water Act, the Clean Air Act, and the Endangered Species Act). The course lays out the various governmental tools used to address the problems of environmental degradation and discusses the value of these tools. Special attention is paid to the economic, social, and political obstacles to efficient regulation of the environment.

LAW 638 Estate Planning
Fall. 2 credits. Limited enrollment. A. F. Grable.
This course covers problems involving planning and drafting for the transfer of property, both during lifetime and at death, taking into account relevant property law and federal and state income, gift, and estate taxes.

LAW 640 Evidence
Fall or spring. 3 credits. S. D. Clymer, F. F. Rossi.
The rules of evidence in civil and criminal cases with emphasis on relevance, authentication, witnesses, experts, and hearsay. The course focuses on the Federal Rules of Evidence, with some attention to how they diverge from the common law.

LAW 641 The Evolving Law of Patents: Patents and Biotechnology
Fall. 2 credits. Y. M. Cripps.
This course focuses on the ways in which biotechnological developments are affecting traditional notions of property, intellectual property, and information. In addition to patent law, other forms of property protection, such as copyright, are examined through a biotechnological prism and compared with the way in which they operate, for example, in relation to the Internet and digital technology. There is also an examination of whether genetically engineered organisms and other biotechnological products should be granted intellectual property protection either within the existing frameworks of intellectual property law or under some new regime designed specifically for that purpose. As is inevitable in any discussion of intellectual property law, international perspectives are important. The course involves presentation and discussion of papers in class in lieu of a final exam. Each student writes a 10–15 page paper that is presented in class as well as very brief written critiques of the other students' papers.

LAW 642 Family Law
Spring. 3 credits. M. A. Fineman.
In this course we use scientific and social scientific information to evaluate our assumptions and beliefs and to call into question the appropriateness of a number of current state laws regulating families. We examine the evolution of our society's understanding of and expectations for marriage, and shifts over the past several decades in the nature of and justification for state regulation of that institution. Substantial attention is paid to the social and legal consequences of marriage dissolution, including an examination of the imposition of a gender neutrality-gender equality model in the divorce context.

LAW 643 Federal Courts
Spring. 4 credits. Prerequisite: Constitutional Law and second semester of Civil Procedure. Students without such background should consult with instructor. B. J. Holden-Smith.
This course examines the various constitutional and judge-made doctrines that control access to the federal courts to vindicate federal rights. It is particularly valuable for those planning a career in public interest or the public sector, anyone else expecting to litigate extensively in federal court, and students who have or hope to obtain a judicial clerkship. Topics covered include: case of controversy limitations, including standing; constitutional and statutory limits on jurisdiction; causes of action for constitutional and statutory rights, including 42 U.S.C.§1983 and *Bivens* actions; and bars to such actions, including the various abstention doctrine and the emerging law on 11th Amendment and sovereign immunities.

LAW 644 Federal Income Taxation
Fall or spring. 4 credits. Limited enrollment. W. C. Gifford, R. A. Green.
A basic course designed to develop understanding of tax concepts and ability to work effectively with the Internal Revenue Code, regulations, cases, and other tax materials.

[LAW Feminist Jurisprudence
3 credits. Limited enrollment. Not offered 2001–2002.
This course examines the role of law, and, more generally, the role of the state, in perpetuating and remedying inequities against women. We study several paradigmatic feminist legal theories, including equality, difference, dominance, and various antiessentialist theories (e.g. intersectional, poststructuralist). Among the questions considered are: How does the law help to construct gender? In what ways does it interact with cultural images and assumption regarding women to perpetuate women's disadvantaged status in society? To what extent can a set of institutions implicated in women' marginalization be used to remedy it? Can a legal system predicated on the liberal assumption of a unitary, prepolitical, autonomous self accommodate feminist accounts of social construction, constrained "choice," or decentered subjects? What methods have feminists used to argue in and about the law? And, do these methods themselves have the potential to transform legal thinking?]

LAW 647 Health Law
Fall. 3 credits. L. I. Palmer.
This course examines the role of law and policy in the health care industry. Students are invited to take a "systems approach" to the study of the role of law in arriving at coherent policy solutions for a host of dilemmas facing a rapidly evolving industry. Students are asked to consider if a particular statute, regulation, or judicially crafted legal doctrine is consistent with new developments or any public policy towards health care. Topics covered include: access to health care; purchasing health care; commercialism vs. professionalism; the antitrust challenge to professional dominance; changing institutional providers; and public and industry-sponsored quality control.

LAW 649 Initial Public Offerings and Acquisitions
Spring. 3 credits. Limited enrollment. Prerequisite: Corporations. Z. J. Shulman.
An in-depth look at initial public offerings and acquisitions from a practitioner's point of view. With respect to initial public offerings, the course covers: the applicable statutory framework, pre-offering corporate preparations (such as the implementation of poison pills and stock option plans), the due diligence process, the implementation of corporate governance policies appropriate for a public company, the offering registration process, liability under federal securities laws, the Securities and Exchange Commission review process, underwriting arrangements, selection of a trading forum (i.e., NYSE, NASDAQ, or AMEX), and the transaction closing. Regarding mergers and acquisitions, the course explores: financing alternatives, accounting treatment, due diligence, choosing an appropriate transaction structure (i.e., stock versus asset sale), public company transaction issues (i.e., antitakeover matters and fiduciary duty concerns), and crucial legal aspects of the acquisition, such as letters of intent,

successor liability, continuity of employees, and noncompetition agreements.

LAW 652 International Business Transactions
Fall. 3 credits. J. J. Barceló III, with D. A. Ridgway.
An examination of the unique legal features of business transactions across national boundaries. The first half of the course deals with the private law of international transactions. The topics covered include: choice of law in the United States and Europe concerning international sales; the U.N. Convention on the International Sale of Goods; financing international transactions through letters of credit; and international dispute settlement (litigation and arbitration). The second half of the course deals with public regulatory law, including an overview of the World Trade Organization (WTO/GATT) with some attention to the trade-environment conflict; fair and unfair trade rules (escape clause, subsidies and countervailing duties, and antidumping); the trade consequences of intellectual property rights; and international antitrust.

LAW 653 International Commercial Arbitration
Fall. 3 credits. J. J. Barceló III, with D. A. Ridgway.
A study of arbitration as a dispute resolution process for international trade and business disputes. The course analyzes ad hoc and institutional arbitration, the authority of arbitral panels, enforcement of agreement to arbitrate, challenging arbitrators, procedure and choice of law in arbitral proceedings, and enforcement of international arbitral awards. The course gives special attention to the international convention on the recognition and enforcement of international arbitral agreements and awards (New York Convention) and the UNCITRAL (U.N. Commission of International Trade Law) arbitral rules and model law. It focuses on commercial arbitration as an international phenomenon and not on arbitration under any particular national system.

LAW 655 International Human Rights
Spring. 3 credits. Recommended prerequisite: Public International Law.
D. Wippman.
This course explores the development and effectiveness of international legal rules governing the conduct of a state toward people within its jurisdiction. Topics include the substantive norms of human rights, and their philosophic basis; the mechanisms for the protection of human rights, such as the United Nations, international human rights treaty bodies, and domestic courts; and current issues such as the doctrine of humanitarian intervention, the status of indigenous peoples, and human rights during armed conflicts.

LAW 657 International Organizations and Human Rights Institutions
Fall. 3 credits. M. Ndulo.
The course provides a comprehensive legal analysis of problems concerning membership, the structure of the United Nations organs, and a variety of other international organizations. It considers their functions and acts taking into account the United Nations Charter and texts establishing these organizations. The course further considers the structure, jurisdiction, and functions of the International Court of Justice and the International Criminal Court. It also examines the international machinery for the protection of human rights in the world community including the United Nations Human Rights Committee, the European Court of Human Rights, and the Inter-American Court of Human Rights. Relevant decisions of these courts and of municipal courts are studied as well as basic documents.

[LAW International Protection of Intellectual Property
2 credits. Recommended prerequisite: Intellectual Property. Not offered 2001–2002.
This course studies intellectual property rights in the international legal system. A general introduction reviews the international protection of patents, trademarks, industrial design, and copyright. The starting and focal point is the Agreement on Trade Related Aspects of Intellectual Property (TRIPS) adopted in the framework of the World Trade Organization (WTO). The international protection of intellectual property is studied through consideration of the TRIPS agreement and the several international conventions the observation of which is made mandatory for WTO Members by TRIPS. Also examined are issues of international court jurisdiction and applicable law in the area of intellectual property.]

LAW 658 International Taxation
Fall. 3 credits. Prerequisite: Federal Income Taxation. W. C. Gifford.
This course examines the U.S. income tax treatment of foreign investment and business operations in the United States, as well as the treatment of U.S. investment and business operations abroad. The course focuses on international tax jurisdiction and on the methods by which the United States relieves international double taxation, both by statute and through income tax treaties.

LAW 659 Introduction to Chinese Law and Jurisprudence
Fall. 2 credits. T. Ruskola.
This course is an introduction to the comparative study of Chinese law and legal thought. It starts by analyzing the tradition of imperial Chinese law and its theoretical foundations, and then turns to early twentieth-century law reforms and the introduction of socialist law and jurisprudence. The course ends with the study of post-Mao law reforms and their implications for the future of Chinese law. In addition to its substantive focus, the course considers methodological problems involved in the cross-cultural study of law. Some of the more general themes that run throughout the course include the following: To what extent is "law" a useful analytical category in Sino-American comparison? How is law related to capitalism and socialism? To culture and socio-economic organization more generally? How and why has Chinese law changed over time? What happens when Eastern and Western legal systems come in contact with each other?

LAW 660 Labor Law
Fall. 3 credits. K. V. W. Stone.
A study of collective bargaining, including the process of union formation, legal regulation of strikes and other economic weapons, negotiation and enforcement of collective agreements, the duty of fair representation, the application of antitrust law to union activity, and the relationship between federal labor law and local laws regulating the employment contract.

LAW 661 Land-Use Planning
Fall. 3 credits. E. F. Roberts.
A study of the legal matrix as a method of controlling the environment in which people live and work, including public nuisance as a device to control the town environment; zoning as a control mechanism; conflict between zoning as a plan for growth and as a brake on development; subdivision controls; planning as a respectable government activity; the dynamics of planning, zoning, subdivision controls, and private land-use controls; the rehabilitation-of-center-city syndrome; and future prospects of maintaining a decent environment in a class driven multilingual and culturally tribal society that lacks a genuine moral consensus.

LAW 662 Law, Language, and Ethnic and Racial Identity
Spring. 2 credits. V. Santiago-Irizarry.
This course examines the influential role that language has in the law and in legal processes, especially in constructing ethnic and racial identity in the United States. We approach the law from a critical anthropological perspective, as a cultural system rather than as an abstract collection of rules, norms, and procedures, to examine how legal processes contribute to the creation and maintenance of asymmetrical power relations. Since racism and racialization have been salient experiences of inequality in the United States, they provide us with a particularly appropriate analytical focus. Course material draws on anthropological, linguistic, and critical race theory as well as ethnographies, legislation, and legal cases to guide and document our analyses.

LAW 664 Law of Branding: Trademarks, Trade Dress, and Unfair Competition
Spring. 2 credits. N. D. St. Landau.
Fundamental trademark, trade dress, and unfair competition laws are examined in the context of assisting clients to execute branding and marketing strategies. Special focus is given to branding as it relates to: "consumer products companies;" the impact of e-business and the Internet on branding strategies and acquisitions; and complex proof issues in trademark and domain name litigation. Marketing strategies embody fundamental and long-established principles of the trademark laws. The Lanham Act is used to address issues ranging from confusingly similar words and designs, to false and unsubstantiated advertising claims, and public appropriation—and misappropriation—of long-established corporate icons in today's e-commerce world. This course examines the basics of this rapidly changing body of law.

LAW 667 Lawyers and Clients
Spring. 3 credits. Satisfies the professional responsibility requirement.
D. A. Kysar.
A survey and critique of: the law governing the practice of law and the legal profession's norms concerning the lawyer-client relationship; the social functions of lawyers; the modes and patterns in which legal services are or are not made available to the public; and ethical theory relating to lawyer role and conduct.

LAW 668 Legal Aspects of Foreign Investment in Developing Countries
Spring. 3 credits. M. B. Ndulo.
This course studies legal aspects of foreign investments in developing countries. It seeks to identify legal problems that are likely to

affect a commercial investment in a developing country. Inter alia, it deals with the public international law principles and rules governing the establishment by foreign businesses of various factors of production (persons and capital) on the territory of other states and the protection of such investments. Thus, the course includes a discussion of the following topics: economic development and foreign capital; obstacles to the flow of investments to developing countries; guarantees to investors and investment codes; bilateral treaties; nationalization; joint ventures; transfer of technology; arbitration; investment insurance; unification of trade law; and the settlement of investment disputes.

LAW 669 The Legal Profession
Spring. 3 credits. Satisfies the professional responsibility requirement.
R. E. Atkinson, Jr.
This course is designed to give students a working knowledge of the regulation of the practice of law. The course explores both the policies served by that system of regulation and the problems encountered in its design and implementation. Actual and hypothetical problem situations are analyzed in light of the Code of Professional Responsibility, the Model Rules of Professional Conduct, and, less extensively, several schools of social science and moral philosophy.

LAW 670 Legislation
Spring. 3 credits. L. I. Palmer.
This course explores various theories of legislation by studying how statutes become a source of public policy, how judges interpret them, and how lawyers draft them. Drafting exercises are used throughout the course to determine to what degree legislation can be used to reform law or to remedy particular social problems.

LAW 671 Media Law
Fall. 2 credits. J. P. Due.
This course examines various aspects of media law. It begins by considering the scope of First Amendment protection of the media. It then focuses on legal issues arising from news gathering and moves on to issues arising from publication, such as defamation, publication-related privacy torts, and rights of publicity. The course briefly examines basic copyright concepts in order to lay the groundwork for close study of disputes over electronic publishing rights to collective works. Various recent landmark developments in the case law are highlighted.

LAW 672 Mergers and Acquisitions
Fall. 2 credits. Limited enrollment.
R. F. Balotti.
This course examines the principal business and legal issues in the purchase and sale of publicly held businesses. Emphasis is placed on the duties of directors in the acquisitions of publicly held companies (including hostile takeovers).

LAW 673 Negotiation and Mediation: Alternative Dispute Resolution and Non-Traditional Approaches to Conflict.
Spring. 2 credits. Limited enrollment.
J. Meyer.
This course inquires into the theories and practice of conflict resolution and focuses on non-traditional, cutting-edge alternatives to the traditional litigation process. The course introduces students to the spectrum of ADR processes and teaches interviewing and counseling, negotiation and mediation as skill sets. A variety of approaches are used to analyze issues and develop skill sets, including lecture/discussion, video tapes, negotiation exercises and simulated mediations.

LAW 674 Negotiations
Spring. 3 credits. Limited enrollment.
S. C. Kurvilla.
The purpose of this course is to provide opportunities for class participants to develop their negotiating abilities for use in organizational and other settings. The course is premised on the assumption that negotiating concepts are best learned through practice which is grounded in rigorous analysis and reflection. While theoretical principles and concepts from various reference disciplines (such as social psychology, sociology, and economics) are presented through lectures and readings, this course focuses primarily on improving practical skills. Class participants not only learn to enhance their individual abilities in dyadic and group situations, but also to analyze contexts for the most effective application of these skills.

LAW 675 Partnership Taxation
Spring. 2 credits. R. A. Green.
This course provides an introduction to the taxation of partnerships and limited liability companies. The course focuses on the tax issues arising upon the formation, operation, and liquidation of a partnership or LLC.

LAW 677 Problems in Commercial Law: Sales, Leases, and Electronic Commerce
Spring. 3 credits. W. F. Taylor.
This course explores contemporary issues in Commercial Law with particular emphasis on sales, leases and electronic transactions. This exploration is pursued primarily through the problem solving method with the objective of encouraging students to concentrate on the exact statutory language in the Uniform Commercial Code (UCC) and other related federal statutes. Because of the recent changes in the commercial world around the UCC such as electronic contracts, this course selectively integrates materials on the Uniform Electronic Transactions Act (UETA), the Uniform Computer Information Transactions Act (UCITA) and the United Nations Convention on Contracts for the International Sale of Goods (CISG). This course extends the ideas explored in the traditional Contracts course.

[LAW Private Justice: Arbitration and Other Forms of Alternative Dispute Resolution
4 credits. Limited enrollment. Not offered 2001–2002.
Arbitration has become a major aspect of legal practice in such fields as labor law, commercial law, securities law, family law, and other areas. This course examines the developing law of arbitration and the relationship between private arbitration and the judicial system. It examines issues such as the enforceability of arbitration agreements, arbitral due process, judicial review of arbitration awards, and the effect of arbitration on statutory rights. It also examines other forms of alternative dispute resolution including: mediation, small claims courts, and the new mandatory arbitration requirements of some federal and state judicial systems. The course focuses on the law of alternative dispute mechanisms and includes six simulation and problem-solving sessions.]

LAW 678 Products Liability
Fall. 3 credits. J. A. Henderson, Jr.
Course involves applications of products-liability doctrine and theory to a variety of problems drawn from or closely approximating actual litigation. Serves as an overview of the relevant case law, statutes, and administrative regulations, including the new *Restatement, Third, of Torts: Products Liability.*

LAW 680 Public International Law
Fall. 3 credits. D. Wippman.
An introduction to the legal rules governing the conduct of states vis-á-vis other states, individuals, and international organizations, with reference to major current events and issues. Topics include the nature, sources, and effectiveness of international law; the establishment and recognition of states; principles concerning state sovereignty, territory, and jurisdiction; the law of treaties; state responsibility; international criminal law; and human rights. Special attention is given to the law governing the use of force.

LAW 681 Securities Regulation and the Regulation of Financial Intermediaries
Fall. 3 credits. J. R. Macey.
This course covers the federal rules relating to the public offering of securities, secondary market trading of securities, and the regulation of commercial banking, investment banking, and investment companies (mutual funds). Emphasis is placed on the relationship between the various forms of financial intermediation and capital formation, and on the role of these activities in corporate governance. The increasing internationalization of the capital markets, and the public policy issues related to globalization, are also discussed.

LAW 682 Sex Discrimination and the Law
Spring. 3 credits. R. L. Lieberwitz.
This course examines various legal issues relevant to discrimination on the basis of sex. Among the problems analyzed are: sexual harassment; pornography; reproductive rights; prostitution; work-family conflict; inequality in employment opportunities; gay and lesbian rights; welfare rights; and affirmative action

LAW 683 Social Security Law
Spring. 3 credits. P. W. Martin.
The course focuses especially on how Social Security's benefit rules relate to employment, families, and household composition and how its procedures address the challenge of adjudicating the massive numbers of benefit claims that arise each year. It introduces the general features of the Social Security Act's entitlement, benefit formulae, and procedural rules; highlights those that pose the greatest difficulty to administrators and advocates; and surveys current proposals for change.

LAW 684 Sports Law
Spring. 2 credits. Recommended prerequisites: Antitrust Law and Labor Law.
W. B. Briggs.
The course traces the development of sports law in the United States. Particular attention is given to the relationship of sports with antitrust and labor law. Contemporary issues involving arbitration, collective bargaining, amateur athletics, agents, torts, criminal law, and constitutional law are addressed.

LAW 686 Supervised Teaching
Fall or spring. 1 or 2 credits. Arrange directly with instructor. See Law School Registrar.

LAW 687 Supervised Writing
Fall or spring. 1, 2, or 3 credits. Arrange directly with instructor. See Law School Registrar.

LAW 688 Supervised Teaching and Supervised Writing—Legal Methods Honors Fellows Program
Fall. spring. 4 credits for full year. Prerequisite: Application Process.
Legal Methods Honors Fellows serve for the full year as teaching assistants in the Legal Methods course and as mentors to first-year law students. With training and guidance from the Legal Methods faculty, the Honors Fellows work closely and one-on-one with the students on the various writing projects. In addition to meeting regularly with students, and reviewing and critiquing their work, Honors Fellows may help design writing and research assignments, prepare model memoranda, participate in role-playing exercises during mock interviewing or negotiating sessions, judge oral arguments, and assist the librarians with research training. The Honors Fellows are also responsible for teaching and holding classes on the Bluebook.

Additionally, Honors Fellows serve as mentors to the entering students to help them make the most of the foundational first year of law school. The Fellows hold workshops on basic law school skills and, during the spring semester, under the direction of the Dean of Students, a small group of Fellows may tutor first-year law students.

LAW 689 Taxation of Corporations and Shareholders
Fall. 3 credits. Prerequisite: Federal Income Taxation. R. Green.
This course examines the federal income taxation of corporate structure and transactions, including incorporation, dividends, redemptions, liquidations, divisions, and reorganizations.

LAW 692 Trial Advocacy
Spring. 4 credits. Prerequisite: Evidence. Limited enrollment. F. F. Rossi.
This course is devoted to the study of the trial. Fundamental skills are taught in the context of challenging procedural and substantive law problems. Each stage of the trial is examined: jury selection, opening, objections, direct examination, cross-examination, impeachment, expert witnesses, child witnesses, summation, and pretrial. In addition to exercises every week on a particular segment of a trial, the student also does a full-day jury trial at the completion of the course. Video equipment is used to teach and critique student performances. There are frequent written assignments.

LAW 694 Trusts and Estates
Fall. 4 credits. G. S. Alexander.
The course surveys the basic law of succession to property, including wills and intestate succession, and the law of trusts. Among the recurring themes of the course are strict and lenient enforcement of formal requirements and methods of interpretation. This is not a course on estate taxation.

PROBLEM COURSES AND SEMINARS

All problem courses and seminars satisfy the writing requirement. Limited enrollment.

[LAW Advanced Civil Procedure
3 credits. Not offered 2001–2002.
A study of complex civil litigation involving multiple parties and multiple claims. Topics include joinder of parties and claims, impleader, interpleader, class actions, and intervention.]

LAW 703 Advanced Legal Research
Spring. 3 credits. C. M. Germain and staff.
Teaches cutting-edge research techniques to prepare students for practice in the law office of the future. Focuses on desktop electronic legal research, and covers U.S., international, and foreign law, as well as multidisciplinary research. The course is designed to teach students, whose careers will begin in a period of information transition, how to handle traditional and electronic sources and formats and make efficient choices.

LAW 705 African Americans and the Supreme Court
Spring. 3 credits. B. J. Holden-Smith.
Beginning with its first decisions related to the slavery question, the Supreme Court has at times aided and at other times hindered efforts to afford African Americans full citizenship. This seminar explores the relationship between blacks and the Supreme Court by examining the major Court decisions affecting African Americans and attempting to understand those decisions in their historical contexts. The course begins with a review of the background and meaning of the constitutional provisions pertaining to the status of blacks in the new nation and ends with an intensive look at *Brown v. Board of Education*.

LAW 707 American Legal Theory
Fall. 3 credits. R. S. Summers.
The fall 2001 topic for this seminar is the appropriate form of basic types of legal phenomena such as criteria of valid law (for both publicly and privately made law), statutory rules, accepted methods of statutory interpretation, the principle of stare decisis and common law rules, adjudicative processes, limitations on judicial power to modify rules, and the formal characteristics of the legal system viewed as a whole. American law lacks appropriate form in many important ways and a heavy price is paid for this. However, appropriate legal form and its distinctive underlying rationales (general legal values) profoundly affect the overall content of law and its practice by lawyers in the American as well as other legal systems. Such formality and its rationales have as much or more of a claim to primacy as the essence of law than do problem-specific policies that also inform the law's content. In this seminar, there is equal emphasis on practical skills and theory.

LAW 708 Appellate Advocacy
Fall. 3 credits. J. B. Atlas.
This seminar examines the law and skills that are integral to representing a client on appeal. The seminar is loosely divided into three central parts: (1) the principles of appellate law, including standards of review, the preservation doctrine, harmless-error analysis, and remedies; (2) the unique role of appellate counsel, including ethical duties to the court and client; and (3) appellate skills, including client counseling, issue selection, brief-writing, and oral argument. Miscellaneous additional topics for exploration include motion practice, leave applications, and the role of law clerks in the decision-making process. Students read and analyze the record of a criminal proceeding, assess and research potential appellate issues, and prepare a brief (including a rewrite) for either the prosecution or defense. Each student also orally argues the case in a moot-court session.

LAW 709 Biblical Law
Fall. 3 credits. C. M. Carmichael.
Analysis of law and narrative in the Bible from the perspective of ancient law and legal history. Topics include the nature of the law codes (e.g., hypothetical formulation versus statutory law), legal issues in the narratives (e.g., law of adultery and women's rights), law and morality (e.g., Ten Commandments), law and religion (e.g., institutions guaranteed by the law but condemned by religious authority), the transformation of extralegal relations into legal ones (e.g., with the introduction of money), legal interpretation in antiquity (e.g., Sermon on the Mount), social factors in legal development (e.g., shame and guilt), and aspects of criminal, family, and private law (e.g., eye for an eye, incest rules, and unjust enrichment).

LAW 711 The Common Law and African Legal Systems
Spring. 3 credits. M. Ndulo.
This seminar studies legal systems in post-colonial Africa. It concentrates on the former British colonies. During the colonial period, the common law was imported into British Africa. As a result, these countries are now common law jurisdictions. The description is supported by the history of the countries as well as by current statutory guidelines. African countries, however, also retained African customary law as part of the legal system. In today's Africa, the two systems continue to operate side by side. This seminar considers the following issues: the introduction of the common law in Africa; the nature of the customary judicial process; the nature of the plural system; areas of conflict between customary law and the common law in such areas as succession, land tenure, marriage laws, and gender. It also examines issues relating to constitutional law and governance.

LAW 712 Constitutional Law and Political Theory
Spring. 3 credits. S. H. Shiffrin.
The purpose of the seminar is to explore theories of freedom of speech and theories of equality. How are the ideas of freedom, equality, association, and community linked in doctrine, and how should they be linked? Neoconservative, liberal, radical, feminist, and Marxist writings are considered.

LAW 713 Consumerism
Spring. 3 credits. D. A. Kysar.
This seminar examines evidence for the existence of consumerism as a pervasive social phenomenon, weighs arguments for and against consumerism as a welfare-enhancing or welfare-decreasing social phenomenon, unravels the role of current law in supporting or suppressing consumerism, and speculates on possible alternative legal approaches to regulating the sources and impacts of consumerism. This is accomplished through careful, contextual examination of consumerism in various legal settings. We discuss products liability law, deceptive advertising regulation, food and drug law,

anti-discrimination law, labor law, environmental law, international trade regulation, and constitutional law. Background readings on economic, psychological, critical and other theoretical approaches to consumerism will be interspersed within these units. Students complete a written research paper in conjunction with the seminar.

LAW 716 Corruption Control
Spring. 3 credits. R. C. Goldstock.
This seminar analyzes the types of corruption that exist in both the public and private sectors, the means by which a variety of criminal and non-traditional remedies may be used to reduce the frequency and impact of corrupt activities, and the constitutional and statutory problems implicated by such approaches.

LAW 720 Empirical Studies of Leading Civil Rights Issues
3 credits. T. Eisenberg.
This seminar focuses on empirical studies of sex discrimination in employment cases and death penalty cases.

[LAW European Union Law
3 credits. Not offered 2001–2002.
The course studies the EU and EU treaty, institutions, and lawmaking processes; the direct effect, supremacy, and reception of EU law in the member states, the development of the four freedoms (goods, services, persons, and capital) fundamental rights doctrine, protection of the environment, and the EU antitrust law.]

LAW 722 Ethical Issues in Criminal Practice
Fall. 3 credits. Satisfies the professional responsibility requirement.
C. Grumbach.
Using simulated problems and a real-life perspective, this seminar explores the ethical duties of and practical quandaries faced by prosecutors and defense attorneys. It examines conflicts of interest; ethical duties that pertain to the examination of witnesses and argument to the jury; the duty of the prosecutor to "seek justice," not merely to convict; the relationship of the prosecutor to witnesses and police, and the obligation to disclose exculpatory evidence; the duties and dilemmas of the defense attorney confronted with a guilty client who intends to commit perjury or an innocent client who wishes to accept a plea offer; and the right to effective assistance of counsel.

LAW 731 Immigration and Refugee Law
Fall. 3 credits. Prerequisite: Constitutional Law. S. W. Yale-Loehr.
This seminar explores the evolving relationship between U.S. immigration policy and our national purposes. Immigration plays a central role in contemporary American life, significantly affecting our foreign relations, human rights posture, ethnic group relations, labor market conditions, welfare programs, public services, and domestic politics. It also raises in acute form some of the most basic problems that our legal system must address, including the rights of insular minorities, the concepts of nationhood and sovereignty, fair treatment of competing claimants for scarce resources, the imperatives of mass administrative justice, and pervasive discrimination. In approaching these questions, the course draws on diverse historical, judicial, administrative, and policy materials.

LAW 733 International Criminal Law
Spring. 3 credits. Recommended prerequisite: Public International Law or International Human Rights. D. Wippman.
This seminar examines the evolution of modern international criminal law, from Nuremberg to the new International Criminal Court. Topics include the nature and sources of international criminal law, jurisdiction, individual and state responsibility, penalties and deterrence, and alternatives to criminal trials, such as truth commissions and amnesties. The seminar emphasizes recent developments, such as the Pinochet extradition proceedings and efforts to try senior Khmer Rouge leaders.

LAW 734 Introduction to French Law
Spring. 3 credits. Not available to students with significant knowledge of civil law system. C. M. Germain.
Introduction to the French legal system from a comparative law perspective, with a focus on civil law methodology and French legal institutions. Topics studied include French law sources and authorities, such as legislation, court decisions, and scholarly writings; the relationship between French law and the European Union; the French court structure in civil, criminal, and administrative law matters and its major procedural features; and the organization of the legal profession.

LAW 735 Islamic Law and Middle Eastern Legal Institutions
Spring. 3 credits. S. O. Hassan.
This seminar deals with the origins and sources of Islamic law, the various schools of jurisprudence, and the elaboration of an Islamic legal theory. It considers the practical application of that theory in the law of the family, the Islamic law of nations, and Islamic constitutional theory. The seminar further considers the movement of reform and secularization in Muslim countries and the role of Islamic law in the contemporary legal systems of the Middle East with particular emphasis on the law of obligations and contracts.

LAW 736 Juvenile Advocacy
Spring. 3 credits. C. Grumbach.
In the context of the simulated law office of Myron Taylor Juvenile Rights and Defenders Inc. (JRAD), students represent juveniles charged as juvenile delinquents or persons in need of supervision. Class meetings are run as weekly law office training sessions with the students functioning as junior attorneys. Students give oral presentations to their JRAD colleagues on issues of interest to them that arise from the clients' cases. Such issues may include: the preventive detention of juveniles, the application of criminal rights and defenses to delinquency proceedings, police questioning of suspected runaways, the role of the law guardian in representing juveniles, and the rights of children charged with incorrigibility to assert constitutional rights such as freedom of association and the free exercise of religion, over their parents' objection. Using simulated case files for the JRAD clients, students choose clients to represent and file various trial motions and legal memoranda before a designated judge. In this manner, students hone their persuasive writing skills and practice writing for a specific audience, learn to evaluate pleadings, and learn how to develop litigation theories and strategies and formulate a litigation plan.

[LAW Labor Law Theory and Policy Seminar (also ILR 608)
3 credits. Prerequisite: Labor Law. Not offered 2001–2002.
The U.S. collective bargaining system, which had its origins during the New Deal period, has come under intense attack. The intellectual premises of the system have been challenged by scholars on both the right and the left, and at the same time, the decline in the labor movement has undermined its political support. This seminar looks at the theoretical attacks on the New Deal collective bargaining system and at some of the current proposals for its replacement. Some of the topics discussed include: the theory of regulation embodied in the National Labor Relations Act and its critique; alternative conceptions of labor markets and their policy ramifications; and the emerging global economy and its ramifications for domestic labor regulation. There is also discussion of alternative systems of labor regulation, such as found in West Germany, Sweden, and Japan.]

LAW 740 Law and Economics
Spring. 3 credits. No prior acquaintance with economics is assumed.
S. J. Schwab.
The seminar examines the ways in which the law has incorporated, wittingly or unwittingly, an economic perspective. A major theme is the art of economic modeling and the merits and demerits of simplifying assumptions to understand law. A second theme is the Coase Theorem and its application to legal rules. The seminar focuses on the major common law rules in contracts, torts, property, and procedure. The issues surrounding fairness versus efficiency are also stressed.

LAW 741 Law and Higher Education
Spring. 3 credits. Prerequisite: Constitutional Law or Administrative Law.
J. J. Mingle.
Higher education is a complex, idiosyncratic institution. Universities and colleges have a unique mission—teaching, research, and public service—and a uniquely challenging task of accommodating the various constituencies and organizations both internal (governing boards, faculty, students) and external (alumni, legislatures, courts, government agencies), that influence how they are managed and how policies are shaped. This seminar explores the dynamic tensions, high expectations, and complex legal policy issues universities face in fulfilling their mission.

LAW 742 Law and Mental Health Seminar
Fall. 3 credits. H. R. Beresford.
The seminar explores issues at the interface of law and psychiatry. After an introduction to clinical and scientific aspects of mental illness, the seminar addresses issues of autonomy, liberty, competency, coercion, and criminal responsibility as they relate to persons with disorders of behavior, cognition, or mood. Students write and present seminar papers on self-selected topics.

LAW 743 Law and Practice in Civil Rights Litigation
Spring. 3 credits. J. Margulies.
The seminar explores the legal and practical aspects of police misconduct and prisoner civil rights litigation under 42 U.S.C. section 1983, the principal vehicle for the vindication of constitutional rights. Case materials are based on actual litigation. Each week, students 'litigate' a new issue in the case—e.g.,

municipal and supervisory liability; qualified, sovereign, and absolute immunity; punitive damages, etc.

[LAW Law, Science, and Technology
3 credits. Not offered 2001–2002.
An examination of the interaction between legal principles and procedures and scientific research and development. Topics include the role of the law in regulating cloning, recombinant DNA research, surrogacy, and in vitro fertilization; plant breeders' rights and the patentability of organic matter; judicial assessment of expert scientific evidence; and compensation for damage caused by scientific experiments and new technologies.]

LAW 745 Law through Literature
Fall. 3 credits. N. L. Cook.
In this seminar, students use literature, supplemented by law texts, as a basis for understanding operations of law and the impact of legal process on people's lives. An explicit goal of the course is the acquisition of literary skills that can be cross-utilized in law practice. Students thus not only analyze legal principles in the context of stories, but also learn how to apply such literary concepts as metaphor, imagery, plot and character development, perspective, and point of view in their legal work.

LAW 748 A Lawyer's Responsibilities—Legal Ethics and Professionalism
Fall. 3 credits. Satisfies the professional responsibility requirement. J. W. Martin.
The seminar focuses initially on the law governing lawyers' conduct and related enforcement mechanisms. The ABA's Model Rules of Professional Conduct, selected state codes, the ABA's Ethics 2000 Commission Report and the ALI Restatement of the Law Governing Lawyers are reviewed. State disciplinary processes, disqualification, and malpractice liability are considered. The focus then turns to the elements of professionalism and the extent to which they can be realized in contemporary practice. Finally, students present papers dealing with selective ethical questions or aspects of professionalism. Sample topics may include the responsibility to do pro bono work, equal justice for the poor, discovery abuse, questionable fee arrangements, fraudulent litigation practices, multi-disciplinary practice, client protection funds, and issues involving class actions.

LAW 756 Legal Aspects of Commercial Real Estate Development
Spring. 3 credits. J. E. Blyth.
Through the use of several written memoranda and one oral presentation, this seminar addresses considerations basic to commercial real estate development. It focuses on purchase agreements, options, rights of refusal, memoranda thereof, representations, and warranties; disclosure required of brokers and sellers, attorneys as brokers, notarial misconduct; conveyancing and surveys; commercial leases; conventional financing; conflicts between commercial tenants and institutional lenders; alternatives to conventional financing; title insurance; attorney opinion letters; and choice of real estate entity. About one-half of the course is devoted to commercial leases; conventional financing, and alternative to conventional financing (such as tax exempt financing and synthetic leases).

LAW 757 Legal Ethics and Legal Malpractice
Fall. 3 credits. Satisfies the professional responsibility requirement.
R. E. O'Malley.
This seminar is an in-depth examination of several fundamental legal ethics subjects: conflicts of interest, the lawyer's obligation of confidentiality, and the ethical limitations on the lawyer and the lawyer's client in a litigation matter. It is supplemented by an analysis of real cases in which a lawyer who has deviated from the norms has been found liable for legal malpractice. The seminar also explores the legal ethics obligations of junior lawyers in instances where the conduct or proposed conduct of a senior supervising lawyer is questionable. Consideration is given to relevant portions of The American Law Institute's Restatement of the Law Governing Lawyers (published in 2000), and the American Bar Association Ethics 2000 Commission's final proposals for amendments to the ABA Model Rules of Professional Conduct.

LAW 758 Litigation Skills and the Protection of Civil Rights in Housing
Fall. 3 credits. M. B. Grant.
Students perform practical, pre-trial litigation skills while exploring federal fair housing laws, history, and policies. The seminar includes litigation exercises, legal writing, reading materials, and class discussion. The litigation exercises and legal writing emphasize those skills necessary to investigate, evaluate, manage and resolve a case up to the point of trial. The seminar introduces civil rights in housing through statutes, cases, and literature about underlying policies. The course highlights the differences between some state and local fair housing laws and the federal fair housing laws, and looks at some cutting-edge litigation currently being conducted around the country. Students complete two to three page litigation exercises that simulate work assignments common in a civil litigation practice and at least one oral litigation exercise. Students are permitted to complete these exercises individually, but are encouraged to work as part of a small group. Students will draft two briefs on issues at different procedural postures (for example, injunction and summary judgment), approximately twelve pages each. Each class starts with a discussion of a new litigation skill. The class discussion then shifts to fair housing law and policy. We use photocopied materials and *American Apartheid* by Massey and Denton. The majority of a student's grade is based on the two writing assignments. The balance of the grade is based on completion of the litigation exercises and class participation.

LAW 759 Modern Legal Thought
Spring. 3 credits. S. P. Garvey.
This seminar is intended as a general introduction to modern legal theory. It begins with an examination of several different schools of legal thought (positivism, natural law, legal realism, and critical legal studies), focusing on the differing and often competing answers those schools give to a series of questions that have defined the traditional domain of jurisprudence. It next examines several different schools of political thought (libertarianism, liberalism, communitarianism, feminism, and critical race theory), together with their principal claims and commitments. It also examines how, if at all, the idea of each of these schools is reflected in the law, or alternatively, how those ideas might be used and relied upon to reshape the law. The seminar is intended for those students interested in a broad and even-handed overview and analysis of the most prominent contemporary schools of legal and political thought. Abstract ideas and arguments are, whenever possible, examined in the context of particular cases and controversies, real or imagined.

LAW 760 Organized Crime Control
Fall. 3 credits. R. C. Goldstock.
This seminar explores the challenges organized crime poses to society and to traditional law enforcement techniques. Students undertake a simulated investigation using physical and electronic surveillance, the analysis of documentary evidence, and the examination of recalcitrant witnesses before the grand jury. The RICO statute is explored in detail as are a variety of non-criminal remedies including forfeiture and court-imposed trusteeships.

LAW 765 Pretrial Practice, Litigation Strategies, and Remedies in Commercial Litigation
Spring. 3 credits. Y. G. Harmon.
This seminar studies the strategies of complex commercial litigation, focusing on case development in the pretrial period. It addresses pretrial discovery (strategies and approaches), and remedies (e.g., preliminary injunctions, receiverships) in the context of difficult and unclear legal issues . Damages theories and development are also explored, as is the use of litigation to achieve business goals. Hardball litigation techniques as well as ethical considerations are considered. Actual litigated cases are dissected.

LAW 766 Problems in Advanced Torts
Spring. 3 credits. J. A. Henderson, Jr.
Students have an opportunity to write a paper on a topic of their choosing from the law of torts. Topics not typically covered in the first-year torts course are preferable, including (but not limited to) products liability, business torts, environmental torts, and defamation. Papers are similar in length and scope to a student note in a law review. Required written submissions include topic proposals, outlines, bibliographies, first drafts, and final drafts. Early meetings are devoted to discussions of background topics—e.g., economic analysis of tort law, fairness-based theories, and the like—and selection of topics. Later meetings give each student an opportunity to present his/her work product to the group.

[LAW Reproductive Issues Seminar
3 credits. Not offered 2001–2002.
This seminar considers various reproductive dilemmas, paradoxes, and policies in modern American society. Birth control and abortion are addressed, but the emphasis is on placing the reproductive process within a broad sociolegal context. To this end, we explore issues such as eugenics, the use and regulation of medical technology, lesbian mothering, the relationship between reproduction and poverty programs, and a variety of other contemporary issues.]

LAW 772 Selected Business Transactions Seminar
Fall. 3 credits. Recommended prerequisites: Corporations. Z. J. Shulman.
An in-depth look at initial public offerings and acquisitions from a practitioner's point of view. With respect to initial public offerings,

the course covers: the applicable statutory framework, pre-offering corporate preparations (such as the implementation of poison pills and stock option plans), the due diligence process, the implementation of corporate governance policies appropriate for a public company, the offering registration process, liability under federal securities laws, the Securities and Exchange Commission review process, underwriting arrangements, selection of a trading forum (i.e., NYSE, NASDAQ, or AMEX) and the transaction closing. Regarding mergers and acquisitions, the course explores: financing alternatives, accounting treatment, due diligence, choosing an appropriate transaction structure (i.e., stock versus asset sale), public company transaction issues i.e., antitakeover matters and fiduciary concerns, fiduciary duties, and crucial legal aspects of the acquisition, such as letters of intent, successor liability, continuity of employees, and noncompetition agreements.

LAW 774 Separation of Powers
Fall. 3 credits. Prerequisite: Constitutional Law and Administrative Law strongly advised. Students without such background should consult instructor.
C. R. Farina.
The last 20 years have witnessed more debate about the nature and consequences of "separation of powers" than we have seen since the Founding Era. This seminar examines the ways this concept is understood and used by modern judges, legislators, executive officials, and scholars to justify, or to attempt to modify, the distribution of power within contemporary American government.

LAW 776 Street Law
Fall. 3 credits. W. F. Taylor.
As a new offering in the fall semester, this seminar allows law students to lead weekly discussions at the Auburn Correctional Facility on contemporary legal topics. Although all students enrolled in the seminar are expected to attend the weekly meeting, two students are responsible for presenting a legal or policy issue at each meeting and then opening the floor to questions and comments from the prisoners in attendance. Prison administrators determine who will attend the legal seminar series. From the experience of those in other disciplines who have done similar prison projects at Auburn, it is anticipated that not more than thirty prisoners will participate weekly. The objective of this seminar is to facilitate the exchange of ideas and to give students an additional opportunity to take law and legal education beyond the traditional classroom setting. Possible topics might include: Reparations for African Americans: Legal and Policy Issues; Racial Profiling; Family Law and the Rights of Fathers; Term Limits on Elected Officials: Pornography as Discrimination Against Women; The Relevance of Race, Ethnicity, and Sex to Judicial Appointments; Therapeutic Jurisprudence and Shaming Penalties; and Fourth Amendment and Other Limits on Policing Schools for Drugs and Guns.

LAW 777 Theories of Law, Theories of Film
Spring. 3 credits. C. D. Bond.
This seminar examines cultural representations of the American legal system and lawyers. As part of the course materials, students view several canonical, mostly American, films that deal with the law. Students learn the language of film form and theory, which they use to discuss how particular films construct narratives about the legal system. Topics of inquiry include parallels between law and film as narrative systems, the role of interpretation in constituting legal and cultural meaning, and the manner in which cultural representations of law reflect cultural values, fantasies, and myths, with particular attention given to narratives of race and gender. Students read film theory and criticism and legal theory in an attempt to correlate theories of narrative across both disciplines.

LAW 778 Theories of Property
Fall. 3 credits. Prerequisite: Property.
G. S. Alexander.
This seminar explores the various ways that people have conceived of, or understood, property. The materials studied are eclectic and interdisciplinary. They include readings on commonses, commodification, and women and property, as well as the classical justifications for private property (libertarian, utilitarian, etc).

LAW 779 Topics in Feminist Legal Theory
Spring. 3 credits. M. A. Fineman.
Over the course of the semester we examine the work of 5 or 6 feminist legal theorists who will also be guest lecturers in the class. The feminist scholars chosen are experts on a variety of legal topics including sexuality, reproduction, family, and work. The objective is to introduce students to feminist thinking and critique in these specific areas, as well as generally. In addition, the seminar is designed to give students an understanding of the processes whereby scholarly (and policy) ideas and concepts are developed by an individual through much revision, reflection and struggle. Two or three pieces of writings by each scholar are distributed and discussed in the session preceding her/his visit to the class. The following week the scholar speaks to the students about the readings and her/his experiences. The scholar responds to questions and comments about her/his current thinking and the direction of future work in her/his area(s) of expertise. Questions and comments are generated and distributed in advance of the scholar's appearance in the class by the students in the form of "reflection papers." A research paper on one of the topics discussed is required at the end of the semester.

LAW 780 Trial Preparation and Practice
Fall. 3 credits. H. C. Hay.
Using a sexual harassment lawsuit as a focal point, this seminar seeks to provide students with understanding of, and training in, the basic skills of trial preparation and practice. Students draft a complaint and answer, take and defend a deposition, prepare for and attend a mediation, and ultimately present the case to a mock jury.

CLINICAL COURSES AND EXTERNSHIPS

All clinic courses and externships have limited enrollment.

LAW 781 Capital Punishment Clinic: Post-Conviction Litigation
Spring. 4 credits. Prerequisite: permission of instructor; Criminal Procedure or criminal law experience preferred.
J. H. Blume, S. L. Johnson.
Clinic covers death penalty post-conviction litigation including: investigation and the preparation of petitions, memorandums, and briefs. This course is taught as a clinic. Two or possibly three South Carolina Death Row cases are worked on by students. Case selection depends on both pedagogical factors and litigation needs of the inmates. Students read the record and research legal issues. Some students are involved in investigation, while others assist in the preparation of papers. All students are included in discussions regarding the necessary investigation and strategy for the cases.

LAW 782 Capital Trial Clinic
Spring. 4 credits. Prerequisite: permission of instructor; Criminal Procedure or criminal law experience preferred.
J. H. Blume, S. L. Johnson.
The clinic covers the issues that are unique to a capital trial, with a focus on a specific capital trial and the issues it presents.

LAW 783 Full-Term Externship
Fall. 12 credits. G. G. Galbreath, J. M. Miner.
Occasionally students find that their educational and career goals would be best achieved by spending one semester working at a placement outside the law school. The Full-Term Externship course allows students to earn 12 credit hours as externs working full time at various approved placement sites during the fall semester of their third year. Written application must be submitted to the instructors by March 1 of the preceding spring semester. The application should include, among other things, a description of the placement and the activities that the extern expects to perform, a statement of the extern's educational and career goals, and an explanation of how those goals are better met at the placement than at the law school. The instructors, in collaboration with the Associate Dean for Academic Affairs, review the applications and, by March 15, decide whether each applicant should be granted conditional approval. For students to receive final approval, the placement site must accept the student for the placement and meet specified criteria including identification of an attorney at the placement who will closely supervise and mentor the extern. In addition to his or her work responsibilities for the placement, the extern prepares weekly journal entries for the instructor serving as his or her faculty supervisor, provides the instructor with samples of his or her written work product, engages in regular e-mail communication with the instructor (and, if required by the instructor, with other students in the course), hosts the instructor for a site visit, makes a written evaluation of the placement and the placement experience for the law school's files, and makes him- or herself available in the semester following the externship to do a presentation about the placement for the law school community.

LAW 784 Government Benefits Clinic
Spring. 6 credits. Course has two classroom components: Government Benefits Clinic class and Clinical Skills 1 or Clinical Skills 3. B. Strom.
The course has a substantive component, in which a broad conceptual understanding of a complex and controversial area of law and public policy is developed, and a live client clinical experience, in which those concepts can be applied in solving actual client

problems. The substantive component provides an introduction to government benefits law by examining various social insurance and need-based benefit programs including Social Security, Unemployment Insurance, Temporary Assistance to Needy Families (TANF), Supplemental Security Income (SSI), Medicaid, and Food Stamps. Case handling involves the representation of clients in government benefits cases involving the Tompkins County Department of Social Services, the N.Y.S. Department of Labor and the Social Security Administration. The course also includes Clinical Skills 1 or Clinical Skills 3. Clinical Skills 1 class addresses interviewing, counseling, negotiation, and advocacy skills through the use of readings, videotapes, discussions, demonstrations, and simulation exercises. Clinical Skills 3 builds on the skills taught in Clinical Skills 1 and addresses such topics as alternative dispute resolution, formal discovery, and motion argument.

LAW 785 Government Benefits Clinic/ Neighborhood Legal Services Externship

Spring. 6 credits. B. Strom.

This course is a combination of Government Benefits and the Neighborhood Legal Services Externship and either Clinical Skills 1 or Clinical Skills 3. The course is the same as Government Benefits except that the case handling component involves handling cases for the Ithaca office of Neighborhood Legal Services. See the descriptions for the Government Benefits Clinic and the Neighborhood Legal Services Externship for additional details.

LAW 786 Judicial Externship

Fall or spring. 4 credits. G. G. Galbreath.

Students work with a trial court judge. Work involves courtroom observation, conferences with the judge, research and writing memoranda, and drafting decisions. The emphasis is on learning about judges, the judicial decision-making process, and trials. There are weekly class meetings with readings and discussions of topics related to the externship experience. While the primary focus is the student's work at the placement, each student also does a class presentation, a final project, and meets individually with the faculty member.

LAW 790 Law Guardian Externship

Fall or spring. 4 credits. J. M. Miner.

Students learn about the representation of children in abuse and neglect cases, juvenile delinquency proceedings, and PINS (Person in Need of Supervision) cases through their placement at the Tompkins County Law Guardian office. Duties may include interviewing, investigation, drafting memoranda and motions, and assisting in trial preparation. The classroom component is provided by Clinical Skills 1, 2 (fall), or 3 (spring), depending on whether the student has previously been enrolled in a course in which Clinical Skills 1 was a component. Clinical Skills 1 class addresses interviewing, counseling, negotiation, and advocacy skills through the use of readings, videotapes, discussions, demonstrations, and simulation exercises. Clinical Skills 2 builds on the skills taught in Clinical Skills 1. Clinical Skills 3 builds on the skills taught in Clinical Skills 1 and 2.

LAW 791 Legislative Externship

Fall or spring. 3 credits. B. Strom.

Students work with the local New York State Member of Assembly. Work involves drafting legislation, tracking legislation for constituents, legal research and writing, responding to constituent requests that particularly require legal research or an explanation of law. The emphasis is on learning about legislative process, drafting of legislation, understanding the reasons for statutory ambiguity, and developing various skills. There are several informal meetings with the faculty supervisor during the semester with readings and group discussions related to the externship experience.

LAW 792 Neighborhood Legal Services Externship

Fall or spring. 4 credits. B. Strom.

Classroom component is provided by Clinical Skills 1, 2 (fall), or 3 (spring), depending on whether the student has previously been enrolled in a course in which Clinical Skills 1 was a component. Cases involve the representation of clients of a legal services office, the Ithaca office of Neighborhood Legal Services (NLS). Along with case handling, this externship includes a classroom component, provided by Clinical Skills 1, 2, or 3. The classes are devoted to the development of lawyering skills and issues related to professional responsibility and the role of an attorney. In addition, each student meets periodically with the faculty supervisor for review of the placement experience.

LAW 793 Public Interest Clinic 1

Fall or spring. 4 credits. Note: During the second or third week their may be an additional class session. Classes are mandatory. N. Cook, G. G. Galbreath, J. M. Miner, R. Seibel, B. Strom.

Students handle civil cases for low-income clients of the Public Interest Clinic under the supervision of the clinic faculty. Students interview and counsel; investigate and analyze facts; interrelate substantive and procedural law with facts in the context of actual representation; develop a strategy to handle clients' problems; identify and resolve professional responsibility issues; do legal writing; negotiate and settle cases; and represent clients at administrative hearings. Classroom component is provided by the Clinical Skills 1 class, in which students develop interviewing, counseling, negotiation, and advocacy skills through the use of readings, videotapes, discussions, demonstrations, and simulation exercises.

LAW 794 Public Interest Clinic 2

Fall. 4 credits. Prerequisite: Public Interest Clinic 1 or a clinic course that included the Clinical Skills 1 classroom component. N. Cook, G. G. Galbreath, J. M. Miner, R. Seibel, B. Strom.

Students handle Public Interest Clinic cases, participate in a classroom component, Clinical Skills 2, and help supervise participants in Public Interest Clinic 1. Cases are handled as described in the course description for Public Interest Clinic 1. The classroom component, Clinical Skills 2, builds on the skills taught in Clinical Skills 1. Students represent the clinic's clients in both federal and state courts.

LAW 795 Public Interest Clinic 3

Spring. 4 credits. Prerequisite: Public Interest Clinic 1 or a clinic course that included the Clinical Skills 1 classroom component. N. Cook, G. G. Galbreath, J. M. Miner, R. Seibel, B. Strom.

Students handle Public Interest Clinic cases, participate in a classroom component, Clinical Skills 3, and help supervise participants in Public Interest Clinic 1. Cases are handled as described in the course description for Public Interest Clinic 1. The classroom component, Clinical Skills 3, builds on the skills taught in Clinical Skills 1 and 2. Students represent the clinic's clients in both federal and state courts.

LAW 797 Women and the Law Clinic

Spring. 6 credits. J. M. Miner.

The course has two classroom components: Women and the Law Clinic class and Clinical Skills 1 or Clinical Skills 3 class. Students represent women clients who have legal matters primarily in the family law area (divorce, custody, support, domestic violence). The Women and the Law Clinic class focuses on such issues as the impact of substantive law on women, the impact of legal institutions on women, professional role development, feminist lawyering methods, and other topics related to women and the law. Students also participate in the lawyering skills classroom component, Clinical Skills 1 or Clinical Skills 3. Clinical Skills 1 addresses interviewing, counseling, negotiation, and advocacy skills through the use of readings, videotapes, discussions, demonstrations, and simulation exercises. Clinical Skills 3 builds on the skills taught in Clinical Skills 1.

LAW 798 Youth Law Clinic

Spring. 6 credits. Course has two classroom components: Youth Law Clinic class and Clinical Skills 1, 2 (fall), or 3 (spring) class. N. Cook.

Students work with groups of youth and service providers in a multifaceted approach to identifying and resolving problems of a legal nature. Under the supervision of faculty and community experts, clinic students both handle individual representation cases and participate in non-litigation project work such as community education, legislative advocacy, and mediation training. The emphasis of the course is on planning, communication, policy development, and nonadversarial problem solving. Students also participate in the lawyering skills classroom component, Clinical Skills 1, 2, or 3. Clinical Skills 1 class addresses interviewing, counseling, negotiation, and advocacy skills through the use of readings, videotapes, discussions, demonstrations, and simulation exercises. Clinical Skills 2 builds on the skills taught in Clinical Skills 1.

NONPROFESSIONAL COURSES

GOVT 313 The Nature, Functions, and Limits of Law

Spring. 4 credits. Undergraduates only. R. A. Hillman.

A general-education course for students at the sophomore and higher levels. Law is presented not as a body of rules but as a set of techniques for resolving conflicts and dealing with social problems. The course analyzes the roles of courts, legislatures, and administrative agencies in the legal process, considering also constitutional limits on their power and practical limits on their effectiveness. Assigned readings consist mainly of judicial and administrative decisions, statutes and rules, and commentaries on the legal process.

LAW 406 Biotechnology and Law (also B&SOC 406)

Spring. 4 credits. Undergraduates only. L. I. Palmer.

Biotechnology, with myriad applications in areas such as medicine and agriculture, is

creating many challenges for basic social institutions. This course explores the use and potential abuse of biotechnology in areas such as genetic screening and counseling, reproductive technologies, intentional release of genetically engineered organisms, patents, and ownership of human tissue. Particular attention is given to evolving legal and management strategies for regulating the applications of biotechnology. Readings are from science, medicine, law, and public policy. Several short written assignments as well as a research paper are required.

LAW 410 Limits on and Protection of Creative Expression—Copyright Law and Its Close Neighbors
Fall. 4 credits. P. W. Martin.
This course, offered during fall term 2001, provides an introduction to copyright law and closely related legal regimes for non-law students. The bulk of the instruction and discussion are on-line.

Copyright law has become increasingly important as the U.S. has shifted from a predominantly manufacturing economy to an information economy, with such products as software, recorded music, movies, and TV assuming major importance as exports, and digital distribution exploding. This course provides an overview of U.S. copyright law and the relationship between copyright and contractual license, trademark, patent, and the "right of publicity" as these other regimes relate to information products. The survey begins with the substantive and procedural requirements that surround copyright protection. It proceeds to survey the rights granted copyright holders and important limits on those rights such as "fair use." How infringement is established, what remedies are available, and other important features of copyright litigation are covered. Issues raised by new information technologies and recent amendments addressing them receive special attention. Finally, because of the growing importance of the global market for copyright-protected products, the international copyright system is also addressed.

FACULTY ROSTER

Abrams, Kathryn A., J.D., Yale U. Prof. of Law and Assoc. Prof. of Ethics and Public Life in the College of Arts and Sciences
Alexander, Gregory S., J.D., Northwestern U. A. Robert Noll Prof.
Atkinson, Robert E., Jr. J.D., Yale U. Visiting Prof.
Barcelò, John J. III, S.J.D.., Harvard U. William Nelson Cromwell Professor of International and Comparative Law
Blume, John H., J.D., Yale U. Visiting Prof.
Clermont, Kevin M., J.D., Harvard U. James and Mark Flanagan Professor of Law
Clymer, Steven D., J.D., Cornell U. Assoc. Prof.
Cripps, Yvonne M., Ph.D., U. of Cambridge. Visiting Prof.
Eisenberg, Theodore, J.D. U. of Pennsylvania. Henry Allen Mark Professor of Law
Farina, Cynthia R., J.D., Boston U. Prof.
Fineman, Martha A., J.D., U. of Chicago. Doreatha S. Clarke Professor of Feminist Jurisprudence
Garvey, Stephen P., J.D., Yale U. Prof.
Germain, Claire M., M.L.L., U. of Denver. Edward Cornell Law Librarian and Professor of Law
Gifford, William C., LL.B., Harvard U. Prof.
Green, Robert A., J.D., Georgetown U. Prof.
Hay, George A., Ph.D., Northwestern U. Edward Cornell Professor of Law and Professor of Economics in the College of Arts and Sciences
Hay, Howard C., J.D., U. of Michigan. Visiting Prof.
Henderson, James A., Jr., LL.M., Harvard U. Frank B. Ingersoll Professor of Law
Hillman, Robert A., J.D., Cornell U. Edwin H. Woodruff Professor of Law
Holden-Smith, Barbara J., J.D., U. of Chicago. Prof.
Johnson, Sheri L., J.D., Yale U. Prof.
Kysar, Douglas A., J.D., Harvard U. Asst. Prof.
Macey, Jonathan R., J.D., Yale U. J. DuPratt White Professor of Law
Margulies, Joseph, J.D., Northwestern U. Visiting Prof.
Martin, John W., Jr., J.D., DePaul U. Visiting Prof.
Martin, Peter W.., LL.B., Harvard U. Jane M. G. Foster Professor of Law
Ndulo, Muna B., D. Phil., Trinity C. Prof.
Palmer, Larry I., LL.B., Yale U. Prof.
Rachlinski, Jeffrey J., Ph.D., Stanford U. Prof.
Rossi, Faust F., J.D., Cornell U. Samuel S. Leibowitz Professor of Trial Techniques
Ruskola, Teemu, J.D., Yale U. Asst. Visiting Prof.
Schwab, Stewart J., Ph.D., U. of Michigan. Prof.
Shiffrin, Steven H., J.D. Loyola U. of Los Angeles. Prof.
Siliciano, John A., J.D., Columbia U. Prof.
Simson, Gary J., J.D. Yale U. Prof.
Spence, David B., Ph.D., Duke U. Asst. Visiting Prof.
Stone, Katherine V. W., J.D., Harvard U. Prof. of Law and Anne Evans Estabrook Prof. of Dispute Resolution in the School of Industrial and Labor Relations
Summers, Robert S., LL.B., Harvard U. William G. McRoberts Research Professor in Administration of the Law
Taylor, Winnie F., LL.M., U. of Wisconsin. Prof.
Teitelbaum Lee E., LL.M., Northwestern U. Prof.
Wippman, David, J.D., Yale U. Prof.

Legal Aid Clinic

Cook, Nancy L., J.D., Georgetown U. Senior Lecturer and Director
Galbreath, Glenn G., J.D., Case Western Reserve U. Senior Lecturer
Miner, JoAnne M., J.D., U. of Connecticut. Senior Lecturer
Seibel, Robert F., J.D., Northwestern U. Visiting Sr. Lecturer
Strom, Barry, J.D., Cornell U. Senior Lecturer, Cornell Legal Aid Clinic

Legal Methods Program

Anderson, Paige S., J.D. Cornell U. Lecturer
Atlas, Joel, J.D., Boston U. Senior Lecturer
Bond, Cynthia D., J.D., Cornell U. Lecturer
Grumbach, Carol, J.D., Cornell U. Director of Legal Methods Prog. and Senior Lecturer
McKee, Estelle M., J.D., Columbia U. Lecturer
Mooney, Andrea J., J.D., Cornell U. Lecturer

Academic Library Staff

Germain, Claire M., LL.B., U. of Paris. Edward Cornell Law Librarian and Professor of Law
Bynum, Charlotte L., J.D., Tulane U. Reference Librarian
Court, Patrica G., J.D. Hamline U. Asst. Director for Administration and Public Affairs
Gillespie, Janet M., M.S., Cornell U. Adminsitrative Supervisor/Access Service
Kreisler, Brandy, J.D., Texas Tech. Reference Librarian

DIVISION OF NUTRITIONAL SCIENCES

ADMINISTRATION

Jere Haas, director

Carole Bisogni, associate director for academic affairs

Michael Kazarinoff, director of graduate studies, Field of Nutrition

THE DIVISION

Nutritional Science draws upon the chemical, biological, and social sciences to understand the complex relationships between human health, nutritional status, food and lifestyle patterns, and social and institutional environments. Understanding these relationships includes the study of the metabolic regulation and function of nutrients, nutrient requirements throughout the life span, the role of diet in reducing risk of chronic disease, the nutritional quality of foods, and interventions and policies designed to promote the nutritional health of individuals, communities, and populations.

The focus of this broad field of study at Cornell is the Division of Nutritional Sciences, which brings together specialists from many disciplines. The faculty are involved in undergraduate and graduate teaching, research, and extension of research-based knowledge throughout New York State, the nation, and the world.

The division is affiliated with both the College of Human Ecology and the College of Agriculture and Life Sciences. The undergraduate program in Nutritional Sciences is offered through the College of Human Ecology. An undergraduate program, Nutrition, Food, and Agriculture, is offered in the College of Agriculture and Life Sciences. The undergraduate program in Human Biology, Health, and Society is offered through the College of Human Ecology. A program of study in nutrition for biological science majors is offered in collaboration with the undergraduate program in biology. Graduate study in the field of nutrition, is administered by faculty members throughout the university.

FACILITIES

Most of the faculty members of the division work in Savage Hall, Kinzelberg Hall, and Martha Van Rensselaer Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities. The division's Learning Resource Center in Martha Van Rensselaer Hall is used by students for individual study and for small group discussions. The Learning Resource Center contains computers and printed and audiovisual resources which give students access to specialized software. Savage Hall also has a graduate reading room.

UNDERGRADUATE PROGRAMS

The Division of Nutritional Sciences offers three programs leading to a B.S. degree:

Nutritional Sciences (NS), College of Human Ecology: this program provides students with a strong foundation in the broad field of nutritional sciences as well as thorough training in chemistry and biology. Students may prepare for a variety of career interests including medicine and other health careers, fitness and sports nutrition, nutrition counseling, clinical nutrition, dietetics, nutritional biochemistry, community nutrition, and nutrition education.

Nutrition, Food, and Agriculture (NFA), College of Agriculture and Life Sciences: this program is for students who want strong training in human nutrition combined with supportive course work in the agriculture and the life sciences. Strong preparation in biology, chemistry, and math is required. Students in the Nutrition, Food, and Agriculture program supplement the nutrition curriculum with courses in areas such as food science, animal science, plant science, advanced biology, business and economics, education, and communication.

Human Biology, Health, and Society (HBHS), College of Human Ecology: established in 1997, this program gives students a strong foundation in biology. It then goes on to explore human health issues from the perspectives of both biology and the social sciences. Students complete a rigorous curriculum in the natural sciences and then, choosing from a wide array of courses offered in the College of Human Ecology, focus their studies on health issues of their choice. Students can explore such topics as gene expression and metabolism related to disease states, biological and social aspects of growth and development, and policies and programs influencing health.

The Division also offers the **Program of Study in Human Nutrition for biological sciences majors** who may be enrolled in the College of Agriculture and Life Sciences or College of Arts and Sciences. The program of study in Human Nutrition offers biology majors courses on the nature and biochemical function of essential and non-essential nutrients, nutrient requirements, the role of nutrients in gene expression, and the role of diet in both risk of chronic disease and treatment of existing disease states.

Students in this program of study are encouraged to complete a diverse set of advanced courses. They afford a perspective on current knowledge of nutrient requirements and function, and how this knowledge can be put to use. With the exception of a core course in the structure and function of nutrients, the course requirements are unspecified.

Faculty advisers work with individual students to develop a curriculum that fits the students' interests. As part of their program, students are encouraged to obtain laboratory experience either through coursework or research. Students completing the program in nutrition most often choose to continue their education in medical or graduate school, and pursue careers in the applied aspects of nutrition or in laboratory-based or epidemiological research.

THE CURRICULUM

Undergraduate students in these programs complete the requirements of their colleges as well as the courses required by the program of their specific interest.

The NS, NFA, and HBHS programs all require a rigorous sequence of courses in chemistry and biology, including introductory chemistry and biology, organic chemistry, biochemistry, and physiology. A minimum competency in college algebra is required with an additional math and/or statistics requirement for some programs and career paths. Students in the HBHS major also complete a course in physics and two additional courses in advanced biology.

All students complete the introductory course, Nutrition and Health: Concepts and Controversies (NS 115). The NS and NFA programs require the completion of four other core courses: Social Science Perspectives on Food and Nutrition (NS 245); Nutritional and Physicochemical Aspects of Foods (NS 345); Physiological and Biochemical Bases of Nutrition (NS 331); and Methods in Nutritional Sciences (NS 332). Students in these programs also must select a minimum of nine credits in advanced courses in the nutritional sciences.

The HBHS major requires a minimum of six credits from courses that integrate biology and the social sciences as they examine health issues. In addition, students also must complete nine credits of advanced electives in courses focused on human biology, health, and society.

Undergraduate students in these programs have a faculty adviser with whom they meet at least twice a year. Advisers help students plan their course schedules and can suggest opportunities for individual study or experience outside the classroom.

In all undergraduate programs the correct sequencing of biology, chemistry, and/or nutrition courses is very important. Students considering these programs should get detailed information about course requirements from the division's Academic Affairs Office, 309/335 MVR. This office offers a wide range of advising materials to help students develop a program of study that matches students' interests and needs.

CAREER OPTIONS AND COURSE PLANNING

Requirements for the programs are the minimum set of courses necessary for a

bachelor's degree in these fields. Students should supplement their requirements with elective courses and other learning experiences that will prepare them for entry-level jobs or advanced study in their field(s) of interest. A summary of suggested electives for different career interests follows:

Medicine and Other Health Careers: Recommended courses for pre-med students include calculus and two terms of physics. Specific information about medical school admissions requirements can be obtained from the university's Health Careers Office, 203 Barnes Hall. Students interested in other health careers should acquire specific information about those requirements. Courses of interest may include those related to the biological and social determinants of health; human growth, development, and behavior through the life course; interpersonal communications; advanced biology; sociology; psychology; and ethics.

Dietetics: Students who wish to work in the areas of clinical nutrition, nutrition counseling, sports nutrition, community nutrition, or food and nutrition management should complete the academic requirements for The American Dietetic Association (ADA). Courses in foods, nutrition and disease, microbiology, management, statistics, and nutritional care are added to the courses required for the nutrition programs. For more information about meeting ADA requirements see Marie Kamp, 373 MVR.

Exercise, Nutrition, and Health Promotion: Students should complete a course in physiology and a course in anatomy after introductory biology. Students can complete the Applied Exercise Science Concentration at Ithaca College, which includes courses in kinesiology, exercise physiology, and biomechanics. Students who wish to apply to graduate schools to study physical therapy should complete a year of introductory physics, a course in statistics, a course in ethics, and three courses in psychology. Students should check the specific requirements of their schools of interest. For information about the Applied Exercise Science Concentration, contact the DNS Academic Affairs Office, 309 MVR.

Biomedical Research/Nutritional Biochemistry: Recommended electives include calculus, physics, genetics, advanced biology and chemistry, toxicology, and nutritional sciences courses related to the physiology, biochemistry, and metabolism of different nutrients and disease states.

Public Health and Community Nutrition: Suggested electives include courses in communications, education, human development, policy analysis and management, maternal and child nutrition, geriatric nutrition, nutrition and disease, and food economics.

Nutrition, Food, and Business: Recommended electives include courses in management, marketing, economics, communications, hotel administration, and food science.

Nutrition and Agriculture: Recommended electives include courses in food science, animal science, plant sciences, international agriculture, agricultural economics, biological sciences, and rural sociology.

International Nutrition: Recommended electives include courses in language, anthropology, agricultural economics, policy, economics, rural sociology, international agriculture, and nutritional sciences related to maternal and child health and problems of developing nations.

Biology and Behavior: Recommended electives include courses in psychology, human development, and neurobiology.

Food, Nutrition, and Health Policy: Recommended electives include courses in economics, sociology, government, policy analysis, and management.

SPECIAL EXPERIENCES

Undergraduates can enhance their experiences by participating in structured field experiences or study abroad. Academic credit can be earned for field experiences in a community agency, health-care facility, or business. The Urban Semester in the College of Human Ecology provides students with an opportunity to study and gain field experience in New York City. All students intending to spend a term off campus in field experience or study abroad must plan their courses well in advance to be sure that all program requirements can be met.

INDEPENDENT STUDY ELECTIVES

Independent study courses (NS 400, 401, 402) can be used to obtain credit for more diverse or intensive experience than the classroom can offer, whether this involves laboratory work, library research, or field study. Any student interested in independent study should obtain the sponsorship of a faculty adviser and the approval of the associate director for academic affairs or consider applying to the honors program.

HONORS PROGRAM

The honors program, leading to a B.S. degree with honors in the College of Human Ecology, or B.S. degree with Distinction in Research in the College of Agriculture and Life Sciences, gives official recognition to students who have demonstrated excellence in their academic work and their capacity for independent study.

In addition to fulfilling the requirements for a major, students in the honors program take seminars in designing and evaluating research, complete an original piece of research (at least six credits of NS 499), and prepare an honors thesis. The honors project may be laboratory or field research or deal with policy and program development. For more information, students should contact Michael Kazarinoff, 230 Savage Hall..

COURSES RECOMMENDED FOR NONMAJORS

Courses in nutritional sciences can strengthen programs of study in biological sciences, biology and society, communications, food science, human development, human services, and other fields.

NS 115, Nutrition and Health: Concepts and Controversies, is open to all students. After NS 115, nonmajors with limited backgrounds in chemistry and biology may elect NS 200, Vegetarian Nutrition: An Introduction; NS 245, Social Science Perspectives on Food and Nutrition; NS 247, Food for Contemporary Living; NS 262, Nutrients and Cells; NS 275, Human Biology and Evolution; NS 306, Nutritional Problems of Developing Nations; NS 315, Obesity and the Regulation of Body Weight; NS 347, Human Growth and Development: Biological and Behavioral Interactions; NS 380, Integrating Food Systems and Human Nutrition Needs; NS 450, Public Health Nutrition; NS 451 Epidemiology and Health of Human Communities. Nonmajors with strong backgrounds in chemistry and the biological sciences may consider NS 331, Physiological and Biochemical Bases of Human Nutrition, as well as many advanced nutritional sciences courses, such as NS 345 Physicochemical and Nutritional Aspects of Foods; NS 431 Mineral Nutriton and Chronic Disease; NS 441, Nutrition and Disease; and NS 475 Molecular Nutrition and Development.

GRADUATE PROGRAMS

Graduate study is administered by the Field of Nutrition, a group of about 40 faculty members from throughout the university who have a common interest in nutritional problems. In the M.S. and Ph.D. degree programs, students may specialize in molecular and biochemical nutrition, human or animal nutrition, community nutrition, or international nutrition. Research is emphasized in all graduate programs. Field experience may be an important component of concentrations in community, international and public-health nutrition, and nutrition education. Teaching experience and participation in the graduate student seminar (NS 703) are important aspects of graduate training.

The specialties and interests represented by faculty in the Field of Nutrition provide almost unlimited opportunity for graduate study. Cornell's extensive laboratory and agricultural facilities ensure that students interested in experimental nutrition have exceptional choices and thorough training. As the largest faculty in the country devoted to the study of human nutrition, the field includes specialists in biochemical, metabolic, epidemiological, and sociocultural research. Opportunities to work with community and federal agencies are available to students interested in applied nutrition and public policy. Students in international nutrition are expected to conduct their thesis research abroad.

For more information about the graduate program, please write for the brochure. Graduate Study in Nutrition, available from the Director of Graduate Studies, Field of Nutrition, Cornell University, 309 MVR Hall, Ithaca, NY 14853–4401; telephone (607) 255–4410; web site: www.nutrition.cornell.edu/grad.html, e-mail: nutrition_gfr@cornell.edu

COURSES

NS 115 Nutrition and Health: Concepts and Controversies
Fall. 3 credits. S-U grades optional. M W F 1:25. D. Levitsky.
The course will discuss the facts and fallacies concerning the role that nutrition, exercise,

and other health behaviors play in preventing disease, maintaining good health, and maximizing athletic performance. Emphasis is on understanding the biological mechanisms through which good nutrition and regular exercise affect psychological and physical health.

NS 116 Personalized Concepts and Controversies
Fall. 1 credit. Corequisite: NS 115. S-U only. Limited to freshmen and transfer students, 10 per section. TBA. E. West.
This course provides students enrolled in NS 115 individualized assistance in many skills including using computers to analyze diets, finding and using scientific references, understanding and criticizing scientific articles, and reviewing material presented in lectures.

NS 120 Nutrition and Health: Issues, Outlooks, and Opportunities
Spring. 1 credit. S-U grades only. Limited to 120 freshmen, sophomores, and juniors, others by permission of instructor. W 12:20. E. West.
A course for students interested in exploring careers in the broad fields of food, nutrition, and health. Experts representing different areas will discuss their work, focusing on current issues and trends as well as their requisite knowledge and skills. This course describes the many disciplines that are drawn upon in addressing human problems related to food, diet, and health. It also explores the related intellectual and career opportunities. This is not an introductory nutrition course for nonmajors.

NS 200 Vegetarian Nutrition: An Introduction
Fall. 3 credits. S-U grades optional. Prerequisites: NS 115 advised but not essential. T R 2:55–4:10. T. C. Campbell.
This introductory course will survey vegetarianism from a variety of nutrition and health considerations. The material to be presented and discussed will primarily include the empirical scientific evidence presented for easy comprehension for students without nutrition training. The course will also consider the historical and sociocultural roots, both ancient and of more recent times, that have led to the growing interest in, and acceptance of, this type of dietary practice. Particular attention will be given to the role of vegetarianism in the prevention and reversal of chronic degenerative diseases. Special topics on competitive sport, childhood nutrition, food preparation, and dietary transition will be offered. Internationally known guest speakers, will provide six to eight of the lectures.

NS 222 Maternal and Child Nutrition
Fall. 3 credits. Prerequisites: NS 115 and a college biology course or permission of the instructor. S-U grades optional. Limited to 25 students. Preregistration is required in room 309 MVR Hall. T R 1:25–2:40. C. Garza, P. Brannon.
Involves the study of nutritional requirements in pregnancy, lactation, infancy, and childhood through adolescence. Topics include the relationship between maternal diet and pregnancy outcome; analysis of different methods of infant feeding; and the nutritional status of pregnant women, children, and adolescents in the United States and in developing countries.

NS 245 Social Science Perspectives on Food and Nutrition
Fall. 3 credits. Prerequisite: NS 115. Letter grade only. T R 10:10–11:25. J. Sobal.
Theories, concepts, and methods from the social sciences will be used to examine food, eating, and nutrition. The course will use the food and nutrition system and the food choice process as conceptual models for examining the scope of social aspects of nutrition.

NS 247 Food for Contemporary Living
Fall and spring. 2 credits. Laboratory sections limited to 32 students. Preregistration during course preregistration required in 309 MVR Hall. Laboratory coat or apron required. Fall W 12:20–3:20; spring T 1:25–4:25 or R 9:05–12:05. M. Kamp.
Emphasizes meal planning for healthy individuals using national nutrition standards; the development of food preparation and presentation skills; the application of sensory evaluation techniques; food science principles as they apply to cooking and ethnic and cultural influences on cuisine.

NS 262 Nutrients and Cells
Spring. 3 credits. Prerequisites: one semester of biology and chemistry. M W F 9:05. N. Noy.
The course will focus on the relationship of the cells with the environment. Examples from three general areas will be considered: (1) mechanisms of uptake of nutrients by bacterial and by mammalian cells; (2) intracellular outcomes of nutritional stimuli: effects on metabolism and gene expression, toxicity; (3) and pathways of neutralization: detoxification, secretion, and DNA repair.

[NS 275 Human Biology and Evolution (also BIOEE 275 and ANTHR 275)
Fall. S-U grades optional, with permission of either instructor. Next offered 2002–2003.
See BIOEE 275 for course description.]

NS 300 Special Studies for Undergraduates
Fall or spring. Prerequisites: permission of instructor. S-U grades optional. DNS faculty.
Special arrangements can be made to establish equivalency for courses not transferred from a previous major or institution. Students prepare a description of the study they want to undertake using a form available from the College Registrar's Office. The form, signed by both the instructor directing the study and the associate director for academic affairs, is filed at course registration or during the change-of-registration period.

NS 306 Nutritional Problems of Developing Nations
Spring. 3 credits. Prerequisites: NS 115. S-U grades optional. T R 10:10. Offered alternate years. M. C. Latham.
The course is designed for undergraduates interested in the nutritional problems of developing countries. Attention is given to the array of nutritional problems encountered, the causes of hunger and malnutrition, the epidemiology of the major nutritional problems afflicting poor nations, the functional consequences of these problems on individuals and societies, and the types of programs that can be implemented to improve health and nutrition.

NS 315 Obesity and the Regulation of Body Weight (also Psychology 613)
Spring. 3 credits. Prerequisites: NS 115, Psych 101. Limited to juniors and seniors. S-U grades optional. Offered alternate years. Not offered 2002–03. T R 1:25–3:00. D. Levitsky.
This course is a multidisciplinary discussion of the causes, effects, and treatments of human obesity. Topics include the biopsychology of eating behavior, the genetics of obesity, the role of activity and energy metabolism, the psychosocial determinants of obesity, anorexia nervosa, therapy and its effectiveness, and social discrimination.

NS 320 Introduction to Human Biochemistry
Fall. 4 credits. Prerequisites: one year college biology; one year college general chemistry; and CHEM 257 or 357–358; or permission of the instructor. S-U grades optional. M W F 10:10, sec T 1:25. W. Arion, P. Stover.
The principles of biochemistry are presented within the context of human health and disease. Metabolism of carbohydrates, lipids, proteins, and selected micro-nutrients is taught from a perspective that emphasizes their role in supporting the structure and physiological functions of the major organs of the body, including the blood. The concepts of enzyme catalysis, enzyme regulation, hormone action, and bioenergetics are incorporated within this framework. The fundamental concepts of eucaryotic DNA structure, function, and gene expression are covered with reference to their importance in regulating metabolism and the impact of a changing nutrient environment.

NS 331 Physiological and Biochemical Bases of Human Nutrition
Spring. 4 credits. Prerequisites: Biological Sciences 330, or 331, or NS 320, or equivalent. S-U grades optional. Lec M W F 10:10; disc, W or R. M. Stipanuk, C. McCormick.
This course examines the biochemical and physiological bases of human nutritional requirements. The instructors use an integrated approach to cover the digestion and metabolism of the nutrients (carbohydrates, proteins, lipids, vitamins, and minerals). Metabolic and chronic diseases that are related to nutrition are discussed throughout the semester. The discussion sections and problem sets provide an opportunity to examine in greater depth selected topics from lecture.

NS 332 Methods in Nutritional Sciences
Fall and spring. 3 credits. Each section limited to 18 students. Prerequisites: NS 345, NS 331 preferred or concurrent registration. Laboratory preregistration during course preregistration required in 309 MVR. One evening prelim to be scheduled. Fall. Lec M 12:20; lab M W 1:25–4:25 or T R 10:10–1:10. Spring. Lec M 12:20; labs M W 1:25–4:25 or T R 10:10–1:10. J. T. Brenna, M. N. Kazarinoff.
Laboratory introduction to principles and analytical techniques of nutritional research. Emphasis is on analytical concepts and skills required to determine nutrient function and nutritional status of individuals. Topics include methods of nutrient, metabolite, and enzyme analysis in body fluids, and methods for assessing individual food intake and nutritional status.

NS 341 Human Anatomy and Physiology
Spring. 4 credits. Letter grade only. Prerequisites: college biology; NS 115 recommended. **Completion of laboratory permission forms required in 309 MVR during course enroll period. Limit 18 per lab. Attendance is required at first lab, or you will forfeit your placement. For further information go to room 309 MVR.** Lec M W F 11:15, lab W or R or F 9:05–11:00, or 2:30–4:25. V. Utermohlen.
Introduction to human anatomy and physiology with particular emphasis on aspects of relevance to the nutrition sciences and medicine. All major organ systems will be covered. Laboratories will emphasize location, recognition, and description of anatomical structures. Testing of physiological functions will focus on the tests with nutritional and medical relevance.

NS 345 Nutritional and Physicochemical Aspects of Food
Spring. 3 credits. Prerequisite: college course in organic chemistry or biochemistry. S-U grades optional. T R 1:25–2:40. B. Parker, B. Lewis.
A study of the nutritional, physical, and chemical properties of foods including composition, food structure, enzymic and nonenzymic phenomena, and processing/preparation aspects. Issues related to food safety, regulation, and food composition data bases will also be discussed.

NS 346 Introduction to Physiochemical Aspects of Foods—Laboratory
Spring. 1 credit. Each section limited to 18 students. Limited to dietetics students in DNS. Prerequisites: NS 345 or concurrent registration; a college course in organic chemistry and permission of instructor during course registration (permission-of-instructor forms must be obtained from and returned to 309 MVR). Letter grade only. M 12:20–3:20 or T 9:05–12:05. B. Parker, B. Lewis.
Laboratory exercises are designed to illustrate principles related to food quality and ingredient functionality, and to introduce students to the analytical methodology associated with food evaluation.

[NS 347 Human Growth and Development: Biological and Behavioral Interactions (also Human Development 347 and Biology and Society 347)
Spring. 3 credits. Prerequisites: Biological Sciences 101 or 109 or equivalent; Human Development 115 or Psychology 101 or equivalent. M W F 1:25. Offered alternate years. Next offered 2002–2003. J. Haas, S. Robertson.
This course is concerned with the interrelationships of physical and psychological growth and development in humans, particularly during infancy. Intrinsic and extrinsic causes of variations in growth, including various forms of stimulation, are considered. In addition, the consequences of early growth and its variation for current and subsequent behavioral, psychological, and physical development are examined. The interaction between physical and behavioral or psychological factors is emphasized throughout the course.]

NS 361 Biology of Normal and Abnormal Behavior (also PSYCH 361)
Fall. 3 credits. Prerequisites: Biological Sciences 101–102 and Psychology 101, or permission of the instructor. A fundamental knowledge of biology and psychology is essential. S-U grades optional. Limited to juniors and seniors. M W F 9:05. B. Strupp.
A critical evaluation of biological factors thought to influence behavior and/or cognitive functioning. Biological, psychological, and societal influences will be integrated. Topics include nutrition and behavior, psychiatric disorders, developmental exposure to environmental toxins and abused drugs, biopsychology of learning, memory, intelligence, and related cognitive disorders.

NS 378 Food, Nutrition, and Service Management
Fall. 3 credits. Prerequisites: NS 115, NS 247 or permission of instructor. T R 1:25–2:40. M. Kamp.
The course discusses how management principles and theories apply to foodservice operations and nutrition services. The systems concept of organization is utilized. Emphasis is placed on leadership development, decision making/problem solving as it relates to procurement, production, distribution, and quality assurance in food and nutrition services. Menu development projects demonstrate the interrelationships of nutrition, labor, equipment, food costs, and customer satisfaction. Marketing strategies and implementation are discussed. Teamwork and negotiating skills are emphasized.

NS 380 Integrating Food Systems and Human Nutrition Needs
Spring. 2 credits. Prerequisites: NS 115 or FOOD 200 or An Sc 100. Letter grade only. T R 8:40–9:55. G. Combs.
This is a student-centered course that uses case studies to examine the link between human nutrition and health issues to those involved in systems of food production and distribution. Student teams will investigate new and existing technological options within food systems that can be used to address domestic or international human nutrition needs.

NS 398 Honors in Nutritional Sciences
Fall. 1 credit. Limited to students admitted to the division honors program. S-U grades only. T 12:20. M. Kazarinoff.
Research design. Analysis of research papers on selected topics.

NS 400–401–402–403 Special Studies for Undergraduates
Fall or spring. Credits to be arranged. S-U grades optional. Division faculty.
For advanced independent study by an individual or group of students who want to study a field of nutritional sciences not otherwise provided through course work in the division or elsewhere in the university. Students prepare a description of the study they want to undertake on a form to be signed by the instructor directing the study and the associate director for academic affairs. The form, available from the department office, is filed at course registration or within the change-of-registration period along with an add/drop slip in 145 MVR, College Registrar Office. To ensure review before the close of the course registration or change-of-registration period, students should submit the special-studies form to the associate director for academic affairs as early as possible.

NS 400 Directed Readings
For study that predominantly involves library research and independent reading.

NS 401 Empirical Research
For study that predominantly involves data collection and analysis or laboratory or studio projects.

NS 402 Supervised Fieldwork
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

NS 403 Teaching Apprenticeship
For study that includes assisting faculty with instruction.

NS 421 Nutrition and Exercise
Spring. 3 credits. Prerequisites: BIOAP 311 or NS 341 and NS 115 or NS 331 preferred. Limited to nutrition majors, others by permission of the instructor. S-U grades optional. Lec T R 11:15, Sec T, or R, or F 8:00–9:55. S. Travis.
Designed for nutrition majors, students in this course will examine the interaction between nutrition, exercise, and athletic performance. Topics will include the biological, psychological, and sociological aspects of nutrition as it relates to exercise performance. Lectures will cover current research on nutritional needs in response to exercise including: fluids, energy nutrient requirements and caloric distribution, supplementation, ergogenic aids, pre/post event recommendations. Applications will be made to various sports. Critical thinking skills will be enhanced by critiques of studies on sports nutrition related topics and the evaluation of popular sports nutrition claims. Students will learn educational strategies for communicating with the recreational and professional athlete, coach, and trainer.

NS 425 Nutrition Communications and Counseling
Spring. 3 credits. Prerequisites: NS 115, NS 245. Limited to dietetics majors. S-U grades optional. M W F 1:25. S. Travis.
Students will come to understand the theoretical basis of effective health promotion communications and to develop effective nutrition communication skills through application in a variety of settings. The course will provide hands-on experiences in counseling, educational program development, and oral and written communications.

NS 431 Mineral Nutrition and Chronic Disease
Fall. 3 credits. Prerequisites: NS 331, An Sc 410, or permission of instructor. S-U grades optional. T R 11:15. C. McCormick.
We will evaluate the evidence that diet plays a role in osteoporosis and hypertension and consider whether iron status affects the development of heart disease and inflammation. An additional goal of the course is to review the data upon which recommendations for daily nutrient intakes are currently based, and the biological basis of current recommendations. Class discussion of key research articles will be conducted and evaluated.

NS 441 Nutrition and Disease
Fall. 4 credits. Prerequisites: NS 331 and a human physiology course. S-U grades optional. M W F 10:10; F 8:00. V. Utermohlen.

Study of the anatomical, physiological, and metabolic abnormalities in acute and chronic illness, and the role of nutritional therapy in their prevention and care. Topics covered include: nutritional assessment, nutritional pharmacology, starvation, infection, trauma, cancer, diabetes mellitus, and renal, cardiovascular, pulmonary, skeletal, neurological, liver, and gastrointestinal disorders.

NS 442 Implementation of Nutrition Care
Fall. 3 credits. Prerequisites: NS 247, concurrent registration in NS 441 (or equivalent background in either course). S-U grades optional. Lec M W F 9:05. TBA.
Development of skills necessary to implement nutrition care in clinical settings: nutrition screening, dietary assessment, principles of medical nutrition therapy, menu planning for disease states, the role of other allied health practitioners in assuring nutritional health, and reimbursment and legislation in dietetics practice.

NS 450 Public Health Nutrition
Spring. 3 credits. Prerequisites: NS 115, and one course dealing with population-level studies, e.g., NS 245, HDFS 150, PAM 201, PAM 303, RSOC 100, RSOC 200. M W F 11:15. K. Rasmussen, D. Pelletier.
Public health nutrition is the major professional career track for nutritionists outside of dietetics. It deals with efforts to improve the diets and nutritional status of whole populations by working at the community, state, and national level. This course helps prepare students to work in public health nutrition by describing methods used in the assessment of nutrition problems, development of nutrition-related policies, and delivery of health, nutrition, and food assistance programs.

NS 451 Epidemiology and Health of Human Communities
Fall. 3 credits. Prerequisite: one semester of statistics (can be taken concurrently). M W F 1:25. E. Frongillo.
Examines through a series of case studies, the role of epidemiological investigation in understanding, assessing, and improving the health and nutrition of human communities and populations. Students will read and discuss scientific research and public policy literature on specific topics of current interest. Emphasis is on the conceptualization of epidemiology as an ecological science that studies the interdependence and interaction of humans with their social, cultural, and physical environment. Intended for advanced undergraduates and graduate students with an interest in health, human biology, nutrition, or epidemiology.

NS 452 Molecular Epidemiology and Dietary Markers of Chronic Disease
Spring. 3 credits. Prerequisites: upper level biology course, introductory statistics course (can be taken concurrently), or permission of the instructor. S-U grades Optional. T R 10:10–11:25. P. Cassano.
This course provides an introduction to chronic disease epidemiology, and covers the natural history of the major chronic diseases affecting the U.S. population. The course focuses on the use of biological markers in understanding the etiology of cardiovascular disease, cancer, and lung disease. The course integrates biological and epidemiological information, as well as public health considerations and concepts related to the prevention of disease. Topics include gene-nutrient interaction in relation to cardiovascular risk, micronutrients and cancer risk, and nutritional influences on the immune system in relation to asthma risk. The course will provide a health context that will enrich the learning experience in other advanced courses, particularly in biology and nutrition.

NS 457 Economics of Hunger and Malnutrition (also ECON 474)
Spring. 3 credits. Prerequisites: ECON 101 and introductory statistics, or permission of the instructor. S-U grades optional. M W F 9:05. D. Sahn.
This course focuses on the analysis of global hunger and malnutrition. We will analyze the dimensions, causes, and solutions to hunger and malnutrition, particularly in developing countries. Grades will be based on a mid-term and a final exam, a term paper, and class participation.

NS 475 Molecular Nutrition and Development
Spring. 3 credits. Prerequisites: Chem 207–208 or equivalent, Chem 357–358 or equivalent, BioBM 330 or equivalent. S-U grades optional. M W F 9:05. Offered alternate years. Not offered 2002–03. P. Stover, D. Noden.
This course explores the role of maternal nutrition, maternal genotype, and placental function in mammalian embryo development. The role of vitamins and nutrients including folic acid, vitamins A and D, iron, and cholesterol in cellular and morphogenic processes during development are discussed at the molecular level. The course is based on the current primary literature and concentrates on the modern experimental approaches used to address these relationships including mutagenic, transgenic, cell and fetal culture models.

NS 488 Applied Dietetics in Foodservice Systems
Spring. 3 credits. Limited to 27 students. Prerequisites: NS 378, Micro 290. Laboratory preregistration during course preregistration is required in 309 MVR. White lab coat is required. Approximately $25.00 will be needed for special supplies/activities. Lec M W 9:05; labs, W or R 2:30–6:30. M. Kamp.
Students will gain experience in facility design; equipment selection, use, and care; job analysis and evaluation; human resources planning; management of financial resources; recipe development and volume food production; computer-assisted management; employee training; applied safety and sanitation standards; and will develop other skills required to operate/manage a foodservice program. The application of quality management in food service operations and facility management is stressed. Laboratories will be arranged through Cornell Dining.

NS 498 Honors in Nutritional Sciences
Spring. 1 credit. Limited to students admitted to the division honors program. Students may register in NS 499 concurrently. M or F 2:30. M. Kazarinoff and division faculty.
Juniors (Mondays). Discussion of research opportunities in nutrition and orientation to research facilities. Delineation of honors research problems in consultation with faculty mentors. Seniors (Fridays). Workshop sessions on honors thesis and oral presentation preparation.

NS 499 Honors Problem
Fall and spring. Credits to be arranged. Open only to students in the division honors program. M. Kazarinoff and division faculty.
An independent literature, laboratory, or field investigation. Students should plan to spread the work over two or more semesters.

NS 600 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. Limited to graduate students recommended by their chair and approved by the instructor in charge. S-U grades optional. Division faculty.
Emphasis on independent advanced work. Experience in research laboratories in the division may be arranged.

[NS 601 Proteins and Amino Acids (also AN SC 601)
Spring. 2 credits. Prerequisites: physiology, biochemistry, and nutrition. Offered alternate years. W F 12:20. Next offered 2002–2003. R. E. Austic.
The course emphasizes the dynamic aspects of protein digestion and absorption, amino acid transport, and amino acid and nitrogen metabolism and their relationships to the nutritional requirements for amino acids.]

NS 602 Lipids (also BIO AP 619)
Fall. 2 credits. T R 11:15. A. Bensadoun.
Advanced course on biochemical, metabolic, and physiological aspects of lipids, more specifically lipid transport. Topics covered include lipid methodology, structure of plasma lipoproteins, molecular biology and cell biology of apolipoproteins, lipoprotein receptors, lipid transfer factors, lipolytic enzymes, and atherosclerosis.

[NS 603 Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also AN SC 603)
Fall. 2 credits. Letter grade only. Prerequisites: biochemistry, physiology, and nutrition. T 2:20–4:25. Offered alternate years. Next offered 2002–2003. X. G. Lei, G. F. Combs, Jr.
The course emphasizes the metabolic roles and environmental impacts of mineral nutrition in animal, human, and food systems. Team-taught lectures include general biochemical and physiological aspects of mineral metabolism and specific mechanisms of gene expression regulation and mammal health disorders associated with individual elements. Methodology and facility of mineral research is also discussed.]

NS 604 The Vitamins (also AN SC 604)
Fall. 2 credits. T R 10:10. G. Combs.
Text-based discussion sessions on nutritional aspects of the vitamins, including recent developments in nutritional and biochemical interrelationships with other nutrients and metabolites.

NS 605 Nutritional Biochemistry Colloquim
Fall and spring. 1 credit. S-U grades only. R 12:20. Nutritional biochemistry faculty.
Nutritional biochemistry colloquium is a graduate seminar series that focuses on recent advancements in biochemical nutrition. Weekly presentations are made by faculty, postdocs, and graduate students, and are based on the primary literature. The presentations are followed by a discussion involving all participants.

NS 607 Nutrition as an Integrating Discipline: Concepts and Paradigms
Fall. 3 credits. Prerequisite: some prior coursework or experience in nutrition, or permission of the instructor. M W F 10:10. M. Kazarinoff, D. Pelletier, and division faculty.
An overview course for beginning graduate students which introduces them to the full breadth of nutritional science disciplines, including quantitative and qualitative sciences. Also suitable for seniors as an integrating course. The course presents concepts and paradigms of molecular biology, biochemistry, clinical nutrition, epidemiology, anthropology, economics, program planning and administration, policy development, and ethics. The course uses Vitamin A as the example. Emphasis will be placed on the integration of factual and conceptual knowledge to solve nutrition problems in human societies.

NS 611 Molecular Toxicology (also Toxicology 611)
Spring. 3 credits. Prerequisite: Toxicology 610 and a full-year 400-level course in biochemistry or equivalent. S-U grades optional. TBA. S. Bloom, R. Dietert.
A study of the fundamental biochemical mechanisms of absorption, transport, metabolism, and excretion of drugs, carcinogens, and toxicants. Emphasis is placed on oxidative and conjugative pathways of metabolism and of environmental and nutritional factors that influence toxicant metabolism and disposition. Methods of evaluating in vivo and in vitro metabolism are also addressed.

[NS 612 Methods of Assessing Physical Growth in Children
Spring. 3 credits. Limited to graduate students and undergraduate students who have permission of the instructor. A previous course in statistics required. S-U grades optional. Lec T 1:25; lab, R 1:25–4:25; disc T 2:15–3:05. Not offered 2001–2002. J. Haas.
A laboratory course to train students in methods and techniques used to assess the physical growth and development of children. The methods explored are those applicable for field, community, and clinical studies and cover anthropometry, body composition, skeletal age, maturity indicators, physical fitness, and energy expenditure.]

NS 614 Topics in Maternal and Child Nutrition
Fall. 3 credits. Prerequisites: NS 331, and 222 or 347, Biological Sciences 311, and permission of instructor. T R 8:30–9:55. K. Rasmussen.
An advanced course on the role of nutrition during pregnancy and lactation. The feeding and growth of infants and children in health and disease is considered. Critical evaluation of current literature is emphasized via lecture, discussions, and a term paper.

NS 617 Teaching Seminar
Fall or spring. 0 credit. Limited to division graduate students and students who have permission of the instructor. S-U only. C. Bisogni, D. Way.
Individualized instruction focusing on development of teaching skills for guiding classroom learning in lecture, discussion, and laboratory settings. Preparation of content, presentation, and interaction techniques and evaluative methods are emphasized in relation to the student's specific teaching assignment. Videotaped simulations provide opportunity for practice and analysis of teaching behaviors.

NS 618 Teaching Experience
Fall or spring. 0 credit. Limited to division graduate students and students who have permission of instructor. S-U only. C. Bisogni.
Designed to provide experience in teaching nutritional sciences by direct involvement in college courses under supervision of a faculty member. The aspects of teaching and the degree of involvement vary, depending on the needs of the course and the experience of the student.

NS 619 Field of Nutrition Seminar (also AN SC 619)
Fall or spring. 0 credit. S-U only. M 4:00. Faculty and guest lecturers.
Lectures on current research in nutrition.

NS 620 Food Carbohydrates (also Food Science 620)
Spring. 2 credits. Prerequisites: Biological Sciences 330 or equivalent. Letter grades only. T R 10:10. Offered alternate years. Not offered 2002–03. J. Brady, B. Lewis.
A consideration of the chemistry of carbohydrates, including sugars and complex carbohydrates (starches, pectins, hemicelluloses, gums, cellulose, and glycoconjugates). Emphasis is placed on intrinsic chemistry, functionality in food systems, and changes occurring during food processing and storage.

NS 626 Special Topics in Food
Fall. 2 credits. TBA. B. Lewis.
This course provides a discussion of current research on specific topics related to functional foods and nutraceuticals/phytochemicals.

NS 630 Anthropometric Assessment
Spring. 1 credit. Prerequisite: NS 331 or equivalent and permission of the instructor. 5 weeks only. W 1:25–4:25. J. Haas.
Topics covered in this lecture/lab course are: biological basis of anthropometry for nutritional status assessment, quality control of anthropometric data, applications to special groups (infants, children, adolescents, pregnant women, and elderly), statistical analysis and presentation of anthropometric data, references standards and interpretation, measurement techniques of anthropometry, and body composition assessment.

NS 637 Epidemiology of Nutrition
Spring. 3 credits. Limited to graduate students. Prerequisites: Biometry 601 and concurrent registration in Biometry 602 or equivalent knowledge. Basic knowledge about the nutritional aspects of growth and development and about nutritional biochemistry. TBA. J-P. Habicht.
This course covers principles of nutritional epidemiology, impact assessment of nutrition intervention programs, and nutritional surveillance. Principles of using nutritional information in decision making are presented. The course shows how the biochemistry and physiology of nutrition can be related to epidemiological assessment and research strategies.

NS 638 Epidemiology of Nutrition Seminar
Spring. 3 credits. Reserved for graduate students planning field intervention studies; by permission of instructor. Prerequisite: NS 637. TBA. J-P. Habicht.
Covers the meta-analysis, design, measurement, and analytic issues involved in developing, implementing, and analyzing studies of field interventions with nutritional impact.

NS 639 Epidemiology Seminar (also Statistics and Biometry 639)
Spring. 0–1 credit. Limited to graduate students; others by permission of instructor. Contact P. Cassano 255–7551 for permission and credit information. S-U grades only. M 12:20. P. Cassano.
This course will develop skills in the preparation and interpretation of epidemiological data by discussing current research topics and issues.

NS 640 Social Science Theories in Nutrition
Fall. 3 credits. Limited to 20 graduate students. T R 10:10–12:05. J. Sobal.
Social science theories and paradigms from sociology, psychology, anthropology, economics, political science, geography, and history that contribute to understanding food, eating and nutrition will be discussed to understand how theories apply to nutrition topics, issues, and problems.

NS 644 Community Nutrition Seminar
Fall and spring. 1 credit. S-U only. Fall M 11:15, spring M 12:20. A. Gillespie and Cornell Community Nutrition faculty.
This seminar, sponsored by the Cornell Community Nutrition Program, focuses on research and program presentations in community nutrition, and related fields. Cornell faculty, graduate students, and invited outside speakers present research proposals, results from ongoing research, theoretical bases for research, program evaluations, and discuss current programs and issues in community nutrition. The format varies but always includes discussion by participants.

NS 646 Seminar in Physicochemical Aspects of Food
Spring. 1–3 credits. Prerequisite: a college course in organic chemistry or biochemistry. S-U grades optional. T R 1:25–2:40. B. Lewis, B. Parker.
An introduction to physicochemical aspects of food, for graduate students who have had limited or no work in this area. The seminar uses the lectures of NS 345 as a basis for supplementary readings and critical review of research on selected topics.

NS 650 Assessing Food and Nutrition in a Social Context
Fall. 4 credits. Prerequisite: course in Social Sciences. S-U grades only. T R 1:25–2:40. D. Pelletier, G. Pelto.
Food and nutrition problems in developed and developing countries may manifest themselves in biological or functional terms, but their causes and solutions ultimately are rooted in the socio-political world. This course provides multidisciplinary perspectives and some community experiences needed to assess and analyze the social context of nutrition problems. The course is relevant to developed and developing countries and to research and practice related to community nutrition as well as nutrition policy.

NS 651 Food and Nutrition Action in a Social Context
Spring. 3 credits. Prerequisites: at least 1 course in social sciences; NS 650 strongly recommended. S-U grades only. T R 1:25–2:40. D. Pelletier, G. Pelto.
This course builds upon the perspectives developed in NS 650. It provides a framework for combining socio-political considerations and analytical criteria in the planning, implementation, and evaluation of nutrition actions at community and policy levels. Case studies from the United States and developing countries are used extensively for examining a wide range of nutrition actions from the perspective of this integrated framework.

NS 660 Special Topics in Nutrition
Fall or spring. 3 credits maximum each term. Registration by permission of the instructor. Division faculty.
Designed for students who want to become informed in any specific topic related directly or indirectly to nutrition. The course may include individual tutorial study, experience in research laboratories, a lecture series on a special topic selected by a professor or a group of students, and/or selected lectures of another course already offered. Topics may be changed so that the course may be repeated for credit.

NS 680 International Nutrition Problems, Policy, and Programs
Spring. 3 credits. Prerequisite: permission of instructor. T R 11:15–12:30. Offered alternate years. Not offered 2002–2003. M. Latham.
Designed for graduate students who want to learn about the important nutritional problems of developing countries. The major forms of malnutrition related to poverty and their underlying causes are discussed. Emphasis is placed on programs and policies that can assist poor countries and communities to improve their nutritional and health status.

NS 685 Empirical Methods for the Analysis of Household Survey Data: Applications to Nutrition, Health, and Poverty (also ECON 771)
Spring. 3 credits. Prerequisites: introductory microeconomics, intermediate statistics (through multiple regression), or instructor's permission. M W 2:55–4:10. D. Sahn.
This course examines the role of government policy in alleviating poverty, food insecurity, and malnutrition in developing countries. Topics covered include methodologies for economic policy analysis of time use and food acquisition behavior, the "production" of nutritional outcomes, and the role of price policy and markets. Course readings draw largely on examples from Africa and Asia.

NS 690 Trace Element and Isotopic Analysis (also Chemistry 628)
Spring. 3 credits. Primarily for graduate students and advanced undergrads. Prerequisite: Chemistry 288 or 390, 302 or Chemistry 208 and Mathematics 112, or permission of instructor. S-U grades optional. T R 11:15. Offered alternate years. Not offered 2002–03. J. T. Brenna.
Survey course in modern high precision isotope ratio mass spectrometry (IRMS) techniques and trace/surface methods of analysis. Topics include dual inlet and continuous flow IRMS, thermal ionization MS, inductively coupled plasma MS, atomic spectroscopy, ion and electron microscopies, X-ray and electron spectroscopies, and biological and solid state applications. The first five weeks of CHEM 628/NS 690 focus on IRMS instrumentation and are offered as a separate 1 cr. special topics course (NS660).

NS 698 International Nutrition Seminar
Fall and spring. No credit. No grades given. R 12:20–1:10. J-P. Habicht, E. A. Frongillo.
This seminar series consists of presentations by Cornell faculty and graduate students, and by invited outside speakers. Speakers cover a range of topics relating to nutritional problems, policy, and programs in the nonindustrialized countries.

NS 699 Special Topics in International Nutrition
Fall and spring. 3 credits maximum each term. Registration by permission of instructor. Faculty in International Nutrition Program.
This option is designed for graduate students, mainly those with a concentration in international nutrition, who wish to become familiar with some specific topic related to international nutrition that is not adequately covered in an existing course. It usually consists of tutorial study on an agreed topic. Because the topics change, the course may be repeated for credit.

NS 700 Current Topics in Toxicology (also Toxicology 698)
Fall or spring. 1–3 credits. S-U grades optional. TBA. Staff.
A discussion of the most current developments in various areas of toxicological research and testing. Faculty and students will participate jointly in evaluating research findings and provide seminars and discussion of such material. For information regarding the topic, instructor, location, and credit, contact the office of the Graduate Field of Environmental Toxicology or go to http://www.cFe.cornell.edu/icet/seminars.htm.

NS 702 Seminar in Toxicology (also Toxicology 702)
Fall or spring. 1 credit. S-U grades only. F 12:20. Staff.
The seminar program covers varied topics in biochemical, genetic, nutritional, veterinary, and regulatory toxicology, ecotoxicology, and environmental chemistry. Included are presentations of basic research studies, fundamental concepts, and research activities involving environmental problems of a toxicological nature. Presentations are given by speakers from Cornell and visitors.

NS 703 Seminar in Nutritional Sciences
Fall and spring. 1 credit. S-U grades only. T 12:20 or W 12:20. Division faculty.
Presentations of original articles pertinent to the Nutritional Sciences. Students will learn how to make professional presentations and how to critique the presentations given by others. In addition, students will read and learn how to interpret original articles published in a wide variety of journals.

[NS 707 Nutrition as an Integrating Discipline: Evaluation, Criticism, Application
Fall. 3 credits. Prerequisites: advanced graduate standing and permission of the instructor. 2-hour class period per week plus discussion and workshop. M 1:25–3:20. Not offered 2001–2002. M. Kazarinoff, K. Rasmussen.
The goal of this course is to provide an integrative capstone learning experience for advanced graduate students with majors or minors in nutrition. Groups of students will focus on a series of special problems in nutrition drawn from those currently faced by nutrition professionals. Special problems may involve assuming the role of consultants, expert committee members or peer-reviewers who are charged with answering questions or formulating recommendations related to research, programs, or policies.]

NS 899 Master's Thesis and Research
Fall or spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional. Division graduate faculty.

NS 999 Doctoral Thesis and Research
Fall or spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional. Division graduate faculty.

FACULTY ROSTER

Arion, William J., Ph.D., U. of N. Dakota. Prof.
Bensadoun, Andre, Ph.D., Cornell U. Prof., Nutritional Sciences/Physiology
Bisogni, Carole, Ph.D., Cornell U. Prof. and Associate Director for Academic Affairs
Brannon, Patsy, PhD., Cornell U. Professor and Dean, College of Human Ecology
Brenna, Thomas, Ph.D., Cornell U. Assoc. Prof.
Campbell, T. Colin, Ph.D., Cornell U. Jacob Gould Schurman Professor of Nutritional Biochemistry
Cassano, Patricia, Ph.D., U.of Washington. Asst. Prof.
Chen, Junshi, M.D., Peking Medical College, China. Adjunct Prof.
Combs, Gerald F. Jr., Ph.D. Cornell U. Prof.
Devine, Carol M., Ph.D., Cornell U. Asst. Prof.
Dollahite, Jamie, Ph.D., U. Texas. Assoc. Prof. and EFNEP Leader
Frongillo, Edward, Jr., Ph.D. Cornell U. Assoc. Prof.
Garza, Cutberto, M.D., Baylor College; Ph.D., MIT. Prof.
Gillespie, Ardyth, Ph.D., Iowa State U. Assoc. Prof.
Haas, Jere D., Ph.D., Pennsylvania State U. Director and Nancy Schlegel Meining Professor in Maternal and Child Nutrition
Habicht, Jean-Pierre, Ph.D., Massachusetts Inst. of Technology. James Jamison Professor of Nutritional Epidemiology
Kamp, Marie, MBA, Oklahoma City U. Lecturer
Kazarinoff, Michael N., Ph.D., Cornell U. Assoc. Prof., Nutritional Sciences/Biochemistry, Molecular and Cell Biology
Latham, Michael C., D.T.M.&H., U. of London (England). Prof.
Levitsky, David A., Ph.D., Rutgers U. Prof.
Lewis, Bertha A., Ph.D., U. of Minnesota. Assoc. Prof.
Manor, Danny, Ph.D., Albert Einstein College of Medicine. Assoc. Prof.
McCormick, Charles, Ph.D., North Carolina St. U. Assoc. Prof.

Joint Appointees

Bauman, Dale, Prof., Animal Science/ Nutritional Sciences
Miller, Dennis, Prof., Food Science/Nutritional Sciences

OFFICER EDUCATION

Military instruction began at Cornell University in 1868 under the provisions of the Morrill Act of 1862. Since that time, officer education has been highlighted by the construction of Barton Hall in 1914 and the establishment of a formal Reserve Officers Training Corps (ROTC) unit in 1917. The program evolves to keep pace with the latest military changes and emphasizes the development of leadership and managerial skills.

The Officer Education Programs prepare students for a commission as an officer in either the United States Army, Navy, Air Force, or Marine Corps. Each service program is headed by a senior military officer who also serves as a full professor on the Cornell faculty.

MILITARY SCIENCE

Lieutenant Colonel Robert Sova, Aviation (AV), United States Army, Professor of Military Science and Commanding Officer, U.S. Army ROTC Instructor Group

Major Brian Edholm, Military Intelligence, United States Army

Captain Richard Brown, Engineer, United States Army

Captain Michelle McKeown, Air Defense Artillery, United States Army

United States Army ROTC Program

The primary objective of the Army Officer Education Program at Cornell is to commission the future officer leadership of the United States Army. Intermediate objectives are to provide students with an understanding of the fundamentals of responsibility, integrity, and self-discipline, as well as an appreciation of the citizen's role in national defense. The application of the decision-making process to a variety of situations is given major emphasis as a valuable aid in developing leadership potential. These objectives are achieved through a program normally covering four years. A two-year program is available for those who qualify. The program includes specific courses in military science, more general academic subjects that assure a well-rounded education, practical training in leadership through participation in the Cadet Corps (including attendance at one five-week summer camp at Ft. Lewis, Washington), and the opportunity to participate in a number of extracurricular activities. This combination prepares the student for commissioning and effective performance in the many branches of the Army. This student's academic major, academic performance, leadership ability, personal desires, and the needs of the Army determine the branch of the Army into which the student is commissioned upon graduation.

Requirements for Enrolling

Applicants must be citizens of the United States and be able to obtain a Secret level security clearance prior to being commissioned as lieutenants. (Noncitizens may enroll in selected portions of the program.) Students must meet Army medical requirements. Overall sound mental and physical condition is essential; students are required to undergo periodic physical fitness tests. Enrollment and continuation in the program is subject to the approval of the Professor of Military Science. Enrollment in specific courses by students not formally enrolled in the program must be approved by course instructors. Contracted students must register for letter-grade military science classes and leadership laboratories for the purpose of commissioning into the United States Army.

Four-Year Program

The Four-Year Program is open to students in their freshman year or, with the approval of military and university authorities, to sophomores in a five-year degree program. Veterans of the Armed Forces of the United States and students entering Cornell with AROTC credit from secondary or military schools (Junior Division AROTC) may receive advanced standing, if qualified. Under the Four-Year Program students enroll in the Basic Course (Mil S I and II) during the first two years, and the Advanced Course (Mil S III and IV) during the next two years. A total of 12 credits of military subjects are taken. In addition, academic enrichment courses are required in such fields as written communications, computer science, and military history. All cadets attend a five-week camp, with pay, between their junior and senior years. All cadets participate in physical fitness training three days per week. Each year selected cadets are sent to the Army Airborne School, Winter Survival School, and Air Assault Course, depending upon availability and student standings within the ROTC program.

Basic Course (MIL S I and MIL S II)

Students in the first year of the Basic Course take one classroom course in military science in the fall and spring semesters, for which they receive academic credit depending upon their college. These courses include study of the U.S. organization for defense and principles and techniques of leadership and management.

Students also participate in leadership modules that include rappelling, orienteering, drill and ceremony, physical training, winter survival, rifle marksmanship, historical site visits, land navigation, interpersonal communication, and individual tactical training. These modules are designed to promote personal development and enrichment. While they do not receive academic credit for these activities, students may receive physical education credit. Typical freshman participation in Army officer education is 6 program-related hours per week.

In the fall of the second year, students take a two-credit course in American military history.

In the spring of the second year, students take a one-credit course in leadership theory and spend approximately two hours a week in practical leadership training, land navigation, and military skills.

Advanced Course (MIL S III and MIL S IV)

The Advanced Course of the Four-Year Program is open to students who have successfully completed the Basic Course and are accepted by the Professor of Military Science for further enrollment. It is also open to students who have gained appropriate advanced standing through either successful completion of Basic Camp, a six-week summer training camp, or prior military training. Students entering the Advanced Course must have the equivalent of four academic semesters remaining at Cornell or another degree-granting institution. Students must pass required physical and aptitude tests. In addition, the past performance and desire of each student is evaluated to determine potential for eventual commissioning.

When students are accepted for the Advanced Course or accept a scholarship, they sign a written contract with the U.S. government. Under the terms of the contract, they agree to complete the Advanced Course and to accept a commission if offered. Concurrently with the signing of the contract, students enlist in the United States Army Reserve.

Classroom study in the Advanced Course includes one military science course each semester on such subjects as leadership and management, small-unit tactics, and command and staff organization and functions. The two hours a week of practical leadership training continues, and between the junior and senior years all cadets attend a five-week advanced summer camp conducted at Ft. Lewis, Washington.

Scholarships

Scholarships are awarded on the basis of merit and may be available for two, three, or four years. AROTC scholarships are awarded each year to outstanding Basic Camp participants and students in the freshman and sophomore classes. Scholarships pay up to $17,000 toward tuition and mandatory fees. Scholarship cadets and Advanced Course cadets also receive between $200 and $400 a month for up to ten months a year. Scholarship cadets also receive $510 per year toward the cost of text books.

Commissioning

All students who successfully complete the Advanced Course, including the advanced summer camp, are commissioned as second lieutenants in the United States Army upon graduation.

Service Obligations

ROTC graduates may serve on Active Duty, in the Army Reserve, or in the National Guard, depending upon the needs of the Army and the leadership abilities of the cadet. Officers beginning active duty attend the Officer Basic Course (normally 10 to 16 weeks) of their assigned branch. Upon completion, officers

are assigned to a unit and location determined by the desires of the individual and the requirements of the Army. Officers selected for reserve duty attend the Officer Basic Course, after which they are released to reserve status.

ROTC graduates generally serve four years on active duty and four years in reserve status; however, some may serve eight years on reserve duty.

Choice of Branch

Cadets in the second year of the Advanced Course (normally the senior year) may specify the branch of the Army—such as Infantry, Armor, Field Artillery, Air Defense Artillery, Aviation, Corps of Engineers, Signal Corps, Military Police, Military Intelligence—in which they prefer to serve. They are notified in December of the branch to which they are assigned. Appointment in a chosen branch depends upon the student's academic and officer education performance, degree area, and the needs of the Army at that time.

Graduate Study

Active duty deferments, or educational delays, may be granted to individuals who want to attend graduate school at their own expense. Requests will be considered on the basis of the needs of the service. Admission to graduate school is the student's responsibility.

Benefits

Each cadet in the Advanced Course (Mil S III and Mil S IV) receives $200 a month for up to 10 months a year. While attending the advanced summer camp (between the junior and senior years), each cadet receives approximately $700. A cadet in the Two-Year Program receives the same payments as cadets in the Advanced Course and, in addition, receives approximately $700 for summer Basic Camp attendance before entering the Advanced Course.

Military Science Courses

All cadets take one course and a leadership laboratory each semester in military science. The number of hours a week spent in the classroom varies from semester to semester, as does the credit received for each course.

Freshman Year (MIL S I)

MIL S 101 United States Organization for Defense
Fall. 1 credit. Required. B. Edholm.
Students examine the U.S. defense structure in terms of organization, mission, personnel, and relationships among and between military forces and branches and departments of the government. The U.S. Army force structure is examined at all levels. The complexities and magnitude of operating the defense organization are studied to provide a framework for subsequent instruction. Students develop skills in conducting oral and written presentations.

MIL S 102 Leadership Theory
Spring. 1 credit. Required. B. Edholm.
This course allows students to develop a basic understanding and appreciation of theories of social and organizational psychology and behavior as they apply to the military setting. Attention is given to leader types, the source and exercise of authority, and the impact of varying styles of leadership, resource management, motivation, and organizational effectiveness. The student is instructed in the concepts of integrity, ethics, and professionalism. Classes on historical events and strategy are also presented.

Sophomore Year (MIL S II)

MIL S 222 Small Organizational Operations/Land Navigation
Spring. 1 credit. Required. Prerequisite: MIL S 102 or instructor approval. J. Lopez.
Students learn the basic principles of group dynamics at the level of the smallest military unit, the squad. Troop-leading procedures are introduced through case studies and role-playing exercises. Leadership theories introduced in MIL S 102 are examined in a variety of realistic settings. The practical application of behavioral theories is explored in the context of small military organizations. The course will also provide practical knowledge of the various forms of topographic representation. Students will use maps in terrain association and land navigation. Knowledge of topography is complemented by an orientation on significant environmental influences of physical, social, and climatic factors. Portions of the course offer experience in land navigation and orienteering.

