The dates shown in this calendar are subject to change at any time by official action of Cornell University.

In this calendar, the university has scheduled classes, laboratories, and examinations on religious holidays. It is the intent of the university that students who miss those activities because of religious observances be given adequate opportunity to make up the missed work.

The Law School and College of Veterinary Medicine calendars differ in a number of ways from the university calendar. Please consult the catalogs of those colleges for details.

The courses and curricula described in this catalog, and the teaching personnel listed herein, are subject to change at any time by official action of Cornell University.

The rules and regulations stated in this catalog are for information only and in no way constitute a contract between the student and Cornell University. The university reserves the right to change any regulation or requirement at any time.

This catalog was produced by the Office of Publications and Marketing at Cornell University.

2005–2006

Change in Course Numbering System

In the near future, the university will be moving from a three-digit to a four-digit course numbering system (e.g., HIST 404 becomes HIST 4041). As part of this transition, this issue of Courses of Study shows both three- and four-digit (in parentheses) course numbers for course listings. For a complete explanation of the course numbering system, see page 12.

Accreditation

Cornell University is accredited by the Middle States Association of Colleges and Schools.

A copy of the most recent reaffirmation of Cornell's accreditation can be found at dpb.cornell.edu/irp/accreditation.htm. Requests to review additional documentation supporting Cornell's accreditation should be addressed to Michael Matier, director, Institutional Research and Planning, Cornell University, 440 Day Hall, Ithaca, NY 14853–2801, mwm5@cornell.edu.

Cornell University

(USPS 132–860)

Volume 97 of the series "Cornell University" consists of four catalogs, of which this is number three, dated August 1, 2005. Issued once in January, once in July, once in August, and once in November. Published by Cornell University, Publications and Marketing, East Hill Plaza, 353 Pine Tree Road, Ithaca, NY 14850–2820. Periodicals postage paid at Ithaca, New York.

Postmaster: Send address changes to Cornell University, Office of the University Registrar, B07 Day Hall, Ithaca, NY 14853–2801.

CORNELL UNIVERSITY—GENERAL INFORMATION

Introduction

Courses of Study (cuinfo.cornell.edu/Academic/Courses/), a catalogue of Cornell University's many academic programs and resources, contains information about colleges and departments, interdisciplinary programs, undergraduate and graduate course offerings, and procedures. Students also should consult with their college's advising office for specific information on their college's academic policies and procedures, degree programs, and requirements. Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City.

It is not possible to keep this single volume completely up-to-date. The most current information regarding course descriptions, schedules, sections, rooms, credits, and registration procedures may be found at www.cornell.edu/academics/courses.cfm, which also includes the Course and Time Roster and the Course and Room Roster. Students are also advised to consult individual college and department offices for up-to-date course information.

The *Policy Notebook* (www.policy.cornell.edu/notebook.cfm) summarizes pertinent university policies, including the Code of Conduct and the Code of Academic Integrity. If you do not have web access, the *Courses of Study* and the *Policy Notebook* publications are available in the university libraries, the Office of the Dean of the University Faculty, the Office of the University Counsel, the Office of the Judicial Administrator, and the college offices.

The following are offices and sources of information about admission to Cornell University.

Undergraduate Admissions Office, 410 Thurston Avenue, Ithaca, NY 14850-2488, 255-5241, admissions.cornell.edu.

Graduate School, 143 Caldwell Hall, Ithaca, NY 14853-2602, 255-4884, gradschool.cornell.edu.

Law School, Myron Taylor Hall, Ithaca, NY 14853-4901, 255-5141, www.lawschool.cornell.edu/admissions.

Samuel Curtis Johnson Graduate School of Management, Office of Admissions, 111 Sage Hall, Ithaca, NY 14853-4201, 255-4526, www.johnson.cornell.edu/academic/admissions/.

College of Veterinary Medicine, Admissions Office, Cornell University, Schurman Hall, Ithaca, NY 14853-6401, 253-3700, www.vet.cornell.edu/admissions/.

Joan and Sanford I. Weill Medical College and Graduate School of Medical Sciences, Office of Admissions, 445 E. 69th Street, New York, NY 10021, 212-746-1067/-6565, www.med.cornell.edu/education/admissions/.

University Registration

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must

- complete course enrollment according to individual college requirements;
- settle all financial accounts, including current semester tuition;
- satisfy New York State and university health requirements;
- have no holds from the college, the Office of the Judicial Administrator, Gannett: Cornell University Health Services, or the bursar.

Individuals must become registered students by the end of the third week of the semester or they will be subject to a financial penalty.

Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises. The university does not permit retroactive registration and does not record courses or grades for unregistered persons.

LEAVES AND WITHDRAWALS

A leave of absence must be requested from the college in which the student is enrolled. A leave of absence is granted for a specified time, after which the student is expected to return to resume course work. Students should inform their college of intent to return.

Students may withdraw from the university at their own discretion. In addition, a college may withdraw a student who fails to return at the end of a period of authorized leave.

Medical leaves are granted by the student's college upon recommendation by Gannett: Cornell University Health Services.

Bursar Information

TUITION, FEES, AND EXPENSES

Tuition for Academic Year 2005–2006

Endowed Divisions

Undergraduate

Architecture, Art, and Planning	
Arts and Sciences	
Engineering	
Hotel Administration	\$31,300

Graduate

Graduate School (with chairman in an endowed college)	\$31,300
Johnson Graduate School of Management	\$36,350

Professional

Law School	
Entering students	\$37,750
second-year students	\$37,000
third-year students	\$36,280

---	----------

Graduate and Professional Students

Graduate School (with chair in a contract college)	\$19,300
Veterinary Medicine	
New York State resident DVM	\$22,000
Nonresident DVM	\$31,500
Graduate	\$19,300

Student Activities Fee

Undergraduate students	\$167
Graduate and professional students	\$62

Summer Session (2005) per credit**	\$795
---------------------------------------	-------

In Absentia Fees

Undergraduate	\$15 per semester
Graduate and professional	\$200 per semester
Law and management	\$75 per semester

Excess-Hours Tuition

\$690 per credit hour

The amount, time, and manner of payment of tuition, fees, or other charges may be changed at any time without notice.

• **Residency status** is determined at the time of admission by the college. Change in residency status is determined by the university bursar following matriculation. The deadline for submission of requests for the Fall 2005 semester is June 1, 2005. The deadline for the Spring 2006 semester is November 1, 2005. Further information and an application can be found at www.bursar.cornell.edu.

New contract college undergraduate nonresident students are defined as

- new entering students (i.e., freshmen).
- new transfers from external colleges (including transfers from two-year institutions with which Cornell has transfer agreements).
- new transfers from an endowed Cornell college to a contract college.
- students who have deferred entry of more than one semester.
- returning students who had withdrawn from the university.
- graduates who are returning for additional degrees.
- students who have taken a leave of absence for more than one year.

****Regular session rate.** Special program rates may vary.

Fees and Expenses

Undergraduate applicants to Cornell pay a nonrefundable \$65 application fee when submitting an application for admission. The Graduate and Law School application fee is \$65. Application to the Johnson Graduate School of Management costs \$180 for MBA applicants and \$70 for Ph.D. applicants.

Tuition Refund Policy

Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. The date of this request will determine the tuition liability for the semester. All students refer to the "Proration Schedule for Withdrawals and Leaves of Absence" below.

Repayment policy. Students receiving financial aid from the university who withdraw during a semester will have their aid reevaluated, possibly necessitating repayment of a portion of aid received. Repayment to aid accounts depends on the type of aid received, government regulations, and the period of time in attendance. Cornell is authorized to offset any credit balances against any debts owed by the student to the university.

Proration Schedule for Withdrawals and Leaves of Absence**Fall 2005 and Spring 2006**

Percentage	All Students	
	Fall 2005	Spring 2006
no charge	8/23-8/29	1/19-1/25
10% charge	8/30-9/5	1/26-2/1
20% charge	9/6-9/19	2/2-2/15
30% charge	9/20-9/26	2/16-2/22
40% charge	9/27-10/3	2/23-3/1
50% charge	10/4-10/10	3/2-3/8
60% charge	10/11-10/17	3/9-3/15
80% charge	10/18-10/24	3/16-3/22
100% charge	10/25	3/23

Special programs, such as Cornell Abroad and Executive MBA, may follow their own tuition refund policies for withdrawals and leaves of absence. Please refer to the appropriate program office for details regarding those policies.

BILLING AND PAYMENT**Billing**

Tuition and room and board charges will be billed in July and December and must be paid before registration. The due date for these semester bills will normally be 5 to 10 working days before registration day. All other charges, credits, and payments will appear on monthly statements mailed before the middle of the month.

It is possible that some charges will not be listed on the first bill and will appear on a subsequent monthly bill. *A student must be prepared to pay any charges appearing on a subsequent bill even though the student receives a financial aid stipend before the charges are billed.*

All bills are due by the date stated on the bill; all payments must be *received* by that date to avoid *finance charges*. Payments are *not* processed by postmark.

Changes to billing addresses can be made via Just the Facts. *Address changes made at other offices will not change the billing address.* The address initially used on billing statements will be the home address as listed on each student's application for admission.

The Office of the Bursar conducts all business directly with the student. Monthly charges, as well as any awards, grants, scholarships, and loans, are listed and billed under the student's name. Refund checks and direct deposit refunds are also drawn in the name of the student. Cornell is also authorized to offset any credit balances against any debts owed by the student to the university.

Payments

An individual who has outstanding indebtedness to the university will not be allowed to register or reregister in the university, receive a transcript of record, have academic credits certified, be granted a leave of absence, or have a degree conferred. University policy precludes the use of any current financial aid for payment of past-due charges.

The Office of the Bursar acts as a clearinghouse for student charges and credits that are placed directly on a student's bill by several departments and offices of the university. *Because the Office of the Bursar does not have detailed records concerning many items that appear on a bill, students should contact the office involved if they have questions.*

For further information, students should contact the Office of the Bursar, Cornell University, 260 Day Hall (tel. 255-2336; fax 255-6442; ucobursar@cornell.edu; www.bursar.cornell.edu). Bursar account and Cornellcard information may be viewed real time on *Just the Facts*.

Student Health Insurance

Because of the high cost of medical care, it is Cornell University policy that every full-time registered student must have health insurance coverage.

The Student Health Insurance Plan (SHIP) is developed especially for Cornell students and provides extensive coverage at a reasonable cost for most on- or off-campus medical care. Complete and current details of the SHIP, its cost, and population-specific material for undergraduates, graduate students, and professional students are mailed to each student in July. Undergraduates, graduate students, and professional students each have separate deadlines and guidelines. Please be sure to check the July mailing for complete details.

The Student Health Insurance Plan provides coverage 24 hours a day, 365 days a year, anywhere in the world. Students graduating midyear may be eligible to purchase a five-month plan. Those enrolled in the SHIP may enroll their eligible dependents for an additional cost (fall deadline: September 30). Graduate and professional students who prefer to pay monthly must enroll in the installment payment plan no later than September 30. Because of policy restrictions, the plan is nonrefundable (except for dependents who no longer meet eligibility requirements and students who withdraw from Cornell within the first 30 days of the academic year).

For more information, students should contact Cornell University Office of Student Health Insurance, 409 College Avenue, Suite 211 (tel. 255-6363; sicu@cornell.edu; www.studentinsurance.cornell.edu).

Student Records

The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. Further details may be found in Cornell University Policy 4.5 Access to Student Information, available at www.policy.cornell.edu/VOL4_5.cfm. These rights include:

1. The right to inspect and review the student's education records within 45 days of the day the university receives a request for access.

Students should submit to the registrar, dean, head of the academic department, or other appropriate official, written

requests that identify the record(s) they wish to inspect. The university official will make arrangements for access and notify the student of the time and place where the records may be inspected. If the records are not maintained by the university official to whom the request was submitted, that official shall advise the student of the correct official to whom the request should be addressed.

2. The right to request the amendment of the student's education records that the student believes is inaccurate.

Students may ask the university to amend a record that they believe is inaccurate. They should write the university official responsible for the record, clearly identify the part of the record they want changed, and specify why it is inaccurate.

If the university decides not to amend the record as requested by the student, the university will notify the student of the decision and advise the student of his or her right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.

3. The right to consent to disclosures of personally identifiable information contained in the student's education records, except to the extent that FERPA authorizes disclosure without consent.

One exception, which permits disclosure without consent, is disclosure to school officials with legitimate educational interests. A school official is a person employed by the university in an administrative, supervisory, academic (including emeritus faculty) or research, or support staff position (including law enforcement unit personnel and health staff); a person or company with whom the university has contracted (such as an attorney, auditor, or collection agent); a person serving on the Board of Trustees; or a student serving on an official committee, such as a disciplinary or grievance committee, or assisting another school official in performing his or her tasks.

A school official has a legitimate educational interest if the official needs to review an education record to fulfill his or her professional responsibility.

Upon request, the university discloses education records without consent to officials of another school in which a student seeks or intends to enroll.

4. The right to file a complaint with the U.S. Department of Education concerning alleged failures by Cornell University to comply with the requirements of FERPA. The name and address of the office that administers FERPA is:

Family Policy Compliance Office
U.S. Department of Education
400 Maryland Avenue, SW
Washington, DC 20202-5901

5. Cornell University has defined directory information to include the following: name, local address, local telephone listing, e-mail address, major field of study and college attended, dates of attendance, enrollment status, participation in officially recognized activities (in athletics, the weight and height of members of

athletic teams), and any degrees earned and awards. Directory information may be released unless the student informs the Office of the University Registrar otherwise in writing or on Just the Facts. Students who wish to suppress their directory information from the printed telephone directory must inform the Office of the University Registrar in writing or through Just the Facts within 10 days of the date of official university registration. Students may rescind their no-release request at any time by writing to the Office of the University Registrar or on Just the Facts.

Academic Integrity

Absolute integrity is expected of every Cornell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty and such cases are governed by the Code of Academic Integrity. A pamphlet titled the *Code of Academic Integrity and Acknowledging the Work of Others* is available from the office of the dean of faculty, in the *Policy Notebook*, and at www.policy.cornell.edu/Code_of_Academic_Integrity.html.

Protection of Human Subjects in Research

The University Committee on Human Subjects is the official review board for all university projects that use humans as research subjects, assuring compliance to federal regulations protecting human subjects in research at universities. A human subject is defined by federal regulations as "a living individual about whom an investigator obtains data through intervention or interaction with the individual, or identifiable private information." Projects affected by regulation include, but are not limited to, experiments and psychological or physical tests on humans, surveys, questionnaires, and studies of existing data, documents, or records in which there are individual identifiers. All proposals involving human subjects in any category, including those initiated by students, must be submitted to the University Committee on Human Subjects for review before the research projects begin. The guidelines for the use of human subjects in research are available at www.osp.cornell.edu/Compliance/UCHS/homepageUCHS.htm. Inquiries and communications about the guidelines should be directed to the committee's coordinator (255-5138; UCHS@cornell.edu).

Use of Animals for Courses

Vertebrate animals serve as an invaluable aid in instruction. It is recognized, however, that some students have ethical objections to the use of vertebrate animals in this manner. Courses that use vertebrate animals are identified as such in the course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about

the precise ways in which the animals are used. A set of university guidelines on the use of vertebrate animals in teaching for faculty and students is printed below and is available from departments in which the courses are offered. The use of live vertebrates in instruction is reviewed and approved by the Institutional Animal Care and Use Committee (IACUC).

Students should contact the Occupational Medicine Office of Gannett Health Services, or their personal health care provider, before working with animals or entering an animal facility, if they may have any medical conditions that may increase their risk.

Background: On December 8, 1987, the Cornell University Institutional Animal Care and Use Committee approved a series of guidelines recommended to them by the University Animal Welfare Committee. These guidelines were prepared by a subcommittee of faculty members, after they had the opportunity to evaluate the use of animals in undergraduate teaching (and student concerns for the same) from a representative sample of instructors.

Guidelines

1. For demonstrating certain principles and procedures, the use of animals in teaching is recognized as an invaluable, often essential, pedagogical device.
2. For courses in which vertebrate animals are to be used in dissection, surgery, or in other experimental procedures, the course description that appears in *Courses of Study* should alert students to this fact.
3. A detailed description of the intended use of vertebrate animals should be available to students upon request to the instructor of each course.
4. Faculty members are encouraged to explain their reasons and need for using vertebrate animals and should indicate to students the availability of the procedures described in item 8 below.
5. Students are encouraged to discuss their concerns about the instructional use of vertebrate animals with the instructor of the course.
6. When consistent with pedagogical objectives, faculty members are encouraged to consider adopting alternative methods and procedures that do not involve the use of live animals.
7. When students object on ethical or other valid grounds to participating in an exercise using vertebrate animals, instructors are encouraged to provide alternative means when consistent with pedagogical objectives for learning the same material.
8. A student who is reluctant to voice his or her concerns about animal use in a particular course or who thinks these concerns have not received proper attention may seek assistance from the chair of the Institutional Animal Care and Use Committee (IACUC) at 253-3845 or by e-mail at iacuc-mailbox@cornell.edu.
9. Faculty members should instruct students in the responsible use of animals. For more information, see www.policy.cornell.edu/vol1_4.cfm.

Advanced Placement

Definition and Purpose of Advanced Placement Credit

Advanced placement credit is college credit that students earn before they matriculate as freshmen and that counts toward the degree and degree requirements as specified by the individual college at Cornell. Its primary purpose is to exempt students from introductory courses and to place them in advanced courses. Its value is that it allows students to include more advanced courses in their course of study.

Sources of Advanced Placement Credit

Advanced placement credit may be earned from the following:

1. The requisite score from the Advanced Placement Examinations (AP exams) from the College Entrance Examination Board (CEEB) in Princeton, N.J. The requisite scores, which vary by subject, are determined by the relevant departments at Cornell and are listed on pages 8-10.
2. Acceptable performance on a Cornell department exam (offered only in some subjects, usually during orientation).
3. A regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments accept credit from virtually all accredited colleges; some do not.
4. International credentials from "A" level or IB Examinations are listed on page 11.

Note: Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if

the college provides a transcript of such work. Students who have taken such courses may, however, earn credit by taking an appropriate examination as described in paragraph 1 or 2 above.

The appropriate department of instruction within the university sets the standards of achievement that must be met for advanced placement in its subject, recommends Advanced Placement credit for those who meet the standards, and determines which Cornell courses the credit places students out of. The final decision for awarding advanced placement credit at Cornell and applying it to degree requirements rests with each individual college (consult the relevant college sections of *Courses of Study*). Students need not accept advanced placement, although forfeiting the advantage of moving quickly into advanced courses affects one's overall education. If they take the Cornell course they have placed out of, they relinquish the advanced placement credit.

Advanced placement examinations.

Entering first-year students should have their scores from CEEB Advanced Placement Examinations sent to their college or school registrar's office (see list below).

Departmental advanced standing

examinations. In certain subjects, students may also qualify for advanced placement or credit, or both, on the basis of departmental examinations given on campus during Orientation Week. A schedule of these examinations appears in the orientation booklet mailed in late summer to entering students. The departments that award advanced placement and credit on the basis of departmental examinations are shown on pages 8-12. Students need to register for those examinations in the relevant department.

Transfer of credit. Entering first-year students who have completed college courses for which they want to receive credit toward their Cornell degree should send transcripts and course syllabi to their college or school office (see the list below).

Written inquiries. Students can address questions to departments, schools, or college offices by adding Ithaca, NY 14853 to the addresses given in the following sections.

College of Agriculture and Life Sciences
140 Roberts Hall

College of Architecture, Art, and Planning
B1 West Sibley Hall

College of Arts and Sciences
55 Goldwin Smith Hall

College of Engineering
158 Olin Hall

School of Hotel Administration
174B Statler Hall

College of Human Ecology
145 Martha Van Rensselaer Hall

School of Industrial and Labor Relations
101 Ives Hall

CREDIT AND PLACEMENT

The tables below summarize how credit and placement are determined for most subjects. Supplementary information for some subjects follows immediately.

CEEB's AP Exams

Advanced Subject

Score

Placement (AP) Credit

Placement

Arabic		Department of Near Eastern Studies determines credit and placement based on departmental examination.	
Biology		see www.bio.cornell.edu/advising/ap.cfm for credit and placement information.	
Chemistry	5	4 credits	Department determines placement on basis of student/adviser meeting before registration and/or an exam given during fall orientation. Placement out of 206, 207, or 211; if students take 215 they may also receive 4 AP credits. Pre-med students with AP credit should contact the Health Careers Center to determine how many general chemistry courses they should take. A few medical schools require two semesters of general chemistry; they do not accept AP credit as one of the required courses.
Computer science AB	4,5	4 credits	Placement out of COMS 100. Department also offers placement exam during fall orientation.
Computer science A	5	4 credits	Placement out of COMS 100. Department also offers placement exam during fall orientation.
Economics, micro	4,5	3 credits	Placement out of ECON 101 and HADM 141.
Economics, macro	4,5	3 credits	Placement out of ECON 102.
English literature and composition			varies by college

CEEB's AP Exams (continued)

<i>Subject</i>	<i>Score</i>	<i>Advanced Placement Credit</i>	<i>Placement</i>
English language and composition			varies by college
Environmental science	4,5	3 credits	Placement out of EAS 101 or 111 and NTRES 201.
French language	4,5	3 credits	Department of Romance Studies determines placement. Students should take the CASE† because they will obtain appropriate placement.
French literature	4,5	3 credits	Department of Romance Studies determines placement. Students should take the CASE† because they will obtain appropriate placement.
German	4,5	3 credits	Department of German Studies determines placement. Students should take the CASE† because they will obtain appropriate placement.
Government and politics, U.S.	4,5	3 credits	Placement out of GOVT 111.
Government and politics, comparative	4,5	3 credits	Placement out of GOVT 131.
Greek, Ancient			Department of Classics determines credit and placement based on departmental examination.
Greek, Modern			Department of Near Eastern Studies determines credit and placement based on departmental examination.
Hebrew			Department of Near Eastern Studies determines credit and placement based on departmental examination.
American history	4,5	4 credits	Placement out of HIST 153 and 154.
European history	4,5	4 credits	Placement out of HIST 151 and 152.
Human Geography		no credit	
Italian language	4,5	3 credits	Department of Romance Studies determines placement. Students should take the CASE† because they will obtain appropriate placement.
Italian literature	4,5	3 credits	Department of Romance Studies determines placement. Students should take the CASE† because they will obtain appropriate placement.
Latin			Department of Classics determines credit and placement based on departmental examination.
Mathematics BC	4,5	8 credits	Placement out of MATH 106, 111–112, 121–122, 190, and 191. Permission to take MATH 221, 223, 213, or 231. Students wishing to take engineering calculus will place into MATH 192. (Engineering and BEE students receive only 4 credits).
	3	4 credits	Placement out of MATH 106, 111, and 121. Permission to take MATH 112, 122, 190, 191, or 231. (Engineering and BEE students receive no credit.)
Mathematics AB or AB subscore of BC exam	3,4,5	4 credits	Placement out of MATH 106, 111, and 121. Permission to take MATH 112, 122, 190, 191, or 231. (Engineering and BEE students receive no credit.)
Music			Department of Music determines credit and placement based on departmental examination.
Physics B	5	8 credits	Placement out of PHYS 101–102. Students who also have a score of 4 or 5 on Mathematics BC may choose to accept 4 AP credits for 207 or 112 and then take 208 or 213. Students in the College of Engineering should refer to www.engineering.cornell.edu/student-services/academic-advising/academic-information/ap-credit/index.cfm for credit and placement information.
	4	4 credits	Placement out of PHYS 101.

CEEB's AP Exams (continued)

<i>Subject</i>	<i>Score</i>	<i>Advanced Placement Credit</i>	<i>Placement</i>
Physics C—Mechanics	4,5	4 credits	Placement out of PHYS 112 or 207, or placement into PHYS 116 with no AP credit. For more information, contact department representative.
Physics C—Electricity/ Magnetism	5	4 credits	Placement out of PHYS 213.
Psychology	4,5	3 credits	Placement out of PSYCH 101.
Spanish language	4,5	3 credits	Department of Romance Studies determines placement. Students should take the CASE† because they will obtain appropriate placement.
Spanish literature	4,5	3 credits	Department of Romance Studies determines placement. Students should take the CASE† because they will obtain appropriate placement.
Statistics (excluding engineering students)	4,5	3 credits	Placement out of AEM 210, ILRST 210, PAM 210, or MATH 171 (not HADM 201).
Studio Art		no credit	
World History		no credit	

†Cornell Advanced Standing Examination. Contact Callean Hile, 303 Morrill Hall, for French, Italian, and Spanish. Contact Miriam Zubal, 183 Goldwin Smith Hall, for German.

International Credentials

The policies currently in effect for General Certificate of Education (GCE) "A" Level Examinations and International Baccalaureate Higher Level Examinations are summarized in the table below. Students may submit results of the French Baccalaureat or German Abitur for possible credit depending on the stream or specialization followed. Accepted students holding any other secondary school credentials are urged to sit for the Advanced Placement Examinations of the College Entrance Examination Board or for the departmental examinations offered during Orientation Week.

The table lists subjects and the marks for which credit will be awarded.

SUPPLEMENTARY INFORMATION**Chemistry and Chemical Biology**

The Department of Chemistry and Chemical Biology offers two 8-credit sequences that satisfy prerequisites for further work in the department: CHEM 207–208 and 215–216. CHEM 215–216 is the sequence intended for students with a solid background in chemistry and strong math skills.

Freshmen may qualify for advanced placement and advanced standing credits in chemistry by satisfactory performance on the CEEB Advanced Placement Examination or an international examination, or by passing an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to 4 credits. A student may earn 4 or 8 credits by suitable performance on the departmental examination. To take the departmental examination students must sign up beforehand in the Chemistry and Chemical Biology Instructional Office, 131 Baker Laboratory.

The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her adviser, and the professors teaching the courses. Questions may also be directed to the director of undergraduate studies, in 760A S. T. Olin Laboratory. Students receiving advanced placement who are interested in a major in chemistry or a related science should consider taking CHEM 215–216 and should consult the CHEM 215 instructor or department staff.

Computer Science

Students who receive a score of 4 or 5 on the AB version of the CEEB Advanced Placement Examination in computer science, a score of 5 on the A exam, or a score of 6 or 7 on the IB exam will receive 4 advanced placement credits and may take COM S 211. These credits may be used to satisfy the requirement in computer programming for students in the College of Engineering.

Freshmen may also earn 4 credits by suitable performance on a departmental examination to be given during Orientation Week. To take the departmental examination, students need only show up at the time and location indicated on the Orientation Week Schedule; advanced signup is not necessary.

English

Separate from AP credit for a high score on the CEEB AP test, students who receive scores of 700 or better on the CEEB SAT II examination in English composition, 700 or better on the CEEB SAT II examination in literature, or 4 or 5 on either CEEB Advanced Placement Examination in English are eligible to enroll, space permitting, in the following first-year writing seminars: ENGL 270, 271, or 272.

Mathematics and Statistics

Students entering Cornell before fall 2004 should contact the Department of Mathematics for placement information. The following applies to students in fall 2004 or later.

The calculus courses MATH 111, 112, and 191 cover substantially the same topics as calculus courses given in many high schools, and it is best to avoid repeating material that has already been covered at an appropriate level. Secondary-school students who have had the equivalent of at least one semester of calculus should, if possible, take one of the CEEB's two Advanced Placement Examinations (Calculus AB or Calculus BC) during their senior year.

<i>Subject</i>	<i>Marks</i>	<i>Credit</i>
International Baccalaureate (IB) Higher-Level Examination passes are awarded advanced standing and credit on receipt of the original or a certified copy of the examination results.		
Anthropology		subject to departmental review
Biology		see www.bio.cornell.edu/advising/ap.cfm
Chemical and Physical		
Systems	6 or 7	8 credits (PHYS 101 and 102)
Chemistry	6 or 7	4 credits (CHEM 207)
Computer Science	6 or 7	4 credits (COMS 100)
Economics	6 or 7	6 credits (ECON 101 and 102)
English Literature	7	3 credits and placement out of one first-year writing seminar
	6	3 credits (excluding Arts and Sciences students)
Mathematics	6 or 7	4 credits and placement out of MATH 106 and 111. Students may obtain more credit by taking the Mathematics Department placement exam. (Engineering and BEE students receive no credit.)
Music		by departmental examination
Philosophy	7	3 credits
Physical Science	6 or 7	8 credits (4 credits, CHEM 206; 4 credits, PHYS 101)
Physics	6 or 7	4 credits (PHYS 101, 112, or 207)

General Certificate of Education (GCE) Advanced ("A") Level Examination passes are awarded advanced standing and credit. Students must present the original or a certified copy of their examination certificate to receive credit.

Biology	see www.bio.cornell.edu/advising/ap.cfm	
Chemistry	A	8 credits (CHEM 207 and 208)
	B	4 credits (CHEM 207)
Economics	A	6 credits (ECON 101 and 102)
English literature	A	3 credits and placement out of one first-year writing seminar
	B	3 credits (excluding Arts and Sciences students)
Mathematics	A, B, or C	4 credits and placement out of MATH 106, 111, and 121. (Engineering and BEE students receive no credit.) Students may obtain more credit by taking the Mathematics Department placement exam. Students who take the A level exam in Singapore will receive 8 credits and placement out of MATH 106, 111–112, 121–122, 190, and 191. (Engineering and BEE students receive 4 credits.)
Music		by departmental examination
Philosophy	A or B	3 credits
Physics	A or B	4 credits for PHYS 101, 112, or 207.
		4 additional credits for PHYS 213 are granted for a combination of grades of A or B and a minimum of 8 advanced placement or advanced standing credits in mathematics. Students planning to major in physics are encouraged to enroll in PHYS 116. If students take 116; they do not receive 4 credits for 112. If students take 217, they do not receive credit for 213. Students in the College of Engineering should refer to www.engineering.cornell.edu/student-services/academic-advising/ap-credit/index.cfm for credit and placement information.

The Department of Mathematics offers a placement examination during orientation week. (Separate mathematics placement exams are offered for students in the College of Engineering or the College of Agriculture and Life Sciences.) The Department of Mathematics exam should be taken by

1. students who have had at least a semester of calculus but did not take a CEEB Advanced Placement Examination; or
2. students who believe that their placement is incorrect.

The exam covers the material of the AP calculus program. Students are strongly urged to take this departmental placement exam even if they feel that their grasp of the material is uncertain. The placement information is useful in any case, and the grade on this test does not become a part of the student's record. No advance registration for the departmental examination is necessary.

Students who have been awarded advanced placement credit for calculus or statistics may not also receive academic credit for similar courses taken at Cornell. Students who have been awarded AP credit for statistics (3 academic credits) will forfeit those credits if they take AEM 210, ILRST 210, MATH 171, or PAM 210.

Students who are in neither the College of Engineering nor in the Biological and Environmental Engineering (BEE) program of the College of Agriculture and Life Sciences. Students who have 4 AP credits for calculus will forfeit those credits if they take MATH 106, 111, or 121. Students who have 8 AP credits for calculus will forfeit 4 credits if they take MATH 112, 122, 190, or 191 and all 8 credits if they take MATH 106, 111, or 121.

Students in the College of Engineering or the Biological and Environmental Engineering (BEE) program of the College of Agriculture and Life Sciences.

Engineering students will take the engineering calculus sequence, which assumes students have one semester of calculus experience before entering Cornell. Because the engineering sequence is more advanced than other sequences at Cornell, engineering students may receive at most 4 AP credits, which they will forfeit if they take MATH 190 or 191, the first course in the sequence.

Modern Foreign Languages

Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a placement test. See "Placement Tests and Advanced Placement Credit" under "Foreign Language Requirements" in the College of Arts and Sciences section of this catalog. Students who have had a year of formal study or substantial informal study since they last took a placement test should take the examination again during orientation week if they plan to continue course work.

Advanced standing credit may be earned as follows:

1. Students with a score of 4 or 5 on the language Advanced Placement Examination of the CEEB, earn 3 credits, and are eligible to take the Cornell Advanced Standing Examination (CASE).
2. Students who achieve a minimum score of 65 on the Cornell language placement test given during orientation week are eligible to take the Cornell Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of 3 credits.
3. For formal language work at an accredited college, credit is considered by the relevant department on submission of a syllabus and transcript. Sometimes an exam score or the CASE is also required.
4. Native speakers of languages other than English may, if an examination by the appropriate department is available, be granted a maximum of 3 credits for proficiency equivalent to that required in English for a first-year writing seminar.

Information about times and places of placement tests is available in the orientation booklet and from Academic and Career Counseling Services at sao.cornell.edu/orientation/placement.htm. For more information, see "College of Arts and Sciences" on language course placement, or contact Callean Hile, 303 Morrill Hall, for French, Italian, and Spanish; Miriam Zubal, 183 Goldwin Smith Hall, for German; Doreen Silva, 226 Morrill Hall, for Russian; Kim Robinson, 388 Rockefeller Hall, for Asian languages, Nava Scharf, 409 White Hall, for Hebrew; or Munther Younes, 409 White Hall, for Arabic.

Music

Advanced placement and credit are awarded only in music theory, and only on the basis of an examination administered by the Department of Music; that is, credit cannot be earned on the basis of the AP, IB, or other examinations from outside Cornell, nor on the basis of course work done elsewhere. Outstanding performance on the departmental examination will earn students 3 credits and placement directly into MUSIC 152 Tonal Theory II. In rare instances students may place into MUSIC 251, in which case they will earn 6 credits. The placement examination is normally administered on the Sunday during fall orientation week. For more information about the examination, see the departmental web site.

Physics

Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (Physics B or Physics C), certain international examinations, or the departmental examination (offered only during orientation week, fall semester; appointment required). For information about the departmental examination, students should consult the director of undergraduate studies, 101 Clark Hall (physicsdus@cornell.edu), or the department chair, 109 Clark Hall.

Physics B—Students earning a score of 5 may receive 8 credits for non-calculus-based PHYS 101 and 102. Those earning a score of 5 in Physics B and a score of 4 or 5 in Calculus BC may choose to accept 4 credits in calculus-based PHYS 112 or 207 instead of 8 credits in

PHYS 101 and 102. Those earning a score of 4 may receive 4 credits in PHYS 101.

Physics C—Mechanics: Students earning a score of 4 or 5 may receive 4 credits for PHYS 112 or 207, or placement into PHYS 116, a more analytic first-semester course, with no AP credit.

Physics C—Electricity and Magnetism: Students earning a score of 5 may receive 4 credits for PHYS 213.

Students will not receive credit for an advanced placement course if they receive credit for a Cornell course with similar content. Students may receive credit for only one of the courses in each group:

PHYS 101, 112, 116, 207

PHYS 102, 208, 213, 217

A student planning a major in physics or applied and engineering physics and who is eligible for AP credit should consult with his or her adviser or the department representative.

Advanced placement into a next-in-sequence course depends on the completion of the appropriate mathematics prerequisites before enrolling. To qualify for advanced placement credit, it is not necessary to continue the study of physics.

General information and advice may be obtained from the director of undergraduate studies, 101 Clark Hall, or from the Department of Physics, 109 Clark Hall.

Course Enrollment

PREENROLLMENT

Pre-course enrollment for each semester at Cornell takes place partway through the preceding semester using an online application through Just the Facts. Dates are announced in advance and are posted in school and college offices. Students are expected to meet with their advisers during this period to affirm that the courses they plan to take will ensure satisfactory progress toward a degree.

New students and transfer students may be sent course enrollment instructions by their college offices before they arrive on campus. Procedures vary from college to college.

COURSE ADD/DROP/CHANGE

Students may adjust their schedules during add/drop/change periods. Courses may be added, dropped, or changed online through Just the Facts. Permission-only courses and courses with specific add/drop procedures will be handled using a written add/drop form. The form is completed by the student and signed by both the student's adviser and an appropriate representative of the department offering the course (an instructor, department staff member, or college registrar, depending on the college). The completed and signed form must be returned to the student's college office to be processed. Professional schools, the School of Continuing Education and Summer Sessions, and the Department of Physical Education and Athletics have different course enrollment and

add-drop policies. See the chart below for their course add/drop/change fees.

Late Course Enrollment and Late Add/Drop/Change Fees

Academic Unit	Late Course Enrollment Fee	Late Course Add/Drop/Change Fee
Continuing Education and Summer Sessions	†	
Johnson Graduate School of Management	\$100	\$100
Law School	No fee	No fee
Physical education	\$30	\$20*
Veterinary medicine	\$100*	\$100*

†Consult the Summer Session catalog and the Division of Extramural Study brochure for fees.

*Consult the college office for special considerations and requirements.

AUDITING COURSES

Summer school and extramural students may officially register as visitors (auditors) in courses and have this entered on their permanent records if their attendance is reported as satisfactory. Graduate students may register for courses as auditors but will not have the courses listed on their transcripts. Undergraduates may not register to audit courses.

EXPLANATION OF COURSE NUMBERING SYSTEMS AND COURSE PREFIXES

As the university makes the transition to a new course numbering system, the course levels for three-digit (current) and four-digit (future) course numbers will correspond in the manner shown in the list below. In this issue of *Courses of Study*, all of the current three-digit course numbers and most of the future four-digit course numbers have been included in the course listings (some four-digit course numbers were not available at press time).

100(1100) level—introductory course, no prerequisites, open to all qualified students

200(2000) level—lower-division course, open to freshmen and sophomores, may have prerequisites

300(3000) level—upper-division course, open to juniors and seniors, prerequisites

400(4000) level—upper-division course, open to seniors and graduate students, 200(2000)- and 300(3000)-level course prerequisites or equivalent

500(5000) level—professional level (e.g., management, law, veterinary medicine)

600(6000) level—professional and graduate-level course, open to upper-division students

700(7000) level—graduate-level course

800(8000) level—master's level, thesis, research

900(9000) level—doctoral level, thesis, research

The list of courses that follows is arranged in two broad groups.

Group 1: Divisions that offer both undergraduate- and graduate-level courses

Agriculture and Life Sciences
Architecture, Art, and Planning
Arts and Sciences
Engineering

Hotel Administration
Human Ecology
Industrial and Labor Relations
Nutritional Sciences
Officer Education

Group 2: Graduate professional divisions

Law
Management
Veterinary Medicine

No courses are offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.

Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the departments. All courses are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

Course Prefixes and Their Meanings

AAS	Asian American Studies
AEM	Applied Economics and Management
A&EP	Applied and Engineering Physics
AIR S	Aerospace Studies
AIS	American Indian Studies
ALS	Agriculture and Life Sciences
AM ST	American Studies
AN SC	Animal Sciences
ANTHR	Anthropology

Class Attendance, Meeting Times, and Examinations

CLASS ATTENDANCE AND MEETING TIMES

Students are expected to be present throughout each semester at all meetings of courses for which they are registered. The right to excuse a student from class rests at all times with the faculty member in charge of that class.

Absences because of religious beliefs. In accordance with Section 224-a of the New York State Education Law, each student who is absent from school because of his or her religious beliefs must be given an equivalent opportunity to register for classes or make up examinations, study, or work requirements that he or she may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the university for making available to such student such equivalent opportunity.

01:25 P.M.	04:25 P.M.	
(Mon. and Wed.)	07:30 P.M.	10:30 P.M.

No classes or laboratory exercises are to be held between the hours of 4:25 P.M. and 7:30 P.M. Monday through Thursday, after 4:25 P.M. on Friday, after 12:20 P.M. on Saturday, and all day Sunday.

Evening preliminary examinations that will be given outside of normal class hours may be scheduled on Tuesday and Thursday evenings only, beginning at 7:30 P.M. All room assignments are scheduled by the Office of the University Registrar. The dates and times of these examinations are listed in the course rosters for each semester.

Evening academic activities commencing at 7:30 P.M. on Mondays and Wednesdays, other than regularly scheduled courses and prelims previously approved by the office of the university faculty, are not permitted. Violation of these rules interferes with other university activities (e.g., athletic, musical, theatrical, or employment).

Any exception to the above regulations, other than those for evening preliminary examinations, will require permission of the dean or director of the college or school offering the course. Exceptions to the regulations on evening preliminary examinations require approval of the dean of the university faculty. All such exceptions must include provision of special arrangements for the students for whom conflicts are generated by such an exception.

FINAL EXAMINATIONS

Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. The schedule of final examinations is available in the *Course and Room Roster*, or online at www.cornell.edu/academics/courses.cfm.

General Rules Governing Final Examinations

Legislation of the university faculty governing study periods and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the Office of the University Registrar without prior written permission of the dean of the faculty.
2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.
3. Permission will be given by the dean of the faculty to offer an alternate examination during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time the examination was originally scheduled. The faculty member requesting such a change shall be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the university registrar's office.

- No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) during the final examination period.
- Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.
- Faculty can require students to submit papers during the week preceding the study period.
- Take-home examinations should be given to classes well before the end of the regular semester and should not be required to be submitted during study period but rather well into the examination period.

The university policies governing study period and final examinations are:

- Each course should require that a final examination or some equivalent exercise (for example, a term paper, project report, final critique, oral presentation, or conference) be conducted or due during the period set aside for final examinations.
- Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one 24-hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a make-up for other valid reasons, such as illness or death in the family.
- Students have a right to examine their corrected exams, papers, etc., to be able to question their grading. (Note that students have no absolute right to the return thereof.) Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester, preferably till the end of the following semester, to afford students such right of review.

EVENING PRELIMINARY EXAMINATIONS

The most convenient times and places for "prelims" are the normal class times and classrooms. In cases where the only alternative is to hold evening preliminary examinations, they may be scheduled only on Tuesday and Thursday evenings and only after 7:30 P.M.

An alternative time to take the examination *must* be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

Note that instructors holding evening examinations are strongly urged to indicate this in the course descriptions listed in *Courses of Study* and *must* notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed. For more information on the policy governing evening examinations,

contact the office of the dean of the faculty, 315 Day Hall.

Grading Guidelines

The official university grading system is composed of letter grades with pluses and minuses. Passing grades range from A+ to D-; F is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first semester of a yearlong course. The grades of INC and R do not have quality-point equivalents attached. These are the quality-point equivalents:

A+ =4.3	B+ =3.3	C+ =2.3	D+ =1.3
A =4.0	B =3.0	C =2.0	D =1.0
A- =3.7	B- =2.7	C- =1.7	D- =0.7
			F =0.0

This is how a semester average is computed:

Course	Grade	Points	Quality Credits	Product
CHEM 103	B+	3.3	x 3	= 9.9
ENGL 151	C-	1.7	x 3	= 5.1
DEA 145	B	3.0	x 4	= 12.0
PAM 100	B	3.0	x 3	= 9.0
DEA 111	C	2.0	x 3	= 6.0
<i>Total</i>			16	42.0

To arrive at the semester average, add the products (credits x quality points) and divide by the number of credits taken. Here, 42 divided by 16 equals 2.63.

The cumulative average (an average of grades from two or more semesters) equals the sum of the products of all the grades at Cornell divided by the total number of credits taken.

S-U GRADES

On September 6, 1972, the Faculty Council of Representatives passed the following legislation:

"Resolved, that:

- the S-U system have symbol equivalents which are uniform within the university: S means C- or above; U means D+, D, D-, or failure.
- S-U options be chosen by the student during the first three weeks of the semester.
- the Announcements and/or supplementary course registration materials describing each course include a description of the course grading options, particularly if the course is graded with an exclusive S-U. Any change in grading options must be announced by the instructor within the first two weeks of the semester.
- course requirements (required reading, term paper, etc.) be the same for students electing S-U grades as for those electing letter grades."

The rules for the S-U option are further defined by each of the academic units. They are as follows:

Agriculture and Life Sciences. (1) Must have 100 credit hours with A, B, C, D grades. (2) The S-U option is available only in those courses so designated in the course catalog

after approval by the Educational Policy Committee. (3) Freshmen may not exercise the S-U option. (4) Only one optional S-U course is allowed per semester.

Architecture, Art, and Planning. (1) All courses specifically required for a degree excluded. Various departments may designate specific required courses where S-U will be permitted. (2) In a course designated as S or U, the entire class is so graded. The instructor must announce this decision within the first two weeks of class. (3) Where the option for S or U exists, both student and instructor must agree on the option. This agreement must be made by the end of the third week of classes on the appropriate form in the college office. Once agreed upon, this grade option will be used for the final grade.

Arts and Sciences. (1) Courses that count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission. (2) Permission of instructor. (3) A minimum of 80 of the 120 hours required for the A.B. degree must be in courses for which the student has received letter grades.

Engineering. (1) The course in question must be offered with an S-U option. (2) The student must have completed at least one full semester of study at Cornell. Freshmen may not take any courses on an S-U basis during their first semester with the exception of courses graded "S-U only" such as physical education, ROTC, supplemental courses, and writing workshops. (3) The proposed S-U course must count as either a liberal studies distribution or an approved elective in the Engineering curriculum. (4) Students may elect to enroll S-U in only one course each semester in which the choice between letter grade and S-U is an option. (Additional courses offered "S-U only" may be taken in the same semester as the "elected S-U" course.) (5) After the end of the third week of classes, the grading option may not be changed nor will students be permitted to add a course in which they were previously enrolled (in the current semester) under a different grading option. Note: Courses graded S-U do not count toward eligibility on the Dean's List and may weaken a student's chances for acceptance into graduate school. Questions regarding the S-U grading option should be addressed to Engineering Advising.

Graduate School. (1) Seminars and thesis research courses are usually graded S-U, and should be registered accordingly or a grade error results at semester's end. Other courses may be registered as S-U only if offered as S-U option.

Hotel. (1) Maximum of 4 free-elective credit hours per semester. (2) Exceptions are by petition only.

Human Ecology. (1) Not part of student's major. (2) May be used in the 9 credit hours required outside the major in Human Ecology courses. (3) Not part of hours required in humanities, natural sciences, and social sciences. (4) A department may approve S-U grading in specific courses if approved by Educational Policies Committee. (5) Freshmen enrolled in ENGL 137 and 138, which are offered only for S-U credit, are permitted to apply these courses to the first-year writing seminar requirements. (6) Total of 12 credits in S-U courses (not counting physical education) may be counted toward degree requirements during a student's college career.

Industrial and Labor Relations. (1) This option may be elected, if available in ILR electives, or in out-of-college electives but not including directed studies. (2) Degree requirements include a minimum of 105 letter grade (A+ to D-) credits. (3) Student must also be in good academic standing. (4) A U grade is considered the equivalent of an F in determining a student's academic status. (5) Limited to two courses per semester, not to exceed four hours in any one course.

Internal Transfer. (1) S-U grades permitted only when it is the only option or (2) when specifically approved by an admissions officer in the school or college to which the student plans to transfer.

Veterinary Medicine. (1) There is one foundation course in the veterinary curriculum that is offered on an S-U basis only. All other required core courses must be taken for a letter grade. (2) Elective courses for veterinary students may be offered on an S-U basis at the option of the professor.

INCOMPLETE

The grade of incomplete is appropriate only when two basic conditions are met:

1. the student has a substantial equity at a passing level in the course with respect to work completed; and
2. the student has been prevented by circumstances beyond the student's control, such as illness or family emergency, from completing all of the course requirements on time.

A grade of incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be elected at the student's own discretion.

While it is the student's responsibility to initiate a request for a grade of incomplete, reasons for requesting one must be acceptable to the instructor, who establishes specific make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student's college for completing the course work. Several colleges require that a statement signed by the instructor be on file indicating the reason for the grade of incomplete and the restriction, if any.

It is the responsibility of the student to see that all grades of incomplete are made up before the deadline and that the grade has been properly recorded with the student's college registrar.

CHANGES IN GRADES

Changes in a grade may be made only if the instructor made an error in assigning the original grade.

OFFICIAL TRANSCRIPTS

An official transcript is one that bears the official signature of the university registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the

student. Transcripts can be obtained through the Office of the University Registrar, B7 Day Hall, or requested at transcript.cornell.edu.

University Requirements for Graduation

The university has only two requirements for graduation that must be fulfilled: the swim test and physical education courses. A student's college determines degree requirements such as residency, number of credits, distribution of credits, and grade averages. See the individual requirements listed by each college or school or contact the college registrar's office.

STUDENT RESPONSIBILITIES

Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student's responsibility to be aware of the specific major, degree, distribution, college, and graduation requirements for completing his or her chosen program of studies. Students should know how far they have progressed in meeting those requirements at every stage of their academic career.

PHYSICAL EDUCATION

Classes

All undergraduate students must complete two semesters of work in physical education unless exempted from this requirement for medical or other special reasons or by virtue of advanced standing on admission. For transfer students the requirement is reduced by the number of semesters satisfactorily completed, not necessarily including physical education, in a college of recognized standing before entering Cornell.

Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating on an intercollegiate athletic team as a competitor or manager, or performing in the marching band.

Physical education is a requirement of the first two terms at Cornell. Students must register for it in each semester, except those in which postponements are granted, until the requirement is satisfied.

Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding 20 hours per week). Gannett: Cornell University Health Services can provide certifications based on health, and the financial aid office can provide certifications of employment. Students should see the director or assistant director of Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.

Swim Test

The University Faculty Committee on Physical Education has established a basic swimming and water safety competency requirement for all entering freshman undergraduate students. Normally, the test is given for women in the Helen Newman pool and for men in the Teagle pool as part of their orientation process. The test consists of a feet-first entry into the deep end of the pool and a continuous 75-yard swim using front, back, and optional strokes. Any student who cannot pass the swim test is required to include the course Basic Swimming and Water Safety in his or her program of physical education before electives can be chosen. Students will receive a grade of incomplete in physical education until they have passed the swim test or fulfilled the requirement by satisfactory attendance in two semesters of Basic Swimming and Water Safety. Students unable to meet the swim requirement because of medical, psychological, or religious reasons must petition the University Faculty Committee on Physical Education for a waiver of the requirement. When a waiver is granted by the Faculty Committee on Physical Education, an alternate requirement is imposed. The alternate requirement substitutes a course in either Advanced First Aid (Emergency Response) or Wellness and Fitness for the original swimming requirement.

Internal Transfer Division

Students may not always be satisfied with the original Cornell school or college into which they've been admitted, and may decide to transfer from one college to another within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should apply to the Internal Transfer Division (ITD).

To apply, candidates must interview with the division's director and submit an essay to the ITD office outlining their reasons for wanting to transfer. Internal Transfer Division applicants must also fulfill the application requirements (e.g., interviews, essays) of their target college as if they were applying for direct transfer. In many cases, colleges formally sponsor students in ITD and essentially guarantee admission if students successfully complete the requirements (taking particular courses, earning a specified grade point average while enrolled in ITD) that are outlined in their letter of sponsorship. Sponsorship is the most important factor determining acceptance into ITD. Students can apply simultaneously for direct transfer and to ITD, so that if direct transfer is denied they might be offered the option of being sponsored in the Internal Transfer Division.

For more information about transfer requirements, students should contact the admissions office of the college they hope to enter and the office of the Internal Transfer Division, 220 Day Hall (255-4386).

Interdisciplinary Centers, Programs, and Studies

ANDREW D. WHITE PROFESSORS-AT-LARGE

726 University Avenue (255-0832)

The program has its origins in Cornell's early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by eminent scholars, scientists, and intellectuals who periodically visit the university for the stated purpose of "contributing to the intellectual and cultural life of the university." Toward this end, Andrew D. White Professors-at-Large engage in a variety of activities including public lectures, ongoing courses, and collaborative research, as well as holding office hours for undergraduate and graduate students. They serve for a six-year term and are full members of the faculty when in residence.

Term Ending in 2006

Cleese, John, writer and actor
Goldsworthy, Andy, sculptor
Sacks, Oliver, physician and writer

Term Ending in 2007

Pretty, Jules, sustainable agriculture ecologist
Short, Roger, reproductive physiologist

Term Ending in 2008

Holldobler, Bert, zoologist
Subrahmanyam, Sanjay, economic historian

Term Ending in 2009

Behrends, Okko, legal historian
Butler, Judith, cultural theorist
Venter, Craig, geneticist

Term Ending in 2010

Wasserstein, Wendy, playwright

FRANK H. T. RHODES CLASS OF '56 UNIVERSITY PROFESSORSHIP

To commemorate their 40th reunion, the Class of 1956 initiated an endowment to create the Frank H. T. Rhodes Class of '56 University Professorship in honor of Cornell's ninth president (1977-1995). The purpose of the Rhodes Class of '56 Professorship is to strengthen the undergraduate experience by bringing to the university individuals from every walk of life who represent excellence of achievement and to create opportunities for interaction with undergraduates. The endowment also makes it possible to create public events related to the professorship such as lectures, performances, films, art exhibits, or conferences. Rhodes Class of '56 Professors are full members of the faculty while in residence. Appointments are awarded for a period of one to five years. During each year of their appointment, Rhodes Class of '56 Professors visit the campus for a minimum of two weeks to engage in a variety of activities including public lectures, ongoing courses, and collaborative research.

Term Ending in 2006

McKinney, Cynthia, educator and politician
Nye, Bill, science guy
Pilger, John, journalist and documentary filmmaker

CENTER FOR APPLIED MATHEMATICS

657 Frank H. T. Rhodes Hall (255-4335)

The Center for Applied Mathematics administers a broad-based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. Each student develops a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student's program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

Graduate students in the center take courses related to their program of study that are offered by various departments. Below are listed selected courses in applied mathematics in the main areas of research interest of the center's members. Detailed descriptions of these courses can be found in the listings of the individual departments.

Selected Applied Mathematics Courses

Basic Graduate Courses in Mathematics and Applied Mathematics

MATH 413 Honors Introduction to Analysis
MATH 414 Honors Introduction to Analysis
MATH 433 Honors Linear Algebra
MATH 434 Honors Introduction to Algebra
MATH 611-612 Real and Complex Analysis
MATH 615 Mathematical Methods in Physics
MATH 621 Measure Theory and Lebesgue Integration
MATH 622 Applied Functional Analysis
MATH 631-632 Algebra
MATH 633 Non-Commutative Algebra
MATH 634 Commutative Algebra
MATH 651 Introductory Algebraic Topology
MATH 661 Geometric Topology
T&AM 610, 611, 613, 614 Methods of Applied Mathematics

Analysis (and Differential Equations)

MATH 428^{*} Introduction to Partial Differential Equations
MATH 617 Dynamical Systems
MATH 618 Smooth Ergodic Theory
MATH 619-620 Partial Differential Equations
MATH 652-653 Differentiable Manifolds
MATH 662 Riemannian Geometry
MATH 711-712 Seminar in Analysis
MATH 713 Functional Analysis
MATH 715 Fourier Analysis
MATH 722 Topics in Complex Analysis
MATH 728 Seminar in Partial Differential Equations

Logic and Theory of Computing

COM S 671 Introduction to Automated Reasoning
COM S 677 Reasoning about Uncertainty
COM S 682 Theory of Computing
COM S 715 Seminar in Programming Refinement Logics
MATH 486 Applied Logic (also COMS 486)
MATH 681 Logic

THE MARIO EINAUDI CENTER FOR INTERNATIONAL STUDIES

170 Uris Hall (255-6370)

The Mario Einaudi Center for International Studies, established in 1961 to encourage and support comparative and interdisciplinary research on international subjects, is one of the largest and most diverse centers of its kind in the United States. Currently, it includes five U.S. Department of Education Title VI National Resource Centers and 16 other area, development, topical, and educational programs. More than 500 faculty members voluntarily collaborate in the center's programs with well over 300 graduate students involved directly in its international programs. Undergraduate students may choose concentrations in international relations, Latin American studies, modern European studies, East Asian studies, South Asian studies, or Southeast Asian studies. (See also Africana Studies and Research Center, Asian Studies, and International Agriculture for related majors and concentrations.)

Cornell's international programs are poised to anticipate and respond to changing global circumstances and perspectives. While some programs offer study of geographic regions, others focus on such topics as international agriculture, nutrition, population, law, planning, politics, rural development economics, and world peace. As programs gain momentum and recognition to attract their own resources, the center applies its resources to new pilot activities that bring faculty members and students together across traditional disciplines and departmental boundaries.

Each year the center brings an eminent world leader to campus as the Henry E. and Nancy Horton Bartels World Affairs Fellow to deliver a public lecture, meet with classes, and interact informally with faculty members and students. The center also hosts a Current Events Roundtable each June that enables Cornell alumni to join faculty members in discussion of key world events.

The center promotes graduate students' overseas field research through an annual competition for travel grants and assistance with the Fulbright fellowship program and the Fulbright-Hayes awards, both administered by the center.

Cornell is committed to the study of the global community in all its complexity—through a faculty of preeminent scholars and teachers, outstanding research facilities, instruction in more than 40 languages, and a library system that houses 2,500,000 volumes related to international and comparative studies.

CENTER FOR THE STUDY OF INEQUALITY

363 Uris Hall
254-8674 (tel.)
inequality@cornell.edu
www.inequality.com

The Center for the Study of Inequality (CSI) fosters basic and applied research on social and economic inequalities as well as the processes by which such inequalities change and persist. The study of inequality lies at the heart of current debates about welfare reform, affirmative action, the "glass ceiling," globalization, and any number of other contemporary policy issues. In recent years, public and scholarly interest in issues of inequality has intensified, not merely because of historic increases in income inequality in the United States and other advanced industrial countries, but also because inequalities of race, ethnicity, and gender are evolving in equally dramatic and complicated ways. The mission of CSI is to support research and teaching relevant to issues of inequality, to disseminate findings coming out of this research, and to otherwise facilitate the study of inequality in the United States and throughout the world.

Symposia and Lecture Series

The CSI regularly sponsors symposia, workshops, and lecture series that draw attention to the most pressing problems and controversies in the field. The current schedule of symposia and lecture series is listed on the center's web site (www.inequality.com).

Research Support

For faculty affiliates of CSI, small seed grants for inequality-related research are available, especially for research that has the potential to attract external funding. The CSI also runs a small grant program that supports graduate and undergraduate research on poverty or inequality. The application deadline for all grants is May 1, 2007 (for further details, see www.inequality.com/support/index.shtml).

Internships

The CSI serves as a clearinghouse for student internships that are relevant to the study of inequality. For a full listing of possible internships, please consult www.inequality.com/academics/index.shtml.

Dissemination

The working paper series on the center web site assists in disseminating research findings, opinion pieces, and related scholarship from some of the top scholars of inequality in the world. This series can be found at www.inequality.com/publications/index.shtml.

Awards

The CSI presents a Distinguished Book Award and Distinguished Paper Award for publications that significantly advance our understanding of inequality. The recipients are invited each year to Cornell University to present their research (see www.inequality.com/publications/awards.shtml).

Undergraduate Concentration

The inequality concentration allows undergraduate students to supplement their studies for their major with a coherent

program of courses oriented toward the study of inequality. The concentration is organized into tracks examining such topics as globalization and inequality; social policy; the ethics of inequality; poverty and economic development; social movements; education and inequality; race and ethnicity in comparative perspective; the family and inequality; and literature, postmodernism, and inequality. The concentration is open to students enrolled in any of the seven Cornell undergraduate colleges. If the requirements of the concentration are met, a special notation to this effect will be recorded on the transcript (see www.inequality.com/academics/undergraduate.shtml for further information).

For more information about CSI, contact us at 254-8674 or inequality@cornell.edu.

COGNITIVE STUDIES

278C Uris Hall
255-6431
cogst@cornell.edu
www.cogstud.cornell.edu

Cognitive studies focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspectives—theory, experiment, and computation—with the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive studies draws primarily from the disciplines of computer science, linguistics, neuroscience, philosophy, and psychology. The field of cognitive studies is primarily represented by faculty members in the following departments: Communication, Computer Science, Design and Environmental Analysis, Economics, Education, Electrical and Computer Engineering, Human Development, Linguistics, Mathematics, Mechanical and Aerospace Engineering, Neurobiology and Behavior, Philosophy, Psychology, and Sociology, as well as the Johnson Graduate School of Management.

Undergraduate Programs

An undergraduate concentration in cognitive studies in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department. For further information on the undergraduate program, see "Cognitive Studies Program" under "College of Arts and Sciences." Contact Linda LeVan (255-6431 or cogst@cornell.edu).

Graduate Programs

Cornell offers a graduate field minor in cognitive studies. Cornell's unique program of graduate training, which seeks to tailor an optimal program of study and research for each individual, fosters interdisciplinary committees. It is the norm for students interested in cognitive studies to combine faculty members from such fields as philosophy, computer science, linguistics, psychology, or neurobiology and behavior on common committees. For further information

on the graduate field of cognitive studies, contact Michael J. Spivey, director of graduate studies (255-9365, spivey@cornell.edu), or Linda LeVan, executive staff assistant, 278C Uris Hall, Office of Cognitive Studies (255-6431, cogst@cornell.edu).

Courses

Courses from across the university that are relevant to the Cognitive Studies Program are listed in this catalog in the Cognitive Studies Program section under Arts and Sciences.

CORNELL ABROAD

300 Caldwell Hall
255-6224 (tel.)
255-8700 (fax)
cuabroad@cornell.edu
www.cuabroad.cornell.edu

Study abroad is an integral part of a Cornell education. Recent events have made us aware that those aspiring to lead in this century need, more than ever before, knowledge and experience of the diverse world beyond the boundaries of their home country. To help students develop the knowledge, skills, and attitudes necessary for informed citizenship in a transnational world, Cornell Abroad offers a wide range of international study opportunities that reflect the fundamental educational goals and objectives of the university. Study abroad is a continuous experience with study on campus, enabling students to make regular progress toward the degree.

Qualified students study abroad through programs administered by Cornell and other institutions, and by enrolling directly in foreign universities. Among the many study abroad programs available, students select programs with thoughtful planning and apply with the approval of their colleges and faculty advisers. To earn credit for overseas study during the fall and/or spring semester(s), students must apply through Cornell Abroad, whose staff members assist in the planning and application process.

LOCATIONS ABROAD

Cornell students majoring in a broad array of fields in all seven undergraduate colleges study in more than 40 countries each year. The following list includes programs chosen frequently by students with college approval; those locations preceded by an asterisk (*) are programs run directly by Cornell.

AFRICA

Botswana, Cameroon, Ghana, Kenya, Madagascar, Tanzania, Uganda: School for International Training (SIT)

Ghana: University of Ghana (through the Council of International Educational Exchange, CIEE; NYU)

Kenya: Wildlife Management (School for Field Studies)

South Africa: Universities of Cape Town and KwaZulu-Natal, Organization for Tropical Studies, School for International Training (SIT)

ASIA

China: Chinese University of Hong Kong; *Cornell FALCON for the spring semester or full year at the Inter-University Program for Chinese Language Studies at Tsinghua University, Beijing; Peking, Nanjing, and East China Normal Universities (CIEE); International Chinese Language Program at National Taiwan University; IES Beijing; CET in Beijing, Harbin, or Hangzhou

India: School for International Training; St. Stephen's College Delhi (through Brown or Rutgers Universities); CIEE at University of Hyderabad

Japan: *Kyoto Center for Japanese Studies; International Christian University and other university programs; IES Tokyo; CIEE Tokyo at Sophia University

Korea: Yonsei University; Ewha University

Nepal: *Cornell-Nepal Study Program (Samyukta Adhyayan Karikam Nepal) at Tribhuvan University

Thailand: Khon Kaen University (CIEE)

Vietnam: University of Hanoi (CIEE)

AUSTRALIA AND NEW ZEALAND

Australia: Australian National University, Canberra; University of Sydney; University of Melbourne; University of New South Wales, Sydney; University of Queensland, Brisbane; University of Western Australia, Perth; School for International Training; Sydney Internship (Arcadia, Boston University)

New Zealand: Otago and Lincoln Universities; EcoQuest

EUROPE

Czech Republic: CERGE at Charles University, CET program in Jewish Studies

Denmark: *Denmark's International Study Program (DIS)

France: *EDUCO (Cornell, Duke, and Emory in Paris) at Université de Paris VII, Paris IV, Paris I, Institut d'Études Politiques de Paris ("Sciences Po"); Critical Studies Program at the University of Paris (CIEE); Paris Internship (Boston University); IES Dijon Business Program

Germany: *Berlin Consortium for German Studies at the Free University of Berlin; Wayne State University in Munich and Freiburg; Heidelberg University

Greece: College Year in Athens, Arcadia

Hungary: Central European University

Ireland: Trinity College Dublin and the National University Colleges of Dublin, Galway, and Cork

Italy: *Bologna Consortial Studies Program; *Cornell College of Art, Architecture, and Planning Program in Rome; Arcadia University in Florence at the Accademia Italiana; Boston University Program in Padova; IES Milan and Rome; Intercollegiate Center for Classical Studies in Rome; Syracuse University program in Florence

Netherlands: University of Amsterdam; Leiden University

Russia: St. Petersburg University (CIEE); Moscow International University and other universities (American Council of Teachers of Russian); Smolny College, Math in Moscow

Spain: *Cornell-Michigan-Penn program at the University of Seville; various language and culture programs

Sweden: *Swedish Practicum in Childhood, Family, and Social Policy at the University of Göteborg; The Swedish Program at the University of Stockholm

United Kingdom: *Direct enrollment at: the University of Birmingham; University of Bristol; Cambridge University; City University; University of East Anglia; University of Edinburgh; University of Glasgow; University of Manchester; University of Oxford; University of St. Andrews; University of Sussex; University of Warwick; University of York; University of London: King's College, University College (including the School of Slavonic and East European Studies), Imperial College of Science and Technology, the London School of Economics and Political Science, and the School of Oriental and African Studies, as well as other universities and art schools of choice.

Externally sponsored programs in the UK include the British American Drama Academy; the Arcadia, Boston, and Rochester University internships; the Marymount College Program at the London College of Fashion; and the Hansard Parliamentary Internship Programme.

Students studying in the United Kingdom enjoy a variety of services, and cultural activities, provided by the Cornell-Brown-Penn Centre in London.

LATIN AMERICA, CENTRAL AMERICA, AND THE CARIBBEAN

Argentina and Chile: various university-based study abroad programs, through the Cooperating Programs in the Americas (COPA) of Butler University

Belize, Brazil, Chile, Ecuador, Mexico, Nicaragua, Panama, Peru: School for International Training (SIT)

Costa Rica: Organization for Tropical Studies (OTS) Undergraduate Semester Abroad in tropical biology; School for Field Study

Cuba: University of Havana through COPA; School for International Training (currently suspended)

Ecuador and Jamaica: Partnership for Service Learning

Honduras: Escuela Agrícola Panamericana (Zamorano)

Mexico: Instituto Tecnológico y de Estudios Superiores de Monterrey (ITESM); Universidad de las Américas-Puebla (UDLA); Universidad Iberoamericana; School for Field Studies in Baja California; COPA program at Universidad Autónoma de Yucatán, Mexico

MIDDLE EAST AND NORTH AFRICA

Egypt: American University in Cairo

Israel: Ben-Gurion University; Haifa University; Hebrew University of Jerusalem; Tel Aviv University

Jordan: University of Jordan (CIEE)

Lebanon: American University of Beirut

Morocco: School for International Training

Other Locations

Cornell students are by no means limited to the locations listed above or to the programs identified for particular countries. In recent years, they have also studied in Austria, Croatia, Dominican Republic, Finland, Mongolia, Poland, Portugal, Switzerland, Turkey, Venezuela, and elsewhere.

Who Studies Abroad

Students from all seven undergraduate colleges and from all major fields study abroad; they are expected to have a cumulative grade point average of 3.0 or above. More than 500 undergraduates studied abroad last year. Because the colleges usually require that students complete at least 60 hours of undergraduate credit on the Ithaca campus, students who transfer to Cornell as juniors are usually unable to count study abroad credit toward their Cornell degree.

When Students Study Abroad and for How Long

Students may study abroad during their sophomore, junior, or senior year. Junior year is the traditional choice, but second-semester sophomore year or first-semester senior year abroad is increasingly popular. To ensure preparation, it is important to begin planning for study abroad as early as freshman year. Although semester-long programs are usually available, academic-year programs are highly recommended.

Application Process

Applications for all study abroad programs—Cornell programs, as well as those administered externally by other institutions—are available at Cornell Abroad, 300 Caldwell Hall, where students are encouraged to consult the library of study abroad materials, talk with staff members, and attend information meetings. The Cornell Abroad web site is an excellent resource for program offerings and links to universities and programs worldwide, as well as for applications to download and comprehensive information on all aspects of study abroad. Students meet with the study abroad advisers in their colleges to discuss how they will meet college degree requirements.

Each applicant completes a written statement of academic purpose outlining goals for study abroad and the program of study that will be followed. Applications are signed by both the faculty adviser and the college study abroad adviser. Arts and Sciences, Human Ecology, and Industrial and Labor Relations students submit applications to their college for forwarding to Cornell Abroad; Agriculture and Life Sciences, Architecture, Art, and Planning, Engineering, and Hotel Administration students submit applications directly to Cornell Abroad. Cornell Abroad reviews all applications and forwards them to programs and universities. *All students who wish to receive academic credit for study abroad*

must apply through Cornell Abroad and their undergraduate college.

The application *deadline* for study abroad in the fall 2006 semester and the 2006–2007 academic year is February 15, 2006, for all programs *except* Oxford and Cambridge, for which the deadline to study at those universities for the full year in 2006–2007 is November 1, 2005. Many universities and programs admit on a rolling basis before and after these dates. Students planning to study abroad in the spring semester should initiate the application process during the preceding spring. Early application may improve your chances of admission. In all cases, it is a good idea to check with Cornell Abroad.

Registration, Credit Transfer, and Grades

Students who apply through Cornell Abroad to programs approved by their colleges, as outlined above, remain registered at Cornell during study abroad. They are eligible for financial aid and receive full academic credit for pre-approved courses of study completed with satisfactory grades. Students enroll for a full load of courses abroad, according to the standards of the institution or program overseas, and normally receive 30 credits per year, or 12 to 20 credits per semester. The colleges review course work taken abroad and make the final decisions concerning credit transfer and distribution. When study abroad credit has been transferred, the *transcript* will indicate the names of the courses taken, the grades received, and the total credits earned for each semester. *The foreign grades are not translated into the Cornell/American grading system, nor are they averaged into the Cornell grade point average.*

Foreign Language Requirements

Study abroad programs in non-English-speaking countries that offer direct enrollment in universities generally require the equivalent of at least two years of college-level language study. Students should make firm plans for any requisite language courses early in their freshman year. English-language study abroad programs are increasingly available in non-English-speaking countries—for example, Belgium, Denmark, Egypt, France, Hong Kong, Hungary, Israel, Italy, Japan, Korea, Netherlands, People's Republic of China, and Sweden. Cornell students who participate in programs in a non-English-speaking country with English-language course work are required to take at least one language course as part of their program of study and are strongly encouraged to take more. Students are advised to consult with their college study abroad advisers about relevant language preparation, and students in the College of Arts and Sciences should note that they are required to have studied the host country language, if taught at Cornell, before study abroad.

Housing Arrangements

Study abroad programs generally provide housing in the homes of local residents, in halls of residence for university students, or in rental apartments. Cornell Abroad will advise students of the arrangements that are available and most appropriate to their individual needs.

Costs

Students studying abroad in Cornell-managed programs pay a fixed Cornell Abroad tuition per semester, which covers tuition, housing during term (except in U.K. universities), orientation, program-sponsored trips and events, and administrative and financial aid costs, including emergency medical evacuation and repatriation coverage. It may include other items (e.g., meals, commuter passes) depending on the program. Students pay other costs (e.g., airfare and personal expenses) directly. Different fee levels for Cornell programs reflect the relative costs of operation.

Pending approval by the Board of Trustees, in 2005–2006 the Cornell Abroad tuition for students participating in the Berlin Consortium for German Studies, the Cornell Nepal Study Program, EDUCO (Emory, Duke, and Cornell in Paris), the Michigan–Cornell–Penn Program in Seville, and the Swedish Practicum at the University of Goteborg is \$18,550.

There are three tiers of Cornell Abroad tuition for universities in the United Kingdom:

Group 1, University of Cambridge, Oxford, and the King's College pre-med program, at \$18,100 per semester; Group 2, University of Edinburgh, St. Andrews, Imperial College, King's College, London School of Economics, School of Oriental and African Studies, and University College London, at \$15,750; and Group 3, University of Birmingham, Bristol, East Anglia, Glasgow, Manchester, Sussex, Warwick, and York, at \$11,700 per semester.

For Denmark's International Studies Program (DIS), the Cornell Abroad tuition is \$17,640 per semester, and for the Kyoto Center for Japanese Studies (KCJS), the tuition is \$25,000 per semester. For the Bologna Cooperative Studies Program (BCSP) the tuition is \$28,800 for academic-year students and \$16,800 for spring-only participants.

Students studying in all other programs in 2005–2006 pay the tuition and other costs charged by their programs and a Cornell International Program Tuition of \$4,250 per semester. The International Program Tuition covers the direct and indirect costs of study abroad to the university, including financial aid for all study abroad students.

Financial Aid

Students who are accepted for study abroad during the academic year or semester, having applied through Cornell Abroad, are eligible for two semesters of financial aid, consistent with general university aid policy; this applies to all programs, whether run directly by Cornell or not. Students who have transferred into Cornell with 60 or more credit hours are not likely to receive aid for study abroad assuming they would thereby need more than eight semesters to earn the undergraduate degree. Some programs abroad offer need-based and merit-based scholarships and there are also external aid sources.

Security Abroad and Related Issues

The decision to study in a particular region of the world must be made by each student and his or her family in light of their own interpretation of current events. The director, associate director, and staff of Cornell Abroad stay in regular contact with representatives abroad and receive information regarding rapidly changing political situations worldwide

through the U.S. Department of State Office of Citizens Emergency Services and other agencies. As long as the State Department does not restrict travel by U.S. citizens, Cornell Abroad does not normally recommend limitations on student plans for study abroad. Cornell Abroad will do everything possible to notify students immediately that they should defer plans when official travel restrictions are issued. Nothing is as important as student security and well-being.

Responsibility for a decision to withdraw from a program or return home early rests with the individual and his or her family. There can be no guarantee of credit for students who withdraw from programs sponsored by colleges and universities other than Cornell; they are advised to inquire about those institutions' policies regarding the completion of academic work and the potential financial implications of a premature departure. In the event of a disrupted semester, refunds of tuition and fees, and the appropriate number of credits to be awarded, will be reviewed by Cornell and affiliated institutions on a case-by-case basis. Most institutions sponsoring study abroad programs strive to facilitate student completion of academic programs even under unusual circumstances and have tuition refund policies based on prorated formulas.

Sources of Information and Advice Concerning Study Abroad

Cornell Abroad (300 Caldwell Hall): Richard Gaulton, Ph.D., director; Kristen Grace, Ph.D., associate director; Libby Okihiro, student services coordinator; Kathy Lynch, financial services coordinator. The Cornell Abroad library contains an extensive collection of university catalogs and study abroad program brochures, files of course syllabi and evaluations, books, videotapes, and some information on travel, summer study, and work abroad. Comprehensive information is provided on the Cornell Abroad web site, which incorporates linkages to universities, programs, and resources worldwide as well as a database of cost estimates. In the early weeks of every semester, students and faculty and staff members discuss programs in a series of information meetings announced in the *Cornell Daily Sun* and on the Cornell Abroad web site (www.cuabroad.cornell.edu). The director and associate director are available at Cornell Abroad for individual advising.

College Study Abroad Advisers

Agriculture and Life Sciences: Bonnie Shelley or Tamara Durham, 140 Roberts Hall; *Architecture, Art, and Planning:* Jayne LeGro, B-1 West Sibley Hall; *Arts and Sciences:* Dean Pat Wasyliv, 55 Goldwin Smith Hall; *Engineering:* Dan Maloney Hahn, 167 Olin Hall; *Hotel Administration:* Amber Cohen, 180 Statler Hall; *Human Ecology:* Paul Fisher, 172 Martha Van Rensselaer Hall; *Industrial and Labor Relations:* Kevin Harris, 101 Ives Hall.

CORNELL IN WASHINGTON PROGRAM

M101 McGraw Hall
255-4090
ciw.cornell.edu

Cornell in Washington is a program that offers students from all colleges in the university an opportunity to earn full academic credit for a semester of study in Washington, D.C. The aim of the program is to give students a chance to take advantage of the rich resources of the national capital. Washington, as the center of much of the nation's political energy, is an ideal place to study American public policy and the institutions and processes through which it is formulated and implemented. At the same time, Washington's rich collection of libraries, museums, theaters, and art galleries offers an opportunity to explore American history, literature, art, and the full range of the American humanistic tradition. Washington's vast high-technology sector, concentrated in both telecommunications and biotechnology, creates endless opportunities for the study of recent developments and future prospects in those arenas, as well. Cornell in Washington students enroll in one of two core courses—Studies in Public Policy or Studies in the American Experience—take one or two elective courses, conduct individual research projects, and choose externships from more than a thousand positions in government agencies, research institutes, non-profit organizations, and private professional firms and businesses.

The program is housed at the Cornell Center, 2148 O Street, NW, Washington, DC 20037. The academic and administrative space is located on the first floor and 27 residential units for approximately 60 students are on the upper floors.

The Cornell in Washington program is open to qualified juniors and seniors from all colleges, schools, and divisions of the university. Students enroll in one core course, which involves a major research project often carried out in conjunction with an externship. Students also select one or two other seminars from such fields as government, history, economics, history of art, and social policy. All seminars are taught by Cornell faculty and carry appropriate credit toward fulfillment of major, distribution, and other academic requirements. In addition, students work as externs with congressional committee offices, executive-branch agencies, interest groups, arts and research institutions, and other organizations involved in public policy and American culture.

Tuition

Students are registered as full-time students, earn Cornell credit, pay full tuition, and remain eligible for financial aid.

Housing

Apartments are rented at the Cornell Center during the academic year. All are fully furnished (except for dishes, cookware, towels, and bedding) and reasonably priced by both Washington and Cornell standards. Two students are assigned to each efficiency and three to each one-bedroom apartment. Because of the limited number of spaces and the need for accurate planning, a non-refundable deposit of \$150 is required to reserve a space. Students are discouraged from bringing automobiles. The public transportation system, consisting of

both bus and subway service, is extensive and convenient to the center, and street parking is not permissible.

Applications

Application forms are available from the Cornell in Washington program office at M101 McGraw Hall. Students may also apply at ciw.cornell.edu. Applications should be submitted the semester before participation.

Information

The Cornell in Washington program web site is located at ciw.cornell.edu. Regular information meetings are held on campus in early October and March. These meetings are advertised in the *Cornell Daily Sun* and on campus bulletin boards. Additional information concerning externships, courses, housing, and other features of the program may be obtained at either the Cornell in Washington program office at M101 McGraw Hall, 607-255-4090, or in Washington at the Cornell Center, 2148 O Street, NW, Washington, DC 20037, 202-466-2184.

CORNELL INSTITUTE FOR PUBLIC AFFAIRS

294 Caldwell Hall
255-8018 (tel.)
255-5240 (fax)
cipa@cornell.edu
www.cipa.cornell.edu

The Cornell Institute for Public Affairs (CIPA) offers a university-wide two-year program of graduate professional studies leading to the master of public administration (M.P.A.) degree. CIPA prepares leaders for government, for nonprofit organizations, and for institutions in the private sector that interact with both.

CIPA Fellows (graduate students) have the opportunity to study public policy and program management from a cross-disciplinary perspective. Students gain an understanding of the political and administrative processes through which issues, problems, and policies are formulated; the economic and fiscal basis for government action in a market economy; and the analytical tools for assessing policy implications. They study the behavior of both public and private organizations and their management. They also develop sensitivity to the moral and ethical dimensions of policy issues.

Faculty Members

The depth and flexibility of the program is reflected in the growing number of affiliated faculty members. CIPA is not confined within a single school or college, but spans the entire university. More than 100 field faculty members, representing 25 departments, welcome CIPA Fellows into their courses and serve on professional report/thesis committees. About 30 members of this group, known as the Program Faculty, teach courses taken most frequently by CIPA Fellows. Within this group, members of the Core Faculty provide instruction in the foundation courses. Core Faculty members include David B. Lewis, CIPA director, City and Regional Planning; Nancy Chau, Applied Economics and Management; Neema Kudva, City and Regional Planning; Theodore J. Lowi, the John L. Senior Professor of American Institutions in the Department of

Government; Kathryn S. March, Anthropology; Christine Ranney, Applied Economics and Management; and Jerome Ziegler, Department of Policy Analysis and Management.

M.P.A. Program Flexibility

The two-year master of public administration (M.P.A.) degree program consists of 16 courses; CIPA Fellows typically take four courses per semester for four semesters. Although the M.P.A. program offers a basic structure for study, each CIPA Fellow works closely with a faculty adviser to design an individualized program based on his or her specific area of interest. Courses may be taken through the program in any department or college in the university.

Advising

Upon entering the M.P.A. program, each fellow is assigned a program adviser based on his or her area of interest. These advisers are drawn from the CIPA Core Faculty. They assist fellows in designing their individual program of study and selecting their courses. The assignment of advisers is meant to assist new students in getting a strong start with their studies. Once familiar with the resources available, students are welcome to ask another Core Faculty member to be their program adviser.

Toward the end of their first year, when they select their professional report/thesis topic, CIPA Fellows choose a report/thesis adviser from among the more than 100 faculty members in the field of public affairs. The adviser guides the fellow in research and writing.

Foundation Course Work

To develop a foundation of basic concepts and capabilities for the study of public policy, CIPA Fellows take three courses in each of the following three subject areas:

- Administration, Politics, and Public Policy
- Economics and Public Finance
- Quantitative Analysis

At least one of the three courses in each subject area must be a core foundation course—a course taught by a CIPA Core Faculty member.

Concentration Course Work

The M.P.A. program offers eight concentration options:

- Environmental Policy
- Finance and Fiscal Policy
- Government, Politics, and Policy Studies
- Human Rights and Social Justice
- International Development Studies
- Public and Nonprofit Management
- Science and Technology Policy
- Social Policy

During the latter half of the first year of course work, CIPA Fellows select a concentration. Concentrations are designed to help students organize and develop a particular area of study. Fellows are encouraged to pursue a broad range of interests within their choice of a concentration.

Internships and/or Off-Campus Study Options

CIPA Fellows are expected to engage in public-affairs work related to their respective areas of concentration during the summer between their first and second years of study. The objective is to gain pragmatic professional experience that will complement a student's formal academic study. CIPA's assistant director for professional development provides assistance to fellows in finding placements that match their interests, expertise, and professional goals. Appropriate internships are available in public policy- or public affairs-related organizations in both the public and private sector. Examples of placements include the following:

- the International Monetary Fund
- the Organization of American States
- the United Nations
- the United States Agency for International Development
- the United States Congress and Senate
- the World Bank
- state, local, and urban municipal governments
- nongovernmental organizations worldwide
- private sector consulting firms

CIPA Fellows also have the opportunity to gain professional experience off-campus, while taking a semester of courses for credit, through the following three programs:

- Rome Program
- Cornell in Washington
- Cornell in Nepal Study Program.

Professional Writing Requirement

As a culmination of studies in the M.P.A. program, each fellow develops and submits either a professional report or thesis. Typically, the report or thesis grows out of a fellow's specific area of concentration and often incorporates work done during the summer internship or an off-campus study program. Both the CIPA professional report and the thesis require the student to synthesize and apply his or her education to formulate a solution to a policy problem. The thesis places a greater emphasis on problem definition and literature review, while the professional report emphasizes feasibility, practitioner accessibility, and adapting a student's writing to the professional culture and standard practices of the client organization. The level of work expected for the M.P.A. thesis or professional report is equivalent to one or two semester-long courses.

Professional Student Activities

CIPA Fellows gain practical skills by organizing, managing, and participating in a variety of professional development activities. These provide fellows with opportunities to share work experience with other fellows, and to meet practitioners and distinguished faculty members in the field of public affairs. Fellows participate in one or more of the following activities for at least two semesters. These initiatives include:

- Colloquium and Conference Committee: This student group sets the agenda for the weekly Colloquium Series and

makes arrangements for the chosen guest lecturers to come to campus.

- *Point of View (POV)*: The CIPA Public Affairs television program, POV is part talk show and part debate show. Fellows work in all aspects of TV production and presentation, gaining invaluable experience for the media exposure they will encounter as public-policy professionals.
- *The Current*: CIPA Fellows publish a journal of student policy research. Working on *The Current* offers fellows a firsthand view of the rigors of publishing academic work, and also provides a foundation in professional writing and editing—necessary skills for preparing reports and position papers, and publishing research findings.

Complementary Degrees

CIPA Fellows may elect to combine their M.P.A. program with study for a complementary degree such as a J.D. from the Cornell Law School, an M.B.A. from the Graduate School of Management, an M.M.H. from the Hotel School, or an M.R.P. in the field of City and Regional Planning. Admission to the complementary degree program is independent from admission into CIPA.

Accelerated Master's Program

An accelerated program for Cornell undergraduates allows advanced students to apply to CIPA in their junior year, begin CIPA-related course work in their senior year, and complete the M.P.A. in just one year beyond their undergraduate studies.

Residence Requirement

Fellows are required to spend four semesters of study in residence to complete the M.P.A. Those who enroll in the Cornell Accelerated Master's program can earn the equivalent of two semesters in residence during their senior year.

Admission

The CIPA program seeks diversity in its student body, drawing from a pool of applicants who have studied in a wide range of disciplines. No specific background or undergraduate major is required, although individuals with previous work experience in policy making or implementation are strongly encouraged to apply. Admission to CIPA is selective.

Decisions are based on:

- potential for public-policy leadership as evidenced by professional work; community, extracurricular, or other relevant experience
- an evaluation of the applicant's overall academic record
- GRE scores
- letters of recommendation
- an extensive written statement of purpose

Applicants for whom English is a second language will need to achieve a minimal TOEFL score of 250 (computer based) or 600 (paper based).

Although CIPA has a policy of rolling admission, applications should be submitted by March 1 to be considered for financial aid.

For an application or for more information, contact the Cornell Institute for Public Affairs, 294 Caldwell Hall (tel: 255-8018; fax: 255-5240; cipa@cornell.edu; www.cipa.cornell.edu).

Financial Aid

CIPA students fund their education by drawing on a variety of sources. Although the institute provides some partial fellowships, it is unable to provide full support for any individual student. Fellows often win support from Fulbright, Truman, or World Bank fellowships. In addition, Cornell offers numerous assistantship and employment opportunities for graduate students. Applicants are encouraged to explore all available sources of external funding, including grants that may be provided by current employers.

CORNELL PLANTATIONS

One Plantations Road
255-2400
plantations@cornell.edu
www.plantations.cornell.edu

Introduction

Cornell Plantations is Cornell University's arboretum, botanic garden, natural areas, and many on-campus gardens—places of exceptional beauty, diversity, and learning opportunities. Areas managed include over 4,000 acres of natural areas on and off campus in addition to the 150 acres in the F. R. Newman Arboretum and the 50 acres of botanical gardens in and around central campus.

Cornell Plantations provides unique outdoor laboratories and plant collections for Cornell's academic programs and research in disciplines such as ecology and evolutionary biology, landscape architecture, ornamental horticulture, and bioengineering. While many of Cornell Plantations' resources are on or near campus, several thousand acres in and around Tompkins County preserve quality examples of native vegetation and rare plants and animals. The lands include bogs, fens, glens, swamps, wet and dry forests, vernal ponds, and meadows. Arrangements to use these natural areas for classes and research can be made by calling Cornell Plantations. Cornell Plantations has something for everyone! We're also the many places that non-horticultural students and faculty members visit for classes ranging from art, literature, and women's issues, to nutrition.

Credit Courses

Cornell Plantations offers three for-credit courses: HORT 480 Plantations Fall Lecture Series, HORT 485 Public Garden Management, and HORT 640 New Directions in Public Horticulture. HORT 480 is a 1-credit S-U lecture series offered each fall. HORT 485 is a 3-credit course offered alternate spring semesters. HORT 640 is a 1-credit S-U discussion course offered alternate spring semesters. Cornell Plantations also offers noncredit classes and workshops such as botanical illustration, arts and crafts, gardening techniques, and ecology walks; visit www.plantations.cornell.edu, or call 255-2400 for more information.

Internships

Cornell Plantations' internship program is just for you, the Cornell University student! Since the 1990s, more than 70 university students have been working side by side with Plantations' knowledgeable staff, learning and having fun. A number of positions in various areas are available each year, beginning after finals in May. All positions strive to build on classroom learning through hands-on work, encouraging students' interests in horticulture and the natural world.

Master's Program

Cornell Plantations' master of professional studies program offers fully funded fellowships in public garden management. Visit our web site for program details.

Planning a Visit

To discover all that is Cornell Plantations, visit www.plantations.cornell.edu or pick up a map or a copy of the *Cornell Plantations Path Guide* at the Visitor Resource Center and Garden Gift Shop in the Lewis Education Center just below Tower Road. The *Path Guide* and accompanying video are also available at the Cornell Store.

PROGRAM ON ETHICS AND PUBLIC LIFE

240 Goldwin Smith Hall
255-8515

The critical issues of public life are inescapably ethical issues. In the economy, we face questions of equity and justice and questions about the relation between prosperity, the environment, and the quality of individual lives. In constitutional law, we confront dilemmas about civil rights, freedom of speech, privacy, and abortion. In politics and government, we wrestle with questions about campaigning, character, and compromise. And in international affairs, we encounter the complexities of war and peace, human rights, multilateral aid, and climate change.

The university-wide Program on Ethics and Public Life (EPL) is Cornell's initiative in the systematic study of the ethical dimension of specific public issues. EPL grew out of a conviction that these questions need something more than abstract philosophical discussion. In addition to the general study of values and principles that goes on in theoretical ethics, universities need to foster ways of thinking about the complex, uncertain, and urgent problems of the real world, ways of thinking that are realistic without sacrificing their ethical character.

EPL seeks to enhance and facilitate the discussion of ethical issues by students whose central educational interests lie elsewhere, but whose work and lives will nevertheless confront them with dilemmas and responsibilities for which a university education should prepare them. EPL aims to enrich existing departments with courses that are intellectually and practically fruitful at the same time. It offers a concentration in Law and Society (see separate listing under "Special Programs and Interdisciplinary Studies").

For information regarding content or availability of EPL core/related courses, contact the academic department listed.

EPL Core Courses

PHIL 194/GOVT 294 Global Thinking
PHIL 242/GOVT 260 Social and Political Philosophy
PHIL 246/B&SOC 206/S&TS 206 Ethics and the Environment
PHIL 247 Ethics and Public Life
PHIL 342 Law, Society, and Morality
GOVT 466/LAW 648 Feminism and Gender Discrimination
GOVT 468 Global Climate and Global Justice
GOVT 491/PHIL 691 Normative Elements of International Relations

Related Courses

AN SC 414 Ethics and Animal Science
ENGRG 360/S&TS 360 Ethical and Social Issues in Engineering
PHIL 446 Topics in Social and Political Philosophy
ILRCB 482 Ethics at Work
ILRCB 488 Liberty and Justice for All
LAW 655 International Human Rights
LAW 667 Law and Ethics of Lawyering
LAW 718 Ethnic Conflict and International Law
LAW 748 Legal Ethics and Professionalism
MIL S 441 Leadership, Management, and Ethics for Junior Military Officers
NAV S 402 Leadership and Ethics
NBA 671 Business Ethics
NTRES 332 Introduction to Ethics and Environment
NTRES 433 Applied Environmental Philosophy
PAM 567 Health Policy
PHIL 145 Contemporary Moral Issues
PHIL 193 Inequality, Diversity, and Justice
PHIL 241 Ethics
PHIL 245 Ethics and Health Care
PHIL 341 Ethical Theory
PHIL 344 History of Ethics: Ancient and Medieval
PHIL 345 History of Ethics: Modern
PHIL 346 Modern Political Philosophy
PHIL 447 Contemporary Ethical Theory
PHIL 641 Ethics and Value Theory

Michele M. Moody-Adams, Wyn and William Y. Hutchinson Professor of Ethics and Public Life, and professor of philosophy; Burke Hendrix, assistant professor of government and assistant professor of ethics and public life; Henry Shue, professor of ethics and public life and professor of philosophy.

PROGRAM IN REAL ESTATE

114 West Sibley Hall
255-7110

The two-year master of professional studies in real estate (M.P.S./RE) degree program is an interdisciplinary program that combines courses from nearly every college at Cornell University. The degree is designed for aspiring real estate professionals who are in the initial or early stages of their careers. Two entities provide support for the degree program. The Program in Real Estate exists at Cornell University to serve as the integrating organizational unit for financial management and administration of academic and industry-related real estate activities on and off campus. The field of real estate is a committee of faculty members selected from several different colleges that is directly involved in and responsible for the design, delivery, and administration of the real estate curriculum.

The professional study of real estate is concerned with the finance, exchange, development, management, marketing, and many other aspects of the real estate business. Real estate professionals also contribute an understanding of the long-range social, political, ethical, and environmental implications of decisions about real estate. The 62 credit hours of course work needed to earn the degree provide a comprehensive and lasting foundation for professional careers in real estate.

Students take core courses in principles of real estate, the real estate development process, real estate finance and investments, managerial finance, residential development, real estate law, construction planning and operations, design in real estate development, and real estate marketing and management, along with a weekly industry seminar. Elective courses are taken in a chosen area of concentration, and there is a leadership and management distribution requirement. Many concentration options are possible and may be structured from the hundreds of related courses taught at Cornell University (e.g., development, finance, investments, real estate consulting, sustainable development, property and asset management, real estate marketing and market analysis, or international real estate concentrations). Students complete real-world, semester-long project workshops during their second and final semesters.

Admissions

Applicants to the Program in Real Estate must have completed a bachelor's degree with a good academic record. Applicants must submit a résumé plus two letters of recommendation on appropriate letterhead either from faculty members familiar with the applicant's academic work, or if appropriate, professional recommendations based on work experience. Competitive scores for the GMAT are required. Extension and relevant work experience will receive favorable consideration. International students, for whom English is a second language, will need to achieve a minimum TOEFL score of 250 (computer based) or 600 (paper based). There is no work experience required for admission; however, it is strongly preferred that applicants have at least some work experience; three to five years has been typical. Applications are received on a rolling basis. To be considered for financial aid, applications must be received by January 15. Otherwise, please submit complete application by March 1. Wait list applications will be accepted until June 1. For more information, contact the graduate field coordinator at 255-7110, or real_estate@cornell.edu.

SCIENCE OF EARTH SYSTEMS: AN INTERCOLLEGE MAJOR

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system,

and understanding their various interactions is crucial for understanding our environment.

The Science of Earth Systems (SES) major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges of modern science and as the necessary foundation for the future management of our home planet. In this program, Cornell's strengths across a broad range of earth and environmental sciences have been coalesced to provide students with the tools to engage in what will be the primary challenge of the 21st century.

Graduates of Cornell's SES program are well prepared for several career and advanced study options:

- Graduate studies leading to the M.S. and/or Ph.D. in any of the earth science subdisciplines (e.g., atmospheric science, geology/geophysics, biogeochemistry, hydrology, oceanography).
- Employment in environmentally oriented careers in both the private and public sector at the B.S. or B.A. level such as environmental consulting and science writing.
- Graduate degree in environmental law or policy. These fields value students with an understanding of the science behind legal and policy decisions.
- Advanced degree in teaching, for example, earth science at the middle or high school level.
- Medical school. The emphasis on basic sciences in the SES curriculum makes the SES major a suitable springboard for a career in medicine.

The SES major is available for students in the College of Agriculture and Life Sciences and the College of Arts and Sciences. In the College of Engineering, the SES curriculum may be completed by choosing the SES option in the Department of Earth and Atmospheric Sciences. The SES major has its home in the Department of Earth and Atmospheric Sciences but relies on the collaboration of several departments across the university.

The SES Curriculum

The SES curriculum provides strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences.

The requirements for the major are as follows:

1. Basic Math and Sciences
 - a. MATH 111 and 112, or MATH 191 and 192
 - b. PHYS 207 and 208, or PHYS 112 and 213 if PHYS 214 will also be taken (see below)
 - c. CHEM 207 and 208
 - d. BIO G 101/103 and 102/104 (or 105-106) or BIO G 109 and 110
2. Required introductory course: EAS 220 The Earth System
3. Science of Earth Systems Core Courses
 - EAS 302 Evolution of the Earth System
 - EAS 331/ASTRO 331 Climate Dynamics

EAS 321/NTRES 321 Introduction to Biogeochemistry

4. Concentration Courses

Four intermediate to advanced-level courses (300 level and up) that build on the core courses and have prerequisites among the "Basic Math and Sciences" courses listed above. Note: Additional basic math and science courses may be required to complete the concentration courses; the specific courses will depend on the student's choice of concentration. These concentration courses build depth and provide the student with a specific expertise in some facet of earth system science. Possible areas of concentration include, but are not limited to, Ocean Sciences, Environmental Geology, Climate Dynamics, Biogeochemistry, Ecological Systems, Environmental Biophysics, Hydrological Systems, and Soil Science.

For more information contact Professor Bryan Isacks, Department of Earth and Atmospheric Science, bli1@cornell.edu, and visit www.eas.cornell.edu/eas/ses/SES.home.html.

DEPARTMENT OF STATISTICAL SCIENCE

301 Malott Hall
255-8066

M. T. Wells, chair (301 Malott Hall, 255-4388; R. L. Strawderman, director of graduate studies; J. A. Bunge, director of professional programs; T. Apanosovich, T. Berger, J. Booth, C. Bustamante, T. DiCiccio, R. Durrett, E. Dynkin, T. Fine, X. Guo, Y. Hong, J. T. G. Hwang, H. Kesten, N. Kiefer, G. Lawler, R. Nielsen, M. Nussbaum, P. Protter, S. Resnick, D. Ruppert, G. Samorodnitsky, S. J. Schwager (undergraduate coordinator), B. Turnbull, P. Velleman, A. Vidyashankar, T. Vogelsang.

The university-wide Department of Statistical Science at Cornell coordinates activities in statistics and probability at the undergraduate, graduate, and research levels.

Students interested in graduate study in statistics and probability can apply to the graduate field of statistics or to one of the other graduate fields of study that offer related course work. Students in the field of statistics plan their graduate programs with the assistance of their Special Committee. For detailed information on opportunities for graduate study, students should contact the director of graduate studies, 301 Malott Hall.

The department offers an undergraduate major and minor in biometry and statistics through the Department of Biological Statistics and Computational Biology (BSCB) in the College of Agriculture and Life Sciences. It also offers a minor in Engineering Statistics through [the Department of] Operations Research and Industrial Engineering in the College of Engineering. Undergraduate majors and certificate programs are currently under development for other colleges. For information, contact the undergraduate coordinator (301 Malott Hall, 255-8066). Statistics courses offered by the departments listed below will fill distribution requirements in many of the colleges.

A statistical consulting service is offered by the faculty of BSCB. There is no charge to members of the Cornell community for using the Statistical Consulting Service. It provides

guidance to researchers in a broad variety of fields on designing experiments, collecting and analyzing data, and drawing appropriate conclusions from the results of their studies. Statistical computing consulting is also available through the Office of Statistical Consulting, B21 Savage Hall, 255-1926.

The department is organized into four units: Biological Statistics, Engineering Statistics, Mathematical Statistics and Probability, and Social Statistics. The areas covered include agricultural statistics, biostatistics, economic and social statistics, epidemiology, manufacturing statistics, quality control and reliability, probability theory, sampling theory, statistical computing, statistical design, statistical theory, and stochastic processes and their applications.

Course Designations

The following course identifiers are used to designate the courses offered by the separate units: Biological Statistics and Computational Biology (CALS), STBTRY; Engineering Statistics Unit (ENGR), STENGR; Mathematical Statistics Unit (ARTS), STMATH; Social Statistics Unit (ILR and ARTS), STSOC. To enroll in one of the courses, see the listing for the appropriate college.

Descriptions of undergraduate and graduate courses are listed below.

Department of Statistical Science

ST 201(2010) Introductory Statistics

This is an introduction to the basic concepts of probability, statistics and data analysis. Descriptive methods, normal theory models, and inferential procedures are considered. Topics include basic statistical designs, an introduction to probability, estimation, confidence intervals, tests of significance for a single population mean and proportion, the difference in two population means and proportions, ANOVA, multiple linear regression, contingency tables, and logistic regression.

ST 501-502(5010-5020) Applied Statistical Analysis

Two-semester core course for students in master of professional studies (M.P.S.) degree program in applied statistics in Department of Statistical Science. Prerequisite: enrollment in M.P.S. program. Consists of a series of modules on various topics in applied statistics. Some modules include guest lectures from practitioners. Parallel with the course, students complete a yearlong, in-depth data analysis project.

ST 501(5010) Applied Statistical Analysis

Letter grades only. Topics include, but are not limited to: statistical computing systems, statistical software packages, data management, statistical graphics, and simulation methods and algorithms.

ST 502(5020) Applied Statistical Analysis

Letter grades only. Topics include, but are not limited to: sample surveys and questionnaire design, data sources, experimental design, and data mining.

ST 600(6000) Statistics Seminar

Fall and spring. 1 credit. Pre- or co-requisite: BTRY 409 or permission of instructor. S-U grades only.

Biological Statistics Unit

- STBTRY 301 Biological Statistics I (enroll in BTRY 301)
 STBTRY 302 Biological Statistics II (enroll in BTRY 302)
 STBTRY 310 Statistical Sampling (enroll in BTRY 310)
 STBTRY 382 Introduction to Statistical Genomics and Bioinformatics (enroll in BTRY 382)
 STBTRY 408 Theory and Probability (enroll in BTRY 408)
 STBTRY 409 Theory of Statistics (enroll in BTRY 409)
 STBTRY 482 Statistical Genomics (enroll in BTRY 482)
 STBTRY 494 Undergraduate Special Topics in Biometry and Statistics (enroll in BTRY 494)
 STBTRY 495 Statistical Consulting (enroll in BTRY 495)
 STBTRY 497 Undergraduate Individual Study in Biometry and Statistics (enroll in BTRY 497)
 STBTRY 498 Undergraduate Supervised Teaching (enroll in BTRY 498)
 STBTRY 499 Undergraduate Research (enroll in BTRY 499)
 STBTRY 601 Statistical Methods I (enroll in BTRY 601)
 STBTRY 602 Statistical Methods II (enroll in BTRY 602)
 [STBTRY 603 Statistical Methods III (enroll in BTRY 603)]
 STBTRY 604 Statistical Methods IV: Applied Design (enroll in BTRY 604)
 [STBTRY 652 Computationally Intensive Statistical Inference]
 [STBTRY 672 Topics in Environmental Statistics (BTRY 672)]
 STBTRY 682 Statistical Genomics (enroll in BTRY 682)
 STBTRY 694 Graduate Special Topics in Survival Analysis (enroll in BTRY 694)
 STBTRY 697 Individual Graduate Study in Biometry and Statistics (enroll in BTRY 697)
 [STBTRY 717 Linear and Generalized Linear Models (enroll in BTRY 717)]
 STBTRY 795 Statistical Consulting (enroll in BTRY 795)
 STBTRY 798 Graduate Supervised Teaching (enroll in BTRY 798)

Engineering Statistics Unit

- STENGR 310 Introduction to Probability and Random Signals (enroll in ECE 310)
 STENGR 360 Engineering Probability and Statistics II (enroll in ORIE 360)
 STENGR 361 Introductory Engineering Stochastic Processes I (enroll in ORIE 361)
 STENGR 411 Random Signals in Communications and Signal Processing (enroll in ECE 411)
 STENGR 436 A Mathematical Examination of Fair Representation (enroll in ORIE 436)
 STENGR 467 Telecommunication Systems I (enroll in ECE 467)
 STENGR 473 Operations Research Tools for Financial Engineering (enroll in ORIE 473)
 STENGR 474 Statistical Data Mining (enroll in ORIE 474)
 STENGR 476 Applied Linear Statistical Models (enroll in ORIE 476)
 STENGR 512 Fundamental Information Theory (enroll in ECE 562)
 [STENGR 517 Feedforward Neural Networks (enroll in ECE 577)]
 STENGR 523 Introductory Engineering Stochastic Processes I (enroll in ORIE 523)

- STENGR 560 Engineering Probability and Statistics II (enroll in ORIE 560)
 STENGR 561 Queuing Theory and Its Applications (enroll in ORIE 561)
 STENGR 580 Simulation Modeling and Analysis (enroll in ORIE 580)
 STENGR 650 Applied Stochastic Processes (enroll in ORIE 650)
 STENGR 651 Probability (enroll in ORIE 651)
 STENGR 665 Storage Data Communication Models (enroll in ORIE 665)
 STENGR 670 Statistical Principles (enroll in ORIE 670)
 STENGR 674 Statistical Learning Theory for Data Mining (enroll in ORIE 674)
 STENGR 768 Selected Topics in Applied Probability (enroll in ORIE 768)
 STENGR 778 Selected Topics in Applied Statistics (enroll in ORIE 778)

Mathematical Statistics and Probability Unit

- STMATH 171 Statistical Theory and Application in the Real World (enroll in MATH 171)
 STMATH 311 Introduction to Analysis (enroll in MATH 311)
 STMATH 471 Basic Probability (enroll in MATH 471)
 STMATH 472 Statistics (enroll in MATH 472)
 STMATH 621 Measure Theory and Lebesgue Integration (enroll in MATH 621)
 STMATH 671-672 Probability Theory (enroll in MATH 671-672)
 STMATH 674 Introduction to Mathematical Statistics (enroll in MATH 674)
 STMATH 771-772 Seminar in Probability and Statistics (enroll in MATH 771-772)
 STMATH 777-778 Stochastic Processes (enroll in MATH 777-778)

Social Statistics Unit

- STSOC 210 Statistical Reasoning I (enroll in ILRST 210)
 STSOC 211 Statistical Reasoning II (enroll in ILRST 211)
 STSOC 310 Statistical Sampling (enroll in ILRST 310)
 STSOC 312 Applied Regression Methods (enroll in ILRST 312)
 STSOC 319 Introduction to Statistics and Probability (enroll in ECON 319)
 STSOC 320 Introduction to Econometrics II (enroll in ECON 320)
 STSOC 321 Applied Econometrics II (enroll in ECON 321)
 STSOC 411 Statistical Analysis of Qualitative Data (enroll in ILRST 411)
 STSOC 499 Directed Studies (undergraduate) (enroll in ILRST 499)
 STSOC 510 Statistical Methods for the Social Sciences I (enroll in ILRST 510)
 STSOC 511 Statistical Methods for the Social Sciences II (enroll in ILRST 511)
 STSOC 630 Econometrics II (enroll in ECON 620)
 STSOC 639 Econometrics I (enroll in ECON 619)
 STSOC 721 Time Series Econometrics (enroll in ECON 721)
 STSOC 722 Semi/Nonparametric Econometrics (enroll in ECON 722)

Business and Preprofessional Study

UNDERGRADUATE BUSINESS STUDY

Cornell offers an accredited general undergraduate business degree program as well as world-renowned business-related programs in five other colleges and schools. Because the choices are so broad, students are encouraged to explore the offerings carefully to identify the program that best matches their business career goals. (Graduate study is available in the Johnson Graduate School of Management as well as in graduate fields associated with each of the undergraduate options.)

Applied economics and management

The Department of Applied Economics and Management (AEM) in the College of Agriculture and Life Sciences is home to Cornell's general undergraduate business degree. Accredited by AACSB International—The Association to Advance Collegiate Schools of Business, AEM's undergraduate business program offers courses that prepare students for careers in finance, marketing, management, and business strategy. Students also may participate in AEM's specialized programs focusing on entrepreneurship, agribusiness, small business, and food industry management. Courses reflect the program's analytical, applied economics focus (business.aem.cornell.edu).

Arts and sciences Many of the liberal arts majors offered by the College of Arts and Sciences provide students with a background for a successful business career. In particular are majors in economics, mathematics, sociology, and psychology. Economics focuses on the production, distribution, and consumption of goods and services; monetary systems; and economic theories. Students interested in the human dimensions of business can choose sociology or psychology. Mathematics majors can choose concentrations in computer science, operations research, or economics to prepare for careers in areas such as actuarial science or finance (www.arts.cornell.edu).

Engineering Many of today's business managers hold engineering degrees. Each of the College of Engineering's 12 major fields prepares students for business careers. Operations research and engineering is the most business-oriented engineering field, preparing graduates for careers such as investment banking and process engineering. Engineering students in any field can take a business-oriented minor in areas such as

industrial systems and information technology, and operations research and management science (www.engineering.cornell.edu).

Hotel administration The School of Hotel Administration, the world's leading hospitality management program, prepares students for management and entrepreneurial careers in businesses such as hotels, resorts, restaurants, amusement parks, sports arenas, cruise lines, and airlines. The school offers a rigorous business curriculum with courses in finance and real estate; hospitality facilities and operations; marketing, tourism, strategy, and information systems; and organizational management, communication, and law. The school's 150-room conference hotel gives students the opportunity to apply what they learn in a real-world business (www.hotelschool.cornell.edu).

Human ecology The College of Human Ecology offers three business-oriented majors. The textiles and apparel major prepares students for careers in the fashion industry, for example, as a retail executive or merchandise buyer. Students majoring in facility planning and management study interior design, management, environmental psychology, and real estate to pursue careers as facility planners and consultants. The policy analysis and management major offers concentrations focusing on health, consumers, and policy, and its graduates pursue careers as nonprofit managers, consumer advocates, and policy researchers (www.humec.cornell.edu).

Industrial and labor relations The School of Industrial and Labor Relations (ILR) focuses on the "people" side of business. Its professional-level curriculum provides a strong social science foundation in organizational behavior, human resource management, labor law, labor economics, history, and statistics. Students can then develop special interests in management, dispute resolution, negotiation, employee relations, labor unions, collective bargaining, public policy, and international labor issues. Most ILR graduates begin careers in areas such as management, consulting, and public policy, but about one-third go directly to law school (www.ilr.cornell.edu).

Related Areas

Entrepreneurship and Personal Enterprise Program

This university-wide program is open to all Cornell students interested in eventually starting their own businesses or working for venture capital firms. A series of almost 50 linked entrepreneurship-related courses are offered by the above six colleges and schools as well as by the Johnson Graduate School of Management, the Law School, and the College of Veterinary Medicine (epe.cornell.edu).

International programs Several additional programs allow business students to focus on a particular geographic area. Concentrations are offered in Latin American Studies, Modern European Studies, East Asian Studies, South Asian Studies, Southeast Asian Studies, and Africana Studies (all in the College of Arts and Sciences). The College of Agriculture and Life Sciences offers an interdepartmental program in international agriculture.

COMBINED DEGREE PROGRAMS

Highly qualified undergraduates may co-register with the Johnson Graduate School of Management during their senior year, thereby earning their M.B.A. degree in less than the usual time. Students in all Cornell undergraduate colleges may explore this option. The College of Engineering allows qualified students to earn a B.S., M.B.A., and M. Eng. degree in six years. Admission to these combined degree programs is limited to particularly promising applicants. Careful planning is required for successful integration of the course work.

PRELAW STUDY

Law schools do not prescribe any particular prelaw program, nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and there is practically no subject that cannot be considered of value to the lawyer. Therefore, no undergraduate course of study is totally inappropriate. Students contemplating legal careers should be guided by certain principles, however, when selecting college courses.

1. Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.
2. Of first importance to the lawyer is the ability to express thoughts clearly and cogently in both speech and writing. First-year writing seminars, required of nearly all Cornell first-year students, are designed to develop these skills. English literature and composition, and communication courses, also serve this purpose. Logic and mathematics develop exactness of thought. Also of value are economics, history, government, and sociology, because of their close relation to law and their influence on its development and ethics, and philosophy, because of the influence of philosophic reasoning on legal reasoning and jurisprudence. Psychology and human development lead to an understanding of human nature and mental behavior. Some knowledge of the principles of accounting and of the sciences such as chemistry, physics, biology, and engineering is recommended and will prove of practical value to the lawyer in general practice in the modern world.
3. Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students' interests; help cultivate a wider appreciation of literature, art, and music; and make better-educated and well-rounded persons.
4. Certain subjects are especially useful in specialized legal careers. For some, a broad scientific background—for example, in agriculture, chemistry, physics, or engineering—when coupled with training in law, may furnish qualifications necessary for specialized work with the government, for counseling certain types of businesses, or for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and

legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important goals are to acquire perspective, social awareness, and a critical cast of mind; to develop the ability to think logically and analytically; and to express thoughts clearly and forcefully. These are the crucial tools for a sound legal education and a successful career.

The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the university to apply and be admitted to the Law School. At the time of entry they must have completed 105 of the 120 credits required for the bachelor of arts degree, including 92 credits of course work in the College of Arts and Sciences.

It may be possible for exceptionally well-qualified students in other Cornell undergraduate colleges to arrange to enter the Law School after three years. In addition, members of the Cornell Law School faculty sometimes offer undergraduate courses such as *The Nature, Functions, and Limits of Law*, which are open to all undergraduates.

PREMEDICAL STUDY

Medical and dental schools, while not requiring or recommending any particular major course of study, do require that particular undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, and physics, and all must be taken with a lab. A year of English composition (or a first-year writing seminar) is also required. In addition, many medical schools require or recommend mathematics and at least one advanced biological science course, such as biochemistry, genetics, embryology, histology, or physiology.

There is no major that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests. Students are more likely to succeed at, and benefit from, subjects that interest and stimulate them, and there is no evidence that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, successful Cornell applicants to medical and dental schools have come from the Colleges of Arts and Sciences, Agriculture and Life Sciences, Human Ecology, and Engineering. The appropriate choice depends to a great extent on the student's other interests.

PREVETERINARY STUDY

There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below. Most preveterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to

related careers if the student does not go to veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.

The college-level prerequisite courses for admission to the College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the College of Veterinary Medicine at Cornell, may vary at other veterinary colleges.

For information on additional preparation, including work experience and necessary examinations, students should consult the brochure, *Admissions Information*, obtained by writing to the Office of DVM Admissions, College of Veterinary Medicine, Cornell University, S2-009 Schurman Hall, Ithaca, NY 14853-6401. Information on the Guaranteed Admissions Program is available from the same address.

Qualified students in the College of Agriculture and Life Sciences may apply for acceptance in a double-registration program arranged between Cornell University and the College of Veterinary Medicine at Cornell. This program allows registered students to save one year in pursuit of the bachelor's and D.V.M. degrees. Further information about this program is available from the Health Careers Program, Cornell Career Services, 103 Barnes Hall, Ithaca, NY 14853-1601.

COLLEGE OF AGRICULTURE AND LIFE SCIENCES

INTRODUCTION

College Focus

The College of Agriculture and Life Sciences offers men and women broad-based educational programs to provide them with technical, management, and leadership skills in four primary areas of focus. These areas were developed in response to the global challenges of the 21st century. They are fluid, overlapping, and interdependent and represent agriculture and life sciences at its broadest and most dynamic meaning. These four areas are:

- Land-grant, or agricultural sciences
- Applied social sciences
- Environmental sciences
- New life sciences

Faculty members challenge students with educational programs that promote problem-solving, basic and applied research, extension, and outreach. The programs are geared to the discovery and dissemination of knowledge for the purpose of advancing agriculture and food systems, health and nutrition, food security, biological sciences, education, communication, natural resources and environmental quality, and community, urban and rural development throughout New York State, the nation, and the world.

Administration

Susan A. Henry, dean

William E. Fry, senior associate dean

John M. Finamore, associate dean for financial affairs

Mary Lou Doyle, assistant dean for human resources

Michael P. Riley, assistant dean for alumni affairs, development, and communications

Donald R. Viands, associate dean and director of academic programs

Mark W. Wysocki, associate director of academic programs

Jeffrey J. Doyle, director of undergraduate biology

vacant, associate dean and director of the Cornell University Agricultural Experiment Station

Susan J. Riha, director for sponsored research in the senior associate dean's office

Helene R. Dillard, associate dean and director of cooperative extension

Michael P. Hoffmann, associate director of cooperative extension

W. Ronnie Coffman, director of international programs

James E. Haldeman, associate director of international programs

Terry W. Tucker, associate director of international programs

vacant, director of Cornell International Institute for Food, Agriculture, and Development

Department Chairs

Animal science: Alan W. Bell, 149 Morrison Hall

Applied economics and management: William H. Lesser, 154 Warren Hall

Atmospheric science unit (part of Earth and Atmospheric Sciences): Stephen J. Colucci, 1116 Bradfield Hall; Teresa E. Jordan, 4108 Snee Hall

Biological and environmental engineering: Michael F. Walter, 104 Riley-Robb Hall

Biological statistics and computational biology: Martin T. Wells, 435 Warren Hall

Communication: Geri K. Gay, 303 Kennedy Hall

Crop and soil sciences: Stephen D. DeGloria, 232 Emerson Hall

Development sociology: Philip D. McMichael, 133A Warren Hall

Ecology and evolutionary biology: Nelson G. Hairston, E305 Corson Hall

Education: Rosemary S. Caffarella, 435 Kennedy Hall

Entomology: Jan P. Nyrop, 2130 Comstock Hall

Food science: Joseph H. Hotchkiss, 119 Stocking Hall

Horticulture: Marvin P. Pritts, 134A Plant Science Building

Landscape architecture: Kathryn L. Gleason, 446 Kennedy Hall

Microbiology: William C. Ghiorse, B75C Wing Hall

Molecular biology and genetics: Charles F. Aquadro, 235 Biotechnology Building

Natural resources: Barbara A. Knuth, 117 Fernow Hall

Neurobiology and behavior: Thomas D. Seeley, W159 S. G. Mudd Hall

Plant breeding and genetics: W. Ronald Coffman, 241 Emerson Hall

Plant pathology: George W. Hudler, 318 Plant Science Building

Statistical sciences: Bruce W. Turnbull, 227 Rhodes Hall

Student Services

Office of Academic Programs

The College of Agriculture and Life Sciences (CALS) provides a variety of services for students, faculty and alumni. The hub of these services is the Office of Academic Programs in Roberts Hall, including the director, associate director, the Admissions Office, the Career Development Office, the Counseling and Advising Office, the Multicultural and Diversity Office, and the Registrar's Office. Although most of the student services are in the Office of Academic Programs, significant efforts are located across the college in the Office

of Undergraduate Biology and in various departments.

The Counseling and Advising Office coordinates the faculty advising program, serves as the college's central undergraduate advising office, and offers personal counseling. Academic advising is available for students who are interested in international study, need to file petitions to waive college academic regulations, have disability concerns, are experiencing academic difficulties, or have requests for tutoring. The staff coordinates new student orientation, award ceremonies, commencement activities, and the activities of Ho-Nun-De-Kah, the college's honor society. Students seek counseling and advising on a variety of issues including academic problems, course problems and college procedures, graduation requirements, personal and family problems, stress management, and time management. Two counselors provide short-term counseling with an expertise in college policies and guidelines. Counseling is framed as appropriate to each student's academic circumstances. The staff is available on a walk-in basis, as well as by appointment in 140 Roberts Hall. Visit www.cals.cornell.edu/Counseling_and_Advising.cfm. Counseling and Advising staff: Lisa Ryan, Bonnie Shelley, Pamela Torelli, Tamara Durham.

Faculty members in the College of Agriculture and Life Sciences consider advising to be an important and integral part of the undergraduate program. Each student enrolled in the college is assigned to a faculty adviser in his or her major field of study for assistance and guidance in developing a program of study, and to enhance the student's academic experience.

The Office of Multicultural and Diversity Programs serves to monitor, support, and influence policy on behalf of all underrepresented students within the College of Agriculture and Life Sciences. This population is defined as encompassing, but not limited to, all African American, Latin American, Asian American, and Native American students. Its constituency includes students, faculty, and the general public. In the past academic year this represented approximately 20 percent of the college's undergraduate population. Additionally, the office is charged with monitoring and programming for the Educational Opportunity Program (EOP) and Prehealth Collegiate Science and Technology Entry Program (CSTEP). EOP and CSTEP are state-supported programs intended to assist New York State students who meet economic and academic criteria set by the college, State Programs Office, and New York State Board of Regents. For further information, please contact Catherine Thompson in 140 Roberts Hall.

Within the university, the Office of Multicultural and Diversity Programs is charged with acting as the college liaison with the central Office of Minority Education Affairs, Learning Strategies Center and the State Programs Office. Other University connections include the University Career

Center and the Office of Financial Aid regarding concerns of the underrepresented student population. The director provides support for the CALS Diversity Committee. The director together with peer advisers carries out the duties of the office. The staff acts as a major advocacy group, as well as an information and referral center.

Given the college's policy on nonexclusionary programming, the Office of Multicultural and Diversity Programs is also responsible for some functions which serve the college's entire population. At present, that includes general college diversity activities, serving as the college prehealth adviser and providing ongoing support at all levels for the Office of Counseling and Advising.

The CALS Registrar's Office ensures the accuracy, confidentiality, and reliability of student records and serves as an important link between the university's and college's policies and procedures and the student. The Registrar's Office maintains student records and reviews degree progress on a semester basis, maintains the Dean's List, evaluates and applies non-Cornell credit (transfer credit, study abroad credit, and advanced placement credit), provides registration and enrollment information, consults individually with students on graduation requirements, and schedules all CALS courses. Specific information can be found at www.cals.cornell.edu/registrar.cfm.

The CALS Registrar's Office holds walk-in hours to assist students with any registrar-related issue. Walk-in hours are Tuesdays from 1:00 to 3:00 P.M. and Wednesdays from 10:00 A.M. to 12:00 P.M. in 140 Roberts Hall. No appointment is necessary during these times. Registrar's Office staff: Melanie Holland, Torrey Jacobs, Amy Paolangeli, Elisa Rafferty.

The Office of Career Development offers a variety of helpful services to all students and alumni of the college. Career development includes self-assessment, career exploration, decision making, and transition to employment or further study. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths progress and change.

The Career Library contains an extensive collection of current and useful material, including career information books, extensive internship files, employer directories, and job listings. Alumni Career Link is a database of more than 400 college alumni who have offered to help students and alumni with their career development in a variety of ways. Job search talks on topics such as résumé writing, cover letter writing, and interview skills are presented throughout the semester and are available on videotape. An active on-campus recruiting program brings more than 50 employers to campus each year to interview students for full-time and summer jobs. Additionally, the office provides information on hundreds of internships.

The office, in conjunction with a network of college faculty and staff members, assists students throughout their undergraduate years and beyond. For further information, students should contact Amy Benedict-Augustine, Laurie Gillespie, or Sharon Radcliffe in 177 Roberts Hall.

The CALS Admissions Office is responsible for admitting and enrolling a talented and diverse class of students each year in the college. The process and outcome must reflect and support the college mission and help to meet college and institutional enrollment goals. This includes freshman, transfer and intra-university transfer student processes. The office hosts on-campus and off-campus information sessions for prospective students, evaluates and makes decisions on more than 4,000 applications each year, and coordinates Cornell Days for admitted students each April. The Admissions Office staff advises and supports the CALS Ambassador program. The office is located in 177 Roberts Hall. Staff members include Ann LaFave, Cathy Sheils, Tara Bubble, Jared Rivers, and Lorie Fessenden.

Financial aid is administered through the university office in Day Hall. Endowment funds and annual donations in the college provide supplemental aid for students who are eligible for financial aid. Information about these college grants is available from the Office of Academic Programs in 140 Roberts Hall for students who have their financial aid package established through the university office in Day Hall. Grants are processed through the university's Office of Financial Aid.

Students

Undergraduate enrollment is approximately 3,100, with about 56 percent in the upper division. Each year about 850 students are graduated, while 645 freshmen and 250 new transfer students are enrolled. College faculty members serve as chairs of the Special Committees of roughly 1,000 graduate students.

Admission

The CALS Admissions Office selects applicants who are academically well prepared and appear most likely to benefit from the college's various curricula.

While most students come from New York State, about 43 percent come from other parts of the United States or abroad. Slightly more than half of the undergraduates are women. Approximately 22 percent are self-identified as members of minority ethnic groups.

The CALS Admissions Office is in 177 Roberts Hall (255-2036; www.cals.cornell.edu/admissions/).

Transfer Students

All accepted transfer credit must be from a regionally accredited college or university. Transfer credit is awarded on a case-by-case basis. Additional course information may be required. Contact the CALS Registrar's Office for information. A maximum of 60 non-Cornell credits is allowed.

Approximately 20 percent of CALS undergraduate students are transfers who have completed part of their collegiate work at community colleges, agricultural and technical colleges, or four-year institutions. Many of them hold an associate degree. Detailed information on transfer admission is available from the CALS Admissions Office.

Intra-University Transfer

A Cornell student in good standing may apply for an intra-university transfer to pursue a

course of study unavailable in his or her current college. Guidelines are available in the CALS Admissions Office. The procedure involves filing a transfer request, meeting with a faculty member in the proposed area of study, and submitting a letter of interest in the new area.

Consideration is given to students who have demonstrated an interest in their proposed field of study by taking appropriate prerequisite subjects and courses within the area of study. Academic achievement is also considered. Students are not encouraged to transfer during their freshman year. In certain cases, a student may be referred to the Internal Transfer Division (ITD) to study for one semester before entering the college. A second semester in ITD is considered only in unusual circumstances. During this trial semester, the student must achieve a predetermined average (usually 2.7) and take approved courses to assure acceptance.

Special Students

A limited number of nondegree candidates who want to take courses in the college are admitted each year. Applicants should submit the standard Cornell transfer application, a résumé of their work experience, and a list of the courses in which they are interested. For more information and guidelines, students should contact the CALS Admissions Office.

Off-Campus Students

Programs in which students study off campus but enroll for Cornell credit include SEA semester, field study in human ecology or industrial and labor relations, Albany programs, Cornell in Washington, student teaching, IPM internship, and clinical microbiology internship. **Students intending to receive Cornell credit for work done off campus should inform the college registrar at the time of enrolling for courses to ensure that proper registration will occur.**

Facilities

The College of Agriculture and Life Sciences is located on the upper campus, up the hill from the central area of Cornell University, on land that was once part of the Ezra Cornell family farm.

Buildings around the area commonly known as the Ag Quad house classrooms, offices, and laboratories. Flanking them are the greenhouses, gardens, and research facilities. Nearby orchards, barns, field plots, forests, and streams extend as far as the Animal Science Teaching Research Center at Harford and the New York State Agricultural Experiment Station at Geneva.

Roberts Hall serves as headquarters for the administrative units, including offices of the deans and directors of academic programs, Cornell University Agricultural Experiment Station, and cooperative extension. Included in the Office of Academic Programs are the director and associate director, the Admissions Office, the Career Development Office, the Counseling and Advising Office, the Office of Multicultural and Diversity Programs, and the Registrar's Office.

Mann Library, with its extensive collections of materials in the agricultural and life sciences, is at the east end of the Ag Quad. The student lounge and service center, known as the

Alfalfa Room, and many of the college classrooms are in Warren Hall. Public computer facilities are available in Warren Hall, Riley-Robb Hall, and Mann Library.

DEGREE PROGRAMS

The College of Agriculture and Life Sciences offers programs leading to the degrees bachelor of science, master of science, and doctor of philosophy. Professional degrees include the master of professional studies and the master of arts in teaching. Some registered professional licensing and certification programs are also available.

Each curriculum in the college creditable toward a degree is registered with the New York State Education Department.

Bachelor of Science Degree

Departments in the College of Agriculture and Life Sciences sponsor study for the B.S. degree in 23 major programs. To qualify for the degree, students must fulfill requirements established by the faculty of the college and administered through the Office of Academic Programs. Students are admitted into a single major but afterwards may pursue and graduate with two or more majors within the College of Agriculture and Life Sciences. Students need an adviser in each major. Course requirements for double majors may overlap. The Counseling and Advising Office (140 Roberts Hall) and department representatives have a form for students to complete to officially recognize the double major. The following units offer major fields of study for undergraduates. A faculty advising coordinator is listed for each unit. Students should consult with the faculty coordinator regarding requirements and opportunities for concentrations in the major.

Majors

Agricultural science education: Leah Hershey, 418 Kennedy Hall, lrs55@cornell.edu

Animal sciences: W. Bruce Currie, 434 Morrison Hall, wbc1@cornell.edu

Applied economics and management: Dale Grossman, 205 Warren Hall, dag14@cornell.edu

Atmospheric science: Mark Wysocki, 1114 Bradfield Hall, mww3@cornell.edu

Biological Engineering: James Bartsch, 314 Riley-Robb Hall, jab35@cornell.edu

Biological Sciences: Jeffrey Doyle, 216 Stimson Hall, jid5@cornell.edu; Bonnie Comella, 216 Stimson Hall, bec3@cornell.edu

Biology and society: Brian Chabot, E309A Corson Hall, bfc1@cornell.edu

Biometry and statistics: Steven Schwager, 424 Warren Hall, sjs5@cornell.edu

Communication: Brian Earle, 328 Kennedy Hall, boe1@cornell.edu

Crop and soil sciences: Gary Fick, 507 Bradfield Hall, gwf2@cornell.edu

Development sociology: Max Pfeffer, 133 Warren Hall, mip5@cornell.edu

Entomology: John Losey, 4126 Comstock Hall, jel27@cornell.edu

Environmental engineering: James Bartsch, 314 Riley-Robb Hall, jab35@cornell.edu

Food science: Janice Brown, 107 Stocking Hall, jmb14@cornell.edu

Information science: Lindsay Marzano, 303 Upson Hall, lindsay@cis.cornell.edu

Interdisciplinary studies: Lisa Ryan, 140 Roberts Hall, major@infosci.cornell.edu

International agriculture and rural development: Terry Tucker, 33 Warren Hall, twt2@cornell.edu

Landscape architecture: Peter Trowbridge, 440 Kennedy Hall, pj4@cornell.edu

Natural resources: Tim Fahey, 12 Fernow Hall, tf5@cornell.edu

Nutritional sciences: J. Thomas Brenna, B38 Savage Hall, jtb4@cornell.edu

Plant sciences (plant biology; plant genetics and breeding; horticulture, plant pathology/protection): Peter Davies, 255 Plant Sciences Bldg., pjd2@cornell.edu

Science of earth systems: Bryan Isacks, 3110 Snee Hall, bli1@cornell.edu

Science of natural and environmental systems: Tim Fahey, 12 Fernow Hall, tf5@cornell.edu

Minors

Students in the College of Agriculture and Life Sciences may pursue one or more minor fields of study. Minor fields of study do not require an academic adviser, but each minor field has a contact person who will provide information and verify on the application to graduate that the student will successfully complete the requirements of the minor by graduation. Students may complete as many minors as they wish; the requirements of minors may overlap. Minors are described along with the majors later in the CALS section of this catalog. Not all majors or departments offer minors. Minors available in CALS at the printing of this catalog are listed below with contact person, e-mail address, and location. For minors outside of CALS, please consult with the specific department.

American Indian studies: AIP office, 4th floor, Caldwell Hall

Animal science: Deloris Bevins, 149 Morrison Hall, dgb1@cornell.edu

Atmospheric science: Pam Vitale, 1123 Bradfield Hall, pmv2@cornell.edu

Biological sciences: Bonnie Comella, 216 Stimson Hall, bec3@cornell.edu; Wendy Aquadro, 216 Stimson Hall, gsa8@cornell.edu

Biometry and statistics: Steven Schwager, 424 Warren Hall, sjs5@cornell.edu

Business: Dale Grossman, 205 Warren Hall, dag14@cornell.edu; Marge Arcangeli, 104 Warren Hall, mfa2@cornell.edu

Communication: Linda Van Buskirk, 309 Kennedy Hall, lvp1@cornell.edu; Brian Earle, 328 Kennedy Hall, boe1@cornell.edu

Crop management: Gary Fick, 507 Bradfield Hall, gwf2@cornell.edu; Sue Murphy, 233 Bradfield Hall, sm17@cornell.edu

Development sociology: Tom Hirsch, 333 Warren Hall, tah4@cornell.edu; Renee Hoffman, 118 Warren Hall, rmh6@cornell.edu

Education: Betty Heath-Camp, 408 Kennedy Hall, bh76@cornell.edu

Entomology: John Losey, 4126 Comstock Hall, jel27@cornell.edu

Environmental and resource economics: Jon Conrad, 455 Warren Hall, jmc16@cornell.edu; Greg Poe, 454 Warren Hall, glp2@cornell.edu; Marge Arcangeli, 104 Warren Hall, mfa2@cornell.edu

Farm business management and finance: Wayne Knoblauch, 358 Warren Hall, wak4@cornell.edu; Marge Arcangeli, 104 Warren Hall, mfa2@cornell.edu

Food industry management: Dale Grossman, 205 Warren Hall, dag14@cornell.edu; Marge Arcangeli, 104 Warren Hall, mfa2@cornell.edu

Food science: Janice Brown, 107 Stocking Hall, jmb14@cornell.edu

Information science: Lindsay Marzano, 303 Upson Hall, minor@infosci.cornell.edu

International studies: Kenna Morehouse, 33 Mann Library, klm3@cornell.edu

Landscape studies: Andrea Hammer, 440 Kennedy Hall, agh24@cornell.edu

Natural resources: Marian Hovencamp, 12 Fernow Hall, mth6@cornell.edu

Nutrition and health, Cha-Sook You, 348 MVR Hall, cy12@cornell.edu

Plant sciences: Peter Davies, 255 Plant Science Bldg., pjd2@cornell.edu

Soil science: Gary Fick, 507 Bradfield Hall, gwf2@cornell.edu; Sue Murphy, 233 Bradfield Hall, sm17@cornell.edu

Early Enrollment in Cornell Graduate Programs

The College of Veterinary Medicine may accept students who are then permitted to double-register in their seventh and/or eighth semester and complete requirements for the bachelor of science degree in the College of Agriculture and Life Sciences. Students should consult with the college registrar, 140 Roberts Hall, to ensure that degree requirements have been fulfilled.

Students who have been offered admission to the S. C. Johnson Graduate School of Management

may take management courses in their senior year if approved by their college faculty adviser as part of their undergraduate program. These courses count toward the endowed college credits (maximum 55 without additional tuition charge). Students may consult with the college registrar, 140 Roberts Hall, to verify degree requirements and endowed credits earned.

The Department of Landscape

Architecture offers a first professional degree curriculum in landscape architecture at both undergraduate (BSLA) and graduate levels (MLA I), as well as a second professional graduate degree program (MLA II). The curricula for both the undergraduate and graduate programs are accredited by the Landscape Architecture Accreditation Board (LAAB). The graduate program is cosponsored by the Department of Landscape Architecture in the College of Agriculture and Life Sciences and by the College of Architecture, Art, and Planning.

Graduate Fields of Study

Graduate study is organized by fields that generally coincide with the academic

departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields have primary affiliation in Agriculture and Life Sciences. Current directors of graduate studies are also listed. For more information on graduate programs, please refer to the Graduate Bulletin, or www.gradschool.cornell.edu/. Information following this list refers to undergraduate studies.

Agriculture and life sciences [M.P.S. (agr.)]: Don Viands, 151 Roberts Hall, drv3@cornell.edu

Agricultural and biological engineering: Dan Aneshansley, 306 Riley-Robb Hall, dja4@cornell.edu

Agricultural economics: David Lee, 248 Warren Hall, dlr5@cornell.edu

Animal breeding: John Pollak, B-47 Morrison Hall, ejp6@cornell.edu

Animal science: Richard Quaas, B-47 Morrison Hall, rlq1@cornell.edu

Atmospheric sciences: Dan Wilks, 1113 Bradfield Hall, dsw5@cornell.edu

Biochemistry, molecular, and cell biology: staff, 107 Biotechnology Bldg., dmc18@cornell.edu

Biometry: Marty Wells, 435 Warren Hall, mtw1@cornell.edu

Communication: Bruce Lewenstein, 321 Kennedy Hall, bvl1@cornell.edu

Development sociology: Tom Lyson, 236 Warren Hall, ta12@cornell.edu

Ecology and evolutionary biology: Harry Greene, E251 Corson Hall, hwg5@cornell.edu

Education [also M.A.T.]: Dawn Schrader, 407 Kennedy Hall, des14@cornell.edu

Entomology: staff, 2134 Comstock Hall, fieldofent2@cornell.edu

Environmental toxicology: Andrew Yen, Stocking Hall, ay13@cornell.edu

Food science and technology: Harry Lawless, 106 Stocking Hall, htl1@cornell.edu

Genetics and development: Kenneth Kemphues, 435 Biotechnology Bldg., kjk1@cornell.edu

Horticulture: Nina Bassuk, 33 Plant Science Building, nlb2@cornell.edu

International agriculture and rural development [M.P.S. (agr.)]: Steven Kyle, 249 Warren Hall, sk5@cornell.edu

International development: Norman Uphoff, 31 Warren Hall, ntu1@cornell.edu

Landscape architecture [M.L.A.]: Dan Krall, 440 Kennedy Hall, dwk5@cornell.edu

M.P.S. agriculture with Peace Corps option (offered by most agriculture fields with M.P.S. programs): Terry Tucker, 16 Warren Hall, or see director of graduate studies for chosen field, twt2@cornell.edu

Microbiology: Stephen Winans, 360A Wing Hall, scw2@cornell.edu

Natural resources: Marianne Krasny, 16 Fernow Hall, mek2@cornell.edu

Neurobiology and behavior: David Deitcher, W125 Mudd Hall, dld14@cornell.edu

Nutritional sciences: Michael Kazarinoff, 230 Savage Hall, mnk1@cornell.edu

Physiology: Mark Roberson, T6-008a Vet Research Tower, msr14@cornell.edu

Plant biology: Thomas Owens, 217 Plant Science Bldg., tgo2@cornell.edu; Robert Turgeon, 256 Plant Science Bldg., ert2@cornell.edu

Plant breeding: Lisa Earle, 514 Bradfield Hall, ede3@cornell.edu

Plant pathology: staff, 309 Plant Science Bldg., mlh2@cornell.edu

Plant protection [M.P.S. (agr.)]: William Reissig, Barton Laboratory, Geneva Campus, whr1@cornell.edu

Soil and crop sciences: Harold van Es, 1005 Bradfield Hall, hmv1@cornell.edu

Statistics: Robert Strawderman, 437 Warren Hall, rls54@cornell.edu

Zoology: John Hermanson, T5002A Vet Research Tower, jwh6@cornell.edu

OPPORTUNITIES IN RESEARCH

Undergraduate Research

A multitude of opportunities to be engaged in research exists across the College of Agriculture and Life Sciences and the university.

Students may be able to work on a faculty member's research project for pay. Opportunities can be explored by contacting individual faculty members; departmental offices; the CALS Career Development Office, in 177 Roberts Hall; or Cornell Career Services, in 103 Barnes Hall. Another option is to receive credit through a 499-level course within a department by conducting your own research project under a faculty mentor. More than 600 students each year conduct research for credit. Upperclass students usually have the course background to engage in research, but freshmen and sophomores also may be equipped to do some types of research. Off-campus research experiences are also available for pay or as internships.

The following web sites provide information about research and internships:

CALS Career Development Office:
cals.cornell.edu/Careers.cfm

CALS Undergraduate Research Opportunities:
cals.cornell.edu/CALSUndergraduate_Research_Opportunities.cfm (information on how to explore research opportunities)

Research Honors Program

The Research Honors Program provides students with a special opportunity to work with a faculty mentor to experience the research process. Successful completion of this program requires a thesis written in the style of a master's thesis or professional journal article in that area of research. Original honors research may be published in a professional journal. Students are required to send an electronic version of their thesis title, abstract, student's name, and the research adviser's name to Ann Gantner, amg28@cornell.edu, by the end of the spring semester. In addition to copies of the entire thesis requested by the program area, one copy is required by the Office of Academic Programs (140 Roberts Hall). This copy is made available in Mann Library. Students may volunteer to publish their theses in the Internet-First University Press if it does not interfere with other plans, such as patenting or publishing in another journal. During the summer of each year, the *CALS Research Honors Abstracts* is published as a compilation of abstracts of the honors theses.

The bachelor of science degree with "distinction in research" is conferred upon those students who, in addition to having completed the requirements for the B.S. degree, have satisfactorily completed the honors program in their area of major interest and have been recommended for the degree by the honors committee of that area.

Research may be done under the appropriate program area: animal sciences, biological sciences, biology & society, entomology, information science, landscape studies, natural resources, nutritional sciences, physical sciences, plant sciences, and social sciences. Each program area has its own requirements in addition to the college requirements. After reviewing the requirements of each program area (below), students' questions may be directed toward the appropriate program area chair.

Consult "Undergraduate Research Opportunities" on the web (cals.cornell.edu/CALSUndergraduate_Research_Opportunities.cfm) for information about identifying a research topic, conferring with a faculty member, and undergraduate funding opportunities.

Honors Program Requirements

An undergraduate wishing to enroll in the honors program must have completed at least 55 credits, at least 30 of those 55 at Cornell. In addition, the student must have attained a cumulative Cornell GPA of at least 3.0 (unless otherwise noted by a particular program) at the time of entry.

Interested students must make written application to the CALS Registrar's Office no later than the end of the sixth week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year (or earlier if required by the program area). Earlier application deadlines to program area committees are noted in

the sections below. For most of the program areas, an application form is available from the college registrar in 140 Roberts Hall. The application form also can be printed from the web at www.cals.cornell.edu/CALS_Research_Honors_Program2.cfm. Applications for biological sciences students can be picked up at 200 Stimson Hall, and for biology & society students at 306 Rockefeller Hall.

Before the completed application is returned to the college registrar, signatures of approval are required in the following order: faculty research mentor, academic adviser, and the research honors program area chair. After the college registrar verifies the student's GPA, the student will be officially enrolled in the honors program. Additional requirements for application and completion of the program are described under each particular program area.

Academic credit also may be earned by enrolling in an appropriate independent research course (required by some program areas). When applying for admission to the program, the student may, if appropriate, submit a budget and a modest request for funds (up to \$350) to cover some of the costs incurred in doing the research. If approved, the funding will be transferred from an account in the CALS Office of Academic Programs to a departmental account of the student's research adviser to support the student's research. This funding is not to be used as a student salary. Additional funding opportunities are described at cals.cornell.edu/CALSUndergraduate_Research_Opportunities.cfm.

Unless otherwise indicated in the following program area descriptions, the research report in the form of a thesis or journal article should be submitted to the research program committee no later than four weeks before the end of classes of the semester in which the student expects to graduate. Students in the College of Agriculture and Life Sciences wishing to participate in the Research Honors Program must be accepted in one of the program areas approved by the faculty. Students are not eligible for distinction in research by participating in a program offered by another college or administrative unit.

The research honors committee for each program area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.0 will be graduated with "distinction in research."

At or near the completion of their research, students are required to give an oral presentation or poster session during any event at Cornell. Some departments have seminar series when presentations may be given. The Cornell Undergraduate Research Board (CURB) Forum is another venue for presentations.

For more information, go to www.cals.cornell.edu/CALS_Research_Honors_Program2.cfm.

The following are the honors program areas:

Animal Sciences

Faculty committee: S. M. Quirk, chair; Y. R. Boisclair, J. R. Giles, J. Gavalchin, P. A. Johnson, T. R. Overton

The objective of the animal sciences research honors program is to provide outstanding undergraduates with the opportunity to

pursue supervised independent research and to develop an awareness of the scientific process. It is expected that the research will require significant effort and creative input by the student in its design and execution and in the reporting of the results.

Those students with majors in animal sciences who are interested in doing a research project should consult with their faculty advisers by their junior year. All students are expected to meet the college requirements in qualifying for the program and to complete the following:

- Identify a potential research honors project sponsor (i.e., a faculty member working in the animal sciences) and secure that faculty member's commitment to sponsor the student in the research project. This should be accomplished by the second semester of the junior year. Students are encouraged to implement some research during the junior year and/or summer before the senior year.
- Register for AN SC 499 Undergraduate Research.
- Participate in AN SC 402 Seminar in Animal Sciences, during the spring semester and report on and discuss the project and results.
- Submit a written thesis to the Animal Sciences Research Honors Committee by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.
- Meet with the Animal Sciences Research Honors Committee for a short oral defense of the thesis following a review of the thesis by the student's sponsor and the research committee.

Details pertaining to the specific requirements of the program can be obtained from the administrative office of the Department of Animal Science, 149 Morrison Hall.

Biological Sciences

Students interested in the Research Honors Program in the biological sciences should consult with their faculty advisers and with potential faculty research sponsors early in their junior year. See "Independent Research and Honors Program" in the Biological Sciences section of this catalog for complete details. Information on faculty research, applications, and program requirements may be obtained from the Office of Undergraduate Biology, 216 Stimson Hall.

Biology & Society

Faculty committee: D. Pimentel, chair

The Research Honors Program in Biology & Society is designed to provide independent research opportunities for academically talented undergraduate students in biology & society. Students who enroll in this program are expected, with faculty guidance, to do independent study and research dealing with issues in Biology & Society. Students participating in the program should find the experience intellectually stimulating and rewarding whether or not they intend to pursue a research career.

Biology & Society students are considered for entry into the research honors program at the end of the second semester of the junior

year. Application forms for the program are available in the Biology & Society office, 306 Rockefeller Hall. To qualify for the Biology & Society Research Honors Program, a student must have an overall Cornell cumulative GPA of at least 3.3, have formulated a research topic, and have found a project supervisor (with a Cornell academic appointment) and a Biology & Society faculty member willing to serve as his or her adviser. The director of undergraduate studies will appoint a third reader of the completed research thesis. Applications will be reviewed by a committee headed by the director of undergraduate studies, who will notify students directly of the outcome. Students will be permitted to register for the research honors program only by permission of the biology & society program. Students must enroll for two semesters for 8 credits each in B&SOC 499, Honors Project I and II. More information on the honors program is available in the Biology & Society office, 306 Rockefeller Hall (255-6047).

Important Deadlines

Note: If the following dates fall on a weekend, the deadline is the preceding Friday.

- Last week of second semester of the junior year: Application for honors program submitted to 306 Rockefeller Hall.
- April 14: Thesis completed in a form satisfactory for evaluation and submitted to the three readers.
- April 28: Thesis defense accomplished.
- May 12: One bound copy of completed and defended thesis submitted to director of undergraduate studies.

Entomology

Faculty committee: J. Ewer, chair

The Program. A research honors program in entomology may be pursued by any qualified student in the College of Agriculture and Life Sciences. The student need not be specializing in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for studying a wide array of problems dealing with living systems. Short life cycles, unique physiologies and developmental patterns, and species with easily managed colony requirements and a wide range of behavioral traits provide the raw material for research honors study. Cornell's diverse faculty interests and extensive collections and library in entomology are also major assets if a student selects entomology as the area for research honors study.

Prerequisites. An undergraduate wishing to enroll in the research honors program must have completed at least 55 credits, at least 30 of the 55 at Cornell. In addition, the student must have attained a cumulative GPA of at least 3.0 at the time of entry and maintain this GPA to graduate with distinction in research. The CALS registrar will verify GPAs of applicants before officially enrolling them in the research honors program. Research honors students have the option of earning academic credit by enrolling in ENTOM 497 Independent Study during any semester while working toward a research honors thesis. Credits and grade option for satisfying requirements of ENTOM 497 should be

discussed with the thesis adviser (following page.)

Note: Enrolling in independent study is not a requirement for graduating with distinction in research honors in entomology.

Sequence of Requirements The Entomology Research Honors Committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

1. Discuss the matter with his or her academic adviser, preferably in the junior year. This schedule makes it possible to carefully plan a research project and implement some research during the junior year and/or summer before the senior year.
2. Select an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. This need not be the student's academic adviser. The academic adviser will be of assistance in determining which faculty entomologist has expertise most compatible with the interests of the student.
3. Prepare a brief, tentative plan for the project for discussion and approval of the honors project supervisor. The plan should include a statement of objectives or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.
4. Submit a completed application and proposal (approved by the honors project supervisor and the chair of the Entomology Research Honors Committee) no later than the end of the sixth week of the first semester of the senior year. Earlier submission is encouraged. Applications are available and should be submitted to the CALS registrar, 140 Roberts Hall. These applications include an opportunity to request a modest amount of funding from the CALS honors program. These funds are distributed only one time per year (in late fall).
5. Submit a brief progress report, approved by the project supervisor, to the Entomology Research Honors Committee by midterm of the semester in which the student will complete his or her graduation requirements.
6. Present a formal seminar reporting the significant findings of the research to the Department of Entomology (as a *Jugatae* seminar) in the last semester of the senior year.
7. Submit two copies of the final honors thesis (as approved by the thesis supervisor) to the chair of the Entomology Research Honors Committee no later than two weeks before the last day of classes in the semester in which the student anticipates graduation. The thesis will be reviewed by the faculty honors project supervisor and one other referee selected by the chair of the honors committee.
8. Referees will return the thesis to the student one week before the last day of classes. If reviewers indicate that changes must be made, the revised thesis should be submitted to the Entomology Research Honors Committee chair no

later than the last day of classes. Referees should include a recommendation to the Entomology Research Honors Committee chair regarding acceptability of the honors thesis. The approved honors theses will be bound and housed in the Entomology Library in Comstock Hall.

The complete text of this section can be found at: www.entomology.cornell.edu/Undergrad/EntomHonors.shtml.

Information Science

Students should follow the CALS social sciences guidelines to obtain research honors in information science.

Landscape Studies

Faculty committee: K. Gleason, chair

The research honors program in landscape studies offers outstanding undergraduates in CALS the opportunity to work with a member of the landscape architecture faculty to pursue supervised independent research in design, the cultural landscape, landscape archaeology, environmental design, and community-based planning and design. The student need not be a major in the landscape architecture professional design curriculum. The subject matter and nature of the research experience may be quite varied. Students participating should find the experience intellectually stimulating and rewarding, whether or not they intend to pursue a research career. The guidance and supervision of a faculty member with substantial interest and expertise in the subject is essential to the success of the project. It is expected that the research will require significant effort and creative input by the student in its design and execution and in reporting the results.

Students who consider this option should be aware that honors research is undertaken above and beyond any of the requirements for graduation in the major of landscape architecture. It involves a number of deadlines and a considerable time commitment. Before signing on for research honors, students need to consult with their academic adviser to make sure that honors research projects will not interfere with other academic or professional objectives, such as job applications, preparation of portfolios, or application to graduate school. These may need to be deferred until the thesis is complete. Students are responsible for meeting deadlines and being prepared for presentations and other meetings.

Although honors research credits for spring semester junior year and both semesters senior year are designated a letter grade, individual mentors may choose the R grade for work in progress until the project has been fully completed. Grade is determined by each student's mentor. The designation of "distinction in research" on the diploma is awarded at the recommendation of the faculty adviser and other referees to the honors committee chair. An outline of activities for both years is given below.

The Landscape Studies Research Honors Committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

1. Junior year: Identify a potential research honors project sponsor and secure that faculty member's commitment to sponsor

the student in the research project. This should be accomplished early in the second semester of the junior year and be finalized by the end of the spring semester. Pre-register during the spring for the research honors program (LA 499).

2. Work with a faculty adviser to identify and formulate a research problem. If the faculty adviser is not in the Department of Landscape Architecture, select a co-adviser from the department to ensure that the research is consistent with the field.
3. Submit a completed application and proposal (approved by the honors project supervisor and the chair of the research honors committee) no later than the end of the fourth week of the first semester of the senior year. Earlier submissions are encouraged. These will be reviewed by ad hoc committee members, and successful thesis proposals will be submitted to the college honors committee by the sixth week.
4. Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.
5. Submit an outline of the thesis to the chair of the committee by the end of January for a May graduation.
6. Submit a draft to the readers by April 15. Describe and summarize the work within the range of formats used in the master's thesis program or professional journals in design or research. This version will be reviewed by the faculty supervisor and two *ad hoc* reviewers, and the student will be able to incorporate the committee's comments and suggestions into the final version, which will be due the last day of classes. Referees prepare a recommendation to the honors committee chair regarding the acceptability of the honors thesis.
7. Give two oral presentations to the group of other honors research students and invited faculty members. Both presentations are during the student's senior year.
8. Send two bound copies of the completed and defended thesis to the honors committee chair by May 13. These copies are in addition to the unbound copy required for Mann Library. A 250-word abstract must be provided electronically to the CALS Office of Academic Programs and must appear at the front of the thesis (see "CALS Requirements for Honors Thesis").

Natural Resources

Faculty director: J. B. Yavitt, chair

The research honors program in natural resources involves original, independent research that generates novel findings in applied ecology and resource policy and management. Students learn how to design and carry out research under the direct supervision and guidance of a faculty member or senior research associate in the department. Most students in the program begin their research before the start of the senior year, often in the summer after their junior year. Students may enroll and receive credit in independent study (NTRES 494) during their honors research. The research findings are

presented in a written thesis that is reviewed by two experts in the field. Many theses have been published in leading journals in the disciplinary area of the research. Although the format is not prescribed, the thesis usually consists of a short introduction, relevant materials and methods, a concise presentation of the meaningful data, a discussion, and the student's interpretation of the conclusions. Students also give an oral presentation of their research findings in a special symposium hosted by the department in early May.

Students should adhere to the following schedule.

Junior Year

1. File an informal application with the program director. The application includes a project description and adviser information.

Senior Year

1. Sixth week of fall semester: Submit formal application.
2. March 30: Thesis should be close to completion.
3. April 13: Submit two copies of the thesis to the program director for *ad hoc* reviews.
4. April 29: Pick up *ad hoc* reviewers' comments from the program director.
5. May 13: Submit two copies of the final thesis: one for the college, one for the program director.
6. Week of May 24: Students are notified.

Nutritional Sciences

Faculty committee: J. T. Brenna, C. Bisogni

The research honors program in the Division of Nutritional Sciences is a structured experience that involves (1) taking a course in research (NS 398), (2) conducting a research project through which the student becomes intellectually engaged in the whole research process, (3) completing a written thesis that reports the research, and (4) giving an oral presentation of the project at the undergraduate honors symposium. Students must maintain a minimum grade point average to graduate with honors in research.

The research honors program is an excellent opportunity for students who are highly interested in research and wish to commit substantial time and intellectual energy to a project that will span at least four semesters of their undergraduate experience. Honors students experience the excitement of designing a project to generate new knowledge on a topic that interests them and reporting the project findings. By working with faculty mentors and other researchers, they develop skills in research methods and data analysis. Students also learn that research projects are labor intensive and that writing research reports, such as the honors thesis, is a vital, but time-consuming, aspect of the research process. This intensive research experience is not suitable for all students, and those who wish a less intensive research experience may conduct research with a faculty member under NS 401.

