The dates shown in this calendar are subject to change at any time by official action of Cornell University.

In this calendar, the university has scheduled classes, laboratories, and examinations on religious holidays. It is the intent of the university that students who miss those activities because of religious observances be given adequate opportunity to make up the missed work.

The Law School and College of Veterinary Medicine calendars differ in a number of ways from the university calendar. Please consult the catalogs of those colleges for details.

The courses and curricula described in this catalog, and the teaching personnel listed herein, are subject to change at any time by official action of Cornell University.

The rules and regulations stated in this catalog are for information only and in no way constitute a contract between the student and Cornell University. The university reserves the right to change any regulation or requirement at any time.

This catalog was produced by Media Services at Cornell University.

Cornell University
(USPS 132-860)

Volume 88 of the series "Cornell University" consists of ten catalogs, of which this is number seven, dated August 1, 1996. Issued twice in February, once in May, twice in June, once in July, three times in August, and once in November. Published by Media Services, Cornell University, Comstock Hall, Ithaca, NY 14853-0901. Periodicals postage paid at Ithaca, New York.

Postmaster: Send address changes to Cornell University, University Registrar, 222 Day Hall, Ithaca, NY 14853-2801.

Cornell University Executive Officers

Hunter R. Rawlings III, president

Don M. Randel, provost

Carl Nathan, acting provost for medical affairs

Winnie Taylor, associate provost

Frederick A. Rogers, senior vice president and chief financial officer

Harold D. Craft Jr., vice president for facilities and campus services

Henrik N. Dullea, vice president for university relations

James J. Mingle, university counsel and secretary of the corporation

Ronald G. Ehrenberg, vice president for academic programs, planning and budgeting

H. David Lambert, vice president for information technologies

Susan H. Murphy, vice president for student and academic services

Inge T. Reichenbach, vice president for alumni affairs and development

Norman R. Scott, vice president for research and advanced studies

It is the policy of Cornell University actively to support equality of educational and employment opportunity. No person shall be denied admission to any educational program or activity or be denied employment on the basis of any legally prohibited discrimination involving, but not limited to, such factors as race, color, creed, religion, national or ethnic origin, sex, sexual orientation, age, or handicap. The university is committed to the maintenance of affirmative action programs that will assure the continuation of such equality of opportunity. Sexual harassment is an act of discrimination and, as such, will not be tolerated. Inquiries concerning the application of Title IX may be referred to Cornell's Title IX coordinator (assistant director, gender equity) at the Office of Equal Opportunity, Cornell University, 234 Day Hall, Ithaca, New York 14853-2801 (telephone: 607 255-3976; TDD: 607 255-7665).

Cornell University is committed to assisting those persons with disabilities who have special needs. A brochure describing services for persons with disabilities may be obtained by writing to the Office of Equal Opportunity, Cornell University, 234 Day Hall, Ithaca, New York 14853-2801. Other questions or requests for special assistance may also be directed to that office.

CORNELL UNIVERSITY—GENERAL INFORMATION

Introduction

Courses of Study contains information primarily concerned with academic resources and procedures, college and department programs, interdisciplinary programs, and undergraduate and graduate course offerings of the university. Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City. A student handbook describing life at Cornell will be distributed to all new incoming students. In addition, each new student receives the *Policy Notebook*, which summarizes pertinent university policy. Students should consult with their college's advising office for specific information on academic policies and procedures, degree programs and requirements.

Student responsibility and regulations. The *Campus Code of Conduct* describes the regulations and policies for maintaining public order on campus. The *Code of Academic Integrity* and other statements of student responsibility are set forth in the *Policy Notebook*. Publications are available for viewing on CUINFO, on the World Wide Web, the university's electronic information system, and in print at the various university libraries, the Student Life Union, the Office of the Dean of the University Faculty, the Office of University Counsel, the Office of the Judicial Administrator, and the college offices.

The following is a list of offices and information sources for admission information:

Undergraduate admissions. Information pertinent to prospective applicants is available from the Undergraduate Admissions Office, 410 Thurston Avenue, Ithaca, NY 14850-2488, 607-255-5241.

Graduate School. Information pertaining to admission to the Graduate School may be obtained by contacting the Graduate School, B2 Caldwell Hall, Ithaca, NY 14853-2602, 607-255-4884.

Law School. Admission information for the Law School is available from the Law School, Myron Taylor Hall, Ithaca, NY 14853-4901, 607-255-5141.

Samuel Curtis Johnson Graduate School of Management. Information is available from the Office of Admissions, 315 Malott Hall, Ithaca, NY 14853-4201, 607-255-4526.

College of Veterinary Medicine. Admission information is available from the Admissions Office, Schurman Hall, Cornell University, Ithaca, NY 14853-6401, 607-253-7000.

Medical College and Graduate School of Medical Sciences. Information regarding admissions is available from the Office of Admissions, 1300 York Avenue, New York, NY 10021, 212-746-1067.

CUINFO ON THE WORLD WIDE WEB

It is not possible to keep this single-volume course list completely up-to-date. The most current information regarding course schedules, sections, rooms, credits, and registration procedures may be found on CUINFO, Cornell's electronic information source, and in the *Course and Time Roster* and the *Course and Room Roster*, published each semester by the Office of the University Registrar. You may access CUINFO through the World Wide Web. The URL is: <http://www.cornell.edu>. Students are also advised to consult individual college and department offices for up-to-date course information.

EXPLANATION OF COURSE NUMBERING SYSTEMS

The course levels have been assigned as follows:

100-level course—introductory course, no prerequisites, open to all qualified students

200-level course—lower-division course, open to freshmen and sophomores, may have prerequisites

300-level course—upper-division course, open to juniors and seniors, prerequisites

400-level course—upper-division course, open to seniors and graduate students, 200- and 300-level course prerequisites or equivalent

500-level course—professional level (e.g., management, law, veterinary medicine)

600-level course—graduate-level course, open to upper-division students

700-level course—graduate-level course

800-level course—master's level, thesis, research

900-level course—doctoral level, thesis, research

The list of courses that follows is arranged in two broad groups.

Group 1: Divisions that offer both undergraduate- and graduate-level courses

Agriculture and Life Sciences
Architecture, Art, and Planning
Arts and Sciences
Biological Sciences
Engineering
Hotel Administration
Human Ecology
Industrial and Labor Relations
Nutritional Sciences
Officer Education

Group 2: Graduate professional divisions

Law
Management
Veterinary Medicine

There are no courses offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.

Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the departments. All courses, 0-999 are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

ACCREDITATION

Cornell University is accredited by the Middle States Association of Colleges and Schools. Requests to review documentation supporting its accreditation should be addressed to Michael Matier, Institutional Planning and Research, Cornell University, 440 Day Hall, Ithaca, NY 14853-2801, mwm5@cornell.edu.

Advanced Placement

CREDIT FOR ADVANCED PLACEMENT

Definition and Purpose of Advanced Placement Credit

Advanced placement credit is college credit that students earn before they matriculate as freshmen. Students may use credit they receive for advanced placement to satisfy degree requirements only as specified by the individual college at Cornell. Although such credit counts toward the bachelor's degree, its primary purpose is to exempt students from introductory courses and to place them in advanced courses. Its value is that it allows students to include more advanced courses in their undergraduate curricula.

Sources of Advanced Placement Credit

Advanced placement credit may be earned from one of the following:

- Achieving the requisite score on a departmental examination at Cornell (usually given during orientation week) or from the Advanced Placement Examinations from the College Entrance Examination Board (CEEB). The requisite scores, which vary by subject, are determined by the relevant departments at Cornell and are listed on page 7.
- Passing a regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments have delegated the review of courses to college staff according to guidelines they have formulated. Some departments review each request individually. Some departments accept credit from virtually all accredited colleges; some do not.

Credit for international credentials is evaluated individually (see below).

Please note: *Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript of such work.* Students who have taken such courses may, however, take the appropriate Advanced Placement Examination offered by the College Entrance Examination Board in Princeton, New Jersey, to qualify for credit as in paragraph *a* above.

The final decision for awarding advanced placement credit at Cornell rests with each individual college. The appropriate department of instruction within the university sets the standards of achievement that must be met for advanced placement and recommends AP credit for those who meet the standards. For policies governing advanced placement in a specific college, see the academic information section for that college. Students need not accept advanced placement. They may repeat the course, thereby relinquishing the advanced placement credit.

Advanced placement examinations.

Entering freshmen should have their scores from CEEB Advanced Placement Examinations sent to their college or school office (see below, "Forwarding of scores and transcripts").

Departmental advanced standing examinations. In certain subjects, students may also qualify for advanced placement or credit, or both, on the basis of departmental examinations given on campus during orientation week. A schedule of these examinations will appear in the orientation booklet that will be mailed to entering students in late summer. The departments that award advanced placement and credit on the basis of departmental examinations are shown on page 7.

Transfer of credit. Entering freshmen who have completed college courses for which they want to receive credit toward their Cornell degree should send transcripts and course descriptions to their college or school office (see the list at the end of this section). The award of credit or placement for such courses is determined by the appropriate departments according to individual school and college guidelines. Because policy for using advanced placement credit varies according to each college's or school's professional and academic goals, students should consult their college or school office to determine how they may use such credit.

Foreign credentials. Information regarding Cornell's advanced standing policy for foreign credentials may be obtained by contacting the Associate Director of International Admissions, Cornell University, 410 Thurston Avenue, Ithaca, New York 14850-2488, U.S.A. Students holding foreign credentials who feel they may be eligible for advanced standing consideration should contact the International Students and Scholars Office before enrollment for clarification of the advanced standing policy.

Written inquiries. Many department, school, and college offices encourage students to contact them with any questions they may have. Addresses given in the following sections may be completed by adding Ithaca, New York 14853.

Forwarding of scores and transcripts.

Entering freshmen should have their advanced placement test scores sent to their school or college registrar's office.

College of Agriculture and Life Sciences
177 Roberts Hall

College of Architecture, Art, and Planning
B2 West Sibley Hall

College of Arts and Sciences

N101 Van Rensselaer Hall

School of Industrial and Labor Relations
101 Ives Hall

DETERMINATION OF CREDIT AND PLACEMENT

The table on page 7 provides information on how credit and placement are determined for most subjects. Supplementary information for subjects requiring additional explanation is provided below.

Biological Sciences

The Division of Biological Sciences grants advanced placement credits and exemption from introductory biology courses based on superior performance on the CEEB Advanced Placement Examination in biology.

Any student who earns a score of 5 on this examination may elect to receive eight credits and be permitted exemption from all introductory biology courses.

Students not majoring in biological sciences who score a 4 or 5 may receive, respectively, six or eight advanced placement credits. This will satisfy the distribution requirement in biological sciences for students in the College of Human Ecology and a portion of the group B distribution requirement for students in the College of Agriculture and Life Sciences. For students in the College of Arts and Sciences, credits may be applied to the Group 1 distribution area in accordance with regulations stipulated by the college.

Biological sciences majors who receive a score of 5 may receive eight credits and be exempt from all introductory biology courses or elect to receive four credits and select one of the options allowed for majors with a score of 4. The student receiving a score of 4 must fulfill the introductory biology requirement by taking Biological Sciences 101-102, 101/103, 102/104, or 103-104 or 105 or 106 (Biological Sciences, Lectures and Laboratory). These students should consult information available in the Biological Sciences 101-104 course office (1140 Comstock Hall) and in the Biology Center (216 Stimson Hall) to determine which semester to take to complete the introductory biology requirement. For students in doubt, Biological Sciences 101/103 is advised. These students will receive a total of eight introductory biology credits (four advanced placement credits plus four course credits).

Chemistry

The Department of Chemistry offers two sequences that satisfy prerequisites for further work in the department: Chemistry 207-208, an eight-credit sequence that includes qualitative analysis, and Chemistry 215-216, a nine-credit sequence that includes qualitative and quantitative analysis.

Freshmen may qualify for advanced placement and advanced standing credits in chemistry by satisfactory performance on the CEEB Advanced Placement Examination in chemistry or by passing an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to four credits. A student may earn four or eight credits by suitable performance on the departmental examination. To take the departmental examination students must sign up beforehand with Mrs. Virginia Marcus, in 131 Baker Laboratory.

The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her adviser, and the professors teaching the courses. Questions may also be directed to Dr. Stanley Marcus, associate director of undergraduate studies, in 138 Baker Laboratory. Students receiving advanced placement who are interested in a major in chemistry or a related science should consider taking Chemistry 215-216 and should consult the Chemistry 215 instructor.

Classics

For advanced placement and credit in Latin and Greek, students should consult the Department of Classics, 120 Goldwin Smith Hall.

Latin. Credit and placement are determined on the basis of a departmental examination. A student who is permitted to register in a 300-level course will be given six advanced placement credits.

Greek and Modern Greek. Credit and placement are determined on the basis of a departmental examination. For Ancient Greek, a student who is permitted to register in a 300-level course will be given six advanced placement credits. For Modern Greek, a student who is determined by the examiner to be at an advanced level will be given six advanced placement credits.

Computer Science

Students who receive a score of 4 or 5 on the CEEB Advanced Placement Examination in computer science will receive four advanced placement credits and may take Computer Science 211, 212, or 222 (provided, in the case of Computer Science 222, the mathematics prerequisites are met). These credits may be used to satisfy the requirement in computer programming for students in the College of Engineering or half the distribution requirement in mathematics for students in the College of Arts and Sciences.

Freshmen may also earn four credits by suitable performance on a departmental examination to be given during orientation week. Students who receive a score of 3 on the CEEB Advanced Placement Examination may choose, at their own risk and in consultation with their advisers, to go directly into a 200-level course without receiving credit for Computer Science 100. These

Summary of Credit and Placement

<i>Subject</i>	<i>Score</i>	<i>Advanced Placement Credit</i>	<i>Placement</i>
Arabic	Department of Near Eastern Studies determines credit	8 credits or 4 credits	Placement out of all introductory courses. Students may choose to accept only 4 credits and follow the guidelines for majors with a score of 4.
Biology	5 (majors)	4 credits	4 AP credits awarded after completion of any combination of 4 credits from 101–104 or 105 or 106. Consult department to determine which semester to take to complete introductory biology.
	4 (majors)	4 credits	Placement out of all introductory courses.
	5 (nonmajors)	8 credits	Placement out of 109–110. Does not always satisfy the prerequisite for second- and third-level courses in biology.
	4 (nonmajors)	6 credits	Department determines placement.
Chemistry	5	4 credits	Placement out of C.S. 100.
Computer science	4,5	4 credits	Placement out of Economics 101.
Economics, micro	4,5	3 credits	Placement out of Economics 102.
Economics, macro	4,5	3 credits	
English	4,5	3 credits	
French language	4,5	3 credits	Department of Modern Languages determines placement. Students may earn additional credit by taking CASE examination.†
French literature	4,5	3 credits (and proficiency)	Department of Romance Studies determines placement.
German	4,5	3 credits (and proficiency)	Department of German Studies determines placement in literature courses. Department of Modern Languages determines placement in language courses. Students may earn additional credit by taking CASE examination.†
Government and politics, U.S.	4,5	3 credits	Placement out of Government 111.
Government and politics, comparative	4,5	3 credits	Placement out of Government 131.
Greek, Ancient and Modern	Department of Classics determines credit and placement based on departmental examination.		
Hebrew	4,5	3 credits	Department of Near Eastern Studies determines placement based on departmental examination.
American history	4,5	4 credits	
European history	4,5	4 credits	
History of art	4,5	3 credits	
Italian language	4,5	3 credits	Department of Modern Languages determines placement. Students may earn additional credit by taking CASE examination.†
Italian literature	4,5	3 credits (and proficiency)	Department of Romance Studies determines placement.
Latin	Department of Classics determines credit and placement based on departmental examination.		
Mathematics BC (excluding engineering students)	4,5	8 credits	Placement out of 111, 112. Permission to take 221, 293, or 213.
	2 or 3	4 credits	Placement out of 111. No advanced placement credit for students who take 111. Permission to take 112 or 192.
Mathematics AB (excluding engineering students)	4,5	4 credits	Placement out of 111. Permission to take 112, 122, or 192.
	3	4 credits	Placement out of 111. Permission to take 112 or 192.
	2	none	Students are strongly urged to take the mathematics placement examination.
Music	Department determines credit and placement based on departmental examination.		
Physics B	5	8 credits	Placement out of Physics 101–102. Students with a score of 4 or 5 on Mathematics BC may choose placement out of Physics 112 or 207 (4 credits).
Physics B	4	8 credits	Placement out of Physics 101–102.
	3	4 credits	Placement out of Physics 101.
Physics C—Mechanics	4,5	4 credits	Student may choose placement out of Physics 112 or 207, or placement into Physics 116 with no AP credit. For more information, contact department representative.
Physics C—Electricity/Magnetism	5	4 credits	Student may choose 4 credits for Physics 213 or placement into Physics 217 with no AP credit. For more information, contact department representative.
Psychology	4,5	3 credits	Placement out of Psychology 101.
Sociology	Department determines credit and placement.		
Spanish language	4,5	3 credits	Department of Modern Languages determines placement. Students may earn additional credit by taking CASE examination.†

†Cornell Advanced Standing Examination. Contact the Department of Modern Languages, 203 Morrill Hall.

students are strongly urged to take the departmental placement test. To take the departmental examination, students must sign up beforehand in the Undergraduate Office, 303 Upson Hall.

English

The English department will grant 3 credits to students who score 4 or 5 on the CEEB Advanced Placement Examination. The credits are granted automatically: no application to the department is required.

Students who receive scores of 700 or better on the CEEB SAT II examination in English composition, 700 or better on the CEEB SAT II examination in literature, or 4 or 5 on the CEEB Advanced Placement Examination are eligible to enroll, space permitting, in the following English freshman writing seminars: 270, 271, 272.

Advanced placement credits may not be used to fulfill requirements of the English major or distribution requirements of the College of Arts and Sciences.

Mathematics

The Cornell calculus sequences discussed below are described under "Basic Sequences" in the Department of Mathematics section of this catalog.

The regular freshman calculus courses at Cornell do not differ substantially from calculus courses given in many high schools, and it is best to avoid repeating material that has already been covered at an appropriate level. Secondary school students who have had the equivalent of at least one semester of analytic geometry and calculus should, if possible, take one of the CEEB's two Advanced Placement Examinations (calculus AB or calculus BC) during their senior year.

The following rules do not apply to students being admitted to the College of Engineering. See the college's brochure for a detailed statement.

Students with a grade of 4 or 5 on the BC examination may take the appropriate third-semester course (Mathematics 213, 221, or 293), but students entering Mathematics 293 may have to make up some material on partial differentiation. Students with a 3 on the BC examination or a 4 or 5 on the AB examination may take the appropriate second-semester course (Mathematics 112, 122, or 192). Students with a 2 on the BC examination or a 3 on the AB examination may take one of the second-semester courses (Mathematics 112 or 192). Advanced placement credit will be awarded appropriately; however, no credit will be granted for a grade of 1 on the BC or 1 or 2 on the AB examination.

A grade of 3 or higher on the BC examination satisfies the distribution requirement in mathematics for students in the College of Arts and Sciences.

Note, however, that the grade of 3 is not sufficient for a full year of advanced placement credit in mathematics.

The placement examination in mathematics is offered at Cornell only during orientation week and should be taken by students who

- 1) have had at least a semester of calculus but did not take a CEEB Advanced Placement Examination;

- 2) have received a 2 on the BC examination or a 3 on the AB examination and want to enter the upper sequence; or
- 3) believe that the placement assigned on the strength of the CEEB Advanced Placement Examination is not high enough in their case.

Students are strongly urged to take the departmental placement test even if they feel that their grasp of the material is uncertain. The grade on this test does not become part of a student's record. No advance registration for the departmental examination is necessary.

Modern Languages

Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a placement test. In cases where no placement test exists for a particular language, the Department of Modern Languages designates a professor to handle placement for that language; students should contact Prof. Carol Rosen, director of undergraduate studies, at 255-0722. Students who have had a year of formal study or substantial informal study since they last took a placement test should take the examination again during orientation week if they plan to continue course work.

Advanced standing credit may be entered on a student's record as follows:

- 1) For students with a score of 4 or 5 on the language Advanced Placement Examination of the CEEB, three credits are granted, and they are eligible to take Cornell's Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of six credits.
- 2) Students who achieve a minimum score of 65 on the language placement test given during orientation week are eligible to take Cornell's Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of six credits.
- 3) For formal language work at an accredited college, credit is considered by the department on submission of a transcript and may be entered on the student's Cornell record.
- 4) Native speakers of languages other than English may, on examination by the appropriate professor, be granted a maximum of six credits if they can demonstrate proficiency equivalent to course work on the 200 level or above at Cornell. Additional credit will be considered only for those who pursue advanced work in their native language.

Information about times and places to take placement tests is available in the orientation booklet, from Academic and Career Counseling Services, and from the Department of Modern Languages. For more information, see the College of Arts and Sciences section on language course placement, or contact the Department of Modern Languages, 203 Morrill Hall.

Music

Advanced placement and credit are awarded only in music theory and only on the basis of a comprehensive examination administered by the Department of Music, normally during

orientation week. If special arrangements are made, the examination may be administered at other times during the academic year. All students interested in taking this examination should consult Professor E. Murray, 311 Lincoln Hall (telephone: 607/255-4675). Inquiries may be directed to the Department of Music, 104 Lincoln Hall (telephone: 607/255-4097).

Physics

Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (physics B or physics C), certain international examinations, or the departmental examination (which may be taken during orientation week or at other times as arranged). For information about the departmental examination, students should consult the director of undergraduate studies, Professor R. S. Galik, 101 Clark Hall, or the department chair.

Physics B. Students earning a score of 4 or 5 may receive eight credits for Physics 101 and 102. Those earning a score of 5 in physics B with a score of 4 or 5 in calculus BC may choose to accept four credits in Physics 112 or 207 instead of eight credits in Physics 101 and 102. Those earning a score of 3 will receive four credits in Physics 101.

Physics C—Mechanics: Students earning a score of 4 or 5 may receive four credits for Physics 112 or 207, or placement into Physics 116 with no AP credit.

Physics C—Electricity and Magnetism: Students earning a score of 5 may choose four credits for Physics 213, or placement into Physics 217 with no AP credit. A student planning a major in Physics or Applied and Engineering Physics and who is eligible for credit from the physics C exams should consult with his/her adviser or the department representative.

Advanced placement into a next-in-sequence course depends on the completion of the appropriate mathematics prerequisites before enrolling. To qualify for advanced placement credit, it is not necessary to continue the study of physics.

General information and advice may be obtained from Professor R. S. Galik, 101 Clark Hall, or from the Department of Physics, 109 Clark Hall.

ADVANCED PLACEMENT AND CREDIT FOR INTERNATIONAL CREDENTIALS

Following are the policies currently in effect for G.C.E. "A" Level Examinations and International Baccalaureate Higher Level Examinations. Accepted students holding any other secondary school credentials are urged to sit for the Advanced Placement Examinations of the College Entrance Examination Board or for the departmental examinations offered during orientation week. Students requiring further information concerning advanced standing credit for foreign credentials may contact the Associate Director, Undergraduate International Admissions.

General Certificate of Education (GCE) Advanced ("A") Level Examination passes are awarded advanced standing and credit. Students must present the original or a

certified copy of their examination certificate to the Associate Director, International Admissions, in order to receive credit. The following overseas examinations are recognized by Cornell as equivalent in standard to GCE "A" Levels:

- Matriculation examination of the University of Hong Kong (Advanced Level)
- Advanced Level examination of the University of Hong Kong
- E. African Advanced Certificate of Education (principal passes only)
- W. African Advanced Level General Certificate of Education
- Joint examination for the Higher School Certificate and Advanced Level General Certificate of Education in Malaysia and Singapore (principal passes only)

Following is a list of subjects and the marks for which credit will be awarded:

Subject	Marks	Credit
Biology	A or B	8 credits
Chemistry	A	8 credits (Chem 207 and 208)
	B	4 credits (Chem 207)
Economics	A	6 credits (Econ 101 and 102)
English Literature	A	6 credits
	B	3 credits
Geography		subject to departmental review
History	A, B, or C	4 credits
Mathematics	A or B	8 credits (Math 111 and 112)
	C	4 credits (Math 111)
Music		subject to departmental review
Philosophy	A or B	3 credits
Physics	A or B	4 credits for Physics 101, 112, or 207
		4 additional credits for Physics 213 are granted for a combination of grades of A or B and a minimum of 8 Advanced Placement (or Advanced Standing) credits in Mathematics. Students planning to major in physics should consider enrolling in Physics 217.

International Baccalaureate (IB) Higher Level Examination passes are awarded advanced standing and credit as follows. The original or a certified copy of the examination results must be shown to the Associate Director, International Admissions.

Subject	Marks	Credit
Anthropology		subject to departmental review
Biology	7	8 credits
	6	6 credits
Chemistry	7	8 credits (Chem 207 and 208)
	5 or 6	4 credits (Chem 207)
Economics	6 or 7	6 credits

English Literature	7	6 credits
	6	3 credits
Geography		subject to departmental review
History		subject to departmental review
Mathematics	6 or 7	8 credits (prospective math, science, and engineering majors must consult with math department to determine prerequisite for placement in third-semester math courses)
Music		subject to departmental review
Philosophy	7	3 credits
Physical Science	6 or 7	4 credits (Phys 112 or 207)
Physics	6 or 7	4 credits (Phys 112)

For more information about advanced placement or other academic questions, please contact the Associate Director, International Admissions, Undergraduate Admissions Office, 410 Thurston Avenue, Ithaca, NY 14850-2488.

University Registration

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must

- complete course enrollment according to individual college requirements;
- settle all financial accounts, including current semester tuition;
- satisfy New York State health requirements;

- have no holds from the college, the office of the Judicial Administrator, Gannett Clinic, or the Bursar.

Individuals must become registered students by the end of the third week of the semester.

Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises. The university does not permit retroactive registration and does not record courses or grades for unregistered persons.

COURSE ENROLLMENT

Pre-course enrollment for each semester at Cornell takes place partway through the preceding semester. Dates are announced in advance and are posted in school and college offices. Students are expected to meet with their advisers during this period to affirm that the courses they plan to take will ensure satisfactory progress toward a degree.

New students and transfer students may be sent course enrollment instructions by their college offices before they arrive on campus. Procedures vary from college to college.

COURSE ADD/DROP/CHANGE

Students may adjust their schedules during add/drop/change periods. A form is completed by the student and signed by both the student's adviser and an appropriate representative of the department offering the course (an instructor, department staff member or college registrar, depending on the college). The completed and signed form must be returned to the student's college office to be processed. Professional schools, Continuing Education and Summer Sessions, and the Department of Physical Education and Athletics have different course enrollment and add-drop policies. See the chart below for their course add/drop/change fees.

Late Course Enrollment and Late Add/Drop/Change Fees

Academic Unit	Late Course Enrollment Fee	Late Course Add/Drop/Change Fee
Continuing Education and Summer Sessions	†	†
Johnson Graduate School of Management	\$100	\$100
Law School	No fee	No fee
Physical education	\$30	\$20*
Veterinary medicine	\$15*	\$15*

*Consult the college office for special considerations and requirements.

†Consult the Summer Session catalog and the Division of Extramural Study brochure for fees.

AUDITING COURSES

Summer school and extramural students may officially register as visitors (auditors) in courses and have this entered on their permanent records if their attendance is reported as satisfactory. Graduate students may register for courses as auditors but will not have the courses listed on their transcripts. Undergraduates may not register to audit courses.

LEAVES AND WITHDRAWALS

A leave of absence must be requested from the college in which the student is enrolled. A leave of absence is granted for a specified time, after which the student is expected to return to resume course work. Students should inform their college of intent to return.

A student may withdraw from the university at the student's discretion. In addition, a college may withdraw a student who fails to return at the end of a period of authorized leave.

Medical leaves are granted and processed through University Health Services.

Internal Transfer Division

Students may not always be satisfied with the original Cornell school or college into which they've been admitted. They may decide to transfer from one college to another, within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should apply to the Internal Transfer Division (ITD).

To apply, candidates must interview with the division's director and submit an essay to the ITD office outlining their reasons for wanting to transfer. Internal Transfer Division applicants must also fulfill the application requirements (e.g., interviews, essays) of their target college as if they were applying for direct transfer. In many cases, colleges formally sponsor students in ITD and essentially guarantee admission if students successfully complete the requirements (taking particular courses, earning a specified grade point average while enrolled in ITD) that are outlined in their letter of sponsorship. Although sponsorship does not guarantee admission to the Internal Transfer Division, it is the most important factor determining acceptance into ITD. Students can apply simultaneously for direct transfer and to ITD, so that if direct transfer is denied they might be offered the option of being sponsored in the Internal Transfer Division.

For more information about transfer requirements, students should contact the admissions office of the college they hope to enter and the office of the Internal Transfer Division, 220 Day Hall (255-4386).

Other Tuition and Fees

In absentia fees

Graduate	\$200 per term
Undergraduate	15 per term
Law and Management	75 per term

The amount, time, and manner of payment of tuition, fees, or other charges may be changed at any time without notice.

*Residency status is determined at the time of admission by the college. Change in residency status is determined by the bursar.

Fees and Expenses

Undergraduate applicants to Cornell pay a nonrefundable \$60 application fee when submitting an application for admission. The graduate application fee is \$60. Application to the Johnson Graduate School of Management costs \$85 (domestic), \$110 (international).

Tuition Refund Policy

Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. The date of this request will determine the tuition liability for the semester. Previously matriculated students who terminate their registration with the university during a fall or spring

semester in this manner will be charged tuition from the university registration day through the date of their request as follows: first six days of the semester (including university registration day), no charge; seventh day of the semester, 10 percent; second week, 20 percent; third week, 30 percent; fourth week, 40 percent; fifth week, 60 percent; sixth week, 80 percent; seventh week to the end of the semester, 100 percent.

First-time matriculants will be charged tuition from the university registration day through the date of their request as follows: first six days of the semester (including university registration day), no charge; seventh day of the semester, 10 percent; second and third weeks, 20 percent; fourth week, 30 percent; fifth and sixth weeks, 40 percent; seventh week, 50 percent; eighth and ninth weeks, 60 percent; tenth week to the end of the semester, 100 percent.

Repayment policy. Students receiving financial aid from the university who withdraw during a term will have their aid reevaluated, possibly necessitating repayment of a portion of aid received. Repayment to aid accounts depends on the type of aid received, government regulations, and the period of time in attendance. A partial semester will generally count as one of the eight semesters of financial aid eligibility normally allowed a student.

Refund Schedule for Withdrawals and Leaves of Absence

Fall 1996 and Spring 1997

Previously Matriculated Students

Percent	Fall 1996	Spring 1997
No charge	8/27-9/3	1/16-1/22

60% charge	10/29-11/11	3/7-3/29
100% charge	11/12/96	3/30/97

BILLING AND PAYMENT

Billing

Tuition and room and board charges will be billed in July and December and must be paid prior to registration. The due date for these semester bills will normally be five to ten working days prior to ID validation day. All

other charges, credits, and payments will appear on monthly statements mailed before the twenty-fifth of every month.

It is possible that some charges will not be listed on the first bill and will appear on a subsequent monthly bill. *A student must be prepared to pay any charges appearing on a subsequent bill even though the student receives a financial aid stipend before the charges are billed.*

All bills are due by the date stated on the bill; all payments must be received by that date to avoid *finance charges*. Payments are not processed by postmark.

Please inform the Office of the Bursar of any change in billing address. *Address changes made at other offices will not change the billing address.* The address initially used on billing statements will be the home address as listed on each student's application for admission.

Payments

An individual who has outstanding indebtedness to the university will not be allowed to register* or reregister in the university, receive a transcript of record, have academic credits certified, be granted a leave of absence, or have a degree conferred. University policy precludes the use of any current financial aid for payment of past-due charges.

The Office of the Bursar acts as a clearinghouse for student charges and credits that are placed directly on a student's bill by several departments and offices of the university. *Since the Office of the Bursar does not have detailed records concerning many items that appear on a bill, students should contact the office involved if they have questions.*

For further information, students should contact the Office of the Bursar, Cornell University, 260 Day Hall, Ithaca, New York 14853-2801 (telephone: 607/255-2336; fax: 607/255-6442).

*For specific exceptions, see "Bursar and Cornellcard Procedures," published by the Office of the Bursar, 260 Day Hall.

STUDENT HEALTH INSURANCE

It is a Cornell University policy, by a university board of trustees decision, that all full-time students have health insurance coverage while enrolled at Cornell.

The student health plan offers extensive coverage at a reasonable cost for students and their eligible dependents. Plan benefit information will be mailed to all registered students (including students registered in absentia) in their July bursar bill. If you decide that you have adequate coverage and want to waive the student health plan, a waiver form with proof of other coverage must be submitted to the student insurance office before the September 25 deadline. All full-time registered students, including students registered in absentia, will be automatically billed and enrolled in the student health plan if a completed waiver is not received by the deadline. Because of policy restrictions, the plan is nonrefundable after the deadline (except for dependents who no longer meet eligibility requirements).

Students enrolled in the student health plan may also enroll their eligible dependents for

an additional charge. Enrollment deadline is September 25.

A five-month graduate plan is available for those students who finish their degree requirements before the start of the spring semester. The deadline for application is prior to the start of the spring semester.

To obtain additional information about the Cornell University health plan, please contact the student insurance office at the Gannett Health Center, 10 Central Avenue, Ithaca, NY 14853 or (607) 255-6363. (e-mail: jbs58@cornell.edu)

Class Attendance, Meeting Times, and Examinations

CLASS ATTENDANCE AND ABSENCES

Students are expected to be present throughout each term at all meetings of courses for which they are registered. The right to excuse a student from class rests at all times with the faculty member in charge of that class.

Absences because of religious beliefs. In accordance with Section 224-a of the New York State Education Law, each student who is absent from school because of his or her religious beliefs must be given an equivalent opportunity to register for classes or make up an examination, study, or work requirements that he or she may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the university for making available to such student such equivalent opportunity.

	01:25 PM	04:25 PM
	07:30 PM	10:30 PM

No classes or laboratory exercises are to be held between the hours of 4:25 p.m. and 7:30 p.m. Monday through Thursday, after 4:25 p.m. on Friday, after 12:20 p.m. on Saturday, and all day Sunday.

Evening preliminary examinations that will be given outside of normal class hours may be scheduled on Tuesday and Thursday evenings only, beginning at 7:30 p.m. All room assignments are scheduled by the Office of the University Registrar. The dates and times of these examinations are listed in the course rosters for each term.

Evening academic activities commencing at 7:30 p.m. on Mondays and Wednesdays, other than regularly scheduled courses and prelims previously approved by the office of the university faculty, are not permitted. Violation of these rules interferes with other university activities (athletic, musical, theatrical, employment, etc.).

Any exception to the above regulations, other than those for evening preliminary examinations, will require permission of the dean or director of the college or school offering the course. Exceptions to the regulations on evening preliminary examinations require approval of the dean of the university faculty. All such exceptions must include provision of special arrangements for the students for whom conflicts are generated by such an exception.

FINAL EXAMINATIONS

Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. The schedule of final examinations is available in the *Course and Time Roster* and the *Course and Room Roster*, both of which are published through the Office of the University Registrar each semester. Examinations not listed in the registrar's examination schedule will be arranged by the professor in charge and must fall within the announced examination period, except by permission of the dean of the faculty in accordance with existing faculty legislation.

General Rules Governing Final Examinations

Legislation of the university faculty governing study periods and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the university registrar's office without prior written permission of the dean of the faculty.
2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.
3. Permission will be given by the dean of the faculty to reschedule examinations during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time the examination was originally scheduled. The faculty member requesting such a change shall be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the university registrar's office.
4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) in the final examination period.
5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.
6. Faculty can require students to submit papers during the week preceding the study period.
7. Take-home examinations should be given to classes well before the end of the regular term and should not be required to be submitted during study period but rather well into the examination period.

The university policies governing study period and final examinations are:

- a) Each course should require that a final examination or some equivalent exercise (for example, a term paper, project report, final critique, oral presentation or conference) be conducted or due during the period set aside for final examinations.

- b) Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one twenty-four hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a make-up for other valid reasons, i.e., illness, death in the family, etc.
- c) Students have a right to examine their corrected exams, papers, etc., to be able to question their grading. (Note that students have no absolute right to the return thereof.) Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester, preferably till the end of the following term, to afford students such right of review.

EVENING PRELIMINARY EXAMINATIONS

The most convenient times and places for "prelims" are the normal class times and classrooms. In cases where the only alternative is to hold evening preliminary examinations, they may be scheduled only on Tuesday and Thursday evenings and only after 7:30 p.m.

An alternative time to take the examination *must* be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

Note that instructors holding evening examinations are strongly urged to indicate this in the course descriptions listed in *Courses of Study* and *must* notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed. For more information on the policy governing evening examinations, contact the office of the dean of the faculty, 315 Day Hall.

Grading Guidelines

The official university grading system is composed of letter grades with pluses and minuses. Passing grades range from A+ to D-; F is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first semester of a year-long course. The grades of INC and R do not have quality-point equivalents attached. These are the quality-point equivalents:

A+ =4.3	B+ =3.3	C+ =2.3	D+ =1.3
A =4.0	B =3.0	C =2.0	D =1.0
A- =3.7	B- =2.7	C- =1.7	D- =0.7
		F =0.0	

This is how a term average is computed:

Course	Grade	Points	Quality Credits	Product
Chemistry 103	B+	3.3	x 3	= 9.9
English 151	C-	1.7	x 3	= 5.1
DEA 145	B	3.0	x 4	= 12.0
CEH 100	B	3.0	x 3	= 9.0
DEA 111	C	2.0	x 3	= 6.0
Total			16	42.0

To arrive at the term average, add the products (credits x quality points) and divide by the number of credits taken. Here, 42 divided by 16 equals 2.63.

The cumulative average (an average of grades from two or more terms) equals the sum of the products of all the grades at Cornell divided by the total number of credits taken.

S-U GRADES

On September 6, 1972, the Faculty Council of Representatives passed the following legislation:

"Resolved, that:

- A. the S-U system have symbol equivalents which are uniform within the university: "S" means C- or above; "U" means D+, D, D-, or failure.
- B. S-U options be chosen by the student during the first three weeks of the term.
- C. the Announcements and/or supplementary course registration materials describing each course include a description of the course grading options, particularly if the course is graded with an exclusive S-U. Any change in grading options must be announced by the instructor within the first two weeks of the term.
- D. course requirements (required reading, term paper, etc.) be the same for students electing S-U grades as for those electing letter grades."

The rules for the S-U option are further defined by each of the academic units. They are as follows:

Agriculture and Life Sciences. (a) Must have 100 credit hours with A, B, C, D grades. (b) The S-U option is available only in those courses so designated in the course catalog after approval by the Educational Policy Committee. (c) Freshmen may not exercise the S-U option.

Architecture, Art, and Planning. (a) All courses specifically required for a degree excluded. Various departments may designate specific required courses where S-U will be permitted. (b) In a course designated as S or U, the entire class is so graded. The instructor must announce this decision within the first two weeks of class. (c) Where the option for S or U exists, both student and instructor must agree on the option. This agreement must be made by the end of the third week of classes on the appropriate form in the college office. Once agreed upon, this grade option will be used for the final grade.

Arts and Sciences. (a) Courses that count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission.

(b) Permission of instructor. (c) A minimum of 80 of the 120 hrs. required for the A.B. degree must be in courses for which the student has received letter grades.

Engineering. (a) May take one Humanities and Social Sciences, Approved, or Free Elective per term after completing first semester. (b) This option may be elected during Pre-Course Enrollment or with the written permission of the instructor and adviser on an add/drop form in the first 3 weeks of classes. (c) Decision is irrevocable after first 3 weeks of term.

Graduate School. (a) Seminars and Thesis Research courses are usually graded S/U, and should be registered accordingly or a grade error results at semester's end. Other courses may be registered as S-U only if offered as S-U option.

Hotel. (a) Maximum of four free-elective credit hours per term. (b) Exceptions are by petition only.

Human Ecology. (a) Not part of student's major. (b) May be used in the 15 hours required outside the major in Human Ecology courses. (c) Not part of 39 hours required in humanities, natural sciences, and social sciences. (d) A department may approve S-U grading in specific courses if approved by Educational Policies Committee. (e) Only juniors and seniors may take courses in which both letter grades and S-U are options. (f) Sophomores may take courses in which S-U is offered but letter grades are not offered. (g) Freshmen enrolled in English 137 and 138, which are only offered for S-U credit, are permitted to apply these courses to the freshman seminar requirements. (h) Total of four S-U courses during student's college career.

Industrial and Labor Relations. (a) This option may be elected, if available in I&LR electives, or in out-of-college electives but not including directed studies. (b) Degree requirements include a minimum of 105 lettergrade (A + to D -) credits. (c) Student must also be in good academic standing. (d) A "U" is considered the equivalent of an "F" in determining a student's academic status. (e) Limited to two courses per term, not to exceed four hours in any one course.

Internal Transfer. (a) S-U grades permitted only when it is the only option or (b) when specifically approved by an admissions officer in the school or college to which the student plans to transfer.

Veterinary Medicine. (a) There are four courses in the veterinary core curriculum that are offered on an S-U basis only. All other required core courses must be taken for a letter grade. (b) Elective courses for veterinary students may be offered on a S-U basis at the option of the professor.

INCOMPLETE

The grade of incomplete is appropriate only when two basic conditions are met:

- 1) the student has a substantial equity at a passing level in the course with respect to work completed, and
- 2) the student has been prevented by circumstances beyond the student's control, such as illness or family emergency, from completing all of the course requirements on time.

A grade of incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be elected at the student's own discretion.

While it is the student's responsibility to initiate a request for a grade of incomplete, reasons for requesting one must be acceptable to the instructor, who establishes specific make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student's college for completing the course work. Several colleges require that a statement signed by the instructor be on file indicating the reason for the grade of incomplete and the restriction, if any.

It is the responsibility of the student to see that all grades of incomplete are made up within the deadline and that the grade has been properly recorded with the student's college registrar.

CHANGES IN GRADES

Changes in a grade may be made only if the instructor made an error in assigning the original grade.

OFFICIAL TRANSCRIPTS

An official transcript is one that bears the official signature of the university registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the student. Transcripts can be obtained through the Office of the University Registrar, 222 Day Hall. There is a \$2.00 fee per transcript.

University Requirements for Graduation

The *university* has only two requirements for graduation that must be fulfilled: the swim test and physical education courses. A student's *college* determines degree requirements such as residency, number of credits, distribution of credits, and grade averages. See the individual requirements listed by each college or school or contact the college registrar's office.

PHYSICAL EDUCATION

Classes

All undergraduate students must complete two terms of work in physical education unless exempted from this requirement for medical or other special reasons or by virtue of advanced standing on admission. For transfer students the requirement is reduced by the number of terms satisfactorily completed, not necessarily including physical education, in a college of recognized standing before entering Cornell.

Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating on an intercollegiate athletic team as a competitor or manager, or performing in the marching band.

Physical education is a requirement of the first two terms at Cornell. Students must register for it in each term, except those in which postponements are granted, until the requirement is satisfied.

Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding twenty hours a week). The Gannett Health Center can provide certifications based on health, and the financial aid office can provide certifications of employment. Students should see the director or assistant director of Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.

Swim Test

The University Faculty Committee on Physical Education has established a basic swimming and water safety competency requirement for all entering freshman undergraduate students. Normally, the test is given for women in the Helen Newman pool and for men in the Teagle pool as part of their orientation process. The test consists of a feet-first entry into the deep end of the pool and a continuous 75-yard swim using front, back, and optional strokes. Any student who cannot pass the swim test is required to include the course Basic Swimming and Water Safety in his or her program of physical education before electives can be chosen. Students will receive a grade of incomplete in Physical Education until they have passed the swim test or fulfilled the requirement by satisfactory attendance in two terms of Basic Swimming and Water Safety. Students unable to meet the swim requirement because of medical, psychological, or religious reasons must petition the University Faculty Committee on Physical Education for a waiver of the requirement. When a waiver is granted by the Faculty Committee on Physical Education, an alternate requirement is imposed. The alternate requirement substitutes a course in either Advanced First Aid (Emergency Response) or Wellness and Fitness for the original swimming requirement.

STUDENT RESPONSIBILITIES

Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student's responsibility to be aware of the specific major, degree, distribution, college, and graduation requirements for completing his or her chosen program of studies. Students should know how far they have progressed in meeting those requirements at every stage of their academic career.

Student Records Policy

Under the Family Educational Rights and Privacy Act of 1974 (FERPA), Cornell University is required to advise students of their rights concerning their education records. Education records include records directly related to a student and maintained by an educational institution or party acting on its behalf. The law gives students the right to

- a) inspect and review their education records;
- b) challenge contents of education records;
- c) a hearing if the challenge is unsatisfactory;
- d) include an explanatory statement in the education records if the outcome of the hearing is unsatisfactory;
- e) prevent disclosure of personally identifiable information*;
- f) secure a copy of the institutional policy which includes the location of all education records**; and
- g) file complaints with the Department of Education concerning institutional failure to comply with the act.

*Directory information is a category of personally identifiable information that includes name, home address, local address, local telephone listing, dates of attendance at Cornell, major field of study and college attended, previous educational agency or institution attended, participation in officially recognized activities (in athletics, the weight and height of members of athletic teams), degrees earned and awards. Directory information may be released unless the student indicates otherwise at the time of registration. Students who wish no release of their directory information must inform the office of the university registrar in writing within 10 days of the date of official university registration each academic year. Students may rescind their no release request at any time in writing to the office of the university registrar.

***Cornell University Policy on Access to and Release of Student Education Records" is available on the World Wide Web at URL: <http://WWW.UNIVCO.CORNELL.EDU/policy/ASI.html>.

POLICY ON POSTING OF STUDENT INFORMATION

In compliance with the university's policy on student educational records, and the U.S. Department of Education's Family Educational Rights and Privacy Act of 1974 (FERPA), restricted student information may not be posted.

Accordingly, the following student information is considered restricted and therefore may not be posted:

- Student social security number
- Student identification number
- Courses elected
- Grades earned
- Grade point average
- Class rank
- Date of birth
- Place of birth
- Home telephone listing
- Academic and disciplinary actions
- Student or administrative committees
- The most recent student educational records from previous educational agency or institution
- Financial arrangements between the student and the university
- Any other education record containing personally identifiable information

For further information, please refer to the revised *Policy on Access to and Release of Student Education Records* on the World Wide Web at URL: <http://WWW.UNIVCO.CORNELL.EDU/policy/ASI.html>.

Academic Integrity

Absolute integrity is expected of every Cornell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty and such cases are governed by the Code of Academic Integrity. A pamphlet entitled the *Code of Academic Integrity and Acknowledging the Work of Others* is distributed to new and transfer students and is also available from the office of the dean of faculty. The policy is published in the *Policy Notebook*, available free of charge from the office of the dean of students.

PROTECTION OF HUMAN SUBJECTS IN RESEARCH

The University Committee on Human Subjects is the official review board of all university projects that use humans as research subjects. Projects affected by this restriction include, but are not limited to, surveys, questionnaires, studies of existing data, documents, records in which there are no identifiers, as well as mental and physical tests of human subjects. Requests for student information must be submitted in writing to the Assistant Vice President for Academic Programs and Campus Affairs, 311 Day Hall. All proposals involving human subjects in any category must be submitted to the committee for review. Inquiries, communications, and requests for guidelines should be directed to the committee's Executive Secretary, 120 Day Hall (255-5014). The guidelines are also available on CUIINFO under OSP (Office of Sponsored Programs), and at the World Wide Web address www.osp.cornell.edu

USE OF ANIMALS FOR COURSES

The Cornell University Institutional Animal Care and Use Committee has made the following statement on the use of animals for courses: "In certain courses the use of vertebrate animals serves as an invaluable aid in instruction. It is recognized, however, that some students have ethical objections to the use of vertebrate animals in this manner. Courses that use vertebrate animals are identified as such in course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about the precise ways in which the animals are used. A set of university guidelines on the use of vertebrate animals in teaching for faculty and students is available from departments in which the courses are offered. A student who is reluctant to voice his or her concerns about animal use in a particular course, or who thinks these concerns have not received proper attention, may seek assistance from the director of the Cornell Center for Research Animal Resources (253-3516)."

Interdisciplinary Centers, Programs, and Studies

ANDREW D. WHITE PROFESSORS-AT-LARGE

G4 Van Rensselaer Hall (255-0832).

The program has its origins in Cornell's early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by eminent scholars, scientists, and intellectuals who periodically visit the university for the stated purpose of "contributing to the intellectual and cultural life of the university." Toward this end, Professors-at-Large engage in a variety of activities including public lectures, participation in ongoing courses, and collaborative research, as well as holding office hours for undergraduate and graduate students. Professors-at-Large serve for a six-year term and are full members of the faculty when in residence.

Term Ending in 1996

Lloyd, Geoffrey E. R., Professor of Ancient Philosophy and Science and Master of Darwin College, Cambridge University
Myers, Norman, consultant scientist on conservation and management of tropical diversity
Rowlinson, John Shipley, chemical engineer

Term Ending in 1997

Delano, Jack, artist and film maker
Kuspit, Donald, art critic
Nasr, Seyyed Hossein, Islamism

Term Ending in 1998

Diaconis, Persi, mathematical statistician
Levertov, Denise, poet and critical writer

Term Ending in 1999

Mitchell, Juliet, psychoanalyst and feminist theorist
Mosse, George, historian
Press, Frank, geophysicist, science and technology adviser
Seeger, Anthony, ethnomusicologist

Term Ending in 2000

Berry, Michael, physicist
Wilson, William Julius, sociologist

Term Ending in 2001

Pingree, David, historian of science

Term Ending in 2002

Chartier, Roger, cultural historian
Ernst, Richard R., physical chemist
Goodall, Jane, primatologist
Tobias, Phillip V., paleoanthropologist

CENTER FOR APPLIED MATHEMATICS

657 Frank H. T. Rhodes Hall (255-4335)

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. Each student develops a solid foundation in analysis, algebra, and methods of applied mathematics.

The remainder of the graduate student's program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

Graduate students in the center take courses related to their program of study that are offered by various departments. Below are listed selected courses in applied mathematics in the main areas of research interest of the center's members. Detailed descriptions of these courses can be found in the listings of the individual departments.

Selected Applied Mathematics Courses

Basic Graduate Courses in Applied Mathematics (and Analysis)

Math 413-414 Introduction to Analysis
Math 433-434 Introduction to Algebra
Math 511-512 Real and Complex Analysis
Math 521 Measure Theory and Lebesgue Integration
Math 522 Applied Functional Analysis
Math 531-532 Algebra
Math 551 Introductory Algebraic Topology
Math 515-516 Mathematical Methods in Physics
T&AM 612-613 Methods of Applied Mathematics
T&AM 614-615 Topics in Applied Mathematics

Analysis (and Differential Equations)

Math 427 Ordinary Differential Equations
Math 517 Dynamical Systems
Math 518 Smooth Ergodic Theory
Math 519-520 (also Math 428) Partial Differential Equations
Math 552 Differentiable Manifolds
Math 562 Riemannian Geometry
Math 611-612 Seminar in Analysis
Math 613 Functional Analysis
Math 615 Fourier Analysis
Math 622 Riemann Surfaces
Math 623 Several Complex Variables
Math 627-628 Seminar in Partial Differential Equations

Logic and Theory of Computing

CS 615 Theory of Concurrent Systems
CS 671 Introduction to Automated Reasoning
CS 682 Theory of Computing
CS 715 Seminar in Programming Refinement Logics
Math 486 Applied Logic I
Math 487 Applied Logic II
Math 581 Logic
Math 681-682 Seminar in Logic
Math 683 Model Theory
Math 684 Recursion Theory
Math 685 Metamathematics
Math 687 Set Theory
Math 688 Topics in Applied Logic

Discrete and Numerical Mathematics

CS 422-522 Parallel Scientific Computing
CS 621 Matrix Computations

CS 622 Numerical Optimization and Nonlinear Algebraic Equations
CS 624 Numerical Methods for Differential Equations
CS 681 Analysis of Algorithms
CS 721-722 Advanced Topics in Numerical Analysis
CS 729 Seminar in Numerical Analysis
Math 425 Numerical Solution of Differential Equations
Math 627-628 Seminar in Partial Differential Equations
Math 655 (also CS 655) Mathematical Foundations for Computer Modeling and Simulation
OR&IE 620 Scheduling Theory
OR&IE 630-631 Mathematical Programming I and II
OR&IE 632 Nonlinear Programming
OR&IE 633 Graph Theory and Network Flows
OR&IE 634 Combinatorial Optimization
OR&IE 635 Interior-Point Methods for Mathematical Programming
OR&IE 636 Integer Programming
OR&IE 639 Polyhedral Convexity

Information Communication and Control Theory

EE 411 Random Signals in Communications and Signal Processing
EE 425 Digital Signal Processing
EE 468 Communication Theory
EE 472 Digital Control
EE 495 Group Theory with Applications
EE 521 Theory of Linear Systems
EE 522 Theory of Nonlinear Systems
EE 525 Adaptive Filtering in Communication Systems
EE 526 Advanced Signal Processing
EE 528 Multisensor Digital Signal Processing
EE 561 Error Control Codes
EE 562 Fundamental Information Theory
EE 563 Communication Networks
EE 564 Decision Making and Estimation
EE 565 Queueing Networks
EE 567 Digital Communication
EE 573 Optimal Control and Estimation for Continuous Systems
EE 574 Estimation and Control in Discrete Linear Systems
EE 577 Artificial Neural Networks

Mathematical Biology

Bio S 662 Mathematical Ecology
Stat & Biom 451 Mathematical Modeling of Populations
Stat & Biom 651 Mathematical Population Studies and Modeling
Stat 697 & Biom 760 Special Topics in Theoretical and Computational Biology

Mathematical Economics

Econ 519 Econometrics I
Econ 520 Econometrics II
Econ 610 Stochastic Economics: Concepts and Techniques
Econ 617-618 Mathematical Economics
Econ 619-620 Advanced Topics in Econometrics

Mechanics and Dynamics

Chem E 731 Advanced Fluid Mechanics and Heat Transfer
Chem E 732 Mass Transfer
Chem E 751 Mathematical Methods of Chemical Engineering Analysis
Chem E 753 Analysis of Nonlinear Engineering Systems: Stability, Bifurcation, and Continuation
EE 681 (also A&EP 761) Kinetic Theory

M&AE 601 Foundations of Fluid Dynamics and Aerodynamics
M&AE 602 Fluid Dynamics at High Reynolds Numbers
M&AE 732 Analysis of Turbulent Flows
M&AE 733 Stability of Fluid Flow
M&AE 734 Turbulence and Turbulent Flow
M&AE 736 Computational Aerodynamics
M&AE 737 Computational Fluid Mechanics and Heat Transfer
T&AM 570 Intermediate Dynamics
T&AM 578 Nonlinear Dynamics and Chaos
T&AM 579 Vibrations and Waves in Elastic Systems
T&AM 671 Advanced Dynamics
T&AM 672 Celestial Mechanics (also Astro 579)
T&AM 673 Mechanics of the Solar System (also Astro 571)
T&AM 675 Nonlinear Vibrations
T&AM 751 Continuum Mechanics and Thermodynamics
T&AM 752 Nonlinear Elasticity
T&AM 776 Applied Dynamical Systems

Probability and Statistics

EE 562 Fundamental Information Theory
EE 563 Communication Networks

CENTER FOR THE ENVIRONMENT

Rice Hall (255-7535)

The Cornell Center for the Environment (CfE) is committed to research, teaching, and outreach focused on environmental issues, with the goals of enhancing the quality of life, encouraging economic vitality, and promoting the conservation of natural resources for a sustainable future. The Center serves as a clearinghouse for environmental information; initiates environmental courses and curricula at both the graduate and undergraduate levels; facilitates interdisciplinary environmental research; and coordinates outreach programs that assist state, federal, and local government, private organizations, businesses, and individuals in assessing and solving environmental problems.

Programs of Study

Various departments, centers, and institutes across the campus are involved in teaching and research of potential interest to students wishing to pursue environmental studies. A brochure listing undergraduate environmental course offerings is available from the Center (telephone: 255-7535, or email: cucfe@cornell.edu). Students with this interest most often study in one of the following areas:

- Agricultural and Biological Engineering
- Agricultural, Resource, and Managerial Economics
- Architecture
- Biology and Society
- City and Regional Planning
- Civil and Environmental Engineering
- Design and Environmental Analysis
- Development Sociology
- Ecology and Evolutionary Biology
- Environmental Toxicology
- Natural Resources
- Plant Pathology
- Regional Science
- Rural Sociology
- Science and Technology Studies
- Soil, Crop, and Atmospheric Sciences

Program options for focusing on environmental issues are offered in a number of departments: (1) ecosystems science through the Section of Ecology and Systematics; and the Department of Natural Resources; (2) remote sensing through the Departments of Civil and Environmental Engineering; and Soil, Crop, and Atmospheric Sciences; (3) water resources primarily through the Department of Agricultural and Biological Engineering; (4) waste management through the Departments of Environmental Engineering; Agricultural and Biological Engineering; and Agricultural, Resource and Managerial Economics; (5) environmental policy through Toxicology; Natural Resources; and City and Regional Planning; (6) and biological resources through the Division of Biological Sciences.

The graduate field of environmental toxicology offers a multidisciplinary science program leading to a Ph.D. or M.S. degree. The three major areas of concentration in the program are: cellular and molecular toxicology; food and nutritional toxicology; and ecotoxicology and environmental chemistry. The graduate program prepares students for professional opportunities in academia, industry and private research institutes and governmental agencies. Page 22 lists the courses and describes the program in more detail.

In response to a demand for individuals who can bridge the gap between the technical, social, and managerial aspects of environmental problems, plans are in progress for a new multidisciplinary Master of Professional Studies degree program in environmental management. In this curriculum, students with undergraduate preparation in the fields of Natural Resources; Agricultural Economics; Soil, Crop, and Atmospheric Sciences; Agricultural and Biological Engineering; and Development Sociology will be eligible to undertake a concentration in environmental management. Students in this program will be expected to take courses that will enhance or build upon their undergraduate education and in addition will enroll in a common core of courses in the science and technology of environmental control; organizations; environmental economics and accounting; environmental regulation; and an intensive field project. These core courses are intended to provide students with the knowledge, skills, and insights that will enable them to function effectively as managers at various levels in the private, public, and voluntary sectors.

A new program in the Science of Earth Systems, available to students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Engineering, highlights study of the Earth as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. The curriculum coalesces Cornell's strengths across a broad range of earth and environmental sciences to provide students with a rigorous scientific foundation for the study of the Earth system. The program is described in more detail on page 21.

Student employment opportunities are available through programs in the Center for the Environment. The institutional-based programs include the Water Resources Institute; the Institute for Comparative and Environmental Toxicology; the Cornell Waste Management Institute; and the Institute for Resource Information Systems. The faculty-based programs of the Center include the Cornell Institute for Research in Chemical Ecology; the Watershed Science and Management Initiative; the Cornell Program in Environmental Sciences for Educators and Youth; the Climate Change Research Program; the Cornell Urban Environment Program; the Work and Environment Initiative; the Cornell Local Government Program; the Ocean Resources and Ecosystems Program; and the Cornell Program on Environmental Conflict Management.

Students interested in the environment will also find many organizations, resources, and activities beyond the classroom setting at Cornell. The CfE sponsors guest lecturers and co-hosts conferences with a variety of departments across the campus. Providing a

forum for the diversity of environmental interests and perspectives, the student-produced publication, *URSUS: The Cornell Forum for Environmental Issues*, seeks to promote the sharing of environmental information within and around the Cornell community. Other environmental organizations on campus include, but are not limited to, the Compost Club, Cornell Greens, Cornell Laboratory of Ornithology, Earthrise Committee (Ecology House), and Eco-Justice.

For additional information on programs and publications contact:

THE MARIO EINAUDI CENTER FOR INTERNATIONAL STUDIES

170 Uris Hall (255-6370)

The Mario Einaudi Center for International Studies was established in 1961 to encourage, coordinate, and support comparative and interdisciplinary research on international subjects and was named for its founder in 1991. It is one of the largest and most diverse centers in the United States. Currently it oversees six Title VI National Resource Centers (East Asia, Latin American Studies, Slavic and East European Studies Program, South Asia, Southeast Asia, and Western Societies), as well as sixteen topical programs and the university study-abroad program. More than 500 faculty members voluntarily collaborate in the center's programs and well over 300 graduate students are involved directly in its international programs. Undergraduate concentrations in International Relations and Modern European Societies serve 285 students.

Cornell is committed to the application and expansion of its resources to study the global community in all its complexity. These resources include a faculty of preeminent scholars and teachers, excellent research facilities, ability to teach forty-five languages, and a library system with more than 2,500,000 volumes on topics related to international and comparative studies.

As the world changes, Cornell's international programs change to study those developments. In addition to area studies, these programs focus on topics as varied and vital as international marketing, agriculture, nutrition, population, law, planning, politics, rural development economics, and world peace. These areas and topics change as interest, demand, and potential warrant. As one program gains enough momentum and recognition to attract its own resources, the center applies its resources to another pilot activity that brings faculty and students together across customary professional and departmental boundaries.

In addition, the Einaudi Center was recently given responsibility by the university to redesign and expand foreign study options for Cornellians, which has resulted in our Cornell Abroad Program. The center also encourages

international research and travel by graduate students through its annual Travel Grant Program.

Although the center has both an endowment and an appropriation from the university to support interdisciplinary international studies, Cornell monies are only a fraction of the total funds involved in international studies at Cornell. Programs seek funding from foundations, the federal government, alumni, and international agencies, a process that the center assists with as necessary. When particular programs are in a low budget cycle, rather than allowing them to lapse, the center continues to support those that show promise to keep the voluntary faculty groups operating together until new outside funding can be acquired. The center is also responsible for the International Students and Scholars Office.

Jerry Wilcox, director
B50 Caldwell Hall

COGNITIVE STUDIES

273A Uris Hall (255-6431) (cogst@cornell.edu)

Cognitive studies is a rapidly growing field of study that focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspectives—theoretical, experimental, and computational—with the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive studies has drawn primarily from the disciplines of computer science, linguistics, philosophy, and psychology. In the College of Arts and Sciences the field of cognitive studies is primarily represented by faculty in these departments, as well as in mathematics. It is also represented by faculty in the Department of Human Development and Family Studies (College of Human Ecology), in the Section of Neurobiology and

Behavior (Division of Biological Sciences), in the Department of Education (College of Agriculture and Life Sciences), and in the Johnson Graduate School of Management.

Undergraduate Programs

An undergraduate concentration in cognitive studies in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department. For further information on the undergraduate program, see "Cognitive Studies Concentration" in the College of Arts and Sciences section. Contact Sue Wurster: 255-6431 or cogst@cornell.edu.

Graduate Programs

At the graduate level Cornell offers a graduate field minor in cognitive studies. Cornell's unique program of graduate training, which seeks to tailor an optimal program of study and research for each student, fosters interdisciplinary committees. It is the norm for students interested in cognitive studies to combine faculty members from such departments as Philosophy, Computer Science, Modern Languages and Linguistics, or Psychology on common committees. For further information on the graduate Field of Cognitive Studies, contact Barbara Lust, graduate field representative, NG28 Van Rensselaer Hall (telephone: 607/255-0829), or 273A Uris Hall, Office of Cognitive Studies, 255-6431, cogst@cornell.edu.

Courses

Courses from across the university that are relevant to the Cognitive Studies program are listed in this catalog under Arts and Sciences in the section "Special Programs and Interdisciplinary Studies."

CORNELL ABROAD

474 Uris Hall 607/255-6224, fax 607/255-8700,
e-mail: CUAbroad@cornell.edu
WWW home page:
<http://www.einaudi.cornell.edu/cuabroad>

Study abroad is an integral part of a Cornell education. We live in an increasingly global society in which knowledge, resources, and authority transcend national and regional boundaries. To help students develop the knowledge, skills, and attitudes necessary for global citizenship in the twenty-first century, Cornell Abroad offers a broad range of international study opportunities that reflect the fundamental educational goals and objectives of the university. Study abroad is a continuous experience with study on campus, enabling students to make regular progress toward the degree, at a cost that is generally no greater than for study on campus.

Qualified students study abroad through programs administered by Cornell and other American institutions, and by enrolling directly in foreign universities. Among the many study abroad programs available, students select programs with thoughtful planning and apply with the approval of their colleges and faculty advisers. In all cases, students must apply through Cornell Abroad, whose staff services the planning and application process.

LOCATIONS ABROAD

Cornell students majoring in a broad array of fields in all seven undergraduate colleges regularly study in approximately 40 countries. The following list includes those programs chosen most frequently by students with college approval; those locations preceded by an asterisk (*) are programs run directly by Cornell.

AFRICA

Botswana, Cameroon, Kenya: School for International Training;

Ghana: University of Ghana (through the Council of International Educational Exchange, CIEE);

Kenya: East Africa Program (Friends World Program); Kenya Semester Program (St. Lawrence University);

ASIA

China: Peking and Nanjing Universities through CIEE;

Hong Kong: Chinese University of Hong Kong;

Indonesia: Institut Keguruan Dan Ilmu Pendidikan (IKIP) in Malang (CIEE);

Japan: Kyoto Center for Japanese Studies through a Stanford University-led consortium, and various other university programs;

Korea: Yonsei University;

*Nepal: Cornell-Nepal Study Program (Samyukta Adhyayan Karikam Nepal) at Tribhuvan University;

Thailand: Khon Kaen University (CIEE);

Vietnam: University of Hanoi (CIEE)

AUSTRALIA

Australia National University, Canberra; University of Sydney; University of New South Wales, Sydney; University of New England, Armidale; The University of Wollongong; University of Western Australia, Perth; School for International Training.

EUROPE

Denmark: Denmark's International Study Program (DiS);

*France: EDUCO (Cornell and Duke in Paris) at Université de Paris VII, Paris I, Institut d'Études Politiques de Paris (Sciences Po); Critical Students Program at the University of Paris (CIEE);

Germany: spring engineering semester at the Technical University of Hamburg, Harburg; various university-based study abroad programs;

Greece: College Year in Athens;

Ireland: University of Limerick; Trinity College, Dublin;

Italy: Cornell College of Art, Architecture and Planning Program in Rome; Intercollegiate Center for Classical Studies in Rome;

Russia: St. Petersburg University (CIEE);

*Spain: Cornell-Michigan-Penn program at the University of Seville;

Sweden: Agricultural College of Sweden, Uppsala; The Swedish Program at the University of Stockholm;

*Switzerland: Cornell program at the University of Geneva and affiliated institutes;

United Kingdom: University of Bath; University of Birmingham; University of Bristol; Cambridge University; University of East Anglia; University of Edinburgh; University of Glasgow; University of Lancaster; University of Manchester; University of Nottingham; Oxford University; University of Reading; University of St. Andrews; University of Sussex; University of Warwick; University of York; University of London: King's College, University College, Imperial College of Science and Technology, and the London School of Economics and Political Science, School of Oriental and African Studies, School of Slavonic and East European Studies.

Students studying at British universities enjoy admissions, advising, and counseling services, as well as an array of cultural activities provided by the Cornell-Brown-Penn London Centre.

LATIN AMERICA, CENTRAL AMERICA, AND THE CARIBBEAN

Costa Rica: School for Field Study;

Ecuador and Jamaica: Partnership for Service Learning;

Honduras: Escuela Agrícola Panamericana (Zamorano);

Mexico: Instituto Tecnológico y de Estudios Superiores de Monterrey; Universidad de las Americas-Puebla (UDLA); Universidad Iberoamericana;

MIDDLE EAST

Egypt: American University in Cairo;

Israel: Ben-Gurion University; Haifa University; Hebrew University of Jerusalem; Tel Aviv University;

Morocco: School for International Training

Other Locations

Cornell students are not limited to the locations listed above. In recent years, they have also studied in Argentina, Austria, Brazil, Colombia, Czech Republic, Dominican Republic, India, New Zealand, the Philippines, Poland, Puerto Rico, Turkey, Venezuela, and elsewhere.

Who Studies Abroad

Students from all seven undergraduate colleges and from all major fields study abroad; they are generally expected to have a cumulative grade point average of 3.0 or above. More than 500 undergraduates studied abroad last year. Because the colleges usually require that students complete at least sixty hours of undergraduate credit on the Ithaca campus, students who transfer to Cornell as juniors are usually unable to count student abroad credit toward their Cornell degree.

When Students Study Abroad and for How Long

Students may study abroad their sophomore, junior, or senior year. Junior year is the traditional choice, but second semester sophomore year or first semester senior year is increasingly popular. To ensure preparation, it is important to begin planning for

study abroad in the freshman year. Although semester-long programs are usually available, academic year programs are highly recommended, especially for students enrolling in non-English speaking universities.

Application Process

Applications for all study abroad programs—Cornell programs, as well as those administered externally by other institutions in this country and abroad—are available in the Cornell Abroad Office, 474 Uris Hall, where students are encouraged to consult the library of study abroad materials and to ask preliminary questions of the staff. Students meet with the study abroad advisers in their colleges to choose programs that fit the needs of their degree programs. Each applicant completes a one-page written statement of academic purpose outlining goals for study abroad and the program of study that will be followed. Applications are signed by both college study abroad and faculty advisers and are returned to the Cornell Abroad office, with the exception of Human Ecology and Industrial and Labor Relations students whose applications are submitted to their college for forwarding to Cornell Abroad. Cornell Abroad reviews all applications and forwards them to programs and universities as necessary. *All students who wish to receive academic credit for study abroad must apply through Cornell Abroad and their undergraduate college.*

The application *deadline* for study abroad in the spring 1997 semester is October 15, 1996, for all programs *except* Cornell's programs in Nepal, Geneva, Paris, and Seville, for which the *deadline* is November 1. For study abroad at Oxford and Cambridge during the 1997-98 academic year, the deadline is also November 1. For study abroad during the fall 1997 semester and academic year, the deadline for other programs is February 15, with the exception of the Cornell programs, for which the deadline is March 1. Many universities and programs admit on a rolling basis after these dates; for some, earlier application may be advisable. In all cases, it is a good idea to check with Cornell Abroad.

Registration, Credit Transfer, and Grades

Students who apply through Cornell Abroad to programs approved by their colleges, as outlined above, remain registered at Cornell during study abroad. They are eligible for financial aid and receive full academic credit for pre-approved courses of study completed with satisfactory grades. Students enroll for a full load of courses abroad, according to the standards of the foreign institution and normally receive 30 credits per year or 12 to 20 credits per semester. The colleges review coursework taken abroad and make the final decisions concerning credit transfer and distribution. When study abroad credit has been transferred, the *transcript* will indicate the names of the courses taken, the credits earned, and the grades received. *The foreign grades are not translated into the Cornell/American grading system, nor are they averaged into the Cornell grade point average.*

Foreign Language Requirements

Study abroad programs in non-English-speaking countries that offer direct enrollment in universities generally require at least two years, or the equivalent, of college-level

language study. Students should make firm plans for any requisite language courses early in their freshman year. English-language study abroad programs are increasingly available outside universities in non-English-speaking countries—for example, Belgium, Denmark, Egypt, France, Hong Kong, Indonesia, Israel, Italy, Japan, Korea, Netherlands, People's Republic of China, and Sweden. Cornell students who participate in such non-university enrollment programs in a non-English-speaking country with English-language course work are required to take at least one language course as part of their program of study. Students are advised to consult with their college study abroad advisers about relevant language preparation, and students in the College of Arts and Sciences should note that they are required to have studied the host country language, if taught at Cornell, prior to study abroad.

Housing Arrangements

Study abroad programs generally provide housing in the homes of local residents, in university halls of residence, or in rental apartments. Cornell Abroad will advise students of the arrangements that are available and most appropriate to their individual needs.

Costs

Students studying abroad on Cornell programs in Geneva, Nepal, Paris, and Seville in 1996–97 pay a comprehensive fee of \$13,300 per semester, which covers, tuition, housing, orientation, program field trips, and excursions.

Students studying abroad on all other programs in 1996–97 pay the tuitions and other costs charged by their programs, and a Cornell study abroad fee of \$2,990 per semester. The fee covers the direct and indirect costs of study abroad to the university, including financial aid for study abroad students.

Financial Aid

All students who are accepted for study abroad during the academic year or semester, having applied through Cornell Abroad, are eligible for financial aid, consistent with general university policy; this applies to all programs, whether run directly by Cornell or not.

Security Abroad and Related Issues

The decision to study in a particular region of the world must be made by each student and his or her family in light of their own interpretation of current events. The director, associate director, and staff stay in regular contact with representatives abroad and receive information regarding rapidly changing political situations through the U.S. Department of State Office of Citizens Emergency Services and other agencies. As long as the State Department does not restrict travel by U.S. citizens, Cornell Abroad does not recommend limitations on student plans for study abroad. Cornell Abroad will do everything possible to notify students immediately that they should defer plans when official travel restrictions are issued. Nothing is as important as student security and well-being.

Responsibility for a decision to withdraw from a program or return home early rests with the individual and his or her family. There can be no guarantee of credit for students who withdraw from programs sponsored by colleges and universities other than Cornell; they are advised to inquire about those institutions' policies regarding the completion of academic work and the potential financial implications of a premature departure. In the event of a disrupted semester, refunds of tuition and fees, and the appropriate number of credits to be awarded will be reviewed by Cornell and affiliated institutions on a case-by-case basis. Most institutions sponsoring study abroad programs strive to facilitate student completion of academic programs even under unusual circumstance and have tuition refund policies that contain a prorated formula.

Sources of Information and Advice Concerning Study Abroad

Cornell Abroad (474 Uris Hall):

Urban J. DeWinter, adjunct associate professor of romance studies, director; Beatrice B. Szekeley Ph.D., associate director; Elizabeth R. Okihiko, student services; Kathy Lynch, accounts coordinator. The Cornell Abroad library contains an extensive collection of university catalogs, study abroad program brochures, course syllabi and evaluations, books, videotapes, and some information on travel, summer study, and work abroad. In the early weeks of every semester, faculty, students, and staff discuss programs in a series of information meetings that is announced in the Cornell Daily Sun. Please consult our World Wide Web home page through Academic Life on CU Info or at the address given above.

College Study Abroad Advisers

Agriculture and Life Sciences: Bonnie Shelley, assistant director of Counseling and Advising, 140 Roberts Hall; *Architecture, Art, and Planning:* Phyllis Thibodeau, executive assistant (Rome Program), 129 Sibley; *Arts and Sciences:* advising office, 55 Goldwin Smith Hall; *Engineering:* Professor Richard Lance, 322 Thurston Hall; *Hotel Administration:* Professor Russell Bell, 545C Statler Hall; *Human Ecology:* Dr. Mary Rhodes, registrar, N101 Martha Van Rensselaer; *Industrial and Labor Relations:* Laura Lewis, student development specialist, 101 Ives Hall.

CORNELL-IN-WASHINGTON PROGRAM

471 Hollister Hall (255-4090)

Cornell-in-Washington is a program that offers students from all colleges within the university an opportunity to earn full academic credit for a semester of study in Washington, D.C. The aim of the program is to give students a chance to take advantage of the rich resources of the national capital. Washington, as the center of much of the nation's political energy, is an ideal place to study American public policy and the institutions and processes through which it is formulated and implemented. At the same time, Washington's rich collection of libraries, museums, theaters, and art galleries, offers an opportunity to explore American history, literature, art, and the full range of the American humanistic tradition.

The Cornell-in-Washington Program offers two study options: 1) studies in public policy; and 2) studies in the American experience. Students take courses from Cornell faculty, conduct individual research projects, and work as externs in the Washington community.

The program is housed at the Cornell Center, 2148 O Street, NW, Washington, D.C. 20037. The academic and administrative space is located on the first floor; twenty-seven residential units for students and faculty are on the upper floors.

The Cornell-in-Washington program is open to qualified juniors and seniors from all colleges, schools, and divisions of the university. Students enroll in one core course, which involves a major research project often carried out in conjunction with an externship. Students also select one or two other seminars from such fields as government, history, economics, history of art, natural resources, and social policy. All seminars are taught by Cornell faculty and carry appropriate credit toward fulfillment of major, distribution, and other academic requirements. In addition, students work as externs with congressional committee offices, executive-branch agencies, interest groups, arts and research institutions, and other organizations involved in public policy and American culture.

Tuition

Students are registered as full-time students, earn Cornell credit, pay full tuition, and remain eligible for financial aid.

Housing

Apartments are rented at the Cornell Center during the academic year and during the summer. All are fully furnished (except for dishes, cookware, towels and bedding) and reasonably priced by both Washington and Cornell standards. Two students are assigned to each efficiency and three to each one-bedroom apartment. Because of the limited number of spaces and the need for accurate planning, a non-refundable deposit of \$150 is required to reserve a space. Students are discouraged from bringing automobiles. The public transportation system, consisting of both bus and subway service, is extensive and convenient to the Center and street parking is not available.

Applications

Application forms are available from the Cornell-in-Washington office at 471 Hollister Hall. Applications should be submitted the semester prior to participation.

Information

Regular information meetings are held on campus in early October and March. These meetings are advertised in the *Cornell Daily Sun* and on campus bulletin boards. Additional information concerning externships, courses, housing and other features of the program may be obtained at either the Cornell-in-Washington office at 471 Hollister Hall (607) 255-4090, or in Washington at the Cornell Center, 2148 O Street, NW, Washington, DC 20037, (202) 466-2184.

CORNELL INSTITUTE FOR PUBLIC AFFAIRS

473 Hollister Hall (255-8018)

The Cornell Institute for Public Affairs (CIPA) is a university-wide institute that offers a two-year graduate professional program leading to a Master of Public Administration. Its mission is to develop professionals who can be effective, ethical, and creative leaders in government and in the private sector's interface with government.

CIPA emphasizes the interactions between public and private interests for the benefit of all sectors of society. At CIPA, we use Cornell's cutting-edge strengths as a major research university to understand rapidly evolving national interests, technological opportunities, ecological constraints, individual aspirations, and political possibilities. Cornell's extraordinary depth of sectoral resources including but not confined to science and technology; health, education, and social services administration; agricultural policy; nutrition; international development; environmental studies; peace studies; labor relations; city and regional planning; and ethics in public life provide a diverse base for the CIPA Fellows (our students) to pursue the study of public affairs. Thus, CIPA Fellows take courses and work with faculty from all of Cornell's Colleges as well as the Cornell Law School and the Johnson Graduate School of Management.

The CIPA program has been developed to offer both a sound foundation in the principles, tools, and techniques for a career and leadership in public policy either in the public or private sector. CIPA also offers the flexibility to accommodate and encourage the special interests of its students as they enter this new policy and career environment.

The curriculum is structured into three parts: four required core courses taken by all CIPA Fellows; area requirements focused on developing the wide variety of skills necessary for the public policy professional; and sectoral specialties, focused on the particular interest of the Fellow and leading to a thesis.

The Core Courses

These courses have been developed especially for CIPA Fellows to provide a common, hands-on experience in employing the latest analytical techniques to guide the formulation of programs, their supporting institutions, and their effective administration. They will also provide strategies for implementing change in complex heterogeneous societies.

CIPA I: Quantitative Techniques for Policy Analysis and Program Management (CRP 720) This course is designed to give students the basic management tools essential for the contemporary career in public affairs. It includes hands-on practice with formal management techniques, including investment analysis and linear and dynamic programming.

CIPA II: Public Political Economy (ECON 539) Techniques of economic analysis are used to understand the need for various public programs, to estimate the value of new programs and policies, to forge desirable institutional structures for service delivery, and to anticipate and evaluate outcomes.

CIPA III: Administration, Politics, and Public Affairs (GOVT 621) This course is focused on the processes and institutional

context of public affairs and analyzes the political and administrative structure and dynamics of policy development and implementation.

CIPA IV: Social Policy (SOC 526) This course incorporates the study of analytic methods, especially the use of statistics and simulation models, in order to study the structure of public programs and to assess their consequences.

The Area Requirements

In addition to the four core courses, Fellows must also complete satisfactorily a series of foundation subject or area requirements that are essential to the training of public policy professionals. These areas are: methodologies, politics and policy, economics, math and statistics, finance, regulation, ethics, and public law.

The Sectoral Specialty

At least three courses taken by individual Fellows will be in their sectoral specialty or "concentrations." These are widely divergent and depend on the unique interests and background of the individual student.

The CIPA Thesis

Each Fellow must complete a thesis, which applies the conceptual tools, theories, and analytical techniques to a problem in the Fellow's area of sectoral expertise.

Additional Requirements

All M.P.A. candidates must spend four semesters in residence to complete the degree.

Financial Support. As a professional program, the financial aid resources of CIPA are extremely limited. Students of unusual merit and documented need will be considered for support, but CIPA is unable to provide any one student full support. Therefore, applicants are encouraged to explore and exploit all available sources of external funding. Students requesting aid must submit applications by February 15 for consideration.

Application. Applicants are required to submit GRE general test scores. CIPA has a policy of rolling admissions. For an application or more information, contact Cornell Institute for Public Affairs, 473 Hollister Hall (phone: 607-255-8018; fax: 607-255-5240; e-mail: sb27@cornell.edu).

CORNELL PLANTATIONS

One Plantations Road (255-3020)
e-mail: cu_plantations@cornell.edu

A place of exceptional diversity and opportunities, Cornell Plantations comprises the university's botanical garden, arboretum, and natural areas. Its nearly 3,000 acres include the woodlands and gorges bordering campus, as well as specialized gardens and the 100+-acre arboretum that features a field flower meadow and trees and shrubs native to New York State. Cornell Plantations provides unique outdoor laboratories and plant collections for Cornell's academic programs and research in disciplines that include agronomy, biology, ecology and systematics, entomology, floriculture and ornamental horticulture, fruit and vegetable science, geology, landscape architecture, natural resources, plant breeding, and plant pathol-

ogy. While much of Cornell Plantations' resources are on or near campus, several thousand acres in and around Tompkins County preserve quality examples of native vegetation and rare plants and animals. The lands include bogs, fens, glens, swamps, wet and dry forests, vernal ponds, and meadows. Arrangements to use these areas for classes and research can be made by calling Cornell Plantations.

For those seeking less-strenuous experiences, Cornell Plantations offers relaxation, rejuvenation, and inspiration. The vast open spaces provide room to breathe; the intimate gardens shelter you. Visitors always discover surprises and learn something new in the gardens, which feature herbs, flowers, heritage and modern vegetables, international crops, weeds, alpine and rock garden plants, peonies, poisonous plants, groundcovers, rhododendrons, and plants native to the Cayuga Lake Basin.

Students are encouraged to volunteer as photographers, authors, tour guides, and gardeners. Maps, information, publications, and class brochures (for noncredit classes and workshops) are available in the Garden Gift Shop in the Lewis Headquarters Building at the botanical garden. Non-credit courses in horticulture, plant science, geology, free-hand drawing, and other natural history topics are offered throughout the year.

PROGRAM ON ETHICS & PUBLIC LIFE

119 Stimson Hall (255-8515)

The critical issues of public life are inescapably ethical issues. In the economy, we face questions of equity and justice and questions about the relation between prosperity, the environment, and the quality of individual lives. In constitutional law, we confront dilemmas about civil rights, freedom of speech, privacy, and abortion. In politics and government, we wrestle with questions about campaigning, character, and compromise. And in international affairs, we encounter the complexities of war and peace, human rights, multilateral aid, and climate change.

The university-wide Program on Ethics & Public Life (EPL) is Cornell's initiative in the systematic study of the ethical dimension of specific public issues. EPL grew out of a conviction that these questions need something more than abstract philosophical discussion. In addition to the general study of values and principles that goes on in theoretical ethics, universities need to foster ways of thinking about the complex, uncertain, and urgent problems of the real world, ways of thinking that are realistic without sacrificing anything of their ethical character.

EPL does not intend to create either an undergraduate major or a graduate field in Ethics & Public Life. On the contrary, we seek to enhance and facilitate the discussion of ethical issues by students whose central educational interests lie elsewhere, but whose work and lives will nevertheless confront them with dilemmas and responsibilities for which a university education should prepare them. EPL aims, not to create yet another specialized department, but to enrich existing departments with courses that are intellectu-

ally serious and practically fruitful at the same time.

EPL Core Courses

PHIL 247 Ethics and Public Life
 PHIL 294/GOVT 294 Global Thinking
 PHIL 342 Law, Society, and Morality
 PHIL 343 Political Obligation and Civil Disobedience
 GOVT 469/Phil 369 Limiting War: The Morality of Modern State Violence
 GOVT 412 Voting and Political Participation
 GOVT 466/Womns 466/Law 648 Feminism and Gender Discrimination
 GOVT 468/Phil 368 Global Climate and Global Justice
 GOVT 491/691 Normative Elements of International Relations

Related Courses

CEH 356 Economics of Welfare Policy
 CRP 549 Ethics and Practical Judgment in Planning Practice
 ENGR 360/S&TS 360 Engineering Ethics
 ILRHR 366 Women at Work
 ILRCB 401 My Brother's Keeper
 LAW 718 Ethnic Conflict and International Law
 PHIL 246 Ethics and the Environment
 Henry Shue, director, 119 Stimson Hall, 255-8515; Henry Shue, Wyn and William Y. Hutchinson Professor of Ethics & Public Life; Kathryn Abrams, Associate Professor of Ethics & Public Life and Professor of Law.

PROGRAM IN REAL ESTATE

219 West Sibley Hall (255-1748)

The two-year Master of Professional Studies (MPS) degree in Real Estate is an interdisciplinary degree program that combines courses from nearly every college at Cornell University. The degree is designed for aspiring real estate professionals who are in the initial or early stages of their careers. Two entities provide support for the degree program. The *Program in Real Estate* exists at Cornell University to serve as the integrating organizational unit for financial management and administration of academic real estate activities on and off campus. The *Field of Real Estate* is a committee of faculty members from five different colleges (Architecture, Engineering, Hotel, Human Ecology, and Management) that is directly involved in the design and administration of the real estate curriculum.

The professional study of real estate is concerned with the finance, exchange, development, management, marketing, and many other aspects of the real estate business. Real estate professionals also bring an understanding of the long-range social, political, ethical, and environmental implications of decisions about real estate. The 62 credit hours of course work needed to earn the degree provide a comprehensive and lasting foundation for professional careers in real estate.

Core courses in financial management, economics, real estate finance and investment, market analysis, project development, housing economics, regulation, and environmental issues will be required during the first year of study. During the second year, students take additional core courses and elective courses in their areas of concentration. Many concentra-

tion options are possible and may be structured from the hundreds of related courses taught at Cornell University (e.g., an international real estate concentration).

Admissions

Admissions procedures for the MPS (Real Estate) program are supervised by the Graduate School and Real Estate Field. Applicants to the program must have completed a bachelor's degree with a good academic record. They must achieve Graduate Management Admission Test (GMAT) or Graduate Record Examination (GRE) scores that are at the level required in other Cornell graduate professional degree programs; and at least two letters of recommendation from undergraduate college faculty members (and if appropriate, from employers) familiar with the student's academic and professional work must be submitted. There is no work experience requirement for admission. Foreign students, for whom English is a second language, will need to achieve acceptable TOEFL scores.

For more information, contact Professor Robert Abrams, director of the Program in Real Estate (607-255-1748) or Professor Matthew Drennan, director of graduate studies (607-257-7276).

SCIENCE OF EARTH SYSTEMS: AN INTER-COLLEGE PROGRAM

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

A new program, Science of Earth Systems (SES), is now available for students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Engineering. The SES program emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. Within this program, Cornell's strengths across a broad range of earth and environmental sciences have been coalesced to provide students with the tools to engage in what will be the primary challenge of the twenty-first century.

The program described below has been proposed as an inter-college major. Students can currently enter the program as Independent Major in the College of Arts and Sciences, as a General Studies Major in the College of Agriculture and Life Sciences, and in the College of Engineering's College Program.

The SES Curriculum

The SES curriculum emphasizes strong preparation in mathematics, physics, chemistry, and biology during the freshman

and sophomore years. In addition, students take a two-credit SES Colloquium, which is designed to inform students about the field and to provide a sense of community for SES students and faculty from the several colleges. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences.

The SES program provides a strong preparation for graduate school in any one of the Earth systems sciences and related engineering fields, in addition to preparing students for a wide variety of careers in environmental work with the College of Agriculture and Life Sciences B.S. degree. An alternate track could be designed for students who are interested in entering fields such as environmental law and policy with a strong scientific understanding of the environment, or who are interested in teaching.

The requirements for the program are summarized as follows:

1. MATH 191, 192, 293, 294 (or MATH 111, 112, 221, 222);
2. Four courses in chemistry and physics:
 Option A: Three calculus-based physics courses plus one chemistry course (e.g., PHYS 112-213-214 and CHEM 211), or
 Option B: Two calculus-based physics courses plus two chemistry courses (e.g., PHYS 207-208 and CHEM 207-208);
3. Three biology courses: (e.g., BIO G 101/103-102/104 and BIOES 261);
4. Colloquium in the Science of Earth Systems (SES 101 or 102);
5. Four core courses in the Science of Earth Systems (SES 301, 302, 401, and 402);
6. Four intermediate to advanced-level courses approved by the SES Curriculum Committee. These courses should build on the core sequence and include upper-level courses with prerequisites in the basic sciences and mathematics. The selection of these courses can be used to prepare for careers or graduate study in specific environmental science disciplines such as geology, hydrological sciences, biogeochemistry, ecology, oceanography, and atmospheric sciences. Effective combinations of these disciplines are also possible.

SES Course Descriptions

Note: Class meeting times are accurate at the time of publication. If changes are necessary, new information will be provided as soon as possible.

SES 101-102 Science of Earth Systems Colloquium (also ABEN 120-121, GEOL 123-124, and SCAS 101-102)

101, fall; 102, spring. 2 credits each term. S-U grade only. 101 is not prerequisite for 102. One lecture, one recitation. T 1:25. Staff.

Weekly seminars and discussions of current topics in the study of the earth system. Introduces the student to scientific issues relating to understanding our planet and managing the environment. (<http://www.geo.cornell.edu/ses/ses102.html>)

SES 301 Climate Dynamics (enroll in ASTRO 331 or SCAS 331)

Fall. 4 credits. Prerequisite: Math 112 or 192 or equivalent. Lects, M W F 11:15; rec, R 1:25. K. Cook, P. Gierasch.

The purpose of this course is to develop a physical understanding of the climate system. Processes that determine climate and contribute to its change are discussed, including comparisons with the climates of other planets. Applications to problems of climate change and variability include the astronomical theory of ice ages, greenhouse warming, the ozone hole, African drought, and Amazonian deforestation.

SES 302 Evolution of the Earth System (enroll in GEOL 302 or SCAS 332)

Spring. 4 credits. Prerequisites: Math 112 or 192 and Chem 207 or equivalent, or instructor's approval. Lects, M W F 11:15; recitation TBA. B. Isacks, W. White, W. Allmon, K. Cook.

The co-evolution of life and the earth system over three time scales: origin of the earth and life and earth's early history; plate tectonics, continental drift and climate changes during the past billion years; and mountain building, ice ages, and our own emergence during the past ten million years. Introduction to methods of interpreting the paleontological, geochemical, and tectonic information preserved in the rock record. (http://www.geo.cornell.edu/ses/SES_home.html)

SES 401 Biogeochemistry (enroll in GEOL 401 or NTRES 431)

Fall. 4 credits. Prerequisites: college-level biology and chemistry. Lects T R 12:20-2:15. L. Derry and J. Yavitt.

The cycling of elements at the earth's surface through biologically governed processes and fluxes. Topics include weathering and acid-base chemistry, nutrient limitation and recycling in terrestrial and marine systems, anthropogenic pollution, isotopic tracers, and mathematical modeling of element fluxes.

SES 402 Mechanics in the Earth and Environmental Sciences (enroll in ABEN 385)

Spring. 4 credits. Prerequisites: 4 semesters of calculus. Lects, M W F 11:15-12:05; rec, TBA. P. Baveye, J.-Y. Parlange, W. Brutsaert.

The study of the earth and the environment requires an understanding of the physical processes within and at the surface of the earth. This course encourages the students to develop a broad working knowledge of mechanics and its application to the earth and environmental sciences, providing the background necessary to study the professional literature.

Advising

Students will be matched with an SES adviser according to the student's interests and the college in which the student is enrolled. The adviser will assist the student in selecting the four upper-level courses required by the SES Program. Several example curricula have been designed as guides for students in each of the colleges, to demonstrate how the college and SES Program requirements are met.

Entering the SES Program

Transfers into the program during the freshmen and sophomore years will be relatively straightforward for students who have already begun a calculus sequence and

have taken courses in the basic sciences. Other interested students, either junior- or senior-level science and math students or those from other fields, should contact an SES adviser to explore the possibility of entering the SES program.

For more information on the SES program and classes, see the Web page (http://www.geo.cornell.edu/ses/SES_home.html) and contact:

College of Agriculture and Life Sciences:

K. H. Cook (Soil, Crop, and Atmospheric Sciences), R. Howarth (Biological Sciences), J. Parlange (Agricultural and Biological Engineering);

College of Arts and Sciences: P. Gierasch (Astronomy), B. L. Isacks (Geological Sciences);

College of Engineering: W. Brutsaert (Civil and Environmental Engineering), B. L. Isacks (Geological Sciences), M. Kelley (Electrical Engineering), J. Parlange (Agricultural and Biological Engineering).

STATISTICS CENTER

610 Rhodes Hall (255-8066)

The Cornell Statistics Center coordinates university-wide activities in statistics and probability at the graduate and research level. Students interested in graduate study in statistics and probability can apply to the field of statistics or to one of the other graduate fields of study that offer related course work.

Students in the field of statistics plan their graduate program with the assistance of their Special Committee. For detailed information on opportunities for graduate study in statistics and probability, students should contact the director of the Statistics Center, 610 Rhodes Hall.

The many different programs available to graduate students within the field of statistics can be broadly grouped as follows: biometry, biostatistics, economic and social statistics, operations research, probability theory, sampling theory, statistical computing, statistical design, statistical theory, and stochastic processes and their applications.

The following list contains selected courses in statistics and probability of interest to graduate students in the field of statistics.

Economics

- 519 Econometrics I
- 520 Econometrics II
- 619 Advanced Topics in Econometrics I
- 620 Advanced Topics in Econometrics II

Electrical Engineering

- 411 Random Signals
- 468 Communication Systems I
- 561 Error Control Codes
- 562 Fundamental Information Theory
- 563 Communication Networks
- 564 Decision Making and Estimation
- 567 Communication Systems II
- 577 Artificial Neural Networks
- 663 Advanced Topics in Information Theory
- 664 Foundations of Probability

Industrial and Labor Relations

- 310 Design of Sample Surveys
- 312 Applied Regression Methods
- 410 Techniques of Multivariate Analysis
- 411 Statistical Analysis of Qualitative Data
- 510-511 Introductory Statistics for the Social Sciences

- 610 Seminar in Modern Data Analysis
- 611 Statistical Computing
- 612 Statistical Classification Methods
- 613 Bayesian and Conditional Inference
- 614 Structural Equations with Latent Variables
- 711 Sensitivity Analysis in Linear Regression
- 712 Theory of Sampling
- 713 Empirical Processes with a Statistical Application
- 714 Modern Distribution Theory

Mathematics

- 471 Basic Probability
- 472 Statistics
- 571-572 Probability Theory
- 573 Multivariate Analysis
- 574 Mathematical Statistics
- 670 Topics in Statistics

Operations Research

- 561 Queuing Theory and Its Application
- 562 Inventory Theory
- 563 Applied Time Series Analysis
- 575 Experimental Design II
- 577 Quality Control
- 580 Design and Analysis of Simulated Systems
- 630-631 Mathematical Programming I and II
- 650 Applied Stochastic Processes
- 651 Applied Probability
- 662 Advanced Stochastic Processes
- 663 Time-Series Analysis
- 665 Advanced Queuing Theory
- 670 Applied Statistics
- 671 Intermediate Applied Statistics
- 676 Statistical Analysis of Life Data
- 678 Asymptotic Methods in Statistics
- 680 Simulation
- 769 Selected Topics in Applied Probability

Statistics and Biometry

- 408 Theory of Probability
- 409 Theory of Statistics
- 417 Matrix Algebra
- 451 Mathematical Modeling of Populations
- 601-604 Statistical Methods I, II, III, and IV
- 605 Applied Regression Analysis
- 606 Sampling Biological Populations
- 607 Nonparametric and Distribution-Free Statistical Methods
- 642 Advanced Mathematical Population Studies and Modeling
- 651 Mathematical Population Studies and Modeling
- 662 Mathematical Ecology
- 681 Topics in Environmental Statistics
- 697 Special Problems in Statistics and Biometry
- 717 Linear Models
- 718 Variance Components
- 795 Statistical Consulting

PROGRAM IN COMPARATIVE AND ENVIRONMENTAL TOXICOLOGY

213 Rice Hall (255-8008 or 255-2808)

The Cornell Program in Comparative and Environmental Toxicology is a broadly based inter-college program facilitated by the Institute for Comparative and Environmental Toxicology (ICET). ICET serves as a focal point for all research, teaching, and cooperative extension activities in the broad interdisciplinary area of environmental toxicology at Cornell and encourages the development of collaborative programs between faculty members in many university departments.

Graduate Studies

The major in the graduate Field of Environmental Toxicology promotes training leading to the M.S. or Ph.D. degrees. It provides both breadth and depth in environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. Specialization tracks include cellular and biochemical toxicology; nutritional and food toxicology; ecotoxicology and environmental chemistry; and risk assessment, management, and public policy. Research of the faculty associated with the program is focused on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) and with the ecosystems with which these organisms are associated.

Courses

Courses in environmental toxicology are cosponsored by the university academic departments and are open to all graduate students and to those undergraduates who have permission of the instructor. The titles and numbers of these courses are listed below, and details of course content are provided elsewhere in the catalog under the listings of the cosponsoring department. Further information concerning the program and the development of new courses may be obtained through the graduate faculty representative, 213 Rice Hall (telephone: 255-8008).

- Tox 370 Pesticides and the Environment (Entomology 370)
- Tox 437 Oncogenic Cancer Viruses (Biological Sciences 437)
- Tox 528 Pharmacology (Veterinary Medicine 528)
- Tox 607 Ecotoxicology (Natural Resources 607)
- Tox 610 Introductory Chemical and Environmental Toxicology (Food Science 610)
- Tox 611 Molecular Toxicology (Nutritional Sciences 611)
- Tox 621 Clinical Veterinary Toxicology (Veterinary Medicine 621)
- Tox 640 Principles of Toxicological Pathology (Veterinary Medicine 640)
- Tox 660 Safety Evaluation in Public Health (VetPR 660)
- Tox 680 Hazardous Waste Toxicology
- Tox 690 Insect Toxicology and Insecticidal Chemistry (Entomology 690)
- Tox 698 Current Topics in Environmental Toxicology (Nutritional Sciences 700, NatRes 698, Ag & Bio Eng 698)
- Tox 702 Seminar in Toxicology
- Tox 751 Professional Responsibilities of Toxicologists (Biological Sciences 751)
- Tox 899 Master's Thesis and Research
- Tox 999 Doctoral Thesis and Research

VISUAL STUDIES

Studio G, 726 University Ave. (255-6770) or Sb20A Center for Theatre Arts (254-2782)

Visual Studies as a distinct area of intellectual activity comprehends the analysis of visual forms, especially symbolic visual forms, from a range of historical, scientific, sociological, and aesthetic points of view. Images can be analyzed within a variety of contexts and by means of a variety of methods, and their study

is therefore ideally conceived of in transdisciplinary terms. And since the creation of images has an important bearing on their analysis, visual studies concerns itself with practice as well as theory.

In addition to the courses listed below, which represent only a sampling of formal curricular offerings pertinent to visual studies, interested students should note the extensive offerings in Art, Architecture, Communications, Computer Science, History of Art, Design and Environmental Analysis, Theatre Arts, and the annual listings of offerings in the Society for the Humanities. For additional information, contact Marilyn Rivchin (Theatre Arts).

Courses

Some of these courses may not be taught in 1995-96. For information about availability consult the appropriate departmental listings.

- An Introduction to Architecture (Architecture 132)
- Art and Politics in Twentieth-Century Latin America (History 424)
- Art and Visual Thinking (Textiles and Apparel 125)
- Asian American Images on Film (Asian American Studies 435)
- African Cinema (African Studies 435)
- Art, Design, and Visual Thinking (Textiles and Apparel 125)
- Blacks in Communication Media (African Studies 303)
- Chicanos and Film: Representations of La Raza (English 242)
- Color, Form, Space (Art 110)
- Contemporary French Culture Through Film (French 291)
- Computer Art (Art 171)
- Computer Graphics and Visualization (Architecture 374 and Computer Science 417)
- Computer Vision (Electrical Engineering 547)
- Design I and II (Design and Environmental Analysis 101-102)
- Ethics in Media (Communications 426)
- Fiction and Film in France (French Literature 499)
- Film and Performance (Theatre Arts 413)
- Filming Other Cultures (Anthropology 290 and Theatre Arts 290)
- Fundamentals of 16-mm Filmmaking (Theatre Arts 377)
- The Geometry of Tilings, Polyhedra and Structural Engineering (Mathematics 151)
- German Film (German Studies 396 and Theatre Arts 396)
- Graphic Design (Design and Environmental Analysis 349)
- History and Theory of Commercial Narrative Film (Theatre Arts 375)
- History and Theory of Documentary and Experimental Film (Theatre Arts 376)
- The History of the Book (English 450)
- Human Perception (Psychology 342)
- Image Analysis I (Civil and Environmental Engineering 613-614)
- Impact of Communication Technologies (Communication 626)
- The Indian Example and the Visual Tradition in Culture (Architecture 448)
- Interactive Multimedia (Communications 439)
- Introduction to Film Analysis: Meaning and Value (Theatre Arts 274)
- Introduction to Mass Media (Communication 120)
- Introductory Photo I (Art 161 and Architecture 251)

- Japanese and Asian Film (Asian Studies 313 and Theatre Arts 313)
- Latin American and Latino Video (Romance Studies 402 and Theatre Arts 402)
- Literature to Cinema (Italian 390)
- Machine Vision (Computer Science 664)
- The Medieval Illuminated Book (History of Art 337)
- Modern Architecture on Film (Architecture 392)
- Modern Experimental Optics (Physics 330)
- Myth onto Film (Anthropology 653 and Theatre Arts 653)
- Optical Methods of Biologists (Biological Sciences 450)
- Perception (Psychology 205)
- Photo Communication (Communication 234)
- Political Theory and Cinema (German Studies 330 and Theatre Arts 330)
- Psychology of Television (Human Development and Family Studies 461)
- Psychology of Visual Communications (Psychology 347)
- Russian Film of the 1920s and French Film of the 1960s (Theatre Arts 378)
- Scientific Illustration (Freehand Drawing 417)
- Seminar in Museum Issues (History of Art 407)
- Social and Cultural Construction of Printed Pictures (History 381)
- Spanish Film (Spanish 399)
- Special Investigations in Visual Studies (Architecture 458)
- Studies in Film Analysis (English 263)
- Video: Art, Theory, Politics (English 395, Theatre Arts 395)
- Video Communication (Communication 348)
- Visual Anthropology (Anthropology 453)
- Visual Communication (Communication 230)
- Visual Culture and Social Theory (Art History 370, Comp. Lit. 368)
- Visual Ideology (Comp. Lit 660, Theatre Arts 660)
- Visual Perception (Psychology 305)
- The Visual System (Neurobiology and Behavior 326)

Business and Preprofessional Study

UNDERGRADUATE BUSINESS STUDY

Undergraduate preparation for business is found in many schools and colleges at Cornell. Students most frequently take courses in more than one area, as well as in related fields, to construct a program to suit their interests and career objectives. Each of the following areas provides a different focus for application and use of business study and training, and students should consider carefully the implications of each program when making a choice. (Graduate study is available in the Johnson Graduate School of Management as well as in graduate fields following each of the undergraduate options.)

The areas most often pursued include applied economics and business management (College of Agriculture and Life Sciences), economics (College of Arts and Sciences), engineering, hotel administration, consumer economics and housing (College of Human Ecology), industrial and labor relations, and sociology.

Applied economics and business management. This program is designed to prepare students for a career in business or in public service. Emphasis is placed on the application of economic theory and management

principles. Graduates of this program typically choose careers in investment banking or finance or with firms offering opportunities in sales and marketing. Areas of specialization include business management and marketing, farm business management and finance, and food industry management.

Economics. This program provides a broad view of that social science concerned with the description and analysis of the production, distribution, and consumption of goods and services, the understanding of monetary systems, and the comprehension of economic theories and models. It is viewed more often as preprofessional than as training for immediate practice in business or economics.

Engineering. This area provides much of the management personnel of modern industry. Engineers frequently climb the ladders of technological management that lead to more general management responsibilities; more than half of the management-level personnel of major corporations such as General Electric, Xerox, IBM, and Du Pont have engineering degrees. In addition to becoming managers by being effective technical supervisors, many students enter engineering explicitly anticipating graduate business education, judging that an engineering background is particularly appropriate for management in a technology-oriented society.

Hotel administration. The undergraduate program in hotel administration prepares individuals to be mid- to upper-level managers and entrepreneurs for the hospitality industry (lodging, food service, and travel) and allied fields. Instruction is provided in the areas of administration and general management, human-resources management, accounting and financial management, food and beverage management, law, properties management, communication, science and technology, economics, and marketing.

Consumer economics and housing. Study in the department develops an understanding of the market economy from both buyers' and sellers' perspectives. The focus is on the economic behavior and welfare of consumers in the private, public, and mixed sectors of the economy. An understanding of economics, sociology, and government policy provides the basis for an analysis of consumers' rights and responsibilities.

Industrial and labor relations focuses on the interactions among human beings, organizations, and institutions. It encompasses not only the relationships between employer and employee but the political, economic, social, and psychological factors that affect those relationships. It includes the study of the hiring, training, and motivating of individual workers; negotiation and conflict resolution; and the economic and technological changes that affect the jobs that people perform. Finally, it embraces the many regulations and regulatory agencies created by our society to protect and help both employer and employee.

Sociology. The program provides disciplined understanding of society and social issues. The insights and analytical skills you will acquire are applicable to corporate, government, and nonprofit settings, and the department's focus on social organization and institutions will prepare you well for graduate or professional programs in business schools.

(Also see the description of the Society and Economy Concentration in the Department of Sociology section of Arts and Sciences.)

Related Areas

Courses in areas directly related to these business programs are found in many of the university departments. For example, quantitative methods may be studied in the departments of Mathematics and Computer Science, and courses in public administration are found in the departments of Government, and City and Regional Planning. There are additional programs that allow students with an interest in business to focus on a particular geographic area. Examples are the Latin American Studies Program, the South Asia Program, and the Africana Studies and Research Center. Such interdisciplinary programs as the Program on Science, Technology, and Society and the various programs in international agriculture provide additional opportunities for study of interest to business students.

Combined Degree Programs

Because Cornell has the Samuel Curtis Johnson Graduate School of Management, special opportunities exist for highly qualified undergraduates to combine their undergraduate programs with graduate study in that school. Students in the double-registrant program generally receive a bachelor's degree after four years of study and a Master of Business Administration (M.B.A.) degree after the fifth year of study, rather than the usual sixth year. Students in all Cornell undergraduate colleges and schools are eligible to explore this option. There is also a program with the College of Engineering that allows qualified students to earn a B.S., M.B.A., and Master of Engineering degree in six years. Admission to these combined degree programs is limited to particularly promising applicants. Careful planning is required for successful integration of the work in the two schools.

PRELAW STUDY

Law schools do not prescribe any particular prelaw program, nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and there is practically no subject that cannot be considered of value to the lawyer. Therefore, no undergraduate course of study is totally inappropriate. Students contemplating legal careers should be guided by certain principles, however, when selecting college courses.

1. Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.
2. Of first importance to the lawyer is the ability to express thoughts clearly and cogently in both speech and writing. Freshman writing seminars, required of nearly all Cornell freshmen, are designed to develop these skills. English literature and composition, and communication courses, also serve this purpose. Logic and mathematics develop exactness of thought. Also of value are economics, history, government, and sociology,

because of their close relation to law and their influence on its development and ethics, and philosophy, because of the influence of philosophic reasoning on legal reasoning and jurisprudence. Psychology leads to an understanding of human nature and mental behavior. Some knowledge of the principles of accounting and of the sciences such as chemistry, physics, biology, and engineering is recommended and will prove of practical value to the lawyer in general practice in the modern world.

3. Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students' interests; help cultivate a wider appreciation of literature, art, and music; and make better-educated and well-rounded persons.
4. Certain subjects are especially useful in specialized legal careers. For some, a broad scientific background—for example, in agriculture, chemistry, physics, or engineering—when coupled with training in law, may furnish qualifications necessary for specialized work with the government, for counseling certain types of businesses, or for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important goals are to acquire perspective, social awareness, and a critical cast of mind; to develop the ability to think logically and analytically; and to express thoughts clearly and forcefully. These are the crucial tools for a sound legal education and a successful career.

The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the university to be admitted to the Law School. At the time of entry they must have completed 105 of the 120 credits required for the Bachelor of Arts degree, including 92 credits of course work in the College of Arts and Sciences.

It may be possible for exceptionally well-qualified students in other Cornell undergraduate colleges to arrange to enter the Law School after three years. The College of Human Ecology offers a program in which students spend their fourth year at the Law School. In addition, members of the Cornell Law School faculty sometimes offer undergraduate courses such as Nature, Functions, and Limits of Law, which are open to all undergraduates.

PREMEDICAL STUDY

Medical and dental schools, while not requiring or recommending any particular major course of study, do require that a particular selection of undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, physics, and a year of English composition (or a freshman writing seminar). In addition, many medical schools require or recommend mathematics and at least one advanced biological science course, such as

genetics, embryology, histology, or physiology.

There is no major program that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests.

Students are more likely to succeed at, and benefit from, subjects that interest and stimulate them, and there is no evidence that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, successful Cornell applicants to medical and dental schools have come from the Colleges of Arts and Sciences, Agriculture and Life Sciences, Human Ecology, and Engineering. The appropriate choice depends to a great extent on the student's other interests.

Exceptionally qualified students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology may apply for acceptance to the Medical College through a double registration procedure arranged between Cornell University and Cornell University Medical College in New York City. This procedure allows registered students to save one year in pursuit of the bachelor's and M.D. degrees. This is not a traditional "seven year program"; separate application to the Medical College is required. Further information about this procedure is available from the Health Careers Program office at the Career Center, Cornell University, 103 Barnes Hall, Ithaca, New York, 14853-1601.

PREVETERINARY STUDY

There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major area for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below.

Most preveterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to related careers if the student does not go to veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.

The college-level prerequisite courses for admission to the College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the College of Veterinary Medicine at Cornell, may vary at other veterinary colleges.

For information on additional preparation, including work experience and necessary examinations, students should consult the brochure, *Admission to the College of Veterinary Medicine at Cornell*, obtained by writing to the Office of Student Services, College of Veterinary Medicine, Cornell University, C-106 Schurman Hall, Ithaca, New York 14853-6401. Information on the Guaranteed Admissions Program is available from the same address.

Qualified students in the College of Agriculture and Life Sciences may apply for acceptance in a double-registration program

arranged between Cornell University and the College of Veterinary Medicine at Cornell. This program allows registered students to save one year in pursuit of the bachelor's and D.V.M. degrees. Further information about this program is available from the Health Careers Program office at the Career Center, Cornell University, 103 Barnes Hall, Ithaca, New York 14853-1601.

COLLEGE OF AGRICULTURE AND LIFE SCIENCES

ADMINISTRATION

Daryl B. Lund, dean

Brian F. Chabot, associate dean

Rebecca Tseng Smith, assistant dean for public affairs

H. Dean Sutphin, associate dean and director of academic programs

Donald R. Viands, associate director of academic programs

W. Ronnie Coffman, associate dean and director of research

Anthony M. Shelton, associate director of research

William B. Lacy, associate dean and director of cooperative extension

R. David Smith, associate director of cooperative extension

Norman T. Uphoff, director of international agriculture

James E. Haldeman, associate director of international agriculture

Office of Academic Programs Staff

Counseling and advising: Lisa Ryan, Bonnie Shelley

Registrar: Mary Milks, Patricia Austic, Carol Lucas, Leora Tripodi

Admissions: Randy Stewart, Bonnie Comella, Laurie Gillespie, Jody Sanford

Career development: William Alberta, Amy Benedict-Martin, Sheri Mahaney

Minority programs: Catherine Thompson

Department Chairs

Agricultural and biological engineering: M. F. Walter, Riley-Robb Hall

Agricultural, resource, and managerial economics: A. M. Novakovic, Warren Hall

Animal science: H. F. Hintz, Morrison Hall

Communication: C. J. Glynn, Kennedy Hall

Education: D. H. Monk, Kennedy Hall

Entomology: D. A. Rutz, Comstock Hall

Floriculture and ornamental horticulture: G. L. Good, Plant Science Building

Food science: D. Miller, Stocking Hall

Fruit and vegetable science: H. C. Wien, Plant Science Building

Natural resources: D. J. Decker, Fernow Hall

Plant breeding and biometry: E. D. Earle, Emerson Hall

Plant pathology: S. A. Slack, Plant Science Building

Rural sociology: D. L. Brown, Warren Hall

Soil, crop and atmospheric sciences: J. M. Duxbury, Emerson Hall

College Focus

The College of Agriculture and Life Sciences provides educational programs that prepare men and women with technical, management, and leadership skills. The college's programs fall into three major areas:

- Science and technology
- Management
- Communication and education

The college focuses on a broad-based education for its students, and on a problem-solving and basic research program. The program is geared to the discovery and dissemination of knowledge for the purpose of advancing the food system, agriculture, nutrition, biological sciences, environmental quality, and community and rural development throughout New York State, the nation, and the world.

There are six primary areas of focus, developed in response to the needs of society, and representing agriculture and life sciences in their broadest and most dynamic meaning:

- Agriculture (production and marketing)
- Biological Sciences
- Community, Human and Rural Resources
- Environment
- Food and Nutrition
- International

Facilities

The College of Agriculture and Life Sciences is located on the upper campus, up the hill from the central area of Cornell University, on land that was once part of the Ezra Cornell family farm.

Buildings around the area commonly known as the Ag Quad house classrooms, offices, and laboratories. Flanking them are the greenhouses, gardens, and research facilities. Nearby orchards, barns, field plots, forests, and streams extend as far as the Animal Science Teaching Research Center at Harford and the Agricultural Experiment Station at Geneva.

Roberts Hall serves as headquarters for the administrative units, including offices of the deans and directors of academic programs, research, and cooperative extension. Included in the Office of Academic Programs are the director and associate director, the Admissions Office, the Career Development Office, the Office of Counseling and Advising, Office of Minority Programs, and the Registrar.

Mann Library, with its extensive collections of materials in the agricultural and biological sciences, is at the east end of the Ag Quad. The student lounge and service center, known as the Alfalfa Room, and many of the college classrooms are in Warren Hall. Public computer facilities are available in Warren Hall, in Riley-Robb Hall, and in Mann Library.

DEGREE PROGRAMS

The College of Agriculture and Life Sciences offers programs leading to the degrees of Bachelor of Science, Master of Science, and Doctor of Philosophy. Professional degrees include the Master of Professional Studies and the Master of Arts in Teaching. Some registered professional licensing and certification programs are also available.

Each curriculum in the college creditable toward a degree is registered with the New York State Education Board and is linked with the national Higher Education General Information Survey (HEGIS) codes for federal and state reporting.

Graduate Degrees

Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields have primary affiliation in Agriculture and Life Sciences. Current directors of graduate studies are also listed.

Agriculture [M.P.S. (Agr.)], H. D. Sutphin, Roberts Hall

Agricultural and Biological Engineering, J. A. Bartsch, Riley-Robb Hall

Agricultural Economics, R. N. Boisvert, Warren Hall

Animal Breeding, E. J. Pollak, Morrison Hall

Animal Science, R. L. Quaas, Morrison Hall

*Biochemistry, Molecular and Cell Biology; G. W. Feigenson, Biotechnology Building

Biometry, N. S. Altman, Warren Hall

Communication, M. A. Shapiro, Kennedy Hall

Development Sociology, P. McMichael, Warren Hall

*Ecology and Evolutionary Biology, R. B. Root, Corson Hall

Education [also M.A.T.], J. D. Deshler, Kennedy Hall

Entomology, J. G. Scott, Comstock Hall

Environmental Toxicology, A. Yen, Rice Hall

Floriculture and Ornamental Horticulture, N. L. Bassuk, Plant Science Building

Food Science and Technology, J. H. Hotchkiss, Stocking Hall

*Genetics and Development, M. F. Wolfner, Biotechnology Building

International Agriculture and Rural Development [M.P.S. (Agr.)], R. W. Blake, Morrison Hall

International Development, N. T. Uphoff, Caldwell Hall

Landscape Architecture [M.L.A.], L. J. Mirin, W. Sibley Hall

*Microbiology, V. J. Stewart, Wing Hall

Natural Resources, M. E. Krasny, Fernow Hall

*Neurobiology and Behavior, T. Seeley, Seeley Mudd Hall

Nutritional Sciences, G. F. Combs, Jr., Martha Van Rensselaer Hall

*Physiology, J. F. Wootton, Vet Research Tower

*Plant Biology, J. J. Doyle, Mann Library Building

Plant Breeding, J. C. Steffens, Bradfield Hall

Plant Pathology, J. W. Lorbeer, Plant Science Building

Plant Protection [M.P.S. (Agr.)], G. C. Bergstrom, Plant Science Building

Pomology, M. P. Pritts, Plant Science Building

Soil, Crop and Atmospheric Sciences, J. H. Cherney, Emerson Hall

Statistics, M. T. Wells, Caldwell Hall

Vegetable Crops, P. M. Ludford, Plant Science Building

*Zoology, D. M. Noden, Schurman Hall

**Division of Biological Sciences*

Bachelor of Science Degree

Departments in the College of Agriculture and Life Sciences sponsor study for the B.S. degree in sixteen major fields. To qualify for the degree, students must fulfill requirements established by the faculty of the college and administered through the Office of Academic Programs. The following units offer major fields of study for undergraduates. A faculty advising coordinator is listed for each unit. Students should consult with the faculty coordinator regarding requirements and opportunities for concentrations within the major field.

Agricultural and Biological Engineering: K. G. Gebremedhin, 320 Riley-Robb Hall

Agricultural, Resource, and Managerial Economics: R. D. Christy, 203 Warren

Animal Sciences: E. J. Pollak, B-22 Morrison Hall

Atmospheric Sciences: D. S. Wilks, 1113 Bradfield Hall

Biological Sciences, Division of: H. T. Stinson Jr., 200 Stimson Hall; R. M. Sparrow, 216 Stimson

Biometry and Statistics: S. J. Schwager, 339 Warren Hall

Communication: B. O. Earle, 332 Kennedy Hall

Education: D. E. Hedlund, 403 Kennedy Hall

Entomology: S. Via, 4130 Comstock Hall

Floriculture and Ornamental Horticulture: C. F. Gortzig, 23 Plant Science Building

Food Science: J. M. Brown, 101 Stocking Hall

Landscape Architecture: P. J. Trowbridge, 442 Kennedy Hall

Natural Resources: T. J. Fahey, 12 Fernow Hall

Nutrition, Food, and Agriculture: C. A. Bisogni, 334 MVR Hall

Plant Science Units (Plant Biology, Breeding, Pathology/Protection, Pomology, Vegetable Crops): D. R. Viands, 140 Roberts Hall

Rural Sociology: J. D. Francis, 334A Warren Hall

Soil, Crop and Atmospheric Sciences: G. W. Fick, 505 Bradfield Hall

Special Programs in Agriculture and Life Sciences: L. A. Ryan, 140 Roberts Hall

Summary of Basic College Requirements for Graduation

1. Credit Hours

- Minimum: 120
- Minimum with letter grade: 100 (number with S-U grades pro-rated for transfer students)
- Maximum independent study, teaching experience, internships: 15 (pro-rated for transfer students)
- Minimum from College of Agriculture and Life Sciences: 55
- Maximum from endowed colleges without additional charge: 55. Payment must be made for each credit taken in excess of the 55 allowed, whether or not the courses are passed. For the precise fee per credit, students should call the Office of the Bursar.
- Maximum transferred in: 60; minimum at Cornell: 60

Transfer credit will *not* be accepted for the Project Advance Programs. If a student is enrolled in a college/university course, during his/her high school years, transfer credit will be given *only* if certain criteria are met:

- Course must be a standard course taught by a post-secondary institution.
- High school must be a satellite location, one of several options available to *all* students taking the course.
- Course syllabus, text, examinations, and evaluation process must be the same for *all* students at *all* sites.
- Students must be enrolled for college credit and pay college tuition.
- Instructor must be a faculty member (includes adjunct) at the offering college.

If one of these is not met no transfer credit will be given. Written verification may be necessary.

Note: Credits received for physical education and for certain other courses, such as Mathematics 109, Education 005 and LSC courses, do not count toward the 120 hours but are included on the transcript and in the grade-point average.

2. Residence

- Normally, eight full-time semesters
- Seven semesters, if all other degree requirements are met, with a grade-point average of 2.0
- Minimum of 12 credits per semester
- Minimum of two semesters, including the final semester prior to graduation, in the College of Agriculture and Life Sciences (residency in the Internal Transfer Division [ITD] does not count toward residency in the college)
- Students who have completed 8 semesters in residence at Cornell, including two in the college, and who have 8 or fewer credits remaining for graduation may petition for approval to complete this work elsewhere.

3. Physical Education (see note at 1f)

- Completion of university requirement for two terms of work
- Transfer students may be exempt from part or all of the requirement.

Note: Requests for exemption should be made in writing to the University Faculty Committee on Physical Education. Requests for postponement should be referred to Alan Gantert, Teagle Hall (255-4286). Medical postponement requests must go through Gannett Clinic.

4. Grade-Point Average (GPA)

- Cumulative GPA: 1.7 or above must be maintained
- Final semester GPA: 1.7 on a minimum of 12 credits in final term before graduation.

Note: Only grades earned at Cornell and while registered in the college are included.

5. Distribution

The purpose of the distribution requirement is to provide a broad educational background and acquaint students with a broad range of subject matter. Through study of the physical sciences, students develop quantitative and analytic skills based on an understanding of the physical laws governing the universe; through study of the biological sciences, they gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will impact their work and role in society. Through development of written and oral expression skills, students master the essentials of effective communication.

Credits received for independent study, field, teaching, or work experience, and internships cannot be used to fulfill the distribution requirement. Courses judged to be remedial in the discipline such as Education 005, will not be counted.

Group A: Physical Sciences. 9 credits of 100- or 200- level courses, in at least two disciplines, including at least one course in chemistry or physics.

Chemistry
Physics

*Mathematics (excluding Education 005, Mathematics 101 and 109)

Education 115

Soil, Crop and Atmospheric Sciences 131

Biometry

Astronomy

Geology

Statistics

*The college mathematics requirement is described below.

Group B: Biological Sciences. 9 credits, including 6 of introductory biological science.

Biological Sciences (except 152, 160, 200 unless permission of associate director of the division of Biological Sciences is obtained), 202, 205, 206, 208, 209, 301 or 367)

Animal Sciences 100, 221, 300, 301

Entomology 212

Nutritional Sciences 262

Plant Breeding 201, 225

Plant Pathology 309, 401

Group C: Social Sciences and Humanities. 12 credits (6 in each of the following two categories):

Social Sciences. 100- through 400-level courses in the following departments (*excluding* Freshman Seminars):

Anthropology
Archaeology
CEH 110/CEH 111 (cannot receive credit for these courses and Econ 101/Econ 102)

Communication 418, 422
Economics (except Agricultural Economics)

Education 271, 311, 317, 370, 378
Government
HDFS 150 (cannot receive credit for this course and Soc 243)

LA/CRP 261, 360, 363

LA/ARKEO 365

Psychology

S & TS 324, 350, 390, 391, 400, 401, 402, 406, 407, 412, 425, 427, 431, 442, 467, 483

Sociology (including Rural Sociology except RS 100, 175, 318, 442)

Humanities. 100- through 400-level courses in the following departments (*excluding* Freshman Seminars and language courses):

Africana Studies (literature and history)

Asian American Studies

Asian and Near Eastern Studies (history and literature)

Classics

Comparative Literature

English (*literature only*)

French, German, Italian, Russian, and Spanish (*literature only*)

History

History of Art/History of Architecture

LA 282

Music and Theatre Arts (theory, literature, and history only)

Natural Resources 411

Philosophy (also Natural Resources 407)

Religious Studies

Rural Sociology 100, 175, 318, 442

S & TS 205, 206, 233, 250, 281, 282, 286, 292, 358, 360, 381, 384, 389, 433, 444, 447, 472, 481, 490

WOMNS/S&TS 444

Group D: Written and Oral Expression. 9 credits, of which at least 6 must be in written expression, selected from the following:

Freshman Seminars

Communication 201, 350, 352, 360, 363, 365

English 280-281, 288-289, 382-385, 388-389

6. Mathematics

The faculty requires minimum competency in mathematics as a requisite to satisfactory completion of a degree. As a measure of their competency in mathematics, all entering undergraduates, including those presenting advanced placement or transfer credit in college calculus, must take the college's math proficiency test. The test is administered free of charge just prior to registration each semester. No student may repeat the proficiency test. It consists of fifty sample questions from arithmetic, algebra, geometry, trigonometry, and basic calculus.

The score on the math test has two components and will place each student in one of three groups, defined by the score of each component of the math test.

Mathematics requirements for each group

Group I Students in this group are exempt from the math requirement. If further math is needed for the major area of study, they should consider taking calculus (MATH 111 or MATH 191).

Group II Students in this group MUST complete one math course at Cornell usable in Group A. The recommended math course is EDUC 115 or MATH 105. BTRY 101 is also acceptable.

Group III Students in this group must take remedial math and are automatically registered in EDUC 005 and must also complete one math course at Cornell usable in Group A.

Transfer credit for mathematics

Most college-level math courses in a transfer student's record will be transferred (limit 6 hours into Group A of the college distribution), and the student will be held for the results of the math test and must satisfy the college's math requirement.

Students entering with A-P calculus credit will also be held for the results of the math test, and must satisfy the college's math requirement.

7. Faculty Adviser

a. Each student is assigned to a faculty adviser soon after being admitted to the college. The faculty adviser will help the student plan a program of study and enroll in courses appropriate to the degree programs offered by the college.

b. Course enrollment each semester should be planned in consultation with the faculty adviser. Students pre-enroll for courses by computer through CoursEnroll on the Bear Access menu. Pre-enrollment by computer is not valid until the student's individual code is entered. This code, or advisor key, is obtained from the faculty adviser after approval of the choice of courses.

c. All academic plans, such as acceleration and graduate study, should be made in consultation with the student's faculty adviser. Support of the adviser is essential if a student petitions for an exception to any of the requirements of the college.

8. Progress toward the Degree

a. The progress of each student toward meeting the degree requirements is recorded each term in the college registrar's office on a summary of record form.

b. Students who have been in residence for eight semesters and who have met the graduation requirements will be graduated. Students are entitled to attend for the full eight semesters even if they have completed the graduation requirements in fewer semesters, but must notify the College Registrar of their intent prior to the graduation date. A student who wishes to continue study after graduation must apply for admission as a special student.

c. Application to graduate. Students who are planning to graduate must complete an "Application to Graduate" by February 15th (for May graduate) or September 15th (for January graduate). The adviser signs the application after verifying that the requirements of the major have been completed. The college registrar signs it after verifying that the college requirements have been met.

STUDENTS

Undergraduate enrollment is approximately 3,000, with about 56 percent in the upper division. Each year about 850 students are graduated, while 650 freshmen and 250 transfer students are enrolled. Members of the faculty of the college serve as chairs of the Special Committees of about 1,000 graduate students.

Admission

The College Admissions Committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula.

Most students come from New York State, but around 30 percent come from other parts of the United States or abroad. About half of the undergraduates are women. Approximately 18 percent are identified as members of minority ethnic groups.

Transfer Students

Approximately 18 to 20 percent of the ALS undergraduate students are transfers who have taken part of their collegiate work at community colleges, agricultural and technical colleges, or other four-year institutions. Many of them hold an associate degree.

A Cornell student in good standing may apply for intra-university transfer to pursue a course of study unavailable in his or her current college. Guidelines are available in the Admissions Office of the College of Agriculture and Life Sciences, 177 Roberts Hall. The procedure includes filing a transfer request and submitting a letter explaining reasons for making the transfer.

Consideration is given to students who have demonstrated an interest in their intended field of study, by taking appropriate prerequisite courses and courses within this area of study. Academic achievement is also considered. Students are seldom allowed to transfer during their freshman year.

In some cases a student may be referred to the Internal Transfer Division to study for one semester before entering the college. A second semester is considered under unusual circumstances. During this trial semester the student must achieve a predetermined average (usually 2.7) and take approved courses to assure acceptance.

Special Students

A limited number of non-degree candidates who want to take selected courses in the college are admitted each year. Applicants should submit the standard Cornell application, a resume of their work experience and a list of the courses they want to take. For more information, students should contact the Admissions Office, 177 Roberts Hall.

Part-time Students

All students in the College of Agriculture and Life Sciences are expected to be enrolled as full-time students in a registered program of study. Part-time students must register in the Division of Summer Session, Extramural Courses, and Related Programs. The Continuing Education Information Service, B-20 Day Hall, provides information, counseling, and special programs for mature students throughout the university.

Off-Campus Students

Programs in which students study off campus but enroll for Cornell credit include SEA semester, field study in human ecology or industrial and labor relations, Albany programs, Cornell-in-Washington, student teaching, IPM internship, and clinical microbiology internship. Students intending to receive Cornell credit for work done off campus should inform the college registrar at the time of enrolling for courses to ensure that proper registration will occur.

Off-Campus Courses

Students in CALS are to be registered for at least twelve (12) hours of course work each semester. It is expected that students will not be enrolled in course work at another institution while they are enrolled at CALS.

Two exceptions to enrollment elsewhere while being a full time student at Cornell would be the joint enrollment agreements between Cornell and Ithaca College and Wells college. Other exceptions would be reviewed by the Committee on Academic Achievement and Petitions. Students must petition *before* enrolling for a course elsewhere. The committee would approve such petitions only when there are compelling circumstances such as severe scheduling problems or no equivalent course available at Cornell. Enrolling in a course at another college to avoid taking it at Cornell is discouraged.

Leave of Absence

A student considering taking a leave of absence from the university should contact the Counseling and Advising office in the Office of Academic Programs. A petition must be filed when requesting a voluntary leave of a semester or more. Students returning from a voluntary leave of absence do not need to reapply for admission; but students on a restricted leave must request permission from the Committee on Academic Achievement and Petitions. Petitions and information are available from the Counseling and Advising office.

Withdrawal

A student who finds it necessary to leave the university permanently should file a petition for withdrawal. Such petitions are approved if the student is in good standing. Students who have withdrawn and who later decide to return must apply to the Admissions Office.

Graduation

Graduating seniors must complete the "Application to Graduate." They are distributed to those who have completed the degree requirements and have been approved by the college faculty. After the commencement ceremony at Schoellkopf Field,

graduates return to the Ag Quad to obtain their diplomas.

ADVISING AND COUNSELING SERVICES

Faculty members in the College of Agriculture and Life Sciences recognize that students need information and advice to make intelligent decisions while they are in college. They believe that personal contact on a one-to-one basis is an important way to identify individual differences and needs of students. Faculty members believe that they can and should be an important source of information and advice on both academic and personal matters. Thus they consider advising to be an important and integral part of the undergraduate program.

The Counseling and Advising office has overall responsibility for coordinating the college advising and academic counseling program. Each student enrolled in the college is assigned to a faculty adviser in the major field of study for aid in developing a program of study, and peer advisers are available to help with problems of a general nature relating to personal matters and campus life.

Counseling and Advising provides a variety of services for undergraduates in the College of Agriculture and Life Sciences. The staff is available to counsel and advise students with academic, social, and personal concerns. In addition, tutoring is offered, at no charge, by the college's honor society, Ho-Nun-De-Kah. Assistance is also available for students submitting petitions for waiver of college regulations and for students considering study abroad.

The Counseling and Advising office is located at 140 Roberts Hall, and appointments are not necessary. Questions regarding services and college procedures should be directed to the Counseling and Advising staff.

Minority students in the College of Agriculture and Life Sciences receive counseling, tutoring, advising, and referral to agencies that will meet their special needs. The Educational Opportunity Program (EOP) is a state-supported program intended to assist New York State students who meet specific economic and academic criteria set by the State Programs Office and the NYS Board of Regents. Eligible students are accepted during the admissions process. For further information, please contact Catherine Thompson in 140 Roberts Hall.

The Office of Career Development offers a variety of helpful services in a friendly environment to all students and alumni of the college. Career development includes self-awareness and assessment, career exploration, decision making, and job search. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths progress and change.

The Career Library contains an extensive collection of current and useful material, including career information books, extensive internship files, employer directories, and job listings. Alumni Career Link is a database of several hundred college alumni who have offered to help students and alumni with their

career development in a variety of ways. Job search talks on topics such as resume writing, cover letter writing, and interview skills are presented throughout the semester and are available on videotape. An active on-campus recruiting program brings more than 80 employers to campus each year to interview students for full-time and summer jobs.

The office, in conjunction with a network of college faculty members, assists students throughout their undergraduate years and beyond. For further information, students should contact Bill Alberta and the staff in 177 Roberts Hall.

Financial aid is administered through the university office in Day Hall. Endowment funds and annual donations provide supplemental aid for students in the college who are eligible for aid. Information about these college grants is available from the Office of Academic Programs in Roberts Hall, after students have a financial aid package established through the university office in Day Hall. Grants recommended by the college Financial Aid and Scholarship Committee are processed through the university's Office of Financial Aid.

Academic Integrity Policy

The College of Agriculture and Life Sciences faculty, students, and administration support and abide by the university Code of Academic Integrity. Its principle is that absolute integrity is expected of every student in all academic undertakings: students must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity.

The maintenance of an atmosphere of academic honor and the fulfillment of the provisions of the code are the responsibility of the students and the faculty. Therefore, all students and faculty members shall refrain from any action that would violate the basic principles of this code.

- 1) Students assume responsibility for the content and integrity of the work they submit, such as papers, examinations, or reports.
- 2) Students are guilty of violating the code if they
 - knowingly represent the work of others as their own
 - use or obtain unauthorized assistance in any academic work
 - give fraudulent assistance to another student
 - fabricate data in support of laboratory or field work
 - forge a signature to certify completion or approval
 - knowingly deprive other students of library resources, laboratory equipment, computer programs, and similar aids
 - in any other manner violate the principle of absolute integrity
- 3) Faculty members assume responsibility to make clear to students and teaching assistants specific regulations that apply to scholarly work in a discipline.

- 4) Faculty members fulfill their responsibility to
- maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor
 - make clear the conditions under which examinations are to be given
 - make clear the consequences of violating any aspects of the code
 - provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do independently
 - state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline by which students must cite the source of such materials
 - approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course
 - monitor the work and maintain such records as will support the crucial underpinning of all guidelines: the students' submitted work must be their own and no one else's

Cornell's Code of Academic Integrity spells out how individuals who have allegedly violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides for informal resolution of most perceived violations through a primary hearing between the faculty member and the student involved. If necessary, a hearing before a hearing board follows.

The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the director of counseling and advising, who serves as a nonvoting record keeper. Professor D. Grossman is the current chair.

Individuals who observe or are aware of an alleged violation of the code should report the incident to the faculty member in charge of a course or to the chair of the hearing board. General information and details on procedures for suspected violations or hearings are available from the Counseling and Advising office, 140 Roberts Hall.

ACADEMIC POLICIES AND PROCEDURES

Records

The college registrar maintains for each student a complete record of academic achievement. A permanent record card is on file for each matriculated student and is updated whenever new information becomes available. Staff members are available in Roberts Hall to consult with students regarding the assignment of credit toward

meeting distribution and elective requirements and to verify the official summary of record.

The Committee on Academic Achievement and Petitions is a standing committee of six college faculty members and two students. On behalf of the faculty and subject to its review, the committee

- reviews, at the end of each semester and at other times as shall seem appropriate to the committee, the progress of students
- receives and acts upon petitions from individual students asking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee
- acts upon readmission requests from persons whose previous enrollment was terminated by the committee
- notifies the petitioner in writing of the action taken by the committee

Good academic standing means a student is eligible for, or has been allowed to register and enroll in, academic course work for the current semester. Whether an individual student is in good academic standing is determined by the college registrar and the Committee on Academic Achievement and Petitions.

A petition to be exempt from a college academic requirement or regulation may be filed by any student who has grounds for exemption. Forms are available in the Counseling and Advising office, 140 Roberts Hall.

A petition is usually prepared with the assistance of a student's faculty adviser, whose signature is required; it indicates the adviser's awareness of the petition. The adviser's recommendation is helpful to the committee. The committee determines whether there is evidence of mitigating and unforeseen circumstances beyond the control of the student that would warrant an exemption or other action.

Registration Procedures

All students must register with the university and "check-in" with this college at the beginning of each semester. Registration materials are available in 140 Roberts Hall at a time and place announced each term by the Office of the College Registrar.

Course Enrollment Procedures

To enroll in courses, students will receive information from the university registrar; plan a schedule in consultation with their adviser; and pre-enroll by computer, through CoursEnroll in "Just the Facts" on the Bear Access menu. Pre-enrollment is not valid until entering the student's individual code, or adviser key, into the computer. Adviser keys change each semester and are obtained from the adviser.

To enroll in courses that involve independent study, teaching, or research, a student must file an independent study form, available in the college Registrar's Office, 140 Roberts Hall. Students who will be studying off campus or abroad should file the Intent to Study Off Campus form to ensure that proper registration will occur. These forms are available in the Program Office (Cornell Abroad, 474 Uris Hall).

Students may enroll again for a course in which they received a grade of F in a previous semester. Both grades will be recorded and calculated as part of their GPA.

Students must *not* enroll again for a course in which they received an incomplete or NGR. Instead, work for that course should be completed, and the instructor files an incomplete make-up form or manual grade form to assign the grade. An incomplete not made up by the end of two successive semesters of registration reverts to a failure. In the case of a graduating senior, incompletes revert to failures at the time of graduation.

Students enrolled in a two-semester course will receive an R at the end of the first semester and should enroll again for the same course the second semester. The letter grade will be recorded for the second semester when all work for the course is completed. A note on the transcript will explain the two grades for the same course.

A student is held responsible for and receives a grade for those courses in which he or she enrolls unless the student officially changes such enrollment. All changes in courses or credit, grading options, or sections must be made by the student at the Registrar's Office, 140 Roberts Hall, on an official form provided for that purpose.

Add/Drop/Changes are made by filing properly signed forms in the Registrar's Office, 140 Roberts Hall. Approval and signature of the faculty adviser and course instructor are required to add or to drop a course.

Students may add courses and change grading options or credit hours where applicable during the first three weeks of the term and may drop courses until the end of the seventh week.

Students wishing to withdraw from a course after the end of the seventh week must petition to the college Committee on Academic Achievement and Petitions. A form is available in Counseling and Advising, 140 Roberts Hall. Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total work load, and scheduling prior to the end of the seventh week of the semester.

If the petition to drop a course is approved after the end of the seventh week of classes, the course remains on the student's record and a W (for "withdrawal") is recorded on the transcript.

Grade Reports

Grade reports for the fall term are included in spring term check-in materials; grade reports for the spring term are mailed by the Office of the University Registrar to students at their home addresses unless alternative addresses are reported to the college or university registrar by mid-May.

Academic Deficiency Policies

At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persis-

tently fail to attend classes. In case of students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings to students, placing them on probation, suspending them, decreeing that they may not reregister, granting them leaves of absence, and advising them to withdraw.

Specifically, the committee considers as possible cause for action failure to attend and participate in courses on a regular basis or, at the end of any semester, failure to attain one or more of the following:

- semester GPA of at least 1.7
- cumulative GPA of at least 1.7
- satisfactory completion of 12 or more credits per semester
- reasonable progress toward completion of distribution requirements
- appropriate completion of college and university requirements

In general terms, regular participation in course work with academic loads at a level sufficient to assure graduation within eight semesters and grades averaging C- (1.7) or higher are prima facie evidence of satisfactory progress.

HONORS PROGRAM

The Bachelor of Science degree with honors will be conferred upon those students who, in addition to having completed the requirements for the degree of Bachelor of Science, have satisfactorily completed the honors program in their area of major interest and have been recommended for the degree by the honors committee of that area.

An undergraduate wishing to enroll in the honors program must have completed at least 55 credits, at least 30 of the 55 at Cornell. Also, the student must have attained a cumulative grade-point average of at least 3.0 at the time of entry.

Interested students must make written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. An application form is available from the college registrar, 140 Roberts Hall, or from the area committee chair. (Biological sciences students should get applications at 200 Stimson Hall.)

Written approval of the faculty member who will direct the research and of the honors committee in the area is required. After the college registrar verifies the student's grade-point average, the student will be officially enrolled in the honors program.

Academic credit may also be earned by enrolling in an appropriate independent study course. When applying for admission to the program, the student may, if appropriate, submit a budget and a modest request for funds to cover some of the costs the student incurs in doing the research.

The honors committee for each area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.0 will be graduated with honors.

Students in the College of Agriculture and Life Sciences wishing to participate in the honors program must be accepted in one of the program areas approved by the faculty. Students are not eligible for honors by participating in a program offered by another college or administrative unit.

Animal Sciences

Faculty committee: W. B. Currie, chair; Y. R. Boisclair, P. A. Johnson, E. A. Matitashvili

The objective of the animal sciences honors program is to provide outstanding undergraduates with the opportunity to pursue supervised independent research and to develop an awareness of the scientific process. It is expected that the research will require significant effort and creative input by the student in its design and execution and in the reporting of the results.

Those students with majors in animal sciences who are interested in doing an honors project should consult with their faculty advisers early in their junior year. All students are expected to meet the college requirements in qualifying for the program and to complete the following:

- Identify a potential honors project sponsor (i.e., a faculty member working in the animal sciences) and secure that faculty member's commitment to sponsor the student in the honors project. That should be accomplished early in the second semester of the junior year.
- Preregister during the spring semester for AS 496, Animal Sciences Honors Seminar, which is offered in the fall semester.
- Register for AS 499, Undergraduate Research.
- Participate in AS 402, Seminar in Animal Sciences, during the spring semester and report on and discuss the project and results.
- Submit a written thesis to the honors committee by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.
- Meet with the honors committee for a short oral defense of the thesis following a review of the thesis by the student's sponsor and the honors committee.

Details pertaining to the specific requirements of the program can be obtained from the office of the committee chair, 434 Morrison Hall.

Biological Sciences

Students interested in the honors program in the biological sciences should consult with their faculty advisers and with potential faculty research sponsors early in their junior year. See "Independent Research and Honors Program" in the Biological Sciences section of this catalog for complete details. Applications and details pertaining to the program requirements may be obtained from the division's Office for Academic Affairs, 200 Stimson Hall. Information on faculty research activities is available in the Behrman Biology Center, 216 Stimson Hall.

Entomology

Faculty committee: B. L. Peckarsky, chair

An honors program in the area of entomology may be pursued by any qualified student in the College of Agriculture and Life Sciences (see the requirements at the beginning of this section). The student need not be specializing in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for study in a wide array of problems dealing with living systems. Short life cycles, unique physiologies and developmental patterns, and species with easily managed colony requirements and a wide range of behavioral traits provide the raw material for honors study. Cornell's diverse faculty interests and extensive collections and library in entomology are also major assets if a student selects entomology as the area for honors study.

The honors committee requires that an undergraduate who is interested in embarking upon an honors project proceed with the following steps:

- Discuss the matter with his or her academic adviser, preferably in the junior year, so that a research project can be carefully planned. The possibility of conducting some research during the junior year and/or summer should be discussed.
- Discuss the project with an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. (The faculty adviser will be of assistance in determining which faculty entomologist might be the best supervisor, the decision being based primarily on available faculty members' areas of expertise.)
- Prepare a brief, tentative plan for the project for discussion and approval of the honors project supervisor. The plan should include a statement of objects or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.
- Present a completed application to the chair of the entomology honors committee no later than the end of the third week of the first semester of the senior year. Earlier submission is encouraged.
- Submit a brief progress report, approved by the project supervisor, to the entomology honors committee by midterm of the semester in which the student will complete his or her graduation requirements.
- Present a formal seminar reporting the significant findings of the research to the Department of Entomology (preferably as a Jugatae seminar) in the last semester of the senior year.
- Submit two copies of the final project report (honors thesis) to the chair of the entomology area honors committee no later than two weeks before the last day of classes in the semester in which the student anticipates graduation. The thesis will be reviewed by the faculty honors project supervisor and one other referee from the department honors committee. The committee will return the thesis to

the student one week before the last day of classes. If reviewers indicate that changes must be made, the revised thesis should be submitted to the chair no later than the last day of classes.

Natural Resources

Faculty committee: M. E. Krasny, chair; B. A. Knuth, J. P. Lassoie, E. L. Mills

The honors program in natural resources provides an opportunity for undergraduates to pursue supervised independent research in the areas of (1) ecology and management of landscapes; (2) fish and wildlife biology and management; and (3) resource policy, management, and human dimensions. The subject matter and nature of the research experience may be quite varied in this program but require the guidance and supervision of a faculty member with substantial interest and expertise in the subject area chosen.

In addition to meeting requirements of the college, the student is expected to do the following:

- Register for the honors program in the junior year or earlier.
- Select a faculty adviser who will help identify and formulate a research problem.
- Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.
- Describe and summarize the work in the format of a conventional master's thesis or in the form of a scientific paper ready for journal submission. About half of the theses have been published.
- Work closely with at least two faculty or staff members who will agree to serve as readers for the thesis. Provide readers with a copy of the guidelines for evaluation of honors theses, available from the department's honors program committee.
- Take the lead role for meeting each of the above expectations.

Nutritional Sciences

Faculty committee: M. N. Kazarinoff, R. S. Parker

The honors program offers students a research experience structured to give them the opportunity to choose a research project, search the literature relevant to it, plan and execute the research, and write it up in the form of a thesis. As in other types of research available to undergraduates, each student is guided by a faculty mentor. The honors project is designed to be spread over both semesters of the junior and senior years.

Students who consider this option should be aware that it involves a number of deadlines and considerable time commitment. Before signing on for honors they need to consult with their academic advisers to make sure that honors will not interfere with other academic objectives, such as preparation for admission to medical school or making the dean's list. Although honors research credits for spring semester junior year and both semesters senior year are designed LET, individual mentors may choose the R grade for work in progress until the project has been fully

completed. An outline of activities for both years is given below. Letters of invitation are sent to upcoming juniors during the summer.

Junior Year

Fall Semester Course No: NS 398 (1 credit, S-U): Students are oriented to the program, and provided material that summarizes the range of research activities in DNS. Students begin making arrangements with faculty members. When these arrangements have been completed, students will begin a literature search that focuses on their research problems.

Spring Semester Students register for NS 498 (1 credit, section 1). Additional faculty presentations of research opportunities are made and orientation to supportive services available through DNS are made. Placements with faculty mentors should be completed by spring break. Each student may also register under the number NS 499 for a convenient number of credits, to be determined in consultation with the chosen adviser. Work carried out will have two objectives:

1. to become familiar with literature and/or research methods appropriate to the problem for the honors research,
2. to develop a research proposal.

The semester outcome will be written reports/discussions of the method(s) or literature searches and a short research proposal, evaluated by the research adviser.

Senior Year

Fall Semester Students will register under the number NS 499 (2-4 credits, LET, by arrangement with their mentors). They may begin their research earlier than fall, e.g., during the summer, or even earlier, but should be prepared to begin research **early in the fall semester at the latest**. The objective for the semester will be to conclude most of the hands-on research/data acquisition.

Spring Semester Students will again register under course number NS 499 for 2-4 credits LET, by arrangement with their research mentors. Much of the allotted time will be spent on data analysis and on writing the honors thesis.

Several important deadlines should be noted.

1. **Last week in March:** The names of thesis readers** are to be in the hands of the honors committee.
2. **Third to fourth week of April:** A final draft of the thesis is handed to the readers.
3. **First to second week of May:** Scheduled seminars for oral presentations of each student's research.
4. **Last day of classes:** Final form of the thesis is handed to the honors chairman.

To help students meet these deadlines, students register for NS 498 (1 credit, section 2) class sessions will be held before spring break for guidance in thesis writing and/or informal reporting of preliminary data. After spring break the group will meet once or twice (depending on number of students) to practice oral presentations of completed research.

* Grade is determined by each student's mentor.

**Two readers knowledgeable in the area of the student's research topic to be chosen by the honors committee and faculty advisers.

Physical Sciences

Faculty committee: C. E. McCulloch, chair; G. W. Fick, J.-Y. Parlange, S. S. H. Rizvi

The honors program in physical sciences provides outstanding students with an opportunity to do independent research under the supervision of a faculty member in the Departments of Agricultural and Biological Engineering; Soil, Crop, and Atmospheric Sciences; Food Science; or in the Biometrics Unit.

Students must be enrolled in the program for a minimum of two semesters and must also enroll in the appropriate departmental independent study course for a total of at least 6 credits. They must submit a report of their research, usually in the form of a journal article, to the honors committee by the end of classes of the semester in which they expect to graduate.

Details of the program can be obtained from the chair of the physical sciences honors committee.

Plant Sciences

Faculty committee: R. L. Obendorf, chair; L. L. Creasy, A. M. Petrovic, W. A. Sinclair

Students perform independent scientific research under the guidance of faculty members in fields of horticultural, agronomic, and soil sciences; plant biology; plant breeding; and plant pathology. For admission to the program, students must meet college requirements and submit to the Plant Sciences Honors Committee a project proposal (2-3 pages) which includes a title; a brief background to the problem (justification and literature review); a clear statement of objective(s) and hypotheses to be tested; methodology and experimental plan, necessary space, equipment and supplies; and a project budget. The proposal must be accompanied by a letter from the faculty supervisor stating that he or she has approved the project plan and that its completion within the remainder of the student's undergraduate tenure is feasible.

Successful completion of the honors program requires acceptance by the honors committee of two copies of a research report. The report should be written in the format of a research publication in the appropriate scientific field. The acceptable report must have been reviewed and corrected according to recommendations of the research supervisor before the report is submitted to the honors committee. The report must be received by the honors committee at least two weeks before the last day of classes of the semester in which the degree is sought and must be accompanied by a letter from the research supervisor evaluating the research and, if appropriate, recommending graduation with honors.

The honors committee will review the report within one week and may accept it or return it to the student with specific recommendations for revisions. A suitably revised version must be submitted to the committee before the second day of the examination period. When the committee accepts an honors report, the chair will recommend to the Director of Academic Programs and to the College

Registrar that the student be graduated with honors. One copy of the accepted report will be returned to the student with review comments from the committee. The other copy will be shelved in Mann Library.

Social Sciences

Faculty committee: B. V. Lewenstein, chair; K. A. Strike, M. J. Pfeffer, W. H. Lesser

Acceptance into the social sciences honors program of the College of Agriculture and Life Sciences is contingent on meeting all the criteria described above, on information in the student's written application, and on a detailed thesis proposal. The application and proposal are due no later than the third week of the first semester of the senior year. Each student is encouraged to begin working on this proposal with a prospective faculty thesis adviser during the first semester of the junior year. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and his or her faculty adviser. Second, the Honors Committee reviews the proposal to determine whether it is consistent with honors thesis requirements, and to make suggestions for improvement.

The proposal must be 5-10 typed, double-spaced pages in length and include the following sections:

- **Research Topic:** This section should contain a statement of the problem to be studied or the topic of interest. The relevant literature should be briefly reviewed and the background of the problem or topic discussed; a more extensive bibliography should be included.
- **Research Questions/Empirical Hypotheses:** This section should contain specific questions to be answered or hypotheses to be empirically tested via collection of data and some mode of analysis accepted in the social sciences.
- **Research Methods:** This section should contain a discussion of models to be constructed, data collection procedures (including survey instruments or experiments, if appropriate), and methods of analysis.
- **Expected Significance:** What new knowledge or information is likely to be forthcoming and why is it important?

Faculty advisers must be members of the graduate faculty. Exceptions to this rule will be granted for persons with special expertise who are deemed capable of thesis supervision; exceptions will be granted pending petition to the social science honors committee. Students may register for independent study directed by the faculty adviser in conjunction with an honors project.

Honors degrees are awarded upon approval of the honors thesis by the social science honors committee. The research should deal with a substantive issue within one of the fields in the social sciences. Both the results of the research and the methodology (or the argument by which the results were achieved) must be reported. Reviews of the literature, practical conclusions or applications, or broad characterizations of an area of inquiry may constitute part of the research report but are not themselves sufficient to count as research.

Honors theses should be written according to the form of any standard journal within the appropriate fields. Four copies of the thesis must be submitted to the chair of the social science committee no later than three weeks before the last day of classes of the semester for which the degree is sought. A supporting letter from the faculty member supervising the work also must be submitted. Approval of the thesis requires a majority vote of the honors committee.

INTERCOLLEGE PROGRAMS

The College of Agriculture and Life Sciences does not participate in any dual-degree programs. Study for the Bachelor of Science is the only undergraduate degree program offered.

The College of Veterinary Medicine may accept students who are then permitted to double-register in their seventh or eighth semester and complete requirements for the Bachelor of Science degree in the College of Agriculture and Life Sciences. Students should consult with the college registrar, 140 Roberts Hall, to ensure that degree requirements have been fulfilled.

Students who have been offered admission to the S. C. Johnson Graduate School of Management upon completion of the B.S. degree in Agriculture and Life Sciences may take a program of management courses in their senior year if it is approved by their college faculty adviser as part of their undergraduate program. In certain cases an "upset" tuition charge, equal to the endowed undergraduate tuition rate, will be applied for undergraduate statutory college students taking excess credit hours from endowed colleges and schools. Inquiries should be directed to the university bursar.

Students in the Field Program in Agricultural and Biological Engineering are usually enrolled in the College of Agriculture and Life Sciences during the freshman and sophomore years and jointly enrolled in this college and the College of Engineering in the junior and senior years. Students pay the engineering college tuition in the junior year. The curriculum is accredited by the Accreditation Board for Engineering and Technology. The B.S. degree is awarded in cooperation with the College of Engineering.

The Program in Landscape Architecture is cosponsored by the Department of Floriculture and Ornamental Horticulture in the College of Agriculture and Life Sciences and by the College of Architecture, Art, and Planning. The program offers a first professional degree curriculum in landscape architecture at both undergraduate and graduate levels, as well as a graduate second professional degree program.

The Division of Nutritional Sciences is an intercollege unit affiliated with the College of Human Ecology and the College of Agriculture and Life Sciences. The undergraduate nutrition major is based in the College of Human Ecology. Students in Agriculture and Life Sciences may study nutrition in areas such as animal sciences; food-industry management; food science; microbiology; nutrition, food, and agriculture; and fruit or vegetable science. Students may also plan a concentration in biological sciences or a concentration

in general studies in agriculture to include a human nutrition component.

The Department of Science and Technology Studies is an academic unit that engages in teaching and research involving the interactions of science and technology with social and political institutions. The program draws its students, faculty, and research staff from the various divisions of the university, including the College of Agriculture and Life Sciences. It offers an interdisciplinary undergraduate major in Biology and Society. A concentration in general studies in the agriculture major may be planned in consultation with a faculty adviser to include a biology and society component. Further information, including a list of courses, may be obtained from the undergraduate office, 275 Clark Hall.

The American Indian Program (AIP) is a multidisciplinary intercollege program with instructional, research, and extension components. The instructional core consists of courses focusing on American Indian life with emphasis on the Iroquois and other Indians of the Northeast. A description of the program and general information is available from the director of the American Indian Program, Caldwell Hall.

The Comparative and Environmental Toxicology Program is an interdisciplinary intercollege program with research, teaching, and cooperative extension components coordinated by the Institute for Comparative and Environmental Toxicology (ICET). Courses are cosponsored by academic departments in several colleges of the university. A description of the program and general information is available from the director of the program through the ICET office, 16 Fernow Hall.

The Cornell Laboratory of Environmental Applications of Remote Sensing (CLEARS) is an interdisciplinary intercollege center with teaching, research, and extension components affiliated with the College of Agriculture and Life Sciences and the School of Civil and Environmental Engineering. A description of the program and general information is available from the director through the CLEARS office in Hollister Hall.

OFF-CAMPUS STUDY PROGRAMS

Study off campus is of two types: (1) credit may be earned at another institution and transferred to Cornell, or (2) credit may be earned in Cornell courses that require off-campus activity.

An Intent to Study Off Campus form should be filed with the college registrar before leaving campus. Tuition may be reduced. In some cases stipends or cost of living allowances are provided. Students should consult with the Office of Financial Aid if receiving financial aid and clear all accounts with the bursar prior to departure.

Students who plan to enroll in courses at another institution in the United States must petition for a leave of absence. Courses should be selected in consultation with the faculty adviser.

Albany Programs

Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Students receive an intensive orientation to state government and attend a lecture-seminar program composed of three two-credit components and offered by professors-in-residence. An internship experience, supervised by an internship committee, provides up to six academic credits. Independent study and research courses offered by the various departments in ALS and/or courses offered by academic institutions in the Albany areas may be elected.

Three opportunities are available. The Assembly Intern Program provides a placement with a member of staff of the New York State Assembly. The Senate Assistants Program has placements with New York State senators and selected staff. The Albany Semester Program provides experience with a state agency such as the Departments of Environmental Conservation, Education, or Labor.

Applicants are screened by the ALS Internship Committee in the term prior to assignments. Those accepted should plan a program of study in consultation with their faculty adviser. At least twelve credits must be carried to meet the residence requirement. Seniors should note that the last term average must be 1.7 or above.

All interns will audit the orientation sessions and meet participation requirements in at least two of the lecture-seminar sections. The paper required in each section constitutes an independent study project to be directed and evaluated by a Cornell faculty member in an appropriate discipline. Normally a faculty member will not sponsor more than one of the independent study courses for any one student. To receive academic credit for the internship, students enroll in ALS 400, for an S-U grade only.

Information and applications are available in the Career Development Office, 177 Roberts Hall.

Cornell-In-Washington

The Cornell-in-Washington Program offers students from all colleges within the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty, conduct individual research projects, and work as externs. The Cornell-in-Washington Program offers two study options: 1) studies in public policy; and, 2) studies in the American experience. Students take part in a public policy or humanities seminar which requires them to serve as externs in federal agencies, congressional offices, or nongovernmental organizations and to carry out individual research projects under the supervision of Cornell faculty. The required externships and all course enrollments are arranged through, and approved by, the Cornell-in-Washington program. Students in the College of Agriculture and Life Sciences must register for ALS 500 and cannot receive credit for the externship experience alone. For further information, see p. 19 or inquire at 471 Hollister Hall, 255-4090.

SEA Semester

The Sea Education Association is a nonprofit educational institution offering ocean-focused academic programs and the opportunity to live, work, and study at sea. Science, the humanities, and practical seamanship are integrated in small, personal classes. The 17-credit program is twelve weeks in length. Six weeks are spent in Woods Hole, the following six weeks are spent on either one of SEA's two sailing vessels: the R/V Westward, or the R/V Corwith Cramer. For more information, students should contact the Cornell Marine Programs office, G14 Stimson Hall. ALS students should file the intent to study off campus form with the college registrar as early as possible to ensure proper registration and enrollment in courses.

Shoals Marine Laboratory

The Shoals Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on 95-acre Appledore Island off the coast of Portsmouth, New Hampshire, in the Gulf of Maine. SML offers undergraduate, beginning graduate students, and other interested adults a unique opportunity to study marine science in a setting noted for its biota, geology, and history. Please refer to "Courses in Marine Science," under the section on the Division of Biological Sciences, for a list of courses offered.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, 607-255-3717.

Internships

Several departments in the college offer supervised internships for academic credit. Arrangements should be made with the offering department for assignment of a faculty member who will be responsible for placement, for planning the program of work, and for evaluating student performance.

For internships not governed by an established internship course, the student must enroll in a 497 course for the number of credits to be assigned. If the work is done during the summer, the student must enroll in the Cornell summer session for the agreed-upon credits.

In cases where the work is not done at Cornell, the awarding of credits depends upon a prior contractual arrangement between a Cornell professor and the student. Specific terms for receiving credit and a grade should be recorded, using the Independent Study, Research, Teaching, or Internship form, available in the Registrar's Office, 140 Roberts Hall.

A maximum of 15 (pro-rated for transfer students) of the 120 credits required for the degree may be taken in internships, independent study courses, and undergraduate teaching or research. No more than 6 of the 15 credits allowed for independent study may be awarded for internships consisting of off-campus work experiences that do not have the continued presence of a Cornell faculty member. The 6-credit allotment includes transfer credit and credit for internships in other colleges at Cornell. The 6-credit limit does not apply to secondary, postsecondary, and cooperative extension teaching internships in the Department of Education.

The College of Agriculture and Life Sciences does not offer a field study option. In general, a rather narrow view is taken toward awarding academic credit for work experience, "life" experience, or apprenticeships. Credit will only be assigned or accepted in cases where a professor is directly involved in determining both the course content and in evaluating a student's work. The awarding of credit will not be allowed in cases where a student brings to the college or to a professor a description of a past experience and requests credit nor in cases where the student has received financial remuneration.

All students enrolling for an internship must file an Independent Study, Research, Teaching, or Internship form with the Office of the College Registrar. If the study is to take place off campus, the Intent to Study Off Campus form should also be filed with the college registrar.

Overseas Academic Programs

All students planning to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study.

The Cornell Abroad program is open to students in all colleges of the university. Students in the College of Agriculture and Life Sciences should consult with their faculty adviser and the college registrar to ensure that credit received for academic work abroad will meet requirements for graduation. The Counseling and Advising office, 140 Roberts Hall, has information and application forms.

The Swedish exchange program is operated in cooperation with the Agricultural College of Sweden at Uppsala. The ALS student selected to participate in the Swedish exchange spends the junior year at Uppsala. All essential expenses in Sweden, including a living allowance, are provided by a student group there. Round-trip air transportation must be paid by the student. An exchange student from Uppsala spends a year at Cornell, supported by the college and the Cornell student in Sweden. A similar program is operated in cooperation with ITESM in Monterrey, Mexico.

INTERDISCIPLINARY PROGRAMS

American Indian Studies

Jane Mt. Pleasant, director. Core faculty: B. Lambert, D. L. Moore, K. Shanley, D. Usner, R. W. Venables. Associated faculty: D. J. Barr, S. Baugher, C. C. Geisler, D. J. Greenwood, K. Walkingstick

The American Indian Program (AIP) is a multidisciplinary intercollege program consisting of academic, research, extension, and student support components. Course work is intended to enhance students' understanding of the unique heritage of North American Indians and their relationship to other peoples in the United States and Canada. Students are challenged by such topics as the sovereign rights of Indian Nations and the contemporary relevance of Indian attitudes toward the environment. The program's instructional core consists of courses focusing on American Indian life from pre-contact times to the present, and from the

perspectives of Native people as much as possible. Core courses are supplemented by a variety of offerings in several different departments.

Research areas among faculty active in the program include Indian education, social and economic development, agriculture, environmental issues, history, literature and the arts, and cultural preservation. Their research topics, which are highly relevant to Indian communities, will be of interest to Indian and non-Indian graduate students. Extension and outreach efforts within the program seek to develop solutions to problems identified by Indian communities and to facilitate the application of institutional resources, research, and expertise to community needs.

The American Indian Program publishes its own multidisciplinary journal, *Native Americas*, and sponsors conferences, guest lectures, and forums on important local, national, and international issues. Akwe:kon, the American Indian Residence House, offers undergraduate students a living environment that promotes intercultural exchange.

The American Indian Program offers a concentration in American Indian Studies to undergraduate students in conjunction with their major defined elsewhere in the university. The concentration will be earned upon completion of five courses: Rural Sociology 100 (Introduction to American Indian Studies) and Rural Sociology 175 (Issues in Contemporary American Indian Societies), plus three other courses selected from the following course listing (ANTHR 230, ANTHR 665 ENGL 260, ENGL 269, ENGL 278, ENGL 659, ENGL 669, ENGL 687, HIST 209 HIST 276, HIST 277, HIST 370, HIST 429, HIST 624, R SOC 100, R SOC 175, R SOC 318, R SOC 440, R SOC 442), for a total of at least 15 credits. Students choosing a concentration in American Indian Studies should obtain application materials from the AIP office in 300 Caldwell or consult with K. Shanley, associate director of academic development, American Indian Program, 300 Caldwell Hall, 255-8402.

Science of Earth Systems

A new program in the Science of Earth Systems (SES) is now available for students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Engineering. The SES program emphasizes the rigorous, objective study of the Earth system as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. The program, described in more detail in the introductory section of the catalog under, "Interdisciplinary Centers, Programs, and Studies," coalesces Cornell's teaching and research strengths across a broad range of earth and environmental sciences to provide students with a rigorous scientific foundation for the study of our complex, highly interactive earth. The program is being proposed as an inter-college major. At present, students may complete the program as general studies majors or within another compatible field.

The curriculum includes a freshman/sophomore emphasis on strong preparation in mathematics, physics, chemistry, and biology. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences. Students wishing to explore

the new field are encouraged to enroll in the SES Colloquium (register for ABEN 120/121, GEOL 123/124, SCAS 101/102) and one or both of the upper-level core courses offered during the 1996/1997 academic year. These courses are Climate Dynamics (register for SCAS 331, ASTRO 331) and Evolution of the Earth System (register for GEOL 302 or SCAS 332), and Mechanics in the Earth and Environmental Sciences (register for ABEN 385).

A broad range of interdisciplinary tracks is available through course offerings throughout the three colleges. This tracking is accomplished through the selection of courses beyond the core sequence. These courses should build on the core sequence and generally include junior and senior level courses with prerequisites in the basic sciences and mathematics. Effective tracks can be designed to prepare students for careers or graduate study in specific environmental science disciplines including atmospheric sciences, hydrology, biogeochemistry, ecology, oceanography, and geophysics. Meaningful and effective combinations of these disciplines are also possible. The selection of the course sequences must be approved by the SES Coordinating Committee to ensure that depth as well as breadth is attained.

The SES curriculum is described in more detail in the Interdisciplinary Programs section. For more information, contact K. H. Cook in SCAS (255-5123), J. Parlange in ABEN (255-2476), or R. Howarth in BioSci (255-6175).

MAJOR FIELDS OF STUDY

The college curriculum emphasizes the biological and physical sciences and the technology basic to the study of agriculture and life sciences. The sixteen major program areas reflect the departmental academic effort in the college. Faculty curriculum committees in each area identify a sequence of courses appropriate to all students studying in that field. Courses of study are designed to provide systematic development of basic skills and concepts. Opportunity for concentration in an area of particular interest is usually available.

Programs are planned with considerable flexibility, allowing students to prepare for careers, graduate work, professional opportunities, and the responsibilities of educated citizens. Course requirements in each program area are different, but all students must meet minimum distribution requirements of the college.

Agricultural and Biological Engineering

Agricultural and biological engineering is at the focus of three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, air, and energy; and developing engineering systems that monitor, replace, or intervene in the biology of living organisms. The undergraduate Engineering Program in the Department of Agricultural and Biological Engineering has a unique focus on biological systems, including the environment, that is realized through a combination of fundamental engineering sciences, biology, applications

courses, and liberal studies. The program leads to a joint Bachelor of Science degree from the Colleges of Engineering and Agriculture and Life Sciences, and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET).

Three concentrations in agricultural and biological engineering are offered: environmental systems engineering, biological engineering, and agricultural engineering. All of these students take courses in mathematics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, materials, and transport processes), engineering applications, and design. Students select application courses in the department in areas that include bioprocessing, soil and water management, bioenvironmental and facilities engineering, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students select other courses in the College of Engineering that reflect their concentration, such as environmental engineering or biomedical engineering. Students planning for medical school also take organic chemistry. Throughout the curriculum, emphasis is placed on communications and teamwork skills. **Specific course requirements and other information for the Agricultural and Biological Engineering (joint program) are in the section of the College of Engineering in this same publication.**

The department also offers two technology programs: environmental systems technology and agricultural systems technology. The two technology programs emphasize applied and technical aspects of agricultural, biological, and environmental sciences. These programs incorporate courses in basic biological and physical sciences and mathematics as well as engineering and technology, agriculture, business, social sciences, and liberal studies. The student develops his or her own program of advanced and elective courses in consultation with a faculty adviser, and may have an informal minor in an area such as communication, business, education, or international agriculture.

Many undergraduate students participate in teaching assistantships, research assistantships, design teams, Engineering Coop, and study abroad. Students should have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities cover the spectrum of private industry, public agencies, educational institutions, and graduate programs in engineering, science, medicine, law, and other fields. In recent years graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management consulting, and international agriculture.

The living world is all around us, and within us. The biological revolution of this century has given rise to a growing demand for engineers who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, and who appreciate the challenges facing society. Agricultural and biological engineering is training the next generation of engineers to meet these challenges. The

department is located in Riley-Robb Hall and operates specialized facilities that are among the largest and most complete of their kind in the world.

Specific course distribution requirements for the academic programs in environmental systems technology and agricultural systems technology include (for the joint program, see the College of Engineering section):

A. Basic Subjects	Credits
1. Calculus	8
2. Chemistry	6
3. Physics	8
4. Introductory biological science	6
5. Computer applications	4
6. Statistics or probability	3
7. Economics	3
8. Oral communication	3
B. Advanced and Applied Subjects	
1. Five courses in the agricultural, biological, or environmental sciences	15
2. Five engineering courses at the 300 level or above; at least 9 credits in agricultural and biological engineering	15
C. Electives	
Additional courses to complete college requirements	
D. Total (minimum)	120

For further details on the agricultural and biological engineering and technology programs, see the department's undergraduate programs publication, available at 207 Riley-Robb Hall, or contact the field's coordinator of instruction Professor Kifle Gebremedhin for the programs, at 255-2499.

Animal Sciences

The animal sciences program area offers a coordinated group of courses dealing with the principles of animal breeding, nutrition, physiology, management, and growth biology. Emphasis in subject matter is directed toward domestic animal species, dairy and beef cattle, horses, poultry, pigs, and sheep, while laboratory, companion, and exotic animal species are also included in research and teaching programs. The Animal Science department has extensive facilities for animal production and well-equipped laboratories and classrooms, including a teaching barn, in which students can gain practical experience in the care and management of large animals at a campus location.

The program focuses on the application of science to the efficient production of animals for food, fiber, and pleasure and easily accommodates a variety of interests and goals. Beyond a core of basic courses (suggested minimum, 12 credits) students select production and advanced courses to fulfill an individually tailored program worked out in consultation with their advisers. In this way it is possible to concentrate by species as well as by subject matter (nutrition, physiology, growth biology, breeding, management). For each subject area, supporting courses in other departments are readily available and strongly encouraged. Many science-oriented students elect a program emphasizing supportive

preparation in the physical and biological sciences appropriate to graduate, veterinary, or professional study following graduation. Dairy management is a popular program among students who may be preparing to manage a dairy farm or enter a related career. Other students may elect a program oriented toward economics and business in preparation for a career in the poultry, dairy, meat-animal, horse, feed, or meats industry. These are examples of the flexibility of programs that can be developed to meet a student's career interest related to animals.

It is recommended that students obtain appropriate fieldwork or animal experience during summers. Several special training opportunities exist for highly motivated students. Upperclass students whose academic records warrant it may, by arrangement with individual faculty members, engage in research (either for credit or for Honors) or assist with teaching (for credit). The Dairy Management Fellows program and the Livestock Fellows program offer an equally challenging but different type of experience for a highly select group of students.

Applied Economics and Business Management

The undergraduate program in applied economics and business management is based in the Department of Agricultural, Resource, and Managerial Economics. Courses in agricultural, resource, and managerial economics are supplemented with others in related areas such as computer science, economics, sociology, history, government, industrial and labor relations, hotel administration, consumer economics, animal sciences, plant sciences, natural resources, mathematics, and statistics.

Six areas of specialization are offered:

Agribusiness management is designed for students who have a special interest in the economics and management of businesses that provide services for the agricultural sector of the economy.

Agricultural and applied economics provides a general program in the economics of the agricultural sector and of resource use. It is an appropriate major for those students who (1) are interested in applied economics; (2) want to survey offerings in agricultural, resource, and managerial economics, such as management, marketing, economic development, policy, and environmental and resource economics; and (3) want to prepare for graduate work in agricultural economics. It is an appropriate option for those interested in the application of the principles of economics to problems in both the public and private sector.

Business management and marketing applies the principles of economics and the tools of management to prepare students for careers in business. Special emphasis is given to developing decision-making skills and to the study of the structure and practices of business institutions. Market analysis, sales, banking, merchandising, production management, and general business management are careers for which students may prepare.

Environmental and resource economics provides training for students interested in applying economic concepts to problems of the environment and resource use. A good option for those wishing to take positions as

analysts with agencies that have environmental responsibility or facing environmental regulations.

Farm business management and finance is intended for students with farm experience who are interested in farming or in preparing for work in farm management or farm finance, in such positions as Agricultural Lenders, Extensions Specialists, or Consultants.

Food-industry management is designed for students interested in management or sales positions with the processing, manufacturing, or distribution segments of the food industry.

All of these areas of specialization can provide a strong foundation for graduate work. In planning a course schedule, students must work closely with their faculty adviser. Each area of specialization has its own unique set of required and recommended courses, yet all the areas have enough flexibility to satisfy the interests and abilities of each individual student.

Biological Sciences

Biology is a popular subject at many universities for a variety of reasons: It is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences at Cornell is offered by the Division of Biological Sciences to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Student services in the division's Office for Academic Affairs and the Behrman Biology Center are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include animal physiology; biochemistry; cell biology; ecology and evolutionary biology; general biology; genetics and development; microbiology; neurobiology and behavior; and plant biology. A special program of study is available for qualified students with an interest in nutrition. Students interested in the marine sciences may consult the Cornell Marine Programs Office (G14 Stimson Hall, 255-3717) for academic advice and career counseling. For more details about the biology curriculum see the section in this catalog on the Division of Biological Sciences.

Biometry and Statistics

Biometry is the application of mathematical and statistical techniques to the life sciences. Statistics is concerned with quantitative aspects of scientific investigation: design, measurement, summarization of data, and drawing conclusions based on probability statements. Students with ability in mathematics and an interest in its applications will find this a rewarding and challenging major.

The work of a statistician or biometrician can encompass research, teaching, consulting, and computing in almost any mix and in a wide

variety of applications. Opportunities for employment are abundant in universities, government, and businesses ranging from large corporations to small consulting firms; salaries are usually excellent.

While satisfying course requirements for a major in biometry and statistics, students can also take a wide variety of courses in other disciplines. In fact, students are encouraged to take courses in applied disciplines such as agriculture, biology, economics, and the social sciences that involve numerical data and their interpretation.

Students majoring in this area are required to take at least two computer science courses (e.g., Computer Science 100 and 211), mathematics courses (at least three semesters of calculus), and Biometry and Statistics 101, 102, 200, 215, 408-409, 417, 601-602, and 607, and Industrial and Labor Relations 310. Experience gained through summer employment or work as an undergraduate teaching assistant is highly recommended. Students should contact Steven J. Schwager for information.

Communication

A generation ago, college graduates were thought to be equipped with the knowledge and skills needed to carry them through their entire career. Today we know that the single most important thing we can prepare you for is change.

Upon graduation you will face a world vastly different from the world you lived in when you entered Cornell. The public understanding of our most basic and essential processes such as the production of food and fiber and the development and protection of a sustainable environment becomes more difficult each day. The amount of information we receive and are expected to understand is increasing exponentially.

The public also has become more and more distrustful of science, technology, corporations, and policy makers. It's clear that communication is taking a more central role in all of these areas. Increasingly, government, industry, and special interest groups are relying upon communication specialists to aid in managing information—collecting, sorting, interpreting or reinterpreting, summarizing, and making information accessible to the general public, to special groups, and to decision-makers in organizations. Effective information management requires a thorough understanding of the communication process. Students need to understand that "what we know" is partially determined by "how we found out."

When you graduate from our department, you will have polished the basic communication skills of speaking, writing, and listening. Additionally, you will be prepared for dealing with the changing public climate in many other ways. You will come to understand and be able to communicate, analyze, and synthesize information about the growing complexities of science, agriculture, the environment and health, and public policy.

As a communication major you also will learn about:

- communication processes, such as how communication influences attitudes, opinions, and behaviors

- how communication systems work in our society and in others
- how to apply this understanding of communication to solving problems in government, industry, and education

The communication major is a program with a strong core of contemporary communication knowledge, theory, and practice. Core courses are taken in the freshman and sophomore years (8 courses) and are followed by courses in one or more of the four focus areas of the department. The series of freshman required courses include:

Comm 120	Contemporary Mass Communication
Comm 116	Communication in Social Relationships
Comm 117	Writing about Communication
Comm 121	Investigating Communication

This series of courses will provide you with a basic understanding of communication and the communication process. The courses also provide a unique opportunity to link practical application (such as writing and critical thinking) with up-to-date research and knowledge about communication.

During the sophomore year communication majors will take:

Comm 201	Oral Communication
Comm 230	Visual Communication
Comm 253	Information Gathering and Writing
Comm 282	Applying Communication Knowledge and Methods

After completion of the 8 courses in the core curriculum, you can choose to concentrate your study in one of four focus areas:

- Communication in the Life Sciences. (Studies of the impact of communication on environmental, health, science and agricultural issues, as well as public perceptions of risk.)
- Communication Systems and Technology. (Principles of how we use communication technologies and how we are influenced by these technologies.)
- Communication Planning and Evaluation. (Development of communication plans to solve problems for individuals or for organizations and learning how to evaluate the success of these plans.)
- Communication as a Social Science. (Study of communication research and methods with emphasis on communication as a new social science discipline.)

The department requires that all majors take a 3-credit course in one of the focus areas and an additional 15 credits. Further information on the distribution of these 15 credits will be provided to students in fall 1996.

In designing the communication major, the faculty of the department has kept in mind the necessity for students to understand contemporary research-based knowledge about communication as well as their need to be competent communicators in the workplace and within society at large. Both are critical to successful careers and enlightened citizenship in the 21st century. For students who have specific careers in mind, the department will

have available "pathways," which advisers and students will use to identify courses within and outside the department. The pathways will help guide students toward selected communication careers.

Education

The focus in the Department of Education is on how teaching and learning take place in school and nonschool settings, as well as on the role of education in our society. Students study concepts and develop competencies necessary to analyze educational situations critically and to plan, implement, and evaluate educational programs. Students in the program area take a core curriculum:

- A course in general psychology (e.g., Psychology 101)
- A course in educational psychology (e.g., Education 311, 317)
- A course in the social and philosophical foundations of education (e.g., Education 271, 370, 378, 472)
- A field experience (e.g., Education 420, 430, 498)

Three specializations and two teacher certification programs are available at the undergraduate level.

Agricultural, extension, and adult education. Agricultural, extension, and adult education is a program that combines preparation in both the agricultural and social sciences. The program prepares students for teaching careers in agriculture/biotechnology in public schools, Cooperative Extension and extension and adult programs of agricultural businesses, government agencies, and a variety of private and not-for-profit organizations. Students take a college program that includes a balance of courses in education as well as courses in a technical area of agriculture/biotechnology, community/economic development, natural resources, human ecology, or communication. Education courses in issues in education, teaching and learning, methodology, and instructional applications of microcomputers prepare students to succeed as educators in a broad range of careers. Courses are selected to develop professional leadership and teaching competence. Students may elect to focus their study on one or more of these areas: agricultural education, extension education, or adult education. As an alternative, students may elect to major in one of the college's technical departments and co-advise to prepare in one or more of the three areas of agricultural, extension, and adult education. Further information is available from the agricultural extension and adult education coordinator, Kennedy Hall (Tel: 607-255-2198).