MIL S 321 Armed Conflict in Society
Fall. 2 credits. Required. J. M. Keefe.
This course provides practical knowledge in American Military History. It is primarily an overview course designed to provide an understanding of the art and nature of warfare and particularly how warfare has affected the United States. The course consists of three primary areas of instruction with an emphasis on American military history. The first area of instruction addresses the art and theory of modern warfare. It analyzes America's first attempt at war, the American Revolution, and ends with the development of modern warfare under Napoleon Bonaparte. The second phase focuses on America at war in the nineteenth century. It places particular emphasis on the American Civil War and the strategy of annihilation versus the strategy of attrition. The final phase looks at warfare in the twentieth century and finishes with an analysis of the future of warfare for the military of the United States.

Junior Year (MIL S III)

MIL S 331 Theory and Dynamics of the Military Team
Fall. 2 credits. Required. R. Brown.
After an initial introduction to techniques of presenting briefings, students are provided with a broad understanding of the principles and application of teamwork in military organizations. Particular emphasis is given to the leadership responsibilities of the commander as the team coordinator. This course helps students develop an understanding of the roles and contributions of the various branches of the Army in support of the military team.

MIL S 332 Leadership in Small-Unit Operations
Spring. 2 credits. Required. Prerequisite: MIL S 331. R. Brown.
This course takes on the nature of decision making and the tactical application of the military team. Through the use of conferences and extensive practical exercises, students develop familiarity with the factors influencing a leader's decisions and the process of planning, coordinating, and directing the operations of military units through operation plans and orders.

Senior Year (MIL S IV)

MIL S 441 Leadership, Management, and Ethics for the Junior Military Officer
Fall. 2 credits. Required. J. M. Keefe.
This course provides an overview of the functions, responsibilities, and interrelationships among small-unit leaders, the commander, and the staff. Discussions focus on actions of small-unit leaders, communication skills, army operations, the logistical support of the army in the field, and the army training system. The course focuses on the dynamics of leadership in battle through the detailed analysis of a series of case studies. Just war theory, ethics, and professionalism are also addressed in a seminar fashion.

MIL S 442 Contemporary Military Environment
Spring. 2 credits. Required. J. M. Keefe.
A continuation of MIL S 441. Conferences and seminars examine the techniques of effective military leadership, with special attention given to professionalism and ethical considerations in the armed forces during both peacetime and conflict. Army operations and basic doctrine are also discussed. This is a capstone course designed to prepare the student for commissioning.

Practical Leadership Training

All Army Officer-Education Students

No credit is given for leadership training, but participation is required for successful completion of the AROTC program. Students receive physical education credit for the laboratory. Each semester, cadets register for the appropriate leadership laboratory, consisting of physical fitness training three times per week, two hours of military training each week, and one or two weekend training exercises per semester.

MIL S I Leadership Laboratory I

Fall.	Spring.
0 credits. S-U.	0 credits. S-U.
MIL S 151	MIL S 152

MIL S I cadets meet for two hours each week to learn a variety of military skills including rappelling, first aid, drill and ceremonies, weapons familiarization, and physical fitness training.

MIL S II Leadership Laboratory II

Fall.	Spring.
0 credits. S-U.	0 credits. S-U.
MIL S 251	MIL S 252

Cadets meet for two hours each week as members of the cadet organization to participate in practical leadership exercises. Types of practical activities include rifle marksmanship, orienteering, drill and ceremonies, signal communications, physical fitness training, first aid, tactics, and field exercises.

MIL S III Leadership Laboratory III

Fall. 0 credits.	Spring. 0 credits.
Required. S-U.	Required. S-U.
MIL S 351	MIL S 352

Cadets meet for two hours a week and ocassional weekends to prepare for a five-week summer camp that follows their junior year. Emphasis is placed on the development of individual practical and leadership skills. Cadets rotate through leadership positions to practice applying decision-making skills in a myriad of situations.

MIL S IV Leadership Laboratory IV

Fall. 0 credits. S-U. Required. MIL S 451

Spring. 0 credits. Required. S-U. MIL S 452

Senior cadets plan and operate the leadership laboratory programs for MIL S I–III cadets. The development of planning and supervisory skills is emphasized. Cadets have an opportunity to practice leadership skills developed during previous ROTC training and summer camp experiences. Includes two to three hours a week devoted to physical fitness.

Professional Military Education (PME) Requirements

In addition to the ROTC classes and leadership laboratories listed above, a number of courses are required as part of the contracted student's academic program. These courses are offered by the university and round out the student's professional education. The PME component of the ROTC program requires at least one college course in each of the following areas: communication skills, military history, and an introduction to computers. These courses must be completed prior to graduation and commissioning. Courses that meet these requirements are approved by the Professor of Military Science.

NAVAL SCIENCE

Captain J. Alley, United States Navy, Professor of Naval Science and Commanding Officer, Naval ROTC Unit

Lieutenant Colonel R. Minor, United States Marine Corps

Lieutenant S. Jordan, United States Navy

Lieutenant J. Lankford, United States Navy

Lieutenant J. Biondi, United States Navy

The objective of the Naval Officer Education Program is to prepare students for service as commissioned officers in the United States Navy or United States Marine Corps; this is done by supplementing undergraduate education with instruction in essential concepts of naval science and by fostering qualities of leadership, integrity, and dedication to country. The program is compatible with most undergraduate major fields of study, including five-year baccalaureate degree programs.

The program covers four years and combines specific courses in naval science and specified academic subjects. These courses supplement weekly professional development sessions in which the practical aspects of naval science and leadership procedures are stressed. It also includes at least one summer-at-sea period.

Though the Navy–Marine Corps Program has been designed to prepare future officers, naval science courses are open to all students at Cornell as space limitations allow.

Requirements for Enrollment

An applicant for the Naval ROTC program at Cornell must be a citizen of the United States. Applicants must have reached their seventeenth birthday by June 30 of the entering year and be less than 27 years of age on June 30 of the calendar year in which they are commissioned. Waivers of the upper age limit may be available for applicants who have prior active duty military service. Applicants must also meet physical and medical requirements. Interested students can visit the Naval ROTC Unit in Barton Hall or contact their local officer recruiter.

Programs

There are two programs: the Scholarship Program and the College Program. The two programs differ primarily in benefits given to the student.

Scholarship Program

The Scholarship Program provides approximately 1,000 scholarships in more than 60 universities nationwide to selected students who want to serve in the Navy or Marine Corps. Financial support is provided to students during college preceding the award of the baccalaureate degree.

Benefits

The program offers scholarships that provide *full tuition* and are not need-based. While on scholarship, students also receive money for instructional fees, textbooks, nonconsumable supplies, and a $200-a-month stipend for a maximum of 40 months.

Successful completion of the Scholarship Program leads to a commission in the Navy or Marine Corps Reserve. At Cornell University, over 90 percent of NROTC students have a scholarship. Students entering NROTC without a prior scholarship award are entitled to compete for two- or three-year scholarships controlled by the Chief of Naval Education and Training.

Entering the Scholarship Program

There are three ways to enter the Scholarship Program.

The first way is by applying to the national competition each year. This process entails filling out and submitting an appropriate application; being interviewed; having a physical examination; and applying to, and being accepted by, one of the colleges or universities throughout the country that offers an NROTC program.

The second way is by enrolling in the College Program at Cornell and being recommended by the Professor of Naval Science for a scholarship after at least one semester in the program.

The third way is by entering through the Two-Year Scholarship Program.

College Program

There are two College Programs available. Both lead to a commission in the Naval or Marine Corps Reserve.

Starting in the junior year, each of these programs provides textbooks for naval science courses, uniforms, and a subsistence allowance of $200 a month.

The regular College Program is four years long. Academic requirements for students in this program are somewhat fewer than those for scholarship students, as noted in the curriculum section of this booklet.

The Two-Year College Program begins the summer before the junior year; students attend a required program, with pay, at the Naval Science Institute in Newport, R.I.

Summer Training

Each summer, students in the Scholarship Program spend approximately four to six weeks on a Navy ship, or participate in a naval activity that may take place anywhere in the world, for on-the-job training. College Program students attend one summer training session of the same duration between the junior and senior years.

Active Duty Requirements

Scholarship midshipmen commissioned in the Navy or Marine Corps Reserve serve on active duty for a minimum of four years. College program midshipmen commissioned in the Naval or Marine Corps Reserve serve a minimum of three years. In somes cases, following commissioning, specialized training such as aviation or nuclear power will add additional active duty requirements.

Choice of Assignment

Graduates have the opportunity to request the duty they prefer upon graduation. These requests are given careful consideration, and every effort is made to assign newly commissioned officers to their duty of choice.

Among the assignments available are duties in naval aviation as either a pilot or naval flight officer, on submarines, and on surface ships. Other specialties, such as special warfare or medical service corps, may be available on a limited basis.

Marine Corps Options

The United States Marine Corps is an integral part of the Naval Services and is commanded by the Commandant of the Marine Corps. One-sixth of the NROTC scholarship students may be Marine selectees who will be designated Marine-option midshipmen. Upon successful completion of the program they will be appointed second lieutenants in the United States Marine Corps Reserve.

Marine-option midshipmen follow the same program as other NROTC midshipmen for the first two years. Beginning with the junior year, Marine-option midshipmen are taught Marine oriented courses by a Marine Officer Instructor. For First Class summer training (after the junior year), Marine-option students travel to Quantico, Virginia, where they undergo six weeks of intensive training known as the USMC Officer Candidate School. Upon commissioning the following year as second lieutenants, they are assigned to the Basic School at Quantico, Virginia. After the Basic School, the Marine officer is assigned duty in a variety of occupational fields. Among the duties available are infantry, aviation, artillery, tracked vehicles, engineering, communications, electronics, supply, administration, and computer science. The officer may serve on board naval vessels or at shore installations of the Marine Corps or Navy, either in this country or overseas.

The Marine Corps has a postgraduate training system similar in objectives and organization to that of the Navy. Marine officers selected for aviation receive flight training at the Naval Air Station, Pensacola, Florida, along with their Navy counterparts.

Curriculum

A student has three categories of requirements to fulfill as a midshipman. The first of these requirements is a weekly naval professional

development session each semester. The second requirement is a naval science course each semester. The last set of requirements consists of further courses prescribed by the Navy to meet the growing need for more and better technically educated junior officers.

Naval Professional Laboratories

NAV S 141–142, 241–242, 341–342, or 441–442

All students in the program participate in one 90-minute professional development session each week. The session is held from 2:30 until 4:00 on Wednesday afternoons, and consists of both drill and professional information briefings. Students gain experience in actual leadership situations and learn the fundamentals of seamanship, military formations, movements, commands, discipline, courtesies, and honors. During information briefings, special emphasis is given to applied leadership as it relates to the administrative and managerial aspects of a Navy or Marine Corps officer's duties.

Naval Science Courses

All Navy and Marine midshipmen take one naval science course each semester during their freshman and sophomore years. Navy-option students continue to take a naval science course each semester during their junior and senior years. Marine-option students have slightly different curriculum requirements for their junior and senior years.

Freshman Year (Navy and Marines)

NAV S 101 Fundamentals of Naval Science

Fall. No credit.

This course involves a study of fundamental aspects of naval science, this includes contributions to sea power, different warfare communities involved in the physical development of naval forces, and study of resource management and naval science prospects for the future. Naval uniforms, customs, and traditions are also covered.

NAV S 102 Sea Power and Maritime Affairs

Spring. 3 credits.

Discussions examine the history of the Navy as a force in diplomacy and an instrument of U.S. foreign policy. Relationships between Congress and the military for determining the national defense policy are also explored. An integrated examination of current events and issues lends historical perspective throughout the course.

NAV S 157 Principles of Sailing

Fall and spring. Physical education credit.

This is a course of instruction in basic sailing skills and safety principles. Students sail small boats on Cayuga Lake. Focus is on U.S. Navy Class B inshore skipper certifications.

Sophomore Year (Navy and Marines)

NAV S 201 Organizational Behavior and Small Group Processes

Fall. 3 credits.

The theme of the course is the "evolving role of the manager, organizational decision maker, and leader." The course begins by briefly covering the theoretical principles of management and progresses through practical skills used by managers and leaders. Lectures, reading assignments, films, and discussions provide students with an excellent opportunity to consider complex managerial and leadership issues. The goal of this course is for students to begin to develop a sound personal leadership philosophy that will enable them to more effectively accomplish the assigned responsibilities of leading men and women in today's demanding and high tech naval environment.

NAV S 202 Naval Ship Systems I (also Mechanical and Aerospace Engineering 101)

Spring. 3 credits.

An introduction to primary ship-systems and their interrelationships. Basic principles of thermodynamics, propulsion, mechanical operation, internal communications, electronics, ship structure, and other marine systems are covered.

Junior Year (Navy)

NAV S 301 Principles of Navigation (also Agricultural Engineering 305)

Fall. 4 credits.

An introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. This course covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, star identification, use of the nautical almanac, and study of tides and currents. Electronic navigation systems are discussed.

NAV S 302 Naval Operations

Spring. 3 credits.

The course covers the application of the nautical rules and maneuvering board in order to avoid collisions at sea. Other aspects of naval surface ship operations that are introduced include visual and electronic communications methods, tactical disposition of forces, ship handling theory, and deck seamanship topics.

Senior Year (Navy)

NAV S 401 Naval Ships Systems II (Weapons)

Fall. 3 credits.

The principles and theories used in the development of naval weapons systems are examined. Initially, extensive study is made of detection systems, especially radar and sonar, followed by discussions of ancillary systems for computing, stabilizing, tracking, and weapons control and delivery.

NAV S 402 Leadership and Ethics

Spring. 3 credits.

A variety of topics important to the naval officer for both professional and managerial development are reviewed. The material is designed to provide the midshipman with an understanding and appreciation of leadership and ethics in preparation for assignments in the naval service. Through the use of lectures, case studies, and role playing, the student will learn various aspects of naval leadership and ethical decision making. Marine-option students may also take this course.

Junior or Senior Year (Marine Options)

NAV S 310 Evolution of War

Spring. 3 credits.

A study of warfare that examines the relationship of military strategy to geography, economics, sociology, technology, and national political realities. This course includes study of the evolution of warfare, including principles of war, weapons, and associated equipment, and the effects of nuclear weapons and guerrilla warfare on traditional concepts of national strategy.

NAV S 410 History of Amphibious Warfare

Spring. 3 credits.

The history of the development, theory, techniques, and conduct of amphibious operations from 490 B.C. to the present. Special emphasis is placed on amphibious operations conducted in the central Pacific during World War II and on the future of amphibious operations.

Other Required Courses

Navy–Option Scholarship Program

To be eligible for a commission in the United States Navy, midshipmen must successfully complete all the requirements for a baccalaureate degree in any field of study offered by Cornell University, and complete courses in the following subjects (specified courses to be approved by the Professor of Naval Science):

American military affairs or national security policy (one semester)

English (one year)

calculus (one year)

calculus-based physics (one year)

computer science (one semester)

The calculus requirement must be satisfied by the end of the sophomore year and the physics requirement by the end of the junior year.

Although free choice of academic majors is permitted, students are encouraged to pursue majors in engineering and the physical sciences so that they may be best prepared to meet the technological requirements of the modern Navy.

Navy–Option College Program

Navy–option College Program students must complete one year of college-level study in mathematics, physical science, and English as a prerequisite for commissioning. The mathematics course must be completed by the end of the junior year; the physical science course by the end of the senior year. In addition, one term of computer science is required. College Program students who desire entry into the Navy-option Scholarship Program should fulfill all of the requirements applicable to Navy-option scholarship students if they wish to be eligible for a scholarship controlled by the Chief of Naval Education and Training.

Marine Option

Any midshipman, in either the Scholarship Program or the College Program, who completes all of Cornell University's degree requirements in any academic major, is eligible for a commission in the U.S. Marine Corps or U.S. Marine Corps Reserve. Marine-option students take the same naval science courses and naval professional laboratories as Navy-option students for the freshman and sophomore years. During the junior and senior years, Marine-option students have slightly different naval science course requirements than their Navy-option counterparts. Two semesters of courses (a minimum of 3 hours each) in the area of American Military Affairs or National Security Policy are

required. One semester of a modern foreign language must be completed.

Extracurricular Activities

The NROTC midshipman at Cornell is offered a broad range of activities, including sail training and a comprehensive intramural sports program. Midshipmen participate in a myriad of social events, including the annual Navy/Marine Corps Birthday Ball.

DEPARTMENT OF AEROSPACE STUDIES

Colonel James L. Wilson, Jr., United States Air Force, Professor of Aerospace Studies and Commander, Air Force ROTC Detachment 520

Captain April L. Murawsky, United States Air Force

Captain Michael Mowry, United States Air Force

The objective of the Air Force Officer Education Program at Cornell is to prepare men and women for positions as officers in the United States Air Force. The program is designed to teach students about the mission and organization of the Air Force, the historical development of airpower, leadership, and management. Students study national security policy and the role of the military in a democratic society. This program includes specific courses in aerospace studies and practical leadership laboratories.

Requirements for Enrollment

The Air Force Officer Education Program is open to any qualified undergraduate or graduate student enrolled in any major field of study. An applicant must be a United States citizen to become a commissioned officer. Noncitizens may enroll and will receive certificates acknowledging completion of the course but cannot receive a commission.

All applicants receive physical examinations at no cost and must meet certain physical requirements to be accepted. Students who are interested in qualifying for flying categories (pilot or navigator) must meet more stringent physical requirements. In addition, students enrolled in the commissioning program must meet specified physical fitness requirements.

Though the program is designed to prepare future Air Force officers, the Department of Aerospace Studies' academic courses are open to all students at Cornell.

Four-Year Program

The Four-Year Program is open to all qualified freshmen. Sophomores may also enter a condensed version of the four-year program in coordination with the AFROTC staff.

Veterans of the U.S. armed forces and students entering Cornell from military schools may receive advanced standing, subject to approval by the Professor of Aerospace Studies.

The Four-Year Program consists of General Military Courses (GMC) and Professional Officer Courses (POC). For scholarship cadets, the first year of the GMC carries no military commitment, and students may withdraw at any time. For nonscholarship cadets, both years of the GMC carry no military commitment, and students may withdraw at any time.

General Military Course

Students in General Military Courses (GMC) take a 1 credit Aerospace Studies course each semester. During the freshman year, the student examines the organization and mission of the United States Air Force and the environment of the Air Force officer. In the sophomore year, the student studies the history and development of American air power. In both years, officership and professionalism within the United States Air Force are emphasized.

Students also spend two hours a week in a leadership laboratory. Leadership laboratories provide cadets with an opportunity to put into practice the skills they have learned in their aerospace studies classes. These laboratories focus on the development of officer qualities through such activities as drill and ceremonies, group leadership problems, confidence-building exercises, and guest lecturers. In addition, all students participate in summer field training for four weeks between their sophomore and junior years.

Professional Officer Course

The Professional Officer Courses (POC) provide a two-year advanced program of instruction. Students who are accepted for the POC must have successfully completed or validated the basic course and must meet academic and physical standards. Each cadet accepted into the POC must sign an agreement to complete the program and accept, if offered, a commission in the United States Air Force upon graduation.

Classroom study in the POC is a 3 credit course each semester. In the junior year, cadets study Air Force leadership and management at the junior officer level. During the senior year, cadets study the elements of national security and the military's role in American society. Leadership laboratory requires two hours a week in the junior and senior years. In leadership laboratory, cadets are exposed to advanced leadership experiences and apply principles of leadership learned in the classroom.

Two-Year Program

The Two-Year Program consists of the last two years (Professional Officer Courses) of the regular Four-Year Program plus a five-week summer training course preceding enrollment.

The Two-Year Program is open to all qualified students with two years of academic study remaining at Cornell (graduate or undergraduate) or at schools supported under a crosstown agreement. Applications are accepted from October through April of the academic year preceding the applicant's planned entry into the program. Selectees are then required to complete a five-week summer training program at government expense.

Scholarships

The Air Force offers three- and four-year scholarships to high school seniors and one-, two- and three-year scholarships to college students. Four-year scholarships are offered on a competitive basis in specified majors to high school seniors. Scholarship information can be obtained from a high school guidance counselor, from Air Force ROTC officers at Cornell (AFROTC phone number is 607–255–4004), from a local Air Force recruiter, or from the Air Force ROTC scholarship section, Maxwell AFB, AL 36112–6106, 334–953–2093, extension 2093. The deadline for submitting a four-year scholarship application is December 1 of the year preceding the academic year in which a student wants to enter the program. Students should apply early.

Scholarships for two and three years. Applications for these scholarships should be made to the Professor of Aerospace Studies during the freshman, sophomore, or junior years of college. All selections are based on the student's major, scores achieved on the Air Force Officer Qualifying Test, the student's overall grade point average, and the recommendation of the Professor of Aerospace Studies. Scholarships include amounts ranging from $3,000 per year to full tuition, fees and books, and provide a $200 monthly nontaxable allowance during the school year. Scholarships do not include the cost of room and board.

Fees

An initial uniform deposit of $50 is required on entry into AFROTC. Prior to commissioning, cadets may purchase uniforms with their deposit or return uniforms and receive their deposit back.

Benefits

All cadets in the advanced program (POC)—whether they are on scholarship or not—receive a $200-a-month, nontaxable subsistence allowance during the academic year. During the four- or five-week summer field training (see below), each cadet receives a pay allowance plus an allowance for travel to and from the field site. Textbooks and supplies required for Department of Aerospace Studies courses are provided.

All cadets are eligible to participate in AFROTC-sponsored field trips made to Air Force bases throughout the country as well as voluntary summer programs for professional development. Scholarship and advanced cadets (POC) are entitled to space-available travel on Air Force aircraft flying within the continental United States.

Field Training

There are two types of field training: a four-week course for cadets in the Four-Year Program and a five-week course for Two-Year Program applicants. Students in these programs normally attend field training between their sophomore and junior years.

Field training is designed to stimulate the development of military leadership skills through meaningful experiences. The curriculum consists of aircraft, aircrew, and survival orientation; junior officer training; physical training; small arms training; a social-actions program; and supplemental training. The five-week training program includes sixty hours of Air Force ROTC academic course work that substitutes for the freshman and sophomore Aerospace Studies courses.

Cadets may also volunteer for one of many Advanced Training Programs. These programs include but are not limited to the Professional Development Program, Air Force Academy Free-Fall Parachute Training, the British Royal Air Force (RAF) Exchange Program, Research and Development Experiences, the Academy Soaring Program, and Army Airborne Training.

Commissioning Obligations

All students who successfully complete the AFROTC advanced program (POC) are awarded a baccalaureate degree, tendered a commission, and enter the Air Force as second lieutenants.

Second lieutenants commissioned in nonflying categories are required to serve on active duty for four years. Pilots are required to serve on active duty for ten years after completing flying training. Navigators and Air Battle Managers serve six years after completing training.

Air Force Careers

The Air Force assigns new officers to a career field based on mission requirements, educational background, and officers' preferences. Students in the engineering-scientific category may be assigned to practice in their specialty in research and development, communications, electronics, aeronautics, astronautics, the biological sciences, computer design and maintenance, meteorology, space, or other engineering and scientific fields. Graduates in the nontechnical category can anticipate assignments in manpower management, information management, logistics, law enforcement and investigation, intelligence, personnel, transportation, accounting and finance, and other career fields.

Any undergraduate major is suitable for those who are qualified and interested in entering the space and missile career fields or in becoming pilots, navigators, or air battle managers. After completion of flying training, personnel are assigned to a specific type of aircraft.

Curriculum

Students in the Four-Year Program are required to take all courses listed below. Students in the Two-Year Program are required to take all of the courses listed for the junior and senior years. There are no prerequisites for any Aerospace Studies courses.

Freshman Year

AIR S 161 The Foundations of the United States Air Force I
Fall. 1 credit.
This is a survey course designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps. Featured topics include: mission and organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer opportunities, group leadership problems, and an introduction to communication skills. Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with followership experiences.

AIR S 162 The Foundations of the United States Air Force II
Spring. 1 credit.
Continuation of AIR S 161.

Sophomore Year

AIR S 211 The Evolution of USAF Air and Space Power I
Fall. 1 credit.
This course is designed to examine general aspects of air and space power through a historical perspective. The course covers a time period from the first balloons and dirigibles to the role of air power in Bosnia–Herzegovina. Historical examples are provided to illustrate the development of Air Force capabilities and functions to demonstrate the evolution of what has become today's USAF air and space power. The course examines several fundamental truths associated with war in the third dimension, and provides students with an understanding of the general element and employment of air and space power from an institutional, doctrinal, and historical perspective. In addition, students will continue to discuss the importance of the Air Force core values.

AIR S 212 The Evolution of USAF Air and Space Power II
Spring. 1 credit.
Continuation of AIR S 211.

Junior Year

AIR S 331 Air Force Leadership Studies I
Fall. 3 credits.
This course is a study of the leadership, quality management fundamentals, professional knowledge, Air Force personnel and evaluation systems, ethics, and communication skills required of an Air Force junior officer. Case studies are used to examine Air Force leadership and management situations; they demonstrate practical applications of the concepts being studied. A mandatory leadership laboratory complements this course, providing advanced leadership experiences in officer-type activities, and giving students the opportunity to apply leadership and management principles of this course.

AIR S 332 Air Force Leadership Studies II
Spring. 3 credits.
Continuation of AIR S 331.

Senior Year

AIR S 401 National Security Affairs/ Preparation for Active Duty I
Fall. 3 credits.
This course is concerned with the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Other topics include the military as a profession, officership, military justice, civilian control of the military, preparation for active duty, and current issues affecting military professionalism. Continued emphasis is given to refining communication skills. A mandatory leadership laboratory complements this course by providing advanced leadership experiences, giving students the opportunity to apply the leadership and management principles described in this course.

AIR S 402 National Security Affairs/ Preparation for Active Duty II
Spring. 3 credits.
Continuation of AIR S 401.

Leadership Laboratory Courses

All Air Force cadets spend two hours a week throughout the academic year in a leadership laboratory, for which no academic credit is given. Occasionally laboratories are held at times other than the normally scheduled period. All cadets are expected to participate in a formal dinner and to meet minimum physical fitness and weight standards each semester. Leadership lab is open to students qualified to compete for an Air Force commission.

AIR S 141–142 Initial Military Experiences
Introduction to the responsibilities, life, and work of an Air Force officer. Basic knowledge of drill and ceremonies, military courtesies, and the wearing of the uniform. This course includes a field trip to a local military installation.

AIR S 241–242 Intermediate Military Experiences
This course is designed to help students develop skill in giving commands for drill and ceremonies. They are also introduced to the Air Force base environment in which the officer functions. Career areas available based on academic majors are described. Students participate in military drills and ceremonies, and go on a field trip to a local military installation.

AIR S 341–342 Junior Officer Leadership Experiences
Cadets assume leadership responsibilities similar to those of a junior officer. Emphasis is on the importance of applying effective human relations skills in dealing with superiors, peers, and subordinates. Cadets also gain insight into the general structure and progression patterns of selected Air Force officer career fields.

AIR S 441 Advanced Leadership Experiences
Cadets assume command leadership responsibilities to operate a military organization. Cadets apply effective leadership and managerial techniques with individuals and groups, and participate in self-analysis of leadership and managerial abilities.

AIR S 442 Precommissioning Laboratory
Factors that facilitate transition from civilian to military life are reviewed. The need for military security, base services and activities, personal finances, travel regulations, and social obligations are introduced.

DEPARTMENT OF PHYSICAL EDUCATION AND ATHLETICS

ADMINISTRATION

Alan E. Gantert, director

COURSES

The courses and fees described in this catalog are subject to change or cancellation at any time by official action of Cornell University. For current fee information on physical education courses call 255–4286; for outdoor education courses, call 255–6415 (ext. 2).

Enrollment in any course is limited by the space available. Other restrictions are included in the course description. Most courses are coeducational. The specific time and place of class meetings, as well as information about fees, are available at the physical education course registration or may be found on "Bear Access," a package of software for accessing a variety of network services at Cornell. Course fees are billed through the Office of the Bursar.

Additional course offerings may be listed at registration, as the curriculum is frequently reviewed and changed.

Aquatic Courses

Lifeguard Training
Fall and spring. Fee charged. Prerequisite: swimming test consisting of 500 yards, demonstrating 3 strokes, treading water without the use of hands, and retrieving a brick from 7 feet of water. 3 classes a week.
An American Red Cross certification course. Practice and execution of lifeguarding first aid and CPR skills and techniques. Certification is awarded in lifeguarding, first aid, and CPR upon satisfactory completion of the course.

Lifeguard Training Instructor
Spring. Fee charged. Prerequisites: current Red Cross ICT or instructor card, written and skill tests in lifeguarding, first aid, and CPR techniques. Students must not miss first class. 2 classes a week.
American Red Cross lifeguarding instructor and CPR-FPR certifications are awarded upon successful completion.

Scuba, Open-Water
Fall, spring, and summer (6 weeks). Fee charged.
Program includes classroom work, skill training in a pool, and open-water training in Cayuga Lake. P.A.D.I. open water certification awarded upon successful completion.

Scuba, Advanced Open-Water
Fall and spring. Fee charged.
Advanced-level open-water training in Cayuga Lake. For those who have completed the open-water course.

Rescue Diver
Fall and spring. Fee charged.
Advanced course for scuba divers. For those who have completed Advanced Open-Water Scuba certification and are interested in learning rescue and safety techniques.

Dive Master
Fall and spring. Fee charged.
Advanced-level scuba course open only to those who have completed the Rescue Diver course. NOTE: This is a long, time-consuming course, which requires the student to be in good physical and swimming shape.

Specialty Scuba Diving
Fall and spring. Fee charged.
Courses offered in the following specialty diving areas: navigation, search and recovery, night diving, deep diving, underwater photography, wreck, multi-level, boat, tropical fish identification and buoyancy control, and underwater naturalist.

Scuba Diving Trips
Spring. Fee charged.
This course is offered during the spring intersession period. Scuba trips to various destinations such as the Bahamas. Locations change from year to year. See the information sheet at the registration table.

Swimming, Introduction to (ARC)
Fall, spring, and summer. (6 weeks).
Instruction and practice in skills leading to passing the basic swimming proficiency test.

Swimming, Advanced Beginning (ARC)
Spring.
Ideal for all who have taken one term of Beginning Swimming, regardless of whether the test was successfully completed. Areas of special emphasis are the crawl stroke and rotary breathing, back crawl, elementary backstroke, diving, treading water, and underwater swimming. The primary objective is to strengthen the student's confidence and competence.

Swimming, Intermediate (ARC)
Fall and spring.
Practice of basic skills and five basic strokes; front crawl, back crawl, elementary backstroke, breaststroke, sidestroke.

Swimming, Advanced (ARC)
Fall and spring.
Practice of nine strokes: front crawl, back crawl, elementary backstroke, breaststroke, inverted breaststroke, sidestroke, overarm sidestroke, trudgeon, and butterfly.

Swimming Conditioning
Fall and spring. Prerequisite: reasonable swimming ability.
Introduction to, and practice of, different training methods. Final objective: to swim 2,500 yards during class period. Primarily a conditioning and not an instructional course.

Water Safety Instructor
Spring. Fee charged. Prerequisite: passing of written and skill water tests which are given on the first day.
American Red Cross water safety instructor certification is awarded upon satisfactory completion of the course. This is not a course for a casual participant. Approximately 45 hours of work is required.

Bowling Courses

Bowling
Fall and spring. Fee charged.
For the beginning and intermediate bowler. Shoe rental is included in the fee.

Dance Courses

Develop flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with rhythmic accuracy, clarity of body design, and fullness of feeling. Auditions are required for admission to all advanced courses, since they require the mental and physical ability to perform more-complex phrases in various styles.

Ballet I
Fall and spring.

Ballet II
Fall and spring.

Ballet III
Fall and spring.

Ballet IV
Fall and spring.

Ballroom Dancing
Fall, spring and summer. Fee charged. One class a week, Helen Newman Hall.
Students and their partners must sign up at course registration.
Includes instruction in the waltz, swing, cha cha, calypso, tango, and others.

Belly Dancing I
Fall and spring. Fee charged.
Belly dancing is an exciting Middle Eastern folk art that can help in the development of flexibility, body awareness, and overall body tone. The class will begin with warm-ups and continue with basic movements and rhythms, then put them together in a dance to music of the Middle East.

Belly Dancing II
Spring. Fee charged.
Advanced Belly Dance movements and combinations which include putting basic and advanced movements to the Beledi, Masmouodi, and Karsilma dance rhythms of the Middle East. A drum solo, taqsim (fluid, graceful movements of the arms and hands), floor work (level changes with the dance), and how to play finger cymbals are also a part of this class.

Introduction to Swing Dance
Fall and spring. Fee charged.
No partners are needed. Beginners can expect to develop significant capacity for enjoyment of two forms of swing dance: jitterbug and street boogie. Partners will be rotated throughout the course. Effort will be made at registration to equalize male and female ratios.

Swing Dance II
Fall and spring. Fee charged.
A class for those who have taken the introductory course.

Latin Dance
Fall and spring. Fee charged.
Partner sign-in required. This is an introductory course that will teach salsa, mambo, Latin and meringue. Emphasis on listening, feeling, and expressing Latin rhythms with precise detail and technique.

Modern Dance I (also THETR 124)
Fall and spring.

Modern Dance II (also THETR 232)
Fall, spring, and summer (6 weeks).

Modern Dance III (also THETR 306)
Fall and spring.

Modern Dance IV (also THETR 308)
Spring.

Equitation Courses

Basic, Intermediate, Advanced
Fall, spring, and summer (6 weeks). Fee charged.
All riding classes are held at the Cornell Equestrian Center located on Pine Tree Road near East Hill Plaza. Detailed information will be offered by the equitation staff at the registration sign-up table. Basic—never ridden; Intermediate I—completed basic with knowledge of walk/trot/canter; Intermediate II—walk/trot/canter with control over 2' course; Advanced—strong jumping/dressage skills with experience hunting/showing/eventing. Students must fill out a release form to participate in any riding class.

First Aid/CPR Courses

Emergency Response
Fall and spring. Fee charged.
This advanced-level first aid course is the most comprehensive available without NYS certification. Sixty hours of training includes CPR for the Professional Rescuer and oxygen administration, as well as many of the first aid skills taught in a basic EMT class. American Red Cross certification is valid throughout the United States and is accepted by many states as a Certified First Responder equivalent. Certification is valid for three years. This certification would be appropriate for camp medical directors and those who work closely with pre-hospital medical staff.

NYS Emergency Medical Technician—Basic
Two-semester course. Fee charged.
This intensive 130-hour course is taught throughout both the fall and spring semesters. Course includes training in CPR for the Professional Rescuer, oxygen administration, airway management, fracture management, bleeding control, expanded patient assessment, spinal immobilization, medical anti-shock trousers, and defibrillation. Students will qualify for the NYS EMT Certification Exam upon successful completion of this course. Rigid attendance and participation requirements are strictly enforced.

NYS Emergency Medical Technician—Intermediate
Two-semester course. Fee charged.
A class for those who are certified as a Basic Emergency Medical Technician.

Fishing Courses

Fly Fishing and Basic Flytying Techniques, Level I
Fall and spring. Fee charged.
Learn the art of tying several of your own artificial flies while you learn the art of fly casting. Students must have a valid NYS fishing license and their own wader boots. All other materials provided.

Introduction to Freshwater Angling
Fall. Fee charged.
This course acquaints the student with freshwater spinning, casting and fly fishing equipment, tackle, and techniques through on-the-water experiences. It also seeks to promote an awareness of the angling opportunities that exist close to Cornell and in the Finger Lakes region of New York. The class consists of an orientation and outings to various locations around the area such as Cayuga Lake and the Susquehana River.

Fitness Courses

Aerobic Dance
Fall, spring, and summer (6 weeks). Fee charged.
A dance program designed to keep the cardiovascular system in top shape by making the body demand increased amounts of oxygen.

Body Sculpting
Fall and spring. Fee charged.

Cardio Crazy
Fall and spring. Fee charged.
The course is designed to acquaint the student with the various types of indoor aerobic training equipment, rowing machines, tread mills, stair machines, exercycles, and Nordic Traks, and to teach them to design a personal fitness program incorporating the equipment.

8 O'Clock Rock
Fall and spring. Fee charged.
This class combines the best of the principles of weight training and the cardio training in the 8 O'Clock Rock Class.

Aerobic Instructor Training
Fall and spring. Fee charged.
The course is designed to train the student to teach aerobics and prepare for the A.F.A.A. Primary Aerobic Instructors Certification Test.

Fitness and Conditioning
Fall and spring.
Physical fitness program that embodies features of stretching exercises, weight lifting, and jogging. Students work on their individual training needs.

Jogging
Fall and spring.
This course will cover running and stretching techniques. A conditioning program with the objective to develop the capacity to run three miles after 12 weeks of training.

Jogging Tours—Distance Running
Fall and spring.
A course designed for the intermediate runner who can run an average of 3 miles in 30 minutes. Most tours will be 3–4 miles long and will go through campus and nearby countryside.

Triathlon
Fall and spring.
Designed to acquaint students with the components of, and conditioning for, triathlon (running, swimming, and bicycling).

Wellness and Fitness
Fall and spring. Fee charged.
"Here's to a Healthier You"—a wellness experience for the busy student. This course will assess the student's physical fitness status, blood cholesterol levels, and overall lifestyle health habits. Each student will receive an individual exercise prescription and have access to the Wellness Program fitness room in Helen Newman Hall. Lectures on nutrition and stress management are also presented. This course has been made possible through the generosity of the Bateman family in memory of Ms. Dorothy Bateman, Cornell's first director of women's sports and physical education (1920 to 1962).

Golf Courses

Golf, Introduction to
Fall and spring. Fee charged.
A PGA program of instruction is geared to all levels of experience and ability. The objective is to give beginners enough skill to play, and to give more-advanced players direction in their thinking, practice, and play, through a thorough understanding of fundamentals. Equipment is furnished.

Golf, Recreational
Fall and spring. Limited to students who are experienced golfers. Fee charged.
Students must provide their own clubs. A minimum of ten rounds of nine holes each must be played to receive credit. Fee covers a semester's membership.

Gymnastics Courses

Gymnastics, Introduction to
Fall and spring.
Introduction to gymnastics deals with a majority of the Olympic events. The course will focus upon beginner-level skills and is open to both male and female participants.

Ice Skating Courses

Skating, Introduction to
Fall and spring. For beginning to intermediate skaters. Fee charged.
Students provide their own skates or rent them at Lynah Rink. Course will cover forward and backward skating, turns, and stops.

Figure Skating, Beginning, Intermediate, and Advanced Levels
Fall and spring. Fee charged.
Instruction and practice in basic figure skating techniques: forward, backward, crossovers, turns, and spirals. Students provide their own skates or rent them at Lynah Rink.

Martial Arts—Self-Defense Courses

Boxing, Introduction to
Fall and spring. Fee charged.
The course covers the basic skills of footwork, defensive, and offensive techniques. Skipping rope, shadow boxing, and heavy bag work will be taught as methods for individual aerobic conditioning.

Boxing, Thai
Fall and spring. Fee charged.
A martial art system developed from the unique culture of Thailand is a blend of art, science, and sport.

Fencing, Introduction to
Fall and spring. Fee charged.
Includes warm-up exercises and offensive and defensive moves. Equipment furnished.

Fencing, Intermediate
Spring. Fee charged. Prerequisite: Introduction to Fencing or the equivalent.
Interclass competition is stressed. Equipment is furnished.

Fencing, Classical
Fall and spring. Fee charged.
Classical fencing is a martial art that uses the practice of the sword to cultivate self-mastery.

Renaissance Fencing
Fall and spring. Prerequisite: Fencing I or with the permission of the instructor. Fee charged.
Focuses on the fundamental techniques of 16th-17th century fencing with an emphasis on safety, balance, line, focus, and distance.

Judo, Introduction to
Fall and spring. Fee charged.
Conditions and increases suppleness.
Continue to develop skills in the two parts of judo: standing techniques (throws and trips) and mat techniques.

Judo, Intermediate
Fall and spring. Fee charged.
Conditions and increases suppleness.
Continue to develop skills in the two parts of

judo: standing techniques (throws and trips) and mat techniques.

Karate, Introduction to
Fall and spring. Fee charged.
A beginning course taught by professional black belt instructors. Involves mastery of basic blocks, kicks, and punches.

Karate, Advanced
Fall and spring. Fee charged.
Open to those who have taken basic Karate or the equivalent.

Kung Fu
Fall and spring. Fee charged.
Exploration of conditioning and fitness procedures used in the major martial arts, such as karate or judo. Covers circular movement for generating strong blocks, kicks, and punches.

Self-Defense and Empowerment for Women
Fall and spring. Fee charged.
Basic methods of physical protection for women.

Tae Kwon Do, Introduction to
Fall and spring. Fee charged.
A Korean martial art distinguished by emphasis on high and powerful kicks. Basic kicking, punching, and blocking emphasized.

Tae Kwon Do, Intermediate
Fall and spring. Fee charged.
A Korean martial art distinguished by its emphasis on high and powerful kicks. Intermediate-level kicking, punching, and blocking are emphasized.

Tae Kwon Do, Advanced
Fall and spring. Fee charged.
A Korean martial art distinguished by its emphasis on high and powerful kicks. Advanced-level kicking, punching, and blocking are emphasized.

T'ai Chi Chuan, Introduction to, and Intermediate
Fall and spring. Fee charged.
Introduction to T'ai Chi, a system of graceful exercises that aim at nurturing relaxation, deep breathing, and improved circulation.

Outdoor Education Program

See the brochure for the Cornell University Outdoor Education Program at registration for more information about courses.

Climbing Courses

Basic Rock-Climbing
Fall, spring, and summer. Fee charged.
Seven afternoons climbing inside on the Lindseth climbing wall.

Basic Rock-Climbing, for Women
Fall, spring. Fee charged.
Seven afternoons climbing inside on the Lindseth climbing wall taught by and for women.

Basic Rock-Climbing, for 24 and Over
Fall, spring. Fee charged. Non-credit course.
Four evenings climbing indoors on the Lindseth wall for people age 25 or older.

High Adventure 101
Fall, spring, and summer. Fee charged.
Six afternoons at local parks and wilderness areas, some classes on indoor Lindseth climbing wall.

Continuing Rock-Climbing
Fall, spring. Fee charged.
Seven afternoons of advanced climbing techniques on the Lindseth climbing wall.

Ice Climbing
Spring. Fee charged.
Four outings to local state parks and gorges.

Outdoor Top Roping
Fall, spring. Fee charged.
Two outings (nights) on the Lindseth climbing wall and two outings at local climbing areas.

Shawangunks Rock-Climbing
Fall, spring. Fee charged.
Four-day climbing camp at the Shawangunks.

Backpacking Courses

Natural History of the Finger Lakes
Fall, spring. Fee charged.
Backpacking skills with a strong environmental focus.

Backpacking in the Finger Lakes
Fall, spring. Fee charged.
Classes lead to two full weekends on the trail.

Southwest Backpacking
Spring. Fee charged.
Spring break trip to the SW deserts and canyons.

Trail Maintenance
Fall, spring. Fee charged.
Work with the local trails club to support and maintain trail systems.

Wilderness Skills
Fall, spring. Fee charged.
Break trip focusing on wilderness travel and living skills.

Wilderness Survival Skills
Fall, spring. Fee charged.
Primitive living skills taught in three classes and a weekend backpack trip.

Biking Courses

Bike and Hike
Fall, spring. Fee charged.
Four full days exploring local countryside.

Bike Repair, Beginning
Fall, spring. Fee charged. Non-credit.
Two evenings of hands-on repair work.

Bike Repair, Intermediate
Fall, spring. Fee charged. Non-credit.
One evening of hands-on repair work.

Mountain Biking
Fall. Fee charged.
Four full days exploring local countryside.

Canoeing Courses

Canoeing, Adirondacks
Fall. Fee charged.
Break trip explores the beauty of the Adirondacks via canoe.

Introduction to Paddling
Fall, spring. Fee charged.
A sampler of beginning canoeing and kayaking.

Canoe/Camping, Flatwater
Fall, spring. Fee charged.
Four full days paddling local waterways including an overnight.

Canoeing, Moving Water
Fall, spring. Fee charged.
Includes a full weekend of river paddling.

Caving Courses

Caving
Fall, spring. Fee charged.
Four days in the fall and two weekends in the spring in Pennsylvania caves.

Hiking Courses

Day Hiking
Fall, spring. Fee charged.
Day outings in the Finger Lakes Region.

Snowshoeing
Spring. Fee charged.
Day outings in the Finger Lakes Region.

Kayaking Courses

Whitewater Kayaking Day Trip
Spring. Fee charged. Non-credit course.
Day excursion for paddlers with basic skills.

Whitewater Kayaking
Fall, spring. Fee charged.
Includes a full weekend of whitewater paddling.

Pool Kayaking
Fall, spring. Fee charged.
Seven-session introduction to whitewater kayaking skills.

Sea Kayaking
Fall, spring. Fee charged.
Break trip exploring various coastal areas.

Outdoor Leadership

Wyoming Expedition
Summer. Fee charged.
Twenty-one day leadership and mountaineering expedition to the Wind River Mountains.

Outdoor Leadership
Spring. Fee charged.
Training course for outdoor education instructors.

Wilderness Emergency Care, Basic
Fall, spring, summer (6 weeks). Fee charged.
Full weekend of wilderness first aid and CPR.

Wilderness Emergency Care, Advanced
Fall, spring. Fee charged. Non-credit.
Two evenings of specialized wilderness care.

Wilderness First Responder
Offered in January, over winter break. Fee charged.
Ten days of instruction and practical application of backcountry first aid. Participants earn CPR and First Responder certifications. Taught by SOLO Wilderness Medical Institute.

Skiing—Cross-Country Courses

Cross-Country Skiing, Basic
Spring. Fee charged.

Cross-Country Skiing, Intermediate
Spring. Fee charged.

Cross-Country Ski Day Touring
Spring. Fee charged.
Four full-day weekend outings. Emphasis on backwoods touring.

Telemark Skiing
Spring. Fee charged.
Four evenings at Song Mountain Ski Area.

Personal Growth Courses

Body-Mind
Fall and spring.
Activities are drawn from ancient Eastern practices as well as modern Western psychology, and are designed to give the student first-hand experience of the interaction between their own bodies and minds.

Introduction to Meditation
Fall and spring. Fee charged.
This course provides the opportunity to explore a variety of ancient and modern methods designed to bring one to the state of meditation. The methods serve to evoke the deep relaxation from which heightened awareness and creativity arise.

Living Routines
Fall and spring.
Provides the opportunity to explore a variety of ancient and modern methods designed to bring one to the state of meditation.

Relaxation and Stress Management
Fall and spring.
Introduction to basic relaxation techniques for the reduction of everyday stress. Techniques will be taught that can be used in normal everyday living situations.

Swedish Massage
Fall, spring, and summer. Fee charged.
Learn to give a relaxing, stress-reducing Swedish massage. You will master the basic strokes of Swedish massage and learn about their application to the different parts of the body. Students will use oils and lotions as a part of their training.

Introduction to Massage
Fall, spring, and summer. Fee charged.
Provides an experiential introduction to several types of massage. Included are Swedish, shiatsu, polarity, and sports massage. Class members will participate in group exercises and practice on each other during class time. All exercises and techniques can be done while wearing street clothing.

Shiatsu Massage
Fall and spring. Fee charged.
Gain an experimental understanding of your body and learn certain shiatsu massage techniques.

Yoga, Introduction to
Fall, spring, and summer (6 weeks). Fee charged.
Fundamentals of hatha-yoga. Covers basic postures, breathing techniques, and deep relaxation. Introduces chanting.

Racquet Sports Courses

Badminton, Introduction to
Fall and spring. Helen Newman Hall.
Fundamental shots, scoring, and general play.

Badminton, Intermediate
Fall and spring. Helen Newman Hall.
Review of fundamental shots, scoring, and general play.

Racquetball, Introduction to
Fall, spring, and summer. Fee charged.
Instruction for beginners. Equipment is furnished. Protective eyewear required.

Squash, Introduction to
Fall, spring, and summer. Fee charged.
Classes for appropriate level of play. Equipment is furnished. Protective eye wear required.

Tennis, Introduction to
Fall, spring, and summer. Fee charged.
Basic skills taught include forehand, backhand, serve, and volley. Scoring methods taught.

Tennis, Intermediate
Fall, spring, and summer. Fee charged.
Review basic strokes plus topspin and underspin. Doubles strategy emphasized.

Tennis, Advanced
Fall, spring. Fee charged.
Advanced strokes and doubles play emphasized. Recommended for tournament players or those with previous team experience.

Tennis, Indoor-Recreational
Fall and spring. Fee charged.
Play is conducted at the new Reis Tennis Center. Players must have high school or college tournament experience or a rating of 3.5 or higher from the USTA. Matches are played in both doubles and singles. Equipment furnished. NO BLACK-SOLE SHOES ALLOWED ON COURTS!

Sailing Courses

Small-Boat Sailing, Introduction to
Fall, spring, and summer (6 weeks). Fee charged.
Learn basic skills necessary to sail small sailboats and basic keelboats safely.

Small-Boat Sailing, Competitive
Fall and spring. Fee charged.
Vanguard 420 sailboat used for the course. USYRA Rules Book used as a text for the course. Fee includes one-year membership in university sailing team program.

Water Skiing
Fall only. Fee charged.
Introductory course for beginning water skiers. Classes will be conducted from East Shore Marina.

Skiing and Snow Boarding

Downhill Skiing and Snowboarding
Spring. Fee charged.
Transportation, instruction, ski-lift fees, and skiing time are offered in a package deal. Greek Peak and Song Mountain personnel are present at registration to explain the program and accept fees. Bus transportation to Greek Peak is provided six afternoons a week for six weeks.

Cross-Country Skiing—See Outdoor Program.

Target Shooting Courses

Archery, Introduction to
Fall and spring. Fee charged. Two classes a week.
Instruction in the care of equipment; seven basic steps for shooting; scoring; practice shooting at 20, 30, and 40 yards.

Pistol, Introduction to
Fall, spring, and summer (6 weeks). Fee charged.
Instruction in use of pistol in the three modes of 50-foot competitive target shooting—slow fire, timed fire, and rapid fire. Emphasis on safety and responsibility while firing.

Riflery
Fall and spring. Fee charged.
Instruction and practice in the techniques of target riflery from various shooting positions.

Trap and Skeet
Fall, spring, and summer (6 weeks). Fee charged.
Includes lectures and shooting at the Tompkins County Rod and Gun Club range. Guns and shells are furnished.

Team Sports Courses

Basketball
Fall and spring.
Fundamental drills in passing, shooting, and dribbling. Scrimmages each class session.

Ice Hockey, Introduction to
Fall and spring. Prerequisite: basic skating ability. Fee charged.
Stick handling, passing, and shooting are stressed. Some scrimaging. Students provide their own skates and sticks; all other equipment is furnished.

Ice Hockey, Intermediate
Fall and spring. Fee charged. Prerequisite: beginning hockey or previous participation in organized hockey.
This course is designed for the intermediate hockey player. Advanced techniques taught include positioning, power play, penalty killing, and offensive and defensive attack. Each session emphasizes game situations and scrimmaging. Skates and hockey sticks must be supplied by the participants.

Soccer
Spring.
Introduction to the game. Includes basic individual skills (passing, trapping, shooting) and team play and strategy.

Volleyball, Introduction to
Fall and spring.
Fundamentals of ball handling, serves, defensive blocks, and position play are stressed. Classes will scrimmage.

Volleyball, Intermediate
Fall and spring.
Passing and blocking strategy; scrimmages in class.

Volleyball, Advanced
Fall and spring.
Offensive and defensive team strategy is emphasized in class scrimmages.

Weight Training Courses

Trotter Circuit Training
Fall and spring. Fee charged.
Students will gain a working knowledge of the basic principles of Trotter selectorized weight lifting equipment. Emphasis on principles of weight training, circuit training, intensity training, and program design.

Principles of Weight Training
Fall and spring. Fee charged.
Introduces the proper use of olympic weights for improving physical condition and muscular strength. Instruction with focus on the relation between high-rep light weight lifting, low-rep heavy lifting, and the development of bulk, strength, and endurance.

Independent Study

Independent Study
Fall and spring.
Independent study is designed for those who have difficulty fitting any of the regularly scheduled courses into their academic program. Class activities will be based on personal fitness programs. A term paper is required. Permission to enter this program must be granted by the program director.

SCHOOL OF CONTINUING EDUCATION AND SUMMER SESSIONS

Summer Sessions provides a wide variety of educational opportunities beyond the degree-granting programs of the university. These programs serve virtually all age groups in a great variety of formats and time frames. For information about the following programs write B20 Day Hall, Ithaca, New York 14853–2801; call 255–4987; e-mail cusce@cornell.edu; or fax 255–9697; unless indicated otherwise below. You may also visit us on the web at www.continuingeducation.cornell.edu.

SCHOOL ADMINISTRATION

Glenn C. Altschuler, dean

Stuart M. Blumin, director, Cornell-in-Washington Program

Dane Cruz, interim director, Cornell Interactive Theatre Ensemble

Abby H. Eller, director, Cornell University Summer College

Carol L. Hall, assistant director, finance and administration

Christine Holmes, special programs manager

Ralph Janis, director, Cornell's Adult University

Charles W. Jermy, Jr., associate dean, and director, Cornell University Summer Session

Ann L. Morse, media manager

Cathy M. Pace, registrar

Diane E. Sheridan, director, finance and administration

SPECIAL AND PROFESSIONAL PROGRAMS

Intensive learning experiences are presented year-round both for students and for professionals in many fields. Formats include for-credit courses of one to eight weeks and noncredit weekend and weeklong short courses. Programs can also be designed to respond to the needs and interests of corporations, professional societies, and other groups. These programs take place on the Cornell campus, on site, at other locations worldwide, and via distance learning. For information call 255–7259; e-mail cusp@cornell.edu; fax 255–9697; or visit www.continuingeducation.cornell.edu/SP/.

SUMMER COLLEGE PROGRAMS FOR HIGH SCHOOL STUDENTS

Talented high school sophomores, juniors, and seniors attend regular university courses through Cornell University Summer College and may earn college credit. They also explore academic and career options in noncredit seminars. Students live in residence halls, become familiar with campus life, and attend seminars describing the college admissions process. The program is designed to help ease the transition from high school to college. For information call 255–6203; e-mail summer_college@cornell.edu; fax 255–6665; or visit www.summercollege.cornell.edu.

CORNELL'S ADULT UNIVERSITY

Cornell's Adult University (CAU) offers week-long noncredit courses on campus for adults and families during the summer. During the fall, winter, and spring, there are weekend seminars, week-long domestic programs, and international study tours. Developed and led by distinguished members of the Cornell faculty, all programs are inspired by the belief that learning never ends and that one of the roles of a great university is to provide a bridge between traditional formal education and informal, noncredit study. For information, write Cornell's Adult University, 626B Thurston Avenue, Ithaca, New York 14850–2490; call 255–6260; e-mail cauinfo@cornell.edu; fax 254–4482; or visit www.cau.cornell.edu.

DISTANCE LEARNING

The School of Continuing Education and Summer Sessions offers a range of courses through distance learning. Instructional materials for these courses may be presented on the web, and/or through video tapes, assigned readings, e-mail sessions with course instructors, and CD-ROMs. Students interact with the instructor and other students by phone or e-mail. Courses may be taken from home or elsewhere. Assignments and examinations are completed within a scheduled session, just as in on-campus courses, but students have the option of beginning study prior to the start of the session. For information, visit www.continuingeducation.cornell.edu/DL/.

EXTRAMURAL STUDY

Cornell undergraduate or graduate students whose studies have been interrupted may find it appropriate to resume their studies by taking classes on a part-time basis. Area residents may take courses on a part-time basis by registering as extramural students. Those interested may enroll in almost any course offered in the fall and spring terms if they receive the instructor's written approval. Another offering, the **Visitor's Program**, allows adults to attend classes in many divisions of the university on a space-available basis at a reduced charge. In this program, no credit is given, and no record is kept of attendance or performance. Visitors are required to obtain written permission from the instructor. For information, write to Extramural Study, B20 Day Hall, Ithaca, NY 14853–2801; call 255–4987; e-mail cusce@cornell.edu; fax 255–9697; or visit www.continuingeducation.edu/EXMU/.

WINTER SESSION

Cornell undergraduate and graduate students, as well as employees and area residents, can earn up to four credits between the fall and spring semesters by enrolling in the winter session. This quiet time on campus allows students to enjoy generally smaller classes and to concentrate on intensive study. Winter-session students may enroll in scheduled courses or design individualized study with a faculty member. For information, write to Winter Session, B20 Day Hall, Ithaca, NY 14853–2801; call 255–4987; e-mail cusce@cornell.edu; fax 255–9697; or visit www.wintersession.cornell.edu.

CONTINUING EDUCATION INFORMATION SERVICE

This service provides free information, counseling, and referral to adults who have been out of school for several years and want to resume their education. It also provides information about short courses, workshops, professional updates, and executive programs offered by the university to people inside and outside Cornell. For information, write to Continuing Education, B20 Day Hall, Ithaca, NY 14853–2801; call 255–4987; e-mail cusce@cornell.edu; or fax 255–9697.

CORNELL-IN-WASHINGTON PROGRAM

Cornell-in-Washington offers undergraduates the opportunity to combine the strengths of Cornell with all of the best parts of living and learning in Washington, D.C. Students take courses for credit, work as externs, and complete substantial research projects, all the while enjoying the rich opportunities available in the nation's capital.

CORNELL INTERACTIVE THEATRE ENSEMBLE (CITE)

The Cornell Interactive Theatre Ensemble (CITE) is a unique resource for human relations training both on and off campus, serving a wide variety of client groups including university staff, faculty, administrators and students, professional conferences, corporations, and other organizations. Using the medium of interactive theatre, CITE training workshops explore how people can work together effectively and appropriately in a workplace characterized by differences.

CORNELL UNIVERSITY SUMMER SESSION

The Cornell University Summer Session provides unique and unusually attractive opportunities for study and recreation at a time when the Cornell campus and the Finger Lakes region of central New York are at their loveliest and the Ithaca weather is at its best. Participants may choose from a wide spectrum of courses scheduled during three-, six-, and eight-week sessions. Although admission is open to persons of all ages, the majority of summer session participants are matriculated Cornell students. Classes meet daily, are generally small, and feature personalized interaction with Cornell faculty members. These courses also provide students with the opportunity to accelerate their degree program, take courses not available during the fall and spring semesters, and delve into areas of special interest. For information call 255–4987; e-mail cusce@cornell.edu; or visit our web site at www.summer.cornell.edu.

Summer Session Course Roster

The Cornell University Summer Session offers a wide variety of courses. The list that follows includes those courses that are usually offered every summer. The list is not exhaustive; many new courses or courses offered only occasionally are not listed. For complete information, contact the Summer Session Office. Courses are posted to the web (www.summer.cornell.edu) in the fall as the roster is developed. A preliminary course roster is available beginning in late November. If a course is also offered through distance learning, the course title will be followed by **DL**.

Molecular Medicine: G. Weiland

Population Medicine and Diagnostic Services: Y. Grohn, acting chair

THE COLLEGE

The College of Veterinary Medicine offers a professional program that requires four years of full-time academic and clinical study of the normal and abnormal structure and function of the animal body and the diagnosis, treatment, and prevention of animal disease.

Graduates of the college receive the Doctor of Veterinary Medicine (D.V.M.) degree, which is recognized by licensing boards throughout the world. Graduates generally enter private practice, academia, or become engaged in one of the increasing number of other biomedical activities.

Admission requires a minimum of three years of college work, including specific prerequisite courses and experience. Applications must be filed approximately one year before the proposed matriculation date. The competition for admission is keen, since there are many more qualified applicants than can be admitted.

Graduate programs in veterinary research and postdoctoral training in clinical specialties are open to Doctors of Veterinary Medicine and some highly qualified holders of baccalaureate degrees and lead to the degree of Master of Science or Doctor of Philosophy.

More detailed information is available electronically at the website of the College of Veterinary Medicine, http://zoo.vet.cornell.edu/.

Note: 500- and 600-level courses are open only to veterinary students except by written permission from the instructor.

The College of Veterinary Medicine has revised its professional curriculum; the new course requirements apply to the class that matriculated in the fall of 1993 and to subsequent classes. Courses in the revised professional curriculum are designated with the prefix "VTMED" and consist of two categories of courses: foundation courses and distribution courses.

The Professional Curriculum

FOUNDATION COURSES

In foundation courses I, II, III, and IV (VTMED 510, 520, 530, 540), students work in small groups under the guidance of a faculty tutor. Case-based exercises are used to facilitate the understanding of basic science concepts within the context of clinical medicine. On average, three to four 2-hour tutorial sessions are scheduled each week. These are complemented by lectures, laboratories, and discussion sessions or other organized learning opportunities specific to the individual course. Faculty are available to respond to questions that arise as a result of the case-based exercises.

Tutorial sessions and all other organized learning programs are usually scheduled during the mornings, thereby reserving the afternoons for independent study. By situating learning in a clinical context, students are better able to integrate material from the basic and clinical sciences and are encouraged to develop an understanding of the clinical reasoning process from the beginning of the curriculum. The tutorial-based educational format creates an atmosphere that requires students to be involved actively in their learning and allows them to develop skills in communication, information retrieval, and analysis.

Note: Courses listed in brackets [ ] are approved courses that are not offered during the 2001–2002 academic year.

VTMED 510 The Animal Body (Foundation Course I)

Fall. 12 credits. Limited to first-year veterinary students. Letter grades only. J. W. Hermanson and staff.

This course is designed to enable students to understand the principles of veterinary anatomy at the gross, microscopic, and ultrastructural levels. Developmental anatomy is emphasized to the extent that it reflects determination of adult form and species differences. Radiologic and related imaging techniques are used throughout the course to assist in the understanding of normal structural anatomy. Understanding of the anatomic basis of common surgical procedures is achieved during the various dissection procedures. The course is based on tutorials with significant emphasis on practical laboratories. Lectures and modules complement student learning.

VTMED 517 Animals, Veterinarians, and Society: Part A (Foundation Course VIIa)

Fall. 1 credit. Limited to first-year veterinary students. Letter grades only. A fee of approximately $10 is charged for the course guide. J. W. Ludders.

This course is the correlate for VTMED 510 The Animal Body. This is a laboratory-based course that teaches physical examination of four species (dog, cat, cow, and horse). The class is divided into small groups and each group meets for two hours each week during the first 11 weeks. The skills of auscultation, percussion, palpation, and observation are taught along with clinically related diagnostic procedures.

VTMED 520 Genetics and Development (Foundation Course II)

Fall and spring. 8 credits. Limited to first-year veterinary students. Prerequisite: VTMED 510 The Animal Body. Letter grades only. R. A. Levine and staff.

An appreciation of how gene expression and cell behavior contribute to normal animal development and health is crucial for our understanding of the pathogenesis of disease. Students gain an understanding of the cellular and molecular mechanisms that regulate development and maintain normal structure and function throughout the life of an animal. Emphasis is placed on defining and characterizing normal cellular behaviors and on understanding how mutations in specific genes promote disease. Students become familiar with the common molecular procedures being used to develop new diagnostic and therapeutic tools to maintain health and combat disease. Tutorial sessions are complemented by lectures, laboratories, and class discussions.

VTMED 521 Neuroanatomy and Clinical Neurology

Spring. 3 credits. Limited to first-year veterinary students. Letter grades only. A. deLahunta.

Fundamentals of functional neuroanatomy and diseases of the nervous system are taught so that each student is competent in the diagnosis of clinical neurologic disorders of domestic animals. This is a vertically integrated course that includes dissection of the central nervous system of the dog, the anatomic basis for the diagnosis of diseases of

the nervous system, and the differential diagnosis of those diseases. Clinical cases with pertinent lesions are demonstrated with each system. Films and videotapes of clinical patients are used to demonstrate the clinical signs produced by the various diseases. Slides of gross and microscopic lesions are used to emphasize the clinical and neuroanatomic relationships and to stress characteristic features of representative conditions.

VTMED 527 Animals, Veterinarians, and Society: Part B (Foundation Course VIIb)

This course begins in the last part of fall semester and finishes at the end of winter session. 1 credit. Limited to first-year veterinary students. Prerequisite: VTMED 517 Animals, Veterinarians, and Society: Part A. Letter grades only. A fee of approximately $7 is charged for the course guide. J. W. Ludders.

This course is the correlate for VTMED 520 Genetics and Development. It enters into a study of ethical issues related to animal use, animal welfare, animal genetics, clinical application of genetics, genetics counseling, and clinical day-to-day ethics. The course meets for one 2-hour session each week.

VTMED 530 Function and Dysfunction: Part I (Foundation Course IIIa)

Spring. 9 credits. Limited to first-year veterinary students. Prerequisite: VTMED 520 Genetics and Development. Letter grades only. R. Rawson and staff.

This course is designed to develop students' understanding of how an animal maintains itself as a functional organism; how this is achieved through the integration of different functional organ systems; how tissue structure relates to tissue function; how injury alters structure and leads to dysfunction, manifested as clinical signs; how organ function can be assessed; and how it can be modulated pharmacologically. The course incorporates aspects of physiology, biochemistry, cell biology, histology, pathology and histopathology, clinical pathology, and pharmacology.

VTMED 531 Function and Dysfunction: Part II (Foundation Course IIIb)

Fall. 7 credits. Limited to second-year veterinary students. Prerequisite: VTMED 530 Function and Dysfunction: Part I. Letter grades only. R. Rawson and staff.

A continuation of VTMED 530 Function and Dysfunction: Part I.

VTMED 537 Animals, Veterinarians, and Society: Part C1 (Foundation Course VIIc)

Spring. 1.5 credits. Limited to first-year veterinary students. Prerequisite: VTMED 527 Animals, Veterinarians, and Society: Part B. Letter grades only. A fee of approximately $9 is charged for the course guide. J. W. Ludders.

This course is the correlate for VTMED 530 Function and Dysfunction: Part I. The central goal of this course is to provide students with the interpersonal skills and techniques necessary to communicate effectively with clients. In addition, students are provided an opportunity to study the human-animal bond, animal death, and grief counseling. This course also provides opportunities to practice client interviewing skills and to participate in a home or farm visit.

VTMED 538 Animals, Veterinarians, and Society: Part C2 (Foundation Course VIIc, continued)

Fall. 1 credit. Limited to second-year veterinary students. Prerequisite: VTMED 537 Animals, Veterinarians, and Society: Part C1. Letter grades only. A fee of approximately $6 is charged for the course guide. J. W. Ludders.

This course is the correlate for VTMED 531 Function and Dysfunction: Part II. This course provides for understanding the importance of the medical record, the diversity of clients, employees, and society in general, and a session on alternative medicine and its various practices. How to critically read and evaluate clinical studies and journal articles is also addressed.

VTMED 540 Host, Agent, and Defense (Foundation Course IV)

Fall. 12 credits. Limited to second-year veterinary students. Prerequisite: VTMED 531 Function and Dysfunction: Part II. Letter grades only. J. Baines (course leader) and others.

This course is divided into six sections: the host response, intracellular environment, extracellular environment, somatic environment, external environment, and surrounding environment. Using this approach, students develop an understanding of the host response to insult, a familiarity with groups of important pathogens, an understanding of how pathogens manipulate the host and how the host defends itself against attacks, and an understanding of the roles played by the external environment and human intervention in the epidemiology of infectious organisms.

VTMED 547 Animals, Veterinarians, and Society: Part D (Foundation Course VIId)

Fall. 1 credit. Limited to second-year veterinary students. Prerequisite: VTMED 538 Animals, Veterinarians, and Society: Part C2. Letter grades only. A fee of approximately $12 is charged for the course guide. J. W. Ludders.

This course is the correlate for VTMED 540 Host, Agent, and Defense. The course emphasizes maintaining health in both individuals and populations of animals and humans. Topics include animal bites, nosocomial infections, rabies control programs, vaccines and vaccine reactions, zoonotic diseases, and integrated health maintenance programs. The course emphasizes veterinary public health.

VTMED 550 Animal Health and Disease: Part I (Foundation Course V)

Spring. 10 credits. Limited to second-year veterinary students. Prerequisite: VTMED 540 Host, Agent, and Defense. Letter grades only. R. Hackett.

This course integrates the clinical sciences of medicine, surgery, anesthesiology, radiology, and theriogenology, which are themselves integrated subjects, with systems pathology and relevant aspects of applied pharmacology. The course is presented on a systems basis moving from clinical signs of alteration in function, to pathophysiology of clinical signs, to strategies for diagnosis and treatment. Specific examples are used to establish a cognitive framework and knowledge of the most important diseases. This course provides a sound foundation for clinical rotations in Foundation Course VI. It builds on the strengths developed in earlier courses by an increased exposure to case examples in a more directed way, taking advantage of the diversity of skills and special knowledge of both faculty and students. A variety of educational techniques are used, including lectures in which interaction is encouraged, laboratories, demonstrations, case discussions, and autotutorials.

VTMED 551 Animal Health and Disease: Part II (Foundation Course V, continued)

Fall. 20 credits. Limited to third-year veterinary students. Prerequisite: VTMED 550 Animal Health and Disease: Part I. Letter grades only. R. Hackett and staff.

A continuation of VTMED 550 Animal Health and Disease: Part I.

VTMED 557 Animals, Veterinarians and Society: Part E (Foundation Course VIIe)

Spring. 1 credit. Limited to second-year veterinary students rolling over into fall semester for the then third-year veterinary students. Prerequisite: VTMED 547 Animals, Veterinarians, and Society: Part D. Letter grade only. A fee of approximately $14 is charged for the course guide. J. W. Ludders.

This course is a correlate with Foundation Course V, Animal Health and Disease. The course examines governmental regulation of the veterinary profession, including proper drug usage, extra label drug use (FDA), controlled substances (DEA), substance abuse, professional liability and malpractice insurance, professional and unprofessional conduct, hazardous materials in the workplace (OSHA), and environmental issues (EPA). Also included are sessions relating to controlling and preventing the spread of animal diseases and the role of USDA and specifically APHIS in these regulatory functions.

VTMED 560 Ambulatory and Production Medicine I

Fall, winter, spring and summer. Credit variable (either one or two credits). Limited to veterinary students. Letter grades only. M. E. White and staff.

A total of 4 weeks of Ambulatory and Production Medicine are required. VTMED 565 is taken during the clinical rotations in the 3rd or 4th year. VTMED 560 is also generally taken during the third or fourth year, however first and second year students are encouraged to take one or two weeks of this course over winter recess or during the summer if slots are available. A lottery is done to assign first or second year students to the available slots. See VTMED 565 for course description.

VTMED 561 Community Practice Service—Medicine

2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. W. E. Hornbuckle and staff.

The Community Practice–Medicine Service is structured to provide supervised clinical experience in the practice of small companion animal medicine. The course is conducted in the Small Animal Clinic of the Cornell University Hospital for Animals. Students interact directly with clients presenting their pet for primary medical care. Under the supervision of the clinical faculty and staff, the students are expected to formulate and carry out plans for the diagnostic evaluation and medical management of these patients. After review, students explain their plans to the clients and provide follow-up care and management of these patients.

VTMED 562 Surgery III
2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. H. J. Harvey and staff.
Basic principles of anesthesiology and surgery are emphasized in the clinical rotation. Under direct staff supervision, students anesthetize and perform surgical procedures on patients presented to the Small Animal Clinic for neutering and minor elective procedures. Students are responsible for all aspects of patient care during their hospital stay and are expected to fully participate in client communications. Ordinarily, this course will precede Anesthesiology Service and Small Animal Surgery Service (soft tissue component).

VTMED 563 Small Animal Medicine
Fall, spring, winter, and summer. 4 credits. Required course open to second-semester third-year and all fourth-year veterinary students; not open to others. Letter grades only. S. C. Barr, S. A. Center, J. F. Randolph, and K. W. Simpson.
The Small Animal Medicine Service is structured to provide supervised clinical experience in the practice of companion small animal medicine. The course is conducted in the Small Animal Clinic of the Cornell University Hospital for Animals. Students interact directly with clients presenting their pets for primary or referral medical care. Under the supervision of the clinical faculty and staff, the students are expected to formulate and carry out plans for the diagnostic evaluation and medical management of these patients.

VTMED 564 Small Animal Surgery Service
Fall, winter, spring, and summer. 4 credits. Required of all third- and fourth-year veterinary students; not open to others. Letter grades only. H. J. Harvey and small animal surgery faculty.
A clinical service rotation, this course exposes the student to the practice of surgery under hospital conditions. Students participate in the diagnostic techniques; planning of therapy; and daily care of dogs, cats, and exotic species under the direction of a faculty veterinarian. Students assist experienced surgeons in the operating room and, with house-officer supervision, are responsible for patients undergoing elective ovariohysterectomy or castration. Client communications and the basics of efficient practice are emphasized.

VTMED 565 Ambulatory and Production Medicine II
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. M. E. White and staff.
A clinical service rotation in which students accompany ambulatory clinicians on farm and stable calls and learn the skills and procedures necessary for operation of a modern veterinary practice offering primary care to large animal clients. Routine herd health visits are conducted for cattle, horses, sheep, goats, and swine. Reproductive evaluations (including pregnancy and fertility examinations), nutritional evaluation, and disease prevention are stressed. Herd health programs also include vaccinations, parasite control, mastitis prevention, and routine procedures such as castration and dehorning. With appropriate herds, analysis of computerized performance data is conducted and discussed with the owner. In addition to assisting with routine scheduled work, students participate in diagnosis and medical or surgical treatment of ill or injured animals. This includes rotating assignments for night and weekend duty.

VTMED 566 Large Animal Medicine Service
Fall, winter, spring, and summer. 3 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. D. Ainsworth, T. Divers, and staff.
Students assigned to this service assist the faculty and house staff of the Large Animal Medicine service in the diagnosis and care of patients. The goal of this course is for students working on this service to acquire knowledge and skills in history taking, physical examination, election and completion of appropriate ancillary tests, diagnosis, treatment, and patient care. Daily rounds and discussions are used to monitor patient progress and further educate students.

VTMED 567 Large Animal Surgery Service
Fall, winter, spring, and summer. 4 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. A. J. Nixon and staff.
This clinical rotation is structured to provide supervised clinical experience in the practice of large animal surgery. Under the direction of faculty and house staff, students participate in the diagnosis, surgical treatment, and care of patients presented to the Large Animal Clinic. Training through patient care is supplemented by formal rounds and didactic instruction.

VTMED 568 Anesthesiology Service
Fall, winter, spring, and summer. 3 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. R. D. Gleed, J. W. Ludders, P. F. Moon, and staff.
This course is designed to provide clinical experience in the use of anesthetics in small companion animals, horses, and some food animals. The students participate in selecting suitable anesthetic techniques for patients in the Cornell University Hospital for Animals and then implement those techniques under the supervision of faculty and residents. The goal is for students to learn the skills and thought processes necessary to perform safe anesthesia in a modern veterinary practice.

VTMED 569 Dermatology Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. W. H. Miller and D. W. Scott.
During this clinical rotation, students participate in the diagnosis and management of skin disorders in small and large animals. Patients are examined by appointment and through consultation with other hospital services.

VTMED 570 Ophthalmology Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. R. C. Riis, T. Kern, and N. Irby.
This course combines clinical experience with beginning skills in diagnostic ophthalmology. Students learn how to apply the ophthalmic diagnostic tests. A competent ocular examination is the goal of this rotation. Confidence in using direct and indirect ophthalmoscopes, slit lamps, tonometers, goniolenses, conjunctival cytology, and surgery comes with the practice provided by this rotation. Students are required to review the introductory orientation videotapes in the Autotutorial Center titled *Ocular Examination I and II* before the start of the rotation. This rotation provides surgical experience and consultations. A high percentage of the consultations are referral cases that usually challenge the service. Adequate routine case material is presented to prepare most students for practice.

VTMED 571 Pathology Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. B. A. Summers and staff.
This course involves the hands-on diagnostic necropsies of most mammalian species that are presented to the pathology necropsy room and of avian species that are admitted to the avian and aquatic animal medicine necropsy room. Students work in groups of three to five for the two-week rotation. Necropsies are performed under the guidance of pathology faculty and residents. Students prepare written reports of necropsies performed, review microscopic hematology and cytology slides, perform urinalyses, and discuss case studies.

VTMED 572 Radiology Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. N. L. Dykes and staff.
A two-week clinical experience in the Imaging Section of the Cornell University Hospital for Animals. Students use radiographic, CT, ultrasonographic, and nuclear medicine imaging techniques to evaluate animal patients under treatment in the Hospital. Students obtain and interpret radiographic and ultrasonographic studies with guidance from radiology faculty and technical staff. Two 3-hour laboratory sessions are given to allow hands-on experience in patient positioning and radiographic technique. An autotutorial teaching film file is used to familiarize students with radiographic examples of common diseases of large and small animal species. Small-group discussions are scheduled to present and discuss current cases. The safe use of x-ray–producing equipment and radioisotopes is discussed.

VTMED 573 Fourth-Year Seminar
Fall and spring. 1 credit. Required of all fourth-year veterinary students. First-, second-, and third-year students and all staff members are also invited and encouraged to attend. S-U grades only. F. H. Fox, chair of the Senior Seminar Committee.
The aim of this course is to give the student the responsibility and opportunity of selecting and studying disease entity on the basis of a case or series of cases, or to conduct a short-term, clinically oriented research project under the direction of a faculty member. In either case, an oral report is presented at a weekly seminar. A written report is also submitted at the time of the seminar. All participants are encouraged to foster an atmosphere in which discussion, exchange of ideas, and the airing of controversial opinions might flourish.

DISTRIBUTION COURSES

Distribution courses comprise 30 percent of the curriculum and are usually scheduled during the first half of each spring semester. During the first two years, many of the distribution courses are oriented to the basic sciences. During years three and four, students have additional distribution course offerings from which to choose. Some emphasize clinical specialties, whereas others integrate basic science disciplines with clinical medicine and are co-taught by faculty representing both areas. Students from different classes have the opportunity to take many of these courses together.

Grades: Grading options for distribution courses are either letter or S-U.

VTMED 601 Anatomy of the Carnivore

Spring. 3 credits. Prerequisite: VTMED 510 The Animal Body or permission of instructor. First-, second-, third-, and fourth-year veterinary students; others by permission. Letter grades only. A. J. Bezuidenhout.

Carnivore anatomy is studied by detailed systematic and regional dissection of the cat, with comparison to the dog. Student dissection is supplemented with prosections, radiographs, and exercises focusing on surgical approaches. There are opportunities to dissect other carnivores, such as the ferret and the fox, depending on availability of specimens. The lectures augment the laboratory dissection and introduce the student to functional morphological comparative features in the Order Carnivore. Students do an independent research project on the carnivore species of their choice and give an oral presentation on this to the class.

VTMED 602 Anatomy of the Horse

Spring. 3 credits. Prerequisite: VTMED 510 The Animal Body or permission of instructor. First-, second-, third-, and fourth-year veterinary students; others by permission. Letter grades only. K. Haussler.

This course is organized as a traditional anatomy course that relies primarily on students learning the anatomy of horses through hands-on dissection laboratories augmented by lectures and highlighted by clinical correlations. An understanding of anatomy that provides the foundation for surgery and is directly relevant to clinical practice is emphasized in the regional approach to dissection. Most lectures emphasize structural-functional correlations that are unique or important in the horse. Microscopic anatomy is integrated into the course in selected areas to lay a foundation for the later study of pathology or when it reinforces concepts of structure and function that are difficult to understand by a study of the gross anatomy alone (i.e., hoof). Student dissection cadavers are supplemented by skeletal materials, radiographs, models, preserved predissected specimens, and fresh specimens when they are available.

VTMED 603 Anatomy of the Ruminant

Spring. 3 credits. Prerequisite: VTMED 510 The Animal Body or permission of instructor. First-, second-, third-, and fourth-year veterinary students; others by permission. Letter grades only. J. Hermanson.

The regional anatomy of several ruminant species is covered using dissection laboratories, lectures, and large-group discussions. Functional consequences of structural modifications and anatomical features relevant to clinical practice are emphasized. Microscopic anatomy is correlated with gross anatomy when appropriate to relate structure to function and to provide a foundation for later study in pathology. Student dissection material is supplemented by skeletal materials, radiographs, models, predissected specimens, and postmortem specimens. Students are required to complete an independent study project on a relevant subject of their choice. Assessment includes written and practical examination.

VTMED 605 Comparative Anatomy: Pattern and Function

Spring. 3 credits. Prerequisite: VTMED 510 The Animal Body. First-, second-, third-, or fourth-year veterinary students; others by permission. Letter grades only. L. A. Mizer.

The goal of this course is to study anatomical variability among amniote (mammals, birds, and reptiles) and anomniote (amphibian and fish) species. This is accomplished by relating the anatomy of major organ systems in each species to a common basic pattern and considering the differences in a functional perspective. Five major systems are explored (integumentary, locomotory, cardiorespiratory, digestive, and urogenital) in a variety of species as available.

VTMED 606 Advanced Clinical Neurology

Spring. 1 credit. Prerequisite: VTMED 521 Neuroanatomy and Clinical Neurology. Third- and fourth-year veterinary students. Letter grades only. A. deLahunta.

The objective of this course is to further the experience and confidence of the student in the diagnosis and understanding of clinical neurological disorders. It continues their correlation of anatomy, physiology, and pathology in the diagnosis of diseases of the nervous system and the understanding of their pathogenesis. Neurological disorders that are not covered in the foundation course are considered here. The course is entirely based on case examples that are presented on videotapes and slides.

VTMED 607 The Literature and Subject Matter of Natural History

Spring. 1 credit. First-, second-, third-, and fourth-year veterinary students; others by permission. S-U grades only. H. E. Evans.

This course is an introduction to classic and current natural history literature. Materials relating to the earth sciences and the biology of plants and animals from around the world are shown and discussed. Students are required to show and discuss a book that concerns natural history in a country of their choice, and submit a one-page book report for duplication. A recommended reference text for this course is *The Cambridge Illustrated Dictionary of Natural History* by R. J. Lincoln and G. A. Boxshall, 1990.

VTMED 609 Anatomy and Histology of Fish

Spring. 2 credits. Minimum enrollment 4; maximum enrollment 6. First-, second-, third-, and fourth-year veterinary students, others by written permission of instructor. S-U grades optional. P. R. Bowser.

This course provides an overview of the diversity of anatomy and histology of fish. Students participate in lecture, discussion, and laboratory exercises to review the major organ systems. Extensive use of library resources for assigned readings is expected. Each student prepares a term project and makes one oral presentation.

VTMED 610 Veterinary Aspects of Avian Biology

Spring. 1 credit. Minimum enrollment 10; maximum enrollment 60. First-, second-, third-, and fourth-year veterinary students; others by permission. Letter grades only. Offered even-numbered years. G. V. Kollias.

An introduction to avian biology for veterinary students. The course includes lectures and laboratories involving avian evolution, anatomy, physiology, and ecology. Emphasis is on the development of a strong foundation in avian biology that will be applied in VTMED 616 Diseases of Birds and VTMED 652 Avian Medicine and Surgery.

[VTMED 611 Fish Health Management

Spring. 1 credit. Minimum enrollment 8; maximum enrollment 16. First-, second-, third-, and fourth-year veterinary students; others by written permission of instructor. S-U grades optional. Offered odd-numbered years; next offered spring 2003. P. R. Bowser.

This course presents a summary of important diseases of fin fishes. Diseases covered are those of importance in commercial aquaculture as well as those encountered by the tropical fish hobbyist. The course is designed to provide the students with a knowledge base and hands-on diagnostic experience in diseases of fish. Each student prepares a term project and makes one oral presentation.]

VTMED 612 Management of Aquarium Systems

Spring. 1 credit. Minimum enrollment 8; maximum enrollment 16. First-, second-, third-, and fourth-year veterinary students; others by written permission of instructor. S-U grades optional. Offered even-numbered years. P. R. Bowser.

This is a lecture and laboratory course dealing with procedures and practices involved in management of aquarium systems. Topics include water quality, types of aquarium filtration systems, fish health, fish nutrition, and general fish biology. A portion of the course requires independent work in aquarium system management. Each student prepares a term project and makes one oral presentation.

VTMED 613 Aquavet I: Introduction to Aquatic Veterinary Medicine

Four weeks of full-time instruction at Woods Hole, Massachusetts, immediately after the spring term. 4 credits. Maximum enrollment 24 students from Cornell University, the University of Pennsylvania, and other U.S. colleges and schools of veterinary medicine. Available, by a competitive application process, to veterinary and graduate students. S-U grades only. Course fee required. P. R. Bowser.

The course is sponsored by Cornell University, the University of Pennsylvania, and three marine science institutions at Woods Hole: the Marine Biological Laboratory, Woods Hole Oceanographic Institution, and Northeast Center of the National Marine Fisheries Service. It is designed to introduce veterinary students to aquatic animal medicine. The marine environment is described and visited on field trips in the Woods Hole area. Specific aspects of the comparative anatomy,

physiology, nutrition, microbiology, pathology, and medicine of a variety of marine and freshwater species are discussed. Some emphasis is placed on systems of aquaculture. The specific diseases of a few selected species are presented as examples, including the diseases of a crustacean, a shellfish, a finfish, and marine mammals. The course is taught by an invited faculty of 35 individuals who are leaders in their respective fields of aquatic animal medicine. Students present seminars on appropriate topics.

VTMED 614 Aquavet II: Comparative Pathology of Aquatic Animals

Two weeks of full-time instruction at Woods Hole, Massachusetts, immediately after the spring term. 2 credits. Prerequisites: formal course work in diseases of aquatic animals or appropriate experience and permission of instructor. Maximum enrollment 18. S-U grades optional. Course fee required. Available, by a competitive application process, to veterinary and graduate students. P. R. Bowser.

This course is sponsored by Cornell University, the University of Pennsylvania, and three marine science institutes at Woods Hole: the Marine Biological Laboratory, Woods Hole Oceanographic Institution, and Northeast Center of the National Marine Fisheries Service. It is an advanced course in the comparative pathology of aquatic invertebrates and vertebrates commonly used as laboratory animals. The material presented consists of discussions of the diseases of aquatic animals as well as extensive use of the microscope to examine the histopathology associated with these diseases. The course is taught by an invited faculty of 12 individuals who are leaders in their respective fields of aquatic animal medicine.

[VTMED 615 Veterinary Medicine in Developing Nations

Spring. 2 credits. Maximum enrollment 20. First-, second-, third-, and fourth- year veterinary students; others by permission of instructor. S-U grades only. Offered odd-numbered years; next offered spring 2003. K. A. Schat.

Veterinary medicine has an important role to play in developing nations in developing and providing economical sources of animal proteins for human consumption and protecting ecological resources. This seminar course provides interested veterinary students with information on and insight into the multitude of complex issues facing U.S. veterinarians working in developing nations.]

VTMED 616 Diseases of Birds

Spring. 2 credits. Minimum enrollment 10; maximum enrollment 80. Second-, third-, and fourth-year veterinary students. Letter grades only. S. Naqi and G. V. Kollias.

This course is designed to introduce second-, third-, and fourth-year veterinary students to a basic and practical knowledge of the most common infectious and noninfectious diseases affecting a variety of avian species. The course emphasizes the latest diagnostic and control approaches. The course format is a combination of didactic lectures and discussions.

[VTMED 618 Adaptation of Animals to the Environment

Spring. 1 credit. Minimum enrollment 10. Graduate and first-, second-, third-, and fourth-year veterinary students. Letter grades only. Not offered 2001–2002. Staff.

The course examines the physiological adaptations of animals to their environment in addition to methods of acclimatization to novel environments. The course focuses on environmental parameters that exist in harsh environments and include heat, cold, altitude, and xeric conditions. Thus the physiological mechanisms of thermoregulation in mammals, birds, and ectotherms is examined together with their responses to low food and water availability. The knowledge obtained aids in understanding the consequences of translocation of both wild and domestic animals and provide a rational basis for animal housing and the provision of appropriate habitats for zoological gardens. The degree of environmental adaptation is also examined in terms of animal production from a basic science standpoint.]

[VTMED 619 Pathogenesis of Viral Disease

Spring. 2 credits. Minimum enrollment 15; maximum enrollment 45. Strongly recommended prerequisite of immunology. First-, second-, third-, and fourth-year veterinary students. Letter grades only. Offered odd-numbered years. Next offered spring 2003. J. D. Baines.

Course content and objectives: the course focuses on the balance between host defense against viral infections and the mechanisms by which viruses perpetuate themselves in human and animal populations. In the process, the mechanisms of cell and animal infection, spreading between cells, disease mechanisms, and the roles of the immune response in enhancing and suppressing disease are explored. This includes a systems-based approach exploring the pathogenesis of disease in the CNS, gastrointestinal, hepatic, tegumentary, respiratory, and urogenital systems. The basic principles of virus taxonomy, structure and replication are included to introduce various viral groups and their special properties. Methods of intervention (vaccination, antiviral drugs) are also covered. Lectures are derived from relevant current literature, the text, Nathanson's *Viral Pathogenesis*, 1997, and Field's *Virology*, third edition, 1996. Relevant materials are placed on reserve in the veterinary library.]

VTMED 620 Molecular Biology and Immunology of Host-Parasite Interactions (also VETMI 702)

Spring. 2 credits: First-, second-, third-, and fourth-year veterinary students, others by permission of the instructor. Letter grades only. Offered even-numbered years. E. J. Pearce.

The primary objective of this lecture course is to make the student aware of the most important areas of research in contemporary parasitology. Lectures focus on a broad range of parasites, with an emphasis on those of medical importance. Recently published research articles and reviews are used as the basis from which to explore the issues of host invasion, evasion of host defense mechanisms by parasites, vaccination against parasitic infections, chemotherapy, drug resistance, vector biology, and molecular diagnosis.

VTMED 622 Foreign Infectious Diseases of Animals

Spring. 1 credit. Minimum enrollment 18. Second-, third-, and fourth-year veterinary students. Letter grades only. D. H. Schlafer.

This course describes the etiology, pathogenesis, clinical signs, gross pathology, differential diagnosis, methods of spread, reservoir hosts, and control of foreign animal diseases that present serious economic threats to the United States. The format is student seminar presentations with each student responsible for presenting one seminar. The recent spread of FMD, West Nile and BSE emphasize the importance these diseases have to producers, consumers, and practicing veterinarians. Ordinarily the course also includes presentations by college faculty and research scientists working on foreign infectious diseases.

VTMED 624 Feline Infectious Diseases

Spring. 1 credit. Minimum enrollment 10; maximum enrollment 80. Second-, third- and, fourth-year veterinary students. Letter grades only. S. C. Barr.

The course consists of two 50-minute lecture periods a week for eight weeks. The letter grade is obtained entirely from the result of a written examination (usually multiple choice format) given in the final period. The course emphasizes the clinical aspects of feline infectious diseases common to cats in North America and complements knowledge acquired in Blocks IV and V. The overall objective is to provide details about specific infectious diseases a future small animal practitioner may need to know to effectively diagnose and treat diseases. Etiology, epidemiology (prevalence and transmission), pathogenesis, clinical findings, diagnosis, pathologic findings, therapy prevention, and public health considerations are emphasized. Most lectures are presented from a clinician's point of view and therefore the material is oriented towards practical skills in managing clinical cases.

VTMED 625 Osteoarthritis

Spring. 1 credit. Maximum enrollment 16. Graduate and second-, third-, and fourth-year veterinary students. Letter grades only. G. Lust.

This course provides a basis at the molecular, cellular, and tissue levels for understanding the function of mammalian diarthrodial joints. It includes a description of a diarthrodial joint and the composition and metabolism of articular cartilage, subchondral bone, ligaments, meniscus, capsule, and synovium. The interrelationships of synovium, synovial fluid, articular cartilage, joint lubrication, biomechanical considerations, and enervation are considered. Canine hip dysplasia is a focus during the early class sessions. The osteoarthritis that is associated with canine hip dysplasia serves as a basis for discussion of the etiopathogenesis of the disease. Canine osteoarthritis is emphasized, but the disease in animal models such as mice, guinea pigs, rabbits, and sheep is mentioned. Therapies, such as nonsteroidal anti-inflammatory drugs, glucocorticoids, and others may be discussed.

VTMED 626 Epidemiology of Infectious Diseases

Spring. 1 credit. Maximum enrollment 8. Second-, third-, and fourth-year veterinary students. Letter grades only. H. Mohammed and staff.

This course introduces the epidemiologic methods used in infectious disease investigations. The importance of surveillance systems in detecting modern epidemics and in the development of effective disease prevention and control strategies are also discussed. An emphasis is placed on understanding the relationships between the host, the agent, and the environment as they relate to disease causation. The course explores contemporary epidemiologic methods applicable to old diseases that remain real or potential

problems, newly emerging infectious diseases, and nosocomial infections. Selected diseases are discussed to clarify the role of epidemiology in understanding the pathogenesis of infectious processes in individuals and groups of animals. Students have the opportunity to apply the methods learned to actual disease problems and write an epidemiologic report that might lead to a publication in a peer-reviewed scientific journal.

[VTMED 627 Diseases of Antiquity
Spring. 1 credit. Second-, third-, and fourth-year veterinary students. Letter grades only. Not offered 2002. Staff.
This is a study of 36 human and animal diseases that have had profound effects on the course of human history from the beginning of recorded time to the present. This course combines aspects of literature, medicine, and history and explores the interactions between demographics, commerce, imperialism, medical care, the environment, and disease. Prevailing superstitions and religious views are considered in context with each illness and simultaneously occurring world events.]

[VTMED 628 Clinical Pathology
Spring. 2 credits. Minimum enrollment 20; maximum enrollment 60. Second-, third-, and fourth-year veterinary students. Letter grades only. Not offered 2002. Staff.
This six-week course addresses a range of issues related to laboratory medicine and interpretation of laboratory results. General topic areas include hematology, clinical chemistry and immunology, and urinalysis. The primary mode of instruction is student-driven small-group (untutored) exploration of case materials followed by faculty-moderated large-group discussions. Selected lectures and laboratory sessions supplement and expand on issues generated by the case discussions. This course builds on concepts previously addressed in Block III and IV and also provides additional experiences in practical clinical pathology procedures and microscopy.]

VTMED 630 Clinical Biostatistics for Journal Readers
Spring. 1 credit. Minimum enrollment 6; maximum enrollment 20. First-, second-, third-, and fourth-year veterinary students; others by permission of instructor. Letter grade. H. N. Erb.
Students become familiar with the statistical methods commonly used in veterinary clinical articles, are taught to recognize obvious misuse of those methods, and are taught to interpret the statistical results.

VTMED 631 Clinical Diagnostic Parasitology
Fall and spring. 0.5 credit. Prerequisite: VTMED 551. Third- and fourth-year veterinary students. S-U grades only. TBA with Dr. Frongillo, D. D. Bowman and M. K. Frongillo.
This course provides a chance to perform diagnostic parasitology methods using samples obtained from ongoing clinic cases. Students attend eight 1-hour sessions as they rotate through the ambulatory, community practice, and pathology rotations. In the ambulatory service (four sessions with students), diagnostics concentrates on the laboratory examination of samples from large animal cases that have been observed during the previous week. In the Community Practice Service, one hour concentrates on the examination of samples from ongoing cases, while a second hour consists of a discussion of the treatment of common endo- and ectoparasites. The two hours spent as part of the pathology rotation examine methods of recovering parasites from pathology specimens, including the examination of wet preparations and the digestion of tissues for parasite recovery. The course is considered to be a logical extension to the foundation course Host, Agent, and Defense and is expected to build on the didactic material presented in Large and Small Animal Parasitology.

VTMED 632 Senior Seminar
Fall and spring. 1 credit. First-, second-, and third-year veterinary students. S-U grades only. Must be completed in two consecutive terms (either fall to spring or spring to fall). R. O. Gilbert.
Attendance at 14 of the senior seminar sessions presented during the academic year constitutes acceptable completion of this course. This course does *not* fulfill the 1-credit Set VII minimum.

[VTMED 633 Introduction to Nontraditional Companion and Laboratory Animals
Spring. 1 credit. First-, second-, third-, and fourth-year veterinary students. Letter grades only. Not offered 2002. Staff.
This course is both laboratory and lecture based and deals with a wide variety of nontraditional species, other than dogs or cats, that might be brought into a small-animal practice. These can be either companion or laboratory animals and include rodents, lagomorphs, other small mammals, reptiles, amphibians, birds, fish, goats, sheep, potbellied pigs, primates, and llamas. Instruction in restraint and handling, breeding, husbandry, and general management information is provided for each species. This is followed, where possible, by laboratory sessions for observation, restraint, and physical examination.]

[VTMED 635 Introduction to the Professional Literature
Spring. 1 credit. Minimum enrollment 6; maximum enrollment 20. First-, second-, third-, and fourth-year veterinary students. Letter grades only. Not offered 2002. D. Lee.
This course introduces veterinary students to the professional and biomedical literature, including development of critical reading skills. Students become familiar with the broad range of professional and biomedical literature and are encouraged to develop a rigorous approach to journal and scientific article review. Secondary emphasis is on developing skills in library and bibliographic search techniques, as well as exploring the use of veterinary-related on-line information.]

VTMED 637 Introduction to Community Practice Service
Fall, winter, spring, and summer. 1 credit. First- and second-year veterinary students by permission of instructor. S-U grades optional. W. E. Hornbuckle.
This course introduces veterinary students to primary care small-animal clinical practice through direct exposure to the Community Practice Service of the Cornell University Hospital for Animals. Students observe and assist with restraint, examination and routine treatment of pets, and communication with clients. Successful completion requires satisfactory participation during 10 half-days of clinical service.

VTMED 638 Physiological Nutrition
Spring. 1 credit. Minimum enrollment 10; maximum enrollment 90. Second-, third-, and fourth-year veterinary students; others by permission of instructor. Letter grades only. F. A. Kallfelz.
This course provides information on the evaluation and formulation of rations for large and small animals. These concepts are applied in discussion on the nutrition requirements of these animals during maintenance, gestation, lactation, growth, stress, and aging. The course is recommended for all second-year veterinary students who do not have a strong background in ruminant, equine, canine, and feline nutrition. This course, or its equivalent, is necessary for comprehension of clinical nutrition concepts in Foundation Course V.

[VTMED 639 Veterinary Dentistry
Spring. 1 credit. Maximum enrollment 96. Second-, third-, and fourth-year students. Letter grades only. Not offered 2002. Staff.
This is an introductory-level course in small animal dentistry. It is a laboratory course that meets for two hours twice a week for 16 sessions. Basic concepts and practical topics in dental nomenclature, dental anatomy, oral/dental examination, routine dental care including prophylaxis, recordkeeping, genetics and breed differences, feline-specific dental disease, occlusion/malocclusion, periodontics, endodontics, restorative dentistry, oral surgery, and orthodontics are presented. Basic instrumentation, dental radiography, and materials used in dentistry are stressed. The class uses prepared specimens for all sessions.]

VTMED 640 Veterinary Aspects of Captive Wildlife Management
Spring. 2 credits. First-, second-, third-, and fourth-year veterinary students. Letter grades only. G. V. Kollias.
This course concentrates on principles of captive wildlife management, both clinical and nonclinical. Students are challenged to learn and integrate a variety of disciplines that are essential to managing wildlife successfully in a captive or semi-free-ranging environment. These disciplines include but are not limited to: species-specific (1) behavior and behavioral requirements, (2) nutritional requirements and problems, (3) natural history, (4) zoonotic and toxicological problems, (5) manual restraint and anesthesia, (6) preventive medicine, and (7) medical and legal ethics. In even-numbered years the course emphasizes non–North American wildlife species (examples include African, Asian, Australian, and Central and South American species), and in odd-numbered years the course focuses more on the North American (native) wildlife species.

VTMED 641 Approaches to Problems in Canine Infectious Diseases
Spring. 1 credit. Minimum enrollment 10; maximum enrollment 80. Second-, third-, and fourth-year veterinary students. Letter grades only. S. C. Barr.
The course consists of two 50-minute lecture periods each week for eight weeks. The letter grade is obtained entirely from the result of a written examination (usually multiple choice format) given in the final period. The course emphasizes the clinical aspects of the more common canine infectious diseases that are not covered in Foundation Course IV or V. The overall objective is to provide details about specific infectious diseases a future small animal practitioner may need to know

to effectively diagnose and treat these diseases. Clinical signs, presentation, clinicopathologic data, diagnostic choices, treatment plans, and prevention are emphasized. Most lectures are presented by clinical faculty and therefore the material is oriented toward practical skills in managing clinical cases.

[VTMED 642 Management of Fluid and Electrolyte Disorders
Spring. 2 credits. Minimum enrollment 20; maximum enrollment 40. Second-, third-, and fourth-year veterinary students. Letter grades only. Not offered 2002. D. F. Smith.
Students focus on clinical manifestations and the pathophysiologic mechanisms associated with fluid, electrolyte, and metabolic acid base disturbances in domestic animals. The course is divided into segments dealing with salt and water imbalances, potassium abnormalities, metabolic acidosis, metabolic alkalosis, and mixed acid-base disturbances.]

VTMED 643 Fundamental Aspects of Embryo Transfer
Spring. 1 credit. Maximum enrollment 16. Enrollment is done by lottery. Third- and fourth-year veterinary students or graduate students by permission of instructor. S-U grades only. J. R. Hill.
This course introduces the theory and practice of embryo transfer in domestic animals. Topics include: background, advantages and disadvantages, superovulation, embryo recovery techniques, embryo culture and manipulation, embryo transfer techniques, registration of offspring, import and export, and related topics in assisted reproductive technologies. Students are exposed to practical techniques of embryo transfer in cattle, small ruminants, horses, and swine. The course consists of lectures, demonstrations, and laboratory classes during which students practice techniques of embryo recovery, evaluation, handling, and transfer.

VTMED 644 Equine Surgical and Anesthetic Techniques
Winter. 1 credit. Prerequisite: VTMED 602 Anatomy of the Horse. Minimum enrollment 3; maximum enrollment 21. Enrollment is done by lottery. Third- and fourth-year veterinary students. S-U grades only. S. L. Fubini (coordinator) and other large-animal surgeons.
This course consists of five laboratories performing surgical procedures on ponies and cadaver specimens. It is the intent of this course not to make the students proficient in these procedures but to familiarize them with some specialized surgical techniques and to make them more enlightened referring practitioners. The course, therefore, is intended for students anticipating equine practice after graduation. This course is offered during a one-week period over winter intersession.

VTMED 645 Food Animal Surgical and Anesthetic Techniques
Winter. 1 credit. Prerequisite: VTMED 603 Anatomy of the Ruminant. Minimum enrollment 6; maximum enrollment 21. Third- and fourth-year veterinary students. S-U grades only. Enrollment is done by lottery. S. L. Fubini and other large-animal surgeons.
This course consists of five laboratories performing surgical procedures on sheep, calves, cadaver specimens, and adult cattle. It is the intent of this course not to make the students proficient in these procedures but to familiarize them with surgical techniques and to make them more enlightened referring practitioners. The course, therefore, is intended for students anticipating food animal practice after graduation. This course is offered during a one-week period over winter intersession.

VTMED 646 Llama Tutorial
Fall, spring, summer. 1 credit. Prerequisite: VTMED 540. Second-semester second-, third-, or fourth-year veterinary students. S-U grades only. Independent study. M. C. Smith.
This autotutorial or group tutorial course covers common problems of llamas and alpacas. Participants are provided with study guides consisting of brief case descriptions and sample study questions. Reference is made to textbooks, journal articles, videotapes, and (if available) a teaching llama or alpaca to assist students in finding the answers to the questions efficiently. Grading is based on an oral exam.

VTMED 647 Poisonous Plants
Fall. 1 credit. First-, second-, third-, and fourth-year veterinary students; others by permission of instructor. S-U grades only. R. Hillman and M. Smith.
Field trips demonstrate toxic plants growing in natural or cultivated settings. Lectures address economically important poisonous plants native to the United States. Information presented includes plant identification, natural habitat, toxic principles, clinical signs of toxicity, and treatment and prevention of poisoning in animals. Some of the major toxic principles found in plants and considered in detail in the course are nitrates, cyanide, oxalates, photodynamic agents, alkaloids, and mycotoxins.

VTMED 648 Clinical Management of Native Wildlife
Fall, spring, summer (credit given in fall). 1 credit. Enrollment not to exceed 20 students per semester, 2 students per rotation. First-, second-, third-, and fourth-year veterinary students by permission of instructor. Letter grades only. G. V. Kollias and staff.
This course introduces veterinary students to primary native wildlife care and to wildlife issues that practicing veterinarians face on a daily basis. Students are responsible for the assessment, physical examination, and medical care of native wildlife presented to the Cornell University Hospital for Animals by the public and local wildlife rehabilitators. Student activities are directly supervised and assessed by faculty wildlife clinicians on a daily basis. Successful completion of the course requires 40 hours of satisfactory supervised participation per semester in the clinic. Clinic times are appropriately scheduled throughout the semester. Students are required to submit two case summaries before the end of the semester and a log of their clinical hours.

VTMED 649 Introduction to Equine Practice
Spring. 0.5 credit. Maximum enrollment 30. First- and second-year veterinary students. Letter grades only. R. Hackett and C. Collyer.
This is an introductory course in equine husbandry intended for students with little or no experience working with horses. Lecture topics include horse breeds and colors, housing facilities and fencing, and overview discussions of the racing, showing, and breeding industries. Laboratories emphasize basic equine handling and restraint as well as feeds and bedding.

VTMED 652 Avian Medicine and Surgery
Spring. 2 credits. Minimum enrollment 20; maximum enrollment 80. Third- and fourth-year veterinary students. Letter grades only. G. V. Kollias and staff.
This course is designed to introduce third- and fourth-year veterinary students to the principles and practice of clinical avian medicine and surgery. The course is taught in a basic didactic lecture and discussion format with laboratories that reinforce concepts presented in the lectures.

VTMED 653 Advanced Equine Lameness
Spring. 1.5 credits. Minimum enrollment 7; maximum enrollment 21. Third- and fourth-year veterinary students. Enrollment is done by lottery. S-U grades only. N. Ducharme, A. Nixon, and staff.
This course is designed to help students understand the methodology and to develop the manual skills required for lameness examination in horses. Emphasis is on developing diagnostic skills. Specifically, students are expected to develop proficiency in the identification of clinical characteristics associated with recognized lamenesses and to localize the origin of the lameness. Teaching aids include video modules outlining various gait abnormalities. In addition, horses with specific gait abnormalities will be available for physical, radiographic, and ultrasonographic examination.

VTMED 654 Current Therapy in Equine Reproduction
Spring. Lec, 1 credit; lab, 0.5 credit. Lab minimum enrollment 12; maximum enrollment 24. Laboratory enrollment is done by lottery, if oversubscribed; concurrent enrollment in lecture is required. Third- and fourth-year veterinary students. Letter grades only. D. H. Volkmann and C. M. Schweizer.
This course covers advanced aspects of equine reproductive physiology. Reproductive management of mares and stallions using natural and artificial breeding strategies is discussed. Diagnosis, treatment, and prevention of common reproductive disorders are stressed. The laboratory component builds on skills acquired during Foundation Courses and provides experience in techniques important in equine theriogenology.

VTMED 655 Production Animal Theriogenology
Spring. Lec, 1 credit; lab, 1 credit. Lab, minimum enrollment 12; maximum enrollment 24. Laboratory enrollment is done by lottery. Concurrent enrollment in Production Animal Theriogenology Lecture is required. Third- and fourth-year veterinary students. Letter grades only. J. R. Hill.
This course deals with specific reproductive disorders of production animals as well as reproductive management of production units. Content includes reproductive biology of production animals, economic considerations, and medical and surgical approaches to management of reproductive disorders. Laboratory sessions are tailored to acquisition of specific skills fundamental to the practice of

theriogenology of production animals. Emphasis is on dairy cows.

VTMED 656 Special Problems in Equine Medicine
Spring. 1.5 credits. Minimum enrollment 10; maximum enrollment 30. Enrollment is done by lottery. Third- and fourth-year veterinary students. S-U grades only. T. Divers and staff.
This course is intended for students who plan to or may enter equine practice. In-depth study of important diseases, review of recent literature, health management, and hands-on procedures or demonstrations are the core of this course.

VTMED 657 Disorders of Large Animal Neonates
Spring. 1 credit. Minimum enrollment 10; maximum enrollment 100. First-, second-, third-, and fourth-year veterinary students. Letter grades only. D. Ainsworth.
The common medical problems of foals and calves, with emphasis placed on the neonatal period, are discussed. Specific topics examined in detail include disorders affecting the respiratory, gastrointestinal, and musculoskeletal systems. Students also spend several hours in the neonatal intensive care unit providing medical care of hospitalized patients under staff supervision.

VTMED 659 Equine Soft Tissue Surgery
Spring. 1 credit. Minimum enrollment 6; maximum enrollment 21. Third- and fourth-year veterinary students. Enrollment is done by lottery. Letter grades only. R. Hackett and staff.
This course, intended for students anticipating equine practice after graduation, builds on material presented in the foundation courses to provide supplemental instruction in surgical disorders of the horse. Lectures are case based and emphasize disorders likely to be encountered in equine practice (colic, traumatic injuries, upper respiratory tract disorders, prepurchase examination). Laboratories emphasize diagnostic and therapeutic procedures in which an entry-level equine practitioner should be competent.

VTMED 661 Surgical Pathology
Spring, summer, fall. Variable 1–2 credits. Second-, third-, and fourth-year veterinary students with permission of instructor. Letter grades only. S. McDonough.
This one- or two-week course (approximately eight hours per day for one credit per week) provides hands-on experience in the Surgical Pathology Service of the Department of Biomedical Sciences. Working with the attending pathologist, students examine tissue specimens histologically, propose diagnoses, and discuss their interpretations. Students may enroll in this course only through the Office of Student Records *within the official add/drop period*. All requests to enroll must be accompanied by the Supplemental Enrollment Form indicating Dr. McDonough's approval of the enrollment and the amount of credit to be awarded. *Second-year students* should not enroll for any term other than summer *unless* they have actually reserved a January or spring break slot through Dr. McDonough.

VTMED 665 Medical and Surgical Problems of Dairy Cattle—Emphasis on the Individual Animal
Spring. 1.5 credits. Minimum enrollment 6; maximum enrollment 28. Enrollment is done by lottery. Third- and fourth-year veterinary students. Letter grades only. S. Fubini and staff.
This course provides students with a special interest in dairy practice the opportunity for in-depth discussions of special problems in bovine medicine and surgery. Emphasis is on case discussions, physical examination techniques, and ethical and practical matters. The course emphasizes individual cow treatment.

VTMED 666 Small Animal Clinical Oncology
Spring. 1 credit. Third- and fourth-year veterinary students. Letter grades only. R. L. Page.
This course presents common tumor syndromes in small animals. Emphasis is placed on biological behavior, patient management, and client relations. Format includes lectures, journal club discussions, demonstrations, and seminars.

VTMED 667 Special Problems in Small Animal Medicine
Spring. 1 credit. Minimum enrollment 10; maximum enrollment 40. Third- and fourth-year veterinary students. S-U grades only. J. Randolph (coordinator) and staff.
During the four-week course, students work through selected problems in small-animal medicine. The course consists of a 2-hour weekly seminar. The focus is on the medical problems associated with cases using historic, clinical, clinical pathologic, and pathologic findings to elucidate basic pathophysiologic principles of disease. The overall objective is to give future small-animal practitioners skills in the approach to clinical problems with specific emphasis placed on history taking, clinical signs and examination skills, assessment of clinical pathology data and diagnostic materials (radiographs, ultrasounds), treatment plans, and prevention. The course expands knowledge gained in Foundation Course V and, under the instruction of a clinical faculty member, is aimed at facilitating the use of that knowledge into the practical skills of managing clinical cases.

[VTMED 668 Practice Management
Spring. 2 credits. Number of sections will be determined by enrollment. Third- and fourth-year veterinary students. S-U grades only. Not offered 2002. D. Lee.
Course participants form a veterinary group practice that includes the specialties of each person's interest. Topics are presented and discussed in the staff meeting format of the practice. Topics include basic practice organization, leadership styles, career planning, communication skills, facility management, human resource management, maintenance of standards, marketing and merchandising, building and maintaining clients, practice growth, finances, computing systems and information management, money management, legal issues and insurance, professional relations and responsibility, and maintaining an acceptable quality of life, including stress management. Various practitioners and practice managers speak to the group about their very different successful practices, concentrating on management and organizational skills.]

VTMED 669 Sheep and Goat Medicine
Spring. Lec, 1 credit; lab, 0.5 credit. Lab, concurrent enrollment in Sheep and Goat Medicine Lecture is required. Third- and fourth-year veterinary students. S-U grades only. M. Smith.
This course discusses diagnosis, treatment, and prevention of medical and surgical problems of individual small ruminants and of sheep and goat herds. Basic information on breeds, behavior, nutritional requirements, and management systems is supplied. Economically important contagious or metabolic diseases are discussed in depth. The diagnostic evaluation and differential diagnoses for common clinical presentations such as skin disease, neurologic disease, lameness, and mastitis are considered. Herd monitoring of economically important parameters and necropsy diagnosis of abortions and neonatal losses are addressed. Breeding systems, pregnancy diagnosis methods, and correction of dystocias are discussed and demonstrated in optional laboratory sessions.

VTMED 670 Drug Handling in the Body
Spring. 0.5 credit. Maximum enrollment 60. Second-, third-, and fourth-year veterinary students. Letter grades only. R. A. Cerione and G. A. Weiland.
This course provides an in-depth consideration of the pharmacological principles of administration, adsorption, distribution, metabolism, and elimination of drugs. Emphasis is on the conceptual basis of the pharmacokinetic considerations in the therapeutic use of drugs. The course builds on the pharmacological and physiological principles introduced in Foundation Course III.

VTMED 671 Autonomic Pharmacology
Spring. 0.5 credit. Maximum enrollment 80. Second-, third-, and fourth-year veterinary students. Letter grades only. G. A. Weiland.
This course provides an in-depth consideration of the pharmacological and physiological principles of autonomic pharmacology. Molecular, cellular, and organ system mechanisms are emphasized. The course explores in more detail the fundamental pharmacological and physiological principles of the effects of drugs on autonomic organs introduced in Foundation Course III.

VTMED 672 Antimicrobial Drug Therapy in Veterinary Medicine
Spring. 1 credit. Second-, third-, and fourth-year veterinary students. Letter grades only. W. S. Schwark.
The objective of this course is to familiarize students with antimicrobial drugs used in veterinary practice. The course builds on fundamental pharmacological and microbiological principles covered in Foundation Courses III and IV and considers antibacterial, antifungal, antiparasitic, and anticancer drugs from the point of view of unique pharmacokinetic properties, indications for clinical use, and potential toxicities as the basis for rational use.

VTMED 675 Fundamental Principles of Vertebrate Central Nervous System Pharmacology
Spring. 0.5 credit. Minimum enrollment 6. Second-, third-, and fourth-year veterinary students. Letter grades only. L. M. Nowak.
This course includes up-to-date knowledge of physiological and pharmacological aspects of the main central nervous system neurotrans-

mitter receptors and provides a basis for rational understanding of the drugs used during surgery and in treatment of neurological diseases.

VTMED 676 Clinical Ophthalmology
Spring. 0.5 credit. Third- and fourth-year veterinary students. S-U grades only. R. Riis, N. Irby, and T. Kern.
The principles and practice of entry-level veterinary ophthalmology introduced in Block V, Introduction to Veterinary Ophthalmology, are supplemented by lectures and discussions that emphasize species differences, basic surgical decision-making, and recognition of ocular conditions appropriate for referral.

VTMED 677 Dairy Production Medicine
Fall. 2 credits. Minimum enrollment 6; maximum enrollment 14. Third- and fourth-year veterinary students. S-U grades only. C. Guard.
This is an intermediate course in the techniques and procedures used by veterinarians in modern dairy practice. Many of these activities fall outside the traditional boundaries of medicine, surgery, and theriogenology and might include housing, facilities, manure management, and employee education. Data analysis, disease and productivity monitoring, and evaluation of deviations from targeted performance are used to plan cost-effective interventions or corrections, followed by continued surveillance to monitor their effect. Students are introduced to the dominant software currently used in dairy management. Local dairy herds serve as additional laboratories for class projects.

VTMED 678 Small Animal Theriogenology
Spring. 1 credit. Third- and fourth-year veterinary students. Letter grades only. D. H. Volkmann.
This is a distribution course in a lecture-based format designed to complement the knowledge gained in the theriogenology component of Foundation Course V, Animal Health and Disease. Content includes discussion of breeding management, infectious and noninfectious causes of infertility and pathology of the male and female reproductive tracts, their diagnosis and management. The emphasis of the course is on conditions affecting dogs and cats.

VTMED 679 Clinical Pharmacology
Spring. 0.5 credit. Third- and fourth-year veterinary students. S-U grades only. W. Schwark.
This course is offered after Blocks I–V and formal exposure to pharmacology course work is completed. The course is designed to familiarize students with drug use in the clinical setting and uses ongoing cases in the teaching hospital as a teaching tool. Pharmacological concepts are emphasized, with a focus on the rationale for drug choice, alternative drug choices available, pharmacokinetic considerations, and potential drug interactions/toxicities. This course is offered at the time students are about to embark on their clinical rotations. It is designed to emphasize practical aspects of pharmacology in the clinical setting, using basic concepts obtained during formal course work. The onus is placed on the student to explain/rationalize drugs employed in clinical cases in the teaching hospital.

VTMED 680 Behavior Problems of Horses
Spring. 1 credit. Prerequisite: one semester of veterinary curriculum. First-, second-, third-, and fourth-year veterinary students. S-U grades only. K. A. Houpt.
The goal of this course is to give veterinary students the ability to treat the behavior problems of horses. History-taking, counseling, diagnostic tests, follow-up, the importance of cooperation with the referring veterinarian, prevention of behavior problems, training techniques of value to the practitioner, and socialization of foals are presented.

VTMED 681 Behavior Problems of Small Animals
Spring. 1 credit. Prerequisite: one semester of veterinary curriculum. First-, second-, third-, and fourth-year veterinary students. S-U grades only. K. A. Houpt.
The goal of this course is to give veterinary students the ability to treat the behavior problems of cats and dogs. History-taking, counseling, and follow-up methods are presented. Each student has the opportunity to participate in three cases. Behavioral and pharmacological treatments for behavior problems are presented.

VTMED 682 Topics in Veterinary Emergency and Critical Care Medicine
Spring. 1 credit. Minimum enrollment 10; maximum enrollment 35. Enrollment is done by lottery. Third- and fourth-year veterinary students; all others by permission of instructor. S-U grades optional. P. Moon.
This course provides an introduction to emergency and critical care medicine. It is designed to have one to two topics per week. An introductory seminar presents basic information on the topic(s) at the beginning of the week followed by a two-hour group discussion later in the week. Although most of the cases are based on small-animal cases, the same principles apply to both large- and small-animal situations. Topics that might be covered include: triage, emergency fluid therapy, cardiac and pulmonary emergencies, nutritional support, common toxicology problems, emergency surgical procedures (chest tubes, tracheotomies), and basic and advanced cardiopulmonary resuscitation. When two courses (i.e., section "A" and "B") are offered in the same year, different topics are covered in each course.

VTMED 685 Physiology of Pregnancy
Spring. 2 credits. Maximum enrollment 20. Second-, third-, and fourth-year veterinary students. Letter grades only. P. W. Nathanielsz.
This course is presented in lecture fashion. One major reference per lecture is assigned each week. Subjects covered are placental function, fetal growth, central nervous system development, fetal breathing, biorhythms in maternal and fetal physiology, parturition, and adaptations to newborn life.