Students interested in the program should take NS 398 as early in their program as possible. Students may review program requirements at the NS 398 web site or contact the program

directors. Acceptance into the research honors program occurs when the student (1) is accepted into a faculty member's research program and (2) submits a research proposal abstract that is approved by the directors of the research honors program.

Students interested in the program typically spend the spring sophomore semester and fall junior semester exploring honors project opportunities with prospective faculty mentors. Students are responsible for contacting faculty members and applying to their research programs, although some guidance in this process will be provided in NS 398. By the fall of the junior year, the student is expected to have identified their faculty member and be working with him/her on a proposal abstract, which is due early in the spring junior semester.

Students receive academic credit for work on their honors project under NS 499. The 6 required credits may be taken over several semesters. How much time is spent on the project each semester will be the decision of the student and the faculty mentor. For each three to four hours of work per week, the faculty mentor usually will assign one hour of academic credit. This applies to the preparation of the research plan and necessary library research (usually completed during the junior year) as well as the carrying out of the research itself and preparation of the thesis.

The research honors project is the major component of the research honors program. It should be well defined and sufficiently circumscribed to give the student the opportunity to develop the research plan, execute the research, and write an acceptable thesis within the limited time available to students carrying full academic loads. Typically, the project is designed early in the junior year and conducted in the spring junior semester and fall senior semester. Students may arrange with their faculty mentor to work on the project during the summer. The spring senior semester is usually devoted to writing the thesis (at least 25 pages). The student works with the faculty mentor to prepare a draft of the thesis, which is submitted before spring break to a second faculty member for evaluation. When comments are received from the reader, the student must revise the thesis to meet the criteria for acceptance. The student presents the thesis at the Honors Student Symposium at the end of the semester.

Physical Sciences

Faculty committee: A. T. DeGaetano, chair; S. J. Mulvaney, C. D. Bustamante

The research honors program in physical sciences provides outstanding students with an opportunity to do independent research under the supervision of a faculty member in the Departments of Biological and Environmental Engineering, Food Science, Earth and Atmospheric Sciences, or Biological Statistics and Computational Biology.

In addition to meeting the requirements of the college, the student is expected to:

1. Identify a thesis adviser and thesis topic before the end of the junior year.
2. Work with the thesis adviser to prepare a budget and application form (due by the sixth week of senior year).

3. Enroll in the program for a minimum of two semesters.
4. Enroll in the appropriate departmental undergraduate research course for a total of at least 6 credits.
5. Submit an outline of the thesis to the chair of the committee by the end of January (for a May graduation).
6. Submit a draft of the thesis to the thesis adviser with sufficient lead-time for a revision to be prepared.
7. Submit three copies of the thesis and names of recommended reviewers to the chair of the honors committee by four weeks before the end of classes in the semester in which graduation is expected.

There is no required format, but the thesis is usually written in the form of a research journal article or a master's thesis.

Further details of the program can be obtained from the chair of the Physical Sciences Research Honors Committee.

Plant Sciences

Faculty committee: R. L. Obendorf, chair; I. A. Merwin, E. B. Nelson, F. S. Rossi, A. DiTommaso, M. E. Smith-Einarson

Students perform independent scientific research under the guidance of faculty members in the fields of horticultural, agronomic, and soil sciences; plant biology; plant genetics and breeding; and plant pathology. For admission to the program, students must meet college requirements and submit to the Plant Sciences Research Honors Committee a project proposal (two to three pages) that includes a title; a brief background of the problem (justification and literature review); a clear statement of objective(s) and hypotheses to be tested; methodology and experimental plan, necessary space, equipment and supplies; and a project budget. The proposal must be accompanied by a letter from the faculty supervisor stating that he or she has approved the project plan and that its completion within the remainder of the student's undergraduate tenure is feasible.

A brief progress report will be made to the committee usually during the third week of the spring semester. Research presentations are recommended (e.g., Cornell Undergraduate Research Board Spring Forum, department seminars, professional meetings).

Successful completion of the research honors program requires acceptance by the honors committee of two copies of a research report. The report should be written in the format of a research publication in the appropriate scientific field. The acceptable report must have been reviewed and corrected according to the recommendations of the research supervisor before the report is submitted to the honors committee. The report must be received by the honors committee at least two weeks before the last day of classes of the semester in which the degree is sought and must be accompanied by a letter from the research supervisor evaluating the research and, if appropriate, recommending graduation with distinction in research.

The research honors committee will review the report within one week and may accept it or return it to the student with specific recommendations for revisions. A suitably revised version must be submitted to the committee before the second day of the

examination period. When the committee accepts an honors report, the chair will recommend to the associate dean and director of academic programs and to the college registrar that the student be graduated with distinction in research. One copy of the accepted report will be returned to the student with review comments from the committee.

Additional guidelines may be found at www.css.cornell.edu/Programs/PlantSciHon/.

Social Sciences

Faculty committee: J. B. Walther, chair; J. D. Francis, N. Chau, S. C. Piliero

Research projects in this program area include applied economics and management, communication, development sociology, education, and information science. Students are accepted into the social sciences research honors program of the College of Agriculture and Life Sciences after meeting all the college criteria described above, after evaluation of the student's written application, and on approval of a detailed thesis proposal. The application and proposal are due to the program area chair no later than the third week of the first semester of the senior year. Each student is encouraged to begin working on this proposal with a prospective faculty thesis adviser during the junior year. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and his or her faculty adviser. Second, the honors committee reviews the proposal to determine whether it is consistent with honors thesis requirements and to make suggestions for improvement.

The proposal should be 5 to 10 typed, double-spaced pages and include the following:

1. **Research Topic:** State the problem to be studied or the topic of interest. Review the basic literature and the background of the problem or topic; include a more extensive bibliography to be consulted.
2. **Research Questions/Empirical Hypotheses:** Specify the proposed questions to be answered or hypotheses to be tested empirically via collection of data and a mode of analysis accepted in the social sciences.
3. **Research Methods:** Discuss the models to be constructed (if any), sampling procedures, data collection procedures (including measurement instruments and survey or experimental designs, if appropriate), and proposed methods of analysis.
4. **Expected Significance:** State what new knowledge or information is likely to be forthcoming and why it is important. State any practical applications expected as a result of the research.

Faculty advisers must be members of the graduate faculty. Exceptions may be granted for persons with special expertise who are deemed capable of thesis supervision; exceptions may be granted pending petition to the Social Science Honors Committee. Students should register for honors credit directed by the faculty research honors project adviser.

Distinction in research is awarded upon approval of the research honors thesis by the Social Science Research Honors Committee. The research should deal with a substantive issue in one of the fields in the social sciences. Both the results of the research and the methodology (or the logical argument by which the results were achieved) must be reported. Reviews of the literature, practical conclusions or applications, or broad characterizations of an area of inquiry may constitute part of the research report but are not themselves sufficient to count as research.

Honors theses should be written according to the form of any standard journal within the appropriate field. We recommend the submission of the thesis draft to the student's research adviser by the beginning of the month two months before graduation, for revision suggestions. Two copies of the thesis must be submitted to the chair of the social science committee no later than the middle of the second-to-last month before graduation (i.e., April or November). A supporting letter from the faculty member supervising the work also must be submitted. The thesis will be independently reviewed and further revisions may be required before the thesis is accepted. Final approval of the thesis requires a majority vote of the honors committee.

OFF-CAMPUS OPPORTUNITIES

Study off campus is of two types: (1) credit may be earned at another institution and transferred to Cornell, or (2) credit may be earned in Cornell courses that require off-campus activity.

Students who plan to enroll in courses at another institution in the United States must petition for a leave of absence. Courses should be selected in consultation with the faculty adviser. Please also see transfer credit policies under non-Cornell credit policies. Information about enrolling at another institution outside of the United States can be found under "Study Abroad."

Albany Programs

Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Two formalized opportunities are available. The Assembly Intern Program is offered in the spring semester and provides placement with a staff member of the New York State Assembly. The Senate Assistants Program also occurs during the spring semester and has placements with New York State senators and selected staff. Each program has an academic component as well. Check the individual folders in the internship files in the CALS Career Development Office, 177 Roberts Hall.

Applications are collected and processed by the CALS Career Development Office, 177 Roberts Hall, in the semester before assignments. Those accepted should plan a program of study in consultation with their faculty adviser. At least 12 credits must be carried to meet the residency requirement. To receive academic credit for the internship, students enroll in ALS 400 for an S-U grade only.

Information and applications are available in the CALS Career Development Office, 177 Roberts Hall.

Cornell in Washington

The Cornell in Washington program offers students from all colleges in the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty members, conduct individual research projects, and work as externs. Students take part in a public policy or humanities seminar, serve as externs in federal agencies, congressional offices, or nongovernmental organizations, and carry out individual research projects under the supervision of Cornell faculty members. The required externships and all course enrollments are arranged through, and approved by, the Cornell in Washington program. Students in the College of Agriculture and Life Sciences must register for ALS 500 and cannot receive credit for the externship experience alone. For further information, see p. 22, inquire at M101 McGraw Hall, 255-4090, or visit ciw.cornell.edu.

SEA Semester

The Sea Education Association is a nonprofit educational institution offering ocean-focused academic programs and the opportunity to live, work, and study at sea. Science, the humanities, and practical seamanship are integrated in small, personal classes. The 17-credit program is 12 weeks in length. Six weeks are spent in Woods Hole, and the following six weeks are spent on either one of SEA's two sailing vessels: the *SSV Robert Seamans* or the *SSV Corwith Cramer*. For more information, contact the Cornell Marine Programs office, G14 Stimson Hall (255-3717) or visit www.sea.edu. CALS students should file an intent to study off campus form with the college registrar as early as possible to ensure proper registration and enrollment in courses.

Shoals Marine Laboratory (SML)

The Shoals Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on 95-acre Appledore Island off the coast of Portsmouth, N.H., in the Gulf of Maine. SML offers undergraduates and other interested adults a unique opportunity to study marine science in a setting noted for its biota, geology, and history. Please refer to "Courses in Marine Science," in the section on the Office of Undergraduate Biology, for a list of courses offered.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, 255-3717, or visit www.sml.cornell.edu.

Internships

Several departments in the college offer supervised internships for academic credit. Internships may be granted for pay and/or credit with a limit of up to 3 credits per internship and no more than 6 credits total allowed for internships consisting of off-campus work experiences that do not have the continued presence of a Cornell faculty member. The number of credits awarded should reflect the amount of knowledge gained per internship and/or following the CALS guidelines for assigning credits. The 6-credit allotment includes transfer credit and credit from other internships in other colleges at Cornell. The 6-credit limit does

not apply to secondary, post-secondary, and Cooperative Extension teaching internships in the Department of Education. The awarding of credit will not be allowed in cases where a student brings to the college or to a professor a description of a past experience and requests credit. Note that a maximum of 15 (prorated for transfer students) of the 120 credits required for the degree may be taken in internships, independent study courses, and undergraduate teaching or research. For internships not governed by an established internship course, the student must enroll in a 497-level course for the number of credits assigned.

To ensure a fair and manageable system to deal with internships, the College of Agricultural and Life Sciences has set forth guidelines to serve as minimum requirements for a student to receive internship credit.

1. Credit will be assigned or accepted only in cases in which a Cornell faculty member is directly involved in determining both the course content and in evaluating the student's work.
2. The internship should be purposeful, provide opportunities for reflection, present a continual challenge to the student, and incorporate active learning, with the student an active participant in all stages of the experience from planning to evaluation.
3. Before a student begins the internship, a learning contract needs to be written between the Cornell faculty internship adviser on campus, the supervisor at the location, and the student. This contract should state the conditions of the work assignments, supervisor, learning goals, number of credits, and methods of evaluation of the work. A contract form can be obtained from the college Registrar's Office, or departments may have their own.
4. Students should further develop the internship experience based on the college Experiential Learning Criteria, which can be found on the web at cals.cornell.edu/Experimental_Learning_Report.cfm.
5. Students need to keep their faculty internship adviser updated on the progress of the internship while away from campus.

Arrangements should be made with the offering department for assignment of a faculty mentor for planning the program of work, and for evaluating student performance. Individual departments may add more requirements to the internship based on specific needs such as time constraints, faculty workloads, and the relationship of the internship to the goals of the department. The specific terms of the contract should be recorded, using the independent study, research, teaching, and internship form, available in the Registrar's Office in 140 Roberts Hall.

Study Abroad

Each year about 200 CALS undergraduates spend an academic year or semester studying abroad. Whether attending a large university in Australia, a smaller campus in Sweden, or a technical school in Singapore, CALS students have a variety of international study options available to them. They can choose from:

- a CALS exchange program in Austria, Australia, Brazil, Denmark, Mexico, Netherlands, New Zealand, Singapore, Sweden, Switzerland or the United Kingdom;
- a study abroad program through the Cornell Abroad office;
- an international study tour as part of a CALS course, or a summer program designed especially for CALS students.

CALS exchange programs are unique agreements created with other prestigious universities around the world. CALS students participating in an exchange program pay only their Cornell tuition, with no additional administrative fees. To learn more about the exchange programs, please visit: www.cals.cornell.edu/Study_Abroad_Exchange_Index.cfm/ or e-mail exchange coordinator Bonnie Shelley, brs9@cornell.edu.

Study abroad opportunities offered through the Cornell Abroad office are vast, ranging from a traditional university in London to field study in Africa. For information about specific programs, costs and more, visit their office in 300 Caldwell Hall or go to www.cuabroad.cornell.edu/.

Whether on a CALS exchange or going through Cornell Abroad, all CALS students interested in studying abroad must receive approval from their faculty adviser and meet with the college study abroad adviser to review the college policies and to receive college approval. College policies can be viewed at: www.cals.cornell.edu/College_Policies.cfm.

Study abroad advising hours are held in 140 Roberts Hall on Tuesdays and Thursdays, 9:00 A.M. to 12:00 P.M. and Wednesdays 1:00 to 3:00 P.M.

Ithaca College and Wells College Exchange Programs

The Cornell University-Ithaca College Exchange Program is a reciprocal arrangement between Cornell University and Ithaca College that allows matriculated full-time students with prior approval and within stated stipulations, to cross-register at the other institution. No additional tuition is charged except in the case of undergraduate students enrolled during any one semester for a total of more than 18 credits (Cornell and Ithaca College combined). Those students are subject to additional tuition charges on a per-credit basis. This arrangement is available during the fall and spring semesters only, and is contingent upon space availability. A maximum of 12 credits may be taken through this program.

Cornell University also has a reciprocal arrangement with Wells College in Aurora, N.Y. For further information, contact the Cornell School of Continuing Education office, B20 Day Hall, 255-4987, or on the web at www.sce.cornell.edu/exmu/.

GRADUATION REQUIREMENTS FOR THE BACHELOR OF SCIENCE

Graduation Requirements

1. Credit Hours

- a. Minimum: 120

Exceptions:

- Credit for review or supplemental courses (MATH 109, EDUC 005, and 00 level) **increases** the number of credits required for graduation by the number of credits in the course. The credits **do** count toward the minimum 12 credits for full-time status.
 - Credit for repeated courses **increases** the number of credits required for graduation by the number of credits in the course. The credits **do** count toward the minimum 12 credits for full-time status.
- b. Minimum at Cornell: **60** academic credits; maximum non-Cornell credits: **60**.
 - c. Minimum from College of Agriculture and Life Sciences: **55** (includes credit used in the distribution and appropriate transfer and AP credit). CALS credit includes courses from departments within CALS, and Biological Sciences, Earth and Atmospheric Sciences, Information Science, and Nutritional Sciences.
 - d. Maximum from endowed colleges (Arts and Sciences; Architecture, Art, and Planning; Engineering; and Hotel School) without additional tuition charge: **55** (includes credit used in the distribution and failed courses). Summer session courses taken in endowed colleges do not count.
 - e. Minimum with letter grade: **100** (prorated for transfer students). Freshmen are limited to one optional S-U course per semester.
 - f. Maximum independent study, research, teaching experience, internships based on 120 credits: **15** (prorated for transfer students).
 - g. Freshmen may not enroll in more than 18 credits, not including physical education.
 - h. Credit for physical education *does not* count toward the 120 credits or the minimum 12 credits for full-time status (see #6).
- #### 2. Residence
- a. Students are entitled to enroll eight full-time semesters (prorated for transfer students). A full-time semester requires a minimum of 12 credits per semester (*not* counting physical education.) Review or supplemental courses and repeated courses (see #1a) *are* counted.
 - b. A minimum of seven semesters is expected; graduation in fewer than seven requires an application. Transfer students are credited with one semester in residence for each 15 credits from another institution.
 - c. Internal transfer students must be enrolled in CALS for at least two semesters, **not** including residency in Internal Transfer Division.

- d. The final semester before graduation **must** be in residence at Cornell as a full-time student in good academic standing.

Exception: Students with 8 or fewer credits remaining for graduation and with circumstances that prevent full-time study may apply to complete remaining credits at another institution or prorated in CALS. An application must be submitted the semester before graduation. Contact the CALS Registrar's Office (140 Roberts Hall) for additional information.

3. Grade Point Average (GPA)

A cumulative GPA of 2.00 or above must be maintained. This requirement includes all grades earned at Cornell.

For students who matriculated before 8/01: A cumulative GPA of 1.70 or above must be maintained. This requirement includes all grades earned at Cornell.

4. Distribution

The purpose of the distribution requirement is to provide a broad educational background and to ensure a minimum level of competency in particular skills. Through study of the physical and life sciences, students develop their understanding and appreciation of the physical sciences, enhance their quantitative reasoning skills, and gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will affect their work and role in society. Written and oral expression is designed to help students become competent and confident in the use of oral and written communication to express themselves and their ideas.

Credits received for independent study, field, teaching, research, work experience, and internships cannot be used to fulfill the distribution requirement. Courses judged to be review or supplemental in the discipline, such as MATH 109, EDUC 005, and 00 level, will not be counted.

Physical and Life Sciences. 18 credits in at least three disciplines of which 6 credits must be introductory biology and 3 credits in chemistry or physics.

Introductory Biology: BIO G 101-104, 105-106, 107-108, or 109-110

Oral Expression

COMM 201, 203

Note: This requirement may be fulfilled by completing (1) 9 credits of written expression or (2) 6 credits of written plus 3 credits of oral expression.

Students scoring 4 or 5 on the English advanced placement exam may be awarded 3 credits, which will be recorded in Written and Oral Expression.

5. Mathematics Requirement

Faculty legislation requires minimum competency in mathematics to complete a degree in the College of Agriculture and Life Sciences. As a measure of competency in mathematics, all entering undergraduates, including those with advanced placement or transfer credit in calculus, must take the college math proficiency exam (administered during orientation). The following students are exempt from the CALS Math Placement Exam: (a) internal transfer students who already have passed one mathematics course listed below under Group II, section 1, and (b) entering biological and environmental engineering (BEE) students who take the placement exam in the College of Engineering.

The CALS exam score determines the college math graduation requirement, and provides placement information. Cut-off scores divide students into three groups, each with specific graduation requirements.

Mathematics requirements and placement suggestions:

Group I: Students in this group are considered proficient in math for college graduation requirements. If further math is needed for the major, placement score *suggests* calculus skill level (e.g., MATH 111).

Group II: Placement score *suggests* pre-calculus skill level, and students in this group must satisfy one of the following:

1. Successfully complete an approved mathematics course at Cornell. EDUC 115 is recommended.

Approved Courses:

- Math: EDUC 115, any mathematics course (except MATH 100, 103 and 109).
- Statistics: MATH 171; AEM 210; BTRY 301/NTRES 313; ILRST 211, 310, 311, 312; ENGRD 270; PAM 210. (Also BTRY 100, 101, 102, 201 and 261, and ILRST 210 formerly offered)
- 2. Successfully complete or have completed an approved calculus course at another college or university with a final grade of B- or better.
- 3. Receive AP credit for calculus (4 or 5 on Math AB or BC) or statistics.

Group III: Students in Group III on the CALS math placement exam must successfully complete an approved non-statistics mathematics course at Cornell. Prior completion of EDUC 005 may be recommended at the discretion of the student's academic adviser.

Approved Courses:

- EDUC 115, any mathematics course (except MATH 100, 103, 109 and 171).
- Transfer and AP math credit (up to 6) will be recorded in Physical and Life Sciences of the college distribution requirements. Additional transfer credit in math will be recorded as general electives. BEE students typically receive fewer AP credits than other CALS students with the same scores. BEE students also may receive AP credits based on the Engineering math placement exam.

6. Physical Education

- a. Pass a required swim test, administered during orientation. External transfer students who are exempt from PE are exempt from the swim test. See below.
- b. Pass two courses with a satisfactory grade (courses do **not** count toward 120 credits for graduation or the minimum 12 credits for full-time study).
- c. Students are expected to complete the physical education requirement in their first two semesters at Cornell.
- d. External transfer students are credited with one course of physical education for each semester previously enrolled **full-time** (12 or more credits) at another college and are exempt from the swim test.

Non-Cornell Credit Policies

1. Non-Cornell credit includes advanced placement credit (see p. 8 for further details), credit earned at an accredited college or university, credit earned through the Ithaca College and Wells College Exchange Programs, and credit earned through a Cornell Abroad or CALS exchange program.
2. Non-Cornell credit is accepted by CALS when:
 - the credits are earned at an accredited institution;
 - the credits do not duplicate course work already completed at Cornell;
 - the credits are earned before matriculating into CALS or during the summer or winter session (except for an approved exchange program);

- the credits have not been applied toward high school graduation requirements (except for AP exam credit, see p. XX);
- the grade earned is "C-" or better; and
- an official transcript is sent directly to the CALS Registrar's Office from the college/university where the credits were completed.

Please note: *Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript for such work. Students who have taken such courses may, however, earn credit by taking an appropriate examination as described on pp. 8-10 of this catalog.*

3. A student may apply a maximum of 60 non-Cornell credits toward his or her graduation requirements.
 - Cornell Abroad (not CALS exchange) credits are limited to 15 credits per semester, 30 per academic year.
 - If more than 60 non-Cornell credits have been completed, the CALS Registrar's Office will work with the student to determine which credits best fulfill CALS graduation requirements.
4. Non-Cornell credits are recorded on the graduation summary and can be applied toward CALS credits, distribution requirements, and major requirements.*
 - Non-Cornell courses that are similar to courses offered in CALS are recorded as CALS credits on the graduation summary and count toward the minimum of 55 CALS credits required for graduation.
 - Non-Cornell courses that are equivalent to Cornell courses which fulfill distribution requirements are recorded under the appropriate distribution area on the graduation summary.
 - Non-Cornell courses that are equivalent to endowed courses can be applied toward distribution requirements or general electives; however, these credits do not count against the maximum of 55 endowed credit hours.
 - If a course has no comparable course at Cornell, the Registrar staff will determine how the credit should be applied.

*Faculty advisers determine how non-Cornell credit will be applied toward major requirements; the CALS Registrar's Office determines how non-Cornell credit will be applied toward CALS graduation requirements.

5. Students who have already matriculated into CALS and are planning to take courses at another institution must complete a transfer credit pre-approval form before completing the course work. Pre-approval forms are available in the CALS Registrar's Office in 140 Roberts Hall.

Graduation Procedures

1. The progress of each student toward meeting the degree requirements is recorded each semester in the CALS Registrar's Office on a graduation summary form. All students receive an updated graduation summary in the fall

check-in packet. Students can review their graduation summary online at <https://dust.cals.cornell.edu>.

2. Students who have been in residence for eight semesters and who have met the graduation requirements will be graduated. Students are entitled to attend for the full eight semesters even if they have completed the graduation requirements in fewer semesters. A student who wishes to either graduate early or delay graduation must complete an additional application with the CALS Registrar's Office.
3. Application to graduate. In the first semester of their senior year, students must complete and submit an application to graduate to the CALS Registrar's Office.

Student Responsibilities: It is the student's responsibility to complete the application to graduate, obtain signatures from faculty adviser(s), and then schedule an appointment to file the application with the CALS Registrar's Office.

Deadlines: January graduates must complete the application to graduate, obtain required signatures, and meet with the CALS Registrar's Office before the end of the third week of classes in their final fall semester.

May graduates must complete the application to graduate, obtain required signatures, and meet with the CALS Registrar's Office before the end of the sixth week of classes in their final fall semester.

Failure to meet these deadlines could result in a student's name being omitted from the commencement program and/or a diploma not being available for pick-up on commencement Sunday.

Faculty Adviser Responsibilities: It is the faculty adviser's responsibility to inform seniors of any courses still needed to fulfill major and/or minor requirements and to list those courses on the application to graduate. Faculty advisers must sign the application to graduate before the student meets with the CALS Registrar's Office. If a student is completing more than one major, the signatures of all faculty advisers are required. If a student is completing a minor, the signature of the minor faculty adviser is also needed.

CALS Registrar's Office Responsibilities: It is the responsibility of the CALS Registrar's Office to inform seniors of any credits needed to fulfill the CALS graduation requirements and to list those credits on the application to graduate. The Registrar's Office will sign the application to graduate and provide both the student and faculty adviser with copies of the signed application. The student should retain a record of the application.

Commencement Information: Commencement information will be provided to all graduating seniors directly from the Commencement Office. Information is also available at www.commencement.cornell.edu/.

ACADEMIC POLICIES AND PROCEDURES

Registration

All students must register with the university and check in with this college at the beginning of each fall semester. Check-in materials are available in 140 Roberts Hall.

Course Enrollment

Students will receive course enrollment information from the university registrar. After planning a schedule of courses in consultation with their faculty adviser, students pre-enroll by computer.

To enroll in courses that involve independent study, teaching, or research, a student must file an independent study form, available in the CALS Registrar's Office, 140 Roberts Hall. Students who will be studying off campus should notify the Registrar's Office to ensure that proper registration will occur.

Students may enroll again for a course in which they received a grade of F in a previous semester. Both grades will be recorded and calculated as part of their GPA. If a student retakes a course in which a passing grade was earned, both grades will be recorded and calculated as part of their GPA. However, repeating a course increases the number of credits required for graduation by the number of credits in the course.

Students must *not* enroll again for a course in which they received an incomplete or NGR. Instead, work for that course should be completed without further enrollment. The instructor files a manual grade form with the college registrar when a grade has been assigned. An incomplete not made up by the end of two successive semesters of residence reverts to a failure. In the case of a graduating senior, incompletes revert to failures at the time of graduation.

A student is held responsible for and receives a grade for those courses in which he or she enrolls unless the student officially changes such enrollment. All changes in courses or credit, grading options, or sections must be made by the student using the online add/drop through "Just the Facts" or the official course drop and add form at the Registrar's Office, 140 Roberts Hall. Approval of the faculty adviser is required to change course enrollment. Department or course instructor approval may be required for select courses.

Students may add courses and change grading options or credit hours where applicable during the first three weeks of the semester, and may drop courses until the end of the seventh week.

Academic Integrity Policy

The College of Agriculture and Life Sciences faculty, students, and administration support and abide by the university Code of Academic Integrity. Its principle is that absolute integrity is expected of every student in all academic undertakings: students must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity.

The maintenance of an atmosphere of academic honor and the fulfillment of the provisions of the code are the responsibility

of the students and the faculty. Therefore, all students and faculty members shall refrain from any action that would violate the basic principles of this code.

1. Students assume responsibility for the content and integrity of their submitted work, such as papers, examinations, or reports.
2. Students are guilty of violating the code if they
 - knowingly represent the work of others as their own.
 - use or obtain unauthorized assistance in any academic work.
 - give fraudulent assistance to another student.
 - fabricate data in support of laboratory or field work.
 - forge a signature to certify completion or approval.
 - submit the same work for two different courses without advance permission.
 - knowingly deprive other students of library resources, laboratory equipment, computer programs, or similar aids.
 - in any other manner violate the principle of absolute integrity.
3. Faculty members assume responsibility to make clear to students and teaching assistants specific regulations that apply to scholarly work in a discipline.
4. Faculty members fulfill their responsibility to
 - maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor.
 - make clear the conditions under which examinations are to be given.
 - make clear the consequences of violating any aspects of the code.
 - provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do independently.
 - state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline by which students must cite the source of such materials.
 - approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course.
 - monitor the work and maintain such records as will support the crucial underpinning of all guidelines: the students' submitted work must be their own and no one else's.

Cornell's Code of Academic Integrity spells out how individuals who have allegedly violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides informal resolution of most perceived violations through a primary

hearing between the faculty member, the student involved, and an independent witness. If necessary, a hearing before a hearing board follows.

The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the director of counseling and advising, who serves as a nonvoting record keeper. Professor Dale Grossman is the current chair.

Individuals who observe or are aware of an alleged violation of the code should report the incident to the faculty member in charge of a course or to the chair of the hearing board. General information and details on procedures for suspected violations or hearings are available from the Counseling and Advising Office, 140 Roberts Hall.

Academic Honors

The college encourages high academic achievement and recognizes outstanding students in several ways:

1. **Dean's List.** Each semester, students are recognized for academic excellence by inclusion on the Dean's List. Eligibility for the Dean's List in the College of Agriculture and Life Sciences is determined by the following criteria:
 - a. a minimum course load for the semester of 12 letter-graded credits;
 - b. completion of at least one CALS course;
 - c. achievement of a semester GPA of at least 3.50;
 - d. achievement of an S grade, or a C- or better grade in each course (including physical education), with no Incompletes. Dean's List will be granted retroactively if students meet all the requirements after successful course completion to make up INC grades.
2. **Bachelor of Science with Honors**
 - a. Students receiving a cumulative GPA of 4.00 or greater (based on the last four full-time residential semesters of Cornell credits, with a minimum of 48 letter-graded credits) will graduate "summa cum laude."
 - b. Students receiving a cumulative GPA of greater than or equal to 3.75 and less than 4.00 (based on the last four full-time residential semesters of Cornell credits, with a minimum of 48 letter-graded credits) will graduate "magna cum laude."
 - c. Students receiving a cumulative GPA of greater than or equal to 3.50 and less than 3.75 (based on the last four full-time residential semesters of Cornell credits, with a minimum of 48 letter-graded credits) will graduate "cum laude."
3. **Bachelor of Science with Distinction in Research.** Students will graduate with a bachelor of science degree with distinction in research when, in addition to having completed all the graduation requirements, they have satisfactorily completed the research honors program in their area of interest and have been recommended for the degree by the honors committee of that area. Special requirements are given in the section on the Research Honors Program.

4. **Ho-Nun-De-Kah**, founded in 1929, is the undergraduate honor society of the College of Agriculture and Life Sciences. Members are recruited from the top 20 percent of the senior class and top 15 percent of the junior class. In keeping with the ideals of encouraging scholarship, leadership, and citizenship, members provide free tutoring and a variety of service activities to both the college and the community.
5. **Gamma Sigma Delta** is an honor society of faculty members and students in the Colleges of Agriculture and Life Sciences, Human Ecology, and Veterinary Medicine. The common bond is promotion of excellence in work related to the quality of our environment and life as it relates to agriculture and the related sciences. The Cornell chapter recognizes the academic achievements of students, faculty members, and alumni of those colleges with nominations for membership and with special awards. To be eligible, seniors must be in the upper 15 percent of their major. Five juniors with the highest grade point average in the college are also nominated. Gamma Sigma Delta also promotes academic excellence through sponsorship of special programs in the three colleges.
6. **Golden Key** is an international honor society that recognizes and encourages scholastic achievement and excellence in all undergraduate fields of study. Juniors and seniors in the top 15 percent of their class are invited to membership. Visit Golden Key's web site at www.rso.cornell.edu/gkihs/.

Academic Standing

At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persistently fail to attend classes. For students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings, placing students on probation, granting students leaves of absence, advising students to withdraw, or suspending or expelling students.

Specifically, the committee considers as possible cause for action failure to attend and participate in courses on a regular basis or, at the end of any semester, failure to attain one or more of the following:

- semester GPA of at least 2.00*
- cumulative GPA of at least 2.00*
- satisfactory completion of 12 or more credits per semester
- reasonable progress toward completion of distribution requirements
- appropriate completion of college and university requirements

In general terms, regular participation in course work with academic loads at a level sufficient to assure graduation within eight semesters and grades averaging C (2.00) or higher are prima facie evidence of satisfactory progress and good academic standing.

*For those students matriculating 8/01 or later. Requirements are 1.70 for those who matriculated before 8/01.

Petitions Procedures

The Committee on Academic Achievement and Petitions is a college committee of six faculty and two student members. On behalf of the faculty, the committee

- reviews, at the end of each semester and at other times as shall seem appropriate to the committee, the progress of students toward meeting graduation requirements.
- receives and acts on petitions from individual students asking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee.
- acts on readmission requests from persons whose previous enrollment was terminated by the committee.
- notifies the petitioner in writing of the action taken by the committee.

A petition for exemption from a college academic requirement or missed deadline may be filed by any student who has grounds for exemption. A petition is usually prepared with the assistance of a student's faculty adviser, whose signature is required. The adviser's recommendation is helpful to the committee. The committee reviews the written petition and determines whether there is evidence of mitigating and unforeseen circumstances beyond the control of the student that would warrant an exemption or other action.

Students wishing to withdraw from a course after the end of the seventh week must petition. Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total workload, and scheduling prior to stated deadlines. A grade of W (for "withdrawal") is recorded on the transcript if a petition to drop a course is approved after the end of the seventh week of classes, and if an approved drop results in fewer than 12 credits.

Forms are available in the Counseling and Advising Office, 140 Roberts Hall. Counselors are available to assist with the process.

Leave of Absence

A student wishing a break from studies in a future semester or who finds it necessary to leave the university before the end of a semester should submit a written petition for a leave of absence. Such action is necessary to clear the record for the semester and if not taken may adversely affect the student's subsequent readmission to the university.

An approved leave is considered a voluntary interruption in study and holds the student's place in the college without requiring reapplication to the university. Voluntary leaves are issued in two ways: unrestricted for students in good academic standing (no restrictions placed on length of leave, or activities pursued, and simple notification by student of intent to return), and restricted (length of leave and activities pursued may

be specified, and a petition to return must be approved by the Petitions Committee).

A database is maintained by the Counseling and Advising Office to assist students with questions and the return procedure.

Information and petition forms are available in the Counseling and Advising Office, 140 Roberts Hall.

Withdrawal

A student who wishes to leave the university permanently should file a petition for withdrawal. Such petitions are approved if the student is in good academic standing. Students who have withdrawn and who later decide to return must apply to the CALS Admissions Office.

MAJOR FIELDS OF STUDY

The college curriculum consists of 23 major program areas that reflect the departmental academic effort in the college. Faculty curriculum committees in each area identify a sequence of courses appropriate to all students studying in that field. Courses of study are designed to provide systematic development of basic skills and concepts as well as critical thinking. Opportunity for concentration in an area of particular interest is usually available.

Programs are planned with considerable flexibility, allowing students to prepare for careers, graduate work, professional opportunities, and the responsibilities of educated citizens. Course requirements in each program area are different, but all students must meet the minimum distribution requirements of the college.

Animal Sciences

The animal sciences program area offers a coordinated group of courses dealing with the principles of animal breeding, nutrition, physiology, management, and growth biology. Emphasis in subject matter is directed toward domestic animal species, dairy and beef cattle, horses, poultry, pigs, and sheep, while laboratory, companion, and exotic animal species are also included in research and teaching programs. The Department of Animal Science has extensive facilities for animal production and well-equipped laboratories and classrooms, including a teaching barn, in which students can gain practical experience in the care and management of large animals.

The program focuses on the application of science to the efficient production of animals for food, fiber, and pleasure and easily accommodates a variety of interests and goals. Beyond a core of basic courses (suggested minimum, 15 credits) students select production and advanced courses to fulfill an individually tailored program worked out in consultation with their advisers. In this way it is possible to concentrate by species as well as by subject matter (nutrition, physiology, growth biology, breeding, management). For each subject area, supporting courses in other departments are readily available and strongly encouraged. Many science-oriented students elect a program emphasizing supportive preparation in the physical and biological sciences appropriate to graduate, veterinary, or professional study following graduation.

Dairy management is a popular program among students who may be preparing to manage a dairy farm or enter a related career. Other students may elect a program oriented toward economics and business in preparation for a career in the poultry, dairy, meat-animal, horse, feed, or meats industry. These are examples of the flexibility within these programs that can be developed to meet a student's career interest related to animals.

It is recommended that students obtain appropriate fieldwork or animal experience during summers. Several special training opportunities exist for highly motivated students. Juniors and seniors whose academic records warrant it may, by arrangement with individual faculty members, engage in research (either for credit or honors) or assist with teaching (for credit). The Dairy Management Fellows Program offers an equally challenging but different type of experience for a select group of students.

Students declaring a minor in animal science will arrange for a formal academic adviser in animal science at least three semesters before graduating. It is expected that the minor will be satisfied by completing at least 12 credit hours of animal science courses (at least 6 of which must be taken at Cornell), the makeup of which will be determined in consultation with the adviser. For example, it is recommended that students completing the minor will assemble courses (or demonstrate having the equivalent from elsewhere) including some basic and applied biology of animals (anatomy, physiology, nutrition, genetics) along with a selection of intermediate or advanced offerings from the animal science curriculum. Satisfactory completion of minor requirements will be verified by the minor adviser's signature on the petition to graduate.

For information, contact Deloris Bevins in 149 Morrison Hall, dgb1@cornell.edu.

Applied Economics and Management

The Department of Applied Economics and Management (AEM) offers undergraduate programs of study in three broad areas: business, agribusiness, and applied economics.

AEM is home to Cornell's undergraduate general business degree. Here students can immerse themselves in finance, marketing, management, and business strategy courses, as well as take specialized courses in entrepreneurship, food industry management, and agribusiness. This highly selective program is accredited by AACSB International, the accrediting body for general business degree programs.

AEM also includes undergraduate specializations that focus on the economics of agriculture and the environment. All AEM courses stress the application of analytical skills, critical thinking, and economic theory to real-world business and public policy issues.

The six areas of specialization offered in AEM are:

Business, one of the largest undergraduate majors at Cornell University, offers students a broad array of courses in the fields of finance, marketing, management, accounting, and entrepreneurship.

Food industry management is a specialized business program for students interested

in management positions in the retailing, manufacturing, and distribution sectors of the food industry.

Agribusiness management students study general business and take courses tailored to agricultural businesses.

Farm business management and finance is for students interested in working for firms with ties to farming and agriculture, such as cooperatives, banks, horticultural businesses, and family farms.

Agricultural and applied economics is a broad-based specialization that focuses on such important national and international issues as the economics of policy, markets, production, international trade, and international development.

Environmental and resource economics students study the economics of water and air quality, waste management, rural-urban land use, the sustainability of natural resources, energy use, and global climate change.

AEM graduates are actively recruited by elite businesses for positions in finance, marketing, investment banking, and management consulting, as well as by federal and international agencies. Many graduates go on for advanced professional and academic degrees, often after several years in a challenging career position in business or government.

Minors

Through the Department of Applied Economics and Management, CALS students may complete a minor program of study in five different subject areas—agribusiness, business, environmental and resource economics, farm management, or food industry management. These minors consist of between 18 and 20 credits of required courses. Students should contact the Department of Applied Economics and Management for more detailed information and to enroll in one of these minor programs of study. These minors are not open to students outside of CALS.

Atmospheric Science

Atmospheric science is the study of the atmosphere and the processes that shape weather and climate. The curriculum emphasizes the scientific study of the behavior of weather and climate, and applications to the important practical problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes and acquire skill and experience in the analysis, interpretation, and forecasting of meteorological events. All students are required to complete a minimum of three semesters of calculus, two semesters of physics, and a semester each of chemistry, computer science, and statistics.

Atmospheric science courses are offered through the Department of Earth and Atmospheric Sciences (EAS). The requirements for the B.S. in atmospheric science through the College of Agriculture and Life Sciences are as follows:

1. Atmospheric science:
 - a. EAS 341, 342, 352, 447, 451
 - b. See tracks listed below for additional required courses

2. Mathematics, statistics, and computer science:
 - a. MATH 111, 112, 213, or equivalent
 - b. AEM 210 or equivalent
 - c. MATH 222, or MATH 223, or EAS 435
 - d. EAS 121/150 or equivalent
3. Basic physical sciences:
 - a. PHYS 207, 208, or equivalent
 - b. CHEM 206
4. Tracks

Operational <i>required</i>	Education <i>required</i>	Broadcasting <i>required</i>
EAS 250	EAS 131/133	EAS 131/133
EAS 296	EAS 250	EAS 250
EAS 456		EAS 296
EAS 470		EAS 470
		COMM 201
<i>suggested</i>	<i>suggested</i>	<i>suggested</i>
EAS 131/133	Courses in	EAS 268
EAS 268	(ASTRO, EAS)	minor in communication
EAS 331	minor in education	
EAS 435		
Business <i>required</i>	Environmental <i>required</i>	
EAS 131/133	CHEM 207-208	
EAS 268	EAS 334	
	EAS 457	
<i>suggested</i>	<i>suggested</i>	
minor in business	EAS 131/133	
	EAS 250	
	EAS 268	
	EAS 302	
	EAS 331	
	EAS 435	
	EAS 483	

It is recommended that students who are interested in graduate study in atmospheric science should take additional courses in mathematics and physics.

A student may minor in atmospheric science by completing any four of the following EAS courses*: 131, 250, 268, 331, 334, 341, 342, 352, 435, 447, 451, 456, 457, 470, 651, 652 or 666.

*(two of the courses must be taken at Cornell.)

Courses satisfying the requirements for a major or minor in atmospheric science may not be taken S-U.

Biological Sciences

Biology is a popular subject at many universities for a variety of reasons: it is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to

understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The Office of Undergraduate Biology in 216 Stimson Hall provides student services that are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include either general biology or one of the following concentrations: animal physiology, biochemistry, computational biology, ecology and evolutionary biology, genetics and development, insect biology, molecular and cell biology, microbiology, neurobiology and behavior, nutrition, plant biology, and systematics and biotic diversity. Students interested in the marine sciences should consult the Shoals Marine Laboratory office, G14 Stimson Hall, 255-3717, for academic advising. For more details about the biology curriculum see the section in this catalog on biological sciences or visit www.bio.cornell.edu. For details regarding the minor in biological sciences, please refer to the Biological Sciences section of this catalog.

Biological and Environmental Engineering

The Department of Biological and Environmental Engineering (BEE) addresses three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, air, biodiversity, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The undergraduate engineering major in the Department of Biological and Environmental Engineering has a unique focus on biological systems, including the environment, that is realized through a combination of fundamental engineering sciences, biology, engineering applications and design courses, and liberal studies. The program leads to a bachelor of science degree in biological engineering, which is awarded jointly by the Colleges of Engineering and Agriculture and Life Sciences, and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology, Inc. (ABET). All students in the jointly administered BEE major enroll in the College of Engineering and pay endowed tuition their last two semesters.

Biological engineering students take courses in mathematics, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and design. They may select upper-level engineering courses in subjects that include bioprocessing, soil and water management, biotechnology applications, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students further strengthen their programs by

completing minors or a second engineering major. Students planning for medical school take additional lab-based courses in biology, biochemistry, and organic chemistry. Throughout the curriculum, emphasis is placed on communication and teamwork skills, and all biological engineering students complete a capstone design project. Students in the engineering program may major in either biological engineering or environmental engineering and may pursue minors and options in specialized areas as noted in the engineering section of this publication. Biological engineering majors interested in the environment may complete a formal program of courses in the environmental engineering option. **Specific course requirements and other information for the biological engineering program and the environmental engineering Option are described in the College of Engineering section of this publication.** Further information is also available at the undergraduate program office in BEE Student Services, 207 Riley-Robb Hall, or at www.bee.cornell.edu/.

The department also offers two technology programs: biological engineering technology and environmental engineering technology. The technology programs emphasize applied and technical aspects of biological, environmental, physical, and life sciences. These programs incorporate courses in basic biological and physical sciences and mathematics as well as engineering and technology, agriculture, business, social sciences, and liberal studies.

Many engineering and technology undergraduate students participate in honors programs, undergraduate teaching and research, internships, independent study, design teams, and study abroad. Students in the engineering program are also eligible to participate in the Engineering Cooperative Education Program. Students pursuing majors offered in the BEE department should have a strong aptitude for the physical and life sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities for engineers and technologists cover the spectrum of self-employment, private industry, public agencies, educational institutions, and graduate programs in engineering and science, as well as the professional fields like medicine, business, and law. In recent years graduates have pursued careers in environmental consulting, biotechnology, pharmaceutical industries, biomedical engineering, management, sustainable technologies, consulting, and international development.

The living world is all around us and within us. The biological revolution continues and it has given rise to a growing demand for engineers and technical people who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, who are sensitive to the needs of people, and who are interested in the challenges facing society. The Department of Biological and Environmental Engineering is educating the next generation of engineers to meet these challenges.

Specific course requirements for the accredited engineering programs are found in the College of Engineering section of this book.

Specific course distribution requirements for the academic programs in biological engineering technology and environmental engineering technology include

	Credits
1. <i>Basic Subjects</i>	
a. Calculus	8
b. Chemistry	7
c. Physics	8
d. Introductory biological sciences	6-8
e. Computer programming	4
f. Statistics or probability	3
g. Written and oral expression	9
h. Social sciences	6
i. Humanities	6
2. <i>Advanced and Applied Subjects</i>	
a. Five courses in the biological, environmental, or life sciences	15
b. Five engineering or technology courses at the 300 level or above; including at least 9 credits in biological and environmental engineering	15
3. <i>Electives</i>	
Additional courses to complete College of Agriculture and Life Sciences requirements	
4. <i>Total (minimum)</i>	120

For further details on the biological and environmental engineering and technology programs, see the *BEE Undergraduate Program Handbook*, available at 207 Riley-Robb Hall or at www.bee.cornell.edu. Contact Professor Jim Bartsch at 255-2800, jab35@cornell.edu, or go to www.bee.cornell.edu for more information.

Biology & Society

The Biology & Society program area is designed for students who wish to combine the study of biology with perspectives from the social sciences and humanities. Many of the most critical social issues of our time, from the implications of genetic engineering to the impact of global climate change, have biological processes at their core. At the same time these issues are inherently social, involving complex relationships among people, institutions, laws, and beliefs. The Biology & Society field of study provides the skills and perspectives necessary to confront problems with biological, social, and ethical dimensions. In consultation with a faculty member, students are expected to select their courses in the field to meet their own goals and interests. For a description of the Biology & Society requirements and courses, see "Biology & Society" under the College of Arts and Sciences in this publication or visit www.sts.cornell.edu.

Students who elect Biology & Society as their major field of study graduate from Cornell with well-developed writing and analytical skills and a knowledge base that can lead to employment in a variety of fields. Many graduates have accepted positions as health counselors, writers, or policy analysts and researchers for government organizations, medical institutions, consumer or environmental groups, or scientific research institutes. Students have found that Biology & Society is also excellent preparation for

professional training in medicine, law, and health services administration and for graduate programs in such fields as genetic counseling, nutrition, clinical psychology, public health, environmental studies, anthropology, sociology, and other related fields.

Admissions

Students in CALS may be admitted provisionally into this field of study when they apply to the college. Full admission depends on completing introductory biology and completing an application. Students transferring into this field of study will need to complete introductory biology and to submit an application during their sophomore year.

The application includes

1. a one- to two-page statement explaining the student's intellectual interests in Biology & Society and why it is consistent with his or her academic goals and interests.
2. a selected theme.
3. a tentative plan of courses fulfilling Biology & Society requirements, including courses taken and those planned.
4. a transcript of work taken at Cornell University, current as of the date of application.

The faculty admissions committee reviews applications twice a year, once each during the fall and spring semesters. A faculty adviser is assigned on admittance to the field. Approximately 60 faculty members from four colleges serve as advisers to Biology & Society students. The major program is coordinated for students in all colleges through the Biology & Society Office, 306 Rockefeller Hall, where students can get information, specific course requirements, and application forms. Faculty advisers are available to discuss the Biology & Society requirements.

Requirements for the program are listed below. A full description and listings of courses that satisfy the requirements can be obtained in 306 Rockefeller Hall or at www.sts.cornell.edu. See also "Biology & Society" in the College of Arts and Sciences section of this publication.

Biology & Society requirements:

1. Introductory biology (101-104, 105-106, or 107-108, or a 5 in AP biology)
2. College calculus (one course)
3. Ethics (one course)
4. Two social sciences/humanities foundation courses
5. Three biology foundation courses
6. One biology depth course
7. Statistics (one course)
8. Core course
9. Five theme courses (a coherent group of five courses relevant to the student's special interest in Biology & Society, including a senior seminar that serves as a capstone course for the program).

Students should develop their theme and select their courses in consultation with a member of the Biology & Society faculty. A list of the faculty is available in 306 Rockefeller Hall. Further information may be obtained at www.sts.cornell.edu.

Biometry and Statistics

Quantitative prediction and interpretation are increasingly essential components of biological and social sciences. Complex patterns, structures, and interactions raise fundamental and fascinating questions that can be addressed only using formal mathematical, statistical, and computational methods. The wealth of data that can be acquired using modern methodologies to address these questions, in turn, requires substantive quantitative approaches to make possible appropriate analysis and interpretation. Computational power, meanwhile, has increased exponentially providing the means for sophisticated analysis of complex phenomena.

The biometry and statistics major, in the Department of Biological Statistics and Computational Biology, focuses on the application of mathematical and statistical techniques to the sciences. Biometry applies mathematics and statistics to problems with a biological component, as seen in agricultural, environmental, biological, and medical science. Statistics is concerned with quantitative aspects of scientific investigation: design, measurement, summarization of data, and reaching conclusions based on probability statements. Students with ability in mathematics and an interest in its applications will find this a rewarding and challenging major.

The work of an applied statistician or computational biologist can encompass research, teaching, consulting, and computing in almost any combination and in a wide variety of fields of application. Opportunities for employment are abundant in academics, government, and businesses ranging from large corporations to small consulting firms; salaries are usually excellent. Experience gained through summer employment or work as an undergraduate teaching assistant is highly recommended. For further details on the biometry and statistics major/minor, please contact the director of undergraduate studies, Professor Steven J. Schwager (424WN) at sjs5@cornell.edu or go to www.bsbc.cornell.edu.

Requirements for the Major (beyond the college requirements)

Ten (10) core courses:

- BTRY 301 Biological Statistics I or
BTRY 601 Statistical Methods I
BTRY 302 Biological Statistics I or
BTRY 602 Statistical Methods II
BTRY 408 Theory of Probability
BTRY 409 Theory of Statistics
BTRY 495 Statistical Consulting
MATH 111 and 112 Calculus I and II or
MATH 121 and 122 Honors Calculus I and II or
MATH 191 and 192 Calculus I and II for Engineers
MATH 221 and 222 Linear Algebra and Differential Equations or
MATH 223 and 224 Theoretical Linear Algebra and Calculus or
MATH 293 and 294 Engineering Mathematics or

MATH 213 and 231 Calculus III and Linear Algebra with Applications

COM S 100M Introduction to Computer Programming or

BEE 151 Introduction to Computing

Statistics concentration: Students must complete three (3) advanced courses in statistics, computer science, operations research, biology, and/or mathematics courses; below is a sample of such courses (for complete list, go to www.bsbc.cornell.edu/ugrads04/):

BTRY 310 Statistical Sampling

BTRY 382 Introduction to Genomics and Bioinformatics

BTRY 604 Applied Experiment Design

ILRST 410 Multivariate Analysis

NTRES 670 Spatial Statistics

COM S 211 Computers and Programming

COM S 426 Computational Biology

OR&IE 361 and 462 Stochastic Processes

OR&IE 473 Empirical Finance

BIOPL 440 Phylogenetic Systematics

AN SC 420 Quantitative Animal Genetics

MATH 311 or 413-414 Introduction to Analysis

MATH 420 Differential Equations and Dynamical Systems

Statistical genomics concentration:

Students must complete BTRY 382 Introduction to Genomics and Bioinformatics and BIOGD 281 Genetics; in addition, they must complete two (2) courses from the advanced courses previously listed (for complete list go to www.bsbc.cornell.edu/ugrads04/). BTRY 482/682 Statistical Genomics is highly recommended.

Supplementary concentration: Each biometry and statistics major is strongly encouraged to supplement the required courses with a concentration in an area of interest to the student, consisting of a cohesive set of courses chosen by the student. It is the student's responsibility to develop this concentration, with advice from the faculty, particularly the student's faculty adviser. It will be helpful to discuss the selection of courses with the director of undergraduate studies or undergraduate advising coordinator of a department closely linked with the chosen concentration.

The Minor

A minor in biometry and statistics is available to all undergraduate students in CALS. To complete the program, students must submit a minor program of study form, available in 434 Warren Hall. Each student will retain a copy of the form and will be responsible for planning the minor program of study in conjunction with the adviser in the student's major and a BSCB faculty adviser. Students and advisers in other departments should contact the director of undergraduate studies in the Department of Biological Statistics and Computational Biology if they have questions about biometry and statistics courses or the minor. The director of undergraduate studies or another BSCB faculty member will supervise and assist each minor in course selection.

Requirements for the minor

BTRY 301 Biological Statistics I or BTRY 601 Statistical Methods I

BTRY 302 Biological Statistics II or BTRY 602 Statistical Methods II

BTRY 408 Theory and Probability

BTRY 409 Theory of Statistics

MATH 111 Calculus I

MATH 112 Calculus II

MATH 213 Calculus III or MATH 221–222 Linear Algebra and Differential Equations

One (1) additional statistics elective:

BTRY 310 Statistical Sampling

BTRY 382 Introduction to Genomics and Bioinformatics

BTRY 482 Statistical Genomics

BTRY 495 Statistical Consulting

BTRY 603 Statistical Methods III

BTRY 604 Applied Experiment Design

BTRY 652 Computational Statistical Inference

BTRY 672 Environmental Statistics

ILRST 410 Multivariate Analysis

ILRST 411 Categorical Data Analysis

ILRST 614 Structural Equations

NTRES 670 Spatial Statistics

A minimum of 31 credits is needed to complete the minor. Only courses for which the student receives a grade of C or better will count toward the minor in biometry and statistics.

Communication

Communication majors at Cornell study communication in three main areas: science, media, and technology. Students gain a strong core in the theory of communication processes, including attitude, knowledge, and behavior change, public opinion, and information systems. They develop applied oral and written communication skills; they learn how communication systems work in society and in their personal and professional lives; they apply their understanding of communication to solving problems, sustaining the environment, reaching the public with new knowledge, and managing intricate networks of technologies.

Communication majors learn how

- communication influences attitudes, opinions, and behaviors.
- mass media work in our society.
- to use, evaluate, and design communication technologies.
- to apply their understanding of communication to solving problems in science, the environment, government, industry, health, and education.

The communication major is a program with a strong core of contemporary communication knowledge, theory, and practice.

Required freshman courses*Fall semester*

COMM 120 Contemporary Mass Communication

Spring semester

COMM 116 Understanding Human Communication

COMM 117 Writing about Communication

This set of courses provides students with a basic understanding of communication and the communication process.

Sophomore courses*Fall semester*

COMM 201 Oral Communication

COMM 282 Communication Industry Research

Spring semester

COMM 230 Visual Communication

After completing the courses in the core curriculum, all majors take an additional 18 credits in communication. In consultation with their advisers, students can choose to concentrate in one of four defined focus areas or they may plan an independent focus area appropriate to specific educational and career goals.

1. *Communication in the life sciences (CILS)*—Students focusing in CILS will understand the nature of science, health, and environmental communication; learn specific skills for communicating in the life sciences; and explore conceptual and theoretical issues in science communication.
2. *Communication media studies (CMS)*—Students concentrating in CMS will analyze and understand the social processes that are affected by media in contemporary society.
3. *Communication and information technology (CIT)*—Students focusing in CIT will explore the nature of communication systems and technologies, their social and organizational uses and impacts, and their social design.
4. *Communication planning and evaluation (CPE)*—Students focusing in CPE will develop skills in identifying audiences and in preparing and implementing communication programs to meet the needs of those particular audiences. Courses in this focus area stress the positive, ethical, and effective uses of communication in human affairs.
5. *Independent concentration*—The Undergraduate Program Committee will review proposed independent focus areas and authorize students to proceed with approved independent concentrations.

Detailed information on the distribution of courses is available from the department.

In designing the communication major, the faculty of the department has considered students' need to understand contemporary research-based knowledge about communication as well as their need to be competent communicators in the workplace and in society at large.

Through the Department of Communication, CALS students may complete a **minor**

program of study in communication or a **minor program of study in information science** or both.

The **minor in communication** consists of four required courses (COMM 116, 120, 201, 230), one advanced presentation course (chosen from COMM 203, 260, 263, 301, 350, 352), and two elective courses totaling 6 credit hours, at least one of which must be at the 300–400 level, excluding COMM 496 and 498.

The **minor program of study in information science** is a cross-disciplinary program requiring one prerequisite statistics course, two courses from the information systems component area (primarily computer science), two courses from the human-centered systems component area (human–computer interaction and cognitive science), one course from the social systems component area (social, economic, political, and legal issues), and one additional course from any component area. A list of specific courses is available through the Department of Communication.

Students should contact the Department of Communication to enroll in either of these programs of study.

Crop and Soil Sciences

The Department of Crop and Soil Sciences provides instruction in the subject matter areas of crop science, soil science, environmental information science, and agronomy.

Agronomy integrates the first three subjects. A specialization in crop science is a part of the plant science major. A focus on soil science is possible in two majors, the science of natural and environmental systems (SNES) or the science of earth systems (SES). The SNES major is a biophysical science-based major that addresses the interface of environmental science and human systems involved in environmental management. Within the SNES major, students can concentrate in agroecosystem science, environmental biology, environmental information science, and sustainable development. The SES major places emphasis on the basic disciplines of chemistry, physics, and mathematics. The agronomy area combines crop production and soil management. Students interested in agronomy can major in crop and soil sciences. This major requires 30 credits with 6–12 credits in each of the categories of applied crop science, plant protection, and soil science.

A **minor in crop management** is also available for students with any major at Cornell University. In summary, it requires at least two courses and at least 7 credits in each of crop science (CSS 311, 312, 317, or 414) and plant protection (CSS 315, 444, ENTOM 241, or PL PA 301 or 401) plus at least three courses and at least 12 credits in soil science (CSS 260, 372, 412, 421 or 466). Equivalent transferred courses can be substituted. This minor helps prepare students for the Certified Crop Advisor examination, which provides an important credential for jobs in agriculture and environmental management.

A **minor in soil science** requires 15 credits in soil science, but an additional 12 credits in biological, physical, and earth sciences are recommended to qualify the student for the Civil Service classification as Soil Scientist (GS-0470). In addition to 15 credits in soil science, Civil Service classification as

Soil Conservationist (GS-0457) requires 12 credits in natural resources and agriculture and three credits in applied plant science. The soil science minor is also available to students with any major at Cornell University and transfer credit can be used to meet requirements. Students wishing to pursue either the crop management or soil science minor should contact the Department of Crop and Soil Sciences (255-5459).

Development Sociology

Technological, economic, demographic, and environmental changes are social processes. Each has major impacts on individuals, social groups, societies, and the international order. At Cornell, development sociology students study these and other facets of social change in both domestic and international settings. The development sociology major provides an opportunity for in-depth study of the interactions among development processes, environmental and technological contexts, demographic structures and processes, and the institutionalized and grassroots social movements through which people seek change in these dimensions. Courses offered by the department cover topics such as: the impact of changes in agricultural systems on rural development; community and regional development; environmental sociology; rural industrialization and labor markets; technology and social change; the implications of the genomic revolution for agriculture and communities; the linkages between population dynamics, the environment, and development; the political economy of globalization; women in development; and ethnic competition and stratification. Most courses provide background in both domestic and international aspects of the subject matter. Students can develop a specialization with a domestic, international, or global emphasis by choosing appropriate elective courses. All students learn the theory and methodology of sociology and how to apply both to research and policy in their subject areas.

Majors in development sociology are required to successfully complete seven core courses: introductory sociology (D SOC 101), international development (D SOC 205), population dynamics (D SOC 201), methods (D SOC 213 or 214), theory (D SOC 301), social stratification (D SOC 370), and a course in statistics. Four additional development sociology courses are also required of all majors, at least two of which must be at the 300 level or higher. The elective courses allow students to focus their major on particular themes such as the sociology of development; the social processes linking the environment, population, and development; and more general areas such as ethnic and class stratification, social movements, social policy, and gender and development. In each of these focus areas, students can choose to concentrate on domestic or international situations. Students are encouraged to complement courses in the department with course work in the history and economics of development, area studies, and the policy sciences.

Recognizing that students are concerned with future career opportunities, the development sociology major emphasizes acquisition of skills as well as general knowledge in preparation for jobs or post-graduate study. Accordingly, students are expected to become involved in the application

of theory, methodology, and principles and concepts in the analysis of practical problems. Development sociology offers degree programs at both the undergraduate and graduate levels (B.S., M.S., and Ph.D.). The department and graduate field are recognized as top programs in the area. The department is particularly well known for providing instruction in international as well as domestic aspects of community and rural development, environmental sociology, sociology of agriculture, population studies, and the interactions among these dimensions. Development sociology faculty are committed to both quality instruction and cutting-edge research programs.

The department maintains strong ties with technical fields in CALS as well as with programs dealing with a range of issues of importance to international and domestic development. These include: the International Agriculture Program, the Biology and Society Program, the Cornell Institute for Social and Economic Research, the Center for the Environment, the Polson Institute for Global Development, the Community and Rural Development Institute, the Gender and Global Change Program, the Bronfenbrenner Life Course Institute, and the Center for International Studies. Nearly half of the department faculty is associated with one or more area studies programs including the Southeast Asia Program, South Asia Program, Latin American Studies Program, East Asia Program, and the Institute for African Development. Department members also maintain working relations with faculty members in the Department of Sociology and social science units located in other colleges at Cornell. Students are encouraged to supplement their development sociology course work by electing courses in these other departments.

Education

Building on strong academic disciplines and grounding in sociopolitical, psychological, empirical, and theoretical bases of educational practice, the department has two foci to meet societal demands for teachers of mathematics, science, and agriculture, and for leaders in nonformal educational settings: Learning, Teaching, and Social Policy (LTSP), which includes the Cornell Teacher Education Program (CTE); and Adult and Extension Education (AEE). These two programs of study, largely at the graduate level, prepare leaders who will both engage in professional practice and improve educational processes through research, practice, and scholarship. Our undergraduate program leads to provisional certification in agricultural education. For the latest information on program developments, go to <http://education.cornell.edu>.

Adult and Extension Education (AEE).

Creating a livable world requires more than just new knowledge and technology; it also requires sustained and expert practice in learning and education. The AEE program provides opportunities for graduate students to investigate participatory educational and organizing practices that link learning to the challenge of facilitating global sustainability. As public universities focus their research, teaching, and extension on domestic and global environmental, political, and social problems, the AEE program focuses on creating opportunities for critical reflection on

adult, extension, and international education by connecting action and research. The goal is to move beyond procedural questions of "how to do it" to critical institutional questions of who does and who should benefit from our adult, extension, and international educational work. The aim is to engage practitioners and graduate students in critical reflection on practice to create practical theory from and for action.

Participation in the AEE program helps scholars and practitioners prepare for adult and extension educational leadership and professional roles in domestic and international community-based, nongovernmental, and governmental organizational settings. Areas of expertise and inquiry include: participatory practices in research, community development, and adult education; public scholarship, university extension/outreach, and community organizing in the United States; international adult and extension education; learning in adulthood; educational planning and program development; continuing professional education; staff development; and health issues related to the education of adults.

Learning, Teaching, and Social Policy (LTSP).

This program is designed to foster the development of educational leaders, researchers, and practitioners who approach issues and challenges in education from multiple perspectives, and seek to construct an integrated knowledge base upon which the practice of teaching, learning, and social policy is based. The impacts of implementation and practice are explored for creating new theories, approaches, and policies to improve teaching, learning, and community life.

Drawing on the dynamic nature of teaching and learning, this program challenges students to create and apply research-based, critically reflective analysis of cognitive, intellectual, personal, social, moral, and institutional dimensions of learning, teaching, and educational policy in a variety of contexts and at multiple governance levels. Students engage in critically reflective practice to address pressing problems and issues in formal and nonformal educational contexts across a variety of national and cultural settings.

The program is philosophically grounded in the perspective that learning and teaching is a lifelong process vital to individual development, the development of democratic communities, and the implementation of democratic values in educational policy and practice. Context, gender, social, and economic diversity underlie the design and implementation of curriculum, teaching and learning theory, and social interactions, and are lenses for examining educational practice, theory, and policy.

Faculty members and graduate students in research programs in Learning, Teaching, and Social Policy (LTSP) engage in research that investigate factors that contribute to scientific and quantitative literacy; curriculum design and evaluation in science, mathematics, and agricultural science; effectiveness of teacher professional development; educational policy in rural schools; and sociomoral development, action, and reflective thought in schools and communities. Our mission is to contribute to an educated, global society of leaders and citizens who are prepared to respond to emerging social, technological, and scientific

issues, with ethical and critically reflective judgment.

The Cornell Teacher Education (CTE) program is a unique interdisciplinary cohort-based program that certifies teachers for secondary teaching in agriculture, science, and mathematics. Students in the CTE program develop a solid mastery of their content areas and an understanding of the issues in education, and interact with and learn from each other. Each of the certification areas contributes to the others in important ways. Understanding contemporary agriculture requires knowledge of the scientific bases for the changes in the way agriculture is practiced and is developing. Understanding science fully requires knowledge of how principles are applied in the world. Agriculture provides a salient field in which to apply science notions. Understanding the ways that mathematics is used to develop analytic systems, build arguments, and organize the world is essential to any modern scientific enterprise, whether basic or applied. Agriculture and science topics give mathematics teachers practical examples they can use to help their future pupils develop understanding of abstract mathematical principles. CTE teachers are prepared as scholars of teaching and learning, able to help all their students achieve the scientific and quantitative literacy and ethical decision making skills needed for participation in a democracy.

Effective College Teaching Series. The Center for Learning and Teaching, under the auspices of the Department of Education, offers a series of courses, both credit and noncredit, for the improvement of teaching at Cornell, designed for Cornell faculty members and graduate students who are either currently teaching or intending to teach. For details, contact the Center for Learning and Teaching, 607-255-6130, or www.clt.cornell.edu.

Current offerings include:

EDUC 548(5480) Effective College Teaching

Spring and one-week summer session. 1-3 credits. For faculty and graduate students who intend to pursue an academic career.

EDUC 578(5780) ITADP Cross-Cultural Classroom Dynamics, Language, and Teaching Practicum

Fall and spring. 2 credits. For international graduate students who have, or will have, teaching assistantships.

EDUC 579(5790) ITADP Further Training for International Teaching Assistants

Fall and spring. Noncredit course for international teaching assistants who have completed EDUC 578 but need or desire continued work in classroom instructional and communication skills.

Graduate Teaching Development Workshops

Offered early in each fall and spring semester, this daylong series offers an array of workshops in teaching effectiveness, from teacher-student interactions to developing a teaching portfolio. Noncredit, open to all Cornell faculty members and graduate teaching assistants.

EDUC 620(6200) Internship in Education

Fall and spring. 1 credit. Prerequisite: CALS Graduate Student Professional Development Workshop. For CALS graduate teaching

assistants or CALS teaching personnel who wish to extend their workshop experience through reflective practice and consultation with an instructional support specialist.

Entomology

The entomology curriculum provides students with a basic background in biological and natural sciences, with a special emphasis on the study of insects. Majors may pursue graduate studies in entomology or related sciences upon completion of the B.S. degree. Alternatively, students may immediately begin careers in various aspects of basic or applied insect biology, including integrated pest management, insect pathology, environmental assessment, medical or veterinary entomology, insect toxicology, apiculture, insect systematics, or insect ecology. Because of the diversity of career options, the major includes flexibility among the core requirements and electives that can be selected by students in consultation with their advisers.

Requirements

General Requirements for CALS (see Graduation Requirements for Bachelor of Science)

Basic Science and Math Requirements

- One year of college mathematics, may substitute statistics or biometry, but must include one course in calculus
- One semester of physics (may need two depending on future plans)
- CHEM 206-208 or 207-208
- CHEM 257 (organic)
- Introductory biology (101-104 recommended, even if AP credit received)
- BIOGD 281 (genetics) or PL BR 225 (plant genetics)
- BIOEE 278 (Evolutionary Biology)
- Choose one of the following two courses:
 - BIOEE 261 (Ecology and the Environment)
 - BIOBM 330 or 331 (Principles of Biochemistry)
 (Choice depends on student interest in organismal vs. cellular/molecular aspects of biology)

Entomology Requirements (15-21 credits)

- ENTOM 212 Insect Biology - 4 cr
- Group A (core courses). Choose two of the following six courses:
 - ENTOM 322 Insect Morphology - 4 cr
 - ENTOM 333 Larval Insect Biology - 3 cr
 - ENTOM 331 Insect Systematics - 4 cr
 - ENTOM 400 Insect Development - 4 cr
 - ENTOM 455 Insect Ecology - 3 cr
 - ENTOM 483 Insect Physiology - 4 cr
- Two additional entomology courses from Groups A or B (see link to Entomology Course Spreadsheet for a complete list of entomology courses, www.entomology.cornell.edu)

Food Science

The food science program prepares students for careers in the food industry or research organizations and for graduate study in food

science or related disciplines. Food scientists enjoy satisfying careers that help ensure the sustainable availability of a safe, nutritious, affordable, and high-quality food supply for people throughout New York State, the nation, and the world.

Students in the food science program can choose from one of four specialization options in the major: (1) food science; (2) food operations and management; (3) food biotechnology; or (4) enology. The first option meets the curriculum standards set by the Institute of Food Technologists (IFT), the premier professional society for food scientists, allowing students to compete for IFT scholarships and awards. Students choose an option based on their individual interests and career goals.

The first two years of the undergraduate food science program are intended to establish a solid background in the physical and biological sciences, math and statistics, and communication skills. Required courses include chemistry (introductory and organic), biology, microbiology, calculus, physics, first-year seminar, introductory food science courses, and nutrition. The last two years emphasize the application of these basic sciences and technology to the manufacturing, sensory evaluation, storage, distribution, and safety of foods and food ingredients. Examples of food science core courses include Food Engineering Principles, Physical Principles of Food Manufacturing, Food Safety Assurance, Food Chemistry, Sensory Evaluation of Foods, and Food Microbiology; many elective courses are offered as well. Students choose electives to satisfy both college distribution requirements and their individual interests within the major and beyond.

Students are also strongly encouraged to participate in undergraduate research supervised by a faculty member and/or complete an internship in a food company during their program of study. Most teaching faculty in the department also have active research programs and welcome participation by undergraduate students. Students may receive academic credit or wages for faculty-directed undergraduate research. Several food companies recruit on campus for their internship programs. These internships provide an excellent opportunity for students to gain hands-on experience in their chosen field of interest and to establish contacts for future employment. A modern food processing and development pilot plant, an operational dairy plant, and well-equipped laboratory facilities are available to support the teaching and research needs of undergraduates.

Enology and Viticulture. Students with primary interest in viticulture and secondary interest in enology (V/E) can enroll in the plant sciences degree program, with a concentration in horticulture and a specialization in Viticulture. For these students, plant sciences will be their "major," and their required courses in enology (offered within the Food Science program) will constitute a "minor" in Food Science with a concentration in enology.

Students with primary interest in enology and secondary interest in viticulture (E/V) can "major" in food science (with a concentration in enology) and a "minor" in plant sciences (with a concentration in Horticulture).

Students in either track will take many of the same courses during their two years and must satisfy the core degree-program requirements of their major and minor program, as well as the general requirements of the college. The curriculum will consist of course work in the basic sciences (e.g., chemistry, biology, microbiology) as well as advanced courses in plant and food sciences. In addition, students will be expected to participate in internships at vineyards and/or with wine makers.

The curriculum is designed to provide students with a strong background in the basic sciences, coupled with a thorough understanding of plant and food sciences as applied to viticulture and wine making. Elective courses can be taken in a variety of areas to support and expand the major.

Prospective students should contact the undergraduate coordinators in either the Department of Horticulture (viticulture option) or Food Science (enology option) for specific course requirements.

Information Science

Information Science (IS) is an interdisciplinary field that studies the design and use of information systems in a social context: the field studies the creation, representation, organization, application, and analysis of information in digital form. The focus of Information Science is on systems and their use, rather than on the computing and communication technologies that underlie and sustain them. Moreover, Information Science examines the social, cultural, economic, historical, legal, and political contexts in which information systems are employed, both to inform the design of such systems and to understand their impact on individuals, social groups, and institutions.

The Information Science major organizes its courses into three area-based tracks:

- **Human-Centered Systems.** This area examines the relationship between humans and information, drawing from human-computer interaction and cognitive science.
- **Information Systems.** This area examines the computer science problems of representing, organizing, storing, manipulating, and accessing digital information.
- **Social Systems.** This area studies the cultural, economic, historical, legal, political, and social contexts in which digital information is a major factor.

Students must complete a set of 11 core courses: one introductory course, four courses in math and statistics, and two courses from each of the three IS areas. Students must also obtain depth in two tracks—a primary and a secondary track—that together best represent their interests. In particular, completion of the major requires four advanced courses from the selected primary track and three advanced courses from the secondary track.

Note: All INFO courses will count as in-college credit.

Requirements

Core (11 courses)

1. Introductory (one course):
INFO 130 Introductory Design and Programming for the Web
2. Math and Statistics (four courses):
 - MATH 111 Calculus I
 - one course chosen from: MATH 171 Statistical Theory and Application in the Real World; H ADM 201 Hospitality Quantitative Analysis; AEM 210 Introductory Statistics; PAM 210 Introduction to Statistics; ENGRD 270 Basic Engineering Probability and Statistics; BTRY 301 Statistical Methods I; SOC 301 Evaluating Statistical Evidence; CEE 304 Uncertainty Analysis in Engineering; ILRST 312 Applied Regression Methods; ECON 319 Introduction to Statistics and Probability; PSYCH 350 Statistics and Research Design
 - either MATH 231 Linear Algebra or MATH 221 Linear Algebra and Differential Equations
 - INFO 295 Mathematical Methods for Information Science
3. Human-Centered Systems (two courses):
INFO 214 Cognitive Psychology
INFO 245 Psychology of Social Computing
4. Information Systems (two courses):
COM S 211 Computers and Programming
INFO 230 Intermediate Design and Programming for the Web
5. Social Systems (two courses):
 - either ECON 301 Microeconomics or ECON 313 Intermediate Microeconomic Theory
 - either INFO 292 Inventing an Information Society or INFO 355 Computers: From the 17 C. to the Dot.com Boom or INFO 356 Computing Cultures

Where options in the core courses exist, the choice will depend on the student's interests and planned advanced courses for the selected primary and secondary tracks.

Tracks

Students must complete four advanced courses in their selected primary track and three advanced courses in their selected secondary track. The Human-Centered Systems and Information Systems tracks can be used as primary or secondary tracks. The Social Systems track can be used only as a secondary track.

Courses taken to satisfy the core-course requirements may not be used to fulfill the track requirements.

All courses used toward the major must be taken for a letter grade.

Additional information on Information Science courses can be found below and in the CIS section of *Courses of Study*. Course information for all other courses in the major can be found in the relevant departments (e.g., AEM, COM S, and S&TS).

1. Human-Centered Systems

PSYCH 342 Human Perception: Applications to Computer Graphics, Art, and Visual Display*

INFO 345 Human-Computer Interaction Design

PSYCH 347 Psychology of Visual Communications

PSYCH 380 Social Cognition*

PSYCH 413 Information Processing: Conscious and Unconscious

PSYCH 416 Modeling Perception and Cognition

INFO 440 Advanced Human-Computer Interaction Design

INFO 445 Seminar in Computer-Mediated Communication

INFO 450 Language and Technology

DEA 470 Applied Ergonomic Methods

*Students who take PSYCH 342 may also count its prerequisite, PSYCH 205, toward the Human-Centered Systems primary/secondary track requirements. Similarly, students who take PSYCH 380 may also count PSYCH 280 toward the Human-Centered Systems primary/secondary track requirements. At most, one of PSYCH 205 or 280 can be counted toward the primary/secondary track requirements.

2. Information Systems

INFO 330 Applied Database Systems

COM S 419 Computer Networks

LING 424 Computational Linguistics

INFO 430 Information Retrieval

INFO 431 Web Information Systems

COM S 432 Introduction to Database Systems

COM S 465 Computer Graphics I

COM S 472 Foundations of Artificial Intelligence

LING 474 Introduction to Natural Language Processing

OR&IE 474 Statistical Data Mining

COM S 478 Machine Learning

OR&IE 480 Information Technology

COM S 501 Software Engineering

INFO 530 Architecture of Large-Scale Information Systems

3. Social Systems

SOC 304 Social Networks and Social Processes

AEM 322 Technology, Information, and Business Strategy*

INFO 349 Media Technologies

INFO 355 Computers: From the 17 C. to the Dot.com Boom

INFO 356 Computing Cultures

ECON 368 Game Theory (formerly ECON 467)*

INFO 387 The Automatic Lifestyle: Consumer Culture and Technology

LAW 410 Limits on and Protection of Creative Expression—Copyright Law and Its Close Neighbors

S&TS 411 Knowledge, Technology, and Property

ECON 419 Economic Decisions Under Uncertainty

COMM 428 Communication Law

INFO 435 Seminar on Applications of Information Science

OR&IE 435 Introduction to Game Theory*

S&TS 438 Minds, Machines, and Intelligence

INFO 447 Social and Economic Data

ECON 476/477 Decision Theory I and II

COMM 494 Special Topics in Communication: Copyright in the Digital Age

INFO 515 Culture, Law, and Politics of the Internet

H ADM 574 Strategic Information Systems*

*Only one of OR&IE 435 and ECON 368 may be taken for IS credit. Only one of AEM 322 and H ADM 574 may be taken for INFO credit.

The Minor

A minor in Information Science is also available to students in AAP (Architecture and Planning students only), Arts and Sciences, CALS, Engineering, Hotel, Human Ecology, and ILR. The minor has been designed to ensure that students have substantial grounding in all three of the human-centered systems, information systems, and social systems areas. Detailed information about the minor can be found in the CIS section of *Courses of Study*. Students are also referred to www.infosci.cornell.edu/ugrad/concentrations.html for the most up-to-date description of the concentration and its requirements.

International Agriculture and Rural Development

International agriculture and rural development provides students with an understanding of the special problems of applying basic knowledge to the processes of agricultural development in low-income countries. The student typically specializes in a particular subject and works with an adviser to plan a program oriented toward international agriculture. The courses in international agriculture and rural development are designed to acquaint students with the socioeconomic factors in agricultural development, the physical and biological nature of tropical crops and animals, and the various world areas for which study programs exist.

Requirements

In addition to the college distribution requirements, students in international agriculture and rural development must take a minimum of 36 credits toward the major. A minimum of 7 credits in international agriculture and rural development (IARD) are required. The foreign language requirement for the IARD major is identical to that of the College of Arts and Sciences (see p. 422). Students are expected to complete an overseas field experience of a minimum of six weeks. The other courses recommended are drawn from a wide range of disciplines. The objective is to familiarize students with the many facets of agricultural development

in low-income countries. Students are encouraged to take additional specialized courses in one of the other program areas of the college.

International Studies Minor

Preparing for leadership in an increasingly interconnected and dynamic world, CALS undergraduates need knowledge, skills, and attitudes that build "global competencies." The minor for CALS students not majoring in international agriculture and rural development will recognize an international concentration of course work and experiences.

Requirements

1. Four courses with significant international content, as recommended by students' major departments (two should be from CALS).
2. One semester of IARD 480 Global Seminar.
3. The foreign language requirement for the international studies minor is identical to that of the College of Arts and Sciences (see p. 422).
4. An approved overseas experience (exchange, study abroad program, internship, or faculty-led short course).

For more information, contact the academic programs coordinator in the International Programs Office, 255-3037.

Landscape Architecture

Landscape architecture focuses on the art of landscape design as an expression of the cultural values and the natural processes of the ambient environment. The program's unique place within the university promotes interaction among the areas of horticulture, environmental science, architecture, and city and regional planning.

The course of study prepares students for the practice of landscape architecture. The curriculum focuses on graphic communication, basic and advanced design methods, landscape history and theory, plant materials, construction and engineering technology, and professional practice. Design studios deal with the integration of cultural and natural systems requirements as applied to specific sites at varying scales. Projects may include garden design, parks design, housing design, historic preservation, environmental rehabilitation, and urban design.

Landscape architecture offers two professional degree alternatives: a four-year bachelor of science degree administered through the College of Agriculture and Life Sciences and a three-year master of landscape architecture degree administered through the Graduate School for those who have a four-year undergraduate degree in another field. Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects. The major in each degree is composed of core courses related to professional education in landscape architecture, a concentration in a subject related to the core courses, and free electives.

The department also offers a two-year master of landscape architecture advanced degree program administered through the Graduate School for those with accredited degrees in

landscape architecture or architecture. The program entails core courses in the discipline and the development of a concentration in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

In addition, an undergraduate minor in cultural landscape studies is available for nonmajors.

Dual-Degree Options

Graduate students can earn a master of landscape architecture and a master of science (Horticulture) or a master of city and regional planning simultaneously. Students need to be accepted into both fields of study to engage in a dual-degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Study Abroad

The faculty encourages study abroad and has two formally structured programs. The *Denmark International Study* (DIS) program is available primarily to senior undergraduates and third-year graduate students in the fall semester and is administered through Cornell Abroad. The *Rome Program* is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

Bachelor of Science Landscape

Architecture Degree Sequence (Note: Each semester, the studio classes require payment of a supply and field trip fee, and all landscape architecture majors are required to pay an annual technology fee.):

First Year

<i>Fall Semester</i>	<i>Credits</i>
*LA 141 Grounding in Landscape Architecture	4
†Biological sciences elective	3
†Physical sciences elective	3
†Social sciences or humanities elective	3
†Written or oral expression elective	3
	16

Master of Landscape Architecture

Advanced Degree Program. The two-year master of landscape architecture (M.L.A./A.D.) program serves to broaden and enrich undergraduate education in design

by providing an expanded educational experience to those who are technically skilled. Applicants must hold a bachelor's degree in landscape architecture or architecture from an accredited program. The objective of the two-year (M.L.A./A.D.) program is to develop specializations for individuals who may wish to teach, practice, or conduct applied research in landscape architecture.

Students admitted to the two-year M.L.A./A.D. program are required to complete 60 credits of course work as approved by the members of their graduate committee. For landscape architects, this must include at least two advanced studios, a graduate seminar, a concentration, and a thesis. For architects, the curriculum requires three advanced studios, two courses in plants and planting design, two courses in the history of landscape, two courses in site engineering, a seminar in design theory, a course in professional practice, a concentration, and electives.

Undergraduate Minor for Nonmajors

Students outside the professional program may choose the undergraduate minor (five courses, 15 credits) in cultural landscape studies to complement their major. A variety of courses consider the cultural landscape as an object, something to be studied for its own sake, and as a subject, as means to understand society's relationship to natural systems. The study of cultural landscapes also includes perceptions of landscapes, cultural ideas and values, and visible elements. Direct inquiries to Professor A. Hammer, Department of Landscape Architecture, 440 Kennedy Hall.

Courses: choose five for a total of 15 credits

+LA 140 The Symbols of New York State's Cultural Landscape (3 credits)

+LA 155 American Indian Cultural Landscapes: Changes in Time (3 credits)

+LA 360 Pre-Industrial Cities and Towns of North America (3 credits) offered alternate years

+LA 261 Urban Archaeology (4 credits)

+LA 262 Laboratory in Landscape Archaeology (3 credits)

LA 263 American Indians, Planners, and Public Policy (3 credits), offered alternate years

+LA 282 The American Landscape (3 credits)

+LA 418 New York Landscapes Oral History Project (3 credits)

+LA 483 Seminar in Landscape Studies (3 credits)

LA 497 Independent Study (1-5 credits)

LANAR 524 History of European Landscape Architecture (3 credits)

LANAR 525 History of American Landscape Architecture (3 credits)

LA 545 The Parks and Fora of Imperial Rome (3 credits)

LA 569 Archaeology in Preservation Planning and Design (3 credits)

LA 580 Landscape Preservation: Theory and Practice (3 credits)

+ Distribution elective

Natural Resources

As the number of humans living on the Earth surpassed six billion at the start of the 21st century, knowing how to conserve and manage well the Earth's remaining biological resources and natural environments takes on increasing importance and urgency. The field of natural resources sits squarely at the interface of science and policy, applied to these important conservation and environmental challenges. This is a biologically based major that focuses on the interface of nature (species, populations, communities, and ecosystems) with the human institutions involved in environmental conservation and management. The major's focus on biological resources (e.g., fisheries, wildlife, forests, and wetlands) includes issues of conservation and restoration of scarce species and their habitats, sustainable harvest of species of economic importance, management of invasive species and overabundant species, population dynamics in aquatic and terrestrial environments, ecosystem and watershed management, and mitigating the effects of human-induced changes on the environment.

The mission of the Department of Natural Resources, home of the major, is "to develop knowledge and facilitate learning to improve society's stewardship of natural resources and the environment." A commitment to undergraduate education is a vital component of that mission. For more information see www.dnr.cornell.edu. The curriculum emphasizes the biology and ecology of natural systems, as well as the social science/human aspects of conservation challenges. The major allows students flexibility to pursue a variety of paths to understand the scientific, ethical, and societal basis for management and protection of natural resources and environments through the application of ecological principles and knowledge of societal needs.

The Future for Natural Resources Majors

Most students entering the major have a strong interest in the natural world and in contributing to greater harmony between humans and the environment. An undergraduate degree in natural resources gives students the concepts and tools needed to participate intelligently and effectively in decisions that determine the future of our environment, either as natural resources professionals or as informed citizens.

Career opportunities in natural resources are diverse. The major prepares students for graduate school or entry-level positions in natural resources and environmental management agencies at local, state, federal, and international levels, or for jobs in the private for-profit (e.g., environmental consulting firms) or nonprofit sectors. Many students ultimately pursue graduate studies in environmentally related fields including the biological, physical, and chemical sciences; forest, wetland, stream, wildlife, or fisheries management; and environmental law and public policy. Graduates often assume leadership positions in government, colleges and universities, national and international conservation organizations, environmental consulting firms, environmental divisions of private industry, and organizations involved in environmental education or communication.

Curriculum

Natural resources is a flexible major, and free electives can account for as many as 40 credits out of the total of 120 required for graduation. Students complete a set of courses in biology, ecology, chemistry, mathematics, economics, ethics, and written and oral expression; many of these courses also meet the college's distribution requirements for graduation. *Freshmen and sophomores* complete a series of four foundation courses in the major: Introduction to the Field of Natural Resources, Environmental Conservation, Introductory Field Biology, and People, Values, and Natural Resources. Juniors complete three core courses: Applied Population Ecology, General Ecology, and Natural Resources Management and Planning. These foundation and core courses introduce the critical environmental and natural-resource issues confronting society, and develop the conceptual and methodological tools that students will use in upper-division courses.

Juniors and seniors may specialize in one of three areas of concentration: applied ecology, resource policy and management, or environmental studies. Through course work in these concentrations, students gain an in-depth understanding of key principles, concepts, and practices. All students also have the flexibility to gain exposure to a wide variety of environment-related courses offered by Natural Resources and other departments throughout Cornell. Many students elect to conduct a research honors thesis.

Areas of Concentration within the Major

Applied ecology is designed as a foundation for those who wish to pursue careers or advanced study in science-based conservation or management of fish and wildlife populations and their habitats, conservation biology, control of invasive and overabundant species, watershed and landscape management, quantitative population dynamics, resource inventory and information management, global ecology, or applied ecology and biogeochemistry of forests and wetlands. This concentration also may interest students seeking a biologically-based approach to environmental science or global studies. Students who select this concentration typically focus their course work in the areas of species biology and applied ecosystem ecology, including quantitative analysis of fish, wildlife, and plant populations, ecosystems, and landscapes. They complement their course work within the department with courses in other departments, such as Ecology and Evolutionary Biology, Microbiology, Geology, Crop and Soil Science, Atmospheric and Earth Sciences, Animal Sciences, and Plant Biology.

Resource policy and management provides a foundation for students who wish to pursue careers or advanced study in the human dimensions or policy aspects of natural resource conservation and management, natural resource and environmental law, environmental policy analysis, or environmental communication. Students who select this concentration typically focus on courses related to the development of environmental policy, management strategies for particular species or ecosystems, natural resource planning, resource economics, or programs in environmental communication and education. They complement their course work within the department with courses

in other departments such as Government, Ecology and Evolutionary Biology, Development Sociology, Communications, Applied Economics and Management, City and Regional Planning, and Policy Analysis and Management.

Environmental studies is intended for those who wish to pursue a broad and synthetic approach to understanding and participating in (re)structuring the interactions between society and environment. The concentration's emphasis is on developing an ability to think critically about these interactions. Building on a foundation of courses required for the natural resources major, during years 3 and 4, each student will design a cohesive sequence of six upper-division courses with help from their departmental adviser. These six courses should include two courses from each of three categories: (1) natural science; (2) social science and analytic skills, e.g., economics, political economy, logic, computer programming, GIS, statistics; and (3) humanities, e.g., history, philosophy, literature, arts, foreign language. This self-defined environmental theme ensures development of specific competencies linked to personal and professional ambitions of the individual student. Example themes include environmental law, environmental education, "green" business, sustainable agriculture, and environmental communication. Students are expected to take advantage of internship, independent study, and honors thesis opportunities, as appropriate.

Research and Work Opportunities for Undergraduates

The department offers many opportunities for field-oriented studies, independent research, internships, and jobs. These include several field-based courses and access for research at the Arnot Teaching and Research Forest near Ithaca, the Little Moose Field Station in the Adirondacks, the Cornell Biological Field Station on Oneida Lake near Syracuse, and the Hubbard Brook Experimental Forest in New Hampshire, as well as numerous natural areas near campus. Part-time jobs in the research and extension programs of many faculty members offer students opportunities for career-related work experience. A research honors program is available for qualified students.

For a comparison of the natural resources major with other environmental majors, see www.dnr.cornell.edu/teaching/ugrad/faq/cals_env.pdf.

Nutritional Sciences

Nutritional sciences draws upon chemistry, biology, and the social sciences to understand complex relationships among human health and well-being, food and lifestyle patterns, food and agricultural systems, and social and institutional environments.

The program in nutritional sciences provides students with strong training in human nutrition in the context of an understanding and appreciation of the agricultural and life sciences. The program responds to the growing and important interrelationships among human nutrition and the agricultural and life sciences. Growing public interest in health and nutrition has placed new demands upon food producers, processors, and retailers. The problems of hunger and malnutrition in the United States and abroad

require that nutritionists work with specialists in areas such as agricultural economics, food production, and development sociology. Advances in biotechnology provide researchers with new ways to understand human nutritional requirements and the regulation of human metabolism.

Nutritional sciences majors complete a core set of requirements and choose elective courses in the areas of their particular interest. The core curriculum includes introductory chemistry and biology, organic chemistry, biochemistry, physiology, and mathematics. Students complete five courses in nutritional sciences: NS 115 Nutrition, Health and Society; NS 245 Social Science Perspectives on Food and Nutrition; NS 345 Nutritional and Physicochemical Aspects of Foods; NS 331 Physiological and Biochemical Bases of Nutrition; and NS 332 Methods in Nutritional Sciences. In addition, students select a minimum of three advanced courses in nutritional sciences as well as elective courses in the broad areas of food production and processing, food and agricultural policy, the life sciences, environment and natural resources, communication, and education.

All majors have faculty advisers in the Division of Nutritional Sciences with whom they meet regularly. Advisers help students plan course schedules and help find opportunities for special study or experiences outside the classroom.

Many students engage in laboratory or field research with a faculty member for academic credit. The research honors program is designed for academically talented students who are interested in research. Honors students conduct independent research projects under the guidance of a faculty member and prepare an honors thesis. Many students participate in field experiences for credit during the academic year or summer. Placements in laboratories, industries, or community agencies are possible.

The major in nutritional sciences can lead to many different career paths. By supplementing the core requirements with courses in different areas, students can prepare for jobs in industry, government, or community agencies in the United States or abroad. The major is excellent preparation for graduate study in a variety of fields.

The Division of Nutritional Sciences is affiliated with both the College of Agriculture and Life Sciences and the College of Human Ecology. Most of the division faculty members work in Savage Hall, Kinzelberg Hall, and Martha Van Rensselaer (MVR) Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities.

For additional information about the nutritional sciences program, contact the Division of Nutritional Sciences Academic Affairs Office, 335 MVR Hall, 255-2628, aadns@cornell.edu.

The minor in **nutrition and health** in the College of Agriculture and Life Sciences allows students to choose from courses concerned with economic influences on human nutrition, epidemiology and public health, food quality and food service management, human health and nutrition, nutritional biochemistry, and the psychological and social influences on human nutrition. The minor consists of NS 115

Nutrition, Health, and Society plus 9 credits of 200-level or above didactic NS courses. Enrollment is limited in some courses. Please check www.nutrition.cornell.edu/undergrad/calmsnir.html for details.

Plant Sciences

Plant sciences prepares students for careers that meet the challenges of providing a safe, nutritious, and abundant food supply for a growing world population and using plants to enhance the beauty of our landscapes. It is a multidisciplinary program administered by faculty in the Departments of Crop and Soil Sciences, Horticulture, Plant Biology, Plant Breeding and Genetics, and Plant Pathology, representing one of the strongest groups of plant scientists in the world. Students in the program share a common interest in learning about topics associated with plant growth and development in the broadest sense, but beyond that common thread, individual career goals vary widely. Some have their sights set on careers in applied agriculture, others plan to contribute to advancements of our knowledge by way of teaching or research, and still others see study in plant science as a stepping-stone to specialized training in business, government, or law. In addition to the college distribution requirements, Plant science majors must take at least one course in each of several areas including botany, plant physiology, ecology, taxonomy/systematics, genetics, statistics, plant-pest interactions, crop production, and soil science, for a total of 40 credits.

Students who begin with well-defined interests or who identify certain areas of interest after several semesters of course work may choose a specialization within one of the five cooperating departments. Each specialization has additional requirements beyond the basic core courses. However, students who are uncertain about the breadth of their interests or who are seeking as much flexibility as possible may choose to design their course of study in plant sciences without declaring a specialization. Those students develop a strong background in plant science but have fewer required courses so that they can explore other areas of interest.

More than 100 courses that deal directly with some area of plant science are offered by the cooperating departments, and other courses relating to plant science are offered elsewhere in the university. There are also ample opportunities for internships, undergraduate teaching, and research experience. Qualified students, especially those expecting to go on for graduate degrees, are encouraged to avail themselves of such opportunities. Students who are planning to enter the work force immediately upon completion of the B.S. degree are encouraged to obtain practical experience. This may involve summer employment in research or in a plant production or maintenance related industry such as a lawn and tree care company, commercial greenhouse, nursery, orchard, vineyard or winery, botanical garden or arboretum, crop production farm, or with Cooperative Extension. Plant sciences faculty members also encourage students to avail themselves of opportunities to work and/or study abroad.

In addition to classrooms and laboratories in five buildings on the Cornell campus proper, research and teaching facilities

adjacent to the campus are freely available to students for hands-on practice, technical training, independent research projects, and internships. These facilities include research orchards and vineyards, golf courses and a turf research facility, the Cornell Plantations (including arboretum and natural areas) and vegetable and field crop farms. Demonstration/research facilities in Aurora (Cayuga County), Geneva (Ontario County), Highland (Ulster County), Lake Placid (Essex County), Middletown (Orange County), Odessa (Tioga County), and Riverhead (Suffolk County) are also sites administered by departments in the Plant Sciences consortium and are available for undergraduate and graduate field study.

Crop science is a specialization that focuses on the major food and feed crops of the world, such as wheat, corn, rice, soybeans, and alfalfa. In addition to 15 credits in applied crop science, students in this program also take at least 6 credits in plant protection (weed science, entomology, and plant pathology), and at least 6 credits in soil science. The crop science specialization can be focused on preparation for graduate school or be combined with a crop management minor for those planning to be certified crop advisers.

Enology and viticulture. The College of Agriculture and Life Sciences offers a curriculum in viticulture and enology within existing undergraduate B.S. degree programs in plant sciences and food science.

Students with primary interest in viticulture and secondary interest in enology (V/E) can enroll in the plant sciences degree program, with a concentration in horticulture and a specialization in viticulture. For these students, plant sciences will be their "major," and their required courses in enology (offered within the food science program) will constitute a "minor" in food science with a concentration in enology.

Students with primary interest in enology and secondary interest in viticulture (E/V) will "major" in food science (with a concentration in enology) and "minor" in plant sciences (with a concentration in Horticulture).

Students in either track will take many of the same courses during their two to four years, and must satisfy the core degree-program requirements of their major and minor programs, as well as the general requirements of the college. The curriculum will consist of course work in the basic sciences (e.g., chemistry, biology, microbiology) as well as advanced courses in plant and food sciences. In addition, students will be expected to participate in internships at vineyards and/or with wine makers.

The curriculum is designed to provide students with a strong background in the basic sciences, coupled with a thorough understanding of plant and food sciences as applied to viticulture and wine making. Elective courses can be taken in a variety of areas to support and expand the major.

Prospective students should contact the undergraduate coordinators in either the Department of Horticulture (viticulture option) or Food Science (enology option) for specific course requirements.

Horticulture. Derived from the Latin word "hortus," meaning garden, horticulture is a blend of science and culture involving

knowledge of plants in farms and gardens, parks and landscapes, and athletic and recreational facilities; indoor plants; greenhouse and nursery plant production; and crops used for wines, herbs and spices, medicinal purposes, and coffee and teas. The knowledge and skills essential to grow, maintain, process, and market horticultural plants are in high demand in a world increasingly concerned with environmental quality, recreation, and health.

The 40 faculty members in horticulture specialize in almost every aspect of horticultural science, with active research and outreach programs regionally, nationally and internationally.

Students choosing a concentration in horticulture must complete a minimum of 40 credits of core courses for the plant sciences major, plus the following courses:

HORT 101 Horticultural Science and Systems (4 credits)

HORT 400 Plant Propagation (3 credits)

Two HORT courses in plant production or management at the 400 level (6 credits)

One additional course of integrated pest management (plant pathology, entomology, or weed science) beyond the 3-credit plant sciences core requirement (3 credits)

Students transferring into Cornell from other colleges can petition to waive or adjust these requirements, in consultation with their faculty advisers.

Plant biology stresses a basic, rather than applied, understanding of how plants function, grow, and develop, as well as a study of their genome, evolution, and relationships to man. It provides undergraduates with a thorough preparation for graduate study in plant sciences. In cooperation with an adviser each student plans a curriculum with a concentration in basic sciences, supplemented by more advanced courses in plant biology. Students specializing in plant biology within the plant sciences major should take a minimum of four courses beyond the core of plant sciences courses. Options include plant molecular biology, plant cell biology, biochemistry, ethnobotany, and further courses in the function, growth, genetics, systematics, ecology, and evolution of plants. Individual research under professorial guidance is encouraged. Different options within plant biology afford a flexible curriculum.

Plant genetics and breeding relates information about genetics/genomics of plants to the improvement of cultivated plant species. Agriculturally important genes are identified, characterized, and deployed through combinations of molecular studies and sexual crosses. This area of study integrates genetic information with plant physiology/biochemistry, plant pathology, entomology, conservation biology, international agriculture, and related areas to create crops that meet the needs of modern society. In addition to the core plant sciences courses, students should take PL BR 201, 403, 404, and BIOPL 343. Other courses may be included after consultation with the adviser. Students are encouraged to participate in research projects and take advantage of opportunities for internships in industry.

Plant pathology is the study of plant diseases caused either by microorganisms or by chronic exposure to toxic elements in air and

water. At the very least, specialists in the field must learn how to identify plant diseases and to design management strategies that will limit their overall impact. However, by employing contemporary tools from molecular biology, plant pathologists are also well positioned to answer fundamental questions about the nature of host-pathogen interactions and the genes that control them. Use of these new tools has already led to rapid deployment of disease-resistant crop varieties and it promises to offer much more in the future. For most students, a concentration in plant pathology as an undergraduate is preparation for graduate study in the field. However, graduates may also be employed as representatives with agribusiness firms, Cooperative Extension educators, state or federal regulatory agents, and laboratory technicians. Suggested courses beyond the plant sciences core include organic chemistry, biochemistry, calculus, introductory plant pathology, mycology, entomology, and plant breeding.

Plant protection is offered to students who are interested in the management of plant pests. It includes the study of insects, diseases, weeds, vertebrate pests, and other factors that prevent maximum crop production. Although designed as a terminal program for students desiring practical preparation for careers in pest management, the specialization can also provide an adequate background for graduate work in entomology, plant pathology, or weed science.

Science of Earth Systems (SES)

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the destruction of the ozone layer, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The SES major emphasizes the basic study of the Earth system as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. Cornell's strengths across a broad range of earth and environmental sciences have been fused to provide students with the tools to engage in what will be the primary challenge of the 21st century. The SES major has its home in the Department of Earth and Atmospheric Sciences, but relies on the collaboration of several departments across the university.

The SES curriculum includes a strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. During the junior and senior years, students complete the SES core sequence, studying such topics as climate dynamics, Earth system evolution, and biogeochemistry. These classes emphasize the interconnectedness of the Earth system, and are team-taught by professors from different traditional disciplines. The selection of upper-level "concentration" courses allows the student to develop an area of expertise that complements the breadth of the introductory and SES core courses. Possible areas of concentration include biogeochemistry,

ecological systems, environmental geology, ocean sciences, climate dynamics, hydrological systems, and soil science.

The SES major provides a strong preparation for graduate school in any one of the Earth system sciences, such as atmospheric sciences, geology/geophysics, oceanography, hydrology, ecology, and biogeochemistry. Students seeking employment with the B.S. degree will have many options in a wide variety of environmentally oriented careers in both the private sector and government. Students with the strong science background provided by the SES major are also highly valued by graduate programs in environmental law, public affairs, economics, and public policy.

Requirements for the Major

1. Basic Math and Sciences

This part of the SES curriculum builds a strong and diverse knowledge of fundamental science and mathematics, providing the student with the basic tools needed in upper-level science classes.

- MATH 190 or 191, and MATH 192 (or MATH 111, 112)
- PHYS 207 and 208 (or PHYS 112, 213)
- CHEM 207 and 208
- BIOGD 101/103-102/104 (or 105-106) or BIOGD 109/110

2. Required Introductory Courses: EAS 220 The Earth System

3. Science of Earth Systems Core Courses

Three 4-credit courses that emphasize the interconnectedness of the Earth system are required. These courses are founded on the most modern views of the planet as an interactive and ever-changing system, and each crosses the traditional boundaries of disciplinary science.

EAS 302 Evolution of the Earth System

EAS 331/ASTRO 331 Climate Dynamics

EAS 321/NTRES 321 Biogeochemistry

4. Concentration Courses

Four intermediate to advanced-level courses (300 level and up) that build on the core courses and have prerequisites in the basic sciences and mathematics courses are required. Note that additional basic math and science courses may be required to complete the concentration courses; the specific courses will depend on the student's choice of a concentration. The concentration courses build depth and provide the student with a specific expertise in some facet of Earth system science. The concentration should be chosen before the junior year in consultation with an SES adviser whose interests match those of the student.

Freshmen are encouraged to enroll in EAS 103, the SES freshman colloquium offered in the fall semester. For more information, contact Professor Stephen Colucci, Department of Earth and Atmospheric Science, sjc25@cornell.edu, or visit www.geo.cornell.edu/ses/.

Science of Natural and Environmental Systems

Environmental stewardship and sustainability are increasingly recognized as human and planetary imperatives. Graduates who understand how people both generate and can resolve environmental problems

will contribute significantly to creating a sustainable environment for their own and future generations. This new major in environmental science provides a broad-based, integrative program in the physical, biological, social, and economic sciences, as well as disciplinary strength in one or more subjects suitable for entry-level professional positions or post-baccalaureate studies.

The curriculum comprises an intensive foundation in the sciences; an environmental core with courses covering earth, biotic, social, and economic systems; and several disciplinary programs of study. This major emphasizes inter- and multidisciplinary work, independent thinking and analysis, and development of competency in writing and speaking throughout the curriculum.

Foundation Courses

The foundation courses, listed here, can be used to fulfill many of the CALS distribution requirements. The purpose of this component of the program is to provide a strong foundation in the basic sciences and an introduction to the relationships between the biophysical and social sciences.

- two semesters of college-level biology
- two semesters of college-level calculus
- four semesters of college-level chemistry and physics (at least one semester of each)
- one semester of college-level statistics
- NTRES 201 Environmental Conservation
- DEA 150 Introduction to Human-Environment Relationships

The freshman and sophomore years are designed to provide foundation courses and meet CALS requirements at the outset. The freshman year provides engagement with environmental study through DEA 150 and NTRES 201. Depending on student interest and available time, other courses in environmental study may be taken as electives early in the schedule.

Advanced placement credit will be accommodated in the program through consultation with the student's faculty adviser.

Environmental Core

The environmental core consists of five courses. Its purpose is to provide a rigorous, integrated understanding of the environment, broadly defined. This core recognizes that knowledge of the environment encompasses physical and biological sciences, social sciences, and human behavior. ALS 115, required in the freshman year, provides a unifying overview of the goals, facts, depth, and breadth of the major.

Core courses are to provide integration (among areas, disciplines, methodologies, topics, and issues); systems emphasis; basic, rigorous presentation of core material; root competencies for understanding the environment; a framework for further advanced courses; and a new way of thinking that enables innovative solutions to difficult problems.

Environmental Science: ALS 115 Environmental Science: Core Principles

Earth Systems: CSS 365 Environmental Chemistry: Soil, Air, and Water

Biotic Systems: BIOEE 261 Ecology and the Environment

Economic Systems: AEM 250 Environmental and Resource Economics

Social Systems: D SOC 324 (S&TS/SOC 324) Environment and Society

Programs of Study

Programs of study that focus in one or more areas of environmental science are being established to provide disciplinary expertise sufficient for entry-level proficiency. Each student in the major will be required to take four courses at the 300 level or above in at least one program of study.

Programs of study will not replace or duplicate current majors. Rather, they will provide the basic core of knowledge essential for an introductory understanding of the area—the concepts, basic science, methodologies, and major applications. Proposed programs of study are

- environmental biology
- environmental information science
- sustainable development
- agroecosystem science
- environmental economics

If established programs of study do not meet the student's interests and needs, the student may propose a program of study, in collaboration with a faculty mentor and subject to approval by the Faculty Program Committee.

Freshmen are encouraged to enroll in the introductory environmental science course. For more information about this major, see snes.eas.cornell.edu, visit the undergraduate program office in 12 Fernow Hall, or send e-mail to sw38@cornell.edu.

Special Programs in Agriculture and Life Sciences

Interdisciplinary Studies. The opportunity to develop an independent major in interdisciplinary studies is available for students interested in pursuing a general education in agriculture and life sciences. In consultation with a faculty adviser, students may plan a sequence of courses suited to their individual interests, abilities, and objectives in an area not encompassed by the existing programs. In addition to the distribution and other college requirements, this major may include a concentration of courses in one of several academic units of the college or university.

Students completing this major are often planning a career in agriculturally related food and service enterprises. Many of the fast-growing occupations require the broad perspective, the scientific and technical skills, and the attitudes and the analytical ability that a general education fosters.

Interdisciplinary studies includes production agriculture as well as technical work in the agricultural and life sciences. Many biotechnology concerns deal with aspects of agriculture, especially plants, crops, and ecosystems in the natural environment. A strong grounding in biological sciences as well as knowledge of the agricultural sciences is essential in this rapidly growing field. Students should plan basic course work in the major areas of study in the college—animal sciences,

plant sciences, environment and technology, agronomic sciences, biological sciences, and social sciences. Advanced courses may be selected in these and other areas of individual interest or career aspiration. A course of study for a special program must be planned with and approved by a college faculty adviser. Information on the options and names of faculty advisers prepared to advise in special programs are available in the Counseling and Advising Office, 140 Roberts Hall.

Agricultural Science Program

Many students wish to pursue a general education in agriculture to prepare for careers that require knowledge of food systems and natural resources, such as production and marketing of foods (animals and plants) and ornamental plants, agricultural education in secondary schools, cooperative extension, food systems, and crop consultants. The agricultural science program is designed to allow students to work with their adviser in developing a curriculum that best fits the needs of each individual student. In this program, students can gain a broad exposure to the agricultural courses across the college. The program is very flexible and allows students to develop a general course of study and to select one or two areas of concentration.

All students are required to take the core courses. Concentrations requiring at least 12 credits are available in animal science, applied economics and management, education and communication, and plant sciences/agronomy.

Students will gain practical experience through special projects, extracurricular activities, and/or internships. Opportunities are available in research and outreach experiences, and in summer employment, which enrich the practical experience. Students will engage in group activities and will participate in discussions with faculty and other experts in various sectors of the agricultural industry.

Approval of this program as a major is anticipated by summer 2005.

DESCRIPTION OF COURSES

Undergraduate and graduate courses in the college are offered through the academic departments and units and also through the biological sciences undergraduate program and the Division of Nutritional Sciences.

Descriptions of undergraduate and graduate courses are arranged by department, in alphabetical order.

Graduate study is organized under graduate fields, which generally coincide with the departments. Graduate degree requirements are described in the *Announcement of the Graduate School*. Courses for graduate students are described in the section on the academic department that offers them.

INTERDEPARTMENTAL/INTERCOLLEGE COURSES

American Indian Studies

The American Indian Program offers a minor in American Indian Studies to undergraduate students. The minor is earned upon the completion of five courses: AIS 100 and AIS

101, plus at least three other courses from the AIS curriculum, for a minimum total of 15 credit hours. The three additional courses must include one course from Group A (arts and humanities) and one course from Group B (social and natural sciences) as listed below. One of the courses offered toward the minor must be at the 300- or 400-level. Only one 3-credit independent study (AIS 497) may be counted toward the minor. Only program-listed courses for which the student has earned a letter grade of C or better will be counted toward the minor. No courses taken for S-U credit will be counted toward the minor. Students seeking to minor in American Indian studies are encouraged to contact Professor Kurt Jordan, associate director of academic development, 255-3109. Application materials for the minor may also be obtained from the AIP office, 4th floor, Caldwell Hall. Students are also advised to consult www.aip.cornell.edu/academic.htm for the most up-to-date listings of course offerings.

Minor in American Indian Studies

Required Courses

AIS 100 Introduction to American Indian Studies I: Indigenous North America to 1890

AIS 101 Introduction to American Indian Studies II: Contemporary Issues in Indigenous North America

Electives

(Group A, Arts and Humanities)

AIS 195 Colonial Latin America

AIS 236 Native Peoples of the Northeast

AIS 239 Seminar in Iroquois History

AIS 260 Introduction to Native American Literature

AIS 266 Introduction to Native American History

AIS 386 Contemporary American Indian Fiction of the United States

AIS 404 Race and Ethnicity in Latin America

AIS 486 American Indian Women's Literature

AIS 490 New World Encounters, 1500–1800

(Group B, Social and Natural Sciences)

AIS 230 Cultures of Native North America

AIS 235 Archaeology of North American Indians

AIS 311 Social Movements

AIS 333 Environmental Issues and Indigenous People

AIS 340 Contested Terrain: Hawaii

AIS 348 Iroquois Archaeology

AIS 353 Anthropology of Colonialism

AIS 435 Indigenous Peoples and Globalization

AIS 472 Historical Archaeology of Indigenous Peoples

(Independent Study)

AIS 497 Independent Study

J. Mt Pleasant, director; E. Cheyfitz, L. Donaldson, C. Geisler, A. Gonzales, K. Jordan, B. Lambert, M. Muskett, J. Parmenter, A. Simpson

AIS 100(1100) Introduction to American Indian Studies I: Indigenous North America to 1890

Fall. 3 credits. T R 1:25–2:40 plus sec. K. Jordan

Provides an interdisciplinary introduction to American Indian cultures and histories from Precolumbian times to 1890, emphasizing the current relevance of traditional values and the ways the deep past continues to affect present-day Indian peoples. Course materials draw on perspectives from the humanities, social sciences and expressive arts.

AIS 101(1110) Introduction to American Indian Studies II: Contemporary Issues in Indigenous North America

Spring. 3 credits. M W 11:15–12:05 plus sec. A. Simpson.

Interdisciplinary exploration of contemporary issues in American Indian Country north of Mexico after 1890. Examines Indian sovereignty, nationhood, agency and engagement through time using the perspective of American Indian Studies. Course materials are drawn from the humanities, social science and expressive arts.

AIS 195(1950) Colonial Latin America (also HIST 195[1950])

Fall. 4 credits. S-U option. M W 11:15–12:05, plus sec. K. Graubart.

Examines the colonial "encounter" of Iberia, Africa and the New World, which began in 1492. Topics include economic and social organization of the colonies; the cultural hybridity that preceded as well as developed within colonialism; the production of ethnicity and race; slavery, forced labor and economic stratification; intellectual currents and daily life; indigenous and slave resistance and rebellion; and independence.

AIS 230(2300) Cultures of Native North America (also ANTHR 230[2730])

Fall. 3 or 4 credits. M W F 1:25–2:15. B. Lambert.

Survey of the principal Inuit and American Indian culture area north of Mexico. Examines selected cultures to bring out the distinctive features of the economy, social organization, religion, and worldview. Although the course concentrates on traditional cultures, some lectures and readings deal with changes in native ways of life that have occurred during the period of European-Indian contact.

AIS 235(2350) Archaeology of North American Indians (also ANTHR 235[2235])

Spring. 3 credits. M W F 10:10–11:00. K. Jordan.

Introductory course surveying archaeology's contributions to the study of North American Indian cultural diversity and change. A principal focus is on major transformations in lifeways such as the adoption of agriculture, the development of political-economic hierarchies, and the disruptions that accompanied the arrival of Europeans to the continent.

[AIS 236(2360) Native Peoples of the Northeast, Pre-Contact to the Present (also HIST/AM ST 236[2360])

Fall. 4 credits. Not offered 2005–2006. J. Parmenter.

After an initial, hostile series of economic and military exchanges with Europeans beginning off the coast of Maine in 1524, the native peoples of northeastern North America have undergone a fascinating and dramatic series of transformations. Adopting an interdisciplinary perspective, this course analyzes the history of Native Americans in the Northeast from a variety of perspectives. Readings and discussions are drawn from a wide range of secondary and primary sources, including historical documents, traditional narratives, archaeological reports, the Internet, and museum exhibits of material culture. The course emphasizes critical reading of texts and discussion.]

AIS 239(2390) Seminar in Iroquois History (also HIST 239[2390])

Fall. 4 credits. M W 2:55–4:10. J. Parmenter.

Interdisciplinary seminar exploring the history and culture of Iroquois people from ancient times, through their initial contacts with European settlers, to their present-day struggles and achievements under colonial circumstances in North America.

[AIS 260(2600) Survey of American Indian Literatures in the United States (also ENGL 260[2600])

Spring. 4 credits. Not offered 2005–2006. E. Cheyfitz.

Introduction to U.S. American Indian literatures, both oral and written. The method of studying these literatures emphasizes historical, legal, and cultural contexts as well as current critical debates over methodological approaches. In addition to examples of the oral tradition transcribed in writing, students study a variety of written genres from their beginnings in the late 18th century, including autobiography, the essay, poetry, and fiction.]

AIS 266(2660) Introduction to Native American History (also HIST/AM ST 266[2660])

Spring. 4 credits. M W 11:15–12:05, plus sec. J. Parmenter.

With the abandonment of earlier perspectives grounded in romantic and evolutionary stereotypes, Native American history represents today one of the most exciting, dynamic, and contentious fields of inquiry into America's past. This course introduces students to the key themes and trends in the history of North America's indigenous peoples by taking an issues-oriented approach. It stresses the ongoing complexity and change in Native American societies and emphasizes the theme of Native peoples' creative adaptations to historical change. Additionally, the course provides numerous opportunities for students to develop their critical thinking and reading skills.

AIS 311(3110) Social Movements (also D SOC/LSP 311[3110])

Fall. 3 credits. Prerequisites: D SOC/SOC 101 or permission of instructor. S-U grades optional. T R 10:10–11:25. A. Gonzales.

Social movements are collective efforts by relatively powerless groups of people to change society. Typically conceptualized as political activity outside the institutional framework, social movements are "politics by other means." This course examines the transnational dimensions of social movements to assess the implications of globalization for political mobilization and the ways that social movement actors engage the global political process to effect social change. Under what

circumstances do movements emerge? How do global processes shape both domestic and transnational political mobilization? How do movements internally organize and choose political tactics and strategies to achieve their goals? How have social movements changed history, identities, society, and politics? This course addresses these and related questions through an examination of indigenous peoples' movements in the United States, Canada, and Latin America.

AIS 333(3330) Environmental Issues and Indigenous People (also NTRES 333(3330))

Spring. 3 credits. TBA. M. Muskett.
For description, see NTRES 333.

AIS 340(3400) Contested Terrain: Hawaii

Spring. 3 credits. Prerequisite: introductory or intermediate-level social sciences or history. F 8–11 A.M.; one S a month 8–11 A.M. M. M. Hamabata.

This course, offered in conjunction with Earth and Atmospheric Sciences' program in Hawaii, draws from the fields of history, political science, and sociology to present an historical understanding of contemporary Hawaiian society. Topics include Western contact, establishment of Western institutions, overthrow of a sovereign government, annexation, integration into the United States. Direct experience with Hawaiian leaders and institutions are incorporated to address contemporary issues: sovereignty, economic development/dependency, social change, and land use as a sociopolitical and cultural struggle. Students should consult www.eas.cornell.edu/hawaii/ regarding the status of this course.

AIS 348/648(3480/6480) Iroquois Archaeology (also ANTHR 348/648(3480/6480))

Spring. 4 credits. S-U grades optional. K. Jordan.

Surveys the long-term development of Iroquois (Haudenosaunee) culture from an archaeological perspective. Issues examined will include the origins of the Iroquois; material culture, settlement, and subsistence; the Iroquois Confederacy; responses to European encroachment; and contemporary Haudenosaunee perspectives on archaeology. Course requirements differ at the 300 and 600 levels.

AIS 353(3530) Anthropology of Colonialism (also ANTHR 353(3453))

Fall. 4 credits. M W F 10:10–11 A.M. A. Simpson.

Examines the relationship between colonialism and anthropology and the ways in which the discipline has engaged this global process locally in North America. One of the aims is to gain an appreciation of colonialism both as a theory of political legitimacy and as a set of governmental practices. As such, North America is re-imagined in light of the colonial project—and its technologies of rule such as education, law, policy—that worked to transform indigenous notions of gender, property, and territory. Students come to appreciate the ways in which these forms of knowledge and practice advanced the settlement of space and place and both settled and unsettled peoples. This course is comparative in scope but is grounded in the literature from Native North America.

[AIS 386(3860) Contemporary American Indian Fiction (also ENGL 367(3670))

Fall. 4 credits. Not offered 2005–2006.
Examines contemporary American Indian fiction as a response to the colonial structure of federal Indian law. Beginning with Mourning Dove's *Cogewea*, a novel of the Allotment Era, students read works by a range of Native fiction writers (from a list that includes McNickle, Welch, Silko, Vizenor, Hogan, Alexie, Walters, Glancy, and Red Corn) that respond critically to U.S. federal Indian policy.]

AIS 404(4040) Race and Ethnicity in Latin America (also HIST 404(6041))

Fall. 4 credits. Recommended: Latin American history course. M 2:30–4:25. K. Graubart.

Seminar examining the historical production of "race" and ethnicity in the Latin American context, beginning with the creation of "Indians" by European colonists and the introduction of African slaves into these already complex societies. The second half of the course addresses contemporary issues that stem from these colonial concerns: nationalism, the romantic invocation of the indigenous past, cultural practices, land rights, political representation, and enduring racism.

[AIS 435/635(4350/6350) Indigenous Peoples and Globalization (also D SOC 435/465(4350/4650))

Fall. 3 credits. Not offered 2005–2006.
Explores ways in which processes of globalization affect indigenous peoples worldwide and the strategies indigenous peoples are using to deal with those pressures. Globalization, whether under the auspices of the World Trade Organization and regional economic agreements such as the NAFTA or the territorialization of social and political arrangements cotemporal with modernization or the expansion of communication technology and its impact on traditional knowledge systems, have had profound social, cultural, and economic impacts on indigenous peoples. At issue are the lands, resources, traditional knowledge, intellectual and cultural property, and indigenous struggles for recognition and self-determination.]

[AIS 472/772(4720/7720) Historical Archaeology of Indigenous Peoples

Spring. 4 credits. Not offered 2005–2006. K. A. Jordan.

Seminar examining the responses of indigenous peoples across the world to European expansion and colonialism over the past 500 years. Archaeological case studies from North America, Africa, and the Pacific provide a comparative perspective on Postcolumbian culture contact and illustrate how archaeology can both supplement and challenge document-based histories.]

[AIS 486(4860) American Indian Women's Literature (also ENGL 486(4860))

Spring. 4 credits. Not offered 2005–2006.
Explores the development of women's literature in a number of different American Indian cultures. Attends to native paradigms of cultural production such as women's songmaking, weaving, basketmaking, and storytelling, as well as the appropriation of European literary forms such as the novel. Students read a diverse range of materials including novels, autobiography, poetry, drama, and short stories.]

AIS 490(4900) New World Encounters, 1500 to 1800 (also HIST 490(4990), AM ST 499(4990))

Spring. 4 credits. M 2:30–4:25. J. Parmenter.
The discovery of the Americas, wrote Francisco Lopez de Gomara in 1552, was "the greatest event since the creation of the world, excepting the Incarnation and Death of Him who created it." Five centuries have not diminished either the overwhelming importance or the strangeness of the early encounter between Europeans and the indigenous peoples of the Americas. Taking a comparative approach, this course conceptualizes early American history as the product of reciprocal cultural encounters by assessing the various experiences of Spanish, French, and English newcomers in different regions of the Americas. Critical interpretation of primary source material is emphasized, as is the development of students' ability to reflect critically on these documents, taking into account the perspective of both the colonizers and the colonized.

AIS 497(4970) Independent Study

Fall or spring. 1–4 credits. Staff.
Topic and credit hours TBA between faculty member and student. The American Indian Program office must approve independent study forms.

[AIS 600(6000) American Indian Studies

Fall. 4 credits. Staff.]

AIS 601(6010) American Indian Studies Proseminar

Fall and spring. 1 credit. TBA. Staff.
Graduate-level course that introduces students to ongoing research in the field of American Indian Studies in a proseminar/colloque format. Advanced graduate students are expected to present their work in progress; all are expected to attend each seminar and provide presenters with critical and constructive commentary on papers.

[AIS 671(6710) Law and Literature in the Antebellum United States (also ENGL 671)]

Spring. 4 credits. Not offered 2005–2006. E. Cheyfitz.
For description, see ENGL 671.]

AIS 726(7260) Federal Indian Law: The Legal Construction of Indian Country (also LAW 726)

Spring. 3 credits. TBA. Limited enrollment. Students who have taken LAW 608 American Indian Law may also take this seminar. Letter grades only. E. Cheyfitz.
For description, see LAW 726.

Department of Statistical Science

The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found at the front of this catalog (see p. 25).

Environmental Toxicology

A. J. Baeumner, S. E. Bloom, K. J. Boor, P. R. Bowser, D. L. Brown, J. W. Casey, R. R. Dietert, R. A. Durst, J. W. Gillett, A. G. Hay, A. Hedge, J. H. Hotchkiss, L. V. Kochian, W. L. Kraus, A. T. Lemley, L. W. Lion, R. H. Liu, E. L. Madsen, M. B. McBride, C. McCormick, A. Nikitin, B. U. Pauli, M. Roberson, E. Rodriguez, J. G. Scott, M. L. Shuler, S. M. Snedeker, D. A. Soderlund, J. R. Stedinger, B. J. Strupp, D. A. Weinstein, R. S. Weiss, D. B. Wilson, A. Yen

There is both breadth and depth in many facets of environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. The graduate student may choose from three degree options: M.S., M.S./Ph.D., or Ph.D. Concentrations include cellular and molecular toxicology; nutritional and food toxicology; ecotoxicology and environmental chemistry; and risk assessment, management, and public policy. Research by the faculty associated with the program focuses on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) as well as the ecosystems with which these organisms are associated. General information is available through the Environmental Toxicology office in 116 Stocking Hall, or at toxicology.cornell.edu.

TOX 323(3230) Principles of Toxicology (Undergraduate) (also NTRES 323[3230])

Spring. 3 credits. Prerequisites: one year each of chemistry and biology with labs; one semester of organic chemistry lecture or permission of instructor. J. W. Gillett.
For description, see NTRES 323.

TOX 370(3700) Pesticides and the Environment (also ENTOM 370[3700])

Fall. 2 credits. Prerequisites: BIO G 101-102 or equivalent. Offered even years. J. G. Scott.

For description, see ENTOM 370.

TOX 406(4060) Ecology Risk Assessment (also NTRES 406[4060])

Fall. 3 credits. Prerequisites: BIOEE 261 or equivalent; advanced student in natural sciences or engineering or permission of instructor. J. W. Gillett.

For description, see NTRES 406.

TOX 437(4370) Eukaryotic Cell Proliferation (also BIOBM 437[4370])

Fall. Variable credit; students may take lec for 2 credits, or lec and disc for 3 credits. Limited to 20 students per disc; priority given to graduate students. Prerequisite: BIO G 101-102 or 105-106 and BIOBM 330 or 331/332. Recommended: BIOGD 281 and BIOBM 432. S. Lee.

For description see BIOBM 437.

TOX 490(4900) Insect Toxicology and Insecticidal Chemistry (also ENTOM 490[4900])

Spring. 3 credits. Prerequisite: general chemistry course. Offered odd years. J. G. Scott.

For description, see ENTOM 490.

TOX 607(6070) Ecotoxicology (also NTRES 607[6070])

Spring. 3 credits. Prerequisites: graduate or senior standing; two 300-level courses in chemistry, biological science, or toxicology. Offered alternate even years. J. W. Gillett.

For description, see NTRES 607.

TOX 610(6100) Introduction to Chemical and Environmental Toxicology (also BIOMI 610[6100])

Fall. 3 credits. Prerequisite: graduate standing in field or permission of instructor. A. G. Hay.

For description, see BIOMI 610.

[TOX 611(6110) Molecular Toxicology (NS 611[6110])]

Spring. 3 credits. Prerequisites: TOX 610 or permission of instructors. Lec, T R 10:10. Offered alternate years; next offered 2006-2007. S. Bloom, R. Dietert, D. Muscarella, and B. Strupp.

For description, see NS 611.]

[TOX 625(6250) Nutritional Toxicology (also AN SC 625[6250])]

Spring. 2 credits. Prerequisites: biochemistry and nutrition courses. S-U grades optional. Offered alternate years; not offered 2005-2006. Lec, W 1:25-2:15; lab/disc, W 2:30-4:25. D. L. Brown.

For description, see AN SC 625.]

TOX 698(6980) Current Topics in Environmental Toxicology (also NTRES 698[6980] and NS 700[7000])

Fall, spring. 1 to 3 credits. Prerequisites: graduate or senior standing in scientific discipline and permission of instructor.

For description, see NTRES 698.

TOX 699(6990) Environmental Toxicology Journal Club (also BIOMI 699[6990])

Spring only. 1 credit. Requirement for env. tox. students until post-A exam.

A. G. Hay.

TOX 701(7010) Mouse Pathology and Transgenesis (also VTBMS 701[7010])

Spring only. 1 credit. Prerequisites: basic course in histology (BIOAP 413 or equivalent) highly recommended, or permission of instructor. Letter grades only. A. Nikitin.

For description, see VTBMS 701.

TOX 702(7020) Seminar in Toxicology (NS 702[7020])

Fall or spring. 1 credit.

For description, see NS 702.

TOX 713(7130) Cell Cycle Analysis (also VTBMS 713[7130])

Spring. 1 credit. S-U grades only. A. Yen.

For description, see VTBMS 713.

TOX 890(8900) Master's Thesis and Research

Fall/spring. Credit TBA. Prerequisite: permission of chair of graduate committee and instructor.

TOX 990(9900) Doctoral Thesis and Research

Fall/spring. Credit TBA. Prerequisite: permission of chair of graduate committee and instructor.

Related Courses in Other Departments

CEE 597(5970) Risk Analysis and Management

Spring. 3 credits. Prerequisite: introduction to probability and statistics course (e.g., CEE 304, ENGRD 270, ILSRT 210, BTRY 261 or AEM 210); two semesters of calculus. Prerequisite: senior or graduate standing or permission of instructor. J. R. Stedinger.

For description, see CEE 597.

FD SC 621(6210) Food Lipids

NONDEPARTMENTAL COURSES

ALS 101(1101) Transition to and Success at Cornell

Fall. 1 credit. Prerequisite: entering students in CALS. Letter grades only. B. O. Earle and CALS Career Development Office.

Discussion-oriented course to enable all new CALS students to enjoy their experience at and transition to Cornell. Lecture, discussion, guest speakers, student panels, and assignments that explore Cornell's history, academic opportunities, services, and organizations are used. Emphasizes the role of Agriculture and Life Sciences in the future of all related careers.

ALS 115(1150) Environmental Science: Core Principles

Fall. 3 credits. Letter grades only. Lec, T R 10:10-11; lab, R 1-4. E. L. Madsen.

Environmental science is the multidisciplinary study of how the Earth works, how to contend with environmental change, and how humans influence and manage the Earth's life-support systems. This course highlights facts and principles from the physical, chemical, biological, social, and economic sciences. The readings, case studies, discussions, field/laboratory experiences, and research topics are designed to unify the curriculum for students majoring in the Science of Natural and Environmental Systems (SNES).

ALS 134(1340) Emergency Medical Technician

Fall and spring. 3 credits each semester. Two-semester course; students enroll in fall semester only. Recommended: basic or advanced first aid. S-U grades optional. Lec, M 1:30-4:30; lab, W 1:30-4:30 or W 6:30-9:30. D. A. Grossman, P. Rach, and A. E. Gantert.

Intensive 140-hour course taught throughout the fall and spring semesters. Includes training in C.P.R. for the professional rescuer, oxygen administration, airway management, fracture management, bleeding control, patient assessment, spinal immobilization, the use of medical antishock trousers, and defibrillation. Students qualify for the New York State E.M.T. Certification Exam upon successful completion of the course.

ALS 135(1350) Advanced Emergency Medical Technician, Critical Care

Fall and spring; two-semester course. 4 credits each semester. Prerequisite: current certification as N.Y.S. Basic E.M.T. or have applied for reciprocity. S-U grades optional. Lec, T 1:30-4:30; lab, R 1:30-4:30, Sat 9:00-12:00. D. Grossman, P. Rach, and D. Spaulding.

Includes topics such as emergency pharmacology, patient assessment, advanced cardiac life support, emergency hypoperfusion management, and basic trauma life support. Uses classroom, lab, hospital, and field sessions to teach skills such as intubation, emergency IV access, electro-cardioversion and defibrillation, and patient assessment and pharmacological intervention. Requires extensive out of classroom (exceeds 140 hours) time.

ALS 392(3920) New York State Government Affairs (also PAM 392(3920))

Spring. 15 credits. Prerequisite: junior or senior standing; minimum GPA of 2.3. W. Rosen.

For description see PAM 392.

ALS 400(4000) Internship

Fall, spring, or summer. 6 credits max. Not open to students who have earned internship credits elsewhere or in previous semesters. S-U grades only.

Students may register only for internships in the New York State Assembly Intern Program, the New York State Senate Session Assistant's Program, and the Albany Semester Program. A learning contract is negotiated between the student and the faculty supervisor(s), stating conditions of the work assignment, supervision, and reporting. Requires participation in any structured learning activities associated with the internship.

ALS 402(4020) Agricultural Study Tour to Burgundy, France

Spring. 2 credits. Prerequisite: registered CALS students. S-U grades optional. L. A. Weston and P. Durand.

Two-week study tour held in the month of May in Burgundy, France. Students experience French agriculture, history, and cuisine. Tour includes wine, fruit, vegetable, cheese, dairy, beef, and poultry production, and French university facilities featuring modern agricultural research. Requires 10- to 20-page paper. Students travel throughout Burgundy and eastern France with Pascal Durand, professor at ENESAD in Dijon, France.

ALS 403(4030) Internship Opportunities in Burgundy, France

Spring. Variable to 4 credits. Prerequisite: enrollment in Agricultural Study Tour to Burgundy, France. Recommended: some French language experience. S-U grades optional. L. A. Weston and P. Durand.

Six- to eight-week internship experiences in Burgundy, France, in agriculturally related subject areas including viticulture, agribusiness, agronomy, food science, and biotechnology. Requires final paper documenting internship experience.

ALS 477(4770) Environmental Stewardship in the Cornell Community

Spring. 2-4 credits, variable. T R 11:40-1:10. J. M. Regenstein, plus faculty adviser. Each student undertakes an original project to improve the environment at Cornell while working with a faculty adviser and the Cornell infrastructure (generally campus life and/or facilities). Through class discussions, students learn how to be more effective at developing environmental programs in the future, both during and after college. Students present the final written project report orally at a public forum. (Note: If students prefer to take 1 or 2 credits of independent research in a depart-

ment in the College of Agriculture and Life Sciences, this can be arranged. Assistance in finding a faculty adviser is provided. May be taken more than once.)

ALS 481(4810) Global Conflict and Terrorism

Spring. 3 credits. Lec, M 7:30-9:30; sec, R 2:30-3:20. J. Shanahan.

Reviews and discusses issues concerning global development and its relationship to conflict and terrorism. Each class session focuses on a specific topic presented by either a faculty member or a guest speaker leading the discussion and actively engaging the students. The weekly discussion section focuses on discussing in greater depth the reading assignments.

ALS 494(4940) Special Topics in Agriculture and Life Sciences

Fall or spring. 4 credits max. S-U grades optional.

The college teaches "trial" or temporary courses under this number. Offerings vary by semester and are advertised by the college before the beginning of the semester. The same course is not offered more than twice under this number.

ALS 499(4991/4992) Honors Project I and II (also B&SOC/S&TS 499[4991/4992])

Fall and spring (yearlong). 8 credits each semester. Prerequisite: biology & society seniors and permission of department; overall GPA of 3.3. Apply in 306 Rockefeller Hall.

Students who are admitted to the honors program are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research and the completed work should be of wider scope and greater originality than is normal for an upper-level course.

ALS 500(4998) Politics and Policy: Theory, Research, and Practice [also AM ST 501(4998), PAM 406(4998), GOVT 500(4998)]

Students in CALS must register for ALS 500. S. Jackson and staff.

This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell in Washington program. The central objective is to provide students with the instruction and guidance necessary to analyze and evaluate their own chosen issue in public policy. Toward that end, the course has three components: (1) weekly lectures providing background on the structures and processes of national politics and policy as well as training in research methodology; (2) student externships; and (3) individual research papers or projects. All three components interrelate to provide students with a strategy and framework for integrating classroom-based learning, field experience, and individual research. Students apply through the Cornell in Washington office. M101 McGraw Hall.

ALS 580(5800) International Teaching Assistant Development Program Course 3

Fall or spring. 2 credits. Prerequisite: EDUC 579. ITADP staff.

Specifically designed for international graduate students who plan to assume teaching assistant responsibilities that range from lab introductions to individual tutoring sessions with undergraduate students. Participants

address English-language issues relating to phonemes, grammar, and suprasegmentals. Activities in these areas target communicative functions such as presenting concepts, initiating and sustaining conversation, and interpreting information in academic settings.

ALS 581(5810) International Teaching Assistant Development Program Course 4

Fall or spring. 2 credits. Prerequisite: ALS 580. ITADP staff.

Specifically designed for international graduate students who plan to assume teaching assistant responsibilities that range from lab introductions to individual tutoring sessions with undergraduate students. Participants develop skills in self-monitoring, critical listening and language fluency with attention to time frame usage, academic terminology, extended discourse, and compensatory speech strategies.

ALS 661(6610) Environmental Policy [also B&SOC 461(4611), BIOEE 661(6610)]

Fall and spring. 3 credits each semester; students must register for 6 credits each semester since "R" grade is given at end of fall semester. Limited to 12 students.

Prerequisite: permission of instructor. Sem, R 2:30-4:30. D. Pimentel.

Focuses on complex environmental issues. Ten to 12 students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in *Science* or *BioScience*. Thus far, every study has been published.

APPLIED ECONOMICS AND MANAGEMENT

W. H. Lesser, chair (154 Warren Hall, 255-4576); C. B. Barrett, N. L. Bills, G. Blalock, V. L. Bogan, R. N. Boisvert, L. D. Chapman, N. H. Chau, R. D. Christy, J. M. Conrad, R. T. Curtis, H. Daouk, H. de Gorter, B. A. Gloy, C. Gomes, D. A. Grossman, J. M. Hagen, D. R. Just, H. M. Kaiser, S. M. Kanbur, W. A. Knoblauch, S. C. Kyle, E. L. LaDue, D. R. Lee, A. E. Leiponen, J. E. Little, E. W. McLaughlin, T. D. Mount, D. T.-C. Ng, A. M. Novakovic, P. D. Perez, D. J. Perosio, G. L. Poe, J. E. Pratt, J. T. Prince, S. P. Raj, C. K. Ranney, W. D. Schulze, D. H. Simon, M. W. Stephenson, D. H. Streeter, L. W. Tauer, W. G. Tomek, C. L. van Es, A. Wang, B. Wansink, G. B. White

Courses by Subject

Farm management, agricultural finance, and production economics: 302, 403, 404, 405, 608, 708

Statistics, quantitative methods, and analytical economics: 210, 410, 411, 412, 415, 417, 419, 711, 712, 713, 714, 717

Management, finance, law, and accounting: 220, 221, 222, 320, 321, 322, 323, 324, 325, 327, 329, 420, 421, 422, 424, 425, 427, 428, 429

Policy and international trade: 230, 335, 430, 431, 432, 433, 434, 630, 632, 633, 634, 730, 735

Marketing and food distribution: 240, 241, 342, 344, 346, 442, 443, 444, 446, 447, 448, 449, 640, 641

Environmental and resource economics: 250, 450, 451, 555, 651, 655, 750

Economics of development: 464, 660, 667, 762, 765

Consumer economics: 670

General, contemporary issues, research, and other: 101, 200, 380, 494, 497, 498, 499, 694, 698, 699, 700, 800, 900, 901

AEM 101(1101) Introduction to Applied Economics and Management

Fall. 1 credit. Prerequisite: required of and limited to freshmen in AEM. S-U grades only. D. A. Grossman and A. M. Novakovic.

Freshman transition course exploring the major courses of study available to AEM students, including a discussion of "hot topics," research, and career paths in each field. Numerous AEM faculty members are guest presenters. Students are introduced to campus resources such as the library system, study abroad opportunities, course planning, career planning, and learning strategies. Short written assignments and active group participation are required.

AEM 120(1200) Foundations of Entrepreneurship and Business

Fall. 2 credits. P. D. Perez.

Introductory course providing a sound base to both the understanding of entrepreneurial activity and possibilities and the study and practice of entrepreneurship at Cornell. Includes lectures, selected guest appearances by successful entrepreneurs, and extensive use of IT-based learning and presentation tools.

AEM 121(1210) Entrepreneurship Speaker Series

Fall. 1 credit. M. P. D. Perez.

Seminars and guest lectures by faculty members engaged in the study and practice of entrepreneurship and by prominent entrepreneurs associated with the Entrepreneurship and Personal Enterprise program at Cornell, with a view to inform and inspire students. Evaluation includes attendance and written feedback on lectures. Intended as a companion to AEM 120 but may be taken independently.

AEM 200(2000) Contemporary Controversies in the Global Economy

Fall. 3 credits. Prerequisite: ECON 101. Recommended: ECON 102. Priority given to sophomores and juniors in AEM. C. Barrett.

Aims to stimulate critical thinking and cogent writing and speaking about contemporary controversies that attract regular attention in the international press and among key private and public sector decision-makers. Students read and discuss competing arguments about current issues such as patenting and pricing of pharmaceuticals worldwide, controls on commercial and humanitarian distribution of genetically modified foods, and immigration restrictions. Students write a series of short briefing papers and give regular oral briefs, which are evaluated for quality of communication and content.

AEM 210(2100) Introductory Statistics

Spring. 4 credits. Prerequisite: EDUC 115 or equivalent level of algebra. Two evening prelims. C. van Es.

Introduces statistical methods. Topics include the descriptive analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, and correlation analysis. Uses applications from business, economics, and the biological sciences to illustrate the methods covered.

AEM 220(2200) Introduction to Business Management

Spring. 3 credits. Two evening prelims. P. D. Perez.

Provides an overview of management and business. Human resource, marketing, finance, and strategy concerns are addressed with consideration paid to current issues such as technology and its impact on operations, globalization, ethics, quality, and entrepreneurship. Guest speakers are an important part of the course.

AEM 221(2210) Financial Accounting

Fall. 3 credits. Not open to freshmen. Priority given to CALS majors. Two evening prelims. J. Little.

Comprehensive introduction to financial accounting concepts and techniques, intended to provide a basic understanding of the accounting cycle, elements of financial statements, underlying theory of GAAP, and financial statement interpretation. Topics include methods of recording inventory, receivables, depreciation, bonds, and equity. Requires two evening prelims and a comprehensive final; weekly homework assignments.

AEM 222(2220) Business Management Case Analysis

Spring. 1 credit. Requirement for and limited to AEM majors. P. D. Perez.

Offers students teams the opportunity for hands-on application of general business management concepts through discussion and written analysis of a series of cases. Case topics are closely coordinated with both the content and sequencing of material presented in AEM 220.

AEM 230(2300) International Trade and Finance (also ECON 230(2300))

Spring. 3 credits. Prerequisites: ECON 101 or equivalent. Recommended: ECON 102 or equivalent. S-U grades optional. One evening prelim. D. R. Lee.

One-semester introduction to international economic principles and issues. Begins by surveying key topics such as the elements of comparative advantage, tariff and nontariff barriers, and multilateral institutions. The second part of the course treats selected topics in international finance, including exchange rates, balance of payments, and capital markets. Discusses current issues such as the effects of trade liberalization, trade and economic growth, and instability in international capital markets. Designed as a less technical introduction to concepts developed at a more advanced level in AEM 430 and ECON 361-362.

AEM 240(2400) Marketing

Fall. 3 credits. E. W. McLaughlin.

Provides a broad introduction to the fundamentals of marketing. Explores the components of an organization's strategic marketing program, including how to price, promote, and distribute goods and services. Industry guest lectures and current marketing

applications from various companies are presented and analyzed.

AEM 241(2410) Marketing Plan Development

Fall. 1 credit. Requirement for and limited to AEM majors. D. J. Perosio.

Offers student teams the opportunity for an intense, hands-on application of basic marketing concepts through research and development of a marketing plan. Guided by a series of assignments, teams develop key components that are integrated into a comprehensive written plan for a local business.

AEM 250(2500) Environmental and Resource Economics

Spring. 3 credits. S-U grades optional. G. L. Poe.

Introduces fundamental economic principles and the "economic approach" to policy issues, and demonstrates how these concepts underpin contemporary environmental and natural resource issues and policy solutions. Subjects include valuation, benefit-cost analysis, policy design, property rights, and ecological economics. Uses these tools to explore major current policy issues such as economic incentives in environmental policy, endangered species protection, air and water pollution, depletion of renewable and nonrenewable resources, and global warming.

AEM 302(3020) Farm Business Management

Fall. 4 credits. Not open to freshmen. Prerequisite for AEM 405 and 427. On days farms are visited, sec is 1:25-6. W. A. Knoblauch.

Intensive study of planning, directing, organizing, and controlling a farm business, with emphasis on the tools of managerial analysis and decision making. Topics include financial statements, business analysis, budgeting, and acquisition, organization, and management of capital, labor, land, buildings, and machinery.

AEM 320(3200) Business Law I (also NBA 560(5600))

Fall and summer. 3 credits. Prerequisite: junior, senior, or graduate standing. One evening prelim. D. A. Grossman.

Examines legal problems of particular interest to persons who expect to engage in business. Emphasizes the law of contracts, sales, agency, and property.

AEM 321(3210) Business Law II (also NBA 561(5610))

Spring. 3 credits. Prerequisite: junior, senior, or graduate standing; business law course or permission of instructor. D. A. Grossman.

The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited liability companies. The second portion reviews selected topics in business law, like employment discrimination, debtor/creditor relations, product liability, unfair competition, e-commerce law, and international business law.

AEM 322(3220) Information Technology Strategy

Spring. 3 credits. Prerequisites: AEM 220 and ECON 101. A. Leiponen.

Explores the impact of new technologies on business processes and industries. Focuses particularly on the effects of information and communication technologies (ICT).

The objective is to understand the nature of information as an economic good, business opportunities and challenges created by ICT, and organizational constraints involved in exploiting these opportunities.

AEM 323 Managerial Accounting

Spring. 3 credits. Priority given to CALS majors. Prerequisite: AEM 221 or equivalent. Two evening prelims. J. Little. Introduction to cost accounting emphasizing the application of accounting concepts to managerial control and decision making. Major topics include product costing, standard costing, cost behavior, cost allocation, budgeting, variance analysis, and accounting systems in the manufacturing environment. Requires use of electronic spreadsheets. Includes two evening prelims, a third exam, weekly homework.

AEM 324(3240) Finance

Fall. 4 credits. Priority given to CALS majors. Prerequisites: AEM 210, 220, and 221, or equivalents. Three evening prelims. R. Curtis.

Focuses on the mathematics of finance, valuation, and the economics of managerial decisions, corporate financial policy, risk management, and investments. Topics include the time value of money, bond and stock valuation, capital-budgeting decisions, financing alternatives, the cost of capital and the capital-structure decision, distribution policy, mergers and acquisitions and restructuring, options, forward and futures contracts, market efficiency and market anomalies, strategies of successful investors, and personal finance.

AEM 325(3250) Personal Enterprise and Small Business Management

Spring. 4 credits. Prerequisites: junior or senior standing; AEM 220 and 221 or permission of instructor. Absolutely no adds or drops after second class meeting. Cost of term project: approx. \$100 per team. D. Streeter.

Focuses on the activities involved in planning a start-up business, including the exploration of strategic dimensions, performance of marketing research, and planning of financial aspects related to the new company. Lectures and hands-on clinics include visits by real world entrepreneurs, who discuss the start-up process and the challenges of managing growth in a small business. Term project is the development of a business plan, completed in teams of no fewer than three students.

AEM 328(3280) Innovation and Dynamic Management (also H ADM 444[4443])

Spring. 3 credits. Prerequisite: junior or senior standing. Staff.
For description, see H ADM 443.

AEM 329(3290) International Agribusiness Study Trip

Fall. 2 credits. Prerequisites: AEM 220 or 302, and 240. Open by application before March 1 of spring semester before course is offered. Approximately 12 students are selected with preference given to sophomores and juniors in CALS. Field study co-payment: \$800. B. A. Gloy and L. W. Tauer.

Gives students interested in agribusiness management exposure to the managerial practices essential to the success of agriculture, agribusiness, and food companies competing in the global marketplace. Involves a two-week international field study trip

that takes place after the final exam period of the spring semester before the course is offered. The course meets for a few sessions in advance of the field study trip. A paper analyzing an aspect of the field study is required.

AEM 330(3300) Managerial Economics and Decision Making

Spring. 3 credits. Prerequisites: AEM 220 and ECON 101. D. Simon.

Focuses on tools for making various decisions managers encounter in the real world, including decisions of pricing, output, advertising expenditures, and new product introductions. Considers issues such as how to estimate a firm's demand and cost functions as considered in making such decisions. Compares standard microeconomic models with more realistic approaches to making decisions. Emphasizes considering decisions that are less stylized and more similar to those managers face on a regular basis.

AEM 331(3310) Economic of Business Regulation

Spring. 3 credits. Prerequisites: ECON 101, 313, and AEM 220. S-U or letter grades. J. Prince.

Studies the economics and other factors (e.g., politics, lobbying) that determine regulation policy along with firm strategies in regulated or potentially regulated markets. Major topics include: antitrust, economic regulation and environmental regulation. Applications to the current business environment are emphasized.

AEM 334(3340) Women, Leadership, and Entrepreneurship

Fall. 1 credit. D. Streeter.

Seminar that uses lectures, guest panels, and readings to focus on issues facing women (and their partners) in their business careers. Topics include status of women in business leadership, pathways and strategies for leadership development, family/life balance issues, gender issues in the workplace, and resources for emerging leaders.

[AEM 335(3350) International Technology Marketing of Biotechnology]

Spring. 3 credits. Prerequisites: ECON 101 and BIOG 109 or equivalents. S-U grades optional. W. H. Lesser.

Explores international technology marketing from an economics perspective using biotechnology as an example. Topics include technology theories, products, risk (health and environmental) regulation, industry structure, labeling uses and regulations, public perceptions, patents, trade, and international conventions. The course is of interest to students of biotechnology, public technology policy, and international technology marketing.]

[AEM 340(3400) Futures and Options Trading]

Fall. 3 credits. Prerequisite: junior or senior standing. Priority given to CALS juniors and seniors, then non-CALS seniors; ECON 101, EDUC 115, and AEM 210 or equivalent. S-U grades optional. Staff.

Focuses on the use of futures and options as risk management tools. Covers commodities, exchange rate, and interest rate derivatives from the perspective of the hedger, but those also provides insight for students interested in arbitrage and speculation. Students participate in a simulated trading exercise in which they use price and market information and input

from industry experts to manage a hedge position.]

AEM 342(3420) Integrated Marketing Communication

Fall. 3 credits. Prerequisite: introductory marketing course. S. P. Raj.

Focuses on decisions regarding communication and promotion decisions in companies that market consumer products and services. Explores how business-to-business communication differs. Responsibility for many of these decisions typically resides under the brand-management umbrella and calls for an integrated approach to planning, budgeting, and evaluating advertising, sales promotion, and public relations.

AEM 344(3440) Consumer Behavior

Fall. 3 credits. Prerequisites: AEM 240 or equivalent. B. Wansink.

Develops a useful, conceptual understanding of the problems and strategies associated with psychology behind consumer behavior. In doing so, the course provides frameworks that enable students to address these issues responsibly, systematically, and creatively.

AEM 346(3460) Dairy Markets and Policy

Spring. 3 credits. Prerequisites: junior, senior, or graduate standing; ECON 101 or equivalent. S-U grades optional.

A. Novakovic.
Survey of topics related to the structure and performance of U.S. dairy markets and federal and state policies that regulate market activities. Emphasizes learning both the origin and characteristics of dairy policies and methods for analyzing their impacts on market performance.

AEM 380(3800) Independent Honors Research in Social Science

Fall or spring. 1-6 credits. Prerequisite: requirements for honors program met (see "Honors Program" under CALS).

Provides qualified students an opportunity to conduct original research under supervision. Information is available in the AEM undergraduate program office in Warren Hall.

AEM 403(4030) Farm Management Study Trip

Spring. 1 credit. Prerequisite: AEM 302. Open by application only. W. A. Knoblauch.

Special program to study production and management systems in diverse agricultural regions of the United States. Includes a trip (usually taken during spring break) to the region being studied. A different region is visited each year. The course meets in advance of the study trip and upon return from trip. Students must write a paper that further explores an aspect of the trip.

AEM 404(4040) Advanced Agricultural Finance Seminar

Spring. 3 credits. Limited to 16 students. Prerequisite: senior standing; extensive course work in farm management and farm finance. Open by application before March 1 of year before course is offered. Staff.

Special program in agricultural finance, conducted with financial support from the Farm Credit System. Includes two days at Northeast Farm Credit offices, one week in Farm Credit Association offices, a one-day program on FSA financing during fall semester, a two- to four-day trip to financial institutions in New York City, and an actual

farm consulting and credit analysis experience in the spring semester.

AEM 405(4050) Agricultural Finance

Spring. 4 credits. Prerequisite: AEM 302 or equivalent. L. Tauer.

Discusses the principles and practices used in financing agricultural businesses, from the perspectives of the business owner and the lender. Topics include sources of capital, financing entry into agriculture, financial analysis of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, and leasing.

AEM 410(4100) Business Statistics

Fall. 3 credits. Prerequisite: AEM 210 or equivalent. C. van Es.

Focuses on techniques used to analyze data from marketing research, business, and economics. Topics include experimental design and ANOVA, contingency-table analysis, quality-control methods, time-series analysis and forecasting. Also includes brief introductions to nonparametric methods and multivariate analysis. Involves a research project designed to give experience in collecting and interpreting data.

AEM 411(4110) Introduction to Econometrics

Fall. 3 credits. Prerequisite: AEM 210 and either ECON 313 or PAM 200 or equivalents. D. Just.

Introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Introduces assumptions, properties, and problems encountered in the use of multiple regression are discussed and simultaneous equation models, simulation, and forecasting techniques.

AEM 412(4120) Computational Methods for Management and Economics

Spring. 3 credits. Primarily for juniors, seniors, and M.S. degree candidates. Prerequisite: AEM 210 or equivalent. C. Gomes.

Course in applied mathematical programming. Emphasizes formulation of and interpretation of solutions to mathematical models of problems in economics and business. Studies blending, resource allocation, capital budgeting, transportation and financial planning, and inventory management. Introduces integer and nonlinear programming.

AEM 414(4140) Behavioral Economics and Managerial Decisions

Fall. 3 credits. Prerequisites: junior or senior standing; ECON 313 or PAM 200. Lab fee: \$40. D. Just.

Behavioral economics integrates psychology and economics by identifying systematic anomalies in decision-making. These are now recognized to be an important source of error in business decisions, and provide the foundation for both behavioral marketing and finance. The course compares rational choice theory with behavior both in lecture and through a series of economics experiments in which students face situations that are likely to lead to anomalies such as "the winner's curse," the status quo bias, hyperbolic discounting, and bias in assessing risks. Students have the opportunity to evaluate their own decision-making.