Educational psychology. Studies in educational psychology have traditionally focused on teaching and learning in schools. Yet schools are only one location in which learning and teaching take place. An undergraduate emphasis in educational psychology at Cornell applies principles of teaching and learning to educational enterprises, broadly defined.

While graduate study is required for many careers in psychology, an undergraduate emphasis in educational psychology provides excellent preparation for graduate work or for many post-baccalaureate positions. Educa-

tional psychologists develop and/or supervise training programs in business, industry, the military, and government; design and evaluate curriculum and instructional materials for publishers; develop tests for educational and professional associations; evaluate social programs; work in human resource management; and conduct applied research for educational research organizations.

Students interested in concentrating their studies in educational psychology complete a total of 21 hours in educational psychology and related courses. Working with a faculty adviser a student may design a program in one of a variety of applied areas: Instructional Systems Design and Development; Human Relations; Measurement and Evaluation; Individual and Social Development; or the Educational Psychology of Human Development.

Students interested in careers in educational psychology should apply for admission to the Education Department. For more information regarding a concentration in educational psychology, contact: Coordinator, Educational Psychology Program, Education Department, Kennedy Hall.

General education. The concentration in General Education provides a solid background in the foundations of education and the opportunity to explore more specialized areas. Students can prepare themselves for graduate programs in areas such as: environmental education; research methods; extension, adult, and continuing education; and the social/economic/legal/philosophical foundations of education. This concentration is appropriate for a variety of careers in nonformal educational settings, human resources, and youth work. Further information is available from the undergraduate coordinator, Kennedy Hall.

Teacher Certification

Teacher education in agriculture. Students completing the Cornell registered program earn grade 7-12 certification to teach agricultural subjects (animal science, plant science, mechanical science, environmental science, and business management), introduction to occupations, occupational science, and occupational mathematics; and the introduction to technology course required for all 7-8th grade students.

A passing grade on the National Teacher Examination (NTE) or Liberal Arts and Science test (LAST); and one year of agricultural work experience are required. Provisional (initial) certification is valid for five years. A master's degree required for permanent certification is offered through graduate study at Cornell.

Students may also be certified to teach selected science subjects (e.g., biology, earth science, and general science) and work as a diversified cooperative education work experience coordinator through direct application to the State Education Department. For more information contact the program coordinator at (607) 255-2198.

Teacher Education in Science and Mathematics. Students at Cornell may pursue teaching credentials in biology, chemistry, earth science, general science, mathematics, and physics. Teacher Education in Science and Mathematics (TESM) is a university program jointly conducted by the departments of Education and Mathematics.

TESM students who begin the program as juniors or seniors complete their undergraduate major and five education courses. TESM students come from a number of different majors offered at Cornell, including Animal Science, Biometry and Statistics, and Engineering. In a fifth year of study, TESM students do student teaching and take additional science and/or mathematics courses. Students earn the Master of Arts in teaching degree for this graduate study. Students who complete the TESM program and pass the required New York State tests are eligible for provisional certification in New York State. The masters degree is required for permanent certification in New York State. Students can also begin the TESM program at the graduate level.

For more information, contact the TESM Student Support Specialist at (607) 255-9255 or the program coordinator, D. J. Trumbull (607) 255-3108.

Entomology

The entomology curriculum provides students with a basic background in biological and environmental sciences, with a special emphasis in the study of insects. Majors may pursue graduate studies in entomology or related sciences upon completion of the B.S. degree. Alternatively, students may immediately begin careers in various aspects of integrated pest management. Because of this diversity of career options, the major includes a common core of requirements allowing flexibility in electives selected by students in consultation with their advisers.

Specific Requirements

Basic Sciences

College mathematics, including a course in calculus
A year of physics
Chemistry 103-104 or 207-208
Chemistry 253 (organic)

General Biology

Introductory Biology
Biological Sciences 281, Genetics, or Plant Breeding 225, Plant Genetics
A choice of one: Biological Sciences 261, Principles of Ecology **or**
Biological Sciences 330 or 331, Principles of Biochemistry **or**
Biological Sciences 378, Evolutionary Biology

Entomology

Entomology 212, Insect Biology
Entomology 322, Insect Morphology
Entomology 331, Introductory Insect Systematics
Entomology 483, Insect Physiology

It is strongly recommended that students who wish to undertake graduate training in entomology include course work beyond the minimum in their program, including enrollment in more than one of the general biology courses; i.e., ecology, biochemistry, and evolutionary biology. Students interested in pest management may include courses such as Entomology 241, Applied Entomology, Entomology/Plant Pathology 444, Integrated Pest Management, or other appropriate specialized courses.

Food Science

The mission of the Food Science Program is to educate students for careers in food science

and technology. Graduates are prepared for entry level positions in industry, government, and research organizations or for advanced study in food science and related disciplines. Food scientists qualify for satisfying careers which focus on ensuring the sustainable availability of a safe, nutritious, affordable, and high quality food supply for people throughout New York State, the nation, and the world.

Students choose one of five specialization options: 1) Basic Food Science, 2) Food Engineering, 3) Food Processing, 4) Food Industry Operations and Management, 5) International Food Development. The first three options meet minimum curriculum standards set by the Institute of Food Technologists, the premier professional society for food scientists. Students choose an option based on individual interests and career goals. The choice should be made as early as possible.

The first two years of the program are focused on establishing a solid background in the physical and biological sciences, math, and communication. Required courses include chemistry (intro and organic), biology, microbiology, calculus, physics, freshman seminar, food science, and nutrition. The second two years emphasize the application of basic science and technology to the processing, storage, distribution, marketing, and final preparation of foods. Required courses include Food Engineering Principles, Unit Operations in Food Manufacturing, Food Safety Assurance, Food Chemistry, Sensory Evaluation of Foods, Food Microbiology, and statistics. Students choose electives to satisfy college distribution requirements and individual interests.

Students are strongly encouraged to participate in research supervised by a faculty member and/or to work as an intern in a food company during summers. Most faculty in the department have active research programs and welcome participation by undergraduate students. Students may receive academic credit or wages for undergraduate research on campus. Many food companies recruit on campus for their summer internship programs. These internships are excellent opportunities for students to gain experience and establish contacts for future employment.

A state-of-the-art food processing and development laboratory, a full-scale dairy plant, and extensive laboratory facilities are available on campus for training, research, and employment.

Landscape Architecture Program

The Landscape Architecture Program focuses on the art of landscape design as an expression of cultural values combined with natural processes of the ambient environment. The program's unique place within the university promotes interaction among the areas of horticulture, architecture, and city and regional planning. The program is co-sponsored by the colleges of Agriculture and Life Sciences and Architecture, Art, and Planning.

The program offers a course of study that prepares students intellectually, technically, artistically, and ethically for the practice of landscape architecture. The curriculum focuses on graphic communication, basic and advanced design methods, landscape history, plant materials, construction technology,

theory, and professional practice. Design studios deal with the integration of cultural and natural systems requirements as applied to specific sites at varying scales. Projects range from urban design and housing to parks and garden design.

The Landscape Architecture Program offers two professional degree alternatives: a four-year Bachelor of Science degree administered through the College of Agriculture and Life Sciences; a three-year Master of Landscape Architecture degree administered through the Graduate School for those who have a four-year undergraduate degree in another field. Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects.

The program also offers a two-year Master of Landscape Architecture Advanced Degree Program administered through the Graduate School, for those with accredited degrees in Landscape Architecture or Architecture. The two-year program entails developing concentrations in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape + art, or urban design.

In addition, an undergraduate concentration in the American Cultural Landscape is available for nonmajors.

Dual Degree Options

Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Study Abroad

The faculty encourages study abroad and has two formally structured programs. The *Denmark International Study* (DIS) program is available primarily to senior undergraduates in the fall semester and is administered through Cornell Abroad. The *Rome Program* is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

Bachelor of Science Landscape Architecture Degree Sequence:

First Year

<i>Fall Term</i>	<i>Credits</i>
*LA 141, Grounding in Landscape Architecture	4
†Biological sciences elective	3
†Physical sciences elective	3
†Social sciences or humanities elective	3
†Written or oral expression elective	3
	<hr/> 16

Spring Term

*LA 142, Grounding in Landscape Architecture	4
†Biological sciences elective	3
†Social sciences or humanities elective	3
†Written or oral expression elective	3
‡Free elective	2
	<hr/> 15

Second Year

Fall Term

*LA 480, Principles of Spatial Design and Aesthetics	3
*LA 201, Medium of the Landscape	6
††Free elective	3
*HORT 335, Woody Plant Materials for Landscape Use	3
	<hr/> 15

Spring Term

*LA 202, Medium of the Landscape	6
*LA 315, Site Engineering I (1st 7 weeks)	2
*LANAR 524, History of European Landscape Architecture	3
†Written or oral expression elective	3
†Physical sciences elective	3
	<hr/> 17

Third Year

Fall Term

*LA 301, Integration of Realities	6

Master of Landscape Architecture

Advanced Degree Program. The two-year Master of Landscape Architecture (M.L.A./A.D.) program serves to broaden and enrich undergraduate education in design by providing an expanded educational experience to those who are technically skilled. Applicants are therefore expected to hold a Bachelor's Degree in Landscape Architecture or Architecture from an accredited program.

The objective of the two-year (M.L.A./A.D.) program is to develop specializations for individuals who may wish to teach, practice, or conduct applied research in landscape architecture. Students are permitted some flexibility in establishing programs that take full advantage of the teaching and research resources of the university.

Students admitted to the two-year M.L.A./A.D. program are required to complete 60 credits of course work as approved by the members of their graduate committee. This must include at least two advanced studios, a graduate seminar, a concentration, and a thesis.

Undergraduate Concentration for Non-Majors

Students outside the professional program may choose the undergraduate concentration in the American Cultural Landscape to complement their major. The courses center on the landscape as an object, something to be studied for its own sake, and as a subject, as a means to understand society and its relationship to natural systems and diverse cultures. The cultural landscape includes its visible elements as well as perceptions and cultural ideas and values. The concentration consists of five courses, two required and three elective. Students may petition to substitute one course in the electives list. Direct inquiries to professors H. Gottfried or S. Baugher.

Required.

Visual Studies (choose one):

- Arch 11 Introduction to Architectural Design (4 cr)
- Art 121 Introduction to Painting (3 cr)
- Art 141 Introduction to Sculpture (3 cr)
- Art 151 Introduction to Drawing (3 cr)
- Art 158 Conceptual Drawing (3 cr)
- Art 159 Life and Still-Life (3 cr)
- Art 161 Photography I (3 cr)
- DEA 101 Design I: Fundamentals (3 cr)
- DEA 114 Drawing (3 cr)
- LA 141 Freehand Drawing (3 cr)

The Landscape

- +LA 282 The American Landscape (3 cr)

Electives (choose three):

- +LA 261 Urban Archaeology (3 cr)
- +LA 262 Laboratory in Landscape Archaeology
- +LA 360 Pre-Industrial Cities and Towns of North America (3 cr) offered alternate years [1995-96/1997-98]
- LA 363 American Indians, Planners, and Public Policy (3 cr)
- LANAR 521 History of American Landscape Architecture (3 cr)
- LA 569 Archeology in Site Design and Planning (3 cr) offered alternative years [1996-97]

+Distribution Elective

Natural Resources

The undergraduate curriculum is designed to provide an enduring and broadly applicable education. The focus of study is on the systems that yield our renewable natural resources (water, forests, fish, and wildlife) and includes emphasis on both the ecological and human dimensions of resource management. Students are encouraged to understand the scientific, ethical, and societal basis for the protection and management of renewable resources through the application of ecological principles and knowledge of social needs.

Required Core Curriculum

Students who desire to graduate with a specialization in Natural Resources are expected to complete, as a minimum, the courses specified in the following two-part Core Curriculum. First is a broad group of courses taken primarily outside the department, which, as their presentation suggests (Groups A-D), also fulfill this college's course distribution requirements described on page 30.

Group A - Physical Sciences *Total Hours*

- Mathematics - 2 courses 6-8
- Chemistry - 2 courses 7-8

Group B - Biological Sciences

- Introductory biology - 8 cr. hours 8
- General ecology - 1 course 4

Group C - Social Sciences

- 3 credits in addition to
- 3 credits in economics 6

Humanities

- 6 credits in addition to a course in "normative" ethics (NTRES 407, or PHIL 241, 246, or 247) 9

Group D - Written and Oral Expression

- Freshman Writing Seminars - 2 courses 6
- Oral communications - 1 course 3

Courses outside the Distribution Groups

- Statistics - 1 course 3
- Computer applications or programming - 1 course 3

The Core Curriculum's second portion is composed entirely of courses offered by the Department of Natural Resources; a minimum of 19 hours in department courses is required.

YEAR 1*Total Hours*

One of 2 introductory courses: 3

NTRES 100 Principles of Conservation (Fall, 3 cr.)

NTRES 201 Environmental Conservation (Spr., 3 cr.)

YEAR 2

both courses listed:

NTRES 210 Introductory Field Biology (Fall, 4 cr.) 4

NTRES 253 Applied Ecology and Ecosystem Management (Spr., 3 cr.) 3

YEARS 3 AND 4

At least 9 credit hours from the following courses, with a minimum of 3 credit hours in ecology and 3 credit hours in management.

Course	Ecology Credit	Management Credit
NTRES 301 Forest Ecology—Lecture	3	
NTRES 302 Forest Ecology—Lab	1	
NTRES 303 Woodlot Management		3
NTRES 304 Wildlife Ecology Concepts	1	
NTRES 305 Wildlife Ecology/Applications	1-2	
NTRES 308 Natural Resources Management	3	
NTRES 350 Global Dimensions of Ecological Change	3	
NTRES 401 Env. and Nat. Res. Policies	3	
NTRES 402 Nat. Res. Policy, Planning & Politics	3	
NTRES 404 Wildlife Population Concepts	1	
NTRES 405 Wildlife Population Applications		1-2
NTRES 410 Wildlife Management Concepts & Applications		3
NTRES 415 Agroforestry		2
NTRES 418 Wetland Ecology & Management—Lecture	2	1
NTRES 419 Wetland Ecology & Management—Laboratory		1
NTRES 438 Fishery Management		3
NTRES 442 Techniques in Fishery Science		5
NTRES 450 Conservation Biology	2	1
Total Credit Hours	(3 min)	(3 min)
	(9 minimum total)	

Students pursuing this specialization have remaining approximately 40 credit hours available to develop one or more concentrations of their choice within or outside this field.

Students who wish to do so may specialize further in natural resource ecology and management (including wildlife, fishery, forest, and aquatic sciences), or natural resource policy, management, and human dimensions.

Opportunities for field-oriented studies are available at Cornell's nearby Arnot Teaching and Research Forest, the Cornell Biological Field Station on Oneida Lake near Syracuse, as well as at numerous natural areas near campus.

Students should seek relevant work experience to complement their academic studies.

Nutrition, Food, and Agriculture

Nutritional sciences draws upon chemistry, biology, and the social sciences to understand complex relationships among human health and well-being, food and lifestyle patterns, food and agricultural systems, and social and institutional environments.

The program in nutrition, food, and agriculture provides students with strong training in human nutrition in the context of an understanding and appreciation of the agricultural and life sciences. The program responds to the growing and important interrelationships between human nutrition and the agricultural and life sciences. Growing public interest in health and nutrition has placed new demands upon food producers, processors, and retailers. The problems of hunger and malnutrition in the United States and abroad require that nutritionists work together with specialists in areas such as agricultural economics, food production, and rural sociology. Advances in biotechnology provide researchers with new ways to understand human nutritional requirements and the regulation of human metabolism.

Nutrition, food, and agriculture majors complete a core set of requirements and choose elective courses in the areas of their particular interest. The core curriculum includes introductory chemistry and biology, organic chemistry, biochemistry, physiology, and mathematics. Students complete five courses in nutritional sciences: NS 115 Nutrition and Health Concepts and Controversies, NS 245 Social Science Perspectives on Food and Nutrition, NS 345 Nutritional and Physicochemical Aspects of Foods, NS 331 Physiological and Biochemical Bases of Nutrition, and NS 332 Methods in Nutritional Sciences. In addition, students select a minimum of three advanced courses in nutritional sciences as well as elective courses in the broad areas of food production and processing, food and agricultural policy, and the life sciences.

All majors have faculty advisers in the Division of Nutritional Sciences with whom they meet regularly. Advisers help students plan course schedules and help find opportunities for special study or experiences outside the classroom.

Many students engage in laboratory or field research with a faculty member for academic credit. The honors program is designed for academically talented students who are interested in research. Honors students conduct independent research projects under the guidance of a faculty member and prepare an honors thesis. Many students participate in field experiences for credit during the

academic year or summer. Placements in laboratories, industries, or community agencies are possible.

The major in nutrition, food, and agriculture can lead to many different career paths. By supplementing the core requirements with courses in different areas, students can prepare for jobs in industry, government, or community agencies in the United States or abroad. The major is excellent preparation for graduate study in a variety of fields.

The Division of Nutritional Sciences is affiliated with both the College of Agriculture and Life Sciences and the College of Human Ecology. Most of the Division faculty members work in Savage Hall and Martha Van Rensselaer Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities. The nutritional sciences Learning Resource Center in Martha Van Rensselaer Hall is used by students for study and small group discussion. The center contains class materials, audiovisual aids and supplementary books and periodicals for independent study and special projects.

For additional information about the nutrition, food, and agriculture program, contact the Division of Nutritional Sciences Academic Affairs Office, 335 MVR, 607-255-2628.

Plant Sciences

Plant sciences students can specialize in plant biology, plant genetics and breeding, plant pathology, plant protection, or horticultural sciences, including floriculture and ornamental horticulture, and fruit and vegetable science. Students with well-defined interests upon arrival at Cornell can specialize in one of these programs beginning as freshmen. Others may prefer to start in the general plant sciences curriculum and specialize after exploring the program offerings.

Plant sciences is a multidepartmental program, sponsored by the Department of Plant Breeding in Emerson Hall, and the Departments of Floriculture and Ornamental Horticulture, Fruit and Vegetable Science, Plant Pathology, and the Section of Plant Biology, all located in the Plant Science Building.

General plant science is intended for students whose interest in studying plants has not yet centered on any one of the specializations within the area. Students may continue with this option throughout their undergraduate years, particularly if they are likely to be interested in and qualified for advanced studies beyond the bachelor's degree. Students who plan to seek employment upon graduation may prefer to specialize. There are, however, excellent opportunities for general plant science graduates at the bachelor's degree level in the service and supply industries, as Cooperative Extension agents, as teachers, and as research technicians.

More than one hundred courses are offered that deal directly with some area of plant science. Other courses relating to plant science are offered in other departments. In addition, an interest in plant science may be combined with another specialization, such as agricultural and biological engineering, education, statistics, international agriculture,

food science, or agricultural, resource, and business management.

Undergraduates are encouraged to obtain practical experience, which may involve internship and/or research under the direction of a faculty member or work in a commercial industry, research institute, botanical garden or arboretum, nursery, greenhouse, or farm operation. Departments will assist students in finding positions that will provide useful experience.

Floriculture and ornamental horticulture applies principles of plant science and business management to the production and marketing of florist, nursery, and turfgrass crops, as well as to the selection and management of plants for both indoor and outdoor landscapes. Programs prepare students for careers at the professional and managerial levels in horticultural business, botanical gardens and arboreta, research, teaching, communications, and extension and public education.

The core curriculum consists of the following courses:

BIO G 109 and 110, Biological Principles or an equivalent course
CHEM 103 and 104 or 207 and 208 or an equivalent course
HORT 101, Introduction to Horticultural Science
HORT 102, General Horticulture
HORT 230, Woody Plant Materials
HORT 243, (BIO PL 243), Taxonomy of Cultivated Plants
HORT 300 and 301, Garden and Interior Plants I and II
HORT 400, Principles of Plant Propagation
BIOPL 241, Plant Biology (Introductory Botany)
BIOPL 242, Plant Physiology (lecture)
BIOPL 244, Plant Physiology (laboratory)
SCAS 260, Introduction to Soil Science
ENTOM 241, Applied Entomology
PLPA 241, Plant Diseases and Disease Management or PL PA 401, Basic Plant Pathology

Although mastery of these subject areas is considered essential for students planning to enter a floriculture or landscape horticulture career, justifiable exceptions to the core curriculum may be granted by the student's adviser.

With permission of the adviser, a transfer student may receive core curriculum credit for similar courses taken at other institutions provided that transfer credit is granted by the College of Agriculture and Life Sciences. In addition, all transfer students must complete a minimum of 12 credits in floriculture and ornamental horticulture courses at Cornell. No more than two of the following landscape architecture courses may be included in this 12-credit requirement: LA 142, 282, 315, 316, 317, 318, 410, 480, 491. No other landscape architecture or freehand drawing courses may be applied to the requirement because they do not contain horticultural subject matter.

Students may select an area of emphasis in either floriculture or landscape horticulture, or they may study generally across the specialization. Concentration in floriculture prepares students for careers in management of florist and greenhouse crop production, crops in controlled environment agriculture, and wholesale- and retail-florist marketing. Specialization in landscape horticulture trains

students for careers in nursery-crop production, turfgrass management, exterior and interior landscape contracting and service, retail- and wholesale-marketing of nursery products and services, public and botanical garden and arboretum management, urban horticulture, and related areas. Some students choose to pursue a general program in floriculture and landscape horticulture including courses in both areas. Similarly, programs in horticultural business management, research, teaching, extension and public education, and communications/journalism may be arranged across two specialization areas. Students wishing to prepare for graduate study in horticultural science may develop a program in basic sciences and their application in horticultural science. Lists of recommended courses for the areas of specialization are available from student advisers and from the undergraduate program coordinator.

Working with his or her faculty adviser, each student will tailor a program to achieve individual educational objectives in floriculture, landscape horticulture, horticultural business management, or general horticultural science. A core of management courses also is strongly recommended for students planning horticultural business careers.

Students are also encouraged to take courses in these areas: agricultural and biological engineering, soil science, computer science, ecology, entomology, geology, plant breeding, plant pathology, plant physiology, oral and written expression, plant taxonomy, and weed science. Use of electives to pursue study in the humanities and in other areas of special interest to the student is encouraged.

Numerous opportunities to become familiar with the horticultural industries and professions are provided through field trips, guest lectures, undergraduate seminars, independent or small-group study, optional internships, and work-experience programs.

Questions concerning the undergraduate curriculum, advising, and related matters should be addressed to Professor Carl F. Gortzig, Undergraduate Program Coordinator, Department of Floriculture and Ornamental Horticulture, 23 Plant Science Building, Ithaca, New York 14853-5908 (telephone: 607-255-1787).

The department's office is 20 Plant Science Building. Departmental facilities include classrooms and laboratories in the Plant Science Building, greenhouse and laboratory facilities at the Kenneth Post Laboratory, the Test Garden, the Turfgrass Research Field and Laboratory, landscape architecture studios on the fourth floor of Roberts Hall (entrance Kennedy Hall), and freehand drawing studios in Mann Library.

Plant biology provides undergraduates with preparation for graduate study in the plant sciences that stresses basic, rather than applied, research. In cooperation with an adviser, each student plans a curriculum with a concentration in basic sciences supplemented by courses in applied areas that seem appropriate. Options include molecular biology, plant physiology, plant biology, genetics, cytology, organic chemistry, biochemistry, anatomy, taxonomy, ecology and evolution, and statistics. A core of courses, including mathematics, plant biology and physiology, and cytology, is strongly suggested. However, different specialties

within plant biology afford a flexible curriculum.

Plant genetics and breeding provides undergraduates with (1) preparation for graduate study leading to advanced degrees in plant breeding and plant genetics and (2) preparation for work in producing and marketing plant varieties and making varietal recommendations, for positions in seed analysis, regulation, and quality control, and for work in biotechnology laboratories.

In cooperation with an adviser, each student plans a curriculum with a concentration in basic sciences supplemented by courses in applied fields best suited to his or her individual goals. Options include plant breeding and plant genetics; genetics, cytology, and cytogenetics; statistics; organic chemistry and biochemistry; plant anatomy, ecology, taxonomy, and physiology; crop production; plant pathology; entomology; and molecular biology and biotechnology.

Students are encouraged to gain hands-on experience in plant genetics and breeding by conducting independent research under direction of a faculty advisor and/or by working for a faculty member on his/her research. Field, greenhouse, and laboratory facilities are available.

Plant pathology is the study of the causes of plant diseases, the mechanisms of the interactions of disease-causing agents and plants, and the methods of preventing or controlling plant diseases. For most students, a concentration in plant pathology as an undergraduate is preparation for graduate study in plant pathology or another field of plant science. However, this concentration also prepares students for careers as technical representatives for agribusiness, as cooperative extension agents, as state or federal regulatory agents, or as research technicians in laboratories of plant pathology, mycology, microbiology, and biotechnology.

Courses include chemistry, mathematics, introductory biology, botany, plant physiology, and introductory plant pathology. Additional plant pathology courses and other relevant courses from other fields are selected according to the particular interests of the student. Options include entomology; plant breeding; pomology; vegetable crops; floriculture and ornamental horticulture; and soil, crop, and atmospheric sciences.

Plant protection is offered for students who are interested in the management of plant pests. It includes the study of insects, diseases, weeds, vertebrate pests, and other factors that prevent maximum crop production. This concentration can prepare students for careers in agribusiness, the agrichemical industry, cooperative extension, pest management consulting, state and federal regulatory work, and a variety of other technical positions. Although designed as a terminal program for students desiring a practical preparation in general plant protection, this specialization can also provide an adequate background for graduate work in entomology, plant pathology, or weed science.

The following subjects are considered essential to the plant protection specialization: botany and plant physiology, general ecology, soils, crop science, and microbial ecology. Additional courses in introductory entomol-

ogy, introductory plant pathology, plant disease control, weed science, and integrated pest management are recommended.

In addition, a number of other subjects pertinent to plant protection are recommended, depending upon the student's interests: agricultural economics, agricultural and biological engineering; soil, crop, and atmospheric sciences; biochemistry; communication; pathology and entomology; general physics; genetics; meteorology; mycology; pesticides in the environment; and plant anatomy. Employment involving practical experience in plant protection between the junior and senior years is encouraged. The job may be on a farm, at an experimental station, with an agrichemical company, or with a regulatory agency.

Pomology (the science of fruit growing) provides students with knowledge of the scientific technology and the influence of environmental factors on the production, handling, and storage of deciduous fruit crops. New York is a national leader in fruit production.

Courses are selected by students in consultation with a faculty adviser. Flexibility in programs makes it possible to establish a course of study to fit the desired goals of individual students. The diverse pomology curriculum, complemented by courses in basic sciences and arts and electives in a student's area of interest, prepares pomology majors for a career in fruit production, agricultural business related to the fruit industry, storage and merchandising, or professional pomology. Job opportunities for graduates can be found in fruit production, marketing, sales and service, research, teaching, and extension.

Vegetable crops is offered for students with an interest in either applied or basic aspects of vegetable production. The high value of vegetables and their importance in the human diet assures a continued demand for trained personnel in all aspects of vegetable technology. A flexible curriculum is provided to prepare undergraduates for careers in a diversity of fields, including: horticultural research, teaching, extension, production, processing, and marketing. A faculty adviser assists individual students in the selection of courses, which usually include: general horticulture, soils, botany, vegetable types and identification, vegetable production, and post-harvest handling or marketing. Additional course work depends upon the interest of the student, and may include: vegetable physiology; plant breeding; entomology; plant pathology; weed science; ecology; soil, crop, and atmospheric sciences; nutritional science; agricultural economics; international agriculture; and agricultural and biological engineering.

The vegetable industry is an economically important component of agriculture in New York and in the United States. Recently, there has been increased interest in growing vegetables in tropical countries. Exciting challenges are facing the industry. Greater awareness of environmental and health issues is driving a change toward farming practices that depend less upon agricultural chemicals than in the recent past. New technologies are being developed and implemented to help growers make this change while remaining profitable. Among these technologies are: integrated pest management, genetic engineering, breeding for insect and disease

resistance, low-input and organic cropping systems, and cultural practices that improve production efficiency and conserve agricultural resources.

The Department of Fruit and Vegetable Science has on-campus greenhouses and laboratories as well as two research farms in the Ithaca area that support our teaching program. Students are encouraged to gain hands-on experience growing vegetables and to pursue their individual interests through course work and by taking advantage of the many resources available in the College of Agriculture and Life Sciences.

Rural Sociology

Technological, economic, demographic, and environmental changes are social processes, and each has major impacts on individuals, social groups, societies, and the international order. At Cornell, rural sociology students study these and other facets of social change in both domestic and international settings. Among the topic areas in which faculty members in the Department of Rural Sociology specialize are international agricultural and rural development, community and regional development and changes in the United States, environmental sociology, aging and the life course, sociology of agriculture, rural industrialization and labor markets, technology and social change, population and development, political economy, women in development, race and ethnic relations, and research methodology. Most courses provide background in both domestic and international aspects of the subject matter. Normally, students will develop a specialization with either a domestic or international emphasis by choosing appropriate elective courses. All students learn the theory and methodology of sociology, and how to apply both to research and policy in their subject areas.

Recognizing that students are concerned with future career opportunities, the undergraduate program emphasizes acquisition of skills as well as general knowledge in preparation for jobs or further study upon graduation. Accordingly, students are expected to become involved in the application of theory, methodology, principles, and concepts in the analysis of practical problems.

Rural sociology offers degree programs at both the undergraduate and graduate levels (B.S., M.S., M.P.S., or Ph.D.). These programs are offered through the Department of Rural Sociology and the Graduate Field of Development Sociology, both of which are located in Warren Hall. For many years, the department and graduate field have been recognized as among the top programs in the country, and both are known for innovative program orientations. The department is particularly well known for providing instruction in international as well as domestic aspects of community and rural development, environmental sociology, sociology of agriculture, population studies, and other topics. Faculty members in this department are committed to both quality instruction and research programs. Being located in a college of agriculture, faculty members maintain strong ties with the technical fields in the college as well as with the International Agriculture Program, the Biology and Society Program, the Cornell Institute for Social and Economic Research, the Community and Rural Develop-

ment Institute, the Gender and Global Change Program, the Life Course Institute, the Rural Development Program, the Hispanic Studies Program, the Program on Science, Technology, and Society, and the Center for International Studies. Nearly half of the department faculty are associated with one or more area studies programs (the Southeast Asia Program, South Asia Program, Latin American Studies Program, East Asia Program, or the Institute for African Development). Department members also maintain working relations with faculty in the Department of Sociology and other social science units located in other colleges at Cornell. Students are encouraged to supplement their course work by electing courses in these other departments and programs, thereby rounding out their educations by acquiring different perspectives.

The courses offered in rural sociology can be grouped in three broad categories: development sociology; population, environment, and society; and social data and policy analysis. All students majoring in Rural Sociology are required to take five core courses: an introductory course (R SOC 101), methods (R SOC 213), theory (R SOC 301), social stratification (R SOC 370), and a course in statistics. Four elective Rural Sociology courses are also required of all majors.

The focus area in development sociology provides an understanding of the processes and policies that influence social and economic development in rural settings in North America and low-income countries in the developing world. Courses provide background in the sociology of development in both the advanced and developing countries. Students normally select a set of elective courses in which either domestic or international development is emphasized. These courses provide background in several aspects of development sociology, including (1) an understanding of the processes of socioeconomic development in low-income or Third World countries and training in the formulation of strategies to enhance the socioeconomic well-being of citizens of those countries, (2) analysis of the social structures and processes for development in nonmetropolitan settings in the United States, (3) analysis of the processes of agricultural change and development in industrialized and low-income countries, and (4) an understanding of the processes of technological development and change in agriculture and other rural industries in developed and developing countries.

Students are encouraged to complement courses in the department with course work in the history and economics of development, area studies, and the policy sciences.

Courses in the population, environment, and society focus area provide an understanding of (1) the causes and consequences of the major components of population change—fertility, mortality, and migration; (2) the major patterns of population distribution and population characteristics in the United States and the developing world, (3) the relationships between social structure and the biophysical environment, (4) the relationships between population change and natural resource utilization in development, and (5) impacts of public policy interventions on population size, growth and composition or on natural resource availability and environmental quality. Students normally

select the elective courses for the major in such a way as to stress either population studies or sociological aspects of natural resources and the environment.

Students are encouraged to complement courses in the department with course work in demographic methods, household analysis, ecology and evolution, environmental studies, natural resources, and policy sciences.

Courses in the social data and policy analysis focus area provide (1) knowledge of research methodology, statistics, and computer applications, (2) an understanding of social, economic, political, and historical concepts essential for conducting meaningful analyses of practical problems and issues faced by organizations, communities, regions, and states, and (3) knowledge and practice in policy analysis. Students ordinarily select electives in order to specialize in either policy analysis or in a particular area of public policy (international development policy, domestic rural development policy, environmental policy, or population policy, etc.).

Students are encouraged to complement courses in the department with course work in data collection and research design, evaluation research, computing, and advanced statistics.

Soil, Crop, and Atmospheric Sciences

The Department of Soil, Crop, and Atmospheric Sciences provides instruction in five specializations: atmospheric science, agronomy, crop science, science of earth systems, and soil science. Employment opportunities are increased with practical experience, and the faculty of the department and the Career Development office of the college are glad to help students search for relevant summer jobs and internship opportunities. Professional certification can also be obtained in some of these specializations.

Atmospheric science is the study of the atmosphere and the processes that shape our weather. The core curriculum in meteorology is designed to provide students with an understanding of the fundamental physical and dynamic properties and processes of the atmosphere. All students are required to complete a minimum of five semesters of calculus; two semesters of physics; a semester each of chemistry, computer science, and statistics; and a sequence of eight courses covering observational, general, theoretical, and synoptic meteorology. Additional courses are available for students interested in specialized areas of meteorology. The curriculum satisfies the basic requirements for employment as a professional meteorologist and provides a sound background for graduate study or work in the numerous specialized areas of meteorological science. Students are encouraged to choose additional course work in related or complementary areas of interest, such as agriculture, biology, computer science, mathematics, statistics, physics, chemistry, or engineering.

Agronomy combines the study of crop production and soil management. It provides the student with a broad array of career opportunities after completion of the B.S. degree, including agricultural business, extension service work, and farming. Graduate school can also follow a well-planned program. The student should take at

least 12 credits of crops and 12 credits of soils and design the remainder of his or her curriculum to meet specific interests and goals. Some students pursue a double major in agronomy and international agriculture.

Crop science is the application of basic biological and ecological science to the improvement and management of the world's main field crops used for human food and livestock feed. Courses required include 18 credits of crops, 12 credits of plant biology, and 6 credits of soils. Students who anticipate a career in agricultural production or service after completion of the B.S. degree should take additional courses in economics, communication, plant pathology, entomology, and nutrition. Students planning graduate or professional study beyond the bachelor's degree should take advanced course work in organic chemistry and biochemistry, calculus, physics, and statistics.

Science of Earth Systems integrates atmospheric and soil science as well as other earth studies to develop a scientific basis for managing the basic resources of the planet. This is an interdisciplinary program described in detail elsewhere (see index).

Soil science is a basic discipline important in ecology, engineering, agriculture, and conservation. The curriculum in soil science combines physical and biological training to address critical issues in environmental and agriculture management related to soils. Students take 18 credits in soil science, including 4 credits in the introductory course. In addition, chemistry, mathematics, physics, and microbiology are required, as well as 6 credits of crop science to satisfy the major.

Special Programs in Agriculture and Life Sciences

Some students are interested in pursuing a general education in the agricultural sciences. Others are uncertain about career objectives in agriculture and the life sciences. The opportunity to develop an independent major in general studies in agriculture and the life sciences is available for such students. In consultation with a faculty adviser, they may plan a sequence of courses suited to their individual interests, abilities, and objectives in an area not encompassed by the existing programs. In addition to the distribution and other college requirements, this major may include a concentration of courses in one or several academic units of the university.

Students completing this major are often planning a career in agriculturally related food and service enterprises. Many of the fast-growing occupations require the broad perspective, the scientific and technical skills, the attitudes, and the analytical ability that a general education fosters. A course of study for a special program must be planned with and approved by a college faculty adviser. Information on the options and names of faculty advisers prepared to advise in special programs are available in the Counseling and Advising office, 140 Roberts Hall.

General studies includes production agriculture as well as technical work in the agricultural and life sciences. Many biotechnology concerns deal with aspects of agriculture, especially plants, crops, and ecosystems in the natural environment. A strong grounding in biological sciences as well as knowledge of the agricultural sciences is

essential in this rapidly growing field. Students should plan basic course work in the major areas of study in the college—animal sciences, plant sciences, environment and technology, agronomic sciences, biological sciences, and social sciences. Advanced courses may be selected in those and other areas of individual interest or career aspiration.

International Agriculture provides students with an understanding of the special problems of applying basic knowledge to the processes of agricultural development in low-income countries. The student typically specializes in a particular subject and works with an adviser to plan a program oriented toward international agriculture. The courses in International Agriculture are designed to acquaint students with the socio-economic factors in agricultural development, with the physical and biological nature of tropical crops and animals, and with various world areas for which study programs exist. Competence in a foreign language is required.

In addition to the college distribution requirement of 39 credits, students majoring in International Agriculture must take a minimum of 30 credits. A minimum of 7 credits in International Agriculture and 8 credits (or equivalent competence) in a modern foreign language are required. The other courses recommended are drawn from a wide range of disciplines. The objective is to acquaint students with the many facets of agricultural development in low-income countries. Students are encouraged to take additional specialized courses in one of the other program areas of the college.

ACADEMIC HONORS

The college encourages high academic achievement and recognizes outstanding students in several ways:

Dean's List. Each semester, students are recognized for academic excellence by inclusion in the Dean's List. The criteria are subject to change from semester to semester, and can be obtained from the College Registrar's office in 140 Roberts Hall.

Bachelor of Science with Distinction. Students who rank in the top 10 percent of the college's graduates on the basis of the GPA for the last 60 credits completed at Cornell will be graduated with distinction.

Bachelor of Science with Honors. Students will graduate with a bachelor of science degree with honors when, in addition to having completed all the graduation requirements, they have satisfactorily completed the honors program in their area of interest and have been recommended for the degree by the honors committee of that area. Special requirements are given in the section on the Honors Program.

Ho-Nun-De-Kah, founded in 1929, is the undergraduate honor society of the College of Agriculture and Life Sciences. Members are recruited from the top 20 percent of the senior class and top 10 percent of the junior class. In keeping with the ideals of encouraging scholarship, leadership, and citizenship, members provide free tutoring and a variety of service activities to both the college and the community.

Gamma Sigma Delta is an honor society of the faculty in the Colleges of Agriculture and Life Sciences, Human Ecology, and Veterinary Medicine. The common bond is promotion of excellence in work related to the quality of our environment and life based on "agriculture and the related sciences." The Cornell Chapter recognizes the academic achievements of students, faculty, and alumni of those colleges with nominations for membership and with special awards. To be eligible, seniors must be in the upper 15 percent of their major. Five juniors with the highest grade point average in the college are also nominated.

Phi Kappa Phi is an honor society that recognizes outstanding scholarship in all academic disciplines. Members are nominated from among seniors, graduate students, and faculty. Seniors must be in the top 10 percent of their class, and juniors in the top 5 percent of their class to be eligible.

Sigma Xi is an honor society that recognizes outstanding achievements in research. It was founded at Cornell University in 1886. Its membership is selected mostly from graduate students, faculty, and alumni who have made "noteworthy achievement as an original investigator in a field of pure or applied science." Seniors who have demonstrated research aptitude with publishable independent investigations are also eligible for associate membership.

DESCRIPTION OF COURSES

Undergraduate and graduate courses in the college are offered through the sixteen academic departments and units and also through the Divisions of Biological Sciences and Nutritional Sciences.

Descriptions of courses, both undergraduate and graduate, are given by department, arranged in alphabetical order.

Graduate study is organized under graduate fields, which generally coincide with the departments. Graduate degree requirements are described in the Announcement of the Graduate School. Courses for graduate students are described in the section on the academic department that offers them.

NONDEPARTMENTAL COURSES

ALS 400 Internship

Fall, spring, or summer. 6 credits maximum. Not open to students who have earned internship credits elsewhere or in previous terms. S-U grades only. Students may register only for internships in the New York State Assembly Intern Program, the New York State Senate Session Assistant's Program, and the Albany Semester Program. A learning contract is negotiated between the student and the faculty supervisor(s), stating conditions of the work assignment, supervision, and reporting. Participation is required in any structured learning activities associated with the internship.

ALS 500 Politics and Policy: Theory, Research, and Practice (also HSS 404 and GOVT 500)

Students in the College of Agriculture and Life Sciences must register for ALS 500. S. Jackson and staff.

This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell-in-Washington program. The central course objective is to provide students with the instruction and guidance necessary to analyze and evaluate their own chosen issue in public policy. Toward that end, the course has three components: (1) weekly lectures providing background on the structures and processes of national politics and policy as well as training in research methodology; (2) student externships; and (3) individual research papers or projects. All three components interrelate to provide students with a strategy and framework for integrating classroom-based learning, field experience, and individual research. Applications are made through the Cornell-in-Washington office, 471 Hollister Hall.

ALS 661 Environmental Policy (also Biology and Society 461 and BIOES 661)

Fall and spring. 3 credits each term. (Students must register for 6 credits each term since an "R" grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor. Sem R 2:30-4:30 p.m. D. Pimentel.

This course uses an interdisciplinary approach to focus on complex environmental and policy issues. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in Science or BioScience.

AGRICULTURAL AND BIOLOGICAL ENGINEERING

M. F. Walter, chair; B. A. Ahner, L. D. Albright, D. J. Aneshansley, J. A. Bartsch, S. G. Capps, T. J. Cook, J. R. Cooke, A. K. Datta, R. C. Derksen, K. G. Gebremedhin, W. W. Gunkel, D. A. Haith, P. E. Hillman, J. B. Hunter, L. H. Irwin, W. J. Jewell, C. D. Montemagno, J.-Y. Parlange, R. E. Pitt, T. S. Steenhuis, M. B. Timmons, L. P. Walker

Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

ABEN 102 Introduction to Microcomputer Applications

Fall. 3 credits. S-U grades optional. Each lab section limited to 14 students. All students, including those pre-enrolled, must attend the first lecture to guarantee admittance to a laboratory section. Lec, T R 12:20-1:10; lab M 1:25-4:25 or 7:30-10:30 p.m. or T 1:25-4:25 or W 1:25-4:25 or 7:30-10:30 p.m., or R 1:25-4:25 p.m. Fee, \$15. 1 evening prelim. P. E. Hillman.

Introduction to application packages on microcomputers. Laboratories provide hands-on experience with word processing, spreadsheets, database management, and presentation graphics. Although the Macintosh computer is used in the laboratory, matching versions of the software are available on PC computers. These packages

and others such as desktop publishing, multimedia, computer-aided design (CAD), Internet, and World Wide Web browsers are discussed and demonstrated in the lectures, as well as computer hardware and Windows.

ABEN 104 Introduction to Programming using Pascal plus C++ or FORTRAN

Spring. 4 credits. S-U grades optional. Each lab section limited to 22 students. Lec, T R 11:15-12:05; lab T 12:20-2:15 (Pascal and FORTRAN) or W 12:20-2:15 (Pascal and C++). Fee, \$15. 2 evening prelims. P. E. Hillman.

An introductory course in computer programming with an emphasis on handling data and algorithm development. Problem sets are on topics of general interest. The first two-thirds of the course utilizes Pascal to introduce students to programming concepts and style. For the last third of the course, students can choose between a gentle introduction to C++ or an introduction to FORTRAN 90. Students are expected to spend 5 to 8 hours outside their scheduled laboratory periods to complete problem sets. No prior knowledge of computers or computer language is necessary.

ABEN 110 Introduction to Metal Fabrication Techniques

Spring. 2 credits. Each lab limited to 18 students. Lec, R 9:05; labs M T or R 1:25-4:25, or M T 7-10. T. J. Cook.

Emphasis on selection of proper materials and techniques to accomplish a variety of metal fabrication and maintenance projects. To include both hand and machine tools, fasteners, strengths of materials, classification and identification of metals, soldering, brazing, forging, pipe fitting, sheet metal work, controlling distortion, oxy-acetylene cutting, and arc welding.

ABEN 120/121 Science of Earth Systems Colloquium (also Soli, Crop and Atmospheric Sciences 101/102 and Geology 123/124)

120, Fall; 121, Spring. 2 credits. S-U grades only. ABEN 120 is not a prerequisite for ABEN 121. J.-Y. Parlange, K. H. Cook, et al.

Weekly one-hour seminars followed by one-hour discussion of current topics in the study of the earth systems. Introduces the student to scientific issues relating to understanding our planet and managing the environment.

ABEN 132 Introduction to Wood Construction

Fall. 2 credits. Each lab limited to 15 students. Lec, T 9:05; labs, T W or R 1:25-4:25, W 7-10. T. J. Cook.

Principles and practice of wood construction. To include site selection and preparation, drainage, water and septic development, footers and foundations, material properties, framing and roofing, comparison of alternatives to wood construction, use of hand and power tools, wood joining methods, fasteners, concrete work, and block construction. Each student will plan and construct an approved carpentry project.

ABEN 151 Introduction to Computing

Fall. 4 credits. Prerequisite Math 191 or equivalent (co-registration permissible). Lec, T R 11:15-12:05; labs, T 2:30-4:25, 12:20-2:15, W 2:30-4:25, R 2:30-4:25, 12:20-2:15; sec, M 7:30-8:20 p.m., 8:30-9:20 p.m., W 7:30-8:20 p.m., W 8:30-9:20 PM, 9:30-10:20 p.m.. Each lab and

recitation section limited to 22 students.

D. J. Aneshansley.

An introduction to computer programming and concepts of problem analysis, algorithm development, and data structure in an engineering context. A structured programming language is used, implemented on interactive personal computers, and applied to problems of interest in agricultural and biological engineering. No previous programming experience is assumed.

ABEN 200 Undergraduate Seminar

Spring. 1 credit. S-U grades optional. Lec, T 1:25. Staff.

A forum to discuss the curriculum requirements of the academic programs in the agriculture and biological engineering department and the contemporary and future role of agricultural and biological engineering in society. A required course for freshmen majors in Agricultural and Biological Engineering academic programs. A series of seminars will be given by practicing engineers, Cornell faculty members, alumni of the department, and students. Students are expected to develop personalized, written career plans and select future courses to meet their career goals.

[ABEN 221 Plane Surveying

Fall. 3 credits. S-U grades optional. Lec, M W 12:20; lab M 1:25-4:25. Not offered 1996-97. Staff.

Principles and practice of measurement of distance, elevation, and direction. Use and care of equipment is stressed during field problems related to mapping, engineering design, and construction. Other topics include surveying specifications, error analysis, and standards of accuracy.]

ABEN 250 Engineering Applications in Biological Systems

Fall. 3 credits. Prerequisite: enrollment in an engineering curriculum. Recommended for the sophomore year. Lec, M W F 12:20. L. P. Walker.

Case studies of engineering problems in agricultural and biological systems, including animal and crop production, environmental problems, energy, biomedicine, and food engineering. Emphasis is on the application of mathematics, physics, and the engineering sciences to energy and mass balances in biological systems.

ABEN 301 Introduction to Energy Systems

Spring. 3 credits. Prerequisite: college physics. Lec, T R 8:40-9:55. M. B. Timmons.

Introduction to energy systems with emphasis on quantifying costs and alternative systems for conversion of environmental inputs into useful forms of energy. Course will cover solar energy, small-scale hydropower, wind, bio-conversion processes, house energy balances, energy crops, and the public policy implications of alternatives. Use of spread sheets will be extensive.

ABEN 305 Principles of Navigation (also Nav S 301)

Fall. 4 credits. Four classes each week (lecture-recitation-project work). Lec, M W F 8:00-8:50; lab, R 8:00 or 9:05. W. W. Gunkel.

An introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. The course covers coordinate systems, chart projections,

navigational aids, instruments, compass observations, time, star identification, use of the nautical almanac, tides and currents. Electronic navigation systems are also *briefly* discussed.

ABEN 310 Advanced Metal Fabrication Techniques

Spring. 1 credit (2-credit option available).

Prerequisite: ABEN 110 or permission of instructor. Lab, F 1:25-4:30. T. J. Cook.

Principles and practices extending beyond the scope of ABEN 110. To include out-of-position, high carbon steel and cast iron welding. Soldering and brazing of aluminum, hard surfacing, both tungsten (TIG) and metallic (MIG) inert gas welding, plasma-arc and oxy cutting of metals. Planning, development, and fabrication of a metal construction project for the 2 credit option.

ABEN 331 Environmental Control for Agricultural Production Systems

Fall. 3 credits. Lecs, M W F 12:20-1:10.

K. G. Gebremedhin.

A study of indoor environmental requirements of plants and animals; design and control of indoor environment of livestock (dairy, beef, and swine) and poultry facilities. Topics include psychrometric processes, energy balances, ventilation design (mechanical and natural), and heat flow. Other topics may include functional layout and design, waste management, economic analysis, and linear programming of agricultural production systems. The course is designed for juniors and seniors in the ABEN Technology Programs, Animal Science, General Studies and General Agriculture students.

ABEN 350 Biological and Environmental Transport Processes

Fall. 3 credits. Prerequisites: MATH 294 and fluid mechanics (co-registration permissible). Lecs, M W F 11:15-12:05; disc, W 2:30. A. K. Datta.

Integration of heat and mass transfer in the context of biological and environmental systems. Emphasis is on physical understanding of transport processes and simple reaction rates with application examples from plant and animal biology, the environment (soil/water/air), and industrial processing of food and biomaterials.

ABEN 367 Introduction to Biological Engineering

Spring. 3 credits. Prerequisites: one year each calculus and introductory biology; minimum one term each college chemistry and physics. Not open to freshmen. S-U grades optional. Lecs, T R 10:10; lab R or F 1:25-4:25. J. B. Hunter.

Explores the use of engineering principles to solve biological problems in the context of laboratory experiments. Topics may include artificial organs, neuromuscular electrical signals, mass transfer in fermentation, enzyme kinetics, mechanics of plant or animal tissue, and DNA transfer. Many topics relate to ongoing research at Cornell. Appropriate for engineering and life science students. Field trips, demonstrations, and readings in current scientific literature.

ABEN 371 Hydrology and the Environment (also Soil, Crop, and Atmospheric Sciences 371 and Geology 204)

Spring. 3 credits. Prerequisite: one course in calculus. 2 lecs, 1 lab. Lecs, T R 9:05; lab, F 2:30-4:25. T. S. Steenhuis, P. C. Baveye, J. Y. Parlange, M. F. Walter, L. Cathles.

Introduction to hydrology: the hydrologic cycle and the role of water and chemicals in the natural environment. Includes precipitation, infiltration, evapotranspiration, ground water, surface runoff, river meandering, floods, and droughts. Case studies, short field trips, computer programs, and laboratories foster an understanding of concepts and principles of hydrologic processes. This course satisfies the capstone design experience requirement.

ABEN 385 Mechanics in the Earth and Environmental Sciences

Spring. 4 credits. S-U option. Lecs, M W F 11:15; sec, W 2:30-4:25. P. Baveye, J.-Y. Parlange, and W. Brutsaert.

The study of the earth and the environment requires an understanding of transport and other physical processes within and at the surface of the earth. This course encourages the students to develop a broad working knowledge of mechanics and its application to the earth and environmental sciences, providing the background necessary to study the professional literature.

ABEN 396 Fundamentals of Engineering Design

Spring. 3 credits. Lecs, T R 12:20 sec, T 1:25. S. G. Capps.

Fundamentals of design course for junior-level students. Topics and skills discussed will include time and team management, salesmanship and motivation, design constraints, design problem definition and specification, project scheduling, materials selection, cost analysis, ethics, and design evaluation.

ABEN 435 Principles of Aquaculture

Spring. 3 credits. Prerequisite: junior standing and above. Lec, T R 1:25-2:15; lab, R 2:30-4:25. M. B. Timmons.

An in-depth treatment of the principles of aquaculture: fish biology, waste treatment, engineering design, fish health, nutrition, processing, etc. This course is intended to build upon the undergraduate's previous course background and interests. Supervised "hands-on" laboratory experiences. An ABEN 496 capstone design project can also be taken in conjunction with this course.

ABEN 450 Instrument Design: Signal Processing and Data Acquisition

Fall. 3 or 4 credits. 3 Prerequisites: Linear Differential Equations, physics or electrical science, computer programming and use of spreadsheets. Lec, W M F 9:05-9:55; lab, M W 2:00-4:25. D. J. Aneshansley.

An introduction to static and dynamic characteristics of electronic sensors, transducers, digital and analog signal conditioning circuits and conversion techniques, data acquisition and instrument control with personal computers are considered. Biological and agricultural examples of instrument problems and designs are used. A capstone design project is an option with this course, see instructor for details. An ABEN 496 capstone design project can also be taken in conjunction with this course.

ABEN 451 Biomass Conversion Processes for Energy and Chemicals

Spring. 3 credits. Prerequisites: ABEN 250 and 350, MATH 294, Thermodynamics (co-registration permissible), and CHEM 211. Lecs, M W F 9:05. L. P. Walker.

A variety of physical and biological processes are available for converting plants and other

biomass resources into fuels, industrial chemicals, and foods. The design of these processes is accomplished through fusing concepts from biochemistry, microbiology, and plant biology with the concepts and methods of engineering. There are five major components to this course: plants as biochemical resources, heat and mass transfer, enzyme catalysis, fermentation kinetics, and biological filtration with plants. The last four components are concluded with case studies that demonstrate how the scientific and engineering concepts are used to design a biomass conversion process. This course does **not** satisfy the capstone design experience requirement.

ABEN 453 Computer-Aided Engineering: Applications to Biomaterials and Food Processing

Spring. 3 credits. Prerequisite: Computer programming and heat and mass transfer (ABEN 350 or equivalent). Lecs, M W F 11:15; computation disc/lab to be arranged. A. K. Datta.

Design, optimization, and analysis of complex real-life processes using state-of-the-art physics-based computational software as powerful tools that are easy to use. Industrial biological and food processing applications of heat and mass transfer are covered in topics such as heat sterilization, freezing, and dehydration. Computational topics introduce finite-difference and finite-element methods, convergence, stability, accuracy, pre-and post-processing, and pitfalls of using computational software. Term project encourages students to develop own ideas, including work related to research projects or other courses not involving such computation. This course satisfies the capstone design experience requirement.

ABEN 454 Physiological Engineering

Fall. 3 credits. Prerequisites: Introductory biology, computer programming. Corequisite: fluid mechanics. Lecs, T R 12:20-1:10; lab T R 1:25-4:25. R. E. Pitt.

Engineering analysis and design in the physiology of animals and humans. Use of engineering principles to study how animals work in nature and to intervene in physiological functions. The two major engineering themes are: frequency analysis as applied to neural conduction, sound processing, vision, and image processing; and systematics as applied to cardiovascular and respiratory systems, bioenergetics, and bird flight. Laboratories involve experiments, computing applications, field trips, and guest lectures. An ABEN 496 capstone design project can also be taken in conjunction with this course.

ABEN 455 Mechanics of Biological Tissues

Spring. 3 credits. Lecs, T R 9:05-9:55; lab, W 2:30-4:25. S. G. Capps and R. E. Pitt.

Lecture focuses on the importance of material and structural properties of biological tissues. Laboratory exercises are related to procurement, preservation, and storage of biological samples; testing techniques; experimental design; and biomechanical considerations of different material types. This course does **not** satisfy the capstone design experience requirement.

ABEN 471 Geohydrology (also Civil and Environmental Engineering 431 and Geology 445)

Fall. 3 credits. Prerequisites: Mathematics 294 and Engr 202. 2 lecs, 1 disc, lecture, field trip. W. Brutsaert, L. M. Cathles, J. Y. Parlange, T. S. Steenhuis.

Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport. This course does **not** satisfy the capstone design experience requirement.

ABEN 473 Watershed Engineering

Fall. 3 credits. Prerequisite: Fluid Mechanics or Hydrology. Lecs, T R 9:05; disc, R 1:25-4:30. M. F. Walter.

Engineering principles are applied to the design of soil and water management technologies aimed at solving natural resource problems in the context of watersheds. Emphasis will be placed on rural and countryside engineering and small-scale design for soil erosion control, flood damage control, earthen dams, ponds, moisture conservation, drainage, irrigation, and water supply. This course satisfies the capstone design experience.

ABEN 474 Drainage and Irrigation Design

Spring. 3 credits. Prerequisites: Fluid Mechanics or Hydrology. Lecs, M W F 12:20. T. S. Steenhuis and L. D. Geohring.

This course will focus on design of drainage and irrigation systems for agriculture and non-agricultural purposes. The course will also briefly cover design for rural water supply and sanitation systems. Emphasis is placed on problem solving with actual situations used wherever possible. One major design project is required of each student. This course satisfies the capstone design experience requirement.

ABEN 475 Environmental Systems Analysis

Fall. 3 credits. Prerequisites: computer programming and one year of calculus. Lecs, M W F 1:25-2:15. D. A. Haith.

Systems analysis and its use in environmental quality management. Emphasis is on modeling of environmental problems, translation of models into efficient computational algorithms, and use of computer simulation and optimization procedures (search techniques, linear programming, dynamic programming, and separable programming) to evaluate management alternatives. Applications include pollution control and resource management problems. This course does **not** satisfy the capstone design experience requirement.

ABEN 476 Solid Waste Engineering

Spring. 3 credits. Prerequisites: 1 semester of physics and chemistry. Lecs, M W F 1:25. D. A. Haith.

Planning and design of processes and facilities for management of municipal solid wastes. Source characterization and reduction; collection and transport systems; waste-to-energy combustion; sanitary landfills; composting; recycling and materials recovery facilities; hazardous waste management. Emphasis on quantitative analyses. This course does **not** satisfy the capstone design experience requirement.

ABEN 477 Treatment and Disposal of Agricultural Wastes

Fall. 3 credits. Prerequisites: One environmental science course and at least junior-level standing; or permission of instructor. T R 2:30-3:45. W. J. Jewell.

Overview of pollution problems in agriculture, legal restrictions, and technologies used to control pollution. Biological, physical, and chemical processes are applied to solve problems associated with animal wastes, food production, and food and fiber processing. This course does **not** satisfy the capstone design experience requirement.

ABEN 478 Ecological Engineering

Spring. 3 credits. Prerequisite: Junior-level environmental quality engineering course or equivalent. Lecs, T R 2:30-3:45. W. J. Jewell.

Natural waste treatment systems are sustainable, driven by solar power, and generate useful and valuable by-products. Constructed wetlands, hydroponic applications of plants, wastewater farming, sludge and industrial residue application to land, soil restoration, bioremediation of toxics, and biofilters for air purification are examples of pollution control systems that depend on natural processes. Pollution control mechanisms in soils and plants are defined and used to design innovative treatment systems for agriculture, municipalities, and industry. This course satisfies the capstone design experience requirement.

ABEN 481 Design of Wood Structures

Spring. 3 credits. Prerequisite: ENG 202. Lecs, M W F 10:10. K. G. Gebremedhin.

Two evening prelims. Computer-aided and manual computation procedures of engineering wood structures. Topics include national design codes; estimation of design loads (dead, live, wind, snow, and seismic loads); mechanical properties of materials; designs of beams, columns, trusses, frames, arches, shear walls, horizontal diaphragms of post-frame buildings, connections, and special wood (glue-laminated) structural systems. Engineering judgment and individual responsibility in engineering design are also emphasized. This course satisfies the capstone design experience requirement.

ABEN 482 Bioenvironmental Engineering

Spring. 3 credits. Prerequisites: ABEN 250 and 350, or equivalent. Lecs, T R 11:15; lab, W 1:25-4:25. L. D. Albright.

Analysis and design of structures to modify the thermal and aerial environment of animals and plants. Environmental requirements of animals and plants, and the design of buildings to act as buffers between biological systems and climate. Heat flow, air flow, psychrometrics, energy balances, temperature biology, animal and plant models, thermal modeling, mechanical and natural ventilation, solar energy, and weather phenomena. This course satisfies the capstone design experience requirement.

ABEN 491 Highway Engineering (also Civil and Environmental Engineering 362)

Fall. 3 credits. Prerequisites: junior standing in engineering, fluid mechanics, and soil mechanics (may be taken concurrently). Lec, F 1:25-4:25; lab, M 1:25-4:25. L. H. Irwin.

An introduction to highway engineering with an emphasis on design. Students will work in

teams to apply the current standards and design criteria used in professional practice to several highway design projects. Topics of discussion include route location and design, traffic engineering, economic analysis, human factors and public safety, hydrology and drainage design, highway materials, pavement design, and maintenance. This course satisfies the capstone design experience requirement.

ABEN 494 Special Topics in Agricultural and Biological Engineering

Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

ABEN 496 Senior Design in Agricultural and Biological Engineering

Fall and spring. 1-3 credits. Prerequisite: ABEN 396 or co-registration, and senior standing in ABEN engineering program or permission of instructor. Note: Completing an independent study form is required to register. Hours to be arranged. Staff.

Involves capstone design experience, including a team project, incorporating analysis, design, evaluation, synthesis, and a written report of the end-product. This course may be taken in conjunction with an approved ABEN course (for an approved ABEN course, see ABEN Undergraduate Program publication).

ABEN 497 Individual Study in Agricultural and Biological Engineering

Fall and spring. 1-4 credits. S-U option. Prerequisite: written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in upper two-fifths of their class. Students must register with an independent study form (available in 140 Roberts Hall). Hours to be arranged. Staff.

Special work in any area of agricultural and biological engineering on problems under investigation by the department or of special interest to the student, provided, in the latter case, that adequate facilities can be obtained.

ABEN 498 Undergraduate Teaching

Fall and spring. 1-4 credits. Prerequisite: written permission of instructor. Students must register with an independent study form (available in 140 Roberts Hall). Hours to be arranged. Staff.

The student assists in teaching an agricultural and biological engineering course appropriate to his/her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses objectives and techniques with the faculty member in charge of the course.

ABEN 499 Undergraduate Research

Fall and spring. 1-3 credits. Prerequisites: normally reserved for seniors in upper two-fifths of their class. Adequate training for work proposed. Written permission of instructor. Students must register with an independent study form (available in 140 Roberts Hall). Hours to be arranged. Staff.

Research in any area of agricultural or biological engineering on problems under investigation by the department or of special interest to the student, provided that adequate facilities can be obtained. The student must review pertinent literature, prepare a project outline, carry out an approved plan, and submit a formal final report.

ABEN 501-502 M.P.S. Project

Fall and spring. 1-6 credits. Required of each M.P.S. candidate in the field. Hours to be arranged. ABEN graduate faculty. A comprehensive project emphasizing the application of agricultural technology to the solution of a real problem.

ABEN 551-552 Agricultural and Biological Engineering Design Project

Fall and spring. 3-6 credits. Prerequisite: admission to the M.Eng. (Agr.) degree program. Hours to be arranged. ABEN graduate faculty. Comprehensive design projects dealing with existing engineering problems in the field. Emphasis is on the formulation of alternative design proposals that include consideration of economics, nontechnical factors, engineering analysis, and complete design for the best design solution. Projects are supervised by faculty members on an individual basis. However, there is a formal orientation during the first four weeks of the semester. A formal report and public presentation of the results of the design project are required for completion of the course(s). A minimum of 3 to a maximum of 12 credits of 551-552 is required for the Master of Engineering degree. Students should register for 551 their first semester and complete any additional design project credits with 552. If more than 6 design project credits are desired in one semester, both 551 and 552 may be taken.

[ABEN 652 Instrumentation: Sensors and Transducers

Spring. 3 credits. Prerequisites: Linear differential equations, introductory chemistry and introductory physics, or permission of the instructor. Not offered 1996-97. D. J. Aneshanley. Application of instrumentation concepts and systems to the measurement of environmental, biological, and agricultural phenomena. Construction and characterization of electronic sensors and transducers will be emphasized. Image processing techniques will be introduced. A final project is required.]

ABEN 655 Thermodynamics and Its Applications

Spring. 3 credits. Prerequisite: Mathematics 293 or equivalent. Lects, M W F 12:20. J. Y. Parlange. Thermodynamics and its applications to problems in engineering and agriculture. Topics include basic concepts (equilibrium, entropy, processes, systems, potentials, stability, phase transitions) and applications (soil and water processes, dilute solutions, electromagnetism, surface phenomena, heat and mass transport, structure of organizations).

ABEN 671 Analysis of the Flow of Water and Chemicals in Soils

Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics. Lec, R 3:35-4:50 (first meeting—TBA after that). J. Y. Parlange.

The course encompasses the full range from simple to complex methods to describe the chemical and water flows on the surface, in the vadose zone, and through the aquifer. Current analytical, semi-analytical, and computer-based techniques are discussed. Both homogeneous and heterogeneous soils are analyzed. Offered alternately with Civil and Environmental Engineering 633—a complementary, but not identical, course.

[ABEN 672 Drainage

Spring. 4 credits. Prerequisites: ABEN 471 and two calculus courses. S-U grades optional. Offered alternate years. Not offered 1996-97. Lects, M W F 12:20; lab, T 1:25-4:25. T. S. Steenhuis. Theory of water and solute flow in aquifers, hillslopes, and the vadose zone as it relates to artificial drainage is discussed. Drainage design as it relates to agricultural land, landfills, and land application sites will be critically reviewed. The importance of preferential flow and matrix flow on water quality of drainage waters is examined. Laboratories are used for hands-on experience with measuring soil parameters and for actual drainage design. This course satisfies the capstone design experience requirement.]

ABEN 677 Treatment and Disposal of Agricultural Wastes

Fall. 3 credits. Prerequisite: permission of instructor. Lects, T R 2:30-3:45. W. J. Jewell. Emphasis is on the causes of agricultural waste problems and the application of fundamentals of treatment and control methods to minimize related pollution. Fundamentals of biological, physical, and chemical pollution control methods are used in design problems with animal wastes, food production, and food and fiber processing. A semester-long design project is required. This course satisfies the capstone design experience requirement.

ABEN 678 Nonpoint Source Models

Spring. 3 credits. Prerequisites: computer programming and calculus. Lects, M W F 2:30. D. A. Haith. Development and programming of simulation models for management of water pollution from runoff and percolation. Emphasis is on prediction of water and chemical inputs to surface waters and groundwater. Applications include urban and rural runoff, lake eutrophication, groundwater waste loadings from land disposal sites, pesticides and nutrients in agricultural drainage, irrigation return flows, and watershed stream flow and sediment yield.

ABEN 685 Biological Engineering Analysis

Spring. 4 credits. Prerequisite: T&AM 310 or permission of instructor. Lects, M W F 11:15. J. R. Cooke. Engineering problem-solving strategies and techniques are explored. Students solve several representative engineering problems that inherently involve biological properties. Emphasis is on formulation and solution of mathematical models and the interpretation of results. The student's knowledge of fundamental principles is used extensively.

ABEN 692 Pavement Engineering (also Civil and Environmental Engineering 643)

Spring. 4 credits. Limited to engineering seniors and graduate students. Prerequisite: one introductory course in soil mechanics or highway engineering. Lec, M F 2:30-4:25. L. H. Irwin. Application of geotechnical engineering principles to the selection of materials and the design of highway and airfield pavements, computer-based methods for pavement design, structural evaluation of pavements, and pavement systems management. Topics of discussion will include bituminous mixture design; base courses; soil stabilization methods; seal-coat design; design of flexible and rigid pavements; pavement design for frost conditions; and pavement evaluation using nondestructive test methods. Laboratory will provide a case study of pavement systems management.

ABEN 694 Graduate Special Topics in Agricultural and Biological Engineering

Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. ABEN graduate faculty. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

ABEN 697 Graduate Individual Study in Agricultural and Biological Engineering

Fall or spring. 1-6 credits. Prerequisite: permission of instructor. S-U grades optional. Hours to be arranged. ABEN graduate faculty. Topics are arranged by the staff at the beginning of the term.

ABEN 700 General Seminar

Fall. 1 credit. S-U grades only. M (time to be announced). Staff. Presentation and discussion of research and special developments in agricultural and biological engineering and related fields.

ABEN 750 Orientation for Research

Fall. 1 credit. Limited to newly joining graduate students. S-U grades only. Lects, first 7 weeks, R 3:35-4:25; remainder to be arranged. J. A. Bartsch. An introduction to departmental research policy, programs, methodology, resources, and degree candidates' responsibilities and opportunities.

ABEN 754 Sociotechnical Aspects of Watershed Development (also ARME 754 and Government 644)

Spring. 2-3 credits. S-U grades optional. T. Steenhuis, M. Walter, N. Uphoff and R. Barker. Examines watershed development and its relation to agriculture, irrigation and other activities within its boundaries. Emphasis on social, technical and economic processes within watersheds, including political and administrative aspects. Provides an opportunity to examine systematically the interaction of various aspects of watershed management and design in developing countries.

ABEN 771 Soil and Water Engineering Seminar

Fall and spring. 1-3 credits. Prerequisite: graduate status or permission of instructor. S-U grades optional. Hours to be arranged. T. S. Steenhuis. J.-Y. Parlange and M. F. Walter.

Study and discussion of research or design procedures related to selected topics in irrigation, drainage, erosion control, hydrology, and water quality.

ABEN 775 Agricultural Waste Management Seminar

Spring. 1 credit. Limited to graduate students. Prerequisite: permission of instructor. S-U grades only. Hours to be arranged. Staff.

Management of agricultural wastes, with emphasis on physical, chemical, biological, and economic factors affecting waste production, treatment and handling, utilization, and disposal.

ABEN 781 Structures and Related Topics Seminar

Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. Hours to be arranged. Staff.

Advanced analysis and design of production systems with emphasis on structural and environmental requirements, biological responses, and economic considerations. Hours to be arranged.

ABEN 785 Biological Engineering Seminar

Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. Hours to be arranged. J. R. Cooke.

The interactions of engineering and biology, especially the environmental aspects of plant, animal, and human physiology, are examined in order to improve communication between engineers and biologists.

ABEN 800 Master's-level Thesis Research

Fall and spring. 1-15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty.

ABEN 900 Graduate-level Thesis Research

Fall and spring. 1-15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty. Variable credit for Ph.D. research before the "A" exam is passed.

ABEN 901 Doctoral-level Thesis Research

Fall and spring. 1-15 credits. Prerequisite: passing of Admission Candidacy Exam and permission of adviser. S-U grades. ABEN graduate faculty.

AGRICULTURAL, RESOURCE, AND MANAGERIAL ECONOMICS

A. M. Novakovic, chair; D. J. Allee, B. L. Anderson, R. D. Aplin, N. L. Bills, R. N. Boisvert, J. R. Brake, L. D. Chapman, R. D. Christy, G. J. Conneman, J. M. Conrad, H. de Gorter, E. E. Figueroa, G. A. German, D. A. Grossman, M. J. Hubbert, H. M. Kaiser, R. J. Kalter, W. A. Knoblauch, S. C. Kyle, E. L. LaDue, D. R. Lee, W. H. Lesser, E. W. McLaughlin, R. A. Milligan, T. D. Mount, G. L. Poe, T. T. Poleman, J. E. Pratt, C. Ranney, W. D. Schulze, D. Streeter, L. W. Tauer, W. G. Tomek, C. van Es, G. B. White, L. S. Willett

Courses by Subject

Farm management, finance, and production economics: 302, 402, 403, 404, 405, 406, 605, 608, 708

Statistics, quantitative methods, and price analysis: 310, 313, 410, 411, 412, 415, 710, 711, 712, 713, 714, 717

Business management, law, and accounting: 220, 221, 320, 321, 323, 324, 325, 422, 424, 425, 426, 428

Public policy: 430, 431, 432, 630, 730, 731

Marketing and food distribution: 240, 340, 342, 346, 347, 443, 446, 447, 448, 449, 640, 641, 740, 741

Environmental and resource economics: 250, 450, 451, 651, 652, 750, 751, 754

Economics of development: 464, 660, 665, 666, 763

General, contemporary issues, research, and other: 100, 380, 494, 497, 498, 499, 694, 698, 699, 700

Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

ARME 100 Introduction to Global Economic Issues

Fall. 3 credits. Lab fees \$35. Lects, M W 11:15-12:05; labs to be arranged. W. D. Schulze.

The course begins with a survey of economic principles and then applies economic analysis to global issues such as: economic growth and the short and long term availability of natural resources; agriculture and population growth; business management, international trade, and global markets; and issues of global environmental management.

ARME 220 Introduction to Business Management

Spring. 3 credits. Lects, M W F 10:10-11 or 11:15-12:05; disc, M 2:30-4:25 (2 secs) or 7:30-9:25 p.m. (2 secs); T 8-9:55, or 2:30-4:25; W 10:10-12:05, 12:20-2:15, 2:30-4:25 (2 secs), or 7:30-9:25 p.m. (2 secs); R 8-9:55 or 2:30-4:25. In weeks when discs are held there will be no W lecture. 2 evening prelims. Staff.

An overview of management and business. Provides exposure to key management functions, a firm's internal and external environments, business ethics, forms of business ownership, some key concepts and tools in human resource management, financial management and marketing and important current issues such as quality, global competition, and corporate governance. Several guest executives.

ARME 221 Financial Accounting

Spring. 3 credits. Not open to freshmen. Lects, M F 11:15-12:05 or 12:20-1:10; sec, T 10:10-12:05 (2 secs), 12:20-2:15, or 2:30-4:25; W 10:10-12:05 (2 secs), 12:20-2:15 (2 secs), 2:30-4:25 (2 secs), or 7-9 p.m. (2 secs); or R 10:10-12:05, 12:20-2:15, or 2:30-4:25. 2 evening prelims and a comprehensive final, weekly homework assignments, and 2 written case studies. M. J. Hubbert.

A comprehensive introduction to financial accounting concepts and techniques, intended to provide a basic understanding of the accounting cycle, elements of financial statements, underlying theory of GAAP, and statements interpretation. Elements examined include inventory, depreciation, internal control of assets, time value of money, notes, stocks, bonds, and the statement of cash flows. Limited use of a financial data base of publicly held companies; introduction to financial information on the World Wide Web.

ARME 240 Marketing

Fall. 3 credits. Lects, M W F 10:10-11; discs, M 2:30-3:20; T 12:20-1:10 (2 secs), 1:25-2:15 (2 secs), 2:30-3:20, or 3:35-4:25; W 12:20-1:10 (2 secs), 1:25-2:15 (2 secs), 2:30-3:20, or 3:35-4:25; R 12:20-1:10 (2 secs), 1:25-2:15 (2 secs), 2:30-3:20, or 3:35-4:25; or F 10:10-11:00. 5 discussion sections are held during the semester. In weeks discussions are held, there will be no F lecture. E. W. McLaughlin.

This course provides a broad introduction to the fundamentals of marketing. We will explore the components of an organization's strategic marketing program, including how to price, promote, and distribute goods, services, ideas, people, and places. We will examine specifically the central role played by changing consumers; our primary emphasis will be placed on consumer goods industries. Although examples will frequently be drawn from the food and agricultural system, the principles and concepts from this course will apply equally well to the marketing of goods and services in all sectors of the economy. Case studies, industry guest lectures, and current marketing applications from various companies will be presented and analyzed.

ARME 250 Environmental Economics

Spring. 3 credits. Lects, T R 2:30-3:45. D. Chapman.

Concepts and methods used in the public and private analysis of environmental resources. Subjects include valuation and benefit-cost analysis. Major current economic problems such as economic incentives in environmental policy, endangered species protection, forestry, energy use, world petroleum resources, and global warming. The growing world trade in resource-intensive manufactured products and the impact on income, employment, and pollution. Comparative resource use and environmental protection in industrialized and developing countries.

ARME 302 Farm Business Management

Fall. 4 credits. Not open to freshmen. This course is a prerequisite for ARME 402 and 405. Lects, M W F 9:05-9:55; sec, W or R 1:25-4:25. On days farms are visited, the section period is 1:25-6:00. W. A. Knoblauch.

An intensive study of planning, directing, organizing, and controlling a farm business, with emphasis on the tools of managerial analysis and decision making. Topics include financial statements, business analysis,

budgeting, and acquisition, organization, and management of capital, labor, land, buildings and machinery.

ARME 310 Introductory Statistics

Fall or spring. 4 credits. Prerequisite: EDUC 115 or equivalent level of algebra. Lec, M W F 1:25-2:15; sec T 10:10-12:05, 12:20-2:15, or 2:30-4:25 (2 secs); W 11:15-1:10 or 2:30-4:25 (2 secs); or R 12:20-2:15 or 2:30-4:25 (2 secs). 3 evening prelims. C. van Es.

An introduction to statistical methods. Topics to be covered include the descriptive analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, and correlation analysis. Applications from business, economics, and the biological sciences are used to illustrate the methods covered in the course.

ARME 313 Information Systems and Decision Models

Fall. 3 credits. Limited to juniors and seniors. Prerequisites: ABEN 102 or equivalent, ECON 101 or equivalent, and ARME 310. Lec, M W 10:10-11; lab, M 12:20-2:15, 4:35-6:30, or 7:30-9:25 p.m.; T 12:20-2:15, 2:30-4:25 or 4:35-6:30. Staff.

The focus of the course is on information systems and the quantitative approaches used in business decision making. The computer models presented enable the student to appreciate information systems, identify problems that can be analyzed with business decision making techniques, examine problems using analytical techniques, and gain a perspective for critiquing the decision making process.

ARME 320 Business Law I

Fall. 3 credits. Limited to juniors, seniors, and graduate students. Lec, M W F 9:05-9:55. 1 evening prelim. D. A. Grossman. Consideration is given chiefly to legal problems of particular interest to persons who expect to engage in business. Emphasis is on the law pertaining to contracts, sales, agency, property, and the landlord-tenant relationship.

ARME 321 Business Law II

Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: a course in business law. Lec, T R 8:30-9:55. D. A. Grossman.

The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited liability companies. The second portion of the course will review selected topics in business law, like employment discrimination, secured transactions, product liability, unfair competition, and computer law.

ARME 323 Managerial Accounting

Fall. 3 credits. Prerequisite: ARME 221 or equivalent. Lec, M W 12:20-1:10; disc, R 10:10-12:05, 12:20-2:15 (2 secs), or 2:30-4:25 (2 secs); or F 10:10-12:05 or 12:20-2:15 (2 secs). 2 evening prelims, a third exam, weekly homework, one written case study, and one project on an electronic spreadsheet. M. J. Hubbert.

An introduction to cost accounting that emphasizes the application of accounting concepts to managerial control and decision making. Major topics include product costing, standard costing, cost behavior, cost allocation, budgeting, inventory control, variance analysis, measuring divisional performance,

and accounting systems in the manufacturing environment. Limited use of electronic spreadsheets.

ARME 324 Financial Management

Spring. 4 credits. Prerequisite: ARME 220 or equivalent. Recommended: ARME 221 and 310 or equivalents. Lec, M W F 9:05-9:55; disc, W 2:30-4:25 or R 9:05-11, 12:20-2:15, or 2:30-4:25, or F 10:10-12:05 or 12:20-2:15. 2 evening prelims. B. L. Anderson.

Focuses on three major questions facing management: how to evaluate capital investment decisions, how to raise the capital to finance the firm, and how to generate sufficient cash flows to meet the firm's cash obligations. Major topics include methods to analyze investment decisions, impact of taxes, techniques for handling risk and uncertainty, effects of inflation, sources and costs of debt and equity, capital structure, leverage, and working capital management. Microcomputers are used for analyzing financial problems. Previous computer experience is preferred, but optional instruction offered.

ARME 325 Personal Enterprise and Small Business Management

Spring. 3 credits. Limited to juniors and seniors. Prerequisites: ARME 220 and 221 or permission of instructor. Absolutely no adds or drops after second class meeting. Lec, T R 12:20-1:35, or 2:30-3:45. D. Streeter.

Acquaints students with the challenging role of small business in the global economy. Special emphasis on the problems of planning, starting, and managing a new business, including strategic planning, marketing, financing, and managing growth. Term project, development of a business plan, is done in teams of no fewer than three. Case studies and visiting entrepreneurs illustrate various small business issues.

[ARME 340 Futures and Options Trading

Spring. 3 credits. Prerequisites: ECON 101. Open by application only. S-U grades optional. Not offered 1996-97. Staff.

The focus of the course is on the use of agricultural financial futures and options as marketing and management tools. A primary objective is to understand how companies, financial institutions, and farm businesses can employ hedging strategies to manage risk. Students will participate in a simulated trading exercise in which they will use real-time price and market information and input from industry experts to manage a hedge position.]

ARME 342 Marketing Management

Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: ARME 240 and ECON 101-102. Lec, M W F 10:10-11; disc, R 12:20-1:10 (2 secs) or 2:30-3:20 (2 secs); F 10:10-11 (2 secs), or 12:20-1:10 (2 secs). In weeks discs are held, there will be no F lecture. R. D. Christy.

Deals with the central link between marketing at the societal level and everyday consumption by the general public. As such, this course emphasizes the management aspects of marketing by considering consumer behavior, strategies in product and brand selection, pricing, promotion, sales forecasting, and channel selection. Identification and generation of economic data necessary for marketing decisions are considered. Public

policy and ethical dimensions of marketing are examined.

[ARME 346 Dairy Markets and Policy

Spring. 3 credits. Limited to juniors and seniors. Prerequisite: ECON 101 or equivalent. Offered alternate years. Not offered spring 1997. Next offered spring 1998. Lec, T R 8:30-9:55. H. M. Kaiser.

A survey of the structural and institutional characteristics of dairy markets and the analysis of policy issues, pricing systems, and government programs, including marketing orders, price supports, and import policies.]

ARME 347 Marketing Fruits, Vegetables, and Ornamental Products

Fall. 3 credits. S-U grades optional. A mandatory 2-day field trip. Estimated cost of field trip, \$50. Lec, M W F 12:20-1:10. E. E. Figueroa.

A study of fruits, vegetables, and ornamental product marketing, including seasonal variations. Role of market intermediaries, role of government agencies, and the price discovery process. Discussion and description of horticultural product market orders in the U.S. The emerging importance of interregional and international markets.

ARME 380 Independent Honors Research in Social Science

Fall or spring. 1-6 credits. Limited to students who have met the requirements for the honors program. See "Honors Program" in CALS section of this catalog. Provides qualified students an opportunity to conduct original research under supervision. Information available in ARME undergrad program office in Warren Hall.

ARME 402 Seminar in Farm Business Planning and Managerial Problem Solving

Fall. 3 credits. 6 half-day field trips. On days field trips are taken, class ends at 5:30. Prerequisite: ARME 302 or equivalent. Lec, T R 12:20-1:10; disc, R 1:25-4:25. G. J. Conneman.

A capstone seminar/workshop designed for seniors who plan to return to the family business or home farm or to take positions in banking, credit, or agribusiness, as well as those who wish to establish entrepreneurial businesses. The objective of the course is to pull together interdisciplinary knowledge and apply it in a problem-solving/critical-thinking management context.

ARME 403 Farm Management Study Trip

Spring. 1 credit. Prerequisite: ARME 302. Open by application only. Secs, arranged. W. A. Knoblauch.

A special program to study production and management systems in diverse agricultural regions of the U.S. Includes a trip (usually taken during spring break) to the region being studied. A different region is visited each year. The course meets in advance of the study trip and upon return from trip. A paper, selected by the student, which further explores an aspect of the trip, is a requirement for completing the course.

ARME 404 Advanced Agricultural Finance Seminar

Spring. 2 credits. Limited to 16 seniors with extensive course work in farm management and farm finance. Open by application prior to March 1 of the year before the course is offered. W 3:35-5:30. E. L. LaDue.

A special program in agricultural finance, conducted with financial support from the Farm Credit System. Includes two days at Farm Credit Banks of Springfield, one week in Farm Credit Association offices, a field trip to observe FHA financing during fall term, a four-day trip to financial institutions in New York City during intersession, and an actual farm consulting and credit analysis in the spring term.

ARME 405 Farm Finance

Spring. 4 credits. Prerequisite: ARME 302 or equivalent. Lec, M W F 9:05-9:55; disc, T 1:25-3:20. E. L. LaDue.

The principles and practices used in financing farm businesses, from the perspectives of the farmer and the farm lender. Topics include sources of capital, financing entry into agriculture, financial analysis of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, and leasing.

ARME 406 Farm and Rural Real Estate Appraisal

Spring, weeks 7-15. 2 credits. Limited to 40 students. Prerequisites: ARME 302 or equivalent and permission of instructor. Lec, R 11:15-12:05; sec R 1:25-5:30. 6 half-day field trips, 1 all-day field trip. G. J. Conneman.

The basic concepts and principles involved in appraisal. Factors governing the price of farms and rural real estate and methods of valuation are studied. Practice in appraising farms and other rural properties.

ARME 410 Business Statistics

Spring. 3 credits. Prerequisite: ARME 310 or equivalent. Lec, M W F 10:10-11. C. van Es.

This course focuses on four major topics used to analyze data from marketing research, business, and economics. Topics studied are: survey sampling procedures, contingency table analysis, time series and forecasting, and experimental design and ANOVA. The course will involve a research project designed to give experience in collecting and interpreting data.

ARME 411 Introduction to Econometrics

Spring. 3 credits. Prerequisite: ARME 310 or equivalent. Lec, T R 10:10-11:25. J. E. Pratt.

The course introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression procedures are discussed and simultaneous equation models are introduced. Students are required to specify, estimate, and report the results of an empirical model using econometric methods.

ARME 412 Introduction to Mathematical Programming

Fall. 3 credits. Primarily for juniors, seniors, and M.S. degree candidates. Prerequisite: ARME 310 or equivalent. Lec, T R 12:20-1:35. J. E. Pratt.

This is a course in applied linear programming. Following a review of linear algebra, the emphasis will be on formulation, specification, and interpretation of solutions to mathematical models of economic problems. Standard LP problems such as work scheduling, blending, resource allocation, capital budgeting, transportation and financial

planning, inventory management, etc., will be studied. Integer and nonlinear programming will be introduced, if time permits.

ARME 415 Price Analysis

Fall. 3 credits. Prerequisites: ECON 313 or CEH 210 or equivalent, ARME 310 or equivalent. Lec, M W F 9:05-9:55. H. M. Kaiser.

The focus of this course is on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions are included.

ARME 422 Estate Planning

Fall. 1 credit. Limited to juniors, seniors, and graduate students. S-U grades only. Lec, M 3:35-4:25. D. A. Grossman.

Fourteen sessions on the various aspects of estate-planning techniques. The law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and substitutes for probate procedures are covered.

ARME 424 Business Policy

Fall. 3 credits. Limited to seniors majoring in business management and marketing. T R 9:05-10:35, 11:15-12:45 or 2:30-4:00. R. D. Aplin.

An integrating course that examines business policy formulation and implementation from the standpoint of the general manager of an organization, focusing on decision making and leadership. The course is built around a series of cases. Several guest executives. Emphasizes improving oral and written communication skills.

ARME 425 Small Business Management Workshop

Fall. 4 credits. Limited to seniors. Prerequisite: ARME 325 or NBA 300 and permission of instructor. Term project work will amount to approximately \$100 per team. Lec, M W 2:30-4:25. D. Streeter.

Students serve as counselors to small businesses in the central New York area and confront problems facing small personal enterprises. Encourages the application of business principles to an existing business and the witnessing of the results of firm-level decision making. Student teams meet with the business owners and course staff at arranged times during the semester.

ARME 426 Cooperative Management and Strategies

Spring. 3 credits. Recommended: ARME 220 or equivalent. Estimated cost of field trip, \$50. Lec, M W F 12:20-1:10. 2 day field trip required. B. L. Anderson.

Investigates the unique aspects of cooperative, membership, and not-for-profit organizations. Issues are approached from the point of view of management, the board of directors, and members. Topics include characteristics of various types of business organizations, cooperative principles, legislation, taxation, as well as the unique nature of corporate strategies, management, financing, and marketing in cooperative, membership, and not-for-profit organizations. Primary focus is on operating cooperatives in agriculture although alternative types of cooperative organizations are discussed, such as: credit unions, insurance cooperatives, employee

stock ownership plans, housing cooperatives, flexible manufacturing networks, consumer cooperatives, and membership organizations.

[ARME 428 Technology: Management and Economic Issues

Spring. 3 credits. Prerequisites: ECON 101-102, or permission of instructor. Limited to juniors and seniors. Not offered 1996-97. Lec, T R 10:10-11:25. R. J. Kalter.

Designed to acquaint students with the role of technology in modern society, business, and education. Emphasis is placed on the context for managerial analysis and decisions with respect to technological adoption. Topics include the historical influence of technology on economic structure and activity, contemporary technological trends, implications for business managers, adoption and diffusion, public acceptance, implications for future structural and spatial organization of economic activity, impediments to technological advancement, and public policy considerations.]

ARME 430 International Trade Policy

Spring. 3 credits. Prerequisites: ECON 101-102 or equivalents. Lec, T R 12:20-1:35. Optional disc to be arranged. D. R. Lee.

This course examines the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Applications to current topics in international trade policy, to trade in primary commodities, and to both developed and developing countries are also emphasized.

ARME 431 Food and Agricultural Policies

Fall. 3 credits. Lec, T R 9:05-9:55; disc, R 11:15-12:05 or 3:35-4:25. H. de Gorter.

The course deals broadly with food and agricultural policies, including price support and storage or reserve policies, agricultural protection, soil conservation programs, the structure of agriculture, domestic food subsidy programs, environmental issues, and food safety. The importance of international trade and agricultural policies in other countries is emphasized.

[ARME 432 Economics of the Public Sector

Spring. 3 credits. Prerequisite: ECON 313 or CEH 210 or equivalent. Not offered 1996-97. Staff.

The application of economic concepts to the evaluation of the structure and performance of the public sectors of the economy. Emphasis on microeconomic analysis of public finance and public resource allocation. Principal topics: market failure, articulation of public choice and interests, evaluation of public decisions, and current public policy.]

ARME 443 Food-Industry Management

Fall. 4 credits. Limited to juniors and seniors. Prerequisite: ARME 448 or 342 or permission of instructor. Lec, T R 10:10-11:25; sec T 1:25-2:40. G. A. German.

A case-study approach is used to examine the application of management principles and concepts to marketing and distribution problems of the food industry. Cases covering new product introductions, merchandising strategies, and investment decisions are included. Guest speakers from the food industry present case-study solutions at the Tuesday session.

ARME 446 Food Marketing Colloquium

Fall. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. Permission of the instructors. S-U grades only. R 3:35-5. G. A. German, E. W. McLaughlin, and D. J. Perosio.

ARME 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar will cover advanced topics in food marketing, many of which will have an important international dimension and will be presented by industry members. A number of field trips will be taken, including an international trip during January intersession and a five-day trip to the Food Marketing Institute Convention in Chicago during the first week in May. Students will prepare research topics on various aspects of the food industry.

ARME 447 Food Marketing Colloquium

Spring. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. Permission of instructors. S-U grades only. R 3:35-5. G. A. German, E. W. McLaughlin, and D. J. Perosio.

ARME 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar will cover advanced topics in food marketing, many of which will have an important international dimension and will be presented by industry members. A number of field trips will be taken, including an international trip during January intersession and a five-day trip to the Food Marketing Institute Convention in Chicago during the first week in May. Students will prepare research topics on various aspects of the food industry.

ARME 448 Food Merchandising

Spring. 3 credits. Limited to juniors and seniors. Prerequisite: ARME 240. Lects, T R 12:20-1:35. G. A. German and D. J. Perosio.

Merchandising principles and practices as they apply to food industry situations. The various elements of merchandising such as buying, pricing, advertising, promotion, display, store layout, profit planning and control, and merchandising strategy are examined in this course. The consequences of food industry trends and initiatives for other industry members, public policymakers, and consumers are considered.

ARME 449 Global Marketing Strategy

Fall. 3 credits. Prerequisite: ARME 342. S-U grades optional. T R 1:25-2:40. W. H. Lesser.

This course will examine the marketing environment, opportunities, and challenges in the rapidly changing global marketplace. We will explore what factors are predictive of business success in various national markets and the means by which these factors can be incorporated into firm strategy. The focus of the course will be kept practical and managerial through liberal use of actual case studies.

ARME 450 Resource Economics

Fall. 3 credits. Prerequisites: MATH 111 and ECON 313. Lects, M W F 2:30-3:20. J. M. Conrad.

Dynamic models of renewable, nonrenewable, and environmental resources will be constructed to examine market allocation and optimal resource management.

ARME 451 Environmental Economics and Policy

Spring. 3 credits. Prerequisite: ECON 313; ARME 250 recommended. S-U grades optional. Lects, M W 2:55-4:10. Staff.

This course applies economic concepts to public decision making about environmental commodities and natural resources. Two economic paradigms of allocating public goods will be explored: the conventional economic approach, with specific emphasis on market failure, externalities, benefit-cost analysis, and the use of non-market valuation techniques; and a property rights/institutional perspective.

ARME 464 Economics of Agricultural Development

Spring. 3 credits. Prerequisites: ECON 101-102, or permission of instructor. Lects, T R 12:20-1:35. R. D. Christy.

This course is designed to provide an understanding of the economics of the agricultural sector in low-income countries. In addition, more general issues of economic development beyond the agricultural sector will be covered in order to provide the necessary context for an understanding of rural problems. Among the areas covered are the nature of development and technical change, welfare and income distribution, land reform, food and nutrition policy, food security and food aid, competition with more developed countries and international markets, the effect of U.S. policy on agricultural development, and the role of international institutions. Examples from a wide variety of developing countries will be used to illustrate the basis for economic analysis.

ARME 494 Undergraduate Special Topics in Agricultural, Resource, and Managerial Economics

Fall or spring. 4 credits maximum. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department.

ARME 497 Individual Study in Agricultural, Resource, and Managerial Economics

Fall or spring. Variable credit. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

To be used for special projects designed by faculty members.

ARME 498 Supervised Teaching Experience

Fall or spring. 1-3 credits. Total of 4 credits maximum during undergraduate program. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty. Students are expected to actually teach at least one hour per week for each credit awarded. Students cannot receive both pay and credit for the same hours of preparation and teaching.

ARME 499 Undergraduate Research

Fall, spring, or summer. 1-4 credits. Limited to students with grade-point averages of at least 2.7. Prerequisite: written permission of the staff member who will supervise the work and assign the grade. Students must register with an

Independent Study form (available in 140 Roberts Hall). S-U grades optional. Staff. Permits outstanding undergraduates to carry out independent study of suitable problems under appropriate supervision. Students cannot receive both pay and credit for the same hours of work.

ARME 605 Agricultural Finance and Capital Management

Fall. 3 credits. Prerequisite: ARME 405 or equivalent. Offered alternate years. Offered fall 1996 and fall 1998; not offered fall 1997. \$25 charge for reading materials; no text. T R 8:40-9:55. E. L. LaDue and L. W. Tauer.

Advanced topics in capital management and financing of agriculture. Special emphasis on current issues. Example topics: farm-sector funds flows, financial risk and decision analysis, agricultural finance policy, financial intermediation and intermediaries, firm growth, inflation, loan evaluation, and selected topics on financing agriculture in developing countries.

ARME 608 Production Economics

Fall. 3 credits. Recommended: ECON 313 and MATH 111 or equivalents. Lects, M W F 10:10-11. L. W. Tauer.

The theory of production economics with emphasis on applications to agriculture. Topics include the derivation, estimation, and use of production, cost, profit, demand, and supply functions. Production response over time and under risk is introduced.

ARME 630 Policy Analysis: Welfare Theory, Agriculture, and Trade

Spring. 4 credits. Prerequisites: ARME 608 or CE&H 603, ECON 313, or equivalent intermediate micro theory incorporating calculus. Lects, T R 8-9:55. H. de Gorter and staff.

The first half of the course surveys the theory of welfare economics as a foundation for public policy analysis. Major issues addressed include the problem of social welfare measurement, the choice of welfare criteria, and the choice of market or nonmarket allocation. Basic concepts covered include measurement of welfare change, including the compensation principle, consumer and producer surplus, willingness-to-pay measures, externalities, and the general theory of second-best optima. The second half of the course focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international markets.

ARME 640 Analysis of Agricultural Markets

Fall, weeks 1-7 (ends Oct. 17). 2 credits. Prerequisites: ARME 411 and 415 or equivalents. Lects, T R 2:30-4:25. W. G. Tomek.

This course is about agricultural product markets. Focus is placed on their distinguishing characteristics, criteria for evaluating performance, models of price determination, and selected public-policy issues related to market performance.

ARME 641 Commodity Futures Markets

Fall, weeks 8-14 (starts Oct. 22). 2 credits.
Prerequisites: ARME 411 and 415 or
equivalents. Recommended: ARME 640.
Lecs, T R 2:30-4:25. W. G. Tomek.

This course is primarily about markets for agricultural futures contracts. Emphasis is placed on models of price behavior on cash and futures markets including relationships among prices. These principles provide a foundation for a discussion of hedging, speculation, and public-policy issues.

ARME 651 Environmental and Resource Economics

Spring. 4 credits. Limited to graduate students. Lec, T R 10:10-11:25.
W. D. Schulze.

Applied welfare economics with specific applications to environmental and resource issues. Review of welfare economics, environmental externalities, and common property resources, and a survey of current environmental and natural resource policy. Techniques for measuring benefits and cost—including property value and wage hedonic approaches, travel models and contingent valuation—are covered. Survey/data collection methods are described in detail. Explore innovative market mechanisms for resolving public good, common property, and externality problems. Students will be required to complete a paper describing their own formal economic analysis of a natural resource or environmental problem. ARME 651 is a core course for the Environmental Management concentration/option.

ARME 652 Land Economics Problems (co-listed with Civil and Environmental Engineering 529)

Fall or spring. 1 or more credits. Limited to graduate students. Prerequisite: permission of instructor. S-U grades optional. Hours to be arranged.
D. J. Allee.

Special work on any subject in the field of land and resource economics.

ARME 660 The World's Food

Spring. 3 credits. S-U grades optional.
T R 12:20-1:40. T. T. Poleman.

Designed to introduce first-year graduate students to food economics, the world food situation, and the linkages between food, population, and employment in developing countries. Among the topics considered are the extent of hunger, income and dietary change, control of population growth, and the outlook for feeding an eventual population of 10-12 billion.

ARME 665 Food and Nutrition Policy (also Nutritional Sciences 685)

Spring. 3 credits. Prerequisites: Introductory microeconomics and intermediate statistics (i.e. through multiple regression), or permission of instructor. S-U grades optional. Lec, M W 2:30-3:40. D. Sahn and P. Dorosh.

For description, see NS 685.

ARME 666 Economics of Development

Spring. 3 credits. Prerequisites: ECON 313 and 314 or permission of instructor. S-U grades optional. Lec, T R 10:10-11:25. S. C. Kyle.

The course is designed as an introduction to the economics of development at the graduate level. The course will be split into two major sections, the first dealing with the micro-economics of households in developing

countries and the second covering macroeconomic strategy and performance. A principal goal will be to illuminate the particular features of low-income countries which are important to economic analysis and policy. Special attention will be given to issues facing countries with important agricultural and resource sectors.

ARME 694 Graduate Special Topics in Agricultural, Resource, and Managerial Economics

Fall or spring. 4 credits maximum. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department.

ARME 698 Supervised Graduate Teaching Experience

Fall or spring. 1-3 credits. Total of 4 credits maximum during graduate program. Students must register with an Independent Study form (available in 140 Roberts Hall). Open only to graduate students. Undergraduates should enroll in ARME 498. S-U grades optional. Prerequisite: permission of instructor. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories, and tutoring. Students are expected to actually teach at least one hour per week for each credit awarded. Students cannot receive both pay and credit for the same hours of preparation and teaching.

ARME 699 M.P.S. Research

1-6 credits. Prerequisite: registration as an M.P.S. student. Credit is granted for the M.P.S. project report. Staff.

ARME 700 Individual Study in Agricultural, Resource, and Managerial Economics

Fall or spring. Limited to graduate students. S-U grades optional. Credit, class hours, and other details arranged with a faculty member. Staff.

This course is used for special projects designed by faculty members. More than one topic may be given each semester in different sections. The student must register in the section appropriate to the topic being covered; the section number is provided by the instructor.

[ARME 708 Advanced Production Economics

Fall. 3 credits. Prerequisite: ARME 608, 710, or equivalents; ECON 509 is highly recommended. Offered alternate years. Not offered fall 1996 and 1998. Next offered fall 1997. Hours to be arranged.
R. N. Boisvert.

Theoretical and mathematical developments in production economics, with emphasis on estimating production relationships, scale economies, technical change, factor substitution. Developments in flexible functional forms, duality and dynamic adjustment models are emphasized. Discussions of other topics (risk, supply response, and household production functions) based on student interest.]

ARME 710 Econometrics I

Spring. 4 credits. Prerequisite: matrix algebra and statistics at the level of BTRY 417 and 601 (BTRY 408-409 preferred). Undergraduates must have permission of instructor. Lec, T R 2:30-4:25.
W. G. Tomek.

This intermediate-level course covers selected statistical models and associated estimators used in econometrics; dynamic and other stochastic regressor models, seemingly unrelated regression and simultaneous equation models, and models with nonspherical error terms and specification errors. Students seeking an introduction to econometrics should take ARME 411.

ARME 711 Econometrics II

Fall. 4 credits. Prerequisite: ARME 710 or equivalent. BTRY 417 recommended.
Lecs, M W 10:10-12:05. T. D. Mount.

Coverage beyond that of ARME 710 of linear regression models, including alternative methods of incorporating non-sample information and testing restrictions, diagnostic techniques for collinearity and influential observations, pooling data, stochastic coefficients, limited dependent variables and latent variables.

ARME 712 Quantitative Methods I

Fall. 4 credits. Prerequisite: some formal training in matrix algebra. A course at the level of BTRY 417 is highly recommended.
Lecs, M W 8-9:55; sec, F 8-9:55.
R. N. Boisvert.

A comprehensive treatment of linear programming and its extensions, including postoptimality analysis. Topics in nonlinear programming, including separable, spatial equilibrium and risk programming models. Input-output models and their role in social accounting matrices and computable general equilibrium models are discussed. Applications are made to agricultural, resource, and regional economic problems.

ARME 713 Quantitative Methods II

Spring. 4 credits. Prerequisites: ECON 509 and ARME 710. Lec, M W 9:05-11.
J. M. Conrad and T. D. Mount.

This course is concerned with the analysis and optimization of dynamic systems. Course objectives are to (1) present the basic theory of dynamical systems and dynamic optimization, (2) introduce associated methods of numerical and econometric analysis, (3) review some applications of dynamic analysis from various subfields in economics, and thereby (4) equip students with basic theory and methods to perform applied research on dynamic allocation problems.

[ARME 714 Experimental Economics

Fall. 4 credits. Prerequisites: ECON 509. Offered alternate years. Not offered fall 1996 and 1998. Next offered fall 1997.
Lecs, T R 10:10-11:25. W. D. Schulze.

The course will survey both experimental economics methods and research as an approach to test economic theory. Students will participate as subjects in a series of illustrative computerized experiments ranging from double auctions to public goods provision. Topics covered include experimental methods; decisions and games; markets (testing auction institutions); market power (monopoly, oligopoly); bargaining, compensation and performance; public goods; externalities, and voting; information and uncertainty; and economic anomalies. Students must design, implement, and write a

paper describing their own experiment testing an economic theory.]

ARME 717 Research Methods in Agricultural Economics

Spring. 2 credits. Limited to graduate students. M 1:25–3:20. R. N. Boisvert. Discussion of the research process and scientific method as applied in agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting data, questionnaire design and testing, field organization, and analysis of data. During the semester each student develops a research proposal that may be associated with his or her thesis.

[ARME 730 Seminar on International Trade Policy: Agriculture, Resources and Development]

Spring. 3 credits. Limited to graduate students. Prerequisites: ARME 630 or equivalent. Offered alternate years. Not offered spring 1997. Next offered spring 1998. Hours to be arranged. D. R. Lee.

This course examines selected topics in the professional literature on international trade policy, focusing on agricultural trade and related topics, including trade liberalization, trade and environmental linkages, technological change and trade policy, and agricultural trade and development.]

ARME 731 Seminar on Agricultural Policy

Fall. 3 credits. Limited to graduate students. Offered alternate years. Offered fall 1996 and 1998. Not offered fall 1997. T R 12:20–1:50. H. de Gorter.

A review of the professional literature relating to agricultural policy issues and techniques appropriate to the analysis of such issues.

ARME 740 Agricultural Markets and Public Policy

Spring, weeks 1–7. 2 credits. Limited to graduate students. Prerequisite: familiarity with multiple regression techniques at the ARME 411 level or higher. Recommended: ARME 640. T R 12:20–2:15. W. H. Lesser.

Develops the concepts and methodology for applying and analyzing the effects of public-policy directives to the improvement of performance in the U.S. food marketing system. Prospective topics include a survey of industrial organization principles, antitrust and other legal controls, and coordination systems in agriculture. Topics can be adjusted to students' interests.

ARME 741 Space, Trade, and Commodity Analysis

Spring, weeks 8–14. 2 credits. Limited to graduate students. Recommended: ARME 412 or equivalent and ARME 640. T R 12:20–2:15. J. E. Pratt.

Principal topics are spatial micro-economics of the firm, spatial pricing and location decisions, the forms of spatial competition, and quantitative methods for spatial analyses, which include techniques for finding spatial equilibria and selected network optimization algorithms.

ARME 750 Resource Economics

Spring. 4 credits. Prerequisites: ECON 509 and 518, or ARME 713. Lects, T R 2:30–4:20. J. M. Conrad.

Optimal control and other methods of dynamic optimization will be used to study the allocation and management of natural resources.

ARME 751 Environmental Economics

Fall. 4 credits. Prerequisites: ECON 509 and 518, or ARME 713. S-U grades optional. Lects, T R 2:30–4:20. J. M. Conrad and L. D. Chapman.

Economic theory will be applied to the problems of managing environmental quality. Static and dynamic models of externality, decisions to preserve or develop natural environments, and methods of valuation will be presented.

ARME 754 Sociotechnical Aspects of Watershed Development (also Agricultural and Biological Engineering 754, and Government 644)

Spring. 2 or 3 credits. S-U grades optional. W 7–9:30 p.m. T. Steenhuis, M. Walter, N. Uphoff, and staff.

For description, see ABEN 754.

ARME 763 Macro Policy in Developing Countries

Spring. 3 credits. Prerequisites: ECON 509, 510, 513 (may be taken concurrently), or permission of instructor. Offered alternate years. Offered spring 1997; not offered spring 1998. Lec, T 2–4:25. S. C. Kyle.

This course examines macroeconomic policies in developing countries and their interaction with economic growth, development, and stability. Theoretical models useful for analysis of macro policies will be covered as well as an examination of empirical studies. Emphasis will be on research topics of current interest to students and professionals in the field, particularly those relating to the interaction of macro policy with micro and sectoral analysis.

ANIMAL SCIENCE

H. F. Hintz, chair; B. J. Apgar, R. E. Austic, D. E. Bauman, D. H. Beermann, A. W. Bell, R. W. Blake, Y. R. Boisclair, D. L. Brown, W. R. Butler, L. E. Chase, G. F. Combs, W. B. Currie, H. N. Erb, R. W. Everett, D. G. Fox, D. M. Galton, R. C. Gorewit, D. E. Hogue, P. A. Johnson, L. R. Jones, K. Keshavarz, X. G. Lei, E. A. Oltenacu, P. A. Oltenacu, J. E. Parks, A. N. Pell, E. J. Pollak, R. L. Quaas, S. M. Quirk, J. B. Russell, R. D. Smith, M. L. Thonney, M. E. Van Amburgh, D. R. Van Campen

AN SC 100 Domestic Animal Biology I

Fall. 4 credits. S-U grades optional. Lects, M W F 9:05; sec, T W or R 2–4:25.

W. B. Currie, M. L. Thonney, and staff.

An introduction to the science of raising animals in the context of commercial animal production. Lectures and labs address the biology of economically important species (morphology, anatomy, and physiology) and application of the biology to the management of animals within major livestock industries. Topics covered include fundamentals of anatomy, regulatory mechanisms, vital systems, digestion, and metabolism. Students care for small numbers of cattle, sheep, pigs, and chickens in different phases of their life cycle to maximize hands-on contact. Living animals will be used noninvasively, and fresh organs and tissues from dead animals will be used in laboratories.

AN SC 105 Contemporary Perspectives of Animal Science

Spring. 1 credit. Limited to freshmen, sophomores, and first-year transfers. T 1:25 or W 12:20. R. C. Gorewit and D. J. Cherney.

A forum to discuss the students' career planning and the contemporary and future role of animals in relation to human needs.

AN SC 120 Animal Domestication and Behavior

Fall. 3 credits. T R 8:40–9:55.

E. A. Oltenacu.

This Freshman Writing Seminar will explore the relationship between humans and their domestic animals. Students will study the role of animal behavior in the domestication process, both historically and in modern attempts to domesticate new species, and in finding solutions to current issues related to animal welfare.

AN SC 150 Domestic Animal Biology II

Spring. 4 credits. S-U grades optional.

Lec, M W F 9:05; lab/disc T W or R 2–4:25. W. R. Butler and staff.

Second of a two-semester sequence (100/150) applying the basic biology of growth, defense mechanisms, reproduction, and lactation to aspects of the production and care of domestic animals. Fresh tissues and organs from dead animals along with preserved specimens will be used in laboratories, exercises, and demonstrations.

AN SC 212 Animal Nutrition

Fall. 4 credits. Prerequisite: CHEM 104 or 208. Recommended: AN SC 100 and 150. Lects, M W F 10:10; lab, M T W R or F 1:25–4:25. A. W. Bell.

An introduction to animal nutrition, including digestive physiology and metabolism of livestock and other species; nutrient properties and requirements for different aspects of animal production; principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and a nutritional experiment performed on a laboratory or farm animal species.

AN SC 213 Nutrition of Companion Animals

Spring, weeks 1–7. 1 credit. Prerequisite: AN SC 212 or equivalent. Offered alternate years. Next offered spring 1997, 1999. Lects W 7:30–9:25 p.m. H. F. Hintz.

Nutrition of companion animals, with emphasis on the dog and cat. Digestive physiology, nutrient requirements, feeding practices, and interactions of nutrition and disease.

[AN SC 214 Nutrition of Exotic Animals]

Spring, weeks 1–7. 1 credit. Prerequisite: AN SC 212. Offered alternate years. Offered spring 1998. Lec, W 7:30–9:25 p.m. H. F. Hintz.

Principles of nutrition for exotic animals including birds and fish. Nutrient requirements, sources of nutrients, feeding management systems, and ration formulation will be discussed. Signs of nutrient deficiencies and excesses will be described.]

AN SC 215 Exotic Avian Husbandry and Propagation

Spring. 2 credits. Limited to 100 students.
Prerequisites: AN SC 100, 150 or Bio G 103, 104 or equivalent. Lec, M 2:30-4:30.
J. Parks and D. Muscarella.

Natural history, care, management, health and breeding of exotic avian species with emphasis on psittacines (parrots and related species) and raptors (birds of prey). Lectures, demonstrations, and local field trips.

AN SC 221 Introductory Animal Genetics

Spring. 3 credits. Prerequisite: a year of college biology. Lec, T R 9:05; sec, T W R or F 2-4:25. E. J. Pollak.

An examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection on animal populations.

AN SC 230 Poultry Biology

Spring. 3 credits. Prerequisites: AN SC 100 and 150 or introductory biology.
Offered alternate years. Not offered spring 1998; next offered spring 1997, 1999. Lec, T R 11:15; lab, M 2-4:25. R. E. Austic.

A course designed to acquaint the student with principles of avian biology and their application in the various aspects of poultry production. Some laboratory sessions involve dissection and/or the handling of live birds.

AN SC 250 Dairy Cattle Principles

Fall. 3 credits. S-U grade optional. Lec, T R 10:10; lab, W or R 2-4:25.
D. M. Galton and T. Batchelder.

Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of production techniques. This course is a prerequisite for AN SC 351 and AN SC 455.

AN SC 251 Dairy Cattle Selection

Spring. 2 credits. Prerequisite: AN SC 250 or equivalent. S-U grades optional. Lec, W 1:25-2:15; lab, W 2:15-4:25.
D. M. Galton.

Application of scientific principles of genetic programs in herds with different breeding programs. Emphasis on economical traits to be used to improve genetic progress and herd profitability.

AN SC 265 Horses

Spring. 3 credits. Prerequisites: AN SC 100 and 150 or permission of instructor. S-U grades optional. Lec, T R 10:10; lab, R 1:25-4:25. C. Collyer.

Selection, management, feeding, breeding, and training of light horses.

AN SC 290 Meat Science (also Food Science 290)

Fall. 2 or 3 credits. Lec, T R 11:15; lab, M or R 12:20-3:20. D. H. Beermann and staff. Lecture only, 2 credits; lecture plus lab, 3 credits.

An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, inspection, grading, curing, sausage manufacture and quality control. An all-day field trip to commercial meat plants is taken.

AN SC 300 Animal Reproduction and Development

Spring. 3 credits. Prerequisite: AN SC 100-150 or equivalent and one year of introductory biology. Lec, M W F 10:10.
J. E. Parks.

Comparative anatomy and physiology of mammalian and avian reproduction, with emphasis on domestic and laboratory animals. Fertilization through embryonic development, pregnancy, and growth to sexual maturity; emphasis on physiological mechanisms and application to fertility regulation. Separate laboratory offered to demonstrate fundamental aspects of reproduction and reproductive technology.

AN SC 301 Animal Reproduction and Development Lab

Spring. 1 credit. Prerequisite: AN SC 100-150 or equivalent. Concurrent enrollment in or completion of AN SC 300 required to register. Labs, M W or F 1:25-4:25. Each lab limited to 30 students.
J. E. Parks.

Demonstration of fundamental principles and applied aspects of mammalian and avian reproduction. A limited number of live animals will be used in some demonstrations. Dissection and examination of tissues from vertebrate animals will be included in selected laboratories.

AN SC 305 Farm Animal Behavior (also BIOAP 312)

Spring. 2 credits. Prerequisites: introductory course in animal physiology; at least one animal production course or equivalent experience is recommended. S-U grades optional. Lec, T R 11:15.
E. A. Oltenacu and K. A. Houpt.

The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic animals and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

AN SC 312 Applied Cattle Nutrition

Spring. 4 credits. Prerequisites: AN SC 100 and 212 (or equivalent) Dairy Fellows enroll during senior year after AN SC 455. Lec, M W F 10:10; lab, M or T 1:25-4:25.
M. E. Van Amburgh.

An applied approach to predicting nutrient requirements and feed utilization to meet requirements with wide variations in cattle type, feed composition, and environmental conditions. Dairy cattle are emphasized. Nutrient management to minimize cost of production and environmental effects is discussed. Computer models (Cornell Net Carbohydrate and Protein System) are used in the laboratory to apply the information presented in lectures, including evaluation of feeding programs on case study farms. Course is designed for advanced juniors, seniors, and entering graduate students.

AN SC 321 Applied Animal Genetics Seminar

Spring. 1 credit. Prerequisite: AN SC 221 or equivalent. S-U grades only. Lec, M 9:05. P. A. Oltenacu and E. J. Pollak.

Topics of interest related to the genetic definition and control of qualitative and quantitative traits in various species of animals are presented. Current animal improvement

strategies as well as challenges presented by new developments in reproductive biology and molecular genetics are addressed in a lecture discussion-type format.

AN SC 322 Applied Animal Genetics-Laboratory

Spring. 1 credit. Prerequisite: concurrent registration in AN SC 321 or instructor's permission. S-U grades only. M 2-4:25.
P. A. Oltenacu and E. J. Pollak.

Many genetic concepts addressed in AN SC 321 are explored in depth using a computer-assisted instruction environment. Mendelian inheritance of qualitative traits, detection of carriers of recessive genes, artificial selection, inbreeding and heterosis, design and evaluation of genetic improvement and conservation programs, and role of population size are among the topics considered.

[AN SC 330 Commercial Poultry Production

Spring. 2 credits. Prerequisites: AN SC 100, 150, and 230 or permission of instructor. Offered alternate years. Not offered 1997. Next offered spring 1998. Lec, F 2-4 (occasional field trips run past 4 p.m.) K. Keshavarz.

The course emphasizes production and business management aspects of commercial poultry farm operation and is designed to acquaint the student with current technology involved in commercial poultry production.]

AN SC 341 Physiology of Lactation

Spring. 3 credits. Prerequisite: AN SC 150 or AN SC 300 or equivalent. Lec, T R 9:05; lab R 2-4:25. Staff.

The physiology of milk production is covered with emphasis on mammary gland development, anatomy, hormonal control of milk secretion, and the biosynthesis of milk constituents. The dairy cow serves as the model system, but all livestock species are considered.

AN SC 351 Dairy Herd Management

Spring. 4 credits. Prerequisites: AN SC 250 or permission of instructor. Recommended: ARME 302. Lec, M W F 11:15; labs, M or T 1:25-4:25, and F (alternate weeks) 1:25-4:25. D. M. Galton and staff.

Application of scientific principles to practical herd management with components of reproduction, milking, housing, records, and production economics. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

AN SC 360 Beef Cattle

Spring. 3 credits. Limited to 32 students. Lec, T R 10:10; lab, W 2-4:25.
M. L. Thonney.

Emphasis is on the management of reproduction, nutrition, and selection in beef cattle enterprises. A cattle growth model is studied. Laboratories acquaint students with the management skills through computerized simulations and working directly with cattle. Students are required to spend several days during the semester feeding and caring for cattle and observing calving.

[AN SC 370 Swine Nutrition and Management

Fall. 3 credits. Recommended: AN SC 212. Offered alternate years. Not offered fall 1996, 1998. Next offered fall 1997. Lec, T R 11:15; lab, T 2-4:25. X. G. Lei and K. Roneker.

This course focuses on swine nutrition, feeding, and management. Lectures are integrated basic nutrition and swine system including pig biology, digestive and metabolic development, nutritional biochemistry and physiology, impact of swine nutrition on environment, use of pig model in medicine, and current swine nutrition and biotechnology. Laboratory practice, animal projects, and problem troubleshooting are offered.]

AN SC 380 Sheep

Fall. 3 credits. Lec, T R 9:05; sec, W 1:25-4:25 every other week. D. E. Hogue. The breeding, feeding, management, and selection of sheep from a production-system approach. Lectures and laboratories are designed to give students a practical knowledge of sheep production as well as the scientific background for improved practices.

AN SC 392 Animal Growth Biology

Fall. 2 credits. Not open to freshmen; sophomores by permission of instructor only. Prerequisites: one year of college biology and one course in animal or human physiology, AN SC 212 and 221. Lec, R 1:25-3:20; sec, F 1:25-2:15. D. H. Beermann and staff.

A detailed discussion of the morphological and physiological aspects of growth of domestic and laboratory animals. Overview of the cell cycle and early embryo growth regulation, differentiation and cellular aspects of tissue development and growth, maternal influences on fetal growth and allometric patterns of postnatal growth are discussed. Endocrine, genetic and nutritional influences on protein and lipid metabolism, nutrient requirements and composition of growth will be emphasized.

AN SC 400 Tropical Livestock Production

Spring. 3 credits. Prerequisite: Upperclass standing. Lec, T R 9:05; disc W 1:25-3:20. R. W. Blake. An analysis of constraints on livestock production in developing countries of the tropics, economic objectives and risk, and production methods. Emphasis is on strategic use of animal and plant resources, animal performance with inputs restricted, decision making, and alternative systems of production. Principles, real examples, independent study projects, and classroom interactions will aid problem-solving efforts to improve food security.

AN SC 401 Dairy Production Seminar

Spring. 1 credit. Limited to juniors and seniors. Disc, M 7 p.m. D. E. Bauman. Capstone course where students, with the help of faculty members, complete a study of the research literature on topics of current interest in the dairy industry. Students then make an oral and a written report on their topic with emphasis on integrating theory and practice.

AN SC 402 Seminar in Animal Sciences

Spring. 1 credit. Limited to juniors and seniors. May be repeated. S-U grades optional. Lec, M 4:30. P. A. Johnson and W. B. Currie.

Review of literature pertinent to topics of animal science or reports of undergraduate research and Honors projects. Students present oral reports of their work for class discussion in addition to written reports.

AN SC 403 Tropical Forages

Spring. 2 credits. Limited to seniors and graduate students except by permission of instructor. Prerequisites: crop production and livestock nutrition. Offered alternate years. Not offered 1998. Next offered spring, 1997. Lec, T R 12:20. A. N. Pell. An overview of tropical grasslands, seeded pastures, and crop residues as feed resources; grass and legume characteristics; establishment and management of pastures; determination of feeding value forages and crop residues; physiology of digestion of ruminants that affects feeding behavior of various species; problems of chemical inhibitors in plants; and utilization of tropical forages as hay or silage.

AN SC 410 Nutritional Physiology and Metabolism

Fall. 3 credits. Prerequisites: biochemistry and physiology. M W F 11:15. R. E. Austic and D. E. Bauman. A fundamental approach to nutrition focusing on the metabolic rate of nutrients and the interrelationships among nutrients, nutritional state, and metabolic processes. The overall goal is to increase understanding of metabolism and metabolic regulation through an integration of nutrition, biochemistry, and physiology.

AN SC 414 Ethics in Animal Science

Fall. 2 credits. Enrollment limited to 40. Juniors and seniors only. If enrollment exceeds 40, preference will be given to seniors. Lec, M 12:20; disc, W or F 12:20-1:10. One evening movie (7-9 pm, Oct. 2): Susceptible to Kindness, Miss Ever's Boys. The Tuskegee Syphilis Study. One Saturday mandatory farm tour (9 am-1 pm, Sept. 28). D. J. Cherney and A. Van Tienhoven.

Exploration of the place of humans in the biological world, the origin and development of ethics and morality and to what extent human rights should be extended to nonhuman animals. A book review, participation in discussions, and the performance of a task (selected from four options) will be the basis for the grade earned.

AN SC 415 Poultry Nutrition

Spring. 1 credit. Prerequisite: AN SC 212 or permission of instructor. Offered alternate years. Not offered spring 1998; next offered spring 1997, 1999. Lec, F 11:15. R. E. Austic.

A practical consideration of principles of nutrition applied to feeding poultry, including use of linear programming techniques in diet formulation.

AN SC 420 Quantitative Animal Genetics

Fall. 2 credits. Prerequisite: AN SC 221 or equivalent. Limited to 30 students. Lec, T 11:15; sec, R 2-4:25. E. J. Pollak.

A consideration of problems involved in improvement of animals through application of the theory of quantitative genetics, with emphasis on genetic evaluation and analysis of data for genetic parameters. Computer labs use interactive matrix algebra program for problem solving.

AN SC 425 Gamete Physiology and Fertilization

Fall. 2 credits. Limited to 50 students. Prerequisite: AN SC 300 or equivalent. Offered alternate years. Not offered fall 1996; next offered fall 1997. Lec, R 2:30-4:25. J. E. Parks.

Study of the formation, growth, differentiation, and maturation of mammalian sperm and oocytes; gamete transport and interaction with male and female reproductive tracts; and cytological, physiological, and molecular changes required for fertilization. Lecture, discussion, and demonstration of selected aspects of gamete physiology and *in vitro* technologies such as oocyte maturation and fertilization.]

AN SC 427 Fundamentals of Endocrinology

Fall. 3 credits. Prerequisite: animal or human physiology or permission of instructor. Lec, M W F 9:05. P. A. Johnson.

Physiology and regulation of endocrine secretions. Neuroendocrine, reproductive, growth, and metabolic aspects of endocrinology are emphasized. Examples are selected from many animals, including humans.

AN SC 455 Dairy Nutrition and Health

Fall. 3 credits. Prerequisite: AN SC 351 and permission of instructor. S-U grades optional. Lec, T R 11:15; lab, M or T 1:25-4:25; and F (alternative weeks) 1:25-4:25. D. M. Galton, L. E. Chase and T. Batchelder.

Application of scientific principles to practical herd management with components of nutrition and herd health. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

AN SC 456 Dairy Management Fellowship

Spring. 2 credits. Limited to seniors. Prerequisites: AN SC 351 and 455, and permission of instructor. S-U grades only. Hours to be arranged. D. M. Galton and T. Batchelder.

The program is designed for undergraduates who have a sincere interest in dairy farm management. Objectives are to gain further understanding of the integration and application of dairy farm management principles and programs with respect to progressive dairying and related industries.

[AN SC 457 Livestock Fellowship

Spring. 2 credits. Prerequisite: permission of instructor. Not offered spring 1997. S-U grades only. Lec, F 1:00-4:25.

A program for students with particular interests in meat animal production, beef cattle, sheep, and swine. Objectives are to gain a more thorough understanding of the production of these species and their integration in various farm management situations. Students will participate in extension education programs and have contact with representative livestock producers as well as the agribusiness organizations important to livestock production.]

[AN SC 490 Commercial Meat Processing

Spring. 2 or 3 credits. Prerequisite: AN SC 290 or permission of instructor. Offered alternate years. Not offered spring 1997. Next offered spring 1998. Lec, T R 9:05; lab, T 1:25-4:25. Lecture only, 2 credits; lecture and lab, 3 credits. Field trip to commercial meat processing plants. D. H. Beermann.

A study of the classification, formulation, and production of commercially available processed meat products. Physical and chemical characteristics of meat and nonmeat

ingredients; their functional properties; various processing methodologies; microbiology; packaging, handling, and storage; and quality assurance are discussed.]

AN SC 494 Special Topics in Animal Science

Fall or spring. 4 credits maximum.
Prerequisite: undergraduate standing.
S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

AN SC 496 Animal Sciences Honors Seminar

Fall weeks 1-8. 1 credit. S-U grades only. Students must be accepted into the Animal Sciences Honors Program. Disc, M 2:30-4:00. W. B. Currie.

The course is designed to provide information and guidance for students enrolled in the honors program in animal sciences and expecting to complete an honors thesis. The following topics will be presented and discussed: requirements and expectations of the honors program, formulating hypotheses, the scientific method, literature search techniques ethics in science, and scientific communication. Students are required to make verbal presentations.

AN SC 497 Individual Study in Animal Science

Fall or spring. 1-3 credits; may be repeated for credit. Intended for students in animal sciences. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Staff.

May include individual tutorial study or a lecture topic selected by a professor. Since topics may change, the course may be repeated for credit.

AN SC 498 Undergraduate Teaching

Fall or spring. 1, 2 or 3 credits; limited to two experiences during undergraduate career. Limited to students with grade-point averages of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall).

Designed to consolidate the student's knowledge. A participating student assists in teaching a course allied with the student's education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

AN SC 499 Undergraduate Research

Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with grade-point averages of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall).

Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

[AN SC 601 Amino Acids (also NS 601)]

Spring. 2 credits. Prerequisites: physiology, biochemistry, and nutrition. Offered alternate years. Not offered spring 1997; next offered spring 1998. Lec, W F 12:20. R. E. Austic.

A course emphasizing the dynamic aspects of protein digestion and absorption, amino acid transport and amino acid and nitrogen metabolism, and their relationships to the requirements for amino acids.]

AN SC 603 Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also NS 603)

Fall. 2 credits. Prerequisites: Biochemistry, physiology, and nutrition. Offered alternate years. Next offered fall 1996. Lec M W 10:10. X. G. Lei and G. F. Combs Jr.

A revised course emphasizing the metabolic roles and environmental impacts of mineral nutrition in animal, human, and food systems. Team-taught lectures include general biochemical and physiological aspects of mineral metabolism and specific mechanisms of gene expression, regulation, and mammal health disorders associated with individual elements. Methodology and facility of mineral research is also discussed.

AN SC 604 Vitamins

Fall. 2 credits. Lec, T R 10:10.
G. F. Combs, Jr.

The biochemical, physiological, and clinical aspects of the vitamins presented in an interactive discussion-based format.

AN SC 610 Seminar

Fall and spring. 1 credit. S-U grades only.

AN SC 619 Field of Nutrition Seminar

Fall and spring. No credit. No grades given.

Lectures on current research in nutrition.

AN SC 620 Seminar in Animal Breeding

Fall and spring. 1 credit. Limited to graduate students with a major or minor in animal breeding. S-U grades only. Hours to be arranged.

AN SC 621 Seminar: Endo/Reprod Biology

Fall and spring. 1 credit. Prerequisites: Permission of instructor. Registration limited to graduate students. S-U grades only. Lec, W 4:00. W. R. Butler and staff.

Current research in reproductive physiology is presented by staff members, graduate students, and visitors.

AN SC 625 Nutritional Toxicology

Spring. 2 credits. Prerequisites: Biochemistry and nutrition courses. S-U grades optional. Lec T 2:30-4:25. D. L. Brown.

Toxic doses of nutrients and interference with the metabolism of nutrients by other toxic compounds represent the two principal branches of the course. Introduction to poisonous plants and general toxicology will be provided. Course will focus on toxicants found in feeds and foods.

AN SC 630 Bioenergetics/Nutritional Physiology

Spring. 3 credits. Prerequisites: AN SC 410 and biochemistry or physiology, or permission of instructor. S-U grades optional. Offered alternate years. Next offered spring 1997, 1999. Lec, M W F 10:10. A. W. Bell and D. E. Bauman.

An integrated systems approach to the nutritional physiology and energy metabolism of productive animals. Emphasis on extracellular regulation of tissue and organ metabolism of specific nutrients in relation to pregnancy, lactation, and growth. Critical discussion of techniques and approaches to the study of animal bioenergetics.

AN SC 640 Individual Study in Animal Science

Fall or spring. 1 or more credits. S-U grades optional. Hours to be arranged. Staff.

Study of topics in animal science more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

AN SC 650 Molecular Techniques for Animal Biologists

Spring. 4 credits. Prerequisites: BIOBM 330 or BIOBM 332 or BIOBM 333 or equivalents and permission of instructors. Enrollment limited to 15 students. Lec, T 11:15; labs, T and R 1:25-4:25. Y. Boisclair and S. Quirk.

A laboratory course designed for students with little or no experience with techniques in molecular biology. Emphasis will be on techniques used in conducting research in nutrition and physiology (e.g., subcloning, mutagenesis of DNA, RT-PCR, DNA sequencing and analysis, analysis of gene expression, protein expression). Animal science and mammalian biology provide the context to the experiments. Lectures will introduce laboratory exercises, supplement laboratory topics, and discuss selected readings from the literature. Students will perform an independent project requiring time outside scheduled laboratories and will give a scientific presentation.

AN SC 694 Special Topics in Animal Science

Fall or spring. 4 credits maximum.
Prerequisite: graduate standing. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

[AN SC 720 Advanced Quantitative Genetics]

Spring. 3 credits. Prerequisites: matrix algebra, linear models, and mathematical statistics. S-U grades optional. Offered alternate years. Not offered spring 1997; next offered spring 1998. Hours to be arranged. R. L. Quaas.

Estimation of genetic and environmental parameters required to design efficient selection programs. Emphasis is given to interpretation of experimental and survey data with unequal subclass numbers, and prediction of genetic progress resulting from alternative selection methods.]

AN SC 800 Master's-Level Thesis Research

Fall or spring. Credit to be arranged, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.

For students admitted specifically to a Master's program.

AN SC 900 Graduate-Level Thesis Research

Fall or spring. Credit to be arranged, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.

For students in a Ph.D. program **only before** the 'A' exam has been passed.

AN SC 901 Doctoral-Level Thesis Research

Fall or spring. Credit to be arranged, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.

For students admitted to candidacy after the 'A' exam has been passed.

BIOLOGICAL SCIENCES

The program of study in biology is offered by the Division of Biological Sciences. For course descriptions, see the section on the Division of Biological Sciences.

BIOMETRY AND STATISTICS

C. Castillo-Chavez, chair; N. S. Altman, G. Casella, G. A. Churchill, M. Contreras, S. Holmes, C. E. McCulloch, S. J. Schwager, S. R. Searle

Courses in biometry and statistics are offered by the Biometrics Unit in the Department of Plant Breeding and Biometry.

BTRY 101 Introduction to Biometry I

Fall. 4 credits. S-U grades optional.

Prerequisites: ALS 115 or equivalent.

An introductory survey course in the use of mathematics, computing, and probability and statistics in the biological sciences. Case studies are used to develop the ideas of statistics, curve fitting, elementary matrix algebra, basic probability, and differentiation. Selected topics in differential and difference equations and integration will also be covered. A symbolic mathematics and graphics package (e.g., Maple or Mathematica) will be taught and used throughout the course.

BTRY 102 Introduction to Biometry II

Spring. 4 credits. S-U grades optional.

Prerequisite: BTRY I or equivalent.

This course is the continuation of Biometry 101 (formerly 102). It provides a more in-depth view of the use of mathematics, computing, probability and statistics in the biological sciences. Topics covered include discrete and continuous models, applications of differential and integral calculus, optimization methods, matrix algebra, and Markov models.

BTRY 200 Statistics and the World We Live In

Spring. 3 credits.

Major concepts and approaches of statistics are presented at an introductory level. Three broad areas are covered: collecting data, organizing data, and drawing conclusions from data. Topics include sampling, statistical experimentation and design, measurement, tables, graphs, measures of center and spread, probability, the normal curve, confidence intervals, and statistical tests.

BTRY 215 Introduction to Statistical Methods

Fall. 3 credits. Prerequisite: BTRY 200 is recommended for students with no prior experience in data collection and interpretation.

Statistical methods are developed and used to analyze data arising from the biological sciences. Topics include point and confidence interval estimation, hypothesis testing, t-tests, correlation, simple linear regression, and analysis of variance and multiple regression. Statistical computing is taught and used throughout the course. Emphasis is on proper use of statistical methodology and interpretation of statistical analyses.

BTRY 400 Biometry Seminar

Fall and spring. 1 credit. S-U grades only.

Students will attend weekly seminar, the Biometrics Unit Discussion Series. Can be taken concurrently with BTRY 600 only with permission of instructor.

BTRY 408 Theory of Probability

Fall. 4 credits. Prerequisite: MATH 112, 122, or 192, or permission of instructor.

An introduction to probability theory: foundations, combinatorics, random variables and their probability distributions, expectations, generating functions, and limit theory. Biological and statistical applications are the focus. Can serve as either a one-semester introduction to probability or a foundation for a course in the theory of statistics.

BTRY 409 Theory of Statistics

Spring. 4 credits. Prerequisite: BTRY 408 or equivalent.

The concepts developed in BTRY 408 are applied to provide an introduction to the classical theory of parametric statistical inference. Topics include sampling distributions, parameter estimation, hypothesis testing, and linear regression. Students seeking applied courses in statistical methodology should consider BTRY 601–602 or BTRY 215.

BTRY 417 Matrix Algebra

Fall. 3 credits. Prerequisite: precalculus mathematics.

Definitions, basic operations and arithmetic, determinants, and the inverse matrix. Rank, linear dependence, canonical forms, linear equations, generalized inverses and eigenroots and vectors. Emphasis is on understanding basic ideas and on developing skills for applying matrix algebra.

BTRY 451 Mathematical Modeling of Populations

Fall. 3 credits. S-U grades optional.

Prerequisites: MATH 112, BTRY 408, or equivalent. Offered alternate years. Not offered 1997–98; offered fall 1996.

This course will emphasize stochastic and deterministic models relevant to population genetics and population biology. Computer simulations and use of mathematical packages will be an integral part of the course.

BTRY 494 Undergraduate Special Topics in Biometry and Statistics

Fall or spring. 1–3 credits. S-U grades optional.

A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 495 Statistical Consulting

Spring. 2 credits. S-U grades only.

Limited to undergraduates. Prerequisites or co-requisites: BTRY 409 and 602 and permission of instructor.

Participation in the Biometrics Unit consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered during previous weeks.

BTRY 497 Undergraduate Individual Study in Biometry and Statistics

Fall or spring. 1–3 credits. S-U grades optional.

Students must register with an Independent Study form (available in 140 Roberts Hall).

Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 498 Undergraduate Supervised Teaching

Fall or spring. 2 credits. S-U grades only.

Students must register with an Independent Study form (available in 140 Roberts Hall).

Students assist in teaching a course appropriate to their previous training. Students will meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

BTRY 499 Undergraduate Research

Fall or spring. 1–3 credits. S-U grades optional.

Limited to statistics and biometry undergraduates. Prerequisite: permission of faculty member directing research.

Students must register with an Independent Study form (available in 140 Roberts Hall).

BTRY 600 Statistics Seminar

Fall and spring. 1 credit. S-U grades only.

Prerequisite or corequisite: BTRY 409 or permission of instructor.

BTRY 601 Statistical Methods I

Fall and summer. 4 credits. Limited to graduate students; others by permission of the instructor.

Statistical methods are developed and used to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, comparisons among population means, analysis of categorical data, and correlation and regression analysis. Interactive computing is introduced through MINITAB statistical software. Emphasis is on basic principles and criteria for selection of statistical techniques.

BTRY 602 Statistical Methods II

Spring. 4 credits. Limited to graduate students; others by permission of instructor.

Prerequisite: BTRY 601 or equivalent.

A continuation of BTRY 601. Emphasis is on the use of multiple regression analysis,

analysis of variance, and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques; least squares estimation; multiple regression; model selection techniques; detection of influential points, goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasis is on appropriate design of studies prior to data collection, and the appropriate application and interpretation of statistical techniques. For practical applications, computing is done with the MINITAB and SAS statistical packages.

BTRY 603 Statistical Methods III

Fall or spring. 3 credits. Prerequisite: BTRY 601 and 602 or permission of instructor. Offered alternate years. Not offered 1997-98; offered Spring 1997.

Categorical data analysis, including logistic regression, loglinear models, stratified tables, matched pairs analysis, polytomous response and ordinal data. Applications in biomedical and social sciences.

[BTRY 604 Statistical Methods IV: Applied Design]

Fall or spring. 3 credits. Prerequisites: BTRY 601 and 602 or permission of instructor. Offered alternate years. Not offered 1996-97; next offered fall 1997.

Applications of experimental design including such advanced designs as split plots, incomplete blocks, fractional factorials. Use of the computer for both design and analysis will be stressed, with emphasis on solutions of real data problems.]

[BTRY 606 Sampling Biological Populations]

Fall, 1/3 of the term. 1 credit. Prerequisite: BTRY 601 or equivalent. Offered alternate years. Not offered 1996-97.

Standard methods of sample-survey design and estimation are presented, including stratified random sampling, cluster sampling, double sampling, and variable probability sampling. Special emphasis given to methods of particular utility or specifically designed for biological sampling. Examples are taken from forestry, fisheries, and other biological areas.]

[BTRY 607 Nonparametric and Distribution-Free Statistical Methods]

Spring, 1/3 of the term. 1 credit. S-U grades optional. Prerequisite: BTRY 601 or equivalent. Offered alternate years. Not offered 1996-97.

Nonparametric and distribution-free alternatives to normal-theory testing procedures are presented: sign or rank tests for one or two populations; analyses for completely randomized and randomized blocks designs; comparisons among several means; correlation and regression; goodness-of-fit; and tests based on randomization of the data.]

BTRY 639 Epidemiology Seminar

Spring. 1 credit, variable. S-U grades only. Permission of instructor.

This course will develop skills in the preparation and interpretation of epidemiological data by discussing current research topics and issues.

BTRY 662 Mathematical Ecology

Fall. 3 credits. S-U grades optional.

Prerequisites: a year of calculus and a course in statistics.

Mathematical and statistical analysis of populations and communities: theory and methods. Spatial and temporal pattern analysis, deterministic and stochastic models of population dynamics. Model formulation, parameter estimation, and simulation and analytical techniques.

BTRY 672 Topics in Environmental Statistics (also OR&IE 672)

Fall and spring. 2 credits. S-U grades optional. Prerequisite: BTRY 601 or permission of the instructor.

This course is a discussion group focusing on statistical problems arising in the environmental sciences. These issues are explored in a number of different ways, such as student presentations of research papers, directed readings, and outside speakers.

BTRY 682 Statistical Methods for Molecular Biology

Spring. 2 credits. S-U only. Prerequisite: Permission of instructor.

Statistical and mathematical topics of current interest in molecular biology: genetic mapping, physical mapping, DNA sequence analysis, phylogenetic inference, population modeling. Topics may vary. The course may be repeated for credit.

BTRY 694 Graduate Special Topics in Biometry and Statistics

Fall or spring. 1-3 credits. S-U grades optional.

A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 697 Individual Graduate Study in Biometry and Statistics

Fall, spring, or summer. 1-3 credits. S-U grades optional.

Consists of individual tutorial study selected by the faculty. Since topics usually change from year to year, this course may be repeated for credit.

[BTRY 717 Linear Models]

Spring. 3 credits. S-U grades only. Prerequisites: BTRY 409 or equivalent and BTRY 417 and 602. Offered alternate years. Not offered 1996-97.

Analysis of variance and estimation procedures for unequal-subclass-numbers data. Cell means models for the 1-way classification, nested classifications, and the 2-way crossed classification, both with and without interactions; introduction to multinomial variables and the distribution of quadratic forms. The general linear model (in matrix and vector form), estimable functions, and testable hypotheses. Overparameterized models, restricted models, multifactor cases, covariables, computing.]

[BTRY 718 Variance Components]

Spring. 3 credits. S-U grades only. Prerequisite: BTRY 717. Offered alternate years. Not offered 1996-97.

Several methods of estimating variance components are explained and compared: for balanced data (equal subclass numbers), the analysis of variance method; for unbalanced data (unequal subclass numbers), the three Henderson methods and the methods of maximum likelihood, restricted maximum likelihood, and minimum norm quadratic unbiasedness. Also included: estimation from

mixed models, prediction of random variables, the dispersion-mean model, and computer package output for variance component estimation.]

BTRY 795 Statistical Consulting

Fall and spring. 2 credits. S-U grades only. Limited to graduate students.

Participation in the Biometrics Unit consulting service: faculty supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered by the services during previous weeks. Since consultations usually change from semester to semester, the course may be repeated for credit.

BTRY 800 Master's Level Thesis Research

Fall or spring. Credit to be arranged. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned.

Research at the M.S. level.

BTRY 900 Graduate Level Dissertation Research

Fall or spring. Credit to be arranged. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned.

Research at the Ph.D. level.

BTRY 901 Doctoral Level Dissertation Research

Fall or spring. Credit to be arranged. S-U grades only.

COMMUNICATION

C. J. Glynn, chair; R. D. Colle, L. Cowdery, K. Druckman, B. O. Earle, G. Gay, D. A. Grossman, M. Korcok, B. Lewenstein, A. Marshall, D. G. McDonald, R. E. Ostman, T. M. Russo, C. Scherer, D. F. Schwartz, J. Shanahan, M. A. Shapiro, P. Stepp, R. B. Thompson, M. Toor, L. VanBuskirk, W. B. Ward, S. A. White, J. P. Yarbrough

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

COMM 116 Communication in Social Relationships

Spring or summer. 3 credits. Not open to first-semester freshmen. Spring: lec, M W F 1:25-2:15. Staff.

An overview of current knowledge about communication, with particular emphasis on interpersonal communication. Introduction to a wide range of contemporary theories and research about effective communication in contexts such as friendships, small groups, organizations, and health care settings.

COMM 117 Writing About Communication

Spring. 3 credits. Concurrent enrollment in Comm 116 required. TR 10:10-11:25. L. VanBuskirk and staff.

Students develop skill in various writing styles and genres. The class explores communication practices and theories as they are observed and studied in personal and professional contexts. Assignments polish students' ability to gather information, to analyze information, to integrate ideas about

communication, and to express those ideas clearly and cogently.

COMM 120 Contemporary Mass Communication

Fall. Lec, M W 12:20-1:10; disc, R 10:10-11:00, 11:15-12:05 or 1:25-2:15 or F 10:10-11:00, or 12:20-1:10. J. Shanahan.

The processes and effects of communication systems. Topics include the evolution of communication media, current knowledge about mediated communication, and the role of communication in contemporary social issues. Discussion sections relate the course topics to students' personal experience. Assignments include case studies, experiential learning exercises, and short papers.

COMM 121 Investigating Communication

Fall. 3 credits. Students must be enrolled concurrently in COMM 120. Lec, T R 8:40-9:55, 10:10-11:25, 11:40-12:55 or 1:25-2:40. R. Ostman.

An examination of research methods in communication, with particular emphasis on the mass communication process. Exercises in writing, speaking, and working in small groups focus on topics such as gender depictions, violence in the media, and social roles.

COMM 191 Topics in Communication

Summer. 1-3 credits. Hours to be arranged. Staff.

Study of topics in communication at lower-division level. Special emphasis on topics reflecting the expertise of visiting faculty available in summer session and on topics suitable for entry-level college students.

COMM 201 Oral Communication

Fall, spring, or summer. 3 credits. Each section limited to 20 students (fall and spring) or 15 students (summer). Preference given to sophomores, juniors, and seniors. Fluency in spoken English is assumed. Students missing the first two class meetings without university excuse are dropped so others may register. No student will be added or dropped after the second week of classes. B. Earle, M. Kocok, T. Russo, R. Thompson, and staff.

Through theory and practice students develop self-confidence and competence in researching, organizing, and presenting material to audiences. Students give four graded speeches, write short papers, perform speaker evaluations, and engage in other speech-related activities.

COMM 203 Argumentation and Debate

Fall. 3 credits. T R 10:10-11:25. P. Stepp. The student will learn the principles of argumentation and the rules of debate. Classroom debates on the CEDA national topic will provide experience in critical thinking, rapid organization of thoughts, employment of research, and writing and speaking in a logical, persuasive manner.

COMM 204 Effective Listening

Fall and spring. 3 credits. Limited to 25 nonfreshman students per section. No students accepted or allowed to drop after the second week of classes. Lec, M 2:55-4:10; sec, W 1:25-2:40, 2:55-4:10; R 1:25-2:40, 2:55-4:10. R. Thompson.

Lecture and sections are used to present an analysis of the process of listening, to identify barriers to effective listening, and to develop students' listening skills. Topics include audiology, cultural contexts, intercultural

communication, linguistics, therapeutic listening, and critical analysis of information. Students are involved in skill-building exercises and in writing self-analytical papers, as well as attending seminars.

COMM 230 Visual Communication

Fall. 3 credits. Lec, T R 9:05-9:55; lab, T 2:30-4:25; W 10:10-12:05, 12:20-2:15 or 2:30-4:25. C. Scherer.

An introduction to visual communication theory. Course examines how visuals influence our attention, perspectives, and understanding. Examples of visuals drawn from advertising, TV news, documentaries, entertainment movies, print and interactive media are used to develop a theoretical framework for becoming more visually aware and for thinking more critically about how visuals influence us.

COMM 232 Art of Publication

Fall and spring. 3 credits. Each lab limited to 24 nonfreshman students. Students missing the first two classes without university excuse are dropped so others may register. Project materials cost \$75-\$100. Lec, M W 10:10-11:00 or 11:15-12:05; labs M 2:30-4:25; W 2:30-4:25. M. Toor.

A basic course designed to explore visual concepts that increase communication effectiveness through the printed word. The importance of selecting and coordinating format, layout, typography, and illustrations is stressed. Lectures, in-class laboratory assignments, and outside projects examine opportunities and problems in publication design and desktop publishing.

COMM 250 Newswriting for Newspapers

Fall, spring, or summer. 3 credits. Limited to 25 students. Prerequisite: Major in communication, or permission of instructor. Keyboarding ability essential. Students missing first two classes without university excuse will be dropped. Lec, M W 9:05-9:55; labs, R 2:30-4:25 or F 9:05-11:00. Staff.

Writing and analyzing news stories. A study of the elements that make news, sources of news, interviewing, writing style and structure, press problems, and press-society relations. Concentration on newswriting as it is practiced by newspapers in the United States. Two writing assignments each week, one done in class, one done out of class.

COMM 272 Principles of Public Relations and Advertising

Summer. 3 credits. Not open to freshmen. Staff.

Survey of the fields of public relations and advertising. Descriptions of organizations, jobs, and functions in the industry. The roles of public relations and advertising in society, the economic system, and organizations. Psychological and sociological principles as bases for appeals. Strategies for media selection and message execution. Introduction to research and regulation.

COMM 273 Communication Institutions

Spring. 3 credits. Letter only. T R 11:40-12:55. J. Shanahan.

A survey of the history, organization, and social importance of communication institutions. Institutions to be analyzed include advertising/PR, media industries, propaganda and political communication, news/journalism, and new technologies. Cases and examples will be drawn from areas relevant to CALS

programs, including environment, agricultural policy and land use. Communication 116 or 120 are suggested but not required.

COMM 280 Thinking about Communication

Spring. 3 credits. Prerequisite: COMM 116, 120, and at least one writing or oral communication course. Communication majors only. Not open to freshmen. Communication sophomores given priority. Lec 01, T R 11:40-12:55; Lec 02, T R 10:10-11:25; Lec 03, M W 8:40-9:55. R. Ostman and staff.

Expanding upon conceptual knowledge gained in introductory communication courses, students will learn critical thinking in the context of communication topics, issues, problems, and questions selected annually by individual instructors. After learning, discussing, and practicing critical thinking, students will have an enhanced ability to create and sustain responsible dialogue, as well as to evaluate implications and applications of thought.

COMM 284 Sex, Gender, and Communication

Fall. 3 credits. Not open to freshmen. T R 2:55-4:10. L. Van Buskirk.

The course explores the personal, career, social, and economic implications of gender categories. Topics considered include theories of gender construction, social structures, personal relationships, and gender concerns in the workplace.

COMM 285 Communication in Life Sciences

Spring. 3 credits. M W 2:55-4:10. B. Lewenstein.

Environmental problems...public health issues...scientific research. In each of these areas, communication plays a fundamental role. From the mass media to individual conversations, from technical journals to textbooks, from lab notes to the World Wide Web, communication helps define social issues and research findings. This course examines the institutional and intellectual contexts, processes, and practical constraints on communication in the life sciences.

COMM 301 Business and Professional Speaking

Fall, spring, or summer. 3 credits. Prerequisite: COMM 201. Limited to second term sophomores, juniors and seniors during fall and spring. Lec, M W 11:15-12:05; sec, T 2:30-4:25; W 12:20-2:15; R 10:10-12:05. B. Earle.

The study and practice of written and oral communication skills used in formal and informal organizations, including interviews, informative and persuasive speeches, reports, and discussions. Students exercise and enhance the organizational, analytical, and presentational skills needed in particular settings suited to their own business and professional careers.

COMM 303 Speech and Debate Practicum

Fall and spring. 2 credits. Limited to 10-15 Program in Speech and Debate members only; permission of instructor and completion of one-year trial basis. Hours to be arranged. P. Stepp.

Students will learn preparation for practice in CEDA (Cross Examination Debate Association) debate, Lincoln Douglas debate, or individual speaking events. The class will be divided

into four groups according to level of experience; therefore it may be repeated to a maximum of 8 credits.

COMM 315 Introduction to Health Communication

Fall. 3 credits. COMM 116 or COMM 120 or permission of instructor. Juniors and seniors only. T R 1:25-2:40. A. Marshall. An overview of health communication, examining topics such as physician-patient relationships, the role of support groups, communication in health care organizations, cultural differences in health beliefs and communication, and public health campaigns. Instruction techniques include class discussion, presentations, and group projects.

COMM 342 Electronic Media

Spring or summer. 3 credits. Limited to 21 communication majors. Prerequisite: COMM 120. Lec, T R 1:25-2:40. T. Russo. The process of audio and video message design and production is explored. Emphasis is on development of skills needed for the creation of effective audio/video production. Students complete exercises designed to develop specific competencies and work on productions from conception through completion.

COMM 348 Video as a Communication Tool

Fall. 3 credits. Prerequisites: permission of instructor. Lec, T R 10:10-11:00; lab, R 1:25-4:25. S. White. This course explores video as a non-broadcast communication tool utilizing organizational and visual communication conceptual and theoretical foundations. An overview of video applications, visual thinking, and team building in employing participatory approaches to constructing messages. Covers basics of interactive media and issues of changing communication technologies. Hands-on team project integrates knowledge, theory, and practice. Students have access to camcorders and editing equipment.

COMM 350 Writing for Magazines

Fall or spring. 3 credits. Limited to 25 juniors, seniors, and graduate students, or others with permission of instructor. No drops after third week. Extensive out-of-class writing assignments. Fall: M 1:25-4:25; spring: T R 12:20-1:50. W. Ward and staff. A course in nonfiction freelance writing for magazines. Intensive fact writing to help students communicate more effectively through the medium of the printed word in magazines. Art and techniques of good writing are studied; magazines in many fields of interest are reviewed. All articles are analyzed and returned to the student to rewrite and submit to a magazine.

COMM 352 Science Writing for the Mass Media

Fall. 3 credits. Not open to freshmen. Prerequisite: one college-level writing course. Lec, M W 9:05; lab, W 12:20-2:15, 2:30-4:25. B. Lewenstein. How to write about science, technology, and medicine for the mass media. Discussion topics include accuracy, simplicity, comprehensiveness, risk communication, and the history and social structure of science. Writing assignments focus on writing news and feature stories for newspapers and magazines, with excursions into newsletters, radio, TV, and other media.

COMM 360 Scientific Writing for Public Information

Fall and spring. 3 credits. Limited to 25 nonfreshman or graduate students per section. Prerequisite: one college-level writing course. Fall: Lec 01, M W F 9:05-9:55. Spring: Lec 01, M W F 9:05-9:55. Lec 02, M W F 10:10-11:00. L. Cowdery. An intensive course in simplifying scientific and technical material for specific audiences within the general public. Weekly assignments include instructions, descriptions, explanations, and summaries in such formats as the newsletter, brochure, and report. Audience analysis will be emphasized. Not oriented to the mass media, or writing for scientists.

COMM 363 Organizational Writing

Fall, spring, or summer. 3 credits. Limited to 25 junior, senior, or graduate students per section. Prerequisite: any college-level writing course. Lec 01, M F 11:15-12:05; Sec M 12:20-2:15; W 10:10-12:05. L. Van Buskirk and staff. Students write as members of different organizations, in the position of supervisor, subordinate, colleague, and representative of business, government, community, and other organizations. Emphasis on adapting tone to the audience and the purpose of the message. Weekly writing assignments include various kinds of internal and external reports, memoranda, proposals, and letters. Assignments based on the Exxon Valdez oil spill and other case studies.

COMM 368 Editing

Fall. 3 credits. Limited to 25 junior, senior, or graduate students. Prerequisite: COMM 250, 350, 352, or 360. M W F 12:20-1:10. L. Cowdery. Students will follow the process that takes a manuscript from final draft to publication. Emphasis will be on copy editing, proofreading, fitting copy, working with authors, making editorial decisions, and developing skill in critical reading. Appropriate for any student who expects to work with manuscripts or do editorial work.

COMM 376 Planning Communication Campaigns

Spring. 3 credits. Limited to 20 juniors and seniors. Prerequisite: COMM 116 or 120 or permission of instructor. T R 10:10-11:25. Staff. Overviews theories that guide and influence social change efforts. Research techniques and communication tools used in communication planning and campaign design are reviewed. Class discussion focuses on social change efforts in nutrition and health, rural development, marketing, and the environment. Students work closely with a client in designing a communication campaign.

COMM 380 Independent Honors Research in Social Science

Fall or spring. 1-6 credits. Limited to undergraduates who have met the requirements for the honors program. B. Lewenstein.

COMM 382 Methods of Communication Research

Spring. 3 credits. Lec M W 12:20-1:10; labs, F 10:10-12:05 or 12:20-2:15. J. Shanahan. An analysis of the methods used in communication research. Emphasis on understanding the rationale for survey, textual, experimental,

and ethnographic research methods. Development of class research project from research question to final report. Computer use of Statistical Package for the Social Sciences (SPSS) to assist in data analysis. Familiarity with basic statistical concepts helpful.

COMM 405 Community Service Practicum

Fall and spring. 2 credits. May be repeated for credit. Limited to 10-15 Program in Speech and Debate members; permission of instructor required. Hours to be arranged. P. Stepp. Students share their communication talents in structured experiences in which they design and implement a speech or debate project in local schools or the community.

COMM 410 Organizational Behavior and Communication

Fall. 3 credits. Labs limited to 15 junior, senior, or graduate students. Prerequisite: COMM 116 or equivalent. Lec, M W 11:15-12:05; Sec 01, W 2:30-4:25; Sec 02, F 10:10-12:05. D. Schwartz. Study of management and leadership in formal organizations with emphasis on the psychology of communication between supervisor and employee; examination of formal and informal communication networks, and interpersonal communication in an organizational context. Case studies analyzed in lab. Lectures concurrent with COMM 510; graduate students should enroll in COMM 510.

COMM 411 Leadership from a Communication Perspective

Fall. 3 credits. Limited to 30 students. Lec, T R 1:25-2:40. P. Stepp. Leadership is a product of human communication. Leadership competence can be increased by increasing communication competence. Leadership theories, particularly transformational leadership will be studied, and gender/minority responsive leadership will be stressed. Practical application will include leadership exercises and observation of leaders.

COMM 418 Communication and Persuasion

Spring. 3 credits. Prerequisite: COMM 116 and 120 or introductory psychology or social psychology. M W 2:55-4:10 (one evening mid-semester prelim). M. Shapiro. The course focuses on theories of communication influence on persuasion and attitude change. Students will become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories also will be applied to a variety of communication situations including mass communication, advertising, public relations/public information, and interpersonal communication. Lectures concurrent with COMM 618; graduate students should enroll in COMM 618.

COMM 420 Public Opinion and Social Processes

Fall. 3 credits. Lec, T R 10:10-11:25. C. Glynn. The course provides an overview of the theoretical and applied literature related to the concept "public opinion." Students investigate how public opinion is perceived and acted upon by society. Relationships between public opinion, communication and social psychological variables are examined. Public opinion is studied using current theoretical and practical applications. Analysis and

interpretation of public opinion polls and trends in public opinion on specific issues. Lectures concurrent with COMM 620; graduate students should enroll in COMM 620.

COMM 421 Communication and the Environment

Spring. 3 credits. Limited to 20 junior, senior, or graduate students or permission of the instructor. Lec, T R 2:55-4:10. J. Shanahan.

Students will investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus will be mass media's impact in public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content.

COMM 422 Psychology of Television

Fall. 3 credits. Prerequisites: Introductory psychology and COMM 120. M W F 12:20-1:10 (one evening mid semester prelim). M. Shapiro.

A survey of knowledge about the psychological influence of television and other audio-visual communication technologies. Topics may include: the history of concerns about television and movies, who watches television and why, how people understand and mentally process television, how television influences thinking and emotions, the effects of various forms (including entertainment, news, and advertising), the future forms of mass media including multimedia and virtual reality. Lectures concurrent with COMM 622; graduate students should enroll in COMM 622.

[COMM 424 Communication in the Developing Nations]

Spring. 3 credits. Limited to juniors and seniors. T R 2:55-4:10. Not offered 1996-97. R. Colle.

The role of communication in development programs, particularly in Third World. Emphasis is on communication interventions in agriculture, health, nutrition, family planning and community development, and especially on methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 624; graduate students should enroll in COMM 624.]

COMM 426 Impact of Communication Technologies

Fall. 3 credits. M W 2:55-4:10. P. Yarbrough.

Examine emerging technologies of communication, such as computer-based information systems and satellites and their potential for influencing communication processes and social systems. Also examines the impacts of previous communication innovations from cave painting to television. Lectures concurrent with COMM 626; graduate students should enroll in COMM 626.

COMM 428 Communication Law

Spring. 3 credits. Limited to junior, senior, and graduate students; others by permission of the instructor. Lec, M W F 11:15-12:05. D. Grossman.

A practical survey of the law governing mass media, primarily for those working in the field. Coverage includes restraints on news gathering and publication, privacy, defamation, copyright, broadcast and cable regula-

tion, access, electronic media and other issues of current interest.

COMM 439 Interactive Multimedia: Design and Research Issues

Fall. 3 credits. Prerequisite: permission of instructor. Lec, T R 11:15-12:05; lab T 12:20-2:15. G. Gay.

An overview of interactive multimedia technologies (videodisc, CD-ROM, digital video technologies, computer graphics, and text). Course will focus on theories and research applicable to interactive multimedia such as visualization, learner control, mental models, knowledge representations, and information processing. Course will also emphasize interactive multimedia design, application, and evaluation.

COMM 440 Social Design of Communications Systems

Spring. 3 credits. Permission of instructor. S-U grades optional. Lec, T R 11:15-12:05; lab, T 12:20-2:15. G. Gay.

Course will focus on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

COMM 460 Video Communication I: Basic Concepts and Theory, Planning, and Participatory Production

Summer only. 2 credits. Fee: \$50.00. T R 9:00-4:00. S. White and staff.

The course focuses on understanding video as a tool in development communication. Hands-on instruction covers use of the video portapak and editing systems. Participants produce videotapes emphasizing the power of images, video for individual feedback, group process observation, and process intervention for individual and community development.

COMM 461 Video Communication II: Video for Development/Social Intervention

Summer only. 3 credits. Prerequisites: COMM 460 and/or permission of instructor. M W F 10:10-1:00. S. White and staff.

Explores the use of video in the context of development. Covers advanced visualization concepts and techniques and issues relevant to appropriate application of video technologies. Participants develop and implement proposals for creating a videotape designed to meet specific communication objectives.

COMM 466 Public Communication of Science and Technology

Fall. 3 credits. Limited to 15 students. Prerequisite: COMM 352 or 360, or Engineering 350, or permission of instructor. M W 2:55-4:10. B. Lewenstein.

Explore the structure, meanings, and implications of "public communication of science and technology" (PCST). Examine the contexts in which PCST occurs, look at motivations and constraints of those involved in producing information about science for nonprofessional audiences, analyze the functions of PCST. Tie existing ideas about PCST to general communication research, and learn how to develop new knowledge about PCST. Course format is primarily seminar/discussion.

COMM 486 Risk Communication

Spring. 3 credits. T R 1:25-2:40. C. Scherer.

An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course will concentrate on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors will be examined. Emphasis will be placed on understanding, applying, and developing theories of risk communication. Lectures concurrent with COMM 686; graduate students should enroll in COMM 686.

COMM 487 Communication, Mood, and Emotion

Fall. 3 credits. Prerequisites: COMM 382 or equivalent. M W F 1:25-2:15. D. McDonald.

An examination of theory and research on communication and emotion. The course consists of the following seven areas: defining mood and emotion, tactics for investigation, emotion and cognition, mood and emotion as communication effects, communication as consequence, communication and mood management, and enduring issues.

COMM 494 Special Topics in Communication

Fall, spring, or summer. 1-3 credits variable. S-U grades optional. Prerequisite: permission of instructor.

Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

COMM 496 Internship

Fall, spring, summer, and intersession. 1-3 credits. Students must apply no later than the spring pre-course enrollment period for a fall internship or the fall pre-course enrollment period for a spring or summer internship. Prerequisites: Limited to communication juniors or seniors, 3.0 average in communication courses, and approval of academic advisor. S-U grades only.

Structured, on-the-job learning experience under supervision of communication professionals in a cooperating organization. Maximum of 6 credits total may be earned; no more than 3 per internship but flexibility allows 6 for 1 credit each, 3 for 2 credits each, or 2 for 3 credits each. Internships must be approved in advance by the student's academic advisor and must be supervised by a communication professional in fields of public relations, advertising, publishing, or broadcasting. Minimum of 60 on-the-job hours per credit required.

COMM 497 Individual Study in Communication

Fall or spring. 1-3 credits; may be repeated to 6 credits with a different supervising faculty member. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in 140 Roberts Hall).

Group or individual study under faculty supervision. Work should concentrate on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. Attempts to implement this knowledge in a practical application are desirable.

COMM 498 Communication Teaching Experience

Fall or spring. 1-3 credits; may be repeated to 6 credits with different courses. Limited to juniors and seniors. Intended for undergraduates desiring classroom teaching experience. Prerequisite: 3.0 cumulative average (2.7 if teaching assistant for a skill development course) and permission of the faculty member who will supervise the work and assign the grade. Students must register with an Independent Study form (available in 140 Roberts Hall).

Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to aiding with the actual instruction, each student prepares a paper on some aspect of the course.

COMM 499 Independent Research

Fall or spring. 1-3 credits; may be repeated to 6 credits. Limited to seniors and graduate students. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in 140 Roberts Hall).

Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientific: systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

[COMM 510 Organizational Behavior and Communication]

Fall. 3 credits. Not offered 1996-97. Study of management and leadership in formal organizations with emphasis on the psychology of communication between supervisor and employee; examination of formal and informal communication networks, and interpersonal communication in an organizational context. Case studies analyzed in lab. Lectures concurrent with COMM 410; graduate students should enroll in COMM 510.]

COMM 610 Seminar in Organizational Communication

Spring. 3 credits. Prerequisites: COMM 410/510 or one course in organizational behavior or permission of instructor. Lec, M W 11:15-12:05; lab, F 10:10-12:05. D. Schwartz.

Examination of contemporary research on the social psychology of interpersonal communication in organizations including supervisor-employee relations, leadership style, work motivation, organizational socialization, and formal and informal communication networks.

COMM 618 Communication and Persuasion

Spring. 3 credits. Prerequisite: introductory psychology or social psychology or introductory research methods course. M W 2:55-4:10. M. Shapiro.

The course focuses on theories of communication influence on persuasion and attitude change. Students will become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories also will be applied to a variety of communication situations including mass communication, advertising, public relations/public information, and interpersonal communication. Lectures concurrent with

COMM 418; graduate students should enroll in COMM 618.

COMM 620 Public Opinion and Social Processes

Fall. 3 credits. T R 10:10-11:25. C. Glynn. The course provides an overview of the theoretical and applied literature related to the concept "public opinion." Students investigate how public opinion is perceived and acted upon by society. Relationships between public opinion, communication and social psychological variables are examined. Public opinion is studied using current theoretical and practical applications. Analysis and interpretation of public opinion polls and trends in public opinion on specific issues. Lectures concurrent with COMM 420; graduate students should enroll in COMM 620.

COMM 622 Psychology of Television

Fall. 3 credits. Prerequisites: introductory psychology or social psychology and introductory research-methods course. M W F 12:20-1:10. M. Shapiro.

A survey of knowledge about the psychological influence of television and other audiovisual communication technologies. Topics may include: the history of concerns about television and movies, who watches television and why, how people understand and mentally process television, how television influences thinking and emotions, the effects of various forms (including entertainment, news, and advertising), the future forms of mass media including multimedia and virtual reality. Lectures concurrent with COMM 422; graduate students should enroll in COMM 622.

[COMM 624 Communication in the Developing Nations]

Spring. 3 credits. Open to juniors, seniors, and graduate students. T R 2:55-4:10. Not offered 1996-97. R. D. Colle. The role of communication in development programs, particularly in Third World nations. Emphasis is on communication interventions in agriculture, health, nutrition, family planning and community development, and especially on methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 424; graduate students should enroll in COMM 624.]

COMM 625 Communication for Social Change

Summer only. 3 credits. T R 9:00-1:00. Staff.

A survey of international communication problems and perspectives on social change, with a special focus on the Third World. Concentration on critical issues of communication policy and planning at local, national, and international levels, and the impact of new communication technologies.

COMM 626 Impact of Communication Technologies

Fall. 3 credits. Open to seniors. M W 2:55-4:10. P. Yarbrough. Examines emerging technologies of communication, such as computer-based information systems and satellites and their potential for influencing communication processes and social systems. Also examines the impacts of previous communication innovations from cave painting to television. Lectures concurrent with COMM 426; graduate students enroll in COMM 626.

COMM 639 Interactive Multimedia: Design and Research Issues

Fall. 3 credits. Prerequisite: permission of instructor. Lec, T R 11:15-12:05; lab, T 12:20-2:15. G. Gay.

An overview of multimedia technologies (videodisk, CD-ROM, digital video technologies, computer graphics, and text). Course will focus on theories and research applicable to interactive multimedia such as visualization, learner control, mental models, knowledge representations, and information processing. Course will also emphasize interactive multimedia design, application, and evaluation.

COMM 640 Social Design of Communication Systems

Spring. 3 credits. Prerequisite: permission of instructor. Lec, T R 11:15-12:05; lab, T 12:20-2:15. G. Gay.

Course will focus on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

COMM 676 Planning Communication Campaigns

Spring. 3 credits. T R 10:10-11:25. C. Scherer.

Overview theories that guide and influence social change efforts. Research techniques and communication tools used in communication planning and campaign techniques and communication tools used in communication planning and campaign design are reviewed. Class discussion focuses on social change efforts in nutrition and health, rural development, marketing, and the environment. Course seeks to integrate theory, data-based generalizations, and planning processes into an integrated communication plan.

COMM 680 Studies in Communication

Fall. 3 credits. Limited to graduate students in communication; others by permission of instructor. M W 9:05-11:00. D. McDonald.

A review of classical and contemporary readings in communication, including key concepts and areas of investigation. An exploration of the scope of the field, the interrelationships of its various branches, and an examination of the role of theory in the research process.

[COMM 681 Seminar in Psychology of Communication]

Spring. 3 credits. Prerequisite: graduate students in communication; others by permission of instructor. Not offered 1996-97. M. Shapiro.

An introduction to theory and research in the mental processes of the communicating individual. Discussions and readings may include how individuals process and remember communication information, how communication information is used in decision processes, how motivation influences processing of mass communication information, and how attitudes form and change.]

COMM 682 Methods of Communication Research

Spring. 3 credits. Lec, M W 12:20-1:10; sec, F 12:20-2:15. R. Ostman.

An analysis of the methods used in communication research. Emphasis on understanding the rationale for survey, textual, experimental, and ethnographic research methods. Development of class research project from research question to final report. Computer use of Statistical Package for the Social Sciences (SPSS) to assist in data analysis. Familiarity with basic statistical concepts helpful.

COMM 683 Quantitative Research Methods in Communication

Spring. 3 credits. Prerequisite: COMM 682 or equivalent. Lec, M W 10:10–11:00; Sec, M 1:25–2:40. D. McDonald.

Experience in quantitative research techniques. The course provides an introduction to inter- and multi-disciplinary research through examination of the procedures, techniques and assumptions associated with particular techniques of design and measurement, data collection, data preparation, data analysis, and hypothesis testing. Readings include a variety of fields and disciplines in the social and natural sciences.

COMM 684 Qualitative Methods in Communication Research

Spring. 3 credits. T R 10:10–11:25. B. Lewenstein.

This course explores the nature of communication research and the place of qualitative methods in that research. Through readings, discussions, and papers, students will examine the various techniques of qualitative research, gaining both an introduction to those methods and an appreciation of when those methods are appropriate for addressing particular issues in communication.

[COMM 685 Training and Development: Theory and Practice (also International Agriculture 685 and EDUC 685)]

Spring. 4 credits. S-U grades optional. Charge for materials, \$45. F 9:05–12:05; lab to be arranged. Not offered 1996–97. R. Colle, D. Deshler, and M. Ewert.

Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Design for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.]

COMM 686 Risk Communication

Spring. 3 credits. T R 1:25–2:40. C. Scherer.

An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course will concentrate on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors will be examined. Emphasis will be placed on understanding, applying, and developing theories of risk communication. Lectures concurrent with COMM 486; graduate students should enroll in COMM 686.

[COMM 687 Communication, Mood and Emotion]

Fall. 3 credits. Prerequisites: COMM 382 or equivalent. Not offered 1996–97. D. McDonald.

An examination of theory and research on communication and emotion. The course consists of the following seven areas: defining mood and emotion, tactics for investigation, emotion and cognition, mood and emotion as communication effects, communication as consequence, communication and mood management, and enduring issues. Lectures concurrent with COMM 487; graduate students should enroll in COMM 687.]

COMM 688 Participatory Communication for Research and Development

Summer only. 3 credits. Prerequisites: Qualitative research or graduate-level communication course and/or permission of instructor. Lects, T R 1:00–5:00; disc, arranged 2 hours/week. S. White.

Conceptual framework and theoretic rationale for utilizing participatory approaches in communication and research for rural development and social action. Case examples and video documentation from India, Africa, Latin America. Focus is on problem-solving approaches in communication and use of video as a communication tool for enhancing people's participation in the development context.

COMM 691 Seminar: Topics in Communication

Fall and spring. No credit. S-U grades only. Hours to be arranged. Staff.

Some weeks scholars from a wide variety of fields will present varied topics in theory or research as it relates to communication; other weeks graduate students will present thesis (project) proposals to faculty and peers.

COMM 694 Special Topics in Communication

Fall, spring, or summer. 1–3 credits variable. S-U grades optional. Prerequisite: permission of instructor. Hours to be arranged. Staff.

Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

COMM 700 MPS Project Research

Fall or spring. 1–6 credits. May be repeated for a maximum of 6 credits. Prerequisite: permission of committee chair.

Project research for Master of Professional Studies (Communication) students.

COMM 794 Seminar in Communication Issues

Fall, spring, or summer. 1–3 credits. Prerequisite: permission of instructor.

Small group study of topical issue(s) in communication not otherwise examined in a graduate field course.

COMM 797 Graduate Independent Study

Fall, spring, or summer. 1–3 credits. Prerequisite: permission of instructor.

Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

COMM 798 Communication Teaching Laboratory

Fall and spring. 1–3 credits each semester. May be repeated once. Limited to graduate students. Prerequisite: permission of the faculty member who will supervise the work and assign the grade. Students must use the faculty member's section number to register. Graduate faculty.

Designed primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.

COMM 799 Graduate Research

Fall, spring, or summer. 1–3 credits. Prerequisite: appropriate communication graduate course work or permission of instructor.

Small-group or individual research based on original, empirical, data-based designs regarding topical issues in communication not otherwise examined in a graduate field course.

COMM 800 Master's-Level Thesis Research

Fall or spring. 1–6 credits. May be repeated for a maximum of 6 credits. Prerequisite: permission of committee chair.

Thesis research for Master of Science (Communication) students.

COMM 901 Doctoral-Level Dissertation Research

Fall or spring. 1–9 credits. May be repeated for a maximum of 9 credits. Prerequisites: completion of "A" exam; permission of committee chair. Dissertation research for doctoral candidates.

EDUCATION

D. H. Monk, chair; W. S. Carlsen, J. Confrey, C. Conroy, J. D. Deshler, J. A. Dunn, D. M. Ewert, E. J. Haller, D. E. Hedlund, J. Millman, D. D. Peasley, S. C. Piliero, G. J. Posner, R. E. Ripple, V. N. Rockcastle, D. E. Schrader, R. E. Steele, K. A. Strike, H. D. Sutphin, D. J. Trumbull

EDUC 005 Basic Review Mathematics

Fall or spring. 3 credits (this credit is not counted toward the 120 credits required for the degree). Lects, M W F 8:00 or 9:05. S. C. Piliero.

Review of concepts necessary for success in EDUC 115 and basic statistics courses. Topics include problem solving, graphing, basic algebra skills, linear and quadratic functions, polynomial equations, exponents and logarithms, and right-triangle trigonometry. Considerable emphasis is placed on learning mathematics for understanding and on solving word problems.

EDUC 101 Introduction to Education

Fall. 3 credits. T R 11:40–12:55.

G. J. Posner and staff.

Education 101 explores three current issues in education in depth in order to introduce students to the field of education. The social-historical, psychological, and pedagogical foundations, and current proposals addressing each issue are considered.

EDUC 115 Introductory College Mathematics

Fall or spring. 4 credits. S. C. Piliero.

Designed for students wishing to fulfill distribution requirements and/or prepare for study in calculus. This course offers a nontraditional approach to college-level precalculus mathematics, stressing conceptual understanding, problem solving, and applications in a technology-enhanced environment. Considerable emphasis is placed on numerical, graphical and symbolic

representations of functions and their transformations. Students will use Function Probe®, multi-representational software for the Macintosh, in a collaborative, computer-based lab setting.

EDUC 120 Education for Empowerment

Spring. 1-3 credits. T R 2:30-4:00. Staff.
A modular course, with each module spanning 5 weeks for 1 credit. Common themes running through the modules include human learning, teaching strategies, political/social/economic factors affecting education. The course provides an opportunity to sample different areas of study and to gain knowledge and awareness of one's own educational processes.

EDUC 210 Psychology of Learning and Memory

Fall. 3 credits. Prerequisite: introductory psychology. Not offered fall 1997.
J. A. Dunn.
This course deals with contemporary theories of learning, issues in the study of learning, and application of the principles of learning to the management of teaching and learning. Practical applications of research findings will be emphasized. One or more experimental projects and the use of microcomputers will be required.

EDUC 212 Psychological Foundations of Education

Spring. 2-3 credits. S-U option available. Prerequisite: introductory psychology.
W 2-4:25 plus times to be arranged.
J. A. Dunn.
A lecture/discussion survey of the psychological foundations of educational practice. Topics include the selective contributions of developmental, social, and experimental psychology, including instructional technology, to American education.

EDUC 240 The Art of Teaching

Fall and spring. 3 credits. Fall: M 8-9:55 or T 10:10-12:05 or 2:30-4:25.
D. J. Trumbull and staff. Spring: M 8-9:55 or 12:20-2:15 or T 2:30-4:25 or W 12:20-2:15 or 2:30-4:25. G. J. Posner and staff.
This course is designed for all students interested in finding out more about teaching. Students engage in field experiences to find out what teaching involves. Possible field experiences range from large group to tutorial situations, from preschool to adult education, from traditional school subject matters to recreational and vocational areas, and from school-based to nonformal situations. Class work builds on those experiences and provides skills and concepts to make the field experiences more profitable.

EDUC 247 Instructional/Informational Application of Microcomputers and Related Technologies

Fall and spring. 2-3 credits. Not available to students who have completed ABEN 102 or NR 107. Lec, R 2:30-3:20; lab to be arranged. D. D. Peasley.
The primary goal of the course is to develop conceptual understandings of instructional/informational applications of microcomputers and teach introductory to intermediate-level skills. Class instruction will relate to microcomputer and networked applications in both formal and informal educational/training settings. Independent study project required for third credit.

EDUC 271 Sociology of Education

Fall. 3 credits. S-U grades optional. T R 10:10-11:25. E. J. Haller.
An introduction to the sociological study of schooling and education. Topics include the effects of social factors on educational achievement, the norms and values learned as part of the process of schooling, the relations between students and teachers, and the school's relations to the economic and political systems. All levels of education, from elementary school to the university, are considered.

EDUC 311 Educational Psychology

Fall. 3 credits. Prerequisite: introductory psychology. S-U grades optional. M W F 11:15-12:05. D. E. Schrader.
This course applies psychological concepts to educational settings such as schools with a focus on understanding the interaction between people, context and knowledge in schools and other learning environments. It examines education as a social, moral, and interpersonal enterprise that respects differences between individuals. This course is designed to foster effective teaching and learning across the life span, but with a focus on secondary education.

[EDUC 312 Learning to Learn

Spring. 3 credits. Prerequisite: one or more courses in psychology or educational psychology. T R 9:05. Not offered 1996-97. Staff.
This course is intended for persons interested in the improvement of their learning strategies and the application of new ideas and methods to improve educational programs. Lectures and discussions are based on assigned readings and the contributions of class members. The major focus of the course is how and why concepts play a central role in human learning. Concept mapping and other strategies for educating will be used. Students will apply principles and methodologies in a project related to their interests.]

EDUC 317 Psychology of Adolescence

Spring. 3 credits. Prerequisite: introductory psychology. S-U grades optional. M W 11:15-12:05; Friday section to be arranged. D. E. Schrader.
This course surveys the nature of adolescent cognitive, social, moral, and self-development. Theories of adolescence are examined in the context of real-life experiences of adolescents using case analysis as a methodological tool. Educational implications will be discussed for both formal and informal settings.

EDUC 331 Careers in Agriculture, Extension, and Adult Education

Fall. 1-3 credits. Letter grade only. M 2:00-4:25. J. D. Deshler and D. E. Foster.
This course will offer modules in three areas of teaching: Adult Education, Cooperative Extension, and Agricultural Education. Each module will offer one hour of credit, and students may take one or more of the modules. The course will provide a historical perspective and an introduction to the organization and scope of programs for each module. Students will examine career opportunities and characteristics of the professions addressed by each module. Course activities include field observations and experiences during arranged times.