VTMED 689 Fundamentals of Ruminant Digestion and Metabolism
Spring. 0.5 credit. Minimum enrollment 5; maximum enrollment 50. First-, second-, third-, and fourth-year veterinary students; selected graduate students by permission of instructor. Letter grades only. T. R. Houpt.
This course is designed for the student who has little or no previous course work in ruminant digestive physiology. It consists primarily of lectures surveying: the functional aspects of control of feed intake; salivation; reticuloruminal motility, including rumination and eructation; microbial flora and fauna; fermentation in reticulorumen (digestion of carbohydrates, proteins and fats); ruminal gas formation; absorption of short-chained fatty acids; special features of ruminal nitrogen metabolism; passage of nutrients to lower tract; and a brief consideration of the functions of omasum, abomasum, and small and large intestines. Emphasis is on the differences of the ruminant digestive processes from those of the simple-stomached animals.

VTMED 690 Molecular and Genetic Basis of Inherited Disorders in Animals and Application to Clinical Medicine
Spring. 2 credits. Minimum enrollment 5; maximum enrollment 15. First-, second-, third,- and fourth-year veterinary students; graduate and undergraduate students also welcome. Letter grades only. Offered even-numbered years. J. Ray.
This course introduces the molecular basis of inherited diseases in domestic animals. Topics include: several inherited metabolic defects causing systematic malfunctions; muscle and bone abnormalities; retinal degeneration; and failure of the immune systems. Techniques to characterize genes and mutations. Use of molecular techniques for diagnosis and prevention. Use of molecular tools for the treatment of inherited disorders.

VTMED 692 Current Concepts in Reproductive Biology
Fall. 3 credits. First-, second-, and third-year veterinary students or appropriate undergraduate/graduate training. Letter grades only. Lec, 2 hours each week; disc, 2 hours each week; T R 10:10–12:05. Offered odd-numbered years. J. Fortune, W. R. Butler, and staff.
This is a team-taught survey course in reproductive physiology/endocrinology. Lectures are given by several reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, and sperm physiology/function); female reproductive function (endocrinology, ovarian development and function, oocyte physiology/function); fertilization and early embryo development; pregnancy; parturition; puberty; and reproductive technology. Students participate in the form of discussions and/or presentations.

VTMED 695 Genetic Basis of Eye Diseases
Spring. 1 credit. Minimum enrollment 5; maximum enrollment 14. First-, second-, third-, and fourth-year veterinary students. Letter grades only. G. Aguirre.
This course covers the molecular and genetic basis of inherited eye diseases in domestic and laboratory animals. It is aimed at the professional student in the veterinary curriculum but is open to graduate-level students. The course is given in a combination lecture/seminar format, with students leading and actively participating in discussions. The students are expected to do assigned and independent outside research, both for class discussions and the paper.

[VTMED 696 Fundamental Principles and Techniques of Small Animal Anesthesia: Dogs, Cats, and Birds.
Spring. 1 credit. Minimum enrollment 15. Third- and fourth-year veterinary medical students. Not offered 2002. P. F. Moon, R. D. Gleed, and J. W. Ludders.
This course is designed for the veterinary medical student interested in small-animal practice. The course consists of lectures, case discussions, and development of anesthetic protocols for routine and complicated cases. Subjects to be covered include: anesthetic management for elective and emergency surgery, management of the high-risk patient, fluid therapy, drug interactions, pain management, and the management of anesthesia-related complications, cardiopulmonary resuscitation, and post-anesthetic management. While fundamental concepts and recent advances in anesthesia are discussed, the practical application of anesthetic principles and techniques are a major objective of the course.]

[VTMED 697 Fundamental Principles of Large Animal Anesthesia: Equine and Mixed Animal Practice
Spring. 1 credit. Minimum enrollment 15. Third- and fourth-year veterinary medical students. Not offered 2002. J. W. Ludders, R. D. Gleed, and P. F. Moon.
This course is designed for the veterinary medical student interested in equine or mixed animal practice. The course consists of lectures, case discussions, and development of anesthetic protocols for routine and complicated cases. Subjects to be covered include: anesthetic management for elective surgery, field anesthesia, management of the high-risk patient, fluid therapy, drug interactions, pain management, and the management of anesthesia-related complications, cardiopulmonary resuscitation, and post-anesthetic management. While fundamental concepts and recent advances in anesthesia are discussed, the practical application of anesthetic principles and techniques is a major objective of the course.]

VTMED 698 Special Projects in Veterinary Medicine
Fall, winter, spring, summer. Variable 1–4 credits. Must be arranged with a College of Veterinary Medicine tenure-track faculty member. S-U grades optional.
This course provides the opportunity for students to work individually with a faculty member to pursue an area of particular interest and, typically, not part of the established curriculum. Specific course objectives and course content are flexible and reflect the scope and academic expertise of the faculty.

VTMED 699 Research Opportunities in Veterinary Medicine
Fall, winter, spring, summer. Variable 1–4 credits. Must be arranged with a College of Veterinary Medicine tenure-track faculty member. S-U grades optional.
This course provides the opportunity for individual students to work in the research environment of faculty involved in veterinary or biomedical research. Specific course objectives and course content are flexible and reflect the specific research environment. Research projects may be arranged to accumulate credit toward requirements in Distribution Sets I, II, III, IV, and V.

VTMED 700 Large Animal Theriogenology Service
Spring. 2 or 4 credits. Prerequisite: VTMED 551. Maximum enrollment 4 per rotation. Third- and fourth-year veterinary students. Letter grades only. D. H. Volkmann, C. Schweizer, J. R. Hill, R. O. Gilbert.
Two week exposure to clinical procedures in large animal theriogenology as provided by CUHA patient load and augmented by teaching herd(s) (equine and bovine) animals.

VTMED 701 Cardiology Service
Fall and spring. 2 credits. Prerequisite: VTMED 551. Minimum enrollment 1 per rotation; maximum enrollment 2. Third- and fourth-year veterinary students. Letter grades only. S. Moise.
The purpose of the cardiology rotation is to provide students with the opportunity to put into practice what they have learned in the foundation years. The management of the most common cardiac diseases is emphasized including congestive heart failure, arrhythmias, and secondary cardiac diseases. All species are examined, large and small, although the majority are small animals. Diagnostics, including cardiovascular physical examination, electrocardiography, radiography, and echocardiography, are taught. The rotation includes clinical work, didactic teaching, and self-initiated digging for information.

VTMED 702 Laboratory Animal Medicine
Fall and spring. 2 credits. Prerequisite: VTMED 551. Maximum enrollment 4 per rotation. Third- and fourth-year veterinary students. Letter grades only. F. Quimby and staff.
The practice of laboratory animal medicine requires a combination of preventive programs, clinical skills, knowledge of various species' biologies, familiarity with research methodology, and acquaintance with state and federal regulations. This course is offered as a two-week introduction to that specialty. Students accompany laboratory animal veterinarians on clinical rounds of Cornell's research animal housing and participate in laboratory diagnostic work. Review sessions are conducted on the biology, medicine, pathology, and husbandry of rodents, rabbits, and primates and on current legislation regulating the care and use of research animals. The course may include a field trip to the research animal facilities of Rockefeller University, the Cornell University Medical College, Marshall Farms, and the Laboratory of Experimental Medicine and Surgery in Primates.

VTMED 703 Clinical Wildlife, Exotic, and Zoo Animal Medicine
Fall, winter, spring, summer. 2 credits. Prerequisite: VTMED 551. Maximum enrollment 2 per rotation. Third- and fourth-year veterinary students. Letter grades only. G. V. Kollias and staff.
This course introduces students to primary medical care of nontraditional pet species, zoo animals, and native wildlife. Students, directly supervised by the attending clinician, are responsible for the assessment, physical examination, and medical management of exotic animal species presented to the Cornell University Hospital for Animals. Other opportunities available to assist in the development of clinical skills in wildlife, zoo and exotic animal medicine include the wildlife clinic cases, ongoing wildlife research and service projects, and trips to the Rosamond Gifford Zoo. Successful completion of the course requires satisfactory performance during this 14-day clinical rotation.

VTMED 704 Quality Milk
Fall or spring. 2 credits. Prerequisite: VTMED 551. Third- and fourth-year veterinary students. Letter grades only. R. Gonzalez, Y. Schukken, D. Wilson and staff.
This course covers the causes, diagnosis, treatment, and prevention of bovine mastitis. The role of management practices is stressed. The course includes lectures, readings, discussions, laboratory exercises, and farm visits as part of the Quality Milk Promotion Services—New York State Mastitis Control Program. Participants are expected to complete a case study on a dairy farm with udder health problems and present their findings to the producer and farm personnel. Grading is on performance during the course and a final exam.

VTMED 705 Special Opportunities in Clinical Veterinary Medicine
Fall, spring, and summer. Prerequisite: VTMED 551. Third- and fourth-year veterinary students. S-U grades only.
This course provides opportunities for students finished with Foundation Course V to explore professional areas not available through the regular curriculum. Blocks of two to four weeks are usually spent at other teaching hospitals, research laboratories, or zoological facilities. Student proposals are submitted to the associate dean for academic programs for review and approval. On-site supervisors of the block act as ex-officio faculty members and are required to evaluate each student formally.

VTMED 707 Poultry Medicine and Production Rotation
Fall. 2 credits. Prerequisite: VTMED 551 and VTMED 616, Diseases of Birds, is recommended. Third- and fourth-year veterinary students. K. A. Schat.
This course is a two-week rotation that takes place at the University of St. Hyacinthe or the University of Guelph in alternating years. The course provides students with an introduction in practical poultry medicine by a combination of lectures, discussions, and laboratory sessions including postmortem examinations. Students also visit hatcheries, broiler, layer, and turkey farms.

VTMED 708 Clinical Oncology
Fall and spring. 2 credits. Prerequisite: VTMED 551. Maximum enrollment 4 per rotation. Third- and fourth-year veterinary students. Letter grades only. R. Page.
Management and prevention of cancer in companion animals represents a significant component of the practice of veterinary medicine. The focus of this clinical rotation is the development of a comprehensive set of skills necessary for a veterinarian to become an advocate for the client/patient with cancer. These skills include appropriate initial evaluation of animals with cancer, sensitive and effective client and referring veterinarian communication, ability to access relevant information from numerous sources related to cancer management, understand and apply principles of surgical, medical, and radiation oncology as well as techniques specifically related to minimize pain and treatment-related effects in cancer patients.

VTMED 720 Issues and Preventive Medicine in Animal Shelters

Spring. 1 credit. Prerequisite: VTMED 540. Minimum enrollment 5; maximum enrollment 30. Second-, third-, and fourth-year veterinary students. Letter grades only. J. M. Scarlett and staff from the American Society for Prevention of Cruelty to Animals.

Veterinarians often work for or with animal shelters, serve on shelter boards of directors, are community resources for issues relating to companion animal welfare, participate in spay and neuter programs, and influence the quality of the human-animal bond. This course addresses the history of the humane movement, role of the veterinarian in relation to shelters, preventive and palliative health management (including highlighting diseases of major concern), issues surrounding euthanasia, reasons for relinquishment, programs for behavior modification, and the legal concerns of shelters. These issues are addressed using lectures and large group discussions.

VTMED 721 Timely Topics in Veterinary Parasitology: Large Animal

Spring. 0.50 credits. Minimum enrollment 2. Third-, and fourth-year veterinary students. S-U grades only. D. D. Bowman.

This course presents an in-depth look at one or a few parasites of special interest relative to large-animal medicine. The course presents details of taxonomy, biology, epidemiology, clinical presentation, and preventive and curative treatment. Efforts are made to discuss those aspects of the disease as it relates to the practical control of these and in-depth coverage of primary literature relating to the parasite being discussed. Topics vary annually. The course is presented in a lecture/discussion format.

VTMED 722 Timely Topics in Veterinary Parasitology: Small Animal

Spring. 0.5 credits. Minimum enrollment 2. Third- and fourth-year veterinary students. S-U grades only. D. D. Bowman.

This course presents an in-depth look at one or a few parasites of special interest relative to small-animal medicine. The course presents details of taxonomy, biology, epidemiology, clinical presentation, and preventive and curative treatment. Efforts are made to discuss those aspects of the disease as it relates to the practical control of these and in-depth coverage of primary literature relating to the parasite being discussed. Topics vary annually. The course is presented in a lecture/discussion format.

VTMED 723 Bacteria and Fungi in Veterinary Medicine

Spring. 2 credits. Minimum enrollment 8; maximum enrollment 80. Second-, third-, and fourth-year veterinary students. Letter grades only. D. P. Debbie.

This course provides an overview and listing of important bacterial and fungal diseases of domestic animals (cow, horse, sheep, pig, goat, dog, cat) in preparation for medicine courses. The etiology, pathogenesis, host response, and prevention are emphasized. Avian, zoonotic, and exotic (foreign animal) bacterial and fungal diseases are covered in less detail because they are covered in other courses. The course also provides insight into diagnostic procedures for bacterial and fungal diseases such as available tests, what samples to take, how to handle samples, and how diagnostic procedures are performed.

[VTMED 725 Diagnostic Cytology

Spring. 1 credit. Prerequisite: VTMED 628. Maximum enrollment 5. Second-, third-, and fourth-year veterinary students. S-U grades only. Not offered 2002.

This two-week course provides in-depth experience in preparation and interpretation of cytological specimens. Evaluation of the cytological specimens is incorporated into clinical cases, so that the results are interpreted with respect to the provided case material. The primary mode of instruction is based on faculty-driven microscopic slide evaluation. Students are required to evaluate the slides independently before the microscope sessions. Selected mini-tutorials and laboratories complement the microscopic sessions. The course builds on concepts previously addressed in the Foundation Blocks 3 and 4 and in the Clinical Pathology Distribution Course (VTMED 628). This course is limited to students participating in or who have completed the Clinical Pathology Distribution Course.]

VTMED 726 Reptile Medicine and Surgery

Spring. 1 credit. Minimum enrollment 10; maximum enrollment 40. Third-, and fourth-year veterinary students. Letter grades only. G. V. Kollias.

This course is designed to introduce third- and potentially fourth-year veterinary students to the principles and practices of reptile medicine and surgery. The course is taught in a basic lecture and discussion format with laboratories (limited) reinforcing concepts presented in the lectures.

VTMED 730 Vaccines: Theory and Practice

Spring. 1 credit. Prerequisite: introductory course in immunology or VTMED 540 or VETMI 315. Minimum enrollment 10; maximum enrollment 40. Second-, third-, and fourth-year veterinary students and graduate students; others by permission of instructor. Letter grades only. Grades based on a final examination and one term report. Offered even-numbered years. T. Clark.

This course provides an overview of vaccines used in clinical practice, as well as an in-depth look at vaccine development. Emphasis is placed on the most recent advances in vaccine design and delivery, including the use of recombinant DNA techniques for targeting specific immunological responses. Lectures touch on vaccines commonly used in veterinary practice and address in detail the use of carriers, adjuvants and immunostimulants; attenuated pathogens; synthetic peptides; recombinant subunit vaccines; viral and bacterial vectors for vaccine delivery; synthetic antibodies; and genetic immunization with "naked" DNA.

[VTMED 732 Veterinary Clinical Toxicology

Spring. 1.5 credits. Second-, third-, and fourth-year veterinary students. S-U grades optional. Not offered 2002. L. Thompson and K. Earnest-Koons.

This course provides the veterinary student with a solid introduction to concepts and principles of toxicology and how they are applied in the clinical setting. Students learn about specific common toxicants, clinical signs in affected animals, and treatment protocols for the toxicants in question. Students also gain an understanding of the clinical approach to suspected or unknown toxicoses, sample collection and handling, and resources available for clinical toxicologic problems. The course is conducted with two 1-hour lectures per week and one hour-long large-group discussion per week. The class meets two days per week, the first day for one hour and the second day for two hours. Grades are based on weekly quizzes, a final exam, a short paper and/or oral participation.]

[VTMED 733 Selected Infectious Diseases of Swine

Spring. 1.5 credits. Minimum enrollment 6; maximum enrollment 80. Second-, third-, and fourth-year veterinary students. S-U grades optional. Not offered 2002. K. Earnest-Koons.

This course provides veterinary students with a solid introduction to concepts and principles of swine infectious diseases and how they are treated in the clinical setting. Students learn about specific infectious diseases, clinical signs in affected animals, and treatment protocols for the diseases in question. Students also gain an understanding of the clinical approach to suspected or unknown infectious agents, sample collection and handling, and resources available for infectious disease diagnosis. The course is conducted with two 1-hour lectures per week and one hour-long large-group discussion per week. The class meets three days per week for one hour each. Grades are based on weekly quizzes, a final exam, a short paper and/or oral presentation.]

VTMED 735 Special Topics in Ambulatory and Production Animal Medicine.

Fall, winter, spring, and summer. Variable 1–2 credits. Prerequisite: VTMED 560. Enrollment is done by lottery. Second-, third-, and fourth-year veterinary students. Letter grades only. M. E. White and staff.

This course provides specialized experiences in the Ambulatory and Production Medicine Service. The course consists of participation in scheduled and emergency farm calls and completion of projects designed to provide experience in herd problem solving, records analysis and implementing herd-health programs. Clinical service assignments are planned to meet individual student goals. Examples of focus areas available include livestock production medicine, dairy reproductive examinations, small-ruminant medicine, and equine ambulatory practice.

VTMED 736 Veterinary Diagnostic Imaging: Anatomy and Interpretation

Spring. 1.5 credits. Minimum enrollment 20; maximum enrollment 50. First- and second-year veterinary students by permission of instructor. Third- and fourth-year veterinary students. Letter grades only. P. Scrivani.

The course is designed to emphasize the relevance of a solid foundation in veterinary anatomy as it clinically applies to diagnostic imaging. Additionally, the course is designed to provide students with an understanding of the strengths and limitation of diagnostic imaging by discussing interpretation principles, pitfalls and interpretations, and measurements obtained through lectures, laboratory exercises, weekly quizzes, and reading assignments. Integration of these objectives culminates in weekly laboratory exercises where students must make or evaluate decisions regarding patient management based on evaluation of clinical signs and imaging examinations. The "Roentgen-Sign"

approach to diagnostic imaging interpretation is used as a model.

VTMED 737 Principles of Pathology
Spring. 1.5 credits. Minimum enrollment 6; maximum enrollment 40. Second-, third-, and fourth-year veterinary students. Letter grades only. S. McDonough and K. Earnest-Koons.

Principles of Pathology is intended for students who wish to strengthen and broaden their knowledge of the pathologic basis of disease. Fundamental biologic processes as revealed by gross and microscopic pathologic changes are emphasized. Molecular mechanisms are integrated into the discussion where appropriate. General pathologic processes are organized into a logical and uniform system in order to facilitate comprehension and learning with particular attention paid to definition and proper usage of terminology. The course includes two lectures per week and a one-hour large-group discussion. The large-group discussion allows students to apply general knowledge gained in lecture to a specific problem. Approximately half of the large-group discussions are held in the Necropsy Teaching Laboratory using actual diseased organs for illustration of general pathologic principles.

VTMED 738 Veterinary Parasitology
Spring. 2.5 credits. First-, second-, third-, and fourth-year veterinary students. Letter grades only. D. D. Bowman

This course provides a basic introduction to animal parasites of veterinary importance, concentrating mainly on the biology, control, and diagnosis of protozoan and metazoan parasites. Emphasis is given to parasites representative of significant disease processes or of significant clinical importance to veterinarians. The course elaborates on the biology and pathogenesis of these major pathogens with the ultimate goal being to maximize the recognition of the major disease manifestations induced by the different groups of organisms. Laboratories stress certain aspects of some important parasite groups.

[VTMED 739 Viruses in Veterinary Medicine
Spring. 1.5 credits. Maximum enrollment 90. Second-, third-, and fourth-year veterinary students. Letter grades only. Offered odd-numbered years. C. R. Parrish and J. Baines.

This course is designed to supplement the information provided in the Foundation Courses, particularly courses IV and V. The objective is to provide, in a survey form, an overview of the major groups of viruses, which infect animals, and to give a summary of the diseases that they cause. The diseases, which are most commonly encountered in veterinary practice, are given the greatest amount of the available time, and diseases which are less frequently seen are given less detailed coverage. The properties of the viruses, their general pathogenic mechanisms, diagnostic methods, and some specific examples are covered.]

VTMED 745 Dynamics of Dairy Herd Health and Management
Spring. 1 credit. First-, second-, third-, and fourth-year veterinary students. Letter grades only. Y. T. Grohn and L. D. Warnick.

Competitive pressure, increasing input costs, and comparatively stagnant milk and salvage values require dairy producers to become more efficient. The current trend of increasing herd size drives changes in management. Dairy cattle are handled in groups, although individual cow health and productivity fundamentally underpin the financial success of the dairy enterprise. Veterinarians are called upon to advise dairy producers not only in matters of herd health but increasingly in matters of productivity and management decision making. Identifying opportunity areas to improve productivity and ultimately profitability requires modern veterinarians to recognize and solve complex and interdependent milk production, reproduction, and health issues. Until the advent of the new veterinary curriculum, biological systems were often taught in isolation. Yet there are research models that integrate the dynamic nature of dairy production, health, management, and economics through epidemiological and economic modeling. Despite the existence of such advanced research models, they have not been integrated fully into the curriculum. The goal of this course is to teach students the dynamic relationships of herd performance parameters with dairy herd health and management. This is done with a combination of lectures and exercises using two computer simulation models. The following topics are addressed: (1) how often production diseases occur and when, (2) how they are interrelated, (3) the impact of disease on milk production, reproductive performance, and risk of culling, and (4) how to use this information in production medicine. The format of this eight-week course (two days per week) is a lecture one day and hands-on work with computer simulation models on the other day.

Biomedical Sciences

VTBMS 346 Introductory Animal Physiology (also BIOAP 311) (Undergraduate)
Fall. 3 credits. Prerequisites: BIOG 105, BIOG 106, or BIOG 101, BIOG 102, BIOG 103, BIOG 104, BIOG 107, BIOG 108; CHEM 207, CHEM 208, or CHEM 206, or CHEM 215, CHEM 216; MATH 106, MATH 111 or MATH 191 or AP credit for any of the above; or one year of college-level biology, chemistry, and mathematics. S-U grades optional. M W F 11:15. E. R. Loew.

A general course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure-function relationships are stressed along with underlying physical-chemical mechanisms.

VTBMS 600 Special Projects in Anatomy
Fall, spring. 1 credit per 2.5-hour period. By permission of instructor. S-U grades only. Biomedical science staff.

VTBMS 628 Graduate Research in Animal Physiology (Graduate) (also BIO S 719)
Fall, spring. 1–3 credits. By written permission of department chairperson and faculty mentor who will supervise the work and assign the grade. S-U grades optional.

Similar to Biological Sciences 499 but intended for graduate students who are working with faculty members on an individual basis.

[VTBMS 639 Autotutorial in Laboratory Animal Medicine and Science
Spring. 1–3 credits. Letter grades only. Not offered 2002.

This course is offered to individuals interested in pursuing various aspects of laboratory animal medicine and science in depth. A variety of resources are available to assist students in their research on a particular topic: the library of the Division of Laboratory Animal Medicine, including the autotutorial library; the university libraries; and special information collected from other institutions. Grades are determined on the basis of a paper, an oral presentation, or the creation of an audiovisual teaching aid, any of which may be selected by the student.]

VTBMS 700 Predictions of Form or Phlogeny
Spring. 1 credit. By permission of instructor. S-U grades optional. J. W. Hermanson.

Form and function are often discussed as a correlated entity in biology. This seminar group starts with the question, Does form really predict function? This is addressed initially with respect to the analysis of paleobiology but then encompasses examples of experimental functional morphology. In particular, there is a growing body of experimental data demonstrating that diverse functions can be achieved with nearly identical morphologies, and that the functional diversity may better be explained by behavior or environmental factors. Might these observations refute current theories about the origin of flight in extinct organisms (i.e., the cursorial or ground-up theory of flight versus the arboreal gliding theory of flight evolution)? Specific topics pursued are selected by participants in this course. Participation is open to interested graduate students, advanced undergraduate students, and veterinary students.

[VTBMS 713 Cell Cycle Analysis
Spring. 1 credit. S-U grades only. Not offered 2002. A. Yen.

Current topics in the control of mammalian cell division are discussed, including growth factors and oncogenes.]

VTBMS 720 Special Problems in Physiology (Graduate)
Fall, spring. 1–3 credits. By permission of instructor. Laboratory work, conferences, collateral readings, and reports. Adapted to the needs of students. S-U grades optional.

VTBMS 788 Seminar in Surgical Pathology
Fall, spring. 1 credit. Intended for residents; third- and fourth-year veterinary students may attend. Letter grades only. B. A. Summers and staff.

The major objective of this discussion and seminar course is to introduce the residents to the discipline of surgical pathology. Selected material from the Surgical Pathology Service is prepared in advance for independent review by the residents. The material is presented in a slide-seminar format by the residents under the review of the faculty. Emphasis is placed on pathogenesis, etiology, and pathologic descriptions of the lesions. In addition, appropriate guest lecturers cover specific areas of interest and special topics not encountered in the departmental service programs.

[VTBMS 796 Medical Primatology
Fall. 1 credit. For residents and graduate students by permission of instructor. Offered even-numbered years; next offered fall 2002.
This course is a survey of major diseases, medical care, and management techniques for all life stages of primates. Topics include physical examination, restraint anesthesia, housing, and management of various nonhuman primate species; bacterial, viral, and parasitic diseases; noninfectious diseases; infant and nursery care reproduction and behavioral considerations; and therapeutics.]

VTBMS 811 Advanced Physiology Methods I (also BIO S 811) (Graduate)
Fall. 2 credits. Enrollment limited. Prerequisite: graduate student status or permission of course coordinator. S-U grades only. Lab TBA. J. Ray.
This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint students with the latest techniques and methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

VTBMS 812 Advanced Physiology Methods II (also BIO S 812) (Graduate)
Spring. 2 credits. Enrollment limited. Prerequisite: graduate student status or permission of course coordinator. S-U grades only. Lab TBA. J. Ray.
This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint students with the latest techniques and methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

Clinical Sciences

VETCS 700 Pathophysiology of Gastrointestinal Surgery
Fall. 1.5 credits. S-U grades only. Offered every third year. N. G. Ducharme.
Normal anatomy and physiology of the gastrointestinal system in carnivores, herbivores and ruminants is presented initially. This is followed by in-depth discussion of the pathophysiological mechanisms and sequelae of gastrointestinal obstructions including reperfusion injury, peritonitis, adhesions and short bowel syndrome. The emphasis of this course is development of advanced understanding of surgically relevant gastrointestinal problems that lead to appropriate decision making.

VETCS 701 Pathophysiology of Orthopedic Surgery (Graduate)
Spring. 1.5 credits. Prerequisites include DVM, MD, or equivalents or approval of instructor. S-U grades only. Offered every third year. Next offered spring 2003. E. J. Trotter.

[VETCS 702 Pathophysiology of Cardiopulmonary Surgery (Graduate)
Fall. 1.5 credits. Prerequisite: DVM degree or equivalent. S-U grades only. Offered every third year. Next offered fall 2002. R. P. Hackett, S. L. Fubini, N. G. Ducharme, H. J. Harvey.
Using lectures and group discussions, the objective of this course is to explain the pathophysiology of various cardiovascular diseases (cardiac arrest, cardiac arrhythmia under anesthesia) and airway disease (thoracic and upper airway disease). As a basis for these abnormalities, cardiopulmonary hemodynamics and biomechanical aspects of ventilation are reviewed. The emphasis is placed on understanding these mechanisms and outlining the surgeon's response to them.]

[VETCS 703 Surgical Principles and Surgery of the Integumentary System (Graduate)
Spring. 1.5 credits. For graduate DVMs (or equivalent) in residency or graduate training programs. S-U grades only. Offered every third year. Next offered spring 2003.
This course is designed for surgery residents and graduate students. It is largely discussion format and examines surgical principles and surgery of the integumentary system.]

[VETCS 704 Pathophysiology of Urogenital Surgery (Graduate)
Fall. For graduate DVMs or equivalent in residency or graduate training programs. 1.5 credits. S-U grades only. Offered every third year. Next offered fall 2003. S. Fubini.
This course is designed to review and discuss urogenital surgical procedures in animals and the rational basis for them. Pathophysiology will be stressed. Some classes will consist of reprints with discussion.]

VETCS 705 Animal Pain and Its Control
Spring. 2 credits. By permission of instructor. S-U grades optional. R. D. Gleed, J. W. Ludders, and P. F. Moon.
This course is open to third- and fourth-year veterinary medical students, interns, residents, graduate students, and postdoctoral associates who are interested in the fundamental and applied concepts of pain in animals. The course emphasizes the physiologic and pathophysiologic mechanisms involved in pain perception by animals, their responses (physiological and behavioral) to pain, and the pharmacologic mechanisms underlying analgesic therapy. The subject material is presented through lectures, group discussions, group readings, and group evaluation of analgesic protocols.

[VETCS 706 Pathophysiology of Neurologic Surgery (Graduate)
Spring. 1.5 credits. Prerequisite: DVM, MD, or equivalent or approval of instructor. S-U grades only. Offered every third year. Next offered spring 2004. A. J. Nixon, E. J. Trotter.
This course provides specialized training in neurosurgical techniques and application and discusses pathophysiologic implications of neurosurgical and neurologic diseases.]

VETCS 710 Advanced Veterinary Anesthesiology I
Fall, winter. 1 credit. Prerequisite: VTMED 568 Veterinary Anesthesiology or permission of instructor. Third- and fourth-year veterinary students, graduate students, interns, and residents. S-U grades only. P. F. Moon and staff.
The content of this course is designed for preparation for the American College of Veterinary Anesthesiology examinations. However, the course is also suitable for interns and for residency training in other areas such as surgery and internal medicine. Speakers are from both inside and outside the college. Topics cover the basic sciences as they apply to anesthesiology such as physics and engineering, applied pharmacology, physiology, and pathology. Clinically oriented lectures are also given concerning specific anesthetic techniques and species-specific differences in response to anesthetic drugs.

VETCS 711 Advanced Veterinary Anesthesiology II
Fall, winter, spring. 1 credit. Prerequisite: VTMED 568, Veterinary Anesthesiology or permission of instructor. Third- and fourth-year veterinary students, graduate students, interns, and residents. S-U grades only. P. F. Moon and staff.
The content of the course is designed for preparation for the American College of Veterinary Anesthesiology examinations. However, the course is also suitable for interns and for residency training in other areas such as surgery and internal medicine. Speakers are from both inside and outside the college. Topics cover the basic sciences as they apply to anesthesiology such as physics and engineering, applied pharmacology, physiology and pathology. Clinically oriented lectures are also given concerning specific anesthetic techniques and species-specific differences in response to anesthetic drugs.

Microbiology and Immunology

VETMI 315 Basic Immunology (Undergraduate) (also Biological Sciences 305)
Fall. 3 credits. Strongly recommended: basic courses in microbiology, genetics, and biochemistry. S-U grades optional. J. A. Marsh.
This course is a survey of immunology, with emphasis on the cellular and molecular bases of the immune response. More information is available at the biog305 courseinfo web site.

[VETMI 320 Principles of Toxicology (Undergraduate) (also Biological Sciences 320 and Toxicology 320)
Spring. 3 credits. Prerequisites: one year each of introductory biology and chemistry, with lab; one semester of organic chemistry lecture or waiver by instructor. S-U grades optional. T R 1:25–2:40. Not offered 2001–2002. S. Penningroth, R. Dietert, and S. Bloom.
This course is an introduction to the interdisciplinary science of toxicology, drawing on material from biology, chemistry, pharmacology, ecology, earth science, risk analysis, and policy studies. Basic principles of toxicological science are presented and illustrated by case examples, such as pesticide toxicity to wildlife reproduction and human health risk assessment at a Superfund hazardous chemical waste site. Chemical risk management is described as a sociopolitical process involving the integration of scientific, economic, and cultural factors.

Independent student projects include a toxic chemical profile and a team analysis of hypothetical "environmental risk scenarios." Periodic talks by toxicology faculty acquaint students with basic research in this interdisciplinary branch of biological science. This is an introductory-level course in toxicology. Format: lecture supplemented by case examples. One field trip to a hazardous chemical waste site. Appropriate for nonmajors seeking basic literacy in environmental and human toxicology. "Gateway course" for students interested in 400- and 600-level toxicology courses.]

VETMI 331 General Parasitology (also BIOMI 331; Undergraduate)
Spring. 2 credits. Prerequisites: zoology or biology; any of the following courses: BIOES 261, 264, 267, 274, 275, 278; BIOG 101, 102, 103, 104, 106, 107, 108, 109, 110, 170, 220, 207: BIOMI 192, 290 or equivalent courses. Letter grades only. D. D. Bowman.
An introduction to the basic animal parasites, stressing systematics, taxonomy, general biology, ecological interactions, and behavior of non-medically important groups. Introduces the major animal parasites, protozoan, nematode, platyhelminth, acanthocephalan, annelid, and arthropod.

[VETMI 404 Pathogenic Bacteriology and Mycology (also BIOMI 404)
Spring. 2 or 3 credits (3 credits with lecture and seminar). Prerequisites: BIOMI 290 and 291. Seminar is required of graduate students and open to undergraduates with permission of instructor. Maximum enrollment 15 students. Letter grades only. Not offered spring 2002. D. P. Debbie.
This is a course in medical microbiology, presenting the major groups of bacterial and mycotic pathogens important to human and veterinary medicine. The course emphasizes infection and disease pathogenesis. Topics include disease causality; interactions of host, pathogen, and environment, including immunity to bacteria and fungi; and principles of antimicrobial therapy and drug resistance. A companion seminar addresses the current and classic literature related to microbial pathophysiology on the cellular and molecular levels.]

VETMI 408 Viruses and Diseases I (also Biological Sciences 408)
Spring. 2 credits. Intended primarily for graduate and undergraduate microbiology majors. Prerequisites: Microbiology 290 and 291 (College of Agriculture and Life Sciences). Recommended: VETMI 315, Genetics 281. Letter grades only. Offered even-numbered years. J. W. Casey.
The course covers basic concepts in virology with emphasis primarily on DNA virus-host interactions, strategies for gene regulation, and mechanisms of pathogenicity. Selected viral infections that result in immune dysfunction and neoplasia are highlighted in the context of approaches to prevent or reduce the severity of diseases.

[VETMI 409 Viruses and Disease II (also BIOMI 409)
Fall. 2 credits. Prerequisites: BIOMI 290 and 291 or permission of instructor. Recommended: BIOMI 408, BIOBM 330–332, BIOBM 432. Offered even-numbered years; next offered fall 2002. G. Whittaker.
This course is complementary to BIOMI 408, Viruses and Disease I, and emphasizes RNA viruses. The course is complete in its own right. As such, completion of BIOMI 408 is not a requirement. The course covers the structure and classification of viruses, entry, genome replication, and virus assembly. Particular emphasis is placed on virus-host cell interactions. Vaccinations, chemotherapy, and evolution of viruses are also discussed.]

VETMI 431 Medical Paras]itology (also BIOMI 417; Undergraduate)
Fall. 2 credits. Prerequisites: zoology or biology; any of the following courses: BIOES 261, 263, 264, 267, 274, 275, 278; BIOG 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 170, 202, 207; BIOMI 192, 290, 398 or equivalent course. Letter grades only. D. D. Bowman.
This course is a systematic study of arthropod, protozoan, and helminth parasites of public health importance, with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasitisms.

VETMI 605 Special Projects in Microbiology (Undergraduate)
Fall, spring. 1–3 credits. By permission of instructor. Prerequisite: a good background in microbiology or immunology. Preferably, students should have background in pathogenic microbiology and immunology. S-U grades only. Microbiology staff.
The course normally provides an opportunity for the student to work in a research laboratory or carry out a special project under supervision.

VETMI 700 The Biology of Animal Viruses (Graduate and Upper-level Undergraduate)
Fall. 2 credits. Letter grades only. Offered odd-numbered years. C. R. Parrish and staff.
This course examines current topics in studies of animal viruses, including some comparisons with plant viruses where similar mechanisms apply. Selected topics are examined in depth, including the structures of viruses and their components, viral nucleic acids and replication strategies, details of the interactions between viruses and their host cell components and metabolism. Other topics include the evolution and selection of viruses, novel approaches to the prevention of virus infection, and methods for antiviral chemotherapy.

[VETMI 701 Pathogenesis of Viral Diseases (also VTMED 619)
Spring. 2 credits. Given during 8-week spring distribution period, January–March. Open to graduate students and advanced undergraduates by permission of instructor. Strongly recommended prerequisite: Immunology. Letter grades only. Generally offered odd-numbered years, but next year offered, still to be determined. Microbiology faculty.
Course content and objectives: the course focuses on the balance between host defense against viral infections and the mechanisms by which viruses perpetuate themselves in human and animal populations. In the process, the mechanisms of cell and animal infection, spread between cells, disease mechanisms, and the roles of the immune response in enhancing and suppressing disease are explored. This includes a systems-based approach exploring the pathogenesis of disease in the CNS, gastrointestinal, hepatic, tegumentary, respiratory, and urogenital systems. The basic principles of virus taxonomy, structure, and replication are included to introduce various viral groups and their special properties. Methods of intervention (vaccination, antiviral drugs) are also covered. Lectures are derived from relevant current literature; Nathanson's *Viral Pathogenesis*, 1997; and Field's *Virology*, third edition, 1996. Relevant materials are placed on reserve in the veterinary library.]

VETMI 702 Molecular Biology and Immunology of Host-Parasite Interactions (Graduate) (also VTMED 620)
Spring. 2 credits. S-U grades optional. Offered even-numbered years. E. J. Pearce.
See description for VTMED 620.

VETMI 705 Advanced Immunology (Graduate) (also Biological Sciences 705)
Spring. 4 credits. Prerequisite: VETMI 315 Basic Immunology or permission of instructor. Letter grades only. Offered even-numbered years. E. Pearce and staff.
Coverage at an advanced level of molecular and cellular immunology.

VETMI 707 Advanced Work in Bacteriology, Virology, and Immunology (Graduate)
Fall, spring. 1–3 credits. By permission of instructor. S-U grades optional. Microbiology staff.
This course is designed primarily for graduate students with a good background in pathogenic microbiology and immunology. It may be elected by veterinary students who are properly prepared.

[VETMI 708 Selected Topics in Animal Virology
Spring, odd-numbered years. 2 credits. Letter grades only. Next offered spring 2003. Microbiology faculty.
Principles of animal virus biology with focus on mechanisms in viral pathogenesis.]

VETMI 712 Seminars in Infection and Immunity
Fall, spring. 1 credit. Required of all graduate students in the department of Microbiology and Immunology and the field of Immunology. S-U grades only. D. Russell.
Invited speakers in immunology and infection biology acquaint students with current advances in the field.

[VETMI 719 Immunology of Infectious Diseases (also Biological Sciences 706) (Graduate)
Spring. 2 credits. Prerequisite: VETMI 315 Basic Immunology or permission of instructor. S-U grades optional. Offered odd-numbered years; next offered spring 2003. E. Y. Denkers and staff.
Coverage at an advanced level of the immunology of diseases caused by selected bacterial, viral, protozoan, and helminthic parasites.]

VETMI 737 Advanced Work in Animal Parasitology (Graduate)
Fall, spring. 1–3 credits. For advanced undergraduate, graduate, and veterinary students. Letter grades only. D. D. Bowman and other faculty.
This course is intended for advanced undergraduate, graduate, and veterinary students with interests in parasitology research.

VETMI 770 Advanced Work in Avian Diseases (Graduate)
Fall, spring. 1–3 credits. By arrangement with instructor. Letter grades only. K. A. Schat.

VETMI 772 Advanced Work in Aquatic Animal Diseases (Graduate)
Fall, spring. 1–3 credits. By arrangement with instructor. S-U grades only. P. R. Bowser.

VETMI 773 Advanced Work in Avian Immunology
Fall, spring. Variable credit. Letter grades only. K. A. Schat.

VETMI 783 Seminars in Parasitology (Graduate)
Fall, spring. 1 credit. Open to veterinary students or graduate students; others by permission of instructor. S-U grades only. D. D. Bowman.
This is a seminar series designed to acquaint students with current research in the field of parasitology. The range of topics is determined, in part, by the interests of those participating and may include such topics as the ecology of parasitism, parasite systematics, wildlife parasitology, and parasitic diseases of plants and animals, including humans.

Molecular Medicine

VETMM 299 Undergraduate Research in Pharmacology
Summer. 3 to 6 credits (3 credits per 120 contact hours). Prerequisites: one year of basic biology (Score of 5 on Biology Advanced Placement Examination of the College Entrance Examination Board or BIOG 100 level.) Letter grades only. R. A. Cerione.
This is a mentored research apprenticeship program, designed to give laboratory experience to qualified unmatriculated high school students (participating in Cornell Summer College) or Cornell underclassmen.

Students are placed in research laboratory with designated project under the direct supervision of a research associate (upper-level graduate student, post-doc, or faculty member). A minimum of 120 hours of laboratory time is expected per three course credits. Students are graded on preparation, participation in laboratory academic life, and appropriate acquisition of techniques. At the end of the six-week session, students are expected to give a brief (15–20 minute) oral presentation of their work, and submit a manuscript in a form suitable for publication. The faculty director of the laboratory has ultimate responsibility for evaluating the student's work and assigning the grade.

VETMM 470 Biophysical Methods (also A&EP 470)
Spring. 3 credits. Prerequisite: permission of instructor. Letter grades only. M. Lindau.
This course is an overview of the diversity of modern biophysical experimental techniques used in the study of biological systems at the cellular and molecular level found in articles published in the *Biophysical* journal. Topics covered include methods that examine both structure and function of biological systems: light microscopy, fluorescence microscopy, Fourier optics and image processing, confocal and multiphoton microscopy, phase contrast, electron microscopy, X-ray diffraction and protein structure determination, multidimensional NMR, spectroscopy, chromophores, calcium measurements, resonance energy transfer, membrane biophysics, electrophysiology, ion channels, action potentials, ligand-gated channels, fluctuation analysis, patch-clamp, molecular biology of ion channels, rapid kinetics, caged compounds, transmitter release, capacitance measurements, amperometry, optical traps, and molecular force measurements. The course format includes assigned literature reviews by the students on specific topics and individual students' presentation of these topics. The course is intended for students of the engineering, physics, chemistry, and biological disciplines who seek an introduction to modern biophysical experimental methods. Due to the interdisciplinary nature of the course, students have diverse backgrounds. A basic knowledge of and interest in physics and mathematics is expected but strong attempts are made to give an intuitive understanding of the mathematics and physics involved. Some knowledge of physical chemistry, molecular and cell biology, or neurobiology is helpful. Depending on individual backgrounds all students find certain aspects of the course easy and other aspects demanding.

[VETMM 610 Cellular and Molecular Pharmacology
Fall. 2 credits. By permission of the instructors. S-U grades optional. Offered even-numbered years; next offered fall 2002. G. A. Weiland and molecular medicine faculty.
This graduate-level course surveys the molecular and cellular aspects of receptor mechanisms, signaling pathways, and effector systems. Topics include drug-receptor interactions; ligand- and voltage-gated ion channels; G protein pathways; growth factor signaling; lipid signaling; calcium; nutrient and nitric oxide signaling; and mechanisms of receptor-mediated effects on neural excitability, electrical pacemakers, muscle contraction, and gene expression.]

VETMM 611 Systems Pharmacology
Spring. 2 credits. By permission of the instructors. S-U grades optional. Offered even-numbered years. G. A. Weiland and molecular medicine faculty.
This graduate-level course surveys system- and organ-related aspects of pharmacology. Topics include drug disposition; pharmacokinetics; autonomic pharmacology; central nervous system pharmacology; pharmacology of inflammation, allergy and platelet function; cardiovascular, gastrointestinal and endocrine pharmacology; and chemotherapy, including antimicrobial agents and cancer chemotherapy.

VETMM 672 Protein Kinetics (also CHEM 672)
Spring. 4 credits. Prerequisite: CHEM 288 or 390, BIOBM 331, or permission of instructor. Letter grades only. B. A. Baird.
This course focuses on protein interactions with ligands and consequent changes in structure and activity. Topics include protein structure and dynamics; thermodynamics and kinetics of ligand binding; steady state and transient enzyme kinetics; enzyme catalysis and regulation; and role of cell membrane receptors in regulating cellular activities.

[VETMM 700 Calcium as a Second Messenger in Cell Activation
Fall. 2 credits. By permission of instructor. Lecture-discussion. S-U grades only. Offered even-numbered years; next offered fall 2002. C. M. S. Fewtrell.
This course focuses on regulation of intracellular calcium and techniques for studying calcium movements and distribution in cells. Topics include calcium channels and exchangers, calcium-binding proteins, and calcium stores; phosphatidylinositol turnover, release of calcium from intracellular stores, and activation of calcium influx; calcium gradients and oscillations; mechanisms of exocytosis and the proteins involved. Each topic is introduced with a lecture followed by discussion of recent papers from the literature.]

[VETMM 701 Organ System Toxicology (also TOX 611)
Fall. 1 credit. For graduate students in environmental toxicology. S-U grades only. Offered even-numbered years; next offered fall 2002. W. S. Schwark.
This is a minicourse on molecular mechanisms involved in chemical toxicity. Specific examples of toxicity in organ systems such as the nervous system, kidney, liver, respiratory tract, and cardiovascular system are considered.]

VETMM 703 Receptor-Ligand Interactions (also BIONB 790–02)
Fall. 2 credits. By permission of the instructors. S-U grades optional. Offered odd-numbered years. R. E. Oswald and G. A. Weiland.
The course covers both the practical and theoretical tools for the study of ligand-receptor interactions, emphasizing the quantitative and physical chemical aspects of receptor theory. Topics discussed are basic methods of radioligand binding assays, including separation and measurement of bound and free ligand; characterization of receptor function; analysis of receptor structure; thermodynamic basis of the binding; methods of analyzing equilibrium binding; equilibrium binding for complex binding mechanisms; and kinetics of simple and complex binding mechanisms.

VETMM 704 CNS Synaptic Transmission
Fall. 2 credits. Maximum enrollment 20 graduate students and undergraduate seniors by permission of instructor. S-U grades optional. Offered odd-numbered years. L. M. Nowak.
This is a survey course in vertebrate central nervous system physiology and pharmacology, and it focuses on mechanisms of neurotransmitter action at the membrane and cellular levels. Roles of selected neurotransmitters in normal and dysfunctional brains are covered. Topics are introduced in lectures and followed up in discussions of recent journal articles.

VETMM 705 Molecular Mechanisms of Receptor-G Protein Coupled Signaling
Fall. 2 credits. S-U grades optional. Offered odd-numbered years. R. A. Cerione.
This course focuses on the mechanisms of action of GTP binding proteins. Several receptor-coupled signaling systems are examined, including adenylyl cyclase, vertebrate vision, phosphatidylinositol lipid turnover, receptor systems regulating various ion channels, and receptors involved in cell growth regulation.

VETMM 706 Growth Factor-Coupled Signaling (also BIOBM 734)
Fall. 0.5 credits. By permission of the instructor. S-U grades optional. Offered odd-numbered years. R. A. Cerione.
The general theme of this course is mitogenic signaling pathways. Receptor tyrosine kinases, src, ras, and ras-regulatory proteins are covered.

VETMM 707 Protein NMR Spectroscopy (also BIOBM 730)
Spring. 2 credits. S-U grades optional. Offered even-numbered years. R. E. Oswald and L. K. Nicholson.

The fundamentals of NMR are presented and students acquire the tools necessary to establish an in-depth understanding of multidimensional, multinuclear NMR experiments. Application of the technique to proteins for assignment of resonances, determination of structure, and characterization of dynamics are presented. Special approaches for applying solution NMR techniques to large proteins are discussed.

[VETMM 708 Lipid Second Messengers
Fall. 2 credits. Students with a general biology background may enroll by permission of instructor. Lecture-discussion. S-U grades optional. Offered even-numbered years; next offered fall 2002. H. A. Brown.
This course covers the biochemical pathways involved in the production of lipid second messengers. These pathways function as essential elements of cellular signal transduction cascades. Topics include pathways of phospholipid synthesis, regulation of major mammalian phospholipases by receptors linked through G-proteins and tyrosine kinase receptors to intracellular cascades, and subsequent metabolism of lipid products. The roles of lipids in regulating cell processes, such as membrane structure, exocytosis, cell cycle, and apoptosis, are topics for discussion following reviews of recent publications. A background in general biochemistry is recommended.]

Special Projects and Research in Pharmacology

Fall, spring, summer. 1–3 credits. By arrangement with instructor. S-U grades optional. Independent study or research. Field of pharmacology faculty.
These courses cover a variety of topics related to the research interests of the faculty.

VETMM 711 The Role of Calcium in Stimulus-Secretion Coupling
C. M. S. Fewtrell.

VETMM 713 Mechanisms of Growth-Factor Action
R. A. Cerione.

VETMM 714 Central Nervous System Neurotransmitters
L. M. Nowak.

VETMM 718 Structure-Function of the Nicotinic Acetylcholine Receptor
R. E. Oswald.

VETMM 730 Graduate Research in Molecular Medicine
Fall, spring, and summer. 1–12 credits. By permission of instructor. S-U grades only. This course is offered by individual faculty members in the Department of Molecular Medicine for graduate students undertaking research toward M.S. or Ph.D. degrees.

Directed Readings in Pharmacology

Fall, spring, and summer. 1–3 credits each topic. By arrangement with instructor. S-U grades optional. Field of pharmacology faculty. Reading and discussions.
These courses are offered to small groups or to individual students.

VETMM 742 Receptor Mechanisms
G. A. Weiland.

VETMM 745 Biochemical Neuropharmacology
G. A. Weiland.

VETMM 747 Amino Acid Neurotransmitters
L. M. Nowak.

VETMM 748 Stimulus-Secretion Coupling
C. M. S. Fewtrell.

VETMM 750 Cell Calcium
C. M. S. Fewtrell.

VETMM 760 Advanced Topics in Pharmacology
Molecular medicine faculty.

Topics in Cancer Cell Biology

VETMM 761 Topics in Cancer Cell Biology
Fall. 1 credit per section. Letter grades only. Section 02 will not be offered 2001–2002. B. Pauli, J. Guan, A. Yen.
Section 1, Cell Adhesion Molecules, Signaling and Cancer is taught by Dr. Jun-in Guan. This section of the topics in cancer cell biology introduces the role of cell adhesion receptors in cancer. The emphasis is on the integrin and cadherin families of cell adhesion molecules and function of integrin, intergrin interactions with cytoskeleton, intracellular signaling pathways in cell-matrix interactions, integrin-mediated signaling in cell migration, proliferation and survival, changes of integrins in tumors and metastasis, structure and function of cadherins, and signaling mechanisms in cell-cell interactions in normal development and cancer.

Section 2, Cell Cycle Analysis is taught by Dr. Andrew Yen. This course presents: (1) a brief historical review of the cell cycle, (2) a summary of cell cycle regulatory processes, and (3) practical methods for cell cycle analysis, including mathematical representations. Topics include: growth control of bacterial cell cycle including chemostats, mammalian cell tissue, cell synchronization, flow cytometry, age-density representation, G1 regulation, labile regulatory protein models, cell transformation, regulation by growth factors and the cytoskeleton, cyclin/E2F/RB regulatory model, practical examples for analysis of cell cycle phase durations, cell cycle phase specific growth factor sensitivity, and timing of RB protein phosphorylation within the cell cycle. The objective of the course is to present graduate students with methods for cell cycle analyses that will be useful in their research.

Population Medicine and Diagnostic Sciences

VTPMD 299 Undergraduate Research in Epidemiology
Summer. 3 credits. Limited to undergraduate students. Letter grades only. Prerequisites are one year of basic biology (Score of 5 on Biology Advanced Placement Examination of the College Entrance Examination Board or BIOG 100 level). Permission of the instructor can be submitted for the prerequisite. J. Scarlett.
This is a mentored research apprenticeship program designed to give laboratory experience in applied epidemiology to qualified unmatriculated high-school students (participating in Cornell Summer College) or Cornell underclassmen. Students are placed in a research laboratory with a designed project under the direct supervision of a research associate (upper-level graduate student, post-doc, or faculty member). A minimum of 120 hours of laboratory time is expected per three course credits. Students are graded on preparation participation in laboratory academic life, and appropriate acquisition of techniques. At the end of the six-week session, students are expected to give a brief (15–20 minute) oral presentation on their work, and submit a manuscript in a form suitable for publication. The faculty director of the laboratory has ultimate responsibility for evaluating each student's work and assigning the grade.

VTPMD 664 Introduction to Epidemiology (Graduate)
Fall. 3 credits. Prerequisites: Statistics and Biometry 601 (College of Agriculture and Life Sciences) may be taken concurrently or by permission of instructor. S-U grades optional. H. N. Erb.
Lectures and discussion deal with the fundamentals of epidemiology. Current topics in epidemiology from the fields of nutrition, infectious and chronic diseases, occupational medicine, and veterinary medicine are reviewed to illustrate the principles and practice of epidemiology, especially of clinical-trial design and infectious-disease epidemiology.

VTPMD 665 Study Designs (Graduate)
Spring. 2 credits. Prerequisites: VTPMD/VETCS 664 and Statistics and Biometry 601 (College of Agriculture and Life Sciences). S-U grades optional. H. O. Mohammed.
Design and interpretation of cross-sectional, case-control, and cohort studies (including controlled clinical trial) are covered. Design issues include sample size, bias, and relative advantages and disadvantages.

The course objectives are (1) to know the difference between different epidemiologic study designs and relative advantages and disadvantages of each; (2) given a problem (usually a field situation), be able to design an appropriate epidemiologic study; (3) be able to effectively analyze and criticize published epidemiologic studies.

The course consists of lectures on the principles of epidemiologic study design and related issues (sample size calculations, validity and precision, and identification and minimizing of bias); basic analysis of epidemiologic data; and discussion of published epidemiologic studies. These studies include observational cohort studies (prospective and retrospective), cross-sectional studies, case-control studies, and hybrid studies (ambidirectional, and other hybrid designs).

VTPMD 666 Advanced Methods in Epidemiology (Graduate)
Fall. 3 credits. Prerequisites: VTPMD/VETCS 665 and Statistics and Biometry 602 (College of Agriculture and Life Sciences). S-U grades optional. M W F 8:45–9:35. Y. T. Grohn.
Concepts introduced in VTPMD 664 and VTPMD 665 are further developed, with emphasis on statistical methods. Topics include interaction, effect modification, stratified analysis, matching and multivariate (logistic regression) methods, survival analysis, and strategies for the analysis of epidemiologic data.

VTPMD 700 Special Projects in Diagnostic Endocrinology
Fall, spring. 1–3 credits. By permission of instructor. Letter grades only. Schanbacher and Lamb.
An independent study course. Students have the opportunity to research a particular topic in diagnostic/clinical endocrinology of animals.

VTPMD 701 Special Projects in Infectious Diseases
Fall, spring. 1–3 credits. By permission of instructor. S-U grades optional. Diagnostic laboratory faculty.
This course provides laboratory experience with attention to specific aspects of infectious disease problems.

VTPMD 702 Special Topics in Infectious Diseases
Fall, spring. 1–3 credits. By permission of instructor. S-U grades optional. Diagnostic laboratory faculty.
The objective of this course is to offer a broad exposure to various aspects of infectious diseases.

VTPMD 703 Doctoral-Level Thesis Research (Graduate)
Fall, spring. 6–9 credits. By permission of instructor. S-U grades only. Diagnostic Laboratory faculty.
Research leading to a Ph.D. degree.

VTPMD 704 Master's-Level Thesis Research (Graduate)
Fall, spring. 1–3 credits. By permission of instructor. S-U grades only. Diagnostic Laboratory faculty.
Research leading to an M.S. degree.

VTPMD 705 Interdisciplinary Approaches to Animal Health
Spring. 3 credits. Minimum enrollment 7 students. S-U grades optional. A. L. Rivas.

[VTPMD 707 Clinical Biostatistics (Graduate)
Spring. 2 credits. For veterinary residents or graduate students. Letter grades only. Offered odd-numbered years; next offered spring 2003. H. N. Erb, Y. T. Grohn, H. O. Mohammed, and J. M. Scarlett.
This course explains the theory behind and interpretation of parametric and nonparametric statistical techniques commonly employed in research/clinical medicine. Students analyze small data sets using a commercial statistical software package.]

VTPMD 708 Epidemiology Seminar Series (Graduate)
Fall, spring. 1 credit. S-U grades only. Epidemiology faculty.
Advanced theoretical and analytical epidemiologic concepts and techniques are discussed.

VTPMD 766 Graduate Research (Graduate)
Fall, spring, summer. Credit and hours TBA. Must be registered in masters or Ph.D. program in epidemiology and permission of the graduate faculty member concerned. S-U grades only. Epidemiology faculty.
This course enables students outside the section of Epidemiology to receive graduate research credits for projects with epidemiological components.

VTPMD 799 Independent Studies in Epidemiology
Fall, spring. 1–3 credits. H. N. Erb, Y. T. Grohn, H. O. Mohammed, and J. M. Scarlett.
The purpose of this course is to investigate an epidemiologic topic with one of the instructors. It provides experience in problem definition, research design, and the analysis of epidemiologic data.

FACULTY ROSTER

Abou-Madi, Noha, D.V.M., U. of Montreal (Canada). Lecturer, Clinical Sciences
Aguirre, Gustavo D., Ph.D., U. of Pennsylvania. Alfred H. Caspary Professor, Clinical Sciences
Ainsworth, Dorothy M., Ph.D., U. of Wisconsin–Madison. Assoc. Prof., Clinical Sciences
Antczak, Douglas F., Ph.D., U. of Cambridge (England). Dorothy Havemeyer McConville Professor of Microbiology and Immunology

COLLEGE OF ARTS AND SCIENCES

PROGRAM OF STUDY

Introduction

The College of Arts and Sciences—composed of departments in the humanities and the arts, the basic sciences, mathematics and computer science, and the social sciences and history—is a community of about 4,100 undergraduates and 600 faculty members. The college values intellectual breadth and rigor, individual choice and responsibility, imaginative courses of study, and development of critical thinking and writing. The college is also a graduate school and research center attracting faculty whose research and scholarly and creative work require first-rate academic facilities and who bring to all their students the profound questioning and the current ideas of contemporary scholarship. Finally, the college exists within a university of several other colleges and of about 19,000 students and 1,500 faculty members. This wider community provides depth and diversity of applied and professional studies beyond what one undergraduate college alone can offer. Students may draw upon the knowledge and facilities of the other undergraduate colleges at Cornell to supplement their studies. Abundant variety and outstanding quality in many fields, including interdisciplinary fields, give the college and the university its distinctive character.

The richness of the college's curriculum is extraordinary; there is no course that all students must take, and there are nearly 2,000 from which they may choose. By choosing courses each semester, students design their own education. They strike a balance between developing known interests and exploring new subjects. They sharpen their verbal and quantitative skills. They also come to understand more thoroughly the Western tradition and learn something about the non-Western world and its peoples. An education in the liberal arts and sciences means honing one's critical capacities, learning about oneself in nature and culture, and gaining real experience with views of the world radically unlike one's own. All this is highly individual, and the college relies on each student and faculty adviser to design a sensible, challenging, and appropriate course of study.

Yet the faculty believes that each student's education should have certain common qualities. These include familiarity with several different ways of knowing that are reflected in clusters of disciplines in the natural sciences, the social sciences, and the humanities and the arts. In addition to these general areas of knowledge, students study foreign languages, acquire effective writing and quantitative skills, and concentrate on one particular field to develop the powers of imaginative and critical thinking as fully as possible. To accomplish these objectives, the college has certain requirements for graduation.

The College of Arts and Sciences awards one undergraduate degree, the Bachelor of Arts degree

Summary of Requirements

1) First-Year Writing Seminars: two courses. (See John S. Knight Institute for Writing in the Disciplines p. 563.)
2) Foreign language: proficiency in one language or qualification in two; zero to four courses, depending on background.
3) Distribution: nine courses, three of which are satisfied with a major in humanities or social sciences and four of which are satisfied with a major in sciences.
4) Breadth: two courses (may be among courses for distribution, major, or electives).
5) Major.
6) Electives: four or five courses (at least 15 credits) not used to fulfill other requirements and not in the major field.
7) Residence: eight full-time semesters, unless a student can successfully complete all other requirements in fewer than eight semesters and meet the additional criteria to accelerate graduation. (See below under "Acceleration.")
8) 34 courses: a three- or four-credit course counts as one course. A two-credit course counts as half a course; a one-credit course does not normally count toward the requirement; a six-credit language course counts as one and one-half courses. (See below under "Courses and Credits" for some one-credit courses in music, dance, and theatre performance that can be cumulated to count as one-half course and for counting other five and six credit courses.
9) Credits: a total of 120 academic credits, of which 100 must be taken in the College of Arts and Sciences. (Note "Non-credit courses below.")
10) Physical education: completion of the university requirement (passing a swim test and two one-credit non-academic courses). Please note that physical education credit does not count toward graduation or toward the 12-credit minimum required for good academic standing each semester.
11) Application to graduate. (See below under "Graduation.")

Explanation of Requirements

Foreign Language Requirement

The faculty considers competence in a foreign language essential for an educated person. Studying language other than one's own helps students understand the problematics of language, our fundamental intellectual tool, and more fully opens another culture for exploration. The sooner a student acquires competence, the more useful it will be. Hence, work toward the foreign language requirement should be undertaken in the first two years. Courses in foreign languages and/or literature are taught in the College of Arts and Sciences by the following departments: Africana Studies and Research Center, Asian Studies, Classics, German Studies, Linguistics, Near Eastern Studies, Romance Studies, and Russian Literature.

The language requirement may be satisfied in one of two ways:

1) by attaining *proficiency* (competence at the intermediate level) in one language

or

2) by attaining *qualification* (mastery of an introductory sequence) in two languages.

Proficiency

Proficiency may be attained in languages by passing an intermediate (usually 200-level) Cornell course (or Chinese or Japanese 161). Introductory courses in some less commonly taught languages are taught at the 200-level or above; (for example, Ancient Egyptian and Welsh); these do not confer proficiency. Proficiency can also be earned by examination. A score of 4 or 5 on an AP *literature* exam in French, Italian, or Spanish earns proficiency and three credits. A score of 4 or 5 on the AP exam in German earns proficiency and three credits. Students with those scores should also take the Cornell Advanced Standing Examination (CASE), given during orientation week, to see if they can earn three additional credits. A score of 4 or 5 on an AP *language* exam earns three credits but *does not* carry with it proficiency. However, a student who received a score of 4 or 5 on an AP language exam can earn proficiency and an additional three credits by scoring high enough on the CASE. Students with appropriate scores on Cornell Language Placement tests or SAT II examinations are also eligible to take the CASE (see chart below). Native speakers and writers of a language other than English may earn proficiency and six credits by taking the CASE or an individual exam (if no CASE is available).

Qualification

Qualification may be attained in any of the following ways:

1) Three years of high school study in any one language gives qualification in that language. No demonstration of competence is necessary. Note, however, that this route to qualification does not guarantee entrance into an intermediate level course. Students who want to continue studying the language must be placed in the appropriate course through an examination. Being placed below the intermediate level does not cancel the qualification.
2) Passing the requisite Cornell course, the last course of the introductory sequence.

   Note: Except in the case of Sanskrit, completion of language sequences 131–132 does not constitute qualification.

3) Achieving the requisitie score (see chart) on the SAT II taken in high school or a score of 56 or higher on the appropriate Cornell LP (Language Placement) test.

   Students may earn a score of 56 on the placement test at the end of a course numbered 122 (second semester of the introductory sequence) and consequently attain *qualification* without taking 123, the third semester of the introductory sequence.

4) By departmental or (when no placement test is available) individual examination at Cornell (if a qualified examiner is here).

Placement in Language Courses and Advanced Placement Credit

Placement into language courses and advanced placement credit are separate results of examinations.

Placement

Entering students who have had two or more years of high school study in a language, who have been awarded credit for language work at another college or university, or who are native speakers, bilingual, or have spoken the language at home, may enroll in a course in the same language only after being placed by examination. The placement exam may have been taken in high school (SAT II, taken after the last course, or AP, if the score was 4 or 5) or at Cornell (LP test). Students may, but need not, retake a language test if a year or more has passed since last taking it. Being placed into the first course at an intermediate level course does not earn credit toward the degree. Degree credit is earned only for demonstrated mastery of work equivalent to the first course at an intermediate level at Cornell, and placement into the second intermediate course.

Placement Tests and Advanced Placement Credit

1) The following language placement and advanced standing tests are scheduled at the beginning of each semester: Chinese, Japanese, and Korean (schedule available from the Department of Asian Studies, 388 Rockefeller Hall); German (schedule available from the Department of German Studies, 183 Goldwin Smith Hall); French, Italian, and Spanish (schedule available from the Department of Romance Studies, 303 Morrill Hall); and Russian (schedule available from the Department of Russian Literature, 226 Morrill Hall). Please note that the advanced standing examination in French, German, Italian, Russian, and Spanish, is called the CASE (Cornell Advanced Standing Examination). Eligibility for the CASE may be determined from the placement tables below. In Russian only, *all* students seeking placement take the CASE.

   Native speakers of Spanish who have completed their secondary education in a Spanish-speaking country do not take the CASE. For these students, the Spanish program offers a walk-in service, the Native Language Accreditation for Spanish, in the third week of September and the first week of February. Students interested in this service should contact Eleanor Dozier in Morrill Hall. Spanish-English bilinguals who do not fit the definition of "native speakers," and whose test scores make them eligible, should take the CASE.

French

Placement Tests LPF	*SAT II*	*Language Courses*	*Literature Courses*
below 37	below 410	121	
37–44	410–480	112 or 122	
45–55	490–590	123	
56–64	600–680	206 209 H ADM 266	201
60 and above	640 and above		220, 221, 222
65 and above	690 and above		CASE required for placement in language.
AP 4 or 5 in language, 3 credits.			CASE required for placement in language.
AP 4 or 5 in literature, 3 credits and proficiency.			CASE required for placement in language.

German

Placement Tests LPG	*SAT II*	*Language Courses*	*Literature Courses*
below 37	below 370	121	
37–44	370–450	122	
45–55	460–570	123	
56–64	580–670	200 205	200
65 and above	680 and above		CASE required for placement
AP 4 or 5, 3 credits.			CASE required for placement

Italian

Placement Tests LPI	*SAT II*	*Language Courses*	*Literature Courses*
below 37	below 370	121	
37–44	370–450	122	
45–55	460–580	123	
56–64	590–680	209	214, 215, 216, or 217
65 and above	690 and above		CASE recommended for placement*
AP 4 or 5 in language, 3 credits.			CASE recommended for placement*
AP 4 or 5 in literature, 3 credits and proficiency.			CASE recommended for placement*

* Students who have a score of 65 of higher on the LPI, or 690 or higher on the SAT II, or an AP score of 4 or 5 may enroll in Italian 201 or 203 without taking the CASE.

Spanish

Placement Tests LPS	*SAT II*	*Language Courses*	*Literature Courses*
below 37	below 370	121	
37–44	370–450	112 122	
45–55	460–580	123	
56–64	590–680	200 209 207	218
65 and above	690 and above		CASE recommended for placement*
AP 4 or 5 in language, 3 credits.			CASE recommended for placement*
AP 4 or 5 in literature, 3 credits and proficiency.			CASE recommended for placement*

*Students who have a score of 65 of higher on the LPS, or 690 or higher on the SAT II, or an AP score of 4 or 5 may enroll in Spanish 200, 207, or 209 without taking the CASE.

2) Arabic: departmental examination, Department of Near Eastern Studies, 360 Rockefeller Hall.

3) Greek, ancient and modern: departmental examination, Department of Classics, 120 Goldwin Smith Hall.

4) Hebrew: departmental examination, Department of Near Eastern Studies, 360 Rockefeller Hall.

5) Latin: departmental examination, Department of Classics, 120 Goldwin Smith Hall.

Substitutions to the Language Requirement

Outright waivers of the requirement are never granted. However, rarely and as appropriate, alternatives to language acquisition are approved. Legitimate requests for substitutions require evidence of inability to learn foreign languages in a classroom setting. Most students provide documentation of learning disabilities relating to foreign language acquisition (e.g., an auditory processing problem) to Student Disability Services, 420 Computing and Communications Center, 255–4545. Other students who may never have been tested for a disability reveal it through repeated and dedicated but vain attempts in formal language courses. A poor grade in a Cornell introductory language course or taking the LP exam repeatedly and unsuccessfully is not adequate evidence.

Students who wish to request a substitution for the normal requirement should meet with Dean Walbridge, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall. If Dean Walbridge determines that the request has merit, the student meets with the Language Substitution Review Committee. This committee makes the final decision for or against a substitution. If a substitution is allowed, the committee works with the student to select substitute courses.

Distribution Requirements

In satisfying the distribution requirements, students become acquainted with a broad range of subject matter and points of view among disciplines in the college and explore areas that may be entirely new to them. Or, to look at it the other way, as first-year students explore subjects that interest them, they satisfy some of the distribution requirements along the way. Consequently, first-year students should take courses to prepare for possible majors and to explore subjects new to them, and take no course only in order to satisfy a distribution requirement. Although, students may complete the requirements over eight semesters, they can take advanced courses in subjects they (perhaps unexpectedly) find intriguing only if they have completed the introductory prerequisites. Consequently, students should not postpone satisfying distribution requirements until the last semesters. Once sure of a major, students should consider which distribution requirements are yet unfilled and how to fulfill them with courses that complement their overall program.

Students must take a total of nine courses of three or more credits each for the distribution requirements: four courses from Groups I and II below, at least two of which are from Group I and at least one of which is from Group II (for example, one chemistry, one physics, one geology, and one mathematics); five courses from Groups III and IV below, with at least two in each group and two in the same department (for example, one course in sociology, one in history, one in history of art, and two in theater arts). Courses that satisfy distribution requirements are listed and described in their departmental sections. The Roman numeral—I, II, III, or IV indicates which group they satisfy. If there is no numeral at all, the course satisfies no distribution requirement. Courses in the major may be applied to the distribution requirements (unless prohibited by one of the restrictions noted under restrictions on applying AP credit, transfer credit, and Cornell courses to distribution requirements).

I. Physical and Biological Sciences

In fulfilling the four courses in science and quantitative reasoning, students must take at least two science courses. At least one of these must be from the primary list of courses in science departments in the College of Arts and Sciences:

Primary list:

Anthropology:
- 275 Human Biology and Evolution
- 371 Human Paleontology
- 474 Lab and Field Methods in Human Biology

Astronomy

Chemistry

Computer Science
- 321 Numerical Methods in Computational Molecular Biology

Earth and Atmospheric Sciences, *except* 150, 250

Physics

Psychology
- 111 Brain, Mind, and Behavior
- 322 Hormones and Behavior
- 324 Biopsychology Laboratory
- 332 Biopsychology of Learning and Memory
- 396 Introduction to Sensory Sytems
- 424 Neuroethology
- 429 Olfaction and Taste: Structure and Function
- 431 Effects of Aging on Sensory and Perception Systems
- 492 Sensory Function

Biological Sciences: While there are several single-semester biology courses particularly suitable for distribution, students must note that introductory biology can count for distribution only when completed as a two-semester sequence: 109–110, 105–106, or 101 and 103 plus 102 and 104, or 107–108, or a combination of the first term of one sequence and the second term of another. Students may select additional science courses from the following **supplementary list:**

Animal Science:
- 100 Domestic Animal Biology I
- 150 Domestic Animal Biology II
- 212 Animal Nutrition

Anthropology:
- 101 Introduction to Anthropology
- 208 The Evolution of Human Mating
- 390 Primate Behavior and Ecology

Applied and Engineering Physics:
- 110 The Laser and its Applications in Science, Technology, and Medicine

Electrical Engineering:
- 430 Lasers and Optical Electronics

Engineering:
- 110 The Laser and its Applications in Science, Technology, and Medicine

Entomology:
- 212 Insect Biology

Food:
- 200 Introductory Food Science

Materials Science and Engineering:
- 281 The Substance of Civilization

Natural Resources:
- 201 Environmental Conservation
- 210 Introductory Field Biology
- 301 Forest Ecology

Nutritional Science:
- 115 Nutrition and Health

Psychology:
- 223 Introduction to Biopsychology
- 326 Evolution of Human Behavior

II. Quantitative and formal reasoning

In completing four courses in science and quantitative reasoning, students must take at least one of the following courses:

Biometry:
- 261 Statistical Methods

City and Regional Planning:
- 321 Introduction to Quantitative Methods

Computer Science:
- 100 Introduction to Computer Programming
- 211 Computers and Programming
- 312 Structure and Interpretation of Computer Programs
- 486 Applied Logic

Economics:
- 319 Introduction to Statistics and Probability
- 320 Introduction to Econometrics
- 321 Applied Econometrics

Industrial & Labor Relations:
- 210 Statistical Reasoning I
- 211 Statistical Reasoning II

Linguistics:
- 216 Mathematical Linguistics

Mathematics: all courses *except* 101 and 109

Operations Research & Industrial Engineering:
- 115 Engineering Applications of OR&IE

Philosophy:
- 231 Introduction to Deductive Logic
- 331 Deductive Logic
- 431 Mathematical Logic
- 432 Topics in Logic
- 434 The Foundations of Mathematics
- 436 Intensional Logic

Physics:
- 205 Reasoning about Luck
- 209 Relativity and Chaos
- 210 Random Classical & Quantum Physics

Psychology:
- 350 Statistics and Research Design

Sociology:
- 301 Evaluating Statistical Evidence

If students choose two courses from this list to satisfy part of the distribution requirement, those two courses may not have significant overlap. For example, students may not choose two beginning courses in statistics.

III. Social sciences and history

The following departments are included in Group III, social sciences and history. Most (although not all) courses in these departments satisfy distribution in this group. Students should consult the departmental listings for options that are noted as satisfying Group III.

Anthropology
Economics
Government
History
Linguistics
Psychology
Sociology

In addition, interdisciplinary departments and programs offer courses in Group III. Again, students should consult the departmental and program listings and note which courses satisfy Group III.

Africana Studies
American Studies
Archaeology
Asian Studies
Asian American Studies
Biology and Society
Cognitive Studies
Near Eastern Studies
Religious Studies
Science and Technology Studies
Women's Studies

Finally, CRP 100 and 101 and ENGRG 250 and 298 satisfy distribution in Group III.

IV. Humanities and the arts

The following departments are included in Group IV, humanities (literature and philosophy) and the arts. While language and logic courses do not count for distribution in this group, most (although not all) other courses in these departments do. Students should consult the departmental listings for options that are noted as satisfying Group IV.

Asian Studies
Classics
Comparative Literature
English
German Studies
History of Art
Music

(One course must be in music history, culture, or theory. If a student chooses to satisfy part of the distribution requirement with more than one music course, an acceptable sequence may include four credits (two half courses) in musical performance, organizations, or ensembles combined with theory, history, and culture courses. Students may count performance credits as only one course toward distribution.)

Philosophy
Romance Studies (French, Italian, and Spanish Literature)
Russian Literature
Theatre, Film, and Dance

In addition, interdisciplinary departments and programs offer courses in Group IV. Again, students should consult the departmental and program listings to find which courses satisfy Group IV.

Africana Studies
American Studies
Anthropology
Archaeology
Asian American Studies
Biology and Society
Near Eastern Studies
Religious Studies
Science and Technology Studies
Women's Studies

Restrictions on Applying AP Courses and Credit from Other Institutions to the Distribution Requirements

Students may apply up to two courses of approved advanced placement or transfer credit towards distribution requirements in Groups I and II (physical/biological sciences and quantitative/formal reasoning), as long as they take at least one course from the primary list in an Arts and Sciences science department at Cornell. Transfer credit applied to distribution in Group II (quantitative/formal reasoning) must be in mathematics, statistics, or computer science; it may not be in other quantitative subjects. Courses taken at other institutions in mathematics or computer science must be approved for transfer and distribution credit by the Departments of Mathematics or Computer Science respectively. Statistics courses taken at other institutions in social science departments must be approved by the relevant department in Arts and Sciences (e.g., psychology or sociology); statistics courses taken in mathematics or statistics departments must be approved by the Department of Mathematics.

Students may apply no advanced placement or transfer credit from other institutions toward satisfaction of the distribution requirements in Groups III and IV (social sciences/history and humantities/arts).

Students who transfer to the college from another institution or who enter through the Mid-Year Freshman Program are under the above rules for advanced placement credit, but are eligible to have credit for post high school coursework taken during regular semesters (not summer school) at their previous institution count towards all distribution requirements. Transfer students receive a detailed credit evaluation when they are accepted for admission.

Restrictions on Applying Cornell Courses to the Distribution Requirement

1) First-Year Writing Seminars may not count toward any distribution requirement.
2) No single course may satisfy more than one distribution requirement.
3) Students may count courses in their major towards distribution. However, courses offered or cross-listed by their major department may not be counted toward any distribution category beyond the usual category of the major department itself. For example, a history major may not count a course cross-listed between history and a literature department toward distribution in the humanities.

Breadth Requirements

Students must include in their undergraduate curricula at least one Arts and Sciences course that focuses on an area or a people other than those of the United States, Canada, or Europe and one course that focuses on an historical period before the twentieth century. Courses that satisfy the geographic breadth requirement are marked with an @ when described in this catalog. Courses that satisfy the historical breadth requirement are marked with a #. Many courses satisfy both requirements, and students may in fact use the same course to satisfy both. Students may use courses satisfying distribution, major, or elective—but not writing—requirements in satisfaction of either of the breadth requirements. They may also apply Cornell courses conferring proficiency in a non-Western language toward the geographical breadth requirement. They may not apply to either of the breadth requirements (a) advanced placement credit, (b) credit awarded by examination, or (c) if matriculating as freshmen (unless through the Mid-Year Freshman Program), transfer credit.

The Major

In their last two years, students devote roughly one-half their time to acquiring depth and competence in a major subject. The major does not necessarily define a student's intellect or character or lead directly to a lifetime occupation, although it sometimes does some of each. Through the major, students focus and develop their imaginative and intellectual capacities through a subject they find especially interesting.

Most departments and programs specify certain prerequisites for admission to the major; they are found on the following pages in the descriptions of each department and program.

Students may apply for acceptance into the major as soon as they have completed the prerequisites and are confident of their choice. This may be as early as the second semester of freshman year, and may be no later than second semester of sophomore year. To apply, they take a copy of their transcript to an appointment with the director of undergraduate studies in their prospective major. A department or program may refuse admission into the major if the applicant's performance does not meet established standards. A student without a major at the beginning of the junior year is not making satisfactory progress toward the degree. That student must meet with an advising dean, and may not be allowed to continue in the college.

Available majors

Majors are offered by each of the departments. There are also majors in American studies, archaeology, biology and society, religious studies, science of earth systems, and women's studies.

Some students want to pursue a subject that cannot be met within an established major. They may plan, with the help of their faculty adviser, an independent major that includes courses from several departments and even colleges. See "Independent Major Program," under "Special Academic Options." Whatever the major—chemistry, math, philosophy, or music—graduates from the College of Arts and Sciences earn the one degree the college awards, a Bachelor of Arts.

Double Majors

Only one major is required for graduation. Some students choose to complete two

majors. No special permission or procedure is required; students simply become accepted into both majors and find an adviser in each department. Both majors are posted on the official transcript.

Electives

Of the 34 courses and 120 credits required for graduation, almost one-third are free electives. How students use these electives frequently makes the difference between an ordinary and a truly interesting course of study. Students must complete at least four courses and at least 15 credits offered outside the major field and not used to fill another requirement except breadth. AP credits not otherwise used may be used to fulfill elective requirements. Students may group electives to complete one of the established interdisciplinary concentrations described in the pages following the descriptions of departments or may form their own unofficial concentration or "minor" separate from their major. Students may also group electives into a second major. Since only one major is required, students may count courses in a second major as electives. Some students choose to explore a variety of subjects; some develop a concentration in a department or subject outside Arts and Sciences to gain practical training or specialized knowledge.

Residence

The College of Arts and Sciences is a residential college for students who devote their energy and spirit to full-time study. The faculty believes that integrated, full-time study for a defined period best promotes intellectual and creative development and best prepares people for citizenship and careers.

Consequently, eight semesters of full-time study in the College of Arts and Sciences are integral to earning the A.B. degree. Even if the minimum requirements can be met in fewer semesters, the faculty of the college expects students to take advantage of the resources of the university for eight full terms and obtain as rich and advanced an education in the liberal arts and sciences as possible. Students may complete their undergraduate degrees with credits earned at other institutions or as part-time or summer students at Cornell only if they have completed their eight full-time semesters of residence or satisfied the criteria listed below under "Part-time study in final semester."

For transfer students from other institutions each full semester of study at their previous institution counts as one of the eight semesters of residence. However, even if transfer students have completed more than four full semesters at their previous institution, they must spend a minimum of four semesters on the Cornell campus in Ithaca enrolled in the College of Arts and Sciences. Transfers from other colleges at Cornell must spend four semesters on campus in Ithaca as students in the Internal Transfer Division or in the college.

Approved study abroad, SEA Semester, Urban Semester, and Cornell-in-Washington are considered semesters of residence, but not as semesters on the Cornell campus. Students may spend no more than two semesters on such programs and must be on campus during their last semester.

Semesters of extramural study in Cornell's Division of Continuing Education, semesters of study at other institutions while on leave from Cornell, and summer sessions anywhere do not count as semesters of residence.

Acceleration

Some students decide that they do not need eight semesters of residence to obtain a solid undergraduate education. These students must compress the first four semesters and spend four full semesters in the major. Benefitting from opportunities for advanced, seminar, and independent (sometimes honors) work is what best characterizes undergraduate education in the college. Students considering acceleration should discuss their plans with their major adviser.

Accelerants apply to graduate one semester before their intended new graduation date. They obtain an "Application to Graduate" for this purpose in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall.

1. Accelerants must meet either condition *a* or *b*:
   a. Complete 60 credits before beginning their last four semesters in the college and complete the prerequisites for admission to the major in time to spend *four* semesters in the major.
   b. Pass 48 credits in College of Arts and Sciences courses numbered "300" and above. Upper-level courses taken in other colleges at Cornell University may count as College of Arts and Sciences credit only if approved for the major.
2. All accelerants are required to complete 100 credits at Cornell at "C" or above. Courses completed with a grade of "S" will count toward the 100 credits. Advanced placement credits do not count toward this requirement.
3. Students may not use credits earned while on leave of absence to reduce their terms of residence.
4. Accelerants may not finish the degree with credits earned in summer or winter session, through part-time study (unless they meet the guidelines for part-time study), or at an off-campus program, including Cornell-in-Washington, SEA Semester, Urban Semester, or study abroad. That is, they may not exit through any program other than a regular, full-time Cornell semester in Ithaca.

Students matriculating as freshmen may not compress their undergraduate education into fewer than six semesters of residence. Transfer students, both from other institutions and from other colleges at Cornell, must satisfy the residence requirement and must spend at least four semesters in the college on campus in Ithaca.

Ninth term

Students who can graduate in eight semesters should do so. If a worthy academic plan for a full ninth or tenth semester is approved, the student enrolls in the college as a special student for the additional work. Such a status allows enrollment in a full schedule of courses for full tuition and full use of campus resources, but allows financial aid only from loans or outside agencies, not from Cornell funds. Students who need only a part-time schedule of courses in a ninth or tenth term in order to graduate should complete the outstanding courses as part-time students paying prorated tuition. Students may spend a ninth term with Cornell aid only with permission of the Committee on Academic Records. Such permission is normally granted only to:

1. Students who have been ill or have an exceptionally compelling academic plan.
2. Students attracted late to a field with a hierarchical curriculum (for example, physics).
3. Students who were academically underprepared for the curriculum at Cornell and needed to begin with a lighter schedule of courses than normal. (See Dean Turner, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, about this option.)

Part-time study

Students in good academic standing may take a personal leave of absence and enroll in the Division of Continuing Education, but such semesters of extramural study do not count as terms of residence and credits from such semesters may not be used to reduce the terms of residence.

Part-time study in special circumstances

The college and university support students (with financial aid and services) as best they can to make full-time study possible. Occasionally, however, extraordinary but nonfinancial personal, academic, or medical circumstances make becoming a part-time student necessary and appropriate. Students in good academic standing who face extraordinary situations may petition the Committee on Academic Records for part-time status and proration of tuition in the college.

Students requesting part-time status because of documented disabilities that, under the Americans with Disabilities Act, require appropriate accommodations, should discuss their situation with Dean Walbridge. Otherwise, students should meet with a dean of their class.

Part-time study in final semester

Students may complete their degrees as part-time students paying prorated tuition at Cornell after fewer than eight semesters of full-time residence only if:

1) They have completed all requirements by the end of the sixth or seventh term, met the criteria for accelerated graduation, and are remaining to complete study beyond what is required for the degree.
2) They are writing an honors thesis in the eighth semester and can complete all degree requirements by taking two courses, one of which is the thesis itself. They must register for the thesis and at least one additional course.

In all cases, students must obtain approval of an advising dean in the semester *prior* to the part-time semester and confirm their status and registration with college registrar Sally O'Hanlon in 55 Goldwin Smith Hall.

Courses and Credits

Counting courses and credits

Students must complete at least 34 courses to

graduate—that is, an average of four courses during each of six semesters and five courses during each of two semesters. A three- or four-credit course counts as one course; a two-credit course counts as one-half course. Single-credit courses do not count as part of the 34 except in certain cases when they form a part of a series and two in the same series can be aggregated to count as one-half course (certain offerings in the Departments of Music and of Theatre, Film and Dance fall into this category). Three one-credit courses do not aggregate to count as one course. A six-credit language course counts as 1 1/2 courses, while the summer Falcon Programs in Asian languages count as eight credits and 2 1/2 courses each. Archaeology and geology fieldwork for more than six credits counts as two courses each. BIOGD 281 counts as 1 1/2 courses. Other five- or six-credit courses count as one course. AP exam scores that result in an award of three or four credits count as one course; those in language that result in six credits count as 1 1/2 courses; those in biology that result in six credits count as two courses; those that result in an award of eight credits count as two courses.

Students must also complete 120 credits, 100 of which must be from courses taken in the College of Arts and Sciences. Liberal arts courses approved for study abroad during a semester or academic year of full-time study (not summer study) and courses taken in certain off-campus Cornell residential programs may be counted toward the 100 credits required in the college. Advanced placement credits, credits earned in other colleges at Cornell, or credits earned in any subject at institutions other than Cornell do not count as part of the 100. The only exceptions to the above restrictions are for courses (usually no more than three) that certain departments accept from other colleges at Cornell as fulfilling major requirements and for up to two courses that an adviser accepts as part of a completed and formally established cross-college, inter-disciplinary concentration.

Using courses towards more than one requirement

A course may fulfill more than one college requirement in the following situations:

1) A course may be used to fulfill a distribution requirement and also a major requirement (except as noted under previous section of restrictions on applying AP credits, transfer credits, and Cornell courses to distribution requirements).
2) A one-semester course in foreign literature (not language) that is acceptable for achieving proficiency in that language may also be used as a partial fulfillment of the distribution requirement in the humanities and the arts.
3) Courses may count toward breadth requirements and toward any other requirement except First-Year Writing Seminars.
4) Courses in a second major may count as electives.

Auditing

The college encourages its students to take advantage of its rich curriculum by sitting in on courses that interest them but that they prefer not to take for credit. As long as the instructor agrees, students are welcome to visit courses. Small seminars and language courses are sometimes not open to visitors. Audited courses do not appear on the student's schedule or transcript.

Repeating courses

Students occasionally need to repeat courses. If the instructor certifies that the course content has been changed, credit will be granted a second time. If the content has not changed, both grades nontheless will appear on the transcript and be included in any average that is calculated, but credit will be counted toward the degree only once; students considering repeating a course under this circumstance should discuss the matter with their adviser and an advising dean. Students who plan to repeat a course submit a petition to the college registrar, Sally O'Hanlon, 55 Goldwin Smith Hall. If the original course grade was F, no petition is necessary.

Courses that do not count toward the degree

The college does not grant credit toward the degree for every course offered by the university. Courses in military training, training as emergency medical technician, service as a teaching assistant, physical education, remedial or developmental reading, high school mathematics, supplemental science and mathematics offered by the Learning Strategies Center, English as a second language, keyboarding, and shorthand are among those for which degree credit and credit toward the 12 credits required for good academic standing are not given.

Students enrolled in courses for undergraduate teaching assistants may petition once to have the nondegree credits count towards good academic standing. This would allow continued eligibility for graduating with distinction in all subjects, but would disqualify the student from being on the dean's list that semester.

Advanced placement credit

See p. 6 and 7 Advanced placement credit counts as part of the 120 credits and 34 courses required for the degree. It does not count as part of the 100 credits required in Arts and Sciences; its application to distribution requirements is restricted, as explained under "Distribution."

Summer session credit

A student may earn credit toward the degree by completing courses in Cornell's summer session or by successful petitioning for credit for summer courses at other colleges. Students should consult their advisers regarding summer study plans.

Credit for summer courses not taken at Cornell must be approved by the appropriate Cornell department. Approval forms and information are available on-line, www.arts.cornell.edu, and in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall. Transcripts for completed work at other institutions must be sent to Robin Perry, 172 Goldwin Smith Hall. Credit approved for summer courses away from Cornell (including summer or orientation programs abroad) counts toward the 120 credits and 34 courses required for the degree, but does not count toward the 100 credits required in the college. It may be applied to part of the Group I and II distribution requirements, to elective requirements (but not to breadth requirements) and to major requirements (with the approval of the department).

Entering students who want to receive credit toward the degree for courses completed before matriculation in a summer session away from Cornell should obtain approval forms as soon as possible and have transcripts sent to Robin Perry, 172 Goldwin Smith Hall. Credits completed in Cornell summer sessions will be awarded automatically.

Summer session at Cornell or elsewhere does not count toward the eight-semester residence requirement.

Transferring credit earned away from Cornell while on leave of absence

Students may petition to transfer credits from other accredited institutions for work completed while on leave of absence. Petitions are available in 55 and 172 Goldwin Smith Hall and at www.arts.cornell.edu. The relevant department will decide whether the course is comparable to Cornell courses. Credit approved for transfer counts as part of the 120 required for graduation and as part of the 34 courses. It does not count among the 100 credits required in Arts and Sciences and cannot be used to graduate in fewer than eight semesters. Its application to distribution and breadth requirements is restricted as described under "Distribution."

Transferring credit (for transfer students from another institution or from another Cornell college)

Transfer students must satisfy all normal requirements for the degree, including eight semesters of full-time study. They may never complete fewer than 60 credits and 16 courses at Cornell nor be in residence in the college for fewer than four regular semesters (summer session does not count toward the residence requirement). The college evaluates credit and residence earned either at another school or college at Cornell University or at another accredited institution of collegiate rank and determines the number of credits and courses the student may apply toward the various requirements for the Bachelor of Arts degree at Cornell. In addition, it reevaluates advanced placement credit allowed by another institution, including another college at Cornell. Evaluations of transfer credits are normally provided when students are notified of their admission.

SPECIAL ACADEMIC OPTIONS

Degree Programs

The following five programs allow students to alter the regular college or major requirements or to work toward more than one degree.

College Scholar Program

The College Scholar Program frees up to 40 students in each class from the usual college requirements for a degree and allows them to design their own course of study. It is meant to serve students whose interests and talents would benefit from a little more academic freedom than other students have, who demonstrate exceptional promise, and who show the maturity to plan and carry out, with the help of their adviser, a well-designed program of studies. College Scholars design idiosyncratic programs: some pursue diverse

interests; others integrate a variety of courses into a coherent subject.

College Scholars must complete 120 credits of course work (100 in the college), 34 courses, and, unless they receive permission from the program to accelerate, eight full terms of undergraduate study. They must also complete the university's physical education requirement. All College Scholars must complete a senior project. They are not required to complete or fulfill the general education requirements, although members of the College Scholar Advisory Board believe that the spirit of those requirements is a good one.

Each applicant to the College Scholar Program is asked to write an essay, which is due the last Wednesday in April of the freshman year. Mid-year freshmen apply by that date in their first spring semester in the college. Students should contact the director of the program, Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall, for further information.

Dual-Degree Program with Other Colleges

The Dual-Degree Program enables especially ambitious undergraduate students to pursue programs of study in two colleges. Dual-degree candidates may earn both a Bachelor of Arts degree from the College of Arts and Sciences and: (1) a Bachelor of Science degree from the College of Engineering; or (2) a Bachelor of Fine Arts degree from the Department of Art in the College of Architecture, Art, and Planning; or (3) a Bachelor of Science degree in urban and regional studies from the Department of City and Regional Planning in the College of Architecture, Art, and Planning; or (4) a Bachelor of Science degree in architectural history from the Department of Architecture in the College of Architecture, Art, and Planning. Students enter one of these colleges as freshmen or sophomores and begin the Dual-Degree Program with the second college in the second or, in some cases, the third year. The Dual-Degree Program ordinarily takes five years to complete, and students are eligible for ten semesters with financial aid. For further information contact the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Independent Major Program

The Independent Major Program allows students to design their own interdisciplinary majors and pursue a subject that cannot be found in an established major. Proposals for an independent major must be equivalent in coherence, breadth, and depth to a departmental major, well suited to the student's academic preparation, and consistent with a liberal education. Proposals must also be supported by a faculty adviser and are assessed by a board of faculty members. Independent majors substitute for established majors, but students must still satisfy all the other requirements for the baccalaureate degree. Students should contact the director of the Independent Major Program, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall, for further information. Deadlines for submitting independent major proposals are listed on the calendar supplement for the College of Arts and Sciences.

Double Registration with and Early Admission to Professional Schools

Registration in the senior year of the College of Arts and Sciences and the first year of Cornell Law School, Cornell Medical College, or the Johnson Graduate School of Management, is occasionally possible. A very few exceptionally well-prepared students who have earned 105 credits before the start of the senior year and have been accepted by one of the above-named professional schools may be permitted to register simultaneously in the college and in one or another of these professional schools during the seventh and eighth terms. They earn the A.B. degree after the first year of professional school.

Students with eight or fewer credits and two or fewer courses to complete may apply to enter the Master's of Engineering program during (but no earlier than) the last semester; dual-degree students may enter this program no earlier than the ninth semester. They earn the bachelor degree(s) after one semester of graduate school.

Students interested in the joint program with the Law School or the Graduate School of Management, or in early admission to the Master's of Engineering program should apply to the relevant program. Students interested in the joint program with Cornell Medical College should contact the health careers coordinator, 203 Barnes Hall. All candidates should confirm their eligibilty with an advising dean, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Double-registered students must, of course, complete all requirements for the A.B. degree, including 100 credits in Arts and Sciences courses.

Teacher Education in Agriculture, Mathematics, and Science

Students at Cornell may pursue teaching credentials in agriculture, biology, chemistry, earth science, general science, mathematics, and physics. Teacher Education in Agriculture, Mathematics and Science (TEAMS) is a university program jointly conducted by the departments of Education and Mathematics. Cornell Students from any college are encouraged to apply for admissions to TEAMS during their sophomore year. Those who are admitted complete their undergraduate major in an agricultural science, mathematics or one of the sciences, while taking Education courses. They are then able to complete a Master of Arts in Teaching (MAT) degree in one year.

For more information, contact the TEAMS Program Coordinator at 255–9573.

Special-Interest Options

The following options enable students to pursue special interests within the usual degree programs.

Concentrations

Established interdisciplinary concentrations, described in the pages following the descriptions of the departments and their curricula, provide structures for organizing electives. Completed concentrations are noted on the transcript.

Informal Minors

Some students organize electives within a discipline or department. Such informal minors can be developed with the help of the departmental directors of undergraduate studies. They are not noted on the transcript.

Independent Study

Independent study affords students the opportunity to pursue special interests or research not treated in regularly scheduled courses. A faculty member, who becomes the student's instructor for the independent course, must approve the program of study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study (proposal forms are available on-line at www.arts.cornell.edu and in the Office of Undergraduate Admissions and Advising, 55 and 172 Goldwin Smith Hall). In one semester students may earn up to six credits with one instructor or up to eight credits with more than one instructor.

Undergraduate Research Program

An excellent way to benefit from being an undergraduate at a research university, at Cornell in particular, is to become an apprentice in on-going faculty research. About 400 students participate each year in creating new knowledge and earn independent study credit for what they learn and contribute. They sharpen their critical and creative abilities and test their interest in pursuing a research career. Sometimes they publish their work.

The Undergraduate Research Program gathers information about research opportunities in most disciplines of the liberal arts and sciences, guides students in finding further opportunities—on campus and elsewhere and during the academic year and the summer—and helps students prepare for research and presenting themselves as candidates for apprenticeships. Other students locate research opportunities independently through faculty whose courses they have taken, through their major departments, or through published materials.

The Cornell Undergraduate Research Board, an undergraduate organization, conducts an annual open house to help students get started in research and an annual forum at which undergraduates present their work.

Students interested in this program should consult the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Language Study

FALCON (Full-Year Asian Language Concentration). FALCON allows students who are interested in the Far East to study Chinese or Japanese exclusively for one year. They gain proficiency in the language and familiarity with the culture. Students who are interested in the Far East should be aware of the opportunities to pursue rapid and thorough beginning studies on campus with the objective of studying abroad later—in China or Japan. Students interested in this program should contact the Department of Asian Studies, 388 Rockefeller Hall; e-mail: falcon@cornell.edu.

Language House Program

A complement to classroom cultural and linguistic instruction, the Language House Program combines residential and academic opportunities for developing and practicing conversational skills in French, German,

Italian, Japanese, Mandarin Chinese, and Spanish. It helps prepare students who plan to study abroad and helps returning students share their cultural experiences while further increasing their language skills. Students interested in this program should see Academic Administrator Daniel Evett, 136 Goldwin Smith Hall.

Prelaw Study

Law schools neither require nor prefer any particular program of study; they do seek students with sound training in the liberal arts and sciences. Students should therefore plan a program in which they are interested and do well. Beyond that, students are advised to take courses that will develop their powers of precise, analytical thinking and proficiency in writing and speaking.

The college offers a concentration in law and society. Students should work toward completion of this concentration because they find it interesting, not because they hope to impress law schools.

Students in the College of Arts and Sciences who are applying to law school may consult a career adviser in the Office of Undergraduate Admissions and Advising, 61 Goldwin Smith Hall.

Premedical Study

The breadth and depth afforded by a liberal arts education are invaluable for students planning medical careers, whether they intend to practice or go into research. Such training has a profound effect on the doctor's usefulness to patients, and it affords the flexibility of mind that is needed for major research undertakings. Medical and dental schools do not prescribe or even prefer a particular major; they do, however, require particular undergraduate courses, and most students are well advised to begin chemistry in their freshman year. Students who are interested in medical careers are urged to visit the Health Careers Office, 203 Barnes Hall.

The adviser for students in the College of Arts and Sciences who are planning careers in medicine is Dean Turner, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall.

Off-Campus Programs

Many students find it important to their majors or to their overall academic programs to study off campus or abroad for one or two semesters. When it makes academic sense, the college encourages its students to pursue such studies and grants credit toward the degree for work satisfactorily completed.

Study Abroad

Each year about 200 undergraduates in Arts and Sciences include semester- or year-long study abroad as part of their formal undergraduate education. Ideally, study abroad builds on a broad liberal arts background in the early semesters: area studies, language training, and preparation in the proposed field of study are all essential.

Many students go abroad to pursue work in their majors. Focused academic work in an appropriate institution abroad can prepare students for advanced study or honors work in the final semesters back in Ithaca.

The college insists wherever possible on study at foreign institutions alongside their degree candidates rather than study in self-contained programs that offer courses specially designed for foreigners. The primary goals of this educational immersion are to learn firsthand the modes of inquiry, methods of analysis, and educational values of higher education offered to students of another country and to involve students in social relationships with peers who may hold a new and unexpected range of social attitudes.

The college advocates study abroad that enables students to become competent enough in another language to experience daily life, develop social relationships, and accomplish formal course work in that language. **Students who intend to study abroad in a country where the host language is not English must demonstrate a serious commitment to learning the language through course work before studying abroad; specific language requirements may vary, but most programs require two semesters of 200-level language instruction.** At least one area studies course or one course in the history, culture, economics, politics, or social relations of the country of destination must be part of every student's preparation for study abroad.

Students planning to study abroad need solid academic credentials to do so productively and successfully. The college requires a minimum overall grade point average of 3.0 for all Cornell course work and good academic standing in the semester immediately before going abroad.

Study abroad is possible during the sophomore and junior years or during the first semester of the senior year. Study abroad in the final semester is rarely approved. Important steps to prepare for study abroad include

- substantial progress with college distribution requirements;
- admission to a major and a faculty adviser in the major;
- clear academic agenda for study abroad;
- appropriate preparatory study of the country or region of destination, especially language study.

Study abroad can earn up to 15 liberal arts and sciences credits per semester of full-time course work as long as the curriculum abroad is consistent with that of the college. A maximum of 10 credits is awarded for each trimester of study. Courses that fall outside the scope of the liberal arts and sciences may earn non-Arts credits. Students must carry a full course-load as defined by the host institution. Students may spend up to two semesters abroad. Only those with compelling academic reasons may study in more than one location over two semesters. The college does not approve study abroad that tours more than one country or that is more touristic than scholarly in content and structure. Students must continue study of the host language while abroad. Only in exceptional circumstances will the college approve programs which, in non-English speaking countries, provide no language training.

Applications to study abroad must have the support of a faculty adviser in the major and the approval of an advising dean in the Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall. Although students investigate options for study abroad and submit final applications through the Cornell Abroad office, Arts and Sciences applicants submit to the college an essay describing the academic rationale for study abroad, an outline of prospective courses to be taken and any other relevant materials.

All courses taken abroad will appear on the Cornell transcript and grades earned are reported in the system of the host institution. Grades earned through course work abroad do not, however, become part of the Cornell grade point average.

Students who transfer to Cornell and must complete at least four semesters of residence on campus in Ithaca may not study abroad as one of those four semesters.

All applicants for study abroad during the academic year, must go through the Cornell Abroad Office after being approved by the College of Arts and Sciences. For more information see Dean Wasyliw, 55 Goldwin Smith Hall.

Summer Residential Programs in Archaeology

During the summer months students may participate in a Cornell-sponsored archaeological project. In recent years the program has organized archaeological projects in Central America, Greece, Israel, Italy, and New York State. Students should contact the Archaeology Program for information about the sites currently available.

Marine Science

Shoals Marine Laboratory is a seasonal field station that offers a variety of courses and experiences designed to introduce undergraduates to the marine sciences. The laboratory is located on Appledore Island, six miles off the Maine/New Hampshire coasts. Students should contact the Shoals Marine Laboratory Office, G14 Stimson Hall, for further information.

Cornell-in-Washington

The Cornell-in-Washington program offers students from all colleges in the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty, conduct individual research projects, and work as externs. The Cornell-in-Washington program offers two study options: (1) studies in public policy, and (2) studies in the American experience. The program also offers unique externship opportunities: students serve as externs in a federal agency, congressional office, or non-governmental organization and take part in a public policy or humanities seminar. They define and carry out individual research projects under the supervision of Cornell faculty. Potential externships are arranged through, and approved by, the Cornell-in-Washington program. For further information, see p. 20 or inquire at 311 Caldwell Hall, 255–4090. Study in Washington during a final semester of residence is allowed only and unusually by petition. Students should consult with the dean of seniors, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Fieldwork

Sometimes it is appropriate for students to include fieldwork as part of their major. A three-member faculty committee helps the student plan the project, arranges for ongoing

supervision, and evaluates the project at the end of the term. Fieldwork almost always involves writing a long paper or several short ones, as well as practical experience. All proposals for fieldwork must be presented in advance to the college faculty's Committee on Academic Records for approval. A maximum of 15 credits in fieldwork may be earned. For further information students should contact an advising dean in Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall.

ACADEMIC INTEGRITY

Academic integrity is the heart of intellectual life in the college—both in learning and in research. All members of the university community simply must support each other's efforts to master new material and discover new knowledge by sharing ideas and resources, by respecting each other's contributions, and by being honest about one's own work. Otherwise the university will fail to accomplish its most central and important goals.

Cornell's Code of Academic Integrity and policy about acknowledging the work of others are among the documents new students receive. Students should read them carefully and not assume they understand what integrity and cheating are and are not. Academic integrity implies more here at the university than it usually did in high school. The standards of integrity are those that prevail in professional life. This means that students must acknowledge and cite ideas they adopt from others (not just direct quotations) and help they receive from colleagues. With productive emphases on collaborative learning and writing, students must understand the general standards and policies about academic integrity and be sure they understand the expectations in individual courses as well. When in doubt, ask the instructor.

ADVISING

The following advisers and offices provide academic advising, help with problems, and information on college procedures and regulations.

Faculty Advisers

Each new student is assigned a faculty adviser. Advisers help students plan programs of study and advise them about ways to achieve their academic goals. Advisers may also help students with study or personal problems or may direct them to other offices on campus where help is available. Academic difficulties may frequently be solved or avoided if students and advisers recognize and address problems early.

Advisers and new advisees meet first during orientation week to discuss course selection. New students are encouraged to see their advisers again early in the term, before it is too late to drop courses, to discuss their academic progress and to become better acquainted. Advisers and advisees meet at least once each semester to discuss courses for the following term and more often if advisees wish to discuss academic or personal issues or to petition for an exception to college rules.

Student Advisers

Student advisers pass on lore about the college and life at Cornell and help new students negotiate the university.

Major Advisers

After acceptance into a major, students are assigned a major adviser, a faculty member in the major department, with whom they shape and direct their course of study. The adviser eventually certifies the completion of the major. The major adviser should be consulted by the student about all academic plans, including honors, study abroad, acceleration, and graduate study. The adviser's support is especially important if a student petitions for an exception to the requirements for the degree.

Office of Undergraduate Admissions and Advising

This office, 55 Goldwin Smith Hall, 255–5004 and 172 Goldwin Smith Hall, 255–4833, is a resource for faculty and student advisers and especially for students themselves and their parents. Advising deans are available to help students define their academic and career goals, to help with special academic options and exceptions to college rules, and to help when problems arise:

Lynne S. Abel, associate dean for undergraduate admissions and advising—255–3386

David Devries, juniors and seniors and undergraduate research—255–4833

Daniel Evett—Language House Program—255–6543

Stephen Friedfeld, mid-year freshman and first- and second-year students—255–4833

Ken Gabard, first- and second-year students and College Scholar Program—255–5004

Lisa M. Harris, career services and pre-law advising—255–6926

Irene Komor, career counselling—254–5295

Lawrence Lamphere, internal transfers and minority students—255–4833

Diane J. Miller, career services—255–6924

Sally O'Hanlon, registrar—255–5051

Janice Turner, minority students and pre-med advising—255–9497

Peggy Walbridge, transfer students and students with disabilities—255–4833

Catherine Wagner, juniors and seniors and dual degree students—255–4833

Patricia Wasyliw, first- and second-year students and study abroad—255–5004

REGISTRATION AND COURSE SCHEDULING

Enrollment in Courses in the College of Arts and Sciences

New Students

During orientation week, new students attend briefings and other information sessions, meet with faculty advisers, and sign into courses. The college reserves spaces in courses for its in-coming students.

Continuing Students

Continuing students select and schedule up to five courses of 3 or more credits and as many 1 and 2 credits as they would like during the semester prior to the one in which the courses will be taken. Students who do not "pre-enroll" during the designated period must wait until the beginning of the term and may have difficulty securing places in the courses they most want. Before signing into courses, students plan their programs and discuss long-range goals with their faculty advisers. In addition, all students are welcome to discuss programs and plans with an advising dean in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall.

At the beginning of each term, students find their schedules and should confirm the accuracy of their records on "Just the Facts."

Limits on Numbers of Courses and Credits

To meet the 34-course requirement, students must normally take four courses during each of six semesters and five courses during each of two semesters. To meet the 120-credit requirement, students must average 15 credits per semester. (AP credit and/or summer credits may reduce the average numbers of courses and credits required each semester.)

Minimum number of credits per semester

To maintain good academic standing as a full-time student, students must complete at least twelve degree credits per semester; if for compelling personal or academic reasons students need to carry fewer than 12 credits, they should consult their faculty adviser and an advising dean. Permission is by petition only; it is freely given for first-semester students.

Maximum number of credits per semester

First-term freshmen must petition to register for more than 18 credits; other students may register for more than 18 credits if their previous term's average was 3.0 or higher and they are in good academic standing. No more than 22 credits may be taken in a regular semester without permission of the college's faculty Committee on Academic Records. Students who fail to receive approval for excess credits from the committee normally may count only 18 credits for the semester toward the degree.

Attendance

Attendance in classes is expected. Absences are a matter between students and their instructors. If a student cannot attend classes because of illness or family crisis, the Office of Undergraduate Admissions and Advising will notify instructors at the request of the student or the family. Nonetheless, the student must arrange to make up examina-

tions or other work with each instructor. A student who will be absent because of religious holidays or athletic competitions must discuss arrangements for making up work with his or her instructors well in advance of the absence. A student who must miss an examination must also consult with the professor in advance. Alternative arrangements are at the discretion of the instructor.

Adding and Dropping Courses

After course enrollment (also known as pre-enrollment), students may not adjust their schedules until the new term begins. During the first three weeks of the semester, students may change courses without petitioning. Add/drop forms are available in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall. (Note: the add period for First-Year Writing Seminars is only two weeks.)

After the third week of classes, students must petition to add courses and may normally add them only for a letter grade. They may drop courses up to the seventh week of the term, if the department approves and no issue of academic integrity is at stake. Between the seventh and twelfth weeks students may petition to withdraw from courses, if (1) the instructor approves; (2) the adviser approves; (3) an advising dean approves; and (4) no issue of academic integrity is at stake. Students must meet with an advising dean to obtain petition forms.

Courses dropped after the seventh week will be noted on the transcript by a "W" where the grade would normally appear. **This is a matter of record and cannot be petitioned. Petitions to withdraw from courses may not be submitted after the end of the twelfth week in the term.** Deadlines for short courses will be adjusted according to the length of the courses.

The effective date of all course changes will be the day the student submits all completed paperwork to the Academic Advising Office.

Leaves of Absence

Taking time off from college to explore goals, find direction, or to gain experiences or funds is sometimes useful. Usually, of course, students take leaves at the end of a semester for the following semester. Students in good academic standing, however, may take a leave as late as the seventh week of a semester, although there are serious financial consequences to taking leaves after a term has begun. Five years is the maximum length of time a student may be on leave and return without special permission. Leaves of absence are of four types:

1) *Personal leaves* impose no conditions concerning reentering the college except for the five-year limit. Readmission is automatic upon written request made at least one month before the beginning of the term in which the student wishes to return.
2) *Medical leaves*, usually for at least six months, are granted by the college only on recommendation by University Health Services. In some cases, students must satisfy the UHS that the condition requiring the leave has been corrected before they may return. The student's academic standing will also be subject to review at the time of the leave and on return.
3) *Conditional leaves* are granted when the student is not in good academic standing or, in unusual circumstances, between the seventh and twelfth weeks of the term. In consultation with the student, an advising dean sets the conditions for the student's return. Normally students may not return from conditional leaves for at least two terms or until specific and individual conditions, such as completing unfinished work, have been met. Students may be granted conditional leaves after the twelfth week of a term only under extraordinary circumstances and with the approval of the faculty's Committee on Academic Records.
4) *Required leaves:* The Committee on Academic Records may require a leave of absence if a student is not making satisfactory progress toward the degree. See the section "Academic Actions."

Any student who wishes to take a leave of absence should consult an advising dean in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall. On readmission, the student's graduation date will be recalculated.

Transferring Credits Earned While on Leave

Students who take courses elsewhere in the United States while on leave may petition to have credits transferred. Approval depends on acceptable grades and the judgment of the relevant departments about the quality of the courses. If approved, these credits may be applied toward the 120 credits and 34 courses needed for graduation, but not toward the 100 credits required in the college. They may be applied to part of Group I and II distribution requirements (not to Group III or IV), to elective requirements (but not to breadth requirements) or to the major as allowed by the department. Credits earned during a leave do not count toward the eight semesters of residence and may not be used to reduce the terms of residence. See the section "Residence."

Study Abroad and International Students on Leave of Absence

Study abroad undertaken during a leave of absence will not receive academic credit. International students on leave of absence from the College of Arts and Sciences may enroll in courses at a college or university in their home country **only**, as such enrollment is not defined as study abroad. They may petition for transfer of credit upon return to Cornell. If approved, the credit will count as described in the previous paragraph.

Withdrawals

A withdrawal is a permanent severance from the university and from status as a degree candidate. Students planning to withdraw should consult an advising dean. Students not requesting a leave and failing to register for a term will be withdrawn from the college. The college faculty's Committee on Academic Records may require a student to withdraw for a highly unsatisfactory academic record.

Transferring within Cornell (Internal Transfer)

Internal transfer from one college or school at Cornell into another is attractive for many students whose intellectual interests change (or become more focused). Students who want to transfer should discuss their eligibility with a counselor in the new school or college.

In some cases, students who want to transfer into the College of Arts and Sciences may transfer directly. In other cases, they may be referred to the Internal Transfer Division. During the term immediately preceding transfer into the College of Arts and Sciences, students should complete at least 12 credits of courses in the College of Arts and Sciences with a 3.0 average and without any grades of *Incomplete*, any S-U grades (unless only S-U grades are offered for that particular course), or any grades below C. Satisfying this minimum requirement does not, however, guarantee admission. Admission to the college is based on consideration of the student's entire record at Cornell and the high school record, not just the work of one semester. It is also based on ability to complete the A.B. degree within a reasonable time. Internal transfers are required to spend four semesters in Arts and Sciences and thus should initiate the transfer process no later than the second semester of sophomore year. Interested students should see Dean Lamphere, 172 Goldwin Smith Hall.

ACADEMIC STANDING

Students are in good academic standing for the term if they successfully complete at least 12 degree credits by the end of the term and earn no more than one D and no F or U grades. If a student completes only three courses, all grades must be above D. In addition, students are expected to make satisfactory progress toward satisfying requirements for the degree and to earn grades of C (not C–) or better in at least 100 of the 120 credits for the degree. Courses listed under "courses that do not count toward the degree" do not count toward good academic standing in a semester.

Academic Actions

Students who are not in good academic standing will be considered for academic action by the college's faculty Committee on Academic Records or by one of the advising deans of the college. They are urged to present evidence that will help explain their poor academic performance. Students may appeal a decision or action of the committee, if they have new relevant information. They must consult an advising dean about appealing.

Warning

Any student who fails to maintain good academic standing will, at a minimum, be warned. A warning is posted on a student's college record but is not reported to the university registrar and does not appear on official transcripts.

Required leave of absence

A student in serious academic difficulty may be required by the faculty Committee on Academic Records to take a leave of absence, normally for a full year. Usually, but not always or necessarily, the Committee on Academic Records warns students before suspending them. Before being allowed to return and reregister in the college, students must document what they did on leave and how they resolved their problems and submit a plan for completing the degree. In some

cases students will be required to furnish evidence that they are ready to return or satisfy other conditions before being allowed to reregister in the college. Students who request to return in less than a year must present to the committee extraordinarily convincing evidence of their readiness to return. "Required leave" and the date are posted on the student's official transcript.

Required withdrawal

The faculty Committee on Academic Records may dismiss a student from the college because of a highly unsatisfactory record for one term or for failure to make satisfactory overall progress in grades, credits, or degree requirements. This action expels the student permanently from the college. "Required withdrawal" and the date are posted on the student's official transcript.

Forgery on Forms

Forging signatures or credentials on college forms is an academic offense; sometimes it constitutes academic fraud. In all cases of forgery on academic forms, the effect of the forged documents shall be negated. Students may then petition properly to do whatever they attempted to do improperly. Such incidents will be recorded in the Academic Integrity Hearing Board's confidential file for forgeries. If a student forges more than once or if the forgery would advance the student's academic standing unfairly or fraudulently, or if for any other reason the situation requires some response in addition to the uniform penalty, the Academic Integrity Hearing Board might make a different recommendation, such as a notation on the student's transcript, suspension, or dismissal.

GRADES

Letter Grades

See Grading Guidelines, page 13.

S-U Grades

The S-U (satisfactory-unsatisfactory) option allows students to explore unfamiliar subjects or take advanced courses in subjects relatively new to them without being under pressure to compete with better prepared students for high grades. It is not meant to allow students to reduce the amount of work they complete in a course or the amount of effort they devote to it. The S-U option is contingent upon the instructor's willingness to assign such grades. Students must select their grading option and obtain the instructor's approval for the S-U option during the first three weeks of the term. Virtually no exceptions to this deadline are permitted, and consequently students adding courses after the third week of the term must normally add them for a letter grade. A grade of S is equivalent to a grade of C– or higher; a grade of U, which is equivalent to any grade below C–, is a *failing* grade equal to an F. S means the student receives the credit specified for the course. U means no credit is given. A few courses in the college are graded exclusively S-U; in that case, the final grade appears on the transcript as SX or UX.

Courses that will count toward satisfaction of major requirements should not be taken for an S-U grade unless the department grants permission. Students may elect the S-U option in courses used to satisfy the distribution, and elective requirements, provided that such courses do not also count toward major requirements or serve as prerequisites for admission to the major. Students are advised to use the S-U option sparingly if they intend to apply to graduate school or for transfer to another college. There is no limit on the number of courses each term for which students may elect the S-U grade, but within the 120 credits required for the degree, a minimum of 80 credits must be in courses for which a letter grade was received.

Grades of Incomplete

A grade of incomplete signifies that a course was not completed before the end of the term for reasons beyond the student's control and acceptable to the instructor. Students must have substantial (normally at least 50 percent) equity in the course; that is, they must be able to complete the remaining work without further registration and must have a passing grade for the completed portion. When a grade of incomplete is reported, the instructor submits a form stating what work must be completed, when it must be completed, and the grade (or "frozen" incomplete) earned if the work is not completed by that date. When a final grade is determined, it is recorded on the official transcript with an asterisk and a footnote explaining that this grade was formerly an incomplete.

Students must resolve (make up or "freeze") any incompletes with their instructors before graduation.

Note of R

R designates two-semester or year-long courses and students enroll in the course both semesters, each time for the full number of credits for the whole course. The R is recorded on the student's transcript at the end of the first term. The grade recorded at the end of the second term evaluates the student's level of performance in the course for the entire year. The total of credits earned for the whole course is listed each term.

Grade Reports

Students should periodically check their courses and grades on "Just the Facts" to be sure that they are recorded correctly.

Class Rank

The college does not compute class rank.

Dean's List

Inclusion on the Dean's List for academic excellence is an honor bestowed by the dean of the college semester by semester. Based on grades, the criteria include about the top 30 percent of students and vary with the number of credits the student completes. The criteria are subject to slight changes from semester to semester and are available in the Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall.

GRADUATION

The Degree

The College of Arts and Sciences grants only one degree (no matter what the student's major): the A.B. (or B.A.). A.B. is the abbreviation of the Latin name for the degree, "Artium Baccalarius," or translated into English, B.A., "Bachelor of Arts."

Application to Graduate

In the first semester of their senior year, students attend senior briefings and then complete an application to graduate. The application allows the college to check each student's plan for fulfilling college requirements. This process is intended to help seniors identify problems early enough in the final year to make any necessary changes in course selection to satisfy those requirements. *Nonetheless, meeting graduation requirements is the student's responsibility;* problems that are discovered, even late in the final term, must be resolved by the student before the degree can be granted.

Degree Dates

There are three degree dates in the year: May, August, and January. Students who plan to graduate in August may attend graduation ceremonies in the preceding May. Students graduating in January are invited to a special recognition ceremony in December; they may also attend graduation ceremonies the following May.

Honors

Bachelor of Arts with Honors

Almost all departments offer honors programs for students who have demonstrated exceptional ability in the major and who have completed original independent research. The honors programs are described by individual departments in their following sections. The degree of Bachelor of Arts with honors will be conferred upon students who, in addition to having completed the requirements for the degree of Bachelor of Arts, have satisfactorily completed the honors program in their major and have been recommended for honors by their major department, the Independent Major Program, or the College Scholar Program. Concentrations do not offer honors programs.