AEM 415(4150) Price Analysis (also ECON 415)

Fall. 3 credits. Prerequisites: AEM 210 or equivalent, ECON 313 or PAM 200 or equivalent. H. M. Kaiser.

Focuses on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Pays special attention to empirical analysis. Includes institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions.

AEM 416(4160) Consumer Demographics and Market Analysis (also D SOC 331[3310])

Summer. 3 credits. Prerequisite: AEM 210 or equivalent. W. Brown.
For description, see D SOC 331.

AEM 417(4170) Decision Models for Small and Large Businesses

Fall. 3 credits. Prerequisites: junior or senior standing (priority given to AEM majors); AEM 210 or equivalent. No F lec in weeks labs are held. C. L. van Es.

Focuses on economic and statistical models of decision analysis and their applications in large and small business settings. Demonstrates how use of models can improve the decision-making process by helping the decision maker. Emphasizes the importance of sensitivity analysis and the need to combine both quantitative and qualitative considerations in decision making. Draws cases from small business scenarios, the public policy arena, and corporate settings. Lab sessions focus on implementing decision models with computers.

AEM 419(4190) Strategic Thinking

Fall. 3 credits. Prerequisite: PAM 200 or ECON 313. S-U grades optional. N. H. Chau.

The art of thinking strategically puts outdoing one's adversary at the core of the decision-making process, while anticipating that the adversary is doing exactly the same thing. Businesses make investment decisions and innovate products in anticipation of the reaction of their rivals; managers make pay contingent on peer performance, taking into account the reaction of their subordinates and superiors; national trade policies are formulated based on whether trading partners are committed to make credible concessions. This course introduces and explores the use of game theory to understand these interactions; students are expected to work with a balanced dose of both theory and relevant case studies. The objective of the course is to facilitate students' ability to think strategically on firm level issues (e.g., pricing, advertising wars, product differentiation, and entry deterrence) and strategic policy interaction in international economic relations (e.g., trade wars, and the arms race).

AEM 420(4200) Investments

Spring. 3 credits. Prerequisites: AEM 210 or equivalent and AEM 324. Recommended: basic knowledge of statistics and linear algebra. Priority given to AEM students. S-U grades optional. A. Wang.

Introduces the basic conceptual frameworks and analytical tools used in investment analysis. These tools are then applied to a variety of financial applications, both theoretical and empirical. Topics include: forwards and futures, portfolio theory, CAPM, options, financial management, and selected

advanced topics. A portion of this course involves the use of a spreadsheet or other computer programs.

AEM 421(4210) Derivatives and Risk Management

Fall. 3 credits. Prerequisites: AEM 210 and 324 or equivalents. Recommended: ECON 313 or equivalent and a calculus course; familiarity with calculus and probability and statistics. Priority given to students in AEM. S-U grades optional. H. Daouk.

Covers the pricing of derivatives and how derivatives can be used for the purpose of risk management and speculation. A portion of this course involves the use of a spreadsheet or other computer programs.

AEM 422(4220) Estate Planning (also NBA 562[5620])

Fall. 1 credit. Prerequisite: junior, senior, or graduate standing. S-U grades only. D. A. Grossman.

Fourteen sessions on the various aspects of estate planning techniques. Covers the law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and substitutes for probate procedures.

AEM 423(4230) Contemporary Topics in Applied Finance

Fall. 3 credits. Prerequisites: ECON 101, MATH 111 or equivalent, AEM 210 or equivalent, AEM 324. Letter grades. V. Bogan.

Stimulates critical thinking about contemporary topics that attract attention in the press and among key finance decision-makers. This analytical course draws on the theory of modern finance to facilitate the understanding of real world issues. Covers traditional topics in financial markets such as security trading, derivatives, fixed income, IPOs, portfolio formation, and market efficiency. Also explores newer issues such as technology and financial markets.

AEM 424(4240) Management Strategy

Fall and spring. 3 credits. Prerequisite: AEM seniors in business. Fall, G. Blalock; spring, D. Simon.

Capstone course designed to integrate what students have learned in other AEM courses with an emphasis on strategic decision making. Approaches issues from the standpoint of the board of directors, chief executive officer, and business unit managers. Focuses on what should be considered and how strategic decisions should be made.

AEM 425(4250) Small Business Management Workshop

Fall. 4 credits. Prerequisite: senior standing, AEM 325 or NBA 300 and permission of instructor. Cost of term project: approx. \$100 per team. D. Streeter.

Students serve as counselors to small businesses in the central New York area and confront problems facing small personal enterprises. Encourages the application of business principles to an existing business and the witnessing of the results of firm-level decision making. Student teams meet with the business owners and course staff members at arranged times during the semester.

AEM 427(4270) Agribusiness Strategy

Fall. 3 credits. Prerequisite: AEM 220 or 302. B. A. Gloy.

Intended for students with an interest in agribusiness and designed to integrate previous course work and enhance

problem identification and solving skills. Focuses on the evaluation, formulation, and implementation of strategy designed to create and sustain competitive advantage for agribusiness firms. Covers industry analysis, firm analysis, market analysis and selection, risk analysis, strategy development, organizational design and structure, and leadership for agribusiness firms. Designed as a capstone course for the agribusiness management specialization.

AEM 428(4280) Valuation of Capital Investment

Spring. 3 credits. Prerequisites: AEM 210 and 324 or equivalents. D. T.-C. Ng. Focuses on the analysis of financial information—particularly firms' financial reports—for making decisions to invest in businesses. The primary focus is on equity (share) valuation, with some attention given to credit analysis. Examines various valuation models in detail and applies them in cases and projects involving listed companies. Topics include models of shareholder value, discounted cash flow approaches to valuation, the analysis of profitability, growth, and valuation generation in a firm, forecasting earnings and cash flows, proforma analysis for strategy and planning, analysis of risk, and the determination of price/earnings and market-to-book ratios.

AEM 429(4290) International Finance

Spring. 3 credits. Prerequisites: AEM 210 and 324. S-U grades optional. D. T.-C. Ng. Teaches students about issues in international financial management and international investment. The major issues discussed include exchange rate volatility, the benefit of international diversification, and the analysis of international capital budgeting decisions. Specific topics include the determination of the cost of capital for foreign investments, the determination and management of foreign exchange risks and country risks, and the use of innovative financing for the multinational corporation.

AEM 430(4300) International Trade Policy

Spring. 3 credits. Prerequisites: ECON 101-102 or equivalents and intermediate microeconomics course. S-U grades optional. N. H. Chau. Examines the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Also emphasizes applications to current topics in international trade policy, to trade in primary commodities, and to both developed and developing countries.

AEM 431(4310) Agricultural and Food Policy

Spring. 3 credits. Prerequisites: junior, senior, or graduate standing; PAM 200, ECON 301, 313, or equivalent. S-U grades optional. A. Novakovic. Acquaints students with current and historically important U.S. policies related to agriculture and food, including subsidies and regulations related to markets, production, and the environment. Explores methods of policy analysis, and students learn to critique policies and write policy briefs.

AEM 432(4320) Business and Governments in a Global Marketplace

Fall. 3 credits. Prerequisite: intermediate microeconomics course. C. K. Ranney. The government agency and the individual business enterprise are two of the most powerful institutions in modern society. This course looks at the economic interfaces between government and business. The shifting and complicated relationships between them exert great influence on the changing performance of the economy and on the lives of citizens. These relationships range from cooperative to competitive, from friendly to hostile. It is an uneasy relationship, each side possessing basic powers and yet each having an important need for the other. In the United States, the result is a mixed economy in which the public and the private sectors interact in many ways. Government exercises a variety of important powers in dealing with the individual private enterprise, ranging from taxation to regulation. Business, in turn, relies on constitutional protections as well as on public support of its basic role in creating income, employment, and material standards of living. In a dynamic and increasingly globalized economy, the business-government relationship is constantly changing and the line between public and private sectors frequently shifts. Future managers are constantly confronted with issues that relate to government-business interfaces.

AEM 433(4330) Devolution, Privatization, and the New Public Management (also CRP 412[4120], FGSS 411/611[4110/6110])

Fall. 4 credits. Prerequisite: ECON 101. S-U grades optional. M. E. Warner. For description, see CRP 412.

AEM 434(4340) Government Policy Workshop (also CRP 418[4180], FGSS 420[4200])

Spring. 4 credits. S-U grades optional. M. E. Warner. For description, see CRP 418.

AEM 437(4370) Technological Change and Innovation Strategy

Spring. 3 credits. Prerequisites: AEM 220 and ECON 101. A. Leponen. Explores innovation and technological change. Studies how technological change affects economies and industries, and how innovation of new products, processes, and services takes place in firms. Focuses on the creation, management, and exchange of knowledge within and across organizational boundaries.

AEM 442(4420) Emerging Markets

Fall. 3 credits. Prerequisites: senior or graduate standing; AEM 240 and PAM 200 or ECON 313. R. D. Christy. Provides a framework for examining the effectiveness of marketing strategies in economies in transition and identifying the challenges and opportunities for firms in low-income economies to access industrial markets. Appraises the risk of entering markets in low-income economies and assesses the political, legal, cultural, and economic forces. Analyzes and discusses case studies of companies.

AEM 443(4430) Food-Industry Strategy

Fall. 3 credits. Prerequisite: AEM juniors, seniors, or graduate students; AEM 240 or 448; or permission of instructor. J. M. Hagen.

Examines the decisions that businesses must make, such as what to sell, where to invest, when to outsource, and how to market—all in a changing and competitive environment. While the principles are applicable to any competitive environment, the focus is on one industry, the food industry, to allow an in-depth look at how the various players (manufacturers, retailers, and others) both cooperate and compete in the process of supplying food to consumers. Students learn how such issues as globalization, industry consolidation, new technologies, and health concerns add to their challenges and opportunities.

AEM 444(4440) Marketing Strategy and Brand Management

Fall. 3 credits. Prerequisite: AEM 240. S. P. Raj.

A sound marketing strategy is essential for the long-term success of a firm. This requires an understanding of how customer needs evolve, how product-market boundaries shift, and how competitors are likely to react. The strategic roles of existing and new products need to be assessed, appropriate resource allocations made, and strategies developed to ensure sustained growth. The course is designed to provide opportunities to learn about the theoretical and applied perspectives of marketing strategy from readings, case analyses, and guest speakers.

AEM 446(4460) Food Marketing Colloquium

Fall. 1 credit. Prerequisite: junior or senior standing; extensive course work in food industry management and marketing. D. J. Perosio.

AEM 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar covers advanced topics in food marketing, many of which have an important international dimension and are presented by industry members. Several field trips are taken. Students participate in research topics on various aspects of the food industry.

AEM 447(4470) Food Marketing Colloquium

Spring. 1 credit. Prerequisite: food marketing fellows. D. J. Perosio. For description, see AEM 446.

AEM 448(4480) Food Merchandising

Spring. 3 credits. Prerequisite: junior or senior standing; AEM 240. D. J. Perosio. Covers merchandising principles and practices as they apply to food industry situations. Examines the various elements of merchandising such as buying, pricing, advertising, promotion, display, store layout, profit planning and control, and merchandising strategy. Considers the consequences of food industry trends and initiatives for other industry members, public policymakers, and consumers.

AEM 449(4490) Global Marketing Strategy

Spring. 3 credits. Prerequisite: junior, senior, or graduate standing; marketing course. J. M. Hagen. Examines opportunities and challenges in the rapidly changing global marketplace. Topics

include the decision to serve a foreign market, alternative strategies for entry into foreign markets (such as exporting or establishing a local subsidiary), and issues in implementing those strategies. Includes case analysis and discussion.

AEM 450(4500) Resource Economics (also ECON 450[4500])

Fall. 3 credits. Prerequisites: MATH 111, ECON 313, and familiarity with Excel. J. M. Conrad.

Constructs dynamic models of renewable, nonrenewable, and environmental resources to examine market allocation and optimal resource management.

AEM 451(4510) Environmental Economics (also ECON 409[4090])

Spring. 3 credits. Prerequisites: undergraduate standing; intermediate microeconomics course, and calculus. S-U grades optional. G. L. Poe.

Explores the economic foundations for public decision making about environmental commodities and natural resources, using tools from intermediate microeconomics. Emphasizes the welfare economic approach for allocating public goods, with specific emphasis on market failure, externalities, benefit-cost analysis, nonmarket valuation techniques, and cost-effective policy instruments. Also examines property rights/institutional perspectives and ecological economic concepts.

AEM 460(4600) Security Trading and Market Making

Spring. 3 credits. Prerequisite: AEM 324. S-U grades optional. A. Wang.

Theory and practice of securities trading at exchanges around the world. How trading and the design of markets affects liquidity, informativeness, transparency, volatility, and fairness. Analyzes alternative trading strategies and the cost of trading. Examines innovations in security exchanges and regulatory policy. Provides hands-on trading experience using realistic trading simulations.

AEM 464(4640) Economics of Agricultural Development (also ECON 464[4640])

Fall. 3 credits. Prerequisites: ECON 101-102 or permission of instructor. R. D. Christy.

Provides an understanding of the economics of the agricultural sector in low-income countries. Also covers more general issues of economic development beyond the agricultural sector to provide the necessary context for an understanding of rural problems. Topics include the nature of development and technical change, welfare and income distribution, land reform, food and nutrition policy, food security and food aid, competition with more developed countries and international markets, the effect of U.S. policy on agricultural development, and the role of international institutions. Uses examples from a wide variety of developing countries to illustrate the basis for economic analysis.

AEM 494(4940) Undergraduate Special Topics in Applied Economics and Management

Fall or spring. 4 credits max. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and

are advertised by the department before the beginning of the semester.

AEM 497(4970) Individual Study in Applied Economics and Management

Fall or spring. Variable credit. S-U grades optional. Students must register using independent study form (available in undergraduate program office in Warren Hall). Staff.

Used for special projects designed by faculty members.

AEM 498(4980) Supervised Teaching Experience

Fall or spring. 1-4 credits. Students must register using independent study form (available in undergraduate program office in Warren Hall). Staff.

Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty. Students cannot receive both pay and credit for the same hours of preparation and teaching.

AEM 499(4990) Undergraduate Research

Fall, spring, or summer. 1-4 credits. Prerequisite: GPA of at least 2.7. Students must register using independent study form (available in undergraduate program office in Warren Hall). S-U grades optional. Staff.

Permits outstanding undergraduates to carry out independent study of suitable problems under appropriate supervision. Students cannot receive both pay and credit for the same hours of work.

AEM 555(5550) Environmental Management and Policy

Fall. 3 credits. Prerequisites: ECON 101 and 102 or equivalent and calculus course. L. D. Chapman.

Seminar giving an inside perspective on implementation and evaluation of environmental policy in a business or organization. Examines the effectiveness of the new market-based green policies; analyze the operational significance of sustainability in a business context; and come to understand the economic basis for government's role in environmental protection. Uses HBS case studies; each seminar participant prepares a case study of environmental management in a business or organization. Makes extensive use of guest speakers from finance, electricity, forest products, construction, and manufacturing.

[AEM 605(6050) Agricultural Finance

Fall. 3 credits. Prerequisite: AEM 324 or 405 or equivalent. Not offered 2005-2006. B. A. Gloy.

Covers advanced topics in agricultural finance, including investment analysis, capital budgeting under uncertainty, decision analysis, risk management, capital structure, and financial intermediaries.]

AEM 608(6080) Production Economics (also ECON 408[4080])

Fall. 3 credits. Prerequisite: ECON 313 and MATH 111 or equivalents. L. W. Tauer.

Studies the theory of production economics with emphasis on applications to agriculture and natural resources. Topics include the derivation, estimation, and use of production, cost, profit, revenue, demand, and supply functions. Discusses the concepts of efficiency and productivity. Introduces production response over time and under risk.

AEM 611(6110) Global Modeling

Spring. 3 credits. Prerequisite: graduate micro theory course. T. D. Mount and R. N. Boisvert. Taught over Internet by Tom Hertel at Purdue University.

Teaches how to use a global general equilibrium model (GTAP) for research on trade and environment policies. Weekly assignments start with the components of a single-country model and end with a full global model. A final project and the assignments are the primary course requirements.

AEM 612(6120) Applied Econometrics

Fall. 1 credit. Co-requisite: AEM 411. D. Just.

Designed for M.S. and Ph.D. students who do not meet the prerequisites for other graduate-level econometrics courses. Complements AEM 411, providing greater depth of understanding of econometric methods and exposure to applied econometric literature. Focuses on preparing students to conduct their own applied economic research.

AEM 630(6300) Policy Analysis: Welfare Theory, Agriculture, and Trade (also ECON 430[4300])

Spring. 4 credits. Prerequisites: AEM 608 or PAM 603, ECON 313, or equivalent intermediate micro theory course incorporating calculus. H. de Gorter.

The first half of the course surveys the theory of welfare economics as a foundation for public policy analysis. Major issues addressed include the problem of social welfare measurement, the choice of welfare criteria, and the choice of market or nonmarket allocation. Basic concepts covered include measurement of welfare change, including the compensation principle, consumer and producer surplus, willingness-to-pay measures, externalities, and the general theory of second-best optima. The second half focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international markets.

AEM 632(6320) Open Economy Analysis: Theory and Applications

Spring. 3 credits. Prerequisites: ECON 313/314 or permission of instructor. S-U grades optional. N. Chau and S. Kyle.

Explores both recent theoretical and methodological advances as well as practical applications in analyzing current topics and issues in open economies. Brings together research methods pertinent to open economy macroeconomics and international trade policies to give students a basic understanding of how different aspects of contemporary debates are analyzed in practice.

AEM 633(6330) Devolution, Privatization, and the New Public Management (also CRP 612[6120], FGSS 611[6110])

Fall. 4 credits. S-U grades optional. M. E. Warner.

For description, see CRP 612.

AEM 634(6340) Government Policy Workshop (also CRP 618[6180], FGSS 620)

Spring. 4 credits. S-U grades optional.
M. E. Warner.
For description, see CRP 618.

[AEM 640(6400) Analysis of Agricultural Markets (also ECON 440[4400])]

Fall. 3 credits. Prerequisites: AEM 411 and 415 or equivalents. Offered even years; not offered 2005-2006. H. M. Kaiser.

Focuses on the unique features of agricultural commodity markets. Emphasizes government and private institutions that affect these markets, as well as on models of price behavior including marketing margins and imperfect competition. Also covers empirical tools to evaluate market characteristics.]

AEM 641(6410) Commodity Futures Markets

Spring, weeks 8-14. 2 credits.
Prerequisites: AEM 411 and 415 or equivalents. Recommended: AEM 640.
W. G. Tomek.

Focuses on markets for agricultural futures contracts. Emphasizes models of price behavior on futures markets including relationships among cash and futures prices. These principles provide a foundation for a discussion of hedging, speculation, and public policy issues.

AEM 642(6420) Globalization, Food Security and Nutrition (also NS 642[6420])

Fall. 2 credits. Prerequisites: permission of instructor, enrollment in a graduate program, and basic understanding of economics and nutrition. Letter grades.
P. Pinstrup-Andersen.

For description, see NS 642.

AEM 651(6510) Environmental and Resource Economics

Spring. 4 credits. Core course for environmental management concentration/option. Prerequisite: graduate standing. Open to graduate students outside economics. W. D. Schulze.

Review of welfare economics, environmental externalities, and common property resources, and a survey of current environmental and natural resource policy. Covers techniques for measuring benefits and costs—including property value and wage hedonic approaches, travel cost models, and contingent evaluation. Describes survey/data collection methods in detail. Explores innovative market mechanisms for resolving public good, common property, and externality problems. Students are required to complete a paper describing their own formal economic analysis of a natural resource or environmental problem.

[AEM 652(6520) Land Economics Problems]

Fall or spring. 1 or more credits.
Prerequisite: graduate standing and permission of instructor. S-U grades optional. Staff.
Special work on any subject in the field of land and resource economics.]

AEM 655(6550) Electric Systems Engineering and Economics (also ECE 551[5510])

Fall. 2 credits. Prerequisites: basic calculus and microeconomics courses. T. D. Mount and R. Thomas.

For description, see ECE 551.

AEM 660(6600) Agroecosystems, Economic Development, and the Environment

Spring. 3-4 credits. Prerequisite: graduate standing. Open to graduate students outside economics; additional sec TBA for economics majors. S-U grades optional.
D. R. Lee.

Examines selected topics in agricultural and economic development, technology assessment, ecosystem management and the environment, with a focus on developing countries. Topics include production, poverty, and environmental tradeoffs; sustainable technology development; trade and environment linkages; economics of conservation and development; and alternative methodologies for analyzing these interactions. Readings emphasize the economic literature, but also draw from the biophysical sciences, ecosystem management, and the broader social sciences.

AEM 667(6670) Topics in Economic Development (also ECON 770[7770])

Fall. 3 credits. Targeted to second-year graduate students. Prerequisite: basic first-year courses in ECON or AEM or permission of instructor. S-U grades optional. R. Kanbur.

Topics vary from year to year but may include poverty, inequality, intra-household allocation, structural adjustment, and debt. Examination is by term paper.

AEM 670(6700) Economics of Consumer Demand (also PAM 608[6080])

Fall. 3 credits. Prerequisites: ECON 311 or 313 and two semesters of calculus. S-U grades optional. C. K. Ranney.

Graduate-level introduction to theory and empirical research on household demand, consumption, and saving. Emphasizes the use of the theory in empirical research. Topics include neoclassical theory of demand, duality, complete demand systems, conditional demand, demographic scaling and translating, consumption, and savings. As time allows, Becker and Lancaster models of demand may be introduced.

AEM 694(6940) Graduate Special Topics in Applied Economics and Management

Fall or spring. 4 credits max. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the beginning of the semester.

AEM 698(6980) Supervised Graduate Teaching Experience

Fall or spring. 1-4 credits; max. 4 credits during graduate program. Prerequisite: graduate standing; permission of instructor. Undergraduates should enroll in AEM 498. Students must register using independent study form (available in undergraduate program office in Warren Hall). S-U grades optional. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories, and tutoring. Students are expected to actually teach at least one hour per week for each credit awarded. Students may not receive both pay and credit for the same hours of preparation and teaching.

AEM 699(6990) M.P.S. Research

1-6 credits. Prerequisite: M.P.S. students. Credit granted for M.P.S. project report. Staff.

AEM 700(7000) Individual Study in Applied Economics and Management

Fall or spring. Prerequisite: graduate standing. S-U grades optional. Credit, class hours, and other details TBA with faculty member. Staff.

Used for special projects designed by faculty members. More than one topic may be given each semester in different sections. Student must register in section appropriate to topic being covered; section number is provided by instructor.

[AEM 708(7080) Advanced Production Economics]

Fall. 3 credits. Prerequisite: AEM 608, 710, or equivalents. Highly recommended: ECON 609. Offered alternate years; not offered 2005-2006. R. N. Boisvert.

Covers theoretical and mathematical developments in production economics, with emphasis on estimating production relationships, scale economies, technical change, and factor substitution. Emphasizes developments in flexible functional forms, duality, and dynamic adjustment models. Gives considerable emphasis to empirical specification and estimation. Discusses other topics (risk, supply response, and household production functions) based on student interest.]

AEM 710(7100) Econometrics I

Spring. 3 credits. Prerequisites: matrix algebra and statistical methods courses at level of ILRST 311 or ECON 619.
H. Daouk.

Provides (together with AEM 711) a graduate sequence in applied econometrics that is suitable for M.S. and Ph.D. students. Covers linear-regression models and the associated estimation and testing procedures.

AEM 711(7110) Econometrics II

Fall. 3 credits. Prerequisite: AEM 610 or equivalent. T. D. Mount.

Coverage beyond AEM 610 of dynamic models, including single equation ARIMA, vector ARIMA, Kalman filtering, structural dynamic models, and regime switching. Topics include endogeneity, stability, causality, and cointegration.

AEM 712(7120) Quantitative Methods I

Fall. 4 credits. Prerequisite: some formal training in matrix algebra. Highly recommended: course at level of BTRY 417. R. N. Boisvert.

Comprehensive treatment of linear programming and its extensions, including postoptimality analysis. Topics include nonlinear programming, including separable, spatial equilibrium, and risk programming models. Discusses input-output models and their role in social accounting matrices and computable general equilibrium models. Makes applications to agricultural, resource, and regional economic problems.

AEM 713(7130) Dynamic Optimization

Spring. 3 credits. Prerequisite: ECON 609. S-U grades only. J. M. Conrad.

Concerned with the solution of dynamic allocation problems. Objectives are to (1) pose prototype optimization problems in discrete and continuous time, (2) introduce the common methods for solving prototype problems, (3) present a set of numerical

problems, and thereby (4) equip students with basic theory and methods to perform applied research on dynamic allocation problems.

AEM 714(7140) Experimental Economics

Fall. 4 credits. Prerequisite: ECON 609.

Offered alternate years. W. D. Schulze.

Surveys both experimental economics methods and research as an approach to test economic theory. Students participate as subjects in a series of illustrative computerized experiments ranging from double auctions to public goods provision. Topics include experimental methods; decisions and games; markets (testing auction institutions); market power (monopoly, oligopoly); bargaining, compensation, and performance; public goods; externalities and voting; information and uncertainty; and economic anomalies. Students must design and write a paper describing their own experiment.

AEM 717(7170) Research Methods in Agricultural Economics

Spring. 2 credits. Prerequisite: graduate standing. R. N. Boisvert.

Discusses the research process and scientific method as applied in agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting data, questionnaire design and testing, field organization, and analysis of data. During the semester, each student develops a research proposal that may be associated with his or her thesis.

[AEM 730(7300) Seminar on International Trade Policy: Agriculture, Resources and Development]

Spring. 3 credits. Prerequisite: graduate standing; AEM 630 or equivalent. Not offered 2005–2006. D. R. Lee.

Examines selected topics in the professional literature on international trade policy, focusing on agricultural trade and related topics, including trade liberalization, trade and environmental linkages, technological change and trade policy, and agricultural trade and development.]

AEM 735(7350) Public Finance: Resource Allocation and Fiscal Policy (also ECON 735(7350))

Fall. 4 credits. R. Kanbur.

For description, see ECON 735.

[AEM 740(7400) Agricultural Markets and Public Policy]

Spring, weeks 1–7. 2 credits. Prerequisite: graduate standing; familiarity with multiple regression techniques at AEM 411 level or higher. Recommended: AEM 640. W. H. Lesser.

Develops the concepts and methodology for applying and analyzing the effects of public-policy directives to the improvement of performance in the U.S. food marketing system. Prospective topics include a survey of industrial organization principles, antitrust and other legal controls, and coordination systems in agriculture. Topics may be adjusted to students' interests.]

AEM 744(7440) Advanced Consumer Research

Fall. 3 credits. Prerequisite: graduate standing; priority given to CALS Ph.D. students, especially in AEM, nutritional science, or food technology. B. Wansink.

Workshop providing students with a unique opportunity to develop an advanced theory-

based understanding of consumers by using innovative methods and new research techniques. Class sessions alternate theory with implementation.

AEM 750(7500) Resource Economics

Fall. 3 credits. Prerequisites: ECON 609 and 618, or AEM 713. J. M. Conrad.

Uses optimal control and other methods of dynamic optimization to study the allocation and management of natural resources.

AEM 751(7510) Environmental Economics

Spring. 4 credits. Prerequisites: ECON 609 and 618, or AEM 713. S-U grades optional. R. N. Boisvert.

Studies the basic theory and applications of environmental economics and policy. Extensions include comparisons of taxes, subsidies, and other policy instruments; an examination of the effects on policy of market imperfections; multiple positive and negative externalities; and other government regulations such as those in agriculture. Also examines the effects of uncertainty, and special problems associated with nonpoint externalities and asymmetric information. There is an extensive treatment and evaluation of contingent valuation and other methods for valuing nonmarket goods. Throughout, the theoretical results are highlighted through discussions of important empirical policy applications.

AEM 752(7520) Applied Welfare Economics: Nonmarket Valuation of Public Goods

Fall, first seven weeks of semester. 2 credits. Prerequisites: ECON 609 and graduate-level econometrics course or permission of instructor. G. L. Poe.

Estimates of nonmarket values associated with improvements (or decrements) in public goods, such as environmental resources and public health and safety, are now widely required in public decision-making. This course develops the policy context and the economic-theoretic foundations of nonmarket valuation and benefit-cost analysis. Uses these foundations to develop empirical models of leading valuation methods, including both stated (e.g., contingent valuation and stated-choice methods) and revealed (e.g., hedonic analysis, travel-cost method and defensive expenditures) preference methods.

AEM 762(7620) Microeconomics of International Development

Fall. 3 credits. Prerequisite: completion of first-year Ph.D. course sequence in AEM or ECON or permission of instructor. S-U grades optional. C. B. Barrett.

Focuses on models of individual, household, firm/farm, and market behavior in low- and middle-income developing economies. Topics include agricultural land, labor, and financial institutions; technology adoption; food security and nutrition; risk management; intra-household analysis; reciprocity networks; and product/factor markets analysis. Emphasizes empirical research.

AEM 765(7650) Development Microeconomics Graduate Research Seminar

Fall/spring. 1–3 credits. Prerequisite: graduate standing and permission of instructor. C. B. Barrett.

Graduate students and the instructor present draft research proposals, papers, and preliminary thesis results for group review and

discussion. Students who actively participate by offering written and oral comments on others' work receive 1 credit. Students who also present their own proposal or paper receive 2 credits. Presentations last 75 minutes and thus represent a substantial investment of time. Students who present a second proposal or paper receive 3 credits.

AEM 800(8900) Master's-Level Thesis Research

Fall or spring. 1–9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty.

For students admitted specifically to a master's program.

AEM 900(9900) Graduate-Level Thesis Research

Fall or spring. 1–9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty.

For Ph.D. students **only before** "A" exam has been passed.

AEM 901(9910) Doctoral-Level Thesis Research

Fall or spring. 1–9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty.

For Ph.D. candidates **after** "A" exam has been passed.

ANIMAL SCIENCE

A. W. Bell, chair (149 Morrison Hall, 255-2862); R. E. Austic, D. E. Bauman, R. W. Blake, Y. R. Boisclair, D. L. Brown, W. R. Butler, L. E. Chase, W. B. Currie, H. N. Erb, R. W. Everett, D. M. Galton, J. Gavalchin, P. A. Johnson, X. G. Lei, P. A. Oltenacu, T. R. Overton, J. E. Parks, A. N. Pell, E. J. Pollak, R. L. Quaas, S. M. Quirk, R. D. Smith, M. L. Thonney, M. E. Van Amburgh

AN SC 100(1000) Domestic Animal Biology I

Fall. 4 credits. S-U grades optional. Lec, M W F 9:05; sec, T W or R 2:00–4:25. W. B. Currie.

Introduction to the biology of economically important species (morphology, anatomy, and physiology) and its application to the management of animals in major livestock industries. Topics include domestication and origins of animal science, anatomy, quantitative cell biology, regulatory mechanisms, public domain genetic databases, major life support systems, and digestion. Students undertake the care and management of several species of farm animals and Japanese quail. Laboratory exercises include animal handling and examining aspects of growth and development. Living farm animals are used noninvasively, and fresh organs from dead animals are examined.

AN SC 105(1050) Contemporary Perspectives of Animal Science

Spring. 1 credit. Prerequisite: freshmen, sophomores, and first-year transfers. T 1:25 or W 12:20. D. J. R. Cherney and D. E. Bauman.

A forum to discuss the students' career planning and the contemporary and future role of animals in relation to human needs.

AN SC 110(1100) The Animals That Sustain Us: Lecture

Spring. 2 credits. S-U grades optional. Lec, T R 11:15. D. L. Brown.

Teaches the importance of the symbiosis between humans and domestic animals and how animal enterprises can be ethically, environmentally, and economically sound.

AN SC 111(1110) The Animals That Sustain Us: Lab

Spring. 1 credit. S-U grades optional. Lab, R 1:25-4:25. D. L. Brown.

Teaches students to restrain and care for several species of domestic animals, including cats, dogs, sheep, cattle, goats, fish, and horses. Other species may be added according to student interest. Associated with AN SC 110 but may be taken separately.

AN SC 150(1500) Domestic Animal Biology II

Spring. 4 credits. S-U grades optional. Lec, M W F 9:05; lab/disc, T W or R 2:00-4:25. W. R. Butler and staff.

Second of a two-semester sequence (100/150) applying the basic biology and physiology of growth, defense mechanisms, reproduction, and lactation to aspects of the production and care of domestic animals. Uses fresh tissues and organs from dead animals along with preserved specimens in laboratories, exercises, and demonstrations. Uses a colony of Japanese quail for growth exercises, behavior, and data collection.

AN SC 204 Sophomore Seminar: Domestic Animal Issues

Fall. 3 credits. S-U grades optional. Lec, T R 1:25-2:40. D. Brown.

Expression of discoveries, opinions, and solutions to problems in the area of domestic animal science and industry take on an extremely wide variety of forms. These expressions may include: the peer-reviewed journal article, summaries of scientific work for the public, grant writing for science, film, music, cowboy poetry, investigative journalism, web pages, online discussion groups, computer models and the conference. This course challenges students from any major with the criticism and practice of these arts. Topics used as points of reference for exposition of biological principles and for practicing those means of expression will vary as the years go on, but for 2005-2006 include: roles animals play in society; BSE; vegetarianism; gender stereotypes and livestock; impact of animals on air and water quality; using hormones and antibiotics in food production; feral horses of the West.

AN SC 212(2120) Animal Nutrition

Fall. 4 credits. Prerequisite: CHEM 208 or equivalent. Recommended: AN SC 100 and 150. Lec, M W F 10:10; lab, M T W R or F 1:25-4:25. A. W. Bell and D. J. R. Cherney.

Introduction to animal nutrition, including digestive physiology and metabolism of domestic animals and other species; nutrient properties and requirements for different aspects of animal production and performance; principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and nutritional experiments performed on laboratory or farm animal species.

[AN SC 213(2130) Nutrition of the Dog

Spring, weeks 1-7. 1 credit. Prerequisite: AN SC 212 or equivalent. Offered alternate years; next offered 2007. Lec, W 7:30-9:25 P.M. A. W. Bell.

Covers digestive physiology, nutrient requirements, feeding practices, and interactions of nutrition and disease.]

AN SC 214(2140) Nutrition of Exotic Animals

Fall, weeks 1-7. 1 credit. Prerequisite: AN SC 212 or equivalent. Lec, W 7:30-9:25 P.M. H. F. Hintz.

Discusses nutrient requirements, sources of nutrients, feeding management systems, and ration formulation. Describes signs of nutrient deficiencies and excesses.

AN SC 215(2150) Exotic Avian Husbandry and Propagation

Fall. 2 credits. Limited to 100 students. Prerequisite: AN SC 100, 150, or one year introductory biology. Lec, M 2:30-4:25. J. Parks and D. Muscarella.

Natural history, care, management, health, and breeding of exotic avian species with emphasis on psittacines (parrots and related species) and raptors (birds of prey). Includes lectures, demonstrations, and local field trips.

[AN SC 216(2160) Nutrition of the Cat

Fall, weeks 1-7. 1 credit. Prerequisite: AN SC 212 or equivalent. Offered alternate years; next offered 2006. Lec, W 7:30-9:25 P.M. H. F. Hintz.

Covers digestive physiology, nutrient requirements, feeding practices, and interactions of nutrition and disease.]

AN SC 221(2210) Introductory Animal Genetics

Spring. 3 credits. Prerequisite: one year of college biology. Lec, T R 9:05; sec, T W R or F 2:00-4:25. E. J. Pollak.

Examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection on animal populations.

AN SC 222(2220) Introduction to Canine Genetics

Winter or summer. 1 credit. Prerequisite: introductory biology or permission of instructor. (May not be taken for credit by students who have successfully completed AN SC 221.) S-U grades only. To receive credit, students must register through School of Continuing Education, www.sce.cornell.edu/DL/html/caninegenetics.html. E. J. Pollak.

Introduction to basic Mendelian genetics and simply inherited characteristics in the dog. This distance-education course delivered by CD and web interaction for residents and nonresidents consists of lectures on basic genetic principles, probabilities, linkage and genetic testing, and seminars on genome mapping, inherited sexual disorders, bleeding disorders, and eye defects.

AN SC 250(2500) Dairy Cattle Principles

Fall. 3 credits. Prerequisite for AN SC 251, 351, 354, and 355. S-U grades optional. Lec, T R 10:10; lab, T or R 1:25-4:25.

D. M. Galton and T. Batchelder. Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of production techniques.

AN SC 251(2510) Dairy Cattle Selection

Fall. 2 credits. Prerequisite: senior standing or permission of instructor. S-U grades optional. Lec, W 11:15-12:05; disc, W 12:20-1:10. D. M. Galton.

Application of scientific principles of genetic programs in herds with different breeding programs. Emphasizes economical traits to be used to improve genetic progress and herd profitability.

AN SC 265(2650) Horses

Fall. 3 credits. Prerequisites: AN SC 100 and 150 or permission of instructor. S-U grades optional. Lec, T R 9:05; lab, R 1:25-4:25.

C. Collyer.

Selection, management, feeding, breeding, and training of light horses.

AN SC 280(2800) Molecular Biology in Agriculture and Medicine

Fall. 3 credits. Prerequisite: one year introductory biology. Lec, T R 10:10-11:25. S. M. Quirk.

Discusses the applications of molecular biology to animal research, animal agriculture, industry, and medicine. Introduction of basic recombinant DNA techniques followed by topics such as genome projects, comparative and functional genomics, genetic screening, gene therapy, transgenic animal production, and mammalian cloning. Class discussions explore ethical issues raised by the use of these technologies.

AN SC 290(2900) Meat Science (also FD SC 290(2900))

Fall. 2 or 3 credits. Lec, T R 11:15; lab, M or R 12:20-3:20. Lec only, 2 credits; lec plus lab, 3 credits; lab cannot be taken without lec. D. Shaw.

Introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Also study properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation. Laboratory exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, inspection, grading, curing, sausage manufacture, and quality control. An all-day field trip to a commercial meat plant may be taken.

AN SC 300(3000) Animal Reproduction and Development

Spring. 3 credits. Prerequisite: AN SC 100-150 or equivalent and one year introductory biology. Lec, M W F 10:10. J. E. Parks.

Comparative anatomy and physiology of mammalian and avian reproduction, with emphasis on domestic and laboratory animals; fertilization through embryonic development, pregnancy, and growth to sexual maturity; emphasizes on physiological mechanisms and application to fertility regulation. Separate laboratory is offered to demonstrate fundamental aspects of reproduction and reproductive technology.

AN SC 301(3010) Animal Reproduction and Development Lab

Spring. 1 credit. Limited to 30 students per lab. Prerequisite: AN SC 100-150 or equivalent; concurrent enrollment in or completion of AN SC 300. Lab, M W or F 1:25-4:25. J. E. Parks.

Demonstrates fundamental principles and applied aspects of mammalian and avian reproduction. A limited number of live

animals are used in some demonstrations. Dissection and examination of tissues from vertebrate animals are included in selected laboratories.

AN SC 305(3050) Farm Animal Behavior (also BIOAP 312[3120])

Spring. 2 credits. Prerequisites: one year introductory biology and introductory animal physiology (AN SC 100 and 150 or equivalent or BIOAP 311). Recommended: at least one animal production course or equivalent experience. S-U grades optional. Lec, T R 11:15. Staff.

The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic animals and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

AN SC 323(3230) Equine Genetics Seminar

Fall. 2 credits. Prerequisite: AN SC 221 or equivalent. S-U or letter grades. Disc, T 1:25-2:15. P. A. Oltenacu.

Presents and discusses topics of equine genetics. Students are also required to view one seminar each week. Seminars are animated PowerPoint presentations available in computer lab and can be viewed at flexible times during the week.

AN SC 341(3410) Biology of Lactation

Spring. 2 credits. Prerequisite: AN SC 100-150 or animal physiology course. Offered alternate years; next offered 2007. Lec, T R 9:05. Y. R. Boisclair and staff.

Comprehensive survey of the biology of the mammary gland. Lectures cover (1) basic aspects such as anatomy and development of the mammary gland, biochemistry and hormone regulation of milk synthesis and regulation of gene expression in the mammary cells; (2) practical aspects such as the impact of lactation on nutrition, reproduction, and diseases. Lactation in the dairy cow provides the primary context, but examples from other mammals, including humans, are used.]

AN SC 351(3510) Dairy Herd Management

Spring. 4 credits. Prerequisite: AN SC 250 or permission of instructor. Recommended: AEM 302. Lec, M W F 11:15; lab, W 1:25-4:25 and F (alternate weeks) 1:25-4:25. D. M. Galton.

Application of scientific principles to practical herd management with components of reproduction, milking, housing, records, and production economics. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

AN SC 354(3540) Dairy Cattle Herd Health

Fall. 3 credits. Prerequisite: AN SC 250 or permission of instructor. Lec, T R 9:05-9:55; lab, R 1:25-4:25. D. M. Galton and W. Stone.

Application of scientific principles to practical herd management with emphasis on herd health and animal well-being. Laboratory emphasizes practical applications of herd health management including on-farm herd health analysis.

AN SC 355(3550) Dairy Cattle Nutrition

Spring. 3 credits. Prerequisite: AN SC 250 or permission of instructor. Letter grades only. Lec, W F 10:10; lab, R 1:25-4:25.

T. L. Batchelder and L. E. Chase.

Application of scientific principles to practical herd nutrition relating to herd production and feeding management. Laboratory emphasizes practical applications and field trips.

AN SC 360(3600) Beef Cattle

Spring. 3 credits. Lec, T R 10:10; sec, W 2:00-4:25. Offered alternate years; next offered 2006. M. L. Thonney.

Emphasizes the management of reproduction, nutrition, and selection in beef cattle enterprises. A cattle growth model is studied. Laboratories acquaint students with management skills through computerized simulations and working directly with cattle. Students spend several days during the semester feeding and caring for cows and their newborn calves.

AN SC 365(3650) Equine Nutrition

Fall. 3 credits. Prerequisites: AN SC 100, 212, and 265 or equivalent. S-U grades optional. Lec, M W F 9:05-9:55. Not offered 2005. Staff.

Presents the principles of nutrition for horses. Discusses digestive physiology, sources of nutrients, feeding programs for various classes of horses, and interactions of nutrition and diseases.]

AN SC 370(3700) Swine Nutrition and Management

Fall. 3 credits. Recommended: AN SC 212. Lec, T R 11:15; lab, T 2-4:25. Offered alternate years; next offered 2006. X. G. Lei and K. Roneker.

Focuses on swine nutrition, feeding, and management. Lectures are integrated basic nutrition and swine system, including pig biology, digestive and metabolic development, nutritional biochemistry and physiology, impact of swine nutrition on environment, use of pig model in medicine, and current swine nutrition and biotechnology. Offers laboratory practice, animal projects, and problem troubleshooting.]

AN SC 380(3800) Sheep

Spring. 3 credits. Lec, T R 10:10; sec, W 2-4:25. Offered alternate years; next offered 2007. M. L. Thonney.

Emphasizes the breeding, feeding, management, and selection of sheep from a production-system approach. Lectures and laboratories are designed to give students a practical knowledge of sheep production as well as the scientific background for improved management practices. Students work directly with sheep during laboratories and spend several days during the semester feeding and caring for ewes and their newborn lambs.]

AN SC 400(4000) Livestock in Tropical Farming Systems

Spring. 3 credits. Prerequisite: upperclass standing. Cost of optional field trip (includes airfare, local transport, and lodging; some merit and need-based financial aid may be available): approx. \$2,000. Lec, T R 9:05; disc, W 1:25-3:20. R. W. Blake.

Comprises analyses of constraints on livestock production in developing countries of the tropics, economic objectives and risk, and methods of management. The 2006-2007 editions focus on livestock systems in the Yucatán Peninsula. Emphasis is on strategic

use of animal and plant resources, animal performance with inputs restricted, and decision making. Principles, field study, independent study projects and classroom interactions aided by videoconferencing with Mexican partners facilitate problem-solving to improve welfare of rural households. Interactions with Mexican farmers and other professionals during a 10-day field-study trip provide context and opportunities for developing study projects aligned with needs of Yucatecan farmers.

AN SC 401(4010) Dairy Production Seminar

Spring. 1 credit. Prerequisite: junior or senior standing. Disc, M 7:30 P.M. T. R. Overton.

Capstone course in which students, with the help of faculty members, complete a study of the research literature on topics of current interest in the dairy industry. Students then make an oral and a written report on their topic with emphasis on integrating theory and practice.

AN SC 402(4020) Seminar in Animal Sciences

Spring. 1 credit. Prerequisite: students engaged in undergraduate honors research projects. S-U grades optional. Disc, R 4:30. S. Quirk.

Reports of undergraduate research and honors projects. Students present oral reports of their work for class discussion.

AN SC 403(4030) Tropical Forages

Spring. 2 credits. Prerequisites: knowledge of crop production and livestock nutrition. Offered alternate years. Next offered 2006. Lec, T R 10:10. A. N. Pell.

Overview of tropical grasslands, seeded pastures, and crop residues as feed resources; grass and legume characteristics; establishment and management of pastures; determination of feeding value of forages and crop residues; physiology of digestion of ruminants that affects feeding behavior; problems of chemical inhibitors in plants; and preservation of tropical forages as hay or silage.

AN SC 410(4100) Nutritional Physiology and Metabolism

Fall. 3 credits. Prerequisites: biochemistry and physiology courses. M W F 11:15. R. E. Austic and D. E. Bauman.

Fundamental approach to nutrition focusing on the metabolic fate of nutrients and the interrelationships among nutrients, nutritional state, and metabolic processes. The overall goal is to increase understanding of metabolism and metabolic regulation through an integration of nutrition, biochemistry, and physiology.

AN SC 411(4110) Applied Cattle Nutrition

Fall. 4 credits. Designed for juniors, seniors, and entering graduate students. Prerequisites: AN SC 100 and 212 (or equivalent). Highly recommended: AN SC 355. Lec, M W F 10:10; lab, M 1:25-4:25. M. E. Van Amburgh.

Applied approach to predicting nutrient requirements and feed use to meet requirements with wide variations in cattle type, feed composition, and environmental conditions. Emphasizes dairy cattle. Discusses nutrient management to minimize cost of production and environmental effects. Computer models (Cornell Net Carbohydrate and Protein System) are used in the laboratory to apply the information presented in lectures,

including evaluation of feeding programs on case study farms.

AN SC 412(4120) Whole-Farm Nutrient Management (also CSS 412[4120])

Spring. 2- or 4-credit option. Prerequisite: junior, senior, or graduate standing; AN SC 411. Offered as two modules. Enrollment in Module 1 for first half of semester required (2 credits). Consists of crop and manure nutrient management planning; no prerequisites for CALS students. Enrollment in Module 2 for second half of semester is optional (additional 2 credits); builds on crop and manure nutrient management planning module by integrating agronomic nutrient management planning with herd nutrient management planning. Lec, T R 11:15; lab, T 1:25-4:25 for both modules, with work on case studies outside lab.

M. E. Van Amburgh and Q. M. Ketterings.

Provides students with an understanding of the concepts underlying whole farm nutrient management planning to improve profitability while protecting water and air quality. Students learn and apply concepts in the development of a Comprehensive Nutrient Management Plan (CNMP) that is required for a Concentrated Animal Feeding Operation plan to meet environmental regulations. Students develop components of a CNMP for a case study farm, using the Cornell University Nutrient Management Planning System (cuNMPS) and other tools. All students enrolled learn the concepts and processes of developing the crop and manure nutrient management plan component of a CNMP during the first half of the semester in Module 1. Students opting to continue through the end of the semester in Module 2 (4-credit option) build upon knowledge gained in the first half of the semester by learning the knowledge and skills necessary to integrate crop production and herd feeding management for reducing nutrient imports on farms.

AN SC 414(4140) Ethics and Animal Science

Fall. 2 credits. Prerequisite: junior or senior standing. Lec, M 12:20; disc, W 12:20-1:10. D. J. R. Cherney.

Explores the place of humans in the biological world, origins of ethics and morality, speciesism, the use of animals for research and agricultural purposes, transgenic animals. A book review, participation in discussion in class and online, and a project of the student's choice are used to evaluate the performance of each student.

AN SC 420(4200) Quantitative Animal Genetics

Spring. 2 credits. Limited to 30 students. Prerequisite: AN SC 221 or equivalent. S-U grades only. Lec, M 12:20; sec, M 2:00-4:25. E. J. Pollak.

Consideration of problems involved in improvement of animals through application of the theory of quantitative genetics, with emphasis on genetic evaluation and analysis of data for genetic parameters. Computer labs use interactive matrix algebra programs for problem solving.

AN SC 425(4250) Gamete Physiology and Fertilization (also BIOAP 425[4250])

Fall. 2 credits. Limited to 50 students. Prerequisite: AN SC 300 or equivalent. Offered alternate years. Next offered 2005. Lec, R 2:30-4:25. J. E. Parks.

Study of the formation, growth, differentiation, and maturation of mammalian sperm and oocytes; gamete transport and interaction with male and female reproductive tracts; and cytological, physiological, and molecular changes required for fertilization. Lecture, discussion, and aspects of gamete physiology and in vitro technologies such as cryopreservation, oocyte maturation, and fertilization are covered.

AN SC 427(4270) Fundamentals of Endocrinology (also BIOAP 427[4270])

Fall. 3 credits. Prerequisite: animal or human physiology course or permission of instructor. Lec, M W F 9:05. P. A. Johnson. Physiology and regulation of endocrine secretions. Emphasizes neuroendocrine, reproductive, growth, and metabolic aspects of endocrinology. Examples are selected from many animals, including humans.

AN SC 451(4510) Dairy Herd Business Management

Fall. 3 credits. Co-requisite: AN SC 456. Lec, W 1:25-2:15; disc, W 2:30-4:25; lab, F 1:25-4:25. D. M. Galton and J. Karszes. Emphasizes dairy herd business management with application to herd management analysis. Laboratory includes farm tours and analysis.

AN SC 456(4560) Dairy Management Fellowship

Spring. 2 credits. Prerequisites: senior standing; AN SC 351; permission of instructor. S-U grades only. Times TBA. D. M. Galton.

Designed for undergraduates who have a sincere interest in dairy farm management. Objective is to gain further understanding of the integration and application of dairy farm management principles and programs with respect to progressive dairying and related industries.

AN SC 457(4570) Communicating to Hispanic Staff

Fall. 2 credits. Pre- or co-requisite: AN SC 250 or permission of instructor. Lec, T 2:30-4:25. Staff.

Students with a focus on dairy management learn to communicate with the increasingly Spanish-speaking workforce to assure that the knowledge of cutting-edge dairy management and observations from the field are exchanged accurately. This is the first of a sequence of two courses developed to meet these goals. Students are expected to be able to converse and explain, through the use of live animals, technical processes involved in the care of livestock and to listen and understand observations and concerns of Spanish-speaking staff.

AN SC 458(4580) Communicating to Hispanic Staff

Spring. 2 credits. Pre- or co-requisite: AN SC 250 or permission of instructor. Lec, W 2:30-4:25. Staff.

Students with a focus on dairy management need to be able to communicate with the Hispanic workforce and upward mobility of that workforce depends on knowledge of cutting-edge dairy management. This is the second course of a two-sequence program that will further develop the students' skills to be able to communicate in Spanish higher-level dairy production tasks and principles to Hispanic dairy workers. Students are expected to be able to converse and explain through the use of live animals technical processes

involved in the care of livestock and to listen and understand observations and concerns of Spanish-speaking staff.

AN SC 494(4940) Special Topics in Animal Science

Fall or spring. 4 credits max. Prerequisite: undergraduate standing. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

AN SC 496(4960) Internship in Animal Science

Fall or spring. 1-3 credits; 6 credits max, during undergraduate career. Students must register using independent study form (available in 140 Roberts Hall). S-U grades only. Staff.

Structured, on-the-job learning experience under supervision of qualified professionals in a cooperating organization (e.g., farm, agribusiness, pharmaceutical company, zoo, educational institution). Internships are arranged by the student and must be approved in advance by the student's academic adviser. The internship should provide a professionally supervised experience with at least 60 hours on the job per credit required.

AN SC 497(4970) Individual Study in Animal Science

Fall or spring. 1-3 credits; may be repeated for credit. Intended for students in animal sciences. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S-U grades optional. Staff. May include individual tutorial study or a lecture topic selected by a professor. Because topics may change, the course may be repeated for credit.

AN SC 498(4980) Undergraduate Teaching

Fall or spring. 1-3 credits; limited to two experiences during undergraduate career. Prerequisite: GPA of at least 2.7. Students must register using independent study form (available in 140 Roberts Hall).

Designed to consolidate the student's knowledge. A participating student assists in teaching a course allied with his or her education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

AN SC 499(4990) Undergraduate Research

Fall or spring. 6 credits max, during undergraduate career. Prerequisite: junior or senior standing; GPA of at least 2.7. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Students must register using independent study form (available in 140 Roberts Hall).

Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

[AN SC 603(6030) Mineral Nutrition: Metabolic, Health, and Environmental Aspects [also NS 603(6030)]

Fall. 2 credits. Prerequisites: biochemistry, physiology, and nutrition courses. Letter grades only. Lec, T 2-4. Offered alternate years; next offered 2006. X. G. Lei and C. C. McCormick.

Emphasizes metabolism, gene regulation, antioxidation, and genetic defects related to mineral nutrition. Team-taught lectures cover topics ranging from single gene mutation to social and environmental aspects of mineral nutrition and mineral-related disorders. Discusses effective approaches to improve global mineral nutrition by agriculture and food systems.]

[AN SC 606(6060) Ruminant Nutrition: Microbial Ecology and Forage Chemistry]

Spring. 4 credits. Prerequisites: AN SC 212, biochemistry course; senior or graduate standing or permission of instructor. S-U grades optional. Lec, M W F 9:05; disc, W 8:00. Offered alternate years; next offered 2007. A. N. Pell.

Provides an overview of ruminant nutrition with an emphasis on microbial ecology, forage chemistry, and rumen function.]

AN SC 610(6100) Animal Science Seminar

Fall and spring. 1 credit. Prerequisite: graduate standing. S-U grades only. Lec, T 12:20-1:10. A. W. Bell.

Weekly seminar on topics related to animal science. The requirement for an S grade is regular attendance at seminars during the semester.

AN SC 619(6190) Field of Nutrition Seminar [also NS 619(6190)]

Fall and spring. 0 credits. No grades given. For description, see NS 619.

AN SC 620(6200) Seminar in Animal Breeding

Fall and spring. 1 credit. Prerequisite: graduate standing and major or minor in animal breeding. S-U grades only. Times TBA. E. J. Pollak.

Current topics in animal breeding and statistics as applied to genetic evaluation and selection of domestic animals.

AN SC 621(6210) Reproductive Physiology/Endocrinology Seminar

Fall and spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades only. Lec, W 4:00. W. R. Butler and staff.

Current research in reproductive physiology is presented by staff members, graduate students, and visitors.

AN SC 622(6220) Seminar in Animal Metabolism

Fall and spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Lec, R 4:00. Y. R. Boisclair and D. E. Bauman.

Current issues in metabolism are discussed as they relate to productivity, well-being, and diseases of animals. Students present research proposals for new initiatives, progress reports on ongoing projects and recent peer-reviewed publications of high significance.

[AN SC 625(6250) Nutritional Toxicology (also TOX 625(6250))]

Spring. 2 credits. Prerequisites: biochemistry and nutrition courses. S-U grades optional. Offered alternate years; next offered 2007. Lec, W 1:25-2:15; lab/disc, W 2:30-4:25. D. L. Brown.

Explores toxicological principles and a selective survey of natural food and feed toxicants. At the end of this course, students understand relationships between nutrition and toxicology; are prepared to conduct research concerning the effects of naturally occurring toxicants; and are able to use multimedia to present their understanding of a class of toxicants. Occasional on-campus field trips. In addition, students read printed and electronic communications and create STELLA simulation models and a system of web pages related to a specific family of toxicants.]

AN SC 640(6400) Individual Study in Animal Science: TIES Seminar, Decision Support of Ruminant Livestock Systems in the Gulf Region of Mexico [U.S.-Mexico Training, Internships, Exchanges, and Scholarships (TIES) Partnership Initiative]

Fall and spring. 1 credit. S-U grades only. Times TBA. R. W. Blake.

Study of topics in animal science more advanced than, or different from, other courses. Subject matter involves research and training collaborations between Cornell University and Mexican institutions in the Gulf Region of Mexico.

AN SC 650(6500) Molecular Techniques for Animal Biologists

Spring. 4 credits. Limited to 15 students. Prerequisites: BIOBM 330 or 332 or 333 or equivalents and permission of instructors. Lec, T 11:15; lab, T and R 1:25-4:25. Offered alternate years; next offered 2006. Y. Boisclair and staff.

Lab course designed for students who have little or no experience with techniques in molecular biology. Emphasizes modern techniques used in conducting research in animal-related sciences such as nutrition, physiology, pharmacology, and immunology (e.g., subcloning, mutagenesis of DNA, RT-PCR, analysis of gene and protein expression, overexpression of proteins, and study of protein-DNA interactions). Lectures introduce laboratory exercises and supplement laboratory topics. Students perform an independent project requiring time outside scheduled laboratories and give a scientific presentation.

AN SC 694(6940) Special Topics in Animal Science

Fall or spring. 4 credits max. Prerequisite: graduate standing. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

AN SC 720(7200) Advanced Quantitative Genetics

Spring. 3 credits. Prerequisites: matrix algebra, linear models, and mathematical statistics courses. S-U grades optional. Times TBA. Offered alternate years; next offered 2006. R. L. Quaas.

Covers statistical methods used in a variety of problems in the quantitative genetics of animal populations. The initial focus is the estimation of breeding values for purposes of ranking animals for selection. The core of the course is the mixed linear model; linear estimators and predictors are treated extensively. Emphasizes the importance of appropriate modeling; makes generalizations to nonlinear models, via Bayesian principles, i.e., inferences from posterior distributions.

AN SC 800(8900) Master's-Level Thesis Research

Fall or spring. Credit TBA, max. 12 per semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty. For students admitted specifically to a master's program.

AN SC 900(9900) Graduate-Level Thesis Research

Fall or spring. Credit TBA, max. 12 per semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty. For students in a Ph.D. program **only before** "A" exam has been passed.

AN SC 901(9910) Doctoral-Level Thesis Research

Fall or spring. Credit TBA, max. 12 credits per semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty. For students admitted to candidacy **after** "A" exam has been passed.

M. F. Walter, chair (104 Riley-Robb Hall; 255-2270, -2465); B. A. Ahner, L. D. Albright, D. J. Aneshansley, A. J. Baeumner, J. A. Bartsch, J. R. Cooke, A. K. Datta, K. G. Gebremedhin, D. A. Haith, J. B. Hunter, L. H. Irwin, W. J. Jewell, D. Luo, J.-Y. Parlange, N. R. Scott, R. M. Spanswick, T. S. Steenhuis, M. B. Timmons, L. P. Walker. Lecturers: T. J. Cook, L. D. Geohring, P. E. Hillman

Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible.

BEE 102(1102) Introduction to Microcomputer Applications

Fall or spring. 3 credits. All students, including graduating seniors and pre-enrolled students, must attend first lec to guarantee admittance and select a lab sec. Letter grades only. Lec, fall: T R 12:20-1:10, spring: M W 12:20-1:10; lab, M 1:25-4:25 or 7:30-10:30 P.M. or T 1:25-4:25 or W 1:25-4:25 or 7:30-10:30 P.M. or R 1:25-4:25. Fee: \$25. P. E. Hillman.

Introduction to application packages on microcomputers. Laboratories provide experience with word processing, object-oriented and bit-mapped graphics, spreadsheets, visual basic macros, database management, presentation graphics, and web page authoring. An independent project using spreadsheets, presentation graphics, and word processing is required. These packages and others such as anti-virus software and those used for searching the Internet for information are discussed and demonstrated in the lectures, along with an overview of computer hardware and health hazards and social issues of computing.

BEE 110(1030) Introduction to Metal Fabrication Techniques

Spring. 3 credits. Limited to 18 students per lab. Lec, T R 9:05-9:55; lab, M T or R 1:25-4:25, M or T 7:30-10:30 P.M.
T. J. Cook.

Emphasizes selection of proper materials and techniques to accomplish a variety of metal fabrication and maintenance projects. Covers hand and machine tools, fasteners, strengths of materials, classification and identification of metals, soldering, brazing, forging, pipe fitting, sheet metal work, controlling distortion, oxyacetylene cutting, and arc welding.

BEE 132(1040) Introduction to Wood Construction

Fall. 3 credits. Limited to 16 students per lab. Lec, T R 9:05-9:55; lab, T W or R 1:25-4:25, T or W 7:30-10:30 P.M.
T. J. Cook.

Principles and practice of wood construction. Covers site selection and preparation, drainage, water and septic development, footers and foundations, material properties, framing and roofing, comparison of alternatives to wood construction, use of hand and power tools, wood joining methods, fasteners, concrete work, and block construction. Each student plans and constructs an approved carpentry project.

BEE 151(1510) Introduction to Computer Programming

Fall. 4 credits. Limited to 22 students per lab and rec. No previous programming experience assumed. Pre- or co-requisite: MATH 191 or equivalent. Lec, M W F 11:15-12:05; lab, W R 12:20-2:15, 2:30-4:25, F 1:25-3:20. L. D. Albright.

Introduction to computer programming and concepts of problem analysis, algorithm development, and data structure in an engineering context. The programming language MATLAB with Simulink is implemented on personal computers and applied to problems of interest in biological and environmental engineering.

BEE 200(1200) The BEE Experience

Spring. 1 credit. Requirement for BEE freshmen. Not required for students who have completed ENGRG 150. Prerequisite: BEE majors or permission of instructor. Letter grades only. Lec, T 1:25-2:15.
J. A. Bartsch.

Forum covering the career opportunities for engineering students and the activities and curricula that lead to these opportunities. A series of seminars are given by practicing engineers, Cornell faculty members, alumni, staff from Cornell career services offices, and students. Students develop their undergraduate course plans, complete a web search assignment to locate jobs and internships, and

select future courses to meet their academic objectives and career goals.

BEE 222(2220) Bioengineering Thermodynamics and Kinetics

Spring. 3 credits. Prerequisites: MATH 192, one semester of introductory biology, or equivalent; PHYS 213 and chemistry course completed or concurrent. Lec, M W F 9:05-9:55. J. B. Hunter.

Living systems rely on chemical and phase equilibria, precise coordination of biochemical pathways, and the release of chemical energy as heat, all of which are governed by the laws of thermodynamics and the rates of chemical reactions. The course covers concepts and laws of thermodynamics as applied to phase transformations, work, heat, and chemical reactions; and reaction kinetics applied to industrial processes and living systems, all with a focus on biological examples.

BEE 251(2510) Engineering for a Sustainable Society (also ENGRD 251(2510))

Fall. 3 credits. Pre- or co-requisite: MATH 293. Lec, T R 10:10-11:25. B. A. Ahner.

Case studies of contemporary environmental issues including pollutant distribution in natural systems, air quality, hazardous waste management, and sustainable development. Emphasis is on the application of math, physics, and engineering sciences to solve energy and mass balances in environmental sciences. Introduces students to the basic chemistry, ecology, biology, ethics, and environmental legislation relevant to the particular environmental problem. BEE students must complete either BEE 251 or 260 according to their academic plan. BEE students who complete both BEE 251 and 260 receive engineering credit for only one of these courses.

BEE 260(2600) Principles of Biological Engineering (also ENGRD 260(2600))

Spring. 3 credits. Pre- or co-requisite: MATH 293. Lec, T R 8:40-9:55. Offered spring 2006 and fall 2006 and every fall thereafter. A. J. Baeumner.

Focuses on the integration of biological principles with engineering, math, and physical principles. Students learn how to formulate equations for biological systems in class and practice in homework sets. Topics range from molecular principles of reaction kinetics and molecular binding events to macroscopic applications such as energy and mass balances of bioprocessing and engineering design of implantable sensors. BEE students must complete either BEE 251 or 260 according to their academic plan. BEE students who complete both BEE 251 and 260 receive engineering credit for only one of these courses.

BEE 299(3299) Sustainable Development: A Web-Based Course

Spring. 3 credits. Prerequisite: at least sophomore standing. S-U grades optional. N. R. Scott.

Sustainable development is the dominant economic, environmental, and social issue of the 21st century. This course develops the concepts of sustainable development as an evolutionary process, demanding the integration of the physical sciences and engineering with the biological and social sciences for design of systems. Topics include the nature of ecosystems, global processes, sustainable communities, and industrial ecology and life cycle analysis.

BEE 305(3050) Principles of Navigation (also NAV S 301(3050))

Fall. 4 credits. 4 classes each week (lec-rec-project work). Lec, T R 8-9:15; lab, F 8-8:50 or 9:05-9:50. Lt. Leisner.

Introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. Covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, star identification, use of the nautical almanac, tides, and currents. Also *briefly* discusses electronic navigation systems.

BEE 310(1050) Advanced Metal Fabrication Techniques

Spring. 1 credit; 2-credit option available. Prerequisite: BEE 110 or permission of instructor. Lab, F 1:25-4:30. T. J. Cook.

Principles and practices beyond the scope of BEE 110. Includes out-of-position, high-carbon steel and cast iron welding. Topics such as soldering and brazing of aluminum, hard surfacing, both tungsten (TIG) and metallic (MIG) inert gas welding, and plasma-arc and oxy cutting of metals. Planning, development, and fabrication of a metal construction project is required for the 2-credit option.

BEE 325(3250) Environmental Management

Fall. 3 credits. Lec, T R 2:55-4:10.
W. J. Jewell.

Explores the decline in environmental quality caused by human activities and the limits of science and technology solutions. Emphasizes understanding complex issues such as global warming and deriving sustainable solutions, which are illustrated with case studies. Includes field trips to water supply and waste treatment facilities. Emphasizes water, using energy, air quality, and soil evaluations to illustrate environmental quality problems. Meets concurrently with BEE 625. BEE 625 students complete a semester-long design-oriented project.

BEE 350(3500) Biological and Environmental Transport Processes

Fall. 3 credits. Pre- or co-requisites: MATH 293 and fluid mechanics course. Lec, M W F 11:15-12:05; disc, W 2:30-3:20; two evening prelims. A. K. Datta.

Focuses on understanding the principles of heat and mass transfer in the context of biological, biomedical, and environmental systems. Emphasizes physical understanding of transport processes and simple reaction rates with application examples from plant, animal, and human biology, the environment (soil/water/air), and industrial processing of food and biomaterials.

BEE 360(3600) Molecular and Cellular Bioengineering (also BME 360(3600))

Spring. 3 credits. Prerequisite: biochemistry course or AEP 252 or permission of instructor. Lec, T R 2:55-4:10. D. Luo.

Biological engineering at the molecular and cellular level, focusing on different organisms (viruses, bacteria, cells, animals, and plants) and different scales (nano, molecular, cellular, tissue, and environment) with two underlying themes: DNA and cancer. Introduction of quantitative analysis and measurement as well as ethics in molecular and cellular bioengineering with emphasis on integration of molecular and cell biology with engineering.

BEE 365(3650) Properties of Biological Materials

Spring. 3 credits. Pre- or co-requisite: ENGRD 202. Lec, T R 12:20–1:10; lab, W, R, or F 2:30–4:25. J. A. Bartsch.

Mechanics and structural properties of biological materials; mechanical testing of animal, plant, and food products. Laboratory exercises involve quasistatic and dynamic testing of materials and interpretation of test results. Uses experimental techniques to determine engineering properties of these materials. Satisfies BEE laboratory experience requirement.

BEE 368(3680) Biotechnology Applications: Animal Bioreactors

Fall. 3 credits. Prerequisite: biochemistry course or permission of instructor. Lec, M W F 10:10–11:00. R. C. Gorewit.

Introduces students to the biotechnological applications of animals; their organs, tissues, and cells as bioreactors for the production of substances such as pharmaceuticals; growth factors, anti-tumor proteins, antibodies, and vaccines. Exposes students to various design issues, technical constraints, societal concerns, and ethical considerations of this biotechnology.

BEE 371(3710) Physical Hydrology for Ecosystems

Spring. 3 credits. Prerequisite: MATH 192 or permission of instructor. Lec, T R 9:05–9:55; lab, R 2:30–4:25. T. S. Steenhuis and M. T. Walter.

Physical hydrological processes and their interaction with ecological systems and human activities; surface and near-surface processes and introduction to deep groundwater hydrology. Topics include hydrologic cycles, watershed hydrology, ecosystem–watershed interactions, runoff generation, physical and biophysical vadose-zone processes, soil erosion, ecophysiology, biogeochemical–watershed budgets. Assignments and lab activities provide opportunities to manipulate, and analyze hydrological data in various contexts.

BEE 401(4010) Renewable Energy Systems

Spring. 3 credits. Prerequisite: college physics. Lec, T R 10:10–11:25. L. D. Albright.

Introduces energy systems with emphasis on quantifying costs and designing renewable energy systems to convert environmental inputs into useful forms of energy. Covers solar energy, small-scale hydropower, wind, bio-conversion processes, house energy balances. Focuses on the technologies and small-scale system design, not policy issues. Use of spreadsheets is extensive.

BEE 427(4270) Water Sampling and Measurement

Fall. 3 credits. Satisfies BEE laboratory experience requirement. Prerequisites: fluids or hydrology course and MATH 191. Lec, T R 9:05–9:55; lab, T 1:25–4:25. L. D. Geohring and T. S. Steenhuis.

Get your feet wet with this field-based lab course on water sampling methods where science and engineering technologies are integrated to quantify, characterize, and analyze environmental engineering problems. Focuses on quantification of surface and subsurface flow and quality, and includes sampling techniques of soils and sediment. Addresses standard environmental site characterization and monitoring methods, quality assurance and control protocols,

and interpretation of watershed loading of contaminants.

BEE 435(4350) Principles of Aquaculture

Spring. 3 credits. BEE students who wish to take this course to satisfy BEE capstone design requirement must co-register in BEE 496 for 1 credit hour. Prerequisite: at least junior standing. Lec, W 1:25–4:25.

M. B. Timmons.

In-depth treatment of the principles of aquacultural engineering: mass balances, waste-treatment system design, gas conditioning, production economics, and fish processing. Presents nutrition and fish health in the context of global and local demand. Builds upon previous biology and engineering course work and emphasizes fish-production system design. Includes “hands-on” experiences and field trips.

BEE 450(4500) Bioinstrumentation

Spring. 4 credits. Satisfies both BEE laboratory experience and BEE capstone design requirement. Satisfies College of Engineering technical writing requirement when co-registered in BEE 493.

Prerequisites: MATH 294, BEE 151, PHYS 213, or permission of instructor. Lec, T R 8:40–9:55; lab, M, T, or W 2:30–4:25.

D. J. Aneshansley.

Lab-based course emphasizing biological and biomedical applications. Considers the electronic instrument from sensor to computer. Static and dynamic characteristics of components and systems are determined theoretically and empirically. General analog and digital signal condition circuits are designed, constructed, and tested.

BEE 453(4530) Computer-Aided Engineering: Applications to Biomedical Processes (also M&E 453(4530))

Spring. 3 credits. Satisfies BEE capstone design requirement. Prerequisite: heat and mass transfer (BEE 350 or equivalent). Lec, M W 10:10–11; computation disc/lab, F 10:10–11. A. K. Datta.

Introduction to simulation-based design as an alternative to prototype-based design; analysis and optimization of complex real-life processes using industry-standard physics-based computational software on a supercomputer or on high-end personal computers. Covers biomedical heat and mass transfer processes, including cryosurgery, hyperthermia treatment, laser eye surgery, detection of breast cancer, and drug delivery. Computational topics introduce the finite-element method, pre- and post-processing, and pitfalls of using computational software. Students choose their own term project, which is the major component of the course (no final exam).

BEE 454(4540) Physiological Engineering

Fall. 3 credits. Satisfies BEE laboratory experience requirement. Co-requisite: fluid mechanics course. Lec, T R 12:20–1:10; lab, T R 1:25–4:25. D. J. Aneshansley.

Engineering analysis and design in the physiology of animals and humans. Covers the use of engineering principles to study how animals work in nature and to intervene in physiological functions. The two major engineering themes are: signal processing as related to neural conduction, sound processing, vision, and image processing; and systematics as applied to cardiovascular and respiratory systems, bioenergetics, and bird flight. Laboratories involve experiments,

computing applications, field trips, and live animal demonstrations.

[BEE 456(4560) Biomechanics of Plants (also BIOPL 456(4560))]

Fall. 3 credits. Prerequisites: upper-division undergraduate or graduate standing, completion of introductory sequence in biology and one year of calculus, or permission of instructor. S-U or letter grades optional. Not offered 2005–2006. Lec, T R 11:15–12:05; disc, W 2:30–3:20. J. R. Cooke and K. J. Niklas.

Takes an engineering approach to plant form and function following the text *Plant Biomechanics*. Topics include mechanical behavior of materials, effect of geometry on mechanical behavior, plant-water relations, plant cell walls, mechanical behavior of tissues, mechanical attributes of organs, the plant body, fluid mechanics and biomechanics, and plant evolution.]

[BEE 459(4590) Biosensors and Bioanalytical Techniques]

Spring. 4 credits. Satisfies BEE capstone design requirement and BEE laboratory experience requirement for engineering students. Prerequisites: biochemistry course and permission of instructor. Lec, T R 11:40–12:55; lab, M 1:25–4:25 and 7:30–10:30 P.M. Not offered 2005–2006.

A. J. Baeumner.

Provides students with an understanding of the scientific and engineering principles of biosensors and bioanalytical techniques. Addresses selected topics from simple biosensors to micro/nanofabricated Micro Total Analysis Systems (MicroTAS). Biosensor and Micro TAS applications in environmental analysis, food safety, and medical diagnostics are explored. Students give oral presentations in lecture, prepare a biosensor of their choice in the laboratory, and present a poster in a biosensor workshop at the end of the semester. Undergraduate students work together in teams of two to four.]

BEE 464(4640) Bioseparation Processes

Fall. 3 credits. Prerequisites: introductory biochemistry, physics, MATH 192, BEE 260 or equivalent, or permission of instructor. Lec, M W F 12:20–1:10. J. B. Hunter.

Bioseparation is the science and engineering of fractionating and purifying biological materials: DNA, proteins, living cells, antibiotics, biofuels, and even foods. This course covers separation methods used in the biotechnology industry, principles governing these methods, approaches to improving bioseparation performance, and the special challenges of scale-up. Key topics (centrifugation, filtration, extraction, membrane methods, ion exchange, chromatography, electrophoresis) are supplemented with student presentations. Intended for seniors and graduate students in engineering, chemistry, biology, and food science.

BEE 471(4710) Introduction to Groundwater (also EAS 445(4710))

Spring. 3 credits. Prerequisites: MATH 293, fluid mechanics or hydrology course. Lec, T R 10:10–11:25; field trip. L. M. Cathles and T. S. Steenhuis.

Intermediate-level study of aquifer geology, groundwater flow, and contamination of aquifers and cleanup methods. Describes transport of pesticides, nutrients and toxics through the unsaturated zone and aquifers. Discusses theoretical and practical applications. Includes short field trips.

BEE 473(4730) Watershed Engineering

Fall. 3 credits. BEE students who wish to take this course to satisfy BEE capstone design requirement must co-register in BEE 496 for 1 credit. Satisfies College of Engineering technical writing requirement when co-registered in BEE 493.

Prerequisite: fluid mechanics or hydrology course. Lec, T R 10:10–11:00; disc, R 1:25–4:25. M. F. Walter.

Applies engineering principles to the design of management strategies aimed at solving natural resource problems in the context of watersheds. Emphasizes rural systems and small-scale design for water conveyance, soil erosion control, flood damage control, earthen dams, ponds, moisture conservation, drainage, and water supply.

BEE 474(4740) Water and Landscape Engineering Applications

Spring. 3 credits. Satisfies BEE capstone design requirement. Prerequisite: fluid mechanics or hydrology course or permission of instructor. Lec, M W F 12:20–1:10. T. S. Steenhuis and L. D. Geohring.

Addresses water–soil plant relationships and methods to solve water-management problems in humid and arid ecosystems. The main focus is on drainage and irrigation systems. Emphasizes the practical application of hydrology and hydraulics for solving problems in agriculture and nonagricultural settings. A major design project is required and actual situations are evaluated.

BEE 475(4750) Environmental Systems Analysis

Fall. 3 credits. Prerequisites: computer programming and one year of calculus. Lec, T R 11:40–12:55. D. A. Haith.

Applications mathematical modeling, simulation, and optimization to environmental-quality management. Fate and transport models for contaminants in air, water, and soil. Optimization methods (search techniques, linear programming) to evaluate alternatives for solid-waste management and water and air pollution control. Introduction to hydrologic simulation (runoff and streamflow).

BEE 476(4760) Solid Waste Engineering

Spring. 3 credits. Prerequisites: one semester of physics and chemistry. Lec, T R 11:40–12:55. D. A. Haith.

Planning and design of processes and facilities for management of municipal solid wastes. Source characterization and reduction; collection and transport systems; waste-to-energy combustion; sanitary landfills; composting; recycling, and materials recovery facilities; and hazardous waste management. Emphasizes quantitative analyses.

BEE 478(4780) Ecological Engineering

Spring. 3 credits. BEE students who wish to take this course to satisfy BEE capstone design requirement must co-register in BEE 496 for 1 credit. Prerequisite: junior-level environmental quality engineering course or equivalent. Lec, T R 2:55–4:10. W. J. Jewell.

Ecological engineering is the language of sustainable living. Waste management with natural systems, the most advanced form of this new engineering direction, includes constructed wetlands, hydroponic applications of plants in resource-recovery waste management systems, soil restoration, phytoremediation, and bioremediation of toxics. Biomass refineries to create energy-

independent communities, sustainable drinking water systems, carbon sequestration, and zero polluting farms are future sustainable living topics that also solve some of society's larger problems.

BEE 481(4791) LRFD-Based Engineering of Wood Structures (also CEE 481[4791])

Spring. 3 credits. BEE students who wish to take course to satisfy BEE capstone design requirement must co-register in BEE 496 for 1 credit. Prerequisite: ENGRD 202. Lec, M W F 12:20–1:10 (Hollister Hall); two evening prelims. K. G. Gebremedhin.

Computer-aided and manual computation procedures of Load and Resistance Factor Design (LRFD)-based engineering of wood structures. Topics include national design codes and standards; estimation of design loads (dead, live, wind, snow, and seismic loads); determination of factored resistance and stiffness values; mechanical properties of wood and wood products; designs of beams, columns, trusses, frames, arches, bridges, and diaphragms; and connections and special wood structural members and systems. Also discusses engineering design judgment as an integral component of the quantitative design procedure.

BEE 482(4820) Biothermal Engineering for Humans

Fall. 3 credits. Satisfies BEE capstone design requirement. Prerequisites: BEE 350 or equivalent and introductory biology. Letter grades only. Lec, M W F 11:15–12:05. P. E. Hillman.

Engineering design to help humans survive outdoor extremes of heat and cold as well as achieving comfort indoors. Three major topics are discussed: principles of heat and mass transfer applied to humans interacting with their environment, physiological responses to stressful environments, and designing outerwear for environmental extremes.

BEE 484(4840) Metabolic Engineering

Spring. 3 credits. Prerequisite: biochemistry course or permission of instructor. S-U grades optional. Lec, T R 10:10–11:25. R. M. Spanswick.

The principles of metabolic engineering as they relate to the regulation of metabolic pathways, including membrane transport, are considered in terms of enzyme kinetics and metabolic control analysis. Case studies, reflecting the interests of the instructor, include examples involving higher plants. Each student is expected to investigate one topic in depth and make a short class presentation.

BEE 487(4870) Sustainable Energy Systems

Spring. 3 credits. Satisfies BEE capstone design requirement. Intended for upper-level undergraduates and graduate students. Prerequisite: BEE 350 and thermodynamics course. Lec, T R 9:05–9:55; lab, W 1:25–4:25. N. R. Scott and L. D. Albright.

Offers a systems approach to understanding renewable energy systems (solar, wind, and biomass) and their conversion processes, from various aspects of biology, physics, engineering, environmental impacts, economics, and sustainable development.

BEE 489(4890) Engineering Entrepreneurship, Management, and Ethics

Spring. 4 credits. Satisfies College of Engineering technical writing requirement. Prerequisites: junior standing; ENGRD 270 or CEE 304 or equivalent. Lec, T R 1:25–2:40; disc, M 1:25–2:15, or 7:30–8:20 P.M. M. B. Timmons.

Focuses on engineering entrepreneurship, economics, management, and professional ethics. Covers prediction/probability of net returns; financial calculations (internal rate of return, time value of money, pro forma statements); legal structures of businesses; project management; developing an awareness of issues related to professional ethics; and technical writing and communication. Group project required to produce a business plan for a technology-driven concept suitable for a venture fair audience.

BEE 493(4930) Technical Writing for Engineers

Fall or spring. 1 credit. Meets College of Engineering technical writing requirement when taken concurrently with BEE 473 in fall or BEE 450 in spring. Co-requisite: BEE 473 (fall), BEE 450 (spring). Lec, M 7:30–9:25 P.M. (five evenings in first half of semester). Staff.

Covers writing skills necessary for technical project reports. Also considers outlines, style, audience, and general writing mechanics.

BEE 494(4940) Fundamentals of Tissue Engineering

Spring. 3 credits. Limited to 20 students; priority given to graduating seniors. Prerequisites: biochemistry, BEE 350. Letter grades only. Lec, M W F 12:20–1:10. R. C. Gorewit.

Fundamentals and applications of tissue engineering. Cell technology, cell function in constructs and sources of cells for tissue engineering. Biomaterials, including functional requirements, biomimetics and substrates, and bioartificial construct technology. Diffusion and transport processes in engineered tissue, manufacture and scale-up of production processes, regulation and FDA approval of engineered products. Examples include cartilage, bone, skin, cardiovascular and neural tissues.

BEE 495(4950) BEE Honors Research

Fall or spring. 1–6 credits, variable. Prerequisite: enrollment in BEE research honors program. Students must complete honors program application by third week of fall semester, senior year. Letter grades only. Staff.

Intended for students pursuing the research honors program in BEE.

BEE 496(4960) Capstone Design in Biological and Environmental Engineering

Fall and spring. 1 credit. Co-requisite: one approved upper-level course (BEE 435, 473, 478, 481). Students must register using independent study form (available in 140 Roberts Hall). Staff.

Involves capstone design experience, including a team project incorporating analysis, design, evaluation, synthesis, and a written and oral report of the end product.

BEE 497(4970) Individual Study in Biological and Environmental Engineering

Fall and spring. 1-4 credits. S-U grades optional. Prerequisite: written permission of instructor and adequate ability and training for work proposed; normally reserved for seniors in upper two-fifths of their class. Students must register using independent study form (available in 140 Roberts Hall). Staff.

Special work in any area of biological and environmental engineering on problems under investigation by the department or of special interest to the student, provided, in the latter case, that adequate facilities can be obtained.

BEE 498(4980) Undergraduate Teaching

Fall and spring. 1-4 credits. Prerequisite: written permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff.

The student assists in teaching a biological and environmental engineering course appropriate to his or her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses objectives and techniques with the faculty member in charge of the course.

BEE 499(4990) Undergraduate Research

Fall and spring. 1-4 credits. Prerequisites: normally reserved for seniors in upper two-fifths of their class; adequate training for work proposed; written permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff.

Research in any area of biological or environmental engineering on problems under investigation by the department or of special interest to the student, provided that adequate facilities can be obtained. The student must review pertinent literature, prepare a project outline, carry out an approved plan, and submit a formal final report.

BEE 501(5010) Bioengineering Seminar (also BME 501[5010])

Fall, spring. 1 credit. Prerequisite: junior, senior, or graduate standing. S-U grades only. Fall, R 3:35-4:25; spring, W 3:35-4:25. D. Putnam.

Broad survey of all aspects of bioengineering, including biomedical, bioprocess, biological, and bioenvironmental engineering and aspects of biotechnology. Sessions may be technical presentations for discussions. Sessions may occasionally be held outside of scheduled times.

BEE 520(5900) M.P.S. Project

Fall and spring. 1-6 credits. Requirement for each M.P.S. candidate in field. ABEN graduate faculty.

Comprehensive project emphasizing the application of agricultural technology to the solution of a real problem.

BEE 551(5950) Master of Engineering Design Project

Fall and spring. 3-6 credits. Prerequisite: admission to M.Eng. degree program. ABEN graduate faculty.

Comprehensive design projects dealing with existing engineering problems in the field. Emphasizes the formulation of alternative design proposals that include consideration of economics, nontechnical factors, engineering analysis, and complete design for the best design solution. Projects are supervised by

faculty members on an individual basis. There is, however, a formal orientation during the first four weeks of the semester. A formal report and public presentation of the results of the design project are required for completion of the course(s). A minimum of 3 to a maximum of 12 credits of 551 is required for the M.Eng. degree.

BEE 625(6250) Environmental Management

Fall. 3 credits. Lec, T R 2:55-4:10. W. J. Jewell.

For description, see BEE 325.

BEE 647(6470) Water Transport in Plants (also BIOPL 651[6510])

Fall. 3 credits. Lec, T R 10:10-11:00.

Offered alternate years. R. M. Spanswick. Topics include water relations of plant cells and tissues using water potential terminology; permeability of plant cells to water and the role of aquaporins; transport of water through whole plants, including transpiration, stomatal physiology, and the modifications due to plant communities; water status and plant growth in relation to water stress.

[BEE 649(6490) Solute Transport in Plants (also BIOPL 649[6490])]

Fall. 3 credits. Lec, T R 10:10-11:25.

Offered alternate years; not offered 2005-2006. R. M. Spanswick.

Fundamental treatment of the transport of ions and small organic molecules in plants. Topics include electrophysiology of cell membranes, including ion channels and electrogenic ion pumps; transport mechanisms for the major ions; intercellular and long-distance ion transport; cotransport systems for sugars and amino acids; phloem transport; ABC-type transporters.]

BEE 651(6510) Bioremediation: Engineering Organisms to Clean Up the Environment

Spring. 3 credits. Prerequisites: BIOMI 290 or 398 or BIOBM 331 or permission of instructor. Lec, T R 10:10-11. B. A. Ahner.

Examines ways in which organisms may be used to remove or metabolize pollutants in the environment, including bacterial degradation of organics and phytoremediation of heavy metals. Through lectures and current literature, students evaluate the benefits as well as the current obstacles. Examines the current efforts to genetically engineer organisms for bioremediation and the potential risks of releasing them into the environment.

BEE 655(6550) Thermodynamics and Its Applications

Fall. 3 credits. Prerequisite: MATH 293 or equivalent. Lec, R 2:30-4:30. Offered alternate years. J.-Y. Parlange.

Thermodynamics and its applications to problems in engineering and agriculture. Topics include basic concepts (equilibrium, entropy, processes, systems, potentials, stability, phase transitions) and applications (soil and water processes, dilute solutions, electromagnetism, surface phenomena, heat and mass transport, and structure of organizations).

[BEE 659(6590) Biosensors and Bioanalytical Techniques]

Spring. 4 credits. Prerequisites: biochemistry course and permission of instructor. Lec, T R 11:40-12:55; lab, M 1:25-4:25 and 7:30-10:30 P.M. Not offered 2005-2006. A. J. Baeumner.

Provides students with an understanding of the scientific and engineering principles of biosensors and bioanalytical techniques. Addresses selected topics from simple biosensors to micro/nanofabricated Micro Total Analysis Systems (MicroTAS). Biosensor and Micro TAS applications in environmental analysis, food safety, and medical diagnostics are explored. Students give oral presentations in lecture, prepare a biosensor of their choice in the laboratory, and present a poster in a biosensor workshop at the end of the semester. Graduate students work independently on individual biosensor projects.]

[BEE 671(6710) Analysis of the Flow of Water and Chemicals in Soils]

Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics course. Lec, M 2:30-4:25 (first meeting TBA). Offered alternate years; not offered 2005-2006. J.-Y. Parlange.

Encompasses a full range from simple to complex methods to describe the chemical and water flows on the surface, in the vadose zone, and through the aquifer. Discusses current analytical, semi-analytical, and computer-based techniques. Analyzes both homogeneous and heterogeneous soils are analyzed. Offered alternately with CEE 633—a complementary, but not identical, course.]

BEE 672(6720) Drainage

Spring. 4 credits. Satisfies BEE capstone design experience requirement.

Prerequisites: BEE 471 or BEE 473. S-U grades optional. Lec, M W F 12:20-1:10; lab, T 1:25-4:25. T. S. Steenhuis and L. D. Geohring.

Discusses the theory of water and solute flow in aquifers, hill slopes, and the vadose zone as it relates to natural and artificial drainage. Critically reviews drainage design as it relates to agricultural land, landfills, and land application sites. Examines the importance of preferential flow and matrix flow on water quality of drainage waters. Laboratories provide hands-on experience with measuring soil parameters and for actual drainage design.

BEE 673(6730) Sustainable Development Seminar (also NBA 573[5730])

Spring. 1-3 credits. Prerequisites: upper-division undergraduate or graduate standing or permission of instructor. Lec, F 1:30-3:00. N. R. Scott.

Sustainable development is the most beneficial concept to come out of the environmental movement in years. The concept of a sustainable world, however, is not a constant. There are many aspects of sustainability involving economics, environment, and political, social, scientific, and technological developments. This seminar explores topics such as energy, agricultural and food systems, green buildings and ecological design, corporate sustainability, and other contemporary issues.

BEE 685(6850) Biological Engineering Analysis

Spring. 4 credits. Prerequisite: TAM 310 or permission of instructor. Lec, M W F 11:15-12:05. J. R. Cooke.

Explores engineering problem-solving strategies and techniques. Students solve several representative engineering problems that inherently involve biological properties. Emphasizes formulation and solution of mathematical models and the interpretation

of results. Makes extensive use of students' knowledge of fundamental principles.

BEE 687(6870) The Science and Engineering Challenges to the Development of Sustainable Bio-Based Industries

Fall. 1 credit. Prerequisite: graduate standing. Lec, R 12:20-1:10; disc, R 1:25-2:15. B. A. Ahner.

Environmentally sustainable alternatives for our energy and chemical needs are critical. This seminar series explores challenges facing the development of industries that use biologically derived materials to produce useful chemicals and energy for society. Topics include natural products from biological systems, conversion of biomass to fuel and other commodities, and the use of biological systems for environmental bioremediation.

BEE 694(6940) Graduate Special Topics in Agricultural and Biological Engineering

Fall or spring. 4 credits max. S-U grades optional. ABEN graduate faculty.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

BEE 697(6970) Graduate Individual Study in Agricultural and Biological Engineering

Fall or spring. 1-6 credits. Prerequisite: permission of instructor. S-U grades optional. ABEN graduate faculty.

Topics are arranged by the staff at the beginning of the semester.

BEE 700(7010) General Seminar

Fall. 1 credit. S-U grades only. Staff. Presentation and discussion of research and special developments in agricultural and biological engineering and related fields.

BEE 740(6430) Veterinary Perspectives on Pathogen Control in Animal Manure (also VTMED/BIOMI 740[6430])

Spring, March 24-May 16. 2 credits. Prerequisite: graduate standing or permission of instructor. Lec, M T W R 3:00-4:00. D. D. Bowman.

In-depth look at the management of pathogens in animal manures. Reviews the pathogens involved, the role of governing agencies, the survival of pathogens in the field, and methods of pathogen destruction. Discusses commercial methods of manure processing for the control of these pathogens for the protection of other animals and the human population. Concludes with class discussions with major stakeholders representing the dairy, beef, pork, and poultry industries and their understanding of the problem as it relates to veterinary students.

BEE 750(7000) Orientation to Graduate Study

Fall, first seven weeks. 1 credit. Prerequisite: new graduate students. S-U grades only. Lec, M 3:35-4:25. D. J. Aneshansley.

Introduction to BEE research policy, programs, methodology, resources, and degree candidates' responsibilities and opportunities.

BEE 754(7540) Watershed Management
Spring. 2-3 credits. Prerequisite: graduate standing or permission of instructors. Lec, W 2:30-4:25. T. S. Steenhuis and M. J. Pfeffer.

Traditional top-down approaches to watershed management have been challenged by advocates of public participation. These challenges have raised questions about how to effectively integrate science, policy, and public participation. This course reviews different management approaches and evaluates their usefulness in dealing with different watershed management problems. Considers case examples from watersheds in the United States and overseas.

BEE 760(7600) Nucleic Acid Engineering (also BME 760[7600])

Spring. 2 credits. Prerequisite: BEE 360 or permission of instructor. Lec, T R 12:20-1:10. D. Luo.

Nucleic acid engineering focuses on manipulating nucleic acid molecules in a true engineering sense as well as in the "genetic engineering" sense by treating nucleic acids (including DNA, RNA, PNA, and TNA) as both genetic and generic materials. Both biomedical and nonbiomedical applications of nucleic acid engineering, including tool kits for nucleic acid engineering and current examples of DNA-based engineering, DNA nanotechnology, and DNA-based medicine. A design project and formal project presentation are required.

BEE 771(7710) Soil and Water Engineering Seminar

Fall and spring. 1-3 credits. Prerequisite: graduate standing or permission of instructor. S-U grades optional. T. S. Steenhuis, J.-Y. Parlange, and M. F. Walter.

Study and discussion of research or design procedures related to selected topics in irrigation, drainage, erosion control, hydrology, and water quality.

BEE 781(7810) Structures and Related Topics Seminar

Spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades only. Times TBA. Staff.

Advanced analysis and design of production systems with emphasis on structural and environmental requirements, biological responses, and economic considerations.

BEE 785(7850) Biological Engineering Seminar

Spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades only. Staff TBA.

Examines the interactions of engineering and biology, especially the environmental aspects of plant, animal, and human physiology to improve communication between engineers and biologists.

BEE 787(7870) Industrial Ecology of Agriculturally Based Bioindustries

Spring. 3 credits. Prerequisites: graduate standing; one year of calculus, some knowledge of MATLAB, BEE 687. Lec, M W F 3:35-4:25. L. P. Walker.

Uses input/output modeling methods to explore the use of the industrial ecology perspective for the design and analysis of sustainable bio-based industries.

BEE 788(7880) Biomass Conversion of Energy and Chemicals

Fall. 3 credits. Prerequisite: one year of college calculus and chemistry; minimum of one course in thermodynamics and computer programming. Lec, M W F 1:25-2:15. L. P. Walker.

Biological and physical conversion of biomass to bioenergy and bioproducts. Biological and engineering concepts associated with microbial and enzymatic conversion of biomass to useful products, physical and chemical concepts associated with the pretreatment of biomass and the separation of key biomolecules. Uses mass and energy balances and mathematical models (with MATLAB) to simulate process behavior.

BEE 800(8900) Master's-Level Thesis Research

Fall and spring. 1-15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty.

BEE 900(9900) Doctoral-Level Thesis Research

Fall and spring. 1-15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty. Variable credit for Ph.D. research.

BIOLOGICAL SCIENCES

The program of study in biology is coordinated by the Office of Undergraduate Biology. For course descriptions, see the separate section "Biological Sciences."

BIOLOGY & SOCIETY

The undergraduate major field of study in biology & society is offered through the Department of Science and Technology Studies. For a full description of courses that fulfill field requirements, see "Biology & Society" under the College of Arts and Sciences.

BIOMETRY AND STATISTICS

M. Wells, chair (301 Malott Hall, 255-4388, -8801), J. Booth, C. Bustamante, R. Nielsen, S. J. Schwager, A. C. Siepel, R. Strawderman

The Department of Biological Statistics and Computational Biology in Statistical Science offers the following courses in Biometry and Statistics. Students must register under Course Listings: College of Agriculture and Life Sciences—Biometry and Statistics.

BTRY 301(3010) Biological Statistics I (also NTRES 313[3130], STBTRY 301[3010])

Fall and summer. 4 credits.

Develops and applies statistical methods to problems encountered in the biological and environmental sciences. Methods include data visualization, population parameter estimation, sampling, bootstrap resampling, hypothesis testing, the Normal and other probability distributions, and an introduction to modeling. Carries out applied analysis in the S-Plus statistical computing environment.

BTRY 302(3020) Biological Statistics II (also NTRES 413[4130], STBTRY 302[3020])

Spring. 4 credits. Prerequisite: BTRY 301 or 601.

Applies linear statistical methods to quantitative problems addressed in biological and environmental research. Methods include linear regression, inference, model assumption evaluation, the likelihood approach, matrix formulation, generalized linear models, single factor and multifactor analysis of variance (ANOVA), and a brief foray into nonlinear modeling. Carries out applied analysis in the S-Plus statistical computing environment.

BTRY 310(3100) Statistical Sampling (also ILRST 310[3100] and STBTRY 310[3100])

Fall. 3 credits. Lec. T R 1:25–2:40.

Prerequisites: two semesters of statistics.

Applied methodology and theory of statistical sampling, with particular emphasis on sampling methods, sample design, cost, estimation of population quantities, and error estimation. Assessment of nonsampling errors. Discussion of application to social and biological sciences and business. Includes an applied project.

[BTRY 382(3820) Introduction to Statistical Genomics and Bioinformatics (also STBTRY 382[3820])]

Fall. 4 credits. Intended for undergraduates and beginning graduate students in mathematical and biological sciences.

Prerequisite: BTRY 301, MATH 111, BIOG 102, or equivalent.

Survey course focusing on the statistical analysis of genomic data. Includes an introduction to probability and statistics and application to DNA sequence analysis, phylogenetic inference, population genetics, genetic mapping, molecular evolution, and macromolecular structure prediction. Evaluation is based on weekly problem sets and computer assignments as well as a midterm and final examination.]

BTRY 408(4080) Theory and Probability (also STBTRY 408[4080])

Fall. 4 credits. Prerequisites: MATH 111, 112, at least concurrent enrollment in 213 or 222 or equivalents. Recommended: at least one introductory course in statistical methods.

Introduction to probability theory: axiomatic foundations; combinatorics and equally likely events; conditional probability and independence; discrete and continuous random variables, their distributions and moments; generating functions; transformations; extensions to problems involving two or more random variables; random samples. Can serve as either one-semester introduction or a foundation for a course in statistical theory.

BTRY 409(4090) Theory of Statistics (also STBTRY 409[4090])

Spring. 4 credits. Prerequisites: BTRY 408 or equivalent and at least one introductory statistics course.

Introduction to classical theory of parametric statistical inference that builds on the material covered in BTRY 408. Topics include sampling distributions, principles of data reduction, likelihood, parameter estimation, hypothesis testing, interval estimation, and basic asymptotic theory.

[BTRY 421(4210) Matrix Computation

Fall. 4 credits. Prerequisite: calculus course. Not offered 2005–2006.

Introductory course in matrix computations that reviews linear algebra (vector spaces, linear independence) and emphasizes a matrix approach to solving systems (LU-factorization, QR-decomposition, SVD, Schur complements) and the role of the condition number of a matrix. Discusses positive definite matrices, eigenvalues, and their applications in mathematical modeling and statistics.]

BTRY 482(4820) Statistical Genomics (also STBTRY 482[4820])

Fall. 4 credits. Prerequisite: BTRY 382 or equivalent. S-U grades optional.

Covers topics in the statistical analysis of genetic, molecular, and genomic data, including the statistics of DNA database searches and alignment, statistical methods in molecular evolution, population genetics, phylogenetics, molecular ecology, forensic genetics, the analysis of comparative molecular data, QTL mapping, and association mapping. Topics may vary from year to year. Meets concurrently with BTRY 682; undergraduate students are evaluated on the basis of a final exam and a term paper instead of a research project.

BTRY 494(4940) Undergraduate Special Topics in Biometry and Statistics (also STBTRY 494[4940])

Fall or spring. 1–3 credits. S-U grades optional.

Course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 495(4950) Statistical Consulting (also STBTRY 495[4950])

Fall and spring. 2–3 credits. Pre- or co-requisites: BTRY 302 or 602 and 409 and permission of instructor. S-U grades optional.

Participation in the Department of Biological Statistics and Computational Biology consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions are held for joint consideration of literature and selected consultations encountered during previous weeks.

BTRY 497(4970) Undergraduate Individual Study in Biometry and Statistics (also STBTRY 497[4970])

Fall and spring. 1–3 credits. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall).

Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 498(4980) Undergraduate Supervised Teaching (also STBTRY 498[4980])

Fall and spring. 2 credits. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall).

Students assist in teaching a course appropriate to their previous training. Students meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

BTRY 499(4990) Undergraduate Research (also STBTRY 499[4990])

Fall or spring. 1–3 credits. Prerequisite: statistics and biometry undergraduates; permission of faculty member directing research. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall).

BTRY 601(6010) Statistical Methods I (also STBTRY 601[6010])

Fall and summer. 4 credits. Prerequisite: graduate standing or permission of instructor.

Develops and uses statistical methods to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, comparisons among population means, analysis of categorical data, and correlation and regression analysis. Introduces interactive computing through MINITAB statistical software. Emphasizes basic principles and criteria for selection of statistical techniques.

BTRY 602(6020) Statistical Methods II (also STBTRY 602[6020])

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor; BTRY 601 or equivalent.

Continuation of BTRY 601. Emphasizes the use of multiple regression analysis, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques; least squares estimation; multiple regression; model selection techniques; detection of influential points, goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasizes appropriate design of studies before data collection, and the appropriate application and interpretation of statistical techniques. Practical applications are implemented using a modern, widely available statistical package.

[BTRY 603(6030) Statistical Methods III (also STBTRY 603[6030])]

Spring. 3 credits. Prerequisite: BTRY 601 and 602 or permission of instructor. Offered alternate years.

Categorical data analysis, including logistic regression, log-linear models, stratified tables, matched pairs analysis, polytomous response and ordinal data. Applications in biomedical and social sciences.]

BTRY 604(6040) Statistical Methods IV: Applied Design (also STBTRY 604[6040])

Spring. 4 credits. Prerequisites: BTRY 601 and 602 or permission of instructor. Offered alternate years.

Applications of experimental design including such advanced designs as split plots, incomplete blocks, fractional factorials. Stresses use of the computer for both design and analysis, with emphasis on solutions of real data problems.

[BTRY 652(6520) Computationally Intensive Statistical Inference (also STBTRY 652[6520])]

Spring. 4 credits. Prerequisite: BTRY 421 and 409 or equivalent. S-U grades optional. Offered alternate years.

Modern applications in statistics often require intensive computation not handled by "off-the-shelf" software. This course covers topics in statistical computing, including numerical optimization and finding zeros (likelihood and related techniques including generalized estimating equations and robust estimation), kernel density estimation, resampling methods (randomization and bootstrap tests and confidence intervals), and statistical simulation (random number generation, heuristic search methods, Bayesian estimation, and Monte Carlo Markov Chain methods for tests and interval estimation). Programming is done in MATLAB. Focuses on the use of numerical analysis methods for solving problems in statistical inference and estimation.]

[BTRY 672(6720) Topics in Environmental Statistics (also STBTRY 672[6720])]

Fall and spring. 2 credits. S-U grades optional. Prerequisite: BTRY 601 or permission of instructor. Not offered 2005-2006.

Discussion group focusing on statistical problems arising in the environmental sciences. Explores these issues in a number of different ways, such as student presentations of research papers, directed readings, and outside speakers.]

BTRY 682(6820) Statistical Genomics (also STBTRY 682[6820])

Fall. 4 credits. Prerequisite: BTRY 382 or equivalent. S-U grades optional.

Covers topics in the statistical analysis of genetic, molecular, and genomic data, including the statistics of DNA database searches and alignment, statistical methods in molecular evolution, population genetics, phylogenetics, molecular ecology, forensic genetics, the analysis of comparative molecular data, QTL mapping, and association mapping. Topics may vary from year to year. All students are expected to participate in small research projects.

BTRY 694(6940) Graduate Special Topics in Biometry and Statistics (also STBTRY 694[6920])

Fall or spring. 1-3 credits. S-U grades optional.

Course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 697(6970) Individual Graduate Study in Biometry and Statistics (also STBTRY 697[6970])

Fall, spring, or summer. 1-3 credits. S-U grades optional.

Individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

[BTRY 717(7170) Linear and Generalized Linear Models (also STBTRY 717[7170])]

Fall. 3 credits. Prerequisites: BTRY 409, 421, and 602 or equivalents. S-U grades optional. Offered alternate years.

Statistical modeling and inference using linear models and generalized linear models. Includes estimation by least squares, maximum likelihood, quasi-likelihood, and

generalized estimating equations. Covers the use of link functions and generalized linear models to accommodate nonlinear models and non-normally distributed data. Also covers the use of random effects to accommodate correlation structures in both linear mixed models and generalized linear mixed models and to model longitudinal data. Some use of software packages and illustrative examples.]

BTRY 726(7260) Problems and Perspectives in Computational Molecular Biology (also PL BR 726[7260], COM S 726[7590])

Fall and spring. 1 credit. Prerequisite: permission of instructor. S-U grades only.

Weekly seminar series discussing timely topics of computational molecular biology. Addresses methodological approaches to sequence annotation, protein structure and function relationships, and evolutionary relationships across species. Discusses statistical and deterministic computational approaches are covered and specific and detailed biological examples. Discusses topics of interest discussed in relation to papers prepared by teams of students and/or faculty members. Students/faculty members from biology backgrounds are paired with students from math, computer science, and statistics for paper preparation. Students summarize the salient questions addressed by the paper, the research methods used, and the results obtained. At the end of the presentation, questions should be listed on an overhead slide to initiate discussion in the group.

BTRY 795(7950) Statistical Consulting (also STBTRY 795[7950])

Fall and spring. 2-3 credits. Pre- or co-requisites: BTRY 602 and 409 and permission of instructor. S-U grades optional.

Participation in the Department of Biological Statistics and Computational Biology consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions are held for joint consideration of literature and selected consultations encountered during previous weeks.

BTRY 798(7980) Graduate Supervised Teaching (also STBTRY 798[7980])

Fall and spring. 2-4 credits. Prerequisites: permission of instructor and chair of special committee plus at least two advanced courses in statistics and biometry. S-U grades only.

Students assist in teaching a course appropriate to their previous training. Students meet with a discussion section, prepare course materials, and assist in grading. Credit hours are determined in consultation with the instructor, depending on the level of teaching and the quality of work expected.

BTRY 800(8900) Master's-Level Thesis Research

Fall or spring. Credit TBA. Prerequisite: M.S. candidates; permission of graduate field member concerned. S-U grades only. Research at the M.S. level.

BTRY 900(9900) Graduate-Level Dissertation Research

Fall or spring. Credit TBA. Prerequisite: Ph.D. candidates; permission of graduate field member concerned. S-U grades only. Research at the Ph.D. level.

BTRY 901(9910) Doctoral-Level Dissertation Research

Fall or spring. Credit TBA. S-U grades only.

COMMUNICATION

G. K. Gay, chair (303 Kennedy Hall, 255-7737, -5530); K. L. Berggren, S. A. Conroe, R. D. Colle, B. O. Earle, T. L. Gillespie, D. A. Grossman, J. T. Hancock, B. V. Lewenstein, K. A. McComas, P. L. McLeod, R. E. Ostman, T. M. Russo, C. W. Scherer, J. E. Shanahan, M. A. Shapiro, L. P. Van Buskirk, J. B. Walther, Y. C. Yuan

Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible.

COMM 116(1160) Understanding Human Communication

Spring. 3 credits. Lec, M W F 11:15-12:05. K. McComas.

Introduces students to communication theory and its applications to social relations. Students gain an understanding of theory development and evaluation and learn about the major paradigms of communication research. Covers a wide range of communication theories in a variety of settings, including interpersonal, group, and organizational.

COMM 117(1170) Writing about Communication

Spring. 3 credits. Co-requisite: COMM 116. T R 10:10-11:25, 11:40-12:55, 1:25-2:40, 2:55-4:10. L. Van Buskirk and staff.

Students develop skill in various writing styles and genres. This course explores communication practices and theories as they are observed and studied in personal and professional contexts. Assignments polish students' ability to gather information, analyze information, integrate ideas about communication, and express those ideas clearly and cogently.

COMM 120(1200) Contemporary Mass Communication

Fall or summer. Fall: lec, M W F 12:20-1:10. J. Shanahan.

The processes and effects of mass communication systems. Topics include the evolution of communication media, current knowledge about mediated communication, and the role of communication in contemporary social issues.

COMM 201(2010) Oral Communication

Fall, spring, or summer. 3 credits. Limited to 20 students per sec (fall and spring) or 15 students per sec (summer). Priority given to sophomores, juniors, and seniors. Fluency in spoken English assumed. Class secs meet first day of class before mass lec. Students absent twice during first week of class are dropped from course roster. K. Berggren, T. Russo, and staff.

Through theory and practice, students develop self-confidence and competence in researching, organizing, and presenting material to audiences. Students give four graded speeches, write short papers, perform speaker evaluations, and engage in other speech-related activities.

COMM 203(2030) Argumentation and Debate

Fall, spring, and summer. 3 credits. Fall: T R 11:40–12:55; spring: T R 11:40–12:55. Staff.

Students learn the principles of argumentation and debate. Topics emphasize Internet database research, synthesis of collected data, analysis of evidentiary quality, refutation of counter claims, identification of logical fallacies, risk evaluation, framing of issues, and coherent storytelling. Prepares students to work with a great range of opinion and evidence. Emphasizes different viewpoints, including those of different cultures. Assumptions are interrogated.

COMM 220(2200) Mass Media and Society

Spring. 3 credits. Lec, T R 11:40–12:55. T. Gillespie.

Considers the role of the mass media in a democratic society. Explores recent theories of communication, media, and society by considering: the industries and institutions that structure media production and distribution; the representational complexity of media texts and genres; the role of news media in the political life of the nation; the interpretive work of audiences; and the relationship between media texts and cultural identity.

COMM 230(2300) Visual Communication

Spring. 3 credits. Lec 01, T R 9:05–9:55; lab, T 2:30–4:25; W 10:10–12:05; 12:20–2:15, 2:30–4:25. C. Scherer.

Introduction to visual communication theory. Examines how visuals influence our attention, perspectives, and understanding. Uses examples of visuals drawn from advertising, TV news, documentaries, entertainment movies, print, and interactive media develop a theoretical framework for becoming more visually aware and for thinking more critically about how visuals influence us.

COMM 245(2450) Psychology and Social Computing (also INFO 245[2450])

Fall. 3 credits. T R 10:10–11:25. J. Hancock. In-depth examination of several social aspects of computing, drawing upon recent and classical social psychology and social-cognition research. Closely examines a small number of topics that may include impression formation/management, group behavior, deception and trust, disinhibition, and online relationships.

COMM 260(2600) Science Writing for Public Information

Fall, spring, or summer. 3 credits. Limited to 25 students per sec. Prerequisite: sophomore, junior, senior, or graduate-student standing; college-level writing course. Fall: Lec 01, M W F 9:05–9:55, lec 02, M W F 10:10–11:00; spring: Lec 01, M W F 9:05–9:55 or lec 02, M W F 1:25–2:15. S. Conroe.

Intensive course in simplifying scientific and technical material for specific audiences within the general public. Weekly assignments include instructions, descriptions, explanations, and summaries in such formats as the newsletter, brochure, and report. Emphasizes audience analysis. Not oriented to the mass media.

COMM 263(2630) Organizational Writing

Fall, spring, or summer. 3 credits. Limited to 25 students per sec. Prerequisite: junior, senior, or graduate standing; college-level writing course. Fall: Lec 01, M W F 9:05–

9:55; lec 02, M W F 10:10–11:00; lec 03, M W F 11:15–12:05. Spring: Lec 01, M W F 10:10–11:00, lec 02, M W F 11:15–12:05. L. Van Buskirk and staff.

Students write from the point of view of various organizations, including businesses, government agencies, and nonprofit organizations. This course emphasizes appropriate representation of the writer's organization, audience analysis, and clear and effective written presentation of detailed content. Assignments include text for web sites, reports, proposals, memoranda, letters, and e-mail.

COMM 272(2720) Principles of Public Relations and Advertising

Summer. 3 credits. Not open to freshmen. Staff.

Survey of the fields of public relations and advertising. Describes organizations, jobs, and functions in the industry. Covers the roles of public relations and advertising in society, the economic system, and organizations; psychological and sociological principles as bases for appeals; strategies for media selection and message execution. Introduction to research and regulation.

COMM 282(2820) Communication Industry Research

Fall. 3 credits. Pre- or co-requisite: COMM 116, 120. Lec, M W F 11:15–12:05. R. Ostman and staff.

Public opinion polls, readership/viewership studies, audience segmentation techniques, and media and message effect evaluation are all widely used in communication industries. This course covers the use of basic research design, measurement, sampling, and simple descriptive and influential statistics in conducting these studies.

COMM 284(2840) Sex, Gender, and Communication

Fall. 3 credits. Not open to freshmen. T R 2:55–4:10. L. Van Buskirk.

Explores the personal, career, social, and economic implications of male and female gender categories. Topics include theories of male and female gender construction, social structures, personal relationships, and gender concerns in the workplace.

COMM 285(2850) Communication in Life Sciences (also S&TS 285[2851])

Spring. 3 credits. M W F 10:10–11. B. Lewenstein.

Environmental problems, public health issues, scientific research—in each of these areas, communication plays a fundamental role. From the mass media to individual conversations, from technical journals to textbooks, from lab notes to the web, communication helps define social issues and research findings. This course examines the institutional and intellectual contexts, processes, and practical constraints on communication in the life sciences.

COMM 301(3010) Business and Professional Presentation

Fall and spring. 3 credits. Prerequisite: COMM 201; second-semester sophomore, junior, or senior standing. Lec, M W 11:15–12:05; sec, T 12:20–2:15 and 2:30–4:25; W 1:25–3:20; R 10:10–12:05. B. Earle.

The study and practice of written and oral communication skills used in formal and informal organizations. These skills include interviews; informative, persuasive, and special-occasion speeches; reports;

discussions; and Powerpoint presentations. Students study and practice the organizational, analytical, and presentational skills needed in contexts suited to their own business and professional career goals.

COMM 303(3030) Speech and Debate Practicum

Fall and spring. 2 credits. Prerequisite: Program in Speech and Debate members; permission of instructor; completion of one year in program. Staff.

Students learn how to prepare for CEDA (Cross Examination Debate Association) debate, Lincoln-Douglas debate, or individual speaking events. The class is divided into four groups according to level of experience; therefore, it may be repeated to a maximum of 8 credits.

COMM 345(3450) Human-Computer Interaction Design (also INFO 345[3450])

Spring. 3 credits. T R 10:10–11:25. G. Gay.

Gives students insight into the design of computer interfaces and software from the user's point of view. Students come to understand how hardware and software design influence the interaction between people and computers. Using assigned readings, demonstrations, and projects, students examine issues and trade-offs in interaction design and invent and evaluate alternative solutions.

[COMM 349(3490) Media Technologies (also S&TS 349[3491])]

Spring. 3 credits. Not offered 2005–2006. T R 1:25–2:40. T. Gillespie.

Our efforts to communicate, share culture, and drive social agendas depend on the tools we've developed. However, our commonplace notions of communication and media regularly overlook the role of the material technologies that are so crucial to them. This course considers the technologies of media (including printing, photography, film, telegraph, telephone, radio, television, and computer networks) as an opportunity to think about the intersection of technology, communication, and its social context.]

COMM 350(3500) Writing for Magazines

Fall. 3 credits. Limited to 25 students. Prerequisite: junior, senior, or graduate standing or permission of instructor; college-level writing course. No drops after third week. M 1:25–4:25; lab, R 1:25–2:15. S. Conroe.

Course in nonfiction freelance writing for magazines. Intensive fact writing to help students communicate more effectively through the medium of the printed word in magazines. Art and techniques of good writing are studied; magazines in many fields of interest are reviewed. All articles are analyzed and returned to the student to rewrite and submit to a magazine. Extensive out-of-class writing assignments.

COMM 352(3520) Science Writing for the Mass Media (also S&TS 352[3521])

Fall and spring. 3 credits. Limited to 24 students. Not open to freshmen. Prerequisite: college-level writing course. Lec, M W 10:10–11; lab, W 12:20–2:15. B. Lewenstein and staff.

How to write about science, technology, and medicine for the mass media. Discussion topics include accuracy, simplicity, comprehensiveness, risk communication, and the history and social structure of science.

Writing assignments focus on writing news and feature stories for newspapers and magazines, with excursions into newsletters, radio, TV, and other media.

COMM 353(3530) Science Writing Practicum

Spring. 1 credit. Prerequisite: COMM 260, COMM/S&TS 352, ENGRC 350, or permission of instructor. B. Lewenstein.

Students cover the annual meeting of the American Association for the Advancement of Science, held in February each year. Before the meeting, students review science writing techniques and issues. At the meeting, students meet with science writers and attend press conferences and scientific sessions. Students write at least two stories. Students are responsible for all costs of travel, lodging, and meals.

[COMM 376(3760) Planning Communication Campaigns]

Fall. 3 credits. Pre- or co-requisites: COMM 282 or equivalent social research course. Not offered 2005-2006. T R 11:40-12:55. K. McComas.

Provides a theoretical and practical overview of the audiences, messages, and evaluation of communication campaigns. Includes principles of planning and evaluation relevant to several kinds of campaigns. Topics include discussion of campaign goals, objectives, strategies, and tactics; research design and implementation; audience segmentation; message construction; and techniques of evaluation. Considers common methods of data collection (e.g., focus groups, experiments, surveys) and analysis of campaign-related data sources.]

COMM 382(4932) Advanced Communication Research

Fall. 3 credits. Prerequisite: COMM 282 or equivalent social research course. C. Yuan.

Advanced approaches to methods of data collection and analysis in communication research for students who intend to complete advanced research projects such as honors research or other independent studies and who have preliminary research under way. Every week the class examines one or two research situations in detail, analyzes specific problems connected to the method used, and discusses strategies for data analysis and presentation. This format provides all students—independent of their specific thesis topic—with an in-depth understanding of the methods used in communication research and how they are applied to specific projects.

COMM 398(3980) Issues in Teaching Communication

Fall and spring. 1 credit. Pre- or co-requisite: junior or senior standing; present or past undergraduate teaching assistant for COMM course. Alternate M 7:30-9:10 P.M. K. Berggren.

Seminar bringing together novice educators to discuss ideas, experiences, and practice. Integration of theory into actual education efforts is challenging for professional educators. Novice teachers are not aware of their common experiences, much less of a theoretical component to education. In discussions of actual teaching experiences, literature reviews, research reports, textbook chapters, curriculum, and evaluation tools, students examine new ideas and practices. The primary goal of the seminar is to enrich and deepen the novice teaching experience.

COMM 405(4050) Community Service Practicum

Fall and spring. 1 credit; may be repeated once for credit. Meets 1 hour weekly, time TBA. Staff.

Students share their communication talents in structured experiences in which they design and implement a speech or debate project in local schools or the community.

[COMM 410(4100) Organizational Communication: Theory and Practice]

Fall. 3 credits. Limited to 15 students per lab. Prerequisite: junior, senior, or graduate standing; COMM 116 or permission of instructor. Not offered 2005-2006. Lec, M W 11:15-12:05; lab 01, W 12:20-2:15; lab 02, W 2:30-4:15; lab 03, R 12:20-2:15; lab 04, R 2:30-4:15. C. Yuan.

Study of management communication processes in formal organizations. Applies relevant organizational behavior and communication principles in today's business environment; examines formal and informal communication networks, and explores the craft of consulting. Case studies analyzed in lab.]

COMM 420(4200) Public Opinion and Social Process

Spring. 3 credits. Prerequisite: COMM 282. M W 2:55-4:10. R. Ostman and staff.

Provides a scientific and applied overview of the concept of "public opinion" and its implications for macrosocial processes. Reviews the historical development of this concept in fields such as political science, social psychology, and communication science, followed by a closer look at what is meant by "measuring" public opinion. For example, is public opinion measured by summing across individual opinions, or are there macro-level dynamics of public opinion that go beyond what individuals in a society think? Based on theory, students conduct survey research on the importance of public opinion and public opinion perception for democratic societies, examining such areas as communication media, policymaking, risk perceptions, mass and popular culture, or political participation.

[COMM 421(4210) Communication and the Environment]

Spring. 3 credits. Lec, M W 2:55-4:10. Offered odd-numbered years. K. McComas.

Students investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is mass media's impact on public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content.]

COMM 422(4220) Psychology of Television (and Beyond)

Fall. 3 credits. Prerequisites: introductory psychology or HD 120 or COMM 120 or 116. Lec, M W F 12:20-1:10. M. Shapiro.

Survey of knowledge about how people mentally process television and other audiovisual communication technologies—including movies, video games, virtual reality, and the Internet. Topics include why people watch, what happens mentally when they watch, how people understand and mentally process media, and how media psychologically influence beliefs, attitudes, thinking, and emotion.

[COMM 424(4240) Communication in the Developing Nations]

Fall. 3 credits. Prerequisite: junior or senior standing. Not offered 2005-2006. Lec, T 1:25-2:35; lab, T 2:35-4:25. R. Colle.

The role of communication in development programs, particularly in the Third World. Emphasizes communication interventions in agriculture, health, nutrition, family planning, and community development and especially on methods for designing communication strategies for reaching low-income, rural people. Considers extension, social marketing, and development support communication.]

COMM 428(4280) Communication Law

Spring. 3 credits. Prerequisite: junior, senior, or graduate standing or permission of instructor. Lec, M W F 11:15-12:20. D. Grossman.

Deals with the law governing communication media. Topics include First Amendment concepts, restraints on newsgathering and dissemination, libel, invasion of privacy, copyright protection, regulation of broadcast and nonbroadcast electronic media, advertising law, and current legal issues unique to online communication.

COMM 440(4400) Advanced Human-Computer Interaction Design (also INFO 440[4400])

Fall. 3 credits. Prerequisite: COMM 245 or permission of instructor. T R 10:10-11:25. G. Gay.

Focuses on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

COMM 445(4450) Seminar in Computer-Mediated Communication (also INFO 445[4450])

Fall. 3 credits. Prerequisite: COMM 245. T R 11:40-12:55. J. Walther.

Focuses on reading and evaluating the theories and research methodologies used to investigate communication via computer systems. Assignments include student collaborations using electronic conferencing and other advanced communication technologies, as well as reflections on and evaluations of these collaborations in light of current theories and research findings. Topics include virtual teams, videoconferencing, and others as they emerge.

COMM 450(4500) Language and Technology (also INFO 450[4500])

Spring. 3 credits. T R 11:40-12:55. J. Hancock.

Examines how new communication technologies affect the way we produce and understand language and modify interaction with one another. Focuses on the collaborative nature of language use and how Internet technologies affect the joint activities of speakers and listeners during the construction of meaning in conversation.

COMM 466(4660) Public Communication of Science and Technology (also S&TS 466[4660])

Fall. 3 credits. Prerequisite: COMM 260 or 352, ENGRC 350, or permission of instructor. Offered odd-numbered years. M W 2:55-4:10. B. Lewenstein.

Explores the structure, meanings, and implications of "public communication of science and technology" (PCST). Examines the contexts in which PCST occurs, looks at motivations and constraints of those involved in producing information about science for nonprofessional audiences, and analyzes the functions of PCST. Ties existing ideas about PCST to general communication research, and leads to developing new knowledge about PCST. Format is primarily seminar/discussion.

COMM 476(4760) Communication Fellows Program

Spring. 2 credits. Prerequisites: communication seniors selected based on goals and academic preparation; permission of instructor. Fee for three-day trip: \$150. M 2:55-4:10. B. O. Earle. Series of lectures, seminars, and guest speakers exploring the planning, evaluation, and policy-making process. Includes a three-day trip to a metropolitan area to visit corporate leaders, administrative agencies, and policymakers.

COMM 480(4800) Independent Honors Research in Social Science

Fall or spring. 1-6 credits. Prerequisite: undergraduate standing; requirements met for honors program. Times TBA. Staff. Students who have successfully completed COMM 382 register for no more than 3 credits. Students who have not completed an advanced research methods course may register for up to 6 credit hours.

COMM 486(4860) Risk Communication

Spring. 3 credits. T R 1:25-2:15; lab, R 2:30-4:25. C. Scherer. Examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Concentrates on social theories related to risk perception and behavior. Examines case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors. Emphasizes understanding, applying, and developing theories.

COMM 494(4940) Special Topics in Communication

Fall, spring, or summer. 1-3 credits, variable. Prerequisite: permission of instructor. S-U grades optional. Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

COMM 496(4960) Communication Internship

Fall or spring. Work component and variable. 1 credit; may be repeated once for a total of 2 credits. Prerequisite: COMM major or minor (first-, second-, third-, or fourth-year) for 1 credit (minimum 60 hours). K. Berggren. Students receive a structured, on-the-job learning experience under the supervision of communication professionals in cooperating organization. A minimum of 60 hours of on-the-job work is required; the number of work hours beyond 60 is left to the discretion of the intern and the supervising company. A final paper linking communication theory to practical work experience is required. All internships must be approved before the work experience segment by the internship coordinator.

COMM 497(4970) Individual Study in Communication

Fall or spring. 1-3 credits; may be repeated to 6 credits with different supervising faculty member. Prerequisite: 3.0 GPA. Students must register using independent study form (available in 140 Roberts Hall).

Individual study under faculty supervision. Work should concentrate on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. Attempts to implement this knowledge in a practical application are desirable.

COMM 498(4980) Communication Teaching Experience

Fall or spring. 1-3 credits; may be repeated to 6 credits with different courses. Intended for undergraduates desiring classroom teaching experience. Prerequisite: junior or senior standing; 3.0 GPA (2.7 if teaching assistant for skills* development course); permission of faculty member who supervises work and assigns grade. Students must register using independent study form (available in 140 Roberts Hall).

Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to aiding with the actual instruction, each student prepares a paper on some aspect of the course.

COMM 499(4990) Independent Research

Fall or spring. 1-3 credits; may be repeated to 6 credits. Prerequisites: senior standing; 3.0 GPA. Students must register using independent study form (available in 140 Roberts Hall).

Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientific: systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

[COMM 610(6100) Seminar in Communication and Social Networks
Not offered 2005-2006.]

[COMM 618(6180) Communication and Persuasion

Spring. 3 credits. Prerequisite: introductory research methods course and introductory psychology or social psychology course. Not offered 2005-2006. T R 10:10-11:25. Staff.

Focuses on theories of communication's influence on persuasion and attitude change. Familiarizes students with a variety of social-psychological theories of attitude change and persuasion. Also applies those theories to a variety of communication situations including mass communication, advertising, public relations/public information, and interpersonal communication. Lectures concurrent with COMM 418; graduate students should enroll in COMM 618.]

[COMM 621(6210) Advanced Communication and the Environment

Spring. 3 credits. M W 2:55-4:10. Offered odd-numbered years. K. McComas. Students investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is mass media's impact

on public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content. Lectures concurrent with COMM 421; graduate students should enroll in COMM 621.]

COMM 622(6220) Advanced Psychology of Television (and Beyond)

Fall. 3 credits. Prerequisites: graduate standing and permission of instructor. Times TBA. M. Shapiro.

Survey of knowledge about how people mentally process television and other audiovisual communication technologies—including movies, video games, virtual reality, and the Internet. Topics include why people watch, what happens mentally when they watch, how people understand and mentally process media, and how media psychologically influence beliefs, attitudes, thinking, and emotion.

COMM 624(6240) Communication in the Developing Nations

Fall. 3 credits. Prerequisite: junior, senior, or graduate standing. Lec, M 2:30-4:25; lab, 1 hour TBA. R. D. Colle.

The role of communication in development programs, particularly in Third World nations. Emphasizes communication interventions in agriculture, health, nutrition, family planning, and community development, and especially methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 424; graduate students should enroll in COMM 624.

COMM 640(6400) Human-Computer Interaction Design (also INFO 640(6400))

Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. T R 10:10-11:25. G. Gay.

Graduate-level readings and research supplementing COMM 440. Focuses on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

COMM 645(6450) CMC Graduate Seminar (also INFO 645(6450))

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. T R 11:40-12:25. J. Walther and J. Hancock.

Graduate-level readings and research supplementing COMM 445. Through close reading and research in communication and technology, and participation in projects using these technologies, students enhance experiential, theoretical, and critical understanding of contemporary computer-mediated communication systems and uses. Topics include virtual teams, videoconferencing, and others.

COMM 650(6500) Language and Technology (also INFO 650(6500))

Spring. 3 credits. T R 11:40-12:55. J. Hancock.

Graduate-level readings and research supplementing COMM 450. Examines how new communication technologies affect the

way we produce and understand language and modify interaction with one another. Focuses on the collaborative nature of language use and how Internet technologies affect the joint activities of speakers and listeners during the construction of meaning in conversation.

[COMM 676(6760) Communication Planning for Social and Behavioral Change]

Spring. 3 credits. T R 10:10-11:25. Not offered 2005-2006. Staff.]

COMM 680(6800) Studies in Communication

Fall. 3 credits. Prerequisite: communication graduate students or permission of instructor. M W 8:40-9:55. J. Shanahan.

Reviews classical and contemporary readings in communication, including key concepts and areas of investigation. Explores the scope of the field, the interrelationships of its various branches, and examines the role of theory in the research process.

COMM 681(6810) Advanced Communication Theory

Spring. 3 credits. Prerequisite: COMM 680 or graduate standing and permission of instructor. M W 2:55-4:10 with additional meetings TBA. M. Shapiro.

Development of, and contemporary issues in, communication theory. Discusses the interaction between communication and society, social groupings, and mental processing.

COMM 682(6820) Methods of Communication Research

Spring. 3 credits. Recommended: familiarity with basic statistical concepts. M W F 12:20. R. Ostman.

Analyzes the methods used in communication research. Emphasizes understanding the rationale for survey, textual, experimental, and ethnographic research methods. Development of class research project from research question to final report. (Uses Statistical Package for the Social Sciences [SPSS] to assist in data analysis.)

[COMM 683(6830) Qualitative Research Methods in Communication]

Not offered 2005-2006.]

COMM 686(6860) Risk Communication

Spring. 3 credits. M W 10:10-11:25; lab, R 2:30-4:25. C. Scherer.

Examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Concentrates on social theories related to risk perception and behavior. Examines case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors. Emphasizes understanding, applying, and developing theories of risk communication.

COMM 691(6910) Seminar: Topics in Communication

Fall and spring. 0 credits. S-U grades only. Staff.

Some weeks scholars from a wide variety of fields present varied topics in theory or research as it relates to communication; other weeks graduate students present thesis (project) proposals to faculty members and peers.

COMM 694(6940) Special Topics in Communication

Fall, spring, or summer. 1-3 credits, variable. Prerequisite: permission of instructor. S-U grades optional.

Study of topics in communication not otherwise provided by a department course and determined by the interest of faculty members and students.

[COMM 781(7810) Seminar in Psychology of Communication]

Spring. 3 credits. Prerequisite: COMM 680 and 681 or equivalent graduate-level theory in psychology or social psychology. Letter grades. Offered odd-numbered years. M. Shapiro.

Discusses and analyzes selected current issues in the psychology of communication. Students discuss and synthesize current research and theory in the mental processing of communication.]

COMM 794(7940) Seminar in Communication Issues

Fall, spring, or summer. 1-3 credits. Prerequisite: permission of instructor. Letter grades only.

Small group study of topical issue(s) in communication not otherwise examined in a graduate field course.

COMM 797(7970) Graduate Independent Study

Fall, spring, or summer. 1-3 credits. Prerequisite: permission of instructor. Letter grades only.

Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

COMM 798(7980) Communication Teaching Laboratory

Fall and spring. 1-3 credits each semester; may be repeated once. Prerequisite: graduate standing and permission of faculty member who will supervise work and assign grade. (Students must use faculty member's section number to register.) Letter grades only. Graduate faculty.

Designed primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.

COMM 799(7990) Graduate Research

Fall, spring, or summer. 1-3 credits. Prerequisite: appropriate communication graduate course work or permission of instructor. Letter grades only.

Small-group or individual research based on original, empirical, data-based designs regarding topical issues in communication not otherwise examined in a graduate field course.

COMM 800(8900) Master's-Level Thesis Research

Fall or spring. 1-6 credits; may be repeated for max. of 6 credits. Prerequisite: permission of committee chair. S-U grades only.

Thesis research for M.S. (communication) students.

COMM 901(9900) Doctoral-Level Dissertation Research

Fall or spring. 1-9 credits; may be repeated for max. of 9 credits.

Prerequisites: completion of "A" exam; permission of committee chair. S-U grades only.

Dissertation research for Ph.D. candidates.

CROP AND SOIL SCIENCES

S. D. DeGloria, chair (232 Emerson Hall, 255-5459); P. C. Baveye, D. R. Bouldin, D. Buckley, J. H. Cherney, W. J. Cox, A. DiTommaso, J. M. Duxbury, E. C. Fernandes, G. W. Fick, R. R. Hahn, P. Hobbs, Q. Ketterings, L. V. Kochian, J. Lehmann, A. Lembo, M. B. McBride, R. L. Obendorf, S. J. Riha, J. M. Russel-Anelli, T. W. Scott, T. L. Setter, J. E. Thies, H. M. van Es, A. Van Wambeke, R. M. Welch

Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible.

Courses by Subject

Crop Science: 311, 312, 315, 317, 414, 415, 444, 455, 608, 610, 612, 613, 614, 642, 691, 820, 920, 921

Environmental Information Science: 398, 410, 411, 420, 465, 485, 486, 620, 660, 675, 694, 860, 960, 961

Soil Science: 200, 260, 362, 363, 365, 372, 373, 412, 421, 466, 471, 472, 473, 483, 621, 663, 666, 667, 669, 671, 672, 693, 880, 980, 981

General Courses

CSS 190(1900) Sustainable Agriculture

Fall. 3 or 4 credits, variable. Limited to 60 students. S-U grades optional. Lec, T R 10:10; labs, M T 2:00-4:25. G. W. Fick.

Concerns food, farming, and the future. Designed to introduce basic food production resources in the context of the human aspects of farming. The information is of general value for nonmajors and students new to the field. Several field trips enhance appreciation for the diversity of agriculture. Students can earn 1 extra credit by participating in team preparation and delivery of a lesson in sustainable agriculture.

CSS 494(4940) Special Topics in Crop and Soil Sciences (undergraduate level)

Fall or spring. 4 credits max. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester begins. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

CSS 497(4970) Individual Study in Crop and Soil Sciences

Fall or spring. 1-6 credits. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall).

Topics in soil science, crop science, or environmental information science are

arranged at the beginning of the semester for individual study or for group discussions.

CSS 498(4980) Teaching Experience in Crop and Soil Sciences

Fall or spring. 1–5 credits. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall).

Teaching experience in soil science, crop science, or environmental information science is obtained by assisting in the instruction of a departmental course.

CSS 499(4990) Undergraduate Research

Fall or spring. Credit TBA. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall).

Independent research on current problems selected from any phase of crop science, soil science, or environmental information science.

CSS 696(6960) Seminar in Crop and Soil Sciences

Fall and spring. 1 credit. S-U grades only. Lec, R 12:20–1:10. Staff.

Covers current research and selected topics in the crop and soil sciences and related fields.

Crop Science

CSS 311(3110) Grains and Nutraceuticals

Fall. 4 credits. Prerequisite: CSS 260 or BIOPL 241. Lec, M W F 10:10; lab, M 1:25–4:25. One or two field trips during lab periods (until 5 P.M. or on weekends). R. L. Obendorf.

Globally, six seed crops provide 75 percent of the caloric and protein needs of mankind by direct consumption or indirectly through animal and microbial products. Seed crops for starch, protein, oil, fiber, sugar, nutraceutical, pharmaceutical, and industrial uses are emphasized, including adaptation, growth and development, environmental stress, optimization of yield and quality, and genetic improvement in the context of food systems for improved health. Laboratory uses living plants, an extensive crop garden, and computer simulation.

CSS 312(3120) Forage Crops

Spring. 4 credits. Prerequisite: introductory crop and/or soil science course.

Recommended: animal nutrition course. Lec, M W F 9:05; lab, M 1:25–4:25.

G. W. Fick.

Considers the production and management of crops used for livestock feed in terms of establishment, growth, maintenance, harvesting, and preservation. Emphasizes forage grasses, forage legumes, and corn and considers their value as livestock feed in terms of energy, protein, and other nutritional components.

CSS 315(3150) Weed Science

Fall. 4 credits. Prerequisite: introductory course in biology or botany. Lec, T R 10:10–11:25; lab, T or W 2:00–4:25. A. DiTommaso.

Examines principles of weed science. Emphasizes (1) weed biology and ecology; (2) weed-management strategies used in agricultural and natural ecosystems; and (3) chemistry of herbicides in relation to effects on plant growth and the environment. Hands-on laboratory sessions cover weed identification and ecology, herbicide application, selectivity, and symptomatology.

[CSS 317(3170) Seed Science and Technology (also HORT 317(3170))]

Fall. 3 credits. Prerequisite: BIOPL 241 or equivalent. Lec, T R 11:15–12:05; lab, R. Two all-day field trips are scheduled during semester. Offered alternate years; not offered 2005–2006. A. G. Taylor, Geneva Experiment Station. (Ithaca contact, R. L. Obendorf.)

The principles and practices involved in the production, harvesting, processing, storage, testing, quality management, certification, and use of high-quality seed from improved cultivars. Information is applicable to various kinds of agricultural seeds. Hands-on laboratory experience.]

CSS 403(4030) Traditional Agriculture in Developing Nations (also IARD 403(4030))

Fall. 1 credit. S-U grades only. P. Hobbs. Half the world's arable land is farmed by traditional farmers who have produced food and fiber for millennia with few outside inputs. Many of these practices are forgotten but some are still used by farmers in developing countries. This course examines the pros and cons of some of these traditional systems.

CSS 414(4140) Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also IARD 314(3140))

Fall. 3 credits. Prerequisite: introductory crop science or soil science or biology course or permission of instructor. Lec, T R 8:40–9:55; labs, one per month, TBA. P. Hobbs.

Characterizes and discusses traditional shifting cultivation; lowland rice-based systems; upland cereal-based systems; smallholder mixed farming including root crops and livestock; plantation fruit and oil crop systems; and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. Evaluates the impact of tropical cropping systems on the environment.

CSS 426(4260) Practicum in Forest Farming as an Agroforestry System (also HORT/NTRES 426(4260))

Fall. 2 credits. Lab, W 1:25–4:25.

K. W. Mudge, L. E. Buck, and P. Hobbs. Students actively take part in the development and management of a 70-year-old nut grove originally planted at Cornell in the 1930s. The MacDaniel's Nut Grove is being developed as a multipurpose forest-farming teaching, research, and extension site. Hands-on activities include all or most of the following: temperate-nut harvest and variety evaluation, mushroom culture, small-fruit and fruit-tree culture, medicinal-herb culture, site evaluation and planning, and field trips to other agroforestry-related sites. Outdoor activities are integrated with selected readings via an online discussion board.

CSS 444(4440) Integrated Pest Management (also ENTOM 444(4440))

Fall. 4 credits. Prerequisites: biology course or permission of instructor. Lec, M W F 9:05; lab, M 1:25–4:25. J. E. Losey and A. DiTommaso.

Lectures integrate the principles of pest control, ecology, and economics in the management of pests across multiple systems. Laboratory exercises reinforce concepts

presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

[CSS 455(4550) Mineral Nutrition of Crops and Landscape Plants (also HORT 455(4550))]

Spring. 3–5 credits. Prerequisite: CSS 260 and BIOPL 242, or equivalent. Lec, M W F 9:05; lab, R 1:30–4. Offered alternate years; next offered 2006–2007. H. C. Wien and staff.

Modular course on principles of plant mineral nutrition and nutrient management. A mandatory module on principles is followed by others on agronomic crops, vegetables, floriculture, and fruit crops. Each module carries 1 credit; a minimum of 3 credits must be taken in one semester. By the end of the course, students understand the principles of mineral nutrient function in crop plants, and are able to diagnose deficiencies by symptoms and tissue tests and devise organic and conventional nutrient management schemes that maximize productivity and mineral nutrient quality.]

[CSS 608(6080) Water Status in Plants and Soils]

Fall. 1 credit. Prerequisite: permission of instructor. S-U grades only. Lec, lab, R 1:25–4:25, first class meeting R. Offered alternate years; not offered 2005–2006. T. L. Setter.

Covers techniques for field appraisal of the status of water in plants and soil, including methods used in physiological studies, such as the psychrometer, pressure chamber, gas exchange analyzer, and abscisic acid analysis with ELISA.]

[CSS 610(6010) Physiology of Environmental Stresses]

Fall. 3 credits. Prerequisite: plant physiology course (BIOPL 242 or 342) or permission of instructor. Offered alternate years; not offered 2005–2006. Lec, M W F 1:25. T. L. Setter.

Study of the responses of plants to environmental stresses, including chilling, drought, freezing, high temperature, salinity, hypoxia, and toxic elements. Emphasizes the physiological and biochemical basis of injury and plant resistance mechanisms at the whole-plant, cellular, and molecular levels.]

CSS 612(6120) Seed Biology

Fall. 3 credits. Prerequisite: plant physiology course. T R 8:30–9:55. R. L. Obendorf.

Describes the molecular, biochemical, physiological, environmental, and genetic regulation of seed development, maturation, and germination events, including the deposition and mobilization of seed reserves with illustrations from the world's major food and feed seeds. Illustrations extend the principles to practical situations, industrial uses, and food systems for improved health.

CSS 613(6130) Physiology and Ecology of Yield

Spring. 3 credits. Prerequisite: plant physiology course (BIOPL 242 or 342) or permission of instructor. M W F 12:20–1. T. L. Setter.

Study of environmental constraints on crop-plant productivity from the perspective of key biological processes. Examines acclimation responses and genetic adaptation for temperature, light, water, compacted

soil, and mineral nutrient environments. Topics include photosynthesis and nitrogen assimilation, translocation, and partitioning; canopy-scale influences on solar radiation use efficiency; regulation of growth processes in leaf, root, and floral sinks in response to environment; seed set; water transport and stomatal regulation; root growth in flooded and compacted soils; and drought responses. Emphasizes growth processes of vegetative plant organs.

[CSS 614(6140) Weed Ecology and Management]

Spring. 3 credits. Prerequisite: CSS 315 or equivalent. Lec, T R 10:10-11:25. Offered alternate years; not offered 2005-2006. A. DiTommaso.

Examination of plant ecological principles governing weed population dynamics and weed-crop competitive interactions in different crop and noncrop ecosystems. Explores the application of these fundamentals for the development and implementation of environmentally sound and sustainable integrated weed management strategies. Topics include seed biology and seedbank dynamics, weed demography and spatial variation, weed-crop interference, invasive weed biology, biological weed control, and site-specific weed management.]

[CSS 642(6420) Plant Mineral Nutrition (also BIOPL 642(6420))]

Spring. 3 credits. Prerequisite: BIOPL 341 or equivalent. Lec, M W F 10:10-11. Not offered 2005-2006. L. V. Kochian, R. M. Welch.

Detailed study of the processes by which plants acquire and use mineral nutrients from the soil. Topics include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and nutrition of plants adapted to extreme environmental stresses (e.g., acidic soils). Emphasizes specific mineral elements to illustrate the above topics.]

CSS 691(6910) Special Topics in Crop Science

Fall or spring. 1-6 credits. S-U grades optional. Staff.

Study of topics in crop science that are more specialized or different from other courses. Special topics to be offered depend on staff and student interests.

CSS 820(8200) Master's-Level Thesis Research in Crop Science

Fall or spring. Credit TBA. S-U grades only. Times TBA. Graduate faculty.

Thesis research for M.S. candidates.

CSS 920(9200) Graduate-Level Thesis Research in Crop Science

Fall or spring. Credit TBA. S-U grades only. Times TBA. Graduate faculty.

Thesis research for Ph.D. students before "A" exam has been passed.

CSS 921(9210) Doctoral-Level Dissertation Research in Crop Science

Fall or spring. Credit TBA. S-U grades only. Times TBA. Graduate faculty.

Dissertation research for Ph.D. candidates after "A" exam has been passed.

Environmental Information Science

[CSS 397(3970) Environmental Microbiology (also BIOMI 397(3970))]

Spring. 3 credits. Prerequisite: BIOEE 261 or BIOMI 290 or CSS 260 or permission of instructor. Offered alternate years; not offered 2005-2006. Lec, M W F 10:10-11:00. E. L. Madsen.

Discusses the biology, behavior, and function of microorganisms in natural environments in relation to past and present environmental conditions on Earth. Also considers the role of microorganisms in ecologically and environmentally significant processes through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutant chemicals, wastewater treatment, and environmental biotechnology.]

CSS 410(4100) The GMO Debate: Environmental Impacts

Spring. 3 credits. Prerequisite: BIO G 109 or equivalent. Lec, M W F 9:05-9:55. D. Buckley and P. Hobbs.

This course covers issues pertaining to the agricultural use of genetically modified organisms with emphasis on evaluating their environmental impact. Students will learn to critically evaluate the risks of benefits associated with the use of GMOs. We will examine the types of GMOs in use and in development, how they are made, and their potential impacts on the environment including: gene flow, non-target effects, horizontal gene transfer, biodiversity effects and the implications of changes in farming practices and chemical inputs.

CSS 411(4110) Resource Inventory Methods (also CEE 411(4110))

Spring. 3 credits. Prerequisite: permission of instructor. Lec, M W F 9:05-9:55; lab, M R 1:25-4:25. A. Lembo.

Survey of resource inventory methods applied to field-based studies of environmental systems. Laboratory emphasizes using maps, spatial databases, global positioning systems, and aerospace imagery to discriminate, measure, inventory, and monitor environmental resources.

CSS 420(4200) Geographic Information Systems

Fall. 4 credits. Prerequisite: CSS 411 or permission of instructor. Lec, T R 9:05-9:55; lab, T 10:10-1:10; M W R 1:25-4:25; F lab added only if enrollment numbers dictate. A. Lembo.

Principles and applications of geographic information systems for the characterization and assessment of agronomic and environmental resources. Emphasizes methods for accessing, updating, analyzing, and mapping spatial data and information. Considers needs assessment, coordinate systems, database design and maintenance, data transformations, and map accuracy assessment.

CSS 465(4650) Global Positioning System

Fall, first five weeks of semester. 1 credit. Prerequisite: CSS 411 or 420, or equivalent, or permission of instructor. Lec, F 9:05-12:00. Spring, last five weeks of semester. 1 credit. Prerequisite: CSS 411 or 420, or equivalent, or permission of instructor. Lec, F 1:25-4:25. A. Lembo.

Introduction to navigation-grade GPS instruments used in agricultural and

environmental science. Topics include instrument familiarization; field-data collection and processing; real-time and post-differential correction; and GPS-GIS integration.

CSS 485(4850) Problem Solving in Environmental and Agroecosystem Science I

Fall. 4 credits. Prerequisite: senior standing, CSS 260 or equivalent. Lec, first meeting F 1:25; lab, at least one four-hour afternoon per week plus additional time as needed. P. Baveye.

Capstone experience for seniors, centering on the pluridisciplinary analysis of a specific problem (e.g., a brownfield in Ithaca in fall 2004), with a number of faculty members serving as technical resources and lecturing as needed. Involves field trips, in-depth discussions of data assembled before the course, gathering of relevant scientific information (in groups), and report writing. Students are expected to work approximately 15 hours per week on a range of assignments. The course is conceived as the first of a sequence of two complementary courses, but it can be taken alone.

CSS 486(4860) Problem Solving in Environmental and Agroecosystem Science II

Spring. 4 credits. Prerequisite: senior standing, CSS 485. Lec, TBA; lab, at least one four-hour afternoon per week plus additional time as needed. P. Baveye.

Capstone experience for seniors, in continuation of CSS 485. Students work in groups to carry out the laboratory measurements identified in the fall, with faculty members serving as technical support and lecturing as needed. Students are expected to work approximately 15 hours per week on a range of laboratory measurements. The results of these measurements are discussed as they become available and are combined with the rest of the assembled information to come up with recommendations about the management of the targeted problem (e.g., in spring 2005, a brownfield in Ithaca).

CSS 620(6200) Spatial Modeling and Analysis

Spring. 3 credits. Prerequisites: CSS 420, 461, or permission of instructor. Lec, T R 9:05-9:55; lab, T W 1:25-4:25. A. Lembo.

Theory and practice in the development, integration, and visualization of spatial data for resource inventory, environmental process modeling, land classification, and evaluation. Emphasizes application and evaluation of advanced spatial analytical methods applied to environmental systems and databases of interest to the student.

CSS 621(6210) Applications of Space-Time Statistics

Spring. 2 credits. Prerequisite: STBTRY 601 or equivalent. S-U grades only. Offered alternate years; offered after spring break 2006. W F 2:30-4:25. H. Van Es.

Introduction to space-time statistics with applications in agriculture and environmental management. Topics include geostatistics (including use of ArcView's Geostatistical Analyst), temporal statistics, sampling, experimental design, state-space analysis, data mining, and fuzzy logic. Focuses on landscape-scale processes and a user's perspective.

[CSS 660(6600) Remote Sensing Fundamentals [also CEE 610(6100)]

Fall. 3 credits. Prerequisite: permission of instructor. Lec, M W 12:20–1:10; lab, F 12:20–1:10, 1:25–2:15. Not offered 2005–2006. W. D. Philpot.

Introduces equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Covers sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.]

CSS 675(6750) Modeling the Soil-Plant-Atmosphere System [also EAS 675(6750)]

Spring. 3 credits. Prerequisite: CSS 483 or equivalent. Offered alternate years. Lec, T R 8:40–9:55. S. J. Riha.

Introduction to the structure and use of soil-plant-atmosphere models. Topics include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and land surface processes as well as model data requirements, validation, and scale. Discusses use of soil-plant-atmosphere models for teaching, research, extension, and policy formation.

CSS 694(6940) Special Topics in Environmental Information Science

Fall or spring. 1–6 credits. S-U grades optional. Staff.

Study of topics in environmental science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

CSS 860(8600) Master's-Level Thesis Research in Environmental Information Science

Fall or spring. Credit TBA. S-U grades only. Graduate faculty.

Thesis research for master's students.

CSS 960(9600) Graduate-Level Dissertation Research in Environmental Information Science

Fall or spring. TBA. S-U grades only. Times TBA. Graduate faculty.

Dissertation research for Ph.D. students before "A" exam has been passed.

CSS 961(9610) Doctoral-Level Dissertation Research in Environmental Information Science

Fall or spring. Credit TBA. S-U grades only. Times TBA. Graduate faculty.

Dissertation research for Ph.D. candidates after "A" exam has been passed.

Soil Science**CSS 200(2000) Sophomore Writing Seminar: Civilizations and Sustainable Land Use**

Fall. 4 credits. Limited to 15 students. S-U grades optional. Lec, M W F 11:15–12:05. P. Baveye.

This course provides an extensive, guided writing opportunity on the historical connection between the rise and fall of civilizations in various parts of the world and the efficient use or abuse of available soil and water resources. Based on selected readings, students will reflect on worldwide soil and water contamination. In addition, this semester, students will have the opportunity to create a virtual field trip to the New York City watershed. After touring, filming, and

photographing the area, and interviewing experts, students will discuss their experiences and how best to relate their observations in a thorough but engaging manner to a future audience. Students will receive extensive feedback at every step of the way, from outlining and selecting illustrations, to the final formatting and submission of their work.

This is a special seminar sponsored by the John S. Knight Institute's Sophomore Seminars Program. Seminars offer discipline-intensive study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the discipline's outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Special emphasis is given to strong thinking and writing and to personalized instructions with top university professors.

CSS 260(2600) Soil Science

Fall. 4 credits. S-U grades optional. Lec, M W F 9:05; lab, M T W or R 1:25–4:25. J. Russell-Anelli.

Designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective. Divided into three units: (1) soil information unit introduces students to soil characterization, testing, mapping, classification, GIS, and land evaluation. (2) soil management unit addresses fertility, pest management, water, and microclimate, as well as erosion, conservation, pollution, and soil health. (3) unit on the role of soils in ecosystems considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs are initially field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs focus on accessing, interpreting, and applying soil information.

[CSS 362(3620) Soil Morphology

Fall. 1 credit. Prerequisite: undergraduate standing. Recommended for sophomores and juniors. One all-day field trip required. R 1:25–4:25. Not offered 2005–2006. J. Russell-Anelli.

Presents the principles for field identification of soil properties, profiles, and landscapes. A series of soil pits are examined, described, classified, and interpreted in the field.]

CSS 363(3630) Soil Genesis, Classification, and Survey

Fall. 4 credits. Prerequisite: CSS 260. Lec, M W F 11:15; lab, W 1:25–4:25. One all-day field trip required. J. Russell-Anelli.

Discusses factors and processes of soil formation on which soil survey is based. Practices principles of field identification, classification, survey, and interpretation in a field setting. Provides an overview of soil databases, their content, development, and use for site evaluation and land classification.

CSS 365(3650) Environmental Chemistry: Soil, Air, and Water

Spring. 3 credits. Prerequisites: CHEM 207–208. Lec, M W F 10:10–11. M. B. McBride.

Overview of the chemical processes that control the fluxes, concentrations, and bioavailability of nutrients and pollutants in soil, air, and water. Gives particular attention to soil's function as a filter for contaminants. Describes the history of environmental contamination by xenobiotics and heavy

metals and their impact on agricultural soils and ecosystems.

CSS 372(3720) Nutrient Management in Agroecosystems

Spring. 4 credits. Prerequisite: CSS 260 or permission of instructor. Graduate students should enroll in CSS 472. Lec, T R 8:40–9:55; lab, R 1:25–4:25. J. Lehmann.

Familiarizes students with the basic concepts of soil fertility and biogeochemistry and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agroecosystems. Emphasizes how nutrient management can be improved without creating environmental hazards. Students have hands-on training in analytical procedures and expand knowledge in discussion groups and through oral as well as poster presentations.

CSS 412(4120) Whole-Farm Nutrient Management [also AN SC 412(4120)]

Spring. 2- or 4-credit option. Prerequisite: AN SC 411; junior, senior, or graduate standing. Offered as two modules.