EDUC 332 Instructional Methods in Formal and Non-formal Education

Spring. 3 credits. W F 3:35-5:15. Staff.
Selection, practice, and evaluation of methods in formal and non-formal education will be stressed. The course will focus on both general teaching strategies and methodology unique to teaching in schools and non-formal settings. Course activities include micro-teaching and field experience during arranged times.

EDUC 335 Youth Organizations

Spring. 3 credits. T R 10:10-11:00; lab to be arranged. Staff.
The role of selected youth organizations in providing educational experiences for youth. Factors affecting membership, purposes, design, operation, and administration are surveyed, emphasizing the roles an adult volunteer leader may play. The course is designed to give students an in-depth, learning-by-doing experience of how youth organizations function. Field experience with a recognized youth organization is required.

EDUC 352 Reading Statistics

Fall. 1 credit. T 12:20-1:10. J. Millman.
An introduction to statistical vocabulary and symbolism frequently used in reporting empirical research in education and other social sciences. Students are taught how to comprehend statistical terminology and results.

EDUC 370 Issues in Educational Policy

Spring. 3 credits. T R 10:10-11:30.
K. A. Strike.
An examination of selected policy issues in current education. Included are such topics as equality of educational opportunity; student, parent, and teacher rights; and educational politics. Issues are treated from legal, sociological, and economic perspectives. Meets group C requirements for College of Agriculture and Life Sciences.

EDUC 378 Political Economy of Education

Fall. 3 credits. S-U grades optional. T R 12:20-2:15. D. H. Monk and staff.
A policy oriented examination of educational systems with an emphasis on political and economic perspectives. Attention will be paid to both external and internal aspects of educational activities. Specific topics will include the changing contributions of education to earnings, school-community relations, power within educational organizations, the impact of technology in the workplace and in classrooms, and the sources and impact of educational costs. A variety of education settings will be examined including higher education and non-formal education.

EDUC 380 Independent Honors Research in Social Science

Fall or spring. 1-6 credits. Limited to students who have met requirements for the honors program. S-U grades optional. A maximum of 6 credits may be earned in the honors program. Staff.

EDUC 401 Our Physical Environment

Fall. 3 credits. Prerequisite: permission of instructor. Charge for laboratory supplies, approximately \$7. T 1:25-4:25.
V. N. Rockcastle.
A practical, relatively nonmathematical study of some basic relationships and physical interactions in the environment, with emphasis on physics and earth science. Attention is paid to analysis for understanding

and techniques for teaching. An individual research project is included. Useful for teachers, environmental educators, and those for whom physical science seems difficult or uninviting.

EDUC 402 Knowing and Learning in Science and Mathematics

Fall. 4 credits. Prerequisite: enrollment in science and math certification program or permission of instructor. M W 2:30-4:00. D. J. Trumbull.

Students examine both current notions in the history and philosophy of science that explain how knowledge within a discipline develops and current theory and research that examines the individual's acquisition of knowledge. This material serves as a basis for students' individual research projects investigating neophytes' knowledge of science and mathematics concepts. All students enrolled must complete fieldwork. Fieldwork will comprise a minimum of three hours a week in an appropriate educational setting.

EDUC 403 Observing and Teaching Science and Math

Spring. 4 credits. Prerequisites: Enrollment in a Cornell teacher education program or permission of the instructor. W F 3:35-5:15. W. S. Carlsen.

Designed for prospective secondary teachers, this course provides a multiple-perspectives orientation to the culture of schools and the work of teaching science and mathematics. Students spend 6-8 hours each week observing in area schools. Students also plan and teach innovative lessons in the scheduled teaching laboratory. Readings and discussions concern models of instruction, teacher knowledge, educational equity and tracking, and classroom language.

[EDUC 411 Introduction to Educational Measurement

Fall. 3 credits. Not offered 1996-97. J. Millman.

Presents practices and theories of the measurement of human knowledge and performance. Students will be expected to acquire the practical skills of planning and constructing tests for a variety of purposes, interpreting and using test results, evaluating commercially available instruments, and the like. Students will also be expected to discuss intelligently a myriad of social, ethical, legal, and technical issues associated with educational testing. One course in statistics or concurrent registration in Education 352 is recommended but is not required.]

EDUC 413 Psychology of Human Interaction

Fall. 3 credits. Enrollment limited. Prerequisite: permission of instructor. Fee, \$5. T R 10:10-12:05. D. E. Hedlund.

Designed to develop skills for, and understanding of, effective interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources.

[EDUC 414 Counseling Psychology

Spring. 4 credits. Limited to 30 students. Prerequisites: introductory psychology, social or personality psychology, and EDUC 413. T R 10:10-12:05. Not offered spring 1997; next offered spring 1998. D. E. Hedlund.

The processes of counseling are examined from various theoretical perspectives. Typical

adult counseling issues are examined, and implications are drawn for counseling strategies with an adult population, including psychological assessment, establishing therapeutic goals, intervention strategies, and evaluation of outcomes.]

EDUC 420 Field Experience

Fall or spring. 1-4 credits. S-U grades optional. Undergraduates must attach to their course enrollment material written permission from the faculty member who will supervise the work and assign the grade. Staff.

Students may engage in planned, semiprofessional, or professional practice in an educational enterprise. Each student prepares a plan of action including rationale, purposes, and procedures and arranges with a faculty member to supervise and evaluate the field experience.

EDUC 430 Special Problems in Agricultural Education

Fall, spring, or summer. 1-3 credits. S-U grades optional. W 12:20-1:10. R. E. Steele.

An opportunity to study individually selected problems in agricultural education.

EDUC 432 Teaching Agriculture: Methods, Materials, Practice

Fall. 9 credits. Prerequisites: EDUC 332 and concurrent registration in EDUC 430 and 497. M T W R F 8:00-3:00. R. E. Steele.

Directed participation in teaching agriculture at the secondary school level. Program includes a five-day intensive on-campus period and periodic seminars addressing selected methods and materials in teaching agriculture, combined with a 14-week period in an off-campus student teaching center. Includes evaluation of area resources, instructional materials and facilities, planning and executing instruction, directing work experience, and advising youth organizations.

[EDUC 445 Curriculum Design Workshop

Fall. 3 credits. Not offered 1996-97. T R 10:10-11:25. G. J. Posner.

A general practical approach to course planning. Readings, group discussions, workshops, and individual conferences centering on each student's project. This project consists of designing a course in a subject area for an age level and an institutional setting of the student's choosing.]

EDUC 472 Philosophy of Education

Fall. 3 credits. T 2:30-4:25. K. A. Strike. A study of central issues in the philosophy of education. Questions of ethics, political philosophy, and the theory of knowledge are examined and linked to current educational issues.

[EDUC 475 Epistemology and Teaching

Spring. 3 credits. Letter grade only. T R 3:30-4:45. Not offered spring 1997; next offered spring 1998. K. A. Strike.

This course emphasizes the critical examination of recent debates in philosophy of science concerning the nature of scientific knowledge and scientific inquiry. It applies these inquiries to such questions as the organization of curricular materials, the nature of effective science teaching, and the role of scientific knowledge in the deliberations of a liberal democracy.]

EDUC 477 Law and Educational Policy

Fall. 3 credits. M 2:30-4:25. K. A. Strike. A study of recent federal court decisions concerning education. Emphasis on examining legal issues against a background of related educational issues and in terms of the consequences of legal decisions for the development and operation of educational institutions.

[EDUC 481 Educating for Community Action

Spring. 3 credits. Not offered 1996-97. D. M. Ewert.

The design and execution of educational aspects of community-action and nonformal education programs. Deals with the identification and statement of educational goals, selection of teaching strategies, and evaluation of outcomes.]

EDUC 483 Comparative Studies in Adult Education

Spring. 3 credits. S-U grades optional. T R 3:35-5:00. J. D. Deshler.

Focuses on the variety of adult-education programs in countries around the world. Literature on comparative adult education, international conferences on adult education, UNESCO adult-education publications, and international community development are analyzed in relationship to each student's exploration of adult education in two countries. Description of adult education in other countries is shared by international students.

EDUC 494 Special Topics in Education

Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

EDUC 497 Individual Study in Education

Fall or spring. 1-3 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to be arranged. Staff.

A student may, with approval of a faculty adviser, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

EDUC 498 Undergraduate Teaching

Fall or spring. 1 or 2 credits; 4 credits maximum during undergraduate career. Limited to students with grade-point averages of at least 2.7. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to be arranged. Staff.

Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

EDUC 499 Undergraduate Research

Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with grade-point averages of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to be arranged. Staff.

Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

EDUC 501 Communication Workshop

Summer and intersession. 2-3 credits. S-U grades optional. M. D. Glock.

The course focuses on skills enabling individuals to cope with such concerns as motivation, dealing with difficult persons, criticizing productively, improving comprehension, adjusting to different learning styles, and communicating with the public. Practice is coordinated with theory and research findings. The ongoing dynamics of the course necessitate intense participation over a period of time, not provided by regularly scheduled fifty-minute class periods. Additional auto-tutorial lab time is scheduled. Appropriate for anyone who works with people.

EDUC 507 Science and Environment for Teachers

Summer. 3 credits. S-U option. Prerequisite: contact instructor for details. W. S. Carlsen.

This three-week inservice program for secondary and middle school science teachers focuses on biological, chemical, and hydrological methods of water monitoring and watershed dynamics. Participants also use remote sensing; work with computers; investigate topics in science, technology and society; learn pedagogical techniques that are consistent with science reform initiatives; and discuss and develop new types of assessment.

EDUC 513 Interpersonal Interaction

Summer. 1-2 credits. D. E. Hedlund.

Designed to develop skills for an understanding of effective interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources. A workshop design is required for the second credit. Participants must bring a tape recorder to class.

EDUC 547 Improvement of College Teaching

Summer. 2 credits. Staff.

Concepts of teaching, learning, curriculum, and governance are used to guide practical activities that enhance faculty competence. Recent studies of concept mapping and learning, structure of knowledge, science teaching, adult learning, and evaluation provide a conceptual basis for improving teaching.

EDUC 548 Effective College Teaching

Spring. 1-3 credits. S-U grade option. Hours to be arranged. H. D. Sutphin, D. M. Ewert, and D. J. Trumbull.

This course is designed to help participants become more effective college teachers. It will examine the basic principle of learning, identify different learning styles, and explore a

variety of teaching techniques, methods, and technologies. Participants will also learn how to design a course and improve their effectiveness as teachers.

EDUC 601 Secondary Science and Mathematics Teaching Practicum

Fall or spring. 6 credits. Prerequisite: permission of instructor. Letter grades only. For graduate students enrolled in the Teacher Education in Science and Mathematics program. M T W R F 8:00-3:00. W. S. Carlsen, G. J. Posner, A. Solomon, M. S. Slack, and D. J. Trumbull.

Supervised student teaching in science or mathematics at the secondary level. Program includes teaching in a local school for ten weeks.

EDUC 602 Teaching Science/Mathematics: Methods, Materials, Practice

Fall or spring. 9 credits. Prerequisite: concurrent enrollment in EDUC 601 or permission of instructor. M T W R F 9:00-3:00. W. S. Carlsen and staff.

The course begins with full day sessions of intensive consideration of theoretical frameworks relevant to all aspects of student teaching. Assignments and a weekly seminar during the semester require students to use those theories to develop and evaluate teaching materials and practices. Students will complete an extensive portfolio documenting their work.

[EDUC 603 Teaching Mathematics

Fall. 3 credits. Offered alternate years. Not offered 1996-97. T R 10:10-11:25. J. Confrey.

Current research in mathematics education will be examined in order to develop a picture of the mathematics classroom that integrates subject matter, student conceptions, affective variables, and issues in the social context of learning mathematics. Special topics will include research on problem solving, women and mathematics, misconceptions, and research on teaching.]

EDUC 606 Seminar in Science and Mathematics Education

Fall. 1 credit. S-U grades only. T 4:30-5:30. J. Confrey.

Explores topics in science and mathematics education. The focus of the seminar changes each year.

[EDUC 609 Educational Ethnography

Spring. 3 credits. Prerequisite: course in research methods or measurement or permission of instructor. M W 2:30-4:00. Not offered spring 1997; next offered spring 1998. D. J. Trumbull.

The course will study educational ethnography as a form of interpretive research, a perspective that attends to the complex interactions between researcher, researched, and context and accepts the centrality of meaning-making in the conduct of human affairs. Students will examine some of the philosophical debates about research approaches and will discuss research methods as they relate to the aims and assumptions of interpretive research. Students will conduct a joint research project during the course of the semester.]

EDUC 611 Educational Psychology

Fall. 3 credits. Prerequisite: introductory psychology. S-U grades optional. M W 11:15-12:05. R. E. Ripple.

A basic survey course for graduate students. Emphasis on psychological factors involved in human learning and the educational process. Set in a broad-based conceptual model of any behavioral setting for learning. A life span developmental approach is used, appropriate for those seeking an introduction to educational psychology or a refresher course in contemporary educational psychology.

EDUC 614 Epistemological Development and Reflective Thought

Fall. 3 credits. S-U grades optional. M 12:20-2:15. D. E. Schrader.

Insight into how individuals make sense of knowledge is essential to teaching and learning. This course examines theories of intellectual development and their implications for educating students of various age groups, particularly college students. The role of reflection on thinking (metacognition) and its impact on development of thought is explored.

[EDUC 615 Self and Interpersonal Development and Education

Spring. 3 credits. S-U grades optional. Not offered 1996-97. M 12:20-2:15. D. E. Schrader.

Interpersonal interactions affect teaching and learning. This course takes a life-span perspective as it explores constructive-developmental theories of self and others, and how such theories explain students' understanding of their own and others' actions in educational contexts.]

EDUC 620 Internship In Education

Fall or spring. 1-6 credits. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for supervising the work. Staff.

An opportunity for practical experience in educational professions development.

EDUC 621 Work-Experience Coordinator Certification Course I

Summer. 3 credits. S-U grades optional. Staff.

The first of a two-course sequence designed to develop the competencies needed for certification as a coordinator of diversified cooperative work experience programs. The course focuses on the history and philosophy, types, operation, and evaluation of work-experience programs including articulation with JPTA and VESID. Field interviews are required. A prerequisite for Course II, EDUC 622.

EDUC 622 Work-Experience Coordinator Certification Course II

Summer. 3 credits. Prerequisite: EDUC 621 Work-Experience Certification Course I. Staff.

The second course for certification as a diversified cooperative work experience coordinator combines course work and directed field experience leading to the planning, development, and approval of a work-experience program in a local educational agency. Development of a philosophy and policy statement, budget, curriculum for related instruction, annual work plan by function, promotional materials, and all program forms for Board of Education approval required.

EDUC 630 Special Problems in Agricultural Education

Fall or spring; may also be offered in summer. 1-3 credits. S-U grades optional. Hours to be announced. Staff.

The course provides an opportunity for graduate-level study of individually selected problems and issues in agricultural and occupational education. Designed for experienced teachers.

EDUC 632 Teaching Agricultural, Extension, and Adult Education

Spring. 3 credits. Prerequisite: an introductory course in teaching methods or permission of instructor. M 8:00-10:00. Staff.

The focus of the course is on the selection, use, and evaluation of methods and materials for teaching. Methods for group and informal instruction are covered. Opportunity is provided for students to develop teaching competence based on their individual needs and interests. Development of self-evaluation skills is included. A class project on the development of instructional materials is required.

EDUC 633 Program Planning in Agricultural, Extension, and Adult Education

Fall. 3 credits. Field trip. Lec, T 2:00-4:30; lab, to be announced. R. E. Steele.

Current social and economic conditions affecting agricultural, extension, and adult education are examined. Principles, objectives, strategies, and sources of information are applied to program planning. Participants have an opportunity to observe ongoing programs in agricultural, extension, and adult education, and to pursue individual interests in program development and improvement.

EDUC 644 Curriculum Theory and Analysis

Spring. 3 credits. M 2:30-5:00. G. J. Posner and W. S. Carlsen.

An examination of the basic elements involved in making curriculum decisions and an analysis of current approaches to curriculum. The course focuses on the assumptions underlying any curriculum. The major task of each student is to choose and conduct an in-depth analysis of a curriculum. This course is the basic graduate course in curriculum.

EDUC 647 Instructional Technologies: Analysis and Practices

Fall. 2-4 credits. Prerequisite: skills in statistics and research design. Letter grade only. Lec, R 2:30-3:20; lab and seminar to be announced. D. D. Peasley.

Current research and literature on instructional computing and related technologies in the public and private sectors will be examined. Students complete a group research project on educational technologies and meet for five seminar sessions to earn 2 credits. The research experience includes design, data collection, input, analysis, and synthesis. Concurrent attendance in ED 247 Modules A and B is required (2 credits); or the modules may be taken as a prerequisite.

EDUC 650 Methods of Educational Inquiry

Fall. 1 credit. J. Millman.

A survey of approaches to inquiry in the social sciences, including experimental and comparative designs, survey research, case study, philosophical and historical inquiry, content analysis, and secondary data analysis. The course is intended to broaden the

student's views of appropriate methods of disciplined inquiry.

EDUC 651 Writing a Thesis Proposal

Fall. 1 credit. S-U grades only. T 3:35-4:25. J. Millman.

Procedures for developing and writing a master's or doctoral thesis proposal. Emphasis will be given to identifying a significant topic, recognizing weaknesses in illustrative proposals, and clear and concise writing. Students will be provided ample assistance in constructing a brief thesis proposal of their own.

EDUC 659 Special Topics in Research Methods

Spring. 2-3 credits. Prerequisite: permission of instructor. S-U grades only. Hours to be arranged. J. Millman.

Consideration of new techniques and current topics in educational research design, measurement, or evaluation of programs, products, and personnel.

EDUC 661 Administration of Educational Organizations

Fall. 3 credits. W 3:35-6:00. E. J. Haller.

Perspectives on the administration of educational organizations. Consideration of social science, legal and ethical theories, and their application to both public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of schools as organizations.

EDUC 664 Educational Finance

Fall. 3 credits. S-U grades optional. R 3:35-6:00. D. H. Monk.

An analysis of the distribution and utilization of public and private resources for educational purposes. The discussion will revolve around the issues of equity, efficiency, and freedom of choice. Alternative methods of financing schools will be evaluated, and the perplexing legal and moral issues raised by such questions as "Who pays?" and "Who benefits?" will be discussed. Specific attention will be given to budgeting, accountability, and productivity. An opportunity for individuals to focus on their own areas of interest, such as occupational education, the two-year college, or secondary or higher education.

EDUC 665 Administrative Decision Making

Spring. 3 credits. S-U grades optional. W 3:35-6:00. D. H. Monk.

An introduction to decision making theory and its relevance to the field of educational administration. Specific applications will be made to the study and improvement of productivity within educational systems. A wide variety of educational settings will be considered, including higher education and non-formal education.

EDUC 680 Foundations of Extension Adult Education

Fall. 3 credits. Limited to 20 students. S-U grades optional. F 9:05-12:10. J. D. Deshler.

An analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings. Definitions, conceptual controversies, philosophical issues, and current research directions will be examined through a seminar approach.

EDUC 682 Community Education and Development

Fall. 3 credits. Limited to 25 students. Letter grade only. M 1:25-4:25. D. M. Ewert.

An examination of the concept of community; changes in community life; the analysis of community; alternative strategies for community development; patterns of response to community by universities, colleges, schools, cooperative extension, and government service agencies; and such functional dimensions of community education programming as participatory decision making, volunteers, leadership development, council formation and function, interagency coordination, and change-agents roles.

EDUC 685 Training and Development: Theory and Practice (also Communication 685, International Agriculture 685)

Spring. 4 credits. S-U grades optional. Charge for materials, \$45. F 9:05-12:05; lab to be arranged. R. D. Colle and J. D. Deshler.

Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

EDUC 690 Research Seminar

Fall and/or spring. No credit. G. J. Posner and staff.

Presentation of current research in the field of education by graduate students and staff. Opportunities to discuss methodology, findings, and other aspects of research.

EDUC 694 Special Topics in Education

Fall, spring, or summer. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional. Hours to be arranged. Staff.

Topics to be announced.

[EDUC 711 Contemporary Issues in Educational Psychology]

Fall and spring. 2-3 credits. Fall: M W 11:15. J. Dunn. Spring: hours to be arranged. R. E. Ripple.

This is a graduate-level seminar dealing with key issues in contemporary psychology having implications for educational practice and research. Topics will vary from semester to semester. Students may take the course more than once.]

EDUC 714 Moral Development and Education

Spring. 3 credits. S-U grades optional. M 12:20-2:15. D. E. Schrader.

This seminar focuses on current topics in moral development research as related to the educational process. Topics include the question of the development of moral reasoning, gender differences, the relationship between moral judgment and moral action, questions related to moral education in secondary schools and university settings, and professional ethics in educational settings. This course takes a life-span perspective; however, special emphasis will be placed on development from adolescence through adulthood.

EDUC 715 Seminar in Psychology and Education

Fall. Variable credit. Prerequisite: permission of instructor. Fall: W 1:25-3:25. D. E. Hedlund.

Selected topics focusing on the interaction of theoretical and research developments in psychology and education.

EDUC 718 Adult Learning and Development

Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. W 2:30-5:00. R. E. Ripple and J. D. Deshler.

Deals with adult development and learning behavior from points of view of educational psychology, and adult education. Inferences are drawn from theory and research to the practice of adult continuing education. Appropriate for graduate students in educational psychology, extension and continuing education, and community service education, and for others interested in adult learning and development.

[EDUC 730 Seminar in Agricultural, Extension, and Adult Education]

Spring. 2 credits. S-U grades optional. R 8:00-9:55. Not offered 1996-97. D. M. Ewert.

Emphasis on current problems and research in agricultural, extension, and adult education. Includes discussion and analysis of student and staff research.]

EDUC 739 Evaluating Programs in Agricultural, Extension, and Adult Education

Spring. 3 credits. Field trip. Staff.

This course examines objectives, criteria, and strategies for evaluating programs of agricultural, extension, and adult education. Evaluation models, case studies, and evaluation as a function of program planning are considered. Participants examine the roles of supervision in evaluation and have an opportunity to develop and apply evaluation instruments. Field trips and resource persons provide opportunities to observe actual evaluation problems and procedures.

[EDUC 745 Seminar in Curriculum Theory and Research]

Fall. 3 credits. Prerequisite: EDUC 644, or permission of instructor. T 2:30-5:00. Not offered 1996-97. G. J. Posner.

Theoretical issues in curriculum and appropriate areas for curriculum research are discussed. Two current topics of interest are the hidden curriculum and school reform. Both topics serve to uncover the relation between ideology and research.]

EDUC 762 Research in Educational Administration

Spring. 3 credits. Prerequisite: one course in elementary statistics or permission of instructor. S-U grades only. E. J. Haller.

For students interested in learning about the process of formulating and carrying out a piece of empirical research. Studies will focus on policy and administrative issues concerning public education. Seminar participants will have access to large, nationally representative data sets that will permit them to conduct high-quality, publishable studies of U.S. schools, students, teachers, and parents. In the process they will learn some of the costs and benefits of secondary data analysis and gain some familiarity with statistical analyses on a Cornell mainframe computer.

EDUC 772 Seminar in Philosophy of Education

Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. W 9:00-11:00. K. A. Strike.

Topics to be announced.

EDUC 783 Comparative Extension Education Systems

Summer. 3 credits. S-U option. D. M. Ewert.

Extension education in the developing nations is studied using, as an analytical frame of reference, a hypothetical model comprising such components as community organization, community-based learning, indigenous facilitators and leaders, extension generalists and specialists, training and research-extension linkages. Case materials on alternative extension models and intercountry experiences provide an empirical base.

[EDUC 784 Educational Technology-Transfer and Decision Making]

Fall. 3 credits. Offered odd years only. Not offered 1996-97. H. D. Sutphin and J. McGonigal.

The educational and program management decisions involved in the adoption of educational technology in extension, rural development, and nonformal education programs are reviewed, and a variety of decision-making approaches is explored. An overall problem-solving method with case study illustrations is used. Consideration is given to structure and operating style of the educational organization, as well as to the characteristics of the technology under consideration. The course makes use of recent literature and continuously updated files on current developments in technology applications.]

EDUC 800 Master's-Level Thesis Research

Fall or spring. Credit to be arranged. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work. Hours to be arranged. Staff.

EDUC 900 Doctoral-Level Thesis Research

Fall or spring. Credit to be arranged. Limited to students working on theses or other research and development projects. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work. Hours to be arranged. Staff.

ENTOMOLOGY

D. A. Rutz, chair; N. W. Calderone, B. N. Danforth, P. M. Davis, P. P. Feeny, C. Gilbert, A. E. Hajek, M. P. Hoffmann, J. K. Liebherr, R. A. Morse, L. A. Patrican, B. L. Peckarsky, D. Pimentel, L. S. Raylor, R. B. Root, R. T. Roush, J. P. Sanderson, J. G. Scott, A. M. Shelton, E. J. Shields, M. J. Tauber, W. M. Tingey, S. Via, Q. D. Wheeler

Courses by Subject

Apiculture: 260, 264
Behavior: 215, 471, 662
Ecology: 452, 455, 456, 470, 471, 672
Introductory courses: 201, 212, 215

Medical entomology and veterinary entomology: 352

Morphology: 322

Pathology: 463

Pest management: 241, 441, 444, 477, 640

Physiology and toxicology: 370, 483, 490, 685

Systematics: 331, 453, 631, 632, 634

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

ENTOM 201 Six-legged Science

Spring. 2 credits. S-U grades optional.

Offered alternate years. Not offered fall 1996 and 1997; next offered spring 1997 and fall 1998 and alternate fall semesters thereafter. Lects, T R 9:05; optional field trips, required lab demonstrations.

A. E. Hajek.

Fascinating, frightening, innocuous, injurious, dainty and ethereal, abundant and essential. Visit the amazing world of the insects.

Lectures will explore aspects of the wonders of the insects, and their interactions with humans. We will offer opportunities to investigate insects in the field and laboratory.

ENTOM 212 Insect Biology

Fall. 4 credits. Prerequisites: BIO G 101-102 (may be taken concurrently) or equivalent. Lects, W F 10:10-11:00; labs T, W or R 1:25-4:25. J. K. Liebherr.

Introduces the science of entomology by focusing on basic principles of systematics, morphology, physiology, behavior, and ecology of insects. The laboratory in early fall includes field trips to collect and study insects in the natural environment. A collection emphasizing ecological, behavioral and taxonomic categories is required.

ENTOM 215 Spider Biology: Life on a Silken Thread

Fall. 2 credits. Prerequisite: Introductory biology or permission of instructor. S-U grades optional. Lects, M W 1:25-2:15. L. S. Raylor.

An introduction to the fascinating world of spiders. Evolution, ecology, behavior, and physiology of spiders and their close kin from a modern perspective. Topics include identification of major spider families, spiders' unique use of silk, risky courtship, predatory behavior, diverse life styles, social spiders, sensory physiology, and potential use in IPM.

ENTOM 241 Applied Entomology

Spring. 3 credits. Prerequisites: BIO G 101-102 or equivalent. Lects, T R 9:05; lab/disc, T or W 12:20-3:15. W. M. Tingey.

Introduction to major pest species and tactics for their management. Discussions of insect pest management requirements on farms, gardens, forests, and urban environments, along with descriptions of control methods, materials, and equipment.

ENTOM 260 Introductory Beekeeping

Fall. 2 credits. Lects, T R 11:15. R. A. Morse.

Introduces the fundamentals of practical beekeeping, including the life history, physiology, and behavior of honey bees. The classical experiments on the dance language and the role of pheromones are reviewed. Some lectures are devoted to pollination of agricultural crops and the production of honey and beeswax.

ENTOM 264 Practical Beekeeping

Fall. 1 credit. Limited to 20 students.
Prerequisite: ENTOM 260 (may be taken concurrently). Lab, R 2-4:25. R. A. Morse.

This course consists of fourteen laboratory sessions to acquaint students with practical methods of colony management. Laboratories involve actual work with honey bee colonies and equipment. Some of the topics covered are management of bees for apple pollination, honey harvesting and processing, and disease identification and control.

ENTOM 322 Insect Morphology

Spring. 5 credits. Prerequisite: ENTOM 212 or 241. Offered alternate years. Not offered spring 1998; next offered spring 1997 and 1999. Lects, M W F 9:05; labs, M F 1:25-4:25. B. N. Danforth.

An introduction to the external and internal anatomy of insects, with emphasis on the comparative and functional aspects. The laboratory is devoted largely to dissection.

[ENTOM 331 Introductory Insect Systematics]

Spring. 4 credits. Prerequisite: ENTOM 212. Offered alternate years. Not offered spring 1997 and 1999; next offered spring 1998. Lects, T R 10:10; labs, M W 1:25-4:25. Q. D. Wheeler.

An introduction to the classification, evolutionary history, and distribution of the insects. Laboratory practice in the identification of orders, families, and representative genera of insects; methods of collection, preservation, and study. Lectures on theory and practice of insect systematics and major features of insect evolution. Insect collections are required.]

ENTOM 352 Medical and Veterinary Entomology

Fall. 3 credits. Prerequisites: BIO G 101-102 or equivalent. S-U grades optional. Offered alternate years. Not offered fall 1997; next offered fall 1996 and 1998. Lects, T R 10:10; lab, R 1:25-4:25. L. A. Patrican.

The ecology of arthropods of medical and veterinary importance in temperate and tropical regions of the world with emphasis on the role they play in causation or transmission of disease. The laboratory involves 2 field trips, techniques of collection and identification, dissections, methods of transmission, means of identification of a blood pathogen and the source of a blood meal.

ENTOM 370 Pesticides, the Environment, and Human Health (also Toxicology 370)

Fall. 2 credits. Prerequisites: BIO G 101-102 or equivalent. Offered alternate years. Not offered fall 1997; next offered fall 1996 and 1998. Lects, T R 9:05. J. G. Scott.

A survey of the different types of pesticides, their uses, properties, and effects on the environment. Discussion of the risks, benefits, regulation, politics, and current controversies associated with pesticide use.

[ENTOM 441 Seminar in Insect Pest Management]

Spring. 1 credit. Limited to 15 students. Prerequisite: ENTOM 241 or 444 or permission of instructor. S-U grades only. Offered alternate years. Not offered spring 1997 and 1999; next offered spring 1998. Hours to be arranged. M. P. Hoffmann and A. M. Shelton.

Discussion and analysis of current topics in insect pest management.]

ENTOM 444 Integrated Pest Management (also Plant Pathology 444)

Fall. 4 credits. Prerequisites: BIOES 261, ENTOM 212 or 241, and PL PA 301 or their equivalents or permission of instructor. Lects, M W F 9:05; labs M or T 1:25-4:25. P. Arneson.

Lectures integrate the principles of pest control, ecology, and economics in the management of pest-crop systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

ENTOM 452 Herbivores and Plants: Chemical Ecology and Coevolution (also BIOES 452)

Spring. 3 credits. Prerequisites: one year of introductory biology; BIOES 261; CHEM 253 or 357/358 and 251 or 301; or permission of instructor. Offered alternate years. Not offered spring 1998; next offered spring 1997 and 1999. Lects, M W F 11:15. P. P. Feeny.

Significance of plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant finding and exploitation by animals; especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack; implications for human food and agriculture.

[ENTOM 453 Principles and Practice of Historical Biogeography (also BIOPL 453)]

Fall. 3 credits. Prerequisite: A course in systematics or permission of instructors. S-U grades optional. Offered alternate years. Not offered fall 1996 and 1998; next offered fall 1997. Lects, T R 10:10; lab T 1:25-4:30. J. K. Liebherr and M. Luckow.

A survey of techniques in historical biogeography, and the development of modern biogeographic theory in the context of classical, ecological and phylogenetic analytical methods. Geological and paleontological aspects of biogeography will be presented, and large-scale biogeographic patterns discussed. Laboratories will focus on computer applications and discussion of controversial issues.]

[ENTOM 455 Insect Ecology, Lectures (also BIOES 455)]

Fall. 3 credits. Prerequisites: BIOES 261 or equivalent and ENTOM 212 or equivalent knowledge of another taxon. S-U grades optional. Offered alternate years. Not offered fall 1996 and 1998; next offered fall 1997. Lects, M W F 11:15. R. B. Root.

Topics include the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.]

ENTOM 456 Stream Ecology (also BIOES 456)

Spring. 4 credits. Recommended: BIOES 261. S-U grades optional. Offered alternate years. Not offered spring 1998; next offered spring 1997 and 1999. Lects,

T R 9:05; labs, T W or R 1:25-4:25.

B. L. Peckarsky and M. B. Bain.

Lecture addresses the patterns and processes occurring in stream ecosystems, including channel formation, water chemistry, watershed influences, plant, invertebrate, and fish community structure, nutrient cycling, trophic dynamics, colonization and succession, community dynamics, conservation and the impacts of disturbances. **Lab:** A field project includes descriptive and experimental techniques and hypotheses testing related to environmental assessment.

[ENTOM 463 Invertebrate Pathology]

Spring. 4 credits. Prerequisites: one year of introductory biology. S-U grades optional. Offered alternate years. Not offered spring 1997 and 1999; next offered spring 1998. Lects, M W F 9:05; labs, W 1:25-4:25. A. E. Hajek.

Lecture presents principles of pathology as applied to invertebrates. Topics explored include non-infectious and infectious diseases caused by viruses, bacteria, fungi, protozoa, and nematodes, epizootiology of insect diseases and use of pathogens for control. Laboratory involves a diversity of pathogens and hosts using techniques such as microinjection, electrophoresis, immunoassay, density gradient centrifugation, soil extraction, and computer simulation.]

ENTOM 470 Ecological Genetics (also BIOES 470)

Spring. 4 credits. Prerequisites: BIOES 378 or permission of instructor. S-U grades optional. Offered alternate years. Not offered spring 1998; next offered spring 1997 and 1999. Lects, T R 10:10-11:30; disc, 1 hr/wk to be arranged. S. Via.

A study of the relationships between genetic and ecological processes in populations. Topics include consequences of genetic variation in age-structured populations; demographic concepts of fitness; evaluation of methods for measuring genetic variation and natural selection on ecologically important traits; genetics of competitive ability and predator avoidance; genetic and ecological aspects of phenotypic plasticity; character displacement; maintenance of genetic variability; limits to selection. How theory can be used to formulate hypotheses about evolutionary mechanisms in natural populations is considered and experiments designed to test such hypotheses are evaluated.

[ENTOM 471 Freshwater Invertebrate Biology]

Spring. 5 credits. Recommended: ENTOM 212. Offered alternate years. Not offered spring 1997 and 1999; next offered spring 1998. Lects, T R 9:05; labs, T R 1:25-4:25. B. L. Peckarsky.

The lecture explores the morphology, physiology, phylogeny, life histories, behavior, feeding ecology, and evolution of macroscopic freshwater invertebrates with an emphasis on contrasting the attributes of aquatic and terrestrial insects. The laboratory involves field collections and laboratory identification of invertebrates and stresses the use of keys. Students prepare a collection of freshwater invertebrates.]

[ENTOM 477 Biological Control]

Fall. 3 credits. Prerequisites: ENTOM 212, BIOES 261, and permission of instructor. Offered alternate years. Not offered fall 1996 and 1998; next offered fall 1997. Lects, T R 9:05; lab T 1:25-4:15. M. J. Tauber.

Approach and procedures in biological control of arthropod pests and weeds. Demonstrations focus on living parasitoids and predators. Discussions focus on case histories.]

ENTOM 483 Insect Physiology

Fall. 5 credits. Prerequisite: ENTOM 212 or permission of instructor. Offered alternate years. Not offered fall 1997; next offered fall 1996 and 1998. Lects, M W F 11:15; lab W 1:25-4:25. C. Gilbert.

An introduction to the often unique ways in which insects have met their basic needs. Each organ system is examined with emphasis on basic principles and specific examples. The student will also be introduced to some common methods used in physiological research and to the critical reading of scientific literature.

ENTOM 490 Toxicology of Insecticides (also Toxicology 490)

Spring. 4 credits. Prerequisites: general chemistry and organic chemistry. S-U grades optional. Offered alternate years. Not offered spring 1998; next offered spring 1997 and 1999. Lects, M W F 9:05; lab W 1:25-4:25. J. G. Scott.

The history, metabolism, and mechanism of action of synthetic and naturally occurring insecticides. Mechanisms of insecticide resistance, evaluation of insecticide toxicity, and new approaches to insect control with biotechnology will be discussed.

ENTOM 494 Special Topics in Entomology

Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

ENTOM 497 Individual Study in Entomology

Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

ENTOM 498 Undergraduate Teaching

Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Undergraduate teaching assistance in an entomology course by agreement with the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

ENTOM 631 Systematics of the Coleoptera

Summer. 3 credits. Max enrollment 18 students. 3 week summer session. Prerequisites: an introductory course in insect taxonomy and permission of instructor. Offered alternate years. Not offered summer 1998; next offered summer 1997 and 1999. Lab, M T W R F 9-4; Saturday field trips. Q. D. Wheeler.

A comprehensive review of the comparative morphology, phylogenetic relationships, classification, natural history, and distribution of the Coleoptera, including adult and immature stages. Laboratory practice in identification and methods for collection and study of beetles. A collection is required.

[ENTOM 632 Advanced Coleopterology]

Summer. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional. Offered alternate years. Not offered summer 1997 and 1999; next offered summer 1998. Lab, to be arranged. Q. D. Wheeler.

An advanced course on the phylogeny and classification of selected subclades of Coleoptera. Laboratory exercises in identification of beetles, generally to the level of genus or beyond. Taught by authority on taxon of interest, frequently including a visiting scholar. Can be repeated for credit.]

ENTOM 634 Special Topics in Systematic Entomology

Fall or spring; taught on demand. 2-4 credits. Prerequisite: permission of instructor. Staff.

Lectures on the classification, evolution, and bionomics of selected taxa, with accompanying laboratory studies on identification and comparative morphology. Collections sometimes required.

ENTOM 640 Applied Ecology and Pest Management

Spring. 3 credits. Prerequisites: ENTOM 444 and a course in statistics. Recommended: a course in computer science. S-U grades optional. Offered alternate years. Not offered spring 1998; next offered spring 1997 and 1999. Lects, T R 1:25-2:40. P. M. Davis.

Theory and quantitative methods for characterizing arthropod population dynamics for research and pest management purposes. Course evaluates biological and climatic factors influencing population numbers, development, dispersal, and plant response to arthropod pests. Special topics include development of sampling methodology and simulation modeling.

ENTOM 662 Insect Behavior Seminar

Spring. 2 credits. Prerequisites: permission of instructor and ENTOM 212 and BIONB 221 or equivalents. S-U grades optional. Offered alternate years. Not offered spring 1998; next offered spring 1997 and 1999. Hours to be arranged. M. J. Tauber.

[ENTOM 672 Seminar in Aquatic Ecology]

Spring. 1 credit. Prerequisites: permission of instructor or either ENTOM 456, 471 or BIOES 261, 462. S-U grades optional. Offered alternate years. Not offered spring 1997 and 1999; next offered spring 1998. Hours to be arranged. B. L. Peckarsky.

Discussion and analysis of current topics in the ecology of streams, lakes and marine

ecosystems, including student-generated synthesis of key papers in the literature.]

[ENTOM 685 Seminar in Insect Physiology]

Spring. 1 credit. S-U grades optional. Prerequisite: permission of instructor. Offered alternate years. Not offered spring 1997 and 1999; next offered spring 1998. Hours to be arranged. C. Gilbert.]

ENTOM 694 Special Topics in Entomology

Fall or spring. 4 credits maximum. S-U grades optional. Hour to be arranged. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

ENTOM 707 Individual Study for Graduate Students

Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Not for thesis research. Staff.

ENTOM 709 Teaching Entomology

Credit to be arranged. Staff. Teaching entomology or for extension training.

ENTOM 800 Master's-Level Thesis Research

Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Staff.

ENTOM 900 Doctoral-Level Thesis Research

Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Staff.

Jugatae Seminar

Fall and spring. A seminar conducted by Jugatae, the entomology club of Cornell University, to discuss topics of interest to its members and guests. All interested undergraduate and graduate students are encouraged to attend.

FLORICULTURE AND ORNAMENTAL HORTICULTURE

Floriculture and Ornamental Horticulture courses are listed under Horticultural Sciences.

Freehand Drawing and Scientific Illustration

Freehand Drawing and Scientific Illustration courses are offered through the Department of Floriculture and Ornamental Horticulture. Courses are described in the section "Freehand Drawing and Scientific Illustration."

Landscape Architecture

The Landscape Architecture Program at Cornell is sponsored by the College of Agriculture and Life Sciences through the Department of Floriculture and Ornamental Horticulture, and the College of Architecture, Art, and Planning. For course descriptions, see Landscape Architecture.

FOOD SCIENCE

D. D. Miller, chair; T. E. Acree, D. K. Bandler, D. M. Barbano, C. A. Batt, D. H. Beermann, K. J. Boor, M. C. Bourne, J. W. Brady, J. M. Brown, R. A. Durst, R. B. Gravani, T. Henick-Kling, J. H. Hotchkiss, H. T. Lawless, R. A. Ledford, C. Y. Lee, S. Mulvaney, J. M. Regenstein, S. S. H. Rizvi, J. W. Sherbon, K. J. Siebert

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

FOOD 101 Science and Technology of Foods

Fall. 1 credit. S-U grades only. M 1:25–2:15. J. H. Hotchkiss and staff.

This course explores the application of science and technology to foods. Lectures will elucidate the role of engineering, biotechnology, chemistry, biochemistry, nutrition, toxicology, and microbiology in supplying the world with safe and nutritious food. An overview of food science as a discipline and career choice will be given.

FOOD 102 Contemporary Perspectives in Food Science

Spring. 1 credit. S-U grades only. F 12:20. Three field trips, 2 on F 1:25–5:00 and one on F 7:30 a.m.–5:30. R. A. Ledford.

A series of seminars dealing with current technological, regulatory, and international developments in food science. Field trips to four or five commercial food plants will be used to illustrate the application of current technologies.

FOOD 150 Food Choices and Issues

Spring. 2 credits. S-U grades optional. T R 12:20. R. B. Gravani and D. D. Miller.

This course provides Cornell students with the knowledge needed to make healthy food choices. A systematic or holistic approach to food production, processing, distribution, and consumption will be presented. Topics include relationships between food, diet and health; food processing; food safety; and discussions of contemporary issues relating to food quality, safety, and nutritional value.

FOOD 200 Introductory Food Science

Fall. 3 credits. Prerequisite: one course each in chemistry and biology. M W F 11:15–12:05. J. H. Hotchkiss.

A comprehensive introduction to the principles and practice of food science and technology. Topics include: chemistry of foods; nutritional significance; food formulation, preservation, and processing; microbiology and fermentations; composition and processing of food commodities; and contemporary issues including food safety, regulation, and world food needs. Interrelationships between the chemical, physical, nutritional and quality properties of foods as affected by formulation, processing, and packaging are stressed.

FOOD 210 Food Analysis

Spring. 3 credits. Prerequisite: CHEM 104 or 208. Lec, M W 12:20; lab, F 12:20–3:20. J. W. Sherbon.

Introduces tests used by food analysts for fats, proteins, carbohydrates, and selected minor nutrients. Emphasis is on understanding and use of good analytical techniques, including gravimetric, volumetric, chromatographic and spectrophotometric methods. A special

project for the total analysis of a complex food provides experience in technique selection, work scheduling, and execution.

FOOD 250 Kosher and Halal Food Regulations

Spring. 2 credits. Sophomore standing and above. M 7:30–9:35 p.m. J. M. Regenstein.

A comprehensive introduction to kosher and halal foods in the American food industry. The kosher food laws, their origin, and their application in modern food processing will be examined. The nature of the kosher supervision industry in America will be described. Halal laws will also be examined and the interactions between the two communities explored. Current food-related issues in both communities will be reviewed, including recent court decisions striking down laws in the state of New Jersey and the City of Baltimore. Some aspects of ethnic foods will also be considered.

FOOD 290 Meat Science (also Animal Science 290)

Fall. 2 or 3 credits. Lec, T R 11:15–12:05 p.m.; lab, M or R 12:20–3:20. D. H. Beermann.

An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, processing, inspection, grading, quality control, and meat merchandising. An all-day field trip to commercial meat plants is taken.

FOOD 311 Milk and Frozen Desserts

Fall. 2 credits. Prerequisite: FOOD 322 or permission of instructor. Offered alternate years. Not offered 1997–98; next offered fall 1998 and 2000. R 12:20–4:25. D. K. Bandler and D. P. Brown.

Deals with the principles and practices of processing fluid milk products and frozen desserts. The chemical, microbiological, and technological aspects of processing these dairy products are considered. Emphasis will be upon product quality and recognition of factors affecting it.

FOOD 321 Food Engineering Principles

Fall. 3 credits. Prerequisites: FOOD 200 and Introductory Physics. M W F 9:05–9:55. S. S. H. Rizvi.

Introduces the engineering principles underlying food processes and equipment. Topics covered include thermodynamics, mass and energy balance, fluid mechanics, and heat and mass transport.

FOOD 322 Food Engineering Laboratory

Spring. 2 credits. Prerequisite: FOOD 321. Lab, T or W 1:25–4:00; lec, T 12:20. S. S. H. Rizvi.

Provides hands-on experience with food engineering processes and measurements. Topics covered include mass and energy balances, rheology, fluid mechanics, heat transfer, refrigeration and psychrometry.

FOOD 351 Milk Quality

Fall. 1 credit. Prerequisite: AN SCI 350 or equivalent or permission of instructor. F 12:20. D. K. Bandler.

Focuses on the important aspects of farm sanitation and milk handling as they affect

milk flavor and quality. The course is an overview of quality control tests, basic microbiology, cleaning and sanitizing, and special problems in manufacturing and marketing fresh and storable dairy products.

FOOD 394 Food Microbiology Lectures

Fall. 2 credits. Prerequisites: BIOMI 290 and 291. M W 12:20–1:10. R. A. Ledford.

The major families of microorganisms of importance in foods are studied, with emphasis on the roles of those organisms in food preservation, food fermentations, and public health.

FOOD 395 Food Microbiology Laboratory

Fall. 2 credits. Prerequisite: BIOMI 291. Graduate students must have permission of the instructor. M W 2:00–4:25. J. M. Brown.

Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and special methods for microbiological testing and control of food products, and practice in the application of a systematic approach to controlling the safety of foods.

FOOD 396 Food Safety Assurance

Spring. 2 credits. Prerequisite: FOOD 200 or permission of instructor. Offered alternate years. Not offered 1997–98. T R 9:05–9:55. R. B. Gravani.

This course provides information on procedures to control biological, chemical, and physical hazards and assure the safety of foods. Topics include discussions on Hazard Analysis Critical Control Point (HACCP) programs, total quality management, and the application of current technologies in reducing the incidence of foodborne illness. Case studies and exercises will be used to demonstrate and apply the key principles that are discussed.

FOOD 400 Senior Seminar in Food Science and Technology

Fall. 1 credit. Limited to seniors. M 4:30–5:20. D. K. Bandler.

Students prepare and present a seminar on a topic of current interest in food science and technology.

FOOD 401 Concepts of Product Development

Spring. 2 credits. Prerequisite: FOOD 200 or equivalent. Offered alternate years. Not offered 1997–98. M W 11:15–12:05. J. H. Hotchkiss.

A discussion of the sequence of events in developing and marketing new food products. Topics include packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.

[FOOD 405 Food Waste Management

Spring. 2 credits. Prerequisite: FOOD 200 or its equivalent. Offered alternate years. Not offered 1996–97; next offered spring 1998 and 2000. Lec, M 12:20–2:15; lab, M 2:30–4:25. J. M. Regenstein.

Introduction to the principles and practices related to managing wastes from food plants through reduction, reuse, recycling, and composting. Some broader areas of waste management impacting the food industry will also be discussed. Includes field trips which may take all afternoon.]

[FOOD 406 Cheese and Other Fermented Foods]

Fall. 2 credits. Prerequisite: background in microbiology. Offered alternate years. Not offered 1996-97; next offered fall 1997 and 1999. R 12:20-4:25. D. K. Bandler.

Principles and practices of fermentation and processing techniques as they apply to cheeses, cultured dairy foods, beers, and related products. Labs will feature unit processes and tastings.]

FOOD 409 Food Chemistry

Spring. 3 credits. Prerequisite: BIOBM 330 or 331. M W F 9:05-9:55. Staff.

The chemistry of foods and food ingredients. Chemical and physical properties of water, proteins, lipids, carbohydrates, and other food components/additives are discussed in the context of their functional roles in foods. The effects of chemical changes during processing and storage on quality and nutritional aspects of several food commodity groups (milk, meat, fruits and vegetables, cereals and legumes) are described.

FOOD 410 Sensory Evaluations of Foods

Fall. 3 credits. Prerequisite: statistics. M W F 10:10-11:00. H. T. Lawless.

Deals with the sensory techniques used in evaluating the flavor, color, and texture of foods and the evaluation of consumer acceptance. Includes methods for measuring these qualities, underlying psychological principles, statistical methods for analyzing results, and establishing a full-service sensory evaluation program.

[FOOD 415 Principles of Food Packaging]

Spring. 3 credits. Offered alternate years. Not offered 1996-97; next offered spring 1998 and 2000. M W F 9:05-9:55. J. H. Hotchkiss.

The chemical and physical properties and manufacture of the basic materials used to construct packaging are discussed. The influence of packaging on shelf life is presented. Emphasis is on newer packaging technologies and materials. Economics, design, and regulation of food packaging are briefly presented.]

[FOOD 417 Sensory Analysis of Dairy Products]

Spring. 1 credit. S-U grades optional. Offered alternate years. Not offered 1996-97; next offered spring 1998 and 2000. H. T. Lawless.

A survey of the traditional quality grading techniques used for sensory evaluation of dairy products, and a comparison of those techniques to alternative sensory evaluation procedures. Students will prepare samples for one or two demonstrations of classical dairy defects such as lipid oxidation or hydrolytic rancidity. Tasting and practice in identifying defects will be given in class. Primary attention will be given to sensory quality factors in fluid milk, cheddar cheese, cottage cheese, and ice cream.]

FOOD 419 Food Chemistry Laboratory

Spring. 2 credits. Prerequisites: BIOBM 330 or 331 and concurrent registration in FOOD 409. W 12:20-4:30. D. D. Miller and J. M. Brown.

A laboratory course emphasizing fundamental chemical principles and laboratory techniques necessary for an understanding of the chemistry of foods. Relationships between chemical composition and functional, nutritional, and organoleptic properties of

foods are stressed. Many of the laboratory techniques involved are common to those used in biochemistry laboratories (e.g., electrophoresis, chromatography, enzyme assays) but are applied to specific foods or beverages.

FOOD 423 Unit Operations in Food Manufacturing

Fall. 4 credits. Intended for seniors and food science majors. Lec, T R 11:15-12:05, lab, T 12:20-4:25. S. J. Mulvaney and S. S. H. Rizvi.

An integrated approach to understanding food manufacturing operations. Topics include major unit operations used for thermalization, freezing and dehydration of foods. Emphasis is placed on the interplay between engineering design of processes and the physical and chemical transformations that occur as food is produced from various commodities. The impact of process conditions on product safety, overall quality, and storage stability are also considered.

FOOD 430 Understanding Wine

Spring. 3 credits. Prerequisites: Introductory biology and chemistry or permission of instructor. Students must be 21 years old by the first day of class (Jan. 20, 1997) to enroll. S-U grades optional. T R 2:30-4:25. T. Henick-Kling, T. E. Acree, and H. T. Lawless.

An introduction to wine appreciation through the study of fermentation biology, wine composition, and sensory perception. Samples of wines will be used to illustrate the sensory properties, microbiological processes, and chemical components that determine wine quality. Students will learn to recognize the major features of wine that determine sensory quality and know the processes that produced them. Topics will include the psychology and chemistry of bouquet, taste, and aroma; the microbiology of fermentation and spoilage; and the sensory properties of wines from different grape varieties, viticultural practices, and wine making techniques.

FOOD 447 International Postharvest Food Systems

Fall. 2 or 3 credits. Prerequisite: freshman chemistry. S-U grades optional. T R 10:10-11:00. M. C. Bourne and staff.

An interdisciplinary course designed for all undergraduate and graduate students in ALS. Describes postharvest food losses and methods to reduce the loss. Topics include storage and care of unprocessed and minimally processed foods such as cereal grains, fruits, vegetables, tubers, and fish; biology and control of fungi, insects, and vertebrates in foods; chemical causes of quality loss; effects of climate; and economic and social factors affecting food preservation and storage. Emphasis is given to the problems in developing countries. The third credit requires a written case study of a country or commodity.

FOOD 450 Fundamentals of Food Law

Spring. 2 credits. Offered alternate years. Not offered 1997-98; next offered spring 1997 and 1999. J. M. Regenstien.

Introduction to the complex array of federal and state statutes and regulations that control the processing, packaging, labeling, and distribution of food, including aspects of safety and nutritive value. Emphasis will be on the Food and Drug Administration and U.S. Department of Agriculture regulations, but the

course also will refer to other regulatory agencies. Emphasis will be placed on how a food or agricultural professional interacts with this legal system.

[FOOD 456 Advanced Concepts in Sensory Evaluation]

Spring. 2 credits. Prerequisite: FOOD 410. S-U grades optional. Offered in alternate years. Not offered 1996-97; next offered spring 1998 and 2000. F 1:25-3:25. H. T. Lawless.

Readings and discussions of primary source materials in sensory evaluation, including historical perspectives, psychophysics, perceptual biases, human information processing. Concepts influencing detection of sensory differences, use of rating scales, and characterization of sensory properties will be emphasized.]

FOOD 490 Commercial Meat Processing (also Animal Science 490)

Spring. 2 or 3 credits. Lec, T R 9:05; lab T 1:25-4:25. Field trip to commercial meat processing plants. D. H. Beermann.

A study of the classification, formulation, and production of commercially available processed meat products. Physical and chemical characteristics of meat and nonmeat ingredients; their functional properties; various processing methodologies; microbiology; packaging, handling, and storage; and quality assurance are discussed.

FOOD 494 Special Topics in Food Science

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

FOOD 497 Individual Study in Food Science

Fall or spring. 3 credits maximum.

Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

May include individual tutorial study, a special topic selected by a professor or a group of students, or selected lectures of a course already offered. As topics may be changed, the course may be repeated for credit.

FOOD 498 Undergraduate Teaching Experience

Fall or spring. 3 credits maximum.

Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades only.

Students assist in teaching a course appropriate to their previous training. Students will meet with a discussion or laboratory section and will regularly discuss objectives with the course instructor.

FOOD 499 Undergraduate Research in Food Science

Fall or spring. 4 credits maximum. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).

Students conduct original research directed by a food science faculty member.

FOOD 600 Seminar

Fall or spring. 1 credit. Required of all food science graduate students. S-U grades only. T 4:30-5:20.

FOOD 604 Chemistry of Dairy Products

Fall. 2 credits. Limited to 16 students. Prerequisites: organic chemistry, biochemistry, knowledge of dairy-product manufacturing procedures, and permission of instructor. Offered alternate years. Not offered 1997-98; next offered fall 1996 and 1998. F 1:25-3:30. D. M. Barbano.

A detailed study of milk constituents and their properties. Properties of various milk constituents are related to observed physical and chemical changes that occur in dairy products during and after processing. This course will emphasize current research in dairy chemistry.

FOOD 605 Physical Chemistry of Food Components

Fall. 3 credits. Prerequisite: an undergraduate course in physical chemistry. Offered alternate years. Not offered 1997-98; next offered fall 1996 and 1998. M W F 10:10. J. W. Brady.

This course will cover the physical properties of food molecules. Emphasis will be placed on the molecular basis of structural characteristics; colloidal properties; molecular interactions; foams, gels; and water binding of foods.

[FOOD 607 Advanced Food Microbiology

Spring. 2 credits. Prerequisites: food microbiology, genetics (preferred). Offered alternate years. Not offered 1996-97; next offered spring 1998 and 2000. M W 11:15. C. A. Batt.

There have been great advances in applying the modern tools of molecular biology to the detection of microorganisms and their metabolites. The primary emphasis of this course will be to review the recent developments in the theory and application of nucleic acid and antibody-based detection systems, especially as they concern food safety. In addition, other approaches, including measurement of impedance, ATP, and endotoxins, will be discussed.]

FOOD 612 Electroanalytical Chemistry

Fall. 2 credits. T 12:20-2:15. R. A. Durst. A descriptive, largely non-mathematical course, focusing on electrochemical principles and methods, will provide a basic survey of the instrumentation, applications, advantages and limitations of the diverse arsenal of potentiometric and amperometric methods of analysis. Applications to analytical problems in environmental and food science will be emphasized.

FOOD 616 Flavors—Analysis and Applications

Spring. 2 credits. S-U grades optional. Offered alternate years. Not offered 1997-98; next offered spring 1997 and 1999. Lec, F 1:25; disc, F 2:30. H. T. Lawless and T. E. Acree.

An advanced course in sensory and instrumental analysis of flavors, flavor chemistry, and flavor applications in foods for food scientists and those in related fields concerned with human food perception and consumption. The course will survey taste, aroma and volatile flavors, and trigeminal stimuli from the perspectives of chemical structures, methods of analysis, uses and interactions in food systems, and consumer acceptance.

[FOOD 620 Food Carbohydrates (also Nutritional Sciences 620)

Spring. 2 credits. Limited to qualified seniors and graduate students. Prerequisite: BIOBM 330 or equivalent. Offered alternate years. Not offered 1996-97; next offered spring 1998 and 2000. T R 10:10. B. A. Lewis and J. W. Brady.

A consideration of the chemistry of carbohydrates, including sugars, starches, pectins, hemicelluloses, gums, and other complex carbohydrates. Emphasis is on the intrinsic chemistry and functionality in food systems and the changes occurring during food processing and storage.]

[FOOD 665 Engineering Properties of Foods

Spring. 2 credits. Prerequisite: course in transport processes or unit operations as applied to foods; or permission of instructor. Offered alternate years. Not offered 1996-97; next offered spring 1998. T R 12:20-1:10. S. S. H. Rizvi and S. J. Mulvaney.

Theories and methods of measurement and prediction of rheological, thermal, and mass transport properties of foods and biomaterial systems. Emphasis is on physical-mathematical basis of measurement as well as the prediction processes. Examples of appropriate use of these properties in engineering design and analysis of food processes will also be provided.]

FOOD 694 Special Topics in Food Science

Fall or spring. 4 credits maximum. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

FOOD 698 Graduate Teaching Experience

Fall or spring. 1 to 3 credits. S-U grades only. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of field faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring. There will be assigned readings and discussion sessions on educational theory and practice throughout the term.

FOOD 800 Masters-Level Thesis Research

Fall or spring. Credit to be arranged. Maximum credit, 12. Prerequisite: limited to master's candidates; permission of Special Committee Chair. S-U grades only. Graduate faculty.

FOOD 900 Graduate-Level Thesis Research

Fall or spring. Credit to be arranged. Maximum credit, 12. Prerequisite: limited to doctoral students who have not passed the "A" exam; permission of Special Committee Chair. S-U grades only. Graduate faculty.

FOOD 901 Doctoral-Level Thesis Research

Fall or spring. Credit to be arranged. Maximum credit, 12. Prerequisite: limited

to doctoral students who have passed the "A" exam; permission of Special Committee Chair. S-U grades only. Graduate faculty.

Related Courses in Other Departments

Introduction to Computing (ABEN 151)

Food Process Engineering: A Transport Phenomena Approach (ABEN 466)

Marketing (ARME 240)

Food Industry Management (ARME 443)

FREEHAND DRAWING AND SCIENTIFIC ILLUSTRATION

Freehand Drawing is a program within the Department of Floriculture and Ornamental Horticulture. Other courses offered by the department are listed under Horticultural Sciences and Landscape Architecture.

FR DR 109 Nature Drawing

Fall. 3 credits. Limited to 25 students. S-U grades optional. Permission of instructor required. M W F 10:10-12:05. R. J. Lambert.

A beginning course with emphasis on the drawing of natural forms: plants, animals, and landscapes. Of particular interest to students in floriculture and ornamental horticulture, landscape architecture, biological sciences, nature education, or similar fields. Outside field notebook assignments.

FR DR 210 Sketching in Watercolor

Summer. 3 credits. S-U grades optional. M T W R F 11:30-12:45. R. J. Lambert.

Practice in outdoor sketching, primarily in watercolor, but including pen and ink, pencil, and colored pencil. Studio will develop working sketches into complete paintings. Principles of perspective are taught and applied. For any student who wishes to develop skill in handling watercolor. Outside-of-class sketchbook work required.

FR DR 211 Freehand Drawing and Illustration

Fall. 2 credits. Prerequisite: FR DR 109 or equivalent. S-U grades optional. 6 studio hours scheduled in 2 or 3 hour units between 9:05 and 12:05 M T W R F. R. J. Lambert.

Progression to the organization of complete illustrations. Subject matter largely from sketchbooks, still life, and imagination. Composition, perspective, and ways of rendering in different media are considered.

FR DR 214 Watercolor

Spring. 2 credits. Prerequisite: FR DR 109 or equivalent. S-U grades optional. 6 studio hours scheduled in 2 or 3 hour units between 9:05 and 12:05. M T W R F. R. J. Lambert.

A survey of watercolor techniques. Subject matter largely still life, sketchbook, and on-the-spot outdoor painting.

FR DR 316 Advanced Drawing

Fall or spring. 2 credits. Prerequisite: FR DR 109, 211 or permission of instructor. S-U grades optional. 6 hours to be arranged. R. J. Lambert.

For students who want to attain proficiency in a particular type of illustration or technique.

[FR DR 417 Scientific Illustration]

Fall. 2 credits. Prerequisite: FR DR 211 or 316 or equivalent. S-U grades optional for graduate students only. Not offered 1996-97.

A survey of methods of illustration. Training in techniques of accurate representation in media suitable for reproduction processes, including pen and ink, scratchboard, wash, and mixed media.]

FRUIT AND VEGETABLE SCIENCE: HORTICULTURAL SCIENCE

See Horticultural Sciences.

HORTICULTURAL SCIENCES

Horticultural science courses at Cornell are taught by the faculty of the Department of Floriculture and Ornamental Horticulture and the Department of Fruit and Vegetable Science.

Floriculture and Ornamental Horticulture

G. L. Good, chair; M. I. Adleman, N. L. Bassuk, S. Baugher, C. F. Gortzig, H. W. Gottfried, J. Gruttadauria, P. H. Horrigan, D. W. Krall, R. J. Lambert, R. W. Langhans, L. J. Mirin, R. G. Mower, K. W. Mudge, J. C. Neal, A. M. Petrovic, D. A. Rakow, F. S. Rossi, D. J. Tennesen, R. T. Trancik, P. J. Trowbridge, T. C. Weiler, T. H. Whitlow

Fruit and Vegetable Science

H. C. Wien, chair; R. R. Bellinder, L. L. Creasy, L. A. Ellerbrock, D. E. Halseth, J. R. Hicks, I. A. Merwin, M. P. Pritts, J. Sieczka, W. C. Stiles, L. D. Topoleski, C. B. Watkins, D. W. Wolfe

Courses by Subject:

General horticulture: 101, 102

Crop production:

Agroforestry: 415

Controlled Environment Agriculture: 410, 411, 412, 413

Fruit: 200, 442, 444, 445, 450

Greenhouse: 410, 411, 412, 413

Nursery: 400, 420

Turfgrass: 330, 475

Vegetable: 225, 456, 460

Extension education: 629

Horticultural physiology: 400, 450, 455, 456, 460, 462, 615, 620

Independent study, research, and teaching: 470, 495, 496, 497, 498, 499, 500, 605, 700, 800, 900

Internships: 496

Landscape architecture (professionally accredited program)

Landscape horticulture: 435, 440, 491

Landscape architecture: 141, 142, 261, 282, 315, 316, 317, 318, 360, 363, 410, 412, 480, 483, 486, 487, 496

Plant materials: 230, 243, 300, 301, 335, 430

Plant propagation: 400

Postharvest physiology: 325, 625, 630

Sales and service businesses: 425

Seminars: 495, 602, 630, 636

Special topics: 470, 494, 629, 630, 635, 694

Turfgrass management: 330, 475

Vegetable types and varieties: 220, 465

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

HORT 101 Introduction to Horticultural Science

Fall. 4 credits. Lec, M W F 10:10; lab W 1:25-4:25. C. F. Gortzig.

An introduction to horticulture in all of its components: floriculture, nursery, landscape horticulture, turfgrass management, fruit and vegetable science, urban horticulture, and related professional and commercial fields. A survey of the component fields of plant science also is provided. Emphasis is on the history, geography, and literature of the field; the structure and organization of the component industries, institutions, and professions; and the role of science and technology in the continuing development of horticultural practice. Field trips, including one three-day field trip (cost approximately \$130.00), are taken to horticultural firms, institutions, and historic sites.

HORT 102 General Horticulture

Spring. 4 credits. Each lab limited to 25 students. Lec, M W F 10:10; lab M T or W 2-4:25. L. D. Topoleski.

Acquaints the student with applied and basic horticulture. Open to all students who want a general knowledge of the subject or who want to specialize in horticulture but have a limited background in practical experience or training in plant science. Includes flower, fruit, and vegetable growing and gardening techniques.

HORT 200 Introductory Pomology

Fall. 3 credits. S-U grades optional. Lec, T R 10:10; lab, T 1:25-4:25. I. A. Merwin.

A survey of fruit science, emphasizing the natural history, botany, physiology, and production of edible fruits in temperate-climate areas. Topics include varietal breeding and propagation, environmental and sustainability issues, and practical methods of fruit production. Labs and field trips will provide hands-on experience and tours of regional orchards.

HORT 220 Vegetable Types and Identification

Fall. 2 credits. T 2-4:25. L. Topoleski.

Acquaints students with the vegetable species grown in the Northeast and the pests and disorders encountered in their production. Subjects covered include identification of economically destructive weeds, diseases and insects of vegetables, identification of vegetable and weed seeds, seedlings, nutrient deficiencies, vegetable judging, grading, and grade defects.

HORT 225 Vegetable Production

Fall. 4 credits. Lec, M W F 11:15; lab, W 2-4:25; 1 S fieldtrip and 3 fieldtrips (Stepember). W 11:15-6:00. L. A. Ellerbrock.

Intended for those interested in the production, processing, and marketing of vegetables. Topics included are techniques, problems, and trends in the culture, harvesting and storage of the major vegetable crops. Field trips to conventional and organic farms and hands-on experience in growing vegetables in the laboratory are included.

HORT 230 Woody Plant Materials

Spring. 4 credits. Fee for lecture-laboratory manual: \$35. Lec, T R 9:05; lab T 2-4:25 required and either W or F 2-4:25. R. G. Mower.

A study of the trees, shrubs, ground covers, and vines used in landscape plantings. Emphasis is on winter identification and values for use as landscape material.

HORT 243 Taxonomy of Cultivated Plants (also BIOPL 243)

Fall. 3 credits. Prerequisite: One year of introductory biology or written permission of instructor. May not be taken for credit after BIOPL 248. Offered 1996-97; next offered 1998-99. Lec, M W 10:10-11:00; lab, W 2-4:25. M. A. Luckow.

A study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

HORT 300 Garden and Interior Plants I

Fall. 3 credits. Fee for lecture-laboratory manual: \$35. Lec, T R 10:10; lab, T 2-4:25. R. G. Mower.

A study of ornamental plants used in garden and interior situations. The first seven weeks cover primarily herbaceous annuals and perennials, with the laboratory devoted to various practical gardening activities. The remainder of the semester covers the major kinds of foliage and flowering plants used in the home and in other interior landscape situations. Emphasis is on identification, use, and general cultural requirements.

HORT 301 Garden and Interior Plants II

Spring. 3 credits. Prerequisite: HORT 300 or permission of instructor. Fee for lecture-laboratory manual: \$35. Lec, M W 11:15; lab, M 2-4:25. R. G. Mower.

A continuation of Horticultural Sciences 300. The first seven weeks are devoted to a further study of interior plants, with emphasis on specialized groups of interior plants such as orchids, cacti and succulents, gesneriads, ferns, palms, and bromeliads. The second seven weeks are devoted to outdoor herbaceous plants, such as tulips, daffodils, crocuses, and irises, as well as other spring-blooming bulbs and perennial plants. Outdoor laboratories emphasize practical gardening activities appropriate to the spring season.

[HORT 325 Practical Aspects of Postharvest Handling of Horticultural Crops]

Spring. 3 credits. Offered alternate years. Not offered spring 1997. Lec, M W 9:05; lab T 1:25-4:25. J. R. Hicks.

A study of changes that occur in horticultural crops between harvest and consumer. Practices that affect the rate of change and the final effect on quality of the commodity are discussed. Maturity/quality indices, preharvest treatments, and harvesting/handling practices and storage/transportation requirements of selected horticulture crops are covered.]

HORT 330 Turfgrass Management

Fall. 3 credits. Prerequisite: SCAS 260.
Offered fall 1996; next offered 1998-99.
Lec, M W 11:15; lab, F 11:15-1:10.
A. M. Petrovic.

Study of the scientific principles involved in the management of golf courses, athletic fields, parks and industrial grounds, and commercial sod production. Considerations given to principles of establishment, mowing, irrigation, growth and development, species selection, and nutrition in the management of turfgrass sites.

HORT 335 Woody Plant Materials for Landscape Use

Fall. 3 credits. Limited to 30 students.
Primarily for landscape architecture majors.
Fee for lecture-laboratory manual, \$35.
Lecs, M W 9:05; lab R 1:25-4:25.
R. G. Mower.

A study of the trees, shrubs, vines, and ground covers used in landscape plantings in the northeastern United States. Emphasis is on leaf identification and on characteristics that determine the usefulness of each as landscape subjects.

HORT 400 Principles of Plant Propagation

Fall. 3 credits. Prerequisites: BIOPL 242 and 244 or another course in plant physiology. Lec, T R 9:05; lab, R 1:25-4:25. K. W. Mudge.

Sexual (seed) propagation and asexual (vegetative) propagation including cuttage, graftage, tissue culture, layering and specialized vegetative reproductive structure. Physiological, environmental, and anatomical principles are stressed in lecture and hands-on experience in laboratories. Examples include both temperate as well as tropical horticulture, agronomic, and forestry crops.

HORT 410 Principles of Controlled Environment Agriculture (CEA)

Spring. 3 credits. Prerequisite: permission of instructor. Letter grade only.
3-day field trip required. Cost of field trip: \$80+. Lec, T R 10:10-12:05. T. C. Weiler and staff.

Basics and issues related to managing agricultural production in environmentally optimized facilities. Survey of CEA as an agricultural alternative, technology basics, systems and practices; world centers of production, structures, systems and equipment, materials handling, heating and cooling, lighting, fertilizing and irrigation, environmental stewardship, integrated pest management, business management, and human resource management.

HORT 411 Principles of Crop Production in Controlled Environments

Spring. 3 credits. Prerequisites or corequisite: HORT 410. Letter grade only.
Two afternoon field trips required. Lec, W F 8:00; lab R 2-4:25. T. C. Weiler.

Study of several controlled-environment agriculture (CEA) crops; including cut, pot and bedding ornamentals; vegetables and fruits briefly covered; emphasis on predictive harvesting through environmental, physical, and chemical management of growth and development. Each student will grow one or more crops.

HORT 412 Case Studies of Controlled Environment Agriculture (CEA)

Spring. 1 credit. Prerequisite or corequisite: HORT 410. Lab 3 hours per week as scheduled. R. W. Langhans, J. D. Novak and G. R. White.

Analysis of actual CEA enterprises regarding adoption of technology, crop culture, operations management, and/or marketing.

HORT 413 Computer-Assisted Management in Controlled Environment Agriculture (CEA)

Spring. 1 credit. Prerequisite or corequisite: HORT 410. Lab 3 hours per week as scheduled. R. W. Langhans.

Application of computer software to operations management and environmental management of a CEA facility—including specifications for facilities, optimization of resource inputs (e.g., energy, fertilizer), crop programming, efficient space use, labor efficiency (time and motion), and inventory management.

HORT 415 Principles and Practices of Agroforestry (also NTRES 415)

Spring. 2 credits. Prerequisites: senior or graduate standing or permission of instructor. S-U option. Lec, W 10:10; lab, 1:25-4:25. K. W. Mudge, J. P. Lassoie.

An introduction to modern and traditional agroforestry systems involving the spatial or temporal integration of multipurpose woody plants (trees and/or shrubs) with annual or perennial crops and/or with livestock. Interactions between woody and non-woody components of agroforestry systems will be considered from the standpoint of above and below ground resource capture. The sustainability of agroforestry systems will be critically examined from both a biophysical and socioeconomic perspective. Laboratory sessions will include field trips, case studies, use of computer-based sources of information, and practical skills involved in woody plant management (identification, propagation, planting, pruning, measurement.)

HORT 420 Principles of Nursery-Crop Production

Fall. 4 credits. Prerequisite: HORT 400.
Lecs, M W F 9:05; lab, M 2-4:25. Field trips. G. L. Good.

Principles of commercial production of nursery crops to marketable stage, including postharvest handling and storage. Term project required. Field trips are made to commercial nurseries.

HORT 425 Horticultural Sales and Service Businesses

Spring. 4 credits. Fee for course manual \$35. Prerequisites: ARME 240 or permission of instructor. Weekly laboratory field trips to commercial operations and one 3-4-day field trip to a metropolitan area (cost approximately \$130.00) are taken. Lec, M W F 10:10; lab, W 1:25-4:25. C. F. Gortzig.

A study of the application of horticultural, marketing, and management principles and practices in the operation of horticultural sales and service firms, e.g., garden centers, retail florist and nursery stores, wholesale marketing operations, mail-order businesses, mass markets, interior and outdoor landscape-service and related firms.

HORT 430 Special Topics in Ornamental Plants

Fall or spring. Credit and hours to be arranged. Primarily for upperclass floriculture and ornamental horticulture majors. Prerequisites: HORT 230, 300, 301, 335, or the equivalent, and permission of instructor. R. W. Mower.

Topical subjects in plant materials. Independent and group study of important groups of woody and herbaceous plant materials not considered in other courses. The topic is given in the supplementary announcement.

[HORT 435 Landscape Management

Fall. 4 credits. Prerequisites: HORT 230 or 335, and BIO PL 241 or permission of instructor. Not offered 1996-97. Lec, M W F 12:20; lab, T 1:25-4:25.

A study of the practices involved in the planting and maintenance of woody ornamental plants in the landscape. The major emphases will be on planting and post-planting techniques, water and fertilization management, pruning, and general tree care. The lectures will focus on the physiological bases for essential management principles. Labs have a hands-on focus.]

[HORT 440 Restoration Ecology

Fall. Offered odd years; next offered 1997. Weeks 1-10. 3 credits. Prerequisite: upper division or graduate standing. Letter grade only. Lec, T R 10:10; lab, F 1:25-4:25. T. H. Whitlow.

An inquiry based treatment of the principles and methods of ecology, conservation biology, hydrology, soil science and related disciplines applied to the restoration of degraded terrestrial ecosystems. Weekly labs, four weekend field trips, and a semester-long project provide many opportunities for experiential learning. Substantial commitment outside of the classroom is expected.]

HORT 442 Berry Crops: Culture and Management

Fall. 3 credits. Offered even years. Lec, M W 9:05; lab, M 1:25-4:25. M. P. Pritts.

A study of the evolution, breeding history, and physiology of strawberries, raspberries, blackberries, blueberries, and other minor small fruit crops, and of cultural practices that influence productivity, fruit quality, and pest damage. Marketing and economics will be considered, and alternative production practices for both commercial and home gardeners will be discussed. Frequent field trips enhance classroom activities.

[HORT 444 Applied Viticulture

Fall. 3 credits. Not offered fall 1996.
Lecs, T R 9:05; lab, R 2-4:25. L. L. Creasy.

Grape production and post-production practices with emphasis on the Great Lakes and Finger Lakes regions. We will examine grape varieties, site selection, and vine management as affected by geography, meteorology and vine anatomy/physiology. Protection of vines and grapes from injury by cultural, chemical, and natural means will also be explored. Laboratory exercises and field trips offer hands-on experience in vineyard practices, marketing and processing.]

HORT 445 Orchard Management

Spring. 3 credits. Prerequisite: HORT 200. S-U grades optional. Offered even years. Not offered 1997. Lec, T R 10:10; lab T 1:25-4:25. I. A. Merwin.

The science of tree fruit production in temperate climates, including site evaluation and improvement, fruit variety and rootstock

selection, tree propagation, planting, pruning, and training systems, the physiology of flowering and fruit development, dormancy and cold hardiness, tree nutrition and water relations, fruit harvesting and storage, and integrated pest management. Emphasis is on agroecological principles and hands-on practice in orchard lab-sessions and field trips.

[HORT 450 Soil Management and Nutrition of Perennial Crops]

Fall. 3 credits. Not offered 1996. Lects, M W 8; lab, M 1:25-4:25. W. C. Stiles.

Fundamentals of mineral nutrition and soil management for perennial horticultural crops. Mineral nutrition aspects deal with diagnostic techniques, interpretation of tissue and soil analyses, and nutrient requirements for optimizing crop performance. Soil management effects on crop performance, nutrient relationships, and interaction with other components of crop production systems are emphasized.]

[HORT 455 Fertility Management and Nutrition of Vegetable Crops]

Fall. 3 credits. Prerequisite: any college-level chemistry course. Lects, M W 10:10; lab/disc, M 2-4:25. Not offered fall 1996.

The course deals with both major, secondary and minor elements including fertilization programs, interpretation of tissue and soil analyses, nutrient interactions, induced deficiencies, toxicities as well as the effects of organic matter, crop residues, and specific crop sequences. The course emphasizes hands-on field and greenhouse experiments and small group discussions.]

HORT 460 Plant-Plant Interactions

Spring, weeks 1-6. 2 credits. Prerequisite: any crop production course or permission of instructor. Lects, M W F 10:10; lab, M 2-4:25; disc, R or F 1, 2, or 3 (1 hr.). H. C. Wien.

The manner in which plants interfere or positively interact is examined for the management of cropping systems. Competitive and chemical interactions are considered between weeds and crops, among crops in polyculture, and between individuals in monoculture. Examples will be taken from both temperate and tropical monoculture and intercropping systems.

HORT 462 Vegetable Crop Physiology

Spring, weeks 7-14. 3 credits. Prerequisites: HORT 225 and BIOL 242. Lects, M W F 10:10; lab, M 2-4:25; disc, R or F 1, 2, or 3 (1 hr.). H. C. Wien.

Study of the physiological processes that determine the timing, quantity, and quality of vegetable crop yield. Processes of flower induction, fruit set, fruit growth, and the relations between vegetative and reproductive growth are covered. The course emphasizes practical hands-on greenhouse experiments and weekly small-group discussions.

[HORT 465 Vegetable Varieties and Their Evaluation]

Fall, weeks 1-7. 2 credits. Prerequisites: HORT 225 or permission of instructor. S-U grades only. Lects, W F 8; lab, F 1:25-4:25. Not offered fall 1996. D. W. Wolfe and H. C. Wien.

Principles of vegetable variety evaluation and selection of techniques in relation to program objectives. Morphology, yield, and quality of selected crops will be studied in the field. The seed industry will be briefly discussed.]

HORT 470 Special Topics in Pomology

Spring. 3 credits. Open to undergraduates by permission. Hours to be arranged. Staff.

Selected topics are considered with respect to the current literature, experimental techniques, or applied technologies. Topics change from one year to another and reflect the expertise and research interests of the professors who participate. Topics selected for each term will be announced several months before the term begins.

[HORT 475 Golf Course Management]

Fall. 2 credits. Prerequisite: HORT 330 or equivalent. Offered odd years; fall 1997, fall 1999. Lects to be arranged. A. M. Petrovic.

Advanced study in the management of golf course operations including selection of root zone materials, fertilization practices, integrated pest management practices, irrigation systems, environmental based decision making, personnel management and financial operations. Analysis of a central New York golf course will provide the basis for discussion.]

HORT 491 Planting Design and Establishment (also LA 491)

Fall. 3 credits. Prerequisites: HORT 230 or 335 or permission of instructor. Lects, T R 12:20; studio, R 1:25-4:25.

N. L. Bassuk and P. J. Trowbridge.

This course will focus on the establishment of woody and herbaceous plants in urban and garden settings. By understanding the environmental constraints placed on plants, we will be able to critically assess and modify potential planting sites, select appropriate trees, shrubs, and ground covers for a given site, and learn about the principles and practices of plant establishment both in the ground and in contained environments. Design followed by specifications and graphic details will be produced to implement these practices. Field work includes chemical and physical analysis of soils, vegetation, and site assessment.

HORT 494 Special Topics in Horticulture

Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged.

Section 01, fruit and vegetable science; **Section 02** floriculture. Staff.

The departments teach "trial" courses under this number. Offerings vary by semester, and will be advertised by the departments. Courses offered under the number will be approved by the department curriculum committees, and the same course will not be offered more than twice under this number.

HORT 495 Undergraduate Seminar

Undergraduate participation in weekly departmental seminar series. May be taken four times for one credit per semester. S-U grades only.

Section 01: Current topics in Fruit and Vegetable Science (see HORT 602).

Fall or spring. 1 credit. R4. I. A. Merwin. Graduate students should enroll in HORT 602.

Section 02: Current topics in Floriculture and Ornamental Horticulture.

Fall. 1 credit. R 12:20. T. C. Weiler. Graduate students in Floriculture and Ornamental Horticulture should enroll in HORT 636 (Section 02).

HORT 496 Internship in Horticultural Sciences

Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of student's adviser **in advance of participation** in internship programs. Students must register with an Independent Study form (available in 140 Roberts Hall) signed by the faculty member who will supervise their study and assign their grade. Hours to be arranged. Staff.

HORT 497 Independent Study in Horticultural Sciences

Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor(s). Students must register with an Independent Study form (available in 140 Roberts Hall.) Independent study in horticultural sciences under the direction of one or more faculty members. Hours to be arranged. Staff.

HORT 498 Undergraduate Teaching Experience

Fall or spring. Credit variable. S-U grades optional. Prerequisites: previous enrollment in course to be taught or equivalent, and written permission of the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall.) Hours to be arranged. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and teaching horticultural sciences courses under the supervision of departmental faculty members. This experience may include leading discussion sections; preparing, assisting in, or teaching laboratories; and tutoring.

HORT 499 Undergraduate Research

Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall.) Hours to be arranged. Staff.

Undergraduate research projects in horticultural sciences.

HORT 500 Master of Professional Studies (Agriculture) Project

Fall or spring. 1-6 credits. (6 credits maximum toward MPS [Agriculture] degree). S-U grades optional. Staff.

A comprehensive project emphasizing the application of principles and practices to professional horticultural teaching, extension, and research programs and situations. Required of Masters of Professional Studies (Agriculture) candidates in the respective graduate fields of horticulture.

HORT 600 Professional Colloquium Series/FOH

Spring. 1 credit. Prerequisite: Primarily for graduate students in final year of studies; written permission from instructor required for undergraduates. Lec, M 12:20. D. J. Tennesen.

Graduate students join distinguished visitors and Cornell staff members for weekly professional seminars on current teaching, research, and extension in floriculture and ornamental horticulture. Students will present a seminar based on their work. Often students use the presentations as part of their thesis defense and in preparation for job interviews.

HORT 602 Seminar in Fruit and Vegetable Science

Fall or spring. 1 credit. S-U grades only. R 4:00. I. A. Merwin.

Weekly seminars consist of graduate student research project reports, faculty research topics, as well as guest speakers from other universities and/or industry. Required of graduate students majoring or minoring in pomology or vegetable crops. Undergraduate students register under HORT 495 Sec 1.

HORT 615 Quantitative Methods in Horticultural Research

Spring. Weeks 1-9. 2 credits. Prerequisite: BTRY 601, BTRY 602 or permission of instructor. S-U grades only. T R 2:30-4:25. D. W. Wolfe.

Advantages and limitations of conventional experimental designs and analyses of greenhouse and field (including on-farm) experiments. Use and interpretation of plant growth analysis techniques. Discussions will include critical analysis of published data and research in progress.

HORT 620 Woody Plant Physiology

Spring. 4 credits. BIOPL, BIOBM 331, CHEM 357, or equivalent, or permission of instructor. Offered spring 1997. Letter grade only. Lects, T R 8:40-9:55. T. H. Whitlow.

A detailed study of physiological processes in woody plants and how these processes influence crop production practices. Topics will include shoot and root growth, phytohormones, dormancy, photoperiodism, photosynthesis, respiration, carbon and nitrogen metabolism, water relations, and fruiting. Several faculty members participate in teaching.

[HORT 625 Advanced Postharvest Physiology of Horticultural Crops]

Spring. 3 credits. Prerequisite: BIOPL 242 and/or HORT 325. Offered alternate years. Not offered spring 1997. Lects, T R 10:10; disc, to be arranged. P. M. Ludford.

Physiological and biochemical aspects of growth and maturation, ripening, and senescence of harvested horticultural plant parts. Topics include morphological and compositional changes during ripening and storage life, some physiological disorders, aspects of hormone action and interactions, and a consideration of control.]

HORT 629 Special Topics in Plant Science Extension (also Plant Breeding 629)

Spring. 2 credits. Offered alternate years. F 1:25-4:25. W. D. Pardee.

Designed for graduate students and advanced undergraduates to provide a broader knowledge of cooperative extension philosophy and methods. Developed for students interested in extension and research in public and commercial organizations. Topics relate to extension in other countries as well as in the United States.

HORT 630 Current Topics in Postharvest Horticulture

Spring. 1 credit. Prerequisite: permission of instructor. Hours to be arranged. Staff. Graduate students and staff report and discuss current topics in postharvest biology and technology of horticultural crops.

HORT 635 Tools for Thought

Fall. 1 credit. Open to graduate students only. S-U grade only. 1 hour per week, to be arranged. T. H. Whitlow.

A survey of the philosophy of science, hypothesis testing, approaches to experimental design, experimental hierarchies, methods of data reduction, the interaction between basic and applied research and the role of reductionism in the applied plant sciences. This course is intended to assist newer graduate students make the intellectual transition from taking proscribed courses to conducting independent original research. Readings include Kuhn's *The Structure of Scientific Revolutions*. Discussion and critiques of assigned readings.

HORT 636 Current Topics in Horticulture

1 credit. S-U grades only.

Section 01: Fruit and Vegetable Science.

Staff. Fall or spring. 1 hour per week, to be arranged. A seminar series on current topics chosen by participating students and faculty, on a rotating basis. Format consists of weekly discussion groups, with each participant presenting at least one oral report based on independent reading and/or experimentation relating to the chosen topic. Interested students should contact the designated instructor(s) for each term.

Section 02: Floriculture and Ornamental Horticulture.

T. C. Weiler and staff. Fall. 1 hour per week, to be arranged. Graduate students only. Undergraduates should enroll in HORT 495 (Section 02). Each week a staff member will develop a dialogue with students on a topic of current mutual interest. Topics and discussion leaders change by week and semester; topics will encompass planting design, exterior and interior landscape management, turfgrass management, urban horticulture, nursery management, plant materials, stress physiology, weed science, root zone ecology, horticultural sales and service business operation, and controlled environment agriculture. Brief reading assignments may be distributed for completion by the next class.

HORT 694 Special Topics in Horticulture

Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged.

Sec 01, Floriculture. Sec 02, Fruit and Vegetable Science. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committees, and the same course will not be offered more than twice under this number.

HORT 700 Graduate Teaching Experience

Fall or spring. Credit variable. Open only to graduate students. Undergraduates should enroll in HORT 498. S-U grades optional. Prerequisite: permission of instructor. Hours to be arranged. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories; and tutoring.

HORT 800 Thesis Research, Master of Science

Fall or spring. Credit to be arranged. S-U grades only.

HORT 900 Thesis Research, Doctor of Philosophy

Fall or spring. Credit to be arranged. S-U grades only.

INTERNATIONAL AGRICULTURE

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

INTAG 300 Perspectives in International Agriculture and Rural Development

Fall. 2 credits. F 1:25-3:20. E. Erickson.

A forum to discuss both contemporary and future world food issues and the need for an integrated, multidisciplinary team approach in helping farmers and rural development planners adjust to the ever-changing food needs of the world.

INTAG 402 Agriculture in Tropical America

Fall. 2 credits. Prerequisite: Upper class or graduate standing. F 1:25-3:20.

H. D. Thurston and staff.

A preparatory course for participation in International Agriculture 602. Physical resources, vegetation, history, crop and animal production, and various social and economic aspects of agriculture in tropical America will be discussed.

INTAG 403 Traditional Agriculture in Developing Countries

Fall. 1 credit. S-U only. T 8-8:50.

H. D. Thurston, D. Bates, R. Blake, J. Lassoie, A. Power, E. Fernandez, T. Steenhuis.

Today, perhaps over half of the world's arable land is farmed by traditional farmers. They developed sustainable agriculture practices which allowed them to produce food and fiber for millennia with few outside inputs. Many of these practices have been forgotten in developed countries but are still used by many traditional, subsistence, or partially subsistence farmers in developing countries. The course will examine traditional systems from several disciplinary points of view.

INTAG 414 Cultivation and Improvement of Cereal Crops

Spring. 1 credit. Prerequisite: An introductory biology or crops course (BIO G 101, HORT 102, SCAS 311 or equivalent) and SCAS/BIO G 473. Offered alternate years. Not offered 1997-98; next offered 1996-97 and 1998-99. M W F 11:15.

M. E. Smith and staff.

An introduction to characteristics, culture, and improvement of important cereal crops of the tropics and subtropics, including agronomic, economic, and social aspects. Emphasizes maize and rice. Lectures feature slides and other illustrative material based on experiences in the tropics and discussion of current issues relating to tropical cereal crops. This is the first of three 1-credit modules, including INTAG 416 and INTAG 418, each taught for one-third of the semester.

INTAG 416 Cultivation and Improvement of Root, Tuber, and Plantain Crops

Spring. 1 credit. Prerequisite: An introductory biology or crops course (BIO G 101, HORT 102, SCAS 311, or equivalent) and SCAS/BIO G 473. Offered alternate years. Not offered 1997-98; next offered 1996-97 and 1998-99. M W F 10:10. Staff.

An introduction to tropical root, tuber, and plantain crops, their importance, their culture, and their food, feed, and industrial uses. The cultural and socio-economic role of these crops in tropical societies will be considered, as well as the negative and positive aspects of their production and utilization. This is one of three 1-credit modules, including INTAG 414 and INTAG 418, each taught for one-third of the semester.

INTAG 418 Horticultural Crops in the Tropics

Spring. 1 credit. Prerequisite: An introductory biology or crops course (BIO G 101, HORT 102, SCAS 311 or equivalent) and SCAS/BIO G 473. Offered alternate years. Not offered 1997-98; next offered 1996-97 and 1998-99. M W F 11:15.

I. Merwin, E. Figueroa, and C. Wien.

A survey of fruit and vegetable crops of economic and/or dietary importance in the tropics. The natural history of horticultural crops, major regions and methods of production, domestic and export marketing systems, and various technological, ecological, and social factors that affect tropical fruit and vegetable production will be emphasized. This is one of three 1-credit modules, including INTAG 414 and INTAG 416, each taught for one-third of the semester.

INTAG 599 International Agriculture and Rural Development Project Paper

Fall and spring. 1-6 credits. Limited to M.P.S. candidates in the fields of International Agriculture and Rural Development (IARD) and International Development (ID). S-U grades only. Staff.

INTAG 602 Agriculture in the Developing Nations

Spring. 3 credits. Prerequisites: INTAG 300 or equivalent, INTAG 402, and permission of instructors. Cost of field-study trip includes air fare and approximately \$450 for lodging, meals, and personal expenses. T R 2:30-4:25 until midterm only. R. W. Blake and staff.

Oriented to provide students an opportunity to observe agricultural development in a tropical environment and promote interdisciplinary exchange among staff and students. The two-week field-study trip during January to Latin American countries is followed by discussions and assignments dealing with problems in agriculture and livestock production in the context of social and economic conditions.

INTAG 603 Administration of Agricultural and Rural Development (also Government 692)

Spring. 4 credits. M 2:30-5:00. N. T. Uphoff and staff.

An intercollege course designed to provide graduate students with a multidisciplinary perspective on the administration of agricultural and rural development activities in developing countries. The course is oriented to students trained in agricultural or social sciences who are likely to have administrative responsibilities during their professional careers.

INTAG 650 Special Topics in International Agricultural and Rural Development

Fall or spring. 1-3 credits. Staff. A seminar for new themes of agricultural and rural development. Offered occasionally. Specific content varies.

INTAG 685 Training and Development: Theory and Practice (also Communication 685, Education 685 and Industrial and Labor Relations 658)

Spring and summer. 4 credits. S-U grades optional. Charge for materials \$45. Lec, F 9:05-12:05; lab, 1 hour per week, to be arranged. At Communication Graduate Center. R. Colle, M. Ewert, D. Deshler.

Analysis, design, and administration of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy as nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

INTAG 703 Seminar for Special Projects in Agricultural and Rural Development

Fall and spring. 1 credit. Required for graduate students enrolled in the M.P.S. (Agr.) degree program and majoring in international agricultural and rural development; others with permission of the program director. S-U grades only. M 12:20-2:15. R. W. Blake and staff.

The seminar provides students with the opportunity to develop and present their special projects. It also serves as a forum for discussion of current issues in low-income agricultural and rural development, with particular attention to interdisciplinary complexities.

International Trade Policy (ARME 430)
Economics of Agricultural Development (ARME 464)

The World's Food (ARME 660)
[Seminar on Agricultural Trade Policy (ARME 730)
Not offered 1996-97.]

Macro Policy in Developing Countries (ARME 763)
Tropical Livestock Production (AN SC 400)
Tropical Forages (AN SC 403)

Southeast Asia Seminar: Country Seminar (ASIAN 601 and 602)

Plants and Civilization (BIO PL 246)
Food, Agriculture, and Society (B&SOC 469, BIO G 469, S&TS 469)

Seminar in International Planning (CRP 671)

Seminar in Project Planning in Developing Countries (CRP 675)

Intercultural and Development Communication (COMM 612)

Communication in the Developing Nations (COMM 624)

Comparative Studies in Adult Education (EDUC 483)

Planning Educational Systems (EDUC 678)

Designing Extension and Continuing Education Programs (EDUC 681)

Community Education and Development (EDUC 682)

International Postharvest Food Systems (FOOD 447)

Political Economy of Change: Rural Development in the Third World (GOVT 648)

International Environmental Issues (NTRES 400)
Religion, Ethics, and the Environment (NTRES 407)

National and International Food Economics (NS 457)

International Nutrition Problems, Policy, and Programs (NS 680)

International Nutrition Seminar (NS 698)

Special Topics in International Nutrition (NS 699)

Introduction to Plant Breeding (PL BR 201)

Plant Diseases in Tropical Agriculture (PL PA 655)
International Development (R SOC 205)

Comparative Issues in Social Stratification (R SOC 370)

Gender Relations, Gender Ideologies, and Social Change (R SOC 425)

Social Demography (R SOC 438)

Population, Environment, and Development in Sub-Saharan Africa (R SOC 495)

Contemporary Sociological Theories of Development (R SOC 606)

Land Reform, Old and New (R SOC 643)

Social Movements in Agrarian Society (R SOC 723)

The Political Economy of Policy and Planning in Third World States (R SOC 725)

Tropical Cropping Systems (SCAS 314)

Properties and Appraisal of Soils of the Tropics (SCAS 471)

Ecology of Agricultural Systems (SCAS 473 and BIOES 473)

LANDSCAPE ARCHITECTURE

H. W. Gottfried, Program coordinator;
M. I. Adleman, S. Baugher, P. H. Horrigan,
D. W. Krall, L. J. Mirin, R. T. Trancik,
P. J. Trowbridge, K. A. Wolf

LA 141 Grounding in Landscape Architecture

Fall. 4 credits. Limited to 25 students. S-U grades optional.

Developing ability in freehand observation drawing. Freehand still life, landscape, figure, and perspective drawing will be included. Weekly sketchbook assignments.

LA 142 Grounding in Landscape Architecture Studio

Spring. 4 credits. Limited to approximately 20 students; freshman landscape architecture majors or permission of instructor. Cost of basic drafting equipment and supplies, about \$200.

Fundamentals of landscape design applied to residential and other small-scale site-planning projects. Work in the studio introduces course participant to the design process, design principles, construction materials, planting design, and graphics.

LA 201 Medium of the Landscape

Fall. 6 credits. Limited to landscape architecture majors. Cost of basic drafting equipment and supplies, about \$200; expenses for field trip, about \$250.

This course provides a foundation in design theory, contemporary and historic case studies, two-dimensional pattern design, three dimensional modelling, measured drawing, sketch and constructed representations, concepts in landform and landscape materials including vegetation. Lecture, seminar but primarily studio practice will be used to introduce course participants to skill development necessary for design within the discipline. Theory related to proportion, distance, size, color, light and time will be fundamental to this course. However, life experience, memory and culture will be highly valued.

LA 202 Medium of the Landscape

Spring. 6 credits. Prerequisite: LA 201 with a grade of C or better. Cost of supplies, about \$200; expenses for field trip, about \$250.

Understanding the role of basic design, design theory, and design languages in landscape architectural projects.

LA 261 Urban Archaeology (also CRP 261)

Fall. 3 credits.

Urban archaeologists study American Indian, colonial, and nineteenth-century sites which now lie within the boundaries of modern cities. This course explores how urban centers evolve; what lies beneath today's cities; and how various cultures have altered the urban landscape. Students will participate in a local archaeological excavation.

LA 262 Laboratory In Landscape Archaeology

Spring. 3 credits. Prerequisites: LA 261 or CRP261 or permission of instructor.

Various American Indian civilizations and European cultures have all altered the landscape to meet the needs of their cultures. Students will learn how to interpret the American Indian and Euro-American landscapes of specific archaeological sites by identifying and dating artifacts, studying soil samples, and creating site maps.

LA 282 The American Landscape

Spring. 3 credits.

An interdisciplinary survey of the cultural history of the American landscape, including perceptions of landscape as expressed in paintings, photographs, and literature. Landscape values, the relation of landscape to culture, landscape use, and the history of regional and national landscapes are general topics, all seen within the context of the history of the environment.

LA 301 Integration of Realities

Fall. 6 credits. Prerequisite: LA 202 with a grade of C or better. Cost of supplies, about \$200; expenses for field trip, about \$250.

Course participants will be engaged in the art and science of site-scaled design. This includes gardens, parks, and residential projects, their design and technical solutions.

LA 302 Integration of Realities

Spring. 6 credits. Prerequisite: LA 301 with a grade of C or better. Cost of supplies, about \$200; expenses for field trip, about \$250.

LA 315 Site Engineering I

Spring (1st seven weeks of semester). 2 credits. Prerequisite: permission of instructor.

Lectures and studio projects focusing on the development of a working knowledge of site grading, earthwork, storm-water management, site irrigation, site layout, and road alignment.

LA 316 Site Engineering II

Fall (2nd seven weeks of semester). 2 credits. Prerequisite: LA 315.

Lectures and studio projects dealing with earthwork estimating; storm water management, site surveys, site layout, site irrigation and horizontal and vertical road alignment.

LA 317 Site Construction I

Fall (1st seven weeks of semester). 2 credits. Prerequisite: permission of instructor.

The detail design and use of landscape materials, used by landscape architects in project implementation is the focus of this course. The course format includes lectures, field trips, studio problems, and development of technical drawings leading to construction documentation for a wide variety of projects. Students will construct detail material

prototypes and models and have the option of developing computer-generated drawings.

LA 318 Site Construction II

Spring (2nd seven weeks of semester). 2 credits. Prerequisite: permission of instructor.

Exploration of construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation is the focus for this course. The course includes lectures, studio problems, and development of drawings leading to construction documentation for a comprehensive project. Students will develop a site survey and measured drawings as necessary to develop the comprehensive project.

[LA 360 Pre-Industrial Cities and Towns of North America (also CRP 360)]

Fall. 3 credits. Not offered 1996-97; next offered 1997-98.

Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. Each culture has altered the landscape in their own unique way as they created their own built environments.]

LA 363/547 American Indians, Planners, and Public Policy (also CRP 363/547)

Spring. 3 credits.

Decisions made by public agencies and private enterprise too often lead to the flooding, polluting, strip-mining, or other destruction of American Indian reservations, archaeological sites, and burial grounds. The central focus of the course is how to address urban and regional problems without imperiling the cultural survival of minorities.

LA 401 Advanced Synthesis: Project Design

Fall. 6 credits. Prerequisite: LA 302 with a grade of C or better. Cost of supplies and reproductions, about \$200; basic expenses for field trips, about \$200.

Site design and construction projects introduced as an evaluation of each student's professional competency in landscape architecture.

LA 402 Advanced Synthesis: Project Design

Spring. 6 credits. Prerequisites: completion of LA 401 or the study abroad option with a grade of C or better. Cost of supplies, about \$200; basic expenses for field trip, about \$250.

A sequence of projects introducing students to advanced skills in large-scale urban design, including 3-d computer modeling and digital design media as tools for shaping the form of the city.

LA 410 Computer Applications In Landscape Architecture

Fall or spring. 3 credits. Offered to landscape architecture students only. Limited to 15 students.

This course is designed to develop a working knowledge of various computer software applications (Autocad, Landcad, GIS, etc.) with emphasis on Autocad and Landcad. The course will explore other applications relative to land-use planning and the profession of Landscape Architecture.

LA 412 Professional Practice

Spring. 1 credit.

Presents the student with a comprehensive understanding of the role of the professional landscape architect and the problems and opportunities one may encounter in an office or other professional situations. Topics discussed include practice diversity, marketing professional services, office and project management, construction management, computers in the profession, and ethics.

LA 480 Principles of Spatial Design and Aesthetics (also City and Regional Planning 481 and 581)

Fall. 3 credits.

A lecture course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America.

LA 483 Design Criticism

Fall. 3 credits.

A practicum in writing environmental design criticism. Emphasis on impressionistic writing, on analytical descriptions and interpretations or works, and on the role of criticism in environmental design discourse.

LA 486 Community Design Workshop

Spring. 3 credits. Permission of instructor. S-U grades optional.

This class will offer the opportunity to learn, hands-on, the design process through the designing and building of service-oriented community projects including parks, greenways, public spaces, playgrounds, gardens and urban design. This course will enable students to both study and experience design and implementation skills at all levels of the design process. Community design and workshop series. Students will learn skills related to community design in a series of workshops and work on a real project with a community.

LA 487 Experiential Community Design

Fall. 3 credits. Permission of instructor. S-U grades optional.

This class will offer the opportunity to learn, hands-on, the design process through the designing and building of service-oriented community projects including parks, greenways, public spaces, playgrounds, gardens and urban design. This course will enable students to both study and experience design and implementation skills at all level of the design process Community Build and Implementation. Students will be engaged in the community-build phase of the community design project initiated the previous spring semester.

LA 491 Planting Design and Establishment (also HORT 491)

Fall. 3 credits. Prerequisites: FOH 230 or permission of instructor.

This course will focus on the establishment of woody and herbaceous plants in urban and garden settings. By understanding the special constraints placed on plants, we will be able to critically assess and modify potential planting sites, select appropriate trees, shrubs, and ground covers for a given site, and learn about the principles and practices of plant establishment both in the ground and in contained environments. Design followed by

specifications and graphic details will be produced to implement these practices. Techniques for tree preservation and land reclamation/vegetation will also be discussed. Field work includes chemical and physical analysis of soils, vegetation, and site assessment.

LA 494 Special Topics in Landscape Architecture

Fall or spring. 1-3 credits; may be repeated for credit. S-U grades optional. Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

LA 497 Individual Study in Landscape Architecture

Fall or spring. 1-5 credits; may be repeated for credit. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Work on special topics by individuals or small groups.

LA 498 Undergraduate Teaching

Fall or spring. 1-3 credits. Prerequisites: previous enrollment in course to be taught and permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grade optional.

Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty.

LA 501 Composition and Theory

Fall. 6 credits. Limited to graduate students. Cost of drafting supplies about \$200. Field trip about \$250. Basic design principles and processes applied to the design of the outdoor environment. Studio projects focus on the analysis, organization, and form of outdoor space through the use of three-dimensional components including structures, vegetation, and earthform.

LA 502 Composition and Theory

Spring. 6 credits. Limited to graduate students. Cost of drafting supplies, about \$200; expenses for field trip, about \$250. The studio will focus on the spatial design of project-scale site development. Students will develop their expertise in applying the design theory, vocabulary, and graphic expression introduced in LA 501.

LA 505 Graphic Communication I

Fall. 3 credits. Prerequisites: concurrent enrollment in LA 501 or permission of instructor.

Basic skills in graphic presentation, including pencil-and-ink drawing and drafting techniques applicable to landscape architecture projects. Basic design in freehand drawing, orthographic projection, axonometric projection, and lettering are covered in the course.

LA 506 Graphic Communication II

Spring. 3 credits. Prerequisites: LA 505 and concurrent enrollment in LA 502 or permission of instructor. Course will focus on modes of landscape representation from ideation to presentation. Projects will in many cases correspond with LA 502 design projects. Representation modes will include for example: freehand, analysis and orthographic drawing; concept modelling; composite drawings; visual books.

LANAR 520 Contemporary Issues in Landscape Architecture*

Fall. 2 credits. *Offered through the College of Architecture, Art, and Planning.

LANAR 524 History of European Landscape Architecture*

Spring. 3 credits. *Offered through the College of Architecture, Art, and Planning.

LANAR 525 History of American Landscape Architecture*

Fall. 3 credits. *Offered through the College of Architecture, Art, and Planning.

LA 569 Archaeology on Preservation Planning and Landscape (also CRP 569)

Fall. 3 credits. Offered alternate years. Next offered 1998-99. In response to federal, state, and local legislation, archaeology now plays an important role in design, planning, and land-use decisions. Students develop the research skills needed to complete environmental review projects and historic landscape plans.

LA 590 Theory Seminar

Fall. 3 credits. For graduate students in their last year of study. Seminar in research methods and landscape knowledge, culminating in a thesis proposal.

LA 601 Context and Landscape/Integration of Reality

Fall. 6 credits. Limited to graduate students. Cost of supplies, about \$200; expenses for field trip, about \$250. Design theory and process as applied to larger scale, site-specific projects while incorporating skills and techniques from site engineering.

LA 602 Natural Systems and Planting Design Studio

Spring. 6 credits. Limited to graduate students. Cost of drafting supplies, about \$200; expenses for field trip, about \$250. The studio focuses upon site-scaled projects that have as a primary concern natural systems and the ecology of a site. Projects will have nature-like design expressions inherent in the studio exercises. Design knowledge of hydrology, soils, plant associates, culture, geography, history and microclimate are necessary to engage studio projects. Studio participants are expected to have a mastery of communication skills including oral presentation and graphic representation.

LA 615 Site Engineering I

Spring. (1st seven weeks of semester). 2 credits. Prerequisite: permission of instructor. Lectures and studio projects focusing on the development of a working knowledge of site grading, earthwork, storm-water management, site irrigation, site layout, and road alignment.

LA 616 Site Engineering II

Fall. (2nd seven weeks of semester). 2 credits. Prerequisite: LA 615. Lectures and studio projects dealing with earthwork estimating, storm water management, site surveys, site layout, site irrigation and horizontal and vertical road alignment.

LA 617 Site Construction I

Fall (1st seven weeks of semester). 2 credits. Prerequisite: permission of instructor.

The detail design and use of landscape materials, used by landscape architects in project implementation is the focus of this course. The course format includes lectures, field trips, studio problems, and development of technical drawings leading to construction documentation for a wide variety of projects. Students will construct detail material prototypes and models and have the option of developing computer-generated drawings.

LA 618 Site Construction II

Spring. (2nd seven weeks of semester). 2 credits. Prerequisite: permission of instructor.

Exploration of materials, including specifications, cost estimates, and methods used by landscape architects in project implementation is the focus for this course. The course includes lectures, short studio problems, and the development of drawings leading to construction documentation for a comprehensive project. Students will develop a site survey and measured drawings as necessary to develop the comprehensive project.

LA 619 Advanced Site Grading

Spring (2nd seven weeks of semester). 2 credits. Limited to 10 students. Prerequisite: LA 315 or LA 615. Grading skills and knowledge applied as a design component of site planning projects.

[LA 666 Pre-Industrial Cities and Towns of North America (also CRP 666)]

Fall. 3 credits. Offered alternate years. Not offered 1996-97; next offered 1997-98. Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. Each culture has altered the landscape in their own unique way as they created their own built environments.]

LA 680 Graduate Seminar in Landscape Architecture

Fall or spring. 1-3 credits. May be repeated for credit. Limited to graduate students. S-U grades optional. Topical subjects in landscape architectural design, theory, history, or technology. Seminar topics and group study not considered in other courses.

LA 694 Special Topics in Landscape Architecture

Fall or spring. 1-3 credits; may be repeated for credit. S-U grades optional. Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

LA 701 Urban Design and Planning (also CRP 555)

Fall. 6 credits. Limited to graduate students. Cost of supplies, about \$200; expenses for field trip, about \$250. Application of urban-design and town-planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions and spatial typologies involving the street, square, block, garden, and park systems. 3-d computer modeling and digital design media are introduced as tools for urban design. This is a specially arranged collaborative studio with the Department of City and Regional Planning.

LA 702 Advanced Design Studio

Spring. 6 credits.

This advanced studio provides the opportunity to deeply explore issues of contemporary landscape architecture and integrate the related fields of ecology and sociology. Topics examined include the influences of culture, ethics, and criticism, as well as the roles and reinterpretations of engineering and representation.

LA 800 Master's Thesis in Landscape Architecture

Fall or spring. 9 credits.

Independent research, under faculty guidance leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in final semester of residency.

NATURAL RESOURCES

D. J. Decker, chair; R. A. Baer, M. B. Bain, B. L. Bedford, T. Brown, L. E. Buck, P. Curtis, T. J. Fahey, T. A. Gavin, J. W. Gillett, J. Jacobson, B. A. Knuth, M. E. Krasny, C. C. Krueger, J. P. Lassoie, R. A. Malecki, B. Matthews, R. J. McNeil, E. Mills, A. N. Moen, M. E. Richmond, L. Rudstam, J. Schelhas, R. Schneider, C. R. Smith, L. H. Weinstein, B. T. Wilkins, J. B. Yavitt

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

NTRES 100 Principles of Conservation

Fall. 3 credits. Limited to students specializing in natural resources or with permission of instructor. Letter grade only. M W F 9:05; 1 hr disc to be arranged. Staff.

The nature of natural resources, how they are managed, and their interactions with individuals and societies are considered. Case histories are used to illustrate both principles and practices. Emphasis will be on management of renewable resources based on ecological and cultural perspectives.

NTRES 101 The Environment

Fall. 2 or 3 credits. Letter grade only. M 7:30-9:30 p.m. Optional 1 hr disc sec to be arranged. B. L. Bedford.

An overview of Earth's environmental problems. Lectures are presented by a series of Cornell's most distinguished authorities and by visiting experts. A major theme of the course is that environmental problems, and their solutions, are not isolated technical problems, but rather are interrelated social, political, ethical, ecological and economic problems.

NTRES 104 Natural History Information Management Concepts

Spring. 1 credit. Letter grade only. T 9:05. A. N. Moen.

Natural history information management concepts using electronic technology to provide global access to information resources will be introduced. Students will learn how to access and prepare hypertext and multimedia files of natural history information.

NTRES 105 Natural History Information Management Applications

Fall and spring. Credit to be arranged. Letter grade only. 3 hours (TBA) per credit hour. Prerequisite: NTRES 104 (or concurrent registration). A. N. Moen.

Natural history information will be used to learn computer-based information management skills and to produce information resources for use in other courses in the Department of Natural Resources. Sections will include: (1) Natural History of Plants; (2) Natural History of Animals; and (3) Decision Aids for Laboratory and Field Identification.

NTRES 201 Environmental Conservation

Spring. 3 credits. M W F 12:20; 1 hr disc sec to be arranged. T. J. Fahey.

As the end of the 20th century approaches, our lives are increasingly touched by questions about environmental degradation at local, regional, and global scales. Business as usual is being challenged. This course will stimulate you to go beyond the often simplistic portraits of the environmental dilemma offered by the mass media so that you will have a firmer basis for responsible citizenship and action on environmental issues.

NTRES 204 Natural Resource Modeling Concepts

Spring. 1 credit. Letter grade only. R 9:05. Prerequisite: NTRES 104 or permission of instructor. A. N. Moen.

Basic concepts underlying computer modeling in natural resources are introduced, and selected models illustrate specific biophysical, population, and simulation models.

NTRES 205 Natural Resource Modeling Applications

Fall and spring. Credit to be arranged. Letter grade only. 3 hours (TBA) per credit hour. Prerequisite: NTRES 204 (or concurrent registration) and one course in computer programming. A. N. Moen.

Students may enroll for variable credits in biophysical modeling, population modeling, and simulation modeling sections. Original programs are designed by the students and become part of the information resources in the Cooperative Learning Center. Sections will include: (1) Biophysical Modeling in Natural Resources; (2) Simulation Modeling in Natural Resources; and (3) Population Modeling in Natural Resources.

NTRES 210 Introductory Field Biology

Fall. 4 credits. Limited to 90 students. Open to sophomores and juniors with an adviser in Natural Resources or by permission of instructor. Prerequisites: BIO G 101 and 102 or equivalent. 2 overnight field trips required. Cost of field trips, approximately \$10. Lec, W 9:05; labs, M W 1:25-4:25 or T R 1:25-4:25. T. Gavin and C. Smith.

Introduction to methods of inventorying, identifying, and studying plants and animals. Students are required to learn the taxonomy, natural history, and how to identify approximately 170 species of vertebrates and 80 species of woody plants. Selected aspects of current ecological thinking are stressed. The interaction of students with biological events in the field and accurate recording of these events are emphasized.

NTRES 215 Environmental Disruption and Regulation

Summer, 3-week session. 3 credits. Open to high school students. Optional field trips. M W 6:15-9:30 p.m. M. Heiman.

The physical and social context of human-environmental interrelations in advanced industrial societies. Interest-group positions and the United States regulatory response on air and water pollution; toxic, nuclear, and solid waste management; and workplace hazards. The conflicts and compatibility of economic growth, social justice, and environmental quality.

NTRES 230 Environment and Society

Summer, 6-week session. 3 credits. T R 6:15-9:30 p.m. G. M. Berardi.

Introduction to societal and environmental factors affecting famine and starvation, "overpopulation," deforestation, water degradation and global warming. Topics include sustainable development, gene banks and biotechnology, nutritional and environmental policy, models for conservation, alternative futures. Case studies from the United States and underdeveloped countries. Optional field trips.

NTRES 253 Applied Ecology and Ecosystem Management

Spring. 3 credits. Prerequisites: introductory courses in biology and ecology. Lec M W 10:10-11:00; lab, T, W or F 2:30-4:00 or R 12:20-2:15. J. B. Yavitt.

The application of ecological principles to renewable resource and environmental problems. The perspective is the interactions of species within the ecosystem, which is the basic unit of study. Topics include fisheries, forests, the conservation and management of wild species, invaders and pests, and pollution. The discussion section emphasizes quantitative analysis and the use of microcomputers.

NTRES 270 Conservation of Birds

Spring or summer. 2 credits. C. R. Smith. A course for majors and nonmajors, focusing on bird conservation and management at the organism, population, community and landscape levels. Current resource management issues relevant to birds will be explored in the contexts of agricultural practices, habitat management, tropical deforestation, the design and management of natural preserves, endangered species management, global climate change and the economic importance of bird study as an outdoor recreational activity.

NTRES 271 Conservation of Birds Laboratory

Spring or summer. 1 credit. Concurrent enrollment in NTRES 270 required. Limited to NTRES majors.

A field-oriented course designed to teach skills of bird observation and identification based on the integration of field marks, songs and calls, and habitat cues. Topics covered will include the choice and effective use of field guides, binoculars, and other aids to bird identification; procedures for taking and organizing field notes; the relationships of birds to their habitats and to other birds; and methods and procedures for censusing and surveying songbird populations. Students are required to provide their own binoculars for field use.

NTRES 300 International Environmental Issues

Fall. 3 credits. Junior standing or above.
T R 9:05-9:55; 1 hr disc sec to be arranged.
R. J. McNeil.

Lectures will survey international environmental issues, with some attention to causes and to solutions. Case studies will include such subjects as whales and whaling, tropical deforestation, endangered species and biodiversity, Law of the Sea, Antarctica, ozone depletion, global warming. Institutions such as treaties, development banks, international law, and trade agreements will be examined. Perspectives will include primarily ecology, secondarily ethics, economics, law.

NTRES 301 Forest Ecology

Fall. 3 credits. Prerequisite: Introductory Biology. M W F 11:15. T. J. Fahey.

A comprehensive analysis of the distribution, structure, and dynamics of forest ecosystems. Topics include paleoecology of forests, ecophysiology of forest trees, disturbance, succession and community analysis, primary productivity, and nutrient cycling.

NTRES 302 Forest Ecology Laboratory

Fall. 1 credit. Cost of weekend trip approximately \$30. Concurrent enrollment in NTRES 301 required. M 1:25-4:25.
T. J. Fahey.

Field trips designed to familiarize students with the nature of regional forests and to provide experience with approaches to quantifying forest composition and its relation to environmental factors. Optional weekend field trips to Adirondacks and White Mountains, New Hampshire. Group research projects in local forests.

NTRES 303 Forest and Woodlot Management

Fall. 3 credits. Letter grades only. Lec,
T R 10:10-11:00; lab R 12:20-4:25.
T. J. Fahey.

A practical, field-oriented course emphasizing multiple purpose management of small nonindustrial private forestland in the northeastern United States.

NTRES 304 Wildlife Ecology Concepts

Spring. 1 credit. Letter grade only.
M W F 11:15. (1st 1/3 of the semester).
A. N. Moen.

The main concepts underlying wildlife behavior, physiology, nutrition, and energetics are discussed in an ecological context as a basis for further study in the NTRES 305 sections associated with this course.

NTRES 305 Wildlife Ecology Applications

Fall and spring. Credit to be arranged.
Letter grade only. 3 hours (TBA) per credit hour. Prerequisites: NTRES 304 (or concurrent registration).

Field research and computer simulations provide in-depth study in wildlife behavior, physiology, nutrition, and energetics sections in cooperative learning environment. All students publish their findings on the information system in the Cooperative Learning Center. Sections will include: (1) Wildlife Behavior; (2) Wildlife Physiology; (3) Wildlife Nutrition; and (4) Wildlife Energetics.

NTRES 306 Coastal and Oceanic Law and Policy

Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$950.

Intended for persons interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

NTRES 308 Natural Resources Management

Fall. 3 credits. Prerequisite: junior standing. M W F 10:10. B. A. Knuth.
Focus is on fish, wildlife, forest, and water resources. Concepts emphasized include the comprehensive planning process and human dimensions of resource management. Students integrate organismal, environmental, social and institutional dimensions of management through case studies. Grades are based on individual and group performance.

NTRES 309 Land and Culture: Systems of Native American Resource Management

Summer. 3 credits. Prerequisite: none required; one course each in Natural Resources and American Indian Program recommended. S. M. Penningroth.
This course presents a cross-cultural examination of natural resource management on land inhabited by indigenous peoples, with an emphasis on the United States. Topics include Native religions, technologies, and science; the political and legal basis of tribal sovereignty; and "cultural economics", defined as the tension between traditional Native uses of natural resources and tribal economic development.

NTRES 350 Ecological Dimensions of Global Change

Fall. 3 credits. Prerequisites: college-level courses in biology and chemistry.
T R 2:30-3:20, disc sec, T or R 3:35-4:25.
J. B. Yavitt.

A course for students in any major examining how human-induced changes in the biosphere (e.g., land-use change) force climatic change. Lectures present a comprehensive understanding of our climatic system. Discussions consider the response of biosphere to different scenarios of climatic change and some of the policy intended to mitigate the effects of changes.

[NTRES 400 International Environmental Issues

Fall. 4 credits. Limited to about 35 students. Prerequisite: junior standing or above. Not offered fall 1996.
International aspects of the preservation and development of environmental and natural resources. Concepts include development, resource ownership, exploitation, compensation, and preservation. Cultural differences in

attitudes and behavior toward environment. Management practices under different cultural, economic, and social systems. Will cover current issues such as acid precipitation; management of migratory whales, fish, and waterfowl; Antarctic development; global climate and energy issues; and preservation of tropical rainforests and endangered species. Lecture and discussion, term paper, and examinations. Priority to: seniors, a few graduate students, others providing best mix of backgrounds, others with special needs, natural resources majors.]

NTRES 401 Environmental and Natural Resources Policies

Fall or spring. 3 or 4 credits. Prerequisites: junior standing and participation in Cornell-in-Washington Program.

Concepts and principles fundamental to the environmental policy process and central to decision making in the natural resources arena, particularly at the national and international levels. Role of the legal system in the policy process; roles of citizen organizations, lobbyists, bureaucrats, legislators. Case studies, interviews with Washington officials, several short papers, one exam. A fourth credit available requires a more extensive written assignment and an oral presentation.

NTRES 402 Natural Resources Policy, Planning, and Politics

Spring. 3 credits. Prerequisites: junior standing and permission of instructor. Lec, January two-week intersession; two 2 hr orientation sessions in December and four 2 hr sessions in January and February.

An introduction to the environmental policy process and its conceptual framework. Recognition of phenomena identified as natural resources or environmental problems and issues; steps leading to legislation or regulations to solve problems; implementation and evaluation stages; role of the legal system; roles of citizens, lobbyists, government actors. Case studies; presentations by and discussions with about twenty prominent Washington policy makers appearing as guest lecturers. Required interviews, term paper, oral reports. Several meetings in Ithaca before and after intensive January session in Washington.

NTRES 404 Wildlife Populations Ecology

Spring. 1 credit. Letter grade only.
Prerequisites: NTRES 204 or permission of instructor. M W F 11:15. (second 1/3 of the semester). A. N. Moen.

The main concepts underlying population dynamics of free-ranging species are discussed in an ecological context as a basis for further study in the NTRES 405 sections associated with this course. The emphasis is on analytical population models rather than descriptive population parameters.

NTRES 405 Wildlife Population Applications

Fall and spring. Credit to be arranged.
Letter grade only. 3 hours (TBA) per credit hour. Prerequisites: NTRES 404 (or concurrent registration).

Population estimating techniques, simulation models, and reconstruction models provide in-depth experience in these population application sections. Students may reregister for the sections in order to continue model development. Sections will include (1) Wildlife Population Estimating Techniques; (2) Wildlife Population Simulation Models; and (3) Wildlife Population Reconstruction Models.

NTRES 406 Ecology Risk Assessment

Spring. 3 credits. Prerequisites: BIOES 261 or equivalent; permission of instructor if not an advanced student in natural sciences of engineering. Offered alternate odd years. Next offered spring 1997 and spring 1999. M W F 11:15-12:05. J. W. Gillett.

This course strives to develop understanding of and competence in the different types of ecological (non human health) risk assessments. Focus is on cases for chemical, physical, and biological stressors in a variety of circumstances. The proposed USEPA approach under development will serve as the working model.

NTRES 407 Religion, Ethics, and the Environment

Spring. 4 credits. For juniors, seniors, and graduate students; others by permission only. S-U grades optional. T R 9:05-9:55; a hr disc to be arranged. R. A. Baer.

A study of how religion (mainly Christianity and Judaism), philosophy, and ethics contribute to our understanding and treatment of nature. Terms like religion, value, knowledge, nature, and the public interest are examined in detail. Particular themes include the structure of modern science, the nature of moral claims, character and moral development, and the role of mediating structures in fostering environmentally responsible behavior. Also, animal rights; responsibility to future generations; anthropocentric, biocentric, and theocentric views of human beings and nature.

NTRES 408 Resource Management and Environmental Law

Fall. 3 credits. For juniors, seniors, and graduate students. S-U grades optional. T R 10:10-12:05. Staff.

A senior-level course that introduces the use of legal concepts, doctrines, and remedies in natural resource and environmental management. For a variety of living resources and their habitats, it explores the common law and regulatory processes available for resolving conflicts between exploitation and protection and stresses a practical understanding of how public and private values, economic considerations, and constitutional limitations affect management techniques and objectives.

NTRES 410 Wildlife Management Concepts and Applications

Spring. 3 credits. Prerequisites: broad background in biology, NTRES 304 (Wildlife Species Ecology) or NTRES 404 (Wildlife Populations Ecology). This course is open to seniors and graduate students. M W F 9:05. A. Moen.

In-depth analyses of the ecological basis for decision making in wildlife management, computer simulations of management problems and effects of options, management information systems, and preparation of computer-based landscape files. Local field trips are taken.

NTRES 411 Seminar in Environmental Ethics

Fall. 3 credits. For graduate students, seniors, and juniors. S-U grades optional. W 1:25-3:50.

Moral concerns relative to agriculture and/or the environment. In successive years, the seminar will focus on such topics as (1) animal rights and animal welfare, (2) natural resources management and the concept of the public interest, (3) doing

environmental ethics in a democratic and pluralistic society, and, (4) land use ethics.

NTRES 415 Principles and Practices of Agroforestry (also Hort 415)

Spring. 2 credits. Prerequisites: senior or graduate standing or permission of instructor. S-U option. Lec, W 10:10-11:00; lab, W 1:25-4:30. J. Lassoie and K. Mudge.

An introduction to modern and traditional agroforestry systems involving the spatial or temporal integration of multipurpose woody plants (trees and/or shrubs) with annual or perennial crops and/or with livestock. Interactions between woody and non-woody components of agroforestry systems will be considered from the standpoint of above and below ground resource capture. The sustainability of agroforestry systems will be critically examined from both a biophysical and socioeconomic perspective. Laboratory sessions will include field trips, case studies, use of computer-based sources of information, and practical skills involved in woody plant management (identification, propagation, planting, pruning, measurement.)

NTRES 417 Wetland Resources

Summer. 2 credits. Prerequisite: one year of college biology. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$950.

An examination of coastal and adjacent freshwater wetlands from historic, destruction, and preservation perspectives, including fresh- and salt-marsh ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.

NTRES 418 Wetland Ecology and Management-Lecture

Fall. 3 credits. (Students may not receive credit for NTRES 418 and NTRES 417 Wetland Resources, Shoals Marine Laboratory summer course.) T R 12:20-1:35. B. L. Bedford.

Examination of the structure, function, and dynamics of wetland ecosystems with an emphasis on principles required to understand how human activities affect wetlands. Current regulations, protection programs, and management strategies are considered.

NTRES 419 Wetland Ecology and Management-Laboratory

Fall. 1 credit. Optional. Concurrent enrollment in NTRES 418 is required. W or F 12:20-4:25. One weekend fieldtrip required.

An integrated set of laboratory field exercises designed to expose students to: (a) the diversity of wetland ecosystems; (b) the flora, fauna, soils, and hydrology of wetlands within the region; (c) methods of sampling wetlands vegetation, soils, and water; and (d) methods of wetland identification and delineation. Some exercises will require written reports.

NTRES 438 Fishery Management

Spring. 3 credits. Offered alternate odd years. Next offered spring 1997. Lec, T R 10:10; disc, T or R 11:15. C. C. Krueger.

Introduction to management as an adaptive process that focuses on achievement of goals. Coverage includes sport and commercial fisheries and species restoration. Topics include setting goals and objectives, regulations, habitat management, population control, stocking, and management of trout, reservoirs, the Great Lakes, and Pacific halibut. Ecological, social, political, and economic aspects of those topics are discussed.

[NTRES 442 Techniques in Fishery Science]

Fall. 5 credits. Limited to 15 upperclass and graduate fishery students. Cost of field trips, no more than \$30. Offered alternate odd years. Next offered fall 1997 and fall 1999. T R 1:25-4:25; 1 or more weekend field trips. C. C. Krueger.

Emphasis is on methods for collecting data from fish populations and their habitat. Topics include passive and active fish-capture methods, tagging and marking, and physical and chemical habitat measurements. Assumptions and limitations inherent in data sets, research planning, and scientific report writing are also discussed. Several field trips provide hands-on experience in data collection on streams and lakes.)

NTRES 450 Conservation Biology

Fall. 3 credits. Prerequisite: a reasonable biology background. Lec, T 10:10-12:05; disc, R 10:10 or 11:15. T. A. Gavin.

Biological topics important to the maintenance of biological diversity will be emphasized. Examples include population viability analysis, and the analysis of the demography and genetics of small populations as they are affected by habitat fragmentation and isolation. Students will gain thorough familiarity with these concepts and their potential application through lectures, discussion, and use of computer models.

NTRES 471 Management of Terrestrial Habitats

Spring or summer. 2 credits. Prerequisites: NTRES 210, 304; statistics recommended; junior standing or above. Lec/lab, W 1:25-4:25. C. R. Smith.

A landscape ecological approach will be used to introduce students to habitat concepts and to methods of inventorying, measuring, monitoring, describing, classifying, and restoring terrestrial habitats at a variety of temporal and spatial scales. Field trips will be taken to areas managed by both public and private land management organizations. An introduction to use of Global Positioning Systems (GPS) is included.

NTRES 493 Individual Study in Resource Policy, Management, and Human Dimensions

Fall or spring. Credit to be arranged. S-U grades optional. Prerequisite: permission of instructor. R. A. Baer, T. Brown, L. E. Buck, D. J. Decker, J. Gillett, B. Knuth, B. Matthews, R. McNeil.

Topics in environmental and natural resource policy, management, and human dimensions are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

NTRES 494 Special Topics in Natural Resources

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and

will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

NTRES 495 Individual Study in Fish and Wildlife Biology and Management

Fall or spring. Credit to be arranged. S-U grades optional. Prerequisite: permission of instructor. M. Bain, T. Gavin, C. Krueger, R. Malecki, E. Mills, A. Moen, M. Richmond, L. Rudstam, C. Smith.

Topics in fish and wildlife biology and management are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

NTRES 496 Individual Study in Ecology and Management of Landscapes

Fall or spring. Credit to be arranged. S-U grades optional. Prerequisite: permission of instructor. B. Bedford, T. Fahey, M. Krasny, J. Lassoie, J. Schelhas, R. Schneider, J. Yavitt.

Topics in ecology and management of landscapes are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

NTRES 498 Teaching in Natural Resources

Fall and spring. 1-4 credits. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Course designed to give students an opportunity to obtain teaching experience by assisting in labs, field trips for designated sections, discussions, and grading. Students will gain insights into the organization, preparation, and execution of course plans through application and discussions with instructor.

NTRES 500 Professional Projects—M.P.S.

Fall and spring. Credit to be arranged. Limited to graduate students working on professional master's projects. S-U grades only.

NTRES 601 Seminar on Selected Topics in Fishery Biology

Fall or spring. 1 credit. S-U grades only. R 3:30-5:00.

NTRES 604 Seminar on Selected Topics in Resource Policy and Management

Fall. 2 credits. S-U grades optional. M 3:00-4:30.

Primarily for graduate students with a major or minor in resource policy and management and upper level undergraduates with a strong interest in resource policy analysis. Topics include the policy process, actors and stakeholders, ethical dimensions, and evaluation. Emphasis is placed on discussion, faculty-student interaction, communication skills, and current resource policy issues.

[NTRES 607 Ecotoxicology (Toxicology 607)]

Spring. 3 credits. Prerequisites: graduate or senior status and two 300-level courses in chemistry, biological science, or toxicology. Offered alternate even years. Not offered spring 1997. M W F 11:15.

Lectures, readings, and special guests focus on the principles of effects of toxic chemicals on natural ecosystems, their components, and

processes. Major topics include fate and transport of chemicals (chemodynamics), comparative biochemical toxicology, ecosystem process analysis, simulation through mathematical and physical (microcosm) models, and relationships to regulation and environmental management.]

NTRES 610 Introduction to Chemical and Environmental Toxicology

Fall. 3 credits. Prerequisites: biochemistry and animal physiology. Letter grade only. M W F 11:15-12:05.

Introduction to the basic concepts of toxicology, exposure and biological responses to toxicants, methods of assessing toxicity, and the role of epidemiology. The chemical and biological factors that affect toxicity and specific sources of toxicants, including air pollution, agriculture, industrial and commercial processes, natural occurring toxicants, and social poisons will be presented. Regulation of toxic materials will be introduced.

NTRES 612 Wildlife Science Seminar

Fall and spring. 1 credit. Prerequisite: permission of instructor. S-U grades optional.

Discussion of individual research or current problems in wildlife science.

NTRES 615 Case Studies and Special Topics in Agroforestry

Fall. 2 credits. Prerequisites: NTRES/HORT 415 or permission of instructor. S-U only. Hours to be arranged.

Interdisciplinary groups of students examine case study examples of agroforestry practices in developed and developing countries. Specific topical areas are examined in depth, leading to development of a team-written report and a class presentation. Extensive library research and participation in small group discussions are required.

NTRES 616 Forest Science and Management Seminar

Fall/spring. 1 credit. Permission of instructor.

Selected readings and discussions of research and/or current problems in forest science and management.

NTRES 618 Critical Issues in Conservation and Sustainable Development

Fall. 3 credits. Preference to graduate students with minor in conservation and sustainable development; seniors by permission. Limited to 30 students. T R 2:30-4:25. J. Schelhas.

Establishes a theoretical foundation for analyzing and addressing conservation and development issues from an interdisciplinary perspective. Engages students in the inherent conflicts between natural resource conservation and the development for human needs. Students will work in interdisciplinary groups to analyze issues and cases from both developing and developed countries.

NTRES 619 Field Practicum in Conservation and Sustainable Development

Spring. 3 credits. Prerequisites: NTRES 618; preference given to graduate students with minor in conservation and sustainable development; permission of instructor. Limited to 12 students. Includes two-week field study trip to a Latin American country in January. J. Schelhas.

An interdisciplinary study of a conservation and development problem in Costa Rica or the Dominican Republic. The course will use an interdisciplinary research methodology that includes group problem identification, individual or small group research projects, and synthesis of group work to identify key conservation issues and research priorities for a selected site.

NTRES 694 Special Topics in Natural Resources

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

NTRES 698 Current Topics: Environmental Toxicology (Toxicology 698)

Fall, spring. 1-3 credits. Prerequisites: graduate or senior standing in scientific discipline and permission of instructor.

A student-faculty colloquium on subjects of current interest, usually focusing on multidisciplinary aspects of topical problems (e.g., Superfund, oil spills).

NTRES 699 Graduate Individual Study in Natural Resources

Fall or spring. Credit to be arranged. S-U grades optional. Prerequisite: permission of instructor. NTRES Graduate Faculty.

Study of topics in natural resources more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

NTRES 800 Master's Thesis Research

Fall and spring. Credit to be arranged. Limited to graduate students working on master's thesis research. S-U grades only.

NTRES 900 Graduate-Level Thesis Research

Fall and spring. Credit to be arranged. Limited to graduate students in a Ph.D. program **only before** the 'A' exam has been passed. S-U grades only.

NTRES 901 Doctoral-Level Thesis Research

Fall and spring. Credit to be arranged. For students admitted to candidacy after the 'A' exam has been passed. S-U grades only.

PLANT BREEDING

E. D. Earle, chair; W. R. Coffman, M. M. Kyle, S. R. McCouch, M. A. Mutschler, W. D. Pardee, K. V. Raman, M. E. Smith, M. E. Sorrells, J. C. Steffens, S. D. Tanksley, D. R. Viands, R. W. Zobel

Emeritus Professors: R. E. Anderson, H. L. Everett, C. C. Lowe, H. M. Munger, R. P. Murphy, R. L. Plaisted and D. H. Wallace

Biometry courses are listed under "Biometry and Statistics."

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

PL BR 201 Plants, Genes, and Global Food Production

Spring. 2 credits. Prerequisite: one year of introductory biology or permission of instructor. Lecs, T R 11:15.

S. R. McCouch.

This course provides an introduction to Plant Breeding. It offers a sense of the historical and social importance of the field, tracing its evolution from the pre-scientific days of crop domestication to modern applications of biotechnology. It offers specific examples of how breeding objectives are realized and raises questions about the environmental, social and economic consequences of intensive food production systems. This course may be used for partial fulfillment of the CALS distribution requirement GROUP B - Biological Sciences.

PL BR 225 Plant Genetics

Spring. 4 credits. Prerequisite: one year of introductory biology or permission of instructor. Limited to 50 students. Lecs, M W F 9:05; lab, T or W 1:25, lab section assignments at first lecture. Labs start first week. M. A. Mutschler.

An overview of classical and modern genetic principles using examples from a variety of ornamental, horticultural, and agronomic plant species. Labs provide hands-on experience and an independent project with *Brassica campestris*. This course may be used for partial fulfillment of the CALS distribution requirement GROUP B - Biological Sciences.

PL BR 401 Plant Cell and Tissue Culture

Fall. 3 credits. Prerequisites: a course in plant biology, cell biology, or genetics, or permission of instructor. Lecs, T R 10:10. E. D. Earle.

Lectures and demonstrations dealing with the techniques of plant tissue, cell, protoplast, embryo, and anther culture and the applications of those techniques to biological and agricultural studies. Methods for plant improvement via manipulations of cultured cells will be discussed. Six written assignments and a term paper are required.

PL BR 402 Plant Tissue Culture Laboratory

Fall. 1 credit. Enrollment limited. Prerequisites: PL BR 401 (may be taken concurrently) and permission of instructor. W 1:25-4:25 (alternate weeks) plus 1 hr to be arranged. E. D. Earle.

Laboratory exercises complementing Plant Breeding 401. Techniques for establishing, evaluating, and utilizing plant organ, tissue and cell cultures will be covered. Experiments will use a broad range of plant materials.

[PL BR 446 Plant Cytogenetics Laboratory

Spring. 2 credits. S-U grades optional. Prerequisites: BIOGD 281 or PL BR 225. Lab, M 1:25-4:30. K. N. Watanabe.

This course aims to provide fundamental knowledge and techniques in plant cytogenetics. Emphasis will be on applications to research on plant genetics and plant breeding. Plant materials involve a wide range of crop species. Specific topics will be covered by invited lecturers.]

PL BR 494 Special Topics in Plant Breeding

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

PL BR 496 Internship in Plant Breeding

Fall or spring. Credits variable, may be repeated to a maximum of 6. Minimum of 60 on-the-job hours per credit granted. Prerequisites: permission of adviser and enrollment during the pre-enrollment period of the semester before the internship. Student must be a plant breeding junior or senior with a minimum 3.0 average in plant breeding courses. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their study and assign their credits and grade. S-U grades only. Staff.

On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and student, stating the conditions of the work assignment, supervision, and reporting.

PL BR 497 Individual Study in Plant Breeding

Fall or spring. Credits variable, may be repeated to a maximum of 6. S-U optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

PL BR 498 Undergraduate Teaching

Fall or spring. Credits variable, may be repeated to a maximum of 6. S-U optional. Prerequisites: permission of instructor, and previous enrollment in course to be taught or equivalent. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

PL BR 499 Undergraduate Research

Fall or spring. Credits variable, may be repeated to a maximum of 6. S-U optional. Prerequisite: permission of instructor. Students must register with an

Independent Study form (available in 140 Roberts Hall). Staff.

Undergraduate research projects in plant breeding.

PL BR 603 Methods of Plant Breeding

Fall. 3 credits. Prerequisites: BIOGD 281 or PL BR 225 or equivalent and an introductory course in crop production. M W F 9:05. M. E. Smith.

A comprehensive examination of plant breeding methods, including inbreeding and population improvement methods. Operational details and practical limitations for each method will be considered, as will suitability for major breeding objectives (agronomic characteristics, quality, and biotic and abiotic stress tolerance). The goal is to familiarize students with tools available to plant breeders, criteria for choosing among them, and options for creatively modifying them for specific situations.

PL BR 604 Methods of Plant Breeding Laboratory

Fall. 2 credits. Prerequisite: PL BR 603 or equivalent (may be taken concurrently). T R 1:25-4:15. M. E. Sorrells and R. E. Anderson.

Field trips to plant breeding programs involve discussion of breeding methods used, overall goals, selection and screening techniques, and variety and germ plasm release. Additional labs include use of computers in plant breeding research and selection techniques for disease resistance. For a term project each student designs a comprehensive breeding program on a chosen crop.

PL BR 606 Advanced Plant Genetics

Spring. 3 credits. S-U grades optional. Prerequisites: BIOGD 281, PL BR 225, or equivalent. Lecs, M W F 11:15-12:05. M. M. Kyle.

This course provides an advanced survey of genetics in higher plants. Topics include genetic analysis of developmental and metabolic processes, cytogenetics, mating behavior and barriers, and aspects of population and quantitative genetics.

PL BR 622 Seminar

Fall or spring. 1 credit. S-U grades only. T 12:20. Staff and graduate students.

PL BR 629 Special Topics in Plant Science Extension

Spring. 2 credits. F 1:25-4:25. W. D. Pardee.

Designed for graduate students and advanced undergraduates to provide a broader knowledge of cooperative extension philosophy and methods. Developed for students interested in extension and research in public and commercial organizations. Topics relate to extension in other countries as well as in the United States.

PL BR 650 Special Problems in Research and Teaching

Fall or spring. 1 or more credits. Prerequisite: permission of instructor supervising the research or teaching. Staff.

PL BR 653.1 Concepts and Techniques in Plant Molecular Biology

Fall. 1 credit. S-U grades optional. Prerequisite: BIOGD 281 and BIOBM 332 or 330 or their equivalent. Recommended: BIOBM 331. Lecs, M W F 10:10-11:00 (12 lecs). Sept. 4-Sept. 30. D. Stern and J. Steffens.

A review and update on molecular biology concepts relevant to plant sciences including DNA synthesis. RNA transcription and processing, and protein structure and translation. Methods applicable to plant molecular biology are described including isolation of nucleic acids, gel electrophoresis, recombinant DNA techniques, mutant production, DNA-protein interactions, and use of antibodies.

PL BR 653.2 Plant Biotechnology (also Plant Pathology 663 and BIO PL 653.2)

Fall. 1 credit. S-U grades optional. Prerequisite: BIO PL 653.1 or permission of instructor. E. D. Earle and M. Zaitlin. Lec, M W F 10:10-11:00 (12 lecs) Sept. 4-Sept. 30.

This course deals with production and use of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

PL BR 653.3 Plant Genome Organization

Fall. 1 credit. Prerequisite: BIOPL 653.1. Lec, M W F 10:10-11:00 (12 lecs) Oct. 2-Oct. 30. S. D. Tanksley.

This course will cover the origins and measurement of nuclear DNA variation in plants as well as the development and exploitation of molecular markers for breeding as well as the isolation of genes underlying interesting phenotypes.

PL BR 694 Special Topics in Plant Breeding

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

PL BR 716 Perspectives in Plant Breeding Strategies

Spring. 3 credits. S-U grades optional. Prerequisite: PL BR 603. Offered odd years. Next offered 1998-99. T 1:25-2:15, R 12:20-2:15. M. E. Sorrells.

Emphasis is on discussion and evaluation of selected benchmark papers and current literature. Selection techniques and breeding objectives, methods, and strategies for both self- and cross-pollinated crops are reviewed and discussed. Extensive outside reading is required.

[PL BR 717 Quantitative Genetics in Plant Breeding]

Spring. 3 credits. S-U grades only. Prerequisites: PL BR 603 and BTRY 601. Offered even years; next offered 1997-98. T R 8:30-9:55. D. R. Viands.

Discussion of quantitative genetics to help make decisions for more efficient plant breeding. Specific topics include components of variance (estimated from mating designs), gene pool development, linkage, heritability, phenotypic and genotypic correlation coefficients, and theoretical gain from selection. During one period, plants in the

greenhouse will be evaluated to provide data for computing quantitative genetic parameters.]

[PL BR 718 Breeding for Pest Resistance]

Spring. 3 credits. Prerequisites: BIOGD 281 or PL BR 225, and PL BR 603 required. An introductory course in Plant Pathology and/or Entomology also highly recommended. Lec, T R 10:10-11:30. M. A. Mutschler.

A multidisciplinary examination of the challenge of incorporating disease and insect resistance into crop plants. Topics covered include national and international germplasm collections, identification of sources of resistance, resistance mechanisms in plants, monogenic and polygenic control of resistance, approaches to breeding for resistance stability of genetic resistance mechanisms, and the use of biochemical/physiological/molecular tools in breeding for pest resistance.]

PL BR 800 Master's-Level Thesis Research

Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students working on a master's thesis.

PL BR 900 Graduate-Level Dissertation

Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students in a Ph.D. program **only before** the "A" exam has been passed.

PL BR 901 Doctoral-Level Dissertation Research

Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students admitted to candidacy **after** the "A" exam has been passed.

PLANT PATHOLOGY

S. A. Slack, chair; J. R. Aist, P. A. Arneson, S. V. Beer, G. C. Bergstrom, B. B. Brodie, A. R. Collmer, T. P. Delaney, W. E. Fry, S. M. Gray, R. K. Horst, G. W. Hudler, R. P. Korf, J. A. Laurence, J. W. Lorbeer, R. Loria, M. T. McGrath, M. G. Milgroom, E. B. Nelson, P. F. Palukaitis, W. A. Sinclair, H. D. Thurston, B. G. Turgeon, O. C. Yoder, M. Zaitlin, T. A. Zitter

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

PL PA 101 Freshman Writing Seminar: Pests, Pesticides, People, and Politics

Fall. 3 credits. Limited to 17 students. Lec, M W F 8:00. P. A. Arneson.

This seminar will examine the use of pesticides, their impact on human health and the environment, and their regulation. Beginning with Rachael Carson's classic *Silent Spring*, we will examine many facets of the pesticide controversy through readings in current popular literature, technical journals, government documents, industry propaganda, and publications of various so-called "public interest groups." We will emphasize the need for critical thinking as we explore the power of the written word to persuade.

PL PA 102 Freshman Writing Seminar: Environmental Issues and the Changing Global Climate

Spring. 3 credits. Limited to 17 students. Lec, T R 11:40. J. A. Laurence.

This seminar provides an opportunity to learn more about the biological, social, and political impact of environmental issues on scales ranging from local to global. Readings, discussions, and some hands-on experience will provide subjects for a seminar designed to teach writing at levels of single sentences to term papers.

PL PA 201 Magical Mushrooms, Mischievous Molds

Spring. 2 credits. S-U optional. Lec, T R 11:15. G. W. Hudler.

A presentation of the fungi and their roles in nature and in shaping past and present civilizations. The historical and practical significance of fungi as decayers of organic matter, as pathogens of plants and animals, as food, and as sources of mind-altering chemicals will be emphasized.

PL PA 241 Plant Diseases and Disease Management

Spring. 4 credits. Prerequisite: one year of biology. Lec, M W F 11:15; lab, T or W 1:25. W. E. Fry.

An introduction to plant diseases, their diagnosis, and their management. Topics covered include fungi, bacteria, viruses, nematodes, and other plant pathogens; disease cycles, plant disease epidemiology, disease forecasting, and the principles and practices of plant disease management. This course is intended for students who want a practical knowledge of plant diseases and their control. It is not an adequate prerequisite for plant pathology courses numbered 600 and above.

PL PA 247 Nature of Sensing and Response

Spring. 1 credit. Prerequisites: Biol. 101-104 or equivalent. Lec, R 1:25-2:15. T. P. Delaney.

The responses of organisms and cells to their surroundings are examined to illustrate how biological systems: sense their environment and communicate sensing into appropriate responses. A variety of responses will be explored to show both the unique features and similar processes that are utilized by widely divergent organisms. Examples will be portrayed of plant and animal mechanisms for light sensing, control of development and responses to disease. Discussion will also examine the role of genetics and biochemistry in understanding signal transduction pathways, as well as the way these systems are perturbed in certain diseases.

PL PA 309 Introductory Mycology

Fall. 3 credits. Prerequisite: a year of biology or equivalent. Concurrent registration in PL PA 319 is recommended. Lec, T R 9:05-9:55; labs, R 1:25-4:25. J. R. Aist.

An introduction to fungi, emphasizing biology, comparative morphology, and taxonomy.

PL PA 319 Field Mycology

Fall. 1 credit. Prerequisite: permission of instructor. R. P. Korf.

Study of mushrooms and other fungi on 7 field excursions followed by 7 evening labs devoted to identification and study of collections under the microscope. Emphasis on ecology, biology, and means of identifica-

tion. There are no lectures; grades will be determined on basis of laboratory final.

PL PA 401 Basic Plant Pathology

Fall. 4 credits. Prerequisite: one year of biology and BIO S 241 or equivalent. Recommended: general microbiology, plant physiology. Lects, T R 11:10; lab, T or W 1:25. W. A. Sinclair.

Principles and practice of plant pathology. Lectures and labs are coordinated to consider types of plant pathogens and their population dynamics, disease cycles, diagnostic criteria and procedures, mechanisms of pathogen attack and plant defense, vector relationships, epidemiology, disease forecasting, loss assessment, and disease control. This course prepares students for graduate-level work in plant pathology.

[PL PA 411 Plant Disease Diagnosis

Fall. 3 credits. For senior undergraduates specializing in plant pathology or pest management and for graduate students with a major or minor in plant pathology or plant protection. Limited to 20 students. Prerequisites: PL PA 241 or equivalent and permission of instructor. Not offered 1996-97. Lec, M 11:15; lab, M W 1:25-4:25. G. W. Hudler.

A method for diagnosis of plant disease is presented with emphasis on contemporary laboratory techniques and effective use of the literature.]

PL PA 443 Pathology of Trees and Shrubs

Fall. 3 credits. Prerequisites: PL PA 241 or equivalents. Lects, M W 11:15; labs, F 1:25-4:25. G. W. Hudler.

For students preparing for careers in horticulture, urban forestry, and pest management. Deals with the nature, diagnosis, assessment, and treatment of diseases of trees and shrubs. Forest, shade, and ornamental plants are considered.

PL PA 444 Integrated Pest Management

Fall. 4 credits. Prerequisites: BIO ES 261, ENTOM 212 or 241, or PL PA 301 or their equivalents or permission of instructor. P. A. Ameson.

Lectures integrate the principles of pest control, ecology, and economics in the management of pest-crop systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

PL PA 494 Special Topics in Plant Pathology

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

PL PA 497 Independent Study

Fall or spring. 1-5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

An opportunity for independent study of a special topic in mycology or plant pathology under the direction of a faculty member.

PL PA 498 Teaching Experience

Fall or spring. 1-5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Undergraduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor.

PL PA 499 Undergraduate Research

Fall or spring. 3-5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

An opportunity for research experience under the direction of a faculty member.

PL PA 642-661 Special Topics Series

Unless otherwise indicated, the following description applies to courses 642-661.

Fall or spring. 1 credit. Prerequisite: permission of instructor. S-U grades only.

Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PL PA 642 Plant Disease Epidemiology

Spring. TBA. M. G. Milgroom.

PL PA 644 Ecology of Soil-Borne Pathogens

Fall or spring. R 12:20. E. B. Nelson.

PL PA 645 Plant Virology

Fall. F 12:20. S. M. Gray.

PL PA 647 Bacterial Plant Diseases

Fall and spring. M 9:05. S. V. Beer. Emphasizes reports of current research in phytobacteriology undertaken in laboratories at Cornell.

PL PA 648 Molecular Plant Pathology

Fall. R 12:20. T. P. Delaney.

PL PA 649 Mycology Conferences

Fall. 1 credit. R. P. Korf.

PL PA 650 Diseases of Vegetable Crops

Fall. TBA. Hours to be arranged. J. W. Lorbeer and T. A. Zitter.

PL PA 652 Field Crop Pathology

Spring. W 8:00. G. C. Bergstrom.

PL PA 654 Diseases of Florist Crops

Spring. F 12:20. R. K. Horst.

PL PA 655 Plant Diseases in Tropical Agriculture

Fall. T 12:20. H. D. Thurston.

PL PA 661 Diagnostic Lab Experience

Summer and fall. 1 or 2 credits. S-U grades only. Requires 3 hrs/wk per credit hour. Hours to be arranged. T. A. Zitter.

For graduate students and advanced undergraduates with a special interest in diagnosing plant diseases. Students will work in the Diagnostic Laboratory (Plant Pathology Department) under supervision of the diagnostician. Coursework or experience in diagnostic techniques is strongly advised. Priority will be given to graduate students in plant pathology and plant protection.

PL PA 662 Molecular Plant-Pathogen Interactions

Spring. 1 credit. Prerequisites: BIOGD 281, BIOBM 330 or 331, and BIOMI 653.1. Lects, M W F 10:10 (12 lecs) Jan. 22-Feb. 17. T. P. Delaney, A. R. Collmer, O. C. Yoder.

An examination of the molecular properties that control the development of host-parasitic interactions in both microorganisms (bacteria and fungi) and higher plants. Contemporary theories describing the genetic mechanisms of pathogenesis and resistance are discussed.

PL PA 663 Plant Biotechnology (PL BR 653.2)

Fall. 1 credit. Prerequisites: BIOGD 281, BIOBM 330 or 331, and BIOPL 653.1.

Lecs, M W F 10:10 (12 lecs) Sept. 4-Sept. 30. M. Zaitlin, E. D. Earle.

PL PA 681 Plant Pathology Seminar

Fall and spring. 1 credit. Required of all plant pathology majors. S-U grades only. W 12:20-1:10.

PL PA 694 Special Topics in Plant Pathology

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

PL PA 701 Concepts of Plant Pathology: Organismal Aspects

Spring. 3 credits. For graduate students with majors or minors in plant pathology; others by permission. Prerequisites: PL PA 401 or equivalent and permission of instructor. Lects, T R 9:05; lab/disc, R 2-4:25. A. R. Collmer.

Concepts in host-pathogen relationships with emphasis on roles of molecules and cells in determining the outcome of an interaction. Genetic, molecular biological, physiological, and cell biological approaches to experimental analysis of exemplary host-pathogen systems will be considered. Historical perspectives and recent research will be reviewed and analyzed. Students prepare and review mock grant proposals.

PL PA 702 Concepts of Plant Pathology: Population Aspects

Fall. 3 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or permission of instructor. Some background in statistics is recommended. Lab = discussion section. Lec, T R 10:10; disc, T 2-4:25. M. G. Milgroom.

Theory and concepts in plant disease epidemiology and population biology of plant pathogens. Topics include: population dynamics of pathogens in time and space, interactions of pathogen and plant populations, and population genetics of pathogens. The discussion section will be used for examining current plant pathology literature and other exercises complementary to lecture material.

PL PA 705 Phytovirology

Spring. 2 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or equivalent. Offered alternate years. M. Zaitlin.

This course considers plant viruses and the diseases they cause. Consideration is given to virus structure and composition, classification, replication, effects on hosts, modes of transmission, and the relationships of these aspects to principles of diagnosis and control.

[PL PA 706 Phytonematology]

Fall. 2 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or equivalent or permission of instructor. Not offered 1996-97.

Deals with morphology, anatomy, biology, physiology, ecology, detection and identification of plant pathogenic nematodes, evaluation of population data, interactions between nematodes and other plant pathogens, and methods of assessment of pathogenicity and plant damage.]

[PL PA 707 Phytobacteriology]

Fall. 2 credits. Prerequisites: general microbiology, lectures and laboratory; Introductory Plant Pathology. Offered alternate years. S. V. Beer.

A consideration of the prokaryotes that cause disease in plants and examples of the diseases they cause. The course emphasizes properties of bacterial pathogens that affect disease, methods for manipulation of the pathogens, and recent developments in phytobacteriology. The current state of knowledge of important phytopathogenic genera including their genetics and mechanisms of pathogenesis will be reviewed. Laboratory practice in isolation, inoculation, identification, genetics, and physiology is included.

[PL PA 709 Phytomycology]

Spring. 2 credits. For graduate students with a major or minor in mycology or plant pathology; others by permission. Prerequisites: PL PA 401 and 309 or equivalents, or permission of instructor. Lec, F 1:25-2:30; lab, 2:30-4:30. J. W. Lorbeer.

Provides basic information on the biology of plant pathogenic fungi with selected emphasis on the structure, ecology, genetics, life cycles, and disease cycles of representative genera and species.

[PL PA 715 Phytovirology Laboratory]

Spring. 2 credits. Limited to 12 students. Prerequisite: permission of instructor. S-U grades only. M. Zaitlin.

[PL PA 735 Advanced Plant Virology]

Spring. 3 credits. Prerequisite: permission of instructors. 3 lecs, hours to be arranged. Not offered 1996-97. P. Palukaitis and M. Zaitlin.

Topics in plant virology, with an emphasis placed on student discussion of current literature. Topics included are viral infection process, viral and viroid replication, viral recombination, viral movement, viral genes and their products, cross protection, detection of viruses, molecular approaches to resistance and the use of viruses as vectors for introducing genetic material into plants.]

[PL PA 738 Genetics and Development of Filamentous Fungi]

Fall. 2 credits. Prerequisite: BIOGD 281 or equivalent. Hours to be arranged. O. C. Yoder, B. G. Turgeon.

Classical and molecular approaches to the study of fungal genetics are discussed. Recently developed molecular technology is highlighted, with emphasis on transformation systems, gene disruption and replacement, gene over-expression, stability of transforming DNA, native transposons and plasmids, karyotyping by chromosome separation, and secretion of heterologous proteins. Application of contemporary methodology to genetic

dissection of developmental processes, such as plant pathogenesis (including host and tissue specificity), the mitotic and meiotic cell cycles, and conidium formation is described. Experimental evidence supporting various hypotheses to explain fungal pathogenicity is evaluated. Examples are chosen from investigations of recently developed plant pathogenic fungi such as *Cochliobolus heterostrophus* and *Magnaporthe grisea* and from well known genetic models such as *Aspergillus nidulans* and *Neurospora crassa*.

[PL PA 739 Advanced Mycology]

Fall. 4 credits. Prerequisites: PL PA 309 or equivalent, a course in genetics, and permission of instructor. Offered alternate years. Not offered 1996-97. R. P. Korf. A detailed study of the taxonomy, nomenclature, and biology of four major groups of fungi (rusts, smuts, peronosporales, and fungi imperfecti).]

[PL PA 788 Research in Molecular Plant Pathology]

Fall and spring. 2, 4, or 6 credits. Prerequisite: permission of instructor. S-U grades only. S. V. Beer. Guided research experiences in laboratories addressing questions concerning the interaction of pathogens (bacteria, fungi, viruses) and plants at the molecular level. Intended for beginning graduate students with a concentration in Molecular Plant Pathology and sufficient theoretical background and practical laboratory experience. Students submit plans and reports on each research experience.

[PL PA 797 Special Topics]

Fall or spring. 1-5 credits. S-U grades optional. An opportunity for independent study of a special topic.

[PL PA 798 Graduate Teaching Experience]

Fall or spring. 1-5 credits. S-U grades. Hours to be arranged. Staff. Graduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor. This experience may include, but is not limited to, preparing, assisting in, and teaching laboratories, preparing and delivering lectures, leading discussion sessions, and tutoring.

[PL PA 800 Master's-Level Thesis Research]

Fall or spring. S-U grades optional. Credit to be arranged. Prerequisite: permission of adviser. Graduate faculty. For student's working on a master's degree.

[PL PA 900 Graduate-Level Thesis Research]

Fall or spring. S-U grades optional. Credit to be arranged. Prerequisite: permission of adviser. Graduate faculty. For students in a Ph.D. program who have not passed the "A" exam.

[PL PA 901 Doctoral-Level Thesis Research]

Fall or spring. S-U grades optional. Credit to be arranged. Prerequisite: permission of adviser. Graduate faculty. For doctoral candidates who have passed the "A" exam.

POMOLOGY (FRUIT SCIENCE)

See Horticultural Sciences.

RURAL SOCIOLOGY

D. L. Brown, chair; P. R. Eberts, E. C. Erickson, S. Feldman, J. D. Francis, C. C. Geisler, N. Glasgow, D. T. Gurak, M. M. Kritz, T. A. Hirschl, W. B. Lacy, T. A. Lyson, P. D. McMichael, M. J. Pfeffer, J. M. Stycos, R. W. Venables, L. B. Williams

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

R SOC 100 American Indian Studies: An Introduction

Fall. 3 credits. S-U grades optional. W 7:30-10:30 p.m. R. W. Venables. This course provides a foundation for the study of American Indians. Emphasis will be placed on social, cultural, historical, educational, and human development. Guest lecturers from Cornell's staff and the Indian communities and media presentations.

R SOC 101 Introduction to Sociology

Fall or spring. 3 credits. Lecs, T R 10:10-11:00; sec, various times. C. C. Geisler and staff.

A survey of concepts and theories in sociology and an examination of social forces and institutions shaping modern societies. The major topics include culture and socialization, social stratification and social class, age, race, ethnic and gender inequality, deviance and social control, religious, education, and occupation organizations, urbanization and demographic change, social change and social movements, bureaucracy, environmentalism, and the uses of sociology.

R SOC 175 Issues in Contemporary American Indian Societies

Spring. 3 credits. S-U grades optional. W 7:30-10:30 p.m. R. W. Venables. Early American Indian history and the postcontact period will be reviewed with an emphasis given to developments since 1789. Topics such as land claims, treaties, education, mineral and water rights, social problems, militant organizations, and civil rights will be covered, with guest lecturers and media presentations.

R SOC 200 Social Problems

Fall. 3 credits. S-U grades optional. M W F 9:05-9:55. T. A. Hirschl. This course investigates a variety of current social problems from a sociological perspective. The course begins with an overview of sociological theories that may account for social problems and identifies common as well as competing elements of these theories. The theoretical framework is then applied to analyses of a variety of social problems, and these may vary semester to semester. Examples of social problems are homelessness, teenage pregnancy, deindustrialization, and homicide, among others. Emphasis in the course will be given to how social problems are measured, and students will be given an opportunity to test theories with data analysis.

R SOC 201 Population Dynamics

Spring. 3 credits. S-U grades optional.
ALS students must register for this course
as R SOC 201. T R 8:40-9:55.
L. B. Williams.

This course provides an introduction to population studies. The primary focus is on the relationships between demographic processes (fertility, mortality, and migration) and social and economic issues. Discussion will cover special topics related to population growth and distribution, including marriage and family formation, labor force participation, urban growth and urbanization resource allocation, and the environment.

R SOC 205 International Development

Spring. 3 credits. M W F 10:10-11:00.
P. D. McMichael.

New questions concerning development models in the post-Cold War era are examined from a comparative and global perspective on North-South relations. While the focus is the "Third World," the issues confronting it are often global, even when they concern the most basic issue of food security. Using films and various theoretical perspectives, we examine Southern societies (economies, ecologies, class/gender relations) and the impact of global forces on Southern resources. Such forces include global food systems, new forms of export production, development agencies, multilateral institutions, local bureaucracies, transnational corporations, the debt crisis, and new technologies. We will also examine the new social movements, such as environmentalism, feminism, and grassroots activism.

R SOC 206 Gender and Society (also Women's Studies 206)

Spring. 3 credits. Lec, M W 11:15-12:05;
sec, various times. N. Glasgow.

Course will familiarize students with origin of gender hierarchies, social and behavioral similarities/differences between females and males, and degree that biological, psychoanalytic, psychological and sociological perspectives help to understand the differences. United States and cross-cultural comparisons of the consequences of gender inequality will be a major focus of the course. Objectives will be met through lectures, readings, films, participant observation and personal experiences.

[R SOC 208 Technology and Society

Fall. 3 credits. Offered alternate years.
Not offered fall 1996 and 1998; next
offered fall 1997. M W F 10:10-11:00.
C. C. Geisler.

The relationship between technology and society is among the most pervasive concerns of our time. Ultimately, what makes a technology useful or "appropriate" is a sociological question. Lectures and readings review classical debates regarding technology and society. Herein, students compare high technologies and appropriate technologies, identify problems associated with technology transfer to other societies, and create a list of important criteria by which technologies are judged appropriate or inappropriate using numerous case studies.]

R SOC 213 Research Methods for the Social Sciences

Fall. 3 credits. T R 11:40-12:55.
L. B. Williams.

A survey of approaches to conducting research in sociology will be presented. Definitions of social indicators will be devised

and issues of data management and analysis will be demonstrated. Illustrations will be provided from data on both developed and developing countries.

R SOC 220 Sociology of Health of Latinos and Ethnic Minorities (also Latino Studies Program 220)

Fall. 3 credits. S-U grades optional.
T R 10:10-11:25. P. A. Parra.

Discusses the health status of Latinos in the United States. Specifically, it will explore intragroup diversity such as migration, economic status and the influence of culture and the environment on health status and access to health care. Although focus is on Latino population, discussion encompasses other minorities who face similar problems.

R SOC 301 Theories of Society

Fall. 3 credits. Prerequisites: rural sociology or sociology course. S-U grades optional. M W F 11:15-12:05.
P. R. Eberts.

An introduction to the "classical" sociological theorists for juniors, seniors, and beginning graduate students. Emphasis on (1) the central concepts of the sociological tradition, (2) major classical theorists (Marx, Durkheim, Weber) and contemporary counterparts. The relevance of these theories of society to current events and social problems will be stressed.

[R SOC 318 Ethnohistory of the Northern Iroquois

Fall. 3 credits. S-U grades optional. Not offered 1996-97. T 1:25-4:25.
R. W. Venables.

The development of Iroquois (Houdeñosau-nee) history and culture is traced to the present day.]

R SOC 324 Environment and Society (also Science and Technology 324)

Spring. 3 credits. M W F 1:25-2:15.
M. J. Pfeffer.

The main objective of the course is to develop a critical understanding of the dominant trends in modern U.S. environmental thought like preservationism, conservationism, deep ecology, ecofeminism, social ecology, NIMBYism, risk assessment, and environmental equity. Another objective is to familiarize students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands management, biodiversity, deforestation, climate change, and ozone depletion. A sociological framework is applied to evaluate interrelationships between substantive and philosophical/theoretical issues.

R SOC 331 Demographic Analysis in Business and Government

Spring. 3 credits. S-U with permission of instructor. Prerequisite: R SOC 213 or a statistics course. M W F 1:25-2:15.
W. Brown.

An overview of the way demographic analysis is used in business and government. Through the use of case study and problem solving methods of learning, students come to understand how demographic concepts, methods, and data are used by demographers to solve problems in business and government. The course is designed for upper-level undergraduates from a variety of academic disciplines and career orientations. Students will work on problems drawn from consumer marketing, education, housing and real estate

development, human resources, health services.

R SOC 336 Rural Areas in Metropolitan Society

Fall. 3 credits. S-U grades optional.
Prerequisite: a social science course.
Offered alternate years. T R 11:40-12:55.
D. L. Brown.

This course analyzes the changing structure and role of small towns and rural areas in developed nations. The focus is on adaptation of rural communities and populations to major trends including increased societal differentiation and complexity; increased societal interdependence, and rapid social, economic, technological, and ecological change. Alternative policies to ameliorate rural problems and/or enhance rural contributions to national development are considered. Students participate in group projects in rural communities.

R SOC 370 Comparative Issues in Social Stratification

Fall. 3 credits. Prerequisite: an introductory social science course. T R 1:25-2:40.
T. A. Lyson.

This course reviews both classical and contemporary issues in the comparative social stratification literature. Particular attention is given to the changing configurations of different labor markets, debates on the meaning of new economic constituencies, and the role of gender, race, ethnicity, and sexuality in assessing the patterns, meaning and experiences of inequality. Throughout the course we will give special attention to the importance of understanding how questions of measurement are constructed and employed in understanding social inequality.

R SOC 380 Independent Honors Research in Social Science

Fall and spring. 1-6 credits. Limited to students who have met the requirements for the honors program. A maximum of 6 credits may be earned in the honors program.

Students should select a faculty adviser and begin proposal development during the junior year. Students must submit written proposals by the third week of the semester of their senior year to the departmental honors committee representative, M. Pfeffer.

R SOC 408 Human Fertility in Developing Nations

Spring. 3 credits. Offered alternate years.
T R 2:55-4:10. J. M. Stycos.

A review of the major literature dealing with the social causation of variation in human fertility. Emphasis will be on international comparisons and on the methodology of field research.

[R SOC 418 Population Policy

Spring. 3 credits. Prerequisite: R SOC 201 or permission of instructor. Offered alternate years. Not offered spring 1997 and 1999; next offered spring 1998.
T R 10:10-11:25. J. M. Stycos.

The ways in which societies try to affect demographic trends. Special focus is on government policies and programs to reduce fertility.]

[R SOC 425 Gender Relations, Gender Ideologies, and Social Change

Spring. 3 credits. Offered alternate years.
Not offered spring 1997 or 1998; next offered spring 1999. R 1:25-4:25.
S. Feldman.

Drawing on feminist and sociological theory and methods, within a comparative and global framework, the course examines gender ideologies, work-family linkages, and the transformation of the labor process as these reconfigure gender relations, state capacities, and cultural practices.]

[R SOC 430 Migration and Population Redistribution]

Fall. 3 credits. Prerequisite: undergraduates, one demography course or permission of instructor. Offered alternate years. Not offered fall 1996 and 1998; next offered fall 1997. T R 8:40-9:55. D. L. Brown.

This course analyzes the determinants and consequences of internal migration in urban and rural areas of developed and developing nations. Economic and demographic interrelationships are emphasized as are implications of changes in local and regional population size and composition for labor supply, the demand for goods and services, and infrastructure. Public policy implications of the inter-relations are investigated. Techniques and measurement issues associated with the analysis of migration and population distribution are discussed.]

R SOC 431 Social Demography of Minorities

Spring. 3 credits. S-U option. M W 8:40-9:55. D. T. Gurak.

Ethnic conflict and accommodation is examined in diverse settings (societies and historical periods). Demographic indicators (such as residential segregation, marital patterns, mortality and fertility differentials, and occupational mobility) of underlying social conditions serve as the principal vehicle for evaluating the status of ethnic relations.

[R SOC 437 Aging and Aging Social Policy in the 1990s]

Fall. 3 credits. Prerequisite: R SOC 101 or its equivalent. Not offered fall 1996; next offered fall 1997. T R 11:40-12:55. N. Glasgow.

An analysis of the "graying" of America and the responses of the public and private sectors to this demographic revolution. Examines the interplay between basic and applied knowledge in social gerontology. Explores the formal and informal networks of services, in both rural and urban environments, that help maintain independent living arrangements by the elderly.]

R SOC 438 Social Demography

Fall. 3 credits. M W 8:40-9:55. D. T. Gurak.

This course surveys the methods, theories, and problems of population studies. Attention is directed to the social, economic, and cultural determinants and consequences of population growth, distribution, and change. The core areas of demography, fertility, mortality, and migration are studied. Comparisons are made between developed and developing areas and between Africa, Asia, and Latin America.

[R SOC 440 The Social Impact of Resource Development]

Spring. 3 credits. S-U grades optional. Offered alternate years. Not offered spring 1997 and 1999; next offered spring 1998. C. C. Geisler.

Social impact assessment (SIA) is a method of anticipating unwanted side-effects of projects, policies, and new technologies before they

happen and a decision tool for mitigation. The seminar explores SIA applications in different parts of the world and pays particular attention to impacts on native and indigenous peoples. Students learn practical SIA skills and related theoretical/conceptual debates.]

[R SOC 442 American Indian Philosophies: Selected Topics]

Spring. 3 credits. S-U grades optional. Prerequisite: Permission of instructor. Not offered 1996-97. T 1:25-4:25. R. W. Venables.

This course provides an opportunity for students to read and discuss a wide range of American Indian philosophies.]

[R SOC 490 Society and Survival]

Fall. 3 credits. Prerequisite: introductory sociology course or permission of instructor. Not offered 1996-97. T R 2:55-4:10. D. T. Gurak.

Course surveys existing theories, methodological techniques, and research results relating to how social, economic and cultural structures and processes affect survival chances in diverse societies. A comparative framework is presented, and the utility of existing knowledge for policy-related applications in different societies is assessed. Attention is given to the problems associated with imputing causality in morbidity and mortality data.]

[R SOC 492 Contemporary Issues Seminars: Developments in the Pacific Rim]

Spring. 1-2 credits. Not offered 1996-97. M 1:25-2:15. P. D. McMichael.

Pacific Rim dynamics challenge U.S. supremacy, Western conceptions of modernization, and "Third World" unity. We relate these trends to regional political, economic, and cultural forces, including the Japanese model, the "Newly Industrializing Countries" (e.g., South Korea, Taiwan), the "third tier" countries (e.g., Indonesia, the Philippines), and emerging Chinese markets.]

R SOC 494 Special Topics in Rural Sociology

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

R SOC 495 Population, Environment, and Development in Sub-Saharan Africa

Fall. 3 credits. Offered alternate years. M W 2:55-4:10. M. M. Kritz.

In the past three decades, countries in sub-Saharan Africa have experienced rapid population growth, weak economic growth, and growing environmental problems. This course examines how these problems are interrelated and looks at possible solutions. After reviewing trends in population, environment and development within the region, the course focuses on specific problems, including: urbanization, health and survival, population pressure and sustainable agriculture, refugees, and gender/family/community structures.

R SOC 497 Independent Study in Rural Sociology

Fall or spring. 3 credits variable (may be repeated for credit). Students must register with an Independent Study form (available at 140 Roberts Hall). S-U grades optional. Informal study may include a reading course, research experience, or public service experience.

[R SOC 603 Classical Sociological Theory]

Fall. 4 credits. Offered alternate years. Not offered fall 1996 and 1998; next offered fall 1997. S-U grades optional. Prerequisites: open to graduate students and undergraduates with permission of instructor. T R 2:55-4:10. M. J. Pfeffer.

Students will review the main streams of classical sociological thought, focusing on the work of Weber, Durkheim, and Marx. Course materials include original texts and secondary literature, used to examine the concepts, methods and explanation in classical sociological thought. Important objectives of the course will be to identify the philosophical and conceptual core of the discipline and to critically evaluate the relevance of the classical theories to contemporary social change and development.]

[R SOC 604 Theories of Social Change]

Spring. 3 credits. S-U grades optional. Not offered 1996-97. T R 2:55-4:10. P. D. McMichael.

This course surveys major twentieth-century social theories, focusing on lineages from classical theory and on theories relevant to understanding the processes of social change. Major topics covered will include mid-century functionalism, conflict theories, neo-Marxism, neo-Weberianism, substantive economic sociology, and world-systems theory. Other topics, such as the "new sociology of culture," critical theory, structuration theory, neofunctionalism, the new methodological individualism, and the macro-micro link, will be covered briefly.]

R SOC 606 Contemporary Sociological Theories of Development

Spring. 3 credits. T R 2:55-4:10. Staff. Development is now understood to include life expectancy, health and education in addition to material well-being, and it remains a problem everywhere, in both the rich and poor countries, and within them, for regions and communities. Sociological explanations of development have recently crystallized around three competing positions: political economy, rational choice institutionalism, and sociological structuralism. The course will focus on these theories, their antecedents and close cousins, and their research and policy implications.

R SOC 609 Population and Environment

Spring. 3 credits. T R 10:10-11:25. J. M. Stycos.

A voluminous new literature is emerging, attempting to trace the connections between population dynamics and environmental change. The seminar will be devoted to a critical examination of this literature, stressing population change both as cause and consequence of environmental factors. In addition, the social and economic forces that mediate the population-environment relation will be examined.

R SOC 618 Research Design I

Fall. 4 credits. Prerequisite: a statistics course. Offered alternate years.

T R 12:20-2:15. J. D. Francis.

First of a two-semester sequence (may be taken individually) in introductory graduate methods. Discusses problems of measurement, the design of instruments, and problems of reliability and validity. Common forms of measuring instruments are discussed. Concludes with an introduction to factor analysis. Students apply principles to development of several common types of scales. Computers will be used extensively.

R SOC 619 Research Design II

Spring. 4 credits. Prerequisite: an introductory methods course and a statistics course. Offered alternate years.

T R 12:20-2:15. J. D. Francis.

The second part of the two-semester sequence in introductory graduate methods, with emphasis on an intermediate-level treatment of the following topics: regression, analysis of variance, analysis of covariance. Special attention is given to use of categorical variables in regression. Students develop and examine several analytical models using actual data to familiarize themselves with data handling and processing. Extensive use of computers.

[R SOC 625 State, Economy, and Society]

Spring. 3 credits. Offered alternate years. Not offered spring 1997 and 1999; next offered spring 1998. W 1:25-4:25.

P. D. McMichael.

Reviews major issues concerning the relations between political and economic institutions and the role of states, markets, firms, social movements, and cultural institutions in the process of social change. Theoretical perspectives are drawn from classical and modern social theory, including the application of comparative and historical methodologies. Substantive themes concern debates about the trajectories and crises of capitalism and socialism and the modern world economy.]

[R SOC 630 Field Research Methods and Strategies]

Fall. 3 credits. Not offered fall 1996; next offered fall 1997. T R 8:40-9:55.

L. B. Williams.

Course will cover a variety of methods: structured surveys, focus groups, in-depth interviews, participant observation, archival record analysis, among others. Frameworks by which research questions can be matched with appropriate field methodologies, choice of sample, data collection, etc., will be discussed. Assessment of strengths and weakness of various strategies of field research. Discussion of practical matters such as fieldworker recruitment and training, and data processing issues and ethnics of field work.]

[R SOC 640 Community and Changing Property Institutions]

Fall. 3 credits. Offered alternate years. Not offered fall 1997 and 1999; next offered fall 1998. R 1:25-4:25.

C. C. Geisler.

The seminar acquaints students with the evolution of property rights, from antiquity to the present, and features a number of property debates (the biological basis of ownership; private versus public ownership; property and value; the so-called "tragedy of the commons"; the "new" property). Readings

explore land use regulation and property rights, common property issues, opposing land ethics, and new property forms in the future.]

[R SOC 641 Politics and Economics of Rural and Regional Development]

Fall. 3 credits. Limited to upperclass or graduate students. S-U grades optional. Offered alternate years. Not offered fall 1996 and 1998; next offered fall 1997.

M 12:20-2:50. T. A. Lyson.

A survey of social, political, and economic factors in regional development. Theories of regional development and underdevelopment are explored. The neoclassical paradigm is offered as a benchmark against which other more "structural" alternatives can be compared. The politics of rural and regional development are explored through sets of readings dealing with industrial policy.]

[R SOC 643 Land Reform Old and New]

Spring. 3 credits. Offered alternate years. S-U grades optional. Not offered spring 1997 and 1999; next offered spring 1998.

R 1:25-4:25. C. C. Geisler.

Land reform continues to be a major cornerstone of development planning. Between 1980 and 2000 the number of landless and near-landless in the Third World will approach one billion. Though land reform is a principal source of hope for the landless, its meanings are many and its models are controversial. The seminar acquaints students with land reform in antiquity as well as in contemporary settings (among others, Japan, the Philippines, Israel, India, Brazil, Mexico, Russia, and the United States). Perennial issues of equity, efficiency, and sustainability will be discussed in each of these case study areas.]

[R SOC 645 Rural Economy and Society]

Fall. 3 credits. Offered alternate years. Not offered 1996-97. T 1:25-4:25.

S. Feldman.

The structure and dynamics of rural communities are examined in a comparative historical framework focusing on continuities and divergences among advanced and post colonial settings. Major topics include classical theories of rural social organization and their retheorization in contemporary peasant studies and agrarian political economy literatures, theorizations of locality, rurality and spatial complexity within the world economy, and critical issues framing the relationship between political and labor market restructuring and petty commodity and household production systems.]

R SOC 655 Advanced Techniques of Demographic Analysis

Spring. 3 credits. Prerequisites: CEH 606, graduate standing or permission of instructor. M 7:30-10:30 p.m.

D. T. Gurak.

An examination of analytical techniques that assumes a basic knowledge of demographic data and research methodology. Life tables, demographic estimates with incomplete data, survey techniques to supplement inadequate vital registration systems, data management, multi-level models, and other multivariate procedures are among the topics to be covered.

R SOC 660 Social Analysis of Ecological Change

Spring. 3 credits. Offered alternate years. Prerequisite: graduate standing or permission of instructor. T 9:05-12:05.

P. Taylor.

Scientific studies of ecological and social processes, together with the interpretation of those studies by historians, sociologists, and anthropologists. Topics include ideas of nature, colonial conservation science, systems ecology, the tragedy of the commons, neo-Malthusianism, human ecology, local knowledge, nomadic pastoralism, political ecology, women and eco-development, and global environmental discourse.