Bachelor of Arts with Distinction

The degree of Bachelor of Arts with distinction in all subjects will be conferred on students who have completed the requirements for the degree of Bachelor of Arts, if they have met the following requirements by the end of their final semester:

1) completed at least 60 credits while registered in regular sessions at Cornell;
2) ranked in the upper 30 percent of their class at the end of the seventh semester, or next-to-last semester for transfers and accelerants;
3) received a grade below C– in no more than one course;
4) received no failing grade;
5) have no frozen *Incompletes* on their records, and
6) maintained good academic standing, including completing a full schedule of at least 12 credits, in each of their last four terms.

CALENDAR SUPPLEMENT

All of the dates in the university calendar at the front of this volume apply to all Cornell students. Listed below are some additional dates that are of importance for students in the College of Arts and Sciences.

	Fall 2001	*Spring 2002*
Last day for adding courses without petition.	Sept. 21	Feb. 8
Last day for adding a First-Year Writing Seminar.	Sept. 14	Feb. 1
Last day for changing grade option to S-U or letter.	Sept. 21	Feb. 8
First deadline for submitting independent major requests. Go to Academic Advising Center, 55 Goldwin Smith Hall, for further information.	Sept. 27	Feb. 21
Last day for dropping courses without petition.	Oct. 19	March 8
Last day to petition to withdraw from a course.	Nov. 26	April 19
Second deadline for submitting independent major requests. Go to the Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, for further information.	Nov. 29	April 4
Deadline for requesting internal transfer to the College of Arts and Sciences for the following term.	Dec. 1	May 1
Deadline for applying to the College Scholar Program.		April 24
Deadline for applying to study abroad.	See Cornell Abroad, 474 Uris Hall	
Course enrollment (preregistration) for the following term.	TBA	TBA

ADMINISTRATION

Philip E. Lewis, dean—255–4146

Jon C. Clardy, senior associate dean—255–4147

Jonathan D. Culler, senior associate dean—255–4147

Lynne S. Abel, associate dean of admissions and undergraduate education—255–3386

Jonathan B. Monroe, associate dean and director of writing programs—255–4061

Jane V. Pedersen, associate dean of administration—255–7507

Courses and Departments

SPECIAL PROGRAMS AND AREAS OF CONCENTRATION

The college offers a number of interdisciplinary programs described in the section following the departmental program descriptions.

AFRIKAANS

See Department of German Studies (Dutch).

AFRICANA STUDIES MAJOR

See Special Programs and Interdisciplinary Studies.

AKKADIAN

See Department of Near Eastern Studies.

AMERICAN STUDIES

See Special Programs and Interdisciplinary Studies.

ANTHROPOLOGY

D. Holmberg, chair; R. Ascher, T. Bestor, D. Boyer, A. Clark Arcadi, J. Fajans, D. Greenwood, J. Henderson, B. J. Isbell, B. Lambert, K. March, V. Munasinghe, N. Russell, P. S. Sangren, V. Santiago-Irizarry, J. Siegel, M. Small, T. Turner, T. Volman, A. Willford. Emeritus: J. Murra, R. Smith.

Anthropology is one of the most diverse disciplines in the university. Spanning human evolution, the development and heterogeneity of language and culture, human history, and the diversity of cultures past and present, the field has broad scope, uses a variety of methods, addresses basic issues about human origins and human life, and maintains commitment to understanding social life and using this understanding to improve society. Anthropology is an ideal "liberal arts" major. It also serves as a major that, when well designed by the student with their adviser, prepares students for a wide range of professional careers, e.g., law, medicine, foreign service, social services, and business, among others.

Courses for nonmajors: Anthropology welcomes nonmajors into many of its courses. Unless prerequisites are explicitly stated, 200- and 300-level courses do not have formal prerequisites and can be taken by students without prior experience in anthropology. Such students are welcome in these upper-level courses. For additional information to assist nonmajors and students from other colleges in selecting anthropology courses, see the anthropology department web page (falcon.arts.cornell.edu/~anthro/).

The Major

The range and complexity of the field of Anthropology requires active collaboration between the student and a faculty adviser in developing an individualized program of study. To enter the anthropology major, a student must pass one course in each of the two broad introductory areas of anthropology: "Nature and Culture" and "Culture and History" listed below under the heading "Introductory Courses." Provisional acceptance into the major is possible before completing these courses, with permission from the Director of Undergraduate Studies in anthropology. Students are encouraged to contact the Director of Undergraduate Studies or other faculty members as soon as possible in their studies to discuss their interests and a possible major in anthropology.

Students see the Director of Undergraduate Studies to apply to the major and get an adviser. They prepare a short statement about their interests and goals for the major, then meet with their adviser to develop a course plan reflecting these special interests. This concentration should include at least 32 credits in addition to the two introductory courses used to enter the major. Examples of possible concentrations are myth and ritual; ethnicity and identity; action research; nature and culture in human history; anthropology and literature, or law, or the arts, or medicine; human origins; ethnomusicology; primate and human behavior; prehistory of the Americas, or Europe, or Africa; cultural construction of the person; etc. When warranted, the adviser is free to approve up to two cognate courses from other departments totaling up to eight credit hours to fulfill the 32-credit requirement. Students may revise their program of study in consultation with their adviser as they move through their studies. Our goal is to provide a close and supportive advising relationship and a strong and coherent structure for the student's major.

In the senior year, all Anthropology majors are required to take one of the Anthropology Senior Seminars offered by the department (archaeologically oriented majors may substitute Approaches to Archaeology or Archaeological Research Design). These seminars are designed to provide broad integrating perspectives on the contemporary field of anthropology through the study of principal trends, contemporary issues, history, etc.

Study abroad and off-campus study programs: the Department of Anthropology encourages students to consider a semester of study abroad or off-campus study developed as an integral part of the student's major concentration. The Director of Undergraduate Studies serves as the Anthropology Study Abroad adviser.

The Cornell-Nepal Study Program: the Cornell-Nepal Study Program is a joint program of Cornell University and Tribhuvan University, the national university of Nepal. Qualified juniors, seniors, and first- or second-year graduate students work with faculty from both universities to prepare for and undertake field research projects in Nepal. Students receive 15 credits per semester; students may enroll for either fall or spring semester, or for the entire year; application is through Cornell Abroad. For further information, consult David Holmberg or Kathryn March in the Department of Anthropology.

Other anthropologically-relevant study abroad options, using existing Cornell Abroad and off-campus options, can be worked out in consultation with the major adviser, the Anthropology Study Abroad adviser, and Cornell Abroad.

Honors

Honors in anthropology are awarded for excellence in the major, which includes overall grade point average and completion of an honors thesis. Anthropology majors interested in the Honors Program should consult the chair of the Honors Committee in their junior year. To qualify for entrance into the Honors Program, a student must have at least a 3.0 GPA overall and 3.3 GPA in the major, and the consent of a faculty member in anthropology who will guide the honors thesis. After applying to the program and being admitted as a candidate by the Honors Committee, the student conducts research and writes a thesis. This thesis is evaluated by the faculty research adviser and two other faculty members. Honors (i.e., cum laude, magna cum laude, or summa cum laude) are awarded based on the quality of the thesis and the student's overall record. Honors candidates must start this process by consulting their major adviser about the honors program early in their junior year.

While working on the thesis during the senior year, students should make use of the Senior Seminar as a place to develop the ideas for their thesis. In addition, students may enroll in ANTHR 483 (fall or spring) "Honors Thesis Research." To complete the thesis, students must enroll in 491 (fall or spring) "Honors Thesis Write-up." Only ANTHR 483 may count toward hours for completion of the anthropology major requirements. The credit hours for these courses are variable, grades for these courses are given by the faculty research adviser, and they are based on performance during thesis research and writing.

Any honors candidate whose research directly involves working with human subjects must receive approval for the project from the Cornell University Committee on Human Subjects.

Special Programs and Facilities

Collections: the department has an extensive collection of archaeological and ethnological materials housed in the anthropology collections. A limited number of students can make arrangements to serve as interns in the anthropology collections. Olin Library houses some of the most extensive collections of materials on the ethnology of Southeast Asia, South Asia, East Asia, and Latin America to be found anywhere in the United States. The biological anthropology laboratory (McGraw B65) houses an extensive collection of materials for teaching purposes, including (1) human skeletal remains, (2) articulated skeletons and cranial casts of primates, and (3) casts of important fossils in the human lineage.

Independent Study: specialized individual study programs are offered in Anthropology 497, Topics in Anthropology, a course open to a limited number of juniors and seniors who have obtained consent and supervision of a faculty member. Undergraduates should note that many 600-level courses are open to them by consent of the instructor.

Colloquia: the Department of Anthropology holds colloquia almost every week of the semester on Friday at 3:30 in McGraw 215. Faculty members from Cornell and other universities participate in discussions of current research and problems in anthropology. Students are encouraged to attend.

For more complete information about the anthropology major, see the Director of Undergraduate Studies, pick up a copy of the major brochure (which includes descriptions of the courses not offered during 2001–2002), or visit the Anthropology Department web page (falcon.arts.cornell.edu/~anthro/).

I. Introductory Courses

A. Nature and Culture:

ANTHR 101 Introduction to Anthropology: Biological Perspectives on the Evolution of Humankind (I Supplementary List)
Fall. 3 credits. M. Small.
The evolution of humankind is explored through the fossil record, studies of the biological differences among current human populations, and a comparison with our closest relatives, the primates. This course investigates the roots of human biology and behavior with an evolutionary framework. Fee for lab usage and maintenance, $5.

ANTHR 103 The Scope of Anthropology
Spring. 1 credit. Prerequisite: concurrent enrollment in or prior completion of ANTHR 101 or ANTHR 102. S-U grades only. Staff.
This course is intended for majors or prospective majors in anthropology. Each week a different member of the faculty in anthropology at Cornell makes a presentation on the nature of their work within the field and discusses their interests with students. The course is meant to introduce the range of approaches found within anthropology and help students in planning future course work.

[ANTHR 203 Early People: The Archaeological and Fossil Record (also ARKEO 203) # (III)
Spring. 3 credits. Not offered 2001–2002.]

[ANTHR 211 Nature and Culture @ (III)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 275 Human Biology and Evolution (also BIOES 275 and NS 275) (I)
Fall. 3 credits. Not offered 2001–2002.]

B. Culture and History:

ANTHR 100 Introduction to Archaeology (also ARKEO 100) # @ (III or IV)
Fall. 3 credits. J. Henderson.
A broad introduction to archaeology—the study of material remains to answer questions about the human past. Case studies highlight the variability of ancient societies and illustrate the varied methods and interpretive frameworks archaeologists use to reconstruct them. This course can serve as a platform for both archaeology and anthropology undergraduate majors.

ANTHR 102 Introduction to Anthropology: The Comparison of Cultures @ (III)
Spring. 3 credits. Staff.
An introduction to cultural anthropology through ethnographies, or the descriptive accounts of anthropologists. Through readings and lectures, students acquaint themselves with a number of cultures from several parts of the world. The cultures range in form from those of small-scale tribal societies to those of state societies. Throughout the course, we attempt to make sense of exotic cultures in their own terms. Attention is focused on variation in cultural patterns as they are expressed in social, economic, and ritual practices. In this encounter, the principles of anthropology as a comparative enterprise that pose distinct cultural systems in relief are developed. Fiction, films, and exercises supplement the formal anthropological materials.

ANTHR 103 The Scope of Anthropology
Spring. 1 credit. Prerequisite: concurrent enrollment in or prior completion of ANTHR 101 or ANTHR 102.
S-U grades only. Staff.
For course description, see section I.A, Introductory Courses.

ANTHR 200 Cultural Diversity and Contemporary Issues @ (III)
Fall. 3 credits. A. Willford.
This course introduces students to the meaning and significance of forms of cultural diversity for understanding contemporary issues. Drawing from films, videos, and selected readings, students are confronted with different representational forms that portray cultures in various parts of the world and they are asked to critically examine their own prejudices as they influence the perception and evaluation of cultural differences. We approach cultures holistically, assuming the inseparability of economies, kinship, religion, and politics, as well as interconnections and dependencies between world areas (e.g., Africa, Latin America, the West). Among the issues considered: "political correctness" and truth; nativism and ecological diversity; race, ethnicity, and sexuality; sin, religion, and war; and global process and cultural integrity.

[ANTHR 202 Interpretive Archaeology (also ARKEO 202) (III)
Fall. 3 credits. Not offered 2001–2002.]

[ANTHR 215 Stone Age Art (also ARKEO 215) # (III)
Fall. 3 credits. Not offered 2001–2002.]

[ANTHR 240 Old World Prehistory (also ARKEO 240) # (III)
Fall. 3 credits. Not offered 2001–2002.]

II. Honors and Independent Study

ANTHR 483 Honors Thesis Research
Fall or spring. Credit and hours TBA. Prerequisite: consent of the Honors Committee. Staff.
Independent work under the close guidance of a faculty member selected by the student.

ANTHR 491 Honors Thesis Write-Up
Fall or spring. Credit and hours TBA. Staff.

ANTHR 497 Independent Study: Undergrad I
Fall or spring. Credit and hours TBA. Intended for undergraduate students only. Staff.
Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 498 Independent Study: Undergrad II
Fall or spring. Credit and hours TBA. Intended for undergraduate students only. Staff.
For course description, see ANTHR 497, section I, Honors and Independent Study.

III. Anthropology Major Senior Seminars

In the senior year, all Anthropology majors are required to take one of the Anthropology Senior Seminars offered by the department (archaeologically oriented majors may substitute Approaches to Archaeology or Archaeological Research Design). These seminars are designed to provide broad integrating perspectives on the contemporary field of anthropology through the study of principal trends, contemporary issues, history, and so on.

ANTHR 422 Anthropology and Environment @ (III)
Fall. 4 credits. Limited to 15. Prerequisite: anthropology major or permission of instructor. A. Subramanian.
This course explores issues in the environment that anthropology addresses in unique ways. Topics include indigenous knowledge, intellectual property, local and global interrelations, ecotourism, cultural ecology, development and resistance, environmentalism, and cultural diversity framed in the context of extended case studies.

ANTHR 440 Ethnographic Approaches to Studying Professionals and Institutions (III)
Spring. 4 credits. D. Boyer.
Anthropological research on institutions and professions is a rapidly-expanding area of inquiry. Anthropology is broadening horizons of research on complex societies, social elites, and reflexivity. This mode of research has conceptual and methodological challenges all its own, some of which require rethinking or adapting the "traditional" armature of anthropological theory and field research. For example, how can anthropological theories of language and culture be made helpful/relevant to understanding the everyday life of institutions and the social subjectivity of professionals? How can ethnographers gain access to institutions (such as consulting and advertising firms, for example) where logics of proprietary knowledge are paramount? This course reviews past and present ethnography on professionals and institutions with special attention to what conceptual paradigms and methods are suitable to the objects of inquiry.

ANTHR 480 Anthropology and Globalization (also ANTHR 680) (III)
Fall. 4 credits. A. Willford.
This course examines anthropological perspectives on globalization and assesses the cultural, political, and social implications of contemporary global processes. In exploring the factors that contribute to the production of diasporic consciousness, the intensity and variety of transnational flows of culture, commodities, corporations, and people are considered in order to assess challenges these processes pose to the modern nation-state. Has culture been liberated from the control of the nation-state through the emergence of new cultural networks created by immigration, electronic media, tourism, and multinational corporations and organizations? Or has the acceleration of global processes in the modern world system created new tools of domination within an increasingly stratified global economy? This course addresses these and related questions utilizing both anthropological theories of and ethnographic studies on globalization, ethnicity, diaspora, and nationalism.

ANTHR 490 Topics on Primates and Evolution: The Evolution of Language
Spring. 4 credits. Limited to 12. Prerequisite: ANTHR 390 or permission of instructor. A. Clark Arcadi.
This seminar begins by examining general theoretical issues in the study of animal communication: What is the function of communication? How do signalers and receivers benefit from communicative interactions? The focal behavior of our nearest relatives, the primates, is then examined. Emphasis is placed on areas relevant to human language: are primate signals learned? Do they have seminatic content? Are they assembled syntactically? What do they tell us about primate cognition? Finally, distinguishing features of language, as both a highly structured system and a social behavior, are considered from the point of view of evolution: Did language evolve from a primate focal communication system? Is there fossil and/or symbolic evidence for the origin of language? What does language tell us about human cognition?

[ANTHR 490 Topics on Primates and Evolution: Evolutionary Medicine
Spring. 4 credits. Not offered 2001–2002.]

IV. Nature and Culture

Thinking about nature and culture and their interaction is central to contemporary anthropology. The courses in this section present a biological and evolutionary perspective on behavior, focus on the interplay between nature and culture, and discuss the controversies surrounding these relationships between these dimensions of human life.

[ANTHR 208 The Evolution of Human Mating (III)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 211 Nature and Culture @ (III)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 242 Early Agriculture @ # (III)
Spring. 3 credits. Not offered 2001–2002.]

[ANTHR 344 Male and Female in Chinese Culture and Society (also WOMNS 344) @ (III)
Fall. 4 credits. Not offered 2001–2002.]

[ANTHR 370 Environmental Archaeology (also ANTHR 670 and ARKEO 370/670) (III)
Spring. 4 credits. Not offered 2001–2002.]

ANTHR 371 Human Paleontology (also BIOEE 371) (I)
Fall. 4 credits. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Lecs, M W F 2:30; lab, 1 hour each week TBA; occasional field trips. Offered alternate years. K. A. R. Kennedy.
A broad survey of the fossil evidence for human evolution with special attention to skeletal and dental anatomy, geological contexts, paleoecology, dating methods, archaeological associations, and current theories of human origins and physical diversity.

[ANTHR 372 Hunters and Gatherers (also ANTHR 672) # @ (III)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 375 Evolutionary Theory and Human Behavior (also ANTHR 675) (III)
Spring. 4 credits. Not offered 2001–2002.]

ANTHR 390 Primate Behavior and Ecology (I Supplementary List)
Spring. 4 credits. Prerequisite: ANTHR 101 or permission of instructor. A. Clark Arcadi.
The course investigates all aspects of non-human primate life. Based on the fundamentals of evolutionary theory, group and inter-individual behaviors are presented. In addition, an understanding of group structure and breeding systems is reached through an evaluation of ecological constraints imposed on primates in different habitats. Subjects include: primate taxonomy, diet and foraging, predation, cooperation and competition, social ontogeny, kinship, and mating strategies.

[ANTHR 409 Approaches to Archaeology (also ANTHR 609 and ARKEO 409/609) (III)
Fall. 4 credits. Not offered 2001–2002.]

ANTHR 422 Anthropology and Environment @ (III)
Fall. 4 credits. Limited to 15 students. Prerequisite: anthropology major or permission of instructor. D. Holmberg.
For course description, see section III, Anthropology Major Senior Seminars.

ANTHR 490 Topics on Primates and Evolution: The Evolution of Language
Spring. 4 credits. Limited to 12. Prerequisite: ANTHR 390 or permission of instructor. A. Clark Arcadi.
For course description, see section III, Anthropology Major Senior Seminars.

[ANTHR 490 Topics on Primates and Evolution: Evolutionary Medicine
Spring. 4 credits. Not offered 2001–2002.]

V. Human History and Archeology

Archaeology tells the story of human origins, the invention of farming and settled life, the rise of complex social institutions and technologies, and the worldviews of the past, while also teaching field and laboratory methods for uncovering the human past.

[ANTHR 203 Early People: The Archaeological and Fossil Record (also ARKEO 203) # (III)
Spring. 3 credits. Not offered 2001–2002.]

[ANTHR 215 Stone Age Art (also ARKEO 215) # (III)
Fall. 3 credits. Not offered 2001–2002.]

Fall. 4 credits. Not offered 2001–2002.]

[ANTHR 463 Zooarchaeological Method (also ARKEO 463) (III)
Fall. 5 credits. Not offered 2001–2002.]

[ANTHR 464 Zooarchaeological Interpretation (also ARKEO 464) (III)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 466 Humans and Animals (also ANTHR 666 and ARKEO 466/666) # (III)
Fall. 4 credits. Not offered 2001–2002.]

[ANTHR 467 Origins of Agriculture (also ARKEO 467) # (III)
Spring. 4 credits. Not offered 2001–2002.]

ANTHR 469 Gender and Age in Archaeology (also ANTHR 669, ARKEO 469/669) # (III)
Spring. 4 credits. N. Russell.
In recent years, feminist theory has begun to have an impact on archaeological thought. It is now recognized that gender is likely to have been a relevant dimension of social organization in past societies. Some archaeologists are also trying to take into account the differing interests and experiences of children, adults of reproductive age, and the elderly. This course is not limited to any period or geographical area, but ranges widely in examining how feminist theory has been applied to archaeological data and models. We consider whether it is necessary to identify women and men, adults and children in the archaeological record in order to take gender and age into account. We also examine the uses of archaeological data by contemporary feminists.

[ANTHR 493 Seminar in Archaeology (also ARKEO 493)
Fall. 4 credits. Not offered 2001–2002.]

[ANTHR 494 Seminar in Archaeology: The Archaeology of Human Origins (also ARKEO 494)
Fall. 4 credits. Not offered 2001–2002.]

VI. Anthropological Thought and Method

As a form of inquiry, anthropology has a long and complex history and utilizes a wide variety of theories and methods. In this section, topics in the history of anthropological thought and numerous anthropological approaches are presented, along with courses focused on the design of anthropological research projects.

[ANTHR 215 Stone Age Art (also ARKEO 215) # (III)
Fall. 3 credits. Not offered 2001–2002.]

ANTHR 291 Filming Other Cultures (also ANTHR 691 and THETR 291/691) @ (III)
Spring. 4 credits. Limited to 20 students. Preference given to students who have taken either ANTHR 102 or THETR 474. Fee for film screening and maintenance, $35. R. Ascher.
Shortly after the first films were screened, their makers saw in motion pictures a promise for greater understanding among peoples. Was the promise fulfilled? In this discussion course, responses to this question are examined through the study of short, representative films and related readings. The discussions are framed and informed by ideas from anthropology and film studies. For example, we consider: aesthetics, ethics, and responsibility in filming and editing; connections between sound—or lack of it—and image; the implications of film as a product of Euroamerican culture; cultural assumptions in camera movements, film color, and film pace; indigenous people's presentations of themselves and Euroamerican representations of others; and the blurry, ever- changing space that separates fiction from nonfiction film. For one meeting each week, two students, in cooperation with the instructor, are responsible for leading the discussion.

[ANTHR 306 Ethnographic Description (III)
Fall. 4 credits. Not offered 2001–2002.]

[ANTHR 324 Anthropology Amongst the Disciplines (III)
Fall. 4 credits. Not offered 2001–2002.]

ANTHR 362 Democratizing Society: Participation, Action, and Research (also ANTHR 662) (III)
Fall. 4 credits. D. J. Greenwood.
This course poses an alternative to distanced, "objectivist" social science by reviewing some of the numerous approaches to socially engaged research. Among the approaches discussed are those centering on the pedagogy of liberation, feminism, the industrial democracy movement, "Southern" participatory action research, action science, and participatory evaluation. There are no prerequisites and undergraduates are welcome.

ANTHR 368 Marx: An Overview of His Thought (also ANTHR 668) (III)
Spring. 4 credits. T. Turner.
A reading and interpretation of Marx's principal writings, emphasizing both the continuities and the changes from his earlier to his later works, with attention given to contemporary developments and controversies in Marxian scholarship.

[ANTHR 372 Hunters and Gatherers (also ANTHR 672) # @ (III)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 403 The Craft of Anthropology: Ethnographic Field Methods (also ANTHR 603) (III)
Fall. 4 credits. Not offered 2001–2002.]

[ANTHR 405 Archaeology Research Design (also ANTHR 605 and ARKEO 405/605) (III)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 412 Contemporary Anthropological Theory (III)
Spring. 4 credits. Not offered 2001–2002.]

ANTHR 420 Development of Anthropological Thought (III)
Spring. 4 credits. J. Fajans.
An examination of the history and development of anthropological theory and practice. The course focuses on the differences and continuities among the various national and historical approaches that have come to be regarded as the schools of anthropology.

[ANTHR 453 Visual Anthropology (IV)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 458 Archaeological Analysis (also ANTHR 658 and ARKEO 458/658) (III)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 459 Archaeology of the Household (also ANTHR 659 and ARKEO 459/659) # (III)
Fall. 4 credits. Not offered 2001–2002.]

[ANTHR 463 Zooarchaeological Method (also ARKEO 463) (III)
Fall. 5 credits. Not offered 2001–2002.]

[ANTHR 464 Zooarchaeological Interpretation (also ARKEO 464) (III)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 466 Humans and Animals (also ANTHR 666 and ARKEO 466/666) # (III)
Fall. 4 credits. Not offered 2001–2002.]

[ANTHR 467 Origins of Agriculture (also ARKEO 467) # (III)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 474 Laboratory and Field Methods in Human Biology (also BIOES 474) (I)
Spring. 5 credits. Not offered 2001–2002.]

ANTHR 480 Anthropology and Globalization (also ANTHRO 680) (III)
Fall. 4 credits. A. Willford.
For course description, see section III, Anthropology Major Senior Seminars.

ANTHR 487 Field Research Abroad @ (III)
Fall or spring. Credit TBA. Intended for undergraduate students only. Staff.
Field research abroad as part of the Cornell-Nepal Studies Program, the Cornell-Honduras

Program, or other departmentally-approved programs. Topics are selected and project proposals prepared by students in consultation with faculty. Fieldwork typically involves extended research (usually four–six weeks) in a foreign setting with faculty supervision, culminating in a major paper or report.

[ANTHR 494 Seminar in Archaeology: The Archaeology of Human Origins (also ARKEO 494) (III)
Fall. 4 credits. Not offered 2001–2002.]

ANTHR 495 Action Research Practicum
Fall and spring. 2 credits. Prerequisite: student must be holder of Bartels Action Research Undergraduate Fellowship.
D. Greenwood.
The Henry E. Bartels Undergraduate Action Research Fellowship Program offers opportunities for Cornell University undergraduate students from all colleges, departments, and majors to engage in action research projects in the local community, including the Ithaca area and the Cornell campus community. This is a two-part course.

VII. Understanding Cultures

Anthropologists examine the diversity of human behaviors, social relationships and structures, economies, political and legal orders, worldviews, logics, languages, symbols, myths, and religions among the many other means human beings invent to create and reproduce social life around the world. Anthropologists work from a holistic perspective to account for differences and similarities across cultures. Anthropologists also take small-scale societies and local sociocultural systems as the object of analysis. They collect data primarily through ethnographic fieldwork, that is, months or years of participating in and observing of the societies they study. Anthropologists see inherent linkages between the practical and the meaningful dimensions of human existence.

A. Anthropological Approaches to Economy, Society, Law, and Politics:

The courses below take as their starting point what are usually defined as the social, political, legal, and economic practices and structures of human life and show how they are shaped culturally and how they shape culture.

[ANTHR 217 Nationalism and Revivalism (III)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 305 Emotion, Gender, and Culture (also WOMNS 305) @ (III)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 313 Anthropology of the City @ (III)
Spring. 4 credits. Not offered 2001–2002.]

ANTHR 321 Sex and Gender in Cross-Cultural Perspective (also ANTHR 621 and WOMNS 321/631) @ (III)
Fall. 4 credits. D. Doukas.
An introduction to the study of sex roles cross-culturally and to anthropological theories of sex and gender. The course examines various aspects of the place of the sexes in social, political, economic, ideological, and biological systems to emphasize the diversity in gender and sex-role definitions around the world.

ANTHR 323 Kinship and Social Organization (III)
Spring. 4 credits. B. Lambert.
Much of this course is a survey of forms of the family, descent groups, and marriage systems. The role of age and sex in the social structure is also considered. The last part of the course is devoted to a history of the British and American family and to its fate in utopian communities.

[ANTHR 326 Economic Anthropology (III)
Fall. 4 credits. Not offered 2001–2002.]

ANTHR 328 Conflict, Dispute Resolution, and Law in Cultural Context (III)
Fall. 4 credits. V. Santiago-Irizarry.
Rule-making and dispute resolution are integral aspects of social reality in any culture. The ways in which conflict is treated and interpreted—to be then deflected or resolved—articulate with other cultural domains such as religion, politics, and economics as part of the material and symbolic processes that enable sociocultural interaction. At issue then are the formal and processual means that the treatment of conflict takes in different societies. These means constitute frames for the definition of social experience that are used by social factors in the interpretation of events within the terms of an overriding sociocultural logic that is in turn refigured by these interpretive frames.

[ANTHR 380 State, Nation, and Everyday Life (III)
Spring. 4 credits. Not offered 2001–2002.]

ANTHR 385 The Anthropology of Intellectuals (III)
Fall. 4 credits. D. Boyer.
This course offers a review of anthropological research on intellectuals (or "knowledge-specialists") and on social practices of knowledge-making. The question of how social knowledge is articulated, standardized, and reproduced has become an area of renewed interest across the social sciences since the 1970s. Reflexive social science has been especially interested in understanding how social and cultural knowledges are created, by whom, and for what purposes. These questions actually have a substantial heritage and the course begins with a review of classic sociological and anthropological theories of intellectuals and their role(s) in society. Then the course explores both classic and contemporary ethnographies of knowledge-specialists and knowledge-making with a special focus on the relationship between intellectuals and the creation of cultural order. Finally, the course discusses the possibly changing role of intellectuals in contemporary western "knowledge societies."

ANTHR 415 Creolization, Syncretism, and Hybridity (also S HUM 415) (III)
Spring. 4 credits. V. Munasinghe.
The concepts of Creolization, Syncretism, and Hybridity all convey a state of 'mixture' that assumes a diasporic situation. This course explores theories and empirical case studies of processes of racial, cultural and religious mixture from an inter-disciplinary perspective. The course explores the interconnections among concepts denoting 'mixture' that have diverse originary points. The overarching line of inquiry is to explore the genealogies of the three concepts as a necessary precursor to understanding how these terminologies may, in concert, illuminate different aspects of the dynamics structuring processes of mixture in different historical and ethnographic settings.

ANTHR 422 Anthropology and Environment @ (III)
Fall. 4 credits. Prerequisite: anthropology major or permission of instructor.
D. Holmberg.
For course description, see section III, Anthropology Major Senior Seminars.

[ANTHR 426 Ideology and Social Reproduction (III)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 429 Anthropology and Psychoanalysis @ (III)
Fall. 4 credits. Not offered 2001–2002.]

ANTHR 440 Ethnographic Approaches to Studying Professionals and Institutions (III)
Spring. 4 credits. D. Boyer.
For course description, see section III, Anthropology Major Senior Seminars.

[ANTHR 460 Culture and International Order (III)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 479 Ethnicity and Identity Politics: An Anthropological Perspective (III)
Fall. 4 credits. Not offered 2001–2002.]

ANTHR 485 Mothers, Priests, Rebels, and Indian Chiefs: New Social Movements in Latin America (also ANTHR 685) @ (III)
Spring. 4 credits. B. J. Isbell.
Latin America is characterized today as a region of widespread yet diverse forms of mobilization that appear to be in constant transformation. The "Mad Mothers" of Argentina, indigenous environmentalists, liberation theologists, revolutionaries, ethnic leaders, gay activists, and urban squatters are challenging historicity, engaging in cultural innovation, and articulating in diverse ways with the state and national cultures. This seminar charts a course between theoretical texts on power and mobilization and examples of ethnography/historical cases of social movements.

B. Interpretive Approaches in Cultural Anthropology:

These courses stress symbolic or textual approaches to human society. They take as their object of analysis structures of meaning in such diverse areas as performance and text, myth and religion, views of the self, gender, and the sociology of knowledge. These same topics arise in many of the area-focused courses as well (Section D), but take center stage in the following courses.

ANTHR 232 Media, Culture, and Society (III)
Spring. 3 credits. D. Boyer.
This course provides an introduction to understanding the relationship between media and culture from an anthropological perspective. The primary goal of the course is to help students develop an ethnographic awareness of the complex factors influencing mass media production, representation, and reception. We work toward this goal by studying how media technologies effect the representation and reproduction of cultural identities, how mass media representations mediate the negotiation of national identities and moralities, how institutional situations and professional practices influence media production, and

how state and market forces both create and restrict possibilities of media expression. A wide range of social and historical cases are covered by both readings and lectures. Course materials include print, visual, and electronic media. Course assignments encourage students to engage the contemporary American media both analytically and critically.

ANTHR 250 The Anthropology of Food and Cuisine (III)
Spring. 4 credits. J. Fajans.
You are what you eat! This course examines the way food is produced, prepared, exchanged, presented, and given meaning in cultures around the world. It examines the symbolism of specific foodstuffs. Who prepares food and how it is done? Who feeds whom and how these relations are expressed and valued? In addition to looking at these questions we analyze ideas about commensality; how food is used in public contexts for presentation or exchange, and how food is a marker of gender, class, status, ethnicity, and identity. In addition to looking specifically at food, we analyze cultural ideas about gender, the body, and identity in terms of how these cultural patterns are produced and expressed through concrete activities like eating, fasting, and special diets. In this class we stress critical and comparative thinking about subjects we tend to take for granted.

ANTHR 291 Filming Other Cultures (also ANTHR 691 and THETR 291/691) @ (III)
Spring. 4 credits. Limited to 20 students. Preference given to students who have taken either ANTHR 102 or THETR 474. Fee for film screening and maintenance, $35. R. Ascher.
For description, see section VI, Nature and Culture.

ANTHR 320 Myth, Ritual, and Symbol (also RELST 320) @ (III)
Spring. 4 credits. D. Holmberg.
This course examines how systems of thought, symbolic forms, and ritual practice are formulated and expressed in primarily non-Western societies. It focuses on anthropological interpretations of space, time, cosmology, myth, classificatory systems (such as color, totems, food, dress, kinship), taboos, sacrifice, witchcraft, sorcery, and rites of passage (birth, initiation, marriage, death). Examines both the roles of specialists (spirit mediums, curers, priests, ascetics, etc.) and nonspecialists in producing these cultural forms.

[ANTHR 322 Magic, Myth, Science, and Religion (also RELST 322) @ (III)
Fall. 3 credits (4 by arrangement with instructor). Not offered 2001–2002.]

[ANTHR 379 Culture, Language, and Thought (III)
Spring. 4 credits. Not offered 2001–2002.]

ANTHR 381 Anthropology and Religion (also RELST 381) @ (III)
Fall. 4 credits. A. Willford.
This course approaches the study of religion from an anthropological perspective. The centrality and universality of religion in social life has been fundamental in the development of social and cultural theory. We begin by examining the classic theories of religion in the works of Durkheim, Marx, Weber, and Freud, followed by an exploration of how these theories have been influential in anthropological studies of cosmology, ritual, selfhood, myth, sorcery, witchcraft, and pilgrimage. We conclude by examining the apparent persistence, revival and transformation of religious beliefs and practices within modern and modernizing states. This leads us to ask whether an increasing politicization and globalization of religious ideology poses significant challenges to the anthropological analysis of religion.

[ANTHR 406 The Culture of Lives (also WOMNS 406) @
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 408 Gender Symbolism (also WOMNS 408) @ (IV)
Spring. 4 credits. Not offered 2001–2002.]

ANTHR 410 Cross-Culturality in the Caribbean (also S HUM 420) (III)
Spring. 4 credits. S. Shukla.
This seminar takes as its inspiration the literary and sociopolitical imagination of Guyanese writer Wilson Harris, described as "cross-culturality." Here, the model of diversity being elaborated is rather different from the multiculturalism we are familiar with, in the United States (or Britain or Canada, for that matter), where cultures are seen to function as discrete parts of the whole. Cross-culturality presumes that individual ethnic or racial cultures are partial and reinvent themselves through dialogues with other cultures. Perhaps this broad and flexible conception can only emerge from the Caribbean, a hyper-theorized space of hybridity. But is this because the constitutive ideas of race, nation, and migration, are different in West Indian countries from those that operate in the North American context? Can they be traced historically, in relation to political developments, of colonialism, historically, in relation to political developments, of colonialism, postcolonialism and regionalism? And what happens to these concepts when they move across the border of the nation-state?

[ANTHR 432 Culture and Performance and Performing Culture @ (IV)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 453 Visual Anthropology (III)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 456 Mesoamerican Religion, Science, and History @ # (III)
Fall. 4 credits. Not offered 2001–2002.]

[ANTHR 460 Culture and International Order (III)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 469 Gender and Age in Archaeology # (III)
Spring. 4 credits. Not offered 2001–2002.]

C. Cultures in Anthropological Perspective:

Anthropology constructs its theories in the comparison of different social and cultural systems and thus depends integrally on knowledge about particular places. The courses below are all focused on the cultures and societies of particular areas of the world and organize knowledge about these areas in reference to key anthropological questions. Students without prior experience in anthropology are welcome in these courses.

[ANTHR 221 Anthropological Representation: Ethnographies on Latino Culture (also LSP 221 and AM ST 221) (III)
Fall. 3 credits. Not offered 2001–2002.]

ANTHR 224 The French Experience (also FRLIT 224) (III or IV)
Fall. 3 credits. J. Siegel, A. Berger.
An examination of French society, culture, and institutions. What has made French culture so distinctive? Its literature and its revolutions, its gastronomy and fashion, its painting, cathedrals and cinema. Looking attentively at texts, images, and contexts from selected moments in the eighteenth, nineteenth, and twentieth centuries, we attempt to unravel some of the defining enigmas of the French exeperience.

ANTHR 230 Cultures of Native North America @ # (III)
Fall. 4 credits. B. Lambert.
A survey of the principal Eskimo and American Indian culture areas north of Mexico. Selected cultures are examined to bring out distinctive features of the economy, social organization, religion, and worldview. Although the course concentrates on traditional cultures, some lectures and readings deal with changes in native ways of life that have occurred during the period of European-Indian contact.

ANTHR 301 Equality and Dominance—the U.S. Before 1900 (also AM ST 307) # (III)
Spring. 4 credits. D. Doukas.
This course uses historical ethnography—that is, applying anthropological insights to historical materials—for a searching investigation into the United States' past, from the indigenous peoples' fateful encounter with Europe to the social upheavals of the early corporate capitalist era. Focusing on primary sources and contextualizing them in the transnational processes of colonization, enslavement, and political-economic centralization, the course aims to avoid the extremes of triumphalism and anti-Americanism by approaching this past in terms of a constitutive tension between new ideals of equality and old habits of dominance and subordination.

ANTHR 303 Asians in the Americas: A Comparative Perspective (also AAS 303) (III)
Fall. 4 credits. A. Subramanian.
For description, see department website.

ANTHR 316 Power, Society, and Culture in Southeast Asia @ (III)
Spring. 4 credits. A. Willford.
Southeast Asia is a region where anthropologists have paid great attention to the symbolic within cultural and social processes. While this intellectual orientation has produced contextually rich accounts of cultural uniqueness, there has been a tendency within "interpretive" ethnographies to downplay the role of power and domination within culture and society. This course aims to utilize the traditional strengths of symbolic anthropology by examining the roles of ritual, art, religion, and "traditional" values within contemporary Southeast Asian societies. In so doing, however, we examine how these practices and ideas can also structure ethnic, class, and gender inequalities. Understanding how "traditional" cultural practices and ideologies fit within contemporary nation-states requires that we also examine the effects of colonialism, war, and nationalism throughout the region. In addition to providing a broad and comparative ethnographic survey of Southeast Asia, this course also investigates how culturally-specific forms of power and

domination are reflected in national politics and in local and regional responses to the economic and cultural forces of globalization.

[ANTHR 333 Ethnology of the Andean Region @ # (III)
Spring. 4 credits. Not offered 2001–2002.]

ANTHR 336 Change and Continuity in the Pacific Islands (III)
Fall. 4 credits. J. Fajans.
This course provides an introduction to the diverse peoples and cultures of Oceania, which extends from Hawaii to New Zealand and from Easter Island to New Guinea. It surveys the continuities and differences within this vast domain. The primary focus is on cultural diversity, linguistic patterns, history and migration, and ecological constraints and adaptations. The course examines issues confronting the contemporary Pacific nations: colonialism, development, nationalism, the politics of tradition, and how the world system influences events and politics in the region. This course is open to anyone interested in the Pacific region and/or in anthropology.

[ANTHR 337 Gender, Identity, and Exchange in Melanesia @ (III)
Fall. 4 credits. Not offered 2001–2002.]

ANTHR 339 Peoples and Cultures of the Himalayas (also ANTHR 739) @ (III)
Spring. 4 credits. K. March.
A comprehensive exploration of the peoples and cultures of the Himalayas. Ethnographic materials draw on the lifeways of populations living in the Himalayan regions of Bhutan, India, Nepal, and Tibet. Some of the cultural issues to be examined through these sources include images of the Himalayas in the West, forms of social life, ethnic diversity, political and economic history, and religious complexity.

[ANTHR 344 Male and Female in Chinese Culture and Society (also WOMNS 344) @ (III)
Fall. 4 credits. Not offered 2001–2002.]

[ANTHR 345 Japanese Society @ (III)
Fall. 4 credits. Not offered 2001–2002.

[ANTHR 350 Topics in the Anthropology of Europe (III)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 355 Ancient Mexico and Central America (also ARKEO 355) @ # (III)
Spring. 4 credits. Not offered 2001–2002.]

ANTHR 377 The United States (also LSP 377 and AM ST 377) (III)
Fall. 4 credits. V. Santiago-Irizarry.
The anthropological inquiry into one's own culture is never a neutral exercise. This course explores issues in the cultural construction of the United States as a "pluralistic" society. We look at the ideological context for the production of a cultural profile predicted upon ideas that are intrinsic to American images of identity such as individualism, freedom, and equality and the way these are applied in practice. The course readings include historic documents and accounts, popular writing, and recent ethnographies on the United States.

[ANTHR 405 Global Tokyo (also S HUM 404 and ASIAN 405) @ (III)
Fall. 4 credits. Not offered 2001–2002.]

Fall. 4 credits. D. Pelletier, G. Pelto.

NS 651 Food and Nutrition Action in a Social Context
Spring. 3 credits. D. Pelletier, G. Pelto.

VIII. Graduate Seminars

The graduate program in anthropology is described in much greater detail in the Graduate Program brochure which is available through the Director of Graduate Studies. This document is also found on the anthropology department web page at falcon.arts.cornell.edu/~anthro/. The seminars described immediately below pertain to the program in socio-cultural anthropology. For information about graduate study in archaeology and biological anthropology, see the anthropology department web page.

A core set of seminars is required of all graduate students in socio-cultural anthropology: ANTHR 600 and 601. ANTHR 603 is strongly recommended. These courses are open to graduate students from other related fields. This sequence, and the graduate curriculum in general, is premised on the idea that anthropology is best defined as the comparative study of human social life. This definition resists institutional pressures in the academy to distinguish social science from humanistic or cultural studies and scholarly from more worldly applications. Our most important method, ethnography, is at once scientific and humanistic; disciplinary aspirations refuse to view cultural interpretation and analytic explanation as separable values. Furthermore, theory in anthropology is directly related to practice in the world whether in relation to research or more action-oriented pursuits. Consequently, the core sequences as well as most other courses for graduate students are oriented explicitly toward subverting an ideological construction of social life as separable into cultural and social (or political-economic) domains.

ANTHR 600 Proseminar: Culture and Symbol
Fall. 6 credits. J. Fajans.
This course focuses on an appreciation of symbolic, expressive, and representational forms and processes both as producers and products of social activities. Through the study of symbolic anthropology, structuralism, exchange, myth and ritual, religion, gender, personhood, linguistics, semiology, etc., we investigate how identity and meaning are linked to the practical exigencies of social life. While emphasizing aspects of the discipline generally associated with cultural anthropology, the course endeavors to set the stage for a dialectical understanding of social, political, economic, and symbolic activities as interrelated phenomena. The works of de Saussure, Levi-Strauss, Dumont, Geertz, Victor Turner, Sahlins, among others, as well as contemporary theories are given careful attention.

ANTHR 601 Proseminar: Social Organization
Spring. 6 credits. T. Turner.
This course focuses on linkages between culture and social institutions, representations and practices. The nature of these linkages is debated from strongly contesting points of view in social theory (structuralist, poststructuralist, utilitarian, hermeneutic, Marxist). Unlike debates in critical theory where the form of contestation has been mainly philosophical, in anthropology, these issues have developed in ethnographic analyses. The course briefly surveys kinship theory and economic anthropology with a focus on implications for general issues in social theory. Discussion of attempts to develop dialectical syntheses around the motion of "practice" follows. The issues addressed in this section carry over into the next, colonialism and post-colonialism, in which poststructuralist readings of history are counterposed to Marxist ones. Finally, Lacanian and Marxist visions of ideology as they relate to anthropological theory and ethnographic analysis are examined with particular emphasis on the cultural and social production of persons.

[ANTHR 602 The Practices of Anthropology
Fall. 4 credits. Not offered 2001–2002.]

[ANTHR 604 Praxis and Culture
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 605 Archaeological Research Design (also ANTHR 405 and ARKEO 405/605)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 609 Approaches to Archaeology (also ANTHR 409 and ARKEO 409/609)
Fall. 4 credits. Not offered 2001–2002.]

[ANTHR 610 Language and Myth
Fall. 4 credits. Not offered 2001–2002.]

ANTHR 614 Reading in the Ethnographic Tradition (1880–1960)
Spring. 4 credits. D. Holmberg.
This seminar examines the development of the monographic tradition within American cultural anthropology and British social anthropology. We read "classic" ethnographic texts beginning with Cushing's writings in the late nineteenth century, following with works by anthropologists such as Rivers, Boas, Radcliffe-Brown, Malinowski, Firth, Mead, Bateson, Radin, Redfield, Srinivas, Evans-Pritchard, and Leach. We also read some of the more recent literature assessing ethnographic practice and writing. This seminar alternates from year to year with ANTHR 615.

[ANTHR 615 Reading Contemporary Ethnographies (1960–1990)
Fall. 4 credits. Not offered 2001–2002.]

[ANTHR 616 Cultural Production of the Person
Spring. 4 credits. Not offered 2001–2002.]

ANTHR 621 Sex and Gender in Cross-Cultural Perspective (also ANTHR 321 and WOMNS 321/631)
Fall. 4 credits. Prerequisite: concurrent attendance in the lectures and films of ANTHR/WOMNS 321 and permission of instructor. D. Doukas.
For course description, see ANTHR 321, section VII.A, Understanding Cultures.

ANTHR 628 Political Anthropology
Fall. 4 credits. Prerequisite: a reading knowledge of Indonesian is required. J. Siegel.
A comparison of political rhetoric in the Indonesian Old and New Orders. The bearing of such phenomenon as newspapers, magazines, television, and various types of theater, music, and fiction on the shaping of accommodation or opposition to the political order is examined.

[ANTHR 629 Chinese Ethnology
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 632 Andean Symbolism
Spring. 4 credits. Not offered 2001–2002.]

ANTHR 635 Southeast Asia: Readings in Special Problems
Fall or spring. Credit and hours TBA. Staff.
Independent reading course on topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

[ANTHR 636 Cognition and Classification
Fall. 4 credits. Not offered 2001–2002.]

[ANTHR 637 Theorizing Social Movements, Human Rights and Democracy in Latin America
Spring. 4 credits. Not offered 2001–2002.]

ANTHR 638 Contemporary Gender Issues in the Americas (also WOMNS 638)
Spring. 4 credits. Prerequisite: knowledge of Spanish language required. B. J. Isbell.
This course provides a forum of comparison of contemporary gender issues in the Americas: the foci are on the United States and specific case studies in Latin America. Issues discussed are: globalization and more specifically the feminization of poverty and women's responses, gender rights and public policies; women's and children's health; and the construction of gender identity. The course also takes an historical perspective on the development of feminism and gender politics in specific countries that students are researching. Each student is responsible for in-depth research on specific issues in a particular country or countries.

[ANTHR 639 The Feminine Symbolic
Spring. 4 credits. Not offered 2001–2002.]

ANTHR 641 South Asia: Readings in Special Problems
Fall or spring. Credit and hours TBA. Staff.
Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 644 Research Design
Spring. 4 credits. A. Subramanian.
This seminar focuses on preparing a full-scale proposal for anthropological fieldwork for a dissertation. Topics include: identifying appropriate funding sources; defining a researchable problem; selecting and justifying a particular fieldwork site; situating the ethnographic case within appropriate theoretical contexts; selecting and justifying appropriate research methodologies; developing a feasible timetable for field research; ethical considerations and human subjects protection procedures; and preparing appropriate budgets. This is a writing seminar; students complete a proposal suitable for submission to a major funding agency in the social sciences.

[ANTHR 645 Japanese Ethnology
Fall. 4 credits. Not offered 2001–2002.]

[ANTHR 647 Death of the Father
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 648 Marriage and Death
Fall. 4 credits. Not offered 2001–2002.]

[ANTHR 649 Narrative and the Analysis of Culture
Spring. 4 credits. Not offered 2001–2002.]

ANTHR 653 Myth Onto Film (also THETR 653)
Spring. 4 credits. Enrollment limited by available studio space and equipment. Prerequisite: some knowledge of one of the following: anthropology, filmmaking, mythology, graphics, drawing, or painting is required. Open to undergraduates and graduate students with permission of instructor. Fee for film screening and maintenance, $50. R. Ascher.
In myths, whales fly, pebbles throw themselves across streams, and trees are transformed into women. Toward the end of visualizing myths—in particular the myths of other people—we explore the possibilities of animated film. The technique used is cameraless animation; that is, we draw and paint, frame by frame, directly onto movie film. The intellectual problem is to visualize the myths of others so that they are comprehensible to us but are not thought to be of us. Reading includes introductory works on both myth and animation and there is background reading on the particular myth that is committed to film.

ANTHR 655 East Asia: Readings in Special Problems
Fall or spring. Credit and hours TBA. Staff.
Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

[ANTHR 656 Maya History
Fall. 4 credits. Not offered 2001–2002.]

[ANTHR 658 Archaeological Analysis (also ANTHR 458 and ARKEO 458/658)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 659 Archaeology of the Household (also ANTHR 459 and ARKEO 459/659)
Fall. 4 credits. Not offered 2001–2002.]

[ANTHR 660 Language, Ideologies and Practices (also LSP 660)
Spring. 4 credits. Not offered 2001–2002.]

ANTHR 662 Democratizing Society: Participation, Action, and Research (also ANTHR 362)
Fall. 4 credits. D. J. Greenwood.
For description, see ANTHR 362, Section VI, Anthropological Thought and Method.

ANTHR 663 Action Research
Spring. 4 credits. D. Greenwood.
This seminar is a practicum in action research (AR) in which the semester becomes a self-managing learning environment for the exploration of the techniques and group processes involved in AR, including co-generative learning, searching, and AR facilitation. Participation in a seminar-centered LISTSERV on the Internet is expected.

ANTHR 665 Topics in Native American Societies and Cultures
Spring. 4 credits. B. Lambert.
This seminar is intended for undergraduate and graduate students in any field who are prepared to undertake independent research in American Indian Studies. I am particularly interested in how materials from Native American cultures can be used to help solve problems of general anthropological significance and in the contributions Native Americans have made to anthropological and sociological knowledge as teachers and researchers. However, students are encouraged to pursue their own interests and are expected to discuss work in progress with other members of the seminar. A reading list is developed to provide a shared background for discussions.

[ANTHR 666 Humans and Animals (also ANTHR 466 and ARKEO 466/666)
Fall. 4 credits. Not offered 2001–2002.]

ANTHR 667 Contemporary Archaeological Theory (also ARKEO 667)
Spring. 4 credits. Prerequisite: undergraduates with permission of instructor only. N. Russell.
This course surveys recent developments and current debates in archaeological theory. This includes the processual/postprocessual debate and contrasts between scientific and humanistic approaches more generally, as well as other approaches (Marxist, feminist, etc.). We also discuss ethical concerns and engagements with groups outside archaeology with interests in the past.

ANTHR 668 Marx: An Overview of His Thought (also ANTHR 368)
Spring. 4 credits. T. Turner.
For course description, see section VI, Anthropological Thought and Method.

ANTHR 669 Gender and Age in Archaeology (also ANTHR 469 and ARKEO 469/669)
Spring. 4 credits. N. Russell.
For course description, see section V, Human History and Archaeology.

[ANTHR 670 Environmental Archaeology (also ANTHR 370 and ARKEO 370/670)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 671 Palaeoanthropology of South Asia (also BIOES 671 and ASIAN 620)
Fall. 3 credits. Not offered 2001–2002.]

[ANTHR 672 Hunters and Gatherers (also ANTHR 372)
Spring. 4 credits. Not offered 2001–2002.]

[ANTHR 673 Human Evolution: Concepts, History, and Theory (also BIOES 673)
Fall. 4 credits. Not offered 2001–2002.]

ANTHR 680 Anthropology and Globalization (also ANTHR 480)
Fall. 4 credits. A. Willford.
For course description, see section VI, Anthropological Thought and Method.

[ANTHR 682 Perspectives on the Nation (also AAS 682)
Spring. 4 credits. Not offered 2001–2002.]

ANTHR 685 Mothers, Priests, Rebels, and Indian Chiefs: New Social Movements in Latin America
Spring. 4 credits. B. J. Isbell.
For course description, see section VII.A, Understanding Cultures.

[ANTHR 690 Ritual and Myth: Structure, Process, Practice
Spring. 4 credits. Not offered 2001–2002.]

ANTHR 691 Filming Other Cultures (also ANTHR 291 and THETR 291/691)
Spring. 4 credits. Fee for film screening and maintenance, $35.
For description, see ANTHR 291 and THETR 291. Graduate students who register in this course attend the meetings of 291. In addition, they write in-depth studies of one or more films in consultation with the instructor.

[ANTHR 699 Current Fields in Biological Anthropology
Fall. 4 credits. Not offered 2001–2002.]

ANTHR 701 Independent Study: Grad I
Fall, spring. Credit and hours TBA.
Intended for graduate students only. Staff.
Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 702 Independent Study: Grad II
Fall or spring. Credit and hours TBA.
Intended for graduate students only. Staff.
For course description, see ANTHR 701, section VIII, Graduate Seminars.

ANTHR 703 Independent Study: Grad III
Fall or spring. Credit and hours TBA.
Intended for graduate students only. Staff.
For course description, see ANTHR 701, section VIII, Graduate Seminars.

ANTHR 739 Peoples and Cultures of the Himalayas (also ANTHR 339)
Spring. 4 credits. K. March.
For course description, see section VII.C, Understanding Cultures.

ARABIC AND ARAMAIC

See under Department of Near Eastern Studies.

ARCHAEOLOGY

ASIAN AMERICAN STUDIES

See under Special Programs and Interdisciplinary Studies.

ASIAN STUDIES

E. M. Gunn, chair (388 Rockefeller Hall, 255–5095); B. R. Anderson, I. Azis, J. Badgley, T. Bestor, D. Boucher, K. Brazell, R. Bullock, T. Chaloemtiarana, P. Chi, S. Cochran, A. Cohn, B. de Bary, H. Diffloth, M. Farooqi, S. Feldman, G. Fields, P. Gellert, D. Gold, M. Hatch, R. Herring, S. Hoare, D. Holmberg, N. Jagacinski, Y. Katagiri, M. Katzenstein, Y. Kawasaki, K. A. R. Kennedy, J. V. Koschmann, F. Kotas, S. Kuruvilla, J. M. Law, T. Loos, T. Lyons, B. G. MacDougall, K. March, K. McGowan, R. McNeal, F. Mehta, T. L. Mei, C. Minkowski, S. Mohanty, V. Munasinghe, N. Nakada, Y. Nakanishi-Whitman, V. Nee, A. Nussbaum, S. Oja, A. Pan, C. A. Peterson, J. R. Piggott, T. Poleman, A. Riedy, N. Sakai, C. Salomon, P. S. Sangren, K. Selden, M. Shin, Y. Shirai, V. Shue, J. T. Siegel, R. J. Smith, R. Sukle, H. Tao, K. Taylor, Q. Teng, E. Thorbecke, T. Tranviet, S. Tun, N. Uphoff, D. X. Warner, J. Whitman, L. Williams, J. U. Wolff, O. Wolters

The Department of Asian Studies encompasses the geographical areas of East Asia, South Asia, and Southeast Asia and offers courses in most of the disciplines of the social sciences and the humanities. Asian studies courses through the 400 level (ASIAN is the prefix) are taught in English and are open to all students in the university. Some of these courses may be counted toward majors in other departments; others fulfill the humanities distribution requirement. Courses listed under Asian Studies offered through other departments may fulfill distribution requirements in history, social sciences, and arts.

The Major

A student majoring in Asian studies normally specializes in the language and culture of one country and often chooses an additional major in a traditional discipline.

Majors complete two courses at the 200 level (a minimum of six credits with a grade of C or better) in one of the Asian languages offered at Cornell. The major consists of at least 30 additional credits (which may include up to six credits of further language study) selected by the student in consultation with his or her adviser from among the courses listed under the Department of Asian Studies and numbered 250 and above.

The applicant for admission to the major in Asian studies must have completed at least one area studies course selected from among those listed under the Department of Asian Studies and must receive permission for admission to the major from the director of undergraduate studies. The student must have received a minimum grade of C in this course and in all other courses counted toward the major.

Honors

To be eligible for honors in Asian studies, a student must have a cumulative grade average of A- in all Asian studies area courses, exclusive of language study only, and must successfully complete an honors essay during the senior year. Students who wish to be considered for honors should apply to the director of undergraduate studies during the second term of their junior year. The application must include an outline of the proposed project and the endorsement of a supervisor chosen from the Asian studies faculty. During the first term of the senior year the student does research for the essay in conjunction with an appropriate Asian studies course or ASIAN 401. By the end of the first term the student must present a detailed outline of the honors essay or other appropriate written work and have it approved by the project supervisor and the director of undergraduate studies. The student is then eligible for ASIAN 402, the honors course, which entails writing the essay. At the end of the senior year, the student has an oral examination (with at least two faculty members) covering both the honors essay and the student's area of concentration.

Concentration in East Asia Studies

A candidate for the Bachelor of Arts degree at Cornell may take a concentration in East Asia studies by completing at least 18 credits of course work.

Students normally take five courses in East Asian studies at the 200 level or above from those East Asian courses listed (China, Japan, Korea) either under Asian Studies or Asian-related courses. Of these, two courses might be Asian language courses at the 200-level or beyond. East Asian graduate courses may also be offered for the concentration, as well as East Asia–related courses with a research paper on an East Asian topic. Appropriate courses taken through Cornell Abroad in East Asia may also be counted toward the concentration. Students concentrating in East Asian studies should select an adviser from the East Asia Program faculty for consultation on their course of study. For more information, contact the Asian Studies Department at 388 Rockefeller Hall, (607) 255–5095.

Concentration in South Asia Studies

A candidate for the Bachelor of Arts or Science degree at Cornell may take a concentration in South Asian studies by completing at least 18 credits of course work in South Asian studies, including ASIAN 215 (Introduction to South Asia) and four courses or seminars at the intermediate or advanced levels, two of which may be South Asian language courses.

Students taking a concentration in South Asian studies are considered members of the South Asia Program and will have an adviser from the program faculty. (This adviser will be for the student's concentration and is not a substitute for a student's academic adviser in his or her major.)

One South Asian graduate course may be taken for the concentration with consent of both the instructor and the adviser. The same applies for one South Asia-related course with a research paper on a South Asian subject. Additional courses may be added if offered with comparable South Asia content.

Concentration in Southeast Asia Studies

A candidate for the Bachelor of Arts or Science degree at Cornell may take a concentration in Southeast Asian studies by completing 18 credits of course work. A recommended plan would include ASIAN 208 and four courses at the intermediate or advanced stage, two of which could be a Southeast Asian language. Students taking a concentration in Southeast Asian studies are members of the Southeast Asia Program and are assigned an adviser from the program faculty. Such students are encouraged to commence work on a Southeast Asian language either at the 10-week intensive courses offered by the Southeast Asia Studies Summer Institute (SEASSI) or by studying for one semester at IKIP Malang, Indonesia; Khon Kaen University, Thailand; or Hanoi University, Vietnam; fellowships are available for undergraduates through the Cornell Abroad Program.

Intensive Language Program (FALCON)

The FALCON Program offers intensive instruction in Japanese or Chinese. The program is still the only one in the world offering a full year of intensive instruction from the elementary level, except for the exclusive language schools of some government agencies. Students must formally apply to the program, but the application process is simple and admission is open to all students. (Applications available for FALCON from the administrative assistant, room 125 Rockefeller Hall, or visit our web site www.arts.cornell.edu/asian/falcon.htm and apply online.) Students may take the entire sequence of 160, 161, 162, or any other portion of the program if they have the necessary background (to be determined by a placement test). The courses are full-time intensive language study; the degree of intensity required does not allow students to enroll simultaneously in other courses or to work, except perhaps on weekends.

Study Abroad

Cornell is a member of the Inter-University Center for Japanese Language Studies in Yokohama, the Inter-University Board for Chinese Language Studies in Beijing (at Tsinghua University), and a member of the Council on International Educational Exchange offering study in China at Beijing University and Nanjing University. These centers offer training in both spoken and written forms of the languages. The Kyoto Center for Japanese Studies (KCJS) is an undergraduate program for students who wish to spend either one or two semesters in Kyoto, Japan studying the Japanese language as well as contemporary and traditional Japanese culture.

Cornell is a class-A member of the American Institute of Indian Studies, which offers fellowships in India for intensive language study in Hindi, Bengali, and Tamil.

Cornell and the central campus of the Nepalese national university—Tribhuvan—at Kirtipur, Kathmandu, cosponsor an academic semester or year in Nepal.

Other opportunities include a junior year abroad at IKIP-Malang, in Indonesia, or at the School of Oriental and African Studies, University of London. Many other options for study in Asia exist, including in Indonesia, Thailand, and Vietnam through the Council for International Educational Exchange. Undergraduates should consult Cornell Abroad; graduate students should inquire at the East Asia Program, the South Asia Program, or the Southeast Asia Program offices.

First-Year Writing Seminars

See John S. Knight Institute brochure for times, instructor, and descriptions.

General Education Courses

ASIAN 191 Introduction to Modern Asian History (also HIST 191) @ (III)
Fall. 4 credits. T. Loos, S. Cochran.
See HIST 191 for description.

ASIAN 192 Introduction to World Music: Asia (also MUSIC 104) @ (IV)
Fall. 3 credits. M. Hatch.
See MUSIC 104 for description.

ASIAN 203 Introduction to Comparative Literature (also COM L 203) (IV)
Fall. 4 credits. Team.
See COM L 203 for description.

[ASIAN 204 Global Fictions (also COM L 204) (IV)
Spring. 4 credits. Not offered 2001–2002. N. Melas.
See COM L 204 for description.]

[ASIAN 206 The Occidental Tourist: Travel Writing and Orientalism in Southeast Asia (also HIST 207) @ (III)
Spring. 4 credits. Not offered 2001–2002. T. Loos.]

ASIAN 208 Introduction to Southeast Asia @ (III or IV)
Spring. 3 credits. T. Chaloemtiarana.
This course is for anyone curious about the most diverse part of Asia; it defines Southeast Asia both as the nation-states that have emerged since 1945 (Brunei, Burma, Cambodia, Indonesia, Laos, Malaysia, Philippines, Singapore, Thailand, and Viet Nam) and as a larger cultural world extending from southern China to Madagascar and Polynesia. Students find a serious, organized introduction to a variety of disciplinary and topical approaches to this region, including geography, linguistics, history, religion and ideology, anthropology, marriage and family systems, music, literacy and literature, art and architecture, agriculture, industrialization and urbanization, politics and government, warfare and diplomacy, ecological and human degradation, and business and marketing. The course teaches both basic information and different ways of interpreting that information.

ASIAN 211 Introduction to Japan: Japanese Texts in History @ # (IV)
Fall. 3 credits. B. deBary.
An interdisciplinary introduction to Japanese Studies especially designed for nonmajors. The course takes up a diverse series of cultural artifacts and demonstrates how, against the background of simultaneous and successive rises and falls of polities on the Japanese archipelago, the meanings and readings generated by these artifacts have changed dramatically over time. We consider verbal and visual, fictional and historical, canonical and noncanonical texts, including the eighth century *Kojiki*, the courtly narrative *Tale of Genji*, eighteenth century puppet theater, modern Ainu autobiography, and films and comic books dealing with themes of nuclear warfare and apocalypse.

ASIAN 212 Introduction to China @ # (IV)
Spring. 3 credits (4 credits with a special project; consult instructor for information). R. McNeal.
An interdisciplinary introduction to Chinese culture especially designed for students not majoring in Asian Studies.

ASIAN 215 Introduction to South Asian Civilization @ (IV)
Fall. 3 credits. C. Minkowski.
An interdisciplinary introduction to the culture and history shared by India and other states of South Asia. Designed for students not majoring in Asian Studies. Guest lecturers provide the perspective of their disciplines to the general themes of the course: cultural diversity and the role of tradition in contemporary life.

ASIAN 218 Introduction to Korea (also HIST 218 and GOVT 218) @ (IV)
Fall or spring. 3 credits. Staff.
An interdisciplinary introduction to Korean history and culture, including: geography, ethnography, language, literature, philosophy, religion, political economy, government, music, and art (sculpture, architecture, and painting). Includes an overview of Korean history from the Three Kingdoms Period to the present, focusing on the March 1, 1919 Independence Movement, the Korean War, the 1960 Student Revolution, the 1980 Kwangju Massacre, and other events.

Asia—Literature and Religion Courses

The following courses are taught entirely in English and are open to any Cornell student.

ASIAN 245 Gamelan in Indonesian History and Cultures (also MUSIC 245) @ (IV)
Fall or spring. 3 credits. M. Hatch.
See MUSIC 245 for description.

ASIAN 249 Peddlers, Pirates and Prostitutes: Subaltern Histories of Southeast Asia, 1800–1900 (also HIST 249/648) @ # (III)
Spring. 4 credits. E. Tagliacozzo.
See HIST 249 for description.

ASIAN 250 Introduction to Asian Religions (also RELST 250) @ # (IV)
Spring. 3 credits. D. Boucher.
This course explores a range of religious traditions in South Asia (Pakistan, India, and Sri Lanka) and East Asia (China and Japan) including Hinduism, Buddhism (South and East Asian), Confucianism, Daoism, and Shinto. We concentrate on these religions in traditional times in order to understand better the historical foundations that have influenced much of what these cultures are today. We attempt to inquire collectively into the nature of religious impulses among peoples who are in some fundamental ways both very much like us and very much different from us. The course format includes lectures and discussion sections.

ASIAN 277 Meditation in Indian Culture @ # (IV)
Spring. 3 credits. D. Gold.
This course probes the truths behind traditional claims of the priority of internal practice in Indian traditions. We examine both practices themselves—techniques of meditation and contemplation, religious ways of using intellect, forms of chant and ritual—and the dynamics through which these have left a wider mark on South Asian civilization. These dynamics include not only the evident reverberations of practice in philosophical reflection and socioreligious institutions, but also wide-ranging processes of stylization, elaboration, and popularization found throughout South Asian culture. In order to get a sense of the experiences treated in classical religious texts, students will be expected to experiment with some basic meditation practices. At least as important for the work of the course (and much more important for the grade) are the ways in which students situate these practices within larger South Asian world views as suggested by doctrines, rituals, iconic forms, and literary texts. To keep the interaction between internal practice and broader world views central, we will examine both Hindu and Buddhist sources, consistently examining the ways in which similar practices are given distinct shapes by the two religious traditions.

ASIAN 284 Southeast Asia in the World System: Capitalism and Incorporation, 1500-Present (also HIST 284) @ # (III)
Fall. 4 credits. E. Tagliacozzo.
See HIST 284 for description.

ASIAN 294 History of China in Modern Times (also HIST 294) @ (III)
Spring. 4 credits. S. Cochran.
See HIST 294 for description.

ASIAN 297 Japan Before 1600 (also HIST 297) @ # (III)
Fall. 4 credits. J. Piggott.
See HIST 297 for description.

ASIAN 298 The U.S.-Vietnam War (also HIST 289) (III)
Fall. 3 credits. K. Taylor.
This is a survey of events in Vietnam, the US, and elsewhere related to US intervention in Vietnam from the 1940s to 1975. Readings include historical narratives, memoirs, and literature. Alternative ways of understanding this war in the context of Vietnamese and American history will be explored.

[ASIAN 299 Buddhism (also RELST 290) @ # (IV)
Fall. 4 credits. Not offered 2001–2002.
D. Boucher.
This course explores the Buddhist tradition from its origins in ancient India to its migrations throughout Asia and eventually to the West. The first half of the course deals with Indian Buddhism: the Buddha, the principal teachings and practices of his early followers, and new developments in spiritual orientation. We then turn to the transmission of Buddhism to Central and East Asia, including China, Japan, and Tibet, concentrating on those traditions in traditional times. From there we look at the southern migration to Sri Lanka and Southeast Asia and conclude with an examination of Buddhism in America.]

[ASIAN 301 Schools of Thought-Ancient China @ # (IV)
Spring. 4 credits. Not offered 2001–2002.
R. McNeal.
This course introduces students to China's most important early moral and political philosophers, such as Confucius, Laozi, and Sunzi, through readings in translation. We address the traditional conception of six schools of thought in ancient China as reflected in classical and modern historiography and examine newly discovered texts with an eye toward clarifying the relationships among early schools and their representatives.]

ASIAN 302 Art of War in Ancient China @ # (IV)
Winter only. 4 credits. R. McNeal. *Also fulfills Humanities requirement.*
Sun-tzu's *Art of War* is one of the most widely translated and circulated books of all time. Businessmen in Asia swear by it, professional coaches invoke it when planning strategy, and students of political science plumb its depths for timeless wisdom on how to defeat an enemy without taking to the battlefield. This class examines Sun-tzu's text in its historical context, along with several other early military and strategic works. We treat these works as a genre, and look for characteristic features of the genre that can be better understood by reading these texts not as manuals for modern-day success, but as a record of a complex and sophisticated conceptualization of the role of warfare and all its components in the broader mission of the state.

ASIAN 306 Zen Buddhism (also RELST 306) @ # (IV)
Spring. 4 credits. Prerequisites: any course in Buddhism or Asian Studies (Religious Studies) 250, or consent of the instructor. Graduate students can take this course for credit and sign up for an additional credit hour for an extra session. J. M. Law.
This course is an exploration of the Zen tradition, with a core focus on central religious, historical and aesthetic developments in Japan. The course begins by situating the rise of the Ch'an tradition in China and the development of the Northern and Southern Schools. In Japan, we look at the establishment of Zen in the Kamakura period, with a focus on the developments of both Rinzai and Soto Zen, with a focus on the early transmissions of Chinese texts and practices to Japan through Japanese emissaries. To understand the developments of these two schools, we will study the lives and writings of both Eisai (1146–1215) and Dôgen (1200–1253), and also explore how their life works and writings influenced later developments in Zen. We also explore the work of the Tokugawa Zen figure Hakuin (1686–1769). In the latter part of the class, we study the ways in which Zen has become implicated in Japanese postwar identity discourses, by focusing on a critical reading of the writings of D. T. Suzuki and other writings which create an aestheticism as a central component of Japanese national identity. Includes fieldtrips to some of the largest Zen monasteries in North America. Japanese readings are available to those able to read Japanese.

[ASIAN 311 Modern Korean Culture and Literature @ (IV)
Spring. 4 credits. Not offered 2001–2002.
Staff.
A survey of the literature of the Post-Liberation period (1945–present), with an emphasis on the development of modern Korean poetry and its relation to the intellectual history of this time. Students read major poetic texts of each period in English translation as well as writings on cultural movements and major arguments in intellectual history.]

ASIAN 312 Intellectuals in Early Modern Korea @ # (IV)
Fall. 4 credits. M. Shin.
An introduction to early modern Korean history (early 19th century to 1945) through a survey of its major intellectuals. The course gives an overview of the political and socio-economic background that gave rise to these intellectuals and then examines how they commented on and tried to shape the conditions of their times. Topics to be covered include critiques of feudal society, the origins of modern literature and historiography, socialism/communism, liberation movements, Christianity, and feminism. Readings include secondary sources, Korean texts in translation, and works by Korean intellectuals written in English.

[ASIAN 314 Europe and Its Others (also COM L 304) (IV)
Fall. 4 credits. Not offered 2001–2002.
N. Melas.
See COM L 304 for description.]

[ASIAN 347 Tantric Traditions (also RELST 349) @ # (IV)
Fall. 4 credits. Not offered 2001–2002.
D. Gold.
This course treats the development of tantric traditions in the Indian subcontinent and beyond. Philosophical, socio-religious, cultic, and visionary dimensions of tantra are discussed. We study different Hindu and Indo-Tibetan traditions, with some attention also paid to tantric developments in East Asian Buddhism.]

ASIAN 351 Indian Religious Worlds (also RELST 351) @ (IV)
Fall. 4 credits. D. Gold.
A study of religious traditions as lived today in the Indian subcontinent. Alongside some underlying similarities, attention is paid to differences in piety and practice within alternative environments: urban and rural, male and female, more and less orthodox. In addition to several Hindu traditions, Sikh, Jain, Buddhist, and Muslim traditions may also be treated. Readings include ethnologies and perhaps a novel.

[ASIAN 357 Chinese Religions (also RELST 357) @ # (IV)
Spring. 4 credits. Not offered 2001–2002.
D. Boucher.
This course presents a broad survey of Chinese religions from the earliest historic records through the late imperial and modern periods, from highbrow philisophical movements to local deity cults. Our survey focuses intensively on the great traditions of Confucianism, Taoism, and Buddhism as well as the lesser known practices that often fall through the cracks. Our goal in part is to trace patterns of continuity among competing and sometimes acrimonious voices.]

[ASIAN 358 Chinese Buddhism (also RELST 357) @ # (IV)
Fall. 4 credits. Not offered 2001–2002.
D. Boucher.
Buddhism was a mature tradition when it came to China, a society of great sophistication and antiquity, and in their remarkable

religious and cultural encounter both Buddhism and China were transformed. We consider Buddhism's introduction and acceptance, the social impact of its monastic system and moral ideals, the literary and artistic contributions of its scriptures and sculpture, the efflorescence of its doctrine and various schools, and its role in Chinese history.]

[ASIAN 359 Japanese Buddhism: Texts in Context (also RELST 359) @ # (IV)
Spring. 4 credits. Not offered 2001–2002. J M Law.
This course explores a number of major dynamics in Japanese Buddhism within the context of the larger Japanese religious ethos. We focus on the following: (1) strategies used in the introduction and spread of Buddhism in Japan, and systems of accommodation, with special attention to the *Lotus Sutra*; (2) the formulation of Buddhist doctrine and practice of four major figures in Japanese Buddhism: Saicho, Kukai, Nichiren, and Dogen; and (3) understandings of Buddhist practice expressed in the "new" religion, with Reiyukai as our case. Readings are in English, with optional readings in Japanese for graduate students.]

ASIAN 360 Confucianism @ # (IV)
Spring. 4 credits. K. Taylor.
This course surveys the major works and thinkers associated with Confucianism in China, Japan, Korea, and Vietnam. It also discusses the influence of Confucian thought upon rulers, societies, and individuals, from ancient to modern times. The focus of the course is on Confucianism as a moral philosophy of human relations. There is comparative discussion of Confucianism and other major world religions and philosophies.

ASIAN 373 Twentieth-Century Chinese Literature @ (IV)
Fall. 4 credits. E. Gunn.
A survey of the principal works in English translation, the course introduces fiction, drama, essays, and poetry of China beginning with the Republican era and continuing up to the present in the People's Republic and Taiwan, with attention to social and political issues and literary theory.

ASIAN 374 Chinese Narrative Literature (also COM L 376) @ # (IV)
Spring. 4 credits. E. Gunn.
Selected works in classical Chinese fiction are read in translation. Major novels, such as *The Dream of the Red Chamber* and *Water Margin*, are emphasized.

[ASIAN 383 Introduction to the Arts of China (also ART H 380 and ARKEO 380) @ # (IV)
Fall. 4 credits. Not offered 2001–2002. A. Pan.
See ART H 380 for description.]

[ASIAN 384 Representation and Meaning in Chinese Painting (also ART H 385) @ # (IV)
4 credits. Not offered 2001–2002. A. Pan.
See ART H 385 for description.]

ASIAN 385 History of Vietnam (also HIST 388/688) @ # (IV)
Spring. 4 credits. Also fulfills Humanities requirement. K. Taylor.
This course is a survey of Vietnamese history and culture from earliest times to the present. Graduate students may enroll and attend a seminar section.

ASIAN 390 The Sanskrit Epics @ # (IV)
Spring. 4 credits. C. Minkowski.
Readings in translation from the two Sanskrit epics, the Mahabharata and the Ramayana, supported by a study of the reception of the epics in later Indian imaginative literature. Attention is also given to comparitive theories of the epic in ancient Indo-European languages.

ASIAN 394 The House and the World: Architecture of Asia (also ART H 395) @ # (IV)
Spring. 4 credits. K. McGowan.
See ART H 395 for description.

[ASIAN 395 Classical Indian Philosophical Systems (also CLASS 395 and RELST 395) @ # (IV)
Fall. 4 credits. Prerequisite: some background in philosophy or in classical culture. Not offered 2001–2002. C. Minkowski.
A survey of the traditions of philosophical inquiry in ancient India, especially Nyaya, Sankhya, Mimamsa, and Vedanta. Topics include the origins in and relationships to the Vedas; the formation of distinct positions on such subjects as perception, language, identity, karma, and liberation; the dialogue with Buddhist, Jains, skeptics, materialist, and cynics; and new theistic models, particularly among the Saiva philosophers in Kashmir.]

ASIAN 396 Southeast Asian History from the Eighteenth Century (also HIST 396) @ (III)
Spring. 4 credits. T. Loos.
See HIST 396 for description.

[ASIAN 400 Tibetan Buddhism (also RELST 400) @ # (IV)
Fall. 3 credits. Prerequisites: at least 1 course on Buddhism or Asian religions, or the permission of the instructor. Class size is limited to 15. Not offered 2001–2002. J M Law.
This course is an exploration of the development of the Vajrayana tradition through a focus on the myths and stories about, and writings by central figures in, what is known in the west as Tibetan Buddhism. Following an overview of the historical development of this tradition, we explore the contributions made by several (mythico-historical) seminal thinkers in the tradition including Atisa, Naropa, Marpa, Milarepa, and Tsongkapa, and explore how their life works reflect the process of adapting Buddhism to the Tibetan context. (We also include myths and stories about the mythical founder Padmasambhava.) Readings include primary source religious works written by or attributed to these figures, hagiographical accounts of their lives (their "biographies" and "autobiographies" and tributes to them by their disciples), and treatises and commentaries on their works which are influential in the formulation of the various schools of Tibetan Buddhism. In the final segment of the course, we explore the implications of exile for Tibetan Buddhism, and read several popular works by the Ven. Tenzin Gyatso (the fourteenth Dalai Lama), to show the dramatic changes made in the tradition as it reformulates itself in a more global context. Throughout this course, we direct our attention to dynamics of tradition formulation, articulation, and reformation as it changes throughout Tibetan history. In addition to two short writing assignments and a final research project, we take field trips to two regional Tibetan monasteries.]

[ASIAN 405 Global Tokyo (also S HUM 404) (III)
Fall. 4 credits. Not offered 2001–2002. T. Bestor.
See S HUM 404 for description.]

[ASIAN 407 Religion and Human Rights (also RELST 407) (IV)
Spring. 3 credits. Prerequisite: permission of instructor. Limited to 15 students. Not offered 2001–2002. J. M. Law.
This course, open to advanced students with a strong background in either religious studies, human rights work, or international law pertaining to human rights, is an exploration of the various ways that the sub-disciplines within religious studies (hermeneutics, critical ideological studies, the sociology of religion, etc.) can shed light on our understanding of human rights issues. In particular, the course focuses on four intersections of religion and human rights: religious traditions as ideologies of oppression used to legitimate major human rights violations; religious tradition identification as the primary "subject relationships" causing certain people or groups to be targeted for persecution; religious traditions and doctrine as the motivation for certain human rights workers to campaign as advocates for victims; and the role of religious discourse in attempts at reconciliation after major human rights violations have occurred. Through specific cases (mostly Asian), students explore the methodological issues that each of these intersections raises. The focus of the course is on close readings of primary source documents (some in translation by necessity), context studies of historical and social events surrounding major violations of human rights, and preparation of public response papers for each of the cases studied. In addition to weekly writing assignments prepared as part of a portfolio of written work, students also prepare one group presentation for the class. This course is offered in conjunction with the Writing in the Majors Program.]

[ASIAN 410 Chinese Performing Arts @ (IV)
Fall. 4 credits. Not offered 2001–2002. E. Gunn.
The course surveys drama, music theater, and film in twentieth-century China. Some material requires knowledge of Chinese.]

[ASIAN 411 History of the Japanese Language (also LING 411) @ # (III)
Fall. 4 credits. Not offered 2001–2002. J. Whitman.
See LING 411 for description.]

[ASIAN 412 Linguistic Structure of Japanese (also LING 404) (III)
Spring. 4 credits. Not offered 2001–2002. J. Whitman.
See LING 404 for description.]

ASIAN 415 Virtual Orientalisms (also S HUM 415 and COM L 418) # (IV)
Spring. 4 credits. Enrollment limited to 25 students. Not offered 2001–2002. B. de Bary.
A comparative study of representations of Japan in postwar French, American, and Japanese cultures. The course is particularly concerned with the role of virtual technologies in representations of Japan, as well as with a proliferation of late twentieth-century representations of Japan as a site of utopic or dystopic virtuality. Positing Orientalism as a broadly-based, but definitely not monolithic, ensemble of representational and regulatory

practices, we attend to differences in the historical context. Examples include: Roland Barthes' figuring of Japan as a "possibility of difference," or of "the very fissure of the symbolic" in post-1968 France, and Michael Crichton's more recent superimposition of a "Rising Sun" over processes of American racial hybridization, high-tech reproduction and alteration of images, and trade imbalances. Ambiguously represented as a culture of both the "chrysanthemum" (the hyper-aesthetic) and the "sword" (the hyper-phallic), with the advent of what some have called "techno-orientalism," Japan has increasingly become a preoccupation of technological and futurological imagination. We consider literary, filmic, and theoretical texts, as well as science fiction, video games, and fanzines.

ASIAN 416 Undergraduate Seminar on Gender and Sexuality in Southeast Asian History (also HIST 416) (III)
Fall. 4 credits. T. Loos.
See HIST 416 for description.

[ASIAN 417 Second Language Acquisition (also LING 415) (III)
Spring. 4 credits. Not offered 2001–2002. Y. Shirai.
See LING 415 for description.]

[ASIAN 427 Buddhist Monasticism (also RELST 425) @ # (IV)
Fall. 4 credits. Not offered 2001–2002. D. Boucher.
Buddhist monasticism has existed and continues to exist in the context of a complex exchange system within Buddhist cultures. The laity provide for the monks' and nuns' material needs; the mendicants, by accepting these offerings, provide an opportunity for spiritual merit and advancement for the faithful. This course explores Buddhist renunciant traditions—sedentary monks and nuns, forest hermits, revolutionary reformers, and others—in the light of this "religious capitalism." We consider the formation of this role for monks in Buddhist societies as well as attempts both to defend and to critique this exchange system within Buddhism. This course operates in a seminar format, which assumes careful reading, active participation, and independent research on the part of all students.]

ASIAN 428 Democracy and the City: East and West, Old and New (S HUM 402)
Fall. 4 credits. Limited to 15 students. Permission of instructor. F. Jullien.
See S HUM 402 for description.

[ASIAN 429 Structure of the Chinese Language (also LING 429) @ (III)
Fall. 4 credits. Not offered 2001–2002. H. Tao.
See LING 429 for description.]

[ASIAN 430 Structure of Korean (also LING 430) (III)
Spring. 4 credits. Not offered 2001–2002. J. Whitman.
See LING 430 for description.]

ASIAN 431 Language, Religion, and Politics in Modern South Asia (IV)
Fall. 4 credits. F. Mir.
This course examines the modern formation of linguistic identities in South Asia with an emphasis on their role in religious nationalisms and movements for regional autonomy. Drawing on theoretical literature about language and identity to provide a framework, we explore particular movements in South Asian history when linguistic identity became politically charged. Specific topics include: the role of Hindi, Urdu, and Punjabi in constituting, respectively, Hindu, Muslim, and Sikh nationalism in the colonial period; the relationship between linguistic identity and regional movements in post-colonial South Asia, looking specifically at Assamese and Tamil; the adoption of Urdu as the national language of Pakistan; and how regional identities and languages, particularly Bengali until the civil war of 1971, were subsumed under the rubric of Muslim unity.

ASIAN 432 Perspectives from Historiography, Literature, and Film (IV)
Spring. 4 credits. F. Mir.
The aim of the course is to familiarize students with the main historical arguments regarding India's partition, and to compare the narratives of partition as they emerge from different genres. The course looks at the primary historiographical arguments about the partition of British India and its immediate impact. It explores fictional narratives of partition events, looking primarily at short stories and excerpts from novels. Finally, it examines how the narrative of partition has been represented in Indian and Pakistani cinema. Students are encouraged to think about different forms of historical narrative and how historiography can incorporate multiple perspectives and interpretations into the understanding of a historical event by drawing on alternative sources.

[ASIAN 441 Mahayana Buddhism (also RELST 441) @ # (IV)
Spring. 4 credits. Not offered 2001–2002. D. Boucher.
By reading successive examples of Mahayana Buddhist literature, we study the formation and evolution of the ideal of the bodhisattva; the understanding of transcendental wisdom and the concept of emptiness; and the workings of both the conscious and subconscious mind in the course of spiritual practice. We include discussion of major philosophical schools, as well as issues of social setting and popular religious practice, in both India and East Asia.]

ASIAN 449 History and Methods of the Academic Study of Religion (also RELST 449) (III)
Spring. 4 credits. Prerequisite: 1 course satisfying the religious studies major. D. Gold.
In this course we read and discuss formative works in the study of religion, exemplary modern studies, and commentaries on contemporary issues in the field. We first explore the rise of the analytic study of religion in the nineteenth century, contrasting the implications of romantic and enlightment temperaments for academic method. We then examine some different disciplinary perspectives on religion developed in the twentieth century, with attention to exemplary writers. We conclude with some postmodern and postcolonial perspectives. In addition to the theoretical perspectives presented in the works read, we also pay attention to the ways in which they engage readers' imaginations and what they suggest about the characteristics of knowledge in Religious Studies.

ASIAN 450 Crime and Diaspora in Southeast Asian History (also HIST 451) @ # (III)
Fall. 4 credits. E. Tagliacozzo.
See HIST 451 for description.

ASIAN 460 Indian Meditation Texts (also RELST 460) @ # (IV)
Fall. 4 credits. D. Gold.
Because texts that record visionary experience prescribe the practice of contemplation, and present enigmatic utterances are highly valued in Indian tradition, they need to be taken seriously by students of Indian and world civilizations. Yet the special problems of interpretation that they present have often caused meditation texts to be passed over in embarrassed, sometimes reverent silence. In this course we draw on approaches from literary criticism, anthropology, and religious studies to explore a number of the problems to which these texts give rise: in what ways are the apparent differences in experience presented in meditation texts shaped by different cosmologies and ritual practice? Do different literary genres have particular religious implications? What are the relations between convention and experience in the creation of the texts? Readings are drawn from the Upanishads and Tantra, devotional verse in the vernaculars, and the classical meditation manuals of Hinduism and Buddhism. Some attention may be given to Indian Sufi materials. No knowledge of Indian languages is required.

[ASIAN 463 Readings in Hindi and Urdu Literature @ (IV)
Spring. 4 credits. Not offered 2001–2002. D. Gold.
Selected topics in Hindi and Urdu literature, with readings in the original; discussions in Hindi-Urdu and English. May be repeated for additional credit with consent of instructor.]

[ASIAN 471 Japanese Theatre (also THETR 471) @ # (IV)
Fall. 4 credits. Alternates with ASIAN 470. Not offered 2001–2002. K. Brazell.
A study of traditional forms of Japanese theatre. Topics include ritual and theatre, noh and kyogen, kabuki, and the puppet theatres, and contemporary theatrical use of the traditional forms. Special emphasis is placed on dramaturgy, acting styles, performance aesthetics, and theories of performer training.]

[ASIAN 476 Senior Seminar: Comparative Colonial Law and Society (also HIST 476 and WOMNS 476) @ (III)
Fall. 4 credits. Letter grade only. Limited to 15 students. Not offered 2001–2002. T. Loos.
See HIST 476 for description.]

[ASIAN 479 Art of the T'ang Dynasty (also ART H 481) # @ (IV)
Spring. 4 credits. Not offered 2001–2002. A. Pan.
See ART H 481 for description.]

[ASIAN 481 Translation and Identities @ (IV)
Spring. 4 credits. Not offered 2001–2002. N. Sakai.
Translation establishes a division of two spheres and thereby marks the limit of what can be expressed in one medium. Broadly understood, translation can take place not only between two national languages but also at a variety of boundaries within a putatively single society. The seminar investigates

different economies of translation by which different social and cultural identities are constructed, emphasizing the disappearance of multi-lingualism in modern nation-state and the mutation of translation economies which gave rise to new ways of imagining the organicist unity of the society in eighteenth-century and twentieth-century Japan. Seminar readings are translations of pre-modern Japanese and Chinese writings, and modern European and Japanese philosophical articles (in English).]

[ASIAN 482 Seminar: Gender Adjudicated (also HIST 480) # (III)
Fall. 4 credits. Not offered 2001–2002. T. Loos.
See HIST 480 for description.]

ASIAN 483 Internationalism, Nationalism, and Modern Japanese Discursive Space @ (III)
Spring. 3 credits. N. Sakai.
The late nineteenth century marks an important transitional period; nation-states formed in Britain, France, Japan, Germany, the United States, and elsewhere sought to become imperial powers; and "internationalism" virtually collapsed. Focusing on Japanese examples, but not excluding other cases, we study the discursive spaces of modern national subjectivity with a view to the problems of ethnicity, colonialism, imperial sexism, violence, historical memory, post-coloniality and academic knowledge. A major critical paper is required.

ASIAN 486 Ritual and Performance in Japanese Religions (also REL ST 486) (IV)
Spring. 4 credits. Class size limited to 12. Prerequisites: instructor consent for undergraduates. Ability to read Japanese is not required, but there are optional readings in Japanese. Graduate students may sign up for this as a graduate level course. J M Law.
In the last fifty years in Japan, there has been a proliferation of revived, restored, invented and newly created folk performing arts throughout the country. This course is an exploration of this phenomenon, and its relationship to Japanese religion. The course begins with an overview of the major theoretical works relating to tradition creation, revitalization and invention, with a focus on ritual performance theory. With this theoretical basis, we explore several paradigmatic cases classified as "folk performing arts" (minzoku geinô) which are directly related to overtly religious concerns. Through these cases, we see how both national and local identity discourses are being worked out through public ritual performances. Each student also has an opportunity to conduct in-depth research on one ritual performance tradition, or a given aspect of critical theory relating to ritual studies. This course is recommended for upper level undergraduates with the consent of the instructor or graduate students.

ASIAN 490 Tales of the Heike (also HIST 490) @ # (III)
Fall. 4 credits. J. R. Piggott.
See HIST 490 for description.

[ASIAN 491 Art and Collecting: East and West (also ART H 490) @ # (IV)
Spring. 4 credits. Not offered 2001–2002. K. McGowan.
See ART H 490 for description.]

ASIAN 493 Problems in Modern Chinese History (also HIST 493) @ (III)
Fall. 4 credits. S. Cochran.
See HIST 493 for description.

ASIAN 496 Tokugawa Literature and Thought @ # (IV)
Spring. 4 credits. N. Sakai.
An introduction (in English translation) to literary, theatrical, and intellectual works of the Tokugawa period (1600–1868). We examine the characteristics of early Tokugawa literary and theatrical works and see how different they are from the literary works of the later Tokugawa period. We also read the philosophical and philological works on the classics by writers such as Ogyu Sorai and Motoori Norinaga to understand the ways contemporary Japanese intellectuals understood cultural activities and literature during the Tokugawa period.

ASIAN 499 Problems in Modern Chinese History (also HIST 499) @ (III)
Spring. 4 credits. S. Cochran.
See HIST 499 for description.

ASIAN 580 Problems in Asian Art: Water and Politics in Southeast Asia (also ART H 580)
Spring. 4 credits. K. McGowan.
See ART H 580 for description.

ASIAN 597 Japan Before 1600 (also HIST 597)
Fall. 4 credits. J. Piggott.
See HIST 597 for description.

Asia—Graduate Seminars

For complete descriptions of courses numbered 600 or above, consult the director of graduate studies.

[ASIAN 601 Southeast Asia Seminar: Indonesia (also GOVT 652)
Fall. 3–4 credits. Not offered 2001–2002. J. Siegel.
The course serves as an introduction to Indonesia, considered in several dimensions: nationalist Indonesia, ethnic Indonesia, the recent history of nationalism and the politics of the present, minority problems, etc. No knowledge of Indonesian is required.]

ASIAN 602 Southeast Asia Seminar
Fall or spring. 4 credits. Staff.

ASIAN 603 Southeast Asia Topical Seminar: Sociology of Natural Resources and Development (also R SOC 607)
Spring. 3 credits. P. Gellert.
Building on theories in the sociology of development, this seminar examines the role of natural resource extraction, processing, and exports to global markets in the development trajectories of nations in Asia, Africa, and Latin America. This course engages students in both theoretical debates and practical implications of resource access, control, and conflict amongst various social stakeholders. Detailed historical cases are examined, primarily from Southeast Asia (Indonesia, Malaysia, Philippines).

[ASIAN 604 Southeast Asia Topical Seminar
Spring. 3–4 credits. Not offered 2001–2002. Staff.]

ASIAN 605–606 Master of Arts Seminar in Asian Studies
605, fall; 606, spring. 2–4 credits. Staff.

[ASIAN 609 Modern Japanese Studies: The Formation of the Field in History and Literature (also HIST 609)
Spring. 4 credits. Not offered 2001–2002. N. Sakai, J. V. Koschmann, B. de Bary.
See HIST 609 for description.]

[ASIAN 610 SLA and the Asian Languages (also LING 609)
Fall. 4 credits. Not offered 2001–2002. Y. Shirai.
See LING 609 for description.]

ASIAN 612 Japanese Bibliography and Methodology
Fall. 1 credit. Prerequisite: permission of instructor. Required of honors students and M.A. candidates. F. Kotas.

ASIAN 613 Southeast Asian Bibliography and Methodology
Fall. 1 credit. Prerequisite: permission of instructor. A. Riedy.
This course is designed to instruct students in methods of identifying and locating resources for the study of Southeast Asia. Emphasis is on the practical aspects of using various types of bibliographical tools to identify both primary and secondary sources in Southeast Asian and Western languages. Electronic databases and online services as well as traditional printed resources are covered. Relevant arcana of library science is explained as necessary. Required of honors students and Master of Arts candidates. No foreign language competence is required but a reading knowledge of at least one Southeast Asian language or other Asian language (especially Chinese or Japanese) and a major European language (especially French, Spanish, or Dutch) is highly desirable.

[ASIAN 623–624 Topics in South Asia
623, fall; 624, spring. 1 credit. Not offered 2001–2002. Staff.
A series designed to introduce as well as enhance and build on students' knowledge of various topics of importance to South Asia (Bangladesh, India, Nepal, Pakistan, and Sri Lanka). Weekly lectures survey contemporary themes in South Asian scholarship where visiting scholars and members of the Cornell community discuss a multidisciplinary range of issues. These may include science and nation building; ritual power and resistance; tribal communities and the environment; industrial and agrarian relations; gender and the media; and economic liberalization. A short essay is required at the end of the course.]

ASIAN 648 Peddlers, Pirates, and Prostitutes: Subaltern Histories of Southeast Asia, 1800–1900 (also HIST 249/648)
Spring. 4 credits. E. Tagliacozzo.
See HIST 648 for description.

ASIAN 651 Crime and Diaspora in Southeast Asian History (also HIST 451/650)
Fall. 4 credits. E. Tagliacozzo.
See HIST 650 for description.

ASIAN 684 Southeast Asia in the World System: Capitalism and Incorporation, 1500-Present (also HIST 284/684)
Fall. 4 credits. E. Tagliacozzo.
See HIST 684 for description.

ASIAN 685 History of Vietnam (also HIST 388/688)
Spring. 4 credits. K. Taylor.

This course is a survey of Vietnamese history and culture from earliest times to the present. Graduate students may enroll and attend a seminar section.

ASIAN 690 Tales of the Heike (also HIST 490/690)
Fall. 4 credits. J. R. Piggott.

ASIAN 693 Problems in Modern Chinese History (also HIST 693)
Fall. 4 credits. S. Cochran.
See HIST 693 for description.

ASIAN 694 Problems in Modern Chinese History (also HIST 694)
Spring. 4 credits. S. Cochran.
See HIST 694 for description.

ASIAN 696 Modern Southeast Asia: Graduate Proseminar (also HIST 396)
Spring. 4 credits. T. Loos.
See HIST 696 for description.

ASIAN 701–702 Seminar in East Asian Literature
701, fall; 702, spring. 1–4 credits. Staff.

ASIAN 703–704 Directed Research
703, fall or spring; 704, fall or spring. 1–4 credits. Staff.

ASIAN 899 Master's Thesis Research
Fall, spring. 2–4 credits. Staff.

ASIAN 999 Doctoral Dissertation Research
Fall, spring. 2–4 credits. Staff.

Honors Courses

ASIAN 401 Asian Studies Honors Course
Fall or spring. 4 credits. Intended for seniors who have been admitted to the honors program. Staff.
Supervised reading and research on the problem selected for honors work.

ASIAN 402 Asian Studies Honors: Senior Essay
Fall or spring. 4 credits. Prerequisite: admission to the honors program. Staff.
The student, under faculty direction, prepares an honors essay.

ASIAN 403–404 Asian Studies Supervised Reading
Fall, spring, or both. 1–4 credits. Prerequisite: permission of instructor. Open to majors and other qualified students. Intensive reading under the direction of a member of the staff.

Bengali

BENGL 121–122 Elementary Bengali
121, fall; 122, spring. 4 credits each term. *BENGL 122 provides language qualification.* Prerequisite: for BENGL 122, BENGL 121 or examination. Staff.
The emphasis is on basic grammar, speaking, and comprehension skills; Bengali script is also introduced.

BENGL 201–202 Intermediate Bengali Reading
201, fall; 202, spring. 3 credits each term. *BENGL 202@ provides language proficiency.* Prerequisites: for BENGL 201, BENGL 122 or examination; for BENGL 202, BENGL 201 or examination. Staff.
Continuing instruction in grammar with attention to speaking and reading skills.

BENGL 203–204 Intermediate Bengali Composition and Conversation
203, fall; 204, spring. 3 credits each term. *BENGL 204@ provides language proficiency.* Prerequisites: for BENGL 203, BENGL 122 or examination; for BENGL 204, BENGL 203 or examination. Staff.
Continuing instruction in grammar with attention to writing skills.

BENGL 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. Staff.
Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

BENGL 303–304 Bengali Literature I, II
303, fall; 304, spring. 4 credits each term. Prerequisites: BENGL 203–204 or equivalent. Staff.
An introduction to noted Bengali writers. Selections of works by Rabindranath Tagore and Abanindranath Tagore and short stories by Bonophul are covered. The course is devoted to reading these works and developing literary criticism and creative writing in Bengali.

Burmese

NOTE: Contact S. Tun in Morrill Hall 405 before classes begin for placement or other testing and organizational information.

BURM 103–104 Burmese Conversation Practice
103, fall; 104, spring. 2 credits each term. Prerequisites: for BURM 104, BURM 103 and BURM 121. May not be taken alone. Must be taken simultaneously with BURM 121–122. Satisfactory completion of BURM 104/122 fulfills the qualification portion of the language requirement. S. Tun.
Additional drills, practice, and extension of materials covered in BURM 121 and 122. These courses are designed to be attended simultaneously with BURM 121–122 respectively, allowing students to obtain qualification within a year.

BURM 121–122 Elementary Burmese
121, fall; 122, spring. 4 credits each term. *BURM 122 provides language qualification.* Prerequisite: for BURM 122, BURM 121. May be taken alone or simultaneously with BURM 103–104. Satisfactory completion of BURM 104/122 fulfills the qualification portion of the language requirement. S. Tun.
A thorough grounding is given in all language skills: listening, speaking, reading, and writing.

BURM 123 Continuing Burmese
Fall. 4 credits. *Provides language qualification.* Prerequisite: BURM 122. Satisfactory completion of BURM 123 fulfills the qualification portion of the language requirement. S. Tun.
Continuing instruction in conversational and reading skills, to prepare students for 200-level courses.

BURM 201–202 Intermediate Burmese Reading @
201, fall or spring; 202, fall or spring. 3 credits each term. *BURM 201 provides language proficiency.* Prerequisites: for BURM 201, BURM 123; for BURM 202, BURM 201. S. Tun.
Continuing instruction in Burmese, with emphasis on consolidating and extending conversational skills, and on extending reading ability.

BURM 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. S. Tun.
Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

BURM 301–302 Advanced Burmese
301, fall or spring; 302, fall or spring. 3 credits each term. Prerequisites: for BURM 301, BURM 202 or permission of instructor; for BURM 302, BURM 301. S. Tun.
Continuing instruction on conversational and literary skills, but with special emphasis on reading. Students encounter various genres and styles of written Burmese. Readings will include articles on current events, and either several short stories or a novel. Focus is on developing reading skills, particularly on vocabulary development, consolidating and expanding grammar, and appreciating stylistic and cultural differences.

BURM 303–304 Advanced Burmese II
303, fall or spring; 304, fall or spring. 3 credits each term. Prerequisite: for BURM 303, BURM 202 or permission of instructor; for BURM 304, BURM 303. S. Tun.
This is a course for students who have good conversational ability in Burmese and some familiarity with Burmese culture, but who need to strengthen reading skills and further enrich their vocabulary. Students in consultation with the instructor, are able to select reading materials. There is also an opportunity for those who need it, to strengthen listening skills, through the study of current films, TV, and radio programs in Burmese.

BURM 401–402 Directed Individual Study
401, fall; 402, spring. 2–4 credits variable each term. Prerequisite: permission of instructor. S. Tun.
This course is designed to accommodate the needs of advanced or specialized students, and faculty interests. Topics of reading and discussion are selected on the basis of student need.

Cambodian

See Khmer.

Chinese

NOTE: Testing for placement, except for those with near-native abilities (particularly those schooled in a Chinese setting up until the age of about 12) takes place in registration week, before classes begin. Time and place will be posted on the web at www.arts.cornell.edu/asian/index.html under "Language Programs" and the bulletin board outside Rockefeller 388. Students with some Chinese schooling who want to obtain 3 or 6 credits for their proficiency will be tested at the beginning of the second week of classes. Again, the time and place will be announced.

CHIN 101–102 Elementary Standard Chinese ('Mandarin')
101, fall; 102, spring. 6 credits each term. Prerequisite: for CHIN 102, CHIN 101, or equivalent. You must enroll in lecture and 1 section. Since each section is limited to 10–12 students, students missing the first 2 class meetings without a university excuse are dropped so others may register. No student will be added after the second week of classes. Satisfactory completion of CHIN 102 fulfills the qualification portion of the language requirement. Staff.
A course for beginners or those who have been placed in the course by examination. The course gives a thorough grounding in conversational and reading skills. Students with some facility in the spoken language (because Chinese is spoken at home) but who do not read characters should take 109–110. Students who read Chinese, but who speak 'dialects,' such as Cantonese or Amoy, should consult with the staff before enrolling.

CHIN 109–110 Beginning Reading and Writing (Standard Chinese)
109, fall; 110, spring. 4 credits each term. *CHIN 110 provides language qualification.* Prerequisites: must have permission of instructor to enroll. Students who complete CHIN 110 normally continue with CHIN 209 and 210. Because of high demand for this course, students missing the first 2 meetings without a university excuse are dropped so others may register. Satisfactory completion of CHIN 110 fulfills the qualification portion of the language requirement. F. Lee Mehta.
This course is intended primarily for students who speak some Chinese (e.g., at home), but who have had little or no formal training. The focus is on characters, reading comprehension, basic composition, standard grammar, and reading aloud with standard Chinese ('Mandarin') pronunciation.

CHIN 111–112 Elementary Cantonese
111, fall; 112, spring. 4 credits each term. Prerequisite: for CHIN 112, CHIN 111 or equivalent. CHIN 111–112 only satisfies the qualification portion of the language requirement if the student can also demonstrate a comparable reading ability. H. Huang.
A course in conversational standard Cantonese (as spoken in Hong Kong and Canton) for beginners. Students need not have a Mandarin background to take this course, but those with elementary reading skills are also introduced to Cantonese (character) writing.

CHIN 113–114 Beginning Reading for Cantonese Speakers
113, fall; 114, spring. 3 credits each term. *CHIN 114 provides language qualification.* Prerequisite: everyday conversational ability in Cantonese. H. Huang.
This course is intended primarily for students who speak some Cantonese (e.g., at home), but who have had little or no formal training in writing. The focus is on characters, reading comprehension, standard grammar, and reading aloud with Cantonese pronunciation.

CHIN 201–202 Intermediate Standard Chinese ('Mandarin') @
201, fall or summer; 202, spring or summer. 4 credits each term. *CHIN 201 provides language proficiency.* Prerequisites: for CHIN 201, CHIN 102 with a grade of C+ or above or equivalent; for CHIN 202, CHIN 201 or equivalent. Section 1, Q. Teng; Section 2, Staff.
Continuing instruction in written and spoken Chinese with particular emphasis on consolidating basic conversational skills and improving reading confidence and ability.

CHIN 209–210 Intermediate Reading and Writing @
209, fall; 210, spring. 4 credits each term. *CHIN 209 provides language proficiency.* Prerequisites: for CHIN 209, CHIN 110 or equivalent; CHIN 210, CHIN 209. After completing 210, students may only take 400-level courses in Chinese. X. Sun.
Continuing focus on reading and writing for students with spoken background in standard Chinese; introduction of personal letter writing and other types of composition.

CHIN 211–212 Intermediate Cantonese @
211, fall; 212, spring. 4 credits each term. *CHIN 211 provides language proficiency.* H. Huang.
Continuing instruction in spoken Cantonese and in characters (Cantonese and Mandarin), reading comprehension, and reading aloud with Cantonese pronunciation.

CHIN 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. Staff.
Taught on a specialized basis to address particular student needs. Times arranged with instructor.

CHIN 301–302 High Intermediate Chinese
301, fall; 302, spring. 4 credits each term. Prerequisites: for CHIN 301, CHIN 202 or equivalent; for CHIN 302, CHIN 301. F. Lee-Mehta.
Continuing instruction in spoken Chinese and in various genres and styles of written Chinese.

CHIN 411–412 Advanced Chinese: Fiction, Reportage, Current Events
411, fall; 412, spring. 4 credits each term. Prerequisites: for CHIN 411, CHIN 302 or equivalent; for CHIN 412, CHIN 411 and permission of instructor required. Q. Teng.
Reading, discussion, and composition at advanced levels.

CHIN 425 Special Topics
Fall or spring, according to demand. 4 credits. Prerequisite: permission of instructor. Staff.
A number of different topics in advanced Chinese language, advertised the previous semester, are offered under this title to accommodate the needs of advanced or specialized students, and take advantage of faculty interests. Topics include: correspondence and composition, excerpts from classical novels, Ch'ing documents, xiesheng comedy routines, etc. May be repeated for credit.

Chinese FALCON (Full-year Asian Language CONcentration)

For full information, brochures, etc., see the FALCON secretary 125 Rockefeller Hall
e-mail: falcon@cornell.edu or
www.arts.cornell.edu/asian/falcon.htm.

CHIN 160 Introductory Intensive Mandarin
Summer only. 8 credits. *Provides language qualification.* Completion of 160 fulfills the qualification portion of the language requirement. S. Hoare and staff.
Introduction to spoken and written Mandarin. Lectures on linguistic and cultural matters, intensive practice with native speakers, and laboratory work. Students who complete this course with a grade of at least B are normally eligible to enroll in CHIN 201.

CHIN 161–162 Intensive Mandarin @
161, fall; 162, spring. 16 credits each term. *Provides language proficiency.* Prerequisites: for CHIN 161, CHIN 160 or equivalent or permission of instructor; for CHIN 162, CHIN 161 or placement by FALCON staff prior to beginning of spring term. Students must apply formally to the program; application open to all Cornell students and students from other institutions. S. Hoare and staff.
Work on spoken and written Chinese from an intermediate level to an advanced level. This is a full-time program and full academic load; the demands of the program do not normally permit students to take other courses simultaneously. With a sequence of 160, 161, and 162, in only one calendar year a student can complete as much Chinese as would be contained in three or more years of regular study at most academic institutions. This course sequence also serves to fulfill the language requirement for the MA in Asian Studies and the joint MBA/MA in Asian Studies.

Literature in Chinese

CHLIT 213–214 Introduction to Classical Chinese @ #
213, fall; 214, spring. 3 credits each term. *Provides language proficiency.* Prerequisite: qualification in Chinese or permission of instructor. May be taken concurrently with CHIN 101–102, 201–202, 301–302. R. McNeal, D. X. Warner.
This course is an introduction to the fundamental grammar and vocabulary of classical Chinese. Students analyze and translate short passages in class, and are tested on these skills in regular quizzes and examinations. Students should be competent in usage of the Chinese script and have at least the equivalent of two years of any East Asian language that employs the Chinese writing system (e.g., Mandarin, Cantonese, Japanese).

CHLIT 300 Reading from the Early Masters @ #
Spring. 4 credits. Prerequisites: CHLIT 213–214 or permission of instructor. R. McNeal.
Students read and discuss several passages from early classical texts, including the Confucian Analects, the Mozi, the Guanzi, and others. Attention is paid to grammar, historical context, and methodology. Students who have not completed one year of classical Chinese at Cornell need permission from the instructor to register.

CHLIT 307 Readings in Classical Chinese Literature @
Fall. 4 credits. Prerequisite: CHLIT 214 or permission of instructor. D. Warner.
This is an introduction to classical Chinese literary texts. Students survey a selection of master works from the Pre-Qin and Han dynasty periods, covering the major genres, themes and literary styles that were foundational to later Chinese literary tradition.

CHLIT 421–422 Directed Study
Fall or spring. 2–4 credits each term. Prerequisite: permission of instructor. Staff.
Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop course content.

CHLIT 423 Readings in Chinese History @
Fall. 4 credits. Staff.
This course is designed for seniors and graduate students who are interested in ethnic relations and minority issues in Chinese history, and who wish to pursue further research in this field in the future. By studying the selected readings from Chinese historical documents (which were written in classical Chinese), students familiarize themselves with the vocabulary and categorization of the documents, obtain the basic skills needed for reading and analyzing Chinese historical materials, and learn to use original Chinese source materials in conducting their own research. The aim is to provide insight into the historical relations between the Han Chinese and ethnic minorities in China.

CHLIT 435 Chinese Buddhist Texts @ # IV
Spring. 4 credits. Prerequisite: 1 year of literary Chinese or permission of the instructor. Not offered 2001–2002. D. Boucher.
This seminar is designed to introduce students to the idiom of Buddhist Chinese. We start by reading selections from the early translations to gain a grounding in the vocabulary and syntax that came to characterize literary Buddhism in China. From there we survey some of the so-called apocryphal texts (Buddhist "sutras" produced in China) and look at samples from important writers and schools, depending on student interests. This course is open to students in any area of East Asia with an interest in developing skills in Buddhist texts.

[CHLIT 610 Chinese Cultural Criticism
Fall. 4 credits. Not offered 2001–2002. E. Gunn.
This course develops questions about cultural criticism of China through reading and discussion of modern critiques of Chinese culture, primarily from the late Qing to the post-Mao era, selected from the work of both Chinese and Western critics. Particular emphasis is placed on the role of cultural criticism in producing literature.]

CHLIT 615 Seminar: Ideas and Literature of Medieval China
Spring. 4 credits. D. Warner.
This is a graduate-level seminar that offers study of the language and genres of Medieval Chinese literature in the context of Medieval Chinese intellectual history. Students read from a range of primary works—including poetry, prose, literary treatises, philosophical essays, and historical writings—from the Later Han to the Sui and early Tang, in addition to a selection of modern scholarly essays in the field. Our primary aim is to re-examine the interrelationship between the history of ideas and the formation of a medieval poetics during this period of Chinese literary history.

CHLIT 618 Seminar on Ancient China
Fall. 4 credits. Also fulfills Humanities requirement. Prerequisite: CHLIT 213–214 or permission of instructor. R. McNeal.
This seminar provides graduate students and advanced undergraduates with a critical introduction to the most important sources, both textual and archaeological, for the study of ancient China. We cover materials from the earliest historical period, circa 1300 B.C., down to the consolidation of empire in the first century B.C. Outstanding problems and controversies pertaining to this period are covered, and basic methodological tools presently used by historians, textual critics, paleographers, and archaeologists are addressed. Students participate in the seminar by taking responsibility for presenting on certain topics in detail, some of which may include topics related to their own research or interests.

CHLIT 621–622 Advanced Directed Reading: Chinese Historical Syntax
621, fall; 622, spring. 2–4 credits. Prerequisite: permission of instructor. Staff.
Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop class readings.

Hindi

HINDI 101–102 Elementary Hindi-Urdu
101, fall; 102, spring. 6 credits each term. *HINDI 102 provides language qualification.* Prerequisite: for HINDI 102, HINDI 101 or equivalent. M. Farooqi.
A semi-intensive course for students without prior experience in Hindi-Urdu or a closely related language. A thorough grounding is given in all language skills: listening, speaking, reading, and writing. Students who have had exposure to Hindi-Urdu or a closely related language in the home or otherwise should generally take HINDI 109–110. Check with instructor regarding placement.

HINDI 109–110 Accelerated Elementary Hindi-Urdu
109, fall; 110, spring. 3 credits each term. *HINDI 110 provides language qualification.* Prerequisite for HINDI 110: HINDI 109 or equivalent. M. Farooqi.
An entry-level sequence for students with some prior exposure to Hindi-Urdu or a closely related language. This course sequence provides a thorough grounding in all the language skills: listening, speaking, reading, and writing. Completion of this sequence, including satisfactory performance on an examination given at the end of HINDI 110, constitutes a level of performance equal to that of the 101–102 sequence, and is thus considered to fulfill qualification for the language requirement plus eligibility for 200-level Hindi-Urdu courses. Check with instructor regarding placement.

HINDI 201–202 Intermediate Hindi Reading @
201, fall; 202, spring. 3 credits each term. *HINDI 201 provides language proficiency.* Prerequisites: for HINDI 201, HINDI 102; for HINDI 202, HINDI 201 or permission of instructor. M. Farooqi.

HINDI 203–204 Intermediate Composition and Conversation @
203, fall; 204, spring. 3 credits each term. *HINDI 203 provides language proficiency.* Prerequisites: for HINDI 203, HINDI 102; for HINDI 204, HINDI 203 or permission of instructor. M. Farooqi.
Throughout this course sequence all aspects of language learning are practiced: listening, speaking, reading, and writing. In 203, video materials are used and the emphasis is on the conversational aspect of the language. In 204, the focus shifts to reading skills and the main text used is a popular novel.

HINDI 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. M. Farooqi.
Taught on a specialized basis to address particular student needs. Times arranged with instructor.

HINDI 301–302 Advanced Readings in Hindi Literature
301, fall; 302, spring. 4 credits each term. Prerequisites: for HINDI 301, HINDI 202; for HINDI 302, HINDI 301 or equivalent. M. Farooqi.
Selected readings in modern Hindi literature.

Indonesian

For students who have completed INDO 121–122–123 or its equivalent there is the option of a one-semester program in Malang, East Java, during the junior year. The program combines a variety of cultural and artistic options with area course work and advanced language study. Complete information is available through Cornell Abroad.

Students who have completed a minimum of 18 credits or the equivalent are eligible to apply for a summer program in the Advanced Indonesian Abroad Program. Further information is available from Professor John Wolff (217 Morrill Hall, 255–0733).

INDO 121–122 Elementary Indonesian
121, fall; 122, spring. 4 credits each term. Prerequisite: for INDO 122, INDO 121. J. Wolff and staff.
A thorough grounding is given in basic speaking and listening skills with an introduction to reading.

INDO 123 Continuing Indonesian
Fall. 4 credits. *Provides language qualification.* Prerequisite: INDO 122 or equivalent. Satisfactory completion of INDO 123 fulfills the qualification portion of the language requirement. J. Wolff and staff.
Improves speaking skills, such as fluency and pronunciation, focusing on verbal communication skills; offers a wide range of readings and sharpens listening skills.

INDO 203–204 Intermediate Composition and Conversation @
203, fall; 204, spring. 3 credits each term. *INDO 203 provides language proficiency.* Prerequisites: for INDO 203, INDO 123; for INDO 204, INDO 203 or permission of instructor. J. Wolff and staff.
Intermediate instruction in spoken and written grammar and reading comprehension.

INDO 205–206 Intermediate Indonesian @
205, fall; 206, spring. 3 credits each term. *INDO 205 provides language proficiency.* Prerequisites: for INDO 205, INDO 123 or equivalent; for INDO 206: INDO 205 or equivalent. Satisfactory completion of INDO 205 fulfills the proficiency portion of the language requirement. J. Wolff and staff.
This course develops all four skills: reading, writing, speaking, and comprehension.

INDO 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. J. Wolff.
Taught on a specialized basis to address particular student needs. Times arranged with instructor.

INDO 305–306 Directed Individual Study
305, fall; 306, spring. 2–4 credits. Prerequisites: INDO 301–302 and 303–304 or equivalent knowledge of Indonesian or Malay. J. Wolff and staff.
A practical language course on an advanced level in which the students read materials in their own field of interest, write reports, and meet with the instructor for two hours a week for two credits and twice a week for four credits.

Japanese

JAPAN 101–102 Elementary Japanese
101, fall; 102, spring. 6 credits each term. *JAPAN 102 provides language qualification.* Prerequisite for JAPAN 102: JAPAN 101 or placement by the instructor during registration period. Intended for beginners or for those who have been placed in the course by examination. You must enroll in lecture and 1 section. R. Sukle and staff.
A thorough grounding in all four language skills—speaking, hearing, reading, writing—at the beginning level, but with a special emphasis on oral communication and actual use of the language in social context. Homework for the course is largely work on the skill aspects of language through practice in the language lab with tapes or CD-ROM. The lecture provides explanation, analysis, and cultural background necessary for successful interaction with Japanese people. The sections are conducted entirely in Japanese. Materials covered are not the same as for JAPAN 141–142.

[JAPAN 121–122 Continuing Japanese
Fall. 6 credits. Prerequisite: placement by the instructor at beginning of semester. Sections will co-meet with JAPAN 101–102 sections. Not offered 2001–2002. Staff.
Accelerated training in listening, speaking, reading, and writing with special emphasis on oral communication. For students who have already acquired a limited facility in Japanese through residence in Japan or through brief formal study and require fewer contact hours per week.]

JAPAN 141–142 Beginning Japanese at a Moderate Pace
141, fall; 142, spring. 4 credits each term. Prerequisite for JAPAN 142: JAPAN 141 or placement by instructor during registration period. Y. Shirai and staff.
Beginning level training in listening, speaking, reading, and writing, with more emphasis on written skills than JAPAN 101–102. Classroom activities focus on oral communication skills. Homework for the course is largely written exercises. Fewer credits and fewer class contact hours than JAPAN 101–102; the course meets five hours per week (MTWRF). Materials covered are not the same materials as JAPAN 101–102.

JAPAN 201–202 Intermediate Japanese Conversation @
201, fall and summer; 202, spring and summer. 4 credits each term. *JAPAN 201 provides language proficiency.* Prerequisites: for JAPAN 201, JAPAN 102 or placement by the instructor during registration; for JAPAN 202, JAPAN 201 and 203 or placement by the instructor during registration. You must enroll in lecture and 1 section. Students enrolled in JAPAN 201 are strongly urged to enroll concurrently in JAPAN 203. Y. Katagiri.
Course topics include the reading of elementary texts with emphasis on practical materials, and the development of writing skills.