Enrollment in Module 1 for first half of semester required (2 credits); consists of crop and manure nutrient management planning; no prerequisites for CALS students. Enrollment in Module 2 for second half of semester optional (additional 2 credits). Lec, T R 11:15 and lab T 1:25–4:25 for both modules, with work on case studies outside of lab.

M. E. VanAmburgh, Q. M. Ketterings, and G. L. Albrecht.

Provides students with an understanding of the concepts underlying whole-farm nutrient management planning to improve profitability while protecting water and air quality. Students learn and apply concepts in the development of a Comprehensive Nutrient Management Plan (CNMP) that is required for a Concentrated Animal Feeding Operation plan to meet environmental regulations. Students develop components of a CNMP for a case study farm, using the Cornell University Nutrient Management Planning System (cuNMPS) and other tools. All students enrolled learn the concepts and processes of developing the crop and manure nutrient management plan component of a CNMP (Module 1). Students opting to continue through the end of the semester in Module 2 (4-credit option) build on knowledge gained in the first half of the semester by learning the knowledge and skills necessary to integrate crop production and herd feeding management for reducing nutrient imports on farms.

CSS 421(4210) Soil and Water Management

Fall. 4 credits. Prerequisite: CSS 260. S-U grades optional. Lec, T R 11:40–12:55; lab, R 2:30–4:30. H. M. van Es.

Introduces students to the principles of soil and water interaction and to the effects of human intervention on these processes. Examines aspects of soil and water management, including hydrology, soil erosion and conservation, water management, contaminant movement, tillage, soil compaction, and water quality. Discusses case studies and policy approaches from both the United States and abroad.

CSS 466(4660) Soil Ecology (also HORT 466[4660])

Spring. 4 credits, with lab. Prerequisite: one year of biology or ecology and CSS 260 or permission of instructor. Lec, T R 10:10-11:25; lab, W 1:25-4:25. J. E. Thies. Discover the wonder of life underground. This course studies the amazing diversity of soil organisms along with their multifaceted functions in terrestrial ecosystems. It highlights the fundamental principles and features of biologically mediated processes in the soil and the functions of soil biology in the context of both managed and unmanaged ecosystems. Special topics are selected from: beneficial symbioses, biological control of plant pathogens, biogeochemistry of unique habitats, bioremediation and composting of organic wastes, among others. Labs focus on molecular and traditional methods for assessing soil biological-community composition, abundance, and activity in soil.

[CSS 471(4710) Properties and Appraisal of Soils of the Tropics]

Spring. 3 credits. Prerequisite: CSS 260 or equivalent. S-U grades optional. No auditors. Lec, T R 12:20; disc, W 1:25-3:25. Not offered 2005-2006. A. VanWambeke. Examines the conditions in which soils form, and considers ecological, geological, and vegetational factors that produce the diversity that exists among them. The major kinds of soils are recognized, their management properties described, and methods to alleviate the constraints to crop production and preservation of the environment are examined. Topics include the identification of soils, and their functions in sustaining traditional farming systems and advanced technological packages. The course pursues these themes reviewing the most recent sources of information generated in tropical countries and published in Latin-American, French, and English journals. The last part of the course gives special attention to salt-affected soils, paddy rice cultivation, and the characteristics of acid-sulfate soils. Lectures include slides of soils, landscapes, and cropping systems. The course is available on a compact disk in Mann Library.]

CSS 472(4720) Nutrient Management and Research in Agroecosystems

Spring. 4 credits. Prerequisite: CSS 260 or permission of instructor. Lec, T R 8:40-9:55; lab, R 1:25-4:25. J. Lehmann. Familiarizes students with the basic concepts of soil fertility and biogeochemistry and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agroecosystems. Emphasizes the way nutrient management can be improved without creating environmental hazards. Gives students hands-on training in analytical procedures and expand knowledge in discussion groups and through oral as well as poster presentations. The laboratory experiments conclude with a final paper.

[CSS 473(4730) Ecology of Agricultural Systems (also BIOEE 473[4730])]

Fall. 3 credits. Limited to 45 students. Prerequisite: BIOEE 261 or permission of instructor. S-U grades optional. Lec and disc, T R. During first six weeks of class, R meetings may run to 5:30 because of field trips. T R 2:30-3:45. Not offered 2005-2006. A. G. Power and E. C. Fernandes.

Analysis the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Uses case studies from both the tropics and the temperate zone to illustrate important concepts.]

[CSS 483(4830) Environmental Biophysics (also EAS 483[4830])]

Spring. 3 credits. Prerequisite: CSS 260 or equivalent or permission of instructor. Offered alternate years; next offered 2006-2007. Lec, T R 8:40-9:55. S. J. Riha. Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Covers energy budgets; soil heat flow; water movement in saturated and unsaturated soils; evapotranspiration; and water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum. Considers applications to agronomic and environmental problems and instrument design and use through discussion and problems sets.]

[CSS 663(6630) Pedology]

Spring. 3 credits. Prerequisite: CSS 361 or permission of instructor. M W F 11:15-12:05. Offered alternate years; not offered 2005-2006. J. Russell-Anelli. Weathering, reactions, and processes of soil genesis; principles of soil classification and the rationale and use of soil taxonomy; development and significance of major groups of soils of the world.]

CSS 666(6660) Applied Plant-Microbe Interactions

Fall. 4 credits. Prerequisite: CSS 466 or equivalent or permission of instructor. Lec, T R 10:10-11:25; lab, F 1:25-4:25. Offered alternate years. Next offered fall 2005. J. E. Thies. Discussion and laboratory-based course focusing on the nature of microbial interactions with plants, concentrating largely on bacterial and fungal associations. Investigates symbiotic, associative, and pathogenic interactions. A main aim of this subject is improving professional practice, within the content area. Students learn to examine the primary literature, present research reports, write and review proposals, conduct a small independent-research project, and report on the outcomes in conference and journal formats. Class discussions explore the nature of the rhizosphere environment as a habitat for microorganisms and the ecology of the organisms residing there through readings in the primary literature. In laboratory, all students conduct an independent research project, aligned with their interests, in which they develop testable hypotheses and conduct experiments using relevant, modern methods.

[CSS 667(6670) Advanced Soil Physics]

Spring. 3 credits. Prerequisites: one year of college physics and CSS 483 or permission of instructor. S-U grades optional. Offered alternate years; not offered 2005-2006. M W F 11:15-12:05. P. C. Baveye. Acquaints students with advanced topics in soil physics in a number of areas, including the statics and thermodynamics of soil water, the physics of swelling-shrinking soils, the transport of water and solutes in heterogeneous soils, the measurement of

soil physical parameters, and the effect of spatial/temporal heterogeneity of soils on their physical characteristics. The format of the course, based in most years on weekly, individual tutorials, allows different topics to be covered, depending on the interest(s) of the students. If a group of students expresses interest, the course also can involve reflection on the detailed design of one or more laboratory or field experiments related to soil physics.]

CSS 669(6690) Organic Matter—Soils, Sediments, and Waters

Spring. 3 credits. Prerequisites: CSS 260 and CHEM 357-358 or equivalent. M W F 10:10-11:00. J. M. Duxbury. Discussion of current concepts on the chemical nature, dynamics, and properties of natural organics and organo-mineral associations in terrestrial and aquatic environments. Includes a modeling project of soil carbon dynamics in natural or agricultural ecosystems.

CSS 671(6710) Soil Chemistry

Fall. 3 credits. Prerequisite: one year of physical chemistry or permission of instructor. Lec, M W F 10:10. Offered alternate years. M. B. McBride. Detailed examination of the structure and surface chemistry of colloidal particles important to the function of soils. Emphasizes ion exchange; mineral-solution equilibria; and adsorption reactions of silicate clays, oxides, and organic matter. Describes the sorption behavior of environmental contaminants in soils, particularly metals and xenobiotics.

[CSS 672(6720) Nutrient Cycling in Natural and Managed Ecosystems]

Fall. 3 credits. Prerequisite: CSS 372 or NTRES 321 or BIOEE 478, or permission of instructor. Offered alternate years; offered 2006-2007. Lec, T R 10:10-11; lab, F 1:25-4:25. J. Lehmann. Covers nutrient cycling in soil and the interface between the soil and the biosphere, atmosphere, and hydrosphere. Examines the biogeochemistry of nutrient elements in natural ecosystems, disturbed or degraded ecosystems, and agricultural systems, including pollution in watersheds. Students develop independent projects, present a research proposal, and conduct field research that culminates in a presentation and a paper in publishable format.]

CSS 693(6930) Special Topics in Soil Science

Fall, spring, or summer. 1-6 credits. S-U grades optional. Study of topics in soil science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

CSS 696(6960) Seminar: Organic Inputs in Tropical Soils and Agroforestry (also NTRES/IARD 696[6960])

Fall, spring. 1 credit sec 2. S-U grades only. Lec, F 12:20-1:10. E. Fernandes and L. Fisher.

A variety of speakers present seminars on organic inputs in the tropics and agroforestry. Students are required to prepare a synopsis of each seminar.

CSS 880(8880) Master's-Level Thesis Research in Soil Science

Fall or spring. Credit TBA. S-U grades only. Times TBA. Graduate faculty. Thesis research for master's students.

DEVELOPMENT SOCIOLOGY

P. D. McMichael, chair (133A Warren Hall,
255-5495); D. L. Brown, P. R. Eberts,
P. Eloundou-Enyegue, S. Feldman,
J. D. Francis, C. C. Geisler, A. Gonzales,
D. T. Gurak, T. A. Hirschl, T. A. Lyson,
R. L. Mize, M. J. Pfeffer, L. B. Williams

Note: The prefixes for courses in this
department were listed as RSOC in previous
years.

Note: Class meeting times are accurate
at the time of publication. If changes
occur, the department will provide new
information as soon as possible.

**D SOC 101(1101) Introduction to
Sociology**

Fall or spring. 3 credits. Lec, T R 10:10–
11:00; sec, various times. Fall, T. Hirschl;
spring, A. Gonzales and R. Mize.
Introduction to theory and research in
sociology. Demonstrates how the insights,
theories, and methods of sociological analysis
can be brought to bear on major issues of
social life. A primary goal is to convey a sense
of the manner in which sociologists formulate
theories and how the collection and analysis
of data are used to evaluate those theories.
Provides "hands-on" experience in analyzing
sociological issues. Students undertake
guided research exercises that involve using
computers to analyze actual data. No prior
background is presumed; necessary skills are
covered in class and section meetings.

**[D SOC 103(1103) Self and Society (also
SOC 103)]****D SOC 111(1201) Development Sociology
First-Year Writing Seminar**

Fall, spring. 3 credits. Lec, T R 10:10–11:25.
Staff.
The department offers first-year writing
seminars on a wide range of development
sociology topics. Consult John S. Knight
Writing Seminar Program brochures for
instructors and descriptions.

**D SOC 112(1200) Development Sociology
First-Year Writing Seminar**

Fall, spring. 3 credits. Lec, M W 2:55–4:10.
Staff.
The department offers first-year writing
seminars on a wide range of development
sociology topics. Consult John S. Knight
Writing Seminar Program brochures for
instructors and descriptions.

**[D SOC 200(2000) Social Problems (also
SOC 200)]****D SOC 201(2010) Population Dynamics
(also SOC 202[2202])**

Spring. 3 credits. Limited to 35 students.
ALS students must enroll in D SOC 201.
S-U grades optional. T R 2:55–4:10.
P. Eloundou-Enyegue.
Introduction to population studies. First reviews
basic concepts and demographic principles and
techniques, then focuses on how demographic
processes (fertility, mortality, and migration)
affect social and economic outcomes.
Discussions cover special topics related to
population growth and distribution, including
mass education, marriage and family formation,
labor force participation, inequality and
poverty, women's status, resource allocation,
and the environment.

**D SOC 205(2050) International
Development (also SOC 206[2206])**

Spring. 3 credits. Limited to 74 students. M
W F 10:10–11:00. P. McMichael.
Examines new questions concerning
development models in the post-Cold War era
from a comparative and global perspective
on North-South relations. While the focus is
the "Third World," the issues confronting it
are often global, even when they concern
the most basic issue of food security. Using
films and various theoretical perspectives,
the course examines Southern societies
(economies, ecologies, class/gender relations)
and the impact of global forces on Southern
resources. Such forces include global food
systems, new forms of export production,
development agencies, multilateral institutions,
local bureaucracies, transnational corporations,
the debt crisis, and new technologies. Also
examines the new global justice movements,
such as environmentalism, feminism, and
landless workers, peasant, and grassroots
activism.

**[D SOC 206(2060) Gender and Society
(also FGSS 206[2060])]**

Spring. 3 credits. Limited to 100 students.
Lec, T R 10:10–11:25; sec, various times.
Not offered 2005–2006. Staff.
Familiarizes students with origin of gender
hierarchies, social and behavioral similarities/
differences between females and males, and
the degree that biological, psychoanalytic,
psychological and sociological perspectives
help to understand the differences. United
States and cross-cultural comparisons of the
consequences of gender inequality are a
major focus of the course. Objectives are met
through lectures, readings, films, participant
observation, and personal experiences.]

**[D SOC 208(2080) Technology and
Society]****D SOC 209(2090) Social Inequality (also
SOC 208[2208])**

Spring. 4 credits. T R 10:10–11:25.
K. Weeden.
For description, see SOC 208.

**[D SOC 210(2100) Race in America and
at Cornell (also GOVT 210[2101])]****D SOC 213(2130) Social Indicators, Data
Management, and Analysis**

Fall. 3 credits. Offered alternate years
(complement of D SOC 214). T R 11:40–
12:55. P. Eloundou-Enyegue.
Survey of definitions of social indicators and
general principles of social indicators research
is illustrated from data on both developed and

less-developed countries. Data management
and analysis of measures of poverty, level of
living, inequality, and quality of life based
on census data, household surveys, and key-
informant and other low-cost techniques, are
examined using personal computers.

**[D SOC 214(2140) Research Methods for
the Social Sciences]****[D SOC 215(2150) Introduction to
Organizations (also SOC 215[2150])]****D SOC 220(2200) Sociology of Health
of Ethnic Minorities (also LSP
220[2200])**

Fall. 3 credits. Limited to 15 students.
S-U grades optional. T R 10:10–11:25.
P. A. Parra.
Discusses the health status of minorities in the
United States. Explores intragroup diversity
such as migration, economic status, and the
influence of culture and the environment
on health status and access to health care.
Although special attention is given to Latino
populations, discussion encompasses other
minorities who face similar problems.

**D SOC 230(2300) Latino Communities
(also AM ST/LSP 230[2300])**

Fall. 3 credits. T R 1:25–2:40. R. Mize.
From community sociology perspectives, an
analysis of Latino community formation in
U.S. urban and rural contexts. A major focus
is the predominance of Puerto Ricans and
Dominicans in New York, Cubans in South
Florida, and Mexicans in the Southwest.
The last portion of the course addresses the
increasing "Latinization" of new receiving areas
and the formation of transnational communities
that transcend spatially defined communities.

**[D SOC 261(2610) Sociology of
Sustainable Development]****D SOC 275(2750) Immigration and a
Changing America**

Fall. 3 credits. S-U grades optional. T R
2:55–4:10. M. M. Kritz.
Immigration helped America become the
nation that it is today. While many experts
thought that immigration's contribution to
American history ended in the early 1900s,
immigration surged to historic highs in the
second half of the 20th century and shows no
signs of diminishing in the 21st century. This
course examines the economic, social, and
policy forces that underlie contemporary U.S.
immigration and the impacts that immigrants
are having on the American economy and
society today. It looks in detail at who the
new immigrants are, why they come to
America, where they live, and what roles they
fill in America.

**D SOC 301(3010) Theories of Society
(also SOC 375[3750])**

Spring. 3 credits. Limited to 30 students.
Prerequisites: development sociology or
sociology course. S-U grades optional. T R
11:40–12:55. P. Eberts.

Introduction to the "classical" sociological
theorists (Marx, Weber, Durkheim) of the
late 19th and early 20th century. Also
addresses the dramatic social upheavals of
the industrialization, capitalism, and rise of
bureaucracy to which these thinkers reacted
and the inspiring (and conflicting) visions for
the future which they offered. Emphasizes
the intellectual history, the influence of the
theorists on subsequent sociology, and the
potential for relevance to contemporary
society.

D SOC 305(3050) Education, Inequality and Development

Spring. 3 credits. Prerequisite: introductory social science course or permission of instructor. Letter grades. T R 10:10-11:25. P. Eloundou-Enyegue.

Improvements in formal schooling are often advocated as solutions for a variety of socioeconomic problems in nonindustrial and industrial nations alike. This course critically assesses human capital approaches to development. Topics include (1) the variety and functions of school systems, (2) the individual and macro-level determinants of education, (3) education and socioeconomic stratification, (4) the effects of education on development, and (5) tools for evaluating education projects.

D SOC 311(3110) Social Movements (also AIS/LSP 311[3110])

Fall. 3 credits. Prerequisites: D SOC 101/ SOC 101 or permission of instructor. S-U grades optional. T R 2:55-4:10.

A. Gonzales.

Introduces students to the causes and characteristics of social movements and related ideologies central to the sociological study and interpretation of major trends involving both social and cultural change in society. Drawing upon a diverse range of empirical examples, students examine key theories that explain the origins, tactics, and success of social movements and the ways in which people have mobilized to bring about political and social change.

D SOC 324(3240) Environment and Society (also S&TS 324[3241], SOC 324[3240])

Spring. 3 credits. Limited to 100 students. T R 2:55-4:10. C. Geisler.

The main objective is to develop a critical understanding of the dominant trends in modern U.S. environmental thought, such as preservationism, conservationism, deep ecology, social ecology, NIMBYism, risk assessment, ecological modernization, and environmental equity. A second objective is to familiarize students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands management, biodiversity, deforestation, climate change, and ozone depletion. A sociological framework is applied to evaluate interrelationships of substantive and philosophical/theoretical issues.

[D SOC 333(3330) Genomics and Society]**[D SOC 336(3360) Rural Areas in Metropolitan Society]**

Spring. 3 credits. Prerequisite: social science course. T R 11:40-12:55. Not offered 2005-2006. D. Brown.

Analyzes the changing structure and role of small towns and rural areas in developed nations. Focuses on adaptation of rural communities and populations to major trends, including increased societal differentiation and complexity; increased societal interdependence; and rapid social, economic, technological, and ecological change. Considers alternative policies to ameliorate rural problems and/or enhance rural contributions to national development. Students participate in group research projects in rural communities.]

[D SOC 340(3400) Sociology of Food Systems]

Spring. 3 credits. T R 1:25-2:40. Not offered 2005-2006. G. W. Gillespie.

Examines our changing food and agricultural systems sociologically, with attention to how these reflect the social organization of an increasingly global society. Addresses such questions as: What are the major trends? What drives them? What do these trends imply for people, communities, and the environment? What are the social, human-health, and environmental issues? What might be better alternatives and what strategies of development might achieve them?

[D SOC 354(3540) Sociology of Contemporary Culture (also S&TS 354[3541], SOC 352[3520])]

Fall. 4 credits. M W F 11:15-12:05. Not offered 2005-2006. C. Leuenberger.

Introduces students to the rapidly expanding body of work at the intersection of sociology, cultural studies, and science and technology studies. Provides an introduction to theoretical debates in cultural studies and to sociological studies of culture. Discusses the emergence of the tourist industry; the significance of consumption and advertisements in modern life; the cultures of music, art, and television; the use of rhetoric in politics and science; cultural and feminist analyses of knowledge, science, and technology; as well as the social construction of self, bodies, and identities.]

[D SOC 355(3550) Latinos, Law, and Identity (also LSP 355[3550], AM ST 357[3570])]

Spring. 3 credits. Prerequisite: D SOC 101 or permission of instructor. Letter grades only. M W F 11:15-12:05. Not offered 2005-2006. R. L. Mize.

Critical exploration of the critical-justice movement and Latina/o identities. Highlights legal cases, federal and state laws, and constitutional issues that affect Latina/os residing in the United States. Theoretical contributions of law and society, critical race theory, LatCrit, and outsider-jurisprudence perspectives applied to historical precedent and current attempts at marginalizing/empowering Latina/o communities.]

D SOC 370(3700) Comparative Issues in Social Stratification (also SOC 371[3710])

Fall. 3 credits. Prerequisite: introductory social science course. T R 1:25-2:40. T. Lyson.

Reviews both classical and contemporary issues in the comparative social stratification literature. Gives particular attention to the changing configurations of different labor markets, debates on the meaning of new economic constituencies, and the role of gender, race, ethnicity, and sexuality in assessing the patterns, meaning, and experiences of inequality. Throughout the course special attention is given to the importance of understanding how questions of measurement are constructed and employed in understanding social inequality.

D SOC 375(3750) Comparative U.S. Racial and Ethnic Relations (also AM ST/LSP 375[3750])

Spring. 3 credits. Prerequisite: D SOC 101 or permission of instructor. Letter grades only. T R 1:25-2:40. R. L. Mize.

Comparative historical study of the social construction of race. Examines structures of racism as they influence Latina/o, African

American, Native American, and Asian American experiences. Does a critical interrogation of whiteness and ethnic identities. Focuses on historical legacy of institutional and interpersonal racism and its contemporary relevance in terms of political economic, residential, legal, educational, cultural, health, and social-psychological inequalities.

D SOC 380(4900) Independent Honors Research in Social Science

Fall and spring. 1-6 credits; 6 credits max. may be earned in honors program.

Prerequisite: requirements for honors program met. J. Francis.

Students should select a faculty adviser and begin proposal development during the junior year. Students must submit written proposals by the third week of the semester of their senior year to the departmental honors committee representative.

D SOC 410(4100) Health and Survival Inequalities (also SOC 410[4100])

Fall. 4 credits. S-U grades optional. T R 2:55-4:10. A. Basu.

Historical inequalities in health and survival continue to exist today. This course covers some of the markers of such inequalities, including region, class, race, gender, and age, and examines some of the biological, socioeconomic, and political determinants of these differences. Examines macro as well as individual and family-level determinants. Evaluates policy prescriptions and proposes new innovative approaches.

D SOC 421(4210) Theories of Reproduction (also SOC 421[4210])

Spring. 4 credits. S-U grades optional. T R 2:55-4:10. A. Basu.

Examines the contentious debate on what makes women have any, few, and many children. Covers theories of population growth and changing fertility in both historical and contemporary populations. Discusses demographic concepts like "the demographic transition" and "natural fertility." Gives primary attention to "sociocultural" and "gender-based" explanations of reproductive behavior. Also looks at theories about the place of the state in women's lives.

D SOC 430/629(4300/6300) Human Migration: Internal and International

Fall. 3 credits. Prerequisite: demography course or permission from instructor. M 10:10-1:10. D. Brown.

Analyzes the determinants and consequences of internal and international migration in developed and developing nations. Emphasizes multilevel and multidisciplinary approaches. Examines public policy implications of the volume and composition of migration for origin and destination communities. Discusses techniques and measurement issues. (For 629, graduate students also meet with instructor every other week to discuss graduate readings and topics relevant to term project.)

D SOC 431/631(4310/6310) Comparative Ethnic Stratification: Demographic Perspectives

Spring. 3 credits. Prerequisite: introduction to sociology or permission of instructor. S-U grades optional. T R 11:40-12:55.

D. Gurak.

Comparative examination of ethnic stratification and mobility that focuses principally on dimensions of social groups

that can be empirically measured using readily available demographic sources. These include residential segregation, occupational status and mobility, marriage and family formation patterns, health and mortality, family structure, fertility, and intermarriage. Also examines the role of migration in shaping ethnic stratification systems. About half of the course examines the U.S. situation. Other societies receiving significant attention include India, Brazil, Nigeria, and several European societies. For D SOC 631, graduate students also meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.

[D SOC 437(4370) Aging and Aging Social Policy in the 1990s]

D SOC 438/638(4380/6380) Population and Development

Fall. 3 credits. Prerequisite: permission of instructor. S-U grades optional. T R 11:40–12:55. D. Gurak.

Examines major historical and recent demographic transitions in mortality, fertility, age structure, and composition, and explores the relationships between these transitions and the social, or economic, and cultural changes being experienced by diverse societies before, during, and following the onset and conclusions of the demographic shifts. Uses case studies from diverse historical periods and geographic locations. Graduate students meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.

D SOC 494(4800) Special Topics in Development Sociology

Fall or spring. 4 credits max. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

[D SOC 495/695(4650/6650) Population and Development in Sub-Saharan Africa]

D SOC 497(4901) Independent Study in Development Sociology

Fall or spring. 3 credits, variable; may be repeated for credit. Students must register using independent study form (available in 140 Roberts Hall). S-U grades optional.

Informal study may include a reading course, research experience, or public service experience.

D SOC 560(5600) Managing Local Environmental Systems: Social Perspectives and Research Cases

Fall. 3 credits. W 1:25–4:25. J. Francis.

For students with diverse backgrounds: undergrads, grads, people in professional careers, others with interesting environmental-issue identification, resolution, and management. Discussions include ecological, social, economic, and local government perspectives. Via lab exercises throughout the semester, students have opportunities to apply the concepts and principles of these perspectives to analysis of specific local environmental-management problems. Readings, lectures, and a course project are mandatory.

D SOC 601(6010) Theoretical and Methodological Approaches to Community and Rural Development

Fall. 3 credits. Prerequisite: graduate standing. Letter grades only. Lec, W 7:30–10 P.M. P. Eberts.

Survey of three general approaches for conducting analysis and practice in community and rural development. These approaches include examinations of (1) community structural changes and policymaking; (2) participatory processes for generating community development; and (3) planning strategies as mechanisms for creating community development opportunities.

D SOC 602(6020) Community Development Seminar

Spring. 1 credit. Prerequisite: D SOC 601. Letter grades only. W 7:30–10:00 P.M. P. Eberts.

A participatory seminar for feedback, collective learning, and guidance as M.P.S. students apply community and rural development theory and methods in thesis project work with local and regional communities.

D SOC 603(6030) Classical Sociological Theory

Spring. 4 credits. Prerequisite: graduate standing. T 2:30–5:30. M. J. Pfeffer.

Reviews the main streams of classical sociological thought, focusing on the work of Weber, Durkheim, Marx, and Simmel. Course materials include original texts and secondary literature used to examine the concepts, methods, and explanation in classical sociological thought. Important objectives are to identify the philosophical and conceptual core of the discipline and to critically evaluate the relevance of the classical theories to contemporary social change and development.

D SOC 606(6060) Sociological Theories of Development

Fall. 3 credits. R 1:25–4:25. Staff.

Critical examination of a historical range of theories and research in the sociology of development from the postwar period through the present. Major topics include modernization theory, dependency theory, world-system theory, the developmental state, global commodity chains, and globalization. Throughout the course, the concept of development itself is questioned and critiqued both theoretically and in terms of practical challenges from environmental, indigenous, and other social movements.

[D SOC 607(6070) Sociology of Natural Resources and Development (also ASIAN 603[6603])]

D SOC 608(6080) Demographic Techniques (also PAM 606[6060])

Fall. 3 credits. Prerequisite: multivariate statistics or permission of instructor. S-U grades optional. W 4:30–7:30 P.M. K. Joyner.

Introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort vs. period analysis, sources and quality of demographic data, population estimation and projection, and stable population models.

[D SOC 611(6110) Globalization and Social Movements]

[D SOC 612(6120) Population and Development in Asia (also FGSS 612[6120])]

D SOC 615(6150) Qualitative Research Methods

Fall. 3 credits. Letter grades only. Lec, T 1:25–4:25. L. Williams.

Seminar introducing students to a number of qualitative methods of field research in the social sciences. Discusses field observation, archival research, in-depth individual interviews, and focus group interviews. Assesses the strengths and weaknesses of various strategies of field research and consider a range of practical matters such as choice of research site (and sample where appropriate), choice of questions, and issues of validity and reliability. Highlights ethical considerations.

D SOC 617(6170) Foundations in Social Research: Comparative Epistemologies

Fall. 3 credits. Letter grades only. W 1:25–4:25. S. Feldman.

Seminar designed to introduce graduate students in the social sciences to the variety of epistemological approaches used by social scientists to analyze social change and development. Examines both positivist and nonpositivist approaches. Relates the relationship of quantitative and qualitative methodologies to different epistemologies.

[D SOC 618(6180) Research Design I]

D SOC 619(6190) Quantitative Research Methods

Spring. 4 credits. Prerequisite: statistics course. Letter grades only. T R 12:20–2:15. J. Francis.

Graduate-level course in measurement and analysis of survey, demographic, and observational data. Topics include linear regression, analysis of variance, and analysis of covariance with both continuous and categorically coded variables. Introduces logistic regression and some nonlinear models. Gives special attention to handling ordered and unordered categorical data as these are prevalent in social/demographic data sets. Analyzes data from real surveys like the American National Election Studies and the General Social Surveys using programs like SAS and SPSS. Includes labs and writing programs to analyze these data. Students familiarize themselves with data cleaning, missing data estimation, transformations, subsetting, and other data handling procedures.

D SOC 620(6200) Sociology of the Community

Fall. 3 credits. W 1:25–4:25. D. Brown.

Graduate seminar that critically analyzes the intellectual core of community sociology and its theoretical development over time. "Community" as a concept is often reified and rarely critically examined, hence the course begins by clarifying the various ways in which "community" has been conceptualized and operationalized by sociologists. The course provides students with both a grounded conceptual foundation and an overview of multiple strategies for conducting research on community structure and change in the United States and internationally. Includes a critical examination of the forms and shapes sociological research on the community

assumes. Uses a case study approach to examine the assumptions driving the methods and analysis of both contemporary and historical research.

[D SOC 621(6210) Foundations of Environmental Sociology]

[D SOC 625(6250) State, Economy, and Society]

Fall. 3 credits. T 1:25-4:25.
P. D. McMichael.

Reviews major issues concerning the relations between political and economic institutions and the role of states, markets, firms, social movements, and cultural institutions in the process of social change. Draws theoretical perspectives from classical and modern social theory, including the application of comparative and world/historical methodologies.]

[D SOC 630(6500) Field Research Methods and Strategies]

[D SOC 635(6350) Indigenous Peoples and Globalization (also AIS 635(6350))]

Fall. 3 credits. Limited to 25 students.
Prerequisite: graduate standing. S-U grades optional. W 10:10-1:10. Not offered 2005-2006. A. Gonzales.

Explores ways in which processes of globalization affect indigenous peoples worldwide and the strategies indigenous peoples are using to deal with those pressures. Globalization, whether under the auspices of the World Trade Organization and regional economic agreements such as the NAFTA or the de-territorialization of social and political arrangements cotermporal with modernization or the expansion of communication technology and its impact on traditional knowledge systems, has had profound social, cultural, and economic impacts on indigenous peoples. At issue are the lands, resources, traditional knowledge, intellectual and cultural property, and indigenous struggles for recognition and self-determination.]

[D SOC 640(6400) Community and Changing Property Institutions]

Fall. 3 credits. R 1:25-4:25. C. C. Geisler.

The "ownership society" assumes multiple forms. The seminar focuses on property in land and acquaints students with the origin and evolution of property rights. It traces major property debates (aboriginal ownership vs. terra nullius; private versus public (and mixed) ownerships; the tragedy (versus the opportunity) of the commons; takings vs. givings) as well as abiding property topics with which social scientists should be familiar (the "new" property; property rights as human rights; and new currents in and reform).

[D SOC 641(6410) Politics and Economics of Rural and Regional Development]

Fall. 3 credits. Prerequisite: upper-level or graduate standing. M 12:20-2:50. Not offered 2005-2006. A. Lyson.

Survey of social, political, and economic factors in local and regional development. Explores theories of community and regional development and underdevelopment. Examines Neoclassical, Marxist, and civil society theories within local and global contexts.]

[D SOC 645(6450) Rural Economy and Society]

[D SOC 655(6550) Advanced Techniques of Demographic Analysis]

[D SOC 661(6610) Sustainable Agriculture and Development]

Fall. 3 credits. M 12:20-2:50. T. A. Lyson.
Examines the relationship between local agriculture and development as these are embedded in a globalizing economy.

[D SOC 666(6660) Genomics, Agriculture, Food Systems, and Development]

[D SOC 671(6710) Epistemological Challenges to Social Science Paradigms: A Feminist Inquiry (also FGSS 671(6710))]

[D SOC 675(6750) Global Patterns of International Migration]

[D SOC 694(6800) Special Topics in Development Sociology]

Fall or spring. 4 credits max. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

[D SOC 715(7150) Comparative Research Methods]

[D SOC 718(7180) Multidimensional Measurement and Classification]

[D SOC 719(7190) Logistic and Log Linear Models]

[D SOC 725(7250) Theories of State, States of Theory]

Spring. 3 credits. W 1:25-4:25. Not offered 2005-2006. S. Feldman.

Examines how processes of political, economic, and social restructuring reshape state capacities and processes of state formation. The animating question: How have new patterns of "globalization"—transnational corporatist alliances, social movements, and new hegemonic relations—altered how we understand the meanings, activities, and power of rule? Critical to these discussions are the contours of nationalisms, and fundamentalisms as these emerge and reconfigure national, regional, and global alliances and practices, as well as shape interpretations of current processes of resistance, change, and terms of intervention and exchange. The course engages historical, poststructural, postcolonial, and comparative theories particularly as these have emerged and been refined by current debates in South Asia, Latin America, and Africa.]

[D SOC 730(7300) Sociology of Global Change]

Fall. 3 credits. R 1:25-4:25. Not offered 2005-2006. P. D. McMichael.

Analyses of social change and development are increasingly sensitive to global context. They include the sociology of the world economy as a multilayered entity anchored in an evolving international division of labor and the system of nation states, and the sociology of transnational political, economic, and cultural processes (e.g., food regimes, commodity chains, diasporas and transnational identities, the new regionalism, and

transnational social movements). This seminar examines the substantive and methodological questions generated by research on these global processes, including questions of relevant units of analysis, situating global process in local events and subjectivities and vice versa, and examining the ways in which national structures and cultures interact with global structures and cultures.]

[D SOC 791(7910) Teaching Experience]

Fall or spring. 1-3 credits. Prerequisite: graduate standing. S-U grades only.
Graduate faculty.

Participation in the ongoing teaching program of the department.

[D SOC 800(8900) Master's-Level Thesis Research]

Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.

Thesis research for master's students.

[D SOC 872(8720) Development Sociology]

Prerequisite: master's and doctoral degree candidates, permission of graduate field member concerned. S-U grades optional. Graduate faculty.

[D SOC 900(7900) Graduate-Level Thesis Research]

Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.

Thesis research for Ph.D. students only before "A" exam has been passed.

[D SOC 901(9900) Doctoral-Level Thesis Research]

Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.

Thesis research for Ph.D. candidates after "A" exam has been passed.

Related Courses in Other Departments

Field Study in Hawaii

Field study is a fundamental aspect of earth system science. Students wishing to increase their field experience may fulfill some of the requirements for the SES major by off-campus study through the Cornell Earth and Environmental Semester program

(EES). The EES program is offered during the spring semester and emphasizes field-based education and research. It is based on the island of Hawaii, an outstanding natural laboratory for earth and environmental sciences. Courses that may be applied to the SES major include EAS 240, 322, and 351. EAS 322 and 351 may also be used to fulfill requirements of the Geological Sciences major. The EES program also offers opportunities for internships with various academic, nonprofit, and government organizations. Typically students participate in the EES program during their junior year, although exceptions are possible. The EES program is administered by Cornell Abroad. For further information on the EES program see www.geo.cornell.edu/geology/classes/hawaii/course.html.

EAS 240(2400) Field Study of the Earth System

Spring. 5 credits. Prerequisites: one semester of calculus (MATH 190/191/192 or 111/112) and two semesters of any of the following: PHYS 207/208 or 112/213; CHEM 207/208; BIO G 101/103-102/104 or 105/106 or 109/110 or equivalent course work. A. Moore.

Interdisciplinary field course covering fundamental concepts of the Earth system. Topics include global circulation patterns in the solid Earth, atmosphere and ocean; energy and mass transfer; change and variability of Earth atmosphere and ocean systems; the temporal record of change preserved in the geologic record; Earth/ocean/atmospheric controls on ecosystem processes. The course is project-based with students engaged in hands-on, active learning that takes advantage of local resources.

EAS 322(3220) Biogeochemistry of the Hawaiian Islands

Spring. 4 credits. Prerequisites: EAS 240. Recommended: college-level chemistry. L. Derry.

Field-oriented study of biogeochemical processes and ecosystem interactions across the Hawaiian Islands. Field, class, and laboratory work focus on how landscape age and climate strongly control biogeochemical cycling and ecosystem development in Hawaii. Other topics include succession of ecosystems, evolution of nutrient cycles, and impacts of invasive species. The course is structured around field projects, carried out both as groups and individually.

EAS 350(3500) Dynamics of Marine Ecosystems (also BIOEE 350[3500])

Fall. 3 credits. Prerequisites: one year of calculus (MATH 191/192/193 or 111/112), semester of oceanography (EAS/BIOEE 154) permission of instructor. Offered alternate years. C. Greene and R. Howarth. Lecture course covering the interactions of physical and biological processes in marine ecosystems. Begins by looking at these processes on a global scale and works down to the scales relevant to individual organisms. Topics include the following: global patterns of ocean circulation; global patterns of ocean production; climate variability and the role of the ocean in global climate change; the El Niño/Southern Oscillation; ecosystem dynamics of the open ocean and coastal environments.

EAS 351(3510) Marine Ecosystems Field Course (also BIOEE 351[3510])

Spring. 4 credits. Prerequisite: EAS 240.

Recommended: oceanography course

C. Greene, B. Monger, and C. D. Harvell.

Covers the interactions of physical and biological processes in marine ecosystems. Begins by looking at these processes on ocean-basin to regional scales and work down to the smaller scales relevant to individual organisms. Introduces students to modern techniques of marine-ecosystems research, including remote sensing, oceanographic-survey methods, and experimental marine ecology. This course is field and laboratory intensive with students engaged in hands-on, active learning that takes advantage of local resources.

EAS 496(4960) Internship Experience

2 credits. Prerequisite: EAS 240. A. Moore.

During the last 3.5 weeks of the semester students carry out a service-learning project with a local NGO, environmental business, government agency, research lab, or educational facility. Projects are carefully designed with the student, sponsoring agency, and faculty member. A final report is required.

General Courses

EAS 121(1210) Introduction to Computer Programming

Fall. 2 credits. Prerequisites: MATH 111.

Co-requisite: MATH 191. D. Schwartz.

EAS 150(1500) FORTRAN Applications in Earth Science

Spring, seven-week course. 2 credits.

Prerequisite: CIS/EAS 121 or equivalent.

Letter grades only. Lec, T R 9:05-9:55; lab, T 1:25-3:25. A. J. Pershing.

Emphasizes the application of scientific computing in the Earth sciences, including data processing and modeling of the Earth, its atmosphere, and oceans. Extends the procedural programming concepts developed in CIS 121/EAS 121 and considers their implementation in high-performance, compiled languages. Topics include the structure and syntax of a FORTRAN program, data input/output, compilation, and debugging.

EAS 496(4960) Internship Experience

Fall or spring. 1-2 credits. S-U grades only.

Staff. See individual units for requirements.

EAS 498(4980) Teaching Experience in Earth and Atmospheric Sciences

Fall, spring. 1-4 credits. S-U grades only.

Students must register using independent study form. Staff.

The student assists in teaching an EAS course appropriate to his or her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses course objectives and teaching techniques with the faculty member in charge of the course.

Atmospheric Science

EAS 131(1310) Basic Principles of Meteorology

Fall. 3 credits. Lec, M W F 9:05.

M. W. Wysocki.

Simplified treatment of the structure of the atmosphere: heat balance of the Earth; general and secondary circulations; air masses, fronts,

and cyclones; and hurricanes, thunderstorms, tornadoes, and atmospheric condensation. The optional 1-credit laboratory for the course is offered as EAS 133.

EAS 133(1330) Basic Meteorology Lab

Fall. 1 credit. Co-requisite: EAS 131. T W or R 1:25-4:25 or M 7-9:30 P.M.; M 7-9:30 P.M. (majors only). M. W. Wysocki.

This course is required for atmospheric science majors, but is optional for other students taking EAS 131.

EAS 250(2500) Meteorological Observations and Instruments

Fall. 4 credits. Prerequisite: EAS 131. Lec, M W F 12:20; lab, R 1:25. M. W. Wysocki and B. Monger.

Covers methods and principles of meteorological measurements and observations including surface, free-air, and remote systems. Also covers instrument siting, mounting, and protection; instrument response characteristics, calibration, and standardization; and recorders and data logging systems. Laboratory exercises are in observation and data analysis. The course is intended to serve as preparation for Observers Examination.

EAS 268(2680) Climate and Global Warming

Spring. 3 credits. Prerequisite: basic college math. S-U grades optional. Lec, M W F 10:10-11:00. A. T. DeGaetano.

Familiarizes students from a range of disciplines with such contemporary issues in climatology as global warming and El Niño. Introduces the natural greenhouse effect, past climates, and observed and projected climate changes and impacts. Also covers natural climate variations (e.g. El Niño) and their consequences and predictability. Weekly student-led discussions of issues appearing in journals such as *Nature*.

EAS 296(2960) Forecast Competition

Fall and spring. 1 credit; students enroll for two consecutive semesters; credit awarded after second semester; may be repeated for credit. Prerequisite: sophomore standing in atmospheric science or permission of instructor. S-U grades only. D. S. Wilks. Two-semester course providing daily exercise in probabilistic weather forecasting, in which students compete to forecast local weather most skillfully.

EAS 331(3310) Climate Dynamics (also ASTRO 331[331])

Fall. 3 credits. Prerequisites: two semesters of calculus and one semester of physics.

Lec, M W F 12:20-1:10; disc, F 1:25-2:15.

K. H. Cook and P. J. Gierasch.

Discusses processes that determine climate and contribute to its change, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Investigates contemporary climate change issues and discusses them in the context of natural variability of the system.

[EAS 334(3340) Microclimatology

Spring. 3 credits. Prerequisite: physics course. T R 10:10-11:25. Not offered 2005-2006. D. S. Wilks.

The relationships of radiant energy, temperature, wind, and moisture in the atmosphere near the ground. Examines the interplay between physical processes of the atmosphere, plant canopies, and soil with emphasis on the energy balance.)

EAS 341(3410) Atmospheric Thermodynamics and Hydrostatics

Fall. 3 credits. Prerequisites: one year of calculus and one semester of physics. M W F 10:10-11:00. M. W. Wysocki.

Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics include thermodynamic processes of dry air, water vapor, and moist air, and concepts of hydrostatics and stability.

EAS 342(3420) Atmospheric Dynamics (also ASTRO 342(3342))

Spring. 3 credits. Prerequisites: one year each of calculus and physics. Lec, M W F 11:15-12:05. K. H. Cook and P. J. Gierasch.

Introduction to the basic equations and techniques used to understand motion in the atmosphere, with an emphasis on the space and time scales typical of storm systems (the synoptic scale). Derives the governing equations of atmospheric flow from first principles and applies them to middle latitude and tropical meteorology. Topics include balanced flow, atmospheric waves, circulation, and vorticity.

EAS 352(3520) Synoptic Meteorology I

Spring. 3 credits. Prerequisite: EAS 341. Co-requisite: EAS 342. Lec, T R 9:05; lab, M 1:25. M. W. Wysocki.

Study of weather map analysis and forecasting techniques by applying the principles of fluid and heat flow. Strengthens previously introduced meteorological concepts that are applied to forecasting midlatitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

EAS 435(4350) Statistical Methods in Meteorology and Climatology

Fall. 3 credits. Prerequisites: one introductory course each in statistics (e.g., AEM 210) and calculus. T R 10:10-11:25. D. S. Wilks.

Statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications. Includes statistical characteristics of meteorological data including probability distributions and correlation structures. Covers operational forecasts derived from multiple regression models, including the MOS system and forecast evaluation techniques.

EAS 447(4470) Physical Meteorology

Fall. 3 credits. Prerequisites: one year each of calculus and physics. M W F 9:05-9:55. Offered alternate years. A. T. DeGaetano.

Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include atmospheric electricity; atmospheric optics and radiation; microphysical cloud processes; and principles of radar probing of the atmosphere.

EAS 451(4510) Synoptic Meteorology II

Fall. 3 credits. Prerequisites: EAS 341 and 342. Lec, T R 9:05; lab, M 1:25-4:25. S. J. Colucci.

Structure and dynamics of large-scale midlatitude weather systems, such as cyclones, anticyclones, and waves, with consideration of processes that contribute to temperature changes and precipitation. Lab sessions involve real-time weather forecasting and the computer application of a numerical model of the atmosphere to study selected large-scale midlatitude weather events.

EAS 456(4560) Mesoscale Meteorology

Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. T R 11:40-12:55. S. J. Colucci.

Covers structure and dynamics of midlatitude mesoscale weather systems such as fronts, jets, squall lines, convective complexes, precipitation bands, downslope windstorms, mountain breezes, sea breeze circulations, and lake effect snowstorms. Also considers tropical weather systems and mesoscale modeling.

[EAS 457(4570) Atmospheric Air Pollution]

Fall. 3 credits. Prerequisites: EAS 341 or one course in thermodynamics, and one semester of chemistry, or permission of instructor. M W F 10:10-11. Offered alternate years; next offered 2006-2007. M. W. Wysocki.

Examines sources, effects, transport, measurement, and controls of air pollution. Discusses the basic principles in each area with an emphasis on their local, regional, and global impacts.]

EAS 470(4700) Weather Forecasting and Analysis

Spring. 3 credits. Prerequisites: EAS 352 and 451. Times TBA. M. W. Wysocki.

Applied course focusing on weather forecasting and analysis techniques for various regions around the world. Lectures emphasize the application of student's knowledge of atmospheric dynamics, thermodynamics, and computer data analysis, to forecast the development and movement of multiscale weather systems. Students participate in weekly forecast discussions; write daily forecasts that include a synoptic discussion, quantitative precipitation forecasts, and severe weather outlook for the forecast region; and lead class discussion on assigned readings.

[EAS 483(4830) Environmental Biophysics (also CSS 483(4830))]

Spring. 3 credits. T R 8:40-9:55. Offered alternate years; next offered 2006-2007. S. J. Riha.

Introduces basic principles of energy and mass transfer and storage in soil-plant systems. Covers energy budgets, soil heat flow; water movement in saturated and unsaturated soils; evapotranspiration; and water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum. Considers applications to agronomic and environmental problems and instrument design and use through discussions and problem sets.]

EAS 487(4870) Introduction to Radar Remote Sensing (also ECE 487(4870))

Fall. 3 credits. Prerequisite: PHYS 208 or 213 or equivalent, or permission of instructor. Lec, M W F 9:05-9:55. D. L. Hysell.

Fundamentals of radar, antennas, and remote sensing. Exposes students to the principles underlying the analysis and design of antennas used for communication and for radar-related applications. Students also encounter both a mathematical and a practical description of how radars function, how their performance can be optimized for different applications, and how signals acquired by them can be processed. The objective is to familiarize students with a wide variety of radars rather than to turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of backgrounds are able to take the

course. Emphasizes radar applications in geophysics, meteorology and atmospheric sciences, and astronomy and space sciences. Gives special attention to radar remote sensing of the Earth from spacecraft.

EAS 494(4940) Special Topics in Atmospheric Science (undergraduate level)

Fall or spring. 8 credits max. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. The same course is not offered more than twice.

EAS 497(4970) Individual Study in Atmospheric Science

Fall or spring. 1-6 credits. S-U grades optional. Students must register using independent study form. Staff.

Topics are arranged at the beginning of the semester for individual study or for group discussions.

EAS 499(4990) Undergraduate Research in Atmospheric Science

Fall or spring. Credit TBA. S-U grades only. Students must register using independent study form. Staff.

Independent research on current problems in atmospheric science.

[EAS 651(6510) Atmospheric Physics (also ASTRO 651(7651))]

Fall. 3 credits. Prerequisites: good background in undergraduate calculus and physics. Offered alternate years; next offered 2006-2007. T R 11:40-12:55. K. H. Cook, P. J. Gierasch, and S. J. Colucci.

Survey of the fundamental physical processes in atmospheres. Topics include thermodynamics of atmospheric gases, moist effects, hydrostatics, convective instability, atmospheric radiation and radiative heating, radiative-convective equilibrium, clouds, cloud microphysics, and precipitation processes. Discusses thermal structure and greenhouse effects on the Earth and other planets. Taught at the level of *Thermodynamics of Atmospheres and Oceans* by Curry and Webster.]

[EAS 652(6520) Advanced Atmospheric Dynamics (also ASTRO 652(7652))]

Spring. 3 credits. Prerequisites: EAS 341 and 342 or equivalents. T R 11:40-12:55. Offered alternate years; next offered 2006-2007. S. J. Colucci and P. J. Gierasch.

Covers quasigeostrophic theory, atmospheric waves, hydrodynamic instability, the general circulation of the atmosphere, and other topics selected from among numerical weather prediction and tropical, mesoscale, and middle atmosphere processes according to student interest.]

[EAS 666(6660) Applied Multivariate Statistics]

Spring. 3 credits. Prerequisites: multivariable calculus, matrix algebra, two statistics courses. Offered alternate years; not offered 2005-2006. T R 10:10-11:25. D. S. Wilks.

Statistical techniques for multivariable data. Topics include multivariate exploratory data analysis, the multivariate normal distribution, parametric and nonparametric inference about multivariate means, principal component analysis, canonical correlation analysis, discriminant analysis, and cluster analysis. Emphasizes geophysical applications, using

primarily atmospheric and oceanographic data as examples, but the development is general enough to be of broader interest.]

EAS 675(6750) Modeling the Soil-Plant-Atmosphere System (also CSS 675[6750])

Spring. 3 credits. Prerequisite: EAS/CSS 483 or equivalent. T R 8:40–9:55. S. J. Riha.

Introduction to the structure and use of soil-plant-atmosphere models. Topics include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and land surface processes as well as model data requirements, validation, and scale. Discusses use of soil-plant-atmosphere models for teaching, research, extension, and policy formation.

EAS 692(6920) Special Topics in Atmospheric Science

Fall or spring. 1–6 credits. S-U grades optional. Staff.

Study of topics in atmospheric science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

EAS 711(7110) Upper Atmospheric and Space Physics

Fall or spring. 1–6 credits. Seminar course TBA. D. L. Hysell.

EAS 850(8500) Master's-Level Thesis Research in Atmospheric Science

Fall or spring. Credit TBA. S-U grades only. Times TBA. Graduate faculty.

Thesis research for atmospheric science master's students.

EAS 950(9500) Graduate-Level Dissertation Research in Atmospheric Science

Fall or spring. Credit TBA. S-U grades optional. Times TBA. Graduate faculty.

Dissertation research for atmospheric science Ph.D. students only before "A" exam has been passed.

EAS 951(9510) Doctoral-Level Dissertation Research in Atmospheric Science

Fall or spring. Credit TBA. S-U grades optional. Times TBA. Graduate faculty.

Dissertation research for atmospheric science Ph.D. candidates after "A" exam has been passed.

Geological Science

EAS 101(1101) Introductory Geological Sciences

Fall. 3 credits. Staff.

Designed to enhance an appreciation of the physical world. Emphasizes natural environments, surface temperatures, dynamic processes such as mountain belts, volcanoes, earthquakes, glaciers, and river systems. Covers interactions of the atmosphere, hydrosphere, biosphere, and lithosphere (Earth system science). Examines water, mineral, and fuel resources and environmental concerns. Includes field trips in the Ithaca region.

EAS 102(1102) Evolution of the Earth and Life (also BIO G 170[1700])

Spring. 3 credits. J. L. Cisne.

Earth systems and their evolution; Earth history's astronomical context; plate tectonics, continental drift, and their implications for

climate and life; coevolution of life and the atmosphere; precedents for ongoing global change; dinosaurs, mass extinctions, and human ancestry. Includes laboratories on reconstructing geological history and mapping ancient geography. Fossil-collecting on field trips.

EAS 108(1108) Earth in the News

Summer. 3 credits. S. L. Losh.

Introduction to physical geology and Earth system science and explores the scientific basis for informed decision making regarding many timely environmental issues including global warming; water pollution and use; geologic hazards such as floods, earthquakes, and volcanoes; fossil fuel distribution and use; and land use. A field trip is taken in the Ithaca area.

EAS 109(1109) Dinosaurs

Fall. 1 credit. J. L. Cisne.

Introductory survey course for anyone interested in dinosaurs. Lectures examine the fossil evidence and illustrate how various geological and biological disciplines contribute to understanding dinosaurs and their world.

[EAS 111(1110) To Know the Earth

Fall. 3 credits. Staff.

Acquaints the nonscientist with Earth, its major features, how the Earth has evolved, Earth system science, and building a habitable planet. Covers the effects of human activity on geologic environments, mitigating environment damage, and living with natural hazards. Also covers mineral resource use in the 21st century and an environmentally sound fuel-minerals cycle.]

EAS 122(1220) Earthquake! (also ENGRI 122[1220])

Spring. 3 credits. L. D. Brown.

Explores the science of natural hazards and strategic resource. Covers techniques for locating and characterizing earthquakes and assessing the damage they cause; methods of using sound waves to image the Earth's interior to search for strategic minerals; and the historical importance of such resources. Includes seismic experiments on campus to probe for groundwater, the new critical environmental resource.

EAS 154(1540) The Sea: An Introduction to Oceanography—Lecture (also BIOEE 154[1540])

Fall, summer. 3 credits; optional 1-credit lab offered as EAS/BIOEE 155. S-U grades optional. Spring: C. H. Greene, B. C. Monger; summer: B. C. Monger.

Intended for both science and nonscience majors. Cover the basic workings of the ocean including its physics, chemistry, and biology. Following this basic description, the course examines threats to the health of the ocean and the important role the ocean plays in global climate change. Nonscience majors should pay particular attention to this course to fulfill a science requirement, because they learn broadly how the Earth works (physically, chemically, and biologically) in a single nonquantitative class.

EAS 155(1550) The Sea: An Introduction to Oceanography—Laboratory (also BIOEE 155[1550])

Fall. 1 credit. Co-requisite: EAS/BIOEE 154. S-U grades optional. C. H. Greene and B. C. Monger.

Laboratory course covering topics presented in EAS/BIOEE 154.

EAS 201(2010) Introduction to the Physics and Chemistry of the Earth (also ENGRD 201[2010])

Fall. 3 credits. Prerequisite: PHYS 112 or 207. J. Phipps Morgan.

Covers formation of the solar system; accretion and evolution of the Earth; the rock cycle; radioactive isotopes and the geological time scale, plate tectonics, rocks and minerals, earth dynamics, mantle plumes; the hydrologic cycle: runoff, floods and sedimentation, groundwater flow, and contaminant transport; and the weathering cycle: chemical cycles, CO₂ (weathering), controls on global temperature (CO₂ or ocean currents), and oil and mineral resources.

EAS 210(2100) Introduction to Field Methods in Geological Sciences

Fall. 1 lec, 5 field trips. 3 credits.

Prerequisite: EAS 101 or EAS 201 or permission of instructor. Staff.

Considers the methods by which rocks are used as a geological database. Covers field methods used in the construction of geologic maps and cross sections; systematic description of stratigraphic sections. Field and lab sessions meet on Saturdays until Thanksgiving. There is also one additional lecture during most of these weeks. There is one weekend field trip to eastern New York.

EAS 213(2130) Marine and Coastal Geology

Summer. 4 credits. Prerequisite:

introductory geology or ecology course or permission of instructor. Staff.

Special two-week course offered at Cornell's Shoals Marine Laboratory (SML), located on an island near Portsmouth, N.H. For more details, including estimated cost and an application, contact SML office, G14 Stimson Hall, or visit www.sml.cornell.edu.

EAS 302(3020) Evolution of the Earth System

Spring. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent.

W. White and staff.

Coevolution of life and the Earth system: Earth's early history; plate tectonics, continental drift, and climate changes during the past billion years; mountain building, ice ages, and humans' own emergence during the past 10 million years. Introduces methods of interpreting information preserved in the rock record.

EAS 315(3150) Geomorphology

Fall. 4 credits. Prerequisite: geology, hydrology, or soil science course. Two S field trips. B. L. Isacks.

Study of the processes that sculpt the Earth's landscapes (above and below sea level) and the nature of those landforms. The point of departure is landforms constructed by Earth's internal processes, as the course examines their modification by physical interaction with the atmosphere and oceans. Also treats depositional landforms that are generated by accumulations of grains or sediment. Laboratory exercises include both field examination of landforms of the Finger Lakes area and computer analysis of satellite images and Digital Elevation Models of examples from around the globe.

EAS 321(3210) Introduction to Biogeochemistry (also NTRES 321(3210))

Fall. 4 credits. Prerequisites: CHEM 207, MATH 112, and biology and/or geology course. L. A. Derry and J. Yavitt.

Control and function of the Earth's global biogeochemical cycles. Begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, controls on atmospheric carbon dioxide, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

EAS 326(3260) Structural Geology

Spring. 4 credits. Prerequisite: one semester of calculus plus introductory geology course, or permission of instructor. One weekend field trip. R. W. Allmendinger.

Nature and origin of deformed rocks at microscopic to macroscopic scales, with emphasis on structural geometry and kinematics. Topics include stress, strain, rheology, deformation mechanisms, minor structures, faulting, folding, and structural families.

EAS 350(3500) Dynamics of Marine Ecosystems (also BIOEE 350(3500))

Fall. 3 credits. Prerequisites: one year of calculus and one semester of oceanography (i.e., BIOEE/EAS 154), or permission of instructor. C. H. Greene and R. W. Howarth.

Lecture course covering the interactions of physical and biological processes in marine ecosystems. Begins by looking at these processes on a global scale and works down to the scales relevant to individual organisms. Topics include global patterns of ocean circulation; global patterns of ocean production; climate variability and the role of the ocean in global climate change; the El Niño/Southern Oscillation; ecosystem dynamics of the open ocean and coastal environments.

EAS 355(3550) Mineralogy

Fall. 4 credits. Prerequisite: EAS 101 or 201 and CHEM 207/211 or permission of instructor. S. Mahlburg Kay.

Examination of minerals by hand-specimen properties and optical microscopy. Covers geological setting, classification, crystal structures, phase relations, chemical properties, and physical properties of minerals. Introduces X-ray diffraction. Includes an independent research project.

EAS 356(3560) Petrology and Geochemistry

Spring. 4 credits. Prerequisite: EAS 355. R. W. Kay.

Principles of phase equilibrium as applied to igneous and metamorphic systems. Includes description, classification, chemistry, origin, regional distribution, and dating of igneous and metamorphic rocks; geochemical distribution of trace elements and isotopes in igneous and metamorphic systems. Also covers the petrological evolution of the planets.

EAS 375(3750) Sedimentology and Stratigraphy

Fall. 4 credits. Prerequisite: EAS 101, 102, or 201. J. L. Cisne.

Sediments, sedimentary rocks, and the rock cycle; sedimentary systems and stratigraphic sequences; fossil organisms and their paleoecology; correlation of strata in relation to age and environment; construction of the geological time scale; stratigraphic study of plate-tectonic processes and global change.

EAS 388(3880) Geophysics and Geotectonics

Spring. 4 credits. Prerequisites: MATH 192 (or 112) and PHYS 208 or 213. B. L. Isacks.

Covers global tectonics and the deep structure of the solid Earth as revealed by investigations of earthquakes, earthquake waves, the Earth's gravitational and magnetic fields, and heat flow.

EAS 401(4010) Fundamentals of Energy and Mineral Resources

Spring. 3 credits. Prerequisites: math through differential equations, physics through electricity and magnetism, CHEM 207, or equivalent. Recommended: introduction to geology. L. M. Cathles.

Fossil fuels will continue to be the prime source of energy for the foreseeable future, and society depends upon mineral resources. This course describes and quantitatively analyzes energy and mineral resources on the earth. Describes the distribution and nature of earth resources, focusing on U.S. examples. Develops quantitative tools and uses them to understand the processes that accumulate resources to economic levels.

EAS 404(4040) Geodynamics

Spring. 3 credits. Prerequisite: calculus and calculus-based physics courses or permission of instructor. J. Phipps Morgan.

Quantitative study of the deformation, heat transport, and melting processes that have shaped the evolution of the solid Earth. Familiar physical and chemical principles and concepts are applied to the study of plate tectonics, fluid dynamics, mantle convection, melting, and mountain building.

EAS 405(4050) Active Tectonics

Spring. 3 credits. Recommended: mechanical background equivalent to EAS 326/388. M. Pritchard.

Develops the ideas and methods necessary to understand how the Earth deforms—from individual earthquakes to the construction of mountain ranges. Discusses the driving forces of deformation, and how these forces interact with different geologic materials to cause deformation.

EAS 417(4170) Field Mapping in Argentina

Summer. 3 credits. Prerequisites: EAS 210 and 326; Recommended: knowledge of Spanish. S. Mahlburg Kay.

Modern techniques of geological mapping applied in the region of San Juan, Argentina, including folded and faulted sedimentary rock units of the Andean Precordillera (San Juan River section), intensely deformed Precambrian metamorphic rocks of the Pampean Ranges (Pie de Palo), and shallow-level silicic intrusives (Cerro Blanco-Ullun).

[EAS 434(4340) Reflection Seismology

Fall. 3 credits. Prerequisites: MATH 192 and PHYS 208, 213, or equivalent. Not offered 2005–2006. L. D. Brown.

Fundamentals of subsurface imaging by multichannel seismic reflection techniques as used in oil exploration and geohydrological investigations. Covers survey design, acquisition, analysis, processing, and interpretation in both 2-D and 3-D. Includes discussion of related techniques such as seismic refraction analysis, tomographic inversion, vertical seismic profiling, shear wave exploration, and ground-penetrating radar. Lab is keyed to state-of-the-art seismic processing, modeling, and interpretation software from LandMark.]

EAS 437(4370) Geophysical Field Methods (also ARKEO 437(4370))

Fall. 3 credits. Prerequisites: PHYS 213 or 208, or permission of instructor. Offered alternate years. L. D. Brown.

Introduction to field methods of geophysical exploration, especially as applied to environmental issues. Emphasizes seismic, ground penetrating radar, gravity, and magnetic techniques. Analyzes and interprets field surveys carried out at the beginning of the semester.

EAS 453(4530) Advanced Petrology

Fall. 3 credits. Prerequisite: EAS 356. Offered alternate years. R. W. Kay.

Magmas and metamorphism in the context of plate tectonics; major and trace element chemistry and phase petrology as monitors of the creation and modification of igneous rocks; temperature and stress in the crust and mantle and their influence on reaction rates and textures of metamorphic rocks; application of experimental studies to natural systems.

[EAS 454(4540) Advanced Mineralogy

Spring. 3 credits. Prerequisite: EAS 355 or permission of instructor. Offered alternate years. S. M. Kay.

Covers crystallography and crystal chemistry of minerals and the methods of their study. Includes X-ray diffraction, optical methods, and computer simulation of crystal structures. Emphasizes effects of high pressures and temperatures with implications for understanding the Earth's interior.]

EAS 455(4550) Geochemistry

Fall. 4 credits. Prerequisites: CHEM 207 and MATH 192 or equivalent. Recommended: EAS 356. Offered alternate years. W. M. White.

The Earth from a chemical perspective. Covers the formation of the elements; cosmochemistry; chemical evidence regarding the formation of the Earth and solar system; trace-element geochemistry; isotope geochemistry; geochemical thermodynamics and kinetics; chemical evolution of the crust, mantle, and core; weathering and the chemistry of natural waters; chemistry of rivers and the oceans; hydrothermal systems; and ore deposition.

[EAS 458(4580) Volcanology

Fall. 3 credits. Prerequisite: EAS 356 or equivalent. Next offered 2006–2007. R. W. Kay and W. M. White.

Causes of volcanism, melting in the Earth, and the origin of magmas. Physical volcanology, nature and types of volcanic eruptions and associated deposits, and eruption mechanisms. Volcanic plumbing systems, magma chamber

processes, evolution of magma. Volcanism and impact phenomena in the solar system. Volcanic hazard assessment and volcano monitoring. Ore deposits associated with volcanism.]

[EAS 460(4600) Late Quaternary Paleocology]

Fall. 4 credits. Not offered 2005–2006. M. Goman.

Explores topics in Late Quaternary paleocology. Broadly divided into two sections: (1) lectures that cover a variety of topics, such as philosophy of paleocology, radiometric dating methods, and paleoenvironmental proxies; (2) field- and laboratory-based research. The field research provides students with hands-on experience in sediment core collection, while in the laboratory students learn the basics of core description, pollen, and macrofossil analysis.]

[EAS 462(4620) Marine Ecology (also BIOEE 462(4620))]

Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE 261. Offered alternate years. C. D. Harvell and C. H. Greene.

Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, ecosystems, and evolutionary biology. Draws examples from all types of marine habitats, including polar seas, temperate coastal waters, and tropical coral reefs.]

EAS 471(4710) Introduction to Groundwater (also BEE 471(4710))

Spring. 3 credits. Prerequisite: MATH 293, fluid mechanics or hydrology course.

T. S. Steenhuis and L. M. Cathles.

Intermediate-level study of aquifer geology, groundwater flow, and contamination of aquifers and cleanup methods. Includes description of transport of pesticides, nutrients and toxics through the unsaturated zone and aquifers. Discusses theoretical and practical applications. Includes short field trips.

EAS 475(4750) Special Topics in Oceanography

Fall, spring, summer. 2–6 credits, variable.

Prerequisites: one semester of oceanography and permission of instructor.

Fall, spring: C. H. Greene; summer: B. C. Monger.

Undergraduate instruction and participation in advanced areas of oceanographic research. Topics change from semester to semester. Contact instructor for further information.

[EAS 476(4760) Sedimentary Basins: Tectonics and Mechanics]

Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. T. E. Jordan.

Subsidence of sedimentary basins from the point of view of plate tectonics and geomechanics. Covers interactions of subsidence, sediment supply, and environmental characteristics in development of stratigraphic sequences. Also covers stratigraphic characteristics of active-margin, passive-margin, and cratonic basins. Geophysical and stratigraphic modeling; sequence stratigraphy. Uses modern and ancient examples.]

[EAS 478(4780) Advanced Stratigraphy]

Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years; next offered 2005–2006.

T. E. Jordan.

Covers modern improvements on traditional methods of study of ages and of genetic relations among sedimentary rocks, emphasizing 3-D relationships. Introduces techniques and applications of sequence stratigraphy at scales ranging from beds to entire basins. Considers physical correlation, dating techniques, and time resolution in sedimentary rocks as well as physical controls on the stratigraphic record and numerical modeling.]

[EAS 479(4790) Paleobiology (also BIOEE 479(4790))]

Fall. 4 credits. Prerequisites: one year of introductory biology and BIOEE 274 or 373 or EAS 375, or permission of instructor. Offered alternate years; not offered 2005–2006. W. D. Allmon.

Surveys the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of Earth and atmospheric science students concerning the nature and significance of the fossil record for their respective studies.]

EAS 491–492(4910–4920) Undergraduate Research

Fall, spring. 1 to 4 credits. Staff.

Introduction to the techniques and philosophy of research in geological sciences and an opportunity for undergraduates to participate in current faculty research projects. Topics chosen in consultation with, and guided by, a faculty member. A short written report is required, and outstanding projects are prepared for publication. Fill out form at 2124 Sne Hall.

EAS 498(4980) Teaching Experience in Earth and Atmospheric Sciences

Fall, spring. 1–4 credits. S–U grades only. Students must register using independent study form. Staff.

EAS 500(5000) Design Project in Geohydrology

Fall, spring. 3–12 credits. Alternative to industrial project for M.Eng. students choosing geohydrology option. May continue over two or more semesters. L. M. Cathles.

The project may address one of the many aspects of groundwater flow and contamination, and must involve a significant geological component and lead to concrete recommendations or conclusions of an engineering nature. Results are presented orally and in a professional report.

EAS 502(5020) Case Histories in Groundwater Analysis

Spring. 4 credits. L. M. Cathles.

Analyzes in depth groundwater flow in a specific area, such as a proposed nuclear-waste disposal site. Geological and resource data on the area are presented early in the course. Students working as an engineering analysis team analyze the material. Each student makes a weekly progress report and writes part of a final report. Results are presented in a half-day seminar at the end of semester.

[EAS 622(6220) Advanced Structural Geology I]

Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. R. W. Allmendinger.

Stress-strain theory and application: advanced techniques of structural analysis. Topics include finite and incremental strain measurement; microstructure, preferred orientation, and TEM analysis; and pressure solution and cleavage development; and experimental deformation. Applications to deformation of unconsolidated sediments, brittle and brittle-ductile deformation of supracrustal strata, and ductile deformation of high-grade metamorphic rocks. Kinematic analysis of shear zones and folds in these regimes.]

EAS 624(6240) Advanced Structural Geology II

Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. R. W. Allmendinger.

Geometry, kinematics, and mechanics of structural provinces. Concentrates on thrust belts, rift provinces, or strike-slip provinces. Covers techniques of balanced cross sections.

[EAS 628(6280) Geology of Orogenic Belts]

Spring. 3 credits. Prerequisite: permission of instructor. Not offered 2005–2006. Staff.

Seminar course in which students study specific geologic topics of an orogenic belt selected for study during the semester.]

[EAS 641(6410) Analysis of Biogeochemical Systems]

Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years. TBA. L. A. Derry.

Covers dynamics of biogeochemical systems; kinetic treatment of biogeochemical cycles; box models, residence time, response time; analytical and numerical solutions of model systems; Eigen-analysis of linear systems; feedback and nonlinear cases, problems of uncertainties in natural systems; modeling software such as MATLAB; and applications to current research of participants or from recent literature.]

[EAS 656(6560) Isotope Geochemistry]

Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 455 or permission of instructor. Offered alternate years. W. M. White.

Nucleosynthetic processes and the isotopic abundance of the elements; geochronology and cosmochronology using radioactive decay schemes, including U–Pb, Rb–Sr, Sm–Nd, K–Ar, U-series isotopes, and cosmogenic isotopes such as ^{14}C and ^{36}Cl . Use of radiogenic and stable isotopes in petrology and their application to study of the evolution of the crust and mantle. Isotopic evidence regarding the formation of the Earth and the solar system. Stable isotopes and their use in geothermometry, ore petrogenesis, paleontology, and the global climate system.]

EAS 693(6930) Special Topics in Geological Sciences

1–3 var. credits. Fall or spring. S–U grades optional. Staff.

Study of specialized advanced topics in the Earth Sciences through readings from the scientific literature, seminars, and discussions.

EAS 700-799(7000-7990) Seminars and Special Work

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff.

Advanced work on original investigations in earth and atmospheric sciences. Topics change from semester to semester. Contact appropriate professor for more information.

EAS 722(7220) Advanced Topics in Structural Geology

R. W. Allmendinger.

EAS 731(7310) Planetary Geodynamics, Active Tectonics, Volcanology, Earthquakes, and Geodesy

M. Pritchard.

EAS 733(7330) Advanced Topics in Geodynamics

Spring. J. Phipps Morgan.

EAS 751(7510) Petrology and Geochemistry

R. W. Kay.

EAS 755(7550) Advanced Topics in Tectonics and Geochemistry

J. Phipps Morgan.

EAS 757(7570) Current Research in Petrology and Geochemistry

S. Mahlburg Kay.

EAS 762(7620) Advanced Topics in Paleobiology

W. D. Allmon.

EAS 771(7710) Advanced Topics in Sedimentology and Stratigraphy

T. E. Jordan.

EAS 773(7730) Paleobiology

J. L. Cisne.

EAS 775(7750) Advanced Topics in Oceanography

C. H. Greene.

EAS 780(7800) Earthquake Record Reading

Fall. M. Barazangi.

EAS 781(7810) Geophysics, Exploration Seismology, Ground-Penetrating Radar

L. D. Brown.

EAS 783(7830) Advanced Topics in Geophysics

B. L. Isacks.

EAS 789(7890) Lithospheric Seismology Seminar

L. D. Brown.

EAS 793(7930) Andes-Himalaya Seminar

S. Mahlburg Kay, R. W. Allmendinger, B. L. Isacks, and T. E. Jordan.

EAS 795(7950) Low Temperature Geochemistry

L. A. Derry.

EAS 796(7960) Geochemistry of the Solid Earth

W. M. White.

EAS 797(7970) Fluid-Rock Interactions

L. M. Cathles.

EAS 799(7990) Soil, Water, and Geology Seminar

Spring. L. M. Cathles and T. S. Steenhuis.

EDUCATION

R. S. Caffarella, chair (435 Kennedy Hall, 255-2207); G. J. Applebee, W. G. Camp, M. Conatas, B. A. Crawford, B. Heath-Camp, M. M. Kroma, S. K. Kroma, S. J. Peters, S. C. Piliero, R. Ripple, V. N. Rockcastle, D. E. Schrader, J. W. Sipple, D. J. Trumbull, T. Tucker, D. G. Way, A. L. Wilson

EDUC 005(1005) Basic Review Mathematics

Spring. 3 credits; not counted toward 120 credits required for degree. S-U grades.

Lec, T R 2:55-4:10. S. Piliero.

Reviews concepts necessary for success in basic mathematics and statistics courses. Topics include problem solving, graphing, basic algebra skills, linear and quadratic functions, polynomial equations, exponents and logarithms, and trigonometry. Places considerable emphasis on learning mathematics for understanding and solving word problems.

EDUC 100(1100) Multiculturalism in Education

Fall. 3 credits. M W F 10:10-11:25. S. Kroma. Should schools provide mandatory bilingual education programs to non-English-speaking students? Should the United States adopt an "English only" official language policy? Should Kwanza be celebrated as a public holiday? These are some of the many questions that challenge the notion of "cultural unity" once expressed as the "melting pot." In this course, students develop writing skills as they explore discourse on the forces responsible for our cultural diversity and the changing perspectives on our "cultural unity." Through writing activities, students learn to critically examine the historical, political, and legal contexts of this diversity and define their own views on the competing public positions that multicultural education issues arouse.

EDUC 100.2 Writing through Action: Scholarly Discourse in the University

Fall, spring. 3 credits. Disc, T R 10:10-11:25. C. Shafer.

The challenge for this highly interactive course is to create a model community of inquiry within which to explore the links between research, writing, and thinking in the university. Readings introduce fearless explorers and careful scholars of digital discourse and action research whose work alike challenges the status quo of academic culture. Their respective views of educational transformation and its associated issues of validity, property, space, reality, community, power, and identity inform our own writing about the future of knowledge making. For more information, see cu-ed100.com.

EDUC 100.3 Re-creating the World: Education and Social Change

Spring. 3 credits. T R 1:25-2:40. M. Hittleman.

How do we build respectful, just, democratic communities in which all can participate and flourish? How do we help others participate in such change processes? Through a cooperative inquiry process, this course explores the work of educators and community organizers, including Dewey, Freire, Hooks, Horton, Shor, and Baker; students critically examine their own experiences as members of a powerful social and institutional community: the American university.

EDUC 115(1150) Introductory College Mathematics

Fall. 4 credits. Does **not** count toward graduation credit in College of Arts and Sciences. M W F 11:15-12:05; lab, TBA. S. Piliero.

Designed for students wishing to fulfill distribution requirements and/or prepare for study in calculus. Offers a multi-representational approach to topics in precalculus and calculus, stressing conceptual understanding, problem solving, and applications in a technology-enhanced environment. Considerable emphasis is placed on numerical, graphical, and symbolic representations of functions and their transformations. Students use graphing calculators in a collaborative lab setting.

[EDUC 120(1200) Education for Empowerment

Spring. 3 credits. W 1:25-4:25. Not offered 2005-2006. Staff.

Common themes running through the modules include human learning, teaching strategies, and political/social/economic factors affecting education. Provides an opportunity to sample different areas of study and to gain knowledge and awareness of one's own educational processes.]

EDUC 151(1510) Engaging Diversity: Multicultural Issues in Education and Society

Fall or spring. 3 credits. S-U grades optional. Lec, T R 1:25-2:40. S. K. Kroma.

Explores diversity issues that affect students e.g., example, race, culture, gender, and class in the context of modern American society. Through selected readings and course activities, students recognize the strengths of a diverse community and acquire the knowledge and skills necessary for living and working in it. The focus is on critical thinking about the differences in our society, and the strategies we need for cross-cultural interactions.

EDUC 220(2200) Community Learning and Service Partnership (CLASP)

Fall only. 2 credits. Prerequisite: permission of instructor. Students must commit to taking EDUC 221 the following spring. S-U grades optional. T 2:30-4:25. A. Wilson.

In this service-learning course, students partner with Cornell service staff to accomplish a variety of learning goals selected by the employees. Students are introduced to the field of adult basic education and the principles of the Community Learning and Service Partnership (CLASP). Seminars examine the issues of learning through service and reflection, adult teaching philosophy and practice, and empowerment through education. Students must commit to continuing their service by taking EDUC 221 the following spring semester.

EDUC 221(2210) Community Learning and Service Partnership (CLASP)

Spring only. 2 credits. Prerequisites: EDUC 220 and permission of instructor. S-U grades optional. T 2:30-4:25. A. Wilson.

Continues the field experience and curriculum begun in EDUC 220. Students work with Cornell service staff to accomplish a variety of learning goals selected by the employees. Students receive in-service training and support. Seminars examine the impact of gender, race, and social class on learning and educational opportunity.

EDUC 240(2400) The Art of Teaching

Fall and spring. 3 credits. Fall: M 12:20–2:15, or T 2:30–4:25, or W 12:20–2:15, or R 2:30–4:25; spring: M 12:20–2:15, or T 2:30–4:25, or W 12:20–2:15, or R 2:30–4:25.

B. Heath-Camp.

Exploratory course designed for students of all backgrounds and interests who have a desire to learn more about teaching. Teaching takes place in a variety of contexts from the family to the workplace and this course endeavors to examine the elements of teaching that transcend the typical school-teaching environment. Designed to guide students in reflecting upon their experiences to help them better understand the decisions they make as teachers. Students have the opportunity to pursue their own interests through a teaching fieldwork assignment. Possible field experiences range from large group to tutorial situations, from preschool to adult education, from traditional school subject matters to recreational and career and technical areas, and from school-based to nonformal situations. The course work and readings are designed to build on these experiences throughout the semester and provide concepts and skills to apply in the field.

EDUC 271(2710) Social and Political Context of American Education

Fall. 3 credits. Disc, T R 1:25–2:40.

J. W. Sipple.

Examines the goals, roles, inputs, and outcomes of schooling in American society and the policy environment in which schools operate. Analyzes controversies and tensions (e.g., equity, market forces, state control) surrounding public education at local, state, and federal levels. Includes current and historical, urban and rural issues and problems.

EDUC 331(3310) Careers in Agriculture, Extension, and Adult Education

Fall. 1–3 credits. Letter grades only. F 1:25–4:20; 2:00–4:25. G. J. Applebee.

Offers modules in three areas of teaching: adult education, cooperative extension, and agricultural education. Each module offers 1 hour of credit, and students may take one or more of the modules. The course provides an historical perspective and an introduction to the organization and scope of programs for each module. Students examine career opportunities and characteristics of the professions addressed by each module. Course activities include field observations and experiences during arranged times.

EDUC 335(3350) Youth Organizations

Spring. 3 credits. R 2:55–4:25; lab, TBA. W. Camp.

Visionary, creative, and competent leaders are essential for youth organizations. Class participants learn how to facilitate both youth and adult volunteer leadership development. They examine factors affecting membership, purposes, design, operation, and administration of youth organizations. The course provides students with in-depth learning-by-doing experience of how youth organizations function. Requires field experience with a recognized youth organization.

EDUC 380(3800) Independent Honors Research in Social Science

Fall or spring. 1–6 credits; max. 6 credits may be earned in honors program. Prerequisite: requirements for honors program met. S-U grades optional. Staff.

EDUC 401(4010) Our Physical Environment

Fall. 3 credits. Prerequisite: permission of instructor. Lab fee: approx. \$7. T 1:25–4:25. V. N. Rockcastle.

Practical, relatively nonmathematical study of some basic relationships and physical interactions in the environment, with emphasis on physics and earth science. Pays attention to analysis for understanding and techniques for teaching. Includes an individual research project. Useful for teachers, environmental educators, and those for whom physical science seems difficult or uninviting.

EDUC 404(4040) Learning and Teaching I

Fall. 4 credits. Prerequisite: admission to Cornell Teacher Education program or permission of instructor. Letter grades. Lec, T R 8:40–9:55 P.M.; fieldwork, TBA. D. Trumbull.

Designed to foster development of pedagogical and reflective understanding crucial to good teaching. Students explore what it means to understand and teach through examining key disciplinary topics, which requires rethinking disciplinary knowledge, assessment of learning, and motivation. Required fieldwork (4 hours weekly) focuses on learners' understandings and classroom structures.

EDUC 405(4050) Learning and Teaching II

Spring. 4 credits. Prerequisite: EDUC 404 or permission of instructor. Letter grades. Lec, T R 8:40–9:55; fieldwork, TBA.

W. Camp, B. A. Crawford, and S. Piliero. Important part of a sequence of courses and experiences intended to lead to excellence in science, agricultural science, and mathematics teaching. Prospective teachers develop understanding and skills in effective planning, instruction, and assessment of students studying agricultural science, mathematics, and science in middle and high school. The course is intended to integrate theory and practice associated with learning and teaching in school classroom settings and includes a minimum of 40 hours of fieldwork in area classrooms.

EDUC 411(4110) Educational Psychology

Fall. 3 credits. Prerequisite: PSYCH 101 or permission of instructor. S-U grades optional. Lec, T R 11:15–12:05; F sec TBA. D. E. Schrader.

Educational psychology is the application of psychological concepts to educational settings. This course examines the dynamic interaction between people as teachers and learners, schools as social and learning environments, and the sociocultural contexts that influence learning. The focus is on those interactions in cognitive, epistemic, social, moral, and personal domains in educational contexts.

EDUC 420(4200) Field Experience

Fall or spring. 1–4 credits. Undergraduates must attach to their course enrollment material written permission from faculty member who will supervise work and assign grade. S-U grades optional. Staff.

Students may engage in planned, semiprofessional, or professional practice in an educational enterprise. Each student prepares a plan of action including rationale, purposes, and procedures and arranges with a faculty member to supervise and evaluate their field experience.

EDUC 441(4410) Language, Literacy, and Schooling

Spring. 3 or 4 credits. M W 2:55–4:10; lab, TBA. S. Kroma.

Foundation for literacy activities in secondary education. Examines current research, policy, and practice relating to the acquisition of first and second languages, the dynamics of literacy in school contexts, and the development of academic language proficiency. The fourth credit hour requires a practical project based on fieldwork.

[EDUC 445(4450) Curriculum Design Workshop

Spring. 3 credits. Not offered 2005–2006. Staff.

General practical approach to course planning. Includes readings, group discussions, and individual conferences centering on students' projects. Consists of designing course materials in a subject area for an age level and an institutional setting of the student's choosing and, when possible, testing materials.]

[EDUC 448(4480) Instruction for Students with Disabilities

Summer. 3 credits. Prerequisite: educational psychology or introductory psychology course, or permission of instructor. S-U grades optional. Lec, TBA: 3 hours weekly. Not offered 2005–2006. Staff.

Provides preservice middle and secondary school teachers a comprehensive overview of disability law, functional limitations caused by disabling conditions, and classroom strategies to provide academic accommodations/adjustments to meet the needs of students with disabilities. Focuses on specific classroom and curriculum strategies for adapting instruction to meet the needs of students with disabilities.]

[EDUC 450(4500) Education Technology

Fall. 3 credits. Letter grades. M W 10:10–11:25. W. Camp.

Gives future educators the skills necessary to use current technology in educational settings. Focuses on examining how applying technology in the classroom can be used to enhance students' understanding of course content. Course participants compile an electronic portfolio demonstrating skills developed throughout the semester. A quarter of the class time is lecture and discussion focused on the current use of technology in the classroom. The remainder of the time is spent in lab completing hands-on projects.]

EDUC 451(4510) Multicultural Issues in Education

Fall. 3 credits. Letter grades. Lec, M W 2:55–4:10. S. K. Kroma.

Explores issues pertaining to teaching and learning in multicultural classrooms in American schools. Examines events that have shaped contemporary American society, the educational policies and practices that affect the cultural diversity that has emerged, and the teacher's role in dealing with cross-cultural issues in the classroom.

EDUC 452(4520) Multicultural Issues in Secondary Education

Fall. 1 credit. Prerequisites: EDUC 451 and permission of instructor. Letter grades. S. K. Kroma.

Students spend two out-of-class hours a week in a classroom setting in the Ithaca school community and write a project on

culturally responsive teaching based on their experience.

EDUC 459(4590) Educational innovations in Africa and the Diaspora (also AS&RC 459[4601])

Fall. 3 credits; 4 in College of Arts and Sciences. T 10:10-12:35. N. Assié-Lumumba.

Deals with educational innovations geared to promoting equal opportunity based on gender, race and class, in Africa and the African Diaspora. After introducing the concepts and theories of education and innovations and the stages of innovation as planned change, the course focus on concrete cases and different types of educational innovations. Selected case studies, in the United States, include the creation and expansion of historically black institutions with a focus on Tuskegee Institute (now Tuskegee University), Lincoln University, Spelman College, and the Westside Preparatory School in Chicago. The African cases studied include African languages for instruction in Nigeria, science education also in Nigeria, Ujamaa and education for self-reliance in Tanzania, classroom action research in Lesotho, Information Communication Technologies (ICTs) in African higher education with a focus on African Virtual Universities (AVU), the application of the Global Development Learning Network (GDLN) in Côte d'Ivoire, and OnLine learning in South Africa.

EDUC 463(4630) Policies, Practices, and Critical Issues of Distance Learning in Developing Countries

Spring. 3 credits. S-U grades optional. T 2:00-4:25. N. Assié-Lumumba.

Distance learning is increasingly being adopted to respond to the high demand for education in developing countries. This course critically analyzes distance education for the general population as well as specific social and professional categories. A typology of the ICTs (information and communication technologies) used and the different forms of virtual learning institutions are examined. Case studies include single-mode and dual-mode institutions in Africa, Asia, and Latin American countries and also eLearning programs designed in industrial countries for developing countries.

EDUC 494(4940) Special Topics in Education

Fall or spring. 4 credits max. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department before the semester starts. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

EDUC 497(4970) Individual Study in Education

Fall or spring. 1-3 credits. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall). Staff.

A student may, with approval of a faculty adviser, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

EDUC 498(4980) Undergraduate Teaching

Fall or spring. 1 or 2 credits; 4 credits max. during undergraduate career. Prerequisite: GPA of at least 2.7. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall). Staff.

Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

EDUC 499(4990) Undergraduate Research

Fall or spring. 6 credits max. during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Prerequisite: junior or senior standing; GPA at least 2.7. Students must register using independent study form (available in 140 Roberts Hall). Staff.

Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

EDUC 502(5020) Education and Development in Africa (also AS&RC 502[5020])

Spring. 3 credits; 4 in College of Arts and Sciences. S-U grades optional. T 2:00-4:25. N. Assié-Lumumba.

Examines the relationship between education and individual and national development. Besides human capital theory, different paradigms of development, including modernization and dependency theories, and Third World Forum, are examined. Issues discussed include schooling and nonformal education; the role of primary, secondary, and higher education in development; and the issues related to employment, national migration and international brain drain, language, equity in access, output, and outcome based on social class, ethnicity, race, gender, and nationality. Finally, the information and communication technologies (ICTs), indigenous knowledge systems, and the role of higher education in the national, regional, and international contexts and cooperation are discussed.

EDUC 503(5030) Diversity in the Classroom

Fall, spring, or summer. 1 credit for each seminar. Prerequisite: admission to CTE program. S-U grades optional. Disc. TBA. S. Kroma.

Builds on knowledge of literacy and diversity gained from course work and field activities in the CTE program. Students review literacy development, cultural diversity, learning style preferences, fieldwork experiences, and strategies for accommodating difference in teaching.

EDUC 504(5040) Research Experience for Teachers (also PL BR/BIO G 504[5040])

Spring. 3 credits. Prerequisites: appropriate science major, 6 credits education or educational psychology course work, and permission of instructor. Intended for, but not restricted to, students in M.A.T. degree

program, practicing teachers, and students considering becoming teachers. S-U or letter grades. T. Fulton.

Students work in a laboratory with a research team for the semester. Research experiences are accompanied by weekly discussions and readings. Students explore how research is conducted, how formal scientific discourse and informal communication occur and differ, and how these topics can be conveyed during classroom teaching.

EDUC 523(5230) Food and Fiber Across the Curriculum

Summer, July 19-23, M-F (four overnights, on the road). 1-3 credits; offered at graduate level for 1-3 credits; 1 credit granted for satisfactorily completing course. Additional credits require completion of special project agreed on by instructor. Expenses for food and incidentals are responsibility of participants; lodging, course materials, and transportation provided. W. Camp.

Intensive five-day course focusing on agriculture and food systems as a classroom on wheels. Designed to help teachers, administrators, graduate students, extension agents, and other educators understand the complexity of the agriculture and food system. Students travel throughout upstate New York visiting farms of all types, forests, food processors, food retailers, and agriculture research and education centers. Participants explore agriculture, global and local food systems, issues of sustainability, environment and natural resources, and careers in agriculture. Students visit all aspects of the food and fiber system and explore a variety of marketing and distribution models. The integration of agriculture and food systems into the core disciplines of math, science, English, language arts, social studies, the arts, family and consumer sciences, health, physical education, technology, and career exploration—while meeting all the State Learning Standards at the local level—is a course priority.

EDUC 532(5320) Educational Programs in Agricultural Science

Fall. 3 credits. R 3-5:25. W. Camp.

Overview of the organization and planning processes necessary to operate a successful agricultural science education program in the public schools. Topics include local needs assessments, agricultural advisory boards, community-partnering strategies, program planning, course development, sequencing instruction, professional development. Fieldwork provides experience with New York agricultural education students, teachers, and programs.

EDUC 548(5480) Effective College Teaching

Spring. 1-3 credits. S-U grades optional. T 5-7. D. Way.

Designed to help participants become more effective college teachers. Examines the basic principle of learning, identifies different learning styles, and explores a variety of teaching techniques, methods, and technologies. Participants also learn how to design a course and improve their effectiveness as teachers.

EDUC 571(5710) Social and Political Context of American Education

Fall. 3 credits. Prerequisites: admission to Cornell Teacher Education Program or permission of instructor. T R 1:25–2:40. J. W. Sipple.

Examines the goals, roles, inputs, and outcomes of schooling in American society, and the policy environment in which schools operate. Analyzes controversies and tensions (e.g., equity, market forces, state control) surrounding public education at local, state, and federal levels. Includes current and historical, urban and rural issues and problems.

EDUC 578(5780) International Teaching Assistant Development Program (ITADP) Training Course: Cross-Cultural Classroom Dynamics, Pronunciation, and Language, Video Teaching Practicum

Fall and spring. 2 credits. S-U grades only. TBA. ITADP staff.

Designed for first-time international teaching assistants from countries in which English is not the primary language. Focuses on three areas: cross-cultural classroom dynamics, video teaching practicum, and language—enhancing communicative competence in English. Through small-group seminars and individual conferences, the ITADP helps international teaching assistants develop their linguistic and pedagogical skills as they gain sensitivity to the dynamics of U.S. classrooms.

EDUC 579(5790) Further Training for International Teaching Assistants

Fall, spring, summer. 2 credits. Prerequisite: EDUC 578. S-U grades optional. Lec, TBA: 3 contact hours per week. ITADP staff.

Designed for international teaching assistants from countries in which English is not the primary language and who have completed EDUC 578, the ITADP follow-up course provides further instruction and practice in oral English and pedagogical skills.

EDUC 601(6010) Secondary Agriculture, Science, and Mathematics Teaching Practicum

Fall or spring. 6 credits. Prerequisite: graduate students enrolled in Teacher Education in Science and Mathematics Program; permission of instructor. S-U grades only. M T W R F 8:00–3:00. S. C. Piliero, D. J. Trumbull, B. A. Crawford, and W. Camp.

Supervised student teaching in agriculture, mathematics or science at the secondary level. Program includes teaching in a local school for 14 weeks.

EDUC 602(6020) Practicum Seminar

Fall or spring. 9 credits. Co-requisite: EDUC 601 or permission of instructor. M T W R F 9:00–3:00. W. Camp, B. A. Crawford, D. J. Trumbull, and S. C. Piliero.

Begins with full-day sessions of intensive consideration of theoretical frameworks relevant to all aspects of student teaching. Assignments and an online seminar during the semester require students to use those theories to develop and evaluate teaching materials and practices. Students complete an extensive portfolio documenting their work.

EDUC 603(6030) Inquiry Science Outreach in Secondary Schools (also NTRES 603[6030])

Fall or spring. 1 credit. Prerequisite: recipients of fellowship from Cornell Science Inquiry Partnerships (CSIP) program. S-U grades. N. Trautmann, L. Tompkins, and M. Krasny.

Prepares graduate students who receive Cornell Science Inquiry Partnerships fellowships for outreach work in high school and middle school science classes. Participants explore effective strategies for inquiry-based learning and review core educational issues such as learning standards, working with students of various ability levels, and assessing student learning.

EDUC 614(6140) Gender, Context, and Epistemological Development (also FGSS 624[6240])

Fall. 3 credits. S-U grades optional. T 12:20–2:15. D. E. Schrader.

Insight into how individuals make sense of knowledge is essential to teaching and learning. This course examines theories of personal epistemology and their implications for educating students across the life span. Places particular emphasis on the role of gender and contextual influences on the development of thought and on metacognitive development.

EDUC 620(6200) Internship in Education

Fall or spring. 1–6 credits. S-U grades optional. Each student, before course enrollment, must obtain approval of faculty member who will assume responsibility for supervising work. Staff.

Opportunity for practical experience in educational professions development.

EDUC 621(6210) Work-Experience Coordinator Certification Course I

Summer. 3 credits. Prerequisite for EDUC 622. S-U grades optional. Staff.

First of a two-course sequence designed to develop the competencies needed for certification as a coordinator of diversified cooperative work experience programs. Focuses on the history and philosophy, types, operation, and evaluation of work-experience programs including articulation with JPTA and VESID. Requires field interviews.

EDUC 622(6220) Work-Experience Coordinator Certification Course II

Summer. 3 credits. Prerequisite: EDUC 621. Staff.

Second course for certification as a diversified cooperative work experience coordinator combines course work and directed field experience leading to the planning, development, and approval of a work-experience program in a local educational agency. Development of a philosophy and policy statement, budget, curriculum for related instruction, annual work plan by function, promotional materials, and all program forms for Board of Education approval required.

EDUC 630[6300] Special Problems in Agricultural, Extension, and Adult Education

Fall or spring; may also be offered in summer. 1–3 credits. S-U grades optional. Staff.

Provides an opportunity for graduate-level study of individually selected problems and issues in agricultural, extension, and adult education.

[EDUC 632[6320] Teaching Agricultural, Extension, and Adult Education

Summer. 3 credits. Prerequisite: introductory teaching methods course or permission of instructor. Staff.

Focuses on the selection, use, and evaluation of methods and materials for teaching. Covers methods for group and informal instruction. Provides an opportunity for students to develop teaching competence based on their individual needs and interests. Develops self-evaluation skills. Class project on the development of instructional materials required.]

EDUC 633(6330) Program Planning in Adult and Extension Education

Spring. 3 credits. S-U grades optional. Lec, R 4–6:30. Offered alternate years beginning spring 2006. A. Wilson.

Examines current social and economic conditions affecting agricultural, extension, and adult education. Applies principles, objectives, strategies, and sources of information to program planning. Participants have an opportunity to observe ongoing programs in agricultural, extension, and adult education and to pursue individual interests in program development and improvement.

[EDUC 635(6350) Experiential Learning

Fall. 2 credits. Prerequisite: for undergraduates, permission of instructor. S-U grades optional. T 12:20–2:15. Not offered 2004–2005. Staff.

Participants explore various dimensions of scholar and practitioner thinking about the understanding and practice of experiential learning. Theoretical perspectives on experiential education, reflective practice, and a critical learning systems perspective are explored through readings and applied assignments. The instructor introduces methods of facilitation designed to encourage inquiry and dialogue for improvement of both nonformal and formal educational activities. The course process is intended to engage participants in reflective dialogue—nurturing emergence of learning community elements.]

[EDUC 645(6450) Curriculum for a Diverse and Technological Society

Spring. 3 credits. Letter grades only. Disc, TBA. Staff.

Examines basic curriculum concepts, principles, and theories. Gives special emphasis to the ways diversity and technology drive changes in the development of curriculum. Each student chooses a particular curriculum for analysis as a project. Within that context, theoretical perspectives on curriculum and the basic elements of any curriculum are discussed.]

EDUC 661(6610) Administration Leadership and Organizational Change

Fall. 3 credits. T 3:35–6:00. J. W. Sipple.

Perspectives on the administration of educational organizations. Considers social science, legal and ethical theories, and their application to both public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of educational organizations.

EDUC 671(6710) American School Reform: Organizational and Sociological Perspectives

Spring. 3 credits. S-U grades optional. Lec. M 1:55-4:25. J. W. Supple.

For individuals interested in the role of schools in society and in organizational behavior and public policy. This seminar investigates the sociological functions of schooling, including the stability of school organization given the long history of policy initiatives designed to reform schools. The focus is American K-12 public education, though issues of pre-K, private, and post-secondary education are covered.

EDUC 680(6800) Foundations of Adult and Extension Education

Fall. 3 credits. Limited to 20 students. S-U grades optional. R 4-6:30. Offered alternate years beginning fall 2005. A. Wilson.

Analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings. Examines definitions, conceptual controversies, philosophical issues, and current research directions through a seminar approach.

EDUC 682(6820) Community Education and Development

Fall. 3 credits. Limited to 25 students. Letter grades only. W 1:25-4:25. S. Peters.

Critical study of the democratic purposes and practices of educators in community and economic development, with a special focus on the role of education in community organizing. Key philosophies and traditions of community education and development are analyzed in their historical, cultural, social, and political context, with an eye toward implications for contemporary practice.

EDUC 683(6830) Adult Education and Globalization: Comparative Perspectives

Spring. 3 credits. S-U grades optional. T 1:25-3:55. M. Kroma.

Examines the interconnections between particular economic and political systems as key to understanding the relationships of adult education to society. Employing a critical framework, the course explores emerging local, regional and national responses in adult education that are planting seeds of change and creativity in ways that are nurturing new forms of educational life in the context of globalization. Particular attention is paid to modes of social analyses that explore the relationship between adult education and social structural factors, including gender, race and class, to inform a sense of place and social location.

EDUC 685(6850) Training and Development: Theory and Practice (also IARD 685[6850])

Spring. 4 credits. S-U grades optional. F 9:05-12:05. M. Kroma.

Prepares professionals to design, administer and facilitate training programs responsive to the challenges of sustainability in our world system. Focuses on the theory and practice of training for the development of human resources in small farm agriculture, rural health and nutrition and literacy. Through in-depth discursive critiques of selected readings, students develop insights into the range of methods and strategies employed in situation analysis, the analysis of socioeconomic,

sociocultural, and sociopolitical contexts of training programs; facilitation of participatory training programs for the development of human resources in small holder agriculture, rural health and nutrition, and community building. The specific role of training/education in larger change-promoting systems is also explored. The course is appropriate for persons likely to be playing professional roles as educator-trainers, scientists, administrators, and social organizers in rural and agricultural development programs in international as well as domestic contexts.

EDUC 694(6940) Special Topics in Education

Fall, spring, or summer. 1-3 credits.

Prerequisite: permission of instructor. S-U grades optional. Staff.

Topics TBA.

EDUC 700(7000) Directed Readings

Fall or spring. 6 credits, variable.

Prerequisite: graduate standing; permission of instructor. S-U grades optional. Staff.

For study that predominantly involves library research and independent study.

EDUC 701(7010) Empirical Research

Fall or spring. 6 credits, variable.

Prerequisite: graduate standing; permission of instructor. S-U grades optional. Staff.

For study that primarily involves collection and analysis of research data.

EDUC 702(7020) Practicum

Fall or spring. 6 credits, variable.

Prerequisite: graduate standing; permission of instructor. S-U grades optional. Staff.

For study that predominantly involves field experience in community settings.

EDUC 703(7030) Teaching Assistantship

Fall or spring. 6 credits, variable.

Prerequisite: graduate standing; permission of instructor. S-U grades optional. Staff.

For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

EDUC 704(7040) Research Assistantship

Fall or spring. 6 credits, variable.

Prerequisite: graduate standing; permission of instructor. S-U grades optional. Staff.

For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

EDUC 705(7050) Extension Assistantship

Fall or spring. 6 credits, variable.

Prerequisite: graduate standing; permission of instructor. S-U grades optional. Staff.

For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

[EDUC 714(7140) Moral Development and Education

Spring. 3 credits. S-U grades optional. T 12:20-2:15. D. E. Schrader.

Seminar exploring moral psychology from cognitive developmental, social contextual, normative, and feminist perspectives. Topics vary by semester, yet all semesters discuss theoretical and empirical studies of the development of moral reasoning, gender differences, cultural context, the relationship between moral judgment and moral action, the development of the self in relation to others and to society, and moral education. Emphasis is on development in adolescence through adulthood.]

EDUC 718(7180) Adult Learning and Development

Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. W 2-4:25. Staff.

Deals with adult development and learning from points of view of educational psychology, sociology, and adult education. Draws inferences from theory and research to the practice of adult and extension education. Appropriate for graduate students in adult and extension education and community service education, and for others interested in adult learning and development.

[EDUC 730(7300) Seminar in Agricultural, Extension, and Adult Education

Spring. 3 credits. S-U grades optional. R 8-9:55. S. Peters.

Emphasizes current problems and research in agricultural, extension, and adult education. Includes discussion and analysis of student and staff research.]

EDUC 762(7620) Comparative and International Education

Fall. 3 credits. S-U grades optional. M 2-4:25. N. Assie-Lumumba.

Seminar that critically analyzes education conceived both as a universal social institution and a reflection of cultural, economic, and political dynamics of the local and global contexts. The analysis focuses on policies, organization, and the functioning of education in industrial, new/emerging economies, and developing countries. Specific case studies are drawn from different countries.

EDUC 783(7830) Farmer-Centered Research and Extension (also IARD 783[7830])

Fall. 3 credits. S-U grades optional. M. Kroma.

Forum for discussion and critical analyses of participatory research and extension approaches in agriculture and natural resource management in the complex and diverse environments characteristic of many developing countries. Theoretical and philosophical arguments that underpin participatory research and extension, as well as current tools and techniques for facilitating participation and social learning are examined. Case studies and individual projects related to farmer-centered research and extension provide a focus for analyses. The course also explores and pays special attention to the challenges and opportunities related to institutionalization of participatory research and extension for sustainable agriculture and natural resource management.

EDUC 800(8900) Master's-Level Thesis Research

Fall or spring. Credit TBA. Each student, before course enrollment, must obtain approval of faculty member who will assume responsibility for guiding work. S-U grades optional. Times TBA. Staff.

EDUC 900(9900) Doctoral-Level Thesis Research

Fall or spring. Credit TBA. Each student, before course enrollment, must obtain approval of faculty member who will assume responsibility for guiding work. S-U grades optional. Times TBA. Staff.

Doctoral or other research and development projects for Ph.D. students.

ENTOMOLOGY

J. P. Nyrop, chair (2130 Comstock Hall, 255-7723); A. M. Agnello, A. Agrawal, N. W. Calderone, B. N. Danforth, A. DiTommaso, T. Eisner, G. M. English-Loeb, J. Ever, P. P. Feeny, C. Gilbert, A. E. Hajek, L. C. Harrington, G. W. Hudler, B. P. Lazzaro, J. K. Liebherr, C. Linn, J. E. Losey, M. Luckow, D. Pimentel, L. S. Rayor, J. P. Sanderson, J. G. Scott, E. J. Shields, J. S. Thaler, W. M. Tingey, P. A. Weston

Courses by Subject

Apiculture: 260, 264
 Behavior: 215, 315, 325, 394, 471, 662
 Conservation: 344
 Ecology: 369, 452, 455, 470, 672
 Introductory courses: 201, 210, 212, 215, 241
 Medical and veterinary entomology: 210, 352, 652
 Morphology: 322
 Pathology: 463, 670
 Pest management: 241, 277, 441, 443, 444, 477, 644, 670
 Physiology, development, and toxicology: 370, 394, 400, 483, 490, 685
 Systematics: 331, 333, 453, 634, 635

Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible. Check the web site for updates.

ENTOM 201(2010) Alien Empire: Bizarre Biology of Bugs

Spring. 2 credits. Limited to 100 students. S-U grades optional. Lec, T R 9:05; optional field trips, required lab demonstrations. B. N. Danforth.

Insects are the most abundant and diverse animals on earth. This course explores the bizarre biology of insects by examining their evolutionary history, anatomy, development, feeding habits, life-history strategies, behavior, and their interactions with humans (both positive and negative) through history. Optional field trips and one open lab provide hands-on opportunities for examining these amazing animals.

ENTOM 210(2100) Plagues and People

Fall. 2 or 3 credits. Prerequisites: introductory biology or permission of instructor. Lec, M W F 2:30-3:20. Offered alternate years; not offered 2006-2007. L. C. Harrington.

Human diseases transmitted by insects and related forms (arthropods) have affected human lives and society through history. This course focuses on the pathogens, parasites, and arthropods causing human plagues. Those plagues that have had the greatest impact on human culture and expression are emphasized. Lectures are supplemented with readings and films. Also addresses emerging diseases, bioterrorism, and future plagues. Students taking the course for 3 credits participate in readings, presentations/discussions each week (on Fridays), weekly readings quizzes, and have a comprehensive final project.

ENTOM 212(2120) Insect Biology

Fall. 4 credits. Pre- or co-requisites: BIO G 101-102 or equivalent. Lec, T R 11:15-12:05; lab, T W or R 1:25-4:25. Lab fee: \$38. J. P. Sanderson.

Introduces the science of entomology by focusing on basic principles of systematics, morphology, physiology, behavior, and ecology of insects. The laboratory in early

fall includes field trips to collect and study insects in the natural environment. Requires a collection emphasizing ecological, behavioral, and taxonomic categories.

ENTOM 215(2150) Spider Biology: Life on a Silken Thread

Fall. 2 credits. Prerequisite: introductory biology or permission of instructor. S-U grades optional. Lec, W F 1:25-2:15. L. S. Rayor.

Introduction to the fascinating world of spiders. Explores evolution, ecology, behavior, and physiology of spiders and their close kin from a modern perspective. Topics include identification of major spider families, spiders' unique use of silk, risky courtship, predatory behavior, diverse life styles, social spiders, and potential use in IPM.

ENTOM 241(2410) Insect Pest Management for Practitioners

Spring. 3 credits. Limited to 18 students. Prerequisites: BIO G 101-102 or equivalent. Lec, T R 10:10-11; lab/disc, T 12:20-3:15. W. M. Tingey.

Introduction to insect pest management in plant or animal protection for those preparing for careers in extension, service, and production. Emphasizes pest monitoring, sight identification, diagnosis, decision-making, and management tactics for the major groups of insect and arthropod pests affecting field, forage, and vegetable crops; floriculture, woody ornamentals, and turf; urban environments and public health; veterinary, dairy, livestock, and poultry. Five off-campus laboratory field trips with demonstrations of pest management decision-making, pest-monitoring tools, and pesticide-application equipment.

[ENTOM 260(2600) Introductory Beekeeping

Fall. 2 credits. Lec, T R 11:15-12:05. Offered alternate years; not offered 2006-2007. N. W. Calderone.

Introduces students to the life history, physiology, and behavior of honey bees, as well as to the fundamentals of practical beekeeping. Reviews classical and contemporary research on the dance language, chemical communication, behavioral genetics, division of labor, and evolution of social behavior. Also includes lectures on pollination of agricultural crops, honey and beeswax, bees in ancient and modern rituals, Africanized honey bees, and insect politics.]

[ENTOM 264(2640) Practical Beekeeping

Fall. 1 credit. Limited to 20 students. Pre- or co-requisite: ENTOM 260. Lab, R 2-4:25. Offered alternate years; not offered 2006-2007. N. W. Calderone.

Consists of 14 laboratory sessions that acquaint students with practical methods of colony management. Laboratories involve hands-on work with honey bee colonies and equipment. Topics include management of bees for apple pollination, honey harvesting and processing, and disease identification/control. The class makes a number of field trips to commercial beekeeping operations. Students conduct simple experiments to demonstrate color perception by bees, as well as the chemical basis for swarming, nest guarding, and mating.]

ENTOM 277(2770) Natural Enemies: An Introduction to Biological Control

Spring. 2-3 credits. S-U grades optional. Lec, T R 1:25-2:15; lab, demonstration; optional field trip. Optional disc session for 1 credit. A. E. Hajek and J. P. Nyrop.

Introduces students to the dynamic field of biological control: What it is, when should it be used, and how to use it safely. This course covers a diversity of types of biological control, including use of parasitoids, predators, pathogens and antagonists to control pests form microbes to weeds to invertebrates and vertebrates. This course is intended for students curious about the biology and ecology of these organisms and their practical use. Students are not allowed to take both ENTOM 277 and ENTOM 377 for credit.

ENTOM 315(3150) Spider Biology

Fall. 3 credits. Prerequisite: introductory biology or permission of instructor. Letter grades only. Lec, M W F 1:25-2:15. L. S. Rayor.

In-depth introduction to the fascinating world of spiders and their relatives. Meets concurrently with ENTOM 215 (2 credits). Students in ENTOM 315 meet for another hour with additional coverage of current topics in arachnology and developing spider identification skills. Entomology majors and biology majors in the Insect Biology Program of Study should take ENTOM 315 rather than 215. Students may not take both ENTOM 215 and 315 for credit.

[ENTOM 322(3220) Comparative Insect Morphology

Spring. 4 credits. Prerequisite: ENTOM 212 or 241. Lec, T R 9:05-9:55; lab, T R 1:25-4:25. Offered alternate years; not offered 2005-2006; next offered 2006-2007. B. N. Danforth.

Provides a detailed introduction to the external and internal anatomy of insects. Lectures introduce basic concepts in insect morphology, such as the organization of the insect body plan and organ systems, functional morphology, homology, phylogeny, modularity, and development. The lab introduces students to the basic methods of insect microdissection, specimen preparation, and scientific illustration. High-quality, publishable illustrations are produced based on student artwork.]

[ENTOM 325(3250) Insect Behavior

Spring. 3 credits. Prerequisite: introductory biology and either ENTOM 212 or BIONB 221. Lec, T R 10:10-11:25. Offered alternate years; not offered 2005-2006; next offered 2006-2007. L. S. Rayor.

Insects are the most diverse organisms on earth, with equally diverse behavior. This course explores the behavior of insects, ranging from the individual sensory and physiological mechanisms that are the basis of insect behavior, to the behavioral dynamics of foraging, courtship, parental care, and social behavior. Topics include insect learning, perceptual abilities, host finding strategies, predation, pollination, and examination of current issues in insect behavior.]

[ENTOM 331(3310) Introductory Insect Systematics

Spring. 4 credits. Prerequisite: ENTOM 212. Lec, T R 12:20-1:10; lab, T R 1:25-4:25. Lab fee: \$50. Offered alternate years; not offered 2005-2006; next offered 2007-2008. Staff.

Introduction to the classification, evolutionary history, and distribution of insects. Includes

lab practice in the identification of orders, families, and representative genera of insects; methods of collection, preservation, and study. Lectures cover theory and practice of insect systematics and major features of insect evolution. Insect collections required.]

ENTOM 333(3330) Maggots, Grubs, and Cutworms: Larval Insect Biology

Spring. 3 credits. Prerequisites: ENTOM 212 or permission of instructor. S-U grades optional. Lec, T R 11:15-12:05; lab, T 1:25-4:25. Offered alternate years; not offered 2006-2007. J. K. Liebherr.

The evolutionary history of the Holometabola has been greatly informed by attributes of their larvae. This course introduces students to the biology, anatomy, and natural history of holometabolous insect larvae. The lab includes field sampling, curation of field-collected specimens, and identification of unknowns. Development of a small larval collection required.

ENTOM 335(3350) Naturalist Outreach in Biology

ENTOM 344(3440) Insect Conservation Biology

Spring. 3 credits. Prerequisite: entomology or conservation biology course or permission of instructor. S-U grades optional. Lec, T R 10:10-11:25. Offered alternate years; not offered 2006-2007. J. E. Losey.

In-depth look at the concepts and issues surrounding the conservation of insects and other invertebrates. Topics include sampling rare populations; insect conservation genetics; the role of phylogeny in determining conservation priorities; refuge design; saving individual species; plus the unique political, social, and ethical aspects of insect conservation and preservation of their ecological services (i.e., pollination, decomposition, pest suppression, and insectivore food sources).

[ENTOM 352(3520) Medical and Veterinary Entomology]

Fall. 4 credits. Prerequisites: BIO G 101-102 or permission of instructor. S-U grades optional. Lec, T R 10:10-11; lab, R 1:25-4:25. Offered alternate years; not offered 2005-2006; next offered 2006-2007. L. C. Harrington.

Diseases resulting from arthropod-borne pathogens (such as malaria, dengue, and yellow fever) cause considerable human and animal suffering and death worldwide. This course explores the impact of vector-borne disease and provides a comprehensive overview of the fields of medical and veterinary entomology. The goal is to encourage an understanding of evolutionary and ecological issues associated with disease transmission. The laboratory includes field trips, collection and identification of arthropods of medical/veterinary importance, and hands-on experience with modern laboratory research methods. Undergraduate and graduate students from entomology as well as other disciplines including pre-medical and veterinary students are encouraged to enroll.]

ENTOM 369(3690) Chemical Ecology (also BIOEE/BIONB 369[3690])

Spring. 3 credits. Prerequisites: one semester of introductory biology for majors or nonmajors and one semester of introductory chemistry for majors or nonmajors or equivalents, or permission of

instructor. S-U grades optional. Lec, M W F 11:15-12:05. A. Agrawal, G. Jander, A. Kessler, and J. Thaler.

Why are chilies so spicy? This course examines the chemical basis of interactions between species and is intended for students with a basic knowledge of chemistry and biology. Focuses on the ecology and chemistry of plants, animals, and microbes. Stresses chemical signals used in diverse ecosystems, using Darwinian natural selection as a framework. Topics include: plant defenses, microbial warfare, communication in marine organisms, and human pheromones.

[ENTOM 370(3700) Pesticides, the Environment, and Human Health (also TOX 370[3700])]

Fall. 2 credits. Prerequisites: BIO G 101-102 or equivalent. Lec, T R 9:05. Offered alternate years; not offered 2005-2006; next offered 2006-2007. J. G. Scott.

Survey of the different types of pesticides, their uses, properties, and effects on the environment. Discusses the risks, benefits, regulation, politics, and current controversies associated with pesticide use and genetically modified crops.]

ENTOM 394(3940) Circadian Rhythms (also BIOGD/BIONB/PL PA 394[3940])

Fall. 2 credits. Prerequisite: 200-level biology course. S-U grades optional. Lec, T 10:10-11:50. K. Lee (fall, even years) and J. Ewer (fall, odd years).

Explores a fundamental feature of living organisms from all kingdoms: how the cellular 24-hour biological clock operates and influences biological activities. Covers fundamental properties of biological rhythms and cellular and molecular structure of circadian oscillators in many organisms, including cyanobacteria, fungi, insects, plants, reptiles, birds, and mammals (including humans).

ENTOM 400(4000) Insect Development (also BIOGD 402[4020])

Spring. 4 credits. Prerequisite: ENTOM 212 or BIOGD 281 or permission of instructor. S-U grades optional. Lec, M W 11:15-12:05; lab, M 12:20-3:20; disc, F 11:15-12:05. Offered alternate years; not offered 2006-2007. J. Ewer.

Emphasizes the mechanisms that underlie embryonic and post-embryonic developmental processes of insects. The portion of the course on embryonic development leans heavily on knowledge obtained from *Drosophila* but also covers more classical studies as well as recent advances exploring the molecular basis for the evolution of body plan. The post-embryonic development portion covers the control of growth, molting, and metamorphosis. The lab uses modern techniques to illustrate developmental events at the organismal and cellular level. The discussion section involves the analysis and presentation of primary research papers.

[ENTOM 443(4430) Entomology and Pathology of Trees and Shrubs (also PL PA 443[4430])]

Fall. 4 credits. Prerequisites: ENTOM 212 or equivalent and PL PA 241 or equivalent. S-U grades optional. Lec, M W F 11:15-12:05; lab, F 1:25-4:25; evening prelims. Offered alternate years; not offered 2005-2006; next offered 2006-2007. P. A. Weston and G. W. Hudler.

For students preparing for careers in horticulture, urban forestry, pest management,

and natural history/science education. Deals with the nature, diagnosis, assessment, and management of insect and disease pests on trees and shrubs in forests, urban landscapes, Christmas tree plantations, and other sites where intensive pest management is practiced.]

ENTOM 444(4440) Integrated Pest Management (also CSS 444[4440])

Fall. 4 credits. Prerequisite: introductory biology or permission of instructor. Lec, M W F 9:05-9:55; lab, M 1:25-4:25. J. E. Losey and A. DiTommaso.

Lectures integrate the principles of pest control, ecology, and economics in the management of pests across multiple systems. Labs consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

[ENTOM 452(4520) Herbivores and Plants: Chemical Ecology and Coevolution (also BIOEE 452[4520])]

Spring. 3 credits. Prerequisites: one year introductory biology; BIOEE 261; CHEM 257 or 357/358 and 251 or 301; or permission of instructor. Lec, M W F 11:15-12:05. Offered alternate years; not offered 2005-2006; next offered 2006-2007. P. P. Feeny.

Significance of plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant finding and exploitation by animals, especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack; implications for human food and agriculture.]

ENTOM 453(4530) Principles and Practice of Historical Biogeography (also BIOPL 453[4530])

Fall. 3 credits. Prerequisite: systematics course or permission of instructor. S-U grades optional. Lec, T R 10:10-11; lab, T 1:25-4:25. Offered alternate years; not offered 2006-2007. J. K. Liebherr and M. Luckow.

Survey of techniques in historical biogeography, and the development of modern biogeographic theory in the context of classical, ecological, and phylogenetic analytical methods. Presents geological and paleontological aspects of biogeography and discusses large-scale biogeographic patterns. Labs focus on computer applications and discussion of controversial issues.

ENTOM 455(4550) Insect Ecology (also BIOEE 455[4550])

Fall. 3 credits. Recommended: ENTOM 212 or BIOEE 261 or permission of instructor. S-U grades optional. Lec, T R 9:05-9:55; lab, T 1:25-4:25. Offered alternate years; not offered 2006-2007. J. S. Thaler.

Focuses on individual and population aspects of insect ecology as well as some topics in community and ecosystem ecology. Stresses the importance of interactions with the biotic and abiotic environment stressed. Laboratory includes indoor and outdoor field trips illustrating the major concepts in insect ecology as well as experimental techniques.

ENTOM 463(4630) Invertebrate Pathology

Spring. 4 credits. Prerequisites: one year introductory biology. S-U grades optional. Lec, M W F 9:05-9:55; lab, W 1:25-4:25. Offered alternate years; not offered 2006-2007. A. E. Hajek.

Lecture presents principles of pathology as applied to invertebrates. Topics include noninfectious and infectious diseases caused by viruses, bacteria, fungi, protozoa, and nematodes, epizootiology of insect diseases, and use of pathogens for control. Lab involves a diversity of pathogens and hosts using techniques such as microinjection, electrophoresis, immunoassay, density gradient centrifugation, soil extraction, and computer simulation.

[ENTOM 470(4700) Ecological Genetics]

Spring. 3 credits. Prerequisites: BIOEE 278 or permission of instructor. S-U grades optional. Offered alternate years; next offered 2006–2007. Lec, T R 11:40–12:55. B. P. Lazzaro.

Focuses on the application of population genetic concepts in ecological or applied contexts. Emphasizes measuring adaptation in natural populations, detecting the effects of population demography, and determining the genetic basis of quantitative traits. Draws examples from primary research on animals and plants to illustrate experimental techniques and methods of data analysis on single-gene, multi-locus and genome-wide scales.]

[ENTOM 477(4770) Biological Control]

Spring. 3 credits. Prerequisites: ENTOM 212, BIOEE 261, and permission of instructor. Lec, T R 9:05–9:50; lab, T 1:25–4:15. Offered alternate years; not offered 2005–2006; next offered 2006–2007. J. Nyrop and A. Hajek.

Lectures present case studies exploring classical biological control, augmentation and conservation, and applications of strategies to control arthropods and weeds. Labs focus on selected concepts in more depth using live organisms.]

[ENTOM 483(4830) Insect Physiology]

Fall. 4 credits. Prerequisite: ENTOM 212 or permission of instructor. Lec, M W F 11:15–12:05; lab, W 1:25–4:25 disc, TBA. Offered alternate years; not offered 2006–2007. C. Gilbert.

Introduction to the often unique ways in which insects have met their basic needs. Examines each organ system with emphasis on basic principles and specific examples. Also introduces students to some common methods used in physiological research and to the critical reading of scientific literature.

[ENTOM 490(4900) Toxicology of Insecticides (also TOX 490(4900))]

Spring. 3 credits. Prerequisite: general chemistry course. S-U grades optional. Lec, M W F 9:05–9:55. Offered alternate years; not offered 2005–2006; next offered 2006–2007. J. G. Scott.

History, metabolism, and mechanism of action of genetically modified, synthetic, and naturally occurring insecticides. Discusses insecticide resistance, resistance management, and new approaches to insect control with genetically modified organisms.]

[ENTOM 494(4940) Special Topics in Entomology]

Fall or spring. 4 credits max. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is

not to be offered more than twice under this number.

[ENTOM 497(4970) Individual Study in Entomology]

Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff.

[ENTOM 498(4980) Undergraduate Teaching]

Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff.

Undergraduate teaching assistance in an entomology course by agreement with the instructor. Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

[ENTOM 634(6340) Special Topics in Systematic Entomology]

Fall or spring; on demand. 2–4 credits.

Prerequisite: permission of instructor. Staff. Lectures on the classification, evolution, and bionomics of selected taxa, with accompanying laboratory studies on identification and comparative morphology. Collections sometimes required.

[ENTOM 635(6350) Insect Molecular Systematics]

Spring. 2 credits. Prerequisite: permission of instructor. Times TBA. Offered alternate years; not offered 2006–2007.

B. N. Danforth.

Analysis of DNA sequence variation can provide a powerful tool for resolving problems in insect systematics, from species-level taxonomic decisions to higher-level (ordinal) relationships. This course introduces students, through readings of the primary literature, to the basic methods of insect molecular systematics, including DNA extraction, gel electrophoresis, PCR, DNA purification, and DNA sequencing (manual and automated). Results are analyzed using available computer programs. Students are encouraged to collect preliminary data for thesis or post-doctoral research.

[ENTOM 644(6440) Advanced IPM: Theory and Implementation]

Spring. 1–4 credits. Prerequisites: upper-level undergraduate or graduate standing; intermediate backgrounds in IPM. (In special cases, students with little or no background in IPM seeking intensive instruction on a specialized topic may enroll with permission of instructor.) S-U grades optional. Lec, M W F 10:10. Coordinator: J. E. Losey.

Rotating series of four-week intensive modules on specialized topics. Topics range from basic ecology and genetics of pests and their natural enemies to specific strategies for pest management implementation. Each module is a unique unit and students may take any or all modules each time the course is offered. Prerequisites and grading procedures are determined by the instructor(s) of each module. Potential modules include: Insecticide Resistance and Resistance Management—J. Scott: Entomology (Ithaca); Crop Protection Decision Making—

J. Nyrop: Entomology (Geneva); Greenhouse and Floriculture IPM—J. Sanderson: Entomology (Ithaca); Agricultural Acarology—J. Sanderson: Entomology (Ithaca); Fruit Arthropod IPM Methods in New York—A. Agnello, G. English-Loeb: Entomology (Geneva); Plant Resistance—W. Tingey: Entomology (Ithaca); Aerial Sampling in Pest Management—E. Shields: Entomology (Ithaca); Conservation Biological Control—J. Nyrop and G. English-Loeb: Entomology (Geneva); Insect Population Ecology—J. Losey: Entomology (Ithaca); Veterinary Entomology—IPM Methods for New York—D. Rutz: Entomology (Ithaca); Chemical Conversations and Integrated Pest Management—C. Linn: Entomology (Geneva).

[ENTOM 652(6520) Seminar in Medical Entomology]

Fall. 1 credit. Prerequisite: permission of instructor or ENTOM 352. Disc, TBA. L. C. Harrington.

Addresses a variety of topics in the field of medical entomology. Weekly discussions of key papers on topics chosen by participating students and faculty.

[ENTOM 662(6620) Insect Behavior Seminar]

Spring. 2 credits. Prerequisites: permission of instructor or ENTOM 212 and BIONB 221 or equivalents. S-U grades optional. Offered alternate years; not offered 2005–2006; next offered 2006–2007. Times TBA. C. Gilbert.]

[ENTOM 670(6700) Seminar on Biological Control]

Fall. 1 credit. Prerequisite: ENTOM 463 or 644 or permission of instructor. S-U grades optional. Times TBA. Offered alternate years; not offered 2005–2006; next offered 2006–2007. A. E. Hajek.

Upper-level seminar series in biological control covering topics chosen by participating students and faculty. Weekly discussion groups with each participant presenting at least one oral report based on independent reading or research focusing on a central theme for the semester.]

[ENTOM 685(6850) Seminar in Insect Physiology]

Spring. 1 credit. Prerequisite: permission of instructor. S-U grades optional. Times TBA. Offered alternate years; next offered 2006–2007. C. Gilbert.]

[ENTOM 707(7070) Individual Study for Graduate Students]

Fall or spring. Credit TBA. Prerequisite: permission of instructor. Not for thesis research. Staff.

[ENTOM 709(7090) Teaching Entomology]

Credit TBA. Staff. Teaching entomology or for extension training.

[ENTOM 767(7670) Current Topics in Entomology]

Fall and spring. 1 credit. Requirement for first- and second-year entomology graduate students. S-U grades only. Staff.

After the Jugatae seminar, the students taking the course discuss the seminar and additional papers with the speakers from 4:30 to 5:30 in 2123 Comstock Hall.

ENTOM 800(8000) Master's-Level Thesis Research

Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Staff. Research at the master's level.

ENTOM 900(9000) Doctoral-Level Thesis Research

Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Staff. Research at the doctoral level.

Jugatae Seminar

Fall and spring. Seminar conducted by Jugatae, the entomology club of Cornell University, to discuss topics of interest to its members and guests. All interested undergraduate and graduate students are encouraged to attend.

FOOD SCIENCE

J. H. Hotchkiss, chair (119 Stocking Hall, 255-7912); T. E. Acree, D. M. Barbano, C. A. Batt, K. J. Boor, J. W. Brady, D. P. Brown, J. M. Brown, R. B. Gravani, T. Henick-Kling, H. T. Lawless, C. Y. Lee, R. H. Liu, D. D. Miller, C. I. Moraru, S. J. Mulvaney, J. M. Regenstein, S. S. H. Rizvi, J. S. Roberts, K. J. Siebert, M. Wiedmann

Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible.

FD SC 101(1010) Science and Technology of Foods

Fall. 1 credit. S-U grades only. M 1:25-2:15. J. H. Hotchkiss and staff.

Explores the application of science and technology to foods. Lectures elucidate the role of engineering, biotechnology, chemistry, biochemistry, nutrition, toxicology, and microbiology in supplying the world with safe and nutritious food. An overview of food science as a discipline and career choice is given.

FD SC 102(1020) Exploring Food Processing

Spring. 1 credit. S-U grades only. F 12:20, five field trips; one F 12:30-4:00, four F 12:30-5:30. D. P. Brown.

Series of seminars on current technological and regulatory developments in food science. Field trips to five commercial food manufacturing/processing plants are used to illustrate the application of current technologies. A course project, using the Food Science Alumni Network, is required.

FD SC 150(1500) Food Choices and Issues

Spring. 2 credits. S-U grades optional. T R 12:20-1:10. R. B. Gravani and D. D. Miller. Provides Cornell students with the knowledge needed to make healthy food choices. Topics include the U.S. food system; relationships between diet and health; food processing; food safety; and discussions of contemporary issues relating to food quality, safety, and nutrition. Students assess the nutritional quality of their personal diets and learn how to make changes to improve their eating habits.

FD SC 151(1510) Food and Health: Current Issues and Controversies

Spring. 1 credit. Limited to 25 students. Pre- or co-requisites: FD SC 150 or permission of instructors. S-U grades only. Disc, M 2:30-3:25. R. B. Gravani and D. D. Miller.

Discussion-based course designed to explore current issues and controversies that involve relationships between food and health. A required reading from the popular press or the scientific literature is assigned each week. S-U grades are based on attendance, overall participation, and the oral presentation. Topics may include the obesity epidemic, food irradiation, food safety, plant sterols, heart disease, eating disorders, functional foods, dietary supplements, food regulations, genetically modified foods, and other current issues. Several class discussions are held at a Cornell dining facility on selected Wednesday evenings during the semester.

FD SC 200(2000) Introductory Food Science

Fall. 3 credits. Prerequisite: college-level courses in chemistry and biology. Letter grades only. M W F 11:15-12:05.

J. H. Hotchkiss.

Comprehensive introduction to the principles and practice of food science and technology. Topics include chemistry of foods; nutritional significance; food formulation, preservation, and processing; microbiology and fermentations; composition and processing of food commodities; and contemporary issues including food safety, regulation, and world food needs. Stresses interrelationships between the chemical, physical, nutritional, and quality properties of foods as affected by formulation, processing, and packaging.

FD SC 210(2100) Food Analysis

Spring. 3 credits. Limited to 24 students. Prerequisite: CHEM 208 or equivalent. Lec, W F 1:25-2:15; lab, M 12:20-3:20. R. H. Liu and J. M. Brown.

Introduces basic analytical techniques for food analysis and other biological analysis. Emphasizes fundamental principles of analytical chemistry, basic laboratory techniques, and modern instrumental methods. Discusses gravimetric, volumetric, and spectrophotometric methods, gas chromatography (GC), high-performance liquid chromatography (HPLC), infrared spectra (IR), and atomic absorption spectrometry.

FD SC 230(2300) Sophomore Seminar: Functional Foods; Where Food Science and Nutrition Meet (also NS 230(2300))

Spring. 2 credits. Limited to 15 students; priority given to sophomores who have completed two first-year writing seminars and introductory course in either food science or nutritional sciences. Lec, W 2:30-4:25. S. J. Mulvaney and R. Parker.

Functional foods are foods whose nutrient composition has been modified to achieve targeted health outcomes. This course explores the interface where nutritional science and food science can work together to design and produce foods to meet certain health goals using a case study approach. Each case study involves interdisciplinary discussion, and a writing assignment that includes both technical (e.g., scientific basis for diet-health claims) and nontechnical (e.g.,

personal experience and opinions related to functional foods) content.

This is a special seminar sponsored by the John S. Knight Institute's Sophomore Seminars Program. Seminars offer discipline-intensive study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the discipline's outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.

FD SC 250(2500) Kosher and Halal Food Regulations

Spring. 2 credits. Prerequisite: at least sophomore standing. S-U grades optional. Lec, M 7:30-9:25 P.M. J. M. Regenstein.

Comprehensive introduction to kosher and halal foods in the American food industry with some coverage of home practices. Examines the kosher food laws, their origin, and their application in modern food processing. Describes the nature of the kosher supervision industry in America. Also examines Halal laws and explores the interactions between the two communities. Reviews current food-related issues in both communities, including recent court decisions. May also consider some aspects of ethnic foods.

FD SC 290(2900) Meat Science (also AN SC 290(2900))

Fall. 2 or 3 credits; lec only—2 credits; lec plus lab—3 credits; lab cannot be taken without lec. Letter grades only. Lec, T R 11:15; lab, M or R 12:20-3:20. D. E. Shaw.

Introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Also studies properties of fresh and processed meat, microbiology, preservations, nutritive value, inspection, and sanitation. Lab exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, processing, inspection, grading, quality control, and meat merchandising. An all-day field trip to commercial meat plants may be taken.

FD SC 321(3210) Food Engineering Principles

Fall. 3 credits. Prerequisites: FD SC 200 and introductory physics. Letter grades only. M W F 11:15-12:05; disc, W 3:35-4:20.

S. S. H. Rizvi.

Introduces the engineering principles underlying food processes and equipment. Topics include thermodynamics, mass and energy balance, fluid mechanics, heat and mass transport, and refrigeration and psychrometrics.

FD SC 351(3510) Milk Quality

Fall. 1 credit. Prerequisite: AN SC 250 or equivalent or permission of instructor.

Letter grades only. F 12:20. M. Wiedmann. Focuses on the effects of on-farm and animal husbandry practices on milk and dairy food quality and safety. Significant parts of class focus on discussion and critical analysis of the assigned reading materials, questions, and hot topics.

FD SC 394(3940) Applied and Food Microbiology (also BIOMI 394[3940])

Fall. 3 credits. Prerequisites: BIOMI 290–291. M W F 12:20–1:10. C. A. Batt.

Microorganisms play a central role in a variety of food, agricultural, and environmental processes. This course presents a comprehensive survey of the roles that microorganisms play in industrial/biotechnological processes as well as their importance in the safety and production of foods. Reviews issues related to the biochemistry, genetics, and physiology of microorganisms important in these processes. A 2-credit core section on food microbiology is complemented by a 1-credit section on industrial/biotechnological applications.

FD SC 395(3950) Food Microbiology Laboratory

Fall. 2 credits. Prerequisite: BIOMI 291 or equivalent. Letter grades only. M W 2:00–4:25. J. M. Brown.

Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and rapid methods for microbiological testing and control of food products, and practice in the application of a systematic approach to controlling the safety of foods, or addressing a food safety issue.

[FD SC 396(3960) Food Safety Assurance

Spring. 2 credits. Prerequisite: BIOMI 290 or permission of instructor. T R 9:05–9:55. Offered alternate years; not offered 2005–2006; next offered 2006–2007.

R. B. Gravani.

Provides information on procedures to control biological, chemical, and physical hazards and assure the safety of foods. Topics include discussions on the Hazard Analysis Critical Control Point (HACCP) concept, good manufacturing practices, prerequisite programs, and the application of current technologies in reducing the risk of foodborne illnesses. Uses case studies and class projects to demonstrate and apply the key principles discussed.]

FD SC 400(4000) Current Topics in Food Science and Technology

Spring. 1 credit. S-U grades optional. R 3:35–4:25. Staff.

Discussion of current topics in food science. Topics vary and are chosen from scientific literature and popular press.

[FD SC 401(4010) Concepts of Product Development

Spring. 2 credits. Prerequisite: FD SC 200 or equivalent. Letter grades only. M W 11:15–12:05. Offered alternate years; not offered 2005–2006; next offered 2006–2007. J. H. Hotchkiss.

Discussion of the sequence of events in developing and marketing new food products. Topics include food formulation, packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.]

FD SC 402(4020) Agriculture in Developing Nations I (also IARD 402[4020])

Fall. 2 credits. F 1:25–3:20. T. W. Tucker and R. W. Blake (Mexico sec); K. V. Raman and W. R. Coffman (India sec).

Acquaints students with the major issues and problems in international agriculture and rural development and demonstrates how problems in development are being addressed in the Gulf Region of Mexico and India. The

lectures/discussions establish the global and regional contexts for sustainable agricultural development and focus on development challenges in Latin America and Asia through cases in southern Mexico and India. This course may be taken as a stand-alone survey course in international agriculture and rural development. However, it is primarily a preparatory course for participants selected to participate in the spring semester course Agriculture in the Developing Nations II (IARD 602), which includes concurrent field trips to the Gulf Region of Mexico and India during the January intersession.

[FD SC 405(4050) Managing Food Waste Without Trashing the Environment

Spring. 2 credits. Prerequisite: FD SC 200 or equivalent. Letter grades only. Lec, M 12:30–2:15; lab, M 2:30–4:25. Offered alternate years; not offered 2005–2006; next offered 2006–2007. J. M. Regenstein.

Examines the various waste streams generated by food plants, institutional feeders, supermarkets, and restaurants. What is the role of waste minimization? What technologies can control or remediate the problems? What are the disposal, composting, and recycling options? What are the legal requirements locally, state-wide, and nationally that affect various food waste processes? This course serves as a general introduction to available waste management technologies and to policy issues faced by a wide range of businesses and production plants.]

FD SC 406(4060) Dairy and Food Fermentations

Fall. 2 credits. Prerequisite: BIOMI 290. Letter grades only. R 12:20–2:15. M. Wiedmann.

Lecture course covering the basic principles of fermentation, the microbiology of food fermentations (including the physiology and genetics of fermentative microorganisms), starter cultures and their preparations and applications, as well as specific examples of food fermentations. Selected textbook readings are supplemented with papers from peer-reviewed journals. Significant parts of class focus on discussion and critical analysis of the assigned reading materials.

FD SC 410(4100) Sensory Evaluation of Food

Fall. 2–3 credits; 1 lab credit. Lec and lab required for undergraduate food science majors. Prerequisite: statistics course. Letter grades only. Lec, T R 9:05–9:55; lab, F 1:25–4:25. H. T. Lawless.

Topics include the sensory evaluation methods used to test the flavor, appearance, and texture of foods by quantitative description and simple difference testing; consumer testing for product acceptability; sensory tests in quality control; strategic product research; and product development. Presents the psychological principles in sensory testing and statistical methods for sensory data analysis. The lab provides first-hand experience in organizing and conducting sensory tests and an introduction to online data collection and analysis.

FD SC 415(4150) Principles of Food Packaging

Spring. 3 credits. Letter grades only. M W F 10:10–11:00. Offered alternate years; offered 2005–2006. J. H. Hotchkiss.

Discusses the chemical and physical properties and manufacture of the basic materials used to construct packaging. Presents the influence

of packaging on shelf life. Emphasizes newer packaging technologies and materials. Briefly presents economics, design, and regulation of food packaging.

FD SC 417–418(4170–4180) Food Chemistry I and II

417, spring (3 credits); 418, fall (2 credits). Prerequisites: CHEM 257 or BIOBM 330 or 331. S-U or letter grades. 417, M W F 9:05–9:55; 418, M W 9:05–9:55. J. W. Brady.

Covers the chemistry of foods and food ingredients. Discusses the chemical and physical properties of water, proteins, lipids, carbohydrates, and other food components and additives in the context of their interactions and functional roles in foods. Describes the effects of chemical changes during processing and storage on the quality and nutritional aspects of several food commodity groups (dairy, meat, fruits and vegetables, cereals, and legumes).

FD SC 419(4190) Food Chemistry Laboratory

Spring. 2 credits. Prerequisites: BIOBM 330 or 331 or CHEM 257 or equivalent. Co-requisite: FD SC 417. W 12:20–4:25. D. D. Miller.

Deals with the chemical properties of food components and changes they undergo in processing and storage. Stresses relationships between the chemical composition of foods and functional, nutritional, and organoleptic properties. Introduces lab techniques commonly used in food research. Requires a lab research project that involves writing a research proposal for the project, conducting laboratory research to test hypotheses described in the proposal, analyzing the data, and writing a paper following the format used by the *Journal of Food Science*.

FD SC 423(4230) Physical Principles of Food Preservation and Manufacturing

Fall. 3 credits. Prerequisite: FD SC 321. Letter grades only. Lec, T R 11:15–12:05; disc, T 12:20–2:15. S. J. Mulvaney and J. S. Roberts.

Emphasizes the fundamental principles that underlie much of food preservation and manufacturing. Uses a systems analysis approach to make connections between the chemical and physical changes that occur in food processing and their impact on food quality. Topics include materials properties of foods, heat processing, freezing, concentration, and drying. Selected products serve as case studies for more complex manufactured foods.

FD SC 425(4250) Dairy Foods Processing

Spring. 3 credits. Prerequisites: FD SC 321, 394, 417, 418, and 423. Letter grades only. Lec, M 12:20–1:10, W 9:05–9:55; lab, M 1:25–4:25. C. I. Moraru.

Combined lecture-laboratory course focusing on principles and practices fundamental to modern dairy foods processing. Structured in two parts. The first part deals with the main unit operations used in dairy processing (i.e., pasteurization, sterilization, centrifugal separation, homogenization, membrane separation, concentration, and drying) and the second part focuses on the science and technology that underpins the manufacture of main classes of dairy products (i.e., fluid milk, milk powder, ice cream, butter, and cheese). Laboratories are conducted in a food processing pilot plant facility, which allows students to gain hands-on experience

in operating pilot plant equipment and the manufacture of safe, high quality dairy products. One field trip to operating dairy plants in the area is scheduled during the semester.

FD SC 430(4300) Understanding Wine and Beer

Spring. 3 credits. Prerequisites: introductory biology and chemistry or permission of instructor; age 21 by first day of class (Jan. 23, 2006). S-U grades optional. T R 1:25-3:20. T. E. Acree, T. Henick-Kling, and K. J. Siebert.

Introduction to wine and beer appreciation through the study of fermentation biology, product composition, and sensory perception. Uses samples of wines and beers to illustrate the sensory properties, microbiological processes, and chemical components that determine quality. Students learn to recognize the major features of wine and beer that determine sensory quality and know the processes that produced them. Topics include the psychology and chemistry of bouquet, taste, and aroma; the microbiology of fermentation and spoilage; the sensory properties of wines from different grape varieties, viticultural practices, and wine-making techniques; and the effects of brewing raw materials and processing procedures on beer quality.

FD SC 450(4500) Fundamentals of Food Law

Spring. 2 credits. Letter grades only. Lec, M 1:25-3:20. Offered alternate years; not offered 2006-2007. J. M. Regenstein.

Introduction to the complex array of federal and state statutes and regulations that control the processing, packaging, labeling, and distribution of food, including aspects of safety and nutritive value. Emphasizes the Food and Drug Administration and U.S. Department of Agriculture regulations but also refers to other regulatory agencies. Emphasizes how a food or agricultural professional interacts with the U.S. legal system during legislative action, regulatory rule making, and with respect to compliance.

[FD SC 456(4560) Advanced Concepts in Sensory Evaluation]

Spring. 2 credits. Prerequisite: FD SC 410. S-U grades optional. Offered alternate years; not offered 2005-2006; next offered 2006-2007. F 1:25-3:20. H. T. Lawless.

Readings and discussions of primary source materials in sensory evaluation, including recent advances in sensory methods, historical perspectives, psychophysics, perceptual biases, and multivariate statistical approaches to sensory data. Students conduct a major independent research project on a current issue in sensory evaluation.]

FD SC 480(4800) Global Seminar: Building Sustainable Environments and Secure Food Systems for a Modern World (also NTRES/IARD 480[4800])

Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. J. Lassoie and D. Miller.

Modernization has led to development pressures that have increasingly disrupted natural systems, leading to widespread concerns about the long-term viability of important environmental services, including those critical to food security worldwide. This multidisciplinary course uses case studies to explore interrelationships among social,

economic, and environmental factors basic to sustainable development. Cases include population growth, genetically modified foods, biodiversity, sustainable tourism, global warming, and global responsibility. Cornell faculty members lead discussions in each of the major topic areas. In addition, students participate in discussions and debates with students from Sweden, Costa Rica, Honduras, South Africa, and Australia through live interactive videoconferences and electronic discussion boards.

FD SC 494(4940) Special Topics in Food Science

Fall or spring. 4 credits max. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

FD SC 497(4970) Individual Study in Food Science

Fall or spring. 3 credits max. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S-U grades optional. Staff.

May include individual tutorial study, a special topic selected by a professor or a group of students, or selected lectures of a course already offered. Since topics vary, the course may be repeated for credit.

FD SC 498(4980) Undergraduate Teaching Experience

Fall or spring. 3 credits max. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S-U grades only. Staff.

Students assist in teaching a course appropriate to their previous training and experience. Students meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

FD SC 499(4990) Undergraduate Research in Food Science

Fall or spring. 4 credits max; may be repeated for credit. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall). Staff.

Students conduct original research directed by a food science faculty member.

FD SC 599(5990) Research for Lausanne Exchange Students

Fall/spring. 10 credits max. Prerequisite: permission of instructor. S-U grades optional. Staff.

Undergraduate senior thesis research for Lausanne exchange students only. Students conduct original research directed by a food science faculty member, then write and present a final report to the faculties of both Cornell University and the University of Lausanne.

FD SC 600(6000) Seminar in Food Science

Fall and spring. 1 credit. S-U grades only. Requirement for all graduate students in field of food science and technology; highly recommended for graduate students minoring in food science and technology. T 4:00-5:00. Staff.

Weekly seminar series on contemporary topics and issues in the field of food science and technology. Representatives from academia, industry, and government provide presentations on a wide variety of topics. Graduate students in the field of food science and technology may use the forum to present their required thesis research seminar.

FD SC 602(6020) Agriculture in Developing Nations II (also IARD 602[6020])

Spring, field trips to Gulf Region of Mexico (sec 1) and India (sec 2) during Jan. intersession. 3 credits. Prerequisites: IARD 402 and (or) permission of instructors. Cost of field study trip (including airfare, local transportation, and lodging; some merit and need based financial aid may be available): approx. \$2,500. T R 2:30-4:25 until midterm only. R. W. Blake, T. W. Tucker, and C. F. Nicholson (Mexico); K. V. Raman and W. R. Coffman (India).

Designed to provide students with an opportunity to observe agricultural development in tropical Mexico or India and to promote interdisciplinary exchange among faculty, staff, students and their Mexican and Indian counterparts. A two-week field-study trip in January is followed by discussions, written projects and oral presentations dealing with problems in food, agriculture and livestock production in the context of social and economic conditions.

[FD SC 604(6040) Chemistry of Dairy Products]

Fall. 2 credits. Limited to 16 students. Prerequisites: introductory organic and biochemistry, food chemistry, and dairy foods processing courses or permission of instructor. Letter grades only. Offered alternate years; not offered 2005-2006; next offered 2006-2007. F 1:25-3:20. D. M. Barbano.

Detailed study of milk constituents and their properties. Covers the chemical and physical changes that occur in dairy products before, during, and after processing. Emphasizes current research in dairy chemistry.]

FD SC 607(6070) Advanced Food Microbiology

Spring. 2 credits. Prerequisites: BIOMI 290, FD SC 394. Letter grades only. Offered alternate years; not offered 2006-2007. M W 11:15. M. Wiedmann.

Explores advanced topics in food microbiology. Places major emphasis on critical evaluation of current literature and on microbiological concepts that affect food microbiology. Specific areas covered include microbial ecology of foods, rapid detection and typing methods for foodborne pathogens, microbial modeling, pathogenesis of foodborne diseases, and food applications of genetic engineering. Some guest lectures may be arranged to provide an introduction to other advanced food microbiology topics (e.g., risk assessment).

[FD SC 608(6080) Chemometric Methods in Food Science]

Fall. 2 credits. Prerequisites: basic statistics and chemistry course or permission of instructor. S-U grades optional. W 1:25-3:20. Offered alternate years; not offered 2005-2006; next offered 2006-2007. K. J. Siebert.

Food science applications using multivariate statistical methods (chemometrics) include extracting information from large data sets,

modeling molecular and product properties, optimizing analytical methods and processing operations, discerning relationships between product composition and sensory properties, identifying cultivars or species, and detecting adulteration. The techniques covered are also applicable to many other problems in biology and chemistry.]

FD SC 616(6160) Flavors—Analysis and Applications

Spring. 2 credits. S-U grades optional. Lec, F 1:25; disc, F 2:30. Offered alternate years; not offered 2006–2007. H. T. Lawless and T. E. Acree.

Advanced course in sensory and instrumental analysis of flavors, flavor chemistry, and flavor applications in foods for food scientists and those in related fields concerned with human food perception and consumption. Surveys taste, aroma and volatile flavors, and trigeminal stimuli from the perspectives of chemical structures, methods of analysis, uses and interactions in food systems. Also discusses recent advances in the physiology of taste and smell.

FD SC 620(6200) Food Carbohydrates (also NS 620[6200])

Spring. 2 credits. Prerequisite: qualified seniors and graduate students, BIOBM 330 or equivalent. T R 10:10–11. Offered alternate years; not offered 2006–2007. B. A. Lewis and J. W. Brady.

Considers the chemistry of carbohydrates, including sugars, starches, pectins, hemicelluloses, gums, and other complex carbohydrates. Emphasizes the intrinsic chemistry and functionality in food systems and the changes occurring during food processing and storage.

[FD SC 621(6210) Food Lipids]

Fall. 2 credits. Prerequisite: basic biochemistry course. Letter grades only. Offered alternate years; not offered 2005–2006; next offered 2006–2007. T R 2:30–3:20. R. H. Liu.

Describes the physical, chemical, biochemical, and functional properties of lipids. Emphasizes lipid oxidation, emulsions, and functional foods associated with lipids.]

FD SC 622(6220) Nutraceuticals and Functional Foods

Fall. 2 credits. Prerequisites: biochemistry course equivalent to BIOBM 330 and one year college biology or permission of instructor. Letter grades only. Offered alternate years; not offered 2006–2007. Lec, T R 2:30–3:20. R. H. Liu.

Covers nutraceuticals and functional foods, natural bioactive compounds, antioxidants, and dietary supplements, botanicals and herbs in disease prevention and health promotion. Emphasizes the mechanisms of action and scientific evidence of efficacy of nutraceuticals and functional foods. Also discusses biomarkers, safety and efficacy testing, and regulations for nutraceuticals and functional foods.

FD SC 664(6640) Food Polymer Science: Principles and Applications

Spring. 2 credits. Prerequisites: introductory chemistry and physics. T R 12:20–1:10. Offered alternate years; not offered 2006–2007. S. J. Mulvaney.

Integrates polymer science, chemistry, and materials science principles as the basis for characterization of the physical properties of biopolymer materials of interest to the food

industry. Emphasizes unique aspects of food materials, e.g., plasticization by water, physical gelation, transient networks, and effects of thermal treatments on material properties. Problems and case studies based on proteins, starches, gelatin, and other hydrocolloids relevant to food systems.

[FD SC 665(6650) Food and Bioprocessing Systems]

Spring. 3 credits. Prerequisite: FD SC 423. Letter grades only. Offered alternate years; not offered 2005–2006; next offered 2006–2007. Lec, T R 12:20; disc, T 1:25–2:15. S. S. H. Rizvi and S. J. Mulvaney.

Fundamental and quantitative analyses of processes for manufacture of foods and related biological products. Topics include centrifugation, membranes, supercritical fluids, extrusion, high pressure, pulsed electric field, thermal processing, drying, and crystallization.]

FD SC 694(6940) Special Topics in Food Science

Fall or spring. 4 credits max. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

FD SC 695(6950) Current Readings in Food Science

Fall and spring. 1 credit; may be taken multiple times. Graduate students in food science strongly encouraged to enroll. Prerequisite: 300- to 400-level course relevant to chosen topic. S-U grades only. Lec, TBA/one hour per week. Staff.

Seminar series on current topics chosen by participating faculty members and students on a rotating basis. Format consists of weekly discussion groups with each participant presenting at least one oral report based on independent reading. Multiple sections focusing on different topics may be taught in any given semester. Topics include food microbiology and food safety; food chemistry; packaging; food engineering. Interested students should contact the designated instructor(s) for each semester.

FD SC 698(6980) Graduate Teaching Experience

Fall and spring. 1 to 3 credits. S-U grades only. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of field faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

FD SC 800(8000) Master's-Level Thesis Research

Fall or spring. Credit TBA; max. 12. Prerequisite: master's candidates; permission of Special Committee chair. S-U grades only. Graduate faculty.

FD SC 900(9000) Graduate-Level Thesis Research

Fall or spring. Credit TBA; max. 12. Prerequisite: doctoral students who have not passed "A" exam; permission of Special Committee chair. S-U grades only. Graduate faculty.

FD SC 901(9010) Doctoral-Level Thesis Research

Fall or spring. Credit TBA. Maximum of 12 credits. Prerequisite: doctoral students who have passed "A" exam; permission of Special Committee chair. S-U grades only. Graduate faculty.

HORTICULTURE

M. P. Pritts, chair (134A Plant Science Bldg., 255-1778); N. L. Bassuk, R. R. Bellinder, M. P. Bridgen, L. Cheng, L. E. Drinkwater, M. Eames-Sheavly, S. Gan, G. L. Good, D. E. Halseth, C. P. Mazza, I. A. Merwin, W. B. Miller, J. Mt. Pleasant, K. W. Mudge, A. M. Petrovic, D. A. Rakow, A. Rangarajan, F. S. Rossi, C. B. Watkins, L. A. Weston, T. H. Whitlow, H. C. Wien, D. W. Wolfe

HORT 101(1110) Horticultural Science and Systems

Fall. 4 credits. Lec, M W F 9:05; lab, W 1:25–4:25. I. A. Merwin.

Science and technology of horticultural plants grown for foods and beverages and ornamental, landscape, or recreational purposes. Lectures, labs, and field trips involve natural history and evolution of horticultural plants, botany and physiology, sustainable management of soil, water and plant nutrition, breeding and propagation, ecological and landscape functions, and integrated design and management of horticultural plantings and production systems.

HORT 102(1120) Hands-On Horticulture

Spring. 2 credits. Nominal materials fee. Lec, F 12:20; lab F 1:25–4:25. M. P. Pritts.

The objective is to instill in students a lifelong appreciation for how gardening can enhance individual well-being through aesthetics, culinary experiences, and mastery of techniques. Emphasizes hands-on learning and practice of key gardening skills and techniques in the greenhouse and the field, such as landscape management, garden design, propagation, pruning, grafting, pest management, and flower arrangement. There is one Saturday field trip at the end of the semester to visit gardens in the local area.

HORT 201(2010) The Art of Horticulture I: Plants and Gardens as a Subject of Art

Fall. 2–3 credits. Studio, T 1:25–4:25. Fee for materials: \$35. M. Eames-Sheavly.

Part of a HORT 201 and 203 sequence, this experiential course considers plants and gardens as a subject of art. Students explore basic drawing techniques, botanical-illustration methods, watercolor, and photography. The course addresses the natural history and symbolic use of plants in fine art. Students critically reflect on course content in journals and explore the work of garden writers.