[R SOC 661 Sustainable Agriculture and Development]

Fall. 3 credits. S-U grades optional. Offered alternate years. Not offered fall 1996 and 1998; next offered fall 1997.

Prerequisites: graduate standing or instructor's permission. W 1:25-4:25.

T. A. Lyson.

This course examines the relationship between local agriculture and development as these are embedded in a globalizing economy. Topics include an examination of the social scientific theoretical underpinnings of conventional agriculture, the social origins of sustainable agriculture, environmental and community sustainability, agricultural diversification strategies, and the political and policy contexts of more sustainable agricultural systems.]

R SOC 671 Epistemological Challenges to Social Science Paradigms: A Feminist Inquiry (also Women's Studies 671)

Spring. 3 credits. Offered alternate years. R 1:25-4:25. S. Feldman.

Employing a sociology of knowledge perspective and comparative approach within the social sciences, this course will review and analyze contemporary themes in the feminist epistemological critique of sociological methods. It will begin by identifying what constitutes mainstream explanations within the social sciences, introduce early feminist challenges to androcentric paradigms, move to examine the philosophical and post-modern challenge, and outline issues critical to "doing fieldwork." We will examine studies which address issues of class, race ethnicity and constructions of otherness.

R SOC 675 Global Patterns of International Migration

Fall. 3 credits. Offered alternate years. M 7:30-10:30 p.m. M. M. Kritz.

International migration to the United States and other countries has increased in recent decades. What accounts for that trend in an era when large-scale international migration is supposed to have ended and what are the implications of immigration for receiving countries? Theories and research on these issues are examined in the course from a comparative and interdisciplinary perspectives. Several migration systems are examined, including those of North America and the European Community. Policies shaping immigration are also reviewed.

R SOC 694 Special Topics in Rural Sociology

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and

will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

R SOC 715 Comparative Research Methods

Fall. 3 credits. Offered alternate years.
M 12:20-2:50. T. A. Lyson.

This seminar focuses on the comparative method in the social sciences. The logic of comparative inquiry forms the substantive base of the course. Topics include cross-national and cross-regional research design and an analysis of the comparative case study approach. Illustrations of the comparative research approach will cover a range of data types and problems.

[R SOC 718 Multidimensional Measurement and Classification

Fall. 4 credits. Prerequisite: previous course work in scaling and statistics.
Offered alternate years. Not offered fall 1996 and 1998; next offered fall 1997.
T R 12:20-2:15. J. D. Francis.

An advanced course in measurement and scaling, building from work by Thurstone, Guttman and Coombs to multidimensional measurements. Topics include philosophy of factor analysis, factor-analysis models, factoring design, factoring techniques, and comparison with factor-analysis models. Cluster analysis and multidimensional scaling are the other major techniques discussed. As matrix algebra is an integral part of these procedures, class time is devoted to this topic. Computers are used to analyze fit to models.]

[R SOC 719 Logistic and Log Linear Models

Spring. 4 credits. Prerequisites: two courses in statistics and one in methods.
Offered alternate years. Not offered spring 1997 and 1999; next offered spring 1998.
T R 12:20-2:15. J. D. Francis.

The first part of the course reviews multiple regression theory and procedures, after which extensions of these models to categorical data are discussed. Consideration is given to violations of assumptions and their effects. Then more advanced regression concepts and estimation techniques are discussed. The main focus of the course is on logit and log linear models. Computerized labs are an integral part of the course.]

R SOC 721 Sociology of Environment and Development

Fall. 3 credits. Offered alternate years.
S-U optional. W 10:10-12:35.
M. J. Pfeffer.

This course examines society/environment relations in the contemporary environmental discourse and in sociology. Students evaluate such topics as sustainability, science and ethics, and the definition of nature. The central objective is to evaluate sociological theories' treatment of the problems of environmentalism. Subsidiary objectives include the identification of key sociological issues in contemporary environmentalism, and review of environmental themes in sociological theory.

R SOC 725 The Sociology of "Third World" States

Fall. 3 credits. Offered alternate years.
T 1:25-4:25. S. Feldman.

This course examines how processes of political and economic restructuring have

reshaped state capacities and processes of state formation. Particular attention is paid to questions of class formation, corporatist alliances, transnational interests, and alternative development strategies with the emergence of austerity, privatization and trade liberalization and its neoliberalist ideology. Critical to this discussion are the contours of authoritarianism, nationalism, communalism and fundamentalism as these reconfigure national and regional alliances and practices.

R SOC 730 Sociology of the World Economy

Spring. 3 credits. S-U grades optional.
Offered alternate years. W 1:25-4:25.
P. D. McMichael.

Analyses of social change and development are increasingly sensitive to global context, including the sociology of the world economy as a multi-layered entity, anchored in an evolving division of world labor and interstate system. The analysis of transnational economic and cultural processes (such as food regimes, commodity chains, and international labor complexes), has substantive and methodological dimensions, considering a variety of levels and kinds of analysis of global processes. This includes global theories (and their limits), and methods of situating local processes within their world-historical context.

[R SOC 741 Community Development and Local Control

Spring. 3 credits. Offered alternate years.
Not offered 1996-97. W 1:25-4:25.
C. C. Geisler.

Theories of community growth and decline and the current debate over the place of local control in community development in general are considered. Salient themes include the role of neopopulism in community development, changing institutions of property as community development occurs, and changing definitions of "community."]

R SOC 771 Special Seminar

Fall or spring. Credit to be arranged.
Limited to graduate students; others by permission of instructor.

R SOC 791 Teaching Experience

Fall or spring. 1-3 credits. Limited to graduate students. S-U grades only.
Participation in the ongoing teaching program of the department.

R SOC 792 Public Service Experience

Fall or spring. Credit to be arranged.
Limited to graduate students. S-U grades optional.

Participation in the ongoing public service activities of the department.

R SOC 800 Master's-Level Thesis Research

Fall or spring. Credit to be arranged.
Prerequisite: permission of instructor.
S-U grades optional. Graduate faculty.

For students admitted specifically to a Master's program.

R SOC 871-874 Informal Study

Fall or spring. Credit to be arranged.
Limited to master's and doctoral degree candidates with permission of the graduate field member concerned. S-U grades optional.

R SOC 871 Rural Sociology

R SOC 872 Development Sociology

R SOC 873 Organization Behavior and Social Action

R SOC 874 Methods of Sociological Research

R SOC 900 Graduate-Level Thesis Research

Fall or spring. Credit to be arranged.
Prerequisite: permission of instructor.
S-U grades optional. Graduate faculty.
For students in a Ph.D. program **only before** the "A" exam has been passed.

R SOC 901 Doctoral-Level Thesis Research

Fall or spring. Credit to be arranged.
Prerequisite: permission of instructor.
S-U grades optional. Graduate faculty.
For students admitted to candidacy **after** the "A" exam has been passed.

Related Courses in Other Departments

(Others may be added)

Introduction to Sociology (SOC 101)

Population Dynamics (SOC 205)

Social Analysis of Ecological Change (S&TS 660 and B&SOC 460)

Population Policy (B SOC 414)

Gender Relations, Gender Ideologies, and Social Change (WMNS 524)

Summer Session Courses

Introduction to Sociology (6-week session)

Environment and Society (3-week session)

Successful Aging: Today and Tomorrow (3-week session)

SOIL, CROP, AND ATMOSPHERIC SCIENCES

J. M. Duxbury, chair; M. Alexander, P. C. Baveye, D. R. Bouldin, R. B. Bryant, J. H. Cherney, S. J. Colucci, K. H. Cook, W. J. Cox, S. D. DeGloria, E. C. Fernandes, G. W. Fick, D. L. Grunes, R. R. Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

Courses by Subject

Atmospheric Science: 101/102, 131, 250, 331, 332, 334, 341, 342, 352, 353, 435, 444, 446, 447, 451, 456, 457, 635, 646, 652, 692, 850, 950, 951

Crop Science: 311, 312, 314, 315, 317, 608, 610, 612, 613, 614, 642, 690, 691, 820, 920, 921

Environmental Information and Analysis: 420, 461, 620, 660, 675

Soil Science: 260, 321, 362, 363, 364, 365, 371, 372, 373, 385, 471, 473, 483, 663, 666, 667, 669, 671, 681, 693, 880, 980, 981

General Courses

SCAS 190 Sustainable Agriculture

Fall. Credits variable, 2 or 3. Limited to 60 students. S-U grades optional. Lec, R 10:10; labs, M 2:00-4:25, T 10:10-12:35. G. W. Fick.

This course is designed to be an enjoyable introduction to basic food production resources (soils, crops, and climates), and it emphasizes management concepts that conserve or renew those resources for continuing benefit to society. The information is of general value for non-majors and students new to the field. Laboratories include several field trips and stress hands-on experience with soils, crops, and descriptive climatology. Written assignments are prepared for the World Wide Web. An extra credit can be earned by participation in team preparation and delivery of a lesson in sustainable agriculture.

SCAS 494 Special Topics in Soil, Crop and Atmospheric Sciences (undergraduate level)

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

SCAS 497 Individual Study in Soil, Crop, and Atmospheric Sciences

Fall or spring. 1-6 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).

The topics in soil science or crop science or atmospheric science are arranged at the beginning of the term for individual study or for group discussions.

SCAS 498 Teaching Experience in Soil Science, Crop Science, and Atmospheric Science

Fall or spring. 1-5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Teaching experience in soil science, crop science, or atmospheric science is obtained by assisting in the instruction of a departmental course.

SCAS 499 Undergraduate Research

Fall or spring. Credit to be arranged. Students must register with an Independent Study form (available in 140 Roberts Hall).

Independent research on current problems selected from any phase of crop science, atmospheric science, or soil science.

SCAS 694 Special Topics in Soil, Crop and Atmospheric Sciences (graduate level)

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

SCAS 695 Planning and Reporting Research

Spring. 2 credits. Prerequisite: graduate student status or permission of the instructor. Limited to 10 students. Lec to be announced. G. W. Fick.

This course is designed to prepare students in the SCAS Department and closely related fields for planning their research and reporting research results. Emphasis is given to literature reviews, scientific writing and reviewing (either thesis proposals, grant proposals, or manuscripts for publication), and slide and poster presentations. Students are expected to work closely with their major professor as well as the instructor of the course.

Atmospheric Science

SCAS 101/102 Science of Earth Systems Colloquium (also ABEN 120/121, GEOL 123/124)

Fall and spring. 2 credits. Lec, T 1:25-4:10. K. H. Cook.

Weekly one-hour seminars followed by discussion of current topics in the study of the earth system. Introduces the student to scientific issues relating to understanding our planet and managing the environment. See "Interdisciplinary Centers, Programs, and Studies" in the introductory section of the catalog for a complete description of a new program in the Science of Earth Systems.

SCAS 131 Basic Principles of Meteorology

Fall. 3 credits. Lects, T R 11:15; lab, T W or R 1:25-4:25 and M W 7:00-9:30 p.m. M. W. Wysocki.

A simplified treatment of the structure of the atmosphere: heat balance of the earth; general and secondary circulations; air masses, fronts, and cyclones; and hurricanes, thunderstorms, tornadoes, and atmospheric condensation. In the laboratory, emphasis is on techniques of analysis of weather systems.

SCAS 250 Meteorological Observations and Instruments

Spring. 3 credits. Prerequisite: SCAS 131. Lects, M W 12:20; lab, W 1:25-3:20. M. W. Wysocki.

Methods and principles of meteorological measurements and observations, including surface, free-air, and remote systems. Instrument siting, mounting, and protection. Instrument response characteristics, calibration, and standardization. Recorders and data-logging systems. Laboratory exercises in observation and data analysis. Intended to serve as preparation for Observers Examination. Lab fee, \$45.

SCAS 331 Climate Dynamics (also ASTRO 331)

Fall. 4 credits. Prerequisites: MATH 112 or 192 or equivalent. Lects, M W F 11:15-12:05; disc, R 1:25. K. H. Cook, P. J. Gierasch.

Processes that determine climate and contribute to its change are discussed, including comparisons with climates of other planets. Applications to problems of climate change and variability include the astronomical theory of ice ages, greenhouse warming, the ozone hole, African drought, and Amazonian deforestation.

SCAS 332 Evolution of the Earth System (also SES 302, GEOL 302)

Spring. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. Lects, M W F 11:15-12:05; disc, T 1:25. B. Isacks and others.

Co-evolution of life and the earth system: Earth's early history; plate tectonics, continental drift and climate changes during the past billion years; mountain building, ice ages, and our own emergence during the past ten million years. Introduction to methods of interpreting information preserved in the rock record.

SCAS 334 Microclimatology

Spring. 3 credits. Recommended: a course in physics. T R 10:10-11:25. D. S. Wilks.

The relationships of radiant energy, temperature, wind, and moisture in the atmosphere near the ground. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined, with emphasis on the energy balance.

SCAS 341 Atmospheric Thermodynamics and Hydrostatics

Fall. 3 credits. Prerequisites: one year of calculus and one semester of physics. M W F 9:05-9:55. W. W. Knapp.

Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics covered include thermodynamic processes of dry air, water vapor and moist air, and concepts of hydrostatics and stability.

SCAS 342 Atmospheric Dynamics

Spring. 3 credits. Prerequisites: one year each of calculus and physics. M W F 10:10. W. W. Knapp.

Introduction to atmospheric dynamics and to the methods of description and quantitative analysis used in meteorology. Topics considered include equations of atmospheric motion, motion in the free atmosphere, vertical variations of wind and pressure fields, mathematical representation and characteristics of fronts, mechanisms of pressure change, concepts of circulation and vorticity, and effects of friction on atmospheric motion.

SCAS 352 Synoptic Meteorology I

Spring. 3 credits. Prerequisites: SCAS 341 and concurrent enrollment in SCAS 342. Lects, T R 9:05; lab, M 1:25-3:25. M. W. Wysocki.

Weather map analysis and forecasting techniques are studied by applying the principles of fluid and heat flow. This course will strengthen previously introduced meteorological concepts that will be applied to forecasting mid-latitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

SCAS 353 Application of FORTRAN in Meteorology

Fall. 3 credits. Prerequisites: SCAS 131 plus one computer programming course. Lec, T R 12:20-1:10; lab, F 1:25-3:20. M. W. Wysocki.

An introduction to numerical techniques using FORTRAN to solve meteorological problems. No previous experience with FORTRAN is expected.

SCAS 435 Statistical Methods in Meteorology

Fall. 3 credits. Prerequisite: an introductory course in statistics (e.g., BTRY 215 or ARME 310) and calculus. T R 10:10-11:25. D. S. Wilks.

Statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications. Some statistical characteristics of meteorological data, including probability distributions, intercorrelations, and persistence. Operational forecasts derived from multiple regression models, including the MOS system. Forecast verification techniques and scoring rules. Time series analysis, EOFs, and other research topics as time permits.

[SCAS 444 Tropical Meteorology]

Spring. 3 credits. Prerequisites: SCAS 342 or instructor's approval. Offered alternate years. Not offered 1996-97; next offered spring 1998. M W F 11:15-12:05. K. H. Cook.

Structure and dynamics of the tropical atmosphere on a wide range of time and space scales ranging from meso-scale convective systems to planetary waves. Topics include hurricanes, monsoonal circulation, and El Nino.]

SCAS 446 Modeling the Earth System

Spring. 3 credits. Prerequisites: Programming knowledge and instructor's approval. Offered alternate years. Offered 1996-97. T R 12:20-1:35. K. H. Cook.

Project-oriented exploration of aspects of the Earth System through computer modeling. Intended primarily for science majors with computing experience, preferably in FORTRAN. Lectures focus on facilitating student projects, discussing basic concepts governing the Earth system dynamics, and evaluating complex models. Students develop a model on a topic of their choice.

[SCAS 447 Physical Meteorology]

Fall. 3 credits. Prerequisites: a year each of calculus and physics. Offered alternate years. Not offered fall 1996; next offered fall 1997. M W F 11:15. W. W. Knapp.

Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include composition and structure of the atmosphere, atmospheric optics, acoustics and electricity, solar and terrestrial radiation, and principles of radar probing of the atmosphere.]

SCAS 451 Synoptic Meteorology II

Fall. 3 credits. Prerequisites: SCAS 341 and SCAS 342. Lects, T R 9:05; lab, M 1:25-3:20. S. J. Colucci.

Structure and dynamics of large-scale mid-latitude weather systems, such as cyclones, anticyclones and waves, from the perspective of a quasigeostrophic model of the atmosphere.

[SCAS 456 Mesoscale Meteorology]

Spring. 3 credits. Prerequisites: SCAS 341 and SCAS 342 or permission of instructor. Offered alternate years. Not offered spring 1997; next offered spring 1998. T R 12:20-1:35. S. J. Colucci.

Structure and dynamics of mid-latitude mesoscale weather systems such as fronts, jets, squall lines, convective complexes, precipitation bands, downslope windstorms, mountain breezes, sea breeze circulations, and lake effect snowstorms.]

SCAS 457 Atmospheric Air Pollution

Fall. 3 credits. Prerequisites: SCAS 341 or one course in Thermodynamics and one semester of chemistry or permission of instructor. Offered alternate years. Offered 1996-97. M W F 11:15-12:05. M. W. Wysocki.

Course will examine sources, effects, transport, measurement, and controls of air pollution. The basic principles in each area will be discussed with an emphasis on their local, regional, and global impacts.

SCAS 635 Advanced Statistical Meteorology

Fall. 3 credits. Prerequisites: coursework in or elementary knowledge of statistics, calculus, matrix algebra, and computer programming. Lec, T R 10:10-11:25, R 11:35-12:05. D. S. Wilks.

Lectures and topics concurrent with SCAS 435, plus an extra 30-minute session per week in which selected topics from SCAS 435 are treated in more depth, and additional topics are covered which may vary from year to year according to student interest. Term project required.

SCAS 646 Modeling the Earth System

Spring. 3 credits. Prerequisite: instructor's approval. Offered alternate years. Offered spring 1997. T R 12:20-1:35. K. H. Cook.

Lectures concurrent with SCAS 446 (see description). Graduate students have different problem sets and more sophisticated projects.

SCAS 652 Advanced Atmospheric Dynamics

Spring. 3 credits. Prerequisites: SCAS 341 and SCAS 342 or permission of instructor. Offered alternate years. Offered spring 1997. M W F 11:15-12:05. S. J. Colucci.

Quasigeostrophic theory, atmospheric waves, hydrodynamic instability, the general circulation of the atmosphere, and topics selected from among numerical weather prediction and tropical, mesoscale, and middle atmosphere processes according to student interest.

SCAS 692 Special Topics in Atmospheric Sciences

Fall or spring. 1-6 credits. S-U grades optional.

Study of topics in atmospheric science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

SCAS 850 Master's-Level Thesis Research in Atmospheric Sciences

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

Limited to students specifically in a master's program.

SCAS 950 Graduate-Level Dissertation Research in Atmospheric Sciences

Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement.

Limited to students in a Ph.D. program only before the "A" exam has been passed.

SCAS 951 Doctoral-Level Dissertation Research in Atmospheric Sciences

Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty.

Limited to students admitted to candidacy after the "A" exam has been passed.

Crop Science**SCAS 311 Grain Crops**

Fall. 4 credits. Prerequisite: SCAS 260 or BIOPL 241. Lects, M W F 10:10; lab, M 1:25-4:25. 1 or 2 field trips during lab periods (until 5 p.m. or on weekends)! R. L. Obendorf.

Principles of field-crop growth, development and maturation, species recognition, soil and climatic adaptations, liming and mineral nutrition, weed control, cropping sequences, management systems, and crop improvement are considered. Grain, protein, oil, fiber, and sugar crops are emphasized. Laboratory utilizes living plants, extensive crop garden, and computer simulation.

SCAS 312 Forage Crops

Spring. 4 credits. Prerequisites: SCAS 260 or BIOPL 241 or equivalent. Recommended: AN SC 212. Lects, M W F 11:15; lab, M or T 1:25-4:25. G. W. Fick.

The production and management of crops used for livestock feed are considered in terms of establishment, growth, maintenance, harvesting, and preservation. Forage grasses, forage legumes, and corn are emphasized, and consideration is given to their value as livestock feed in terms of energy, protein, and other nutritional components.

SCAS 314 Production of Tropical Crops

Spring. 3 credits. Offered 1996. Hours to be announced. E. C. Fernandes.

An introduction to major tropical cropping systems, their characteristics and management for sustainability.

SCAS 315 Weed Science

Fall. 3 credits. Prerequisite: introductory course in biology or botany. Lects, T R 9:05; lab, T W 2-4:25. Staff.

Principles of weed science are examined. Emphasis is on (a) weed ecology, (b) chemistry of herbicides in relation to effects on the environment and plant growth, and (c) control of weeds in crops. Laboratory covers weed identification and ecology, herbicide selectivity, symptomology, and behavior in soil.

[SCAS 317 Seed Science and Technology]

Fall. 3 credits. Prerequisite: BIOPL 241 or equivalent. Offered alternate years. Not offered fall 1996; next offered fall 1997. Lects, T R 11:15; lab, R 1:25-4:25. 2 all-day field trips will be scheduled during the semester. A. G. Taylor, Geneva Experiment Station. (Ithaca contact, R. L. Obendorf.)

The principles and practices involved in the production, harvesting, processing, storage, testing, quality management, certification, and use of high-quality seed from improved cultivars. Information is applicable to various kinds of agricultural seeds. Hands-on laboratory experience.]

SCAS 608 Water Status in Plants and Soils

Fall. 1 credit. Prerequisite: permission of instructor. S-U grades only. Offered alternate years. Offered fall 1996.

Lec, 1 hour to be arranged; lab, R 1:25-4:25 or as arranged. T. L. Setter.

Techniques for field appraisal of the status of water in plants and soil, including methods used in physiological studies, such as the psychrometer, pressure chamber, gas exchange analyzer, and abscisic acid analysis with ELISA.

[SCAS 610 Physiology of Environmental Stresses]

Spring. 3 credits. Prerequisite: BIOPL 242 or 341. Offered alternate years. Not offered spring 1997; next offered spring 1998. Lects, T R 10:10–11:25. P. L. Steponkus.

A study of the responses of plants to environmental stresses, with emphasis on thermal stresses including chilling, freezing, and high temperature injury. Emphasis is on the physiological and biochemical basis of injury and plant resistance mechanisms at the whole-plant, cellular, and molecular levels.]

[SCAS 612 Seed Physiology]

Spring. 3 credits. Prerequisite: plant physiology. Not offered spring 1997. T R 8:30–9:55. R. L. Obendorf.

Morphology, physiology, and biochemistry of cereal, legume, and oil-seed formation, composition, storage, and germination. Emphasis is on the deposition of seed reserves during seed formation, stabilization of reserves during storage, and mobilization of reserves during germination. Topics range from on-farm problems to molecular mechanisms.]

[SCAS 613 Physiology and Ecology of Yield]

Spring. 3 credits. Prerequisite: plant physiology. M W F 12:20. T. L. Setter.

A study of the constraints on crop productivity from a physiological perspective. Influence of environment and genetics on the assimilation, translocation, and partitioning of carbon and nitrogen during crop ontogeny. Emphasis on growth processes of vegetative plant organs.

[SCAS 614 Research Methods in Weed Physiology]

Spring. 2 credits. Prerequisite: SCAS 315 or equivalent. Offered alternate years. Not offered spring 1997. Staff.

Examination of a variety of modern techniques used to study herbicide absorption, translocation, metabolism, mode of action, and mechanism of resistance. Experiments will also be designed to study herbicide behavior and detection in soils. Laboratories will be accompanied by short lectures pertinent to experimental topics.]

[SCAS 642 Plant Mineral Nutrition (ALSO BIO PL 642)]

Spring. 3 credits. Prerequisite: BIO PL 341 or equivalent. Offered alternate years. Offered spring 1997. Lects, M W F 10:10–11. L. V. Kochian, R. M. Welch.

A detailed study of the processes by which plants acquire and utilize mineral nutrients from the soil. Topics will include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements will be emphasized to illustrate the above topics.

[SCAS 690 Root-Soil Interactions]

Fall or spring. 1–2 credits. S-U grades optional. Hours to be arranged. R. W. Zobel.

A topic dealing with root-soil interaction will be selected during the first meeting of the term. Students will prepare one or two seminars based on published work on the topic. Possible topics include root genetics, root morphology, conservation tillage, and soil temperature.

[SCAS 691 Special Topics in Crop Science]

Fall or spring. 1–6 credits. S-U grades optional. Hours to be arranged. Staff. Study of topics in crop science that are more specialized or different from other courses. Special topics to be offered will depend on staff and student interests.

[SCAS 820 Master's-Level Thesis Research in Crop Science]

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

Limited to students specifically in a master's program.

[SCAS 920 Graduate-Level Thesis Research in Crop Science]

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

Limited to students in a Ph.D. program only before the "A" exam has been passed.

[SCAS 921 Doctoral-Level Dissertation Research in Crop Science]

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

Limited to students admitted for candidacy after the "A" exam has been passed.

Environmental Information and Analysis**[SCAS 420 Geographic Information Systems]**

Fall. 3 credits. Prerequisite: instructor's approval. Lects, T R 9:05–9:55; lab, M T 1:25–4:25. S. D. DeGloria.

Principles and applications of geographic information systems used for environmental assessment and economic development programs. Methods for accessing, updating, analyzing, and mapping spatial data and information are emphasized. Needs assessment, database design and maintenance, data transformations, and map accuracy assessment are considered.

[SCAS 461 Resource Inventory Methods (also Civil and Environmental Engineering 411)]

Spring. 3 credits. Prerequisite: permission of instructor. Not offered 1996–97. S. D. DeGloria.

A survey of resource inventory methods applied to field-based studies of environmental systems. Laboratory emphasis is on using maps, spatial databases, global positioning systems, and aerospace imagery to discriminate, measure, inventory, and monitor environmental resources.]

[SCAS 620 Spatial Modeling and Analysis]

Spring. 3 credits. Prerequisites: SCAS 420 or permission of instructor. Lects, T R 9:05–9:55; lab, T 1:25–4:25. S. D. DeGloria.

Theory and practice in the development, integration, and scientific visualization of spatial data for environmental process modeling, land classification and evaluation, and resource inventory and analysis. Application and evaluation of spatial analytical methods applied to environmental systems and databases of interest to the student are emphasized.

[SCAS 660 Remote Sensing Fundamentals (also Civil and Environmental Engineering 610)]

Fall. 3 credits. Prerequisite: permission of instructor. Lects, T R 12:20–1:10; lab, R 1:25–3:20. W. D. Philpot.

An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

[SCAS 675 Application of Soil-Plant-Atmosphere Models]

Spring. 3 credits. Prerequisite: SCAS 483 or equivalent and COM S 100 or equivalent. Offered alternate years. Not offered spring 1997; next offered spring 1998. Lects, T R 1:25–2:45. S. J. Riha, J. L. Hutson.

Introduction to selection and use of soil-plant-atmosphere models. Topics covered will include problem analysis, general and specific types of models in current use, how to obtain and process data required to parameterize and drive models, and how to critically evaluate and present model output. The course will use a case study approach in which different models are used to address a number of current agricultural and environmental problems. Strengths and weaknesses in the use of soil-plant-atmosphere models for teaching, research, extension and policy formation will be discussed.]

Soil Science**[SCAS 260 Introduction to Soil Science]**

Spring. 4 credits. Prerequisite: CHEM 103, 207 or 215. S-U grades optional. Lects, M W F 9:05; lab, M T W or R 1:25. R. B. Bryant.

A comprehensive introduction to the field of soil science, with emphasis on scientific principles and their application to solving soil management problems. The laboratory exercises stress quantitative measurement of soil properties.

[SCAS 321 Soil and Water Management]

Spring. 3 credits. Prerequisites: SCAS 190 or 260. S-U grades optional. Lects, T R 11:15–12:05; lab, R 2:30–4:30. H. M. van Es.

Course intended to introduce students to the principles of soil and water interaction and to the effects of human intervention in these processes. Aspects of soil and water management, including hydrology, soil erosion, water management, contaminant movement, tillage, and water quality are examined. Case studies and policy approaches from both the United States and abroad are discussed.

[SCAS 362 Soil Morphology]

Fall. 1 credit. Undergraduates only. Recommended for sophomores and juniors. R. 1:25–4:25; all day field trip required. R. B. Bryant and J. M. Galbraith. The principles for field identification of soil properties, profiles, and landscapes are presented. A series of soil pits are examined, described, classified, and interpreted in the field.

SCAS 363 Intermediate Soil Science I: Genesis, Classification, and Survey

Fall, weeks 1-7. 2 credits. Prerequisite: SCAS 260. Lects, M W F 10:10; lab, W 1:25-4:25. One all day field trip is required. R. B. Bryant.

Factors and processes of soil formation. Principles of field identification, classification, survey, and interpretation. Laboratory exercises and field trips provide practical training in soil morphology and landscape relations. Course ends at mid-semester and is part of a sequence of three Intermediate Soil Science courses.

SCAS 364 Intermediate Soil Science II: Physics

Fall, weeks 8-14. 2 credits. Prerequisites: SCAS 260, one year of calculus and consent of instructor. Lects, M W F 10:10; lab, W 1:25-4:25. P. C. Baveye.

Description and measurement of the status of water in soils. Theory of water, solute, and heat transport. Infiltration, drainage, and redistribution. Weekly laboratory and problem-solving sessions illustrate the concepts introduced in class. Course starts at mid-semester and is part of a sequence of three intermediate Soil Science courses.

SCAS 365 Intermediate Soil Science III: Chemistry and Microbiology

Spring. 3 credits. Prerequisite: SCAS 260. T R 10:10-11:30. M. B. McBride and M. Alexander.

The chemical properties and microorganisms of soil and the chemical reactions and transformations occurring in soil. This course is part of a sequence of three intermediate Soil Science courses.

SCAS 371 Hydrology and the Environment (also ABEN 371 and GEOL 204)

Spring. 3 credits. Students enrolled in the statutory colleges must enroll in ABEN 371 or SCAS 371. Prerequisite: 1 course in calculus. Lects, T R 9:05; lab, F 1:25-3:20. T. S. Steenhuis, J.-Y. Parlange, M. F. Walter, L. M. Cathles, P. C. Baveye.

Introduction to hydrology as a description of the hydrologic cycle and the role of water and chemicals in the natural environment. Includes precipitation, infiltration, evapotranspiration, groundwater, surface runoff, river meandering floods, and droughts. Case studies, short field trips, computer programs, and laboratories are used to foster an understanding of concepts and principles of hydrologic processes.

SCAS 372 Soil Fertility Management

Fall. 3 credits. Prerequisite: SCAS 260 or permission of instructor. S-U grades optional. M W F 9:05. D. R. Bouldin.

An integrated discussion of soil crop yield relationships, with emphasis on the soil as a source of mineral nutrients for crops and the role of fertilizers and manure in crop production.

SCAS 373 Soil, Water, and Aquatic Plants

Fall. 3 credits. Prerequisites: SCAS 260, BIO G 101-102, and CHEM 103-104 or equivalents. Lec, T R 11:15; lab, R 1:25-4:25. J. H. Peverly.

The success or failure of soil and water management is manifested in streams, wetlands, lakes, and aquifers. Chemical and biological changes downstream are studied and related to agricultural management

techniques upstream. Basic chemical and physiological processes are presented and used to suggest appropriate responses to water management problems.

SCAS 385 Biogeochemical Cycles, Agriculture, and the Environment

Spring. 2 credits. Prerequisites: CHEM 103 or 207 and SCAS 260 or equivalent. Lects, T R 11:15-12:05. J. M. Duxbury.

The impact of agriculture on aspects of the global biogeochemical cycles of carbon, nitrogen, sulfur, and phosphorus is discussed and illustrated with current agricultural and environmental issues. Topics include sustainable agriculture, effects of nitrogen fixation, acid rain, global warming, and land disposal of wastes.

[SCAS 471 Properties and Appraisal of Soils of the Tropics]

Spring. 3 credits. Prerequisite: SCAS 260 or equivalent. S-U grades optional. No audits accepted. Offered alternate years. Not offered spring 1997; next offered spring 1998. Lects, T R 12:20; disc, W 1:25-3:25. A. VanWambeke.

The course examines the conditions in which soils form, and considers ecological, geological and vegetational factors that produce the diversity that exists among them. The major kinds of soils are recognized, their management properties described, and methods to alleviate the constraints to crop production examined. Topics include the identification of soils, and their functions in sustaining traditional farming systems and advanced technological packages. The course pursues these themes reviewing the most recent sources of information generated in tropical countries and published in Latin-American, Francophone, and English journals. The last part of the course gives special attention to salt-affected soils, paddy rice cultivation and the characteristics of acid-sulfate soils.]

SCAS 473 Ecology of Agricultural Systems (also BIOES 473)

Fall. 3 credits. Limited to 45 students. Prerequisite: BIOES 261 or permission of instructor. S-U grades optional. Offered alternate years. Offered fall 1996. Lec and disc, T R 2:30-3:45. During the first 6 weeks of class, the Thursday meetings may run to 5:30 because of field trips. A. G. Power and staff.

Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.

SCAS 483 Environmental Biophysics

Fall. 3 credits. Prerequisite: SCAS 260 or equivalent or permission of instructor. Lects, M W F 11:15. S. J. Riha.

Introduction to basic principles of energy and water transfer and storage in soil-plant systems. Energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, and water dynamics in the soil-plant-atmosphere continuum will be covered. Applications to agronomic and environmental problems and instrument

design and use are considered through discussion and problems sets.

SCAS 663 Pedology

Spring. 3 credits. Prerequisite: SCAS 361 or permission of instructor. Textbook recommended, not required. Offered odd spring semesters. R. B. Bryant.

Weathering, reactions, and processes of soil genesis. Principles of soil classification and the rationale and utilization of soil taxonomy. Development and significance of major groups of soils of the world.

SCAS 666 Advanced Soil Microbiology

Fall. 1 credit. Prerequisite: SCAS 365 or permission of instructor. S-U grades only for graduate students. T 12:20. M. Alexander.

Discussions of current topics in special areas of soil microbiology. Particular attention is given to biodegradation, bioremediation and fate of chemicals.

[SCAS 667 Advanced Soil Physics]

Spring. 3 credits. Prerequisites: One year of college physics and SCAS 483 or permission of instructor. S-U grades optional. Offered alternate years. Not offered spring 1997. Hours to be arranged. P. C. Baveye.

A detailed study of measurement processes and of the hydrostatics of aqueous solutions in soils and porous media, with emphasis on fundamental principles. Examination of the molecular aspects of water-solid interactions, including shrink-swell phenomena and the properties of absorbed water. Analysis of equilibrium water adsorption from thermodynamic and mechanistic (molecular) standpoints. Mechanical and thermodynamic analysis of the equilibrium status of aqueous solutions in deformable soils. Formal lectures are complemented by tutorial sessions.]

SCAS 669 Organic Matter—Soils, Sediments, and Waters

Spring. 2 or 3 (with discussion) credits. Prerequisites: SCAS 260 and CHEM 357-358 or equivalent. T R 9:05; disc, W 1:25-2:15. J. M. Duxbury.

A discussion of current concepts on the chemical nature, dynamics, and properties of natural organics and organo-mineral associations in terrestrial and aquatic environments. Interaction with anthropogenic organics and effects of anthropogenic activities on natural organics are considered.

[SCAS 671 Soil Chemistry]

Fall. 3 credits. Prerequisite: one year of physical chemistry or permission of instructor. Offered alternate years. Not offered fall 1996; next offered fall 1997. Lects, M W F 11:15. M. B. McBride.

A detailed examination of the structure and surface chemistry of minerals common to soils. Ion exchange, mineral-solution equilibria, and adsorption reactions of silicate clays and oxides will be emphasized.]

SCAS 681 Soil Physics Research Seminar

Fall. 1 credit. Open to graduate students. P. C. Baveye, J. L. Hutson, H. van Es. Discussions of current topics in special areas of soil physics and presentation of research carried out by participants.

SCAS 693 Special Topics in Soil Science

Fall or spring. 1-6 credits. S-U grades optional.

Study of topics in soil science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

SCAS 880 Master's-Level Thesis Research in Soil Science

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

Limited to students specifically in a master's program.

SCAS 980 Graduate-Level Dissertation Research in Soil Science

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

Limited to students in a Ph.D. program **only** before the "A" exam has been passed.

SCAS 981 Doctoral-Level Dissertation Research in Soil Science

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

Limited to students admitted to candidacy **after** the "A" exam has been passed.

COLLEGE OF ARCHITECTURE, ART, AND PLANNING

ADMINISTRATION

William G. McMinn, dean

Stanley J. Bowman, associate dean

Laurie Roberts, director of public affairs

Cynthia K. Prescott, director of administrative operations

Reginald D. Ryder, director of minority educational affairs

Donna L. Kuhar, registrar

Elizabeth A. Cutter, director of admissions

Margaret Webster, curator of visual resources facility

Helen Johnson, director of career office

FACULTY ADVISERS

Architecture students are assigned faculty advisers for their first year. Upperclass students have one assigned adviser but are encouraged to seek assistance and advice from the most appropriate faculty member or college officer.

First-year students in the fine arts department are assigned faculty advisers for the first year. Students may then choose advisers in their major area of concentration.

Undergraduate students in the Program of Urban and Regional Studies are assigned faculty advisers.

All students in the college are invited to share their concerns and seek advice from the volunteer student advisers at anytime.

Specific inquiries regarding rules, procedures, or deadlines should be addressed to:

Kent L. Hubbell, chair, Department of Architecture

Porus Olpadwala, chair, Department of City and Regional Planning

Roberto Bertoia, chair, Department of Art.

DEGREE PROGRAMS

	<i>Degree</i>
Architecture	B.Arch.
	B.F.A.
Fine Arts	B.F.A.
History of Architecture and Urbanism	B.S.
Urban and Regional Studies	B.S.

The college offers programs leading to the bachelor's degree—the five-year program in architecture leads to the Bachelor of Architecture; four-year programs in art and architecture lead to the Bachelor of Fine Arts. In addition, four-year programs with a concentration in either urban and regional studies or history of architecture lead to the Bachelor of Science.

Graduate-level programs are offered in art, architectural design and urban design, architectural sciences, history of architecture and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture.

Students in each of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with the students and faculty in other disciplines.

Early in its development the college set a limit on the number of students it would enroll and devised a selective method of admission. There are now more than 650 students and a full-time teaching staff of over fifty-five, supplemented by visiting professors and critics, part-time lecturers, and assistants. Teachers and students mix freely, and much instruction and criticism is on an individual basis.

The college's courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university. The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curriculum, the methods of teaching, and the extracurricular life of teachers and students.

FACILITIES

The college occupies Sibley Hall, Olive Tjaden Hall, Rand Hall, and the Foundry. Facilities for architecture, and city and regional planning, as well as college administrative offices, the Visual Resources Facility, and the Fine Arts Library are located in Sibley Hall. The Department of Art is housed in Olive Tjaden Hall. Sculpture facilities are in the Foundry and shop facilities in Rand. The Green Dragon Cafe, a student eatery and lounge, is located in the basement of Sibley Dome. The college has three darkrooms that are available for general use by students in the college and serve as laboratories for the photography courses. A darkroom fee must be paid by each user. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk.

NOTE: anticipated renovations of the college buildings will temporarily relocate some of the aforementioned facilities. More information on the current location of college facilities can be obtained by contacting the individual departments.

Through the generosity of the late Lillian P. Heller, the college also owns the Miller-Heller House, home of William H. Miller, the first student to enroll for the study

of architecture at Cornell, and later a practicing architect in Ithaca. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

Libraries

The Fine Arts Library, in Sibley Hall, serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, city and regional planning and landscape architecture. The library, with more than 150,000 books, is capable of supporting undergraduate, graduate, and research programs. Some 1,900 serials are currently received and maintained.

The Visual Resources Facility, made possible through gifts from George and Adelaide Knight, in Sibley Hall contains the F. M. Wells Memorial Slide Collection, which consists of a large and growing collection of slides of architecture, architectural history, and art. The collection now includes approximately 400,000 slides.

The facilities of the libraries of other schools and departments on campus and the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

Museums and Galleries

The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held. Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John Hartell Gallery in Sibley Dome and in the Olive Tjaden Gallery in Olive Tjaden Hall.

Rome Program

The College of Architecture, Art, and Planning's Rome Program was founded in the fall of 1986 to provide instruction in Italy for students seeking excellence in art, architecture, and other disciplines. The program offers an educational experience that draws upon the rich past of Rome, its resources in museums, its art and architecture, and its wide variety of cultural offerings. The school is located in the famous Palazzo Massimo in the center of the historical city next to such well-known Roman sights as Piazza Navona, the Pantheon, and Rome's famous outdoor market at the Campo dei Fiori.

The program in Rome offers components for students majoring in liberal arts, architecture, fine arts, and planning. Full course loads are available to all students in a curriculum that stresses the convergence of artistic, cultural, and architectural ideas vital to an understanding of the city. Students are responsible for planning course schedules that ensure their particular requirements can be met, since course offerings in Rome are limited. For additional information, see individual department listings.

COLLEGE ACADEMIC POLICIES

Ownership of Student Work

All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college for retention for academic purposes.

Exhibitions of Student Work

Exhibitions of student work are held each semester as part of the yearly schedule of the Olive Tjaden Hall gallery and the John Hartell Gallery. These galleries display work from a specific course or exhibit examples of recent work by individual faculty, students, and visitors.

Scholastic Standards

Term by term, a candidate for an undergraduate degree in the college is required to pass all courses in which the student is registered and have a weighted average for the term of not less than C (2.0). The record of each student who falls below the standard will be reviewed by the Student Records Committee for appropriate action, as described below:

- 1) **Warning** means that the student's performance is not up to expectations. Unless improvement is shown in the subsequent term, the student may be placed on final warning or required to take a leave of absence from the college.
- 2) **Final Warning** indicates that the student's record is unsatisfactory. Unless considerable improvement is shown in the subsequent term, the student shall be required to take a leave of absence from the college.
- 3) **Required leave of absence: Academic Deficiency.** The student is dismissed from the college and may not continue studies in the college. A student who has been placed on a required leave of absence may apply for readmission after an absence of at least two semesters. Application for readmission is made by letter, addressed to the Student Records Committee. The student must submit evidence that his or her time has been well used, and, if employed, must submit a letter from an immediate superior. If a student chooses to register for courses, either extramurally at Cornell or at another institution, he or she should be advised that credit for these courses will not apply toward the degree but will appear on the student's transcript. The grades received for any courses taken while on a required leave of absence will

not be counted into the grade point average. Readmission to the college is at the discretion of the Student Records Committee. Application for spring-term readmission must be made by November 15, and application for fall-term readmission must be made by April 15. Refer to the Architecture, Art & Planning Handbook (Whitebook) for further information regarding required leave of absence.

- 4) **Required withdrawal: May Not Reregister,** College of Architecture, Art, and Planning. The student is dismissed from the college and is permanently prohibited from continuing studies in it. This dismissal does not preclude the possibility of applying for admission to another division of the university.

The above actions are not necessarily sequential. A student who has received a warning may be placed on a required leave of absence for academic deficiency at the end of the next term if performance during that time is deemed to be grossly deficient.

A cumulative average of at least C- (1.7) is required for graduation.

ARCHITECTURE

Kent Hubbell, chair; L. Chi, M. Cruvellier, M. Curry, W. Goehner, D. P. Greenberg, S. Gruzdy, G. Hascup, M. Jarzombek, B. G. MacDougall, A. B. Mackenzie, W. G. McMinn, J. C. Miller, L. Mirin, V. Mulcahy, J. Ochshorn, C. F. Otto, A. Ovaska, C. W. Pearman, H. W. Richardson, M. L. Schack, A. Simitch, V. K. Warke, J. Wells, M. Woods, J. Zissovici

Professional Degree Program

The first professional degree in architecture is the Bachelor of Architecture. This degree counts toward the professional registration requirements established by the various states, National Architectural Accrediting Board, and the National Council of Architectural Registration Boards. The professional program is normally five years in length and is designed particularly for people who, before they apply, have established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.

The program is oriented toward developing the student's ability to deal creatively with architectural problems on analytical, conceptual, and developmental levels. The sequence courses in design, consisting of studio work augmented by lectures and seminars dealing with theory and method, are the core of the program. Sequences of studies in the history of architecture and cities, culture and society, visual studies, environmental science, structures, and building technology provide a base for the work in design.

In the first three years the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years this base may expand through detailed further studies in these areas. Within the professional program a basis for understanding architecture in its contemporary and historical cultural contexts is established.

The structure of the program incorporates considerable flexibility for the individual student to pursue his or her particular interest in the fourth and fifth years. By carefully planning options and electives in the fifth year, it is possible for a qualified student to apply the last year's work for the Bachelor of Architecture degree to one of the graduate programs offered in the department. Some students are then able to complete the requirements for the master's degree in one additional year.

Rome Program

The program offers the opportunity for students from Cornell and other universities to spend one or two terms of study in Rome. This option is open to fourth- and fifth-year Cornell architecture students; outstanding third-year students are admitted by petition and a review of their design record. Courses offered by this department include design, thesis, thesis introduction, history, theory, architectural science, and visual studies. In addition, courses are offered by other departments in Italian language, Italian culture, and history of art. The program provides a unique urban and architectural experience drawing from the rich past of the city for sources of instruction and inspiration.

Overlap Program

For qualified students the department offers an option that combines the fifth year of the undergraduate program with the first year of the Master of Architecture program. In the fall of the fourth undergraduate year interested students petition the department to substitute Arch 601-602 or 603-604 for Arch 501-502. At the same time, they complete graduate school applications and submit them with fee and portfolio to the graduate field secretary for architecture. Students accepted into the program may not normally begin until the fall of their fifth year and, once enrolled, may not transfer back into the 501-502 sequence.

Following admission into the Overlap Program, students may petition to apply toward the requirements of the master's degree a maximum of 30 credits, including Arch 601-602 or 603-604 and other advanced courses taken in excess of distribution requirements for the Bachelor of Architecture degree.

Curriculum

First Year

<i>Fall Term</i>	<i>Credits</i>
101 Design I	6
181 History of Architecture I	3
151 Drawing I	2
Math 111 Calculus or Math 106 or out-of-college elective	3-4
Out-of-college elective	3
	17-18

Spring Term

102 Design II	6
182 History of Architecture II	3
152 Drawing II	2
Math 111 or out-of-college elective	3-4

Out-of-college elective (freshman writing seminar suggested) 3
17-18

Second Year

Fall Term Credits
201 Design III 6
263 Structural Concepts 4
231 Architectural Analysis I 2
261 Site Planning 3
Out-of-college elective 3
18

Spring Term

202 Design IV 6
232 Architectural Analysis II 2
262 Building Technology, Materials, and Methods 3
264 Structural Elements 3
College elective 3
17

Third Year

Fall Term
301 Design V 6
361 Environmental Controls I—Lighting and Acoustics 3
363 Structural Systems 3
Departmental elective 3
Out-of-college elective 3
18

Spring Term

302 Design VI 6
342 Architecture as a Cultural System 3
362 Environmental Controls II—Mechanical and Passive Solar Systems 3
Departmental elective 3
College or out-of-college elective 3
18

Fourth Year

Fall Term
401 Design VII 6
411 Professional Practice 3
Departmental elective 3
College elective 3
Out-of-college elective 3
18

Spring Term

402 Design VIII 6
Departmental elective 3
Departmental elective 3
College or out-of-college elective 3
Out-of-college elective 3
18

Fifth Year

Fall Term

501 Design IX or 601 or 603 Overlap Program 6
Departmental elective 3
College or out-of-college elective 3
Out-of-college elective 3
Out-of-college elective 3
18

Spring Term

502 Design X or 602 or 604 Overlap Program 8
Departmental elective 3
College or out-of-college elective 3
College or out-of-college elective 3
17

Required Departmental Courses

Terms	Course Subject	Numbers	Credits
10	design	101-502	62
1	mathematics	Math 111, Math 106, or approved equivalent	3-4
3	structures	263, 264, 363	10
4	technology	261, 262, 361, 362	12
2	architectural theory	231, 232	4
2	history of architecture	181, 182	6
1	architecture, culture and society	342	3
1	professional practice or seminar	411	3
2	drawing	151, 152	4
			107-108

Electives

Departmental Terms	Credits
3 history of architecture: 300-level	9
1 visual studies or computer graphics	3
2 architectural theory or non-sequence design	6
1 architectural structures, construction, and technology	3
	21

Credits
2 art: any courses

Out-of-College Terms

Credits
1 computer programming or applications
1 freshman seminar
1 mathematics, physics, or biological sciences
1 humanities
12

Free

Of the electives, 15 credits are to be taken outside the College of Architecture, Art, and Planning, and 15 credits may be taken either in or outside the college. 30
Total credits 176

Transfer Students

Although the program leading to the Bachelor of Architecture is specifically directed to those who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed a nonprofessional undergraduate degree must also apply to transfer to the Bachelor of Architecture degree program, since the graduate program in architecture requires the Bachelor of Architecture degree or its equivalent for entrance.

Transfer students are responsible for completing that portion of the curriculum that has not been covered by equivalent work. Applicants who have had no previous work in architectural design must complete the ten-term design sequence. Since this sequence may be accelerated by attending summer terms, seven or eight regular terms and two or three summer terms are typically required.

For those who would benefit from an opportunity to explore the field of architecture before deciding on a commitment to professional education, the department offers an introductory summer program that includes an introductory studio in architectural design, lectures, and other experiences designed to acquaint the participants with opportunities, issues, and methods in the field of architecture.

Admission is offered to a limited number of transfer applicants who have completed a portion of their architecture studies in other schools. Each applicant's case is considered individually. Transfer students must complete a minimum of 70 credits and four terms in residence, taking 35 of the 70 credits (including four terms of design) in the Department of Architecture. Placement in the design sequence is based on a review of a representative portfolio of previous work.

Alternative Programs

Bachelor of Fine Arts

After completing the first four years of requirements, the student may choose to receive the degree of Bachelor of Fine Arts (B.F.A.) in architecture, which is not a professional degree.

Bachelor of Science in History of Architecture

The history of architecture major leads to a Bachelor of Science degree, conferred by the College of Architecture, Art, and Planning. The major is intended for transfer students from other programs at Cornell and from colleges and universities outside Cornell. Students in the Department of Architecture and the College of Arts and Sciences may take the major as part of a dual-degree program. The course of study in this major, available to students from a variety of academic back-

grounds, offers the opportunity for a vigorous exploration of architecture and its history.

Admission requirements. Two years of undergraduate study, Arch 181 and 182 or the equivalent. Students transferring from a B.Arch. program must be in good standing in their design sequence.

Procedure. Students from Cornell may transfer to the program at the beginning of the fall term of their third or fourth year of study. They submit a short application as prospective internal transfer students. Before applying, all prospective internal transfer students meet with a history of architecture faculty member to discuss scheduling for the program.

Students who wish to transfer to the program from outside Cornell must apply to the Department of Architecture by March 15. Applications may be considered after this date but are given lower priority. Applications for both internal and external transfer students are available from Elizabeth Cutter, Admissions Office, College of Architecture, Art, and Planning, Cornell University, 135 East Sibley Hall, Ithaca, New York 14853-6701.

Curriculum. A student entering the program is assigned an adviser from the history of architecture faculty in the Department of Architecture. Adviser and student together prepare an appropriate two-year course of study according to the following guidelines:

- 1) 24 credits of 300-level courses in architectural history: Arch 380 through Arch 399
- 2) 12 credits in 600-level architectural history seminars: Arch 681 through Arch 699; or 8 credits in a 600-level seminar plus Arch 499, offered for honors candidates only
- 3) One 300-, 400-, or 600-level course in architectural theory
- 4) 24 credits in electives selected in consultation with the student's adviser
- 5) Language requirement, to be met in the manner specified for students enrolled in the College of Arts and Sciences

Honors program. Students will graduate with honors if, during their two years of study in the program, they have a cumulative average of B or better in all courses, have no grade lower than A- in all history of architecture courses taken at the 300 level, and have completed an honors thesis (Arch 499) deemed to be of distinguished quality by the history of architecture faculty.

Dual Degree Options

Students can earn both the B.S. and B.Arch. degrees either simultaneously or sequentially. Students who have transferred into the B.Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study.

Students currently enrolled in the College of Arts and Sciences at Cornell can earn a B.A. in an arts college major and a B.S. in the history of architecture in five years. In this option, students complete a minimum of 150 credits, which includes the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences. Further information about this option is available at the Admissions Office, 135 East Sibley Hall, and at the Academic Advising Center of the

College of Arts and Sciences, 55 Goldwin Smith Hall.

Students may also elect to continue toward a Master of Arts degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor's degree; with this special sequential degree arrangement that time is shortened to one year.

Summer Term in Architecture

The summer term offers students the opportunity of a concentrated period of design work. Design is offered at both undergraduate and graduate levels; the term is six to eight weeks in duration.

Undergraduate design sequence courses, including thesis, are offered at first- through fifth-year levels in Ithaca. Normally there is also a design program abroad for third-, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to apply to enroll in any summer program.

At the graduate level participation in the summer program cannot be undertaken without the consent of the student's Special Committee.

Furniture design, architectural structures, and computer visualization may be offered as elective courses, contingent upon student interest and faculty availability.

The department offers a Career Discovery Program in Architecture for high school students and undergraduates interested in exploring the possibility of a career in architecture.

Architectural Design

Courses in brackets are not offered this year.

A studio fee of \$65 is charged each semester for every design course (these fees are subject to change).

Sequence Courses

ARCH 101 Design I

Fall. 6 credits. Limited to department students.

An introduction to design as a conceptual discipline directed at the analysis, interpretation, synthesis, and transformation of the physical environment. Exercises are aimed at developing an understanding of the issues, elements, and processes of environmental design.

ARCH 102 Design II

Spring. 6 credits. Limited to department students. Prerequisite: Architecture 101 and Architecture 151. A continuation of Architecture 101.

Human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

ARCH 201-202 Design III and IV

Fall and spring. 6 credits each term. Coregistration in Architecture 231-232 and completion of Architecture 151-152 required. Limited to department students. Prerequisite for Architecture 201 is Architecture 102 and Architecture 152. Prerequisite for Architecture 202 is Architecture 201.

ARCH 301-302 Design V and VI

Fall and spring. 6 credits each term. Limited to department students. Prerequisite for Architecture 301 is Architecture 202. Prerequisite for Architecture 302 is Architecture 301.

ARCH 401-402 Design VII and VIII

Fall and spring. 6 credits each term. Limited to department students. Prerequisite for Architecture 401 is Architecture 302. Prerequisite for Architecture 402 is Architecture 401.

Programs in architectural design, urban design, or architectural technology and environmental science, etc.

ARCH 501 Design IX

Fall or spring. 6 credits. Limited to department students. Prerequisite: Architecture 402.

Programs in architectural design, building typology investigations, and research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis is followed by tutorial work with the student's advisory committee.

ARCH 502 Design X—Thesis

Fall or spring. 8 credits. Prerequisite: Architecture 501 or Architecture 500 and Architecture 510. Required of B.Arch. candidates who must satisfactorily complete a thesis. Students accepted for admission to the Overlap Program are exempt from the thesis requirement.

ARCH 601-602 Special Program in Architectural Design

Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only.

ARCH 603-604 Special Program in Urban Design

Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only.

Graduate Courses

ARCH 701-702 Problems in Architectural Design

Fall and spring. 9 credits each term. Basic first-year design course for graduate students whose major concentration is architectural design.

ARCH 703-704 Problems in Urban Design

Fall and spring. 9 credits each term. Basic first-year design course for graduate students whose major concentration is urban design.

ARCH 801 Thesis or Research in Architectural Design

Fall or spring. 9 credits. Prerequisite: Architecture 701 and Architecture 702. Second-year design course for graduate students whose major concentration is architectural design.

ARCH 802 Thesis or Research in Urban Design

Fall or spring. 9 credits. Prerequisite: Architecture 703 and Architecture 704. Second-year design course for graduate students whose major concentration is regional design.

Elective Design Courses**ARCH 103-104 Elective Design Studio**

103, fall; 104, spring. 6 credits each term. Limited to students from outside the department. Prerequisite for Architecture 103: permission of instructor required. Prerequisite for Architecture 104: Architecture 103 and permission of instructor.

ARCH 303 Special Problems in Architectural Design

Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 200, 300, 400, 500 Elective Design

Fall or spring. 6 credits each term. Open by permission to transfer students who have not been assigned to a sequence course. Prerequisite: permission of department office. Each student is assigned to a class of appropriate level. Prerequisite for Architecture 500 is Architecture 402.

ARCH 605 Special Problems in Design

Fall and spring. Variable credit (maximum 3). Prerequisite: permission of instructor. Independent study.

Related Courses and Seminars**ARCH 110 Introduction to Architecture: Design Studio**

Summer session. 3 credits. S-U option. Open to non-architectural majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year.

A course designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the architectural concepts of space, form, function, and technology. Instruction is via highly personalized critiques of individual student work by assigned department faculty as well as by periodic reviews of group by invited faculty and guest critics. The course grade is based on the overall performance in the studio with special emphasis on the quality of a major studio project.

[ARCH 111 An Introduction to Architectural Design

Fall or spring. 4 credits. Open to out-of-department students only. Not offered 1996-97.

An introduction to architectural design as a conceptual discipline. Exercises will develop an understanding of architectural space and its elements.]

ARCH 317 Contemporary Italian Culture

Fall or spring. Variable credit (maximum, 3). For students in the Rome program only.

This course provides a broad view of the culture and social structure of Italy, drawing from Italian literature, history, and current events.

ARCH 411 Professional Practice

Fall or spring. 3 credits each term. An examination of organizational and management theories and practices for delivering professional design services. Included is a historic overview of the profession and a review of the architect's

responsibilities from the precontract phase through construction. Application of computer technology in preparing specifications.

ARCH 510 Thesis Introduction

Foreign summer programs and Rome program only. 3 credits. Must be taken in conjunction with Architecture 500. Prerequisite for Architecture 500 is Architecture 402. Architecture 500 will be considered equivalent to Architecture 501 when taken concurrently with Architecture 510 during a foreign summer program or in Rome.

Lectures, seminars, and independent research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 610 Graduate Design Seminar

Fall. 3 credits. Intended for but not limited to graduate students in the Architectural Design and Urban Design Program.

Issues in architectural and urban design. Required for first-year graduate students in design.

ARCH 611-612 Urban Housing Developments

611, fall; 612, spring. 3 credits each term. Limited to fourth- and fifth-year students in architecture and graduate students. Prerequisite: permission of instructor. Not offered every year.

ARCH 613 Transportation

Fall. 3 credits. Prerequisite: permission of instructor. Not offered every year.

The impact of various transportation forms on the environment is considered from the perspectives of architects, engineers, planners, and human ecologists. Readings and discussions of past, current, and future transportation modes focus on aesthetic and physical aspects.

ARCH 614 Low-Cost Housing

Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year.

Aspects of low-cost housing involving engineering technology, architecture, physical planning, economics, and sociology.

ARCH 618-619 Seminar in Urban and Regional Design

618, fall; 619, spring. 3 credits each term. Limited to fifth-year and graduate students. Not offered every year.

A broad range of issues and problems of urban and regional development and the context in which the designer functions are surveyed. Selected case studies are presented by the participants and visitors.

Architectural Theory**ARCH 130 An Introduction to Architecture: Lecture Series**

Summer. 3 credits. S-U option. Open to non-architectural majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year.

A survey course that covers the many facets of architecture: history, design principles, preservations, landscape architecture, building technology, and cultural factors. The format of the course comprises lectures, demonstra-

tions, films, and field trips. Course evaluation is based on quizzes and a final examination.

ARCH 131 An Introduction to Architecture

Fall. 3 credits. Open to out-of-department students only. Architecture 131 is not a prerequisite for Architecture 132.

Intended to familiarize non-architecture students with the art and science of architecture. Fundamentals of plan, section, and elevation, the primary elements that comprise an architectural form; basic organizational principles; the ways in which we perceive architectural space; and the various concepts of function in relation to form will be included among the topics to be covered, using examples from numerous times and cultures as well as from the contemporary Cornell campus.

ARCH 132 An Introduction to Architecture

Spring. 3 credits. Open to out-of-department students only. Architecture 131 is not a prerequisite for Architecture 132.

Non-architecture students are initiated into various types of architectural drawings and exposed to a variety of methods whereby architectural forms communicate both simple and complex meanings. Architecture in its relation to fields such as landscape architecture, urban design, structural design, interior design, set design, architectural history, preservation, and computer graphics will be included in the presentations, which will also deal with the various relationships established between an architect and a society. Cross-historical and cross-cultural examples will be used in developing in the student a degree of fluency in the languages of architectural discourse.

ARCH 231 Architectural Analysis I

Fall. 2 credits. Architecture students must register concurrently in Architecture 201.

An introduction to analysis of the object of study in the interest of broadening one's understandings of the ways in which architecture can connote and denote meanings.

ARCH 232 Architectural Analysis II

Spring. 2 credits. Architecture students must register for this course concurrently with Architecture 202.

Advanced analytical studies focusing on complex architectural spaces, objects, images, and representations.

ARCH 335 Theory of Architecture

Fall or spring. 3 credits. Prerequisite: Architecture 231-232 or permission of instructor. Not offered every year.

ARCH 336 Theory of Architecture

Fall or spring. 3 credits. Limited to third-year students and above. Not offered every year.

Theories of modern architecture: De Stijl, cubist and purist painting, industrialized architecture, Le Corbusier's architecture and urban theories, architectural sequence, facades, the free plan, "DOM-INO" theory.

ARCH 337 Special Investigations in the Theory of Architecture I

Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor and approved independent study form.

Independent study.

ARCH 338 Special Topics in the Theory of Architecture I

Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced before preregistration.

ARCH 339 Elements, Principles, and Theories in Japanese Architecture

Spring. 3 credits. Not offered every year.

An examination of Japanese architecture—buildings and gardens—and their contexts—landscapes, settlements, and cities. The course is addressed to those interested in Japanese architecture as a manifestation of Japanese culture and as a subject for analysis. Emphasis is on underlying concepts, ordering principles, formal typologies, space and its representation, perceptual phenomena, and symbolic content. Readings focus on theoretical treatments of these aspects by Japanese and western writers.

ARCH 431 Theory of Architecture

Fall. 3 credits. Prerequisite: third-year status. Not offered every year.

Gardening and architecture: urban parks; villas and country houses; and Italian, French, and English landscape gardens. Site planning.

ARCH 432 Theory of Architecture

Spring. 3 credits. Prerequisite: third-year status. Not offered every year.

The development of urban form, urban intervention, contextualism, ideal cities, historic new towns, streets, piazzas, fortifications, public buildings and social housing types, site planning, and transportation.

ARCH 435 Architecture and Representation

Fall. 3 credits. Limited to degree candidates in architecture. Prerequisite: successful completion of Architecture 231–232. Not offered every year.

A study of architecture as it functions as a representational art, referring to its past while inferring its present.

ARCH 635 Critical Theory in Architecture

Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year.

An inquiry into the fundamental principles of architectural criticism in theory and practice, with emphasis on the structures of criticism in the twentieth century.

ARCH 637 Special Investigations in the Theory of Architecture II

Fall or spring. Variable credit (maximum, 4). Prerequisite: permission of instructor and approved independent study form.

Independent study.

ARCH 638 Special Topics in the Theory of Architecture II

Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced before preregistration.

ARCH 639 Principles of Design Process

Fall or spring. 3 credits. Limited to third-year architecture students and above; students in other colleges must have permission of instructor. Not offered every year.

Analysis of the major theories and techniques of design developed during the past fifteen years, with special emphasis on application to the solution of whole problems in architectural design.

Architecture, Culture, and Society

ARCH 342 Architecture as a Cultural System

Spring. 3 credits. Architecture 445, 446, 447, or 448 can substitute with permission of instructor.

What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of ordering within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is a significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the ideational and formal relationships between folk and monumental traditions in complex societies, the structure of the ideal social order and its refraction in the material world, cosmological models and architectural form, geometries of non-Western traditions, and the relationship between indigenization and culture change.

ARCH 349 Undergraduate Investigations in Architecture, Culture, and Society

Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor and approved independent study form.

Independent study.

ARCH 441–442 Special Topics in Architecture, Culture, and Society

Fall and spring. 3 credits each term. Prerequisite: permission of instructor.

Topic to be announced before preregistration.

ARCH 445 Architecture and the Mythic Imagination

Fall. 3 credits. Prerequisite: Architecture 342 or permission of instructor. Not offered every year.

This course focuses on traditional societies in which beliefs about architectural order are borne out of the mythic and religious imagination. Certain themes that are common to a range of cultures are explored in detail. They include the model of the human body as a source of architectural knowledge, the sacred center, the cosmic mountain, and architectural rituals as enactments of myths. Such themes are traced across cultures, through time and into contemporary theory.

ARCH 446 Topics in Architecture, Culture, and Society

Fall or spring. 3 credits. Prerequisite: Architecture 342 or permission of instructor.

ARCH 447 Architectural Design and the Utopian Tradition

Fall. 3 credits. Prerequisite: Architecture 342 or permission of instructor. Not offered every year.

This course explores the relationship between visionary architecture of the late 19th and 20th centuries and the wider utopian literature of the time. It first explores themes in utopian fiction as well as in anti-utopian tracts and then turns to the attempts of architects, planners, and artists to concretize visions of the ideal world. The course will devote special attention to the ways in which ideals grounded in the utopian tradition have emerged in the social criticism of housing and neighborhood design in the urban setting in recent times.

ARCH 448 The Indian Example and the Visual Tradition in Culture

Spring. 3 credits. Prerequisite: Architecture 342 or permission of instructor. Not offered every year.

This course provides a concise chronological summary of the major building traditions of Hindu India and explores the relationship between form and more general beliefs about the power of vision to reveal and transform. Topics include the sculptural program of the Hindu temple as a vehicle for the preservation and transmission of mythic texts, the oculus as an element and the eye as a motif, darshan, the spiritually transforming vision, and the destructive power of vision as revealed in myth and beliefs about "evil eye."

[ARCH 647–648 (667–668) Architecture in Its Cultural Context I and II]

647, fall; 648, spring. 4 credits each term.

Prerequisite: permission of instructor.

Not offered 1996–97.

Fall term, theory; spring term, problem solving and method. An examination of the relationship between architecture and other aspects of culture. Emphasis on the motivations for particular architectural forms and especially on theories of architecture. Examples from the United States and Asia.]

ARCH 649 Graduate Investigations in Architecture, Culture, and Society

Fall or spring. Variable credit (maximum

4). Prerequisite: permission of instructor and approved independent study form.

Independent study.

Visual Studies

Darkroom fees charged for all photography courses.

ARCH 151 Drawing I

Fall. 2 credits.

Freehand drawing with emphasis on line and perspective representation of form and space.

ARCH 152 Drawing II

Spring. 2 credits. Prerequisite: Architecture 151.

Freehand drawing as a means of conceiving and expressing spatial form; line weight, shades and shadows, and figure drawing.

ARCH 251 Introductory Photo I (also Art 161)

Fall or spring. 3 credits each term.

For description see Art 161.

ARCH 351 Photography II (also Art 261)

Spring. 4 credits. Prerequisites: Architecture 251 or Art 161, or permission of instructor.

For description see Art 261.

[ARCH 356 Architectural Simulation Techniques]

Fall or spring. 3 credits. Prerequisite: Architecture 151 or permission of instructor. Not offered 1996–97.

Two- and three-dimensional simulation techniques in architecture. Emphasis on simulation of environment, space, materials, and lighting as visual tools for architectural design.]

ARCH 450 Architectural Publications

Fall and spring. Variable credit (maximum 3). May be repeated for credit.

Colloquy and practicum on issues related to the production of an architectural journal, as well as other theoretical and practical production related to the exchange of

architectural ideas. Exercises will cover both theoretical as well as hands-on aspects of architectural publication.

ARCH 457 Special Project in Photography

Fall or spring. Variable credit (maximum, 3). Prerequisites: written proposal outlining the special project and permission of instructor. Not offered every year. Independent study.

ARCH 458 Special Investigations in Visual Studies

Fall or spring. Variable credit (maximum, 3). Prerequisites: permission of instructor and approved independent study form. Independent study.

ARCH 459 Special Topics in Visual Studies I

Fall or spring. 3 credits. Prerequisite: permission of instructor. Topics to be announced before preregistration.

ARCH 458 Special Investigations in Visual Studies II

Fall or spring. Variable credit (maximum, 4). Prerequisites: permission of instructor and approved independent study form. Independent study.

ARCH 459 Special Topics in Visual Studies II

Fall or spring. 3 credits. Prerequisite: permission of instructor. Topic to be announced before preregistration.

Architectural Science and Technology Structures

ARCH 263 Structural Concepts

Fall. 4 credits. Prerequisite: Mathematics 111 or approved equivalent. Fundamental concepts of structural behavior. Statics and strength of materials. Introduction to and analysis of simple structural systems.

ARCH 264 Structural Elements

Spring. 3 credits. Prerequisite: Architecture 263. Concepts and procedures for the design of individual structural components (columns, beams, etc.) in steel, concrete, and timber construction.

ARCH 363 Structural Systems

Fall. 3 credits. Prerequisite: Architecture 264. Concepts and procedures for the design of overall structural framing systems in steel, concrete, and timber construction.

ARCH 463 Special Topics in Structures

Fall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 263, 264, and 363 or permission of instructor. Not offered every year. Topic to be announced by preregistration.

ARCH 473 Special Investigations in Structures

Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

Construction

[ARCH 160 The History of Architectural Technology]

Fall or spring. 3 credits. Not for students in the Department of Architecture. Not offered 1996-97.

Architectural technology is a seemingly illogical blend of scientific knowledge and empirical experience. Whereas it may seem chaotic to the nonprofessional, it is a product of logic in the widely differing areas of design, structure, installation, production and erection, material use, law, economics, and historical development. The evolution of this interdependence is treated using examples of architectural and civic engineering works and processes.]

[ARCH 161 An Introduction to Building Technology]

Fall. 3 credits. Open to out-of-department students only. Not offered 1996-97.

An introduction to building technology, materials, and construction systems for non-architecture majors. Topics will include structure (why buildings stand up); enclosure (mediation of environmental conditions); mechanical systems (how buildings provide comfort, hygiene, and life safety); and interior surfaces (walls, floors, ceilings, acoustical behavior, and fire safety). The relationship between the principles and practices underlying the construction of buildings ("technology") and what buildings look like ("design") will also be explored. Concepts rather than computation will be emphasized.]

ARCH 262 Building Technology, Materials, and Methods

Spring. 3 credits. Properties of materials—their use and application to the design of buildings and building systems. Discussion of various methods of building construction and assembly.

ARCH 465 Special Topics in Construction

Fall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 262 or permission of instructor. Not offered every year. Topic to be announced by preregistration.

ARCH 475 Special Investigations in Construction

Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

Environmental Controls

ARCH 261 Environmental Controls—Site Planning

Fall. 3 credits. The basic principles involved in design in the outdoor environment. A brief historical perspective. A development of inventory including grading and drainage. Foundations, surfacing, and construction.

ARCH 361 Environmental Controls—Lighting and Acoustics

Fall. 3 credits. Basic properties and principles of sound and light. Sound phenomena, noise control, absorption, acoustical design. Light, color, and form. Natural lighting possibilities and constraints. Good and bad examples of artificial lighting.

ARCH 362 Environmental Controls—Mechanical and Passive Solar Systems

Spring. 3 credits. Basic thermal analysis of buildings, human comfort criteria, energy conservation, passive solar design, HVAC distribution systems, overview of mechanical conveying systems and plumbing.

ARCH 464 Special Topics in Environmental Controls

Fall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 261, 361, and 362 or permission of instructor. Not offered every year. Topic to be announced by preregistration.

ARCH 474 Special Investigations in Environmental Controls

Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

Computer Applications

ARCH 372 Imaging and the Electronic Age

Spring. 3 credits. For undergraduate, non-computer-scientists. 2 lectures. 1 recitation. D. Greenberg. Historical technological advances which created major paradigm shifts for communications as well as advances in computer technology will be presented. Technical fundamentals of computer graphics capabilities will be emphasized. The latter half of the course will cover the effect of these scientific advances on many discipline-specific areas including architecture, art and animation, photography and the film industry, medicine, engineering design, the corporate structure, and education itself. The course will be heavily supplemented with pictorial content consisting of slides, movies, and live interactive demonstrations.

ARCH 374 Computer Graphics and Visualization

For description, see Computer Science 417.

ARCH 375 Practicum in Computer Graphics (also Computer Science 418)

Spring. 2 credits. Prerequisite: Computer Science 211. Recommended: Computer Science 314. Corequisite: Architecture 374. Not offered every year. Two or three programming assignments dealing with sophisticated interactive vector graphics programs on calligraphic displays and solid-image generation on raster graphics displays.

ARCH 378 Microcomputer Applications in Design

Fall. 3 credits. Prerequisites: previous knowledge of PC-based CAD or permission of instructor. This course covers advanced principles, concepts, and applications of microcomputer-aided design, synthetic imaging, and animations. It combines seminar-style presentation with hands-on laboratory sessions. The course uses IBM PC platforms exclusively.

ARCH 379 Design by Computer

Spring. 3 credits. Prerequisites: Limited to third-year students and above. Not offered every year. Exploration of the formalization of the design process for compatibility with the computer,

and the role of computers in design. Lecture with CAD lab.

ARCH 476 Special Topics in Computer Applications

Fall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 374 or 379 or permission of instructor. Not offered every year.

Topic to be announced by preregistration.

ARCH 477-478 Special Projects in Computer Graphics

477, fall; 478, spring. Variable credit (maximum, 4). Limited to third-year students and above. Prerequisites:

Architecture 374 plus concurrent registration in Computer Science 314 or equivalent, and permission of instructor.

Advanced work in computer graphics input and display techniques, including storage tube, dynamic vector and color raster displays.

Graduate Courses

ARCH 761-762 Architectural Science Laboratory

761, fall; 762, spring. 6 credits each term. Open to architectural science graduate students only.

Projects, exercises, and research in the architectural sciences.

ARCH 763-764 Thesis or Research in Architectural Science

763, fall; 764, spring. Variable credit (maximum, 12). Limited to architectural science graduate students.

Independent study.

Architectural History

The history of the built domain is an integral part of all aspects of the architecture curriculum, from design and theory to science and technology. Incoming students take Architecture 181-182 in the first year, and three additional courses from the 380-399 series, preferably in the third and fourth years. Seminars are intended for advanced undergraduate and graduate students and do not satisfy undergraduate history requirements. Courses with the same number may only be taken once to satisfy history of architecture or in-college requirements.

Sequence Courses

ARCH 181 History of Architecture I

Fall. 3 credits. Required of all first-year students in architecture; open to all students in other colleges with an interest in the history of the built domain.

The history of the built environment as social and cultural expression from the earliest to more recent times. Themes, theories, and ideas in architecture and urban design are explored, beginning with the earliest written records.

ARCH 182 History of Architecture II

Spring. 3 credits. Required of all first-year students in architecture. Open to all students in other colleges with an interest in the history of the built domain; may be taken independently of Architecture 181.

The history of the built environment as social and cultural expression from more recent times to the present. Themes, theories, and ideas are addressed in greater detail for architecture and urban design leading to the present.

Directed Electives

ARCH 380 History of Theory

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

This course, in which classroom discussion and debate play a central role, explores the history of important theoretical issues involving art and architecture. The readings, which span from the Greeks to today, focus on more than just questions of aesthetics and include theories of ethics, origins, imagination, nature, society, and pedagogy.

ARCH 381 Greek and Roman Architecture and Urbanism

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

The history of architecture and urban design in ancient Mediterranean civilizations, with emphasis on Greece and Rome. The course considers change and transformation of building types and their elements within the general context of social demands.

[ARCH 382 Architecture of the Middle Ages

Fall. 4 credits. Prerequisites: Architecture 181-182 or permission of instructor. Credit for this course may be obtained by taking History of Art 332. Not offered every year. Not offered 1996-97.

A survey of medieval architecture from the Early Christian period to the late Gothic (A.D. 300-1500). Emphasis is given to the development of structural systems, form, function, and meaning of important medieval buildings.]

ARCH 383 The City

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

This course looks at the development of urban form and urban consciousness from the bronze age to the industrial revolution. It studies conceptions of the city, competing urban paradigms, images of cities both real and fictive, as well as the religious and cultural practices associated with city design.

ARCH 384 The Italian Renaissance: Architecture, Politics, and Urbanism

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

This course focuses on the leading architects and theorists of the Renaissance from within the context of the political and cultural developments in Italy from 1300 to the mid-sixteenth century. The course also investigates specific architectural problems faced by designers as well as questions of architectural patronage, practices, and theories.

ARCH 385 Magnificent Utility—Architecture and the Arts of Persuasion

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

Architects put revolutionary attitudes about form, space, light, and the arts into practice during the course of the seventeenth century. Focusing on the urban centers of Rome and Paris and the cultural landscapes of Spain, England, and Central Europe, this course explores how architecture, urban design, and the arts were employed to promote state and church.

ARCH 387 The Nineteenth Century—Style, Technology, and Individuality in the West

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

An examination of the nineteenth-century efforts to create appropriate stylistic forms and expressions for emerging building technologies and typologies. The preservation of individual artistic expression against the backdrop of industrialization, urbanization, and professionalization will be emphasized. The course begins with Rationalist theory and its architectural expression and concludes with considerations of Art Nouveau, Modernismo, and Jugendstil.

ARCH 388 Modernism

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

Precursors and proponents of the modern movement from the late nineteenth century into the 1940s are considered in this course. The cultural intents of the modern are examined in architectural and urban design for individuals, groups, and institutions, from Mies van der Rohe, Le Corbusier, and Frank Lloyd Wright to de Stijl, the Bauhaus, and design education. Attention is paid to the politics of design in the service of the state during the 1930s.

ARCH 389 Architecture, Revolution and Tradition

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

From early eighteenth to early nineteenth century, European society underwent profound change. Political absolutism—the doctrine of unlimited government control—was challenged; Enlightenment attitudes—commitments to human reason, science and education—gained ascendancy. This course considers architectural and urban design in these times of tumult. It begins with efforts to foment architectural revolution within inherited traditions and ends with attempts to establish design traditions within revolutionary settings.

ARCH 390 American Architecture and Building I

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

A review of architecture, building, and responses to the landscape from the prehistoric period to the Civil War. Architecture and building as social and collaborative arts will be emphasized and thus the contributions of artisans, clients, and users as well as professional architects and builders will be examined. The architectural expressions of Native Americans, African Americans, women, and others will be treated in addition to those of European colonists and settlers.

ARCH 391 American Architecture and Building II

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

A continuation of Architecture 390 but may be taken independently. An account of American architecture, building, and responses to the environment from the post-Civil War period to the present day. Particular attention will be paid to the processes of industrialization, professionalization, and urbanization as well

as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.

ARCH 392 Modern Architecture On Film

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

An exploration of certain themes deemed critical to modern architecture and urbanism through their representation in both commercial and avant-garde films from the medium's birth until the present day. The focus will vary each semester with particular emphases to include the modern house and housing, the modern city, technology and visions of the future, and finally the image of the architect. Representations of these themes in other forms such as painting, photography, theatre, literature, and advertising will also be examined. Selected readings in modern architecture and film, screenings in class, class discussions, presentations, and papers.

ARCH 393 The Cumulative City

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

Well established cities were transformed by radical and unimagined change in the nineteenth and twentieth centuries. Politics and economies were recast, populations exploded, and new technologies reshaped transportation, communication, and building. This course explores transformation historically in the cumulative city, focusing on specific cities in America and Europe, Africa, and Asia. The cultural context of each city is examined to understand how it changed and how meanings became associated with evolving urban forms.

ARCH 394 Toward the Millennium

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

Theory and practice in architecture and urbanism are investigated from the 1950s to the present. From the Americanized International Style to the recent internationalism of design attitudes, the immediate past is explored historically to probe the matrix of meanings associated with contemporary form, urbanism, and technology.

ARCH 395 Contemporary Issues in the Built Environment

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

A consideration of how certain social, cultural, political, ethical, and economic issues are manifest in the architectural and built environments of the United States. Overarching issues will be examined through case studies such as the question of monuments and monumentality in a contemporary, multicultural society through the Vietnam Memorial in Washington, D.C., Holocaust museums and memorials, and the preservation of the Audubon Ballroom as a memorial to Malcolm X. Historical concerns and examples will be brought to bear on these contemporary manifestations of preservation, monumentality, gender, class, professional responsibility, and ethics and design as a collaborative art. A course for architects, planners, and preservationists but also clients and users of buildings and landscape.

ARCH 396 Special Topics in the History of Architecture and Urbanism

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. Topic to be announced.

ARCH 397 Special Topics in the History of Architecture and Urbanism

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. Topic to be announced.

ARCH 398 Special Topics in the History of Architecture and Urbanism

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. Topic to be announced.

ARCH 399 Special Topics in the History of Architecture and Urbanism

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. Topic to be announced.

Courses in Preservation

ARCH 583 Measured Drawing

For description, see CRP 567.

ARCH 584 Problems in Contemporary Preservation Practice

For description, see CRP 563.

ARCH 585 Perspectives on Preservation

For description, see CRP 562.

ARCH 586 Documentation for Preservation

For description, see CRP 560.

ARCH 587 Building Materials Conservation

For description, see CRP 564.

ARCH 588 Historic Preservation Planning Workshop: Surveys and Analyses

For description, see CRP 561.

Graduate Seminars in the History of Architecture and Urbanism

ARCH 680 Seminar in Historiography

Fall. 4 credits. Prerequisite: permission of instructor.

Historiographic and methodological issues are examined in relation to the history of architecture and urbanism. Taught by different faculty members in successive years, the seminar is required of all first- and second-year graduate students in the History of Architecture and Urbanism program.

ARCH 682 Seminar in Urban History

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

ARCH 683 Seminar in the History of Theory

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

ARCH 684 Seminar in the Italian Renaissance: Architecture, Politics, and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

ARCH 686 Seminar in Seventeenth- and Eighteenth-Century Architecture and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

ARCH 688 Seminar in Twentieth-Century Architecture and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

ARCH 689 Seminar in the History of Cities

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

ARCH 690 Seminar in American Architecture, Building, and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

ARCH 692 Seminar in Nineteenth-Century Architecture, Building, and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

ARCH 696 Seminar in Special Topics in the History of Architecture and Urbanism

Fall or spring. 4 credits. Prerequisites: permission of instructor. Not offered every year.

Topic to be announced.

ARCH 697 Seminar in Special Topics in the History of Architecture and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

ARCH 698 Seminar in Special Topics in the History of Architecture and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

ARCH 699 Seminar in Special Topics in the History of Architecture and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

Independent Study, Thesis, Dissertation**ARCH 299 Undergraduate Independent Study in the History of Architecture and Urbanism**

Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor. May not be taken by students in design to satisfy undergraduate history requirements. Independent study for undergraduate students.

ARCH 499 Undergraduate Thesis in the History of Architecture and Urbanism

Fall or spring. 4 credits. For B.S. honors candidates in history only.

ARCH 799 Graduate Independent Study in the History of Architecture and Urbanism

Fall or spring. Variable credit. Prerequisite: permission of instructor. Independent study for graduate students.

ARCH 899 M.A. Essay in the History of Architecture and Urbanism

Fall or spring. 4 credits. Independent preparation of the M.A. essay, often developed from topics investigated in Arch 680.

ARCH 999 Ph.D. Dissertation in the History of Architecture and Urbanism

Fall or spring. Variable credit. Independent study for the doctoral degree.

ART

R. Bertoia, chair; Z. Blum, S. Bowman, N. D. Daly, V. G. Kord, J. N. Locey, E. Meyer, G. Page, B. Perlus, director of graduate studies; S. Poleskie, J. L. Squier, W. S. Taft, K. WalkingStick, G. S. White, and visiting critics.

Undergraduate Program

The undergraduate curriculum in art, leading to the degree of Bachelor of Fine Arts, provides an opportunity for the student to combine a general liberal education with the studio concentration required for a professional degree. During the first four semesters all students follow a common course of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience in the last two years. Beginning with the third year, students concentrate in painting, sculpture, photography, printmaking, or combined media.

Studio courses occupy approximately one-half of the student's time during the four years at Cornell; the remainder is devoted to a diversified program of academic subjects with a generous provision for electives.

The curriculum in art is a program of study within the College of Architecture, Art, and Planning.

The undergraduate curriculum in art is an excellent background for a career in applied art although no specific technical courses are offered in such areas as interior design, fashion, or commercial art.

All members of the faculty in the Department of Art are active, practicing artists, whose work represents a broad range of expression.

A candidate for the B.F.A. degree may also earn a Bachelor of Arts degree from the College of Arts and Sciences or the College of Human Ecology, or a Bachelor of Science degree from the College of Engineering. This decision should be made early in the candidate's career (no later than the third semester) so that he or she can petition to be registered in both colleges simultaneously. Each student will be assigned an adviser in both colleges, of their dual degree program, to provide needed guidance. As a candidate for two degrees you must satisfy all requirements for both degrees. At least 67 of the total credits must come from courses offered in the Department of Art and an additional 6 credits of History of World Art. In addition, all Department of Art requirements for freshman writing seminars, art history, and distribution must be met.

It is expected that a dual degree candidate will complete the pre-thesis and thesis requirements for the B.F.A. degree during the fifth year.

Bachelor of Fine Arts Degree Requirements**Credits and Distribution**

130 credits are required for the BFA degree. A minimum of 67 are taken in the Department of Art and an additional 6 credits of Survey of World Art. A minimum of 49 are taken outside the department.

Curriculum

Students are expected to take an average course load of 16 credits per semester during their four years. No more than three studio courses may be taken in any one semester. Studio courses may be repeated for elective credit. All students must take at least one studio course a semester unless there are exceptional circumstances expressed in the form of a petition. **Any request to deviate from the standard curriculum must be petitioned prior to the act.**

Specific Course Requirements

By the end of the second year, students must have completed an introductory course in each of the areas of painting, sculpture, printmaking, and photography and four drawing courses. By the end of the third year, all students must have completed an additional 12 credits beyond the introductory level in three of the four areas.

Concentration

Students must plan their programs to complete 27 credits in one of the studio areas of painting, sculpture, or photography or printmaking. Declaration of the area of concentration must be made during the second semester of the sophomore year. B.F.A. students must complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition in the semester the thesis is taken.

Concentration Requirements (27 credits total)

The required courses for each concentration are as follows:

Painting: ART 121, 221, 321, 322, 421, 422 (Thesis)

Sculpture: ART 141, 241, 341, 342, 441, 442 (Thesis)

Printmaking: ART 130; 231/232/233 (1 of 3); 231, 232, 233, 234, 235, 236, 264 (2 of 7); 431, 432 (Thesis)

Photography: ART 161, 261, 263, 461, 462 and one of the following: ART 234, 264, and 265

Dual Concentration

If a student is interested in studying in more than one area, he or she may choose to do a dual concentration. The dual concentration requires a first area, in which the thesis is conducted, and a non-thesis second area. Pre-thesis and thesis must be taken in the first area of concentration. Students must take 23 credits in the first area of concentration. Students must take 15 credits in the second area of concentration. Drawing is only available as a second area of concentration.

The required courses for the dual concentration are:

<i>First Area of Concentration</i>	<i>Total Credits</i>
------------------------------------	----------------------

Painting: ART 121, 221, 321, 421, 422	23
---------------------------------------	----

Sculpture: ART 141, 241, 341, 441, 442	23
--	----

Printmaking: ART 130, 231/232/233 (1 of 3), 231, 232, 233, 234, 235, 236, 264 (1 of 7); 431, 432	23
--	----

Photography: ART 161, 261, 234/263/264/265 (1 of 4), 461, 462	23
---	----

<i>Second Area of Concentration</i>	<i>Total Credits</i>
-------------------------------------	----------------------

Drawing: ART 151, 152, 251, 252, repeat 251	15
---	----

Painting: ART 121, 221, 321, 322	15
----------------------------------	----

Sculpture: ART 141, 241, 341, 342	15
-----------------------------------	----

Printmaking: ART 130 and 231/232/233/234/235/236/264 (2 of 7)	15
---	----

Photography: ART 161, 261, 263/264/234 265 (2 of 4)	15
---	----

Note: The total number of out-of-college elective credits required will be adjusted to allow for the additional credits required of the dual concentration.

Combined Media Concentration

The combined media program enables students to fulfill concentration requirements by combining several studio disciplines, including out-of-department studio courses such as those offered in the departments of music, theatre, and dance, etc.

The required courses for the concentration in **Combined Media** (33 credits) are:

100 and 200 level studios ART 1__, 2__	7
---	---

200 and 300 level studios ART 2__, 2__, 3__, 3__ (2 of 4)	8
--	---

Pre-Thesis and Thesis ART 481, 482	12
---------------------------------------	----

Out-of-college studio electives (minimum of 2)	6
---	---

OCE Studio, OCE Studio

Total	33 credits
--------------	-------------------

Note: The total number of in/out-of-college elective credits required will be adjusted to allow for the additional credits required of the combined media concentration.

Out-of-College Requirements

A minimum of 49 electives credits must be taken outside of the college. In the first year, students must take two freshman writing seminars. Students are required to take courses from among three groups, which include: Physical and Biological Sciences (minimum of two courses, of at least 3 credits each); Social Sciences (minimum of three courses, of at least 3 credits each); and, Humanities and Expressive Arts (minimum of three courses, of at least 3 credits each). All BFA students are required to take 12 credits in the History of Art. One course must be taken in each of the following areas:

Modern: 260, 265, 270, 361, 362, 364, 366, 367, 370, 376.

Non-Western: 280, 380, 381, 383, 384, 385, 386, 389, 396.

Elective: Any art history elective at the 300 level or above or any architectural history elective.

The university requirement of two terms in physical education must be met.

A candidate for the B.F.A. degree at Cornell is required to spend the last two terms of candidacy in residence at the university, subject to the conditions of the Cornell faculty legislation of November 14, 1962. No student may study in absentia for more than two terms.

Students who transfer into the undergraduate degree program in art must complete a minimum of four terms in residence at Cornell and a minimum of 60 credits at the university, of which 30 credits must be taken in the Department of Art, including four terms of studio work.

Rome Program

Students in good standing who have completed the requirements of the first two years of the curriculum are eligible for participation in the Rome Program. Students are admitted to the program by application and review of their record. Applications are submitted to the Rome Program coordinator. Students applying to the Rome Program must meet with their faculty adviser, the art department Rome Program adviser, and the department chair to obtain signatures of approval for admission to the program. Students in the department wishing to attend the Rome Program must register for a full semester of credits. The department recommends that students attend the program during the first or second semester of their junior year. Under special circumstances, seniors may also attend the Rome Program. Students wishing to spend two consecutive semesters in Rome are encouraged to do so. In both cases students must petition for special consideration. This petition must include the proposed course schedule for both semesters and must show signatures of approval by the adviser in the student's area of concentration, the department chair, and by the Rome Program adviser.

Rome Curriculum

Art 400	Rome Studio	4
Fulfills 4 credits of concentration

Arch 317	Contemporary Italian Film	1

16 Total

Students may not take more than 16 credits a semester in the Rome Program. Only four studio credits may be taken in any one semester. Students may study in Rome for one or two academic semesters.

*Fulfills 300-level Theory and Criticism requirement.

For those students matriculating in fall of 1996:

Students are required to take ART 100, Basic Studio in Art; ART 111, Introductory Art Seminar; ART 121, Introductory Painting; or ART 141, Introductory Sculpture; ART 112, History of World Art; and a Freshman Writing Seminar during the fall semester of the freshman year. ART 113, History of World Art, and an additional Freshman Writing Seminar must be taken during the spring semester of the freshman year. A 300-level course in Theory and Criticism must be taken sometime during the junior or senior year.

Courses that will fulfill Theory and Criticism requirement:

Art 310, 312	
Art History 367, 370, 470, 494, 570, 594, 595, 596

The M.F.A. Program

The Master of Fine Arts program requires four terms of residence and sixty credits. Transfer credit for graduate work done elsewhere or in the summer session is not acceptable. The curriculum leading to the master's degree is flexible to accommodate the needs of the individual student and to enable the student to partake of the greater Cornell community. The ratio of graduate faculty to students is greater than one-to-one, allowing exceptional opportunity for individual mentoring. Graduate students are provided individual studios and have 24-hour access to specialized studios and labs.

Graduate students in art may enroll in introductory or advanced courses in any field of study offered at the university: specialty courses in writing, stagecraft, cinema, and music are available as well as general education courses in the history of art, philosophy, anthropology, and so forth. Fifteen credits are required in each term; of these, nine credits are in studio work, and three credits are in Graduate Seminar (ART 611, 612, 613, 614). Students are required to take at least twelve credits of academic work outside the Department of Art during their four terms in residence. Candidates for the Master of Fine Arts degree must have completed eighteen credits in the history of art in the course of their graduate and/or undergraduate study. Every M.F.A. candidate must prepare a written thesis, offer a thesis exhibition of studio work completed during residency, and give an oral defense of the

written and visual thesis. Gallery space is provided for a one-week solo thesis exhibition during the final spring semester.

Course Information

Most courses in the Department of Art are open to students in any college of the university who have fulfilled the prerequisites or have permission of the instructor.

Fees are charged for all studio courses. See the specific course description for course fees.

To take advantage of the special opportunities afforded by summer study, the department has developed several summer-only courses.

Guidelines for Independent Study

A student who wants to undertake Independent Study must be a junior in good standing. Fine Arts students must have completed two years of the curriculum, **including all first- and second-year studios and four semesters of drawing.** An independent study cannot be used to fulfill any of the four drawing requirements. All students must have taken a minimum of one Cornell Art Department course in the area of the proposed independent study. It is recommended that the student take the independent study with a professor with whom they have previously studied. Out-of-department students may be exempt from the studio sequence requirement at the discretion of the supervising professor. Independent studies do NOT count toward studio requirements. Credit hours are variable up to a maximum of four.

Courses in Theory and Criticism

ART 111 Introductory Art Seminar

Fall. 1 credit. S-U only. Limited to B.F.A. students.

Students meet each week with a different member of the faculty. The varying artistic interests of the faculty are presented and discussed.

ART 112 History of World Art

Fall and spring. 3 credits.
This two-semester course will survey world art from the Paleolithic era to the present. While primary emphasis will be placed upon the art and architecture of the western tradition, lectures on the visual arts outside that tradition will also be presented. The course will emphasize major monuments, important trends and developments, and critical approaches to the art of the past and present. The history of artistic styles will be studied in relation to cultural factors shaping the work of art such as patronage, politics, religion, and economics. The original settings and functions of works of art and buildings will be emphasized as will the possibilities and limitations of materials and techniques.

[ART 113 History of World Art

Fall and spring. 3 credits. Not offered 1996-97.

Continuation of Art 112.]

ART 214 Art and the Multicultural Experience

Fall. 3 credits.
This course will investigate selected topics related to art and the multicultural experience. Students will study the basic vocabulary and tools used in the expression of art. They will question the nature of the visual arts as a discipline and survey art created by under-

represented American minority cultural groups.

ART 310 Pictorial Analysis

Fall or spring. 3 credits.
A lecture course using historical illustrative material which is presented in a comparative, nonchronological order for the purpose of examining how each painting uses principles that are constant throughout art history. The foundations of these principles are studied separately as the elements of abstract order. These elements are to be demonstrated by original compositions that proceed sequentially from relatively simple arrangements to those of maturity.

[ART 311 Issues in Contemporary Art

Fall. 3 credits. Not offered 1996-97.
A seminar course in issues of contemporary art, including lectures by visiting artists.]

ART 312 Modern Art in Italy

Fall or spring. 3 credits. Rome Program only.

This course is designed to introduce students to contemporary developments in Italian art and to major issues concerning the art world. Significant movements of the twentieth century, including Futurism, Metaphysical painting, and Magic Realism will be discussed, post-war painting and sculpture will be emphasized. Visits with artists in studios, galleries and museums will introduce students to the exchange between artists, dealers and critics. Fulfills 300-level Theory and Criticism requirement for Fine Arts majors.

ART 317 History of Art in Rome: Early Christian to the Baroque Age

Fall. 4 credits. Rome Program only.
General survey of the early Christian period to the fantastic vision of Piranesi in the eighteenth century. Special emphasis will be placed on the developments of the Renaissance and Baroque periods. Weekly lecture and field trips.

ART 318 History of Art in Rome: Renaissance in Rome and Florence

Spring. 4 credits. Rome Program only.
A direct knowledge of art in its historical context is the aim of this course. Open both to students interested in history and to those concentrating on the visual impact of art. Included are lectures and field trips.

ART 419 Independent Study/Supervised Readings in Art

Fall, spring or summer. 4 credits variable.
Prerequisite: student must be a junior in good standing and have the written permission of the instructor.
Independent reading and research allows a student the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to be pursued under the supervision of a faculty member.

ART 611 Professional Skills for the Visual Artist

Fall. 4 credits.
This seminar will help fine arts graduate students build professional skills that will assist them in their careers as practicing artists and in their work at art-related employment. Students will complete a resource notebook that should be useful to them in the years after they graduate. Topics will include: funding resources, exhibition opportunities, employment options, documentation of work, health, safety, and legal issues.

ART 612 Recent Practice in the Visual Arts

Spring. 3 credits.
This seminar is designed to provide graduate students with an overview of recent visual artwork. Students will study work from a wide range of artists who have received significant recognition within the visual arts community. Reviews of major exhibitions such as Documenta, La Biennale di Venezia, and the Whitney Biennial will be discussed. Students will be encouraged to travel to nearby cities to look at contemporary work.

ART 613 On-Line Publication for the Visual Artist

Fall. 3 credits.
This course is designed to introduce graduate students to the basic principles of electronic imaging. As a major project, each student will interview a contemporary visual artist. These interviews will be illustrated with digital images of each artist's work and combined in an on-line magazine. Additionally each student will learn to create a home page on the World Wide Web.

ART 614 Contemporary Theory in the Visual Arts

Spring. 3 credits.
This seminar explores selected writings on the current issues represented within the visual arts. It is designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary visual practice. Topics will vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

Studio Courses in Painting

Fees for painting courses:
121, 221, 321, 322, 323, 421, 422, 429: \$40

ART 121 Introductory Painting

Fall, spring, or summer. 3 credits.
An introduction to the problems of artistic expression through the study of pictorial composition; proportion, space, shapes, and color as applied to abstract and representational design.

ART 123 Landscape Painting

Summer. 3 credits.
Class meets outdoors at selected sites in the Ithaca area. A different motif is explored each week. Pen, pencil, and water- or oil-based colors (optional) are the materials employed. Analysis and discussion of the landscape work of Corot, Cézanne, van Gogh, Seurat, and others are included.

ART 221 Painting II

Fall or spring. 4 credits. Prerequisite: Art 121 or permission of instructor.
A continuation of Art 121.

ART 321 Painting III

Fall or spring. 4 credits. Prerequisite: Art 221 or permission of instructor.
Continued study of the principles of painting and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 322 Painting IV

Fall or spring. 4 credits. Prerequisite: Art 321 or permission of instructor.
Continued study of the principles of painting and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 323 Painting V

Fall or spring. 4 credits. Will not be offered after spring 1997. Prerequisite: Art 322 or permission of instructor.

Continued study of the principles of painting and the selection and expressive use of materials and media. Group discussions and individual criticisms.

ART 421 Pre-Thesis in Painting

Fall or spring. 6 credits. Prerequisite: Art 323.

Further study of the art of painting through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

ART 422 Thesis in Painting

Fall or spring. 6 credits. Prerequisite: Art 421.

Advanced painting project to demonstrate creative ability and technical proficiency.

ART 429 Independent Studio in Painting

Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor.

Independent studio in painting allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 721-722, 821-822 Graduate Painting

721 Fall, 722 Spring, first-year M.F.A. students. 9 credits. 821 Fall, 822 Spring, second-year M.F.A. students. 9 credits.

Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation.

Studio Courses in Printmaking

Fees for printmaking courses:

Art: 130, 234, 235, 236:	\$55
Intaglio: 231, 431.1, 432.1, 439.1:	\$65
Lithography: 233, 431.2, 432.2, 439.2:	\$85
Screenprinting: 232, 431.3, 432.3, 439.3:	\$45

ART 130 A Survey of the Printmaking Processes

Fall. 3 credits.

An introduction to the printmaking processes of intaglio, screen printing, and lithography. Students will produce introductory-level projects utilizing each of these printmaking processes. This class will also address the procedures and protocol of the printshop.

ART 231 Intaglio

Spring. 4 credits. Prerequisite: Art 130.

A studio course in advanced etching techniques. Refinement of processes and ideas through the uses of aquatint, spit bite, lift ground, soft ground, and dry point in black and white with an introduction to multiple plate color printmaking.

ART 232 Screen Printing

Fall. 4 credits. Prerequisite: Art 130.

An exploration of the screen printing process as it applies to the Fine Arts. Students will develop skills in multicolor printing using transparent inks and additives. Stencils will be made by the handcut and the photo process.

ART 233 Lithography

Spring. 4 credits. Prerequisite: Art 130.

The theory and practice of lithographic printing using lithographic stones and aluminum plates. Traditional techniques in crayon, tusche wash, and color printing as well as photolithography using kodalith and computer-generated transparencies.

ART 234 Art of the Book

Fall. 4 credits.

A studio course that investigates the expanding genre of artists' and one-of-a-kind books. Assignments guide the student's exploration of elements of the book: page, type, scale, covers, dynamics. Projects involve a variety of structures, media, and binding techniques. A valuable course for artists, architects, poets, and others who are curious about the book form.

ART 235 Large Relief/ Monoprint

Spring. 4 credits. Prerequisite: Art 130.

A studio course that investigates large-scale composition through the specific print techniques of wood cut, linoleum cut, and monoprint. The multiple state print will be utilized for this painterly approach to printmaking. The large format is especially suitable for understanding scale and its relationship to printing.

ART 236 Non-Press Printing

Spring. 4 credits.

A consideration of the various methods of printing available to the artist that do not involve a press or other mechanical means. Included will be linocuts, woodcuts, collage prints, rubbings, pochoir, and monoprints as well as various experimental techniques.

ART 431 Pre-Thesis in Printmaking

Fall or spring. 6 credits. Prerequisites: Art 231/232/233 (1 of 3) and 231/232/233/234/235/236/264 (1 of 7).

Further study of the art of graphics through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

ART 432 Thesis in Printmaking

Fall or spring. 6 credits. Prerequisite: Art 431.

Advanced printmaking project to demonstrate creative ability and technical proficiency.

ART 439 Independent Studio in Printmaking

Fall, spring, or summer. 4 credits variable.

Prerequisite: student must be a junior in good standing and have the written permission of the instructor.

Independent studio in printmaking allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 731-732, 831-832 Graduate Printmaking

731 Fall, 732 Spring, first-year M.F.A. students. 9 credits. 831 Fall, 832 Spring, second-year M.F.A. students. 9 credits.

Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation; discussion sessions of work in progress are held.

Studio Courses in Sculpture

Fees for sculpture courses:

141, 148, 149	\$50
241, 341, 342, 343, 441, 442	\$75

ART 141 Introductory Sculpture

Fall, spring, or summer. 3 credits.

A series of studio problems introduce the student to the basic considerations of artistic expression through three-dimensional design, i.e., modeling in Plasteline, building directly in plaster, casting in plaster, and constructing in wood and metal.

ART 148 Figurative Sculpture

Summer. 3 credits. Three-week session only.

This course will introduce students to the figure by working directly from observation. Students will learn the basics of modeling in clay, making plaster molds, and casting in plaster. Daily hands-on demonstrations and slide lectures will provide a historical overview. Open enrollment.

ART 149 Metal Fabrication and Bronze Casting

Summer. 3 credits. Three-week session only.

This course will introduce students to materials, techniques, and processes associated with metal fabrication and bronze casting. Through a series of assignments, students will explore the unique character of metals.

ART 241 Sculpture II

Fall or spring. 4 credits. Prerequisites: Art 141, or an Arch design studio, or permission of instructor.

Various materials, including clay, plaster, wood, stone, and metal, are used for exercises involving figurative modeling, abstract carving, and other aspects of three-dimensional form and design. Beginning in the second year, students are encouraged to explore the bronze casting process. The sculpture program, which is housed in its own building, contains a fully equipped bronze casting foundry.

ART 341 Sculpture III

Fall or spring. 4 credits. Prerequisite: Art 241 or permission of instructor.

Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 342 Sculpture IV

Fall or spring. 4 credits. Prerequisite: Art 341 or permission of instructor.

Continuation and expansion of Art 341.

ART 343 Sculpture V

Fall or spring. 4 credits. Will not be offered after spring 1997. Prerequisite: Art 342 or permission of instructor.

Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 441 Pre-Thesis in Sculpture

Fall or spring. 6 credits. Prerequisite: Art 343.

Further study of the art of sculpture through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

ART 442 Thesis in Sculpture

Fall or spring. 6 credits. Prerequisite: Art 441.

Advanced sculpture project to demonstrate creative ability and technical proficiency.

ART 449 Independent Studio in Sculpture

Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor.

Independent studio in sculpture allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 741-742, 841-842 Graduate Sculpture

741 Fall, 742 Spring, first-year M.F.A. students. 9 credits. 841 Fall, 842 Spring, second-year M.F.A. students. 9 credits.

Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation. Weekly discussion sessions of works in progress are held.

Studio Courses in Photography

Darkroom fees for photography courses:

Fee for B & W courses:	\$80.00
Fee for color courses:	\$160.00
Fee for an additional B & W course taken the same term:	\$25.00
Fee for an additional color course taken the same term:	\$105.00

ART 161 Photography I (also Architecture 251)

Fall, spring, or summer. 3 credits. A basic lecture-studio course in black and white photography for beginners. Emphasis is on basic camera skills, darkroom techniques, and understanding of photography imagery.

ART 168 Black-and-White Photography

Summer. 3 credits. Three-week session only. Intended for students at all levels, from introductory to advanced. Emphasis on camera skills, darkroom techniques, and the content of black-and-white photographic imagery.

ART 169 Color Photography

Summer. 3 credits. Three-week session only. Intended for students at all levels, from introductory to advanced. Emphasis on camera skills, darkroom techniques, and the content of color photographic imagery.

ART 261 Photography II (also Architecture 351)

Fall, spring, or summer. 4 credits. Prerequisites: Art 161 or Architecture 251, or permission of instructor. A continuation of Photography I concentrating on black and white photographic processes, history and theory of creative practice, and individual projects.

ART 263 Color Photography

Fall, spring, or summer. 4 credits. Prerequisite: Art 161 or Arch 251, or permission of instructor.

A studio course in color photography with emphasis on camera skills, darkroom techniques, and the content of color photography.

ART 264 Photo Processes

Fall, spring, or summer. 4 credits. Prerequisite: Art 161 or Arch 251, or permission of instructor.

A studio course in alternative and nonsilver photographic processes. Emphasis is on camera skill, basic techniques and processes, image content, and creative use of photo processes.

[ART 265 Studio Photography]

Fall or spring. 4 credits. Prerequisite: Art 161 or Arch 251, or permission of instructor. Not offered 1996-97.

A course in the use of medium- and large-format cameras that explores technique, lighting, and the use of larger-format cameras for personal expression both in the studio and outdoors.]

ART 461 Pre-Thesis in Photography

Fall or spring. 6 credits. Prerequisite: Art 261, 263.

A studio course intended for photography majors and other qualified students.

ART 462 Thesis in Photography

Fall or spring. 6 credits. Prerequisite: Art 461.

A studio course intended for photography majors and other qualified students. Advanced photography project to demonstrate creative ability and technical proficiency.

ART 469 Independent Studio in Photography

Fall, spring or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor.

Independent studio in photography allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 761-762, 861-862 Graduate Photography

761 Fall, 762 Spring, first-year M.F.A. students. 9 credits. 861 Fall, 862 Spring, second-year M.F.A. students. 9 credits.

Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation. Discussion sessions of work in progress are held.

Studio Courses in Drawing

Fees for drawing courses:

151, 152, 251, 252, 459:	\$25
--------------------------	------

ART 151 Drawing I

Fall, spring, or summer. 3 credits. A course that is general in nature and introduces students to principles and techniques of representation. Emphasis will be on creating the illusion of space and form through line, the rendering of light and shade, and studies in perspective. In addition, the student will have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink and wash, etc.

ART 152 Drawing II

Spring. 3 credits. Prerequisite: Art 151. A general course in drawing that will emphasize figure study and life drawing. This course will build on the foundation of Art 151 concentrating on the analytical study of the figure. Students will explore a variety of materials, traditional and contemporary.

ART 158 Conceptual Drawing

Summer. 3 credits. Emphasis on drawing from the imagination. The generation of ideas and their development in sketches is stressed. The intent is not to produce finished art but rather to experience a series of problems that require image and design concepts different from those of the artist working directly from nature.

ART 159 Life and Still-Life Drawing

Summer. 3 credits. The human figure and still life are studied both as isolated phenomena and in relation to their environment. Focuses on helping the student observe and discover.

ART 251 Drawing III

Fall. 3 credits. Prerequisites: Art 152. An intermediate drawing course in which students will study composition, the articulation of form, and the illusion of space in a variety of materials. Expressive content, conceptualization, and the exploration of materials will be stressed.

ART 252 Drawing IV

Spring. 3 credits. Prerequisites: Art 251. Advanced drawing with an emphasis on life drawing and figure composition. Individual expression will be encouraged along with creative investigation of materials and processes.

ART 459 Independent Studio in Drawing

Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor.

Independent studio in drawing allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

Special Studio Courses

Course fees:

100	\$25
171, 479	\$100
481, 482, 489	\$70

ART 100 Basic Studio in Art

Fall. 4 credits. An introductory course designed to teach basic art concepts and theory, to introduce all art media, and provide a basis for the study and practice of the visual arts.

ART 171 Electronic Imaging in Art

Fall or spring. 3 credits. An introductory studio course using the computer as a tool for making art. Students will explore various approaches to 2-D image creation using software programs for still image generation and processing.

ART 372 Special Topics in Art Studio

Fall, spring, or summer. Variable credit. An exploration of a particular theme or project.

[ART 372 Special Topics: Digital Photography]

Fall. 4 credits. Not offered 1996-97.
An advanced studio course in digital photography. Emphasis on individual projects exploring developing technologies in photography.]

ART 379 Independent Studio in Rome for Non-Majors

Fall and spring. 4 credits variable.
Prerequisite: student must be a junior in good standing, and have the written permission of the instructor. Rome Program only.

Independent studio in Rome allows non-art majors the opportunity to pursue special interests in Fine Arts not treated in regularly scheduled courses. The student plans a course of study or projects that meet the approval of the faculty member selected to guide their progress and evaluate the results.

ART 400 Rome Studio

Fall or spring. 4 credits. Prerequisite: permission of instructor. Fee: \$25. Rome Program only.

The content for the Rome studio will be determined by the instructor. Emphasis will be divided between work accomplished in the studio and work executed outdoors in the environs of Rome. Media will consist primarily of painting, drawing, sculpture, and photography, or those assigned by the instructor. Art 400 fulfills four credits of the concentration requirement.

ART 479 Independent Studio in Electronic Imaging

Fall, spring or summer. 4 credits variable.
Prerequisite: student must be a junior in good standing and have the written permission of the instructor.

Independent studio in electronic imaging allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 481 Pre-Thesis in Combined Media

Fall or spring. 6 credits. Prerequisite: written permission of instructor on a combined media thesis form must be received in the art department, prior to enrollment in this course.

Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 482 Thesis in Combined Media

Fall or spring. 6 credits. Prerequisite: 481 and written permission of instructor on a combined media thesis form must be received in the art department, prior to enrollment in this course.

Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 489 Independent Studio in Combined Media

Fall, spring, or summer. 4 credits variable.
Prerequisite: student must be a junior in good standing and have the written permission of the instructor.

Independent studio in combined media allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

CITY AND REGIONAL PLANNING

P. Olpadwala, chair; S. Baugher, L. Beneria, R. S. Booth, S. Christopherson, P. Clavel, S. Czamanski (emeritus), M. Drennan, J. F. Forester, director, URS; W. W. Goldsmith, W. Isard, B. G. Jones, B. Kelly (emeritus), D. Lewis, B. Lynch, K. C. Parsons, J. W. Reps (emeritus), S. Saltzman, S. W. Stein (emeritus), M. A. Tomlan, R. T. Trancik, T. Victorisz (visiting)

The department offers several programs of study at both the undergraduate and graduate levels.

The Undergraduate Program in Urban and Regional Studies

The Program in Urban and Regional Studies (URS) is a four-year academic program aimed at assessing the problems of human communities and regions. Students who graduate from the program receive a Bachelor of Science degree. The program provides both an excellent liberal arts education and a strong concentration of studies respecting urban and regional issues. The urban and regional studies courses in the program provide students with a broad understanding of relevant issues, the ability to assess those issues, and technical analysis skills. The URS Program is truly interdisciplinary. Students learn to evaluate urban and regional problems by using a wide range of analytic tools and disciplinary perspectives.

Basic Degree Requirements

Requirements for Graduation: URS requirements include (1) eight semesters of residence, (2) 120 credits, (3) two freshman seminars, (4) qualification in one foreign language, (5) four groups of distribution requirements, (6) required courses for major, (7) area requirements for major, (8) free electives, (9) a minimum of 34 courses. The university requires students to complete two semesters of physical education.

1. General education

- a. Freshman writing seminars: 2 courses
- b. Foreign language: 3 courses or qualification in one foreign language
- c. Distribution Requirements: 9 courses

Students must take a total of nine courses for the distribution requirement: four courses (of three or more credits each) from Groups 1 and 2, at least two of which are from Group 1, and at least one of which is from Group 2; five courses from Groups 3 and 4, with at least two in each group and two in the same department. No single course may satisfy more than one distribution requirement. URS students must follow the College of Arts and

Sciences guidelines specifying courses that meet the requirements for groups 1-4.

Group 1: Physical and biological sciences (2-3 courses required)

Group 2: Quantitative and formal reasoning (1-2 courses required)

Group 3: Social sciences and history (2-3 courses required)

Group 4: Humanities and the arts (2-3 courses required)

Advanced Placement Credit

Students may apply up to two courses of approved advanced placement credit in calculus, computer science, and science toward satisfaction of the distribution requirement in Groups 1 and 2 above, if they complete at least one science course during their undergraduate career. They may apply no advanced placement credit toward the distribution requirement in Groups 3 and 4. Grades of S-U courses applied to distribution requirements are not acceptable.

2. Required Courses for the Major in Urban and Regional Studies: 5 courses

CRP 100: The American City

CRP 101: The Global City: People, Production, and Planning in the Third World

CRP 320: Introduction to Statistical Reasoning for Urban and Regional Analysis (statistics course)

Micro Economics course (at least 3 credits, from approved list)

Architecture course (at least 3 credits, from approved list)

Approved List of Micro Economics and Architecture Courses

Micro Economics:

CE&H 110: Introductory Micro Economics

CE&H 210: Intermediate Micro Economics

ECON 101: Introduction to Micro Economics

ECON 203: Micro Economics

ECON 313: Intermediate Micro Economics

Architecture:

ARCH 131: An Introduction to Architecture I

ARCH 132: An Introduction to Architecture II

ARCH 181: History of Architecture I

ARCH 182: History of Architecture II

3. Area Requirements for the Major in Urban and Regional Studies: 11 courses

A. Students must take one listed CRP course in each of the following 6 areas: Design, Economics, Environment, History, Politics/Policy, Quantitative Analysis

a. Design

CRP 415: Gender Issues in Planning and Architecture

CRP 481: Principles of Spatial Design and Aesthetics

CRP 482: Urban Land Use Concepts

b. Economics

CRP 400: Introduction to Urban and Regional Theory

CRP 401: Seminar in Urban Political Economy

CRP 404: Urban Economics

CRP 417: Industrial Restructuring: Implications for State and Local Policy

NOTE: This requirement **may not** be satisfied with the same course taken to complete the micro-economics course requirement under B.

c. Environment

CRP 380: Environmental Politics

CRP 451: Environmental Law

d. History

CRP 261: Urban Archaeology

CRP 360: Pre-Industrial Cities and Towns of North America

CRP 361: Seminar in American Urban History

CRP 461: Methods of Archival Research

CRP 462: The American Planning Tradition

e. Politics/Policy

CRP 314: Planning, Power, and Decision Making

CRP 315: The Progressive City

CRP 363: American Indians, Planners, and Public Policy

CRP 413: Planning and Political Economy I

CRP 448: Social Policy and Social Welfare

f. Quantitative Analysis

CRP 321: Introduction to Quantitative Methods for the Analysis of Public Policy

CRP 421: Introduction to Computers in Planning

B. Students must take any additional 5 CRP courses (of at least 3 credits each, letter grade only)

4. Free Electives: 6-9 courses

5. Physical Education (2 terms of PE)

Required courses for graduation: 34

Required credits: 120

Honors Program

Each year a few well-qualified junior-year students can join the honors program. Each honors student will develop and write an honors thesis under the guidance of his or her faculty adviser.

Off-Campus Opportunities

Cornell-in-Washington Program. Students in good standing can earn degree credits in the Cornell-in-Washington program through course work and an urban-oriented externship in Washington, D.C. Students may work as externs with congressional offices, executive-branch agencies, interest groups, research institutions, and other organizations involved in the political process and public policy.

Students also select one or two other seminars from such fields as government, history, economics, human development, architectural history, natural resources, and social policy. Cornell faculty members teach these seminars, which provide credit toward fulfillment of major, distribution, and other academic requirements.

Cornell Abroad. We encourage qualified undergraduates to study abroad because exposure to foreign cultures can be an eye-opening part of a university education. In an increasingly interdependent world, the experience of living and learning in a foreign country is invaluable. We work continually to develop study abroad opportunities. Current programs are available in Great Britain, Spain, and Germany. Opportunities in Asia, the Mideast, and France should be forthcoming. We encourage URS students to explore these opportunities.

Cornell-in-Rome Program. The College of Architecture, Art, and Planning has a teaching facility in Rome located in the sixteenth-century Palazzo Massimo. Students in good standing can earn degree credits through courses taken with Cornell faculty assigned to Rome and with accredited instructors. Courses are available in areas of urban development, regional development, and architecture and art.

Research and fieldwork. Students are welcome to work with department faculty members on research or other opportunities that are appropriate to their particular interests. Fieldwork and community-service options also exist for students in the Urban and Regional Studies Program.

Additional Degree Options

Linked degree options. Urban and regional studies students can earn both a Bachelor of Science degree and a Master of Regional Planning (M.R.P.) degree in a fifth year of study. Ordinarily the professional M.R.P. degree requires two years of work beyond that for the bachelor's degree. Under this option, a minimum of 30 credits and a master's thesis or thesis project are required for the M.R.P. degree. Interested students apply to the Graduate School, usually in the senior year.

Dual degree option. A student accepted in the Cornell College of Arts and Sciences can earn both a B.A. in a College of Arts and Sciences major and a B.S. in urban and regional studies in a total of five years. Special requirements have been established for this dual degree program. Cornell students interested in pursuing the dual degree program should contact either the director of the Urban and Regional Studies Program or the appropriate dean of the College of Arts and Sciences for further information.

Admissions Requirements and Procedures

Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential and commitment—a combination of ability, achievement, motivation, diligence, and use of educational and social opportunities. Nonacademic qualifications are important as well. The department encourages students with outstanding personal qualities, initiative, and leadership ability. Above all, the department seeks students with a high level of enthusiasm and depth of interest in the study

of urban and regional issues. Applicants must complete a university admission application.

Transfer Students

In most cases, transfer applicants should no longer be affiliated with a high school and should have completed no fewer than 12 credits of college or university work at the time of application. High school students who have completed graduation requirements at midyear and are taking college courses for the rest of the academic year should apply as freshmen. Prospective candidates who believe that their circumstances are exceptional should consult with the Director of Admissions in the Cornell division of interest to them before filing an application.

Forms for transfer application and financial aid are available from the Cornell University Office of Admissions, 410 Thurston Avenue, Ithaca, New York 14850-2488. Official transcripts of all high school and college work must be submitted along with SAT or ACT scores and letters of recommendation.

Prospective transfers should have taken at least 6 credits in English. In addition, students should have taken basic college-level courses distributed across the natural and social sciences, humanities, and mathematics. Applicants whose previous course work closely parallels the "General Education" requirements of the Urban and Regional Studies curriculum will have relative ease in transfer. Nevertheless, students with other academic backgrounds, such as engineering, architecture, fine arts, management, and agriculture, are eligible to apply.

Although an interview is not required, applicants are urged to visit the campus. Applicants who want further information regarding the Urban and Regional Studies Program, may contact Professor John Forester, Program Director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, New York 14853-6701 (telephone: 607-255-4613).

The Graduate Program in City and Regional Planning

The major concentrations of course work in city and regional planning are in the following areas:

Built environment and urban development planning is concerned with physical facilities; the social, economic, and environmental forces that affect their design; and the process of development, plan making and administration.

History and historic preservation planning is a special program of study preparing students for work in history, analysis, and preservation of buildings, urban environments, and neighborhoods, including downtown business areas.

Regional planning and regional science are concerned with socioeconomic issues and functional planning at the regional level, the forces that generate economic growth and social development, and the ways in which resources can best be used.

Local and regional economic development is concerned with understanding and influencing how economic change may be harnessed to the benefit of communities, counteracting plant closings and more general regional decline and stimulating more equitable

programs of socioeconomic change and development.

International planning offers a broad range of courses in international economic development, development planning, and political economy.

Quantitative methods and policy analysis courses are offered to prepare planners and researchers for a variety of situations and problems.

Complementing these concentrations, planning theory and political economy courses examine the organizational and planning processes and the political and economic conditions in which planning and international development operate.

Several graduate degrees are offered: the Ph.D.; the Master of Regional Planning (M.R.P.), for a two-year program; the Master of Arts (M.A.) in historic preservation planning, for a two-year program; and, in special cases, the Master of Professional Studies (International Development) [M.P.S.(I.D.)], for the twelve-month international planning program.

Off-Campus Opportunities

Rome Program. Graduate students have the opportunity to spend one or two semesters in Rome, studying at Cornell's center at the Palazzo Massimo. Instruction is given by Cornell professors-in-residence and by other faculty. The program is structured to include work assignments in one of the international development organizations headquartered in Rome.

Course Information

Most courses in the Department of City and Regional Planning are open to students in any college of the university who have fulfilled the prerequisites and have the permission of the instructor.

The department attempts to offer courses according to the information that follows. However, students should check with the department at the beginning of each semester for late changes.

Undergraduate Program in Urban and Regional Studies

CRP 100 The American City

Fall. 3 credits.

An introductory course on the evolution of urban problems and opportunities facing the majority of this country's population as we approach the last decade of the twentieth century. Readings, discussions, and brief papers exploring topics ranging from suburban development to central city poverty, from environmental threats to downtown revitalization, and from municipal finance to the new position of women in the urban economy.

CRP 101 The Global City: People, Production, and Planning in the Third World

Spring. 3 credits.

A critical look at the physical and social development of giant cities in the Third World. Their origins, roles, contributions, and shortcomings are examined. Their place in world political economy is evaluated. Policy prescriptions for their principal problems are discussed.

CRP 261 Urban Archaeology

For description, see LA 261.

CRP 314 Planning, Power, and Decision Making

Fall. 3 credits.

This seminar examines various bases of political and professional power. We ask, What do professionals who want to serve the public need to know about power and decision-making processes in the institutional settings in which they operate? How and why can professionals make a difference when facing problems characterized by great complexity and severe inequalities among affected groups?

CRP 315 The Progressive City

Spring. 3 credits.

A review of attempts to incorporate the interest of working-class and poor constituencies through majority control of local governments. Topics to be covered include the role of the city in class formation; historical perspectives on urban political administration; contemporary populist, socialist, and progressive urban governments; and the search for an economic basis for progressive reforms.

CRP 320 Introduction to Statistical Reasoning for Urban and Regional Analysis

Fall. 4 credits.

An introduction to the role and use of quantitative methods in the study of urban and regional issues. Emphasis will be on statistical and related computer methods for the formulation, analysis, and testing of hypotheses and models of social, economic, and physical phenomena of cities and regions. This course will cover applicable methods in probability, descriptive statistics, estimation, hypothesis testing, and regression.

CRP 321 Introduction to Quantitative Methods for the Analysis of Public Policy

Spring. 3 credits.

An introduction to the role and use of quantitative methods in the study of urban and regional issues. This course will focus on various types of models commonly used to analyze urban and regional policy, including techniques for decision analysis, linear programming, cost-benefit analysis, simulation, and regression models, among others. Strengths and weaknesses of those methods will also be considered.

[CRP 360 Pre-Industrial Cities and Towns of North America (also CRP 666, LA 360, and LA 666)]

Fall. 3 credits. S-U grades optional. For description, see LA 360. Not offered 1996-97.]

CRP 361 Seminar in American Urban History (also CRP 662)

Spring. 3 credits. Prerequisite: permission of instructor.

Seminar in the historical evolution of the American city. Emphasis on factors in urban growth, the process of urbanization, the urban reform movement, and intellectual and social responses to the city.

CRP 363 American Indians, Planners, and Public Policy (also CRP 547, LA 363, and LA 547)

Spring. 3 credits.

For description, see LA 363.

CRP 370 The Regional Question: The Case of Italy

Fall. 3 credits. Rome Program only. Economists, sociologists, and planners have written extensively about severe regional inequalities and regional development planning in Italy. This literature offers a route to understanding why some regions remain less developed than others. We will look at the case of the "the third Italy," which includes several highly successful manufacturing regions in the north, and at southern Italy, which is underdeveloped. Introduced by a series of lectures, the course will include field trips to Naples and to the industrial districts of the North.

CRP 380 Environmental Politics

Spring. 4 credits.

Examines the politics of public decisions affecting the environment. Focuses on the roles played by different political actors, the powers of various interest groups, methods for influencing environmental decisions, and the political and social impacts of those decisions.

CRP 400 Introduction to Urban and Regional Theory

Fall. 4 credits. Open to juniors and seniors.

Introductory review of theories dealing with the spatial distribution of population and economic activity, drawn from various social science disciplines such as geography, economics, and sociology. Review of recent research dealing with such topics as population distribution, migration, location of industry and economic activity, and the spatial organization of urban and regional social systems.

CRP 401 Seminar in Urban Political Economy

Spring. 4 credits. Prerequisites: introductory economics or sociology; for URS students, CRP 400 also.

The world economy, the global city, and social change. Population, technology, and work in industrial and developing countries. Race, ethnicity, and nationality. Profits, subsistence, and poverty. Students may read and direct discussions on outstanding texts, write book reviews, and prepare brief reports.

[CRP 404 Urban Economics (also CRP 604)]

Fall or spring. 4 credits. Prerequisite: basic economics. Not offered 1996-97.

Urban phenomena are analyzed from an economic point of view. Areas examined include economic aspects of urbanization processes and policies, determinants of urban growth and decline, urban land and housing markets, urban transportation, and urban public services. Some time will be spent in discussing problems of cities in developing countries.]

CRP 408 Introduction to Urban Geographic Information Systems (GIS) (also CRP 608)

Spring. 4 credits. Letter grade.

Geographic Information Systems (GIS) have revolutionized the way we manage, analyze, and present spatial information. This course will focus on GIS in the social sciences. Many of the exercises and examples will be based on planning issues, but the concepts can be applied to many other disciplines such as government, economics, natural resources, and sociology. Some of the issues to be covered include: fundamentals of spatial analysis; overview of GIS technology and

applications; designing a GIS project; gathering and analyzing data; and creating thematic maps.

CRP 417 Industrial Restructuring: Implications for State and Local Policy (also CRP 517)

Fall. 4 credits.

A basic introduction to new issues arising from the way in which national and international economic shifts are affecting diverse United States localities. The course will focus on intra-industry restructuring, the location of economic activities, and state and local economic policy. Cases will be drawn from a variety of industries and national situations, with specific application to New York and other Northeast locations.

CRP 421 Introduction to Computers in Planning (also CRP 522)

Fall. 4 credits.

Students learn how to use microcomputers and software packages in the planning and problem-solving processes. Included are word processing, spreadsheets, mapping, and other types of packages that are useful for other classes and for professional work in the field. (WordPerfect, Lotus 1-2-3, dBase and MacGIS are examples of packages that have been taught in previous years.)

CRP 442 The Sociology of Science
For description, See S&TS 442.

[CRP 448 Social Policy and Social Welfare (also CRP 548)]

Spring. 4 credits. Not offered 1996-97.

This course addresses conceptual issues underlying social policy and the provision of social welfare and analyzes how different positions are reflected in a set of current social welfare controversies. The first part of the course will introduce principles that guide the development of social policy including fairness and justice. Various conceptions of society will be examined with reference to their influence on the extent and nature of social welfare provision, comparing the U.S. and other industrialized countries. The second part of the course will examine the relationship between economic change and social policy in the United States. A series of current social policy controversies (such as AIDS, homelessness, abortion, and welfare) will illustrate how values and assumptions about state, economy, and society affect the forms of social welfare provisions and how they are administered.]

CRP 451 Environmental Law (also CRP 551)

Fall. 4 credits.

An introduction to how the legal system handles environmental problems. Study of federal statutes such as the National Environmental Policy Act, the Clean Air Act, and the Clean Water Act, and of important judicial decisions that have been handed down under federal environmental statutes and regulations. Discussion of environmental law topics from a policy management perspective. This course is designed for undergraduate and graduate students interested in urban issues, planning, natural resources, government, environmental engineering, law, business, architecture, landscape architecture, etc. Course assignments for graduate students will differ in some aspects from those for undergraduates.

CRP 453 Environmental Aspects of International Planning (also CRP 683)

Fall. 3 credits.

This seminar will examine the roles of diverse environmental actors—international organizations, national bureaucracies, scientific communities, NGOs, and social movement organizations in shaping environmental debates and designing conservation and remediation programs in the Third World. Open to advanced undergraduate and graduate students in planning, environmental studies, and related social and natural sciences.

CRP 457 Community Service Fieldwork

Fall or spring. 4 credits variable. Permission is granted by instructor.

Undergraduate students work under the direction of a faculty member in the CRP department on a project that assists a public or nonprofit organization. Projects will involve urban and regional issues as defined by a "client" and agreed upon by the faculty member.

CRP 461 Methods of Archival Research

Fall. 3 credits.

Examination of methods of using archival materials, including documents in the Cornell archives and regional history collection, for research in the history of architecture, historic preservation, and history of urban development.

CRP 477 Issues in African Development (also CRP 677)

Fall and spring. 1 credit. S-U only.

This course examines a broad range of critical concerns in contemporary Africa including food production, human resource development, migration, urbanization, environmental resource management, economic growth, and policy guidance. The weekly presentations are made by invited specialists. Students are required to write a term paper.

CRP 481 Principles of Spatial Design and Aesthetics (also CRP 581 and Landscape Architecture 480)

Fall. 3 credits. Course enrollment is restricted to planning and landscape architecture students unless special permission is granted by instructor.

A lecture course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America.

CRP 482 Urban Land Use Concepts

Fall. 3 credits.

Explorations of the use of land in urban areas, with an emphasis on the experience of North American cities. The course reviews use types, use characteristics, and use relationships in terms of conflicting social and economic demands. Concepts of organizing urban space in the past and present are reviewed. Physical planning, site planning and urban design issues are discussed.

CRP 490 Student-Faculty Research

Fall or spring. 1-4 credits. Limited to undergraduate students in the Urban and Regional Studies Program. S-U grades only.

Research, reading, and/or writing project in which a student and faculty member choose a topic related to urban and regional studies.

CRP 492 Honors Thesis Research

Fall or spring. 4 credits. Limited to Urban and Regional Studies Program majors who have been selected as honor students by the department faculty.

Each selected student works with his or her thesis adviser.

CRP 493 Honors Thesis Writing

Fall or spring. 4 credits. Prerequisite: Completion of CRP 492.

Each selected student works with his or her thesis adviser.

CRP 495 Special Topics

Fall, spring, summer. 4 credits. Hours to be arranged.

CRP 495.27 Cuban Transitions: The Search for Development Alternatives

Fall. 3 credits. Open to sophomores, juniors, seniors. No prerequisites.

Cuba is a symbol; it is also a society. This course looks beyond the symbol to Cuban society, environment, and political economy within a Caribbean context. Cuba's relations with other nations and their impacts on Cuban development will be emphasized. The 1959 Revolution was a defining moment in Cuban history and a central element in Cuban culture. Students will learn about the experiences that shaped the revolution, altered its course in the 1970s and 1980s, and led to profound experimentation and a renewed search for authenticity in the 1990s.

CRP 497 Supervised Readings

Fall or spring. Variable 4 credits. Limited to upperclass students. Prerequisite: permission of instructor.

Graduate Courses and Seminars

Courses numbered from 500 to 599 and 600 to 699 are generally considered introductory or first-year courses; those numbered from 700 to 799 and 800 to 899 are generally considered more advanced. Upperclass undergraduate courses are numbered from 300 to 499. (Undergraduate students with the necessary prerequisites and permission of the instructor may enroll in courses numbered 500 and above.)

CRP 508 Introductory Workshop

Fall. 2 credits. First-year MRP students.

A short, intensive workshop course designed to engage entering MRP students and selected faculty in a simulated or real world planning problem. Group problem solving, oral and written report presentation, and graphics.

CRP 512 Public and Spatial Economics for Planners

Fall. 3 credits. Letter grade. No prior knowledge of economics.

Covers basic microeconomic theory and some topics in macroeconomics. What distinguishes it from foundation courses in economics is that the context of every topic is both spatial and public. The concept of space is central to city and regional planning, and the perspective of the public and nonprofit sectors is the perspective of city and regional planning. Both space and the public-nonprofit sectors are peripheral to (or absent from) the usual graduate foundations courses in economics. The course will also cover the economic theory necessary to understand the many applications of economics presented in

subsequent courses in city and regional planning.

CRP 513 Planning Practice and Urban Structure Seminar

Fall. 4 credits.

This introductory graduate seminar has several objectives. It exposes students to the theory and history of (1) planning, administration, and related public intervention in urban affairs, (2) the growth and development of cities, and (3) the built environment. Topics are analyzed from the perspective of political economy. Students improve their understanding of the planning process and of the urban application of the social sciences, get practice in writing short papers, and explore one research topic in depth.

CRP 517 Industrial Restructuring: Implications for State and Local Policy (also CRP 417)

Fall. 4 credits. For description, see CRP 417.

CRP 520 Statistical and Mathematical Concepts for Planning

Fall. 3 or 4 credits.

An introduction to statistical and mathematical concepts and methods of importance in planning and policy analysis. Topics will include matrix algebra, probability, sampling, estimation, and regression as well as the use of a microcomputer statistical package.

CRP 521 Mathematical Foundation for Planning Analysis.

Fall. 1 credit. S-U only. Meets for two hours, once each week, for approximately half the semester.

Review of mathematical foundations for planning analysis. Topics include probability statistics, mathematical functions, and matrix algebra. Intended for students with prior course work as a refresher course in preparation for higher-level courses in planning analysis. Departmental permission required.

CRP 522 Introduction to Computers in Planning

For description, see CRP 421.

CRP 532 Real Estate Development Process

Fall. 3 credits.

Examination of various forms of development as well as the role of major participants in the processes. Review issues in residential, retail, industrial, office, and low-income housing projects. Some guest speakers and case studies.

CRP 533 Real Estate Marketing and Management

Spring. 3 credits.

The course focuses on the tenant or user as the basic source of the value of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Office buildings are considered in detail while key elements common to the operation and marketing of all types of property are reviewed. Topics include examination of tenant types, factors creating preferred locations, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and case studies.

CRP 541 The Politics of Technical Decisions I (also Government 628 and Science and Technology Studies 415)

Spring. 4 credits. For description, see S&TS 415.

CRP 545 Introduction to Public Policy Analysis and Management

For description, see CRP 321.

CRP 546 Conflict Resolution in Community and Environment

Fall. 3 credits.

This course will explore the theories and techniques of conflict resolution as they apply to community, environmental, and related public policy disputes. Analysis will complement skill-building. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

CRP 547 American Indians, Planners, and Public Policy (also CRP 363, LA 363, and LA 547)

Spring. 3 credits.

For description, see LA 363.

[CRP 548 Social Policy and Social Welfare (also CRP 448)]

Spring. 4 credits. Not offered 1996-97.

For description, see CRP 448.]

CRP 549 Ethics and Practical Judgment in Planning

Spring. 4 credits variable.

An introduction to problems of practical judgment and ethics as they arise in planning and public-serving professional practice. Issues such as consent, interests, deliberation, and legitimacy are central concerns.

CRP 551 Environmental Law (also CRP 451)

Fall. 4 credits. For description, see CRP 451.

CRP 552 Urban Land-Use Planning I

Fall. 3 credits.

Surveys, analyses, and plan-making techniques for guiding physical development of urban areas; location requirements, space needs, and interrelations of land uses. Emphasis on residential, commercial, and industrial activities and community facilities; housing and neighborhood conditions. Lectures, seminars, and field exercises.

CRP 553 Urban Land-Use Planning II

Spring. 3 credits. Prerequisite: CRP 552 or permission of instructor.

In-depth consideration of special issues in urban land-use planning, such as industrial districts, large-scale integrated development, Planned Unit Development, public and institutional facilities, open space, land banking, central business districts, neighborhoods, energy impacts, transportation impacts, and others.

CRP 555 Urban Systems Studio (also Landscape Architecture 701)

Fall. 6 credits. Prerequisite: permission of instructor.

Application of urban design and town planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions involving the street, square, block, garden, and park systems. Topics covered in the studio include urban land-use development, spatial systems and aesthetics, and public and private

implementation of urban-design plans. Computer modeling and digital design media will be introduced as tools for urban design. This is a specially arranged collaborative studio with the Landscape Architecture Program.

CRP 557 City Planning Design Studio

Spring. 4 credits. Prerequisite: previous design courses or permission of instructor.

A series of individual and team small area design projects at district, neighborhood, and project scale. The course objective is to develop an understanding of the spatial issues, knowledge, and skills needed to design for the functional, aesthetic, social, and cost needs of urban communities. Studio projects, field trips, and reading.

CRP 558 City and Regional Planning Workshop

Fall and spring. 4 credits. S-U only.

Students work on urban issues, such as housing, traffic and parking, economic development, zoning, and related planning issues, with public or non-profit organizations in New York State. Projects are undertaken on a community-service basis for "clients" who specifically request planning assistance. Students work individually or in teams.

CRP 560 Documentation for Preservation (also Architecture 586)

Fall or spring. 3 credits.

Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

CRP 561 Historic Preservation Planning Workshop: Surveys and Analyses (also Architecture 588)

Fall or spring. 4 credits.

Techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York; and explorations of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasis on fieldwork with individuals and community organizations.

CRP 562 Perspectives on Preservation (also Architecture 585)

Fall. 3 credits.

Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.

CRP 563 Problems in Contemporary Preservation Practice (also Architecture 584)

Spring. Variable credit.

A review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed. Presented by staff and guest lecturers.

CRP 564 Building Materials Conservation (also Architecture 587)

Spring. 3 credits. Open to juniors, seniors, and graduate students.

A survey of the development of building materials in the United States, chiefly during the nineteenth and early twentieth centuries, and a review of the measures that might be taken to conserve them.

CRP 565 Fieldwork or Workshop in History and Preservation

Fall or spring. Variable credit.
Work on applied problems in history and preservation planning in a field or laboratory setting or both.

CRP 567 Measured Drawing (also Architecture 583)

Fall. 3 credits. For undergraduate architecture students and graduate students in history and preservation. Prerequisite: permission of instructor.
Combines study of architectural drawing as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.

CRP 569 Archaeology on Preservation Planning and Landscape (also LA 569)

Fall. 3 credits. Offered alternate years.
Not offered 1997-98.
For description, see LA 569.

CRP 581 Principles of Spatial Design and Aesthetics (also Landscape Architecture 480)

For description, see CRP 481.

[CRP 604 Urban Economics]

Not offered 1996-97.
For description, see CRP 404.]

CRP 605 Urban Public Finance

Fall. 4 credits. Letter grade. Prerequisite: prior exposure to microeconomics.
An overview of neoclassical public economics theory, particularly those aspects of the theory that are central to urban public finance. In part two, the unusual three-tiered fiscal system of the United States is described along with the evolving fiscal and economic role of large municipal governments. Part three of the course presents the public finance theory of taxation. Major taxes and other revenue sources utilized by large municipalities are described and analyzed. Part four is the heart of the matter, namely the measurement and analysis of the fiscal condition of cities.

CRP 608 Introduction to Urban Geographic Information Systems (GIS) (also CRP 408)

Spring. 4 credits. Letter grade.
For description, see CRP 408.

[CRP 614 Gender and International Development (also Women's Studies 614)]

Spring. 3 credits. Not offered 1996-97.
This course has four main objectives. First, to provide an analysis of the location of women in processes of development and to understand the centrality of gender in each case. Second, to examine theoretical and conceptual frameworks for the analysis, including an understanding of gender divisions and their interaction with other forms of inequality such as class, race, and ethnicity. Third, to reflect upon the linkages between the global economy and the gendered macro and micro processes of development. Fourth to provide a basis for research, practical action, and policy formulation and for evaluating directions and strategies for social change.]

CRP 616 Development and Change in the World Economy

Fall. 3 credits. Letter grade only.
This course concentrates on the current dynamics of national and international development, the globalization of national economies, and the forces and trends that are shaping this process. Beginning with an analysis of economic restructuring taking place since the late 1960s, the emphasis is on the factors affecting the new international division of labor and production, the labor market, consumption, trade and finance, and the distribution of resources. This includes the analysis of processes through which the current neoliberal model is being built, such as trade liberalization, labor market flexibilization, the erosion of nation states as economic units, and the formation of trade blocks and global institutions.

CRP 620 Planning Analysis

Spring. 4 credits.
A survey of commonly used techniques for analyzing various aspects of subnational socioeconomic systems. Emphasizes planning applications.

CRP 631 Local Economic Policy—Field Workshop

Spring. 4 credits.
A group policy analysis exercise in an upstate New York city. Students do a combination of data analysis; interviews with labor, business, and public leaders; and problem papers addressed to current issues presented by a client group. Individual work is synthesized into a comprehensive report at the end of the semester.

CRP 635 Workshop: State Economic Development Strategies

Spring. 4 credits. S-U grades optional.
The purpose of this course/workshop is twofold: 1) to provide students with research tools useful in developing state-level economic development strategies; and 2) to provide a critical understanding of the primary economic development strategy used by U.S. state policymakers: firm specific subsidies. The course will consist of lecture and discussion meetings. The workshop sessions will include exercises in qualitative information gathering on economic development topics; use of the census in combination with geographic information systems for analysis and presentation; and shift-share analysis.

CRP 639.05 Special Topic: Regional Development, Planning, and the Market, with Emphasis on the Third World-I: Historical and Theoretical Perspective

Fall. 4 credits variable.
Historical and conceptual background, and relevant case material, for dealing with urban and regional development using production analysis with a focus on the Third World. Consequences of the organization of production for urban-rural and regional interactions will be emphasized. This historically oriented theoretical framework will be compared to location, central place, and interregional feedback theories.

CRP 639.06 Special Topic: Regional Development, Planning, and the Market, with Emphasis on the Third World-II: Current Policy Perspective

Spring. 4 credits variable.
The course focuses on what the market can or cannot accomplish in terms of guiding economic industrial, and regional develop-

ment. Points of view represented range from completely unrestricted market operations to proactive industrial development policies in market contexts. Lessons are drawn for Third World regional development policy drawn from the experience.

CRP 642 Critical Theory and the Micro-politics of Practice

Spring. 4 credits variable.
Trying to "solve problems," planners and policy analysts set agendas, shape participation, negotiate relations of power. This seminar explores theories illuminating the communicative micro-politics of their daily practice. We explore issues of power and discourse, practical judgment and deliberation, productive and reproductive aspects of ordinary speech and action.

CRP 653 Legal Aspects of Land-Use Planning

Spring. 3 credits.
Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

CRP 661 Historic Preservation Planning Workshop: Plans and Programs

Fall or spring. 1-4 credits. Prerequisite: CRP 561.
Preparation of elements of historic preservation plans, designs, legislation, and special studies. Individual or group projects are selected by students. Fieldwork is emphasized.

CRP 662 Seminar in American Urban History (also CRP 361)

Spring. 3 credits. Prerequisite: permission of instructor.
For description, see CRP 361.

[CRP 663 Historic Preservation Law]

Spring. 3 credits. Offered alternate years.
Not offered 1996-97.
Law of historic district and landmark designation, tools for preservation (such as police power, taxation, eminent domain), and recent developments in state and federal historic preservation.]

CRP 664 Economics and Financing of Neighborhood Conservation and Preservation

Fall. 3 credits.
The economic and financial aspects of historic preservation and neighborhood conservation. Topics include public finance, selected issues in urban economics, real estate economics, and private financing of real estate projects.

CRP 665 Preservation Planning and Urban Change

Fall. 3 credits.
An examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.

[CRP 666 Pre-Industrial Cities and Towns of North America (also CRP 360, LA 360 and LA 666)]

Spring. 3 credits. S-U grades optional.
Not offered 1996-97.
For description, see LA 360.]

CRP 670 Regional Planning and Development in Developing Nations

Fall or spring. 4 credits. Prerequisite: second-year graduate standing.

Extensive case studies of development planning are analyzed. Focus is on the political economy of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed.

CRP 671 Seminar in International Planning

Spring. 1 credit. S-U grades only.

The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development and planning. The only formal requirement for the course is a brief evaluation of the series at the end of the semester.

CRP 675 Seminar in Project Planning in Developing Countries

Spring. 4 credits.

An examination of the problems and issues involved in preparing project proposals for presentation to funding agencies. Topics include technical design, financial feasibility, social impact analysis, and policy relevance, as well as techniques for effective presentation of proposals. The course is organized as seminar-workshop providing both an analysis of the critical elements of effective proposals and an opportunity to use those elements in the preparation of proposals. A multidisciplinary perspective is emphasized.

CRP 677 Issues in African Development (also CRP 477)

Fall or spring. 1 credit. S-U only.

For description, see CRP 477.

CRP 683 Environmental Aspects of International Planning (also CRP 453)

Fall. 3 credits.

For description, see CRP 453.

[CRP 703 Contemporary Theories of Regional Development]

Fall or spring. 4 credits. Not offered 1996-97.

An advanced seminar, mainly for doctoral candidates, to review recent contributions to the literature. After a fast-paced review of basic material in political economy, students will read and present summaries of works by major contemporary theorists. A final paper is required.]

CRP 711 Planning and Organization Theory

Fall or spring. 4 credits.

Advanced seminar on theoretical models of planning, organization, and urban structure. The first part of the course, which may be taken separately for one credit, provides an overview of administrative issues affecting planning. Next, attention is given to theories of organizational structure, growth, and change. Final sessions are devoted to the influence of urban and regional structures as context. Critical reading, short papers, and seminar discussion characterize the course.

CRP 720 Quantitative Techniques for Policy Analysis and Program Management

Fall. 4 credits.

Selected analytical techniques used in the planning and evaluation of public policy and public investments are examined. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

CRP 730 Methods of Regional Science and Planning I

Fall or spring. 4 credits variable.

An introduction to some of the major methods and models used in regional science and planning. This course is half of a two-semester sequence (see CRP 731). Either course may be taken first. Both courses will cover topics related to the structure and assumptions of the models, model development, and their applications in regional science and planning. Where appropriate, computer implementation will be considered. The spring semester emphasizes statistical and econometric models.

CRP 731 Methods of Regional Science and Planning II

Fall or spring. 4 credits.

See CRP 730. The fall semester will provide an introduction to deterministic methods and models such as input/output models, social accounting models, and optimization models.

CRP 732 Methods of Regional Science and Planning III

Fall or spring. 3 credits. Prerequisites:

CRP 730 and CRP 731 or permission of the instructor.

An introduction to the design and implementation of Social Accounting Matrix and Computable General Equilibrium models and their uses, primarily in a regional context, for planning and policy analysis. The use of econometric methods and CGE models will be discussed. The GAMS software package will be used in related computer exercises.

[CRP 733 Seminar in Regional Models]

Fall or spring. 3 credits. S-U grades optional. Prerequisites: sufficient methodological background to read the current literature. Not offered 1996-97.

A review of the classical and important current literature on socioeconomic and/or environmental models of subnational regions. Each student will be expected to identify his or her own area of interest and critically review and report to the class on important papers in that area.]

CRP 790 Professional Planning Colloquium I

Fall. 1 credit.

Visiting lecturers treat problems and opportunities in the practice of planning. Topical focus to be announced. The only formal requirements for the course are attendance and a brief evaluation at the semester's end.

CRP 792 Master's Thesis, Project, or Research Paper

Fall or spring. 10 credits variable. S-U grades optional.

CRP 794 Planning Internships

Fall, spring, or summer. 1-12 credits.

Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Salaried internships in federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field

experiences, assigned readings, and guest speakers to examine current issues of federal, urban, and regional policy from the perspective of planning practice.

CRP 795 Master's Thesis in Preservation Planning

Fall or spring. 1-6 credits.

CRP 796 Colloquial Journal Publication Workshop

Fall or spring. 2 credits. S-U grades only.

Individual and group projects culminating in the production of a professional journal.

CRP 797 Supervised Readings

Fall or spring. 4 variable credits. Limited to graduate students. Prerequisites: permission of instructor.

CRP 798 Colloquium in Regional Science, Planning, and Policy Analysis

Fall or spring. 1 credit.

Presentation and discussion of current research by faculty, visitors, and graduate students working on their dissertations. Typically, the colloquium will meet once a week during the semester.

CRP 800 Advanced Seminar in Urban and Regional Theory I

Fall. 3 credits. Prerequisite: CRP 500.

The theory of urban spatial organization. Economic, technological, and social factors leading to urbanization and various kinds of spatial organizations are explored. Major theoretical contributions to the understanding of intraregional and intraurban distribution of population and economic activity are reviewed.

CRP 801 Advanced Seminar in Urban and Regional Theory II

Spring. 3 credits. Prerequisite: CRP 800.

A continuation of City and Regional Planning 800, concentrating on recent developments.

CRP 810 Advanced Planning Theory

Fall. 3 credits. Prerequisite: CRP 500 or 710.

A survey of the works of scholars who have contributed to current thinking about planning theory. Alternative assumptions concerning models of man and theoretical concepts concerning the nature of planning today are considered.

CRP 830 Seminar in Regional Sciences, Planning, and Policy Analysis

Fall or spring. Variable-4 credits. S-U grades only.

This seminar will provide an opportunity to review some of the literature and current research in regional science, planning, and policy analysis. Specific topics covered will vary each year. Empirical and analytical research will be emphasized. Students will be expected to prepare and present a research paper during the semester on some aspect of the topics under review.

CRP 890 Planning Research Seminar I

Fall or spring. 2 credits.

Intended for doctoral candidates in city and regional planning; other students welcome. Presentation and discussion of current problem areas and research by advanced doctoral students, faculty members, and visitors.

CRP 892 Doctoral Dissertation

Fall or spring. 1-2 credits.

Special Topic Courses

Fall or spring. Variable credit.
Typical topics are:

- CRP 609 Urban and Regional Theory**
- CRP 619 Planning Theory and Politics**
- CRP 629 Quantitative Methods and Analysis**
- CRP 639 Regional Development Planning**
- CRP 649 Social-Policy Planning**
- CRP 659 Urban Development Planning**
- CRP 669 History and Preservation**
- CRP 679 Planning and Developing Regions**
- CRP 689 Environmental Planning**
- CRP 699 Regional Science**
- CRP 719 Planning Theory and Politics**

LANDSCAPE ARCHITECTURE

The Landscape Architecture Program at Cornell is jointly sponsored by the College of Agriculture and Life Sciences (in association with the Department of Floriculture and Ornamental Horticulture) and the College of Architecture, Art, and Planning.

The Program

Program faculty: M. I. Adleman, S. Baugher, H. Gottfried, E. D. Hermann, P. Horrigan, D. W. Krall, L. J. Mirin, R. T. Trancik, P. J. Trowbridge, K. A. Wolf.

The Landscape Architecture Department offers a four-year Bachelor of Science degree administered through the College of Agriculture and Life Sciences. The Landscape Architecture Graduate Program offers two professional degree alternatives: a two-year graduate curriculum directed to those who have undergraduate degrees in landscape architecture or architecture and a three-year graduate curriculum directed to those who have undergraduate degrees in other fields. Graduate studies in landscape architecture are administered through the Graduate School and lead to a Master of Landscape Architecture degree. Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects.

Dual Degree Options

Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Course Information

- *LA 141 Grounding in Landscape Architecture**
Fall. 4 credits.
- *LA 142 Introduction to Landscape Architecture**
Spring. 4 credits.

- *LA 201 Medium of the Landscape**
Fall. 6 credits.
- *LA 202 Medium of the Landscape**
Spring. 6 credits.
- *LA 261 Urban Archaeology (also CRP 261)**
Fall. 3 credits.
- *LA 262 Laboratory in Landscape Archaeology**
Spring. 3 credits.
- *LA 282 The American Landscape**
Spring. 3 credits.
- *LA 301 Integration of Realities**
Fall. 6 credits.
- *LA 302 Integration of Realities**
Spring. 6 credits.
- *LA 315 Site Engineering I**
Spring. 2 credits. First seven weeks of semester.
- *LA 316 Site Engineering II**
Fall. 2 credits. Second seven weeks of semester.
- *LA 317 Site Construction I**
Fall. 2 credits. First seven weeks of semester.
- *LA 318 Site Construction II**
Spring. 2 credits. Second seven weeks of semester.
- [*LA 360 Pre-Industrial Cities and Towns of North America (also CRP 360, CRP 666 and LA 666)]**
Fall. 3 credits. Offered alternate years 1997-98/1999-00.]
- *LA 363 American Indians, Planners, and Public Policy (also CRP 363/547 and LA 547)**
Spring. 3 credits.
- *LA 401 Advanced Synthesis: Project Design**
Fall. 6 credits.
- *LA 402 Advanced Synthesis: Urban Design**
Spring. 6 credits.
- *LA 410 Computer Applications in Landscape Architecture**
Fall or spring. 3 credits.
- *LA 412 Professional Practice**
Spring. 1 credit.
- *LA 480 Principles of Spatial Design and Aesthetics (also CRP 481/581)**
Fall. 3 credits.
- *LA 483 Design Criticism**
Spring. 3 credits.
- *LA 486 Community Design Workshop**
Spring. 3 credits.
- *LA 487 Experiential Community Design**
Fall. 3 credits.
- *LA 491 Planting Design and Establishment (also HORT 491)**
Fall. 3 credits.
- *LA 494 Special Topics in Landscape Architecture**
Fall or spring. 1-3 credits.

LANAR 497 Individual Study in Landscape Architecture

Fall or spring. 1-5 credits; may be repeated for credit. S-U grades optional. L. J. Mirin.
Work on special topics by individuals or small groups.

***LA 498 Undergraduate Teaching**

Fall or spring. 1-3 credits.

LANAR 501 Composition and Theory

Fall. 6 credits. Limited to graduate students. Cost of basic drafting and supplies about \$250. Cost of field trip \$250. L. J. Mirin.

Basic design principles and processes applied to the design of the outdoor environment. Studio projects focus on the analysis, organization, and form of outdoor space through the use of three-dimensional components including structures, vegetation, and earthform.

***LA 502 Composition and Theory**

Spring. 6 credits.

***LA 505 Graphic Communication I**

Fall. 3 credits.

***LA 506 Graphic Communication II**

Spring. 3 credits.

LANAR 520 Contemporary Issues in Landscape Architecture

Fall. 2 credits. S-U grades only. L. Mirin. Presentations on topics that are current and significant to the environmental design and planning fields. Issues are discussed from a landscape architecture point of view by practitioners and researchers representing a range of professions.

LANAR 524 History of European Landscape Architecture

Spring. 3 credits. L. Mirin.
A survey from classical times to the present, emphasizing design principles and techniques that have established the landscape architecture tradition in Europe. Particular reference is made to the manner in which environments such as gardens, streets, plazas, parks, and new towns reflect in their built form a range of response to demands of culture, economics, technology, security, the law, and ecology.

LANAR 525 History of American Landscape Architecture

Fall. 3 credits. L. Mirin.
Landscape architecture in the United States from Jefferson to the present is examined as a unique expression of the American experience. Influences exerted by the physical landscape, the frontier and utopian spirit, and the cultural assumptions of democracy and capitalism are traced as they affect the forms of urban parks, private and corporate estates, public housing, transportation planning, national parks, and other open-space designs.

***LA 547 American Indians, Planners, and Public Policy (also CRP 363/547 and LA 363)**

Spring. 3 credits.
For description, see LA 363.

***LA 569 Archaeology on Preservation Planning and Landscape (also CRP 569)**

Fall. 3 credits. Offered alternative years 1998-99/2000-2001.

***LA 590 Thesis Seminar**

Fall. 3 credits.

***LA 601 Content and Landscape/Integration of Reality**

Fall. 6 credits. Limited to graduate students.

***LA 602 Content and Landscape/Integration of Reality**

Fall. 6 credits.

***LA 615 Site Engineering I**

Spring. 2 credits. First seven weeks of semester.

***LA 616 Site Engineering II**

Fall. 2 credits. Second seven weeks of semester.

***LA 617 Site Construction I**

Fall. 2 credits. First seven weeks of semester.

***LA 618 Site Construction II**

Spring. 2 credits. Second seven weeks of semester.

***LA 619 Advanced Site Grading**

Spring. 2 credits.

[*LA 666 Pre-Industrial Cities and Towns of North America (also CRP 360, CRP 666 and LA 360)

Fall. 3 credits. Offered alternate years 1997-98/1999-00.]

***LA 680 Graduate Seminar in Landscape Architecture**

Fall or spring. 1-3 credits.

***LA 694 Special Topics in Landscape Architecture**

Fall or spring. 1-3 credits.

***LA 701 Urban Design and Planning (also CRP 555)**

Fall. 6 credits.

***LA 702 Advanced Design Studio**

Spring. 6 credits.

LANAR 800 Master's Thesis in Landscape Architecture

Fall or spring. 9 credits. L. J. Mirin.

Independent research under faculty guidance, leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in the final semester of residency.

*Offered through the College of Agriculture and Life Sciences.

DIVISION OF BIOLOGICAL SCIENCES

The Division of Biological Sciences provides a unified curriculum for undergraduate majors enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell.

Graduate study in the biological sciences is administered by more than a dozen specialized fields within the Graduate School, as described in the Announcement of the Graduate School.

ORGANIZATION

The Division of Biological Sciences is composed of seven sections: Biochemistry, Molecular and Cell Biology; Ecology and Systematics; Genetics and Development; Microbiology; Neurobiology and Behavior; Physiology; Plant Biology; and, in addition, the L. H. Bailey Hortorium and the Shoals Marine Laboratory.

Student services are provided by the division's Office for Academic Affairs and the Behrman Biology Center, both located in Stimson Hall, where academic advice, information on biological sciences course offerings, other important information, and counseling are available for undergraduates. The Office for Academic Affairs also follows the progress of biology majors and works closely with faculty advisers. Additional services and resources of the Biology Center include academic program planning, tutoring, lecture tapes, examination files, and information on undergraduate research opportunities. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides advising and career counseling for students interested in the marine sciences and administers the SEA Semester program for Cornell students pursuing studies at Woods Hole or aboard the schooner *Westward* or brigantine *Corwith Cramer*.

C. Winans, D. W. Winkler, M. F. Wolfner, J. F. Wootton, R. Wu, S. A. Zahler, S. H. Zinder

Other Teaching Personnel

G. S. Albrecht, J. E. Blankenship, R. A. Calvo, P. W. Concannon, M. L. Cordts, C. Eberhard, P. R. Ecklund, J. C. Glase, J. B. Heiser, B. R. Johnson, C. H. McFadden, S. Merkel, H. T. Nivison, C. M. Rehkugler, H. C. Reiss, B. Sneath, B. M. Tyler

DISTRIBUTION REQUIREMENT

In the College of Agriculture and Life Sciences, the biological sciences distribution requirement (Group B) is for a minimum of 9 credits, including at least 6 credits of introductory biology satisfied by Biological Sciences 109–110, 105–106, or 101 and 103 plus 102 and 104, or 107–108 or any combination of the first term of one sequence and the second term of another. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) satisfies the requirement for introductory biology. The additional credits may be satisfied by any biological sciences courses *except Biological Sciences 152, 200* (unless permission of associate director is obtained), 208, 209, or 367.

For College of Arts and Sciences students matriculating before fall 1992, the biological sciences distribution requirement is for a two-semester introductory biology sequence selected from Biological Sciences 109–110, 105–106, or 101 and 103 plus 102 and 104, or

107–108 or any combination of the first term of one sequence and the second term of another. An Advanced Placement score of 4 or 5 fulfills one-half the distribution requirement. Students must take an upper-level biology course to complete the distribution requirement in biological sciences. The remainder of the distribution requirement may be satisfied by an upper-level course (200+) offered by the Division of Biological Sciences *other than Biological Sciences 152, 200* (except by permission of associate director), 208, 209, or 367; Anthropology 101; or Chemistry 222 or any combination of the first term of one sequence and the second term of another.

For students in the College of Arts and Sciences who matriculate fall 1992 or later, all courses offered by the Division of Biological Sciences can be used toward fulfillment of the biological distribution requirement except *Biological Sciences 152, 200* (unless permission of the associate director is obtained), 208, 209, or 367. The following courses are especially suitable for the distribution requirement because they have no prerequisites: Biological Sciences 101–104, 105–106, 107–108, 109–110, 154, 160, 170, 184, 192, 207, 212, 246, 264, 266, 275. *Note that introductory biology can only count for distribution credit when taken as a two-semester sequence: 109–110, 105–106, or 101 and 103 plus 102 and 104, or 107–108, or a combination of the first term of one sequence and the second term of another.* Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) may be applied to the Group 1 distribution area in accordance with regulations stipulated by the Arts College.

In the College of Human Ecology, the natural sciences distribution requirement is for at least 6 credits selected from Biological Sciences 109–110, 101 and 103 plus 102 and 104, 105–106 or 107–108 or from specified courses in chemistry or physics. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) also satisfies the distribution requirement in the natural sciences.

Note: Biological Sciences 101–102–103–104 should be taken as a unit by students of any college except those with advanced placement credit.

Switching from one introductory biology sequence to another at midyear may not be possible because of variation in presentation of topics. Students must receive permission of the instructor to switch sequences. Taking sequences in reverse or inconsecutive order is strongly discouraged.

THE MAJOR

The Division of Biological Sciences offers a major in biological sciences to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is

coordinated for students in both colleges through the division's Office for Academic Affairs, where students submit their applications to the major and obtain biology faculty advisers.

During the second semester of the sophomore year, all students who intend to major in biological sciences must apply for acceptance into the major with the associate director for academic affairs, in 200 Stimson Hall. Students in the College of Agriculture and Life Sciences who were admitted directly to the major complete the application process to declare a program of study area and to assure satisfactory progress toward completion of the major. Acceptance into the major requires completion of the course sequences in introductory biology, chemistry, and mathematics (see requirements 1-3 below), plus one semester of organic chemistry lectures. In addition, a 2.75 Cornell cumulative grade-point average is required for final acceptance into the major except for those students admitted directly to the major as freshmen (College of Agriculture and Life Sciences students only) or as transfers. Students in the process of completing these prerequisites for admission to the major may be accepted on a *provisional* basis. Final acceptance into the major is required for graduation with a biological sciences major. It is the student's responsibility to assure that final acceptance has been granted.

Whenever possible, students should include the introductory biology, chemistry, and mathematics sequences in their freshman schedule and complete the organic chemistry lecture course in their sophomore year. Students are not encouraged to continue with the major in biological sciences unless performance in these four subjects gives evidence of capacity to perform satisfactorily at a more advanced level.

The requirements for the biological sciences major are listed below. These courses, with the exception of the language requirement, should be taken for a letter grade, unless the course is offered for S-U grades only.

- 1) **Introductory biology for majors** (one year): Biological Sciences 101 and 103 plus 102 and 104, or 105-106. Biological Sciences 107-108, offered during the eight-week Cornell Summer Session for 8 credits, also satisfies the introductory biology requirement for majors. Students may choose to accept advanced placement if they have received a score of 5 on the Advanced Placement Examination of the College Entrance Examination Board (CEEB). Students with a score of 4 must fulfill the introductory biology requirement by taking Biological Sciences 101-102, 101 and 103, 102 and 104, or 103-104. These students should consult information available in the course office (1140 Comstock Hall) and in the Biology Center (216 Stimson Hall) to determine which semester to take to complete the introductory biology requirement. For students in doubt, completion of Biological Sciences 101 and 103 is advised. These students receive a total of 8 introductory biology credits (4 AP credits plus 4 course credits).

- 2) **General chemistry** (one year): Chemistry 207-208,* or 103-208, or 215-216.*
- 3) **College mathematics** (one year): two semesters of calculus (Mathematics 111-112, 191-192, or their equivalents) or one semester of calculus (Mathematics 106, 111, 191, or equivalent) plus either Mathematics 105 or Statistics and Biometry 101. Education 115 may not be used to fulfill any part of this requirement.
- 4) **Organic chemistry**: Chemistry 253 and 251, or 253 and 301, or 257 and 251, or 357-358 and 251, or 357-358 and 301, or 359-360 and 251, or 359-360 and 301.
- 5) **Physics**: Physics 207-208,* 112-213,* or 101-102. Those who take Physics 112-213 are advised to complete Physics 214 as well.
- 6) **Genetics**: Biological Sciences 281.
- 7) **Biochemistry**: Biological Sciences 330, or 331 and 332, or 333.
- 8) **Evolutionary Biology**: Biological Sciences 278.
- 9) **A program of study** selected from the outline below.
- 10) **Foreign language**: students registered in the College of Agriculture and Life Sciences must satisfy the foreign language requirement of the Division of Biological Sciences by (a) presenting evidence of successful completion of three or more years of study of a foreign language in high school or (b) attaining a score of 560 or more on the reading portion of the College Entrance Examination Board achievement test or (c) achieving "qualification" status in a language as defined by the College of Arts and Sciences or (d) successfully completing at least 6 college credits in a foreign language. Students registered in the College of Arts and Sciences must satisfy the language requirement as stated by that college.

*Since modern biology has an important physical and quantitative orientation, students are advised to undertake basic science courses that emphasize this approach. Asterisks in the above list indicate the courses that provide this orientation, but all courses listed are acceptable.

Although not required for the biological sciences major, a course in statistics is recommended for students planning graduate study or a research career. Students should consult their faculty advisers when choosing appropriate courses in statistics.

Programs of Study and Requirements

As noted in the list of requirements above, students accepted into the biological sciences major must choose a program of study. The program of study requirements are designed to help students achieve depth in one area of biology while ensuring that the selected advanced courses form a coherent and meaningful unit. Because of the flexibility allowed in satisfying these requirements, students should consult their faculty advisers. The possible programs of study are listed below.

- 1) **Animal Physiology**: BIOAP 311, Introductory Animal Physiology, Lectures; BIOAP 313, Histology: The Biology of the Tissues; BIOAP 316, Cellular Physiology; and BIOAP 319, Animal Physiology Experimentation. The Program of Study in Animal Physiology emphasizes whole-animal, tissue, and cell physiology, and provides considerable opportunity for studies using live animals. It is intended especially for students contemplating careers in biomedical practice or research.
- 2) **Biochemistry**: Quantitative Chemistry (Chemistry 300 or completion of Chemistry 215-216 for the general chemistry requirement for the major); a minimum of four credits of organic chemistry laboratory (Chemistry 301-302 or 251-252-302 or 301 or 251-252); one of the 5-credit options of Biochemistry (331 and 332 or 330 and 334) is strongly recommended; 4 credits of biochemistry laboratory courses (BIOBM 630) (see note below); and Physical Chemistry (Chemistry 389-390 or 287-288 or 287-390 or 389-288). Note that Chemistry 288 is designed for biologists. It is recommended that students interested in graduate work in biochemistry take the more rigorous organic chemistry and physics sequences (Chemistry 357-358 or 359-360 and Physics 207-208), six credits of organic chemistry laboratory, and a third semester of calculus in preparation for the more rigorous physical chemistry sequence (Chemistry 389-390). Students interested in biochemistry should complete a year of introductory chemistry other than Chemistry 103-104 before the start of their sophomore year. Students are also urged to complete introductory biology in their freshman year.
Note: Formerly the 600-level biochemistry laboratory courses were taught separately as BIOBM 630, 634, and 638. These courses have been reorganized as sections under a single course number. The specific courses offered in any semester may vary. All courses emphasize qualitative and quantitative aspects of modern approaches to research in biochemistry, molecular and cell biology, and expect some student input into experimental design based on readings of original papers.
- 3) **Cell Biology**: Chemistry 300 or 215-216, Quantitative Chemistry; BIOBM 432, Survey of Cell Biology; 4 credits of biochemistry laboratory courses (strongly recommended to include the Experimental Cell Biology section of BIOBM 630) (see "Note" under Biochemistry); and at least 5 additional credits chosen from the following courses: BIONB 222, Neurobiology and Behavior II: Introduction to Neurobiology; BIO G 305, Basic Immunology; BIOAP 313, Histology: The Biology of the Tissues; BIOPL 345, Plant Anatomy; BIONB 425, Natural History of Ion Channels; BIOBM 435-436, Undergraduate Biochemistry Seminar; BIOBM 437, Oncogenes and Cancer Viruses; BIOPL

444, Plant Cell Biology; BIO G 450, Light and Video Microscopy for Biologists; BIOGD 483, Molecular Aspects of Development; BIOBM 632, Membranes and Bioenergetics; BIOBM 636, Cell Biology; BIOBM 639, The Nucleus.

Students interested in cell biology should complete a year of introductory chemistry other than Chemistry 103-104 before the start of their sophomore year. Students are also urged to complete introductory biology in their freshman year and are strongly encouraged to take one of the 5-credit options of Biochemistry (331 and 332 or 330 and 334). If graduate work in cell biology is anticipated, students should consider taking a physical chemistry sequence (Chemistry 389-390 or 287-288 or 287-390 or 389-288).

- 4) *Ecology and Evolutionary Biology*: BIOES 261, Ecology and the Environment, and 10 credits from the following course lists, including at least one course from each group:

(a) BIOPL 241, Introductory Botany; BIOES 274, Functional and Comparative Morphology of Vertebrates; BIOES 373, Biology of the Marine Invertebrates; BIOES 466 and 468, Physiological Plant Ecology, Lectures and Laboratory; BIOES 471, Mammalogy; BIOES 472, Herpetology; BIOES 475, Ornithology; BIOES 476, Biology of Fishes; ENTOM 212, Insect Biology.

(b) BIOES 263, Field Ecology; BIOES 272, Functional Ecology of the Vertebrates; BIOPL 448, Plant Evolution and the Fossil Record; BIOES 452, Herbivores and Plants: Chemical Ecology and Coevolution; BIOES 455, Insect Ecology; BIOES 456, Stream Ecology; BIOES 457 and 459, Limnology: Ecology of Lakes, Lectures and Laboratory; BIOES 461, Population and Evolutionary Ecology; BIOES 462, Marine Ecology; BIOES 463 and 465, Plant Ecology and Population Biology, Lectures and Laboratory; BIOES 464, Macroevolution; BIOES 470, Ecological Genetics; BIOES 473, Ecology of Agricultural Systems; BIOES 478, Ecosystem Biology; BIOES 479, Paleobiology; BIOGD 481, Population Genetics.

Note: One 400-level, 4-credit course (including 4 credits from BIOSM 364) offered at Shoals Marine Laboratory may be applied toward the 10 credits. Students are encouraged to gain experience in some aspect of field biology through course work at a biological field station or work experience.

Note: The Ecology and Evolutionary Biology program of study offers an undergraduate specialization in Marine Biology and Oceanography. A description of this specialization can be found in the section entitled COURSES IN MARINE SCIENCE.

- 5) *General Biology*: The Program of Study in General Biology requires a minimum of 13 credit hours from courses offered by the Division of Biological Sciences in addition to courses counted towards requirements 1-8 above. These credits must include one course (200-level or

above) from the courses fulfilling requirements for at least three of the eight other programs of study (see pages 128-129), and must include a course with a laboratory (200-level or above) and a minimum of two upper-level (300 and above) courses of two or more credits. BIOPL 341 may not count as the lab course. BIO G 498 may not be used to fulfill the requirements of this program of study. BIO G 499 (minimum of 2 credits, but no more than 3 credits) may count as one of the upper-level courses, and may count as the laboratory course with approval of the adviser, but it cannot count as a course representing a program of study.

- 6) *Genetics and Development*: A minimum of 13 credits, usually chosen from the following courses: BIOGD 385, Developmental Biology; BIOGD 389, Embryology; BIOGD 480, Seminar in Developmental Biology; BIOGD 481, Population Genetics; BIOGD 482, Human Genetics and Society; BIOGD 483, Molecular Aspects of Development; BIOGD 484, Molecular Evolution; BIOGD 486, Advanced Eukaryotic Genetics; BIOGD 488, Molecular Genetic Analysis (up to 3 credits); BIOBM 438, Yeast Genetics and Molecular Biology; BIOES 470, Ecological Genetics; BIOMI 485, Bacterial Genetics; BIONB 423, Neurogenetics; BIONB 493, Developmental Neurobiology; BIOPL 343, Molecular Biology and Genetic Engineering of Plants.

Students may also choose from the following courses to complete the 13-credit requirement: BIOGD 682, Fertilization and Early Development; BIOGD 684, Advanced Topics in Population Genetics; BIOGD 687, Developmental Genetics; BIOBM 633, Biosynthesis of Macromolecules; BIOBM 639, The Nucleus; BIOES 663, Theoretical Population Genetics; BIOMI 694, Genetics of Diverse Bacteria; BIOPL 641, Laboratory in Plant Molecular Biology; BIOPL 644, Plant Growth and Development; BIOPL 652, Plant Molecular Biology II; BIOPL 653, Plant Molecular Biology I; PL BR 606, Advanced Plant Genetics.

Up to 3 credits for this program of study may be chosen from other biological sciences courses, including BIO G 499, Undergraduate Research in Biology, with approval of the faculty adviser.

- 7) *Microbiology*: BIOMI 290, General Microbiology, Lectures; BIOMI 291, General Microbiology, Laboratory; BIOMI 300, Seminar in Microbiology; BIOMI 391, Advanced Microbiology Laboratory; and at least 5 credits from the following course lists, including at least one course from each group: (a) BIOMI 485, Bacterial Genetics; or BIOPL 416, Microbial Physiology; and (b) BIOMI 415, Bacterial Diversity; or BIOMI 451, Structure and Function of Bacterial Cells.
- 8) *Neurobiology and Behavior*: The two-semester introductory course sequence, Neurobiology and Behavior I and II

(BIONB 221 and 222) with discussion section (4 credits per term), and 7 additional credits, among which must be a course from the neurobiology and behavior offerings. BIONB 420, BIO G 498 and 499, and BIONB 720 may not be used as this neurobiology and behavior course. However, these readings and independent research courses may form part of the additional credits (beyond those provided by the advanced neurobiology and behavior course) required to complete the Program of Study in Neurobiology and Behavior.

Note: Students who declare the Program of Study in Neurobiology and Behavior after taking BIONB 221 or 222 for only 3 credits must complete additional course work in neurobiology and behavior. These students should consult the chair of the Section of Neurobiology and Behavior (W363 Seeley G. Mudd Hall) to determine what course(s) to use to make up the deficiency.

- 9) *Plant Biology*: Students choose one area of study from the following two options:

Option (a) *Botany*: Students are required to take Introductory Botany (BIOPL 241). Students should then choose, with the aid of their faculty adviser, a minimum of three of the following courses, for a total of at least 10 additional credits, to round out their botanical training: BIOPL 242 and 244, Plant Physiology, Lectures and Laboratory; BIOPL 246, Plants and Civilization; BIOPL 248, Taxonomy of Vascular Plants; BIOPL 342 and 344, Plant Physiology, Lectures and Laboratory; BIOPL 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory; BIOPL 345, Plant Anatomy; BIOPL 359, Biology of Grasses; BIOPL 444, Plant Cell Biology; BIOPL 445, Photosynthesis; BIOPL 447, Molecular Systematics; BIOPL 448, Plant Evolution and the Fossil Record; BIOES 463 and 465, Plant Ecology and Population Biology, Lectures and Laboratory; or BIOES 466 and 468, Physiological Plant Ecology, Lectures and Laboratory.

Option (b) *Plant Biotechnology*: Students are required to take BIOPL 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory. Students choose, in consultation with their faculty adviser, a minimum of 10 additional credits from the following list: BIOPL 241, Introductory Botany; BIOPL 242 and 244, Plant Physiology, Lectures and Laboratory; BIOPL 342 and 344, Plant Physiology, Lectures and Laboratory; BIOPL 346, Algal Physiology; BIOPL 444, Plant Cell Biology; BIOPL 648, Plant Biochemistry; PL BR 401, Plant Cell and Tissue Culture; or PL BR 402, Plant Tissue Culture Laboratory.

- 10) *Independent Option*: A special program for students interested in nutrition is available under this option. Students interested in courses in biophysics should contact the Office for Academic Affairs (200 Stimson Hall) for further information. In addition, students who want to undertake a

course of study not covered by the nine existing programs of study or the special program may petition the Division of Biological Sciences Curriculum Committee. Information on independent options and Curriculum Committee petition forms are available in the Office for Academic Affairs, 200 Stimson Hall.

Independent Research and Honors Program

Individual research projects under the direction of a faculty member are encouraged as an aspect of study within a program of study. Applicants for research projects are accepted by the individual faculty members, who take into account students' previous academic accomplishments, interests, and goals and the availability of space and equipment suitable for the proposed project. Students accepted for independent research enroll for credit in Biological Sciences (BIO G) 499 (Undergraduate Research in Biology) with the written permission of the faculty supervisor. Students register for this course in 200 Stimson Hall. Any faculty member in the Division of Biological Sciences may act as a supervisor. Faculty supervisors outside the division are acceptable only if a faculty member of the division agrees to take full responsibility for the quality of the work. Students may not earn credit for research conducted outside of Cornell. Information on faculty research activities and undergraduate research opportunities is available in the Behrman Biology Center, 216 Stimson Hall.

Research credits may not be used in completion of the following program of study areas: animal physiology; biochemistry; cell biology; ecology and evolutionary biology; microbiology; plant biology. Up to 3 credits of research may be used to complete the Program of Studies in general biology and genetics and development, and 4 credits of research in neurobiology and behavior.

The honors program in biological sciences is designed to offer advanced training in laboratory or field research through the performance of an original research project under the direct guidance of a member of the Cornell faculty. Applications for the honors program are available in the Office for Academic Affairs, 200 Stimson Hall, and must be submitted to the Honors Program Committee by the deadline announced early in the senior year. Application forms for the honors program are separate from the enrollment forms for Biological Sciences (BIO G) 499 (Undergraduate Research in Biology). To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 30 credits at Cornell, and have an overall Cornell cumulative grade-point average of at least 3.00. In addition, students must have at least a 3.00 Cornell cumulative grade-point average in all biology, chemistry, mathematics, and physics courses. (Grades earned in courses in other departments that are used to fulfill major requirements are included in this computation.) In addition, candidates must have a Cornell faculty member to supervise their research. Any faculty member in the Division of Biological Sciences may act as a supervisor. Students may also work with Cornell faculty supervisors outside the division. Students who select supervisors outside the division must arrange for a faculty member of the

division to serve as cosigner of the research. The division cosigner must agree to meet with the student on a regular basis, to report to the Honors Program Committee on the progress of the work approximately two months before the thesis is due, and to serve as a reviewer of the thesis. An honors candidate usually enrolls for credit in Biological Sciences (BIO G) 499 (Undergraduate Research in Biology) under the direction of the faculty member acting as honors supervisor, although it is not necessary to do so. Students choosing to earn credit for honors research must enroll in Biological Sciences (BIO G) 499 (Undergraduate Research in Biology) separate from the honors program. Requirements of the honors program include participation in honors research seminars during two semesters, submission of an acceptable honors thesis, completion of all major requirements, and maintenance of the 3.00 Cornell cumulative grade-point average through graduation. Recommendation to the faculty that a candidate graduate with honors and at what level of honors is the responsibility of the Honors Program Committee. The student's final grade point average is a factor in determining the level of honors recommended.