JAPAN 203–204 Intermediate Japanese Reading I @
203, fall; 204, spring. 2 or 3 credits each term. *JAPAN 203 provides language proficiency.* Prerequisites: for JAPAN 203, JAPAN 102, or placement by the instructor during registration; for JAPAN 204, JAPAN 203 or placement by the instructor during registration. You must enroll in lecture and 1 section. N. Nakada.
Reading of elementary texts emphasizing practical materials, with development of writing skills.

JAPAN 241–242 Intermediate Japanese at a Moderate Pace
241, fall; 242, spring. 4 credits each term. *JAPAN 241 provides language qualification. JAPAN 242@ provides language proficiency.* Prerequisites: for JAPAN 241, JAPAN 142 or placement by instructor during registration period; for JAPAN 242, JAPAN 241 or placement by instructor. Y. Kawasaki and K. Selden.
Training in listening, speaking, reading, and writing for those students who have acquired a basic beginning-level command.

[JAPAN 251–252 Elementary/Intermediate Japanese @
251, fall; 252, spring. 4 credits each term. *JAPAN 251 provides language proficiency.* Prerequisites: for JAPAN 251, JAPAN 160 or placement by instructor during registration period; for JAPAN 252, JAPAN 251, 102, or placement by instructor during registration period. Not offered 2001–2002. Y. Nakanishi-Whitman.
Training in listening, speaking, reading, and writing for those students who have acquired a basic beginning-level command. Provides an alternate choice for students who find it difficult to schedule the more intensive JAPAN 201/203 and 202/204 into their schedules: MBA students, engineering students, hotel school students, arts college students, and others identical with 541–552. Can be followed by JAPAN 351–352.]

JAPAN 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. Staff.
Taught on a specialized basis to address particular student needs. Times arranged with instructor.

JAPAN 301–302 Communicative Competence @
301, fall; 302, spring. 3 credits each term. Prerequisites: for JAPAN 301, JAPAN 202 and placement by the instructor during registration; for JAPAN 302, JAPAN 301 or placement by the instructor during registration. Y. Katagiri.
This is a course for students who have learned basic Japanese grammar and oral skill and would like to use the language for natural conversation and effective oral communication. The course is intended to: (1) expand vocabulary for daily life use; (2) brush up on knowledge of basic grammar for fluency; and (3) develop communicative skills for varied situations.

JAPAN 303–304 Intermediate Japanese Reading II @
303, fall; 304, spring. 4 credits each term. Prerequisites: for JAPAN 303, JAPAN 202 or placement by the instructor during registration; for JAPAN 304, JAPAN 303 or placement by the instructor during registration. Staff.
Reading of selected modern texts with emphasis on expository style.

JAPAN 401–402 Oral Narration and Public Speaking
401, fall; 402, spring. 2 credits each term. Prerequisites: for JAPAN 401, JAPAN 302 or placement by the instructor during registration; for JAPAN 402, JAPAN 401 or placement by the instructor during registration. N. Nakada.
Instruction in making and delivering socially appropriate and effective speeches, with emphasis on both the construction of discourse and Japanese patterns of oral delivery.

JAPAN 403–404 Advanced Japanese Reading @
403, fall; 404, spring. 4 credits each term. Prerequisite: JAPAN 304 or permission of instructor.
Section I: Area of Humanities. Cannot be used for distribution. Reading of selected modern texts with emphasis on expository style. K. Selden.

Section II: Area of Economics and Social Science. Cannot be used for distribution. Y. Kawasaki. Reading of selected modern texts with emphasis on expository style.

JAPAN 410 History of the Japanese Language (also LING 411) @ #
Fall. 4 credits. Prerequisite: permission of instructor. Offered alternate years. J. Whitman.
An overview of the history of the Japanese language followed by intensive examination of issues of interest to the participants. Students should have a reading knowledge of Japanese.

JAPAN 421–422 Directed Readings
421, fall; 422, spring. Credit TBA. Limited to advanced students. Prerequisite: placement by the instructor during registration. K. Selden.
Topics are selected on the basis of student needs.

Japanese FALCON (Full-year Asian Language Concentration)

Director: R. Sukle, 123 Rockefeller Hall; FALCON Secretary 125 Rockefeller Hall, 255–6457, e-mail: falcon@cornell.edu or www.arts.cornell.edu/asian/falcon.htm.

There are three small interactive classes per day conducted entirely in Japanese and one lecture conducted in English and Japanese. The interactive classes are conducted by experienced and highly trained teachers; the lecture is conducted by an expert in Japanese language structure. Two one-hour sessions in the language lab are required daily. Additional preparation time in the language lab is necessary in the evenings. Exposure to the language exceeds that of even students living and studying in Japan, providing over 1,800 hours of exposure throughout the full-year program. The extensive exposure and intensive work on the language allows students to develop a level of fluency, accuracy, and control of the language not achieved in any other type of academic settings. The course is designed to develop 'copability' in the students by bringing them up to the level where they will be able to successfully make further progress in the language on their own even if they do not have further formal instruction. The intensive nature of the program allows graduate students to complete their language work in minimal time and undergraduates, including freshmen, to achieve levels of Japanese that are far beyond what is normally achieved in a four-year program, provided they continue their study of Japanese after FALCON.

JAPAN 160 Introductory Intensive Japanese (FALCON)
Summer only. 8 credits. *Satisfies language qualification.* R. Sukle and staff.
(See general description above). This is the first term of the FALCON Program. It is a full-time, intensive, nine-week course which begins at the absolute beginning level, in speaking as well as rudimentary reading and writing. Formal application must be made to the program, but admission is open to all students, not just those planning to take the full-year program. Students completing this course and planning to continue at Cornell in the fall may continue with the fall and spring terms of FALCON (JAPAN 161 and 162), or they should consult the FALCON Director, Robert Sukle, at 255–0734 or rjs19@cornell.edu, about other options.

JAPAN 161–162 Intensive Japanese (FALCON) @
161, fall; 162, spring. 16 credits each term. *JAPAN 161 provides language proficiency.* Prerequisites: for JAPAN 161, JAPAN 160, or JAPAN 102 at Cornell, or placement by FALCON staff prior to beginning of fall term; for JAPAN 162, JAPAN 161, or placement by FALCON staff prior to beginning of spring term. Students must apply formally to program (see above); application open to all Cornell students and students from other institutions. R. Sukle and staff.
(See general description above). Work on spoken and written Japanese from an intermediate level to an advanced level. This is a full-time program and full academic load; the demands of the program do not normally permit students to take other courses simultaneously. With a sequence of 160–161–162, in only one calendar year a student can complete as much Japanese as would be contained in three or more years of regular study at most academic institutions. This course sequence also serves to fulfill the language requirement for the M.A. in Asian studies and the joint M.B.A./M.A. in Asian studies.

Literature in Japanese

JPLIT 406 Introduction to Classical Japanese @ #
Fall. 4 credits. Prerequisite: permission of instructor. K. Selden.
This course is an introduction to the fundamental grammar and vocabulary of classical Japanese.

JPLIT 408 Readings in Classical Japanese @ #
Spring. 4 credits. Prerequisite: JPLIT 406 or permission of instructor. K. Selden.
This course is intended for students who have completed the JAPAN 403/404 sequence or the equivalent. Readings of excerpts and complete brief pieces from representative premodern Japanese literature mostly with the use of standard modern annotated editions. Different selections and themes are introduced each year.

JPLIT 421–422 Directed Readings
421, fall; 422, spring. 2–4 credits. Prerequisite: for JPLIT 421, JAPAN 402 or equivalent; for JPLIT 422, JAPAN 421 or equivalent. Staff.
Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop class readings.

[JPLIT 611 Seminar in Classical Japanese Literature
Spring. 2–4 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 2001–2002. K. Brazell.
For advanced graduate students in the field of East Asian Literature. This seminar focuses on the reading of Japanese literary and literary-critical texts in relation to a selected topic in classical literature.]

[JPLIT 612 Seminar in Medieval Genres
Spring. 2–4 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 2001–2002. K. Brazell.
This seminar explores medieval literary genres in terms of the contemporary religious, social, political, and aesthetic discourses. Readings are in classical and modern Japanese as well as in English.]

JPLIT 613 Seminar in Tokugawa Culture and Thought
Spring. 2–4 credits. Prerequisite: permission of instructor. Offered alternate years. N. Sakai.
This seminar examines a variety of texts written during the Tokugawa period. The topics discussed in these are many: from the conceptualization of the virtue in the Confucian tradition, to the composition of Waka poetry. The texts are not selected from one school or from one teaching but encompass a wide range of intellectual trends including Neo-Confucianism, the Kogaku and the Kokugaku. In addition to the original texts of the Tokugawa period, we are going to read a few works of modern historiography on Tokugawa thought and culture. These works do not necessarily represent the standard of the present-day Tokugawa studies, but they clearly show different approaches. In this seminar, we evaluate critically these works through a careful reading of the original texts of the Tokugawa period.

JPLIT 614 Seminar in Modern Japanese Literature: Postmodern Thought for Area Studies (also COM L 695)
Spring. 4 credits. Prerequisite: permission of instructor. B. de Bary.
How might postmodern debates on language and difference transform our understanding of the project of cross-cultural learning institutionalized in postwar American area studies? Intended as an introductory course for graduate students, this class emphasizes weekly close readings of important primary texts which have grappled with, or attempted to challenge, epistemological assumptions, categories, and processes which have informed modern disciplinary knowledge of cultural others. Readings will include texts by Rey Chow, James Clifford, Jacques Derrida, Gayatri Spivak, and others.

JPLIT 624 Advanced Readings in Modern Japanese Literature
Spring. 4 credits. Prerequisite: permission of instructor. Offered alternate years. B. de Bary.
The course considers representations of the body and eroticism in fiction, poetry, film, and theoretical writings from the Taisho through early Showa periods (1912 to the late 1930s). Special attention is given to writings about the "New Woman" and "Modern Girl," to sexuality in modernist cinematic and literary experiments, and to reciprocal relations between colonial and metropolitan culture. All readings are done in Japanese.

JPLIT 625 Directed Readings
Fall or spring. 4 credits. Staff.
Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop class readings.

[JPLIT 700–701 Seminar: Reading of Historical Materials—Japanese Imperial Nationalism and Its Literature
700, fall; 701, spring. 4 credits. Not offered 2001–2002. N. Sakai.
Research readings for graduate level students.]

Javanese

[JAVA 131–132 Elementary Javanese
131, fall; 132, spring. 3 credits each term. Prerequisite: for JAVA 132, JAVA 131 or equivalent. This language series (131–132) cannot be used to satisfy the language requirement. Not offered 2001–2002. J. Wolff and staff.
An elementary language course for those who have had no previous experience in the language.]

[JAVA 133–134 Continuing Javanese
133, fall; 134, spring. 3 credits each term. *JAVA 134 provides language qualification.* Prerequisites: for JAVA 133, JAVA 132 or equivalent; for JAVA 134, JAVA 133 or equivalent. Satisfactory completion of JAVA 134 fulfills the qualification portion of the language requirement. Not offered 2001–2002. J. Wolff and staff.
An intermediate conversation and reading course.]

[JAVA 203–204 Directed Individual Study @
203, fall; 204, spring. 3 credits. *JAVA 203 provides language proficiency.* Prerequisite: JAVA 134 or equivalent. Not offered 2001–2002. J. Wolff and staff.
This is a practical language course on an intermediate level in which the students work through readings and conversations under the guidance of a native speaker for three contact hours a week.]

[JAVA 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. Not offered 2001–2002. J. Wolff.
Taught on a specialized basis to address particular student needs. Times arranged with instructor.]

Khmer (Cambodian)

KHMER 101–102 Elementary Khmer
101, fall; 102, spring. 6 credits each term. *KHMER102 provides language qualification.* Prerequisite: for KHMER 102, KHMER 101 or equivalent. S. Son.
A course for beginners or for those who have been placed in the course by examination. The course gives a thorough grounding in speaking and reading.

KHMER [201]–202 Intermediate Khmer Reading @
201, not offered 2001–2002; 202, fall. 3 credits each term. *KHMER 201 provides language proficiency.* Prerequisites: for KHMER 201, KHMER 102; for KHMER 202, KHMER 201. S. Son.
Continuing instruction in spoken and written Khmer.

[KHMER 203–204 Intermediate Composition and Conversation @
203, fall; 204, spring. 3 credits each term. *KHMER 203 provides language proficiency.* Prerequisites: for KHMER 203, KHMER 102; for KHMER 204, KHMER 203. Not offered 2001–2002. Staff.
Letter writing and other forms of composition.]

KHMER 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. S. Son.
Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

KHMER 301–302 Advanced Khmer
301, 302, fall. 4 credits each term. Prerequisites: for KHMER 301, KHMER 202 or equivalent; for KHMER 302, KHMER 301. S. Son.
Continuing instruction in spoken and written Khmer; emphasis on enlarging vocabulary, increasing reading speed, and reading various genres and styles of prose.

[KHMER 401–402 Directed Individual Study
401, fall; 402, spring. For advanced students. 2–4 credits each term. Prerequisite: permission of instructor. Not offered 2001–2002. Staff.
Various topics according to need.]

Korean

KOREA 101–102 Elementary Korean
101, fall; 102, spring. 6 credits each term. *KOREA 102 provides language qualification.* Satisfactory completion of KOREA 102 fulfills the qualification portion of the language requirement. H. Diffloth and staff.
Covers basics of speaking, reading, and writing. Introduces Hangul writing system and grammar.

KOREA 109–110 Elementary Reading
109, fall; 110, spring. 3 credits each term. *KOREA 110 provides language qualification.* Prerequisite: permission of instructor. Satisfactory completion of KOREA 110 fulfills the qualification portion of the language requirement. H. Diffloth and staff.
This course is for students who have spoken some Korean in the home, but whose reading and writing skills are limited or nonexistent. If in doubt about eligibility, see instructor.

KOREA 201–202 Intermediate Korean @
201, fall; 202, spring. 4 credits each term. *KOREA 201 provides language proficiency.* Prerequisites: for KOREA 201, KOREA 102 or permission of instructor; for KOREA 202, KOREA 201. Satisfactory completion of KOREA 201 fulfills the proficiency portion of the language requirement. H. Diffloth and staff.
Covers the basics of speaking, reading, and writing at the intermediate level. Introduces some reading and writing with Chinese characters.

KOREA 209–210 Intermediate Reading @
209, fall; 210, spring. 4 credits each term. *KOREA 209 provides language proficiency.* Prerequisites: for KOREA 209, KOREA 110 or permission of instructor; for KOREA 210, KOREA 209 or permission of instructor. H. Diffloth and staff.
An intermediate level of reading comprehension and writing course for students who have acquired basic oral proficiency. Introduces some reading and writing with Chinese characters. If in doubt about eligibility, see instructor.

KOREA 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. H. Diffloth.
Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

KOREA 301–302 Advanced Korean
301, fall; 302, spring. 4 credits each term. Prerequisites: for KOREA 301, KOREA 202 or placement by instructor; for KOREA 302, KOREA 301 or placement by instructor. H. Diffloth and staff.
Reading of advanced texts, including newspapers and Chinese character material, together with advanced use of the spoken language.

KOREA 430 Structure of Korean (also LING 430)
Spring. 4 credits. Offered alternate years. J. Whitman.
See description under LING 430.

Literature in Korean

KRLIT 405 Readings in Korean Literature
Fall. 4 credits. Prerequisite: three years of Korean language study or permission of instructor. M. Shin.
Reading of a variety of prose works in modern Korean. Assignments are chosen from newspapers, magazines, short stories, novels, and academic texts.

[KRLIT 406 Korean Literature Translation Workshop @
Spring. 2–3 credits. Prerequisite: KOREA 301–302 or equivalent; permission of instructor. Not offered 2001–2002.]

Nepali

Study Abroad in Nepal

Cornell and the central campus of the Nepalese national university—Tribhuvan—at Kirtipur, Kathmandu, co-sponsor an academic year in Nepal. North American students study and live with Nepalese students who come from outside the Kathmandu Valley to Tribhuvan University. Students may participate in one or two semesters. Courses are offered both at Tribhuvan University and at the Cornell-Nepal Study Program House adjacent to the university. All courses are officially taught in English. A five-week, in-country orientation program includes classes in intensive Nepali conversation, cultural orientation programs, and a ten-day field trip and trek. Semester course offerings include Nepali language (Tibetan and/or Newari languages also possible), contemporary issues in Nepalese studies, field research design and methods in sociology/anthropology and ecology/environment, and guided field research.

Juniors and seniors in good academic standing from any major field may participate. Students must have a desire to study on the other side of the world, to participate in a multicultural program, and to undertake rigorous field research. No experience in Nepal is necessary and instruction is in English, but some prior Nepali language study is strongly recommended. Students interested in the study abroad in Nepal program should consult with the Cornell Abroad office (474 Uris Hall) for further information.

NEPAL 101–102 Elementary Nepali
101, fall; 102, spring. 6 credits each term. *NEPAL 102 provides language qualification.* Prerequisite: for NEPAL 102, 101 or examination. S. Oja.
Intended for beginners. The emphasis is on basic grammar, speaking, and comprehension skills, using culturally appropriate materials and texts. Devanagari script for reading and writing is also introduced.

NEPAL 160 Intensive Nepali
Summer only. 6 credits. Intended for beginners. Offered alternate years. S. Oja.
Emphasis is on the spoken language, in dialogues, exercises, and conversation practice. In addition, however, special attention is given to assisting students to develop vocabularies and abilities appropriate to their unique professional needs. Reading and writing practice use both colloquial and scholarly materials in the Nepali (Devanagari) script.

NEPAL 201–202 Intermediate Nepali Conversation @
201, fall; 202, spring. 3 credits each term. *NEPAL 201 provides language proficiency.* Prerequisites: for NEPAL 201, NEPAL 102 or examination; for NEPAL 202, NEPAL 201 or examination. S. Oja.
Intermediate instruction in spoken grammar and verbal comprehension skills, with special attention to developing technical vocabularies and other verbal skills appropriate to students' professional fields.

NEPAL 203–204 Intermediate Nepali Composition @
203, fall; 204, spring. 3 credits each term. *NEPAL 203 provides language proficiency.* Prerequisites: for NEPAL 203, NEPAL 102 or examination; for NEPAL 204, NEPAL 203 or examination. S. Oja.
A systematic review of written grammar and reading comprehension, with special attention to the technical vocabularies, necessary writing skills, and published materials typical of advanced students' professional fields.

NEPAL 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. S. Oja.
Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

NEPAL 301–302 Advanced Nepali
301, fall; 302, spring. 3 credits each term. Prerequisite: NEPAL 204 or permission of instructor. S. Oja.
Reading of advanced texts, together with advanced drill on the spoken language.

Pali

See also courses listed in this section under South Asian Languages.

[PALI 131–132 Elementary Pali
131, fall; 132, spring. 3 credits each term. ***This language series cannot be used to satisfy the language requirement.*** Not offered 2001–2002. Staff.
131 is an introduction to the language of the canonical texts of Theravada Buddhism. Reading of authentic texts of Theravada Buddhism. Emphasis on both content and grammatical structure. Familiarity with Sanskrit is not required. 132 is a continuation of 131 with further readings.]

PALI 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. D. Boucher.
Taught on a specialized basis to address particular student needs. Times arranged with instructor.

Sanskrit

SANSK 131–132 Elementary Sanskrit (also CLASS 131–132 and LING 131–132)
131, fall; 132, spring. 4 credits each term. *SANSK 132 provides language qualification.* Offered alternate years. C. Minkowski.
An introduction to the essentials of Sanskrit grammar. Designed to enable the student to read classical and epic Sanskrit as quickly as possible.

[SANSK 251–252 Intermediate Sanskrit (also CLASS 251–252 and LING 251–252) @ # IV
251, fall; 252, spring. 3 credits each term. *SANSK 251 provides language proficiency.* Prerequisite: SANSK 132 or equivalent. Offered alternate years. Not offered 2001–2002. C. Minkowski.
Readings from the literature of classical Sanskrit. Fall: selections from the two Sanskrit epics, the Mahabharata and the Ramayana. Spring: more selections from the epics and selections from either Sanskrit story literature or from Sanskrit dramas.]

Literature in Sanskrit

[SNLIT 467–468 Reading in Sanskrit Literature: The Vedas @ #
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 2001–2002. C. Minkowski.
Readings in translation; readings in the original Vedic. Both courses must be taken as a sequence.]

Sinhala (Sinhalese)

SINHA 101–102 Elementary Sinhala
101, fall; 102, spring. 6 credits each term. *SINHA 102 provides language qualification.* Prerequisite: for SINHA 102, SINHA 101 or equivalent. Staff.
A semi-intensive course for beginners. A thorough grounding is given in all the language skills; listening, speaking, reading, and writing.

SINHA 160 Intensive Sinhala
Summer only. 6 credits. Intended for beginners. Offered alternate years.
Emphasis is on the spoken (colloquial) language, the writing system is introduced and used to present all Sinhala materials, with additional reading practice with colloquial materials. A foundation is laid for later study of the written language (literary Sinhala).

SINHA 201–202 Intermediate Sinhala Reading @
201, fall; 202, spring. 3 credits each term. *SINHA 201 provides language proficiency.* Prerequisites: for SINHA 201, SINHA 102; for SINHA 202, SINHA 201 or equivalent. Staff.

[SINHA 203–204 Intermediate Composition and Conversation @
203, fall; 204, spring. 3 credits each term. *SINHA 203 provides language proficiency.* Prerequisites: for SINHA 203, SINHA 102 or permission of instructor; for SINHA 204, SINHA 203 or equivalent. Not offered 2001–2002. Staff.]

SINHA 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. Staff.
Taught on a specialized basis to address particular student needs. Times arranged with instructor.

Southeast Asian Languages

[LING 230 Introduction to Southeast Asian Languages and Linguistics @ III
Fall. 3–4 credits variable. For nonmajors or majors. Not offered 2001–2002. A. Cohn, J. Wolff.
This is a survey of the languages of Southeast Asia. The goal of this course is to expose students to Southeast Asia as a linguistic area and introduce them to the rich language diversity of the region. It includes three main parts: (1) sociolinguistic and ethnolinguistic issues of language and politics, language and culture, and language use; (2) language structures and typological patterns of the area's languages; and (3) historical linguistics, as well as the linguistic effects of language contact and linguistic evidence for prehistory.]

[LING 653–654 Seminar in Southeast Asian Linguistics
653, fall; 654, spring. 4 credits each term. Prerequisite: permission of instructor. Language 653 isn't a prerequisite for Language 654. Not offered 2001–2002. J. Wolff.
Languages of mainland Southeast Asia. Topics, chosen according to student interests, may include description, dialectology, typology, comparative reconstruction, and historical studies.]

[LING 655–656 Seminar in Austronesian Linguistics (also LING 655–656)
655, fall; 656, spring. 4 credits each term. Prerequisites: for 655, permission of instructor, for 656, Language 655. Not offered 2001–2002. J. Wolff.
Descriptive and comparative studies of Malayo-Polynesian languages.]

Tagalog

TAG 121–122 Elementary Tagalog
121, fall; 122, spring. 4 credits each term. Prerequisite: for TAG 122, TAG 121. Staff.
A thorough grounding is given in basic speaking and listening skills with an introduction to reading.

TAG 123 Continuing Tagalog
Fall. 4 credits. *Provides language qualification.* Prerequisite: TAG 122 or equivalent. Satisfactory completion of TAG 123 fulfills the qualification portion of the language requirement. J. Wolff and staff.
Improves speaking skills, such as fluency and pronunciation, focusing on verbal communication skills; offers a wide range of readings; and sharpens listening skills.

TAG 205–206 Intermediate Tagalog @
205, fall; 206, spring. 3 credits each term. *TAG 205 provides language proficiency.* Prerequisites: for TAG 205, TAG 123 or equivalent; for TAG 206, TAG 205 or equivalent. Staff.
This course develops all four skills: reading, writing, speaking, and comprehension.

TAG 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. Staff.
Taught on a specialized basis to address particular student needs. Times arranged with instructor.

Thai

THAI 101–102 Elementary Thai
101, fall; 102, spring. 6 credits each term. *THAI 102 provides language qualification.* Prerequisite: for THAI 102, THAI 101 or equivalent. Intended for beginners or students placed by examination. N. Jagacinski.

A thorough grounding is given in all the language skills: listening, speaking, reading, and writing.

THAI 201–202 Intermediate Thai Reading @
201, fall; 202, spring. 3 credits each term. *THAI 201 provides language proficiency*. Prerequisites: for THAI 201, THAI 102; for THAI 202, THAI 201 or equivalent. N. Jagacinski.
Continuing instruction in spoken and written Thai.

THAI 203–204 Intermediate Composition and Conversation @
203, fall; 204, spring. 3 credits each term. *THAI 203 provides language proficiency*. Prerequisites: for THAI 203, THAI 102; for THAI 204, THAI 203. N. Jagacinski.
Intermediate instruction in spoken and written grammar and reading comprehension.

THAI 301–302 Advanced Thai
301, fall; 302, spring. 4 credits each term. Prerequisite: THAI 202 or equivalent. N. Jagacinski.
Selected readings in Thai writings in various fields.

THAI 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. N. Jagacinski.
Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

THAI 303–304 Thai Literature @
303, fall; 304, spring. 4 credits each term. Prerequisite: THAI 302 or equivalent. N. Jagacinski.
Reading of significant novels, short stories, and poetry written since 1850.

THAI 401–402 Directed Individual Study
401, fall; 402, spring. 4 credits each term. For advanced students or students with special problems or interests. Prerequisite: permission of instructor. N. Jagacinski.

Urdu

See listings under Hindi.

URDU 125 Introduction to the Urdu Script
Spring. 1 credits. Prerequisite: HINDI 101 or permission of instructor. M. Farooqi.
This course provides instruction in the basics of the Urdu script. It is intended primarily for students who have had some exposure to Urdu or Hindi but who have had little or **no** formal training in the script. The course focuses on mastering the script and pronunciation. It does not provide instruction in grammar.

Vietnamese

VIET 101–102 Elementary Vietnamese
101, fall; 102, spring. 6 credits each term. *VIET 102 provides language qualification.* Prerequisite: for VIET 102, VIET 101 or equivalent. Intended for beginners or students placed by examination. Satisfactory completion of VIET 102 fulfills the qualification portion of the language requirement. T. Tranviet.
A thorough grounding is given in all language skills: listening, speaking, reading, and writing.

VIET 201–202 Intermediate Vietnamese @
201, fall; 202, spring. 3 credits each term. *VIET 201 provides language proficiency.* Prerequisites: for VIET 201, VIET 102 or equivalent; for VIET 202, VIET 201. T. Tranviet.
Continuing instruction in spoken and written Vietnamese.

VIET 203–204 Intermediate Vietnamese Composition and Reading @
203, fall; 204, spring. 3 credits each term. *VIET 203 provides language proficiency.* Prerequisite: permission of instructor only. T. Tranviet.
Designed for students and "native" speakers of Vietnamese whose speaking and listening are at the advanced level, but who still need to improve writing and reading skills.

VIET 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. T. Tranviet.
Taught on a specialized basis to address particular student needs. Times arranged with instructor.

VIET 301–302 Advanced Vietnamese
301, fall or spring; 302, fall or spring. 3 credits each term. Prerequisites: for VIET 301, VIET 202 or permission of instructor; for VIET 302, VIET 301. T. Tranviet.
Continuing instruction in spoken and written Vietnamese; emphasis on enlarging vocabulary, increasing reading speed, and reading various genres and styles of prose.

VIET 401–402 Directed Individual Study
401, fall; 402, spring. 2–4 credits variable each term. Prerequisite: permission of instructor. Intended for advanced students. T. Tranviet.
Various topics according to need.

[VTLIT 222–223 Introduction to Classical Vietnamese @ #
222, fall; 223, spring. 3 credits. *VTLIT 222 provides language proficiency.* Prerequisite: qualification in Vietnamese or permission of instructor. Not offered 2001–2002. K. Taylor.
This is the first semester of a two-semester sequence of courses introducing students to Han (Classical Chinese as used in the Vietnamese language) and Nom (vernacular Vietnamese character writing). Students learn to read Han and Nom texts, mostly from the seventeenth through nineteenth centuries, including historical records, prose writings, and poetry.]

[VTLIT 224 Continuing Classical Vietnamese @ #
Fall. 3 credits. Not offered 2001–2002. K. Taylor.
This course continues study for students who have completed VTLIT 222–223 "Introduction to Classical Vietnamese."]

Related Courses in Other Departments and Colleges

Check the primary department section for the offering status of the following courses. Courses in other colleges will count as College of Arts and Sciences credit only for Asian Studies majors.

ASTRONOMY

J. F. Veverka, chair (312 Space Sciences Building, 255–3507); M. P. Haynes, director of undergraduate studies (530 Space Sciences Building 255–0610); J. F. Bell, J. A. Burns, D. B. Campbell, D. F. Chernoff, J. M. Cordes, S. S. Eikenberry, E. E. Flanagan, P. J. Gierasch, R. Giovanelli, P. F. Goldsmith, T. L. Herter, J. R. Houck, D. Lai, R. V. E. Lovelace, P. D. Nicholson, C. J. Salter, S. W. Squyres, G. J. Stacey, Y. Terzian, S. A. Teukolsky, I. M. Wasserman. Emeritus: T. Gold, T. Hagfors, M. O. Harwit, E. E. Salpeter

Cornell's astronomy faculty, research staff, graduate, and undergraduate students are active in diverse areas of modern astronomy ranging from theoretical astrophysics and general relativity to radio and radar astronomy, infrared and optical astronomy, and the exploration of the solar system. Cornell operates two local optical observatories, the world's largest radio telescope at Arecibo, Puerto Rico, and with two other institutions, the 200-inch optical telescope at Mt. Palomar in California. Several members of the department faculty are also Principal Investigators on major NASA space and planetary exploration missions.

The department offers a number of courses to satisfy a general interest in astronomy. These courses have few or no prerequisites and are not intended for the training of professional astronomers. Among the introductory courses, several choices are available, depending on background and on the requirements to be fulfilled. The 100-level courses are designed primarily for nonscience majors. The alternative introductory sequence Astronomy 211–212 is geared toward sophomore physical science and engineering majors and requires coregistration in beginning calculus. Astronomy 201 and 202 are intended for students with an interest in astronomy but no scientific background; they are topical rather than survey-oriented. Astronomy 332 is designed for physical science and engineering majors as an introduction to astrophysics. Other courses at the 200 and 300 levels may appeal to students of various backgrounds and interests, as indicated in the individual course descriptions.

Courses numbered above 400 are intended for students who have had two to three years of college physics and at least two years of college mathematics. Astronomy 440, Independent Study, permits students to engage in individual research projects under the guidance of a faculty member.

Interested students are encouraged to become members of the undergraduate Cornell Astronomy Club. The club has access to the Fuertes Observatory on campus and conducts regular observing and astrophotography sessions. All students are invited to visit the Space Sciences Building, see the exhibits on display there, and consult faculty members about career plans or choice of courses.

The Major

The purpose of the major in astronomy is to provide in-depth knowledge and education about the nature of the universe. Astronomy relies heavily on preparation in physics and mathematics. Consequently, many courses in these fields are included as prerequisites. In preparation for the major, students normally elect the introductory physics sequence PHYS 112–213–214 or 116–217–218 and the complementary pathway in mathematics, MATH 111–122–221–222 or 191–192–293–294 (or equivalent). Students who anticipate undertaking graduate study are urged to elect the honors physics sequence PHYS 116–217–218–318–327 if possible. The sophomore seminar, ASTRO 233 "Topics in Astronomy and Astrophysics," provides an introduction to current research in astronomy and astrophysics for prospective majors, but is not required of students who elect to major in astronomy after the sophomore year. Students are also urged to acquire computer literacy. ASTRO 234 is designed to give students hands-on experience with the methods of analysis, visualization, and simulation needed in astrophysical research. Acceptance to the major is first considered after completion of three semesters of introductory physics and mathematics and in general requires a GPA of 3.2 in physics and mathematics courses.

The major requirements stress the importance of building a strong preparation in physical science. The following upper level courses are normally required:

PHYS 314 or 318, 316, 323 or 327, 341 and 443

A&EP 321–322 (or equivalent, e.g. MATH 420 and 422)

ASTRO 410, 431, and 432.

Upon consent of the major adviser, students interested in planetary studies may substitute appropriate advanced courses or may pursue an independent major under the program in the Science of Earth Systems. Majors are encouraged to supplement the above courses with any astronomy, physics, or other appropriate courses at or above the 300 level. Advanced seniors can enroll in astronomy graduate courses with the consent of the instructor. Students are also encouraged to work with faculty members on independent study projects under the course ASTRO 440 or to apply to a variety of programs at Cornell, Arecibo, and elsewhere that offer undergradu-

ates summer employment as research assistants. Nearly all undergraduate majors and concentrators become involved in research projects in the junior and senior years.

Students whose interest in astronomy is sparked somewhat late in their undergraduate career are encouraged to discuss possible paths with the Director of Undergraduate Studies in Astronomy.

Honors. A student may be granted honors in astronomy upon the recommendation of the Astronomy Advisers Committee of the astronomy faculty.

Double majors. A double major in astronomy and another subject is possible in many circumstances. However, the set of courses used to fulfill the requirements for each major must be completely independent.

Concentration. The concentration in astronomy for other majors normally requires 12 credits, at least eight of which must be at the 300 level or above. ASTRO 233 and 234 are recommended for sophomores planning to concentrate in astronomy.

Distribution Requirement

All courses in astronomy, except ASTRO 233 and 234, may be used to fulfill the science distribution requirement in the College of Arts and Sciences.

Courses

ASTRO 101 The Nature of the Universe (I)
Fall. 4 credits. No prerequisites. Labs limited to 18 students each and discussions limited to 30 students each. T. Herter, labs: J. Houck.
This course introduces students to the cosmos. The birth, evolution, and death of stars, the formation of the chemical elements, and the nature of white dwarfs, neutron stars, and black holes are discussed. An introduction to the theories of special relativity and general relativity is given. The course covers the search for other worlds outside the solar system and the possible existence of life and intelligence elsewhere in the universe. Modern theories of cosmology are presented, and the origin, structure, and fate of the universe are discussed. The full notes for the course as well as sample exams and simulations are made available on the web.

ASTRO 102 Our Solar System (I)
Spring. 4 credits. Labs limited to 18 students each; discussions limited to 30 students each. J. Bell; labs: J. Houck.
The past few decades have seen incredible advances in the exploration of our solar system. In this course students learn about the current state and past evolution of the Sun and its family of planets, moons, asteroids, and comets. The course emphasizes images and other data obtained from current and past NASA space missions and how these data provide insights about the important processes that have shaped the evolution of solar system objects. General astronomical concepts relevant to the study of the solar system are also discussed. Critical focus is on developing an understanding of the Earth as a planetary body and discovering how studies of other planets and satellites influence models of the climatic, geologic, and biologic history of our home world. Other topics covered include impact hazards, the search for life in the solar system, and future missions.

ASTRO 103 The Nature of the Universe (I)
Fall. 3 credits. T. Herter.
Identical to ASTRO 101 except for omission of the laboratory (see description above).

ASTRO 104 Our Solar System (I)
Spring. 3 credits. J. Bell.
Identical to ASTRO 102 except for omission of the laboratory.

ASTRO 105 An Introduction to the Universe (I)
Summer. 3 credits. J. Harrington.
How do we measure the size of our galaxy and the size of the universe? Is the universe round or flat? How are the stars born, why do they shine, and how do they die? What are the chemical elements, and how were they formed in stars? What are quasars, pulsars, and black holes? How was the solar system formed? What are the environments of other planets like? What is the basic structure of Earth and the other planets? Will we catastrophically alter the earth? Does life exist elsewhere in the universe? How can we find out? Each student has an opportunity to make observations with small telescopes.

ASTRO 106 Essential Ideas in Relativity and Cosmology (I)
Summer. 3 credits. Prerequisites: high school algebra and trigonometry. R. A. Saenz.
An explanation of Einstein's theories of special and general relativity, which brought about a fundamental change in our conceptual understanding of space and time. Correspondence to, and conflicts with, common sense. Applications to various areas in special relativity space travel, the equivalence of mass and energy, nuclear fission and fusion, and thermonuclear processes in the sun and in general relativity (motion of light and particles in curved space-time, cosmological models, and the question of whether the universe is open or closed).

ASTRO 107 An Introduction to the Universe (I)
Summer. 4 credits. J. Harrington.
Identical to ASTRO 105 except for the addition of the afternoon laboratory that emphasizes mathematical problem-solving. This option is recommended for potential majors in science and engineering.

ASTRO 195 Observational Astronomy (I)
Fall. 3 credits. Limited to 24 students. G. Stacey.
This course provides a "hands-on" introduction to observational astronomy intended for liberal arts students at the freshman and sophomore level. High school mathematics is assumed, but otherwise there are no formal prerequisites. The course objective is to teach how we know what we know about the universe. The course is set up with two lectures and one evening laboratory per week. Not all of the evening sessions will be used. Planned exercises include five or six observational labs (star gazing with binoculars and small telescopes, telescopic observations and CCD imaging of star clusters, nebulae, and the planets, solar observations, radio observations of the Milky Way Galaxy), plus a selection of exercises from the following: experiments in navigating by the stars; construction and use of simple instruments such as optical spectroscopes and sun dials; laboratory spectroscopy; experiments in planetary cratering; collection and study of micrometeorites; computer simulations of the orbits of planets and their satellites; and cosmological explorations using data from the Hubble Space Telescope available on the web.

ASTRO 201 Our Home in the Universe (I)
Fall. 3 credits. Assumes no scientific background. Course intended for freshmen and sophomores. R. Giovanelli, M. Haynes.
A general discussion of our relation to the physical universe and how our view of the universe has changed from ancient to modern times. Several main themes are covered over the course of the semester: the evolution of our view of the sky from that of ancient cultures to that of space telescopes; the death of stars and the formation of black holes; dark matter and the structure of galaxies; and the origin, evolution, and fate of the universe. We present a nonmathematical introduction to these subjects and discuss uncertainties and unresolved issues in our understanding.

ASTRO 202 Our Home in the Solar System (I)
Spring. 3 credits. Prerequisite: some background in science is required. Course intended for freshmen and sophomores. J. Veverka.
This writing course is designed to develop an understanding of our home planet as a member of a diverse family of objects in our solar system. Discussion centers on how studies of other planets and satellites have broadened our knowledge and perspective of Earth, and vice versa. We study, debate, and learn to write critically about important issues in science and public policy that benefit from this perspective. Topics discussed include global warming, the impact threat, the searches for extrasolar planets and extraterrestrial intelligence and the exploration of Mars.

ASTRO 211 Astronomy: Stars, Galaxies, and Cosmology (I)
Fall. 4 credits. Intended for engineering and physical sciences freshmen and sophomores. Prerequisite: introductory calculus or coregistration in MATH 111 or 191. D. Lai.
The formation and evolution of normal stars, supernovae, pulsars, and black holes. The interstellar medium. Cosmology and the structure and evolution of galaxies.

ASTRO 212 The Solar System: Planets, Satellites, and Rings (I)
Spring. 4 credits. Intended for first and second year engineering and physical sciences students. Prerequisite: introductory calculus or coregistration in MATH 111 or 191; some knowledge of classical physics (mechanics and thermodynamics). S. Squyres.
An introduction to the solar system, with emphasis on the application of simple physical principles. Topics include: the Sun, nucleosynthesis of the elements, radioactive dating, seismology and planetary interiors, planetary surfaces and atmospheres including greenhouse models, orbital mechanics and resonances, interrelations between meteorites, asteroids and comets, the Jovian planets, icy moons and ring systems, and the search for extra-solar planets.

ASTRO 233 Topics in Astronomy and Astrophysics
Fall. 2 credits. Prerequisites: PHYS 112 or 116 and 213 or 217, MATH 112, 122, or 192, or permission of instructor. Intended for sophomores planning to major in astronomy or related fields. M. Haynes, R. Giovanelli.
A seminar course on selected topics in astronomy and astrophysics designed for prospective astronomy majors. Content varies from year to year, but includes topics from the fields of planetary, galactic, and extragalactic research.

ASTRO 234 Modern Astrophysical Techniques
Spring. 2 credits. Prerequisites: 2 semesters of introductory physics and 2 semesters of calculus plus ASTRO 233 or permission of instructor. Some experience with computer programming expected. Intended for sophomores majoring or concentrating in astronomy or related fields. S. Eikenberry.
The course reviews the basic techniques employed in astrophysical research, both observational and theoretical, to explore the universe. Basic methods and strategies of data acquisition and image and signal processing are discussed. Students gain hands-on experience with visualization techniques and methods of error analysis, data fitting, and numerical simulation. Exercises address the processes by which astrophysicists piece together observations made with today's foremost astronomical instruments to solve questions concerning the origin of planets, stars, galaxies, and the universe itself.

ASTRO 280 Space Exploration (I)
Fall. 3 credits. S. Squyres.
This course provides an overview of space science, with particular emphasis on the solar system, and a detailed examination of a few selected objects, including the planet Mars, the satellites in the outer solar system, and comets. The focus is on methods of collecting information and especially on spacecraft and space missions. Topics include the design and limitations of instruments. Ethical and political questions associated with space exploration are discussed. Intended for students with an interest in science, technology, and associated policy issues. No special background in physical sciences, math, or engineering is assumed.

[ASTRO 290 Relativity and Astrophysics (I)
Spring. 4 credits. Prerequisites: knowledge of freshman physics, calculus, and geometry. Not offered 2001–2002. I. Wasserman.
This course provides a geometrically based introduction to special and general relativity, followed by consideration of astrophysical applications. Includes discussion of tests of Einstein's theory of space, time, and gravitation; the physics of white dwarfs, neutron stars, and black holes; an introduction to modern cosmology.]

[ASTRO 299 Search for Life in the Universe (I)
Spring. 4 credits. Prerequisites: 2 courses in any physical science subject or permission of instructors. Not offered 2001–2002. J. Cordes, Y. Terzian.
The contents of the universe is surveyed. Theories of cosmic and stellar evolution, and of the formation and evolution of planetary systems, planetary atmospheres, and surfaces are reviewed. Questions regarding the evolution of life and the development of technology are discussed. Methods to detect extraterrestrial life with emphasis on radio telescopes and associated instrumentation are presented. Hypothetical communication systems are developed and discussed.]

ASTRO 331 Climate Dynamics (also EAS 331) (I)
Fall. 4 credits. Prerequisite: MATH 112 or 192 or equivalent *or* instructor's approval. K. Cook, P. Gierasch
Processes that determine climate and contribute to its change are discussed, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Contemporary climate change issues are investigated and discussed in the context of natural variability of the system.

ASTRO 332 Elements of Astrophysics (I)
Spring. 4 credits. Prerequisites: MATH 112, 122, 192, or equivalent. PHYS 213 or 217. P. Nicholson.
An introduction to astronomy, with emphasis on the application of physics to the study of the universe. Covers: physical laws of radiation; distance, size, mass, and age of stars, galaxies, and the universe; stellar evolution and nucleosynthesis; supernovae, pulsars, and black holes; galaxies and quasars. Introduction to cosmology. Mainly intended for students of science, engineering, and science education interested in astronomy and astrophysics.

ASTRO 342 Atmospheric Dynamics (also EAS 342) (I)
Spring. 3 credits. Prerequisites: 1 year each of calculus and physics. K. H. Cook, P. J. Gierasch.
Introduction to atmospheric dynamics and to the methods of description and quantitative analysis used in meteorology. Topics considered include: equations of atmospheric motion, vertical variations of wind and pressure fields, mathematical representation and characteristics of fronts, concepts of circulation and vorticity, and effects of friction on atmospheric motion. Applications and illustrations are drawn from both terrestrial and planetary examples.

ASTRO 410 Experimental Astronomy (I)
Fall. 4 credits. Prerequisites: PHYS 214/8 (or 310 or 360), PHYS 323/7 (or coregistration) or permission of instructor. J. Houck, S. Eikenberry, P. Goldsmith.
Observational astrophysics. Major experiments involve techniques in CCD (charge-coupled-device) imaging, optical photometry, optical spectroscopy, radiometry, radio spectroscopy and radio astronomy. The experiments involve use of the Hartung-Boothroyd Observatory's 24-inch telescope, a laboratory two-element radio interferometer, and a radio telescope mounted on top of the Space Sciences Building. The laboratory covers the fundamentals of using astronomical instrumentation and data analysis as applied to celestial phenomena: asteroids, normal stars, supernova remnants, globular clusters, planetary nebulae, the interstellar medium, OH masers, and galaxies.

ASTRO 431 Introduction to Astrophysics and Space Sciences (I)
Fall. 4 credits. Prerequisites: mathematics above the 200 level and physics above the 300 level; PHYS 443 is recommended. I. Wasserman.
A systematic development of modern astrophysical concepts for physical science majors. Stellar structure and evolution, stellar atmospheres, compact objects (white dwarf, neutron star, and black holes), planets, and brown dwarfs. Current research problems in these areas are introduced along the way. The emphasis is on using fundamental physics principles to explain astronomical phenomena. A variety of physics, including elements of general relativity, nuclear physics, solid state physics and fluid mechanics, are introduced or reviewed in a quick, practical fashion and put into use in solving astrophysics puzzles.

ASTRO 432 Introduction to Astrophysics and Space Sciences II (I)
Spring. 4 credits. Prerequisite: ASTRO 431 or permission of instructor. D. Chernoff.
This course is divided into two broad topics; the astrophysics of the interstellar medium and cosmology. The interstellar medium section covers thermal equilibrium and radiative transport in HII regions, atomic gas regions, and molecular clouds. The cosmology section includes expansion of the universe, metrics, Friedmann equations, dark matter, cosmological tests, the early universe, and the cosmological production of the elements.

[ASTRO 434 The Evolution of Planets (I)
Spring. 4 credits. Not offered 2001–2002. Staff.
An introduction to the physical and chemical processes that have been active in altering the environments of planets and satellites from their original to their present state. Theories of the formation of the solar system are revealed with special emphasis on chemical differentiation of the primeval solar nebula. A critical assessment is made of how well the various theories account for the clues left in the meteorite record and how well they explain the current environments of the planets and satellites. The main ideas about the formation and evolution of terrestrial planets, satellite systems, and asteroids are considered in detail. Some specific topics included are the history of the earth-moon system, the probable evolution of Jupiter's Galilean satellites, and the comparative histories of Venus, Earth, and Mars.]

ASTRO 440 Independent Study in Astronomy
Fall or spring. 2–4 credits. Prerequisite: permission of instructor. Recommended: familiarity with the topics covered in ASTRO 332, 431, or 434.
Individuals work on selected topics. A program of study is devised by the student and instructor. Students need to fill out an independent study form, have it signed by the instructor, and register in the department office, 610 Space Sciences Building.

ASTRO 490 Senior Seminar Critical Thinking (I)
Fall. 3 credits. Y. Terzian.
Critical thinking in scientific and nonscientific contexts. Topics include elements of classical logic, including standards of evidence and paradoxes. Case studies include examples of competing hypotheses in the history of science, as well as examples from borderline sciences. Stress will be put on creative generation of alternative hypotheses and their winnowing by critical scrutiny. Topics include the nature and history of the universe, the nature of time, the nature of reality, the possibilities of life on other planets, and

artificial intelligence. The course includes debates by the students.

[ASTRO 509 General Relativity
Fall. 4 credits. Not offered 2001–2002. E. Flanagan.
For description, see PHYS 553.]

[ASTRO 510 Applications of General Relativity
Spring. 4 credits. Not offered 2001–2002. E. Flanagan.
For description, see PHYS 554.]

[ASTRO 511 Physics of Black Holes, White Dwarfs, and Neutron Stars (also PHYS 525)
Fall. 4 credits. The minimum prerequisites for this course are all of the physics at the upper division undergraduate level. Not offered 2001–2002. D. Lai.
Compact objects (neutron stars, black holes and white dwarfs) are the endpoints of stellar evolution. They are responsible for some of the most exotic phenomena in the universe including: supernova explosion, radio pulsars, bright X-ray binaries, magnetars, gamma-ray bursts, and so on. Supermassive black holes also lie at the heart of the violent processes in active galactic nuclei and quasars. The study of compact objects allows one to probe physics under extreme conditions (high densities, strong magnetic fields, and gravity). This course surveys the astrophysics of compact stars and related subjects. Emphasis is on the application of diverse theoretical physics tools to various observations of compact stars. There are no astronomy or general relativity prerequisites. At the level of *Physics of Black Holes, White Dwarfs, and Neutron Stars* by Shapiro and Teukolsky.]

ASTRO 516 Galactic Structure and Stellar Dynamics (I)
Fall. 4 credits. D. Chernoff.
This course is an introduction to the study of the structure of galaxies via the laws of modern physics. Topics include the observed kinematics and spatial distribution of stars in the vicinity of the Sun, shapes and properties of stellar orbits, the gravitational N-body problem, collisional relaxation in stellar systems, spiral structure, galaxy classification and evolution, and cosmological results in galaxy formation.

ASTRO 520 Radio Astronomy
Fall. 4 credits. D. Campbell, P. Goldsmith.
Covers radio astronomy telescopes and electronics; antenna theory; observing procedures and data analysis; concepts of interferometry and aperture synthesis.

[ASTRO 523 Signal Modeling, Statistical Inference, and Data Mining in Astronomy
Spring. 4 credits. Not offered 2001–2002. J. Cordes.
The course aims to provide tools for modeling and detection of various kinds of signals encountered in the physical sciences and engineering. Data mining and statistical inference from large and diverse databases are also covered. Experimental design is to be discussed. Basic topics covered include: probability theory; Fourier analysis of continuous and discrete signals; digital filtering; matched filtering and pattern recognition; spectral analysis; Karhunen-Loeve analysis; wavelets; parameter estimation; optimization techniques; Bayesian statistical inference; deterministic, chaotic, and stochastic processes; image formation and analysis; maximum entropy techniques. Specific applications are chosen from current areas of interest in astronomy, where large-scale surveys throughout the electromagnetic spectrum and using non-electromagnetic signals (e.g., neutrinos and gravitational waves) are ongoing and anticipated. Applications are also chosen from topics in geophysics, plasma physics, electronics, artificial intelligence, expert systems, and genetic programming. The course is self-contained and is intended for students with thorough backgrounds in the physical sciences or engineering.]

ASTRO 525 Techniques of Optical/ Infrared and Submillimeter Astronomy
Spring. 4 credits. T. Herter, G. Stacey.
Optical/infrared and submillimeter telescopes and instrumentation are discussed and related to current research in these fields. The course includes telescope design and general optical design (ray tracing). CCD, photoconductor, photovoltaic, bolometer, impurity band conduction, and heterodyne detection systems are presented. The instrumentation discussion includes general instrument design and specific applications to cameras, spectrographs, and interferometers. Detection limits of various systems, cryogenic techniques, and astronomical data anlaysis techniques are also discussed. Special topics include speckle interferometry and adaptive optics.

ASTRO 530 Astrophysical Processes
Spring. 4 credits. D. Lai.
Thermal and nonthermal radiation processes encountered in studies of stars, the interstellar and intergalactic media, galaxies, and quasars. Fundamentals of radiative transfer, bremsstrahlung, synchrotron radiation, and Compton scattering are covered, as well as spectral line transfer, gas heating and cooling, and topics in atomic and molecular spectroscopy. These topics are discussed within the framework of astrophysical situations, such as star formation, interstellar gas and dust clouds, jets, active galactic nuclei, clusters of galaxies and cosmology.

[ASTRO 555 Theory of the Interstellar Medium
Spring. 4 credits. Not offered 2001–2002.
Covers global theories of the interstellar medium-mass and energy exchange between the different phases; the role of shock waves and energic outflows in the thermal equilibrium and ionization state of gas in the galaxy; basic astrophysical fluids and plasmas; galactic dynamics; and observation techiques, current problems and results.]

[ASTRO 560 Theory of Stellar Structure and Evolution (also PHYS 667)
Spring. 4 credits. Not offered 2001–2002.
This course is intended to provide a systematic development of stellar astrophysics, both theory and observations. Topics include: hydrostatic equilibrium; equation of state; radiation transfer and atmospheres; convection and stellar turbulence; nuclear burning and nucleosythesis; solar neutrinos; star formation; pre-main sequence stars; brown dwarfs; end states of stellar evolution (white dwarfs, neutron stars and black holes); supernovae; interacting binary stars; stellar rotation and magnetic fields; stellar pulsations; winds and outflows. The prerequisites for the course are all undergraduate level physics. Though helpful, no astronomy background is required.]

ASTRO 570 Physics of the Planets
Fall. 4 credits. P. Nicholson.
An introductory survey of planetary science with an emphasis on the application of physical principles. Planetary dynamics, including satellite orbits, tidal interactions, resonances, and ring dynamics. An introduction to the theory of planetary interiors, gravitational fields, heat sources, and rotational mechanics. Physics of planetary atmospheres, including radiative transfer, convection, and thermal structure. Important observational results, including those of ground-based optical, infrared, radio, and radar astronomy, as well as those made by spacecraft, are discussed. Intended for graduate students and seniors in astronomy, physics, and engineering.

[ASTRO 571 Mechanics of the Solar System (also T&AM 673)
Spring. 3 credits. Not offered 2001–2002. J. Burns.
Course topics include: gravitational potential, planetary gravity fields; free and forced rotations; Chandler wobble, polar wander, damping of nutation; equilibrium tidal theory, tidal heating; orbital evolution of natural satellites, resonances, spin-orbit coupling; Cassini states; long-term variations in planetary orbits; orbital and rotational chaos; dust dynamics; dynamics of ring systems; and seismic waves, free oscillations. Illustrative examples are drawn from contemporary research.]

[ASTRO 579 Celestial Mechanics
Fall. 3 credits. Not offered 2001–2002.
For description, See T&AM 672.]

[ASTRO 590 Galaxies and the Universe
Spring. 4 credits. Not offered 2001–2002. M. Haynes, T. Herter.
The universe, its constituents, its large-scale structure, and its history in the light of the major thrusts of extragalactic research. The morphology, photometry, dynamics, and kinematics of galaxies and their subsystems. Determination of masses, mass-to-light ratios, and the "missing mass." Activity in Seyferts, radio galaxies, and quasars. Binaries, groups, clusters, and superclusters. The extragalactic distance scale. Galaxy formation and evolution. Confrontation of cosmological theories with observational results.]

ASTRO 599 Cosmology (also PHYS 599)
Fall. 4 credits. Prerequisites: statistical physics, quantum mechanics and electromagnetic theory. I. Wasserman.
This course is intended to provide a detailed theoretical development of current ideas in cosmology. Topics include observational overview; growth of irregularities, galaxy formation, and clustering; big bang cosmology, recombination, nucleosynthesis; very early universe, symmetry breaking, inflationary scenarios. At the level of Peebles, *Principles of Physical Cosmology*.

[ASTRO 620 Seminar: Advanced Radio Astronomy
Fall. 2 credits. Prerequisites: some background in astronomical spectroscopy suggested. Open to advanced undergraduates by permission of instructor. W 2:30–4:30. Not offered 2001–2002.
Selected topics in the application of spectroscopic techniques from the infrared through radio regime to studies of the "dark ages" and the origin of galaxies, stars, and planets. We emphasize the processes of star formation

from the earliest times to the current circumstances of stellar and planetary formation in the Milky Way and other galaxies. Discussions include the potential of new facilities including the Arecibo and Green Bank telescopes, the Expanded VLA, the Atacama Large Millimeter Array, the Large Millimeter Telescope, the Square Kilometer Array, SIRTF, and the Cornell Atacama Telescope.]

ASTRO 621 Seminar: Planetary Radar Astronomy
Spring. 3 credits. Prerequisites: intended for graduate students and upper-level undergraduates in astronomy, engineering, and geology. A good background in undergraduate mathematics and physics is required. D. Campbell.
The application of radar to the study of the surfaces of planets, planetary satellites, asteroids, and comets. Topics covered target detectability and the specification of the needed antennas, transmitters, and receiving systems; data processing techniques; imaging techniques including delay-Doppler imaging, synthetic aperture radar (SAR) and interferometric SAR; target characterization from cross section, scattering laws and polarization measurements; results from earth-based and spacecraft radar observations of Mercury, Earth, the Moon, Mars, the satellites of Jupiter, the rings of Saturn, asteroids, and comets.

ASTRO 640 Advanced Study and Research
Fall or spring. Credit TBA.
Guided reading and seminars on topics not currently covered in regular courses. Students need to register in the department office, 610 Space Sciences Building.

[ASTRO 651 Atmospheric Physics (also EAS 651)
Fall. 3 credits. Not offered 2001–2002. K. Cook, S. Colucci, P. Gierasch.
For description, see SCAS 651.]

[ASTRO 652 Advanced Atmospheric Dynamics (also SCAS 652)
Spring. 3 credits. Offered alternate years, not offered 2001–2002. S. Colucci, K. Cook, P. Gierasch.
For description, see SCAS 652.]

[ASTRO 660 Cosmic Electrodynamics (also A&EP 608)
Spring. 2 credits. Not offered 2001–2002.]

ASTRO 671 Seminar: Spectroscopy of Planetary Surfaces
Fall. 3 credits. J. Bell.
Students review the physics behind remote sensing of the solid surfaces of the Moon, terrestrial planets, asteroids and comets. The class emphasizes relevant aspects of Crystal Field theory, Hapke theory, spectral analysis and classification, and measurement techniques. Examples of telescopic and spacecraft reflectance and thermal emission spectra are discussed.

ASTRO 673 Seminar: Planetary Atmospheres
Spring. 2 credits. P. Gierasch.
This course deals with motions in planetary atmospheres. Among the topics discussed are the Venus general circulation, dust and water transports on Mars, alternating jets on the outer planets, and compositional layering in the outer planets.

[ASTRO 690 Seminar: Computational Astrophysics (also PHYS 680)
Spring. 3 credits. Prerequisites: working knowledge of FORTRAN. Not offered 2001–2002. Staff.]

[ASTRO 699 Seminar: Problems in Theoretical Astrophysics (also PHYS 665)
Fall. 2 credits. Not offered 2001–2002. Staff.]

[ASTRO 699 Seminar: Observational High Energy Physics
Spring. 2 credits. ASTRO 511 (PHYS 525) is strongly recommended as a co- or prerequisite. Not offered 2001–2002. Staff.]

BIOLOGICAL SCIENCES

Biology is a popular subject at many universities for a variety of reasons: it is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences at Cornell is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Student services provided by the Office of Undergraduate Biology, 216 Stimson Hall, are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include animal physiology; biochemistry; computational biology; ecology and evolutionary biology; general biology; genetics and development; microbiology; molecular and cell biology; neurobiology and behavior; nutrition; plant biology; and systematics and biotic diversity. Students interested in the marine sciences may consult the Cornell Marine Programs Office (G14 Stimson Hall, 255–3717) for academic advice and career counseling. For more details about the biology curriculum, see the section in this catalog on Biological Sciences.

BIOLOGY AND SOCIETY MAJOR

CHEMISTRY AND CHEMICAL BIOLOGY

B. K. Carpenter, chair (122 Baker Laboratory, 255–4174); D. Y. Sogah, director of undergraduate studies; H. D. Abruña, A. C. Albrecht, B. A. Baird, T. P. Begley, J. M. Burlitch, B. K. Carpenter, R. A. Cerione, P. J. Chirik, J. C. Clardy, G. W. Coates, D. B. Collum, B. R. Crane, H. F. Davis, F. J. DiSalvo, S. E. Ealick, G. S. Ezra, R. C. Fay, J. H. Freed, B. Ganem, M. A. Hines, R. Hoffmann, P. L. Houston, S. Lee, R. F. Loring, S. T. Marcus (associate director of undergraduate studies), J. A. Marohn, T. McCarrick, J. E. McMurry, D. T. McQuade, J. Meinwald, S. O. Russo, D. Y. Sogah, D. A. Usher, B. Widom, C. F. Wilcox, P. T. Wolczanski, D. B. Zax

The Department of Chemistry and Chemical Biology offers a full range of courses in physical, organic, inorganic, analytical, theoretical, bioorganic, and biophysical chemistry. In addition to their teaching interests, Chemistry and Chemical Biology faculty members have active research programs. The link between teaching and research is a vital one in a continuously evolving scientific subject; it ensures that students will be provided with the most advanced information and perspectives, and affords opportunities for students to participate in research.

The Standard Major

The chemistry major at Cornell provides a great deal of flexibility and prepares students for a large variety of career options. In recent years, chemistry majors have gone on to graduate study in chemistry, medicine, law, and business management, as well as directly into positions with chemical, pharmaceutical, and other industrial companies. A major in chemistry can also provide the basis for work in related areas such as molecular biology, chemical physics, geochemistry, chemical engineering, materials science, solid state physics, and secondary education. Nearly all of the required courses for the major can be completed in three years, leaving the senior year open for advanced and independent work under the supervision of a professor.

The courses are arranged as a progression, with some (including mathematics and physics) prerequisite to those that are more advanced. During the first year, a student should normally register for general chemistry (preferably CHEM 215–216 although CHEM 207–208 or 206–208 is acceptable), mathematics, a freshman writing seminar, a foreign language if necessary, or physics. CHEM 215–216 is aimed at those students with good preparation and a strong interest in chemistry. Students who do not know if their preparation is adequate should consult the instructor. In the second year a student should complete calculus and take physics and organic chemistry (CHEM 359–360 is preferred to CHEM 357–358). The second-year laboratory courses include 300, Quantitative Chemistry and 301, Experimental Chemistry I. CHEM 389–390, Physical Chemistry I and II, and CHEM 302–303, Experimental Chemistry II and III, should be completed in the third year. CHEM 410 should be completed in the third or fourth year. Advanced work in chemistry and related subjects can be pursued in the fourth year and in the earlier years as well.

The opportunity for independent research is also available. All students with questions about the major are encouraged to consult the chair of the Department of Chemistry and Chemical Biology or the chair's representative. Entering students who are exceptionally well prepared in chemistry may receive advanced placement credit for CHEM 207.

Prerequisites for admission to a major in chemistry are (1) CHEM 215–216, 300; or 207–208, 300; or 211, 208, 300; or 206, 208, 300; (2) PHYS 207 or 112; and (3) MATH 111 or 191. Students are not encouraged to undertake a major in chemistry unless they have passed those prerequisite courses at a good level of proficiency. The minimum additional courses that must be completed for the standard major in chemistry are listed below.

1) CHEM 301–302–303, 359–360 (357–358 may be substituted), 389–390, and 410
2) MATH 112, 213; or 122, 221–222; or 192–293–294
3) PHYS 208

Potential majors electing to take MATH 213 are strongly urged to do so in their sophomore year to avoid scheduling conflicts with CHEM 389 in their junior year.

The sequence described above is a basic program in chemistry that students can extend substantially in whatever direction suits their own needs and interests. Those going on to do graduate work in chemistry should recognize that these requirements are minimal and should supplement their programs, where possible, with further courses such as CHEM 405, 605, 606, 665, 666, 668, and 681. Even students not planning graduate work in chemistry should consider advanced work in physics and mathematics, courses in the biological sciences, and advanced work in chemistry as possible extensions of the basic program.

Honors. The honors program in chemistry offers superior students in the standard major an opportunity to study independently in seminars and to gain additional experience by engaging in research during the senior year. It is particularly recommended to those who plan graduate work in chemistry. Prospective candidates should complete the introductory organic chemistry and physical chemistry sequences by the end of the junior year, although failure to have completed those courses in the junior year does not in itself disqualify a student from the honors program. Completion of the program at a high level of performance leads to the degree of Bachelor of Arts with honors in chemistry. Students will be admitted to the program by invitation of the department, with selection based on a superior cumulative average, including chemistry grades, and good performance in at least four credits of research at Cornell.

Prospective candidates should discuss their plans with advisers by March 1 of their junior year; participants are notified by early January of their senior year. To be awarded honors, candidates must show outstanding performance in at least eight credits of undergraduate research such as is offered in CHEM 421, 433, 461, or 477. In addition, the writing of a thesis in the honors seminar (CHEM 498) is expected.

The Alternative Major

The alternative major is a flexible program that provides core coverage of chemistry around which students can design a program to meet their own career goals. Requirements consist of a core program along with four additional courses chosen by the student. One of the four must be in chemistry at the 300 level or above; the other three may be in another field but should represent a cohesive plan and must be approved by a departmental committee.

The Core Program for the Alternative Major

1) CHEM 215–216, 300 (or 207–208, 300; or 211, 208, 300; or 206, 208, 300); 251, 257, 287, 289, and 410 (CHEM 357–358 or 359–360 can be substituted for CHEM 257, or CHEM 389–390 can be substituted for CHEM 287, thereby fulfilling the requirement for an additional 300-level chemistry course)
2) MATH 111–112; or 111, 122; or 191–192
3) PHYS 207–208; or 112, 213

Additional Courses for the Alternative Major

Possible plans for the remaining three courses might include programs in Biochemistry; Biology; Physics; Computer Science; Polymers; Materials Science; Science, Technology, and Society; History and Philosophy of Science and Technology; Business and Management; Economics; Education; and others.

Premedical students and those interested in pursuing double majors might find the alternative major particularly attractive. The course requirements for admission to the alternative major are the same as those for the standard major.

Program for Science Teachers

Chemistry majors who wish to become teachers will be interested to know that Cornell University offers a certification program for teachers of secondary (grades 7–12) science. Interested students apply to the program during their sophomore or junior years. If accepted, students integrate some course work in Education with the rest of their undergraduate studies. All chemistry majors who enter this program will remain in the College of Arts and Sciences to complete the major.

After earning the bachelor's degree, certification students enter the Graduate Field of Education to complete a fifth year of study at Cornell. Following this fifth year, students are eligible for a master's degree from Cornell and a teaching certificate from New York State. Additional information is available from Susie Slack, 424 Kennedy Hall, 255–9255 or Prof. Deborah Trumbull, 426 Kennedy Hall, 255–3108.

Laboratory Course Regulations

Students registered for laboratory courses who do not appear at the first meeting of the laboratory will forfeit their registration in that course.

Students and members of the teaching staff are required to wear safety goggles and lab aprons in all chemistry laboratories. Close-toed footwear is required (no sandals). Students are reminded to take their goggles and lab aprons to the first laboratory session. Those who fail to cooperate with the safety program will be asked to leave the laboratories.

Students are required to pay for glassware and any other items broken or missing from their laboratory desks at the close of each semester. Students who fail to inventory their desks at the appointed time in the presence of their instructor are charged a $10 fee in addition to charges for any breakage.

Courses

Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

Preliminary examinations for all courses may be given in the evening.

[CHEM 105 The Language of Chemistry (I)
Fall. 3 credits. This course contributes to satisfying the CALS physical science requirement of one course in chemistry. S-U or letter grades. Lecs, M W F 12:20. Prelims: in normal class period at 12:20 P.M. Not offered 2001–2002; next offered fall 2002. Staff.
In his autobiography, A. Kornberg (Nobel Laureate in Medicine, 1959) wrote, "much of life can be understood in rational terms if expressed in the language of chemistry. It is an international language, a language for all time, a language that explains where we came from, what we are, and where the physical world will allow us to go." Through careful examination of a few milestone investigations of naturally occurring biologically important compounds (such as the antimalarial quinine, bombykol, and the sperm attractants of algae), the principles of chemistry to which Kornberg refers are developed. Methods of analyzing chemical problems are emphasized, rather than the memorization of specific results or formulas. There is an opportunity for students, working in small groups, to prepare and present short reports on topics of particular current interest at the interface between chemistry and biology.]

CHEM 106 The World of Chemistry (I)
Spring. 3 credits. This course contributes to satisfying the CALS physical science requirement of one course in chemistry. S-U or letter grades. Lecs, M W F 1:25. Prelims: 7:30–9 P.M., March 5, April 4. R. Hoffman.
Chemistry is the art, craft, business, and science of substances and their transformations. And, ever since we've learned to look inside, we know those substances are molecular, and chemistry is also played out on the microscopic level. This is a course that looks at the way chemistry enters all aspects of the everyday world. In CHEM 106 students gain a feeling for the way science is done and grasp the interplay of chemistry and biology. They come to understand the central place of chemistry in culture and in the economy. The teaching is open and unintimidating, and there are many live demonstrations, as well as excerpts from poems, plays, and movies.

CHEM 206 Introduction to General Chemistry (I)
Fall or summer. 4 credits. Enrollment limited. Recommended for students who have not had high school chemistry and for those needing a less intensive course than CHEM 207. Lecs, M W F 11:15; lab, T R or F 8:00–11:00, or M W or F 1:25–4:25.

Prelims: 7:30–9 P.M., Oct. 11, Nov. 15. C. F. Wilcox.

An introduction to general chemistry, with emphasis on important principles and facts. CHEM 206 covers much of the same material as CHEM 207 plus the basics of chemical equilibrium, but does so at a slower pace.

CHEM 207–208 General Chemistry (I)

Fall or summer, 207; spring or summer, 208. 4 credits each term. Recommended for those students who will take further courses in chemistry. Prerequisite for CHEM 207: high school chemistry. Prerequisite for CHEM 208: CHEM 206 or 207. Lecs, T R 10:10 or 12:20; lab, T R F 8–12 or M T W R F 12:20–4:25. Prelims: 7:30–9 P.M., Oct. 11, Nov. 15, Feb. 26, April 9. Fall: J. E. McMurry; spring: M. A. Hines.

Fundamental chemical principles and descriptive facts are covered, with considerable attention given to the quantitative aspects and to the techniques important for further work in chemistry. Second-term laboratory includes a systematic study of qualitative analysis.

Note: Entering students exceptionally well prepared in chemistry may receive advanced placement credit for General Chemistry 207 by demonstrating competence in the advanced placement examination of the College Entrance Examination Board or in the departmental examination given at Cornell before classes start in the fall. Taking CHEM 208 after 215 is not recommended and can be done only with the permission of the 208 instructor.

CHEM 211 Chemistry for the Applied Sciences (I)

Fall or spring. 4 credits. Recommended for those students who intend to take only one term of chemistry. Enrollment limited. Prerequisite: high school chemistry or permission of instructor. Corequisite: a calculus course at the level of MATH 111 or 191. Lecs, fall, M W F 12:20; spring, M W F 11:15. Labs, M T W R F 1:25–4:25. Prelims: 7:30–9 P.M., Sept. 25, Oct. 25, Nov. 29, Feb. 14, Mar. 12, Apr. 11. Fall: P. T. Wolczanski; spring: J. Marohn.

Important chemical principles and facts are covered with the objective of understanding the role of chemistry in other fields. Emphasis is on topics such as solid-state materials, periodic trends, and specific classes of compounds, such as polymers.

Note: Entering students exceptionally well prepared in chemistry may receive advanced placement credit for General Chemistry by demonstrating competence in the advanced placement examination of the College Entrance Examination Board or in the departmental examination given at Cornell before classes start in the fall.

CHEM 215–216 General and Inorganic Chemistry (I)

Fall, 215; spring, 216. 4 credits each term. Recommended for students who intend to specialize in chemistry or in related fields. Enrollment limited. Prerequisites: good performance in high school chemistry, physics, and mathematics. Corequisite: a calculus course at the level of MATH 111 or 191 for students who have not taken high school calculus. Prerequisite for CHEM 216: CHEM 215. Lecs, M W F 12:20; lab, M T W R or F 1:25–4:25. Prelims: 7:30–9 P.M., Oct. 11, Nov. 15, Feb. 14, Mar. 12, Apr. 11. Fall: B. Widom; spring: B. R. Crane.

An intensive systematic study of the laws and concepts of chemistry, with considerable emphasis on quantitative aspects. Second term includes systematics of inorganic chemistry. Laboratory work covers qualitative and quantitative analysis, transition metal chemistry, and spectroscopic techniques.

Note: Taking CHEM 208 after 215 is not recommended and can be done only with the permission of 208 instructor.

[CHEM 233 Introduction to Biomolecular Structure

Fall. 2 credits. Limited to 30 students. Prerequisites: CHEM 207–208 or equivalents. Lecs, T R 2:30–3:20. Not offered 2001–2002. S. E. Ealick.

This course is intended for students with a basic understanding of chemistry who are considering a program of study in biochemistry. The interrelationship of the structure and function of biologically important molecules are explored. Emphasis is placed on understanding the way in which the three-dimensional arrangements of atoms determine the biological properties of both small molecules and macromolecules such as proteins and enzymes. The study of molecular structure is aided by interactive computer graphics for visualizing three-dimensional structures of molecules.]

CHEM 251 Introduction to Experimental Organic Chemistry

Fall, spring, or summer. 2 credits. Recommended for non-chemistry majors. Enrollment limited. Prerequisites: coregistration in CHEM 257 or 357. Lecs: fall, R 11:15 or F 8:00; spring, F 8; lab, M T W R or F 1:25–4:25, or T or R 8–11. Prelims: 7:30–9 P.M., Fall: Nov. 15. Spring: Apr. 16. S. Russo.

Introduction to the synthesis, separation, and handling of materials, including applications of many types of chromatography, simple and fractional distillation, crystallization, extraction, and others.

CHEM 252 Elementary Experimental Organic Chemistry

Spring. 2 credits. Recommended for non-chemistry majors. Prerequisite: CHEM 251. Lec, R 11:15; lab, T 8–11, W 1:25–4:25. Prelims: 7:30–9 P.M. Apr. 16. S. Russo.

A continuation of CHEM 251.

CHEM 257 Introduction to Organic and Biological Chemistry (I)

Spring. 3 credits. Prerequisite: CHEM 206 or 207. Because CHEM 257 is only a 3-credit course, it does not provide a practical route to satisfying medical school requirements. Lecs, M W F 12:20. Prelims: 7:30–9:00 P.M. March 5, April 9. D. A. Usher.

An introduction to organic chemistry with an emphasis on those structures and reactions of organic compounds having particular relevance to biological chemistry.

CHEM 287–288 Introductory Physical Chemistry (I)

Fall, 287; spring, 288. 3 credits each term. Prerequisites: CHEM 208 or 216 and MATH 111–112 and PHYS 208, or permission of instructor. Prerequisite for CHEM 288: CHEM 287 or 389. Lecs, M W F 9:05; 287: rec, M or W 1:25, T 9:05; 288: rec, M or W 1:25. Prelims: 7:30–9 P.M., 287: Oct. 16, Nov. 29. 288: Mar. 7, Apr. 16. Fall: A. C. Albrecht; spring: J. H. Freed.

A systematic treatment of the fundamental principles of physical chemistry, focusing in the fall on thermodynamics and an introduction to quantum mechanics. In the spring the course is oriented to the application of physical chemistry to biological systems, including transport, kinetics, electrochemistry, spectroscopy. CHEM 287 satisfies the minimum requirement for physical chemistry in the alternative chemistry major.

CHEM 289–290 Introductory Physical Chemistry Laboratory

Fall, 289; spring, 290. 2 credits each term. Lecs: fall, R 8:00 A.M.; spring, R 8:00 or 9:05. Lab: fall, M T 1:25–4:25; spring, M T W R 1:25–4:25. T. McCarrick.

A survey of the methods basic to the experimental study of physical chemistry, with a focus on the areas of kinetics, equilibrium, calorimetry, and molecular spectroscopy.

CHEM 300 Quantitative Chemistry

Fall. 2 credits. Prerequisite: CHEM 208, or CHEM 216 or advanced placement in chemistry. Lec, R 10:10; lab, M T W R 12:20–4:25 or T 8–12. Prelim: 7:30–9 P.M., Oct. 25, Nov. 29. J. M. Burlitch.

Volumetric, spectrophotometric, and potentiometric methods are emphasized. Techniques are learned by analysis of knowns, and then are used on unknowns. Lectures and problem sets stress the relationship between theory and applications.

CHEM 301 Experimental Chemistry I (I)

Spring. 4 credits. Prerequisites: CHEM 300, and 357 or 359. Lec, M W F 12:20; 2 labs, M W 1:25–4:25 or T R 8–11 or T R 1:25–4:25. J. M. Burlitch.

An introduction to the techniques of synthetic organic chemistry. A representative selection of the most important classes of organic reactions is explored in the first half of the semester, augmented by lectures on the reaction chemistry and the theory of separation and characterization techniques. The second half of the term is devoted to a special project, part of which is designed by the student. An opportunity to use inert atmosphere techniques is included.

CHEM 302 Experimental Chemistry II (I)

Fall. 4 credits. Enrollment limited; preference given to chemistry majors. Prerequisite: CHEM 301. Lecs, M W F 9:05; 2 labs, M W 1:25–4:25, T R 8–11 or T R 1:25–4:25. F. J. DiSalvo.

Instrumental methods of analysis, including chemical microscopy, UV, IR, and AA spectroscopies, and gas chromatography. The design, execution, and analysis of experiments is stressed.

CHEM 303 Experimental Chemistry III (I)

Spring. 4 credits. Each lab limited to 10 students. Prerequisites: CHEM 302, 389, 390; coregistration in the latter is permissible. Lecs, M W F 9:05; 2 labs, M W 1:25–4:25, or T R 9:00–12 or T R 1:25–4:25. H. D. Abruña.

An introduction to experimental physical chemistry, including topics in calorimetry, spectroscopy, and kinetics. The analysis and numerical simulation of experimental data is stressed.

CHEM 357–358 Organic Chemistry for the Life Sciences (I)
Fall or summer, 357; spring or summer, 358. 3 credits each term. Prerequisite for CHEM 357: CHEM 208 or 216 or advanced placement; recommended: concurrent registration in CHEM 251 or 300. Prerequisite for CHEM 358: CHEM 357 or permission of the instructor. Lecs, M W F 9:05 or 10:10, optional rec may be offered. Prelims: 7:30–9 P.M., Oct. 4, Oct. 23, Nov. 20, Feb. 14, Mar. 12, Apr. 11. Fall: T. Ruttledge; spring: J. Meinwald.
A study of the more important classes of carbon compounds—especially those encountered in the biological sciences. Emphasis is placed on their three-dimensional structures, mechanisms of their characteristic reactions, their synthesis in nature and the laboratory, methods of identifying them, and their role in modern science and technology.

Note: Because of duplication of material, students who take both CHEM 257 and 357 will receive graduation credit only for CHEM 257.

CHEM 359–360 Organic Chemistry I and II (I)
Fall, 359; spring, 360. 4 credits each term. Recommended for students who intend to specialize in chemistry or closely related fields. Enrollment limited. Prerequisites: CHEM 216 with a grade of B or better, CHEM 208 with a grade of A or better, or permission of instructor. Prerequisite for CHEM 360: CHEM 359. Recommended: coregistration in CHEM 300–301–302. Lecs, M W F 9:05; dis sec, W 7:30 P.M.; prelims, 7:30–9:00 P.M., Sept. 19, Oct. 17, Nov. 14, Spring: 7:30–9:00 P.M., Feb. 13, Mar. 13, Apr. 17. Fall: D. Ganem; spring, G. W. Coates.
A rigorous and systematic study of organic compounds, their structures, the mechanisms of their reactions, and the ways they are synthesized in nature and in the laboratory.

CHEM 389–390 Physical Chemistry I and II (I)
Fall, 389; spring, 390. 4 credits each term. Prerequisites: MATH 213 or, ideally, 221–222; PHYS 208; CHEM 208 or 216 or permission of instructor. Prerequisite for CHEM 390: CHEM 389. Lecs, 389: M W F 10:10; rec M or W 1:25 or T 9:05. Lecs, 390: M W F 10:10; prelims: 7:30–9 P.M. 389: Oct. 2, Oct. 30, Nov. 29. 390: Feb. 14, Mar. 12, Apr. 11. Fall: P. L. Houston; spring: 390: H. F. Davis.
The principles of physical chemistry are studied from the standpoint of the laws of thermodynamics, kinetic theory, statistical mechanics, and quantum chemistry.

CHEM 391 Physical Chemistry II (also CHEME 391) (I)
Spring. 4 credits. Enrollment limited to engineering students only. Prerequisites: MATH 293; PHYS 112, 213; CHEM 208 or 216 or permission of instructor. Corequisite: MATH 294. Prerequisite for CHEM 391: CHEM 389. Lecs, M W F 9:05; rec M 1:25 or T 9:05; T. M. Duncan.
Course is the study of two topics: (1) Quantum chemistry—the electronic structure of atoms, molecules, and condensed matter; the interaction of electromagnetic radiation with matter for spectroscopy and chemical reaction; and (2) Chemistry kinetics—reaction rate laws from experimental data and reaction mechanisms; approximation methods and applications to polymerization and heterogeneous catalysis.

CHEM 404 Entrepreneurship in Chemical Enterprise
Spring. 1 credit. Lecs, T 2:55–4:10. B. Ganem.
Designed to acquaint students with the problems of planning, starting, and managing a new scientifically oriented business venture, the course consists of six weekly 90-minute meetings focusing on case studies and assigned reading, as well as outside lectures by entrepreneurs in the chemical, pharmaceutical, and biotechnology industries. Topics include new technology evaluation and assessment, business formation, resource allocation, management development, as well as manufacturing and sales issues.

[CHEM 405 Techniques of Modern Synthetic Chemistry (I)
Spring. 3 or 6 credits. Enrollment limited. Prerequisites: CHEM 302 *and* permission of instructor. To receive 3 credits, students must perform a minimum of three 2-week experiments. 6 credits will be given for 3 additional experiments. Completion of 5 exercises in elementary glass-blowing will count as 1 experiment. Lab time required: 16 hours each week, including at least two 4-hour sessions in 1 section (M W 1:25). First meeting will be at 1:30 on first class day of semester. Lec, first week only, at times TBA. Not offered 2001–2002. J. M. Burlitch.]

CHEM 410 Inorganic Chemistry (I)
Fall. 4 credits. Prerequisites: CHEM 358 or 360, and 287 or 390. Lecs, M W F 11:15. Prelims: 7:30–9:00 P.M., Sept. 25, Oct. 25, Nov. 20. R. C. Fay.
A systematic study of the synthesis, structure, bonding, reactivity, and uses of inorganic organometallic, and solid-state compounds.

CHEM 421 Introduction to Inorganic Chemistry Research
Fall or spring. 2–4 credits. Prerequisites: CHEM 303 and 389–390, or CHEM 287–288, and CHEM 289–290 with an average of B– or better, or permission of instructor. Selected faculty.
Research in inorganic chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 433 Introduction to Analytical Chemistry Research
Fall or spring. 2–4 credits. Prerequisites: CHEM 303 and 390 with an average of B– or better or permission of instructor. Selected faculty.
Research in analytical chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 450 Principles of Chemical Biology (I)
Fall. 3 credits. Prerequisites: CHEM 357–358, CHEM 359–360 or equivalent. Lecs, T R 10:10–11:25. J. C. Clardy.
Biological processes are increasingly understood in chemical terms, and this course introduces some of the most important chemical approaches to biological processes. Topics such as structure-based drug design, small molecule mediators or protein-protein interaction, combinatorial synthesis, chemical genetics, conformational analysis of biological molecules, and the molecules transfer of biological information are covered.

CHEM 461 Introduction to Organic Chemistry Research
Fall or spring. 2–4 credits. Prerequisites: CHEM 302 and 358 or 360 with a grade of B– or better or permission of instructor. Selected faculty.
Research in organic chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 477 Introduction to Physical Chemistry Research
Fall or spring. 2–4 credits. Prerequisite: CHEM 390 with an average of B– or better or permission of instructor. Selected faculty.
Research in physical chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 498 Honors Seminar
Spring. No credit. Admission to standard chemistry majors only by departmental invitation. Additional prerequisites or corequisites: outstanding performance in either (1) two coherent 4-credit units of research in a course such as CHEM 421, 433, 461, or 477; or (2) one 4-credit unit in a course such as CHEM 421, 433, 461, or 477 and summer research equivalent to at least 4 credits in the same subject. W 2:30–4. R. F. Loring.
Informal presentations and discussions of selected topics in which all students participate. Professional issues are discussed, including graduate education, publication, techniques of oral and audiovisual presentation, employment, ethics, chemistry in society, and support of scientific research. Individual research on advanced problems in chemistry or a related subject under the guidance of a faculty member, culminating in a written report.

CHEM 600–601 General Chemistry Colloquium
Fall, 600; spring, 601. No credit. R 4:40. Staff.
A series of talks representative of all fields of current research interest in chemistry given by distinguished visitors and faculty members.

CHEM 602 Information Literacy for the Physical Scientist
Spring. 1 credit. Primarily for first-year graduate students and undergraduate chemistry majors doing research. Lec, T 4:45–6:00. L. Solla.
An introduction to physical science information research methods, including use of paper and electronic resources. With the continued information explosion, much time can be wasted and important information missed unless an efficient information research strategy is developed. This course demonstrates the use of library and other information resources as a method to critically evaluate the success of research projects.

CHEM 605 Advanced Inorganic Chemistry I: Symmetry, Structure, and Reactivity
Fall. 4 credits. Prerequisite: CHEM 389–390 or equivalent or permission of instructor. Lecs, M W F 11:15. P. J. Chirik.
Selected topics in modern inorganic chemistry. Group theory applications: hybrid orbitals, molecular orbitals, molecular vibrations and spectroscopy with emphasis on modern coordination compounds. Reading's at the level of Jordan's *Reaction Mechanisms of Inorganic* and *Organometallic Systems,* and

Cotton's *Chemical Applications of Group Theory.*

[CHEM 606 Advanced Inorganic Chemistry II: Synthesis, Structure, and Reactivity of Coordination Compounds, and Bioinorganic Chemistry

Spring. 4 credits. Lecs, M W F 10:10. Not offered 2001–2002; next offered fall 2002. P. T. Wolczanski.

Synthesis, structure, and reactivity of modern coordination compounds; oxidation and bioinorganic chemistry. Emphasis on bonding models, structure, and reactivity, including the elucidation of mechanisms. Readings at the level of Purcell and Kotz's *Inorganic Chemistry*, and Jordan's *Reaction Mechanisms of Inorganic and Organometallic Systems.*]

CHEM 607 Advanced Inorganic Chemistry III: Solid-State Chemistry

Spring. 4 credits. Prerequisite: CHEM 605 or permission of instructor. Lecs, M W F 11:15. S. Lee.

The third in a three-term sequence. Interdisciplinary approach to solids. Topics include solid-state structure and X-ray diffraction, synthesis methods, defects in solids, phase diagrams, electronic structure, and chemical and physical properties of solids. Text: *Solid State Chemistry and Its Applications*, by West. Readings from inorganic chemistry and solid-state physics texts.

CHEM 608 Organometallic Chemistry

Spring. 4 credits. M W F 10:10. P. T. Wolczanski.

Synthesis, structure, and reactivity of organotransition metal complexes. Current literature is emphasized, and background readings are at the level of Collman, Hefedus, Finke, and Norton's *Principles and Applications of Organotransition Metal Chemistry.*

[CHEM 622 Chemical Communication

Fall. 3 credits. Lecs, M W F 10:10. Not offered 2001–2002; next offered fall 2002. J. Meinwald, T. Eisner.

For description, see BIONB 623.]

CHEM 625 Advanced Analytical Chemistry I

Spring. 4 credits. Prerequisite: CHEM 288 or 390 or equivalent. Lecs, M W F 9:05; occasional prelims W 7:30 P.M. D. B. Zax.

The application of molecular spectroscopy to chemical problems. Topics in infrared, NMR, and mass spectroscopy are discussed.

[CHEM 627 Advanced Analytical Chemistry II

Spring. 3 credits. Primarily for graduate students. Prerequisite: CHEM 793 or equivalent is preferable. Lecs, M W F 9:05–9:55. Not offered 2001–2002; next offered spring 2003. D. B. Zax.

Modern techniques in nuclear magnetic resonance. Little overlap is expected with CHEM 625, as this course focuses on more general questions of experimental design, understanding of multipulse experiments, and aspects of coherent averaging theory. Examples taken from both liquid and solid-state NMR. May also be of interest to other coherent spectroscopies.]

CHEM 628 Isotopic and Trace Element Analysis (also NS 690)

Spring. 3 credits. Primarily for graduate students and advanced undergraduates. Prerequisite: CHEM 288 or 390 or 302, or CHEM 208 and PHYS 208, or permission of instructor. Lecs T R 10:10. Offered alternate years. J. T. Brenna.

Survey course in modern high precision isotope ratio mass spectrometry (IRMS) techniques and trace/surface methods of analysis. Topics include dual inlet and continuous flow IRMS, thermal ionization MS, inductively coupled plasma MS, atomic spectroscopy, ion and electron microscopies, X-ray and electron spectroscopies, and biological and solid state applications.

CHEM 629 Electrochemistry

Fall. 4 credits. Primarily for graduate students and junior and senior undergraduates. Prerequisite: CHEM 390 or equivalent (MATH 213 helpful). Lecs, T R 8:40–9:55. H. D. Abruña.

Fundamentals and applications of electrochemistry. Topics include the fundamentals of electrode kinetics, electron transfer theory, the electrical double layer, diffusion, and other modes of transport. A wide range of techniques and their application as well as instrumental aspects are covered.

CHEM 665 Advanced Organic Chemistry

Fall. 4 credits. Primarily for graduate students and junior and senior undergraduates. Prerequisites: CHEM 358 or 360, and 390 or equivalents or permission of instructor. Lecs, M W F 9:05. D. T. McQuade.

CHEM 665 focuses on bonding (covalent and non-covalent), reaction mechanisms, and reactive intermediates, with an emphasis on experimental design and methods. The lecture portion of the course is augmented by both written and oral presentations from the students.

CHEM 666 Synthetic Organic Chemistry

Spring. 4 credits. Primarily for graduate students and upperclass undergraduates. Prerequisite: CHEM 665 or permission of instructor. Lecs, T R 10:10–11:25. D. B. Collum.

Modern techniques of organic synthesis; applications of organic reaction mechanisms and retrosynthetic analysis to the problems encountered in rational multistep synthesis, with particular emphasis on modern developments in synthesis design.

CHEM 668 Chemical Aspects of Biological Processes

Fall. 4 credits. Prerequisite: CHEM 360 or equivalent. Lecs, T R 8:40–9:55. T. P. Begley.

A representative selection of the most important classes of enzyme-catalyzed reactions is examined from a mechanistic perspective. Topics discussed include the chemical basis of enzymatic catalysis, techniques for the elucidation of enzyme mechanism, cofactor chemistry, and the biosynthesis of selected natural products. The application of chemical principles to understanding biological processes is emphasized.

CHEM 670 Fundamental Principles of Polymer Chemistry

Fall. 4 credits. Prerequisite: Physical Chemistry 389/390 and Organic Chemistry 359/360 or equivalent or by permission of instructor. Primarily for graduate students and advanced undergraduates. No previous knowledge of polymers is required. Lecs, T R 10:00–11:15. D. Y. Sogah.

This course emphasizes general concepts and fundamental principles of polymer chemistry. The first part of the course deals with general introduction to classes of polymers, molar masses and their distributions, and a brief survey of major methods of polymer synthesis—radical, step growth, ionic, group transfer, Ziegler-Natta, and metathesis polymerization methods—with emphasis on kinetics, mechanisms and stero chemistry rather than on structure. The second part deals with characterization and physical properties. These include: solution properties—solubility and solubility parameters, solution viscosity, molecular weight characterizations [gel permeation chromatography, viscometry, light scattering, osmometry]; bulk properties—thermal and mechanical properties; and structure-property relationships. The discussions will focus on chemistry rather and physics than engineering of polymers.

CHEM 671 Synthetic Polymer Chemistry (also MS&E 671 and CHEME 675)

Spring. 4 credits. Prerequisites: a minimum of organic chemistry at the level of CHEM 359/360 is essential. Those without this organic chemistry background should see the instructor before registering for the course. Primarily for graduate students and advanced undergraduates. No previous knowledge of polymer chemistry is required although knowledge of material covered in CHEM 670 or MS&E 452 will be helpful. Lecs, T R 8:30–10:00. D. Y. Sogah.

This course emphasizes application of organic synthetic methods to the development of new polymerization methods and control of polymer architecture. Emphasis is on modern concepts in synthetic polymer chemistry and topics of current interest: the study of new methods of synthesis, preparation of polymers with reactive end groups, the control of polymer stereochemistry and topology, and the design of polymers tailored for specific uses and properties. Topics on synthesis are selected from the following: step-growth polymerization with emphasis on high performances materials, free radical polymerization and copolymerization, Ziegler-Natta polymerization, recent developments in living free radical, anionic, cationic, group transfer, and ring-opening metathesis polymerizations.

[CHEM 672 Kinetics and Regulation of Enzyme Systems

Spring. 4 credits. Primarily for graduate students with interests in biophysical chemistry. Prerequisite: CHEM 288 or 390, BIOBN 331, or equivalents or permission of instructor. Lecs, M W F 10:10. Not offered 2001–2002. B. Baird.

Focus is on protein interactions with ligands and consequent changes in structure and activity. Topics include protein structure and dynamics; thermodynamics and kinetics of ligand binding; steady state and transient enzyme kinetics; enzyme catalysis and regulation; and the role of cell membrane receptors in regulating cellular activities.]

CHEM 677 Chemistry of Nucleic Acids

Fall. 4 credits. Primarily for graduate students. Prerequisites: CHEM 358 or 360, and 390 or equivalents. Lecs, M W 10:10–11:00. D. A. Usher.

Structure, properties, synthesis, and reactions of nucleic acids from a chemical point of view. Special topics include antisense and antigene technology, ribozyme reactions (including the ribosome), mutagens, PCR, recent advances in sequencing, DNA as a computer, and alternative genetic materials.

CHEM 678 Statistical Thermodynamics
Fall. 4 credits. Primarily for graduate students. Prerequisite: CHEM 390 or equivalent. Lecs, M W F 9:05. J. Marohn.
Course covers the principles of statistical thermodynamics and how they lead to classical thermodynamics. Topics include: ensembles and partition functions; ideal gases and crystals; thermodynamic properties from spectroscopic and structural data; chemical equilibrium; dense gases: virial coefficients; statistical mechanics of solutions, and Bose-Einstein and Fermi-Dirac statistics. At the level of the first twelve chapters of *Statistical Mechanics* by McQuarrie.

CHEM 681 Introduction to Quantum Chemistry
Fall. 4 credits. Prerequisites: 1 year of undergraduate physical chemistry, 3 semesters of calculus, 1 year of college physics. Lecs T R 10:10–11:25. G. S. Ezra.
An introduction to the application of quantum mechanics in chemistry. This course covers many of the topics in CHEM 793–794 at a more descriptive, less mathematical level. The course is designed for advanced undergraduates, chemistry graduate students with a minor in physical chemistry, and graduate students from related fields with an interest in physical chemistry. At the level of *Quantum Chemistry*, by Levine, or *Molecular Quantum Mechanics* by Atkins.

CHEM 686 Physical Chemistry of Proteins
Fall. 4 credits. Primarily for graduate students. Prerequisite: CHEM 288 or 390 or equivalents. Letter grade for undergraduate and graduates. Lecs, M W F 12:20. B. Crane.
Physical properties of proteins are presented from a quantitative perspective and related to biological function. Topics include: chemical, structural, thermodynamic, hydrodynamic, electrical and conductive properties of soluble and membrane proteins; conformational transitions, protein stability and folding; photochemistry and spectroscopic properties of proteins; and protein-protein interactions and single molecular studies.

CHEM 700 Baker Lectures
Fall, on dates TBA. No credit. Lec, T R 11:15.
Distinguished scientists who have made significant contributions to chemistry present lectures for approximately six weeks. This year's lecturer: Jean M. J. Frechet, University of California at Berkley.

CHEM 701 Introductory Graduate Seminar
Fall. No credit. Highly recommended for all senior graduate students, in any field of chemistry. Lecs W 8:00–9:00 P.M. R. Hoffmann.
A discussion of professional issues facing young chemists as well as life skills: academic and industrial trends, presentations, employment, immigration, publication, research funding, and ethics.

CHEM 716 Introduction to Solid State Organic Chemistry
Fall. 3 credits. Prerequisite: some exposure to (or a course in) quantum mechanics. A good undergraduate physical chemistry course may be sufficient, while PHYS 443 or CHEM 793 or CHEM 794 are at a substantially higher level than what is needed. Lecs, M W F 12:20. S. Lee.
This course examines first the principles of crystallography. We then consider properties such as conduction, superconductivity, ferroelectricity and ferromagnetism. The final portion of this course is concerned with structure-property relations.

[CHEM 765 Physical Organic Chemistry I
Fall. 4 credits. Primarily for graduate students. Prerequisite: CHEM 665 or permission of instructor. Lecs, M W F 10:10. Not offered 2001–2002. C. F. Wilcox.
Application of computational and experimental techniques to studies of organic reaction mechanisms and the properties of reactive intermediates.]

CHEM 774 Chemistry of Natural Products: Combinatorial Chemistry
Spring. 3 credits. Prerequisites: CHEM 360 and BIOBM 330 or equivalent. Lec, M W F 10:10–11:30. T. P. Begley.
Combinatorial chemistry has revolutionized the way organic chemists think about structure function studies on biological systems and the design of inhibitors. This course explores the design, synthesis, screening, and use of natural (i.e., peptide, protein, nucleic acid, carbohydrate) and unnatural (i.e., totally synthetic) libraries.

CHEM 780 Chemical Kinetics and Molecular Reaction Dynamics
Fall. 4 credits. Prerequisite: CHEM 681 or permission of instructor. Lecs, T R 10:10–11:25. P. L. Houston.
Principles and theories of chemical kinetics and molecular reaction dynamics. Topics include potential energy surfaces, transition state theory, and statistical theories of unimolecular decomposition. Depending on class interest, the course also includes special topics such as surface reactions and photochemistry.

CHEM 787 Modern Methods of Physical Chemistry
Fall. 4 credits. Prerequisites: 1 year of undergraduate physical chemistry, 3 semesters of calculus, 1 year of college physics, (same as for CHEM 681). Lecs, T R 10:10. J. H. Freed.
This course provides the methodological background for graduate courses in chemical thermodynamics, kinetics, statistical mechanics, and quantum chemistry. It includes the methods of solution of relevant differential equations; the eigenvalue problem and linear algebra; special functions partial differential equations for diffusion and wave mechanics; integral transforms; functions of a complex variable. At the level of *Mathematical Methods in the Physical Sciences, 2nd Edition*, by Boas. There is a midterm and a final exam, and 12 problem sets.

CHEM 788 Macromolecular Crystallography (also BIOBM 738)
Spring. 3 credits. S-U grades optional. Prerequisite: permission of instructor. Offered alternate years. Lecs, T R 10:10. S. E. Ealick.
Lectures briefly cover the fundamentals of crystallography and focus on methods for determining the three-dimensional strucures of macromolecules. These include crystallization, data collection, phasing methods, model building, refinement, structure validation and structure interpretation.

[CHEM 791 Spectroscopy
Spring. 4 credits. Prerequisite: CHEM 793 or PHYS 443 or equivalent. Lecs, M W F 11:15–12:05. Not offered 2001–2002. G. S. Ezra.
Principles of molecular rotational, vibrational, and electronic spectroscopy. Topics include interaction of molecules with radiation; Born-Oppenheimer approximation; diatomic molecules; polyatomic molecules; feasible operations and the molecular symmetry group; and spectroscopy, dynamics, and IVR. At the level of Kroto's *Molecular Rotation Spectra*.]

[CHEM 792 Molecular Collision Theory
Spring. 4 credits. Lecs, T R 10:10–11:25. Not offered 2001–2002. G. S. Ezra.
The concepts and methods of scattering theory are described with particular emphasis on applications to problems of chemical interest. At the level of Child's *Molecular Collision Theory* and Taylor's *Scattering Theory*.]

CHEM 793 Quantum Mechanics I
Fall. 4 credits. Prerequisites: CHEM 390, coregistration in A&EP 321 or equivalents or permission of instructor. Lecs, M W F 11:15. D. B. Zax.
Course topics include: Schrodinger's equation, wave packets, uncertainty principle, WKB theory, matrix mechanics, orbital and spin angular momentum, exclusion principle, perturbation theory, and the variational principle. At the level of Cohen-Tannoudji's *Quantum Mechanics*.

CHEM 794 Quantum Mechanics II
Spring. 4 credits. Prerequisites: CHEM 793 or equivalent and the equivalent of or coregistration in A&EP 322, or permission of instructor. Lecs, T R 10:10. B. Widom.
Course topics include: WKB theory; potential curves and surfaces; light/matter interaction and spectroscopy; scattering theory; Hartree-Fock and density-functional theories of electronic structure; molecular-orbital theory; and band theory of solids.

CHEM 796 Statistical Mechanics
Spring. 4 credits. Prerequisite: CHEM 678 and 793 or equivalent. Lecs, T R 8:30–9:55. R. F. Loring.
Statistical mechanics of systems of interacting molecules. Structure and thermodynamics of molecular liquids. Phase transitions and critical phenomena. Computer simulation methods Nonequilibrium statistical mechanics, with application to reactive and nonreactive dynamics in the liquid state.

[CHEM 798 Special Topics in Physical Chemistry (Chemical Bonding in Polymers, Surfaces, and the Solid State)
Spring. 4 credits. Prerequisite: CHEM 605, or 681, or 793, or PHYS 443, or the equivalent. Lecs, T R 10:10–11:25. Not offered 2001–2002. R. Hoffmann.
The qualitative aspects of the electronic structure and chemical bonding on extended one-, two-, and three-dimensional systems are discussed, in a way accessible to a wide range of inorganic and organic chemists, and to engineers and physicists as well.]

CLASSICS

H. Pelliccia (chair), L. S. Abel, F. M. Ahl, C. Brittain (director of undergraduate studies), K. Clinton, J. E. Coleman, G. Fine, J. R. Ginsburg, E. Hohendahl, G. Holst-Warhaft, T. Irwin, G. M. Kirkwood (emeritus), H. Kolias, D. Mankin, G. M. Messing (emeritus), A. Nussbaum, P. Pucci, H. R. Rawlings III, J. L. Rife, J. Rusten, D. R. Shanzer, (director of graduate studies), B. Strauss

Cornell University has long recognized the importance of studying the civilizations of ancient Greece and Rome. Particularly in an age of increasing specialization, study of the Classics is widely viewed as an excellent means of acquiring a liberal education; at Cornell, we are deeply interested in the continuing humanistic values contained in the literature of the ancient world and in gaining a fuller understanding of these important cultures and their imprint on subsequent ages.

The Department of Classics at Cornell is one of the oldest and largest in the country. With 14 full-time faculty members, together with professors of related interests in the Departments of History, Philosophy, Comparative Literature, History of Art, Modern Languages, Linguistics, and Near Eastern Studies and in the Archaeology, Medieval Studies, and Religious Studies programs, the range of instruction available is very large, including not only the traditional study of language, literature, and ancient history, but also newer developments in the field, such as comparative study of Mediterranean civilizations and modern literary theory.

Although Classics, like other areas of humanistic study, does not aim at providing specific preprofessional training, over the years Classics majors from Cornell have gone on to a wide variety of careers in law, education, medicine, diplomacy, management, educational administration, government, and many others.

The department offers courses in Bronze Age and Classical archaeology and is active in field projects in Classical lands. It sponsors archaeological excavations at Halai in Greece, which serves as a field training school for Cornell undergraduate and graduate students. On campus there are also collections of ancient artifacts, reproductions of ancient sculpture, and one of the few laboratories in the world to concentrate on the tree-ring dating of ancient monuments from Greece, Cyprus, and Turkey. The archaeology courses may be used to satisfy some of the requirements for the Intercollege Program in Archaeology or for the major in Classical Civilization. They require no knowledge of either Greek or Latin. Similarly, the department offers a variety of courses and seminars in English on such subjects as Greek mythology, Greek and Roman mystery religions, early Christianity, and Greek and Roman society, as well as ancient epic, tragedy, history, and philosophy. For those whose interest in things Greek and Roman extends no further than a desire to understand the English language a little better, the department offers one course in the Greek and Latin elements that make up a huge proportion of the vocabulary of Modern English, and another that deals more specifically with the Greek and Latin ingredients of bioscientific vocabulary. Programs in Greek and Latin at the elementary level are also offered. For the more ambitious there are courses involving reading, in the original, of Greek and Latin authors from Homer to St. Augustine and Bede and, periodically, the Latin works of Dante, Petrarch, and Milton. Sanskrit, the classical language of ancient India, is also offered, along with courses in translation on Indic religion, myth, and literature. The department makes every attempt to adapt its program to the needs of each student. If there is a Classical writer you would like to study, the department will do its best to help you do so whether you are a major in the department or not.

Majors

The Department of Classics offers majors in Classics, Greek, Latin, and Classical Civilization.

Classics

The Classics major comprises seven courses in advanced Greek and Latin (numbered 201 or above) and three courses in related subjects (see below) selected in consultation with the adviser. Classics majors are required to take a minimum of one 300-level course in one language and two 300-level courses in the other.

Students who are considering the option of undertaking graduate study in Classics are strongly advised to complete the Classics major.

Greek

The Greek major comprises CLASS 201 plus five advanced courses in Greek (numbered 203 and above) of which at least three are to be taken at the 300-level, and three courses in related subjects (see below) selected in consultation with the adviser.

Latin

The Latin major comprises CLASS 205 plus five advanced courses in Latin (numbered 207 and above) of which at least three are to be taken at the 300-level, and three courses in related subjects (see below) selected in consultation with the adviser.

Classical Civilization

Those who major in Classical Civilization must complete (a) qualification in Latin and Greek or proficiency in either; (b) CLASS 211 (or HIST 265), CLASS 212 (or HIST 268), and CLASS 220, plus five courses selected from those listed under Classical civilization, Classical archaeology, Ancient Philosophy, Latin, and Greek; and (c) three courses in related subjects (see below) selected in consultation with the adviser.

Related Subjects

The field or scope of the subject "Classics" is the interdisciplinary study of Greek and Roman antiquity, comprising Greek and Latin language, literature, and linguistics; ancient philosophy; history; archaeology and art history; papyrology; epigraphy; and numismatics. It covers the ancient Mediterranean and neighboring lands as they were during the period extending from approximately 3000 B.C.E. to the sixth century C.E. In addition to the required courses in language and literature, the major includes related courses intended to give breadth and exposure to the other disciplines within the field and to enrich the student's study of the original languages. Since the influence of the Greco-Roman world extended far beyond antiquity, a related course could well focus on some aspect of the classical tradition in a later period. Students select related courses in consultation with their advisers or the DUS.

Honors

Candidates for the degree of Bachelor of Arts with honors in Classics, Greek, Latin, or Classical civilization must fulfill the requirements of the appropriate major study as given above and must also successfully complete the special honors course 472. Credit for the honors course may be included in the credits required for the major. Students who wish to become candidates for honors must have a cumulative average of B, and B+ in the major. In consultation with the Standing Committee on Honors, the students should choose an honors adviser by the end of their sixth semester. By the second week of their seventh semester they should submit an outline of their proposed honors work to the Standing Committee and to the adviser(s). The thesis will be written under the supervision of the honors adviser(s) chosen by the student. Honors advisers will submit recommendations to the Standing Committee on Honors. The Committee will read all honors theses and will determine the level of departmental honors. A copy of each successful honors thesis will be filed with the department.

Independent Study

Independent study at the 300 level may be undertaken by undergraduates upon completion of one semester of work at the 300 level. 200-level independent study may be undertaken only in the case of documented schedule conflict upon application to the DUS.

Study Abroad

Cornell participates in the Intercollegiate Center for Classical Studies in Rome, which offers courses in Latin, Greek, ancient history, art, archaeology, and Italian. Another opportunity for a semester's study abroad is available through College Year in Athens. (Consult Cornell Abroad for details.) In addition, Cornell is a member institution of the American School of Classical Studies at Athens, whose Summer Program is open to graduate students and qualified undergraduates. The American Academy in Rome, of which Cornell is also a member institution, offers full-year and summer programs for qualified graduate students. For graduate students the Department of Classics offers a few travel grants each year from the Townsend Memorial Fund. Detailed information on these programs is available in the Department of Classics Office, 120 Goldwin Smith Hall.

Summer Support for Language Study

The Beatrice R. Kanders Memorial Scholarship (for the summer immediately following the freshman or sophomore year; preference given to dyslexic students) is available to students who want to enroll in Intensive Latin or Greek in the Cornell summer session. These courses are designed to enable students to enter second-year Latin or Greek the following fall. Preference is given to Classics undergraduate majors, and other students needing Latin or Greek for completion of their majors. Applications are due to the chair of the Department of Classics by March 16.

Placement in Latin, Ancient Greek, and Modern Greek

Placement of first-year students in Latin and ancient Greek courses, and proficiency level in modern Greek, is determined by an examination given by the Department of Classics during orientation week or by arrangement with the director of undergraduate studies.

First-Year Writing Seminars

The department offers freshman writing seminars on a variety of topics. Consult John S. Knight Institute brochure for times, instructors, and descriptions.

Classical Civilization

CLASS 100 Word Power: Greek and Latin Elements in the English Language
Spring. 3 credits. E. Hohendahl.
This course gives the student with no knowledge of the classical languages an understanding of how the Greek and Latin elements that make up over half our English vocabulary operate in both literary and scientific English usage. Attention is paid to how words acquire their meaning and to enlarging each student's working knowledge of vocabulary and grammar.

CLASS 109 English Words: Histories and Mysteries (also LING 109) # (III)
Fall. 3 credits. M. Weiss.
For description, see LING 109.

CLASS 211 The Greek Experience # (IV)
Fall. 3 credits. Limited to 50 students. F. Ahl.
An introduction to the literature and thought of ancient Greece. Topics include epic and lyric poetry, tragedy and comedy, and historical, political, philosophical, and scientific writings. Some attention is also given to the daily life of ordinary citizens, supplemented by slides of ancient art and architecture.

[CLASS 212 The Roman Experience # (IV)
Spring. 3 credits. Not offered 2001–2002; next offered 2002–2003. Staff.
An introduction to the civilization of the Romans as expressed in their literature, religion, and social and political institutions.]

CLASS 217 Initiation to Greek Culture # (IV)
Fall. 4 credits. Limited to 18 students. This course is intended especially for freshmen (a few exceptionally motivated sophomores or upperclass students may be accepted). Apply in writing to the Chair, Department of Classics, 120 Goldwin Smith Hall. P. Pucci and L. Abel.
Knowledge of Greek or Latin is not necessary, since all texts are in translation. What is necessary is the willingness to participate in three one-hour seminars each week and also a supplementary one- or two-hour session, during which the class participates in workshops with specially invited guests.

This course covers a wide range of Greek literary and philosophical works, as well as modern critical and philosophical writings on the Greeks. Our focus throughout is on the status of language, the many forms of discourse that appear in the literature, and the attempts the Greeks themselves made to overcome the perceived inadequacies and difficulties inherent in language as the medium of poetry and philosophy.

We inquire into the development of philosophy in the context of a culture infused with traditional, mythological accounts of the cosmos. We ask how poetic forms such as tragedy responded to and made an accommodation with philosophical discourse while creating a most emotional effect on the audience; how the first historians, using literary and philosophical discourse, created space for their own inquiry; and we discuss how these issues persist and are formulated in our own thinking.

[CLASS 218 Initiation to the Classical Tradition # (IV)
Spring. 4 credits. See CLASS 217 front matter. Not offered 2001–2002.]

CLASS 222 Ancient Fiction (also COM L 222) # (IV)
Fall. 3 credits. All readings are in English. J. Rife.
Ancient fiction blended ideal romance, fantastic adventure, and social realism into new literary forms that would have a lasting impact on the medieval and modern imagination, from early Christian and Renaissance literature to opera and film. This course surveys major works of fiction by Greek and Roman authors in translation, including the novels by Achilles Tatius, Apuleius, Chariton, Heliodorus, Longus, and Petronius and a selection of shorter pieces from related genres such as satire, biography, and travel accounts. Lecture and discussion address the development of several defining features: the central themes of love and death, the design and involution of narrative structure, the play of intertextuality, the drawing of imaginary landscapes, the portrayal of ethnic and social identity, and the labile classification of truth, or historicity, and falsehood, or fictionality. Students also evaluate several theoretical approaches to the interpretation of ancient fiction and consider the influence of the ancient novels on their successors.

CLASS 223 The Comic Theater (also COM L 223 and THETR 223) # (IV)
Summer 2002. 3 credits. J. Rusten.
The origins of comic drama in ancient Greece and Rome, and its subsequent incarnations especially in the Italian renaissance (*Commedia erudita* and *Commedia dell'arte*), Elizabethan England, seventeenth-century France, the English Restoration, and Hollywood in the thirties and forties. Chief topics include: the growth of the comic theatrical tradition and conventions; techniques and themes of comic plots (trickster, parody, farce, caricature); and the role of comedy in society. All readings in English.

[CLASS 229 War and Peace in Greece and Rome (also HIST 228) # (III)
Fall. 4 credits. Not offered 2001–2002. B. Strauss.
For description, see HIST 228.]

CLASS 231 Ancient Philosophy (also PHIL 211) # (IV)
Fall. 4 credits. C. Brittain.
For description, see PHIL 211.

CLASS 234 Seminar: Eyewitness to War in the Ancient World (also HIST 232) # (III)
Spring. 3 credits. B. Strauss.
A study of ancient soldier-historians who participated in the campaigns about which they later wrote. Topics include historicity, autobiography, propaganda, prose style. Readings include selections from Thucydides, Xenophon, Julius Caesar, Josephus, Ammianus Marcellinus as well as, for comparative purposes, modern soldier-historians.

CLASS 236 Greek Mythology (also COM L 236) # (IV)
Fall 2001 and summer 2002. 3 credits. Limited to 200 students. D. Mankin.
A survey of the Greek myths, with emphasis on the content and significance of the myths in Mediterranean society, including the place of myth in Greek life and consciousness; the factors and influences involved in the creation of myths; and the use of myths for our understanding of Greek literature, religion, and moral and political concepts.

[CLASS 237 Greek Religion and Mystery Cults (also RELST 237) # (IV)
Spring. 3 credits. Not offered 2001–2002. K. Clinton.
Greek religion constitutes one of the essential features of ancient Greek civilization and distinguishes it from later Western civilization. Since religion permeates Greek culture, including the major art forms (epic poetry, tragedy, comedy, architecture, painting, and sculpture), the course investigates the interaction of religion with these forms—an investigation that is fruitful both for the understanding of Greek religion and the forms themselves, some of which, like tragedy, originated in cult. A representative variety of cults and their history are studied with special emphasis on mystery cults, such as the Eleusinian mysteries of Demeter and Persephone, the Kabiroi, the Great Gods of Samothrace, and Bacchic rites.]

[CLASS 238 The Ancient Epic and Beyond # (IV)
3 credits. Not offered 2001–2002. H. Pelliccia.
We move, Odysseus-like, to the West: beginning with Homer's *Iliad* (and including the British poet Christopher Logue's "account" of the opening books) and *Odyssey*, we continue in the Hellenistic and Augustan eras with Apollonius of Rhodes' *Argonautica* and Virgil's *Aeneid*. A violent shift in space and time has us conclude with two New World maritime epics: Herman Melville's *Moby Dick* and Derek Walcott's *Omeros*.]

CLASS 258 Periclean Athens # (IV)
Spring. 4 credits. H. Pelliccia, H. R. Rawlings III, and J. Rusten.
The first five weeks provide a synoptic view of Athens' historical and cultural achievement in the middle of the fifth century B.C.—the traditional pinnacle of "The Glory that was Greece." Readings are taken from Greek historians, philosophers, poets, and documentary texts. At least two of the (75-minute) lectures are devoted to art history and delivered by a guest speaker. The next 7–8 weeks follow the course of the Peloponnesian War to its end; readings from Thucydides are interwoven with contemporaneous texts composed by the dramatists (Sophocles, Euripides, and Aristophanes) and the sophists (supplemented with readings from Plato). The remaining classes consider the fate of Socrates and a few other fourth-century developments. The basic aim of the course is to approach an understanding of how and why a vital and creative society came unglued. There are weekly discussion sections.

CLASS 260 Conceptions of the Self in Classical Antiquity # (IV)
Spring. 4 credits. There are no prerequisites for this course; all readings are in English. C. Brittain.
The idea of a person or a 'self' seems to be something determined by nature: we each have one mind, a unique personality, and the capacity to act as moral agents. But the way in which we conceive of ourselves also depends on our beliefs about human nature, rationality, freedom, luck, and society. This course examines a variety of very different conceptions of the self from the period 700 BCE to 400 CE, using a range of texts from Greek and Roman literature (including epic and tragedy), medical theory, and philosophy (both pagan and Christian).

CLASS 265 Ancient Greece from Homer to Alexander the Great (also HIST 265) # (III)
4 credits. Open to freshmen. B. Strauss.
For description, see HIST 265.

[CLASS 268 A History of Rome from Republic to Principate (also HIST 268) # (III)
Spring. 4 credits. Open to freshmen. Not offered 2001–2002. J. Ginsburg.
For description, see HIST 268.]

[CLASS 291 Classical Indian Narrative (also ASIAN 291) @ # (IV)
Spring. 3 credits. Not offered 2001–2002. C. Minkowski.]

CLASS 303–304 Independent Study in Classical Civilization, Undergraduate Level
303, fall; 304, spring. Up to 4 credits.

CLASS 324 Translation for the Theatre (also THETR 423/623 and COM L 446/646) # (IV)
Spring. 4 credits. Prerequisites: proficiency in language other then English; coursework in dramatic literature, directing, or playwriting. J. E. Gainor.
For description, see THETR 423/623.

CLASS 331 Goths, Vandals, Franks, and Romans # (IV)
Fall. 4 credits. D. Shanzer.
Contemporary views of the Visigothic Sack of Rome by Alaric in 410 are followed by three different case-studies for co-existence of Roman and barbarian in Late Antiquity: the Vandal kingdom (North Africa), the Ostrogothic kingdom (Italy), and finally the one that lasted, the Frankish kingdom (Gaul). Readings include contemporary primary works as well as modern historiography.

CLASS 333 Greek and Roman Mystery Cults and Early Christianity (also RELST 333) # (IV)
Fall. 4 credits. A previous course in Classics (civilization or language) or Religious Studies 101 is recommended. K. Clinton.
A study of the controversial question of religious continuity between paganism and early Christianity. After a brief survey of classical mystery cults and Hellenistic religion, the course focuses on such Hellenistic and Roman cults as the mystery cults of Isis, Bacchus, Mithras, and Attis and the Great Mother and on the distinctive features that contributed to their success. Discussion of Christian liturgy and beliefs to determine what Christianity owed to its pagan predecessors and to isolate the factors that contributed to its triumph over the "rival" pagan cults of late antiquity.

CLASS 339 Plato (also PHIL 309) # (IV)
Fall. 4 credits. Prerequisite: at least 1 previous course in philosophy. G. Fine.
For description, see PHIL 309.

[CLASS 345 The Tragic Theater (also COM L 344 and THETR 345) # (IV)
Spring. 4 credits. Limited to 40 students. Not offered 2001–2002. F. Ahl.
Tragedy and its audiences from ancient Greece to modern theater and film. Topics: origins of theatrical conventions; Shakespeare and Seneca; tragedy in modern theater and film. Works studied will include: Aeschylus' *Agamemnon*; Sophocles' *Oedipus Tyrannus*, *Philoctetes*; Euripides' *Alcestis*, *Helen*, *Iphigeneia in Aulis*, *Orestes*; Seneca's *Thyestes*, *Trojan Women*; Shakespeare's *Julius Caesar*, *Titus Andronicus*, *Othello*; Strindberg's *The Father*; Dürrenmatt's *The Visit*; Bergman's *Seventh Seal*; Cacoyannis' *Iphigeneia*.]

CLASS 382 Greeks, Romans, and Victorians (also COM L 382) # (IV)
Spring. 4 credits. F. Ahl.
This course explores how nineteenth-century (and especially Victorian English and Irish) poets, dramatists, and to a lesser extent, novelists, present Greco-Roman antiquity. The varied influences of Vergil and Homer, Seneca and Sophocles, Plautus and Aristophanes, Horace, and Greek lyric poetry are discussed in selected works of Thomas More, Shelley, Byron, Swinburne, W. S. Gilbert, Oscar Wilde, and the pre-Raphaelites and Victorian poets.