HORT 203(2030) The Art of Horticulture II: Plants Used in Art or as Artforms

Spring. 2 credits. Studio, T 1:25–4:25. Fee for materials: \$35. M. Eames-Sheavly.

Part of a HORT 201 and 203 sequence, this experiential course focuses on plant materials used to create art or manipulated as artforms. Acquaints students with a range of topics such as the use of plants in fibers and dyes; floral design; and living-sculpture practices such as topiary, bonsai, turfworks, and tree sculpture. Students create a final project focused on these or related methods.

HORT 215(2150) Sophomore Seminar: Nonfiction Adventure Writing: Reclaiming the Scientist's Voice

Spring. 4 credits. Limited to 15 students. Letter grades only. Lec, TBA.

T. H. Whitlow.

Using juxtaposed readings drawn from the published chronicles of scientific and nonscientific adventures, this course discovers strategies for conveying excitement in their own writing. In addition to classroom discussion, group adventures in the field and lab provide raw material for writing individual narratives. Each student has opportunities to cultivate individual awareness of natural processes and recount their discoveries in writing.

This is a special seminar sponsored by the John S. Knight Institute's Sophomore Seminars Program. Seminars offer discipline-intensive study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the discipline's outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.

HORT 220(2200) Practicing Sustainable Land Care

Fall. 2-3 credits; 1 additional credit for student projects by permission of instructor. Lec, R 12:20; lab, R 1:25-4:25. Offered odd years. L. E. Drinkwater.

Experiential course emphasizing interdisciplinary, ecosystem-based approaches to land management and food production. Covers concepts from biological and environmental sciences (i.e. ecology, soil science, horticulture) and includes hands-on activities in organic agriculture, agroforestry, and ecosystem restoration. Classes are held at Dilmun Hill Organic Farm and the MacDaniels Nut Grove.

[HORT 225(2250) Vegetable Production]

Fall. 4 credits. Lec, M W F 11:15; lab, W 2:00-4:25; four field trips (Sept.). W 11:15-6. Not offered 2005-2006. Staff.

Intended for those interested in the production, processing, and marketing of vegetables. Topics include techniques, problems, and trends in the culture, harvesting, and storage of the major vegetable crops. Includes field trips to conventional and organic farms and hands-on experience in growing vegetables in the greenhouse.]

HORT 235(2350) Plants and Human Well-Being

Spring. 3 credits. Lec, T R 9:05; lab, W 1:25-4:25. J. Mt. Pleasant and S. M. Skelly.

Examines the beneficial effects of plants on human cultures, communities and individuals. Areas of focus include: impacts of community gardens, green space, and farmer's markets; use of plants for pollution control, economic development, conflict resolution, and tourism; how plants benefit individuals, in terms of adult cognition, K-12 education, mental health, and personal empowerment. Laboratories include field trips and exercises to allow students to analyze and evaluate plant-based initiatives in many phases of contemporary life.

[HORT 243(2430) Taxonomy of Cultivated Plants (also BIOPL 243(2430))]

Fall. 4 credits. Prerequisite: one year introductory biology or written permission of instructor. May not be taken for credit after BIOPL 248. Lec, M W F 10:10-11; lab, M or W 2-4:25. Offered even years. M. A. Luckow.

Study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Places particular emphasis on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Also gives attention to the economic importance of taxa, the basic taxonomic literature, and the elements of nomenclature.]

HORT 300(3000) Herbaceous Plant Materials

Fall. 3 credits: Lec, T R 10:10; lab, T 2-4:25. Cost of field trip: \$75. W. B. Miller.

Identification, use, characteristics, and garden cultural requirements of annual and herbaceous perennial plants, especially those used in northern climates. Practical gardening experiences at selected campus locations. Field trips to nearby specialty nurseries.

[HORT 310(3100) Production and Marketing of Greenhouse Crops]

Spring. 4 credits. Letter grades only. Lec, T R 10:10; lab, R 1:25-4:25. Cost of required three-day field trip: approx. \$130. Offered odd years. Staff.

Covers basics of establishing a greenhouse operation, growing crops in optimized environments, and serving niche or mass markets. Discusses technology basics including structures and equipment, systems for heating and cooling, lighting, irrigating and fertilizing, materials handling; environmental stewardship and integrated pest management; and production management. Also covers world centers of greenhouse crop production; culture of cut, pot, bedding, vegetable, and fruit crops in greenhouses, emphasizing predictive harvesting through environmental, physical, and chemical management of growth and development. Each student grows one or more crops.]

[HORT 317(3170) Seed Science and Technology (also CSS 317(3170))]

Fall. 3 credits. Prerequisite: BIOPL 241 or equivalent course approved by instructor. Letter grades only. Lec, T R 11:40-12:30; lab, R 1:25-4:25. Not offered 2005-2006; next offered 2006-2007. A. G. Taylor, Geneva Experiment Station.

Study of the principles and practices involved in seed production, conditioning, storage, quality management, seed enhancements, and stand establishment. Information is applicable to various kinds of agricultural and horticultural seeds. Hands-on laboratory experience.]

HORT 330(3300) Turfgrass-ing the Landscape

Spring. 3 credits. Prerequisite: CSS 260 or permission of instructor. Letter grades only. Lec, M W F 8 A.M. F. S. Rossi and A. M. Petrovic.

Proposal, siting, specification, installation, establishment, and management of turfgrass areas. Emphasizes commercial locations including lawns, sports fields, and golf courses. Case study projects are a major aspect of the course.

HORT 391(3910) Woody Plant Identification and Use I

Fall. 2 credits. Limited enrollment. Prerequisite: permission of instructor. Letter grades only. Lec, R 12:20-1:10; lab, R 1:25-4:25. N. L. Bassuk.

Module of HORT/LA 491 covering the identification of approximately 200 woody trees, shrubs, and vines in leaf and their use in the landscape. Students desiring a more comprehensive course that covers site assessment, soil modification, design, plant specifications and landscape establishment principles and techniques should take HORT/LA 491 or the 491-492 sequence.

HORT 392(3920) Woody Plant Identification and Use II

Spring. 2 credits. Limited enrollment. Prerequisite: permission of instructor. Letter grades only. Lec, T 12:20-1:10; lab, T 1:25-4:25. N. L. Bassuk.

Module of HORT/LA 492 covering the identification of approximately 160 evergreen trees and shrubs and deciduous plants using winter identification. HORT 391 (fall module) need not be taken before taking HORT 392 (spring module). Students also assist in the establishment of a new landscape on campus.

HORT 400(4000) Principles of Plant Propagation

Fall. 3 credits. Prerequisites: BIOPL 242 and 244 or another plant physiology course or permission of instructor. Lec, T R 9:05; lab, R 1:25-4:25. K. W. Mudge.

Sexual (seed) propagation and asexual (vegetative) propagation including cuttage, graftage, tissue culture, layering, and specialized vegetative reproductive structures. Stresses physiological, environmental, and anatomical principles and industry applications in lecture, and hands-on skills in laboratories. Examples include both temperate and tropical horticultural, agronomic, and forestry crops.

HORT 401(4010) The How, When, and Why of Grafting—A Distance Learning Approach

Spring, 10 weeks. 2 credits. Lec, autotutorial (web); lab, greenhouse/autotutorial (web/CD); disc, web; one introductory face-to-face meeting, TBA. K. W. Mudge.

Web/CD-based autotutorial approach to the principles and practices of grafting and budding as applied to plant propagation. Emphasizes the role of grafting in modern horticultural practice and on student development of hands-on grafting skills. Instruction involves web-based asynchronous presentation of lecture and lab materials (web, CD-ROM), asynchronous discussion, and autotutorial hands-on grafting lab exercises.

HORT 420(4200) Principles of Nursery-Crop Production

Fall. 4 credits. Prerequisite: HORT 400. Lec, M W F 9:05; lab, M 2-4:25. Field trips. Offered odd years. G. L. Good.

Principles of commercial production of nursery crops to marketable stage, including postharvest handling and storage. Term project required. Includes field trips to commercial nurseries.

HORT 425(4250) Postharvest Biology of Horticultural Crops

Fall. 3 credits. Lec, M W 9:05-9:55; lab, W 1:25-4:25. Offered odd years. S. Gan.

Study of the biological processes controlling physical and chemical changes

in harvested yet living horticultural crops or their parts. Discusses the theoretical principles and fundamental processes underlying these changes. Also covers strategies and practical handling requirements/conditions for storage, transportation, and quality monitoring of harvested horticultural crops.

HORT 426(4260) Practicum in Forest Farming as an Agroforestry System (also NTRES/CSS 426(4260))

Fall. 2 credits. Prerequisite: junior, senior, or graduate standing or permission of instructor. Lab, W 1:25–4:25. K. W. Mudge and L. E. Buck.

Students actively take part in the restoration of a 70-year-old nut grove. The MacDaniel's Nut Grove is being developed as a multipurpose forest-farming teaching, research, and extension site. Hands-on activities include: temperate-nut harvest and variety evaluation, mushroom culture, small-fruit and fruit-tree culture, medicinal-herb culture, site evaluation and planning, and field trips to other agroforestry-related sites. Outdoor activities are integrated with selected readings via an online discussion board.

[HORT 435(4350) The Care of Woody and Herbaceous Plants in the Landscape]

Fall. 4 credits. Prerequisites: HORT 301 and 491 or permission of instructor. Lec, M W F 9:05; lab, M 2–4:25. Field trips. Offered even years. Staff.

Study of the practices involved in the maintenance of ornamental plants in the landscape. The major emphasis is on post-planting techniques, including water and fertilization management, weed management, pruning, and general tree care. Labs have a hands-on focus.]

HORT 440(4400) Restoration Ecology

Fall. 5 credits. Prerequisite: upper division or graduate standing and permission of instructor. Letter grades only. Lec, T R 8:40–9:55; lab, F 12:30–4:45, plus several weekends. T. H. Whitlow.

Draws concepts from ecology, hydrology, soil science, and conservation biology and applies these in both principle and practice to the rapidly evolving field of restoration ecology. Through lectures, reading, and discussion, site visits to active restoration sites, and a real world class project, students learn and practice skills needed to develop restoration plans for a variety of situations.

[HORT 442(4420) Berry Crops: Culture and Management]

Fall. 3 credits. Lec, M W 9:05; lab, M 1:25–4:25. Offered even years. M. P. Pritts.

Study of the evolution, breeding history, and physiology of strawberries, raspberries, blackberries, blueberries, and other minor small fruit crops, and of cultural practices that influence productivity, fruit quality, and pest damage. Considers marketing and economics and discusses alternate production practices for both commercial and home gardeners. Frequent field trips enhance classroom activities.]

HORT 443(4430) Viticulture and Vineyard Management—I

Fall. 3 credits. Prerequisites: BIO G 101/103, 102/104, BIOPL 241, CSS 260, BIOPL 242/244 or equivalents. Letter grades only. Lec, T R 9:05; lab, R 1:25–4:25. R. M. Pool, A. N. Lakso, and M. C. Goffinet.

First-semester course in commercial grape production with an emphasis on the problems of production in cold climates. Students examine environmental factors favoring production and quality, soils, and the anatomical and physiological basis for vineyard management decision-making. Laboratory exercises and field trips offer hands-on experience.

HORT 444(4440) Viticulture and Vineyard Management—II

Spring. 3 credits. Pre- or co-requisites: HORT 443 and PL BR 225 or equivalent. Letter grades only. Lec, T R 9:05; lab, R 1:25–4:25. R. M. Pool, B. I. Reisch, P. Cousins, and C. Owens.

Second-semester course in commercial grape production with an emphasis on the problems of production in cold climates. Students examine the genetics of the vine, and learn principles of vineyard establishment, propagation, pruning and training, and conservation. Laboratory exercises and field trips offer hands-on experience.

HORT 445(4450) Ecological Orchard Management

Spring. 3 credits. Prerequisite: introductory biology. S-U grades optional. Recommended: previous horticulture/plant science courses. Lec, T R 10:10; lab, T 1:25–4:25. Offered even years. I. A. Merwin.

The ecology and technology of deciduous tree-fruit production. Topics include basic tree and fruit physiology; orchard renovation and design systems; nutrition, irrigation, and freeze protection practices; tree pruning and training; post-harvest fruit storage; marketing and economic spreadsheet models; monitoring and decision-making systems for integrated pest management; and efficient use of orchard equipment. Emphasizes the agroecology of perennial crop systems, with labs providing hands-on experience in orchard management.

HORT 449(4490) Green Signals and Triggers—The Plant Hormones (also BIOPL 449(4490))

Fall. 1 or 2 credits. Prerequisites: introductory biology and BIOPL 242 or 342 or permission of instructor. S-U grades optional. Lec, F 1:25–2:15. Offered odd years. P. J. Davies.

Study of the plant hormones and how they regulate plant growth and development. Topics include the discovery, role in growth and development, mode of action, and practical uses of the plant hormones auxin, gibberellins, cytokinins, abscisic acid, ethylene, and brassinosteroids. An optional additional 1-credit writing component is offered for construction of a book on plant hormones appropriate for the course.

HORT 455(4550) Mineral Nutrition of Crops and Landscape Plants (also CSS 455(4550))

Spring. 3–5 credits. Prerequisite: CSS 260 and BIOPL 242(2420), or equivalent. Lec, M W F 9:05; lab, R 2–4:25. Offered even years. H. C. Wien and staff.

Modular course on principles of plant mineral nutrition and nutrient management. A mandatory module on principles is followed by others on agronomic crops, vegetables, floriculture, and fruit crops. Each module carries 1 credit; a minimum of 3 credits must be taken in one semester. By the end of the course, students understand the principles of mineral nutrient function in crop plants, are able to diagnose deficiencies by symptoms

and tissue tests, and can devise organic and conventional nutrient management schemes that maximize productivity and mineral nutrient quality.

HORT 460(4600) Plant-Plant Interactions

Spring. 3 credits. Prerequisite: any crop production or plant ecology course or permission of instructor. Lec, T R 9:05; lab/disc, M 2–4:25. Offered even years. D. W. Wolfe.

Uses our basic understanding of plant ecology and physiology to evaluate the mechanisms by which plants perceive "neighbors" and compete or positively interact with each other in natural and managed ecosystems. Emphasizes agricultural systems, from tropical home garden polyculture, to pastures, to intensive row-crop monoculture. In laboratory exercises, the effects of plant density and environmental factors such as light and fertility on plant interactions are quantified, and students gain first-hand experience in techniques such as isolation of allelochemicals and determination of weed thresholds.

[HORT 462(4620) Physiology of Vegetables and Flowers]

Spring. 4 credits. Prerequisite: BIOPL 242 or equivalent. Lec, M W F 9:05; lab/disc, M 2–4:25. Offered odd years. H. C. Wien.

Study of the physiological principles that govern growth, development, and production of reproductive structures of vegetable crops and herbaceous ornamental plants. Emphasizes processes of flower induction, fruit and seed set, and the balance of vegetative and reproductive growth, especially in perennials. Practical hands-on greenhouse experiments and small group discussions illustrate the lecture material.]

HORT 466(4660) Soil Ecology (also CSS 466(4660))

Spring. 4 credits, with lab. Prerequisite: one year of biology or ecology and CSS 260 or permission of instructor. Lec, T R 10:10–11:25; lab, W 1:25–4:25. J. E. Thies. For description, see CSS 466.

HORT 480(4800) Plantations Lecture Series

Fall, 12 weeks. 1 credit. S-U grades only. W 7:30–8:45. D. A. Rakow.

Introductory class, 10 lectures, and a final evaluation session. Each week, lectures feature prominent speakers on a broad range of popular horticultural, natural-science, and human-cultural themes.

[HORT 485(4850) Public Garden Management]

Spring. 3 credits. Prerequisites: HORT 300 or 301; HORT 230 or 335. Lec, T R 10:10–11, lab, T R 11:15–12:05.

Two-and-a-half-day field trip to other botanical gardens and arboreta. Offered odd years. D. A. Rakow and S. M. Skelly. Explores the history of public gardens, types of contemporary public gardens, and the operation of botanical gardens and arboreta. Includes separate units on collections curation, design of collections, management of landscapes and natural areas, educational programming, interpretive programs, research, financial management, and staffing.]

HORT 491(4910) Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 491[4910])

Fall. 4 credits. Limited to 48 students. Prerequisite: horticulture or landscape architecture majors or permission of instructor. Preregistration required. Lec, T R 12:20-1:10; Lab, T R 1:25-4:25.

N. L. Bassuk and P. J. Trowbridge.

Focuses on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students can critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details is produced to implement these practices. A project where students implement what they have learned by creating a new landscape serves to integrate theory, principles, and practices. No prior design experience necessary.

HORT 492(4920) Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 492[4920])

Spring. 4 credits. Limited to 48 students. Prerequisite: passing grade in HORT/LA 491; horticulture or landscape architecture majors or permission of instructors. Preregistration required. Lec, T R 12:20-1:10; lab, T R 1:25-4:25. N. L. Bassuk and P. J. Trowbridge.

Second half of course focusing on the winter identification, uses, and establishment of woody plants in urban and garden settings. Issues of site assessment and soil remediation are emphasized in addition to soil volume calculations, drainage and surface detailing, and planting techniques. Students critically assess potential planting sites, and select appropriate trees, shrubs, vines, and ground covers for a given site. Design for specific sites followed by written specifications and graphic details are produced to implement these proposals. Students implement, in a hands-on manner, site remediation and planting techniques they have learned by creating new landscapes that serve to integrate theory, principles, and practices. Together, HORT/LA 491 and 492 constitute an integrated course.

HORT 494(4940) Special Topics in Horticulture

Fall or spring. 4 credits max. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings may vary by semester, and will be advertised before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

HORT 495(4950) Undergraduate Seminar—Current Topics in Horticulture

Fall and spring. 1 credit; may be taken four times for 1 credit per semester. Graduate students should enroll in HORT 600. S-U grades only. M 11:15-12:05.

L. Cheng.

Undergraduate participation in weekly departmental seminar series.

HORT 496(4960) Internship in Horticulture

Fall or spring. Variable credit. Prerequisite: permission of student's adviser **in advance of participation** in internship programs. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall) signed by faculty member who will supervise study and assign grade. Staff.

HORT 497(4970) Independent Study in Horticulture

Fall or spring. Variable credit. Prerequisite: permission of instructor(s). S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall).

Independent study in horticultural sciences under the direction of one or more faculty members. Staff.

HORT 498(4980) Undergraduate Teaching Experience

Fall or spring. Variable credit. Prerequisites: previous enrollment in course to be taught or equivalent, and written permission of instructor. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall). Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and teaching horticultural sciences courses under the supervision of departmental faculty members. May include leading discussion sections; preparing, assisting in, or teaching laboratories; and tutoring.

HORT 499(4990) Undergraduate Research

Fall or spring. Variable credit. Prerequisite: permission of instructor. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall.) Staff.

Undergraduate research projects in horticultural sciences.

HORT 500(5000) Master of Professional Studies (Agriculture) Project

Fall or spring. 1-6 credits; 6 credits max. toward M.P.S. (agriculture) degree. Requirement for M.P.S. (agriculture) candidates in respective graduate fields of horticulture. S-U grades optional. Staff.

Comprehensive project emphasizing the application of principles and practices to professional horticultural teaching, extension, and research programs and situations.

HORT 600(6000) Seminar in Horticulture

Fall and spring. 1 credit. Requirement for graduate students majoring or minoring in horticulture. Undergraduate students enroll in HORT 495. S-U grades only. M 11:15-12:05. L. Cheng.

Weekly seminars consisting of graduate student research project reports, faculty research topics, as well as guest speakers from other universities and/or industry.

HORT 615(6150) Quantitative Methods in Horticultural Research

Spring, weeks 1-7. 2 credits. Prerequisite: BTRY 601, 602, or permission of instructor. S-U grades only. W F 2:30-4:25. Offered even years. D. W. Wolfe.

Provides experience in applying statistics principles to real-world agricultural research problems. Uses examples of lab, greenhouse, and field studies from the published literature. Explores other quantitative methods. Topics

include approaches to controlling and analysis of variation; common block and incomplete block designs; selecting an appropriate significance level; designing on-farm experiments and demonstration plots; regression methods in relation to mechanistic models and path and principal components analysis; and plant growth analysis techniques.

HORT 617(6170) Advanced Analytical Methods for Plant Systems

Spring. 3 credits. Prerequisite: one year of general chemistry, one semester of organic chemistry, plant physiology. Letter grades only. Lec, T 12:20; lab, T 1:25-4:25.

Offered even years. Staff.

Principles and practical applications of selected laboratory methods in the plant and environmental sciences. Emphasizes enhancement of laboratory technique and problem-solving skills. Discusses suitability of various procedures for measuring important plant and soil components. Analytical techniques are chosen from: ICP spectroscopy, elemental analysis by combustion or flow analysis, gas chromatography, HPLC, electrophoresis, electrochemical assays, enzyme assays, bioassays, and mass spectrometry.

[HORT 618(6180) Breeding for Pest Resistance (also PL BR 618[6180])

Fall. 2 credits. Prerequisites: BIOGD 281 and PL BR 403 or equivalents. Highly recommended: introductory plant pathology and/or entomology course. Letter grades only. Lec, M 2:30-4:25.

Offered even years. P. D. Griffiths.

For description, see PL BR 618.]

[HORT 625(6250) Advanced Postharvest Biology

Fall. 1-3 credits, variable. Times TBA. Offered even years. Coordinators: S. Gan and C. B. Watkins.

Sec 01 Advanced Postharvest Physiology. 1 credit. (12 lec). S. Gan.

Emphasizes the physiological and biochemical aspects of growth and maturation, ripening, and senescence of harvested horticultural plant parts.

Sec 02 Plant Senescence (also BIOPL 653.06). 1 credit. (12 lec). S. Gan.

Introduces molecular, genetics, and genomics approaches in plant senescence and postharvest research. Topics include gene expression, regulation, and function associated with physiological and biochemical changes in senescing, maturing, and/or ripening plants or parts. Also discusses genetic manipulation of senescence/ripening processes.

Sec 03 Advanced Postharvest Technology. 1 credit. (12 lec). C. B. Watkins.

Emphasizes advanced existing and emerging technology and practice for handling, monitoring, and storage of horticultural crops after harvest.]

HORT 635(6350) Tools for Thought

Fall. 1 credit. Prerequisite: graduate standing. S-U grades only. Disc. TBA. T. H. Whitlow.

Discusses readings from Kuhn, Waddington, Wilson, Lewontin, and others emphasizing application of the philosophy of science to the real-world practices of scientists.

HORT 636(6360) Current Topics in Horticulture

Fall or spring. 1 credit. S-U grades only.
One hour per week. TBA. Staff.

Seminar series on current topics chosen by participating students and faculty members, on a rotating basis. Format consists of weekly discussion groups, with each participant presenting at least one oral report based on independent reading and/or experimentation relating to the chosen topic. Interested students should contact the designated instructor(s) for each semester.

HORT 6400(6400) New Directions in Public Horticulture

Spring. 1 credit. Disc TBA. Offered even years. D. A. Rakow and S. M. Skelly.

Designed to introduce students to a range of current issues facing public gardens through a set of required readings. Each class period is devoted to a discussion of the topic between the instructors and students based on both the readings and personal experiences.

HORT 694(6940) Special Topics in Horticulture

Fall or spring. 4 credits max. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committees, and the same course is not offered more than twice under this number.

HORT 700(7000) Graduate Teaching Experience

Fall or spring. Variable credit. Prerequisite: permission of instructor; graduate standing. Undergraduates should enroll in HORT 498. S-U grades optional. Times TBA. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. May include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

HORT 800(8000) Thesis Research, Master of Science

Fall or spring. Credit TBA. S-U grades only.

HORT 900(9000) Thesis Research, Doctor of Philosophy

Fall or spring. Credit TBA. S-U grades only.

INTERNATIONAL AGRICULTURE AND RURAL DEVELOPMENT

IARD 300(3000) Perspectives in International Agriculture and Rural Development

Fall. 2 credits. R. Everett and R. Nelson. Forum to discuss both contemporary and future world food issues and the need for an integrated, multidisciplinary team approach in helping farmers and rural development planners adjust to the ever-changing food needs of the world.

IARD 314(3140) Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts [also CSS 314(3140)]

Fall. 3 credits. Prerequisite: introductory crop science, soil science, or biology course or permission of instructor. P. Hobbs.

Characterization and discussion of traditional shifting cultivation, lowland rice-based systems, upland cereal-based systems, smallholder mixed farming including root crops and livestock, plantation fruit and oil crop systems, and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. Evaluates the effect of tropical cropping systems on the environment.

IARD 402(4020) Agriculture in Developing Nations I [also FD SC 402(4020)]

Fall. 2 credits. F 1:25–3:20. T. W. Tucker and R. W. Blake (Mexico sec); K. V. Raman and W. R. Coffman (India sec).

Acquaint students with the major issues and problems in international agriculture and rural development and to demonstrate how problems in development are being addressed in the Gulf Region of Mexico and India. The lectures/discussions establish the global and regional contexts for sustainable agricultural development and focus on development challenges in Latin America and Asia through cases in southern Mexico and India. This course may be taken as a stand-alone survey course in international agriculture and rural development. However, it is primarily a preparatory course for participants selected to participate in the spring semester course Agriculture in the Developing Nations II (IARD 602), which includes concurrent field trips to the Gulf Region of Mexico and India during the January intersession.

IARD 403(4030) Traditional Agriculture in Developing Countries [also CSS 403(4030)]

Fall. 1 credit. S-U grades only. P. Hobbs. Today, perhaps more than half of the world's arable land is farmed by traditional farmers. They developed sustainable agriculture practices that allowed them to produce food and fiber for millennia with few outside inputs. Many of these practices have been forgotten in developed countries but are still used by many traditional, subsistence, or partially subsistence farmers in developing countries. This course examines traditional systems from several disciplinary points of view.

IARD 404(4040) Crop Evolution, Domestication, and Diversity [also PL BR/BIOPL 404(4040)]

Spring. 2 credits. Prerequisite: BIOGD 281 or PL BR 225 or permission of instructor. S-U grades optional. S. Kresovich.

Evolution, domestication, and breeding of crop plants have molded the current diversity we conserve and use. Based on advances in systematics and molecular genetics, this course presents an integrated approach to understanding and describing diversity of agricultural and horticultural species. Underlying ethical, legal, and social issues affecting conservation and use also are addressed.

IARD 480(4800) Global Seminar: Building Sustainable Environments and Secure Food Systems for a Modern World [also NTRES/FD SC 480(4800)]

Spring. 1–3 credits. Prerequisite: junior, senior, or graduate standing. Letter grades. J. Lassoie and D. Miller.

For description, see NTRES 480.

IARD 494(4940) Special Topics in International Agriculture [also IARD 694(6940)]

Fall, spring, summer. 1–3 credits. S-U grades optional. Staff.

The department teaches "trial" courses, and special topics not covered in other courses, at the undergraduate level, under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

IARD 496(4960) International Internship

Fall, spring. 1–6 credits. Prerequisite: submission of approved internship form (see CALS internship policy guidelines). S-U grades optional. Staff.

International internship, supervised by a faculty member who is directly involved in determining both the course content and in evaluating a student's work. The student researches and initiates an appropriate international internship and negotiates a learning contract with the faculty supervisor, stating the conditions of the work assignment, supervision, and reporting.

IARD 497(4970) Independent Study in IARD

Fall and spring. 1–3 credits. S-U or letter grades. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff.

Allows students the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the direction of a faculty member.

IARD 598(5980) International Development M.P.S. Project Paper

Fall and spring. 1–6 credits; max. 6 credits may be applied toward M.P.S. degree. Prerequisite: M.P.S. candidates in field of international development (ID). S-U grades only. N. Uphoff.

Problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international development.

IARD 599(5990) International Agriculture and Rural Development M.P.S. Project Paper

Fall and spring. 1–6 credits; maximum of 6 credits may be applied toward M.P.S. degree requirements. Prerequisite: M.P.S. candidates in field of international agriculture and rural development (IARD). S-U grades only. S. Kyle.

Problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem

related to a substantive area of international agriculture and rural development.

IARD 602(6020) Agriculture in Developing Nations II (also FD SC 602(6020))

Spring, field trips to Gulf Region of Mexico (sec 1) and India (sec 2) during Jan. intersession. 3 credits. Prerequisites: IARD 402 and (or) permission of instructors. Cost of field-study trip (including airfare, local transportation, and lodging; some merit and need-based financial aid may be available): approx. \$2,500. T R 2:30-4:25 until midterm only. R. W. Blake, T. W. Tucker and C. F. Nicholson (Mexico); K. V. Raman and W. R. Coffman (India).

Designed to provide students with an opportunity to observe agricultural development in tropical Mexico or India and to promote interdisciplinary exchange among faculty, staff, students and their Mexican and Indian counterparts. A two-week field-study trip in January is followed by discussions, written projects and oral presentations dealing with problems in food, agriculture and livestock production in the context of social and economic conditions of the Gulf Region of Mexico and India.

IARD 603(6030) Administration of Agricultural and Rural Development (also GOVT 692)

Spring. 4 credits. N. T. Uphoff and T. W. Tucker.

Intercollege course designed to provide graduate students with a multidisciplinary perspective on the administration of agricultural and rural development activities in developing countries. The course is oriented to students in agricultural or social sciences who may have administrative responsibilities during their professional careers.

IARD 612(6120) Patents, Plants, and Profits: Intellectual Property Management for Scientists and Entrepreneurs (also PL BR 612(6120))

Spring. 2 credits. Prerequisite: senior or graduate standing. S-U grades optional. A. F. Krattiger, R. Potter, and R. D. Kryder. For description, see PL BR 612.

IARD 620(6200) Rural Livelihoods and Biological Resources: Technologies and Institutions

Fall, spring. 1-2 credits. S-U grades only. Biweekly. TBA. C. Barrett, A. Pell, and E. Fernandes.

Seminar exploring issues that straddle the boundaries of the biological and social sciences as they relate to rural livelihoods, food security, and the management of biological resources. Students taking the 1-credit option participate in seminars and panels. Students taking the 2-credit option must also participate in a group project.

IARD 685(6850) Training and Development: Theory and Practice (also EDUC 685(6850))

Spring. 4 credits. S-U grades optional. M. Kroma.

Analysis, design, and administration of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy as nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural

development programs in the United States and abroad.

IARD 694(6940) Graduate Special Topics in IARD

Fall or spring. 1-4 credits. S-U or letter grades. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

IARD 696 Agroecological Perspectives for Sustainable Development (also NTRES/CSS 696(6960))

Fall, spring. 1 credit. S-U grades only. L. Fisher and L. Buck.

A variety of speakers present seminars on agroecological topics relating to sustainable development throughout the world. Students are required to prepare a synopsis of each seminar.

IARD 697-698(6970-6980) International Development M.P.S. Seminar

Fall, spring. 1 credit. S-U grades only. N. Uphoff.

For M.P.S. students to discuss important issues in international development and to prepare them to write their project papers. Specific content varies.

IARD 699(6990) International Agriculture and Rural Development M.P.S. Project Seminar

Fall, spring. 1 credit. S-U grades only. Prerequisite: required for, and limited to, M.P.S. IARD students or permission of instructor. S. C. Kyle.

Provides students with the opportunity to develop and present their special projects. Also serves as a forum for discussion of current issues in low-income agricultural and rural development, with particular attention to interdisciplinary complexities.

IARD 783(7830) Farmer-Centered Research and Extension (also EDUC 783(7830))

Fall. 3 credits. S-U or letter grades. M. Kroma and T. Tucker.

Introduction to participatory traditions in farming systems research, extension, evaluation of rural development, technology generation, gender analysis, participatory rural appraisal, and documentation of local and indigenous knowledge of community-based development. Case studies of farmer-centered research and extension provide a focus for analysis. Appropriate roles of researchers and extensionists as partners with farmers are examined. A major contribution of farmer-centered research and extensions is its potential to legitimize people's knowledge by enhancing their capacity to critically analyze their own problems, to conduct their own research, and to empower them to take direct action to solve those problems.

Related Courses in Other Departments

In addition to international agriculture and rural development (IARD) courses, many other courses have an international focus. The following are suggested relevant courses:

Applied Economics and Management

International Trade and Monetary Economics (AEM 230)

*International Agribusiness Study Trip (AEM 329)

International Trade Policy (AEM 430)

*Food Marketing Colloquium (AEM 446/447)

Global Marketing Strategy (AEM 449)

Seminar on Agricultural Trade Policy (AEM 730)

Agriculture and Life Sciences

*Agriculture Study Tour to Burgundy, France (ALS 402)

*Internship Opportunities in Burgundy, France (ALS 403)

Global Seminar (NTRES 480/FD SC 480/IARD 480)

Animal Science

Tropical Livestock Production (AN SC 400)

Tropical Forages (AN SC 403)

Asian Studies

Southeast Asia Seminar: Country Seminar (ASIAN 601)

Biology

Biology of the Neotropics (BIOEE 405)

Food, Agriculture, and Society (BIOEE 469)

The Healing Forest (BIOPL 348)

Communication

Communication in the Developing Nations (COMM 424)

City and Regional Planning

Seminar in International Planning (CRP 671)

Seminar in Project Planning in Developing Countries (CRP 675)

Crop and Soil Science

Properties and Appraisal of Soils of the Tropics (CSS 471)

Ecology of Agricultural Systems (CSS 473)

Tropical Cropping Systems (CSS/IARD 314)

Development Sociology

Comparative Issues in Social Stratification (D SOC 370)

Education, Inequality, and Development (D SOC 305)

International Development (D SOC 205)

Population Dynamics (D SOC 201)

Population, Environment, and Development in Sub-Saharan Africa (D SOC 495)

Population Policy (D SOC 418)

Migration and Population Redistribution (D SOC 430)

Social Indicators, Data Management, and Analysis (D SOC 213)

Sociological Theories of Development (D SOC 606)

Sustainable Development (D SOC 261)

The Sociology of "Third World" States (D SOC 725)

Education

Farmer-Centered Research and Extension (EDUC/IARD 783)

Natural Resources

Global Ecology and Management (NTRES 322)

Environmental Governance (NTRES 331)

International Conservation: Communities and the Management of the World's Natural Resources (NTRES 434)

Seminar in Ecoagriculture (NTRES 694)

Nutritional Science

Nutritional Problems in Developing Nations (NS 306)

Integrating Food Systems and Human Needs (NS 380)

National and International Food Economics (NS 457)

International Nutrition Problems, Policy, and Programs (NS 680)

Plant Breeding

Plants, Genes, and Global Food Production (PL BR 201)

Crop Evolution, Domestication, and Diversity (PL BR 404)

*Includes overseas travel

Fall. 3 credits. Prerequisite: COMM/INFO 245.

For description, see COMM 445.

INFO 447(4470) Social and Economic Data (also ILRLE 447[4470])

Spring. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, at least one upper-level social science course, or permission of instructor.

For description, see INFO 447 in CIS section.

INFO 450(4500) Language and Technology (also COMM 450[4500])

Spring. 3 credits.

For description, see COMM 450.

INFO 490(4900) Independent Reading and Research

Fall, spring. 1–4 credits.

Independent reading and research for undergraduates.

INFO 491(4910) Teaching in Information Science, Systems, and Technology

Fall, spring. Variable credit.

Involves working as a TA in a course in the information science, systems, and technology major.

INFO 515(5150) Culture, Law, and Politics of the Internet

Fall. 4 credits.

For description, see INFO 515 in CIS section.

INFO 530(5300) The Architecture of Large-Scale Information Systems (also COM S 530[5300])

Spring. 4 credits. Prerequisite: COM S/INFO 330 or COM S 432.

For description, see COM S 530 in CIS section.

[INFO 614(6140) Cognitive Psychology (also COGST 614, PSYCH 614[6140])]

Fall. 5 credits. Two components: PSYCH 214 (3 credits) and COGST 501 (2 credits). Intended for graduate students; undergraduates opting for 5 credits should enroll simultaneously in PSYCH 214 and COGST 501. Not offered 2005–2006.

For description, see PSYCH 614.]

INFO 630(6300) Representing and Accessing Digital Information (also COM S 630[6300])

Spring. 4 credits. Prerequisite: basic knowledge of linear algebra and probability theory; basic programming skills.

For description, see COM S 630 in CIS section.

[INFO 634(6341) Information Technology in Sociocultural Context (also S&TS 634[6341])]

Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2005–2006.

For description, see S&TS 634.

INFO 635(6390) Seminar on Applications of Information Science (also INFO 435[4350])

Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of COM S 211 or equivalent, and experience in using information systems. Undergraduates and master's students should enroll in INFO 435; Ph.D. students should enroll in INFO 635.

For description, see INFO 635 in CIS section.

INFO 640(6400) Human-Computer Interaction Design (also COMM 640[6400])

Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.

For description, see COMM 640.

INFO 645(6450) Seminar in Computer-Mediated Communication (also COMM 645[6450])

Spring. 3 credits. Prerequisite: COMM/INFO 245.

For description, see COMM 645.

[INFO 648(6648) Speech Synthesis by Rule (also LING 648[6648])

Spring. 4 credits. Prerequisite: LING 401, 419, or permission of instructor. Offered alternate years; not offered 2005-2006.

For description, see LING 648.]

INFO 685(6850) The Structure of Information Networks (also COM S 685[6850])

Fall or spring. 4 credits. Prerequisite: COM S 482.

For description, see COM S 685 in CIS section.

[INFO 694(6940) The Internet as a Social Phenomenon (COMM 694[6940])

Fall. 3 credits. Prerequisite: graduate standing; seniors by permission of instructor. Not offered 2005-2006.

For description, see COMM 694.]

INFO 747(7400) Social and Economic Data (GR-RDC) (ILRLE 740[7400])

Spring. 4 credits. Limited to Ph.D. and research master's students.

For description, see INFO 747 in CIS section.

[INFO 751(7002) Media Research and Critical Design

Fall or spring. 4 credits. Prerequisites: graduate-level training in science and technology studies, philosophy, critical theory, communication, artificial intelligence, human-computer interaction, or equivalent, or permission of instructor. Not offered every year.]

INFO 790(7900) Independent Research

Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.

Independent research for M.Eng. students and pre-A exam Ph.D. students.

INFO 990(9900) Thesis Research

Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.

Thesis research for post-A exam Ph.D. students.

LANDSCAPE ARCHITECTURE

K. L. Gleason, chair (446 Kennedy Hall, 255-1649); M. I. Adleman, S. Baugher, H. W. Gottfried, A. Hammer, P. H. Horrigan, R. Jaenson, D. W. Krall, L. J. Mirin, A. Okigbo, R. T. Trancik, P. J. Trowbridge, R. W. Venables

LA 140(1400) The Symbols of New York State's Cultural Landscape

Spring. 3 credits.

Lectures with slides and other media illustrate how successive waves of New Yorkers continually defined and redefined their sense of place and "the power of place" by references to natural symbols such as Niagara Falls and to human constructions such as towns of Iroquois long houses and cities of skyscrapers.

LA 141(1410) Grounding in Landscape Architecture

Fall. 4 credits. Limited to 15 students. Letter grades only. Fee for required drafting equipment plus materials for projects: approx. \$250.

Introduction to the representation and design of landscapes and to working in a studio setting. Uses freehand drawing, measured drawing, and model making to understand design principles of the changing landscape.

LA 142(1420) Grounding in Landscape Architecture

Spring. 4 credits. Limited to approx. 20 students. Prerequisite: freshman landscape architecture majors or permission of instructor. Required drafting equipment plus project supplies: approx. \$250.

Applies fundamentals of landscape design to small-scale site-planning projects. Work in the studio introduces students to the design process, design principles, construction materials, planting design, and graphics.

LA 155(1550) American Indian Cultural Landscapes: Changes in Time

Fall. 3 credits.

Lectures with slides and other media illustrate American Indian cultures and philosophies both before and after 1492. A major focus is on how all Indian societies, from hunting societies to agricultural communities, continually transformed their cultural landscapes. Lectures also include how European expansion forcefully transformed American Indian cultural landscapes.

LA 201(2010) Medium of the Landscape

Fall. 5 credits. Prerequisite: landscape architecture majors. Required drafting equipment, supplies, and fees: approx. \$200; field trip: approx. \$250.

Studio course emphasizing the design process and principles involved in organizing and giving form to outdoor space through the use of structures, vehicular and pedestrian circulation systems, earthforms, water, and vegetation.

LA 202(2020) Medium of the Landscape

Spring. 5 credits. Prerequisite: LA 201 with grade of C or better. Supplies and fees: approx. \$250; field trip: approx. \$250.

Focuses on the role of materials in design, design theory, and design vocabulary associated with landscape architecture projects.

LA 215(2150) Sophomore Seminar: Engaging Places

Fall. 4 credits. Lec, M W 2:55-4:10. A. Hammer.

Explores how places come to be what they are, how they shape—and are shaped by—the people who live in them, how they become coordinates for plotting both a culture's biography and the meaning of a life. While the course serves as an introduction to cultural landscape studies, or the interaction of people and place, its focus is on writing: how do we represent the complexity of a place and our relation to it?

LA 261(2610) Fieldwork in Urban Archaeology [also CRP/ARKEO 261[2610]]

Fall. 4 credits.

Urban archaeologists study American Indian, colonial, and 19th-century sites that now lie within the boundaries of modern cities. This course explores how urban centers evolve; what lies beneath today's cities; and

how various cultures have altered the urban landscape. Students participate in a local archaeological excavation. Three 8-hour Saturday field labs are required; students choose three labs from seven that are offered.

LA 262(2620) Laboratory in Landscape Archaeology (also ARKEO 262[2620])

Spring. 3 credits. Prerequisites: LA 261 or ARKEO 261 or permission of instructor.

Various American Indian civilizations and European cultures have altered the landscape to meet the needs of their cultures. Students learn how to interpret the American Indian and Euro-American landscapes of specific archaeological sites by identifying and dating artifacts, studying soil samples, and creating site maps.

[LA 263/547(2630/5470) American Indians, Planners, and Public Policy (also CRP 363/547[3630/5470])

Spring. 3 credits. Offered alternate years; not offered 2005-2006.

Decisions made by public agencies and private enterprise too often lead to the flooding, polluting, strip-mining, or other destruction of American Indian reservations, archaeological sites, and burial grounds. The central focus of this course is how to address urban and regional problems without imperiling the cultural survival of minorities.]

LA 266(2660) Jerusalem through the Ages [also NES 266(2660), JWST/ARKEO/RELST 266(2660)]

Fall. 3 credits.

Explores the history, archaeology, and natural topography of Jerusalem throughout its long life, from its earliest remains in the Chalcolithic period (ca. 4000 B.C.E.) to the 19th century, including Jebusite Jerusalem, Jerusalem as the capital of the Davidic dynasty, the Roman era city of Herod and Jesus, the Crusaders and medieval Jerusalem, and Ottoman Jerusalem as the city entered the modern era. Students examine the original historical sources (e.g., Bible, Josephus, and the Madaba map) that pertain to Jerusalem. Uses slides and videos to illustrate the natural features, human-built monuments, and artifacts that flesh out the textual material, providing a fuller image of the world's most prominent spiritual and secular capital.

LA 282(2820) The American Landscape

Fall. 3 credits.

Interdisciplinary study of the environmental and cultural history of the American landscape. Topics include the relation of landscape to culture, landscape use and ecological change, regional and national landscapes, and perceptions of landscape expressed in paintings, photographs, and literature.

LA 301(3010) Integrating Theory and Practice I

Fall. 5 credits. Prerequisite: LA 202 with grade of C or better. Supplies and fees: approx. \$250; field trip: approx. \$250.

Engages participants in the art and science of design. The studio focuses on site-scaled projects that consider significant cultural and natural landscapes. Explores theories of landscape restoration, sustainable design, and landscape representation through projects that derive form from site and place.

LA 302(3020) Community Design Studio
Spring. 5 credits. Prerequisite: LA 301 with grade of C or better. Supplies and fees: approx. \$250; field trip: approx. \$250.

Engages the theory and practice of participatory community design through a real community service project. Participants gain an understanding of how to integrate meaningful public service with design invention and creativity, engage rigorous design research methods, and understand how institutional and community contexts influence design problem-solving. Students are expected to work independently and collaboratively on team projects in a community. One class period per week is designated for community fieldwork. Studio theme to be announced.

LA 315(3150) Site Engineering I
Spring. 3 credits. Prerequisite: permission of instructor.

Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

LA 316(3160) Site Engineering II
Fall. 2 credits. Prerequisite: LA 315 or permission of instructor.

Lectures and studio projects dealing with earthwork estimating; storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 318(3180) Site Construction
Spring. 5 credits. Prerequisite: permission of instructor.

Emphasizes detail design and use of landscape materials in project implementation. Explores construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation are the foci for this course. Includes lectures, studio problems, and development of drawings leading to construction documentation for a comprehensive project. Participants also fabricate material prototypes in wood and metal.

[LA 360(3600) Pre-Industrial Cities and Towns of North America (also ARKEO 360[3600], CRP 360/666[3600/6660], LA 666[6660])]
Fall. 3 credits. Not offered 2005–2006.

Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. This course considers how each culture has altered the landscape in its own unique way as it created its own built environments.]

LA 402(4020) Integrating Theory and Practice II

Spring. 5 credits. Supplies and fees: approx. \$250; field trip: approx. \$250. Studio focusing on the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historic factors and their relationships to site design and planning are critically explored through theory and practice in this studio.

LA 403(4030) Directed Study: The Concentration

Fall, spring. 1 credit. Prerequisite: landscape architecture undergraduates in final year of study.

Working with their adviser, students create a written and visual paper that documents the concentration intent.

LA 410(4100) Computer Applications in Landscape Architecture

Fall or spring. 3 credits. Limited to 15 students. Prerequisite: landscape architecture students.

Designed to develop a working knowledge of various computer software applications with emphasis on Autocad. Explores other applications relative to land-use planning and the profession of landscape architecture.

LA 412(4120) Professional Practice
Spring. 1 credit.

Presents the student with a comprehensive understanding of the role of the professional landscape architect and the problems and opportunities one may encounter in an office or in other professional situations. Topics include practice diversity, marketing professional services, office and project management, construction management, computers in the profession, and ethics.

LA 418(4180) New York Landscapes Oral History Project

Fall/spring. 3 credits. Limited to 15 students. Letter grades only.

Long-term project documenting the changing face of New York agriculture. Gives students hands-on experience in audio documentary, in creating aural portraits of rural landscapes and communities undergoing critical change. Students talk to people about their lives and work, explore local soundscapes—what Donald Ihde calls “the noise and voice of the environment, of the surrounding lifeworld”—make field recordings, write and prepare pieces for the ear, and use the Pro Tools digital editing system to create compelling pieces for listening. The course encourages students to listen more deeply to the changing world around them, while it offers New Yorkers an occasion to speak meaningfully about the decisions they face.

LA 483(4830) Seminar in Landscape Studies

Spring. 3 credits. Prerequisite: senior or graduate standing in any major or field. Topical seminar with a different subject and method each time it is offered. Subject and schedule include “Landscape and Visual Culture,” spring 2006—an inquiry into the visual construction of landscape and landscape representation in visual (painting, photography, film, graphic design) and written texts.

LA 486(4860) Placemaking by Design

Fall. 3 credits. Limited to 20 students. Priority given to juniors, seniors, and graduate students. S-U grades optional. Seminar providing an understanding of contemporary planning and landscape architecture design strategies that reaffirm and reclaim a sense of place. Readings and discussions focus on the theory and practice of placemaking as represented in the literature and in built works. Addresses the following questions: What constitutes a place-based design approach and what distinguishes it from other more conventional design approaches? Who are the key players shaping the theory and practice of placemaking?

LA 491(4910) Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 491[4910])

Fall. 4 credits. Limited to 48 students. Prerequisite: horticulture or landscape architecture majors or permission of instructors. Preregistration required. Supplies: approx. \$50; field trips: approx. \$50.

Focuses on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students are able to critically assess potential planting sites; select appropriate trees, shrubs, vines, and ground covers for a given site; and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details is produced to implement these practices.

LA 492(4920) Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 492[4920])

Spring. 4 credits. Limited to 48 students. Prerequisite: horticulture or landscape architecture majors or permission of instructors; passing grade in HORT/LA 491. Preregistration required. Supplies: approx. \$50; field trips: approx. \$50.

Second half of course focusing on winter identification, uses, and establishment of woody plants in urban and garden settings. Issues of site assessment and soil remediation are emphasized in addition to soil volume calculations, drainage and surface detailing, and planting techniques. Students critically assess potential planting sites; and select appropriate trees, shrubs, vines and ground covers for a given site. Designs for specific sites are followed by written specifications, and graphic details are produced to implement these proposals. Students implement, in a hands-on manner, site remediation and planting techniques they have learned by creating new landscapes that serve to integrate theory, principles, and practices. Together, HORT/LA 491 and 492 constitute an integrated course.

LA 494(4940) Special Topics in Landscape Architecture

Fall or spring. 1–3 credits; may be repeated for credit. S-U grades optional. Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

LA 495(4950) Green Cities: The Future of Urban Ecology (also CRP 384/584[3840/5840])

Fall. 4 credits. Explores the history and future of the ecology of cities and their role in solving the present global ecological crisis. Examines the politics, design, and economics of “green cities” in terms of transportation, renewable energy, solid waste and recycling, land use, and the built environment.

LA 497(4970) Individual Study in Landscape Architecture

Fall or spring. 1–5 credits; may be repeated for credit. Students must register using independent study form (available in 140 Roberts Hall). S-U grades optional. Work on special topics by individuals or small groups.

LA 498(4980) Undergraduate Teaching

Fall or spring. 1-2 credits. Prerequisites: previous enrollment in course to be taught and permission of instructor. Students must register using independent study form (available in 140 Roberts Hall).

Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty members.

LA 499(4990) Undergraduate Research

Fall or spring. 1-5 credits. Students must register using independent study form (available in 140 Roberts Hall).

Permits outstanding undergraduates to carry out independent research in landscape architecture under appropriate faculty supervision. Research goals should include description, prediction, and explanation, and should generate new knowledge in the field of landscape architecture.

LA 501(5010) Composition and Theory

Fall. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. \$250; field trip: approx. \$250.

Basic principles of natural and cultural processes that form "places" in the landscape. Projects focus on design applied to the practice of landscape architecture: particularly the relationship between measurement, process, experience, and form at multiple scales of intervention.

LA 502(5020) Composition and Theory

Spring. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. \$250; field trip: approx. \$250.

Studio focusing on the spatial design of project-scale site development. Students develop their expertise in applying the design theory, vocabulary, and graphic expression introduced in LA 501.

LA 505(5050) Landscape Representation I

Fall. 3 credits. Co-requisite: LA 501 or permission of instructor.

Introduces students to both conventional and unconventional modes of landscape architectural design representation. Teaches drafting, orthographic drawing, axonometric project, lettering, analysis, and concept drawing alongside more expressive modes of direct site study and representation.

LA 506(5060) Graphic Communication II

Spring. 3 credits. Prerequisite: LA 505. Co-requisite: LA 502 or permission of instructor.

Intermediate-level course focusing on modes of landscape representation from ideation to presentation. Representation modes may include freehand, process drawing, analysis and orthographic drawing; concept modeling; composite drawings; and visual books.

LA 524(5240) History of European Landscape Architecture*

Fall. 3 credits.

*Offered through College of Architecture, Art, and Planning.

LA 525(5250) History of American Landscape Architecture*

Spring. 3 credits.

*Offered through College of Architecture, Art, and Planning.

[LA 545(5450) The Parks and Fora of Imperial Rome

Spring. 3 credits. Prerequisites: advanced standing in a design field, classics, or history of art, other disciplines, or permission of instructor.

Advanced seminar seeking an interdisciplinary group of students in classics, art history, archaeology, landscape architecture, horticulture, and architecture to bring their knowledge of Latin, Greek, Italian, archaeology, drawing, design, or computer modeling to a collaborative study of the ancient fora and public parks depicted on the Severan Marble plan of Rome. Opportunity for a spring break trip to Rome.]

[LA 569(5690) Archaeology in Preservation Planning and Site Design (also CRP 569(5690))

Spring. 3 credits. Offered alternate years; not offered 2005-2006.

In response to federal, state, and local legislation, historical archaeology now plays an important role in design, planning, and land-use decisions. Students develop the research skills needed to complete environmental review projects and historic landscape plans.]

LA 580(5800) Landscape Preservation: Theory and Practice

Fall. 3 credits. Prerequisite: junior, senior, or graduate standing.

Examines the evolving practice of landscape preservation in the United States. Topics include the recent history of the discipline, methodology in documentation of historic landscapes, and important practitioners and notable projects. Format is assigned readings and discussion, invited speakers, lectures, and a project documenting a local site.

LA 582(5820) The American Landscape

Fall. 3 credits.

Interdisciplinary study of the environmental and cultural history of the American landscape. Topics include the relation of landscape to culture, landscape use and ecological change, regional and national landscapes, and perceptions of landscape expressed in paintings, photographs, and literature. Graduate students complete additional outside work and attend an additional class session.

LA 590(5900) Theory Seminar

Spring. 3 credits. Prerequisite: senior or graduate standing.

Seminar in landscape design theory.

LA 598(5980) Graduate Teaching

Fall or spring. 1-3 credits. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff.

Designed to give qualified students experience through involvement in planning and teaching courses under the supervision of faculty members. The experience may include leading discussion sections, preparing, assisting in desk critiques, and presenting lectures. There are assigned readings and discussion sessions on education theory and practice throughout the semester. (Credit hours are determined by the formula: 2 hours per week = 1 credit hour).

LA 601(6010) Integrating Theory and Practice I

Fall. 5 credits. Prerequisite: graduate standing or permission of instructor. Supplies and fees: approx. \$250.

Studio focusing on site-scaled projects that consider significant cultural and natural landscapes. Explores theories of landscape restoration, sustainable design, and landscape representation are explored through projects that derive form from site and place. The integration of site history, ecology, and site construction supports an understanding and relationship between design and site.

LA 602(6020) Integrating Theory and Practice II

Spring. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. \$250; field trip: approx. \$250.

Studio building on prior course work with an expectation that participants can creatively manipulate the program and conditions of a site, with increased emphasis on contemporary construction technology. Focuses on the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historic factors and their relationship to site design and planning are critically explored through theory and practice.

LA 603(6030) Directed Study: The Concentration

Fall, spring. 1 credit. Prerequisite:

landscape architecture graduate students in final year of study.

Working with their adviser, students create a written and visual paper that documents the concentration intent.

LA 615(6150) Site Engineering I

Spring. 3 credits. Prerequisite: permission of instructor.

Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

LA 616(6160) Site Engineering II

Fall. 2 credits. Prerequisite: LA 615 or permission of instructor.

Lectures and studio projects dealing with earthwork estimating, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 618(6180) Site Construction

Spring. 5 credits. Prerequisite: permission of instructor.

Emphasizes detail design and use of landscape materials in project implementation. Explores materials, including specifications, cost estimates, and methods used by landscape architects in project implementation. Includes lectures, short studio problems, and the development of drawings leading to construction documentation for a comprehensive project. Participants also fabricate material prototypes in wood and metal.

[LA 666(6660) Pre-Industrial Cities and Towns of North America (also CRP 666(6660))

Fall. 3 credits. Offered alternate years.

Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. This course considers how each culture has altered the landscape in its own unique way as it created its own built environments.]

LA 680(6800) Graduate Seminar in Landscape Architecture

Fall or spring. 1-3 credits; may be repeated for credit. Prerequisite: graduate standing. S-U grades optional.

Topical subjects in landscape architectural design, theory, history, or technology. Includes seminar topics and group study not considered in other courses.

LA 694(6940) Special Topics in Landscape Architecture

Fall or spring. 1-3 credits; may be repeated for credit. S-U grades optional.

Topical subjects in landscape architectural design, theory, history, or technology. Includes group study of topics not considered in other courses.

LA 701(7010) Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555[5550])

Fall. 5 credits. Prerequisite: graduate standing. Supplies and fees: approx. \$250; required field trip: approx. \$250.

Application of urban-design and town-planning techniques to specific contemporary problems of city environments. Investigates issues of urbanism and applies them to physical design interventions and spatial typologies involving the street, square, block, garden, and park systems. Introduces three-dimensional computer modeling and digital design media as tools for urban design. This is a specially arranged collaborative studio with the Department of City and Regional Planning.

LA 702(7020) Advanced Design Studio

Spring. 5 credits.

Capstone studio providing the opportunity to explore issues in contemporary landscape architecture and to integrate related fields. Topics include the influences of culture, history, and criticism, as well as reinterpretations of engineering and representation.

LA 800(8000) Master's Thesis in Landscape Architecture

Fall or spring. 9 credits.

Independent research, under faculty guidance leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in final semester of residency.

NATURAL RESOURCES

B. A. Knuth, chair (117 Fernow Hall, 255-2822); M. B. Bain, B. L. Bedford, B. Blosssey, T. Brown, L. E. Buck, E. Cooch, P. Curtis, D. J. Decker, J. Enck, T. J. Fahey, T. A. Gavin, J. W. Gillett, G. Goff, J. R. Jackson, C. Kraft, M. E. Krasny, J. P. Lassoie, B. Lauber, R. A. Malecki, E. Mills, S. Morreale, M. Muskett, M. E. Richmond, L. Rudstam, R. Schneider, R. Sherman, P. J. Smallidge, C. R. Smith, K. Sullivan, P. Sullivan, J. Tantillo, N. Trautmann, S. Wolf, J. B. Yavitt

Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible.

NTRES 100(1001) Introduction to Environmental Studies

Summer. 3 credits. S-U grades optional. R. J. McNeil.

Discussion-centered course examining the interrelationships between the sciences, arts, and humanities as they relate to our environment. Students explore how we manage nature and negotiate with each other to meet our needs. Emphasis is on principles of ecology, economics, aesthetics, ethics, and law.

NTRES 101(1010) Introduction to the Field of Natural Resources

Fall. 3 credits. Prerequisite: first-year students in Department of Natural Resources. J. Lassoie.

Overview of the modern field of renewable natural resources. Focuses on identifying the components of knowledge required to understand the Earth's natural resources and ecological systems, and to participate intelligently in their conservation and management. Uses case studies introduce students to the scientific, ethical, and societal basis for protection and management of natural resources and their related environments. Students become actively engaged in data collection and analysis, use quantitative models to analyze and interpret data, explore the human dimensions of natural resource issues, and come to understand the complexities of the policy process and management strategies.

NTRES 201(2010) Environmental Conservation

Spring. 3 credits. T. Fahey.

At the beginning of the 21st century, our lives increasingly are touched by questions about environmental degradation at local, regional, and global scales. Business as usual is being challenged. This course stimulates students to go beyond the often simplistic portraits of the environmental dilemma offered by the mass media to gain a firmer basis for responsible citizenship and action on environmental issues.

NTRES 210(2100) Introductory Field Biology

Fall. 4 credits. Limited to 90 students.

Prerequisite: sophomore or junior standing with adviser in natural resources or permission of instructor; BIOG 101 and 102 or equivalent. Cost of two required overnight weekend field trips: approx. \$12. T. Gavin and C. Smith.

Introduction to methods of inventorying, identifying, and studying plants and animals. Students are required to learn taxonomy, natural history, and how to identify approximately 170 species of vertebrates and 80 species of woody plants. Stresses selected aspects of current ecological thinking. Emphasizes the interaction of students with biological events in the field and accurate recording of those events.

NTRES 220(2200) People, Values, and Natural Resources

Spring. 3 credits. J. Tantillo.

Cultural and political context for natural resources conservation and management in North America. Explores historical basis through analysis of North American environmental history, examining shifts in attitudes and conceptions of human relationships to natural resources and the environment. Reviews key laws guiding policy, conservation, and management of natural resources. Introduces concepts

underlying the study of human attitudes, behaviors, institutions, and decision-making processes related to natural resource conservation and management.

NTRES 306(3060) Coastal and Oceanic Law and Policy

Summer. 2 credits. Special one-week course offered at Cornell's Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details and an application, contact SML office, G14 Stimson Hall. Staff.

Intended for students interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

NTRES 310(3100) Applied Population Ecology

Fall. 3 credits. Letter grades only.

Prerequisite: completion of CALS math requirement or equivalent. Highly recommended: background in biology or ecology. E. Cooch.

In-depth analysis of the ecological factors influencing the natural fluctuation and regulation of animal population numbers. Examines models of single- and multi-species population dynamics, with emphasis on understanding the relationship between ecological processes operating at the individual level and subsequent dynamics at the population level. Significant emphasis is placed on principles as applied to conservation and management.

NTRES 311(3110) Fish Ecology, Conservation, and Management

Spring. 3 credits. Prerequisites: NTRES 210 or permission of instructor. Recommended: NTRES 310 or a general ecology course.

E. Mills, L. Rudstam, and R. Jackson. Covers basic principles of fish ecology at the individual, population, and community level, particularly as they relate to interactions between fish and the aquatic environment. Emphasizes the application of these principles to the conservation and management of fisheries resources and aquatic habitats. Provides illustrative examples from current literature and case studies.

NTRES 312(3111) Fish Ecology Laboratory

Spring, two weekend field trips. 1 credit. Pre- or co-requisite: NTRES 311. E. Mills, L. Rudstam, and R. Jackson.

Two overnight weekend field trips to the Cornell Biological Field Station and the Adirondack Field Station. Activities include experiences with various fish sampling gear and analysis of collected samples. Discussions about sampling considerations and inferences we can make by contrasting the ecology of fish in lakes of different productivity. Includes visit to a state of the art fish hatchery and evening discussion session during the field trips. Written reports required.

NTRES 313(3130) Biological Statistics I (also BTRY 301[3010])

Fall. 4 credits. Prerequisite: one semester of calculus. P. J. Sullivan.

Develops statistical methods and applies them to problems encountered in the biological and environmental sciences. Methods include data visualization, population parameter estimation, sampling, bootstrap resampling, hypothesis testing, the Normal and other probability distributions, and an introduction to modeling. Applied analysis is carried out in the Splus statistical computing environment.

[NTRES 314(3140) Conservation of Birds

Spring or summer. 2 credits. Prerequisite: NTRES 210 or permission of instructor. Offered alternate odd years; next offered 2007. C. R. Smith.]

[NTRES 315(3141) Conservation of Birds Laboratory

Spring or summer. 1 credit. Co-requisite: NTRES 314. Saturday mornings, TBA. Offered alternate odd years; next offered 2007. C. R. Smith.]

NTRES 321(3210) Introduction to Biogeochemistry (also EAS 321[3210])

Fall. 4 credits. Prerequisites: college-level chemistry and a biology and/or geology course. J. B. Yavitt and L. A. Derry.

For description, see EAS 321.

NTRES 322(3220) Global Ecology and Management

Spring. 3 credits. Prerequisites: college-level biology and general ecology course. J. B. Yavitt.

The subjects of biogeography, ecology, and biodiversity have patterns and processes that emerge only at the global scale. Recognizing the global importance of these patterns and processes is even more imperative in light of the tremendous increase in the human population size and the effects of humans on the Earth. This course is an introduction to the field of global ecology. Topics include comparative ecology and biogeography, community ecology, island biogeography, and ramifications of global climatic change.

NTRES 323(3230) Principles of Toxicology (also TOX 323[3230])

Spring. 3 credits. Prerequisites: one year each of chemistry and biology with labs; one semester of organic chemistry lecture or permission of instructor. J. W. Gillett.

Introductory lecture course in human and environmental toxicology emphasizing basic principles (exposure, dose-response, effects) involved with pesticides, hazardous wastes, and natural products. Science-based assessments for risk analysis and policy are integrated with other considerations. Guest speakers and extensive case studies augment lectures and student team exercises applied to management.

NTRES 324(3240) Ecological Management of Water Resources

Spring. 3 credits. Prerequisites: introductory ecology and introductory chemistry or permission of instructor. R. Schneider.

In-depth analysis of those ecological and biological principles relevant to the management of fresh and marine water resources, with emphasis on the effects of water management on community ecology. Lectures and discussion integrate scientific literature with current management issues. Topics include linkages between hydrologic

variability and communities; groundwater-surface connections, flow paths for dispersal, patchily distributed water resources, and water quality controls on organisms.

NTRES 325(3250) Forest Management and Maple Syrup Production

Spring. 3 credits. Letter grades only. Offered alternate even years. P. J. Smallidge.

Practical, field-oriented course emphasizing principles and practices of stewardship and multiple purpose management of small, nonindustrial, private forest land in the northeastern United States, including the production of maple syrup.

NTRES 326(3260) Applied Ecosystem Analysis Laboratory

Spring. 2 credits. Prerequisite: introductory biology; BIOEE 261 or permission of instructor. S. Morreale.

Field and lab course designed to provide experience with techniques for examining and measuring ecosystem structure and function, especially within the context of contemporary applied ecology. Tools and methods to study ecosystems include field sampling schemes and methods, measures of biodiversity and biomass, resource mapping, spatial referencing, and techniques to quantify soil and stream biota, decomposition, and physical and chemical factors controlling ecosystem structure and function.

NTRES 330(3300) Natural Resources Planning and Management

Fall. 3 credits. Prerequisite: junior standing. T. B. Lauber.

Focuses on terrestrial and aquatic resources. Emphasizes the comprehensive planning process and human dimensions of resource management. Students integrate biological, social, and institutional dimensions of management through case studies. Grades are based on individual and group performance.

NTRES 331(3310) Environmental Governance (also S&TS/B&SOC 331[3311])

Spring. 3 credits. S. Wolf.

Considers the question of environmental governance, defined as the assembly of social institutions that regulate natural resource use and shape environmental outcomes. Participants explore the roles of public policy, market exchange, and collective action in resource (mis)management. Introduces theoretical concepts from a variety of social science perspectives to support case studies and student-led discussions. Comparative analysis of how governance is pursued in different countries, historical periods, and ecological contexts (forestry, endangered species, water quality) highlight scope for institutional innovation. Students who wish to take the course for graduate credit should see NTRES 631.

NTRES 332(3320) Introduction to Ethics and Environment

Fall. 4 credits. J. Tantillo.

Introduction to ethics, aesthetics, and epistemology as related to the environment. Asks the question "How should I live?" and explores the implications of different answers to that question for our treatment of nature. Also examines the various approaches to ethics theory: the relations between art, literature, religion, and mortality; the objective nature of value judgments; and the subjective nature of nature.

NTRES 333(3330) Environmental Issues and Indigenous People (also AIS 330[3330])

Spring. 3 credits. M. Muskett.

Explores environmental perceptions and relationships held by indigenous people. Interpretations of the relationships between Indians and nature are examined through the concepts of connective and holistic interrelationship, community, identity, and the sacredness of nature. These concepts are illustrated with specific legal cases, stories, individual perceptions, and current environmental case studies.

NTRES 406(4060) Ecology Risk Assessment (also TOX 406[4060])

Fall. 3 credits. Prerequisites: BIOEE 261 or equivalent; an advanced students in natural sciences or engineering or permission of instructor. J. W. Gillett.

Strives to develop understanding of and competence in the different types of ecological (nonhuman health) risk assessments based on USEPA principles and methods. Focuses on cases for chemical, physical, and biological stressors in a variety of circumstances.

NTRES 410(4100) Conservation Biology: Concepts and Techniques

Fall. 4 credits. Limited to first 30 seniors, plus graduate students. Prerequisite: NTRES 210. Highly recommended: completion of, or concurrent enrollment in, NTRES 310. E. G. Cooch and T. A. Gavin.

Thorough analysis the ecological and quantitative dimensions for decision making in modern conservation biology and management. Emphasizes analysis of variation and maintenance of biological diversity, and focuses on principles and techniques, including demographic viability analysis of populations, genetic analysis, as well as aspects of the human dimensions of conservation biology.

NTRES 411(4110) Quantitative Ecology and Management of Fisheries Resources

Spring. 4 credits. S-U grades optional. Prerequisites: NTRES 313 recommended or permission of instructor. Offered alternate even years. P. J. Sullivan.

Examines the dynamics of marine and freshwater fisheries resources with a view toward observation, analysis, and decision making within a quantitative framework. Growing pressure on fisheries' resources, habitat modification, and increased uncertainty about the nature of biological systems are at the center of many fisheries' issues. Quantitative models are useful for integrating information needed by decision makers in addressing these issues. The course develops analytical methods to assess the dynamics and status of fisheries' resources and then demonstrates how the information may be transformed into useful information for decision makers.

[NTRES 412(4120) Wildlife Population Analysis: Techniques and Models

Spring. 3 credits. Prerequisites: NTRES 310 (or equivalent or permission of instructor), a college-level math or statistics course. Not offered 2005-2006; next offered 2007-2008. E. Cooch.]

NTRES 413(4130) Biological Statistics II (also BTRY 302[3020])

Spring. 4 credits. Prerequisite: NTRES 313 or BTRY 301. P. J. Sullivan.

Applies linear statistical methods to quantitative problems addressed in biological and environmental research. Methods include linear regression, inference, model assumption evaluation, the likelihood approach, matrix formulation, generalized linear models, single factor and multifactor analysis of variance (ANOVA), and a brief foray into nonlinear modeling. Applied analysis is carried out in the Splus statistical computing environment.

NTRES 414(4140) A Darwinian Perspective on Human Behavior and Natural Resources

Spring. 2 credits. Offered alternate even years. Pre-requisite: BIONB 221 or permission of instructor. T. Gavin.

Seeks to understand why human behavior, a product of natural selection and cultural factors, seems to result in environmental degradation. Once students understand the probable underlying basis for this human behavior, the course explores possible methods for altering this behavior.

NTRES 420(4200) Forest Ecology

Fall. 3 credits. Prerequisite: introductory biology. T. J. Fahey.

Comprehensive analysis of the distribution, structure, and dynamics of forest ecosystems. Topics include paleoecology of forests; ecophysiology of forest trees; disturbance, succession and community analysis; primary productivity; and nutrient cycling.

NTRES 421(4201) Forest Ecology Laboratory

Fall. 1 credit. Co-requisite: NTRES 420.

Weekend trip: approx. \$30. T. J. Fahey.

Field trips designed to familiarize students with the nature of regional forests and to provide experience with approaches to quantifying forest composition and its relation to environmental factors. Optional weekend field trips to Adirondacks and to the White Mountains, New Hampshire. Includes group research projects in local forests.

NTRES 422(4220) Wetland Ecology and Management—Lecture

Fall. 3 credits. Prerequisite: BIOEE 261. B. L. Bedford.

Examination of the structure, function, and dynamics of wetland ecosystems with an emphasis on principles required to understand how human activities affect wetlands. Topics include geomorphology, hydrology, biogeochemistry, plant and animal adaptations to wetland environments, and vegetation dynamics of freshwater and saline wetlands. Considers current regulations, protection programs, and management strategies.

NTRES 423(4221) Wetland Ecology and Management—Laboratory

Fall. 1 credit. Optional. Co-requisite: NTRES 422. One weekend field trip required. B. L. Bedford.

Integrated set of field and laboratory exercises designed to expose students to the diversity of wetland ecosystems; the vegetation, soils, water chemistry, and hydrology of wetlands in the region; methods of sampling wetlands vegetation, soils, and water; and methods of wetland identification and delineation.

NTRES 424(4240) Landscape Impact Analysis

Spring. 3 credits. Prerequisites: junior standing; one introductory and one advanced course in ecology or equivalents. B. L. Bedford.

Presents ecological concepts and analytical tools needed to evaluate environmental impacts to natural resources and ecosystems within an integrated context that incorporates the landscapes in which these resources occur. Explores diverse conceptual frameworks for landscape impact analysis and exposes students to modern tools for evaluating landscapes.

NTRES 426(4260) Practicum in Forest Farming as an Agroforestry System (also HORT/CSS 426[4260])

Fall. 2 credits. Lab, W 1:25–4:25.

K. W. Mudge, L. E. Buck, and P. Hobbs.

Students actively take part in the development and management of a 70-year-old nut grove originally planted at Cornell in the 1930s. The MacDaniel's Nut Grove is being developed as a multipurpose forest-farming teaching, research, and extension site. Hands-on activities include all or most of the following: temperate-nut harvest and variety evaluation, mushroom culture, small-fruit and fruit-tree culture, medicinal-herb culture, site evaluation and planning, and field trips to other agroforestry-related sites. Outdoor activities are integrated with selected readings via an online discussion board.

[NTRES 427(4270) Ecoregions: Ecology and Conservation]

Spring. 2 credits. Prerequisites: NTRES 210, 310; junior standing or above.

Recommended: statistics course. Lec/lab.

Letter grades only. Offered alternate even years; not offered 2005–2006. C. R. Smith.]

NTRES 430(4300) Environmental and Natural Resources Policy Processes

Spring. 3 credits. Prerequisites: junior standing; special application process. Lec, Wash., D.C., during Jan. 11-day winter session; three two-hour orientation sessions in fall semester and four two-hour sessions in Feb. and March. Fee: approx. \$400. Completed applications due by October 13. Applications available by contacting map10@cornell.edu or at www.dnr.cornell.edu/teaching/ugrad/courses/. B. A. Knuth.

Intensive exploration of the environmental policy process and its conceptual framework. Recognizing and defining natural resource or environmental problems and issues; aggregating interests; agenda-setting; formulating and selecting alternative solutions; implementation and evaluation stages; roles of lobbyists, legislature, executive branch, and other actors. Case studies; presentations by and discussions with about 20 prominent Washington policymakers who appear as guest lecturers. Required interviews, term paper, and oral reports.

NTRES 431(4310) Environmental Strategies

Spring. 3 credits. S. Wolf.

How is conservation of natural resources pursued in today's institutional environment? This course focuses on opportunities to mobilize market mechanisms and competitive strategies of firms to harmonize social and ecological demands on environmental systems. Through production of a portfolio of analyses of real-world integrated environmental

management schemes, students explore the mechanics of this general class of policy tools and develop a critique as to why the market does not represent a comprehensive approach to sustainability.

NTRES 432(4320) Human Dimensions of Natural Resource Management

Spring. 3 credits. Prerequisite: junior or senior standing. S-U grades optional. J. Enck.

Focuses on how a social science-based understanding of human attitudes, values, and behaviors can be incorporated in natural resource management decisions and actions. Uses examples from federal, state, and nongovernmental fish, wildlife, and forest management programs to illustrate the importance of socioeconomic considerations in problem solving and decision making.

NTRES 433(4330) Applied Environmental Philosophy

Spring. 3 credits. Recommended: NTRES 332. J. Tantillo.

Focuses on environmental philosophy and environmental ethics considered as an academic field. Major themes include anthropocentrism versus non-anthropocentrism, intrinsic value, monism versus pluralism, animal rights versus environmental ethics, and various approaches to environmental ethics, including deep ecology, ecofeminism, and pragmatism.

NTRES 434(4340) International Conservation: Communities and the Management of the World's Natural Resources

Spring. 3 credits. Letter grades only. J. Lassoie.

Lectures, readings, and multimedia information, including the Internet, build a multidisciplinary understanding of the principles underpinning conservation and natural-resource management. Specific attention is given to the role of local communities in developing sustainable land-use strategies. Case studies from Africa, Latin America, China, and the United States examine particular conservation and management issues from widely different geopolitical perspectives. Stakeholder analyses are used to base discussions of each case, followed by a synthesis and discussion of key contrasts and comparisons centered on common themes identified during the course.

NTRES 444(4440) Resource Management and Environmental Law (also CRP 444[4440])

Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. S-U grades optional. R. Booth.

For description, see CRP 444.

NTRES 456(4560) Stream Ecology (also BIOEE 456[4560])

Fall. 4 credits. Limited to 40 students.

Prerequisite: BIOEE 261 or permission of instructor. S-U grades optional. One S field trip. Offered alternate odd years. C. Kraft and A. Flecker.

Lecture examines patterns and processes in stream ecosystems, including geomorphology and hydrology, watershed-stream interactions, trophic dynamics, biogeochemistry, disturbance, and conservation and management. Field and laboratory exercises focus on experimental and analytical techniques used to study stream ecosystems, including techniques to measure stream

discharge, physical habitat, water chemistry, and stream biota. Field project with lab papers.

NTRES 480(4800) Global Seminar: Building Sustainable Environments and Secure Food Systems for a Modern World (also FD SC/IARD 480(4800))

Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. J. Lassoie and D. Miller.

Modernization has led to development pressures that have increasingly disrupted natural systems leading to widespread concerns about the long-term viability of important environmental services, including those critical to food security worldwide. This multidisciplinary course uses case studies to explore interrelationships among social, economic, and environmental factors basic to sustainable development. Cases include population growth, genetically modified foods, biodiversity, sustainable tourism, global warming, and global responsibility. Cornell faculty members lead discussions in each of the major topic areas. In addition, students participate in discussions and debates with students from Sweden, Costa Rica, Honduras, South Africa, and Australia through live interactive videoconferences and electronic discussion boards.

NTRES 493(4930) Individual Study in Resource Policy, Management, and Human Dimensions

Fall, spring, or winter. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall). R. A. Baer, T. Brown, L. E. Buck, D. J. Decker, J. Enck, J. Gillett, B. Knuth, T. B. Lauber, M. Muskett, J. Tantillo, and S. Wolf.

Topics in environmental and natural resource policy, management, and human dimensions are arranged depending on the interests of students and availability of staff.

NTRES 494(4940) Special Topics in Natural Resources

Fall or spring. 4 credits max. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

NTRES 495(4850) Individual Study in Fish and Wildlife Biology and Management

Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall). M. Bain, E. Cooch, P. Curtis, T. Gavin, J. R. Jackson, C. Kraft, R. Malecki, E. Mills, S. Morreale, M. Richmond, L. Rudstam, C. Smith, and P. Sullivan.

Topics in fish and wildlife biology and management are arranged depending on the interests of students and availability of staff.

NTRES 496(4960) Individual Study in Ecology and Management of Landscapes

Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall). B. Bedford, B. Blosssey, T. Fahey, M. Krasny, J. Lassoie, R. Schneider, R. Sherman, P. Smallidge, and J. Yavitt.

Topics in ecology and management of landscapes are arranged depending on the interests of students and availability of staff.

NTRES 497(4970) Honors Research in Natural Resources

Fall or spring. 1-6 credits, variable; may be repeated for credit. Prerequisite: enrollment in NTRES honors research program; students must register using independent study form (available in 140 Roberts Hall). NTRES Staff.

Intended for students pursuing the research honors program in natural resources. Students must complete the CALS Honors program application by the third week of the fall semester of their senior year. The research supervisor should be a faculty member or senior research associate within NTRES.

NTRES 498(4980) Teaching in Natural Resources

Fall and spring. 1-4 credits. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S-U grades optional.

Designed to give students an opportunity to obtain teaching experience by assisting in labs, field trips for designated sections, discussions, and grading. Students gain insight into the organization, preparation, and execution of course plans through application and discussions with instructor.

NTRES 500(5900) Professional Projects—M.P.S.

Fall and spring. Credit TBA. Prerequisite: M.P.S. graduate students working on professional master's projects. S-U grades only.

NTRES 600(6000) Introduction to Graduate Study in Natural Resources

Fall. 2 credits. Prerequisite: beginning graduate students whose faculty advisers are in Natural Resources. S-U grades. Lec TBA.

Includes faculty-led discussions of key natural resource issues, student discussions of research ideas, and skill building sessions on proposal writing and giving research presentations. Students are required to complete a research proposal.

NTRES 601(6010) Seminar on Selected Topics in Natural Resources

Fall or spring. 1 credit. S-U grades only. Times TBA. Check with department for availability. Staff.

Selected readings and discussions of research and/or current problems in natural resources. Offering varies by semester and is subject to availability of staff.

NTRES 603(6030) Inquiry Science Outreach in Secondary Schools (also EDUC 603(6030))

Fall or spring. 1 credit. Prerequisite: recipients of fellowships from Cornell Science Inquiry Partnerships (CSIP) program. S-U grades. N. Trautmann, L. Tompkins, and M. Krasny.

Prepares graduate students who receive Cornell Science Inquiry Partnerships fellowships for outreach work in high school and middle school science classes. Participants explore effective strategies for inquiry-based learning and review core educational issues such as learning standards, working with students of various ability levels, and assessing student learning.

NTRES 604(6040) Seminar on Selected Topics in Resource Policy and Management

Fall. 2 credits. S-U grades only. Times TBA. Check with department for availability.

Special topics seminar on subjects related to resource policy and management. Offering varies by semester and is subject to availability of staff.

NTRES 605(6050) Issues in Risk Analysis Seminar (also CEE 605(6050))

Fall. 1 credit. Prerequisite: calculus course, advanced course in statistics and basic natural sciences (chemistry, biology, earth systems). S-U grades only. Lec, TBA. J. Gillett and J. Stedinger.

Discussion of current issues and ongoing research on risk analysis issues from many perspectives with an emphasis on environmental risk analysis. Speakers address problem formulation, quantitative/qualitative methods in assessment of risks, communication issues, and challenges to risk assessment methodologies. Some sessions held jointly with other seminar series. Requires short reports and participation in two required discussion meetings for class members designed to integrate the issues raised during the semester.

NTRES 607(6070) Ecotoxicology (also TOX 607(6070))

Spring. 3 credits. Prerequisites: graduate or senior standing and two 300-level courses in chemistry, biological science, or toxicology. Offered alternate even years. J. W. Gillett.

Lectures, readings, and special guests focus on the principles of effects of toxic chemicals on natural ecosystems, their components, and processes. Major topics include fate and transport of chemicals (chemodynamics), comparative biochemical toxicology, ecosystem process analysis, simulation through mathematical and physical (microcosm) models, and relationships to regulation and environmental management.

NTRES 611(6110) Quantitative Ecology and Management of Fisheries Resources

Spring. 4 credits. S-U grades optional. Prerequisite: NTRES 313 or permission of instructor. Offered even years. P. J. Sullivan.

Taught in conjunction with NTRES 411 (see description above). Students taking the course for graduate credit are asked, in addition to the 400-level projects and homework, to construct and document a model of population or community dynamics that reflects and extends the concepts covered in the course.

[NTRES 612(6120) Wildlife Population Analysis: Techniques and Models]

Spring, 3 credits. Prerequisites: NTRES 310 (or equivalent or permission of instructor), college-level math and statistics course. Not offered 2005–2006; next offered 2007–2008. E. Cooch.]

NTRES 614(6140) Fish and Wildlife Ecology Seminar

Fall and spring, 1 credit. Prerequisite: permission of instructor. Check with department for availability. Staff.

Discussion of individual research, current problems, and current literature in fish and in wildlife ecology. Offering varies by semester and subject to availability.

NTRES 615(6150) Case Studies and Special Topics in Agroforestry

Fall, 2 credits. S-U grades only. Prerequisites: graduate standing or permission of instructor. Offered alternate odd years. J. P. Lassoie.

Multidisciplinary examination of the principles and practices of agroforestry in developed and developing countries through discussions of specific case studies and key research and development literature. Students, working individually or in teams, prepare written reviews and analyses of original cases or contemporary topics in agroforestry for presentation to the class.

NTRES 616(6160) Forest Science and Management Seminar

Fall, 1 credit. Prerequisite: upper-level undergraduate or graduate standing. J. B. Yavitt.

Reviews current literature, student research, and selected topics of interest. Topics include biogeography, ecology, and human use of forests located in boreal, temperate, and/or tropical environments.

NTRES 631(6310) Environmental Governance

Spring, 4 credits. S. Wolf.

For description, see NTRES 331. Students taking the course for graduate credit are required to read supplemental materials, undertake more complex research assignments, and participate in seminar discussion section.

[NTRES 670(6700) Spatial Statistics]

Spring, 3 credits. Prerequisites: BTRY 601 and 602. Highly recommended: introductory GIS course. S-U grades optional. Offered alternate odd years; next offered 2006–2007. P. J. Sullivan.

Develops and applies spatial statistical concepts and techniques to ecological and natural resource issues. Topics include visualizing spatial data and analysis and modeling of geostatistical, lattice, and spatial point processes. Students should consider taking this course simultaneously with CSS 620.]

NTRES 694(6940) Special Topics in Natural Resources

Fall or spring, 4 credits max. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

NTRES 696(6960) Agroecological Perspectives for Sustainable Development (also IARD/CSS 696[6960])

Fall and spring, 1 credit. S-U grades only. F 12:20–1:10. L. Buck, L. Fisher, and S. DeGloria.

For description, see IARD 696.

NTRES 698(6980) Current Topics: Environmental Toxicology (also TOX 698[6980])

Fall, spring, 1–3 credits. Prerequisites: senior or graduate standing in scientific discipline and permission of instructor.

Student-faculty colloquium on subjects of current interest, usually focusing on multidisciplinary aspects of topical problems (e.g., Superfund, oil spills).

NTRES 699(6990) Graduate Individual Study in Natural Resources

Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. NTRES graduate faculty.

Study of topics in natural resources more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

NTRES 800(8900) Master's Thesis Research

Fall and spring. Credit TBA. Prerequisite: graduate students working on master's thesis research. S-U grades only.

NTRES 900(9900) Graduate-Level Thesis Research

Fall and spring. Credit TBA. Prerequisite: Ph.D. students before "A" exam has been passed. S-U grades only.

NTRES 901(9910) Doctoral-Level Thesis Research

Fall and spring. Credit TBA. Prerequisite: Ph.D. candidates after "A" exam has been passed. S-U grades only.

Related Courses in Other Departments

Courses in many other departments are relevant to students majoring in natural resources. The following list includes some of the most closely related courses but is not exhaustive.

Environment and Society (D SOC 208, 324, 340, 410, 438, 495)

Ecology and Biology (ENTOM 370, 470, 471; BIOEE 261, 263, 274, 278, 452, 457, 459, 461, 462, 463, 465, 466, 468, 471, 472, 475, 476, 478; BIOMI 290–292, 397, 418)

Environmental Law, Ethics, and Philosophy (S&TS 206; CRP 380, 443, 444, 451, 453; PHIL 241, 246, 247, 381)

Human Systems and Communication (COMM 260, 285, 352, 421)

Physical Sciences (BEE 151, 301, 371, 427, 435, 471, 473, 475, 478; CSS 260, 365, 372, 398, 483; EAS 102, 104, 321; CEE 432)

Public Policy and Politics (GOVT 427, 428; B&SOC 461)

Resource Economics (AEM 250, 450, 451)

Spatial Data Interpretation (CSS 411, 420, 620, 660)

PLANT BREEDING

T. Brutnell, E. S. Buckler, W. R. Coffman, W. De Jong, J. J. Doyle, E. D. Earle, V. Gracen, P. Gregory, A. F. Krattiger, S. Kresovich, M. M. Jahn, L. Li, S. R. McCouch, M. A. Mutschler, R. J. Nelson, K. V. Raman, T. L. Setter, M. E. Smith, M. E. Sorrells, S. D. Tanksley, D. R. Viands, W. Pawlowski. Emeritus: R. E. Anderson, H. M. Munger, R. P. Murphy, W. D. Pardee, R. L. Plaisted

Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible.

PL BR 201(2010) Plants, Genes, and Global Food Production

Fall, 2 credits. May be used for partial fulfillment of CALS distribution requirement GROUP B—Biological Sciences.

Prerequisite: one year introductory biology or permission of instructor. Lec, T R 11:15. S. R. McCouch.

Introduces plant breeding; offers a sense of the historical and social importance of the field, tracing its evolution from the pre-scientific days of crop domestication to modern applications of biotechnology. Offers specific examples of how breeding objectives are realized and raises questions about the environmental, social, and economic consequences of intensive food production systems.

PL BR 225(2250) Plant Genetics

Spring, 3 or 4 credits; 2 credits if taken after BIOGD 281. Prerequisites: one year of introductory biology or equivalent; permission of instructor for students who have taken BIOGD 281. Lec, M W F 11:15–12:05; lab, R or F 1:25–4:25. M. Mutschler.

Surveys the fundamentals of plant genetics and shows how this information is used in plant biology and allied agricultural sciences and provides a basis for understanding the complex issues related to modern crop genetics. Topics include simple inheritance; linkage analysis; polyploidy; analysis of nuclear, chloroplast and mitochondrial genomes; pollination controls; and methods for analysis and manipulation of genes, chromosomes, and whole genomes. Examples and materials are drawn from diverse crops and plant species.

PL BR 299(2990) Introduction to Research Methods in Plant Breeding and Genetics

Fall, spring, or summer. 1–3 credits, variable. S-U grades only. Staff.

Intended for students who are new to undergraduate research. Students may be reading scientific literature, learning research techniques, or assisting with ongoing research. Students must identify a faculty supervisor who determines the work goals and the form of the final report.

PL BR 401(4010) Plant Cell and Tissue Culture

Fall, 3 credits. Prerequisite: plant biology or genetics course or permission of instructor. Recommended: concurrent enrollment in PL BR 402. Lec, T R 10:10. E. D. Earle.

Provides broad coverage of techniques of plant tissue, cell, protoplast, embryo, and anther culture and the applications of those techniques to biological and agricultural studies. Examples include horticultural, agronomic, and endangered species. Genetic

modification of plants via gene transfer and other manipulations of cultured cells is a major topic.

PL BR 402(4020) Plant Tissue Culture Laboratory

Fall. 1 credit. Limited enrollment. Pre- or co-requisite: PL BR 401 or permission of instructor. W or R 1:25-4:25 (alternate weeks) plus 1 hour TBA. E. D. Earle.

Provides hands-on experience in plant tissue culture and complements PL BR 401. Lab work includes cell, tissue and organ culture techniques related to plant propagation, germplasm storage, and genetic manipulations. Experiments use a broad range of plant materials and include protoplast culture and *Agrobacterium*-mediated gene transfer.

PL BR 403(4030) Genetic Improvement of Crop Plants

Fall. 3 credits. Prerequisites: BIOGD 281, PL BR 225, or other standard genetics course and course in crops or horticulture. M W F 9:05-9:55. V. Gracen.

Genetic enhancement of crop value to humans began with domestication and continues with farmers' variety development and scientifically trained plant breeders' applications of Mendelian, quantitative, and molecular genetics. This course examines crop genetic improvement methods by discussing the history and current practice of plant breeding, tools available to breeders, choices and modifications of those tools to meet specific objectives, and challenges plant breeders face in developing varieties for the future.

PL BR 404(4040) Crop Evolution, Domestication and Diversity (also BIOPL/IARD 404(4040))

Fall. 2 credits. Prerequisite: BIOGD 281 or PL BR 225 or permission of instructor. S-U or letter grades. Lec, T R 9:05. S. Kresovich.

Evolution, domestication, and breeding of crop plants have molded the current diversity we conserve and use. Based on advances in systematics and molecular genetics, this course presents an integrated approach to understanding and describing diversity of agricultural and horticultural species. Also addresses underlying ethical, legal, and social issues affecting conservation and use.

[PL BR 446(4460) Plant Cytogenetics Laboratory]

Spring, two-week module. 1 credit. S-U grades only. Prerequisite: genetics course or permission of instructor. Times TBA. Check with department for further information. K. N. Watanabe.

Aims to provide fundamental knowledge and techniques in plant cytogenetics. Emphasizes applications to research on plant genetics and plant breeding. Plant materials involve a wide range of crop species. Covers basic techniques for examination of plant chromosomes.]

PL BR 494(4940) Special Topics in Plant Breeding

Fall or spring. 4 credits max. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PL BR 496(4960) Internship in Plant Breeding

Fall or spring. Variable credit; may be repeated to max. of 6; minimum 60 on-the-job hours per credit granted. Prerequisites: junior or senior in plant breeding; minimum GPA of 3.0 in plant breeding courses; permission of adviser and enrollment during pre-enrollment period of semester before internship. S-U grades only. Students must attach to their course enrollment materials a CALS independent study, research, teaching, or internship form signed by faculty member who will supervise study and assign credits and grade. Staff.

On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and student, stating the conditions of the work assignment, supervision, and reporting.

PL BR 497(4970) Individual Study in Plant Breeding

Fall or spring. Variable credit; may be repeated to max. of 6. Prerequisite: permission of instructor. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall). Staff.

PL BR 498(4980) Undergraduate Teaching

Fall or spring. Variable credit; may be repeated to max. of 6. S-U grades optional. Prerequisites: permission of instructor and previous enrollment in course to be taught or equivalent. Students must register using independent study form (available in 140 Roberts Hall). Staff.

Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

PL BR 499(4990) Undergraduate Research

Fall or spring. Variable credit. Prerequisite: permission of instructor. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall). Staff.

Undergraduate research projects in plant breeding.

PL BR 504(5040) Research Experience for Teachers (also EDUC 504(5040), BIO G 504(5040))

Spring. 3 credits. Intended for, but not restricted to, students in M.A.T. degree program, practicing teachers, and students considering becoming teachers. Prerequisites: appropriate science major, 6 credits education or educational psychology course work, and permission of instructor. S-U or letter grades. T. Fulton.

Students work in a laboratory with a research team for the semester. Research experiences are accompanied by weekly discussions and readings. Students explore how research is conducted, how formal scientific discourse and informal communication occur and differ, and how these concepts can be conveyed during classroom teaching.

PL BR 604(6040) Methods of Plant Breeding Laboratory

Fall. 2 credits. Pre- or co-requisite: PL BR 403 or equivalent. S-U grades optional. T R 1:25-4:15. M. E. Sorrells.

Field trips to plant breeding programs involve discussion of breeding methods used, overall goals, selection and screening techniques, and variety and germplasm release. Additional labs include selection techniques for various traits, intellectual property issues, genetically modified crops, and international agriculture. For a term project, each student designs a comprehensive breeding program on a chosen crop.

PL BR 606(6060) Advanced Plant Genetics

Spring. 3 credits. S-U grades optional. Prerequisites: BIOGD 281 or equivalent and permission of instructor. Lec, T R 1:25-2:40. W. Pawlowski.

Advanced survey of genetics in higher plants including selected topics in Mendelian genetics, plant reproductive biology, chromosome biology, cytogenetics, and epigenetics. The development of critical analytical skills is stressed through case studies, in-class exercises, and the course project.

PL BR 612(6120) Patents, Plants, and Profits: Intellectual Property Management for Scientists and Entrepreneurs (also IARD 612(6120))

Spring, weeks 1-8. 2 credits. Prerequisite: senior or graduate standing. S-U or letter grades. Lec, M 12:20-4:25. A. F. Krattiger, R. Kryden, and R. Potter.

Covers statutory protection (copyright, trademarks, patents, plant variety protection), contracts (from material transfer to licensing), management of IP (e.g., freedom-to-operate, valuation, genetic resources, trade, and marketing), and negotiation. Emphasizes technology transfer and international aspects. The course is particularly relevant to students interested in science management, technology transfer, international agriculture, and business.

[PL BR 618(6180) Breeding for Pest Resistance (also HORT 618(6180))]

Fall. 2 credits. Prerequisites: BIOGD 281 and PL BR 403 or equivalents. Highly recommended: introductory course in plant pathology and/or entomology. Lec, M 2:30-4:25. Offered alternate even years. P. Griffiths.

Multidisciplinary examination of the challenge of incorporating disease and insect resistance into crop plants. Topics include national and international germplasm collections, germplasm evaluation and enhancement, resistance mechanisms in plants, monogenic and polygenic control of resistance, approaches to breeding for resistance, stability of genetic resistance mechanisms, and the use of biochemical, physiological, and molecular tools in breeding for pest resistance.]

PL BR 622(6220) Seminar

Fall or spring. 1 credit. S-U grades only. T 12:20-1:10. Staff, graduate students, and visitors.

PL BR 624(6240) Quantitative Trait Loci Analysis (also BIOGD/PL PA 624(6240))

Fall. 1 credit. S-U or letter option. Prerequisites: introductory statistics and BIOGD 281 or permission of instructor. T 10:10-12:05. Offered alternate years. K. Lee.

For description, see BIOGD 624.

PL BR 650(6500) Special Problems in Research and Teaching

Fall or spring. 1 or more credits.
Prerequisite: permission of instructor supervising research or teaching. Staff.

PL BR 652) Plant Biotechnology (also PL PA 662.2, BIOPL 652.6)

Spring. 1 credit. Prerequisite: BIOPL 653.1 or permission of instructor. S-U grades optional. Lec, M W F 1:25-2:15 (12 lecs). E. D. Earle and M. Zaitlin.

Deals with current and proposed use of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, or have improved nutritional or processing characteristics. Other topics are use of transgenic plants for production of valuable products and for environmental remediation. Biosafety, social, legal, and international issues relating to plant biotechnology are discussed.

PL BR 653.1 Concepts and Techniques in Plant Molecular Biology (also BIOPL 653.1, PL PA 663.01)

Fall, eight weeks. 2 credits. Prerequisites: see BIOPL 653. S-U grades optional. Two lec and one day of disc per week. Lec, M W F 10:10 (24 lecs), Aug. 26-Oct. 21. S. McCouch, J. Giovannoni, and J. Rose.

Introductory module providing a broad overview of molecular biology concepts relevant to the plant sciences. Serves as a prerequisite to other modules in the BIOPL 653 (fall) and BIOPL 652 (spring) series. The course is divided into three sections: (1) gene discovery: genetic, molecular, and genomics approaches to the isolation of plant genes; (2) gene characterization: DNA sequence analysis, assessment of gene expression, functional genomics approaches, and production of transgenic plants; (3) analysis and characterization of proteins and metabolites: metabolomic techniques. Course material is coordinated with BIOPL 641 (lab). Emphasis is on understanding concepts, techniques, and strategies that are appropriate for different experiments and objectives.

PL BR 653.3 Plant Genome Organization (also BIOPL 653.3)

Fall. 1 credit. Prerequisite: BIOPL 653.1. M W F 10:10-11:00 (12 lec), September 23-October 19. S-U or letter grades. Offered alternate years. S. D. Tanksley.

Structure and variation of plant nuclear genomes, including changes in genome size, centromere/telomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene cloning, genomic sequencing, and comparative genomics.

[PL BR 653.6 Molecular Breeding (also BIOPL 653.6)]

Fall. 1 credit. S-U or letter grades. Lec, M W F 10:10-11 (12 lec). Offered alternate years. S. Tanksley.

Application of DNA markers to the identification, manipulation, and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students learn how to design and execute experiments to identify quantitative trait loci (QTLs), as well as how to apply molecular markers to plant and animal breeding programs.]

PL BR 694(6940) Special Topics in Plant Breeding

Fall or spring. 4 credits max. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

[PL BR 716(7160) Perspectives in Plant Breeding Strategies

Spring. 3 credits. Prerequisite: PL BR 403. S-U grades optional. Offered alternate odd years. W 3:35-5:15, F 3:35-4:25. M. E. Sorrells.

Emphasizes critical discussion and evaluation of selected benchmark papers and current literature. Reviews and discusses conventional and molecular selection techniques and breeding objectives, methods, and strategies for both self- and cross-pollinated crops. Requires extensive outside reading. Grades are based on four papers demonstrating creative thinking and analysis of plant breeding concepts.]

PL BR 717(7170) Quantitative Genetics in Plant Breeding

Spring. 3 credits. Prerequisites: PL BR 403 and BTRY 601 or equivalent. S-U grades optional. W F 2:55-4:10. Offered even years. D. R. Viands.

Discussion of quantitative genetics and quantitative trait loci (QTLs) for more efficient plant breeding. Specific topics include population genetics, linkage, components of variance (estimated from various mating designs); theory and computer analysis for QTL, population structure, multiple locus regressions, and interval analysis; heritability; theoretical gain from selection; and genotypic and phenotypic correlation coefficients. During one period, plants in the greenhouse are evaluated to provide data for computing quantitative genetic parameters.

PL BR 726(7260) Problems and Perspectives in Computational Molecular Biology (also COM S/BTRY 726(7260))

Fall and spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Lec, M 1:25-2:15.

Weekly seminar series discussing timely topics of computational molecular biology. The course addresses methodological approaches to sequence annotation, protein structure and function relationships, and evolutionary relationships across species. Statistical and deterministic computational approaches are covered and specific and detailed biological examples are discussed. Topics of interest are discussed in relation to papers prepared by teams of students and/or faculty members. Students/faculty members from biology backgrounds are paired with students from math, computer science, and statistics for paper preparation. Students summarize the salient questions addressed by the paper, the research methods used, and the results obtained. At the end of the presentation, questions are listed on an overhead slide to initiate discussion in the group.

PL BR 800(8900) Master's-Level Thesis Research

Fall or spring. Variable credit. Prerequisite: Ph.D. students **only before** "A" exam has been passed; permission of instructor. S-U grades optional. Graduate faculty.

For students working on a master's thesis.

PL BR 900(9900) Graduate-Level Dissertation

Fall or spring. Variable credit. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.

PL BR 901(9910) Doctoral-Level Dissertation Research

Fall or spring. Variable credit. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.

For students admitted to candidacy **after** "A" exam has been passed.

PLANT PATHOLOGY

G. W. Hudler, chair (318 Plant Science Bldg., 255-7848); S. V. Beer, G. C. Bergstrom, S. Cartinour, A. R. Collmer, W. E. Fry, S. M. Gray, K. T. Hodge, S. G. Lazarowitz, K. Lee, J. W. Lorbeer, R. Loria, G. B. Martin, M. T. McGrath, M. G. Milgroom, E. B. Nelson, R. J. Nelson, T. Pawlowska, K. L. Perry, B. G. Turgeon, X. Wang, M. Zaitlin, T. A. Zitter

Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible.

PL PA 201(2010) Magical Mushrooms, Mischievous Molds

Spring. 2 credits. S-U grades optional. Lec, T R 11:15. G. W. Hudler.

Presentation of the fungi and their roles in nature and in shaping past and present civilizations. Emphasizes the historical and practical significance of fungi as decayers of organic matter, as pathogens of plants and animals, as food, and as sources of mind-altering chemicals.

PL PA 301(3010) Plant Diseases and Disease Management

Fall. 4 credits. Prerequisite: one year of biology. Lec, M W F 11:15; lab, T or W 1:25. M. G. Milgroom.

Introduction to plant diseases, their diagnosis, and their management. Topics include fungi, bacteria, viruses, nematodes, and other plant pathogens; disease cycles, plant disease epidemiology, disease forecasting, and the principles and practices of plant disease management. Intended for students who want a practical knowledge of plant diseases and their control.

PL PA 309(3090) Introductory Mycology

Fall. 3 credits. Prerequisite: one year of biology. Recommended: concurrent enrollment in PL PA 319. Lec, T R 9:05-9:55; lab, R 1:25-4:25. K. T. Hodge.

Survey of the astounding kingdom of fungi, including mushrooms, molds, yeasts, athlete's foot, fairy rings, and the blue stuff in blue cheese. Covers fungal biodiversity and systematics, how fungi work, and their roles in the environment and in human affairs. Students work with preserved and living fungi and learn basic identification skills. Grades are based on two prelims, a final exam, and a culture collection project.

PL PA 319(3190) Field Mycology

Fall, weeks 1-8. 1 credit. Letter grades only. Lab, W 1:25-4:25 and W 7:30-9:25 P.M. K. T. Hodge.

Students learn to identify mushrooms and other macrofungi on a series of eight afternoon field trips followed by evening lab sessions. Fungi are collected during afternoon trips to sites around Ithaca. In the evenings, students use technical keys and microscopes to identify the fungi and learn about their ecology. Grades are based on a collection project and a final laboratory examination.

PL PA 394(3940) Circadian Rhythms (also ENTOM 394[3940], BIOGD/ BIONB 394[3940])

Fall. 2 credits. Prerequisite: 200-level biology. S-U grades optional. Lec, T 10:10-11:50. K. Lee (even years) or Lec, 7:30-9:25 P.M. J. Ewer (odd years).

Explores a fundamental feature of living organisms from all kingdoms: how the cellular 24-hour biological clock operates and influences biological activities. Covers fundamental properties of biological rhythms and cellular and molecular structure of circadian oscillators in many organisms including cyanobacteria, fungi, insects, plants, reptiles, birds, and mammals (including humans).

PL PA 409(4090) Principles of Virology (also VETMI/BIOMI 409[4090])

Fall. 3 credits. Prerequisites: BIOMI 290, 291 or permission of instructor. Recommended: BIOBM 330-332, 432. Letter grades only. Lec, T R 1:25-2:40. G. R. Whittaker and S. G. Lazarowitz.

For description, see VETMI 409.

[PL PA 411(4110) Plant Disease Diagnosis

Fall. 3 credits. Limited to 18 students. Prerequisites: PL PA 301 or equivalent and permission of instructor. Lec, T R 10:10; lab, T R 1:25-4:25. Next offered 2007. Staff.

Teaches a method of diagnosing plant diseases caused by infectious and noninfectious agents with emphasis on application of contemporary laboratory techniques and effective use of the literature. After seven weeks of formal lecture and laboratory sessions, students spend the rest of the semester working on their own to determine the causes of plant diseases on samples that have either been received by the Plant Disease Diagnostic Lab or that have been prepared by instructors.]

PL PA 419(4190) Agricultural Application of Plant Disease Concepts

Fall. 2 credits. Seven sessions. Prerequisite: PL PA 301 and permission of instructor. S-U or letter grades. Lec, M 8:30-10:30; lab, M 10:30-4:30. H. Aldwinckle.

Addresses real-world problems in plant pathology through the application of research. Students tour production fields of a diversity of major fruit and vegetable crops that have been affected by diseases. Strategies for managing diseases based on research findings as well as the interface between Research and Extension are emphasized. **This course is taught at Geneva. Free transportation available.**

[PL PA 443(4430) Pathology and Entomology of Trees and Shrubs (also ENTOM 443[4430])

Fall. 4 credits. Limited to 30 students. Prerequisites: PL PA 301 or equivalent, ENTOM 212 or equivalent. Lec, M W F 11:15; lab, F 1:25-4:25. Offered even years; not offered 2005-2006; next offered 2006-2007. G. W. Hudler and P. A. Weston.

For students preparing for careers in horticulture, urban forestry, natural resources, and pest management. Deals with identification, impact, assessment, biology, and management of insects and diseases that damage trees and shrubs. Emphasizes pests of northeastern flora but examples from other parts of the country and the world are also used. Considers forest, shade, and ornamental plants.]

PL PA 470(4700) Professional Skills in Plant Science

Fall. 2 credits. S-U grades only. Lec, R 1:25-4:25. E. B. Nelson.

Provides students who are aspiring to careers as research plant scientists with an overview of the art and science of the profession. Topics include (1) what it means to be a scientist and plant pathologist; (2) preparation required of graduate students in plant pathology programs; (3) ethical considerations important to plant pathologists; (4) how to seek funding to support research activities; (5) managing the scientific literature; (6) funneling curiosity into scientific inquiry; and (7) how to read a scientific paper. Students in related disciplines (e.g., horticulture, plant breeding, plant biology) also benefit from concepts presented in this course.

PL PA 494(4940) Special Topics in Plant Pathology

Fall or spring. 4 credits maximum. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PL PA 497(4970) Independent Study

Fall or spring. 1-5 credits. S-U grades optional.

Students must register using independent study form (available in 140 Roberts Hall).

An opportunity for independent study of a special topic in mycology or plant pathology under the direction of a faculty member.

PL PA 498(4980) Teaching Experience

Fall or spring. 1-5 credits. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall).

Undergraduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor.

PL PA 499(4990) Undergraduate Research

Fall or spring. 3-5 credits. Students must register using an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Opportunity for research experience under the direction of a faculty member.

PL PA 601(6010) Concepts of Plant Pathology

Spring. 3 credits. Prerequisites: PL PA 301 or equivalent. S-U grades optional. Lec, T R 8:40-9:55; lab, R 2:00-4:25. A. R. Collmer.

Concepts in plant-pathogen relationships uniting molecular and population biology approaches, with emphases on molecular/cellular investigations of model pathosystems and population biology studies integrating host-pathogen evolution, genetics, and ecology. The discussion section is used for examining current research literature and other exercises complementary to lecture topics; emphasis is on critical thinking in science. Students prepare and review mock grant proposals.

PL PA 602(6020) Biology of Plant Pathogens

Spring. 3 credits. Prerequisite: PL PA 301. Recommended: PL PA 601 as co-requisite. Lec, T R 10:10-11; lab, R 12:20-2:15. Staff.

Biology and ecology of four major groups of plant pathogens: fungi, bacteria, viruses, and oomycetes. Model plant pathogens are used to illustrate concepts of pathogen diversity, evolution, reproduction, life cycles, movement, diagnosis, and control. Lecture and laboratory topics are coordinated with PL PA 601 to provide students with a comprehensive treatment of pathogen-host interactions at all levels from molecular to ecological. Laboratory periods are used for hands-on demonstration of pathogen diagnosis and manipulation or to discuss current literature relevant to lecture topics.

[PL PA 606(6060) Molecular Plant Virology (also BIOMI 650[6500])

Spring, 7 weeks, first half of semester. 1 credit. Prerequisites: BIOMI 409, cell biology course, or permission of instructor. S-U grades optional. Lec, M W 11:15. Offered odd years; not offered 2005-2006; next offered 2006-2007. S. G. Lazarowitz.

Introduces students to the molecular biology of plant virus replication and interactions with the host to produce disease. Topics include virus replication strategies, cell-to-cell and systemic movement, host defense responses and virus counterstrategies, and engineered resistance.]

[PL PA 608(6080) Genomics of Bacterium-Host Interactions (also BIOMI 608[6080])

Fall, second half of semester. 1 credit. Prerequisites: BIOMI 290 or equivalent or permission of instructor. S-U grades optional. Lec, M W 9:05. Offered even years; not offered 2005-2006; next offered 2006-2007. A. Collmer and S. Winans.

Introduction to genomic approaches, tools, and discoveries involving the study of bacterial interactions with plant and animal hosts. Topics include the TIGRE Comprehensive Microbial Resource and Artemis tools, the pathogens *Yersinia pestis*, *V. enterocolitica*, *Pseudomonas syringae*, *Ralstonia solanacearum*, and *Agrobacterium tumefaciens*, and the symbiont *Sinorhizobium meliloti*.]

[PL PA 620(6200) Ecology of Plant Pathogens

Spring, seven weeks, first half of semester. 1 credit. S-U grades optional. Prerequisite: PL PA 301 or permission of instructor. Lec, M W 9:05-9:55. Offered even years. E. B. Nelson.

Covers the basic ecological concepts, principles, methods, and literature important to the understanding of the interactions of plant pathogens with their physical, biochemical, and microbial environments. Emphasizes ecological processes that regulate the pre-infection behavior of plant pathogens in both aboveground and belowground habitats. Topics include the nature and behavior of pathogen inoculum, population and community biology, pathogen interactions with plant-associated microbial populations and communities, and rhizosphere and phyllosphere dynamics.]

[PL PA 621(6210) Chemical and Biological Disease Control]

Spring, seven weeks, second half of semester. 1 credit. S-U grades optional. Prerequisite: PL PA 301 or permission of instructor. Lec, M W 9:05–9:55. Offered even years. E. B. Nelson and W. Koeller. Discussion of the principles and methods used for the control of plant diseases. Emphasizes chemical and biological strategies for disease control. Topics include historical aspects of disease management in plant pathology; the discovery, use, and mode of action of major fungicide groups; pathogen resistance to fungicides; microbial strategies for biological control, regulation, and commercialization of microorganisms; transgenic microorganisms; and strategies for integrating biological and chemical control strategies.]

PL PA 624(6240) Quantitative Trait Loci Analysis (also BIOGD/PL BR 624[6240])

Fall. 1 credit. Limited to 20 students. Prerequisite: introductory statistics and genetics or permission of instructor. S-U grades optional. Lec, T 10:10–11 (4 computer labs until 12:05). K. Lee. The combination of genomic sequences, new molecular marker technologies and sophisticated mapping algorithms has made it possible to use natural variation in combination with quantitative genetic techniques to dissect complex traits down to single loci. In this modular QTL analysis course, students learn basic principles of statistical inference and quantitative genetics for QTL analysis. Students also learn how to use the statistical and QTL analysis programs so that they can perform QTL analysis independently.

[PL PA 638(6380) Filamentous Fungal Genomics and Development (also BIOGD 638[6380])]

Spring, last four weeks of semester. 1 credit. Prerequisite: BIOGD 281 or equivalent. S-U grades optional. Lec, M W F 10:10. Offered odd years; not offered 2005–2006; next offered 2006–2007. B. G. Turgeon.

Molecular genetic and genomic approaches to the study of fungal biology. Applications of contemporary methodology to genetic dissection of developmental processes, such as pathogenesis and reproduction, are described and experimental data are evaluated. Examples are chosen from investigations of model plant pathogenic fungi such as *Cochliobolus heterostrophus*, *Fusarium graminearum*, *Magnaporthe grisea*, and *Ustilago maydis* and from well known genetic models such as *Aspergillus nidulans* and *Neurospora crassa*.]

PL PA 642/652(6420/6520) Special Topics Series

Unless otherwise indicated, the following description applies to PL PA 642–652. Fall or spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PL PA 642(6420) Pathogen Population Biology

Fall. TBA. M. G. Milgroom.

PL PA 644(6440) Current Topics in Oomycete Biology

Fall. R 12:20. E. B. Nelson.

PL PA 645(6450) Plant Virology

Fall. F 12:20. S. M. Gray.

PL PA 647(6470) Phyto bacteriology Research Updates

Fall and spring. Alternate M 12:20. S. V. Beer.

Emphasizes current research in phyto bacteriology undertaken in laboratories at Cornell.

PL PA 649(6490) Fungal Biology

Spring. 1 credit. Recommended: some background in mycology or plant pathology. Weekly, TBA. K. T. Hodge and B. G. Turgeon.

Weekly meeting to discuss current scientific articles on the biology of fungi. Primarily directed at graduate students, but undergraduates, postdocs, staff, and guests who have an interest in fungi are welcome.

PL PA 650(6500) Diseases of Vegetable Crops

Fall. T 12:20. S-U grades only. J. W. Lorbeer and T. A. Zitter.

PL PA 652(6520) Field Crop Pathology

Spring. 1 credit. TBA. W. G. C. Bergstrom.

PL PA 660(6600) Special Topics in Plant Disease Management

Fall and spring. 1 credit. S-U grades only. Lec, F 12:20–1:10. C. D. Smart.

Weekly discussions of current topics in plant disease management. These include not only management practices, but also factors that influence management strategies. Students are required to read current literature and present oral reports on a topic. **Offered only at the Geneva campus. Students provide their own transportation.**

PL PA 661(6610) Diagnostic Lab Experience

Summer and fall. 1 or 2 credits. Priority given to graduate students in plant pathology and plant protection. Recommended: course work or experience in diagnostic techniques. S-U grades only. Requires 3 hours per week per credit hour. T. A. Zitter.

For graduate students and advanced undergraduates with a special interest in diagnosing plant diseases. Students work in the Diagnostic Laboratory (plant pathology department) under supervision of the diagnostician.

PL PA 662.1 Molecular Plant-Pathogen Interactions I and II (also BIOPL 652.1)

Spring, Jan. 23–Feb. 17 (12 lec). 1 credit. Prerequisites: BIOGD 281, BIOBM 330 or 331, and BIOPL 653.1. Lec, M W F. A. Collmer, S. G. Lazarowitz, G. Martin, and B. Turgeon.

Examines the molecular and cellular factors that control pathogen-plant interactions from the perspectives of pathogen biology and plant responses to pathogen infection. Beginning spring 2004, alternate years will focus on (1) plant perception of microbial pathogens and the interplay of plant defenses and pathogen counterstrategies that result in resistance or susceptibility to disease production, with topics including the genetic nature of dominant and recessive resistance, induction of pathogen defense genes, apoptotic responses that limit infection, and RNA interference; and (2) the genetic and molecular mechanisms of microbial pathogenesis, with an emphasis on fungal and bacterial virulence proteins, toxins, and their deployment systems.

PL PA 662.2 Plant Biotechnology (BIOPL 652.2 and PL BR 652)

Spring. 1 credit. Lec, M W F 1:25 (12 lec) Mar. 27–Apr. 21. M. Zaitlin and E. D. Earle. Deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides; produce useful products; or have improved nutritional and food processing characteristics. Discusses regulatory and social issues relating to plant biotechnology.

PL PA 663 Plant Molecular Biology 1

Fall. 1–5 credit. Prerequisite: BIOGD 281, BIOBM 330 or 331.

Sec 01 Concepts and Techniques in Plant Molecular Biology (also BIO PL/PL BR 653.1)

Fall. Aug. 26–Oct. 22, 12 lec. 2 credits. Lec, M W F 10:10. J. J. Giovannoni, S. R. McCouch, and J. Rose.

Introductory module that provides a broad overview of molecular biology concepts relevant to the plant sciences, and serves as a prerequisite to other modules in the BIOPL 653 (fall) and BIOPL 652 (spring) series. The course is divided into two sections: (1) gene discovery, which covers genetic, molecular, and genomics approaches to the isolation of plant genes; and (2) gene characterization, which covers DNA sequencing, DNA and RNA blotting, use of gene databases, and various approaches to producing transgenic plants. Emphasis is on understanding the appropriate approach that is needed for different experiments.

[PL PA 664 Molecular Plant-Microbe Interactions (also BIOPL/BIOMI 652.2)]

Spring, first four weeks: Jan. 23–Feb. 17 (12 lec). 1 credit. Prerequisites: BIOGD 281, BIOBM 330 or 331 or 333, and BIOPL 653 (sec 1) or equivalents. S-U grades optional. Lec, M W F 12:20. Offered even years. S. C. Winans.

For description, see BIOPL 652, sec 2.]

PL PA 681(6810) Plant Pathology Seminar

Fall and spring. 1 credit. Requirement for all plant pathology majors. S-U grades only. W 12:20-1:10. B. G. Turgeon.

PL PA 694(6940) Special Topics in Plant Pathology

Fall or spring. 4 credits max. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PL PA 788(7880) Research in Molecular Plant Pathology

Fall and spring. 2, 4, or 6 credits. Prerequisite: permission of instructor before beginning research. S-U grades only. S. V. Beer.

Guided research experiences in laboratories addressing questions concerning the interaction of pathogens (bacteria, fungi, viruses) and plants at the molecular level. Intended for beginning graduate students with a concentration in molecular plant pathology and sufficient theoretical background and practical laboratory experience. Students submit plans and reports on each research experience.

PL PA 797(7970) Special Topics

Fall or spring. 1-5 credits. S-U grades optional. Staff.

Opportunity for independent study of a special topic.

PL PA 798(7980) Graduate Teaching Experience

Fall or spring. 1-5 credits. S-U grades. Staff.

Graduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor. This experience may include, but is not limited to, preparing, assisting in, and teaching laboratories, preparing and delivering lectures, leading discussion sessions, and tutoring.

PL PA 800(8900) Master's-Level Thesis Research

Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of adviser. Graduate faculty.

For students working on a master's degree.

PL PA 900(9900) Graduate-Level Thesis Research

Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of adviser. Graduate faculty.

For Ph.D. students who have not passed "A" exam.

PL PA 901(9910) Doctoral-Level Thesis Research

Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of adviser. Graduate faculty.

For Ph.D. candidates who have passed "A" exam.

FACULTY ROSTER

Abawi, George S., Ph.D., Cornell U. Prof., Plant Pathology (Geneva)
 Acree, Terry E., Ph.D., Cornell U. Prof., Food Science, and Technology (Geneva)

COLLEGE OF ARCHITECTURE, ART, AND PLANNING

ADMINISTRATION

Mohsen Mostafavi, dean

W. Stanley Taft, associate dean

Nasrine Seraji, chair, department of architecture

Buzz Spector, chair, department of art

Kenneth M. Reardon, chair, department of city and regional planning

John McKeown, interim director, administration and finance

Deborah Durnam, director, admissions

Carol Cooke, director, alumni affairs and development

M. Susan Lewis, director, career services

Leon Lawrence, director, multicultural affairs

Margaret N. Webster, director, visual resources facility

Jayne A. LeGro, registrar

FACULTY ADVISERS

Architecture students are assigned faculty advisers and are also invited to share concerns with and seek advice from the most appropriate faculty member or college officer, including the registrar, the department chair, and the dean.

Students in the fine arts department are assigned a faculty adviser for the first year. After the first year, students may select their advisers. Students are required to have an adviser throughout their program in their area of concentration.

Undergraduate students in the Program of Urban and Regional Studies are assigned faculty advisers.

All students in the college are invited to share concerns and seek advice from the volunteer student advisers (EARS) at any time.

DEGREE PROGRAMS

	<i>Degree</i>
Architecture	B. Arch.
	B.F.A.
Fine Arts	B.F.A.
History of Architecture and Urbanism	B.S.
Urban and Regional Studies	B.S.

The college offers programs leading to the bachelor's degree—the five-year program in architecture leads to the bachelor of architecture; four-year programs in art and architecture lead to the bachelor of fine arts. In addition, four-year programs with a concentration in either urban and regional studies or history of architecture lead to the bachelor of science.

Graduate-level programs are offered in art, architectural design and urban design, architectural science, history of architecture and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture.

Students in most of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with students and faculty from other disciplines.

Early in its development, the college set a limit on the number of students it would enroll and devised a selective method of admission. There are now more than 670 students and a full-time teaching staff of over 60, supplemented by visiting professors and critics, part-time lecturers, and assistants. Teachers and students mix freely, and much instruction and criticism is on an individual basis.

The college's courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university. The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curricula, the methods of teaching, and the extracurricular life of teachers and students.

FACILITIES

The college occupies Sibley Hall, Olive Tjaden Hall, Rand Hall, and the Foundry. Facilities for architecture and city and regional planning, as well as college administrative offices, the Visual Resources Facility, and the Fine Arts Library, are located in Sibley Hall. The Department of Art is housed in Olive Tjaden Hall. Sculpture facilities are in the Foundry and architecture design studios and shop facilities are in Rand and Sibley. The Green Dragon Café, a student eatery and lounge, is located in the lower level of Sibley Dome. Darkrooms in the Department of Art are available for general use by students in the college and are used primarily as laboratories for the photography courses. Each user must pay a darkroom fee. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk.

Through the generosity of the late Lillian P. Heller, the college also owns the Miller-Heller House, home of William H. Miller, the first student to enroll for the study of architecture at Cornell, and later a practicing architect in Ithaca. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

Libraries

The Fine Arts Library in Sibley Hall serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, city and regional planning, and landscape architecture. The library, with more than 177,000 books, is capable of supporting undergraduate, graduate, and research programs. Some 1,300 serials are currently received and maintained.

The Visual Resources Facility, made possible through gifts from George and Adelaide Knight, is located in Sibley Hall and contains the F. M. Wells Memorial Slide Collection, which consists of a large and growing collection of slides of architecture, architectural history, and art. The collection now includes approximately 450,000 slides.

The facilities of the libraries of other schools and departments on campus and the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

Museums and Galleries

The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell. Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John Hartell Gallery in Sibley Dome and in the Olive Tjaden Gallery in Olive Tjaden Hall. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held.

Rome Program

The College of Architecture, Art, and Planning's Rome Program was founded in the fall of 1986 to provide instruction in Italy for students seeking excellence in art, architecture, and other disciplines. The program offers an educational experience that draws upon the rich past of Rome, its resources in museums, its art and architecture, and its wide variety of cultural offerings. The school is located in the restored 17th-century Palazzo Lazzaroni in the center of the eternal city near such well-known Roman sights as Piazza Navona, the Pantheon, and Rome's famous outdoor market at the Campo dei Fiori.

The program in Rome offers components for students majoring in architecture, fine arts, planning, and liberal arts. Full course loads are available to all students in a curriculum that stresses the convergence of artistic, cultural, and architectural ideas vital to

an understanding of the city. Students are responsible for planning course schedules that ensure their particular requirements can be met, since course offerings in Rome are limited. For additional information, see individual department listings or contact the Rome Program office, 149 East Sibley Hall.

COLLEGE ACADEMIC POLICIES

Ownership of Student Work

All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college for retention for academic purposes.

Exhibitions of Student Work

Exhibitions of student work are held each semester as part of the yearly schedule of the Olive Tjaden Gallery and the John Hartell Gallery in Sibley Dome. These galleries display work from a specific course or exhibit examples of recent work by individual faculty members, students, and visitors.

Scholastic Standards

Semester by semester, a candidate for an undergraduate degree in this college is required to successfully complete a minimum of 12 credit hours with a grade point average for the semester of not less than C (2.0). The record of each student who falls below the standard will be reviewed by the college's Academic Records Committee for appropriate action, among those described below:

1. The student is issued a **Warning**. This means the student's performance is not up to expectations. Unless improvement is shown in the subsequent semester, the student may be placed on **Final Warning** or given a **Required Leave of Absence** from the college.
2. The student is issued a **Final Warning**. This indicates the student's record is unsatisfactory. Unless considerable improvement is shown in the subsequent semester, the student may be given a **Required Leave of Absence** from the college.
3. The student is placed on a **Required Leave of Absence**. The student is dismissed from the college and may not continue studies in the college. A student who has been placed on a required leave of absence may request to resume studies after a leave of absence of at least two semesters. This request is made by letter addressed to the college dean, chair of the Academic Records Committee, 129 Sibley Hall, Ithaca, NY 14853-6702. The student must submit evidence that time has been well used, and if employed, the student must submit a letter from the employer(s). Students on required leave are not allowed to register extramurally at Cornell, as the intention of the required leave is to insist upon a break from study at Cornell. If a student chooses to enroll in courses at another institution while on a required leave, credit is not granted automatically. Upon receiving permission to return, a student must

petition the department to request credit for courses taken. A return to study in the college after a required leave of absence is at the discretion of the college's Academic Records Committee. Requests for spring semester return must be made by November 15 and requests for fall semester return must be made by April 15. The second required leave of absence is a de facto dismissal and the student will be permanently withdrawn from the college.

4. The student is placed on a **Required Withdrawal**. The student may not reregister in the College of Architecture, Art, and Planning and is dismissed from the college and is permanently prohibited from continuing studies in it.

The required withdrawal action does not prevent the student from applying for admission to another division of the university.

The above actions are not necessarily sequential. A student who has received a warning may be placed on a required leave of absence at the end of the next semester if the performance during that semester is deemed to be grossly deficient.

It is necessary to have a cumulative grade point average of at least 1.7 (C-) for graduation.

ARCHITECTURE

N. Seraji, chair (143 East Sibley Hall, 255-5236); L. Chi, M. Cruvellier, M. Curry, F. Davis, W. Goehner, D. P. Greenberg, G. Hascup, K. Hubbell, D. M. Lasansky, B. G. MacDougall, A. B. Mackenzie, L. Mirin, V. Mulcahy, J. Ochshorn, C. F. Otto, A. Ovaska, H. W. Richardson, A. Simitch, V. K. Warke, J. Wells, M. Woods, J. Zissovici

Professional Degree Programs

Cornell offers two professional degrees in architecture: the undergraduate bachelor of architecture and the graduate master of architecture. These degrees count toward the professional registration requirements established by the various states, the National Architectural Accrediting Board, and the National Council of Architectural Registration Boards.

B. Arch.

The undergraduate professional program is normally five years in length and is designed particularly for people who, before they apply, have established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.

The program is oriented toward developing the student's ability to deal creatively with architectural problems on analytical, conceptual, and developmental levels. The sequence courses in design, consisting of studio work augmented by lectures and seminars, are the core of the program. Sequences of studies in the history of architecture and cities, culture and society, architectural theory, visual studies, environmental control, structures, construction, and computer applications provide a base for the work in design.

In the first three years, the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years, this base may expand through further detailed studies in these areas. Within the professional program a basis for understanding architecture in its contemporary and historical cultural contexts is established.

The structure of the program incorporates considerable flexibility for the individual student to pursue his or her particular interest in the fourth and fifth years. By carefully planning options and electives in the fifth year, it is possible for a qualified student to apply the last year's work for the bachelor of architecture degree to the post-professional M. Arch. II program. Some students are then able to complete the requirements for the master's degree in one additional year.

M. Arch. I

Cornell's graduate professional program is normally three and one-half years long and is intended for students who already have a bachelor's degree in any subject. Information on this professional graduate program may be found on the architecture web site (www.architecture.cornell.edu).

Note on Professional Accreditation

In the United States, most state registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit U.S. professional degree programs in architecture, recognizes three types of degrees: the bachelor of architecture, the master of architecture, and the doctor of architecture. A program may be granted a six-year, three-year, or two-year term of accreditation, depending on the extent of its conformance with established educational standards.

Master's degree programs may consist of a preprofessional undergraduate degree and a professional graduate degree, which, when earned sequentially, constitute an accredited professional education. The preprofessional degree, however, is not, by itself, recognized as an accredited degree.

Rome Program

The program offers the opportunity for students from Cornell and other universities to spend one or two semesters of study in Rome. This option is open to fourth- and fifth-year Cornell architecture students; outstanding third-year students are admitted by petition and a review of their design record. Courses offered by this department include design, history, theory, architectural science, and visual studies. In addition, courses are offered by other departments in Italian language, Italian culture, art, city and regional planning and history of art. The program provides a unique urban and architectural experience drawing from the rich past of the city for sources of instruction and inspiration.

Overlap Program

For qualified students the department offers an option that combines the fifth year of the undergraduate program with the first year of the post-professional master of architecture program. In the fall of the fourth undergraduate year, interested students

petition the department to substitute ARCH 601-602 or 603-604 for ARCH 501-502. At the same time, they complete graduate school applications and submit them with fee and portfolio to the graduate field assistant for architecture. Students accepted into the program may not normally begin until the fall of their fifth year and, once enrolled, may not transfer back into the 501-502 sequence.

Following admission into the Overlap Program, students may petition to apply toward the requirements of the master's degree a maximum of 30 credits, including ARCH 601-602 or 603-604 and other advanced courses taken in excess of distribution requirements for the bachelor of architecture degree.

Curriculum

First Year

<i>Fall Semester</i>	<i>Credits</i>
101 Design I	6
181 History of Architecture I	3
151 Drawing I	2
MATH 111 Calculus or out-of-college elective	3-4
Out-of-college elective	3
	17-18

Spring Semester

102 Design II	6
182 History of Architecture II	3
152 Drawing II	2
MATH 106 or 111 or out- of-college elective	3-4
Out-of-college elective (first-year writing seminar suggested)	3
	17-18

Second Year

<i>Fall Semester</i>	<i>Credits</i>
201 Design III	6
263 Structural Concepts	4
231 Architectural Analysis I	2
262 Building Technology, Materials, and Methods	3
ARCH 253 or out-of-college elective	2-3
	17-18

Spring Semester

202 Design IV	6
232 Architectural Analysis II	2
261 Site Planning	3
264 Structural Elements	3
ARCH 253 or college elective	2-3
	16-17

Third Year

<i>Fall Semester</i>	<i>Credits</i>
301 Design V	6
361 Environmental Systems I— Lighting and Acoustics	3
Departmental elective	3
Departmental elective	3
Out-of-college elective	3
	18

Spring Semester

302 Design VI	6
363 Structural Systems	3
362 Environmental Systems II— Mechanical and Passive Solar Systems	3
342 Architecture as a Cultural System	3
College or out-of-college elective	3
	18

Fourth Year

<i>Fall Semester</i>	<i>Credits</i>
401 Design VII	6
Departmental elective	3
Departmental elective	3
College elective	3
Out-of-college elective	3
	18

Spring Semester

402 Design VIII	6
521 Professional Practice	3
Departmental elective	3
College or out-of-college elective	3
Out-of-college elective	3
	18

Fifth Year

<i>Fall Semester</i>	<i>Credits</i>
501 Design IX	6
[or Overlap Program 601 or 603]	9]
Departmental elective	3
ARCH 510	3
Out-of-college elective	3
Out-of-college elective	3
	18

Spring Semester

502 Design X	8
[or Overlap Program 602 or 604]	9]
Departmental elective	3
Out-of-college elective	3
College or out-of-college elective	3
	17

Required Departmental Courses

<i>Semesters</i>	<i>Course</i>	<i>Subject</i>	<i>Numbers</i>
<i>Credits</i>			
10	design	101-502	62
1	mathematics	MATH 111, MATH 106, or approved equivalent	3-4
3	structures	263, 264, 363	10
4	technology	261, 262, 361, 362	12
2	architectural theory	231, 232	4
2	history of architecture	181, 182	6

1	architecture, culture, and society	342	3
1	professional practice	521	3
3	drawing	151, 152, 253	6
			107-108

Electives

<i>Departmental Semesters</i>		<i>Credits</i>
3	history of architecture: 300 level	9
1	visual representation in architecture	3
2	architectural theory or 600-level design-related course	6
1	architectural structures, construction, or environmental systems and conservation	3
		21

College Semesters

2	art: any studio courses (ART 214 will fulfill)	6
---	---	---

Out-of-College Semesters

1	first-year writing seminar	
3		
1	mathematics, or physical or biological sciences	3
1	humanities	3
		12

Free

Of the electives, 15 credits are to be taken outside the College of Architecture, Art, and Planning, and 15 credits may be taken either in or outside the college.	30
Total credits	176

Architecture Concentrations for Majors

The Department of Architecture recognizes any concentration earned within the university but outside of the department (using standards set by those departments) on the transcripts of its students.

It is often advantageous for undergraduates to concentrate in specific subdisciplines of architecture, especially if they anticipate application to specialized graduate programs; therefore, the following concentrations in architecture are offered within the department for B. Arch. and B.F.A. in architecture candidates only:

Architecture, Culture, and Society 342 (or equivalent), plus 9 credits in this area.

Architectural Science and Technology 261, 262, 263, 264, 361, 362, 363, distribution requirement (3 credits), plus 6 credits in this area.

History of Architecture 181, 182, distribution requirements (9 credits), plus 7 credits (including a 4-credit seminar course) in this area.

Theory of Architecture 231, 232, distribution requirements (6 credits), plus 6 credits in this area.

Visual Representation in Architecture 151, 152, distribution requirement (3 credits), plus 9 credits in this area.

Students wishing to receive recognition for a concentration must submit a concentration request form to the Architecture Department office. For a course to count toward a concentration, the student must receive a grade of C or better.

Transfer Students

Although the program leading to the bachelor of architecture is directed specifically to those who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed a nonprofessional undergraduate degree may apply to the professional M. Arch. I program.

Transfer students are responsible for completing that portion of the curriculum which has not been covered by equivalent work. Applicants who have had no previous work in architectural design must complete the 10-semester design sequence. Since this sequence may be accelerated by attending summer semesters, seven or eight regular semesters and two or three summer terms are typically required.

Admission is offered to a limited number of transfer applicants who have completed a portion of their architecture studies in other schools. Each applicant's case is considered individually. Transfer students must complete a minimum of 70 credits and four semesters in residence, taking 35 of the 70 credits (including four semesters of design) in the Department of Architecture. Placement in the design sequence is based on a review of a representative portfolio of previous work.

For those who would benefit from an opportunity to explore the field of architecture before deciding on a commitment to professional education, the department offers an introductory summer program that includes an introductory studio in architectural design, lectures, and other experiences designed to acquaint participants with opportunities, issues, and methods in the field of architecture.

Alternative Programs

Bachelor of Fine Arts

After completing the first four years of requirements, the student may choose to receive the degree of bachelor of fine arts (B.F.A.) in architecture, which is not a professional degree.

Bachelor of Science in History of Architecture

The history of architecture major leads to a bachelor of science degree, conferred by the College of Architecture, Art, and Planning. The major is intended for transfer students from other programs at Cornell and from colleges and universities outside Cornell. Students in the Department of Architecture and the College of Arts and Sciences may take the major as part of a dual-degree program. The course of study in this major, available to students from a variety of academic backgrounds, offers the opportunity for a

vigorous exploration of architecture and its history.

Admission requirements. Two years of undergraduate study, ARCH 181 and 182 or the equivalent. Students transferring from a B. Arch. program must be in good standing in their design sequence.

Procedure. Students from Cornell may transfer to the program at the beginning of the fall semester of their third or fourth year of study. They submit a short application as prospective internal transfer students. Before applying, all prospective internal transfer students meet with a history of architecture faculty member to discuss scheduling for the program.

All students who wish to enter the program, either from Cornell or other institutions, must apply by November 15 for spring admission or by March 31 for fall admission. Applications for both internal and external transfer students are available from the Admissions Office, College of Architecture, Art, and Planning, Cornell University, B-1 West Sibley Hall, Ithaca, NY 14853-6702. Completed applications must be submitted to the Admissions Office.

Curriculum. A student entering the program is assigned an adviser from the history of architecture faculty in the Department of Architecture. Adviser and student together prepare an appropriate two-year course of study according to the following guidelines:

1. 24 credits of 300-level courses in architectural history: ARCH 380 through 399
2. 12 credits in 600-level architectural history seminars: ARCH 681 through 699; or 8 credits in a 600-level seminar plus ARCH 499, offered for honors candidates only
3. One 300-, 400-, or 600-level course in architectural theory
4. 24 credits in electives selected in consultation with the student's adviser
5. Language requirement, to be met in the manner specified for students enrolled in the College of Arts and Sciences

Honors program. Students graduate with honors if, during their two years of study in the program, they have a cumulative average of B or better in all courses, have no grade lower than A- in all history of architecture courses taken at the 300 level, and have completed an honors thesis (ARCH 499) deemed to be of distinguished quality by the history of architecture faculty.

Dual-Degree Options

Students can earn both the B.S. and B. Arch. degrees either simultaneously or sequentially. Students who have transferred into the B. Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study.

Students currently enrolled in the College of Arts and Sciences at Cornell can earn a B.A. in an arts college major and a B.S. in the history of architecture in five years. In this option, students complete a minimum of 150 credits, which includes the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences. Further information about this option is available at the Admissions Office, B-1 West Sibley Hall, and at the Academic Advising Center of the

College of Arts and Sciences, 55 Goldwin Smith Hall.

Students may also elect to continue toward a master of arts degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor's degree; with this special sequential degree arrangement that time is shortened to one year.

Summer Term in Architecture

The summer term offers students the opportunity of a concentrated period of design work; the term is six to eight weeks in duration.

Undergraduate design sequence courses, excluding 101 and 502, are offered in Ithaca. Normally there is also a design program abroad for third-, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to apply to enroll in any summer program.

Other department courses may be offered as elective courses, contingent upon student interest, faculty availability, and departmental approval.

The department offers a Career Explorations in Architecture Program for high school students and college students considering a professional education in architecture.

Concentration in Architecture for Nonmajors

A special concentration has been formulated specifically for those students not enrolled in the Department of Architecture but who are interested in complementing their current academic program with an introduction to various facets of architectural studies. Some students may wish to use the Concentration in Architecture for Nonmajors as a means of investigating possible graduate studies in architecture. Some may wish to develop architectural specialties within other disciplines. Students meeting the requirements for this concentration should complete a concentration form, which is available in the architecture department office. This form, when validated by the architecture department and the AAP college registrar, serves as evidence of completion of the concentration requirements. Students should consult their individual college registrars for information about whether their home college recognizes and notes such concentrations on transcripts or diplomas.

The curriculum for students in the Concentration in Architecture Program totals 14 credit hours minimum, including 8 credits of required courses and 6 credits of elective courses. Grades earned must be C or better in all courses.

Required courses. A minimum of 8 credits, including one design studio, one visual studies course (e.g., drawing), and one history of architecture course. For example,

ARCH 110 Introduction to Architecture Design Studio
(offered summer only) 3 credits

or

ARCH 103 Elective Design Studio
(offered fall only, not offered every year) 6 credits

(ARCH 103 may substitute for ARCH 110; students who complete ARCH 103 must take all other course requirements for the concentration.)

ARCH 151 Drawing I (fall only) 2 credits

ARCH 181 or 182 History of Architecture I or II (ARCH 181, fall; ARCH 182, spring) 3 credits

Departmental elective courses: A minimum of 6 credits, including two departmental elective courses, are required.

Architectural Design

Courses in brackets are not offered this year.

Each student in the architecture program (undergraduates, graduates, and Rome Program participants) is charged a fee each semester to help defray the continuing costs of refurbishing and replacing equipment.

Sequence Courses

ARCH 101(1101) Design I

Fall, spring. 6 credits. Prerequisite: department students. Staff.

Introduction to design as a conceptual discipline directed at the analysis, interpretation, synthesis, and transformation of the physical environment. Exercises are aimed at developing an understanding of the issues, elements, and processes of environmental design.

ARCH 102(1102) Design II

Spring. 6 credits. Prerequisite: department students; ARCH 101 and 151. Staff.

Continuation of ARCH 101. Covers human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

ARCH 201-202(2101-2102) Design III and IV

Fall and spring. 6 credits each semester. Prerequisites: department students; ARCH 151-152; for ARCH 201, ARCH 102 and 152; for 202, ARCH 201. Co-requisite: ARCH 231-232. Staff.

ARCH 301-302(3101-3102) Design V and VI

Fall and spring. 6 credits each semester. Prerequisites: department students; for ARCH 301, ARCH 202; for 302, ARCH 301. Staff.

ARCH 401-402(4101-4102) Design VII and VIII

Fall and spring. 6 credits each semester. Prerequisite: department students; for ARCH 401, ARCH 302; for 402, ARCH 401. Staff.

Programs in architectural design, urban design, or architectural technology and environmental science and topical studies.

ARCH 501(5101) Design IX

Fall or spring. 6 credits. Prerequisite: department students; ARCH 402. Co-requisite: ARCH 510. Staff.

Programs in architectural design, building typology investigations, and research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 502(5902) Design X—Thesis

Fall or spring. 8 credits. Requirement for B. Arch. candidates who must satisfactorily complete a thesis. Students accepted for admission to Overlap Program are exempt from thesis requirement. Prerequisite: ARCH 501 and 510. Staff.

ARCH 601-602(6101-6102) Special Program in Architectural Design

Fall and spring. 9 credits each semester. Prerequisite: acceptance into Overlap Program. Registration by petition only. Staff.

ARCH 603-604(6103-6104) Special Program in Urban Design

Fall and spring. 9 credits each semester. Prerequisite: acceptance into Overlap Program. Registration by petition only. Staff.

Graduate Courses

ARCH 511-512(5111-5112) Core Design Studios

Fall and spring. 6 credits. Prerequisites: M. Arch. I students; for ARCH 512, ARCH 511 and 551. Staff.

Two-semester sequence in which fundamental design skills are taught. The core studios integrate a broad range of architectural territories, and students acquire a command of techniques of design and representation through a number of complex architectural problems.

ARCH 513-516(5113-5116) Vertical Design Studios

Fall and spring. 6 credits. Prerequisites: M. Arch. I students; for ARCH 513, ARCH 512 and 552; ARCH 513-516 must be taken in sequence. Staff.

Vertical studios investigate a variety of programs and project types, from individual buildings to urban districts. Students examine topics of architectural production—such as building technology, landscape, urbanism, history, and theory—and their roles in analysis and design.

ARCH 701-702(7101-7102) Problems in Architectural Design

Fall and spring. 9 credits each semester. Staff.

Basic first-year design course for M. Arch. II students whose major concentration is architectural design.

ARCH 703-704(7103-7104) Problems in Urban Design

Fall and spring. 9 credits each semester. Staff.

Basic first-year design course for M. Arch. II students whose major concentration is urban design.

ARCH 801(8901) Thesis or Research in Architectural Design

Fall or spring. 9 credits. Prerequisite: ARCH 701-702. Staff.

Second-year design course for M. Arch. II students whose major concentration is architectural design.

ARCH 802(8902) Thesis or Research in Urban Design

Fall or spring. 9 credits. Prerequisite: ARCH 703-704. Staff.

Second-year design course for M. Arch. II students whose major concentration is urban design.

ARCH 811(8911) Graduate Thesis Proseminar

Fall. 3 credits. Prerequisites: M. Arch. I students; ARCH 515. Staff.

First half of the yearlong thesis in architecture. Covers research methods and other subjects students employ in the development of their individual thesis topics. Emphasizes learning different types of theses and developing specific programming, design, and site definition techniques.

ARCH 812(8912) Independent Design Thesis

Spring. 9 credits. Prerequisites: M. Arch. I students; ARCH 516. Staff.

The master of architecture thesis is an independent design project on a topic selected by the student and researched in ARCH 811. The student develops a thesis statement outlining an area of study or a problem that has consequences for contemporary architectural production and produces a design project that examines it. Marking the transition between the academic and professional worlds, the thesis project is an opportunity for each student to define an individual position with regard to a specific aspect of architectural practice.

Elective Design Courses

ARCH 103-104(1103-1104) Elective Design Studio

103, fall; 104, spring. 6 credits each semester. Prerequisite: nonarchitecture students; for ARCH 103, permission of instructor; for ARCH 104, ARCH 103 and permission of instructor. Staff.

ARCH 200, 300, 400, 500(2100, 3100, 4100, 5100) Elective Design Studio

Fall, spring, or summer. 6 credits. For students who are not architecture majors at Cornell. Prerequisite: permission of department office. Each student is assigned to a class of appropriate level. Staff.

Nonsequence design used as temporary placement of transfer students, off-campus foreign programs for third-year students (summer and Rome) and for incompletes in design sequence. In some cases student must petition to convert elective design into sequence design.

ARCH 503(5103) Design IXa

Fall and spring. 6 credits. Limited to department students. Prerequisites: ARCH 406 and passing, but nonadvancing, grade in ARCH 502.

Structured studio for those needing to take an alternative to design thesis. Operates within the 401-402, 501 design studios.

Related Courses and Seminars

ARCH 110(1110) Introduction to Architecture: Design Studio

Summer. 3 credits. Open to nonarchitecture majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. S-U option. Not offered every year. Staff.

Designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major semester project, students explore the architectural concepts of space, form, function, and technology. Instruction is via highly personalized critiques

of individual student work by assigned department faculty members, as well as periodic reviews of the group by invited faculty and guest critics. The grade is based on the overall performance in the studio with special emphasis on the quality of a major studio project.

ARCH 111(1111) Concentration in Architecture: Design Studio

Summer only. 3 credits. Subject to enrollment. Prerequisite: nonarchitecture students. Not offered every year. Staff. Designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the interrelationship of the architectural concepts of space, form, function, and technology. Instruction includes critiques of individual student work by department faculty, as well as by periodic reviews by guest critics.

ARCH 303(3103) Special Problems in Architectural Design

Fall or spring. Variable credit; max. 3. Does not count for design sequence credit. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 306(3106) Praxis: Community Design Workshop (also ARCH 606[6106])

Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. F. Davis. Workshop-based, hands-on course directed to underserved local and global communities that seek to improve the quality of life for all citizens. It is an interdisciplinary, service-learning course that challenges the usual definition and separation of practice and theoretical research. Services are provided collaboratively to not-for-profit agencies, civic and governmental groups, as well as as community-action groups to support sustainable design solutions. The course teaches professional work proficiency, and emphasizes teamwork as well as written, verbal, and graphic communication skills to negotiate the public realm.

ARCH 313(3113) Furniture Design

Fall or spring. 3 credits. Limited enrollment. Students who wish to earn arch visual representation credit must enroll in sec 01; arch technology credit, sec 02; and in-college elective credit, sec 03. Prerequisite: permission of instructor. Not offered every year. G. Hascup. Explores the history, design, and materiality of furniture. Analyses of materials and joinery-connective systems are developed in parallel with ergonomic restraints. Design transformation occurs through cycles of conceptual alternatives (models and drawings); increasing in scale as the idea evolves. Full-scale prototypes and detailed tectonic drawings are required on three pieces.

ARCH 317(3117) Contemporary Italian Culture

Fall or spring. Variable credit; max. 3. Prerequisite: Rome Program participants. Staff. Provides a broad view of the culture and social structure of Italy, drawing from Italian literature, history, and current events.

ARCH 510(5110) Thesis Proseminar

Fall and spring. 2 credits. Prerequisite: ARCH 402. Staff. Lectures, seminars, and independent research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 521(5201) Professional Practice

Fall or spring. 3 credits. Staff. Examination of organizational and management theories and practices for delivering professional design services. Includes a historic overview of the profession and a review of the architect's responsibilities from the precontract phase through construction. Application of computer technology in preparing specifications.

ARCH 522(5202) Professional Seminar

Fall or spring. 3 credits. Prerequisite: ARCH 411. Staff. Visits to public and private agencies and architectural firms. Discussions relative to the various aspects of each firm's practice and the identification of agency roles.

ARCH 605(6109) Special Problems in Design

Fall and spring. Variable credit; max. 3. Does not count toward design sequence credit. Prerequisite: permission of instructor. Staff. Independent study.

ARCH 606(6106) Praxis: Community Design Workshop (also ARCH 306[3106])

Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. F. Davis. For description, see ARCH 306.

ARCH 610(6110) Graduate Design Seminar

Fall. 3 credits. Intended for, but not limited to, graduate students in Architectural Design and Urban Design Program. Not offered every year. Staff. Issues in architectural and urban design.

ARCH 611-612(6111-6112) Urban Housing Developments

611, fall; 612, spring. 3 credits each semester. Prerequisite: fourth- and fifth-year students in architecture and graduate students; permission of instructor. Not offered every year. Staff.

Architectural Theory

ARCH 130(1300) An Introduction to Architecture: Lectures

Summer. 3 credits. Open to nonarchitecture majors in college, high school students in 11th and 12th grades, and anyone with minimum of a high school diploma interested in exploring the field of architecture. S-U grades optional. Not offered every year. Staff. Survey course that covers the many facets of architecture: history, design principles, preservations, landscape architecture, building technology, and cultural factors. Course format comprises lectures, demonstrations, films, and field trips. Evaluation is based on quizzes and a final exam.

[ARCH 131(1301) An Introduction to Architecture

Not offered 2005-2006; next offered 2006-2007.]

ARCH 231(2310) Architectural Analysis I

Fall. 2 credits. Co-requisite: for architecture students, ARCH 201. Staff. Introduction to analysis of the object of study in the interest of broadening one's understandings of the ways in which architecture can connote and denote meanings.

ARCH 232(2302) Architectural Analysis II

Spring. 2 credits. Co-requisite: for architecture students, ARCH 202. Staff. Advanced analytical studies focusing on complex architectural spaces, objects, images, and representations.

ARCH 334(3304) Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 634[6304])

Fall or spring. 3 credits. Prerequisite: third-year students and above. J. Wells. Field and figure relationships (interrelation of parts dominated by the general character of the whole) are the general themes for studying numerous issues relevant to the design of elevations and facades. The first part of the semester is a lecture/seminar format. Students are required to research and present a paper for discussion. In the latter part of the semester, students do exercises to demonstrate their understanding of the issues addressed.

ARCH 337(3309) Special Investigations in the Theory of Architecture I

Fall or spring. Variable credit, max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 338(3308) Special Topics in the Theory of Architecture I

Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff. Topic TBA before preregistration.

ARCH 339(3307) Elements, Principles, and Theories in Japanese Architecture

Spring. 3 credits. Not offered every year. L. Mirin.

Examination of Japanese architecture (buildings and gardens) and their contexts: landscapes, settlements, and cities. The course is addressed to those interested in Japanese architecture as a manifestation of Japanese culture and as a subject for analysis. Emphasis is on underlying concepts, ordering principles, formal typologies, space and its representation, perceptual phenomena, and symbolic content. Readings focus on theoretical treatments of these aspects by Japanese and western writers.

[ARCH 431(4301) Theory of Architecture

Not offered 2005-2006.]

ARCH 432(4302) Theory of Architecture

Spring. 3 credits. Prerequisite: third-year standing. Not offered every year. Staff. Development of urban form, urban intervention, contextualism, ideal cities, historic new towns, streets, piazzas, fortifications, public buildings and social housing types, site planning, and transportation.

ARCH 435(4305) Architecture and Representation

Fall. 3 credits. Prerequisite: degree candidates in architecture; successful completion of ARCH 231-232. Not offered every year. Staff. Study of architecture as it functions as a representational art, referring to its past while inferring its present.

ARCH 531-532(5301-5302) Architectural Analysis I and II

Fall and spring. 3 credits. Prerequisites: for ARCH 532, 531; M. Arch. I students, or permission of instructor. Staff.

Introduction to a wide range of questions that inform the discipline of architecture. Architectural thinking is investigated through a cross-section of contemporary theoretical texts and an analysis of built projects, unbuilt proposals, drawings, and other forms of representation.

ARCH 634(6304) Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 334[3304])

Fall or spring. 3 credits. Prerequisite: third-year students and above. J. Wells.

For description, see ARCH 334.

ARCH 635(6305) Theory and Criticism in Architecture

Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

Inquiry into the fundamental principles of architectural criticism in theory and practice, with emphasis on the structures of criticism in the 20th century.

ARCH 637(6309) Special Investigations in the Theory of Architecture II

Fall or spring. Variable credit; max. 4.

Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 638(6308) Special Topics in the Theory of Architecture II

Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

Topic TBA before preregistration.

Architecture, Culture, and Society**ARCH 342(3402) Architecture as a Cultural System**

Spring. 3 credits. Can substitute ARCH 445, 446, 447, or 448 by permission of instructor. B. MacDougall.

What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of ordering within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the ideational and formal relationships between folk and monumental traditions in complex societies; the structure of the ideal social order and its refraction in the material world; cosmological models and architectural form; geometries of non-Western traditions; and the relationship between indigenization and culture change.

ARCH 349(3409) Undergraduate Investigations in Architecture, Culture, and Society

Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. B. MacDougall.

Independent study.

ARCH 441-442(4408-4418) Special Topics in Architecture, Culture, and Society

Fall and spring. 3 credits each semester.

Prerequisite: permission of instructor.

B. MacDougall.

Topic TBA before preregistration.

ARCH 445(4405) Architecture and the Mythic Imagination

Fall. 3 credits. Prerequisite: ARCH 342 or permission of instructor. Not offered every year. B. MacDougall.

ARCH 447(4407) Architectural Design and the Utopian Tradition

Fall. 3 credits. Prerequisite: ARCH 342 or permission of instructor. Not offered every year. Staff.

ARCH 647-648(6401-6402) Architecture in Its Cultural Context I and II

647, fall; 648, spring. 4 credits each semester. Prerequisite: permission of instructor. Not offered every year.

B. MacDougall.

ARCH 649(6409) Graduate Investigations in Architecture, Culture, and Society

Fall or spring. Variable credit; max. 4.

Prerequisite: permission of instructor and approved independent study form.

B. MacDougall.

Independent study.

Visual Studies**ARCH 151(1501) Drawing I: Freehand Drawing**

Fall. 2 credits. Staff.