Students interested in the honors program should consult their faculty advisers early during their junior year. Students are strongly encouraged to begin their research projects in their junior year, although they are not formally admitted to the honors program until the beginning of their senior year. Students who are considering study abroad during their junior year should consult with a member of the Honors Committee during their sophomore year to plan a reasonable schedule for honors research. The Honors Program requires that student participants attend honors seminars in which they give oral presentations during the first and second semesters of their senior year. Therefore, students who are considering studying away from campus during the senior year should consult with a member of the Honors Committee no later than the beginning of the first semester of their junior year. Details pertaining to thesis due dates, seminars, and other requirements may be obtained from the chair of the Honors Program Committee or from the Office for Academic Affairs, 200 Stimson Hall. Information on faculty research activities is available in the Behrman Biology Center, 216 Stimson Hall. Deviation from any of the requirements of the Honors Program requires a petition in the form of a letter to the Honors Program Committee, c/o 200 Stimson Hall.

CURRICULUM COMMITTEE

Many decisions pertaining to the curriculum, to division-wide requirements, and to the programs of study are made by the Curriculum Committee of the division. The committee consists of faculty and elected student members and welcomes advice and suggestions from all interested persons.

ADVISING

Students in need of academic advice are encouraged to consult their advisers, come to the Behrman Biology Center (216 Stimson

Hall), or contact the associate director for academic affairs (200 Stimson Hall).

Students interested in marine biology should visit the Cornell Marine Programs Office, G14 Stimson Hall.

Students interested in the multidisciplinary program Biology and Society should see "Special Programs and Interdisciplinary Studies," in the College of Arts and Sciences section of this catalog.

INDEX OF COURSES

The following course identifiers are used to denote biological sciences courses in specific areas: General Courses, BIO G; Animal Physiology, BIOAP; Biochemistry, Molecular and Cell Biology, BIOBM; Ecology and Systematics, BIOES; Genetics and Development, BIOGD; Microbiology, BIOMI; Neurobiology and Behavior, BIONB; Plant Biology, BIOPL; Shoals Marine Laboratory, BIOSM.

Note: Biological sciences courses count as agriculture and life sciences credits for students in the College of Agriculture and Life Sciences and as arts and sciences credits for students in the College of Arts and Sciences.

GENERAL COURSES (BIO G)

The Division of Biological Sciences teaches three introductory biology course sequences during the academic year: Bio G 101–104, Bio G 105–106, and Bio G 109–110; and one during the eight-week summer session: Bio G 107–108. Bio G 101–104, 105–106, and 107–108 are intended for biological sciences majors and other students needing 8 credits from an introductory sequence for majors (for example, students in a premedical curriculum). Any of these sequences meets the prerequisite for upper-level courses listing “one year of introductory biology for majors” as a prerequisite. Bio G 109–110 is a course sequence intended for non-majors, and meets the prerequisite for many, but not all, upper-level courses listing “one year of introductory biology” as a prerequisite. Students can earn a maximum of 8 credits in introductory biology (including advanced placement credits).

BIO G 101–102 Biological Sciences, Lectures

101, fall; 102, spring. 2 credits each term. Prerequisite: concurrent enrollment in Bio G 103 (fall) or 104 (spring). Passing grade (D or better) in 101 is prerequisite to 102 unless permission is obtained from instructor. May not be taken for credit after Bio G 105–106 or 109–110. S-U grades optional, with permission of instructor. Lects, M W F 9:05 or 10:10. 2 lecs each week; to accommodate these, students must reserve all 3 days. Evening prelims: fall, Sept. 26 and Nov. 12; spring, Feb. 20 and Apr. 3. K. K. Adler.

Designed both for students who intend to specialize in biological sciences and for those who want to obtain a thorough knowledge of biology as part of their general education. The fall semester covers the chemical and cellular basis of life, energy transformations, physiology, neurobiology, and behavior. The spring semester covers genetics, development, evolution, and ecology. Each topic is considered in the light of modern evolutionary theory and discussions of plant and animal systems are integrated.

BIO G 103–104 Biological Sciences, Laboratory

103, fall; 104, spring. 2 credits each term. Prerequisite: concurrent enrollment in BIO G 101 (fall) or 102 (spring). 103 is prerequisite to 104 unless permission is obtained from instructor. No admittance after second week of classes. S-U grades optional, with permission of instructor. Lab, M T W or R 1:25–4:25, M or W 7:30–10:30 p.m., or T R or S 8–11. One 3-hour

lab each week and a weekly lec for discs, special lecs, etc. J. C. Glase, P. R. Ecklund, and staff.

BIO G 103–104 is designed to provide laboratory experience with major biological phenomena in order to support an understanding of the important concepts, principles, and theories of modern biology. A second objective of the laboratory course is to help students gain expertise in the methods used by biologists to construct new knowledge. Students are exposed to basic concepts, research methods, including laboratory and data transformation techniques, and instrumentation in the major areas of biology. First-semester topics include biochemistry, physiology, plant biology, and behavior. In the second semester, laboratory experience is provided in the areas of genetics, biotechnology, immunology, invertebrate diversity, population plant growth and development, and ecology. During the first semester, dissection of a doubly-pithed frog is included. Pithing is done by the instructor.

BIO G 105–106 Introductory Biology

105, fall; 106, spring. 4 credits each term (or 2 credits, with permission of instructor). Enrollment limited to 200 students. Prerequisite: 105 is prerequisite to 106, unless written permission is obtained from instructor. May not be taken for credit after BIO G 101–104 or 109–110. No admittance after first week of classes. Estimated cost for dissection kit, \$11. S-U grades optional, with written permission of instructor. Lec, T 9:05 (1st lec of fall term, R 8/29 9:05); additional study and lab hours to be arranged. C. H. McFadden and staff.

Designed primarily for biology majors, preprofessionals, and other students who desire a challenging, broad introduction to fundamental concepts of biology. Physiology, anatomy (accompanied by preserved vertebrate and invertebrate dissection), and biochemistry are strongly emphasized in the fall semester. Subjects of study in the spring semester are genetics, development, ecology, evolution, behavior, and the diversity of organisms (accompanied by preserved vertebrate dissection). The course uses an autotutorial format and offers considerable flexibility in scheduling. Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Students who take the course must respect deadlines. Four formal laboratory sessions are offered each semester; additional laboratory work is included in the core units. Evaluation is based on written reports on experimental work or on extensive dissections (both vertebrate and invertebrate) with practical exams. Performance on the core units, the laboratories, and the final examination determine the final grade. Students who object to dissecting live invertebrates should talk to the instructor before registering.

BIO G 107–108 General Biology

Summer (8-week session); 107, weeks 1–4; 108, weeks 5–8). 4 credits each. Prerequisite: one year of college or permission of instructor; BIO G 101–103, 105, or 107 is a prerequisite for 108. Fee, \$25 for weeks 1–4; \$15 for weeks 5–8. Lects, M-R 9–12; labs, M T R 1:30–4:30, F 9–12. Staff.

Designed for students who plan further study in biology and for students who want a broad course in biology as part of their general

education. BIO G 107 covers biological metabolism, first at the molecular level and then progressively to the organ system level. The laboratory work involves an introduction to some major techniques, vertebrate dissection, and a survey of plant organization. BIO G 108 seeks to integrate the topics of genetics, developmental biology, population biology, and ecology in a general consideration of biological evolution. The laboratory work is a continuation of the material covered in BIO G 107 and involves more techniques, a survey of animal organization, and the design and performance of a field study. BIO G 107-108 fulfills the introductory biology requirement for majors and forms a suitable introductory biology course sequence for students intending to go to medical school.

BIO G 109-110 Biological Principles

109, fall; 110, spring. 3 credits each term. Limited to 600 students. A passing grade in 109 or 101-103 or 105 is prerequisite to 110 unless written permission is obtained from the instructor and the student has at least 3 credits of college biology. Since 109-110 together constitute an integrated survey, 109 cannot be used to satisfy the College of Arts and Sciences or College of Agriculture and Life Sciences distribution requirement unless it is followed by 110 or an exemption is obtained from the instructor. May not be taken for credit after BIO G 101-104 or 105-106. This course sequence may be used to fulfill the distribution requirement in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology but may not be used as an introductory course for the major in biological sciences. *Note that this course satisfies the prerequisite for many, but not all second- and third-level courses in biology.* Letter grade only. Lec, M W F 9:05 or 10:10; lab, M T W R or F 2-4:25 or T 10:10-12:35. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. Each student must attend lab on alternate weeks. Evening prelims: fall, Sept. 26 and Nov. 12; spring, Feb. 20 and Apr. 3. R. Turgeon, M. Taylor, C. Eberhard, and staff.

Students who do not plan to major in biology may take this broad introductory course in modern biology. It is not a course in social biology but addresses itself to biological principles with academic rigor. The content is designed to appeal to anyone who seeks a comprehensive knowledge of biology as part of a general education. Laboratory sections enable small groups of students to meet with the course staff and are used for problem-solving experiments, demonstrations, and discussions. No live dissections are involved; there are dissections of vertebrate and invertebrate material (observation required).

BIO G 152 Special Topics in Biology

Spring. 1 credit. Limited to 30 students. Prerequisites: superior performance in BIO G 109 or equivalent and concurrent enrollment in BIO G 102, 106, or 110, or written permission of instructor. S-U grades only. *This course may not be used in fulfillment of college distribution requirements.* Lec, T 3:35; occasional field trips to be arranged. Guest lecturers discuss topics in their field of research interest. R. Turgeon, C. Eberhard, staff, and guest lecturers.

This course is designed to complement introductory biology by providing an opportunity for deeper exploration of selected topics of interest. Class involvement and discussion are encouraged.

BIO G 170 Evolution of the Earth and Life (also Geological Sciences 102)

Spring. 3 credits. Recommended: GEOL 101. S-U grades optional. Lec, T R 9:05 or 11:15; lab, M T W or R 2:00-4:25; field trips during lab. J. L. Cisne.

Earth systems and their evolution. Earth history's astronomical context. Plate tectonics, continental drift, and their implications for climate and life. Coevolution of life and the atmosphere. Precedents for ongoing global change. Dinosaurs; mass extinctions; human ancestry. Laboratories on reconstructing geological history and mapping ancient geography. Fossil-collecting on field trips.

BIO G 200 Special Studies in Biology

Fall, spring, or summer. 1-3 credits. Prerequisites: transfer- or special-student status and written permission of instructor and of the associate director of the Division of Biological Sciences. Students must register using a special form available in Stimson 200. S-U grades optional, with permission of instructor. Hours to be arranged. Staff.

A registration device for students who want to take only a portion of a regular biological sciences course—for example, only the lectures or only the laboratory in a course that includes both. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. This course may not be substituted for 100-level courses and may not be used in fulfillment of college distribution requirements except by permission of the associate director of the division.

BIO G 207 Evolution (also History 287 and Science and Technology Studies 287)

Fall or summer. 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOES 278. Does not meet the evolutionary biology requirement for the biological sciences major. S-U grades optional. Fall: Lec, T R 10:10; disc, 1 hour each week to be arranged. W. B. Provine. Summer: Lec/disc, M-F 8:30-9:45. A. S. Kondrashov.

Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. Aims of the course include understanding the major issues in the history and current status of evolutionary biology, and exploration of the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

BIO G 208 Drawing the Human Figure

Summer (6-week session). 3 credits. Labs, M T W 3:00-5:15. K. Kucharski.

Human anatomy. Emphasis on learning correct anatomical information relating to the skeletal and muscular systems as approached through observation and drawing practices.

BIO G 209 Introduction to Natural Science Illustration

Summer (6-week session). 2 credits. Limited to 12 students. Prerequisite: free-hand drawing or permission of instructor.

S-U grades optional. Lec and labs, T R 6:30-9:30 p.m. B. S. King.

An introduction to the art of natural science illustration for publication, and to the techniques of various media including pencil, pen and ink, watercolor, colored pencil, scratchboard, and carbon dust. Potentials and limitations of line and half-tone reproduction, copyright, and portfolio presentation are discussed.

BIO G 305 Basic Immunology Lectures (also Veterinary Microbiology 315)

Fall. 3 credits. Strongly recommended: basic courses in microbiology, biochemistry, and genetics. S-U grades optional, with permission of instructor. Lec, T R 8:30-9:55. J. A. Marsh.

A survey of immunology, with emphasis on the biological functions of the immune response.

BIO G 400 Undergraduate Seminar in Biology

Fall or spring. Variable credit (1-3 credits assigned for individual seminar offerings). May be repeated for credit. S-U grades optional. Sem to be arranged. Staff.

From time to time specialized seminars on topics of interest to undergraduates are offered by visiting faculty or faculty from the Sections of Ecology and Systematics, Genetics and Development, or Plant Biology. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester. For students interested in Biochemistry, Physiology, or Neurobiology, please see descriptions under appropriate section.

[BIO G 401 Introduction to Scanning Electron Microscopy]

Fall or spring, weeks 1-8. 1 credit. Limited to 8 students (fall), 12 students (spring). Prerequisite: permission of instructor. S-U grades optional. Not offered fall 1996; next offered spring 1997. Lec, M 10:10; lab, T R or F 9:05-12:15 or T W or R 1:25-4:25. Fee may be charged. M. V. Parthasarathy.

An introductory course that includes the principle and use of the scanning electron microscope. Students use biological material to explore and understand some of the fine biological architecture. In addition to preparing the specimens, the students use the scanning electron microscope to study and obtain micrographs of features that interest them.]

[BIO G 403 Transmission Electron Microscopy for Biologists]

Fall. 1, 3, or 4 credits (4 credits if student takes both sections). Limited to 12 students. Prerequisites: BIOAP 313, BIOPL 345 or 443, or written permission of instructor. S-U grades optional. Not offered 1996-97; next offered fall 1997. Lec, T 11:15; labs, M W or T R 1:25-4:25. Two sections: Sec 01, 1 credit, weeks 1-4; sec 02, 3 credits, weeks 5-12. Students may register for one or both sections. Fee may be charged. M. V. Parthasarathy.

Section 01, 1 credit, weeks 1-4, covers the principles and use of the transmission electron microscopy (TEM), with emphasis on proper operation of the instrument and interpretation of images obtained. Negatively stained materials are used for viewing with the transmission electron microscope. Section 02, 3 credits, weeks 5-12, covers the principles and techniques of preparing biological

material for transmission electron microscopy. Using animal, plant, and microbe materials this section studies chemical fixtures, cryofixations, ultrathin sectioning, immunogold localization, quantitative microscopy, and metal shadowing techniques. Students have two additional weeks to complete laboratory assignments at the end of each section.]

BIO G 405 Neotropics: Introduction to Their Biology

Fall. 2 credits. Limited to 18 students. Prerequisites: BioES 261 or equivalent, and permission of instructor. Sem, W 7:30–9:30 p.m. A. S. Flecker, P. H. Wrege, J. B. Heiser.

This seminar is an introductory survey of the biology of selected biomes of the New World tropics, with primary focus on moist lowland forests. The objectives are to learn the basic characteristics and phenomena important to an understanding of neotropical biology, to gain firsthand knowledge of the resources available at Cornell for the pursuit of this knowledge, and to learn (through doing) how to organize and execute a meaningful seminar presentation. Students read assignments from the two texts for the course. Additional readings are available if background material is needed or if the students have an area of special interest. In addition, each student participates in the design, organization, and presentation of one unit of course work. This may include arranging class visits to various Cornell resource facilities for the study of tropical biology, arranging for guest speakers, presenting additional material from the literature, and interviewing members of the Cornell community with experience or expertise relevant to that unit's topic. Selected films may also be presented.

BIO G 450 Light and Video Microscopy for Biologists

Spring. 3 credits. Limited to 12 students. Prerequisites: one year of introductory biology and permission of instructor. Lects, T R 1:25–2:30; lab, R 2:30–4:30. R. O. Wayne.

Theoretical and practical aspects of light microscopy, including brightfield, darkfield, phase-contrast, polarization, Hoffman-modulation contrast, interference, differential-interference contrast, and fluorescence microscopy, as well as video- and computer-based digital image enhancement, are studied. Students learn both qualitative and quantitative techniques to probe noninvasively the structure and function of living plant cells.

[BIO G 467 Seminar in the History of Biology (also History 415, Biology and Society 447, and Science and Technology Studies 447)]

Fall. 4 credits. Limited to 18 students. Prerequisite: permission of instructor required; register for course in Corson E139. Sem, T R 12:20–2:15 p.m. Not offered 1996–97. W. B. Provine.

Specific topic changes each year. Readings from scientists and historians, sociologists, and philosophers of science. The course helps students to evaluate assertions that the synthesis remains robust and assertions that the synthesis has disintegrated.]

BIO G 469 Food, Agriculture, and Society (also Biology and Society 469 and Science and Technology Studies 469)

Spring. 3 credits. Limited to 20 students. Prerequisite: an introductory ecology course or permission of instructor. S-U grades optional. Lects, T R 1:25–2:40. A. G. Power.

A multidisciplinary course dealing with the social and environmental impact of food production in the United States and developing countries. Agroecosystems of various kinds are analyzed from biological, economic, and social perspectives. The impacts of traditional, conventional, and alternative agricultural technologies are critically examined in the context of developed and developing economies. Specific topics include pest management, soil conservation, plant genetic resources, biotechnology, and sustainable development.

BIO G 498 Teaching Experience

Fall or spring. 1–4 credits. Enrollment limited. Prerequisites: previous enrollment in the course to be taught or equivalent, and written permission of instructor. *Students in the College of Arts and Sciences may not count credits from this course toward the 120 credits required for graduation.* S-U grades optional, with permission of instructor. Hours to be arranged. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring. Biological sciences courses currently offering such experience include BIO G 105–106; BIOAP 311, 319; BIOBM 231, 330, 331; BIOES 274, 475; and BIOIM 291, 292.

BIO G 499 Undergraduate Research in Biology

Fall or spring. Variable credit. *Students in the College of Arts and Sciences may not register for more than 6 credits per term with one supervisor or 8 credits per term with more than one supervisor.* Prerequisite: written permission of staff member who supervises the work and assigns the grade. *Students must register in the Office for Academic Affairs in 200 Stimson Hall.* Each student must submit an independent study statement describing the proposed research project during course registration. (Special forms for this purpose are available in the college offices and in 200 Stimson Hall.) Any faculty member in the Division of Biological Sciences may act as a supervisor. Cornell faculty supervisors outside the division are acceptable only if a faculty member of the division agrees to serve as cosigner, taking full responsibility for the quality of the work. Supervisors outside of Cornell are not acceptable. S-U grades optional. Hours to be arranged. Staff.

Practice in planning, conducting, and reporting independent laboratory and library research programs. Research credits may not be used in completion of the following programs of study: animal physiology; biochemistry; cell biology; ecology and evolutionary biology; microbiology; plant biology. Up to 3 credits of research may be used to complete the Program of Studies in general biology and genetics and develop-

ment, and 4 credits of research in neurobiology and behavior.

BIO G 606 Freeze-Fracture Technique

Spring, weeks 9–14. 1 credit. Primarily for graduate students. Limited to 8 students. Prerequisites: BIO G 403 or equivalent, and permission of instructor. S-U grades only. Lec, M 10:10; disc to be arranged; labs, M W 1:25–4:25. Fee may be charged. M. V. Parthasarathy.

Principles of freeze-fracturing and freeze-substitution technique, freezing artifacts, and interpretation of images.

[BIO G 705 Advanced Immunology Lectures (also Veterinary Microbiology 705)]

Spring. 3 credits. Prerequisite: BIO G 305 or permission of instructor. Offered alternate years. Not offered 1996–97.

Lecs, M W F 9:05. Coordinator: R. G. Bell. Coverage at an advanced level of molecular and cellular immunology.]

BIO G 706 Immunology of Infectious Diseases and Tumors (also Veterinary Microbiology 719)

Spring. 2 credits. Prerequisite: BIO G 305 or permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Lec, R 10:10–12:05. Coordinator: R. G. Bell.

Coverage at an advanced level of the immunology of diseases caused by selected bacteria, viruses, protozoa, and helminths, and tumor immunology.

Related Courses in Other Departments

The Sea: An Introduction to Oceanography (Biological Sciences [BIOES] 154)

Medicine and Civilization (Biology and Society 322)

Pathogenic Bacteriology and Mycology (Biological Sciences [BIOIM] 304 and Veterinary Microbiology 318)

Viruses and Disease (Biological Sciences [BIOIM] 408 and Veterinary Microbiology 408)

ANIMAL PHYSIOLOGY (BIOAP)

BIOAP 212 Human Physiology for Non-Biology Majors

Spring. 3 credits. May not be taken for credit after BIOAP 311. Limited to 130 students. This course may be used toward the science distribution requirement of the College of Arts and Sciences and the Group B distribution requirement of the College of Agriculture and Life Sciences. This course may not be used to fulfill the requirements of any Program of Study in the biological sciences major. Lects, M W F 1:25; disc, M W or F 2:15. Evening prelims: Feb. 27 and Apr. 15. P. W. Concannon and staff.

Introduction to the physiology of all major organ systems and the relation of that physiology to human health and disease. Emphasis on understanding of major body functions and control mechanisms regulating each organ system. Students develop a fundamental understanding of how their bodies work that will be the basis of making informed decisions about their own health and medical needs and those of their families. Taught by staff of research physiologists and cooperating physicians.

BIOAP 214 Biological Basis of Sex Differences (also Biology and Society 214 and Women's Studies 214)

Fall. 3 credits. Limited to non-biology majors and freshman and sophomore biology majors; junior and senior biology majors may register with permission of instructor. Prerequisite: one year of introductory biology. S-U grades optional. Offered alternate years. Lects, T R 8:30-9:55; occasional discussion to be arranged. J. E. Fortune.

The structural and functional differences between the sexes are examined. Emphasis is placed on mechanisms of mammalian reproduction; where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, mental, and physical capabilities) is discussed. The course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.

BIOAP 311 Introductory Animal Physiology, Lectures (also Veterinary Physiology 346)

Fall. 3 credits. Prerequisites: one year of college biology, chemistry, and mathematics. Recommended: previous or concurrent course in physics. S-U grades optional, with permission of instructor. Lects, M W F 11:15. Evening prelims: Sept. 24 and Oct. 31. E. R. Loew and staff.

A general course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure/function relationships are stressed along with underlying physico-chemical mechanisms.

BIOAP 312 Farm Animal Behavior (also Animal Science 305)

Spring. 2 credits. Prerequisites: introductory course in animal physiology. Recommended: at least one animal production course or equivalent experience. S-U grades optional. Lects, T R 11:15. E. A. Oltenacu, K. A. Houpt.

The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic animals, and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

BIOAP 313 Histology: The Biology of the Tissues

Fall. 4 credits. Prerequisite: one year of introductory biology. Recommended: BIOBM 330 or 331, or their equivalents; and previous or concurrent enrollment in BIOAP 311. S-U grades optional, with permission of instructor. Lects, T R 1:25; labs, T R 2:30-5:00. C. Wahl.

Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates, as well as methods of analytic morphology at the cell and tissue levels. Dynamic interrelations of structure, composition, and function in cells and tissues are emphasized. The course may include work with vertebrate animals.

BIOAP 316 Cellular Physiology

Spring. 4 credits. Limited to 72 students, with preference given to students studying in animal physiology. Each lab limited to 36 students. Prerequisite: concurrent or previous enrollment in BIOBM 330 or 331 and 332 or 333. Lects, M W F 9:05; lab, M or T 1:25-5:00. Evening prelims: Feb. 25, Apr. 3, and April 29. A. Quaroni and staff.

Lectures introduce students to the most current information on the way cells function and regulate themselves and neighboring cells and on what molecules are involved in these regulatory processes. Laboratories provide an introduction to cell and organ culture and to immunological techniques used to study cell structure and function *in vivo* and *in vitro*. Experiments performed in the laboratory are closely related to, and provide practical experience with, subjects covered in the lectures. Vertebrate animals are used in this course. No experimentation is performed on live animals.

BIOAP 319 Animal Physiology Experimentation

Fall. 4 credits. Designed for upper-level undergraduate and graduate students studying in physiology, and other students interested in biomedically related professions. Graduate students in the Field of Physiology and related fields without equivalent background are strongly encouraged to enroll. Each of 3 afternoon laboratory sections limited to 32 students. Prerequisite: concurrent or previous enrollment in BIOAP 311 or permission of instructor based on previous meritorious performance in another introductory animal physiology course. Lec, R 12:20; lab, M W or F 12:20-5:00 (includes disc section). R. A. Corradino.

A series of student-conducted *in vitro* and *in vivo* experimental exercises designed to illustrate basic physiological processes in animals and to introduce students to animal physiology research techniques, instrumentation, experimental design, and interpretation of results. Techniques include anesthesia, dissection, vivisection under anesthesia, physiographic and computer recording and analysis. Experiments with living tissues and live animals examine properties of blood, muscle, and nerves; cardiovascular, respiratory, and renal function and their control; and endocrine regulation of renal, cardiovascular, and reproductive tissue activity. Experimental resources include live animals of several vertebrate species, including frogs, rats, and rabbits, which are euthanized in conjunction with the laboratory exercises. Written reports of laboratory activities are required. Grading is based on evaluation of these reports, quizzes, and laboratory performance.

BIOAP 419 Advanced Animal Physiology Experimentation

Spring. 3 credits. Prerequisite: BIOAP 319 previous semester. Limited to 12 selected students. Lab to be arranged. Coordinator: R. A. Corradino.

Advanced research on selected aspects of laboratories conducted in BIOAP 319, Animal Physiology Experimentation.

BIOAP 458 Mammalian Physiology

Spring. 3 credits. Enrollment limited. Graduate student auditors allowed. Prerequisite: BIOAP 311 or equivalent. Students not meeting this prerequisite must obtain written permission of instructor in T9 026 Vet Research Tower before the first

class. Lects, M W F 10:10. Evening prelims: Feb. 18, Mar. 25, and Apr. 22. K. W. Beyenbach and staff.

The course offers an in-depth treatment of selected topics in mammalian and human physiology. Emphasis is on concepts and a working knowledge of physiology. Selected topics include: basic functional elements of biological systems; recurrent themes in physiology; design of multicellular animals; mammalian fluid compartments; homeostasis; membrane and epithelial transport; electrophysiology; cardiovascular physiology, gastrointestinal physiology; renal physiology; and acid/base physiology. The lectures incorporate clinical correlations whenever appropriate. Occasional guest lecturers talk about work and careers in basic research and/or clinical medicine. Recommended for biological sciences majors, pre-med and pre-vet students, and beginning graduate students in physiology, nutrition, and animal science.

BIOAP 619 Lipids (also Nutritional Sciences 602)

Fall. 2 credits. Lects, T R 11:15. A. Bensadoun.

Advanced course on biochemical, metabolic, and nutritional aspects of lipids. Emphasis is placed on critical analysis of current topics in lipid methodology; lipid absorption; lipoprotein secretion, molecular structure, and catabolism; molecular biology, function and regulation of lipoprotein receptors; mechanism of hormonal regulation of lipolysis and fatty acid synthesis; and cholesterol metabolism and atherosclerosis.

[BIOAP 658 Molecular Mechanisms of Hormone Action]

Spring. 2 credits. Prerequisite: permission of instructor. Minimum enrollment of 6 required. Offered alternate years. Not offered 1996-97. Lects, T R 10:10. R. A. Corradino.

An advanced course developed from the current literature on endocrine mechanisms. Primarily a lecture course with student discussion.]

BIOAP 710-718 Special Topics in Physiology

Fall or spring. 1 or 2 credits for each topic. May be repeated for credit. Enrollment in each topic may be limited. S-U grades optional, with permission of instructor. Lectures, laboratories, discussions, and seminars on specialized topics. Two topics offered fall 1996; one topic offered spring 1997.

BIOAP 711 Stress Physiology: to be discussed as part of animal welfare

Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent. Offered alternate years. Lec, 1 hour each week to be arranged. K. A. Houpt.

Emphasis is on physiological assessment of stress.

BIOAP 712 Proteolysis in Physiological Function and Dysfunction (also VET MED 686)

Spring. 1 credit. Offered alternate years. Lec, 1 hour each week to be arranged. J. F. Wootton.

BIOAP 713 Cardiac Electrophysiology

Fall. 1 credit. Offered alternate years. Lec, 1 hour each week to be arranged. R. F. Gilmour.

Survey of cardiac action potentials, passive membrane properties, ion channels, and

cardiac arrhythmias. Emphasis on non-linear dynamical aspects of cardiac electrophysiology and cardiac arrhythmias.

BIOAP 719 Graduate Research in Animal Physiology (also Veterinary Physiology 628)

Fall or spring. Variable credit. Prerequisites: written permission of the section chair and of the staff member who supervises the work and assigns the grade. Students must register in Vet Research Tower 825. S-U grades optional. Hours to be arranged. Staff.

Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

BIOAP 757 Current Concepts in Reproductive Biology

Fall. 3 credits. Limited to 20 students. Prerequisites: undergraduate degree in biology and a strong interest in reproductive biology. S-U grades optional. Offered alternate years. Lec, 2 hours each week to be arranged; disc, 1 hour each week to be arranged. J. E. Fortune, W. R. Butler, and staff.

A team-taught survey course in reproductive physiology/endocrinology. Lectures by a number of reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, and sperm physiology/function); female reproductive function (endocrinology, ovarian development and functions, oocyte physiology/function); fertilization and early embryo development; pregnancy; parturition; puberty; and reproductive technology. Student participation in the form of discussions and/or presentations.

BIOAP 811 Advanced Physiological Methods I

Fall. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab to be arranged. Coordinator: P. W. Nathanielsz.

This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint graduate students with the latest techniques/methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

BIOAP 812 Advanced Physiological Methods II

Spring. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab to be arranged. Coordinator: P. W. Nathanielsz.

This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint graduate students with the latest techniques/methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

BIOBM 132 Orientation Lectures in Biochemistry

Spring, weeks 1–3. No credit. Primarily for freshmen, sophomores, and transfer students. S-U grades only (registered students receive an unsatisfactory grade for nonattendance). Lec, S 10:10–11:00, for first three S of semester. Section chair and staff.

Discussions by six professors about their research and promising areas for research in the future.

[BIOBM 231 General Biochemistry

Fall. 3 credits. Not offered 1996–97. Staff.]

BIOBM 233 Introduction to Biomolecular Structure

Fall. 2 credits. Limited to 30 students. Prerequisites: CHEM 207–208 or equivalents. Lects, T R 2:30–3:20. S. E. Ealick.

This course is intended for students with a basic understanding of chemistry who are considering a program of study in biochemistry. The interrelationship between the structure and function of biologically important molecules are explored. Emphasis is placed on understanding the way in which the three-dimensional arrangements of atoms determine the biological properties of both small molecules and macromolecules such as proteins and enzymes. The study of molecular structure is aided by interactive computer graphics for visualizing three-dimensional structures of molecules.

[BIOBM 234 Recombinant DNA Applications, Discussion

Spring. 1 credit. Concurrent registration in BioBM 232 required. Limited to 16 students in each section. S-U grades optional. Not offered 1996–97.

Applications discussed include screening for genetic diseases, HIV and other maladies; gene therapies; DNA fingerprinting; agricultural uses—animals, plants, and food products; and drugs, diagnostics, and vaccines. Social, ethical, legal, and economic issues are discussed as well as new linkages between agriculture and medicine.]

BIOBM 320 Physics of Life (also Applied and Engineering Physics 320)

Spring. 3 credits. Prerequisites: freshman and sophomore chemistry, physics, math. S-U grades optional. Lects, T R 10:10–11:25; lab/field trips/discussions to be arranged. L. Jelinski.

A foundations course for students interested in biophysics and bioengineering.

BIOBM 330–332 Principles of Biochemistry

Introductory biochemistry is offered in three formats: individualized instruction (330) and lectures (331 and 332) during the academic year and lecture (333) during the summer. *Individualized instruction is offered to a maximum of approximately 200 students each semester. Lectures given fall semester (331) and spring semester (332).*

BIOBM 330 Principles of Biochemistry, Individualized Instruction

Fall or spring. 4 credits. Prerequisites: one year of introductory biology for majors and one year of general chemistry and CHEM 253 or 257 or 357–358 or equivalent, or permission of instructor. Concurrent registration in BIOBM 334 is encouraged. May not be taken for credit after BIOBM 331, 332, or 333. S-U grade optional for graduate students only. Hours to be arranged. Evening prelims: fall, Oct. 22; spring, Mar. 11. J. E. Blankenship, G. S. Albrecht, P. C. Hinkle, R. Wu, and staff.

Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, protein synthesis, and an introduction to gene cloning. No formal lectures; autotutorial format; discussion sessions on three research papers on protein structure and function.

BIOBM 331 Principles of Biochemistry: Proteins and Metabolism

Fall. 3 credits. Prerequisites: one year of introductory biology for majors and one year of general chemistry and CHEM 253 or 257 or 357–358 or equivalent, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades with permission of instructor. Lects, M W F 10:10. Evening prelim: Oct. 22. G. W. Feigenson.

The chemical reactions important to biology, and the enzymes that catalyze these reactions, are discussed in an integrated format. Topics include methods for studying proteins, protein folding, enzyme catalysis, bioenergetics, and key reactions of synthesis and catabolism.

BIOBM 332 Principles of Biochemistry: Molecular Biology

Spring. 2 credits. Prerequisites: one year of introductory biology for majors and previous or concurrent registration in organic chemistry, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades optional, with permission of instructor. Lects, T R 12:20. J. M. Calvo.

A comprehensive course in molecular biology that covers the structure and properties of DNA, DNA replication and recombination, synthesis and processing of RNA and proteins, the regulation of gene expression, and the principles and uses of recombinant DNA technologies.

BIOBM 333 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology

Summer (6-week session). 4 credits.
Prerequisites: one year general chemistry and CHEM 253 or 257, or 358, or equivalents, or permission of the instructor. May not be taken for credit after BIOBM 330, 331, or 332. S-U grades with permission of instructor. Lects, M-F 10:00-12:00. H. T. Nivison.

The content of this course is similar to that of BIOBM 330; however, it is presented in lecture format rather than as individualized instruction. The topics include the structure and function of proteins, enzyme catalysis, metabolism, and the replication and expression of genes.

BIOBM 334 Computer Graphics and Molecular Biology

Fall or spring. 1 credit. Prerequisite: concurrent registration in BIOBM 330 or written permission of instructor. May not be taken for credit after BIOBM 331, 332, or 333. Disc to be arranged.
J. E. Blankenship, G. S. Albrecht, P. C. Hinkle, A. Karplus, and staff.
Visualization of complex biomolecules using Silicon Graphics computers. Student presentations on current topics in molecular biology.

BIOBM 432 Survey of Cell Biology

Spring. 3 credits. Prerequisite: BIOBM 330, 333, or 331, and previous or concurrent registration in 332, or equivalent. S-U grades optional for graduate students only. Lects, M W 8:40-9:50. W. J. Brown and staff.

A survey of a wide array of topics focusing on the general properties of eucaryotic cells. The topics include methods used for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-to-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in BIOBM 437; BIOGD 483; BIOBM 632, 636, and 639.

BIOBM 434 Biotechnology: Molecular Basis

Summer (6-week session). 3 credits.
Prerequisite: BIOBM 330 or 331 and 332 or 333, or equivalent. Lec to be arranged. S. Ely.

This course provides a detailed account of the biochemistry and molecular biology behind recent biotechnological advances and commercial introductions. Topics include the use of transgenic bacteria in bioremediation and for insect control, of transgenic plants to provide novel biopesticide delivery and protection systems, and the engineering of plants and animals for production of pharmaceutical and other valuable materials.

BIOBM 435-436 Undergraduate Biochemistry Seminar

435, fall; 436, spring. 1 credit each term. May be repeated for credit. Limited to upperclass students. Prerequisite: BIOBM 330 or 333 or 331 and 332 or written permission of instructor. S-U grades only. Sem to be arranged. Organizational meeting first W of each semester at 4 p.m. Fall: G. P. Hess; spring: staff.
Selected papers from the literature on a given topic are evaluated critically during six or seven two-hour meetings.

BIOBM 437 Oncogenes and Cancer Viruses (also Toxicology 437)

Fall. 3 or 4 credits (4 credits for participation in the writing component of the course). Undergraduates are required to do the 4-credit option. Prerequisite: BIOBM 330 or 333 or 331 and 332. Recommended: BIOGD 281. S-U grades optional. Lects, T R 12:20-1:35; disc, W 7:30 p.m. D. I. Shalloway.

The use of animal cells in culture as an experimental system for studying the cellular mechanisms involved in carcinogenesis through the use of recombinant DNA and biochemical methods. Topics include immortalization of cells, the cell cycle, differences between normal and neoplastically transformed cells, growth factors, molecular biology and biochemistry of cancer viruses, and structure and function of viral and cellular oncogenes. Understanding of relevant experimental techniques, experimental design, and comprehension of primary research literature is emphasized. This is *not* a survey course; it is designed primarily for students planning a career in research. A series of exercises to develop scientific writing skills are required for undergraduate students except by special permission. Depending on availability, graduate students may also participate in this writing component. Four credits are given when the writing component is included.

BIOBM 438 Yeast Genetics and Molecular Biology

Spring. 2 credits. Prerequisites: BIOGD 281 and BIOBM 330 or 332 or 333, or permission of instructor. S-U grades optional. Offered alternate years. Lec. W 8-9:55 p.m. B.-K. Tye.

An advanced overview of genetic studies in yeast, primarily *Saccharomyces cerevisiae*. Special attention is given to the use of yeast as a model for studying problems in cell biology in eukaryotes. Both genetic and molecular approaches to selected problems of biological interest are discussed.

BIOBM 630 Laboratories in Biochemistry, Molecular, and Cell Biology (formerly BIOBM 630, Experimental Cell Biology; BIOBM 634, Experimental Proteins and Enzymology; and BIOBM 638, Experimental Molecular Biology)

Fall or spring. 2 or 4 credits (students are expected to sign up for two sections for a total of 4 credits; limited space available for students taking only one section). Enrollment limited. Prerequisites: BIOBM 330, or 331 and previous or concurrent enrollment in 332, or 332 and previous or concurrent enrollment in 331, or 333, and permission of instructor obtained by filling out an enrollment form (available in 301C Rice Hall). Strongly recommended: BIOGD 281. Class assignments are affected by date enrollment forms returned to 301C Rice Hall. Preference given to undergraduate majors in the Biochemistry or Cell Biology Program of Study, and to graduate students with a minor in the Field of Biochemistry, Molecular and Cell Biology. Labs, M W 12:20-4:25 (disc, one hour F afternoon to be arranged) or T 9:05-4:25 (disc, one hour R morning to be arranged) or R 9:05-4:25 (disc, one hour T afternoon to be arranged.) Each section is seven weeks during the semester; the dates to be determined at the beginning of

each semester depending on scheduling constraints and student preferences.

Section 01 Experimental Molecular Biology

2 credits. H. T. Nivison, B. Tyler, V. M. Vogt.

Experiments include cloning of DNA fragments, restriction mapping, DNA sequencing, Southern blotting, and PCR. The experiments emphasize quantitative aspects as well as experimental design.

Section 02 Experimental Proteins and Enzymology

2 credits. H. T. Nivison, B. Tyler, V. M. Vogt.

Experiments include purification of enzymes by ion exchange chromatography and affinity chromatography, determination of kinetic parameters for an enzyme, analysis of proteins by rate zonal sedimentation, SDS-polyacrylamide gel electrophoresis, and immunoblotting.

Section 03 Experimental Cell Biology

2 credits. T. Huffaker, B. Tyler.

Experiments include culture of animal cells, transfection, immunofluorescence microscopy, and evaluation of cellular stress responses using radioisotope labeling methods.

BIOBM 631 Protein Structure and Function

Fall. 3 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332, physical chemistry, and organic chemistry. S-U grades optional. Lects, M W F 9:05. L. Nicholson.

Presentations on the principles of protein structure and the nature of enzymatic catalysis. Specific topics include protein folding, stability, dynamics and evolution, folded conformations and structure prediction, ligand binding energetics, and the structural basis of catalysis.

[BIOBM 632 Membranes and Bioenergetics]

Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. Offered alternate years. Not offered 1996-97. Lects, T R 11:15. P. C. Hinkle.

Structure and dynamics of biological membranes, physical methods, model membranes, ionophores, ion-transport ATPases, mitochondrial and chloroplast electron transfer chains, and examples of transport from plants, animals, and bacteria. Emphasis given to structure of membrane proteins.]

BIOBM 633 Biosynthesis of Macromolecules

Fall. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332. Recommended: BIOGD 281. Lects, T R 9:05. J. W. Roberts, D. B. Wilson.

Synthesis of DNA, RNA, and proteins, and regulation of gene expression.

BIOBM 635 Mechanisms of Metabolic Regulation and Mammalian Gene Expression (also Nutritional Sciences 635)

Spring. 2 credits. Prerequisites: at least 4 credits of Principles of Biochemistry and CHEM 358 or 360, or permission of instructor. Offered alternate years. Lects, T R 9:05. M. N. Kazarinoff, N. Noy, P. Stover.

Molecular mechanisms by which sensory, hormonal, and nutritional inputs cause changes in enzyme activity in order to regulate metabolic transformations. Emphasis is on gene expression, protein modification,

and allosteric effects using examples from mammalian systems. Consideration of identification and characterization of regulatory steps in metabolism from both theoretical and practical aspects.

BIOBM 636 Cell Biology

Spring. 2 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332, and 432, or their equivalents. Not offered 1996-97. Lec, T 9:05-11:00. A. P. Bretscher. Lectures covering current topics in cell biology, including a detailed discussion of secretion, endocytosis, membrane-bound organelles, membrane recycling, the cytoskeleton, cell motility, junctions, the cell cycle, and related topics. Together with BIOBM 632 and 639, this course provides broad coverage of the cell biology subject area.]

BIOBM 637 Integration and Coordination of Energy Metabolism (also Nutritional Sciences 636)

Fall. 3 credits. Prerequisite: BIOBM 330 or 331 or 333 or equivalent. Lec, M W F 9:05. Evening prelims to be arranged. W. J. Arion.

The elements and dynamics of energy metabolism in humans and higher animals are developed systematically through biochemical characterizations of the metabolic components and structure of major tissues and organs. Emphasis is placed on correlations with physiologic functions. Mechanisms that control energy metabolism within individual tissues and coordinate these processes *in vivo* are analyzed in the contexts of selected physiologic and pathologic stresses.

BIOBM 639 The Nucleus

Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. Recommended: BIOGD 281. Lec, M 7:30-9:25 p.m. J. T. Lis.

Lectures on topics of eucaryotic gene organization, regulation of gene expression, RNA processing, chromatin structure, the structure and movement of chromosomes, and the architecture of the nucleus. This course covers the structure and function of the nucleus at the molecular and cell biological levels, and together with BIOBM 632 and 636, provides broad coverage of the cell biology subject area.

BIOBM 648 Plant Biochemistry (BIOPL 648)

Spring. 3 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332, organic chemistry, and a course in plant physiology. Offered alternate years. Lec, M W F 9:05. A. T. Jagendorf and staff. For course description, see BIOPL 648.

BIOBM 692 Protein-Nucleic Acid Interactions (BIOMI 692)

Spring. 3 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332 and 633. Lec, T R 10:10-11:25. J. D. Helmann. For course description, see BIOMI 692.

BIOBM 732-737 Current Topics in Biochemistry

Fall or spring. 1/2 or 1 credit for each topic. May be repeated for credit. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. S-U grades only. Lectures and seminars on specialized topics. Topics for fall and spring to be announced in the division's course supplement published at the beginning of each semester.

BIOBM 738 Macromolecular Crystallography (also Chemistry 788)

Spring. 3 credits. S-U grades optional. Prerequisite: permission of instructor. Offered alternate years. Lec, M W F 10:10. S. A. Ealick, P. A. Karplus, J. C. Clardy.

Lectures briefly cover the fundamentals of crystallography and focus on methods for determining the 3-dimensional structures of macromolecules. These include crystallization, data collection, multiple isomorphous replacement, molecular replacement, model building, refinement, and structure interpretation.

BIOBM 750 Cancer Cell Biology (also Veterinary Pathology 750)

Spring. 3 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. Offered alternate years. Not offered 1996-97. Lec, M W F 9:05. J. Guan, R. Levine, B. Pauli, A. Yen.

Course covers molecular, cellular and genetic aspects of cancer. The course is divided into three sections: The first section addresses tumor etiology, progression and metastasis; the second section looks at cell-matrix and cell-cell interactions in cancer; and, the third section focuses on cell cycle. For a detailed course description, see the Division of Biological Sciences "Course Supplement."]

BIOBM 751 Ethical Issues and Professional Responsibilities (also Toxicology 751 and Science and Technology Studies 751)

Fall or spring. 2 credits. Limited to graduate students beyond first year. S-U grades only. Fall: sem, T R 2:30-4:15 (7 weeks, Oct. 22-Dec. 5); spring: sem, W 2:30-4:15. Additional sections may be offered. J. M. Fessenden MacDonald.

Ethical issues in research and the professional responsibilities of scientists are discussed in a case-study format. Topics to be discussed include regulations; data selection, manipulation, and representation; fraud, misconduct, and whistle-blowing; conflicts of interest and commitment; authorship, ownership, and intellectual properties; peer review and confidentiality; scientific response to external pressure; legal liabilities; and professional codes of ethics.

BIOBM 830 Biochemistry Seminar

Fall or spring. No credit. Sem, F 4:00. Staff.

Lectures on current research in biochemistry, presented by distinguished visitors and staff members. Lectures are open to everyone, but registration limited to graduate students in Biochemistry, Molecular and Cell Biology.

BIOBM 831 Advanced Biochemical Methods I

Fall. 6 credits. Limited to graduate students majoring in biochemistry. S-U grades optional. Labs and discs, 12 hours each week to be arranged. Organizational meeting first R of semester, 10:10. B. M. Tyler and staff.

This course emphasizes experimental design and the concepts implicit in current approaches to research in biochemistry and cell biology. Students are required to read papers and participate actively in discussions in order to design their own protocols before performing experiments using the techniques most common in the recent literature of these fields.

BIOBM 832 Advanced Biochemical Methods II

Spring. 6 credits. Limited to graduate students majoring in biochemistry. S-U grades only. Lab to be arranged. Staff (Coordinator: G. W. Feigenson, graduate faculty representative).

Research in the laboratories of two or three different professors chosen by the student. Arrangements are made jointly between the graduate field representative and the research adviser.

BIOBM 833 Research Seminar in Biochemistry

Fall or spring. 1 credit each term. May be repeated for credit. Required of, and limited to, second-, third-, and fourth-year graduate students majoring in biochemistry. S-U grades only. Sem, M 12:20-1:30. T. C. Huffaker, W. J. Brown, J. T. Lis.

Each student presents one seminar per year on his or her thesis research and then meets with instructors and thesis committee members for evaluation.

BIOBM 835-836 Methods and Logic in Biochemistry, Molecular and Cell Biology

835, fall; 836, spring. 1 credit each term. Limited to first-year graduate students majoring in the Field of Biochemistry, Molecular and Cell Biology. S-U grades only. Sem and disc to be arranged. Fall: S. E. Ealick, G. P. Hess; spring: Staff.

A seminar course with critical discussion by students of original research papers. A variety of topics in biochemistry, molecular and cell biology are covered.

ECOLOGY AND EVOLUTIONARY BIOLOGY (BIOES)

BIOES 154 The Sea: An Introduction to Oceanography (also Geological Sciences 104)

Spring. 3 or 4 credits (4-credit option includes one 2 1/2 hour laboratory each week). S-U grades optional. Lec, M W 8:40-9:55; labs, M W or F 2:00-4:25, or M 7:30-9:55 p.m.. C. H. Greene, W. M. White.

A survey of the physics, chemistry, geology, and biology of the oceans for both science and non-science majors. Topics include: sea-floor spreading and plate tectonics, marine sedimentation, chemistry of seawater, ocean currents and circulation, the oceans and climate, ocean ecology, coastal processes, marine pollution, and marine resources.

BIOES 261 Ecology and the Environment

Fall or summer. 4 credits. Prerequisite: one year of introductory biology. S-U grades optional. Lecs, M W F 11:15; disc, W or R 1:25, 2:30, or 3:35. T. E. Dawson, R. B. Root.

An introduction to principles of ecology concerning the interactions between organisms and their environment. The course covers both terrestrial and aquatic ecology, drawing examples from both plant and animal studies. Phenomena that occur at the individual, population, community, and ecosystem levels of organization are discussed. Ecological principles are extensively applied to current environmental problems and issues.

BIOES 263 Field Ecology

Fall. 2 credits. Limited to 25 students. Prerequisite: concurrent or previous enrollment in BIOES 261. Lec, R 1:25; lab, F 12:20-5:00. One weekend field trip to the Hudson Valley. Small fee for field trip. R. B. Root.

Field exercises designed to give students direct experience with field work, with emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of insects, influence of herbivores and competition on plant performance, decomposition of soil litter, sampling plankton, and use of scientific collections.

BIOES 264 Birds in Biology, Lectures

Spring. 2 credits. May not be taken for credit after BIOES 475. Intended for students with no background in biology. S-U grades optional. Lecs, M W 9:05. A. A. Dhondt.

Using birds as a starting point, this course aims at bringing exciting new insights in bird biology to non-majors. Bird research has often generated new insights in the biological sciences. Starting from studies on birds a number of topics from a variety of biological disciplines can be addressed. These include problems from behavioral ecology (mating systems, sperm competition, extra-pair paternity, territorial behavior, song), from population ecology (population dynamics, micro-evolution, competition), from evolutionary biology (trade-offs in life history theory, optimal clutch size) and from conservation biology (biodiversity, habitat fragmentation, inbreeding).

BIOES 266 Birds in Biology, Laboratory

Spring. 1 credit. Limited to 40 students. Intended for students with no background in biology. Prerequisite: concurrent enrollment in BIOES 264. S-U grades optional. Lab, S 9:05-12:05; some all-day field trips to be arranged. Carpooling to the Vertebrate Collections at Research Park is necessary several times during the semester. A. A. Dhondt.

Laboratories supplement the lecture course and provide hands-on experience. Laboratories include field trips, some field-research experience, and work in the Cornell bird collections.

[BIOES 272 Functional Ecology of Vertebrates

Spring. 4 credits. Enrollment limited to 60 students (15 per laboratory section); preference given to sophomores and juniors. Prerequisite: one year of introductory biology for majors. Offered alternate years. Not offered 1996-97; next

offered spring 1998. Lecs, M W F 9:05; lab, M T W or R 1:25-4:25. Fee, \$15. Staff.

An introductory course for students interested in organismal biology. The features of the physical environment that are important to insects and vertebrates are used to illustrate the interaction of physiological, behavioral, and morphological characteristics in organismal activity and homeostasis. Laboratories include a survey of the diversity of endothermal and ectothermal animals, ecophysiological measurements, and measurements of important environmental parameters in local habitats. This course uses live and preserved vertebrate animals for field observations and laboratory exercises.]

BIOES 274 The Vertebrates: Structure, Function, and Evolution

Spring. 4 credits. Prerequisite: one year of introductory biology. Offered alternate years. Lecs, M W F 12:20; labs, M T or W 1:25-4:25. Evening prelims to be announced. Fee, \$15. Staff.

An exploration of the relations between form and function in biological systems with an emphasis on trends in vertebrate evolution. Lectures integrate data from topics such as locomotion, feeding, size, and scaling with issues of historical importance and current interest (e.g., correlation of body parts, adaptationist explanations, developmental constraints, criteria for determining biomechanical and energetic "efficiency"). Laboratories include dissections of preserved vertebrate animals and noninvasive live animal demonstrations (motion analysis, surface electrode, and force-plate recordings).

BIOES 275 Human Biology and Evolution (also Anthropology 275 and Nutritional Sciences 275)

Fall. 3 credits. S-U grades optional, with permission of either instructor. Offered alternate years. Lecs, W F 10:10; disc, M 10:10. K. A. R. Kennedy, J. D. Haas.

An introduction to the biology of *Homo sapiens* through an examination of human evolution, biological diversity, and modes of adaptation to past and present environments. Evolutionary theory is reviewed in relation to the current evidence from the fossil record and studies of the evolution of human behavior. A survey of human adaptation covers a complex of biological and behavioral responses to environmental stress. Human diversity is examined as the product of long-term evolutionary forces and short-term adaptive responses. Topics such as creationism, the Piltdown fraud, the sociobiology debate, genetic engineering, race and IQ, and racism are presented as examples of current issues in human biology.

BIOES 278 Evolutionary Biology

Fall or spring. 3 or 4 credits. (4-credit option involves writing component and two discussion sections per week; limited to 20 students each semester. Students may not preregister for the 4-credit option; interested students complete an application form on the first day of class.) Limited to 300 students; not open to freshmen fall semester. Prerequisite: one year introductory biology or permission of instructor. S-U grades optional. Lecs, T R 9:05; disc, 1 hour each week to be arranged. Evening prelims: Fall, Oct. 1 and Nov. 5; spring, Feb. 25 and Apr. 1. Fall, A. S. Kondroshov; spring, R. G. Harrison and staff.

The course considers explanations for patterns of diversity and for the apparent "good fit" of organisms to the environment. Topics covered include the genetic and developmental basis of evolutionary change, processes at the population level, the theory of evolution by natural selection, levels of selection, concepts of fitness and adaptation, modes of speciation, long-term trends in evolution, rates of evolution, and extinction. Students taking the 4-credit option read additional materials from the primary literature and write a series of essays in place of the regular prelims.

[BIOES 371 Human Paleontology (also Anthropology 371)]

Fall. 4 credits. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Offered alternate years. Not offered 1996-97; next offered fall 1997. Lecs, M W F 2:30; lab, 1 hour each week to be arranged; occasional field trips. K. A. R. Kennedy.

A broad survey of the fossil evidence for human evolution with special attention to skeletal and dental anatomy, geological contexts, paleoecology, dating methods, archaeological associations, and current theories of human origins and physical diversity.]

[BIOES 373 Biology of the Marine Invertebrates

Fall. 4 credits. Limited to 30 students. Prerequisite: one year of introductory biology for majors. Offered alternate years. Not offered 1996-97. Lecs, M W F 10:10; lab, W 1:25-4:25; 1 optional weekend field trip to Shoals Marine Laboratory. \$60 fee for optional field trip. C. D. Harvell.

An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. The Shoals field trip is an excellent opportunity to study representatives of most of the major phyla in their natural habitat. Laboratory demonstrations on campus involve live marine and freshwater invertebrates.]

BIOES 452 Herbivores and Plants: Chemical Ecology and Coevolution (also Entomology 452)

Spring. 3 credits. Prerequisites: one year of introductory biology, BIOES 261, CHEM 253 or 357/358 and 251 or 301, or permission of instructor. S-U grades optional. Offered alternate years. Lecs, M W F 11:15. Field trips, additional lectures, or laboratory demonstrations may be held in place of F lecture. P. P. Feeny.

Topics include significance of plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant finding and exploitation by animals, especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack; and implications for human food and agriculture.

[BIOES 455 Insect Ecology (also Entomology 455)]

Fall. 3 credits. Prerequisites: BIOES 261 or equivalent and ENTOM 212 or knowledge of another taxon. S-U grades optional. Offered alternate years. Not offered 1996-97. Lects, M W F 11:15.
R. B. Root.

Topics include the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.]

[BIOES 456 Stream Ecology (also Entomology 456)]

Spring. 4 credits. Recommended: BIOES 261. S-U grades optional, with permission of instructor. Offered alternate years. Lects, T R 9:05; labs, T W or R 1:25-4:25. Field project with term paper.
B. L. Peckarsky, M. B. Bain.

Lecture addresses the patterns and processes occurring in stream ecosystems, including channel formation; water chemistry; watershed influences; plant, invertebrate, and fish community structure; nutrient cycling; trophic dynamics, colonization and succession; community dynamics; conservation; and the impacts of disturbances. **Lab:** A field project includes descriptive and experimental techniques and hypotheses testing related environmental assessment.

[BIOES 457 Limnology: Ecology of Lakes, Lectures]

Fall. 3 credits. Prerequisite: BIOES 261 or written permission of instructor. Recommended: introductory chemistry. Offered alternate years. Lects, M W F 11:15.
N. G. Hairston, Jr.

The study of continental waters, with emphasis on lakes and ponds. Factors regulating nutrient cycling processes, population and community dynamics of freshwater organisms, and physical and chemical properties of fresh water are considered.

[BIOES 459 Limnology: Ecology of Lakes, Laboratory]

Fall. 2 credits. Prerequisite: concurrent or previous enrollment in BIOES 457. Offered alternate years. Lab, T W or R 1:25-4:25; 1 weekend field trip. Fee, \$10.
N. G. Hairston, Jr. and staff.

Laboratories and field trips devoted to studies of the biological, chemical, and physical properties of lakes and other freshwater environments. Vertebrate dissection (fish) during one laboratory exercise and during a portion of weekend field trip.

[BIOES 461 Population and Evolutionary Ecology]

Spring. 4 credits. Prerequisites: BIOES 261 or 278 plus two semesters of calculus, or permission of instructor. S-U grades optional. Offered alternate years. Lects, M W F 9:05; lab, M or T 1:25-4:25.
D. W. Winkler, A. S. Kondrashov.

Problems of ecology are viewed from an evolutionary perspective, exploring issues of adaptation and fitness by developing advanced understanding of demography and interspecific interactions. Blending theory and empirical findings, the course explores

population dynamics; life-history theory; dispersal; competition; predation; parasite-host coevolution; mutualisms; and sexual, kin, and group selection. Methods of estimation and analysis are learned in laboratory.

[BIOES 462 Marine Ecology]

Spring. 3 credits. Limited to 75 students. Prerequisite: BIOES 261. Offered alternate years. Lects and disc, M W F 10:10.
C. D. Harvell, C. H. Greene.

Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, ecosystems, and evolutionary biology. Examples are drawn from all types of marine habitats, including polar seas, temperate coastal waters, and tropical coral reefs.

[BIOES 463 Plant Ecology and Population Biology, Lectures]

Fall. 3 credits. Prerequisite: BIOES 261 or 278 or equivalents, or permission of instructor. Recommended: some taxonomic familiarity with vascular plants and concurrent enrollment in BIOES 465. Offered alternate years. Lects, M W F 11:15. M. A. Geber, P. L. Marks.

This course examines the biological and historical factors affecting the structure of plant communities, and the distribution, abundance, and population dynamics of individual species. The influence of the environment, disturbance history, competition, and herbivory on the organization of plant communities are considered. Plant populations are also studied through an analysis of plant life histories and plant-plant and plant-animal interactions. Throughout the course an attempt is made to blend empirical patterns, experimental results, and theory. Readings are drawn from the primary literature.

[BIOES 464 Macroevolution]

Spring. 4 credits. Limited to 25 students. Prerequisite: BIOES 278 or permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1996-97. Lects, T R 10:10-11:25; disc, 1 hour each week to be arranged. A. R. McCune.

An advanced course in evolutionary biology centered on large-scale features of evolution. Areas of emphasis include patterns and processes of speciation, phylogeny reconstruction, the origins and fate of variation, causes of major evolutionary transitions, and patterns of diversification and extinction in the fossil record. Discussion of these problems involve data and approaches from genetics, morphology, systematics, paleobiology, development, and ecology.]

[BIOES 465 Plant Ecology and Population Biology, Laboratory]

Fall. 1 credit. Prerequisite: concurrent enrollment in BIOES 463. Offered alternate years. Lab, F 12:05-5:00.
M. A. Geber, P. L. Marks.

Laboratory and field exercises designed to give firsthand experience with the ecology and population biology of plants. Emphasis is on making observations and measurements of plants in the field and greenhouse, and on data analysis.

[BIOES 466 Physiological Plant Ecology, Lectures]

Spring. 3 credits. Limited to 35 students. Prerequisite: BIOES 261 or introductory plant physiology. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1996-97. Lects, T R 10:10-11:25; optional disc to be arranged. T. E. Dawson.

A detailed survey of the physiological approaches used to understand the relationships between plants and their environment. Lectures explore physiological adaptation; limiting factors; resource acquisition and allocation; photosynthesis, carbon, and energy balance; water use and water relations; nutrient relations; linking physiology, development, and morphology; stress physiology; life history and physiology; the evolution of physiological performance; and physiology at the population and community and ecosystem levels. Readings draw from the primary literature and textbooks.]

[BIOES 468 Physiological Plant Ecology, Laboratory]

Spring. 2 credits. Limited to 15 students. Prerequisite: previous or concurrent enrollment in BIOES 466. Offered alternate years. Not offered 1996-97. Lab, T 1:25-4:25, plus additional lab hours to be arranged. T. E. Dawson.

A detailed survey of the physiological approaches used in understanding the relationships between plants and their environment. Laboratories apply physiological techniques to specific ecological problems and cover aspects of experimental design and computer-aided data analysis. Most laboratories run past the three-hour period, with students spending an average of 3 hours/week in additional lab time for this course.]

[BIOES 470 Ecological Genetics (also Entomology 470)]

Spring. 4 credits. Prerequisite: BIOES 278 or permission of instructor. S-U grades optional. Offered alternate years. Lects, T R 10:10-11:25; disc, 1 hour each week to be arranged. S. Via.

A study of the relationships between genetic and ecological processes in populations. Topics include consequences of genetic variation in age-structured populations; demographic concepts of fitness; evaluation of methods for measuring genetic variation and natural selection on ecologically important traits; genetics of competitive ability and predator avoidance; genetic and ecological aspects of phenotypic plasticity; character displacement; maintenance of genetic variability; limits to selection. How theory can be used to formulate hypotheses about evolutionary mechanisms in natural populations is considered and experiments designed to test such hypotheses are evaluated.

[BIOES 471 Mammalogy]

Fall. 4 credits. Recommended: BIOES 274. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1996-97. Lects, M W F 12:20; lab, M T or W 1:25-4:25; 1 weekend field trip required. Carpooling to the Vertebrate Collections at Research Park is necessary several times during the semester. Fee, \$15. Staff.

Lectures on the evolution, classification, distribution, and adaptations of mammals. Laboratory and fieldwork on systematics, ecology, and natural history of mammals of the world, with primary emphasis on the

North American fauna. Systematics laboratories held in the museum at Research Park. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics laboratory exercises are based on museum specimens.]

[BIOES 472 Herpetology]

Spring. 4 credits. Recommended: BIOES 274. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1996-97. Lects, T R 12:20; labs, M W or T R 1:25-4:25; occasional field trips and special projects. Fee, \$15. Staff. Lectures cover various aspects of the biology of amphibians and reptiles, including evolution, zoogeography, ecology, behavior, and physiology. Laboratory includes systematics, functional morphology, and behavior. Live animals are studied in the field and are used in the laboratory for non-destructive demonstrations and experiments. The systematics laboratory exercises are based on museum specimens and dissection of preserved materials.]

[BIOES 473 Ecology of Agricultural Systems (also Soil, Crop, and Atmospheric Sciences 473)]

Fall. 3 credits. Limited to 45 students. Prerequisite: BIOES 261 or permission of instructor. S-U grades optional. Offered alternate years. Lects and discs, T R 2:30-3:45. During the first 6 weeks of class, the Thursday meetings may run to 5:00 because of field trips. A. G. Power and staff.

Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.

[BIOES 474 Laboratory and Field Methods in Human Biology (also Anthropology 474)]

Spring. 5 credits. Limited to 16 students with permission of instructor obtained by preregistering in E231 Corson. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Offered alternate years. Lects and labs, T R 10:10-12:05; additional hours to be arranged. Independent research project required. K. A. R. Kennedy.

Practical exercises and demonstrations of modern approaches to the methodology of physical anthropology. Emphasis on comparative human anatomy, osteology, description of skeletal and living subjects, paleopathology, skeletal maturation, and relevant field techniques for the archaeologist and forensic anthropologist. There is a dissection of a profused (dead) nonhuman primate, usually a macaque or baboon. Students attend demonstrations of the dissection prepared by the prosector (a hired graduate student).

[BIOES 475 Ornithology]

Fall. 4 credits. Limited to 30 students, with permission of instructor obtained by preregistering in E241 Corson. Recommended: BIOES 274. S-U grades optional,

with permission of instructor. Offered alternate years. Lects and labs, T R 12:20-4:25; occasional field trips and special projects. Carpooling to the Vertebrate Collections at Research Park is necessary once a week. Fee, \$15. D. W. Winkler.

Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and biogeography. Laboratory includes dissection of dead material, studies of skeletons and plumages, and specimen identification of avian families of the world and species of New York. Independent projects emphasize research skills.

[BIOES 476 Biology of Fishes]

Fall. 4 credits. Limited to 24 students. Recommended: BIOES 272 or 274 or equivalent experience in vertebrate zoology. S-U grades optional, with permission of instructor. Offered alternate years. Lects, M W F 10:10; lab, M 1:25-4:25. A small lab fee may be required. A. R. McCune.

An introduction to the study of fishes: their structure, evolution, distribution, ecology, physiology, behavior, classification, and identification, with emphasis on local species. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics and dissection laboratories use preserved specimens.

[BIOES 478 Ecosystem Biology]

Spring. 4 credits. Prerequisite: BIOES 261 or equivalent. S-U grades optional. Offered alternate years. Lects and discs, T R 10:10-12:05. L. O. Hedin, R. W. Howarth.

Analysis of ecosystems in terms of energy flow and nutrient cycles, emphasizing an experimental approach and comparative aspects of terrestrial, freshwater, and marine ecosystems. Consideration of anthropogenic effects on ecosystems, such as from acid precipitation and offshore oil pollution. Analysis of climate change and regional environmental change from an ecosystem perspective.

[BIOES 479 Paleobiology (also Geological Sciences 479)]

Fall. 3 credits. Prerequisites: one year of introductory biology for majors and either BIOES 272 or 274, GEOL 375, BIOES 373, or permission of instructor. Offered alternate years. Not offered 1996-97. Lects, M W F 12:20. J. L. Cisne and staff.

A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of geology students and the geological backgrounds of biology students concerning the nature and significance of the fossil record for their respective studies.]

[BIOES 660 Field Studies in Ecology and Systematics]

Fall or spring. Variable credit. Prerequisites: BIOES 261, a taxon-oriented course, and permission of instructor. Estimated costs: to be announced. S-U grades optional, with permission of instructor. Lects and field trips to be arranged. Staff. This course provides students with opportunities to learn field techniques and a new biotas by participating in an intensive series of field exercises. Extended field trips may be scheduled during fall break, intersession, or spring break. The regions visited, trip

objectives, and other details are announced by the various instructors in the Division's "Course Supplement" issued at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.

Section 01: Life Histories of Marine and Freshwater Invertebrates

Fall. 2 credits. Prerequisite: Undergraduates must have previous experience or course work with marine or freshwater invertebrates. Fee: \$100 (to help cover transportation and housing at Shoals Marine Lab). Two extended weekend field trips in early September and October. Organizational meeting Thursday, August 29, 4:00 p.m., in Corson/Mudd A409.

C. D. Harvell, N. G. Hairston, Jr. Field trips to the Shoals Marine Lab and Shackleton Point Field Station. Students employ experimental approaches to study the evolution of invertebrate life histories.

[BIOES 661 Environmental Policy (also ALS 661 and Biology and Society 461)]

Fall and spring. 3 credits each term. (Students must register for 6 credits each term, since an "R" grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor. Sem, R 2:30-4:30. D. Pimentel. This course uses an interdisciplinary approach to focus on complex environmental problems. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in *Science* or *BioScience*.

[BIOES 662 Mathematical Ecology (also Statistics and Biometry 662)]

Spring. 3 credits. Prerequisites: one year of calculus and a course in statistics. Recommended: a general ecology course. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1996-97. Lects, M W F 12:20. C. Castillo-Chavez and staff. Mathematical and statistical analysis of populations and communities: theory and methods. Spatial and temporal pattern analysis. Deterministic and stochastic models of population dynamics. Model formulation, parameter estimation, simulation, and analytical techniques.]

[BIOES 663 Theoretical Population Genetics]

Spring. 3 credits. Prerequisites: knowledge of basic population genetics (e.g., BIOGD 481), and some mathematics (e.g., MATH 111). Primarily for graduate students; permission of instructor required for undergraduates. S-U grades optional. Offered alternate years. Not offered 1996-97. Lec, 2 hours each week to be arranged; lab (computer), 3 hours each week to be arranged. A. S. Kondrashov. Theoretical population genetics (TPG) is one of the areas of current evolutionary biology. The course explains why TPG is successful in its domain and what its limitations are. Students analyze the effects of seven elementary factors of population dynamics (mutation, selection, drift, migration, segregation, recombination, and non-random mating). Consideration of biologically relevant situations when several factors act simultaneously (migration-drift, mutation-selection-drift, segregation-recombination-

selection, etc.) leads to studying the changes of not only the population state, but of the "rules of the game" themselves (evolution of reproductive isolation, life history, recombination, mutability, etc.). Students study in detail several topics of general biological interest (maintenance of quantitative variability, evolution of aging, and sexual selection). Active use of computers in analyzing the models, but no formal training in programming required.]

[BIOES 665 Limnology Seminar]

Spring. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Offered alternate years. Not offered 1996-97. Sem to be arranged. N. G. Hairston, Jr.

A seminar course on advanced topics in freshwater ecology.]

[BIOES 668 Principles of Biogeochemistry]

Spring. 4 credits. Limited to 20 students. Prerequisite: solid background in ecology, environmental chemistry, or related environmental science. Permission of instructor required for undergraduates. S-U grades optional. Offered alternate years. Not offered 1996-97. Lects and discs, T R 10:10-12:05. R. W. Howarth, L. O. Hedin.

Lectures cover the biotic controls on the chemistry of the environment and the chemical control of ecosystem function. Emphasis is on cycles of major elements and minor elements globally and in selected ecosystems, stressing the coupling of element cycles. A comparative approach is used to illustrate similarities and differences in element cycling among ecosystems. Analysis of both theoretical and applied issues, including global atmospheric changes and factors controlling the acidification of lakes and soils.)

[BIOES 669 Plant Ecology Seminar]

Spring. 1 credit. May be repeated for credit. Suggested for students majoring or minoring in plant ecology. S-U grades optional. Sem to be arranged. Staff. Includes review of current literature, student research, and selected topics of interest to participants.

[BIOES 670 Graduate Seminar in Vertebrate Biology]

Fall or spring. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades only. Sem to be arranged. Staff. Seminar presentations and discussions by students on areas of current research in vertebrate biology. Topics vary from semester to semester.

[BIOES 672 Graduate Seminar in Physiological Ecology]

Spring. 2 credits. May be repeated for credit. Limited to 12 students. Prerequisite: a course in plant or animal physiology, especially BIOES 466 or 467. Permission required for undergraduates. S-U grades only. Offered alternate years. Not offered 1996-97. Sem, 2 hours each week to be arranged. T. E. Dawson and staff.

Discussion of topics on water balance, energetics, and temperature regulation emphasize parallels and contrasts in the

relations of animals and plants to their biophysical environments. Each student leads a discussion and prepares a written review of a topic, drawing on the primary literature of his or her own research interests.]

[BIOES 673 Human Evolution: Concepts, History, and Theory (also Anthropology 673)]

Fall. 3 credits. Prerequisite: one year of introductory biology, ANTHR 101, or permission of instructor. Offered alternate years. Not offered 1996-97; next offered fall 1998. Lec, M 2:30; sem and disc, W 7:30-9:30 p.m. K. A. R. Kennedy.

The historical background of present-day concepts of man's evolutionary variations and adaptations in space and time is surveyed. The formation of biological anthropology as an area of scientific inquiry within the social and biological sciences is reviewed. Students select their own topics within a broad range of readings in the history of Western concepts of human origins, diversity, and place in nature.]

[BIOES 760 Special Topics in Evolution and Ecology]

Fall or spring. 1-3 credits. May be repeated for credit. Enrollment limited. S-U grades optional, with permission of instructor. Hours to be arranged. Staff. Independent or group intensive study of special topics of current interest. Content varies and is arranged between student and staff member.

[BIOES 767 Current Topics in Ecology and Evolutionary Biology]

Fall. 4 credits. Prerequisite: permission of instructor required for undergraduates. S-U grades only. Lects and discs, T R 8-9:55. One weekend field trip. Staff. Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

GENETICS AND DEVELOPMENT (BIOGD)

BIOGD 184 Understanding Genetics

Spring. 3 credits. May not be taken for credit after BIOGD 281 or 282. This course may be used toward the science distribution requirement of the College of Arts and Sciences and the Group B distribution requirement of the College of Agriculture and Life Sciences. This course may not be used to fulfill the requirements for any Program of Study in the biological sciences major. S-U grades optional. Offered alternate years. Lects, M W F 9:05. T. D. Fox.

An introduction to genetics for students majoring in fields other than biology. Genetics is a rapidly developing science that is providing insight into all aspects of biology and practical tools which increasingly affect our lives. The course shows how major conclusions about inheritance have been derived from the experimental evidence, drawing on examples from the biology of humans, other animals, plants, fungi, and bacteria. It also illustrates current and future applications of genetic discoveries. For example, the basic principles of inheritance, in conjunction with methods for the isolation and detection of specific gene fragments, is used to understand the detection of genetic diseases and the identification of individuals (DNA fingerprinting). Other topics to be covered include the origin of mutations, use of genetic methods to alter the properties of organisms and the influence of inheritance on behavior.

BIOGD 281 Genetics

Fall, spring, or summer (8-week session). 5 credits. Not open to freshmen in fall semester. Enrollment may be limited to 200 students. Prerequisite: one year of introductory biology or equivalent. No admittance after first week of classes. Lects, T R 10:10-12:05; lab, T W or F 2:30-4:25; additional hours to be arranged. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. Problem-solving sessions strongly recommended, T or W 8:30-9:45 (additional session to be arranged if necessary). T. D. Fox, M. L. Goldberg, R. J. MacIntyre.

A general study of the fundamental principles of genetics in eukaryotes and prokaryotes. Discussions of gene transmission, gene action and interaction, gene linkage and recombination, gene structure, gene and chromosome mutations, genes in populations, and extrachromosomal inheritance. Aspects of recombinant DNA technology are discussed. In the laboratory, students perform experiments with microorganisms and conduct an independent study of inheritance in *Drosophila*.

BIOGD 282 Human Genetics

Spring. 2 or 3 credits (2 credits if taken after BIOGD 281). Each discussion limited to 25 students. Prerequisite: one year of introductory biology or equivalent; permission of instructor required for students who have taken BIOGD 281. May not be taken for credit after BIOGD 184. S-U grades optional. Lects, M W 10:10 (lects, also F 10:10 1st 3 weeks only); disc, R 10:10 or F 10:10 or 11:15. R. A. Calvo.

A course designed for nonmajors. Lectures provide the technical background needed to understand controversial personal, social, and legal implications of modern genetics that are discussed in section meetings.

BIOGD 385 Developmental Biology

Fall. 3 credits. Prerequisite: BIOGD 281. Lec, M W F 11:15. A. W. Blackler.
An introduction to the morphogenetic, cellular, and genetic aspects of the developmental biology of animals.

BIOGD 389 Embryology

Spring. 3 credits. Preference given to seniors. Prerequisites: one year of introductory biology and a knowledge of mammalian adult anatomy. Lec, T R 10:10; labs, T or R 2-4:25. A. W. Blackler.
A course in the embryonic development of vertebrate animals, with emphasis on the comparative aspects of morphogenesis and function at the tissue and organ levels. The laboratory has a strong morphogenetic bias, emphasizing the comparative aspects of developmental anatomy and preparation for medical studies.

BIOGD 480 Seminar in Developmental Biology

Spring. 1 credit. May be repeated for credit. Limited to upperclass students. Prerequisite: BIOGD 281. S-U grades only. Sem, W 3:30-4:25. A. W. Blackler.
Topic for spring, 1997: Developmental Aspects of Sex.

BIOGD 481 Population Genetics

Fall. 4 credits. Prerequisite: BIOGD 281, BIOES 278, or equivalents. Lec, M W F 10:10; disc, M 2:30 or T 1:25. C. F. Aquadro.
Population genetics is the study of the transmission of genetic variation through time and space. The class explores how to quantify this variation, what the distribution of variation tells us about the structure of natural populations, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation. Emphasis is placed on DNA sequence variation, and the interplay between theory and the data from experiments and natural populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, the genetic structure and evolution of human populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microbes.

BIOGD 482 Human Genetics and Society

Fall. 3 credits. Enrollment limited to 24 senior biological sciences majors, with preference given to students studying genetics and development. Prerequisites: BIOGD 281 and BIOBM 330 or 333 or 331 and 332, and written permission of instructor. S-U grades optional. Disc, T 2:30-4:25 and R 2:30-3:30. R. A. Calvo, H. T. Stinson.
Presentation of some of the science and technology, plus discussion of the ethical, social, and legal implications of recent advances in human genetics. Among the topics considered are new reproductive strategies, eugenics, genetic counseling,

genetic screening (prenatal, neonatal, presymptomatic, carrier, and workplace), wrongful life and wrongful birth, genetic effects of abused substances, genetics and behavior, and therapy for genetic diseases. Students lead most discussions. There is a major writing component in the course.

BIOGD 483 Molecular Aspects of Development

Spring. 3 credits. Prerequisites: BIOGD 281; BIOBM 332 (preferred) or 330 or 333; and BIOGD 385. Offered alternate years. Lec, T R 2:30-4:00. M. F. Wolfner.
An advanced course in developmental biology, with emphasis on the molecular events underlying developmental processes. Simultaneously, a molecular biology course that focuses on how development modulates and uses transcriptional, post-transcriptional, translational and post-translational regulation of gene expression and cellular events such as cell-cell communication. Numerous developmental systems are discussed and analyzed in microorganisms, plants and, especially, animals including fruit flies, nematode worms, and vertebrates such as mice and humans. Course readings include original research articles. Discussion emphasizes specific experiments and approaches, results and their interpretation.

[BIOGD 484 Molecular Evolution

Spring. 3 credits. Prerequisites: BIOGD 281 and organic chemistry. Offered alternate years. Not offered 1996-97. Lec, T R 11:15. R. J. MacIntyre.
An analysis of evolutionary changes in proteins and nucleic acids. Theories on the evolution of the genetic code and the construction of phylogenetic trees from biochemical data are discussed. The second half of the course concerns the evolution and the organization of genomes from viruses to higher eukaryotes.]

BIOGD 485 Bacterial Genetics (BIOMI 485)

Fall. 2 credits. Graduate students, see BIOMI 685. Prerequisite: BIOGD 281. Recommended: BIOMI 290 and BIOBM 330 or 331 and 332 or 333. Lec, W 7:30-9:25 p.m. V. J. Stewart.
For course description, see BIOMI 485.

BIOGD 486 Advanced Eukaryotic Genetics

Spring. 4 credits. Prerequisites: BIOGD 281, BIOBM 330 or 333 or 331 and 332. S-U grades optional. Lec, T R 12:20-2:15 (includes one-hour discussion section). E. E. Alani.
The course develops fundamental skills in eukaryotic genetic analysis through lectures and by reading, analyzing, and presenting research articles. Concepts are presented within the context of a well-studied field, such as cell cycle control or protein secretion, and then the basic tools that have been developed to study this field are used to analyze other topics such as vegetative and meiotic cell cycle control, embryonic development, chromosome organization, and protein trafficking.

BIOGD 488 Molecular Genetic Analysis

Fall or spring. 3 credits. May be repeated for credit. Limited to 10 students. Prerequisites: BIOGD 281 and written permission of instructor. Interview with instructor required (255-7816 or bjs14@comell.edu). S-U grades optional

for graduate students only. Labs, T R 1:25-4:25; additional three hours each week to be arranged. B. J. Sneath.

Course teaches the basic principles of fruit fly development and provides students with hands-on research experience in modern experimental genetic methods. The course involves screening a collection of female-sterile *Drosophila melanogaster* mutants for P-element mutations disrupting early embryonic development. The nuclei and cytoskeletal structures of mutants are characterized using fluorescence microscopy. The location of the mutated genes is examined by *in situ* hybridization. The disrupted genes are cloned and sequenced using molecular genetic techniques.

A maximum of 3 credits may be used to fulfill the requirements in the Program of Study in Genetics and Development.

[BIOGD 682 Fertilization and the Early Embryo

Spring. 2 credits. Prerequisites: BIOGD 281; BIOBM 332 (preferred), 330 or 333; and BIOGD 385. Offered alternate years. Not offered 1996-97. Lec, R 2:30-4:25. M. F. Wolfner.

This course treats the earliest events in the formation of a new organism. The methods and findings of genetic, developmental, and molecular analyses are discussed. Readings in the recent literature and discussions focus on pre-gastrulation embryos from several animal species. Topics include fertilization, pronuclear fusion, triggering mitosis, cleavage divisions, cytoplasmic determinants, changes in nuclear and cytoplasmic architecture, and midblastula transition.]

BIOGD 684 Advanced Topics in Population Genetics

Spring. 2 credits. Limited to 20 students. Prerequisites: BIOGD 481 or equivalent and written permission of instructor. S-U grades optional. Offered alternate years. Lec, T 2:30-4:25. C. F. Aquadro.

An in-depth exploration of current areas of research in population genetics. Readings primarily from recent books and the current literature. Specific topics are announced the previous fall and in the division's catalog supplement. Format includes lectures, discussion, and presentations by students.

BIOGD 685 Advanced Bacterial Genetics (BIOMI 485)

Fall. 2 credits. Limited to graduate students in Biological Sciences; see BIOMI 485. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 and 332 or equivalent, and permission of instructor. Recommended: BIOMI 290 or equivalent. Lec, W 7:30-9:25; disc, R 10:10-11:00. V. J. Stewart.

For course description, see BIOMI 685.

[BIOGD 687 Developmental Genetics

Fall. 2 credits. Limited to 20 students. Prerequisites: BIOGD 281 and 385 or their equivalents. S-U grades optional. Offered alternate years. Not offered 1996-97. Lec to be arranged. K. J. Kemphues.
Selected topics focus on the use of genetic analysis in understanding mechanisms of development. Topics are drawn primarily from studies in *Drosophila*, *Caenorhabditis*, and mouse. Possible topics include pattern formation, cell lineage, neural development, maternal information in development, germ cell development, sex determination, and

intercellular communication. Students read current literature and are given the opportunity to discuss each topic in class.]

BIOGD 780 Current Topics in Genetics

Fall or spring. 2 credits. May be repeated for credit. Primarily for graduate students, with preference given to majors in the Field of Genetics; written permission of instructor required for undergraduates. Limited to 20 students. No auditors. S-U grades optional, with permission of instructor. Sem to be arranged. Fall: K. J. Kempthues; spring: D. M. Noden.

A seminar course with critical presentation and discussion by students of original research papers in a particular area of current interest. Content of the course and staff direction vary each year and are announced a semester in advance.

BIOGD 781 Problems in Genetics and Development

Fall. 2 credits. Limited to first-year graduate students in the Field of Genetics and Development. Disc to be arranged. M. F. Wolfner and staff.

An introduction to the research literature in selected areas through weekly problem sets and discussions.

BIOGD 782-783 Current Genetics/Development Topics

Fall or spring. 1/2 or 1 credit for each topic. May be repeated for credit. S-U grades only. Lectures and seminars on specialized topics to be announced. Fall: K. J. Kempthues.

BIOGD 786 Research Seminar in Genetics and Development

Fall and spring. 1 credit. Limited to and required of second-, third-, and fourth-year graduate students in Genetics and Development. S-U grades only. Sem, W 12:20-1:30. Staff.

Each graduate student presents one seminar per year based on his or her thesis research. The student then meets with the thesis committee members for an evaluation of the presentation.

BIOGD 787 Seminar in Genetics and Development

Fall or spring. 1 credit. Limited to graduate students in Genetics and Development. S-U grades only. Sem, M 4-5:00. Staff.

Seminars in current research in genetics and developmental biology conducted by distinguished visitors and staff.

MICROBIOLOGY (BIOMI)

BIOMI 192 Microorganisms on the Planet Earth

Spring. 3 credits. May not be taken for credit after BIOMI 290. S-U grades optional. Lec, M W F 11:15.

R. P. Mortlock.

A course in microbiology designed to introduce students, who have a limited background in science, to the microorganisms that populate our planet earth. Among the microorganisms studied are the bacteria, the archaeobacteria, some of the single-celled plants and animals, and the viruses. Topics covered are the basic nature of microorganisms, their evolution on earth, their composition and growth, their role in the ecology of this planet, their role in human history and disease, and their use in bioengineering. This course is not a prerequisite for advanced courses in microbiology.

BIOMI 290 General Microbiology, Lectures

Fall, spring, or summer (6-week session). 2 or 3 credits (2 credits if taken after BIOMI 192). Prerequisites: one year of introductory biology for majors and one year of college chemistry, or equivalent. Recommended: concurrent registration in BIOMI 291. Lec, M W F 11:15. M. L. Cordts, S. M. Merkel.

A comprehensive overview of the biology of microorganisms, with emphasis on bacteria. Topics include microbial cell structure and function, physiology, metabolism, genetics, diversity, and ecology. Applied aspects of microbiology are also covered such as biotechnology, the role of microorganisms in environmental processes, and immunology and medical microbiology.

BIOMI 291 General Microbiology, Laboratory

Fall or spring, 2 credits. Summer (6-week session), 2 or 3 credits. Prerequisite: concurrent or previous enrollment in BIOMI 290. Labs, M W 2-4:25, or T R 11:15-1:45 or 2-4:25. C. M. Rehkuglar.

A study of the basic principles and techniques of laboratory practice in microbiology, and fundamentals necessary for further work in the subject.

BIOMI 292 General Microbiology, Discussion

Spring. 1 credit. Prerequisite: concurrent or previous enrollment in BIOMI 290. S-U grades only. Disc to be arranged.

C. M. Rehkuglar, E. Seacord.

A series of discussion groups in specialized areas of microbiology to complement BIOMI 290.

BIOMI 300 Seminar in Microbiology

Spring. 1 credit. Required of biological science students in the microbiology program of study. Strongly recommended for students considering the microbiology program of study. S-U grades only. Sem, W 12:20. Staff.

A series of lectures and seminars designed to present students with laboratory safety training and acquaint them with research projects in microbiology on the Cornell campus.

[BIOMI 304 Pathogenic Bacteriology and Mycology (also Veterinary Microbiology 318)]

Spring. 2 or 4 credits (4 credits with lecture and laboratory). Limited to 40 students. Prerequisites: BIOMI 290 and 291. Strongly recommended: BIO G 305. Offered alternate years. Not offered 1996-97. Lec, T R 1:25; labs, T R 2:25-5:00. E. Tullson.

The study of the major bacterial and fungal agents of infectious disease, with emphasis on the function of virulence mechanisms and the host-parasite interaction. Lectures cover the significance of normal flora, antibiotic therapy and drug resistance, and vaccine development. Laboratories emphasize techniques for isolation, culture, and identification of infectious agents. Animal models are used to help understand certain pathogenic mechanisms.]

BIOMI 391 Advanced Microbiology Laboratory

Fall. 3 credits. Prerequisites: BIOMI 290, 291, and BIOBM 330 or 331 or 333.

Preference given to biological sciences students in the microbiology program of study. Lab, M W or T R 1:25-4:25; disc, F 1:25. J. B. Russell and staff.

A laboratory course that illustrates basic principles of experimental microbiology. The course is organized into four modules which last three weeks each: 1) ecology, 2) physiology, 3) genetics, and 4) structure and function. Students select a topic from one of the modules and conduct a two-week independent experiment at the end of the semester.

BIOMI 398 Environmental Microbiology

Spring. 3 credits. Prerequisite: BIOES 261 or BIOMI 290 or SCAS 260 or permission of instructor. Offered alternate years.

Lec, M W F 10:10. W. C. Ghiorse, E. L. Madsen.

The biology, behavior, and function of microorganisms in natural environments are discussed in relation to past and present environmental conditions on Earth. The role of microorganisms in ecologically and environmentally significant processes is also considered through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutant chemicals, wastewater treatment, and environmental biotechnology.

BIOMI 406 Clinical Microbiology

Fall and spring. 15 credits each semester.

Prerequisite: permission of instructor.

Hours to be arranged. R. P. Mortlock.

Training and practical experience in clinical microbiology in the hospital laboratory of the Cornell Medical College and New York Hospital in New York City. Emphasis is on developing students' capability in the isolation and rapid identification of organisms from various types of clinical specimens. This course is intended to prepare the student for state and federal licensing in various areas of clinical microbiology. This is a full-time program, taking place from September to August of the student's senior year.

BIOMI 408 Viruses and Disease (also Veterinary Microbiology 417)

Spring. 3 credits. Prerequisites: BIOMI 290, 291; BIO G 305; and permission of instructor. Recommended: BIOGD 281.

Lecs, M W 7:30 p.m. J. Casey.

The course covers basic concepts in virology with emphasis on virus-host interactions, strategies for gene regulation, and mechanisms of pathogenicity. Selected viral infections that result in immune dysfunction and neoplasia are highlighted in the context of approaches to prevent or reduce the severity of diseases.

BIOMI 415 Bacterial Diversity

Fall. 3 credits. Prerequisites: BIOMI 290, 291, and BIOBM 330 or 331 or 333. Lec, M W F 11:15. S. H. Zinder.

A consideration of the physiology, ecology, genetics, and practical potential of important groups of bacteria. Topics include molecular methods for determining bacterial phylogeny and taxonomy, the evolution of diverse mechanisms of energy conservation, fixation of carbon and nitrogen, and adaptation to extreme environments.

BIOMI 416 Microbial Physiology

Spring. 3 credits. Prerequisites: BIOMI 290, 291, and BIOBM 330 or 331 or 333, or their equivalents. S-U grades optional for students not specializing in the microbiology program of study. Lec, M W F 11:15. J. P. Shapleigh.

The concern is with the physiological and metabolic functions of microorganisms. Consideration is given to chemical structure, regulation, growth, and the energy metabolism of prokaryotic organisms. Special attention is given to those aspects of microbial metabolism not normally studied in biochemistry courses.

[BIOMI 417 Medical Parasitology (also Veterinary Microbiology, Immunology and Parasitology 431)]

Fall. 2 credits. Prerequisites: courses pertaining to zoology and biology. Offered alternate years. Not offered 1996-97. Lec, T R 3:35-4:25.

D. Bowman.

A systematic study of anthropol, protozoan, and helminth parasites of public health importance with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasitisms.]

[BIOMI 451 Structure and Function of Bacterial Cells

Fall. 3 credits. Prerequisites: BIOMI 290 and BIOBM 330 or 331 or 333 or permission of instructor. Recommended: BIOMI 415. S-U grades optional. Offered alternate years. Not offered 1996-97. Lec, M W F 10:10. W. C. Ghorise.

Morphology, ultrastructure, macromolecular organization, and life cycles of bacterial cells are considered with regard to chemical composition and physiological and ecological function of cellular components.]

BIOMI 485 Bacterial Genetics (also BIOMI 685)

Fall. 2 credits. Graduate students, see BIOMI 685. Prerequisite: BIOGD 281. Recommended: BIOMI 290 and BIOBM 330 or 331 or 332 or 333. Lec, W 7:30-9:25 p.m. V. J. Stewart.

Concepts and principles of formal genetic analysis as applied to prokaryotes, with emphasis on enterobacteria and their viruses. Topics include mutagenesis and isolation of mutants; genetic exchange, recombination and mapping; complementation, epistasis and suppression; transposons; gene expression and regulation; and genetics of bacterial pathogenesis.

BIOMI 652 (Section 04) Molecular Plant-Microbe Interactions (BIOPL 652, Sec 03)

Spring. 1 credit. Prerequisites: BIOGD 281, BIOBM 330 or 331 or 333, and BIOPL 653 (section 01) or their equivalents. S-U grades optional. Lec, M W F 10:10 (12 lec) Mar. 26-Apr. 21. S. C. Winans.

For course description, see BIOPL 652, Sec 04.

BIOMI 685 Advanced Bacterial Genetics (also BIOMI 485)

Fall. 2 credits. Limited to graduate students in Biological Sciences; see BIOMI 485. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 or 332 or equivalent, and permission of instructor. Recommended: BIOMI 290 or equivalent. Lec, W 7:30-9:25 p.m.; disc, R 10:10. V. J. Stewart.

Concepts and principles of formal genetic analysis as applied to prokaryotes, with emphasis on enterobacteria and their viruses. Topics include mutagenesis and isolation of mutants; genetic exchange, recombination and mapping; complementation, epistasis and suppression; transposons; gene expression and regulation; and genetics of bacterial pathogenesis. Lectures and written assignments are shared with BIOMI 485; advanced topics from the primary literature are critically evaluated in the discussion.

BIOMI 692 Protein-Nucleic Acid Interactions

Spring. 3 credits. Prerequisites: BIOBM 330 or 331 or 333 and 633. Lec, T R 10:10-11:25. J. D. Helmann.

The physical and chemical bases of protein-nucleic acid interactions are explored including both theory and specific examples. Proteins considered include bacterial non-specific and sequence specific DNA and RNA binding proteins, nucleic acid polymerases, recombinases, topoisomerases, DNA repair enzymes, and nucleases.

BIOMI 694 Genetics of Diverse Bacteria

Spring. 3 credits. Prerequisite: BIOMI 485 or equivalent. Lec, M W 2:30-3:45. S. C. Winans.

Selected topics in bacterial diversity, with strong emphasis placed on underlying molecular mechanisms. Topics include interactions between bacteria and plants and animals, prokaryotic developmental biology, biodegradation of xenobiotics, and synthesis of antibiotics.

BIOMI 791 Advanced Topics in Bacterial Genetics

Fall or spring. 1 credit. May be repeated for credit. Prerequisite: graduate standing in microbiology. S-U grades only. Disc, T 4-5:00. Fall: S. C. Winans; spring: V. J. Stewart.

Discussion and critical evaluation of selections from the contemporary literature in bacterial genetics and molecular biology.

BIOMI 795-796 Current Topics in Microbiology

Fall, 795; spring, 796. 1/2 or 1 credit for each topic. May be repeated for credit. Designed primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S-U grades only. Lec, to be arranged. Staff.

Lectures and seminars on special topics in microbiology.

BIOMI 797 Graduate Seminar in Microbiology

Fall and spring. 1 credit each semester. All students in the Graduate Field of Microbiology must enroll for at least their first three semesters in residence. Students are expected to lead discussions on recent primary literature in microbiology. S-U grades only. Sem to be arranged. Staff.

BIOMI 798 Graduate Research Seminar in Microbiology

Fall and spring. 1 credit each semester. Required of all graduate students in the Graduate Field of Microbiology. S-U grades only. Sem to be arranged. Staff.

A seminar relating to the research activities of those enrolled. Students who have completed the BIOMI 797 series requirement are required to present a seminar concerning their research interests and activities at least once each year.

[BIOMI 799 Microbiology Seminar

Fall and spring. Required of all graduate students in the Graduate Field of Microbiology and open to all who are interested. Not offered 1996-97. Sem to be arranged. Staff.]

NEUROBIOLOGY AND BEHAVIOR (BIONB)

BIONB 221 Neurobiology and Behavior I: Introduction to Behavior

Fall. 3 or 4 credits (4 credits with discussion section and written projects, or writing-intensive section). 4-credit option required of students studying neurobiology and behavior. Each discussion limited to 20 students, with preference given to students studying neurobiology and behavior. Not open to freshmen. Prerequisite: one year of introductory biology for majors. May be taken independently of BIONB 222. S-U grades optional. Lects, M W F 12:20; disc to be arranged. H. K. Reeve and staff.

A general introduction to the field of behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, rhythmicity, orientation and navigation, and hormonal mechanisms of behavior.

BIONB 222 Neurobiology and Behavior II: Introduction to Neurobiology

Spring. 3 or 4 credits (4 credits with discussion and written projects). 4-credit option required of students studying neurobiology and behavior. Each discussion limited to 20 students, with preference given to students studying neurobiology and behavior. Not open to freshmen. Prerequisites: one year of introductory biology for majors and one year of chemistry. May be taken independently of BIONB 221. S-U grades optional. Lects, M W F 12:20; disc to be arranged. M. Salpeter and staff.

A general introduction to the field of cellular and integrative neurobiology. Topics include neural systems, neuroanatomy, developmental neurobiology, electrical properties of nerve cells, synaptic mechanisms, neurochemistry, motor systems, sensory systems, learning, and memory.

BIONB 322 Hormones and Behavior (also Psychology 322)

Spring. 3 or 4 credits; the 4-credit option involves a one-hour section once a week in which students are expected to read original papers in the field and participate in discussion. Limited to juniors and seniors; open to sophomores only by permission. Prerequisites: BIONB 221 or 222 or one year of introductory biology plus a course in psychology. S-U grades optional. Lects, M W F 1:25; disc to be arranged. Staff.

Following a review of the neural and endocrine systems, this course connects endocrine physiology to specific behaviors observed in various species, including humans. Although the relationship between sexual physiology and behavior is strongly emphasized, the lectures also describe hormonal contributions to parental behavior, aggression, stress, learning and memory, homeostasis, and biology rhythms. Topics for the discussion sections are chosen by the students within the context of hormonal influences on behavior.

BIONB 324 Biopsychology Laboratory (also Psychology 324)

Fall. 4 credits. Limited to 20 upperclass students. Prerequisites: laboratory experience in biology or psychology, BIONB 221 and 222 or PSYCH 123 and 222; and permission of instructor. Labs, T R 1:25-4:25. T. J. DeVoogd.

Experiments designed to provide research experience in animal behavior (including learning) and its neural and hormonal mechanisms. A variety of techniques, species, and behavior patterns are included. Live animals are used in the laboratory.

BIONB 325 Neurodiseases - Molecular Aspects

Fall. 3 credits. Prerequisites: two courses from BIONB 222, BIOGD 281, BIOBM 330, or 331; co-registration in one of the two is acceptable. S-U grades optional. Offered alternate years. Lects, T R 9:05; disc, T 2:30. T. R. Podleski.

The intent of this course is to teach students how to use recombinant DNA techniques for the study of neurodiseases. How are genes responsible for diseases identified and how are the functions of these genes studied? Attention is focused on those neural diseases in which significant advances have been made using these techniques, for example, Alzheimer's, Huntington's, color blindness, affective disorders, disorders affecting ion channels, and muscular dystrophies. In addition to the molecular studies, when appropriate, time is devoted to discussions of other aspects of the diseases. Emphasis is placed on how these studies provide a useful approach to studying the nervous system by exposing the functions of genes that would be difficult to identify in other ways.

[BIONB 326 The Visual System

Spring. 4 credits. Prerequisite: BIONB 222 or BIOAP 311, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1996-97. Lects, M W F 10:10; disc, 1 hour each week to be arranged. H. C. Howland.

The visual systems of vertebrates are discussed in breadth and depth. Topics covered include the optics of eyes, retinal neurophysiology, structure and function of higher visual centers, and ocular development.]

BIONB 328 Biopsychology of Learning and Memory (also Psychology 332)

Spring. 3 credits. Prerequisites: one year of biology and either a course in biopsychology or BIONB 222. Lects, M W F 11:15. T. J. DeVoogd.

This course surveys the approaches that have been or are currently being used in order to understand the biological bases for learning and memory. Topics include invertebrate, "simple system" approaches, imprinting, avian song learning, hippocampal and cerebellar function, and human pathology. Many of the readings are from primary literature.

[BIONB 396 Introduction to Sensory Systems (also Psychology 396 and 696)

Spring. 3 or 4 credits (4 credits with term paper). Registration for the 4-credit option requires permission of instructor. Prerequisites: an introductory course in biology or biopsychology, plus a second course in neurobiology or behavior or perception or cognition or biopsychology. Students are expected to have elementary knowledge of perception, neurophysiology, behavior, and chemistry. No auditors. Offered alternate years. Not offered 1996-97. Lects, M W F 10:10. B. P. Halpern.

This course is taught using the Socratic method, in which the instructor asks questions of the students. Students read, analyze, and discuss in class difficult original literature dealing with both those characteristics of sensory systems that are common across living organisms and those sensory properties which represent adaptations of animals to particular habitats or environments. Classroom discussion can increase, but not decrease, a student's final grade. There are two preliminary exams and a final exam. The principles and limitations of major methods used to examine sensory systems are considered. General principles of sensory systems and auditory, visual, and somesthetic systems are covered. One aspect of each system (e.g., localization of objects in space by sound, color vision, and thermoreception) is selected for special attention. Two or more textbooks, and a course packet of reproduced articles are used. At the level of *An Introduction to the Physiology of Hearing*, 2nd edition, by J. O. Pickles; *Physiological acoustics, neural coding, and psychoacoustics*, by W. L. Gulick, G. A. Gescheider, and R. D. Frisina; *The Retina: An approachable part of the brain*, by J. E. Dowling; *Handbook of Physiology—The Nervous System. III. Sensory Processes*, edited by J. M. Brookhard and V. B. Mountcastle.]

BIONB 420 Topics in Neurobiology and Behavior

Fall or spring. Variable credit. May be repeated for credit. Primarily for undergraduates. S-U grades optional. To be arranged. Staff.

Courses on selected topics in neurobiology and behavior; can include lecture and seminar courses. Topics, instructors, and time of organizational meetings are listed in the division's catalog supplement issued at the beginning of the semester.

[BIONB 421 Effects of Aging on Sensory and Perceptual Systems (also Psychology 431 and 631)

Fall. 3 or 4 credits (4 credits with term paper). Limited to 25 students. Prerequisites: introductory course in biology or psychology, plus a second course in perception, neurobiology, cognition, or

biopsychology. No auditors. S-U grades optional. Offered alternate years. Not offered 1996-97. Lects, T R 10:10-11:25. B. P. Halpern.

A literature-based examination of post-maturation changes in the perceptual, structural, and physiological characteristics of somesthetic, chemosensory, visual and auditory systems. Emphasis is on human data, with non-human information included when especially relevant. The course examines the current developments in human sensory prosthetic devices, and in regeneration of receptor structures. Brief written statements (preferably by electronic mail) of questions and problems related to each set of assigned readings are required at least one day in advance of each class meeting. This course is taught using the Socratic Method, in which the instructor asks questions of the students. Students are expected to come to each class having already done, and thought about, the assigned readings.]

[BIONB 422 Modeling Behavioral Evolution]

Spring. 4 credits. Limited to 25 students. Prerequisites: BIONB 221, one year of calculus, one course in probability or statistics, and permission of instructor (Office: W309 Mudd Hall; phone: 254-4352). This course is open to advanced undergraduates and graduate students. S-U grades optional. Not offered 1996-97. Lects, T R 2:30-4:00; computer lab, one class period per week to be arranged. H. K. Reeve.

This is an intensive lecture and computer lab course on modeling strategies and techniques in the study of behavioral evolution. Population genetics (including quantitative genetics), static optimization, dynamic programming, and game-theoretic methods are emphasized. These approaches are illustrated by application to problems in optimal foraging, sexual selection, sex ratio evolution, animal communication, and the evolution cooperation and conflict within animal social groups. Students learn to assess critically recent evolutionary theories of animal behavior, as well as to develop their own testable models for biological systems of interest or to extend pre-existing models in novel directions. The *Mathematica* software program is used as a modeling tool in the accompanying computer lab (no prior experience with computers required).]

[BIONB 423 Neurogenetics]

Fall. 3 credits. Limited to junior, senior, and graduate students. Prerequisites: permission of instructor, one year of introductory biology or equivalent, and BIOGD 281. Strongly recommended: BIONB 222. S-U grades optional. Offered alternate years. Not offered 1996-97. Lects, T R 2:30; disc, R 3:35. A. M. Schneiderman.

Lectures, discussions, and student presentations focus on the uses of genetics for the study of the nervous system. Emphasis is on recent advances in genetic and molecular biological techniques and their application to the study of neural development and behavior. Both invertebrate and vertebrate systems are discussed, and main consideration is given to the fruit fly and the mouse. Readings are taken primarily from original journal articles.]

[BIONB 424 Neuroethology (also Psychology 424)]

Spring. 3 credits. Prerequisites: BIONB 221 and 222. Offered alternate years. Not offered 1996-97. Lects, T 9:05-11:05; R 9:05-9:55. C. D. Hopkins.

In the 1950s through the 1970s, ethologists attempted to understand the mechanisms of animal behavior through the use of comparative methods, evolutionary analysis, careful observations of animals in their native habitats, and clever experimentation. Now, with the explosion of knowledge and techniques in the neurosciences, many of the ethologist's mechanisms are being explained in terms of neural systems. This course reviews the status of research in neuroethology, including mechanisms of acoustic communication in insects and in vertebrates, echolocation in bats and sound localization in owls, electroreception and electrolocation, and visual processing. In addition, the course reviews studies of the neural systems involved in decision making, in initiating action, and in coordinating fixed acts. Assigned readings include original articles from the scientific literature. A term paper or equivalent is required. Recitations scheduled in class.]

BIONB 425 Natural History of Ion Channels

Spring. 3 credits. Limited to 20 students. Prerequisite: BIONB 222. S-U grades optional. Offered alternate years. D. McCobb.

Course takes a broad view of ion channels and cellular bioelectricity, with emphasis on the gene superfamily including voltage-gated channels. Evolutionary divergence is considered across phylogenetic history and tissue differentiation. Functional and structural variety, particularly in neural cells, examined from modern electrophysiological and molecular biological perspectives. Contributions to behavioral plasticity and neural development are considered.

[BIONB 427 Animal Social Behavior]

Fall. 4 credits. Limited to 30 students. Prerequisites: BIONB 221 and BIOES 261 or 278, and advance permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1996-97. Lects and discs, T R 2:30-4:25. S. T. Emlen.

An intensive course for upper-division students interested in behavioral ecology and sociobiology. Lectures, discussions, and student presentations examine topics including adaptation, spacing systems, mating systems, sexual selection, sex ratios, inbreeding and outbreeding, mate choice, conflict and cooperation in animal societies, and the evolution of deceit, honesty, and altruism.]

BIONB 428 Topics in Behavior

Fall or spring. 2-4 credits. (Credits based on number of lectures and/or field exercises as outlined in the division's catalog course supplement and subject to approval through the associate director's office.) May be repeated for credit. Primarily for undergraduates. S-U grades optional.

Courses on selected topics in behavior; can include lecture and seminar courses; may include laboratory. Past topics have included animal orientation, insect behavior, bio-rhythms, and communication. Topics, instructors, and time of organizational meeting

are listed in the division's catalog supplement issued at the beginning of each semester.

[BIONB 429 Olfaction and Taste: Structure and Function (also Psychology 429)]

Fall. 3 or 4 credits (4 credits with term paper or research project, which can, but need not, study nonhuman vertebrates). Preference given to junior and senior psychology and biology majors and graduate students. Graduate students, see PSYCH 629. Prerequisite: a 300-level course in biopsychology or equivalent. Offered alternate years. Not offered 1996-97. Lects, T R 9:05. B. P. Halpern.

The structural and functional characteristics of olfaction and taste are explored by reading and discussing current literature in these areas. Structure is examined at the light levels of electron microscopes as well as at the molecular level. Function is examined primarily in its neurophysiological and biochemical aspects. The emphasis is on vertebrates, especially air-breathing vertebrates in the case of olfaction, although there is some coverage of invertebrate forms. A textbook and a course packet of reproduced articles are used. At the level of *Smell and Taste in Health and Disease*, edited by T. V. Getchell, R. L. Doty, L. M. Bartoshuk, and J. B. Snow; *The Neurobiology of Taste and Smell*, edited by T. E. Finger and W. L. Silver.]

BIONB 490 Neotropical Behavior/Ecology Field Semester

Spring. 15 credits. Limited to 2-4 juniors or senior students. Prerequisites: BIONB 221 or BIOES 260 or their equivalents and permission of instructor. S. T. Emlen, P. H. Wrege.

Field studies in the Neotropics conducted under the auspices of Cornell University and the Smithsonian Tropical Research Institute (STRI) in central Panama. Students live in the town of Gamboa, perform research in the lowland tropical rain forest of Soberina National Park, and visit research projects on the Barro Colorado Island, Gigante Peninsula, Pipeline Road, Metropolitan Park, and elsewhere.

The semester includes three units of study: (1) Field Methods in Behavior and Ecology (4 credits). Weekly discussion meetings; through selected readings students examine the objectives, strengths, and limitations of the field methods being used on an ongoing research project on role reversal in a neotropical shorebird, the Wattled jacana. Students learn about a wide variety of field methods through short-term visits to other field projects sponsored by the Smithsonian. (2) Topics in Neotropical Biology (4 credits). Weekly seminars on behavior, ecology, physiology, and systematics presented by Smithsonian staff and visiting scientists. Topics may also include the geology and paleontology of the Isthmus regions. Students prepare a paper exploring the status and interdependence of two topics introduced in the seminar series. (3) Independent Research in Behavioral Ecology (7 credits). A comprehensive experience in field research, through active participation in ongoing research. This unit of the program includes readings on, and discussions of, the conceptual framework underlying the project; participation in the design of experimental protocols and data acquisition methods; capture, marking, and measuring of study animals; intensive use of methods to study animal social behavior in

the field; organization and entry of data for analysis; and examination and statistical analysis of data. Students are expected to develop an independent research project within the framework of the ongoing Jacana Research Project.

BIONB 491 Principles of Neurophysiology

Spring. 4 credits. Limited to 20 students. Prerequisite: BIONB 222 or written permission of instructor. S-U grades optional for graduate students. Lec, M W 10:10; lab, M or T 12:20-4:25; additional hours to be arranged. B. R. Johnson.

A laboratory-oriented course designed to teach the theory and techniques of modern cellular neurophysiology. Lecture time is used to introduce laboratory exercises and discuss results, to supplement laboratory topics, and for discussion of primary research papers. Extracellular and intracellular recording and voltage clamp techniques are used to analyze motor neuron and sensory receptor firing properties, and examine the cellular basis for resting and action potentials and synaptic transmission. A variety of preparations are used as model systems. Computer acquisition and analysis of laboratory results are emphasized.

[BIONB 492 Sensory Function (also Psychology 492)]

Spring. 3 or 4 credits. (The 4-credit option involves a one-hour section once a week, in which students are expected to participate in discussion. The 4-credit option is not always offered.) Prerequisite: a 300-level course in biopsychology or BIONB 222 or BIOAP 311, or permission of instructors. Students are expected to have a knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Offered alternate years. Not offered 1996-97. Lec, M W F 10:10; disc, hours to be arranged. B. P. Halpern, H. C. Howland.

This course covers classical topics in sensory function such as vision, hearing, touch, and balance, as well as some more modern topics like sensory coding, location of stimulus sources in space, the development of sensory system, and nonclassical topics such as electroreception and internal chemoreceptors. Both human and nonhuman systems are discussed. In all cases the chemical, physical, and neurophysiological bases of sensory information are treated, and the processing of this information is followed into the central nervous system. At the level of *The Senses*, edited by Barlow and Mollon, and *An Introduction to the Physiology of Hearing*, 2nd edition, by Pickles.]

[BIONB 493 Developmental Neurobiology]

Fall. 3 credits. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1996-97. Lec, M W F 9:05. R. Booker.

Lectures covering the development of the nervous system, taking examples from both vertebrates and invertebrates. Emphasis is on cellular and molecular issues, that is, How do nerve cells differentiate both morphologically and biochemically? The role of cues such as hormones and developmental genes in neural development is discussed. Readings are taken from original journal articles.]

[BIONB 494 Comparative Vertebrate Neuroanatomy]

Spring. 3 credits. Intended for juniors, seniors, and graduate students. Prerequisite: BIONB 222 or equivalent. S-U grades optional. Offered alternate years. Not offered 1996-97. Lec, T R 10:10-11:30. A. H. Bass.

Organization and evolution of neuroanatomical pathways as substrates for species-typical vertebrate behaviors. The course is divided into three major sections: development, general principles of brain organization, and co-evolution of vertebrate brain and behavior.]

BIONB 496 Bioacoustic Signals in Animals and Man

Fall. 3 credits. Limited to 12 junior, senior, and graduate students. Prerequisites: one year of introductory biology, PHYS 101-102 or 207-208, and permission of instructor. S-U grades optional. Offered alternate years. Next offered spring 1999 and alternate spring semesters thereafter. Lec, M W 9:05; lab to be arranged. C. W. Clark, R. R. Hoy.

Humans and most terrestrial animals live in a world of sound. Acoustic signals mediate social interactions and predator-prey behavior. This course teaches students about animal acoustical communication by introducing them to the different communication systems that are based on sound. The course presents the physical properties of sound, the physiological mechanisms of sound production and hearing, and an analysis of the behavioral context of signaling. In the laboratory students learn how to record, synthesize, and analyze acoustic signals with the aid of tape recorders and the Macintosh computer. Laboratories are designed around the lecture material and provide "real-world" exercises designed to stimulate discovery of the fundamental principles described in class. Class research projects on a selected topic in bioacoustics are required. The laboratory is based on software instrumentation running on a Macintosh II platform equipped with A/D-D/A data acquisition boards.

[BIONB 497 Neurochemistry and Molecular Neurobiology]

Fall. 3 credits. Limited to 30 students. Prerequisites: BIONB 222 and either BIOBM 330 or 331 and 332, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1996-97. Lec, T R 9:05; disc, T 2:25. R. M. Harris-Warrick.

This course focuses primarily on the biochemistry/molecular biology of neurons. Emphasis is on the molecular properties of these cells that account for their unique function. The presynaptic regulation of release and postsynaptic mechanism of action of the major classes of neurotransmitters are discussed, as well as selected neuromodulators and hormones. Readings are selected primarily from research journals.]

[BIONB 623 Chemical Communication (also Chemistry 622)]

Fall. 3 credits. Primarily for research-oriented students. Limited to 30 students. Prerequisites: one year of introductory biology for majors or equivalent, course work in biochemistry, and CHEM 358 or equivalent. Offered alternate years. Not offered 1996-97. Lec, M W 1:25; disc, F 1:25. J. Meinwald, T. Eisner, W. L. Roelofs, and guest lecturers.

The production, transmission, and reception of chemical signals in communicative interactions of animals, plants, and microorganisms. Studies of insects are emphasized. Specific topics are treated with varying emphasis on chemical, biochemical, ecological, behavioral, and evolutionary principles. The discussion sessions focus on readings from the recent literature and involve student-led discussions of contemporary topics.]

BIONB 626 Sex Differences in Brain and Behavior (also Psychology 524)

Spring. 2 credits. Limited to 12 students. Prerequisite: BIONB 322 or permission of instructor. Discs and sems to be arranged. T. J. DeVogd.

A survey of the newly discovered animal models for sex differences in the brain. Topics include the role of steroids in brain development, whether hormones can modify the structure of the adult brain, and the consequences of such sex differences in anatomy for behavior.

BIONB 720 Seminar in Advanced Topics in Neurobiology and Behavior

Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Sem to be arranged. Staff and students.

Designed to provide several study groups each semester on specialized topics. A group may meet for whatever period is judged adequate to enable coverage of the selected topics. Ordinarily, topics are selected and circulated during the preceding semester. Discussion of current literature is encouraged. Suggestions for topics should be submitted by faculty or students to the chair of the Section of Neurobiology and Behavior.

BIONB 721 Introductory Graduate Survey in Neurobiology and Behavior

Fall. 2 credits each term. Required of graduate students majoring in neurobiology and behavior. Concurrent registration in BIONB 221 and 222 not required. S-U grades only. Lec and discs, T R 11:15-12:05, alternate weeks. T. D. Seeley.

Lectures by faculty and student-led discussions on topics of current importance in neurobiology and behavior. Topics are linked to the materials presented in BIONB 221 and 222. Class meets twice a week, every other week. Students are required to write four term papers, over the two semesters, on selected topics in two of three sub-areas: (1) cellular and molecular neurobiology; (2) integrative neurobiology; (3) behavior.

BIONB 723 Advanced Topics in Animal Behavior

Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional. Sem to be arranged. Staff.

A seminar on a specific topic in animal behavior. The instructor presents lectures during the first few course meetings; the remainder of the course is devoted to student presentations. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

BIONB 724 Field Methods in Animal Behavior

Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional. Sem and fieldwork to be arranged. Staff.

A seminar-field experience course designed for first-year graduate students in animal behavior. Weekly seminars discussing field methodology, data collection, and hypothesis testing are followed by an intensive period (ten days to two weeks) in the field. Specific topics and field sites vary from semester to semester. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

BIONB 790 Advanced Topics in Cellular and Molecular Neurobiology

Fall or spring. Variable credit. May be repeated for credit. Limited to graduate students and advanced undergraduates studying neurobiology and behavior. Prerequisite: BIONB 222. S-U grades optional. Lec and sem to be arranged. Staff.

A lecture-seminar course on selected topics in cellular and molecular neurobiology. Students read original papers in the scientific literature and lead discussions of these articles. Suggestions for topics may be submitted by faculty or students to the chair of the Section of Neurobiology and Behavior. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

BIONB 792 Advanced Laboratory in Cellular and Molecular Neurobiology

Fall or spring. 2 credits. May be repeated for credit. Primarily for graduate students. Prerequisites: BIOBM 330 or 331 or equivalent, BIONB 491 or equivalent, and written permission of instructor. S-U grades optional. Lab to be arranged. Staff.

A two-week intensive laboratory course designed to provide experience with a specific technique currently used in cellular and molecular neurobiology. The technique under study and instructor in charge vary from semester to semester and are listed in the division's catalog supplement issued at the beginning of the semester.

BIONB 793 Advanced Topics in Integrative Neurobiology

Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Lec and discs to be arranged. Staff.

A course designed to provide in-depth knowledge of current research in anatomical and physiological bases of vertebrate and invertebrate behavior. Readings are primarily from specialty books and selected journal articles. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

BIONB 794 Advanced Laboratory Techniques in Integrative Neurobiology

Fall or spring. Variable credit. May be repeated for credit. Prerequisite: permission of instructor based upon a personal interview. Lab to be arranged. Staff.

A laboratory in the integrative, or neuroethological, approach to studies of animal

behavior. Designed to provide practical working knowledge of research methods in anatomical, physiological, and behavioral approaches to studies of vertebrate and invertebrate behavior. Laboratory technique to be covered and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

PLANT BIOLOGY (BIOPL)**BIOPL 241 Introductory Botany**

Fall. 3 credits. Lec, T R 9:05; lab, M T W or R 1:25-4:25, or W 7:30-10:30 p.m. K. J. Niklas.

Introductory botany for those interested in the plant sciences. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plant materials, including identification. First and second weeks of laboratory are field trips, starting with the first day of classes. *Those who register for an evening laboratory are still required to attend the afternoon field trips.*

BIOPL 242 Plant Physiology, Lectures

Spring. 3 credits. Primarily for undergraduates in agricultural sciences, but also for any Biological Sciences students wanting to know about plant function. Suitable as a second-level course for nonmajors to satisfy the biology distribution requirement. Prerequisites: one year of introductory biology and/or BIOPL 241. Recommended: one year introductory chemistry. Concurrent enrollment in BIOPL 244 required of undergraduates except those majoring in the social sciences or humanities, for whom it is recommended. May not be taken for credit after BIOPL 342 except by written permission of instructor. Lec, M W F 10:10. C. Reiss.

How plants function and grow. Examples deal with crop plants or higher plants where possible, though not exclusively. Topics include cell structure and function; plant metabolism, including photosynthesis; light relations in crops; plant-water relations; water uptake, transport, and transpiration; irrigation

of crops; sugar transport; mineral nutrition; growth and development—hormones, flowering, fruiting, dormancy, and abscission; stress; tissue culture; and genetic engineering.

BIOPL 243 Taxonomy of Cultivated Plants

Fall. 3 credits. Prerequisite: one year of introductory biology or written permission of instructor. May not be taken for credit after BIOPL 248. Lec, M W 10:10; labs, W 2-4:25. M. A. Luckow.

A study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

BIOPL 244 Plant Physiology, Laboratory

Spring. 2 credits. Prerequisite: concurrent enrollment in BIOPL 242. May not be taken for credit after BIOPL 344. Disc and lab, M T W or R 12:20-4:25. C. Reiss.

Experiments exemplify concepts covered in BIOPL 242 and offer experience in a variety of biological and biochemical techniques, including use of small amounts of radioisotopes.

BIOPL 245 Plant Biology

Summer (6-week session). 3 credits. Limited to 24 students. Lec, M-F 11:30-12:45; labs, M W 2-5:00. S. Williams.

Introductory botany, including plant identification. Emphasizes structure, reproduction, and classification of flowering plants. Most of the laboratory work is conducted outdoors in an area that surpasses most biological stations. Those who lack college-level biology are expected to work more closely with the instructor on supplemental instructional materials.

BIOPL 246 Plants and Civilization

Spring. 3 credits. Lec, T R 11:15; disc, T or W 1:25 or W or R 12:20. D. M. Bates.

A consideration of the role that plants have played and continue to play in the evolution of human cultures. Emphasis is on the interactions between humans and the plant environment, the nature of plants and manner in which humans use and integrate them into their cultures, and the problems and concerns related to contemporary and future use of plant resources.

BIOPL 248 Taxonomy of Vascular Plants

Spring. 4 credits. Prerequisite: one year of introductory biology. May not be taken for credit after BIOPL 243. S-U grades optional. Lec, M W F 9:05; lab, W or R 1:25-4:25. J. I. Davis.

An introduction to the classification of vascular plants, with attention to the goals of taxonomy, the processes of plant evolution, and the means of analyzing evolutionary relationships among plants. The laboratory concentrates on methods of plant identification and presents an overview of vascular plant diversity, with particular attention to the flowering plants.

BIOPL 341 Plants in Laboratory Teaching

Fall. 2 credits. Limited to 16 students. Prerequisite: one year of introductory biology. S-U grades optional. Disc and lab, T R 3:10-4:30. C. Reiss, D. J. Paolillo.

This course is intended for science education students who intend to teach biology at the high school level. The focus is on how to use plants in the biology laboratory in interesting ways, with particular emphasis on using plants to demonstrate basic biological principles. Hands-on experience is provided in experimental set-up and performance. Additional emphasis given to experimental design, data collection and analysis, and actual experience in a high school biology teaching laboratory.

BIOPL 342 Plant Physiology, Lectures

Spring. 3 credits. Prerequisites: one year of introductory biology and either concurrent enrollment in BIOPL 344 or written permission of instructor. May not be taken for credit after BIOPL 242 unless written permission is obtained from instructor. Lec's, T R 10:10–11:25. T. G. Owens.

An integrated and interdisciplinary study of the processes that contribute to the growth, competition, and reproduction of plants. Topics include, but are not limited to, plant water relations, membrane properties and processes, photosynthesis, plant respiration, mineral and organic nutrition, stress physiology, control of growth and development, and responses to the environment. Emphasis is on the relationship between structure and function from the molecular to the whole-plant level.

BIOPL 343 Molecular Biology and Genetic Engineering of Plants

Fall. 2 credits. Prerequisite: one year general biology or permission of instructor. S-U grades optional. Lec's, T R 11:15. M. E. Nasrallah.

An introduction to current studies involving recombinant DNA technology and its application to the analysis of basic plant processes. The course emphasizes genetic transformation methodology, molecular genetic approaches to the study of selected plant systems, and prospects for plant improvement using biotechnology. The course is directed at undergraduates who wish to become familiar with plants as experimental organisms. Selected topics attempt to illustrate the uniqueness of plant life and how it differs from other systems.

BIOPL 344 Plant Physiology, Laboratory

Spring. 2 credits. Prerequisite: concurrent enrollment in BIOPL 342. May not be taken for credit after BIOPL 244. Similar to BIOPL 244 but at a more advanced level. Lab, W 1:25–4:25; disc, W 12:20. C. Reiss. Experiments exemplify concepts covered in BIOPL 342 and offer experience in a variety of biological and biochemical techniques, including use of small amounts of radioisotopes, with emphasis on experimental design.

[BIOPL 345 Plant Anatomy

Fall. 4 credits. Limited to 15 students. Prerequisite: one year of introductory biology or a semester of botany. Offered alternate years. Not offered 1996–97. Lec's, M W 9:05; labs, M W 2–4:25. D. J. Paolillo.

A descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.]

[BIOPL 346 Algal Physiology

Fall. 3 credits. Prerequisites: one year of introductory biology for majors and BIOPL 242 or 342, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1996–97. Lec's, T R 8:30–9:55. T. G. Owens.

This course takes an interdisciplinary approach to the study of algae with an emphasis on the physiology, biochemistry, and ecology of this diverse group of organisms. The algal classes are briefly described with consideration of traditional and emerging criteria for classification of the algae. The majority of the course focuses on interactions of algae with the physical/chemical environment, uptake of inorganic compounds, algal photosynthesis, metabolic strategies, and population dynamics of planktonic algae and benthic macrophytes. There is no laboratory section with this course.]

BIOPL 347 Laboratory in Molecular Biology and Genetic Engineering of Plants

Fall. 2 credits. Limited to 24 students. Prerequisite: BIOPL 343 or permission of instructor. Concurrent enrollment in BIOPL 343 is encouraged. S-U grades optional. Lab, W 1:25–4:25. M. E. Nasrallah.

The laboratory provides experience in handling and experimenting with the plant *Arabidopsis thaliana*. Selected experiments include the preparation and analysis of nucleic acids, methods used in the detection and isolation of plant genes, analysis of gene expression using antibody and nucleic acid probes, mutant isolation, and methods of gene transfer to plants.

[BIOPL 359 Biology of Grasses

Fall. 3 credits. Limited to 24 students. Prerequisite: one year of introductory biology or an introductory plant taxonomy course, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1996–97. Lec's, T R 10:10; lab, T 1:25–4:25. J. I. Davis.

Systematics and ecology of the graminoid plant families (grasses, sedges, and rushes), with principal emphasis on grasses. Major topics include taxonomy, phylogenetics, physiology, reproductive biology, ecotypic variation, speciation, biogeography, and population biology. The role of graminoids as ecosystem dominants, weeds, and the origins of cultivated species are discussed. Laboratory concentrates on the diversity of grasses.]

BIOPL 440 Phylogenetic Systematics

Fall. 4 credits. Limited to 24 students. Prerequisite: graduate standing or permission of instructor. Offered alternate years. Lec's, T R 10:10; labs, T R 2:00–4:25. K. C. Nixon.

Basic and advanced theory and methods of phylogenetic analysis. Students are introduced to cladistic analysis using parsimony and gain experience with computer-aided analysis of taxonomic data, including both morphological and molecular data sources. Topics discussed include applications of phylogenetic methods to biogeography and evolutionary studies.

BIOPL 441 Systematics and Evolution of Crops

Fall. 2 credits. Prerequisite: an advanced-level course in the plant sciences with taxonomic content or permission of instructor. Offered alternate years. Lec's,

R 12:20–2:15. D. M. Bates.

An integrated study of the systematics and evolution of agronomic and horticultural species. Processes of domestication, the evolutionary history of selected cultigens, the nature of weeds and land races, classification and nomenclature as applied to cultivated plants, and underexploited plant resources are among the topics considered.

BIOPL 443 Topics and Research Methods in Systematics

Fall or spring. 1–2 credits (1 credit per section). Prerequisite: written permission of instructor. S-U grades optional.

A series of 1-credit modules on specialized topics in systematics. Topics and instructors vary each semester. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester.

Section 01 Pollen Structure and Morphology

Fall. 1 credit. Lec's, M W 12:20–1:10 (12 lec's) Sept. 2–Oct. 9. W. L. Crepet.

A broad introduction to variation in the structure and morphology of pollen, principally in the contexts of systematic significance and evolution. Pollen development and function in pollination are discussed.

Section 02 Polyploidy in Plants

Fall. 1 credit. Lec's, M W 12:20–1:10 (12 lec's) Oct. 16–Dec. 2. J. J. Doyle, J. I. Davis.

An introduction to the process of polyploidy, with emphasis on its evolutionary and phylogenetic significance. Origins and evolution of polyploid complexes in wild and cultivated plant groups are discussed.

BIOPL 444 Plant Cell Biology

Fall. 4 credits. Limited to 24 students. Prerequisites: one year of introductory biology or permission of instructor. Lec's, M W F 9:05; lab, M or W 1:25–4:25. R. O. Wayne.

Evidence from microscopy, physiology, biochemistry, and molecular biology is used to try to unravel the mystery of the living cell. The dynamics of protoplasm, membranes, and the various organelles are studied. The mechanisms of cell growth and division, the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

BIOPL 445 Photosynthesis

Fall. 3 credits. Prerequisites: CHEM 104 or 208, MATH 106 or 111, and either PHYS 102 or 208 or permission of instructor. Offered alternate years. Lec's, M W F 10:10. T. G. Owens.

A detailed study of the processes by which plants use light energy to grow. Structure of the photosynthetic apparatus, light absorption and antenna processes, photochemistry, and electron transport are emphasized. The course incorporates biophysical, biochemical, physiological, and molecular aspects of photosynthesis. Photosynthetic carbon metabolism is not covered in detail. Discussions include relevant material in bacterial, algal, and higher-plant photosynthesis.

[BIOPL 447 Molecular Systematics]

Fall. 3 credits. Prerequisites: BIOES 278 or BIOGD 281 or BIOBM 332, or written permission of instructor. Offered alternate years. Not offered 1996-97. Lects, T R 8:30-9:55. J. J. Doyle.

The study of variation at the molecular level and its application to the taxonomy and evolution of plants, particularly angiosperms. Emphasis is on the use of molecular evidence, particularly DNA data, for reconstructing phylogenies. Theory and methods of phylogenetic reconstruction are discussed. The organization and evolution of nuclear, mitochondrial, and chloroplast genomes, genes, and gene products are described from the standpoint of their utility for addressing a diversity of evolutionary questions. These questions span the entire taxonomic spectrum, and include such issues as the origin of angiosperms, evolution of species related to important crop plants, and population studies of hybridization.]

[BIOPL 448 Plant Evolution and the Fossil Record]

Spring. 3 credits. Prerequisite: BIOPL 241 or equivalent, or permission of instructor. Offered alternate years. Lects, T R 9:05; lab, R 12:20-2:15. K. J. Niklas, W. L. Crepet.

An introduction to evolution, surveying major changes in plants from the origin of life to the present. Emphasis is placed on plant form and function, adaptations to particular ecologic settings, and evolutionary theory as it relates to plants.

[BIOPL 453 Principles and Practice of Historical Biogeography (also Entomology 453)]

Fall. 3 credits. Prerequisite: a course in systematics or permission of instructor. S-U grades optional. Lects, T R 10:10; lab/disc, R 2:30-4:25. J. K. Liebherr, M. A. Luckow.

This course provides a comprehensive survey of the current methods and techniques used in historical biogeography, and the development of modern biogeographic theory in the context of classical and ecological methods of analysis. Brief summaries of geological and paleontological aspects of biogeography are presented, and large-scale biogeographic patterns discussed. The laboratories focus on hands-on computer applications of modern techniques and discussion of controversial issues in biogeography.

[BIOPL 466 Physiological Plant Ecology, Lectures (BIOES 466)]

Spring. 3 credits. Limited to 35 students. Prerequisite: BIOES 261 or introductory plant physiology. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1996-97. Lects, T R 10:10-11:25; optional disc to be arranged. T. E. Dawson.

For course description, see BIOES 466.]

[BIOPL 468 Physiological Plant Ecology, Laboratory (BIOES 468)]

Spring. 2 credits. Limited to 15 students. Prerequisite: previous or concurrent enrollment in BIOES 466. Offered alternate years. Not offered 1996-97. Lab, T 1:25-4:25, plus additional lab hours to be arranged; 1 weekend field trip required. Fee, \$15. T. E. Dawson.

For course description, see BIOES 468.]

[BIOPL 641 Laboratory in Plant Molecular Biology]

Spring. 4 credits. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 or equivalent, and permission of instructor. S-U grades optional. Lab, T 9:05-4:30. J. B. Nasrallah, M. R. Hanson, S. D. Tanksley.

Selected experiments on genome organization, gene expression, and gene transfer in plants. The course emphasizes the application of molecular biology methodology to plant systems. Students may have additional lab time to complete assignments.

[BIOPL 642 Plant Mineral Nutrition (also Soil, Crop, and Atmospheric Sciences 642)]

Spring. 3 credits. Prerequisite: BIOPL 342 or equivalent. Offered alternate years. Lects, M W F 10:10. L. V. Kochian, R. M. Welch.

A detailed study of the processes by which plants acquire and use mineral nutrients from the soil. Topics include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; the metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and the nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements are emphasized to illustrate these topics.

[BIOPL 643 Plant Physiology, Advanced Laboratory Techniques]

Fall. 4 credits. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. S-U grades only. Offered alternate years. Not offered 1996-97. Lab, T or W 8-5:00; disc, M 4:30-5:30. A. T. Jagendorf and staff.

An introduction to some modern methods in experimental plant biology. A partial list of techniques used includes fluorescence measurements, infrared CO₂ analysis, gel electrophoresis and Western blots, cellular electrode measurements, microtiter plate technology for enzyme assays, sensitive growth measurements, HPLC and GC-MS, and computer interfacing with laboratory equipment.]

[BIOPL 644 Plant Growth and Development]

Spring. 3 credits. Prerequisites: BIOPL 345 and either 242 or 342 or their equivalents, or written permission of instructor. Offered alternate years. Not offered 1996-97. Lects, M W F 9:05. P. J. Davies, D. J. Paolillo.

Explores the changes that occur during plant growth and development and their control: morphological and anatomical changes in apices, tissue differentiation, organ formation, embryo development, gene regulation, hormone action and interaction, the influence of light in development, flowering, fruiting, dormancy, abscission, and senescence.]

[BIOPL 645 Families of Tropical Flowering Plants]

Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Offered alternate years. Not offered 1996-97. Lec and disc, F 11:15. K. C. Nixon.

The families of flowering plants encountered solely or chiefly in tropical regions are considered in lectures, discussions, and demonstrations, with the aim of providing basic points of recognition for, and an

understanding of, diversity and relationships in these families for the student venturing into the tropics.]

[BIOPL 646 Families of Tropical Flowering Plants: Field Laboratory]

Interession. 3 credits. Limited to 20 students, with preference given to graduate students from member institutions of the Organization for Tropical Studies. Prerequisite: BIOPL 243 or 248 or equivalent. Recommended: BIOPL 645. S-U grades only. For more details and application, contact the L. H. Bailey Hortorium, 467 Mann Library. Offered alternate years. Not offered 1996-97. K. C. Nixon.

An intensive orientation to families of tropical flowering plants represented in forests of the American tropics. Emphasis on field identification combined with laboratory analysis of available materials in a "whole-biology" context.]

[BIOPL 647 Seminar in Systematic Botany]

Fall or spring. 1 credit. May be repeated for credit. Prerequisite: written permission of course coordinator required for undergraduates. S-U grades optional.

Sem, T 11:15-1:10. Bailey Hortorium staff. Lectures and discussions led by staff, visitors, and students on topics of current importance to systematic botany.

[BIOPL 648 Plant Biochemistry]

Spring. 3 credits. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. Offered alternate years. Lects, M W F 9:05. A. T. Jagendorf and staff.

Selected areas of plant biochemistry are reviewed in the context of the plant life cycle and responses to the environment. Topics include metabolism of lipids, carbohydrates, organic acids, phenolic compounds, and proteins; nitrogen and sulfur assimilation; respiration; photosynthesis; development and replication of chloroplasts; and cell-wall composition and properties. Attention is paid to operation of control mechanisms.

[BIOPL 649 Transport of Solutes and Water in Plants]

Fall. 3 credits. Prerequisite: BIOPL 342 or equivalent. Offered alternate years. Not offered 1996-97. Lects, T R 10:10-11:30. R. M. Spanswick.

Transport of ions, water, and organic materials in plants; mechanisms of ion transport; relationships between ion transport and metabolism; ion uptake and transport in higher plants; phloem transport; and water relations of single cells and whole plants.]

[BIOPL 651 Quantitative Whole-Plant Physiology]

Fall. 3 credits. Prerequisites: introductory physics, calculus, and plant physiology. S-U grades only. Offered alternate years. Lects, T R 10:10-11:30. R. M. Spanswick.

An exploration of the extent to which physiological processes and their interactions can be formulated in a quantitative manner and integrated to describe various aspects of plant behavior, including growth and yield. Consideration is given to characterization of the plant environment, energy balance, gas exchange, water relations, photosynthesis, respiration, translocation, nutrient supply, and the timing of developmental events.

BIOPL 652 Plant Molecular Biology II

Spring. 1-4 credits (1 credit per section).
Prerequisites: BIOGD 281 and BIOBM 330 or 332, or their equivalents. Recommended: BIOBM 331. S-U grades optional.

A series of four-week modules on specialized topics. Coordinator: S. H. Howell.

Section 01 Molecular Plant-Pathogen Interactions (also Plant Pathology 662)

1 credit. Lects, M W F 10:10 (12 lecs) Jan. 22-Feb. 17. O. C. Yoder, A. R. Collmer, T. P. Delaney.

An examination of the molecular properties that control the development of host-parasite interactions in both microorganisms (bacteria and fungi) and higher plants. Contemporary theories describing the genetic and molecular mechanisms of microbial pathogenesis and plant resistance are discussed.

Section 02 Molecular Aspects of Plant Development II

1 credit. S-U grades optional. Lects, M W F 10:10 (12 lecs) Feb. 19-Mar. 24. S. H. Howell.

The molecular genetics of plant development. This module focuses on vegetative development and includes topics such as the development of the shoot, root, and vasculature and the operation of the vegetative shoot apical meristem. The module is a companion to BIOPL 653, Sec 04 (Plant Development I), which covers molecular aspects of reproductive development.

Section 03 Molecular Plant-Microbe Interactions

1 credit. S-U grades optional. Lects, M W F 10:10 (12 lecs) Mar. 26-Apr. 21. S. C. Winans.

Course focuses on the interactions of *Agrobacteria* and *Rhizobia* with plants. Topics on *Agrobacterium*-plant interactions include plant-microbe recognition mechanisms, T-DNA transfer process, oncogenesis and use of *Agrobacterium* to produce transgenic plants. Topics on *Rhizobium*-plant interactions include regulation of nitrogenase activity and expression, organization and function of the *sym* plasmid, nodule development, and plant genetics involved in plant-microbe interaction.

Section 04 Plant Gene Evolution and Phylogeny

1 credit. Lects, M W F 1:25 (12 lecs) Mar. 26-Apr. 21. J. J. Doyle.

Practical applications of molecular systematics/evolution for plant molecular biologists and other non-systematists. The course focuses on two basic issues: methods and principles for inferring relationships among genes and the use of data to hypothesize relationships among plants. Evolutionary patterns and processes of genes and gene families are discussed, as well as rates of sequence evolution, paralogy and orthology, the effects of recombination and concerted evolution of gene phylogenies, and the implications of using gene or allele phylogenies to infer organismal evolutionary patterns. The principles of distance and parsimony methods are described, and computer methods for reconstructing gene phylogenies are discussed.

BIOPL 653 Plant Molecular Biology I

Fall. 1-5 credits (1 credit per section).
Prerequisites: BIOGD 281 and BIOBM 330 or 332, or their equivalents. Recommended: BIOBM 331. S-U grades optional.

A series of four-week modules on specialized topics. Coordinator: S. H. Howell.

Section 01 Concepts and Techniques in Plant Molecular Biology (also Plant Breeding 653.1)

1 credit. Lects, M W F 10:10 (12 lecs) Sept. 4-Sept. 30. J. Steffins, D. B. Stern.

A review and update on molecular biology concepts relevant to plant sciences including DNA synthesis, RNA transcription and processing, and protein structure and translation. Methods applicable to plant molecular biology are described including isolation of nucleic acids, gel electrophoresis, recombinant DNA techniques, mutant production, DNA-protein interactions, and use of antibodies.

Section 02 Plant Biotechnology (also Plant Breeding 653.2 and Plant Pathology 663)

1 credit. Lects, M W F 10:10 (12 lecs) Sept. 4-Sept. 30. M. Zaitlin, E. D. Earle.

This course deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

Section 03 Plant Genome Organization and Function (also Plant Breeding 653.3)

1 credit. Lects, M W F 10:10 (12 lecs) Oct. 2-Oct. 30. S. D. Tanksley.

This course covers the origins and measurement of nuclear DNA variation in plants as well as the development and exploitation of molecular markers for breedings and the isolation of genes underlying interesting phenotypes.

Section 04 Molecular Aspects of Plant Development I

1 credit. Lects, M W F 10:10 (12 lecs) Nov. 4-Dec. 2. J. B. Nasrallah.

This module focuses on the molecular genetics of plant reproduction. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Topics include the integration of environmental and developmental signals during the transition to flowering, the establishment of pattern during floral morphogenesis, cell death and sex determination, gamete development, cell-cell signaling during pollination, and fertilization. The module is a companion to BIOPL 652, Sec 02 (Molecular Aspects of Plant Development II), which covers molecular aspects of vegetative development.

Section 05 Molecular Biology of Plant Organelles

1 credit. S-U grades optional. Lects, M W F 1:25 (12 lecs) Nov. 4-Dec. 2. M. R. Hanson (odd years), D. B. Stern (even years).

An in-depth examination of the molecular biology of plant mitochondria (odd years) and plastids (even years). Topics include the

organization and expression of organelle genomes, RNA editing, organelle transformation, expression of nuclear genes for organelle proteins. Special topics include cytoplasmic male sterility and gene regulation during plastid development.

[BIOPL 654 Botanical Nomenclature

Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Offered alternate years. Not offered 1996-97. Lec and disc to be arranged. Staff.

An analysis of the International Code of Botanical Nomenclature and its application to various plant groups.]

BIOPL 655 Seminar in Ethnobotany

Fall. 2 or 4 credits (4 credits with independent tutorial). Prerequisite: written permission of instructor for undergraduates. Lec, W 1:25; disc, W 2:30. D. M. Bates.

An exploration of ethnobotany, the study of the interrelationships of people and plants viewed from anthropological and botanical perspectives. Contemporary issues, theory, and methodology are considered. Topics include subsistence systems, crop domestication, traditional medicine, indigenous resource management, and preceptions of nature, among others.

BIOPL 656 Topics in Plant Evolution

Spring. 1 credit. Prerequisite: BIOPL 448 or equivalent background in evolution, or written permission of instructor. Lab and disc to be arranged. K. J. Niklas.

A series of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.

BIOPL 740 Plant Biology Seminar

Fall and spring. No credit (no official registration). Required of graduate students doing work in plant biology. Sem, F 11:15. Staff.

Lectures on current research in plant biology, presented by visitors and staff.

BIOPL 741 Problems in Plant Cell and Molecular Biology

Fall. 2 credits. Limited to first- and second-year graduate students in the Plant Cell and Molecular Biology Program. Disc to be arranged. Staff.

An introduction to the research literature in plant molecular and cellular biology through weekly problem sets and discussions.

BIOPL 742 Current Topics in Plant Molecular Biology

Fall or spring. 1 credit. Enrollment is limited. Primarily for graduate students, with preference given to majors or minors in plant molecular biology; written permission of instructor required for undergraduates. S-U grades only. Sem, 1 hour each week to be arranged. Staff.

A seminar with critical presentation and discussion by students of original research papers concerning the molecular biology of plants. Staff direction varies each year and is announced a semester in advance.

BIOPL 743 Current Research in Plant Cell and Molecular Biology

Fall. 1 credit. Limited to graduate students; written permission from a member of the Plant Cell and Molecular Biology Program required for undergraduates. Lec to be arranged. Staff.

An introduction for graduate students to the research being conducted by Cornell faculty in the Plant Cell and Molecular Biology Program.

BIOPL 749 Graduate Research in Botany

Fall or spring. Variable credit. May be repeated for credit. S-U grades optional. Hours to be arranged. Staff.

Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

BIOPL 840 Current Topics in Plant Physiology

Fall or spring. 2 credits. May be repeated for credit. S-U grades only. Sem to be arranged.

Seminar reports by graduate students on current literature in experimental plant physiology or related areas.

COURSES IN MARINE SCIENCE

Cornell offers an extensive listing of undergraduate courses in marine science.

Undergraduates interested in pursuing studies in marine science are encouraged to explore the undergraduate specialization in Marine Biology and Oceanography offered through the Division of Biological Sciences and the summer program of courses offered by the Shoals Marine Laboratory. Further information on both can be found at the Cornell Marine Programs Office, G14 Stimson Hall.

Undergraduate Specialization in Marine Biology and Oceanography

Biological Sciences majors in the ecology and evolutionary biology program of study have the option of specializing their program of study in the areas of marine biology and oceanography. In addition to fulfilling the major and the ecology and evolutionary biology program of study requirements, students in marine biology and oceanography are encouraged to enroll in the following courses:

- 1) BIOES 154, The Sea: An Introduction to Oceanography,
- 2) BIOSM 364, Field Marine Science or a 400-level BIOSM field course at the Shoals Marine Laboratory,
- 3) BIOES 462, Marine Ecology.

Students in this specialization are exposed to an integrated program of study, emphasizing a natural progression of formal course work combined with ample opportunities for practical field experience.

SHOALS MARINE LABORATORY (BIOSM)

G14 Stimson Hall, 255-3717

The objective of the Shoals Marine Laboratory (SML) is to provide undergraduates, beginning graduate students, and other interested adults a unique opportunity to explore marine sciences in an island setting noted for its biota, geology, and history. SML has established a national reputation for excellence and has become North America's largest marine field station focusing on undergraduate education.

The summer population of Appledore Island is limited to about one hundred people at any one time. Participants and faculty members can literally and figuratively immerse themselves in their explorations, free from distractions common to most academic institutions. Because SML is a residential facility, a sense of community develops that makes courses and seminars at SML outstanding educational and intellectual experiences. Participants learn from and exchange ideas with a wide range of specialists whose primary interests are marine but whose perspectives often differ, providing fertile ground for lively discussions.

Credit courses at Shoals Marine Laboratory are full-time, intensive learning experiences. Courses may be taken sequentially, but not concurrently. A typical day combines lecture sessions, laboratory and field work, field trips to nearby islands and the mainland, and collecting and research excursions aboard the Laboratory's 47-foot research vessel, *John M. Kingsbury*. Field experience is an integral component of all courses, using Appledore's extensive intertidal zone, wading bird rookeries, and seabird colonies. Faculty, drawn from Cornell University, the University of New Hampshire, and other leading academic institutions, are selected not only based on their academic excellence, but also on their teaching ability in the field. In addition, numerous guest lecturers include engineers, coastal planners, and specialists from private industry, government, and the academic community.

The Ithaca campus functions of the Shoals Marine Laboratory are centered in the Cornell Marine Programs Office, G14 Stimson Hall. The office serves as an advising center for students interested in the marine sciences, maintains a browsing library with updated information on graduate study and career opportunities as well as on marine programs at other institutions, and administers the SEA Semester, a 17-credit program offered in cooperation with the Sea Education Association (SEA). SML and SEA offer a joint SEA/Island semester for 18 credits, which combines

both programs (BIOSM 364, 366, 367, 368, 372).

The following marine sciences courses are currently administered by the Cornell Marine Programs Office.

BIOSM 160 The Oceanography of the Gulf of Maine

Summer. 4 credits. S-U grades optional. Limited to 24 students. A special 2-week course offered aboard the *SSV Corwith Cramer* and at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, contact the SML office, G14 Stimson Hall or the Sea Education Association office at P.O. Box 6, Woods Hole, MA, 02543. Estimated cost (includes tuition, room and board aboard ship and on the island, and ferry transportation), \$3,000. Daily labs, and fieldwork for 2 weeks. SML faculty.

An exciting opportunity to explore the offshore and near-coastal environments of the Gulf of Maine for pre-college and first-year non-science majors. Students spend ten days aboard the Sea Education Association's *SSV Corwith Cramer* and sail from Woods Hole, MA, to the Isles of Shoals via Georges Bank and the Gulf of Maine. Besides operating the ship, students study the many characteristics of this unique ocean environment. Following the sea component, students spend seven days at the Shoals Marine Laboratory to collect data characteristic of the Isles of Shoals coastal environment.

BIOSM 161 Introduction to Field Marine Science

Summer. 4 credits. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$1,800. Offered alternate years.

This course allows students who are not biology majors to experience the breadth of the marine sciences under field conditions at an island laboratory. Aspects of biology, geology, earth science, chemistry, and physics are included. Specific topics include beach, salt marsh, tidal mud flat, tide pool, and benthic offshore environments; identification of marine plants and animals; chemical and physical oceanography; marine geology; and ecology of kelp beds and urchin barrens.

BIOSM 204 Biological Illustration

Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, supplies, and ferry transportation), \$950. Daily sessions for 1 week. SML faculty.

General discussion of scientific publishing, illustration labeling, color techniques, and printing processes. The course provides the scientist or science student a chance to experience several illustration techniques with the goal of obtaining an overview of scientific and wildlife illustrations. The student may choose a single technique to explore in depth. Course size is limited so that individual attention can be emphasized.

BIOSM 309 Coastal Ecology and Bioclimates

Summer. 4 credits. Prerequisite: one year of college-level biology; background preferred in physics/physical geography. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$1,850. Daily lec's, labs, and fieldwork for 2 weeks. SML faculty.

A study of the fundamentals of organism-environment interaction developed through defining and measuring abiotic factors including solar radiation, temperature, atmospheric moisture, precipital wind, and currents. On-site exploration of the dynamics of meteorology and the role of abiotic and biotic factors in the life of coastal and marine plants and animals including humans.

BIOSM 327 Neurobiology of Animal Behavior

Summer. 4 credits. Prerequisite: permission of instructor and successful performance in college-level introductory biology and chemistry courses with laboratories. Recommended: course work in neurobiology, psychology, and animal behavior. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off the coast of Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$1,850. Daily lec's, labs, and fieldwork for 2 weeks. SML faculty.

Neural mechanisms underlie all behaviors, from simple reflexes to complex social interactions. The functional elements of those mechanisms often are common to both vertebrate and invertebrate nervous systems. The course focuses on neural mechanisms of behavior in marine organisms, a topic that has produced significant biomedical discoveries. Students gain hands-on experience with a spectrum of modern research techniques for behavioral, systems, cellular, and molecular approaches. A visiting scientist program allows student interaction with research scientists.

BIOSM 329 Ecology of Animal Behavior

Summer. 4 credits. Prerequisite: one year of introductory college biology. Recommended: course work in ecology, psychology, or behavior. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$1,850. Daily lec's, labs, and fieldwork for 2 weeks. SML faculty.

The ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory research methods. Lectures and readings address the major subareas of behavior (communication, orientation, social behavior, foraging, predator avoidance, and sensory mechanisms). Each student engages in short-term behavioral observation and prepares a research proposal for studying a problem within the course subject area.

BIOSM 363 Marine Biology for Teachers

Summer. 3 or 4 credits (4-credit option: additional 4 days for individual research). Primarily for teachers, grades 6 through 12, but open to others with teaching experience. Prerequisite: one year of introductory college biology. S-U grades optional. A special 10-day course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$1,850. Daily lec's, labs, and fieldwork for 10 days. SML faculty.

Designed to give an overview of living marine organisms (algae, invertebrates, fishes, marine mammals, and shorebirds) and of the environment they inhabit. Fieldwork is emphasized. Occasional lectures and films deal with additional topics such as coastal-zone problems, marine fisheries, economics of marine organisms, and educational resources of the marine environment.

BIOSM 364 Field Marine Science

Summer. 6 credits. Prerequisite: one year of college biology. S-U grades optional. A special 4-week course offered twice each summer at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML Office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$2,850. Daily lec's, labs, and fieldwork for 4 weeks. 3 core faculty members assisted by up to 15 visiting lecturers, including representatives of governmental agencies. SML faculty.

Designed for the student who desires an initial overview of the marine sciences, this course emphasizes living material in natural habitats. Most of the course work is concerned with the biology of intertidal plants and animals, biological oceanography, ichthyology, and fisheries. Attention is also given to introductory physical and chemical oceanography and marine geology. Marine ecology and the effects of human activity on the marine environment are included. Students apply this knowledge by conducting a transect study toward the end of the course.

BIOSM 365 Underwater Research

Summer. 4 credits. Prerequisites: one year of college-level biology, recognized scuba certification, and a medical examination. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$1,950. Daily lec's and fieldwork for 2 weeks. Team-taught by three faculty members with occasional guest lecturers. Not for recreational divers.

Course covers the philosophy of research, hypothesis testing and experimental design, sampling methods, various underwater techniques, diving physics and physiology, and use of dive tables. Emphasis is on subtidal ecological research. Requirements include critical evaluation of several journal articles and production of a research proposal.

BIOSM 366-370 SEA Semester

In cooperation with the Sea Education Association (SEA), the Shoals Marine Laboratory offers a semester-length sequence of courses designed to provide college undergraduates with a thorough academic, scientific, and practical understanding of the sea. *This sequence is repeated approximately once every two months throughout the year.* Students spend the first half of SEA Semester (a six-week shore component) in Woods Hole, MA, receiving instruction in oceanography, nautical science, and maritime studies. The second half of SEA Semester (a six-week sea component) is spent at sea aboard the R/V *Westward* or the R/V *Corwith Cramer*. Enrollment is open to men and women judged capable of benefiting from SEA Semester; no specific prior training or study is required. Cornell students enrolled in the SEA Semester must take the entire sequence.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, or call SEA directly at 1-800-552-3633. Program costs are to be paid in place of regular Cornell tuition and fees: tuition for the entire 17-credit SEA Semester, about \$8,500; room and board about \$2,500.

Instructors for the SEA Semester include faculty of the Sea Education Association and the Woods Hole Oceanographic Institution and others.

Shore Component (six weeks)**BIOSM 366 SEA Introduction to Oceanography**

3 credits. Prerequisite: concurrent enrollment in BIOSM 367 and 368. A survey of the characteristics and processes of the global ocean. Oceanographic concepts are introduced and developed from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

BIOSM 367 SEA Introduction to Maritime Studies

3 credits. Prerequisite: concurrent enrollment in BIOSM 366 and 368. An interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

BIOSM 368 SEA Introduction to Nautical Science

3 credits. Prerequisites: concurrent enrollment in BIOSM 366 and 367. An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial, and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

Sea Component (six weeks)

Courses 369 and 370 take place aboard the R/V *Westward*, a 125-foot steel auxiliary-powered staysail schooner built in 1961, or the R/V *Corwith Cramer*, a 134-foot steel auxiliary-powered brigantine built in 1987 for SEA. Both ships normally put to sea with a ship's company of thirty-four. The professional staff of nine includes the captain, the chief scientist, three science watch officers, three deck watch officers, an engineer, and a steward. In addition, one or more visiting investigators are frequently aboard. Up to twenty-four students round out the complement.

BIOSM 369 SEA Practical Oceanography I

4 credits. Prerequisite: BIOSM 366. Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment; in the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

BIOSM 370 SEA Practical Oceanography II

4 credits. Prerequisites: BIOSM 368 and 369. Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.

BIOSM 372 SEA Practical Oceanography III

Summer. 3 credits. Prerequisites: BIOSM 366, 367, and 368. Theories and problems raised in class are tested in the practice of oceanography at sea. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, in the methodologies involved in the collection, analysis, and reduction of oceanographic data, and in the attendant operations of sailing an oceanographic research vessel. Group research projects are completed.

BIOSM 402 Marine Pollution

Summer. 4 credits. Prerequisites: one year of college-level biology and chemistry or permission of instructor. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$1,850. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

An introduction to marine pollutants; their sources and control/treatment; the effects of marine pollution upon coastal ecosystems; and federal and state water pollution regulatory programs. Laboratory includes training in field collection of water samples,

measurement and modeling of effluent plume dispersion, and measurement of microbial indicators of water quality, dissolved nutrients, BOD, dissolved oxygen, and toxicity.

BIOSM 409 Ciliophorology

Summer. 2 credits. Prerequisite: permission of instructor. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$950. Daily lecs and lab for 1 week. SML faculty.

A special course that examines ciliophoran biology in depth through lectures and laboratory exercises. Topics include a detailed look at the ciliate faunules found in such diverse habitats as salt marshes, sandy sediment interstitial spaces, the Gulf Stream and the Sargasso Sea, marine caves, and benthic hydrothermal vents. Laboratory focuses on examining silver stained specimens, and covers staining techniques, as well as back scattered and secondary SEM and TEM methodologies.

BIOSM 413 Adaptations of Marine Organisms

Summer. 6 credits. Prerequisite: BIOSM 364 or permission of instructor. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$2,500. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.

An introduction to the physiological ecology and functional morphology of marine plants and animals, with emphasis on selected algal and invertebrate examples from the Gulf of Maine. Topics covered include photosynthesis in the marine environment; respiration in intertidal organisms; carbohydrates, proteins, and lipids as nutrients in the sea; acclimation and tolerance of tide-pool biota; and biological responses to competition and grazing. Field and laboratory exercises explore principles and procedures used to characterize the physical, chemical, and biotic environment of intertidal and shallow subtidal organisms, including determination of temperature, light, salinity, oxygen and nutrient levels, and *in vivo* functional analyses of metabolic phenomena. The process of scientific investigation is the predominant theme of the course.

BIOSM 418 Tropical Marine Science

Summer. 8 credits. Limited to 12 students. Prerequisites: one year college-level biology; BioES 261 or BioSM 364 or equivalent; BioSM 365 or equivalent experience; recognized SCUBA certification; medical exam; and permission of instructor. Lec/lab, 2 weeks; 6 weeks monitoring study and individual research projects, including data analysis on computers. D. F. Shapiro.

A special 8-week course offered in Akumal, Mexico. For more details, contact Shoals Marine Laboratory, G-14 Stimson Hall, 255-3717. Estimated cost (includes room, board, tuition, and airfare) \$4,000. For competent divers only. In addition to lectures and laboratories covering the basic principles

of coral reef ecology, students participate in a coral reef monitoring survey. Following two weeks of course work, students engage in independent research projects. This course applies skills learned in the Underwater Research course at Shoals Marine Laboratory.

BIOSM 449 Marine Botany: Ecology of Marine Plants

Summer. 4 credits. Prerequisite: BIOSM 364 or one year of introductory biology. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$1,850. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

An overview of the major marine algal groups, including aspects of anatomy, morphology, development, life histories, physiology, and use. Laboratories and fieldwork emphasize relationships between distribution and major environmental parameters and involve student projects.

BIOSM 477 Marine Vertebrates

Summer. 6 credits. Prerequisites: permission of instructor and a course in vertebrate biology. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$2,500. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.

Topics in marine vertebrate biology emphasizing laboratory studies, field collections or observations, and readings from the current literature. Topics covered include systematics of fishes of the Gulf of Maine, elasmobranch physiology, interpretation of life history and parameters from otolith microstructure, teleost skeletomuscular structure and function, population biology and the contemporary Gulf of Maine fishery, Mesozoic marine reptiles, the biology of sea turtles in cold water, coloniality in sea birds, avian adaptations to life at sea, evolution and systematics of marine mammals, diving physiology, and ecology and conservation of existing marine mammal populations. Dissection of vertebrate animals is a part of one or more laboratory sessions.

ARKEO Archaeology of Maritime Communities (Archaeology 300: Individual Study in Archaeology)

Summer. 2 credits. Prerequisite: a strong interest in history. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$950. Daily lecs, labs, and fieldwork for 1 week. SML faculty.

Fieldwork on various land sites and their adjacent offshore marine environments. Artifact analysis, preliminary conservation, and the proper recording of finds are emphasized. Methods of archaeological research, including the use of archives and historical materials, and publication methodologies as well as the larger questions in the discipline are discussed.

ARKEO Archaeology Underwater (Archaeology 319)

Summer. 2 credits. Prerequisites: recognized scuba certification and a medical examination required for students engaging in underwater research; also open to non-divers. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$950. Daily lecs, labs, and fieldwork for 1 week. SML faculty.

An introduction to the subject and a review of this contemporary subdiscipline of archaeology. The approach of the course is practical, with a strong potential for actual on-site experience in search, site recognition, survey, and recording. The course also covers the history and development of the subject, the legal aspects of underwater research, and the worldwide potential of the field. Since any archaeological research project involves a great deal more than digging, the course provides ample opportunities for those who are interested in the subject but are not divers or sufficiently experienced in scuba.

GEOL Marine and Coastal Geology (Geological Sciences 213)

Summer. 2 credits. Prerequisite: an introductory course in geology or permission of instructor. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$950. Daily lecs, labs, and fieldwork for 1 week. SML faculty.

With "the New England coast" defined as beginning at the -200 meter isobath and proceeding westward, this course examines specific geological events and processes important in shaping the area's bedrock and surficial sediments. Petrology, geophysics, and the Pleistocene geology of the region are investigated. Consideration of the geologic history of New England within the plate tectonic model is emphasized. Examination of insular geology is used to integrate micro-, meso-, and macro-scale geological evolution of continental margins in general. Marine geology is approached through basic geophysical exploration and bottom-sediment collection followed by data analysis and interpretation. Experience aboard a coastal research vessel is an integral part of the course.

NTRES Coastal and Oceanic Law and Policy (Natural Resources 306)

Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$950. Daily lecs and disc for 1 week. SML faculty.

Intended for persons interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial

jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and analysis of the efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

NTRES Wetland Resources (Natural Resources 417)

Summer. 2 credits. Prerequisite: one year of college-level biology. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$950. Daily lecs, labs, and fieldwork. SML faculty.

An examination of coastal and adjacent freshwater wetlands from historic, destruction, and preservation perspectives, including fresh- and salt-marsh ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.

FACULTY ROSTER

New York State College of Agriculture and Life Sciences

- Adler, Kraig K., Ph.D., U. of Michigan. Prof., Neurobiology and Behavior
 Alani, Eric E., Ph.D., Harvard U. Asst. Prof., Genetics and Development
 Anderson, John M., Ph.D., New York U. Prof. Emeritus, Genetics and Development
 Banks, Harlan P., Ph.D., Cornell U. Liberty Hyde Bailey Prof. of Botany Emeritus, Plant Biology

COLLEGE OF ENGINEERING

ADMINISTRATION

John E. Hopcroft, dean

Michael S. Isaacson, associate dean for research and graduate studies

Kenneth C. Hover, associate dean for undergraduate programs

Mark K. Spiro, associate dean for administration

Deborah Cox, assistant dean for student services

Murray Deathe, assistant dean for development and alumni relations

FACILITIES AND SPECIAL PROGRAMS

Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. Facilities for applied and engineering physics are located in Clark Hall on the College of Arts and Sciences campus, and facilities for agricultural and biological engineering are centered in Riley-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences.

Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers and programs contribute to opportunities for study and research.

Cornell programs and centers of special interest in engineering include the following:

Center for Applied Mathematics. A cross-disciplinary center that administers a graduate program.

Center for Manufacturing Enterprise. A joint venture of Cornell, industrial organizations, and the federal government to encourage the development and implementation of modern manufacturing systems.

Center for Radiophysics and Space Research. An interdisciplinary unit that facilitates research in astronomy and the space sciences.

Center for Theory and Simulation in Science and Engineering. A national supercomputer facility used for advanced research in engineering and the physical and biological sciences.

Cornell Electronic Packaging Alliance. A cooperative venture involving Cornell and several corporations in the areas of computing and microelectronics, organized to undertake precompetitive, interdisciplinary research in electronic packaging.

Cornell High Energy Synchrotron Source (CHESS). A high-energy synchrotron radiation laboratory operated in conjunction with the university's high-energy storage ring. Current research programs at CHESS are in areas of structural biology, chemistry, materials science, and physics.

Cornell Nanofabrication Facility (part of the National Science Foundation funded National Nanofabrication Users Network). A center that provides equipment and services for research in the science, engineering, and technology of nanometer scale structures for electronic, chemical, physical, and biological applications.

Cornell Waste Management Institute. A research, teaching, and extension program within the Center for Environmental Research that addresses the environmental, technical, and economic issues associated with solid waste; one facility sponsored by the institute is the Combustion Simulation Laboratory in the Sibley School of Mechanical and Aerospace Engineering.

Institute for the Study of the Continents. An interdisciplinary organization that promotes research on the structure, composition, and evolution of the continents.

Laboratory of Plasma Studies. A center for interdisciplinary research in plasma physics and lasers.

Materials Science Center. An interdisciplinary facility with substantial support from the National Science Foundation, providing sophisticated scientific measurement and characterization equipment.

Mathematical Sciences Institute. An interdisciplinary program in applications of mathematics funded by the U.S. Army.

National Astronomy and Ionosphere Center. The world's largest radio-radar telescope facility, operated by Cornell in Arecibo, Puerto Rico.

National Earthquake Engineering Research Center. A facility recently established by the National Science Foundation and a group of universities in New York State to study response and design of structures in earthquake environments.

National Institutes of Health/National Science Foundation Developmental Resource in Biophysical Imaging and Optoelectronics. A resource that develops novel measurement and optical instrumentation for solving biophysical problems.

Power Systems Engineering Research Center. A research and instructional program centered in a laboratory that has a complete real-time model of an electric power system.

Program of Computer Graphics. An interdisciplinary research center that operates one of the most advanced computer-graphics laboratories in the United States.

Program on Science, Technology, and Society. A cross-disciplinary unit that sponsors courses and promotes research on the interaction of science, technology, and society.

SRC Center for the Program on Microscience and Technology. A center sponsored by the Semiconductor Research Corporation to promote research essential to the development of VLSI devices and circuits.

Statistics Center. Coordinates a university-wide program in statistics and probability.

Ward Laboratory of Nuclear Engineering. Irradiation, isotope production, and activation analysis facilities for interdisciplinary research.

The programs listed on this page are sponsored by College of Engineering units and several are industry affiliated. These are in the areas of injection molding, computer science, materials science, geologic study of the continents, and nanometer scale structures.

DEGREE PROGRAMS

Cornell programs in engineering and applied science lead to the degrees of Bachelor of Science, Master of Engineering (with field designation), Master of Science, and Doctor of Philosophy.

General academic information concerning the Bachelor of Science degree is given here under the heading "Undergraduate Study." Curricula for major studies are described under the various academic areas.

Programs leading to the Master of Science and Doctor of Philosophy degrees are administered by the Graduate School. They are described in the *Announcement of the Graduate School* and the special announcement *Graduate Study in Engineering and Applied Science*. The professional Master of Engineering programs and cooperative programs with the Johnson Graduate School of Management are described below.

UNDERGRADUATE STUDY

Bachelor of Science (B.S.) degrees are offered in the following areas:*

Agricultural and Biological Engineering†
Chemical Engineering
Civil Engineering
College Program
Computer Science
Electrical Engineering
Engineering Physics
Geological Sciences
Materials Science and Engineering
Mechanical Engineering
Operations Research and Engineering

Students in the College of Engineering begin their undergraduate studies in the Common Curriculum, which is administered by the faculty members of the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and the Engineering Advising office. Subsequently most students enter *field* programs, which are described separately for each academic area. Criteria for entrance into the

field programs are described in the section titled "Affiliation with a Field Program." Alternatively students may enter the *College Program* (described below), which permits them to pursue a course of study adapted to individual interests.

Students interested in bioengineering may arrange a suitable curriculum with a bioengineering option within one of the field programs or through the College Program. Information about the bioengineering option is available in the Engineering Advising office, 167 Olin Hall. Students interested in environmental engineering may pursue the environmental option offered by the School of Civil and Environmental Engineering.

*Agricultural and biological engineering, chemical engineering, civil engineering, electrical engineering, engineering physics, materials science and engineering, mechanical engineering, and operations research and engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology.

†To major in agricultural and biological engineering students normally enroll in the College of Agriculture and Life Sciences for the first and second years, and jointly in that college and the College of Engineering for the third and fourth years. However, students enrolled in the College of Engineering for the first two years may affiliate with the field of agricultural and biological engineering and become jointly enrolled in the Colleges of Agriculture and Life Sciences and Engineering for the third and fourth years.

Requirements for Graduation

To receive the Bachelor of Science degree, students must meet the requirements of the Common Curriculum, as set forth by the College of Engineering, including the requirements of the field program, as established by the school or department with which they become affiliated. Students must meet the Common Curriculum as explained below. (Further explanation of the revised Common Curriculum and field flow charts are provided in the 1996-97 edition of the *Engineering Undergraduate Handbook*.)

Course Category	Credits
1) Mathematics	16
2) Physics (depending on field)	8-12
3) Chemistry (depending on field)	4-8
4) Freshman writing seminar*	6
5) Computer programming†	4
6) Engineering distribution (3 courses)	
a. One Introduction to Engineering (ENGRI)	3
b. Two other distribution courses (ENGRD)	6
7) Liberal studies distribution (6 courses)	18
8) Approved electives	6
9) Field program	
a. Field required courses	30 cr. min.
b. Field approved electives	9
c. Courses outside the field	9

*One writing-intensive technical course or a course in technical or scientific writing must also be taken; this course may simultaneously satisfy some other requirement.

†One approved course in computing applications must also be taken; this course may simultaneously satisfy some other requirement, such as an engineering distribution course, an approved elective, or a field program course.

From 123 to 129 credit hours are required for graduation; the specific number of required credit hours will vary depending on which field program is chosen. (See field curricula for specific field requirements.) Two terms of physical education must be taken in the freshman year and students must meet the swimming requirement to satisfy a university requirement.

Mathematics

The normal program in mathematics includes Mathematics 191 or 193, 192, 293, and 294. Every student must attain a grade of at least C- in Mathematics 191 or 193, 192, 293, and 294, or other courses that may be approved as substitutes for these courses. If this requirement is not met the first time a course is taken, the course must be repeated immediately and a satisfactory grade attained before the next course in the sequence may be taken. Courses that are taken a second time in order to meet this requirement do not yield additional credit toward a degree.

Physics

The normal program in physics includes Physics 112, 213, and 214 or the corresponding honors courses (Physics 116, 217, and 218). Engineering students are required to have attained a minimum grade of C- in Mathematics 191 or equivalent before taking Physics 112. The same minimum grade is required in each subsequent mathematics course before taking the physics course for which it is a prerequisite (e.g., C- in Mathematics 192 before taking Physics 213, or C- in Mathematics 293 before taking Physics 214). Students in the field programs of ABEN, CHEME, CEE (environmental track), or OR&IE may substitute Chemistry 208 for Physics 214.

Chemistry

Chemistry 211 or 207 is required for all students.

Chemistry 211 is a course designed for students who do not intend any further study in chemistry and may be taken either in the fall or spring of the freshman year or the first semester of their sophomore year if they take Physics 112 or 213 in their freshman year.

In general, students intending to affiliate with the following departments and schools should take Chemistry 211: electrical engineering, operations research and industrial engineering, computer science, material science and engineering, mechanical and aerospace engineering, applied and engineering physics (applied and engineering physics students should discuss this option with the field consultant), and civil engineering (not students in the environmental engineering option). Students in chemical engineering must take Chemistry 207 in the fall of their freshman year, to be followed by Chemistry 208 in the spring term. All students considering the environmental concentration in civil engineering, geological sciences, or a health-related career such as medicine should take the Chemistry 207-208 sequence.

Freshman Writing Seminars

Each semester of their freshman year, students choose a freshman writing seminar from among more than seventy courses offered by over twenty different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also assure beginning students the benefits of a small class.

Technical Writing

In addition to the two Freshman Writing Seminars required, engineering students must take a course that includes a significant amount of technical and scientific writing. This course may be used to satisfy another graduation requirement. A student can fulfill the technical writing requirement by enrolling in an engineering course specifically designed to include a writing-intensive component or by taking a course in technical or scientific writing. Courses that currently satisfy this requirement are A&EP 264, ABEN 396, CHEM E 432, COMM 352*, COMM 360*, COMM 363*, COMM 365*, ELE E 215, ENGR C 350, ENGR C 435, M&AE 427, MS&E 435, and MS&E 443-444 if both courses are taken. Students participating in the Engineering Cooperative Program may also arrange for a writing-intensive co-op experience to satisfy this requirement. Updated information on these approved courses may be obtained from Engineering Advising, 167 Olin Hall.

*Note that there is limited enrollment in all Communications Department writing courses.

Computing

In either the first or second term of their freshman year, students normally take COM S 100, Introduction to Computer Programming. Before graduation they must take an additional course with a significant amount of computing applications; this course may also be used to meet another graduation requirement. Courses that satisfy this requirement are ABEN 453, ABEN 475, COM S 212, ENGRD 211 or 212, ENGRD 222, ENGRD 241, ENGRD 264, ELE E 423, M&AE 389, M&AE 489, M&AE 575, M&AE 578, and M&AE 670. The recommended choice for students intending to enter the Field Program in Engineering Physics is ENGRD 264; in Chemical Engineering, ENGRD 222 or 241; in Computer Science, ENGRD 211 or COM S 212; in Electrical Engineering, ENGRD 211; in Civil Engineering, ENGRD 241; in Mechanical Engineering, M&AE 389, M&AE 489, M&AE 575, or M&AE 670; and in Operations Research and Engineering, ENGRD 211.

Engineering Distribution

Three engineering distribution courses (9 credits) are required. One course must be an Introduction to Engineering Course (designated by ENGRI) and is to be taken by the student during their freshman year. The Introduction of Engineering course will introduce students to the engineering process and provide a substantive experience in an open-ended problem solving context. See the Introduction to Engineering Course listing for currently offered courses.

The other two distribution courses must be selected from two different categories listed below. A student may use any one of the possible substitutions described.

1) *Scientific computing*

ENGRD 211, Computers and Programming
 ENGRD 212, Modes of Algorithmic Expression
 ENGRD 222, Introduction to Scientific Computing
 ENGRD 241, Engineering Computation

2) *Materials science*

ENGRD 261, Introduction to Mechanical Properties of Materials
 ENGRD 262, Introduction to Electrical Properties of Materials

3) *Mechanics*

ENGRD 202, Mechanics of Solids
 ENGRD 203, Dynamics

Students in the Field Program in Engineering Physics may substitute A&EP 333 for ENGRD 203.

4) *Probability and statistics*

ENGRD 270, Basic Engineering Probability and Statistics

Students in the Field Program in Electrical Engineering may substitute ELE E 310 for ENGRD 270. Students in the Field Program in Engineering Physics may substitute ELE E 310 or Mathematics 471 for ENGRD 270. Students in the Field Programs in Civil Engineering and Agricultural and Biological Engineering may substitute CEE 304 for ENGRD 270.

5) *Electrical sciences*

ENGRD 210, Introduction to Electrical Systems
 ENGRD 230, Introduction to Digital Systems
 ENGRD 264, Computerized-Instrumentation Design

6) *Thermodynamics and energy balances*

ENGRD 219, Mass and Energy Balances
 ENGRD 221, Thermodynamics

7) *Earth and life sciences*

ENGRD 201, Introduction to the Physics and Chemistry of the Earth

8) *Biology and chemistry*

BIO S 101 and 103, Biological Sciences, Lecture and Laboratory
 BIO S 105, Introductory Biology
 BIO S 107, General Biology (summer only)
 CHEM 389, Physical Chemistry I

Some fields require a specific engineering distribution course as a prerequisite for the upperclass course sequence. These requirements are:

Chemical Engineering: ENGRD 219

Civil Engineering: ENGRD 202, and ENGRD 219 (for environmental option)

Computer Science: ENGRD 211 or ENGRD 212

Electrical Engineering: ENGRD 230

Materials Science and Engineering: ENGRD 261 or 262

Mechanical Engineering: ENGRD 202

Operations Research and Engineering: ENGRD 270

Liberal Studies Distribution

The six required liberal studies courses (totaling at least 18 credits) may be chosen from approved courses in four categories: (a) humanities or history, (b) social sciences, (c) foreign languages, and (d) expressive arts. (No freshman seminar may be used to meet the liberal studies requirement.)

- At least two courses must be chosen from category (a).
- No more than 3 credits toward this requirement may be taken in category (d).
- At least two courses in categories (a) or (b) must be from the same field of study. One of these courses must be at or above the 200-level or be an explicit prerequisite of the other.

Following each category is a list of approved courses. Every effort has been made to keep the lists up to date, but errors sometimes occur. Students who wish to use a course that seems to fit the category description but is not listed should contact the Engineering Advising office.

a) Humanities or History

American Studies 201, 202

Architecture 181, 182

Art 317, 318

Africana Studies 202, 204, 205, 211, 280, 285, 304, 310, 361, 370, 381, 422, 425, 431, 432, 435, 455, 475, 483

Anthropology 290, 451, 452, 453, 455

Archeology (courses in Old World Archeology and 493)

Asian Studies (courses in Asian art, literature, religion or cultural history)

Biology and Society 206

Classics (all courses except 285, 356, 360, 361 and language courses)

Collective Bargaining, Labor Law and Labor History 100, 101, 384, 385, 386, 482, 488

Communication 426, 465

Comparative Literature (all courses)

Economics 315, 323, 324, 325, 326

Engineering 250, 298, 360

English (all courses except ENGL 285 and writing courses, whose numbers end in the 80s; e.g., 288, 289, 382, etc.)

French Literature (all courses)

German Literature (all courses)

History (all courses)

History of Art (all courses)

Industrial and Labor Relations Interdepartmental Course 451

International and Comparative Labor Relations 430

Italian Literature (all courses)

Jewish Studies 274, 351, 352

Labor Economics 448

Music (only introductory, music theory, and music history courses)

Natural Resources 407

Near Eastern Studies (courses listed under history, civilization, or literature)

Philosophy (all courses except courses in logic)

Religious Studies 101

Russian Literature (all courses)

Science and Technology Studies 233, 433, 444, 525

Spanish Literature (all courses)

Theater Arts (only courses in Theater Studies, film analysis and history)

Women's Studies 227, 238, 251, 264, 273, 307, 341, 348, 363, 365, 366, 374, 390, 404, 406, 408, 426, 433, 444, 445, 451, 455, 474, 493

b) Social Sciences

Africana Studies 171, 172, 191, 220, 231, 271, 280, 290, 300, 301, 311, 380, 410, 420, 451, 459, 478, 479

Agricultural Economics (ARME) 100, 250, 430, 431, 432, 450, 464

Anthropology (all courses except 101 and courses in Biological and Ecological Anthropology)

Archeology (all courses except those in Methodology and Technology)

Architecture 342

Asian Studies (courses in Asian anthropology, economics, government, linguistics, or sociology)

Biology and Society 201, 301, 406, 407

City and Regional Planning 100, 101, 314, 361, 382, 404, 442

Communication 116, 120, 314, 410, 416, 420

Consumer Economics and Housing (110, 111, 247, and any course having one or more of these as a prerequisite)

Design and Environmental Analysis 150, 250

Economics (all courses except 315, 317, 318, 319, 320, 326. Engineering students should generally take Economics 203–204 and *not* 101–102, unless they have had no calculus.)

Education 210, 212, 271, 311, 317, 378, 413, 477

Government (all courses)

Human Development and Family Studies (all courses)

Human Service Studies (all courses)

International and Comparative Labor Relations (all courses)

Labor Economics (all courses except 345 and 448)

Linguistics (all courses)

Natural Resources 201

Organizational Behavior (all courses)

Psychology (all courses *except* 123, 307, 322, 324, 326, 332, 350, 361, 396, 422, 425, 426, 429, 465, 470, 471, 472, 473, 475, 476, 478, 479, 492)

Rural Sociology (all courses)

Sociology (all courses)

Textiles and Apparel 245

Women's Studies 210, 218, 220, 238, 244, 277, 281, 297, 305, 321, 353, 362, 365, 366, 372, 406, 408, 425, 428, 438, 450, 454, 463, 468, 479, 480, 493

c) Foreign Language

This category includes all foreign language courses; if two or more foreign language courses are used to fulfill part of the liberal studies requirement, they must be a sequence of courses in the same language. The rules for placement and advanced placement credit in languages are those of the College of Arts and Sciences. Speakers of languages other than English may obtain up to 6 advanced placement credits equal to two courses according to these rules.

d) Expressive Arts

Africana Studies 303, 425, 430

Art (studio courses)

Biological Sciences 208, 209

Communications (all courses)

Design and Environmental Analysis 101, 102, 114

Engineering (all Engineering Communications courses, which are designated ENGR)

English (expository and creative writing courses, whose numbers end in the 80's, e.g., 288, 289, 382, etc.)