[CLASS 390 The Sanskrit Epics (also ASIAN 390) @ # (IV)
4 credits. Not offered 2001–2002. C. Minkowski.
For description, see ASIAN 390.]

[CLASS 395 Classical Indian Philosophical Systems (also ASIAN 395 and RELST 395) @ # (IV)
Spring. 4 credits. Prerequisite: some background in philosophy or in classical Indian culture. Not offered 2001–2002. C. Minkowski.
For description, see ASIAN 395.]

CLASS 445 Classic Modern Historiography of Ancient Greece (also HIST 435) (III)
Fall. 4 credits. Prerequisite: an introductory course in ancient Greek history or civilization or permission of the instructor. B. Strauss.
This upper-level seminar is an introduction to some of the main themes, directions, and controversies in modern research on ancient Greece. We read selections from the leading works of scholarship on ancient Greece from the nineteenth and twentieth century, including such authors as Grote, Burckhardt, Cornford, Glotz, Momigliano, M. I. Finley, Ste. Croix, Vernant, Vidal-Naquet, and the current crop of scholars.

[CLASS 450 The Peloponnesian War (also CLASS 632 and HIST 450/630) # (III)
Fall. 4 credits. Prerequisites: CLASS 211 or 217, HIST 265, or permission of instructor. Not offered 2001–2002. B. Strauss.
For description, see HIST 450.]

[CLASS 463 Gender and Politics in the Roman World (also HIST 463 and WOMNS 464) # (III or IV)
Spring. 4 credits. Not offered 2001–2002. J. Ginsburg.
An undergraduate seminar examining the relationship between gender and politics in the late Roman Republic and early Empire. Among the questions this course addresses are: was politics the exclusive domain of men in Roman society (as is generally assumed) or does a broader definition of politics and an understanding of the various forms political activity in ancient Rome might have taken allow a place for women in Roman political life? What role did gender have in Roman political discourse and ideology? Why did issues such as family, marriage, and sexuality become subjects of political debate and legislation?]

[CLASS 469 Equality and Inequality in Ancient Greece (also HIST 469) # (III) or IV
Fall. 4 credits. Prerequisite: HIST 265, CLASS 211 or 217, or written permission of the instructor. Not offered 2001–2002. B. Strauss.
For description, see HIST 469.]

CLASS 480 Roman Society and Politics under the Julio-Claudians (also HIST 473) # (III or IV)
Spring. 4 credits. Prerequisite: CLASS 212, HIST 268, or permission of instructor. J. Ginsburg.
This course examines several of the important social and political changes in Roman society under Augustus and his successors, the Julio-Claudians. Topics to be investigated include Augustus's consolidation of power through political and social revolution, the Augustan attempt to regulate family life and social relations by legislation, the relation of the emperor Tiberius with the members of the old ruling class, the growth of the imperial bureaucracy and the new opportunities for social mobility, the political opposition to Claudius and Nero, Nero's cultural and provincial policy, and the manipulation of the imperial cult. All readings will be in English.

CLASS 711–712 Independent Study for Graduate Students in Classical Civilization
711, fall; 712, spring. Up to 4 credits.

Greek

CLASS 101 Greek for Beginners
Fall. 4 credits. A. Nussbaum.
Introduction to Attic Greek. Designed to enable the student to read the ancient authors as soon as possible.

CLASS 103 Attic Greek
Spring. 4 credits. *Provides language qualification.* Prerequisite: 101 or equivalent. K. Clinton.
A continuation of CLASS 101, prepares students for CLASS 201.

CLASS 104 Intensive Greek
Summer. 6 credits. *Provides language qualification.* Staff.
An intensive introduction combining the fundamentals of ancient Greek grammar with readings from a variety of classical authors in the original Greek. Prepares students in a single semester for CLASS 201.

CLASS 201 Attic Authors # (IV)
Fall. 3 credits. Prerequisite: CLASS 103 or 104 or equivalent. C. Brittain.
Selected readings from Greek prose.

[CLASS 203 Homer # (IV)
Spring. 3 credits. Prerequisite: CLASS 201. Not offered 2001–2002.
Readings in the Homeric epic with emphasis on formulaic style.]

[CLASS 210 Attic Prose # (IV)
3 credits. Prerequisite: CLASS 201. Not offered 2001–2002.]

CLASS 225–226 Independent Study in Greek, Undergraduate Level
225, fall; 226, spring. Up to 4 credits. Only by permission of the DUS in the case of documented schedule conflict.

[CLASS 305 The Greek New Testament and Early Christian Literature # (IV)
Fall. 4 credits. Prerequisite: CLASS 201 or equivalent, or permission of instructor. Not offered 2001–2002. D. Shanzer.
More advanced readings from the *Acts of the Apostles* and some exercises on the *Gospels* are followed by readings from Early Christian Greek literature. The latter may include theological tracts and hagiographical texts, e.g. martyr-acts, such as the Passion of Pionius or the Passion of Perpetua.]

CLASS 307–308 Independent Study in Greek, Undergraduate Level
307, fall; 308, spring. Up to 4 credits.

CLASS 310 Greek Undergraduate Seminar # (IV)
Fall and spring. 4 credits. Prerequisite: two 200-level courses in Greek or permission of instructor. Fall topic: Symposia. P. Pucci. Spring topic: Herodotus. K. Clinton.
Symposia: extensive passages from Plato's *Symposium* and Xenophon's *Symposium* are read. Literary and pictorial evidence that illustrates the erotic, social, and cultural importance of this Greek institution are studied.

[CLASS 342 Greek Prose Composition
Spring. 4 credits. Prerequisite: CLASS 201 or permission of instructor. Not offered 2001–2002. P. Pucci.]

[CLASS 417 Advanced Readings in Greek # (IV)
4 credits. Not offered 2001–2002.]

[CLASS 419 Advanced Greek Composition
4 credits. Prerequisite: CLASS 342 or equivalent. Not offered 2001–2002.]

CLASS 511 Greek Philosophical Texts (also PHIL 411)
Fall and spring: up to 4 credits. Prerequisites: knowledge of Greek and permission of instructor. T. Irwin, C. Brittain.
Readings of Greek philosophical texts in the original.

CLASS 545 Graduate TA Training
Fall and spring. 1 credit. H. Pelliccia and D. Shanzer.
Pedagogical instruction and course coordination. Required for all graduate student teachers of CLASS (Latin) 105–106 and Classics First-Year Writing Seminars.

[CLASS 555 Graduate Proseminar
Fall. 1 credit. Not offered 2001–2002. Staff.
Graduate students are introduced to the tools, techniques, and methods of classical scholarship.]

CLASS 605–606 Graduate Survey of Greek Literature
605, fall; 606, spring. 4 credits each term. Prerequisite: linguistic proficiency to be determined by instructor. J. Rife.
A survey of Greek literature in two semesters. CLASS 605: Greek literature from Homer to the mid-fifth century. H. Pelliccia. CLASS 606: Greek literature from the late fifth century to the Empire.

[CLASS 632 Topics in Ancient History (also CLASS 450 and HIST 450/630)
Fall. 4 credits. Not offered 2001–2002. B. Strauss.
For description, see HIST 630.]

CLASS 671 Graduate Seminar in Greek: The Pre-Socratics (also PHIL 619)
Fall. 4 credits. D. Sedley.
The philosophical positions and arguments of the major fifth-century BC pre-Socratic thinkers, from Heraclitus to Democritus.

CLASS 672 Graduate Seminar in Greek: Hesiod
Spring. 4 credits. P. Pucci.

CLASS 701–702 Independent Study for Graduate Students in Greek
701, fall; 702, spring. Up to 4 credits.

Latin

CLASS 105 Latin for Beginners
Fall. 4 credits. Staff.
An introductory course designed to prepare students to start reading Latin prose at the end of a year. The class moves swiftly and meets daily. Work includes extensive memorization of vocabulary and paradigms; study of Latin syntax; and written homework, quizzes, tests, and oral drills.

CLASS 106 Elementary Latin
Spring. 4 credits. *Provides language qualification.* Prerequisite: 105 or equivalent. Staff.
A continuation of CLASS 105, using readings from various authors; prepares students for CLASS 205.

CLASS 107 Intensive Latin
Spring and summer. 6 credits. *Provides language qualification.* Staff.
An intensive introduction that lays down the essentials of Latin grammar before progressing rapidly to readings from selected authors in the original Latin. Prepares students in a single semester for CLASS 205.

CLASS 108 Latin in Review
Fall. 4 credits. *Provides language qualification.* Prerequisite: placement by departmental examination. D. Shanzes.
This course is designed to accommodate students who have had some Latin, but are insufficiently prepared to take 106. It begins with review of some material covered in 105 and then continues with second-term Latin material (106). The class moves swiftly and meets daily. Work includes extensive memorization of vocabulary and paradigms; study of Latin syntax; and written homework, quizzes, tests, and oral drills. Students should be ready for CLASS 205 by the end of the course.

CLASS 205 Intermediate Latin # (IV)
Fall and spring. 3 credits. *Satisfies language proficiency.* Prerequisite: CLASS 106, 107, 108, or placement by departmental examination. Fall: E. Hohendahl; spring: D. Mankin.
Readings in Latin prose.

CLASS 207 Catullus # (IV)
Fall. 3 credits. Prerequisite: CLASS 205. D. Mankin.

[CLASS 208 Roman Drama # (IV)
3 credits. Prerequisite: CLASS 205. Not offered 2001–2002. Staff.]

CLASS 216 Vergil # (IV)
Spring. 3 credits. Prerequisite: CLASS 205. J. Ginsburg.

CLASS 227–228 Independent Study in Latin, Undergraduate Level
227, fall; 228, spring. Up to 4 credits. Only by permission of the DUS in the case of documented schedule conflict. Staff.

CLASS 312 Latin Undergraduate Seminar # (IV)
Fall and spring. 4 credits. Prerequisite: 2 terms of 200-level Latin or permission of instructor. Fall topic: Cicero Murder Trials. J. Ginsburg. Spring topic: Petronius and Apuleius. D. Shanzer.
Cicero Murder Trials: among the most famous of Cicero's speeches are those undertaken for the defense of men charged with murder or attempted murder. In this course we read and examine two of the speeches written for murder trials, those in defense of Marcus Caelius Rufus and Titus Annius Milo. Our focus is the rhetorical strategies employed by Cicero to persuade his audience of his clients' innocence; we also examine these speeches within the historical context of the late Republic, a time of political turmoil and of changed social mores and attitudes.

[CLASS 314 The Augustan Age # (IV)
4 credits. Prerequisite: 2 terms of 200-level Latin or permission of instructor. Not offered 2001–2002. Staff.]

CLASS 315–316 Independent Study in Latin, Undergraduate Level
315, fall; 316, spring. Up to 4 credits.

[CLASS 317 Roman Historiography # (III or IV)
4 credits. Prerequisite: 1 term of 300-level Latin or permission of instructor. Not offered 2001–2002. J. Ginsburg.]

CLASS 341 Latin Prose Composition #
4 credits. Prerequisite: 1 term of 200-level Latin or permission of instructor. K. Clinton.

CLASS 369 Intensive Mediaeval Latin Reading # (IV)
Summer only. 4 credits. D. Shanzer.
Web site: www.arts.cornell.edu/classics/Classes/Classics 369/Med_Latin.html

CLASS 411 Advanced Readings in Latin Literature: Ciceronian Invective # (IV)
Fall. 4 credits. J. Ginsburg.

CLASS 412 Advanced Readings in Latin Literature: Propertius # (IV)
Spring. 4 credits. D. Mankin.

[CLASS 420 Plautus # (IV)
4 credits. Prerequisite: at least one 300-level Latin course or permission of instructor. Not offered 2001–2002. A. Nussbaum.]

[CLASS 441 Advanced Latin Prose Composition
Spring. 4 credits. For graduate students. Only those undergraduates who have completed CLASS 341 and have permission of the instructor may enroll. Not offered 2001–2002. Staff.]

[CLASS 555 Graduate Proseminar
Fall. 1 credit. Not offered 2001–2002. Staff. Graduate students are introduced to the tools, techniques, and methods of Classical scholarship.]

[CLASS 603 Later Latin Literature: Late Antique and Medieval Hagiography
Spring. 4 credits. Not offered 2001–2002. D. Shanzer.]

[CLASS 625–626 Graduate Survey of Latin Literature
625 fall; 626 spring. 4 credits each term. Prerequisite: linguistic proficiency to be determined by instructor. Not offered 2001–2002.
A survey of Latin literature in two semesters. 625: Latin poetry from its beginnings to the early Empire. 626: Latin literature of the Empire.]

CLASS 679 Graduate Seminar in Latin: The Flavians
Fall. 4 credits. F. Ahl.

[CLASS 680 Graduate Seminar in Latin
Spring. 4 credits. Not offered spring 2002.]

CLASS 751–752 Independent Study for Graduate Students in Latin
751, fall; 752, spring. Up to 4 credits.

Classical Art and Archaeology

CLASS 220 Introduction to Art History: The Classical World (also ART H 220) # (IV)
Spring. 4 credits. A. Ramage.
An overview of the art and archaeology of the Greek and Roman world. The sculpture, vase painting, and architecture of the ancient Greeks from the Geometric period through the Hellenistic, and the art of the Romans from the early Republic to the late empire and early Christianity. An introduction to the social, cultural, economic, and religious contexts of classical art in the ancient Mediterranean. Discussion of critical methods, formal analyses, and practical techniques of art historians and classical archaeologists.

[CLASS 221 Minoan-Mycenaean Art and Archaeology (also ARKEO 221 and ART H 221) # (IV)
Spring. 3 credits. Not offered 2001–2002. J. Coleman.
The birth of civilization in Greece and the Aegean islands during the Bronze Age. The main focus is on the rise and fall of Minoan Crete and Mycenaean Greece, with consideration given to the nature and significance of Aegean interactions with Egypt, the Near East, and Anatolia.]

[CLASS 232 Archaeology in Action I (also ARKEO 232 and ART H 224) # (IV)
3 credits. Prerequisite: permission of instructor. Not offered 2001–2002. P. I. Kuniholm.]

[CLASS 233 Archaeology in Action II (also ARKEO 233 and ART H 225) # (IV)
3 credits. Prerequisite: permission of instructor. Not offered 2001–2002. P. I. Kuniholm.
For description, see Art H 225.]

[CLASS 256 Practical Archaeology (also ARKEO 256) (III or IV)
Spring. 3 credits. Not offered 2001–2002. J. Coleman.
An introduction to the aims and methods of field archaeology. Topics covered include: remote sensing (satellite images and aerial photos); surface survey; subsurface investigations by magnetometer, ground penetrating radar, etc.; the layout and development of a land excavation; underwater excavations; the collection, description, illustration, and analysis of artifacts and data, such as pottery, lithics, botanical samples, and radiocarbon samples. Hands-on experience with potsherds and other artifacts from prehistoric and Classical Greece and Cyprus in the university's collections is intended to prepare students for work in the field.]

CLASS 309 Dendrochronology of the Aegean (also ARKEO 309 and ART H 309) # (III or IV)
Fall and spring. 4 credits. Prerequisite: permission of instructor. Letter grade only. Limited to 10 students. P. I. Kuniholm.
For description, see ART H 309.

CLASS 319 Art in the Daily Life of Greece and Rome (also ART H 319) # (IV)
Spring. 4 credits. A Ramage.
For description, see ART H 319.

[CLASS 320 The Archaeology of Classical Greece (also ART H 320) # (IV)
4 credits. Not offered 2001–2002. A. Ramage.]

[CLASS 321 Mycenae and Homer (also ARKEO 321 and ART H 321) # (IV)
Fall. 4 credits. Prerequisite: at least 1 previous course in archaeology, classics, or history of art. Not offered 2001–2002. J. Coleman.
Study of the relationship between the Mycenaean period of Greece (known primarily from archaeology) and the Homeric *Iliad* and *Odyssey*. Topics include Mycenaean architecture, burial customs, kingship, and military activities; the reasons for the collapse of the Bronze Age palatial economies; the archaeological evidence for society in the "Dark Ages" that followed; the writing systems of Mycenaean Greece (Linear B) and the Iron Age (the Semitic/Greek alphabet); the nature of the Homeric poems and their value as historical sources.]

[CLASS 322 Greeks and Barbarians (also ART H 328) # (IV)
Fall. 4 credits. Prerequisite: CLASS 220 or 221, or permission of instructor. Not offered 2001–2002. J. Coleman.
A study of the archaeological and other evidence for the interaction between Greek civilization and the peoples of the eastern and western Mediterranean from the thirteenth to the fourth centuries B.C.E. The course focuses on Greek relationships with Egypt, Phoenicia, Cyprus, Anatolia, and Italy in the post-Bronze Age period.]

[CLASS 323 Painting in the Greek and Roman World (also ART H 323) # (IV)
4 credits. Not offered 2001–2002. A. Ramage.]

[CLASS 325 Greek Vase Painting (also ART H 325) # (IV)
Fall. 4 credits. Not offered 2001–2002. A. Ramage.
For description, see ART H 325.]

[CLASS 327 Greek and Roman Coins (also ART H 327) # (IV)
4 credits. Not offered 2001–2002. A. Ramage.
For description, see ART H 327.]

[CLASS 329 Greek Sculpture (also ART H 329) # (IV)
4 credits. Not offered 2001–2002. J. Coleman.
An examination of ancient Greek sculpture, both three-dimensional and two-dimensional, from the Archaic to the Hellenistic period. Aspects of the works studied include: technological advances, changing ideology of the sculptors, regionalism of styles, and taste of individual patrons.]

[CLASS 350 Arts of the Roman Empire (also ART H 322) # (IV)
Fall. 4 credits. Not offered 2001–2002. A. Ramage.
For description, see ART H 322.]

CLASS 357–358 Independent Study in Classical Archaeology, Undergraduate Level
357, fall; 358, spring. Up to 4 credits.

[CLASS 423 Ceramics (also ARKEO 423 and ART H 423) # (IV)
4 credits. Prerequisite: permission of instructor. Not offered 2001–2002. A. Ramage.
For description, see ART H 423.]

[CLASS 430 Seminar on the Bronze Age Architecture of Asia Minor (also ARKEO 425 and ART H 425) # (IV)
Spring. 4 credits. Not offered 2001–2002. P. I. Kuniholm.
For description, see ART H 425.]

[CLASS 432 Sardis and the Cities of Asia Minor (also ARKEO 432 and ART H 424) # (IV)
4 credits. Prerequisite: permission of instructor. Not offered 2001–2002. A. Ramage.
For description, see ART H 424.]

CLASS 434 The Rise of Classical Greece (also ARKEO 434 and ART H 434) # (IV)
Spring. 4 credits. Recommended: CLASS 220 or 221, ART H 220 or 221, or permission of instructor. P. I. Kuniholm.
For description, see ART H 434.

CLASS 435 Seminar on Roman Art and Archaeology (also ARKEO 435 and ART H 427) # (IV)
Spring. 4 credits. Prerequisite: permission of instructor. A. Ramage.
For description, see ART H 427.

[CLASS 629 The Prehistoric Aegean (also ARKEO 629)
4 credits. Not offered 2001–2002. J. Coleman.
Seminar with focus on the Aegean and neighboring regions in the Neolithic and Early Bronze Ages.]

[CLASS 630 Seminar in Classical Archaeology (also ARKEO 520 and ART H 520)
Fall. 4 credits. Not offered 2001–2002. J. Coleman.]

CLASS 721–722 Independent Study for Graduate Students in Classical Archaeology
721, fall; 722, spring. Up to 4 credits.

Greek and Latin Linguistics

[CLASS 421 Greek Comparative Grammar (also LING 451) (III)
4 credits. Prerequisite: thorough familiarity with the morphology of classical Greek. Not offered 2001–2002. A. Nussbaum.
The prehistory and evolution of the sounds and forms of ancient Greek as reconstructed by comparison with the other Indo-European languages.]

CLASS 422 Latin Comparative Grammar (also LING 452) (III)
4 credits. Prerequisite: thorough familiarity with the morphology of classical Latin. A. Nussbaum.
The prehistory and evolution of the sounds and forms of Classical Latin as reconstructed by comparison with the other Indo-European languages.

[CLASS 424 Italic Dialects (also LING 454) (III)
4 credits. Not offered 2001–2002. A. Nussbaum.]

[CLASS 425 Greek Dialects (also LING 455) (III)
Fall. 4 credits. Not offered 2001–2002. A. Nussbaum.]

CLASS 426 Archaic Latin (also LING 456) (III)
Spring. 4 credits. Prerequisite: reading knowledge of Latin. A. Nussbaum.
Reading of epigraphic and literary pre-Classical texts with special attention to archaic and dialectal features. The position of Latin among the Indo-European languages of ancient Italy, the rudiments of Latin historical grammar, and aspects of the development of the literary language.

[CLASS 427 Homeric Philology (also LING 457) (III)
4 credits. Prerequisite: ability to read Homeric Greek. Not offered 2001–2002. A. Nussbaum.
The language of the Homeric epics: dialect background, archaisms, modernizations. The notion of a *Kunstsprache*: its constitution, use, and internal consistency. The phonological and morphological aspects of epic compositional technique.]

[CLASS 429 Mycenaean Greek (also LING 459) (III)
Spring. 4 credits. Prerequisite: thorough familiarity with the morphology of Classical Greek. Not offered 2001–2002. A. Nussbaum.]

Sanskrit

CLASS 131–132 Elementary Sanskrit (also LING 131–132 and SANSK 131–132)
131, fall; 132, spring. 4 credits each term. *CLASS 132 provides language qualification.* C. Minkowski.
An introduction to the essentials of Sanskrit grammar. Designed to enable the student to read classical and epic Sanskrit as quickly as possible.

[CLASS 251–252 Intermediate Sanskrit (also LING 251–252 and SANSK 251–252) @ # (IV)
251, fall; 252, spring. 3 credits each term. *CLASS 251 provides language proficiency.* Prerequisite: CLASS 132 or equivalent. Not offered 2001–2002; next offered 2002–2003. C. Minkowski.
Readings from the literature of Classical Sanskrit. Fall: selections from the two Sanskrit epics, the *Mahabharata* and the *Ramayana*. Spring: more selections from the epics, and from either Sanskrit story literature or from Sanskrit dramas.]

CLASS 403–404 Independent Study in Sanskrit, Undergraduate Level
403, fall; 404, spring. Up to 4 credits. C. Minkowski.

CLASS 703–704 Independent Study for Graduate Students in Sanskrit
703, fall; 704, spring. Up to 4 credits. C. Minkowski.

Also see CLASS 291, 390, and 395 (Classical Civilization listings).

Honors Courses

CLASS 472 Honors Course: Senior Essay
Fall and spring. 8 credits. An adviser must be chosen by the end of the student's sixth semester. Topics must be approved by the Standing Committee on Honors by the beginning of the seventh semester.
See "Honors," Classics front matter.

COMPARATIVE LITERATURE

N. Saccamano, chairman (247 Goldwin Smith), W. J. Kennedy (fall), C. Chase (spring), director of Undergraduate Studies, (247 Goldwin Smith); C. Carmichael (fall), N. Melas (spring), director of Graduate Studies (247 Goldwin Smith); A. Adams, F. Ahl, C. Arroyo, A. Caputi (Emeritus), C. Carmichael, D. Castillo, C. Chase, W. Cohen, J. Culler, B. deBary, S. Donatelli, D. Grossvogel (Emeritus), P. Hohendahl, W. Holdheim (Emeritus), W. J. Kennedy, N. Melas, J. Monroe, E. Rosenberg, N. Saccamano, N. Sakai, J. Stark, L. Waugh (Emeritus), W. Wetherbee.

Also cooperating: L. Adelson, R. Brann, P. Carden, H. Deinert, J. E. Gainor, P. Gilgen, D. LaCapra, D. Mankin, B. Maxwell, T. McNulty, L. Meixner, N. Pollak, P. Rehberg, J. Resina, R. Schneider, D. Schwarz, M. Steinberg, S. Stewart, S. Toorawa, G. Waite.

The Department of Comparative Literature provides a broad range of courses in European as well as non-European literature. Courses stress significant authors, themes, problems, styles, genres, historical periods, and theoretical perspectives. In cooperation with related departments in the humanities, the departmental offerings reflect current interdisciplinary approaches to literary study: hermeneutics, semiotics, deconstruction, cultural criticism, Marxism, reception aesthetics, feminism, and psychoanalysis.

The Major

The major enables students to develop an integrated knowledge of Western literature, to strengthen their reading and writing abilities, and to prepare for careers demanding analytical, interpretive, and evaluative skills. Prospective majors should consult with the director of undergraduate studies. After declaring a major, a student chooses an adviser from the department's faculty. The requirements for the major are designed to allow each student to follow a course of study that combines intellectual rigor with the pursuit of personal interests. The specific contours of such a program are worked out in consultation with the student's adviser.

Requirements for the Major

1) Five courses in Comparative Literature at the 200 level and above, including the core course listed below. A student may include up to two literature courses from other departments.
2) One core course in Comparative Literature (for 2001–2002 COM L 365 [fall]), COM L 370 [spring], to be taken by all majors in their junior or senior year. At the discretion of the department, students may enroll in core courses in both their junior and senior years.
3) Five courses in literature and other areas of the humanities at the 200 or higher level, to be taken in one or more foreign literature departments. Texts must be read in the original language. A student may offer one language course (conversation, composition, etc.) towards fulfilling the language requirement.
4) An honor's essay (COM L 493) of roughly 50 pages is now optional. It is to be written during the senior year under the direction of a faculty member, preferably from within the department, who has agreed to work in close cooperation with the student. Students are urged to begin research on their thesis topic during the summer preceding their senior year. In lieu of a Senior Honors Essay, students may take one course at the 400–600 level.

The department also encourages:

1) a program that includes broad historical coverage (e.g., COM L 201–202: Great Books); intensive study of a single genre (e.g., COM L 363–364: The European Novel, COM L 365: Contemporary Fiction); analysis of problems in literary theory (e.g., COM L 302: Literature and Theory). The department also offers a number of strongly recommended 200-level courses designed to acquaint undergraduates with the discipline: COM L 203: "Introduction to Comparative Literature," as well as broadranging introductory courses in World Fiction (COM L 204) and Introduction to Literary Criticism (COM L 206).

Honors

A student who completes the requirements for the major is eligible for the degree of Bachelor of Arts with honors in comparative literature. The department bases its decision on the students achieving grades of at least B+ on the senior essay, in course work for the major, and in their overall academic performance at Cornell.

First-Year Writing Seminars

Most 100-level courses may be used toward satisfying the freshman writing seminar requirements. See "John S. Knight Institute for Writing in the Disciplines" for a full description of the first-year seminar program.

Courses

COM L 201 Great Books # (IV)
Fall. 4 credits. COM L 201 and 202 may be taken independently of each other.
S. Donatelli.
A reading each semester of seminal texts that represent and have shaped Western culture and hence form an essential part of the student's intellectual equipment. By analyzing, interpreting, and evaluating, students develop critical reading abilities. Selections from the Bible, Homer, Dante, Rabelais, Shakespeare, and others.

COM L 202 Great Books (IV)
Spring. 4 credits. N. Melas.
World literature of the last 300 years, emphasizing the response to European worldwide expansion first in the colonizing countries, then in the colonized. A central concern is the globalization of European literary forms. Readings likely to include selections from Camoens, Shakespeare, Behn, Voltaire, Melville, Conrad, Tagore, Lu Hsun, Borges, Cesaire, Mahfouz, Soyinka, Enichi, Erdrich, and others as well as selected lyric poets.

COM L 203 Introduction to Comparative Literature (also ASIAN 203) (IV)
Fall. 4 credits. W. J. Kennedy and E. Rosenberg.
The course is intended to answer the question persistently asked by undergraduates: "What *is* comparative literature, anyway?" The format of the course is designed to acquaint students with the range and variety of the field by having members of the department present those aspects which reflect their areas of expertise and their methods of teaching. Of the two meetings each week, the first generally takes the form of a lecture; the second is a discussion of the assigned text. Texts and topics range from the naturalism of Thomas Mann and the word play of James Joyce, to post-modern critical theory.

[COM L 204 Global Fictions (also ASIAN 204) (IV)
Spring. 4 credits. Next offered 2002–2003. N. Melas.]

COM L 206 Introduction to Literary Criticism (IV)
Fall. 4 credits. J. Stark.
More advanced undergraduate seminars naturally tend to focus on contemporary literary theory; after all, it is essential for students of literature to be well-informed about contemporary theoretical debates, methodologies, and problems. But literary theory and criticism did not begin with the structuralist revolution of the 1960s, and it is essential for students to understand earlier developments—many of which still have the power to provoke and inspire. Critical historicization should begin at home, with an awareness of how different the forms, practices, institutions, and politics of literary criticism have been, and this course thus introduces students to the vast field of pre-1960 debates. We examine the historical evolution of key terms now more or less taken for granted as part of critical vocabulary, and we pay particular attention to the (relatively recent) emergence of literature itself as a category of study. No prior knowledge of the subject is assumed, and all texts are read in English.

COM L 208 Shakespeare and the Twentieth Century (also ENGL 208) IV
Spring. 4 credits. W. J. Kennedy.
What is the relationship between the plays of Shakespeare in their own time and the various ways they have functioned in modern culture? We compare selected works of Shakespeare with their adaptations in fiction, theater, film, the educational system, government, and popular culture. The discussion of each play is organized around one or more critical approaches. The course as a whole attempts to provide a systematic introduction to the contemporary study of literature and culture.

COM L 211 The Comic Road to Wisdom (also THETR 214) (IV)
Spring. 4 credits. S. Donatelli.
This course offers an appreciation of comedy not only as a literary mode but as a symbolic attitude, as an essential aspect of human experience, and as a species of pre-reflective consciousness whose appearance especially in pre-modern works can provide valuable orientation for humanists in an increasingly rationalistic and technological age. Readings include literary works by Aristophanes, Plato, Erasmus, Cervantes, Shakespeare, Dickens, Austen, Beckett, Flann O'Brien, Dorothy Parker, and Italo Calvino, and films by the Marx Brothers and by Indian director Mira Nair. Prominent theoretical approaches to the comic by Bergson, Pirandello, Freud, Bakhtin, Auden, Frye, Langer, and others is also offered, as is background on related subtopics such as the carnival, the fool, and laughter. While the course communicates an objective sense of several comic strategies and positions, its main purpose is to encourage, and to provide a forum for, the speculative response that comic literature typically provokes.

[COM L 215 Comparative American Literatures (also AM ST 215) (IV)
Spring. 4 credits. Not offered 2001–2002. B. Maxwell.
Twentieth-century writing from Canada, the United States, the Caribbean, and Latin America. A hemispheric American Studies perspective encourages thinking about and across cultural, linguistic, and national demarcations. This course proposes that a question put by the poet William Carlos Williams—"History, history! What do we fools know or care?"—finds its counter-statement in words from Africa, passed on by the novelist Paule Marshall: "Once a great wrong has been done, it never dies. People speak the words of peace, but their hearts do not forgive. Generations perform ceremonies of reconciliation but there is no end." Countering the literature of amnesia and baseless optimism, the works that we read cannot forget, and decline to forgive, the historical traumas that so bitterly flavor them. Our concern is largely with understanding the aesthetic means and strategies that certain writers use to perform ceremonies *not* bent on reconciliation. Readings (in English) include Joy Kogawa, *Obasan;* Sheila Watson, *The Double Hook;* Hubert Aquin, *The Antiphonary;* Jean Toomer, *Cane;* William Faulkner, *Absalom, Absalom!;* Wilson Harris, *The Palace of the Peacock;* Edward Kamau Brathwaite, *X/Self* and *Trench Town Rock;* Mariano Azuela, *The Underdogs;* Jose Donoso, *Curfew;* and Eduardo Galeano, *The Book of Embraces* and selections from the work of John Sanford, Rosario Castellanos, Clarice Lispector, and Juan Gelman.]

COM L 220 Thinking Surrealisms (IV)
Spring. 4 credits. B. Maxwell.
Borrowing its title from a formulation of the Marxist philosopher Ernst Bloch and beginning from the "forays of demoralization" instigated by the Dadas, who bequeathed to surrealism the precious gift of unreconciliation to the given, this course ranges over the protean expressiveness of several surrealist moments of the last century. The inception of surrealist precept and practice in Paris in the mid-1920s is a consideration, perhaps only slightly more central to the course than the explicitly anti-fascist political phase of the 1930s and '40s; the supplementation of Parisian surrealism by Caribbean, Mexican, African American, Quebecois, and Mauritian writers and artists; the renegade practice of Hans Bellmer and the unschooled surreality of Eugene Atget; the reflections of and on surrealism by Walter Benjamin, Ernst Bloch, and Theodor W. Adorno; the relations of surrealism to the Situationist International; and the recent critiques of surrealism in fiction (Milan Kundera) and scholarship (Hal Foster). Throughout, the course asks what the proliferation of "thinking surrealisms" meant to twentieth-century culture and politics. All readings in English.

COM L 222 Ancient Fiction (also CLASS 222) (IV)
Fall. 4 credits. J. Rife.
See CLASS 222 for full course description.

COM L 225 Poetry and Poetics of Difference (also ENGL 225) (IV)
Spring. 4 credits. Limited to 15 students. *While not restricted to sophomores, this course is intended to offer sophomores especially an opportunity to work closely with faculty in a seminar environment in a strong interdisciplinary context.* J. Monroe.

What is the relationship between the diverse pleasures we experience in poetry and contemporary ethical concerns? In what ways does poetry encourage us to understand and engage, in particular, questions of difference and otherness? In exploring these and related questions, this course begins with a constellation of influential examples from poetry of the past two centuries, then moves to recent discussions from a cross-section of fields including anthropology, philosophy, linguistics, and cultural studies. The latter half of the course explores the role such questions have played across a range of contemporary poetic practices within the United States and abroad over the past two decades, with particular emphasis on the period since 1989. Readings include works by Edgar Allen Poe, Gertrude Stein, Andrē Breton, Adrienne Rich, June Jordan, Kamau Brathwaite, Aimé Césaire, Hans Magnus Enzensberger, Joy Harjo, Rosmarie Waldrop, Charles Bernstein, Michael Palmer, Leslie Scalapino, and Susan Howe.

COM L 236 Greek Mythology (also CLASS 236) # (IV)
Fall. 3 credits. Limited to 200. D. Mankin.
For description, see CLASS 236.

COM L 239 Cultural History of the Jews of Spain (also NES 239, JWST 239, RELST 239 and SPAN L 239) # (IV)
Spring. 3 credits. Staff.
See NES 239 for a full course description.

COM L 256 Introduction to the Q'uran (NES 256, RELST 213, JWST 256) @ # (IV)
Spring. 3 credits. S. Toorawa.
See NES 256 for a full course description.

COM L 302 Literature and Theory (also COM L 622 and ENGL 302/602) (IV)
Fall. 4 credits. J. Culler.
Study of issues in contemporary theoretical debates, with particular attention to structuralism, deconstruction, psychoanalysis, and feminism. Readings from Barthes, Derrida, Foucault, J. Butler, B. Johnson, and others. No previous knowlege of literary theory is assumed.

[COM L 304 Europe and Its Others: An Introduction to the Literature of Colonialism @ (IV)
Fall. 4 credits. Limited to 15. Not offered 2001–2002. N. Melas.
Through an examination of selected works from the early twentieth century to the present from France, England, Africa, and the Caribbean, this course provides an introduction to the literature written alongside and against the historical phenomenon that has arguably had the most far reaching impact in modern history: European colonialism. How was culture instrumental in the political project of domination? How have writers of the postcolonial period attempted to write back? What problems and possibilities does colonialism present for cultural identity and cultural resistance? In addition to close reading of texts and a consideration of historical background we also examine visual representations of colonialism, particularly film. Authors include Conrad, Ngugi, Nandy, Condé, Duras, Salih, Fanon, Memmi, Djebar, Resnais, and Pontecorvo. All readings available in English.]

[COM L 311 Modern European Literature and Culture (also FRLIT 315) (IV)
Spring. 4 credits. Not offered 2001–2002. Staff.
We concern ourselves with European culture as embracing the area from Russia to the Atlantic Ocean, not as divided into Western, Eastern, or Central. European culture crosses the old East-West political boundaries. Case studies: Ireland, France, Czech Republic, Russia.

This course is designed for those interested both in the artistic, imaginative side of European literature and in the ways in which culture expresses some of the most significant concerns of our age. The conceptual links include issues of national identity and social justice, as well as concerns of private emotions and individual personality. Popular culture, film, TV, and theatre are integrated with the reading and class discussion. Some authors who are read: Flaubert, Charlotte Bronte (*Villette*), Karl Marx, Dostoevsky, Mayakovsky, Yeats, Malraux, Camus, Joyce, Solzhenitsyn, Kundera, and others.]

[COM L 326 Christianity and Judaism (also RELST 326) (IV)
Spring. 4 credits. Not offered 2001–2002. C. Carmichael.
A study of the New Testament as a product of the First Century Palestinian and Hellenistic Judaism. Other text (also in translation): *The Passover Haggadah*.]

COM L 328 Literature of the Old Testament (also RELST 328) @ # (IV)
Fall. 4 credits. C. M. Carmichael.
Analysis of small sections of well-known material for in-depth discussion.

COM L 330 Political Theory and Cinema (also GERST 330, GOVT 370, THETR 329) (III or IV)
Fall. 4 credits. G. Waite.
See GERST 330 for full course description.

COM L 332 Dostoevsky (also RUSSL 369) # (IV)
Spring. 4 credits. P. Carden.
See RUSSL 369 for full course description.

COM L 334 Islamic Spain: Culture and Society (also NES 339, JWST 339, SPANL 339) @ # (IV)
Fall. 4 credits. R. Brann.
See NES 339 for full course description.

COM L 335 Modern Western Drama, Modern Western Theater: Theory and Practice (also THETR 335) (IV)
Fall. 4 credits. R. Schneider.
See THETR 335 for full course description.

[COM L 343 Contemporary Mass Culture in Japan and in the U.S. (also ASIAN 363) (IV)
Spring. 4 credits. Enrollment limited to 25. Not offered 2001–2002. B. deBary.
For description, please see ASIAN 363.]

[COM L 344 Tragic Theatre (also CLASS 345) (IV)
Spring. 4 credits. Not offered 2001–2002. F. Ahl.
For course description, please see CLASS 345.]

COM L 353 European Cultural History 1870–1945 (also HIST 363) (III or IV)
Spring. 4 credits. M. Steinberg.
See HIST 363 for full course description.

COM L 356 Renaissance Literature (IV)
Spring. 4 credits. W. J. Kennedy.
An introduction to Renaissance literary texts with some attention to cultural backgrounds and intellectual history. Readings from Machiavelli, Erasmus, Rabelais, Shakespeare, Cervantes, and others.

[COM L 362 The Culture of the Renaissance II (also ENGL 325, HIST 364, MUSIC 390, ART H 351 and RELST 362) (III or IV)
Spring. 4 credits. Next offered 2002–2003. C. Kaske, W. J. Kennedy.
Members of various departments lecture on Luther, Michelangelo, Edmund Spenser, Cervantes, Copernicus, Galileo, and Monteverdi.]

COM L 363 The European Novel # (IV)
Fall. 4 credits. J. Stark.
This course examines the history of the European novel and its forms of representing reality. We study how the structure and themes of the novel emerged against a background of radical social, economic, and political upheavals that held profound consequences for Western conceptions of culture, selfhood, and history. How do novels reflect the world? What can they tell us about structures of knowing and understanding? How do novels interact with the worlds of their readers? To address these questions, detailed analysis of formal and aesthetic issues is combined with discussion of the historical and cultural contexts of the works studied. Readings (in English translation) include novels by Cervantes, Diderot, Stendhal, Flaubert, Dostoevsky, Kafka, Woolf, and Calvino.

COM L 364 The European Novel # (IV)
Spring. 4 credits. E. Rosenberg.
Close readings of some eight texts which essentially chart the history of nineteenth and twentieth-century fiction. Readings from among the following: Austen, *Persuasion*, Balzac, *Old Goriot* or *Eugenie Grandet*; Dickens, *Oliver Twist*; Flaubert, *Madame Bovary*; Tolstoy, *Death of Ivan Ilyich* and *Master and Man*; Mann, *Death in Venice*, and *Mario and the Magician*; Gide, *The Immoralist*; Kafka, *The Metamorphosis*; Woolf, *Mrs. Dalloway*; Nabokov, *Lolita* or *Pale Fire*. All texts read in English; students who command the pertinent foreign language may, of course, read the books in the original.

COM L 365 Contemporary Fiction @ (IV)
Fall. 4 credits. Limited to 15 students. Core course for majors. B. Maxwell.
A study of European fiction and drama largely drawing on texts from the first half of the twentieth century. We pay particular attention to the making of literary types and characters; to traces of utopian and messianic elements; to the relations between memory and political revolution; and to the motive of *ressentiment*. Readings (in translation) chosen from the following: Robert Walser, *Snowwhite* and *The Walk*; Franz Kafka, *The Trial*; Thomas Mann, *Death in Venice*; Bertolt Brecht, *The Rise and Fall of the City of Mahagony*; Joseph Roth, *Hotel Savoy*; Alfred Döblin, *Berlin Alexanderplatz*; Christa Wolf, *The Quest for Christa T.*; Louis Aragon, *Paris Peasant*; Louis-Ferdinand Céline, *Death on the Installment Plan*; Elio Vittorini, *In Sicily*; Natalia Ginzburg, stories; and Isaac Babel, stories. Collateral theoretical readings by Georg Lukács, Ernst Bloch, Bertolt Brecht, Walter Benjamin,

Siegfried Kracauer, Gershom Scholem, Elias Canetti, and Christa Wolf.

COM L 367 The Russian Novel (also RUSS L 367) # (IV)
Fall. 4 credits. N. Pollak.
See RUSSL 367 for a full course description.

COM L 370 Literature and Ethics (IV)
Spring. 4 credits. Limited to 15 students. Core course for majors. J. Stark.
Recent literary criticism has renewed the fraught question of how literature relates to ethics. This question arises most dramatically when incompatible modes of interpreting or representing experience confront each other and consequently destabilize accepted definitions of the law, of moral value, and of historical truth. In this course, we encounter a range of paradigmatic scenes that compel ethical reflection, touching on rituals of mourning, social cooperation and rebellion, and specific traumatic histories. We ask how fiction can foster responsibility to one's historical and social surroundings, both through detailed readings of key literary texts by authors including Sophocles, Baudelaire, Melville, Brecht, Ellison, Morrison, and Celan and through critical analysis of the politics of literature in writings by, among others, Sartre, Adorno, and Blanchot. Students may read texts in the original language or in English translation.

COM L 382 Greeks, Romans, and Victorians (also CLASS 382) # (IV)
Spring. 4 credits. F. Ahl.
See CLASS 382 for full course description.

COM L 404 History into Fiction: Nazis and the Literary Imagination (also JEWST 414, ENGL 404 and GERST 414) (IV)
Fall. 4 credits. Limited to 15. E. Rosenberg.
See ENGL 404 for a full course description.

[COM L 413 Death, Culture, and the Literary Monument (IV)
Fall. 4 credits. Next offered 2002–2003. N. Melas.
Beginning with Homer's *Iliad*, this course inquires into the monumental transformation of death into immortality in the literary composition. How do death's negations become fiction's triumph? We pay particular attention to the fate of this procedure when its subjects are no longer heroic warriors but slaves and women. How do colonial domination and gender difference alter the aesthetic procedures and assumptions underlying commemoration and literary immortality? In addition to death and language, we consider such themes as the relation of antiquity to the present, of identity to its dissolution and of politics to culture. Readings of literary texts drawn from a variety of languages and traditions are attended by selected readings in critical theory and a glance at visual culture, particularly surrounding monuments commemorating the emancipation of slaves and the holocaust. Authors include Homer, Derek Walcott, Simone Schwartz-Bart, Virginia Woolf, Krista Wolf, Tayeb Salih, Maurice Blanchot, Hegel, Orlando Patterson, and Walter Benjamin.]

COM L 417 Faust (also GERST 417) # (IV)
Spring. 4 credits. H. Deinert.
See GERST 417 for a full course description.

COM L 418 Virtual Orientalisms (also ASIAN 415) # (IV)
Fall. 4 credits. Limited to 25 students. B. deBary.
See ASIAN 415 for a full course description.

COM L 419–420 Independent Study
419, fall; 420, spring. Variable credit. COM L 419 and 420 may be taken independently of each other. Applications available in 247 G.S.

[COM L 426 New Testament Seminar (also RELST 426) # (IV)
Fall. 4 credits. Limited to 20 students. Next offered 2003–2004. C. Carmichael.
Identification and discussion of problems in the New Testament.]

COM L 428 Biblical Seminar (also RELST 427) # @ (IV)
Fall. 4 credits. C. Carmichael.
We discuss attitudes to sexuality in the Bible. In Old and New Testament texts we examine the clash between ancestral behavior and subsequent laws and between legal and religious ideas. Topics include: marriage and divorce, incest, intermarriage, gender discrimination, guilt and shame, homosexuality, women and purity, sexual language, and symbols.

COM L 432 Racial Democracy in the Americas (also S HUM 418) (IV)
Spring. 4 credits. Z. Nunes.
See for S HUM 418 for full course description.

COM L 442 Spinoza and New Spinozism (also GERST 409) (IV)
Spring. 4 credits. G. Waite.
See GERST 409 for a full course description.

COM L 446 Translation for the Theatre (also THETR 423/623, COM L 646) (IV)
Spring. 4 credits. J. E. Gainor.
See THETR 423 for full course description.

[COM L 450 Renaissance Poetry (also COM L 650, ENGL 622, ITALL 450/650) (IV)
Spring. 4 credits. Not offered 2001–2002. W. J. Kennedy.
A reading and discussion of key texts in lyric poetry from Italian, French, English, and other European literatures of the Renaissance.]

[COM L 451 Renaissance Narrative (IV)
Spring. 4 credits. Not offered 2001–2002. W. J. Kennedy.
A reading and discussion of key texts in narrative epic and chivalric romance from Italian, French, English, and other European literatures of the Renaissance.]

COM L 452 Renaissance Humanism (also COM L 652) # (IV)
Fall. 4 credits. Enrollment limited to 15. W. J. Kennedy.
A reading and discussion of key texts by Renaissance humanists in Italian, French, English and other European literatures from the fourteenth to seventeenth centuries.

COM L 459 Opera, History, Politics, Gender (also HIST 456, WOMNS 454, S HUM 459, MUSIC 474, ITALL 456) (III or IV)
Spring. 4 credits. M. Steinberg, S. Stewart.
See HIST 456 for full course description.

COM L 461 Art and Social Histories (ART H 461) (IV)
Spring. 4 credits. L. Meixner.
See ART H 461 for a full course description.

[COM L 467 Poetry and Rhetoric (also COM L 667, ENGL 483/683, FRLIT 437/637) (IV)
Fall. 4 credits. Not offered 2001–2002. C. Chase.
In present-day common usage, "poetry" means emotion or beauty, and "rhetoric" means deceptive, decorative language. These incompatible meanings cover over a history of close connection between poetry and rhetoric. Historically, if poetry and rhetoric at times have been seen as opposite, incompatible kinds of language, they also have been identified with each other and strongly distinguished from philosophy and science. Where rhetoric belongs turns out to raise issues of politics and philosophy not only of literary history and language. Such questions and issues have been intently pursued in modern poetry beginning with the Romantics. In this course we read poetry and criticism or "theory" that explore what it means for language to be rhetorical. Readings from Aristotle, Shakespeare, Marvell, Coleridge, Wordsworth, Mallarme, Rilke, Valery, Wallace Stevens, Jean Paulhan, Gerard Genette, Derrida, De Man, and Judith Butler. Two papers (one short, one longer) required. Reading knowledge of French and or German recommended but not required.]

COM L 474 Topics in Modern European Intellectual and Cultural History (also HIST 474/673, JWST 474) (III or IV)
Fall. 4 credits. D. LaCapra.
See HIST 474 for a full course description.

COM L 480 Baudelaire in Context (also COM L 680, FRLIT 488/688) # (IV)
Spring. 4 credits. Prerequisite: reading knowledge of French required. J. Culler.
A reading of *Les Fleurs du Mal* and *Les Petits poemes en prose*, in conjunction with major twentieth-century critical treatments of them, so as to grasp what has been at stake in discussions of Baudelaire. Critics to be read include Benjamin, Bersani, de Man, Friedrich, Jakobson, Jauss, Johnson, and Sartre.

[COM L 482 Latin American Women Writers (also SPANL 492, WOMNS 481) (IV)
Spring. 4 credits. Not offered 2001–2002. D. Castillo.
See SPANL 492 for a full course description.

COM L 483 Imagining the Holocaust (also ENGL 458/658, JWST 458/658, COM L 683, GERST 483) (IV)
Spring. 4 credits. D. Schwarz.
See ENGL 458 for a full course description.

COM L 484 Nationalism and Literature (also SPANL 484) (IV)
Spring. 4 credits. R. Resina.
See SPANL 484 for full course description.

COM L 488 Biblical Diasporas in France (also S HUM 406) (IV)
Fall. 4 credits. Limited to 15 students. Prerequisite: permission of instructor. T. McNulty.
See S HUM 406 for full course description.

COM L 493 Senior Essay
Fall and spring. 8 credits.
Hours TBA individually in consultation with the director of the Senior Essay Colloquium. Approximately 50 pages to be written over the course of two semesters in the student's senior year under the direction of the student's adviser. An "R" grade is assigned on the basis of research and a preliminary draft completed

in the first semester. A letter grade is awarded on completion of the second semester.

[COM L 495 The Cultural Theory of the Frankfurt School (also GERST 495, GOVT 471) (III or IV)
Fall. 4 credits. Not offered 2001–2002. P. Hohendahl.
See GERST 495 for a full course description.]

COM L 496 Theorizing the Public Sphere (also GERST 496) (IV)
Fall. 4 credits. P. Hohendahl.
See GERST 496 for full course description.

COM L 499 Seasons of Migration (also S HUM 409) (IV)
Fall. 4 credits. S. Toorawa.
See S HUM 409 for full course description.

[COM L 604 Translation and the Global Marketplace
Fall. 4 credits. Next offered 2003–2004. N. Melas.]

[COM L 609 Comparison and Cultural Difference
Fall. 4 credits. Next offered 2002–2003. N. Melas.
This course is a wide-ranging investigation of the pitfalls and possibilities for cross-cultural comparison. We examine the structure and mechanisms of comparison, both as a disciplinary method and as a concept or practice: to what extent and in what circumstance can comparison produce cultural difference, consolidate it, dissolve it, erect borders, inhabit borderlands, propose a global ecumene? With particular attention to colonialism and globalization, we inquire into the relation between various modes of comparison and broader contexts and ideologies. Though focused on the humanities and on theoretical texts, readings include incursions into the social sciences and selected poetry and film. Authors may include Lyotard, Foucault, Fanon, Tilley, Gilroy, Clifford, Appadurai, Bhabha, Lanser, Kincaid, Walcott.]

[COM L 610 Modern Japanese Studies: The Formation of the Field in History and Literature (also ASIAN 609)
Spring. 4 credits. Not offered 2001–2002. B. deBary, N. Sakai, J. Koschmann.
See ASIAN 609 for a full course description.]

COM L 619–620 Independent Study
619, fall; 620, spring. Variable credit. COM L 619 and 620 may be taken independently of each other. Applications available in 247 G.S.

COM L 622 Literature and Theory (also COM L 302 and ENGL 302/602)
Fall. 4 credits. J. Culler.
See COM L 302 for a full course description.

[COM L 630 Aesthetics in the Eighteenth Century (also ENGL 630)
Fall. 4 credits. Not offered 2001–2002. N. Saccamano.
See ENGL 630 for a full course description.]

COM L 631 Politics and the Passions: Hobbes to Rousseau (also ENGL 631)
Spring. 4 credits. N. Saccamano.
See ENGL 631 for full course description.

COM L 646 Translation for the Theatre (also THETR 423/623, COM L 446)
Spring. 4 credits. J. E. Gainor.
See THETR 623 for full course description.

[COM L 650 Renaissance Poetry (also COM L 450, ENGL 622, ITALL 450/650)
Spring. 4 credits. Not offered 2001–2002. W. J. Kennedy.
See COM L 450 for a full course description.]

COM L 652 Renaissance Humanism (also COM L 452)
Fall. 4 credits. W. J. Kennedy.

COM L 656 Aesthetic Theory: End of Art (also GERST 656)
Fall. 4 credits. P. Gilgen.
See GERST 656 for full course description.

COM L 661 The Gay Critic (also GERST 641)
Fall. 4 credits. P. Rehberg.
See GERST 641 for full course description.

COM L 665 The Literature of Empire in the Renaissance (also ENGL 626)
Spring. 4 credits. W. Cohen.
Literary responses to the first age of European global expansion, viewed in the context of the category of the Renaissance and the ongoing process of the self-definition of European literature and Western civilization. Emphasis on the interplay between Mediterranean and oceanic imperialism, and on the relationship between ideology and literary form. Readings from lyric poetry, Ariosto, Bacon, Camões, Campanella, Marlowe, Montaigne, More, Rabelais, Shakespeare, Spenser, Tasso, and especially Cervantes. Readings available in English.

[COM L 667 Poetry and Rhetoric (also COM L 467, ENGL 4483/683, FRLIT 437/637)
Fall. 4 credits. Not offered 2001–2002. C. Chase.
See COM L 467 for a full course description.]

COM L 671 Transnational Imaginaries: Globalization and Culture
Spring. 4 credits. Limited to 15 students, advanced undergraduates and graduates. N. Melas.
The term 'gobalization' has become ubiquitous in recent years as the primary conceptual frame and material basis for understanding contemporary transnationalism. It evokes a brave new borderless world in which politics, culture and social formations are no longer necessarily congruent with nor primarily beholden to national boundaries. It triumphantly or despairingly announces the end of history when space precedes time as the measure of human experience, and that experience exceeds the grasp of modernity's autonomous subject. Globalization thus challenges many aspects of our experience of culture—both in its ethnographic and humanist guises—and of the categories through which we apprehend and analyze it. This course provides an introduction to recent writings surrounding globalization in that shifting borderland between the humanities and the social sciences, while focussing on some theoretical implications rather than attempting a comprehensive survey. We dwell specifically on 1) analyzing the relation between the terms "postcolonial" and "global" in recent critical theory. To what extent does the "global" mark the end of the "postcolonial" in transnational relations, particularly between the so-called first and third worlds? 2) examining culture's relation to space, time and subjectivity in view of the "time-space compression" that underlies globalization. Readings are equally divided between critical expository texts and fictional texts (including both literature and film). Knowledge of a language other than English recommended but not required.

[COM L 675 After the Divide: German Critical Theory of the Seventies and Eighties (also GERST 675 and HIST 675)
Fall. 4 credits. Not offered 2001–2002. P. Hohendahl.
See GERST 675 for a full course description.]

COM L 680 Baudelaire in Context (also COM L 480, FRLIT 488/688)
Spring. 4 credits. J. Culler.
For course description, please see COM L 480.

COM L 683 Imagining the Holocaust (also COM L 483, ENGL 458/658, JWST 458/658, GERST 483)
Spring. 4 credits. D. Schwarz.
For course description, please see ENGL 458.

COM L 685 Gramsci and Cultural Politics (also GERST 685, GOVT 675)
Spring. 4 credits. G. Waite.
For description, please see GERST 685.

COM L 688 Postcolonial Theory and German Studies (also GERST 671)
Spring. 4 credits. L. Adelson.
See GERST 671 for full course description.

[COM L 689 Adorno's Aesthetic Theory (also GERST 689)
Fall. 4 credits. Not offered 2001–2002. P. Hohendahl.
See GERST 689 for a full course description.]

[COM L 695 Post-Modern Thought and Area Studies (also JPLIT 614)
Fall. 4 credits. Not offered 2001–2002. B. deBary.
See JPLIT 614 for a full course description.]

COMPUTER SCIENCE

C. Van Loan, chair; B. Arms, G. Bailey, K. Birman, C. Cardie, T. Coleman, R. L. Constable, R. Caruana, A. Demers, R. Elber, D. Fan, J. Gehrke, D. Greenberg, J. Halpern, J. E. Hopcroft, D. Huttenlocher, J. Kleinberg, D. Kozen, L. Lee, G. Morrisett, A. Myers, K. Pingali, F. B. Schneider, D. Schwartz, B. Selman, D. Shmoys, E. G. Sirer, E. Tardos, R. Teitelbaum, S. Vavasis, G. Yona, R. Zabih

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science. For details, visit our web site at www.cs.cornell.edu/ugrad.

The Major

CS majors take courses in algorithms, data structures, logic, programming languages, scientific computing, systems, and theory. Electives in artificial intelligence, computer graphics, computer vision, databases, multimedia, and networks are also possible. Requirements include:

- four semesters of calculus (MATH 111–122 (or 112)–221–222 or 191–192–293–294)
- two semesters of introductory computer programming (COM S 100 and 211)
- a one-credit project (COM S 212)

- a seven-course computer science core (COM S 280, 312, 314, 321 or 322 or 421, 381, 414, and 482)
- two 400+ computer science electives, totaling at least six credits
- a computer science project course (COM S 413, 415, 418, 433, 473, 501, 514, 519, or 664)
- a mathematical elective course (OR&IE 270, MATH 300+, T&AM 310, etc.)
- two 300+ courses that are technical in nature and total at least six credits
- a three-course specialization in a topic area other than computer science. These courses must be numbered 300 level or greater.

Note: All of the field electives described above must be courses of three or more credit hours with the exception of the COM S project course, which may be two credits.

The program is broad and rigorous, but it is structured in a way that supports in-depth study of outside areas. Intelligent course selection can set the stage for graduate study and employment in any technical area and any professional area such as business, law, or medicine. With the adviser, the computer science major is expected to put together a coherent program of study that supports career objectives and is true to the aims of liberal education.

Admission

All potential affiliates are reviewed on a case-by-case basis relative to the following criteria:

1) Completion of MATH 293 (or MATH 221), COM S 211, COM S 212*, and COM S 280.
2) A grade of C or better in all required COM S courses, excluding COM S 100, with the overall average of these courses being not less than 2.7.
3) A grade of C or better in all required math courses, with the overall average of these courses being not less than 2.7 (can include the math-related elective).
4) An overall GPA of not less than 2.0 (2.5 or better recommended).

If any courses are repeated, both grades will be counted in the averages used for admissions. Qualifying courses must be taken at Cornell.

Note: Students who do not meet these requirements are discouraged from attempting affiliation with the major. The COM S major can be exceptionally rigorous for students who are not suitably prepared for the academic requirements of the program and are unlikely to be admitted to the major if they do not meet the admissions standards listed above.

*COM S 212 required for class of 2004 and later.

Honors. To qualify for departmental honors a student must have:

- maintained a cumulative GPA greater than or equal to 3.5
- completed eight credit hours of COM S course work at or above the 500 level (graded courses only; no seminars or two-credit project courses.)
- completed six credit hours of COM S 490 research with a COM S faculty member, spread over at least two semesters and with grades of A- or better.

Note: Honors courses may not be used to satisfy the COM S 400+ elective requirement, the COM S project requirement, the math elective, or the specialization. See the COM S undergraduate web site for more information on eligibility: www.cs.cornell.edu/ugrad.

Courses

For complete course descriptions, see the computer science listing in the College of Engineering section.

COM S 099 Fundamental Programming Concepts
Fall, summer. 2 credits. S-U grades only. No prerequisites. Freshman only.

COM S 100 Introduction to Computer Programming (II)
Fall, spring, summer. 4 credits.
During the fall semester, two versions of COM S 100 (COM S 100M and COM S 100J) are available as described in the computer science listing in the College of Engineering.

COM S 101 Introduction to Cognitive Science (also COGST 101, LING 170, and PSYCH 102) (III)
Fall. 3 credits.

COM S 113 Introduction to C
Fall, spring. 1 credit. Usually weeks 1–4. Prerequisite: COM S 100 or equivalent programming experience. Credit is granted for both COM S 113 and 213 only if 113 is taken first. S-U grades only.

COM S 114 Unix Tools
Fall. 1 credit. Usually weeks 5–8. Prerequisite: COM S 100 or equivalent programming experience. S-U grades only.

COM S 130 Creating Web Documents
Fall. 3 credits. No prerequisites.

COM S 191 Media Arts Studio I (also ART 391, THETR 391)
Fall. 3 credits. Prerequisites: one of the following courses: ART 171, THETR 277, 377, MUSIC 120, or equivalent. Also must be a junior and have permission of instructor. Lab fee $50.
For description, see ART 391.

COM S 201 Cognitive Science in Context Laboratory (also COGST 201 and PSYCH 201) (III)
Fall or spring. 4 credits. Concurrent or prior registration in "Introduction to Cognitive Science" PSYCH 102/COGST 101/COM S 101/LING 170/PHIL 191 is suggested but not required. Knowledge of programming languages is not assumed. Limited to 24 students. Fall, B. Halpern and staff; spring, D. Field and staff.

COM S 202 Transition to Java
Fall, spring. 1 credit. Usually weeks 1–4. Prerequisite: one semester-long programming course.

COM S 211 Computers and Programming (also ENGRD 211) (II)
Fall, spring, summer. 3 credits. Prerequisite: COM S 100 or an equivalent course in Java or C++.

COM S 212 Java Practicum
Fall, spring. 1 credit. Letter grade only. Pre- or corequisite: COM S/ENGRD 211.

COM S 213 C++ Programming
Fall, spring. 2 credits. Prerequisite: COM S 100 or equivalent programming experience. Students who plan to take COM S 113 and 213 must take 113 first. S-U grades only.

COMS 214 Advanced UNIX Programming and Tools
Spring. 1 credit. S-U grade only. Prerequisite: COM S 114 or equivalent.

COM S 230 Intermediate Web Design
Spring. 3 credits. Prerequisite: COM S 130. Not offered every year; may be offered spring 2002.

COM S 280 Discrete Structures
Fall, spring. 4 credits. Pre- or corequisite: COM S 211 or permission of instructor.

COM S 312 Data Structures and Functional Programming (II)
Fall, spring. 4 credits. Prerequisite: COM S 211/212 or equivalent programming experience.

COM S 314 Computer Organization (also ECE 314)
Fall, spring. 4 credits. Prerequisite: COM S 211; COM S 312 or ENGRD 231/ECE 232 recommended, but not required.

COM S 321 Numerical Methods in Computational Molecular Biology (also BIOBM 321 and ENGRD 321) (I)
Fall. 3 credits. Prerequisites: at least one course in calculus such as MATH 106, 111, or 191 and a course in linear algebra such as MATH 221 or 294 or BTRY 417. COM S 100 or equivalent and some familiarity with iteration, arrays, and procedures. COM S majors may use only one of the following toward their degree: COM S 321, 322, or 421.

COM S 322 Introduction to Scientific Computation (also ENGRD 322)
Spring, summer. 3 credits. Prerequisites: COM S 100 and (MATH 222 or 294). COM S majors may use only one of the following toward their degree: COM S 321, 322, or 421.

COM S 324 Computational Linguistics (also COGST 424, LING 424) (III)
Spring. 4 credits. Prerequisites: LING 203; Labs involve work in the UNIX environment; COM S 114 recommended.
For description, see LING 424.

COM S 381 Introduction to Theory of Computing
Fall, summer. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and 481.

COM S 392 Topics in High-level Vision (also COGST 465, PSYCH 465) (III)
Spring. 4 credits.
For description, see PSYCH 465.

[COM S 400 The Science of Programming
Spring. 4 credits. Prerequisite: COM S 280 or equivalent. Not offered every year; semester TBA.]

COM S 409 Data Structures and Algorithms for Computational Science
Spring. 4 credits. This course is not open to COM S majors. Prerequisite: COM S 211 or equivalent programming experience. Not offered every year.

COM S 411 Programming Languages and Logics
Fall. 4 credits. Prerequisites: COM S 312 or permission of instructor. Not offered every year; semester TBA.

COM S 412 Introduction to Compilers
Spring. 3 credits. Prerequisites: COM S 312 (or permission of instructor) and 314. Corequisite: COM S 413.

COM S 413 Practicum in Compilers
Spring. 2 credits. Corequisite: COM S 412. A compiler implementation project related to COM S 412.

COM S 414 Systems Programming and Operating Systems
Fall, spring, summer. 3 credits. Prerequisite: COM S 211, 212, 312 (or permission of instructor), and 314. Corequisite: COM S 415 in spring only.

COM S 415 Practicum in Operating Systems
Fall, spring. 2 credits. Corequisite: COM S 414.

COM S 417 Computer Graphics and Visualization (also ARCH 374)
Spring. 3 credits. Prerequisite: COM S 211.

COM S 418 Practicum in Computer Graphics (also ARCH 375)
Spring. 2 credits. Enrollment limited. Prerequisite: COM S 212 and permission of instructor. Recommended: COM S 314. Corequisite: COM S 417.

COM S 421 Numerical Analysis
Fall. 4 credits. Prerequisites: MATH 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming. COM S majors may use only one of the following toward their degree: COM S 321, 322, or 421.

COM S 430 Information Discovery
Spring. 3 credits. Prerequisite: COM S 211 or equivalent.

COM S 432 Introduction to Database Systems
Fall. 3 credits. Prerequisites: COM S 312 or 211, 212, and permission of instructor. Recommended: COM S 213 and strong programming skills in C or C++.

COM S 433 Practicum in Database Systems
Fall. 2 credits. Corequisite: COM S 432.

COM S 472 Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: COM S 211 and 280 (or equivalent).

COM S 473 Practicum in Artificial Intelligence
Fall. 2 credits. Corequisite: COM S 472.

COM S 474 Introduction to Natural Language Processing (also COGST 474, LING 474)
Spring. 4 credits. Prerequisites: COM S 211.

COM S 478 Machine Learning
Spring. 4 credits. Prerequisites: COM S 280, 312, and basic knowledge of linear algebra and probability theory.

COM S 481 Introduction to Theory of Computing
Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and 481. A faster-moving and deeper version of COM S 381. Corrective transfers between COM S 481 and 381 (in either direction) are encouraged during the first few weeks of instruction.

COM S 482 Introduction to Analysis of Algorithms
Spring, summer. 4 credits. Prerequisites: COM S 280, 312, and either 381 or 481, or permission of instructor.

COM S 483 Quantum Information Processing (also PHYS 481, 681)
Spring. 2 credits. Prerequisite: familiarity with the theory of vector spaces over the complex numbers.

COM S 486 Applied Logic (also MATH 486) (II)
Fall or spring. 4 credits. Prerequisites: MATH 222 or 294, COM S 280 or equivalent (such as MATH 332, 432, 434, 481), and some course in mathematics or theoretical computer science.

COM S 490 Independent Reading and Research
Fall, spring. 1–4 credits.

COM S 501 Software Engineering
Spring. 4 credits. Prerequisite: COM S 211 or equivalent experience programming in Java or C++.

COM S 502 Computing Methods for Digital Libraries
Spring. 3 credits. Prerequisite: COM S 211 and some familiarity with the technology of web sites.

COM S 504 Applied Systems Engineering I (also CEE 504, ECE 512, M&AE 591, ORIE 512)
Fall. 3 credits. Prerequisite: permission of instructor. May not be used to fulfill the COM S 400+ electives.

COM S 505 Applied Systems Engineering II (also CEE 505, ECE 513, M&AE 592, OR&IE 513)
Spring. 3 credits. Prerequisite: Applied Systems Engineering I. May not be used to fulfill the COM S 400+ electives.

COM S 513 System Security
Spring. 4 credits. Prerequisites: COM S 414 or 519 and familiarity with JAVA programming language.

COM S 514 Intermediate Computer Systems
Fall or spring. 4 credits. Prerequisites: COM S 414 or permission of instructor.

COM S 515 Practicum in Systems
Fall or spring. 1–2 credits. Corerequisite: COM S 514.

COM S 519 Computer Networks
Spring. 4 credits. Prerequisites: COM S 314 or permission of instructor. Not offered every year.

COM S 522 Computational Tools and Methods for Finance
Spring. 4 credits. Prerequisites: programming experience (e.g. C FORTRAN, or MATLAB) and some knowledge of numerical methods, especially numerical linear algebra. Not offered every year.

COM S 574 Heuristic Methods for Optimization (also CEE 509)
Spring. 3 or 4 credits. Prerequisite: COM S/ ENGRD 211 or 322 or CEE/ENGRD 241, or graduate standing, or permission of instructor. Not offered every year.

COM S 601 System Concepts
Fall. 3 credits. Prerequisite: open to students enrolled in the COM S Ph.D. program.

COM S 611 Advanced Programming Languages
Fall. 4 credits. Prerequisites: graduate standing or permission of instructor.

COM S 612 Compiler Design for High-Performance Architectures
Spring. 4 credits. Prerequisites: COM S 314 and 412 or permission of instructor.

COM S 613 Concurrent Programming
Spring. 4 credits. Prerequisites: COM S 414 or permission of instructor. Not offered every year; semester TBA.

COM S 614 Advanced Systems
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.

COM S 615 Adaptive Systems
Fall. 4 credits. Prerequisites: COM S 614 recommended.

COM S 621 Matrix Computations
Fall. 4 credits. Prerequisites: MATH 411 and 431 or permission of instructor.

[COM S 622 Numerical Optimization and Nonlinear Algebraic Equations
Spring. 4 credits. Prerequisite: COM S 621. Offered in odd-numbered years.]

COM S 624 Numerical Solution of Differential Equations
Spring. 4 credits. Prerequisite: previous exposure to numerical analysis (e.g. COM S 421 or 621) to differential equations, and knowledge of MATLAB. Offered in even-numbered years.

COM S 626 Computational Molecular Biology
Spring. 4 credits. Prerequisites: familiarity with linear programming, numerical solutions of ordinary differential equations and nonlinear optimization methods.

COM S 632 Advanced Database Systems
Spring. 4 credits. Prerequisite: COM S 432/ 433 or permission of instructor.

COM S 664 Machine Vision
Fall or spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 221 or equivalent.

COM S 671 Introduction to Automated Reasoning
Fall. 4 credits. Prerequisite: COM S 611 and graduate standing or permission of instructor.

COM S 672 Advanced Artificial Intelligence
Spring. 4 credits. Prerequisites: COM S 472 or permission of instructor.

COM S 674 Natural Language Processing
Spring. 3 credits. Prerequisites: COM S 472 or permission of instructor. Not offered every year; semester TBA.

[COM S 676 Reasoning about Knowledge
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Offered in even-numbered years. Not offered 2001–2002.]

[COM S 677 Reasoning about Uncertainty
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Offered in odd-numbered years. Not offered 2001–2002.]

COM S 681 Analysis of Algorithms
Fall. 4 credits. Prerequisite: COM S 482 or graduate standing.

COM S 682 Theory of Computing
Spring. 4 credits. Prerequisite: (COM S 381 or 481) and (COM S 482 or 681) or permission of instructor.

COM S 683 Advanced Design and Analysis of Algorithms
Spring. 4 credits. Prerequisites: COM S 681 or permission of instructor.

COM S 684 Approximation and Network Algorithms
Fall. 4 credits. Prerequisites: COM S 681 or permission of instructor.

COM S 686 Logics of Programs
Spring. 4 credits. Prerequisites: COM S 481, 682, and (MATH 481 or MATH/COM S 486).

COM S 709 Computer Science Colloquium
Fall, spring. 1 credit. S-U grades only. For staff, visitors, and graduate students interested in computer science.

COM S 713 Seminar in Systems and Methodology
Fall, spring. 4 credits. Prerequisites: a graduate course employing formal reasoning, such as COM S 611, 613, 671, a logic course, or permission of instructor. Not offered every year; semester TBA.

COM S 715 Seminar in Programming Refinement Logics
Fall, spring. 4 credits. Prerequisite: permission of instructor.

COM S 717 Topics in Parallel Architectures
Fall. 4 credits. Prerequisite: COM S 612 or permission of instructor. Not offered every year; semester TBA.

COM S 719 Seminar in Programming Languages
Fall, spring. 4 credits. Prerequisite: COM S 611 or permission of instructor. S-U grades only.

COM S 721 Topics in Numerical Analysis
Fall, spring. 4 credits. Prerequisite: COM S 621 or 622 or permission of instructor. Not offered every year; semester TBA.

COM S 726 Problems in Computational Molecular Biology (also PL BR 726)
Fall, spring. 1 credit. S-U grades only.

COM S 732 Seminar in Database Systems
Fall, spring. 4 credits. S-U grades only.

COM S 754 Systems Research Seminar
Fall, spring. 1 credit. S-U grades only.

COM S 772 Seminar in Artificial Intelligence
Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

[COM S 773/774 Proseminar in Cognitive Studies I & II (also COGST, PHIL, LING, and PSYCH 773/774)
Fall, 773; spring, 774. 4 credits. Not offered 2001–2002.]

COM S 775 Seminar in Natural Language Understanding
Fall, spring. 2 credits.

COM S 789 Seminar in Theory of Algorithms and Computing
Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

COM S 790 Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser. Letter grade only. Independent research or Master of Engineering project.

COM S 890 Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Master of Science degree research.

COM S 990 Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Doctoral research.

EARTH AND ATMOSPHERIC SCIENCES

B. L. Isacks, chair; S. J. Riha, associate chair; directors of undergraduate studies: K. H. Cook (science of earth systems), R. W. Kay (geological sciences), and D. S. Wilks (atmospheric science); R. W. Allmendinger, W. D. Allmon, M. Barazangi, J. M. Bird, L. D. Brown, L. M. Cathles, J. L. Cisne, S. J. Colucci, A. T. DeGaetano, L. A. Derry, P. J. Gierasch, C. H. Greene, T. E. Jordan, S. Mahlburg Kay, M. C. Kelley, F. H. T. Rhodes, D. L. Turcotte, W. M. White, M. W. Wysocki

The new Department of Earth and Atmospheric Sciences joins faculty in the geological sciences with faculty in atmospheric sciences to cover the breadth of modern earth sciences. We live on a planet with finite resources and a finite capacity to recover quickly from human-induced environmental stresses. It is also a powerful planet, with geologic hazards such as earthquakes and volcanic eruptions that alter the course of history with little prior warning. As the human population grows, understanding the earth and its resources becomes progressively more important for both future policymakers and ordinary citizens.

The new department is the home department for three majors: geological sciences, atmospheric sciences, and science of earth systems (SES). Geological sciences emphasizes the solid earth and its history, atmospheric sciences emphasizes basic understanding of modern climate and weather, while the science of earth systems major covers the new disciplines which study the interactions among rock, water, air, and life in our planet's operation. The geological sciences and SES majors are available for students in the College of Arts and Sciences. The geological sciences major is described below, and the SES major is described in the section, "Special Programs and Interdisciplinary Studies." Atmospheric sciences has been proposed as a new major in the College of Arts and Sciences. If approved, the new major would commence during 2001–2002. The goal is to have the breadth of earth sciences available to students in the Colleges of Arts and Sciences, Engineering, and Agriculture and Life Sciences. The community of majors in these inter-collegiate programs share a common interest in a rigorous scientific understanding of how our planet works.

For the latest information about these programs, please consult our web site at www.eas.cornell.edu.

The Geological Sciences Major

The geological sciences major reveals Earth's turbulent history from the formation of our solar system to the plate tectonic cycles that dominate Earth's present behavior. That history is highlighted by the co-evolution of life and the Earth system, a dramatic story that starts with the origin of life in our sun's planetary system and leads to the modern interglacial phase of our planet's latest ice age during which our species has emerged to play a major role in the planetary system. Topics of study also include the fundamental processes responsible for the concentration of mineral and energy resources that have enabled our technological evolution, and include natural hazards such as earthquakes, volcanic eruptions, floods, and landslides which pose dangers to our increasingly vulnerable cities and infrastructure.

The geological sciences major prepares students in geology, geophysics, geochemistry, and geobiology for careers in mineral and petroleum exploration, environmental geology, and academic and government research enterprises. Many of these career tracks involve graduate study, for which the major is excellent preparation. Alternatively, it is a valuable major for a pre-law or pre-med program or in preparation for a career in K–12 education.

In addition to course work, students learn by outdoor fieldwork and involvement in the vigorous research programs of the depart-

ment. Facilities include equipment for processing seismic signals and satellite images of the Earth's surface using extensive libraries of earthquake records, satellite images, and exploration seismic records, and instruments for highly precise chemical and physical analyses of earth materials, including instruments of the Cornell Center for Material Research, Ward Laboratory and the Cornell High Energy Synchotron Source (CHESS). Undergraduates have served as field assistants for faculty members and graduate students in Argentina, Mexico, British Columbia, the Aleutian Islands and southeastern Alaska, Scotland, Switzerland, Tibet, and the Barbados. Undergraduates are encouraged to participate in research activities, frequently as paid assistants.

For admission to the geological sciences major, a student should have made substantial progress toward completing the following basic science requirements for the major: MATH 111–112 or MATH 191–192, PHYS 207–208 or PHYS 112–113, CHEM 207 or 211. Freshmen and sophomores should take an introductory EAS course (or courses), normally EAS 101 or EAS 201, or EAS 102 or EAS 104. Juniors with a strong foundation in mathematics and science may be accepted into the major without an introductory course. Majors take EAS 210, the five 300-level core courses listed below, six credits of additional course work from earth and atmospheric sciences courses numbered 300, 400, or 600, plus an additional course in either computer science or biological science or an intermediate-level course in biological science, mathematics, chemistry, or physics. In addition, a requirement for an advanced outdoor field experience may be met by completing one of the following four-credit options: (a) EAS 417 (Field Mapping in Argentina, 3 credits) and EAS 491 or 492 (based on field observations) for a combined four-credit minimum; (b) EAS 437 (Geophysical Field Methods, 3 credits) plus at least one credit of EAS 491 or 492 using geophysical techniques from EAS 437; (c) EAS 491–492 (Undergraduate Research, 2 credits each) with a significant component of field work; or (d) an approved outdoor field course taught by another college or university (4-credit minimum).

Core Courses

EAS 326 Structural Geology

EAS 355 Mineralogy

EAS 356 Petrology and Geochemistry

EAS 375 Sedimentology and Stratigraphy

EAS 388 Geophysics and Geotectonics

Prospective majors should contact R. W. Kay as early as possible for advice in planning a program. Students majoring in geological sciences may attend the departmental seminars and take advantage of cruises, field trips, and conferences offered through the Department of Earth and Atmospheric Sciences.

Courses offered at the 100 and 200 level are open to all students. Certain 300- and 400-level courses in earth and atmospheric sciences may be of particular interest to students of chemistry, biology, and physics. Students are encouraged to inquire about courses that interest them at the department office in 2122 Snee Hall.

Honors. An honors program is offered by the Department of Earth and Atmospheric Sciences for superior students. Candidates for honors must maintain an overall 3.0 grade-point average, a cumulative average of 3.5 in the major, and complete an honors thesis (EAS 491 or 492). Students interested in applying should contact the director of undergraduate studies during the second semester of the junior year.

Courses

EAS 101 Introductory Geological Sciences (I)
Fall, spring, or summer. 3 credits. Fall, A. Moore; spring, J. M. Bird; summer, W. Brice.
Designed to enhance an appreciation of the physical world. Emphasizes natural environments, surface temperatures, and dynamic processes such as mountain belts, volcanoes, earthquakes, glaciers, and river systems. Interactions of the atmosphere, hydrosphere, biosphere, and lithosphere (earth system science). Water, mineral, and fuel resources; environmental concerns. Field trips in the Ithaca region.

EAS 102 Evolution of the Earth and Life (also BIO G 170) (I)
Spring. 3 credits. J. L. Cisne.
Course topics include: Earth systems and their evolution; Earth history's astronomical context; plate tectonics, continental drift, and their implications for climate and life; co-evolution of life and the atmosphere; precedents for ongoing global change; and dinosaurs, mass extinctions, and human ancestry. Includes laboratories on reconstructing geological history and mapping ancient geography. Fossil collecting on field trips.

EAS 104 The Sea: An Introduction to Oceanography (also BIOEE 154) (I)
Spring, summer. 3–4 credits (4 credits with lab section). Spring: C. H. Greene, W. M. White; summer: J. Chiment.
A survey of the physics, chemistry, geology, and biology of the oceans for both science and nonscience majors. Topics include: seafloor spreading and plate tectonics, marine sedimentation, chemistry of seawater, ocean currents and circulation, the oceans and climate change, ocean ecology, coastal processes, marine pollution, and marine resources.

EAS 105 Writing on Rocks (Freshman Seminar)
Fall, spring. 3 credits. J. Chiment.
See Freshman Seminar Handbook for description.

EAS 106 Vertebrate Fossil Preparation
Fall, spring. 1 credit. Prerequisite: 1 introductory geology course or concurrent enrollment, class size is limited. J. Chiment.
A laboratory-oriented course that exposes students to techniques of vertebrate fossil preparation. Roughing-out and fine preparation of large specimens in solid matrix are covered, as well as screen washing and microscope techniques for the recovery of micro-vertebrate remains. Specialized scanning techniques are discussed.

The class meets for one hour each week for the first six weeks of the semester. Students are assigned to an individual or group project requiring two hours of participation each week for the remainder of the semester.

EAS 107 How the Earth Works
Fall. 1 credit. J. L. Cisne.
A user-friendly introduction to the workings and interactions of solid earth, ocean, atmosphere, and life as they relate to understanding ongoing global change.

EAS 109 Dinosaurs
Fall. 1 credit. J. L. Cisne.
An introductory survey course for anyone interested in dinosaurs. Lectures examine the fossil evidence and illustrate how various geological and biological disciplines contribute to understanding dinosaurs and their world.

EAS 111 To Know the Earth and Build a Habitable Planet (I)
Fall. 3 credits. J. M. Bird.
Acquaints the nonscientist with Earth. Course topics include: major features and how Earth has evolved; Earth system science and building a habitable planet; effects of human activity on geologic environments, mitigating environment damage, living with natural hazards; and mineral resource use in the twenty-first century and an environmentally sound fuel-minerals cycle.

EAS 122 Earthquake! (also ENGRI 122) (I)
Fall. 3 credits. L. D. Brown.
The science of natural hazards and strategic resources is explored. Techniques for locating and characterizing earthquakes and assessing the damage they cause; methods of using sound waves to image the earth's interior to search for strategic minerals; the historical importance of such resources. Seismic experiments on campus to probe for groundwater, the new critical environmental resource.

EAS 131 Basic Principles of Meteorology (I)
Fall. 3 credits. M. W. Wysocki.
A simplified treatment of the structure of the atmosphere: heat balance of the Earth; general and secondary circulations; air masses, fronts, and cyclones; and hurricanes, thunderstorms, tornadoes, and atmospheric condensation. In the laboratory, emphasis is on techniques of analysis of weather systems.

EAS 150 Introduction to Fortran Programming
Fall. 3 credits. M. W. Wysocki.
An introduction to the elements of computer programming using Fortran. Exercises involve mainly meteorological problems.

EAS 200 Art, Archaeology, and Analysis (also ARKEO 285, ART H 200, ENGRI 185, PHYS 200) (I or IV)
Spring. 3 credits. R. W. Kay.
An interdepartmental course on the use of techniques of science and engineering in cultural research. Applications of physical and physiological principles to the study of archaeological artifacts and works of art. Historical and technical aspects of artistic creation. Analyses by modern methods to deduce geographic origins and for exploration, dating, and authentication of cultural objects. Does not meet liberal studies distribution requirement for engineering.

EAS 201 Introduction to the Physics and Chemistry of the Earth (also ENGRD 201) (I)
Fall. 3 credits. Prerequisites: PHYS 112 or 207. L. M. Cathles.
Course topics include: formation of the solar system: accretion and evolution of the earth;

the rock cycle: radioactive isotopes and the geological time scale, plate tectonics, rock and minerals, earth dynamics, mantle plumes; the hydrologic cycle: runoff, floods and sedimentation, groundwater flow, and contaminant transport; and the weathering cycle: chemical cycles, CO_2 (weathering), rock cycle, controls on global temperature (CO_2 or ocean currents), oil, and mineral resources.

[EAS 203 Natural Hazards and the Science of Complexity (I)
Fall. 3 credits. Prerequisites: 1 calculus course. Not offered 2001–2002.
D. L. Turcotte.
Studies of natural hazards; earthquakes, volcanic eruptions, floods, hurricanes, tornadoes, severe storms, wildfires, meteor impacts. Applications of the science of complexity to natural hazards: fractals, chaos, and self-organized criticality.]

EAS 210 Introduction to Field Methods in Geological Sciences (I)
Fall. 3 credits. 1 lecture, Saturday field trips. Prerequisites: EAS 101 (or 201) or permission of instructor.
R. W. Allmendinger.
Course covers the methods by which rocks are used as a geological database. Topics include field methods used in the construction of geological maps and cross sections; systematic description of stratigraphic sections. There are field and laboratory sessions on Saturdays until Thanksgiving. There is one additional lecture during most of these weeks. Course includes one weekend field trip to eastern New York.

EAS 212 Caribbean Field Trip
Spring. 2 credits. Prerequisite: permission of instructor. Enrollment limited to 15.
Approximate cost $1,100. L. D. Brown.
A multidisciplinary look at earth science and environmental issues represented in the Yucatan Peninsula of Mexico. Base for operations is the Centro Ecologico Akumal, located on the Caribbean coast south of Cancun. This coast and its associated reef epitomizes the conflict between ecological preservation and economic development on an international scale. Excursions may include visits to Merida, a historic Spanish town which lies above the buried impact structure that many believe resulted in the death of the dinosaurs; ruins at Chichen Itza, Mayapan, Coba, and Tulum associated with the rise and fall of Mayan culture; and wildlife (monkeys, jaguars, crocodiles) preserves where recent geological studies have found evidence that the fall of the Mayans may have been triggered by climate change. The field trip features snorkel tours of reefs and lagoons as well as the cenotes (sinkholes) that characterize this classic karst landscape. Weekly lectures during the semester provide background; field trip scheduled for January.

EAS 213 Marine and Coastal Geology
Summer. 2 credits. Prerequisite: an introductory course in geology or permission of instructor. Staff.
A special one-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island near Portsmouth, New Hampshire. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost for 2002 (including tuition, room, board, and ferry transportation) is $1,100.

EAS 250 Meteorological Observations and Instruments
Spring. 3 credits. Lab fee $50.
M. W. Wysocki.
Methods and principles of meteorological measurements and observations including surface, free-air, and remote systems. Topics include: instrument siting, mounting, and protection; instrument response characteristics, calibration, and standardization; and recorders and data logging systems. Includes laboratory exercises in observation and data analysis. Intended to serve as preparation for Observers Examination.

EAS 260 Soil Science (also CSS 260) (I)
Fall. 4 credits. S-U grades optional.
S. J. Riha.
Designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective, this course is divided into three units. A unit on soil information introduces students to soil characterization, testing, mapping, classification, GIS, and land evaluation. A soil management unit addresses fertility, pest management, water, and microclimate, as well as erosion, conservation, pollution, and soil health. The unit on the role of soils in ecosystems considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs are initially field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs focus on accessing, interpreting, and applying soil information.

EAS 296 Forecast Competition
Fall and spring. 1 credit. S-U grades only. Prerequisites: sophomore undergraduate standing in atmospheric science or permission of instructor. D. S. Wilks.
This two-semester course provides daily exercise in probabilistic weather forecasting, in which students compete to forecast local weather most skillfully. Enroll for two consecutive semesters, with credit awarded after the second semester. May be repeated for credit.

EAS 302 Evolution of the Earth System (I)
Spring. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent.
W. M. White, W. D. Allmon, and B. L. Isacks.
Course covers the co-evolution of life and the earth system: Earth's early history; plate tectonics, continental drift, and climate changes during the past billion years; mountain building, ice ages, and our own emergence during the past ten million years. Serves as an introduction to methods of interpreting information preserved in the rock record.

EAS 315 Geomorphology (I)
Fall. 4 credits. Prerequisite: a 3-credit EAS course. T. E. Jordan and B. L. Isacks.
A study of the processes that sculpt the Earth's landscapes (above and below sea level) and the nature of those landforms. Landforms constructed by Earth's internal processes are the point of departure as we examine their modification by physical interaction with the atmosphere and oceans. Also treated are depositional landforms that are generated by accumulations of grains or sediment. Laboratory exercises include both field examination of landforms of the Finger Lakes area and computer analysis of satellite images and Digital Elevation Models of examples from around the globe. Includes two Saturday field trips.

EAS 321 Introduction to Biogeochemistry (also NTRES 321) (I)
Fall. 4 credits. Prerequisites: CHEM 207, MATH 112, plus a course in biology and/or geology. L. A. Derry, J. Yavitt.
Control and function of the Earth's global biogeochemical cycles. The course begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

EAS 326 Structural Geology (I)
Spring. 4 credits. Prerequisite: MATH 112, EAS 101 or 201, or permission of instructor. R. W. Allmendinger.
Nature and origin of deformed rocks at microscopic to macroscopic scales, with emphasis on structural geometry and kinematics. Topics include stress, strain, rheology, deformation mechanisms, minor structures, faulting, folding, and structural families.

EAS 331 Climate Dynamics (also ASTRO 331) (I)
Fall. 4 credits. Prerequisites: MATH 112 or 192 or equivalent. K. H. Cook, P. J. Gierasch.
Processes that determine climate and contribute to its change are discussed, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Contemporary climate change issues are investigated and discussed in the context of natural variability of the system.

EAS 334 Microclimatology (I)
Spring. 3 credits. Prerequisite: a course in physics. Offered alternate years.
D. S. Wilks.
Considers the relationships of radiant energy, temperature, wind, and moisture in the atmosphere near the ground. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined with emphasis on the energy balance.

EAS 341 Atmospheric Thermodynamics and Hydrostatics (I)
Fall. 3 credits. Prerequisites: 1 year of calculus and 1 semester of physics.
M. W. Wysocki.
Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics covered include thermodynamic processes of dry air, water vapor, and moist air and concepts of hydrostatics and stability.

EAS 342 Atmospheric Dynamics (I)
Spring. 3 credits. Prerequisites: 1 year each of calculus and physics. K. H. Cook and P. J. Gierasch.
Introduction to atmospheric dynamics and to the methods of description and quantitative analysis used in meteorology. Topics

considered include equations of atmospheric motion, motion in the free atmosphere, vertical variations of wind and pressure fields, mathematical representation and characteristics of fronts, mechanisms of pressure change, concepts of circulation and vorticity, and effects of friction on atmospheric motion.

EAS 352 Synoptic Meteorology (I)
Spring. 3 credits. Prerequisites: EAS 341 and concurrent enrollment in EAS 342. M. W. Wysocki.
Weather map analysis and forecasting techniques are studied by applying the principles of fluid and heat flow. This course strengthens previously introduced meteorological concepts which are applied to forecasting midlatitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

EAS 355 Mineralogy (I)
Fall. 4 credits. Prerequisites: EAS 101 or 201 and CHEM 207 or permission of instructor. S. Mahlburg Kay.
The course covers chemical and physical properties and identification of minerals with emphasis on the rock forming minerals that are the principal constituents of the Earth and other planets. Topics include internal and external crystallography, crystal chemistry, introductions to x-ray crystallography and optical mineralogy, and a systematic examination of the structures, chemistry, and occurrence of the rock forming minerals. Independent project includes use of electron microprobe and x-ray facilities.

EAS 356 Petrology and Geochemistry (I)
Spring. 4 credits. Prerequisite: EAS 355. R. W. Kay.
Principles of phase equilibrium as applied to igneous and metamorphic systems. Description, classification, chemistry, origin, regional distribution, and dating of igneous and metamorphic rocks. Geochemical distribution of trace elements and isotopes in igneous and metamorphic systems. The petrological evolution of the planets.

EAS 375 Sedimentology and Stratigraphy (I)
Fall. 4 credits. Prerequisite: EAS 101 or 201. J. L. Cisne.
Course covers: the formation of sedimentary rocks; depositional processes and environments; correlation of strata in relation to time and environment; petrology of sandstone and limestone; geological age determination; reconstruction of paleogeography and interpretation of earth history from stratigraphic evidence; and organization of strata in stratigraphic sequences.

EAS 388 Geophysics and Geotectonics (I)
Spring. 4 credits. Prerequisites: MATH 192 (or 112) and PHYS 208 or 213. B. L. Isacks.
Covers global tectonics and the deep structure of the solid earth as revealed by investigations of earthquakes, earthquake waves, the earth's gravitational and magnetic fields, and heat flow.

EAS 417 Field Mapping in Argentina (I)
Summer. 3 credits. Prerequisites: EAS 210 and 326; Spanish desirable, but not required. S. Mahlburg Kay.
Covers modern techniques of geological mapping applied in the region of San Juan, Argentina, including folded and faulted sedimentary rock units of the Andean Precordillera (San Juan River section), intensely deformed Precambrian metamorphic rocks of the Pampean Ranges (Pie de Palo), and shallow-level silicic intrusives (Cerro Blanco-Ullun).

EAS 434 Reflection Seismology (I)
Spring. 4 credits. Prerequisites: MATH 192 and PHYS 208, 213, or equivalent. L. D. Brown.
Fundamentals of subsurface imaging by multichannel seismic reflection techniques as used in oil exploration and geohydrological investigations. Covers survey design, acquisition, analysis, processing, and interpretation in both 2-D and 3-D. Includes discussion of related techniques such as seismic refraction analysis, tomographic inversion, vertical seismic profiling, shear wave exploration, and ground penetrating radar. Lab is keyed to state-of-the-art seismic processing, modeling and interpretation software from LandMark.

EAS 435 Statistical Methods in Meteorology and Climatology (I)
Fall. 3 credits. Prerequisites: an introductory course in statistics (e.g., AEM 210) and calculus. D. S. Wilks.
Covers: statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications; some statistical characteristics of meteorological data, including probability distributions and correlation structures; operational forecasts derived from multiple regression models, including the MOS system; forecast verification techniques and scoring rules; and time series analysis, EOFs, and other research topics as time permits.

EAS 437 Geophysical Field Methods (I)
Fall. 3 credits. Prerequisite: PHYS 213 or 208, or permission of instructor. L. D. Brown.
Introduction to field methods of geophysical exploration, especially as applied to environmental issues. Emphasis is on seismic, ground penetrating radar, gravity, and magnetic techniques. Field surveys carried out at the beginning of the semester are analyzed and interpreted.

EAS 447 Physical Meteorology (I)
Fall. 3 credits. Prerequisites: 1 year each of calculus and physics. Offered alternate years. A. T. DeGaetano.
Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include composition and structure of the atmosphere, atmospheric optics, acoustics and electricity, solar and terrestrial radiation, and principles of radar probing of the atmosphere.

EAS 451 Synoptic Meteorology II (I)
Fall. 3 credits. Prerequisites: EAS 341 and 342. S. J. Colucci.
Structure and dynamics of large-scale, midlatitude weather systems, such as cyclones, anticyclones, and waves, with consideration of processes that contribute to temperature changes and precipitation are covered. Laboratory sessions involve real-time weather forecasting and the computer application of a numerical model of the atmosphere to study selected large-scale, mid-latitude weather events.

[EAS 453 Advanced Petrology (I)
Fall. 3 credits. Prerequisite: EAS 356. Offered alternate years. Not offered 2001–2002. R. W. Kay.
Course topics include: magmas and metamorphism in the context of plate tectonics; major and trace element chemistry and phase petrology as monitors of the creation and modification of igneous rocks; and temperature and stress in the crust and mantle and their influence on reaction rates and textures of metamorphic rocks. Application of experimental studies to natural systems.]

EAS 454 Advanced Mineralogy (I)
Spring. 3 credits. Prerequisite: EAS 355 or permission of instructor. Offered alternate years. S. Mahlburg Kay.
Course covers: crystallography and crystal chemistry of minerals and the methods of their study. Includes X-ray diffraction, optical methods, computer simulation of crystal structures. Emphasis is on effects of high pressures and temperatures with implications for understanding the Earth's interior.

EAS 455 Geochemistry (I)
Fall. 4 credits. Prerequisites: CHEM 207 and MATH 192 or equivalent. Recommended: EAS 356. Offered alternate years. W. M. White.
Looks at the Earth from a chemical perspective. Covers: the formation of the elements; cosmochemistry; chemical evidence regarding the formation of the Earth and solar system; trace-element geochemistry; isotope geochemistry; geochemical thermodynamics and kinetics; chemical evolution of the crust, mantle, and core; weathering and the chemistry of natural waters; chemistry of rivers and the oceans; hydrothermal systems and ore deposition.

EAS 456 Mesoscale Meteorology (I)
Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Offered alternate years. S. J. Colucci.
Covers the structure and dynamics of midlatitude mesoscale weather systems such as fronts, jets, squall lines, convective complexes, precipitation bands, downslope windstorms, mountain breezes, sea breeze circulations, and lake effect snowstorms.

[EAS 457 Atmospheric Air Pollution (I)
Fall. 3 credits. Prerequisites: EAS 341 or 1 course in thermodynamics, and 1 semester of chemistry, or permission of instructor. Offered alternate years; not offered 2001–2002. M. W. Wysocki.
Course examines sources, effects, transport, measurement, and controls of air pollution. The basic principles in each area are discussed with an emphasis on their local, regional, and global impacts.]

EAS 458 Volcanology (I)
Spring. 3 credits. Corequisite: EAS 356 or equivalent. Offered alternate years. R. W. Kay and W. M. White.
Considers the causes of volcanism, melting in the Earth, and the origin of magmas. Topics include: physical volcanology, nature and types of volcanic eruptions and associated deposits, eruption mechanisms; volcanic plumbing systems, magma chamber processes, evolution of magma; volcanism and impact phenomena in the solar system; volcanic hazard assessment and volcano monitoring; and ore deposits associated with volcanism.

[EAS 462 Marine Ecology (also BIOEE 462) (I)
Spring. 3 credits. Limited to 75 students. Prerequisite: BIOEE 261. Offered alternate years. Not offered 2001–2002. C. D. Harvell, C. H. Greene.
Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, ecosystems, and evolutionary biology. Examples are drawn from all types of marine habitats including polar seas, temperate coastal waters, and tropical coral reefs.]

EAS 475 Special Topics in Oceanography
Spring, summer. 2–5 var. credits. Prerequisites: EAS 104 or BIOEE 154, and permission of instructor. C. H. Greene.
Undergraduate instruction and participation in advanced areas of oceanographic research. Topics change from term to term. Contact instructor for further information.

[EAS 476 Sedimentary Basins: Tectonics and Mechanics (I)
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternte years. Not offered 2001–2002. T. E. Jordan.
Covers subsidence of sedimentary basins from the point of view of plate tectonics and geomechanics. Topics include: interactions of subsidence, sediment supply, and environmental characteristics in development of stratigraphic sequences; stratigraphic characteristics of active-margin, passive-margin, and cratonic basins; and geophysical and stratigraphic modeling; sequence stratigraphy. Modern and ancient examples are used.]

EAS 478 Advanced Stratigraphy (I)
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. T. E. Jordan.
Modern improvements on traditional methods of the study of ages and genetic relations among sedimentary rocks, emphasizing 3-D relationships. Techniques and applications of sequence stratigraphy at scales ranging from beds to entire basins. Physical correlation, dating techniques, and time resolution in sedimentary rocks. Physical controls on the stratigraphic record. Numerical modeling.

EAS 479 Paleobiology (also BIOEES 479) (I)
Fall. 4 credits. Prerequisites: 1 year of introductory biology for majors and either BIOEE 274, 373, EAS 375, or permission of instructor. W. Allmon.
A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of earth and atmospheric sciences students concerning the nature and significance of the fossil record for their respective studies.

EAS 481 Senior Survey of Earth Systems (I)
Fall. 3 credits. Limited to seniors majoring in geological science. J. M. Bird.
Survey course that integrates undergraduate course work, intended to enhance overall understanding of geological sciences. Emphasis on current models of earth's dynamic systems (e.g., global climate change; mantle evolution). Includes guest lecturers; synthesis and review literature; scientific literature readings; discussions; student presentations.

[EAS 483 Environmental Biophysics (also CSS 483) (I)
Spring. 3 credits. Prerequisites: EAS/CSS 260 or equivalent, or permission of instructor. Offered alternate years. Not offered 2001–2002. S. J. Riha.
Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Topics include: energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problem sets.]

EAS 491–492 Undergraduate Research
Fall, spring. 1–4 credits. Staff. (R. W. Kay, coordinator.)
Introduction to the techniques and philosophy of research in the earth sciences and an opportunity for undergraduates to participate in current staff research projects. Topics chosen in consultation with, and guided by, a staff member. A short written report is required, and outstanding projects are prepared for publication.

EAS 496 Internship experience
Fall or spring. 1–2 credits. S-U grades only.

EAS 497 Individual Study in Atmospheric Science
Fall or spring. 1–6 credits. S-U grades optional. Students must register with an Independent Study form.
Topics are arranged at the beginning of the term for individual study or for group discussions.

EAS 498 Teaching Experience in Atmospheric Science
Fall or spring. 1–5 credits. S-U grades optional. Students must register with an Independent Study form.
Teaching experience is obtained by assisting in the instruction of an atmospheric science course.

EAS 499 Undergraduate Research in Atmospheric Science
Fall or spring. Credit by arrangement. Students must register with an Independent Study form.
Independent research on current problems in atmospheric science.

EAS 500 Design Project in Geohydrology
Fall, spring. 3–12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over 2 or more semesters. L. M. Cathles.
The project may address one of the many aspects of groundwater flow and contamination and must involve a significant geological component and lead to concrete recommendations or conclusions of an engineering nature. Results are presented orally and in a professional report.

EAS 502 Case Histories in Groundwater Analysis
Spring. 4 credits. L. M. Cathles.
Groundwater flow in a specific area, such as a proposed nuclear-waste disposal site, is analyzed in depth. Geological and resource data on the area are presented early in the course. Then the material is analyzed by students working as an engineering analysis team. Each student makes a weekly progress report and writes part of a final report. Results are presented in a half-day seminar at the end of term.

EAS 622 Advanced Structural Geology I
Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. R. W. Allmendinger.
Stress-strain theory and application. Advanced techniques of structural analysis. Topics include finite and incremental strain measurement; microstructure, preferred orientation, and TEM analysis; pressure solution and cleavage development; and experimental deformation. Applications to deformation of unconsolidated sediments, brittle and brittle-ductile deformation of supracrustal strata, and ductile deformation of high-grade metamorphic rocks. Kinematic analysis of shear zones and folds in these regimes.

[EAS 624 Advanced Structural Geology II
Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. Not offered 2001–2002. R. W. Allmendinger.
Geometry, kinematics, and mechanics of structural provinces. Concentration on thrust belts, rift provinces, or strike-slip provinces. Techniques of balanced cross sections.]

EAS 628 Geology of Orogenic Belts
Spring. 3 credits. Prerequisite: permission of instructor. J. M. Bird.
A seminar course in which students study specific geologic topics of an orogenic belt selected for study during the term. The course is intended to complement EAS 681.

[EAS 634 Advanced Geophysics I: Fractals and Chaos in Geology and Geophysics
Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years. Next offered 2002–2003. D. L. Turcotte.
Topics include: definitions of fractal sets and statistical fractals, scale invariance, self-affine fractals, multifractals, applications to fragmentation, seismicity and tectonics, petroleum distribution and reserves, ore grade and tonnage, drainage networks and landforms, and floods and droughts. Definitions of chaos and self-organized criticality, renormalization groups, diffusion limited aggregation and percolation clusters, wavelet transforms, applications to mantle convection, the earth's dynamo, and distributed seismicity.]

EAS 635 Advanced Statistical Meteorology and Climatology
Fall. 3 credits. Prerequisites: coursework in or elementary knowledge of statistics, calculus, matrix algebra, and computer programming. D. S. Wilks.
Lectures and topics concurrent with EAS 435, plus an extra 40-minute session per week in which selected topics from EAS 435 are treated in more depth and additional topics are covered which may vary from year to year according to student interest. Term project required. Not open to students who have taken EAS 435 for credit.

[EAS 636 Advanced Geophysics II: Quantitative Geodynamics
Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years. Next offered 2003–2004. D. L. Turcotte.

Stress and strain in the earth, elasticity and flexure, heat transfer, gravity, fluid mechanics, rock rheology, faulting, chemical geodynamics, flow in porous media.]

[EAS 641 Analysis of Biogeochemical Systems
Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years. Not offered 2001–2002. L. A. Derry.
Dynamics of biogeochemical systems. Kinetic treatment of biogeochemical cycles. Box models, residence time, response time. Analytical and numerical solutions of model systems. Eigen-analysis of linear systems. Feedback and nonlinear cases, problems of uncertainties in natural systems. Modeling software such as Stella II and Matlab; applications to current research of participants or from recent literature.]

[EAS 651 Atmospheric Physics (also ASTRO 651)
Fall. 3 credits. Prerequisite: a good background in undergraduate calculus and physics is required. Offered alternate years. Not offered 2001–2002. K. H. Cook, P. J. Gierasch, S. J. Colucci.
A survey of the fundamental physical processes in atmospheres. Topics include thermodynamics of atmospheric gases, moist effects, hydrostatics, convective instability, atmospheric radiation and radiative heating, radiative-convective equilibrium, clouds, cloud microphysics, and precipitation processes. Thermal structure and greenhouse effects on the Earth and other planets are discussed. The course is taught at the level of *Fundamentals of Atmospheric Physics* by Salby.]

[EAS 652 Advanced Atmospheric Dynamics (also ASTRO 652)
Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Offered alternate years. Not offered 2001–2002. S. J. Colucci, K. H. Cook, P. J. Gierasch.
Course topics include: quasigeostrophic theory, atmospheric waves, hydrodynamic instability, the general circulation of the atmosphere, and topics selected from among numerical weather prediction and tropical, mesoscale, and middle atmosphere processes according to student interest.]

EAS 656 Isotope Geochemistry
Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 455 or permission of instructor. Offered alternate years. W. M. White.
Course topics include: nucleosynthetic processes and the isotopic abundances of the elements; geochronology and cosmochronology using radioactive decay schemes, including U-Pb, Rb-Sr, Sm-Nd, K-Ar, U-series isotopes, and cosmogenic isotopes such as ^{14}C and ^{36}Cl; use of radiogenic and stable isotopes in petrology and their application to study of the evolution of the crust and mantle; isotopic evidence regarding the formation of the Earth and the solar system; and stable isotopes and their use in geothermometry, ore petrogenesis, paleontology, and the global climate system.

EAS 675 Modeling the Soil-Plant-Atmosphere System (also CSS 675)
Spring. 3 credits. Prerequisites: EAS/CSS 483 or equivalent. Offered alternate years. S. J. Riha.
Introduction to the structure and use of soil-plant-atmosphere models. Topics covered include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and land surface processes as well as model data requirements, validation, and scale. Use of soil-plant-atmosphere models for teaching, research, extension, and policy formation is discussed.

EAS 692 Special Topics in Atmospheric Science
Fall or spring. 1–6 credits. S-U grades optional.
Study of topics in atmospheric science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

EAS 695 Computer Methods in Geological Sciences
Fall, spring. 3 credits. L. Brown, B. L. Isacks.
Independent research projects using state-of-the-art computational resources in the Department of Earth and Atmospheric Sciences. Possibilities include image and seismic processing, seismic and geomechanical modeling, GIS, use of interpretational workshops for 3-D seismic and satellite imagery, modeling fluid flow through complex media.

EAS 700–799 Seminars and Special Work
Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Staff.
Advanced work on original investigations in earth and atmospheric sciences. Topics change from term to term. Contact appropriate professor for more information.

EAS 722 Advanced Topics in Structural Geology
R. W. Allmendinger.

EAS 731 Plate Tectonics and Geology
J. M. Bird.

[EAS 733 Fractals and Chaos—Independent Studies
Not offered 2001–2002. D. L. Turcotte.]

EAS 751 Petrology and Geochemistry
R. W. Kay.

EAS 755 Advanced Topics in Petrology and Tectonics
J. M. Bird.

EAS 757 Current Research in Petrology and Geochemistry
S. Mahlburg Kay.

EAS 762 Advanced Topics in Paleobiology
W. D. Allmon.

EAS 771 Advanced Topics in Sedimentology and Stratigraphy
T. E. Jordan.

EAS 773 Paleobiology
J. L. Cisne.

EAS 775 Advanced Topics in Oceanography
Spring. C. H. Greene.

EAS 780 Earthquake Record Reading
Fall. M. Barazangi.

EAS 781 Geophysics, Exploration Seismology
L. D. Brown.

EAS 783 Advanced Topics in Geophysics
B. L. Isacks.

EAS 789 Lithospheric Seismology Seminar
L. D. Brown.

EAS 793 Andes-Himalayas Seminar
S. Mahlburg Kay, R. W. Allmendinger, B. L. Isacks, T. E. Jordan.

EAS 795 Low Temperature Geochemistry
Spring. L. A. Derry.

EAS 796 Geochemistry of the Solid Earth
W. M. White.

EAS 797 Fluid-Rock Interactions
L. M. Cathles.

EAS 799 Soil, Water, and Geology Seminar
L. M. Cathles, T. S. Steenhuis.

EAS 850 Master's-Level Thesis Research in Atmospheric Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.
Limited to students specifically in the master's program in atmospheric science.

EAS 950 Graduate-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty.
Limited to students in the atmospheric science Ph.D. program *only before* the "A" exam has been passed.

EAS 951 Doctoral-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty.
Limited to students admitted to candidacy in the atmospheric science Ph.D. program *after* the "A" exam has been passed.

ECONOMICS

T. Mitra, chair; R. Masson, graduate field representative; G. Staller, director of undergraduate studies; K. Basu, L. Blume, R. Burkhauser, S. Coate, T. E. Davis, D. Easley, R. Ehrenberg, G. Fields, R. Frank, G. Hay, Y. Hong, R. Kanbur, N. Kiefer, T. Lyons, P. D. McClelland, M. Majumdar, O. Melnikov, T. O'Donoghue, S. Ortigueira, K. Park, U. Possen, A. Razin, R. E. Schuler, K. Shell, S. Subramanian, M. Urquiola, T. Vogelsang, H. Y. Wan, Jr., Y. Wen, J. Wissink. Emeritus: W. Isard, A. Kahn, E. Thorbecke, J. Vanek

The study of economics provides an understanding of the way economies operate and an insight into public issues. The department offers a broad range of undergraduate courses in such fields as money and banking; international and comparative economics; econometrics; theory; history; growth and development; and the organization, performance, and control of industry.

Social Science Distribution Requirement

The microeconomics distribution requirement can be fulfilled with any of the following:
ECON 101, ECON 301, or ECON 313.

The macroeconomics distribution requirement can be satisfied with any of the following:

ECON 102, ECON 302, or ECON 314.

The Major

Prerequisites

ECON 101 and 102 and MATH 111 (or equivalents, with approval of the director of undergraduate studies), all with grades of C or better.

ECON 301 with a grade of C or better substitutes for 101; ECON 302 with a grade of C or better substitutes for 102.

Requirements

Eight courses listed by the Department of Economics at the 300 level or above, or approved by the student's major adviser, all with grades of C- or better. (S-U grade option is not allowed.)

These eight courses must include:

(1) ECON 313 and 314

(2) ECON 321, or ECON 319 and 320

(3) at least three courses from the following: 318, 320, 322–99, 467

ECON 301 with a grade of B or better substitutes for both 101 and 313; ECON 302 with a grade of B or better substitutes for both 102 and 314.

If ECON 321 is applied toward the major, neither 319 nor 320 can be applied.

ECON 498 and 499 *cannot* be counted toward the eight-course requirement.

If ECON 313 is applied to the major, ECON 301 cannot be.

If ECON 314 is applied to the major, ECON 302 cannot be.

An honors program is currently being offered. Students should consult the director of undergraduate studies before May of their junior year for more information.

Students planning graduate work in Economics should select ECON 319–320 rather than 321 and should consider including some of the following courses in their majors:

ECON 317–318, Mathematical Economics

ECON 416, Intertemporal Economics

ECON 419, Economic Decisions under Uncertainty

ECON 445–446, Topics in Microeconomic and Macroeconomic Analysis

ECON 467, Game Theory.

Students planing careers in business management should consider including some of the following courses in their majors:

ECON 333, Financial Economics

ECON 351 or 352, Industrial Organization

ECON 361–362, International Trade and Finance

ECON 440–41, Analysis of Agricultural Markets and Commodity Futures Markets.

ECON 443, Personnel Economics for Managers

In addition to completing the Economics major, such students should also consider courses in accounting and subjects such as finance, marketing, entrepreneurship, business administration, and business law. Courses in these subjects are offered by the Department of Applied Economics and Management; the School of Hotel Administration; and the Johnson Graduate School of Management.

Students planning to attend Law School should consider including some of the following courses in their majors:

ECON 351 or 352, Industrial Organization

ECON 361–362, International Trade and Finance

ECON 404, Economics and the Law.

In addition to completing the Economics major, such students should inquire at Career Services, College of Arts and Sciences, concerning recommended courses offered by other departments.

Courses

ECON 101 Introductory Microeconomics (III)
Fall, spring, winter, and summer. 3 credits. ECON 101 is not a prerequisite for 102.
Explanation and evaluation of how the price system operates in determining what goods are produced, how goods are produced, who receives income, and how the price system is modified and influenced by private organizations and government policy.

ECON 102 Introductory Macroeconomics (III)
Fall, spring, winter, and summer. 3 credits. ECON 101 is not a prerequisite for 102.
Analysis of aggregate economic activity in relation to the level, stability, and growth of national income. Topics discussed may include the determination and effects of unemployment, inflation, balance of payments, deficits, and economic development, and how these may be influenced by monetary, fiscal, and other policies.

ECON 230 International Trade and Finance (III)
For description, see AEM 230.

ECON 301 Microeconomics (III)
Fall. 4 credits. Prerequisite: calculus.
Intended for students with strong analytical skills who have not taken ECON 101, 102. Can be used to replace both ECON 101 and 313. (Can replace 313 only with grade of B or better.) This course covers the topics taught in ECON 101 and 313. An introduction to the theory of consumer and producer behavior and to the functioning of the price system.

ECON 302 Macroeconomics (III)
Spring. 4 credits. Prerequisite: ECON 301.
Intended for students with strong analytical skills who have not taken ECON 101, 102. Can be used to replace both ECON 102 and 314. This course covers the topics taught in ECON 102 and 314. (Can replace 314 only with grade of B or better.) An introduction to the theory of national income determination, unemployment, growth, and inflation.

ECON 307 Introduction to Peace Science (also CRP 495.18) (III)
Winter session. 4 credits. Prerequisites: ECON 101–102 or permission of instructor.
Introduction to the theories of and research on conflict resolution. Topics include conflict, its role and impact on society; theories of aggression and altruism; causes of war; game theory; conflict management procedures and other analytical tools and methods of peace science; and alternatives to war.

ECON 313 Intermediate Microeconomic Theory (III)
Fall, spring, and summer. 4 credits.
Prerequisites: ECON 101–102 and calculus.
The pricing processes in a private enterprise economy are analyzed under varying competitive conditions, and their role in the allocation of resources and the functional distribution of national income is considered.

ECON 314 Intermediate Macroeconomic Theory (III)
Fall, spring, and summer. 4 credits.
Prerequisites: ECON 101–102 and calculus.
The theory of national income and determination and economic growth in alternative models of the national economy is introduced. The interaction and relation of these models to empirical aggregate economic data is examined.

ECON 319 Introduction to Statistics and Probability (II)
Fall. 4 credits. Prerequisites: ECON 101–102 and MATH 111–112.
This course provides an introduction to statistical inference and to principles of probability. It includes descriptive statistics, principles of probability, discrete and continuous distributions, and hypothesis testing (of sample means, proportions, variance). Regression analysis and correlation are introduced.

ECON 320 Introduction to Econometrics (II)
Spring. 4 credits. Prerequisites: ECON 101–102, 319, or equivalent.
Introduction to the theory and application of econometric techniques. How econometric models are formulated, estimated, used to test hypotheses, and used to forecast; understanding economists' results in studies using regression model, multiple regression model, and introduction to simultaneous equation models.

ECON 321 Applied Econometrics (II)
Fall and spring. 4 credits. Prerequisites: ECON 101–102 and calculus.
This course provides an introduction to statistical methods and principles of probability. Topics covered include analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, correlation and time series analysis. Applications from economics are used to illustrate the methods covered in the course.

ECON 322 World Economic History # (III)
Spring. 4 credits. Prerequisites: ECON 101 and 102 or the equivalent.
An economist's perspective on the comparative evolution of selected economic and social institutions, with emphasis on trade, finance, population growth and technological change.

ECON 323 American Economic History # (III)
Fall. 4 credits. Prerequisites: ECON 101–102 or equivalent.
Problems in American economic history from the first settlements to early industrialization are surveyed.

ECON 324 American Economic History # (III)
Spring. 4 credits. Prerequisites: ECON 101–102 or equivalent.
A survey of problems in American economic history from the Civil War to World War I.

ECON 331 Money and Credit (III)
Fall. 4 credits. Prerequisites: ECON 101–102 and 314.
A systematic treatment of the determinants of the money supply and the volume of credit. Economic analysis of credit markets and financial institutions in the United States.

ECON 333 Financial Economics (III)
Spring. 4 credits. Prerequisites: ECON 313 and 314.
The theory and decision making in the presence of uncertainty and the practical aspects of particular asset markets are examined.

ECON 335 Public Finance: The Microeconomics of Government (III)
Fall. 4 credits. Prerequisites: ECON 101–102 and 313, or their equivalent, and one semester of calculus.
The role of government in a free market economy is analyzed. Topics covered include public goods, market failures, allocation mechanisms, optimal taxation, effects of taxation, and benefit-cost analysis. Current topics of an applied nature vary from term to term.

ECON 336 Public Finance: Resource Allocation and Fiscal Policy (III)
Spring. 4 credits. Prerequisites: ECON 101–102, 313 or their equivalent and 1 semester of calculus.
This course covers the revenue side of public finance and special topics. Subjects covered include the federal debt, the budget, and government regulation and transfers, as well as problems like local public goods, health care, education, the hierarchy of governmental structure, plus a variety of applied problems.

ECON 341 Labor Economics (III)
For description, see ILRLE 240.

ECON 351 Industrial Organization I (III)
Fall. 4 credits. Prerequisite: ECON 313 or its equivalent.
This course examines markets with only a few firms (i.e., oligopolies), and the primary focus is the strategic interactions between firms. Topics include static competition in oligopolies, cartels and other forms of collusive behavior, competition between firms producing differentiated products, entry behavior, R&D behavior, and government interventions in oligopoly industries (e.g., antitrust laws).

ECON 352 Industrial Organization II (III)
Spring. 4 credits. Prerequisite: ECON 313 or its equivalent.
This course primarily focuses on the pricing decisions of firms. The course does not consider the strategic response of other firms to these pricing decisions. The pricing decisions include price discrimination, commodity bundling, pricing a product line and pricing a durable good. In addition to pricing decisions, the course considers topics associated with private information such as adverse selection, signaling, and moral hazard. Numerous theoretical models are presented and empirical results are discussed.

ECON 361 International Trade Theory and Policy (III)
Fall. 4 credits. Prerequisites: ECON 101–102 and 313.
This course surveys the sources of comparative advantage. It studies commerical policy and analyzes the welfare economics of trade between countries. Some attention is paid to the institutional aspects of the world trading system.

ECON 362 International Monetary Theory and Policy (III)
Spring and summer. 4 credits. Prerequisites: ECON 101–102 and 314.
This course surveys the determination of exchange rates and theories of balance of payments adjustments. It also explores open economy macroeconomics, and it analyzes some of the institutional details of foreign exchange markets, balance of payments accounting, and the international monetary system.