Freehand drawing with emphasis on line as a means of visualizing form and space in architecture.

ARCH 152(1502) Drawing II: Constructed Drawing Systems

Spring. 2 credits. Prerequisite: ARCH 151 or permission of instructor. Staff.

Freehand drawing as a means of conceiving and expressing spatial form; line weight, shades and shadows, and figure drawing.

ARCH 253(2503) Drawing III: Digital Media in Architecture

Fall or spring. 2 credits. Prerequisite: ARCH 152 or permission of instructor. Letter grades only.

Introduction to two- and three-dimensional digital media in architecture and its potential for visualization, representation, and analysis.

[ARCH 450(4530) Architectural Publications

Not offered 2005-2006.]

ARCH 458(4508) Special Investigations in Visual Representation

Fall or spring. Variable credit; max. 3.

Prerequisites: permission of instructor and approved independent study form. Staff.

Independent study.

ARCH 459(4509) Special Topics in Visual Representation I

Fall or spring. 3 credits. Prerequisite: permission of instructor. Staff.

Topics TBA before preregistration.

ARCH 551-552(5511-5512) Techniques in Visual Representation I and II

Fall and spring. 3 credits. Prerequisite: M. Arch. I students or permission of instructor. Staff.

These courses explore the practice of drawing through analog and digital methods. They serve as an introduction to visualization and representation skills necessary to the development of architectural thought. Students learn a broad range of techniques and tools in relation to one another.

ARCH 658(6509) Special Investigations in Visual Representation II

Fall or spring. Variable credit; max. 4.

Prerequisites: permission of instructor and approved independent study form. Staff.

Independent study.

ARCH 659(6508) Special Topics in Visual Representation II

Fall or spring. 3 credits. Prerequisite: permission of instructor. Staff.

Topics TBA before preregistration.

Architectural Science and Technology**Structures****ARCH 263(2603) Structural Concepts**

Fall. 4 credits. Prerequisite: MATH 111 or approved equivalent. M. Cruvellier.

Fundamental concepts of structural behavior. Statics and strength of materials. Introduction to and analysis of simple structural systems.

ARCH 264(2604) Structural Elements

Spring. 3 credits. Prerequisite: ARCH 263.

J. Ochshorn or staff.

Concepts and procedures for the design of individual structural components (e.g., columns, beams) in steel, concrete, and timber construction.

ARCH 363(3603) Structural Systems

Fall or spring. 3 credits. Prerequisite: ARCH 264. M. Cruvellier.

Concepts and procedures for the design of overall structural framing systems in steel, concrete, and timber construction.

ARCH 364(3604) Vertigo Structures (also ARCH 664[6604])

Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year. M. Cruvellier.

ARCH 365(3605) Bridge Design (also ARCH 665[6605])

Fall or spring. 3 credits. Limited enrollment. Prerequisite: ARCH 363 or equivalent. Not offered every year. M. Cruvellier.

The major visual impact of bridges on the built environment cannot be denied. And yet, during the past century, architects have virtually abandoned their historical role in the design of these structures. Engineers, on the other hand, have claimed bridge design as their responsibility and have hailed it as evidence of structural art. Are the basic principles of bridge design such that this situation makes sense for our society? Or is a rethinking of the manner in which bridges are designed called for? Students examine and experiment with the design of bridge structural forms, not only in terms of what is technically feasible but also, with equal emphasis, in the context of aesthetic, historical, and social considerations. Weekly meetings include lectures, discussion seminars, and studio-type design reviews.

ARCH 366(3606) The Tectonic Articulation of Structure (also ARCH 666[6606])

Fall or spring. 3 credits. Limited enrollment. Prerequisite: ARCH 363 or

equivalent. Not offered every year.
J. Ochshorn.

Through a series of readings, exercises, and case studies, students investigate ways in which structural forces can be expressed in works of architecture. Both the structural basis of form as well as the formal articulation of structure are considered. Course objectives include: gaining insight into the behavior of structure; investigating the cultural meaning of structure and technology; and exploring the interaction of structure and form.

ARCH 463(4603) Special Topics in Structures

Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 263, 264, and 363 or permission of instructor. Not offered every year. Staff.

Topics TBA before preregistration.

ARCH 473(4609) Special Investigations in Structures

Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff.

Independent study.

ARCH 563(5603) Structural Concepts

Fall or spring. 3 credits. Prerequisite: M. Arch. I students or permission of instructor. Staff.

For description, see ARCH 263.

ARCH 564(5604) Structural Elements

Fall or spring. 3 credits. Prerequisite: M. Arch. I students or permission of instructor. Staff.

For description, see ARCH 264.

ARCH 663(6603) Structural Systems

Fall or spring. 3 credits. Prerequisite: M. Arch. I students or permission of instructor. Staff.

For description, see ARCH 363.

[ARCH 664(6604) Vertigo Structures (also ARCH 364[3604])]

Not offered 2005–2006; next offered 2006–2007.]

ARCH 665(6605) Bridge Design (also ARCH 365[3605])

Fall or spring. 3 credits. Limited enrollment. Prerequisite: ARCH 363 or equivalent. Not offered every year. Staff.

For description, see ARCH 365.

ARCH 666(6606) The Tectonic Articulation of Structure (also ARCH 366[3606])

Fall or spring. 3 credits. Limited enrollment. Prerequisite: ARCH 363 or equivalent. Not offered every year. J. Ochshorn.

For description, see ARCH 366.

Construction

ARCH 262(2602) Building Technology, Materials, and Methods

Fall. 3 credits. J. Ochshorn.

Properties of materials—their use and application to the design of buildings and building systems. Discussion of various methods of building construction and assembly.

ARCH 367(3607) Working Drawings (also ARCH 667[6607])

Fall or spring. 3 credits. Prerequisite: ARCH 262 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn.

ARCH 465(4605) Special Topics in Construction

Fall or spring. 3 credits. Limited to 30 students. Prerequisite: ARCH 262 or permission of instructor. Not offered every year. Staff.

Topics TBA before preregistration.

ARCH 475(4604) Special Investigations in Construction

Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff.

Independent study.

ARCH 562(5602) Building Technology, Materials, and Methods

Fall or spring. 3 credits. Prerequisite: M. Arch. I students or permission of instructor. Staff.

For description, see ARCH 262.

ARCH 667(6607) Working Drawings (also ARCH 367[3607])

Fall or spring. 3 credits. Prerequisite: ARCH 262 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn.

Environmental Systems and Conservation

ARCH 261(2601) Environmental Systems—Site Planning

Spring. 3 credits. Staff.

Basic principles involved in design in the outdoor environment. A brief historical perspective. A development of inventory including grading and drainage. Foundations, surfacing, and construction.

ARCH 361(3601) Environmental Systems I—Lighting and Acoustics

Fall. 3 credits. Staff.

Basic properties and principles of sound and light. Sound phenomena, noise control, absorption, acoustical design; light, color, and form. Natural lighting possibilities and constraints as well as good and bad examples of artificial lighting.

ARCH 362(3602) Environmental Systems II—Mechanical and Passive Solar Systems

Spring. 3 credits. Staff.

Basic thermal analysis of buildings, human comfort criteria, energy conservation, passive solar design, HVAC distribution systems, overview of mechanical conveying systems, and plumbing.

ARCH 461(4601) Ecological Literacy and Design (also DEA 422[4220])

Spring. 3 credits. Letter grades only. Cost of field trips: approx. \$25. J. Elliott.

Lecture/seminar course for advanced (junior or senior) students interested in learning about the effects of designing the built environment of the biophysical world. Course objectives are to develop sensitivities to environmental issues, construct conceptual frameworks for analysis, and demonstrate how ecological knowledge can be applied to the practice of design through participatory approaches to learning. Visit <http://instruct1.cit.cornell.edu/courses/dea422/>. ARCH.

ARCH 464(4619) Special Topics in Environmental Systems and Conservation

Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 261, 361, and 362 or permission of instructor. Not offered every year. Staff.

Topics announced before preregistration.

ARCH 474(4618) Special Investigations in Environmental Systems and Conservation

Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff.

Independent study.

ARCH 661(6601) Environmental Systems I—Lighting and Acoustics

Fall or spring. 3 credits. Prerequisite: M. Arch. I students or permission of instructor. Staff.

For description, see ARCH 361.

ARCH 662(6602) Environmental Systems II—Mechanical and Passive Solar Systems

Fall or spring. 3 credits. Prerequisite: M. Arch. I students or permission of instructor.

For description, see ARCH 362.

Computer Applications

ARCH 374(3704) Computer Graphics I (also COM S 465)

Fall. 4 credits. Prerequisite: COM S/ENGRD 211. Staff.

For description, see COM S 465.

ARCH 476(4706) Special Topics in Computer Applications

Fall or spring. 3 credits. Limited to 30 students. Prerequisite: ARCH 374 or 379 or permission of instructor. Not offered every year. Staff.

Topics TBA before preregistration.

[ARCH 477–478(4707–4708) Special Projects in Computer Graphics]
Not offered 2005–2006.]

ARCH 479(4709) Advanced Computer Graphics: Virtual Reality (also ARCH 679[6709])

Fall. 3 credits. Prerequisites: introductory computer graphics or computer science course, or permission of instructor; upper-level undergraduate or graduate standing. H. Richardson.

Explores the role of synthetic imaging and computer graphics in architectural design. The first half of the course examines the new possibilities that information technologies offer for multimedia visualization of architecture, from abstract conceptual drawings, to sketching, photorealistic rendering, and multimodal representation, including motion and sound. The second half explores the uses of information technologies to model and simulate the creative design process. These explorations include developing a library of design ideas as building blocks for design; creating multimodal, multidimensional, immersive, virtual environments; interactive transformation and synthesis of design concepts; and “reverse architecturing” of canonical works. The emphasis of this course is on concepts as well as methods and techniques of computer graphics and their application to simulating the creative design process in architecture.

Graduate Courses**ARCH 679(6709) Advanced Computer Graphics: Virtual Reality (also ARCH 479[4701])**

Fall. 3 credits. Prerequisite: introductory computer graphics or computer science course or permission of instructor; upper-level undergraduate or graduate standing. H. Richardson.

For description, see ARCH 479.

ARCH 761-762(7701-7702) Architectural Science Laboratory

761, fall; 762, spring. 6 credits each semester. Prerequisite: architectural science graduate students. D. Greenberg.

Projects, exercises, and research in the architectural sciences.

ARCH 763-764(7903-7904) Thesis or Research in Architectural Science

763, fall; 764, spring. Variable credit; max. 12. Prerequisite: architectural science graduate students. Staff.

Independent study.

Architectural History

The history of the built domain is an integral part of all aspects of the architecture curriculum, from design and theory to science and technology. Incoming students take ARCH 181-182 in the first year, and three additional courses from the 380-399 series, preferably in the third and fourth years. Seminars are intended for advanced undergraduate and graduate students and do not satisfy undergraduate history requirements. Courses with the same number may be taken only once to satisfy history of architecture or in-college requirements.

Sequence Courses**ARCH 181(1801) History of Architecture I**

Fall. 3 credits. Requirement for first-year architecture students; open to all students in other colleges interested in the history of the built domain. Staff.

The history of the built environment as social and cultural expression from the earliest to more recent times. Themes, theories, and ideas in architecture and urban design are explored, beginning with the earliest written records.

ARCH 182(1802) History of Architecture II

Spring. 3 credits. Requirement for first-year architecture students; open to all students in other colleges interested in the history of the built domain; may be taken independently of ARCH 181. Staff.

The history of the built environment as social and cultural expression from more recent times to the present. Architecture and urban design themes, theories, and ideas are addressed in greater detail leading to the present time.

Directed Electives**ARCH 380(3800) History of Theory**

Not offered every year.

ARCH 381(3801) From Utopia to the Ghetto: Renaissance Urban Form

Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. M. Lasansky.

Significant developments in European urban design from 1300 to 1600. Particular attention is given Italy and Spain. Focuses on a series

of case studies: entire towns, specific urban spaces, and individual building types. Weekly discussions contextualize the city within a larger cultural framework. This course considers how civic, economic, social, political, legislative, technical, and material concerns have had a significant impact on the form, function, and patronage of these places, spaces, and structures. The relevance of Renaissance theory to contemporary practice is also emphasized through the discussion of several 20th-century urban plans and built projects.

ARCH 382(3802) The Cinematic City

Fall. 3 credits. Prerequisite: ARCH 181-182 or permission of instructor. Not offered every year. M. Lasansky.

Examines the relationship between cinematic forms of mass media and architecture.

Explores the representation, perception, and understanding of architecture as it has been mediated by various cinematic genres including film, television, and documentaries. Considers how cinema has been deployed as a tool in architectural production, how it has influenced the experience and design of space, the extent to which it has been used as a vehicle for critical commentary on the urban condition, and the way it is imbedded in the historical development of architecture and urbanism.

ARCH 383(3803) The Construction of Modern Life: The Politics of Memory and the Commodification of Architecture

Fall or spring. 3 credits. Prerequisite: ARCH 181-182 or permission of instructor. Not offered every year. M. Lasansky.

Examines the complex relationship between the built environment, the construction and definition of cultural heritage, collective memory and civic identity, and the commodification or commercial celebration of specific buildings, sites, and urban events. Focuses on late 18th-, 19th-, and 20th-century Europe. Particular attention is awarded to the discourse surrounding the restoration of buildings (and figures such as Ruskin, Viollet-le-Duc, and Giovannoni); political agendas guiding restoration and urban renewal projects; newly defined venues of modern urban spectacle (e.g., the World's Fair, department stores, morgues, and panoramas); and the role played by tourism in the commodification of local and foreign sites.

ARCH 384(3804) The Urban Landscape of Renaissance Rome: 1450 to 1600

Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. M. Lasansky.

Exploration into the urban morphology, architecture, and civic life of Renaissance Rome. The city was a thriving center for architectural practice. It drew practitioners from throughout the peninsula and served as an important theoretical model for architects elsewhere. The course surveys the important issues, individuals, and building projects of the city between 1450 and 1600 with particular emphasis on the intellectual and physical rediscovery and re-appropriation of Antiquity; the role of the Vatican with its large population of pilgrims, tourists, resident church officials, foreign bankers, and dignitaries that made specific demands of the built environment; and the unique topography and natural resources of the city's location. The last portion of the course addresses the legacy of the Renaissance during the period of Italian unification and the Fascist regime.

[ARCH 385(3805) Magnificent Utility—Architecture and the Arts of Persuasion

Not offered 2005-2006.]

ARCH 386(3806) The Architecture of India and Its Interpretation

Spring. 3 credits. Not offered every year. B. MacDougall.

Surveys the architectural record of ancient and medieval India with an emphasis on stupa and temple traditions. Devotes attention to European efforts to write a Western-style architectural history for India and to the British fascination with explaining Indian ethnology and history over two centuries. Attempts to evaluate the claim made by the historian James Fergusson that architecture provided the basis for reconstructing an imperfectly known Indian history. Also examines the notion that scholarly enterprises were closely entwined with strategies for domination. To this end, students read 19th-century firsthand reports on architecture in antiquarian English-language journals alongside more modern accounts. They are compared with indigenous architecture writings that were often unacknowledged by Europeans.

ARCH 387(3807) 19th Century: Tales of the City

Fall or spring. 3 credits. Prerequisite: ARCH 181-182 or permission of instructor. Not offered every year. M. Woods.

Focuses on 19th-century cities as settings for modernisms and modernities, new visions and experiences of modern life. The relationship between urbanism and creativity that emerges during the 19th century engages students in Berlin, Havana, Miami, London, Bombay, Paris, Harlem, and other cities. Issues of center and periphery, nation and locality, capital and colony also emerge. Urban pleasures and dangers for men, women, and the other as revealed through histories of the built environment but also through literature, painting, photography, and film are examined.

[ARCH 388(3808) Modernism

Not offered 2005-2006.]

[ARCH 389(3809) Architecture, Revolution, and Tradition

Not offered 2005-2006.]

ARCH 390(3810) American Architecture and Building I (also AM ST 390[3810])

Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. M. Woods.

Review of architecture, building, and responses to the landscape from the prehistoric period to the Civil War. Architecture and building as social and collaborative arts are emphasized and thus the contributions of artisans, clients, and users as well as professional architects and builders are examined. The architectural expressions of Native Americans, African Americans, women, and others are treated in addition to those of European colonists and settlers.

ARCH 391(3811) American Architecture and Building II (also AM ST 391[3811])

Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. M. Woods.

Continuation of ARCH 390 but may be taken independently. An account of American architecture, building, and responses to the environment from the post-Civil War period

to the present day. Particular attention is paid to the processes of industrialization, professionalization, and urbanization as well as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.

ARCH 392(3812) Modern Architecture on Film

Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. M. Woods.

Exploration of certain themes deemed critical to modern architecture and urbanism through their representation in both commercial and avant-garde films from the medium's birth until the present day. The focus varies each semester with particular emphases to include the modern house and housing, the modern city, technology and visions of the future, and finally the image of the architect. Representations of these themes in other forms such as painting, photography, theater, literature, and advertising also are examined. The course includes selected readings in modern architecture and film, screenings in class, class discussions, presentations, and papers.

[ARCH 393(3813) The Cumulative City]
Not offered 2005-2006.]

ARCH 395(3815) History of the Present—Contemporary Architecture and Urbanism

Fall or spring. 3 credits. Prerequisite: ARCH 181-182 or permission of instructor. C. F. Otto.

Theory and practice in architecture and urbanism are investigated from later Modernism to contemporary positions. Built work, theoretical texts and graphics, and the nature of design practice in locations worldwide (such as the United States and the Pacific Rim) raise issues of globalization and the specificity of place and cultural identity. By engaging the immediate past using methods of cultural and design history, the course problematizes the relationship (and relevance) of history to architectural practice and experience.

ARCH 396(3816) Special Topics in the History of Architecture and Urbanism

Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Staff.

Topics TBA.

Topics TBA.

Graduate Seminars in the History of Architecture and Urbanism

All topics for ARCH 682 to 699 TBA before the start of the semester.

ARCH 680(6800) Seminar in Historiography

Fall. 4 credits. Requirement for first- and second-year graduate students in History of Architecture and Urbanism Program.

Prerequisite: permission of instructor. Staff.

Examines historiographic and methodological issues in relation to the history of architecture and urbanism. Taught by different faculty members in successive years, the seminar is required of all first- and second-year graduate students in the History of Architecture and Urbanism Program.

[ARCH 686(6806) Seminar in 17th- and 18th-Century Architecture and Urbanism]

Not offered 2005-2006.]

[ARCH 688(6808) Seminar in 20th-Century Architecture and Urbanism]

Not offered 2005-2006.]

[ARCH 690(6810) Seminar in American Architecture, Building, and Urbanism]

Not offered 2005-2006; next offered 2006-2007.]

[ARCH 692(6812) Seminar in 19th-Century Architecture, Building, and Urbanism]

Not offered 2005-2006; next offered 2006-2007.]

ARCH 696(6816) Seminar in Special Topics in the History of Architecture and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 697(6817) Seminar in Special Topics in the History of Architecture and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 698(6818) Seminar in Special Topics in the History of Architecture and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 699(6819) Seminar in Special Topics in the History of Architecture and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

Independent Study, Thesis, Dissertation

ARCH 299(2809) Undergraduate Independent Study in the History of Architecture and Urbanism

Fall or spring. Variable credit; max. 3. May not be taken by students in design to satisfy undergraduate history requirements. Prerequisite: permission of instructor. Staff. Independent study for undergraduate students.

ARCH 499(4901) Undergraduate Thesis in the History of Architecture and Urbanism

Fall or spring. 4 credits. Prerequisite: B.S. honors candidates in history. Staff.

ARCH 799(7809) Graduate Independent Study in the History of Architecture and Urbanism

Fall or spring. Variable credit; max. 12.

Prerequisite: permission of instructor. Staff. Independent study for graduate students only.

ARCH 899(8921) M.A. Essay in the History of Architecture and Urbanism

Fall or spring. 4 credits. Staff.

Independent preparation of the M.A. essay, often developed from topics investigated in ARCH 680.

ARCH 999(9901) Ph.D. Dissertation in the History of Architecture and Urbanism

Fall or spring. Variable credit; max. 12. Staff.

Independent study for the doctoral degree.

ART

B. Spector, chair (224 Tjaden Hall, 255-3558); R. Bertoia, J. Locey, T. McGrain, E. Meyer, G. Page, director of graduate studies; B. Perlus, W. S. Taft, and visiting artists and critics.

Undergraduate Program

The curriculum in art is a program of study within the College of Architecture, Art, and Planning, as well as other colleges at Cornell.

The undergraduate curriculum in art is an excellent background for a career in the visual arts. Past graduates have found it to be an excellent preparation for a career in applied art, although no specific technical courses are offered in such areas as interior design, fashion, or commercial art.

The undergraduate curriculum in art, leading to the degree of bachelor of fine arts, provides an opportunity for the student to combine a general liberal education with the studio concentration required for a professional degree. During the first four semesters, all students follow a common course of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience of the last two years. Beginning with the third year, students concentrate in painting, sculpture, photography, printmaking, or combined media.

Studio courses occupy approximately one-half of the student's time during the four years at Cornell; the remaining time is devoted to a diversified program of academic subjects with a generous provision for electives.

All members of the faculty in the Department of Art are practicing, exhibiting artists, whose work represents a broad range of expression.

A candidate for the B.F.A. degree may also earn a bachelor of arts degree from the College of Arts and Sciences or the College of Human Ecology, or a bachelor of science degree from the College of Engineering, in a five-year dual degree program. This decision should be made early in the candidate's career (no later than the third semester) so that he or she can apply to be registered in both colleges simultaneously. Each student is assigned an adviser in both colleges of their dual-degree program to provide needed guidance. Candidates for two degrees must satisfy all requirements for both degrees. At least 62 of the total credits must come from

courses offered in the Department of Art. In addition, all Department of Art requirements for first-year writing seminars, art history, and distribution must be met.

It is expected that a dual-degree candidate will complete the pre-thesis and thesis requirements for the B.F.A. degree during the fourth and fifth year.

Bachelor of Fine Arts Degree Requirements

Credits and Distribution

The B.F.A. degree requires 130 academic credits. A minimum of 58 are taken in the Department of Art.

Curriculum

Students are expected to take an average course load of 16 credits per semester during their four years. Students wishing to take more than three studio courses in any one semester must file a petition. All students must take at least one studio course a semester unless there are exceptional circumstances expressed in the form of a petition. **Any request to deviate from the standard curriculum must be petitioned to the department before the act. No student in the first year of the B.F.A. program will be permitted to deviate from the required curriculum.**

Specific Course Requirements

By the end of the second year, students must have completed an introductory course in each of the areas of painting, sculpture, printmaking, photography, electronic imaging, and four drawing courses. By the end of the third year, all students must have completed an additional 12 credits beyond the introductory level in three of the four areas.

Concentration

Students must plan their programs to complete 27 credits in one of the studio areas of painting, sculpture, photography, or electronic imaging and printmaking (26 credits each). Declaration of the area of concentration must be made by the second semester of the sophomore year. Students concentrating in combined media must also submit an approved projected course plan. B.F.A. students complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition in the semester the thesis is taken.

Concentration Requirements (27 credits total; 26 in electronic imaging and printmaking)

The required courses for each concentration are as follows:

Painting: ART 121, 221, 321, 322, 421, 422 (senior thesis)

Sculpture: ART 141, 241, 341, 342, 441, 442 (senior thesis)

Printmaking: ART 131/132/133 (2 of 3); 134, 231, 232, 233, 234 (1 of 4); 331, 431, 432 (senior thesis)

Photography: ART 161, 261, 263; 264, 265, 361 (1 of 3); 461, 462 (senior thesis)

Electronic Imaging: ART 171; 271/234 (1 of 2); 272/273 (1 of 2), 373/374 (1 of 2), 471, 472 (senior thesis)

Dual Concentration

Students interested in studying in more than one area may choose to do a dual concentration. The dual concentration requires a first area, in which the thesis is conducted, and a nonthesis second area. Pre-thesis and thesis must be taken in the first area of concentration. Students take 23 credits in the first area of concentration (22 for printmaking) and 15 credits in the second area of concentration (14 for printmaking). Drawing is available only as a second area of concentration.

The required courses for the dual concentration are:

<i>First Area of Concentration</i>	<i>Total Credits</i>
Painting: ART 121, 221, 321, 421, 422	23
Sculpture: ART 141, 241, 341, 441, 442	23
Printmaking: ART 131/132/133 (2 of 3) 231/232/233 (1 of 3) 431, 432	22
Photography: ART 161, 261, 263/264/265/361 (1 of 4), 461, 462	23
Electronic Imaging: ART 171; 271/234 (1 of 2); 272/273 (1 of 2) or 373/374 (1 of 2); 471/472	23
<i>Second Area of Concentration</i>	<i>Total Credits</i>
Drawing: ART 151, 152, 251, 252, independent study	15
Painting: ART 121, 221, 321, 322	15
Sculpture: ART 141, 241, 341, 342	15
Printmaking: ART 131/132/133 (2 of 3) 231/232/233 (1 of 3); 331	14
Photography: ART 161, 261, 263/264 265/361 (2 of 4)	15
Electronic Imaging: ART 171; 271/234 (1 of 2); 272/273 (1 of 2); or 391/392 (1 of 2)	15

Note: The total number of out-of-college elective credits required will be adjusted to allow for the additional credits required of the dual concentration.

Combined Media Concentration

The combined media concentration enables students to fulfill concentration requirements by combining several studio disciplines, including out-of-department studio courses such as those offered in the departments of music and theatre, film, and dance.

Students must file an approved "area of concentration" form. In addition to the courses required of all B.F.A. majors during their first and second year (see B.F.A. curriculum), students must take two studios at the 200 or 300 level, a minimum of two "out of college" studio electives (OCE studio) of 3-4 credits each, ART 481 Pre-Thesis in Combined Media and ART 482 Thesis in Combined Media.

Note: The total number of in- and out-of-college elective credits required will be adjusted to allow for additional credits required of the combined media concentration.

Rome Program

Students in good standing who have completed the requirements of the first two years of the curriculum are eligible for participation in the Rome Program. Students are admitted to the program by application and review of their academic record. Applications are submitted to the Rome Program coordinator. Students

applying to the Rome Program must meet with their faculty adviser and the department chair to obtain signatures of approval for admission to the program. Students in the department wishing to attend the Rome Program must register for a full semester of credits. The department recommends that students attend the program during the first or second semester of their junior year. (Under special circumstances, seniors may petition to attend the Rome Program.) **Only under special circumstances, and with prior petition and approval, are seniors allowed to attend the Rome program.** Students wishing to spend two consecutive semesters in Rome must submit a petition, which should include the proposed course schedule for both semesters and must have appropriate faculty approval.

Sample Rome Curriculum

ART 400	Rome Studio	4
	Requirement for Rome B.F.A. students, fulfills 4 credits in a studio concentration	
ART 209	Site-Specific Processes	3
ART 312*	Modern Art in Italy	3
ART 317	History of Art in Rome: Early Christian to the Baroque Age [not offered 2005-2006]	4
or		
ART 318	History of Art in Rome: Renaissance in Rome and Florence	4
or		
ART 372.20	Special Topics in Art History (spring only)	4
ITALA 111/112	Italian Language	4
[ARCH 317	Contemporary Italian Film 1**]	

**Students may add by approved petition to take 19 credits in Rome.

18 Total

Other electives available to B.F.A. students include courses in architectural history, visual studies, city and regional planning, and the Independent Studio in Art.

Students may petition to take more than 16 credits per semester in the Rome Program. Students may study in Rome for one or two academic semesters.

*Fulfills 300-level theory and criticism requirement.

Out-of-College Requirements

A minimum of 57 elective credits must be taken outside of the college. In the first year, students must take two first-year writing seminars. Students are required to take courses from among three groups, which include: physical and biological sciences (minimum of two courses, of at least 3 credits each); social sciences (minimum of three courses, of at least 3 credits each); and humanities and expressive arts (minimum of three courses, of at least 3 credits each). All B.F.A. students are required to take 20 credits in the history of art. One course must be taken in each of the following areas:

Modern: for example, 260, 265, 270, 360, 362, 365, 366, 367, 370, 376, 447, 464.

Non-Western: for example, 215, 280, 339, 378, 380, 383, 384, 385, 386, 395, 396, 470, 478, 490, 571.

Three electives: any art history elective at the 300 level or above or any architectural history elective. (Note: Offerings may vary each semester. Students are encouraged to consult with their adviser. Students may petition to substitute courses of similar content.)

The university requirement of two semesters in physical education must be met.

A candidate for the B.F.A. degree at Cornell is required to spend the last two semesters of candidacy in residence at the university, subject to the conditions of the Cornell faculty legislation of November 14, 1962. No student may study in absentia for more than two semesters.

Students who transfer into the undergraduate degree program in art must complete a minimum of four semesters in residence at Cornell and a minimum of 60 credits at the university, of which 30 credits must be taken in the Department of Art, including four semesters of studio work.

For those students matriculating in fall of 2005:

Students are required to take ART 111 Introductory Art Seminar; ART 121 Introductory Painting; or ART 141 Introductory Sculpture; Art History elective; and a first-year writing seminar during the fall semester of the freshman year. ART 131/132/133 Introductory Printmaking; Art History elective; and an additional first-year writing seminar must be taken during the spring semester of the freshman year. Two 300-level courses in theory and criticism must be taken sometime between the sophomore and senior years.

Courses that will fulfill the theory and criticism requirement (Note: Offerings may vary from year to year. Check the current course catalog.):

The M.F.A. Program

The master of fine arts program requires four semesters of full-time study, equal to a minimum of 60 credits. Graduate work

done elsewhere or in the summer session is not applicable to the M.F.A. degree. The curriculum leading to the master's degree is flexible to accommodate the needs of the individual student and to enable the student to partake of the greater Cornell community. The ratio of graduate faculty to students allows an exceptional opportunity for individual mentoring. Graduate students are provided individual studios and have 24-hour access to studios and labs.

Graduate students in art may enroll in introductory or advanced courses in any field of study offered at the university. Fifteen credits are required in each semester; of these, 9 credits are in studio work, and 3 credits are in graduate seminar (ART 611, 612, 623, 624). Students are required to take at least 12 credits of academic work outside the Department of Art during their four semesters in residence. Candidates for the master of fine arts degree must have completed 18 credits in the history of art in the course of their graduate and/or undergraduate study. Every M.F.A. candidate must prepare a written statement, offer a thesis exhibition of studio work completed during residency, and give an oral defense of the written statement and visual thesis. Gallery space is provided for a one-week solo thesis exhibition during the final spring semester.

Course Information

Most courses in the Department of Art are open to students in any college of the university who have fulfilled the prerequisites or have permission of the instructor.

Fees are charged for all studio courses. See the specific course description for course fees.

To take advantage of the special opportunities afforded by summer study, several courses are offered during summer session.

Guidelines for Independent Study

A student who wishes to undertake an independent study must be a junior and in good academic standing. Fine arts students must have completed two years of the curriculum, including all first- and second-year studios and four semesters of drawing. Students must have prior approval to have an independent study count as a drawing requirement. All students must have taken a minimum of one Cornell art department course in the area of the proposed independent study. It is recommended that the student take the independent study with a professor with whom they have previously studied. Out-of-department students may be exempt from the studio sequence requirement at the discretion of the supervising professor. Independent studies must be petitioned to count toward required studio courses. Credit hours are variable up to a maximum of 4.

Courses in Theory and Criticism

ART 111(1101) Introductory Art Seminar

Fall. 1 credit. Prerequisite: B.F.A. students. S-U grades only. Staff.

Students meet each week with a different member of the faculty. The varying artistic interests of the faculty are presented and discussed. A maximum of two absences are allowed except by permission of chairman.

ART 170(1700) Visual Imaging in the Electronic Age

Fall or spring. 3 credits. D. Greenberg. Interdisciplinary survey course designed to introduce students in the creative arts, science, and engineering to the concepts of digital pictorial representation and display. It is a concept and theory course that concentrates on "why" rather than "how." Topics include perspective representations, display technology, how television works, bandwidth concepts, digital photography, computer graphics modeling and rendering, matting and compositing, color perception, data acquisition, volumetric imaging, and historical precedents, primarily from the art world. Also included are other modes of imaging.

Related Courses**ART 209(2009) Site-Specific Processes**

Fall or spring. 3 credits. Prerequisite: ART 251 or permission of instructor. Staff. This studio course investigates materials, methods, and processes specific to Rome. The Italian experience and specifically the city of Rome is used to engage in artistic practices not readily available on the Ithaca campus. The methods to be studied in workshop settings could include: fresco painting, egg tempera, watercolor, paper making, wood carving, stone carving, mosaics, and ceramics. The final project involves the use of one or more processes presented in a site-specific installation.

ART 214(2104) Art and the Multicultural Experience

Fall. 3 credits. R. Dalton. Investigates selected topics related to art and the multicultural experience. Students study the basic vocabulary and tools used in the expression of art. Students question the nature of the visual arts as a discipline and survey art created by underrepresented American minority cultural groups.

ART 312(3102) Modern Art in Italy

Fall or spring. 3 credits. Fulfills 300-level theory and criticism requirement for fine arts majors. Prerequisite: Rome Program participants. Staff. Introduces students to contemporary art in Rome through studio visits, gallery exhibitions, and museum collections. Lectures by artists, critics, and others. Traces art from idea to realization and explores the gallery and its relationship to artists and to promotion of art, the role of the art critic and museum, and art collecting.

[ART 317(3107) History of Art in Rome: Early Christian to the Baroque Age
Not offered 2005-2006.]**ART 318(3108) History of Art in Rome: Renaissance in Rome and Florence**
Not offered every year. Staff.

Surveys art from the beginning of the 15th century to Michelangelo's death (1564) with field trips to important churches, collections, and villas. Emphasis is given to sculpture and painting, and in the case of fresco, mosaics, and stucco decoration, the relationship with architecture and environment is a key element.

ART 419(4109) Independent Study/Supervised Readings in Art

Fall, spring, or summer. 4 credits, variable. Prerequisite: juniors in good academic standing and written permission of instructor. Staff.

Independent reading and research allows a student the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the supervision of a faculty member.

ART 570(5700) Theory Seminar

Fall and spring. 4 credits. Priority given to AAP and Art History graduate students. B. Spector and M. Fernandez. Introduces students in art, art history, and architecture to diverse theoretical texts of relevance to the three fields. Readings include classic texts in post-structural theory and more recent writings in new areas of theory and artistic practice, including digital art, cyber-feminism, globalization, museums and museology, architecture in/as visual space, biotechnology and artificial life, as well as issues in cognitive science and human-computer interaction centering on space and embodiment. Occasionally this seminar focuses on a single topic of convergence for these diverse areas.

ART 611(6101) Professional Skills for the Visual Artist

Spring. 3 credits. Prerequisite: M.F.A. students. Staff.

This seminar helps fine arts graduate students build professional skills that will assist them in their careers as practicing artists and in their work at art-related employment. Students complete a resource notebook that will be useful to them in the years after they graduate. Topics include: funding resources, exhibition opportunities, employment options, documentation of work, health, safety, and legal issues.

ART 612(6102) Recent Practice in the Visual Arts

Fall. 3 credits. Prerequisite: M.F.A. students. Staff.

This seminar is designed to provide graduate students with an overview of recent visual artwork. Students study work from a wide range of artists who have received significant recognition within the visual arts community. Reviews of major exhibitions such as "Documenta," "La Biennale di Venezia," and the "Whitney Biennial" are discussed. Students are encouraged to travel to nearby cities to look at contemporary work.

ART 613(6103) Online Publication for the Visual Artist

Fall. 3 credits. Prerequisite: M.F.A. students. Staff.

Seminar designed to introduce graduate students to the basic principles of electronic imaging. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist's work and combined in an online magazine. Additionally each student learns to create a home page on the web.

ART 614(6104) Contemporary Theory in the Visual Arts

Spring. 3 credits. Prerequisite: M.F.A. students. Staff.

Seminar exploring selected writings on the current issues represented within the visual arts. Designed to introduce graduate students

to several approaches to critical inquiry and analysis of contemporary visual practice. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

ART 623(6203) Contemporary Theory and Visual Culture

Fall. 3 credits. Prerequisite: M.F.A. students. Staff.

Seminar exploring selected writings on current issues in the visual arts. Designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary practice in the visual arts. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

ART 624(6204) Current Criticism in the Visual Arts

Spring. 3 credits. Prerequisite: M.F.A. students. Staff.

Seminar designed to introduce graduate students to critical writing in the visual arts, both in print and in digital format. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist's work and combined in an online magazine. Additionally, each student learns to create a home page on the web.

Studio Courses in Painting

Fees for painting courses (121, 221, 321, 322, 421, 422, 429): \$40

ART 121(1201) Introductory Painting

Fall, spring, or summer. 3 credits. Staff. Studies the language of painting through color, form, materials, and techniques. Aspects of traditional and modern pictorial composition are studied including proportion, space, and color theory through the representation of a variety of subjects.

ART 221(2201) Painting II

Fall or spring. 4 credits. Prerequisite: ART 121 or permission of instructor. Staff. Continuation of the study of aspects of pictorial composition initiated in ART 121, focusing on problems relating to the depiction of the figure, space, and light. Topics are explored within the context of historical and contemporary artistic expression.

ART 321(3201) Painting III

Fall or spring. 4 credits. Prerequisite: ART 221 or permission of instructor. Staff. Intensive study of painting materials and techniques to express pictorial ideas. A variety of traditional painting techniques are explored including egg tempera, fresco, gouache, encaustic, and oil. In addition, paints and associated techniques developed in the 20th century are used as well as developing technologies applicable to the painting process.

ART 322(3202) Painting IV

Fall or spring. 4 credits. Prerequisite: ART 321 or permission of instructor. Staff. Advanced course centered on issues of artistic expression. A variety of painting media are used to address conceptual issues through representation as well as abstraction.

ART 421(4201) Pre-Thesis in Painting

Fall or spring. 6 credits. Prerequisite: ART 322. Staff. Advanced study of painting through assigned and independent projects using a variety of

materials leading to the formulation of a thesis project.

ART 422(4202) Thesis in Painting

Fall or spring. 6 credits. Prerequisite: ART 421. Staff.

Focused independent project demonstrating creative ability and technical proficiency. Projects are exhibited in an appropriate space at the end of the semester.

ART 429(4209) Independent Studio in Painting

Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and permission of instructor. Staff.

Independent studio in painting that allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate results.

ART 721-722(7201-7202), 821-822(8201-8202) Graduate Painting

721, fall; 722, spring; first-year M.F.A. students. 9 credits. 821, fall; 822, spring; second-year M.F.A. students. 9 credits. Staff.

Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation.

Studio Courses in Printmaking

Fees for printmaking courses:

Intaglio (131, 231, 431, 432, 439): \$95

Screenprinting (132, 232, 431, 432, 439): \$45

Lithography (133, 233, 431, 432, 439): \$95

Expanded Print Forms (134, 234): \$95

ART 131(1301) Introductory Intaglio

Fall and spring. 3 credits. Staff.

Basic introduction to etching techniques, with emphasis on engraving, lift ground, relief printing, monotypes, and experimental techniques.

ART 132(1302) Introductory Graphics

Fall and spring. 3 credits. Staff.

Introduces the two-dimensional thought process and the language of vision. Students explore design projects and the use of graphic materials, including collage, pochoir, and screen printing.

ART 133(1303) Introductory Lithography

Fall and spring. 3 credits. Staff.

Study of the theory and practice of lithographic printing, using limestone block and aluminum plate. Basic lithographic techniques of crayon, wash, and transfer drawing are studied.

ART 134(1304) Expanded Print Forms

Spring. 3 credits. Prerequisite: one of the following: ART 131, 132, 133, 161, 171, 251, or permission of instructor. Staff.

Intensive experimental studio designed to introduce students to various ideas and processes of making artists' books. Encourages the integration of studio practice (photography, printmaking, drawing, and painting) with new digital strategies (digital photography/ink jet print, video/sound, CD-ROM/digital book making). Presents both concept and process as related to the visual book form. An introduction to digital

publication as an expanded print form helps students investigate how the book is reinvented or reshaped within an electronic context.

ART 231(2301) Intaglio II

Spring. 4 credits. Prerequisite: ART 131. Staff.

Studio course in advanced etching techniques. Refinement of processes and ideas through the uses of aquatint, spit bite, lift ground, soft ground, and dry point in black and white with an introduction to multiple-plate color printmaking.

[ART 232(2302) Advanced Screen Printing

Not offered 2005-2006.]

ART 233(2303) Lithography II

Spring. 4 credits. Prerequisite: ART 133. Staff.

Theory and practice of lithographic printing using lithographic stones and aluminum plates. Traditional techniques in crayon, tusche wash, and color printing as well as photolithography using kodalith and computer-generated transparencies.

ART 234(2304) Large-Format Digital Printing

Fall and spring. 4 credits. Prerequisites: ART 161, 171, and one of the following: ART 131, 132, 133, 134 or permission of instructor. Staff.

Focuses on the use of digital printing and its use in combination with traditional forms of printmaking. Students explore various approaches to image making while also using traditional materials and media, including relief, monotype, lithography, screen printing, intaglio, transfers, collage, and photomechanical processes. Students use appropriate software, including Adobe Photoshop, QuarkXpress, Final Cut Pro, and Adobe Illustrator to draw from both still and video base sources. Students work with large-format inkjet printers.

ART 331(3301) Printmaking III

Fall or spring. 4 credits. Prerequisite: ART 231, 232, or 233 or permission of instructor. Staff.

Study of the art of graphics through both assigned and independent projects. Work may concentrate in any one of the graphic media or in a combination of media.

ART 332(3302) Printmaking IV

Fall. 4 credits. Prerequisite: ART 331 or permission of instructor. Staff.

Continuation and expansion of ART 331.

ART 431(4301) Pre-Thesis in Printmaking

Fall or spring. 6 credits. Prerequisite: ART 332. Staff.

Further study of the art of graphics through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

ART 432(4302) Thesis in Printmaking

Fall or spring. 6 credits. Prerequisite: ART 431. Staff.

Advanced printmaking project to demonstrate creative ability and technical proficiency.

ART 439(4309) Independent Studio in Printmaking

Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff.

Independent studio in printmaking that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

ART 731-732(7301-7302), 831-832(8301-8302) Graduate Printmaking

731, fall; 732, spring; first-year M.F.A. students. 9 credits. 831, fall; 832, spring; second-year M.F.A. students. 9 credits. Staff.

Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they work. Members of the faculty are available for consultation; discussion sessions of work in progress are held.

Studio Courses in Sculpture

Fees for sculpture courses:

141: \$50

241, 341, 342, 343, 441, 442: \$75

ART 141(1401) Introductory Sculpture

Fall, spring, or summer. 3 credits. Staff.

Series of studio problems introducing the student to the basic principles of artistic expression in three-dimensions, i.e., clay modeling, direct plaster, plaster casting, and construction in wood, metal, and other materials.

ART 241(2401) Sculpture II

Fall or spring. 4 credits. Prerequisite: ART 141, or architecture design studio, or permission of instructor. Staff.

Various materials, including clay, plaster, wood, stone, and metal, are used for exercises involving figurative modeling, abstract carving, and other aspects of three-dimensional form and design. Beginning in the second year, students are encouraged to explore bronze/metal casting processes. The sculpture program, which is housed in its own building, contains a fully equipped bronze-casting foundry.

ART 341(3401) Sculpture III

Fall or spring. 4 credits. Prerequisite: ART 241 or permission of instructor. Staff.

Continued study of the principles of sculpture and conceptual development. Each student explores the selection and expressive use of materials, media, scale, and content. Group discussions and individual criticism. Experimentation is encouraged.

ART 342(3402) Sculpture IV

Fall or spring. 4 credits. Prerequisite: ART 341 or permission of instructor. Staff.

Continuation and expansion of ART 341. Special projects may include site-specific and/or large-scale installations.

ART 343(3403) Sculpture V

Fall or spring. 4 credits. Prerequisite: ART 342 or permission of instructor. Staff.

Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 441(4401) Pre-Thesis in Sculpture

Fall or spring. 6 credits. Prerequisite: ART 342. Staff.

Further study of the art of sculpture through both assigned and independent projects executed in various media. Instruction through

himonthly group discussions and individual criticism. Students complete a body of work through an approved statement of purpose and proposed schedule.

ART 442(4402) Thesis in Sculpture

Fall or spring. 6 credits. Prerequisite: ART 441. Staff.

Advanced sculpture project to demonstrate creative ability and technical proficiency culminating in a cohesive B.F.A. thesis exhibition.

ART 449(4409) Independent Studio in Sculpture

Fall, spring, or summer. 4 credits variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff.

Independent studio in sculpture that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 741-742(7401-7402), 841-842(8401-8402) Graduate Sculpture

741, fall; 742, spring; first-year M.F.A. students. 9 credits. 841, fall; 842, spring; second-year M.F.A. students. 9 credits. Staff.

Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation. Weekly discussion sessions of works in progress are held.

Studio Courses in Photography

Darkroom fees for photography courses:

Black-and-white courses: \$135

Color courses: \$215

Additional black-and-white course taken the same semester: \$55

Additional color course taken the same semester: \$135

ART 161(1601) Photography I

Fall, spring, or summer. 3 credits. Staff. Basic lecture-studio course in black-and-white photography for beginners. Emphasis is on basic camera skills, darkroom techniques, and understanding of photographic imagery.

ART 168(1608) Black-and-White Photography

Summer, three-week session only. 3 credits. Staff.

Intended for students at all levels, from introductory to advanced. Emphasis is on camera skills, darkroom techniques, and the content of black-and-white photographic imagery.

ART 169(1609) Color Photography

Summer, three-week session only. 3 credits. Staff.

Intended for students at all levels, from introductory to advanced. Emphasis is on camera skills, darkroom techniques, and the content of color photographic imagery.

ART 261(2601) Photography II

Fall, spring, or summer. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. Staff.

Continuation of Photography I, concentrating on black-and-white photographic processes,

history and theory of creative practice, and individual projects.

ART 263(2603) Color Photography

Fall and summer. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. Staff.

Studio course in color photography with emphasis on camera skills, darkroom techniques, and the content of color photography.

ART 264(2604) Photo Processes

Fall, spring, or summer. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. Staff.

Studio course in alternative and nonsilver photographic processes. Emphasis is on camera skills, basic techniques and processes, image content, and creative use of photo processes.

ART 265(2605) Studio Photography

Fall or spring. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. Staff.

Course in the use of medium- and large-format cameras that explores technique, lighting, and the use of larger-format cameras for personal expression both in the studio and outdoors.

ART 361(3601) Photography III

Fall, spring, or summer. 4 credits. Prerequisite: ART 161, 261, or permission of instructor. Staff.

Continued study of creative use of photography, with emphasis on specialized individual projects.

ART 461(4601) Pre-Thesis in Photography

Fall or spring. 6 credits. Prerequisite: ART 261, 263. Staff.

Studio course intended for photography majors and other qualified students.

ART 462(4602) Thesis in Photography

Fall or spring. 6 credits. Prerequisite: ART 461. Staff.

Studio course intended for photography majors and other qualified students. Advanced photography project to demonstrate creative ability and technical proficiency.

ART 469(4609) Independent Studio in Photography

Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff.

Independent studio in photography that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 761-762(7601-7602), 861-862(8601-8602) Graduate Photography

761, fall; 762, spring; first-year M.F.A. students. 9 credits. 861, fall; 862, spring; second-year M.F.A. students. 9 credits. Staff.

Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they work. Members of the faculty are available for consultation. Discussion sessions of work in progress are held.

Studio Courses in Drawing

Fees for all drawing courses:

\$25

ART 151(1501) Drawing I

Fall, spring, or summer. 3 credits. Staff. General course introducing students to principles and techniques of representation. Emphasis is on creating the illusion of space and form through line, the rendering of light and shade, and studies in perspective. Students have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink, and wash.

ART 152(1502) Drawing II

Spring. 3 credits. Prerequisite: ART 151. Staff.

General course in drawing that emphasizes figure study and life drawing. Builds on the foundation of ART 151 and concentrates on the analytical study of the figure. Students explore a variety of materials, traditional and contemporary.

ART 158(1508) Conceptual Drawing

Summer, six-week session. 3 credits. Staff. Emphasizes drawing from the imagination. Stresses the generation of ideas and their development in sketches. The intent is not to produce finished art but rather to experience a series of problems that require image and design concepts different from those of the artist working directly from nature.

ART 159(1509) Life and Still-Life Drawing

Summer, six-week session. 3 credits. Staff. Studies the human figure and still life both as isolated phenomena and in relation to their environment. Focuses are on helping the student observe and discover.

ART 251(2501) Drawing III

Fall. 3 credits. Prerequisite: ART 152. Staff. Intermediate drawing course in which students study composition, the articulation of form, and the illusion of space in a variety of materials. Expressive content, conceptualization, and the exploration of materials are stressed.

ART 252(2502) Drawing IV

Spring. 3 credits. Prerequisite: ART 251. Staff.

Advanced drawing course with emphasis on life drawing and figure composition. Individual expression is encouraged along with creative investigation of materials and processes.

ART 459(4509) Independent Studio in Drawing

Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff.

Independent studio in drawing that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

Studio Courses in Electronic Imaging

Course fees:

171, 372, 479	\$250
234, 271, 272	\$105
373/374	\$250
481, 482, 489	\$ 70

ART 171(1701) Electronic Imaging in Art

Fall or spring. 3 credits. Staff.

Introductory studio course using the computer as a tool for making art. Students explore various approaches to 2- and 3-D web art using software programs and various functions. This course is an introduction to the web.

ART 234(2304) Large-Format Digital Printing

Fall and spring. 4 credits. Prerequisite: ART 171. Staff.

Focuses on the use of digital printing and its use in combination with traditional forms of printmaking. Students explore various approaches to image making while also using traditional materials and media, including relief, monotype, lithography, screen printing, intaglio, transfers, collage, and photomechanical processes. Students use appropriate software, including Adobe PhotoShop, QuarkXpress, Final Cut Pro, and Adobe Illustrator to draw from both still and video-based sources. Students work with large-format inkjet printers.

ART 271(2701) Electronic 3-D Modeling and Animation

Fall or spring. 4 credits. Prerequisite: ART 171. Not offered every year. Staff.

Studio course in creating 2- and 3-D still and animated visualizations using computers and 3-D software for object modeling, animation, and rendering. This course concentrates on the web.

ART 272(2702) Digital Video and Sound

Fall or spring. 4 credits. Prerequisite: ART 171. Not offered every year. Staff.

Studio course that introduces students to digital video including capture stills, animation, video, and sound with an introduction to interactive presentation and CD-ROM production. This course concentrates on the web.

ART 273(2703) Computer Animation (also CIS 565[5640])

Fall. 4 credits. D. Greenberg.

Focuses on techniques of computer animations. Combines critical readings with studio projects that employ a variety of animation software. Topics include modeling, storyboarding, 2-D and 3-D key frame animation, motion and kinematics, lighting effect and shading, texturing and material properties, physical simulation, and cinematography.

ART 373(3703) Intermediate Electronic Imaging Studio I

Fall. 4 credits. Prerequisite: ART 272 or 273. Lab fee TBA. Staff.

For information, please call department.

ART 374(3704) Intermediate Electronic Imaging Studio II

Spring. 4 credits. Prerequisite: ART 272 or 273. Lab fee TBA. Staff.

For information, please call department.

ART 471(4701) Pre-Thesis in Electronic Imaging

Fall and spring. 6 credits. Prerequisites: ART 171, 234 or 271, 272 or 273, 373 or 374. Lab fee TBA. Staff.

For information, please call department.

ART 472(4702) Thesis in Electronic Imaging

Fall and spring. 6 credits. Prerequisite: ART 471. Lab fee TBA. Staff.

For information, please call department.

Special Studio Courses**ART 372(3702) Special Topics in Art Studio**

Fall, spring, or summer. 4 credits, variable. Staff.

Exploration of a particular theme or project.

ART 372.20(3702.20) Special Topics in Art History

Spring. 4 credits, variable. Prerequisite: Rome Program participants. Staff.

Topic TBA.

ART 379(3709) Independent Studio in Rome

Fall and spring. 4 credits, variable.

Prerequisites: Rome Program participants; juniors in good academic standing and written permission of instructor. Staff.

Independent studio in Rome that allows non-art majors the opportunity to pursue special interests in fine arts not treated in regularly scheduled courses. The student plans a course of study or projects that meet the approval of the faculty member selected to guide his or her progress and evaluate the results.

ART 391(3901) Media Arts Studio I (also ARCH 459/659[4509/6509], FILM/ DANCE 391[3910])

Fall. 3 credits. Prerequisites: FILM 277 or 377; junior standing and permission of instructor. Lab fee: \$50. Staff.

For description, see FILM 391.

[ART 392(3902) Media Arts Studio II

Not offered 2005–2006.]

ART 400(4000) Rome Studio

Fall or spring. 4 credits. Fulfills 4 credits of concentration requirement. Prerequisites: Rome Program participants; permission of instructor. Content for Rome studio determined by instructor. Fee: \$60; additional fees for photography and printmaking. Staff.

Emphasis is divided between work accomplished in the studio and work executed outdoors in the environs of Rome. Media consist primarily of painting, drawing, sculpture, and photography, or those assigned by the instructor.

ART 479(4709) Independent Studio in Electronic Imaging

Fall, spring, or summer. 4 credits, variable.

Prerequisites: juniors in good academic standing and written permission of instructor. Staff.

Independent studio in electronic imaging that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

ART 481(4801) Pre-Thesis in Combined Media

Fall or spring. 6 credits. Prerequisite: written permission of instructor on combined media thesis form (must be received in art department before enrollment in course). Students must enroll in pre-thesis course in their primary area of concentration. Staff.

Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they work. Projects should reflect experiences gained by exploring and combining various media including those taken in studio courses

outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 482(4802) Thesis in Combined Media

Fall or spring. 6 credits. Prerequisites: ART

481 and written permission of instructor on combined media thesis form (must be received in art department before enrollment in course). Students must enroll in thesis course in their primary area of concentration. Staff.

Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they work. The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 489(4809) Independent Studio in Combined Media

Fall, spring, or summer. 4 credits, variable.

Prerequisites: juniors in good academic standing and written permission of instructor. Staff.

An independent studio in combined media that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

CITY AND REGIONAL PLANNING

K. Reardon, chair (108 W. Sibley Hall, 254-5378; S. Baugher, L. Beneria, R. S. Booth, S. Christopherson, P. Clavel, M. Drennan, A. M. Ennard, J. F. Forester, W. W. Goldsmith, N. Kudva, Y. Levitte, D. Lewis, B. Lynch, director, URS; P. Olpadwala, R. Pendall, S. Saltzman, M. A. Tomlan, R. T. Trancik, M. Warner. Emeriti: S. Czamanski, W. Isard, J. W. Reps, S. W. Stein. Visiting: I. Azis, T. Vietorisz

The department offers several programs of study at both the undergraduate and graduate levels.

The Undergraduate Program in Urban and Regional Studies

The Program in Urban and Regional Studies (URS) is a four-year academic program aimed at assessing the problems of human communities and regions. Students who graduate from the program receive a bachelor of science degree. The program provides both an excellent liberal arts education and a strong concentration of studies respecting urban and regional issues. The urban and regional studies courses in the program provide students with a broad understanding of relevant issues, the ability to assess those issues, and technical analysis skills. The URS Program is truly interdisciplinary. Students learn to evaluate urban and regional problems by using a wide range of analytic tools and disciplinary perspectives.

Basic Degree Requirements (for students in the graduating class of 2006 and earlier)

Requirements for graduation: URS requirements include (1) eight semesters of residence; (2) 120 credits; (3) two first-year seminars; (4) qualification in one foreign language; (5) four groups of distribution requirements; (6) required courses for major; (7) area requirements for major; (8) free electives; (9) a minimum of 34 courses; and (10) completion of the university requirement of two 1-credit nonacademic courses in physical education. Note: Physical education credit does not count toward graduation or toward the 12-credit minimum required for good academic standing each semester. No course may satisfy more than one requirement.

1. General education

- First-year writing seminars: two courses
- Foreign language: three courses or qualification in one foreign language
- Distribution requirement: nine courses

Students must take a total of nine courses for the distribution requirement: four courses (of three or more credits each) from Groups 1 and 2, at least two of which are from Group 1, and at least one of which is from Group 2; five courses from Groups 3 and 4, with at least two in each group and two in the same department. No single course may satisfy more than one distribution requirement. URS students must follow the College of Arts and Sciences guidelines specifying courses that meet the requirements for groups 1-4.

Group 1: Physical and biological sciences (two to three courses required)

Group 2: Quantitative and formal reasoning (one to two courses required)

Group 3: Social sciences and history (two to three courses required)

Group 4: Humanities and the arts (two to three courses required)

Advanced Placement Credit

Students in the graduating class of 2006 and earlier may apply up to two courses of approved advanced placement credit in calculus, computer science, and science toward satisfaction of the distribution requirement in Groups 1 and 2 above, if they complete at least one science course during their undergraduate career. They may apply no advanced placement credit toward the distribution requirement in Groups 3 and 4. Grades of S-U courses cannot be applied to the distribution requirements.

Students in the graduating classes of 2007 and later may apply *no* advanced placement or transfer credit to general education requirements in Groups 1 through 4 (sciences, quantitative reasoning, social sciences/humanities/arts).

2. Required Courses for the Major in Urban and Regional Studies: five courses

CRP 100 The American City

CRP 101 The Global City: People, Production, and Planning in the Third World

Statistics (at least 3 credits from approved list below)

AEM 210 Introduction to Statistics

BTRY 261 Statistical Methods

ECON 219 Introduction to Statistics and Probability

MATH 171 Statistical Theory and Application in the Real World

SOC 301 Evaluating Statistical Evidence (II) microeconomics course (at least 3 credits, from an approved list)

architecture course (at least 3 credits)

3. Area Requirements for the Major in Urban and Regional Studies: 11 courses

Students must take one CRP course in each of the following six areas: design, economics, environment, history, politics/policy, and quantitative analysis.

The URS approved area requirements list is available in 106 W. Sibley Hall. Students must take any additional five CRP courses (of at least 3 credits each, letter grade only).

Note: Cornell in Washington Program: GOVT 500 Politics/Policy: Theory, Research, and Practice can be used to fulfill 4 credits toward additional CRP course requirement.

4. Free Electives: six to nine courses**5. Physical Education (two semesters)**

Required credits: 120

New requirements for students in the graduating class of 2007 and after

General Education: same as graduating class of 2006 and earlier.

1. First-year writing seminars: two courses

Students earning a score of 5 on both English literature and English language exams will receive 3 credits (in out-of-college electives) and place out of one first-year writing seminar.

Distribution Requirements: same as graduating class of 2006 and earlier

(For a complete listing of courses in Groups 1 through 4, see "Distribution Requirements" under "College of Arts and Sciences." Note: The Arts and Science distribution requirement has been changed for entering freshmen in that college (class of 2007). Rather than selecting courses from Groups 3 (social sciences and history) and 4 (humanities and the arts), **as of fall semester 2004**, Arts and Sciences students are required to complete five courses in at least four of the following five categories: Cultural Analysis (CA); Historical Analysis (HA); Knowledge, Cognition, and Moral Reasoning (KCM); Literature and the Arts (LA); and Social and Behavioral Analysis (SBA). Social science and humanities courses are marked individually by category, and any given department may offer courses that fall into distinct categories. URS students are also encouraged to select their Group 3 and Group 4 courses from four of these five categories.

Required Courses for the Major in Urban and Regional Studies: seven courses

CRP 100 The American City (fall, 3 credits)

CRP 101 The Global City: People, Production, and Planning in the Third World (spring, 3 credits)

CRP 106 URS First-Year Seminar (spring, 1 credit)

CRP 200 The Promise and Pitfalls of Contemporary Planning (fall, 3 credits)

CRP 201 People, Planning and Politics in the City (spring, 3 credits)

ECON 101 Microeconomics (both semesters, 3 credits)

Statistics Various courses (both semesters, 3 credits)

Area Requirement: six CRP courses

A. Design and Land Use (one course)

B. Urban History, Society, and Politics (one course)

C. Environment (one course)

D. Regional Development and Globalization (one course)

E. Methods for Planning and Urban Studies (two courses)

Either CRP 331 or 332

CRP 331 Preparation for Urban Fieldwork (spring, 3 credits)

CRP 332 Urban Policy Research Seminar (fall, 3 credits)

or an equivalent research course approved by the URS director

And one of the following:

CRP 328 Overview Quantitative Methods in Public Policy Analysis

CRP 408 Introduction to Geographic Information Systems

CRP 327 Regional Economic Impact Analysis

CRP 425 Quantitative Methods for Urban Analysis (4 credits) This requirement is also satisfied by GOVT 300 Methods: Research Design and Qualitative Methods (Cornell in Washington) or an equivalent research methods course approved by the URS director.

URS-Approved Area Requirements List (available in program office).

Honors Program

Each year a few well-qualified juniors may join the honors program. Each honors student develops and writes an honors thesis under the guidance of his or her faculty adviser.

Concentrations**Urban Studies Concentration (non-URS majors)**

The Urban and Regional Studies Concentration has been formulated specifically for those students not enrolled in the Program of Urban and Regional Studies and who are interested in complementing their current academic program with an introduction to various facets of urban studies (domestic, environmental, international, professional, urban affairs).

To complete the Urban and Regional Studies (URS) concentration, students must take at least six courses (minimum total of 18 credits) in the Department of City and Regional Planning (CRP). Courses must be completed with letter grade of C or above.

Nine (9) credits of required core courses:

CRP 100 American Cities (3 credits)

CRP 101 The Global City: People, Production in the Third World (3 credits)

CRP 200 The Promise and Pitfalls of Contemporary Planning (3 credits)

And 9 credits of elective department courses at the 300 level or higher.

(Please consult department course listings.)

Students meet with their home college faculty adviser. Upon completion of course requirements, students complete a URS concentration application form, available in 106 W. Sibley Hall. The AAP registrar verifies course completion and grades for concentration requirements and signs the application form. The URS program director (URS concentration adviser) also verifies completion of the concentration, signs the form, and sends a letter (on department letterhead) to the student's home college. The home college will record completion of the URS concentration on the student's transcript.

The department recognizes concentrations earned within the university (accepting standards set by various colleges). Students may apply for concentrations in any college (e.g. Africana Studies, Architecture, Latino Studies, Southeast Asian Studies, and Feminist, Gender, and Sexuality Studies). When a student satisfies the requirements for a concentration, and formal notification is received by the AAP registrar, the concentration will be recorded on the student's official transcript.

Off-Campus Opportunities

Cornell in Washington Program. Students in good standing may earn degree credits in the Cornell in Washington program through course work and an urban-oriented externship in Washington, D.C. Students may work as externs with congressional offices, executive-branch agencies, interest groups, research institutions, and other organizations involved in the political process and public policy. Students also select one or two other seminars from such fields as government, history, economics, human development, architectural history, natural resources, and social policy. Cornell faculty members teach these seminars, which provide credit toward fulfillment of major, distribution, and other academic requirements.

Cornell Abroad. Qualified undergraduates are encouraged to study abroad because exposure to foreign cultures can be an eye-opening aspect of a university education. In an increasingly interdependent world, the experience of living and learning in a foreign country is invaluable. Study-abroad opportunities are continually being developed. Current programs are available in Great Britain, Spain, and Germany. Opportunities in Asia, the Mideast, and France should be forthcoming. The department encourages URS students to explore these opportunities.

Cornell-in-Rome Program. The College of Architecture, Art, and Planning has a teaching facility in Rome located in the 17th-century Palazzo Lazzaroni. Students in good standing can earn degree credits through courses taken with Cornell faculty members assigned to Rome and with accredited instructors. Courses

are available in areas of urban development, regional development, and architecture and art.

Research and fieldwork. Students are welcome to work with department faculty members on research or other opportunities that are appropriate to their particular interests. Fieldwork and community-service options also exist for students in the Urban and Regional Studies Program.

Additional Degree Options

Linked degree options. Urban and regional studies students may earn both a bachelor of science degree and a master of regional planning (M.R.P.) degree in a fifth year of study. Ordinarily the professional M.R.P. degree requires two years of work beyond that for the bachelor's degree. Under this option, a minimum of 30 credits and a master's thesis or thesis project are required for the M.R.P. degree. Interested students apply to the Graduate School, usually in the senior year.

Dual-degree option. A student accepted in Cornell's College of Arts and Sciences may earn both a B.A. in a College of Arts and Sciences major and a B.S. in urban and regional studies in a total of five years. Special requirements have been established for this dual-degree program. Cornell students interested in pursuing the dual degree program should contact either the director of the Urban and Regional Studies Program or the appropriate dean of the College of Arts and Sciences for further information.

Admissions Requirements and Procedures

Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential and commitment—a combination of ability, achievement, motivation, diligence, and use of educational and social opportunities. Nonacademic qualifications are important as well. The department encourages students with outstanding personal qualities, initiative, and leadership ability. Above all, the department seeks students with a high level of enthusiasm and depth of interest in the study of urban and regional issues. Applicants must complete a university admission application.

Transfer Students

In most cases, transfer applicants should no longer be affiliated with a high school and should have completed no fewer than 12 credits of college or university work at the time of application. High school students who have completed graduation requirements at midyear and are taking college courses for the rest of the academic year should apply as freshmen. Prospective candidates who believe that their circumstances are exceptional should consult with the director of admissions in the Cornell division of interest to them before filing an application.

Forms for transfer application and financial aid are available from the Cornell University Office of Admissions, 410 Thurston Avenue, Ithaca, NY 14850-2488. Official transcripts of all high school and college work must be submitted along with SAT or ACT scores and letters of recommendation.

Prospective transfers should have taken at least 6 credits in English. In addition, students should have taken basic college-level

courses distributed across the natural and social sciences, humanities, and mathematics. Applicants whose previous course work closely parallels the "General Education" requirements of the Urban and Regional Studies curriculum will have relative ease in transferring. Nevertheless, students with other academic backgrounds, such as engineering, architecture, fine arts, management, and agriculture, are eligible to apply.

Although an interview is not required, applicants are urged to visit the campus. Applicants who want further information regarding the Urban and Regional Studies Program may contact Professor Barbara Lynch, program director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, NY 14853-6701, 255-2186.

The Graduate Program in City and Regional Planning

There are five graduate degree programs in the city and regional planning department. The master of regional planning program stresses skills basic to professional planning practice and responds to individual needs and interests. The faculty strongly recommends that students concentrate in one of three areas of planning. The Land Use and Environmental Planning concentration focuses on the forces and actions that directly affect the physical character, transformation, rehabilitation, and preservation of cities and regions. Economic Development Planning: Communities and Regions focuses on the economies of neighborhoods, cities, and regions with the intent of producing more informed and effective economic development policy. International Studies in Planning (ISP) focuses on urban, regional, and international development processes and their implications for people's lives and livelihoods in diverse international contexts.

The master of professional studies in international development (M.P.S./I.D.) degree is administered jointly with the Cornell International Institute for Food, Agriculture, and Development (CIIFAD). It is intended to meet the specific training needs of experienced planners or midcareer professionals in related fields.

The 60-credit master of arts (M.A.) in historic preservation planning prepares students for professional work in the creative preservation and use of our physical heritage.

The master of science (M.S.) or master of arts (M.A.) degrees in regional science is the study of regional economies and their interactions with each other. Central issues include capital flows, trade, location of economic activity, growth, and regional conflicts. Graduates are positioned for careers as researchers and policy analysts at the highest levels in national governments, corporations, and international organizations.

The doctor of philosophy (Ph.D.) program is for those who seek advanced, specialized education for a career in teaching, research, or policy making.

Off-Campus Opportunities

Rome Program. Graduate students have the opportunity to spend one or two semesters in Rome, studying at Cornell's center at the Palazzo Lazzaroni. Instruction is given by Cornell professors-in-residence and by other faculty. The program is structured to include

work assignments in one of the international development organizations headquartered in Rome.

Course Information

Most courses in the Department of City and Regional Planning are open to students in any college of the university who have fulfilled the prerequisites and have the permission of the instructor.

The department attempts to offer courses according to the information that follows. However, students should check with the department at the beginning of each semester for late changes.

Undergraduate Program in Urban and Regional Studies

CRP 100(1100) The American City

Fall. 3 credits. S-U grades optional for out-of-department students only.
W. W. Goldsmith.

Introductory course on the evolution of urban problems and opportunities facing the majority of this country's population as we enter the first decade of the 21st century. Readings, discussions, and brief papers explore topics ranging from suburban development to central city poverty, from environmental threats to downtown revitalization, and from municipal finance to the new position of women in the urban economy.

CRP 101(1101) The Global City: People, Production, and Planning in the Third World

Spring. 3 credits. S-U grades optional for out-of-department students only. N. Kudva.
Critical look at the physical and social development of giant cities in the Third World. Their origins, roles, contributions, and shortcomings are examined. Their place in world political economy is evaluated. Policy prescriptions for their principal problems are discussed.

CRP 106(1106) URS First-Year Seminar

Fall. 1 credit. S-U grades only. N. Kudva.
Introduces students to substantive issues of the diverse disciplines that make up the planning profession through weekly interaction with CRP and other faculty members in the department. Students have the opportunity to engage in open discussions.

CRP 200(2000) The Promise and Pitfalls of Contemporary Planning

Fall. 3 credits. Prerequisite: CRP 100.
K. Reardon.
Introduction to the historical origins and evolution of the city planning profession in the United States. The theoretical foundation, core values, primary methods, and key challenges facing contemporary planners are examined through a combination of readings, lectures, films, guest speakers, and field trips. Students acquire a deeper understanding of professional practice by working with local officials to develop community development profiles for several Ithaca neighborhoods.

CRP 201(2010) People, Planning, and Politics in the City

Spring. 3 credits. Prerequisites: CRP 100 and 101. P. Olpadwala.
Seminar examining various bases of political and professional power. What do professionals who want to serve the public need to know about power and decision-making processes in the institutional settings

in which they operate? How and why can professionals make a difference when facing problems characterized by great complexity and severe inequalities among affected groups? The course addresses these and others questions.

CRP 261(2610) Fieldwork in Urban Archaeology (also LA 261[2610])

Fall. 3 credits. S. Baugher.
For description, see LA 261.

CRP 293(2930) Inequality, Diversity, and Justice (also GOVT 293[2935], SOC 293[2930], PHIL 193[1930])

Fall. 4 credits. R. Miller.
For description, see PHIL 193.

CRP 309(3090) Community Development Seminar (also CRP 509[5090])

Spring. 3 credits. Letter grades. K. Reardon.
Introduction to the theory, method, and practice of contemporary community development. Topics include: the role community-based organizations are playing in promoting sustainable development in distressed communities; the contribution planners are making to enhancing the organizational capacity of community-based organizations; and the interplay between neighborhood-based community development activities and regional economic development policy-making.

CRP 318(3810) Politics of Community Development (also CRP 518[5180])

Spring. 3 credits. Letter grades. Staff.
Seminar on city economic development and community institutions. Attention to issues of local politics, planning, housing, and economics. Term papers on field investigations are encouraged. Topics vary from year to year.

CRP 321(3210) Introduction to Quantitative Methods for the Analysis of Public Policy

Spring. 3 credits. Not offered every year.
Y. Mansury.

Introduction to the role and use of quantitative methods in the study of urban and regional issues. Focuses on various types of models commonly used to analyze urban and regional policy, including regression models, cost-benefit analysis, simulation, and others. Strengths and weaknesses of those methods are also considered.

CRP 327(3270) Regional Economic Impact Analysis (also CRP 627[6270])

Fall. 3 credits. Letter grades. Y. Mansury.
A central concern of practicing planners and economic development professionals is how different events affect the regional economy of concern. Some events are the result of policy choices, such as the closing of a military base or an increase in the local sales tax. Some are the result of exogenous economic forces such as out-migration of population, disasters, natural-floods and hurricanes. This course defines the context, a regional economy, for such analysis, and then presents analytical tools for estimating economic impacts. The major tool covered in depth is regional input-output. Most of the course is devoted to understanding and applying IMPLAN, a software and data system for performing regional input-output analysis at the county level.

CRP 328(3280) Overview: Quantitative Methods in Policy Planning (also CRP 528[5280])

Fall or spring. 3 credits. S-U grades optional. Staff.
Introduces students to the basic tools that are used in policy analysis. The goal is to set the context for the techniques presented, to understand the questions that each addresses, to be aware of their potential and limitations, their range of applicability, and the pitfalls to be avoided.

CRP 330(3300) Neighborhood Planning Workshop (also CRP 530[5300])

Spring. 4 credits. Letter grades. K. Reardon.
Offers students the opportunity to collaborate with local residents, leaders, and officials in the development of revitalization plans that address the critical environmental, economic, and social challenges confronting their neighborhoods. A participatory action research approach is used to co-produce professional-quality development plans with local stakeholder groups. Significant fieldwork required.

CRP 331(3310) Preparation for Urban Fieldwork

Spring. 3 credits. Prerequisite: Urban Scholars or permission of instructor. Letter grades only. R. Sinton.
Introduces students to the key theories, methods, and challenges of experiential education, service-learning, reflective practice, and urban ethnography, in preparation for field-based learning and research experiences with nonprofit organizations and local government agencies that serve distressed urban communities. Topics include principles of experiential learning, learning contracts, participant observation, informal/formal interviewing skills, creating critical-incident journals, managing field relations, professional ethics, ethnographic report-writing, and urban social inequality.

CRP 332(3320) Urban Policy Research Seminar on New York City

Fall. 3 credits. Prerequisite: successful completion of Cornell Urban Scholars, Adult Literacy, or Urban Semester Programs or permission of instructor(s).
S-U grades optional. R. Sinton.
Designed to enhance students' organizational, analytical, research, and communication skills in producing scholarly articles of publishable quality that critically examine important urban policy issues affecting the lives of New York City's poorest children, families, and neighborhoods. Students produce policy-oriented journal articles that address vital issues confronting the city's most vulnerable residents, whom they've identified while working in Cornell-sponsored summer internships with nonprofit organizations and public agencies that provide direct services to the poor.

CRP 343(3430) Affordable Housing Policy and Programs (also CRP 643[6430])

Fall. 3 credits. S-U grades optional.
R. Pendall.
Overview of federal, state, and local policies and programs to deliver affordable housing to low-income people; public housing, vouchers, inclusionary zoning, rent control, and much more. Lectures, debates, short papers, and term paper.

CRP 354(3540) Introduction to Environmental Planning (also CRP 554[5540])

Spring. 3 credits. A-M. Esnard.
Introduction to problems facing planners and decision makers as they attempt to manage and preserve environmental quality in urban and rural settings. Case studies are used to discuss issues related to sustainability, quality of life, environmental hazards, and environmental justice. Students are also introduced to the basic regulatory and institutional aspects of environmental planning and tools and techniques for environmental impact assessment, inventorying, and risk analysis.

[CRP 360(3600) Pre-Industrial Cities and Towns of North America (also LA 260/666[2600/6660], CRP 666[6660])

Not offered 2005–2006.]

CRP 361(3610) Seminar in American Urban History (also CRP 661[6610])

Fall or spring. 3 credits. Prerequisite: permission of instructor. M. Tomlan.
Seminar in the historical evolution of the American city. Emphasizes factors in urban growth, the process of urbanization, the urban reform movement, and intellectual and social responses to the city.

[CRP 363(3630) American Indians, Planners, and Public Policy (also CRP 547[5470], LA 263/547[2630/5470])

Not offered 2005–2006.]

CRP 365(3650) Gender and Globalization (also FGSS 360[3600])

Fall. 3 credits. L. Beneria
For description, see FGSS 360(3600).

CRP 368(3860) The History of Urban Form in America (also CRP 668[6680])

Fall or spring. 3 credits. Letter grades. M. Tomlan.
Covers the history of city planning in America from colonial times to the early 20th century, including brief reviews of European influences on urban form. Lectures, discussions, and short papers.

CRP 370(3700) The Regional Question: The Case of Italy

Spring. 4 credits, variable. Prerequisite: Rome Program participants; majors in urban and regional studies. Staff.
The "regional problem" in Italy has long interested regional planners, economists, sociologists, and political scientists. This course makes use of field trips to the Italian Mezzogiorno and the North to explore theoretical and practical aspects of regional inequality. The question of how Italy's integration into the European Union affects and is affected by its regional issues will be considered.

CRP 372(3720) 20th-Century Italy: Politics and Society

Spring. 3 credits. S-U grades optional for out-of-department students only. Staff.
Comprehensive survey of Italian society today, starting with Italy's geography and the historical forces that shaped the nation. Discussion includes north-south tensions and such broad features of Italian social life as community structure, urban development, and family forms. The course also reviews selected institutional issues, such as gender, the system of education, problems of criminality and

justice, economic reform, social class, religion, and politics.

CRP 377(3770) The City in Brazil (also CRP 687[6870])

Summer. 3 credits. S-U grades optional. W. Goldsmith.
Students are taught in Brazil by professors from Cornell and the Instituto de Pesquisa e Planejamento Urbano e Regional (IPPUR), at the Federal University of Rio de Janeiro. Students will live in three Brazilian cities, on site with local scholars, top city officials, and activists. In Belem de Para, at the mouth of the Amazon River, the focus is on the environment and development. In Brasilia, the focus is on modernist planning of the new national capital with its signature Plano Piloto, the separated satellites cities, and migration from the Brazilian Northeast. In Rio de Janeiro, the focus is on housing, transportation, and the informal economy in the context of metropolitan growth and decline.

CRP 378(3780) Recycling and Resource Management (also CRP 578[5780])

Spring. 3 credits. S-U grades optional. Not offered every year. R. Young.
Advanced resource-recycling and management systems are critical to the development of a sustainable society. This course reviews the political, technological, and economic strategies necessary for cities and communities to achieve a closed-loop resource-management system. Drawing from readings, speakers, and field trips that examine the cutting edge of recycling-program development, the course provides students with comprehensive exposure to leading practitioners and best practices in the recycling field. Open to undergraduate and graduate students. Graduate students have additional research requirements.

[CRP 380(3800) Environmental Politics

Fall. 4 credits. Letter grades. Not offered 2005–2006. R. Booth.]

[CRP 381(3810) Principles of Spatial Design and Aesthetics (also CRP 581[5810])

Fall. 3 credits. Limited to 30 students. Not offered 2005–2006. R. Trancik.]

CRP 384(3840) Green Cities (also CRP 584[5840], LA 495[4950])

Fall. 4 credits. S-U grades optional. Not offered every year. R. Young.
For the first time in history, a majority of human beings live in cities. As a result, any realistic solution to the global ecological crisis will need to include strategies for urban life that are ecologically sound. This course examines the history and future of urban ecology and the technology and politics that shape it. Alternative transportation, renewable energy, urban design, recycling and resource management, and sustainable economics are explored as means toward transforming cities to become the basis of a new, ecological society. Open to both graduate and undergraduate students. Graduate students have additional research requirements.

CRP 390(3900) Professional Planning Colloquium I (also CRP 790[7850])

Fall. 1 credit. Staff.
Visiting lecturers address problems and opportunities in the practice of planning. Topical focus to be announced. The only formal requirements for the course are

attendance and a three- to five-page paper about the lecture series.

CRP 395(3850) Special Topics (also CRP 585[5850])

Fall, spring, summer. 4 credits, variable. Times TBA. Staff.
For description, see department coordinator, 106 West Sibley Hall.

CRP 395.03(3850) Wilderness and Wildlands: Issues in Policy and Planning (also CRP 679.03[5850])

Fall. 2–3 credits, variable. Graduate seminar open to juniors and seniors. Not offered every year. L. Thorndike.
Wilderness and wildland resources have been under assault by the Congress, the "Wise Use" movement, property-rights activists, pollutants, and the actual users. This seminar considers historical and philosophical foundations and political factors that affect decisions about wilderness policies, planning, acquisition, protection, and management. The roles of government, professional planners and managers, organized special interests, the legal system, citizens, and user groups are examined. Practical exposure to planning and policy development through readings, discussions, guest practitioners, and a field trip to the Finger Lakes National Forest. Optional weekend trip to Adirondack Park Wilderness area.

CRP 395.73(3850) Planning for Sustainable Transportation: Crisis or Utopia? (also CRP 679.73[5850])

Spring. 3 credits. S-U grades optional. Y. Levitte.
Explores issues related to sustainable transportation policy and practice. The course (1) provides an overview of current transportation trends and their impacts; (2) reviews themes such as planning history and politics, the problems with the present auto-dominated systems, and key challenges to developing sustainable transport systems; and (3) looks at regulatory, design and market based approaches to reducing automobile-dependency, introducing creative sustainable solutions from around the world.

CRP 404(4040) Urban Economics (also CRP 504[5040])

Spring. 4 credits. Not offered every year. Prerequisite: microeconomics course. Staff.
Analyzes urban phenomena from an economic point of view. Areas examined include economic aspects of urbanization processes and policies, determinants of urban growth and decline, urban land and housing markets, urban transportation, and urban public services. Some time is spent in discussing problems of cities in developing countries.

CRP 408(4080) Introduction to Geographic Information Systems (GIS) (also CRP 508[5080])

Spring. 4 credits. A-M. Esnard.
Geographic Information Systems (GIS) have revolutionized the way we manage, analyze, and present spatial information. This course focuses on GIS in the social sciences. Many of the exercises and examples are based on planning issues, but the concepts can be applied to many other disciplines such as government, economics, natural resources, and sociology. Some of the issues covered include: fundamentals of spatial analysis; overview of GIS technology and applications; designing a GIS project; gathering and analyzing data; and creating thematic maps.

CRP 412(4120) Devolution, Privatization, and the New Public Management (also CRP 612[6120], AEM 433/633[4330/6330], FGSS 411/611[4110/6110])

Fall. 4 credits. Prerequisite: ECON 101 or equivalent. S-U grades optional. M. Warner. Addresses devolution and decentralization of government services in a national and international context and then focuses on the local public-sector response in the United States. Privatization, intermunicipal cooperation, and internal restructuring are reviewed, including changing roles for the private sector, nonprofit sector, and unions. Implications for policy, program design, public advocacy, and citizen involvement are addressed. A special topic may include welfare reform. Graduate students are expected to write a major research paper in addition to short papers throughout the semester.

CRP 416(4160) European City: The Public Sphere and Public Space

Spring. 4 credits, variable. Enrollment may be limited by instructor. Prerequisite: junior or senior standing; Rome Program participants. S-U grades optional for nonmajors. Staff.

Examination of the social, economic, and political life of the European city, particularly Italian cities, especially Rome. Study of the socioeconomic underpinnings of the city. How are cities organized, and how do citizens relate to the state; the city to the nation; the nation to the global market? How and where do different groups of people live? How do they travel, inside the city and from city to city? How are new parts of the city developed and old ones preserved, transformed, or destroyed? What public services do people expect, and how are they delivered? What is the role of private business? How do Italians/Europeans confront problems of the urban environment, poor neighborhood services, and impoverished immigrants? In all these cases, how do Italian (or European) conditions and policies differ from those in the United States (or elsewhere)?

CRP 417(4170) Economic Development: Firms, Industries, and Regions (also CRP 517[5170])

Fall. 4 credits. S. Christopherson. Economic development policy in the United States has focused historically on the provision of subsidies to individual firms. As the limitations of this strategy have become more apparent, alternative approaches including multifirm and workforce development are being implemented. This comparative course draws on cases from a variety of industries and national contexts. Particular attention is paid to economic development issues and policies in New York State.

CRP 418(4180) Government Policy Workshop (also CRP 618[6180], AEM 434/634[4340/6340], FGSS 420/620[4200/6200])

Spring. 4 credits. S-U grades optional. M. Warner. Students undertake research requested by clients (associations of local government, unions, nonprofits, and state, federal, and international agencies) to analyze and identify alternative approaches to restructuring government-service delivery. The course requires teamwork and includes qualitative and quantitative methods of analysis in collaboration with clients.

CRP 444(4440) Resource Management and Environmental Law (also CRP 544[5440], NTRES 444[4440])

Spring. 4 credits. Prerequisite: junior, senior, or graduate standing and permission of instructor. R. Booth. Introduces the application of legal concepts and processes to the management of natural resources and natural-resource areas. Explores the role of the common law, statutory law, administrative regulations, and judicial decisions in managing these resources. Particular focus is given to the management of wildlife, wetlands, and critical resources on public lands, and to the conflicts inherent in government attempts to regulate important natural resources on private lands.

CRP 448(4480) Social Policy and Social Welfare (also CRP 548[5480])

Spring. 4 credits. Not offered every year. S. Christopherson. Addresses conceptual issues underlying social policy and the provision of social welfare and analyzes how different positions are reflected in a set of current social-welfare controversies. The first part of the course introduces principles that guide the development of social policy, including fairness and justice. Various conceptions of society are examined with reference to their influence on the nature and extent of social-welfare provision, comparing the United States with other industrialized countries. The second part examines how economic change and government policy affect social provision in the United States.

[CRP 451(4510) Environmental Law (also CRP 551[5510])]

Fall. 4 credits. Not offered 2005-2006. R. Booth.

CRP 453(4530) Environmental Aspects of International Urban Planning (also CRP 683[6830])

Fall. 4 credits. Open to advanced undergraduate and graduate students in planning, environmental studies, and related social and natural sciences. B. Lynch.

This seminar examines the ways in which roles of diverse environmental actors—international organizations, national bureaucracies, scientific communities, NGOs, and social movement organizations—formulate environmental debates and design conservation and remediation programs and policies in the Third World.

CRP 457(4570) Community Service Fieldwork

Fall or spring. 4 credits, variable. Prerequisite: permission of instructor. Staff. Undergraduate students work under the direction of a faculty member in the CRP department on a project that assists a public or nonprofit organization. Projects involve urban and regional issues as defined by a client and agreed upon by the faculty member.

CRP 474(4740) Urban Transformations in the Global South (also CRP 674[6740])

Fall or spring. 4 credits. S-U grades optional. W. Goldsmith. Economic globalization and the post-colonial political order are continually reshaping urban societies and landscapes in the global South, often by relegating everyday life to the margins and shrouding it in illegality.

This course focuses on the spatial, social, and political dimensions of urban transformations, paying particular attention to such topics as competition among cities for international capital and its implications for sociospatial organization; dynamic interrelations between informality in labor markets and in housing urban environmental challenges and municipal efforts to address them; and issues related to governance, social movements, and new formulation of citizenship.

CRP 477(4770) Issues in African Development (also CRP 677[6770])

Fall and spring. 1 credit. S-U grades only. M. Ndulo.

Examines a broad range of critical concerns in contemporary Africa including food production, human resource development, migration, urbanization, environmental resource management, economic growth, and policy guidance. The weekly presentations are made by invited specialists. Students are required to write a term paper.

CRP 490(4900) Student-Faculty Research

Fall or spring. 4 credits, variable. Prerequisite: undergraduates in Urban and Regional Studies Program. S-U grades only. Staff.

Research, reading, and/or writing project in which a student and faculty member choose a topic related to urban and regional studies.

CRP 492(4920) Honors Thesis Research

Fall or spring. 4 credits. Prerequisite: Urban and Regional Studies Program majors who have been selected as honor students by department faculty. Staff. Each selected student works with his or her thesis adviser.

CRP 493(4930) Honors Thesis Writing

Fall or spring. 4 credits. Prerequisite: CRP 492. Staff. Each selected student works with his or her thesis adviser.

CRP 497(4970) Independent Study

Fall or spring. 4 credits, variable. Prerequisite: junior or senior standing; permission of instructor. Staff.

Graduate Courses and Seminars

Courses numbered from 500 to 599 and 600 to 699 are generally considered introductory or first-year courses; those numbered from 700 to 799 and 800 to 899 are generally considered more advanced. Upper-level undergraduate courses are numbered from 300 to 499. (Undergraduate students with the necessary prerequisites and permission of the instructor may enroll in courses numbered 500 and above.)

CRP 504(5040) Urban Economics (also CRP 404[4040])

Spring. 4 credits. Not offered every year. Prerequisite: microeconomics course. Staff. For description, see CRP 404.

CRP 508(5080) Introduction to Geographic Information Systems (GIS) (also CRP 408[4080])

Spring. 4 credits. A.-M. Esnard. For description, see CRP 408.

CRP 509(5090) Community Development Seminar (also CRP 309[3090])

Spring. 3 credits. K. Reardon. For description, see CRP 309.

CRP 512(5120) Public and Spatial Economics for Planners

Fall. 3 credits. No prior knowledge of economics necessary. Staff.

Covers basic microeconomic theory and some topics in macroeconomics. What distinguishes it from foundation courses in economics is that the context of every topic is both spatial and public. The concept of space is central to city and regional planning. The perspective of the public and nonprofit sectors is the same as that of city and regional planning. Both space and the public-nonprofit sectors are peripheral to (or absent from) the usual graduate foundations courses in economics. The course also covers the economic theory necessary to understand the many applications of economics presented in subsequent courses in city and regional planning.

CRP 513(5130) Introduction to Planning Practice and History

Fall. 4 credits. Staff.

Introductory graduate seminar on the theory and history of planning, administration, and related public intervention in urban affairs. Topics are analyzed from the perspective of the political economy of the growth and development of cities. Students improve their understanding of the planning process and of the urban application of the social sciences, get practice in writing, and explore one research topic in depth.

CRP 517(5170) Economic Development: Firms, Industries, and Regions (also CRP 417[4170])

Fall. 4 credits. S. Christopherson.

For description, see CRP 417.

CRP 518(5180) Politics of Community Development (also CRP 318[3180])

Spring. 3 credits. P. Clavel.

For description, see CRP 318.

CRP 519(5190) Urban Theory and Spatial Development

Spring. 3 credits. W. Goldsmith.

Surveys theories on the existence, size, location, and functioning of cities and their metropolitan areas in rich and poor regions of the world. Considers orthodox/conservative treatments as well as critical/left-wing perspectives of planners, geographers, economists, sociologists, and political economists. These theories are indispensable for understanding the origins of cities, the persistence of urban and regional spatial patterns, and the distinctive nature of urban problems.

CRP 520(5200) Statistical and Mathematical Concepts for Planning

Fall. 3 or 4 credits. Not offered every year. Staff.

Introduction to statistical and mathematical concepts and methods of importance in planning and policy analysis. Topics include matrix algebra, probability, sampling, estimation, and regression, and the use of a microcomputer statistical package.

CRP 521(5210) Mathematical Foundation for Planning Analysis

Fall. 1 credit. Meets for two hours, once each week, for approximately half the semester. Prerequisite: permission of department. S-U grades only. Not offered every year. Staff.

Review of mathematical foundations for planning analysis. Topics include probability statistics, mathematical functions, and matrix algebra. Intended for students with

prior course work as a refresher course in preparation for higher-level courses in planning analysis.

CRP 525(5250) Introductory Methods of Planning Analysis

Fall. 4 credits. R. Pendall.

Quantitative and qualitative analysis of neighborhoods, cities, and regions. Focus is on data from various regions of the United States, but tools are applicable throughout the world. They include: descriptive and inferential statistics, mapping, and observation. Required lab exposes students to essential microcomputer applications and builds skills in writing and analysis.

CRP 528(5280) Overview: Quantitative Methods in Policy Planning (also CRP 328[3280])

Fall and spring. 3 credits. S-U grades optional. Staff.

For description, see CRP 328.

CRP 529(5290) Mathematics for Planners

Fall. 4 credits, variable. S-U grades optional. Not offered every year. Staff.

Covers basic mathematical concepts and techniques—with an emphasis on calculus—needed by the student who wishes to take intermediate-level courses in economics, urban and regional analysis, quantitative methods for the social sciences, and policy analysis. Topics include: matrix algebra, set theory, functions, differentiation, and integration.

CRP 530(5300) Neighborhood Planning Workshop (also CRP 330[3300])

Spring. 4 credits. K. Reardon.

For description, see CRP 330.

CRP 532(5320) Real Estate Development Process

Fall. 3 credits. Letter grades. Fee for case studies packet. B. Olson.

Examination of various forms of development as well as the role of major participants in the processes. Reviews issues in residential, retail, industrial, office, and low-income housing projects. Guest speakers and case studies included.

CRP 533(5330) Real Estate Marketing and Management

Fall. 3 credits. R. Abrams.

Focuses on the tenant or user as the basic source of the value of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Office buildings are considered in detail while key elements common to the operation and marketing of all types of property are reviewed. Topics include examination of tenant types, factors creating preferred locations, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and case studies included.

CRP 537(5370) Real Estate Seminar Series

Fall and spring. 0.5 credit each semester. Prerequisite: M.P.S./R.E. students. S-U grades only. B. Olson.

Designed to bring students weekly into direct contact with real-estate professionals mainly through the use of videoconferences originating from locations around the world.

CRP 544(5440) Resource Management and Environmental Law (also CRP 444[4440]/NTRES 444[4440])

Spring. 4 credits. R. Booth.

For description, see CRP 444.

CRP 546(5460) Introduction to Community and Environmental Dispute Resolution

Fall. 3 credits. J. Forester.

Explores the theories and techniques of dispute resolution as they apply to community, environmental, and related public-policy disputes. Analysis complements skill-building. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

[CRP 547(5470) American Indians, Planners, and Public Policy (also CRP 363[3630], LA 263/547 [2630/5470])]

Not offered 2005–2006.]

CRP 548(5480) Social Policy and Social Welfare (also CRP 448[4480])

Spring. 4 credits. Not offered every year. S. Christopherson.

For description, see CRP 448.

[CRP 551(5510) Environmental Law (also CRP 451[4510])]

Fall. 4 credits. Not offered 2005–2006.]

CRP 552(5520) Land-Use Planning

Fall. 3 credits. A-M. Esnard.

Covers surveys, analyses, and plan-making techniques for guiding physical development of urban areas, location requirements, space needs, and interrelations of land uses. Emphasizes residential, commercial, and industrial activities and community facilities, and housing and neighborhood conditions. Lectures, seminars, and field exercises.

CRP 553(5530) Land-Use Regulations

Spring. 3 credits. R. Pendall.

This seminar covers the essentials of "smart growth," zoning, and subdivision, and the main tools for implementing a land-use plan. Also covers agriculture and open-space preservation, infrastructure-timing controls, redevelopment, and planned-unit development.

CRP 554(5540) Introduction to Environmental Planning (also CRP 354[3540])

Spring. 3 credits. A-M. Esnard.

For description, see CRP 354.

CRP 555(5550) Urban Systems Studio (also LA 701[7010])

Fall. 5 credits. Prerequisite: permission of instructor. R. Trancik.

Application of urban-design and town-planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical-design interventions involving the street, square, block, garden, and park systems. Topics include urban land-use development, spatial systems and aesthetics, and public and private implementation of urban-design plans. Computer modeling and digital-design media are introduced as tools for urban design. This is a specially arranged collaborative studio with the Landscape Architecture Program.

CRP 556(5560) Design in Real Estate Development

Spring. 3 credits. S-U grades optional. H. Richardson.

Provides a basic understanding of the importance of design in real estate development. The role of the architect and other design professionals is considered from the initial needs assessment through project implementation. Fundamentals involved in defining, stimulating, and recognizing quality in design are addressed. The analysis of case-study presentations by guest speakers examine the methods and procedures employed to achieve quality design and how this can create added value to development.

CRP 557(5570) City Planning Design Studio

Spring. 4 credits. Prerequisite: design courses or permission of instructor. Staff. Series of individual and team small-area design projects at district, neighborhood, and project scale. The course objective is to develop an understanding of the spatial issues, knowledge, and skills needed to design for the functional, aesthetic, social, and cost needs of urban communities. Studio projects, field trips, and reading.

CRP 558(5580) City and Regional Planning Workshop

Fall or spring. 4 credits, variable. S-U grades optional. R. Pendall. Students work on urban issues, such as housing, traffic and parking, economic development, zoning, and related planning issues with public or nonprofit organizations in New York State. Projects are undertaken on a community-service basis for "clients" who specifically request planning assistance. Students work individually or in teams.

CRP 560(5600) Documentation for Preservation

Fall or spring. 3 credits. M. Tomlan. Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

CRP 561(5610) Historic Preservation Planning Workshop: Surveys and Analyses

Fall or spring. 4 credits. M. Tomlan. Covers techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York; and explorations of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasizes fieldwork with individuals and community organizations.

CRP 562(5620) Perspectives on Preservation

Fall. 3 credits. M. Tomlan. Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.

CRP 563(5630) Problems in Contemporary Preservation Practice

Spring. Variable credit. M. Tomlan. Review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed. Presented by staff and guest lecturers.

CRP 564(5640) Building Materials Conservation

Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. M. Tomlan.

Survey of the development of building materials in the United States, chiefly during the 19th and early 20th centuries, and a review of the measures that might be taken to conserve them.

CRP 565(5650) Fieldwork or Workshop in History and Preservation

Fall or spring. Variable credit. M. Tomlan. Work on applied problems in history and preservation planning in a field or laboratory setting or both.

CRP 566(5660) Planning and Preservation Practice

Fall. 1 credit. Prerequisite: graduate standing in CRP programs or M.P.S./R.E. or permission of instructors. S-U grades only. R. Pendall and M. Tomlan.

Students participate in field study of city planning, historic preservation, economic and community development, and real estate issues in large Eastern U.S. cities.

CRP 567(5670) Measured Drawing

Fall. 3 credits. Prerequisite: undergraduate architecture students and graduate students in history and preservation; permission of instructor. M. Tomlan.

Combines study of architectural drawing as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.

[CRP 569(5690) Archaeology in Preservation Planning and Site Design (also LA 569[5690])

Not offered 2005-2006.]

CRP 578(5780) Recycling and Resource Management (also CRP 378[3780])

Spring. 3 credits. S-U grades optional. R. Young.

For description, see CRP 378.

[CRP 581(5810) Principles of Spatial Design and Aesthetics (also CRP 381[3810])

Fall. 3 credits. Limited to 30 students. Not offered 2005-2006. R. Trancik.]

CRP 584(5840) Green Cities (also CRP 384[3840], LA 495[4950])

Fall. 4 credits. S-U grades optional. Not offered every year. R. Young.

For description, see CRP 384.

CRP 585(5850) Special Topics (also CRP 385[3850])

Fall, spring, or summer. 4 credits, variable. Times TBA. Staff.

For description, see department coordinator, 106 West Sibley Hall.

CRP 605(6050) Urban Public Finance

Fall. 4 credits. Prerequisite: exposure to microeconomics. Not offered every year. Staff.

Overview of neoclassical public-economics theory, particularly those aspects of the theory that are central to urban public finance. The unusual three-tiered fiscal system of the United States is described along with the evolving fiscal and economic role of large municipal governments. Also presented is the public-finance theory of taxation. Major taxes and other revenue sources used by large municipalities are described and analyzed. The heart of the matter is the measurement and analysis of the fiscal condition of cities.

CRP 607(6070) GIS Applications Workshop

Fall. 4 credits. Prerequisites: introductory GIS course or permission of instructor. A.-M. Esnard.

Advanced GIS course that focuses on GIS applications and projects for one or more clients. During some semesters students work on their own projects. Contact the instructor directly to learn about project options for the current semester.

CRP 612(6120) Devolution, Privatization, and the New Public Management (also CRP 412[4120], AEM 433/633[4330/6330], FGSS 411/611[4110/6110])

Fall. 4 credits. Prerequisite: ECON 101 or equivalent. S-U grades optional. M. Warner. For description, see CRP 412.

CRP 614(6140) Gender and International Development (also FGSS 614[6140])

Spring. 3 credits. L. Beneria. The four main objectives are to (1) analyze the location of women in development processes and to understand the centrality of gender in each case; (2) examine theoretical and conceptual frameworks for the analysis, including an understanding of gender divisions and their interaction with other forms of inequality such as class, race, and ethnicity; (3) reflect upon the linkages between the global economy and the macro and micro processes of development from a gender perspective; and (4) provide a basis for research, practical action, and policy formulation and for evaluating directions and strategies for social change.

CRP 618(6180) Government Policy Workshop (also CRP 418[4180], AEM 434/634[4340/6340], FGSS 420/620[4200/6200])

Spring. 4 credits. S-U grades optional. M. Warner.

For description, see CRP 418.

CRP 621(6210) Quantitative Techniques for Policy Analysis and Program Management

Spring. 4 credits. D. Lewis. Examines selected analytical techniques used in the planning and evaluation of public policy and public investments. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

CRP 627(6270) Regional Economical Impact Analysis (also CRP 327[3270])

Fall. 3 credits. Letter grades. Staff.

For description, see CRP 327.

CRP 632(6320) Methods of Regional Science and Planning I

Spring. 4 credits, variable. Staff. Introduction to some of the major methods and models used in regional science and planning. Topics related to the structure and assumptions of the models, model development, and their applications in regional science and planning are discussed. Where appropriate, computer implementation emphasizing statistical, econometric models is considered.

CRP 635(6350) Workshop: State Economic Development Strategies

Fall or spring. 4 credits. S-U grades optional. S. Christopherson.

The purpose of this workshop is twofold: (1) to provide students with research tools useful in developing state-level economic-development strategies; and (2) to provide a critical understanding of the primary economic-development strategy used by U.S. state policymakers: firm-specific subsidies. The course consists of lecture and discussion meetings. The workshop sessions include exercises in qualitative information gathering on economic-development topics; use of the census in combination with geographic information systems for analysis and presentation; and shift-share analysis.

CRP 637(6370) Regional Development Planning: An International Perspective

Fall. 4 credits, variable. S-U grades optional. T. Vietorisz.

Develops a broad historical and theoretical context within which urban and regional planning problems across the world are embedded; addresses aspects of the global information economy affecting economic development and cultural identity; and demonstrates how such a broad perspective can make for more viable local plans. From the perspective of commitment to an open society, the course also examines the tension between planning oriented to social equity and the polarizing forces of market fundamentalism.

CRP 638(6380) Planning and the Global Knowledge Economy: Sustainability Issues

Spring. 4 credits, variable. S-U grades optional. T. Vietorisz.

Analyzes the current sustainability crisis in terms of major changes in the social organization of production, emphasizing the worldwide economic and cultural shocks created by the emerging knowledge economy. Insight into the dynamics of this transition, in the light of similarly dramatic transitions in the past, can guide attempts to move toward sustainability and high-quality urban and regional living environments.

CRP 642(6420) The Micro-Politics of Participatory Planning Practices

Spring. 4 credits, variable. J. Forester.

This seminar explores issues of "practice" (rhetoric and negotiation, interpretation and judgment, narrative and recognition) as they influence democratic deliberations involving questions of ethics and argument, participation and identity, historical trauma and working-through, and more. The approach taken can be called a "critical pragmatism." Practitioners' oral histories are used to investigate the challenges of participatory planning practices.

CRP 643(6430) Affordable Housing Policy and Programs (also CRP 343[3430])

Fall. 3 credits. S-U grades optional. R. Pendall.

For description, see CRP 343.

CRP 653(6530) Legal Aspects of Land-Use Planning

Spring. 3 credits. R. Booth.

Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

CRP 655(6550) Real Estate Project Workshop

Spring. 4 credits. Prerequisite: permission of instructor. Fee for mandatory field trip. R. Abrams and M. Schack.

Students are asked to undertake the preparation of reports analyzing various aspects of real estate activity. Individual and team working relationships are required. A range of types of problems that may be encountered in the real estate field is addressed, including project feasibility, marketing, planning and design, and legal constraints and concerns. Projects focus on real-world case studies and require professional-level reports suitable for oral and written presentations.

CRP 657(6570) Real Estate Law

Spring. 3 credits. Letter grades.

A. Klausner.

Examination of major legal concepts pertaining to acquisition, use, management, and transfer of real estate. Particular focus is on important legal considerations pertaining to property rights, contracts, and public controls on the use of land. Consideration of important case law, statutory law, and rules and regulations. Current legal issues affecting the real estate industry are discussed.

CRP 658(6580) Residential Development

Spring. 4 credits. Letter grades. Fee for mandatory field trip. B. Olson.

Explores the residential-development process from site acquisition through delivery of the finished product. Topics include market feasibility, land planning and acquisition, product selection and design considerations, project financing and feasibility, schedule and budgetary controls, contracting and construction issues, marketing, and sales activities. Current issues in providing competitive housing products in today's markets are also explored. Composition of the residential-development project team is discussed. Classes are supplemented by presentations from visiting professionals. The course includes a semester-long project based on an actual property and market opportunity.

CRP 661(6610) Seminar in American Urban History (also CRP 361[3610])

Fall or spring. 3 credits. Prerequisite: permission of instructor. M. Tomlan.

For description, see CRP 361.

CRP 662(6620) Historic Preservation Planning Workshop: Plans and Programs

Fall or spring. 1-4 credits. Prerequisite: CRP 561. M. Tomlan.

Preparation of elements of historic preservation plans, designs, legislation, and special studies. Individual or group projects are selected by students. Fieldwork is emphasized.

CRP 663(6630) Historic Preservation Law

Spring. 3 credits. Offered alternate years. R. Booth.

Covers law of historic district and landmark designation; tools for preservation (e.g., police power, taxation, eminent domain); and recent developments in state and federal historic preservation.

CRP 664(6640) Economics and Financing of Neighborhood Conservation and Preservation

Spring. 3 credits. M. Tomlan.

The economic and financial aspects of historic preservation and neighborhood conservation. Topics include public finance, selected issues in urban economics, real estate economics, and private financing of real estate projects.

CRP 665(6650) Preservation Planning and Urban Change

Fall. 3 credits. M. Tomlan.

Examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.

[CRP 666(6660) Pre-Industrial Cities and Towns of North America (also CRP 360[3600], LA 260/666[2600/6600])

Not offered 2005-2006.]

CRP 668(6680) The History of Urban Form in America (also CRP 368[3680])

Fall or spring. 3 credits. M. Tomlan.

For description, see CRP 368.

CRP 670(6700) Regional Planning and Development in Developing Nations

Fall or spring. 4 credits. Prerequisite: second-year graduate standing. Staff.

Extensive case studies of development planning are analyzed. Focus is on the political economy of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed.

CRP 671(6710) Seminar in International Planning

Spring. 1 credit. S-U grades only. Staff.

The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development and planning. The only formal requirement for the course is a brief evaluation of the series at the end of the semester.

CRP 672(6720) International Institutions

Spring. 3 credits. L. Beneria.

Focuses on the growth and transformation of international institutions since World War II. The first part includes a discussion of the Bretton Woods institutions and of the U.N. system up to the early 1970s, and how these function and have evolved over time. The second part examines some of the crises and tensions within the international system since the 1980s and how these have affected institutional change and current debates on reform and global governance.

CRP 674(6740) Urban Transformations in the Global South (also CRP 474[4740])

Fall or spring. 4 credits. S-U grades optional. W. Goldsmith.

For description, see CRP 474.

CRP 675(6750) Workshop on Project Planning in Developing Countries

Fall. 4 credits. D. Lewis.

Examines the problems and issues involved in preparing project proposals for presentation to funding agencies. Topics include technical design, financial feasibility, social-impact analysis, and policy relevance, as well as techniques for effective presentation of proposals. The course is organized as a seminar-workshop providing both an analysis of the critical elements of effective proposals and an opportunity to use those

elements in the preparation of proposals. A multidisciplinary perspective is emphasized.

CRP 677(6770) Issues in African Development (also CRP 477[4770])

Fall or spring. 1 credit. S-U grades only. M. Ndulo.

For description, see CRP 477.

[CRP 678(6780) Concrete Manifestations—Infrastructure in the New World Order

Fall or spring. 4 credits. S-U grades optional. Not offered 2005–2006.]

CRP 679.03(5850) Wilderness and Wildlands: Issues in Policy and Planning (also CRP 395.03[3850])

Fall. 2–3 credits, variable. Graduate seminar open to juniors and seniors. Not offered every year. L. Thorndike.

For description, see CRP 395.03.

CRP 679.73(5850) Planning for Sustainable Transportation: Crisis or Utopia? (also 395.73[5850])

Spring. 3 credits. S-U grades optional. Y. Levitte.

Explores issues related to sustainable transportation policy and practice. The course (1) provides an overview of current transportation trends and their impacts; (2) reviews themes such as planning history and politics, the problems with the present auto-dominated systems, and key challenges to developing sustainable transport systems; and (3) looks at regulatory, design and market based approaches to reducing automobile-dependency, introducing creative sustainable solutions from around the world.

CRP 683(6830) Environmental Aspects of International Urban Planning (also CRP 453[4530])

Fall. 4 credits. B. Lynch.

For description, see CRP 453.

CRP 687(6870) The City in Brazil (also CRP 377[3770])

Summer. 3 credits. Letter grades optional. Staff.

For description, see CRP 377.

CRP 790(7850) Professional Planning Colloquium I (also CRP 390[3900])

Fall. 1 credit. Staff.

For description, see CRP 390.

CRP 791(8910) Master's Thesis in Regional Science

Fall or spring. 12 credits, variable. S-U grades optional. Hours TBA. Regional Science faculty. Staff.

CRP 792(8920) Master's Thesis, Project, or Research Paper

Fall or spring. 10 credits, variable. S-U grades optional. Staff.

CRP 794(7940) Planning Internships

Fall, spring, or summer. 12 credits, variable. Staff.

Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Salaried internships in federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal, urban, and regional

policy from the perspective of planning practice.

CRP 795(8950) Master's Thesis in Preservation Planning

Fall or spring. 6 credits, variable. Staff.

CRP 796(7960) Professional Writing and Publishing (Colloquium)

Fall or spring. 2 credits. S-U grades only. Not offered every year. Staff.

Individual and group projects culminating in the production of a professional journal.

CRP 797(7970) Graduate Independent Study

Fall or spring. 4 credits, variable.

Prerequisites: graduate student standing, permission of instructor. Staff.

For description, see department coordinator, 106 West Sibley Hall.

CRP 800(8000) Advanced Seminar in Urban and Regional Theory I

Fall. 3 credits. S. Christopherson.

Introduction to key conceptual and empirical literature in urban theory. Focuses on the relationship between political and economic processes and their joint influence on urban spatial form.

[CRP 801(8010) Advanced Seminar in Urban and Regional Theory II

Not offered 2005–2006.]

[CRP 810(8100) Advanced Planning Theory

Not offered 2005–2006.]

CRP 830(8300) Seminar in Regional Science, Planning, and Policy Analysis

Fall or spring. 4 credits, variable. S-U grades only. Staff.

Provides an opportunity to review some of the literature and current research in regional science, planning, and policy analysis. Specific topics covered vary each year. Empirical and analytical research are emphasized. Students are expected to prepare and present a research paper during the semester on some aspect of the topics under review.

CRP 890(8900) Planning Research Seminar I

Fall or spring. 2 credits. Staff.

Intended for doctoral candidates in city and regional planning; other students welcome. Presentation and discussion of current problem areas and research by advanced doctoral students, faculty members, and visitors.

CRP 892(9920) Doctoral Dissertation

Fall or spring. 2 credits, variable. Staff.

Special Topic Courses

Fall or spring. Variable credit. Staff.

Typical topics are:

CRP 609(6090) Urban and Regional Theory

CRP 619(6190) Planning Theory and Politics

CRP 629(6290) Quantitative Methods and Analysis

CRP 639(6390) Regional Development Planning

CRP 649(6490) Social-Policy Planning

CRP 659(6590) Urban Development Planning

CRP 669(6690) History and Preservation

CRP 679(6790) Planning and Developing Regions

CRP 689(6890) Environmental Planning

CRP 699(6990) Regional Science

CRP 719(7190) Planning Theory and Politics

LANDSCAPE ARCHITECTURE

Landscape Architecture at Cornell is jointly sponsored by the College of Agriculture and Life Sciences and the College of Architecture, Art, and Planning.

The Program

Program faculty: K. L. Gleason, chair (446 Kennedy Hall, 255-1649, -7924); M. I. Adleman, S. Baugher, H. Gottfried, A. Hammer, P. Horrigan, R. Jaenson, D. W. Krall, L. J. Mirin, A. Okigbo, R. T. Trancik, P. J. Trowbridge, R. Venables.

Landscape Architecture offers a three-year master of landscape architecture license qualifying degree, administered through the Graduate School, for those who have a four-year undergraduate degree in another field. The major is composed of several parts: core courses related to professional education in landscape architecture; a concentration in a subject related to the core courses; and free electives. Requirements of the three-year M.L.A. curriculum include 90 credits, six resident units, satisfactory completion of the core curriculum courses, and a thesis or a capstone studio.

The department also offers a two-year master of landscape architecture advanced degree program, administered through the Graduate School, for those with accredited degrees in landscape architecture or architecture. The two-year program entails core courses in the discipline and the development of concentrations in subject-matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects.

Dual-Degree Options

Graduate students can earn a master of landscape architecture and a master of science (horticulture) or a master of city and regional planning simultaneously. Students need to be accepted into both fields of study to engage in a dual-degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Course Information

Note: All of the following courses are offered through the College of Agriculture and Life Sciences except LANAR 497, 524, and 525.

LA 140(1400) The Symbols of New York State's Cultural Landscape

Spring. 3 credits.

LA 141(1410) Grounding in Landscape Architecture
Fall. 4 credits.

LA 142(1420) Grounding in Landscape Architecture
Spring. 4 credits.

LA 155(1550) American Indian Cultural Landscapes: Changes in Time
Fall. 3 credits.

LA 201(2010) Medium of the Landscape
Fall. 5 credits.

LA 202(2020) Medium of the Landscape
Spring. 5 credits.

LA 261(2610) Fieldwork in Urban Archaeology (also CRP 261[2610])
Fall. 4 credits.

LA 262(2620) Laboratory in Landscape Archaeology (also ARKEO 262[2620])
Spring. 3 credits.

[LA 263(2630) American Indians, Planners, and Public Policy (also CRP 363/547[3630/5470], LA 547[5470])
Not offered 2005–2006.]

LA 266(2660) Jerusalem through the Ages
Fall. 3 credits.

LA 282(2820) The American Landscape
Fall. 3 credits.

LA 301(3010) Integrating Theory and Practice I
Fall. 5 credits.

LA 302(3020) Integrating Theory and Practice: Community Design Studio
Spring. 5 credits.

LA 315(3150) Site Engineering I
Spring. 3 credits.

LA 316(3160) Site Engineering II
Fall. 2 credits.

LA 318(3180) Site Construction
Spring. 5 credits.

[LA 360(3600) Pre-Industrial Cities and Towns of North America (also CRP 360/666[3600/6660], LA 666[6660])
Not offered 2005–2006.]

LA 402(4020) Integrating Theory and Practice II
Spring. 5 credits.

LA 403(4030) Directed Study: The Concentration (also LA 603[6030])
Fall or spring. 1 credit.

LA 410(4100) Computer Applications in Landscape Architecture
Fall or spring. 3 credits.

LA 412(4120) Professional Practice
Spring. 1 credit.

[LA 483(4830) Seminar in Landscape Studies
Not offered 2004–2005.]

LA 486(4860) Placemaking by Design: Theory Seminar
Fall. 3 credits.

LA 491(4910) Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 491[4910])
Fall. 4 credits.

LA 492(4920) Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment
Spring. 4 credits.

LA 494(4940) Special Topics in Landscape Architecture
Fall or spring. 1–3 credits.

LA 495(4950) Green Cities (also CRP 384/584[3840/5840])
Fall. 4 credits.

LANAR 497(4970) Individual Study in Landscape Architecture
Spring. 1–5 credits; may be repeated for credit. S-U grades optional. L. J. Mirin.
Work on special topics by individuals or small groups.

LA 498(4980) Undergraduate Teaching
Fall or spring. 1–2 credits.

LA 501(5010) Composition and Theory
Fall. 5 credits.

LA 502(5020) Composition and Theory
Spring. 5 credits.

LA 505(5050) Graphic Communication I
Fall. 3 credits.

LA 506(5060) Graphic Communication II
Spring. 3 credits.

LANAR 524(5240) History of European Landscape Architecture
Fall. 3 credits. L. Mirin.
Survey from classical times to the present, emphasizing design principles and techniques that have established the landscape architecture tradition in Europe. Particular reference is made to the manner in which gardens, streets, plazas, parks, and new towns reflect in their built form, a range of responses to demands of culture, economics, technology, security, the law, and ecology.

LANAR 525(5250) History of American Landscape Architecture
Spring. 3 credits. L. Mirin.
Landscape architecture in the United States from Jefferson to the present is examined as a unique expression of the American experience. Influences exerted by the physical landscape, the frontier and utopian spirit, and the cultural assumptions of democracy and capitalism are traced as they affect the forms of urban parks, private and corporate estates, public housing, transportation planning, national parks, and other open-space designs.

[LA 545(5450) The Parks and Fora of Imperial Rome
Spring. 3 credits. Not offered 2005–2006.]

[LA 547(5470) Americans, Indians, Planners, and Public Policy (also CRP 363/547[3630/5470], LA 263[2630])
Not offered 2005–2006.]

[LA 569(5690) Archaeology in Preservation Planning and Site Design (also CRP 569[5690])
Spring. 3 credits. Not offered 2005–2006.]

LA 580(5800) Landscape Preservation: Theory and Practice
Fall. 3 credits.

LA 582(5820) The American Landscape
Fall. 3 credits.

LA 590(5900) Theory Seminar
Spring. 3 credits.

LA 598(5980) Graduate Teaching
Fall or spring. 1–2 credits.

LA 601(6010) Integrating Theory and Practice I
Fall. 5 credits. Prerequisite: graduate standing.

LA 602(6020) Integrating Theory and Practice II
Spring. 5 credits. Prerequisite: graduate standing.

LA 603(6030) Directed Study: The Concentration (also LA 403[4030])
Fall or spring. 1 credit.

LA 615(6150) Site Engineering I
Spring. 3 credits.

LA 616(6160) Site Engineering II
Fall. 2 credits.

LA 618(6180) Site Construction
Spring, weeks 8–15. 5 credits.

[LA 666(6660) Pre-Industrial Cities and Towns of North America (also CRP 360/666[3600/6660], LA 260[2600])
Not offered 2005–2006.]

LA 680(6800) Graduate Seminar in Landscape Architecture
Fall or spring. 1–3 credits.

LA 694(6940) Special Topics in Landscape Architecture
Fall or spring. 1–3 credits.

LA 701(7010) Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555[5550])
Fall. 5 credits.

LA 702(7020) Advanced Design Studio
Spring. 5 credits.

LA 800(8000) Master's Thesis in Landscape Architecture
Fall or spring. 9 credits.

FACULTY ROSTER

Azis, Iwan, Ph.D., Cornell U. Visiting Prof., City and Regional Planning.
Baugher, Sherene, Ph.D., SUNY, Stony Brook. Visiting Prof., City and Regional Planning.
Beneria, Lourdes, Ph.D., Columbia U. Prof., City and Regional Planning.
Bertoia, Roberto, M.F.A., Southern Illinois U. Assoc. Prof., Art.

Prof., Architecture

BIOLOGICAL SCIENCES

The biology major provides a unified curriculum for undergraduates enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell.

Graduate study in the biological sciences is administered by more than a dozen specialized fields within the Graduate School, as described in the *Announcement of the Graduate School*.

ORGANIZATION

Many different departments participate in the biology major.

Student services are provided by the Office of Undergraduate Biology (OUB), www.bio.cornell.edu. Located in Stimson Hall, the professional and student advisers provide academic and career advising, as well as help undergraduates find research opportunities on campus. Advisers in the OUB also follow the progress of biology majors and work closely with faculty advisers. Additional services and resources of the Biology Center include tutoring, lecture tapes, examination files, and extensive information on summer research opportunities and graduate programs. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides academic advising for students interested in the marine sciences and administers the SEA Semester program for Cornell students pursuing studies at Woods Hole, Mass., or aboard the schooner *Robert C. Seamans* or brigantine *Corwith Cramer*.

DISTRIBUTION REQUIREMENT

In the College of Agriculture and Life Sciences, the Physical and Life Sciences distribution requirement is a minimum of 18 credits, including at least 6 credits of introductory biology satisfied by BIO G 109–110, 105–106, or 101 and 103 plus 102 and 104, or 107–108.

For students in the College of Arts and Sciences, all biology ("BIO") courses can be used toward fulfillment of the biological sciences distribution requirement except *BIO G 200* (unless permission is obtained), *BIO G 209*, or *BIOSM 204*. The following courses are especially suitable for the distribution requirement because they have no prerequisites: BIO G 101–104, 105–106, 107–108, 109–110, 170; BIOAP 212; BIOEE 154, 207, 275; BIOGD 184; BIOMI 192; BIONB 111; BIOPL 240, 241.

In the College of Human Ecology, the natural sciences distribution requirement is for at least

6 credits selected from BIO G 109–110, 101 and 103 plus 102 and 104, 105–106 or 107–108 or from specified courses in chemistry or physics.

Switching between BIO G 109–110 and either BIO G 101–104 or 105–106 at midyear may not be possible because of variation in presentation of topics. Students must receive permission of the instructor to switch sequences. Taking sequences in reverse order is strongly discouraged in BIO G 101–104.

USE OF ANIMALS IN THE BIOLOGICAL SCIENCES CURRICULUM: CORNELL UNIVERSITY

Students wishing to enroll in biology ("BIO") courses should know and understand the following criteria relative to the use of animals in the teaching program, as passed by the faculty of the Division of Biological Sciences in 1988, and reaffirmed in 1997:

1. "Live animals will be used for teaching in certain courses in the biological sciences. Some animals will require humane euthanasia after they have been used for teaching.
2. Courses bearing the "BIO" description conform to the rules for the care of such animals as outlined in *Guiding Principles in the Care and Use of Animals* (as approved by the Council of the American Physiological Society), the Guide for the Care and Use of Laboratory Animals (DHEW publication 86–23, revised 1996; see p. 7, *Courses of Study*), the Animal Welfare Act, and the New York State Public Health Law. Within these regulations, and in keeping with the principle of Academic Freedom of the Faculty, the use of animals to aid in teaching any biological sciences discipline is at the discretion of the professor in charge.
3. Each course, as well as research projects, in which animals are used receives a formal review annually by the Cornell University Institutional Animal Care and Use Committee (IACUC).
4. Any concerns regarding the use of live animals in teaching should be addressed first to the faculty member responsible for that course. He or she is required to be in compliance with all applicable regulations and guidelines. Alternatively, students may choose to address their concerns to the director of the Cornell Center for Research Animal Resources, Dr. Michele Bailey, at 253–3520. The director may initiate discussion with the faculty member responsible for a particular course without involving the student if he or she would prefer to remain anonymous.

5. Enrollees in those courses in the biological sciences in which animal use is a component may, at the professor's discretion, be asked to sign copies of this statement (USE OF ANIMALS . . .) at the first meeting of the course."

ADVANCED PLACEMENT

For information on credit for advanced placement in biological sciences, see www.bio.cornell.edu/advising/ap.cfm.

THE MAJOR

The major of biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is coordinated for students in both colleges by the Office of Undergraduate Biology. By completion of the sophomore year, all students who intend to major in biological sciences must declare the major and a program of study through the Office of Undergraduate Biology, in 216 Stimson Hall.

Whenever possible, students should include the introductory biology, chemistry, and mathematics sequences in their freshman schedule and complete the organic chemistry lecture course in their sophomore year. Biology majors should regularly monitor their progress in the major, and should assess as realistically as possible the likelihood of achieving at a level that is consistent with their academic and personal goals. Weak performance in core courses, particularly after the freshman year, may indicate a need to reevaluate aptitude and genuine interest in the major. Students with questions, particularly with concerns about their ability to complete the major, are encouraged to consult with their biology adviser and to take advantage of the advising and counseling resources of the Office of Undergraduate Biology as well as those of the university and their college.

The requirements for the biological sciences major are listed below. Requirements 1–9 must be taken for a letter grade. Courses taken for the program of study should be taken for a letter grade unless the course is offered for S-U grades only or if the student's adviser grants permission.

1. **Introductory biology for majors** (one year): BIO G 101 and 103 plus 102 and 104, or 105–106. BIO G 107–108, offered during the eight-week Cornell summer session for 8 credits, also satisfies the introductory biology requirement for majors.
2. **General chemistry:** CHEM 207–208 or 215. Students who, via advanced placement, take only CHEM 208 or only 215 should be aware that some professional and graduate schools require 8 credits of general chemistry.

These students may wish to take both CHEM 215 and 208 or 215 and 216. Students may wish to consult with their faculty adviser or advisers in the Office of Undergraduate Biology for further clarification.

3. **College mathematics** (one year): one semester of calculus (MATH 106, 111, 191, or their equivalent) plus one semester selected from the following:
 - a. a second semester of calculus (MATH 112, 192, or their equivalents).
 - b. a course in finite mathematics (BTRY 101, 417, MATH 105, 231).
 - c. a course in statistics (BTRY 301, MATH 171, AEM 210, PSYCH 350, PAM 210, ECON 319, ECON 321, SOC 301).
4. **Organic chemistry:** CHEM 257 and 251, or 357-358 and 251, or 357-358 and 301, or 359-360 and 251, or 359-360 and 301.
5. **Physics:** PHYS 101-102, 207-208,* or 112-213.* Those who take PHYS 112-213 are advised to complete PHYS 214 as well.
6. **Genetics:** BIOGD 281.
7. **Biochemistry:** BIOBM 330, or 331 and 332, or 333.
8. **Evolutionary Biology:** BIOEE 278 or BIOPL 448. Note: BIOPL 241 Botany is a prerequisite course to BIOPL 448.
9. **A program of study** selected from the outline below.
10. **Foreign language:** Students registered in the College of Arts and Sciences must satisfy the language requirement as stated by that college.

Although not required for the biological sciences major, a course in statistics is recommended for students planning graduate study or a research career. Students should consult their faculty advisers when choosing appropriate courses in statistics.

Note: Core courses cannot count toward the program of study requirements.

Programs of Study and Requirements

As noted in the list of requirements above, students accepted into the biological sciences major must choose a program of study. Whereas the core requirements of the biology curriculum provide the common foundation deemed essential for all biology majors, the role of the program of study is to provide either a concentration in a particular area of biology or, in the case of the general biology program of study, a survey of biology that is broad but not superficial. The program of study requirement can be met by taking 13 to 15 credit hours of courses chosen by the student in consultation with his or her biology adviser. Programs of study for particular subject areas are designed by faculty members specializing in the subject. Typically, the program of study consists of one or more courses that provide foundation in the subject and a list of optional courses from that area or related areas, many of which are at an advanced level (300 or higher). Because biology is an experimental science, most programs of study require one

or more laboratory courses. The laboratory requirement in some programs of study can be met by participation in the independent research course (BIO G 499). The possible programs of study and their requirements are listed below:

1. **Animal Physiology:** BIOAP 311 Introductory Animal Physiology, BIOAP 316 Cellular Physiology, plus a minimum of 7 credit hours selected from the following lecture and laboratory courses, of which at least 4 credit hours must be a laboratory course.
 - a. Lecture courses: BEE 454 Physiological Engineering; AN SC 300 Animal Reproduction and Development; AN SC 410 Nutritional Physiology and Metabolism; AN SC 427 Fundamentals of Endocrinology; BIO G 305 Basic Immunology; BIOAP 214 Biological Basis of Sex Differences; BIOAP 458 Mammalian Physiology; BIOBM 407 Nature of Sensing and Response: Signal Transduction in Biological Systems; BIOBM 437 Eukaryotic Cell Proliferation; BIOGD 385 Developmental Biology; BIOGD 483 Molecular Aspects of Development; BIONB 322 Hormones and Behavior; BIONB 325 Neurodisorders-Molecular Aspects; BIONB 326 The Visual System; BIONB 492 Sensory Function; NS 331 Physiological and Biochemical Bases of Human Nutrition.
 - b. Laboratory courses: BEE 454 Physiological Engineering; AN SC 301 Animal Reproduction and Development; BIO G 401 Introduction to Scanning Microscopy; BIO G 403 Transmission Electron Microscopy for Biologists; BIOAP 413 Histology: The Biology of the Tissues; BIOAP 319 Animal Physiology Laboratory; BIOAP 416 Cellular Physiology and Genomics Laboratory; BIOBM 440 Laboratory in Biochemistry and Molecular Biology; BIONB 491 Principles of Neurophysiology.
2. **Biochemistry:** CHEM 300 Quantitative Chemistry; 6 credits of organic chemistry (CHEM 357-358 or 359-360); a minimum of 4 credits of organic chemistry laboratory (CHEM 301-302 or 301 or 251-252); 4 credits of biochemistry laboratory courses (BIOBM 440 Laboratory in Biochemistry and Molecular Biology); and physical chemistry (CHEM 389-390 or 287-288 or 389-288).

Note: CHEM 288 is designed for biologists. Five hours of biochemistry are recommended (331 and 332, or 330 and 334 or 333 and 334), and students are urged to take BIOBM 432 Cell Biology. Students interested in graduate work in biochemistry should take PHYS 207-208 and consider taking a third semester of calculus in preparation for CHEM 389-390. They should be sure to complete CHEM 207-208 or 215-216 during their freshman year.

Note: Biology majors in the College of Agriculture and Life Sciences who select this program of study are allowed to take up to 61 credit hours in the endowed colleges because of the high number of required endowed courses for this program of study.

3. **Computational Biology:** One course in computer programming (COM S 100 Introduction to Computer Programming

or BEE 151 Introduction to Computing); one course in mathematics (MATH 221 Linear Algebra and Calculus or MATH 231 Linear Algebra; or MATH 294 Engineering Mathematics II; or MATH 420 Differential Equations and Dynamical Systems; or BTRY 408 Theory of Probability; or BTRY 421 Matrix Computation); a bridging course, i.e., a course in mathematical modeling applied to biology (BIOEE 362 Dynamic Models in Biology; BIOEE 460 Theoretical Ecology; COM S/BIOBM 321 Numerical Methods in Computational Molecular Biology; or BTRY 382 Introduction to Statistical Genomics and Bioinformatics); or COM S 428 Introduction to Computational Biophysics; and one course from the following list of advanced courses:

BIOBM 631 Protein Structure and Function; BIOGD 481 Population Genetics; BIOGD 484 Molecular Evolution; BIOGD 487 Human Genomics; BIONB 330 Introduction to Computational Neuroscience; BIONB 422 Modeling Behavioral Evolution; BIOPL 440 Phylogenetic Systematics; AN SC 420 Quantitative Animal Genetics; NTRES 305 Applied Population Ecology; NTRES 411 Quantitative Ecology and Management of Fisheries Resources; NTRES 412 Wildlife Population Analysis: Techniques and Models; NTRES 670 Spatial Statistics; BTRY 408 Theory of Probability; BTRY 482/682 Statistical Genomics; BTRY 652 Computationally Intensive Statistical Inference; CIS 409 Data Structures and Algorithms for Computational Science; COM S 211 Computers and Programming; COM S 426 Introduction to Computational Biology; COM S 626 Computational Molecular Biology; COM S 627 Computational Biology: The Machine Learning Approach; MATH 420* Differential Equations and Dynamical Systems; OR&IE 360 Engineering Probability and Statistics II; OR&IE 361 Introductory Engineering Stochastic Processes.

It is strongly recommended that students complete the core physics requirement using the PHYS 207/208 option.

It is strongly recommended that students complete the core organic chemistry requirement using the CHEM 257/251 option and that the time saved be used to take either COM S 211 or a second mathematics course from the list above.

Note: MATH 112 Calculus should be used to fulfill the core requirement for a second semester of math.

Note: Bridging courses require linear algebra (MATH 221 Linear Algebra and Calculus or MATH 231 Linear Algebra or MATH 294 Engineering Mathematics II or BTRY 421 Matrix Computation). For bridging courses, BIOEE 460 Theoretical Ecology; MATH 420 Differential Equations and Dynamical Systems will also serve as a prerequisite.

Note: BTRY 408 and MATH 420 can satisfy either the math requirement or a requirement for an additional course.

Note: Students who use BTRY 408 to fulfill the additional mathematics requirement should not use OR&IE 360 Engineering Probability and Statistics II to

fulfill the requirement for an additional course.

Note: Biology majors in the College of Agriculture and Life Sciences who select this program of study are allowed to take up to 61 credit hours in the endowed colleges because of the high number of required endowed courses for this program of study.

4. *Ecology and Evolutionary Biology*: BIOEE 261 Ecology and the Environment. *Effective fall semester 2005*, new students must also complete 10 credits from the following lists: (a) Principles, (b) Organisms, and (c) Ecological and Evolutionary Processes. One course must be chosen from list (a) and a second either from list (b) or (c). The remaining credits can be satisfied with courses from all three lists. Students are encouraged to take at least one course from each list.
 - a. Principles: BIOEE 453 Speciation; BIOEE 458 Community Ecology; BIOEE 460 Theoretical Ecology; BIOEE 464 Macroevolution; ENTOM 470 Ecological Genetics; BIOEE 478 Ecosystem Biology; NTRES 310 Applied Population Biology.
 - b. Organisms: BIOEE 274 The Vertebrates: Structure, Function, and Evolution; BIOEE 373 Biology of Marine Invertebrates or BIOSM 376 Marine Invertebrate Zoology; BIOEE 471 Mammalogy; BIOEE 470 and 472 Herpetology Lectures and Laboratory; BIOEE 475 Ornithology; BIOEE 476 Biology of Fishes; ENTOM 212 Insect Biology; BIOPL 241 Introductory Botany; BIOPL 448 Plant Evolution and the Fossil Record; PL PA 309 Introductory Mycology; BIOSM 449 Seaweeds, Plankton, and Seagrasses.
 - c. Ecological and Evolutionary Processes: BIOEE 263 Field Ecology; BIOEE 275 Human Biology and Evolution; BIOEE/EAS 350 Dynamics of Marine Ecosystems; BIOEE/MATH 362 Dynamic Models in Biology; BIOEE 452 Herbivores and Plants; BIOEE/ENTOM 455 Insect Ecology; BIOEE/NTRES 456 Stream Ecology; BIOEE 457 and 459 Limnology: Ecology of Lakes, Lec and Lab; BIOEE 462 Marine Ecology; BIOEE 465 and 463 Plant Ecology and Population Biology, Lec and Lab; BIOEE 466 and 468 Physiological Plant Ecology, Lec and Lab; BIOEE 473 Ecology of Agricultural Systems; NTRES 301 Forest Ecology; BIOSM 413 Research in Marine Biology; NTRES 418 and 419 Wetlands Ecology and Management, Lec and Lab; BIOMI 418 Microbial Ecology; CSS 421 Soil Ecology; BIOPL 440 Phylogenetic Systematics; BIOPL/ENTOM 453 Principles of Biogeography; EAS 479 Paleobiology; BIOGD 484 Molecular Evolution.

Note: Students also are encouraged to gain experience in some aspect of field biology through course work at a biological field station and can apply up to 6 credits in the place of courses from lists (b) or (c). For example, students may apply 6 credits from the following courses taken at the Shoals Marine Laboratory (BIOSM): BIOSM 308 Marine Microbial Ecology; BIOSM 309 Climates and Ecosystems; BIOSM 310 Marine Symbiosis; BIOSM 374 Field Ornithology; BIOSM 377 Diversity of Fishes; BIOSM 477 Marine

Vertebrates; and BIOSM courses in lists b and c. The Ecology and Evolutionary Biology program offers a specialization in Marine Biology and Oceanography (for a description, see "Courses in Marine Science"). The Organization for Tropical Studies (OTS) offers an Undergraduate Semester Abroad Program, featuring two courses (Fundamentals in Tropical Biology and Field Research in Tropical Biology) that can count as two 3-credit courses toward the concentration. Six credits can be applied from the 15-week fall "Semester in Environmental Science" program offered by the Woods Hole Marine Biological Laboratory.

5. *General Biology*: The program of study in general biology requires a minimum of 13 credit hours in addition to courses counted toward requirements 1–10 on page 156. These 13 credits must include:
 - a. One course from each of three different programs of study in biology. Only those courses specifically listed as fulfilling a program of study requirement are acceptable without permission of adviser.
 - b. A course with a laboratory.
 - c. A minimum of two upper-level (300 and above) courses of 2 or more credits each.

100-level courses are not acceptable for meeting any of these requirements. BIO G 498 may not be used to fulfill the requirements of this program of study. BIO G 499 (minimum of 2 credits, but no more than 3 credits) may count as one of the upper-level courses, and may count as the laboratory course with approval of the adviser, but it cannot count as a course representing a program of study.

Note: It is possible to use a single course to fulfill more than one requirement. For example, BIOAP 413 Histology could count in all three areas: as a course in the Animal Physiology program of study, as an upper-level course, and as a course with a lab.

6. *Genetics and Development*: A minimum of 13 credits, usually chosen from the following courses: BIOGD 385 Developmental Biology; BIOGD 400 A Genomics Approach to Studying Life; BIOGD 401 Genomics Analysis; BIOGD 450 Vertebrate Development; BIOGD 480 Seminar in Developmental Biology; BIOGD 481 Population Genetics; BIOGD 482 Human Genetics and Society; BIOGD 483 Advanced Developmental Biology; BIOGD 484 Molecular Evolution; BIOGD 486 Advanced Eukaryotic Genetics; BIOGD 487 Human Genomics; BIOGD 489 Mammalian Embryology; BIOGD 490 Manipulating the Mouse Genome; BIOGD 600 Development of Sensory Systems; BIOGD 610–624 Genomics Modules; BIOGD 640 Stem Cell Biology; BIOGD 682 Fertilization and the Early Embryo; BIOGD 684 Advanced Topics in Population Genetics; BIOGD 687 Developmental Genetics; BIOGD 689 Cellular Basis of Development; BIOMI 420 Microbial Genomics; BIOMI 485 Bacterial Genetics; ENTOM 400 Insect Development; BIOAP 475 Mechanisms

Underlying Mammalian Developmental Defects; BIONB 493 Developmental Neurobiology; BIONB 495 Molecular and Genetic Approaches to Neuroscience; BIOBM 437 Cell Proliferation and Senescence; BIOBM 439 Molecular Basis of Human Disease; NS 608 Epigenetics; BIOBM 633 Biosynthesis of Macromolecules; BIOBM 639 The Nucleus; BIOEE 453 Speciation; PL BR 403 Genetic Improvement of Crop Plants; PL BR 606 Advanced Plant Genetics; BIOPL 343 Molecular Biology and Genetic Engineering of Plants; BIOPL 641 Laboratory in Plant Molecular Biology; BIOPL 652 Plant Molecular Biology II; BIOPL 653 Plant Molecular Biology I.

Up to 3 credits for this program of study may be chosen from other biological sciences courses, including BIO G 499 Independent Undergraduate Research in Biology, with approval from the faculty adviser.

7. *Insect Biology*: ENTOM 212 Insect Biology plus a minimum of three additional courses totaling at least 9 credits selected from the following two groups. At least one of the three additional courses must be selected from group a.

Group a

- *ENTOM 322 Insect Morphology
- *ENTOM 331 Introductory Insect Systematics
- *ENTOM 333 Larval Insect Biology
- *ENTOM 400 Insect Development
- *ENTOM 455 Insect Ecology
- *ENTOM 483 Insect Physiology

Group b

- *ENTOM 315 Spider Biology
- *ENTOM 325 Insect Behavior
- *ENTOM 344 Insect Conservation Biology
- *ENTOM 352 Medical and Veterinary Entomology
- *ENTOM 369 Chemical Ecology
- *ENTOM 370 Pesticides, Environment, and Human Health
- *ENTOM 394 Circadian Rhythms
- *ENTOM 443 Entomology and Pathology of Trees and Shrubs
- *ENTOM 444 Integrated Pest Management
- *ENTOM 452 Herbivores and Plants
- *ENTOM 453 Historical Biogeography
- *ENTOM 455 Insect Ecology
- *ENTOM 456 Stream Ecology
- *ENTOM 463 Invertebrate Pathology
- *ENTOM 470 Ecological Genetics
- *ENTOM 471 Freshwater Invertebrate Biology and Biomonitoring
- *ENTOM 477 Biological Control
- *ENTOM 490 Insect Toxicology

8. *Microbiology*: Students in the Microbiology program of study must complete BIOMI 290 General Microbiology, Lec; BIOMI 291 General Microbiology, Lab. At least 8 additional credits are required, which must include at least one of the following courses:

BIOMI 414 Bacterial Diversity; BIOMI 416 Bacterial Physiology; BIOMI 418 Microbial Ecology; BIOMI 485 Bacterial Genetics.

Additional approved courses are included in the list below. Students are invited to complete their requirements in one of three areas of interest (these are only recommended areas of interest; students can design their own course list as long as they meet the requirements described above): (a) Prokaryotic Biology, (b) Molecular Microbiology and Biotechnology, and (c) Pathogenic Microbiology. Courses acceptable to the program of study that cover topics related to a particular area of interest are:

Prokaryotic Biology: BIOMI 391 Advanced Microbiology Laboratory; BIOMI 414 Bacterial Diversity; BIOMI 416 Bacterial Physiology; and BIOMI 418 Microbial Ecology.

Molecular Microbiology and Biotechnology: BIOMI 391 Advanced Microbiology Laboratory; BIOMI 416 Bacterial Physiology; BIOMI 420 Microbial Genomics; BIOMI 485 Bacterial Genetics; and BIOMI 394 Applied and Food Microbiology.

Pathogenic Microbiology: BIOMI 404 Pathogenic Bacteriology and Mycology; BIOMI 409 Viruses and Disease; BIOMI 417 Medical Parasitology; and BIOMI 485 Bacterial Genetics.

9. *Molecular and Cell Biology:* CHEM 357-358 or 359-360; BIOBM 432 Survey of Cell Biology; BIOBM 440 Laboratory in Biochemistry and Molecular Biology, or BIONB 430 Experimental Molecular Neurobiology; and at least 7 additional credits of courses that have a cell biological or molecular biological orientation. The 7 additional hours should include at least two courses from the following list: BIOAP 416 Cellular Physiology and Genomics Laboratory; BIOBM 434 Applications of Molecular Biology; BIOBM 437 Cell Proliferation and Senescence; BIOBM 439 Molecular Basis of Human Disease; BIO G 305 Immunology; BIOGD 385 Developmental Biology; BIOGD 483 Advanced Developmental Biology; BIOGD 484 Molecular Evolution; BIOGD 486 Advanced Eukaryotic Genetics; BIOGD 487 Human Genomics; BIOGD 490 Manipulating The Mouse Genome; BIOMI 409 Principles of Virology; BIOMI 420 Microbial Genomics; BIOMI 485 Bacterial Genetics; BIONB 425 Molecular Neurophysiology; BIONB 495 Molecular and Genetic Approaches to Neurosciences; BIOPL 343 Molecular Biology and Genetic Engineering of Plants; BIOPL 347 Laboratory in Molecular Biology and Genetic Engineering of Plants; BIOPL 444 Plant Cell Biology. Students graduating in spring 2008 or earlier may include BIOMI 290 General Microbiology, Lec, and BIONB 222 Neurobiology and Behavior II: Introduction to Neurobiology. Graduate-level courses such as BIOBM 631 Protein Structure and Function; BIOBM 633 Biosynthesis of Macromolecules; BIOBM 636 Functional Organization of Eukaryotic Cells; and BIOBM 639 The Nucleus are also acceptable by permission of adviser. Five hours of biochemistry are

recommended (BIOBM 331 and 332, or 330 and 334, or 333 and 334). CHEM 207-208 or 215-216 should be completed in the freshman year.

10. *Neurobiology and Behavior:* The two-semester introductory course sequence Neurobiology and Behavior I and II (BIONB 221 and 222) with discussion section (4 credits per semester) and 7 additional credits. The 7 additional credits must include at least one ADVANCED COURSE from the BIONB offerings. "Topics" courses (BIONB 420s and 720s) and independent study (BIO G 499) may be used as supplemental credits but do not qualify as ADVANCED courses.

Note: Students who declare the program of study in Neurobiology and Behavior after taking BIONB 221 or 222 for only 3 credits must still take the 1-credit discussion section in BIONB 221 and 222. To arrange this, the student should consult the professors in charge of the two courses.

11. *Nutrition:* NS 331 Physiological and Biochemical Bases of Human Nutrition (4 credits) and at least 9 credits of additional course work in the biological aspects of nutrition, such as NS 222 Maternal and Child Nutrition; NS 315 Obesity and the Regulation of Body Weight; NS 332 Methods in Nutritional Sciences; NS 341 Human Anatomy and Physiology; NS 347 Human Growth and Development; NS 361 Biology of Normal and Abnormal Behavior; NS 421 Nutrition and Exercise; NS 431 Mineral Nutrition and Chronic Disease; NS 441 Nutrition and Disease; NS 452 Molecular Epidemiology and Dietary Markers of Chronic Diseases; NS 455 Nobel Prizes in Biomedical Research; NS 475 Mechanisms Underlying Mammalian Developmental Defects; NS 602 Lipids; NS 603 Mineral Nutrition: Metabolic, Health, and Environmental Aspects; and NS 614 Topics in Maternal and Child Nutrition. Some courses require NS 115 Nutrition Health and Society, which may be used as part of the additional 9 credits. Independent study credits cannot be used toward the 13-credit minimum.

Note: For students in the College of Agriculture and Life Sciences, credits in NS courses count toward the required 55 CALS credits. For students in the College of Arts and Sciences, NS credits will count toward the 100 hours required in A&S if those credits fulfill major requirements.

12. *Plant Biology:* Students choose one area of study from the following two options:

Option (a) Botany: Students are required to take BIOPL 241 Introductory Botany. Students should then choose, with the aid of their faculty adviser, a minimum of three of the following courses, for a total of at least 10 additional credits, to round out their botanical training: BIOPL 242 and 244 Plant Function and Growth, Lec and Lab; BIOPL 243 Taxonomy of Cultivated Plants; BIOPL 247 Ethnobiology; BIOPL 248 Taxonomy of Vascular Plants; BIOPL 342 and 344 Plant Physiology, Lec and Lab; BIOPL 343 and 347 Molecular Biology and Genetic Engineering of Plants, Lec and Lab; BIOPL 340 Methods in Biological and Biochemical Prospecting; BIOPL 345 Plant Anatomy; BIOPL 348 The

Healing Forest; BIOPL 359 Biology of Grasses; BIOPL 404 Crop Evolution, Domestication, and Diversity; BIOPL 422 Plant Development; BIOPL 442 Current Topics in Ethnobiology; BIOPL 444 Plant Cell Biology; BIOPL 447 Molecular Systematics; BIOPL 448 Plant Evolution and the Fossil Record; BIOPL 449 Green Signals and Triggers—The Plant Hormones; BIOPL 452/454 Systematics of Tropical Plants and Field Lab; BIOPL 453 Principles and Practice of Historical Biogeography; BIOPL 456 Biomechanics of Plants; BIOPL 462 Plant Biochemistry; BIOEE 463 and 465 Plant Ecology and Population Biology, Lec and Lab; or BIOEE 466 and 468 Physiological Plant Ecology, Lec and Lab.

Option (b) Plant Biotechnology: Students are required to take BIOPL 343 and 347 Molecular Biology and Genetic Engineering of Plants, Lec and Lab. Students choose, in consultation with their faculty adviser, a minimum of 10 additional credits from the following list: BIOPL 241 Introductory Botany; BIOPL 242 and 244 Plant Function and Growth, Lec and Lab; BIOPL 342 and 344 Plant Physiology, Lec and Lab; BIOPL 422 Plant Development; BIOPL 444 Plant Cell Biology; BIOPL 456 Biomechanics of Plants; BIOPL 462 Plant Biochemistry; PL BR 401 Plant Cell and Tissue Culture; or PL BR 402 Plant Tissue Culture Laboratory.

13. *Systematics and Biotic Diversity:* A minimum of 13 credits from the following two groups, including at least 7 credits from group a and three from group b and at least two laboratory courses (marked with *). BIO G 499, Independent Undergraduate Research in Biology, with approval of the adviser, can be used in fulfillment of up to 4 credits in group (a), and can count as one laboratory course if it has a laboratory component of 2 or more credits.

a. *BIOEE 264 Tropical Field Ornithology; *BIOEE 274 The Vertebrates: Structure, Function, and Evolution; *BIOEE 373 Biology of the Marine Invertebrates; BIOEE 405 Biology of Neotropics; *BIOEE 471 Mammalogy; BIOEE 470 Herpetology, Lec; *BIOEE 472 Herpetology, Lab; *BIOEE 475 Ornithology; *BIOEE 476 Biology of Fishes; BIOEE 477 Marine Invertebrates Seminar; BIOMI 290 General Microbiology, Lec; *BIOMI 291 General Microbiology, Lab; BIOMI 414 Bacterial Diversity, Lec; *BIOPL 241 Introductory Botany; *BIOPL 243 Taxonomy of Cultivated Plants; BIOPL 247 Ethnobiology; *BIOPL 248 Taxonomy of Vascular Plants; BIOPL 348 The Healing Forest; BIOPL 359 Biology of Grasses; BIOPL 452 Systematics of Tropical Plants; *BIOPL 454 Systematics of Tropical Plants: Field Laboratory; *ENTOM 212 Insect Biology; *ENTOM 213 General Entomology; ENTOM 215 Spider Biology: Life on a Silken Thread; *ENTOM 322 Insect Morphology; *ENTOM 331 Introductory Insect Systematics; *ENTOM 333 Maggots, Grubs, and Cutworms: Larval Insect Biology; *ENTOM 471 Freshwater Invertebrate Biology; *ENTOM 631

Systematics of the Coleoptera; PL PA 309 Introductory Mycology; *PL PA 319 Field Mycology.

- b. BIOEE 453 Speciation; BIOEE 464 Macroevolution; BIOEE 479 Paleobiology; *BIOPL 440 Phylogenetic Systematics; BIOPL 447 Molecular Systematics; *BIOPL 448 Plant Evolution and the Fossil Record; *BIOPL 453 Historical Biogeography; BIOPL 442 Current Topics in Ethnobiology.
14. *Independent Option:* Students who want to undertake a course of study not covered by the existing programs of study may petition the Biological Sciences Curriculum Committee. Information on independent option and Curriculum Committee petition forms are available in the Office of Undergraduate Biology, 216 Stimson Hall.

The Minor in Biological Sciences

The minor in biological sciences has been designed to provide students with a broad background in biology while allowing them some flexibility to choose courses of interest. Students must have completed one full year of introductory biology (or its equivalent) to declare the minor. Students will complete 12 to 15 credits by taking *either* all three biology core course requirements (listed below) *or* two biology core course requirements and 5 or more biology credits from the lists of approved program of study courses as found in *Courses of Study*.

Biology core courses

1. Biochemistry: BIOBM 330, 333, or 331-332; one year of general chemistry and organic chemistry lecture (CHEM 257 or 357-358) are prerequisites
2. Evolutionary biology: BIOEE 278 or BIOPL 448
3. Genetics: BIOGD 281

Notes:

*BIO G 499 Independent Research may not be used to fulfill any requirement for the minor. No course substitutions are allowed. With the exception of transfer and study abroad students, no biology courses taken at other institutions will count toward the minor.

**Biological sciences, biology and society, and human biology, health, and society majors are not eligible to complete the biological sciences minor.

***Applications for the minor are located in 216 Stimson Hall. See Bonnie Comella or Wendy Aquadro for academic advising and for certifying completion of the minor.

Independent Research and Honors Program

Biology majors are encouraged to consider participating in individual research under the direction of a Cornell faculty member. Students interested in beginning research should contact faculty members who have compatible research interests. Information about faculty research interests and undergraduate research opportunities is available in the Office of Undergraduate Biology, 216 Stimson Hall, and at www.bio.cornell.edu.

Faculty members may consider the student's previous academic accomplishments, interests and career goals, and the availability of space and equipment when agreeing to supervise a student in their laboratory. Students conducting research for the first time must enroll in BIO G 299, an S-U course designed to introduce students to research. After the first semester, students enroll in BIO G 499. Registration for both of these classes is done in the Office of Undergraduate Biology in 216 Stimson Hall. Students may work with faculty in any department on campus as long as the research topic is biological. Students may not earn credit for research done off campus, unless supervised by a Cornell faculty member. Up to 3 credits of research may be used to complete the program of studies in general biology, genetics and development, systematic and biotic diversity, as well as 4 credits in neurobiology and behavior.

The honors program in biological sciences is designed to offer advanced training in laboratory or field research through the performance of an original research project under the direct guidance of a member of the Cornell faculty. Applications for the honors program are available in the Office of Undergraduate Biology, 216 Stimson Hall, and must be submitted in October of the senior year to the Honors Program Committee by the announced deadline. To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 30 credits at Cornell, and have a cumulative Cornell grade point average (GPA) of at least 3.0. In addition, students must have at least a 3.0 cumulative Cornell GPA in all biology, chemistry, mathematics, and physics courses. (Grades earned in courses in other departments that are used to fulfill biology major requirements are included in this computation.) In addition, candidates must find a Cornell faculty member to supervise their research. An honors candidate usually enrolls for credit in BIO G 499 Undergraduate Research in Biology under the direction of the faculty member acting as honors supervisor, although the honors program does not require enrollment for credit. Students accepted into the honors program are required to participate in honors research seminars during their senior year; submit an acceptable honors thesis; complete all major requirements; and maintain a 3.00 Cornell cumulative and science GPA through graduation. Recommendation to the faculty that a candidate graduate with honors and at what level of honors is the responsibility of the Honors Program Committee. The student's final GPA and quality of his or her thesis are factors in determining the level of honors recommended.

Students interested in the honors program are strongly encouraged to begin their research projects in their junior year and to consider spending the following summer at Cornell engaged in full-time research on their honors project. Students interested in staying for the summer also are encouraged to apply to the Cornell Hughes Scholars Program.

Biology majors who are considering study abroad and graduating with honors are encouraged to meet with their academic and research adviser during their sophomore year to carefully plan their academic schedule to meet the requirements of the honors program.

Application forms, requirements, deadline dates for the honors program and the Hughes Scholars Program, and information pertaining to faculty research may be obtained at the Office of Undergraduate Biology, 216 Stimson Hall, and at www.bio.cornell.edu.

CURRICULUM COMMITTEE

Many decisions pertaining to the curriculum and to the programs of study are made by the Biology Curriculum Committee. The committee consists of faculty and elected student members and welcomes advice and suggestions from all interested parties.

ADVISING

Students in need of academic advice are encouraged to consult their advisers or go to the Office of Undergraduate Biology, 216 Stimson Hall.