Floriculture (courses in Freehand Drawing and Scientific Illustration)

Industrial and Labor Relations 452

Music (courses in musical performance and musical organizations and ensembles three 1-credit courses equals one course)

Theater Arts (all courses except those listed in category (a) above)

Electives

- Approved electives—six (6) credits required (approved by the academic adviser)

Because these courses should help develop and broaden the skills of the engineer, advisers will generally accept the following as approved electives:

1. One Introduction to Engineering course (ENGRI).
 2. Engineering distribution courses.
 3. Courses stressing written or oral communication.
 4. Upper-level engineering courses.
 5. Advanced courses in mathematics.
 6. Rigorous courses in the biological and physical sciences.
 7. Courses in business, economics, or language (when they serve the student's educational and academic objectives).
 8. Courses that expand the field program or another part of the curriculum (Note: No ROTC courses may be used as approved electives unless they are co-listed by an academic department.)
- Field approved electives—Nine (9) credits (approved by engineering field program faculty and faculty advisers). Students should refer to the Field Program curricula for descriptions of courses that meet this category.
 - To ensure breadth of engineering studies, field programs will also include nine (9) hours of courses outside the field.

Social Issues of Technology

It is important for engineers to realize the social and ethical implications of their work. Consequently, in selecting their humanities, social sciences, and approved electives, students are urged to consider courses listed within the "Science and Technology Studies" undergraduate area of concentration (see Interdisciplinary Centers and Programs section). These courses may provide students with an important perspective on their studies and their future careers.

Engineering Advising Office

From the time that students enter the college as freshmen until they are affiliated with a major field or the College Program before the second term of the sophomore year, they are under the administration of the Engineering Advising office, which implements the academic policies of the College Curriculum Governing Board. The office offers general advising and counseling services and serves as the primary resource center for undergraduate students in the college. The Engineering Minority Programs office and the Women's Programs in Engineering office provide additional specialized services.

Freshman Year

At the end of the freshman year, engineering students are expected to have completed (or received credit for) the following core requirements:

- MATH 191 (or 193) and MATH 192
- CHEM 211 and PHYS 112 OR CHEM 207 and CHEM 208*
- COM S 100
- Two (2) Freshman Writing Seminars
- One (1) Introduction to Engineering course (ENGRI designation)
- Two (2) Physical Education courses

(*Students with an interest in pre-med, chemical engineering, or the environmental option in civil engineering should enroll in the CHEM 207-208 sequence during their freshman year.)

Affiliation with a Field Program

Students must apply for affiliation with a field program during the first term of their sophomore year. This is done by going to the undergraduate field consultant's office in the field of their choice and completing the "Application for Field Affiliation" form. To affiliate with a field program, students must (1) have a 2.0 cumulative grade point average and (2) have satisfied the field's course and grade requirements as specified below:

Field Program

Agricultural and Biological Engineering

Applied and Engineering Physics

Chemical Engineering

Courses and Minimum Grade Requirements

No more than one grade below C- in mathematics and science courses and ABEN 151 or equivalent

2.7 GPA in all mathematics and physics courses

No more than one grade below C- in chemistry, mathematics, physics, or

chemical engineering courses and a 2.2 GPA in mathematics, science, and chemical engineering courses

Civil & Environmental Engineering A grade of C- in ENGRD 202 and a 2.0 GPA in all engineering and science courses

Computer Science A grade of B- in COM S 280, ENGRD 211 or 212 and all mathematics courses

Electrical Engineering A grade of C or better in all 200-level mathematics and physics courses

Geological Sciences Passing grades in required field courses

Materials Sciences & Engineering A grade of C in ENGRD 261 or 262

Mechanical & Aerospace Engineering A grade of C- in mathematics and science courses and ENGRD 202

Operations Research and Engineering A grade of C- in Math 191 (OR 193) and 192

Students must be affiliated or conditionally affiliated by the end of their fourth semester or they will be withdrawn from the College of Engineering, unless allowed to participate in a terminal semester.

SPECIAL PROGRAMS

College Program

Individually arranged courses of study under the College Program are possible for those well-qualified students whose educational objectives cannot be met by one of the regular field programs. Often the desired curriculum is in an interdisciplinary area. Each program is developed by the student in consultation with faculty advisers and must be approved by the College Program Committee, which is responsible for supervising the student's work.

Students apply to enter the College Program by the end of the first term of the sophomore year. A student should seek assistance in developing a coherent program from professors in the proposed major and minor subject areas. If approved, the program is the curricular contract to which the student must adhere. Normally, students applying to the College Program should have a 3.0 cumulative grade point average.

Every curriculum in the College Program, with the exception of certain faculty-sponsored programs, must comprise an engineering major and an educationally related minor. The major may be in any subject area offered by schools or departments of the college; the minor may be in a second engineering subject area or in a logically connected nonengineering area. The combinations must clearly form an engineering education in scope and in substance and should include engineering design and synthesis as well as engineering sciences. In addition to 48 credits in the major and minor subjects, including at least 32 credits in engineering courses, each program includes the normally required

courses in humanities and social sciences and approved electives.

Further information about the College Program may be obtained from the associate dean for undergraduate programs, 221 Carpenter Hall.

College Program in the Science of Earth Systems

A new curriculum in the Science of Earth Systems highlights study of the Earth as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. The curriculum coalesces Cornell's strengths across a broad range of earth and environmental sciences to provide students with a rigorous scientific foundation for the study of our complex, highly interactive earth. Students in the College of Engineering can take this curriculum under the College Program. The curriculum includes a freshman/sophomore emphasis on strong preparation in mathematics, physics, chemistry, and biology. In the junior and senior years, students take a set of four core common courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences. The curriculum in Science of Earth Systems is outlined in more detail in the section, Interdisciplinary Centers, Programs, and Studies, in the front part of the catalog. Students interested in the new field should select ENGR1 122 and ENGRD 201 and contact Profs. B. Isacks, W. Brutsaert, Y. Parlange, or M. Kelley.

Bioengineering Option

Students who elect this option will graduate with a B.S. degree in one of the traditional fields and with an administrative note on their transcript formally recognizing their efforts in bioengineering.

The requirements for completion of the option are four courses (12 credit hours minimum) and one credit hour of Bioengineering Seminar (ENGRG 501). These courses can simultaneously satisfy other degree requirements and are not necessarily four additional courses. These four courses must be selected from two categories: science-based courses and bioengineering courses. At least one course must be from the science-based course list and at least two from the bioengineering course list. Each student interested in the bioengineering option can request through the Engineering Advising office a bioengineering adviser who would assist the student in course selection for this option. The bioengineering adviser is in addition to the student's regular academic adviser.

A list of approved courses is available in the Engineering Advising office, 167 Olin Hall.

International Programs

All students who plan to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study.

An international perspective, sensitivity to other cultures, and the ability to read and speak a second language are increasingly important to today's engineers. In keeping with the university goals of internationalizing the curriculum, the College of Engineering encourages students to study or work abroad

during their undergraduate years. The college sponsors a specially designed Semester in Europe program, supports students who wish to study abroad in regular exchange programs, and offers a special International Scholars College program for students to minor in international studies and study abroad during their junior year. For further information on these and other opportunities to add an international dimension to your undergraduate education, see the staff in Engineering Advising, 167 Olin Hall. Information on co-op programs abroad is available from the Engineering Professional Programs office in 148 Olin Hall.

Dual Degree Option

A special academic option, intended for superior students, is the dual degree program, in which both a Bachelor of Science and a Bachelor of Arts degree can be earned in about five years. Students registered in the College of Engineering or the College of Arts and Sciences may apply and, after acceptance of their application, begin the dual program in their second or third year. Those interested should contact the coordinator of dual degree programs, 172 Goldwin Smith Hall; the associate dean for undergraduate programs in 221 Carpenter Hall; or an adviser in Engineering Advising, 167 Olin Hall.

Double Major in Engineering

The Double Major option, which makes it possible to develop expertise in two allied fields of engineering, generally requires at least one semester beyond the usual four years. Students affiliate with one field in the normal way and then petition to enter a second field before the end of their junior year. All the requirements of both fields must be satisfied. Further information is available from Engineering Advising, 167 Olin Hall, and the individual field consultant offices.

Engineering Communications Program

The ability to communicate effectively is an essential aspect of successful professional practice. The Engineering Communications Program offers instruction in written, oral, and visual presentation. Engineering Communications (ENGRC 350) and Communications for Engineering Managers (ENGRC 435) are three-credit seminar courses designed for students who desire intensive work in these areas. Examples from real-life engineering contexts are analyzed, and many specific assignments are presented as professional case studies. Students learn to address audiences having different levels of technical expertise and to consider the social and ethical aspects of written and oral communication. These courses fulfill the college's technical writing requirement (see Requirements for Graduation). In addition to offering free-standing communications courses, the program works with the engineering fields to integrate communications into technical courses. The program occasionally offers courses on topics of special interest and independent studies or projects in technical/professional communications. The program awards several annual prizes for writing and oral presentation, and arranges discussions of professional communications with students and alumni. For further information, contact the director, 465 Hollister Hall.

Engineering Cooperative Program

A special program for undergraduates in most fields of engineering is the Engineering Cooperative Program, which provides an opportunity for students to gain practical experience in industry and other engineering-related enterprises before they graduate. By supplementing course work with carefully monitored, paid jobs, co-op students are able to explore their own interests and acquire a better understanding of engineering as a profession.

Sophomores in the upper half of their class are eligible to apply for the co-op program. (Students in computer science and agricultural and biological engineering are eligible, even though they may not be registered in the College of Engineering.) Applicants are interviewed by representatives of cooperating companies and select their work assignments from any offers they receive. Those students who are offered assignments and elect to join the program usually take their fifth-term courses at Cornell during the summer following their sophomore year and begin their first co-op work assignment that fall. They return to Cornell to complete term six with their classmates and then undertake a second work assignment with the same company the following summer. Co-op students return to campus for their senior year and graduate with their class.

Further information may be obtained from the Engineering Professional Programs office, 148 Olin Hall.

MASTER OF ENGINEERING DEGREE PROGRAMS

One-year Master of Engineering (M.Eng.) programs are offered in thirteen fields. These programs are discussed in this announcement in connection with the corresponding upperclass engineering field programs because the curricula are integrated. Cornell baccalaureate engineering graduates frequently continue their studies in the M.Eng. program, although the program is also open to qualified graduates of other schools. The M.Eng. degrees and the academic fields under which they are described are listed below.

M.Eng. (Aerospace): Mechanical and Aerospace Engineering

M.Eng. (Agricultural and Biological): Agricultural and Biological Engineering

M.Eng. (Chemical): Chemical Engineering

M.Eng. (Civil & Environmental): Civil and Environmental Engineering

M.Eng. (Computer Science): Computer Science

M.Eng. (Electrical): Electrical Engineering

M.Eng. (Engineering Physics): Applied and Engineering Physics

M.Eng. (Geology): Geological Sciences

M.Eng. (Materials): Materials Science and Engineering

M.Eng. (Mechanical): Mechanical and Aerospace Engineering

M.Eng. (Engineering Mechanics): Theoretical and Applied Mechanics

M.Eng. (Nuclear): Nuclear Science and Engineering

M.Eng. (OR&IE): Operations Research and Industrial Engineering

Candidates for a professional master's degree who wish to specialize in areas related to manufacturing may avail themselves of two special programs. The manufacturing systems engineering option may be centered in any one of the fields listed above. This option is attested to by a Dean's Certificate in addition to a diploma at the time of graduation. An industrial internship program provides opportunities to combine on-campus education with off-campus industrial experience.

An M.Eng. option of potential interest to engineers from all fields is the program in engineering management, offered by the School of Civil and Environmental Engineering. This option is described in the section related to the M.Eng. (Civil & Environmental) degree. A new management option in the M.Eng. (Chemical) degree program is also available.

Cornell engineering graduates in the upper half of their class will generally be admitted to M.Eng. programs; however, requirements for admission vary by field. Superior Cornell applicants who will be, at the time of matriculation, eight or fewer credits short of a baccalaureate degree may petition for early admission. Other applicants must have a baccalaureate degree or its equivalent from a college or university of recognized standing, in an area of engineering or science that is judged appropriate for the proposed field of study. They must also present evidence of undergraduate preparation equivalent to that provided by a Cornell undergraduate engineering education, a transcript, two letters of recommendation, and a statement of academic purpose. A candidate who is admitted with an undergraduate background that is judged inadequate must make up any deficiencies in addition to fulfilling the regular course requirements for the degree. Applicants from foreign universities must submit the results of the Graduate Record Examination aptitude tests and must have an adequate command of the English language. Financial aid providing partial support is available for very highly qualified candidates, primarily those who are residents of the U.S. Industry-sponsored internships, which extend the program to two years, are also available to residents of the United States. Application forms and further information are available from the graduate field offices.

Cooperative Programs with the Johnson Graduate School of Management

Two programs culminate in both Master of Engineering and Master of Business Administration degrees. One, which Cornell students enter during their undergraduate career, makes it possible to earn the B.S., M.Eng., and M.B.A. in six years—one year less than such a program would normally require. The second program, which is available to students who already hold baccalaureate degrees from Cornell or other institutions, requires five semesters and leads to both the M.Eng. and M.B.A.

Undergraduate students at Cornell interested in the six-year program should seek advice and information from the department with

whose field they intend to affiliate during their upperclass years. Information about admission to either program and about special scholarship aid may be obtained from the Engineering Professional Programs office, 148 Olin Hall.

ACADEMIC PROCEDURES AND POLICIES

Advanced Placement Credit

The College of Engineering awards a significant amount of advanced placement (AP) credit to entering freshmen who demonstrate proficiency in the subject areas of introductory courses. Students may qualify for AP credit in one of two ways:

- 1) by receiving sufficiently high scores on advanced placement examinations given and scored by the College Entrance Examination Board (CEEB); or
- 2) by receiving sufficiently high scores on Cornell's departmental placement examinations, which are given during orientation week before fall-term classes begin. Advanced placement is granted only to first-term freshmen, and the placement examinations are scored before the students begin classes.

Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways.

- 1) They may enroll in a more advanced course in the same subject right away.
- 2) They may substitute an elective course from a different area.
- 3) They may enroll in fewer courses, using the AP credit to fulfill basic requirements.

Acceptable Subjects and Scores

The most common subjects for which AP credit is awarded in the College of Engineering, and the scores needed on qualifying tests, are listed below. In mathematics, physics, chemistry, and computer science, AP credit is awarded only for courses required in the engineering curriculum.

Mathematics: Math 191 or 193, 192, 293, and 294 are required.

First-term math (Math 191 or 193). AP credit may be earned by:

- a score of 3 or 4 on the CEEB BC exam, or
- a score of 4 or 5 on the CEEB AB exam, or
- a passing score on the Cornell departmental exam for first-term math.

First-year math (through Math 192). AP credit may be earned by:

- a score of 5 on the CEEB BC exam, or
- a passing score on the Cornell departmental exam for first-year math.

Physics: Physics 112 or 116 and 213 or 217 are required.

Physics 112. AP credit may be earned by:

- a score of 4 or 5 on the mechanics portion of the CEEB exam, or

- a score of 5 on the CEEB B exam *only* if the student has at least one semester of AP or transfer credit in first-term mathematics at the time of matriculation, or
- a passing score on the Cornell departmental exam for Physics 112.

Note: Students who have received credit for Physics 112 **may not** enroll in Physics 213 unless concurrently enrolled in Math 293.

Physics 213. Students, receiving a 5 on the Electricity and Magnetism portion of the C exam may choose to accept AP credit for Physics 213 or placement in Physics 217 with no AP credit for Physics 213. For advice or more information contact Professor Rich Galik, the departmental representative. His telephone number is 607/255-3633.

Chemistry: Chem 207 or Chem 211 is required.

Chem 207 or Chem 211. AP credits may be earned by:

- a score of 5 on the CEEB AP exam, or
- a passing score on the Cornell departmental exam for Chemistry.

Note: Students who are successful in obtaining AP credit for Chem 207 and who are considering majors in chemical engineering or materials science and engineering should consider enrolling in Chem 215. Those who are offered AP credit for Chem 207 and then elect to take Chem 215 will also receive academic credit for Chem 207. You may want to discuss this option with your faculty adviser.

Computing: Computer Science 100 is required. AP credit may be earned by:

- a score of 4 or 5 on the CEEB A or AB exam, or
- a passing score on the Cornell departmental exam for Computer Science 100.

Biology: Biology is not required of engineering students, although it is a popular option as an elective, especially for students who intend to pursue health-related careers. AP credit may be earned as follows:

- eight credits will be offered to students who receive a 5 on the CEEB AP exam;
- students receiving a 4 on the CEEB AP exam will be offered six credits.

Those who want to study more biology should contact the Office for Academic Affairs, Division of Biological Sciences, 200 Stimson Hall, to discuss proper placement.

Freshman Writing Seminar: Two Freshman Writing Seminars (for a total of six credits) are required.

- AP credit for one Freshman Writing Seminar may be earned by a score of 5 on the CEEB AP English exam.

A score of 4 on the AP English exam will earn a student three credits in English. These three credits cannot be applied toward the Freshman Writing Seminar requirement, but can be applied toward the expressive arts category in the Liberal Studies Distribution requirement. AP credit earned in the humanities and social sciences cannot be used to fulfill the "upper level" liberal studies requirement.

Liberal Studies Distribution: Six courses beyond two Freshman Writing Seminars are required. Students may earn AP credit toward the liberal studies distribution by taking College Entrance Examination Board (CEEB) AP tests. AP credit earned in the humanities or social sciences cannot be used to fulfill the "upper level" liberal studies requirements.

Modern Languages: Students may earn AP credit for competence in a foreign language by taking the College Entrance Examination Board (CEEB) AP test or by taking the Cornell Advanced Standing Examination (CASE). Those who score 4 or 5 on the CEEB AP test are entitled to three credits. In order to qualify for the CASE exam, the student must score at least 650 on a College Placement Test (taken either in high school or at Cornell during Orientation Week). A score of 2 on the CASE entitles the student to three credits, and a score of 3 entitles the students to six credits which are equivalent to two courses. Modern language AP credits may be used to satisfy the foreign language category of the liberal studies distribution, or may meet an approved elective requirement, contingent on discussions with the faculty adviser.

General Policies for Advanced Placement

The general policies in the College of Engineering governing awards of AP credit are as follows:

1. AP credit will not be offered in any subject area without a documented examination (CEEB or departmental).
2. All AP examinations (both CEEB and departmental) are normally taken and scored before fall-term classes begin. Students who take CEEB AP tests in high school should have an official report of their scores sent directly to Cornell as soon as possible. Those who wish to take departmental examinations must do so during Orientation Week; permission to take these tests after the start of fall-term classes must be requested in a written petition to the College's Committee on Academic Standards, Petitions, and Credit (ASPAC), and must be filed within the first three weeks of the fall semester.
3. Except when permission for late testing has been granted, students offered AP credit must accept or decline within the first three weeks of the first term at Cornell in the Engineering Registrar's office, 158 Olin Hall. Final AP awards are recorded on the last day of the third week.

A more detailed description of the college's policies concerning advanced placement credit and its use in developing undergraduate programs may be found in the pamphlet *Advanced Placement and Transfer Credit for First-Year Engineering Students*, which may be obtained from Engineering Advising, 167 Olin Hall.

Transfer Credit

Entering freshmen and transfer students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma.

Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell.

To apply for transfer credit, students must complete and submit a transfer credit form (one form for each request), accompanied by a course description. (Transfer Credit forms are available from the Engineering Advising or Registrar's offices.) An official transcript from the offering institution (bearing the institutional seal and registrar's signature) must be sent to the Engineering Registrar's office before official transfer credit will be awarded.

To apply for transfer credit to satisfy requirements in mathematics, science, and engineering courses, and the Freshman Writing Seminar, a student must receive approval from the department offering an equivalent course at Cornell. The department certifying the course may require course materials, textbooks used, etc., in addition to the course description before approving the course.

To apply for transfer credit to satisfy liberal studies distribution requirements, departmental approval is not required. The course will be reviewed for approval by a representative of the Committee on Academic Standards, Petitions, and Credit (ASPAC) in the Engineering Advising office.

Cornell does not award credit for courses in which a student earned a grade less than C; schools and departments may stipulate a higher minimum grade.

College courses completed under the auspices of cooperative college and high school programs will be considered for advanced placement credit only if students demonstrate academic proficiency by taking the appropriate CEEB or Cornell departmental placement examination, as described in the Advanced Credit section.

After matriculation no more than 18 credits of transfer or Cornell extramural credit may be used to satisfy bachelor's degree requirements. Summer session courses taken at Cornell are not considered transfer credits.

Transfer students may transfer up to 36 credits for each year spent in full-time study at another institution, provided that the courses are acceptable for meeting graduation requirements. No more than 72 transfer credits may be used to meet graduation requirements.

A more detailed description of the college's regulations governing transfer credit may be found in the pamphlet, *Advanced Placement and Transfer Credit for First-Year Engineering Students*, available from Engineering Advising, 167 Olin Hall.

Academic Standing

Full-time students are expected to remain in good academic standing. The criteria for good standing change somewhat as a student progresses through the four years of the engineering curriculum. At all times, the student must be making adequate progress toward a degree, but what this actually means varies from field to field.

Requirements for freshman engineering students to be in good standing at the end of the first semester are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC), and the actions

of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. at least 12 credits passed, including at least two courses from mathematics, science, and/or engineering;
2. a C- or better in the mathematics course;
3. a semester average of 2.0 or higher.

Requirements for second-semester freshman and first-semester sophomores to be in good standing are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. at least 14 credits passed in courses that meet engineering degree requirements;
2. a C- or better in the mathematics course, if one was taken;
3. a semester average of 2.0 or higher.

Academic Progress

The total number of credits required for graduation range from 123 to 129, depending upon the field program. Therefore, an average semester credit load ranges from approximately 15 to 16 credits.

Because mathematics is pivotal to the study and practice of engineering, students must earn a grade of C- or better in Math 191 (or 193), 192, 293, and 294. Those who fail to meet this standard are allowed to repeat a course once, in the following semester. Failure to achieve at least a C- the second time will generally result in dismissal from the engineering program. Physics and advanced mathematics courses often have mathematics prerequisites, and having to repeat the prerequisite course may delay your progress in the physics and mathematics curricula.

Dean's List

Dean's List citations are presented each semester to engineering students with exemplary academic records. The criteria for this honor, which are determined by the dean of the college, are a term average of 3.25 or higher with no failing, unsatisfactory, or *incomplete* grades (even in physical education) and 12 credits or more of **letter grades**. Students may earn Dean's List status retroactively if they meet these criteria after making up incompletes according to college rules.

Graduating with Distinction and Honors Program

Graduating with Distinction

Meritorious students graduating with a Bachelor of Science degree from the College of Engineering may also be designated *cum laude*, *magna cum laude*, or *summa cum laude*. *Cum laude* requires a GPA ≥ 3.50 (either overall or for the last four semesters); *magna cum laude* requires a GPA ≥ 3.75 (based on all credits taken at Cornell); and *summa cum laude* requires a GPA ≥ 4.0 (based on all credits taken at Cornell).

Honors Program

To be eligible for honors, a student must achieve and sustain a GPA of ≥ 3.50 . (i.e., the student must also be eligible for one of the three *cum laude* distinctions.) If the field has

an approved honors program and both the GPA and program requirements are fulfilled, the faculty of the field may recommend that a student graduate with the additional diploma and transcript notation of "With Honors." For more specific information, see the field program outline in this catalog.

S-U Grades

Many courses offered by the university may be taken either for a letter grade or for an S-U (satisfactory or unsatisfactory) grade designation. Engineering students may choose to receive an S-U grade option under the following conditions:

- The student must have previously completed at least one full semester of study at Cornell.
- The proposed S-U course must count as either a liberal studies distribution or an approved elective in the engineering curriculum.
- Students may only elect to enroll S-U in one (1) course each semester in which the choice between letter grade and S-U is an option. (Additional courses offered "S-U only" may be taken in the same semester as the "elected S-U" course, given permission through the petition process.)

The choice of grading option for any course is initially made during the pre-enrollment period. Grading options may be changed, however, by submitting a properly completed add/drop form to the Engineering Registrar by the end of the third week of classes. After this deadline, the grading option may not be changed (even by petition), nor will a student be permitted to add a course in which they were previously enrolled (in the current semester) under a different grade option.

The S-U policy does not apply to courses in physical education and other courses that are not taken to fulfill degree requirements. When a particular course is offered **only** on an S-U basis, a student may petition to take a second S-U course in the same term.

Residence Requirements

Candidates for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as full-time students at Cornell. They must also spend at least three semesters of this time affiliated with an engineering field program or with the College Program.

Students who are voluntarily not enrolled at Cornell as full-time students may take individual courses extramurally through the School of Continuing Education and Summer Sessions. Students who have been required to take time off are permitted to register for courses extramurally only with the approval of their field (or the college, for unaffiliated students). No more than 18 credits earned through extramural study or acquired as transfer credit (or a combination thereof) may be used to satisfy the requirements for the bachelor's degree in engineering.

Degree candidates may spend periods of time studying away from the Cornell campus with appropriate authorization. Information on programs sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Cornell Abroad office, 474 Uris Hall. Programs should be

planned in consultation with the staff of Engineering Advising, who can provide information on credit-evaluation policies and assist in the petitioning process.

Transferring within Cornell

It is not uncommon for students to change their academic or career goals after matriculation in one college and decide that their needs would be better met in another college at Cornell. While transfer between colleges is not guaranteed, efforts are made to assist students in this situation.

The office responsible for assisting students with the transfer process is the Internal Transfer Division office. Students who wish to transfer out of the College of Engineering to another college at Cornell should consult initially with the Engineering Advising office.

Students who wish to transfer into the College of Engineering can apply at the Office of Engineering Admissions—application forms are available in the Carpenter Hall Annex. Students who would enter the college as second-semester sophomores or upperclassmen must be accepted by a field program as part of the admission process. Others may be accepted into the college without the requirement of field affiliation.

Students who hope to transfer into engineering should take courses in mathematics, chemistry, computer science, and physics that conform to the requirements of the Common Curriculum. Interested students should discuss their eligibility with an adviser in Engineering Advising, 167 Olin Hall.

Leave of Absence

A leave of absence may be voluntary, medical, or required. Following is a description of each:

Voluntary Leave: Students sometimes find it necessary to suspend their studies. To do this, students must petition for a leave of absence for a specified period of time and receive written approval.

Affiliated students request leave through their fields. Unaffiliated students request leave through Engineering Advising; the first step is an interview to establish conditions for the leave and subsequent return. Those who take a leave before affiliating with a field and while not in good standing may be given a "conditional leave." This requires them to meet specific conditions, established at the time the leave is granted, before they will be reinstated.

Leaves of absence are not generally granted for more than two years. A leave of absence granted during a semester goes into effect on the day it is requested and lasts for a *minimum of six months*. Leaves requested after the twelfth week of a semester generally take effect at the end of the semester, and all courses in which the student was registered at the time of the request are treated as having been dropped (i.e., a "W" will appear on the transcript for each course.) Students who owe money to the university are ineligible for leaves of absence. If courses taken during a leave are to satisfy Cornell degree requirements, they must be approved *in advance* through a formal transfer petition. No more than 18 credits earned while on leave can be used to meet degree requirements.

Students who intend to take a leave of absence should check with the Office of Financial Aid and Student Employment to find out about financial implications; this is especially true for those who have taken out educational loans. Medical insurance eligibility may also be affected.

To return after a leave of absence, the conditions established when the leave was granted must be satisfied, and the college must be notified.

Medical Leave: Medical leaves are granted by the college only upon recommendation by a physician from Gannett Health Center. Such leaves are granted for at least six months and up to five years with the understanding that the student may return at the beginning of any term after the medical condition in question has been corrected. In some cases students must satisfy the Gannett Health Center that the condition has been corrected before they may return. The student's academic standing will also be subject to review at the time of the leave and on return.

Required Leave: A required leave of absence is imposed in cases where the academic progress of a student is so poor that simply continuing into the next semester does not appear prudent. An example where a leave of absence would be required might be failure in several courses in a semester. Unless the student is ahead in the curriculum, returning later to repeat the semester makes better academic sense than continuing without the necessary background. In many cases, the leave is dictated by courses that are only offered in the fall or the spring semester. Leaves are given when the probability of success is increased substantially by deferring the student's return by one semester (or, in unusual circumstances, one year).

Rejoining the College

Students wishing to rejoin the college who have not yet affiliated with a field should request permission to rejoin in a letter to Engineering Advising; affiliated students should contact their field office. This must be done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should describe the student's activities while away from Cornell, detail any academic work completed during this time, and specify the courses the student intends to take upon return.

Withdrawal from the College

A withdrawal from the College of Engineering may be voluntary or required. Following is a description of each:

Voluntary Withdrawal: Students who voluntarily withdraw from the engineering degree program sever all connection with the college. Unaffiliated students who wish to withdraw should do so through Engineering Advising. Affiliated students should contact their field office. If a withdrawal is requested during the semester, courses in which the student is enrolled must be dropped in accordance with applicable regulations.

Any student who fails to register in the first three weeks of the semester, without benefit of a leave of absence or permission for study in absentia, will be deemed to have withdrawn.

Students who withdraw from the College of Engineering are eligible to apply for admission

to one of the other six colleges at Cornell. The intra-university transfer process should be followed.

If students who have withdrawn subsequently wish to return, they must make a formal application for readmission. This is rarely granted. It is subject to a review of the student's academic background and depends on available space in the college and in the student's major field.

Required Withdrawal: Students are withdrawn from the college only when their overall record indicates that they are either incapable of completing the program or not sufficiently motivated to do so. This action only withdraws them from the College of Engineering and does not, in and of itself, adversely affect their ability to transfer and complete a degree in one of the other colleges in the university.

ENGINEERING CAREER SERVICES

Individual advising and group seminars are available for students who desire assistance in career and job-search matters. More than 250 national companies visit the campus annually to recruit technical graduates. Additional job opportunities are posted electronically, and a state-of-the-art résumé referral service is offered for a small fee. Both undergraduate and graduate students can use these services to pursue permanent or summer employment opportunities. Further information on all services is available from the Engineering Career Services office, 201 Carpenter Hall (255-5006).

AGRICULTURAL AND BIOLOGICAL ENGINEERING

M. F. Walter, chair; B. A. Ahner, L. D. Albright, D. J. Aneshansley, J. A. Bartsch, J. R. Cooke, A. K. Datta, R. C. Derksen, K. G. Gebremedhin, D. A. Haith, J. B. Hunter, L. H. Irwin, W. J. Jewell, C. D. Montemagno, J.-Y. Parlange, R. E. Pitt, N. R. Scott, T. S. Steenhuis, M. B. Timmons, L. P. Walker

Bachelor of Science Curriculum

Agricultural and Biological Engineering is at the focus of three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, air, and energy; and developing engineering systems that monitor, replace, or intervene in the biology of living organisms. The undergraduate Engineering Program in the Department of Agricultural and Biological Engineering has a unique focus on biological systems, including the environment, that is realized through a combination of fundamental engineering sciences, biology, applications courses, and liberal studies. The program leads to a joint Bachelor of Science degree from the Colleges of Engineering and Agriculture and Life Sciences, and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET).

Three concentrations in Agricultural and Biological Engineering are offered: Environmental Systems Engineering, Biological

Engineering, and Agricultural Engineering. All of these students take courses in mathematics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, materials, and transport processes), engineering applications, and design. Students select application courses in the department in areas that include bioprocessing, soil and water management, bioenvironmental and facilities engineering, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students select other courses in the College of Engineering that reflect their concentration, such as environmental engineering or biomedical engineering. Students planning for medical school also take organic chemistry. Throughout the curriculum, emphasis is placed on communications and teamwork skills.

Many undergraduate students participate in teaching assistantships, research assistantships, design teams, Engineering Coop, and study abroad. Students should have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities cover the spectrum of private industry, public agencies, educational institutions, and graduate programs in engineering, science, medicine, law, and other fields. In recent years, graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management consulting, and international agriculture.

The living world is all around us, and within us. The biological revolution of this century has given rise to a growing demand for engineers who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, and who appreciate the challenges facing society. Agricultural and biological engineering is training the next generation of engineers to meet these challenges. The department is located in Riley-Robb Hall and operates specialized facilities that are among the largest and most complete of their kind in the world.

For further details see the department's undergraduate programs publication, available at 207 Riley-Robb Hall, or contact the field's coordinator of instruction Professor Kifle Gebremedhin at 255-2499.

The field program requirements are outlined below.

Basic Subjects	Credits
Math 191 (or 193), 192, 293, 294, Calculus for Engineers and Engineering Mathematics	16
Chem 211, General Chemistry, or equivalent	4
Phys 112, 213, 214, Physics I, II, and III (organic chemistry or biochemistry may be substituted for Physics 214)	12
Introductory biological sciences	6 or 8
ABEN 151, Introduction to Computer Programming	4
ABEN 200, Undergraduate Seminar	1
Engineering distribution (two courses, including Mechanics of Solids)	6

Liberal studies (two freshman seminars and at least two courses in humanities or history)

24

Advanced and Applied Subjects

Engineering sciences in any field (must include fluid mechanics and thermodynamics), plus ABEN 250, 350, 396 and 496 (Engineering Applications in Biological Systems, Bio. & Env. Transport Processes, Fundamentals of Engineering Design, and Capstone Design Project, respectively) and a minimum of three agricultural and biological engineering courses (at least 9 credits) chosen from courses numbered 450 to 495

35

Biological or agricultural sciences (at least 3 credits of biological sciences beyond the introductory level)

9

Approved electives (at least 3 credits in the College of Agriculture and Life Sciences)

6

Total (minimum)

123

Agriculture and Biological Engineering Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in the Department of Agricultural and Biological Engineering and have been recommended for the degree by the honors committee of the department. An honor's program student must enter with and maintain a cumulative GPA ≥ 3.50 and must be eligible for one of the *cum laude* distinctions at the time of graduation.

Content

An ABEN honors program shall consist of at least nine credits beyond the minimum required for graduation in ABEN. These nine credits shall be drawn from one or more of the following with at least four credit hours in the first category:

- A significant research experience or honors project under the direct supervision of an ABEN faculty member using ABEN 499, Undergraduate Research. A written senior honors thesis must be submitted as part of this component.
- A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the department (i.e., ABEN 151 or 250) under ABEN 498, Undergraduate Teaching.
- Advanced or graduate courses. These additional courses must be technical in nature, i.e., in engineering, mathematics, biology, chemistry and physics at the 400- and graduate level.

Note: No research, independent study, or teaching for which the student is paid may be counted toward the honors program.

Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make

arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

Procedures

Each applicant to the ABEN honors program must have a faculty advisor to supervise the honors program. A written approval of the faculty member who will direct the research is required. After the College verifies the student's grade-point average, the student will be officially enrolled in the honors program.

Master of Engineering (Agricultural and Biological) Degree Program

The program for the M.Eng. (Agricultural and Biological) degree is intended primarily for those students who plan to enter engineering practice. The curriculum is planned as an extension of an undergraduate program in agricultural and biological engineering but can accommodate graduates of other engineering disciplines. The curriculum consists of 30 credits of courses intended to strengthen the students' fundamental knowledge of engineering and develop their design skills. At least three of the required 30 credits are earned for an engineering design project that culminates in a written and oral report.

A candidate for the M.Eng. (Agricultural and Biological) degree may choose to concentrate in one of the subareas of agricultural and biological engineering or take a broad program without specialization. The subareas include aquaculture, agricultural engineering, biological engineering, energy, environmental engineering, food engineering, structures and their environments, waste management, and highway engineering. Elective courses are chosen from among engineering subject areas relevant to the student's interests and design project. Courses in technical communication, mathematics, biology, and the physical sciences may also be taken as part of a coherent program. Master of Engineering students in agricultural and biological engineering can qualify for the Dean's Certificate in energy, manufacturing, or bioengineering by choosing their design project and some electives from the designated topic areas. More information is available from the ABEN Student Services office, 207 Riley Robb Hall (255-2173), or by e-mail at rgs5@comell.edu.

APPLIED AND ENGINEERING PHYSICS

R. A. Buhrman, director; M. S. Isaacson, associate director; B. W. Batterman, J. D. Brock, T. A. Cool, H. G. Craighead, H. H. Fleischmann, A. L. Gaeta, V. O. Kostroun, B. R. Kusse, R. V. E. Lovelace, T. H. Rhodin (emeritus), J. Silcox, W. W. Webb, F. W. Wise; dual appointments: K. B. Cady, D. D. Clark, R. L. Liboff, R. N. Sudan, G. J. Wolga; adjunct faculty: D. H. Bildersback; senior research associate: E. J. Kirkland

Bachelor of Science Curriculum

The undergraduate engineering physics curriculum is designed for students who want to pursue careers of research or development in applied science or advanced technology and engineering. Its distinguishing feature is a

focus on the physics and mathematics fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration, the students may combine this physics base with a good background in a conventional area of engineering or applied science.

The industrial demand for graduates with baccalaureates is high, and many students go directly to industrial positions where they work in a variety of areas that either combine, or are in the realm of, various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, environmental engineering, geological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-state-device development, technical management, and financial consulting. A number of our graduates go on for advanced study in all areas of basic and applied physics, as well as in a diverse range of areas in advanced science and engineering. Examples include applied physics, astrophysics, atmospheric sciences, biophysics, cell biology, computer science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering, mechanical engineering, medical physics, mathematics, medicine, nuclear engineering, oceanography, and physics. The undergraduate program can also serve as an excellent preparation for medical school, business school, or specialization in patent law.

The engineering physics program fosters this breadth of opportunity because it both stresses the fundamentals of science and engineering and gives the student direct exposure to the application of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for innovative design is provided. Examples are A&EP 110, The Laser and Its Applications in Science, Technology, and Medicine (a freshman Introduction to Engineering course); A&EP 264, Computer-Instrumentation Design (a recommended sophomore engineering distribution course); A&EP 330, Modern Experimental Optics (a junior/senior course); A&EP 363, Electronic Circuits (a sophomore/junior course); Physics 410, Advanced Experimental Physics; and A&EP 438, Computational Engineering Physics (a senior computer laboratory).

Undergraduates who plan to enter the Field Program in Engineering Physics are advised to arrange their Common Curriculum with their developing career goals in mind. Students are also encouraged to take Physics 112 or Physics 116 during their first semester (if their advanced placement credits permit) and are recommended to satisfy the computing applications or technical writing requirement with the engineering distribution course A&EP 264. Engineering physics students need to take only two engineering distribution courses, since A&EP 333, which they take in their junior year, counts as a third member of this category. Engineering Physics students are advised to take A&EP 363 in the spring semester of the sophomore year. Students with a year of advanced placement in math may wish to enroll in A&EP 321 and 322 in their sophomore year.

In addition to the requirements of the Engineering Common Curriculum,* the upperclass course requirements of the field program are as follows:

Course	Credits
A&EP 333, Mechanics of Particles and Solid Bodies	4
A&EP 355, Intermediate Electromagnetism	4
A&EP 356, Intermediate Electrodynamics	4
A&EP 361, Introductory Quantum Mechanics	4
A&EP 363, Electronic Circuits	4
A&EP 423, Statistical Thermodynamics	4
A&EP 434, Continuum Physics	4
Physics 410, Advanced Experimental Physics	4
A&EP 321, Mathematical Physics I; Mathematics 421; or T&AM 610 (applied mathematics)	4
A&EP 322, Mathematical Physics II; Mathematics 422; or T&AM 611 (applied mathematics)	4
Applications of quantum mechanics†	3 or 4
Four technical electives‡	12-16
A third approved elective (in addition to the two required by the Common Curriculum)	3
Total field credits=58 credit hours minimum.	

*The Engineering Common Curriculum allows students to take only 4 courses each semester of their freshman year if they so desire. This course load is fully consistent with the requirements of the EP major, but entering students with strong preparation are encouraged to consider taking an additional course during one or both semesters of the freshman year so that they may have additional flexibility in developing a strong, individualized educational program in their later years, and for best maintaining such options as a semester or year abroad, or early graduation.

†Some courses (though the list is not all-inclusive) that will satisfy this requirement are Physics 444, Nuclear and High-Energy Particle Physics; Physics 454, Introductory Solid-State Physics; A&EP 438, Computational Engineering Physics; A&EP 440, Quantum and Nonlinear Optics; A&EP 609, Low-Energy Nuclear Physics; ELE E 430, Lasers and Optical Electronics; and ELE E 531, Quantum Electronics I.

‡If a scientific computing course was not selected as an engineering distribution course, one of these technical electives may be needed to satisfy the computing applications requirement. For students going on to graduate school a third course in mathematics is recommended.

Areas of concentration. A distinctive aspect of the Engineering Physics curriculum is the strong opportunity it provides students to develop individualized programs of study to meet their particular educational and career goals. These can include the pursuit of dual majors or the development of a broad expertise in one or more of a number of advanced technical and scientific areas. With at least seven technical and approved electives in the sophomore, junior, and senior years, Engineering Physics majors are encouraged to work closely with their adviser to develop a coherent academic program that is in

accordance with those goals. For those students who look toward an industrial position after graduation, these electives should be chosen to widen their background in a specific area of practical engineering. A different set of electives can be selected as preparation for medical, law, or business school. For students who plan on graduate studies, the electives provide an excellent opportunity to explore upper-level and graduate courses, and to prepare themselves particularly well for graduate study in any one of a number of fields. Various programs are described in a special brochure available from the School of Applied and Engineering Physics, Clark Hall. Students interested in these options are advised to consult with their EP adviser, a professor active in their area of interest, or with the associate director of the school, Professor Michael S. Isaacson.

Electives need not be all formal course work. Qualified students are encouraged to undertake informal study under the direction of a member of the faculty (A&EP 490). This may include research or design projects in areas in which faculty members are active.

The variety of course offerings and many electives provide a sizable flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.

The Engineering Physics program requires that a minimum GPA of 2.7 (B-) be attained in all physics and mathematics courses taken by a student before entering the Engineering Physics field unless approval is obtained from the A&EP associate director. To remain in good standing in the field, the engineering physics student is expected to pass every course for which he or she is registered, to earn a grade of C- or better in specifically required courses, and to attain each semester a grade-point average for that semester of at least 2.3.

Engineering Physics Honors Program Eligibility

The Bachelor of Science degree with honors will be conferred upon those students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in the Department of Engineering Physics and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA ≥ 3.50 and must be eligible for one of the *cum laude* distinctions at the time of graduation.

Content

The student must

1. Complete at least eight credits of field approved electives at the 400-level or higher and receive a minimum grade of an A- in each of the courses taken to fulfill this eight-credit requirement. These eight credits are in addition to the credits obtained by completing the senior thesis or special project requirement as discussed in item 2.
2. Enroll in A&EP 490 or an equivalent course over two semesters for the purpose of completing an independent research project or senior thesis under the supervision of a Cornell engineering or

science faculty member. The minimum enrollment is to be two credits in the first semester and four credits in the second. The level of work required for a successful completion of this project or thesis is to be consistent with the amount of academic credit granted.

Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

Procedures

Before enrolling in A&EP 490, or the equivalent, the honors candidate must submit a brief proposal outlining the topic and scope of the proposed project or thesis and a faculty supervisor's written concurrence to the associate director for undergraduate studies. This proposal will be reviewed by the A&EP Honors Committee and either approved or returned to the candidate to correct deficiencies in the proposal. The proposed research project or senior thesis is to consist of a research, development, or design project and must go beyond a literature search. The final steps in completing the honors project are a written and oral report. The written report is to be in the form of a technical paper with, for example, an abstract, introduction, methods section, results section, conclusions section, references, and figures. This report will be evaluated by the faculty supervisor and the chair of the A&EP Honors Committee. Following the completion of the written report, an oral report is to be presented to an audience consisting of the faculty supervisor, the chair of the Honors Committee and at least one other departmental faculty member, along with the other honors candidates. The final research project course grade will be assigned by the faculty supervisor, following the oral presentation and after consultation with the chair of the Honors Committee. A minimum grade of A- is required for successful completion of the honors requirement.

Master of Engineering (Engineering Physics) Degree Program

The M.Eng.(Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, microstructure science and technology, device physics, materials characterization, or software engineering. A wide latitude is allowed in the choice of the required design project.

One example of a specific area of study is solid-state physics and chemistry as applied to microstructure science and technology. Core courses in this specialty include the micro-characterization of materials (A&EP 661) and the microprocessing and microfabrication of materials (A&EP 662). The design project may focus on such areas as semiconductor materials, device physics, microstructure technology, or optoelectronics. Another area of study may be applied optics where core

courses can be chosen from applied physics, electrical engineering, and physics.

Each individual program is planned by the student in consultation with the program chair. The objective is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering; those who have majored in an engineering discipline generally seek to strengthen their physics base. Candidates coming from industry usually want instruction in both areas. All students granted the degree will have demonstrated competence in an appropriate core of basic physics; if this has not been accomplished at the undergraduate level, subjects such as electricity and magnetism, or classical, quantum, and statistical mechanics should be included in the program.

The general requirement for the degree is a total of 30 credits for graduate-level courses or their equivalent, earned with a grade of C or better and distributed as follows:

- 1) a design project in applied science or engineering (not less than 6 nor more than 12 credits)
- 2) an integrated program of graduate-level courses, as discussed below (14 to 20 credits)
- 3) a required special-topics seminar course (4 credits)

The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the university faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory physics course is required.

The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. It is planned to provide an appropriate combination of physics and physics-related courses (applied mathematics, statistical mechanics, applied quantum mechanics) and engineering electives (such as courses in biophysics, chemical engineering, electrical engineering, materials science, computer science, mechanical engineering, or nuclear engineering). Additional science and engineering electives may be included. Some courses at the senior level are acceptable for credit toward the degree; other undergraduate courses may be required as prerequisites but are not credited toward the degree.

Students interested in the M.Eng.(Engineering Physics) degree program should contact Professor R. V. E. Lovelace.

APPLIED MATHEMATICS

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research in a wide range of the mathematical sciences. For detailed information on opportunities for graduate study in applied mathematics, contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in application-oriented mathematics may select an appropriate program in the Department of Mathematics or one of the departments in the College of Engineering.

A list of selected graduate courses in applied mathematics may be found in the description of the Center for Applied Mathematics, in the section "Interdisciplinary Centers and Programs."

CHEMICAL ENGINEERING

W. L. Olbricht, director; A. B. Anton, P. Clancy, C. Cohen, T. M. Duncan, J. R. Engstrom, K. E. Gubbins, D. A. Hammer, P. Harriott, D. L. Koch, R. P. Merrill, A. Panagiotopoulos, F. Rodriguez, W. M. Saltzman, M. L. Shuler, P. H. Steen

Bachelor of Science Curriculum

The undergraduate Field Program in Chemical Engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Special programs in biochemical engineering and polymeric materials are available. Students who plan to enter the field program take Chemistry 208 during the freshman year. The program for the last three years, for students who have taken an Introduction To Engineering course during the first year and entered Cornell Fall 1994 or later is as follows:

<i>Semester 3</i>	<i>Credits</i>
Math 293, Engineering Mathematics	4
Phys 213, Electricity and Magnetism	4
Chem 389, Physical Chemistry (engineering distribution)	4
CHEME 219 (engineering distribution)	3
Humanities or social sciences	3
<i>Semester 4</i>	
Math 294, Engineering Mathematics	4
Chem 290-391, Physical Chemistry (field)	6
Approved elective***	3
Humanities or social sciences	3
<i>Semester 5</i>	
Chem 253, Organic Chemistry**	4
Chem 251, Organic Chemistry Laboratory	2
CHEME 313, Chemical Engineering Thermodynamics	4
CHEME 323, Fluid Mechanics	3
Humanities or social sciences	3
<i>Semester 6</i>	
Applied Science elective†	3
CHEME 301, Nonresident Lectures	1
CHEME 324, Heat and Mass Transfer	3
CHEME 332, Analysis of Separation Processes	4
CHEME 390, Reaction Kinetics and Reactor Design	3
Humanities or social sciences	3

Semester 7

CHEME 432, Chemical Engineering Laboratory	4
CHEME 472, Process Control	3
Electives*	6

Semester 8

CHEME 462, Chemical Process Design	4
Humanities or social sciences	3
Electives*	3
Humanities or social sciences	3

*The electives in semester seven and eight comprise 6 credits of technical electives, and 3 credits of CHEME process or systems elective. CHEME process or systems electives include CHEME 564, Design of Chemical Reactors; CHEME 566, Systematic Methods for Process Design; CHEME 640, Polymeric Materials; CHEME 643, Introduction to Bioprocess Engineering; CHEME 656, Separations Using Membranes or Porous Solids; CHEME 661, Air Pollution Control.

**Chemistry 357 may be substituted for CHEM 253. The applied science elective must then be CHEM 358.

***A computer applications course is recommended, for example, ENGRD 241, 222, or 211.

†Applied science electives include Biological Sciences 290, General Microbiology Lectures; Biological Sciences 330, 331, 332, and 333, Principles of Biochemistry; CEE 654, Aquatic Chemistry; CHEME 640, Polymeric Materials; CHEME 673, Adsorption and Reactions on Chemically Reactive Solids; Food Science 409, Food Chemistry; MS&E 331, Structure of Materials; MS&E 332, Electrical and Magnetic Properties of Materials; MS&E 441, Microprocessing of Materials; MS&E 449, Introduction to Ceramics; MS&E 452, Properties of Solid Polymers; any A&EP course numbered 333 or above; any Chemistry course numbered 301 or above; any Physics course numbered 300 or above.

Students who entered before fall 1994 should contact the field office for a copy of the curriculum.

Master of Engineering (Chemical) Degree Program

The professional master's degree, M.Eng.(Chemical), is awarded at the end of one year of graduate study with successful completion of 30 credits of required and elective courses in technical fields including engineering, mathematics, chemistry, physics, and business administration. Courses emphasize design and optimization based on the economic factors that affect design alternatives for processes, equipment, and plants. General admission and degree requirements are described in the college's introductory section.

Specific requirements include

- 1) two courses in advanced chemical engineering fundamentals chosen from CHEME 711, 713, 731, 732, and 751
- 2) two courses in applied chemical engineering science chosen from CHEME 520, 564, 566, 640, 643, 656, and 661
- 3) a minimum of 3 credits of a design project, CHEME 565

Dean's certificate programs in Bioengineering, Engineering Management, Energy Engineering, and Manufacturing are available. A program offered jointly with the Food Science Department is also available, leading to both the Master of Engineering and the Master of Professional Studies degrees.

CIVIL AND ENVIRONMENTAL ENGINEERING

A. H. Meyburg, director; M. J. Sansalone, acting associate director (1996-97); J. F. Abel, associate director (on leave 1996-97); J. J. Bisogni, Jr., W. H. Brutsaert, G. G. Deierlein, R. I. Dick, J. M. Gossett, M. D. Grigoriu, D. A. Haith, K. C. Hover, A. R. Ingraffea, G. H. Jirka, F. H. Kulhawy, L. W. Lion, P. L-F. Liu, D. P. Loucks, W. R. Lynn, L. K. Nozick, T. D. O'Rourke, T. Peköz, W. D. Philpot, R. E. Schuler, C. A. Shoemaker, J. R. Stedinger, H. E. Stewart, M. A. Turnquist, R. N. White

Bachelor of Science Curriculum

The School of Civil and Environmental Engineering offers an accredited undergraduate program in civil engineering and permits students to pursue one of two options leading to the B.S. degree: civil engineering or environmental engineering. Within civil engineering, students may emphasize structural engineering, geotechnical engineering, hydraulics and hydrology, or transportation. The environmental engineering curriculum emphasizes study of environmental engineering, environmental and water resource systems, and hydraulics and hydrology. Sample curricula are available in the school office, 220 Hollister Hall.

Requirements for Admission to the Field:

Students planning to enter the Field Program in Civil and Environmental Engineering are required to complete ENGRD 202, Mechanics of Solids, either before or during the sophomore year with a grade of C- or better. Additional requirements for affiliation in the field are grade-point averages of at least 2.0: (1) in all engineering and science courses, (2) in the term immediately prior to affiliation, and (3) cumulatively for all courses.

Recommended Engineering Distribution Courses:

The recommended engineering distribution course for students planning to enter the environmental engineering option is ENGRD 219, Mass and Energy Balances. Students entering the environmental option who have not taken ENGRD 219 will be required to do so as part of the Field Program.

Recommended engineering distribution courses for students planning to enter the civil engineering option are:

ENGRD 261, Introduction to Mechanical Properties of Materials, for students interested in structural engineering or civil engineering materials;

ENGRD 201, Introduction to the Physics and Chemistry of the Earth, for students interested in geotechnical engineering;

ENGRD 221, Thermodynamics, for students interested in fluid mechanics and hydraulics/hydrology;

ENGRD 211, Computers and Programming, for students interested in transportation.

Field Program:

These field program requirements will apply to all students in the Classes of 1998 and later, and students in the Class of 1997 are strongly encouraged to follow these new curriculum options as well.

Environmental Engineering Option

For the Field Program in Environmental Engineering, students must take CHEM 208 in place of PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum:

Courses	Credits
ENGRD 241, Engineering Computation*	3
CHEM 253, Elementary Organic Chemistry	4
or Chem 257, Elementary Organic Chemistry	3
BIOMI 290, General Microbiology, Lectures	3
CEE 304, Uncertainty Analysis in Engineering†	4
CEE 323, Engineering Economics	3
CEE 331, Fluid Mechanics	4
CEE 341, Introduction to Geotechnical Engineering	4
CEE 351, Environmental Quality Engineering	3
ABEN 475, Environmental System Analysis	3

Additional requirements include a set of two field-approved electives and three design electives from an approved list of courses which is available in the school office. In addition, students must complete one technical communications course from among the courses designated ENGRC or approved Communications courses. If the technical communications course is taken as an expressive art, then students must take an additional approved elective.

Civil Engineering Option

For the Field Program in Civil Engineering, students may elect to substitute CHEM 208 for PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum.

Courses	Credits
ENGRD 203, Dynamics	3
ENGRD 241, Engineering Computation*	3
CEE 304, Uncertainty Analysis in Engineering†	4
CEE 323, Engineering Economics	3
CEE 331, Fluid Mechanics	4
CEE 341, Introduction to Geotechnical Engineering	4
CEE 351, Environmental Quality Engineering	3
CEE 361, Transportation Engineering	3
CEE 371, Structural Behavior	4

Additional requirements include a set of two field-approved electives (one from outside the field) and three design electives from an approved list of courses which is available in the school office. In addition, students must complete one technical communications course from among the courses designated ENGRC or approved Communications courses.

If the technical communications course is taken as an expressive art, then students must take an additional approved elective from a department or school other than Civil and Environmental Engineering.

*ENGRD 241 can be used to satisfy both the computer application requirement and a field program requirement.

†ENGRD 270 may be accepted (on petition) as a substitute for CEE 304 in the field program, but only if ENGRD 270 is taken before entry into the field, or in some special cases where co-op or study abroad programs necessitate such a substitution.

Civil and Environmental Engineering Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Civil and Environmental Engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA ≥ 3.50 and must be eligible for one of the *cum laude* distinctions at the time of graduation. Only students graduating in 1997 or later are eligible (i.e., only those fulfilling the curriculum requirements of the college and school that were adopted in 1994).

Content

A CEE honors program shall consist of at least nine credits beyond the minimum required for graduation in CEE. These nine credits shall be drawn from one or more of the following components:

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 400: Honors Project in CEE (1-6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component.
2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the College of Engineering (i.e., ENGR 470: Undergraduate Engineering Teaching or CEE 401: Undergraduate Teaching in CEE (1-3 credits per/semester).
3. Advanced or graduate courses at the 500-level or above.

The minimum number of credits in any component included in a program should be two. No research, independent study, or teaching for which the student is paid may be counted toward the honors program.

Timing

All interested students must apply no later than the beginning of the first semester of their senior year, but are encouraged to apply as early as the first semester of their junior year. All honors program students must be in the program for at least two semesters prior to graduation.

Procedures

Each applicant to the CEE honors program must have a faculty adviser or faculty mentor to supervise the student's individual program. (This need not be the student's faculty

adviser.) The application to the program shall be a letter from the student describing the specific proposed honors program and include the explicit approval of the faculty adviser and the honors adviser. Each program must be approved by the CEE Curriculum Committee, although the committee may delegate approval authority to the Associate Director for all but unusual proposals.

Master of Engineering (Civil) Degree Program

The M.Eng. (Civil) degree program is a 30-credit (usually ten-course) curriculum designed to prepare students for professional practice. There are two options in this program: one in civil and environmental engineering design and one in engineering management. Both options require a broad-based background in an engineering field. Applicants holding an ABET-accredited (or equivalent) undergraduate degree in engineering automatically satisfy this requirement. Those without such preparation will require course work beyond the graduate program's 30-credit minimum to fulfill the engineering preparation requirement. Both options also require one course in professional practice and a two-course project sequence. The project entails synthesis, analysis, decision making, and application of engineering judgment. Normally it is undertaken in cooperation with an outside practitioner, and it includes an intensive, full-time, three-week session between semesters. The general degree requirements and admissions information are described above in the section entitled "Master of Engineering Degree Programs." Each student's program of study is designed individually in consultation with an academic adviser and then submitted to the school's Professional Degree Committee for approval.

For the M.Eng. (Civil) program in civil and environmental engineering design options, the requirements are:

- 1) Three courses, one in professional engineering practice (CEE 503) and a two-course design project (CEE 501 and 502).
- 2) Specialization in a major—three to five courses in either environmental engineering, environmental and public systems engineering, geotechnical engineering, hydraulic engineering, remote sensing, structural engineering, or transportation engineering.
- 3) Two courses in a single related or minor area.
- 4) Technical electives (up to two courses).

Courses in the minor and electives may consist of graduate or advanced courses in fields related to the major, either inside or outside of the school.

For the M.Eng. (Civil) program in the engineering management option, the requirements are:

- 1) Five courses: Management Practice (CEE 590), Engineering Management Methods (CEE 593 and 594), and the Management Project (CEE 591 and 592).
- 2) One course in finance, accounting, or engineering economics, as appropriate given a student's background.
- 3) One course in individual and/or organizational behavior from a recommended list.

- 4) Three courses from a disciplinary or functional specialization, subject to adviser's approval.

The School of Civil and Environmental Engineering cooperates with the the Johnson Graduate School of Management in two joint programs leading to both Master of Engineering and Master of Business Administration degrees. See the introductory section under College of Engineering.

Applications for the six-year B.S./M.Eng./M.B.A. program must be submitted at the beginning of the sixth term of study.

COMPUTER SCIENCE

R. L. Constable, chair; K. Birman, C. Cardie, T. Coleman, B. Donald, D. Gries, J. Halpern, J. Hartmanis, M. Henzinger, T. Henzinger, J. E. Hopcroft, D. Huttenlocher, D. Kozen, G. Morrisett, K. Pingali, R. A. Rubinfeld, F. S. Schneider, B. Smith, R. Teitelbaum, S. Toueg, N. Trefethen, C. Van Loan, S. Vavasis, T. vonEicken, R. Zabih

Bachelor of Science Curriculum

The Field Program in Computer Science is intended for students who are interested in the computing process and in the fundamental structure of algorithms, data, and languages that underlie that process.

A student entering the Field Program in Computer Science must take COM S 211 or 212 and COM S 280 before beginning the upperclass sequence. Students who do not earn a grade of B- or better in both COM S 211 or 212 and COM S 280 are strongly advised against attempting the computer science field program. Students who have not maintained an average of at least 3.0 in the mathematics courses required by the Common Curriculum are also discouraged from entering the program. Apart from these requisites and those of the college, the courses required for the Field Program in Computer Science are:

Course Work	Credits
Systems sequence	11
COM S 314, Systems and Organization	
COM S 410, Data Structures	
COM S 414, Systems Programming and Operating Systems	
Theory sequence	8
COM S 381 or 481, Theory of Computing	
COM S 482, Analysis of Algorithms	
Numerical Analysis	3-4
COM S 222, Scientific Computation, or	
COM S 421, Numerical Solutions of Algebraic Equations	
Computer science electives	8-9
Two nonrequired computer science courses numbered 400 or above,* plus a laboratory project course (for example, COM S 413, 415, 418, 433, 463, or 473).	
Related electives	14-16

One mathematically oriented course plus three courses at the 300-level or above forming an upper-level concentration in mathematics, operations research, electrical engineering, or another technical area.

*Must be three or more credits.

For more information, consult our Web Page at <http://www.cs.cornell.edu> or refer to the *Computer Science Undergraduate Handbook*, available from 303 Upson Hall.

The performance of students in the Field of Computer Science is reviewed each term. To remain in good standing with the department, they must have an overall term average of at least 2.3 with no courses failed and a term average for field program courses of at least 2.7 with no course grade less than C-, and they must be making satisfactory progress in the field.

Computer Science Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have:

- maintained a cumulative GPA ≥ 3.50
- qualified for *cum laude* honors in the College of Engineering
- completed 8 credit hours of CS course work at or above the 500-level
- completed 6 credit hours/2 semesters of research with a CS faculty member, obtaining grades of A- or better.

Content

Honors courses may not be used to satisfy any other CS-field requirements, with the exception of the approved electives. In essence, honors course work represents a depth of field work that is well beyond the minimum requirements needed to fulfill the major.

Timing

Honors' determinations are made during the senior year. Students wanting to be considered for field honors should notify the Undergraduate Office in the Department of Computer Science via electronic mail at the following address: ugrad@cs.cornell.edu. The subject line for this message should read "HONORS TRACT". Related questions may also be addressed to the ugrad e-mail alias, or candidates can call or stop by 303 Upson Hall, 255-0982.

Preparation

Arrangements for doing CS490 research should be made directly with faculty members in the department. Students are encouraged to discuss potential contacts with their advisers and/or browse the department's web page at <http://www.cs.cornell.edu> for specific leads on research opportunities.

The Department of Computer Science reserves the right to make changes to the honors program requirements at any time. Generally speaking, all members of the same graduating class in CS will be subject to the same honors criteria.

Master of Engineering (Computer Science) Degree Program

The one-year program leading to the degree of M.Eng. (Computer Science) admits more than 70 students a year. The "fifth year," as it is sometimes referred to, provides students with the opportunity to more fully establish professional credentials in advanced computing technologies. In recent years, the demand for the "fifth year" has expanded enormously.

A strong undergraduate background in computer science or a related field is required. Early admission is available for Cornell seniors who apply in the fall semester. The emphasis of the curriculum can be on programming languages, systems, theory of algorithms, theory of computation, numerical analysis, artificial intelligence, computer graphics/visualization, multimedia, network systems, or information processing, which includes databases and information organization and retrieval. The required design project could be, for example, the design of a compiler for a large subset of a general-purpose programming language or the solution of a significant engineering problem using computer science techniques.

Cooperative Program with the Johnson Graduate School of Management

Undergraduates majoring in computer science may be interested in a program that can lead, in the course of six years, to B.S., M.Eng. (Computer Science), and M.B.A. degrees. This program, which is sponsored jointly by the College of Engineering and the Johnson Graduate School of Management, enables students to study several subjects required for the M.B.A. degree as part of their undergraduate curriculum. Planning must begin early, however, if all requirements are to be completed on schedule.

For further details and assistance in planning a curriculum, students can consult with their adviser, the undergraduate office in 303 Upson Hall, or the Johnson School directly.

ELECTRICAL ENGINEERING

J. S. Thorp, director; J. M. Ballantyne, T. Berger, A. W. Bojanczyk, G. M. Brown, H.-D. Chiang, R. C. Compton, D. F. Delchamps, L. F. Eastman, D. T. Farley, T. L. Fine, Z. Haas, D. A. Hammer, C. Heegard, S. S. Hemami, C. R. Johnson, Jr., M. C. Kelley, P. M. Kintner, R. Kline, J. P. Krusius, R. L. Liboff, Y.-H. Lo, N. C. MacDonald, P. R. McIsaac, J. A. Nation, T. W. Parks, A. Phillips Jr., C. R. Pollock, C. Pottle, A. P. Reeves, C. E. Seyler, Jr., J. R. Shealy, R. N. Sudan, C. L. Tang, R. J. Thomas, H. C. Torng, V. Veeravalli, S. B. Wicker

Bachelor of Science Curriculum

The undergraduate Field Program in Electrical Engineering provides a foundation that reflects the broad scope of this engineering discipline.

Concentrations include computer engineering; control systems; electronic circuit design; information, communication, and decision theory; microwave electronics; plasma physics; power and energy systems; quantum and optical electronics; radio and atmospheric physics; and semiconductor devices and applications.

New Curriculum (starting with Class of 1998)

Students planning to enter the Field Program in Electrical Engineering must take ELE E 230, Introduction to Digital Systems, as an engineering distribution course. The fall of the sophomore year is the preferred term for EE 230 for students without advanced standing in mathematics. Electrical engineering students with an interest in computer engineering are

encouraged to take COM S 211 as an engineering distribution course prior to entry into the field program. In addition, the field program begins normally in the spring of the sophomore year, as shown below. All of these courses (except ELEE 210) are taught only once a year, either spring or fall, as indicated in the course descriptions.

Course	Credits
--------	---------

Field Required Courses

ELE E 210, Introduction to Electrical Systems	3
ELE E 215, Electrical Systems Laboratory	3
ELE E 301, Electrical Signals and Systems I	4
ELE E 303, Electromagnetic Waves and Fields I	4
ELE E 315, Electrical Laboratory	4
A choice of three courses from among:	12
ELE E 302, Electrical Signals and Systems II	
ELE E 304, Electromagnetic Waves and Fields II	
ELE E 306, Fundamentals of Quantum and Solid State Electronics	
ELE E 308, Fundamentals of Computer Engineering	
ELE E 310, Probability and Random Signals*	

Field Elective Courses

Electrical Engineering Approved Electives†	12
Electives Outside Field‡ (3 courses)	9
Total minimum field credits	51

*ELE E 310 can be taken in place of ENGRD 260 or 270 or TAM 310 to satisfy the college application of probability and statistics requirement.

†Must include two electrical engineering laboratory courses and at least one course at the 400-level or above.

‡See *Electrical Engineering Handbook* for detailed definitions, but must include one course at the 300-level or above. At least one of the required electrical engineering laboratory courses must be selected from a list including ELE E 316, 425, 430, 453, 457, 475, 476, 488, 497, 530 and 534. The other may be selected from the above list or from among ELE E 423, 426, 433, 439, 451, 452, 471, 472, 524, 526, 536, 539, 554, and 558.

All students graduating with a B.S. degree must fulfill the engineering design requirement. To meet this requirement, students must demonstrate that they have completed courses that contain at least 16 credits of engineering design. A table listing the engineering design content of all relevant electrical engineering and computer science courses is available in the electrical engineering undergraduate program office.

Undergraduate specialization is achieved through the various electrical engineering elective courses, as well as other courses in related technical fields within engineering, mathematics, the physical sciences, and the analytical biological sciences. The School of Electrical Engineering offers more than thirty courses that are commonly taken as electives by undergraduates.

Maximum technical course scheduling flexibility in the field program is preserved only for those students who *do not* complete their 6 credits of college approved electives prior to entry into the field program. Accordingly, intended electrical engineering students are advised to consider course selection carefully during their first three terms in engineering.

An electrical engineering honors program also exists for those students who so desire and meet the program entrance requirements. The honors program requires additional courses, a required undergraduate research or design project, or an honors thesis. Details are available in the *Electrical Engineering Handbook* or on the electrical engineering homepage located on the World Wide Web at <http://www.ee.cornell.edu>.

Students with advanced standing frequently take one or more graduate-level courses prior to graduation and may actually begin the Master of Electrical Engineering program in their last semester of undergraduate course work so long as 8 or fewer credits remain toward B.S. degree requirements and a 3.0 GPA has been maintained. Admission must be approved in advance of this last semester of undergraduate work.

All students majoring in electrical engineering are expected to meet the following academic standards:

1. Students must achieve a grade-point average of at least 2.3 every semester.
2. No course with a grade of less than C- may be used to satisfy degree requirements in the field program or serve as a prerequisite for a subsequent electrical engineering course.
3. Students must complete satisfactorily ELE E 210, ELE E 215, MATH 294, and PHYS 214 by the end of the first semester in the Field Program of Electrical Engineering, and make adequate progress toward the degree in subsequent semesters.
4. Honors program students must meet the GPA and progress requirements specified in the *Electrical Engineering Handbook* to remain active participants.

Electrical Engineering Honors Program Eligibility, Entry, and Continuation

A student may apply to enter the EE Honors Program as early as the beginning of the fifth semester and as late as the end of the seventh semester. A student must have a cumulative GPA of at least 3.5 to apply for entry. A student in the honors program whose cumulative GPA falls below 3.5 at the end of any semester will be dropped at least temporarily from the honors program. If such a "dropped" student has a cumulative GPA of at least 3.5 at the end of any subsequent semester up to and including the seventh, then he or she will be eligible to reapply for entry into the program. There is an additional requirement (see Honors Seminar) for entry into the program after the end of the fifth semester.

Honors Seminar

Any student in the honors program is required to take (or to have taken) an Honors Seminar during his or her junior year. The Honors Seminar will be a 2-credit semester-course (offered both fall and spring) consisting of a

weekly series of introductory research lectures by EE faculty members. Each Honors Seminar enrollee will be required to write a short paper on one of the topics covered in the lecture series. All EE faculty members will be expected to give a lecture or short series of lectures as part of the Honors Seminar at least every two or three years. Students in the honors program and students with a cumulative GPA of at least 3.5 who are considering entering the honors program will receive letter grades for the Honors Seminar. Other students may attend the Honors Seminar for academic credit, but will be graded on an S/U basis.

Honors Project

Any student in the honors program is required to accumulate at least three credit hours from an honors project consisting either of research, teaching, or directed reading. All Honors Projects should place some emphasis on development of communication skills. A 3-credit teaching-oriented honors project would consist of a one-credit seminar on teaching coupled with two credit hours worth of classroom teaching at the level and intensity of Academic Excellence Workshop facilitators. Research- and reading-oriented honors projects, while similar to the senior projects we now offer, should require explicitly a certain amount of writing.

Additional Coursework

Any student in the honors program is required to take at least four credit hours of advanced EE coursework that has at least a 300-level prerequisite. These four credit hours are in addition to any credit hours required as part of the EE field program.

The program described above would require honors program participants to amass at least nine credit hours over and above the 126 credit hours required for a B.S. degree; thus an honors degree would require a minimum of 135 credit hours.

Master of Engineering (Electrical) Degree Program

The M.Eng.(Electrical) degree program prepares students either for professional work in electrical engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the Master of Science degree mainly in its emphasis on engineering design and analysis skills rather than basic research.

The program requires 30 credits of advanced technical course work, including a minimum of four courses in electrical engineering. An electrical engineering design project is also required and may account for 3 to 8 credits of the M.Eng. program. Occasionally, students take part in very extensive projects and may apply for a waiver of the 8-credit maximum and increase the project component to 10 credits. Students with special career goals, such as engineering management, may apply to use up to 8 credits of approved courses that have significant technical content, but are taught in disciplines other than engineering, mathematics, or the physical sciences.

Although admission to the M.Eng.(Electrical) program is highly competitive, all well-qualified students are urged to apply. Further information is available from the Master of Electrical Engineering Program Office in 222 Phillips Hall.

GEOLOGICAL SCIENCES

B. L. Isacks, chair; R. W. Kay, associate director; R. W. Allmendinger, K. Attoh, M. Barazangi, W. A. Bassett, J. M. Bird, L. D. Brown, L. M. Cathles, J. L. Cisne, L. A. Derry, C. H. Greene, T. E. Jordan, D. E. Karig, S. Mahiburg Kay, F. H. T. Rhodes, W. B. Travers, D. L. Turcotte, W. M. White

Bachelor of Science Curriculum

Study in geological sciences is offered for engineering students who are preparing for careers in earth sciences and for those who want a broad background in the geological sciences as preparation for careers in other engineering fields. The Department of Geological Sciences is organized as an intercollege department in the College of Arts and Sciences and the College of Engineering. College of Arts and Sciences students should consult that college's section on geological sciences as well as the course listing here.

The Department of Geological Sciences is taking part in a new intercollege program in the Science of Earth Systems, available to students in the Colleges of Arts and Sciences, Engineering, and Agricultural and Life Sciences since fall 1995. This program, which is being developed as a new intercollege major, emphasizes a strong preparation in basic mathematics and sciences and an integrated approach to the study of the earth system including the lithosphere, biosphere, hydrosphere, and atmosphere. The aim is to prepare students for graduate study and careers across the broad spectrum of earth sciences required for successful understanding and management of our planet. For a description of the program and proposed requirements for the major, see the section, Interdisciplinary Centers, Programs, and Studies, in the front part of the catalog.

All geology majors take substantially the same set of upper-level geology courses regardless of their college affiliation. The difference between the curricula for students in engineering (B.S.-degree candidates) and those in arts and sciences (B.A.-degree candidates) is in their respective college requirements such as distribution courses, languages, social sciences, and humanities requirements. Both B.S.- and B.A.-degree programs stress a balanced overview of geology, without specialization. Within the B.S.-degree program, substantial specialization can be achieved by careful selection of field approved electives.

Students in the College of Engineering who may wish to affiliate with the Field Program of Geological Sciences may take ENGRI 122 and ENGRD 201 as distribution courses. As a prerequisite for the major, they should take GEOL 201 (ENGRD 201) or GEOL 101 or 103 as a field approved elective, preferably during their freshman or sophomore year. For those interested in geobiology, BIO G 101-103 and 102-104 are recommended. Chemistry 208 may be substituted for PHYS 214 with approval of the adviser.

Geological Sciences requires the following courses for the engineering major: GEOL 210, 214, 326, 355, 356, 375, and 388. GEOL 210 plus 214 count as one course for purposes of graduation requirements. At least two field approved electives should be GEOL 400 or 600-level courses.

In addition, a requirement for field experience may be met by completing one of the following: (a) GS 491-492 (Undergraduate Research) based on field work (2-credit minimum); (b) GS 437 (Geophysical Field Methods) as an additional field approved elective (3 credits); (c) An approved field course taught by another college or university (3 credit minimum); (d) GS 212 (Special January Field Trip) (2 credits). Field observations made during GS 212 as the basis for GS 491-492 is an excellent way to satisfy the requirement.

Core courses may be taken in any reasonable sequence, except that GEOL 355, which is offered in the fall, should be taken before GEOL 356, which is offered in the spring. GEOL 326, 355, 356, and 375 should be taken relatively early in the major program.

It is recommended that students intending to specialize in *geophysics* select most of their field approved electives from the appropriate advanced geology courses and the following courses or their equivalents; these guidelines also apply to the students' choice of other electives outside the major field.

A&EP 333, Mechanics of Particles and Solid Bodies

A&EP 355, Intermediate Electromagnetism

A&EP 356, Intermediate Electrodynamics

A&EP 434, Continuum Physics

Phys 410, Advanced Experimental Physics

T&AM 310-311, Advanced Engineering Analysis I and II

It is recommended that students intending to specialize in *geochemistry* (including petrology and mineralogy) select most of their field approved electives from the appropriate advanced geology courses and the following courses or their equivalents; these guidelines also apply to the students' choice of other electives outside the major field.

CEE 654, Aquatic Chemistry

Chem 207, 208, General Chemistry

Chem 287-288, Introductory Physical Chemistry

Chem 300, Quantitative Chemistry

Chem 301, Experimental Chemistry I

Chem 302, Experimental Chemistry II

Chem 303, Experimental Chemistry III

Chem 357-358, Introductory Organic Chemistry

Chem 389-390, Physical Chemistry I and II

MS&E 331, Structure of Materials

MS&E 335, Thermodynamics of Condensed Systems

It is recommended that students intending to specialize in *geobiology* select most of their field approved electives from the appropriate advanced geology courses and the following courses or their equivalents; these guidelines also apply to the students' choice of other electives outside the major field.

BIOPL 241, Introductory Botany

BIOES 261, Ecology and the Environment

BIOES 274, Functional and Comparative Morphology of Vertebrates

BIOES 278, Evolutionary Biology

BIOES 371, (also ANTHR 371), Human Paleontology

BIOES 373, Biology of the Marine Invertebrates

BIOPL 448, Plant Evolution and the Fossil Record

Chem 253, Elementary Organic Chemistry

It is recommended that students who want to pursue further training or immediate employment in *applied geology* (environmental and engineering geology, geohydrology, petroleum geology, or geological engineering) select most of their field approved electives from the appropriate advanced geology courses and the following courses or their equivalents, with two of the four from the same field; these guidelines also apply to the students' choice of other electives outside the major field.

GEOL 204 (also SCAS 371 and ABEN 371), Hydrology and the Environment

ABEN 475, Environmental Systems Analysis

ABEN 671, Analysis of the Flow of Water and Chemicals in Soils

SCAS 260, Introduction to Soil Science

SCAS 363, Intermediate Soil Science I: Genesis, Classification, and Survey

SCAS 364, Intermediate Soil Science II: Physics

SCAS 365, Intermediate Soil Science III: Chemistry and Microbiology

SCAS 371 (also ABEN 371 and GEOL 204), Hydrology and the Environment

SCAS 667, Advanced Soil Physics

SCAS 671, Soil Chemistry

CEE 331, Fluid Mechanics

CEE 332, Hydraulic Engineering

CEE 341, Introduction to Geotechnical Engineering

CEE 351, Environmental Quality Engineering

CEE 610 (also Agronomy 660), Remote Sensing Fundamentals

CEE 615, Digital Image Processing

CEE 617, Project—Remote Sensing

CEE 630, Advanced Fluid Mechanics

CEE 631, Flow and Contaminant Transport Modeling in Groundwater

CEE 632, Hydrology

CEE 633, Flow in Porous Media and Groundwater

CEE 640, Foundation Engineering

CEE 653, Water Chemistry for Environmental Engineering

CEE 655, Pollutant Transport and Transformation in the Environment

MS&E 331, Structure of Materials

MS&E 445, Mechanical Properties of Materials

OR&IE 270 (also ENGRD 270), Basic Engineering Probability and Statistics

OR&IE 360, Engineering Probability and Statistics II

OR&IE 361, Introductory Engineering Stochastic Processes I

Students intending to specialize in *economic geology* or pursue careers in the mining industries or mineral exploration should consider including economics courses among their liberal studies distribution courses and should select most of their field approved electives from the groups of courses listed above for geochemistry and applied geology plus the following additional courses; these guidelines also apply to the students' choice of other electives outside the major field.

CEE 654, Aquatic Chemistry

CEE 741, Rock Engineering

Students who want a more general background or who want to remain uncommitted with regard to specialty must choose at least two of their field approved electives from the same field, at a level comparable to the courses listed above. The electives outside the field may be chosen from offerings in other science or engineering fields or the liberal arts, but should be at the 300 level or above. Students may request substitution of GEOL 491 and 492, Undergraduate Research, for a fourth-year field approved elective.

Students intending to pursue graduate study in geology are reminded that some graduate schools require proficiency in reading the scientific literature in one or two of the three languages, French, German, and Russian. Undergraduate preparation in foreign languages is advantageous for many careers, as well.

Geological Science Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Geological Sciences and have been recommended for the degree by the honors committee of the department. An honors' program student must enter with and maintain a cumulative GPA ≥ 3.50 and must be eligible for one of the *cum laude* distinctions at the time of graduation.

Content

In addition to the minimum graduation requirements, a student must

1. Have a written proposal of the honors project accepted by his or her faculty adviser and the director of undergraduate studies.
2. Complete an honors thesis (GEOL 490, two credits each over two semesters) of breadth, depth, and quality.

Timing

A student interested in completing an honors thesis must, by the beginning of their 7th semester, have a written proposal of his/her honors project accepted by his/her adviser and the director of undergraduate studies.

Procedures

Each application to the Geological Sciences honors program must have a faculty adviser to supervise the honors program. Written approval by the faculty member who will direct the research is required. After the college verifies the student's grade-point average, the student will be officially enrolled in the honors program.

Master of Engineering (Geological Sciences Degree Program)

The Master of Engineering (Geological Sciences) degree is intended to provide future professional geologists with the geological and engineering background they will need to analyze and solve engineering problems that involve geological variables and concepts. Students may choose a program from one of several options, or tailor a program to meet their special interests with the help of a faculty adviser.

The program requires 30 credits of postgraduate instruction, at least 10 of which must involve engineering design. Students must also complete a design project, worth between 3 and 12 credits, that has a significant geological component and results in substantial conclusions or recommendations.

General information on admission and degree requirements for the M.Eng. degree programs can be found in the college's introductory section.

MATERIALS SCIENCE AND ENGINEERING

C. Y. Li, director; D. G. Ast, J. M. Blakely, R. Dieckmann, E. Giannelis, D. T. Grubb, E. J. Kramer, C. Ober, R. Raj, A. L. Ruoff, S. L. Sass, M. O. Thompson

Bachelor of Science Curriculum

Students majoring in materials science and engineering are required to take MS&E 261, Introduction to Mechanical Properties of Materials, or one of the other MS&E distribution courses, before affiliating with the field. They are strongly urged to take it as an engineering distribution course during their sophomore year. Students in materials science and engineering must concentrate in a specialization which may cover an area such as materials science, solid state, metallic materials, ceramic materials, polymeric materials, or electronic materials.

Specialization is achieved through the selection of technical electives in the junior and senior years. Optional research involvement courses provide undergraduates with the opportunity to work with faculty members and their research groups on current projects.

The requirements for a Bachelor of Science degree in Materials Science and Engineering are:

1. Completion of common curriculum including humanities and social sciences.
2. Completion of 11 required field courses below:

MS&E 331, Structural Characterization of Materials

MS&E 332, Electrical and Magnetic Properties of Materials

MS&E 335, Thermodynamics of Condensed Systems

MS&E 336, Kinetics, Diffusion, and Phase Transformations

MS&E 441, Microprocessing of Materials

MS&E 442, Macroprocessing of Materials

MS&E 443/435, Senior Materials Laboratory I or Senior Thesis I

MS&E 444/435, Senior Materials Laboratory II or Senior Thesis II

MS&E 445, Mechanical Properties of Materials

MS&E 447 & 448, Materials Design Concepts I & II

3. Four courses in a technical specialization.
4. Twelve credits of other electives.
5. One of the elective or specialization courses must include substantial chemical synthesis (e.g., MS&E 414, MS&E 452, CHEM 208 or CHEM 253).

To continue in good standing in the Field of Materials Science and Engineering, students must

- 1) Maintain an overall 2.0 term average.
- 2) Maintain an average of 2.3, with no grade below C, in the department's core curriculum.
- 3) Complete MS&E 261 or 262 with a minimum grade of C prior to affiliation.

The department's core curriculum consists of all the required MS&E courses including the MS&E distribution course and the four courses comprising the student's area of specialization.

An attractive and very challenging program combines the materials science and engineering curriculum with that of either electrical engineering or mechanical engineering, leading to a double major. The combination of materials science and engineering with electrical engineering is particularly well suited to students who will eventually be employed in the electronic materials industry. Mechanical engineers knowledgeable in materials science also will be well equipped for technical careers. Curricula leading to the double-major degree must be approved by both of the departments involved and students are urged to plan such curricula as early as possible.

Material Science and Engineering Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Materials Science and Engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA ≥ 3.50 and must be eligible for one of the *cum laude* distinctions at the time of graduation.

Content

The requirements for an honors degree in Materials Science and Engineering are:

1. Students in the Class of '96 must take at least six credits above the minimum required for graduation in Materials Science and Engineering, so that the minimum number of credits for an honors degree is 138.
2. Students in the Class of '97 and subsequent classes must take at least nine credits above the minimum required for graduation in Materials Science and Engineering, so that the minimum number of credits for an honors degree is 135. These additional courses must be

technical in nature, i.e., in engineering, mathematics, chemistry, and physics at the 400- and graduate-level, with selected courses at the 300-level, which must be approved by the upperclass advisers.

3. A senior honors thesis (eight credits) with a grade of at least an A.

Note: Undergraduates typically enter the Honors program at the beginning of their Senior year (seventh semester), so that they must have a cumulative GPA greater than or equal to 3.50 at that point.

Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the first semester of their junior year. A student must be in the program for at least two semesters before graduation.

Procedures

Each application to the Geological Science honors program must have a faculty adviser to supervise the honors program. A written approval of the faculty member who will direct the research is required. After the college verifies the student's grade-point average, the student will be officially enrolled in the honors program.

Master of Engineering (Materials) Degree Program

Students who have completed a four-year undergraduate program in engineering or the physical sciences can be considered for admission into the M.Eng.(Materials) program. This program consists of 30 credits, including course work and a master's design project. The project, which requires individual effort and initiative, is carried out under the supervision of a faculty member. Twelve credits are devoted to the project, which is normally experimental in nature, although computational or theoretical projects are also possible.

Courses for the additional 18 credits are selected from the graduate-level classes in materials science and engineering and from other related engineering fields approved by the faculty. Typically half of the courses are from MS&E. One 3-credit technical elective must include advanced mathematics (modeling, computer application, or computer modeling), beyond the MS&E undergraduate requirements.

MECHANICAL AND AEROSPACE ENGINEERING

D. A. Caughey, director; P. L. Auer, C. T. Avedisian, D. L. Bartel, G. Berkooz, J. F. Booker, I. D. Boyd, P. R. Dawson, P. C. T. deBoer, E. M. Fisher, A. R. George, F. C. Gouldin, S. Kannapan, S. Leibovich, M. Y. Louge, J. L. Lumley, M. P. Miller, F. C. Moon, F. K. Moore, R. M. Phelan, S. B. Pope, M. L. Psiaki, E. L. Resler, Jr., S.-f. Shen, D. L. Taylor, K. E. Torrance, M. C. H. van der Meulen, H. B. Voelcker, K. K. Wang, Z. Warhaft, R. Warkentin, C. H. K. Williamson, N. Zabaras

Members of the faculty of the graduate Fields of Aerospace Engineering and Mechanical

Engineering are listed in the *Announcement of the Graduate School*.

Bachelor of Science Curriculum in Mechanical Engineering

The upperclass Field Program in Mechanical Engineering is designed to provide a broad background in the fundamentals of this discipline as well as to offer an introduction to the many professional and technical areas with which mechanical engineers are concerned. The program covers both major streams of the field of mechanical engineering.

Mechanical systems, design, and materials processing is concerned with the design, analysis, testing, and manufacture of machinery, vehicles, devices, and systems. Particular areas of concentration are mechanical design and analysis, vehicle engineering, biomechanics, and materials processing and precision engineering. Other topics covered are computer-aided design, vibrations, control systems, and dynamics.

Engineering of fluids, energy, and heat-transfer systems is concerned with the efficient conversion of energy in electric power generation and aerospace and surface transportation, the environmental impact of engineering activity (including pollutants and noise), and the experimental and theoretical aspects of fluid flow, heat transfer, thermodynamics, and combustion. Specific areas of concentration include aerospace engineering; heat, energy, and power engineering; and thermo-fluid sciences.

The undergraduate program is a coordinated sequence of courses beginning in the sophomore year. During the fall term sophomore students who plan to enter the Mechanical Engineering Program take ENGRD 202 (also T&AM 202) as an engineering distribution course. They also are urged to take ENGRD 221 (also M&AE 221), which is a field requirement that may simultaneously satisfy Common Curriculum requirements as an engineering distribution course. Occasionally because of study abroad or requirements for second majors or pre-med, students cannot complete all of the required sophomore courses on schedule. In such cases students should delay ENGRD 221 until the first semester of the junior year. The Sibley School is supportive of students with unusual requirements, but any delays or substitutions must be discussed with and receive approval from the student's adviser.

The requirements for the degree of Bachelor of Science in Mechanical Engineering are as follows:

1. Completion of the Common Curriculum. During the upperclass years this will typically mean earning credit for five humanities or social science courses.
2. Completion of the field requirements, which consist of eleven required courses (beyond ENGRD 202 already mentioned), and five elective courses (24 credits).

The eleven required courses are:

M&AE 212, Mechanical Properties and Processing of Engineering Materials

M&AE 221, Introduction to Thermodynamics

M&AE 225, Mechanical Design and Synthesis

T&AM 203, Dynamics

ELE E 210, Introduction to Electrical Systems

M&AE 323, Introduction to Fluid Mechanics

M&AE 324, Heat Transfer

M&AE 325, Mechanical Design and Analysis

M&AE 326, System Dynamics

M&AE 427, Fluids/Heat Transfer Laboratory

M&AE 428, Engineering Design

Electives

Students should use the flexibility provided by the field approved electives, approved electives, and humanities/social sciences electives to develop a program to meet their specific goals.

Field Approved Electives

The upper-level program includes five field approved electives. Using these five courses, the student must satisfy the following requirements.

At least three of the courses must be upper-level (300+) M&AE courses. Of these three, two must satisfy a concentration chosen by the student.

Typically these are two courses chosen from an appropriate subset of the school's upper-class offering.

However, students can petition for approval of two related courses to form a custom concentration.

The standard concentrations are

Fluids/Aerospace Engineering, M&AE 305, 306, 423, 506, 507

Thermo-Fluids M&AE 423, 449, 506

Materials Processing M&AE 412, 514

Mechanical Systems M&AE 389, 465, 469, 478, 489

Vehicle Engineering M&AE 386, 449, 486, 506, 507

Of the three upper-level M&AE courses, one must be an approved design elective. The design offerings may change from year to year.

Typically this list includes M&AE 401, 464, 486, and 489.

Note that the design elective must be taken during the senior year. Note that a single course may satisfy both the design and concentration requirements, in which case the third course could be any upper level M&AE course.

One of the courses must be an approved upper-level mathematics course taken after Math 294. The course must include some material on statistics. Currently, the approved courses are T&AM 310 and OR&IE 270.

One of the field approved electives can be viewed as a technical elective and can be any course at an appropriate level, chosen from engineering, mathematics, or science (physics, chemistry, or biological sciences). Appropriate level is interpreted as being at a level beyond the required courses of the college curriculum. Note that courses in economics, business, and organizations are not accepted. Advisers may approve such courses as approved electives.

Approved Electives

To maximize flexibility (i.e., the option for study abroad, COOP, internships, pre-med, and flexibility during the upper-class years),

the Sibley School faculty recommends that students delay use of approved electives until after term three. The faculty encourages students to consider the following as possible approved electives:

- any engineering distribution course
- course stressing oral or written communications
- courses stressing the history of technology
- rigorous courses in the physical sciences (physics, biology, chemistry)
- courses in informational science (mathematics, computer science)
- courses in methodologies (modeling, problem solving, synthesis, design)
- course in technology (equipment, machinery, instruments, devices, processes)
- courses in business enterprise operations (economics, financial, legal, etc.)
- courses in organizational behavior
- courses in cognitive sciences.

Recommendation on Humanities/Social Sciences Electives

Students are encouraged to build a program that includes studies in

- history of technology
- societal impacts of technology
- history
- foreign languages
- ethics
- communications
- political science
- aesthetics
- economics
- architecture

An additional graduation requirement of the field program is proof of elementary competence in technical drawing. The demonstration of competence is expected before completion of M&AE 325, Mechanical Design and Analysis. This proof may be given in a number of ways, including satisfactory completion of

- a. a technical drawing course in high school or in a community college,
- b. ENGRG 102, Drawing and Engineering Design,
- c. another technical drawing course at Cornell, or
- d. a departmental examination.

The computer applications requirement of the Common Curriculum may be satisfied by several courses, including M&AE 389 or 489.

The writing requirement of the Common Curriculum is satisfied by M&AE 427.

Introduction to Electrical Systems (ELE E 210) may be replaced or supplemented by Introductory Electronics (PHYS 360).

A limited set of third-year courses is offered each summer under the auspices of the Engineering Cooperative Program.

Applicability: The curriculum requirements described above apply to the Class of '98 and beyond. Graduates of the Class of '97 may choose to complete their studies under the

previous requirements or those described above. Generally the Sibley School expects the Classes of '96 and '97 to use the requirements described above. More detailed materials describing the Mechanical Engineering Program may be obtained from the Sibley School of Mechanical and Aerospace Engineering, Upson Hall.

Preparation in Aerospace Engineering

Although there is no separate undergraduate program in aerospace engineering, students may prepare for a career in this area by majoring in mechanical engineering and taking courses from the aerospace engineering concentration such as M&AE 305, 306, 506, and 507. Students may prepare for the graduate program in aerospace engineering by majoring in mechanical engineering, in other appropriate engineering specialties such as electrical engineering or engineering physics, or in the physical sciences. Other subjects recommended as preparation for graduate study include thermodynamics, fluid mechanics, applied mathematics, chemistry, and physics.

Master of Engineering (Aerospace) Degree Program

The M.Eng. (Aerospace) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include aerodynamics, acoustics and noise, turbulent flows, rarefied and non-equilibrium flows, combustion, dynamics and control, CFD, etc.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty adviser. This proposed program, together with a statement of purpose, is submitted for approval to the M&AE Master of Engineering Committee during the first week of class; any subsequent changes must also be approved by the committee. An individual student's curriculum includes a 4- to 8-credit design course, a major concentration consisting of a minimum of 12 credits, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have an aerospace engineering design focus and have the close supervision of a faculty member.

The courses that constitute the major concentration must be graduate-level courses in aerospace engineering. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the special approval of the M&AE Master of Engineering Committee.

The technical electives may be courses of appropriate level in mathematics, physics, chemistry, or engineering; a maximum of 6 credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will

use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.

Students should check with the M&AE graduate field office (104 Upson Hall) for additional degree requirements.

Master of Engineering (Mechanical) Degree Program

The M.Eng. (Mechanical) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include biomechanical engineering, combustion, energy and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, mechanical systems and design, CFD, CAE, CAD, CAM, etc.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty adviser. This proposed program, together with a statement of purpose, is submitted for approval to the M&AE Master of Engineering Committee during the first week of class; any subsequent changes must also be approved by the committee. An individual student's curriculum includes a 4- to 8-credit design course, a major concentration consisting of a minimum of 12 credits, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have a mechanical engineering design focus and have the close supervision of a faculty member.

The courses that constitute the major concentration must be graduate-level courses in mechanical and aerospace engineering or a closely related field such as theoretical and applied mechanics. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the special approval of the M&AE Master of Engineering Committee.

The technical electives may be courses of appropriate level in mathematics, physics, chemistry, or engineering; a maximum of 6 credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.

Students should check with the M&AE graduate field office (104 Upson Hall) for additional degree requirements.

Students enrolled in the M.Eng. (Mechanical) degree program may take courses that also satisfy the requirements of the Manufacturing, Energy, or Electronic Packaging option programs leading to special dean's certificates in those areas.

NUCLEAR SCIENCE AND ENGINEERING

Faculty members in the graduate Field of Nuclear Science and Engineering who are most directly concerned with the Master of Engineering (Nuclear) curriculum include K. B. Cady (faculty representative), D. D. Clark, H. H. Fleischmann, D. A. Hammer, V. O. Kostroun, and S. C. McGuire

Undergraduate Study

Although there is no special undergraduate field program in nuclear science and engineering, students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives within regular field programs (such as those in engineering physics, materials science and engineering, and civil, chemical, electrical, or mechanical engineering) or within the College Program.

Master of Engineering (Nuclear) Degree Program

The two-term curriculum leading to the M.Eng.(Nuclear) degree is intended primarily for individuals who want a terminal professional degree, but it may also serve as preparation for doctoral study in nuclear science and engineering. The course of study covers the basic principles of nuclear reactor systems with a major emphasis on reactor safety and radiation protection and control. The special facilities of the Ward Laboratory of Nuclear Engineering are described in the *Announcement of the Graduate School*.

The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate specializations. The recommended background is (1) an accredited baccalaureate degree in engineering, physics, or applied science; (2) physics, including atomic and nuclear physics; (3) mathematics, including advanced calculus; and (4) thermodynamics. Students should see that they fulfill these requirements before beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. General admission and degree requirements are described in the college's introductory section.

The following courses are included in the 30-credit program:

Fall term

NS&E 509, Nuclear Physics for Applications

A&EP 612, Nuclear Reactor Theory

A&EP 633, Nuclear Engineering

Technical elective

Spring term

A&EP 651, Nuclear Measurements Laboratory

NS&E 545, Energy Seminar

Technical elective

Engineering design project

Mathematics or physics elective

Engineering electives should be in a subject area relevant to nuclear engineering, such as energy conversion, radiation protection and control, feedback control systems, magnetohydrodynamics, controlled thermonuclear fusion, and environmental engineering. The list below gives typical electives.

M&AE 651, Advanced Heat Transfer

ELE E 581, Introduction to Plasma Physics

ELE E 582, Advanced Plasma Physics

ELE E 589, Magnetohydrodynamics

ELE E 471, Feedback Control Systems

ELE E 472, Digital Control Systems

A&EP 661, Microcharacterization

NS&E 484, Introduction to Controlled Fusion: Principles and Technology

NS&E 621, Radiation Effects In Microelectronics

MS&E 459, Physics of Modern Materials Analysis

Program for Applications of Nuclear Analytical Methods (PANAM)

This new program was initiated in 1993-94. It provides for specialization by Ph.D. candidates with either a major or a minor in NS&E. For those with majors in non-nuclear fields who expect to use nuclear analytical methods in their research, the sequence NS&E 509-551-590 forms a suitable minor in NS&E. The laboratory course 551 has been offered since spring 1989. The lecture course 509, offered for the first time in 1993, covers nuclear physics without requiring quantum mechanics as a prerequisite. For NS&E majors, PANAM offers the opportunity to extend and develop new nuclear-analytical methods, for example, uses of cold neutrons and neutron-depth profiling with conversion electrons. They would normally follow the M.Eng. program in the first year, continue with advanced courses in the second year (including a full quantum-mechanical treatment of nuclear physics), and begin, as early as possible, independent projects as precursors to thesis research.

OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

J. A. Muckstadt, director; J. Renegar, D. Ruppert, associate directors; L. J. Billera, R. G. Bland, D. C. Heath, P. L. Jackson, W. L. Maxwell, S. I. Resnick, R. Roundy, G. Samorodnitsky, L. W. Schruben, D. B. Shmoys, E. Slate, E. Tardos, M. J. Todd, L. E. Trotter, Jr., B. W. Turnbull

Bachelor of Science Curriculum in Operations Research and Industrial Engineering

The program is designed to provide a broad and basic education in the techniques and modeling concepts needed to analyze and design complex systems and to provide an introduction to the technical and professional areas with which operations researchers and industrial engineers are concerned. Except-

tional students interested in pursuing graduate studies are encouraged to speak with their faculty advisers concerning an accelerated program of study.

A student who intends to enter the Field Program in Operations Research and Industrial Engineering should plan to take Basic Engineering Probability and Statistics (ENGRD 270) after completing Math 192. Early consultation with a faculty member of the school or with the associate director for undergraduate studies can be helpful in making appropriate choices. The required courses for the OR&IE field program and the typical terms in which they are taken are as follows:

Term 4	Credits
CS 211, Computers & Programming	3
Term 5	
OR&IE 320, Optimization I	4
OR&IE 350, Cost Accounting, Analysis, and Control	4
OR&IE 360, Engineering Probability and Statistics II	4
A course in humanities and social sciences	3
Field-approved elective	3
Term 6	
OR&IE 310, Industrial Systems Analysis	4
OR&IE 321, Optimization II	4
OR&IE 361, Introductory Engineering Stochastic Processes	4
Behavioral science†	3
Course in humanities and social sciences	3
†The behavioral science requirement can be satisfied by any one of several courses, including the Johnson Graduate School of Management (JGSM) course, NCC 504 (offered only in the fall), which is recommended for those contemplating the pursuit of a graduate business degree, and Industrial and Labor Relations 170, 171, 320, and 461. The adviser must approve the selection in all cases.	
The basic senior-year program, from which individualized programs are developed, consists of the following courses:	

Minimum credits

OR&IE 580, Digital Systems Simulation	4
Three upperclass OR&IE electives as described below	9
Two field-approved electives	6
(one field-approved elective must be outside OR&IE.)	
Two courses in humanities and social sciences	6
Two approved electives	6
Available OR&IE electives are as follows:	
Manufacturing and distribution systems: OR&IE 416, 417, 451, 524, 525, and 562 and JGSM NBA 641*	
Optimization methods: OR&IE 431, 432, and 435	
Applied probability and statistics: OR&IE 462, 475 (2 credits), 476 (2 credits), 561, 563, 575 (2 credits), and 577	

*No more than one course in the Johnson Graduate School of Management may be taken as an OR&IE elective.

Scholastic requirements for the field are a passing grade in every course, a grade of C- or better in CS 211, OR&IE 270, 310, 321, 350, 360, 361 (applies to Class of 1999 and later), an overall average of at least 2.0 for each term the student is enrolled in the school, an average of 2.0 or better for OR&IE field courses, and satisfactory progress toward the completion of the degree requirements. The student's performance is reviewed at the conclusion of each term.

Operations Research and Industrial Engineering Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Operations Research and Industrial Engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA ≥ 3.50 and must be eligible for one of the *cum laude* distinctions at the time of graduation.

Content

An OR&IE honors program shall consist of at least nine credits beyond the minimum required for graduation in OR&IE, so that no part of the honors program can also be used to satisfy graduation requirements. The nine credits shall be from one or more of the following with at least four hours in the first category:

1. Advanced courses in OR&IE at the 500-level or above.
2. A significant research experience or honors project under the direct supervision of an OR&IE faculty member using OR&IE 499: OR&IE Project. A significant written report must be submitted as part of this component.
3. A significant teaching experience under the direct supervision of a faculty member in OR&IE using OR&IE 490: Teaching in OR&IE, or ENGR470: Undergraduate Engineering Teaching.

Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the first semester of their junior year. A student must be in the program for at least two semesters before graduation.

Procedures

Each application to the OR&IE honors program must have a faculty adviser to supervise the honors program. The honors adviser need not be the student's faculty adviser. The application to the program shall be a letter from the student describing the specific proposed honors program and including the explicit approval of the honors adviser. Each program must be approved by the associate director, and any changes to the student's program must also be approved by the associate director of undergraduate studies.

Master of Engineering (OR&IE) Degree Program

This one-year professional degree program stresses applications of operations research and industrial engineering and requires completion of a project. The course work centers on additional study of analytical techniques, with particular emphasis on engineering applications, especially in the design of new or improved man-machine systems, information systems, and control systems.

General admission and degree requirements are described in the introductory "Degree Programs" section. The M.Eng.(OR&IE) program is integrated with the undergraduate Field Program in Operations Research and Industrial Engineering. We also welcome applications from Cornell undergraduates in many other majors, or from qualified non-Cornellians. To ensure completion of the program in one calendar year, the entering student should have completed courses in statistics and in computer programming (Pascal or C). Students interested in the Manufacturing Option should obtain further information from the Center for Manufacturing Enterprise, 103 Frank H. T. Rhodes Hall, 607-255-7757. Students interested in the Financial Engineering Option should contact the Financial Engineering Option Office in 201 Frank H. T. Rhodes Hall, 607-255-9128. Information concerning industrial internships can be obtained from the Master of Engineering Program Office, 148 Olin Hall.

I. For matriculants with preparation comparable to that provided by the undergraduate Field Program in Operations Research and Industrial Engineering:

Fall term	Credits
OR&IE 516, Case Studies	1
OR&IE 893, Applied OR&IE Colloquium	1
M.Eng. Project	1
Technical electives	12
<i>Spring term</i>	
OR&IE 894, Applied OR&IE Colloquium	1
M.Eng. Project	minimum of 4
Technical electives	9

At least 12 credit hours of the electives specified above must be chosen from the list of courses offered by the School of Operations Research and Industrial Engineering. Other restrictions apply. A minimum of 30 credits must be taken to complete the program.

II. For matriculants from other fields who minimally fulfill the prerequisite requirements (students who have the equivalent of OR&IE 520, 523, and 560 will take other technical electives in their place):

Fall term	Credits
OR&IE 560, Engineering Probability and Statistics II	4
OR&IE 520, Operations Research I	4
OR&IE 516, Case Studies	1
OR&IE 580, Digital Systems Simulation	4

OR&IE 893, Applied OR&IE Colloquium	1
M. Eng. Project	1
<i>Spring term</i>	
OR&IE 523, Introduction to Stochastic Modeling	4
OR&IE 894, Applied OR&IE Colloquium	1
M.Eng. Project	minimum of 4
Technical electives	6

A minimum of 30 credit hours are required to complete this program. Additional program requirements exist and are described in the Master of Engineering Handbook, which is available in Room 201, Frank H. T. Rhodes Hall.

The project requirement can be filled in a variety of ways. Common elements in all project experiences include working as part of a group of three to five students on an engineering design problem, meeting with a faculty member on a regular basis, and oral and written presentation of the results obtained. Most projects address problems that actually exist in manufacturing firms, financial firms, hospitals and other service industries.

Cooperative Program with the Johnson Graduate School of Management

Undergraduates majoring in operations research and industrial engineering may be interested in a cooperative program at Cornell that leads to both Master of Engineering and Master of Business Administration (M.B.A.) degrees. With appropriate curriculum planning such a combined B.S./M.Eng./M.B.A. program can be completed in six years.

An advantage for OR&IE majors is that they study, as part of their undergraduate curriculum, several subjects that are required for the M.B.A. degree. (This is because modern management is concerned with the operation of production and service systems, and much of the analytical methodology required to deal with operating decisions is the same as that used by systems engineers in designing these systems.) An early start on meeting the business-degree requirements permits students accepted into the cooperative program to earn both the M.Eng.(OR&IE) and M.B.A. degrees in two years rather than the three years such a program would normally take.

The details of planning courses for this program should be discussed with the admissions office of the Johnson Graduate School of Management.

In accordance with this program the candidate would qualify for the B.S. degree at the end of four years, the M.Eng.(OR&IE) degree at the end of five years, and the M.B.A. degree at the end of six years.

Further details and application forms may be obtained at the office of the School of Operations Research and Industrial Engineering, Frank H. T. Rhodes Hall, and at the admissions office of the Johnson Graduate School of Management.

STATISTICS CENTER

The Cornell Statistics Center coordinates university-wide activities in statistics and probability at the graduate and research level. Students interested in graduate study in statistics and probability should apply to the Field of Statistics or to one of the other graduate fields that offer related coursework.

A list of courses in statistics and probability suitable for graduate students in the Field of Statistics is given under the heading "Statistics Center" in the section "Interdisciplinary Centers and Programs" at the front of this book. Further information can be obtained from the Director of the Statistics Center, Professor B. W. Turnbull, or from the Director of Graduate Studies for Statistics, Professor M. Wells, both at 610 Frank H. T. Rhodes Hall.

THEORETICAL AND APPLIED MECHANICS

J. T. Jenkins, chair; J. A. Burns, K. B. Cady, H. D. Conway, J. M. Guckenheimer, E. W. Hart, T. J. Healey, C. Y. Hui, R. H. Lance, S. Mukherjee, Y. H. Pao, S. L. Phoenix, R. H. Rand, P. Rosakis, A. L. Ruina, W. H. Sachse, S. Strogatz, A. Zehnder

Undergraduate Study

The Department of Theoretical and Applied Mechanics is responsible for courses in engineering mechanics and engineering mathematics, some of which are part of the Common Curriculum.

College Program in Engineering Science

A student may enroll in the College Program in Engineering Science, which is sponsored by the Department of Theoretical and Applied Mechanics. The College Program is described in the section on undergraduate study in the College of Engineering.

Master of Engineering (Engineering Mechanics) Degree Program

Composite materials designed to meet specific requirements of weight, strength, and rigidity are used increasingly in the manufacture of everyday structures and components. The Master of Engineering (Engineering Mechanics) degree program focuses on the mechanical behavior of advanced composite materials and structures and prepares students to play a role in the development of this new technology. Students from diverse engineering backgrounds, such as mechanics, structures, and materials, as well as aerospace and biomedical engineering, can normally complete the requirements for the professional Master of Engineering degree in one year.

The degree program requires satisfactory completion of 30 credits of course work, including 12 credits of courses that involve analysis, computation, design, or laboratory experience. Of these 12 credits, at least 6 must be earned in T&AM. Up to 10 credits will be awarded for an individual project involving composites. The balance of the required credits may be earned in elective courses chosen from those in the course

listing below or others approved by the student's adviser.

The Department of Theoretical and Applied Mechanics has several laboratories equipped for the fabrication and mechanical testing of composite materials and structures. Extensive computing resources are available for numerical computations, design, or other numerical- or simulation-research activities related to composites. The Materials Science Center, the Center for Theory and Simulation in Science and Engineering, and the Computer-Aided Design Instructional Facility provide additional state-of-the-art laboratories and computer resources.

ENGINEERING COURSES

Courses offered in the College of Engineering are listed under the various departments and schools.

Courses are identified with a standard abbreviation followed by a three-digit number.

Introduction to Engineering	ENGRI
Engineering Distribution	ENGRD
Engineering General Interest	ENGRG
Engineering Communications	ENGRC
Agricultural and Biological Engineering	ABEN
Applied and Engineering Physics	A&EP
Chemical Engineering	CHEME
Civil and Environmental Engineering	CEE
Computer Science	COM S
Electrical Engineering	ELE E
Geological Sciences	GEOL
Materials Science and Engineering	MS&E
Mechanical and Aerospace Engineering	M&AE
Nuclear Science and Engineering	NS&E
Operations Research and Industrial Engineering	OR&IE
Theoretical and Applied Mechanics	T&AM

ENGINEERING COMMON COURSES

Courses of General Interest

Courses in this category are of general interest and cover technical, historical, and social issues relevant to the engineering profession. These courses may also include seminar or tutorial type courses.

ENGRG 101 The Computer Age (also COM S 101)

Summer. 3 credits. Not offered every year. Credit is granted for both COM S 100 and 101 only if 101 is taken first.

An introduction to computer science and programming for students in nontechnical areas. The aims of the course are to acquaint the student with the major ideas in computer science and to develop an appreciation of algorithmic thinking. Topics may include the history of computation; microtechnology; the retrieval and transmission of information; scientific computing; computer graphics, art, and music; robotics, natural-language processing, and machine intelligence.

Students become acquainted with the notion of an algorithm by writing several programs in Pascal or Scheme and testing them on microcomputers. The amount of programming is about half that taught in COM S 100.

ENGRG 102 Drawing and Engineering Design (also M&AE 102)

Fall, spring. 1 credit. Half-term course offered twice each semester. Enrollment limited to thirty students each half term. Recommended for students without previous mechanical drawing experience. S-U grades optional.

Introduction to sketching, drawing, and graphic techniques useful in design, analysis, and presentation of ideas. Use of computer-aided drafting software is introduced in the final design project.

ENGRG 150 Advising Seminar

Fall. 0 credits. First-year students only. S-U grades only.

Discussions with freshman faculty advisers to give students information about the various fields of engineering and related career opportunities. Topics may include recent science and engineering developments, applications of engineering principles, and a view of campus resources. Visits to campus academic and research facilities may be included.

ENGRG 250 Technology in Western Society (also ELE E 250)

Fall. 3 credits. Meets humanities distribution requirement.

This course will investigate the history of technology in Western society from ancient Roman times to the present. Topics include the economic and social aspects of industrialization; the myths of heroic inventors like Morse, Edison, and Ford; the government's regulation of technology, the origins of mass production, and the spread of the automobile and microelectronics cultures in the United States.

ENGRG 290 Engineering in Europe

Spring. 2 credits. Open only to participants in the Semester in Europe Program. S-U grades only.

A specially designed course for students in residence in Hamburg, Germany. Weekly seminars and writing assignments associated with approximately ten weekly field trips to engineering sites in and around Hamburg. A term paper is required. No unexcused absences.

ENGRG 298 Inventing the Power and Information Society (also ELE E 298 and S&TS 292)

Spring. 3 credits. Approved for humanities distribution, not as field electives.

Explores the history of electricity in society from the 1830s to the present by considering the technical and social history of telecommunications, the electric-power industry, radio, television, and computers. Emphasis is placed on the changing relationship between science and technology, the economic aspects of innovation, and the social relations of this technology.

ENGRG 323 Engineering Economics and Management (also CEE 323)

Spring. 3 credits. Primarily for juniors and seniors. D. P. Loucks.

Introduction to engineering and business economics and to project management. Intended to give students a working knowledge of money management and how to

make economic comparisons of alternative engineering designs or projects. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and project-management problems.

ENGRG 356 Women in Engineering Career Planning Seminar

Spring. 1 credit. Limited to 25 students. S-U grades only.

Covers aspects of transition to the engineering profession and related issues especially of interest to women. Topics include career and life planning, the job-search process, interviewing strategies, juggling career and family, graduate education, sexual harassment and sexism in the workplace, professionalism, and networking. Corporate professionals and Cornell faculty and staff participate in class discussions.

ENGRG 360 Ethical Issues in Engineering (also S&TS 360)

Spring. 3 credits. A social-science elective for engineering students. Open to sophomores.

A discussion of ethical issues encountered in engineering practice, such as the rights of engineers in corporations, responsibility for actions, whistleblowing, conflicts of interest, and decision making based on cost-benefit analysis. Codes of ethics and ethical theory will be used to sort out conflicts the engineer may feel toward public safety, professional standards, employers, colleagues, and family. Students will present a case study to the class.

ENGRG 461 Entrepreneurship For Engineers

Fall. 3 credits.

See M&AE 461 for course description.

ENGRG 501 Bioengineering Seminar

Fall, spring. 1 credit. Primarily for juniors, seniors, and graduate students.

M. L. Shuler.

Broad survey of all aspects of bioengineering, including biomedical, bioprocess, biological, and bioenvironmental engineering and aspects of biotechnology. Sessions may be technical presentations or discussions.

Engineering Communications Courses

Courses in this category, offered by the Engineering Communications Program, develop writing and oral presentation skills relevant to engineers.

ENGRG 233/433 Topics in Engineering Communications

TBA. 3 credits.

Topics vary as the need and interest arise. Sample topics are: introductory technical communications, graphic presentation of engineering material, desktop publishing, information technologies, advanced problems in engineering communications, technology and the law. Fulfills the college technical writing requirement.

ENGRG 234/434 Independent Study in Engineering Communications

TBA. Variable credits (1-3). Credit and course level (234 or 434) determined by the amount and intellectual level of the work.

Students work closely with a Communications Program instructor to pursue an aspect of professional communications not available

through regular course work. Projects may involve writing technical documentation, creating user manuals, analyzing and producing technical graphics, or reading and writing about problems in engineering practice. Interested students should contact the Engineering Communications Program.

ENGRG 301 Writing in Engineering

TBA. 1 credit. Prerequisite: Permission of instructor. Can be used to satisfy requirements in expressive arts as a free or approved elective. *This course can only be taken in conjunction with a "writing-intensive" engineering class.*

Some "writing-intensive" engineering classes may require students to enroll in this supplementary course. Instructors from the Engineering Communications Program work with engineering faculty members to prepare students for writing assignments. Intended to strengthen understanding of the course content while enhancing communications skills. May be taken more than once, with different engineering courses.

ENGRG 350 Engineering Communications

Fall, spring, summer. 3 credits. Limited to 20 students per section.

Emphasizes technical and professional writing; also includes oral and visual presentation. Communications in real-life engineering contexts are analyzed, with case studies and assignments modeled on professional situations. Students learn to adapt language and formats—letters, memoranda, instructions, definitions, proposals, reports—to audiences having different needs and levels of technical expertise. Students also consider the social and ethical implications of the communications they encounter and produce. Taught as a workshop, with ample time for discussion. The goal throughout is clear, well-organized, responsible, and forceful professional communication. Fulfills the college technical writing requirement. Lab fee will be charged to cover photocopying costs.

ENGRG 435 Communications for Engineering Managers

Fall, spring. 3 credits. Limited to 20 students per section.

Guidance and practice in professional writing through a variety of assignments, including case write-ups on management issues. Emphasizes working effectively in teams (projects include listening skills, team roles, and respectful disagreement) and communicating with a variety of audiences, particularly technical and managerial audiences. The course is taught as a workshop and focuses on oral as well as written communication skills. Fulfills the college technical writing requirement. Lab fee will be charged to cover photocopying costs.

Introduction to Engineering Courses

Courses in this category are freshman-level courses intended to introduce students to various aspects of engineering. They have no prerequisites and are always cross-listed with a department.

ENGR 110 The Laser and Its Applications in Science, Technology, and Medicine (also A&E 110)

Fall, spring. 3 credits.

The principles of laser action, types of laser systems, elements of laser design, and applications of lasers in science, technology,

and medicine are discussed. In the laboratory students build and operate a nitrogen laser and a tunable dye laser. Demonstration experiments with several types of lasers illustrate phenomena such as holography, laser processing of materials, and Raman spectroscopy.

ENGR 111 Materials by Design (also MS&E 111)

Fall. 3 credits. E. P. Giannelis.

Explores the relationship between atomic structure and macroscopic properties of such diverse materials as metals, ceramics, polymers, and semiconductors. Hands-on project involves dissecting and analyzing various consumer products like a disposable camera or portable cassette player. Emphasis is placed on materials identification and their selection to perform an engineering function.

ENGR 112 Introduction to Chemical Engineering (also CHEM 112)

Fall, spring. 3 credits. Limited to freshmen. T. M. Duncan, C. Cohen.

Design and analysis of processes involving chemical change. Strategies for design, such as creative thinking, conceptual blockbusting, and (re)definition of the design goal, in the context of contemporary chemical engineering. Methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.

ENGR 113 Environmental Systems Engineering (also CEE 113)

Fall. 3 credits. Not open (without instructor's permission) to upper-division engineering students, who should take CEE 120 instead. C. A. Shoemaker.

Introduction to analysis, management, and modeling of environmental systems. Discussion of physical, chemical, and biological processes affecting environmental quality. Use of computers to simulate environmental phenomena. Examples include management of water resources, ecosystems concepts, solid waste management, and water quality in surface and ground waters.

ENGR 114 An Introduction to Electrical Engineering Design

Fall. 3 credits.

An introduction to electrical engineering and electronic circuit design. Students work in small groups on a series of electric circuit projects leading to the team design of a working fiber optic transmitter-receiver system. The laboratories and lectures introduce the concepts and principles of electronic circuits and focus upon circuits useful in the design project. Laboratory fee required.

ENGR 115 Engineering Application of Operations Research (also OR&IE 115)

Fall, spring. 3 credits.

An introduction to the problems and methods of Operations Research and Industrial Engineering focusing on problem areas (including inventory, network design, and resource allocation), the situations in which these problems can be found, and several standard solution techniques. In the computer laboratory, students will encounter problem simulations and use some standard software packages.

ENGRI 116 Modern Structures (also CEE 116)

Fall, spring. 3 credits. A. R. Ingraffea, G. G. Deierlein.

An introduction to the basic principles of structural engineering and to structural forms. Emphasis is placed on how various types of structures carry loads. Concepts are illustrated by a series of case studies of major structures such as spacecraft, skyscrapers, bridges, shell structures, and dams. The philosophy of engineering design and lessons learned from structural failures and earthquakes are discussed. A semester project involves the design and construction of a small balsa-wood bridge.

ENGRI 117 Introduction to Mechanical Engineering (also M&AE 117)

Fall or spring to be determined. 3 credits. Enrollment is limited to 40 students.

An introduction to topics of current interest in mechanical engineering. Specific topics vary from offering to offering. Students are urged to check in Upson 112 for details. In 1993, the course was "The Engine and the Atmosphere." This course discussed engines and their design including constraints imposed by the laws of thermodynamics, the combustion process, and the products of the exhaust. This led to a discussion of local and global environmental problems, including greenhouse warming. The dilemma of productivity versus environmental degradation and the engineer's role in this was also discussed. This offering was intended for students wishing to study mechanical engineering as well as environmental, chemical, and civil engineering.

ENGRI 118 Design Integration: A Portable CD Player (also MS&E 118 and T&AM 118)

Spring. 3 credits.

This course examines the roles of various engineering disciplines on the design of a portable compact disc (CD) player. Students are introduced to elements of mechanical, electrical, materials, environmental, manufacturing, and computer engineering as related to the CD player. Laboratory sessions and demonstrations are used to illustrate the principles of design.

ENGRI 120 Introduction to Biotechnology (also CHEME 120)

Fall. 3 credits. W. M. Saltzman.

Introduction to the fundamental science and engineering that spawned the biotechnology revolution—technologies of cell cultures, DNA, and antibodies—and the relationship between biomedical science, bioengineering, and the growing biomedical product industry. Case studies of the development of biotechnical processes, from discovery to clinical use, will include processes for vaccines, antibiotics, cancer chemotherapy, protein pharmaceuticals, and organ transplantation.

ENGRI 121 Fission, Fusion, and Radiation (also NS&E 121)

Spring. 3 credits.

Lecture-laboratory course on (1) the physical nature and biological effects of nuclear radiation; (2) benefits and hazards of nuclear energy; (3) light-water reactors, breeder reactors, and fusion reactors; and (4) uses of nuclear radiation in research. Laboratory demonstrations involve Cornell's two research reactors; detection of nuclear radiation; activation analysis using gamma-ray spectroscopy;

copy; and pulsed power generators for fusion research.

ENGRI 122 Earthquake! (also GEOL 122)

For description, see GEOL 122. L. Brown.

ENGRI 125 Chemistry of the Environment (also GEOL 125)

For description, see GEOL 125.

ENGRI 181 Engineering in Context (also Science and Technology Studies 181)

Fall. 3 credits. No prerequisites.

Illustrated lec; multimedia lab.

Survey of fundamental engineering principles designed to introduce engineering and other majors to the traditions and practices of the engineering profession and their effects on our culture. (Technological literacy for non-engineers.) Development of scientific and engineering-design principles in a variety of technological contexts. The relationship between science, technology, and engineering. Civil, mechanical, electrical, chemical, and other engineering project case studies.

ENGRI 185 Art, Archaeology, and Analysis (also ARKEO 285, ART 372, CLASS 285, ENGL 285, MS&E 285, NS&E 285, PHYS 200)

Spring. 3 credits. 3 lec. Does not meet liberal studies distribution requirements.

An interdepartmental course on application of techniques of physical sciences and engineering to cultural research. Archaeological artifacts or works of art are discussed with a focus on historical and technical aspects of their creation and on their analysis by modern methods to deduce geographical origins, to date and authenticate objects, etc.

Engineering Distribution Courses

Courses in this category are sophomore-level courses cross-listed with a department. These courses are intended to introduce students to more advanced concepts of engineering and may require pre- or co-requisites.

ENGRD 201 Introduction to the Physics and Chemistry of the Earth (also GEOL 201)

Spring. 3 credits. Prerequisites: Mathematics 191 and Physics 112.

L. M. Cathles.

Formation of the solar system: accretion and evolution of the earth. The rock cycle: radioactive isotopes and the geological time scale, plate tectonics, rock and minerals, earth dynamics, mantle plumes. The hydrologic cycle: runoff, floods and sedimentation, groundwater flow, contaminant transport. Weathering cycle: chemical cycles, CO₂ (weathering), rock cycle, controls on global temperature (CO₂ or ocean currents), oil and mineral resources.

ENGRD 202 Mechanics of Solids (also T&AM 202)

Fall, spring. 3 credits. Prerequisite:

Physics 112, coregistration in Mathematics 293 or permission of instructor.

Principles of statics, force systems, and equilibrium; frameworks; mechanics of deformable solids, stress, strain, statically indeterminate problems; mechanical properties of engineering materials; axial force, shearing force, bending moment, plane stress; Mohr's circle; bending and torsion of bars; buckling and plastic behavior.

ENGRD 203 Dynamics (also T&AM 203)

Fall, spring. 3 credits. Prerequisite:

T&AM 202, coregistration in Mathematics 294, or permission of instructor.

Newtonian dynamics of a particle, systems of particles, a rigid body. Kinematics, motion relative to a moving frame. Impulse, momentum, angular momentum, energy. Rigid-body kinematics, angular velocity, moment of momentum, the inertia tensor. Euler equations, the gyroscope.

ENGRD 210 Introduction to Electrical Systems (also ELE E 210)

Fall, spring. 3 credits. Corequisites:

Mathematics 293 and Physics 213.

Fundamental circuit elements and laws, circuit analysis techniques, and operational amplifiers circuits. Response of linear systems, with an introduction to complex frequency and phasors, forced response, average power, transfer function, and the frequency spectrum.

ENGRD 211 Computers and Programming

For description, see COM S 211.

ENGRD 212 Structure and Interpretation of Computer Programs

For description, see COM S 212.

ENGRD 219 Mass and Energy Balances (also CHEME 219)

Fall. 3 credits. Co-requisite: physical or organic chemistry or permission of instructor. P. Clancy.

Engineering problems involving material and energy balances. Batch and continuous reactive systems in the steady and unsteady states. Introduction to phase equilibria for multicomponent systems.

ENGRD 221 Thermodynamics (also M&AE 221)

Fall, spring. 3 credits. Prerequisites: MATH 192 and PHYS 112.

The definitions, concepts, and laws of thermodynamics. Applications to ideal and real gases, multiphase pure substances, gaseous reactions. Heat-engine and heat-pump cycles, with an introduction to energy-conversion systems.

ENGRD 222 Introduction to Scientific Computation

For description, see COM S 222.

ENGRD 230 Introduction to Digital Systems (also ELE E 230)

Fall, spring. 4 credits. Prerequisite: COM S 100.

An introduction to basic principles and design techniques for digital systems such as computers and communications systems. Includes Boolean algebra, switching circuits, finite state machines, and system design methodology.

ENGRD 241 Engineering Computation (also CEE 241)

Fall, spring. 3 credits. Prerequisites:

COM S 100 and MATH 293. Co-requisite: MATH 294. W. D. Philpot.

This course introduces the discipline of numerical methods while developing programming and graphics proficiency with MATLAB and spreadsheets. Numerical analysis topics considered are accuracy, precision, Taylor-series approximations, truncation and round-off errors, condition numbers, operation counts, convergence, and stability. Included are numerical methods for solving engineering problems that entail roots of functions, simultaneous linear equations,

regression, interpolation, numerical differentiation and integration, and ordinary differential equations. The context and solution of partial differential equations are broached. Applications are drawn from different areas of engineering.

ENGRD 261 Introduction to Mechanical Properties of Materials (also MS&E 261)

Fall. 3 credits. S. L. Sass.

The relationship of elastic deformation, plastic deformation, and fracture properties to structure and defects on a microscopic scale in metals, ceramics, polymers, and composite materials. Design and processing of materials to achieve high modulus, damping capacity, hardness, fracture strength, creep resistance, or fatigue resistance. Flaw-tolerant design methods using fracture mechanics.

[ENGRD 262 Introduction to Electrical Properties of Materials (also MS&E 262)]

Fall. 3 credits. Prerequisite: co-registration in PHYS 213 or electricity and magnetism in high school physics. Not offered 1996-97; next offered 1997-98.

M. O. Thompson.

Electrical and structural properties of semiconductors, the operation of p-n junctions and transistors, and the processing methods used to form modern integrated circuits. Electrical conduction in metal films, semiconductors, bipolar and field-effect transistors and light-emitting diodes. Diffusion, ion implantation, oxidation, metallization, and other process steps in fabricating semiconductor devices. Interplay between structural and electrical properties and their application to the design of semiconductor devices and integrated circuits.]

ENGRD 264 Computerized Instrumentation Design (also A&EP 264)

Fall, spring. 3 credits. Prerequisites: Engr 100 or CS 100. 1 lec, 1 lab. Fall: T. Cool; spring: J. Brock.

This course covers the use of a small computer in an engineering or scientific research laboratory. Various experiments are performed using an IBM-AT style computer (80486) running Windows. The experiments and devices to be investigated include: input and output ports, analog to digital converters (ADC), digital to analog converters (DAC), thermistors, optical sensors, digital temperature control, non-linear least squares curve fitting of experimental data, thermal diffusion, and viscosity of fluids. A second goal of this course is to develop effective written communication skills in the context of science and engineering. A number of rhetorical principles will be presented that can produce clarity in communication without oversimplifying scientific issues. Students will prepare progress reports, technical reports, and formal articles based on the experiments.

ENGRD 270 Basic Engineering Probability and Statistics (also OR&IE 270)

Fall, spring. 3 credits. Prerequisite: first-year calculus.

This course should give students a working knowledge of basic probability and statistics and their application to engineering. Computer analysis of data and simulation are emphasized. Topics include random variables, probability distributions, expecta-

tion, estimation, testing, experimental design, quality control, and regression.

AGRICULTURAL AND BIOLOGICAL ENGINEERING

Courses in agricultural and biological engineering will be found in the section listing the offerings of the College of Agriculture and Life Sciences.

APPLIED AND ENGINEERING PHYSICS

A&EP 110 The Laser and Its Applications in Science, Technology, and Medicine (also ENGR 110)

Fall, spring. 3 credits. This is a course in the Introduction to Engineering series. For description see Engineering Common Courses.

A&EP 264 Computer-Instrumentation Design (also ENGR 264)

Fall, spring. 3 credits. Prerequisites: Engr 100 or COM S 100.

For description see Engineering Common Courses.

A&EP 320 Engineering Biophysics: The Physics of Life

Spring. 3 credits. Prerequisites: freshman and sophomore chemistry, physics, math. Introduction to biophysics for engineers and students interested in bioengineering.

A&EP 321 Mathematical Physics I

Fall, summer. 4 credits. Prerequisite: Math 294. Intended for upper-level undergraduates in the physical sciences. Review of vector analysis; complex variable theory, Cauchy-Riemann conditions, complex Taylor and Laurent series, Cauchy integral formula and residue techniques, conformal mapping; Fourier Series; Fourier and Laplace transforms; ordinary differential equations; separation of variables. Texts: *Mathematical Methods for Physicists*, by Arfken; *Mathematical Physics*, by Butkov.

A&EP 322 Mathematical Physics II

Spring. 4 credits. Prerequisite: A&EP 321. Second of the two-course sequence in mathematical physics intended for upper-level undergraduates in the physical sciences.

Partial differential equations, Bessel functions, spherical harmonics, separation of variables, wave and diffusion equations, Laplace, Helmholtz and Poisson's Equations, transform techniques, Green's functions; integral equations, Fredholm equations, kernels; complex variables, theory, branch points and cuts, Riemann sheets, method of steepest descent; tensors, contravariant and covariant representations; group theory, matrix representations, class and character. Texts: *Mathematical Methods for Physicists*, by Arfken; *Mathematical Physics*, by Butkov.

A&EP 330 Modern Experimental Optics (see also PHYS 330)

Fall. 4 credits. Enrollment limited. Prerequisites: Physics 214 or equivalent. E. Bodenschatz.

A practical laboratory course in basic and modern optics. The various projects cover a wide range of topics from geometrical optics

to classical wave properties such as interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology and engineering. The students will also be introduced to digital imaging and image processing techniques.

A&EP 333 Mechanics of Particles and Solid Bodies

Fall, summer. 4 credits. Prerequisites: Physics 112 or 116 and coregistration in A&EP 321 or equivalent or permission of instructor.

Newton's mechanics; constants of the motion; many-body systems; linear oscillations; variational calculus; Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; basic introduction to relativistic mechanics. Emphasis on mathematical treatments, physical concepts, and applications. (On the level of *Classical Dynamics*, by Marion and Thornton).

A&EP 355 Intermediate Electromagnetism

Fall, summer. 4 credits. Prerequisites: PHYS 214 or 217 and coregistration in A&EP 321 or equivalent, or permission of instructor.

Topics: vector calculus, electrostatics, analytic and numerical solutions to Laplace's equation in various geometries, electric and magnetic multipoles, electric and magnetic materials, energy in fields, quasistatics and magnetic circuit design. Emphasis is on developing proficiency with analytical and numerical solution techniques in order to solve real-world design problems.

A&EP 356 Intermediate Electrodynamics

Spring. 4 credits. Prerequisite: A&EP 355 and coregistration in A&EP 322 or equivalent, or permission of instructor. Topics: electromagnetic waves, waveguides, transmission lines, dispersive media, radiation, special relativity, interference phenomena. Emphasis on physical concepts and developing ability to design/analyze microwave circuits and antenna arrays.

A&EP 361 Introductory Quantum Mechanics

Spring. 4 credits. Prerequisites: A&EP 333 or Physics 318; coregistration in A&EP 322 or equivalent and in A&EP 356 or Physics 326.

A first course in the systematic theory of quantum phenomena. Topics include wave mechanics, the Dirac formalism, angular momentum, the hydrogen atom, and perturbation theory.

A&EP 363 Electronic Circuits (also PHYS 360)

Fall, spring. 4 credits. Prerequisites: Physics 208 or 213 or permission of the instructor. No previous experience with electronics assumed; however, the course moves quickly through some introductory topics such as basic DC circuits. Fall term usually less crowded. 1 lec, 2 labs. Fall: E. Kirkland; spring: J. Alexander.

Analyze, design, build and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits:

resistors, capacitors, operational amplifiers (linear amplifiers with feedback, oscillators, comparators), filters, diodes and transistors. Digital circuits: combinatorial (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging.

A&EP 403 Introduction to Nuclear Science and Engineering I (also NS&E 403)

Fall. 3 credits. Prerequisite: Physics 214 or Mathematics 294.

For description see NS&E 403.

A&EP 423 Statistical Thermodynamics

Fall. 4 credits. Prerequisite: Introductory three-semester physics sequence plus one year of junior-level mathematics.

Quantum statistical basis for equilibrium thermodynamics, microcanonical, canonical and grand canonical ensembles, and partition functions. Classical and quantum ideal gases, paramagnetic and multiple-state systems. Maxwell-Boltzmann, Fermi-Dirac, and Bose-Einstein statistics and applications. Introduction to systems of interacting particles. At the level of *Thermal Physics*, by Kittel and Kroemer, and *Statistical Physics*, by Rosser.

A&EP 434 Continuum Physics

Spring. 4 credits. Prerequisites: A&EP 333 and 356 or equivalent.

Elasticity and Fluid Mechanics: Basic phenomena of elasticity, simple beams, stress and strain tensors, materials equations, equations of motion, general beam equations, waves; Fluids: basic phenomena, Navier Stokes equation, scaling laws, Reynolds and Froude numbers, Poiseuille flows, Stokes drag on sphere, boundary layers, inviscid and incompressible flows, potential flow, conservation laws, Bernoulli equation, vorticity and circulation, life of wings, jets, instabilities, introduction to turbulence. Projects in combination with A&EP 438 possible. At the level of Lai, Rubin and Krempel, *Continuum Mechanics*, and Tritton, *Introduction to Fluid Mechanics*.

A&EP 438 Computational Engineering Physics

Spring. 3 credits. Prerequisites: COM S 100, A&EP 321, 333, 355, 361, or equivalent, or permission of instructor; co-registration in 361 permitted.

Numerical computation (derivatives, integrals, differential equations, matrices, boundary-value problems, relaxation, Monte Carlo methods, etc.) will be introduced and applied to engineering physics problems that cannot be solved analytically (three-body problem, electrostatic fields, quantum energy levels, etc.). Computer programming required (in C or optionally C++, FORTRAN, or Pascal). Some prior exposure to programming assumed but no previous experience with C assumed.

A&EP 440 Quantum and Nonlinear Optics

Spring. 4 credits. Prerequisites: A&EP 356, A&EP 361 or equivalent.

An introduction to the fundamentals of the interaction of laser light with matter. Topics include the propagation of laser beams in bulk media and in guided-wave structures, the origins of optical nonlinearities, harmonic generation, self-focusing, optical bistability, propagation of ultrashort pulses, solitons,

optical phase conjugation, optical resonance and two-level atoms, atom cooling and trapping, multiphoton processes, spontaneous and stimulated scattering, ultra-intense laser-matter interactions.

A&EP 484 Introduction to Controlled Fusion: Principles and Technology (also ELE E 484, M&AE 559, and NS&E 484)

Spring. 3 credits. Not offered every year.

Prerequisites: Physics 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics, and permission of instructor. Intended for seniors and graduate students.

For description see NS&E 484.

A&EP 490 Independent Study in Engineering Physics

Fall, spring. Credit to be arranged.

Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the faculty. The study can take a number of forms; for example, design of laboratory apparatus, performance of laboratory measurements, computer simulation or software developments, theoretical design and analysis. Details to be arranged with respective faculty member.

A&EP 606 Introduction to Plasma Physics (also ELE E 581)

For description, see ELE E 581.

A&EP 607 Advanced Plasma Physics

For description, see ELE E 582.

A&EP 609 Nuclear Physics for Applications (also NS&E 509)

Fall. 4 credits. Prerequisite: an introductory course in modern physics, including quantum mechanics. Offered on demand.

The nuclear interaction. Properties of ground and excited states of nuclei; models of nuclear structure; alpha, beta, gamma radioactivity; low-energy nuclear reactions—resonant and nonresonant scattering, absorption, and fission. At the level of *Introduction to Nuclear Physics*, by Enge.

A&EP 612 Nuclear Reactor Theory

Fall. 4 credits. Prerequisites: a year of advanced calculus and some nuclear physics. Offered on demand.

Physical theory of fission reactors. Fission and neutron interactions with matter; theory of neutron diffusion; slowing down and thermalization; calculations of criticality and neutron-flux distribution in nuclear reactors. Reactor kinetics. At the level of *Nuclear Reactor Theory*, by Lamarsh.

A&EP 616 Biophysical Laser Microscopy

Fall 1997. 2 credits. Prerequisite: graduate or senior level in science or engineering.

Principles of laser microscopy. Photophysics of molecular fluorescence. Nonlinear laser microscopy by multi-photon excitation. Confocal optics. Three-dimensionally resolved microimaging of biochemistry. Real time imaging dynamical processes. Laser light sources, modelocked lasers. Time-resolved fluorescence and energy transfer. Three-dimensional image reconstructions. Spatially resolved photochemistry; photobleaching, photolysis, photo-activation of caged bioeffector molecules and neurotransmitters for micropharmacology. Detection, imaging, and tracking of individual molecules. Nanometer scanning probe microscopy:

atomic force, optical force, near field and microinterferometry.]

A&EP 633 Nuclear Reactor Engineering

Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand.

The fundamentals of nuclear reactor engineering, reactor siting and safety, fluid flow and heat transfer, control, environmental effects, and radiation protection.

A&EP 638 Intense Pulsed Electron and Ion Beams: Physics and Technology

Spring. 2 credits. Prerequisites: A&EP 606 (ELE E 581) and 607 (ELE E 582) or equivalent, or permission of instructor.

Offered when demand warrants.

Topics include (1) theoretical aspects of intense electron and ion beams, such as equilibria and stability; (2) technology of intense beam production, such as pulsed-power generator principles, and electron and ion diode operation; and (3) applications of intense beams, such as to controlled fusion, microwave generation, and laser pumping. Extensive discussion of experimental results.

A&EP 651 Nuclear Measurements Laboratory

Spring. 4 credits. Prerequisite: A&EP 609 or equivalent. Primarily for graduate students in nuclear fields. A less-intensive related course, NS&E 551, is intended for students in non-nuclear fields in which nuclear methods are used. Offered on demand.

Lectures on interaction of radiation with matter, radiation protection, and nuclear instruments. Experiments in radiation detection, attenuation, and measurement; activation analysis; neutron radiography; reactor physics. The TRIGA reactor and the Zero Power Reactor are used. At the level of *Radiation Detection and Measurement*, by Knoll.

A&EP 661 Microcharacterization

Fall. 3 credits. Prerequisites: introductory three-semester physics sequence or an introductory course in modern physics. At the senior/first-year graduate level.

The basic physical principles underlying the many modern microanalytical techniques available for characterizing materials from volumes less than a cubic micron. Discussion centers on the physics of the interaction process by which the characterization is performed, the methodology used in performing the characterization, the advantages and limitations of each technique, and the instrumentation involved in each characterization method.

A&EP 662 Micro/Nano-fabrication and Processing

Spring. 3 credits.

An introduction to the fundamentals of micro and nano-fabricating and patterning thin-film materials and surfaces, with emphasis on electronic materials, with emphasis on electronic and optical materials, micromechanics, and other applications. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes. At the level of Brodie and Muray.

A&EP 681-689 Special Topics in Applied Physics

Topics, instructors, and credits to be announced each term. Typical topics include quantum superconducting devices, physics of submicron conductors, nonlinear fluctuators, biophysical processes, molecular fluorescence.

A&EP 711 Principles of Diffraction (also MS&E 610)

Spring. 4 credits. Offered alternate years. Introduction to diffraction phenomena as applied to solid-state problems. Scattering and absorption of neutrons, electrons, and X-ray beams, with particular emphasis on synchrotron radiation X-ray sources. Diffraction from two- and three-dimensional periodic lattices. Fourier representation of scattering centers and the effect of thermal vibrations. Diffraction from almost periodic structures, surface layers, gases, and amorphous materials. Survey of dynamical diffraction from perfect and imperfect lattices. Several laboratory experiments will be conducted.

A&EP 751/752 M ENG Project

751, fall and spring. 6-12 credits to be arranged. Required for candidates for the M.Eng. (Engineering Physics) degree. Independent study under the direction of a member of the university faculty. Students participate in an independent research project through work on a special problem related to their field of interest. A formal and complete research report is required.

A&EP 753 Special Topics Seminar in Applied Physics

Fall. 4 credits. Prerequisite: undergraduate physics. Required for candidates for the M.Eng. (Engineering Physics) degree and recommended for seniors in engineering physics.

Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.

CHEMICAL ENGINEERING

CHEME 112 Introduction to Chemical Engineering (also ENGRI 112)

Fall, spring. 3 credits. Limited to freshmen. T. M. Duncan, C. Cohen. For description see Engineering Common Courses.

CHEME 120 Introduction to Biotechnology (also ENGRI 120)

Fall. 3 credits. W. M. Saltzman. For description see Engineering Common Courses.

CHEME 219 Mass and Energy Balances (also ENGRD 219)

Fall. 3 credits. Corequisite: physical or organic chemistry or permission of instructor. P. Clancy. For description see Engineering Common Courses.

CHEME 301 Nonresident Lectures

Spring. 1 credit. P. Clancy. Lecturers from industry and from selected departments of the university provide information to assist students in their post-graduate plans.

CHEME 313 Chemical Engineering Thermodynamics

Fall. 4 credits. Corequisite: physical chemistry. A. Z. Panagiotopoulos. A study of the first and second laws, with application to batch and flow processes. Thermodynamic properties of fluids; applications of thermodynamics to compressors, power cycles, refrigeration; thermodynamic analysis of processes. Thermodynamics of mixtures, phase equilibria and phase diagrams. Estimation methods. Heat effects, chemical equilibria.

CHEME 323 Fluid Mechanics

Fall. 3 credits. Prerequisites: CHEME 219 and engineering mathematics sequence. P. H. Steen.

Fundamentals of fluid mechanics. Macroscopic and microscopic balances. Applications to problems involving viscous flow.

CHEME 324 Heat and Mass Transfer

Spring. 3 credits. Prerequisite: CHEME 323. W. L. Olbricht. Fundamentals of heat and mass transfer. Macroscopic and microscopic balances. Applications to problems involving conduction, convection, and diffusion.

CHEME 332 Analysis of Separation Processes

Spring. 4 credits. Prerequisites: CHEME 313 and 323. K. E. Gubbins. Analysis of separation processes involving phase equilibria and mass transfer. Phase equilibria; binary and multicomponent distillation; liquid-liquid extraction; gas absorption, adsorption, membrane separations.

CHEME 390 Reaction Kinetics and Reactor Design

Spring. 3 credits. Prerequisites: CHEME 313 and 323. D. L. Koch.

A study of chemical reaction kinetics and principles of reactor design for chemical processes.

CHEME 432 Chemical Engineering Laboratory

Fall. 4 credits. Prerequisites: CHEME 323, 324, 332, and 390. Staff. Laboratory experiments in fluid dynamics, heat and mass transfer, kinetics, other operations. Correlation and interpretation of data. Technical report writing.

CHEME 462 Chemical Process Design

Spring. 4 credits. Prerequisite: CHEME 432. Staff. A consideration of process and economic alternatives in selected chemical processes; design and assessment.

CHEME 472 Process Control

Fall. 3 credits. Prerequisites: CHEME 324 and 390. W. L. Olbricht. Analysis of the dynamics of chemical processes and design of feedback and feedforward control systems. Laplace transform techniques; stability analysis; frequency-response analysis. An introduction to multivariable control.

CHEME 481 Biomedical Engineering

Spring. 3 credits. Prerequisite: CHEME 324 or equivalent or permission of instructor. W. M. Saltzman. Special topics in biomedical engineering, including cell separations, blood flow, design of artificial devices, biomaterials, image analysis, biological transport phenomena, pharmacokinetics and drug delivery, biomedical transducers (ECG and pace makers), and analysis of physiological processes such as adhesion, mobility, secretion, and growth.

CHEME 490 Undergraduate Projects in Chemical Engineering

Fall, spring. Variable credit. Research or studies on special problems in chemical engineering.

CHEME 491 Undergraduate Teaching in Chemical Engineering

Fall, spring. 1 credit. Methods of instruction in chemical engineering acquired through discussions with faculty and by assisting with the instruction of freshmen and sophomores.

CHEME 520 Chemical, Pharmaceutical, and Food Processing

Spring. Variable to 3 credits. Prerequisite: seniors or M.Eng. students with one term of college chemistry, C. Cohen, M. L. Shuler, and S. Mulvaney. This course consists of three equal parts, each worth one credit. The chemical part is open to non-chemical engineers only and covers process fundamentals, design, and control of continuous large-scale chemical processes. Pharmaceutical processing covers fermentation, purification, and sterilization. Food processing emphasizes food preservation principles and technology.

CHEME 562 Managing Chemical Process Design

Fall. 1 or 2 credits. Prerequisite: CHEME 462. K. E. Ackley. Guidance and evaluation of chemical process designs developed by teams of chemical engineers.

CHEME 564 Design of Chemical Reactors

Spring. 3 credits. Prerequisite: CHEME 390 or equivalent. P. Harriott. Design, scale-up, and optimization of chemical reactors with allowance for heat and mass transfer and nonideal flow patterns. Homework problems feature analysis of published data for gas-solid, gas-liquid, and three-phase reaction systems.

CHEME 565 Design Project

Fall, spring. 3 or 6 credits. Required for students in the M.Eng.(Chemical) program. Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

[CHEME 566 Systematic Methods for Process Design

Spring. 3 credits. Prerequisite: CHEME 332 or equivalent. Not offered 1996-97. An introduction to the synthesis and use of computer systems for steady-state simulation of chemical processes. Systematic design methods for vapor-liquid processes, including synthesis methods for separation systems and heat exchanger networks.]

CHEME 590 Special Projects in Chemical Engineering

Fall, spring. Variable credit. Limited to graduate students.

Non-thesis research or studies on special problems in chemical engineering.

CHEME 640 Polymeric Materials

Fall. 3 credits. F. Rodriguez.

Chemistry and physics of the formation and characterization of polymers. Principles of fabrication.

CHEME 642 Polymeric Materials Laboratory

Spring. 2 or 3 credits. Prerequisite: CHEME 640. F. Rodriguez.

Experiments in the formation, characterization, fabrication, and testing of polymers.

CHEME 643 Introduction to Bioprocess Engineering

Fall. 3 credits. Prerequisite: CHEME 390 or permission of instructor. No prior background in the biological sciences required. M. L. Shuler.

A discussion of principles involved in using microorganisms, tissue cultures, and enzymes for processing. Application to food, fermentation, and pharmaceutical industries and to biological waste treatment.

CHEME 645 Advanced Concepts in Biological Engineering

Spring. 3 credits. Prerequisite: CHEME 643 or equivalent or permission of instructor. Not offered spring 1997. D. A. Hammer.

Fundamentals of biochemical and biomedical engineering, with additional emphasis on cell and membrane biophysics. Topics include cell-surface receptor phenomena, protein diffusion, cell adhesion, membrane biophysics, cell motility and growth, mathematical immunology, virus binding and infection, enzyme catalysis, bioseparation, and genetically modified organisms.

[CHEME 648 Polymers in Electronics and Related Areas]

Spring. 3 credits. Prerequisite: 640 or permission of instructor. Not offered 1996-97. F. Rodriguez.

Applications of polymers as resists for microlithography, as insulators, and as conductors. Radiation effects, polymer synthesis, and surface characterization. Additional special topics may be covered.]

CHEME 656 Separations Using Membranes or Porous Solids

Spring. 3 credits. Prerequisites: ChemE 324 and 332. Not offered spring 1997; next offered spring 1998. P. Harriott.

Diffusion of small molecules in gases, liquids, and solids. Membrane separation processes including gas separation, pervaporation, reverse osmosis, and ultrafiltration. Purification of gases and liquids by adsorption, ion exchange, and chromatography.

CHEME 661 Air Pollution Control

Fall. 3 credits. P. Harriott.

Origin of air pollutants, U.S. emission standards, dispersion equations. Design of equipment for removal of particulate and gaseous pollutants formed in combustion and chemical processing.

[CHEME 673 Adsorption and Reactions on Chemically Reactive Solids]

Fall. 3 credits. Not offered 1996-97. R. P. Merrill.

The physics and chemistry of reactions at solid surfaces are presented in molecular detail. The emphasis is on the use of modern spectroscopic techniques to determine the geometric structure, electronic properties, and reaction sequences on well-defined surfaces. Examples from the preparation of optoelectronic materials and from catalysis will be given to illustrate the concepts and principles presented.]

CHEME 675 Synthetic Polymer Chemistry (also MS&E 671 and Chemistry 671)

Fall. 4 credits. Prerequisites: Chem 359-360 or equivalent or permission of instructor. MS&E 620 is recommended.

For description see Chemistry 671.

[CHEME 681 Dynamics of Colloidal Systems]

Fall. 3 credits. Prerequisite: basic understanding of thermodynamics and fluid dynamics. Offered alternate years. Not offered fall 1996 and fall 1998; next offered fall 1997. A. Z. Panagiotopoulos.

Fundamental descriptions of colloidal systems under equilibrium and non-equilibrium conditions. Phase equilibria of surfactant systems, thermodynamics of micelle formation, forces between colloidal particles, electrokinetic phenomena, flocculation and aggregation, transport of surfactant in interfacial systems, stability of emulsions, and dynamics of thin films. Open to advanced undergraduates and graduate students from all fields.]

CHEME 711 Advanced Chemical Engineering Thermodynamics

Fall. 3 credits. Prerequisite: CHEME 313 or equivalent. K. E. Gubbins.

Postulatory approach to thermodynamics. Legendre transformations. Equilibrium and stability of general thermodynamic systems. Applications of thermodynamic methods to advanced problems in chemical engineering. Introduction to statistical mechanical ensembles, phase transitions, Monte Carlo methods, and theory of liquids.

CHEME 713 Chemical Kinetics and Dynamics

Spring. 3 credits. Prerequisite: CHEME 390 or equivalent. R. P. Merrill.

Microscopic and macroscopic viewpoints. Connections between phenomenological chemical kinetics and molecular reaction dynamics. Reaction cross sections, potential energy surfaces, and dynamics of bimolecular collisions. Molecular beam scattering. Transition state theory. Unimolecular reaction dynamics. Complex chemically reacting systems: reactor stability, multiple steady states, oscillations, and bifurcation. Reactions in heterogeneous media. Free-radical mechanisms in combustion and pyrolysis.

CHEME 721 Thermodynamics and Phase Change Heat Transfer (also M&AE 652)

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.

For description see M&AE 652.

CHEME 731 Advanced Fluid Mechanics and Heat Transfer

Fall. 3 credits. Prerequisites: CHEME 323 and 324 or equivalent. D. L. Koch.

Derivation of the equations of motion for Newtonian fluids. Low Reynolds number fluid dynamics, lubrication theory, inviscid fluid dynamics. Boundary layer theory. Convective and conductive heat transfer.

CHEME 732 Diffusion and Mass Transfer

Spring. 2 credits. Prerequisite: CHEME 731 or equivalent. P. H. Steen.

Conservation equations in multicomponent systems, irreversible thermodynamics, dispersion, and Brownian diffusion. Mass transfer for convective diffusion in liquids. Application to a variety of problems such as coagulation of aerosols, diffusion through films and membranes, liquid-liquid extraction, chemical vapor deposition, polymer rheology and diffusion, and reaction-diffusion systems.

CHEME 741 Selected Topics in Biochemical Engineering

Fall. 1 credit (may be repeated for credit). Prerequisite: CHEME 643 or permission of instructor. M. L. Shuler and W. M. Saltzman.

Discussion of current topics and research in biochemical engineering for graduate students.

CHEME 745 Physical Polymer Science I

Fall. 3 credits. Co-requisite: CHEME 711 or equivalent. C. Cohen.

Thermodynamic properties of dilute, semidilute, and concentrated solutions from both classical and scaling approaches. Characterization techniques of dilute solutions: osmometry, light scattering, viscometry, and sedimentation. Rubber elasticity; mechanical and thermodynamic properties of gels. Polymer melts: equations of state and glass transition phenomena.

CHEME 751 Mathematical Methods of Chemical Engineering Analysis

Fall. 4 credits. A. B. Anton.

Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbation, multiple scales, asymptotic analysis. Linear and nonlinear ordinary differential equations, partial differential equations.

CHEME 753 Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation

Fall. 3 credits. Prerequisite: CHEME 751 or equivalent. Offered alternate years. P. H. Steen.

Elements of stability and bifurcation theory. Branch-following techniques. Stability of discrete and continuous systems. Application to elasticity, reaction-diffusion, and hydrodynamic systems using software for continuation problems.

CHEME 772 Theory of Molecular Liquids

Spring. 3 credits. Prerequisite: CHEME 711 or equivalent.

Theory of intermolecular forces, and equilibrium statistical mechanics for nonspherical molecules. Distribution functions. Applications to thermodynamics of such fluids using integral equation and perturbation theory techniques. Mixture properties, phase diagrams for mixtures with polar or quadrupolar components. Surface properties.

CHEME 774 Atomistic Simulation of Materials

Spring. 3 credits. Prerequisite: Competence in FORTRAN, PASCAL, or C. Prior knowledge of statistical mechanics helpful. Offered alternate years.
A. Z. Panagiotopoulos.

The statistical mechanical theory behind Monte-Carlo and Molecular-Dynamics computer-simulation techniques. Strong emphasis is placed on students writing their own MC and MD code. Calculation of distribution functions, thermodynamic, kinetic and structural properties. Introduction to the application of computer graphics to simulation. Interparticle forces and application of atomistic simulation of systems containing metals, semiconductors, and biological materials. Issues of code efficiency and vectorization.

CHEME 790 Seminar

Fall, spring. 1 credit each term.
General chemical engineering seminar required of all graduate students in the Field of Chemical Engineering.

CHEME 792 Advanced Seminar in Thermodynamics

Fall, spring. 1 credit.
A forum for talks by graduate students and faculty members on topics of current interest in thermodynamics and statistical mechanics.

CHEME 890 Thesis Research

Fall, spring. Variable credit.
Thesis research for the M.S. degree in chemical engineering.

CHEME 990 Thesis Research

Fall, spring. Variable credit.
Thesis research for the Ph.D. degree in chemical engineering.

CIVIL AND ENVIRONMENTAL ENGINEERING

General

CEE 113 Environmental Systems Engineering (also ENGRI 113)

Fall. 3 credits. C. A. Shoemaker.
For description see Engineering Common Courses.

CEE 116 Modern Structures (also ENGRI 116)

Fall, spring. 3 credits. A. R. Ingraffea, G. G. Deierlein.
For description see Engineering Common Courses.

CEE 120 Readings on the Environment

Spring. 1 credit. Staff.
A reading course from an introductory environmental text. Topics include structure and dynamics of ecosystems, water habitats and communities, water resources, toxic-waste pollution of surface and groundwater, international water-pollution problems, energy resources, nuclear-waste disposal, hydroelectric power, environmental carcinogens. Not available to students receiving credit for ENGRI 113 or Natural Resources 201.

CEE 241 Engineering Computation (also ENGRD 241)

Fall or spring. 3 credits. Prerequisites: COM S 100 and MATH 293. Corequisite: MATH 294. W. D. Philpot.
For description see Engineering Common Courses.

CEE 304 Uncertainty Analysis in Engineering

Fall. 4 credits. Prerequisite: first-year calculus. M. D. Grigoriu.
An introduction to probability theory and statistical techniques, with examples from civil, environmental, agricultural, and related disciplines. The course covers data presentation, probability theory, commonly used probability distributions, parameter estimation, probability plotting and normality tests, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Examples include structural reliability, models of vehicle arrivals, and distributions describing wind speeds, floods, pollutant concentrations, and soil and material properties. Total quality management employed.

CEE 309 Special Topics in Civil and Environmental Engineering

Fall, spring. 1-6 credits. Staff.
Supervised study by individuals or groups of upper-division students on an undergraduate research project or on specialized topics not covered in regular courses.

CEE 400 Senior Honors Thesis

Fall, spring. 1-6 credits. Staff.
Available to students admitted to the CEE Honors Program. Supervised research, study, and/or project work resulting in a written report or honors thesis.

CEE 401 Undergraduate Engineering Teaching in CEE

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff.
Methods of instruction developed through discussions with faculty and by assisting with the instruction of undergraduates under the supervision of faculty.

CEE 501 Civil and Environmental Engineering Design Project I

Fall. 3 credits. Required for students in the M.Eng.(Civil) program. Staff.
Design of major civil engineering project. Planning and preliminary design in fall term; final design in January intersession (CEE 502).

CEE 502 Civil and Environmental Engineering Design Project II

Spring (work required during January intersession). 3 credits. Required for students in the M.Eng.(Civil) program. Prerequisite: CEE 501. Staff.
A continuation of CEE 501.

CEE 503 Professional Practice in Engineering

Spring. 3 credits. Required for and limited to students in the M.Eng.(Civil) program. Staff.
Financial, legal, regulatory, ethical, and business aspects of engineering practice are examined in detail. Students are expected to develop their understanding of the interrelations among the physical, social, economic, and ethical constraints on engineering design.

CEE 601 Water Resources and Environmental Engineering Seminar

Fall. 1 credit.
Presentation of topics of current interest.

Remote Sensing

CEE 411 Remote Sensing: Environmental Applications (also SCAS 461)

Spring. 3 credits. Prerequisite: permission of instructor. Staff.
A survey of how remote sensing and resource inventory methods are applied to field-based studies of environmental systems. Laboratory emphasis is on using maps, spatial databases, global positioning systems, and aerospace imagery to discriminate, measure, inventory, and monitor environmental resources.

CEE 610 Remote Sensing Fundamentals (also SCAS 660)

Fall. 3 credits. Prerequisite: permission of instructor. W. D. Philpot.
An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors; sensor and ground-data acquisition; data analysis and interpretation; and project design.

[CEE 615 Digital Image Processing

Spring. 3 credits. Prerequisites: facility with algebra and trigonometry (e.g., MATH 109) and statistics (e.g., CEE 304 or ARME 310), or permission of instructor. Not offered 1996-97; next offered 1998-99. W. D. Philpot.

An introduction to digital image-processing concepts and techniques, with emphasis on remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, and classification. Assignments will require the use of image-processing software and graphics.)

CEE 617 Project—Remote Sensing

On demand. 1-6 credits. W. D. Philpot.
Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

CEE 618 Special Topics—Remote Sensing

On demand. 1-6 credits. W. D. Philpot.
Supervised study in small groups on one or more special topics not covered in the regular courses. Special topics may be of a theoretical or applied nature.

CEE 619 Seminar in Remote Sensing (also SCAS 662)

Spring. 1 credit. S-U grades only.
Lectures on current developments in assessing earth resources or the environment. Each week a different topic on remote sensing or geographic information systems is presented by specialists from government, industry, Cornell, or other research or academic institutions.

CEE 710 Research—Remote Sensing

On demand. 1-6 credits. W. D. Philpot.
For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

CEE 810 Thesis—Remote Sensing

Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. W. D. Philpot.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Environmental and Public Systems

See also CEE 113, CEE 120, CEE 241, CEE 304, and CEE 597.

CEE 323 Engineering Economics and Management (also ENGRG 323)

Spring. 3 credits. Prerequisites: MATH 294 and systems (CEE 323). Intended for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors.

D. P. Loucks.

For description see Engineering Common Courses.

CEE 423 Environmental Quality Systems Analysis

Spring. 3 credits. Prerequisites: MATH 294 and systems (CEE 323). Intended for undergraduates who have not taken OR&IE 320 or ABEN 475. Most lectures concurrent with CEE 623.

C. A. Shoemaker.

Applications of optimization and simulation methods to the development of plans and the design and operation of facilities for managing environmental quality. Introduction to algorithms for nonlinear programming, linear programming, and sensitivity analysis. See description of CEE 623 for water quality applications and case studies.

CEE 528 Public Political Economy (also ECON 539)

Spring. 4 credits. R. E. Schuler.

For description, see ECON 539.

CEE 529 Water and Environmental Resources Problems and Policies

Spring. 3 credits. Intended primarily for graduate engineering and non-engineering students but open to qualified upperclass students. Prerequisite: permission of instructor. D. J. Allee and L. B. Dworsky.

Evaluation, appraisal, and prospects for problems involving water and environmental resources. Organization and public policies in the federal system.

CEE 620 Water-Resources Systems I

Fall. 3 credits. Prerequisite: CEE 323 or equivalent. D. P. Loucks.

Development and application of deterministic and stochastic optimization and simulation models for water-resources planning and management. River-basin modeling, including reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, and water-quality prediction and control.

CEE 621 Water-Resources Systems II: Stochastic Hydrology

Spring. 3 credits. Prerequisites: CEE 304 and 620 or permission of instructor. Offered 1996-97 and 1998-99. Not offered 1997-98. J. R. Stedinger.

Course examines statistical, time series, and stochastic optimization methods used to address water resources problems. Statistical issues include properties of moments and other statistical estimators; maximum likelihood, method of moments, and method of L-moments estimation; censored datasets and historical information; probability plotting; Bayesian inference and index flood methods; ARMA and Box-Jenkins models; and disaggregation and multivariate stochastic streamflow models. Course also addresses Monte Carlo methods, stochastic simulation of water resource systems, and stochastic reservoir operation optimization models.

CEE 623 Environmental Quality Systems Analysis

Spring. 3 credits. Prerequisites: MATH 294 and optimization (ABEN 475, CEE 593, or OR&IE 320/520) and probability and statistics (CEE 304 or OR&IE 270), or permission of instructor. C. A. Shoemaker.

Applications of optimization, simulation methods, and uncertainty analysis to the design and operation of facilities for managing the quality of surface- and ground-water. Applications include location of wastewater, solid waste, and hazardous-waste facilities, restoration of dissolved oxygen levels in rivers, and reclamation of contaminated aquifers. Optimization applications use linear programming, and integer, dynamic, and nonlinear programming.

CEE 628 Environmental and Water Resources Systems Analysis Seminar

Spring. 1 credit. Prerequisite: permission of instructor. Staff.

Graduate students and faculty members give informal lectures on various topics related to ongoing research in environmental or water resources systems planning and analysis.

CEE 722 Environmental and Water Resources Systems Analysis Research

On demand. 1-6 credits. Prerequisite: permission of instructor. Preparation must be suitable to the investigation to be undertaken. Staff.

Investigations of particular environmental or water resources systems problems.

CEE 729 Special Topics in Environmental or Water Resources Systems Analysis

On demand. 1-6 credits. Staff.

Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

CEE 820 Thesis—Environmental and Water Resource Systems

Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.

A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Fluid Mechanics and Hydrology

See also CEE 241 and CEE 655.

CEE 331 Fluid Mechanics

Fall, usually offered in summer for Engineering Co-op Program. 4 credits. Prerequisite: ENGRD 202 (may be taken concurrently). W. H. Brutsaert.

Hydrostatics, the basic equations of fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, open-channel flow. Elements of design in water supply systems, canals, and other hydraulic schemes.

CEE 332 Hydraulic Engineering

Spring. 4 credits. Prerequisite: CEE 331. M. L. Weber-Shirk.

Application of fluid-mechanical principles to problems of engineering practice and design: hydraulic machinery, water-distribution systems, open-channel design, river engineering, groundwater flow, and pollutant

dispersal. Lectures supplemented by laboratory work and a design project.

[CEE 431 Geohydrology (also ABEN 471 also GEOL 445)]

Not offered 1996-97 and 1998-99; offered 1997-98.

For description, see GEOL 445.]

CEE 435 Coastal Engineering

Fall. 4 credits. Prerequisite: CEE 331. P. L.-F. Liu.

Introduction to water wave phenomena, including wave generation, shoaling, refraction, diffraction, and breaking. Applications of wave theories to engineering design problems such as forces on coastal structures and beach erosion in coastal zones. Lectures supplemented by four laboratory assignments and a design project.

[CEE 630 Advanced Fluid Mechanics

Fall. 3 credits. Prerequisite: CEE 331. Not offered 1996-97 and 1998-99; offered 1997-98. Staff.

Introduction to tensor analysis; conservation of mass, momentum, and energy. Rigorous treatment includes study of exact solutions of the Navier-Stokes equations. Asymptotic approximations at low and high Reynolds numbers. Similitude and modeling. Laminar diffusion of momentum, mass, and heat.]

CEE 631 Flow and Contaminant Transport Modeling in Groundwater

Spring. 3 credits. Prerequisites: MATH 294 or equivalent, ENGRD 241 or experience in numerical methods and programming, and elementary fluid mechanics. P. L.-F. Liu.

Potential flows and their calculation. Numerical methods include finite difference, finite elements, and boundary elements. Fundamental equations of saturated and unsaturated flow in porous media. Flow in fractured media. Numerical modeling of transport in porous media. Diffusion and advective diffusion in one, two, and three dimensions. Anisotropy. Additional terms for reactive substances. The course will include the use of computer programs.

CEE 632 Hydrology

Spring. 3 credits. Prerequisite: CEE 331. Intended for undergraduates. W. H. Brutsaert.

Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers. Physical and statistical prediction methods for design related to hydrologic processes. Hydrometeorology and evaporation. Infiltration and base flow. Surface runoff and channel routing. Linear and nonlinear hydrologic systems. Storage routing and unit hydrograph methods.

CEE 633 Flow in Porous Media and Groundwater

Fall. 3 credits. Prerequisite: CEE 331. W. H. Brutsaert.

Fluid mechanics and equations of single-phase and multiphase flow; methods of solution. Applications involve aquifer hydraulics, pumping wells; drought flows; infiltration, groundwater recharge; land subsidence; seawater intrusion, miscible displacement; transient seepage in unsaturated materials.

[CEE 634 Boundary Layer Meteorology]
Fall. 3 credits. Prerequisite: CEE 331 or permission of instructor. Not offered 1996-97 and 1998-99; offered 1997-98. W. H. Brutsaert.

Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transfer from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.]

[CEE 635 Small and Finite Amplitude Water Waves]

Spring. 3 credits. Prerequisite: CEE 435 or equivalent. Not offered 1996-97 and 1998-99; offered 1997-98. P. L.-F. Liu.
Review of linear and nonlinear theories of ocean waves. Discussion on the applicability of different wave theories to engineering problems.]

[CEE 636 Environmental Fluid Mechanics]

Spring. 3 credits. Prerequisite: CEE 655 or permission of instructor. Offered alternate years. Not offered 1996-97 and 1998-99; offered 1997-98. Staff.
Mass- and heat-transport processes in the environment and their interaction with pollutant discharges. Mechanics of discretely and continuously stratified fluids, internal waves, density currents, selective withdrawal, and baroclinic motions. Flow stability, mixing, and turbulence. Turbulent diffusion and shear flow dispersion, including effects of buoyancy. Convective instabilities and mixed-layer dynamics. Concentrated sources of momentum and buoyancy: jets and plumes and their behavior in the environment. Applications to mixing processes in rivers, lakes, the ocean, and the atmosphere.]

CEE 638 Hydraulics Seminar

Spring. 1 credit. Open to undergraduates and graduates and required of graduate students majoring in hydraulics or hydraulic engineering. P. L.-F. Liu.
Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

CEE 639 Special Topics in Hydraulics

On demand. 1-6 credits. Staff.
Special topics in fluid mechanics, hydraulic engineering, or hydrology.

[CEE 732 Computational Hydraulics]

Fall. 3 credits. Prerequisite: elementary fluid mechanics or permission of instructor. Offered alternate years. Not offered 1995-96 and 1996-97; offered 1997-98. Staff.
Numerical methods for solving hydraulics and fluid-mechanics problems. Solutions for elliptic, parabolic, and hyperbolic equations. Finite-difference, finite-element, and boundary-integral methods.]

CEE 735 Research in Hydraulics

On demand. 1-6 credits. Staff.
The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge in the form of a research report.

CEE 830 Thesis—Fluid Mechanics and Hydrology

Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.

A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Geotechnical Engineering

CEE 341 Introduction to Geotechnical Engineering

Spring. 4 credits. Prerequisite: ENGRD 202. F. H. Kulhawy.
Soil as an engineering material. Chemical and physical nature of soil. Engineering properties of soil. Stresses and stress analysis of soil. Basic theory and design for water flow in soil, one-dimensional consolidation of clay and silts, and shear-strength problems. Introduction to slope stability, earth pressure, geosynthetics, and landfill and waste-containment issues. Introduction to laboratory testing. Synthesis of soil analysis and laboratory-test results for the design of engineering structures.

CEE 640 Foundation Engineering

Fall. 3 credits. Prerequisite: CEE 341. F. H. Kulhawy.
Soil exploration, sampling, and in-situ testing techniques. Bearing capacity, stress distribution, and settlement. Design of shallow and deep foundations. Compaction and site preparation. Seepage and dewatering of foundation excavations.

CEE 641 Retaining Structures and Slopes

Spring. 3 credits. Prerequisite: CEE 341. T. D. O'Rourke.
Earth pressure theories. Design of rigid, flexible, braced, tied-back, slurry, and reinforced soil structures. Stability of excavation, cut, and natural slopes. Design problems stressing application of course material under field conditions of engineering practice.

CEE 643 Pavement Engineering (also ABEN 692)

Spring. 4 credits. Limited to engineering seniors and graduate students. Prerequisite: CEE 341 or 362. L. H. Irwin.
For description see ABEN 692.

CEE 644 Environmental Applications of Geotechnical Engineering

Spring. 3 credits. Prerequisite: CEE 341 or equivalent. T. D. O'Rourke.
Principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasis on environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.

CEE 648 Seminar in Geotechnical Engineering

Fall, spring. 1 credit. Staff.
Presentation and discussion of topics in current research and practice in geotechnical engineering.

CEE 649 Special Topics in Geotechnical Engineering

On demand. 1-6 credits. Staff.
Supervised study of special topics not covered in the formal courses.

[CEE 740 Engineering Behavior of Soils]

Fall. 4 credits. Prerequisite: CEE 341.
Not offered 1996-97; next offered 1997-98 and 1998-99. H. E. Stewart.
Detailed study of the physiochemical nature of soil. Stress states due to geostatic loading and stress-history effects. In-depth evaluation of stress-strain-strength, compressibility, and hydraulic conductivity of natural soils. Field-testing methods for determining properties based on laboratory testing. Laboratory sessions include in-situ field testing, simple index tests, and complete laboratory characterization of important soil properties.]

CEE 741 Rock Engineering

Spring. 3 credits. Prerequisite: CEE 341 or permission of instructor. Recommended: introductory geology. Staff.
Geological and engineering classifications of intact rock, discontinuities, and rock masses. Laboratory and field evaluation of properties. Stress states and stress analysis. Design of foundations on, and openings in, rock masses. Analysis of the stability of rock slopes.

[CEE 744 Advanced Foundation Engineering]

Spring. 2 credits. Prerequisite: CEE 640. Offered 1997-98; not offered 1996-97 and 1998-99. F. H. Kulhawy.
A continuation of CEE 640, with detailed emphasis on special topics in soil-structure interaction. Typical topics include lateral and pullout loading of deep foundations, pile group behavior, foundations for offshore structures, foundations for special structures.]

CEE 745 Soil Dynamics

Fall. 4 credits. Prerequisite: permission of instructor. H. E. Stewart.
Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Design of embankments and retaining structures under dynamic loading conditions. Laboratory experiments and demonstrations using resonant column and a range of cyclic testing equipment.

CEE 746 Embankment Dam Engineering

Spring. 2 credits. Prerequisites: CEE 641 and 741, or permission of instructor. Offered 1996-97 and 1998-99; not offered 1997-98. F. H. Kulhawy.
Principles of analysis and design for earth and rockfill dams. Materials, construction methods, internal and external stability, seepage and drainage, performance monitoring, abutment and foundation evaluation. Introduction to tailings dams.

CEE 749 Research in Geotechnical Engineering

On demand. 1-6 credits. Staff.
For the student who wants to pursue a particular geotechnical topic in considerable depth.

CEE 840 Thesis—Geotechnical Engineering

Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.

A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Environmental Engineering

CEE 351 Environmental Quality Engineering

Spring; usually offered in summer for Engineering Co-op Program. 3 credits.
L. W. Lion.

Introduction to engineering aspects of environmental quality control. Quality parameters, criteria, and standards for water and wastewater. Emphasis on water-quality control concepts, theory, and methods. Elementary analysis pertaining to the modeling of pollutant reactions in natural systems, and introduction to design of unit processes for water and wastewater treatment.

CEE 352 Water Supply Engineering

Fall. 3 credits. Prerequisites: ENGRD 219, CHEM 253, BIOMI 290 and CEE 351.
R. I. Dick.

Analysis of contemporary threats to human health from water supply systems. Criteria and standards for potable-water quality. Water-quality control theory. Design of water supply facilities.

CEE 453 Laboratory Research in Environmental Engineering

Fall, spring. 3 credits. Prerequisites: CHEM 253, BIOMI 290, CEE 351 or permission of instructor. Enrollment limited to 12.
M. L. Weber-Shirk.

Laboratory investigations reflecting faculty research on current environmental problems. Laboratory exercises will change from year to year. Possible topics include: Acid rain/lake chemistry; contaminated soil-site assessment, risk assessment, and remediation; packed tower air stripping treatment of contaminated groundwater; pollutant dispersion/transport in rivers; drinking water filtration for pathogen removal; oxygen sag in rivers; and biodegradation in landfills.

CEE 651 Microbiology for Environmental Engineering

Fall. 2 credits. Prerequisite: one semester of college chemistry. J. M. Gossett.

A self-paced autotutorial introduction to fundamental aspects of microbiology, organic chemistry, and biochemistry pertinent to environmental engineering. Course work consists of assigned readings, study questions, and brief exams.

CEE 653 Water Chemistry for Environmental Engineering

Fall. 3 credits. Prerequisite: one semester of college chemistry or permission of instructor. L. W. Lion.

Principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics, acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. The focus of the course is on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

CEE 654 Aquatic Chemistry

Spring. 3 credits. Prerequisite: CEE 653 or Chemistry 287-288. J. J. Bisogni.
Concepts of chemical equilibria applied to natural aquatic systems. Topics include acid-base reactions, buffer systems, mineral precipitation, coordination and redox reactions, Eh-pH diagrams adsorption phenomena, humic acid chemistry, and chemical-equilibria computational techniques. In-depth coverage of topics covered in CEE 653.

CEE 655 Pollutant Transport and Transformation in the Environment

Fall. 3 credits. Prerequisite: CEE 331.
J. J. Bisogni.
Introduction to the physical transport and chemical and biochemical transformation processes that govern the fate and distribution of pollutants in the environment.

CEE 658 Sludge Treatment, Utilization, and Disposal

Spring. 3 credits. Prerequisite: CEE 352 or permission of instructor. R. I. Dick.
Analysis of the quantity and quality of residues produced from municipal and industrial water-supply and pollution-control facilities and other residue-producing processes. Alternatives for reclaiming or disposing of hazardous and nonhazardous residues. Performance of treatment processes for altering sludge properties prior to reuse or ultimate disposal. Considerations in selecting and integrating of sludge-management processes.

CEE 659 Environmental Quality Engineering Seminar

Spring. 1 credit. Prerequisite: enrollment as graduate student in environmental engineering. Staff.
Presentation and discussion of current research and design projects in environmental engineering.

CEE 750 Research in Environmental Engineering

On demand. 1-6 credits. Staff.
For students who want to study a particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design and analysis procedures.

CEE 755 Environmental Engineering Processes I

Fall. 3 credits. Prerequisite: Previous or concurrent enrollment in CEE 653 or permission of instructor. J. M. Gossett.
Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in receiving waters. Analysis and design of treatment processes and systems.

CEE 756 Environmental Engineering Processes II

Spring. 3 credits. Prerequisites: CEE 651 and 755, or permission of instructor.
J. M. Gossett.
Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in receiving waters. Biokinetic analysis and design of biological treatment process.

CEE 757 Environmental Engineering Processes Laboratory I

Fall. 2 credits. Prerequisite: concurrent enrollment in CEE 653 and CEE 755.
J. J. Bisogni.

Laboratory studies of aquatic chemistry and physical/chemical processes of environmental engineering. Topics include gravimetric analyses; acids/bases; alkalinity; gas chromatography; UV-visible and atomic absorption spectrophotometry; adsorption; filtration; ion exchange; gas transfer; sedimentation; characterization of reactor mixing regimes; coagulation.

CEE 758 Environmental Engineering Processes Laboratory II

Spring. 2 credits. Prerequisite: CEE 651 and concurrent enrollment in CEE 756.
J. M. Gossett.

Laboratory studies of microbiological phenomena and environmental engineering processes. Topics include microscopy; biochemical and chemical oxygen demand; biological treatability studies; enumeration of bacteria.

CEE 759 Special Topics in Environmental Engineering

On demand. 1-6 credits. Staff.
Supervised study in special topics not covered in formal courses.

CEE 850 Thesis—Environmental Engineering

Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.

A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Transportation

CEE 361 Introduction to Transportation Engineering

Spring; usually offered in summer for Engineering Co-op Program. 3 credits.
A. H. Meyburg.
Introduction to technological, economic, and social aspects of transportation. Emphasis on design and functioning of transportation systems and their components. Supply-demand interactions; system planning, design, and management; traffic flow and control intersection and network analysis. Institutional and energy issues; environmental impacts.

CEE 362 Highway Engineering (also ABEN 491)

Fall. 3 credits. Prerequisites: Fluid mechanics (may be taken concurrently) and junior standing in engineering.
L. H. Irwin.

For description, see ABEN 491.

CEE 463 Transportation and Information Technology

Fall. 3 credits. Prerequisite: CEE 361 or permission of the instructor. L. K. Nozick.
Focuses on shift from building new infrastructure to improving the utilization of current facilities. Reviews major legislation that solidifies this shift and examines the role of computer and telecommunications technology. Technologies to be considered include tags and readers, weigh-in-motion, cellular communication technology, the global positioning system, on-board navigation systems, databases, and distributed databases.

CEE 664 Transportation Systems Design
Spring. 3 credits. Prerequisite: CEE 361. Staff.

Advanced techniques for physical and operational design of transportation systems, including analytical modeling techniques underlying design criteria. Evaluation of alternative designs. Management and operating policies, including investment strategies. Facility location decisions, networks, and passenger and freight terminals.

CEE 762 Transportation Research
On demand. 1-6 credits. Staff.

In-depth investigation of a particular transportation planning or engineering problem mutually agreed upon between the student and one or more faculty members.

CEE 764 Special Topics in Transportation

On demand. 1-6 credits. Staff.
Advanced subject matter not covered in depth in other regular courses.

CEE 860 Thesis—Transportation Engineering

Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Structural Engineering

See also CEE 116, CEE 241, CEE 304, and CEE 595.

CEE 371 Structural Behavior

Spring. 4 credits. Prerequisite: ENGRD 202. A. R. Ingraffea.
Fundamental concepts of structural engineering: behavior, analysis, and design. Loads, structural materials, structural form, statically determinate analysis, approximate analysis of indeterminate systems. Use of interactive graphical analysis programs. Fundamentals of behavior of steel and concrete members. Introduction to limit states design.

CEE 372 Structural Analysis

Fall; usually offered in summer for Engineering Co-op Program. 4 credits. Prerequisite: CEE 371. M. J. Sansalone.
Fundamentals of statically indeterminate structures. Moment-area and virtual-work methods of displacement computation. Matrix flexibility and stiffness methods. Moment distribution analysis. Influence lines. Computer applications to practical structures. The art of structural modeling for analysis and design. Role and limitations of analysis in design.