ECON 367 Game Theoretic Methods (III)
Fall, spring. 4 credits. Prerequisites: ECON 101 or equivalent.
This course introduces students to the use of game-theoretic methods for the social sciences. This leads to an analysis of the social and political foundations of economics which prepares students to think strategically on social and economic matters and thus serve as a background for more advanced courses in economics, game theory, and related social sciences.

ECON 371 Economic Development (III)
Fall. 4 credits. Prerequisites: ECON 313 or equivalent.
Study of the problem of sustaining accelerated economic growth in less-developed countries. Trade-offs between growth, welfare, and equity; the legacy of colonialism; relevance of history and economic theory; problems of capital formation, economic planning and international specialization; and the interaction of industrialization, agricultural development, and population change are emphasized.

ECON 372 Applied Economic Development (III)
Spring. 4 credits. Prerequisite: ECON 101–102.
This course examines several special topics in the economics of developing countries. Among the topics covered recently are the concepts of development and underdevelopment, the debate over development economics, the peasant household and its place in the world economy, the debt crisis, the state vs. market debate and the role of the state in economic development, and the question of sustainable development.

ECON 404 Economics and the Law (III)
Fall. 4 credits. Prerequisite: ECON 101.
An examination, through the lens of economic analysis, of legal principles drawn from various branches of law, including contracts, torts, and property. Cases are assigned for class discussion; in addition, there are several writing assignments.

ECON 408 Production Economics and Policy (III)
For description, see AEM 608.

ECON 409 Environmental Economics and Policy (III)
For description, see AEM 451.

ECON 415 Price Analysis (III)
For description, see AEM 415.

[ECON 416 Intertemporal Economics (III)
Spring. 4 credits. Prerequisites: ECON 313. Not offered 2001–2002.
This course is intended for advanced economics majors who are especially interested in economic theory. Topics covered: (1) review of the one good Ramsey model of optimal savings and accumulation; conditions for intertemporal efficiency in production; comparative dynamics and sensitivity analysis; (2) some earlier models of capital accumulation; the roles of present value and internal rate of return in guiding investment decisions; (3) growth, exhaustible resources; pollution and conservation: discussion of the trade-offs facing a society.]

ECON 417 History of Economic Analysis # (III)
Fall or spring. 4 credits. Prerequisites: ECON 101–102 or permission of instructor.
Covers early writings in economics and their relationship to current economic analysis and policy issues. Examples includle: ancient and medieval philosophers on justice in exchange; mercantilist arguments for trade protection; early theories about the effect of monetary expansion (D. Hume); the role of the entrepreneur (Cantillon); and general competitive equilibrium (the Physiocrats). The most recent reading assignment in this course is Adam Smith's *Wealth of Nations* but the emphasis is on the relationship between the precursors of Adam Smith and his *Wealth of Nations* to modern economics analysis and current efforts to answer some of the questions raised in the early writing on economics.

[ECON 419 Economic Decisions under Uncertainty (III)
Fall. 4 credits. Prerequisites: ECON 313 and 319. Not offered 2001–2002.
This course provides an introduction to the theory of decision making under uncertainty with emphasis on economic applications of the theory.]

ECON 420 Economics of Family Policy—Adults
Economics 420 and 421 together, count as 1 course for the Economics major.
For description, see PAM 320.

ECON 421 Economics of Family Policy—Children
Economics 420 and 421 together, count as 1 course for the Economics major.
For description, see PAM 321.

ECON 425 Economic History of Latin America @ # (III)
Spring. 4 credits.
A survey of changing economic institutions and policies from pre-Columbian to modern times.

ECON 430 Policy Analysis: Welfare Theory, Agriculture, and Trade (III)
For description, see AEM 630.

ECON 440 Analysis of Agricultural Markets
ECON 440 and 441 together, count as 1 course for the Economics major.
For description, see AEM 640.

ECON 441 Commodity Futures Markets
ECON 440 and 441 together, count as 1 course for the Economics major.
For description, see AEM 641.

ECON 443 Personnel Economics for Managers
For description, see ILRLE 433.

ECON 444 Modern European Economic History
For description, see ILRLE 444.

[ECON 445 Topics in Microeconomic Analysis—Markets and Planning (III)
Fall. 4 credits. Prerequisites: ECON 313. Not offered 2001–2002.
This is a course of economic theory designed for upperclass undergraduates. Course contents may vary from year to year. Issues that may be examined include: How can economic activities be efficiently organized through the market mechanism? Why is the presence of many traders essential to efficiency? What can be done if the indivisibility in production processes becomes an important hindrance to competitive pricing? How can economic planning be decentralized efficiently? This course serves two purposes: to introduce concepts that are novel to undergraduates and relevant to public policy but require only a modicum of analytic tooling up, and to illustrate the deductive approach of modern economic analysis—how to define concepts unambiguously, how to form propositions in clear-cut fashion, and how to follow up logical implications sequentially to the conclusion.]

[ECON 446 Topics in Macroeconomic Analysis—Is Keynesianism Dead? (III)
Fall or spring. 4 credits. Prerequisites: ECON 314. Not offered 2001–2002.
The coverage of this course may vary from term to term. Presently, the content of the course deals with the range of criticisms against Keynesian theory by the New Classical Economics, alias the Equilibrium School, alias the Rational Expectations School. Despite the fact that almost all intermediate macroeconomic textbooks are Keynesian in perspective, clearly Keynesian economics is currently at bay. We review critically critiques to Keynesian theory.]

ECON 447 Economics of Social Security (III)
For description, see CEH 346.

ECON 450 Resource Economics (III)
For description, see ARME 450.

ECON 451 Economic Security (III)
For description, see ILRLE 340.

ECON 453 The Economics of Unemployment (III)
For description, see ILRLE 348.

ECON 454 The Economics of Health Care (III)
For description, see ILRLE 440.

ECON 455 Income Distribution (III)
For description, see ILRLE 441.

ECON 456 The Economics of Employee Benefits (III)
For description, see ILRLE 442.

ECON 457 Women in the Economy (III)
For description, see ILRLE 445.

ECON 458 Topics in Twentieth-Century Economic History (III)
For description, see ILRLE 448.

ECON 459 Economic History of British Labor 1750–1940 (III)
For description, see ILRLE 446.

ECON 460 Economic Analysis of the Welfare State (III)
For description, see ILRLE 642.

ECON 461 The Economics of Occupational Safety and Health (III)
For description, see ILRLE 644.

ECON 464 Economics of Agricultural Development (III)
For description, see AEM 464.

ECON 465 Food and Nutrition Policy (III)
For description, see AEM 665.

ECON 466 Economics of Development (III)
For description, see AEM 666.

ECON 467 Game Theory (III)
Fall. 4 credits. Prerequisites: ECON 313 and 319.
This course studies mathematical models of conflict and cooperation in situations of uncertainty (about nature and about decision makers).

ECON 468 Economic Problems of Latin America @ (III)
Spring. 4 credits. Prerequisites: ECON 101–102.
Current topics include, international debt, capital flight, economic integration, stabilization programs, etc.

ECON 469 China's Economy under Mao and Deng @ (III)
Fall. 4 credits. Prerequisites: ECON 101–102 or permission of instructor.
Examines the development of the Chinese economy and the evolution of China's economic system between 1949 and the early 1990s.

ECON 471 The Economies of the Former Soviet Union and of Central Europe: From Central Planning to Markets (III)
Fall. 4 credits. Prerequisites: ECON 101, 102.
The course introduces first the basic features of a centrally planned economy and proceeds to consider the most important example: the rise and fall of the Soviet Union. Secondly, the analysis extends to what used to be known as "Eastern Europe" (e.g., Czechoslovakia, Hungary, Poland). From this necessary historical background, the course proceeds to current attempts to move away from Socialist central planning and its legacies to market economy, privatization, and independence.

ECON 472 Comparative Economic Systems: East and West (III)
Fall. 4 credits. Prerequisites: ECON 101–102.
The course develops first a framework for studying economic systems and national economies and presents three simple stylized systemic models: capitalist market, socialist market, and central planning. Secondly, the course considers economic goals to be achieved (such as growth, stability, and productivity) and introduces quantitative measures used in the evaluation of the performance. Thirdly, comparative studies of selected national economies representing the models are carried out.

ECON 473 Economics of Export-Led Development @ (III)
Spring. 4 credits. Prerequisites: ECON 313, 314, or their equivalent.
This course examines the phenomenon of export-led development from both the theoretical and empirical points of view. Concentration is on experiences within the West Pacific Rim.

ECON 474 National and International Food Economics (III)
For description, see NS 457.

ECON 475 The Economy of India @ (III)
Fall. 4 credits. Prerequisite: ECON 101–102 or equivalent background.
This course presents the major economics and development problems of contemporary India and examines the country's future economic prospects. It is, however, our aim to discuss these problems in their proper historical perspectives. Hence, the course starts with a brief outline of the social and political history of India. It then turns to a more detailed account of the economic history of India in two stages.

ECON 498 Independent Study in Economics
Fall or spring. Variable credit.
Independent study.

ECON 499 Honors Program
Fall and spring. 8 credits. Prerequisites: ECON 313, 314, 321 (or 319–320).
Consult the Director of Undergraduate Studies for details. Interested students should apply to the program in the spring semester of their junior year.

Graduate Courses and Seminars

ECON 609 Microeconomic Theory I
Fall. 4 credits.
Topics in consumer and producer theory.

ECON 610 Microeconomic Theory II
Spring. 4 credits.
Topics in consumer and producer theory, equilibrium models and their application, externalities and public goods, intertemporal choice, simple dynamic models and resource depletion, choice under uncertainty.

ECON 613 Macroeconomic Theory I
Fall. 4 credits.
Course covers the following topics: static general equilibrium; intertemporal general equilibrium: infinitely lived agents models and overlapping generations models; welfare theorems; equivalence between sequential markets and Arrow-Debreu Markets; Ricardian proposition; Modigliani-Miller theorem; asset pricing; recursive competitive equilibrium; the Neoclassical Growth Model; calibration; and introduction to dynamic programming.

ECON 614 Macroeconomic Theory II
Spring. 4 credits.
Course covers the following topics: dynamic programming; stochastic growth; search models; cash-in-advance models; real business-cycle models; labor indivisibilities and lotteries; heterogeneous agents models; optimal fiscal and monetary policy; sustainable plans; and endogenous growth.

ECON 616 Applied Price Theory (also NBA 527)
Spring. 4 credits.
The course emphasizes the applications of the principles of price theory to a variety of problems taken from concrete, practical settings.

ECON 617 Intermediate Mathematical Economics I
Fall. 4 credits. Prerequisites: Calculus II and intermediate linear algebra.
The course covers selected topics in Matrix algebra (vector spaces, matrices, simultaneous linear equations, characteristic value problem), calculus of several variables (elementary real analysis, partial differentiation, convex analysis), classical optimization theory (unconstrained maximization, constrained maximization).

[ECON 618 Intermediate Mathematical Economics II
Spring. 4 credits. Not offered 2001–2002.
A continuation of ECON 617, the course develops additional mathematical techniques for applications in economics. Topics covered may include study of dynamic systems (linear and nonlinear difference equations, differential equation, chaotic behavior), dynamic optimization methods (optimal control theory, nonstochastic and stochastic dynamic programming), and game theory (repeated dynamic and evolutionary games).]

ECON 619 Econometrics I
Fall. 4 credits. Prerequisites: ECON 319–320 or permission of instructor.
This course gives the probabilistic and statistical background for meaningful application of econometric techniques. Topics covered include: probability theory: probability spaces, random variables, distributions, moments, transformations, conditional distributions, distribution theory and the multivariate normal distribution, convergence concepts, laws of large numbers, central limit theorems, Monte Carlo simulation; statistics: sample statistics, sufficiency, exponential families of distributions. Further topics in statistics are considered in ECON 620.

ECON 620 Econometrics II
Spring. 4 credits. Prerequisite: ECON 619.
This course is a continuation of ECON 619 (Econometrics I) covering statistics: estimation theory, least squares methods, method of maximum likelihood, generalized method of moments, theory of hypothesis testing, asymptotic test theory, and nonnested hypothesis testing; and econometrics: the general linear model, generalized least squares, specification tests, instrumental variables, dynamic regression models, linear simultaneous equation models, nonlinear models, and applications.

ECON 639 Public Political Economy
Spring. 4 credits. Prerequisites: ECON 313 or equivalent.
Topics covered include the intrinsic nature of goods and services, decreasing cost of production, externalities and congestion, attributes and government regulation essential for an effective market, the efficient role of government in non-market resource allocation methods, methods for inferring the demand for public goods, efficient public decision-making, the supply of public services and raising revenue through taxes and user-fees. Particular emphasis is placed on the intersection between fairness and efficiency in resolving conflicts over public good provision, including defining jurisdictions for the provision of particular services. Examples emphasize the proper provision of infrastructure services: physical (transportation, utilities, tele-information); human-capital (education and R&D); and biological (renewable resources, species diversity and the environment.

ECON 699 Readings In Economics
Fall or spring. Variable credit.
Independent study.

ECON 703 Seminar In Peace Science
Fall. 4 credits.
Among the topics covered at an advanced level are game theory are: coalition theory, bargaining and negotiation processes, cooperative procedures, microbehavior models, macrosocial processes, and general systems analysis.

ECON 710 Stochastic Economics: Concepts and Techniques
Spring. 4 credits. Prerequisites: ECON 609, 610, 613, 614, 619, and 620.
This course reviews a number of techniques that have been useful in developing stochastic models of economic behavior. These include: discrete-time Markov processes, dynamic programming under uncertainty, and continuous-time diffusion processes. Examples of economic models are drawn from recent literature on optimal capital accumulation and optimal savings and portfolio selection problems; permanent income hypothesis; dynamic models of price adjustment, etc. Advanced graduate students contemplating work in economic theory and econometric theory gain exposure to current research.

ECON 712 Advanced Macroeconomics
4 credits. Prerequisites: ECON 613, 614.
The purpose of this course is to introduce students to some of the topics and analytic techniques of current macroeconomic research. The course falls into three parts: dynamic programming, new Keynesian economics, and recent theories of economic growth. The dynamic programming section includes models of consumption, investment, and real business cycles. The new Keynesian section covers models of wage and price rigidity, coordination failure, and credit markets. The section on endogenous growth looks at recent efforts to add nonconvexities to models of optimal growth. These topics are intended to complement the material on overlapping generations covered elsewhere.

ECON 713 Advanced Macroeconomics II
Spring. 4 credits. Prerequisites: ECON 613, 614.
This course reveiws the most recent research in endogenous growth theory. This theory is little more than a decade old, but it has produced a large number of both empirical and theoretical results that have substantially reshaped the general field of macroeconomics. It is perhaps no exaggeration to say that most of the work at the frontier of today's macroeconomics belongs to this field. An increasing number of papers have been touching important issues such as; learning by doing, R&D investment, market structure, private and public organization of R&D, education financing, human capital accumulation, technological unemployment, growth and business cycles, inequality and growth, political equilibrium, democracy and growth, instability, social conflict, capital accumulation, intergenerational and vested interests and barriers to technology adoption, international transfers of technologies, sustainable development, etc.

This course aims to orient the student in this large and variegated literature consisting of recently published articles and working papers. Understanding this literature is a sound training in the analytical methods used at the frontier of theoretical research, but it also provides a number of empirical results at the center of the economic debate.

ECON 717 Mathematical Economics
4 credits. Prerequisites: ECON 609–610 (or equivalent training in micro theory) and MATH 413–414 (or equivalent training in analysis).
The primary theme of this course is to explore the role of prices in achieving an efficient allocation of resources in dynamic economies. Some of the classical results on static equilibrium theory and welfare economics on attaining optimal allocation through decentralized organizations are examined through an axiomatic approach. Some basic issues on capital theory are also analyzed.

[ECON 718 Topics in Mathematical Economics
4 credits. Not offered 2001–2002.]

ECON 719 Advanced Topics in Econometrics I
Fall. 4 credits. Prerequisites: ECON 619–620 or permission of instructor.
Covers advanced topics in econometrics, such as asymptotic estimation and test theory, robust estimation, Bayesian inference, advanced topics in time-series analysis, errors in variable and latent variable models, qualitative and limited dependent variables, aggregation, panel data, and duration models.

ECON 720 Advanced Topics in Econometrics II
Spring. 4 credits. Prerequisites: ECON 619–620 or permission of instructor.
For description see ECON 719.

ECON 721 Time Series Econometrics
Spring. 4 credits. Prerequisites: ECON 619–620 or permission of instructor.
This course covers traditional and current time series techniques that are widely used in econometrics. Topics include: the theory of stationary stochastic processes including univariate ARMA(p,q) models, spectral density analysis, and vector autoregressive models; parametric and semi-parametric estimation; current developments in distributional theory; and estimation and testing in models with integrated regressors including, unit root tests, cointegration, and permanent vs. transitory components.

ECON 731 Monetary Economics
Spring. 4 credits. Prerequisites: ECON 614 or permission of the instructor.
Covers advanced topics in monetary economics, macroeconomics, and economic growth—such as overlapping-generations, taxes and transfers denominated in money, transactions demand for money, multi-asset accumulation, exchange rates, and financial intermediation.

ECON 732 Monetary Economics
Fall. 4 credits. Prerequisites: ECON 731 or permission of the instructor.
Covers advanced topics in monetary economics, macroeconomics, and economic growth—such as economic volatility, the "burden" of

government debt, restrictions on government borrowing, dynamic optimization, endogenous growth theory, technological evolution, financial market frictions, and cyclical fluctuations.

ECON 735 Public Finance: Resource Allocation and Fiscal Policy (also AEM 735)
Spring. 4 credits.
This course develops a mathematical and highly analytical understanding of the role of government in market economies and the fundamentals of public economics and related issues. Topics covered include: generalizations and extensions of the fundamental theorems of welfare economics, in-depth analysis of social choice theory and the theory on implementation in economic environments, public goods and externalities and other forms of market failure associated with asymmetric information. The theoretical foundation for optimal direct and indirect taxation is also introduced along with the development of various consumer surplus measures and an application to benefit cost analysis. Topics of an applied nature vary from semester to semester depending on faculty research interests.

ECON 736 Public Finance: Resource Allocation and Fiscal Policy
Fall. 4 credits.
This course spends a large part of the semester covering the revenue side of public finance. Topics include the impact of various types of taxes as well as the determination of optimal taxation. The impact of taxation on labor supply, savings, company finance and investment behavior, risk bearing, and portfolio choice are explored. Other topics include the interaction of taxation and inflation, tax evasion, tax incidence, social security, unemployment insurance, deficits, and interactions between different levels of government.

[ECON 737 Location Theory and Regional Analysis
Fall. 4 credits. Prerequisites: ECON 609, 617, and Econometrics. Not offered 2001–2002.
Covers economic principles influencing the location of economic activity, its spatial equilibrium structure, and dynamic forces. Topics include spatial pricing policies, price competition, and relocation by firms; residential location patterns; patterns of regional growth and decline; and patterns of urbanization.]

ECON 738 Public Choice
Spring. 4 credits. Prerequisites: ECON 609, 610.
This class has two parts. It begins with an introduction to economic theories of political decision making. We review the theory of voting, theories of political parties and party competition, theories of legislative decision making and interest group influence. We also discuss empirical evidence concerning the validity of these theories. The second part uses these theories to address a number of issues in Public Economics. We develop the theory of political failure, analyze the performance of alternative political systems and discuss the problem of doing policy analysis which takes into account political constraints.

ECON 741 Seminar in Labor Economics
For description see ILRLE 744.

ECON 742 Seminar in Labor Economics
For description see ILRLE 745.

ECON 751 Industrial Organization and Regulation
Fall. 4 credits. Prerequisites: ECON 609, 610.
This course focuses primarily on recent theoretical advances in the study of industrial organization. Topics covered include: market structure, nonlinear pricing, quality, durability, location selection, repeated games, collusion, entry deterrence, managerial incentives, switching costs, government intervention, and R&D/Patents. These topics are discussed in a game-theoretic context.

ECON 752 Industrial Organization and Regulation
Spring. 4 credits. Prerequisites: ECON 609, 610, 751.
This course rounds out some topics in the Theory of Industrial Organization with the specific intent of addressing the empirical implications of the theory. The course reviews empirical literature in the SCP paradigm and in the NEIO paradigm.

[ECON 753 Public Policy Issues for Industrial Organizations
Spring. 4 credits. Prerequisites: ECON 609, 610, and 751. Not offered 2001–2002.
The course takes an in-depth view of the interaction between the government and business. Methods of business control, including antitrust, price regulation, entry regulation, and safety regulation. Emphasis will be not only on the economic effects on business, but on the economics of selecting and evolving the method of control.]

[ECON 755 Rivalry and Cooperation
Fall. 4 credits. Prerequisites: Economics Graduate Core or instructor's permission. Not offered 2001–2002.
In standard models, economic interaction is impersonal. Agents respond to price signals and measure their own welfare not in relative but in absolute terms; and cooperative behavior emerges only when it coincides with narrow self-interest. This course explores the details of rivalry and cooperation in an effort to synthesize broader views of economic interaction. Topics include: the effect of concerns about relative income on wage rates, consumption, savings, and regulation; the effect of concerns about fairness on prices and wages; the conditions that foster trust and cooperation; and the role of positional competition in the distribution of economic rewards.]

ECON 756 Noncooperative Game Theory
Fall. 4 credits. Prerequisites: ECON 609–610 and 619.
This course surveys equilibrium concepts for noncooperative games. We cover Nash equilibrium and a variety of equilibrium refinements, including perfect equilibrium, proper equilibrium, sequential equilibrium and more! We pay attention to important special classes of games, including bargaining games, signalling games, and games of incomplete information. Most of our analysis is from the strict decision-theoretic point of view, but we also survey some models of bounded rationality in games, including games played by automata.

ECON 757 Economics of Imperfect Information
Spring. 4 credits. Prerequisites: ECON 609–610 and 619.
The purpose of this course is to consider some major topics in the economics of uncertain information. Although the precise topics considered vary from year to year, subjects such as markets with asymmetric information, signalling theory, sequential choice theory, and record theory are discussed.

ECON 758 Psychology and Economic Theory
Fall, spring. 4 credits. Prerequisites: grad core or instructors permission.
This course explores the ways in which insights from psychology can be integrated into economic theory. Evidence is presented on how human behavior systematically departs from the standard assumptions of Economics and how this can be incorporated into modeling techniques.

ECON 760 Topics in Political Economy
Fall. 4 credits. Prerequisite: Economics graduate core or instructor's permission.
This course develops critiques and extensions of economic theory, taking into account the political and social moorings of economic activity and equilibria. The formation and persistence of social norms; the meaning and emergence of property rights; the role of policy advice in influencing economic outcomes; and the effect of political power and ideology on economic variables are studied. While these topics were popular in the classic works of political economy, recent advances in game theory and, more generally, game-theoretic thinking allows us to approach these topics from a new perspective. Hence, the course begins by devoting some lectures to elementary ideas in game-theory and strategic analysis.

ECON 761 International Economics: Trade Theory and Policy
Fall. 4 credits. Prerequisites: ECON 609, 610.
This course surveys the sources of comparative advantage. It analyzes simple general equilibrium models to illustrate the direction, volume, and welfare effects of trade. Topics in game theory and econometrics as applied to international economics may be covered.

ECON 762 International Economics: International Finance and Open Economy Macroeconomics
Spring. 4 credits. Prerequisite: ECON 761.
This course surveys the determination of exchange rates and theories of balance of payment adjustments. It explores open economy macroeconomics by analyzing models of monetary economies. Topics in monetary economics and econometrics as applied to international economics are covered.

ECON 770 Topics in Economic Development
For description, see AEM 667.

ECON 771 Economic Development and Development Planning
Spring. 4 credits. Prerequisites: graduate core or instructor's permission.
Reviews the existing literature on the determinants of economic growth and the interrelationship of growth and income distribution through the process of economic development. A general equilibrium approach

to development is taken. Computable general equilibrium models, based on social accounting matrices, are used to explore the performance of a variety of developing countries. Among the topics explored are: impact of structural adjustment and stabilization policies on growth, equity and internal and external equilibrium; sectoral interrelationship and interdependence through the growth process. Critical review and evaluation of national, sectoral, and regional development models built for such developing countries as India, Brazil, Indonesia, and Ecuador.

ECON 772 Economics of Development
Spring. 4 credits. Prerequisites: first-year graduate economic theory and econometrics.
Analytical approaches to the economic problems of developing nations. Topics to be covered include: some old and new directions in development economics thinking, the welfare economics of poverty and inequality, empirical evidence on who benefits from economic development, labor market models, project analysis with application to the economics of education, and development policy.

ECON 773 Economic Development
Fall. 4 credits. Prerequisites: ECON 609 and 620.
The course is concerned with theoretical and applied works that seek to explain economic development, or lack thereof, in countries at low-income levels. Specific topics vary each semester.

ECON 774 Economic Systems
Spring. 4 credits.
The course deals with economic systems, formerly centrally planned economies, and economies in transition.

ECON 784 Seminars in Advanced Economics
Fall and spring. 4 credits.

ENGLISH

H. Shaw, chair; P. Sawyer, director of undergraduate studies (255–3492); R. Gilbert, director of graduate studies (255–7989); H. S. McMillin, director of honors program; J. Adams, J. Ashton, A. Boehm, F. Bogel, L. Bogel, M. P. Brady, L. Brown, C. Chase, B. Correll, J. Culler, S. Davis, E. DeLoughrey, L. Fakundiny, R. Farrell, D. Fried, A. Fulton, A. Galloway, J. Goldsby, K. Gottschalk, E. Hanson, L. Herrin, T. Hill, M. Hite, M. Jacobus, P. Janowitz, B. Jeyifo, C. Kaske, M. Koch, B. Maxwell, D. McCall, K. McClane, M. McCoy, M. K. McCullough, D. Mermin, S. Mohanty, R. Morgan, T. Murray, R. Parker, J. Porte, E. Rosenberg, N. Saccamano, S. Samuels, D. Schwarz, M. Seltzer, R. Shepherd, S. Siegel, H. Spillers, G. Teskey, S. Vaughn, H. Viramontes, N. Waligora-Davis, W. Wetherbee, S. Wong.
Emeriti: M. H. Abrams, B. Adams, J. Bishop, J. Blackall, A. Caputi, D. Eddy, R. Elias, A. Lurie, P. Marcus, J. McConkey, S. Parrish, M. Radzinowicz, S. C. Strout.

The Department of English offers a wide range of courses in English, American, and Anglophone literature as well as in creative writing, expository writing, and film analysis. Literature courses focus variously on close reading of texts, study of particular authors and genres, questions of critical theory and method, and the relationship of literary works to their historical contexts and to other disciplines. Writing courses typically employ the workshop method in which students develop their skills by responding to the criticism of their work by their classmates as well as their instructors. Many students supplement their formal course work in English by attending public lectures and poetry readings sponsored by the department or by writing for campus literary magazines. The department seeks not only to foster critical analysis and lucid writing but also to teach students to think about the nature of language and to be alert to both the rigors and the pleasures of reading texts of many sorts.

First-Year Writing Seminars

As part of the university-wide First-Year Writing Seminars program administered by the John S. Knight Institute for Writing in the Disciplines, the department offers many one-semester courses dealing with various forms of writing (e.g. narrative, autobiographical, and expository), with the study of specific areas in English and American literature, and with the relation of literature to culture. Students may apply any of these courses to their First-Year Writing Seminar requirement. Detailed course descriptions may be found in the First-Year Writing Seminars program listings, available from college registrars in August for the fall term and in November for the spring term.

Freshmen interested in majoring in English are encouraged to take at least one of the department's 200-level First-Year Writing Seminars: "The Reading of Fiction" (ENGL 270), "The Reading of Poetry" (ENGL 271), and "Introduction to Drama" (ENGL 272). These courses are open to all second-term freshmen. They are also open, as space permits, to first-term freshmen with scores of 700 or above on the CEEB College Placement Tests in English composition or literature, or 4 or 5 on the CEEB Advanced Placement Examination in English, as well as to students who have completed another First-Year Writing Seminar.

Courses for Nonmajors

For students majoring in fields other than English, the department provides a variety of courses at all levels. A number of courses at the 200 level are open to qualified freshmen, and all are open to sophomores. Courses at the 300 level are open to all sophomores, juniors, and seniors; they are also open to freshmen who have received the instructor's prior permission. The suitability of courses at the 400 level for nonmajors depends in part on the course topics, which are subject to change from year to year. Permission of the instructor is sometimes required; prior consultation is always in order and strongly advised.

The Major in English

Students who major in English develop their own programs of study in consultation with their major advisers. Some choose to focus on a particular historical period or literary genre or to combine sustained work in creative writing with the study of literature. Others pursue interests in such areas as women's literature, African-American literature, literature and the visual arts, or critical theory.

The department recommends that students prepare themselves for the English major by taking one or more of its preparatory courses, such as "The Reading of Fiction" (ENGL 270), "The Reading of Poetry" (ENGL 271), or "Introduction to Drama" (ENGL 272). (The "ENGL" prefix identifies courses sponsored by the Department of English, all of which appear in the English section of *Courses of Study* or the department's supplementary lists of courses; it also identifies courses sponsored and taught by other academic units and cross-listed with English.) These courses concentrate on the skills basic to the English major and to much other academic work—responsive, sensitive reading and lucid, strong writing. As First-Year Writing Seminars, any one of them will satisfy one-half the College of Arts and Science's First-Year writing requirement. ENGL 280, 281, 288, and 289 are also suitable preparations for the major and are open to students who have completed their First-Year Writing Seminar requirement. ENGL 201 and 202, which together constitute a two-semester survey of major British writers, though not required are strongly recommended for majors and prospective majors. ENGL 201 and 202 (unlike ENGL 280, 281, 288, and 289) are also "approved for the major" in the special sense of that phrase explained below.

To graduate with a major in English, a student must complete with passing letter grades 10 courses (40 credit hours) approved for the English major. All ENGL courses numbered 300 and above are approved for the major. In addition, with the exception of First-Year Writing Seminars (ENGL 270, 271, and 272), 200-level courses in creative and expository writing (ENGL 280, 281, 288, and 289), and courses designated for nonmajors, all 200-level ENGL courses are also approved for the major. Courses used to meet requirements for the English major may also be used to meet the "Humanities and the Arts" distribution requirement of the College of Arts and Sciences. Many of these courses may be used to meet the college's "historical breadth" requirement as well.

Of the 40 credits required to complete the major, 8 credits (two courses) must be at the 400 level or above; 12 credits (three courses) must be from courses in which 50 percent or more of the material consists of literature originally written in English before 1800; and another 12 credits (three courses) must form an intellectually coherent "concentration." The 400-level and pre-1800 requirements may be satisfied only with ENGL courses, and ENGL 493–494, the Honors Essay Tutorial, may not be used to satisfy either one. Courses that satisfy the pre-1800 requirement are so designated in *Courses of Study*. Many English majors use ENGL 201 to begin meeting this requirement since it provides an overview of earlier periods of British literature and so enables them to make more informed choices of additional pre-1800 courses. ENGL 202, however, does not qualify as a pre-1800 course. Neither do courses offered by other departments unless they are cross-listed with English. Although advanced courses in foreign literature read in the original languages may not be used to fulfill the pre-1800 requirement, they may be used for English major credit provided they are included within the 12-credit limit described below. The three-course concentration requirement may be satisfied with any courses approved for the major. The department's "Guide to the English Major" contains suggested areas of concentra-

tion and lists of courses that fall within the areas proposed, but majors are expected to define their own concentrations in consultation with their advisers.

As many as 12 credits in courses offered by departments and programs other than English may under certain conditions be used to satisfy English major requirements. Courses in literature and creative writing offered by academic units representing neighboring or allied disciplines (German Studies, Romance Studies, Russian, Asian Studies, Classics, Comparative Literature, Africana Studies, the Society for the Humanities, American Studies, Women's Studies, Religious Studies, Asian American Studies, Latino Studies, and Theatre, Film, & Dance) are routinely counted toward the 40 hours of major credit provided they are appropriate for juniors or seniors, as are most courses at the 300 level and above. English majors who are double majors may exercise this option even if all 12 credits are applied to their second major. All English majors are urged to take courses in which they read foreign works of literature in the original language, and for that reason 200-level literature courses for which qualification is a prerequisite (as well as more advanced foreign literature courses taught in the original language) may be counted toward the English major. Credit from other non-ENGL courses may be included within the 12 credits of nondepartmental courses approved for the major only when the student is able to demonstrate to the adviser's satisfaction their relevance to his or her individual program of study.

The Major in English with Honors

Second-term sophomores who have done superior work in English and related subjects are encouraged to seek admission to the department's program leading to the degree of Bachelor of Arts with Honors in English. Following an interview with the chair of the Honors Committee, qualified students will be admitted provisionally to the program. During their junior year these students must complete at least one Honors Seminar (ENGL 491 or 492); they are encouraged to take an additional 400-level English course in the field in which they plan to concentrate. On the basis of work in these and other English courses, a provisional Honors candidate is expected to select a thesis topic and secure a thesis adviser by the end of the junior year. A student who has been accepted by a thesis adviser becomes a candidate for Honors rather than a provisional candidate.

During the senior year, each candidate for Honors in English enrolls in a year-long tutorial (ENGL 493–494) with the faculty member who has agreed to serve as the student's thesis adviser. The year's work culminates in the submission of a substantial scholarly or critical essay to be judged by at least two members of the faculty. More information about the Honors Program may be found in a leaflet available in the English offices.

First-Year Writing Seminars Recommended for Prospective Majors

ENGL 270 The Reading of Fiction
Fall, spring, summer. 3 credits. Each section limited to 17 students. Recommended for prospective majors in English.
This course examines modern fiction, with an emphasis on the short story and novella. Students write critical essays on authors who flourished between 1870 and the present, such as James, Joyce, Woolf, Hurston, Lawrence, Fitzgerald, Hemingway, Faulkner, Rhys, Welty, Salinger, and Morrison. Reading lists vary from section to section, and some may include a novel, but close, attentive, imaginative reading and writing are central to all. *This course does not satisfy requirements for the English major.*

ENGL 271 The Reading of Poetry
Fall, spring. 3 credits. Each section limited to 17 students. Recommended for prospective majors in English.
How can we become more appreciative, alert readers of poetry, and at the same time better writers of prose? This course attends to the rich variety of poems written in English, drawing on the works of poets from William Shakespeare to Sylvia Plath, John Keats to Li-Young Lee, Emily Dickinson to A. R. Ammons. We may read songs, sonnets, odes, villanelles, even limericks. By engaging in thorough discussions and varied writing assignments, we explore some of the major periods, modes, and genres of English poetry, and in the process expand the possibilities of our own writing. *This course does not satisfy requirements for the English major.*

ENGL 272 Introduction to Drama
Fall, spring. 3 credits. Each section limited to 17 students. Recommended for prospective majors in English.
Students in this seminar study plays, older and newer, in a variety of dramatic idioms and cultural traditions. Plays being performed by the theatre department will be included, if possible. A typical reading list might include works by Sophocles, Shakespeare, Moliere, Chekhov, Brecht, Miller, Beckett, and Shange. Course work consists of writing and discussion and the occasional viewing of live or filmed performances. *This course does not satisfy requirements for the English major.*

Expository Writing

ENGL 288–289 Expository Writing (IV)
Fall, spring, summer, winter. 3 credits. Each section limited to 16 students. Students must have completed their colleges' first-year writing requirements or have the permission of the instructor. S. Davis and staff.
ENGL 288–289 offers guidance and an audience for students who wish to gain skill in expository writing. Each section provides a context for writing defined by a form of exposition, a disciplinary area, a practice, or a topic intimately related to the written medium. Course members read in relevant published material and write and revise their own work regularly, while reviewing and responding to each other's. Since these seminar-sized courses depend on members' full participation, regular attendance and submission of written work are required. Students and instructors will confer individually throughout the term. For more information please see the following web site: http//instruct1.cit.cornell.edu/Courses/engl288-89/. Topics for the various sections include:

Section 1—Roensch, R.—The Essay: Personal to Public

Section 2—Wesling, M.—Myths of the City

Section 3—Staff—Reading the News, Understanding the Media

Section 4—Boehm, A.—Minding the Body

Section 5—LeGendre, B.—Issues, Audiences, and Ourselves

Spring 2002 topics TBA.

See English department *Course Offerings* for full fall and spring section descriptions.

This course does not satisfy requirements for the English major.

ENGL 381 Reading as Writing (IV)
Fall. 4 credits. Course limited to 15 students. Prerequisite: permission of the instructor on the basis of a writing sample (critical/interpretive prose), which should reach the instructor before the first day of class. S. Davis.
"Haven't you ever happened to read while looking up from your book?" asked one theorist of reading, "not because you weren't interested, but because you were: because of a flow of ideas, stimuli, associations?" Students in this course look into the intricacies of the reading-writing process, reading a small number of nineteenth- and twentieth-century novels and poems, writing frequently about them, and reading each other's writing as collaborators and commentators. They "look up" frequently to pay conscious attention to the way writers' original literary works are often "readings" of the work of other writers and to the way our own readings may, critically and creatively, rewrite the literary texts we read. This is a course for English majors and non-majors who wish to extend their mastery of critical and interpretive prose and their understanding of what they do when they write it. It is advantageous for those planning to write honors theses in English or another discipline to take this course. The 2001 reading list (tentatively): Nabokov's *Pale Fire*, Wordsworth's two-part *Prelude*, Brontë's *Jane Eyre*, James' *Turn of the Screw*, Rhys' *Wide Sargasso* Sea, and Wilde's *Dorian Gray*.

ENGL 386 Philosophic Fictions (IV)
Spring. 4 credits. S. Davis.
Course limited to 15 students. Prerequisite: permission of the instructor on the basis of a writing sample (critical/interpretive prose), which should reach the instructor before the first day of class.

"Fictions"—of voice, audience, plot, point of view, figurative language, and thought—abound in good expository writing; they stand out in works that deliberately test and play with ideas: dialogues, satires, parodies, parables, philosophic tales, and "thought-experiments." Students write critically about such works and the issues they raise and experiment with writing in similar forms. The "fictions" read and written in this course are not realistic narratives or evocations of personal experience; they are the vehicles and animating resources of writers who want to argue flexibly, provoke thought, ridicule vice or folly, play games, or involve readers in pleasingly or disturbingly insoluble problems. Readings include such works as Plato's *Republic*, Swift's "Modest Proposal" and *Tale of a Tub*, Voltaire's *Candide*, Carroll's *Alice* books, short fictions by Jorge Luis Borges and Octavia Butler, and essays by Richard Rorty and Anthony Appiah.

[ENGL 387 Autobiography: Theory and Practice (IV)
4 credits. Next offered 2002–2003. A. Boehm.]

ENGL 388 The Art of the Essay (IV)
Fall. 4 credits. Limited to 15 students. Interested students should submit 1 or more pieces of recent writing (prose) to the instructor before the beginning of the term, preferably at preregistration. L. Fakundiny.
For both English majors and nonmajors who have done distinguished work in first-year writing seminars and in such courses as ENGL 280–281, 288–289, and who desire intensive practice in writing essays as a kind of creative nonfiction. The course assumes a high degree of self-motivation, a capacity for independent work, and critical interest in the work of other writers; it aims for a portfolio of conceptually rich and stylistically polished writing.

Creative Writing

Students usually begin their work in Creative Writing with ENGL 280 or 281, and only after completion of the First-Year Writing Seminar requirement. Please note that either ENGL 280 or ENGL 281 is the recommended prerequisite for 300-level creative writing courses. ENGL 280 and 281 may satisfy a distribution requirement in your college (please check with your college adviser). ENGL 382–383, 384–385, and 480–481 are approved for the English major.

ENGL 280–281 Creative Writing (IV)
Fall, spring, summer, winter. 3 credits. Prerequisites: completion of the Freshman Seminar requirement. Limited to 18 students.
Majors and prospective majors, please note. Although recommended for prospective English majors, ENGL 280–281 cannot be counted towards the 40 credits required for completion of the English major. It is a prerequisite for 300-level courses in creative writing, which count towards the major. ENGL 280 is not a prerequisite for ENGL 281.

An introductory course in the theory, practice, and reading of prose, poetry, and allied forms. Students are given the opportunity to try both prose and verse writing and may specialize in one or the other. Many of the class meetings are conducted as workshops.

ENGL 382–383 Narrative Writing (IV)
Fall, 382; spring, 383. 4 credits each term. Each section limited to 15 students. Previous enrollment in ENGL 280 or 281 recommended. Prerequisite: permission of instructor, normally on the basis of a manuscript. Fall: Sec. 1, D. McCall; sec. 2, S. Vaughn; sec. 3, R. Morgan. Spring: H. Viramontes, M. Koch, S. Vaughn.
The writing of fiction; study of models; analysis of students' work.

ENGL 384–385 Verse Writing (IV)
Fall or summer, 384; spring, 385. 4 credits each term. Each section limited to 15 students. Prerequisites: ENGL 280 or 281, or permission of instructor. Fall: P. Janowitz, K. McClane. Spring: P. Janowitz, A. Fulton.
The writing of poetry; study of models; analysis of students' poems; personal conferences.

ENGL 480–481 Seminar in Writing (IV)
Fall, 480; spring 481. 4 credits each term. Each section limited to 15 students. Prerequisite: permission of instructor, normally on the basis of a manuscript. The manuscript should be submitted to the instructor no later than the first day of class. Previous enrollment in ENGL 280 or 281 and at least one 300-level writing course recommended. Successful completion of one half of the 480-481 sequence does not guarantee enrollment in the other half; students must receive permission of the instructor to enroll in the second course. Fall: Sec. 1, H. Viramontes, sec. 2, R. Morgan. Spring: P. Janowitz, S. Vaughn.
Intended for those writers who have already gained a basic mastery of technique. Although ENGL 480 is not a prerequisite for ENGL 481, students normally enroll for both terms and should be capable of a major project—a collection of stories or poems, a group of personal essays, or perhaps a novel—to be completed by the end of the second semester. Seminars are used for discussion of the students' manuscripts and published works that individual members have found of exceptional value.

Courses for Freshmen and Sophomores

These courses have no prerequisites and are open to freshmen and nonmajors as well as majors and prospective majors.

Introductions to Literary Studies

ENGL 201–202 The English Literary Tradition # (IV)
201: fall. 4 credits. ENGL 201 is not a prerequisite for 202. This course may be used as one of the three courses before 1800 required of English majors. A. Galloway.
An introduction to the study of English literature, examining its historical development and some of its achievements within the contexts of cultural, intellectual, and religious history from its beginnings in the 8th century through the 17th century. Some of the works we read, discuss and write about across this thousand-year span are *Beowulf*; *Sir Gawain and the Green Knight*; selections from Chaucer's *Canterbury Tales* and Spenser's *Faerie Queene*; Shakespeare's *Sonnets* and *King Lear*; poems by Sidney, Jonson, Donne, Herbert, Herrick, and Marvell; and selections from Milton's *Paradise Lost*.

202: spring. 4 credits. D. Fried.
A survey of English literature from the late seventeenth century to the start of the twentieth century. The focus is on English poetry, drawn from a range of genres and modes, and including Pope's *Rape of the Lock* and the poems and illustrations of Blake's *Songs of Innocence and of Experience*. In addition we read two novels (Swift's *Gulliver's Travels*, Austen's *Persuasion*), and one play (Wilde's *The Importance of Being Earnest*). Lectures twice a week, and once a week small discussion groups provide a chance for closer scrutiny of texts and topics covered in the lectures.

ENGL 207 Introduction to Modern Poetry (IV)
Fall. 4 credits. R. Shepherd.
This course samples the vast array of poetic modes and forms employed over the past century and a half, with primary emphasis on the work of American poets. Our focus in the course is on the poems themselves—what they mean, how they feel, sound, look, and behave. Lectures, discussions, and written assignments emphasize both the craft of writing poetry and the discipline of reading it with understanding and appreciation. No previous study of poetry required.

ENGL 208 Shakespeare and the Twentieth Century (IV)
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. S. Davis.
What can we learn about Shakespeare's plays from their reception in the twentieth century? What can we learn about twentieth century cultures from their appropriations of these texts and their reinventions of the Shakespeare legend? We compare four or five plays with their adaptations in fiction, theater, and film and explore the uses made of Shakespeare in education, advertising, and public culture. Our discussions try to illuminate the vast differences and startling continuities among the Shakespeares handed down by earlier times and those recovered or invented in the modern era; we also pay attention to the variety of critical approaches readers and viewers have taken to Shakespeare on the page and in performance. For spring 2002, tentatively: *Romeo and Juliet*, *Titus Andronicus*, *Othello*, *Macbeth*, and *The Tempest*, together with plays by Eugene Ionesco and Aimé Césaire and films or stage productions directed by Baz Lurhmann, Julie Taymor, Akira Kurosawa, Trevor Nunn, Janet Suzman, and Fred Wilcox.

ENGL 227 Shakespeare # (IV)
Spring, summer, and winter. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. W. Wetherbee.
Careful study of 10 of Shakespeare's major plays, including at least three videotaped performances.

Major Genres and Areas

ENGL 203 Major Poets (IV)
Fall. 4 credits. R. Gilbert.
Intensive readings in the work of nine poets chosen to represent important periods, modes, and assumptions about the uses of poetry. Poets studied may include William Shakespeare (the sonnets), Andrew Marvell, Alexander Pope, John Keats, Emily Dickinson, Robert Browning, Robert Frost, Gwendolyn Brooks, and Seamus Heaney.

[ENGL 209 Introduction to Cultural Studies (IV)
4 credits. Next offered 2002–2003.]

[ENGL 240 Survey in U.S. Latino Literature (also LSP 240) (IV)
4 credits. Next offered 2002–2003.]

ENGL 251 Twentieth-Century Women Novelists (also WOMNS 251 and AM ST 252) (IV)
Fall. 4 credits. S. Samuels.
This course is particularly concerned with questions about women's experience and perspective and explores intersections of gender, ethnicity, race, sexuality, and other vectors of identity. We read novels by Nella Larson, Dorothy Allison, Louise Erdrich, Toni Morrison, Helena María Viramontes, Fae Ng, Cristina Garcia, and others. Assignments include two papers, a research project, and a number of short in-class writings.

ENGL 255 African Literature @ (IV)
Spring. 4 credts. B. Jeyifo.
An introduction to major African writers and literary traditions. Authors to be studied may include Wole Soyinka, Chinua Achebe, Bessie Head, Ayi Kwei Armah, Ama Ata Aidoo, Tayeb Salih, and Ousmane Sembene.

[ENGL 260 Introduction to American Indian Literatures (also AM ST 260) (IV)
4 credits. Next offered 2002–2003.]

ENGL 262 Introduction to Asian American Literature (also AM ST 262 and AAS 262) (IV)
Spring. 4 credits. S. Wong.
This course introduces students to a range of writing by Asian Americans and to some critical issues concerning the production and the reception of Asian American texts. In reading through selected works of prose, poetry and drama, we ask questions about the relation between literary forms and the sociohistorical context within which they take on their meanings, and about the historical formation of Asian American identities.

ENGL 274 Scottish Literature and Culture # (IV)
Fall. 3 or 4 credits. The course may be taken for 3 or 4 credits; those taking it for 4 credits will complete an additional writing project. If taken for four credits, it counts toward the English major, but non-majors are welcome. This course may be used as one of the three pre-1800 courses required of English majors. T. Hill and H. Shaw.
Scotland was an independent kingdom during most of its history. Although it is now politically united with England, it preserves a cultural distinctiveness. This course provides an introduction to Scottish literature and its cultural context. We focus on important Scottish literary texts, with special emphasis on the medieval period and the eighteenth through the twentieth centuries. The course should appeal to those who wish to learn more about their Scottish heritage, to those who wish to view in a new perspective works normally considered monuments of "English" literature, and to those who simply wish to know more about a remarkable culture and the literature Scotland has produced. Some of the texts are read in Scots, but no familiarity with Scots or earlier English is presumed. Authors studied include Henryson, Dunbar, Anonymous (the Scottish Ballads), Hume, Burns, Scott, Hogg, Stevenson, and Grassic Gibbon.

ENGL 275 The American Literary Tradition (also AM ST 275) (IV)
Spring. 4 credits. N. Waligora-Davis.
The problem of an American national literature is explored through the reading, discussion, and close analysis of texts across the range of American literary history. Not a survey, this course focuses on the relations of the texts to each other, the shaping of national identities in those relationships, and the assumptions about history, language, and the self that underlie them.

[ENGL 278 Queer Fiction (also WOMNS 278) (IV)
4 credits. Next offered 2002–2003.]

[ENGL 295 The Essay in English # (IV)
4 credits. Prerequisite: completion of the First-Year Writing Seminar requirement. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2002–2003.
L. Fakundiny.]

Special Topics

ENGL 217 History of the English Language (also LING 217) (III or IV)
Fall. 4 credits. W. Harbert.
See LING 217 for full course description.

ENGL 220 The Idea of the Pet in Literature and History (IV)
Spring. 4 credits. Enrollment is limited to 15 students. While not restricted to sophomores this course is intended to offer sophomores especially an opportunity to work closely with faculty in a seminar environment within a strong interdisciplinary context. L. Brown.
Animal companions are signs of our modernity. They can confirm our humanity, or call it into question. This course studies the culture of pet keeping from the perspectives of literature, history, and philosophy. It introduces students to the methods of cultural critique currently prominent in literary studies, and to some of the recent approaches to the topic of the human relation to the natural world. We begin with the historical origins of pet keeping in the eighteenth century, and then turn to focus on the literature of pets in the nineteenth and twentieth centuries. We move from literary critical questions about the representation of animals to discussions of the social and moral dimensions of pet keeping and the ethics of animal rights. The course includes a workshop on the modern veterinarian's relationship with the companion animal and its owner, and a forum on the ethics of the treatment of animals. Reading include works by William Wordsworth, Virginia Woolf, Jack London, Albert Payson Terhune, and J. M. Coetzee. Three short papers and a final interdisciplinary term paper are required.

ENGL 221 The Ethics of Imagining the Holocaust (IV)
Fall. 4 credits. Enrollment is limited to 15 students. While not restricted to sophomores this course is intended to offer sophomores especially an opportunity to work closely with faculty in a seminar environment within a strong interdisciplinary context. D. Schwarz.
Beginning with memoirs and diaries, and moving to realistic texts and finally fables, myths, and cartoons, this interdisciplinary seminar about ethical issues in writing and reading about the Holocaust selects its syllabus from among the following texts: Wiesel's *Night*, Levi's *Survival at Auschwitz* and *The Periodic Table*, *Anne Frank: The Diary of a Young Girl*, Lanzmann's film *Shoah*, Borowski's *This Way for the Gas Chamber, Ladies and Gentlemen*, Ozick's *The Shawl* (the volume including both "The Shawl" and the sequel, "Rosa"), Hersey's *The Wall*, Epstein's *King of the Jews*, Kosinsky's *The Painted Bird*, both Kineally's novel *Schindler's List* and the Spielberg film of that novel, Styron's *Sophie's Choice*, the recent film *Life is Beautiful*, Appelfeld's *Badenheim* 1939, Schwarz-Bart's *The Last of the Just*, and Spiegelman's *Maus*. We also read a few of the important histories of the period, including those by Lucy Davidowicz (*The War Against the Jews, 1933–1945*) and Martin Gilbert (*The Holocaust: The Jewish Tragedy*). Working with a number of major memoirs, novels, and films about the Holocaust, the course discusses the following issues: How does one survive when the traditional assumptions on which civilized life are based break down? How does one discuss how memory transforms reality and how words transform memory? Can we speak ethically, when addressing the Holocaust? How can those of us who are not survivors write ethically about the Holocaust since, through our writing, we cannot make amends for not being victims? Why do some of those closest to events object to films like *Schindler's List*? What is the ethics of ethnocentrism? Can we define an ethics of Holocaust writing? How would such an ethics affect the anesthetics of representing the Holocaust—or, indeed, other historical atrocities?

ENGL 225 Poetry and Poetics of Difference (also COM L 225) (IV)
Spring. 4 credits. J. Monroe.
See COM L 225 for full course description.

[ENGL 235 Rewriting the Classics: Stories of Travels and Encounters (IV)
4 credits. Next offered 2002–2003.
E. DeLoughrey.]

ENGL 263 Interpreting Hitchcock (also THETR 263) (IV)
Spring. 4 credits. Lab fee. Enrollment limited to 20. L. Bogel.
Through detailed analysis of about 15 of Hitchcock's major films—from early British talkies (*Blackmail, The Thirty-Nine Steps*), to early 40s work in Hollywood (*Shadow of a Doubt, Notorious*), and major American films of his late period (*Rear Window, Vertigo, North by Northwest, Psycho, The Birds*)—we consider Hithcock as a major technical and stylistic innovator in the history of cinema. As texts for psychoanalytic and feminist approaches to study, his films invite questions about film language, the ethics of spectatorship, and the nature of desire and sexuality. For this writing-intensive seminar—including two essays, numerous reading responses, and viewing exercises in close analysis—students must be free to attend Monday late afternoon screenings of the films.

ENGL 266 Asian American Women and Literature (also AAS 266 and AM ST 266) (IV)
Fall. 4 credits. S. Davé.
This course explores the intersection of ethnicity, race, class, gender, and sexuality in the lives and literature of Asian American women. We discuss and analyze the historical, and contemporary social, political, and economic forces that have shaped women's lives and how they are reflected in literature. Our goal in the course is to explore and discover the diversity of voices in Asian American women's experiences and the similarities and commonalities of their social histories.

ENGL 268 Politics and Culture in the 1960s (also AM ST 268) (IV)
Spring. 4 credits. P. Sawyer.
Were the sixties a time of dangerous experimentation with drugs, sex, and alternative lifestyles on the part of a pampered generation that gradually learned to straighten up and join the mainstream? Or was it a time

of revolutionary hopefulness, when the civil rights movement and the Vietnam War stimulated an impassioned critique that changed American society? What can the experiences of young "boomers" contribute to a later generation, the first of the twenty-first century? The course explores these and other questions by focusing on the topics of racial justice, the Vietnam War, the counterculture, the New Left, the woman's movement and the movement for gay rights. Texts include *The Autobiography of Malcolm X, The Electric Kool-Aid Acid Test, Dispatches,* the poems of Allen Ginsburg and Adrienne Rich, films, music, speeches, and manifestos.

ENGL 273 Children's Literature (IV)
Fall. 4 credits. J. Adams.
An historical study of children's literature from the seventeenth century to the present, principally in Europe and America, which explores changing literary forms in relation to the social history of childhood. Ranging from oral folktale to contemporary novelistic realism (with some glances at film narrative), major figures include Perrault, Newbery, the Grimms, Andersen, Carroll, Alcott, Stevenson, Burnett, Kipling, the Disney studio, E. B. White, C. S. Lewis, Sendak, Silverstein, Mildred Taylor, and Bette Greene. We also encounter a variety of critical models—psychoanalytic, materialist, feminist, structuralist—that scholars have employed to explain the variety and importance of children's literature.

[ENGL 291 The American 1920s: Literature and Culture (also AM ST 291) (IV)
4 credits. Next offered 2002–2003. B. Maxwell.]

ENGL 292 Introduction to Visual Studies (IV)
Spring. 4 credits. T. Murray.
See A&S 200 for full course description.

Courses for Sophomores, Juniors, and Seniors

Courses at the 300 level are open to sophomores, juniors, and seniors and to others with the permission of the instructor.

ENGL 302 Literature and Theory (also ENGL 602 and COM L 302 and 622) (IV)
Fall. 4 credits. J. Culler.
Study of issues in contemporary theoretical debates, with particular attention to structuralism, deconstruction, psychoanalysis, and feminism. Readings by Roland Barthes, Judith Butler, Jacques Derrida, Michel Foucault, Barbara Johnson, Jacques Lacan, and others. No previous knowledge of literary theory is assumed.

ENGL 308 Icelandic Family Saga # (IV)
Fall. 4 credits. This course may **not** be used as one of the three pre-1800 courses required of all English majors. T. Hill.
An introduction to Old Norse-Icelandic mythology and the Icelandic family saga—the "native" heroic literary genre of Icelandic tradition. Texts vary but normally include the *Prose Edda*, the *Poetic Edda, Hrafnkels Saga, Njals Saga, Laxdaela Saga*, and *Grettirs Saga*. All readings are in translation.

[ENGL 310 Old English in Translation # (IV)
4 credits. Next offered 2001–2002.]

ENGL 311 Old English (also ENGL 611) # (IV)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. R. Farrell.
This course provides a grounding in the Old English language, and precedes the reading of some major texts in poetry, such as *The Wanderer* and The *Battle of Maldon*. No previous knowledge of Old or Middle English is required or expected. There is both a mid-term and a final, plus oral reports. Students are encouraged to follow their own interests. Graduate students are expected to do a substantial paper, or other research exercise.

ENGL 312 *Beowulf* (also ENGL 612) # (IV)
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. T. Hill.
A close reading of *Beowulf*. Attention is given to relevant literary, cultural, and linguistic issues. One semester's study of Old English, or the equivalent, is recommended.

ENGL 313 The Structure of English (also LING 311) (III or IV)
Fall. 4 credits. M. Suner.
See LING 313 for full course description.

ENGL 314 Life, Literature, and Power in Late-Medieval England (also HIST 310) # (III or IV)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of all English majors. A. Galloway and P. Hyams.
See HIST 310 for full course description.

ENGL 319 Chaucer # (IV)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. R. Farrell.
This course will begin with the study of the major *Canterbury Tales* and some of his minor works, such as *The Book of the Duchess*. If time permits, we will read at least part of his great epic romance *Troilus and Criseyde*. All works will be read in Middle English, but ample time will be devoted to learning the language, for it is impossible to read Chaucer as a poet without Middle English. There will be lectures on Chaucer's life, society, literary, and religious content. There will be take-home, mid-, and end-of-term exams and student presentations.

ENGL 321 Spenser and Malory (also RELST 319) # (IV)
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Informal lecture and discussion. Two papers, no exams. C. Kaske.
Paired selections covering about half of Malory's *Morte d'Arthur* and half of Spenser's *Faerie Queene*. The French Prose Arthurian Cycle, Chretien's romances, *Sir Gawain and the Green Knight,* and some of Spenser's minor poems are mentioned occasionally as background. Comparisons assess possible literary influence, the distinctive vision, style and narrative technique of each author as a writer of romance, and the development of Arthurian romance from the Middle Ages to the Renaissance.

[ENGL 327 Shakespeare: Gender and Power (also WOMNS 327) # (IV)
4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2002–2003.]

ENGL 328 The Bible # (IV)
Fall. 4 credits. G. Teskey.
An introduction to the Bible as what William Blake called "the great code of art." The purpose of the course is to provide students of English literature with a basic knowledge of that literature's most important, underlying text. We examine such matters as the significance of the polemical division of the Bible into "old" and "new" testaments; the division of the Hebrew scriptures into narrative, legal, historical, and prophetic books; the structure of the new testament writings about Jesus, the Christian church, and history; the historical contexts for various parts of the Bible, in particular the fate of the Hebrew nation from about 1200 B.C. and of the early Christian church under the Roman empire; the resource of poetic imagery that Biblical writings have provided for three thousand years; and the unusual, imaginative power of prophecy. The King James Version (1611) is used.

ENGL 329 Milton # (IV)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. G. Teskey.
An introduction to the life, poetry, and ideas of John Milton, the most important English poet after Shakespeare.

ENGL 330 Restoration and Eighteenth-Century Literature # (IV)
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. F. Bogel.
Close reading of texts in a variety of genres (poetry, fiction, drama, autobiography) are guided by such topics as: the nature of satire, irony, and mock-forms; the languages of the ridiculous and the sublime; the politics of gender and sexuality; the authority and fallibility of human knowledge; connections among melancholy, madness, and imagination. Works by such writers as Rochester, Behn, Finch, Dryden, Swift, Gay, Defoe, Johnson, Boswell, Sterne, and Cowper.

ENGL 333 The Eighteenth-Century English Novel # (IV)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. N. Saccamano.
A study of form and theme in the British novel tradition. The course focuses on representative novels mostly from the eighteenth century, paying close attention to language and structure but also to cultural contexts and to the development of the novel form itself. We explore such topics as truth and fiction; romance, realism, satire, and the gothic; heroic and mock-heroic modes; sentiment, sensibility, and sexuality; race and gender; and the forms and uses of narrative. Readings may include Behn's *Oroonoko*, Defoe's *Moll Flanders*, Richardson's *Clarissa*, Fielding's *Tom Jones*, Johnson's *Rasselas*, Sterne's *A Sentimental Journey*, and Austen's *Emma*.

ENGL 340 The English Romantic Period # (IV)
Fall. 4 credits. This course may **not** be used as one of the three pre-1800 courses required of all English majors. R. Parker.
Readings in various writers from the early 1790s to the early 1820s—among them Blake, Wordsworth, Wollstonecraft, Coleridge, Byron, Hazlett, Mary Shelley, Percy Shelley, and Keats—with major emphasis on poetry but with substantial attention to prose fiction, drama, letters, and political and literary essays.

The course is concerned with close reading of formal experiments in narrative, lyric and dramatic representation and with analysis of their relation to political and cultural issues and contexts in an age of national reform and international revolution and conflict.

[ENGL 345 Victorian Controversies # (IV)
4 credits. Next offered 2002–2003.
S. Siegel.]

[ENGL 348 Studies in Women's Fiction (also WOMNS 348) (IV)
4 credits. Next offered 2002–2003.]

ENGL 350 The Modern Tradition I: 1890–1930 (IV)
Fall. 4 credits. D. Schwarz.
Critical study of major works by Hardy, Conrad, Lawrence, Joyce, Woolf, Eliot, Yeats, Hopkins, Wilde, Wallace Stevens, and others. While the emphasis is on close reading of individual works we place the authors and works within the context of literary and intellectual history. The course seeks to define the development of literary modernism (mostly but not exclusively in England), and relate literary modernism in England to that in Europe and America as well as to other intellectual developments. We are especially interested in the relationship between modern literature and modern painting and sculpture, occasionally looking at slides.

ENGL 353 The Modern Indian Novel @ (IV)
Spring. 4 credits. S. Mohanty.
A survey of the modern Indian novel, from its origins in the latter part of the 19th century to the present. An attempt is made to read the novels as responses to colonialism and to the challenges of a postcolonial society. Texts (mainly novels, but also a few short stories) drawn from a variety of Indian languages as well as English, including works by such authors as U. R. Ananthamurthy, Rabindranath Tagore, Salman Rushdie, Gopinath Mohanty, Anita Desai, Fakir Mohan Senapati, Ambai, Prem Chand, Arundhati Roy, and R. K. Narayan. Two papers (5–6 pp. and 12–14 pp.) and a journal.

[ENGL 355 Decadence (also COM L 355 and WOMNS 355) (IV)
4 credits. Next offered 2002–2003.]

[ENGL 356 Postmodernist Fiction (IV)
4 credits. Next offered 2002–2003.]

ENGL 361 Early American Literature (also AM ST 361) # (IV)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required for the English major. J. Porte.
American literature and culture from the 1630s to the 1830s, including some of the following: prose and poetry of the Puritans (Winthrop, Bradford, Bradstreet, Rowlandson, Taylor, Cotton Mather) study of the witchcraft phenomenon; Edwards and Franklin; Tom Paine; Jefferson; Crèvecoeur; Rebecca Rush's *Kelroy*; selections from Irving's *Sketchbook*; the writing of William Apess; the poetry of Bryant; a novel by James Fenimore Cooper; the early work of Emerson and Hawthorne.

[ENGL 362 The American Renaissance (also AM ST 362) (IV)
4 credits. Next offered 2002–2003.]

[ENGL 363 The Age of Realism and Naturalism (also AM ST 363) (IV)
Fall. 4 credits. Next offered 2002–2003.]

[ENGL 364 American Literature Between the Wars (also AM ST 364) (IV)
4 credits. Next offered 2002–2003.]

ENGL 366 The Nineteenth-Century American Novel (also AM ST 366) # (IV)
Fall. 4 credits. D. McCall.
A study of American fiction in its first flowering. This course includes such major works as Hawthorne's *The Scarlet Letter*, Melville's *Moby-Dick*, James's *The Portrait of a Lady*, and Mark Twain's *Adventures of Huckleberry Finn*.

ENGL 367 The Modern American Novel (also AM ST 367) (IV)
Spring. 4 credits. D. McCall.
A reading of some modern American writers of the first half of the twentieth century. Works by Hemingway, Fitzgerald, Faulkner. Lectures with some opportunity for discussion. Emphasis is on the individual works in their historical contexts.

ENGL 368 American Novel Since 1950 (also AM ST 368) (IV)
Fall. 4 credits. P. Sawyer.
A survey of some distinguished American novels of the recent past, with particular attention to narrative structure, and political implication. We explore the relationships between gender, ethnicity, and "Americanness"; between documentary realism and "magical" or satiric abstraction; and between traumatic memory and the impulse to narrate. Readings may include Bellow's *The Victim*, Nabokov's *Lolita*, Heller's *Catch-22*, Pynchon's *The Crying of Lot 49*, Doctorow's *The Book of Daniel*, Kingston's *The Woman Warrior*, and Morrison's *Beloved*.

ENGL 369 Fast Talking Dames and Sad Ladies (also WOMNS 369 and THETR 367) (IV)
Fall. 4 credits. Enrollment limited to 15. Regular critical readings, frequent viewing questions, two longer essays, no exam. Students must be free to attend Monday and/or Tuesday late-afternoon screenings. $20 lab fee. L. Bogel.
In this seminar focusing on brash heroines of Hollywood's 1940s films and 1990s films, we work to define romantic comedy and melodrama as genres; as vehicles for female stars, sassy or subdued; as ways of viewing the world. Psychoanalytic and feminist analyses of these films help us pose questions about gender and culture, about gendered spectatorship, about the relation of these films to American culture, about Hollywood's changing constructions of "woman," the "maternal," and the "feminine," and about representations of desire, pleasure, fantasy, and ideology. Required weekly screenings of such films as *Gilda, The Lady Eve, Gentlemen Prefer Blondes, Notorious, The Women, The Philadelphia Story, His Girl Friday, The Piano, Mrs. Dalloway, First Wives' Club, Silence of the Lambs, Girl Fight, Erin Brokovich*.

ENGL 370 The Nineteenth Century Novel # (IV)
Spring. 4 credits. J. Adams.
A survey of representative works by major British novelists from Austen to Hardy. As great writers in a realistic mode, these novelists explore the interplay of self and society, particularly the clash between traditional social orders—class, gender, marriage—and new forms of mobility and self-determination in the world's first industrial nation. We are especially interested in the novel's preoccupation with domestic life, and reshapings of the familiar "marriage plot" in a world of great social and sexual anxiety. In short: love and money. Readings include works by Austen, Thackery, Dickens, C. Brontë, Braddon, George Eliot, and Hardy.

[ENGL 372 English Drama to 1700 (also THETR 372) # (IV)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2002–2003.
S. McMillin.]

[ENGL 373 English Drama from 1700 to the Present (also THETR 373) # (IV)
4 credits. Next offered 2002–2003.
S. McMillin.]

ENGL 376 Survey in African American Literature: 1918 to present (IV)
Spring. 4 credits. H. Spillers.
This course selects its readings from the genres of poetry, drama, fiction, and nonfiction produced by black American writers from the period of the Harlem Renaissance, to the present. Readings include poems by Harlem Renaissance poets, the poets of African-American modernism, i.e., Gwendolyn Brooks and Robert Hayden, and some of the poetry of the Black Arts Movement of the 60s, by way of Leroi Jones/Imamu Baraka's and Larry Neal's *Black Fire*; plays by Lorraine Hansberry, Ed Bullins, and August Wilson; nonfictional and fictional writings by Malcolm X, Martin Luther King, Nella Larsen, Jean Toomer, Zora Neale Hurston, Toni Morrison, and Nate Mackey. *Cane, The Autobiography of an Ex-Colored Man, Passing, The Autobiography of Malcolm X, Letter from an Birmingham Jail, Black Boy, Invisible Man, Flight to Canada, Oxherding Tales, Middle Passage, Jazz*, and *The Bedouin Hornbook* will be among the selected texts. The course is designed for majors, but is open to all interested students.

[ENGL 378 American Poetry Since 1950 (also AM ST 372) (IV)
4 credits. Next offered 2002–2003.]

ENGL 381 Reading as Writing (IV)
See complete course description in section headed Expository Writing.

ENGL 382–383 Narrative Writing (IV)
See complete course description in section headed Creative Writing.

ENGL 384–385 Verse Writing (IV)
See complete course description in section headed Creative Writing.

ENGL 386 Philosophic Fictions (IV)
See complete course description in section headed Expository Writing.

ENGL 388 The Art of the Essay (IV)
See complete course description in section headed Expository Writing.

[ENGL 390 Autobiography: Memoir, Memory, and History (IV)
4 credits. Next offered 2002–2003.]

[ENGL 395 Video: Art, Theory, and Politics (also THETR 395) (IV)
4 credits. Next offered 2002–2003.
T. Murray.]

[ENGL 396 Introduction to Global Women's Literature (also WOMNS 396) @ (IV)
4 credits. Next offered 2002–2003.
E. DeLoughrey.]

ENGL 397 Policing and Prisons in American Culture (also AM ST 395) (IV)

Spring. 4 credits. B. Maxwell.

Having attained the highest number of incarcerated persons of any nation on earth, while subjecting the citizenry to ordeals that most recently bear the names King, Louima, and Diallo, United States regimes of policing and imprisonment compel historical and critical attention. This course considers policing and imprisonment in United States culture, stressing prisoners' writing, song, slang, and graphic art. Edgar Allan Poe wrote in 1849: "in looking back through history...we should pass over all biographies of 'the good and great,' while we search carefully the slight records of wretches who died in prison, in Bedlam, or upon the gallows." These records—novels, stories, poems, plays, raps, songs, essays, autobiographies, letters, manifestos, paintings, drawings, crafts, and tattoos—are of course less slight now than they were in Poe's day; they make up the greater part of our source material. In addition to work by imprisoned people, readings draw on carceral theory, activist documentation, and the history of criminal justice. Finally, we consider questions raised by noncriminal confinement in U.S. history: slavery, indentured servitude, the reservation system for indigenous peoples, prisoners of war in the Civil War, the wartime internment of Japanese Americans, and carceral and punitive operations of the Immigration and Naturalization Service.

Courses for Advanced Undergraduates

Courses at the 400 level are open to juniors and seniors and to others by permission of instructor unless other prerequisites are noted.

ENGL 401 The Transoceanic Imagination (also ENGL 601 and S HUM 410) (IV)

Fall. 4 credits. E. DeLoughrey.

See S HUM 410 for full course description.

ENGL 402 Literature as Moral Inquiry (IV)

Fall. 4 credits. S. Mohanty.

What can literary works, especially novels and short stories, tell us about moral issues? Should they be seen as suggesting a form of moral inquiry similar to the kind of philosophical discussion we get in, say, Aristotle's *Nicomachean Ethics*? Do they deal with the same range of issues? Can reading philosophical works in ethics together with novels that deal with similar themes help us understand these themes better? This course is an attempt to answer these questions. We read selections from key texts in moral philosophy, including works by Aristotle, Kant, Marx, Nietzsche. Our attempt is to use these works to help us understand the nature of moral debate and inquiry in novels like Eliot's *Middlemarch*, James's *Portrait of a Lady*, Morrison's *Beloved*, Woolf's *Mrs. Dalloway*, Conrad's *Heart of Darkness*, and Achebe's *Things Fall Apart*. Other writers we will probably read include Nadine Gordimer, Doris Lessing, and Kazuo Ishiguro. The emphasis is on close reading, with particular attention to the relationship between formal elements (such as the use of narrative techniques) and the moral questions the texts organize and explore. Assignments include two papers and a journal.

[ENGL 403 Studies in American Poetry: Great Books, 1855–1926 (also AM ST 403) (IV)

4 credits. Next offered 2002–2003.

R. Gilbert.]

ENGL 404 History Into Fiction: Nazis and the Literary Imagination (also COM L 404 and GERST 414) (IV)

Fall. 4 credits. Two papers; no exam.

E. Rosenberg.

The twelve years of Hitler's rule remain the "longest," most critical years of the twentieth century. We read some eight to ten texts by Anglophone and Continental novelists and short-story writers (and a few playwrights and poets) that explore the salient features of the regime: the Weimar background (Thomas Mann's "Disorder and Early Sorrow," Isherwood's *Goodbye to Berlin*); Hitler's rise to power (Mann's "Mario and the Magician," Brecht's *Arturo Ui*, Sartre's "Childhood of a Leader"); civilian life in Nazi Germany (Brecht's "Jewish Wife" and other one-acters, Günter Grass's *Tin Drum*); World War II and the Occupation of Europe (Nabokov's "That in Aleppo Once," Heinrich Böll's short fiction, Camus's *The Plague*); the genocide (Peter Weiss's *The Investigation*, Borowski's *This Way for the Gas*, Ozick's "The Shawl" and "Rosa"; lyrics by Celan, Nelly Sachs, Anthony Hecht). Mondays and Wednesdays are devoted to discussions of the readings; Fridays to twenty-minute oral reports by students on texts dealing with specific topics related to the course, from the Berlin Olympics to the role of the clergy, from Weimar culture to neo-Nazism, from the cult of Richard Wagner to "Aryan" physics, from "autobiographies" of the perpetrators to autobiographies of the survivors. Ancillary materials from the instructor's private documentation of life under the Nazis.

[ENGL 413 Middle English (also ENGL 613) # (IV)

Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2003–2004.]

[ENGL 416 Chaucer and the Politics of Love # (IV)

Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2002–2003.]

ENGL 417 Early Medieval Archaeology and Literature (also ENGL 617 and ARKEO 417 and 617) # (IV)

Spring. 4 credits. Prerequisite: permission of instructor. This course may be used as one of the three pre-1800 courses required of English majors. R. Farrell.

This course is intended to provide an overview of the early middle ages in what is now called Great Britain. A massive amount of evidence on the material culture has come to light in the past 50 years, evidence which permits us a far better comprehension of written sources. We start with a reading of the great Old English epic *Beowulf* and a close study of the material culture of a society in transition from pagan Germanic to cosmopolitan Christian culture. Our next focus is Bede's *Ecclesiastical History of the English People* and the material evidence for the complex cultural developments in England, Ireland, Scandinavia, and the continent. There are frequent student oral reports, a take-home midterm, and a take-home final OR extended research paper. Graduate students are expected to do more detailed oral reports and research papers.

ENGL 418 Racial Democracy in the Americas (also S HUM 418 and ENGL 613) (IV)

Spring. 4 credits. Z. Nunes.

See S HUM 418 for full course description.

ENGL 424 Spenser (also ENGL 624) # (IV)

Fall. 4 credits. C. Kaske.

This course covers, either in whole or in part, almost all the works Spenser wrote—his epic *The Faerie Queene*, his epithalamion, mock-epyllion, pastorals, picaresque tale in verse, Neoplatonic hymns, sonnet-sequence, and prose colonialist treatise. Spenser has something for everybody. The Bible, Aristotle's *Ethics*, classical pastorals and ethics, medieval romances, and the works of Dante, Chaucer, Petrarch, Ariosto, Tasso, Sidney, and Milton are brought in for comparison. Some attention is given to pedagogy and to rhetoric and versification. Political readings alternate with text-centered, formalist readings. Other concerns are intertextuality, self-contestation, gender, genre, the constructions of the sexually and politically alien, public and private virtues, and the interplay of hierarchical with egalitarian paradigms. Lecture and discussion. Everyone participates in class discussion and writes one brief paper of at least 8 pages; those enrolled for a letter grade also give a brief oral report and write a long paper, preferably on the epic. Open to graduate students and to undergraduate juniors and seniors.

ENGL 429 Adam's Rib and Other Divine Signs: Reading Biblical Narrative (also RELST 429) # (IV)

Spring. 4 credits. L. Donaldson.

One of the most exciting developments in the field of biblical studies has been the introduction of new literary and critical methodologies to the texts of the Jewish and Christian Testaments. Reading the Bible through the lenses of semiotics, new historicism, deconstruction, cultural studies, postcolonialism, and feminism has posed a significant challenge to more traditional modes of biblical interpretation. This advanced undergraduate course introduces students to these new and provocative ways of reading biblical narrative. Rather than covering the entire Bible, the course instead focuses on stories and passages foregrounding specific critical issues. For example, feminist critics have examined why the book of Judges symbolically perpetrates violence against women (through the narratives of the Levite's concubine, Jephthah's daughter and the Benjaminite women), while semioticians have privileged the Judges story of Samson and Delilah. Postcolonial critics have interrogated such passages as Matthew's "great commandment" as well as the Johanine story of the woman at the well, while those in cultural studies have paid particular attention to the construction of a multicultural church in Luke/Acts. In this course, students read portions of Genesis and Exodus, Judges, Ruth, I and II Samuel, and the book of Daniel; from the Christian Testament, we read selections from Mark and Matthew as well as the Gospel of John. Course texts include J. P. Fokkelman, *Reading Biblical Narrative: An Introductory Guide*; Mieke Bal, *Lethal Love: Feminist Literary Readings of Biblical Love Stories*; Gale A. Yee, ed., *Judges & Method: New Approaches in Biblical Studies*; R.S. Sugirtharajah, ed., *The*

Postcolonial Bible; and selected essays by Robert Alter, Musa Dube, Laura Donaldson, Yairah Amit, Stephen Moore and the Bible and Culture Collective.

ENGL 430 Literature As History: The Americas (also AM ST 430.03) (IV)
Fall. 4 credits. B. Maxwell.
See AM ST 430.03 for full course description.

ENGL 434 Electronic Art and Culture (IV)
Fall. 4 credits. This course may be counted toward the Visual Studies major. Prerequisite: permission of instructor. Requirements: 2 medium length papers (7–8 pages), visual project (hypertext or image), seminar presentation. Some advanced knowledge of either the artistic or theoretical context is helpful. T. Murray.
The course analyzes the "interface" between recent projects in electronic art and theories of digital culture. Artifacts studied include video and audio installations, web art, CD-Rom art, and digitized cinema. We study both process and content with an emphasis on the role of historical and ideological representation in the works discussed. Special consideration is given to issues such as memory, sexuality, cultural identity, and virtuality. Theorists read include: Bellour, Mercer, Rodowick, Zimmermann, Druckrey, Kroker, Virilio, Morse, Hershman, and Gomez-Pena. Artists to be studied, including, Piper, Stelarc, Woolery, Tamblyn, Marker, McCoys, Shaw, Oursler; can be previewed at: http://contactzones.cit.cornell.edu/.

ENGL 437 Fiction(s) of Race, Fact(s) of Racism: Perspectives from South African and Afro-American Literatures @ (IV)
Spring. 4 credits. B. Jeyifo.
This course examines works of South African and Afro-American **fiction** and **drama** in light of the powerful claim that "race" is a socially constructed fiction with no scientific, rationally provable basis to it. The works explored in the course also see race as a fiction, but consistent with the dialectics of artistic representation, they juxtapose the fiction of race to the fact(s) of racism to pose the fundamental question: Can we imagine a time, a place, a world where racism, like "race," will become fiction? Authors examined include Baraka, Morrison, Naylor, August Wilson, Gordimer, Nkosi, Fugard, and Coetzee.

[ENGL 439 Austen in the Eighteenth Century # (IV)
4 credits. Next offered 2002–2003.]

[ENGL 443 The Dandy in London and Dublin # (IV)
4 credits. Next offered 2002–2003.
S. Siegel.]

ENGL 446 Victorian Poetry # (IV)
Spring. 4 credits. D. Mermin.
Reading of poems by Tennyson, Elizabeth Barrett Browning, Robert Browning, Matthew Arnold, Emily Brontë, Christina Rossetti, Swinburne, and others. Since women made their first serious inroads into the poetic canon during this period, while gender categories became problematic for both male and female poets, we pay particular attention to issues of gender and sexuality. We also think about the relation of poetry to religion, science, and social change; colonialism; the sources of cultural authority; and the way all these matters are reflected in genre and style.

[ENGL 448 The American Short Story (IV)
Fall, spring, or summer. 4 credits. Next offered 2002–2003.]

[ENGL 452 Wilde and Woolf: On Style (also ENGL 652) (IV)
4 credits. Next offered 2002–2003.
S. Siegel.]

ENGL 454 American Musical Theatre (also MUSIC 490 and THETR 454) (IV)
Spring. 4 credits. Prerequisite: ENGL 272 or THETR 240–241 plus some ability to read music. Limited to 15 students. S. McMillin.
A close reading of some seven or eight leading examples of the American musical, together with their sources, from *Showboat* to *Sweeney Todd*. A chronological approach gives a historical basis to the course, but the primary concern is learning how to analyze musical drama and how to handle the problems and opportunities of interpretation integral to this complex theatrical form. Readings include Kern and Hammerstein's *Show Boat* and its source, Edna Ferber's novel of the same name; Rogers and Hammerstein's *Oklahoma!* and its source, Lynn Riggs' *Green Grow the Lilacs;* Loesser and Burrows' *Guys and Dolls* and its source, stories by Damon Runyon; Bernstein and Sondheim's *West Side Story* and its source, Shakespeare's *Romeo and Juliet*; Kander and Ebb's *Cabaret* and its source, Isherwood's *Berlin Stories*.

ENGL 456 Postmodern Novel (also ENGL 656) (IV)
Fall. 4 credits. M. Hite.
Experimental fiction written between 1962 and 1988, ranging from the encyclopedic (Thomas Pynchon's *Gravity's Rainbow*, Doris Lessing's *The Golden Notebook*) to the gnomic (some of Borges' *Ficciones*, stories by John Barth and Angela Carter). Other novels include Bellow's *Herzog*—taken as an example of a contemporary novel that is *not* postmodernist—Margaret Atwood's *Lady Oracle* and Robert Coover's *The Universal Baseball Association*. We are particularly concerned with ways in which these fictions address conventions of realism and modernism, with the strategies of reading that they elicit or seem to elicit, and with questions of canonicity and gender.

ENGL 458 Imagining the Holocaust (also ENGL 658, JWST 458 and 658, COM L 483 and 683) (IV)
Spring. 4 credits. D. Schwarz.
What is the role of the literary imagination in keeping the memory of the Holocaust alive for our culture? We examine major and widely read Holocaust narratives which have shaped the way we understand and respond to the Holocaust. As we move further away from the original events, why do the kinds of narratives with which authors render the Holocaust horror evolve to include fantasy and parable? Employing both a chronological overview and a synchronic approach—which conceives of the authors having a conversation with one another—we discover recurring themes and structural patterns in the works we read.

We begin with first person reminiscences—Wiesel's *Night*, Levi's *Survival at Auschwitz*, and *The Diary of Anne Frank*—before turning to searingly realistic fictions such as Hersey's *The Wall*, Kosinski's *The Painted Bird*, and Ozick's "The Shawl." In later weeks, we explore diverse kinds of fictions and discuss the mythopoeic vision of Schwarz-Bart's *The Last of the Just*, the illuminating distortions of Epstein's *King of the Jews*, the Kafkaesque parable of Appelfeld's *Badenheim 1939*, and the fantastic cartoons of Spiegleman's *Maus* books. We shall also include Kineally's *Schindler's List*, which was the source of Spielberg's academy award winning film, and compare the book with the film.

ENGL 459 Contemporary British Drama (IV)
Spring. 4 credits. S. McMillin.
English theatre in the second half of the twentieth century, with special attention to Tom Stoppard (*Arcadia, Rosencrantz and Guilderstern are Dead*), Harold Pinter (*The Homecoming, Mountain Language, Moonlight*), and Caryl Churchill (*Cloud Nine, Top Girls*), along with plays by Sarah Kane, David Edgar, Michael Frayn, Edward Bond, and Peter Shaffer. The importance of the Royal Court Theatre, the effect of The National Theatre and The Royal Shakespeare Company, the role played by the Fringe, and the political impact of Thatcherism and its aftermath are important considerations.

[ENGL 460 Riddles of Rhythm (IV)
4 credits. Next offered 2002–2003.
D. Fried.]

ENGL 461 Asian Americans and Popular Culture (also AAS 461) (IV)
Fall. 4 credits. S. Davé.
This course examines how Asian Americans are represented and represent themselves in American forms of popular culture such as literature, television, film, print media, and various other forms of modern culture. We will explore the cultural contexts of the term "Asian American" that define its visibility and marketability in contemporary times. Some questions we will address include: Is there an Asian American aesthetic and if so, how is it characterized? What are the consequences of the consumption of ethnic products by a mainstream audience? What are the ramifications of mass marketing for Asian American writers, producers, and artists?

[ENGL 462 Between Aztlan and Queens: Latina Culture and the Making of Space (also LSP 462) (IV)
4 credits. Next offered 2002–2003.
M. P. Brady.]

[ENGL 464 Emerson and Poe (IV)
4 credits. Next offered 2002–2003.
R. Morgan.]

ENGL 466 James on Film (IV)
Spring. 4 credits. D. Fried.
Study of selected films adapted from Henry James's novels involves close reading of the novels and detailed analysis of the films, with a constant eye to the different ways moviegoers and readers make sense of stories. James's aspirations as a dramatist, his writings on theater and photography, and controversies about the interpretation of the novels are also important in exploring how James's stories have been retold by filmmakers. The aim of the course is not to determine whether James has been justly served by the movies, but to consider what novels adapted to films can tell us about the conventions and resources peculiar to film and to prose fiction. Recurrent issues include authorship and authority, point of view, levels of representation, visual and verbal style, the camera as storyteller, acting and character, literary and filmic allusion, and relations between literature and the other arts. Works and films may include *Daisy Miller, The Turn of the Screw/The Innocents, Washington*

Square/The Heiress, The Bostonians, and *The Portrait of a Lady*. To highlight the idiosyncratic problems of using Jamesian prose as the basis for film, there may be some attention to film adaptations of fiction by Edith Wharton and others.

ENGL 468 Baldwin, Brooks, and Baraka (IV)
Spring. 4 credits. K. McClane.
An in-depth analysis of the writings of Gwendolyn Brooks, James Baldwin, and Amiri Baraka, focusing on the aesthetic, political, and social importance of, arguably, the three most significant African American writers of the last 50 years. Readings include Brooks's *In The Mecca* and *Selected Poems*; Baldwin's *The Fire Next Time, If Beale Street Could Talk, Another Country* and *Just Above My Head*; and Baraka's *The Dead Lecturer, Tales, The Dutchman* and *Transbluesency*.

ENGL 469 Faulkner (also AM ST 469) (IV)
Fall. 4 credits. H. Spillers.
This course examines selected writings of William Faulkner, beginning with some of the early novels (*The Sound and the Fury, Light in August, Absalom, Absalom!*) and concluding with *A Fable*. We will consider Faulkner's impact as a maker of myth and as one of the leading figures of a literary discourse that creates a modernist sensibility in American letters. As a southern writer, Faulkner is traditionally confined to the character study of exotic types, but his systemic fictional exploration of "violence and the sacred" provides a powerful clue to the larger issue of a national identity. Faulkner, in his own terms, dared to imagine "culture" as a problem for fiction. This course considers the outcome.

ENGL 470 Studies in the Novel: Forms of American Fiction: The Short Story Collection as Novel (also AM ST 470) (IV)
Fall. 4 credits. Limited to 20 students. L. Herrin.
The claim has been made that the modern short story originated with Edgar Allen Poe and as such represents America's contribution to world letters. I have my doubts about that claim, but lately I have been struck by the number of books of stories that seem to want to be read as novels, and I've begun to wonder if this might be a peculiarly American literary phenomenon. These books of linked stories span the twentieth century, from Sherwood Anderson's *Winesberg, Ohio* to Denis Johnson's *Jesus' Son*. Some of our most famous authors (Hemingway, Faulkner, Welty) have worked in this undeclared genre. (Others who could be considered are Katherine Anne Porter, Harold Brodkey, Grace Paley, Louise Erdrich, and Tim O'Brien.) In this course we read nine or ten of them with an eye to what is gained and what is lost when stories are collected and considered in this manner. Students are expected to read the works carefully, contribute to class discussion, and write wise, speculative essays.

[ENGL 475 Studies in the Twentieth Century: Writers' Writers in Twentieth-Century Literature (IV)
4 credits. Limited to 20 students. Next offered 2002–2003. L. Herrin.]

[ENGL 476 Global Women's Literature (also WOMNS 476) (IV)
4 credits. Next offered 2002–2003.]

[ENGL 477 Studies in Native American Literature: Native American Literature and Criticism (also ENGL 677) (IV)
4 credits. Next offered 2002–2003. Staff.]

[ENGL 479 Jewish-American Writing (also AM ST 479 and JWST 478) (IV)
4 credits. Next offered 2002–2003. J. Porte.]

ENGL 480–481 Seminar in Writing (IV)
Fall, 480; spring 481. 4 credits.
See complete description in section headed Creative Writing.

[ENGL 483 Seminar in Comparative Twentieth-Century Anglophone Drama (IV)
4 credits. Next offered 2002–2003. B. Jeyifo.]

ENGL 487 Writing About Literature (IV)
Fall. 4 credits. F. Bogel.
Why do we write about literature and "interpret" it instead of just "reading" it? Are some interpretations better than others? Truer? If there are many different modes of criticism, does the field of "English" have a coherent identity? This course does not conduct a broad survey of theories but investigates a few critical approaches and attempt to apply them practically to a small selection of literary texts. The aim is less an acquaintance with theory than an enlargement of critical possibilities and a reflection on the undertaking of literary interpretation itself. The critical schools explored include a few of the following: New Criticism (American Formalism), structuralism, deconstruction, feminism, New Historicism, and the literary critical/rhetorical analyses of Kenneth Burke. Literary texts will likely include a Shakespeare play, a variety of lyric poems, and several short stories.

[ENGL 490 Literatures of the Archipelagoes: Caribbean and Pacific "Tidalectics" @ (IV)
4 credits. Next offered 2002–2003. E. DeLoughrey.]

ENGL 491 Honors Seminar I
Fall. 4 credits. Open to students in the Honors Program in English or related fields, or by permission of instructor. S. McMillin.
Early Shakespeare. Close reading of major texts, intended to introduce the critical and scholarly questions important in Shakespeare studies today. Readings include such plays as *Midsummer Night's Dream, Merchant of Venice, Henry IV* Parts One and Two, *Henry V, Othello, King Lear, Winter's Tale*. Assignments fall at the rate of about one play and one critical essay per week. Reports, short papers, a term paper.

ENGL 492 Honors Seminar II
Spring. 4 credits. Open to students in the Honors Program in English or related fields, or by permission of instructor.

Section I: Reading Joyce's *Ulysses* D. Schwarz.
A thorough, episode-by-episode study of the art and meaning of Joyce's *Ulysses*. We explore the relationship between it and the other experiments in modernism and show how *Ulysses* redefines the concepts of epic and hero. We also view *Ulysses* to address major issues in literary study and to test various critical and scholarly approaches. Such a self-conscious inquiry into theories and methods should prepare students to confront other complex texts, as well as help them define their own critical positions as they plan their senior honors theses.

Section II: Women and the Novel Form L. Brown.
This course raises central questions about the role of gender in the study of literature by exploring the development of the female-authored novel from the seventeenth to the twentieth century. Readings include Aphra Behn's *Oroonoko*, Fanny Burney's *Evelina*, Jane Austen's *Emma*, Charlotte Brontë's *Jane Eyre*, Virginia Woolf's *A Room of One's Own* and *Mrs. Dalloway*, and Toni Morrison's *Sula*. These works raise issues of race and slavery, love and marriage, sexuality and homosexuality, history and women's history, and writing itself. Students in the class will work together to develop strong close readings of the texts and to explore the contexts in which they were written. These discussions are the basis for an evolving assessment of the status of a work authored by a woman. Is it shaped in a distinctive way? Does it evoke a specific response? Does it register an unusual apprehension of the psyche? Does it display a unique relation to sexuality? Does it intersect with its context, or with history, in a particular or unconventional fashion? Does it have a special relation to language, ideology, or culture? Students are asked to participate in discussion, and to write two short papers and a final research paper.

ENGL 493 Honors Essay Tutorial I
Fall or spring. 4 credits. Prerequisites: senior standing and permission of Director of the Honors Program.

ENGL 494 Honors Essay Tutorial II
Fall or spring. 4 credits. Prerequisites: English 493 and permission of Director of the Honors Program.

ENGL 495 Independent Study
Fall or spring. 2–4 credits. Prerequisites: Permission of departmental adviser and director of undergraduate studies.

ENGL 496 Decolonizing Identities and Values (IV)
Spring. 4 credits. S. Mohanty.
A close analysis of four novelists who have written, directly or indirectly about the theme of decolonization: Chinua Achebe, Toni Morrison, Salman Rushdie, and Leslie Marmon Silko. Our focus is on the decolonization of social and cultural identities, and the values that accompany the colonized identities as well as the process of decolonization. Selected theoretical readings on decolonization and identity will help inform and orient our discussions, but much of the time is spent pursuing close readings of a few novels and developing frameworks for comparative analyses of the aesthetic and socio-political visions of these writers. Two papers required, one 6–8 pages, and one 14–18 pages.

Courses Primarily for Graduate Students

Permission of the instructor is a prerequisite for admission to courses numbered in the 600s. These are intended primarily for graduate students, although qualified undergraduates are sometimes admitted. Undergraduates seeking admission to a 600-level course should consult the instructor. The list of courses given below is illustrative only; a definitive list, together with course

descriptions and class meeting times, is published in a separate department brochure before course enrollment each term.

Graduate English Courses for 2001–2002

Fall

ENGL 600 Colloquium for Entering Students
M. Hite.

ENGL 601 The Transoceanic Imagination (also ENGL 401 and S HUM 410)
E. DeLoughrey.

ENGL 602 Literature and Theory (also ENGL 302 and COM L 302/622)
J. Culler.

ENGL 611 Old English (also ENGL 311)
R. Farrell.

ENGL 619 Chaucer
W. Wetherbee.

ENGL 624 Spenser (also ENGL 424)
C. Kaske.

ENGL 627 Shakespeare: Shakespeare and the Theatre
S. McMillin.

ENGL 635 Native Encounters: 1660–1914
L. Brown and L. Donaldson.

ENGL 639 Studies in Romantic Literature: Byron, Hazlitt, Shelley, Keats, and the Issues of Romanticism
R. Parker.

ENGL 644 Studies in Victorian Poetry
J. Adams.

ENGL 656 Postmodern Novel
M. Hite.

ENGL 663 American Fiction 1880–1918
J. Porte.

ENGL 669 Narrative and Queer Sexuality: An Introduction
K. McCullough.

ENGL 698 Broken English: English Literature in a Postcolonial/ Postmodern Frame
B. Jeyifo.

ENGL 780.01 MFA: Poetry Seminar
K. McClane.

ENGL 780.02 MFA: Fiction Seminar
M. McCoy.

ENGL 785 Reading for Writers
A. Lurie.

Spring

ENGL 607 Dante's Divine Comedy (also ITAL 427/627)
W. Wetherbee.

ENGL 612 *Beowulf*
T. Hill.

ENGL 613 Racial Democracy in the Americas (also S HUM 418 and ENGL 418)
Z. Nunes.

ENGL 617 Early Medieval Archaeology and Literature (also ENGL 417, ARKEO 417/617
R. Farrell.

ENGL 626 The Literature of Empire in the Renaissance (also COM L 665)
W. Cohen.

ENGL 629 Milton
G. Teskey.

ENGL 631 Politics and the Passions: Hobbes to Rousseau (also COM L 631)
N. Saccamano.

ENGL 634 A Thousand Points of Language: The Diaspora of "The New Criticism"
F. Bogel.

ENGL 657 Twentieth Century Experimental Novel
M. Hite.

ENGL 658 Imagining the Holocaust (also ENGL 458, JWST 458/658, COM L 483/683, GERST 457/657)
D. Schwarz.

ENGL 661 Finding America: Sex, Race, and Conquest in Early Narratives
S. Samuels.

ENGL 664 Studies in American Poetry: Walt Whitman and the Twentieth Century
R. Gilbert.

ENGL 676 Theory and Poetics of the Novel
H. Shaw.

ENGL 696 Decolonizing Identities and Values
S. Mohanty.

ENGL 699 Studies in African American Literature: Black Women Writing at the Intersection
H. Spillers.

ENGL 703 Theorizing Film
T. Murray.

ENGL 710 Advanced Old English
T. Hill.

ENGL 781.01 MFA: Poetry Seminar
A. Fulton.

ENGL 781.02 MFA: Fiction Seminar
L. Herrin.

ENGLISH FOR ACADEMIC PURPOSES

D. Campbell, director; S. Schaffzin, F-H Yap

Note: Courses and credits do not count toward the B.A. degree.

ENGLF 205 English as a Second Language
Fall. 4 credits. Prerequisite: placement by examination. S. Schaffzin.
An all-skills course emphasizing listening and speaking, with some writing practice. Students also meet individually with the instructor.

ENGLF 206 English as a Second Language
Spring. 3 credits. Prerequisite: ENGLF 205 or placement by examination. S. Schaffzin.
A writing class for those who have completed ENGLF 205 and need further practice, or for those who place into the course. Individual conferences are also included.

ENGLF 209 English as a Second Language
Fall or spring. 1 credit. Prerequisite: permission of instructor. S. Schaffzin.
Practice in classroom speaking and in informal conversational English techniques for gaining information. Students also practice giving informal presentations. Individual conferences with the instructor supplement class work.

ENGLF 210 English as a Second Language
Spring. 1 credit. Prerequisite: permission of instructor. S. Schaffzin.
Practice in academic speaking. Formal classroom discussion techniques and presentation of information to a group. Presentations are videotaped and reviewed with the instructor. Individual conferences supplement class work.

ENGLF 211 English as a Second Language
Fall, spring, or summer. 3 credits. Prerequisite: placement by examination. D. Campbell.
Academic writing with emphasis on improving organization, grammar, vocabulary, and style through the writing and revision of short papers relevant to students' fields. Frequent individual conferences supplement class work.

ENGLF 212 English as a Second Language
Spring. 3 credits. Prerequisite: permission of instructor. Enrollment is restricted to 12 on a first-come, first-served basis. D. Campbell.
Research paper writing. For the major writing assignment of this course, the students must have a real project that is required for their graduate work. This can be a thesis proposal; a pre-thesis; part of a thesis, such as the literature review or discussion section; a paper for another course or a series of shorter papers (with permission of the other instructor); or a paper for publication. Time limitations make it difficult to deal with work over 20 pages in length. Course work involves practice in paraphrase, summary, the production of cohesive, coherent prose, vocabulary use, and grammatical structure. Frequent individual conferences are a necessary part of the course. Separate sections for Social Sciences/Humanities and for Science/Technology.

ENGLF 213 Written English for Non-Native Speakers
Spring. 3 credits. Prerequisite: permission of instructor. S. Schaffzin.
Designed for those whose writing fluency is sufficient for them to carry on regular academic work but who want to refine and develop their ability to express themselves clearly and effectively. Individual conferences supplement class work.

First-Year Writing Seminar

ENGLB 115–116 English for Later Bilinguals
For description, see first-year writing seminar brochure.

INTENSIVE ENGLISH PROGRAM

105 Morrill Hall

J. M. Mancusi, director; E. J. Beukenkamp, R. L. Feldman, K. U. Golkowska, M. Johns, M. T. Lovell, J. G. Luks, L. Porterfield, S. L. Vann, S. Yates

This noncredit, nondegree program provides full-time intensive English as a second language instruction as well as academic, social, and cultural orientation to the United States and its institutions. The aim of the program is for participants to acquire proficiency in the language in order to pursue goals in English for academic, business, professional, or personal purposes.

Programs are offered both fall and spring semesters and in the six-week summer session (from late June to early August). Participants receive a minimum of 20 hours of classroom instruction weekly in speaking, listening, reading, writing, and grammar, which are taught at all levels from low intermediate through very-high advanced. Applicants must be at least 17 years of age, hold the equivalent of a high school diploma, and have had some previous study of English. Participants receive a Certificate of Eligibility (Form I-20) to obtain an F-1 visa.

Students who have gained full admission to or who are already registered in degree-granting programs at Cornell should consult the section "English for Academic Purposes" (series ENGLF).

The Intensive English Program is coordinated by the director, Jeanette Mancusi. Information and application materials are available directly from the program at: Cornell University, Intensive English Program, Morrill Hall, Ithaca, NY 14853–4701, U.S.A.: tel. 607/255–4863; fax 607/255–7491; e-mail CUIEP@cornell.edu; web page: http://languagecenter.cornell.edu/iep/

FILM

See Department of Theatre, Film and Dance.

FRENCH

FIRST-YEAR WRITING SEMINARS

For information about the requirements for writing seminars and descriptions of seminar offerings, see "Special Programs and Interdisciplinary Studies" at the end of the Arts and Sciences section of this catalog and consult the John S. Knight Institute brochure, available from college registrars in August for the fall term and on the web in October at www.arts.cornell.edu/knight_institute for the spring term.

GERMAN STUDIES

L. Adelson, chair; P. Gilgen, director of undergraduate studies; A. Schwarz, director of graduate studies; D. Bathrick, M. Briggs (Dutch), B. Buettner, H. Deinert, I. Ezergailis (Emerita), A. Groos, P. U. Hohendahl, G. Lischke, B. Martin, L. Trancik (Swedish), G. Waite

The Department of German Studies offers students a wide variety of opportunities to explore the literature and culture of German-speaking countries, whether as part of their general education, a major in German Studies, or a double major involving another discipline, or as preparation for graduate school or an international professional career. Courses are offered in German as well as in English translation; subjects range from medieval to contemporary literature and from film and visual culture to intellectual history, music, history of psychology, and women's studies.

The department's offerings in English begin with a series of First-Year Writing Seminars introducing various aspects of German literature (the fairy-tale and romantic consciousness, twentieth-century writers such as Kafka, Hesse, Mann, Brecht), theorists such as Marx, Nietzsche and Freud, issues in mass culture and modernity, problems of German national identity/ies, and cinema and society. Courses in English translation at the 300 and 400 levels explore such topics as the Faust legend, aesthetics from Kant to Heidegger, Freud and his legacy, opera from Mozart to Strauss, the German novel, political theory and cinema, the Frankfurt School, and feminist theory. It may be possible to arrange a German section for courses taught in English, either informally or formally (for credit). Students are encouraged to discuss this possibility with instructors.

Students wishing to begin German language at Cornell enroll in GERST 121–122, 123 (elementary language level). Students then continue with intermediate level courses, which provide further grounding in the language as well as introduce German literature and cultural studies. The sequence GERST 205–206 provides language instruction for business German leading to certification. On the advanced level (300 level or above), we offer thematically oriented courses that include intensive grammar review (301, 302, 306); literature and culture study courses in German, including the Senior Seminar; and seminars of interdisciplinary interest taught in English. Addressing a broad spectrum of topics in German culture, our courses at the advanced level appeal to German majors and other qualified students alike.

(Note: beginning in spring 1998, GERST 201 and GERLA 203 were placed by GERST or GERLA 200.)

Sequence of courses

Courses in German:

Elementary level: GERST 121–122, after completion, placement into GERST 123 or 200, 205

Intermediate level: GERST 200, 202, 204, and 205–206

Advanced level: GERST 301, 302, 306, 307, 410.

Courses in German or English:

Further 300- and 400-level literature and culture courses (see course descriptions)

Advanced Standing

Students with an AP score of 4 or better are automatically granted three credits in German. Students with an AP score of 4 or better, an LPG score of 65 or higher, or an SAT II score of 680 or higher must take the CASE examination for placement in courses above GERST 200. Students coming to Cornell with advanced standing in German and/or another subject are encouraged to consider a double major and to discuss the options with the director of undergraduate studies as early as possible.

The Majors

The department offers two options for the major: German literature and culture, and German area studies. The latter is a more broadly defined sequence that includes work in related disciplines. The course of study in either major is designed to give students proficiency in reading, speaking, and writing in German, to acquaint them with German culture, and to help them develop skills in reading, analyzing, and discussing German texts in relevant disciplines. For both majors, there is a wide variety of courses co-sponsored with other departments (Comparative Literature; Government; History; Music; Theatre, Film, and Dance; Women's Studies).

The department encourages double majors and makes every effort to accommodate prospective majors with a late start in German. Students interested in a major should consult the director of undergraduate studies, Peter Gilgen, 192 Goldwin Smith Hall.

German (Literature and Culture)

Although the emphasis of this track is on literature, majors may also pursue individual interests in courses on film and visual culture, theater and performing arts, music, intellectual and political history, and women's studies that have a substantial German component. Please consult with the director of undergraduate studies.

Admission: By the end of their sophomore year, prospective majors should have successfully completed GERST 202, 220, 204, or 206.

To complete the major, a student must:

1. Demonstrate competence in the German language by successful completion of two 300-level courses with intensive language work (GERST 301, 302, or 306) or the equivalent.
2. Complete six courses in German Studies at the 300 level or above. One of these must be the Senior Seminar (GERST 410).

German Area Studies

Students select courses from the Department of German Studies as well as courses with a substantial German component from other departments, such as Comparative Literature; Government; History; Music; Theatre, Film, and Dance; and Women's Studies.

Admission: By the end of their sophomore year, prospective majors should have successfully completed GERST 202, 220, 204, or 206.

To complete the major, a student must:

1. Demonstrate competence in the German language by successful completion of two 300-level courses with intensive language work (GERST 301, 302, or 306) or the equivalent.
2. Complete six courses with a substantial German component at the 300 level or above. Three of these must be in German Studies, including the Senior Seminar (GERST 410).
3. Select a committee of one or more faculty advisers to help formulate a coherent program of study. One of the advisers must be from the Department of German Studies.

Study Abroad in Germany

German Studies strongly supports Study Abroad as an opportunity for students to put their German to use by living and studying in the German cultural context. The experience of living abroad promotes enduring personal growth, provides new intellectual perspectives through cultural immersion, and opens up academic and professional opportunities.

Students interested in studying abroad are encouraged to consider the Berlin Consortium, of which Cornell is an associate member. The program is run in conjunction with the Free University of Berlin and is of very high caliber. Six weeks of an intensive language practicum held at the center of the consortium are followed by one or two semesters of study at the university. Participants enroll in regular courses at the university. Academic-year students have been assisted in finding internships between semesters. Prerequisite for participating in the program is five semesters of German language study, of which the last course must be on the 300 level.

Students interested in this or other study abroad options in Germany, Austria, or Switzerland should consult Gunhild Lischke (G75 Goldwin Smith; 255–0725; gl15@cornell.edu) as soon as possible.

Honors

Eligibility: A student wishing to receive honors in German Studies must have a GPA of 3.5 in all courses relevant to the major.

Committee: Candidates for honors form an advisory committee consisting of an adviser from German Studies and at least one additional faculty member.

Honors essay: During the first term of their senior year, students determine the focus of their honors essay through an appropriate course, GERST 453, under the direction of their advisers. During the second term they complete an honors essay, GERST 454, which will be evaluated by the committee.

Determination of honors: An oral examination concludes the process. Honors is determined by the essay, the exam, and grades in the major.

First-Year Writing Seminars

Consult the John S. Knight Institute brochure for course times, instructors, and descriptions.

Courses Offered in German

Note: All courses are now designated GERST. In earlier years courses were designated either GERLA or GERST. Course numbers remain the same.

GERST 121 Elementary German I
Fall or spring. 4 credits. Intended for students with no prior experience in German or with a language placement test (LPG) score below 37, or an SAT II score below 370. G. Lischke and staff.
Students develop basic abilities in listening, reading, writing, and speaking German in meaningful contexts through interaction in small group activities. Course materials including videos, short articles, poems, and songs provide students with varied perspectives on German language, culture, and society.

GERST 122 Elementary German II
Fall or spring. 4 credits. Prerequisite: GERST 121, LPG score 37–44, or SAT II 370–450. Students who obtain an LPG score of 56 or above after GERST 122 attain qualification and may enter a 200-level course; otherwise successful completion of GERST 123 is required for qualification. G. Lischke and staff.
Students build on their basic knowledge of German by engaging in intense and more sustained interaction in the language. Students learn more advanced language structures allowing them to express more complex ideas in German. Discussions, videos, and group activities address topics of relevance to the contemporary German-speaking world.

GERST 123 Continuing German
Fall or spring. 4 credits. *Provides language qualification.* Limited to students who have previously studied German and have an LPG score 45–55 or SAT II 460–570. Staff.
Students continue to develop their language skills by discussing a variety of cultural topics and themes in the German-speaking world. The focus of the course is on expanding vocabulary, reviewing major grammar topics, developing effective reading strategies, improving listening comprehension, and working on writing skills. Work in small groups increases each student's opportunity to speak in German and provides for greater feedback and individual help.

GERST 200 Contemporary Germany (formerly also GERLA 200) (IV)
Fall or spring. 3 credits. *Provides language proficiency.* Prerequisite: qualification in German (GERST 123 or LPG score of 56–64 or SAT II score of 580–670) or placement by examination. Staff.
A content-based language course on the intermediate level. Students examine important aspects of present-day German culture while expanding and strengthening their reading, writing, and speaking skills in German. Materials for each topic are selected from a variety of sources (fiction, newspapers, magazines, and the Internet). Units address a variety of topics including studying at a German university, modern literature, Germany online, and Germany at the turn of the century. Oral and written work and individual and group presentations emphasize accurate and idiomatic expression in German. Successful completion of the course enables students to continue with more advanced courses in language, literature, and culture.

GERST 202 Exploring German Literature (IV)
Fall or spring. 3 credits. Prerequisite: GERST 200 or equivalent or permission of instructor. Taught in German. Staff.
In this intermediate course, we read and discuss a number of works belonging to different literary genres by major German-speaking authors such as Kafka, Walser, Brecht, Mann, Frisch, Dürrenmatt, Bachmann, and others. We explore questions of subjectivity and identity in modern society, of human existence as existence in language, and of the representation of history in literary texts. Activities and assignments in this course focuses on the development of reading competency in different literary genres, the use of accurate and idiomatic expressions, the expansion of students' German vocabulary, and the systematic review of select topics in German grammar.

GERST 204 Intermediate Conversation and Composition
Fall or spring. 3 credits. Prerequisite: GERST 200 or GERST 201 or GERST 205 or placement by examination (placement score and CASE). Staff.
Emphasis is on improving oral and written expression of idiomatic German. Enrichment of vocabulary and appropriate use of language in different conversational contexts and written genres. Material consists of readings in contemporary prose, articles on current events, videos, and group projects. Topics include awareness of culture, dependence of meaning on perspective, interviews with native German speakers, German news broadcasts, reading German newspapers on the Internet.

GERST 205 Business German I
Fall. 3 credits. *GERST 205 provides language proficiency.* Prerequisite: qualification in German (GERST 123, or an LPG score of 56–64, or an SAT II score between 580–670). G. Lischke.
Learn German and understand German business culture at the same time. This is a German language course that examines the German economic structure and its major components: industry, trade, the banking system, and the government. Participants learn about the business culture in Germany and how to be effective in a work environment, Germany's role within the European Union, the dual education system, the importance of trade and globalization, and current economic issues in Germany. The materials consist of authentic documents from the German business world, TV footage, and a Business German textbook.

GERST 206 Business German II
Spring. 3 credits. Prerequisite: proficiency in German (GERST 205, 200, 201, or placement by examination [placement score and CASE]). G. Lischke.
This course is a continuation of GERST 205; however students without previous knowledge of Business German are welcome. This is a German language course that examines the German economic structure and its major components: industry, trade unions, the banking system, and the government. Participants learn about the business culture in Germany and how to be effective in a work environment, Germany's role within the European Union, the role of the European Central Bank, the importance of trade and globalization, and current economic issues in Germany. The materials consist of authentic documents from the German business world, TV footage, and a Business German textbook. At the end of the course, the external Goethe Institut exam "Deutsch für den Beruf" will be offered.

[GERST 220 Was ist Deutsch? (IV)
Provides language proficiency. Not offered 2001–2002. B. Buettner.]

GERST 301 Scenes of the Crime: German Mystery and Detective Fiction (IV)
Fall. 4 credits. Prerequisite: GERST 202, 220, 204, 206 or equivalent, or permission of instructor. Taught in German. This course may be counted towards the requirement for 300-level language work in the major. P. Gilgen.
An exploration of German crime, detective, and mystery writing in texts ranging from the early nineteenth century to contemporary fiction. Authors to be studied may include:

Kleist, E. T. A. Hoffmann, Dürrenmatt, Schatten, Süskind, Handke, and Ören. In addition to exercising hermeneutic skills (and, by extension, that gray matter of which Sherlock Holmes was so fond), this course aims at improving proficiency in aural and reading comprehension, as well as speaking and writing skills, with emphasis on vocabulary expansion, advanced grammar review, and stylistic development. Recommended to students interested in a combined introduction to literature and high-level language training. The follow-up course, GERST 302, Youth/Adolescence, is taught in the spring only.

GERST 302 Youth Culture: Adolescence in German Fiction (IV)
Spring. 4 credits. Prerequisite: GERST 202, 220, 204, 206 and 301 or equivalent or permission of instructor. Taught in German. P. Gilgen.
Examination of literary and cultural approaches to childhood, youth, and adolescence in texts ranging from the late eighteenth century to the present. Authors include: Hoffmann, Keller, Goethe, Mann, Walser, Musil, Zweig, Handke, and Kaschnitz. Aimed at further improving students' proficiency in aural and reading comprehension, as well as in speaking and composition skills. Focus on high-level grammar review, stylistic and expository refinement and vocabulary expansion. Recommended for students wishing to combine intensive language training with reading and discussion of short fiction.

[GERST 303 Advanced Conversation and Composition
Not offered 2001–2002.]

[GERST 304 Advanced Conversation and Composition
Not offered 2001–2002.]

[GERST 306 German Media
Not offered 2001–2002.]

GERST 307 After the Fires: Divided Germany 1945–1989 (IV)
Fall. 4 credits. Prerequisite: GERST 202, or GERST, or GERLA 204, or GERST 220, or equivalent or permission of instructor. Taught in German. L. Adelson.
Introduction to the history of postwar Germany, the development and unification of the two Germanys, and their societies. The emphasis is on cultural and social institutions as well as political and intellectual debates. Focal topics include responses to the Nazi past, Germany and Europe, protest movements, migration patterns, women, mass media, and popular culture. We consider the changes taking place in Germany today in light of the recent past. Some films are also shown.

GERST 319 Laughter in German Literature (IV)
Spring. 4 credits. Prerequisites: GERST 202 or 204 and 301 or equivalent or permission of instructor. Required readings and class discussion in German. P. Rehberg.
This course explores the sometimes subterranean tradition of the comical in modern German literature and thought. The literary work of Franz Kafka and traditional responses to it are considered in unconventional ways. What happens when readers take the unserious seriously? Discussion and humorous elements in Kafka's work will additionally serve as a springboard for considering the possible relationship between comedy and modernity in broad historical terms. Required readings are drawn from three key periods of German literature: Romanticism, early twentieth century, and Postmodernism. Laughter in works by authors as diverse as Friedrich Schlegel, Sigmund Freud, Robert Musil, and Thomas Bernhard are addressed. Comical phenomena and stylistic media such as irony, jokes, and laughter are compared and contrasted.

[GERST 353 Kleist # (IV)
Not offered 2001–2002.]

[GERST 354 Schiller # (IV)
Not offered 2001–2002.]

GERST 357 Major Works of Goethe (1749–1832) # (IV)
Fall. 4 credits. Open to all qualified students. Prerequisite: GERST 202, or 204, or 206, or equivalent, or permission of instructor. All texts are read in German, but translations will be available to serve as study aids. Class discussion in German and occasionally English. H. Deinert.
Poet, statesman, artist, scientist, rebel, conservative, mythmaker, and iconoclast, Goethe stands at the center of Germany's belated Renaissance. Taking his early cues from Homer, Shakespeare, and the Bible, he created cultural icons at once modern and steeped in tradition. We examine works from all phases of the man's incredibly productive life against the background of political turmoil in Europe and the Americas. We use art, music, and theater as additional tools of interpretation.

Courses offered in English

It may be possible to arrange a German section for courses taught in English, either informally or formally (for credit). Students are encouraged to discuss this possibility with instructors.

GERST 221 The Ethics of Imagining the Holocaust (also ENGL 221 and JWST 257) (IV)
Fall. 4 credits. D. Schwarz.
For description, see ENGL 221.

[GERST 237 The Germanic Languages (also LING 237) (III)
Not offered 2001–2002. W. Harbert, M. Diesing.]

[GERST 318 "1800" # (IV)
Not offered 2001–2002. P. Gilgen.]

[GERST 320 Postwar German Novel (IV)
Not offered 2001–2002.]

GERST 330 Political Theory and Cinema (also COM L 330, GOVT 370 and THETR 329) (III or IV)
Fall. 4 credits. G. Waite.
An introduction (without prerequisites) to fundamental problems of current political theory, filmmaking, and film analysis, along with their interrelationship. Particular emphasis on comparing and contrasting European and alternative cinema with Hollywood in terms of post-Marxist, psychoanalytic, postmodernist, and postcolonial types of interpretation. Filmmakers/theorists might include: David Cronenberg, Michael Curtiz, Kathryn Bigelow, Gilles Deleuze, Rainer Fassbinder, John Ford, Jean-Luc Godard, Marleen Gorris, Werner Herzog, Alfred Hitchcock, Allen & Albert Hughes, Stanley Kubrick, Fredric Jameson, Chris Marker, Pier-Paolo Pasolini, Gillo Pontecorvo, Robert Ray, Martin Scorsese, Ridley Scott, Oliver Stone, George Romero, Steven Shaviro, Kidlat Tahimik, Maurizio Viano, Slavoj Zizek. Although this is a lecture course, there is ample time for class discussions.

GERST 340 Metropolis: Urban Sites in Literature (IV)
Spring. 4 credits. Readings and discussions in English (texts will be available in German). A. Schwarz.
An interdisciplinary study of metropolitan life focusing on Berlin and Vienna (1890–1999) as major contexts of artistic modernity and historical change. Topics of investigation include: the city as both the product and source of artistic production; the interrelationship between literary concepts of montage, collage, and their architectural counterparts (Bauhaus et al.); the tension between private and public spaces, and the status of crowds, anonymity, and the flaneur. We also analyze the rise of an avant-garde movement in an urban environment. Focus on short fiction, architectural theory, sites and art history, film, political and literary manifestos. Authors include: Fontane, Broch, Benn, Benjamin, Döblin, Simmel, Johnson, Rilke, Kohlhaas, Vidler.

[GERST 374 Opera and Culture (also MUSIC 374) # (IV)
Not offered 2001–2002. A. Groos.]

[GERST 378 German Aesthetic Theory: From Kant to Hegel # (IV)
Not offered 2001–2002.]

[GERST 392 Minority Literature in the Federal Republic (IV)
Not offered 2001–2002. L. Adelson.]

[GERST 395 Rilke: The Duino Elegies and Sonnets to Orpheus (IV)
Not offered 2001–2002. H. Deinert.]

[GERST 396 German Film (also COM L 396 and THETR 396) (IV)
Not offered 2001–2002.]

Advanced Undergraduate and Graduate Courses

GERST 402 The Language of German Poetry (IV)
Spring. 4 credits. Taught in German. Prerequisite: GERST 301, 302, or equivalent, or permission of instructor. P. Gilgen.
Based on close readings of lyric poetry written in German from the eighteenth century to the present, this course focuses on linguistic self-reference as the fundamental trait of the poetic function of language. We also examine how poetry is defined vis-à-vis its environment by different poetic conceptions. Attentiveness to changes that affected the situation of poetry (such as new theories of language and the emergence of new media) provide historical orientation for our inquiry. To analyze in detail how poetry and poetics are affected by changing discursive structures, we read recent poetry against some of its poetic sources and address questions concerning poetic traditions, translatability, and media transpositions. Such juxtapositions may include Peter Waterhouse/Celan/Hölderlin; Oswald Egger/Brockes; Michael Donhauser/Ponge; and others.

[GERST 403 The Afro-Europeans (IV)
Not offered 2001–2002.]

[GERST 405 Introduction to Medieval German Literature I # (IV)
Not offered 2001–2002. A. Groos.]