Students interested in marine biology should visit the Shoals Marine Laboratory Office, G14 Stimson Hall.

Students interested in the multidisciplinary program biology and society should see "Special Programs and Interdisciplinary Studies" in the "College of Arts and Sciences" section of this catalog.

TRANSFERRING CREDIT

Students wishing to transfer biology credit to Cornell must receive approval from the director of advising, 216 Stimson Hall. Biology majors are required to complete all three biology core courses at Cornell. External transfer and study abroad students may be allowed to transfer a limited number of biology credits upon approval from the director of advising.

Online course credit is not acceptable to transfer for any biology course.

GENERAL COURSES (BIO G)

Three introductory biology course sequences are taught during the academic year: BIO G 101-104, 105-106, and 109-110; and one during the eight-week summer session: BIO G 107-108. BIO G 101-104, 105-106, and 107-108 are intended for biological sciences majors and other students needing 8 credits from an introductory sequence for majors (e.g., students in a premedical curriculum). Any of these sequences meet the prerequisite for upper-level courses listing "one year of introductory biology for majors" as a prerequisite. BIO G 109-110 is a course sequence intended for nonmajors and meets the prerequisite for many, but not all, upper-level courses listing "one year of introductory biology" as a prerequisite. Students can earn a maximum of 8 credits in introductory biology (including advanced placement credits).

BIO G 101-102(1101-1102) Biological Sciences, Lectures

101, fall; 102, spring. 2 credits each semester. Co-requisite: BIO G 103 (fall) or 104 (spring). Prerequisite: for 102, passing grade (D or better) in 101 or permission of instructor. May not be taken for credit after BIO G 105-106 or 109-110. S-U grades optional by permission of instructor. Lec, M W F 9:05 or 10:10 (first lec of fall semester, F Aug. 26). 2 lec each week; to accommodate these, students must reserve all three days. Evening prelims: fall, Sept. 22 and Nov. 1; spring, Feb. 23 and Apr. 4. Fall, C. Hopkins; Spring, J. Morin.

Designed both for students who intend to specialize in biological sciences and for those who want to obtain a thorough knowledge of biology as part of their general education. The fall semester covers the chemical and cellular basis of life, energy transformations, physiology, neurobiology, and behavior. The spring semester covers genetics, development, evolution, and ecology. Each topic is considered in terms of modern evolutionary theory, and discussions of plant and animal systems are integrated. For those students who object to animal dissection, alternative materials are available for study. However, testing involves identification of important structures in real organisms.

BIO G 103-104(1103-1104) Biological Sciences, Laboratory

103, fall; 104, spring. 2 credits each semester. Co-requisite: BIO G 101 (fall) or 102 (spring). Prerequisite: for 104, 103 or permission of instructor. Students registered for lab courses who are more than 10 minutes late for first meeting of lab forfeit registration in that course; no admittance after second week of classes. S-U grades optional by permission of instructor. Lab, M T W or R 1:25-4:25, M or W 7:30-10:30 P.M., or T or R 8-11 A.M. or S 9 A.M.-12 P.M.; one 3-hour lab each week and weekly lec for disc, special lecs, etc. P. R. Ecklund and staff.

Designed to provide lab experience with major biological phenomena to support an understanding of the important concepts, principles, and theories of modern biology. A second objective is to help students gain expertise in the methods used by biologists to construct new knowledge. Students are exposed to basic concepts, research methods, including laboratory and data transformation techniques, and instrumentation in the major areas of biology. First-semester topics include biochemistry, physiology, plant biology, and behavior. In the second semester, laboratory experience is provided in genetics, biotechnology, invertebrate diversity, plant and animal development, and ecology. During the first semester, students dissect a doubly pithed frog (pithing is done by the instructor). Students dissect several invertebrates during the second semester. For those students who object to animal dissection, alternative materials are available for study. However, testing involves identification of important structures in real organisms.

BIO G 105-106(1105-1106) Introductory Biology

105, fall; 106, spring. 4 credits each semester; 2 credits by permission of instructor. Limited to 200 students. Taking 105-106 in sequence preferred but not required. May not be taken for credit after BIO G 101-104 or 109-110. No admittance

after first week of classes. S-U grades optional by permission of instructor. Lec, T 9:05 (first lec of fall semester, R 8/25, 9:05); additional study and lab. T. Sacco.

Designed primarily for biology majors, preprofessionals, and other students who desire a challenging, broad introduction to fundamental concepts of biology. Cell biology, physiology, anatomy, and biochemistry are strongly emphasized in the fall semester. The spring semester covers genetics, development, ecology, evolution, behavior, and the diversity of organisms. Students who plan to concentrate in anatomy and physiology should consider taking this course because of the strong emphasis on organismal biology. Because some testing involves the use of predissected specimens, students who object to dissections should take BIO G 101-104. The course uses an autotutorial format and offers considerable flexibility in scheduling. Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Students who elect to take the course must be able to meet deadlines. Four formal laboratory sessions are offered each semester; additional laboratory work is included in the core units. Evaluation is based on written reports on experimental work, practical exams, and a comprehensive final exam.

BIO G 107-108(1107-1108) General Biology

Summer, 8-week session; 107, weeks 1-4; 108, weeks 5-8. 4 credits each. 107-108 fulfills introductory biology requirement for majors and forms suitable introductory biology course sequence for students intending to go to medical school. Prerequisite: one year of college or permission of instructor; for BIO G 108, BIO G 101, 103, 105, or 107. Fee for weeks 1-4: \$25; for weeks 5-8, \$25. Lec, M T R F 9-12; lab, M-R 1:30-4:30. Staff.

Designed for students who plan further study in biology or who want a broad course in biology as part of their general education. 107 covers biological metabolism, first at the molecular level and then progressively to the organ system level. The laboratory work involves an introduction to some major techniques, vertebrate dissection, and a survey of plant organization. 108 seeks to integrate the topics of genetics, developmental biology, population biology, and ecology in a general consideration of biological evolution. The laboratory work is a continuation of the material covered in 107 and involves more techniques, a survey of animal organization, and the design and performance of a field study. For those students who object to animal dissection, alternative materials are available for study. However, testing involves identification of important structures in real organisms.

BIO G 109-110(1109-1110) Biological Principles

109, fall; 110, spring. 3 credits each semester. Limited to 600 students. Nonmajors survey course, not appropriate for major in biological science or premed requirement. Both BIO G 109 and 110, taken in either order, are required to fulfill distribution requirement in CALS and Human Ecology. Either course fulfills Arts and Sciences distribution requirement. Students with transfer credit must consult with course instructors for appropriate course placement. Due to overlap in

content, BIO G 109 may not be taken after BIO G 102 or 106, or equivalent, and BIO G 110 may not be taken after BIO G 101, 105, or equivalent. Note: This course may not satisfy prerequisite for upper-level courses in biology. Letter grades only. Lab sec assignments made in first class. Prelims: fall (in class), Sept. 22 and Nov. 1; spring (evening), Feb. 23 and Apr. 6. Lec, fall: T R 11:40, spring: M W F 9:05; lab meets alternate M T W R or F 2-4:25, or F 10:10-12:35 (fall), or T 10:10-12:35 (spring), or W 7:30-10 P.M. H. Greene, R. Wayne and C. Eberhard.

Offers a comprehensive knowledge of biology as part of a general education. Broad goals of the course encompass an understanding of the potential benefits and limitations of science, the complexity and workings of the natural world, and the internal machinery of how our bodies and those of other animals and plants work. Fall: biological diversity, genetics, evolution, ecology, behavior, and conservation biology; Spring: human physiology, plant development, genetic engineering, infectious diseases, and human health. Laboratory sections (16 maximum) are used for problem-solving experiments, demonstrations, discussions, and dissections (preserved vertebrate, invertebrate, and plant materials); for those students who object to dissection, alternative materials are available for study without grade penalty. Testing on dissection labs involves identification of important structures in real organisms.

BIO G 170(1700) Evolution of the Earth and Life (also EAS 102[1102])

Spring. 3 credits. S-U grades optional. Lec 01, T R 11:15-12:05; lec 02, T R 9:05-9:55; lab, T W or R 2-4:25; field trips during lab. J. L. Cisne.

For description, see EAS 102.

BIO G 200(2000) Special Studies in Biology

Fall, spring, or summer. 1-3 credits. Prerequisite: written permission from Office of Undergraduate Biology. Students must register in 216 Stimson Hall. S-U grades optional by permission of instructor. Times TBA. Staff.

Registration device for students who want to take only a portion of a regular biological sciences course—for example, only the lectures or only the laboratory in a course that includes both. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. This course may not be substituted for 100-level courses and may not be used to fulfill college distribution requirements except by permission from the Office of Undergraduate Biology.

BIO G 201(2010) Seminar: Your Future in Biology at Cornell and Beyond

Fall. 1 credit. Limited to 40 students. Prerequisite: one year introductory biology; sophomores and new junior transfer students. S-U grades only. Lec, 2 hours each week. J. Doyle and B. Comella.

Focuses on the academic and career interests of sophomore biology majors and new junior transfer students. Biology faculty, Office of Undergraduate Biology staff, biology alumni, and upperclass students lead weekly sessions on diverse topics that may include the biology curriculum, bioethics, burgeoning fields and careers in biology, faculty and undergraduate

research, biology in the post-9/11 era, and women in science.

BIO G 202(2020) The Diversity of Life
Fall. 3 credits. S-U grades optional. Lec, M W F 2:30. Not offered 2005–2006.
J. I. Davis and J. J. Doyle.]

BIO G 209(2090) Introduction to Natural Science Illustration

Summer, six-week session. 2 credits. Limited to 12 students. Prerequisite: freehand drawing course or permission of instructor. S-U grades optional. Lec and lab, T R 6:30–9:30 P.M. B. S. King.
Introduction to the art of natural science illustration for publication and to the techniques of various media including pencil, pen and ink, watercolor, colored pencil, scratchboard, and carbon dust. Potentials and limitations of line and half-tone reproduction, copyright, and portfolio presentation are discussed.

BIO G 299(2990) Introduction to Research Methods in Biology

Fall, spring, or summer. Variable credit; max. 3 suggested. S-U grades only. Recommended for freshmen and sophomores. Students must register for credit in Office of Undergraduate Biology, 216 Stimson Hall. Applications available in OUB and at www.bio.cornell.edu. Add deadline is **three days** before university deadline. Any Cornell faculty member whose research field is biological in nature may serve as a supervisor for this course. Non-Cornell supervisors not acceptable.

Intended for students who are new to undergraduate research. Students enrolled in BIO G 299 may be reading scientific literature, learning research techniques, or assisting with ongoing research. The faculty supervisor determines the work goals and the form of the final report.

BIO G 305(3050) Basic Immunology Lectures (also VETMI 315[3150])

Fall. 3 credits. Highly recommended: basic courses in microbiology, biochemistry, and genetics. S-U grades optional. Lec.
J. A. Marsh.

For description, see VETMI 315.

BIO G 400(4000) Undergraduate Seminar in Biology

Fall or spring. Variable credit; 1–3 assigned for individual seminar offerings; may be repeated for credit. S-U grades optional. Staff.

Specialized seminars on topics of interest to undergraduates presented by biology faculty including visiting faculty.

Sec 1 Functional Genomics in Non-Model Organisms (also BIOGD 480.1)

Fall. 2 credits. Prerequisites: BIOGD 281 and BIOEE 278 (or equivalent by permission of instructor). Intended for advanced undergraduates. M 1:25–3:20 plus required attendance at four sem, 12:20–1:15, M 9/26, 10/17, 10/31, and 11/14. A. McCune, A. Clark, D. Winkler, and M. Wolfner.

For description, see BIOGD 480.

BIO G 401(4010) Introduction to Scanning Electron Microscopy

Spring, weeks 1–8. 1 credit. Limited to 8 students. S-U grades optional. Fee may be charged. Lec, M 10:10; lab, T or R 9:05–12:15 or T W or R 1:25–4:25. Offered alternate years. Staff.

Introductory course that includes the principle and use of the scanning electron microscope. Students use biological material to explore and understand some of the fine biological architecture. In addition to preparing the specimens, students use the scanning electron microscope to study and obtain micrographs of features that interest them.

BIO G 403(4030) Transmission Electron Microscopy for Biologists

Fall. 1, 3, or 4 credits (4 credits if student takes both sections). Limited to 8 students; minimum of 4. Prerequisites: BIOAP 313, BIOPL 345 or 443. S-U grades optional. Two sec: 01, 1 credit, weeks 1–4; 02, 3 credits, weeks 5–12. Students may register for one or both sec. Fee may be charged. Lec, T 11:15; lab, M W or T R 1:25–4:25. Staff.

Section 01 covers the principles and use of the transmission electron microscope (TEM), with emphasis on proper operation of the instrument and interpretation of images obtained. Negatively stained materials are used for viewing with the transmission electron microscope. Section 02 covers the principles and techniques of preparing biological material for transmission electron microscopy. Using animal, plant, and microbe materials, this section studies chemical fixtures, cryofixations, ultrathin sectioning, immunogold localization, quantitative microscopy, and metal shadowing techniques. Students have two additional weeks to complete laboratory assignments at the end of each section.

BIO G 404(4040) Planning for Graduate Study in Biology

Fall. 1 credit. S-U grades only. Times TBA.
L. E. Southard.

For students who plan to pursue a graduate degree leading to a research career. Covers all aspects of the application process. Selected topics include general information on academic and industrial research careers, selecting appropriate programs, and options for funding. Features faculty, graduate student, and outside speakers. Students write and receive feedback on personal statements.

BIO G 408(4080) Presentation Skills for Biologists

Spring. 1 credit. S-U grades only. Prerequisite: research experience. Priority given to students accepted into Biology Honors Program. L. Southard and G. Hess.
Covers oral and written communication skills used in presenting research to other scientists. Topics include organization and writing of scientific papers, presentation tips for research seminars, and preparation of visual aids using Microsoft Power Point. All students present a 10-minute seminar on their research and evaluate other presentations.

BIO G 410(4100) Teaching High School Biology

Fall. 3 credits. Prerequisite: one year introductory biology; permission of instructor. S-U grades optional. Offered alternate years. L. Southard.

Gives students the opportunity to experience teaching high school science. Students select an important biological concept, then develop inquiry-based teaching plans appropriate for high school students. The first part of the course consists of lectures, discussion, and laboratory experiments, which familiarize the students with the scientific content. Students then work in teams with high school teachers

to develop their curriculum. The final part of the course includes practice presentations and teaching at regional high schools.

BIO G 431(4310) Frontiers in Biophysics

Fall, full day of lec, S, Sept. 17, 9 A.M.–4 P.M., Racker Room, Biotechnology Bldg. 0.5 credit. S-U grades only. Lec TBA.
G. Feigenson and staff.

Overview of current research in biophysics at Cornell by faculty from different departments across the university. Designed for undergraduates considering a career in biophysics and for graduate students interested in biophysics research opportunities at Cornell.

BIO G 450(4500) Light and Video Microscopy for Biologists

Spring. 3 credits. Limited to 12 students. Prerequisites: one year introductory biology and permission of instructor. Lec, T R 1:25–2:30; lab, R 2:30–4:30.
R. O. Wayne.

Students learn the relationship between reality and the image using philosophy, mathematics, and physical theory. Next they apply these tools theoretically and in practice to understand and become experts at image formation and analysis using brightfield, darkfield, phase-contrast, fluorescence, polarization, interference, differential interference and modulation contrast microscopes. They build upon our knowledge and experience to understand how analog image processors and digital image processors can influence, enhance and analyze the images gathered by the microscope. Last they learn about many other kinds of microscopes, including confocal, near field, x-ray, acoustic, nuclear magnetic resonance, infrared, centrifuge, atomic force, and scanning tunneling microscopes.

BIO G 498(4980) Teaching Experience

Fall or spring. 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S-U grades optional by permission of instructor. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring. Biological sciences courses currently offering such experience include BIO G 105–106; BIOAP 311, 313, 319; BIOBM 330, 331; BIOEE 274, 475; BIOGD 281; and BIOMI 291, 292.

BIO G 499(4990) Independent Undergraduate Research in Biology

Fall, spring, or summer. Variable credit. S-U grades optional. Note: Arts students may not register for more than 6 credits per semester with one supervisor or 8 credits per semester with more than one supervisor. Students in CALS may use up to 15 credits of independent study (BIO G 499, 498) toward graduation. Up to 3 credits of research may be used to complete programs of study in General Biology, Genetics and Development, and Systematics and Biotic Diversity, and 4

credits of research in Neurobiology and Behavior. Prerequisite: one semester of BIO G 299 or equivalent.

For students continuing their Cornell research. Students enrolled for this credit should be doing independent work on their own project. Registration forms are available in OUB and on the web at www.bio.cornell.edu. **Add deadline is three days before university deadline.** Each student must submit proposed research project description during course registration. Any Cornell faculty member whose research field is biological in nature may serve as supervisor for this course. Non-Cornell supervisors not acceptable.

BIO G 504(5040) Research Experience for Teachers (also EDUC/PL BR 504[5040])

Spring. 3 credits. S-U or letter grades. T. Fulton.

For description, see EDUC 504.

BIO G 663(6630) Nanobiotechnology (also AEP 663[6630])

Spring. 3 credits. Letter grades only. C. Batt.

For description, see A&EP 663.

BIO G 705(7050) Advanced Immunology Lectures (also VETMI 705[7050])

Spring. 3 credits. Prerequisite: basic immunology course or equivalent or permission of instructor. Offered alternate even years. Lec. Coordinator: J. A. Marsh.

For description, see VETMI 705.

[BIO G 706(7060) Immunology of Infectious Diseases (also VETMI 719[7190])

Spring. 2 credits. Prerequisite: BIO G 305 or permission of instructor. S-U grades optional by permission of instructor. Lec. Offered odd alternate years; not offered 2005-2006. Coordinator: E. Denkers.

For description, see VETMI 719.]

ANIMAL PHYSIOLOGY (BIOAP)

[BIOAP 214(2140) Biological Basis of Sex Differences (also BSOC 214(2141), FGSS 214[2140])

Spring. 3 credits. Prerequisite: one year introductory biology. S-U grades optional. Lec, T R 1:25-2:40. Offered alternate years; not offered 2005-2006. J. E. Fortune.

Examines the structural and functional differences between the sexes. Emphasizes mechanisms of mammalian reproduction; where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, mental, and physical capabilities) is discussed. The course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.]

BIOAP 311(3110) Introductory Animal Physiology, Lectures (also VTBS 346[3460])

Fall. 3 credits. Prerequisites: one year college biology, chemistry, and mathematics. Recommended: previous or concurrent physics course. S-U grades optional by permission of instructor. Lec, M W F 11:15; evening prelims. E. R. Loew.

General course in animal physiology emphasizing principles of operation, regulation, and integration common to a

broad range of living systems from the cellular to the organismal level. Structure/function relationships are stressed along with underlying physico-chemical mechanisms.

BIOAP 312(3120) Farm Animal Behavior (also AN SC 305[3050])

Spring. 2 credits. Prerequisites: one year introductory biology, and introductory animal physiology (AN SC 100 and 150 or equivalent is sufficient or BIOAP 311). Recommended: at least one animal production course or equivalent experience. S-U grades optional.

Lec, T R 11:15. P. Perry and K. A. Houpt.

The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic animals, and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

BIOAP 316(3160) Cellular Physiology

Spring. 3 credits. Pre- or co-requisite: BIOBM 330 or 331 and 332 or 333. Lec, M W F 11:15-12:05; evening prelims. A. Quaroni.

Comprehensive course covering the general characteristics of eukaryotic cells; the structure, composition, and function of subcellular organelles; and the major signal transduction pathways regulating a variety of physiological cell activities. Among the main subjects covered are absorption and transport processes, mechanism of action of signaling molecules (hormones), the cell cycle and regulation of cell proliferation, cell-cell communication, extracellular matrix, and carcinogenesis.

BIOAP 319(3190) Animal Physiology Experimentation

Fall. 4 credits. Limited to 40 students per lab sec. Pre- or co-requisite: BIOAP 311 or permission of instructor. Designed for upper-level undergraduate and graduate students studying physiology and other students interested in biomedically related professions. Graduate students in field of physiology and related fields without equivalent background strongly encouraged to enroll. Lec, R 12:20; lab, M or W 12:20-5. E. R. Loew, N. A. Lorr, and staff.

Series of student-conducted *in vitro* and *in vivo* experiments designed to illustrate basic physiological processes in animals, with emphasis on relevance to humans, and to introduce students to physiological research techniques, instrumentation, experimental design, and interpretation of results. Techniques include anesthesia, surgical procedures, dissection under anesthesia, and real-time computer recording and analysis of data. Experiments with living tissues or live animals examine properties of membranes and epithelia, blood, nerves, skeletal and smooth muscle; cardiovascular, respiratory, renal, and reproductive function and their regulation by the nervous and endocrine systems. Experimental resources include frogs, rats, rabbits, and sheep, which are not always euthanized after the laboratory exercises. Written reports of laboratory activities are required. Grading is based on evaluation of these reports, laboratory performance and weekly discussions, weekly quizzes, and a midterm and final exam.

BIOAP 413(4130) Histology: The Biology of the Tissues

Spring. 4 credits. Prerequisite: one year introductory biology. Recommended: BIOBM 330 or 331, or equivalents. S-U or letter grades. Lec, M W 1:25; lab, M W 2:30-4:25. S. Suarez and L. Mizer.

Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates (primarily mammals), as well as methods of analytic morphology at the cell and tissue levels. Emphasizes dynamic interrelations of structure, composition, and function in cells and tissues.

BIOAP 416(4160) Cell Physiology and Genomics Laboratory

Spring. 4 credits. Limited to 24 students. Designed for graduate and upper-level undergraduate students; priority given to biology majors with physiology concentration. Pre- or co-requisite: BIOAP 316 or BIOBM 432 or permission of instructor. Lec, M W 12:20-1:10; lab, M W 1:25-4:25. A. Quaroni, N. A. Lorr, and staff.

Introduces students to modern methods and instrumentation in cell physiology and genomics. Laboratory exercises teach the following experimental methods: (1) primary cell culture, cell cloning, subculturing, and cell counting; (2) cell and macromolecule imaging using fluorescence and electron microscopy; (3) karyotyping including chromosome spreading, banding, and fluorescent *in situ* hybridization; (4) flow cytometry and DNA electrophoresis for the assay of apoptosis and cell proliferation; (5) protein electrophoresis and Western blotting; (6) recombinant DNA technology including restriction analysis, cloning, transformation of competent cells, plasmid isolation, and transfection; (7) analysis of gene expression by use of RT-PCR, real time-PCR and microarray analysis; and (8) analysis of electrogenic transport systems in cultured epithelia mounted in Ussing chambers.

BIO AP 425(4250) Gamete Physiology and Fertilization (also AN SC 425[4250])

Fall. 2 credits. Limited to 50 students. Prerequisite: AN SC 300 or equivalent. Offered alternate years; not offered 2006-2007. Lec, R 2:30-4:25. J. E. Parks.

Studies the formation, growth, differentiation, and maturation of mammalian sperm and oocytes; gamete transport and interaction with male and female reproductive tracts; and cytological, physiological, and molecular changes required for fertilization. Lecture, discussion, and aspects of gamete physiology and *in vitro* technologies such as cryopreservation, oocyte maturation, and fertilization are covered.

BIOAP 427(4270) Fundamentals of Endocrinology (also AN SC 427[4270])

Fall. 3 credits. Prerequisite: animal or human physiology course or permission of instructor. Lec, M W F 9:05. P. A. Johnson.

For description, see AN SC 427.

BIOAP 458(4580) Mammalian Physiology

Spring. 3 credits. Limited enrollment. Graduate student auditors allowed. Prerequisite: BIOAP 311 or equivalent. Recommended for biological sciences majors, pre-med and pre-vet students, and beginning graduate students in physiology,

nutrition, and animal science. Lec, M W F 10:10; evening prelims. K. W. Beyenbach. In-depth treatment of selected topics in mammalian and human physiology. Emphasizes concepts and a working knowledge of physiology. Selected topics include basic functional elements of biological systems; recurrent themes in physiology; design of multicellular animals; mammalian fluid compartments; homeostasis; membrane and epithelial transport; electrophysiology; cardiovascular physiology; gastrointestinal physiology; renal physiology; and acid/base physiology. Lectures incorporate clinical correlations whenever appropriate. Occasional guest lecturers talk about work and careers in basic research and/or clinical medicine.

BIOAP 475(4750) Mechanisms Underlying Mammalian Developmental Defects (also NS 475(4750))

Spring. 3 credits. Prerequisites: BIOBM 330, 331–332, or 333 (may be taken concurrently). M W F 11:15. Offered alternate years. D. Noden and P. Stover. Focuses on the causes of developmental defects and how genetic changes or teratogenic insults disrupt developmental regulatory and metabolic pathways.

BIOAP 489(4890) Mammalian Embryology (also BIOGD 489(4890))

Spring. 3 credits. Prerequisite: introductory biology. Lec, T R 1:25; lab, T 2:30. Offered alternate years. D. M. Noden. Examines the early formation of the mammalian body and placenta, emphasizing comparative aspects, and morphogenesis and histogenesis of each organ system.

BIOAP 619(6190) Lipids (also NS 602(6020))

Fall. 2 credits. Lec, T R 11:15. A. Bensadoun. Advanced course on biochemical, metabolic, and nutritional aspects of lipids. Emphasizes critical analysis of current topics in lipid methodology; lipid absorption; lipoprotein secretion, molecular structure, and catabolism; molecular biology, function, and regulation of lipoprotein receptors; mechanism of hormonal regulation of lipolysis and fatty acid synthesis; and cholesterol metabolism and atherosclerosis.

BIOAP 710–718(7100–7180) Special Topics in Physiology

Fall or spring. 1 or 2 credits per topic; may be repeated for credit. Enrollment in each topic may be limited. S-U grades optional by permission of instructor. Lectures, laboratories, discussions, and seminars on specialized topics.

BIOAP 711(7110) Readings in Applied Animal Behavior

Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent. Offered alternate years; next offered 2007–2008. Lec, 1 hour each week TBA. K. A. Houpt.

[BIOAP 714(7140) Cardiac Electrophysiology

Fall. 1 credit. S-U grades only. Offered alternate years; next offered 2006–2007. R. Gilmour. Survey of cardiac potentials, passive membrane properties, ion channels, and cardiac arrhythmias. Emphasizes nonlinear dynamic aspects of cardiac electrophysiology and cardiac arrhythmias.]

[BIOAP 715(7150) Stress Physiology: To Be Discussed as Part of Animal Welfare

Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent. Offered alternate years; next offered 2006–2007. K. A. Houpt. Emphasizes physiological assessment of stress.]

BIOAP 720(7200) Animal Physiology and Anatomy Seminar

Spring and fall. 1 credit each semester. Prerequisite: admission to graduate field of physiology.

Designed to train graduate students in the field of physiology to become professional scientists. Students are required to give a seminar on their research. Advice and feedback are provided. Throughout the semester and in one special session devoted to a particular topic, advice is provided on subjects such as preparation of manuscripts, seminars, and grant proposals.

BIOAP 757(7570) Current Concepts in Reproductive Biology

Fall. 3 credits. Limited to 20 students. Prerequisites: undergraduate degree in biology and strong interest in reproductive biology. S-U grades optional. Lec/disc, T R 10:10–12:05. Offered alternate years; next offered 2006–2007. J. E. Fortune, W. R. Butler, and staff.

Team-taught survey course in reproductive physiology/endocrinology. Lectures by a number of reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, and sperm physiology/function); female reproductive function (endocrinology, ovarian development and function, oocyte physiology/function); fertilization and early embryo development; pregnancy; parturition; puberty; and reproductive technology. Student participation in the form of discussions and/or presentations.

BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY (BIOBM)

BIOBM 132(1320) Orientation Lectures in Molecular Biology and Genetics (also BIOGD 132(1320))

Spring, weeks 1–3. 0 credits. Primarily for freshmen, sophomores, and transfer students. S-U grades only. Lec, S 11:15, first three S of semester (Jan. 28, Feb. 8, Feb. 11, 180 Biotechnology Bldg.). Staff. Six professors discuss their research and promising new areas for research in the future.

[BIOBM 233(2330) Introduction to Biomolecular Structure (also CHEM 233(2330))

Fall. 2 credits. Limited to 30 students. Prerequisites: CHEM 207–208 or equivalents. Lec, T R 2:30–3:20. Not offered 2005–2006. S. E. Ealick. For description, see CHEM 233.]

BIOBM 321(3210) Numerical Methods in Computational Molecular Biology (also COM S 321(3510))

Fall. 3 credits. Prerequisites: at least one course in calculus (e.g., MATH 106, 111, or 191) and course in linear algebra (e.g., MATH 221 or 294 or BTRY 417). No particular course in programming required, but student should have some familiarity with iteration, arrays, and procedures. Offered alternate years. For description, see COM S 321.

BIOBM 330–332(3300–3320) Principles of Biochemistry

Introductory biochemistry is offered in three formats: individualized instruction (330) and lectures (331 and 332) during the academic year, and lectures (333) during the summer. *Individualized instruction is offered to a maximum of 250 students each semester. Lectures are given fall semester (331), spring semester (332), and summer (333).*

BIOBM 330(3300) Principles of Biochemistry, Individualized Instruction

Fall or spring. 4 credits. Prerequisites: one year introductory biology for majors and one year general chemistry and CHEM 257 or 357–358 (CHEM 358 may be taken concurrently) or equivalent, or permission of instructor. Recommended: concurrent registration in BIOBM 334. May not be taken for credit after BIOBM 331, 332, or 333. S-U grades optional by permission of instructor. Evening prelims: fall, Sept. 29 and Nov. 1; spring, Feb. 23 and Apr. 14. J. E. Blankenship, P. C. Hinkle, and staff. Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, protein synthesis, and an introduction to gene cloning. No formal lectures, autotutorial format.

BIOBM 331(3310) Principles of Biochemistry: Proteins and Metabolism

Fall. 3 credits. Prerequisites: one year introductory biology for majors, one year general chemistry, and CHEM 257 or 357–358 (CHEM 257 or 357 should not be taken concurrently) or equivalent, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades by permission of instructor. Lec, M W F 10:10; evening prelim, Oct. 20. G. W. Feigenson. The chemical reactions important to biology, and the enzymes that catalyze these reactions,

are discussed in an integrated format. Topics include protein folding, enzyme catalysis, bioenergetics, and key reactions of synthesis and catabolism.

BIOBM 332(3320) Principles of Biochemistry: Molecular Biology

Spring. 2 credits. Prerequisites: one year introductory biology for majors and previous or concurrent registration in organic chemistry, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades optional by permission of instructor. Lec, T R 12:20. B. K. Tye.

Comprehensive course in molecular biology that covers the structure and properties of DNA, DNA replication and repair, synthesis and processing of RNA and proteins, the regulation of gene expression, and the principles and applications of recombinant DNA technologies, genomics, and proteomics.

BIOBM 333(3330) Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology

Summer, eight-week session. 4 credits. Prerequisites: one year introductory biology for majors, one year general chemistry, and CHEM 257, or 357-358, or equivalents, or permission of instructor. May not be taken for credit after BIOBM 330, 331, or 332. H. T. Nivison.

Topics include the structure and function of proteins, enzyme catalysis, metabolism, and the replication and expression of genes.

BIOBM 334(3340) Computer Graphics and Molecular Biology

Fall or spring. 1 credit. Prerequisite: BIOBM 333 or 331/332 (BIOBM 332 may be taken concurrently). Co-requisite: BIOBM 330. J. E. Blankenship, P. C. Hinkle, and staff.

Visualization of complex biomolecules using Silicon Graphics computers. Group presentations on current topics in molecular biology.

BIOBM 432(4320) Survey of Cell Biology

Spring. 3 credits. Prerequisite: BIOBM 330, 333, or 331, and previous or concurrent registration in 332, or equivalent. Recommended: BIOGD 281. Lec, M W 8:40-9:55. V. M. Vogt.

Survey of a wide array of topics focusing on the general properties of eukaryotic cells. Topics include methods used for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-to-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in BIOBM 437, BIOGD 483, and BIOBM 632, 636, and 639.

BIOBM 434(4340) Applications of Molecular Biology to Medicine, Agriculture, and Industry

Fall. 3 credits. Limited to 50 students. Prerequisites: BIOBM 330 or 333 or 331/332. Recommended: BIOGD 281. S-U grades optional. Lec, M W F 11:15-12:05. J. M. Calvo and S. Ely.

Lecture topics include large-scale sequencing of genomes, drug discovery based on genomics, combinatorial approaches to chemical libraries, pharmacogenetics, antibiotics derived from innate immune system, DNA and edible vaccines, transgenic animals, engineering plants resistant to insects,

and gene therapy. About one-quarter of the course is devoted to exploring factors that are required for commercializing ideas and to some social ramifications of biotechnology.

BIOBM 435-436(4350-4360) Undergraduate Biochemistry Seminar

435, fall; first meeting 4 P.M., T, Aug. 30. 436, spring; first meeting 4 P.M., T, Jan. 24, 471 Biotech. Bldg. 1 credit each semester; may be repeated for credit. Prerequisites: upperclass standing; BIOBM 330, 333, or 331-332, or written permission of instructor. S-U grades only. Times TBA; organizational meeting first W of each semester. D. Wilson.

Selected papers from the literature on a given topic are evaluated critically during 12 one-hour meetings.

BIOBM 437(4370) Regulation of Cell Proliferation, Senescence, and Death (also TOX 437[4370])

Spring. Variable credit; students may take lec for 2 credits or lec and disc for 3 credits. Limited to 20 students per disc; priority given to graduate students. Prerequisite: BIO G 101-102 or 105-106 and BIOBM 330 or 331/332. Recommended: BIOGD 281 and BIOBM 432. S-U grades optional. M W 11:15-12:05; disc, TBA. S. Lee.

Covers a wide spectrum of issues related to cell proliferation in eukaryotes. Lectures include various aspects of the regulation of cell division cycle and signal transduction pathways, with additional topics on oncogenesis, cell aging, and cell death. The facts as well as concepts and logics behind findings are presented in the lectures. Research articles are analyzed and discussed in depth during discussion section.

BIOBM 439(4390) Molecular Basis of Human Disease (also BIOGD 439[4390])

Fall. 3 credits. Prerequisites: biochemistry and molecular biology (e.g., BIOBM 330, 331-332, or 333) and genetics (e.g., BIOGD 281) or permission of instructor. Recommended: cell biology (e.g., BIOBM 432 or BIOAP 316) and physiology (e.g., BIOAP 311 or 458). S-U grades optional. Lec, T R 10:10-11:25. Not offered 2006-2007. W. L. Kraus.

Examines how changes in the normal expression, structure, and activity of gene products caused by genetic mutations, epigenetic phenomena, and environmental agents lead to human diseases. Focuses on how these changes lead to alterations in normal cellular processes, as well as the resulting physiological consequences. Topics are selected from hormone insensitivity syndromes, inborn errors of metabolism, gene fusions resulting in hybrid proteins, gene amplification, gene inactivation, disruption of signaling pathways, disruption of metabolic pathways, and the molecular actions of infectious agents and environmental toxins. Examples of diseases are selected to emphasize various aspects of genetics, molecular biology, cell biology, physiology, immunology, and endocrinology that have been presented in other courses. In addition, the methods used to identify the underlying biochemical and genetic basis of the diseases, as well as possible pharmaceutical and genetic therapies for treating the diseases, are presented. A portion of each class period is devoted to discussion and practice questions.

BIOBM 440(4400) Laboratory in Biochemistry and Molecular Biology

Fall, spring, or summer (three-week session). 4 credits. Limited enrollment. Priority given to undergraduate biology majors in Biochemistry or Molecular and Cell Biology programs of study and to graduate students with minor in field of biochemistry. Prerequisites: BIOBM 330 or 333 or 331-332 (at least one of 331-332 completed but one may be taken concurrently). Lab, M W 12:20-4:25 (disc, F 1:25) or T R 12:20-4:25 (disc, F 2:30); summer: M-F 10-5:30. S. Ely and H. Nivison.

Experiments related to molecular biology (includes PCR, DNA cloning, hybridization analysis, restriction mapping, and DNA sequence analysis), protein purification and analysis (salt fractionation, ion exchange chromatography, affinity chromatography, SDS-PAGE, and immunoblotting), and determination of enzyme kinetic parameters.

[BIOBM 443(4430) Experimental Molecular Neurobiology (also BIONB 430[4300])]

Spring. 4 credits. Limited to 12 students. Co-requisite: BIOBM 440 lab. Letter grades only. Disc, one hour each week on day other than lab day; lab, T all day. Offered alternate years. D. L. Deitcher.

For description, see BIONB 430.]

BIOBM 450(4500) Principles of Chemical Biology (also CHEM 450[4500])

Spring. 3 credits. Prerequisites: CHEM 357-358, 359-360, or equivalent. T. P. Begley.

For description, see CHEM 450.

BIOBM 485(4850) Bacterial Genetics (also BIOMI/BIOGD 485[4850])

Fall. 2 credits. Prerequisite: BIOGD 281. Recommended: BIOMI 290 and BIOBM 330 or 331 and 332 or 333. Lec, W 7:30-9:25 P.M. J. E. Peters.

Students gain a detailed understanding of how bacteria maintain and pass on genetic information with a strong focus on the bacterium *Escherichia coli*. Students discover the processes by which bacteria evolve through different types of mutations and the exchange of genetic information. The course explores how genes are regulated efficiently through negative and positive regulation and by global regulatory mechanisms. Upon completion of the course students should understand the tools used to manipulate bacterial genomes for the understanding of bacteria and other living organisms.

BIOBM 631(6310) Protein Structure and Function

Fall. 3 credits. Prerequisites: BIOBM 330 or 333 or 331-332 and organic chemistry. Recommended: physical chemistry course. S-U grades optional. Lec, M W F 9:05. L. Nicholson.

Presentations on the principles of protein structure and the nature of enzymatic catalysis. Specific topics include protein folding, stability, dynamics and evolution, folded conformations and structure prediction, ligand binding energetics, and the structural basis of catalysis.

BIOBM 632(6320) Membranes and Bioenergetics

Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331-332 or equivalent. Lec, T R 11:15. Offered alternate years. P. C. Hinkle.

Structure and dynamics of biological membranes, physical methods, model membranes, ionophores, ion-transport ATPases, mitochondrial and chloroplast electron transfer chains, and examples of transport from plants, animals, and bacteria. Emphasis given to structure of membrane proteins.

BIOBM 633(6330) Biosynthesis of Macromolecules

Fall. 2 credits. Prerequisite: BIOBM 330 or 333 or 331–332. Recommended: BIOGD 281. Lec, T R 9:05. J. W. Roberts and D. B. Wilson.

Synthesis of DNA, RNA, and proteins, and regulation of gene expression.

BIOBM 636(6360) Advanced Cell Biology

Spring. 3 credits. Prerequisites: BIOBM 330 or 333 or 331–332, and 432, or equivalents. Lec, T R 8:40–9:55. A. P. Bretscher and W. J. Brown.

Aims to provide an integrated view of eukaryotic cell organization as elucidated using biochemical molecular, genetic, and cell biological approaches. Major topics include the cytoskeleton, membrane traffic, and cell polarity. Together with BIOBM 437, 632, and 639 this course provides broad coverage of the cell biology subject area.

BIOBM 638(6380) Macromolecular Interactions and Cell Function

Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331–332. Recommended: BIOBM 631 or 633. S-U grades optional. Lec, T R 11:15–12:05. J. Fu.

Lectures focusing on the principles of protein-protein and protein-nucleic acid interactions that underlie cellular processes such as signal transduction, intracellular traffic, gene regulation, and cell development. The emphasis throughout is on the structural basis of these processes as related to cell function. Some specific topics are signal amplification, nuclear import and export, transcription by RNA polymerases, RNA processing and export, and translation of mRNAs.

BIOBM 639(6390) The Nucleus

Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331–332, or equivalent. Recommended: BIOGD 281. Lec, T R 10:10. J. T. Lis.

Lectures on topics of eukaryotic genome organization, chromatin structure, regulation of gene expression, RNA processing, the structure and movement of chromosomes, and nuclear export and import. Covers the structure and function of the nucleus at the molecular and cell biological levels and, together with BIOBM 437, 632 and 636, provides broad coverage of the cell biology subject area.

BIOBM 641(6410) Laboratory in Plant Molecular Biology (also BIOPL 641[6410])

Fall. 4 credits. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 or equivalent, and permission of instructor. S-U grades by permission of instructor. Lab, T R 9:05–4:30. J. B. Nasrallah, M. R. Hanson, and H. Wang.

Selected experiments on gene expression, gene transfer, and assay of reporter genes in plants. Emphasizes the application of molecular biology methodology to plant systems. Additional lab time is required to complete assignments.

BIOBM 652(Sec 05) Molecular Biology of Plant Organelles (also BIOPL 652.5)

Spring. 1 credit. Lec, M W F 10:10 (12 lec) Feb. 17–Mar. 14. M. R. Hanson and D. B. Stern.

In-depth examination of the molecular biology of plant mitochondria and plastids. Topics include the organization, evolution, and expression of organelle genomes, RNA editing, and the expression of nuclear genes encoding structural or regulatory organelle proteins. Special topics include mitochondrially encoded cytoplasmic male sterility, transformation and expression of foreign genes in chloroplasts, and the use of genetics to investigate nucleus-organelle interactions.

BIOBM 653(Sec 04) Molecular Aspects of Plant Development I (also BIOPL 653.4)

Fall. 1 credit. Lec, M W F 10:10 (12 lec), Nov. 1–Dec. 3. J. B. Nasrallah.

Focuses on the molecular genetics of plant development. Discusses current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs. Topics include cell-cell signalling in the establishment of pattern and differentiation of specialized cell types, and the control of developmental pathways by endogenous and external cues. The module is a companion to BIOPL 652, Sec 02 (Molecular Aspects of Plant Development II).

BIOBM 730(7300) Protein NMR Spectroscopy (also VETMM 707[7070])

Spring. 2 credits. Prerequisites: CHEM 389 and 390, or 287 and 288, or permission of instructor. S-U grades optional. Offered alternate years. Lec TBA. L. K. Nicholson and R. E. Oswald.

Students acquire the tools necessary for in-depth understanding of multidimensional, multinuclear NMR experiments. Schemes for magnetization transfer, selective excitation, water suppression, decoupling, and others are presented. The application of these techniques to proteins for resonance assignment, structure determination, and dynamics' characterization is studied.

BIOBM 732-737(7320-7370) Current Topics in Biochemistry

Fall or spring. 0.5 or 1 credit for each topic; may be repeated for credit. Prerequisite: BIOBM 330 or 333 or 331–332 or equivalent. S-U grades only. Times TBA. Lectures and seminars on specialized topics. Topics for fall and spring to be announced in the division's course supplement published at the beginning of each semester or the department mini-courses web site, mbg.cornell.edu/mini_courses_cfm.

BIOBM 738(7380) Macromolecular Crystallography (also CHEM 788[7880])

Fall. 3 credits. Prerequisite: permission of instructor. Lec, T R 10:10. S. E. Ealick. Lectures briefly cover the fundamentals of crystallography and focus on methods for determining the three-dimensional structures of macromolecules.

BIOBM 751(7510) Ethical Issues and Professional Responsibilities

Spring. 1 credit. Prerequisite: graduate students beyond first year. S-U grades only. Organizational meeting first W of semester. Sem, W 3:35–4:25. Additional sec may be offered. P. Hinkle.

Ethical issues in research and the professional responsibilities of scientists are discussed based on readings and occasional lectures. The topics are intended to cover the requirements for ethical training of graduate students on training grants and follow the recommendations of the Office of Research Integrity.

[BIOBM 761(7610) Topics in Cancer Cell Biology (also VETMM 709[7090])]

Spring. Series of 0.5- or 1-credit graduate sections that reflect cancer expertise of Cornell faculty. Not offered 2005–2006; next offered 2006–2007. Course director, B. U. Pauli.

For description, see VETMM 709.]

BIOBM 830(8300) Biochemistry Seminar

Fall or spring. 0 credits. Prerequisite: graduate students in Biochemistry, Molecular, and Cell Biology. Lec open to everyone. Sem, F 4 p.m. Staff.

Lectures on current research in biochemistry, presented by distinguished visitors and staff members.

BIOBM 831(8310) Advanced Biochemical Methods I

Fall. 6 credits. Requirement for, and limited to, first-year graduate students in field of biochemistry, molecular, and cell biology. S-U grades only. Lab and disc, 12 hours per week TBA. Organizational meeting first R of semester 10:10. T. C. Huffaker.

The first half of this course comprises an intensive laboratory covering fundamental aspects of modern molecular biology and cell biology. The second half comprises research in the laboratory of a professor chosen by the student (see BIOBM 832). Students must enroll separately for each half.

BIOBM 832(8320) Advanced Biochemical Methods II

Spring. 6 credits. Requirement for, and limited to, first-year graduate students in field of biochemistry, molecular, and cell biology. S-U grades only. Lab TBA. T. C. Huffaker.

Research in the laboratories of two different professors chosen by the student. Arrangements are made jointly between the director of graduate studies and the research adviser.

BIOBM 833(8330) Research Seminar in Biochemistry

Fall or spring. 1 credit each semester; may be repeated for credit. Requirement for, and limited to, second-, third-, and fourth-year graduate students majoring in field of biochemistry, molecular and cell biology. S-U grades only. Sem, M 12:20–1:30. W. L. Kraus and V. M. Vogt.

Each student presents one seminar per year on his or her thesis research and then meets with instructors and thesis committee members for evaluation.

BIOBM 836(8360) Methods and Logic in Biochemistry, Molecular and Cell Biology, Part I

Spring. 1 credit. Prerequisite: first-year graduate students majoring in field of biochemistry, molecular, and cell biology. S-U grades only. Sem and disc TBA. G. P. Hess.

Seminar with critical discussion by students of original research papers selected by faculty members of the field of biochemistry, molecular and cell biology.

BIOBM 838(8380) Methods and Logic in Biochemistry, Molecular and Cell Biology, Part II

Spring. 2 credits. Prerequisite: second-year graduate students majoring in field of biochemistry, molecular and cell biology or field of genetics and development. S-U grades only. R 5-7 P.M. D. Shalloway.

Interactive seminar to develop the general skills needed to support a career in scientific research: experimental design, writing scientific papers and grants, oral presentation, basic statistical and computational methods, and managing a research laboratory. Exercises focus on the preparation of a mock research grant proposal.

ECOLOGY AND EVOLUTIONARY BIOLOGY (BIOEE)**BIOEE 154(1540) The Sea: An Introduction to Oceanography, Lectures (also EAS 154[1540])**

Fall. 3 credits; optional 1-credit laboratory offered as BIOEE/EAS 155. S-U grades optional. Lec, M W F 10:10-11. B. Monger and C. H. Greene.

For description, see EAS 154.

BIOEE 155(1550) The Sea: An Introduction to Oceanography, Laboratory (also EAS 155[1550])

Fall. 1 credit. Co-requisite: BIOEE/EAS 154. S-U grades optional. Lab, M 2-4:25 or 7:30-9:55 P.M. B. Monger and C. H. Greene.

For description, see EAS 155.

BIOEE 207(2070) Evolution (also HIST/STS 287[2870])

Fall or summer (six-week session). 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOEE 278. Does not meet evolutionary biology requirement for biological sciences major. S-U grades optional. Fall: Lec, T R 10:10; disc, 1 hour each week TBA. Summer: lec and disc, M W 6-9 P.M. W. B. Provine.

Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. This course aims to understand the major issues in the history and current status of evolutionary biology and explore the implications of evolution for

culture. Issues range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

BIOEE 261(2610) Ecology and the Environment

Fall or summer (three-week session). 4 credits. Prerequisite: one year introductory biology. S-U grades optional. Fall: lec, M W F 11:15; disc, W or R 1:25, 2:30, or 3:35. B. F. Chabot and N. G. Hairston. Summer: lec, M T W R F 8:30-12:20; one weekend field trip. A. T. Vawter.

Fall: Explores interactions between the environment and organisms in the context of individuals, populations, communities, and ecosystems. Emphasizes basic ecological principles and processes intrinsic to understanding the world around us and in more advanced studies in the environmental sciences, including management-oriented disciplines. Major topics include adaptive strategies of organisms, population dynamics, species interactions, community structure and ecosystem function, biodiversity, biogeochemistry, productivity, human influences on ecosystems, and sustainable practices.

Summer: Introduction to principles of ecology, concerning the interactions between organisms and their environment. Deals with both terrestrial and aquatic ecology, drawing examples from both plant and animal studies. Phenomena that occur at the individual, population, community, and ecosystem levels of organization are examined through classroom lectures and discussion and through a series of lab and field experiences in natural habitats around Ithaca and in the Adirondack Forest Preserve. Ecological principles are applied extensively to current environmental problems and issues.

BIOEE 263(2630) Field Ecology

Fall. 3 credits. Pre- or co-requisite: BIOEE 261. Lec, R 1:25; lab, F 12:20-4:25; one weekend field trip to Hudson Valley. P. L. Marks.

Field exercises designed to give students direct experience with fieldwork, with emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of insects, influence of herbivores and competition on plant performance, decomposition of soil litter, foraging behavior, census methods, and use of scientific collections.

BIOEE 264(2640) Tropical Field Ornithology

Winter, Jan. 5-19, 2006, two-week, full-time course. 3 credits. Limited to 12 students; minimum of 8. Prerequisite: permission of instructor. Intended for students with limited or no bird knowledge. S-U grades optional. Daily fieldwork, disc, reading, and individual project. Cost of tuition covers airfare, food, and lodging. A. A. Dhondt.

Provides students with the opportunity to study birds intensively in a neotropical environment. Students learn observational and field techniques, participate in group research projects and in daily seminars. The group is housed in the Biodiversity Center at Punta Cana. One or two field trips are taken to national parks in the Dominican Republic.

BIOEE 265(2650) Tropical Field Ecology and Behavior (also BIONB 265[2650])

Summer, three-week field course based in Kenya, Africa, during July. 4 credits. Limited to 15 students. Prerequisites: one introductory biology course and permission of instructors. I. J. Lovette and D. Rubenstein.

Gives students a broad hands-on understanding of tropical biology, ecology, and behavioral ecology. Students gain experience with experimental design and data collection, field methods, basic statistics, interpretation and evaluation of primary scientific literature, and scientific paper writing. Most in-country costs (e.g., ground transportation, room, board) are covered by course tuition, but students pay separately for their international airfare and there may also be a small supplementary laboratory fee.

BIOEE 267(2670) Introduction to Conservation Biology

Fall. 3 credits. Intended for both science and nonscience majors. May not be taken for credit after NTRES 450. Completion of BIOEE 267 not required for NTRES 450. S-U grades optional. Lec, M W 9:05; disc, F 9:05 or R 2:30; one S.A.M. field trip in lieu of disc. Offered alternate years. J. W. Fitzpatrick.

Broad exploration of biological concepts and practices related to conserving the earth's biodiversity; integrates ecological, evolutionary, behavioral, and genetic principles important for understanding conservation issues of the 21st century. Topics include species and ecosystem diversity, values of biodiversity, causes of extinction, risks facing small populations, simulation modeling, design of nature preserves, the Endangered Species Act, species recovery, ecosystem restoration and management, and past and future human impacts on the planet.

BIOEE 274(2740) The Vertebrates: Structure, Function, and Evolution

Spring. 4 credits. Prerequisite: one year introductory biology. Fee: \$25. S-U grades optional. Lec, M W F 9:05; lab, M T or W 1:25-4:25. B. McGuire.

Introductory course in vertebrate organismal biology that explores the structure and function of vertebrates with an emphasis on trends in vertebrate evolution. Lectures cover topics such as the origin and evolution of various vertebrate groups, sensory systems, thermoregulation, life history, locomotion, feeding, size, and scaling. Laboratories include dissections of preserved vertebrate animals and noninvasive live animal demonstrations.

[BIOEE 275(2750) Human Biology and Evolution (also ANTHR/NS 275[2750])

Fall. 3 credits. S-U grades optional by permission of either instructor. Lec, M W F 10:10; disc, M 10:10 or TBA; lec every W and F; occasional lec, M. Not offered 2005-2006. K. A. R. Kennedy and J. D. Haas.

Introduction to the biology of *Homo sapiens* through an examination of human evolution, biological diversity, and modes of adaptation to past and present environments. Reviews evolutionary theory in relation to the current evidence from the fossil record and studies of the evolution of human behavior. A survey of human adaptation covers a complex of biological and behavioral responses to environmental stress. Human diversity is examined as the product of long-term evolutionary forces and short-term adaptive

responses. Topics such as creationism, the Piltown fraud, the sociobiology debate, genetic engineering, race and IQ, and racism are presented as examples of current issues in human biology.]

BIOEE 278(2780) Evolutionary Biology

Fall or spring. 3 or 4 credits; 4-credit option involves writing component and two disc per week; 4-credit option limited to 20 students per sec each semester. (Students may not preregister for 4-credit option; interested students complete application form on first day of class.) Limited to 300 students. Prerequisite: one year introductory biology or permission of instructor; first-semester freshmen by permission of instructor. S-U grades optional. Evening prelims: fall, Sept. 29 and Nov. 3; spring, Mar. 2 and Apr. 4; lec, T R 9:05; disc, 1 hour each week TBA.

Fall, R. G. Harrison; spring, M. J. Shulman. Considers explanations for patterns of diversity and for the apparent "good fit" of organisms to the environment. Topics include the genetic and developmental basis of evolutionary change, processes at the population level, the theory of evolution by natural selection, levels of selection, concepts of fitness and adaptation, modes of speciation, long-term trends in evolution, rates of evolution, and extinction. Students taking the 4-credit option read additional materials from the primary literature and write a series of essays in place of the regular prelims.

BIOEE 350(3500) Dynamics of Marine Ecosystems (also EAS 350(3500))

Fall. 3 credits. Limited to 25 students. Prerequisites: one year of calculus and semester of oceanography (i.e., BIOEE/EAS 154), or permission of instructor. S-U grades optional. Lec, T R 1:25-2:40. Offered alternate years. C. H. Greene and R. W. Howarth.

For description, see EAS 350.

BIOEE 351(3510) Marine Ecosystems Field Course (also EAS 351(3510))

Spring, full-time, three-week course. 4 credits. Limited to 25 students. Prerequisite: enrollment in Cornell Abroad Earth and Environmental Sciences Semester in Hawaii; one semester of calculus and two semesters of biology or permission of instructor. C. H. Greene, C. D. Harvell, and B. Monger.

For description, see EAS 351.

BIOEE 362(3620) Dynamic Models in Biology (also MATH 362(3620))

Spring. 4 credits. Prerequisites: two semesters introductory biology (BIO G 101-102, 105-106, 107-108, 109-110 or equivalent) and completion of mathematics requirements for Biological Sciences major or equivalent. S-U grades optional. Lec, T R 1:25-2:40; computer lab, F 12:20-2:15. Offered alternate years. S. P. Ellner and J. M. Guckenheimer.

Introductory survey of the development, computer implementation, and applications of dynamic models in biology and ecology. Case-study format covering a broad range of current application areas such as regulatory networks, neurobiology, cardiology, infectious disease management, and conservation of endangered species. Students also learn how to construct and study biological systems models on the computer using a scripting and graphics environment.

BIOEE 369(3690) Chemical Ecology (also BIONB/ENTOM 369(3690))

Spring. 3 credits. Prerequisites: one semester of introductory biology for majors or nonmajors and one semester of introductory chemistry for majors or nonmajors or equivalents, or permission of instructor. S-U grades optional. Lec, M W F 11:15-12:05. A. Agrawal, G. Jander, A. Kessler, J. Thaler.

Why are chilies so spicy? This course examines the chemical basis of interactions between species and is intended for students with a basic knowledge of chemistry and biology. Focuses on the ecology and chemistry of plants, animals, and microbes. Stresses chemical signals used in diverse ecosystems, using Darwinian natural selection as a framework. Topics include: plant defenses, microbial warfare, communication in marine organisms, and human pheromones.

BIOEE 371(3710) Human Paleontology (also ANTHR 371)

Spring. 4 credits. Limited to 18 students. Prerequisite: one year introductory biology or ANTHR 101 or permission of instructor. Lec and lab, M W F 2:30; occasional field trips. K. A. R. Kennedy.

Broad survey of the fossil evidence for human evolution with special attention to skeletal and dental anatomy, geological contexts, paleoecology, dating methods, archaeological associations, and current theories of human origins and physical diversity.

BIOEE 373(3730) Biology of the Marine Invertebrates

Fall (but course must be taken previous summer at Shoals Marine Laboratory [SML]), three-week, full-time course. 5 credits (students enroll for credit during fall semester). Limited to 24 students. Prerequisite: one year introductory biology for majors; permission of faculty because off campus. Daily and evening lec, lab, and fieldwork. Total cost for room, board, and overhead at SML: \$1,200. Offered alternate years. C. D. Harvell and J. G. Morin.

Introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. SML exposes students to a wealth of marine and terrestrial invertebrates in their natural habitats. Regular field excursions allow an excellent opportunity to study freshly collected and *in situ* representatives of most of the major phyla.

BIOEE 405(4050) Biology of the Neotropics

Spring. 2 credits. Limited to 18 students. Prerequisite: BIOEE 261 or permission of instructor. S-U grades optional. Lec and disc, W 7:30-9:30 P.M. P. H. Wrege and A. S. Flecker.

Introductory survey of the biology of the New World tropics, with primary focus on moist lowland forests. The objectives are to learn basic characteristics and phenomena important to understanding neotropical biology, to gain firsthand knowledge of the resources in tropical biology available at Cornell, and to learn how to organize and execute a meaningful seminar presentation.

[BIOEE 452(4520) Herbivores and Plants: Chemical Ecology and Coevolution (also ENTOM 452(4520))]

Spring. 3 credits. Prerequisites: one year introductory biology, BIOEE 261, CHEM 257 or 357/358 and 251 or 301, or permission of instructor. S-U grades optional. Field trips, additional lec, or lab demonstrations may be held in place of F lec; lec, M W F 11:15. Offered alternate years; not offered 2005-2006. P. P. Feeny. Topics include significance of plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant finding and exploitation by animals, especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack; and implications for human food and agriculture.]

[BIOEE 453(4530) Speciation]

Spring. 4 credits. Limited to 40 students. Prerequisites: BIOEE 278 and BIOGD 281 or equivalents, or permission of instructor. S-U grades optional. Lec, T R 10:10-11:25; disc, one hour each week TBA. Offered alternate years; not offered 2005-2006. R. G. Harrison.

Advanced course in evolutionary biology focusing on the pattern and process of speciation and the nature and origin of intrinsic barriers to gene exchange. Lecture topics include species concepts and definitions, the history of ideas about speciation, the biological basis of intrinsic barriers to gene exchange, current models for the origin of such barriers, genetic architecture of speciation, rates of speciation. Emphasis is on developing a rigorous conceptual framework for discussing speciation and on detailed analysis of a series of case histories.]

BIOEE 455(4550) Insect Ecology (also ENTOM 455(4550))

Fall. 3 credits. Recommended: ENTOM 212 or BIOEE 261 or permission of instructor. S-U grades optional. Lec, T R 9:05-9:55; lab, T 1:25-4:25. Offered alternate years. J. S. Thaler.

For description, see ENTOM 455.

BIOEE 456(4560) Stream Ecology (also NTRES 456(4560))

Fall. 4 credits. Limited to 40 students. Prerequisite: BIOEE 261 or permission of instructor. S-U grades optional. Field project with lab papers. Lec, T R 9:05; lab, T or W 1:25-4:25; one Sat field trip. Offered alternate years. A. S. Flecker and C. E. Kraft.

For description, see NTRES 456.

[BIOEE 457(4570) Limnology: Ecology of Lakes, Lectures]

Spring. 3 credits. Prerequisite: BIOEE 261 or written permission of instructor. Recommended: introductory chemistry. Letter grades; S-U by permission only. Lec, M W F 11:15. Offered alternate years; not offered 2005-2006. N. G. Hairston, Jr. Limnology is the study of fresh waters and other inland, nonmarine environments. This course focuses on lakes and ponds, which are discussed as distinct aquatic environments with clear terrestrial boundaries, and within which ecological interactions are especially evident. In lakes, interactions between organisms are often strong and adaptations easily recognized. Physical and chemical properties of the environment impact organisms in important ways and organisms,

likewise, influence physics and chemistry. As a result, lakes provide excellent systems for understanding the links between physical (thermal and mixing), chemical (dissolved elements and compounds), and organismal dynamics. Lakes are exciting environments for study in their own right and for gaining perspective on ecological and evolutionary processes in general.]

BIOEE 458(4580) Community Ecology

Spring. 4 credits. Prerequisites: BIOEE 261, 278, or permission of instructor. S-U grades optional. Lec, T R 1:25-2:40; disc, W 1:25-2:15 or R 11:15-12:05. Offered alternate years. M. A. Geber and A. Agrawal.

Intersection between ecology and evolution of species interactions. Covers historical and current views on community structure and diversity. Topics include impacts of species interactions on ecology and evolution of community players, multispecies webs and natural selection in complex communities. Approach is empirical and methodological.

[BIOEE 459(4590) Limnology: Ecology of Lakes, Laboratory]

Spring. 2 credits. Pre- or co-requisite: BIOEE 457. Letter grades; S-U by permission only. Lab, T W or R 1:25-4:25; one weekend field trip. Fee for food on field trip: \$12. Offered alternate years; not offered 2005-2006; next offered spring 2008. N. G. Hairston, Jr. and staff.

Laboratories and field trips devoted to studies of the biological, chemical, and physical properties of lakes and other freshwater environments. Exercises focus on understanding the freshwater environment, on experimentation, and on understanding ecological processes within lakes. Optional vertebrate dissection (fish) during one laboratory exercise and during a portion of the weekend field trip.]

[BIOEE 460(4600) Theoretical Ecology]

Spring. 4 credits. Limited enrollment. Prerequisites: completion of Biological Sciences mathematics requirement or equivalent, and either one additional semester of mathematics, statistics, or modeling (e.g., BEE 260/411, NTRES 305/460, BIONB 422) or permission of instructor. S-U grades optional. Lec, T R 1:25-2:40; lab, M 2-4:25. Offered alternate years; not offered 2005-2006. S. P. Ellner.

Introduction to the models used to construct ecological theory and analyze data on ecological dynamics, and to the mathematical and computer methods used to analyze these models. Applications from individual decision-making through multispecies and spatial dynamics introduce the main themes in theoretical ecology: optimization, dynamics, and the links between process and pattern. The lab includes instruction in computer programming and review of mathematical methods.]

[BIOEE 462(4620) Marine Ecology (also EAS 462[4620])]

Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE 261. Letter grades; S-U by permission only. Lec and disc, M W F 11:15. Offered alternate years; not offered 2005-2006. C. D. Harvell and C. H. Greene.

Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine

systems including organismal, population, community, ecosystems, and evolutionary biology. Examples are drawn from all types of marine habitats, including polar seas, temperate coastal waters, and tropical coral reefs.]

[BIOEE 463(4630) Plant Ecology and Population Biology, Lectures]

Fall. 3 credits. Prerequisite: BIOEE 261 or 278 or equivalents, or permission of instructor. Recommended: some taxonomic familiarity with vascular plants and concurrent enrollment in BIOEE 465. Lec, M W F 11:15. Not offered 2005-2006. M. A. Geber and P. L. Marks.

Examines the biological and historical factors affecting the structure of plant communities, and the distribution, abundance, and population dynamics of individual species. * Considers the influence of the environment, disturbance history, competition, and herbivory on the organization of plant communities. Plant populations are also studied through an analysis of plant life histories and plant-plant and plant-animal interactions. Throughout the course an attempt is made to blend empirical patterns, experimental results, and theory. Readings are drawn from the primary literature.]

BIOEE 464(4640) Macroevolution

Spring. 4 credits. Limited to 30 students. Prerequisite: BIOEE 278 or permission of instructor. Interested graduate students strongly encouraged to preregister. S-U grades optional by permission of instructor. Lec, T R 10:10-11:25; disc, one hour each week TBA. Offered alternate years. A. R. McCune.

Advanced course in evolutionary biology centered on large-scale features of evolution. Areas of emphasis include phylogeny reconstruction, patterns and processes of speciation, the origin of variation, causes of major evolutionary transitions, and patterns of diversification and extinction in the fossil record. Discussion of these problems involves data and approaches from genetics, morphology, systematics, paleobiology, development, and ecology.

[BIOEE 465(4650) Plant Ecology and Population Biology, Laboratory]

Fall. 1 credit. Co-requisite: BIOEE 463. Lab, F 12:05-5. Not offered 2005-2006. M. A. Geber and P. L. Marks.

Field and laboratory exercises are designed to give firsthand experience with the ecology and population biology of plants. Emphasis is on making observations and measurements of plants in the field and greenhouse, and on data analysis.]

[BIOEE 466(4660) Physiological Plant Ecology, Lectures]

Spring. 3 credits. Limited to 30 students. Prerequisite: BIOEE 261 or introductory plant physiology. S-U grades optional by permission of instructor. Lec, M W F 10:10-11. Offered alternate years; not offered 2005-2006. J. P. Sparks.

Detailed survey of the physiological approaches used to understand the relationships between plants and their environment. Lectures explore physiological adaptation; limiting factors; resource acquisition and allocation; photosynthesis, carbon, and energy balance; water use and water relations; nutrient relations; linking physiology, development, and morphology; stress physiology; life history and physiology;

the evolution of physiological performance; and physiology at the population, community, and ecosystem levels. Readings draw from the primary literature and textbooks.]

BIOEE 467(4670) Seminar in the History of Biology (also HIST 415[4150], B&SOC/S&TS 447[4471])

[Fall] or summer (six-week session). 4 credits. Limited to 18 students. S-U grades optional. Not offered fall 2005. W. B. Provine.

Specific topic changes each year.

[BIOEE 468(4680) Physiological Plant Ecology, Laboratory]

Spring. 2 credits. Limited to 15 students. Pre- or co-requisite: BIOEE 466. Lab, M 1:25-4:25, plus additional lab Times TBA. Offered alternate years; not offered 2005-2006. J. P. Sparks.

Detailed survey of the physiological approaches used in understanding the relationships between plants and their environment. Laboratories apply physiological techniques to specific ecological problems and cover aspects of experimental design and computer-aided data analysis. Most laboratories run past the three-hour period, with students spending an average of three hours per week in additional lab time for this course.]

[BIOEE 469(4690) Food, Agriculture, and Society (also B&SOC/S&TS 469[4691])]

Spring. 3 credits. Limited to 20 students. Prerequisite: introductory ecology course or permission of instructor. S-U grades optional. Lec, T R 1:25-2:40. Not offered 2005-2006. A. G. Power.

Multidisciplinary course dealing with the social and environmental impact of food production in the United States and developing countries. Agroecosystems of various kinds are analyzed from biological, economic, and social perspectives. The impacts of traditional, conventional, and alternative agricultural technologies are critically examined in the context of developed and developing economies. Specific topics include pest management, soil conservation, plant genetic resources, biotechnology, and sustainable development.]

[BIOEE 470(4700) Herpetology, Lectures]

Spring. 2 credits. Limited to 50 students. Recommended: BIOEE 274 and concurrent enrollment in BIOEE 472. S-U grades optional by permission of instructor. Lec, T R 12:20-1:10. Offered alternate years; not offered 2005-2006. H. W. Greene.

Lectures cover various aspects of the biology of amphibians and reptiles, including evolution, zoogeography, ecology, behavior, and physiology.]

[BIOEE 471(4710) Mammalogy]

Fall. 4 credits. Recommended: BIOEE 274. S-U grades optional by permission of instructor. Carpooling to Cornell University Museum of Vertebrates (CUMV) necessary several times during semester. Fee: \$15. Lec, M W F 12:20; lab, M T or W 1:25-4:25; one required weekend field trip. Not offered 2005-2006; next offered 2006-2007. B. McGuire.

Lectures on the evolution, classification, distribution, and adaptations of mammals. Laboratory and fieldwork on systematics, ecology, and natural history of mammals of the world, with primary emphasis on

the North American fauna. Systematics laboratories held in the museum at Research Park. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics laboratory exercises are based on museum specimens.]

[BIOEE 472(4720) Herpetology, Laboratory]

Spring. 2 credits. Limited to 35 students. Pre- or co-requisite: BIOEE 470. S-U grades optional by permission of instructor. Fee: \$30. Lab, T R 1:25–4:25; occasional field trips and special projects. Offered alternate years; not offered 2005–2006.
H. W. Greene.

Laboratory topics include systematics, morphology, and behavior. Live animals are studied in the field and are used in the laboratory for nondestructive demonstrations and experiments. The systematics laboratory exercises are based on museum specimens and dissection of preserved materials.]

[BIOEE 473(4730) Ecology of Agricultural Systems (also CSS 473(4730))]

Fall. 3 credits. Limited to 45 students. Prerequisite: BIOEE 261 or permission of instructor. S-U grades optional. During first six weeks of class, R meetings may run later because of field trips. Lec and disc, T R 2:30–3:45. Not offered 2005–2006.
A. G. Power and E. C. M. Fernandes.

Analyzes the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Uses case studies from both the tropics and the temperate zone to illustrate important concepts.]

[BIOEE 475(4750) Ornithology]

Spring. 4 credits. Limited to 35 students. Prerequisite: permission of instructor by preregistering in E141 Corson Hall. Recommended: BIOEE 274. S-U grades optional by permission of instructor. Carpooling to Lab of Ornithology necessary. Fee: \$15. Lec and lab, T R 12:20–4:25; occasional field trips and special projects. Offered alternate years.
D. W. Winkler.

Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and biogeography. Laboratory includes dissection of dead material, studies of skeletons and plumages, and specimen identification of avian families of the world and species of New York.

[BIOEE 476(4760) Biology of Fishes]

Fall. 4 credits. Limited to 24 students. Recommended: BIOEE 274 or equivalent experience in vertebrate zoology. S-U grades optional by permission of instructor. Small lab fee may be required. Lec, M W F 10:10; lab, M 1:25–4:25; additional lab time TBA; two field trips. Offered alternate years; not offered 2005–2006.
A. R. McCune.

Introduction to the study of fishes: their structure, physiology and functional morphology, behavior, ecology, diversity, evolution, classification and identification.

Emphasizes marine fishes from different habitats (temperate, tropical coral reef, intertidal and deep sea); local freshwater species; and interesting freshwater fishes from around the world, especially South America and Africa. Two field trips, including one full-day weekend trip required. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics and dissection laboratories use preserved specimens.]

[BIOEE 477(4770) Marine Invertebrates Seminar]

Fall. 1 credit. Prerequisite: BIOEE 373 or permission of instructor. S-U grades only. Sem, one hour each week TBA. Offered alternate years; not offered 2005–2006.
C. D. Harvell and J. G. Morin.

Discussions and directed readings center on current research themes in Invertebrate Biology. Designed as an on-campus companion course to the field-based BIOEE 373 Biology of the Marine Invertebrates. Students write individual research essays based on projects done in the field.]

[BIOEE 478(4780) Ecosystem Biology]

Spring. 4 credits. Prerequisite: BIOEE 261 or equivalent. S-U grades optional. Lec and disc, T R 10:10–12:05. Offered alternate years; not offered 2005–2006.
C. L. Goodale and R. W. Howarth.

Analyzes ecosystems in terms of energy flow and nutrient cycles, emphasizing an experimental approach and comparative aspects of terrestrial, freshwater, and marine ecosystems. Considers anthropogenic effects on ecosystems, such as from acid precipitation and nitrogen pollution. Also analyzes climate change and regional environmental change from an ecosystem perspective.]

[BIOEE 479(4790) Paleobiology (also EAS 479(4790))]

Fall. 4 credits. Prerequisites: one year introductory biology for majors and either BIOEE 274, 373, EAS 375, or permission of instructor. S-U grades optional. Lec, T R 10:10–11:25; lab, W 2–4:25. Offered alternate years; not offered 2005–2006.
W. Allmon.

For description, see EAS 479.]

[BIOEE 490(4900) Topics in Marine Biology]

Spring. 2 credits; may be repeated for credit. Limited to 15 students. Prerequisite: permission of instructor. Primarily for undergraduates. S-U grades optional. Lec, F 1:25–3:20. Offered alternate years; not offered 2005–2006. J. G. Morin and M. J. Shulman.

Seminar courses on selected topics in marine biology; may include laboratory or field trips. Topics and time of organizational meeting are shown in departmental course offerings listed on the web site.]

[BIOEE 660(6600) Field Studies in Ecology and Systematics]

Fall or spring. Variable credit. Prerequisites: BIOEE 261, taxon-oriented course, and permission of instructor. S-U grades optional by permission of instructor. Lec and field trips TBA. Estimated costs: TBA. Staff.

Provides students with opportunities to learn field techniques and new biota by participating in an intensive series of field exercises. Extended field trips may be

scheduled during fall break, intersession, or spring break. The regions visited, trip objectives, and other details are announced by the various instructors at an organizational meeting held at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.

[Sec 01 Life Histories of Marine and Freshwater Invertebrates]

Spring. 2 credits. Prerequisite: for undergraduates, experience or course work with marine or freshwater invertebrates. Extended field trips over winter break. Fee to cover transportation and housing: TBA. Offered alternate years; not offered 2005–2006. C. D. Harvell and N. G. Hairston, Jr.

Field trips to the Yucatan Coast of Mexico. Students employ experimental approaches to study the ecology of invertebrate life histories.]

[Sec 02 Graduate Field Course in Ecology]

Spring. 3 credits. Prerequisite: graduate standing. Fee charged to help cover food and lodging for trip to Florida. Offered alternate years. J. P. Sparks.

Designed to give graduate students experience in defining questions and designing field investigations. The course is based at the Archbold Biological Station in central Florida over spring break and during the following week. The class visits several ecosystems including sand pine scrub, cattle ranches, cypress swamps, and the everglades.

[BIOEE 661(6610) Environmental Policy (also ALS 661(6610), B&SOC 461(4611))]

Fall and spring. 3 credits each semester; students must register for 6 credits each semester since R grade given at end of fall semester. Limited to 12 students.

Prerequisite: permission of instructor. Sem, R 2:30–4:30. D. Pimentel.

Focuses on complex environmental issues. Ten to 12 students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in *Science* or *BioScience*. Thus far, every study has been published.

[BIOEE 665(6650) Limnology Seminar]

Spring. 1 credit; may be repeated for credit. Prerequisite: graduate standing or written permission of instructor. S-U grades optional. Sem TBA. Not offered 2005–2006. N. G. Hairston, Jr.

Advanced topics in freshwater ecology.]

[BIOEE 668(6680) Principles of Biogeochemistry]

Spring. 4 credits. Limited to 20 students. Prerequisite: solid background in ecology, environmental chemistry, or related environmental science; for undergraduates, permission of instructor. S-U grades optional. Lec and disc, T R 10:10–12:05. Offered alternate years. R. W. Howarth and C. L. Goodale.

Lectures cover the biotic controls on the chemistry of the environment and the chemical control of ecosystem function. Emphasis is on cycles of major elements and minor elements globally and in selected ecosystems, stressing the coupling of element cycles. A comparative approach is used to illustrate similarities and differences in element cycling among ecosystems. Analysis of both theoretical and applied issues, including global atmospheric changes and factors controlling the acidification of lakes and soils.

[BIOEE 669(6690) Plant Ecology Seminar

Spring. 1 credit; may be repeated for credit. Recommended for students majoring or minoring in plant ecology. S-U grades optional. Sem TBA. Not offered 2005-2006. Staff.

Includes review of current literature, student research, and selected topics of interest to participants.]

BIOEE 670(6700) Graduate Seminar in Vertebrate Biology

Fall or spring. 1 credit; may be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades only. Sem TBA. Staff.

Seminar presentations and discussions by students on areas of current research in vertebrate biology. Topics vary from semester to semester.

[BIOEE 671(6710) Palaeoanthropology of South Asia (also ANTHR/ASIAN 671[6371])

Fall. 3 credits. Limited to 15 students. Lec, M 2:30-3:20; sem, W 7:30-9:30 P.M. Not offered 2005-2006. K. A. R. Kennedy.

Explores recent developments in the prehistoric archaeology, palaeoecology, and biological anthropology of the ancient peoples of India, Pakistan, Sri Lanka, and the bordering countries. Discusses issues of origin and decline of the Indus Civilization, fossil record of early humans in the Indian subcontinent, and current research topics.]

[BIOEE 673(6730) Human Evolution: Concepts, History, and Theory (also ANTHR 673[6373])

Spring. 3 credits. Prerequisite: one year introductory biology or ANTHR 101 or permission of instructor. Lec, M 2:30; sem and disc, W 7:30-9:30 P.M. Not offered 2005-2006. K. A. R. Kennedy.

Survey of the historical background of present-day concepts of human evolutionary variations and adaptations in space and time. Reviews the formation of biological anthropology as an area of scientific inquiry within the social and biological sciences. Students select their own topics within a broad range of readings in the history of Western concepts of human origins, diversity, and place in nature.]

BIOEE 760(7600) Special Topics in Evolution and Ecology

Fall or spring. 1-3 credits; may be repeated for credit. Limited enrollment. S-U grades optional by permission of instructor. Staff.

Independent or group intensive study of special topics of current interest. Content varies each semester.

Sec 02 Functional Genomics in Non-Model Organisms (also BIOGD 780.1)

Fall. 2 credits. Prerequisite: knowledge of either basic genetics or ecology/evolutionary biology. Intended for graduate students. S-U grades optional. M 1:25-3:20 plus required attendance at four sem, 12:20-1:15 M, 9/26, 10/17, 10/31 and 11/14. A. McCune, A. Clark, D. Winkler, and M. Wolfner.

This one-time course, offered only in fall 2005, brings geneticists/genomicists together with ecologists/evolutionary/organismal biologists to explore an important interdisciplinary area: the genetic basis of phenotypes in nonmodel organisms. The first part of the

course develops background on genomic techniques and on study of nonmodel organisms. Subsequently, the course centers on research lectures by four eminent visiting scientists who are leaders in genomic studies of nonmodel organisms. Groups of students present a seminar to the class on the work of each upcoming visitor. On the week of a speaker-visit, students attend the speaker's seminar at 12:20, and then the class meets with the visitor to discuss the research presented as well as more general aspects of functional genomics.

BIOEE 761(7610) Microsatellite DNA: Techniques

Fall. 1 credit; may be repeated for credit. Limited to 12 students. Prerequisite: permission of instructor. S-U grades only. Fee: TBA. Lec and disc, TBA.

R. G. Harrison and S. M. Bogdanowicz. Construct and screen genomic DNA libraries for microsatellite loci. Lectures and group discussions regarding microsatellite isolation, characterization, and evolution. Informal presentations of student research projects.

BIOEE 763(7630) Workshop in Biogeochemistry

Fall or spring. 1-3 credits; may be repeated for credit. Limited to 15 students. Prerequisite: BIOEE 668. S-U grades only. Workshop and disc, TBA. Staff.

Workshop-forum in which graduate students interact with invited world leaders in biogeochemistry. Workshop topics change each semester. A one-week workshop is preceded by seven one-hour preparatory discussions of readings.

BIOEE 767(7670) Current Topics in Ecology and Evolutionary Biology

Fall. 4 credits. Prerequisite: for undergraduates, permission of instructor. S-U grades only. Lec and disc, T R 10:10-12:05. P. P. Feeny.

Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

BIOEE 899(8900) M.S. Thesis Research

Fall or spring. 1-15 credits. Prerequisite: admission to field of ecology and evolutionary biology. S-U grades optional. E&EB field faculty.

Thesis research conducted by an M.S. student in the field of ecology and evolutionary biology with advice and consultation of a major professor who is a member of the field.

BIOEE 999(9900) Ph.D. Dissertation Research

Fall or spring. 1-15 credits. Prerequisite: admission to field of ecology and evolutionary biology as Ph.D. student. S-U grades optional. E&EB field faculty.

Dissertation research conducted by a Ph.D. student in the field of ecology and evolutionary biology with advice and consultation of a major professor who is a member of the field.

BIOGD 132(1320) Orientation Lectures in Molecular Biology and Genetics (also BIOBM 132(1320))

Spring, weeks 1-3. 0 credits. Primarily for freshmen, sophomores, and transfer students. S-U grades only. Lec, S 11:15, for first three S of semester (Jan. 28, Feb. 8, Feb. 11, 180 Biotechnology Bldg.) Staff. For description, see BIOBM 132.

BIOGD 280(2800) Lectures in Genetics

Fall, spring, or summer (eight-week session). 3 credits. Not open to freshmen in fall semester. Lec component of BIOGD 281. Not open to students majoring in biological sciences; may not be used to fulfill requirements for biological sciences major. Prerequisites: one year introductory biology or equivalent, or permission of instructor. Lec, T R 10:10-12:05. Highly recommended: problem-solving sessions, T or W 8:30-9:45 (additional session by arrangement). T. D. Fox and R. J. MacIntyre.

General study of the fundamental principles of genetics in eukaryotes and prokaryotes. Topics include gene transmission, gene linkage and recombination, gene structure, gene and chromosome mutations, gene expression, and the manipulation of genes.

BIOGD 281(2810) Genetics

Fall, spring, or summer (eight-week session). 5 credits. Not open to freshmen fall semester. Prerequisite: one year introductory biology or equivalent. Lec, T R 10:10-12:05; lab. Highly recommended: problem-solving sessions, T or W 8:30-10 (additional session TBA). T. D. Fox, R. MacIntyre, and D. Nero.

For description, see BIOGD 280.

BIOGD 282(2820) Human Genetics

Spring. 2 or 3 credits; 2 credits if taken after BIOGD 281. Limited to 20 students per disc. Prerequisite: one year introductory biology or equivalent. S-U grades optional. Lec, M W 10:10 (also F 10:10 first four weeks only); disc, R 10:10 or F 10:10 or 11:15. M. L. Goldberg.

Designed for nonmajors. Lectures provide the technical background needed to understand controversial personal, social, and legal implications of modern genetics that are discussed in section meetings.

BIOGD 385(3850) Developmental Biology

Fall. 3 credits. Prerequisite: BIOGD 281. Lec, M W F 11:15. J. Liu.

Introduction to the morphogenetic, cellular, and genetic aspects of the developmental biology of animals.

BIOGD 394(3940) Circadian Rhythms (also ENTOM/BIONB/PL PA 394(3940))

Fall. 2 credits. Prerequisite: ENTOM 212 or BIOGD 281 or BIONB 221 or 222 or permission of instructor. S-U grades optional. Lec, W 7:30-9:40 P.M. J. Ewer. For description, see ENTOM 394.

BIOGD 400(4000) A Genomics Approach to Studying Life

Fall. 3 credits. Prerequisites: one year introductory biology plus BIOGD 281 or 330 or 333 or 331/332 or permission of instructor. S-U or letter grades. Lec, M W 2:55-4:10. J. Schimenti.

Introduction to principles underlying the organization of genomes and the methods of studying them, emphasizing genome-wide approaches to research. Covers the application of genomics methodologies for addressing issues including evolution, complex systems, genetics and gene: phenotype relationships. Includes periodic, in-depth discussions of landmark or timely genomics papers.

BIOGD 401(4010) Genomic Analysis

Spring. 3 credits. Prerequisites: BIOGD 400 or permission of instructor. Lec, T R 10:10-11:25. T. P. O'Brien.

Overview of approaches and tools used in genomics research. Covers experimental and computational technologies as well as theoretical concepts important for the study of genomes and their function. Topics include high-throughput DNA sequencing and genotyping, genetic mapping of simple and complex traits, RNA expression profiling, proteomics, genome modification and transgenesis, and computational genomics.

BIOGD 402(4020) Insect Development (also ENTOM 400(4000))

Spring. 4 credits. Prerequisite: ENTOM 212 or BIOGD 281 or permission of instructor. S-U grades optional. Lec, M W 11:15; lab, M 12:20-3:20; disc, F 11:15-12:05. Offered alternate years. J. Ewer.

For description, see ENTOM 400.

BIOGD 439(4390) Molecular Basis of Human Disease (also BIOBM 439(4390))

Fall. 3 credits. Prerequisites: biochemistry and molecular biology (e.g., BIOBM 330, 331/332, or 333) and genetics (e.g., BIOGD 281) or permission of instructor. Recommended: cell biology (e.g., BIOBM 432 or BIOAP 316) and physiology (e.g., BIOAP 311 or 458). S-U grades optional. Lec, T R 10:10-11:25. Not offered 2006-2007. W. L. Kraus.

For description, see BIOBM 439.

BIOGD 450(4500) Vertebrate Development

Spring. 3 credits. Prerequisite: introductory biology. S-U and letter grades. Offered alternate years. Lec, T R 11:40-12:55. K. Whitlock.

Designed to examine the development of characteristics that make vertebrates unique. Begins with an introduction to recent evolutionary and molecular approaches to understanding the rise of vertebrate structures. The development of vertebrate structures, such as neural crest, specialized sense organs, and limbs, is examined in detail with emphasis on the cellular and molecular events controlling their development.

BIOGD 480(4800) Seminar in Developmental Biology

Fall or spring. 1 or 2 credits; may be repeated for credit. Prerequisite: junior or senior standing; BIOGD 281. S-U grades only. Times TBA. Staff.

Sec 1 Functional Genomics in Nonmodel Organisms (also BIO G 400.1)

Fall. 2 credits. Prerequisites: BIOGD 281 and BIOEE 278 (or equivalent by permission of instructor). Intended for advanced undergraduates. S-U grades optional. M 1:25-3:20, plus required attendance at four sem, 12:20-1:15 M 9/26, 10/17, 10/31 and 11/14. 2 credits. A. McCune, A. Clark, D. Winkler, and M. Wolfner.

This one-time course, offered only in fall 2005, brings geneticists/genomicists together with ecologists/evolutionary/organismal biologists to explore an important interdisciplinary area: the genetic basis of phenotypes in nonmodel organisms. The first part of the course develops background on genomic techniques and on study of nonmodel organisms. Subsequently, the course centers on research lectures by four eminent visiting scientists who are leaders in genomic studies of nonmodel organisms. Groups of students present a seminar to the class on the work of each upcoming visitor. On the week of a speaker-visit, students attend the speaker's seminar at 12:20, and then the class meets with the visitor to discuss the research presented as well as more general aspects of functional genomics.

BIOGD 481(4810) Population Genetics

Fall. 4 credits. Prerequisite: BIOGD 281, BIOEE 278, or equivalents. Lec, M W F 10:10; disc, M 2:30 or T 1:25.

C. F. Aquadro and B. Lazzaro.

Population genetics is the study of the transmission of genetic variation through time and space. This course explores how to quantify this variation, what the distribution of variation tells us about the structure of natural populations, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation. Emphasis is placed on DNA sequence variation and the interplay between theory and the data from experiments and natural populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, the genetic structure and evolution of human populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microbes.

BIOGD 482(4820) Human Genetics and Society

Fall. 4 credits. Limited to 24 students. Prerequisite: senior biological sciences majors; priority given to students studying genetics and molecular biology; BIOGD 281 and BIOBM 330 or 333 or 331 and 332, and permission of instructor. T R 2:30-4:25. R. A. Calvo.

Presentation of some of the science and technology of human genetics, plus discussion of the ethical, social, and legal implications of recent advances in the field. Topics include assisted reproductive strategies, eugenics, genetic counseling, genetic screening (pre-implantation, prenatal, neonatal, pre-symptomatic, carrier, and workplace), wrongful life and wrongful birth, genetic effects of abused substances, genetics and behavior, human cloning, forensic uses of genetics, and therapy for genetic diseases. Students lead some discussions. There is a major writing component to the course.

[BIOGD 483(4830) Advanced Developmental Biology]

Spring. 3 credits. Prerequisites: BIOGD 281; BIOBM 332 or 330 or 333; and BIOGD 385 or permission of instructor. Lec, T R 2:30-4. Offered alternate years; next offered spring 2007. M. F. Wolfner.

Emphasizes the molecular events underlying developmental processes. Simultaneously, a molecular/cell biology course that focuses on how development modulates and uses transcriptional, post-transcriptional, translational, and post-translational regulation of gene expression and cellular events such as signal transduction and cell-cell communication. Numerous developmental systems are discussed and analyzed in microorganisms, plants, and, especially, animals including fruit flies, nematode worms, and vertebrates such as mice, frogs, and humans. Course readings include original research articles. Discussion emphasizes specific experiments and approaches, and results and their interpretation.]

[BIOGD 484(4840) Molecular Evolution]

Spring. 3 credits. Prerequisites: BIOGD 281. Lec, M W 8:40-9:55. D. Barbash.

Explores the various processes by which DNA and protein sequences evolve over time, and how this evolution at the molecular level relates to changes in the morphology, behavior, and physiology of organisms that have occurred over times scales ranging from thousands to billions of years. After developing basic principles the course discusses the evolution and organization of genomes from viruses to higher eukaryotes including humans, and the relationship between molecular evolution at the sequence level and the evolution of developmental pathways and systems.

[BIOGD 485(4850) Bacterial Genetics (also BIOMI/BIOBM 485(4850))]

Fall. 2 credits. Prerequisite: BIOGD 281. Recommended: BIOMI 290 and BIOBM 330 or 331 and 332 or 333. Lec, W 7:30-9:25 P.M. J. E. Peters.

For description, see BIOMI 485.

[BIOGD 486(4860) Advanced Eukaryotic Genetics]

Spring. 4 credits. Enrollment may be limited to 50 students. Prerequisites: BIOGD 281, BIOBM 330 or 333 or 331 and 332. S-U grades optional. Lec, T 12:20-2:15 and R 12:20-1:10; disc, R 1:25-2:15 or F 11:15-12:05. E. E. Alani.

Develops fundamental skills in eukaryotic genetic analysis through lectures and by reading, analyzing, and presenting research articles. Concepts are presented within the context of a well-studied field, such as chromosome segregation. The basic tools that have been developed to study this field are used to analyze other topics such as vegetative and meiotic cell cycle control, embryonic development, pathogen resistance in plants, and human genetics.

[BIOGD 487(4870) Human Genomics]

Fall. 3 credits. Prerequisite: BIOGD 281. Lec, T R 9:05-10:15. A. G. Clark.

Applies fundamental concepts of transmission, population, and molecular genetics to the problem of determining the degree to which familial clustering of diseases in humans has a genetic basis. Emphasizes the role of full genome knowledge in expediting this process of gene discovery. Stresses the role of statistical inference in interpreting genomic

information. Population genetics, and the central role of understanding variation in the human genome in mediating variation in disease risk, are explored in depth. Methods such as homozygosity mapping, linkage disequilibrium mapping, and admixture mapping are examined. The format is a series of lectures with classroom discussion. Assignments include a series of problem sets and a term paper.

[BIOGD 489(4890) Mammalian Embryology (also BIOAP 489(4890))]

Spring. 3 credits. Prerequisite: introductory biology. Lec, T R 1:25; lab, T 2:30. Offered alternate years. D. M. Noden.

Examines the early formation of the mammalian body and placenta, emphasizing comparative aspects, and morphogenesis and histogenesis of each organ system.

[BIOGD 490(4900) Manipulating the Mouse Genome (also NS 490(4900))]

Fall. 1 credit. Prerequisite: BIOGD 280, 281, or 282 and BIOBM 330, 332, or 333 or NS 320. Lec, M 1:25-2:15. P. D. Soloway.

For description, see NS 490.

[BIOGD 600(6000) Development of Sensory Systems (also BIONB 600(6000))]

Spring. 2 credits. Prerequisites: introductory biology, genetics, development, and neurobiology, or permission of instructor. S-U or letter grades. Lec, M 7-8:40 P.M. Offered alternate years; next offered 2006-2007. K. Whitlock.

Explores the unique and shared mechanisms used in sensory system development of both vertebrates and invertebrates. The first class provides a general introduction to the development of sensory systems in vertebrates and invertebrates. Following classes involve the reading of current and classic papers in sensory system development. Students choose a topic and articles from a list provided by the instructor. Students are responsible for an oral presentation and short paper.]

[BIOGD 608(6080) Epigenetics (also NS 608(6080))]

Fall. 2 credits. Prerequisites: BIOGD 281 and BIOBM 330, 332, or 333 or NS 320. W F 11:15. Letter grades only. P. Soloway.

For description, see NS 608.

[BIOGD 610(6100) Genomes as Chromosomes]

Fall. 3 credits. Limited to 15 students. Prerequisites: BIOGD 281 and BIOBM 330 or 333 or 331/332 or equivalent by permission of instructor. Letter grades only. T. P. O'Brien and P. E. Cohen.

The eukaryotic genome is partitioned into discrete structural units, the chromosomes. The course examines how chromosome organization is related to chromatin structure, gene expression, DNA replication, repair and stability. Special emphasis is placed on how the linear arrangement of sequence features along the chromosome, such as genes and regulatory modules, relate to the functional organization of the genome in the nucleus. Experimental and computational approaches used to address chromosome structure and function are studied.

[BIOGD 611(6110) Genome Maintenance Mechanisms]

Fall. 1 credit. Limited to 25 students. Prerequisites: BIOGD 281, as well as BIOBM 330, or 333, or 331/332 (or equivalents). S-U or letter grades. R. Weiss.

Focuses on the molecular mechanisms used by eukaryotic cells to preserve genomic integrity. Topics include endogenous and exogenous sources of nutrition, DNA repair pathways, and cycle checkpoint mechanisms. Also addresses how genome maintenance impacts genome plasticity and evolution, as well as the relationship between genomic instability and disease, including cancer.

[BIOGD 612(6120) Overview of Model Genetic Organisms]

Spring. 1 credit. Limited to 20 students. Prerequisites: BIOGD 281 or 400 or permission of instructor. S-U or letter grades. J. Schimenti.

Presents the features of various model organisms and their relative merits for conducting various types of genomics/genetics research. Model systems discussed include: yeast, *Arabidopsis*, *Drosophila*, *C. elegans*, zebrafish, and mice.

[BIOGD 624(6240) Quantitative Trait Loci Analysis (also PL PA 624(6240))]

Fall. 1 credit. Prerequisites: introductory statistics and BIOGD 281 or permission of instructor. S-U or letter grades. Offered alternate years. K. Lee.

For description, see PL PA 624.

[BIOGD 638(6380) Filamentous Fungal Genomics and Development (also PL PA 638(6380))]

Spring. last four weeks of semester. 1 credit. S-U grades optional. Prerequisite: BIOGD 281 or equivalent, or permission of instructor. Lec, M W F 10:10. B. G. Turgeon.

Molecular genetic and genomic approaches to the study of fungal biology. Applications of contemporary methodology to genetic dissection of developmental processes, such as plant pathogenesis and reproduction. Examples are chosen from investigations of model plant pathogenic fungi (*Magnaporthe*, *Fusarium*, *Cochliobolus*) and from well-known genetic models such as *Saccharomyces cerevisiae* and *Neurospora crassa*.

[BIOGD 640(6400) Stem Cell Biology: Basic Science and Clinical Applications]

Spring. 2 credits. Limited to 30 students. Prerequisites: BIOBM 432 or BIOGD 385 or permission of instructor. Offered alternate years.

Covers basic aspects of tissue morphogenesis and homeostasis with emphasis with on the biological role of embryonic and adult stem cells in development. Focuses on the molecular mechanisms that govern stem cell self-renewal, classes of stem cells. The second part of the course is a survey of common approaches for in vitro manipulation of stem cells and underlines the potential relevance to the field to human health. Some sessions include discussion of research papers.

[BIOGD 682(6820) Fertilization and the Early Embryo]

Spring. 2 credits. Prerequisites: BIOGD 281; BIOBM 332, 330 or 333; and BIOGD 385 or permission of instructor. Lec, R 2:30-4:25. Offered alternate years. M. F. Wolfner.

Treats the earliest events in the formation of a new organism. Discusses the methods and findings of genetic, developmental, cell, and molecular analyses. Readings in the recent literature and discussions focus on pre-gastrulation embryos from several

animal species. Topics include fertilization (sperm/egg binding, sperm entry into egg), pronuclear fusion, egg activation, initiation and terminating the cleavage, division period, cytoplasmic determinants, and changes in nuclear and cytoplasmic architecture.

[BIOGD 684(6840) Advanced Topics in Population Genetics]

Spring. 2 credits. Limited to 20 students. Prerequisites: BIOGD 481 or equivalent and written permission of instructor. S-U grades optional. Lec, T 2:30–4:25. Not offered 2005–2006. A. G. Clark and C. F. Aquadro.

In-depth exploration of current areas of research in population genetics. Readings primarily from recent books and the current literature. Specific topics are announced the previous fall and in the division's catalog supplement. Format includes lectures, discussion, and presentations by students.]

BIOGD 687(6870) Developmental Genetics

Fall. 2 credits. Limited to 20 students. Prerequisites: BIOGD 281 and 385 or equivalents. S-U grades optional. Lec TBA. Offered alternate years. K. J. Kempthorne.

Selected topics focus on the use of genetic analysis in understanding mechanisms of development. Topics are drawn primarily from studies in fruitflies, nematodes, mice, and fish. Possible topics include pattern formation, cell lineage, neural development, maternal information in development, germ cell development, sex determination, and intercellular communication. Students read current literature and are encouraged to discuss each topic in class.

[BIOGD 689(6890) Cellular Basis of Development]

Fall. 2 credits. Limited to 20 students. Prerequisites: BIOGD 281, 385, and either BIOBM 330 or 331–332. Lec, W 2:30–4:25 P.M. S-U grades optional. Offered alternate years; next offered 2006–2007. J. Liu.

Focuses on the integration of different cellular processes in various developmental contexts. Topics include cell migration, cell adhesion and fusion, cell growth and proliferation, cell-cell communication, and cell death. Students are required to read current literature and participate in discussions in class.]

BIOGD 780(7800) Current Topics in Genetics

Fall or spring. 1 credit; may be repeated for credit. Limited to 20 students. Primarily for graduate students; priority given to majors in field of genetics. Prerequisite: for undergraduates, written permission of instructor. No auditors. S-U grades only, by permission of instructor. Seminar TBA. Staff.

Sec 1 Functional Genomics in Nonmodel Organisms (also BIOEE 760.2)

Fall. 2 credits. M 1:25–3:20, plus required attendance at four sem, 12:20–1:15 M 9/26, 10/17, 10/31, and 11/14. Prerequisite: knowledge of either basic genetics or ecology/evolutionary biology. Intended for graduate students. S-U grades optional. A. McCune, A. Clark, D. Winkler, and M. Wolfner.

For description, see BIOEE 760.

BIOGD 781(7810) Problems in Genetics and Development

Fall. 2 credits. Prerequisite: first-year graduate students in field of genetics and development. Disc TBA. E. Alani and staff.

Introduction to the research literature in selected areas through weekly problem sets and discussions.

[BIOGD 782–783(7820–7830) Current Genetics/Development Topics]

Spring. 0.5 or 1 credit for each topic; may be repeated for credit. S-U grades only. Lec and sem on specialized topics TBA. Times TBA. Staff.]

BIOGD 786(7860) Research Seminar in Genetics and Development

Fall and spring. 1 credit. Requirement for, and limited to second-, third-, and fourth-year graduate students in genetics and development. S-U grades only. Sem, TBA. Staff.

Each graduate student presents one seminar per year based on his or her thesis research. The student then meets with the thesis committee members for an evaluation of the presentation.

BIOGD 787(7870) Seminar in Genetics and Development

Fall and spring. 1 credit. Prerequisite: graduate students in Genetics and Development. S-U grades only. Sem, TBA. Staff.

Seminars in current research in genetics and developmental biology conducted by distinguished visitors and staff.

MICROBIOLOGY (BIOMI)

BIOMI 290(2900) General Microbiology Lectures

Fall, spring, or summer (six-week session). 3 credits. Prerequisites: one year introductory biology for majors and one year college chemistry, or equivalent. Highly recommended: concurrent registration in BIOMI 291. Lec, M W F 11:15–12:05. W. C. Ghiorse.

Comprehensive overview of the biology of microorganisms, with emphasis on bacteria.

Topics include microbial cell structure and function, physiology, metabolism, genetics, diversity, and ecology. Some material may overlap with BIOGD 281 and BIOBM 330. Also covers applied aspects of microbiology such as biotechnology, the role of microorganisms in environmental processes, and medical microbiology.

BIOMI 291(2910) General Microbiology Laboratory

Fall or spring, summer (six-week session). 2 credits. Pre- or co-requisite: BIOMI 290. Lec, F 12:20; lab, M W 12:20–2:15 (2911-01), or T R 10:10–12:05 (2911-02), 12:20–2:15 (2911-03), or 2:30–4:25 (2911-04) (students *must* choose one lab sec). S. M. Merkel.

Study of the basic principles and techniques of laboratory practice in microbiology, and fundamentals necessary for further work in the subject.

BIOMI 292(2920) General Microbiology Discussion

Spring. 1 credit. Pre- or co-requisite: BIOMI 290. S-U grades only. Disc TBA. Staff.

Series of discussion groups in specialized areas of microbiology to complement BIOMI 290.

BIOMI 331(3310) General Parasitology (also VETMI 331[3310])

Spring. 2 credits. Prerequisites: one year introductory biology. Lec, T R 12:20–1:10. D. Bowman.

Introduction to the basic animal parasites, stressing systematics, taxonomy, general biology, ecological interactions, and behavior of nonmedically important groups. Introduces the major animal parasites: protozoan, nematode, platyhelminth, acanthocephalan, annelid, and arthropod.

BIOMI 391(3910) Advanced Microbiology Laboratory

Fall. 3 credits. Prerequisites: BIOMI 290, 291, and BIOBM 330 or 331 or 333. Priority given to biological sciences students in microbiology program of study. Lab, M W 1:25–4:25; disc, F 1:25–2:15. J. B. Russell, W. C. Ghiorse, J. P. Shapleigh, and S. H. Zinder

Illustrates basic principles of experimental microbiology. The course is organized into four modules that last three weeks each: (1) ecology, (2) physiology, (3) genetics, and (4) structure and function. Students are encouraged to take this course during their third year of study.

BIOMI 394(3940) Applied and Food Microbiology (also FD SC 394[3940])

Fall. 2–3 credits. Prerequisites: BIOMI 290–291. M W F 12:20–1:10. C. A. Batt.

For description, see FD SC 394.

[BIOMI 397(3970) Environmental Microbiology (also CSS 397[3970])]

Spring. 3 credits. Prerequisites: BIOEE 261 or BIOMI 290 or CSS (SCAS) 260 or permission of instructor. Lec, M W F 10:10. Offered alternate odd years. E. L. Madsen.

Discusses the biological properties, evolution, and behavior of microorganisms in natural systems in relation to past and present environmental conditions on Earth and other living planets. Also considers the functional role of microorganisms in ecologically and environmentally significant processes through discussion of specific topics such as nutrient and toxic elemental cycles, transformation of pollutant chemicals, wastewater

treatment, environmental biotechnology, and astrobiology.]

[BIOMI 404(4040) Pathogenic Bacteriology and Mycology (also VETMI 404(4040))]

Spring. 2 or 3 credits; 3 credits with lec and sem. Prerequisites: BIOMI 290 and 291; for undergraduates, permission of instructor. Highly recommended: BIO G 305. Lec, M W 10:10; sem, F 10:10. Offered alternate even years. D. Debbie.
For description, see VETMI 404.

[BIOMI 409(4090) Principles of Virology (also VETMI/PL PA 409(4090))]

Fall. 3 credits. Prerequisites: BIOMI 290, 291 or permission of instructor. Recommended: BIOBM 330-332, 432. Letter grades only. Lec, T R 1:25-2:40. G. R. Whittaker and S. G. Lazarowitz.
For description, see VETMI 409.

[BIOMI 414(4140) Prokaryotic Diversity]

Spring. 3 credits. Prerequisites: BIOMI 290 and 291. Recommended: BIOBM 330 or 331 or 333. Lec, M W F 11:15. Offered alternate odd years. S. H. Zinder.
Consideration of the evolutionary biology, physiology, ecology, genetics, and practical potential of important groups of prokaryotes. Topics include prokaryotic phylogeny, the evolution of diverse mechanisms of energy conservation, fixation of carbon and nitrogen, and adaptation to extreme environments.]

[BIOMI 416(4160) Bacterial Physiology]

Spring. 3 credits. Prerequisites: BIOMI 290, 291, and BIOBM 330 or 331, or equivalents. Lec, M W F 11. Offered alternate even years. J. P. Shapleigh.
Focuses on physiological and metabolic functions of bacteria. Consideration is given to chemical structure, regulation, growth, and energy metabolism. Special attention is given to those aspects of bacterial metabolism not normally studied in biochemistry courses.]

[BIOMI 418(4180) Microbial Ecology]

Spring. 3 credits. Prerequisites: BIOMI 290 and 291, or 398 and permission of instructor, and BIOBM 330 or 331 and 332. Lec, M W F 10:10-11. E. R. Angert.
Understanding the role of microorganisms in natural environments is one of the greatest challenges facing microbiologists. This course introduces current biochemical and macromolecule sequence-based methods to assess community diversity and microbial activity in a variety of ecosystems. Other topics discussed include bacterial growth and survival, population biology, and microbial interactions.

[BIOMI 420(4200) Microbial Genomics]

Spring. 2 credits. Prerequisites: BIOMI 290, BIO G 281, BIOBM 330, or equivalent. Lec, T R 10:10-11. Offered alternate odd years. J. P. Shapleigh and J. D. Helmann.
Genomic information is revolutionizing biology. This course discusses the impact of genomic information on the study of microbial physiology, evolution, and biotechnology. Topics include both techniques (automated DNA sequencing, assembly, annotation, DNA chips) and applications (genome-wide analysis of transcription, functional genomics).]

[BIOMI 431(4310) Medical Parasitology (also VETMI 431(4310))]

Fall. 2 credits. Prerequisites: zoology and biology courses. Lec, T R 3:35-4:25. D. Bowman.
For description, see VETMI 431.

BIOMI 485(4850) Bacterial Genetics (also BIOGD/BIOBM 485(4850))

Fall. 2 credits. Prerequisite: BIOGD 281. Recommended: BIOMI 290 and BIOBM 330 or 331 and 332 or 333. Lec, W 7:30-9:25 P.M. J. E. Peters.
Students gain a detailed understanding of how bacteria maintain and pass on genetic information with a strong focus on the bacterium *Escherichia coli*. They discover the processes by which bacteria evolve through different mutations and the exchange of genetic information. The course explores how genes are regulated efficiently through negative and positive regulation and by global regulatory mechanisms. Upon completion of the course students should understand the tools used to manipulate bacterial genomes for the understanding of bacteria and other living organisms.

BIOMI 610(6100) Introduction to Chemical and Environmental Toxicology (also TOX 610(6100))

Fall. 3 credits. Prerequisite: graduate standing in field or permission of instructor. Letter grades. Lec, M W F 11:15-12:05. A. Hay.

Introduction to the general principles of toxicology including the sources, mechanisms, and targets of toxic agents. Gives special attention to the interaction between toxic agents and biological systems at both the organismal and ecological level. The effects of both anthropogenic and natural toxins are examined with respect to genetic and developmental toxicity as well as carcinogenesis and specific organ toxicity.

[BIOMI 650(6060) Molecular Plant Virology (also PL PA 606(6060))]

Spring, first seven weeks of semester. 1 credit. S-U grades optional. Prerequisites: BIOMI 409, cell biology course, or permission of instructor. Lec, M W 11:15. Offered alternate years. S. G. Lazarowitz.
For description, see PL PA 606.]

[BIOMI 651(6080) Genomics of Bacterium-Host Interactions (also PL PA 608(6080))]

Fall, second half of semester. 1 credit. Prerequisites: BIOMI 290 or equivalent or permission of instructor. S-U grades optional. Lec, M W 9:05 (2nd half of semester). Offered alternate odd years. A. Collmer and S. Winans.
For description, see PL PA 608.]

[BIOMI 652(Sec 02) Molecular Plant-Microbe Interactions (also BIOPL 652, Sec 02, PL PA 664(6640))]

Spring. 1 credit. Prerequisites: BIOGD 281, BIOBM 330 or 331 or 333, and BIOPL 653 (sec 01) or equivalents. S-U grades optional. Lec, M W F 12:20 (12 lec). Offered alternate even years. S. C. Winans.
For description, see BIOPL 652, Sec 02.]

BIOMI 690 Prokaryotic Biology

Fall and spring. 4 weeks/8 lec. 1 credit per sec to be offered. T R 10:15-11:30.

Sec 1 Microbial Structure and Function

Fall. J. P. Shapleigh.
Discusses those macromolecules and assemblages of macromolecules that together define the structure of the prokaryotic cell. This includes external structures, such as cell wall, flagella, pili, and peptidoglycan and internal structures such as specialized vesicles and other large complexes.

Sec 2 Environmental Microbiology

Fall. E. L. Madsen.
Core course of concepts, methods, and current literature that reveals the multidisciplinary nature of environmental microbiology and its relationship to prokaryotic biology. Discusses the crucial roles that microorganisms play in catalyzing biogeochemical reactions throughout the biosphere.

Sec 3 Microbial Physiology/Diversity

Fall. S. H. Zinder.
Reviews the major energy-conserving modes of metabolism and their phylogenetic distributions among both bacteria and archaea. Topics include phylogenetic analysis, fermentation, respiration, photosynthesis, pathways of carbon and nitrogen fixation, and evolution of the three domains of life.

Sec 4 Microbial Genetics

Spring. J. D. Helmann.
Reviews the fundamental concepts of microbial genetics including mutations and their analysis, plasmids, conjugation, transformation, transduction, transposition, recombination, repair, and mutagenesis.

Sec 5 Microbial Pathogenesis

Spring. S. C. Winans.
Introduction to the fundamental concepts of bacterial pathogenesis including the normal flora, pathogen entry and colonization, the production and regulation of toxins, horizontal transfer of pathogenesis determinants, and the roles of both specific and nonspecific host defenses. Examples include bacterial pathogens of both animals and plants.

BIOMI 725(7250) Mechanisms of Microbial Pathogenesis (also VETMI 725(7250))

Spring. 3 credits. Prerequisites: for undergraduates, written permission of instructor; BIOMI 404, 409, 417, or equivalent. Highly recommended: completion of two of the three courses. M W F 2:30-3:20 P.M. D. Debbie, M. Hesse, H. Marquis, J. Parker, M. Scidmore, and G. Whittaker.
For description, see VETMI 725.

BIOMI 740(6430) Veterinary Perspectives on Pathogen Control in Animal Manure (also VTMED/BEE 740(6430))

Spring, eight weeks. 2 credits. Prerequisite: third- and fourth-year veterinary students. Letter grades only. Lec/disc, M T W R, 3-4. D. D. Bowman.
For description, see VTMED 740.

BIOMI 791(7910) Advanced Topics in Microbiology

Fall or spring. 1 credit; may be repeated for credit. Prerequisite: graduate standing in microbiology. S-U grades only. Sec 01 Bacterial Genetics, T 4-5, S. C. Winans; Sec 02 Environmental Microbiology, W 4-5, E. R. Angert.

Reading and presentation by graduate students of current literature in selected areas of modern microbiology.

BIOMI 796(7960) Current Topics in Microbiology

Fall and spring. 0.5 or 1 credit for each topic; may be repeated for credit. Primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S-U grades only. Lec TBA. Staff.

Lectures and seminars on special topics in microbiology.

BIOMI 797(7970) Scientific Communication Skills

Fall and spring. 1 credit each semester. Requirement for graduate students in graduate field of microbiology for first two semesters; third semester optional. S-U grades only. F 2:30–3:20. Staff.

The ability to communicate effectively is essential for success as a scientist. The primary goal of this course is to provide students with an opportunity to develop self-confidence and refine their formal oral presentation skills. Students are asked to present topical seminars that are critically evaluated by the instructor. Feedback for improving the presentation and peer evaluations are emphasized.

BIOMI 798(7980) Graduate Research Seminar in Microbiology

Fall and spring. 1 credit each semester. Requirement for graduate students in graduate field of microbiology. S-U grades only. F 1:25–2:15. Staff.

All graduate students in the field of microbiology are required to attend and present a seminar concerning their research at least once each year.

BIOMI 799(7990) Microbiology Seminar

Fall and spring. Requirement for all graduate students in graduate field of microbiology. Open to all who are interested. Sem, R 4–5. Staff.

NEUROBIOLOGY AND BEHAVIOR (BIONB)**BIONB 111(1110) Brain Mind and Behavior (also PSYCH/COGST 111[1110])**

Spring. 3 credits. Prerequisite: none. Intended for freshmen and sophomores in humanities and social sciences; not open to juniors and seniors. Not recommended for psychology majors; biology majors may not use course for credit toward major. Letter grades only. Lec, M W F 9:05. E. Adkins-Regan and R. R. Hoy.

For description, see COGST 111.

[BIONB 208(2080) The Anthropology of Human Mating (also ANTHR 208[2308])]

Spring. 3 credits. Prerequisite: none. T R 8:40–9:55. Offered alternate years. M. Small.

For description, see ANTHR 208.]

BIONB 221(2210) Neurobiology and Behavior I: Introduction to Behavior

Fall. 3, 4, or 5 credits; 4 credits with one disc per week; 5 credits with two disc per week and participation in Writing in the Majors program; 4- or 5-credit option required of students in neurobiology and behavior program of study. Limited to 20 students per 4-credit disc. Priority given to students studying neurobiology and behavior. Limited to 12 students in 5-credit option (students may not preregister for 5-credit option; interested students complete application form on first day of class). Not open to freshmen. Prerequisite: one year introductory biology for majors. May be taken independently of BIONB 222. S-U grades optional. Lec, M W F 12:20; disc, TBA. C. Walcott and staff.

General introduction to the field of animal behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, orientation and navigation, and hormonal mechanisms of behavior.

BIONB 221(2210) Neurobiology and Behavior I: Introduction to Behavior

Summer, six-week session. 3 or 4 credits; 4 credits with one disc per week. Prerequisite: one year introductory college biology. S-U grades optional. Course fee: none. M–F 4–5:15. Staff.

General introduction to the field of animal behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, orientation and navigation, and hormonal mechanisms of behavior.

BIONB 222(2220) Neurobiology and Behavior II: Introduction to Neurobiology

Spring. 3 or 4 credits; 4 credits with disc and written projects; 4-credit option required of students studying neurobiology and behavior. Limited to 15 students per disc; priority given to students studying neurobiology and behavior. Not open to freshmen. Prerequisites: one year introductory biology for majors and one year of chemistry. May be taken independently of BIONB 221. S-U grades optional. Lec, M W F 12:20; disc TBA. R. Booker and staff.

General introduction to the field of cellular and integrative neurobiology. Topics include neural systems, neuroanatomy, developmental

neurobiology, electrical properties of nerve cells, synaptic mechanisms, neurochemistry, motor systems, sensory systems, learning, and memory. Some discussion sections include dissections of preserved brains.

BIONB 231(2310) Sophomore Seminar: Topics in Cognitive Studies: Mind and Reality In Science Fiction (also PSYCH 231/531[2310/6331], COGST 531[5310])

Spring. 4 credits. 231 limited to 15 students. S. Edelman.

For description, see PSYCH 231.

BIONB 265(2650) Tropical Field Ecology and Behavior (also BIOEE 265[2650])

Summer, three weeks, based in Kenya, Africa, during July. 4 credits. Limited to 15 students. Prerequisites: one introductory biology course and permission of instructors. I. J. Lovette and D. Rubenstein.

For description, see BIOEE 265.

[BIONB 322(3220) Hormones and Behavior (also PSYCH 322[3220])]

Fall. 3 credits. Prerequisites: junior or senior standing; any one of the following: PSYCH 223 or BIONB 221 or 222 or one year introductory biology plus psychology course. Two lec plus sec in which students read and discuss original papers in the field, give oral presentation, and write term paper. Letter grades only. Graduate students, see PSYCH 722. Lec, M W F 11:15. Not offered 2005–2006. E. Adkins-Regan.

For description, see PSYCH 322.]

[BIONB 323(3230) Methods in Animal Behavior]

Fall. 4 credits. Prerequisite: BIONB 221. Letter grades only. Lec, M W 1:25–2:15; lab, M W 2:15–4:25. Offered alternate years; not offered 2005–2006.

S. L. Vehrencamp and J. W. Bradbury. Covers methods for observing, quantifying, and analyzing behavioral interactions and communication signals. Lectures plus a series of workshops and projects designed to introduce students to commonly used field and laboratory methods. Emphasis on experimental design and basic statistical techniques. Some lab work with live insects included. Additional lab time often needed to complete projects.]

BIONB 324(3240) Biopsychology Laboratory (also PSYCH 324[3240])

Fall. 4 credits. Limited to 20 students. Prerequisites: junior or senior standing; PSYCH 223 or BIONB 221 or 222, and permission of instructor. Lab, T R 1:25–4:25. T. J. DeVoogd.

For description, see PSYCH 324.

[BIONB 325(3250) Insect Behavior (also ENTOM 325[3250])]

Spring. 3 credits. Prerequisite: ENTOM 212 or BIONB 221. Intended for juniors, seniors, and beginning graduate students. S-U grades optional. Lec, T R 10:10–11:25. Not offered 2005–2006. L. S. Raylor.

For description, see ENTOM 325.]

BIONB 326(3260) The Visual System

Spring. 4 credits. Prerequisite: BIONB 222 or BIOAP 311 or permission of instructor. S-U grades optional. Lec, M W F 10:10; disc, 1 hour each week TBA. Offered alternate years. H. C. Howland.

The visual systems of vertebrates are discussed in breadth and depth as well as

some aspects of invertebrate vision. Topics include the optics and anatomy of eyes, retinal neurophysiology, structure and function of higher visual centers, ocular motility, and ocular and visual system development.

BIONB 327(3270) Evolutionary Perspectives on Human Behavior

Fall. 3 credits. Prerequisites: BIONB 221 and permission of instructor. Letter grades only. M W 2:55-4:10. S. T. Emlen.

Socratically taught, discussion-based course dealing with evolutionary perspectives on human behavior. Topics include genes and behavior, the evolutionary environment of adaptation, the evolutionary function of emotions, human mating system, parenting strategies, and cooperation and conflict within family-based societies. All students read and discuss primary papers and recent books. Each student is responsible for leading multiple discussions, writing an original paper, and peer-reviewing papers of other class members.

BIONB 328(3280) Biopsychology of Learning and Memory (also PSYCH 332[3320])

Spring. 3 credits. Limited to 60 students. Prerequisites: one year of biology and either a biopsychology course or BIONB 222. S-U grades optional. Graduate students, see PSYCH 632. Lec, M W F 11:15. T. J. DeVoogd.

For description, see PSYCH 332.

BIONB 329(3290) Ecology of Animal Behavior (also BIOSM 329[3290])

Summer. 4 credits. Prerequisite: one year introductory college biology. Recommended: ecology, psychology, or behavior course. S-U grades optional. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details and an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for two weeks. SML faculty. For description, see BIOSM 329.

[BIONB 330(3300) Introduction to Computational Neuroscience (also PSYCH/COGST/BME 330[3300])

Fall. 3 or 4 credits; 4 credits includes lab providing additional computer simulation exercises. Limited to 25 students. Prerequisites: BIONB 222 or permission of instructor. S-U grades optional. Lec, M W 2:55-4:10. Offered alternate years; not offered 2005-2006. C. Linster.

Covers the basic ideas and techniques involved in computational neuroscience. Surveys diverse topics, including neural dynamics of small networks of cells, neural coding, learning in neural networks and in brain structures, memory models of the hippocampus, sensory coding, and others.]

BIONB 331(3310) Human Sociobiology

Spring. 3 credits. Prerequisite: BIONB 221 or PSYCH 223 or permission of instructor. Letter grades only. Lec, M W 2:55-4:10. P. Barclay.

Lecture-based course drawing on research in evolutionary biology and animal behavior to investigate various aspects of human social behavior. Findings are presented from areas such as evolutionary psychology, anthropology, human behavioral ecology, and evolutionary game theory. Topics may vary slightly from year to year, but include mating, cooperation (with kin and nonkin), conflict

and aggression, parental behavior, costly signaling, and culture.

BIONB 369(3690) Chemical Ecology (also BIOEE/ENTOM 369[3690])

Spring. 3 credits. Prerequisites: one semester of introductory biology for majors or non-majors and one semester of introductory chemistry for majors or nonmajors or equivalents, or permission of instructor. S-U grades optional. Lec, M W F 11:15-12:05. A. Agrawal, G. Jander, A. Kessler, and J. Thaler.

For description, see BIOEE 369.

BIONB 392(3920) Drugs and the Brain

Fall. 4 credits. Prerequisites: BIONB 222 or equivalent course in neurobiology by permission of instructor. Recommended: knowledge of biochemistry. S-U grades optional. T R 10:10-11:25; disc, TBA. Offered alternate years. R. M. Harris-Warrick and L. M. Nowak.

Introduction to neuropharmacology, with an emphasis on the neural mechanisms of psychoactive drugs. Topics include a brief introduction to neuropharmacology and a discussion of the major neurotransmitter families. The rest of the course covers the major psychoactive drugs, including cocaine, heroin, psychedelics, marijuana, and alcohol, as well as pharmaceuticals for the treatment of anxiety, schizophrenia, and depression. Includes a term paper in the form of a grant proposal to study a current problem in neuropharmacology.

BIONB 394(3940) Circadian Rhythms (also BIOGD/ENTOM/PL PA 394[3940])

Fall. 2 credits. Prerequisite: 200-level biology course. S-U grades optional. Lec, W 7:30-9:10 P.M. Even years, K. Lee; odd years, J. Ewer.

For description, see ENTOM 394.

BIONB 396(3960) Introduction to Sensory Systems (also PSYCH 396[3960])

Spring. 4 credits. Limited to 25 students. Prerequisites: introductory biology or biopsychology, plus second course in behavior, biopsychology, cognitive science, neuroscience, or perception; knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Lec, T R 10:10-11:25. Offered alternate years. B. P. Halpern.

For description, see PSYCH 396.

BIONB 413(4130) Molecules of Social Behavior and Emotion

Spring. 3 credits. Prerequisite: permission of instructor. Letter grades only. Lec, T R 10:10-11:25. D. P. McCobb.

Active-learning course with specific topics to be determined by students. Focuses on molecular, neural, and endocrine mechanisms underlying innate and learned behavior patterns, and their relationship to social, ecological, and evolutionary context. Neurotransmitters, hormones and receptors governing such behaviors as parental care, territoriality, cooperativity, courtship, and stress responses are examples of topics of interest. Format includes library research, oral and written presentations, team work, and peer review.

BIONB 420(4200) Topics in Neurobiology and Behavior

Fall or spring. Variable credit; may be repeated for credit. Primarily for undergraduates. S-U grades optional. Times TBA. Staff.

Courses on selected topics in neurobiology and behavior; can include lecture and seminar courses. See department office (W363 Mudd Hall) for offerings.

BIONB 421(4210) Effects of Aging on Sensory and Perceptual Systems (also PSYCH 431/631[4310/6310])

Fall. 3 or 4 credits; 4-credit option involves term paper or creation of relevant web site. Limited to 25 students. Prerequisites: introductory course in biology or psychology, plus second course in perception, neurobiology, cognitive science, or biopsychology. T R 10:10-11:25. B. P. Halpern.

For description, see PSYCH 431.

[BIONB 422(4220) Modeling Behavioral Evolution

Spring. 4 credits. Limited to 25 students. Prerequisites: BIONB 221, one year of calculus, course in probability or statistics, and permission of instructor; advanced undergraduates and graduate students. S-U grades optional. Lec, T R 2:55-4:10; computer lab, one class period per week TBA. Offered alternate years; not offered 2005-2006. H. K. Reeve.

Intensive lecture and computer lab course on modeling strategies and techniques in the study of behavioral evolution. Population-genetic (including quantitative-genetic), static optimization, dynamic programming, and game-theoretic methods are emphasized. These approaches are illustrated by application to problems in optimal foraging, sexual selection, sex ratio evolution, animal communication, and the evolution of cooperation and conflict within animal social groups. Students learn to critically assess recent evolutionary theories of animal behavior, as well as to develop their own testable models for biological systems of interest or to extend pre-existing models in novel directions. The *Mathematica* software program is used as a modeling tool in the accompanying computer lab (no prior experience with computers required.)

BIONB 423(4230) Cognitive Neuroscience (also PSYCH 425/625[4250/6250])

Fall. 4 credits. Prerequisites: introductory biology; biopsychology or neurobiology (e.g., PSYCH 223 or BIONB 221); and introductory course in perception, cognition, or language (PSYCH 102, 209, 214, or 215 essential). S-U grades optional. Graduate students, see PSYCH 625. M W F 9:05-9:55. Offered alternate years. B. L. Finlay.

For description, see PSYCH 425.

[BIONB 424(4240) Neuroethology (also PSYCH 424[4240])

Spring. 4 credits. Prerequisites: BIONB 221 or 222, or one year introductory biology for majors and permission of instructor. S-U grades optional. Lec TBA; disc, R TBA. Offered alternate years; not offered 2005-2006. C. D. Hopkins.

Neuroethologists take a comparative and evolutionary approach to study the nervous system. They ask, how do brains of animals compare and how did they come about through the process of evolution? How are

neural circuits adapted to species-typical behavior? What is the hope and interest in the study of a large diversity of animals, compared to a specialized look at just a few mammalian species? Can we hope to understand how animals with specialized behaviors have specialized nervous systems? What is the sensory world of a real animal and how does it vary from species to species? These and other questions derive this introductory survey of neuroethology, including exotic senses, amazing motor programs, surprising integration.]

BIONB 425(4250) Molecular Neurophysiology

Fall. 3 credits. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional. Lec, T R 2:55–4:10. Offered alternate years. D. P. McCobb.

Focuses on ion channels, the primary proteins generating cellular electrical signals in nerve cells and other excitable cells (e.g., muscle, heart, glands). Reviews the latest electrophysiological and molecular genetic experiments. Diversity of electrophysiology deriving from channel structure and expression patterns is considered in the contexts of behavior and behavioral plasticity (learning), neural development, and channel evolution. Format includes written and oral presentations, reviewing scientific literature in selected areas, and proposing new experiments.

BIONB 426(4260) Animal Communication

Spring. 4 credits. Prerequisite: BIONB 221. Letter grades only. T R 2:55–4:10; disc, one hour each week TBA. Offered alternate years. J. W. Bradbury and S. L. Vehrencamp.

Integrated approach to animal communication, organized into three parts: (1) the physics and physiology of producing, transmitting, and receiving signals; (2) optimal strategies for encoding information, using information to make decisions, and designing signals; and (3) the behavioral ecology of signal evolution.

[BIONB 427(4270) Animal Social Behavior]

Fall. 4 credits. Limited to 30 students. Prerequisites: BIONB 221 and BIOEE 261 or 278, and permission of instructor. Letter grades only. Lec and disc, T R 2:30–4:25. Offered alternate years; not offered 2005–2006. T. D. Seeley.

Writing-intensive advanced course for upper-division students interested in behavioral ecology and sociobiology. Lectures, discussions, and student presentations examine topics including adaptation, communication, mating systems, sexual selection, sex ratios, inbreeding and outbreeding, altruism, kin recognition, conflict and cooperation in animal societies, and Darwinian medicine.]

[BIONB 428(4280) Clinical Neurobiology]

Fall. 3 credits. Prerequisites: two courses from BIONB 222, BIOGD 281, BIOBM 330 or 331; co-registration in one of the two is acceptable by permission of instructor. Open to advanced undergraduates. S-U grades optional. M W 2:30–4:25. Offered alternate years. R. Booker.

The goal of this course is to provide students with an appreciation of the current challenges facing researchers studying neurodegenerative diseases. The focus is on the etiology, epidemiology, cellular and molecular basis, and strategies for treating a number of neurodegenerative

including but not limited to Alzheimer's disease, Parkinson's disease, neural ischemia, depression, ADHD, eating disorders, and AIDS-related dementia. The course is provides a health context that enriches the student's learning experience in other advanced courses in the biological sciences. Guest speakers include faculty from across the Ithaca campus and the Weill College of Medicine, Departments of Neurology and Neuroscience.]

[BIONB 429(4290) Olfaction and Taste: Structure and Function (also PSYCH 429[4290])]

Spring. 3 or 4 credits; 4-credit option requires term paper or research project (research project can but does not need to study nonhuman vertebrates.) Priority given to junior and senior psychology and biology majors and graduate students. Graduate students, see PSYCH 629. Prerequisite: one 300-level course in biopsychology or equivalent. Lec, T R 10:10–11:25. Offered alternate years; not offered 2005–2006. B. P. Halpern.

For description, see PSYCH 429.]

[BIONB 430(4300) Experimental Molecular Neurobiology (also BIOBM 443[4430])]

Spring. 4 credits. Limited to 12 students. Co-requisite: BIOBM 440 lab. Letter grades only. Disc, one hour each week on day other than lab day; lab, T all day. Offered alternate years. Not offered 2005–2006. D. L. Deitcher.

Experiments include PCR, cloning of DNA fragments, RNA purification, restriction digests, bacterial transformation, DNA sequencing, and protein interactions. Experiments emphasize how molecular techniques can be applied to studying neurobiological problems.]

BIONB 431(4310) Genes and Behavior

Spring. 3 credits. Limited to 50 students. Prerequisite: BIONB 222. S-U grades optional. T R 2:55–4:10. Offered alternate years. J. R. Fetcho.

Our genes influence how we behave. This lecture course explores the current understanding of how genes influence the behavior of a variety of animals, including humans. Topics include the genetic basis of smell, hearing, movement, learning, memory, intelligence, sexual behavior, aggression, sleep, life span, and diseases of behavior. The focus is on the unprecedented insight that modern molecular and genetic tools are providing into the genetic basis of behavior.

BIONB 440(4400) Electronics in Neurobiology (also BME 440[4400])

Fall. 4 credits. Prerequisite: junior, senior, or graduate standing; calculus course. S-U grades optional. Lec, T R 8:40–9:55; lab, W 1:25–4:25. Offered alternate years. B. R. Land.

Emphasizes understanding of the electrical functioning of the nervous system and enables students to build instrumentation to study the nervous system. The course is taught by mathematical analysis, simulation, and construction of circuit examples drawn from practical neurobiological instrumentation problems and the electronic basis of neurons.

[BIONB 441(4410) Computers in Neurobiology (also BME 441[4410])]

Fall. 4 credits. Prerequisite: junior, senior, or graduate standing; calculus course. S-U grades optional. Lec, T R 8:40–9:55; lab, W 1:25–4:25. Offered alternate years; not offered 2005–2006. B. R. Land.

Introduction to computer programming techniques and data reduction. Gives a basic understanding of the techniques for using a computer in a biological context. Includes techniques to convert raw data to scientific visualization. Includes some computer modeling examples drawn from practical neurobiological problems.]

BIONB 470(4700) Biophysical Methods (also AEP/VETMM 470[4700])

Fall. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level. Recommended: knowledge of cellular biology. Letter grades only. Lec, M W 2:55–4:10. M. Lindau.

For description, see AEP 470.

BIONB 491(4910) Principles of Neurophysiology (also BME 491[4910])

Spring. 4 credits. Limited to 20 students. Prerequisite: BIONB 222 or written permission of instructor. S-U grades optional for graduate students by permission of instructor. Lec, M W 10:10; lab, M or T 12:20–4:25. B. R. Johnson.

Laboratory-oriented course designed to teach the theory and techniques of modern cellular neurophysiology including computer acquisition and analysis of laboratory results. Lecture time is used to introduce laboratory exercises and discuss results, to supplement laboratory topics, and to discuss primary research papers. Extracellular and intracellular recording and voltage clamp techniques explore motor neuron and sensory receptor firing properties, and examine the cellular basis for resting and action potentials and synaptic transmission. Invertebrate preparations are used as model systems. See instruct1.cit.cornell.edu/courses/bionb491/index.html.

[BIONB 492(4920) Sensory Function (also PSYCH 492/692[4920/6920])]

Spring. 4 credits. Limited to 25 students. Prerequisite: 300-level course in biopsychology, or BIONB 222, or BIOAP 311, or equivalent; knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Graduate students, see PSYCH 692. Lec, M W F 10:10. Offered alternate years; not offered 2005–2006. B. P. Halpern and H. C. Howland.

For description, see PSYCH 492.]

BIONB 493(4930) Developmental Neurobiology

Fall. 3 credits. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional by permission of instructor. Lec, M W 2:55–4:10. Offered alternate years. R. Booker.

Lectures covering the development of the nervous system, taking examples from both vertebrates and invertebrates. Emphasis is on cellular and molecular issues, that is, how do nerve cells differentiate both morphologically and biochemically? The role of cues such as hormones and developmental genes in neural development is discussed. Readings are taken from original journal articles.

[BIONB 494(4940) Brain Evolution and Behavior]

Spring. 3 credits. Intended for juniors, seniors, and graduate students.
Prerequisite: BIONB 222 or equivalent.
S-U grades optional. Lec, T R 2:55-4:10.
Offered alternate years; not offered 2005-2006.

A. H. Bass.

Organization and evolution of neuroanatomical pathways as substrates for species-typical vertebrate behaviors. The course is divided into three major sections: development, general principles of brain organization, and co-evolution of vertebrate brain and behavior.]

[BIONB 495(4950) Molecular and Genetic Approaches to Neuroscience]

Fall. 3 credits. Prerequisites: junior, senior, or graduate standing; BIONB 222 and BIOBM 330 or 332. Letter grades only. Lec, T R 2:55-4:10. Offered alternate years; not offered 2005-2006. D. L. Deitcher.

Focuses on how different molecular and genetic approaches have led to major advances in neuroscience. Lectures, student presentations, and discussions examine original research articles. Topics include ligand-gated channels, potassium channels, seven membrane spanning receptors, development of the neuromuscular junction, neurotransmitter release, second messengers, learning and memory, and neurodegenerative diseases.]

[BIONB 496(4960) Bioacoustic Signals in Animals and Man]

Fall. 3 credits. Limited to 12 students.
Prerequisites: junior, senior, or graduate standing; one year introductory biology, PHYS 101-102 or 207-208, and permission of instructor. S-U grades optional. Lec, M W 9:05; lab TBA. Offered alternate years.
C. W. Clark and R. R. Hoy.

Teaches students about animal acoustic signaling by introducing them to various animal acoustic systems. Presents the physical properties of sound, physiological mechanisms for sound production and hearing, and the behavioral contexts in which sounds are used. Acoustic techniques are provided in the laboratory where students learn how to record, synthesize, and analyze sounds with the aid of recorders and Mac and/or PC computers running customized software. Labs are designed around the lecture material and provide practical "real-world" exercises designed to stimulate discovery of fundamental principles described in lectures. Class research projects on a selected topic in bioacoustics are required. Engineering students with interests in music, audio analysis, digital signal processing, and computer science are encouraged.

[BIONB 600(6000) Development of Sensory Systems (also BIOGD 600(6000))]

Spring. 2 credits. Prerequisites: introductory biology (genetics, development, and neurobiology preferred, or permission of instructor). S-U grades only. T 7-8:40 P.M.
Not offered 2005-2006. K. Whitlock.

For description, see BIOGD 600.]

[BIONB 720(7200) Seminar in Advanced Topics in Neurobiology and Behavior]

Fall or spring. Variable credit; may be repeated for credit. Prerequisite: graduate standing or permission of instructor.
S-U grades optional. Sem TBA. Staff and students.

Designed to provide several study groups each semester on specialized topics. A group may meet for whatever period is judged adequate to enable coverage of the selected topics. Ordinarily, topics are selected and circulated during the preceding semester. Discussion of current literature is encouraged. Suggestions for topics should be submitted by faculty or students to the chair of the Department of Neurobiology and Behavior.

[BIONB 721(7210) Introductory Graduate Survey in Neurobiology and Behavior]

Fall. 2 credits. Requirement for graduate students majoring in neurobiology and behavior. Concurrent registration in BIONB 221 and 222 not required. S-U grades only.
Lec and disc, W 4-6 P.M. D. L. Deitcher and staff.

Lectures, readings, and discussion introduce first-year graduate students to the research activities of the faculty in the graduate field of neurobiology and behavior. Class meets weekly for two hours. Students also prepare a research proposal on a potential topic for their thesis research (in the format of an NSF or NIH grant). This proposal is prepared in consultation with one or more relevant faculty members.

PLANT BIOLOGY (BIOPL)**[BIOPL 240(2400) Green World/Blue Planet]**

Summer, six-week session. 3 credits.
Limited to 12 students. S-U grades optional. Lec, M-F 10-11:15. T. Silva.

Focuses on helping individuals understand how scientific information relates to the issues they face as citizens, in management decision making, and in public policy. To what extent should genetic engineering of crop plants be permitted? Should we place limits on fossil fuel consumption as a means of limiting global warming and global climate change? Must human endeavors be restricted in certain areas to maintain diversity? The format of this course is interactive, with lectures and discussions about how we as a society deal with controversial issues.

[BIOPL 241(2410) Introductory Botany]

Fall. 3 credits. Lec, T R 9:05; lab, M T W or R 1:25-4:25, or M W 7:30-10:30 P.M.
K. J. Niklas.

Introductory botany for those interested in the plant sciences. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plant materials, including identification. First and second weeks of laboratory are field trips, starting with the first day of classes. *Those who register for an evening laboratory are still required to attend the afternoon field trips.*

[BIOPL 242(2420) Plant Function and Growth]

Spring. 3 credits. S-U grades optional.
Primarily for undergraduates in agricultural sciences but also for any biological sciences students wanting to know about plant function; suitable as second-level course for nonmajors to satisfy biology distribution requirement. Prerequisites: one year introductory biology and/or BIOPL 241. Co-requisite for plant science undergraduates (and highly recommended for other science majors): BIOPL 244. Recommended: one year introductory chemistry. May not be taken for credit after BIOPL 342 except by written permission of instructor. Lec, M W F 10:10; evening prelims, Feb. 23 and Mar. 30; Not offered 2005-2006. P. J. Davies.

How plants function and grow. Examples deal with crop plants or higher plants where possible, though not exclusively. Topics include cell structure and function; plant metabolism, including photosynthesis; light relations in crops; plant-water relations; water uptake, transport, and transpiration; irrigation of crops; sugar transport; mineral nutrition; growth and development—hormones, responses to light, flowering, fruiting, dormancy, and abscission; stress; tissue culture; and genetic engineering of plants.]

[BIOPL 243(2430) Taxonomy of Cultivated Plants (also HORT 243(2430))]

Fall. 4 credits. Prerequisite: one year introductory biology or written permission of instructor. May not be taken for credit after BIOPL 248. Lec, M W F 10:10; lab, M or W 2-4:25. Offered alternate years; not offered 2005-2006. M. A. Luckow.

Study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.]

[BIOPL 244(2440) Plant Function and Growth, Laboratory]

Spring. 2 credits. Limited to 14 students per sec. Co-requisite: BIOPL 242. May not be taken for credit after BIOPL 344. Disc and lab, M T or W 12:20-4:25; students must take lab and disc on same day. Not offered 2005-2006. T. Silva.

Experiments exemplify concepts covered in BIOPL 242 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level.]

BIOPL 245(2450) Plant Biology

Summer, six-week session. 3 credits.
Limited to 24 students. Lec, M-F 11:30-12:45; lab, M W 2-5. T. Silva.

Introductory botany, including plant identification. Emphasizes structure, reproduction, and classification of flowering plants. Much of the laboratory work is conducted outdoors taking advantage of several outstanding natural areas available for study. Those who lack college-level biology are expected to work closely with the instructor on supplemental instructional materials.

[BIOPL 247(2470) Ethnobiology]

Fall. 3 credits. S-U grades optional. Lec, T R 11:15; disc, R 12:20-1:25 or F 12:20. Offered alternate years; not offered 2005-2006. D. M. Bates.

Consideration of the principles, methods, and issues of ethnobiology. Emphasis is on the past and present ecological, evolutionary, economic, and cultural interrelationships of humans in traditional and lay societies with their plants and animals, as a means of understanding the place and future of humans in the biosphere. Traditional medicines, underutilized organisms, resource management, and ownership of nature, and methodology are among the topics covered.]

BIOPL 248(2480) Taxonomy of Vascular Plants

Spring. 4 credits. Prerequisite: one year introductory biology. May not be taken for credit after BIOPL 243. S-U grades optional. Lec, M W F 9:05; lab, W or R 1:25-4:25. Offered alternate years. J. I. Davis.

Introduction to the classification of vascular plants, with attention to the goals of taxonomy, the processes of plant evolution, and the means of analyzing evolutionary relationships among plants. The laboratory concentrates on methods of plant identification and presents an overview of vascular plant diversity, with particular attention to the flowering plants.

BIOPL 340(3440) Methods in Biological and Biochemical Prospecting

Spring. 2 credits. Prerequisites: BIO G 101-104. Recommended: previous or concurrent enrollment in organic chemistry. Times TBA. Offered alternate years. E. Rodriguez.

Students learn theory and methodologies in ethnobotany, chemical ecology, and zoopharmacognosy as they apply in a multidisciplinary fashion to chemical prospecting. The use of techniques in the chemistry of natural products and biological assays in the discovery of chemicals and their role in nature is described. Classical examples of drug development, from quinine to taxol, in the course of chemical prospecting are discussed. An overall medicinal purpose in chemoprospecting is emphasized, with mention of specific worldwide spread of diseases pressing for new drugs.

BIOPL 342(3420) Plant Physiology, Lectures

Spring. 3 credits. Prerequisites: one year introductory biology. Co-requisite: BIOPL 344 or written permission of instructor. May not be taken for credit after BIOPL 242 unless written permission obtained from instructor. Lec, T R 10:10-11:25. T. G. Owens.

Integrated and interdisciplinary study of the processes that contribute to the growth, competition, and reproduction of plants. Topics include, but are not limited to, plant-water relations, membrane properties and processes, photosynthesis, plant respiration, mineral and organic nutrition, stress physiology, control of growth and development, and responses to the environment. Emphasis is on the relationship between structure and function from the molecular to the whole-plant level.

BIOPL 343(3430) Molecular Biology and Genetic Engineering of Plants

Spring. 2 credits. Prerequisite: one year general biology or permission of instructor. S-U grades optional. Lec, T R 11:15. M. E. Nasrallah.

Introduction to current studies involving recombinant DNA technology and its application to the improvement of plants. Emphasizes genetic transformation methodology, gene expression systems, and strategies for increasing productivity. The course is directed toward undergraduates who wish to become familiar with the theory and practice of plant biotechnology.

BIOPL 344(3440) Plant Physiology, Laboratory

Spring. 2 credits. Co-requisite: BIOPL 342. May not be taken for credit after BIOPL 244. Similar to BIOPL 244 but at more advanced level. Lab, R 1:25-4:25; disc, R 12:20. T. Silva.

Experiments exemplify concepts covered in BIOPL 342 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level, with emphasis on experimental design.

BIOPL 345(3450) Plant Anatomy

Fall. 4 credits. Limited to 15 students. Prerequisite: one year introductory biology or a semester of botany. Lec, M W 9:05; lab, M W 2-4:25. Offered alternate years. A. Gandolfo.

Descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.

BIOPL 347(3470) Laboratory in Molecular Biology and Genetic Engineering of Plants

Spring. 2 credits. Limited to 24 students. Prerequisite: BIOPL 343 or permission of instructor. Recommended: concurrent enrollment in BIOPL 343. S-U grades optional. Lab, W 12:25-4:25. M. E. Nasrallah.

Companion to BIOPL 343 with laboratory activities that focus on the practice of plant biotechnology. Students transfer genes to plants by a variety of methods and analyze their expression in the host genome by use of reporter gene assays and by the preparation and analysis of nucleic acids.

BIOPL 348(3480) The Healing Forest

Spring. 2 credits. Prerequisites: introductory biology or plant biology or permission of instructor. Lec/disc, R 2:30-4:25. Offered alternate years. D. M. Bates and E. Rodriguez.

Ethnobotanical and ethnopharmacological consideration of the role of plants, fungi, and insects in traditional and western medicine. Studies of indigenous and lay societies illustrate the ecological, systematic, biochemical, and cultural aspects of herbal medicines and are placed in the broader context of such interdependent themes as the conservation of biological and cultural diversity, human health, bioprospecting, compensation for indigenous knowledge, and sustainable development.

[BIOPL 359(3590) Biology of Grasses]

Fall. 2 credits. Prerequisite: one year introductory biology or course in plant systematics or permission of instructor. S-U grades optional. Lec, T 1:25-2:15; lab, T 2:30-4:25. Offered alternate years; not offered 2005-2006. J. I. Davis.

Systematics and related aspects of the biology of the graminoid plant families (grasses, sedges, and rushes), with the principal emphasis on grasses. Major topics include phylogenetics, taxonomy, physiology, reproductive biology, speciation, and biogeography. The roles of graminoid plants in natural and human-disturbed environments are discussed, as are the origins of cultivated species.]

[BIOPL 380(3800) Strategies and Methods in Chemical Prospecting]

Spring. 2 credits. Prerequisite: one year introductory biology and organic chemistry course or permission of instructor. S-U grades optional. Offered alternate years; not offered 2005-2006. M. A. Aregullin.

Covers strategies and methodologies in chemotaxonomy, chemical ecology, and ethnobotany, as they are used in chemical prospecting for new pharmaceuticals. Discusses the biosynthesis and distribution of plant secondary metabolites, the use of techniques in isolation and structure elucidation of natural products, and biological assays in the discovery of chemicals with pharmacological activity.]

BIOPL 404(4040) Crop Evolution, Domestication and Diversity (also PL BR/IARD 404[4040])

Fall. 2 credits. Prerequisites: BIOGD 281 or PL BR 225 or permission of instructor. S-U grades optional. Lec, T R 9:05. S. Kresovich.

For description, see PL BR 404.

BIOPL 422(4220) Plant Development

Fall. 2 credits. Lec, T R 9:05-9:55. Prerequisites: course work in molecular biology (e.g., BIOBM 330, 331/332, or 333), or genetics (e.g., BIOGD 281), or permission of instructor. S-U grades optional. J. Hua.

Introduction to plant development, studying the mechanisms of morphogenesis and cell fate determination at the organismal, cellular, and molecular levels.

[BIOPL 440(4400) Phylogenetic Systematics]

Spring. 4 credits. Limited to 24 students. Prerequisite: introductory biology or permission of instructor. Lec, T R 10:10; lab, T R 2-4:25. Offered alternate years; not offered 2005-2006. K. C. Nixon.

Basic and advanced theory and methods of phylogenetic analysis. Introduces students to cladistic analysis using parsimony and gain experience with computer-aided analysis of taxonomic data, including both morphological and molecular data sources. Topics include applications of phylogenetic methods to biogeography and evolutionary studies.]

BIOPL 442(4420) Current Topics in Ethnobiology

Fall. 2 credits. Limited to 12 students. Prerequisite: permission of instructor. S-U grades optional. Lec/disc, W 2:30-4:25. Offered alternate years. D. M. Bates.

Explores the interrelationships of plants and animals with humans from a wide range of perspectives. Topics considered are contemporary issues, theory, and methodology of ethnobotany and ethnobiology, and the role of plants and animals in human lives, in subsistence and exchange, and in thought.

BIOPL 443(4430) Topics and Research Methods in Systematics

Fall or spring. 1-2 credits; 1 credit per sec. Prerequisite: written permission of instructor. S-U grades optional. K. C. Nixon.

Series of 1-credit modules on specialized topics in systematics. Topics and instructors vary each semester. May not be taught every semester. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester.

BIOPL 444(4440) Plant Cell Biology

Fall. 4 credits. Limited to 24 students. Prerequisites: one year introductory biology or permission of instructor. Lec, M W F 9:05; lab, M or W 1:25-4:25. R. O. Wayne.

Uses evidence from microscopy, physiology, biochemistry, and molecular biology to try to unravel the mystery of the living cell. Studies the dynamics of protoplasm, membranes, and the various organelles. The mechanisms of cell growth and division, the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

BIOPL 447(4470) Molecular Systematics

Fall. 3 credits. Prerequisites: BIOEE 278 or BIOGD 281 or BIOBM 330, or BIOBM 332, or written permission of instructor. Lec, T R 8:30-9:55. Offered alternate years. J. J. Doyle.

Theory and practice of using molecular evidence, particularly DNA sequence data, for addressing diverse systematic and evolutionary questions. Emphasis is on phylogeny reconstruction, particularly in eukaryotic systems. The organization and evolution of nuclear and organellar genomes is described from the standpoint of their suitability for systematic and evolutionary studies.]

[BIOPL 448(4480) Plant Evolution and the Fossil Record

Spring. 3 credits. Prerequisite: BIOPL 241 or equivalent, or permission of instructor. Lec, T R 9:05; lab, R 12:20-2:15. Offered alternate years; not offered 2005-2006. K. J. Niklas and W. L. Crepet.

Introduction to evolution, surveying major changes in plants from the origin of life to the present. Emphasizes plant form and function, adaptations to particular ecologic settings, and evolutionary theory as it relates to plants.]

BIOPL 449(4490) Green Signals and Triggers—The Plant Hormones (also HORT 449[4490])

Fall. 1 or 2 credits. Prerequisite: one year introductory biology and plant physiology (BIOPL 242 or 342) or permission of instructor. S-U grades optional. F 1:25-2:15. Offered alternate years. P. J. Davies.

Study of plant hormones and how they regulate plant growth and development. Topics include the discovery, role in growth and development, mode of action, and practical uses of the plant hormones auxin, gibberellins, cytokinins, abscisic acid, ethylene, and brassinosteroids.

[BIOPL 452(4520) Systematics of Tropical Plants

Fall. 3 credits. Prerequisite: BIOPL 243 or 248. Letter grades only. Lec, M W; lab, T 1:25-4:25. Offered every three years; not offered 2005-2006. K. C. Nixon.

The families of plants encountered solely or chiefly in tropical regions are considered in a phylogenetic context in lectures, discussions, and laboratory, with the aim of providing basic points of recognition for, and an understanding of, diversity and relationships in these families.]

[BIOPL 453(4530) Principles and Practice of Historical Biogeography (also ENTOM 453[4530])

Fall. 3 credits. Prerequisite: systematics course or permission of instructors. S-U grades optional. Lec, T R 10:10; lab, T 1:25-4:25. Offered alternate years; not offered 2005-2006. J. K. Liebherr and M. A. Luckow.

Survey of techniques in historical biogeography and the development of modern biogeographic theory in the context of classical, ecological, and phylogenetic analytical methods. Presents geological and paleontological aspects of biogeography, and discusses large-scale biogeographic patterns. Laboratories focus on computer applications and discussion of controversial issues.]

[BIOPL 454(4540) Systematics of Tropical Plants: Field Laboratory

Spring. 1 credit. Limited to 15 students. Prerequisite: BIOPL 452 or permission of instructor. Letter grades only. For more details and application, contact L. H. Bailey Hortorium, 467 Mann Library. Offered every three years; not offered 2005-2006. K. C. Nixon.

Intensive orientation to families of tropical flowering plants represented in forests of the American Tropics. Emphasis is on field identification combined with laboratory analysis of available materials in a "whole-biology" context. Two-week field trip over winter break.]

BIOPL 456(4560) Biomechanics of Plants (also BEE 456[4560])

Fall. 3 credits. Prerequisites: upper-division undergraduate or graduate standing, completion of introductory sequence in biology and one year of calculus, or permission of instructor. S-U or letter grades. Lec, T R 11:15-12:05; disc, W 2:30-3:20. J. R. Cooke and K. J. Niklas.

For description, see BEE 456.

BIOPL 462(4620) Plant Biochemistry

Spring. 3 credits. Prerequisites: BIOPL 242 or 342 or equivalent and BIOBM 330 or 331 or equivalent or permission of instructor. Letter grades only. Lec, M W F 9:05. J. Rose and K. Van Wijk.

Focuses on biochemistry of plant specific processes, with the aim to obtain an integrative overview of plant biochemistry. Examples include processes such as cell wall biochemistry, pigment biosynthesis and degradation, secondary metabolism, senescence, defense mechanisms, amino acid biosynthesis, and small molecule transport. Genomics-based experimental tools such as proteomics and metabolomics are discussed.

BIOPL 641(6410) Laboratory in Plant Molecular Biology (also BIOBM 641[6410])

Fall. 4 credits. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 or equivalent, and permission of instructor. S-U grades by permission of instructor. Lab, T R 12:20-4:25. J. B. Nasrallah, M. R. Hanson, and H. Wang.

Includes selected experiments on gene expression, gene transfer, and assay of reporter genes in plants. Emphasizes the application of molecular biology methodology to plant systems. Additional lab time is required to complete assignments.

BIOPL 642(6420) Plant Mineral Nutrition (also CSS 642[6420])

Spring. 3 credits. Prerequisite: BIOPL 342 or equivalent. Lec, M W F 10:10. Offered alternate years. L. V. Kochian and R. M. Welch.

Detailed study of the processes by which plants acquire and use mineral nutrients from the soil. Topics include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; the metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and the nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements are emphasized to illustrate these topics.

BIOPL 647(6470) Seminar in Systematic Botany

Fall or spring. 1 credit; may be repeated for credit. Prerequisite: for undergraduates, written permission of course coordinator. S-U grades optional. Sem, T 12:20. Bailey Hortorium staff.

Lectures and discussions led by staff, visitors, and students on topics of current importance to systematic botany.

[BIOPL 649(6490) Solute Transport in Plants (also BEE 649[6490])

Fall. 3 credits. Letter grades only. Lec, T R 10:10-11:25. Offered alternate years; not offered 2005-2006. R. M. Spanswick.

For description, see BEE 649.]

[BIOPL 651(6510) Water Transport in Plants (also BEE 647[6470])

Fall. 2 credits. Letter grades only. Lec, T R 10:10. Offered alternate years. R. M. Spanswick.

For description, see BEE 647.

BIOPL 652 Plant Molecular Biology II

Spring. 1-6 credits; 1 credit per sec. Prerequisites: BIOGD 281 and BIOBM 330 or 332, or equivalents. Recommended: BIOBM 331. S-U grades optional.

Series of four-week modules on specialized topics. Coordinator: J. B. Nasrallah.