CEE 373 Design of Concrete Structures

Fall. 4 credits. Prerequisites: CEE 372 or permission of instructor. R. G. Sexsmith.
Behavior and design of reinforced concrete and prestressed concrete structures. Design project.

CEE 374 Design of Steel Structures

Spring. 4 credits. Prerequisite: CEE 372 or permission of instructor. T. Peköz.
Behavior and design of steel members, connections, and structures. Discussion of structural systems for buildings and bridges.

CEE 376 Civil Engineering Materials

Spring. 4 credits. Prerequisites: ENGRD 202, ENGRD 261, PHYS 214 and CEE 371 (CEE 371 may be taken concurrently). M. J. Sansalone.

Mechanical properties of concrete, metals, masonry, plastics, wood, and other structural materials. Stress-strain behavior and failure criteria. Nondestructive and destructive testing techniques for the evaluation of structures and the quality control of materials. Laboratory experiments.

[CEE 671 Random Vibration]

Spring. 3 credits. Prerequisites: M&AE 326, CEE 779, and OR&IE 260; or equivalent and permission of instructor. Not offered 1996-97 and 1998-99. Offered 1997-98. M. D. Grigoriu.

Review of random-process theory, simulation, and first-passage time. Linear random vibration: second-moment response descriptors and applications from fatigue; seismic analysis; and response to wind, wave, and other non-Gaussian load processes. Nonlinear random vibration: equivalent linearization, perturbation techniques, Fokker-Planck and Kolmogorov equations, Itô calculus, and applications from chaotic vibration, fatigue, seismic analysis, and parametrically excited systems.]

CEE 672 Fundamentals of Structural Mechanics

Fall. 3 credits. M. D. Grigoriu.
Theory of elasticity, energy principles, plate flexure, failure theories for structural design, beams on elastic foundation, finite-difference method, plate theory, introduction to finite-element method.

CEE 673 Advanced Structural Analysis

Fall. 3 credits. Prerequisites: CEE 372 and computer programming. Staff.
Matrix analysis of structures, computer programming of displacement (stiffness) method, use of interactive graphical analysis programs, solution methods, errors and accuracy, special analysis procedures, virtual work in matrix analysis, and introduction to nonlinear analysis and finite-element methods.

[CEE 675 Concrete Materials and Construction]

Spring. 3 credits. Prerequisite: CEE 376 or equivalent. Offered alternate years. Not offered 1996-97 and 1998-99; offered 1997-98. K. C. Hover.

Materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.]

[CEE 677 Stochastic Mechanics]

Spring. 3 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1996-97 and 1998-99; offered 1997-98. M. D. Grigoriu.

Review of concepts of probability theory, random processes, and random fields. Analytical and numerical methods for reliability analysis. Methods for solution of random eigenvalue problems, equilibrium of uncertain systems and systems with random imperfections, and propagation problems in stochastic systems. Applications include stochastic finite elements, probabilistic fracture mechanics, and dynamic Daniels systems.]

CEE 680 Structural Engineering Seminar

Fall, spring. 1 credit. Limited to qualified seniors and graduate students. Staff.
Presentation of topics of current interest in the field of structures.

CEE 770 Engineering Fracture Mechanics

Fall. 3 credits. Prerequisite: CEE 772 or permission of instructor. Offered alternate years. Offered 1996-97 and 1998-99; not offered 1997-98. A. R. Ingraffea.
Fundamentals of fracture-mechanics theory. Energy and stress-intensity approaches to fracture. Mixed-mode fracture. Fatigue-crack propagation. Finite- and boundary-element methods in fracture mechanics. Introduction to elastic-plastic fracture mechanics. Interactive computer graphics for fracture simulation. Laboratory techniques for fracture-toughness testing of metals, concrete, and rock.

CEE 772 Finite Element Analysis

Spring. 3 credits. Prerequisites: CEE 672 and 673, or permission of instructor. Staff.
Conceptual, theoretical, and practical bases for finite-element analysis in structural mechanics and other disciplines. Development and evaluation of formulations for one-, two-, and three-dimensional elements. Introduction to boundary-element analysis. Interactive computer graphics for finite- and boundary-element analysis.

[CEE 773 Structural Reliability]

Fall. 3 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1996-97 and 1998-99; offered 1997-98. M. D. Grigoriu.

Review of probability theory, practical measures for structural reliability, second-moment reliability indices, probability models for strength and loads, probability-based design codes, reliability of structural systems, imperfection-sensitive structures, fatigue, stochastic finite-element techniques, elementary concepts of probabilistic fracture mechanics.]

CEE 774 Advanced Concrete Structures I

Fall. 3 credits. Prerequisite: undergrad course in concrete structures. R. N. White.
Role of material properties in structural performance; design code philosophies; behavior and design of reinforced and prestressed concrete flexural sections; deflection prediction and control for RC and PC structures including load balancing for PC structures; continuity effects; serviceability issues; behavior and design of RC and PC slab systems; plastic truss (strut-and-tie) approach for torsion and shear; building framing systems.

CEE 775 Advanced Concrete Structures II

Spring. 3 credits. Prerequisite: CEE 774 or equivalent. R. N. White.
Structural walls; extension of plastic truss approach to frame connections, corbels, brackets, and deep beams; anchorage region behavior in PC beams; slender columns and biaxial bending; ductility and its enhancement for resisting severe loadings; composite construction; prestress loss calculations; strip method for design of slabs with unusual geometry; bridges and other structures; control of human error in design and construction.

CEE 776 Advanced Design of Metal Structures

Fall. 3 credits. Prerequisite: CEE 374 or equivalent. G. G. Deierlein.

Preliminary design of structural systems. Design of members and connections. Behavior and computer-aided design of building frames. Design of composite members.

CEE 777 Advanced Behavior of Metal Structures

Spring. 3 credits. Prerequisite: CEE 374 or equivalent. Offered 1996-97 and 1998-99; not offered 1997-98. T. Peköz.

Analysis of elastic and inelastic stability. Behavior and design of hot-rolled and cold-rolled steel and aluminum members, elements, and frames. Critical review of design specifications.

CEE 779 Structural Dynamics and Earthquake Engineering

Spring. 3 credits. M. D. Grigoriu.

Modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

[CEE 780 Advanced Concrete Material Science

Fall. 3 credits. Prerequisites: CEE 376 or equivalent and CEE 675. Not offered 1996-97 and 1998-99; offered 1997-98. K. C. Hover.

Advanced study of the chemistry, physics, and microstructure of cement and concrete. Investigation of cement manufacture and chemistry, hydration reactions and effect of admixtures. Study of microstructure with scanning electron microscopy, and porosity. Engineering properties and behavior include failure mechanisms and elastic and viscoelastic behavior. Durability. Student presentations.]

CEE 783 Civil and Environmental Engineering Materials Project

On demand. 1-3 credits. K. C. Hover.

Individual projects or reading and study assignments involving engineering materials.

CEE 785 Research in Structural Engineering

On demand. 1-6 credits. Staff.

Pursuit of a branch of structural engineering beyond what is covered in regular courses. Theoretical or experimental investigation of suitable problems.

CEE 786 Special Topics in Structural Engineering

On demand. 1-6 credits. Staff.

Individually supervised study or independent design or research in specialized topics not covered in regular courses. Occasional offering of such special courses as Shell Theory and Design, and Advanced Topics in Finite Element Analysis.

CEE 880 Thesis—Structural Engineering

Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.

A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Engineering Management

See also CEE 323 and CEE 463.

CEE 590 Engineering Management Practice

Fall. 3 credits. Prerequisite: permission of instructor. M. A. Turnquist and F. J. Wayno.

An introduction to the work and skills of management, especially for the management of projects. Planning, organizing, communicating, scheduling, controlling, and correcting will be covered in combination of lectures, readings, outside assignments, and in-class role-playing exercises.

CEE 591 Engineering Management Project

Fall. 3 credits. Prerequisite: permission of instructor. Staff.

An intensive evaluation of the management aspects of a major engineering project or system. Most students will work on a large group project in the area of project management, but students may also work singly or in small groups on an engineering management topic of special interest to them.

CEE 592 Engineering Management Project

Spring. 3 credits. Prerequisite: permission of instructor. Staff.

A continuation of CEE 591.

CEE 593 Engineering Management Methods I: Data, Information, and Modeling

Fall. 3 credits. Prerequisites: OR&IE 320 and OR&IE 270 or CEE 304 or equivalent. L. K. Nozick.

Methods for managing data and transforming data into information. Modeling as a means to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods and optimization to managerial problems in project scheduling, quality control, forecasting, and resource allocation.

CEE 594 Engineering Management Methods II: Managing Uncertain Systems

Spring. 3 credits. Prerequisite: CEE 593 or permission of instructor. M. A. Turnquist.

Modeling and managing systems in which uncertainty is a major determinant of system behavior. Systems which are subject to breakdown, deterioration and queuing. Simulation as a tool for analyzing uncertain systems. Projects and case studies to illustrate application of the methods.

CEE 595 Construction Planning and Operations

Fall. 3 credits. Prerequisite: permission of instructor. K. C. Hover.

A course on the fundamentals of construction planning: organization of the worksite, construction planning, scheduling, and cost estimating, bidding, temporary structures, applications of computer methods, and the relationships among owners, designers, contractors, suppliers, and developers.

CEE 597 Risk Analysis and Management

Spring. 3 credits. Prerequisite: CEE 304 or OR&IE 270 or equivalent. J. R. Stedinger.

Course develops a working knowledge of risk terminology and reliability engineering, analytic tools used to analyze environmental and technological risks, and social and

psychological risk issues. Discussions address life risks in the U.S., transportation risks, transportation of hazardous materials, waste incineration, air pollution modeling, public health risks such as AIDS, regulatory policy, risk communication, environmental risk issues in the media, and risk management.

CEE 692 Special Topics in Engineering Management

On demand. 1-6 credits. Staff. Individually supervised study of one or more specialized topics not covered in regular courses.

CEE 694 Research in Engineering Management

On demand. 1-6 credits. Staff. The student may select an area of investigation in engineering management. Results should be submitted to the instructor in charge in the form of a research report.

COMPUTER SCIENCE

The Department of Computer Science is part of both the College of Arts and Sciences and the College of Engineering.

COM S 099 Fundamental Programming Concepts

Fall. 2 credits. No prerequisites. S-U grades only.

This course is designed for students who intend to take COM S 100 but are not adequately prepared for that course. Students who do not intend to take COM S 100 but want some introduction to computers and programming should take COM S 101 instead. Students cannot receive credit for both COM S 101 and COM S 099. Basic programming concepts and problem analysis are studied. The programming language used is Pascal. Students with previous programming experience should not take this course.

COM S 100 Introduction to Computer Programming

Fall, spring, summer. 4 credits. Students who plan to take COM S 101 and also 100 must take 101 first.

An introduction to elementary computer programming concepts. Emphasis is on techniques of problem analysis and the development of algorithms and programs. The subject of the course is programming, not a particular programming language. The principal programming language is C. The course does not presume previous programming experience. Programming assignments are tested and run on interactive, stand-alone microcomputers. During some semesters, two versions of COM S 100 are available as described below.

COM S 100a Introduction to Computer Programming

Standard version of COM S 100. No college-level mathematics is assumed. Register for COM S 100.

COM S 100b Introduction to Computer Programming

Prerequisite: MATH 111, 191 or equivalent. Offered fall only.

Alternative version of COM S 100, emphasizing examples and applications involving continuous mathematics, including trigonometry and calculus. Register for COM S 100. COM S 100b is not always available at all COM S 100 lecture hours.

COM S 101 The Computer Age (also ENGRG 101)

Summer. 3 credits. Credit is granted for both COM S 100 and 101 only if 101 is taken first.

An introduction to computer science and programming for students in nontechnical areas. The aims of the course are to acquaint the student with the major ideas in computer science and to develop an appreciation of algorithmic thinking. Topics may include the history of computation; microtechnology; the retrieval and transmission of information; scientific computing; computer graphics, art, and music; robotics, natural-language processing, and machine intelligence. Students become acquainted with the concept of an algorithm by writing several programs in Pascal or Scheme and testing them on microcomputers. The amount of programming is about half that taught in COM S 100.

COM S 130 Creating Web Documents

Spring. 3 credits.

Interactive on-line media such as the World Wide Web are revolutionizing the way we communicate. This course introduces students with little or no computer background to tools and techniques for creating interactive documents. Topics covered will include HTML authoring, scripting languages, interaction techniques, data mining, and incorporating sound, video, and images in documents.

COM S 211 Computers and Programming (also ENGRD 211)

Fall, spring, summer. 3 credits. Credit will not be granted for both COM S 211 and 212. Prerequisite: COM S 100 or equivalent programming experience.

Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, modules (classes), program development, proofs of program correctness, recursion, data structures and types (lists, stacks, queues, trees), object-oriented and functional programming, and analysis of algorithms. C++ is the principal programming language.

COM S 212 Structure and Interpretation of Computer Programs (also ENGRD 212)

Fall, spring. 4 credits. Credit will not be granted for both COM S 211 and 212. Prerequisite: COM S 100 or equivalent programming experience.

A challenging introduction to programming languages and computer science that emphasizes alternative modes of algorithmic expression. Topics include recursive and higher-order procedures, performance analysis of algorithms, proofs of program correctness, probabilistic algorithms, symbolic hierarchical data, abstract data types, polymorphic functions, object-oriented programming, infinite data types, simulation, and the interpretation of programs. Programs are written in Scheme or a related dialect.

COM S 212 emphasizes a varied collection of advanced programming concepts and techniques available in a modern functional programming language. In contrast, COM S 211 focuses on perfecting programming skills in a conventional imperative programming language. Corrective transfers between COM S 211 and 212 (in either direction) are encouraged during the first few weeks of instruction.

COM S 214 A Taste of UNIX and C

Fall, spring. 1-2 credits. Prerequisite: COM S 211 or equivalent programming experience. S-U grades only.

A brief introduction to the UNIX operating system and the C programming language. Recommended for students who intend to pursue the computer science major. Taught in the first four to eight weeks of the semester. The 2-credit version involves an implementation project.

COM S 222 Introduction to Scientific Computation (also ENGRD 222)

Spring. 3 credits. Prerequisites: COM S 100 and pre/corequisite of MATH 221 or MATH 293.

An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The Matlab computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Special lectures on parallel computation and high-performance Fortran.

COM S 280 Discrete Structures

Fall, spring. 4 credits. Prerequisite: COM S 211 or 212 or permission of instructor.

Covers mathematical aspects of programming and computing. Topics will be chosen from the following: mathematical induction; logical proof; propositional and predicate calculus; combinatorics and discrete mathematics covering manipulation of sums, recurrence relations, and generating-function techniques; basic number theory; sets, functions, and relations; partially ordered sets; graphs.

COM S 314 Introduction to Digital Systems and Computer Organization

Fall, spring, summer. 4 credits. Prerequisite: COM S 211, 212, or equivalent.

Introduction to computer organization. Topics include representation of information, machine-assembly languages, processor organization, interrupts and I/O, memory hierarchies, combinatorial and sequential circuits, data path and control unit design, RTL, and microprogramming.

COM S 381 Introduction to Theory of Computing

Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and COM S 481. Corrective transfers between COM S 381 and COM S 481 (in either direction) are encouraged during the first few weeks of instruction.

An introduction to modern theory of computing: automata theory, formal languages, and effective computability.

[COM S 400 The Science of Programming

Spring. 4 credits. Prerequisite: COM S 280 or equivalent. Not offered every year; semester to be announced.

The practical development of correct programs based on the conscious application of principles that are derived from a mathematical notion of program correctness. Besides dealing with conventional sequential programs, the course covers implementations of abstract data types and contains an introduction to problems with concurrency. Issues in programming-language design that arise from program correctness are discussed. Programs are written but not run on a computer.]

COM S 401 Programming Languages and Software Engineering

Fall. 4 credits. Prerequisite: COM S 410 and knowledge of the C programming language.

An introduction to the programming languages, tools, and methods used in modern software development. Programming methodologies: modularity, data abstraction, object-oriented programming. Programming tools, software libraries, and interface definition languages. General techniques will be complemented with programming experience.

COM S 410 Data Structures

Fall, spring, summer. 4 credits. Prerequisite: COM S 280 or permission of instructor.

Lists, trees, graphs, arrays, and other forms of data structure and their implementation. Relationship between language and data structure, emphasizing abstract data types. Dynamic storage allocation and memory management. Detailed study of searching and sorting methods. Analysis to determine the more efficient algorithm in a given situation.

[COM S 411 Programming Languages and Logics

Fall. 4 credits. Prerequisite: COM S 410 or permission of instructor. Not offered every year; semester to be announced.

The major concepts of programming languages, with emphasis on synthesis and interpretation. Language-based programming methodologies, including object-oriented, functional, and logic programming. Design and criticism of programming languages. Type theory and typed lambda-calculus. Exercises in several unusual programming languages.]

COM S 412 Introduction to Compilers and Translators

Spring. 3 credits. Prerequisites: COM S 314, 381, 410. Corequisite:

COM S 413. Not offered every year; next offered spring 1997.

Overview of the internal structure of modern compilers, with emphasis on implementation techniques. Topics covered include lexical scanning, simple parsing techniques, symbol-table manipulation, type-checking routines, code generation, and simple optimizations. The course entails a compiler implementation project.

COM S 413 Practicum in Compilers and Translators

Spring. 2 credits. Prerequisites: COM S 314, 381, 410. Corequisite: COM S 412.

Not offered every year; next offered spring 1997.

A compiler implementation project related to COMS 412.

COM S 414 Systems Programming and Operating Systems

Fall. 3 credits. Prerequisite: COM S 314 or permission of instructor.

An introduction to the logical design of systems programs, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.

COM S 415 Practicum in Operating Systems

Fall. 2 credits. Prerequisite: COM S 410. Corequisite: COM S 414.

The practical aspects of operating systems are studied through the design and implementation of an operating system kernel that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.

COM S 417 Computer Graphics and Visualization (also ARCH 374)

Spring. 3 credits. Prerequisite: COM S 211 or 212.

An introduction to the principles of interactive computer graphics and scientific visualization. Topics include surface modeling, animation, perspective transformations, hidden-line and hidden-surface algorithms, lighting models, image synthesis, and application to scientific data analysis.

COM S 418 Practicum in Computer Graphics (also ARCH 375)

Spring. 2 credits. Enrollment limited. Permission of instructor. Prerequisite: COM S 211 or 212. Recommended: COM S 314. Co-requisite: COM S 417.

Programming assignments dealing with interactive computer graphics and visualization of scientific data.

COM S 421 Numerical Analysis

Fall. 4 credits. Prerequisites: Mathematics 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming.

Modern algorithms for systems of linear equations, systems of nonlinear equations, numerical optimization, and numerical solution of differential equations. Some discussion of methods suitable for parallel computation.

[COM S 422 Parallel Computing for Scientific Problems]

Spring. 4 credits. Enrollment limited. Permission of instructor. Prerequisites: Math 294, COM S 222 or COM S 421, knowledge of C and FORTRAN. Not offered every year; next offered 1998.

Parallel algorithms and programming environments for important scientific problems, such as fluid flow, systems of particles, and large-scale optimization. This course will involve algorithm development on some of the world's fastest computers, including a Connection Machine and a hypercube.]

COM S 432 Introduction to Database Systems

Spring. 3 credits. Prerequisites: Either COM S 211 or 212, and 410, or permission of instructor. Recommended: COM S 314.

Introduction to modern database management systems. Concepts in data modeling and query processing. Storage structures and access methods. Design and analysis of relational databases. Concurrency control. Object-oriented databases.

COM S 433 Practicum in Database Systems

Spring. 2 credits. Corequisite: COM S 432.

Issues related to the design and implementation of database-management systems will be addressed. Students will implement a

simplified relational database system, including a file-access method and query-processing algorithms.

[COM S 444 Distributed Systems and Algorithms]

Fall. 4 credits. Corequisite: COM S 414 or permission of instructor. Not offered every year; next semester to be announced.

The fundamentals of distributed systems and algorithms. Topics include the problems, methodologies and paradigms necessary for understanding and designing distributed applications, with an emphasis on fault-tolerant computing. Theoretical concepts will be complemented with practical examples of their application in current distributed systems.]

[COM S 462 Robotics and Machine Vision]

Spring. 3 credits. Prerequisite: Permission of instructor, COM S 410, and COM S 381. Co-requisite: COM S 463. Not offered every year; semester to be announced.

Introduction to the science of robotics and machine vision using a combination of programming techniques, applied mathematics, algorithms, and lab experiments. Topics include task-level robot planning and programming, hand-eye systems, feature detection and object recognition, motion planning, shape reconstruction, compliant motion and assembly, model-based planning and recognition, uncertainty and error, active sensing, and manipulation.]

[COM S 463 Robotics and Machine Vision Lab]

Spring. 2 credits. Prerequisite: Permission of instructor, COM S 410, and COM S 381. Co-requisite: COM S 462. Not offered every year; semester to be announced.

Use physical robots (vision systems, hand-eye systems, and mobile robots) in the Computer Science Robotics and Vision Teaching Laboratory. Students should be comfortable both with mathematical concepts and programming, know LISP or Scheme, have a mastery of calculus and linear algebra, a strong background in algorithms, and an ability to work independently.]

COM S 472 Foundations of Artificial Intelligence

Fall. 3 credits. Prerequisites: COM S 107 or COM S 212, COM S 280 and COM S 410. Open to juniors, seniors, and graduate students. 3 lecs.

A challenging introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, search, problem solving, natural-language processing, vision, robotics, logic and deduction, planning, and machine learning.

COM S 473 Practicum in Artificial Intelligence

Fall. 2 credits. Prerequisite: COM S 107 or COM S 212, COM S 280 and COM S 410. Corequisite: COM S 472.

Project portion of COM S 472. Topics include Common LISP programming, representation systems, deductive retrieval, databases and frame languages, and truth-maintenance-system implementations.

COM S 481 Introduction to Theory of Computing

Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and COM S 481. Corrective transfers between COM S 481 and COM S 381 (in either direction) are encouraged during the first few weeks of instruction.

A faster-moving and deeper version of COM S 381.

COM S 482 Introduction to Analysis of Algorithms

Spring. 4 credits. Prerequisites: COM S 410 and either 381 or 481, or permission of instructor.

Techniques used in the creation and analysis of algorithms. Combinatorial algorithms, computational complexity, NP-completeness, and intractable problems.

COM S 486 Applied Logic (also Mathematics 486)

Fall or spring. 4 credits. Prerequisites: Mathematics 222 or 294, COM S 100, and some additional course in mathematics or theoretical computer science.

Propositional and predicate logic, compactness and completeness by tableaux, natural deduction, and resolution. Equational logic. Herbrand Universes and unification. Rewrite rules and equational logic, Knuth-Bendix method and the congruence-closure algorithm and λ -calculus reduction strategies. Topics in Prolog, LISP, ML, or Nuprl. Applications to expert systems and program verification.

COM S 490 Independent Reading and Research

Fall, spring. 1-4 credits.

Independent reading and research for undergraduates.

COM S 501 Programming Languages and Software Engineering

Fall. 4 credits. Prerequisite: COM S 410 and knowledge of the C programming language.

An introduction to the programming languages, tools, and methods used in modern software development. Programming methodologies: modularity, data abstraction, object-oriented programming. Programming tools, software libraries, and interface definition languages. General techniques will be complemented with programming experience.

[COM S 511 Modern Programming Languages]

Fall. 4 credits. Prerequisites: COM S 410 and a project course or permission of instructor. Not offered every year; semester to be announced.

Current trends in programming languages, with emphasis on programming methodologies supported by languages. Topics will include object-oriented programming, modularity and data abstraction, functional and declarative programming, concurrency, logic programming, and programming language design. There will be programming exercises in several new languages.]

COM S 514 Practical in Distributed Systems

Fall or spring. 4 credits. Prerequisites: COM S 414 or permission of instructor.

Not offered every year; next offered spring 1997.

Practical issues in designing and implementing distributed software. Topics include local and

wide-area network protocols, replicated data, dynamic reconfiguration, monitoring for and reacting to failures or recoveries, distributed computation, synchronization, and techniques for expressing coarse-grained parallelism at the application level.

COM S 515 Practicum in Distributed Systems

Fall or spring. 1–2 credits. Co-requisite: COM S 514. Not offered every year; next offered spring 1997.

The practical aspects of distributed systems are studied through the design and implementation of a significant system. Students may work alone or in teams. The project varies from year to year, at the discretion of the instructor.

COM S 516 High-performance Computer Architecture

Spring. 4 credits. Prerequisite: COM S 314 required; COM S 412 or 414 highly recommended.

Introduces techniques used in high-performance computer architecture. Covers pipelining of instruction execution to superscalar, superpipelined, and speculative architectures; memory system design, including caches, operating system support in the form of naming and protection schemes; introduction to parallel architectures.

[COM S 522 Parallel Computing for Scientific Problems]

Not offered every year; next offered 1998. For description, see COM S 422.]

[COM S 562 Robotics and Machine Vision]

Spring. 3 credits. Prerequisites: permission of instructor, COM S 410, and COM S 381/481. Co-requisite: COM S 563. Not offered every year; semester to be announced.

For description, see COM S 462.]

[COM S 563 Robotics and Machine Vision Lab]

Spring. 2 credits. Prerequisites: permission of instructor, COM S 410, and COM S 381/481. Co-requisite: COM S 562. Not offered every year; semester to be announced.

For description, see COM S 463.]

COM S 572 Introduction to Automated Reasoning

Spring. 3 credits.

This course teaches the use of a modern theorem proving system such as Nuprl or PVS or HOL. It covers the underlying logic as well as system operation and style of use.

Assignments and projects involve the use of these systems on typical problems in software or hardware engineering and on the issues arising in creating a database of formalized mathematics.

COM S 601 System Concepts

Spring. 3 credits. Prerequisites: Open to students enrolled in the COM S Ph.D. program. Not offered every year; next offered spring 1997.

This course teaches broadly applicable principles of computing system design and analysis. For example, the principle of locality of reference used in caching, virtual memory, and network service hints. Such broadly applicable abstractions will be discussed along with their implementations in a variety of settings. Case studies from the systems literature will be employed throughout.

COM S 611 Advanced Programming Languages

A study of programming paradigms: functional, imperative, concurrent and logic programming. Models of programming languages, including the lambda calculus. Type systems, polymorphism, modules, and other object-oriented constructs. Program transformations, programming logic, and applications to programming methodology.

COM S 612 Compiler Design for High-Performance Architectures

Spring. 4 credits. Prerequisites: COM S 314 and 412 or permission of instructor.

Compiler design for pipelined and parallel architectures. Program analysis: data and control dependencies, dataflow analysis, efficient solution of dataflow equations, dependence tests, solution of Diophantine equations. Architecture and code generation for instruction-level parallel (ILP) processors: pipelined, VLIW and superscalar architectures, code reorganization and software pipelining. Architecture and code generation for multi-processors: shared- and distributed-memory architectures, latency tolerance and avoidance, loop transformations to enhance parallelism and locality of reference.

COM S 613 Concurrent Programming

Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor. Not offered every year; semester to be announced.

Advanced techniques in, and models of, concurrent systems. Synchronization of concurrent processes; parallel programming languages; deadlock; verification.

COM S 614 Advanced Systems

Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.

An advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication mechanisms, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

[COM S 615 Theory of Concurrent Systems]

Spring. 4 credits. Prerequisites: COM S 611 or permission of instructor. Not offered every year; semester to be announced.

Modeling, specification, and verification of concurrent systems. Topics in modeling will include interleaving vs. partial-order semantics, and linear time vs. branching time. Among the specification methods discussed are temporal logic, automata, process algebra, and Petri nets. Verification methods include proof calculi, model checking, and refinement mappings. Advanced topics will include open systems and real time.]

COM S 617 Frontiers of Parallel Computer Systems

Fall. 4 credits. Prerequisites: COM S 314 or 516 required; COM S 411, 412, or 414. Not offered every year; semester to be announced.

Focus on the architecture, compiler, and operating system aspects required to support features taken for granted in sequential computing, such as portable parallel programs, powerful debuggers, multi-user machine access, virtual memory, and fast I/O.

COM S 618 Topics in the Theory of Distributed Systems

Fall. 4 credits. Prerequisites: COM S 444 or COM S 614 or permission of instructor. Not offered every year; semester to be announced.

This course focuses on research in distributed systems and algorithms. It covers the fundamental problems and presents some of the latest results and open questions in both message-passing and shared-memory systems. Problems will be viewed from a theoretical standpoint with an emphasis on precise specifications, proofs of correctness, upper and lower bounds on various complexity measures and impossibility results.

COM S 621 Matrix Computations

Fall. 4 credits. Prerequisites: Mathematics 411 and 431 or permission of instructor.

Stable and efficient algorithms for linear equations, least squares, and eigenvalue problems. Direct and iterative methods are considered. The Matlab system is used extensively.

COM S 622 Numerical Optimization and Nonlinear Algebraic Equations

Spring. 4 credits. Prerequisite: COM S 621. Offered in odd-numbered years.

Modern algorithms for the numerical solution of multidimensional optimization problems and simultaneous nonlinear algebraic equations. Emphasis is on efficient, stable, and reliable numerical techniques with strong global convergence properties: quasi-Newton methods, modified Newton algorithms, and trust-region procedures. Special topics may include large-scale optimization, quadratic programming, and numerical approximation.

[COM S 624 Numerical Solution of Differential Equations]

Spring. 4 credits. Previous exposure to numerical analysis, mathematical analysis including Fourier methods, and differential equations. Offered in even-numbered years.

Finite difference and spectral methods for the solution of differential equations. A fast-moving course that begins with a three-week survey of numerical methods for ODEs, then moves on to Fourier analysis and methods for PDEs, especially parabolic and hyperbolic equations. Other topics covered include numerical stability, the treatment of boundary conditions, and multigrid methods. This course combines theory and programming (in Matlab), emphasizing fundamental principles more than applications.]

COM S 631 Multimedia Systems

Fall. 4 credits. Prerequisites: COM S 414 or permission of instructor.

Hardware and software issues involved in computer manipulation of audio, video, and images. Topics include media capture, representation, compression, editing, processing, storage, and transportation. Special emphasis on the processing of digital video, including algorithms for special effects and automatic extraction of content, and applications of parallel architectures to video processing.

COM S 661 Robotics

Fall. 4 credits. Prerequisites: COM S 482 and permission of instructor. Not offered every year; semester to be announced.

State-of-the-art in theoretical and experimental robotics, with an emphasis on robot-motion planning. Topics include: Task-level robot planning, collision-free path planning, grasp

synthesis, modeling and propagating uncertainty, planning compliant motions for precision assembly, geometrical planning theories, motion planning with dynamics (and dynamic constraints), computational complexity of robot-motion planning, computational theories of friction, impact, and the physics of manipulation, and error detection and recovery in robotics.

COM S 662 Robotics Laboratory

Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Not offered every year; semester to be announced.

Introduction to the use of equipment and techniques in a modern robotics laboratory. Includes robot programming, force sensing, compliant motion, and mechanical assembly.

COM S 664 Machine Vision

Spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and Math 221 or equivalent.

An introduction to computer vision. The following topics will be covered: edge detection, image segmentation, stereopsis, motion and optical flow, shape reconstruction, shape representations and extracting shapes from images, model-based recognition. Students will be required to implement several of the algorithms covered in the course and evaluate them on both synthetic and real images.

COM S 674 Natural Language Processing

Spring. 4 credits. Prerequisites: COM S 472 or permission of instructor. Not offered every year; semester to be announced.

This course presents an introduction to natural language understanding, a subfield of artificial intelligence whose primary concern is the computational study of language use. The course will cover all aspects of natural language processing including semantic interpretation, syntactic analysis, discourse processing, text summarization, natural language generation, language acquisition, knowledge acquisition, memory models, and statistical methods of ambiguity resolution. The course emphasizes computational modeling and the realization of theories of language processing in computer programs.

COM S 676 Reasoning about Knowledge

Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Not offered every year; next offered fall 1996.

Knowledge plays a crucial role in distributed systems, game theory, and artificial intelligence. Material examines formalizing reasoning about knowledge and the extent to which knowledge is applicable to those areas. Issues: common knowledge, knowledge-based programs, applying knowledge to analyzing distributed systems, attainable states of knowledge, and modeling resource-bounded reasoning.

COM S 677 Reasoning about Uncertainty

Spring. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Not offered every year; semester to be announced.

Examines formalizing reasoning about and representing uncertainty, using formal logical approaches as a basis. Topics: logics of probability, combining knowledge and probability, probability and adversaries, conditional logics of normality, Bayesian

networks, qualitative approaches to uncertainty, going from statistical information to degrees of belief.

COM S 681 Analysis of Algorithms

Fall. 4 credits. Prerequisite: COM S 381 or 481, or permission of instructor.

Methodology for developing efficient algorithms, primarily for graph theoretic problems. Understanding of the inherent complexity of natural problems via polynomial-time algorithms, randomized algorithms, NP-completeness, randomized reducibilities. Additional topics such as parallel algorithms and efficient data structures.

COM S 682 Theory of Computing

Spring. 4 credits. Prerequisite: COM S 381 or 481, or permission of instructor.

Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.

[COM S 684 Introduction to Symbolic Computation

Spring. 4 credits. Prerequisites: COM S 381 or 481, or permission of instructor. Not offered every year; semester to be announced.

Introduction to the algorithms used for algebraic problems in symbolic computing and their mathematical and complexity theoretic foundations. Topics include simplification of, and arithmetic operations with, continued fractions, polynomials, rational functions and elements of algebraic extensions, polynomial factorization, and techniques for questions in algebraic geometry. Related topics may also be included.]

COM S 685 Computational Geometry

Fall. 4 credits. Prerequisite: COM S 681 or permission of instructor. Not offered every year; semester to be announced.

The study of algorithms for geometric problems. Topics include: convex hulls, arrangements of lines, planes and hyperplanes, intersection problems, triangulations, proximity (Voronoi diagrams and Delaunay triangulations), geometric searching, randomized algorithms, parallel algorithms, and geometric optimization.

COM S 709 Computer Science Colloquium

Fall, spring. 1 credit. S-U grades only. For staff, visitors, and graduate students interested in computer science.

A weekly meeting for the discussion and study of important topics in the field.

COM S 713 Seminar in Systems and Methodology

Fall, spring. 4 credits. Prerequisites: a graduate course employing formal reasoning such as COM S 600, 611, 613, 615, 671, a logic course, or permission of instructor. Not offered every year; semester to be announced.

Discussion of contemporary issues in the design and analysis of computing systems. Emphasis on the proper use of rigor, models, and formalism.

COM S 715 Seminar in Programming Refinement Logics

Fall, spring. 4 credits. Prerequisite: permission of instructor.

Topics in programming logics, possibly including type theory, constructive logic, decision procedures, heuristic methods, extraction of code from proofs, and the design

of proof-development and problem-solving systems.

COM S 717 Topics in Parallel Architectures

Fall. 4 credits. Prerequisite: COM S 612 or permission of instructor. Not offered every year; semester to be announced.

Covers topics in parallel computers. Material includes: architectures of parallel computers, parallelizing compilers, operating systems for parallel computers, and languages (functional and logic-programming languages) designed for parallel computation.

COM S 718 Topics in Computer Graphics

Fall or spring. 4 credits. Prerequisite: COM S 417 or permission of instructor. Not offered every year; semester to be announced.

Covers advanced topics in computer graphics and applications of computer graphics to scientific computation.

COM S 719 Seminar in Programming Languages

Fall, spring. 4 credits. Prerequisite: COM S 611 or permission of instructor. S-U grades only.

COM S 722 Topics in Numerical Analysis

Fall or spring. 4 credits. Prerequisite: COM S 621 or 622 or permission of instructor. Not offered every year; semester to be announced.

Topics are chosen at instructor's discretion.

COM S 729 Seminar in Numerical Analysis/ACRI

Fall, spring. 1-4 credits (to be arranged). Prerequisite: permission of instructor. S-U grades only.

COM S 754 Seminar in Work-in-Progress Distributed Systems

Fall or spring. 1 credit.

COM S 775 Seminar in Natural Language Understanding

Fall, spring. 4 credits. Informal weekly seminar in which current topics in natural language understanding and computational linguistics are discussed.

COM S 761 Dynamic Manipulation and Scientific Computation

Spring. 4 credits. Prerequisites: COM S 462 or 661, a strong background in robotics and algorithms (e.g., COM S 481), and permission of the instructor. Not offered every year; semester to be announced.

Most work in dynamic manipulation, an important new area in robotics, uses computer-controlled devices, and yet has been non-computational in flavor. This course surveys the field and attempts to apply methods from numerical and symbolic computation to cast the field into a precise framework and place it on a firm algorithmic footing. Required readings include papers by a variety of researchers.

COM S 762 Robot Café

Spring. 4 credits. Prerequisite: COM S 661. Not offered every year; semester to be announced.

Advanced seminar on varying topics.

COM S 773/774 Proseminar in Cognitive Studies I & II (also Cognitive Studies, Philosophy, Linguistics, and Psychology 773/774)

Fall and spring. 2 credits.

This is a year-long lecture-and-discussion course that is intended to provide graduate students with an interdisciplinary introduction to the study of knowledge, its presentation, acquisition, and use. Topics may include the psychology of perception and cognition; the philosophy of mind, language, and knowledge; the phonology, syntax, and semantics of natural language; computational approaches to natural language processing, vision, and reasoning; parallel distributed processing; and neuropsychology.

COM S 775 Seminar in Natural Language Understanding

Fall, spring. 4 credits.
Informal weekly seminar in which current topics in natural language understanding and computational linguistics are discussed.

COM S 784 Seminar in Computational Algebra

Fall, spring. 4 credits. Not offered every year; semester to be announced.
Informal weekly seminar in which current topics in computational algebra and symbolic mathematics are discussed.

COM S 789 Seminar in Theory of Algorithms and Computing

Fall, spring. 2-4 credits. Prerequisite: permission of instructor. S-U grades only.

COM S 790 Special Investigations in Computer Science

Fall, spring. Prerequisite: permission of a computer science adviser. Letter grade only.
Independent research or Master of Engineering project.

COM S 890 Special Investigations in Computer Science

Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only.
Master of Science degree research.

COM S 990 Special Investigations in Computer Science

Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Doctoral research.

ELECTRICAL ENGINEERING

ELE E 210 Introduction to Electrical Systems (also ENGRD 210)

Fall, spring. 3 credits. Corequisites: Mathematics 293 and Physics 213.
For description, see Engineering Common Courses.

ELE E 215 Electrical Engineering Laboratory I

Spring. 3 credits. Co-requisite: ENGR 210. Letter grade only.
Basic electric and electronic instrumentation. Measurements and design involving circuits with both active and passive elements; characterization of semiconductor devices. Introduction of the personal computer as a laboratory aid. Technical report writing and communication skills.

ELE E 230 Introduction to Digital Systems (also ENGRD 230)

Fall, spring. 4 credits. Prerequisite: COM S 100.
For description, see Engineering Common Courses.

ELE E 250 Technology in Western Society (also ENGRG 250 and S&TS 250)

Fall. 3 credits. Approved for humanities distribution.
For description, see Engineering Common Courses.

ELE E 298 Inventing the Power and Information Society (also ENGRG 292)

Spring. 3 credits. Approved for humanities distribution.
For description, see Engineering Common Courses.

ELE E 301 Electrical Signals and Systems I

Fall. 4 credits. Prerequisites: a grade of at least C+ in Engr 210 and C in Mathematics 293 and 294.

Continuous- and discrete-time signals and systems; Fourier series and transforms; bilateral Laplace and z transforms; convolution; FFTs and DFTs; applications to modulation, filtering, and sampling.

ELE E 302 Introduction to Digital Signal Processing

Spring. 4 credits. Prerequisite: ELE E 301.
The use of digital technology to store, change, and create sounds and pictures, digital signal processing (DSP), is one of the most significant technological developments in the last half-century. This course presents the mathematical concepts necessary to develop a clear and intuitive understanding of the key concepts in DSP. These include sampling, quantization, Fourier analysis, and digital filtering.

ELE E 303 Electromagnetic Fields and Waves

Fall. 4 credits. Prerequisites: grades of C or better in Physics 213, 214, and Mathematics 294.
Electrostatics, magnetostatics, quasistatics; electromagnetic energy and force; Maxwell's equations in integral and differential form; Poynting's theorem; wave equation; plane electromagnetic waves, phase and group velocities, dispersive media; wave reflection and transmission; dielectric and conducting interfaces; guided waves on finite-transmission lines; transient pulse propagation.

ELE E 304 Electromagnetic Fields and Applications

Spring. 4 credits. Prerequisite: ELE E 303.
Theory of electromagnetic fields and waves as a continuation of ELE E 303. Recommended for students interested in wireless communication, high data rate electronics, space based communications systems and fiber optics. Review of Maxwell's equations, boundary conditions, vector and scalar potentials, electromagnetic waves, and the wave equation. Applications include transmission lines, waveguides, and fiber optic guides. Cavities, radiation from dipoles and arrays of dipoles, and other transmitting-receiving systems.

ELE E 306 Fundamentals of Quantum and Solid-State Electronics

Spring. 4 credits. Prerequisites: Physics 214 and Mathematics 294.
Introductory quantum mechanics and solid-state physics necessary for modern solid-state electronic devices. Topics include the formalism and methods of quantum mechanics, the hydrogen atom, the structure of simple solids, energy bands, Fermi-Dirac statistics,

and the basic physics of semiconductors. Applications include quantum wells and the p-n junction.

ELE E 308 Fundamentals of Computer Engineering

Spring. 4 credits. Prerequisite: ELE E 230 and CS 211.

This course provides a fundamental understanding of computer systems, including their integration into embedded systems. Topics covered include assembly language programming, machine code generated by compilers, high-level language data structures, computer organization, CISC and RISC computer architectures, floating point arithmetic, I/O, and memory hierarchy.

ELE E 310 Introduction to Probability and Random Signals

Spring. 4 credits. Prerequisite: Mathematics 294. This course may be used in place of Engr 270 to help satisfy the engineering distribution requirement. It can then also meet a field breadth requirement if 3 additional credits of field approved or out-of-field elective are taken.

Introduction to the theory of probability as a basis for modeling random phenomena and signals, calculating the response of systems, and making estimates, inferences, and decisions in the presence of chance and uncertainty. Applications will be given in such areas as communications, and device modeling, probability, characteristic functions; nonlinear transformations of data; expectation, correlation; and the central limit theorem.

ELE E 315 Electronic Circuit Design

Fall. 4 credits. Prerequisites ELE E 210 and ELE E 215.

Design of electronic circuits for computers, signal processing, communication, microelectronics, optoelectronics, measurements and control. Analog, digital, and mixed signals. Design of building blocks and design with building blocks. Methodology based on estimation, hand calculation, and circuit simulation. PC based on data acquisition, analysis and simulation. Weekly laboratory sessions.

ELE E 316 Global Position System Theory and Design

Spring. 3 credits. Prerequisites: ELE E 301 and 303 or permission of the instructor. 3 design credits.

A laboratory course using the Global Positioning System as a model for examining space-based engineering systems. The course consists of lectures, laboratories, and a design project. The laboratory is based on a GPS engine development system and covers the navigation solution, receiver design and function, and differential GPS.

ELE E 360 Ethical Issues in Engineering (also S&TS 360)

Spring. 3 credits. A social science elective for engineering students.
For description, see Engineering Common Courses.

ELE E 391-392 Electrical Engineering Project

391, fall; 392, spring. 1-8 credits. Limited to juniors in Engineering.
Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students

must make individual arrangements with a faculty sponsor prior to registration.

ELE E 407 Quantum and Solid State Electronics II

Fall. Prerequisite: ELE E 306.

Intermediate quantum mechanical and solid-state concepts. Quantum topics: harmonic oscillator; annihilation and creation operators; angular momentum; selection rules; LS coupling, elements of perturbation theory; atom-radiation interaction. Solid-state topics: Bose-Einstein and Fermi-Dirac distribution; specific heat; metallic conductivity and resistivity; thermal conduction in metals; nearly-free-electron model; k-p expansion; plasma dispersion relation; plasmons; polaritons; excitons; Schottky barrier.

ELE E 411 Random Signals in Communications and Signal Processing

Fall. 3 credits. Prerequisite: ELE E 301 and 310 or equivalent.

Introduction to models for random signals in discrete and continuous time; Markov chains, Poisson process, queuing processes, power spectral densities, Gaussian random process. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

ELE E 423 Computer Methods in Digital Signal Processing

Fall. 4 credits. Prerequisite: ELE E 302. Satisfies undergraduate computer-applications requirement.

Basic computational techniques used in signal processing and communications. Fast algorithms for multidimensional transforms. Solution of structured systems of linear equations. Algorithms for linear least squares estimation problems. Influence of quantization and finite precision arithmetic on the accuracy of numerical methods. Influence of the architecture of modern microprocessors on the design and performance of numerical algorithms.

ELE E 425 Digital Signal Processing

Fall. 4 credits. Prerequisite: ELE E 301.

Fundamentals of signal analysis, review of Fourier, Laplace, and Z transforms. Sampling and reconstruction. Discrete Fourier transform properties and computation (FFT). Digital filter design; the approximation problem for FIR and IIR filters, perception, statistical modeling of images, image transforms. Compression, enhancement, restoration analysis.

ELE E 426 Applications of Signal Processing

Spring. 3 or 4 credits. Prerequisite: ELE E 425.

Applications of signal processing, including signal analysis, filtering, and signal synthesis. The course is laboratory oriented, emphasizing individual student projects. Design is done with signal-processing hardware and by computer simulation. Topics include filter design, spectral analysis, speech coding, speech processing, digital recording, adaptive noise cancellation, and digital signal synthesis.

ELE E 430 Lasers and Optical Electronics

Fall. 4 credits with lab; may be taken for 3 credits without lab. Prerequisite: ELE E 303 or equivalent.

An introduction to the operation of lasers and devices based nonlinear and nonlinear optics.

Material covered includes diffraction-limited optics, Gaussian and beams, optical resonators, interaction of radiation with matter, physics of laser operation, laser design. Applications of coherent radiation to nonlinear optics, communication, and research will be discussed.

ELE E 433 Microwave Integrated Circuits

Fall. 4 credits; may be taken for 3 credits without laboratory. Prerequisites: ELE E 303 and ELE E 306.

An introduction to the design and testing of high-speed circuits (frequencies above 1 GHz). Topics include: computer-aided design, automated microwave measurement techniques, optoelectronic applications, and GaAs monolithic microwave integrated circuits. Six two-week labs cover the basics of designing, fabricating, and testing microwave integrated circuits.

ELE E 439 VLSI Digital System Design

Fall. 4 credits. Prerequisites: EE 230 and EE 315. (See ELE E 539)

Custom CMOS VLSI design as seen by a system designer. Emphasis on structured design methodologies for digital VLSI systems. Topics include MOS transistors, design rules for MOS integrated circuits, implementation of common digital components, clocking disciplines for VLSI, tools for computer-aided design, system design for performance, and novel architectures for VLSI systems.

ELE E 445 Computer Networks and Telecommunications

Fall. 3 credits. Prerequisites: ELE E 308 (or COM S 314) and a course in probability.

Design, analysis, and implementation of local area networks, wide area networks, and telecommunications systems; circuit switching, packet switching; broad band switching; protocols; asynchronous transfer mode systems.

ELE E 451-452 Computer-Aided Analysis of Electric Power Systems I and II

451, fall; 452, spring. 4 credits each term.

Representation of 3-phase power systems, modeling of synchronous machines; transmission lines; transformers; loads, introduction to sparse matrix techniques, power-flow analysis, economic dispatch, optimal power flow, symmetrical components, fault studies, power-system protection, power-system stability, on-line power-flow analysis, voltage-control systems, and power-control systems.

ELE E 453 Integrated Circuit Design

Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 315 or equivalent. ELE E 457 recommended as a corequisite.

Introduction to analysis and design of digital and analog MOS and bipolar integrated circuits (IC). Computer-aided design. Common building blocks for digital and analog applications (inverters, switches, single-stage units, sources, sinks, differential pairs, active loads). Steady-state and transient analysis, frequency response and noise. Overview of common IC designs (microprocessors, memories, amplifiers).

ELE E 457 Silicon Semiconductor Electronics

Fall. 4 credits with lab. Prerequisites: ELE E 315 and ELE E 306 or equivalent.

Fundamental electronic properties of semiconductors. Energy-band diagrams, carrier transport and recombination, pn junctions, metal-semiconductor Schottky

contacts, ohmic contacts, and metal-oxide-semiconductor (MOS) structures. Operation of bipolar junction transistors (BJTs) and field effect-transistors (FETs). Six two-week labs covering electrical measurements of semiconductor materials and devices.

ELE E 468 Communications Systems I

Spring. 4 credits. Prerequisite: ELE E 301 or 521, and 411 or equivalent.

Analog signal representation and filtering using Fourier and Hilbert transform techniques. Varieties of amplitude modulation (AM, DSBSC, SSB, VSB, QAM), phase modulation, frequency modulation, and phase locked loops. Demodulation of AM and FM in the presence of noise; sampling theorems and aliasing. Pulse amplitude modulation. Quantization for A/D conversion. Pulse code modulation. Elements of optimal signal parameter estimation. Application to commercial broadcasting and data transmission.

ELE E 471 Feedback Control Systems (also M&AE 478)

Fall. 4 credits. Prerequisite: ELE E 301 or permission of instructor.

Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the major mathematical tools. Design techniques include root-locus and frequency response methods. Computer-aided design laboratory examines modeling and control of a computer-simulated dynamic process.

ELE E 472 Digital Control Systems

Spring. 4 credits. Prerequisite: ELE E 471 or permission of instructor.

Analysis and design of feedback control systems using digital devices to implement compensation. Z-transforms and linear algebra are the major mathematical tools. Topics include: state realizations, digitizations of analog systems, least-squares system identification, state feedback control, observers, combined observer-controller, and algebraic-control design. Assignments will consist of reports on computer-aided controller design and digitally simulated evaluation.

ELE E 475 Computer Structures

Fall. 4 credits. Prerequisites: ELE E 308 (or COM S 314), and ENGRD 230 or permission of instructor.

Methods of designing digital computers and the hardware-software interface to the systems they function with. Topics include control sequencer and data path design, memory and I/O organization and interfacing, and interrupt hardware design. Laboratory groups will design and build a small digital computer. User-programmable logic devices will be employed for circuit implementation.

ELE E 476 Digital Systems Design Using Microcontrollers

Spring. 4 credits. Prerequisite: ELE E 308 or COM S 314 (ELE E 475 strongly recommended).

Design of real-time digital systems using microprocessor-based embedded controllers. Students working in pairs will design, debug, and construct several small systems that illustrate and employ the techniques of digital system design acquired in previous courses. The content focuses on the laboratory work, the lectures being used primarily for the introduction of examples, description of

specific modules to be designed, and instruction in the hardware and high-level design tools to be employed. The laboratory environment is that of ELE E 475 enhanced with the addition of an integrated single-board computer based on the 80C196KB microcontroller chip. Programming is in assembly language and (optionally) C.

ELE E 482 Plasma Processing of Electronic Materials

Spring. 3 credits. Prerequisite: ELE E 303 or its equivalent.

Fundamental principles that govern partially ionized, chemically reactive plasma discharges and their applications to processing electronic materials. Topics include simple models of low pressure, partially ionized plasmas, collision phenomena, diffusive processes, plasma chemistry and surface processes. Examples and their applications to electronic materials processing will be discussed in detail.

ELE E 484 Introduction to Controlled Fusion: Principles and Technology (also M&AE 559 and NS&E 484)

Spring. 3 credits. Prerequisites: ELE E 303, or permission of instructor. Intended for seniors and graduate students.

For description, see NS&E 484.

ELE E 485 Space Science and Engineering

Fall. 3 credits. Prerequisites: ELE E 301 and ELE E 303 or equivalent.

A survey of subjects relevant to spacecraft design. Astrodynamics and orbital maneuvers. Rigid-body dynamics and control. Communications. Black-body radiation and temperature control. Geospace environment. Remote sensing using electromagnetic techniques. Applications of these topics will be discussed where appropriate. At the level of *Design of Geosynchronous Spacecraft*, by Agrawal.

ELE E 487 Introduction to Antennas and Radar

Fall. 3 credits. Prerequisites: ELE E 301 and ELE E 304 (or a grade of B or better in ELE E 303).

Fundamentals of antenna theory, including gain and effective area, near and far fields, phased arrays, aperture antennas and aperture synthesis. Fundamentals of radar, including detection, tracking, Doppler shifts, sampling, range and frequency aliasing. Synthetic aperture radars and remote sensing from aircraft and satellites; over-the-horizon (OTH) radars and ionospheric propagation effects; radar astronomy techniques.

ELE E 488 RF Circuits and Systems

Spring. 3 credits. Prerequisites: ELE E 315 or equivalent. 2 design credits. lab credit.

Basic RF circuits and applications. Receivers, transmitters, modulators, filters, detectors, transmission lines, oscillators, frequency synthesizers, low-noise amplifiers. Applications include communication systems, radio and television broadcasting, radar, radio and radar astronomy. Computer-aided circuit analysis. Five laboratory sessions.

ELE E 491-492 Electrical Engineering Project

491, fall; 492, spring. 1-8 credits. Limited to seniors in Engineering.

Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty

member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration for this course.

ELE E 493 MicroElectro Mechanical Systems (MEMS)

Spring. 3 credits. Prerequisite: ELE E 210 or permission of instructor.

Introductory course to MEMS: microsensors, microactuators, and microrobots. Fundamentals of MEMS including materials, microstructures, devices and simple microelectromechanical systems, scaling electronic and mechanical systems to the micrometer/nm-scale, material issues, and the integration of micromechanical structures and actuators with simple electronics. This is an interdisciplinary course drawing content from mechanics, materials, structures, electronic systems, and the disciplines of physics and chemistry.

ELE E 494 Distribution Automation and Control for Electric Power Networks

Spring. 4 credits.

Distribution automation is a system that enables an electric utility to monitor, control, and operate distribution systems in a real-time mode from remote locations. This course will cover modeling of distribution networks, three-phase unbalanced power flow analysis and short circuit calculations, state estimation, operation and control strategies, communication systems, and computer systems for distribution automations.

ELE E 495-496 Special Topics in Electrical Engineering

1-4 credits.

Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

ELE E 515-516 Applied Signal Processing Systems Design

515, fall; 516, spring. Variable credits.

Project-level design of systems in the area of signal processing and general instrumentation, including digital signal processing hardware, audio, speech, and analog interfacing. Students pursue individual projects and coordinate ideas and resources with other students with related interest.

[ELE E 517-518 A Practical Electric Vehicle Motor Controller Utilizing Vector Control]

Fall, 517; spring 518. Variable credits (3-8 per year). Prerequisites: ELE E 471, 472, 476, or 457. Not offered 1996-97.

Design of a microcontroller-based vector-control system for a 3-phase induction motor. Emphasis is placed upon the coordinated design of a suitable feedback system with torque control, and a microprocessor arrangement capable of performing the coordinate rotations and implementing an overall torque feedback algorithm. Display and data acquisition software will be developed.]

ELE E 521 Theory of Linear Systems

Fall. 4 credits. Prerequisite: ELE E 302 or permission of instructor. Recommended: a good background in linear algebra and linear differential equations.

State-space and multi-input-multi-output linear systems in discrete and continuous time. The state transition matrix, the matrix exponential, and the Cayley-Hamilton theorem. Controllability, observability, stability, realization

theory. At the level of *Linear Systems*, by T. Kailath.

ELE E 522 Nonlinear Systems: Analysis, Stability, Control, and Applications

Spring. 4 credits. Prerequisites: ELE E 521 or a solid background in linear algebra and real analysis strongly recommended but not required.

A fairly rigorous introduction to nonlinear systems, including nonlinear differential equations, flows, phase-plane analysis, fundamentals of Lyapunov theory, LaSalle's Theorem, regions of attraction, slowly varying systems, advanced stability theory, Lyapunov redesign, applied nonlinear control, describing functions, averaging and singular perturbations; bifurcation analysis and control and application to physical systems.

ELE E 525 Adaptive Filtering in Communication Systems

Fall. 4 credits. Prerequisite: ELE E 302 or permission of instructor. Corequisite: ELE E 425 or 521.

Fundamentals of an adaptive filter theory intended for digital communication systems applications. Traditional problem, e.g., channel equalization for intersymbol interference removal, is used to motivate adaptive filter design and to raise issues of current interest. Assignments will consist of reports on adaptive digital filter and simulated evaluation.

ELE E 526 Advanced Signal Processing

Fall. 4 credits. Prerequisites: ELE E 425 and ELE E 521.

Sampling and signal reconstruction. Approximation theory. Linear inversion theory. Exponential signal modeling. Spectral estimation. Wavelets.

ELE E 530 Fiber and Integrated Optics

Spring. 4 credits with lab. Prerequisite: ELE E 303 or equivalent.

Physical principles of optical waveguides, optical sources and detectors, noise, modulators, and sensing. Wave equation solutions to the mode structure in waveguides, mode coupling, dispersion and bandwidth limitations, optical sources based on semiconductors, detectors and noise, modulation techniques, nonlinear effects in optical waveguides, and optical sensors.

ELE E 531 Quantum Electronics I

Fall. 4 credits. Prerequisites: ELE E 306 and 407, or Physics 443.

A detailed treatment of the physical principles underlying lasers, related fields, and applications. Topics include the interaction of radiation and matter, including emission, absorption, scattering, and basic spectroscopic properties of key laser media; theory of the laser, including methods of achieving population inversions, dispersive effects, and laser oscillation spectrum.

[ELE E 532 Quantum Electronics II]

Spring. 4 credits. Prerequisite: ELE E 531 or permission of instructor. Not offered 1996-97.

A continuation of ELE E 531. Topics include density matrix; nonlinear optical processes; properties of nonlinear optical materials; optical parametric oscillators; spontaneous and stimulated Raman and Brillouin processes; theory of coherence; pico- and femto-second optics; ultrafast processes in semiconductors and molecules; optical properties of semiconductor-doped glasses, quantum-well structures, and superlattices.]

ELE E 533 Semiconductor Lasers

Spring. 3 credits. Prerequisites: ELE E 430, ELE E 457, or permission of instructor. Study of principles and characteristics of semiconductor lasers. Topics cover laser dynamics, noise, quantum confined structures, single-frequency lasers, traveling-wave lasers, surface-emitting lasers, reliability, and emerging research subjects. A term project and paper will be required.

ELE E 535 Semiconductor Physics

Fall. 4 credits. Prerequisites: ELE E 457 and 407, or permission of instructor. Physics of materials and structures useful in semiconductor electronic and photonic devices, including crystal structure, energy bands, effective mass, phonons, classical low-field transport, high-field and ballistic charge carrier transport, electron scattering by phonons, optical absorption, reflection, optical emissions, deep levels as charge carrier traps, surface and interface effects. On the level of *Compound Semiconductor Device Physics* by S. Tiwari.

ELE E 536 VLSI Technology

Spring. 4 credits. 3 credits without laboratory with permission of instructor. Prerequisites: ELE E 453 or ELE E 457 or ELE E 439 or equivalent or permission of instructor. Microfabrication for silicon very large scale integrated circuits (VLSI), microelectromechanics (MEMS), compound semiconductors (CS), and optoelectronics. Lithography, diffusion, ion implantation, thin film deposition, and etching. Process integration for CMOS, BiCMOS and ECL VLSI, MEMS, CS LSI, and optoelectronics. Hands-on fabrication, characterization, and simulation laboratory.

[ELE E 537 Computer System Packaging]

Spring. 4 credits. 3 credits without project with permission of instructor. Prerequisites: ELE EE 230 and ELE EE 453 or ELE EE 457 or ELE 439; or permission of instructor. Not offered 1996-97. Physical integration of circuits, packages, boards, and full electronic systems. Computer (portable, desktop, cabinet levels) and telecommunication (cellular telephone, base station, switch levels) system applications. Packaging architecture; electrical, optical signal distribution; power distribution; signal integrity; power, thermal management, mixed signals, manufacturing, measurements, and simulation. Case studies. Lectures include industry experts.]

ELE E 539 Practicum in VLSI Design

Fall and spring (year-long course). 2 credits each semester. Prerequisites: EE 475 or consent of instructor. Corequisite: EE 439.

A year-long implementation project related to EE 439. Students will design a chip and have it fabricated in the fall semester and test it for functionality and performance in the spring semester. Students are required to take the course both fall and spring.

[ELE E 541 Advanced Computer Architectures]

Fall. 3 credits. Prerequisite: ELE E 308 (or COMS 280 and 314). Not offered 1996-97.

Design and evaluation of processor architectures are examined in the light of actual implementations. Topics include parallel and pipelined architectures, interleaved memories,

cache and virtual memories, I/O processors, vector and array processors, protection mechanisms, and RISC architectures.]

ELE E 542 Parallel Processing

Spring. 3 credits. Prerequisite: ELE E 541. Parallel computer systems that are designed to provide a high computation rate for large specific problems are studied. Topics include computer architecture, interconnection networks, performance characterization, basic algorithms, and parallel programming techniques. Recent multicomputers and massively parallel processors are also discussed.

ELE E 546 Information Networks

Spring. 3 credits. Prerequisite: EE 445 or consent of the instructor. 3 lecs. Evolution of network architectures for integrated services; advance in switching and transmission with an emphasis on asynchronous transfer mode (ATM); performance modeling; traffic and network management.

ELE E 547 Computer Vision

Fall. 4 credits. Prerequisites: ELE E 308 (or COMS 280 and 314) or consent of instructor. Computer acquisition and analysis of image data with emphasis on techniques for robot vision. This course will concentrate on descriptions of objects at three levels of abstraction: segmented images (images organized into subimages that are likely to correspond to interesting objects), geometric structures (quantitative models of image and world structures), and relational structures (complex symbolic descriptions of images and world structures). The programming of several computer-vision algorithms will be required.

ELE E 548 Digital Image Processing

Spring. 3 credits. Prerequisites: ELE E 411, EE 425, familiarity with linear algebra. Introduction to image processing through seven major topics: perception, statistical modeling, transforms, enhancement, analysis, compression, and restoration. Special attention is allocated to compression. Equal emphasis will be placed on gaining a mathematical and an intuitive understanding of algorithms through actual image manipulation and viewing.

ELE E 554 Advanced VLSI Circuit Design

Spring. 4 credits. Prerequisite: ELE E 453 or equivalent. Integration of building blocks on chip. Overview of recent innovations in VLSI circuits. Feedback circuits. Operational amplifiers. Switched-capacitor circuits. Digital-to-analog and analog-to-digital converters. Dynamic and static memories. Programmable logic and gate arrays. Systems on chips (microprocessors, wafer-scale integration).

[ELE E 555 Advanced Power Systems Analysis and Control I]

Fall. 3 credits. Prerequisites: ELE E 302 and concurrent registration in 451, or permission of instructor. Not offered 1996-97.

Advanced static analysis of power systems. State estimation in power systems. Bad-data detection and identification. Static equivalent circuits of external power systems. Static contingency analysis and selection. Steady-state security assessment. Static bifurcation and voltage stability. Theoretical analysis of load flow equations.]

[ELE E 556 Advanced Power Systems Analysis and Control II]

Spring. 3 credits. Prerequisite: ELE E 555 or permission of instructor. Not offered 1996-97.

Analysis of power-system components including rotating machines, excitation systems, automatic voltage regulation, boiler-turbine control, and speed regulation. Automatic Generation Control. Numerical simulations of mid-term and long-term power-system dynamics. Direct methods for power-system stability analysis. Dynamic equivalent circuits of external power systems. Dynamic contingency analysis and selection. Dynamic Security Assessment.]

ELE E 558 Compound Semiconductor Electronics

Spring. 4 credits with lab. Prerequisites: ELE E 457 or equivalent. Electronic properties of advanced semiconductor structures using compound semiconductor materials and heterojunctions. Fundamentals of carrier transport and scattering. Properties of direct bandgap semiconductors and quantum wells. Advanced semiconductor devices including metal-semiconductor transistors (FETs), modulation-doped FETs, and heterojunction bipolar transistors (HBTs). High-frequency operation of compound semiconductor devices. Six two-week labs, which include low-temperature carrier transport, optical absorption and emission, and electrical characterization of compound semiconductor devices.

ELE E 561 Error-Control Codes

Fall. 4 credits. Prerequisite: ELE E 301 or ELE E 521 or equivalent. A strong familiarity with linear algebra is assumed. An introduction to the theory of algebraic error-control codes. Topics include: Hamming codes, group codes, the standard array, minimum-distance decoding, cyclic codes, and the dual of a linear block code. Hamming and Singleton bounds for error-correcting codes. The construction and decoding of Bose-(Ray) Chaudhuri-Hocquenghem (BCH) and Reed-Solomon (RS) codes. Computer methods for the study of the structure and algorithms for error-control are used.

ELE E 562 Fundamental Information Theory

Fall. 4 credits. Prerequisite: ELE E 310 or equivalent. Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

ELE E 563 Communication Networks

Spring. 4 credits. Prerequisite: ELE E 411 or permission of instructor. Classical line-switched communication networks: point-process models for offered traffic; blocking and queuing analyses. Stability, throughput, and delay of distributed algorithms for packet-switched transmission of data over local-area and wide-area nets: using various protocols, TDMA. Flow control and capacity assignment algorithms for wideband circuit-switched and ATM networks.

ELE E 564 Decision Making and Estimation

Fall. 4 credits. Prerequisite: Coregistration in ELE E 411.

An introduction to those methods of making rational decisions and inferences and of forming estimates that are central to problems of communications, detection, pattern recognition, and statistical signal processing. Topics include Bayes, minimax, and Neyman-Pearson decision theories; Bayes and maximum likelihood point estimation; Cramer-Rao bound, efficient, and consistent estimation; spectral estimation; and robust models for signal extraction.

ELE E 567 Communication Systems II

Spring. Offered as 2 or 4 credits. Prerequisites: ELE E 562.

Fundamental topics in modern digital communication. Analytical and computational tools required to understand modern data conversion, transmission, and storage systems. Possible topics include: PCM, DPCM, PAM, PSK, FSK, matched filtering, equalization, line codes, trellis codes, Viterbi decoding, applications to audio, video, and magnetic recording. Vector quantization and universal data compression including LZ, LZW, and arithmetic coding, applied to files, speech, images, and video.

[ELE E 573 Optimal Control and Estimation for Continuous Systems]

Fall. 4 credits. Prerequisite: ELE E 521 or permission of instructor. Not offered 1996-97.

Control system design through parameter optimization, with and without constraints. The minimum principle; linear regulations, minimum-time and minimal-fuel problems. Computational techniques; properties of Lyapunov and Riccati equations.]

ELE E 577 Artificial Neural Networks

Fall. 4 credits. Prerequisites: ELE E 310; ELE E 411 recommended.

Artificial neural networks are brainlike in being formed out of many highly interconnected nonlinear memoryless elements. Probability theory will provide our primary analytical approach to design and analysis of neural networks. The course will cover mathematical and computer-based design capabilities of feed-forward nets (multilayer perceptrons) that can serve as pattern classifiers.

ELE E 580 Applied Electrodynamics

3 credits (4 credits with project). Prerequisite: ELE E 581 or ELE E 583 or permission of instructor.

Contemporary electrodynamics with emphasis placed on applications. Theory, design, and use of high-power microwave devices, such as gyrotrons, free-electron lasers, and traveling-wave tubes. Waveguide and cavity modes, charged-particle orbit theory, particle dynamics in electromagnetic fields, electron beam generation, waves on beams. Project based on the numerical simulation of microwave devices.

ELE E 581 Introduction to Plasma Physics

Fall. 4 credits. Prerequisites: ELE E 303 and ELE E 304 or equivalent. First-year graduate-level course; open to exceptional seniors with permission of instructor.

Plasma state; motion of charged particles in fields; drift-orbit theory; coulomb scattering, collisions; ambipolar diffusion; elementary

transport theory; two-fluid and hydromagnetic equations; plasma oscillations and waves, CMA diagram; hydromagnetic stability; elementary applications to space physics, plasma technology, and controlled fusion.

ELE E 582 Advanced Plasma Physics (also A&EP 607)

Spring. 4 credits. Prerequisites: ELE E 581 or A&EP 606.

Boltzmann and Vlasov Equations; dielectric tensor; waves in hot-magnetized plasma; Landau and cyclotron damping; microinstabilities; drift waves, low-frequency stability; test particles, Cerenkov emission; fluctuations; collisional effects; applications.

ELE E 583 Electrodynamics

Fall. 4 credits. Prerequisite: ELE E 301 and ELE E 304 or equivalent. 3 lecs.

Maxwell's equations, electromagnetic potentials, integral representations of the electromagnetic field, Green's functions. Special theory of relativity, Lienard-Wiechert potentials, radiation from accelerated charges, Cerenkov radiation. Electrodynamics of dispersive dielectric and magnetic media. At the level of *Classical Electrodynamics*, by Jackson.

ELE E 584 Microwave Theory

Spring. 4 credits. Prerequisites: ELE E 301 and 304 or equivalent. 3 lecs, 1 rec.

Theory of passive microwave devices. Modal analysis of inhomogeneous waveguides and cavities. Waveguide excitation, perturbation theory. Nonreciprocal waveguide devices. Scattering matrix analysis of multiport junctions, resonant cavities, directional couplers, circulators. Periodic waveguides, coupled-mode theory.

[ELE E 585 Atmospheric and Near Earth Space Science (also Astronomy 575)]

Fall. 3 credits. Not offered 1996-97; next offered 1997-98.

Energy-balance and thermal structure of neutral planetary atmospheres. Elements of circulation theory. Waves and instabilities. Coupling of lower atmospheres to upper atmospheres. Physical processes in the earth's ionosphere. Production, loss, and transport of charged particles. Electric and magnetic fields. Coupling of neutral-atmosphere dynamics with electric fields and charged-particle transport. Diagnostic techniques.]

[ELE E 586 Solar Terrestrial Physics (also Astronomy 576)]

Spring. 3 credits. Not offered 1996-97; next offered 1997-98.

High-latitude ionosphere; electric fields in the polar cap and auroral zone; particle precipitation and the aurora; magnetic and ionospheric storms; plasma instabilities in the ionosphere and magnetosphere; structure and physical processes in the sun, solar corona, and solar wind; interactions between the solar wind and the earth's magnetosphere; trapping, acceleration, and drift of energetic particles in the magnetosphere.]

ELE E 587 Energy Seminar (also NS&E and M&AE 545)

Fall and spring. 1 credit each semester. Students may take this seminar both fall and spring for credit. 1 lec. D. Hammer.

Energy resources, their conversion to electricity or mechanical work, and the environmental consequences of the energy cycle will be discussed by faculty members from several departments in the University, and by outside experts. Examples of topics to

be surveyed are energy resources, and economics, coal-based electricity generation; nuclear reactors; solar power; energy conservation by users; and air-pollution control.

[ELE E 588 Advanced Electromagnetic Wave Propagation and Scattering]

Spring. 3 credits. Prerequisite: ELE E 487 and 581 or permission of instructor. Offered alternate years. Not offered 1996-97.

WK band and full-wave solutions of the wave equations, interactions between particles and waves, scattering of radio waves from random fluctuations in refractive index, scatter propagation, incoherent scatter from the ionosphere and its use as a diagnostic tool, scattering from unstable plasma waves, pulse compression and other radar probing techniques.]

ELE E 593 Bioelectric Signal Analysis and Processing

3 credits with lab. Prerequisites: ELE E 301, 315, and a knowledge of C programming.

Measurement and analysis of low-level biological signals in the presence of background noise. Basic electrocardiography will be described. A/D conversion, filtering, signal conditioning, and data reduction techniques will be investigated using the human surface ECG as signal source. Pattern classification and safety of biomedical instrumentation will be introduced. Term design projects are required.

ELE E 596 Compiling Concurrent Programs for Field Programmable Gate Arrays

Fall. Prerequisites: ELE E 475 and CS 412.

Current generation field programmable gate arrays (FPGAs) provide circuit densities of 10,000-100,000 gates on a single chip that can be reconfigured in situ. In this course we shall examine systolic array type algorithms and real time data I/O. The course will consider the languages and their compilation to hardware, applications and architectural issues. The course will involve a substantial individual project.

ELE E 596-599 Graduate Topics in Electrical Engineering

1-4 credits.

Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

[ELE E 633 Radiation Effects in Microelectronics]

Not offered 1996-97.

For description, see NS&E 621.]

[ELE E 636 Advanced Solid-State Devices]

Spring. 4 credits. Prerequisites: ELE E 535 or ELE E 457 and ELE E 407 or equivalent. May not be offered 1996-97.

Review of quantum foundations of carriers in semiconductors. Detailed discussion of non-equilibrium transport of carriers in semiconductors including carrier dynamics, scattering, relaxation, recombination, hot carrier effects, high field effects, and quantum mechanical tunneling. Exploration of semi-classical drift-and-diffusion, hydrodynamics, and Monte Carlo-based device simulation. Project requires independent simulation study of state-of-the-art semiconductor device.]

ELE E 691-692 Electrical Engineering Colloquium

691, fall; 692, spring. 1 credit each term.

For students enrolled in the graduate Field of Electrical Engineering.

Lectures by staff, graduate students, and visiting authorities. A weekly meeting for the presentation and discussion of important current topics in the field. Reports required.

ELE E 693-694 Master of Engineering Design

693, fall; 694, spring. 1-10 credits. For students enrolled in the M.Eng.(Electrical) degree program. Uses real engineering situations to present fundamentals of engineering design. Each professor is assigned a section number. To register, see roster for appropriate numbers.

ELE E 695-699 Graduate Topics in Electrical Engineering

1-6 credits.

Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned. See M.Eng. office for course registration procedure.

ELE E 791-792 Thesis Research

791, fall; 792, spring. 1-15 credits. For students enrolled in the master's or doctoral program.

GEOLOGICAL SCIENCES**Freshman and Sophomore Courses****GEOL 101 Introductory Geological Sciences**

Fall, spring, or summer. 3 credits. Fall: W. Travers; spring: J. Bird; summer: W. Brice.

Designed to enhance an appreciation of the physical world. Natural environments, surface features, dynamic processes such as mountain belts, volcanoes, earthquakes, glaciers, and river systems are emphasized. Interactions of the atmosphere, hydrosphere, biosphere, and lithosphere (Earth System Science). Water, mineral, and fuel resources; environmental concerns. Field trips in the Ithaca region.

GEOL 102 Evolution of the Earth and Life (also Bio G 170)

Spring, summer. 3 credits. GEOL 101 recommended. Spring: J. L. Cisne, summer: W. Brice.

Earth systems and their evolution. Earth history's astronomical context. Plate tectonics, continental drifts, and their implications for climate and life. Coevolution of life and the atmosphere. Precedents for ongoing global change. Dinosaurs, mass extinctions, and human ancestry. Laboratories on reconstructing geological history and mapping ancient geography. Fossil collecting on field trips.

GEOL 103 Introduction to Geology Through the Environment

Fall. 3 credits. Limited to 40 students. D. E. Karig.

The geologic factors that affect human well being and safety, taught as much as possible with examples in Tompkins County. Weekly field trips to evaluate geologic hazards such as landslides, floods, groundwater pollution, and hazardous waste disposal. Later in the term, earthquakes and volcanic hazards will be reviewed.

GEOL 104 The Sea: An Introduction to Oceanography (also BIOES 154)

Spring, summer. 3-4 (4 credits with lab section) credits. Spring: C. H. Green, W. M. White; summer: L. Godfrey and W. M. White.

A survey of the physics, chemistry, geology, and biology of the oceans for both science and non-science majors. Topics include: sea-floor spreading and plate tectonics, marine sedimentation, chemistry of seawater, ocean currents and circulation, the oceans and climate, ocean ecology, coastal processes, marine pollution, and marine resources.

GEOL 105 Writing on Rocks (Freshman Seminar)

Fall. 3 credits. J. Chiment.

See Freshman Seminar Handbook for description.

GEOL 107 How the Earth Works

Fall. 1 credit. J. Cisne.

A S/User-friendly introduction to the workings and interactions of solid earth, ocean, atmosphere, and life as they relate to understanding ongoing global change.

GEOL 108 Geology and Society

Spring. 1 credit. May be taken concurrently with or after GEOL 101, 102, 103, 104, 111, 201, or 206. T. E. Jordan.

Intended for students who are curious about the impact of geological materials and processes on society, what geologists actually do, what the big questions are in current research, and what a geology career might hold in store. A different speaker each week takes a look at topics ranging from environmental law to natural resources to agriculture.

GEOL 109 Dinosaurs

Fall. 1 credit. J. L. Cisne.

An entry-level survey course for those who are interested in dinosaurs and may lack a science background. Lectures examine the fossil evidence and illustrate how various geological and biological disciplines contribute to understanding dinosaurs and their world.

GEOL 111 To Know the Earth and Build a Habitable Planet

Fall. 3 credits. J. M. Bird.

Acquaints the non-scientists with Earth. Major features and how Earth has evolved. Earth System Science and building a habitable planet. Effects of human activity on geologic environments, mitigating environment damage, living with natural hazards. Mineral resource use in 21st century and an environmentally sound fuel-minerals cycle.

GEOL 122 Earthquake! (also ENGRI 122)

Fall. 3 credits. L. Brown.

The science of natural hazards and strategic resources is explored. Techniques for locating and characterizing earthquakes, and assessing the damage they cause; methods of using sound waves to image the earth's interior to search for strategic materials; the historical importance of such resources. Seismic experiments on campus to probe for groundwater, the new critical environmental resource.

GEOL 123-124 Science of Earth Systems Colloquium (also ABEN 120-121, SCAS 101-102 and SES 101-102)

For description, see the Science of Earth Systems section in "Interdisciplinary Centers, Programs, and Studies," in the front part of the catalog.

GEOL 125 Chemistry of the Environment (also ENGRI 125)

Fall. 3 credits. W. White, R. Kay, L. Derry. Wise environmental management requires an understanding of natural chemical interactions. Examines natural chemical cycles among atmosphere, biosphere, hydrosphere, and the solid Earth; the impact of man's activity on them, including the greenhouse effect, ozone hole, acid rain, and water pollution. Laboratory sessions include environmental chemical analysis and computer simulation.

GEOL 201 Introduction to the Physics and Chemistry of the Earth (also ENGRD 201)

Spring. 3 credits. Prerequisites: Mathematics 191 and Physics 112.

L. M. Cathles.

For description, see Engineering Common Courses.

GEOL 203 Natural Hazards and the Science of Complexity

Fall. 3 credits. Prerequisites: 1 calculus course. D. L. Turcotte.

Studies of natural hazards; earthquakes, floods, hurricanes, severe storms, wildfires, meteor impacts. Applications of the science of complexity to natural hazards: fractals, chaos, and self-organized criticality.

GEOL 204 Hydrology and the Environment (also SCAS 371 and ABEN 371)

Spring. 3 credits. Prerequisite: 1 course in calculus. P. C. Baveye, L. M. Cathles, J.-Y. Parlange, T. S. Steenhuis, M. F. Walter.

Introduction to hydrology: the hydrologic cycle and the role of water and chemicals in the natural environment. Includes precipitation, infiltration, evapotranspiration, groundwater, surface runoff, river meandering, floods, and droughts. Case studies, short field trips, computer programs, and laboratories foster an understanding of concepts and principles of hydrologic processes.

GEOL 206 Geologic Perspectives on Climate Change

Spring. 3 credits. K. Attoh.

Principles that govern the interactions among the principal components of the climate system (atmosphere, oceans, lithosphere, and solar radiation) are used to reconstruct Earth's climates from the geologic record. Continental climate record in rocks. Geological forcing/responses to climate change.

GEOL 210 Introduction to Field Methods in Geological Sciences

Fall. 3 credits. Prerequisite: GEOL 101, 103, 201, or permission of instructor.

Weekly field sessions. A weekend field trip. S. Mahlburg Kay, J. L. Cisne.

The methods by which rocks are used as a geological database. Field methods used in the construction of geologic maps and cross sections; systematic description of stratigraphic sections. Field and laboratory sessions on Saturday mornings until Thanksgiving. One additional lecture during most of these weeks. One weekend field trip to eastern New York.

GEOL 212 Special January Field Trip

Fall. 2 credits. Prerequisites: GEOL 101 or 201 or equivalent, and permission of instructor. Travel and subsistence expenses to be announced. Staff.

A trip of one week to ten days during January intersession in an area of interesting geology in the lower latitudes. Interested students

should contact the instructor during the early part of the fall semester.

GEOL 213 Marine and Coastal Geology

Summer. 2 credits. Prerequisites: an introductory course in geology or permission of instructor. Staff.
A special one-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island near Portsmouth, New Hampshire. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost for 1995 (including tuition, room, board, and ferry transportation) is \$895.

GEOL 214 Western Adirondack Field Course

Spring, one week at the end of the semester. 1 credit. Prerequisite: GEOL 210 or equivalent, or permission of instructor. Students should be prepared for overnight camping and share in the cost of camp meals. Independent project. W. A. Bassett.

Field mapping methods, mineral and rock identification, examination of Precambrian metamorphic rocks and lower Paleozoic sediments, talc and zinc mines.

Junior, Senior, and Graduate Courses

Of the following, the core courses GEOL 326, 355, 356, 375, and 388 may be taken by B.S. candidates who have successfully completed GEOL 201 or the equivalent and by B.A. candidates who have completed GEOL 101 or the equivalent, or who can demonstrate to the instructor that they have adequate preparation in mathematics, physics, chemistry, biology, or engineering.

GEOL 302 Evolution of the Earth System (also SES 332 and SCAS 302)

For description, see the Science of Earth Systems section in "Interdisciplinary Centers, Programs, and Studies," in the front part of the catalog.

GEOL 326 Structural Geology

Spring. 4 credits. Prerequisite: GEOL 101, 103, or 201, or permission of instructor. R. W. Allmendinger.

Nature and origin of deformed rocks at microscopic to macroscopic scales, with emphasis on structural geometry and kinematics. Topics include stress, strain, rheology, deformation mechanisms, minor structures, faulting, folding, and structural families.

GEOL 355 Mineralogy

Fall. 4 credits. Prerequisite: GEOL 101, 103, or 201 and Chem 207 or permission of instructor. W. A. Bassett.

Examination of minerals by hand-specimen properties and optical microscopy. Geological setting, classification, crystal structures, phase relations, chemical properties, and physical properties of minerals. X-ray diffraction is introduced. Independent research project.

GEOL 356 Petrology and Geochemistry

Spring. 4 credits. Prerequisite: GEOL 355. R. W. Kay.

Principles of phase equilibrium as applied to igneous and metamorphic systems. Description, classification, chemistry, origin, regional distribution, and dating of igneous and metamorphic rocks. Geochemical distribution of trace elements and isotopes in igneous and metamorphic systems. The petrological evolution of the planets.

GEOL 375 Sedimentology and Stratigraphy

Fall. 4 credits. Prerequisite: GEOL 101, 103, or 201. J. L. Cisne, T. E. Jordan.
Formation of sedimentary rocks. Depositional processes and environments. Correlation of strata in relation to time and environment. Petrology of sandstones and limestones. Geological age determination. Reconstruction of paleogeography and interpretation of earth history from stratigraphic evidence. Organization of strata in stratigraphic sequences.

GEOL 388 Geophysics and Geotectonics

Spring. 4 credits. Prerequisites: Mathematics 192 and Physics 208, 213, or equivalent. B. L. Isacks.
Global tectonics and the deep structure of the solid earth as revealed by investigations of earthquakes, earthquake waves, the earth's gravitational and magnetic fields, and heat flow.

GEOL 401 Introduction to Biogeochemistry (also NTRES 432, SES 401)

Fall. 4 credits. Prerequisites: college-level biology and chemistry. L. Derry and J. Yavitts.

The cycling of elements at the earth's surface through biologically governed processes and fluxes. Topics include weathering and acid-base chemistry, river fluxes and marine inorganic chemistry, nutrient limitation and recycling in terrestrial and marine systems, anthropogenic pollution, isotopic tracers and mathematical modeling of element fluxes.

GEOL 411 Global Change Research: Mountains, Climate, and Erosion

Fall. 3 credits. B. L. Isacks.
Undergraduate participation in one of the interdisciplinary research projects of the Earth Observing System (EOS). Choice of topics concerning the interplay of climate, topography, and the environment of the Andes and Himalayan mountains as revealed by satellite images and other computerized data analyzed with modern image processing and Geographic Information Systems (GIS).

GEOL 417 Field Mapping in Argentina

Summer. 3 credits. Prerequisites: GEOL 210 and 326; Spanish desirable, but not required. S. M. Kay.

Modern techniques of geological mapping applied in the region of San Juan, Argentina, including folded and faulted sedimentary rock units of the Andean Precordillera (San Juan River section), intensely deformed Precambrian metamorphic rocks of the Pampean Ranges (Pie de Palo), and shallow-level silicic intrusives (Cerro Blanco-Ullun).

GEOL 423 Petroleum Geology

Fall. 3 credits. Recommended: GEOL 326. Offered alternate years. W. B. Travers.

Introduction to hydrocarbon exploration and development. Exploration techniques, including well logs, fluid pressures, seismic-reflection methods, gravity, and magnetic measurements to map subsurface structures and stratigraphy. Petroleum origin and migration. Dispersal systems and depositional patterns of petroleum reservoirs. Economics of exploration, leasing, drilling and production. Estimates of petroleum reserves, including tar sands and oil shales.

[GEOL 425 Precambrian Orogenic Cycles]

Fall. 3 credits. Prerequisites: GEOL 326, GEOL 356, or permission of instructor. Offered alternate years. Not offered in 1996-97. K. Attoh.

Thermal and kinematic histories of Precambrian orogenic belts. Recent data from metamorphic, structural, and geochronological studies to infer deformation paths in selected orogens, including Dahomeyide and Eburnian orogens of West Africa, and Grenville, Penokean, and Kenoran orogens of the Canadian Shield. Current hypotheses regarding Precambrian orogenic styles and continental crust evolution.]

GEOL 426 Geologic Evolution of South America

Spring. 3 credits. Prerequisites: GEOL 326 and GEOL 356, or permission of instructor. S. Mahlburg Kay.

Regional overview of Paleozoic to recent tectonic and magmatic evolution of South America in the framework of crustal and mantle evolution, with particular emphasis on the evolution of the region of the modern Andean Cordillera.

GEOL 434 Reflection Seismology I: Acquisition and Processing

Fall. 3 credits. Offered alternate years with GEOL 438. L. Brown.

Design of seismic surveys, both 2D and 3D. Source characteristics, array design, recording geometries and equipment. Land and marine operations. Basis signal processing theory. Applied 2D interactive seismic processing with ProMAX:FK filtering, deconvolution, velocity analysis, stacking, migration (time and depth), display.

GEOL 436 Environmental Geophysics

Spring. 3 credits. Offered alternate years. Prerequisites: PHYS 213 and MATH 192 or equivalents, or permission of instructor. L. Brown.

Theory of geophysical techniques for imaging the subsurface. Gravity, magnetic, electrical, and radar methods are covered, but emphasis is on seismic reflection and refraction. The focus is on shallow targets of environmental or archaeological interest. Field experience with these methods is offered in a companion course, GEOL 437.

GEOL 437 Geophysical Field Methods

Fall. 3 credits. Offered alternate years. Prerequisites: PHYS 213 and MATH 192 or equivalents, or permission of instructor. L. Brown.

Introduction to field methods of geophysical exploration, especially as applied to environmental issues. Emphasis on seismic, gravity, and magnetic techniques. Field surveys carried out at the beginning of the semester are analyzed in a series of weekly follow-up meetings during the semester wherein the results are analyzed and interpreted. A field companion to GEOL 436, which is recommended but not required prior to this course.

[GEOL 438 Reflection Seismology II: Analysis and Interpretation]

Spring. 3 credits. Offered alternate years with GEOL 434. Not offered 1996-97. L. Brown.

Methods of inferring geologic structures from seismic images. Migration, velocity, and amplitude interpretation. Seismic stratigraphy. 3D, VSP, and shear wave interpretation. Interactive seismic modeling.]

GEOL 445 Geohydrology (also ABEN 471 and C&EE 431)

Fall. 3 credits. Prerequisites: Mathematics 294 and Engr 202. W. Brutsaert, L. M. Cathles, J.-Y. Parlange, T. S. Steenhuis.

Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

[GEOL 452 X-ray Diffraction Techniques]

Spring. 3 credits. Prerequisites: GEOL 355 or permission of instructor. Offered alternate years. Not offered 1996-97. W. A. Bassett and staff.

Automated X-ray diffractometer, Debye-Scherrer, real-time Laue, high-temperature diffraction, high-pressure diffraction, and pole-figure analysis. Applications in materials science and geological sciences. Labs will be held in the new Materials Science X-Ray Facility.]

GEOL 453 Advanced Petrology

Fall. 3 credits. Prerequisite: GEOL 356. Offered alternate years. R. W. Kay.

Magmas and metamorphism in the context of plate tectonics. Major and trace element chemistry and phase petrology as monitors of the creation and modification of igneous rocks. Temperature and stress in the crust and mantle and their influence on reaction rates and textures of metamorphic rocks. Application of experimental studies to natural systems.

GEOL 454 Advanced Mineralogy

Spring. 3 credits. Prerequisite: GEOL 355 or permission of instructor. Offered alternate years. W. A. Bassett.

Crystallography and crystal chemistry of minerals and the methods of their study. X-ray diffraction, optical methods, computer simulation of crystal structures. Emphasis on effects of high pressures and temperatures with implications for understanding of Earth's interior.

[GEOL 455 Geochemistry]

Fall. 4 credits. Prerequisites: Chemistry 207 and Mathematics 192 or equivalent. Recommended: GEOL 356. Offered alternate years. Not offered 1996-97. W. M. White.

The Earth from a chemical perspective. Formation of the elements; cosmochemistry; chemical evidence regarding the formation of the Earth and Solar System; trace-element geochemistry; isotope geochemistry; geochemical thermodynamics and kinetics; chemical evolution of the crust, mantle, and core; weathering and the chemistry of natural waters; chemistry of rivers and the oceans; hydrothermal systems and ore deposition.]

GEOL 457 Metamorphic Petrology

Fall. 3 credits. Prerequisite: GEOL 355. Offered alternate years. K. Attoh.

Theory, field, and experimental basis for the understanding of metamorphic processes and rocks. Relations between crustal dynamics and metamorphic processes.

GEOL 458 Volcanology

Spring. 3 credits. Corequisite: GEOL 356 or equivalent. Offered alternate years. R. W. Kay and W. M. White.

Causes of volcanism, melting in the Earth, and the origin of magmas. Physical volcanology, nature and types of volcanic eruptions and associated deposits, eruption mechanisms.

Volcanic plumbing systems, magma chamber processes, evolution of magma. Volcanism and impact phenomena in the Solar System. Volcanic hazard assessment and volcano monitoring. Ore deposits associated with volcanism.

[GEOL 476 Sedimentary Basins: Tectonics and Mechanics]

Spring. 3 credits. Prerequisite: GEOL 375 or permission of instructor. Offered alternate years. Not offered 1996-97. T. E. Jordan.

Subsidence of sedimentary basins from the point of view of plate tectonics and geomechanics. Interactions of subsidence, sediment supply, and environmental characteristics in development of stratigraphic sequences. Stratigraphic characteristics of active-margin, passive-margin, and cratonic basins. Geophysical and stratigraphic modeling; sequence stratigraphy. Modern and ancient examples.]

GEOL 478 Advanced Stratigraphy

Spring. 3 credits. Prerequisite: GEOL 375 or permission of instructor. Offered alternate years. T. E. Jordan.

Modern improvements on traditional methods of study of ages and of genetic relations among sedimentary rocks, emphasizing 3-D relationships. Techniques and applications of sequence stratigraphy at scales ranging from beds to entire basins. Physical correlation, dating techniques, and time resolution in sedimentary rocks. Physical controls on the stratigraphic record. Numerical modeling.

[GEOL 479 Paleobiology (also BIO ES 479)]

Fall. 3 credits. Prerequisites: one year of introductory biology for majors and either BIOES 272 or 274, GEOL 375, BIOES 373, or permission of instructor. Offered alternate years. Not offered 1996-97. J. Cisne and staff.

A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of geology students and the geological backgrounds of biology students concerning the nature and significance of the fossil record for their respective studies.]

GEOL 481 Senior Survey of Earth Systems

Fall. 3 credits. Limited to seniors majoring in geological sciences. J. M. Bird.

Survey course that integrates undergraduate course work, intended to enhance overall understanding of geological sciences. Emphasis on current models of earth's dynamic systems (e.g., global climate change; mantle evolution). Guest lecturers; synthesis and review literature; scientific literature readings; discussions; student presentations.

GEOL 490 Honors Thesis (B.A. degree candidates)

Fall, spring. 2 credits. Staff.

Thesis proposal to be discussed with director of undergraduate studies during the junior year. Participation requires acceptance of a thesis proposal by the faculty committee.

GEOL 491-492 Undergraduate Research

Fall, spring. 1 or 2 credits. Staff.

(B. L. Isacks and R. W. Kay, coordinators). Introduction to the techniques and philosophy of research in the earth sciences and an opportunity for undergraduates to participate in current staff research projects. Topics chosen in consultation with, and guided by, a

staff member. A short written report is required, and outstanding projects are prepared for publication.

GEOL 500 Design Project in Geohydrology

Fall, spring 3-12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over two or more semesters. L. M. Cathles.

The project may address one of many aspects of groundwater flow and contamination, and must involve a significant geological component and lead to concrete recommendations or conclusions of an engineering nature. Results are presented orally and in a professional report.

GEOL 502 Case Histories in Groundwater Analysis

Spring. 4 credits. L. M. Cathles.

Groundwater flow in a specific area, such as a proposed nuclear-waste disposal site, analyzed in depth. Geological and resource data on the area are presented early in the course. Then the material is analyzed by students working as an engineering analysis team. Each student makes a weekly progress report and writes part of a final report. Results are presented in a half-day seminar at end of term.

[GEOL 622 Advanced Structural Geology I]

Spring. 3 credits. Prerequisites: GEOL 326 and permission of instructor. Offered alternate years. Not offered 1996-97.

R. W. Allmendinger and D. E. Karig. Stress-strain theory and application. Advanced techniques of structural analysis. Topics include finite and incremental strain measurement; microstructure, preferred orientation, and TEM analysis; pressure solution and cleavage development; and experimental deformation. Applications to deformation of unconsolidated sediments, brittle and brittle-ductile deformation of supracrustal strata, and ductile deformation of high-grade metamorphic rocks. Kinematic analysis of shear zones and folds in these regimes.]

GEOL 624 Advanced Structural Geology II

Spring. 3 credits. Prerequisites: GEOL 326 and permission of instructor. Offered alternate years. R. W. Allmendinger.

Geometry, kinematics, and mechanics of structural provinces. Concentration on thrust belts, rift provinces, or strike-slip provinces. Techniques of balanced cross sections.

GEOL 628 Geology of Orogenic Belts

Spring. 3 credits. Prerequisite: permission of instructor. J. M. Bird.

A seminar course in which students study specific geologic topics of an orogenic belt selected for study during the term. The course is intended to complement GEOL 681.

GEOL 634 Advanced Geophysics I: Fractals and Chaos in Geology and Geophysics

Spring. 3 credits. Prerequisite: GEOL 388 or permission of instructor. Offered alternate years. D. L. Turcotte.

Definitions of fractal sets and statistical fractals, scale invariance, self-affine fractals, multifractals, applications to fragmentation, seismicity and tectonics, petroleum distribution and reserves, ore grade and tonnage, drainage networks and landforms, and floods

and droughts. Definitions of chaos and self-organized criticality, renormalization groups, diffusion limited aggregation and percolation clusters, wavelet transforms, applications to mantle convection, the earth's dynamo, and distributed seismicity.

[GEOL 636 Advanced Geophysics II: Quantitative Geodynamics]

Spring. 3 credits. Prerequisite: GEOL 388 or permission of instructor. Offered alternative years. Not offered 1996-97. D. L. Turcotte.

Stress and strain in the earth, elasticity and flexure, heat transfer, gravity, fluid mechanics, rock rheology, faulting, chemical geodynamics, flow in porous media.]

[GEOL 651 Analysis of Biogeochemical Systems]

Fall. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternative years. Not offered 1996-97. L. A. Derry.

Dynamics of biogeochemical systems. Kinetic treatment of biogeochemical cycles. Box models, residence time, response time. Analytical and numerical solutions of model systems. Eigen-analysis of linear systems. Feedback and nonlinear cases, problems of uncertainties in natural systems. Modeling software such as Stella II and Matlab; applications to current research of participants or from recent literature.]

[GEOL 656 Isotope Geochemistry]

Spring. 3 credits. Open to undergraduates. Prerequisite: GEOL 455 or permission of instructor. Offered alternate years. Not offered 1996-97. W. M. White.

Nucleosynthetic processes and the isotopic abundances of the elements. Geochronology and cosmochronology using radioactive decay schemes, including U-Pb, Rb-Sr, Sm-Nd, K-Ar, U-series isotopes, and cosmogenic isotopes such as ^{14}C and ^{36}Cl . Use of radiogenic and stable isotopes in petrology and their application to study of the evolution of the crust and mantle. Isotopic evidence regarding the formation of the Earth and the Solar System. Stable isotopes and their use in geothermometry, ore petrogenesis, paleontology, and the global climate system.]

[GEOL 681 Geotectonics]

Fall. 3 credits. Prerequisite: permission of instructor. J. M. Bird.

Theories of orogeny; ocean and continent evolution. Kinematics of lithosphere plates. Rock-time assemblages of modern oceans and continental margins, and analogs in ancient orogenic belts. Time-space reconstructions of specific regions. Problems of dynamic mechanisms—corollaries and evidence from crustal features.

[GEOL 695 Computer Methods in Geological Sciences]

Fall, spring. 3 credits. L. Brown, B. L. Isacks.

Independent research projects using state-of-the-art computational resources in the Department of Geological Sciences. Possibilities include: image and seismic processing, seismic and geomechanical modeling, GIS, use of interpretational workstations for 3D seismics and satellite imagery; modeling fluid flow through complex media.

GEOL 700-799 Seminars and Special Work

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff.

Advanced work on original investigations in geological sciences. Topics change from term to term. Contact appropriate professor for more information.

GEOL 722 Advanced Topics in Structural Geology

R. W. Allmendinger.

GEOL 725 Rock and Sediment Deformation

D. E. Karig.

GEOL 731 Plate Tectonics and Geology

J. M. Bird.

GEOL 733 Fractal Chaos—Independent Studies

D. L. Turcotte.

GEOL 751 Petrology and Geochemistry

S. Mahlburg Kay, R. Kay.

GEOL 753 Advanced Topics in Mineral Physics

W. A. Bassett.

GEOL 755 Advanced Topics in Petrology and Tectonics

J. Bird, W. A. Bassett.

GEOL 757 Current Research in Petrology

S. Mahlburg Kay, R. Kay.

GEOL 762 Advanced Topics in Petroleum Exploration

W. Travers.

GEOL 771 Advanced Topics in Sedimentology and Stratigraphy

T. E. Jordan.

GEOL 773 Paleobiology

J. L. Cisne.

GEOL 775 Advanced Topics in Oceanography

C. H. Green.

GEOL 780 Seismic Record Reading

M. Barazangi.

GEOL 781 Geophysics, Exploration Seismology

L. D. Brown.

GEOL 783 Advanced Topics in Geophysics

B. L. Isacks.

GEOL 789 Lithospheric Seismology (COCORP Seminar)

L. Brown.

GEOL 793 Andes-Himalaya Seminar

S. Mahlburg Kay, R. W. Allmendinger, B. L. Isacks, T. E. Jordan.

GEOL 795 Low Temperature Geochemistry

L. A. Derry.

GEOL 796 Geochemistry of the Solid Earth

W. M. White.

GEOL 797 Fluid-Rock Interactions

L. M. Cathles.

GEOL 799 Soil, Water, and Geology Seminar

L. M. Cathles, T. S. Steenhuis.

MATERIALS SCIENCE AND ENGINEERING

Undergraduate Courses

MS&E 111 Materials by Design (also ENGR 111)

Fall. 3 credits. E. P. Giannelis. For description, see Engineering Common Courses.

MS&E 118 Design Integration: A Portable CD Player (also ENGR 118)

Spring. 3 credits. M. O. Thompson, W. Sachse. For description, see Engineering Common Courses.

MS&E 261 Introduction to Mechanical Properties of Materials (also ENGRD 261)

Fall. 3 credits. S. L. Sass. For description, see Engineering Common Courses.

MS&E 262 Introduction to Electrical Properties of Materials (also ENGRD 262)

Fall. 3 credits. Prerequisite: co-registration in Physics 213 or electricity and magnetism in high school physics. M. O. Thompson.

For description, see Engineering Common Courses.

MS&E 265 Biological Materials and Their Synthetic Replacements

Fall. 3 credits. D. T. Grubb. From contact lenses and false teeth to arterial implants and hip joints, a tremendous range of synthetic materials are used in contact with the body to replace or supplement natural biological materials. The course will consider a number of biological systems and describe the properties and structure of the natural materials. Requirements for candidate replacement materials will be discussed, with historical and current solutions. These involve material properties such as strength and corrosion resistance as well as toxicity and bio-compatibility. Design constraints, including methods of production, economics, regulatory approval, and legal liabilities, will also be considered.

MS&E 277 The Substance of Civilization—Materials through the Ages

Spring. 3 credits. 2 lects, 1 lab. S. L. Sass. Materials have enabled revolutionary advances in how we live, work, fight, travel, and play; hence the naming of eras after them—Stone, Bronze, and Iron Ages. This course explores the role of materials in the development of the modern Western industrial civilization by putting technology into a historical context and examining the advances made possible by innovations with materials, starting with the Stone Age. Interconnections between critical developments are identified and explored—for example, the relationship between materials, agriculture, and written languages in the fourth millennium B.C., and between the Exodus of the Hebrews, the general tumult in the Eastern Mediterranean, and the onset of the Iron Age, at the end of the second millennium B.C. Early technologies will be illustrated with beautiful works of art. Lectures, demonstrations, and hands-on laboratory experiments, will elucidate the origin of the unique properties of materials

such as polymers, ceramics, metals and glass. This course is designed to fulfill the science requirement in the College of Arts and Sciences.

MS&E 285 Art, Archaeology, and Analysis (also ENGRI 185 and NS&E 285)

Spring. 3 credits.

For description, see Engineering Common Courses.

MS&E 331/531 Structure of Materials

Fall. 4 credits. J. M. Blakely.

Bonding in materials, crystal structures, and symmetry, defects. Crystal planes and directions, stereographic projections. Techniques for materials analysis: X-ray and electron diffraction, optical and electron microscopy. Experimental systems for structural characterization of materials.

MS&E 332/532 Electrical and Magnetic Properties of Materials

Spring. 3 credits. Prerequisite: MS&E 331

or permission of instructor. J. M. Blakely.

Introduction to electronic band structure of crystals. Electrical and magnetic properties of metals and semiconductors as affected by microstructure. Design of semiconductor properties by doping. Carrier statistics. Properties of junctions in semiconductor devices. Principles and design of ferromagnetic materials for transformers, permanent magnets, and magnetic memory devices. Ionic conductivity. Fundamentals of superconducting materials for high-field magnets and Josephson junctions. Introduction to dielectric and optical properties.

MS&E 333 Research Involvement I

Fall. 3 credits. Prerequisite: approval of course coordinator. Staff.

Supervised independent research project in association with faculty member and faculty research group of the department. Students design experiments, set up the necessary equipment, and evaluate the results. Creativity and synthesis are emphasized.

MS&E 334 Research Involvement II

Spring. 3 credits. Prerequisite: approval of department. Staff.

See MS&E 333 for description. May be a continuation of MS&E 333 or a one-term affiliation with a research group.

MS&E 335/535 Thermodynamics of Condensed Systems

Fall. 4 credits. Prerequisite: Math 293 and 294. E. J. Kramer.

The three laws of thermodynamics are introduced as a basis for understanding phase equilibria, heterogeneous reactions, solutions, electrochemical processes, surfaces, and defects. Statistical mechanics is introduced and applied to the calculation of entropy and specific heat of ideal gases and solids. Examples of design and control of processes.

MS&E 336/536 Kinetics, Diffusion, and Phase Transformations

Spring. 3 credits. Prerequisite: MS&E 335 or permission of instructor. R. Dieckmann.

Introduction to absolute rate theory, atomic motion, and diffusion. Applications and design involving nucleation and growth of new phases in vapors, liquids, and solids; solidification, crystal growth, oxidation and corrosion, radiation damage, recrystallization, gas-metal reactions, and thermomechanical processing to produce desired microstructures

and properties. One-third of course involves examples of design and control of processes.

MS&E 414/514 Chemical Processing of Ceramics

Spring. 3 credits. E. P. Giannelis.

Design and characterization of materials at the molecular level. Synthesis, drying, and sintering of ceramics, glasses, and composites. Sol-gel, hydrothermal, chemical-vapor deposition, and pyrolysis techniques. Surface chemistry of oxides. Analytical techniques include chromatography, mass spectrometry, infrared, uv-visible and nuclear-magnetic resonance spectroscopy. Design, synthesis, and chemical properties of inorganic/organometallic precursors. Ceramic thin films, fibers whiskers, and membranes.

MS&E 435 Senior Thesis I & II

Fall and spring. 2-semester course.

8 credits. Staff.

Open to advanced undergraduates in lieu of the senior materials laboratory. Proposals for thesis topics should be approved by the supervising faculty member prior to beginning the senior year. Approved thesis topics will normally involve original experimental research in direct collaboration with an ongoing research program. Periodic oral and written presentations and a final written thesis are required.

MS&E 441/541 Microprocessing of Materials

Fall. 3 credits. D. G. Ast.

Materials and processing steps involved in the production of integrated circuits and other micro-devices. Science, engineering, and design of processes to produce a specific device, such as a DRAM or CMOS inverter (not detailed electrical-circuit analysis of these devices or system design). Emphasis is on silicon, with extensions to gallium arsenide. All fabrication steps are considered, from single crystal growth and wafer production, to characterization, testing and yield calculations. Major topics are thermal oxidation of silicon, chemical vapor deposition of thin films, diffusion, ion implantation, resists and the principles of lithography using UV, electrons and X-rays, and wet/dry etching.

MS&E 442/542 Macroprocessing

Spring. 3 credits.

Deformation and macro-processing of materials; sheet metals forming, superplastic forming, casting, single crystal growth, powder sintering metal/ceramic joining, surface treatments. Course based on case studies demonstrating various macro-processing techniques. Course includes comprehensive experimental project involving design, measurement, and analysis of superplastic forming process starting from basic mechanisms. Results compared with the predictions of numerical analysis.

MS&E 443-444 Senior Materials Laboratory

443, fall; 444, spring. 3 credits each term.

D. T. Grubb.

Practical laboratory covering the analysis and characterization of materials and processing. Emphasis on design of experiments for evaluation of materials' properties and performance as related to processing history and microstructure. Projects available in areas such as plasticity, mechanical and chemical processing, phase transformations, electrical properties, magnetic properties, and electron microscopy.

MS&E 445 Mechanical Properties of Materials

Fall. 3 credits. Prerequisites: MS&E 331 and 336, or permission of instructor.

A. L. Ruoff.

Stress, strain, and the basics of concepts in deformation and fracture for metals, polymers, and ceramics. Analysis of important mechanical properties such as plastic flow, creep, fatigue, fracture toughness, and rupture. Application of these principles to the design of improved materials and engineering structures.

MS&E 447/448 Materials Design Concepts I & II

447, fall; 448, spring. 2 credits each term.

C. K. Ober/D. G. Ast.

Defines design in the field of materials science using Dieter's *Engineering Design*, Ashby's *Materials Selection in Engineering Design*, and other sources. Innovation, patent searching, and ASTM standards. Speakers from industry and other institutions lecture on case studies of design problems. Students give short oral and written presentations. Proposal for design-study project in the fall semester. Completion of extensive design-study project in the spring semester. Study includes prior art literature, materials selection, and some modeling, as well as discussion of broader economic, regulatory, environmental, and liability concerns that may arise.

MS&E 449 Introduction to Ceramics

Fall. 3 credits. Prerequisite: MS&E 331 or permission of instructor. R. Dieckmann.

Ceramic processes and products, crystal structures, structure of glasses, point defects (point-defect chemistry and relation to nonstoichiometry), line defects, grain boundaries, diffusion in ionic materials (emphasis on the relationships between diffusion and point-defect structure), phase diagrams, phase transformations, kinetics of solid-state reactions (reactions with and between solids: heterogeneous reactions, reactions between different solids, point-defect relaxation, internal reactions), grain growth and sintering. Physico-chemical aspects are emphasized.

MS&E 452 Properties of Solid Polymers

Spring. 3 credits. Prerequisite: Engr 261 or permission of instructor. E. J. Kramer/C. K. Ober.

Synthetic and natural polymers for engineering applications. Production and characterization of long-chain molecules. Gelation and networks, rubber elasticity, elastomers and thermosetting resins. Amorphous and crystalline thermoplastics and their structure. Time- and temperature-dependent elastic properties of polymers. Molecular-weight measurement. Design of high-impact-strength polymers.

MS&E 454 Processing of Glass, Ceramic, and Glass-Ceramic Materials

Spring. 3 credits. Offered alternate years. Recommended: MS&E 449.

Conventional and unconventional techniques for processing glass, glass-ceramic, and ceramic materials. Case studies illustrate the design, engineering, and scientific aspects of such processes. Vapor processes for high-purity optical fibers, hot-processing of ceramic turbine blades, photosensitive materials, and powder processing and sintering of ceramics will be discussed. This course is team taught

with scientists from the research and development laboratory of Corning Glass Works.

MS&E 459 Physics of Modern Materials Analysis

Spring. 3 credits. M. O. Thompson.
The interaction of ions, electrons, and photons with solids, and the characteristics of the emergent radiation in relation to the structure and composition of materials. Aspects of atomic physics that are relevant to understanding techniques of modern materials analysis. Principles of analysis techniques such as Auger electron spectroscopy, ion scattering, and secondary ion-mass spectroscopy. Design of experiments for near-surface analysis.

MS&E 463 Principles of Electronic Packaging

Spring. 3 credits. C. Y. Li.
Design, materials, and manufacturing needs for packaging technology, from chip to board. Principles involved in key areas of materials science, and other engineering disciplines. Packaging materials to be discussed include metals, ceramics, and polymers.

MS&E 482 Plasma Processing of Electronic Materials (also ELE E 482)

Spring. 3 credits. Prerequisite: ELE E 303 or its equivalent. D. Hammer.
Fundamental principles that govern partially ionized, chemically reactive plasma discharges and their applications to processing electronic materials. Topics include simple models of low pressure, partially ionized plasmas, collision phenomena, diffusive processes, plasma chemistry and surface processes. Examples and their application to electronic materials processing will be discussed in detail.

MS&E 489 Undergraduate Teaching Involvement

Fall and spring. Variable credit.
This course will give credit to students who help in the laboratory portions of ENGR 111, 118, 261 or 262 or MSE 277. The number of credits earned will be determined by your teaching load, and will typically be either 1 or 2 credits.

MS&E 490 Independent Study

Fall and spring. 3 credits. Individual faculty.
This course is meant for students who are not yet seniors and who have already taken MSE 333 and MSE 334, Research Involvement, and who want to do an intense research project.

MS&E 495 Introduction to Group Theory with Applications (also EE 495)

Fall. 2 credits. Homework only. S-U only. R. L. Liboff.
Definitions and simple properties. Symmetry operations, point groups and group multiplication tables. Sub-groups and classes. Matrix representations of groups. Irreducible representations. Basis functions. Character tables. The great orthogonality theorem. Crystallographic space groups. Ligand field theory. Permutation group, Cayley's theorem, and Young diagrams. $O(3)$ and $SU(2)$ groups. Tensor representations and the Wigner-Eckart theorem. Application to degeneracy, selection rules, and band structure.

At the level of: B. S. Wherrett, *Group Theory for Atoms, Molecules and Solids* (Prentice Hall, 1986); F. A. Cotton, *Chemical Applications of Group Theory*, 3rd ed. (Wiley-Interscience, 1990).

MS&E 501 Introduction to Electron Microscopy

Fall. 1 credit. S. L. Sass.
This course is for undergraduates and graduate students who are interested in getting a basic foundation in transmission electron microscopy and electron diffraction techniques. This course will be particularly important for students who are planning to use the electron microscope for their undergraduate or graduate research projects. Included will be electron optics, kinematical theory of diffraction, image contrast from crystal defects, high resolution lattice imaging, and the interpretation electron diffraction patterns. Both theoretical and practical aspects of electron microscopy are discussed.

Graduate-Level Professional Courses

[MS&E 516 Thin-Film Materials Science]

Fall. 3 credits. Offered alternate years. Not offered 1996-97. Staff.
This course is a fundamental approach to thin-film science that will cover deposition of films, growth of epitaxial layers, formation of multilayered structures such as superlattices and quantum wells, and interdiffusion and reaction in thin films. The course will begin with the structure and thermodynamics of surfaces and ultrathin films. The conditions for epitaxial growth, such as used in semiconductor heterostructures, will be contrasted with those for amorphous or polycrystalline films. The role of thermal processing for reactive thin films involving the formation of surface oxides, metallic silicides, and aluminides will be presented.

MS&E 518 Introduction to Electron Microscopy

Fall. 3 credits. Prerequisite: MS&E 331 or permission of instructor. Offered alternate years. Staff.
Basic optics and operation of scanning and transmission electron microscopes. Image formation, modes of contrast, and resolution in SEM and TEM. Electron diffraction. Images of perfect crystal and defects in two-beam diffraction contrast. Analytical microscopy; comparison of energy dispersive spectroscopy, wavelength dispersive spectroscopy and electron energy laser spectroscopy. Overview of specimen preparation and in-situ microscopy.

MS&E 520 Practical Electron Microscopy

Fall. 3 credits. Corequisite: MS&E 518. Limited to 12 students. A fee will be charged for instrument usage. Offered alternate years. Staff.
Students will be instructed in the proper use of a scanning and a transmission electron microscope. All stages from initial alignment of the instrument to presentation of the results will be covered. Three or four projects will be completed, including obtaining atomic lattice fringe images and X-ray microanalysis.

MS&E 553-554 Special Project

553, fall; 554, spring. 6 credits each term. Master of Engineering research project.

MS&E 455-655 Introduction to Composite Materials

L. Phoenix.
See TAM 455-655 for description.

Graduate Core Courses

MS&E 455-655 Introduction to Composite Materials

L. Phoenix.
See TAM 455-655 for description.

[MS&E 601 Thermodynamics of Materials]

Fall. 3 credits. Prerequisite: previous course in thermodynamics at level of MS&E 335. Staff. Not offered 1996-97.
Basic statistical thermodynamics. Partition function and thermodynamic state functions. Distributions. Laws of thermodynamics. Free-energy functions and conditions of equilibrium. Chemical reactions. Statistics of electrons in crystals. Heat capacity. Heterogeneous systems and phase transitions. Lattice models of 1-, 2-, 3-dimensional interacting systems. Statistical thermodynamics of alloys. Free-energy and phase diagrams. Order-disorder phenomena. Point defects in crystals. Statistical thermodynamics of interfaces.]

MS&E 602 Elasticity, Plastic Flow, and Fractures

Fall. 3 credits. Staff.
Micromechanical modeling of mechanical behavior. A materials-science approach to modeling combines concepts from continuum mechanics, thermodynamics, kinetics and atomic structure. Topics include: elastic properties of crystals, deformation mechanisms from ambient temperature to very high temperatures over a wide range of strain rates, fracture in brittle materials, fracture in ductile materials, fracture at elevated temperatures, crack tip phenomena, and composite materials.

[MS&E 603 Analytical Techniques for Materials Science]

Spring. 4 credits. Lab. M. O. Thompson.
Not offered 1996-97; next offered 1997-98.
Survey of atomic and structural analysis techniques as applied to surface and bulk materials. Physical processes involved in the interaction of ions, electrons, and photons with solids; characteristics of the emergent radiation in relation to the structure and composition. Techniques covered include Auger electron spectroscopy, ion scattering, nuclear activation, secondary ion mass spectroscopy, UV and X-ray photoelectron spectroscopies, X-ray diffraction and related techniques, etc. Selection and design of experiments for near-surface analysis.]

MS&E 604 Diffusion and Phase Transformation: Kinetics in Condensed Matter

Spring. 3 credits. Staff.
Phenomenology and microscopic aspects of diffusion in fluids, both simple and polymeric, and in solids, metallic and ionic. Phase stability and transformation; nucleation and growth, spinodal decomposition and displacive transformations. Phase coarsening processes, recrystallization and grain growth. Diffusion-controlled growth, interfacial reactions, moving-boundary problems. Grain-boundary migration controlled kinetics. At the level of *Diffusion in the Condensed State*, by Kirkaldy and Young.

Related Course in Another Department

Introductory Solid-State Physics (Physics 454).

Further Graduate Courses**MS&E 610 Principles of Diffraction (also A&EP 711)**

Spring. 4 credits. Offered alternate years. B. Batterman.

For description, see A&EP 711.

[MS&E 611 Modern Polymer Physics]

Spring. 3 credits. Prerequisites: MS&E 452, ChemE 711, or equivalent. Offered alternate years. Not offered 1996-97. E. J. Kramer.

Modern engineering plastics and polymeric matrices for fiber-reinforced composite materials often demand more detailed knowledge of polymer structure and properties in the melt or solid state than is afforded by beginning courses that emphasize polymer solutions. This course is a fundamental approach to the structure and physical properties of polymers, copolymers, and polymer mixtures, including thermodynamics, phase equilibria, diffusion, kinetics of phase separation, surfaces, and interfaces. At the level of *Scaling Concepts in Polymer Physics* by de Gennes.]

[MS&E 612 Solid-State Reactions]

Spring. 3 credits. Offered alternate year. R. Dieckmann. Not offered 1996-97; next offered 1997-98.

Point defects (thermal disorder, component-activity-dependent disorder, influence of dopants, different kinds of associates, Coulomb interaction between point defects), dislocations, grain boundaries transport in solids (definition and different types of diffusion coefficients, reference frames, mechanisms of electrical conduction, elementary diffusion mechanisms, atomic theory of transport, correlation effects, phenomenological theory of transport including some aspects of thermodynamics of irreversible processes, Fick's laws), point-defect relaxation (migration controlled, phase-boundary-reaction controlled), interdiffusion, solid-state reactions involving compound formation (oxidation of metals, reactions between solids), demixing of materials in potential gradients, selected solid-state processes (internal reactions, etc.).]

MS&E 614 Transmission Electron Microscopy

Spring. 3 credits. Prerequisite: MSE 331 or equivalent level of knowledge of crystallography and diffraction. D. T. Grubb.

This course covers the theory and practice of obtaining and interpreting TEM data from crystalline materials. Topics include specimen preparation, adjustment and calibration of the TEM, and image formation. Special emphasis is placed on electron diffraction (formation and analysis of spot patterns, Kikuchi patterns and convergent beam patterns), and obtaining useful images of crystal defects. Practical requirements for high-resolution imaging of crystal lattices and interfaces are also covered. Associated theoretical topics include kinematical and dynamical diffraction theories, including Bloch waves and anomalous absorption, the contrast transfer function theory of phase contrast, and image modeling and image analysis for quantitative interpretation of data. Current texts are Loretto *Electron Beam Analysis of Materials*, 2nd ed., and Riemer *Transmission Electron Microscopy, Physics of Image Formation*.

[MS&E 617 Solid State Electrochemistry]
Spring. 3 credits. Prerequisite: MS&E 612 or permission of instructor. Offered alternate years. Not offered 1996-97; next offered 1997-98. R. Dieckmann.

Disorder in solids; thermodynamic quantities or quasi-free electrons and electron defects in semiconductors; mobility, diffusion and partial conductivity of ions and electrons; solid ionic conductors, solid electrolytes and solid solution electrodes; galvanic cells with solid electrolytes for thermodynamic investigations; technical applications of solid electrolytes. At the level of *Electrochemistry of Solids* by H. Rickett.]

MS&E 619 Superhard Materials

Fall. 3 credits. Prerequisite: permission of instructor. A. L. Ruoff.

The superhard materials include diamond, cubic boron nitride (possibly the new C_4N_3) and borderline, B_4C . The origin of their extreme hardness is examined. The thermodynamics of their stability and the kinetics of their crystal growth will be described. Commercial methods of synthesis of large crystals, powders, thin films and polycrystalline aggregates (by sintering at pressure) will be examined. Their chemical, optical and mechanical properties will be studied. Moreover, there is substantial potential for radiation-hard semi-conducting devices and the status of this area will be covered. At the level of Field, *The Properties of Natural and Synthetic Diamonds*, plus recent papers.

MS&E 524/624 Synthesis of Polymeric Materials

Spring. 3 credits. Alternate years.

Prerequisite: MS&E 452 or permission of instructor. C. K. Ober.

Preparation of synthetic polymers by step- and chain-growth polymerization: condensation; free radical, anionic, and cationic mechanisms; ring opening and coordination routes. Statistical and kinetic aspects of homopolymer and copolymer formation. Stereochemistry of polymers and spectroscopic methods for polymer analysis. Molecular aspects of polymer design for properties such as conductivity, elasticity, thermal stability, and engineering properties. Special topics will include liquid crystalline polymers, photoreactive, and supermolecular chemistry. At the level of *Principles of Polymerization*, by Odian.

MS&E 626 Advanced Inorganic Chemistry III: Solid-State Chemistry (also CHEM 607)

Spring. 4 credits. Prerequisite: Chemistry 605 or permission of instructor. F. DiSalvo.

The third of a three-term sequence. Interdisciplinary approach to solids. Topics include solid-state structure and x-ray diffraction, synthesis methods, defects in solids, phase diagrams, electronic structure, and chemical and physical properties of solids. Text: *Solid State Chemistry and Its Applications*, by West. Readings from inorganic chemistry and solid-state physics texts.

Specialty Courses**MS&E 779 Special Studies in Materials Sciences**

Fall, spring. Variable credit. Offered on demand. Staff.

Supervised studies of special topics in materials science.

MS&E 798 Materials Science and Engineering Colloquium

Fall, spring. 1 credit each term. Credit limited to graduate students. Staff.

Lectures by visiting scientists, Cornell staff members, and graduate students on subjects of interest in materials sciences, especially in connection with new research.

MS&E 799 Materials Science Research Seminars

Fall, spring. 2 credits each term. For graduate students involved in research projects. Staff.

Short presentations on research in progress by students and staff.

MS&E 800/801 Research in Materials Science

800, fall; 801, spring. Credit to be arranged. Staff.

Independent research in materials science under the guidance of a member of the staff.

MECHANICAL AND AEROSPACE ENGINEERING**General and Required Courses****M&AE 101 Naval Ship Systems**

For description, see NAV S 202.

M&AE 102 Drawing and Engineering Design (also ENGR 102)

Fall, spring. 1 credit. Half-term course offered twice each semester. Enrollment limited to thirty students each half term. Recommended for students without previous mechanical drawing experience. S-U grades optional.

For description, see Engineering Common Courses.

M&AE 117 Introduction to Mechanical Engineering (also ENGR 117)

Spring. 3 credits.

For description, see Engineering Common Courses.

M&AE 212 Mechanical Properties and Processing of Engineering Materials

Spring. 4 credits. Prerequisite: ENGRD 202.

Introduction to the broad range of mechanical behavior of materials and their processing. The mechanical properties of metals, ceramics, and composite materials are covered together with their microstructural features and processing. Ideal work methods are introduced for the analysis of bulk deformation processes. Heat treatment of metals and alloys, phase diagrams, casting and quenching processes.

M&AE 221 Thermodynamics (also ENGRD 221)

Fall, spring, may be offered summer. 3 credits. Prerequisites: Mathematics 192 and Physics 112.

For description, see Engineering Common Courses.

M&AE 225 Mechanical Design and Synthesis

Spring. 3 credits. Prerequisite: ENGRD 202. Lab fee.

A hands-on laboratory, the use of machine tools, mechanical dissection, and a number of design projects provide direct experience of creative design synthesis.

M&AE 323 Introductory Fluid Mechanics

Fall; usually offered in Engineering Cooperative Program. 4 credits. Prerequisites: Engr 202 and 203 and coregistration in 221, or permission of instructor.

Statics, kinematics, potential flow, dynamics, momentum, and energy relations. Thermodynamics of compressible flow; dimensional analysis; real fluid phenomena, laminar and turbulent motion, boundary layer; lift and drag; supersonic flow and shock waves.

M&AE 324 Heat Transfer

Spring; may be offered in Engineering Cooperative Program. 3 credits. Prerequisite: M&AE 323 or permission of instructor.

Conduction of heat in steady and unsteady situations. Surfaces with fins and systems with heat sources. Forced and natural convection of heat arising from flow around bodies and through ducts. Heat exchangers. Emission and absorption of radiation; radiative transfer between surfaces. Introduction to boiling and phase change.

M&AE 325 Mechanical Design and Analysis

Fall; usually offered in Engineering Cooperative Program. 4 credits. Prerequisites: ENGRD 202, ENGRD 203, M&AE 212 and M&AE 225. Lab fee.

Application of the principles of mechanics and materials to problems of analysis and design of mechanical components and systems.

M&AE 326 System Dynamics

Spring; may be offered in Engineering Cooperative Program. 4 credits. Prerequisite: Mathematics 294, Engr 203. Junior standing required.

Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications; vibrations of single- and multi-degree-of-freedom systems; feedback control systems, stability analysis. Computer simulation and experimental studies of vibration and control systems.

M&AE 427 Fluids/Heat Transfer Laboratory

Fall. 3 credits. Prerequisites: M&AE 323, 324. Fulfills the writing requirement.

Laboratory exercises in methods, techniques, and instrumentation used in fluid mechanics and heat transfer. Measurements of temperature, heat transfer, viscosity, drag, fluid-flow rate, effects of turbulence, air foil stall, two-phase flows and engine performance. Biweekly written assignments.

M&AE 428 Engineering Design

Fall. 2 credits. Prerequisite: completion of six semesters in mechanical engineering or equivalent.

A comprehensive look at principles of design with a focus on case studies. Examples taken from fluid, thermal, and energy areas, as well as mechanical systems and the manufacturing area of mechanical engineering. Special emphasis on the design sources of engineering failures in products, machines, and mechanical systems, as well as how design should relate to a successful manufactured product.

Mechanical Systems, Design, Materials Processing, and Precision Engineering**M&AE 386 Automotive Engineering**

Spring. 3 credits. Prerequisite: M&AE 325 or permission of instructor.

Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis on automobiles, trucks, and related vehicles. Power plant, drive line, brakes, aerodynamics, suspension, and structure. Other types of vehicles may be considered.

M&AE 389 Computer-Aided Design

Fall. 3 credits. Limited to juniors and seniors. May be offered in Engineering Cooperative Program. Prerequisite: A course in programming. May be taken either before or in conjunction with a numerical-methods course. Fulfills computer applications requirement.

A first course in CAD, introducing the use of software and computer methods in mechanical engineering. Topics include simulation, optimization, solution of field equations (finite elements, finite differences), least-square function approximation, geometry (space curves, splines, patches), computer graphics, and data visualization.

M&AE 412 Smash and Crash: Mechanics of Large Deformations

Prerequisites: MAE 212, TAM 202.

Severe loading is a defining feature of both materials processing and crash worthiness. Materials intentionally are stressed beyond their elastic limits, resulting in deformations that are not reversible. In materials processing, the desire is to change the shape to manufacture components; in crash worthiness, it is to absorb the vehicle energy. In this course the fundamentals of plasticity are covered: yielding, flow laws, work hardening. Various solution methods, including bound theorems, are presented. The fundamentals are applied to localization, primary and secondary forming operations, and plastic buckling. Laboratory experiments deal with these topics and conclude with the individual design, construction, and testing of a crash cage.

M&AE 417 Introduction to Robotics

Spring. 3 credits. Enrollment limited. Not offered 1996-97.

Coordinate transformations for manipulator kinematics. Newton-Euler and Lagrangian developments of manipulator dynamics. Robot control schemes. Trajectory generation. Motion planning. Robot programming.]

M&AE 461 Entrepreneurship for Engineers (also ENGRQ 461)

Spring. 3 credits. Enrollment open to seniors; others with permission of instructor. Enrollment may be limited.

Course will examine issues and skills necessary to identify, evaluate, and start new business ventures. Topics include: competitive analysis, competitive strategy; business formation; bookkeeping; technology protection; human resource management; negotiation; business valuation; and manufacturing issues. Guest speakers will provide a real-life perspective on critical issues facing the entrepreneur. A term project will be the team development of a business plan for an innovative new venture and will require detail of manufacturing, support, and information systems as well as staffing and cost data.

M&AE 464 Design for Manufacture

Spring. 3 credits. Prerequisites: M&AE 212 and M&AE 225. Fulfills field design requirement.

Readings and class discussion will provide a context for the importance of design for manufacture and assembly in product development, manufacturing and marketing.

Lecture topics include DFMA design rules and applications; net present value analysis applied to product development; determination of manufacturing capability using statistical process control; and Taguchi design for experiment methodology to evaluate product/process improvements. A team design project will evaluate the manufacturability of a new or existing product.

M&AE 465 Biomechanical Systems—Analysis and Design

Spring. 3 credits. Prerequisites: Engr 202 and 203. Enrollment limited.

Selected topics from the study of the human body as a mechanical system. Emphasis on the modeling, analysis, and design of biomechanical systems frequently encountered in orthopaedic engineering and rehabilitation engineering.

M&AE 469 Stress Analysis for Mechanical and Aerospace Design

Fall. 3 credits. Prerequisite: T&AM 202 and M&AE 325 or permission of instructor.

Study of advanced topics in the analysis of stress and deformation of elastic bodies, with applications to the analysis and design of mechanical and aerospace systems and components. Review of fundamentals and application to classical problems. Introduction to modern computational methods (e.g., finite element) for analysis of stress and deformation.

M&AE 478 Feedback Control Systems

For description, see ELE E 471.

M&AE 486 Automotive Engineering Design

Spring. 4 credits. Prerequisite: M&AE 428 and senior standing. Fulfills field design requirement.

For description, see M&AE 386.

M&AE 489 Computer-Aided Design Project

Fall. 4 credits. Limited to seniors in mechanical engineering. Fulfills both field design and computer applications requirements.

Requires extensive project in addition to course assignments. For description, see M&AE 389.

M&AE 511 Survey of Manufacturing Processes

Fall or spring to be determined; may be offered in summer program. 3 credits. Prerequisites: graduate standing or permission of instructor. Not for M&AE majors.

Yield criteria and plastic flow. Manufacturing processes for engineering materials, including metals, polymers, ceramics and composites. Casting, forming, material removal and joining processes. Intended for non-mechanical engineers.

M&AE 514 Introduction to Precision Engineering

Fall. 3 credits or 4 with laboratory. Prerequisites: ENGRG 102 and M&AE 212, or 412, or permission of instructor.

Variability in mechanical products arises primarily from the processes used to make and assemble parts; it must be accommodated in design and controlled in manufacturing. This course addresses form variability through studies of ideal-form modeling, form tolerancing, form measurement, and manufacturing process modeling (sources of form error). Central principles, practices, and limitations are summarized.

M&AE 555 Introduction to Composite Materials (also T&AM 555)

For course description, see T&AM 555.

M&AE 570 Intermediate Dynamics

Fall. 3 credits. Prerequisites: graduate standing or permission of instructor. 2 lecs.

Introduction to analytical mechanics, virtual work, Lagrangian mechanics. Small vibration and stability theory. Newtonian-Eulerian mechanics of rigid bodies.

M&AE 577 Mechanical Vibrations

For description, see T&AM 574.

[M&AE 578 Feedback Control Systems Design and Implementation]

Spring. 3 credits. Prerequisite: M&AE 478 or ELE E 471, graduate standing, or permission of instructor. Fulfills the computer application requirement. Not offered 1996-97.

Further development of the theory, design, and implementation of feedback control systems with particular emphasis on applications, modeling and system identification, and hardware implementation. Digital control is introduced. Labs include real-time microprocessor-based control of a D.C.-motor positioning system, a two-link robot arm, and a two-tank level-control system.]

M&AE 612 Materials Processing: Theory and Applications

Fall. 4 credits. Prerequisite: graduate standing, or permission of instructor.

Basic principles governing the inelastic behavior of solids. Slab-analysis models and bound theorems for problems of forging, extrusion, and rolling. Analysis of sheet-metal forming including limit diagrams and springback. Defect initiation during forming processes. Basic solidification processes. Morphological instability of a solid/liquid interface, solidification microstructures, solute redistribution, microsegregation and macrosegregation. Thermomechanical defects in casting processes. Rapid solidification microstructures. Behavior and forming of metal alloys in the semisolid state.

M&AE 613 Computational Methods in Materials Processing

Spring. 4 credits. Prerequisite: M&AE 612 or permission of instructor.

Thermodynamic framework for inelastic constitutive models, temperature and rate dependence, phenomenology of plastic deformation. The finite-element method for rigid plastic flow analysis of extrusion, drawing, forging, rolling and plate bending. Integration of viscoplastic models, geometry updating, boundary conditions, friction at tool/workpiece interface, modeling of incompressibility, iterative process, and applications to process design. Comparison of the flow formulation with an elasto-plastic analysis. Analysis of hot forming processes. Procedures for heat-transfer analysis. Preform design. Modeling of plastic anisotropy with applications to sheet forming. Modeling of heat flow and deformation on casting processes.

M&AE 615 Experiments in Materials Processing

Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.

This course will focus on experiments related to the mechanical properties of materials and experiments using various materials processing apparatus and will include a general

introduction to sensors and instrumentation for engineering measurements. Testing for mechanical properties/model parameter characterization: inelastic deformation, fatigue, and fracture, including rate and temperature effects. Process simulation experiments including forging, extrusion, rolling, and ironing. Formability experiments. Determination of heat transfer coefficients associated with quenching and solidification process. Fluidity measurements. Specimen design and fabrication. Although the focus is on metals and alloys attention is also given to polymers and ceramic materials.

[M&AE 625 Product Development]

Fall or spring. 4 credits. Prerequisite: graduate standing. Not offered 1996-97. Covers a wide range of methods and techniques used in the product development process. Cognitive methods of design, team organization, conceptual design, parametric design, concurrent engineering, quality function deployment, and Taguchi method.]

M&AE 655 Advanced Composite Materials and Structures (also T&AM 655)

For course description, see T&AM 655.

[M&AE 665 Advanced Topics in Orthopaedic Biomechanics]

On demand. 4 credits. Prerequisites: graduate standing, prior or concurrent registration in advanced courses in strength of materials or elasticity, and intermediate dynamics. Not offered 1996-97.

Advanced treatment of topics in the biomechanics of the musculoskeletal system. Force analysis of the musculoskeletal system under static and dynamic conditions, compact and trabecular bone as structural materials, structural analysis of bone-implant systems, remodeling of bone.]

M&AE 670 Finite Element Analysis for Mechanical and Aerospace Design

Spring. 4 credits. Prerequisite: graduate standing, or permission of instructor.

Introduction to the finite-element method for static and dynamic analysis of mechanical and aerospace structures (and related nonstructural applications such as heat conduction). Primary emphasis on underlying mechanics and numerical methods. Secondary consideration of inherent capabilities and limitations of large-scale, general-purpose structural mechanics programs. Introduction to computational aspects through development of small, special-purpose programs and application of available general-purpose programs. Term project.

[M&AE 678 Optimal Control and Estimation]

Fall, on demand. 3 credits. Prerequisite: M&AE 478, ELE E 471, graduate standing, or permission of instructor; programming ability in FORTRAN, Pascal, or C. Corequisite: ELE E 521. Not offered 1996-97.

Develops the theory of the design of modern multi-input-multi-output feedback control systems using optimal control techniques. Topics covered include trajectory optimization and the minimum principle, bang-bang optimal control solutions, Kalman filtering, LQR/LQE compensator design, suboptimal control and estimation, and applications to regulator and tracking problems. Both linear and nonlinear systems, and continuous-time and discrete-time control, and considered.]

M&AE 679 Modeling and Simulation of Dynamic Systems

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.

Practice tools with selected applications from diverse fields. Representation of continuous dynamic systems by state-variable models. Simulation by numerical integration using procedural languages (such as FORTRAN and Pascal) and digital simulation packages (such as CSMP and STELLA). Special topics in linear and nonlinear dynamics. Term project.

[M&AE 715 Finite-Deformation Plasticity and Rheology and Their Applications in Materials Processing]

Fall. 4 credits. Prerequisites: advanced graduate students, Introduction to Continuum Mechanics and Plasticity. Offered alternate years. Not offered 1996-97.

Hyperelasticity and hypoelasticity. Phenomenology of rate-dependent plastic deformation. Kinematic framework for inelastic constitutive modeling. Lagrangian and Eulerian FEM formulations for large deformation elastoviscoplastic problems. Viscoplasticity coupled with damage. Slip systems and lattice rotation. Texture development and strain hardening in rate-dependent polycrystals. Modeling of the evolution of deformation-induced crystallographic texture in forming processes. Rheological models for polymers.]

Energy, Fluids, and Aerospace Engineering**M&AE 305 Introduction to Aeronautics**

Fall. 3 credits. Limited to upperclass engineers; others with permission of instructor.

Introduction to the concept of aircraft design. Principles of incompressible and compressible aerodynamics, boundary layers, and wing theory. Description and performance of propeller-driven and jet propulsion engines. Design studies focus on transonic passenger airplanes and small supersonic jets.

M&AE 306 Spacecraft Design

Spring. 3 credits. Prerequisite: ENGR 221.

Introduction to spacecraft design covering launch, orbital maneuvers, and reentry. Topics covered include space missions, space environment, orbital mechanics, rocket theory, spacecraft control, integrated design, thermal control, and atmospheric entry.

M&AE 400 Components and Systems: Engineering in a Social Context (also Physics 481 and Science, Technology, and Society 400)

Spring. 3 credits. Prerequisites: upperclass standing, two years of college physics. Serves as an approved elective but not as a field elective in mechanical engineering. Offered alternate years.

This course addresses, at a technical level, broader questions than are normally posed in the traditional engineering or physics curriculum. Through the study of individual cases such as the Strategic Defense Initiative (SDI), the National Aerospace Plane, and nuclear power and its alternatives, we investigate interactions between the scientific, technical, political, economic, and social forces that are involved in the development of engineering systems.

M&AE 401 Components and Systems: Engineering in a Social Context

Spring. 4 credits. Prerequisites: senior standing, two years of college physics. Fulfills field design requirement. Offered alternate years.

For description, see M&AE 400.

M&AE 423 Intermediate Fluid Dynamics

Spring. 3 credits. Prerequisite: M&AE 323. This course builds on the foundation of M&AE 323. Emphasis will be both on the calculation of real flows (both engineering and environmental) and fundamental principles. Topics covered will include some exact solutions to the Navier-Stokes equations, boundary layers, wakes and jets, separation, convection, stratified and rotating flows, fluid instabilities, turbulence and chaos.

M&AE 449 Combustion Engines

Spring. 3 credits. Prerequisites: Engr 221 and M&AE 323.

Introduction to combustion engines, with emphasis on the application of thermodynamic and fluid-dynamic principles affecting their performance. Air-standard analyses, chemical equilibrium, ideal-cycle analyses, deviations from ideal processes, combustion knock. Formation and control of undesirable exhaust emissions.

[M&AE 456 Power Systems

Fall. 3 credits. Corequisites: M&AE 428 and senior standing. Fulfills field design requirement. Not offered 1996-97.

A broad survey of methods of large-scale power generation, emphasizing energy sources, thermodynamic cycle considerations, and component description. Power-industry, economic, and environmental factors, trends, and projections.]

M&AE 458 Introduction to Nuclear Science and Engineering I (also A&EP 303, ELE E 403, and NS&E 403)

For description, see NS&E 403.

M&AE 459 Introduction to Controlled Fusion: Principles and Technology (also ELE E 484)

For description, see NS&E 484.

[M&AE 506 Aerospace Propulsion Systems

Spring. 3 credits. Prerequisite: M&AE 323 or permission of instructor. Offered alternate years. Not offered 1996-97.

Application of thermodynamic and fluid-mechanic principles to the design and performance of aerospace systems. Jet propulsion principles, including rockets. Pollution characteristics. Future possibilities for improved performance.]

M&AE 507 Dynamics of Flight Vehicles

Spring. 3 credits. Prerequisites: M&AE 405 and Engr 203, or permission of instructor. Offered alternate years.

Introduction to stability and control of atmospheric-flight vehicles. Review of aerodynamic forces and methods for analysis of linear systems. Static stability and control. Small disturbance equations of unsteady motion. Dynamic stability of longitudinal and lateral-directional motions; transient control response. At the level of *Dynamics of Flight: Stability and Control*, by Etkin.

[M&AE 524 Thermal Management of Electronic Packages

Spring. 3 credits. Prerequisites: M&AE 221 and MATH 294 or permission of instructor. Not offered 1996-97.

This course presents the basic elements of heat transfer in the context of thermal control of a microelectronic package: conduction, convection, radiation, and boiling. The application is to semiconductor chips, transistors, resistors, and optoelectronic devices. Topics include component reliability and temperature; conduction of heat in steady and unsteady states; multilayered structures; thermal contact resistance; extended surfaces (fins); analyses of forced and natural convection flows over surfaces and within enclosures; functional solutions, Reynolds analogy, and integral analyses; calculation of the heat-transfer coefficient; the basics of radiative transfer; jet impingement cooling; immersion cooling; and compact heat exchangers.]

M&AE 543 Combustion Processes

Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.

An introduction to combustion and flame processes, with emphasis on fundamental fluid dynamics, heat and mass transport, and reaction-kinetic processes that govern combustion rates. Thermochemistry, kinetics, vessel explosions, laminar and turbulent premixed and diffusion flames, droplet combustion, and combustion of solids.

M&AE 601 Foundations of Fluid Dynamics and Aerodynamics

Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.

Foundations of fluid mechanics from an advanced viewpoint. Aspects of kinetic theory as it applies to the formulation of continuum fluid dynamics. Surface phenomena and boundary conditions at interfaces. Fundamental kinematic descriptions of fluid flow, tensor analysis, derivation of the Navier-Stokes equations and energy equation for compressible fluids. Viscous flows, boundary layers, potential flows, vorticity dynamics.

M&AE 602 Fluid Dynamics at High Reynolds Numbers

Spring. 4 credits. Prerequisite: M&AE 601.

Navier-Stokes and Euler equations, integral formulas for fluid forces and moments on immersed bodies in compressible and incompressible viscous flows. Vorticity dynamics in compressible flows, Kelvin's theorem. Fjortoft's theorem, Helmholtz decomposition of vector fields. Singularities, vortex filaments, vortex sheets, Biot-Savart relations. Irrotational motion: representations in terms of velocity or vector potentials. Topology of flows; general results in potential theory.

M&AE 603 Compressible Flow

Fall. 4 credits. Graduate standing or permission of instructor.

Fundamental aspects of compressible flow are described in terms of thermodynamics and fluid properties. Conservation laws and Bernoulli equations. Isentropic flow theory including perfect gas relations and nozzle flow. Normal shock waves including Rankine-Hugoniot relations. Viscous compressible flow including duct flow and supersonic flow. Extensive use will be made of computer software to demonstrate and illustrate these topics.

M&AE 608 Physics of Fluids

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.

Behavior of a gas is considered at the microscopic level. Introduction to kinetic theory: velocity distribution, collisions, Boltzmann equation. Quantum theory: internal structure, rigid rotator, harmonic oscillator, one-electron atom. Statistical mechanics: partition functions, relation to thermodynamics. These ideas are combined through application to modeling finite rate changes in the vibrational energy and chemical composition of high-temperature air.

M&AE 651 Advanced Heat Transfer

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.

Advanced treatment of conductive and convective heat transfer. Basic equations reasoned in detail. Integral and differential formulations. Exact and approximate solutions. Forced convection. Natural convection. Laminar and turbulent flows. Effects of viscous dissipation and mass transfer.

M&AE 654 Radiation Heat Transfer

2-4 credits. Prerequisite: graduate standing or permission of instructor.

An independent readings course. Coverage of surface- and gas-radiation properties, including reflection, emission, absorption, and scattering. Deductions from the first and second laws of thermodynamics. The radiative-transfer equation; surface-surface, surface-volume, and volume-volume exchange. Simplifying approximations. Modern methods for exchange calculations and transport analysis including integral, computer-graphics-assisted, and Monte Carlo approaches. Assigned readings from *Radiative Heat Transfer*, by Modest. Discussion sessions. Assigned problems and papers.

[M&AE 732 Analysis of Turbulent Flows

Spring. 4 credits. Prerequisite: M&AE 601 or permission of instructor. Offered alternate years. Not offered 1996-97.

Study of methods for calculating the properties of turbulent flows. Characteristics of turbulent flows. Direct numerical simulations, large-eddy simulations, and the closure problem. Reynolds-stress equation: effects of dissipation, anisotropy, deformation. Transported scalars. Probability density functions (pdfs): definitions and properties, transport equations, relationship to second-order closures, stochastic modeling, Langevin equation, and Monte Carlo solutions. The course emphasizes comparison of theory with experiment.]

[M&AE 733 Stability of Fluid Flow

Fall, on demand. 4 credits. S-U grades only. Prerequisite: graduate standing or permission of instructor. Not offered 1996-97.

Basic stability and bifurcation theory in fluid systems. Thermal, double-diffusive, and related instabilities. Post-bifurcation behavior: the Ginzburg-Landau (Stewartson-Stuart) and Chapman-Proctor-Sivashinsky amplitude equations. Phase dynamics and pattern formation. Stability of periodic motion: Floquet theory. Secondary instabilities; Eckhaus instability, Busse "balloons." Energy stability theory. Effects of symmetry. Taylor-Couette instability. "Open" flow systems: inviscid Kelvin-Helmholtz, Rayleigh-Taylor instability, and capillary instability of liquid jets. Stability of parallel shear flows and of

concentrated vortex flows. Spatial development of linearly unstable motion: "absolute" and "convective" instability.]

M&AE 734 Turbulence and Turbulent Flow

Fall. 4 credits. Prerequisite: M&AE 601, graduate standing, or permission of instructor.

Topics include the dynamics of buoyancy and shear-driven turbulence, boundary-free and bounded shear flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.

M&AE 736 Computational Aerodynamics

Spring. 4 credits. Prerequisites: graduate standing, an advanced course in continuum mechanics or fluid mechanics, and some FORTRAN programming experience.

Numerical methods to solve inviscid and high-Reynolds-number fluid-dynamics problems, including finite-difference, finite-volume, and surface-singularity methods. Accuracy, convergence, and stability; treatment of boundary conditions and grid generation. Focus on hyperbolic (unsteady flow with shock waves) and mixed hyperbolic-elliptic (steady transonic flow) problems. Assignments require programming digital computer.

M&AE 737 Computational Fluid Mechanics and Heat Transfer

Fall. 4 credits. Prerequisites: graduate standing; an advanced course in continuum mechanics, heat transfer, or fluid mechanics; and some FORTRAN or C programming experience.

Numerical methods for elliptic and parabolic partial differential equations arising in fluid flow and heat-transfer problems involving convection and diffusion. Finite-difference, finite-volume, and spectral methods. Accuracy, stability, convergence, and conservation. Review of current methods. Emphasis on steady and unsteady incompressible flows. Assigned problems are solved on a digital computer and at the College Workstation Facility.

Special Offerings

M&AE 490 Special Investigations in Mechanical and Aerospace Engineering

Fall, spring. Credit to be arranged. Limited to undergraduate students.

Prerequisite: permission of instructor.

Intended for an individual student or a small group of students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses.

M&AE 491 Design Projects in Mechanical and Aerospace Engineering

Fall, spring. Credits to be arranged. Prerequisite or corequisite: M&AE 428. Fulfills field design requirement.

Intended for individual students or small groups of students who want to pursue particular design projects outside of regular courses.

M&AE 545 Energy Seminar

For description, see NS&E 545.

M&AE 592 Seminar and Design Project in Aerospace Engineering

Fall, spring. 2 credits each term. Prerequisite: graduate standing or permission of instructor. Intended for students in M.Eng.(Aerospace) program.

Introduction to topics of current research interest in aerospace engineering by Aerospace faculty and invited speakers. Individual design projects supervised by separate faculty members after introductory sessions.

M&AE 594 Manufacturing Seminar

For description, see OR&IE 893.

M&AE 690 Special Investigations in Mechanical and Aerospace Engineering

Fall, spring. Credit to be arranged. Limited to graduate students.

M&AE 695 Special Topics in Mechanical and Aerospace Engineering

Fall, spring. Credit to be arranged. Graduate standing and permission of instructor.

Special lectures by faculty members on topics of current research.

M&AE 791 Mechanical and Aerospace Research Conference

Fall, spring. 1 credit each term. S-U grades only. For graduate students involved in research projects.

Presentations on research in progress by faculty and students.

M&AE 799 Mechanical and Aerospace Engineering Colloquium

Fall, spring. 1 credit each term. Credit limited to graduate students. All students and staff invited to attend.

Lectures by visiting scientists and Cornell faculty and staff members on research topics of current interest in mechanical and aerospace science, especially in connection with new research.

M&AE 890 Research in Mechanical and Aerospace Engineering

Credit to be arranged. Prerequisite: candidacy for M.S. degree in mechanical or aerospace engineering or approval of director.

Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

M&AE 990 Research in Mechanical and Aerospace Engineering

Credit to be arranged. Prerequisite: candidacy for Ph.D. degree in mechanical or aerospace engineering or approval of director.

Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

NUCLEAR SCIENCE AND ENGINEERING

A number of courses in nuclear science and engineering are offered through the School of Applied and Engineering Physics (see A&EP 509, 612, 633, 634, 636, 638, and 651).

NS&E 121 Fission, Fusion, and Radiation (also ENGRI 121)

Spring. 3 credits.

This is a course in the Introduction to Engineering series. For description, see Engineering Common Courses.

NS&E 285 Art, Archaeology, and Analysis

For description, see ENGRI 185.

NS&E 403 Introduction to Nuclear Science and Engineering I (also A&EP 303, ELEE 403, and M&AE 458)

Fall. 3 credits. Prerequisite: Physics 214 and Mathematics 294. This course is designed for juniors or seniors from any engineering field who want to prepare for graduate-level nuclear science and engineering courses at Cornell or elsewhere. It can also serve as a basic course for those who do not intend to continue in the field.

Introduction to the fundamentals of nuclear reactors. Topics include an overview of the field of nuclear engineering; nuclear structure, radioactivity, and reactions; interaction of radiation and matter; and neutron moderation, neutron diffusion, the steady-state chain reaction, and reactor kinetics. At the level of *Introduction to Nuclear Engineering*, by Lamarsh.

NS&E 484 Introduction to Controlled Fusion: Principles and Technology (also ELE E 484, M&AE 459, and A&EP 484)

Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students.

Introduction to the physical principles and various engineering aspects underlying power generation by controlled fusion. Topics include: (i) fuels and conditions required for fusion power, and basic fusion-reactor concepts; (ii) fundamental aspects of plasma physics relevant to fusion plasmas, and basic engineering problems for a fusion reactor; and (iii) an engineering analysis of proposed magnetic and/or inertial confinement fusion-reactor designs.

NS&E 509 Nuclear Physics for Applications

Fall. 3 credits. Prerequisites: sophomore physics and math, or permission of instructor; some upper-division physics is desirable. Primarily for graduate students, especially those with a major or minor in Nuclear Science and Engineering; also open to qualified undergraduates. Offered on demand.

A first course in nuclear physics. Systematic presentation of nuclear phenomena and processes that underlie applications ranging from nuclear power (fission and fusion), to nuclear astrophysics, to nuclear analytical methods for research in nonnuclear fields. Radioactivity, nuclear reactions, and interaction of radiation with matter. At the level of *Radiochemistry and Nuclear Methods of Analysis*, by Ehmann and Vance.

NS&E 545 Energy Seminar (also M&AE 545 and ELE E 587)

Fall and spring. 1 credit each semester. May be taken both fall and spring for credit. Master of Engineering (M.Eng.) students in the Energy Option are expected to take this seminar both fall and spring for credit.

Energy resources, their conversion to electricity or process heat, and the environmental consequences of the energy cycle will be discussed by faculty members from several

departments in the College of Engineering, other units within the university, and invited experts. Examples of topics are energy resources, economics, and politics; coal-based electricity generation; nuclear reactors; solar power; energy conservation by users; and energy from biomass.

NS&E 551 Nuclear Methods in Non-Nuclear Research Fields

Spring. 3 credits. Prerequisite: Physics 214 or 218, or permission of instructor; some upper-division physics desirable. Primarily for graduate students in archaeology, geology, chemistry, biology, materials science, and other non-nuclear fields in which nuclear methods are used. Open to qualified undergraduates. A more intensive related course, A&EP 651, is intended for nuclear specialists. Offered on demand.

Lectures on interaction of radiation with matter, radiation protection, and nuclear instruments. Experiments on radiation detection and measurement; electronic instrumentation, including computerized systems; activation analysis; and emerging applications such as prompt gamma analysis and neutron radiography. The TRIGA reactor is used. Emphasis is on methods used in non-nuclear fields. At the level of *Radiochemistry and Nuclear Methods of Analysis*, by Ehmann and Vance.

NS&E 590 Independent Study

Fall, spring. 1-4 credits. Grade option letter or S-U.

Independent study or project under guidance of a faculty member.

NS&E 591 Project

Fall, spring. 1-6 credits. Master of Engineering or other project under guidance of a faculty member.

NS&E 621 Radiation Effects in Microelectronics (also ELE E 633)

Fall. 1 to 3 credits. Prerequisite: ELEE 435 or permission of instructor. A seminar offered in alternate years intended for seniors and graduate students in engineering or applied physics. S-U or letter grade option.

An introduction to the physical processes that underlie the malfunction and failure of microelectronic circuitry resulting from exposure to ionizing radiation. The roles testing and modeling play in improving circuit and device designs are included.

OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

OR&IE 115 Engineering Application of Operations Research (also ENGR 115)

Fall, spring. 3 credits. Enrollment not open to OR&IE upperclass majors. For description see Engineering Common Courses.

OR&IE 270 Basic Engineering Probability and Statistics (also ENGRD 270)

Fall, spring, summer. 3 credits. Prerequisite: first-year calculus. For description see Engineering Common Courses.

OR&IE 310 Industrial Systems Analysis

Spring. 4 credits. Pre or co-requisite: ENGR 270, OR&IE 350.

Design of production facilities, including engineering economy, taxation effects, materials handling process design, and facility layout. Operations analysis, including process scheduling, process evaluation, procedural analysis, project management, methods analysis and design, work measurement, inventory control, job evaluation, and quality engineering and control. Formerly listed as OR&IE 410.

OR&IE 320 Optimization I

Fall. 4 credits. Prerequisite: Mathematics 221 or 294.

Formulation of linear programming problems and solution by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation and production planning.

OR&IE 321 Optimization II

Spring. 4 credits. Prerequisite: OR&IE 320 or equivalent.

A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer, dynamic, and nonlinear programming. Formulation and modeling are stressed as well as numerous applications.

OR&IE 350 Financial and Managerial Accounting

Fall. 4 credits.

Principles of accounting, financial reports, financial-transactions analysis; financial-statement analysis, budgeting, job-order and process-cost systems, standard costing and variance analysis, economic analysis of short-term decisions.

OR&IE 360 Engineering Probability and Statistics II

Fall. 4 credits. Prerequisite: ENGRD 270 or equivalent.

This second course in probability and statistics provides a rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

OR&IE 361 Introductory Engineering Stochastic Processes I

Spring. 4 credits. Prerequisite: OR&IE 360 or equivalent.

Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing and reliability.

OR&IE 416 Design of Manufacturing Systems

Fall. 4 credits. Senior OR&IE students only. Others by permission of instructor only.

Project course in which students, working in teams, design a manufacturing logistics system

and conduct capacity, material flow, and cost analysis of their design. Meetings between project teams and faculty advisers are substituted for some lectures. Analytical methods for controlling inventories, planning production, and evaluating system performance will be presented in lectures. Lab fee \$15.

OR&IE 417 Material Handling Systems

Fall. 4 credits.

Design of the layout of processes and storage areas and the material-handling system for movement of items. Typical equipment used. Material flow analysis. The functions of identification control, storage, movement, batching, merging, and dispersion.

OR&IE 431 Discrete Models

Fall. 4 credits. Prerequisites: OR&IE 320 and COM S 211, or permission of instructor.

Basic concepts of graphs, networks, and discrete optimization. Fundamental models and applications, and algorithmic techniques for their analysis. Specific optimization models studied include flows in networks, the traveling salesman problem, and network design.

[OR&IE 432 Nonlinear Optimization

Spring. 4 credits. Prerequisite: OR&IE 320. Not offered 1996-97; next offered 1997-98.

Introduction to the practical and theoretical aspects of nonlinear optimization. Attention given to the computational efficiency of algorithms and the application of nonlinear techniques to linear programming; e.g., interior-point methods. Methods of numerical linear algebra introduced as needed.]

OR&IE 435 Introduction to Game Theory

Spring. 3 credits.

A broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games; cooperative and noncooperative n-person games; games in extensive, normal, and characteristic function form. Economic market games. Applications to weighted voting and cost allocation.

OR&IE 451 Economic Analysis of Engineering Systems

Spring. 4 credits. Prerequisites: OR&IE 320 and OR&IE 350.

Financial planning, including cash-flow analysis and inventory flow models. Engineering economic analysis, including discounted cash flows and taxation effects. Application of optimization techniques, as in equipment replacement or capacity expansion models. Issues in designing manufacturing systems. Student group project.

OR&IE 462 Introductory Engineering Stochastic Processes II

Spring. 4 credits. Prerequisite: OR&IE 361 or equivalent.

Stationary processes, martingales, random walks, and gambler's ruin problems, processes with stationary independent increments, Brownian motion and other cases, branching processes, renewal and Markov-renewal processes, reliability theory, Markov decision processes, optimal stopping, statistical inference from stochastic models, and stochastic comparison methods for probability models. Applications to population growth, spread of epidemics, and other models.

OR&IE 475 Regression

Spring. First half of term. 2 credits.
Prerequisite: ENGRD 270.

Linear models; estimation and testing; confidence sets; diagnostics and residual analysis; variable selection and modeling.

OR&IE 476 Experimental Design I

Spring. Second half of term. 2 credits.
Prerequisite: ENGRD 270.

Experimental design to improve industrial products and manufacturing processes. Randomization. Blocking. Fractional factorials. Orthogonal arrays. Nested designs.

OR&IE 490 Teaching in OR&IE

Fall, spring. Credit to be arranged.
Prerequisite: permission of instructor.

This course involves working as a TA in an OR&IE course. The course instructor will assign credits (the guideline is 1 credit per 4 hours/week of work with a limit of 3 credits).

OR&IE 499 OR&IE Project

Fall, spring. Credit to be arranged.
Prerequisite: permission of instructor.

Project-type work, under faculty supervision, on a real problem existing in some firm or institution, usually a regional organization. Opportunities in the course may be discussed with the associate director.

OR&IE 515 Design of Manufacturing Systems

Fall. 4 credits. Prerequisite: permission of instructor. Limited to M.Eng. students in OR&IE.

For description, see OR&IE 416. Lab fee \$15.

OR&IE 516 Case Studies

Fall. 1 credit. Limited to M.Eng. students in OR&IE.

Students are presented with unstructured problems that resemble real-world situations. They work in project groups to formulate mathematical models, perform computer analyses of the data and models, and present oral and written reports.

OR&IE 520 Operations Research I: Optimization I

For description, see OR&IE 320.

OR&IE 521 Optimization II

For description, see OR&IE 321.

OR&IE 522 Operations Research I: Topics in Linear Optimization

Fall. 1 credit. Corequisite: OR&IE 520. Students who have already taken OR&IE 521 should not enroll. Limited to M.Eng. students in OR&IE.

An extension of OR&IE 520 that deals with applications and methodologies of dynamic programming, integer programming, and large-scale linear programming.

OR&IE 523 Operations Research II: Introduction to Stochastic Modeling

For description, see OR&IE 361.

OR&IE 525 Production Planning and Scheduling Theory and Practice

Spring. 3 credits. Prerequisite: OR&IE 320.

Production planning, including MRP, linear programming, and related concepts. Scheduling and sequencing work in manufacturing systems. Job release strategies and control of work in process inventories. Focus on setup time as a determinant of plans and schedules.

OR&IE 528-529 Selected Topics in Applied Operations Research

Fall, spring. Credit to be arranged.

Prerequisite: permission of instructor.
Current topics dealing with applications of operations research.

OR&IE 551 Economic Analysis of Engineering Systems

Spring. 4 credits. Prerequisites: OR&IE 320 and OR&IE 350.

Lectures concurrent with OR&IE 451. For description see OR&IE 451.

OR&IE 560 Engineering Probability and Statistics II

For description, see OR&IE 360.

[OR&IE 561 Queuing Theory and Its Applications

Spring. 3 credits. Prerequisite: OR&IE 361 or permission of instructor. Not offered 1996-97; next offered 1997-98.

Basic queuing models. Little's Law, PASTA property, Markovian and non-Markovian queues. Optimization of queues. Polling queues: exhaustive and gated service. Jackson queuing networks. Open networks and closed networks. Product-form queuing networks.]

[OR&IE 562 Inventory Theory

Spring. 4 credits. Prerequisite: OR&IE 321, 361 or permission of instructor. Not offered 1996-97; next offered 1997-98.

Discussion of the nature of inventory systems and their design and control. Periodic and continuous review policies for single-item and single-location problems. Multi-item and multi-echelon extensions. Dynamic and static models are discussed. Distribution problems are analyzed. Applications are stressed.]

OR&IE 563 Applied Time-Series Analysis

Fall. 3 credits. Prerequisites: OR&IE 361 and OR&IE 270, or permission of instructor.

The first part of this course treats regression methods to model seasonal and non-seasonal data. After that, Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. Analysis of real data is carried out. Assignments require computer work with a time-series package.

OR&IE 564 Introductory Engineering Stochastic Processes II

Spring. 4 credits. Prerequisite: OR&IE 361 or equivalent. Lectures concurrent with OR&IE 462.

For description, see OR&IE 462.

OR&IE 565 Applied Financial Engineering

Spring. 4 credits. Limited to M.Eng. students.

This course has two components: a sequence of lectures and a project. The course will be co-listed with the Johnson School and will be co-taught by one faculty member from each school. The lectures will be given by the faculty for the course and by invited speakers from the financial industry. The project will satisfy the M.Eng. project requirement.

[OR&IE 575 Experimental Design II

Spring. Last half of term. 2 credits.
Prerequisite: OR&IE 476. Not offered 1996-97. To be offered 1997-98.

Continuation of OR&IE 476. Design of industrial experiments. Response surfaces. Robust product designs. Taguchi's methods.]

OR&IE 577 Quality Control

Fall. 3 credits. Prerequisites: ENGRD 270. Concepts and methods for process and acceptance control. Control charts for variables and attributes. Process capability analysis. Acceptance sampling. Continuous sampling plans. Life tests. Use of experimental design and Taguchi methods for off-line control.

OR&IE 580 Design and Analysis of Simulated Systems

Fall. 4 credits. Prerequisites: programming experience and OR&IE 360/560, or permission of instructor. Note: OR&IE 360/560 may be taken concurrently. Digital computer programs to simulate the operation of complex discrete systems in time. Modeling, program organization, pseudo-random-variable generation, simulation languages, statistical considerations; applications to a variety of problem areas.

OR&IE 599 Project

Fall, spring. 5 credits. For M.Eng. students. Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the OR&IE field. A formal report and oral defense of the approach and solution are required.

OR&IE 625 Scheduling Theory

Spring. 3 credits. Scheduling and sequencing problems, including single-machine problems, parallel-machine scheduling, and shop scheduling. The emphasis is on the design and analysis of polynomial time optimization and approximation algorithms and on related complexity issues.

[OR&IE 626 Advanced Production and Inventory Planning

Spring. 3 credits. Not offered 1996-97; next offered 1997-98. Introduction to a variety of production and inventory control planning problems; the development of mathematical models corresponding to these problems; a study of approaches for finding solutions.]

OR&IE 630 Mathematical Programming I

Fall. 4 credits. Prerequisites: advanced calculus and elementary linear algebra. A rigorous treatment of the theory and computational techniques of linear programming and its extensions. Formulation, duality theory, simplex, and dual simplex methods. Sensitivity analysis. Network flow problems and algorithms. Theory of polyhedral convex sets, systems of linear equations and inequalities, Farkas' Lemma. Exploiting special structure in the simplex method, computational implementation. Decomposition Principle.

[OR&IE 631 Mathematical Programming II

Spring. 4 credits. Prerequisite: OR&IE 630. Not offered 1996-97; next offered 1997-98.

A continuation of OR&IE 630. Introduction to nonlinear programming, interior-point methods for linear programming, complexity theory, and integer programming. Some discussion of dynamic programming, and elementary polyhedral theory.]

OR&IE 632 Nonlinear Programming

Fall. 3 credits. Prerequisite: OR&IE 630. Necessary and sufficient conditions for unconstrained and constrained optima. Duality theory. Computational methods for unconstrained (e.g., quasi-Newton) problems, linearly constrained (e.g., active set) problems, and nonlinearly constrained (e.g., successive quadratic programming) problems.

OR&IE 633 Graph Theory and Network Flows

Spring. 3 credits. Prerequisite: permission of instructor.

Directed and undirected graphs. Bipartite graphs. Hamilton cycles and Euler tours. Connectedness, matching, and coloring. Flows in capacity-constrained networks. Maximum flow and minimum cost flow problems.

[OR&IE 634 Combinatorial Optimization]

Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1996-97. Next offered 1997-98.

Topics in combinatorics, graphs, and networks, including matching, matroids, polyhedral combinatorics, and optimization algorithms. Topics change each semester. This course may be taken more than once for credit.]

[OR&IE 635 Interior-Point Methods for Mathematical Programming]

Fall. 3 credits. Prerequisites: Math 411 and OR&IE 630, or permission of instructor. Not offered 1996-97; next offered 1997-98.

Interior-point methods arising from Karmarkar's Algorithm. Application to linear and quadratic programming and the linear complementarity problem. Projective-scaling, affine-scaling, path-following, and potential-reduction methods.]

OR&IE 636 Integer Programming

Fall. 3 credits. Prerequisite: OR&IE 630. Discrete optimization. Linear programming in which the variables must assume integral values. Theory, algorithms, and applications. Cutting-plane and enumerative methods, with additional topics drawn from recent research in this area.

[OR&IE 639 Polyhedral Convexity]

Spring. 3 credits. Prerequisite: basic knowledge of linear algebra. Not offered 1996-97; next offered 1997-98.

A comprehensive introduction to the geometry and combinatorics of polyhedral convex sets. Linear inequalities, supporting and separating hyperplanes. Polarity. Convex hulls, facets, and vertices. Face lattices. Convex cones and polytopes. Minkowski sums. Gale transforms. Simplicial and polyhedral subdivision. Applications to linear programming, combinatorial optimization, and computational geometry.]

OR&IE 650 Applied Stochastic Processes

Fall. 4 credits. Prerequisite: a one-semester calculus-based probability course. An introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

OR&IE 651 Probability

Spring. 4 credits. Prerequisite: Real analysis at the level of Math 413 and a previous one-semester course in calculus-based probability.

Sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, conditioning.

OR&IE 662 Advanced Stochastic Processes

Fall. 3 credits. Prerequisite: OR&IE 651 or equivalent.

Brownian motion, martingales, Markov processes, and topics selected from: diffusions, stationary processes, point processes, weak convergence for stochastic processes and applications to diffusion approximations, Lévy processes, regenerative phenomena, random walks, and stochastic integrals.

[OR&IE 663 Time-Series Analysis]

Fall. 3 credits. Prerequisite: OR&IE 650 or equivalent. Not offered 1996-97; next offered 1997-98.

Representations of stationary time series. The ARIMA models. Spectral analysis. Long-range dependence. Problems of estimation. Multivariate time series.]

OR&IE 670 Statistical Principles

Fall. 4 credits. Co-requisite: OR&IE 650 or equivalent.

Review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t, and F; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; introduction to linear models.

[OR&IE 671 Intermediate Applied Statistics]

Spring. 3 credits. Prerequisite: OR&IE 670 or equivalent. Not offered 1996-97; next offered 1997-98.

Statistical inference based on the general linear model; least-squares estimators and their optimality properties; likelihood ratio tests and corresponding confidence regions; simultaneous inference. Applications in regression analysis and ANOVA models. Variance components and mixed models. Use of the computer as a tool for statistics is stressed.]

OR&IE 672 Selected Topics in Environmental Statistics (also BTRY 672)

Fall, spring. 2 credits. Prerequisite: ENGR 270 or equivalent.

For description, see Biometry 672.

[OR&IE 676 Statistical Analysis of Life Data]

Fall. 3 credits. Prerequisite: OR&IE 671 or equivalent. Not offered 1996-97; next offered 1997-98.

Analysis of data from reliability, fatigue, and life-testing studies in engineering; biomedical applications. Survival distributions, hazard rate, censoring. Life tables. Estimation and hypothesis testing. Standards. Goodness of fit, hazard plotting. Covariance analysis,

accelerated life testing. Multiple decrement models, competing risks. Sample-size determination. Adaptive sampling.]

[OR&IE 678 Asymptotic Methods in Statistics]

Fall. 3 credits. Prerequisite: OR&IE 670 or Mathematics 574. Not offered 1996-97; next offered 1997-98.

Topics chosen from: large-sample behavior of MLEs and other estimates; chi-square, likelihood ratio, and related tests; Pitman and Bahadur efficiency; LAN families and LAM estimates; statistical applications of Edgeworth expansions; adaptive estimation and semiparametric inference, rank statistics, EDF and sample quantiles, nonparametric estimation, and smoothing.]

OR&IE 680 Simulation

Spring. 4 credits. Prerequisite: permission of instructor.

An advanced version of OR&IE 580, intended for Ph.D.-level students.

OR&IE 728-729 Selected Topics in Applied Operations Research

Fall, spring. Credit to be arranged. Current research topics dealing with applications of operations research.

OR&IE 738-739 Selected Topics in Mathematical Programming

Fall, spring. Credit to be arranged. Current research topics in mathematical programming.

OR&IE 768-769 Selected Topics in Applied Probability

Fall, spring. Credit to be arranged. Topics are chosen from current literature and research areas of the staff.

OR&IE 778-779 Selected Topics in Applied Statistics

Fall, spring. Credits to be arranged. Topics chosen from current literature and research of the staff.

OR&IE 790 Special Investigations

Fall, spring. Credit to be arranged. For individuals or small groups. Study of special topics or problems.

OR&IE 799 Thesis Research

Fall, spring. Credit to be arranged. For individuals doing thesis research for master's or doctoral degrees.

OR&IE 891 Operations Research Graduate Colloquium

Fall, spring. 1 credit. A weekly 1-1/2 hour meeting devoted to presentations by distinguished visitors, by faculty members, and by advanced graduate students on topics of current research in the field of operations research.

OR&IE 893-894 Applied OR&IE Colloquium (also M&AE 594)

893, fall; 894, spring. 1 credit each term. A weekly meeting for Master of Engineering students. Discussion of various topics on manufacturing with faculty members and outside speakers.

THEORETICAL AND APPLIED MECHANICS

Basics in Engineering Mathematics and Mechanics

T&AM 118 Design Integration: A Portable CD Player (also MS&E and ENGR 118)

Spring. 3 credits.

For description, see Engineering Common Courses.

T&AM 202 Mechanics of Solids (also ENGRD 202)

Fall, spring. 3 credits. Prerequisite:

Physics 112, coregistration in Mathematics 293 or permission of instructor.

For description, see Engineering Common Courses.

T&AM 203 Dynamics (also ENGRD 203)

Fall, spring. 3 credits. Prerequisite:

T&AM 202, coregistration in Mathematics 294, or permission of instructor.

For description, see Engineering Common Courses.

Engineering Mathematics

T&AM 191 Calculus for Engineers (also MATH 193)

Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry.

For description, see MATH 191.

T&AM 192 Calculus for Engineers (also MATH 192)

Fall, spring, or summer. 4 credits.

Prerequisite: MATH/T&AM 191/193.

For description, see MATH 192.

T&AM 193 Calculus for Engineers (also MATH 193)

Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry.

For description, see MATH 193.

T&AM 293 Engineering Mathematics (also MATH 293)

Fall, spring. 4 credits. Prerequisite:

MATH/T&AM 192 plus a knowledge of computer programming equivalent to that taught in Engineering Common Courses 101.

For description, see MATH 293.

T&AM 294 Engineering Mathematics (also MATH 294)

Fall, spring. 4 credits. Prerequisite:

MATH/T&AM 293.

For description, see MATH 294.

T&AM 310 Advanced Engineering Analysis I

Fall, spring. 3 credits. Prerequisite:

MATH/T&AM 294 or equivalent.

Initial value, boundary value, and eigenvalue problems in linear ordinary differential equations. Special functions, linear partial differential equations. Introduction to probability and statistics. Use of computers to solve problems.

T&AM 311 Advanced Engineering Analysis II

Spring. 3 credits. Prerequisite: Mathematics/T&AM 294 or equivalent (T&AM 311 can be taken without T&AM 310).

Introduction to complex variable theory. Cauchy's Integral theorem, Laurent series,

Classification of singularities, Method of Residues. Applications include conformal mapping (Laplace equation), Laplace transform, Fourier transform, Fourier series, Transfer function, Solution and stability of Linear Systems. Examples are drawn from fluid mechanics, heat transfer, electromagnetics, and elasticity.

T&AM 610 Methods of Applied Mathematics I

Fall. 3 credits. Intended for beginning graduate students in engineering and science. An intensive course, requiring more time than is normally available to undergraduates (see T&AM 310-311) but open to exceptional undergraduates with permission of instructor.

Emphasis is on applications. Linear algebra, calculus of several variables, vector analysis, series, ordinary differential equations, complex variables.

T&AM 611 Methods of Applied Mathematics II

Spring. 3 credits. Prerequisite: T&AM 610 or equivalent.

Emphasis on applications. Partial differential equations, transform techniques, tensor analysis, calculus of variations.

T&AM 612 Methods of Applied Mathematics III

Fall. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent.

Integral transform, methods, Wiener-Hopf technique, solutions of integral equations and partial differential equations. Problems drawn from electromagnetics, elasticity, fluid mechanics, heat transfer, and acoustics.

T&AM 613 Methods of Applied Mathematics IV

Spring. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent.

Topics include asymptotic behavior of solutions of linear and nonlinear ODE (e.g., the WKB boundary layer and multiple-scale methods), asymptotic expansion of integrals (method of steepest descent, stationary phase and Laplace methods). Regular and singular perturbation methods for PDE (e.g., method of composite expansions). Other topics (depending on instructor) may include normal forms, center manifolds, Liapunov-Schmidt reducers, Stokes phenomenon. The course may also include computer exercises at the option of the instructor.

Continuum Mechanics

T&AM 455 Introduction to Composite Materials (also M&AE 455 and MS&E 455)

Fall. 4 credits.

Introduction to composite materials; varieties and properties of fiber reinforcements and matrix materials; micromechanics of stiffness and stress transfer in discontinuous fiber/matrix arrays; orthotropic elasticity as applied to parallel fibers in a matrix and lamina; theory of stiffness (tension, bending, torsion) and failure of laminates and composite plates including computer software for design; manufacturing methods and applications for composites. There is a group component design and manufacturing paper required, and a group laboratory on laminated component fabrication.

T&AM 591 Master of Engineering Design Project I

Fall. 3-6 credits.

M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

T&AM 592 Master of Engineering Design Project II

Spring. 5-15 credits.

M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

T&AM 655 Composite Materials (also M&AE 655 and MS&E 655)

Fall. 4 credits.

Taught jointly with T&AM 455 using same lecture material, but also includes more advanced material and homeworks through additional lectures. Additional material includes: shear-lag models of stress transfer around arrays of fiber breaks including viscoelastic effects, statistical theories of composite strength and failure; stress distributions around holes and cuts in composite laminates; compressive strength of composites. Laboratory on effects of holes and notches in composites.

T&AM 663 Solid Mechanics I

Fall. 4 credits.

Rigorous introduction to solid mechanics emphasizing linear elasticity: tensors; deformations, rotations and strains; balance principles; stress; small-strain theory; linear elasticity, anisotropic and isotropic; basic theorems of elastostatics; boundary-value problems, e.g. plates, St. Venant's solutions.

T&AM 664 Solid Mechanics II

Spring. 4 credits. Prerequisites: MATH 610 and T&AM 663, or equivalent.

Preparation for advanced courses in solid mechanics. Singular solutions in linear elasticity; plane stress, plane strain, anti-plane shear, Airy stress functions; linear viscoelasticity; cracks and dislocations; classical plasticity; thermoelasticity; three-dimensional elasticity.

T&AM 751 Continuum Mechanics and Thermodynamics

Fall. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents.

Kinematics; conservation laws; the entropy inequality; constitutive relations: frame indifference, material symmetry; finite elasticity, rate-dependent materials, and materials with internal state variables.

T&AM 752 Nonlinear Elasticity

Spring. 3 credits. Prerequisites: T&AM 610, 611, and 751 or equivalents. Offered alternate years.

Review of governing equations. Linearization and stability; constitutive inequalities; exact solution of special problems; nonlinear string and rod theories; phase transformations and crystal defects.

T&AM 753 Fracture

Fall. 3 credits. Prerequisites: T&AM 610 or 611; and 663 and 664 or equivalents.

Offered alternate years.

Fundamentals of linear elastic fracture mechanics: K, small-scale yielding, solutions of elastic crack problems, energy concepts, J-integral. Nonlinear, rate-independent, small-deformation, fracture mechanics: plastic fracture, J-integral, small-scale yielding, fields for stationary and growing cracks. Failure mechanisms of polymers, ceramics, composites, and metals: void growth, load transfer

between fibers, crazing. Fracture testing. Fatigue fracture. Computation of stress intensity factors. Plate theory and fracture.

T&AM 757 Inelasticity

Spring. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Offered alternate years. Not offered 1996-97.

Plasticity: dislocation slip systems; early experimental observations; general principles; limit analysis; solution of boundary-value problems, plastic waves, one- and three-dimensional. Visco-elasticity: general principles, solution of boundary-value problems.

T&AM 759 Boundary Element Methods

Fall. 4 credits. Prerequisites: T&AM 610 and 611; and 633 and 644 or equivalents. Offered alternate years.

Introduction to boundary element methods. Solutions for potential theory, linear elasticity, diffusion, material and/or geometric nonlinearities. Modern developments: hypersingular integrals, the boundary contour methods, sensitivity analysis.

[T&AM 768 Elastic Waves

Fall. 3 credits. Prerequisites: T&AM 610 and 611; and 633 and 644 or equivalents. Offered alternate years. Not offered 1996-97.

An advanced course on dynamic stress analysis and wave propagation in elastic solids. Theory of elastodynamics; waves in isotropic and anisotropic medium; reflection and refraction; surface waves and waves in layered media; transient waves and methods of Lamb-Cagniard-Pakeris; thick plate theories; vibrations of spheres; scattering of waves and dynamic stress concentrations.]

[T&AM 574 Vibrations and Waves in Elastic Systems (also M&AE 577)

Spring. 4 credits. Prerequisites: T&AM 570 and 610. Not offered 1996-97.]

T&AM 578 Nonlinear Dynamics and Chaos

Spring. 3 credits. Prerequisite: Mathematics/T&AM 293 or equivalent.

Introduction to nonlinear dynamics, with applications to physics, engineering, biology and chemistry. Emphasizes analytical methods, concrete examples, and geometric thinking. Topics: One-dimensional systems. Bifurcations. Phase plane. Nonlinear oscillators. Lorenz equations, chaos, strange attractors, fractals, iterated mappings, period doubling, renormalization.