[GERST 406 Introduction to Medieval German Literature II # (IV)
Not offered 2001–2002. A. Groos.]

GERST 407 Teaching German as a Foreign Language
Fall. 4 credits. G. Lischke.
This course has been designed to familiarize students with current ways of thinking in the field of applied linguistics and language pedagogy. It introduces different concepts of foreign language methodology as well as presents and discusses various techniques as they can be implemented in the foreign language classroom. Special consideration is given to topics such as planning syllabi, writing classroom tests, and evaluating student's performance. Participants conduct an action research project.

[GERST 408 Uncanny Communities (IV)
Not offered 2001–2002.]

GERST 409 Spinoza and New Spinozism (also COM L 442) (IV)
Spring. 4 credits. Prerequisite: permission of instructor. G. Waite.
Spinoza was excommunicated in his own time, wrote under the constant threat of death, and has remained a scandal to almost all subsequent thought, including philosophy, psychoanalysis, political theory and practice, and ethics. And he exerted a powerful, if subterranean, influence on Marx, Freud, and Nietzsche. Indeed, "every philosopher has two philosophies, his own and Spinoza's" (Henri Bergson), and "everyone is a philosopher, whether professionally or otherwise" (Antonio Gramsci). This seminar takes up the challenge of these two remarks, with two main aims: to introduce Spinoza's basic philosophical and political writings; and then to trace his legacy, concentrating on the current, international group of men and women loosely grouped as the New Spinozists. These include: Gabriel Albiac, Louis Althusser, Etienne Balibar, Gilles Deleuze and Félix Guattari, Emilia Giancotti, Luce Irigaray, Kōjin Karatani, Jacques Lacan, Pierre Macherey, and Toni Negri. Spinoza is currently being used to produce an anti-Kantian, anti-Hegelian analysis of many contemporary problems, including Cyberspace and Virtual Reality. We focus especially on the neo-communist, Althusserian tradition of reading and using Spinoza. In part this is because it may be true that "the new world system, the ultimate third stage of capitalism is for us the absent totality, Spinoza's God or Nature, the ultimate (indeed perhaps the only) referent, the true ground of Being in our time" (Fredric Jameson), though Spinoza is also interesting in his own right. In addition to selections from Spinoza's work, our basic text is the recent anthology *The New Spinoza* (ed. Warren Montag and Ted Stolze).

GERST 410 Senior Seminar
Fall. 4 credits. Open to all students with an adequate command of German. Prerequisite: any German course at the 300-level or equivalent or permission of instructor. Texts and seminar discourse in German. A. Schwarz.
Topic: The Fiction of Autobiography
An investigation of the changing forms of autobiographical discourse in novels ranging from the 18th to the 20th century. The goal of this class is to analyze the interrelationship between the constitution of subjectivity and its articulation in novels. Points of discussion include: the status of life as history; autobiography as loss or gain of selfhood; constructions of identity and literary existence. Authors include: Rilke, Frisch, Raabe, Goethe, Stifter, Th. Mann, Handke. Students are also introduced to pertinent theories of autobiography. Readings and discussion in German.

[GERST 412 German Literature from 1770 to 1848 # (IV)
Not offered 2001–2002.]

[GERST 413 Women around Freud (also COM L 412 and WOMNS 413) (IV)
Not offered 2001–2002.]

GERST 414 History into Fiction: Nazis and the Literary Imagination (also ENGL 404, COM L 404, and NES 404) (IV)
Fall. 4 credits. E. Rosenberg.
For description, see ENGL 404.

[GERST 415 Marx, Nietzsche, Freud (also COM L 425 and GOVT 473) (III or IV)
Not offered 2001–2002.]

GERST 416 Gender and the Law in German Culture (also HIST 413 and WOMNS 414) (III or IV)
Spring. 4 credits. T. Matysik.
The status of law as a social and cultural phenomenon is a much-disputed issue. This course examines the cultural space of law in modern German history. It pays particular attention to law and legal reform in relation to gendered notions of citizenry, subjectivity, and sexuality. The course takes as its hypothesis the idea that the prevalance in modern German thought of the concern with the "law" as the moral regulation of normative behavior is closely connected to the transformation of actual laws and legal codes in German history. In order to assess the terrain between such actual laws and their cultural effects, we examine a combination of literary, social-theoretical, and historiographical readings that address the problem of law. In this way we acquire, first, a general overview of German legal history together with a language with which to speak about a variety of legal theoretical traditions. Second, we explore perceptions of, responses to, and critiques of the historical role of law in German culture. Readings cover: the late eighteenth-century era of German legal reform, the late nineteenth- and early twentieth-century context in which sexual morality had re-entered the legal domain and, more recent thought on law. At the same time, we use our historical understanding to assess the extent to which these more recent critical efforts are a departure from and/or a continuation of their historical predecessors. In the course of these investigations we are guided by questions of the relationships between law, subjectivity, gender, citizenship, and morality.

GERST 417 Faust: Transformations of a Myth (also COM L 417) # (IV)
Spring. 4 credits. Taught in English. H. Deinert.
Few legends have so engaged the imagination as that of the man who signed a pact with the devil to obtain pleasure, power, and knowledge. While the myth itself is timeless, the modern version takes its cue from one real Georg Faust, a figure of dubious character, half scholar, half quack, during the time of the German Reformation. The German *Volksbuch* depicting his adventures was almost immediately translated into English and became the inspiration for Marlowe's *Tragical History of Doktor Faust*. Goethe devoted some 60 years to his *Faust*, completing it only months before his death in 1832. While Marlowe's Faust deserves eternal damnation for his hubris, Goethe's protagonist finds favor with God for the same reason. We look at various representations of the myth from the late sixteenth century through the early nineteenth. The *Faust Book*, Marlowe, and Goethe are our main texts. We listen to some of the music they have inspired: Schubert, Schumann, Berlioz, Gounod, Mahler; and look at related mythical figures like Lucifer, Prometheus, Don Juan, Ahasverus, Schlemiehl, and others. Time permitting, we discuss selections from several recent versions: Bulkagov's *The Master and Margarita* (1938), Valéry's *Mon Faust* (1940), and Thomas Mann's *Doktor Faustus* (1947).

[GERST 418 Thomas Mann (IV)
Not offered 2001–2002.]

GERST 419 Modern Nomads (also S HUM 419) (IV)
Spring. 4 credits. Limited to 15 students. J. Noyes.
For description, see S HUM 419.

GERST 420 Jewish Culture and Modernity (also S HUM 408) (IV)
Fall. 4 credits. M. Steinberg.
For complete course description see S HUM 408.

[GERST 428 Genius and Madness in German Literature (also COM L 409) (IV)
Not offered 2001–2002.]

[GERST 430 Brecht, Artaud, Müller, Wilson (also COM L 430 and THETR 420) (IV)
Not offered 2001–2002. D. Bathrick.]

[GERST 435 Introduction to Literary Theory (also COM L 435) (IV)
Not offered 2001–2002.]

GERST 441 Introduction to Germanic Linguistics (also LING 441) (III)
Fall. 4 credits. W. Harbert.
For course description see LING 441.

[GERST 447 Reading Freud: Gender, Race, and Psychoanalysis (also COM L 447 and WOMNS 447) (IV)
Not offered 2001–2002.]

[GERST 449 Rescreening the Holocaust (also COM L 453 and THETR 450) (IV)
Not offered 2001–2002. D. Bathrick.]

GERST 451–452 Independent Study
451, fall; 452, spring. 1–4 credits each term. Prerequisite: permission of instructor.

GERST 453 Honors Research
Fall. 4 credits. Staff.

GERST 454 Honors Thesis
Spring. 4 credits. Staff.

GERST 457/657 Imagining the Holocaust (also COM L 483/683, ENGL 458/658, and JWST 458/658) (IV)
Spring. 4 credits. D. Schwarz.
For description, see ENGL 458/658.

[GERST 472 Poetry of the 1990s (also COM L 472) (IV)
Not offered 2001–2002.]

[GERST 492 The Advance of Humanism: Aspects of the European Enlightenment # (IV)
Not offered 2001–2002.]

[GERST 495 The Cultural Theory of the Frankfurt School (also COM L 495, GOVT 471) (III or IV)
Not offered 2001–2002. P. U. Hohendahl.]

GERST 496 Theorizing the Public Sphere (also COM L 496 and GOVT 464) (III or IV)
Fall. 4 credits. P. U. Hohendahl.
The recent translation of Jürgen Habermas's *The Structural Transformation of the Public Sphere* into English has renewed the debate about the nature and significance of the public and publicity, about public communication and the media. This discussion has centered around the history of the public sphere in modern society and its relevance for contemporary culture and politics. The seminar discussion deals with contemporary as well as historical topics, among them the significance of class, gender, and race for the construction of the public sphere, the possibility of shared cultures in advanced industrial societies, and the character of public communication under the conditions of the new media. The readings focus on three seminal texts, namely Hannah Arendt's *The Human Condition* (1958), Jürgen Habermas's *The Structural Transformation of the Public Sphere* (1962), and Oskar Negt's/Alexander Kluge's *Public Sphere and Experience*. The discussion includes readings from Richard Sennett and Reinhart Koselleck. Special attention is given to the recent debate about the history and function of the public sphere, which was collected in Craig Calhoun's volume *Habermas and the Public Sphere* (1992) with contributions (among others) by Thomas McCarthy, Nancy Fraser, Mary P. Ryan, Geoff Eley, and Jürgen Habermas.

[GERST 498 German Literature in Exile (IV)
Not offered 2001–2002.]

Graduate Courses

Note: For complete descriptions of courses numbered 600 or above consult the appropriate instructor.

[GERST 600 Special Topics in Feminist Theory (also ANTHR 600 and COM L 600)
Not offered 2001–2002.]

[GERST 606 Topics in Historical Germanic Phonology
Not offered 2001–2002. W. Harbert.]

[GERST 607 Topics in Historical Germanic Morphology
Not offered 2001–2002.]

[GERST 608 Topics in Historical Germanic Syntax
Not offered 2001–2002. W. Harbert.]

[GERST 614 Gender at the Fin-de-siècle
Not offered 2001–2002.]

[GERST 615 Jews in German Culture Since 1945 (also JWST 615)
Not offered 2001–2002.]

[GERST 617 Literature and Affect (also COM L 625)
Not offered 2001–2002. A. Schwarz.]

[GERST 618 "The Science of the Experience of Consciousness": Hegel's *Phenomenology of Spirit* (and Beyond)
Not offered 2001–2002. P. Gilgen.]

[GERST 621 Issues in Gay and Lesbian Studies (also WOMNS 621)
Not offered 2001–2002.]

[GERST 624 Seminar in Medieval German Literature II
Not offered 2001–2002.]

[GERST 626 Nuremberg
Not offered 2001–2002.]

[GERST 627 Baroque (also COM L 626)
Not offered 2001–2002.]

[GERST 629 The Enlightenment
Not offered 2001–2002. P. U. Hohendahl.]

[GERST 630 Classicism and Idealism
Not offered 2001–2002.]

GERST 631–632 Academic German I and II
631, fall; 632, spring. 3 credits each term. Limited to graduate students. Prerequisite: for GERST 632, GERST 631 or equivalent. Staff.
Intended primarily for beginners with little or no previous German knowledge. Emphasis in 631 on acquiring basic German reading skills. Emphasis in 632 on development of the specialized vocabulary of student's field of study.

GERST 634 German Romanticism
Fall. 4 credits. Most readings in German; discussion and papers in English. Students from other disciplines welcome. Anchor course. G. Waite.
Structured introduction to German literature, cultural criticism, political thought, and philosophy from c. 1789 to c. 1830 in two basic contexts: revolutionary Europe at the time and subsequent theory. The latter includes Marxists (on "the German ideology"), Freudians (on "the uncanny"), Heidegger (on "the other beginning" in Hölderlin), de Man (on "the rhetoric of romanticism"), Lacoue-Labarthe & Nancy (on Early Romantic criticism and "the literary absolute"), and Deleuze & Guattari (on "the war machine" in Kleist). Authors/topics might include: B. and A. von Arnim, Arndt, Brentano, Fichte, Gontard, the Grimm brothers, Günderode, Hegel, Heine, Hölderlin, Hoffmann, Kleist, Novalis, Schelling, C. Schlegel-Schelling, F. Schlegel, Schleiermacher, Tieck, Varnhagen, D. Veit-Schlegel, and the repercussions of the Spinoza debate (since Lessing and Jacobi). Primary methodological focus is on the close reading of short, symptomatic texts.

GERST 635 The Gates to Modernity: From Karlsbad to the 1848 Revolution
Spring. 4 credits. Anchor course. P. U. Hohendahl.
The seminar focuses on Germany's entry into the modern age represented by authors such as Heine, Büchner, Feuerbach, and Marx. The course deals with the cultural, political, and social consequences of the Enlightenment, among them the democratization of literature and culture, the politicization of philosophy, and the emancipation of underprivileged groups (women and the working class). Readings trace the formation of bourgeois culture and its contradictions as they are articulated by the writers of Young Germany, the Left Hegelians, and radical literati of the 1840s. In addition to the authors mentioned above, readings are taken from the works of Bettina von Arnim, Börne, Grabbe, Hebbel, and Fanny Lewald.

[GERST 637 Nineteenth-Century Fiction: The Realist Project
Not offered 2001–2002.]

GERST 640 The Modern German Novel
Fall. 4 credits. A. Schwarz. .
The goal of this seminar is to analyze selected works of modernist fiction in order to assess the stylistic qualities that constitute their specifically modernist character. Concentrating on novels ranging from the late 19th to the early 20th century, we pay close attention to questions of narrative structure as well as temporal and spatial arrangements. Also including comparatist interests, the seminar discusses the modern German novel within the European context; discusses generic differences (modern versus "classic"); and examines theories of the novel and their relationship to contemporary representational concerns. Specific points of interest are: the status of self-reflection; philosophical interruptions; irony; montage; subjectivity and literary self-projection; and literature and urbanity. In order to evaluate the "very" modern, the class also discusses two examples of contemporary fiction. Authors include: Rilke, Kafka, Döblin, Broch, Th. Mann, R. Walser, Nossack, Handke, Johnson, Bernhard, Goetz. All texts are read in translation. (German speakers are encouraged to read the original texts).

GERST 641 The Gay Critic (also COM L 661)
Fall. 4 credits. Reading knowledge of German is recommended but not required for this course. P. Rehberg.
This seminar examines the problematic relationship between discourses of homosexuality and criticism in the modern German tradition, where "the homosexual" has figured as both object and subject of social, cultural, and political criticism. The course first reviews the discursive invention of "the homosexual" in medical and juridical practices of the late nineteenth century and subsequently explores the epistemological and discursive status of this figure in psychoanalysis, fascism, Critical Theory, and in novels and films of the Federal Republic. Taking familiar theorems about homosexuality and modernity as a point of departure, this seminar investigates specifically German contributions to theories and representations of twentieth-century homosexuality in its historical and rhetorical contours. Readings includes stylistically diverse works by M. Foucault, S. Freud, K. Mann, K. Theweleit, L. Riefenstahl, T. W. Adorno, A. Hewitt, H. Fichte, and R. W. Fassbinder.

[GERST 647 German Literature from 1949 to 1989: Questions about Identity
Not offered 2001–2002. L. Adelson.]

[GERST 650 Culture in the Weimar Period
Not offered 2001–2002. D. Bathrick.]

GERST 652 Culture in Germany 1933–1945
Spring. 4 credits. Prerequisite: reading knowledge of German necessary; permission of instructor. Anchor course. D. Bathrick.
This course examines three contexts for culture in Germany during the Nazi period. First, the officially promoted party literature and mass mediated culture (film, music, architecture, the performing and visual arts) produced within the *Third Reich*. Second, the

various cultures of resistance, "Inner Immigration," or non-compliance as they emerged in the realm of literature and mass culture during the period. Third, the culture of the Jewish community of Germany and Austria during the Nazi period as well as the cultural products of the concentration and death camps.

[GERST 653 Opera (also COM L 655 and MUSIC 679)
Not offered 2001–2002.]

GERST 656 Aesthetic Theory: The End of Art (also COM L 656, ART H 447 and Visual Studies)
Fall. 4 credits. Prerequisite: permission of instructor. P. Gilgen.
This course investigates the emergence of aesthetics as its own discipline at the end of the eighteenth century. We examine the rationalist articulation of aesthetics in Baumgarten's work and the empiricist theory of taste, particularly Burke's *Enquiry*. Drawing on the findings of these two traditions, Kant's *Critique of Judgment* (1790) inaugurated a preoccupation in German philosophy around 1800 with the philosophical status of the beautiful and of art. Especially in Romantic theory and practice, art was meant to provide a solution to the philosophical dilemmas in the wake of Kant's critical philosophy. But already in Hegel's *Phenomenology*, and more explicitly in the *Encyclopedia* and the *Lectures on Aesthetics*, art lost this elevated position vis-à-vis philosophy. Taking this observation as a guiding thread, the main part of the course is structured around in-depth readings that may include Kant, Schiller, Schelling, Schlegel, Novalis, Hölderlin, and Hegel. Further readings may include writings by contemporary philosophers and theoreticians such as Derrida, Lyotard, de Man, Adorno, and Danto. The following questions will be addressed: What are the conditions for the move from the subjective judgment of taste (Kant) to objective beauty (Romantics, Hegel)? How is the relation of art and nature reconceived by the Romantics? What is the relation of aesthetic theory and the history of art? Is philosophy the end of art?

[GERST 658 Old High German/Old Saxon (also LING 646)
Not offered 2001–2002. W. Harbert.]

[GERST 660 Visual Ideology (also COM L 660 and THETR 660)
Not offered 2001–2002. G. Waite.]

[GERST 661 After the City: From Metropolis to Electropolis (also ARCH 338/638 and COM L 661)
Not offered 2001–2002.]

[GERST 663 Nietzsche and Heidegger (also COM L 663)
Not offered 2001–2002. G. Waite.]

[GERST 664 Freud and the *Fin de siècle*
Not offered 2001–2002.]

[GERST 666 Ingeborg Bachmann
Not offered 2001–2002.]

[GERST 667 "Minor" German Literatures?
Not offered 2001–2002.]

[GERST 668 Literature and the Uncanny (also COM L 664)
Not offered 2001–2002.]

[GERST 669–670 Modern Social Theory I & II (also GOVT 669–670)
Not offered 2001–2002. S. Buck-Morss.]

GERST 671 Postcolonial Theory and German Studies (also COM L 688)
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. L. Adelson.
The recent boom in interdisciplinary scholarship at the crossroads of German Studies and postcolonial theory challenges conventional parameters of both fields of inquiry. The mutual interrogation of German Studies and postcolonial theory promises to reconfigure our understanding of colonial histories in relation to social imaginaries (including facets of: German fascism, German intellectual history, modernist canons, 20th-century nationalism, and European relations on the continent and in the world). With these broad analytical concerns in mind this course juxtaposes readings in the histories and literary cultures surrounding German colonialism with readings in international postcolonial theory as well as new postcolonial scholarship on explicitly German objects of study. Some by now canonical works by postcolonial theorists (*e.g.*, Fanon, Said, Bhabha, Spivak, Pratt) are used both to introduce key concepts and dilemmas and to excavate decisive German influences on postcolonial theory outside putatively German contexts. Scholarly innovations by authors such as S. Zantop, R. Berman, N. Berman, J. Noyes, L. Wildenthal, P. Grosse, M. Klotz, and others are highlighted, while literary examples (*e.g.*, G. Frenssen, F. v. Bülow, F. Kafka, I. Bachmann, H. Müller, H. M. Enzensberger, B. Honigmann, H. Cixous, and others) are drawn primarily from the nineteenth and twentieth centuries. Reading knowledge of German is not required.

[GERST 672 German Opera Topic: Wagner (also MUSIC 674)
Not offered 2001–2002.]

[GERST 674 Contemporary Poetry and Culture: 1968–1993 (also COM L 674, ENGL 697, and SPAN L 674)
Not offered 2001–2002.]

Not offered 2001–2002. P. U. Hohendahl.]

[GERST 679 Bertolt Brecht in Context (also COM L 679 and THETR 679)
Not offered 2001–2002.]

GERST 685 Gramsci and Cultural Politics (also COM L 685 and GOVT 675)
Spring. 4 credits. G. Waite.
The modern or postmodern, and increasingly global, capitalist system rules not only by overt violence and coercion but also in tandem with what Antonio Gramsci (1891-1937) called the "non-coercive coercion" of "cultural hegemony." This seminar has two basic aims: (1) to introduce the basic political, theoretical, historical, and cultural writings of Gramsci himself (which also requires attention to his main sources, e.g., Croce, Dante, Lenin, Marx, Machiavelli); and then (2) to trace main directions of the Gramsci legacy in philosophy, political theory and practice, and cultural theory and practice (notably filmmaking). This legacy includes the works of Aijaz Ahmad, Louis Althusser, Christine Buci-Glucksmann, Norberto Bobbio, Ernesto Laclau, Ariel Dorfman & Armand Mattelart, Chantal Mouffe, and Pier-Paolo Pasolini, among others. It also includes less famous, but no less important, individuals and groups: e.g., feminist activists in Italy, the subaltern study movement in India, and other forms of anti-capitalist theory and practice around the world. We must also note that the first English translation of The Prison Notebooks was made by the U.S. Pentagon, and that "the ashes of Gramsci" is a code name in Italy for cocaine. Our main texts are Gramsci's Pre-Prison Writings and his Prison Notebooks and Letters, which we read alongside symptomatic examples of his ongoing legacy.

[GERST 686 Althusser and Lacan (also COM L 686, GOVT 679, and FRLIT 623)
Not offered 2001–2002.]

[GERST 687 The Politics of Culture in the German Democratic Republic
Not offered 2001–2002.]

[GERST 689 Art and Truth: The Aesthetic Theory of Theodor W. Adorno (also COM L 689)
Not offered 2001–2002.]

[GERST 690 Feminist Criticism and Theory (also WOMNS 690)
Not offered 2001–2002.]

[GERST 693 "The Sign of History": Kant and Lyotard (also COM L 693, GOVT 761)
Not offered 2001–2002. P. Gilgen.]

Not offered 2001–2002.]

GERST 753–754 Tutorial in German Literature
Fall and spring. 1–4 credits per term. Prerequisite: permission of instructor.

Dutch

DUTCH 121–122 Elementary Dutch
121, fall; 122, spring. 4 credits each term. *Provides language qualification.* Prerequisite: permission of instructor. M. Briggs.
Intensive practice in listening, speaking, reading, and writing basic Dutch in meaningful contexts. The course also offers insight into Dutch language, culture, and society.

DUTCH 203 Intermediate Composition and Conversation
Fall. 3 credits. Prerequisite: qualification in Dutch or permission of instructor. *Provides language proficiency.* M. Briggs.
Improved control of Dutch grammatical structures and vocabulary through guided conversation, compositions and reading, drawing on all Dutch-speaking cultures. Taught in Dutch.

DUTCH 204 Intermediate Composition and Conversation
Spring. 3 credits. Prerequisite: DUTCH 203 or permission of instructor. M. Briggs.
This course emphasizes written and oral application of accurate, idiomatic Dutch. Reading of authentic material such as newspapers, literature, and history, with emphasis on the students' interests and specializations. Taught in Dutch.

DUTCH 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: proficiency in Dutch or permission of instructor. M. Briggs.
Individualized advanced Dutch studies. This course provides students with individualized

programs which can be anything from advanced mastery in any or all skills to the mastery of Dutch for research. Literature history in support of all disciplines. Taught in Dutch. Topic for fall: Afrikaans.

Swedish

SWED 121–122 Elementary Swedish
121, fall; 122, spring. 4 credits each term. Prerequisite: for SWED 122, SWED 121 or equivalent. L. Trancik.
The course develops skills in listening, speaking, reading, and writing within Sweden's cultural context. Work on the Internet and interactive computer programs are used in these courses.

SWED 123 Continuing Swedish
Fall. 4 credits. *Provides language qualification.* Prerequisite: SWED 122 or equivalent. L. Trancik.
Development of skills in spoken and written Swedish within Sweden's cultural context.

SWED 203 Intermediate Swedish
Fall. 3 credits. *Provides language proficiency.* Prerequisite: SWED 123 or permission of instructor. L. Trancik.
Intermediate to advanced-level instruction using audio-visual material and text to enhance language comprehension.

SWED 204 Advanced Swedish
Spring. 3 credits. Prerequisite: SWED 203 or permission of instructor. Taught in Swedish. L. Trancik.
Emphasis on improving oral and written expression of Swedish, including vocabulary, readings in contemporary prose, treatment of specific problems in grammar, and presentation of videos and films.

SWED 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. L. Trancik.
Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

GOVERNMENT

I. Kramnick, chair; R. Bensel, S. Buck-Morss, V. Bunce, A. Carlson, J. Cowden, M. Evangelista, R. Herring, N. Hirschmann, M. Jones-Correa, M. Katzenstein, P. Katzenstein, E. W. Kelley, J. Kirshner, T. J. Lowi, R. McDermott, W. Mebane, K. O'Neill, J. Pontusson, J. Rabkin, L. Ryter, E. Sanders, H. Schamis, M. Shefter, V. Shue, A. M. Smith, J. J. Suh, S. G. Tarrow, N. T. Uphoff, C. Way

Government is what Cornell calls a department that elsewhere might be termed political science. The focus of this discipline is power applied to public purposes. Some faculty concentrate on purposes, some on applications. Some engage in the close reading of great texts of political philosophy, while others analyze the behavior of power-wielders and publics in this and other societies. Government is divided into four subfields: U. S. politics, comparative politics (other nations), political theory (philosophy), and international relations (transactions between nations).

To accommodate new courses or course changes, a supplementary announcement is prepared by the department. Before enrolling in courses or registering each term, students are requested to consult the current supplement listing courses in government, available in 125 McGraw Hall.

The Major

To be admitted to the major, a student must pass two government courses.

To complete the major, a student must:

(1) pass two of the introductory government courses (GOVT 111, 131, 161, 181);

(2) pass an additional course in one of the remaining subfields (American government, comparative government, political theory, or international relations). This course may be any course offered in the government department, including introductory courses, upper-level courses or seminars. Students are strongly advised to take at least one course in each of the four subfields;

(3) accumulate an additional 28 credits of government course work at the 200-level or above;

(4) complete at least one seminar-style course in government which may be applied toward the 28 credits. These courses include those numbered 400.XX to which students are admitted by application only;

(5) accumulate 12 credits in upper-level courses in related fields (such as anthropology, economics, history, science and technology studies, psychology, and sociology). Upper-level courses are usually courses numbered at the 300 level or above (200-level courses are not considered upper-level). Students should consult with their major adviser to choose appropriate courses. All choices of related courses must be approved by the major adviser or the director of undergraduate studies;

(6) all courses used to fulfill a government major must be passed with a letter grade.

To summarize, a total of 10 government courses and three additional courses (12 credits) of upper-level related courses are required to complete the major.

Cornell-in-Washington Program. Government majors may apply to the Cornell-in-Washington program to take courses and undertake a closely supervised externship during a fall or spring semester.

European Studies Concentration. Government majors may elect to group some of their required and optional courses in the area of European studies, drawing from a wide variety of courses in relevant departments. Students are invited to consult Professors P. Katzenstein, J. Pontusson, and S. G. Tarrow for advice on course selection and foreign study programs.

Model European Community Simulation. Undergraduates with an interest in the European Union, public affairs, or debating may participate in an annual European Union simulation held, on an alternating basis, in April at SUNY Brockport or in January in Brussels. The simulation provides an opportunity for participants, representing politicians from the members states, to discuss issues and resolutions of current concern to the European Union.

To prepare for the simulation, a two-credit course is offered by the Government department each year (GOVT 431 or GOVT 432). Participation in the simulation is open only to those who register for this course. Anyone interested in participating or finding out more information should contact the Institute for European Studies at 120 Uris Hall, 255–7592.

International Relations Concentration. See the description under "Special Programs and Interdisciplinary Studies."

Honors. In their junior year, Government majors with a G.P.A. of 3.3 in all subjects may join the honors program, which involves a sequence of special courses in the junior and senior year. Application to the honors program is made in the late spring of the sophomore year and application forms are available in 125 McGraw Hall. The courses comprising the honors sequence (honors courses) are described below. Students may be admitted to the honors program in the junior or senior year only with the special permission of the Director of Undergraduate Studies.

Introductory Courses

Students registering for introductory courses should register for the lecture only. Sections are assigned during the first week of class. Introductory courses are also offered during summer session.

GOVT 111 Introduction to American Government and Politics (III)
Fall and summer. 3 credits. T. J. Lowi.
An introduction to government through the American experience. Concentration on analysis of the institutions of government and politics as mechanisms of social control.

GOVT 131 Introduction to Comparative Government and Politics (III)
Spring and summer. 3 credits.
J. Pontusson.
This course provides a survey of the institutions, political processes, and policies of contemporary states. It focuses on the conditions for and workings of democracy. Looking at Western Europe, we analyze institutional variations among liberal democracies, and their political implications. We then probe the origins of democracy in Western societies and the reasons why communism and other forms of authoritarian rule have prevailed elsewhere. Finally, we explore the impetus behind and the obstacles to democratization in the Third World and the erstwhile Communist Bloc. Throughout this survey, problems of democracy are related to problems of economic development, efficiency, and equality.

GOVT 161 Introduction to Political Philosophy # (III)
Spring. 3 credits. I. Kramnick.
A survey of the development of Western political theory from Plato to the present. Readings from the works of the major theorists. An examination of the relevance of their ideas to contemporary politics.

GOVT 181 Introduction to International Relations (III)
Fall and summer. 3 credits. J. Kirshner.
An introduction to the basic concepts and practice of international politics.

First-Year Writing Seminars

Consult the John S. Knight Institute brochure for times, instructors, and descriptions.

Major Seminars

GOVT 400 Major Seminars
Fall or spring. 4 credits.
These seminars, emphasizing important controversies in the discipline, cap the majors' experience. Thus preference in admission is given to majors over nonmajors and seniors over juniors. Topics and instructors change each semester. To apply, students should pick up an application in 125 McGraw Hall during the course selection period the semester before the seminar is given.

The following courses are open to sophomores, juniors, and seniors without prerequisites unless otherwise indicated.

American Government and Institutions

GOVT 111 is recommended.

GOVT 302 Social Movements in American Politics (also AM ST 302) (III)
Fall. 4 credits. E. Sanders.
From populism to environmentalism, social movements directed at reform of national policies and political structures have been an earmark of American politics. This course begins with an examination of late nineteenth-century agrarian and labor movements and moves through progressivism, a variety of 1930s upsurges, civil rights, and more or less contemporary environmental, consumer, feminist, peace, gay rights, and new religious right movements. The focus is on the conditions that gave rise to these movements, their internal resources, and external alliances and their ultimate impact on the national state (as well as vice versa).

[GOVT 303 Introduction to American Political Parties (III)
4 credits. Not offered 2001–2002.]

GOVT 304 Public Opinion and Political Participation (III)
Spring. 4 credits. J. Cowden.
GOVT 304 is a survey course about the nature and impact of public opinion and mass political behavior. We examine classic and contemporary scholarship on the following topics: the role of public opinion in democratic theory; the measurement of opinions; the political sophistication of the electorate; racial and political intolerance; political socialization; party identification and party systems; media effects; candidate preference; turnout and abstention; attitudes about distributive justice; and the intersection between public opinion and public policy.

[GOVT 305 Atomic Consequences: The Incorporation of Nuclear Weapons in Post-War America (III)
4 credits. Not offered 2001–2002.]

GOVT 308 Science in the American Polity 1800–1960 (also S&TS 390) (III)
Fall. 3 credits. M. Dennis.
See S&TS 390 for description.

GOVT 309 Science in the American Polity (also S&TS 391) (III)
Fall. 4 credits. M. Dennis.
This course reviews the changing political relations between science, technology and the state in America from 1960 to the present. It focuses on the politics of choices involving science and technology in a variety of institutional settings, from Congress to courts and regulatory agencies. The tensions and contradictions between the concepts of science as an autonomous republic and as just another special interest provide the central theme for the course. Topics addressed include research funding, technological controversies, scientific advice, citizen participation in science policy, and the use of experts in courts.

GOVT 310 Power and Poverty in America (III)
Fall. 4 credits. E. W. Kelley.
Despite egalitarian democratic rights, the United States remains a stratified society conspicuous for great disparities in the allocation of income and wealth. The purpose of this class is to investigate these disparities, both empirically and normatively, and to assess the impact of government on them. Topics for discussion include: What do we mean by distributional inequality and by the demand for greater egalitarianism? What is the extent of inequality and of poverty in America today? How does one establish minimum standards for distributional justice? Is the United States currently on the road toward achieving that minimum standard? What is the array of federal welfare programs presently available and what is their effect? What reforms or changes are currently on the political agenda? Can we imagine a society somewhat like that in the United States achieving a very different distribution of educational and occupational outcomes as described by race, income, class, and language spoken by parents?

GOVT 311 Urban Politics (III)
Fall. 4 credits. M. Shefter.
Covers the major political actors, institutions, and political styles in large American cities: mayors, city councils, bureaucracies, ethnic and racial minorities, urban machine politics, and the municipal reform movement. Considers the implications of these political forces for policies pertaining to urban poverty, homelessness, and criminal justice.

GOVT 313 The Nature, Functions, and Limits of Law (III)
Spring. 4 credits. Undergraduates only. R. Hillman.
A general education course for students at the sophomore and higher levels. Law is presented not as a body of rules but as a set of varied techniques for resolving conflicts and dealing with social problems. The roles of courts, legislatures, and administrative agencies in the legal process is analyzed, considering also the constitutional limits on their power and practical limits of their effectiveness. Assigned readings consist mainly of judicial and administrative decisions, statutes and rules, and commentaries on the legal process. Students are expected to read assigned materials before each class and to be prepared for participation in class discussion.

[GOVT 314 Prisons (III)
4 credits. Not offered 2001–2002.]

[GOVT 316 The American Presidency (also AM ST 316) (III)
4 credits. Not offered 2001–2002.]

GOVT 317 Campaigns and Elections (III)
Fall. 4 credits. W. Mebane.
This course examines campaigns and elections, focusing primarily on national elections in the United States. Topics include the relationship between elections and the economy, the weakness of the American party system, voter turnout, individual voting decisions, negative campaigning, and the noncompetitiveness of congressional elections. We examine several theories that explain these phenomena, including in particular the theory of rational choice. Course requirements include one or two papers based on original analysis of election survey data.

GOVT 318 The American Congress (III)
Spring. 4 credits. M. Shefter.
The role of Congress in the American political system. Topics discussed: the political setting within which Congress operates, the structure of Congress, the salient features of the legislative process, and recent congressional behavior in a number of policy areas.

GOVT 319 Minority Politics in the US (also LSP 319) (III)
Spring. 4 credits. M. Jones-Correa.
In 1965 the landscape of American politics changed dramatically with the passage of the Voting Rights Act. That same year, Congress passed the Immigration Reform Act, which though little heralded at the time, arguably has had equally profound effects. This course provides a general survey of minority politics in the United States, focusing on the effects of these two key pieces of legislation. The course highlights the relationships between immigrants and minorities, electoral politics and protest politics, and between cooperation and competition within and among minority groups. The purpose of the course is not only to pinpoint the similarities and differences in the agendas and strategies adopted by minority groups, but to indicate the interaction between "minority" politics and American politics as a whole.

GOVT 320 Public Opinion and Public Choice (III)
4 credits. Prerequisite: GOVT 111 or permission of the instructor. W. Mebane.
A fundamental paradox in democracy is the fact that a government the people control will only rarely be a government that does what the people want. This is not to say that government **not** by the people is better (it's usually worse). This course explores this problem, contrasting the answers given by the concept of public opinion and the formal theory of social choice. We encounter the paradox in several American political institutions, including elections, legislatures, and bureaucracy.

GOVT 324 Legal Reasoning and Legal Adaptation: A Comparison of American and Talmudic Law (III)
Spring. 4 credits. J. Rabkin.
Legislatures may change old laws to reflect new preferences, but much American law is still adapted to modern challenges by judges using old precedents and principles, particularly in fields like family law, the law of contracts, and the law of torts. Talmudic law, which rests on much older principles and precepts and cannot fall back on new legislation to justify change in the modern

world, must also be adapted to new circumstances. The rabbinic authorities who seek to apply this law often invoke similar kinds of reasoning as American courts but under peculiar constraints. This course, an unusual venture in comparative law, focuses on characteristic modes of reasoning in each system, rather than attempting any systematic surveys of legal outcomes. Readings include selections from ancient texts as well as modern decisions and contemporary commentaries. No previous background is required.

[GOVT 327 Civil Liberties in the United States (III)
4 credits. Not offered 2001–2002.]

GOVT 328 Constitutional Politics: The United States Supreme Court (III)
Fall. 4 credits. J. Rabkin.
The course investigates the role of the Supreme Court in American politics and government. It traces the historical development of constitutional doctrine and the institutional role the court has played in American politics.

[GOVT 353 Feminism Movements and the State (also WOMNS 353) (III)
4 credits. Not offered 2001–2002.]

GOVT 404 American Political Development in the 20th Century (co-taught with GOVT 612) (III)
Spring. 4 credits. E. Sanders.
This course focuses on the major outbursts of reform directed at the national state from around 1890 to 2001: populism, progressivism, the New Deal, the civil rights—antiwar—environmental—feminist era 1964–76, and the emergence of new conservative movements in the 1980s and after, as well as the challenges to the neo-conservative and religious right movements posed by anti-nuclear weapons and gay rights movements. In each period we attempt to specify the composition and grievances of the reformers, changes in political party regimes, and their legislative and other institutional and cultural legacies. We identify grand and continuing themes in these episodic reform movements and what they say about American political life and institutions past and present.

GOVT 406 Politics of Education (III)
Fall. 4 credits. E. W. Kelley.
Education is simultaneously America's biggest business and the institutional process through which skills and values are passed on to the next generation. This course deals with conflicts about, and the politics of, education as they occur at national, state, and local levels. What (including values) will be taught and to whom? Who will benefit from formal education as a vehicle for entry into economic opportunity? What are the powers and restrictions on government in this area? How does the American system differ from other systems? How does educational testing affect equal opportunity to obtain meaningful competencies and jobs?

GOVT 408 Politics of the American Civil War (also AM ST 430) # (III)
Spring. 4 credits. R. Bensel.
The Civil War, along with the Founding of the nation in the late eighteenth century, is one of the two most important influences on the course of American political development. Arising out of intense ideological, cultural, and economic competition between the slave South and the free labor North, the conflict created two new national states: a northern Union that replaced the loose federation of the antebellum period and a southern Confederacy that perished at Appomattox. In this course, particular attention is paid to: the political economy and culture of plantation slavery in the antebellum South; the apparent inevitability of collision between the slave and free states and their respective societies; the military, political, and economic strategies that determined, on both sides, the course and duration of the war; the limits and possibilities of reform of southern society during Reconstruction; and the impact of the Civil War on the subsequent development of the United States.

GOVT 409 Racial Prejudice and Political Intolerance (III)
Fall. 4 credits. J. Cowden.
This course explores the nature, scope, and etiology of intolerance and its implications for the operation of politics in the United States. Readings include many of the classics in political science, political psychology, psychoanalysis, and social psychology, dating from the 1930s to the present.

[GOVT 412 American Political Parties and Elections (III)
4 credits. Not offered 2001–2002.]

[GOVT 413/613 Finance, Federalism, and Politics (III)
4 credits. Not offered 2001–2002.]

GOVT 416 Personality and Politics (III)
Fall. 4 credits. J. Cowden.
The guiding assumption of this course is that politics is influenced in fundamental ways by variables that are commonly summarized by the term "personality." The course examines in a systematic fashion the effects of such variables on leadership, culture and ideology, national character, ethnic violence and hostility, and mass movements.

GOVT 419 The Politics of Scandal (III)
Spring. 4 credits. M. Shefter, J. Rabkin.
This seminar discusses the politics of "scandal" and "reform" in constitutional doctrine, American history, and recent experience.

[GOVT 427 The Politics of Environmental Protection in America (III)
4 credits. Not offered 2001–2002.]

GOVT 428/728 Government and Public Policy: An Introduction to Analysis and Criticism (III)
Fall. 4 credits. T. J. Lowi.
GOVT 428 concentrates on history and criticism of U.S. policies and the politics associated with them. Particular attention is given to the origins and character of the regulatory state and the welfare state.

GOVT 429 Government and Public Policy: An Introduction to Analysis and Criticism (III)
Spring. Open to undergraduates. 428 and consent of instructor are required for 429.
T. J. Lowi.
GOVT 429 is an opportunity to pursue further the research begun in 428.

Comparative Government

GOVT 131 is recommended.

GOVT 326 Building a Better Democracy (III)
Fall. 4 credits. K. O'Neill.
How would you put together a constitution for a newly democratic country? Democracy exhibits a variety of forms throughout the world. While all of these forms are democratic, the different structures and rules adopted by countries can lead to surprisingly different outcomes. This course explores the tradeoffs inherent in choosing a presidential versus a parliamentary structure. We will look at the consequence of using different electoral rules, whether there is a meaningful difference between systems with two parties and those with multiple parties, and what the different arguments are for choosing a unitary versus a federal government structure. The course combines theoretical arguments about different democratic institutions with real world examples of constitutional assemblies and constitutional reforms from Africa, Latin America, Israel, the United States, and Western and Eastern Europe.

GOVT 330 Europe, the US, and Japan in the Global Economy (also ILRIC 333) (III)
Fall. 4 credits. L. Turner.
For a description, see ILRIC 333.

GOVT 332 Modern European Politics (III)
Fall. 4 credits. D. Schirmer.
The course gives an introduction to politics and political systems in Western Europe. It starts with a brief history of the formation of the nation state and the establishment of democratic rule. It continues with the modes and structures of political conflict and explores political cultures, party and electoral systems, the roles of interest groups and social movements, and the mass media. It then turns to a discussion of parliament and government. The main countries studied include Britain, France, Germany, and Italy. The main dimensions guiding the comparison are conflict vs. consent, federalism vs. centralism, parliamentary vs. presidential systems, and majority vs. proportional representation. The course concludes with a discussion of minority-majority relations and the problem of democratic inclusion.

[GOVT 333 Government and Politics of the Former Soviet Union (III)
4 credits. Not offered 2001–2002.]

[GOVT 334 Political Economy of East Asia @ (III)
4 credits. Not offered 2001–2002.]

[GOVT 335 America in the World # (III)
4 credits. Not offered 2001–2002.]

[GOVT 336 Postcommunist Transitions (III)
4 credits. Not offered 2001–2002.]

[GOVT 338 Comparative Political Economy (III)
4 credits. Not offered 2001–2002.]

GOVT 340 Latin American Politics @ (III)
Spring. 4 credits. H. Schamis.
This course is introductory lecture on the politics of Latin America. The main purpose is to view the region in a conceptual and comparative perspective. Country cases are introduced in order to understand the fundamental historical processes as well as to explain the significance of competing theoretical frameworks that have shaped the debate in the field. The course focuses on the political economies of the region in order to analyze the role of groups and classes under

different political regimes and contrasting strategies of development.

GOVT 341 Modern European Society and Politics (also SOC 341) (III)
Spring. 4 credits. S. Tarrow.
Since the French and industrial revolutions, modern Europe has been the major source of innovation and stability, freedom and imperialism, war and peace, capitalism and socialism, rule of law and state terror, and modernity and its critics. Even the 50-year division of the continent by the Cold War could not destroy its common, but contradictory heritage. This interdisciplinary core course in Modern European Studies serves as an introduction to European society and politics. Topics include European state-building and capitalism, nationalism and socialism, cycles of revolution and reaction, stratification and mobility, law and violence, and war and democracy. The course ends with an introduction to the European Union and its conflicts. May be taken separately, or in combination with GOVT 342, The New Europe, which focuses on contemporary Europe. If qualified student interest permits, a section may be offered in French or German.

[GOVT 342 United Germany in the New Europe (III)
4 credits. Not offered 2001–2002.]

GOVT 343 The Politics of European Integration (III)
Fall. 4 credits. J. Pontusson.
This course explores the policies and policy-making of the European Union against the backdrop of the postwar history of European integration and the institutional framework of the EU. We also explore how European integration is reshaping domestic political and economic arrangements in the member states of the European Union and current debates about the emerging European polity. The implications of Eastward enlargement for the EU, for the emerging market economies of Eastern Europe and for the process of Europeanization are considered in some depth.

[GOVT 346 Modern Japanese Politics @ (III)
4 credits. Not offered 2001–2002.]

GOVT 347 Government and Politics of China @ (III)
Fall. 4 credits. V. Shue.
An introduction to the main currents in China's domestic politics over the last 60 years. Topics include the revolutionary rise of communism; Maoism, in theory and in practice; the politics of bitterness during the "Cultural Revolution"; the evolving roles of the party and the military, and of peasants, workers, and intellectuals in the polity; the prospects for democracy, perceived social inequality, violence, corruption, and other pressing problems that have emerged with the reforms under Deng Xiaoping.

[GOVT 354 Capitalism, Competition, and Conflict in the Global Economy (III)
4 credits. Not offered 2001–2002.]

[GOVT 356 Enlarging the New Europe: Labor, Business, and Politics (also ILRIC 337) (III)
3 credits. Not offered 2001–2002.]

GOVT 357 American Indian Politics and Policy (also AIS 367 and R SOC 367) (III)
Fall. 3 credits. Enrollment limited to 20.
B. Baker.
This course addresses the Constitutional basis of the Federal-Indian Relationship through an examination of treaties, Supreme Court decisions, and Congressional law/policy. The effects of European and American forms of governance on traditional American Indian political structures are detailed and contrasted with contemporary tribal governments and political organizations. Issues relating to sovereignty and self-governance with respect to American Indian tribal governments are addressed relative to state and federal governments.

GOVT 358 Imagining the Modern Middle East (also NES 294, JWST 294) @ (III)
Fall. 4 credits. S. Aatout.
For description, see NES 294.

[GOVT 415 Race, Gender, and Organization (III)
4 credits. Not offered 2001–2002.]

GOVT 432 Model European Union II (III)
Fall. 2 credits. J. Pontusson.
This two-credit course is designed to prepare students to participate in the annual Model European Union Simulation held, on an alternating basis, at SUNY Brockport and in Brussels. The simulation provides an opportunity for participants, representing politicians from the member states of the European Union, to discuss issues and resolutions of current concern to the E.U. The preparatory course introduces students to the E.U., the country that the Cornell team will represent, and the issues to be discussed at the simulation. A substantial part of travel costs for the Cornell team will be paid by the Institute for European Studies, and course enrollment is restricted by budgetary considerations. Students enrolled in this course are required to write a research paper.

GOVT 433 The Politics of Economic Liberalization in the Developing World @ (III)
Fall. 4 credits. H. Schamis.
What drives the current processes of economic liberalization taking place in most of the developing world? What kinds of constraints and opportunities do governments embarked upon such policy reforms face? What types of factors account for their success or failure? What is the relationship between the international dimension of this phenomenon and the domestic political conditions? This seminar addresses these questions by examining the interplay of domestic and international ideas, local and foreign actors, and national and transnational institutions which take part in these processes. The course focuses extensively on, but is not limited to, Latin America.

[GOVT 436 Environmental Politics and Policy (III)
4 credits. Not offered 2001–2002.]

GOVT 437 Contemporary China: Society and Politics @ (III)
Spring. 4 credits. V. Shue.
Selected reading and in-class discussion of some of the central dilemmas that have been posed by the rapidly escalating processes of social change taking place under conditions of continuing political authoritarianism in China today. Topics include broad changes in demographic and social structure; rising tensions in family and gender relations; the enduring salience of community and workplace; the resurgence of Chinese nationalism, of ethnic nationalisms, of regionalism, and of popular religious movements; the significance of rising rates of crime and of political corruption; the growing crisis of social welfare delivery; and the limits on political dissent and on the development of civil society.

[GOVT 438 Contemporary China: Political Economy @ (III)
4 credits. Not offered 2001–2002.]

[GOVT 439 Japan in International Politics @ (III)
4 credits. Not offered 2001–2002.]

[GOVT 440 The Political Economy of Market Reform (also GOVT 630) (III)
4 credits. Not offered 2001–2002.]

[GOVT 448 The Quality of Democracy in Latin America @ (III)
4 credits. Not offered 2001–2002.]

GOVT 449/749 Politics and Magic: Popular Religion and Political Power in China @ (III)
Spring. 4 credits. V. Shue.
A course of readings, research, and seminar discussions illuminating the intersections, past and present, between popular religious organizations, mass spiritual movements, the exercise of state power, and the patterns of political dissent in China. Topics include the Taiping Heavenly Kingdom, the Boxer Uprising, Chinese medicine and contemporary charismatic healing cults, as well as the recent global rise (and repression in China) of the Falun Dafa movement.

[GOVT 456 Poor People's Movements (III)
4 credits. Not offered 2001–2002.]

[GOVT 458 Comparative Democratization (III)
4 credits. Not offered 2001–2002.]

Political Theory

GOVT 161 is recommended.

[GOVT 260 Social and Political Philosophy (also PHIL 260) (III or IV)
4 credits. Not offered 2001–2002.]

GOVT 293 Inequality, Diversity, and Justice (III or IV)
Fall. 4 credits. R. Miller.
See PHIL 193 for description.

GOVT 360 Ideology (III)
Spring. 4 credits. D. Rubenstein.
This course focuses on critical approaches to the study of ideology in order to understand the role of ideology in political subject formation. After an initial exploratory presentation of key Marxist (Marx, Gramsci, Althusser, Hebdige), structuralist/semiotic (Barthes, Eco) and psychoanalytic models (Freud, Lacan), we focus on specific ideologies of race, technology and gender. Students are required to write a 7–8 page take-home examination and a longer 10–12 page (double spaced) paper related to the issues addressed by the course material. A recommended bibliography is available to assist in the selection of the final paper topic.

[GOVT 364 The Selfish Individual and the Modern World (III)
4 credits. Not offered 2001–2002.]

GOVT 366 American Political Thought from Madison to Malcolm X (also HIST 316 and AM ST 366) # (III)
Fall. 4 credits. I. Kramnick.
A survey of American political thought from the eighteenth century to the present. Particular attention is devoted to the persistence of liberal individualism in the American tradition. Politicians, pamphleteers, and poets provide the reading. Insightful historical and social context is offered.

GOVT 369 Introduction to Feminist Political Thought (also WOMNS 359) (III)
Fall. 4 credits. N. Hirschmann.
This course provides a general introduction to feminist political thought, surveying various current issues and methodologies. The course combines analysis of women in western political thought and the relationship of feminism to the discipline of political science; readings by contemporary feminist theorists; and consideration of what theory can contribute to practical issues such as battering, pornography, prostitution, racism, sexuality, and sexual harassment.

GOVT 370 Political Theory and Cinema (also GERST 330, COM L 330, THETR 330) (III or IV)
Fall. 4 credits. G. Waite.
For description, see GERST 330.

[GOVT 375 Visual Culture and Social Theory (also ART H 370 and COM L 368) (III or IV)
4 credits. Not offered 2001–2002.]

GOVT 377 Concepts of Race and Racism (III)
Spring. 4 credits. A. M. Smith.
This course examines race and racism from a political theory perspective. We discuss the different types of racism: traditional racism, "new racism" or cultural racism, scientific racism and contemporary hybrid racism. We then examine the politically ambiguous "ethnicity theory." In the second half of the course, we consider the works by Marable on African American political economy; women of color feminist theorists; native American theorists; Takaki on Asian American labor history; and Hero on Latinos/Latinas and American politics. Although we discuss American multicultural history in some detail, our primary focus is on an investigation of these works' theoretical foundations.

[GOVT 461 Interpreting Race and Racism (III)
4 credits. Not offered 2001–2002.]

GOVT 462 Modern Political Philosophy (also PHIL 346) (III or IV)
Fall. 4 credits. R. Miller.
See Philosophy 346 for description.

GOVT 464 Theorizing the Public Sphere (also GERST 496) (III or IV)
Fall. 4 credits. P. U. Hohendahl.
For description, see GERST 496.

GOVT 465 Reconceiving Liberalism (also PHIL 447) (III or IV)
Spring. 4 credits. R. Miller.
For description, see PHIL 447.

[GOVT 466 Feminism and Gender Discrimination (III)
4 credits. Not offered 2001–2002.]

[GOVT 467 Radical Democratic Feminisms (III)
4 credits. Not offered 2001–2002.]

[GOVT 469 Limiting War (also PHIL 369) (III or IV)
4 credits. Not offered 2001–2002.]

[GOVT 470 Contemporary Reading of the Ancients (III)
4 credits. Not offered 2001–2002.]

[GOVT 471 The Cultural Theory of the Frankfurt School (also GERST 495, COM L 495) (III or IV)
4 credits. Not offered 2001–2002.]

[GOVT 473 Marx, Nietzsche, Freud (also GERST 415) (III or IV)
4 credits. Not offered 2001–2002.]

[GOVT 474 Community, Nation, and Morality (also PHIL 446) (III or IV)
4 credits. Not offered 2001–2002.]

International Relations

GOVT 181 is recommended.

GOVT 294 Global Thinking (also PHIL 194) @ (III or IV)
Fall. 4 credits. No prerequisites; intended for freshmen and sophomores. H. Shue.
For description, see PHIL 194.

[GOVT 380 The Politics of Modern Germany (III)
4 credits. Not offered 2001–2002.]

[GOVT 382 International Relations of East Asia @ (III)
4 credits. Not offered 2001–2002.]

GOVT 384 Contemporary International Conflicts (III)
Fall. 4 credits. J. J. Suh.
This is a survey of contemporary international conflicts. After a brief review of theoretical literature on the causes of conflict/war, we address some of the more salient international security issues such as proliferation of weapons of mass destruction, missile defense, civil wars, and ethnic conflicts. We also critically evaluate whether the use of force or outside intervention is helpful in mitigating the contemporary conflicts.

GOVT 385 American Foreign Policy (III)
Fall. 4 credits. M. Fanis.
This course provides an overview of the history of American foreign policy, concentrating on the period between 1914 and the present. Various theoretical approaches to the study of American foreign policy are covered, including international, domestic, and individual levels of analysis. These interpretations are used to examine events including: the First World War and the League of Nations; the rise of American hegemony; various crises of the Cold War, including the U-2 crisis, the Suez and Berlin crises, and the Cuban missile crisis; and the Korean, Vietnamese, and Gulf Wars. Emphasis is placed on security as opposed to economic foreign policy issues.

GOVT 386 The Causes of War (III)
Spring. 4 credits. C. Way.
This course surveys leading theories of the causes of interstate war B that is, large scale organized violence between the armed forces of states. Why is war a recurring feature of international politics? Are democracies more peaceful than other types of states, and if so what explains this "democratic peace"? Why do democratic publics seem to reward threats to use force by "rallying around the flag" in support of their governments? Does the inexorable pattern of the rise and fall of nations lead to cycles of great power wars throughout history? These and other questions are examined in our survey of theories of war at three levels of analysis: the individual and small groups, domestic politics, and the international system. Topics covered include: historical patterns in warfare; theoretical explanations for war; evaluation of the evidence for the various explanations; nuclear weapons; ethics and warfare; and the major security problems of the coming decades, civil war, and the prospects for peace in the future.

[GOVT 387 Political Psychology in International Relations (III)
4 credits. Not offered 2001–2002.]

[GOVT 388 International Political Economy (III)
4 credits. Not offered 2001–2002.]

[GOVT 389 International Law (III)
4 credits. Not offered 2001–2002.]

GOVT 390 International Relations and Film Theory (III)
Fall. 4 credits. J. Kirshner.
This course considers how ideas about major themes in the history of world politics have been expressed through film. The course includes a review of principal theories of international relations as well a consideration of visual analysis: how filmmakers express their ideas through the construction, juxtaposition, and manipulation of images. Topics such as World War I, the Cold War, and globalization are addressed and films discussed include *Paths of Glory*, *Lifeboat*, and *The Manchurian Candidate*.

GOVT 391 Chinese Foreign Policy @ (III)
Fall. 4 credits. A. Carlson.
In this course we examine the dramatic rise of China through review of the main themes and trends in contemporary Chinese foreign policy since the establishment of the People's Republic, and more specifically concentrating on major developments in Chinese foreign policy during the 1980s and 1990s. Such a survey involves not only a consideration of the evolution of China's relations with its major bilateral partners, but also investigating its changing relationship with international institutions and norms. In addition, students are asked to consider the extent to which Chinese foreign policy is simply a reflection of systemic and structural variables, such as shifts in the relative balance of power, and what role other factors, such as ideology, culture, leadership psychology, and/or domestic politics play. In short, we are exploring how important "China" is in determining the course of Chinese foreign policy.

[GOVT 392 International Relations of the Middle East (also NES 395) @ (III)
4 credits. Not offered 2001–2002.]

GOVT 393 Introduction to Peace Studies (also SOC 310) (III)
Fall. 4 credits. J. Reppy.
This course serves as an introduction to the study of war, peace, and peacemaking. We study different theories of peace and war from a variety of disciplinary perspectives. The course covers definitions of peace and war, causes of conflict, and modes of conflict prevention and resolution. The concepts are

applied to a range of historical and current conflicts. Students prepare analyses of specific conflicts or instances of peacemaking for class presentation.

GOVT 395 New Forces (Actors and Issues) in International Politics (III)
Spring. 4 credits. A. Carlson.
How important are regional groupings, non-governmental organizations, narco-terrorists, ethnic groups, and transnational environmental issues, within international politics? These forces seem to be occupying an increasingly central position in the international arena, yet the factors that have caused their rise, and the degree to which they have transformed the face of international politics, are still poorly understood. In this course we address such issues through exploring how students of international politics have described and explained the emergence of these new forces in the international system during the post-Cold War period. In short, the course focuses on determining the extent to which we are witnessing a transformation of the international political system, and why such a change is (or is not) taking place.

[GOVT 475 The Politics of International Monetary and Financial Relations (III)
4 credits. Not offered 2001–2002.]

[GOVT 477 Rational Choice Approaches to International Relations (III)
S4 credits. Not offered 2001–2002.]

[GOVT 478 Decision Making (III)
4 credits. Not offered 2001–2002.]

[GOVT 479 Sovereignty and International Relations (III)
4 credits. Not offered 2001–2002.]

[GOVT 481 Democracies in the International System (III)
4 credits. Not offered 2001–2002.]

GOVT 483 The Military and New Technology (also S&TS 483) (III)
Spring. 4 credits. J. Reppy.
In conventional wisdom, military organizations are seen paradoxically both as inflexible institutions and as proponents and consumers of rapid technological change. In this seminar we examine changes over time in the attitude of the military toward new technology and analyze competing explanations for these changes. Readings include Michael Howard, *War and European History;* John Ellis, *The Social History of the Machine Gun;* and Donald MacKenzie, *Inventing Accuracy: An Historical Sociology of Nuclear Missile Guidance.*

[GOVT 486 Gender, Nationalism, and Conflict (III)
4 credits. Not offered 2001–2002.]

GOVT 487 Asian Security (also GOVT 687) (III)
Spring. 4 credits. A. Carlson, J. J. Suh.
Throughout the 1990s it has been part of the conventional wisdom of international relations scholarship that Asia was, in the words of Aaron Friedberg, "ripe for rivalry." In this seminar we explore the accuracy of such an assessment through studying Asia's historical and contemporary security situation. Such an examination is oriented toward introducing students to the main security issues confronting Asia, alongside an exploration of the extent to which competing explanations drawn from different strands of IR theory and the security field can explain such issues. In addition, we ask students to challenge the limitations of traditional security studies through considering the importance of new actors and issue areas within the region. In short, while the seminar has a regional focus on east Asia, it is framed within the broader literature of the field.

GOVT 490 International Institutions (also GOVT 690) (III)
Fall. 4 credits. J. J. Suh.
This is a study of the ways in which units in the international system are constituted and how their interactions are institutionalized. We examine not only formal international organizations that have formal decision-making rules and palpable entities, but also "settled practices" the legitimize certain actions and de-legitimize others. We develop our theoretical understanding of international institutions by analyzing such issue areas as decolonization, human rights, the environment, and communications.

[GOVT 491 Conflict, Cooperation, and Norm: Ethical Issues in International Affairs (III)
4 credits. Not offered 2001–2002.]

Honors Courses

Late each spring a limited number of sophomore majors are admitted to the honors program, their work to begin the following fall. Application forms and a full description of the program may be obtained in 125 McGraw Hall.

GOVT 493 Studying Politics: The Junior Honors Seminar
Fall and spring. 4 credits. Fall, H. Schamis; spring, K. O'Neill.
The seminar meets twice weekly under the supervision of a senior faculty member with numerous classes being led by other members of the department faculty. The seminar surveys the broad range of what we mean by "the study of politics" and the various methods we enlist to carry out the study. The seminar is writing intensive, requiring at least five papers.

GOVT 494 Honors Seminar: Thesis Clarification and Research
Fall. 4 credits. A. M. Smith.
Each student works individually with a faculty member. The student initiates the tutorial by interesting a faculty member in his or her likely thesis project and by submitting to the director of undergraduate studies a form outlining the general area the thesis will treat and bearing the faculty tutor's signature. This form is due the third week of classes. The tutorial culminates in a 10- to 15-page paper setting forth the central questions to be addressed by the thesis, the state of existing knowledge regarding those questions, and why they matter.

GOVT 495 Honors Thesis: Research and Writing
Spring. 4 credits. Limited to students who have successfully completed GOVT 494.
Students continue the work of the preceding semester typically with the same faculty tutor. Research on the thesis is completed and writing begun. The tutorial culminates in a thesis of some 60 to 80 pages. The grade for the tutorial is determined by the faculty tutor, while the degree of honors (if any) awarded the thesis is decided by a committee of faculty members established for that purpose.

Independent Study

Independent study, GOVT 499, is a one-on-one tutorial which is arranged by the student with a faculty member of their choosing. GOVT 499 is open to government majors doing superior work, and it is the responsibility of the student to establish the research proposal and to find a faculty sponsor. Applicants for independent study must present a well-defined program of study that cannot be satisfied by pursuing courses in the regularly scheduled curriculum. No more than four credits of independent study may count toward fulfillment of the major. Students who elect to continue taking this course for more than one semester must select a new theme or subject each semester. Credit can be given only for work that results in a satisfactory amount of writing. Emphasis is on the capacity to subject a body of related readings to analysis and criticism. Keep in mind that independent study cannot be used to fulfill the seminar requirement. The application form for Independent Study is available in 125 McGraw Hall and must be completed at the beginning of the semester in which the course is being taken.

GOVT 499 Readings
Fall or spring. 1–4 credits.

Graduate Seminars

Qualified undergraduates are encouraged to apply for seminars listed with 600 course numbers but may only register with the permission of the instructor. Students may consult the supplement that lists graduate courses, available in the department office.

Field Seminars

GOVT 603 Field Seminar in American Politics
Fall. 4 credits. E. Sanders.
The basic issues and institutions of American government and the various subfields of American politics are introduced. The focus is on substantive information and theoretical analysis and problems of teaching and research.

GOVT 606 Field Seminar in International Relations
Spring. 4 credits. C. Way and J. J. Suh.
A general survey of the literature and propositions of the international relations field. Criteria are developed for judging theoretical propositions and are applied to the major findings. Participants are expected to do extensive reading in the literature as well as research.

[GOVT 607 The Western Political Tradition: A Survey
4 credits. Not offered 2001–2002.]

Methodology

GOVT 601 Scope and Methods of Political Analysis
Fall. 4 credits. W. Mebane.
This course introduces the major analytical approaches used in contemporary political science research. We touch on broad philosophical issues concerning the nature of theory and inference, the practices of cultural

and historical interpretation, and the relevance of moral values and political commitments. Several kinds of research designs, including comparative case study and quasi-experimentation, are briefly examined. The basic analytical ideas involved in statistical methods such as sampling and regression analysis are introduced, as are the basic concepts of the theory of collective choice and the elementary methods of applied game theory.

GOVT 602 Seminar in Political Methodology
Spring. 4 credits. J. Cowden and W. Mebane.
This course provides an introduction to some of the quantitative methods used in the social sciences. Topics discussed include elementary probability theory, random variables, functions of random variables, and sampling distributions; concepts of inference including point estimation, confidence intervals, and hypothesis testing; bivariate regression; and multiple regression.

GOVT 605 Comparative Methods
Spring. 4 credits. J. Pontusson.
This seminar provides a survey of different methodological approaches to the study of comparative politics: single case studies, comparative case studies based on Millian logic, qualitative comparative analysis, and a variety of quantitative methods. Substantive works are used to illustrate each approach. Throughout, the discussion emphasizes methodological issues that are common to all forms of comparative inquiry.

GOVT 707 Game Theory for Political Science
Fall. 4 credits. K. O'Neill.
Introduction to game theoretic models of politics. Lays out the logical basis of game theory at an accessible level, and demonstrates applications to topics in comparative politics, international relations, and American politics. Students achieve an understanding of the basic concepts of game theory, the ability to solve and to formulate simple games, and some knowledge of the basic models used in political science.

American Government and Institutions

GOVT 610 Political Identity: Race, Ethnicity, and Nationalism (also LSP 610)
Fall. 4 credits. M. Jones-Correa.
The social sciences generally treat ethnicity, nationalism, and race as descriptive categories or variables, while avoiding actually defining these categories, or thinking about how they should be used. The course seeks answers to the following questions: How should we go about describing ethnicity, nationalism, and race? Should we treat them as primordial or as social constructions? Much of the recent literature suggests the latter. If constructed, by whom are they constructed (or by what)? What constrains/structures these constructions? What purposes do these constructions serve? Whom do they serve? Are some constructions better representations of identity than others, and what does this mean? How should we go about applying these categories in political analysis?

[GOVT 611 The Political Economy of American Development, 1860–1900
4 credits. Not offered 2001–2002.]

GOVT 612 American Political Development in the 20th Century (co-taught with GOVT 404)
Spring. 4 credits. E. Sanders.
For description, see GOVT 404.

[GOVT 613/413 Finance, Federalism, and Politics
4 credits. Not offered 2001–2002.]

GOVT 615 State and Economy in Comparative Perspective
Fall. 4 credits. R. Bensel.
This course reviews the extensive literature on the political economy of comparative state formation and institutional change. Among the topics covered are war-making and state expansion, regime evolution and economic development, and market processes and class transformations. Although much of the reading and discussion focuses on the United States and Europe, the limits of these cases as theoretical prototypes for the remainder of the world is also considered.

[GOVT 620 The United States Congress
4 credits. Not offered 2001–2002.]

GOVT 623 The Politics of Courts
Fall. 4 credits. J. Rabkin.
All modern or westernized governments have judicial organs, designed to provide impartial decisions on certain kinds of disputes. But the kinds of issues that are left to courts vary widely from country to country and from era to era; the forms and degrees of political insulation for courts also vary widely; even the official rationales for such institutions vary a good deal. All of these differences are sometimes subjects of political controversy. This course will survey various forms and doctrines of judicial authority, seeking to clarify the relation between particular judicial models and the political systems in which they operate. Supra-national courts and administrative organs will be included in the survey, but principal emphasis will be on the role of courts in English-speaking countries.

[GOVT 703 Political Economy
4 credits. Not offered 2001–2002.]

GOVT 728 Government and Public Policy
Fall. 4 credits. T. J. Lowi.
For description, see GOVT 428.

Comparative Government

GOVT 630 The Political Economy of Market Reform
Spring. 4 credits. H. Schamis.
This seminar is open to advanced undergraduate and graduate students. It addresses the political economy of market reform in East–Central Europe and Latin America. Specifically, we study the relatively fast collapse of state socialism versus the long decline of import substituting industrialization, and their respective legacies on new economic and political systems. We focus on the role of major agents in the transformation process—the international system, coalitions of interest groups, political (especially state) institutions, and ideologies. Throughout the semester, we examine the emerging market societies in the east and the south in comparative fashion.

[GOVT 632 Politics and Society in Western Europe
4 credits. Not offered 2001–2002.]

[GOVT 638 Latin American Political Economy
4 credits. Not offered 2001–2002.]

GOVT 639 Studying Political Culture
Spring. 4 credits. D. Schirmer.
Selected readings deploying a range of differing approaches to the study of the relations between culture and politics. Discussion of central methodological and interpretive questions and paradigms including the linkage of cultural with structural explanations and the framing of informative comparisons across cultures. Readings and discussion focus on European and North American examples.

GOVT 641 Revitalizing Labor: A Comparative Perspective (also ILRIC 632)
Fall. 4 credits. L. Turner.
For description, see ILRIC 632.

[GOVT 642 Comparative Political Economy: East and Southeast Asia
4 credits. Not offered 2001–2002.]

GOVT 645 Chinese Politics
Fall 4 credits. V. Shue.
Review and assessment of several of the major currently competing approaches to the study of Chinese politics. Discussion and evaluation of leading works in the field analyzing Chinese state and society, policymaking and policy implementation, bureaucratic politics, elite politics, political culture, and political economy. Special attention to problems of research and interpretation.

[GOVT 653 The Plural Society Revisited (also ASIAN 607)
4 credits. Not offered 2001–2002.]

[GOVT 656 Comparative Political Economy
4 credits. Not offered 2001–2002.]

[GOVT 657 Comparative Democratization
4 credits. Not offered 2001–2002.]

GOVT 660 Social Movements and Contentious Politics (also SOC 660)
Fall. 4 credits. S. Tarrow.
This research seminar surveys the related fields of social movements and contentious politics. Using theories that derive from both the collective behavior and political process traditions of social movement research, the course seeks to broaden these into a general approach to contentious politics, applicable protest cycles, strike waves, nationalism, democratization and revolution. Students write review essays or research papers.

GOVT 692 The Administration of Agricultural and Rural Development
Spring. 4 credits. N. Uphoff.
For description, see INTAG 603.

[GOVT 731 Political Ecology
4 credits. Not offered 2001–2002.]

[GOVT 732 Postsocialist Transformations
4 credits. Not offered 2001–2002.]

[GOVT 735 Politics of South Asia
4 credits. Not offered 2001–2002.]

GOVT 749/449 Politics and Magic: Popular Religion and Political Power in China
Spring. 4 credits. V. Shue.
See GOVT 449 for description.

Political Theory

[GOVT 663 Political Theories of Power
4 credits. Not offered 2001–2002.]

[GOVT 665 American Political Thought: From Madison to Malcolm X
4 credits. Not offered 2001–2002.]

[GOVT 667 Major Figures in Modern Political Theory
4 credits. Not offered 2001–2002.]

GOVT 668 Major Figures in Modern Political Theory II: Freedom
Spring. 4 credits. N. Hirschmann.
A complementary course to GOVT 667, this graduate seminar allows students to continue intensive study of major figures in modern political theory through particular temporal or thematic lenses. While the focus changes from year to year, the seminar either engages in intensive analysis of two or three particular "great names" in the field of political theory, or focuses on a specific theme—such as freedom, justice, obligation—as it is treated by significant theorists of the modern era.

[GOVT 669 Modern Social Theory I (also GERST 669)
4 credits. Not offered 2001–2002.]

[GOVT 670 Modern Social Theory II (also GERST 670)
4 credits. Not offered 2001–2002.]

GOVT 671 Graduate Seminar in Feminist Political Theory
Fall 4 credits. The course is open to undergraduates who have taken GOVT 463 or other courses in feminist theory, with permission of the instructor.
N. Hirschmann.
This graduate seminar examines contemporary feminist theory from the perspective of political theory. We study the work of feminist theorists who work specifically within the discipline of political science, as well as the specifically political dimensions of work not generally considered political theory. Though particular readings and topics change from year to year in response to the most recent literature, in general the course focuses on questions of epistemology and methodology as a way to explore a variety of issues of relevance to feminism as an academic, intellectual, and political enterprise.

[GOVT 673 Republicanism and Liberalism
4 credits. Not offered 2001–2002.]

GOVT 674 Theory and Practice of Nationalism
Fall. 4 credits. D. Schirmer.
This course is devoted to the comparative study of the rise and transformation of nationalism, according to different theoretical and philosophical traditions. The relationship of nationalism to questions of race, gender, class, and time is also discussed on the basis of both theoretical and empirical studies.

[GOVT 675 Gramsci and Cultural Politics (also GERST 685)
4 credits. Not offered 2001–2002.]

[GOVT 676 Theories of Governmentality
4 credits. Not offered 2001–2002.]

[GOVT 679 Althusser and Lacan
4 credits. Not offered 2001–2002.]

[GOVT 760 Theoretical Approaches to Ideology
4 credits. Not offered 2001–2002.]

[GOVT 761 "The Sign of History": Kant and Lyotard (also GERST 693)
4 credits. Not offered 2001–2002.]

GOVT 762 Sexuality and the Law Seminar (also WOMNS 762)
Spring. 4 credits. A. M. Smith.
An advanced feminist theory/social theory/political theory/queer theory/legal theory seminar for graduate students. The seminar deals first with theoretical approaches to sexuality that build on and interrogate the post-structuralist approach that defines sexuality as a social construction, rather than an expression of a-historical instincts. Then we explore major works in the field that address issues in American politics such as the construction of "the family" in law; lesbian, gay, bisexual and transgender rights; the regulation of prostitution and public sex; eugenics and governmental population management initiatives; sex education, birth control, reproductive technologies and abortion politics; pornography, censorship and public arts funding; public policy responses to sexually transmitted diseases and the AIDS crisis; and the "family values" dimension of welfare policy. Our reading list includes the works of Michel Foucault, Martha Fineman, Janet Halley, Nancy Fraser, Judith Butler, Judith Walkowitz, Jeffrey Weeks, Linda Gordon, Mimi Abramowitz, Gwendolyn Mink, Dorothy Roberts, Zillah Eisenstein, Rosalind Petchesky, Nan Hunter and Lisa Duggan. Advanced undergraduate students are welcome to apply for admission to the seminar, but they are asked to satisfy, at minimum, the following prerequisites: at least one course in feminist theory and at least one course in American Government.

International Relations

GOVT 680 Sovereignty and International Politics
Fall. 4 credits. A. Carlson.
In recent years international relations theorists have become embroiled in an increasingly heated debate over the role of sovereignty in the contemporary international system. In this seminar we investigate the main aspects of this debate through paying particular attention to questions involving the historical evolution of sovereignty, and its contemporary meaning within an international system. The intent of such a course is not only to critically analyze sovereignty's role in international politics, but also to explore how the approach IR theorists take in regards to sovereignty informs their understanding of systemic and structural change within the international system. In addition, we consider the extent to which a series of competing explanations shed insight upon issues of continuity and change raised by the apparent rise of economic and political integration between states.

GOVT 681 Politics of Transnationalism
Fall. 4 credits. S. Tarrow.
Between the realism of traditional international relations and the constructivism of its critics, a new school of transnational politics has developed. Ranging from sociological institutionalists who examine transnational normative diffusion to students of international institutions who focus on non-state authority, to students of globalization and its discontents, scholars in this tradition examine the responses of actors in civil society to a globalizing world through their interactions with one another, with states, and with international institutions. The course traces the development of this area of research from its origins in the "old" transnational politics of the 1970s; examines critically the contributions of constructivism, sociological institutionalism, and global civil society; and proposes a model of the international system in which transnational actors—claiming to act as proxies for civil society groups—interact with states and international institutions. Particular attention is paid to the formation of transnational coalitions among social movements, transnational advocacy networks, state actors and agents of international institutions.

[GOVT 684 Strategies of Inquiry for International and Comparative Politics
4 credits. Not offered 2001–2002.]

[GOVT 685 International Political Economy
4 credits. Not offered 2001–2002.]

GOVT 687 Asian Security (also GOVT 487)
Spring. 4 credits. A. Carlson, J. J. Suh.
For description, see GOVT 487.

GOVT 688 Political Economy and National Security
Spring. 4 credits. J. Kirshner.
This seminar considers the relationship between economics and national security. Specific topics change from year to year, but typically include the following: the economic foundations of power, economic coercion, the economic roots of conflict, and the ways in which structural changes in the international economy shape and limit state authority.

GOVT 689 International Security Politics
4 credits. Not offered 2001–2002.]

GOVT 691 Normative Elements of International Relations
Fall. 4 credits. H. Shue.
We examine selected normative elements of international affairs, divided into three interlocking clusters. First are issues about conflict, including both low-intensity military intervention and nuclear weapons. Second are questions about cooperation, especially between rich nations and poor nations. Third are debates about the authority and status of the major players in the international system: individual persons, nation-states, and international regimes. Questions considered include: is the retention by some nations of nuclear weapons morally justified? Is the world economy unjust? Should national governments be pressured to respect individual human rights?

Independent Study

This course is *NOT* open to undergraduates. Undergraduates wishing to conduct supervised study should register for GOVT 499.

GOVT 799 Independent Study
Fall or spring. 4 credits.
GOVT 799 is a course of individualized readings and research for graduate students. Topics, readings, and writing requirements are designed through consultation between the student and the instructor. Graduate students in government who are looking to use this as an option to fulfill their course requirements should check with their chairs to be certain that the program of study is acceptable for this purpose. Applications must be completed and signed by the instructor and by the chairs of their special committees. They are available from, and must be returned to, the graduate assistant in 125 McGraw Hall.

HISTORY

S. Greene, chair; V. Caron, director of graduate studies; R. Weil, director of undergraduate studies; S. Blumin, T. Borstelmann, V. Caron, S. Cochran, R. Craib, P. R. Dear, M. C. Garcia, K. Graubart, S. Greene, P. Holquist, I. Hull, P. R. Hyams, J. J. John, C. Kammen, M. Kammen, S. L. Kaplan, J. V. Koschmann, D. C. LaCapra, W. F. LaFeber, T. L. Loos, R. L. Moore, J. M. Najemy, M. B. Norton, C. Peterson, J. R. Piggott, S. Pohl, R. Polenberg, W. B. Provine, M. J. Roldan, J. H. Silbey, M. Steinberg, B. Strauss, E. Tagliacozzo, D. Usner, M. Washington, R. Weil, J. H. Weiss, D. Wyatt

Emeritus: D. A. Baugh, K. Biggerstaff, W. M. Pintner, F. Somkin, B. Tierney

The popularity of history among Cornell students is due to its usefulness as preparation for graduate, professional, or law school and for any career that requires critical thinking and good writing; the reputation of the faculty for scholarship, teaching, and advising; and most of all, the intrinsic interest of the discipline. A wide variety of introductory and advanced courses is offered. The department is particularly strong in ancient, medieval, and modern European history; in American, Latin American, and Asian history; and in the history of science.

Advanced Placement and International Baccalaureate

Advanced placement and International Baccalaureate credit awarded by the College of Arts and Sciences counts towards the 120 credits needed for graduation, but does not count toward completion of the history major. Students earning a 4 or 5 in the Advanced Placement Examination or a 6 or 7 in the International Baccalaureate history examinations are urged to enroll in intermediate or advanced history classes. Students who are unsure about their qualification should consult the instructor.

The Major

To complete the history major, a student must fulfill the requirements listed below:

Entry requirement: completion of *any* two History courses excluding First-Year Writing Seminars.

1) Take nine history department courses (for either 3 or 4 credits each), completing all of them with a grade of C or better. (Courses taken for entry may count towards fulfilling the major.)
2) Of the total nine courses:
   a) four must be outside of American history and
   b) three must be in history before 1800.

   Courses used to fulfill requirement (1) above may also be used to fulfill Requirement (2), in respect both to (a) and (b) if applicable. A course in American history before 1800 may be used to fulfill Requirement (2b). A course before 1800 in a field other than American history can be used toward fulfillment of both Requirements (2a) and (2b).
3) Of the total nine courses, one must be a 400-level seminar. HIST 400 may be used to fulfill this requirement. Appropriate 400-level seminars may be used to fulfill Requirements (2a) and (2b).

Honors

The history department offers an honors program for students who wish to research and write a thesis during their senior year. In addition to writing the thesis, honors students must maintain a 3.5 average in their history courses, take the Honors Proseminar (History 400) plus an additional 400-level seminar, preferably during their junior year, and complete 10 courses in history (for 3 or 4 credits each). During the second term of the sophomore year or early in the junior year, interested students should speak to a faculty member or faculty adviser about the honors program.

Before the beginning of the senior year, the candidate presents, in conversation or in writing, a thesis proposal to an appropriate member of the faculty. The faculty member who approves the proposal ordinarily becomes the thesis supervisor. If for any reason it is necessary to change supervisors, this arrangement should be confirmed no later than the fourth week after the beginning of the candidate's senior year.

Honors candidates should register in HIST 401, Honors Research, with their supervisors. Any exceptions to this must be approved by the Honors Committee. HIST 401 is a four-credit course that permits honors candidates to conduct research and to begin writing the honors essay. At the end of the first semester of the senior year, as part of the requirements for HIST 401, the student submits to the supervisor a 10- to 15-page overview, or, alternatively, a preliminary draft of some part of the thesis along with an outline of the whole and meets with a committee consisting of the student's supervisor and one other department member who will eventually serve as a reader of the thesis. That committee then recommends whether the student may proceed to enroll in HIST 402, Honors Thesis, during the final semester of the senior year. HIST 402 is a four-credit course that permits honors candidates to complete the honors essay and to demonstrate their understanding of the ways in which the themes explored in the thesis fit into a larger historical context.

The completed thesis is evaluated by three readers, including the two faculty members who administered the preliminary oral interview in December.

The text of the honors essay may not exceed 60 pages except by permission of the chair of the honors committee and the student's supervisor. Two copies are due during the third or fourth week of April. In May each honors candidate is given an oral examination administered by the supervisor; examination focuses on the essay as well as the specific subfield of history in which the student has conducted research (e.g., Periclean Athens, seventeenth-century science, nineteenth-century American politics).

To qualify for a bachelor of arts degree with honors in history, a student must (1) sustain at least a 3.5 cumulative average in all history courses and (2) earn at least a cum laude grade on the honors essay and on the oral examination.

Cornell-in-Washington Program. History majors may apply to the Cornell-in-Washington program to take courses and undertake a closely supervised externship during a fall or spring semester.

Course Offerings

Comparative history

History of science

American history

Latin American history

African history

Asian history

Near Eastern history

Ancient European history

Medieval, Renaissance, and early modern European history

Modern European history

Honors and research courses

Course Numbering System

100–level courses are very general introductory courses (like 151–152, 190–191) and freshman writing seminars.

200-level courses come in two kinds: seminars or lecture courses. Neither kind has prerequisites and both admit freshmen.

200-level seminars (which are identified by the name "seminar" in the title) are similar to first-year writing seminars, except that there is greater emphasis on subject matter and less on writing.

200-level lecture courses cover a relatively broad geographical area, period of time, or subject.

300–399-level courses may have specified prerequisites or deal with more-specialized subjects than do those numbered 250–299. Admission of freshmen varies from course to course and is indicated in the course descriptions.

400–499 are upper level undergraduate courses.

600–699 and 700–799 are graduate level courses.

Comparative History

[HIST 274 Foodways: A Social History of Food and Eating # (III)
Fall. 4 credits. Not offered 2001–2002.
S. L. Kaplan.
An interdisciplinary examination of the validity of the adage "man is what he eats." Among the topics: food and nutrition, food and social structure, the politics of food control, food and modernization, taste making, and food in religion and literature. Cases are drawn widely

across space and time, from Pharaoh's Egypt to the 1990s.]

HIST 360 Early Warfare, East and West # (III)
Fall. 4 credits. C. Peterson.
A study of the principal modes of warfare found both in the East and the West from ancient times up to the eighteenth century. Tactical evolution and the impact of innovations are stressed, but attention is also paid to the general social and cultural background and the role of nonmilitary factors.

[HIST 380 Social History of Western Technology # (III)
4 credits. Not offered 2001–2002. J. Weiss.
For description, see History of Science.]

[HIST 393 Images of Humanity in Medieval China (also ASIAN 393) @ # (III)
Fall. 4 credits. Prerequisite: any course on premodern China or Chinese religions, or permission. Not offered 2001–2002. C. Peterson.]

[HIST 409 Seminar on Work in Europe and America # (III)
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2001–2002; next offered 2002–2003. S. L. Kaplan.
A comparative study of the meaning of work in different societies from premodern times to the present. Emphasis is on the "representations" of work of the actors themselves who worked, as well as of those, who for various critical reasons, did not work. The seminar examines not only ideology but also the organization, practice, and physical place of work. It explores theory as well as "cases," and draw on anthropological and sociological as well as historical materials.]

[HIST 432 The City in History: Europe and America # (III)
Spring. 4 credits. Prerequisite: permission of instructor. Not offered 2001–2002; next offered 2002–2003. S. Blumin.
Reading and discussion of significant interpretations of the rise, role, and character of cities in medieval and early modern Europe and in modern Europe and America. Individual research projects.]

[HIST 454 The Herodotean Moment: The Uses and Abuses of "Western Civilization" (also GOVT 454) # (III)
Spring. 4 credits. Limited to 20 students. Prerequisite: permission of instructor. Not offered 2001–2002. J. Najemy, M. Bernal.]

History of Science

HIST 250 Technology in Society (also ENGRG 250, ECE 250, and S&TS 250) (III)
Fall. 3 credits. R. Kline.
For description, see ENGRG 250.

[HIST 280 The Sciences in the Twentieth Century (also S&TS 283) (III)
Spring. 4 credits. Not offered 2001–2002. M. A. Dennis.
Science emerged as a powerful source of social, economic, and political power during the twentieth century. Through an examination of the development of the sciences—physical and biomedical—during the twentieth century, students learn about the reciprocal relations between science and society. Topics covered may include the rise and development of quantum mechanics; the emergence of Big Science; the history of the sciences in totalitarian nations, especially the former Soviet Union, Nazi Germany, and Communist China; the evolutionary synthesis; the rise and fall of molecular biology; the multiple forms of eugenics; the changing character of the social sciences; the role of new technologies in scientific change, especially computer and communication technology; the growth of science as a profession; and the development of science in non-Western cultures.]

HIST 281 Science in Western Civilization (also S&TS 281) # (III)
Fall. 4 credits. HIST 281 is not a prerequisite to 282. P. R. Dear.
This course aims to make comprehensible both to science majors and to students of the humanities the historical structure and development of modern science and to show science as a cultural phenomenon. Changing perceptions of nature and human knowledge from Greek Antiquity to the twentieth century form the framework for current Western views of the world, while the roots of the present-day dominance of "science" as a symbol of progress and modernity lie in an alliance between knowledge of nature and power over nature that took shape in the nineteenth century after a long period of emergence. 281 runs chronologically up to the death of Isaac Newton and focuses on the cultural traditions of Christian Europe and its selective appropriation of a Greek heritage.

HIST 282 Science in Western Civilization (also S&TS 282) # (III)
Spring. 4 credits. HIST 281 is not a prerequisite to 282. P. Dear.
This course aims to make comprehensible both to science majors and to students of the humanities the historical structure and development of modern science and to show sciences as a cultural phenomenon. Changing perceptions of nature and human knowledge from Greek Antiquity to the twentieth century form the framework for current Western views of the world, while the roots of the present-day dominance of "science" as a symbol of progress and modernity lie in an alliance between knowledge of nature and power over nature that took shape in the nineteenth century after a long period of emergence. This course covers the eighteenth, nineteenth, and early twentieth centuries.

HIST 287 Evolution (also BIO EE 207, S&TS 287) (I or III)
Fall or summer. 3 credits. W. Provine.
For description, see BIO G 207.

HIST 292 Inventing an Information Society (also ENGRG 298, ECE 298, and S&TS 292) (I or III)
Spring. 3 credits. R. Kline.
For description, see ENGRG 298.

[HIST 380 Social History of Western Technology # (III)
Spring. 4 credits. Not offered 2001–2002; next offered 2002–2003. J. Weiss.
Studies in the interaction between technological changes and social changes in Western Europe and America since the eighteenth century. Readings and lectures deal both with instances of social transformation that accompanied technological changes and with the role of technology in social thought and cultural expression. Special attention is paid to three periods: Britain during the Industrial Revolution, America in the nineteenth century, and America during the Vietnam War.]

HIST 415 Seminar in the History of Biology (also BIO G 467, B&SOC 447, S&TS 447) (I or III)
Summer (6-week session). 4 credits. W. Provine.
Specific topic changes each year.

HIST 471 Knowledge and Politics in Seventeenth Century England (also S&TS 473) # (III)
Spring. 4 credits. Limited to 15 students. P. Dear and R. Weil.
England in the 17th century was a revolutionary ferment of political, religious, and philosophical conflict. This course examines the conflicts and arguments, and the means explored for their apparent resolution. These affected ideas of God and worship, the meanings of gender, conceptions of the natural world and its scientific appropriation, and the legitimacy and proper form of political power. The course focuses on the close study of primary source readings by many of the principal players in all these areas, including Francis Bacon, Thomas Hobbes, the Duchess of Newcastle, and John Locke.

HIST 525 Seminar in the History of Technology (also S&TS 525)
Spring. 4 credits. R. Kline.
For description, see S&TS 525.

[HIST 616 Enlightened Science (also S&TS 416)
Fall. 4 credits. Not offered 2001–2002; next offered 2002–2003. P. R. Dear and M. A. Dennis.
"Science" is a term that is often associated with "rationality." The idea that "reason," rather than "faith" or "tradition" should be the pre-eminent guide to practical action has deep roots in the thought of eighteenth-century Europe, the period known as the Enlightenment. The practice and image of science in the Enlightenment shows how this ideal was developed and understood, and what its meanings and implications were. Those meanings, and their associated values, remain strongly with us today. This course investigates our current scholarly understanding of many themes and issues relating to "enlightened science," and studies writings of the period itself in a variety of topical areas, from political economy to astronomy and natural history, in several national contexts including Scotland, France, and Germany. We attempt to view these materials from the perspective both of developments from earlier periods and in relation to the later consequences of this ideology.]

[HIST 680 Seminar in Historiographical Approaches to Science (also S&TS 680)
Fall. 4 credits. Not offered 2001–2002. P. R. Dear.
Examines philosophical, sociological, and methodological dimensions of recent historiography of science.]

[HIST 682 Topics in the Scientific Revolution (also S&TS 682)
Fall. 4 credits. Not offered 2001–2002. P. R. Dear.
This is a graduate seminar devoted to investigation of recent scholarship and issues in sixteenth- and seventeenth-century European knowledge of nature. Students are expected to produce a substantial paper focused on the study of primary source documents. Topics include: credibility and social status; the academic environment;

philosophy and court culture; and the situated meaning of experiment.]

[HIST 711 Introduction to Science and Technology Studies (also S&TS 711)
Fall. 4 credits. Not offered 2001–2002. S. Hilgartner.
For description, see S&TS 711.]

HIST 713 Issues in History of Technology
Spring. 3 credits. R. Kline.
For description, see S&TS 700.3.

American History

HIST 101 Introduction to American History (also AM ST 103) # (III)
Summer and fall. 4 credits. 101 is not a prerequisite for 102. M. B. Norton.
A survey of American history from the beginnings through the Civil War. Topics include cultural encounters in the age of Columbus, European colonization, the American Revolution, the early republic, antebellum reform movements, and the coming of the Civil War.

HIST 102 Introduction to American History (also AM ST 104) (III)
Summer and spring. 4 credits. 101 is not a prerequisite for 102. F. Dunaway.
An introductory survey of the development of the United States since the Civil War.

[HIST 201 Seminar: Immigration and Ethnicity in Twentieth-Century U.S. (III)
Spring. 4 credits. Seminar designed for underclassmen but open to all students. Enrollment limited to 15 students. Prerequisite: permission of instructor. Not offered 2001–2002. M. C. Garcia.
This seminar looks at immigration to the United States in the twentieth century, highlighting the experiences of several groups as case studies. We analyze the "push/pull" historical-structural factors that compelled people to come to the United States; the nature of cultural and structural assimilation; nativist movements; the evolution of U.S. immigration policy; and the formation of ethnic identity in U.S. society. Attention is given to current issues such as immigration reform, bilingual education; and the multiculturalism debate.]

[HIST 202 Comparative Migration in the Americas (also AM ST 204 and LSP 203) @ (III)
Spring. 4 credits. Letter grade only. Not offered 2001–2002. M. C. Garcia.
A seminar examining migration both within and to the Americas in the nineteenth and twentieth centuries. Topics to be discussed are the reasons for population movements; immigration policies; social, economic, and political accommodation; nativist and restrictionist responses; women and migration; remittances and transnationalism. Among the immigrant-receiving nations studied are Argentina, Brazil, Canada, Cuba, Mexico, and the United States.]

HIST 208 Seminar: The Era of Franklin D. Roosevelt (also AM ST 208) (III)
Fall. 4 credits. Seminar designed for underclass students but open to all students. Enrollment limited to 15 students. Prerequisite: permission of instructor. R. Polenberg.
The impact of the Great Depression and World War II on American politics, law, and culture.

[HIST 209 Seminar: Political History of Indians in the United States (also AIS 209) # (III)
Fall. 4 credits. Seminar designed for underclassmen but open to all students. Enrollment limited to 15 students. Prerequisite: permission of instructor. Not offered 2001–2002. D. Usner.
An investigation of political organization and change among Native American societies. Discussions and assignments examine forms of tribal government, diplomacy, and warfare, as well as political relations with European colonies and the United States. Specific topics include pan-Indian confederacies, Indian policy, struggles over sovereignty, and Indian strategies of autonomy and resistance.]

[HIST 210 The Atlantic World from Columbus to Equiano # (III)
Spring. 4 credits. Not offered 2001–2002; next offered 2002–2003. R. J. Weil and M. B. Norton.
After Europeans first crossed the Atlantic in the late fifteenth century, the ocean became a vast highway linking the European powers—Spain, France, Britain, and the Netherlands—with their colonial outposts in America. This seminar explores the Atlantic world through reading such primary sources as the log of Christopher Columbus and the autobiography of Olaudah Equiano, an Anglo-African sailor, and recent scholarly examinations of the slave trade and other aspects of the Atlantic economy. Intended primarily for sophomore prospective history majors; open to others by permission of instructors.]

HIST 212 African-American Women in the Twentieth Century (also AM ST 212 and WOMNS 212) (III)
Spring. 4 credits. Sophomore seminar. M. Washington.
An examination of twentieth-century themes significant in the historical experience of Black women. Major emphasis is on race, gender, community, art, and politics in post World War II America. Specific topics include African-American women's involvement in such areas as political activism at the electoral and grass-root levels; socio-economic issues affecting women and the community; religion; representation and participation of Black women in art and entertainment; and issues specific to gender cross-racially as well as intra-racially.

HIST 213 Asian American History (also AAS 213) (III)
Fall. 4 credits. Staff.
Comparative introductory history of Asian Indians, Chinese, Filipino, Japanese, and Koreans in the U.S. from about 1850 to World War II. Themes include U.S. expansionism in the Pacific, Asian migrant labor in Hawaii and the American West, the anti-Asian movement, and Asian resistance.

HIST 214 Seminar on American Foreign Policy (also AM ST 214) (III)
Fall. 3 credits. Prerequisite: permission of instructor. W. LaFeber.
Topic for fall 2001: U.S. Presidential power and foreign relations since the 1890s.

[HIST 238 History of Women in the Professions, 1800 to the Present (also AM ST 258, WOMNS 238, and HD 258) (III)
Spring. 3 credits. Not offered 2001–2002. J. Brumberg.
For description, see HD 258.]

[HIST 251 Black Religious Traditions from Slavery to Freedom (also AM ST 251, RELST 251) (III)
Fall. 4 credits. Sophomore seminar. Letter only. Not offered 2001–2002. M. Washington.
A survey on the black religious and spiritual traditions during bondage and the early years of freedom. The course examines slave religion, the rise of black churches in the North, the formation of black churches after the Civil War, the independent church movement and the churches' role in social protest.]

[HIST 260 Introduction to U. S. Latino History, Part I (also LSP 260 and AM ST 259) (III)
Spring. 4 credits. Not offered 2001–2002; next offered 2002–2003. M. C. Garcia.
This course introduces students to the history of Latinos in the United States. We focus specifically on the history of Chicanos (Mexican Americans) and Central Americans. Part II of this course, History 261, focuses on the history of Puerto Ricans, Cubans, and Dominicans in the U.S. (students are not required to take both courses). Among the topics addressed are: historical immigration patterns and the "push/pull" factors that compelled migration to the United States; the social and political events that shaped the evolution of these Latino communities; and the role of cultural identity, race, class, and gender in shaping experience; and the role of foreign policy in formulating immigration policy.]

HIST 261 Introduction to U.S. Latino History, Part II (also LSP 261 and AM ST 261) (III)
Spring. 4 credits. M. C. Garcia.
This survey discusses the history of Latinos from the Caribbean: the Puerto Ricans, Cubans, and Dominicans. Students are introduced to some of the most important historical and theoretical works in this field. Topics discussed include the push-pull/historical-stuctural factors that influenced migration to the United States; the historical evolution of these communities; the role of cultural identity, as well as race, class, and gender in shaping experience; and the intersection of foreign policy and immigration policy.

[HIST 273 Women in American Society, Past and Present (also WOMNS 273) # (III)
Spring. 4 credits. Not offered 2001–2002; next offered 2002–2003. M. B. Norton.
A survey of women's experiences in America from the seventeenth century to the present. Among the topics discussed are women's familial roles, the changing nature of household work, the women's rights movement, employment of women outside the home, racial and ethnic differences in women's experiences, and contemporary feminism.]

[HIST 276 American Indian History, 1500–1850 (also AIS 276 and AM ST 272) # (III)
Fall. 4 credits. Not offered 2001–2002. D. Usner.
A survey of North American Indian history from the sixteenth century to the mid-nineteenth century. Relations between Indian Nations and with European colonies are explored. Different cultural groups and cross-cultural encounters are compared, with emphasis on resistance and adaptation to European colonialism. The formative years of U.S. Indian policy and the experiences of Indian people through the removal era receives close attention.]

[HIST 277 American Indian History Since 1850 (also AIS 277 and AM ST 277) (III)
Spring. 4 credits. Not offered 2001–2002. D. Usner.
A historical study of American Indians in the United States and Canada from the mid-nineteenth century to the present. The active and complex role played by Indian people in their responses to government policies and to socioeconomic changes is emphasized. Challenges faced and initiatives taken by Indians are traced from the early reservation years to the current era of self-determination. Cultural change and continuity within Indian communities is closely examined.]

[HIST 303 African-American Women in Slavery and Freedom (also WOMNS 307 and AM ST 303) # (III)
Spring. 4 credits. Letter only. Not offered 2001–2002. M. Washington.
Historical exploration of African-American women from a sociopolitical perspective. Topics include women in Africa, slavery and freedom, sexuality, labor, the family, and gender crossracially beginning with the African background and ending at 1900.]

[HIST 304 American Culture in Historical Perspective, 1880–1980 (also AM ST 304) (III)
Spring. 4 credits. Not offered 2001–2002. M. Kammen.
An introduction to the study of modern American culture. Emphasis is on the role of culture in the quest for national identity; the function of cultural myths and myth making; the advent of modernism; relationships between mass culture, popular culture, and high culture; and the question of American exceptionalism (distinctiveness). Special attention is also paid to the situation of subcultures and regions, to the changing role of entertainment in relation to leisure, the media, ethnicity (pluralism), and the decorative and popular arts.]

[HIST 311 The Structure of American Political History (also AM ST 311) # (III)
Fall. 4 credits. Not offered 2001–2002. J. Silbey.
Examines the course of American politics from the eighteenth century to the Gilded Age, focusing on the development of American political culture, the nature of decision making, and the role of social conflict, mass behavior, political parties, and political elites in shaping our political history.]

[HIST 312 The Structure of American Political History (also AM ST 312) (III)
Spring. 4 credits. Not offered 2001–2002. J. Silbey.
A continuation of HIST 311 but can be taken independently. Examines the course of American politics from the 1890s to the present, focusing on the massive transformation of American political life in the late nineteenth and twentieth centuries in response to industrialism and urbanization, the depression, and the international crises from the 1930s to the 1990s.]

[HIST 313 U.S. Foreign Relations, 1750–1912 # (III)
Fall. 4 credits. Not offered 2001–2002. W. LaFeber.
Examines the development of the U.S. continental and global empires by analyzing policy and policymakers from Benjamin Franklin to Woodrow Wilson. Emphasis is placed on domestic events that shaped foreign policy. In conjunction with HIST 313, a special course, 301, for discussion and guided research is offered.]

[HIST 314 History of American Foreign Policy, 1912 to the Present (also AM ST 314) (III)
Spring and summer. 4 credits. Not offered 2001–2002. T. Borstelmann.
Students examine the emergence of the United States as a world power in the twentieth century. The course focuses on the domestic sources of foreign policy and the assumptions of the major policymakers (Wilson through Clinton). Important themes include the American response to a revolutionary world since 1912, the Cold War, the Third World, and the increasingly dominant role of the president in the making of U.S. foreign policy.]

HIST 316 American Political Thought: From Madison to Malcolm X (also AM ST 376 and GOVT 366) # (III)
Fall. 4 credits. I. Kramnick.
For description, see GOVT 366.

HIST 318 American Constitutional Development (also AM ST 317) (III)
Fall. 4 credits. Not open to freshmen. R. Polenberg.
Major issues in constitutional history. Topics include: the drafting of the Constitution; the Bill of Rights; the Marshall era; the crises caused by slavery and emancipation; the rise of substantive due process; Holmes, Brandeis, and freedom of speech; the Roosevelt "revolution"; civil liberties and civil rights in modern America; the right of privacy; the contemporary Supreme Court.

[HIST 321 Colonial North America to 1763 # (III)
Fall. 4 credits. Not offered 2001–2002. M. B. Norton.
A survey of European settlement in North America and the Caribbean, emphasizing the interactions of Europeans, Indians, and Africans; economic development; gender relations; religious and political change; and the impact on the colonies of internal and external conflicts.]

[HIST 324 Varieties of American Dissent, 1880–1900 (also AM ST 324) (III)
Fall. 4 credits. Not offered 2001–2002. N. Salvatore.
The idea of dissent in American society raises a variety of images. Civil rights activists, striking workers, and student radicals of the 1960s are familiar symbols of dissent. But might we understand a Pentecostal believer, filled with the spirit of his or her God in critiquing contemporary society, as an example of American dissent? This course explores the varieties of economic, political, and cultural dissent in America between 1880 and 1990, and examines how understanding dissent in its specific historical context illuminates major aspects of American life and culture.]

HIST 325 Age of the American Revolution, 1754–1815 (also AM ST 322) # (III)
Spring. 4 credits. M. B. Norton.
An examination of the process by which the 13 English colonies became an independent and united nation, with emphasis on political thought and practice, social and economic change, and cultural development. Attention is paid to the impact of the American Revolution on women, Blacks, Indians, and white males.

[HIST 327 American Frontier History before 1850 # (III)
Spring. 4 credits. Not offered 2001–2002. D. Usner.
An overview of European exploration and colonization in North America, life on different colonial-Indian frontiers, and territorial expansion by the United States. Topics include the ideological and material frameworks of expansionism, the political and social dimensions of interethnic and imperial rivalry, and the formation of U.S. Indian and land policies. Themes of human migration, commercial development, and environmental change are emphasized.]

HIST 329 Indians, Settlers, and Slaves in the Early South (also AIS 329) # (III)
Spring. 4 credits. D. H. Usner.
History of the American South from the sixteenth century to the early nineteenth century with an emphasis on intercultural relations. Topics include colonization of the region by Spain, England, France, and the United States, American Indian adaptation and resistance, the evolution of slavery, African American relations with European and Indians, and the role of racial ideology and ethnic identity in the formation of the South as a distinct section of the United States.

[HIST 330 The Age of Jackson, 1815–1850 (also AM ST 330) # (III)
4 credits. Not offered 2001–2002. J. Silbey.]

HIST 331 The American Civil War and Reconstruction 1850–1877 (also AM ST 331) # (III)
4 credits. J. Silbey.
An analysis of the factors leading up to the breakup of the Union, the impact of the war in North and South, and the problems of restoration and reconstruction of the seceded states.

[HIST 332 The Urbanization of American Society: 1600–1860 (also AM ST 332) # (III)
Fall. 4 credits. Not offered 2001–2002. S. Blumin.
America was born in the country and moved to the city. This course examines the transformation of America from a rural to a rapidly urbanizing society and culture, from the first European settlements to the era of the Civil War. It is also a history of the city itself, as a human community, and as a crucible of cultural contact and change.]

HIST 333 The Urbanization of American Society: 1860–2000 (also AM ST 333) (III)
Spring. 4 credits. 332 is not a prerequisite to 333. S. Blumin.

America was born in the country and moved to the city. This course examines the transformation of America from the urbanizing society and culture of the mid-nineteenth century to the thoroughly metropolitan nation of the present. It is also a history of the city itself, as a human community, a crucible of cultural contact and change, and a focus of public policy.

[HIST 335 African-American History from Slavery to Freedom # (III)
Fall. 4 credits. Letter only. Not offered 2001–2002; next offered 2002–2003. M. Washington.
Introductory course on African-Americans from 1619 to 1865. Emphasis is on life in bondage, the free black communities, and racism. Other topics include African cultural heritage, the slave trade, religion, the family, and the black freedom struggle.]

[HIST 336 Capitalism and Society in Developing America, 1607–1877 (also AM ST 336) # (III)
Fall. 4 credits. Not offered 2001–2002. S. Blumin.
An examination of American society in the context of capitalist development, and of capitalism as a social phenomenon. The transformation of pre-industrial colonies into an industrializing nation; the development of social classes; the emerging ethos of free enterprise.]

[HIST 337 Entrepreneurialism and Organization in the Age of the Corporation: Capitalism and Society in Modern America, 1840–2000 (also AM ST 337) (III)
Spring. 4 credits. Not offered 2001–2002. S. Blumin.
An examination of American society in the context of capitalist development and of capitalism as a social phenomenon. The rise of corporate capitalism; class, "mass", and the ethos of enterprise in twentieth-century American society.]

[HIST 340 Recent American History, 1925–1960 (also AM ST 340) (III)
Spring. 4 credits. Not open to freshmen. Not offered 2001–2002. R. Polenberg.
Topics include the Sacco-Vanzetti case; radicalism and reform in the New Deal; Franklin Roosevelt and World War II; the Holocaust and the atomic age; the Cold War and civil liberties; individualism and conformity in the 1950s.]

HIST 341 Recent American History, 1960 to the Present (also AM ST 341) (III)
Summer and fall. 4 credits. Not open to freshmen. R. Polenberg.
Topics include the Supreme Court and civil rights; Kennedy, Johnson, and social reform; the Vietnam War and Watergate; politics and the presidency from Carter to Clinton; and class, race, and ethnicity in modern America.

[HIST 345 The Intellectual and Cultural Life of Nineteenth-Century Americans (also AM ST 345 and RELST 345) # (III)
Spring. 4 credits. Not offered 2001–2002. R. L. Moore.
An examination of the development of cultural and intellectual diversity in the United States. Particular emphasis is placed on religious pluralism.]

[HIST 346 The Modernization of the American Mind (also AM ST 346) (III)
Fall. 4 credits. Not offered 2001–2002. R. L. Moore.
American thought and culture from 1890 to the present. Emphasizes the intellectual impact of major political and economic events and the adaptation of social ideas and values to new conditions.]

HIST 347 American Environmental History (also AM ST 347) (III)
Fall. 4 credits. F. Dunaway.
This course provides an introduction to American environmental history, an exciting and relatively new field of scholarship. Ranging from the colonial period to the present, we explore how different groups of Americans have interacted with the natural world.

[HIST 359 American Families in Historical Perspective (also AM ST 359, HD 359, and WOMNS 357) (III)
Spring. 3 credits. Prerequisite: HD 150 or one 200-level social science or history course. S-U grades optional. Human ecology students must register for HD 359. Not offered 2001–2002. J. Brumberg.
For description, see HD 359.]

[HIST 375 The African-American Workers, 1865–1910: The Rural and Urban Experience (also ILRCB 385) # (III)
Fall. 3 credits. Prerequisite: juniors and seniors, or permission of instructor. Not offered 2001–2002. N. Salvatore.
For description, see ILRCB 385.]

[HIST 376 The African-American Workers, 1910–the present: Race, Work, and the City (III)
Not offered 2001–2002. N. Salvatore.
For description, see ILRCB 386.]

[HIST 378 Topics in U.S. Women's History (also AM ST 378 and WOMNS 378) (III)
Fall. 4 credits. Preference given to students who have taken HIST/WOMNS 273, HIST/WOMNS 303, or HIST/WOMNS 238. Others: by permission of instructor only. Not offered 2001–2002; next offered 2002–2003. M. B. Norton.
Topic for 2003: Gender and Sexuality in America. A colloquium course, limited to 20 students. Students read and discuss some of the new scholarly work on gender and sexuality in American history. They also prepare several written and oral presentations based on their analyses of primary sources in the Cornell Human Sexuality collection and elsewhere.]

HIST 411 Undergraduate Seminar in American Political History (also AM ST 411) (III)
Spring. 4 credits. Prerequisite: permission of instructor. J. Silbey.
Topic for spring 2002: Abraham Lincoln.

HIST 414 Motivations of American Foreign Policy (III)
Fall. 4 credits. Prerequisite: permission of instructor. W. LaFeber.
Topic for fall 2001: Woodrow Wilson's impact on U.S. foreign relations, 1912 to the present.

[HIST 418 Undergraduate Seminar in the History of the American South (III)
4 credits. Not offered 2001–2002. J. Silbey.]

HIST 419 Seminar in American Social History (also AM ST 419) (III)
Spring. 4 credits. S. Blumin.
Topic for 2002: Race, class and the American city in the nineteenth and twentieth centuries. Offered in Cornell-in-Washington program.

[HIST 421 Undergraduate Seminar in Cultural History (also AM ST 421) (III)
4 credits. Prerequisite: permission of instructor. Not offered 2001–2002; next offered 2002–2003. M. Kammen.]

[HIST 426 Undergraduate Seminar in Early American History # (III)
Spring. 4 credits. Not offered 2001–2002. M. B. Norton.]

[HIST 428 Comparative History of Colonial North America # (III)
Fall. 4 credits. Not offered 2001–2002. D. Usner.
This seminar considers ways of comparing how different European empires, especially Spain, France, and England, colonized North America from the sixteenth through the eighteenth centuries. Settlement patterns, labor systems, trans-Atlantic connections, and Indian relations are examined for similarities and differences across imperial boundaries. Borders between colonial and frontier regions, where empires came face-to-face, are also explored. Problems and opportunities for comparative study, found in old and new scholarship on early America, are critically discussed.]

[HIST 429 Undergraduate Seminar in Indians of Eastern North America (also AIS 429) # (III)
Spring. 4 credits. Not offered 2001–2002. D. Usner.
A seminar examining the history of Native Americans in the eastern woodlands from colonial times to the present. The cultural and economic participation of Indians in the evolution of frontier societies is examined. Major topics include fur-trade networks, political relations, removal, and the persistence of Indian communities in eastern states.]

[HIST 430 America in the Camera's Eye (III or IV)
Fall. 4 credits. Not offered 2001–2002. R. L. Moore.
Photographs and films have become archives for historical research. From the era of Matthew Brady's Civil War images, the United States has been recorded by documentary photographers who have called attention to the country's progress and it's poverty. Hollywood filmmakers have also recorded endless images of the American landscape and placed against that landscape fictionalized accounts of the country's history and its social problems. What can we learn from these images? What is their relation to written texts and to other documents that tell us about the past? How truthful is documentary? How misleading is Hollywood? One key text is James Agee's and Walker Evans' *Let Us Now Praise Famous Men*. The seminar meets once each week for discussion and periodically during the semester to view films.]

[HIST 432 The City in History: Europe and America # (III)
Spring. 4 credits. Prerequisite: permission of instructor. Not offered 2001–2002. S. Blumin.
Reading and discussion of significant interpretations of the rise, role, and character

of cities in medieval and early modern Europe, and in modern Europe and America. Individual research projects.]

HIST 439 Reconstruction and the New South (also AM ST 439) # (III)
Fall. 4 credits. Limited to 15 students. M. Washington.
This course focuses on the American South in the nineteenth century as it made the transition from Reconstruction to new forms of social organization and patterns of race relations. Reconstruction is considered from a sociopolitical perspective, concentrating on the experiences of the freed-people. The New South emphasis includes topics on labor relations, economic and political changes, new cultural alliances, the rise of agrarianism, and legalization of Jim Crow.

[HIST 440 Undergraduate Seminar in Recent American History (also AM ST 440) (III)
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2001–2002. R. Polenberg.
Topic: freedom of speech, censorship, and the Supreme Court.]

[HIST 442 Religion and Politics in American History: From J. Winthrop to R. Reed (also AM ST 442 and RELST 442) (III)
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2001–2002. R. L. Moore.
A reading and research seminar concerned with popular culture in nineteenth-century America (publications, performances, and audiences).]

HIST 455 The Four Seasons Motif in American Culture (also SOC HUM 405 and AM ST 430.2) (III)
Fall. 4 credits. Limited to 15 students. Permission of instructor required. M. Kammen.
The focus of this seminar is one of the most ubiquitous and pervasive motifs in all of the arts (painting, literature, and music) in the northern hemisphere, both West and East: **The Four Seasons**. We view works of art and films, read fiction, non-fiction, and poetry, and listen to music. Although we must devote serious attentions to the Old World origins, dispersion, and local permutations of this motif, more than half of the seminar given over to American manifestations and writings about the seasons, with particular attention to changes over time as well as geographical variations.

[HIST 458 Female Adolescence in Historical Perspective (also WOMNS 438 and HD 417) # (III)
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: permission of instructor. Not offered 2001–2002. J. Brumberg.
For description, see HD 417.]

[HIST 484 Seminar in the History of American Labor: Race, Work, and the City (also ILR 304) (III)
Fall. 4 credits. Open to juniors and seniors only with the permission of the instructor. Not offered 2001–2002. N. Salvatore.
For description, see ILRCB 304.]

HIST 486 Seminar on the 1960s (also AM ST 486) (III)
Fall. 4 credits. T. Borstelmann.
This course explores the issues and developments of the most turbulent and significant decade in recent U.S. history. Major topics include the civil rights movement, the Kennedy and Johnson administrations, the Vietnam War, the anti-war movement, the counterculture, the women's liberation movement, and the Nixon administration. A substantial research paper is required.

HIST 494 Cross-Culturality in the Caribbean (also S HUM 420) (III)
Spring. 4 credits. Limited to 15 students. S. Shukla.
For description, see S HUM 420.

HIST 500 Undergraduate Research Seminar (also AM ST 500)
Fall and spring. 8 credits each term. S. Blumin and others.
Offered in Cornell-in-Washington Program. An intensive research and writing experience utilizing the extensive resources of Washington, D.C.

[HIST 521 Seminar in American Cultural Studies (also AM ST 521)
Fall. 4 credits. Not offered 2001–2002. M. Kammen.
The focus is the relationship between government and culture in historical perspective. After three contextual sessions devoted to nineteenth-century background, we are mainly concerned with the period from the 1930s to the present. Several comparative sessions are devoted to government as a patron of culture in other societies. A research paper is required.]

[HIST 607 Writing Seminar on African-American Women
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2001–2002; next offered 2002–2003. M. Washington.
This course is designed for students actively engaged in a writing project on African-American women's history. Students must have already done the research and most of the reading for their papers prior to enrollment. Reading and class discussion focus on style, methodology, and theory. An extensive research paper is due at the end of the semester.]

[HIST 608 African-American Women
Spring. 4 credits. Prerequisite: permission of instructor. Letter only. Not offered 2001–2002; next offered 2002–2003. M. Washington.
A reading and discussion topics seminar focusing on the experiences of African-American women in nineteenth- and twentieth-century America, including the Caribbean.]

[HIST 610 Afro-American Historiography
Fall. 4 credits. Letter only. Not offered 2001–2002. M. Washington.
Reading and discussion course focusing on the way historians write and interpret the Black experience in America. Students will be concerned with individual historians, various schools of thought, and historical approaches.]

[HIST 613 Seminar on American Diplomatic History
Fall. 4 credits. Not offered 2001–2002. T. Borstelmann.
A reading and research seminar in twentieth-century American diplomatic history, emphasizing the Cold War period and interpretive approaches to U.S. foreign policy. A research paper is required.]

[HIST 617 Seminar in American Cultural History
4 credits. Not offered 2001–2002. Semester TBA. R. L. Moore.]

[HIST 618 Seminar in American Cultural History
Spring. 4 credits. Not offered 2001–2002. R. L. Moore.
A reading and research seminar concerning selected topics in nineteenth century America.]

[HIST 621 Graduate Seminar in American Cultural History
Fall. 4 credits. Not offered 2001–2002. M. Kammen.]

[HIST 624 Graduate Seminar in American Indian History (also AIS 624)
Spring. 4 credits. Not offered 2001–2002. D. Usner.
This seminar examines, through a selected series of major topics and problems, the historical study of North American Indians. Various approaches in history—together with anthropology, political science, folklore, and other disciplines—are explored. Emphasis is placed on current interpretations and directions.]

[HIST 626 Graduate Seminar in the History of American Women (also WOMNS 626)
Spring. 4 credits. Not offered 2001–2002. M. B. Norton.
A reading and research seminar intended primarily for graduate students. Major works in American women's history and carefully scrutinized, and each student prepares a lengthy research paper.]

[HIST 627 Graduate Seminar in Early American History
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2001–2002; next offered 2002–2003. M. B. Norton.]

[HIST 633 Seminar in Nineteenth-Century American History
4 credits. Prerequisite: permission of instructor. Not offered 2001–2002. J. Silbey.]

[HIST 634 Seminar in Nineteenth-Century American History
Spring. 4 credits. Not offered 2001–2002. J. Silbey.
A research seminar intended primarily for graduate students exploring society, culture, and politics of the United States between 1815 and 1896.]

HIST 640 Graduate Seminar in Recent American History
Fall. 4 credits. Prerequisite: permission of instructor. T. Borstelmann.
A graduate research seminar that will examine American political and social history since 1945.

HIST 683 Seminar in American Labor History (also ILRCB 783)
Fall. 3 credits. Prerequisites: graduate students only. N. Salvatore.
For description, see ILRCB 783.

[HIST 710 Colloquium in American History
Spring. 4 credits. Required of all first-year graduate students in United States history. Not offered 2001–2002. M. Kammen.
Examination of major approaches, periods, issues, and modes of interpreting American history. Readings include recent "classics" of

American scholarship from diverse subfields and genres.]

Latin American History

HIST 206 Modern Mexico @ (III)
Fall. 4 credits. R. Craib.
A survey of Mexico's history from the early nineteenth century to the present. The course covers social, cultural and economic trends and their relationship to political movements. Topics include rural and urban movements; U.S.-Mexican relations; the Revolution of 1910; indigenismo; popular culture; NAFTA; and the Zapatistas.

HIST 216 Gender and Colonization in Latin America @ (III)
Spring. 4 credits. K. Graubart.
This seminar addresses questions of gender (and sometimes sexuality) in the conquest and colonization of Latin America. We look at the gendered aspects of colonization itself, as well as the experiences of women and men of various ethnicities and classes between the 15th and 19th centuries.

HIST 219 Mexican Immigration to the United States (also LSP 219, AM ST 219) (III)
Fall. 4 credits. J. Cárdenas.
For description, see LSP 219.

HIST 224 Art and Politics in Twentieth-Century Latin America @ (III)
Fall. 4 credits. Prerequisite: permission of instructor. M. Roldan.
This seminar examines how the intersection of art and politics shaped culture, ideology, and identity in Latin America from the Mexican Revolution to the dictatorships of the late twentieth century. Topics may include muralism and the Mexican Revolution; the artist as muse and activist (Frida Kahlo); working class and immigrant culture in Argentina and the tango; samba as social and political protest in Brazil; gender and politics in exiled women's literature; and the appropriation of public spaces as artistic forum and means of communication under authoritarian regimes.

HIST 295 Colonial Latin America @ # (III)
Fall. 4 credits. K. Graubart.