T&AM 671 Advanced Dynamics

Spring. 3 credits. Prerequisite: T&AM 570 or equivalent. Offered alternate years.

Review of Lagrangian mechanics, Kane's equations; Hamilton's principle, the principle of least action, and related topics from the calculus of variations; Hamilton's canonical equations; approximate methods for two-degrees-of-freedom systems (Lie transforms); canonical transformations and Hamilton-Jacobi theory; KAM theory; Melnikov's method.

[T&AM 672 Celestial Mechanics (also Astronomy 579)

Spring. 3 credits. Offered alternate years. Not offered 1996-97.

Description of orbits; 2-body, 3-body, and n-body problems; Hill curves, libration points and their stability; capture problems. Osculating orbital elements, perturbation

equations; effects of gravitational potentials, atmospheric drag, and solar radiation forces on satellite orbits; secular perturbations, resonances, mechanics of planetary rings.]

T&AM 673 Mechanics of the Solar System (also Astronomy 571)

Spring. 3 credits. Prerequisite: an advanced undergraduate course in dynamics. Offered alternate years.

Gravitational potentials, planetary gravity fields. Free and forced rotations. Chandler wobble, polar wander, damping of nutation. Equilibrium tidal theory, tidal heating. Orbital evolution of natural satellites, resonances, spin-orbit coupling, Cassini states. Long-term variations in planetary orbits. Dust dynamics. Dynamics of ring systems. Physics of interiors, seismic waves, free oscillations. Illustrative examples are drawn from contemporary research.

T&AM 675 Nonlinear Vibrations

Fall. 3 credits. Prerequisite: T&AM 578 or equivalent. Offered alternate years.

Quantitative analysis of weakly nonlinear systems in free and forced vibrations, perturbation methods, averaging method. Applications to problems in mechanics, physics, and biology. Additional topics may include Hopf bifurcation, invariant manifolds, coupled oscillators, vibrations in continuous media, normal forms, and exploitation of symmetry.

[T&AM 776 Applied Dynamical Systems

Not offered 1996-97.
For description, see MATH 617.]

Special Courses, Projects, and Thesis Research

T&AM 491-492 Project in Engineering Science

491, fall; 492, spring. 1-4 credits, as arranged.

Projects for undergraduates under the guidance of a faculty member.

T&AM 796-800 Topics in Theoretical and Applied Mechanics

Fall, spring. 1-3 credits, as arranged. Special lectures or seminars on subjects of current interest. Topics are announced when the course is offered.

T&AM 890 Master's Degree Research in Theoretical and Applied Mechanics

Fall, spring. 1-15 credits, as arranged. S-U grades optional. Thesis or independent research at the M.S. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

T&AM 990 Doctoral Research in Theoretical and Applied Mechanics

Fall, spring. 1-15 credits, as arranged. S-U grades optional. Thesis or independent research at the Ph.D. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

FACULTY ROSTER

Abel, John F., Ph.D., U. of California at Berkeley. Prof., Civil and Environmental Engineering
Albright, Louis D., Ph.D., Cornell U. Prof., Agricultural and Biological Engineering

Allmendinger, Richard, Ph.D., Stanford U. Assoc. Prof., Geological Sciences
Aneshansley, Daniel J., Ph.D., Cornell U. Assoc. Prof., Agricultural and Biological Engineering
Anton, A. Brad, Ph.D., California Inst. of Technology. Assoc. Prof., Chemical Engineering
Ast, Dieter G., Ph.D., Cornell U. Prof., Materials Science and Engineering
Attoh, K., Ph.D., Northwestern U., Assoc. Prof., Geological Sciences
Auer, Peter L., Ph.D., California Inst. of Technology. Prof., Mechanical and Aerospace Engineering
Avedisian, C. Thomas, Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
Ballantyne, Joseph M., Ph.D., Massachusetts Inst. of Technology. Prof., Electrical Engineering
Barazangi, Muawia, Ph.D., Columbia U. Senior Scientist, Geological Sciences
Bartel, Donald L., Ph.D., U. of Iowa. Prof., Mechanical and Aerospace Engineering
Bartsch, James A., Ph.D., Purdue U. Assoc. Prof., Agricultural and Biological Engineering
Bassett, William A., Ph.D., Columbia U. Prof., Geological Sciences
Batterman, Boris W., Ph.D., Massachusetts Inst. of Technology. Walter S. Carpenter, Jr. Professorship in Engineering, Applied and Engineering Physics
Berger, Toby, Ph.D., Harvard U. J. Preston Levis Professor of Engineering, Electrical Engineering
Billera, Louis J., Ph.D., City U. of New York. Prof., Operations Research and Industrial Engineering
Bird, John M., Ph.D., Rensselaer Polytechnic Inst. Prof., Geological Sciences
Birman, Kenneth P., Ph.D., U. of California at Berkeley. Prof., Computer Science
Bisogni, James J., Ph.D., Cornell U. Assoc. Prof., Civil and Environmental Engineering
Blakely, John M., Ph.D., Glasgow U. (Scotland). Prof., Materials Science and Engineering
Bland, Robert G., Ph.D., Cornell U. Prof., Operations Research and Industrial Engineering
Bloom, Arthur L., Ph.D., Yale U. Prof., Geological Sciences
Bojanczyk, Adam W., Ph.D., U. of Warsaw (Poland). Assoc. Prof., Electrical Engineering
Booker, John F., Ph.D., Cornell U. Prof., Mechanical and Aerospace Engineering
Boyd, Iain, Ph.D., U. of Southampton (England). Asst. Prof., Mechanical and Aerospace Engineering
Brock, Joel D., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Applied and Engineering Physics
Brown, Geoffrey M., Ph.D., U. of Texas. Assoc. Prof., Electrical Engineering
Brown, Larry D., Ph.D., Cornell U. Prof., Geological Sciences
Brutsaert, Wilfried H., Ph.D., U. of California at Davis. Prof., Civil and Environmental Engineering
Buhrman, Robert A., Ph.D., Johns Hopkins U. John Edson Sweet Professor of Engineering, Applied and Engineering Physics
Burns, Joseph A., Ph.D., Cornell U. Irving Porter Church Professor in Engineering, Theoretical and Applied Mechanics
Cady, K. Bingham, Ph.D., Massachusetts Inst. of Technology. Prof., Theoretical and Applied Mechanics

- Capps, Susan G., Ph.D., North Carolina State U. Asst. Prof., Agricultural and Biological Engineering
- Cardie, Claire T., Ph.D. U. of Massachusetts at Amherst. Asst. Prof., Computer Sciences

Zabaras, Nicholas, Ph.D., Cornell U. Assoc. Prof., Mechanical and Aerospace Engineering

Zabih, Ramin, Ph.D., Stanford U. Asst. Prof., Computer Science

Zehnder, Alan, Ph.D., California Inst. of Technology. Assoc. Prof., Theoretical and Applied Mechanics

GRADUATE SCHOOL

Walter Cohen, dean

Christine Ranney, associate dean

Eleanor S. Reynolds, associate dean

Hilary Ford, assistant dean

Graduate study at Cornell is pursued through the Graduate School, which administers the many graduate fields of study, or through the various graduate professional schools and colleges.

GRADUATE SCHOOL

The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of Master of Arts, Master of Science, and Doctor of Philosophy, but only such general requirements that best accomplish the aim of graduate study: a period of study in residence, the mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee who usually has the primary responsibility for directing the student's thesis or dissertation research.

Students who want to use the university's facilities for intensive specialized training only and who do not want to become degree candidates may apply for admission as non-degree students.

REQUIREMENTS FOR ADMISSION

To be admitted to the Graduate School, an applicant should:

- 1) hold a baccalaureate degree or its equivalent, granted by a faculty or university of recognized standing;
- 2) have adequate preparation for graduate study in the chosen field of instruction;
- 3) have fluent command of the English language;
- 4) present evidence of promise in advanced study and research; and

- 5) take the Graduate Record Examinations General Test for those fields that require the GREs.

Before admission can be final, all applicants whose native language is not English must provide proof of competency in the English language. Acceptable proof could be

- 1) a Test of English as a Foreign Language (TOEFL) score of 550 or higher;
- 2) a degree from a college or university in a country where the native language is English; or
- 3) two or more years of study in an undergraduate or graduate program in a country where the native language is English.

Information on times and places for the TOEFL examination and Graduate Record Examinations and application forms may be obtained from the Educational Testing Service, Princeton, New Jersey 08541, U.S.A.

Applications for admission to the Graduate School may be submitted at any time during the year. Many fields, however, require that applicants for fall admission submit their completed applications by January 10.

Applicants who are also applying for Cornell Graduate School fellowship consideration *must* submit their completed applications and supporting credentials by January 10.

Inquiries regarding admission and fellowships should be addressed to the Graduate School Admissions Office, Cornell University, Caldwell Hall, Ithaca, New York 14853-2602.

Inquiries regarding facilities for advanced study and research in a given field, special requirements for such study and research, and opportunities for teaching and research assistantships should be addressed to the graduate faculty representative in the particular field.

More detailed information is contained in the *Graduate School Catalog*. Both the catalog and an application for admission to the Graduate School may be obtained from the Graduate School, Caldwell Hall, Cornell University, Ithaca, New York 14853-2602. Both the catalog and application are available for viewing on the World Wide Web: <http://www.gradschool.cornell.edu/>.

Note: Programs leading to the degrees of Doctor of Law (J.D.), Doctor of Medicine (M.D.), Doctor of Veterinary Medicine (D.V.M.), and Master of Business Administration (M.B.A.) are not administered by the Graduate School. Information on those programs can be obtained from the Law School, the Medical College (New York City), the College of Veterinary Medicine, and the Johnson Graduate School of Management respectively.

SCHOOL OF HOTEL ADMINISTRATION

ADMINISTRATION

David A. Dittman, dean

A. Neal Geller, associate dean for academic affairs

Judi Brownell, Richard J. and

Monene P. Bradley director for graduate studies

Timothy Hinkin, director of undergraduate studies

Donald C. Bishop, associate dean of students and enrollment management

David W. Butler, associate dean for executive education

Margaret Haley Ferguson, director of financial services

James E. Hisle, managing director of the Statler Hotel and J. Willard Marriott Executive Education Center

Cheryl S. Farrell, director of student services

Yariela Kerr-Donovan, director of minority student programs

Sandra K. Boothe, director of the professional master's program

Katherine S. Margolis, director of academic information resources and training

Richard S. MacDonald, director of administrative services

Preston Clark, director of instructional support

Millie Reed, associate director of career services

Harry R. Keller, director of alumni affairs

Glenn Withiam, director of publications

Fred Conner, senior editor of the *Cornell Hotel and Restaurant Administration Quarterly*

Mark Adams, director of communications

providing students with training and work experience in facilities similar to those in which they will work after graduation.

The School of Hotel Administration

Library has the largest single collection of hospitality-related materials in the United States. The collection contains approximately 25,000 volumes, 1,000 videotapes, numerous ephemera and memorabilia (such as photographs, menus, and rare books), and more than 800 magazine, newsletter, and newspaper subscriptions. Materials on lodging, foodservice, travel and tourism, and general business topics comprise the core of the library's collections. Among the library's special features are numerous computerized information resources, including *NEXIS*, *Dow Jones*, *ABI/INFORM*, and *The International Hospitality and Tourism Database*, an extensive and unique index to hospitality articles. Information resources and services for the hospitality industry are available for a fee through the library's *HOSTLINE* service. In addition to offering an excellent collection of materials and a dignified and refined study space, the Hotel School library extends quality service to every student. Please visit us and benefit from our collections and services.

Statler Hotel and J. Willard Marriott Executive Education Center. The Statler Hotel comprises 150 guest rooms, an executive education center, restaurants, a lounge, and the university's faculty and staff club. It demonstrates the very finest in hospitality and hospitality-education practices. The Statler is an independent, self-sustaining teaching hotel that provides quality food, beverage, meeting, and lodging services to the Cornell community and campus visitors, including parents and those who visit Cornell as part of the application process. In addition, the hotel is a practice-management facility for certain classes, internships, and independent-study projects. It offers part-time jobs to approximately 300 students each semester with preference given to students in the hotel school.

Requirements for Graduation

Regularly enrolled undergraduate students in the School of Hotel Administration are candidates for the degree of Bachelor of Science. The requirements for that degree are:

- 1) completion of eight terms in residence for those who entered as freshmen; terms of residence for transfer students are determined by the amount of transfer credit awarded;
- 2) completion, with a minimum cumulative grade-point average of 2.0 (including a grade-point average of 2.0 in a full-time schedule of courses in the final semester), of 120 required and elective credits, as set forth in the table on the following page;
- 3) qualification in one language other than English. This requirement may be met by any one of the following: 1) three years of high school study of one foreign language; 2) score of 560 on Cornell Placement Test; 3) pass 121 and 122 (8 credits) or the equivalent, and attain a minimum grade of at least C- in each (C or above for transfer credit from other institutions); or 4) pass 123 or the equivalent;
- 4) completion of two units of practice credit prior to the last term of residence, as defined on the following page;
- 5) completion of the university requirement in physical education.

Suggested course programs appear on the following pages. The core courses account for 69 of the 120 credits needed for graduation, the selected concentration accounts for 12 credits, and 18 credits are allotted for distributive electives. The remaining 21 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or any other four-year college or university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval of the school in advance. Without advance approval, such credit may not count toward the degree.

Credit earned in military science, aerospace studies, or naval-science courses may be counted in the 21-credit group of free electives.

Transfer Credit Policy

Transfer students are required to complete all degree requirements with at least seventy-five (75) credits at Cornell University, of which a minimum of sixty (60) must be in courses offered by the Hotel School, and nine (9) must be in distributive electives taken outside the Hotel School. Thus, a maximum of forty-five (45) hours in transfer credit may be allowed from other accredited colleges or universities, as follows:

DEGREE PROGRAMS

	Degree
Hotel and Restaurant Administration	
	B.S.
	M.M.H.
	M.S.
	Ph.D.

FACILITIES

Statler Hall. Statler Hall is a unique building designed expressly to meet the needs of the faculty and students of the School of Hotel Administration. The building serves both practical and theoretical instruction, houses classrooms, lecture rooms, laboratories, a library, a computer center, a beverage-management center, an auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. Statler Hall and the Statler Hotel were designed expressly for the school's academic and executive-education programs,

UNDERGRADUATE CURRICULUM

The School of Hotel Administration offers education in the numerous disciplines required for modern management in the global hospitality industry. Included in the core curriculum are courses in management, human resources, financial management, food and beverage operations, marketing, tourism, property asset management, communications, and law. Students also are encouraged to pursue a broad range of elective courses, including those in the humanities, social sciences, and natural sciences, as preparation for assuming leadership positions in the business and local community. For more complete information about undergraduate program requirements, see the school's student handbook or course supplement (available in room 174 Statler Hall).

Core	15
Concentration	0
Distributive Electives	9
Free Electives	21
	<hr/> 45

In the core, transfer credit may be allowed against basic courses only (for example, HA 121, HA 136, Economics). Others (including HA 243 and HA 174) generally are waived, and an upper-level course in the area substituted. For instance, if HA 243 were waived, another marketing course would be required in its place. The communication courses (HA 165 and HA 365) are tailored specifically to the School of Hotel Administration, and, thus, communication courses taken elsewhere generally are not accepted against core courses.

Concentration courses may not transfer without the express written consent of the faculty in the area concerned. While such consent is rare, it is not impossible.

Distributive electives ensure that Hotel students are exposed to other courses at Cornell, and, thus, only nine (9) credits may transfer. The remaining nine (9) must be taken at Cornell but may be distributed in any combination of humanities, social sciences, or natural sciences provided at least three (3) credits are taken (at Cornell or transferred from elsewhere) in each area.

Twenty-one (21) credits in free electives may transfer.

Concentration

While completing the required courses leading to the bachelor's degree, undergraduates in the school also must select a concentration: 12 elective credits in a major area of the core curriculum or, with the support of a faculty member, in a self-directed course of study.

When students select a field of concentration, they should consult the coordinator of instruction in that area during the sophomore year to plan the sequence of courses that will best fit their program.

Foreign Languages

Mastery of a foreign language is particularly desirable for students who are planning careers in the hospitality industry and, hence, the second language requirement for graduation. Further information on foreign language courses at Cornell, and placement in language courses, may be found in this book in the College of Arts and Sciences program description under the Modern Languages, Literature, and Linguistics section and also under the section Advanced Placement for Freshmen.

Independent Study

Students may conduct independent study projects in any academic area of the school under the direction of a faculty member. Credit is arranged on an individual basis. To enroll in an independent study project, students must obtain written permission from the school before the add deadline. See H Adm 499 or 699 for more details.

Practice-Credit Requirement

As part of degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice-credit

requirement and submit verification thereof prior to registering for the last semester. Further details are set forth in the *Practice Credit Handbook for Undergraduates in the School of Hotel Administration*, available in the school's Career Services Office, room 255 Statler Hall.

Management-Intern Program

Hotel School juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the management intern program. Students receive 12 academic credits, 1 practice credit, and may petition on an ad-hoc basis to have a portion of the academic credits applied toward their concentration. While on the internship, tuition is reduced and students receive a salary from the sponsoring organization. Positions are available in the U.S. and internationally. Sponsors include hotels, restaurants, casinos, corporate offices, consulting firms, and clubs. Application should be made one semester in advance. Information meetings are held at the beginning of each semester and are open to all students. See H Adm 493 and 494 for more details. More information about the management intern program also is available in the Career Services Office, 255 Statler Hall.

Study Abroad

All students planning to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Course of Study.

Programs providing an opportunity to study in a foreign country and develop an awareness of the international component of the Hospitality industry can contribute to each student's total educational experience. Students in recent years have studied in Italy, Spain, France, England, and many other countries. Information on the study-abroad programs operating during the summer and academic year is available at the Cornell Abroad Office (in Uris Hall).

Students should discuss their plans with the school's study-abroad faculty representative and the director of student services so that all petition and credit-evaluation procedures are followed.

Part-Time Study

Generally, part-time study is not allowed. Exceptions may be made for employee degree candidates, students who have medical reasons for a reduced schedule, or other extenuating circumstances. In no event shall a student be allowed to enroll on a part-time basis during the last term of study. Further details on part-time study may be found in the school's student handbook (available in room 174 Statler Hall).

Grading System

Letter grades ranging from A+ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each term average as follows: A is equivalent to 4.0; B to 3.0; C to 2.0; D to 1.0; F to 0. For good standing, the student must maintain a minimum average of 2.0. Of the free-elective courses, a maximum of 4 credits each term may be taken on a "satisfactory-unsatisfactory" (S-U) basis.

Students should be aware that a satisfactory grade equals "C-" or above and an unsatisfactory grade equals "D+" or lower. Courses taken S-U may be counted only as free electives.

Students whose term averages are at least 3.3 and who took at least 12 credits of letter grades with no unsatisfactory or incomplete grades are honored by being placed on the Dean's List.

Course Requirements for Graduation

<i>Required courses</i>	<i>Credits</i>
Management Operation: Hotel Administration 105, 301	6
Human-Resources Management: Hotel Administration 115, 211	6
Financial Management: Hotel Administration 121, 221, 222, 321	12
Food and Beverage Management: Hotel Administration 136, 236, 335	12
Marketing and Tourism: Hotel Administration 243, elective	6
Property Asset Management: Hotel Administration 255, 355	6
Communication: Hotel Administration 165, 365	6
Operations Management and Information Technology: Hotel Administration 174, 175	6
Law: Hotel Administration 387	3
Economics: Micro and Macro	6
<i>Specifically required credits</i>	<hr/> 69
<i>Concentration</i>	12
<i>Distributive electives</i>	18
<i>Free electives</i>	21
Total credits required for graduation	<hr/> 120

Typical Course Sequences

The following arrangements of courses tend to be more fixed in the freshman and sophomore years, with a greater degree of flexibility characterizing the upperclass years.

Freshman Year

Typically, a freshman schedule will consist of 15 to 16 credits each term, to include the following:

<i>Required courses</i>	<i>Credits</i>
H Adm 105, Rooms Division Management	3
H Adm 115, Organizational Behavior and Interpersonal Skills	3
H Adm 121, Financial Accounting	3
H Adm 136, Food and Beverage Management	4
H Adm 165, Managerial Communication I	3
H Adm 174, Microcomputing	3
H Adm 175, Quantitative Methods	3
H Adm 191, Microeconomics for the Service Industries	3
Macroeconomics	3
Distributive or free electives	3
	<hr/> 31

Sophomore Year

<i>Required courses</i>	<i>Credits</i>
H Adm 211, Human Resources Management	3
H Adm 221, Managerial Accounting	3
H Adm 222, Finance	3
H Adm 236, Culinary Theory and Practice	4
H Adm 243, Principles of Marketing	3
H Adm 255, Hotel Development and Planning	3
Distributive electives	3-6
Free electives	3-6
	<hr/> 25-31

Junior Year

<i>Required courses</i>	<i>Credits</i>
H Adm 301, Strategic Management	3
H Adm 321, Hospitality Financial Management	3
H Adm 335, Restaurant Management	4
H Adm 355, Hospitality Facilities Operations	3
H Adm 365, Managerial Communication: Principles and Practices	3
H Adm 387, Business and Hospitality Law	3
Concentration	6
Free electives	3-6
	<hr/> 28-31

Senior Year

<i>Required courses</i>	<i>Credits</i>
Marketing Elective	3
Concentration	6
Free electives	15-23
	<hr/> 24-32

GRADUATE CURRICULUM

The school's programs for advanced degrees include those of Master of Management in Hospitality, Master of Science, and Doctor of Philosophy. For further information on graduate programs, consult the school's graduate catalog (available in room 172 Statler Hall); contact Professor Judi Brownell, the school's Bradley director for graduate studies at 255-7245, Sandra K. Boothe, director of the Master of Management in Hospitality program at 255-7246, or see the university's *Announcement* from the Graduate School.

Required Program for Professional Master's Students

<i>Required courses</i>	<i>Credit</i>
H Adm 701, Competitive Strategies for the Hospitality Industry	3
H Adm 702, Human Behavior in Organizations	3
H Adm 711, Human Resources Management	3
H Adm 721, Financial Economics	3
H Adm 722, Hospitality Financial Management	3

H Adm 731, Food and Beverage Management	3
H Adm 741, Marketing Management	3
H Adm 751, Properties Development and Planning	3
H Adm 761, Communication Modules	0
H Adm 771, Quantitative Methods	3
H Adm 772, Information Technology for Hospitality Managers	3
H Adm 791, Creating and Managing for Service Excellence	3
H Adm 793, Industry Mentorship Program	0
H Adm 794, Management Development Component I, II, and III	0

Balance of courses are electives.

Total credits required for first-year professional master's program 64

Course Schedule Information

For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school student services office in room 178 Statler Hall, telephone 255-3076.

MANAGEMENT OPERATION COURSES**H ADM 100 Principles of Management**

Fall and spring. 3 credits. Limited to non-hotel school students. Elective. R. Chase. An introductory survey course in management with general reference toward the hospitality industry. The course is organized around the traditional management functions of planning, organizing, leading, and controlling.

H ADM 102 Distinguished Management Lectures

Fall. 1 credit. Limited to hotel school students except by written permission. Elective. D. Dittman. A series of lectures given by non-resident speakers prominent in the hotel and restaurant industries or allied fields. Topics include career ladders, company profiles, and business-policy formulation.

H ADM 105 Rooms-Division Management

Fall and spring. 3 credits. Limited to hotel school and sponsored internal transfer division students. Required. R. Hartmanis. Provides students with a comprehensive, well-rounded, fundamental understanding of rooms division operations and management in hotels. Operational areas include housekeeping, reservations, front desk (including check-in, check-out, bellstand, operator, and night audit). Managerial areas include yield management, human resource management, basic marketing and management principles, and organizational objectives.

H ADM 301 Strategic Management

Fall and spring. 3 credits. Limited to 45 juniors and seniors per lecture. Prerequisites: H Adm 105, 115, and 211 or equivalents. Required. C. Enz, P. Rainsford. Focuses on analysis, planning, change, and implementation issues associated with strategic management, emphasizing the value of analyzing environments and formulating strategies linked to environmental conditions,

building on organizational strengths, and defending against organizational weaknesses. Emphasis also on handling ambiguous facts and analysis. **Because of the group project nature of the course, the absolute drop deadline for all students is September 5 in the fall and January 27 in the spring.**

H ADM 303 Club Management

Fall and spring. Fall, second 7 weeks only; spring, first 7 weeks only. 2 credits. Fall, limited to 35 hotel school juniors and seniors; spring, open enrollment. Prerequisite for hotel students: H Adm 105, or equivalent. Elective. R. James.

The study of private membership clubs and club administration. The application of current management principles in a not-for-profit environment is discussed and club management is compared to other areas of the hospitality industry. Topical coverage includes: tournament, facility, and recreation management; legal, financial, and legislative issues; human relations and resource consideration; marketing, pricing policies, and quality standards.

H ADM 305 Resort and Condominium Management

Fall. 3 credits. Not open to freshmen. Recommended: H Adm 387. Elective. M. Noden.

A lecture course in the operation of various types of resort hotels and condominiums. Emphasis is on the promotion of business, the provision of facilities, services, and guest entertainment. Contract and non-contract relationships with the travel industry, terminology, rental-pool agreements, S.E.C. regulations, state statutory requirements, developer-management-owner contracts, and relationships in condominiums are reviewed.

H ADM 306 Franchising in the Hospitality Industry

Fall. 2 credits. Prerequisite: H Adm 121. Elective. M. Noden.

Relationships between franchisor and franchisee, advantages and disadvantages of franchising, structure and services offered by franchisors. Case studies of leading lodging and restaurant companies currently offering franchises will be discussed. Guest speakers from the franchising industry.

H ADM 401 Negotiations in the Hospitality Industry

Spring. 3 credits. Limited to juniors, seniors, and graduate students, with preference given to hotel school seniors and second-year graduate students. Prerequisites: H Adm 115, 702, or equivalents. Elective. T. Simons. Provides hands-on experience in negotiation in a hospitality context. Through role-play exercises, discussion, and writing, students will develop their skills at the fine art of being a tough negotiator with whom people want to continue doing business. Students will improve their comfort level with negotiations and will develop their own personal negotiating style as well as adjusting their style to respond to others' different personalities and negotiation tactics.

H ADM 402 Hospitality Management Seminar

Fall. 1 credit. Limited to 30 seniors and graduate students by permission. Students will be expected to register for H Adm 102. Elective. D. Dittman.

A weekly meeting with the H Adm 102 speaker of the week. The subject matter varies from week to week, depending on the speaker's area of expertise. The class is relatively unstructured, and students are expected to participate in discussions.

H ADM 404 Entrepreneurship and Small Business Management

Fall and spring. 3 credits. Limited to 20 juniors, seniors, and graduate students. Prerequisite: H Adm 321 or equivalent. Elective. Not offered spring 1997. P. Rainsford.

Focuses on the entrepreneur and the decisions made in planning, financing, developing, and operating a new business venture. Case studies and guest speakers will be used. There will be one major term project, which will require the application and integration of the course material. **Because of the group project nature of the course, the absolute drop deadline for all students is September 5 in the fall.**

H ADM 405 Quality Planning in the Hospitality Industry

Spring. 3 credits. Limited to 25 seniors and graduate students. Prerequisites: all required hotel undergraduate courses at the 100, 200, and 300 levels. Elective. T. Hinkin.

Focuses on the analysis of work processes and examines organizations from three perspectives: the customer, the employee, and management. Provides students with a systematic approach to identifying, prioritizing, and improving key job functions and work processes utilizing the tools of quality management. Readings, case analysis.

H ADM 406 Integrated Studies in the Hospitality Industry

Fall and spring. 3 credits. Limited to hotel school seniors. Elective. R. Chase.

Employs text readings, participation in a simulation of a hotel organization, and guest presentations to explore business missions, objectives, strategies, action plans, and evaluations. As an integrative, summary course, the areas of review and application will involve hotel and food service, marketing, organization, and finance.

H ADM 407 Seminar in Hotel Operations

Spring. 3 credits. Limited to 30 seniors. Estimated cost of field trip, \$200. Elective. J. Clark.

Seminar course applies management theory to actual hotel operations via semester-long interactions and visits with the department heads and general manager of a medium-to-large-size hotel. Field trip includes attendance at executive committee meeting, presentations by various department heads, and half-day "shadow assignments."

H ADM 408 Introduction to Casino Operations

Spring. 2 credits. Limited to 45 juniors, seniors and graduate students. Estimated cost of field trip, \$150. Elective. Faculty. Introduction to the multi-billion dollar gaming industry, including a historical overview of gaming and examination of legal, social, and economic issues within the industry. Reviews various games played in casinos, current trends, and the most popular casino destinations in the world. Special attention is devoted to the growth of casinos in cruise ships, Indian reservations, and on river boats in the U.S.

H ADM 409 Airline Management

Spring. 3 credits. Limited to 25 seniors and graduate students, others by permission of instructor. Elective. Focuses on domestic and international airline industries and explores both pre- and post-regulatory climates. Emphasis is on dynamic organizational change in response to fluctuating economic and legal conditions. Topics include airline organization, comparative corporate strategies, marketing and distribution networks, operations and service management, union relations, finance, government regulation, and air transport. Case studies and guest lecturers will be used. Also, using the computer-driven simulation exercise called AIRLINE, student teams will operate a small regional carrier.

H ADM 501 Creative Management for Organizational Change

Spring. 3 credits. Limited to 24 students. Elective.

Through lectures, exercises, and group problem-solving sessions students will explore the characteristics of creative people, organizations, and processes, and obtain an inventory of their own creative ability, examine blocks to creativity and ways to overcome them, plan tactics for selling ideas, discuss methods for leading creative problem-solving meetings, and analyze strategies for producing organizational change. Organizational leaders will present problems for which students will develop creative solutions.

H ADM 603 Managing Across Cultural Boundaries

Spring. 3 credits. Limited to 15 seniors and graduate students. Prerequisites: H Adm 121, 165, 301, 321, or graduate student status. Elective. T. Cullen.

Contributes to the development of knowledge and skills needed to manage effectively in other cultures. Objectives are to develop awareness of the pervasive and hidden influence of culture on behavior, particularly with respect to management and management practices; to develop familiarity with the types of situations and issues that often confront managers working in foreign countries; and to develop an appreciation of the impact on personal behavior of living and working in another culture. Readings, case studies.

[H ADM 605 Best Practices for High Performance and the Management of Change

Fall and spring. 3 credits. Professional master's elective. Not offered 1996-97; next offered fall 1997.

Explores the dynamics of identifying and implementing "best practices" to renew organizations and enhance performance. Examines how to introduce planned change to implement the practices. Emphasis placed on the diagnosis and design of human resource initiatives to achieve improved organizational performance.]

H ADM 701 Competitive Strategies for the Hospitality Industry

Fall. 3 credits. Professional master's requirement. T. Cullen. An integration and application of management concepts, theories, and practices to business situations. Students analyze current problems, formulate strategies, and implement policies.

H ADM 702 Human Behavior in Organizations

Fall. 3 credits. Professional master's requirement. T. Hinkin. An integration of theory and application, designed to increase interpersonal and managerial effectiveness. Emphasis on personality and perception, decision making, motivation, power, group process, and diversity management.

H ADM 801 Seminar in Hospitality and Service Inquiry

Fall. 3 credits. Elective. Faculty. This seminar introduces academic graduate students to the major alternative ways of conceptualizing and designing research, and acquiring, interpreting, and disseminating data. The implications and consequences of one's choices among the alternative perspectives and approaches will be emphasized.

HUMAN RESOURCES MANAGEMENT COURSES

H ADM 115 Organizational Behavior and Interpersonal Skills

Fall and spring. 3 credits. Required. F. Berger, T. Simons. Focuses on managing people in the workplace. Students develop theoretic lenses for understanding people and organizations and practical tools for accomplishing personal and organizational goals. Topics include individual differences, conflict management, problem-solving, power and influence, motivation, leadership, coaching and counseling, and group process. Self-assessments, experiential exercises, reading, discussions, papers, and group activities.

H ADM 210 The Management of Human Resources

Fall and spring. 3 credits. Limited to 100 non-hotel school students, no freshmen. Elective. C. Lundberg. Examines the role of human resources management, starting with an introduction to the personnel function and an analysis of the social, legal, international, and competitive factors. Examines recruitment, selection, training, motivation, development, compensation, performance appraisal, and labor relations. Class discussion and case analysis are emphasized.

H ADM 211 Human Resources Management

Fall and spring. 3 credits. Limited to 60 hotel school students per lecture, no freshmen or graduate students. Prerequisite: H Adm 105 and 115 (co-registration in 115 allowed). Required. B. Tracey. Provides students with an overview of the human resources management (hrm) field and shows them the link between specific hrm activities and substantive issues/situations they will face as future hospitality managers. Integrates information and knowledge acquired in previous courses. Students will understand the relationship between compensation and benefit activities and job design, motivation, and reward structures. Upon completion, students will a) understand the relationship among hrm activities, as well as the relationship between hrm and other functional areas within hospitality organizations; and b) understand how to effectively attract, retain, and motivate hospitality employees.

H ADM 313 Training in the Hospitality Industry

Fall. 3 credits. Limited to 24 students.
Prerequisite: H Adm 211. Elective.
B. Tracey.

Training is one of the primary activities for coping with a continuously changing environment. It also is one of the fundamental responsibilities of all hospitality managers. Students will learn the major theoretical and practical issues associated with program design, development, implementation, and evaluation. Semester-long project with one or more hospitality organizations.

H ADM 412 Managing Organizational Change

Spring. 3 credits. Prerequisite: H Adm 211 or equivalent. Elective. C. Lundberg.
Facilitating and managing change in organizations. Topics include change processes, organizational diagnosis, action planning, and consultancy. Individual and team projects.

H ADM 414 Leadership and Small Group Processes

Fall. 3 credits. Limited to 30 hotel school juniors, seniors, and graduate students.
Elective. C. Lundberg.

Applications of organizational behavior will be explored through lectures, case studies, and management games and exercises. Students will participate in experiential labs aimed at enhancing their effectiveness as members or leaders of groups. Topics include leadership, decision making, motivation, power, and organizational change.

H ADM 415 Managerial Leadership in the 1990s

Spring. January 31, February 1, 2.
1 credit. Elective. K. Blanchard.

Students become participant observers in their own lives through studying the field of applied behavioral science. Students will be able to use what they learn about human beings and how they function best in groups and organizations on a day-to-day basis to develop quality relationships between themselves and the people they support and depend upon (boss, staff, internal peers/associates and customers). **Because of the popularity of this class, priority will be given in the following order: seniors, juniors, non-employee extramural students, sophomores, freshmen, and Cornell employees. Space permitting, the class may be added up to the first day, but the absolute deadline for dropping the course is 3:00 p.m. on the Monday immediately preceding the first class day.**

H ADM 711 Human Resources Management

Spring. 3 credits. Professional master's requirement. C. Lundberg.

Focuses on the development of human resources management skills and exploration of the dilemmas and responsibilities of leadership. Uses managerial perspective with emphasis on the effects that managerial activities have on recruitment, selection, and retention systems. Individual decision-making and integration abilities will be assessed. Case studies, exercises, and simulations.

FINANCIAL MANAGEMENT COURSES**H ADM 120 Survey of Financial Management**

Spring. 2 credits. Limited to non-hotel school students. Elective. Faculty.

A survey of basic principles of financial management, investment management, and financial analysis. Designed for the student who desires a basic general knowledge of financial decision making.

H ADM 121 Financial Accounting

Fall and spring. 3 credits. Limited to hotel school students. Required. D. Ferguson.

The basic principles of accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

H ADM 123 Financial Accounting Principles

Spring. 3 credits. Limited to non-hotel school students. Elective. Faculty.

An in-depth introduction to the principles of financial accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

H ADM 125 Finance

Fall and spring. 3 credits. Limited to non-hotel school students. Elective. Faculty.

Corporate finance topics include time value of money, financial markets, interest rates, financial statement analysis and planning, working capital policy and management, risk and return, risk management, security valuation models, cost of capital, capital budgeting, capital structure, dividend policy, and creative finance.

H ADM 221 Managerial Accounting

Fall. 3 credits. Prerequisites: H Adm 121 and 175, or equivalents. Required.
G. Potter.

Focuses on the use of accounting information for management decision making and control. Topics include product costing, management control systems and performance measurement.

H ADM 222 Finance

Spring. 3 credits. Prerequisite: H Adm 121, 221, or equivalents. Required.
S. Carvell.

Provides students with accounting cash flow information for financial planning, capital structure decisions, capital budgeting evaluation and short-term and long-term financial decision making. Topics include current asset management, short-term financing, capital budgeting, long-term financing, cost of capital, and problems in international finance.

H ADM 321 Hospitality Financial Management

Fall. 3 credits. Prerequisites: H Adm 121, 221 and 222, or permission of instructor. Required. J. Eyster.

Integrates the areas of financial accounting, managerial accounting, and finance and applies the interpretive and analytical skills of each to hospitality-industry situations. Topics include uniform system of accounts, revenue and expense tracking and internal control, accounting systems, ratio and comparative analysis, cost-volume-profit analysis, pricing, operational budgeting, project capital

budgeting, decision-making, equity and debt financing structures, and operating agreement forms. Students analyze hospitality operations and projects and present their findings in management report form.

H ADM 322 Principles of Investment Management

Fall. Limited to non-hotel school students. Hotel school students or those with a background in economics, quantitative analysis, and computers are advised to enroll in H Adm 424. Elective. A. Arbel.

An introductory course covering institutional and analytical aspects of security analysis and investment portfolio management including valuation models and practical strategies for stocks, bonds, and mutual fund selection and trading. Computer-assisted analysis, including students' participation in an investment game, is discussed and applied in a realistic manner.

H ADM 323 Hospitality Real-Estate Finance

Spring. 3 credits. Limited to juniors and seniors. Prerequisite: H Adm 321, or equivalent. Elective. Faculty.

Focuses on real estate financing for hospitality-oriented projects. Topics include methods of measuring rates of return; feasibility and appraisal processes; equity and debt financing vehicles to include joint ventures, limited partnerships, construction mortgages, participating, convertible, and seller-financed mortgages; forms of operating agreements to include management contracts, leases, and franchises; workout strategies for distressed properties; trends in international hotel franchising; and ethical issues of real estate development. Presentations of hospitality industry real estate practitioners.

H ADM 324 International Financial Management

Fall and spring. 3 credits. Prerequisites: H Adm 121, 221, 222, or equivalents, micro and macroeconomics. Elective.
D. Ferguson.

Focuses on the international aspects of financial management important to the hospitality industry with the intention of providing an understanding of and confidence in dealing with the economic issues faced by the multinational corporation. Areas covered are the international financial management environment, the management of foreign exchange risk, international asset management, and international sources of funds.

H ADM 326 Corporate Finance

Fall. 3 credits. Limited to juniors and seniors. Prerequisite: H Adm 321. Elective. S. Carvell.

In-depth analysis of corporate financial management, including financing alternatives and capital structure decisions, cash management, capital budgeting decisions, risk analysis, and working capital management. Although applicable to all businesses, special attention is placed on issues important to the hospitality industry. Emphasizes analytical methods through case studies and an in-depth semester project.

H ADM 421 Internal Control in Hospitality Operations

Fall. 3 credits. Limited to 30 students. Prerequisite: H Adm 321, 722, or equivalents. Elective. N. Geller.

Hotel and restaurant operations are analyzed from the perspective of preventing fraud and embezzlement. The design and distribution of production, accounting, information systems,

and supervisory tasks are studied in a manner that will ensure effective internal control and verifiable audit trails. Case studies.

H ADM 422 Taxation and Management Decisions

Fall. 3 credits. Limited to 50 juniors, seniors and graduate students. Elective. A. Sciarabba.

Introduction to tax advantages and disadvantages of various organizational structures, including corporations, partnerships, and subchapter "S" corporations; financial information reporting to tax authorities and shareholders and how they differ; use of depreciation methods to achieve tax reductions; syndication techniques; and the role tax laws play in promoting private investment and development.

H ADM 423 Financial Management Policy

Fall. 3 credits. Limited to 30 students; non-hotel students by permission of instructor. Prerequisite: H Adm 326 or 721. Elective. S. Carvell.

Covers numerous policy issues in financial management. Each of these issues will affect the potential profitability and survivability of the firm under conditions of uncertainty. The course will concentrate on nine major policy issues including capital structure, dividend policy, lease vs. buy analysis, and working capital financing.

H ADM 424 Security Analysis and Portfolio Management

Fall. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: macro and micro economics, introductory course in statistics and/or quantitative analysis, and knowledge of computers beyond word processing. Elective. A. Arbel.

An in-depth analysis of financial instruments, investments and portfolio management including fixed income, equity securities, advanced valuation models, risk-return analysis, screening techniques, asset allocation, and active portfolio management and trading. Recent developments in investments research are covered, and large financial databases are used for practical applications of the concepts and techniques presented.

H ADM 621 Hospitality Real Estate Finance

Spring. 3 credits. Limited to graduate students. Prerequisite: H Adm 722, or equivalent. Elective. Faculty.

For description, see H ADM 323. This graduate course includes the H Adm 323 lectures plus an hour-long discussion session each week which features guest speakers from industry, faculty from other colleges, and case studies.

H ADM 624 Analysis and Interpretation of Financial Statements

Spring. 3 credits. Limited to seniors and graduate students. Elective. G. Potter.

Covers the financial accounting issues that are encountered in reporting the operations of corporate enterprises. Emphasis is on the components of financial statements, how and why they are reported, and their impact on the overall financial position of the firm and its acceptance in capital markets. Emphasis is on outsiders' views of the company and their decision making through interpretation of the statements.

H ADM 721 Financial Economics

Fall. 3 credits. Professional master's requirement. Faculty.

Integrates corporate finance with the framework of value minimization and the competitive analysis of product and factor markets in the hospitality industry. Topics include short-term asset management, strategic valuation, capital budgeting analysis, capital structure decisions, leasing, and international financial management.

H ADM 722 Hospitality Financial Management

Spring. 3 credits. Professional master's requirement. Faculty.

Covers both managerial accounting and financial management as they are practiced in the hospitality industry. Topics include hospitality accounting systems and internal control, financial statement analysis and interpretation, operational analysis, cost behavior, budgeting and forecasting, pricing, and feasibility analysis.

FOOD AND BEVERAGE MANAGEMENT COURSES

H ADM 136 Food and Beverage Management

Fall and spring. 4 credits. Limited to hotel school students. Required. G. Norkus.

An introduction to the principles of food and beverage management, beginning with an overview of the food service industry at large. Attention is focused on major industry segments, business practices, and trends. Detailed consideration is given to the components of the food service system: marketing, menu planning, logistical support, production, service, controls, and quality assurance. Product and systems differentiation in various industry segments are emphasized.

H ADM 230 Introduction to Culinary Arts

Fall and spring. 2 credits. Limited to non-hotel school students. Priority given to seniors and graduate students. S-U grades only. Attendance at first class is mandatory. Absolute drop deadline for fall is September 9; spring drop deadline is January 24. Elective. Faculty.

Studies of food groups, their respective methods of preparation, cooking, presentation, and holding. Designed for non-hotel students who are interested in learning the professional approach to food preparation and service with hands-on practice. Food product identification, preparation and service methods, and professional language of food and cooking.

H ADM 236 Culinary Theory and Practice

Fall and spring. 4 credits. Prerequisite: H Adm 136. Attendance at first class is mandatory. Required. T. Neuhaus, T. O'Connor, B. Richmond, R. White.

Designed to introduce the student to food and beverage operations through three major components: fundamental food composition and properties, food products and preparation, and food safety and sanitation. Students will prepare recipes, menus, and production schedules and will develop the ability to recognize properly prepared foods through preparing, tasting, and evaluating foods. They also will develop an awareness of potential production problems and how to troubleshoot them.

H ADM 237 Seminar in Culture and Cuisines

Fall. 3 credits. Limited to 20 students.

Prerequisites: H Adm 165 and 236, or permission of instructor. Elective.

R. Spies.

Explores various cuisines in terms of history, lifestyle, and foods peculiar to a culture. Through readings, research, and meal preparation, students explore various cuisines in depth. The goal of the course is to develop an awareness of several international cuisines, enabling students to make comparisons and draw relationships among the foodways of different cultures. Students prepare research reports and oral presentations, and design menus and orchestrate their preparation.

H ADM 330 Seminar in Chain-Restaurant Operations

Spring. 3 credits. Prerequisite: H Adm 136 and 236, or permission of instructor.

Elective. C. Muller, G. Norkus.

Chain-affiliated restaurants account for an ever-increasing market share of all food service dollars. The growth of multi-unit chain operations brings out unique challenges, opportunities, and strategic orientations for restaurant management. This course will identify these present issues, the historical factors that have led to them, and the pending economic and organizational questions facing the chain restaurant segment. Case study analyses, company research, and a term project.

H ADM 331 Food Service Distribution Management

Spring. 3 credits. Limited to 24 juniors, seniors, and graduate students; others by permission of instructor. Elective.

E. Merberg.

Provides an overview of the food service distribution industry: past, present, and future. Specific disciplines of food service distribution include marketing and sales, operations, routing, credit management practices, and financial management of the distribution center. Focus also on the newly emerging role of the "distributor consultant." Concept of developing business partnerships between food service operators and food service distributors is stressed.

H ADM 332 Reviewing the Restaurant: The Consumer's View of the Dining Experience

Spring. 3 credits. Field trip \$200. Limited to 20 students. Prerequisites: H Adm 165 and 335, or permission of the instructors.

Elective. Faculty.

Trains the student to perform a comprehensive analysis of the restaurant dining experience. The role of the restaurant critic/reviewer will be discussed in depth. The student will examine and enhance his or her critical writing skills, as the course will require each student to complete approximately ten restaurant reviews.

H ADM 333 Current Issues in Food Safety and Sanitation

Spring. Variable to 3 credits. Elective.

B. Richmond.

A study of current issues in food safety and sanitation procedures and regulations that affect managerial decisions in food service and hospitality operations. Topics include risk assessment and hazard analysis; legal responsibilities related to food, food handlers, equipment and facilities; foodborne illness and other public-health concerns; and

certification and training. Preparation for NIFI/NRA certification and the Food Protection (ETS) certification exam (optional) is offered.

[H ADM 334 Wine and Food Pairing Principles and Promotion]

Fall. 2 credits. Limited to 20 seniors and graduate students. Prerequisite: H Adm 430 or permission of instructor. Elective. Not offered 1996-97; next offered fall 1997.

Focuses on the pairing and marketing of wine and food. Students develop an understanding of regional and varietal wine styles; how foods' flavors can change a wine's flavor, and the promotion of wine and food. Topics include wine and food pairing principles, cuisines and their flavor components, food trends in restaurants and in the home, special event planning, and wine list development. Students design and present wine and food tastings to industry guests.]

H ADM 335 Restaurant Management

Fall and spring. 4 credits. Limited to 30 hotel school students per lab; others by permission of instructor. Prerequisites: H Adm 136 and 236. Approximate cost of utensils and manual, \$75. Once enrolled, students may not drop the course without permission of instructor. Required. G. Pezzotti, S. Gould, B. Halloran, B. Lang, J. Ridley.

A restaurant-management course in which each student participates as a manager of a full-service restaurant operation. Topics related to the general management of restaurants, including issues in defining a service philosophy, improving profit margins, securing adequate supplies, identifying target markets, and planning for organization growth. The laboratory is based on a hands-on managerial component, from which students become familiar with the various requirements for success of each of the line positions in a restaurant.

H ADM 337 Specialty Foods

Fall. 4 credits. Limited to juniors, seniors, and graduate students. Prerequisites for hotel undergraduates: H Adm 136 and 236. Elective. T. Neuhaus.

An advanced course covering finer points of cooking and baking. A culinary, chemical, and marketing perspective will be taken using principles of organoleptical food evaluation. Topics include flavor marriages, garnishes, unusual vegetables and fruits, marinades, charcuterie, wild game, fermentations, and chocolates.

[H ADM 338 Health and Fitness in the Resort Hotel and Spa Industry]

Fall. 3 credits. Limited to juniors, seniors, and graduate students. Two field trips, \$75-100. Prerequisite: previous courses in food and beverage management and marketing. Elective. M. Tabacchi. Not offered fall 1996; next offered fall 1997.

Emphasizes the management aspects of spas, health clubs, and spa resorts. Topics include feasibility of success and marketing research necessary to establish new spas, design of menus, mental and physical fitness programs, stress management, spa medical treatments, complementary medical treatments and other spa programs. Other topics include personnel required, safety, legal and ethical issues, integration of nutritious menu items and their marketing and merchandising. Guest speakers.]

[H ADM 339 Airline Food Service Management]

Spring. 3 credits. Field trip, \$75-100. Prerequisites/Corequisites: H Adm 136, 236, or permission of the instructor. Elective. Not offered 1996-97; next offered spring 1998.

Focuses on the challenge of preparing and distributing 20,000-30,000 meals per day to 20-30 different airline carriers and rethermalizing, serving, and clearing those meals at 30,000 feet in confined space and short periods of time. Examines strategies, planning, and forecasting by airline, airline catering, and sales executives, as well as the effect of the economy and the airline's competition upon the type of meals served.]

H ADM 430 Introduction to Wines

Fall and spring. 2 credits. Wine glass kit and course fee, \$25.00. Limited to hotel school juniors, seniors, and graduate students, and seniors and graduate students in all other colleges. Hotel students encouraged to enroll in the fall. All students, except those in the hotel school, must be 21 years old by the first day of university classes. S-U grades only. Elective. S. Mutkoski, B. Lang, A. Nash.

An introduction to the major wine-producing regions of the world and what the consumer needs to know to purchase wines, spirits, and beers at retail outlets and in a restaurant setting. Topics include flavor components in wine, pairing wine and food, responsible drinking, selecting quality and value wines, and wine etiquette. Samples from a variety of countries, regions, and vineyards are evaluated.

(Preregistered students who do not attend the first class and fail to notify the course secretary in 274 Statler of their absence before the first class are automatically dropped from the course. The student must then follow the normal drop procedure in his or her school. **Because of the high demand for this course and because a product is consumed, the absolute drop deadline for all students is September 13 in the fall and January 31, 1997 in the spring.)**

H ADM 431 Seminar in Independent Restaurant Operations Management

Fall and spring. 3 credits. Five field trips, \$250. Limited to 20 students. Prerequisite: written permission of instructor. Elective. G. Pezzotti.

Designed for students who have a strong interest in food and beverage operations and who may be considering a career as an entrepreneur. Students visit and analyze various independently owned restaurant operations. Analysis covers the restaurant's concept (market), organization, ownership, management, physical structure, staff, front-and back-of-the-house operations, and fiscal integrity. Readings relevant to current topics in the restaurant industry are required. Classes alternate weekly between field trips and seminar/case presentations.

[H ADM 432 Contemporary Healthy Foods]

Fall. 3 credits. Field trip, \$50. Limited to 20 seniors and graduate students, or by permission of instructors. Elective. Not offered 1996-97; next offered fall 1997.

Builds a greater awareness and understanding among nutrition and food service professionals of the origins and manifestations of today's health-conscious and educated food service

patron. Topics include the marriage of nutrition and the cuisine demanded by today's consumer, fresh produce, lean meats, and lack of fabricated diet foods. Menu design includes creativity and nutrient density of foods. Major emphasis is on preparation, marketing, merchandising and selling of healthy menus in Statler's outlets.]

H ADM 433 Contract Food Service Management

Fall. 3 credits. Field trips, \$25-50. Limited to 25 students. Prerequisites: H Adm 136 and 236. Elective. T. O'Connor.

Designed to explore and analyze food service management in business, industry, and health-care facilities, e.g., office/industrial complexes, educational institutions, contract companies, and hospital and extended-care facilities. Characteristics of food service organization structures, controls, systems design, equipment, and government/legal regulations. Readings, small investigative projects, presentations, discussions, and local site visits.

H ADM 434 Desserts Merchandising

Spring. 3 credits. Limited to 25 students with permission of instructor. Prerequisite: H Adm 236, 230, or, for graduate students, "culinary camp." Elective. T. Neuhaus.

A hands-on course providing exposure to a variety of breads, pastries, cakes, and other desserts. Students develop large-scale production skills, become familiar with bakeshop utensils, and advertise and sell their products.

H ADM 435 Selection, Procurement, and Supply Management

Fall. 3 credits. Prerequisites: H Adm 136 and 236, or 731. Elective. G. Norkus, R. Spies.

Expands upon the concepts of purchasing and supply management that were developed in H ADM 136 and 731. Designed to expose the student to two specific areas: the management of the procurement system and the major commodity groups that are germane to the operation of a hotel or foodservice operation. Lectures include discussions on the comparison of the purchasing function in the hospitality industry to other industries, distribution systems, legal and ethical implications in buyer-seller relationships, procurement options, buying strategy development, price protection programs, and other contemporary issues. Students work with the major entree food groups: meats, seafood, and poultry, with emphasis placed on identification, quality and condition, market form, yield tests, and cost analyses.

H ADM 436 Beverage Management

Fall and spring. 2 credits. Limited to 20 hotel school juniors, seniors, and graduate students in the fall, 36 in the spring. Prerequisite: H Adm 430 (co-registration is not allowed). Elective. S. Mutkoski, A. Nash.

Designed for students who intend to pursue food and beverage as a career. Deals specifically with the management of beverage operations. Lectures develop skills in and awareness of dram shop liability; staff training and responsible customer service; beverage pricing; food and wine pairings; wine list development; purchasing, storage, and service; wine regions; cost controls and loss prevention; and creative beverage merchandising. Guest lecturers.

H ADM 437 Specialty Food and Beverage Operations: Guest Chefs

Spring. 3 credits. Limited to 20 students.
Prerequisite: H Adm 335 or 731. Elective.
B. Lang, B. Halloran, H. Winslow.

Designed for students with a strong food and beverage orientation, especially students considering careers in the hotel food and beverage environment, or those who anticipate interacting with current culinary trends. Working in groups, students market, organize, plan, produce, serve, and prepare the financial analysis and accounting relative to four guest chef specialty production nights for the Cornell community, utilizing the Statler Hotel facility. Final project.

H ADM 438 Catering Management

Spring. 2 credits. Limited to 20 students.
Prerequisite: H Adm 335, 731, or permission of instructor. Elective.
R. Spies.

Examines on- and off-premise catering for business and social functions, as well as sports events and office catering. Topics include the organizational structure of catering operations; legal aspects of catering businesses; menu design for special functions and its operational implications; marketing from a caterer's perspective; function planning and management; staff recruitment, training, and supervision; and post-event analysis. Site visits and analyses of actual catering operations.

H ADM 439 Wine: A Cultural and Historical Perspective

Fall and spring. 2 credits. Limited to 200 students. Elective. Not offered fall 1996; next offered spring 1997. A. Nash.

Designed to provide students with a cultural and historical perspective on wine and its place in society. Topics include history, people, culture, production of wine in specific wine-producing regions of the world, wine and health issues, wine and food pairing, cooking with wine, and retail wine buying strategies. Regions covered will change each semester so students may take the course more than once.

H ADM 631 Case Studies in Multi-unit Restaurant Management

Fall. 3 credits. Limited to 20 graduate students, seniors by permission. Professional master's elective. C. Muller.

Case studies of multi-unit restaurant organizations will focus on topics such as: new venture planning, rapid growth and organizational change, market identification, service delivery and design, consumer demand, corporate culture, production planning and operations management, strategic planning and implementation, tactics and market responses, international expansion, breakpoints and breakthrough thinking. Each class period will be spent in student-organized discourse and exchange based upon their assigned written case analysis. Grading will be on individual case presentations, class participation and written case assignments.

H ADM 731 Graduate Food and Beverage Management

Spring. 3 credits. Professional master's requirement. T. Kelly.

Focuses on the technical, managerial, and human resources skills needed to be successful in food service management. Topics include market analysis, concept development, menu planning, operations management, marketing, and current and

future issues affecting the food service industry.

MARKETING AND TOURISM**H ADM 240 Marketing Principles**

Fall and spring. 3 credits. Limited to non-hotel school students. Faculty.

An introductory course providing a basic understanding of consumer purchase decision making, product planning, distribution, promotion, and pricing. Companies and their current marketing strategies will be examined to better understand these fundamental tenets of marketing and how they contribute to the crucial process of strategic planning.

H ADM 241 Marketing Principles

Fall and spring. 4 credits. Limited to non-hotel school students. Elective. Faculty.

For description, see H ADM 240. This course includes the H Adm 240 lectures plus section activities.

H ADM 243 Marketing Management for the Hospitality Industry

Fall and spring. 3 credits. Limited to hotel school students, not open to freshmen.

Required. R. Bell, M. Lynn.

Provides an overview of the discipline of marketing as it applies to the hospitality industry. Topics include understanding how a marketing strategy is devised, especially the interrelationship of company objectives, internal resources, the external operating environment, and how the special nature of service affects the development of marketing strategies in the hospitality industry.

H ADM 244 Tourism I

Fall. 3 credits. Not open to freshmen. Elective. M. Noden.

An introductory course in the study of tourism. The origins and evolution of contemporary tourism are examined. Students are familiarized with the various supply components of the tourism industrial base and their integration on an international scale. The effects of mass-volume tourist demand on destination development are explored through the use of selected limited case studies. Guest lectures highlight the economic operations and effects of tourism in both the public and private sectors.

H ADM 245 The Basics of Hotel Sales

Spring. 3 credits. Field trip, \$50. Limited to 30 students. Prerequisite: H Adm 240/241/243, 741, or equivalent. Elective.
R. Bell.

Emphasis on skills and knowledge leading to an understanding of the role of a successful property level sales person. Topics include roles of types of sales positions at the hotel level, tools necessary to make it up the ladder, operation of a hotel sales function, and differing buying strategies of market segments.

H ADM 343 Marketing Research

Fall and spring. 3 credits. Limited to 30 students. Prerequisites: introductory principles of marketing or marketing management and an introductory course in quantitative methods for management. Elective. M. Morgan.

Introduces students to the basic techniques and practices used to collect and analyze data for decision making in hospitality marketing.

[H ADM 346 Marketing Planning for Hotels

Fall. 3 credits. Prerequisite: H Adm 243, 741, or equivalent. Elective. Not offered 1996-97; next offered fall 1997.

Key variables in property level management and their proper application in developing a marketing plan, e.g., marketing intelligence, demand analysis, supply and competitor analysis, segment analysis, resource allocation, sales strategies and measurement of results. Upon completion of the course, the student should be able to design, develop, and implement a comprehensive, targeted, and action-oriented marketing plan for a lodging property.]

H ADM 347 Consumer Behavior

Fall and spring. 3 credits. Limited to 55 juniors and seniors. Prerequisite: an introductory principles of marketing or marketing management course. Elective.
M. Lynn.

Introduces students to the dynamic interactions among affect, cognition, behavior, and environmental events that are involved in market exchanges. Covers information processing, behavior management, and market segmentation and positioning as well as using the consumer behavior concepts and principles in the development of marketing strategy.

H ADM 442 Marketing Communications

Spring. 3 credits. Limited to seniors. Prerequisite: a previous marketing course. Elective. C. Dev.

Provides students with a managerial understanding of the effective use of a variety of marketing communication media, including advertising, sales promotion, public relations, direct marketing and out-of-home. Hospitality industry emphasized.

H ADM 444 Tourism II

Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: H Adm 243, 244, or equivalents, or written permission of instructor. Elective.
M. Noden.

An advanced course in the study of tourism. Emphasis is placed on the development of the tourism industrial base and development and financing of superstructure and infrastructure. Econometric model development for demand predictions is examined and analyzed. Students are expected to engage in a wide range of discussion and analysis of the effects of tourism on various environments in social and economic terms. Case studies, occasional guest lectures.

H ADM 445 Services Marketing

Fall and spring. 3 credits. Limited to undergraduate students. Prerequisite: a previous marketing course or permission of instructor. Elective. L. Renaghan.

Students preparing for ownership or management positions will develop an understanding of services marketing principles applicable across entire service sector. Topics include marketing strategies of service firms, new marketing approaches, and the reformulation of traditional marketing principles from consumers and industrial goods marketing. Four case studies, guest speakers.

H ADM 447 Channels of Distribution in Tourism

Spring. 3 credits. Prerequisite: H Adm 343. Elective. M. Noden.

Examines the major elements of the structure, arrangement, management, and control of the channels of distribution in the tourism industries. Topics include emerging trends in electronic distribution, organizational structures of distributive consortia, and their effectiveness in service distribution. Significant readings, guest lectures.

H ADM 449 International Marketing

Spring. 3 credits. Limited to 25 students. Prerequisites: Micro and macroeconomics. Elective. Faculty.

Develops understanding of international marketing with emphasis on hospitality-industry applications. Focuses on the similarities and differences that exist between domestic and international marketing and the conduct of international marketing in various segments of the world.

H ADM 641 Marketing Decision Models for Service Firms

Fall. 3 credits. Limited to 20 seniors and graduate students. Prerequisite: a principles of marketing or marketing management course and an introductory course in quantitative methods for management. Elective. M. Morgan.

Introduces students to advanced data analysis and modelling methods used for decision making in hospitality marketing.

H ADM 642 Strategic Marketing

Fall. 3 credits. Limited to 20 graduate students. Prerequisite: a previous marketing course and permission of instructor. Elective. C. Dev.

Offers theoretical and practical approaches to addressing strategic marketing challenges in hospitality and service firms. Strategic marketing concepts and principles will be learned through lectures, discussion, and development of a strategic marketing report.

H ADM 643 Marketing Research

Fall and spring. 3 credits. Limited to 20 graduate students. Prerequisites: principles of marketing or marketing management and an introductory course in quantitative methods for management. Elective. M. Morgan.

Introduces students to the basic techniques and practices used to collect and analyze data for decision making in hospitality marketing. Advanced research topics, five lab sessions.

[H ADM 644 Food and Beverage Marketing Strategy

Fall. 3 credits. Limited to graduate students, seniors by permission. Prerequisite: prior three-credit marketing course. Elective. Not offered 1996-97; next offered fall 1997.

Focuses on how to apply marketing, sales, and merchandising techniques to the commercial food and beverage industry. Addresses developing a market segmentation based upon understanding the needs and wants of potential target markets, translating needs and wants into viable food service concept positioning strategy, and marketing strategies used to maintain and increase sales and market share. Recitation and analysis involves substantial use of the Consumer Report on Eating Share Trends (CREST) database.]

[H ADM 645 Services Marketing

Fall and spring. 3 credits. Limited to graduate students. Prerequisite: previous marketing course, or permission of instructor. Elective. Not offered 1996-97; next offered fall 1997.

For description, see H ADM 445. This course includes the H Adm 445 lectures plus three case studies and a research paper.]

[H ADM 646 Marketing Planning For Hotels

Fall. 3 credits. Limited to graduate students. Prerequisite: H Adm 243, 741, or equivalent. Elective. Not offered 1996-97; next offered fall 1997.

For description, see 346. This course includes the H Adm 346 lectures plus a theoretical paper.]

H ADM 647 Consumer Behavior

Fall and spring. 3 credits. Limited to 55 graduate students. Prerequisite: introductory marketing principles or marketing management course. Elective. M. Lynn.

For description, see H ADM 347.

H ADM 741 Marketing Management

Spring. 3 credits. Professional master's requirement. R. Bell.

Basic concepts and principles underlying marketing decision making and the skills needed to analyze and understand complex marketing situations in order to plan and implement marketing programs.

PROPERTY ASSET MANAGEMENT COURSES

H ADM 255 Hotel Development and Planning

Spring. 3 credits. Limited to sophomores, juniors, and seniors. Required. J. deRoos.

An introduction and management overview of the problems and opportunities inherent in the development and planning of hospitality facilities. Topics include the project development sequence; conceptual and space planning; architectural design criteria, construction management; and the interpretation of architectural design and consultant drawings. Emphasis is on setting appropriate facilities requirements, understanding industry practice, and implementing properties decisions within a balanced design, operations, and financial framework.

H ADM 350 Real Estate Management

Fall. 3 credits. Elective. J. deRoos.

Designed for students interested in the management of residential and commercial real estate. Overview of real estate economics, the relevant law, and different aspects of property management including leases and management contracts, accounting and finance, staffing, and building operations. Examples from several types of properties.

H ADM 351 Hospitality Facilities Design

Fall. 4 credits. Prerequisite: H Adm 255 or 751 or permission of instructor. Elective. R. Penner.

A lecture-studio course dealing with property development, planning, and design by focusing on the interpretation and analysis of hotel plans. Students learn basic graphic techniques and apply them to planning problems for hospitality facilities. Final project.

H ADM 352 Hotel Planning and Interior Design

Spring. 3 credits. Field trip, \$200; drawing supplies, \$75. Limited to 12 students.

Prerequisite: H Adm 351. Elective.

R. Penner.

A project course concerned with hotel planning, interior design, and renovation. Students establish the operator's criteria for the renovation of hotel guestrooms and public areas, prepare budgets, and develop preliminary conceptual designs leading to a substantial graphic presentation. Drawing ability is essential.

H ADM 353 Food Service Facilities Design

Spring. 3 credits. Limited to 12 students. Prerequisites: H Adm 351 and 335

(co-registration is allowed) or food service experience is recommended. Elective.

M. Redlin.

An introduction to the basic concepts of food service facilities design and planning. Students will determine space allocations for kitchens and their support areas; develop basic production work flow in the preparation and service areas; and select equipment utilizing standards for production capability, quality of construction, and ease of maintenance. Students will use studio time for planning, designing, and writing specifications for a medium-size restaurant kitchen.

H ADM 354 Computer-Aided Design

Fall and spring. 2 credits. Limited to 18 students per lecture. Prerequisite: H Adm 351 or equivalent studio experience.

Attendance at first class is mandatory.

Elective. Faculty.

The operation of microcomputer-based computer-aided design (CAD) systems. Using AutoCAD on the IBM PC, the course presents an organized and logical sequence of commands, mode settings, drawing aids, and other characteristics of CAD. Students will learn the program in the school's computer center and will develop a complete graphic presentation. Emphasis is on the use and operation of CAD systems in a commercial document production environment.

H ADM 355 Hospitality Facilities Operations

Fall. 3 credits. Prerequisite: H Adm 255. Required. M. Redlin.

An overview of the operation of hospitality facilities, including operating costs for various types of facilities, types and characteristics of major building systems, and the responsibilities of the engineering-maintenance departments. The renovation needs of hospitality facilities are examined and key managerial aspects of renovations considered.

H ADM 356 Hospitality Risk Management

Spring. 3 credits. Limited to 30 hotel school juniors, seniors and graduate students. Elective. D. Stipanuk.

Risk management within the hospitality environment as applied to issues of control and risk financing. Issues in fire protection, customer and workplace safety, OSHA requirements, and customer and corporate security are analyzed. Basic elements of insurance and crisis management are discussed.

H ADM 357 Insurance and Risk Management

Fall and spring. 3 credits. Limited to 75 students per lecture. Prerequisite: an introductory accounting or business course. Elective. G. Shankar.

A comprehensive look at risk management within a general business or institutional environment. Reviews insurance and non-insurance solutions to controlling loss, the general legal environment within which risk management processes work, and the integration of crisis management into the overall corporate risk management plan.

H ADM 450 Principles of Real Estate

Fall. 3 credits. Limited to juniors and seniors. Elective. J. Corgel.

Approaches real estate from four perspectives: legal, economic, financial, and business. Understanding these perspectives will enable students to make better investment and financing decisions, to use real estate resources wisely, to understand public-policy issues, and to be prepared for additional courses in real estate investment, finance, and development.

H ADM 455 Special Topics in Properties Management

Spring. 3 credits. Limited to juniors, seniors and graduate students. Elective. D. Stipanuk.

The theme and instructor of the "special topics" course will change each year on the basis of current trends, student interest, and faculty expertise. See the school registrar or properties area coordinator for details about the current topics.

H ADM 456 Hospitality Facilities Management

Fall. 3 credits. Prerequisite: H Adm 355, 751, or permission of the instructor. Elective. D. Stipanuk.

A managerial approach to hospitality facilities addressing issues of owning and operating, cost management, facilities services and delivery systems management, governmental regulatory compliance, and emerging issues. Emphasis on environmental issues such as indoor air quality, waste management, and energy conservation. Extensive use of the World Wide Web.

[H ADM 457 Advanced Development and Construction

Fall. 3 credits. Limited to seniors and graduate students. Elective. Not offered 1996-97; next offered fall 1997.

Focuses on the management structure and systems, laws, regulations, and industry practices that most influence the successful development of commercial and residential real estate, including lodging and eating facilities. Topics include scheduling, budgeting, managing other professionals, and analysis of alternative materials and methods. Guest speakers, case studies, and group project.]

H ADM 458 Hospitality Real Estate

Spring. 3 credits. Prerequisite: H Adm 323, 450, or permission of instructor. Elective. J. Corgel.

Expands the student's understanding of the role of real estate in individual hospitality businesses and corporations. Designed for those who plan careers in the hospitality industry. Specific objectives are to develop an appreciation of real estate as a factor in the production of income of hospitality businesses; to develop an appreciation of real

estate as an asset that can be managed, sold, and otherwise used to increase the wealth of hospitality corporation shareholders; and to understand the importance of valuing real estate, and the approaches to valuation and contemporary hospitality valuation issues.

H ADM 459 International Development

Fall. 3 credits. Limited to 25 seniors and graduate students. Elective. J. Clark. Seminar covering the strategic development of international hospitality projects. Topics include corporate expansion strategies, the international development process, viewpoints of public and private stakeholders; technology, infrastructure, environmental concerns, and public policy issues. Guest lecturers.

H ADM 651 Principles of Real Estate

Fall. 3 credits. Limited to graduate students. Elective. J. Corgel. For description, see H ADM 450. This course includes the H Adm 450 lectures plus an hour-long recitation each week featuring guest speakers from industry, faculty from other colleges, and case studies. Comprehensive term project.

H ADM 658 Advanced Real Estate

Spring. 3 credits. Prerequisite: H Adm 323, 450 or 651. Elective. J. Corgel. Promotes sound real estate investment and finance decision making through the use of advanced theory and techniques in financial economics. Real estate investment decisions are made through applications of the after-tax discounted cash flow model which incorporates prevailing domestic and international economic conditions in real estate markets, tax rules, and government regulations. Financing decisions are made using the techniques of modern financial analysis. A wide array of financing options is considered including convertible, participating, and accrual mortgages. All types of residential and non-residential real estate are analyzed; however, special emphasis is placed on the analysis of hospitality properties.

H ADM 751 Properties Development and Planning

Spring. 3 credits. Professional master's requirement. J. Clark. Provides an overview of project development, hotel planning, and the construction process, including the role of the development team, feasibility, functional planning and design, interpretation of architectural drawings, architectural and engineering criteria, construction management, contracts, and scheduling. Student teams will prepare the program documentation for a new hotel or one undergoing major rehabilitation in conjunction with other professional master's core courses.

COMMUNICATION COURSES**H ADM 165 Managerial Communication I**

Fall and spring. 3 credits. Each lecture limited to 16 students. Note: Students required to take this course generally may not delay it. If extenuating circumstances exist, student must petition to drop the course by the end of the first week of classes. Required. D. Jameson, S. Bryson, S. Jones, S. Kiner, J. Lumley.

An introduction to the role and importance of effective communication in managerial work, especially in the hospitality industry.

Development of abilities in analytical thinking and clear expression. The process of planning, preparing, and executing professional communications. Students write a series of business documents and give several oral presentations.

H ADM 266 Intermediate French: Le Français de l'Hotellerie et du Tourisme

Spring. 3 credits. Limited to 15 students. Prerequisite: French 123 or equivalent (CPT 560 or above), or permission of instructor. Elective. A. Grandjean-Levy. Offers continuing study of the French language with specific emphasis on the hospitality industry. Material presented considers cultural, geographic, economic, historical, political, and social contexts within which the business functions. The course is conducted in French, emphasizing a conversational approach. Specialized situations and vocabulary are used in building general competence in practical usage. Students with special interest in the hospitality industry will be given priority for admission.

H ADM 364 Advanced Business Writing

Fall and spring. 3 credits. Limited to juniors, seniors, or graduate students, or written permission of instructor. Prerequisite for undergraduates: H Adm 165 (for hotel school students) or completion of student's freshman writing requirement. Elective. S. Jones.

Focuses on the written communication that requires special persuasiveness and control of tone. Writing assignments will give students a chance to apply the theories of communication, semantics, and human relations covered in the course. The kinds of communications that will be analyzed, evaluated, and written include persuasive messages to subordinates and superiors in an organization; sales letters and other promotion materials; and negative messages such as refusals, rejections, and responses to complaints. A major topic is the planning and executing of a job-hunting campaign, for which students prepare résumés, letters of application, and follow-up messages adapted to their individual needs.

H ADM 365 Managerial Communication II

Fall and spring. 3 credits. Limited to 22 juniors and seniors per lecture. Note: Students required to take this course generally may not drop it. If extenuating circumstances exist, student must petition to drop the course by the end of the first week of classes. Prerequisites: Hotel undergraduates must have completed H Adm 165 and H Adm 115. Students should not take this course concurrently with H Adm 335. Required. B. Stevens, E. Huettman, S. Bryson, S. Kiner.

A broad study of communication in a management context. Emphasizes the significant role of communication in developing work relationships that enable managers to achieve their goals. It presents the theories and principles of communication that underlie effective performance. Students increase their individual communication abilities by applying these concepts in a variety of managerial contexts, including interacting one-to-one, working in groups, and formally developing and presenting ideas to larger audiences.

H ADM 462 Communication and the Multicultural Organization

Fall. 3 credits. Elective. E. Huettman.
Influence of culture, perception, and gender on communication in multicultural organizations, including international and domestic businesses with diverse work forces. Focus is on human interaction at work. Special emphasis on hospitality industry. Topics include values and beliefs, how race and gender affect language use, cultural differences in nonverbal communication, ethnocentrism and stereotyping, intercultural sensitivity and adjustment, cultural variables, persuasion, and ethics of communication in international business.

H ADM 463 Persuasive Communication in Organizations

Spring. 3 credits. Limited to 18 students.
Prerequisites: H Adm 165 and 365 for hotel school undergraduates, or permission of instructor. Elective.

Prepares students to communicate effectively in a variety of persuasive speaking contexts. Principles of persuasion will be thoroughly examined as they apply to managerial communication tasks. Emphasis on persuasive speaking; also relationship between written and oral communication. Studies the principles of persuasion, analyzes case studies in the hospitality industry, and applies persuasive strategies in simulated workplace settings.

H ADM 661 Organizational Communication For Managers

Spring. 3 credits. Elective. B. Stevens.
Focuses on the complex interactions that occur when people communicate in organizations. Structured around the communication tasks managers must accomplish to be effective on the job. Business cases. Emphasis on design of effective communication strategies. Applications and experiential exercises help students perfect their ability to write, make oral presentations, and interact effectively with others in managerial contexts.

H ADM 761 Communication Modules

Year-long course. Variable credits. S-U grades only. Elective. F. Berger, D. Jameson, B. Stevens.
Elective modules cover topics related to the professional master's program benchmarks: written communication, presentational speaking, and group process/leadership. Additional topics in support of students' individual goals also may be offered. Topics include organizing ideas, revising and editing written documents, etc. Modules are available on a first-come, first-served basis, and are offered throughout the semester during the management development periods.

OPERATIONS MANAGEMENT, INFORMATION TECHNOLOGY COURSES

H ADM 170 Keyboarding on the Macintosh

Spring. 2 credits. Limited to 30 students.
Elective. B. David.
An introduction to the computer and a beginning course in alphabetic and numeric keyboarding. Students learn word-processing skills during the second half of the course.

H ADM 174 Microcomputing

Fall. 3 credits. Limited to hotel school freshmen. Spring and summer. 3 credits.
Open enrollment. Maximum of 30 students per lecture. Required.
R. Alvarez, B. David, R. Moore.

An introduction to microcomputing to develop functional computer fluency. Students develop skills in five generic areas: text, graphics, spreadsheet, presentation, and list processing. The course is entirely lab-oriented and students work in both Mac/OS and Windows.

H ADM 175 Quantitative Methods

Fall and spring. 3 credits. Limited to 120 students. Co- or prerequisite: H Adm 174. Required. G. Thompson.

An introduction to statistical and operations management methods appropriate to the hospitality industry. Topics include descriptive statistics, probability, correlation and regression, forecasting, decision analysis, quality control charts, and an introduction to yield management. Emphasis is on practical applications of the techniques to hospitality related problems.

H ADM 374 End-User Business Computing Tools

Spring. 3 credits. Limited to 20 students per lecture. Elective. R. Alvarez.
Explores the personal computer as a managerial tool. Concepts of spreadsheet modeling, database, and end-user computing are covered. Students learn to use specific software applications programs to solve original problems. All work is done on IBM computers.

H ADM 375 Hotel Computing Applications

Spring. 3 credits. Prerequisite: H Adm 174 or equivalent. Elective. R. Moore.
Introduces students from a management perspective to technology-based systems used in the hospitality industry which enhance guest service and support management decision making. Topics include following systems: global distribution; yield management; property-management; communication networks (LANs and WANS); and food service management. Experience on systems widely used in hospitality industry and develops IBM PC knowledge and skills.

H ADM 474 Corporate Information Systems Management

Spring. 3 credits. Limited to juniors, seniors, and graduate students who have not taken H Adm 772. Elective.
R. Alvarez.
Explores ten key issues in information technology management through use of case studies of companies with relevant experience with the issues. A basic understanding of information technology, organizational behavior, and general management is advised.

H ADM 674 Service Operations Management

Spring. 3 credits. Limited to 25 graduate students. Prerequisite: H Adm 775 or equivalent. Elective. S. Kimes.
The objective of this course is to improve the understanding of the operations function of service organizations. Focuses on the role and nature of service operations, the relationship of operations to other business functions, and develops skills and provides techniques for the effective management of service operations. Topics include service

design, bottleneck and layout analysis, capacity management, work force management, and quality management. Intended for graduate students interested in services management.

H ADM 675 Yield Management

Spring. 3 credits. Prerequisites: H Adm 175, 771, or equivalent. Elective.
S. Kimes.

Students learn how to effectively apply the principles of yield management. Focuses on the integration of yield management techniques with information technology, internal management issues, and external marketing concerns. Topics include yield management techniques, forecasting, overbooking, group decisions, and management and marketing issues.

H ADM 771 Graduate Quantitative Methods

Fall. 3 credits. Professional master's requirement. S. Kimes.
Covers statistical and operations research techniques which can be applied to the hospitality industry. Topics include descriptive statistics, probability, sampling, correlation and regression, forecasting and yield management.

H ADM 772 Information Technology for Hospitality Managers

Fall. 3 credits. Professional master's requirement. R. Moore.
Familiarizes students with issues surrounding the use of information technology in supporting hospitality operations from a guest services perspective and decision making from the viewpoint of management.

LAW COURSES

H ADM 385 Business Law I

Spring. 3 credits. Limited to juniors, seniors, and graduate students outside the hotel school, and hotel students by permission of the instructor. Elective.
J. Sherry.

Designed to enable students to acquire a basic understanding of law and legal relationships in a business context. Variety of topics aid in making decisions as an executive with managerial responsibilities.

H ADM 387 Business and Hospitality Law

Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students.
Required. J. Sherry.
An integrated, chronological presentation of contract, agency, and tort concepts as they apply to the legal aspects of hospitality management. Appropriate federal, state, and local cases, statutes, and other materials are examined. The overall objective is to recognize, analyze, and evaluate legal issues for the purpose of making and articulating appropriate decisions.

H ADM 485 Employment Discrimination Law for Managers

Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students.
Elective. D. Sherwyn.
Provides students with an understanding of anti-discrimination statutes and a framework for establishing the proper policies and procedures for complying with the law, avoiding liability, and maintaining positive employment relations.

H ADM 487 Real Estate Law

Fall and summer. 3 credits. Recommended: completion of H Adm 387 preferred. Elective. J. Sherry.

Familiarizes students with the nature and ownership of real estate. Describes interests in real estate and how title is transferred. Acquaints students with legal aspects of marketing residential and commercial real estate, including shopping center and commercial leases, real estate syndication, and subdividing real estate for development.

H ADM 681 The Interplay of Law and Ethics in Service Industry Management

Spring. 3 credits. Limited to 50 hotel graduate students; seniors and other graduate students by permission of instructor. Prerequisite: completion of all required professional master's first-year courses, or permission of instructor. Elective. J. Sherry.

Involves students in ethical aspects of traditional law problems confronting service industry managers and executives within the areas of commerce, consumerism, administrative law and practice, regulation of anti-competitive marketing activities, and federal securities regulation. The impact of the corporation on traditional notions of personal social responsibility will be stressed.

OTHER COURSES**H ADM 191 Microeconomics for the Service Industry**

Fall and spring. 3 credits. Limited to 60 hotel school students per lecture, others by permission of instructor. Required. M. Conlin, G. Hay.

Introduces the basic principles of microeconomics and teaches students how they apply to managers of enterprises associated with the hospitality industry. Emphasis on methods of market segmentation in the service industries, analyzing economic incentives involved in franchise arrangements, and the nature of competition in various segments of the hospitality industry.

H ADM 490 Housing and Feeding the Homeless

Spring. Variable to 4 credits. Limited to juniors and seniors. Elective. T. O'Connor.

Explores the public and private sector partnership in addressing the crisis of homelessness. Through lectures, readings, discussions, research, volunteerism, and a field placement practicum, students will explore the economic, social, and political issues of our country's concern with housing and feeding homeless people. Students will study the history of homelessness and the strategies to prevent and alleviate the problem. The components of successful housing programs and food assistance programs will be analyzed.

Students taking the course for four credit hours will, in small groups, work with agencies providing services to homeless persons. They will analyze the agency's mission, identify a specific managerial challenge, and formulate an approach and solution to that challenge. This fieldwork will require approximately eight days during the semester.

Students taking the course for three credit hours will research and write a term paper about some aspect of homelessness and volunteer with a service agency approximately three hours per week during the semester.

H ADM 491 Hotel Ezra Cornell

Fall and spring. Variable credit (maximum, 4). Prerequisite: written permission. Elective. G. Pezzotti.

Elected board members of Hotel Ezra Cornell may receive credit for developing, organizing, and managing the April "hotel-for-a-weekend" event.

H ADM 493 Management Intern Program I—Operations

Fall and spring. 6 credits. Limited to hotel school juniors and seniors with approval of the MIP faculty committee. Prerequisites: Students are expected to have completed H Adm 105, 115, 211, 121, 221, 222, 136, 236, 243, 255, 165, and 174. In addition, completion of the following courses is strongly recommended: H Adm 301, 321, 335, 355, and 365. Additional course work might be required for applicants considering specialized internships. A detailed plan for the completion of all remaining academic requirements must be approved prior to acceptance into the course. Must be taken in conjunction with H Adm 494. S-U grades only, based on six performance evaluations. Elective. R. Chase.

H ADM 494 Management Intern Program II—Academic

Fall and spring. 6 credits. Must be taken in conjunction with H Adm 493. Letter grades only, based on submission of goals and objective statement, four management reports, journals, debriefing, and oral presentation. Elective. R. Chase.

[H ADM 495 Development and Management of Wellness in Business Organizations

Spring. 3 credits. Limited to juniors, seniors, and graduate students. Field trip, \$25-50. Elective. Not offered spring 1997; next offered spring 1998.

Designed to encourage future managers to evaluate the work environment and to enhance opportunities for diverse worker productivity which should increase the corporation's competitive edge.]

H ADM 499 Undergraduate Independent Study

Fall and spring. Variable, to 4 credits. Elective.

Students are afforded an opportunity to pursue independent study projects under the direction of a faculty member. Permission in writing is required prior to course enrollment. Obtain permission form from the Hotel School Student Services Office. Independent study work must be performed in the term for which it is approved, and the usual add/drop policy applies. Retroactive credit for work commenced after an academic term has ended is not allowed.

H ADM 690 Honors Monograph

Year-long course. 4 credits. Limited to professional master's students who: 1) either have a minimum GPA of 3.7 or are in the top 10 percent of the students in the year group in their first-year professional master's courses; 2) have given evidence of being a good writer by meeting all components of the written

communication benchmark; and 3) obtained the approval of a brief topic proposal from the potential adviser. Elective. Faculty.

A special integrative course for students who write well and desire to explore in depth a topic of mutual interest to them and a faculty adviser of their choice. The approval of a second reader is required for completion of the course. Special recognition of students who complete the course will be made at graduation. Applications available in the Graduate Office, Room 172 Statler.

H ADM 692 Industry Challenges and Trends

Fall. 3 credits. Limited to 15 seniors and graduate students. Elective. J. Clark. A seminar approach will use readings and case studies to illustrate current challenges and future trends such as globalization and consolidation in the hospitality industry. Case studies and guest speakers. Presentations and final reports.

H ADM 699 Graduate Independent Research

Fall and spring. Credit to be arranged. Elective.

Student must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Permission in writing is required prior to course enrollment. Obtain permission form from the Hotel School Graduate Office, Room 172, Statler.

H ADM 791 Creating and Managing for Service Excellence

Fall. 3 credits. Professional master's requirement. S. Kimes, L. Renaghan.

Focuses on developing a clear understanding of service quality from multiple perspectives. Assisted by a faculty team from management, marketing, and operations, students will define, diagnose, design, measure, control, and change service quality. Emphasis will be placed on critical decision making and strategic thinking.

H ADM 793 Industry Mentorship Program

Spring. No credits. S-U grades only. Professional master's requirement. M. Redlin.

Interaction with a senior hospitality industry executive. Objectives are to give the student an overview of the operating dynamics of a segment of the industry, to provide a realistic awareness of day-to-day life working as an executive in the industry, and to develop an awareness of the skills, level of integration, and other factors required for success.

H ADM 794 Management Development Component I, II, and III

Year-long course. No credits. S-U grades only. Professional master's requirement. J. Brownell, D. Jameson.

Individualized approach ensuring that all students meet program benchmarks in written communication, presentational speaking, and group process/leadership skills as well as identify and achieve individual goals. Begins with an assessment center weekend. Students then work with their advisers to complete a personal development plan. Assignments in core courses are used to benchmark students' skills and determine progress. Continues throughout the professional master's program.

H ADM 890 M.S. Thesis Research

Fall and spring. Credit to be arranged.

H ADM 990 Ph.D. Thesis Research

Fall and spring. Credit to be arranged.

COLLEGE OF HUMAN ECOLOGY

ADMINISTRATION

Francille M. Firebaugh, dean

Charles McClintock, associate dean

William Lacy, associate dean; director of Cornell Cooperative Extension

Carol L. Anderson, assistant dean; associate director of Cornell Cooperative Extension

Jennifer Gerner, assistant dean; assistant director, Cornell University Agricultural Experiment Station

Brenda Bricker, director, admissions

Mary Rhodes, director, student services college registrar

FACILITIES

The College of Human Ecology anticipates and responds to human needs in the areas of nutrition and health, economic and social well-being, environmental design and technology, and human development through education, basic and applied research, and the extension of knowledge. The college is distinctively characterized by the quality of its research in the natural and social sciences and the design arts, a global perspective in academic programs, a preventive approach to contemporary societal problems, multidisciplinary departments and programs, development of leadership in students and citizens, and a commitment to diverse populations. Faculty and students examine individuals in relation to their family, neighborhood, workplace, and community, seeking a balance between theory and practice that will improve the quality of everyday life.

The college is housed in Martha Van Rensselaer Hall. The Division of Nutritional Sciences, an intercollege division supported jointly by the College of Human Ecology and the College of Agriculture and Life Sciences, has space in Savage Hall and in Martha Van Rensselaer Hall.

The buildings include administrative and faculty offices, classrooms, auditoriums, and lecture halls; wet chemistry and biochemistry laboratories for nutrition, food science, and textile science; experimental food laboratories; design studios and a computer-aided design laboratory; woodworking shops; experimental observation rooms with one-way vision screens and sound-recording equipment; educational television studios; and a printing and reproduction facility. Also included are learning resource centers for career planning, field and international study, a historical costume collection, a human metabolic research unit, a research animal facility, cold rooms, a constant temperature and humidity laboratory, and an early childhood research and care program.

Specialized equipment for teaching and research includes biochemical and chemical instruments for spectroscopy, chromatogra-

phy, radioisotope analysis, electrophoresis, microscopy, and ultracentrifugation; physical testing equipment; and cameras, videotape, and sound recording equipment.

	Degree
Biology and Society	B.S.
Consumer Economics and Housing	B.S.
Design and Environmental Analysis	B.S.
Human Development and Family Studies	B.S.
Human Service Studies	B.S.
Nutritional Sciences	B.S.
Policy Analysis	B.S.
Textiles and Apparel	B.S.
Individual Curriculum	B.S.

DIVISION OF STUDENT SERVICES

Brenda Bricker, director, Office of Admissions

Mary Rhodes, director and college registrar, Office of Student Services

Persons interested in undergraduate study in human ecology should contact the Office of Admissions, 170 Martha Van Rensselaer Hall. Those interested in graduate study should contact the graduate field representative identified among the faculty of each department. Department faculty are listed at the beginning of the course descriptions for each department.

Matriculated students can find assistance with matters of academic credit, graduation requirements, academic advising, minority student advising, study abroad advising, career planning and placement, and personal counseling from the Office of Student Services, N101 Martha Van Rensselaer Hall. International students should contact their student counselor in the Office of Student Services.

The Students

The College of Human Ecology undergraduate enrollment is 1,298 with 56 percent in the upper division. About 375 students are graduated each year, and last year 241 freshmen and 104 transfer students matriculated. One hundred faculty members serve as advisers for undergraduates.

The college's undergraduate admissions committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula. Admission is selective.

Approximately 70 percent of the student body comes from New York State, with the remainder from other parts of the United States and abroad. Twenty-seven percent were identified as members of minority groups in 1995.

Approximately 218 graduate students have members of the college's faculty chairing their special committees. The college awarded 66 master's degrees and 19 doctorates last year.

ACADEMIC PROGRAMS

Majors

Selection of a major begins with selection of career goals. In their freshman and sophomore years, students can explore ways to relate their personal interests and capabilities to their career goals. As a result, they sometimes decide to change their major. The counselor for career development in the Office of Student Services (N101 Martha Van Rensselaer Hall), and resources in the Student Resource Center (N139 MVR) can help students through their career exploration process.

Each department offers a major, and within most departmental majors there are specific options. The college also offers two interdepartmental majors. Selecting a major means choosing one option in one department. Although a student may satisfy the requirements of more than one major option, he or she is officially certified to graduate under only one. (The college urges students who satisfy more than one major or option to make note of this in the credentials they file in the university's Career Center and to seek recommendations from faculty associated with the options completed.) Majors include the following options.

Consumer Economics and Housing (CEH): The department supervises the department major and the policy analysis major.

Design and Environmental Analysis (DEA): Interior design, facility planning and management, human environment relations.

Human Development and Family Studies (HDFS): Does not have separate options. Courses focus on cognitive, social, and personality development; phases of development; and family studies and life course. The department administers an honors program for selected students.

Human Service Studies (HSS): Does not have separate options. Courses focus on three content clusters: human service environments, programs, and processes. A professional internship and senior seminar are required. Students may meet the requirements of an accredited bachelor's degree program in social work.

Nutritional Sciences (NS): The division supervises the department major. (By careful planning, students may also meet the minimum academic requirements of The American Dietetic Association.) The division administers an honors program for selected students.

Textiles and Apparel (TXA): Apparel design, apparel-textile management, fiber science.

Interdepartmental Major in Biology and Society (ID-BS).

Interdepartmental Major in Policy Analysis (ID-PA).

Individual Curriculum: It is possible to develop an individual program of study if none of the above programs fits particular educational and career objectives.

Changing Majors

Because any student's interests and goals may change as new options emerge, the college provides ways for students to change their majors. It is important for a student to discuss a possible change of major with her or his faculty adviser or counselor. If the student decides to make a change, a completed change-of-major form (available from the Office of Student Services, N101 Martha Van Rensselaer Hall) will officially record the change so that a new adviser can be assigned to the student.

Students of Mature Status

The college recognizes that students who interrupted their formal education and are returning to school have needs different from those of younger undergraduates. To facilitate the education of mature students, defined as those twenty-four years old or older at first matriculation, the college has adopted certain procedures specifically for that group. The counselor for mature students in the Office of Student Services (N101 MVR) can provide information of interest to mature students.

Mature students are permitted to enroll for as few as 6 credits without petitioning for permission and are also permitted to extend their residency beyond the normal eight terms.

Mature students are encouraged to contact the director of the Continuing Education Information Service, B20 Day Hall, for information on resources available through that office.

Special Students

Students eligible for special status are those visiting from other institutions and interested in particular programs in the college; those with a bachelor's degree preparing for graduate study or jobs and careers in human ecology-related fields; or those who have interrupted their education and are considering completing degree programs. Students accepted in the non-degree status of special student may enroll for a maximum of two semesters. During the second semester of attendance, a special student must either apply for admission as a transfer student or plan to terminate studies in the college at the end of the semester.

Special students are expected to take a minimum of 12 credits each semester and to take one-half to two-thirds of their work in the state divisions of the university. Work taken while a person is classified as a special student may be counted toward the requirements of the bachelor's degree.

Empire State Students

Occasionally a student who is completing requirements for a degree through the Empire State College Program is interested in taking a human ecology course. This can be done by registering through the Division of Summer

Session, Extramural Study, and Related Programs, B20 Day Hall. All rules of the extramural division apply, and registrations will be accepted only on a space-available basis and with the written approval of the course instructor.

At the time of registration, Empire State College students provide the extramural division with a completed copy of Empire State College's notification of cross-registration form number, SA-22, F-031, to verify enrollment in Empire State College. Such students will be charged 25 percent of the standard extramural tuition per credit.

CONSUMER ECONOMICS AND HOUSING

The behavior of people as consumers and family members and their interactions with private markets and public sectors of the economy are increasingly important as the economy becomes more service-based. One result has been an increasing demand from business and government for trained individuals who understand consumers, families, the markets in which they deal, and how public policies affect the markets and through them consumers and families. The demand has been sufficient to elevate salaries for well-trained individuals.

The consumer economics and housing major provides such training. The major combines economics with statistics, sociology, and family resource management to study how consumer markets work, how firms and consumers behave, the role governments play in consumer protection, how functions shift between households and markets as prices, incomes, social values, and legislation change, and how changes in the family affect consumer markets. Students interact with the faculty and with each other both in the classroom and in field-based learning experiences in the Ithaca area, New York City, Washington, or abroad.

Graduates in consumer economics and housing are prepared for a wide variety of consumer- and family-related positions in business and government. The major also provides an excellent foundation for further studies in economics, law, graduate business, and policy analysis.

The consumer economics and housing major is flexible. Students are assigned a faculty adviser by the advising coordinator unless the student wants a particular adviser. The earlier the decision to major in CEH is made, the greater the freedom to develop a program to meet individual educational or career goals. Transfer students are urged to discuss their plans with a faculty adviser as soon as possible. Students may make an appointment directly with an adviser or with the advising coordinator, Alan Mathias, 120e Martha Van Rensselaer Hall.

DESIGN AND ENVIRONMENTAL ANALYSIS

The Department of Design and Environmental Analysis (DEA) is concerned with planning, designing, and managing interior environments to satisfy human needs. Most people

spend over 90 percent of their lives inside buildings. Those settings have substantial and far-reaching effects on the quality of our lives. The processes for creating and maintaining the built environment face enormous challenges. These include frequent social and organizational change, technological advances, new building methods, and finite resources. The program in DEA is dedicated to preparing professionals who can meet these challenges.

Diverse faculty backgrounds and teaching approaches help students to develop their multidisciplinary problem-solving and creative abilities, aesthetic judgment, and analytical thinking. Excellent laboratory, shop, studio, and computer facilities permit exploration of innovative concepts for the design and management of interior environments. The relationship between people and their physical surroundings is explored through a combination of academic courses, field experience, and applied research. Examples of student class projects and faculty work are frequently on display in the department's gallery. The DEA Resource Center includes books, journals, newsletters, and materials samples for student use.

Options

The department offers undergraduate education in three professional areas: interior design, facility planning and management, and human-environment relations. The interior design option is accredited by the Foundation for Interior Design Education Research (FIDER).

To take full advantage of the course sequences and electives, it is important to select an option as early as possible. This is particularly true in the interior design option. Transfer students in the interior design option may need one or two extra semesters to complete the program.

Option I: Interior Design

The interior design option prepares students for professional careers in the planning and design of interior spaces and associated products. The program emphasizes a problem-solving approach based upon knowledge of buildings and their associated systems, furnishings and interior products, human-environment relations, and design principles. Some students combine this program with one of the other options.

Careers are available in interior design and space planning, interior architecture, facility planning, interior product design, and housing. This program also serves as an excellent preparation for graduate study in interior design, facility management, architecture, and product design.

Option II: Facility Planning and Management

This option is designed to prepare students for professional careers in facility management. The program focuses on the planning, design, and management of facilities for large, complex organizations such as corporations, health-care institutions, research and development laboratories, and universities. Facility planning and management is a basic management function that coordinates and integrates information and expertise from areas such as planning and design, real estate and business administration with human factors, ergonomics, environmental psychol-

ogy, telecommunications, and building operations for the purpose of developing and managing facilities that support individual and organizational effectiveness.

Excellent career opportunities exist in the facility management divisions of private companies, institutions, the health-care industry, and with private consulting firms offering facility management services. The program is also a good preparation for graduate study in business, planning, or one of the design disciplines and for advanced study in facility planning and management.

Option III: Human-Environment Relations

Human-environment relations focuses on the interaction between people and their physical surroundings. This option seeks to expand understanding of how the environment affects human perception, cognition, motivation, performance, health, safety, and social behavior, and to use that knowledge to help architects, planners, interior designers and product designers to plan, design, and manage safe and effective environments. The effect of human capabilities or characteristics such as family structure, life-style, social class, and stage in life cycle on environmental needs and requirements is also a focus of the program. Career opportunities are available in design firms and in urban planning and other public agencies as well as in the facility management and product design division of private companies. Human-environment relations is good preparation for graduate study leading to a Ph.D. degree in the social sciences and a career in academic or other research-oriented settings in either the public or private sector. It can also serve as the basis for graduate study in an environmental planning or design discipline such as architecture, facility planning and management, interior design, landscape architecture, or city and regional planning. Electives in the social sciences and in research methods and statistics are encouraged.

Academic Advising

All DEA majors are matched with a faculty adviser during their first semester by advising coordinator Michael Boyd, in E206 Martha Van Rensselaer Hall.

Consultation with faculty advisers about future goals, departmental requirements, sequences of courses, and electives inside or outside the college to meet special needs helps students develop their programs. Students majoring in interior design, especially, must begin early to plan and collect materials for a portfolio of their work, which is necessary for many positions and for application to graduate schools. Faculty advisers can make recommendations on what to include. Students are free to change advisers. Although advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college.

Ownership and Exhibition of Student Work

All design work done in studios as part of an academic program is the property of the department until it has been released by the instructor. The department is not responsible for loss or theft of student work.

HUMAN DEVELOPMENT AND FAMILY STUDIES

The programs of the Department of Human Development and Family Studies (HDFS) are concerned with how people develop throughout the life course. Of equal interest is the family as a context for individual development and as a part of the larger structure of society. An ecological perspective—the person in interaction with complex biological, situational, and environmental conditions of everyday life—is featured in many departmental courses.

Major social science disciplines concerned with the development of individuals and with the structure and function of families are represented among faculty members with backgrounds in psychology, sociology, history, and education. The department's programs of instruction, extension, and research provide diverse opportunities for students to prepare for career development or to acquire the bases for graduate study. Many of the department's majors are interested in clinical psychology, counseling, law, medicine, special education, or university teaching and research that require some graduate study. Others may go directly into employment in business or industry or take bachelor's-level positions such as youth counselors, day-care workers, personnel assistants, research technicians, and social program assistants.

Academic Advising

Every HDFS major is assigned a faculty adviser in the department, and advising conferences are required at least twice a year. An adviser helps plan the course work and consults with the student about career options. The adviser can also help students find special opportunities for individual study or for experience outside the classroom. Although advisers must distribute pin numbers, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college. Students who need an adviser or who want to change advisers for any reason should check with the undergraduate advising coordinator, Joan Brumberg, or the department office, in NG14 Martha Van Rensselaer Hall.

Curriculum

HDFS majors usually combine a broad liberal education with a more specialized focus on either a problem of human concern or a substantive area of concentration. Areas of specialization available within HDFS include infant, child, adolescent, and adult development; abnormal development; family studies; and social-personality and cognitive development. Some students combine an HDFS major with premedical or prelaw training or with specialized work in an area outside the department, such as communication arts, nutrition, business, or government.

During their first two years, students are expected to combine a variety of liberal arts courses with HDFS core courses HDFS 115 (Human Development); HDFS 150 (Families and the Life Course); and intermediate courses in phases of development, cognition, or social-personality. This encourages diversity yet ensures a common base for upper-level courses in the major. Courses within the

department vary from lectures and discussions to research and independent study.

All students are encouraged to participate in an experiential learning course in their particular area of interest. The course may focus on a naturalistic or laboratory setting (e.g., nursery school, youth detention center, retirement home) or on a research setting (e.g., interviewing, administering tests, observing behavior).

An HDFS major also takes a number of upper-level departmental courses in particular areas as described in the Student Guide. Additional information is available in the HDFS Office of Undergraduate Education, NG14 Martha Van Rensselaer Hall.

Math Requirement

HDFS majors are required to fulfill a math requirement by passing Education 115 or demonstrating equivalent competency by scoring 650 or higher on the math SAT examination.

Teaching Certification Option

The cooperative Cornell HDFS-State University College at Cortland education program is designed to meet New York State certification requirements for teaching grades N-6 while simultaneously earning the Cornell bachelor's degree in HDFS. The program requires that the student spend three years at Cornell and the senior year and part of two summers registered in absentia at SUC Cortland. Students keep their Ithaca housing, since Cortland is just 18 miles away and the one-semester teaching internship is based in Ithaca.

This highly selective undergraduate program offers an alternative to the option of seeking a master's degree in education after the undergraduate studies at Cornell have been completed. Students interested in the program should discuss the merits of each option with the Coordinator of Undergraduate Education in NG09 MVR.

Course work at Cornell must be carefully planned. Elective options will be somewhat limited because it will be necessary to consider the twenty-seven Cortland credits plus three education courses at Cornell as electives. The teaching certification program is not an option for external transfers entering as late as upper sophomore or junior year. More information is available in the HDFS Office, NG14 Martha Van Rensselaer Hall.

Honors Program

The honors program leading to a Bachelor of Science degree with honors in HDFS is designed to provide in-depth research experience for students interested in graduate school and to challenge students who enjoy research. Interested students should consult the coordinator of the honors program during their sophomore year.

A grade-point average of 3.3 is required for entry into the program. Honors students must take an approved course in research design, preferably in the sophomore or junior year.

Students spend part of their junior and senior year working on a thesis under faculty supervision, completing the project before April 15 of the senior year when the student's oral examination is held. More information is available in the department's Office of Undergraduate Education, NG14 Martha Van Rensselaer Hall.

Language Competency

The HDFS faculty believe that competence in a foreign language is an essential liberal arts goal for the educated HDFS student. Such exposure opens another culture for exploration at both the instrumental and expressive levels, helps students understand language itself, and encourages knowledge of language as a fundamental intellectual tool and as an essential communicative asset with potential applied benefits. While this is not a graduation requirement, it is strongly recommended that HDFS majors develop competency in a second language.

The following departments teach foreign languages or literature or both in the College of Art and Sciences: Africana Studies and Research Center, Asian Studies, Classics, German Literature, Modern Languages and Linguistics, Near Eastern Studies, Romance Studies, and Russian Literature.

Work toward foreign language competency should be undertaken in the freshman and sophomore years. Please note that high school or transferred language courses can be used for advanced standing credit, even if the student does not want to do any further language work at Cornell.

Speakers of languages other than English may be awarded credit for their bilingual ability. Their English achievement is measured by the Test of English as a Foreign Language (TOEFL), a requirement for matriculation. Their performance in one other language learned outside the academic environment is measured by examination, and evidence of abilities in reading and writing, as well as speaking, is required. A maximum of 6 advanced placement credits are granted to students who demonstrate PROFICIENCY equivalent to course work at the 200 level or above at Cornell. Students may not earn credit both for PROFICIENCY in their native language and for studying English as a second language at Cornell.

Language Course Placement and Credit

Students who have had two or more years of high school study in a language may not register in any course in that language without being placed by examination. Nor may transfer students register without examination, even though they may have been given credit for language work elsewhere.

The type of examination depends on the language course and the level of achievement:

- 1) French, German, Italian, Russian, and Spanish courses: the standardized College Placement Test (CPT). Entering students who have not taken the CPT in high school and who want to continue their language study must take the CPT at Cornell during orientation week. Students may retake this examination at Cornell if they have studied the language a year or more since last taking the test. To do this, students register with the Academic and Career Counseling services, 203 Barnes Hall, and pay a fee.
- 2) Latin (all courses except 105 and 107): departmental examination.
- 3) Greek (all courses except 101, 104, and 111): departmental examination.
- 4) Arabic: departmental examination.
- 5) Hebrew: departmental examination.

- 6) Other languages: special examinations: see the professor in charge.
- 7) High achievement (students with a CPT score of 650 or better in French, German, Hebrew, Italian, Russian, and Spanish): the Cornell Advanced Standing Examination (CASE).

An entering or continuing student with high achievement scores should take the Cornell Advanced Standing Examination (CASE).

See section on College of Arts and Sciences, Language Requirement, for further information.

HUMAN SERVICE STUDIES

Faculty in the Department of Human Service Studies (HSS) prepare students for a variety of careers in programs that serve individuals, families, and the community. HSS graduates work in schools, social services, Cornell Cooperative Extension, health and mental health programs, and community development agencies.

They are employed in such positions as counselors, school teachers, social workers, community educators, planners, and researchers. Many HSS graduates pursue graduate study in law, education, medicine, social work, health, and a variety of social sciences. HSS majors come from diverse backgrounds, but they share a common goal of wanting to serve the needs of others.

HSS is unique in that it integrates a broad spectrum of courses offered by several departments and colleges and focuses them for professional practice in the human services. All HSS students take courses that provide a knowledge base in three content clusters:

1. Human service environments—course choices provide students with knowledge about the working context within which the human service provider functions, including a base in social psychology, group and organizational behavior, social system perspectives, power and leadership.
2. Human service programs—courses for this requirement are selected to provide the student an introduction to historical and current program models, barriers to service delivery, developments in health, education and social welfare—all in the context of both the client and the work done by the human service professional.
3. Human service processes—courses for this requirement are designed to provide students with methods to work effectively in human service programs and environments. Courses include planning and development content, program delivery modes, decision-making processes, basic social planning methods, and program evaluation.

All students take a professional internship and an integrative senior seminar. Regardless of their specific career goals, students acquire a broad understanding of human services and the ways they can collaborate to improve the human condition. In addition, students specialize in an area of concentration such as health, education, social welfare, policy, planning, or evaluation.

Academic Advising

It is important for a student who is interested in majoring in Human Service Studies to declare that major as early as possible. Once that is done, students work with their assigned faculty advisers to plan course work and related educational activities. Students are free to change advisers. Although faculty advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of courses and make sure that the program meets graduation requirements of the major and the college. Students may make an appointment with an adviser or with the undergraduate advising coordinator, Don Tobias, in 183 Martha Van Rensselaer Hall.

Social Work Program

The undergraduate social work major at Cornell has as its principal educational objective the preparation of students for beginning social work practice. In addition, the program prepares students for graduate education in social work. The program also contributes to the enrichment of a college education by helping students understand social welfare needs, services, and issues.

Students wishing to enter the Cornell Social Work Program must apply to the program one semester before they want to be admitted. The first step is to make an appointment with the director of the Social Work Program. Admission criteria are 1) GPA of 2.3 or higher; 2) strong written and oral communication skills; and 3) completion of the following courses with a passing grade: two semesters of English writing seminars

HDFS 115 or an equivalent Human Development course

A beginning psychology course

A beginning sociology course

Two semesters of biology

A basic math, statistics, or computer science course

A basic philosophy course

The social work program is accredited by the Council on Social Work Education. Because it is an accredited program, students who complete all social work requirements are eligible to apply for beginning-level employment as professional social workers and to apply for advanced standing in graduate schools of social work.

The social work program is accredited by the Council on Social Work Education. Because it is an accredited program, students who complete all requirements are eligible to apply for beginning-level employment as professional social workers and to apply for advanced standing in a graduate school of social work.

TEXTILES AND APPAREL

The Department of Textiles and Apparel (TXA) focuses on the use of textiles and fibrous materials for apparel, durable and nondurable household goods, composites, geotechnical, and biomedical applications. Programs in the department, in keeping with the overall mission of the college, emphasize the use of materials to meet human needs. The curriculum includes the application of

design principles, physical and materials science, economics and marketing, government policy/regulation, management of products and their delivery, and technological developments.

Practical problem-solving skills are developed in the department's laboratories and studios. Academic course work is further enhanced by field and international experiences. Gallery space provides the setting to display design work. In addition, the Cornell University Costume Collection, housed in the department, provides a valuable resource; items from the collection are made available to students for classroom and special-study use.

Academic Advising

All TXA majors are matched with a faculty adviser by the advising coordinator, Peter Schwartz (201 Martha Van Rensselaer Hall). Students are strongly urged to discuss their goals, course selection and sequence, electives, and career plans with their faculty adviser. Students in apparel design must begin early to work with their advisers to develop a professional portfolio of their work. Students are free to change advisers; changes must be recorded with the advising coordinator. Although advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college.

Ownership and Exhibition of Student Work

All apparel design work done as part of the academic program is the property of the department until it has been released by the instructor. Certain exceptional work may be retained by the department to exhibit for academic purposes. The department is not responsible for loss or theft of student work.

Course Fees

No grade will be given in a course unless the course fee has been paid by the last week of classes.

Key Policy for Apparel Design Studios

To allow design students access to studios for out-of-class work at any hour in which Van Rensselaer Hall is open, and to provide security for the studios, the department has instituted a key policy. Each student in TXA 040, 145, 264, 367, 375, 425, 446, and 465 who submits a security deposit of \$50 will be given a key to the studio in which his or her class is held. In the event that *any* key is lost, the studio will be rekeyed, and the cost will come from the security deposit of the student who lost the key. At the end of each semester, the studio will be assessed for missing and damaged equipment. The total amount assessed will be deducted from the security deposits of all students assigned to that studio. If all keys are returned and no damage or theft is reported, the security deposits will be returned at the end of the semester. Students who do not wish to work in the studio outside of class hours may elect not to have a key and therefore will not be required to submit a security deposit. Under no circumstances will these students be admitted to the studio outside of class hours.

Options

Students may select options in apparel design, apparel-textile management, or fiber science. The curriculum is based on manipulation of form, color, and the physical characteristics and structures of fabric to solve functional and aesthetic apparel problems; the application of economic and marketing principles to consumer and industry problems in the textile-apparel sector; and the study of chemical, physical, and engineering properties of fibrous structures and polymers. Depending on previous course work, transfer students may need one or two extra semesters to fulfill the requirements of the major.

Option I: Apparel Design

The study of apparel design includes both functional and aesthetic considerations in the design of body coverings. The program emphasizes a problem-solving approach that enables the student to bring a background in apparel, textiles, and human factors to the design process.

Option II: Apparel-Textile Management

Apparel and textile management combines the fields of apparel and textiles with those of economics, business management, and organizational policy. Students combine theory with case studies to find solutions to everyday problems. Course work is drawn from many interrelated disciplines, including textiles, apparel, economics, business management, and communication, as well as practical field experiences. This provides students with the experience of working with professionals from a wide variety of disciplines. Students often combine this option with either Option I (Apparel Design) or III (Fiber Science).

Option III: Fiber Science

Applications for textile structures include advanced engineering composites, protective clothing for industrial and military environments, and biomedical materials, as well as the more traditional applications found in apparel and home furnishings. The fiber science option provides a strong base in mathematics and the physical sciences combined with supporting courses in engineering, consumer economics, and the social sciences.

Career Opportunities

Graduates of programs in the Department of Textiles and Apparel have found challenging employment within the textile and apparel sector, in independent and government-sponsored research, and in community organizations. Recent graduates are working in the fields of new product development, design, management, engineering, communications, and marketing. In addition, the program prepares students for graduate or professional study in fiber and polymer science, textile marketing, apparel design, textiles, or business and management.

INTERDEPARTMENTAL MAJOR IN BIOLOGY AND SOCIETY

Biology and society is a multidisciplinary program for students with special interests in such problems as genetic engineering,

environmental quality, food and population, the right to medical care, and the relation between biology, society, and ethics and/or public policy, as well as for students who plan postgraduate study in management, health, medicine, law, or other related fields.

Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises, by including introductory courses in the fields of biochemistry, chemistry, mathematics, genetics, ecology, ethics, and history. In addition, majors are required to take core courses in biology and society, a set of electives, and a special senior seminar.

Course work in the College of Human Ecology must be taken in two of the following three concentrations: human development and the environment, health, or social policy and human services. The other basic requirements of the college must also be met. Programs incorporating those required courses are designed in consultation with a faculty adviser to accommodate each student's individual goals and interests. For further information on the major, including courses of related interest, specific course requirements, and application procedures, see the Human Ecology Student Guide, available in the Office of Student Services, N101 Martha Van Rensselaer Hall. Academic advising is coordinated by S. Kay Obendorf, 208 Martha Van Rensselaer Hall.

INTERDEPARTMENTAL MAJOR IN POLICY ANALYSIS

As our economy has become more complex, so too has the role of the public sector in our society. An understanding of governmental processes and of how public policies affect the several segments of society has become more important. Individuals with the ability to evaluate government programs critically and trace their impacts quantitatively to consumers, families, business, and industry are in demand at all levels of government and business. Supervised by the Department of Consumer Economics and Housing, the policy analysis major uses the resources of the college and the university to trace and estimate government's influence in the economy.

In the policy analysis major, the student gains a basic understanding of the role of government in the economy and the political environment in which policy is made. Students concentrate on learning the economic, cost/benefit, and statistical skills necessary to evaluate the performance of government programs and policies—consumer policy, housing policy, welfare policy, environmental policy, foreign policy, for example. Because experience in legislative, regulatory, and public administration activities is helpful in providing the context for policy analysis, involvement in Field and International Study, Cornell-in-Washington, and Cornell Abroad is encouraged. The specific requirements for policy analysis are listed under the interdepartmental majors.

Graduates in policy analysis are attractive to business and industry as well as to government because of their analytical skills in economics and statistics, and their knowledge

of political processes. Students also use the major for further work in policy studies, law, and business administration.

The policy analysis major is flexible and allows individual program planning. The faculty adviser assigned by the undergraduate advising coordinator can help develop a program to meet individual educational and career goals. This is particularly important in constructing the appropriate policy concentrations. Transfer students are urged to contact their faculty adviser as soon as possible. An appointment may be made directly to talk either with an adviser or with the advising coordinator, Jennifer Gerner, 132 Martha Van Rensselaer Hall.

INDIVIDUAL CURRICULUM

A student who has educational and professional objectives that cannot be met satisfactorily within the framework of existing majors in the College of Human Ecology may petition to develop an individual curriculum. To be approved, the curriculum must be within the focus of the college and be interdisciplinary in design, include at least 40 credits in human ecology courses, and not exceed the normal number of credits allowed in the endowed divisions. A student develops an individual curriculum in consultation with faculty advisers from at least two subject-matter fields and the program coordinator.

Such a program of study should encompass a substantial part of the student's undergraduate education and must include at least three semesters. For this reason, a request to follow an individual curriculum should be made as early as possible and must be made before the second semester of the junior year.

If an individual curriculum seems advisable, Patti Papapietro, the individual curriculum coordinator in the Office of Student Services, N101 MVR, will provide direction in formally developing a program of study. Although the individual curriculum coordinator must sign the course enrollment schedule during course enrollment each term, it is a student's responsibility to follow the curriculum as planned or to have any necessary revision approved in writing by his or her advisers and the program coordinator in advance of the program change.

SPECIAL OPPORTUNITIES

Several programs allow students to receive academic credit for fieldwork and internship experience, study abroad, study in absentia, college-wide certificate programs, and joint programs with other schools and colleges at Cornell. Students may petition the college registrar to have concentrations that are formally recognized elsewhere within the university noted on their transcripts, when accompanied by appropriate documentation from the program.

International Study

Approximately 16 percent of the class of 1996 in Human Ecology studied abroad. Study abroad allows students to focus on international issues and intercultural understanding through sponsored programs of study abroad for which academic credit is available. Course

work in a foreign institution will, be planned to increase knowledge of the people and institutions of the country concerned; fieldwork may provide guided experience in family, community, or agency situations of the country concerned and in an area related to individual student interest in human ecology.

Students should begin planning for their study abroad experience in their freshman or sophomore year. Opportunities for study abroad are available for human ecology students in several ways: through Cornell Abroad, through other U.S. college-sponsored programs abroad, and through direct enrollment in a foreign university. In all cases, students remain registered at Cornell during the overseas study, and their study abroad will be credited as part of their Cornell degree program. Application packets for study abroad can be obtained from and should be submitted to the study abroad adviser in the Office of Student Services, N101 Martha Van Rensselaer Hall. The Student Resource Center, N139 Martha Van Rensselaer Hall, has catalogs and other information about study abroad opportunities. The study abroad adviser is Mary Rhodes, N101 Martha Van Rensselaer Hall.

Field Study, Internships, and Research Opportunities

Field study, internships, and research opportunities allow students to receive academic credit for work that extends and complements their course of study. Through structured experiences facilitated by faculty members, students learn to test, deepen, and apply what they've learned in the classroom.

Students strengthen their ability to integrate theory and practice and learn to reflect critically on their experience while broadening their understanding of service and professional life and enhancing their understanding of diversity and complex societal issues. In existing courses and through individual and group projects, students develop an intellectual framework for understanding and solving problems in a variety of challenging settings.

Placement opportunities are available in business, health, law, medicine, environmental analysis, education, nutrition, government, laboratories, textiles and apparel, design, social service and community settings. Students are encouraged to plan early for these opportunities.

To learn more, students should consult with their faculty adviser, professor, or undergraduate advising coordinator. They can also visit the Student Resource Center in N-139 MVR and explore listings of opportunities on the "Human Ecology Field Study Computer Program" available on Bear Access. New initiatives are encouraged. For further information, contact Debra Dyason, Field Study Coordinator, N-137 MVR.

Cornell in New York City The Urban Semester Program in Multicultural Dynamics in Urban Affairs

Cornell in New York City provides students with many study options that focus on multicultural dynamics in urban affairs. Experiential learning practices inform all courses of study. The options available include internships, individual and group community service projects, research,

independent study, collaborative learning, and mentorships. Students learn by doing and through reflection and action. Program options are possible throughout the academic year, during winter break, and in the summer.

Courses of study enable students to seek out the relationship between theory and practice, apply theory to practice, acquire professional practice skills, and learn about the impact of diversity on New York City. By applying ethnographic research techniques and methods, students learn to think conceptually, reflect on their actions, and learn how to be agents of change.

Several majors in the college require internships or encourage field study. Check with the advising coordinator of each major for more information. The Student Resource Center in N-139 MVR and the Field Study Coordinator in N-137 MVR can help you find internships and provide more information on department opportunities and enrolling in Cornell in New York City.

The Urban Semester Program in Multicultural Dynamics in Urban Affairs

Fall and spring semesters: HE 408

During the fall and spring semesters, students focus on multicultural issues in urban affairs. Each term, course work in two separate seminars investigates multicultural dynamics in professional, community, or public policy settings. Students study the possibilities and barriers that a multicultural society presents and their relationship to professional practice, culture, and identity.

Students intern in placements of their own choosing and use internship sites to study multicultural issues and dynamics. A list of recent placements follows. Students may choose to participate in Dr. Sam Beck's South Bronx-Banana Kelly/Cornell University project in Community Building instead of an internship placement. Other options also are available.

The Winter Intersession in Community Service and Mutual Learning: The South Bronx-Banana Kelly/Cornell University Project in Community Building

Winter intersession: HE 402

Over the course of two intensive weeks, students participate in an ongoing community service project in the South Bronx. In carrying out community service, students participate in a research project with the director of the Cornell in New York City program. In the 1995 intersession, six students mentored 12 children in an after-school program by documenting the community with photographs and stories. A photography exhibit was produced that is presently circulating. Other projects with Banana Kelly are available to students throughout the year. Please contact Dr. Sam Beck in the Cornell in New York City program office.

Fieldwork in Diversity and Professional Practice

Summer session: HE 406

Over the course of an eight-week summer session, students carry out research projects on the multicultural dynamics of professional practice by interning full time in settings of

their choice. Students meet weekly for three hours and discuss professional practice with New York City practitioners. A reflective seminar, led by Dr. Sam Beck, director of the Cornell in New York City program, follows each discussion.

Gerontology Concentration

Gerontology Certificate Program

This program develops students' understanding of and competence in dealing with the processes and issues of aging. Study in gerontology provides practical experience and preparation for professional work. Students draw on resources of several departments and colleges at Cornell and Ithaca College to shape a curriculum suited to their professional goals and interests. Contact the Gerontology Coordinator, Life Course Institute, 259 Martha Van Rensselaer Hall.

Teacher Certification in Home Economics

Students can combine any major in the college with additional course work that leads to home economics teacher certification (kindergarten through twelfth grade) in New York State and a number of other states. Interested students should contact the Office of Student Services in N101 Martha Van Rensselaer Hall.

University Programs

Africana Studies and Research Center

Courses taken in the Africana Studies and Research Center (ASRC) may be used to meet some of the distribution requirements of the college. Up to two courses or 8 credits of such courses may be applied toward the 12 additional credits in natural and social sciences (section I-C of the graduation requirements) or toward the 9 additional credits in communication, analysis, and the humanities (section II-B). This allowance is in addition to the freshman writing seminar credits that may be taken in ASRC. Other courses taken in the center count as endowed division electives (area IV).

Double-Registration Programs

Johnson Graduate School of Management

A limited number of highly qualified students from Cornell undergraduate divisions, including human ecology, may be accepted by the Johnson Graduate School of Management after the junior year. Students need the approval of the admissions office and the registrar in the College of Human Ecology. Accepted students should be aware that if the management course work taken in the senior year is in excess of the 21 additional credits allowed in the Cornell endowed divisions, they will be charged for the additional credits on a per-credit basis. Students entering this program must also complete requirements for the degree and major in Human Ecology.

Law School

A small number of highly qualified applicants may be admitted to the Cornell Law School after only three years of undergraduate education. The requirements for admission under these circumstances are more stringent than for acceptance after four years of undergraduate study. Applicants must present

outstanding qualifications and strong professional motivation. The junior-year applicant follows the ordinary application procedures for Cornell Law School admission. Interested students should contact the Law School director of admissions to discuss the extraordinary admissions criteria. Because students accepted to this program will spend their senior year in the Cornell Law School, they need to plan ahead to ensure that distribution requirements for the B.S. degree from the College of Human Ecology will be met. Successful applicants need the approval of the college registrar.

Cornell Medical College

A limited number of highly qualified students from three Cornell divisions, including the College of Human Ecology, may be accepted by the Cornell Medical College after the junior year. To be considered for this program, the student must have completed 105 credits toward graduation by the end of the junior year. Students also need to plan ahead to ensure that distribution requirements for the bachelor of science degree will be met. Accepted students receive 15 credits toward the B.S. degree from their first year of study at the College of Medicine. Interested students should contact the Health Careers Program office in 103 Barnes Hall.

Off-Campus Programs

New York State Assembly Internships

A limited number of session internships with the New York State Assembly are available in spring semester. Intern applicants must be sophomores or higher and enrolled in New York State colleges or universities. Human ecology students apply to the program through the student's major department. The New York State Assembly also sponsors a summer internship. Further information about internship programs may be obtained through the Office of Student Services, N101 Martha Van Rensselaer Hall.

Cornell-in-Washington

For information on Cornell-in-Washington, see the section, Interdisciplinary Centers, Programs, and Studies, in the front of the catalog.

Ithaca College

Full-time undergraduate students at Cornell may petition to enroll in courses at Ithaca College. Students pay regular tuition to Cornell and only special fees to Ithaca College, if any are charged. Students are allowed to register for one course a term and may take no more than 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods and practice-teaching courses at Ithaca College.

Cornell students are eligible to register only in Ithaca College courses that are relevant to their program and that do not duplicate Cornell courses. Acceptance of Cornell students into Ithaca College courses is on a space-available basis. Participation in this program is not guaranteed, and Ithaca College has the right to accept or reject students for any reason it deems appropriate. The program is available only during the fall and spring semesters.

For further information students should contact the college registrar, N101 Martha Van Rensselaer Hall.

Wells College

Full-time undergraduate students at Cornell may petition to enroll in courses at Wells College. Students pay regular tuition to Cornell and only special fees to Wells College, if any are charged. Students are allowed to register for one course a term and may take no more than 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods and practice-teaching courses at Wells College.

Cornell students are eligible to register only in Wells College courses that are relevant to their program and that do not duplicate Cornell courses. Acceptance of Cornell students into Wells College courses is on a space-available basis. Participation in this program is not guaranteed, and Wells College has the right to accept or reject students for any reason it deems appropriate. The program is available only during the fall and spring semesters.

For further information students should contact the college registrar, N101 Martha Van Rensselaer Hall.

PLANNING A PROGRAM OF STUDY

Academic Advising

Students who choose to major in a particular department are assigned to a faculty adviser by that department's advising coordinator. The advising coordinator can help match a student's needs with the special interests of a faculty member. Students may change advisers as their own interests change and should see the advising coordinator to discuss such a change. Faculty advisers, and counselors in the Office of Student Services (N101 Martha Van Rensselaer Hall), are available to discuss course requirements and sequences, and electives inside or outside the college, as well as future goals and career opportunities. Although advisers must sign the course enrollment schedule card during course enrollment each term, it is the student's responsibility to make sure that her or his program meets graduation requirements for the major and the college. Advising coordinators in each department are available to answer questions about the advising system and the undergraduate major. Students who are exploring alternative majors should work closely with college counselors who are available for planning and referral to department resource faculty.

Completing Graduation Requirements

A summary of record is kept for each student in the Office of Student Services, N101 Martha Van Rensselaer Hall. At fall registration each continuing student receives a copy showing which major and degree requirements have already been met. It is important to check this summary and to bring any questions to the attention of the faculty advisor and the staff members in the Office of Student Services. Although a student may complete the requirements of more than one major, he or she is officially certified to graduate under only one.

Electives

Students have individual objectives in choosing courses beyond the minimum requirements of the major. The university is diverse; the departments, centers, and special programs numerous; the fields of study almost unlimited. Counselors and faculty advisers are available to discuss which courses may interest students and round out their educations.

Students should consult the index of this Announcement for information on where different subjects are taught in the university. Some subjects are taught in more than one division of the university.

Foreign Language Study and Placement

Students who studied a foreign language before coming to Cornell and who want to continue must take either the College Entrance Examination Board (CEEB) achievement test in that language or a departmental language placement test. The latter is given during orientation week in September and again in December, January, and May. Students in human ecology who plan to work with non-English-speaking people in this country or abroad often find it necessary to be proficient in another language. Students who wish to study abroad may find that many study-abroad programs in non-English-speaking countries require the equivalent of two years of college-level language study. For more detailed information, see the section "Advanced Placement of Freshmen."

REQUIREMENTS FOR THE DEGREE OF BACHELOR OF SCIENCE

General

Students applying as undergraduates who do not have the required academic unit in biology, chemistry, or physics are required to show evidence of having met this deficiency before matriculation in the college.

Freshmen and sophomores are required to enroll in at least one human ecology course per semester.

To graduate, students need to

- 1) meet college credit and distribution requirements,
- 2) complete requirements for a major,
- 3) achieve a cumulative average of 1.7 (C-) or better,
- 4) fulfill residency requirements, and
- 5) complete two terms of physical education within the first two semesters.

College Requirements

These are the general areas of study and specific courses and credits required of every student in the college. The major you choose may require specific courses listed below or may leave you free to choose among certain courses listed there.

I. Natural and Social Sciences (24 credits)

- A. *Natural sciences* (6 credits) selected from Biological Sciences 101-103, 102-104, 105-106, 109-110; Chemistry 103-104, 207-208, 215-216; and Physics

101-102, 112, 201 or 202, 207-208.

Biological sciences courses must be taken sequentially.

- B. *Social sciences* (6 credits) selected from economics (including CEH 110, 111 but excluding Agricultural Economics 221 and 310); psychology (including Education 110, 311, 317; DEA 150; HDFS 115, 216, 217, 218, 219); sociology (including rural sociology, CEH 148, and HDFS 150). *Do not take both Economics 101 and CEH 110; Economics 102 and CEH 111; Psychology 275 and HDFS 360; Rural Sociology 101 and Sociology 101; or Sociology 243 and HDFS 150; they are equivalent courses.*
- C. *Additional credits* (12 credits) selected from any subjects listed above or from courses in anthropology (except archaeology); Astronomy 101 or 102; biochemistry; microbiology; genetics and development; Geological Sciences 101; and government.

II. Communication, Analysis, and the Humanities (15 credits)

- A. *Freshman writing seminars* (6 credits) selected from courses listed in the freshman writing seminar brochure.
- B. *Additional credits* (9 credits) selected from art; communication; comparative literature; computer science; drawing; English; ancient or modern foreign languages; history; history of art; history of architecture; mathematics; music; Natural Resources 407; philosophy; statistics (students *should not take both* Industrial and Labor Relations 210 and Agricultural Economics 310, since the courses are substantially the same); theatre arts; DEA 101, 111, or 115; HSS 292; TXA 117, 125, 375; and selected ASRC courses (list available in the Office of Student Services, N101 Martha Van Rensselaer Hall).

III. Human Ecology (40 credits)

- A. *Requirements for the major* (the number of credits required varies by major and option).
- B. *Other credits in Human Ecology* (15)
The following specific qualifications apply:
 - No credit for HE 00 courses, HE 100, HE 101, or any 403 course can be counted to fulfill this requirement.
 - A maximum of three credits of special studies credits (400, 401, and 402) or of any internship credit can be used.
 - A maximum of six credits of HE 408 can be used.

Transfer students (external and internal) can meet this requirement by completing 15 credit hours comprised of transfer credit and credit earned in the college, or comprised of credit hours all taken in the college and prorated according to the student's status at matriculation. (Refer to "Policies Related to College Requirements" in the Human Ecology Student Guide for details of this policy.)

All students, including internal and external transfer students, must complete a total of 40 credits in Human Ecology.

IV. Additional Credits (41 credits)

- A. *Requirements for the major* (number of credits varies from 0 to 15 credits).
- B. *Electives* (number of credits varies from 26 to 41 credits).

Credit requirements in this section are met through courses in the *state divisions of Cornell*:

- College of Human Ecology (in addition to courses in sections I, II, and III)
- College of Agriculture and Life Sciences
- School of Industrial and Labor Relations
- College of Veterinary Medicine

and through courses in the *endowed divisions of Cornell*:

- Africana Studies and Research Center
- College of Architecture, Art, and Planning
- College of Arts and Sciences
- College of Engineering
- School of Hotel Administration
- Johnson Graduate School of Management

Courses in the endowed divisions in this section may not exceed a total of 21 credits. Students are not required to take any elective credit in the endowed units.

V. Physical Education (2 credits)

Students who have successfully fulfilled these requirements should have completed at least two terms of physical education in their freshman year.

Related Policies

College course requirement. Freshmen and sophomores are required to enroll in at least one course in the College of Human Ecology each semester. Students who fail to comply with this requirement will be reviewed by the Committee on Academic Status for appropriate action.

Section II. Students who score 4 or 5 on the Princeton AP Exam are awarded 3 credits in English. Students who score 5 on the Princeton Exam are exempt from one freshman writing seminar in addition to the 3 English credits awarded.

In sections I, II, and III, the required credits listed are the minimums; credits taken in excess of those minimums (section I, 24 credits; section II, 15 credits and section III, 40 credits) count toward electives (section IV, 41 credits).

In sections I and II, courses specified by the major to meet the requirements in the sections may either be used as meeting the credit requirements in those sections or be applied toward the additional credits in section IV.

Section IV. *There is no limit to the number of credits that may be taken in the state divisions of Cornell,* and therefore students may choose to take additional state credits and graduate with more than 120 credits.

Credits in the endowed divisions in this section may not exceed 21. Any course taken in an endowed division for which a grade of F or U is received will be counted as *part of* the 21 endowed credits allowed. Students are not required to take elective credit in the endowed units.

Elective credits earned in Cornell's endowed divisions during summer session, in absentia credits, and transfer credits are counted as credits earned in the state divisions and therefore do not count as part of the 21 credits allowed in the endowed divisions in meeting the requirements of this section.

Not more than 21 credits in section IV may be taken in the endowed divisions of the university except under *both* of the following conditions:

- 1) The students must have senior status (must be in the final two semesters prior to graduation);
- 2) Payment must be made for each credit taken in excess of the 21 allowed, *whether or not the courses are passed*. For the fee per credit charge, students should call the Office of the Bursar.

Related Policies for Transfer Students

Section I-A. Transfers who enter human ecology programs in consumer economics and housing, design and environmental analysis, human service studies (with the exception of the social work program), and policy analysis can satisfy the College of Human Ecology's natural science graduation requirements with any course(s) taken to meet a former college's natural science requirements as long as the course(s) transferred dealt with matter, energy, and their interrelationships and transformations. Courses in areas such as psychology and mathematics are not included, even though courses in these areas may have been taken to meet a former institution's natural science requirement.

Section II-A. Transfer students should have taken at least 6 credits in courses in English composition or in courses requiring substantial writing and offering instruction in writing equivalent to that offered in the freshmen writing seminar program at Cornell. Students who have not fulfilled this requirement before transferring must fulfill it after matriculation.

Section III-B. External and internal transfer students can meet the requirement for course work outside the major in the College of Human Ecology by completion of either of the following:

- 1) 15 credits of work, outside their department, comprised of transfer credit and credit earned in the college,
or
- 2) credits all taken in this college (no transfer credit is allowed to meet this requirement), on the basis of the status of the student's matriculation and prorated as follows:

*Cornell
Human Ecology
Credits to Satisfy
Work outside
the Major*

Status at Matriculation

Freshman (1-25 transfer credits)	15
Sophomore (26-55 transfer credits)	12
Junior (56-85 transfer credits)	9
Senior (86-120 transfer credits)	9

Note that transfer students are still responsible for completing a total of 40 human ecology credits under section III.

Section IV. Transferred credits for courses applied toward electives do not reduce the 21 Cornell endowed credits that students are allowed. Courses with a passing grade below C- will not transfer to meet human ecology degree requirements.

Section V. Transfer students who have had the equivalent of two semesters of college (and therefore enter as sophomores) are not required to take physical education at Cornell, regardless of whether they took physical education at their first college. Exemption or postponement for medical reasons must be cleared by Gannett Health Center. For further information about exemption from, or postponement of, physical education, students should consult the Office of Physical Education in Teagle Hall.

Related Policies for Freshmen

Section V. Freshmen are required to take two semesters of physical education during their freshman year. Freshman transfer students entering with 12 or more credits have their physical education requirement reduced to one term.

Residency Requirements

All college curricula are planned to fit within an eight-semester program. An average schedule of 15 credits a semester (in addition to physical education) is considered standard, and if pursued for eight semesters will provide the credits needed for graduation. If the student completes all the requirements—for the major, for distribution, for total credits, and for cumulative average—in fewer than eight semesters, the degree may be conferred at the end of the semester in which the last requirements are met. Students who plan to receive their degrees early should notify the college registrar at the beginning of the semester so that their names can be placed on the list of degree candidates.

Sometimes a student (particularly a transfer student) may need an additional semester to complete a program. To register for a semester beyond the eighth, the student submits a general petition to the college registrar in the Office of Student Services, N101 Martha Van Rensselaer Hall. The petition should detail the reasons for wanting to enroll for the extra semester and include a list of courses planned for the additional semester. Such requests are usually granted when there appears to be no feasible way for the student to complete the professional curriculum or the degree requirements without the extra semester.

Freshmen entering the college with 15 transfer credits have seven semesters in which to complete the degree. Transfer students must complete at least 60 credits at Cornell.

Mature students (those at least twenty-four years old at the time of matriculation) are not required to petition the college registrar for approval to study beyond the usual eight semesters.

Exemptions from Requirements

Students who want an exemption from a specific graduation or major requirement may petition, and approval may be given under certain circumstances. Full information about the petition process is given in the Human Ecology Student Guide. Petition forms are available in the Office of Student Services, N101 Martha Van Rensselaer Hall.

PROCEDURES

Course Enrollment and Registration

Students are expected to complete course enrollment during specified times each semester. It is the student's responsibility to learn the dates of course enrollment.

Freshmen and transfer students enrolling in the university for the first time in the fall term request their courses during the summer before they arrive on campus. Enrollment materials are mailed to new students in May. Because new students starting at midyear do not have an opportunity to enroll in courses until after they arrive on campus, the college tries to reserve places for them in human ecology courses. The orientation schedule given to all new students lists a specified time to enroll in such courses.

Continuing students enroll for fall semester in March or April, and enroll for spring semester in October or November preceding the beginning of the term. They are notified of course enrollment dates by poster and by notices in the *Cornell Daily Sun*. Course enrollment materials are available for continuing students via computer access to Just the Facts and in the Office of Student Services, N101 Martha Van Rensselaer Hall. For the first three weeks of the term, students have an opportunity to add courses in other divisions of the university as well as in human ecology.

Enrollment

Before or during course enrollment, students discuss their program plans with a faculty adviser or a college counselor in the Office of Student Services. For their advising sessions, students need the *Course and Time Roster* issued by the university registrar which also is available via computer on CUINFO. Students must obtain an enrollment PIN number from their departmental major faculty adviser, or if they have not declared a major, from a college counselor.

Students complete their enrollment course requests by the deadline announced by the university registrar.

The following policies and procedures apply to course enrollment.

Permission of Instructor

Certain courses may be taken only with the permission of the instructor as indicated in *Cornell University: Courses of Study*. For such courses, students must request the instructor's permission during the pre-enrollment period by placing their name on a list maintained by the departmental advising assistant.

Students interested in taking a course in the Department of Art in the College of Architecture, Art, and Planning are required to register with the departmental secretary (100 Olive Tjadan Hall) before enrolling in the course. Seniors who want to take an elective course in the Johnson Graduate School of Management are required to obtain permission of the instructor on a course authorization form that the student then files with that school's registrar in 312 Malott Hall.

Special Studies Courses

Each department in the College of Human Ecology (CEH, DEA, HDPS, HSS, DNS, and TXA) offers special studies courses that

provide opportunities for students to do independent work not available in regular courses. One of those courses, designated 300, Special Studies for Undergraduates, is intended primarily for students who have transferred from another institution and need to make up certain course work.

The other special studies courses are 400, Directed Readings; 401, Empirical Research; and 402, Supervised Fieldwork. Those courses are normally taken by upperclass students, and work is supervised on an individual basis by a faculty member in the department in which the course is offered. It is important for students to use the appropriate course number (300, 400, 401, or 402) for a special project.

A student who wants to take special studies courses talks with the faculty member under whose supervision the study would be done and then prepares a plan of work. If the faculty member agrees to supervise the study, the student completes a multicopy special studies form, a multicopy description of the study to be pursued. The student obtains the signatures of the instructor and the department chair as well as the student's department adviser before submitting it to the Office of Student Services. The student also must complete a course registration form in the Office of Student Services. Special studies forms and instructions are available in the departmental offices.

To register in a special studies course taught in a department outside the college, students should follow the procedures established for that department.

Course Loads

The normal course load in the college ranges from 12 to 18 credits. *During the course enrollment period no student may enroll for more than 15 credits or five courses, whichever is greater.*

Credits beyond 15 may be added during the first three weeks of the semester without special permission.

Students should avoid planning excessive work loads; the time required to keep abreast of courses tends to increase as the semester progresses. *Courses cannot be dropped after the seventh week of classes without petitioning and by substantiating extenuating circumstances*, so students should try to avoid the need to drop courses.

Except for those with mature student status, students must carry at least 12 credits (exclusive of physical education). In special cases, a student may petition to carry between 8 and 12 credits. Forms for petitioning and advice on how to proceed are available from the Office of Student Services, N101 MVR.

Except for mature students, it is seldom possible to have tuition prorated if a student carries fewer than 12 credits during a semester. (See the college registrar for more information.)

Students of mature status may carry 6 to 11 credits without petitioning and may have their tuition prorated. However, at the beginning of each term, mature students planning to take a light course load should pick up a proration of tuition form from the Office of Student Services, fill it out, have it signed by the college registrar, and return it to the bursar's office in Day Hall.

Oversubscribed Courses

Enrollment in many human ecology courses is limited. When a course is over enrolled, students are generally assigned on the basis of seniority or by criteria defined for each course as listed in *Cornell University: Courses of Study*. Student's professional goals may be considered. Those students not admitted to a course may be placed on a waiting list.

Late Course Enrollment

Students who do not complete course enrollment during the course enrollment period usually must wait until the beginning of the semester to enroll. Extensions are rarely granted and usually only for documented illness.

Students who do not meet the deadline for any reason should see the college registrar in N101 MVR as soon as possible. The college registrar can explain available options on course enrollment procedures under such circumstances.

Important: Students can review their course schedule via computer using Just the Facts. Students are responsible for checking their course schedule for accuracy of course numbers, credit hours, grade option and other data. Students must correct errors immediately. Procedures for correcting enrollment errors as well as making changes for other reasons are described below under **Course Enrollment Changes**.

At the beginning of the fall semester, each continuing student receives a copy of his or her **summary of record** from the Office of Student Services. This summary shows degree requirements that the student has completed. Students are responsible for assuring that their academic program meets degree requirements. They resolve any questions about degree requirements with the appropriate staff person in the Office of Student Services. Students may direct questions about their academic programs to their faculty adviser or to a counselor in the Office of Student Services.

Late University Registration

A student clearing his or her financial obligations **after** the deadline date on the bursar's bill is considered late. **Late registrants are assessed a finance charge on the bursar's bill starting from the date the bill is due.**

All students must be registered according to university policy before the end of the third week of classes. If for any reason a student registers after that time, there will be a \$200 additional charge.

After completing late university registration, the student submits the college registration card to the Office of Student Services and receives a computer printout of the courses for which he or she is officially registered.

Students who fail to register by the third week of the term will be withdrawn from the university. Should withdrawn students wish to return, they must reapply through the admissions committee.

Course Enrollment Changes

Deadlines

- During the first three weeks of the term, courses may be added or dropped.

- From the fourth through the seventh week of the term, course changes may be made with the permission of the instructor (instructor's signature on the add/drop form).
- From the fourth week of the term, instructors have the right to consider students' requests for course changes on an individual basis or to announce at the beginning of the term a specific date between the fourth and seventh weeks beyond which they will no longer approve course changes.
- From the eighth week of the term, no course change may be made without petitioning for approval. Petitions are usually granted only in circumstances beyond a student's control (for example, illness). A student petitioning for medical reasons should provide substantiating medical evidence with the petition.
- A student who submits a petition after the seventh week of the term requesting permission to drop a course must attach a statement from his or her faculty adviser to that petition indicating whether or not the advisor supports the request.
- After the seventh week of the term, any student granted permission to drop a course after petitioning will automatically receive a grade of **W** (Withdrawn), and the course will remain on the official transcript.

Deadlines for Half-Term Courses

Students may drop half-term courses within the first three-and-one-half weeks of the course. Students may add classes after the first week of classes only with the permission of the instructor. After the first three-and-one-half weeks, students must petition to drop the course. (See **Petition Process, General Petition Form** for information on the procedure.)

Procedures

It is to the student's advantage to make any necessary course enrollment changes as early in the term as possible. Adding new courses early makes it easier for the student to keep up with course work. Dropping an unneeded course early makes room in the course for other students who may need it for their academic programs.

Ideally, students evaluate their course work load carefully at the beginning of the term. If, in the first week or two, the instructors do not discuss the amount of material to be covered and the extent of student assignments, students need to ask about course requirements.

Some procedures required for course enrollment are also required for course enrollment changes. For example, the instructor's permission must be obtained for a course requiring it, and the same forms for special studies courses must be completed. Aside from the procedures listed below for course enrollment changes, all course change forms for **nutritional science majors** must be signed by the faculty department adviser.

Waiting List: The Office of Student Services maintains waiting lists for students who want to enroll in courses that have been filled. Waiting lists are maintained on a first-come, first-served basis without regard to seniority or other factors. To keep their names active on a

waiting list, students must **check in person every 48 hours** with the Office of Student Services; names of students who do not check in are automatically dropped from the list.

Limited enrollment classes: Students who do not attend the first two class sessions of courses with limited enrollment may be dropped from the course list. Students can avoid being dropped from a class by notifying the instructor that unavoidable circumstances have prevented their attendance.

There is no charge for course changes. To make course changes during the **first three weeks**, a student takes the following five steps:

- 1) Obtains a course-change form from the Office of Student Services, N101 MVR.
- 2) Completes the form and takes it to the appropriate office for signature: for human ecology courses, the forms should be taken to the Office of Student Services; for courses outside the college, the forms should be taken to the appropriate departmental office in the other college.
- 3) Makes sure that his or her name is added to the list of enrolled students for a course being added, or removed from the class list for a course being dropped. Asks the person recording the change to sign the form.
- 4) **Submits all signed forms to the Office of Student Services, including the forms for out-of-college courses.** Changes are not completed until the signed forms are filed in that office. If a student does not drop a course that he or she no longer attends, the student is in danger of receiving an **F** in the course.
- 5) Receives carbon copies of each course change form at the time it is submitted. It is **important** for students to keep these copies to verify later that the forms were filed.

To make course changes during the **fourth through seventh** weeks of the term, a student takes the following steps:

- 1) Completes the five steps listed above for changes made during the first three weeks.
- 2) Obtains the instructors' signatures on the course change form for human ecology courses.

To make course changes **after the seventh week** of the term, a student must file a general petition form. (See the section below, **Petition Process**.) Students are expected to attend classes and to do assigned work until the petition has been formally approved or denied.

In absentia Study

Under certain conditions, credit toward a Cornell degree may be given for in absentia study, that is, study done at an accredited institution away from Cornell after the student matriculates in the College of Human Ecology.

To be eligible for in absentia study, a student must be in good academic standing and must receive permission in advance from the college registrar. Students not in good standing may study in absentia but will not receive transcript credit until they have been returned to good standing by the Committee on Academic Status. In some cases, students

may petition for in absentia credit after the work has been completed, but there is no guarantee that such credit will be awarded without advance approval. Note that in absentia study and leave of absence status are mutually exclusive.

In absentia petition forms are available in the Office of Student Services, N101 MVR. The student completes the form, has it signed by his or her faculty adviser, attaches catalog descriptions for the courses that will be taken, then submits the form to the Office of Student Services, N101 MVR.

Students receive notice of the petition decision by means of a letter from the college registrar.

A student may take up to 15 credits in absentia as long as the courses do not duplicate courses already taken and the in absentia courses are applicable to the requirements of the college. A student's petition for more than 15 credits in absentia may be allowed under the following conditions: (1) the work taken represents a special educational opportunity not available at Cornell, (2) it relates to the student's particular professional goals, and (3) those goals are consistent with the focus of the college. The in absentia petition form is used to request more than 15 credits in absentia.

The college registrar requests approval from the appropriate department if a student wants to apply in absentia credit to requirements for his or her major. If in absentia credit is sought for a modern foreign language in which the student has done work, approval by the Department of Modern Languages and Linguistics (College of Arts and Sciences) must be obtained. The department will recommend the number of credits the student should receive and may require the student to take a placement test after returning to Cornell.

The student is responsible for having the registrar of the institution where in absentia study is taken send transcripts of grades to the Office of Student Services in the College of Human Ecology. Only then will credit be officially assessed and applied to the Cornell degree. Credit for in absentia study will be granted **only** for those courses with grades of C- or better. Only credits (not course names and grades) for in absentia study appear on the Cornell University transcript.

A student who holds a Regents' or Children of Deceased or Disabled Veterans Scholarship may claim that scholarship for study in absentia if the study is done in a college in New York State and if it is for a maximum of 15 credits acceptable to the College of Human Ecology.

The rules regarding study in absentia apply to transfer students with the additional stipulation that at least 60 credits must be taken at Cornell. At least 40 of the 60 credits must be in the College of Human Ecology at Cornell unless the student has transferred equivalent human ecology credit. (No more than 20 credits of equivalent credit may be applied to the 40 credits required in human ecology course work.)

Leaves of Absence

A student may request a leave of absence before the beginning of the semester or during the first seven weeks of the semester for which a leave is sought. A leave may be extended for a second semester by requesting

an extension in writing from the Office of Student Services. Note that in absentia study and leave of absence status are mutually exclusive.

A student considering a leave of absence is urged to discuss plans with a counselor in the Office of Student Services. The counselor can supply the necessary forms for the student to complete and file with the Office of Student Services, N101 MVR.

Requests for a leave of absence received after the first seven weeks of the semester, or requests for a leave of absence from students who have already had two semesters' leave of absence, will be referred for action to the Committee on Academic Status. The committee may grant or deny such requests, attaching conditions as it deems necessary. Leaves of absence after the first seven weeks are generally granted only when there are compelling reasons why a student is unable to complete the semester, such as extended illness.

A student who requests a leave of absence after the first seven weeks is advised to attend classes until action is taken on the petition. A student whose petition for a leave of absence is denied may choose to withdraw or to complete the semester.

The academic records of all students who are granted a leave of absence are subject to review, and the Committee on Academic Status may request grades and other information from faculty members to determine whether the student should return under warning or severe warning or in good academic standing.

Withdrawal

A withdrawal is a termination of student status at the university. Students may voluntarily withdraw at any time by notifying a counselor in the Office of Student Services and filing a written notice of withdrawal in the Office of Student Services. A student considering such an action is urged to discuss plans with a counselor in the Office of Student Services, N101 MVR.

In some instances a student may be given a withdrawal by the college registrar. A student who leaves the college without an approved leave of absence or does not return after the leave has expired will be given a withdrawal after the seventh week of the term in which he or she fails to register.

A student who has withdrawn from the college or who has been given a withdrawal by the college registrar and who wishes to return at a later date must reapply through the Committee on Admissions for consideration along with all other applicants for admission. If the student was in academic difficulty at the time of the withdrawal, the request for readmission will be referred to the Committee on Academic Status for consideration, and that committee may stipulate criteria under which the student may be readmitted to the college.

Petition Process

The petition process permits students to request exceptions to existing regulations. Petitions are considered individually, weighing the unique situation of the petitioning student with the intent of college and university regulations.

Students can avoid the necessity to petition by carefully observing the deadlines that affect their academic program. See the **Course Enrollment Changes** section above for some of the important deadlines. If unsure about a deadline, check with a counselor in the Office of Student Services, N101 MVR.

Although many kinds of requests can be petitioned in the college, options other than petitioning may be preferable in some cases. To explore whether a petition is appropriate, the student may discuss the situation with a college counselor or the college registrar in the Office of Student Services.

Students may appeal petitions denied by the college registrar to the Committee on Academic Status. Students who appeal a denied petition **must** attach a statement from the student's faculty adviser before CAS will consider the appeal.

Two kinds of petition forms are available. The uses for both forms are described in the *Human Ecology Student Guide*.

General Petition Form

The general petition form is available in the Office of Student Services, N101 MVR. After completing the form, submit it to the Office of Student Services. Students learn the result of the petition process for the general petition form by checking their mail folder in the student mail center, 138 MVR.

In absentia Petition Form

The in absentia petition form is available in the Office of Student Services, N101 MVR. After completing the form, submit it to the Office of Student Services. In absentia petitions must have attached to them the catalog descriptions of the courses for which credit is requested from the other institution. In absentia petition decisions usually are sent to students via the U.S. postal service.

GRADES

See the "Grading Guidelines" section for information on the official university grading policies.

S-U Grades

Some courses in the college and in other academic units at Cornell are offered on an S-U basis; that fact is indicated in the *Cornell University: Courses of Study*. University regulations concerning the S-U system require that a grade of S be given for work equivalent to a C- or better; for work below that level, a U must be given. No grade point assignment is given to S, and S or U grades are not included in the computation of semester or cumulative averages. A course in which a student receives an S is, however, counted for credit. No credit is received for a U. Both the S and U grades appear on a student's record. A student who is attempting to qualify for the Dean's List must take at least 12 credits for the usual A-F grades.

A student may take no more than four courses (or 12 credits) on an S-U basis during his or her college career; however, more than one S-U course may be taken in one semester. S-U courses may be taken **only as electives or in the 15 credits required in the college outside the major** unless the requirements for a specific major indicate otherwise.

Freshmen enrolled in English 137 and 138 (offered for S-U grades only) are permitted to apply those courses to the freshman writing seminar requirement.

To take a course for an S-U grade, a student must check the course description to make sure that the course is offered on the S-U basis; then either sign up for S-U credit during course enrollment, or file an add/drop/change form in the Office of Student Services before the end of the third week of the term. After the third week of the term, students can not change grade options. Forms are available in the Office of Student Services.

Grades of Incomplete

A grade of incomplete is given when a student does not complete the work for a course on time but when, in the instructor's judgment, there was a valid reason. A student with such a reason should discuss the matter with the instructor and request a grade of incomplete.

Beginning fall 1984, a grade of incomplete may remain on a student's official transcript for a maximum of two semesters and one summer after the grade is given, or until the awarding of a degree, whichever is the shorter period of time. The instructor has the option of setting a shorter time limit for completing the course work.

If the work is completed within the designated time period, the grade of incomplete will be changed to a regular grade on the student's official transcript. If the work is not completed within the designated time period, the grade of incomplete will be automatically converted to an F.

When a student wants to receive a grade of incomplete, the student should arrange a conference with the instructor (preferably before classes end and the study period begins) to work out the agreement. A form, called *explanation for reporting a final grade of F or incomplete*, which has been signed by both the instructor and the student, must be submitted by the instructor to the Office of Student Services. This form is submitted with the final grade sheets whenever a grade of incomplete is given.

This form is for the student's protection, particularly in the event that a faculty member with whom a course is being completed leaves campus without leaving a record of the work completed in the course.

If circumstances prevent a student from being present to consult the instructor, the instructor may, if requested by the student, initiate the process by filling out and signing part of the form and turning it in to the Office of Student Services with the grade sheet. Before a student will be allowed to register for succeeding semesters, he or she must go to the Office of Student Services to fill out and sign the remainder of the form.

If the work is satisfactorily completed within the required time, the course appears on the student's official transcript with an asterisk and the final grade received for the semester in which the student was registered for the course.

A student who completes the work in the required time and expects to receive a grade must take the responsibility for checking with the Office of Student Services (about two weeks after the work has been handed in) to

make sure that the grade has been received. Any questions should be discussed with the course instructor.

ACADEMIC HONORS

The college encourages high academic achievement and recognizes outstanding students in several ways.

Dean's List. Excellence in academic achievement is recognized each semester by placing on the Dean's List the names of students who have completed satisfactorily at least 12 credits with letter grades other than S or U and who have a semester grade point average of 3.5 or above. No student who has received an F or U in an academic course will be eligible.

Kappa Omicron Nu seeks to promote graduate study and research and to stimulate scholarship and leadership toward the well-being of individuals and families. As a chapter of a national honor society in the New York State College of Human Ecology, it stimulates and encourages scholarly inquiry and action on significant problems of living—at home, in the community, and throughout the world.

Students are eligible for membership if they have attained junior status and have a cumulative average of not less than B. Transfer students are eligible after completing one year in this institution with a B average.

Current members of Kappa Omicron Nu elect new members. Not more than 10 percent of the junior class may be elected to membership and not more than 20 percent of the senior class may be elected. Graduate students nominated by faculty members may be elected.

Bachelor of Science with Honors recognizes outstanding scholastic achievement in an academic field. Programs leading to a degree with honors are offered to selected students by the Department of Human Development and Family Studies and the Division of Nutritional Sciences. Information about admission to the programs and their requirements may be obtained from the appropriate department or division. Students in other departments who wish to qualify for honors should contact Gret Atkin, N115A Martha Van Rensselaer Hall, their sophomore year or the first semester of their junior year.

Bachelor of Science with Distinction recognizes outstanding scholastic achievement. Consideration will be given to seniors whose academic standing at the end of seven semesters is in the top 10 percent of the graduating class. The honor is conferred on those seniors who are in the top 5 percent of the class after grade point averages have been adjusted by including grades for transfer work and after grades earned in the fifth, sixth, and seventh terms have been given double weighting in the final average. The graduating class includes students who will complete requirements for Bachelor of Science degrees in January, May, or August of the same calendar year.

To be eligible for consideration, transfer students must have completed 45 credits at Cornell. In determining the academic standing of a transfer student, previous work taken at another institution is included in the

computation of the student's academic average. Names of seniors who meet these requirements are presented to the faculty of the college for approval.

The primary objectives of the honor society, **Phi Kappa Phi**, are to promote the pursuit of excellence in higher education and to recognize outstanding achievement by students, faculty, and others through election to membership. Phi Kappa Phi is unique in that it recognizes scholarship in all academic disciplines.

To be eligible for membership students must rank in the top ten percent of the senior class, or in the top five percent of the junior class. Provisions also exist for the election of faculty members and graduate students whose work merits recognition.

INTERDEPARTMENTAL COURSES

HE 100 Critical Reading and Thinking

Fall, spring, or summer. 2 credits.
Enrollment limited. Priority is given to freshmen and sophomores; juniors and seniors are admitted with permission of the instructor. S-U grades only.

The objective of this course is to enable students to increase critical reading and thinking abilities. Theory and research associated with a wide range of reading, thinking, and learning skills are examined. Emphasis is placed on developing and applying analytical and evaluative skills. Laboratory instruction is individualized and provides the opportunity to focus intensively on increasing comprehension, reading rate, and vocabulary.

HE 101 College Achievement Seminar

6-week summer session. 2 credits.
Enrollment limited to and required of Prefreshman Summer Program students. S-U grades only.

The objective of this course is to improve the study and learning skills of incoming freshmen. Emphasis is placed on acquisition of skills necessary to achieve academic success. Topics include time management, note-taking, mapping, textbook comprehension, exam preparation, and exam strategies. The application of theory to the demands of Cornell course work is stressed. In addition, students are introduced to library and computing resources through hands-on projects.

THE URBAN SEMESTER PROGRAM IN NEW YORK CITY

Sam Beck, Ph.D., director

The Urban Semester Program is a set of courses spanning the entire year. During fall and spring semesters students enroll in two separate seminars focusing on the opportunities and barriers that a multicultural society presents and their articulation with professional, community, or public policy settings (15-credit residential program). Students intern three to four days each week and are encouraged to live in the Olin Hall dormitory of the Cornell University Medical College.

The three-week winter intercession course (1 credit) enables students to do fieldwork in New York City by working full time in

community-based organizations or through research supervised by the director. In the eight-week summer semester (3 credits), students carry out research projects on the nature of professional practice by interning full time in settings of their choice. Students who seek to contribute to their own communities are encouraged to participate in any of the program offerings. Most students work with the program staff to locate internships. For further information, contact the Urban Semester Program at (212) 746-2273 or the Student Resource Center, N-139 Martha Van Rensselaer Hall.

New York City offers a wide variety of internship settings. Many bilingual and bicultural internship settings are available in Chinese, Spanish, Creole, Russian, Yiddish, and other languages. Examples of internships follow:

- **Health and medicine**—New York Hospital/Cornell Medical Center, Chinatown Health Clinic, New York City Department of Public Health, Bellevue Hospital, Queens Medical Center for Women and Children, Community Health Project
- **Private and public law**—NOW Legal Defense and Education Fund, Neighborhood Defender Service of Harlem, Legal Aid, Puerto Rican Legal Defense and Education Fund, NAACP Legal Defense and Education Fund, Gay and Lesbian Anti-Violence Project, Kane Kessler, P.C.
- **Government and community agencies**—Women's Action Alliance, The Center for Puerto Rican Studies, New York City Commission on the Status of Women, New York City Council offices, Cornell University Cooperative Extension, New York City Department of Consumer Affairs
- **Wall Street firms and other private businesses**—Bloomingdales, Prudential Securities, Oppenheimer, Inc., The Advertising Council, GKN Securities, Rogers and Cowan, Inc., Kidder Peabody, Co., Hill and Knowlton, Young and Rubicam, Altschiller Reitzfeld, Terry Williams Agency
- **Private not-for-profit organizations**—Grant Street Settlement House, Neighborhood Housing Services, Abyssinian Baptist Church Development Corporation, University Settlement Society of New York, Urban Development Corporation, Greater Chinatown Community Association, Lesbian and Gay Community Services Center
- **Private and public schools**—United Federation of Teachers, Central Park East, River East, Manhattan Center for Math and Science, PS 41, City and Country, Churchill School, Little Red School House, St. Ann's School
- **Design and arts organizations**—Harlem Textile Works, Perry Ellis International, Caribbean Cultural Center, Delacour & Ferrara, Architects, P.C., New York Shakespeare Festival Theatre, New York Theatre Workshop, Cynthia Rowley Company, SOHO20 Gallery, Museum of African Art, Lower East Side Tenement Museum
- **Communication and media**—Good Housekeeping, Mirabella, William Morrow Co., MTV, NBC-TV, ABC-TV, Good Morning America, WBAI-Radio, *The Village Voice*, *The New Yorker*, Telemundo Group, Inc., *Essence*, McNeil-Lehrer News, Ad Council, *McCalls*, *Child*, Children's Television Workshop, Time Warner, Inc.

HE 401 Empirical Research

Fall, spring, winter, and summer. 1-15 credits. Permission of instructor. S. Beck.
This course is available to juniors and seniors who wish to pursue a well-defined, independent research project sponsored by one or more faculty members. Honors projects are welcome. Such students must participate in the course work of HE 402, HE 406, or HE 408. Students must provide a project proposal no longer than five pages, an annotated bibliography representing the fields of interest to be researched or explored, and a letter of approval from one faculty member who will sponsor the investigation.

HE 402 Supervised Fieldwork in Urban Affairs

Winter. 1 credit. Limited to 12 students. Permission of instructor.

This course allows students to participate in Urban Semester Program research or internship opportunities in New York City. Research projects are carried out under the supervision of the program director and will include opportunities for field observation, interviewing, and library and archival inquiry, focused on socioeconomic processes in urban settings. Students interested in internships locate their own placements with assistance from the Urban Semester Program staff. Students keep a journal that reflects on their community service experiences with a focus on specific learning objectives. Applications and placement information are available in the College of Human Ecology Student Resource Center, N-139 Martha Van Rensselaer Hall. Applications must be accompanied by a résumé, a statement of learning objectives, a letter from the placement supporting the student's plan, and a rationale for participating in this activity. The research or community service must take place during the Cornell winter session period.

HE 403 Teaching Apprenticeship

Fall, spring, winter, and summer.
For study that includes assisting faculty with instruction. Prerequisite: Students must have taken the course (or equivalent) in which they will be assisting and have demonstrated a high level of performance.

HE 406 Fieldwork in Professional Practice: Summer in the City

Summer. 1-3 credits. 8-week session. Limited to 12 students.

This is a seminar that examines the culture of professional practice, how professionals think and behave, and the role of professionals in society through internships and weekly discussions with practitioners in a variety of fields. Students will carry out fieldwork in internship placements by researching professional practice in New York City. They will intern for a minimum of eight weeks in organizations and fields such as business, government, private not-for-profit services, education, medicine and health, law, media and communications. Students locate their own internships with assistance from the Urban Semester Program staff. Applications and placement information are available in the College of Human Ecology Student Resource Center, N-139 Martha Van Rensselaer Hall.

HE 408 The Urban Semester Program: Multicultural Issues in Urban Affairs

Fall or spring. 9-15 credits. Limited to 30-35 students, depending on housing availability. Preference given to juniors and seniors. Applications and placement information available in the College of Human Ecology Student Resource Center, N-139 Martha Van Rensselaer Hall.

This course is a study of multicultural issues in urban affairs as students enhance their academic foundations in career development. Students examine issues of diversity (e.g., race, ethnicity, religion, class, gender, sexual orientation) in relationship to: (1) professional life in different sectors of the economy; (2) the development of neighborhoods and communities; and (3) the basis of a just and democratic society. Students intern three to four days each week and attend seminars that include site visits and discussions on multicultural issues with representatives of community, education, government, business, medical organizations and health, legal, and private not-for-profit organizations. In addition, students can enroll in a three-credit companion course offered in New York City through one of the academic departments in the College of Human Ecology.

CONSUMER ECONOMICS AND HOUSING

W. K. Bryant, chair; P. Chi, director of graduate studies; A. Mathios, undergraduate advising coordinator; R. J. Avery, F. Firebaugh, J. Gerner, R. Heck, D. Kenkel, N. Kutty, D. Lillard, L. Morton, E. Peters, P. Pollak, M. Rendall.

NOTE: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

CE&H 210 Intermediate Microeconomics

Fall or spring. 4 credits. Prerequisite: CEH 110 or equivalent. Fall: preference to sophomores and juniors. Spring: preference to juniors and seniors. Fall: T R 12:20-1:35. Spring: M W F 1:25-2:15. B. Rosen.

A section is mandatory. Theory of demand and consumer behavior including classical and indifference curve analyses; theories of production and cost; models for the following markets—competitive, monopoly, monopolistic competition, oligopoly, and inputs; general equilibrium; welfare economics; public goods; risk.

CE&H 226 Household and Family Demography

Fall. 3 credits. Prerequisite: RSOC 101 or equivalent. S-U grades optional. T R 2:30-3:45. M. Rendall.

This course identifies important trends in U.S. household and family structure, examines the demographic, social, and economic forces behind recent changes in household structure, and evaluates current and future consequences and policy implications of these changes for both households and society. Topics include historical and contemporary trends in the size and composition of families and households, trends in marriage, divorce, remarriage, contraception, childbearing, and living arrangements, and interrelationships between household division of labor. Policy

implications of all of the above are also considered.

CE&H 233 Consumers in the Market

Fall. 4 credits. Prerequisites: CEH 110 or equivalent. M W F 2:30-3:20. R. J. Avery. A study of the structure and functioning of consumer retail markets with emphasis on the role and activities of the major players in these markets—firms, consumers, and governments. The nature and consequences of various types of market failures are studied from the perspective of the firm, the consumer, and the role of government. Case studies and outside lecturers are used to impart reality to the course.

CE&H 247 Housing and Society

Spring. 3 credits. S-U grades optional. M W F 10:10-11:00. P. Chi. A survey of contemporary American housing issues as related to the individual, the family, and the community. The course focuses on the current problems of the individual housing consumer, the resulting implications for housing the American population, and governmental actions to alleviate housing problems.

CE&H 250 Introduction to Policy Analysis

Spring. 3 credits. Prerequisite: CEH 210. T R 12:20-1:35. N. Kutty.

Introduction to the tools and techniques of policy analysis. Topics covered include microeconomic concepts such as consumer and producer surplus, deadweight loss; rationale for public policy; benefit-cost analysis; impact assessments; experimental, quasi-experimental and non-experimental designs; and the social ecology of policy analysis.

CE&H 300 Special Studies for Undergraduates

Fall or spring. Credits to be arranged. Staff.

Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake, on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

CE&H 307 Introduction to Econometrics

Fall. 4 credits. Prerequisites: ARME 310 or equivalent. M W F 10:10-11:00. D. Lillard.

The course introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression procedures are discussed. Students are required to specify, estimate, and report the results of an empirical model. Section meets once a week.

CE&H 315 Personal Financial Management

Spring. 3 credits. Preference given to human ecology students; limit 200; not open to freshmen. S-U grades optional. M W F 10:10-11:00. R. Heck.

The study of personal financial management at various income levels and during different stages of the family life span. Course topics include financial management frameworks and decision-making processes, basic economic

and financial principles, returns to human resources, income and wealth analysis, the role of consumer and mortgage credit, financial insolvency and counseling, expenditure and purchase analyses, the use of budgets and record keeping in achieving family economic goals, economic risks and available protection, retirement and estate planning, and alternative forms of savings and investments.

[CE&H 320 Economics of Family Policy—Adults (also Economics 420)]

Fall. 4 credits. Limited to 40 students. Junior or senior standing; non-CEH or PA majors by permission of instructor. M W F 1:25-2:15. Not offered 1996-97. Staff.

This course examines the economics of family policy issues that have a particular impact on adult family members. Emphasis in this course is on the economic behavior surrounding the policy and the incentives set up by the policy. Policies considered include marriage and divorce, family leave policy, policies assisting single parents, and policies affecting caregiving.]

CE&H 321 Economics of Family Policy—Children (also Economics 421)

Spring. 4 credits. Limited to 40 students. Junior or senior standing; non-CEH or PA majors by permission of instructor. M W F 1:25-2:15. J. Gerner.

This course examines the economics of family policy issues that particularly affect children. This course focuses on a) the economic behavior that generates the policies and b) the economic incentives and behavior that result from the policies. Topics include child welfare, education, day care provision, child support, and adoption.

CE&H 325 Economic Organization of the Household

Fall. 3 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional. T R 10:10-11:25. W. K. Bryant.

Economic models are used to help explain a wide variety of family and individual behavior. Topics include the demand for consumer goods and services; consumption and saving; time allocation in the household including labor supply, household production and leisure; human capital investment; fertility; marriage and divorce. Within each topic, uses of the material by public- and private-sector decision makers are discussed.

CE&H 330 The Economics of Consumer Policy

Fall. 4 credits. Open to juniors, seniors, and graduate students. Prerequisites: CEH 110, 111 and 210 or permission of instructor. Class packets on sale at Campus Store. T R 1:25-2:40. D. Lillard.

Students are acquainted with the basic approaches to consumer policy and perform economic analyses of specific consumer policy issues. Three specific areas of policy intervention are addressed: externalities and public goods; anti-trust and regulation of "natural" monopolies; and markets characterized by imperfect information. Policy discussions are reinforced through the use of specific real-world examples. Students are required to write three short papers on each area of policy intervention discussed in class.

CE&H 333 Consumers in the Market II

Spring. 4 credits. M W F 2:30-3:20. R. J. Avery.

This course focuses on external and internal forces that drive consumer demand. Material

in this course will cover the processes whereby consumers interpret market-provided information and the social forces impacting consumer purchase decisions. Particular emphasis will be placed on communication institutions in the market (advertising, the news and other mass media) and the control of these institutions through government regulation. A select group of consumer policy issues will be covered such as consumer evaluation of product safety and quality, food additives, consumer privacy, and socially responsible advertising.

CE&H 348 Urban Economics and Policy

Spring. 4 credits. Prerequisite: CEH 210 or equivalent. S-U grades optional. T R 2:30–3:45. N. Kuttly.

This course explores the economics of cities and urban problems. The course is a study of the location choices of firms and households, growth of cities, and determination of land rents. The urban policy issues explored in this course include—housing, urban poverty, zoning, and community development.

CE&H 355 Wealth and Income

Fall. 3 credits. Open to sophomores, juniors, and seniors; graduate students may elect to audit and write a research paper for 1 to 2 credits under CEH 600. Prerequisites: CEH 110–111 or equivalent. S-U grades optional. M W F 9:05–9:55. D. Lillard.

The wealth and income positions of American households are defined and described. Various statistics are employed to present conflicting pictures of the distribution of income using the same underlying data. Several models of economic determinants of income are presented and redistributive policies are discussed in the context of the economics of the political and philosophical positions for and against such policies.

CE&H 356 The Economics of Welfare Policy

Fall. 4 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional. M W F 11:15–12:05. M. Rendall.

Using the tools of economics, this course examines welfare policy. Included are an examination of which populations are affected, what behavior various policies are likely to engender, and how much income redistribution occurs as a result of various welfare policies. Also evaluated are various proposals for welfare reform.

CE&H 365 Economics of Consumer Law and Protection

Spring. 3 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional. M W F 11:15–12:05. A. Mathios.

Economic analysis of the roles played both by the courts and by federal and state regulatory legislation in altering consumer markets, consumer behavior, and consumer welfare. Topics include economic analyses of contract law, products liability, accident law and antitrust law, as well as the activities of such agencies as the Federal Trade Commission, the Food and Drug Administration, and the Consumer Product Safety Commission.

CE&H 400–401–402 Special Studies for Undergraduates

Fall and spring. Credits to be arranged. S-U grades optional. Staff.

For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of CEH not otherwise provided through

course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake, on a form available from the Student Services Office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department chair is necessary. Students, in consultation with their faculty supervisor, should register for one of the following subdivisions of independent study.

CE&H 400 Directed Readings

For study that predominantly involves library research and independent reading.

CE&H 401 Empirical Research

For study that predominantly involves data collection and analysis.

CE&H 402 Supervised Fieldwork

For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

CE&H 432 Economics of Health Behavior and Policy

Spring. 3 credits. S-U grades optional. Prerequisites: CEH 210 or equivalent or permission of instructor. T R 8:40–9:55. D. Kenkel.

This course uses the tools of economics to provide a better understanding of health behavior and policy. One focus is on policies that promote public health, including education programs and cigarette and alcohol taxation. Policies that influence consumer choices about health care and health insurance are also considered. A common theme is that to understand the effects of health policy it is necessary to analyze the incentives faced by consumers and the incentives of their employers, insurers, and health care providers. Analyses of specific health policies help develop this theme.

CE&H 435 Families in Business

Spring. 3 credits. Prerequisites: introductory statistics or permission of instructor. S-U grades optional. T R 10:10–11:25. R. Heck.

Offers students the opportunity to explore family business topics such as business formation, growth and expansion, strategic management, professionalization, succession, locational choices, and family dynamics, conflicts, and relationships relative to the business. An overview of families who own businesses and the profiles of their businesses will be presented along with the examination of the course topics relative to the various stages of business activity including feasibility, start-up, ongoing maintenance, expansion or redirection, and exit or transfer. Case studies from the Harvard Business School series will be utilized to examine the course topics listed above. The course also provides an introduction to research on family businesses by surveying the conceptual issues and methodological approaches related to the study of family businesses.

CE&H 436 Empirical Research on Family Owned Businesses

Fall. 3 credits. Prerequisites: introductory statistics or permission of instructor. S-U grades optional. T R 10:10–11:25. R. Heck.

Allows students to develop research skills by providing opportunities for hands-on survey and fieldwork. Topics and activities include research design, sampling, questionnaire development, and statistical analyses related to family-owned businesses; critical review of current research approaches and extant databases used to research business ownership; and implementation and completion of an actual survey of fieldwork project of selected family business owners, or the use of extant databases for descriptive analyses of family-owned businesses.

CE&H 444 Housing for the Elderly

Fall. 3 credits. Prerequisite: CEH 247 or permission of instructor. S-U grades optional. T 2:30–4:30. P. Chi.

This is a service-based seminar that will allow students to explore, through a wide range of service experiences, the different ways community agencies assist older adults to remain independent in such diversified residential settings as planned retirement housing, subsidized housing for the low-income elderly, home-sharing projects, ECHO housing, accessory apartments, shared group living projects, and continuing care retirement community. This seminar will focus on how the residential environment influences the ability of older adults to function independently and impacts their need for services. Throughout the seminar, students will be asked to reflect critically on how their service experience complements, challenges, or extends the course curriculum.

The seminar will meet every week for 2 hours. Students are also required to have 4–6 hours of service a week, 4 during the weeks the seminar meets and 6 during the other weeks.

CE&H 475/HDFS 485 Psycho-Economic Perspectives on Human Intelligence and Achievement: Did the Bell Curve Get It Right?

Spring. 3 credits. Prerequisites: Basic Statistics: any of the following (ARME 310, ARME 411, BTRY 215, CEH 307, ECON 319, ECON 320); Basic Economics: CEH 110 or ECON 101 or permission of either instructor. Open to juniors and seniors; limited to 100. S. Ceci, E. Peters.

The course brings together the analytical tools and key models of economics and psychology to investigate issues raised by Herrnstein and Murray's book *The Bell Curve*. The objective of the course is to bring research into the classroom by enabling students to understand and use (in the lab) the methods available for defining and assessing intelligence and its relationship to success in life and other social issues.

CE&H 485 Evaluation of Public Policies

Spring. 3 credits. Prerequisites: CEH 110, 210, 250, or equivalent and an introductory statistics course. T R 12:20–1:35. D. Kenkel.

This is an advanced course in economic policy analysis that builds on the material covered in CEH 250, Introduction to Policy Analysis. The course will use a series of policy examples to demonstrate the economic

approach. Special topics in cost-benefit analysis and policy evaluation techniques will be developed when necessary for the example under study. Examples of topics that may be addressed include excise taxation, economic evaluations of health care innovations, environmental policies, traffic regulations, consumer policies, and welfare reform.

CE&H 499 Honors Program

Fall or spring. Maximum of 15 credits. The goal of the honors program is to provide the students with the opportunity to undertake basic or applied research leading to the preparation of a thesis representing original work of publishable quality. The program is intended for those students who desire the opportunity to extend their interests and efforts beyond the current course offering with the department. Furthermore, the program is designed to offer the student the opportunity to work closely with a professor on a topic of interest.

CE&H 600 Special Problems for Graduate Students

Fall and spring. S-U grades optional. Staff.
Independent advanced work by graduate students recommended by their chair and approved by the department chair and the instructor.

CE&H 601 Research Workshop in Consumer Economics and Housing

Fall and spring. 1 credit. S-U grades only. W 12:10-1:30. Staff.
Research workshop designed to provide a forum for graduate students in consumer economics and housing to present their research.

CE&H 606 Demographic Techniques

Fall. 3 credits. S-U grades optional. T R 12:20-1:35. M. Rendall.
This course provides an introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort vs. period analysis, sources and quality of demographic data, population estimation and projection, and stable population models.

CE&H 613 Economics of Consumer Demand (also Economics 413)

Fall. 3 credits. Prerequisite: CEH 210, Economics 311 or 313, or concurrent enrollment in one of the three. S-U grades optional. T R 8:40-9:55. W. K. Bryant.
Introduction at the graduate level to theory and empirical research on household demand, consumption, and saving. Emphasis on the use of the theory in empirical research. Topics include neo-classical theory of demand, duality, complete demand systems, conditional demand, demographic scaling and translating, consumption and savings. As time allows, Becker and Lancaster models of demand will be introduced.

CE&H 624 Economics of Household Behavior (also Economics 427)

Spring. 3 credits. Prerequisite: CEH 613 or Economics 509-510 or consent of instructor. S-U grades optional. T R 12:20-1:35. E. Peters.
This course examines economic models of fertility, investment in children, family formation and dissolution, resource allocation within the household, and intergenerational transfers across households. Empirical applications of the models are presented for both developed and developing countries.

Implications of the models for family policies such as child care subsidies, divorce laws, and family planning programs are also discussed.

[CE&H 627 Advanced Family Demography]

Fall. 3 credits. Prerequisite: CEH 606 or equivalent. S-U grades optional. W 1:25-3:55. Offered alternate years. Not offered 1996-97. M. Rendall.
This course builds on the basic methods of dynamic population analysis covered in CEH 606, Demographic Techniques, extending them to the study of lives and populations structured not only by age and sex, but also by family status. The same or very similar methods apply to populations structured on other discrete dimensions (e.g., labor force status, region of residence, health status). Life-course analysis methods used to study the distribution of total lifetime are extended to the study of the distribution of total lifetime between family states. Methods for studying reproduction are extended to the study of kin and family sizes resulting from distributions of reproductive performance in the female population. Methods for studying individual lifetimes are also extended to the study of intersecting lifetimes, primarily through nuptiality. These are two-sex models or, more generally, models of interacting populations. Finally, household structure, fusion, and fission are studied. This combines elements of interacting-population and kin-availability modeling, plus static population-comparison methods.]

CE&H 635 Information and Regulation (also Economics 435)

Spring. 3 credits. Prerequisite: CEH 613 or CEH 210 and two semesters of calculus. Class packets on sale at Campus Store. M W F 9:05-9:55. A. Mathios.