Sec 01 Molecular Plant-Pathogen Interactions I and II (also PL PA 662.1)

1 credit. Lec, M W F 10:10 (12 lec).
Offered alternate years. A. Collmer,
S. G. Lazarowitz, G. Martin, and
B. G. Turgeon.

Examination of the molecular and cellular factors that control pathogen-plant interactions from the perspectives of pathogen biology and plant responses to pathogen infection. Beginning spring 2004, alternate years focus on: (1) plant perception of microbial pathogens and the interplay of plant defenses and pathogen counterstrategies that result in resistance or susceptibility to disease production, with topics including the genetic nature of dominant and recessive resistance, induction of pathogen defense genes, apoptotic responses that limit infection, and RNA interference; and (2) the genetic and molecular mechanisms of microbial pathogenesis, with an emphasis on fungal and bacterial virulence proteins, toxins, and their deployment systems.

Sec 02 Molecular Plant-Microbe Interactions (also BIOMI 652, Sec 2, PL PA 664)

1 credit. S-U grades optional. Lec, M W F 12:20 Jan. 16–Feb. 17 (12 lec). Offered alternate years. S. C. Winans.

Focuses on the interactions of *Agrobacterium* and *Rhizobia* with plants. Topics on *Agrobacterium*-plant interactions include plant-microbe recognition mechanisms, T-DNA transfer process, oncogenesis, and use of *Agrobacterium* to produce transgenic plants. Topics on *Rhizobium*-plant interactions include regulation of nitrogenase activity and expression, organization and function of the *sym* plasmid, nodule development, and plant genetics involved in plant-microbe interaction.

Sec 03 Light Signal Transduction in Plants

1 credit. S-U grades optional. Lec, M W F 10:10 (12 lec) Mar. 27–Apr. 21. T. Brutnell.

In addition to providing plants with energy for photosynthesis, light plays an essential role in the development of higher plants. Light quality and intensity is carefully monitored by the plant to avoid neighboring vegetation, set the circadian clock, and adjust photosynthesis rates. This course focuses on recent studies that have illuminated the molecular basis of light signal transduction networks in higher plants. Readings are assigned from current literature with an emphasis on those that use genomics tools such as microarray analysis to address fundamental questions in red/far-red and blue light signal transduction.

[Sec 04 Plant Gene Evolution and Phylogeny

1 credit. Lec, M W F 1:25 (12 lec). Offered alternate years; not offered 2005–2006.
J. J. Doyle.

Practical applications of molecular systematics/evolution for plant molecular biologists and other non-systematists. The course focuses on two basic issues: methods and principles for inferring relationships among genes and the use of data to hypothesize relationships among plants. Evolutionary patterns and processes of genes and gene families are discussed, as well as rates of sequence evolution, paralogy and orthology, the effects of recombination and concerted evolution of gene phylogenies, and the implications of using gene or allele phylogenies to infer organismal evolutionary patterns.]

Sec 05 Molecular Biology of Plant Organelles (also BIOBM 652.5)

1 credit. S-U grades optional. Lec, M W F 10:10 (12 lec) Feb. 22–Mar. 17.
M. R. Hanson and D. B. Stern.

In-depth examination of the molecular biology of plant mitochondria and plastids. Topics include the organization, evolution, and expression of organelle genomes, RNA editing, and the expression of nuclear genes encoding structural or regulatory organelle proteins. Special topics include mitochondrially encoded cytoplasmic male sterility, transformation and expression of foreign genes in chloroplasts, and the use of genetics to investigate nucleus-organelle interactions.

Sec 06 Plant Biotechnology (also PL BR 652, PL PA 662.2)

1 credit. S-U grades optional. Lec, M W F 1:25 (12 lec) Mar. 27–Apr. 21. M. Zaitlin and E. D. Earle.

Deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

Sec 07 Plant Cell Walls: Structure to Proteome

1 credit. S-U grades optional. Lec, M W F 10:10 (12 lec) March 27–Apr. 21. J. Rose.

Examines the structure and function of plant cell walls, exploring their dynamic nature and fundamental contribution to numerous aspects of plant growth and development. Topics include wall biosynthesis; wall structure and composition; regulation of cell expansion and differentiation; defense against pathogens and signaling; the apoplast as a metabolically active subcellular compartment; and analytical techniques: from biochemistry to proteomics.

BIOPL 653 Plant Molecular Biology I

Fall. 1–5 credits; 1 credit per sec.
Prerequisites: BIOGD 281 and BIOBM 330 or 332, or equivalents. Recommended: BIOBM 331. S-U grades optional.
Coordinator: J. B. Nasrallah.

Series of four-week modules on specialized topics.

Sec 01 Concepts and Techniques in Plant Molecular Biology (also PL PA 663.01, PL BR 653.01)

2 credits. Lec, M W F 10:10 (24 lec) Aug. 26–Oct. 19. S. R. McCouch, J. Giovannoni, and J. Rose.

Introductory module that provides a broad overview of molecular biology concepts relevant to the plant sciences. Serves as a prerequisite to other modules in the BIOPL 653 (fall) and BIOPL 652 (spring) series. The course is divided into three sections: (1) Gene discovery: covers genetic, molecular, and genomics approaches to the isolation of plant genes; (2) Gene characterization: covers DNA sequence analysis, assessment of gene expression, functional genomics approaches, and production of transgenic plants; (3) Analysis and characterization of proteins and metabolites: includes proteomics approaches to the analysis of plant proteins, protein-protein interactions, and metabolic profiling through emerging metabolomic techniques. This course consists of two lectures and one

day of discussion per week. Course material is coordinated with BIOPL 641 (lab). Emphasis is on understanding techniques and approaches appropriate for different experiments and objectives.

Sec 02 Proteomics in Plant Biology

1 credit. S-U grades optional. Lec, M W F 1:25 (12 lec) Oct. 3–31. K. van Wijk.

Introduction to proteomics and mass spectrometry and its application in plant biology. Includes discussion of protein separation, protein tagging and visualization techniques; principles of biological mass spectrometry and interpretation of spectra; bioinformatics tools in proteomics; comparative proteomics; phosphorylation mapping. Discusses limitations and possibilities of proteomics on plants for which little sequence information is available and experimental papers involving plant proteomics.

Sec 03 Plant Genome Organization and Function (also PL BR 653.3)

1 credit. Lec, M W F 10:10 (12 lec).

Offered alternate years. S. D. Tanksley.
Covers the structure and variation of plant nuclear genomes, including changes in genome size, centromere/telomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene cloning, genomic sequencing and comparative genomics.

Sec 04 Molecular Aspects of Plant Development I (also BIOBM 653.4)

1 credit. Lec, M W F 10:10 (12 lec) Nov. 2–28. J. B. Nasrallah.

Focuses on the molecular genetics of plant development with an emphasis on plant reproductive biology. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Topics include cell-cell signalling in the establishment of pattern and differentiation of specialized cell types, and the control of developmental pathways by endogenous and external cues. The module is a companion to BIOPL 652, Sec 02 (Molecular Aspects of Plant Development II).

Sec 05 Molecular Breeding (also PL BR 653.6)

1 credit. Lec M W F 10:10 (12 lec). Offered alternate years. S. D. Tanksley.

Application of DNA markers to the identification, manipulation, and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students learn how to design and execute experiments to identify quantitative trait loci (QTLs), as well as how to apply molecular markers to plant and animal breeding programs.

Sec 06 Plant Senescence (also HORT 625.2)

1 credit. S-U grades optional. (12 lec).
S. Gan.

Introduces molecular, genetics, and genomics approaches in plant senescence and postharvest research. Topics include gene expression, regulation, and function associated with physiological and biochemical changes in senescing, maturing, and/or ripening plants or parts. Genetic manipulation of senescence/ripening processes are also discussed.

BIOPL 654(6540) Botanical Nomenclature

Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Lec and disc TBA. Offered alternate years. M. A. Luckow.

Analysis of the International Code of Botanical Nomenclature and its application to various plant groups.

BIOPL 656(6560) Topics in Plant Evolution

Spring. 1 credit. Prerequisite: BIOPL 448 or equivalent background in evolution, or written permission of instructor. Lab and disc TBA. Offered alternate years. K. J. Niklas.

Series of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.

BIOPL 740(7400) Plant Biology Seminar

Fall and spring. 0 credits (no official registration). Requirement for graduate students doing work in plant biology. Sem. F 11:15. W. L. Crepet.

Lectures on current research in plant biology, presented by visitors and staff.

BIOPL 741(7410) Problems in Plant Cell and Molecular Biology

Spring. 2 credits. Prerequisite: first- and second-year graduate students in Plant Cell and Molecular Biology Program. Disc TBA.

Introduction to the research literature in plant molecular and cellular biology through weekly problem sets and discussions.

BIOPL 742(7420) Current Papers in Plant Biology

Fall or spring. 1 credit. Limited enrollment. Primarily for graduate students, with priority given to majors or minors in plant molecular biology. Prerequisite: for undergraduates, written permission of instructor. S-U grades only. Sem, one hour each week TBA. Staff.

BIOPL 743(7430) Faculty Research in Plant Cell and Molecular Biology

Fall. 1 credit. Prerequisite: graduate standing or written permission from member of Plant Cell and Molecular Biology Program or from coordinator for undergraduates. Disc TBA. Staff.

Introduction for graduate students to the research being conducted by Cornell faculty in the Plant Cell and Molecular Biology Program.

BIOPL 744(7440) Graduate Research in Plant Cell and Molecular Biology

Fall or spring. 1 credit. Requirement for, and limited to, second-, third-, and fourth-year graduate students in Plant Cell and Molecular Biology. Sem R 12:20. Staff.

Each student presents one seminar per year on his or her thesis research and then meets with the thesis committee members for evaluation.

BIOPL 745(7450) Current Topics in Systematics

Fall. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades optional. Disc, T 12:20. Bailey Hortorium staff.

Seminar with presentations and discussion by students of original research papers in systematic biology.

BIOPL 746(7460) Research Seminar in Systematic Botany

Spring. 1 credit. Prerequisite: graduate standing or permission of instructor. Disc, T 12:20. Bailey Hortorium staff.

Student-led seminar presentation based on his or her thesis research or a related topic.

BIOPL 749(7490) Graduate Research in Botany

Fall or spring. Variable credit; may be repeated for credit. S-U grades optional. Staff.

Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

COURSES IN MARINE SCIENCE

Cornell offers an extensive listing of undergraduate courses in marine science.

Undergraduates interested in pursuing studies in marine science are encouraged to explore the undergraduate specialization in marine biology offered through the Office of Undergraduate Biology, the undergraduate specialization in ocean sciences offered through the Science of Earth Systems Program, and the summer program of courses offered by the Shoals Marine Laboratory. Further information on these programs can be found at the Cornell Marine Programs Office, G14 Stimson Hall, or at www.sml.cornell.edu.

Undergraduate Specialization in Marine Biology and Oceanography

Biological sciences majors in the Ecology and Evolutionary Biology program of study have the option of specializing their program of study in the area of Marine Biology.

This specialization is intended for students with interests in understanding the unique aspects of organismal biology in the marine environment. In addition to fulfilling the major and the ecology and evolutionary biology program of study requirements, students in marine biology are encouraged to enroll in the following courses:

1. BIOEE 154 The Sea: An Introduction to Oceanography
2. BIOSM 364 Field Marine Science or BIOSM 375 Field Marine Biology and Ecology and at least one 400-level BIOSM field course at the Shoals Marine Laboratory
3. BIOEE 462 Marine Ecology

Undergraduate Specialization in Ocean Sciences

Science of Earth Systems majors have the option of specializing their program of study in the area of ocean sciences. This interdisciplinary specialization is intended for students with interests in understanding the interaction of biological, chemical, geological, and physical processes in ocean systems. In addition to fulfilling the Science of Earth Systems general requirements (see the SES program description in Interdisciplinary Centers, Programs, and Studies section of catalog), students in ocean sciences are required to take four advanced courses from the following list to fulfill their major requirements:

1. BIOEE 373 Biology of the Marine Invertebrates
2. BIOEE 457 Limnology
3. BIOEE 462 Marine Ecology
4. BIOEE 478 Ecosystem Biology
5. BIOEE 490 Topics in Marine Biology
6. BIOSM 377 Diversity of Fishes
7. BIOSM 310 Marine Symbiosis
8. BIOSM 309 Climates and Ecosystems
9. BIOSM 329 Ecology of Animal Behavior
10. BIOSM 364 Field Marine Science
11. BIOSM 365 Underwater Research
12. BIOSM 374 Field Ornithology
13. BIOSM 375 Field Marine Biology and Ecology
14. BIOSM 413 Research in Marine Biology
15. BIOSM 418 Tropical Marine Science
16. BIOSM 449 Seaweeds, Plankton and Seagrass
17. BIOSM 376 Marine Invertebrate Zoology (Note: Not same as BIOEE 373)
18. BIOSM 477 Marine Vertebrates
19. EAS 375 Sedimentology and Stratigraphy
20. EAS 455 Geochemistry
21. EAS 475 Special Topics in Oceanography
22. EAS 479 Paleobiology
23. NTRES 306 Coastal and Oceanic Law and Policy

Sea Semester

BIOSM 366 SEA: Introduction to Oceanography

BIOSM 367 SEA: Introduction to Maritime Studies

BIOSM 368 SEA: Introduction to Nautical Science

BIOSM 369 SEA: Practical Oceanography I

BIOSM 370 SEA: Practical Oceanography II

Students in both marine science specializations are exposed to an integrated program of study, emphasizing a natural progression of formal course work combined with ample opportunities for practical field experience.

These courses must be taken concurrently. Special program run by the Sea Education Association. Contact the Marine Programs office (255-3717) for more details.

SHOALS MARINE LABORATORY (BIOSM)

G14 Stimson Hall, 255-3717

The objective of the Shoals Marine Laboratory (SML) is to provide undergraduates and other interested adults a unique opportunity to explore marine sciences in an island setting noted for its biota, geology, and history. SML has established a national reputation for excellence and has become North America's largest marine field station focusing on undergraduate education.

The summer population of Appledore Island is limited to about one hundred people at any one time. Participants and faculty members can literally and figuratively immerse themselves in their explorations, free from distractions common to most academic institutions. Because SML is a residential facility, a sense of community develops that makes courses and seminars at SML outstanding educational and intellectual experiences. Participants learn from and exchange ideas with a wide range of specialists whose primary interests are marine but whose perspectives often differ, providing fertile ground for lively discussions.

Credit courses at Shoals Marine Laboratory are full-time, intensive learning experiences. Courses may be taken sequentially, but **not** concurrently. A typical day combines lecture sessions, laboratory and field work, field trips to nearby islands and the mainland, and collecting and research excursions aboard the laboratory's 47-foot research vessel, *John M. Kingsbury*, or the 36-foot research vessel, *John B. Heiser*. Field experience is an integral component of all courses, using Appledore's extensive intertidal and subtidal zones, wading bird rookeries, and seabird colonies. Faculty, drawn from Cornell University, the University of New Hampshire, and other leading academic institutions, are selected based not only on their academic excellence but also on their teaching ability in the field. In addition, there are numerous guest lecturers including engineers, coastal planners, and specialists from private industry, government, and the academic community.

The Ithaca campus functions of the Shoals Marine Laboratory are centered in the Cornell Marine Programs office, G14 Stimson Hall. The office serves as an advising center for students interested in the marine sciences, maintains a browsing library with updated information on graduate study and career opportunities as well as on marine programs at other institutions, and administers the SEA Semester, a 17-credit program offered in cooperation with the Sea Education Association (SEA).

The following marine sciences courses are currently administered by the Cornell Marine Programs Office. (Not all of these courses are offered each semester; consult the SML catalog for current offerings.)

BIOSM 160(1600) The Oceanography of the Gulf of Maine

Summer. 4 credits. Limited to 24 students. Special two-week course offered aboard a SEA vessel and at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall or Sea Education Association office, P.O. Box 6, Woods Hole, MA 02543. Daily lec, lab, and fieldwork for two weeks. SML faculty.

Exciting opportunity to explore the offshore and near-coastal environments of the Gulf of Maine for pre-college and first-year non-science majors. Students spend 10 days aboard the Sea Education Association's sailing vessels round trip between Woods Hole, Mass., and the Isles of Shoals via Georges Bank and the Gulf of Maine. Besides operating the ship, students study the many characteristics of this unique ocean environment. Following the sea component, students spend seven days at the Shoals Marine Laboratory collecting data characteristic of the Isles of Shoals coastal environment.

BIOSM 161(1610) Introduction to Marine Science

Summer. 4 credits. S-U grades optional. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for two weeks.

Allows students who are not biology majors to experience the breadth of the marine sciences under field conditions at an island laboratory. Aspects of biology, geology, earth science, chemistry, and physics are included. Specific topics include beach, salt marsh, tidal mud flat, tide pool, and benthic offshore environments; identification of marine plants and animals; chemical and physical oceanography; marine geology; and ecology of kelp beds and urchin barrens.

BIOSM 162(1620) Marine Environmental Science

Summer. 3 credits. Prerequisite: open to high school students who have successfully completed two high school science courses. Special 12-day course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for 12 days. SML faculty.

Environmental studies have become an integral component of high school programs all around the country; however, opportunities to apply this course work to the marine environment are limited. Marine Environmental Science focuses on coastal marine habitats, with an emphasis on issues as they relate to global habitats and concerns. Laboratory exercises and fieldwork include explorations along Appledore Island's rocky intertidal zone and excursions to neighboring islands to observe harbor seal and seabird colonies. Offshore cruises include oceanographic sampling exercises and field trips to seabird and whale foraging grounds. Lectures and discussions expose MES students to topics ranging from fishes to fisheries, seaweeds to lobsters, and plankton to whales. Fundamental scientific research methods and equipment are introduced, and each student has the opportunity to be involved in group research projects.

BIOSM 204(2040) Biological Illustration

Summer. 2 credits. Special one-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily sessions for one week. SML faculty.

General discussion of scientific publishing, illustration labeling, color techniques, and

printing processes. Provides the scientist or science student a chance to experience several illustration techniques with the goal of obtaining an overview of scientific and wildlife illustrations. The student may choose a single technique to explore in depth. Course size is limited so that individual attention can be emphasized.

[BIOSM 303(3030) Ecology of Marine Fishes]

Summer. 4 credits. Prerequisite: one year of college-level biology. Recommended: SCUBA certification. S-U grades optional. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec and fieldwork for two weeks. Not offered 2005. SML staff.

Presents principles, models, and methods for analysis of dynamics of fish populations and communities, and analysis of current research emphasizing theory and its potential uses in fisheries' management. Lab and field activities emphasize collection and analysis of data from the Gulf of Maine and adjacent estuarine habitats.]

BIOSM 308(3080) Microbes in the Marine Environment

Summer. 2 credits. Prerequisite: one full year college-level biology. Recommended: background in microbiology or cell biology. S-U grades optional. Special one-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lecs and fieldwork for one week. SML staff.

Introduction to concepts in marine microbiology, with emphasis on the microbial diversity in the ocean. The following topics are covered in depth: (1) abundance and distribution of Bacteria, Archaea, and single-celled eukaryotes in the marine environment, and the factors that influence their distribution, particularly within the water-column, (2) microbial food webs and their role in global nutrient cycling, and (3) methods to examine the diversity and activity of various marine microbial communities. Students learn how to critically read the primary literature through group discussions of hallmark papers and short writing assignments. Laboratory exercises include field sampling on research cruises, classic microbial culturing techniques, and molecular biology methods to identify members of microbial communities.

BIOSM 309(3090) Climates and Ecosystems

Summer. 4 credits. Prerequisite: one year college-level biology; background preferred in physics/physical geography. S-U grades optional. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for two weeks. SML faculty.

Study of the fundamentals of organism-environment interaction developed through defining and measuring abiotic factors including solar radiation, temperature, atmospheric moisture, precipital wind, and currents. On-site exploration of the dynamics

of meteorology and the role of abiotic and biotic factors in the life of coastal and marine plants and animals including humans.

BIOSM 310(3100) Marine Symbiosis

Summer. 4 credits. Prerequisite: one full year college-level biology. Recommended: background in microbiology or cell biology. S-U grades optional. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec and fieldwork for two weeks. SML staff.

Introduction to the concepts of symbiosis as applied to marine organisms, with an emphasis on microbial symbionts. Students develop the ability to analyze symbioses using a comprehensive set of criteria, including duration, propagation, specificity, integration and modes of interaction. Morning lectures are followed by afternoons collecting, preparing and studying live specimens. Each student learns to use a variety of light microscopic techniques, and contributes, through fieldwork and by written reports, to a comprehensive survey of symbiotic associations on and around Appledore Island.

BIOSM 329(3290) Ecology of Animal Behavior (also BIONB 329(3290))

Summer. 4 credits. Prerequisite: one year introductory college biology. Recommended: course work in ecology, psychology, or behavior. S-U grades optional. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details and an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for two weeks. SML faculty.

The ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory research methods. Lectures and readings address the major subareas of behavior (communication, orientation, social behavior, foraging, predator avoidance, and sensory mechanisms). Each student engages in short-term behavioral observation and prepares a research proposal for studying a problem within the course subject area.

BIOSM 364(3640) Field Marine Science (FMS)

Summer. 6 credits. Prerequisite: one year college biology. S-U grades optional. Special four-week course offered twice each summer at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. Students may not take FMS after taking FMBE (BIOSM 375). For more details or an application, contact SML Office, G14 Stimson Hall. Daily lec, lab, and fieldwork for four weeks. Three core faculty members assisted by up to 15 visiting lecturers, including representatives of governmental agencies. SML faculty.

Designed for the student who desires an initial overview of the marine sciences, this course emphasizes living material in natural habitats. Most of the course work is concerned with the biology of intertidal plants and animals, biological oceanography, ichthyology, and fisheries. Attention is also given to introductory physical and chemical oceanography and marine geology. Marine ecology and the effects of human activity on the marine environment are included. Students apply this knowledge by conducting a transect study toward the end of the course. FMS places emphasis on ichthyology, fisheries

biology, general oceanography (biological, physical, and chemical), and marine geology. FMBE (BIOSM 375) places an additional emphasis on ecology, especially in the intertidal zone; ecological, evolutionary and physiological adaptations of marine organisms; and field experiments.

BIOSM 365(3650) Underwater Research

Summer. 4 credits. Prerequisites: one year college-level biology, recognized SCUBA certification, and medical exam. S-U grades optional. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec and fieldwork for two weeks. Team-taught by three faculty members with occasional guest lecturers. Not for recreational divers.

Covers the philosophy of research, hypothesis testing and experimental design, sampling methods, various underwater techniques, diving physics and physiology, and use of dive tables. Emphasizes subtidal ecological research. Requirements include critical evaluation of several journal articles and production of a research proposal.

BIOSM 374(3740) Field Ornithology

Summer. 4 credits. Prerequisite: one year college-level biology. S-U grades optional. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec and fieldwork for two weeks. SML staff.

Introduction to field ornithology focusing on the biology, ecology, and behavior of the avifauna on the Isles of Shoals. Focuses on fieldwork designed to observe and study many concepts frequently taught in the classroom setting including territoriality, breeding biology, and survivorship. Students learn and apply numerous ornithological field methods including various census techniques, territory mapping, banding, behavioral observations, and creating a field notebook.

BIOSM 375(3750) Field Marine Biology and Ecology (FMBE)

Summer. 6 credits. Prerequisites: one full year college-level biology. S-U grades optional. Four-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G-14 Stimson Hall. Daily lec, lab, and fieldwork for four weeks. SML faculty.

Designed for students seeking an introduction to the marine sciences and marine ecology; FMBE emphasizes fieldwork in natural habitats. Examines aspects of the biology and ecology of marine organisms, including intertidal plants and invertebrates, fishes, marine mammals and birds, biological oceanography, and human impacts on the marine environment. FMBE places a special emphasis on the ecology of the intertidal zone and ecological, evolutionary, and physiological adaptations of marine organisms. Students may not take FMBE after taking FMS (BIOSM 364).

BIOSM 376(3760) Marine Invertebrate Zoology

Summer. 6 credits. Prerequisite: one year introductory biology and permission of instructors. Students may not take BIOSM 376 after taking BIOEE 373. S-U grades optional. Special three-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML

office, G14 Stimson Hall. Daily lec, lab, and fieldwork for three weeks. Offered alternate years. SML faculty.

Introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. Emphasizes the evolution of form and function, and the ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. Appledore Island's unique location provides an excellent venue for the study of freshly collected and *in situ* representatives of most of the major phyla.]

BIOSM 377(3770) Diversity of Fishes

Summer. 4 credits. Prerequisite: one full year college-level biology. Recommended: background in vertebrate biology. S-U grades optional. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec and fieldwork for two weeks. SML staff.

Intensive lecture, laboratory, and field course. Lectures cover the basic anatomy and physiology of fishes with examples drawn from a wide variety of fishes from throughout the world. The course emphasizes the diversity of fishes in two aspects, diversity of evolutionary solutions to problems faced by fishes and the great diversity of different types of fishes that inhabit the world. Laboratory exercises cover the anatomy and osteology of teleost fishes and identification of local species. Each student selects a different local species of teleost fish to study and dissect and prepares a comprehensive paper on its morphology, soft anatomy, and osteology.

BIOSM 402(4020) Marine Pollution

Summer. 4 credits. Prerequisites: one year college-level biology and chemistry or permission of instructor. S-U grades optional. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for two weeks. Offered alternate years; not offered 2005. SML faculty.

Introduction to marine pollutants; their sources and control/treatment; the effects of marine pollution upon coastal ecosystems; and federal and state water pollution regulatory programs. Laboratory includes training in field collection of water samples, measurement and modeling of effluent plume dispersion, and measurement of microbial indicators of water quality, dissolved nutrients, BOD, dissolved oxygen, and toxicity.]

BIOSM 413(4130) Research in Marine Biology

Summer. 6 credits. Prerequisite: one year college-level biology. Recommended: experience in ecology or physiology. S-U grades optional. Special three-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for three weeks. SML faculty.

Introduction to the physiological ecology and functional morphology of marine plants and animals, with emphasis on selected algal and invertebrate examples from the Gulf of Maine. Topics include photosynthesis in the marine environment; respiration in intertidal organisms; carbohydrates, proteins, and lipids as nutrients in the sea; acclimation and

tolerance of tide-pool biota; and biological responses to competition and grazing. Field and laboratory exercises explore principles and procedures used to characterize the physical, chemical, and biotic environment of intertidal and shallow subtidal organisms, including determination of temperature, light, salinity, oxygen and nutrient levels, and *in vivo* functional analyses of metabolic phenomena. The process of scientific investigation is the predominant theme of the course.

[BIOSM 418(4180) Tropical Marine Science

Summer. 6 credits. Limited to 15 students. Prerequisites: recognized SCUBA certification, medical exam, one full year college-level biology, and permission of instructors. Special four-week course offered in Akumal, Mexico. For more details, contact Shoals Marine Laboratory office, G-14 Stimson Hall, 255-3717. Designed for students interested in learning about coral reef ecology and conservation in an environment where these topics are of immediate concern. Students spend four weeks in Akumal, Mexico, a small resort town located about 60 miles south of Cancun on the Caribbean coast of the Yucatan Peninsula. Housing is provided by the Centro Ecologico Akumal, a local organization dedicated to the sustainable development of Akumal and the protection of its coral reefs. The major component of the course is studying basic coral reef ecology and learning the benthic fauna of the local reefs. During the remainder of the course, students participate in a reef-monitoring research project that aid in the establishment of a marine park in Akumal. Akumal is a developing center for research in coral reef biology and ecology. TMS students have the opportunity to interact with the scientists involved in this research.]

[BIOSM 449(4490) Seaweeds, Plankton, and Seagrass: The Ecology and Systematics of Marine Plants

Summer. 4 credits. Prerequisite: BIOSM 364 or one year introductory biology. S-U grades optional. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, consult SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for two weeks. SML faculty.

Overview of the major marine algal groups, including aspects of anatomy, morphology, development, life histories, physiology, and use. Laboratories and fieldwork emphasize relationships between distribution and major environmental parameters and involve student projects.

[EAS 475(4750) Special Topics in Oceanography: Satellite Remote Sensing in Biological Oceanography

Summer. 6 credits. Prerequisites: one course in oceanography and/or marine biology or permission of instructor. Recommended: strong computer skills. S-U grades optional. Special four-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H., and Cornell campus. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for four weeks. Offered alternate years; not offered 2005. SML faculty.

Provides hands-on research experience in hydrologic optics and satellite remote sensing to advanced undergraduate and beginning graduate students. Four principal parts, each taught by a separate team of instructors at two different locations: Part 1 (nine days) is conducted at SML and aboard the *R/V Kingsbury* in waters surrounding the Isles of Shoals. Part 1 is devoted to the theory and measurement of seawater optical properties, emphasizing the dependency of apparent optical property on chlorophyll and dissolved organic matter concentrations. Parts 2-4 (19 days) are conducted at the Science of Earth Systems' computer laboratory on the Cornell campus. Part 2 covers satellite remote sensing of the apparent optical properties of seawater with an emphasis on processing SeaWiFS data using SeaDAS software and IDL programming language. Part 3 addresses satellite remote sensing of physical oceanographic processes that influence ecosystem dynamics with an emphasis on AVHRR-derived sea-surface temperature and SSM/I-derived ocean winds. Part 4 is devoted to independent projects; students attempt to integrate SeaWiFS, AVHRR, and SSM/I data to address questions of biological-physical interactions.]

BIOSM 477(4770) Marine Vertebrates

Summer. 6 credits. Prerequisites: vertebrate biology course. S-U grades optional. Special three-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, consult SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for three weeks. SML faculty.

Topics in marine vertebrate biology emphasizing laboratory studies, field collections or observations, and readings from the current literature. Topics include systematics of fishes of the Gulf of Maine; elasmobranch physiology; interpretation of life history and parameters from otolith microstructure; teleost skeletomuscular structure and function; population biology and the contemporary Gulf of Maine fishery; Mesozoic marine reptiles; the biology of sea turtles in cold water; coloniality in sea birds; avian adaptations to life at sea; evolution and systematics of marine mammals; diving physiology; and ecology and conservation of existing marine mammal populations. Dissection of vertebrate animals is a part of one or more laboratory sessions.

BIOSM 495(4950) Research Methods in Marine Biology

Summer. 1 credit. Co-requisite: BIOSM 499 or permission of instructor. Primarily for undergraduates. Special eight-week course offered at the Shoals Marine Laboratory (SML). For more details or an application, contact SML office, G14 Stimson Hall. Weekly seminars for eight weeks.

J. G. Morin and M. J. Shulman. Seminar course on research methodology, experimental design, statistical analyses, and scientific writing. The course is designed to assist students in the research they are conducting while enrolled in BIOSM 499.

BIOSM 499(4990) Research in Biology

Summer. Variable credit; 2 credits per seven days on site. For more details and an application, contact SML office, G14 Stimson Hall.

Section A: Independent Biological

Research: Independent study with a member of the Shoals Marine Laboratory core faculty, based on student faculty interest and available facilities. A short proposal of research must be sent with application materials.

Research Experiences for Undergraduates (REU)

0 credits. The National Science Foundation (NSF) Research Experiences for Undergraduates (REU) program provides support for undergraduates to pursue supervised, independent research projects at the Shoals Marine Laboratory. Nine students are selected from a competitive, national pool to participate in the eight-week summer program. For more information and an application, contact the SML office, G14 Stimson Hall, or view SML's web site at www.sml.cornell.edu.

BIOSM 650(6500) Field Marine Ecology and Environmental Science for Teachers

Summer. 2 credits. Prerequisites: one year college-level biology. Recommended: teaching experience. A special one-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G-14 Stimson Hall. Daily lec and fieldwork for one week. SML faculty.

Intended for teachers of grades 6-12 but also open to undergraduate junior and senior students interested in teaching. Teachers develop hands-on, experiential approaches to the marine sciences, with an emphasis on coastal and environmental issues. Extensions to freshwater ecology also are included. Fieldwork is emphasized, with numerous excursions to the rocky intertidal and with off-shore ocean sampling. Lectures focus on biodiversity, adaptations, predator-prey interactions, environmental sustainability, and how to engage and motivate students with aquatic projects.

BIOSM 699(6990) Research in Biology for Teachers

Summer. 2 credits per week. Prerequisite: BIOSM 650. Special course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall.

Opportunity for teachers who have taken BIOSM 650 to return to Shoals to pursue in greater depth a topic of their choosing under the direction of the BIOSM 650 faculty.

EAS 213(2130) Marine and Coastal Geology

Summer. 4 credits. Prerequisite: introductory geology or ecology or permission of instructor. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for two weeks. SML faculty.

Examines the geology of the Isles of Shoals from Paleozoic intrusion, deformation, and metamorphism to recent glaciation, sea-level change and wave erosion. Students learn basic surveying and mapping techniques using the Brunton compass, poplevel/stadia rod, autolevel, GPS, seismic and side-scan sonar, and ocean coring, dredging, and grab sampling. Comparisons and inferences

between land and sea studies yield thematic maps depicting topography, bedrock geology and structure, vegetation, and land use. From these, ecological characteristics, habitat definition and occupation of habitat by organisms is also examined. This course is appropriate for students of geology, environmental science, ecology, biology, and coastal zone management.

BIOMI 650(6500) Molecular Plant Virology (also PL PA 606[6060])

Spring, first seven weeks of semester. 1 credit. Prerequisites: BIOMI 409, cell biology course, or permission of instructor. S-U grades optional. Lec, M W 11:15. Offered alternate years. S. G. Lazarowitz. Introduces students to the molecular biology of plant virus replication and interactions with the host to produce disease. Material covered includes virus replication strategies, cell-to-cell and systemic movement, host defense responses and virus counterstrategies, and engineered resistance.

BIOMI 651(6080) Genomics of Bacterium-Host Interactions (also PL PA 608[6080])

Fall, second half of semester. 1 credit. Prerequisite: BIOMI 290 or equivalent or permission of instructor. S-U grades optional. Lec, M W 9:05. Offered alternate years. A. Collmer and S. Winans. Introduction to genomic approaches, tools, and discoveries involving the study of bacterial interactions with plant and animal hosts. Topics include the TIGRE Comprehensive Microbial Resource and Artemis tools, the pathogens *Yersinia pestis*, *V. enterocolitica*, *Pseudomonas syringae*, *Ralstonia solanacearum*, and *Agrobacterium tumefaciens* and the symbiont *Sinorhizobium meliloti*.

[NTRES 306(3060) Coastal and Oceanic Law and Policy

Summer. 2 credits. Special one-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec and disc for one week. SML faculty. Intended for people interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and analysis of the efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.]

BIOSM 366-372(3660-3720) SEA Semester

In cooperation with the Sea Education Association (SEA), the Shoals Marine Laboratory offers a semester-length sequence of courses designed to provide college undergraduates with a thorough academic, scientific, and practical understanding of the sea. This sequence is repeated approximately once every two months throughout the year. Students spend the first half of SEA Semester (a six-week shore component) in Woods Hole, Mass., receiving instruction in oceanography, nautical science, and maritime studies. The second half of SEA Semester (a six-week

sea component) is spent at sea aboard the SSV *Robert C. Seamans* or the SSV *Corwith Cramer*. Enrollment is open to both men and women judged capable of benefiting from SEA semester; a student must have successfully completed at least one college-level laboratory science course (or its equivalent) in order to be admitted to SEA Semester or SEA Summer Session. **No prior sailing experience is necessary.** Cornell students enrolled in the SEA Semester must take the entire sequence.

For more information, contact Shoals Marine Laboratory office, G14 Stimson Hall, or call SEA directly at 800-552-3633. Program costs are to be paid in place of regular Cornell tuition and fees: tuition for the entire 17-credit SEA Semester, approximately \$17,000, includes room and board at SEA.

Instructors for the SEA Semester include faculty of the Sea Education Association and the Woods Hole Oceanographic Institution and others.

Shore Component (six weeks)

BIOSM 366(3660) SEA Introduction to Oceanography

3 credits. Co-requisites: BIOSM 367 and 368.

Survey of the characteristics and processes of the global ocean. Introduces oceanographic concepts and develops them from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

BIOSM 367(3670) SEA Introduction to Maritime Studies

3 credits. Co-requisites: BIOSM 366 and 368.

Interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

BIOSM 368(3680) SEA Introduction to Nautical Science

3 credits. Co-requisites: BIOSM 366 and 367.

An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

Sea Component (six weeks)

Courses 369, 370, and 372 take place aboard the SSV *Robert C. Seamans*, a 134-foot steel auxiliary-powered brigantine schooner built in 2001, or the SSV *Corwith Cramer*, a 134-foot steel auxiliary-powered brigantine built in 1987 for SEA. Both ships normally put to sea with a ship's company of 34. The professional staff of nine includes the captain, the chief scientist, three science watch officers, three deck watch officers, an engineer, and a

steward. In addition, one or more visiting investigators are frequently aboard. Up to 24 students round out the complement.

BIOSM 369(3690) SEA Practical Oceanography I

4 credits. Prerequisite: BIOSM 366. Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment; in the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

BIOSM 370(3700) SEA Practical Oceanography II

4 credits. Prerequisites: BIOSM 368 and 369. Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.

BIOSM 372(3720) SEA Practical Oceanography III

Summer. 3 credits. Prerequisites: BIOSM 366, 367, and 368.

Theories and problems raised in class are tested in the practice of oceanography at sea. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, in the methodologies involved in the collection, analysis, and reduction of oceanographic data, and in the attendant operations of sailing an oceanographic research vessel. Group research projects are completed.

INTRODUCTION

Computing and Information Science (CIS) offers courses and programs campuswide in various academic disciplines in which computing is integral. It is home to the Department of Computer Science, the Department of Statistical Science, the major in Information Science, and interdisciplinary programs in computational biology, computational science, and engineering. The faculty members associated with CIS programs hold joint appointments with CIS and another Cornell academic unit.

Computing and Information Science is a rapidly changing area. Please consult the CIS web site, www.cis.cornell.edu/, for the most current news of programs and courses, or visit the CIS undergraduate office in 303 Upson Hall.

ACADEMIC PROGRAMS

Computing and Information Science offers the following academic programs through its corresponding colleges. See the departmental listings for details of the programs.

Computational Biology

The program of study in computational biology is part of the biological sciences major offered through the College of Agriculture and Life Sciences and the College of Arts and Sciences and is coordinated by the Office of Undergraduate Biology. It provides core training in biology and the supporting physical and information sciences. It is designed for students who want to emphasize basic biological science.

The concentration in computational molecular biology is offered by the Department of

Computer Science to students enrolled in the College of Arts and Sciences and the College of Engineering. It provides core training in computer science and biology. It is designed for students who want to emphasize computational science.

Computational Science and Engineering

Computational science and engineering is an emerging CIS program. Numerous courses are taught throughout the university. Topics include numerical methods, modeling and simulation, and real-time computing and control. CIS sponsors several "tool-based" short courses for students who anticipate that their studies will have a strong computational component (CIS 401, 402, 403, 404). A course on data structures for computational science (CIS 409) is also offered.

Computer Science

All CIS programs have connections to computer science, the study of computation in all of its forms. The curriculum covers the theory of algorithms and computing and its many applications in science, engineering, and business. Students learn the algorithmic method of thinking and how to bring it to bear on a wide range of problems. They also study the elements of computing and information technology such as system design, problem specification, programming, system analysis and evaluation, and complex modeling. Research areas include programming languages, compilers, computing systems, artificial intelligence, natural language processing, computer graphics, computer vision, databases, networks, bioinformatics, the theory of algorithms, scientific computing, and computational logic.

The Department of Computer Science offers the computer science major to students in the College of Arts and Sciences and the College of Engineering, the computer science minor to students in the College of Engineering, and the master of engineering (M.Eng.) degree in computer science to students in the College of Engineering.

Information Science

Information science at Cornell is an interdisciplinary program that studies the design and use of information systems in a social context. It integrates the study of three aspects of digital information systems. First, information science studies computing systems that provide people with information content; this study overlaps with parts of computer science, stressing the design, construction, and use of large information systems such as the World Wide Web and other global information resources. The second aspect of information science examines how people engage these information resources and how they can be integrated into everyday life. This area is also called "human-centered systems" because it is concerned with systems that hundreds of millions of people will use in daily life. The

third aspect deals with understanding how information systems are situated in social, economic, and historical contexts. It explores the economic value of information, the legal constraints on systems, their social impact, and the cultural aspects of their construction. These are synergistic topics, and the next generation of scientists, scholars, business leaders, and government workers will need to understand them and how they relate.

Specific topics emphasized in the information science program include information networks; information discovery; knowledge organization; interaction design; interface design and evaluation; collaboration within and across groups, communities, organizations, and society; computational linguistics; computational techniques in the collection, archiving, and analysis of social science data; information privacy; methods of collecting, preserving, and distributing information; information system design; cognition and learning; social informatics; and cultural studies of computation.

The Information Science (IS) major is offered by the College of Agriculture and Life Sciences and the College of Arts and Sciences. Students in the College of Engineering may major in information science, systems, and technology (ISST), which is offered jointly by the Department of Computer Science and the School of Operations Research and Industrial Engineering. For details about the IS and ISST majors, please refer to the respective colleges.

The minor/concentration in information science is available to students in all undergraduate colleges.

THE INFORMATION SCIENCE CONCENTRATION/MINOR

A concentration/minor in information science is available to students in the Colleges of Agriculture and Life Sciences (CALS); Architecture, Art, and Planning (AAP); available to Architecture and Planning students only; Arts and Sciences; Engineering; Human Ecology; and the Schools of Hotel Administration and Industrial and Labor Relations (ILR). Because of small differences in regulations between the colleges, the requirements may vary slightly, depending on a student's college and, in a few cases, a student's major. All students interested in pursuing the information science concentration/minor must initiate the process by sending an e-mail message with their name, college, year of study (e.g., second-semester sophomore), expected graduation date, and (intended) major to minor@infosci.cornell.edu. Students are also referred to www.infosci.cornell.edu/ugrad/concentrations.html for the most up-to-date description of the concentration and its requirements.

Information science is an interdisciplinary field covering all aspects of digital information. The program has three main areas: human-centered systems, social systems, and information systems. Human-centered systems studies the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examines information in its economic, legal, political, cultural, and social contexts. Information systems studies the computer

science problems of representing, storing, manipulating, and using digital information.

The concentration/minor has been designed to ensure that students have substantial grounding in all three of these areas. To this end, the requirements for the undergraduate concentration/minor are as follows. All courses must be chosen from the course lists below. In addition, a letter grade of C or better is required; S-U courses are not allowed.

Note: Course credits from institutions other than Cornell may not be counted toward the IS minor. Engineering students must use ENGRD 270 or CEE 304. Hotel students must use H ADM 201.

- **Statistics:** one course.
- **Human-centered systems** (human-computer interaction and cognitive science): two courses (for all colleges except Engineering and Hotel); one course (Engineering and Hotel).
- **Social systems** (social, economic, political, cultural, and legal issues): one course.
- **Information systems** (primarily computer science): two courses for all colleges except Hotel. Hotel students need to take one course in this area. Engineering students may not use INFO 130. COM S 211 may not be used by students who are required to take it for their major.
- **Elective:** one additional course from any component area. Hotel students must take three courses in this category, from the following: H ADM 374, 574, and 476 or 575. (Engineering students and all Computer science majors must select a course from human-centered systems or social systems. Communication majors must select a course outside Communication. Students in other majors should check with their advisers to make sure there are no special departmental restrictions or requirements.)

Statistics

An introductory course that provides a working knowledge of basic probability and statistics and their application to analyzing data occurring in the real world.

Engineering students must take one of the following:

- ENGRD 270 Basic Engineering Probability and Statistics
- CEE 304 Uncertainty Analysis in Engineering

Hotel students must take:

- H ADM 201 Hospitality Quantitative Analysis

All other students can meet this requirement with any one of the following:

- MATH 171 Statistical Theory and Application in the Real World
- H ADM 201 Hospitality Quantitative Analysis
- AEM 210 Introductory Statistics
- PAM 210 Introduction to Statistics
- ENGRD 270 Basic Engineering Probability and Statistics

- BTRY 301 Statistical Methods I
- SOC 301 Evaluating Statistical Evidence
- CEE 304 Uncertainty Analysis in Engineering
- ILRST 312 Applied Regression Methods
- ECON 319 Introduction to Statistics and Probability
- PSYCH 350 Statistics and Research Design

Human-Centered Systems

- COGST 101 Introduction to Cognitive Science
- PSYCH 205 Perception
- INFO 214 Cognitive Psychology
- COMM 240 Introduction to Computer-Mediated Communication (can be used only if taken during or before 2003–2004 academic year)
- INFO 245 Psychology of Social Computing
- PSYCH 280 Introduction to Social Psychology
- PSYCH 342 Human Perception: Applications to Computer Graphics, Art, and Visual Display
- INFO 345 Human-Computer Interaction Design
- PSYCH 347 Psychology of Visual Communications
- PSYCH 380 Social Cognition
- PSYCH 413 Information Processing: Conscious and Unconscious
- PSYCH 416 Modeling Perception and Cognition
- INFO 440 Advanced Human-Computer Interaction Design
- INFO 445 Seminar in Computer-Mediated Communication
- INFO 450 Language and Technology
- DEA 470 Applied Ergonomic Methods

Social Systems

- S&TS 250 Technology in Society
- INFO 292 Inventing an Information Society
- ECON 301 Microeconomics*
- SOC 304 Social Networks and Social Processes
- ECON 313 Intermediate Microeconomic Theory*
- AEM 322 Technology, Information, and Business Strategy*
- INFO 349 Media Technologies
- INFO 355 Computers: From the 17 C. to the Dot.com Boom
- INFO 356 Computing Cultures
- ECON 368 Game Theory*
- INFO 387 The Automatic Lifestyle: Consumer Culture and Technology
- LAW 410 Limits on and Protection of Creative Expression—Copyright Law and Its Close Neighbors
- S&TS 411 Knowledge, Technology, and Property

- ECON 419 Economic Decisions Under Uncertainty
- COMM 428 Communication Law
- OR&IE 435 Introduction to Game Theory*
- S&TS 438 Minds, Machines, and Intelligence
- INFO 447 Social and Economic Data
- ECON 476/477 Decision Theory I and II
- COMM 494 Special Topics in Communication: Copyright in the Digital Age
- INFO 515 Culture, Law, and Politics of the Internet
- H ADM 574 Strategic Information Systems

*Only one of ECON 301 and 313 can be taken for IS credit. Only one of OR&IE 435 and ECON 368 can be taken for IS credit. Only one of AEM 322 and H ADM 574 may be taken for IS credit.

Information Systems

- INFO 130 Introductory Design and Programming for the Web*
- INFO 172 Computation, Information, and Intelligence
- COM S 211 Computers and Programming*
- INFO 230 Intermediate Design and Programming for the Web*
- INFO 330 Applied Database Systems
- LING 424 Computational Linguistics
- INFO 430 Information Retrieval
- INFO 431 Web Information Systems
- COM S 432 Introduction to Database Systems
- COM S 465 Computer Graphics I
- COM S 472 Foundations of Artificial Intelligence
- LING 474 Introduction to Natural Language Processing
- OR&IE 474 Statistical Data Mining
- COM S 478 Machine Learning
- OR&IE 480 Information Technology
- OR&IE 481 Delivering OR Solutions with Information Technology
- OR&IE 483 Application of Operations Research and Game Theory in Information Technology
- COM S 501 Software Engineering
- ECE 562 Fundamental Information Theory
- COM S 578 Empirical Methods in Machine Learning and Data Mining

*INFO 130 may not be taken for information science credit by Engineering students. Computer science majors may not use INFO 130 or 230. COM S 211 may not be taken for information science credit by majors for which it is a required course, e.g., Computer Science (COM S) and Operations Research and Industrial Engineering (OR&IE).

COMPUTING AND INFORMATION SCIENCE (CIS) COURSES

CIS 121(1121) Introduction to MATLAB (also EAS 121[1121])

Fall, spring, 2 credits. Corequisite: MATH 111, 191, or equivalent. No programming experience assumed.

Introduction to elementary computer programming concepts using MATLAB. Topics include problem analysis, development of algorithms, selection, iteration, functions, and arrays. Examples and assignments are chosen to build an appreciation for computational science. The goal is for each student to develop a facility with MATLAB that will be useful in other courses whenever there is a need for computer problem solving or visualization.

CIS 122(1002) Application of FORTRAN in the Earth and Environmental Sciences (also EAS 150[1500])

Spring, 2 credits. Prerequisite: CIS/EAS 121 or equivalent.

For description, see EAS 150.

CIS 165(1610) Computing in the Arts (also ART 175, COM S 165[1610], MUSIC 165[1465], PSYCH 165[1650])

Spring, 3 credits.

For description, see COM S 165.

CIS 167(1620) Visual Imaging in the Electronic Age (also ART 170[1700], COM S/ENGRI 167[1620])

Spring, 3 credits. Not offered every year.

For description, see ART 170.

CIS 191(1002) Media Arts Studio I (also ART 391[3901], FILM 391[3910])

Fall, 3 credits. Prerequisite: ART 171, THETR 277, 377, MUSIC 120, or equivalent; junior standing; and permission of instructor. Lab fee: \$50.

For description, see ART 391.

CIS 300(3000) Introduction to Computer Game Design

Fall, spring, 4 credits. Prerequisites: students generally choose one field (art, music, programming, writing), although working in multiple areas is encouraged; artists should have taken ART 251 or have equivalent experience; musicians should have programming experience (COM S 100, COM S/INFO 130 or equivalent) and MUSIC 120; programmers must have completed COM S/ENGRD 211 or CIS 409 and have experience with, or the ability to learn quickly, C++; writers should have programming experience (COM S 100, COM S/INFO 130 or equivalent) and ENGL 280/281 or equivalent experience.

Investigates the theory and practice of developing computer games from a blend of technical, aesthetic, and cultural perspectives. Technical aspects of game architecture include software engineering, artificial intelligence, game physics, computer graphics, and networking. Aesthetic and cultural aspects of design include art and modeling, sound and music, history of games, genre analysis, role of violence, gender issues in games, game balance, and careers in the industry. Programmers, artists, musicians, and writers collaborate to produce an original computer game.

CIS 401(4201) Introduction to Applied Scientific Computing with MATLAB

Fall, usually weeks 2-5. 1 credit.

Prerequisite: COM S 100 or equivalent programming experience. S-U grades only.

Introduction to the use of MATLAB as an aid to scientific research. Introduces the basic syntax and features of MATLAB and develops the background necessary for the more specialized courses. Covers basic MATLAB programming and vectorized operations, data input/output, and simple visualization. Emphasizes applied issues such as managing large data sets, simulation, and visualization but also introduces fundamental ideas in scientific computing such as floating point arithmetic and algorithm efficiency. Although the course uses MATLAB, the ideas and concepts covered are common to many computational environments.

CIS 402(4202) Scientific Visualization with MATLAB

Fall, usually weeks 6-10. 1 credit.

Prerequisite: COM S 100 or equivalent programming experience. Recommended: CIS 401. S-U grades only.

Survey of the advanced visualization features in MATLAB. Covers MATLAB's "handle graphics" paradigm, specialized graphics routines for vectors and fields, and introduces color mapping, lighting, and new features for controlling object transparency. Although the course is meant to introduce students to the capabilities of the MATLAB system, it also emphasizes the basic goal of visualization: producing an image that effectively communicates a scientific result.

[CIS 403(4203) Development of Scientific Computing Programs

Spring, usually weeks 1-4. 1 credit.

Prerequisite: COM S 100 or equivalent programming experience. S-U grades only.

Designed for graduate students who, in their research, will develop computer programs to solve scientific or engineering problems (e.g., in Fortran, C, or Java). Approaches and tools are presented that facilitate the development of good software. The course emphasizes the tools available in UNIX and Windows environments. Topics include compilers, debuggers, software design, and project management.]

[CIS 404(4204) Survey and Use of Software Libraries for Scientific Computing

Spring, usually weeks 5-8. 1 credit.

Prerequisite: COM S 100 or equivalent programming experience. Recommended: CIS 403. S-U grades only.

Many software packages and code libraries have been developed to solve standard problems in scientific computing. Examples of such libraries are LAPACK, IMSL, Numerical Recipes routines, MATLAB functions, and routines available in online repositories such as Netlib. This course discusses how to link to or compile standard library formats and considers the legal and ethical aspects of using other people's code (or having them use yours). The course also surveys some of the standard problems and the available libraries and discusses the issues that arise in their use (e.g., accuracy, robustness, and generality).]

CIS 405(4205) Effective Use of High-Performance Computing

Spring, weeks 1-8. 2 credits. Prerequisite: proficiency in C, C++, Fortran, or Fortran 90. S-U grades only.

Introduction to high-performance computing (HPC) for graduate students or advanced undergraduate students who will use HPC as a tool in their research. Various HPC architectural platforms are described, with a focus on computational clusters. Students learn how to identify and exploit the various types of parallelism in algorithms and legacy applications. Understanding how to measure speedup and efficiency and how various bottlenecks affect them is covered. Parallel programming with MPI, OpenMP, and task-farming techniques, such as the use of web services, is covered in detail. The goal of the course is for students to gain practical HPC experience for use in their specific fields of research.

CIS 409(4209) Data Structures and Algorithms for Computational Science (also M&AE 409[4090])

Fall. 4 credits. Prerequisite: COM S 211 or equivalent programming experience. Not offered every year.

Covers data structures and algorithms with emphasis on those useful for computational science. This course is intended for students outside of the Department of Computer Science whose work involves a significant amount of computing. Topics include basic data structures as well as more advanced areas. Emphasis is placed on the use of abstract data types and on how best to select appropriate data structures.

CIS 490(4999) Independent Reading and Research

Fall, spring. 1-4 credits.

Independent reading and research for undergraduates.

CIS 504(5040) Applied Systems Engineering (also CEE 504[5040], ECE 512[5120], M&AE 591[5910], OR&IE 512[5120], SYSEN 510[5100])

Fall. 3 credits. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor.

For description, see SYSEN 510.

CIS 505(5050) Systems Analysis Architecture, Behavior, and Optimization (also CEE 505[5050], ECE 513[5130], M&AE 592[5920], OR&IE 513[5130], SYSEN 520[5200])

Spring. 3 credits. Prerequisite: Applied Systems Engineering (CEE 504, ECE 512, M&AE 591, OR&IE 512, or SYSEN 510).

For description, see SYSEN 520.

CIS 565(5640) Computer Animation (also ART 273[2703], COM S 565[5640])

Fall. 4 credits. Prerequisite: none.

For description, see ART 273.

CIS 566(5642) Advanced Animation (also ART 372, COM S 566[5642])

Spring. 4 credits. Prerequisite: none.

For description, see ART 372.

CIS 572(5722) Heuristic Methods for Optimization (also CEE 509[5090], COM S 572[5722], OR&IE 533[5340])

Fall. 3 or 4 credits. Prerequisite: COM S/ENGRD 211 or 322, or CEE/ENGRD 241, or graduate standing, or permission of instructor.

For description, see CEE 509.

[CIS 576(5846) Decision Theory I (also ECON 476/676[4460/6760])

Fall. 4 credits. Prerequisite: mathematical sophistication.

CIS 577(5847) Decision Theory II (also ECON 477/677[4770/6770])

Spring. 4 credits. Prerequisite: mathematical sophistication.

CIS 629(6229) Computation Methods for Nonlinear Systems (also PHYS 682[7682])

Fall. 4 credits. Enrollment may be limited.

Labs TR afternoons. J. Sethna and C. Myers.

For description, see PHYS 682.

CIS 673(6724) Integration of Artificial Intelligence and Operations Research (also COM S 673[6724])

Spring. 3 credits.

For description, see COM S 673.

[CIS 750(7726) Evolutionary Computation and Design Automation (also COM S 750[7726], M&AE 650[6500])

Fall. 4 credits. Prerequisite: programming experience or permission of instructor. Not offered every year.]

CIS 790(7999) Independent Research

Fall, spring. Variable credit. Prerequisite: permission of CIS faculty member.

Independent research or master of engineering project.

CIS 797(7970) Topics in CIS/IGERT Seminars

Fall, spring. 1 credit. S-U grades only.

Discusses diverse topics in nonlinear systems. The seminar is oriented to the requirements for the IGERT Program in Nonlinear Systems, a National Science Foundation supported graduate training program. Includes a mixture of student, faculty, and visitor presentations and development of plans for internships and student projects.

COMPUTER SCIENCE

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science. The department is also part of CIS, and its courses are an integral part of its several educational programs.

COM S 099(1109) Fundamental Programming Concepts

Fall, summer. 2 credits. Prerequisite: freshman standing. Credit may not be applied toward engineering degree. S-U grades only.

Designed for students who intend to take COM S 100 but are not adequately prepared for that course. Basic programming concepts and problem analysis are studied. An appropriate high-level programming language is used. Students with previous programming experience and students who do not intend to take COM S 100 should not take this course.

COM S 100J(1110) Introduction to Computer Programming

Fall, spring, summer. 4 credits. Assumes basic high school mathematics (no calculus) but no programming experience.

Introduction to computer programming concepts using the Java programming language. Includes a two-week unit on MATLAB. Topics include algorithms, language concepts, object-oriented concepts,

procedures and functions, arrays, and strings. Principles of software development, style, and testing are emphasized. Weekly lab sections provide students with guided practice on the computer, with staff present to help. COM S 100J and 100M are equivalent courses; both should not be taken.

COM S 100M(1112) Introduction to Computer Programming

Fall, spring. 4 credits. Corequisite: MATH 111, 191, or equivalent. Assumes student is comfortable with mathematics (at level of one semester of calculus) but has no prior programming experience.

Introduction to computer programming concepts using MATLAB (seven weeks) and Java (seven weeks). Emphasizes techniques of problem analysis and development of algorithms and programs. Topics include iteration, functions, arrays, scientific graphics, and object-oriented concepts. Examples and assignments give the student an appreciation for computational science and engineering. COM S 100M and 100J are equivalent courses, and either one provides adequate preparation for COM S/ENGRD 211.

COM S 101(1710) Introduction to Cognitive Science (also COGST 101[1010], LING 170[1700], PHIL 191[1910], PSYCH 102[1020])

Fall, summer. 3 credits.

For description, see COGST 101.

COM S 113(2000) Introduction to C

Fall, spring, usually weeks 1-4. 1 credit.

Prerequisite: COM S 100 or equivalent programming experience. Credit granted for both COM S 113 and 213 only if 113 taken first. S-U grades only.

Brief introduction to the C programming language and standard libraries. Unix accounts are made available for students wishing to use that system for projects, but familiarity with Unix is not required. (Projects may be done using any modern implementation of C.) COM S 213 (C++ Programming) includes much of the material covered in 113. Students planning to take COM S 213 normally do not need to take 113.

COM S 114(2006) Unix Tools

Fall, usually weeks 5-8. 1 credit.

Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S-U grades only.

Introduction to Unix, emphasizing tools for file management, communication, process control, managing the Unix environment, and rudimentary shell scripts. Projects assume no previous knowledge of Unix or expertise in any particular language.

COM S 130(1300) Introductory Design and Programming for the Web (also INFO 130[1300])

Fall. 3 credits. Prerequisite: none. No computer background necessary.

The World Wide Web is both a technology and a pervasive and powerful resource in our society and culture. To build functional and effective web sites, students need technical and design skills as well as analytical skills for understanding who is using the web, in what ways they are using it, and for what purposes. In this course, students develop skills in all three of these areas through the use of technologies such as XHTML, Cascading Stylesheets, and PHP. Students study how web sites are deployed and used, usability issues on the web, user-centered

design, and methods for visual layout and information architecture. Through the web, this course provides an introduction to the interdisciplinary field of information science. No computer background necessary.

COM S 165(1610) Computing in the Arts
(also ART 175, CIS 165[1610], MUSIC 165[1465], PSYCH 165[1650], INFO 172[1700])

Spring. 3 credits. Recommended: good comfort level with computers and some of the arts.

Over the centuries, artists in a wide variety of media have employed many approaches to the creative process, ranging from the philosophical to the mechanical to the virtual. This course unravels some of the mysteries going on inside software used for art and music. It looks at ways of breaking things apart and sampling and ways of putting things together and resynthesizing, and explores ideas for creation. This course does not teach software packages for creating art and music. The course complements ART 171+ and MUSIC 120+.

COM S 167(1620) Visual Imaging in the Electronic Age (also ART 170[1700], CIS/ENGR 167[1620], INFO 172[1700])

Spring. 3 credits.

For description, see ART 170.

COM S 172(1700) Computation, Information, and Intelligence (also COGST 172, ENGR/INFO 172[1700])

Fall. 3 credits. Prerequisites: some knowledge of differentiation; permission of instructor for students who have completed equivalent of COM S 100.

Introduction to computer science using methods and examples from the field of artificial intelligence. Topics include game playing, search techniques, learning theory, compute-intensive methods, data mining, information retrieval, the web, natural language processing, machine translation, and the Turing test. This is not a programming course; rather, "pencil and paper" problem sets are assigned. Some calculus is required.

COM S 201(2710) Cognitive Science in Context Laboratory (also COGST 201, PSYCH 201[2010])

Spring. 4 credits. Limited to 24 students.

Recommended: concurrent or prior registration in PSYCH 102, COGST/COM S 101, LING 170, or PHIL 191. Knowledge of programming languages not assumed.

For description, see COGST 201.

COM S 211(2110) Computers and Programming (also ENGRD 211[2110])

Fall, spring, summer. 3 credits.

Prerequisite: COM S 100 or equivalent course in Java or C++.

Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, object-oriented programming (classes, objects, types, sub-typing), graphical user interfaces, algorithm analysis (asymptotic complexity, big "O" notation), recursion, data structures (lists, trees, stacks, queues, heaps, search trees, hash tables, graphs), simple graph algorithms. Java is the principal programming language.

COM S 212(2111) Java Practicum

Fall, spring. 1 credit. Pre- or corequisite: COM S/ENGRD 211. Letter grades only.

Project course that introduces students to the ways of software engineering using the Java programming language. The course requires the design and implementation of several large programs.

[COM S 213(2002) C++ Programming

Fall or spring. 2 credits. Prerequisite:

COM S 100 or equivalent programming experience. Students who plan to take

COM S 113 and 213 must take 113 first.

S-U grades only. Not offered every year.

Intermediate-level introduction to the C++ programming language and the C/C++ standard libraries. Topics include basic statements, declarations, and types; stream I/O; user defined classes and types; derived classes, inheritance, and object-oriented programming; exceptions and templates. Recommended for students who plan to take advanced courses in computer science that require familiarity with C++ or C. Students planning to take COM S 213 normally do not need to take COM S 113; 213 includes most of the material taught in 113.]

COM S 214(2008) Advanced UNIX Programming and Tools

Spring, usually weeks 5-8. 1 credit.

Prerequisite: COM S 114 or equivalent. S-U grades only.

Focuses on Unix as a programming environment for people with a basic knowledge of Unix and experience programming in at least one language. Projects cover advanced shell scripts (sh, ksh, csh), Makefiles, programming and debugging tools for C and other languages, and more modern scripting languages such as Perl and Python. Students with little or no experience with Unix should take COM S 114 first.

COM S 215(2004) Introduction to C#

Fall, spring, usually weeks 5-8. 1 credit.

Prerequisite: COM S/ENGRD 211 or equivalent experience. S-U grades only.

Introduces students to building applications in the .NET environment using the C# language.

COM S 230(2300) Intermediate Design and Programming for the Web (also INFO 230[2300])

Spring. 3 credits. Prerequisite: COM S 130 or equivalent knowledge.

Web programming requires the cooperation of two machines: the one in front of the viewer (client) and the one delivering the content (server). COM S 130 concentrates almost exclusively on the client side. The main emphasis in COM S 230 is learning about server side processing. Students begin by looking at interactions with databases, learning about querying both on paper and via SQL, and then, through a succession of projects, learn how to apply this understanding to the creation of an interactive data-driven site via the use of an integrated web site development tool such as ColdFusion. Also considered are techniques to enhance security, privacy, and reliability and ways of incorporating other programs. Toward the end of the course, students are shown how these development tools are working. Design issues are emphasized. A major component of the course is the creation of a substantial web site.

COM S 280(2800) Discrete Structures

Fall, spring. 3 credits. Pre- or corequisite:

COM S 100 or permission of instructor.

Covers the mathematics that underlies most of computer science. Topics include mathematical induction; logical proof; propositional and predicate calculus; combinatorics and discrete mathematics; basic probability theory; basic number theory; sets, functions, and relations; partially ordered sets; and graphs. These topics are discussed in the context of applications to many areas of computer science, including game playing, the RSA cryptosystem, data mining, load balancing in distributed systems, properties of the Internet and World Wide Web, and web searching.

COM S 312(3110) Data Structures and Functional Programming

Fall, spring. 4 credits. Prerequisite: COM

S 211/212 or equivalent programming

experience. Should not be taken

concurrently with COM S 314.

Advanced programming course that emphasizes functional programming techniques and data structures. Programming topics include recursive and higher-order procedures, models of programming language evaluation and compilation, type systems, and polymorphism. Data structures and algorithms covered include graph algorithms, balanced trees, memory heaps, and garbage collection. Also covers techniques for analyzing program performance and correctness.

COM S 314(3420) Computer Organization
(also ECE 314[3400])

Fall, spring. 4 credits. Prerequisite: COM S

211 or ENGRD 230. Should not be taken

concurrently with COM S 312.

Basic computer organization. Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic, datapath design, memory hierarchies including caches and virtual memory, I/O devices, and bus-based I/O systems. Students learn assembly language programming and design a simple pipelined processor.

COM S 321(3510) Numerical Methods in Computational Molecular Biology
(also BIOBM 321[3210], ENGRD 321[3510])

Fall. 3 credits. Prerequisites: at least

one course in calculus (e.g., MATH 106,

111, or 191) and linear algebra (e.g.,

MATH 221 or 294 or BTRY 417); COM S

100 or equivalent and some familiarity

with iteration, arrays, and procedures;

knowledge of discrete probability and

random variables at the level of COM S

280. COM S majors and minors may use

only one of the following toward their

degree: COM S 321, 322, or 421. Offered

odd-numbered years.

Introduction to numerical computing using MATLAB organized around five applications: the analysis of protein shapes, dynamics, protein folding, score functions, and field equations. Students become adept at plotting, linear equation solving, least squares fitting, and cubic spline interpolation. More advanced problem-solving techniques that involve eigenvalue analysis, the solution of ordinary and partial differential equations, linear programming, and nonlinear minimization are also treated. The goal of the course is to develop a practical computational expertise with MATLAB and to build mathematical intuition for the problems of molecular biology.

COM S 322(3220) Introduction to Scientific Computation (also ENGRD 322(3220))

Spring, summer. 3 credits. Prerequisites: COM S 100 and MATH 221 or 294, knowledge of discrete probability and random variables at the level of COM S 280. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, or 421.

Introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Includes special lectures on computational statistics.

COM S 324(3740) Computational Linguistics (also CGOST 424(4240), LING 424(4424))

Fall or spring. 4 credits. Prerequisites: LING 203. Recommended: COM S 114. Labs involve work in Unix environment.

For description, see LING 424.

COM S 330(3300) Applied Database Systems (also INFO 330(3300))

Fall. 3 credits. Prerequisite: COM S/ENGRD 211. COM S majors may use only one of the following toward their degree: COM S/INFO 330 or COM S 433.

Introduces students to modern database systems and three-tier application development with a focus on building web-based applications using database systems. Concepts covered include the relational model, relational query languages, data modeling, normalization, database tuning, three-tier architectures, Internet data formats and query languages, server- and client-side technologies, and an introduction to web services. Students build a database-backed web site.

COM S 381(3810) Introduction to Theory of Computing

Fall, summer. 3 credits. Prerequisite: COM S 280 or permission of instructor. Credit not granted for both COM S 381 and 481; corrective transfers between COM S 381 and 481 (in either direction) encouraged during first few weeks of instruction.

Introduction to the modern theory of computing: automata theory, formal languages, and effective computability.

[COM S 400(4150) The Science of Programming

Fall. 3 credits. Prerequisite: COM S 211. Not offered every year.

Covers the practical development of correct programs based on the conscious application of principles that are derived from a mathematical notion of program correctness. In addition, related ideas in algorithmic problem solving are explored.]

[COM S 411(4110) Programming Languages and Logics

Fall. 4 credits. Prerequisite: COM S 312 or permission of instructor. Not offered every year.

Introduction to the theory, design, and implementation of programming languages. Topics include operational semantics, type systems, higher-order function, scope, lambda calculus, laziness, exceptions, side effects, continuations, objects, and modules. Also discussed are logic programming, concurrency, and distributed and persistent programming.]

COM S 412(4120) Introduction to Compilers

Spring. 3 credits. Prerequisites: COM S 312 or permission of instructor; COM S 314. Corequisite: COM S 413.

Introduction to the specification and implementation of modern compilers. Topics include lexical scanning, parsing, type checking, code generation and translation, an introduction to optimization, and the implementation of modern programming languages. The course entails a substantial compiler implementation project.

COM S 413(4121) Practicum in Compilers

Spring. 2 credits. Corequisite: COM S 412. Compiler implementation project related to COM S 412.

COM S 414(4410) Systems Programming and Operating Systems

Fall, spring, summer. 3 credits. Prerequisite: COM S 211, 212, 312 (or permission of instructor), and 314. Corequisite: COM S 415 in spring only.

Introduction to the logical design of systems programs, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.

COM S 415(4411) Practicum in Operating Systems

Fall, spring. 2 credits. Corequisite: COM S 414.

Studies the practical aspects of operating systems through the design and implementation of an operating system kernel that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.

COM S 416(4420) Computer Architecture (also ECE 475(4750))

Fall. 4 credits. Prerequisites: ENGRD 230 and COM S/ECE 314.

For description, see ECE 475.

COM S 419(4450) Computer Networks

Spring. 4 credits. Prerequisites: COM S 211, 212, 312 (or permission of instructor) and 314. Not offered every year.

Introduction to computer networks with an emphasis on evolving Internet standards. A detailed introduction is given to networking protocols for reliable data transfer, flow control, congestion control, naming and addressing, routing, security, management, and applications. Fundamentals of layered protocols and techniques for protocol design and implementation are covered. The course is project oriented and requires substantial programming experience in Java or C.

COM S 421(4210) Numerical Analysis

Fall. 4 credits. Prerequisites: MATH 221 or 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, or 421.

Modern algorithms for systems of linear equations, systems of nonlinear equations, numerical optimization, and numerical solution of differential equations. Some discussion of methods suitable for parallel

computation. This course requires more mathematical sophistication than COM S 322.

COM S 426(4520) Introduction to Bioinformatics

Fall. 4 credits. Prerequisites: COM S/ENGRD 211, COM S 280.

Overview of the goals, tools, and techniques used in bioinformatics, a field that applies ideas from computer science, mathematical modeling, and statistics to make sense of the huge datasets that typify modern biology. Topics include genome assembly, gene finding, gene regulation, genome rearrangements, phylogeny, and comparative genomics. Computational tools such as BLAST, Genscan and MEME are discussed, as are selected applications of Hidden Markov Models, expectation minimization, and dynamic programming. Underlying concepts from biology are provided as required.

[COM S 428(4510) Introduction to Computational Biophysics

Fall. 3 credits. Prerequisite: COM S 100, CHEM 211 or equivalent, MATH 221, 293, or 294, PHYS 112 or 213, or permission of instructor. Recommended: BIOBM 330. Offered even-numbered years.

Teaches the techniques used to simulate on the computer the structure, dynamics, and function of biological molecules. Computer models of water/proteins/membranes using mechanical force fields are considered. Optimization methods (conjugate gradient and Newton Raphson minimization) are explained in the context of structure optimization. Stochastic sampling (Metropolis algorithm) is used to estimate entropy and partition functions. Enhanced sampling approaches such as multi-tempering to estimate free energies are discussed. Continuum approximation to dielectric and the numerical solution of the Poisson Boltzmann equation are explored.

COM S 430(4300) Information Retrieval (also INFO 430(4300))

Fall. 3 credits. Prerequisite: COM S 211 or equivalent.

Studies the methods used to search for and discover information in large-scale systems. The emphasis is on information retrieval applied to textual materials, but there is some discussion of other formats. The course includes techniques for searching, browsing, and filtering information and the use of classification systems and thesauruses. The techniques are illustrated with examples from web searching and digital libraries.

COM S 431(4302) Web Information Systems (also INFO 431(4302))

Spring. 3 credits. Prerequisites: COM S 211 and some familiarity with web site technology.

Examines the architecture of web information systems such as distributed digital libraries and electronic publishing systems. Many of the topics presented are the subject of current research and development at Cornell, other universities, and in standards organizations such as the World Wide Web Consortium. Course content mixes exploration of current tools for building web information systems such as XML, XSLT, and RDF with broader concepts such as techniques for knowledge representation and description, object models for content representation, and legal and economic impacts of web information. A theme that runs throughout the course is the relationship between traditional information

environments, exemplified by libraries, and the distributed information environment of the web.

COM S 432(4320) Introduction to Database Systems

Fall. 3 credits. Prerequisites: COM S 312 (or COM S 211, 212, and permission of instructor).

Introduction to modern relational database systems. Concepts covered include storage structures, access methods, query languages, query processing and optimization, transaction processing, and database design theory. The course covers primarily the internals of database systems and includes SQL programming assignments in C++.

COM S 433(4321) Practicum in Database Systems

Fall. 2 credits. Prerequisite: COM S 432 or coregistration in COM S 432. COM S majors may use only one of the following toward their degree: COM S/INFO 330 or COM S 433.

COM S 465(4620) Computer Graphics I (also ARCH 374[3704])

Fall. 4 credits. Prerequisite: COM S/ENGRD 211. May not be taken after COM S 417.

Introduction to the principles of computer graphics in two and three dimensions.

Topics include digital images, filtering and anti-aliasing, 2-D and 3-D affine geometry, ray tracing, perspective and 3-D viewing, the graphics pipeline, curves and surfaces, and human visual perception. Homework assignments require programming.

COM S 467(4630) Computer Graphics II

Spring. 3 credits. Prerequisite: COM S 465.

Covers the principles of computer graphics including advanced topics such as the modern graphics hardware pipeline, transformations, materials and shading models, advanced texturing, shadow algorithms, hierarchical acceleration structures, global illumination, animation, and 3D surface modeling.

COM S 468(4631) Computer Graphics Practicum

Spring. 2 credits. Prerequisite: COM S 465. Corequisite: COM S 467.

Provides COM S 467 students with hands-on experience in computer graphics programming on modern graphics hardware with a final 3D game project. Programming assignments cover 3D transformations, modeling, shading, rendering, animation, and user interfaces. The course uses Java, OpenGL, and Cg for code development.

COM S 472(4700) Foundations of Artificial Intelligence

Fall. 3 credits. Prerequisites: COM S/ENGRD 211 and COM S 280 (or equivalent).

Challenging introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, heuristic search, problem solving, natural-language processing, game-playing, logic and deduction, planning, and machine learning.

COM S 473(4701) Practicum in Artificial Intelligence

Fall. 2 credits. Corequisite: COM S 472.

Project portion of COM S 472. Topics include knowledge representation systems, search procedures, game-playing, automated reasoning, concept learning, reinforcement learning, neural nets, genetic algorithms, planning, and truth maintenance.

COM S 474(4740) Introduction to Natural Language Processing (also COGST 474, LING 474[4474])

Fall or spring. 4 credits. Prerequisite: COM S 211.

Computationally oriented introduction to natural language processing, the goal of which is to enable computers to use human languages as input, output, or both. Possible topics include parsing, grammar induction, information retrieval, and machine translation.

COM S 478(4780) Machine Learning

Spring. 4 credits. Prerequisites: COM S 280, 312, and basic knowledge of linear algebra and probability theory.

Machine learning is concerned with the question of how to make computers learn from experience. The ability to learn is not only central to most aspects of intelligent behavior, but machine learning techniques have become key components of many software systems. For example, machine learning techniques are used to create spam filters, to analyze customer purchase data, and to explore new domains of science. This course introduces the fundamental set of techniques and algorithms that constitute machine learning as of today, including classification methods like decision trees and support vector machines, parametric Bayesian learning and hidden Markov models, as well as unsupervised learning and reinforcement learning. The course discusses algorithms and methods and provides an introduction to the theory of machine learning.

COM S 480(4870) Introduction to Cryptology (also MATH 335[3350])

Fall, spring. 3 credits. Prerequisites: COM S 100 and MATH 222 or 294.

Students who take this course may not also receive credit for MATH 336.

For description, see MATH 335.

COM S 481(4810) Introduction to Theory of Computing

Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit not granted for both COM S 381 and 481; corrective transfers between COM S 481 and 381 (in either direction) encouraged during first few weeks of instruction.

Faster-moving and deeper version of COM S 381.

COM S 482(4820) Introduction to Analysis of Algorithms

Spring, summer. 4 credits. Prerequisites: COM S 280 and 312.

Develops techniques used in the design and analysis of algorithms, with an emphasis on problems arising in computing applications. Example applications are drawn from systems and networks, artificial intelligence, computer vision, data mining, and computational biology. This course covers four major algorithm design techniques (greedy algorithms, divide-and-conquer, dynamic programming, and network flow), computational complexity focusing on NP-completeness, and algorithmic techniques for intractable problems (including identification of structured special cases, approximation algorithms, and local search heuristics).

COM S 483(4812) Quantum Computation (also PHYS 481/681[4481/7681])

Spring. 2 credits. Prerequisite: familiarity with theory of vector spaces over complex numbers. Not offered every year.

For description, see PHYS 481.

COM S 486(4860) Applied Logic (also MATH 486[4860])

Fall or spring. 4 credits. Prerequisites:

MATH 222 or 294, COM S 280 or equivalent (e.g., MATH 332, 432, 434, 481), and some additional course in mathematics or theoretical computer science.

Propositional and predicate logic, compactness and completeness by tableaux, natural deduction, and resolution. Equational logic. Herbrand Universes and unification. Rewrite rules and equational logic, Knuth-Bendix method, and the congruence-closure algorithm and lambda-calculus reduction strategies. Topics in Prolog, LISP, ML, or Nuprl. Applications to expert systems and program verification.

COM S 490(4999) Independent Reading and Research

Fall, spring. 1-4 credits.

Independent reading and research for undergraduates.

COM S 501(5150) Software Engineering

Spring. 4 credits. Prerequisite: COM S 211 or equivalent experience programming in Java or C++.

Introduction to the practical problems of specifying, designing, and building large, reliable software systems. Students work in teams on projects for real clients. This work includes a feasibility study, requirements analysis, object-oriented design, implementation, testing, and delivery to the client. Additional topics covered in lectures include professionalism, project management, and the legal framework for software development.

COM S 513(5430) System Security

Fall. 4 credits. Prerequisites: COM S 414 or 419 and familiarity with JAVA, C, or C# programming languages.

Discusses security and survivability for computers and communications networks. Includes discussions of policy issues (e.g., the national debates on cryptography policy) as well as the discussions of the technical alternatives for implementing the properties that comprise "trustworthiness" in a computing system. Covers mechanisms for authorization and authentication as well as cryptographic protocols.

COM S 514(5410) Intermediate Computer Systems

Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.

Focuses on practical issues in designing and implementing distributed software. Topics vary depending on instructor. Recent offerings have covered object-oriented software development methodologies and tools, distributed computing, fault-tolerant systems, and network operating systems or databases. Students undertake a substantial software project. Many students obtain additional project credit by co-registering in COM S 490, 515, or 790.

COM S 516(5420) Parallel Computer Architecture (also ECE 572[5720])

Spring. 4 credits. Prerequisite: ECE 475.

For description, see ECE 572.

[COM S 522(5220) Computational Tools and Methods for Finance

Spring. 4 credits. Prerequisites: programming experience (e.g., C, FORTRAN, or MATLAB), some knowledge of numerical methods, especially numerical linear algebra. Not offered every year.

Provides a hands-on introduction to computational methods and tools used in finance. Students study both the underlying methods and efficient implementation. The MATLAB Financial Toolbox, along with additional MATLAB tools, are used extensively. The underlying numerical techniques discussed include nonlinear least-squares procedures (regression), basic linear algebra, linear and nonlinear optimization, finite-difference methods for PDEs, quadratic programming (and linear complementarity problems), and specialized tree (and lattice) evaluation methods.]

COM S 530(5300) The Architecture of Large-Scale Information Systems (also INFO 530[5300])

Spring. 4 credits. Prerequisite: COM S/ INFO 330 or COM S 432.

Deals with the architecture of large-scale information systems, with special emphasis on Internet-based systems. Topics include three-tier architectures, edge caches, distributed transaction management, web services, workflows, performance scalability, and high-availability architectures. The course includes a substantial project in the context of three-tier architectures, involving web servers, application servers, and database systems. Students study and use technologies such as Web Services, .Net, J2EE, ASPs, Servlets, XML, and SOAP.

COM S 565(5640) Computer Animation (also ART 273[2703], CIS 565[5640])

Fall. 4 credits. Prerequisite: none.

For description, see ART 273.

CIS 566(5642) Advanced Animation (also ART 372[3702], COM S 566[5642])

Spring. 4 credits. Prerequisite: none.

For description, see ART 372.

COM S 572(5722) Heuristic Methods for Optimization (also CEE 509[5090], CIS 572[5722], OR&IE 533[5340])

Fall. 3 or 4 credits. Prerequisites: COM S/ ENGRD 211 or 322 or CEE/ENGRD 241, or graduate standing, or permission of instructor. Not offered every year.

For description, see CEE 509.

COM S 578(5780) Empirical Methods in Machine Learning and Data Mining

Fall. 4 credits. Prerequisites: COM S 280 and 312 or equivalent.

This implementation-oriented course presents a broad introduction to current algorithms and approaches in machine learning, knowledge discovery, and data mining and their application to real-world learning and decision-making tasks. The course also covers experimental methods for comparing learning algorithms, for understanding and explaining their differences, and for exploring the conditions under which each is most appropriate.

COM S 611(6110) Advanced Programming Languages

Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.

Study of programming paradigms: functional, imperative, concurrent, and logic programming. Models of programming languages, including the lambda calculus. Type systems, polymorphism, modules, and other object-oriented constructs. Program transformations, programming logic, and applications to programming methodology.

COM S 612(6120) Compiler Design for High-Performance Architectures

Spring. 4 credits. Prerequisites: COM S 314 and 412 or permission of instructor.

Compiler design for pipelined and parallel architectures. Program analysis: data and control dependencies, dataflow analysis, efficient solution of dataflow equations, dependence tests, solution of Diophantine equations. Architecture and code generation for instruction-level parallel (ILP) processors: pipelined, VLIW and superscalar architectures, code reorganization and software pipelining. Architecture and code generation for multi-processors: shared- and distributed-memory architectures, latency tolerance and avoidance, loop transformations to enhance parallelism and locality of reference.

COM S 614(6410) Advanced Systems

Fall or spring. 4 credits. Prerequisite:

COM S 414 or permission of instructor.

Advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication protocols, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

COM S 615(6460) Peer-to-Peer Systems

Fall or spring. 4 credits. Recommended: COM S 614.

Peer-to-peer (P2P) is a new paradigm for distributed computing. P2P systems lack centralized servers and rely on self-organization and peer-to-peer resource sharing to accomplish their tasks. This course examines the peer-to-peer paradigm and peer-to-peer systems, and it discusses existing and new applications. Students are expected to perform an in-depth study of an existing approach or to develop new peer-to-peer systems and applications as part of the course project.

[COM S 619(6450) Advanced Computer Networks

Fall. 4 credits. Prerequisite: COM S 419 or 519, or permission of instructor. Not offered every year.

Examines advanced computer network topics such as overlay and P2P networking, reliable multicast, mobility, voice over IP, header compression, security, and extreme networking environments (fast, slow, big, long). The emphasis is on both research and the latest standards. A project with research content is required.]

COM S 621(6210) Matrix Computations

Fall. 4 credits. Prerequisites: MATH 411 and 431 or permission of instructor.

Stable and efficient algorithms for linear equations, least squares, and eigenvalue problems. Direct and iterative methods are considered. The MATLAB system is used extensively.

[COM S 622(6220) Numerical Optimization and Nonlinear Algebraic Equations

Spring. 4 credits. Prerequisite: COM S 621. Offered odd-numbered years.

Modern algorithms for the numerical solution of multidimensional optimization problems and simultaneous nonlinear algebraic equations. Emphasis is on efficient, stable, and reliable numerical techniques with strong global convergence properties: quasi-Newton methods, modified Newton algorithms, and

trust-region procedures. Special topics may include large-scale optimization, quadratic programming, and numerical approximation.]

COM S 624(6240) Numerical Solution of Differential Equations

Spring. 4 credits. Prerequisites: exposure to numerical analysis (e.g., COM S 421 or 621) and differential equations, and knowledge of MATLAB. Offered even-numbered years.

Finite difference methods for the solution of ordinary and partial differential equations. A fast-moving course that begins with a three-week survey of numerical methods for ODEs, then moves on to Fourier analysis and methods for PDEs, especially parabolic and hyperbolic equations. Other topics include numerical stability, finite element methods, Hamiltonian problems, and computational issues such as mesh generation and sparse matrix computation for PDEs.

COM S 626(6510) Computational Molecular Biology

Spring. 4 credits. Prerequisites: familiarity with linear programming, numerical solutions of ordinary differential equations, and nonlinear optimization methods.

Problems and algorithms in computational molecular biology. Topics include sequences (alignment, scoring functions, complexity of searches and alignment, secondary structure prediction, families, and function), the protein folding problem (lattice models, lattice searches, the HP model, chemical potentials, statistical potentials, funnels, complexity and model verification, global optimization, homology, threading), and the dynamics of complex biosystems (the Molecular Dynamics method, long-range forces, statistics of flexible systems, reduced models).

COM S 628(6522) Biological Sequence Analysis

Spring. 4 credits. Prerequisite: none.

Typically concentrates on one topic in biological sequence analysis, providing an in-depth analysis of the algorithmic and statistical challenges in that area. The selected topics vary from year to year.

COM S 630(6300) Representing and Accessing Digital Information (also INFO 630[6300])

Spring. 4 credits. Prerequisites: basic knowledge of linear algebra and probability theory; basic programming skills.

Information retrieval has evolved from the problem of locating books in a library to a multitude of tasks ubiquitous in business, science, and personal life. Modern information systems automatically compose newspapers, extract facts from the web, and analyze usage patterns. This course covers the necessary techniques for representing, organizing, and accessing digital information that is in textual or semistructured form. Topics combine information retrieval, natural language processing, and machine learning, with links to work in databases and data mining.

COM S 632(6320) Database Systems

Spring. 4 credits. Prerequisite: COM S 432/433 or permission of instructor.

Covers a variety of advanced issues ranging from transaction management to query processing to data mining. Involves extensive paper reading and discussion. Development of a term project with research content is required.

COM S 633(6322) Advanced Database Systems

Spring. 4 credits.

Covers advanced topics in database systems and data mining. The exact set of topics changes with each offering of the course.

COM S 664(6670) Machine Vision

Fall. 4 credits. Prerequisites:

undergraduate-level understanding of algorithms and MATH 221 or equivalent.

Introduction to computer vision, with an emphasis on discrete optimization algorithms and on applications in medical imaging. Topics include edge detection, image segmentation, stereopsis, motion and optical flow, active contours, and the Hausdorff distance. Students are required to implement several of the algorithms covered in the course and complete a final project.

[COM S 665(6620) Advanced Interactive Graphics

Fall or spring. 4 credits. Prerequisites:

COM S 465 and 467 or equivalent and undergraduate-level understanding of algorithms, probability and statistics, vector calculus, and programming. Not offered every year.

Covers advanced topics in realistic rendering with a focus on interactive techniques. Topics include light transport and global illumination, Monte-Carlo rendering, rendering using the modern graphics pipeline, interactive global illumination, shadow algorithms, perception for rendering, and image-based rendering.]

COM S 667(6630) Physically Based Rendering

Fall or spring. 4 credits. Prerequisites:

COM S 465 and 467 or equivalent and undergraduate-level understanding of algorithms, programming, and vector calculus.

Advanced course in realistic image synthesis, focusing on the computation of physically accurate images. Topics include radiometry; light transport and global illumination; rendering with participating media; advanced models for material properties; and physical measurement of light sources, images, and materials.

COM S 671(6762) Introduction to Automated Reasoning

Fall or spring. 4 credits. Prerequisite:

COM S 611 and graduate standing or permission of instructor. Not offered every year.

Topics in modern logic needed to understand and use automated reasoning systems such as HOL, Nuprl, and PVS. Special emphasis is on type theory and logic and on tactic-oriented theorem proving.

COM S 672(6700) Advanced Artificial Intelligence

Spring. 4 credits. Prerequisites: COM S 472 or permission of instructor.

Artificial intelligence (AI) provides many computational challenges. This course covers a variety of areas in AI, including knowledge representation, automated reasoning, learning, game-playing, and planning, with an emphasis on computational issues. Specific topics include stochastic reasoning and search procedures, properties of problem encodings, issues of syntax and semantics in knowledge representation, constraint satisfaction methods and search procedures, and critically constrained problems and their relation to phase-transition phenomena. In addition,

connections between artificial intelligence and other fields, such as statistical physics, operations research, and cognitive science are explored.

COM S 673(6724) Integration of Artificial Intelligence and Operations Research (also CIS 673[6724])

Spring. 3 credits.

Covers topics on the integration of artificial intelligence (AI) and operations research (OR) techniques for solving combinatorial problems as they appear in AI and OR applications. Application domains include AI planning, scheduling, combinatorial auctions, market mechanisms, and combinatorial designs.

COM S 674(6740) Natural Language Processing

Spring. 3 credits. Prerequisites: COM S 472

or permission of instructor. COM S 474 is not a prerequisite. Not offered every year.

Presents a graduate-level introduction to natural language processing, the primary concern of which is the study of human language use from a computational perspective. Covers syntactic analysis, semantic interpretation, and discourse processing, examining both symbolic and statistical approaches. Possible topics include information extraction, natural language generation, memory models, ambiguity resolution, finite-state methods, mildly context-sensitive formalisms, deductive approaches to interpretation, machine translation, and machine learning of natural language.

[COM S 676(6764) Reasoning about Knowledge

Fall. 4 credits. Prerequisites: mathematical

maturity and acquaintance with propositional logic. Not offered every year.

Knowledge plays a crucial role in distributed systems, game theory, and artificial intelligence. Material examines formalizing reasoning about knowledge and the extent to which knowledge is applicable to those areas. Issues include common knowledge, knowledge-based programs, applying knowledge to analyzing distributed systems, attainable states of knowledge, modeling resource-bounded reasoning, and connections to game theory.]

[COM S 677(6766) Reasoning about Uncertainty

Fall. 4 credits. Prerequisites: mathematical

maturity and acquaintance with propositional logic. Not offered every year.

Examines formalizing reasoning about and representing uncertainty, using formal logical approaches as a basis. Topics: logics of probability, combining knowledge and probability, probability and adversaries, conditional logics of normality, Bayesian networks, qualitative approaches to uncertainty, going from statistical information to degrees of belief, and decision theory.]

COM S 678(6780) Advanced Topics in Machine Learning

Spring. 4 credits. Prerequisites: COM S 478

or equivalent, or COM S 578 or equivalent, or permission of instructor. Not offered every year.

Extends and complements COM S 478 and 578, giving in-depth coverage of new and advanced methods in machine learning. In particular, we connect to open research questions in machine learning, giving starting points for future work. The content of the course reflects an equal balance between

learning theory and practical machine learning, making an emphasis on approaches with practical relevance. Topics include support vector machines, clustering, Bayes nets, boosting, model selection, learning orderings, and inductive transfer.

COM S 681(6820) Analysis of Algorithms

Fall. 4 credits. Prerequisite: COM S 482 or graduate standing.

Methodology for developing efficient algorithms, primarily for graph theoretic problems. Understanding of the inherent complexity of natural problems via polynomial-time algorithms, randomized algorithms, NP-completeness, and randomized reducibilities. Also covers topics such as parallel algorithms and efficient data structures.

COM S 682(6810) Theory of Computing

Spring. 4 credits. Prerequisite: (COM S 381 or 481) and (COM S 482 or 681) or permission of instructor.

Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.

[COM S 683(6822) Advanced Design and Analysis of Algorithms

Spring. 4 credits. Prerequisite: COM S 681 or permission of instructor. Not offered every year.]

COM S 684(6840) Algorithmic Game Theory

Fall or spring. 4 credits. Prerequisite: background in algorithms and graphs at level of COM S 482. No prior knowledge of game theory or economics assumed.

Algorithmic game theory combines algorithmic thinking with game-theoretic or, more generally, economic concepts. This course focuses on problems arising from, and motivated by, the Internet and other decentralized computer networks. The most defining characteristic of the Internet is that it was not designed by a single central entity, but emerged from the complex interaction of many economic agents, such as network operators, service providers, designers, and users, in varying degrees of collaboration and competition. The course focuses on some of the many questions at the interface between algorithms and game theory that arise from this point of view. Topics include Nash equilibrium and general equilibrium, the price of anarchy, market equilibrium, social choice theory, mechanism design, and multicast pricing.

COM S 685(6850) The Structure of Information Networks (also INFO 685[6850])

Fall or spring. 4 credits. Prerequisite: COM S 482.

Information networks such as the World Wide Web are characterized by the interplay between heterogeneous content and a complex underlying link structure. This course covers recent research on algorithms for analyzing such networks and models that abstract their basic properties. Topics include combinatorial and probabilistic techniques for link analysis, centralized and decentralized search algorithms, generative models for networks, and connections with work in the areas of social networks and citation analysis.

[COM S 686(6860) Logics of Programs

Spring. 4 credits. Prerequisites: COM S 481, 682, and MATH 481 or MATH/COM S 486. Not offered every year.]

COM S 709(7090) Computer Science Colloquium

Fall, spring. 1 credit. For staff, visitors, and graduate students interested in computer science. S-U grades only.

Weekly meeting for the discussion and study of important topics in the field.

COM S 711(7191) Seminar in Advanced Programming Languages

Fall, spring. 3 credits.

COM S 713(7491) Seminar in Systems and Methodology

Fall, spring. 4 credits. Prerequisites: graduate course employing formal reasoning (e.g., COM S 611, 613, 671), logic course, or permission of instructor. Not offered every year.

Discussion of contemporary issues in the design and analysis of computing systems. Emphasis is on the proper use of rigor, models, and formalism.

COM S 714(7410) Topics in Systems

Fall or spring. 3 credits. Prerequisite: permission of instructor.

COM S 715(7192) Seminar in Programming Refinement Logics

Fall, spring. 4 credits. Prerequisite: permission of instructor.

Topics in programming logics, possibly including type theory, constructive logic, decision procedures, heuristic methods, extraction of code from proofs, and the design of proof-development and problem-solving systems.

COM S 717(7430) Topics in Parallel Architectures

Fall. 4 credits. Prerequisite: COM S 612 or permission of instructor. Not offered every year.

Covers topics in parallel computers. Material includes: architectures of parallel computers, parallelizing compilers, operating systems for parallel computers, and languages (functional and logic-programming languages) designed for parallel computation.

COM S 718(7690) Computer Graphics Seminar

Fall, spring. 4 credits.

COM S 719(7190) Seminar in Programming Languages

Fall, spring. 4 credits. Prerequisite: COM S 611 or permission of instructor. S-U grades only.

COM S 721(7210) Topics in Numerical Analysis

Fall, spring. 4 credits. Prerequisite: COM S 621 or 622 or permission of instructor. Not offered every year.

Topics are chosen at instructor's discretion.

COM S 726(7590) Problems and Perspectives in Computational Molecular Biology (also PL BR 726[7260])

Fall, spring. 1 credit. Open to all from life sciences, computational sciences, and physical sciences. S-U grades only.

Weekly seminar series discussing timely topics in computational molecular biology. Addresses methodological approaches to sequence and structure analysis, function prediction, study of evolutionary relationships, and analysis of large biological systems. Statistical and deterministic computational approaches are covered, and specific and detailed biological examples are discussed. In each topic, one or two representative papers are selected that made significant advances in this field. The lectures

are given by faculty and students. We try to bridge these disciplines by pairing students and faculty from complementary backgrounds.

COM S 732(7320) Seminar in Database Systems

Fall, spring. 4 credits. S-U grades only.

[COM S 750(7726) Evolutionary Computation and Design Automation (also CIS 750[7726], M&AE 650[6500])

Fall. 4 credits. Prerequisite: programming experience or permission of instructor. Not offered every year.

Seminar course in evolutionary algorithms and their application to optimization and open-ended computational design. Genetic algorithms, genetic programming, co-evolution, arms races and cooperation, developmental representations, learning, and symbiosis are covered. Topics include artificial life, evolutionary robotics, and applications in a variety of domains in science and engineering. Suitable for students interested in computational techniques for addressing open-ended design problems and in computational models of evolutionary discovery.

COM S 754(7490) Systems Research Seminar

Fall, spring. 1 credit. S-U grades only.

COM S 772(7790) Seminar in Artificial Intelligence

Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

COM S 775(7794) Seminar in Natural Language Understanding

Fall, spring. 2 credits.

Informal weekly seminar in which current topics in natural language understanding and computational linguistics are discussed.

COM S 786(7860) Introduction to Kleene Algebra

Spring. 4 credits. Prerequisite: COM S 481. Recommended: COM S 482 or 681, COM S 682, elementary logic (MATH 481 or 681), algebra (MATH 432).

Kleene algebra is an algebraic system that axiomatically captures the properties of a natural class of structures arising in logic and computer science. It has appeared in various guises in relational algebra, semantics and logics of programs, automata and formal language theory, and the design and analysis of algorithms. This course reviews the history of the development of Kleene algebra and Kleene algebra with tests (Kleene/Boolean algebra); studies models, compare axiomatizations, and derive completeness, expressiveness, and complexity results; and discusses various applications in program schematology, program verification, compiler optimization, and programming language semantics and logic.

COM S 789(7890) Seminar in Theory of Algorithms and Computing

Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

COM S 790(7999) Independent Research

Fall, spring. Prerequisite: permission of a computer science adviser.

Independent research or master of engineering project.

COM S 990(9999) Thesis Research

Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Doctoral research.

INFORMATION SCIENCE (INFO)**INFO 130(1300) Introductory Design and Programming for the Web (also COM S 130[1300])**

Fall. 3 credits.

For description, see COM S 130.

INFO 172(1700) Computation, Information, and Intelligence (also COGST 172, COM S 172[1700], ENGRI 172[1700])

Fall. 3 credits. Prerequisites: some knowledge of differentiation; permission of instructor for students who have completed equivalent of COM S 100.

For description, see COM S 172.

[INFO 214(2140) Cognitive Psychology (also COGST/PSYCH 214[2140])

Fall. 3 credits. Limited to 175 students.

Prerequisite: sophomore standing.

Graduate students, see INFO/PSYCH 614, or COGST 501. Not offered 2005–2006.

For description, see PSYCH 214.]

INFO 230(2300) Intermediate Design and Programming for the Web (also COM S 230[2300])

Spring. 3 credits. Prerequisite: COM S/INFO 130 or equivalent knowledge.

For description, see COM S 230.

INFO 245(2450) Psychology of Social Computing (also COMM 245[2450])

Fall. 3 credits.

For description, see COMM 245.

INFO 292(2921) Inventing an Information Society (also AM ST 292[2980], ECE/ENGRG 298[2980], HIST 292[2920], S&TS 292[2921])

Spring. 3 credits; may not be taken for credit after ECE/ENGRG 198.

For description, see ENGRG 298.

INFO 295(2950) Mathematical Methods for Information Science

Fall. 4 credits. Corequisite: MATH 231 or equivalent.

Teaches basic mathematical methods for information science. Topics include graph theory, discrete probability, Bayesian methods, finite automata, Markov models, and hidden Markov models. Uses examples and applications from various areas of information science such as the structure of the web, genomics, natural language processing, and signal processing.

INFO 330(3300) Applied Database Systems (also COM S 330[3300])

Fall. 3 credits. Prerequisite: COM S/ENGRD 211.

For description, see COM S 330.

INFO 345(3450) Human-Computer Interaction Design (also COMM 345[3450])

Spring. 3 credits.

For description, see COMM 345.

INFO 349(3491) Media Technologies (also COMM 349[3490], S&TS 349[3491])

Spring. 3 credits.

For description, see S&TS 349.

INFO 355(3551) Computers: From the 17 C. to the Dot.com Boom (also S&TS 355[3561])

Fall. 4 credits.

For description, see S&TS 355.

INFO 356(3561) Computing Cultures (also S&TS 356[3561])

Spring. 4 credits. Prerequisites: none.

For description, see S&TS 356.

[INFO 387(3871) The Automatic Lifestyle: Consumer Culture and Technology (also S&TS 387(3871))

Spring. 4 credits. Not offered 2005-2006.

For description, see S&TS 387.]

INFO 430(4300) Information Retrieval (also COM S 430(4300))

Fall. 3 credits. Prerequisite: COM S/ENGRD 211 or equivalent.

For description, see COM S 430.

INFO 431(4302) Web Information Systems (also COM S 431(4302))

Spring. 3 credits. Prerequisites: COM S 211 and some familiarity with web site technology.

For description, see COM S 431.

INFO 435(4350) Seminar on Applications of Information Science (also INFO 635(6390))

Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of COM S 211 or equivalent, and experience using information systems. Undergraduates and master's students should register for INFO 435; Ph.D. students should register for INFO 635.

Examines the technological, sociological, legal, financial, and political aspects of information systems in the context of innovative applications. Designed as a series of case studies in information science, with occasional presentations from the people involved in designing or maintaining those systems. Examples include arXiv, NSDL, NuPrl, the Legal Information Institute, Protomap, Dspace, and others created or maintained at Cornell, as well as some representative exterior resources. The case studies are augmented by readings and discussions of recent articles on technical components of the information systems, including machine learning tools, link and network analysis, metadata standards, document formats and clustering, data integrity, and natural language processing. Aspects of human and social interactions with the information systems considered include copyright issues, privacy issues, public/private partnerships, and publishing models.

INFO 440(4400) Advanced Human-Computer Interaction Design (also COMM 440(4400))

Fall. 3 credits. Prerequisites: COMM/INFO 345 or permission of instructor.

For description, see COMM 440.

INFO 445(4450) Seminar in Computer-Mediated Communication (also COMM 445(4450))

Fall. 3 credits. Prerequisite: COMM/INFO 245.

For description, see COMM 445.

INFO 447(4470) Social and Economic Data (also ILRLE 447(4470))

Spring. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, and one upper-level social science course, or permission of instructor.

Social and economic data drive decisions in public and private organizations, and quality decisions require quality data. This course focuses on data quality—conceptual fit, sampling and nonsampling error, timeliness, geographic detail, and dissemination—as well as legal and ethical issues in the data manufacturing process. Major emphasis is

placed on public use microdata files of the U.S. Census Bureau and their role in the allocation of federal funds. These files include the Census of Population and Housing, Current Population Survey, American Housing Survey, Consumer Expenditure Survey, and American Community Survey. The course is appropriate for upper-level undergraduate, professional master's and doctoral students who will be users of data products, from the public and private sectors; and/or producers of data products for their organizations, working with existing data products from public and proprietary sources, as well as administrative or survey data collected by their organization.

INFO 450(4500) Language and Technology (also COMM 450(4500))

Spring. 3 credits.

For description, see COMM 450.

INFO 490(4900) Independent Reading and Research

Fall, spring. 1-4 credits.

Independent reading and research for undergraduates.

INFO 491(4910) Teaching in Information Science, Systems, and Technology

Fall, spring. Variable credit.

Involves working as a T.A. in a course in the information science, systems, and technology major.

INFO 515(5150) Culture, Law, and Politics of the Internet

Fall. 4 credits.

Explores the culture, law, and politics of the Internet. Free speech concerns, Internet governance, domain naming, copyright, privacy, and security are highlighted as well as a variety of policy issues such as acceptable-use bandwidth usage on campuses, protocols for DMCA compliance, and the balance of classroom and distributed learning.

INFO 530(5300) The Architecture of Large-Scale Information Systems (also COM S 530(5300))

Spring. 4 credits. Prerequisite: COM S/INFO 330 or COM S 432.

For description, see COM S 530.

[INFO 614(6140) Cognitive Psychology (also COGST 614(6140), PSYCH 614(6140))

Fall. 5 credits. Not offered 2005-2006.

For description, see PSYCH 614.]

INFO 630(6300) Representing and Accessing Digital Information (also COM S 630(6300))

Spring. 4 credits. Prerequisites: basic knowledge of linear algebra and probability theory; basic programming skills.

For description, see COM S 630.

[INFO 634(6341) Information Technology in Sociocultural Context (also S&TS 634(6341))

Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2005-2006.

For description, see S&TS 634.

INFO 635(6390) Seminar on Applications of Information Science (also INFO 435(4390))

Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of COM S 211 or equivalent, and experience using information systems. Undergraduates and master's students should register for INFO 435; Ph.D. students should register for INFO 635.

For description, see INFO 435.

INFO 640(6400) Human-Computer Interaction Design (also COMM 640(6400))

Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.

For description, see COMM 640.

INFO 645(6450) Seminar in Computer-Mediated Communication (also COMM 645(6450))

Spring. 3 credits.

For description, see COMM 645.

[INFO 648(6648) Speech Synthesis By Rule (also LING 648(6648))

Spring. 4 credits. Prerequisite: LING 401, 419, or permission of instructor. Offered alternate years; not offered 2005-2006.

For description, see LING 648.]

INFO 685(6850) The Structure of Information Networks (also COM S 685(6850))

Fall or spring. 4 credits. Prerequisite: COM S 482.

For description, see COM S 685.

[INFO 694(6940) The Internet as a Social Phenomenon (also COMM 694(6940))

Fall. 3 credits. Prerequisite: graduate standing; seniors by permission of instructor. Not offered 2005-2006.

For description, see COMM 694.]

INFO 747(7400) Social and Economic Data (GR-RDC) (also ILRLE 740(7400))

Spring. 4 credits. Prerequisite: Ph.D. and research master's students.

Teaches all the basics required to acquire and transform raw information into social and economic data. Covers legal, statistical, computing, and social science aspects of the data "production" process are covered. Major emphasis is placed on U.S. Census data that are accessible from the Census Bureau's Research Data Center network. This version of the course has been specially prepared for graduate students who are planning to use RDC-based data or are seriously considering it. RDC-based data products covered include the new Longitudinal Employer-Household Dynamics (LEHD) micro data; the Longitudinal Business Database (LBD) and its predecessor the Longitudinal Research Database (LRD); internal versions of the Survey of Income and Program Participation (SIPP), Current Population Survey (CPS), American Community Survey (ACS), American Housing Survey (AHS), the 1990 and 2000 Decennial Census of Population and Housing; the Employer Business Register (BR and SSEL); the Censuses and Annual Surveys of Manufactures, Mining, Services, Retail Trade, Wholesale Trade, Construction, Transportation, Communications, and Utilities; Business Expenditures Survey; Characteristics of Business Owners; and others. Students are introduced to the new NSF-sponsored Virtual Research Data Center. Core topics include: basic statistical principles of

populations and sampling frames; acquiring data via samples, censuses, administrative records, and transaction logging; law, economics and statistics of data privacy and confidentiality protection; data linking and integration techniques (probabilistic record linking; multivariate statistical matching); data imputation techniques; and analytic methods for complex linked data sets.

[INFO 751(7002) Media Research and Critical Design

Fall or spring. 4 credits. Prerequisites: graduate-level training in science and technology studies, philosophy, critical theory, communication, artificial intelligence, human-computer interaction, or equivalent, or permission of instructor. Not offered every year.]

INFO 790(7900) Independent Research

Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.

Independent research for M.Eng. students and pre-A exam Ph.D. students.

INFO 990(9900) Thesis Research

Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.

Thesis research for post-A exam Ph.D. students.

SCHOOL OF CONTINUING EDUCATION AND SUMMER SESSIONS

The School of Continuing Education and Summer Sessions (SCE) is dedicated to providing outstanding educational opportunities throughout the year for people of all ages and interests.

Our programs are presented in a wide variety of formats and time frames and are offered on and off campus and via distance learning.

Join us to prepare for your future, enhance your studies, improve your job skills, or simply have fun learning something new!

For information about the following programs, write B20 Day Hall, Ithaca, NY 14853-2801; call 255-4987; e-mail cusce@cornell.edu; or fax 255-9697; unless indicated otherwise below. You may also visit us on the web at www.sce.cornell.edu.

SCHOOL ADMINISTRATION

Glenn C. Altschuler, dean (on leave 7/05 to 6/06)

Charles W. Jermy, Jr., acting dean, and director, Cornell University Summer Session

Diane E. Sheridan, director, finance and administration

Diane M. Duthie, assistant director, finance and administration

School Program Directors and Managers

Stuart M. Blumin, director, Cornell in Washington Program

Abby H. Eller, director, Summer College Programs for High School Students

Ralph Janis, director, Cornell's Adult University and Cybertower

School Support Services

Graham Dobson, manager, information technologies

Ann L. Morse, manager, media services

Cathy M. Pace, registrar, and coordinator, continuing education information service

CORNELL'S ADULT UNIVERSITY

Cornell's Adult University (CAU) offers weeklong noncredit courses on campus for adults and families during the summer. During the fall, winter, and spring, it offers weekend seminars, weeklong domestic programs, and international study tours. Developed and led by distinguished members of the Cornell faculty, all programs are inspired by the belief that learning never ends and that one of the roles of a great university is to provide a bridge between traditional formal education and informal, noncredit study. For information, write Cornell's Adult University, 626 Thurston Avenue, Ithaca, NY 14850-2490; call 255-6260; e-mail cauinfo@cornell.edu; fax 254-4482; or visit www.cau.cornell.edu.

CONTINUING EDUCATION INFORMATION SERVICE

This service provides free information, counseling, and referral to adults who have been out of school for several years and want to resume their education. It also provides information about short courses, workshops, professional updates, and executive programs offered by the university to people inside and outside Cornell. For information, write to Continuing Education, B20 Day Hall, Ithaca, NY 14853-2801; call 255-4987; e-mail cusce@cornell.edu; or fax 255-9697.

CORNELL IN WASHINGTON PROGRAM

Cornell in Washington offers undergraduates the opportunity to combine the strengths of Cornell with all of the best parts of living and learning in Washington, D.C. Students take courses in the fall, spring, or summer for credit, work as externs, and complete substantial research projects, all the while enjoying the rich opportunities available in the nation's capital. For information, write to Cornell in Washington, M101 McGraw Hall, Ithaca, NY 14853-4601; call 255-4090; e-mail cwash@cornell.edu; or visit www.ciw.cornell.edu.

DISTANCE LEARNING

Need a flexible schedule? Have a full-time job? Planning to travel during winter break or during the summer? Don't let any of these stop you from taking a class, earning credits, or learning something new. Wherever you are, whatever your schedule, Cornell distance learning courses are just a keyboard away.

Distance learning courses may include a web-based component, videotapes, and/or CD-ROMs. Students interact with the instructor and other students by phone or e-mail. Most assignments and examinations are completed within a scheduled time frame, just as in on-campus courses, but students have the option of getting a head start on readings and lectures. For information, visit www.sce.cornell.edu/dl/.

For faculty members interested in developing credit or noncredit distance learning courses, the school offers a broad range of services, including determining technological needs, resolving copyright issues, creating a marketing plan, and fulfilling administrative duties related to the course. Services are tailored to individual needs and ongoing support is available. Visit www.sce.cornell.edu/dl/ to see what's possible.

CyberTower: Cornell at No Cost

Cornell's online CyberTower program is a great way to meet Cornell faculty and explore fascinating topics ranging from mastodons and wine appreciation to today's headline news, all at no cost.

CyberTower features three online program series, with new offerings added every month:

- **Study Rooms** contain video-streamed lectures, links to specially selected web sites, reading lists, and discussion boards with Cornell faculty and fellow CyberTower users.
- **Forums** are informal video-streamed conversations with leading faculty members. Discussion boards enable you to trade comments and questions with each month's featured guest.
- **Views and Reviews** are brief, unabashedly opinionated commentaries by faculty members on books, films, articles, and topics in the news. The newest addition to this series is "SunSpots! Op-Eds from the writers of the *Cornell Daily Sun*."

To explore CyberTower, simply log on to cybertower.cornell.edu and follow the registration instructions. It's all free and is a great way to see what Cornell has to offer.

EXECUTIVE AND PROFESSIONAL PROGRAMS

The school presents short, high-level professional updates, both on and off campus, in study tours and in locations worldwide via distance learning. These courses are taught by Cornell faculty and senior research staff in many fields. Programs also can be designed to respond to the specific needs and interests of corporations, professional societies, and other groups. For information, call 255-7259; e-mail cusps@cornell.edu; fax 255-8942; or visit www.sce.cornell.edu/exec/.

EXTRAMURAL STUDY

Cornell students whose studies have been interrupted may find it useful to take classes on a part-time basis. The school is also dedicated to offering part-time study to staff, faculty, "townies," and anyone else interested in taking courses at the university, improving their job skills, continuing their education, or simply having fun learning something new.

Thanks to the school's Extramural Study program, anyone may (with few exceptions) enroll in any course in the university during the fall and spring semesters if space is available. Part-time study at Cornell is a great opportunity to take fascinating courses and study with world-renowned faculty members. If you'd like to take advantage of Cornell's extensive course offerings but don't need

college credit, you may register through the Visitor's Program and receive a 90 percent discount on tuition.

For information, write to Extramural Study, B20 Day Hall, Ithaca, NY 14853-2801; call 255-4987; e-mail cusce@cornell.edu; fax 255-9697; or visit www.sce.cornell.edu/exmu/.

SPECIAL PROGRAMS

If you want to immerse yourself in a particular subject, consider enrolling in a special program. Programs are offered on and off campus, may include an internship, and may be combined with other courses. For information, call 255-7259; e-mail cusce@cornell.edu; fax 255-8942; or visit www.sce.cornell.edu/sp/.

On-Campus Special Programs Roster

AEM Certificate in Business Management

African Languages: Swahili

Architecture

Asian Studies Programs: Chinese, Japanese, Nepali, Sinhala, Tibetan

Biological Sciences Undergraduate Research Program

CCMR Institute for Chemistry Teachers (CICT)

CNS Institute for Physics Teachers

Cornell Institute for Biology Teachers

Education

Engineering Cooperative Education Program

English for International Students and Scholars

Campus to Careers

The job market's tough. The economy's tight. You've been thinking it's time to get serious about your future

The School of Continuing Education and Summer Sessions invites you to join us for one of our highly regarded programs linking classrooms and careers. No matter what your major is, you can:

- Expand your career opportunities
- Strengthen your resumé and skills
- Develop professional contacts
- Take focused, intensive classes
- Learn from distinguished professors, alumni, practitioners, and executives
- Study in Washington, D.C., New York City, or on the Cornell campus in Ithaca
- Enrich your personal, academic, and professional life

For more information, visit www.sce.cornell.edu/sp/.

SUMMER COLLEGE PROGRAMS FOR HIGH SCHOOL STUDENTS

Cornell's award-winning programs for high school students offer one-, three-, four-, and six-week programs for talented sophomores, juniors, and seniors from around the world.

Participants live on our beautiful campus, take college classes with leading Cornell faculty, earn an average of 6 credits, and explore careers and academic majors.

The program is a wonderful opportunity for high school students to experience college life and make some great friends. At the end of the program, students often say it's been the best summer of their life.

For information, call 255-6203; e-mail summer_college@cornell.edu; fax 255-6665; or visit www.summercollege.cornell.edu.

WINTER SESSION

Cornell undergraduate and graduate students, as well as employees and area residents, can earn up to 4 credits between the fall and spring semesters by enrolling in the winter session. This quiet time on campus allows students to enjoy generally smaller classes and to concentrate on intensive study. Winter-session students may enroll in scheduled courses or design individualized study with a faculty member. For information, write to Winter Session, B20 Day Hall, Ithaca, NY 14853-2801; call 255-4987; e-mail cusce@cornell.edu; fax 255-9697; or visit www.sce.cornell.edu/ws/. If a course also is offered through distance learning, the course title will be followed by **DL**.

CORNELL UNIVERSITY SUMMER SESSION

Summer at Cornell is an excellent time to get a world-class education while enjoying all of the pleasures of summer in the Finger Lakes.

Summer Session features open admissions and outstanding instructors, nearly all of whom are regular Cornell faculty members. Courses are offered on and off campus and via distance learning.

During our three-, six-, or eight-week sessions you can actually get to know your professors and are sure to be surrounded by intriguing people of all ages from all over the world. And, all with time left over for travel or a summer job.

Summer Session offers the practical benefits of fulfilling requirements, accelerating your degree, gaining personal and professional growth, or easing your fall/spring course load. It's also the perfect time to take advantage of the area's stunningly beautiful gorges, waterfalls, lakes, and parks. Hike, swim, sail, picnic, or enjoy a sunset concert on the Arts Quad.

However you look at it, spending a summer at Cornell is a great way to enjoy the best of the university and the best of summer!

For information, call 255-4987; e-mail cusce@cornell.edu; or visit our web site at www.summer.cornell.edu.

Summer Session Course Roster

The Cornell University Summer Session offers a wide variety of courses. The list that follows includes those courses that are usually offered every summer. The list is not exhaustive; many new courses or courses offered only occasionally are not listed. For complete information, contact the Summer Session office. Courses are posted on the web (www.summer.cornell.edu) in the fall as the roster is developed. If a course also is offered through distance learning, the course title will be followed by **DL**.

Africana Studies

AS&RC 131-132 Swahili

AS&RC 205 African Cultures and Civilizations

AS&RC 505 Teaching about Africa

American Studies

AM ST 104 Introduction to American History

AM ST 124 Democracy and Its Discontents: Political Traditions in the United States

AM ST 202 Popular Culture in the United States, 1945 to Present **DL**

AM ST 341 Recent American History, 1960 to the Present

Animal Science

AN SC 112 Sustainable Animal Husbandry

Anthropology

ANTHR 100 Introduction to Archaeology

ANTHR 101-102 Introduction to Anthropology

Applied Economics and Management

AEM 220 Introduction to Business Management

AEM 221 Financial Accounting

AEM 224 Principles of Finance

AEM 240 Marketing **DL**

AEM 320 Business Law I

AEM 323 Managerial Accounting

AEM 495 Undergraduate Special Topics in Applied Economics and Management

Archaeology

ARKEO 100 Introduction to Archaeology

Other field study opportunities are usually available through this department.

Architecture

ARCH 110 Introduction to Architecture: Design Studio

ARCH 130 An Introduction to Architecture: Lectures

Consult the Department of Architecture office for a complete list of summer design offerings including foreign study opportunities.

Art

ART 121 Introductory Painting

ART 131 Introductory Intaglio

ART 141 Introductory Sculpture

ART 151-152 Drawing I and II

ART 159 Life and Still-Life Drawing

ART 161 Photography I

ART 168 Black-and-White Photography

ART 169 Color Photography

ART 171-172 Electronic Imaging in Art

ART 221 Painting II

ART 231 Intaglio II

ART 241 Sculpture II

ART 261 Photography II

ART 263 Color Photography

ART 361 Photography III

Asian Studies

ASIAN 225 Literature, Politics, and Genocide in Cambodia **DL**

Astronomy

ASTRO 105 An Introduction to the Universe

ASTRO 106 Essential Ideas in Relativity and Cosmology

ASTRO 107 An Introduction to the Universe

Biological and Environmental Engineering

BEE 299 Sustainable Development **DL**

Biological Sciences

Ecology and Evolutionary Biology

BIOEE 207 Evolution

BIOEE 261 Ecology and the Environment

BIOEE 467 Seminar in the History of Biology: Evolution, Ethics, and Meaning in Life

Microbiology

BIOMI 290-291 General Microbiology

Molecular Biology and Genetics

BIO G 200 Special Studies in Biology

BIOGD 281 Genetics

BIOBM 333 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology

BIOBM 432 Survey of Cell Biology

BIOBM 440 Laboratory in Biochemistry and Molecular Biology

Neurobiology and Behavior

BIO G 107-108 General Biology

BIONB 221 Neurobiology and Behavior I: Introduction to Behavior

Plant Biology

BIOPL 240 Green World/Blue Planet

BIOPL 245 Plant Biology

Biology and Society

B&SOC 447 Seminar in the History of Biology: Evolution, Ethics, and Meaning in Life

Biometry and Statistics

BTRY 301/601 Statistical Methods I

Chemistry and Chemical Biology

CHEM 206 Introduction to General Chemistry

CHEM 207-208 General Chemistry

CHEM 251 Introduction to Experimental Organic Chemistry

CHEM 257 Introduction to Organic and Biological Chemistry

CHEM 357-358 Organic Chemistry for the Life Sciences

Classics

Classical Civilization

CLASS 236 Greek Mythology

Writing

WRIT 134 An Introduction to Writing in the University

INDIVIDUALIZED STUDY

Can't find the course you want? Take it independently! You'd like to study cosmic rays and high-energy electromagnetic radiation, protein structure and the nature of enzymatic catalysis, or American and European decorative arts of the Renaissance and the 19th century. Although there are no regularly scheduled summer courses in those areas or in other areas in which you may be interested, you may still be able to study your favorite subject. Courses that aren't a part of the regular schedule may be offered for an individual or a group.

If you're interested in such a course and can find a professor willing to supervise your study, pick up the application for individualized study (available on the web at www.summer.cornell.edu or from the Summer Session office). Also, please let the Summer Session office know if there are courses you would like to see offered next summer (call 255-4987 or e-mail cusce@cornell.edu).

COLLEGE OF ENGINEERING

ADMINISTRATION

W. Kent Fuchs, dean

David Gries, associate dean for undergraduate programs

Michael Spencer, associate dean for research, graduate studies, and professional education

Zellman Warhaft, associate dean for diversity

Deborah Cox, assistant dean for strategic planning, assessment, and new initiatives

Betsy East, assistant dean for student services

Cathy Long, assistant dean for administration

Marsha Pickens, assistant dean for alumni affairs and development

FACILITIES AND SPECIAL PROGRAMS

Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. The School of Applied and Engineering Physics is located in Clark Hall on the College of Arts and Sciences campus, and the Department of Biological and Environmental Engineering is in Riley-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences.

Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers and programs contribute to opportunities for study and research.

Cornell programs and centers of interest in engineering include the following:

Center for Applied Mathematics. This cross-disciplinary center administers a graduate program.

Center for Nanoscale Systems in Information Technologies. The mission of this National Science Foundation Nanoscience and Technology Center is to explore new methods for creating nanoscale devices for use in information technologies. The facilities for this center are distributed between Clark Hall and the Engineering Quadrangle, and especially in the new Duffield Hall.

Center for Radiophysics and Space Research. This interdisciplinary unit facilitates research in astronomy and the space sciences.

Center for Theory and Simulation in Science and Engineering. A supercomputer facility used for advanced research in engineering and the physical and biological sciences.

Cornell High Energy Synchrotron Source (CHESS). A high-energy synchrotron radiation laboratory operated in conjunction with the university's high-energy storage ring. Current research programs at CHESS are in areas of structural biology, chemistry, materials science, and physics.

Cornell Nanoscale Science and Technology Facility (part of the National Science Foundation-funded National Nanofabrication Users Network). This center provides

equipment and services for research in the science, engineering, and technology of nanometer-scale structures for electronic, chemical, physical, and biological applications.

Cornell Waste Management Institute. This research, teaching, and extension program within the Center for Environmental Research addresses the environmental, technical, and economic issues associated with solid waste; one facility sponsored by the institute is the Combustion Simulation Laboratory in the Sibley School of Mechanical and Aerospace Engineering.

Institute for the Study of the Continents. This interdisciplinary organization promotes research on the structure, composition, and evolution of the continents.

W. M. Keck Foundation in Nanobiotechnology. Facilities of this program include tools for nanoscale diagnostics of biomaterials.

Laboratory of Plasma Studies. A center for research in plasma physics.

Cornell Center for Materials Research. An interdisciplinary facility, with substantial support from the National Science Foundation, providing sophisticated scientific measurement and characterization equipment for materials research.

National Astronomy and Ionosphere Center. The world's largest radio-radar telescope facility, operated by Cornell in Arecibo, Puerto Rico.

Multidisciplinary Center for Earthquake Engineering Research. A facility established by the National Science Foundation and a group of universities to study response and design of structures in earthquake environments.

Nanobiotechnology Center. The mission of this National Science Foundation Science and Technology Center is to develop nanoscale technologies and science applied to the life sciences. The facilities of this center are distributed between Clark Hall, Kimball Hall, and the Biotechnology Center.

National Institutes of Health/National Science Foundation Developmental Resource in Biophysical Imaging and Optoelectronics. This resource develops novel measurement and optical instrumentation for solving biophysical problems.

Network for Earthquake Engineering Simulation (NEES). A system of nationwide experimental facilities linked by high-performance Internet for laboratory and computational simulation of structures under earthquake loads.

Power Systems Engineering Research Center. A National Science Foundation cooperative center between university and industry in which research is centered on power systems and infrastructure networks.

Program of Computer Graphics. This interdisciplinary research center operates one of the most advanced computer-graphics laboratories in the United States.

Program on Science, Technology, and Society. This cross-disciplinary unit sponsors courses and promotes research on the interaction of science, technology, and society.

The programs listed above are sponsored by College of Engineering units, and several are industry affiliated.

DEGREE PROGRAMS

Cornell programs in engineering and applied science lead to the degrees of bachelor of science (B.S.), master of engineering (with field designation) (M.Eng.), master of science (M.S.), and doctor of philosophy (Ph.D.).

General academic information concerning the B.S. degree is given below under "Undergraduate Study." The student pursues the degree in one of 13 majors. The majors are described under "Engineering Majors."

Many students stay a fifth year in the College of Engineering to pursue a professional degree, the master of engineering (M.Eng.) degree. Joint enrollment in the B.S. and M.Eng. degrees is possible for students in their last semester who lack only 1 to 8 credits for the B.S.

M.Eng. degrees are awarded in most of the major areas. In addition, the following M.Eng. degrees are awarded: aerospace engineering, biomedical engineering, electrical engineering, engineering mechanics, nuclear engineering, operations research and industrial engineering, and systems engineering. For full details on M.Eng. degrees, see "Master of Engineering Degree Programs."

Programs leading to the M.S. and Ph.D. degrees are administered by the Graduate School. They are described in the *Announcement of the Graduate School* and the special announcement *Graduate Study in Engineering and Applied Science*.

UNDERGRADUATE STUDY

Students in the College of Engineering spend most of their first two years of undergraduate studies in the Common Curriculum, which is administered by the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and Engineering Advising. At the end of their third semester, they affiliate with one of these majors: *

biological engineering (BE)†

chemical engineering (ChemE)

civil engineering (CE)

computer science (CS)

electrical and computer engineering (ECE)

engineering physics (EP)

environmental engineering (EnvE)

geological sciences (GeoS)—with options in geoscience, atmospheric science, and science of earth systems

independent major (IM)

information science, systems, and technology (ISST)—with options in information science and management science

materials science and engineering (MS&E)

mechanical engineering (ME)

operations research and engineering (ORE)

Criteria for affiliation with the majors are described under "Affiliation with a Major." The majors are described under "Undergraduate Engineering Majors."

Most of the majors have a corresponding minor or option, in which the student can pursue a secondary interest. In addition, there are minors in applied mathematics, biomedical engineering, civil infrastructure, engineering management, engineering statistics, industrial systems and information technology, and information science. There is one option, in bioengineering. See the main section, "Engineering Minors and Options."

*The majors biological engineering, chemical engineering, civil engineering, electrical and computer engineering, materials science and engineering, and mechanical engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

†To major in biological engineering, students normally enroll in the College of Agriculture and Life Sciences for the first three years and jointly in that college and the College of Engineering for the final year. However, students initially enrolled in the College of Engineering may affiliate with the biological engineering major and complete the degree solely within Engineering.

There is no undergraduate major in nuclear science and engineering. Students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives within the major (e.g., engineering physics, materials science and engineering, civil engineering, chemical engineering, and the independent major). Contact one of the faculty members in the graduate field of nuclear science and engineering who are most directly concerned with the curriculum, including K. B. Cady, D. A. Hammer, R. W. Kay, and V. O. Kostroun.

Graduation Requirements

To receive the bachelor of science degree, students must meet the requirements of the common curriculum (outlined below) as set forth by the College of Engineering, including the requirements of their chosen major, as established by the school or department that administers the major. (Further explanation of the revised common curriculum and major flow charts are provided in the 2005-2006 edition of the *Engineering Undergraduate Handbook*.)

Course Category	Credits
1. Mathematics	15-16
2. Physics (major-specific)	8-12
3. Chemistry (major-specific)	4-8

4. First-year writing seminar 6
5. Technical writing* 3
6. Computer programming 4
7. Introduction to engineering (ENGRI) 3
8. Two engineering distributions (ENGRD) 6
9. Liberal studies distribution (6 courses min.) ≥ 18
10. Adviser-approved electives 6
11. Major program
 - a. Major-required courses ≥ 30
 - b. Major-approved electives 9
 - c. Courses outside the major 9
12. Two semesters of physical education in the freshman year and demonstration of proficiency in swimming (university requirement)

From 123 to 133 credits are required for graduation, depending on the major (see "Engineering Majors").

*Technical writing courses may simultaneously fulfill another requirement.

Mathematics

The normal program in mathematics includes MATH 191 (or 190), 192, 293 or 294 (depending on the major), and a major-specific math course. At least C- must be attained in these courses; if not, the course must be repeated immediately before the next course in the sequence is taken. Failure to achieve at least C- the second time will generally result in withdrawal from the College of Engineering. Courses that are taken a second time to meet this requirement do not yield additional credit toward a degree.

Physics

The normal program in physics includes PHYS 112, 213, and 214 or the corresponding honors courses (PHYS 116, 217, and 218). Engineering students must attain at least C- in each math prerequisite of a physics course before taking the physics course (e.g., C- in MATH 191 before taking PHYS 112 and C- in MATH 192 before taking PHYS 213). Students in the majors ChemE, CE, CS, GeoS (geoscience and SES options), ISST, and ORE may substitute CHEM 208 for PHYS 214. BE and EnvE students may substitute CHEM 257 or 357 for PHYS 214.

Chemistry

CHEM 211 or 207 is required.

CHEM 211 is designed for students who do not intend further study in chemistry. Typically, CHEM 211 is taken during the freshman year, but students who wish to complete the physics program (PHYS 112, 213, and 214) first may postpone CHEM 211 until the sophomore year.

Students intending to affiliate with the following majors usually take CHEM 211: engineering physics; computer science; electrical and computer engineering; information science, systems, and technology; materials science and engineering; mechanical engineering; and operations research and engineering. Students considering chemical engineering must take CHEM 207 in the fall of their freshman year and CHEM 208 in the spring semester. Students considering the science-of-earth-systems option in geological

sciences or a health-related career such as medicine should take the CHEM 207-208 sequence.

First-Year Writing Seminars

Each semester of their freshman year, students choose a first-year writing seminar from among more than 100 courses offered by over 30 different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also assure beginning students the benefits of a small class.

Technical Writing

Students can fulfill the upper-level technical-writing requirement using one of the six alternatives below. See www.engineering.cornell.edu/ECP/index.htm for more information about these alternatives.

1. ENGR 350 or 335, taught by the Engineering Communications Program
2. The Writing-Intensive Co-op—an opportunity to combine work and academics. Some co-op students do a significant amount of writing on the job; under certain circumstances, this writing will satisfy the college's technical-writing requirement. More information is available at www.engineering.cornell.edu/ECP/Writing-IntensiveCoop.htm.
3. An officially designated Writing-Intensive (W-I) engineering course:
 - ENGRD/A&EP 264
 - CHEME 432
 - MS&E 403 and 404 (both)
 - MS&E 405 and 406 (both)
 - M&AE 427
 - BEE 450 with co-registration in BEE 493
 - BEE 473 with co-registration in BEE 493
 - BEE 489
4. ENGR 302, a 1-credit attachment to an engineering course that is not one of the officially designated W-I courses (see #3 above). An instructor may wish to extend the writing done in their course for a given semester so that it will fulfill the technical-writing requirement. With the approval of the CCGB's Subcommittee on Technical Writing, the instructor may have students co-register in ENGR 302, which may be taken more than once with different courses by permission of the engineering instructor.
5. COMM 260, 263, or 352, taught by the Department of Communication (in the College of Agriculture and Life Sciences).
6. Petition. Occasionally, a student will be doing a significant amount and variety of technical writing elsewhere in the College of Engineering. It may be appropriate to petition the CCGB's Subcommittee on Technical Writing for permission to use this upcoming writing (not past writing) to meet the technical-writing requirement.

Computer Programming

COM S 100 Introduction to Computer Programming is normally taken in the freshman year to fulfill the computer programming requirement.

Before taking COM S 100, some students take COM S 099, Fundamental Programming Concepts, offered in the fall and summer. This 2-credit S-U course is meant for students with virtually no programming experience; students with previous programming experience may not enroll in it. Basic programming concepts and problem analysis are studied. COM S 099 may not be used as credit toward graduation.

Introduction to Engineering Course

An introduction to engineering course (designated ENGR1) must be taken during the freshman year. This course introduces students to the engineering process and provides a substantive experience in an open-ended problem-solving context. See the Introduction to Engineering course listing for current course offerings.

Engineering Distribution

Two engineering distribution (ENGRD) courses (6–8 credits) must be selected from two different categories listed below. A student may use any one of the possible substitutions described.

1. *Scientific computing*

ENGRD 211 Computers and Programming
ENGRD 241 Engineering Computation
ENGRD 321 Numerical Methods in Computational Molecular Biology
ENGRD 322 Introduction to Scientific Computation

2. *Materials science*

ENGRD 261 Introduction to Mechanical Properties of Materials: From Nanodevices to Superstructures
ENGRD 262 Electronic Materials for the Information Age

3. *Mechanics*

ENGRD 202 Mechanics of Solids
ENGRD 203 Dynamics

Majors in Engineering Physics may substitute A&EP 333 for ENGRD 203.

4. *Probability and statistics*

ENGRD 270 Basic Engineering Probability and Statistics

Majors in Electrical and Computer Engineering may substitute ECE 310 for ENGRD 270. Majors in Engineering Physics may substitute ECE 310 or MATH 471 for ENGRD 270. Majors in Civil Engineering and Biological Engineering may substitute CEE 304 for ENGRD 270.

5. *Electrical sciences*

ENGRD 210 Introduction to Circuits for Electrical and Computer Engineers
ENGRD 230 Introduction to Digital Logic Design
ENGRD 264 Computer-Instrumentation Design

6. *Thermodynamics and energy balances*

ENGRD 219 Mass and Energy Balances
ENGRD 221 Thermodynamics

7. *Earth and life sciences*

ENGRD 201 Introduction to the Physics and Chemistry of the Earth

ENGRD 251 Engineering for a Sustainable Society

ENGRD 260 Principles of Biological Engineering

8. *Biology and chemistry*

ENGRD 252/A&EP 252 The Physics of Life
BIO G 101 and 103 Biological Sciences, Lec and Lab

BIO G 105 Introductory Biology

BIO G 107 General Biology (summer only)

CHEM 389 Physical Chemistry I

Some majors require a specific engineering distribution course as a prerequisite for the upper-class course sequence. These requirements are as follows:

Biological Engineering: ENGRD 202

Chemical Engineering: ENGRD 219

Civil Engineering: ENGRD 202

Computer Science: ENGRD 211 (co-enrollment in COM S 212 highly recommended)

Electrical and Computer Engineering: ENGRD 230

Environmental Engineering: ENGRD 202

Geological Sciences: ENGRD 201

Information Science, Systems, and Technology: ENGRD 270

Materials Science and Engineering: ENGRD 261

Mechanical Engineering: ENGRD 202

Operations Research and Engineering: ENGRD 270

Some majors require additional distribution courses after the student affiliates.

Liberal Studies Distribution

The following liberal studies distribution requirements begin with the class entering in 2003. Students who entered before that may choose to use the new requirements.

Global and diverse societies require that engineers have an awareness of historical patterns, an appreciation for different cultures, professional ethics, the ability to work in multifaceted groups, and superior communications skills. Cornell has a rich curriculum in the humanities, arts, and social sciences, enabling every engineering student to obtain a true liberal education. At least six courses (totaling at least 18 credits) are required, and they should be chosen with as much care and foresight as courses from technical areas.

- The six courses must be chosen from at least three of the following six groups.
- At least two of the six courses must be at the 200 level or higher.

Besides courses classified as liberal studies distribution in Arts and Sciences, Engineering classifies appropriate courses in other colleges as meeting the various categories. To view these courses, go to www.engineering.cornell.edu/student-services/academic-advising/index.cfm, which contains a complete listing of acceptable courses in each group. A list of courses is also available in Engineering Advising, 167 Olin Hall.

Group 1. Cultural Analysis (CA)

Courses in this area study human life in particular cultural contexts through interpretive analysis of individual behavior, discourse, and social practice. Topics include belief systems (science, medicine, religion), expressive arts and symbolic behavior (visual arts, performance, poetry, myth, narrative, ritual), identity (nationality, race, ethnicity, gender, sexuality), social groups and institutions (family, market, community), and power and politics (states, colonialism, inequality).

Group 2. Historical Analysis (HA)

Courses in this group interpret continuities and changes—political, social, economic, diplomatic, religious, intellectual, artistic, and scientific—through time. The focus may be on groups of people, dominant or subaltern, a specific country or region, an event, a process, or a time period.

Group 3. Literature and the Arts (LA)

Offerings in this area explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, observing, and hearing and encourage reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

Group 4. Knowledge, Cognition, and Moral Reasoning (KCM)

Offerings in this area investigate the bases of human knowledge in its broadest sense, ranging from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to form and justify moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science, cognitive psychology, linguistics, or philosophy. Courses focusing on moral reasoning explore ways of reflecting on ethical questions that concern the nature of justice, the good life, or human values in general.

Group 5. Social and Behavioral Analysis (SBA)

Courses in this area examine human life in its social context through the use of social-scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, stigmas, conflict resolution).

Group 6. Foreign Languages (not literature courses)

Courses in this area teach language skills, inclusive of reading, writing, listening, and spoken non-English languages, at beginning to advanced levels.

Electives

- **Adviser-approved electives:** 6 credits required (approved by the academic adviser). Because these courses should help develop and broaden the skills of the engineer, advisers generally accept the following as approved electives:
 1. One introduction to engineering course (ENGRI)
 2. Engineering distribution courses
 3. Courses stressing written or oral communication
 4. Upper-level engineering courses
 5. Advanced courses in mathematics
 6. Rigorous courses in the biological and physical sciences
 7. Courses in business, economics, or language (when they serve the student's educational and academic objectives)
 8. Courses that expand the major or another part of the curriculum (Note: No ROTC courses may be used as approved electives unless they are co-listed by an academic department.)
- **Major-approved electives:** 9 credits (approved by the major and faculty advisers in the major). Refer to the major curricula for descriptions of courses in this category.
- **Outside-the-major electives:** 9 credits of courses outside the major to ensure breadth of engineering studies

Social Issues of Technology

It is important for engineers to realize the social and ethical implications of their work. Consequently, in selecting their liberal studies distribution courses and approved electives, students are urged to consider courses listed in the "Science and Technology Studies" undergraduate area of concentration (see "Interdisciplinary Centers and Programs"). These courses may provide students with important perspectives on their studies and their future careers.

Engineering Advising

Entering first-year students are assigned a faculty adviser (who may or may not be in their intended major), who remains their adviser until affiliation with a major (normally during the fourth semester). The students are also under the administration of Engineering Advising in Olin Hall, which implements the academic policies of the College Curriculum Governing Board. Engineering Advising serves as the primary resource center for undergraduate students in the college, offering general advising and counseling. Also located in Olin Hall are the Engineering Learning Initiatives Program and Diversity Programs, which are primary resources for counseling, support, tutoring, and networking opportunities.

First-Year Requirements

During the first year, engineering students are expected to complete (or receive credit for) the following core requirements:

- MATH 191 (or 190) and 192
- Two of: CHEM 211, 207, 208, PHYS 112, 213, 214*
- COM S 100

- Two first-year writing seminars
- One introduction to engineering (ENGRI) course
- Two physical education courses

*Students with an interest in pre-med (or other health-related careers), chemical engineering, or the science-of-earth-systems option in geological sciences should enroll in the CHEM 207-208 sequence during their first year.

Affiliation with a Major

Students must apply for affiliation with a major during the first semester of their sophomore year, although earlier affiliation may be granted at the discretion of the major. This is done by visiting the undergraduate major office and completing the application for major affiliation form. To affiliate, students must (1) make good progress toward completing required courses in the common curriculum, (2) have a GPA ≥ 2.0 , and (3) have satisfied the major's course and grade requirements as specified below:

(Majors may impose alternative affiliation requirements for students applying for affiliation later than the first semester of the sophomore year.)

Major	Courses and Minimum Grade Requirements
Biological Engineering	At most one grade below C- in math and science courses and BEE 151 or equivalent
Chemical Engineering	At most one grade below C- in chemistry, math, physics, and chemical engineering courses. GPA ≥ 2.2 in math, science, and engineering courses
Civil Engineering	GPA ≥ 2.0 in engineering and science courses. At least C- in ENGRD 202 (or CHEM 208, for students who do not take ENGRD 202 before affiliation)
Computer Science	At least C in completed COM S and math courses. GPA ≥ 2.5 in COM S 211, 212, and 280. GPA ≥ 2.5 in MATH 192 and COM S 280. Visit the CS undergraduate office or the CS undergraduate web site to learn about alternative criteria for affiliation.
Electrical and Computer Engineering	At least C+ in MATH 293, PHYS 213, and either ECE/ENGRD 210, ECE 220, or ENGRD 230. These courses must be taken for 4 credits. GPA ≥ 2.5 in (if completed): MATH 192, 293, 294, PHYS 213, ENGRD 211, 230, ECE/ENGRD 210, ECE 220.
Engineering Physics	At least B- in required math and physics courses
Environmental Engineering	GPA ≥ 2.0 in engineering and science courses. At least C- in ENGRD 202 or CHEM 257.

Geological Science Good academic standing in the College of Engineering

Independent Major GPA ≥ 2.0

Information Science Systems, and Technology At least C in two of MATH 294, COM S 211, and OR&IE/ENGRD 270. Courses must be taken for a letter grade. GPA ≥ 2.3 in completed engineering mathematics, engineering distribution, and ISST major courses, which must be taken at Cornell.

Materials Science and Engineering At least C- in physics and chemistry courses. At least C in ENGRD 261 or ENGRD 262

Mechanical Engineering At least C- in ENGRD 202, ENGRD 221*, and all required mathematics, science, and computer science courses. GPA ≥ 2.5 in MATH 293, PHYS 213, ENGRD 202, and ENGRD 221* (*if ENGRD 221 was taken)

Operations Research and Engineering At least C- in MATH 191, 192, 294, and ENGRD 270. GPA ≥ 2.0 in math, science, and engineering courses (both overall and in the semester immediately before affiliation)

Students must be affiliated or conditionally affiliated with a major by the end of their fourth semester or they will be withdrawn from the College of Engineering, unless allowed to participate in a terminal semester.

SPECIAL PROGRAMS

Dual-Degree Program

The dual-degree program, intended for superior students, allows both a bachelor of science and either a bachelor of arts (B.A.) or bachelor of fine arts (B.F.A.) degree to be earned in about five years. Students registered in the College of Engineering, the College of Arts and Sciences, or the College of Architecture, Art, and Planning may apply and, after acceptance of their application, begin the dual-degree program in their second or third year. For information, contact the appropriate coordinators of dual-degree programs at 55 Goldwin Smith Hall (for Arts and Sciences), B-1 West Sibley Hall (for Architecture, Art, and Planning), and Engineering Advising, 167 Olin Hall.

Double Major in Engineering

The double-major option, which makes it possible to develop expertise in two allied engineering majors, generally requires at least one semester beyond the usual four years. Students affiliate with one major following normal procedures and then petition to enter a second major before the end of their junior year. All requirements of both majors must be satisfied. Further information is available from Engineering Advising, 167 Olin Hall, and the individual major offices.

Independent Major

Students whose educational objectives cannot be met by one of the regular majors may affiliate with the independent major. Often, the desired curriculum is in an interdisciplinary area.

This major consists of a primary area (≥ 32 credits), which may be any subject areas offered by the schools or departments of the college, and an educationally related secondary area (≥ 16 credits), which may be in a second engineering subject area or in a logically connected nonengineering area. The combination must form an engineering education in scope and substance and should include engineering design and synthesis as well as engineering sciences. See the discussion of this major in "Undergraduate Engineering Majors."

Engineering Minors and Options

Most of the majors have a corresponding minor, requiring six courses (18 credits), in which the student can pursue a secondary interest. Besides those minors, there are minors in applied mathematics, biomedical engineering, civil infrastructure, engineering management, engineering statistics, industrial systems and information technology, and information science. There is also the bioengineering option, which requires only four courses (12 credits) plus a seminar. See "Engineering Minors and Options."

Department of Biomedical Engineering

270 Olin Hall

The charge of the Department of Biomedical Engineering (BME) is to bridge engineering, biology, and medicine. Students are educated to convert basic discoveries in biology and medicine into medically useful devices and therapies to improve human health. Biomedical engineers also contribute to biological discovery. The 39 faculty in the biomedical engineering graduate field represent 12 departments and six colleges (including Weill Medical College). The BME field offers research opportunities in biomedical mechanics; biomaterials; drug delivery, design, production, and metabolism; biomedical instrumentation and diagnostics; and system computational biology.

The Department of BME administers the undergraduate minor in biomedical engineering, the biomedical engineering graduate field, the M.S./Ph.D. degree programs, and the M.Eng. (BME) degree.

Engineering Communications Program

424 Hollister Hall, 255-8558,
www.engineering.cornell.edu/ECP

The Engineering Communications Program (ECP), created in 1987 at the urging of the College of Engineering faculty and employers of Cornell engineers, provides instruction in technical writing, oral presentation, and the use of graphics in both. The ECP is a recipient of the Engineering Dean's Prize in Excellence and Innovation in Teaching.

ECP courses give students experience with the difficult task of explaining technical information to audiences that have various levels of technical expertise. Students improve their writing style, become more comfortable with and effective at oral presentation, use standard forms and formats for presenting

technical information, perform library and Internet research on engineering topics, and study real engineering situations in which ethics may have been breached.

Enrollment in ECP courses is 20 students per section; like writing seminars elsewhere at Cornell, those taught by the ECP are discussion classes. Students' work receives abundant written comments, and conferences are frequent.

ECP members are available to consult with the faculty teaching writing-intensive technical courses and anyone else interested in including writing in their courses. They oversee the communications component of the Writing-Intensive Co-op and occasionally give talks to alumni and student groups.

Diversity Programs in Engineering Office

146 Olin Hall, 255-0735

The Diversity Programs in Engineering Office (DPEO) operates programs at all levels to facilitate the recruitment and retention of women and minority students in Engineering. The DPEO acts as a catalyst for the support, career placement, graduate school preparation, and overall success of women and minority students.

The office participates in a university-wide pre-freshman summer program, and it also provides specialized instruction, in collaboration with Engineering Advising and Engineering Learning Initiatives, each semester in subjects such as math, computer science, and English composition.

Trips and recreational activities provide opportunities for getting a better understanding of how to navigate and adapt to the college. Seminars, lectures, and workshops provide a wide range of topics that are relevant to academic and extracurricular life in the university setting.

In addition, the DPEO sponsors a networking event in April and September that allows company representatives from all over the United States to meet students from historically underrepresented populations. Summer internships and permanent jobs frequently result from this event.

Engineering Learning Initiatives

167 Olin Hall, 255-9622, www.engineering.cornell.edu/learninginitiatives

The office of Engineering Learning Initiatives offers programs designed to enhance the undergraduate academic experience through peer education, cooperative learning, and research opportunities.

Academic Excellence Workshops (AEWs) offered through Engineering Learning Initiatives are taken in conjunction with core engineering courses in math, computer science, and chemistry. The 1-credit AEWs are weekly two-hour cooperative learning sessions. Designed to enhance student understanding, they feature peer-facilitated group work on problems at or above the level of course material.

Undergraduate Research Grants offered through Engineering Learning Initiatives provide opportunities for students to obtain hands-on research experience with a faculty mentor. Students and faculty may apply for

funding to cover student stipend and expense costs for the fall, spring, and summer terms.

Tutors-on-Call, through Engineering Learning Initiatives, offers one-on-one peer tutoring free of charge for engineering students in many first- and second-year core courses, including math, chemistry, physics, computer science, and distribution courses.

Engineering Cooperative Education and Career Services

201 Carpenter Hall, 255-5006,
www.engineering.cornell.edu/careerservices

This office assists engineering students (freshmen through Ph.D.) on issues related to career development and the job search through individual advising and group seminars. It also administers the Engineering Cooperative Education Program. Each year, more than 200 national employers typically visit the office to recruit technical students and graduates; additional job opportunities are posted electronically through CornellTrak. Both undergraduate and graduate students can use these resources to pursue permanent, summer, or co-op employment; however, students seeking co-op opportunities must meet specific requirements.

The Engineering Cooperative Education Program (Co-op) provides an opportunity for students to gain practical experience in industry and other engineering-related enterprises before they graduate. By supplementing course work with carefully monitored, paid jobs, co-op students are able to explore their own interests and acquire a better understanding of engineering as a profession—and still graduate in four years.

To be eligible, a student must have been enrolled in the College of Engineering for four semesters. Students majoring in computer science or biological engineering, but not registered in the College of Engineering, are also eligible. In all cases a GPA ≥ 2.7 is required. Applicants interview with participating employers in February of the sophomore year. Those who receive offers and join the program usually complete their fifth-semester course work on campus during the summer after sophomore year, beginning the first co-op work term the following fall. They return to Cornell to complete the sixth semester with their classmates, and then return to work the following summer with the same employer (but not necessarily in the same department or location) to complete a second work term. Students then spend the senior year back on campus, graduating on schedule with their class. Students who are ahead in their course curriculum may prefer to complete one eight-month spring/summer or summer/fall co-op work term during the junior year.

International Programs

An international perspective, sensitivity to other cultures, and the ability to read and speak a second language are increasingly important for today's engineers. In keeping with the university goals of transnationalizing the curriculum, the College of Engineering encourages students to study or work abroad during their undergraduate years. For information on these and other opportunities to add an international dimension to your undergraduate education, visit Engineering Advising, 167 Olin Hall. For information on an

international co-op work experience, visit the Engineering Cooperative Education and Career Services office, 201 Carpenter Hall.

Students who plan to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of *Courses of Study*.

Cooperative Program with the Johnson Graduate School of Management

Undergraduates may be interested in a cooperative program at Cornell that leads to both master of engineering and master of business administration (M.B.A.) degrees. See "Master of Engineering Degrees" for details.

Lester Knight Scholarship Program

The Lester Knight Scholarship Program is designed to assist and encourage Cornell Engineering students and alumni interested in combining their engineering education with a business degree. See "Master of Engineering Degrees" for details.

ACADEMIC PROCEDURES AND POLICIES

Advanced Placement Credit

The College of Engineering awards a significant amount of advanced placement (AP) credit to entering first-year students who demonstrate proficiency in the subject areas of introductory courses. Students can earn AP credit by receiving qualifying scores on any of the following:

1. Advanced placement examinations given and scored by the College Entrance Examination Board (CEEB);
2. General Certificate of Education (GCE) Advanced ("A") Level Examinations;
3. International Baccalaureate (IB) Higher Level Examinations; or
4. Cornell's departmental placement examinations, given during orientation week before the beginning of fall-semester classes.

Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways. They may:

1. enroll in a more advanced course in the same subject right away.
2. substitute an elective course from a different area.
3. enroll in fewer courses, using the AP credit to fulfill basic requirements.

Acceptable Subjects and Scores for CEEB or Cornell Departmental AP Exams

The most common subjects for which AP credit is awarded in the College of Engineering, and the scores needed on qualifying tests, are listed below. AP credit is awarded only for courses that meet engineering curriculum requirements.

Mathematics: MATH 191 (or 190), 192 are required.

First-semester math (MATH 191). AP credit may be earned by:

- a score of 4 or 5 on the CEEB BC exam, or
- a passing score on the Cornell departmental exam for first-semester math.

First-year math (through MATH 192). AP credit may be earned by:

- a passing score on the Cornell departmental exam for first-year math.

Physics: PHYS 112 and 213 are required.

PHYS 112. AP credit may be earned by:

- a score of 4 or 5 on the mechanics portion of the CEEB C exam, or
- a score of 5 on the CEEB B exam with successful completion of a high school-level calculus course, or
- a passing score on the Cornell departmental exam for PHYS 112.

Note: MATH 293 is a prerequisite for PHYS 214.

PHYS 213. Students receiving a 5 on the Electricity and Magnetism portion of the AP C exam may choose to accept AP credit for PHYS 213 or to enroll in PHYS 213 with no AP credit.

PHYS 116, 217, and 218 (honors sequence). This sequence is designed for students with strong experience in physics and calculus, e.g., a 5 on one or both Physics C AP tests and the equivalent of at least one semester of university calculus. Students interested in PHYS 217 or 218 are strongly advised to start with PHYS 116. Even for a student with a 5 on both Physics C AP tests, 116 will not be boring. Students may not simultaneously receive credit for PHYS 116 and AP credit for PHYS 112, or credit for PHYS 217 and AP credit for PHYS 213. For advice or more information, contact the departmental representative at 255-6016.

Chemistry: CHEM 207 or 211 is required.

CHEM 207 or 211. AP credits may be earned by:

- a score of 5 on the CEEB AP exam, or
- a passing score on the Cornell departmental exam for chemistry.

Note: Students who obtain AP credit for CHEM 207 and who are considering a major in chemical engineering or materials science and engineering should consider enrolling in CHEM 215. Those who are offered AP credit for CHEM 207 and then elect to take CHEM 215 will also receive academic credit for CHEM 207. Students may want to discuss this option with their faculty adviser.

Computing: COM S 100 is required. AP credit may be earned by:

- a score of 5 on the CEEB A or a score of 4 or 5 on the AB exam, or
- a passing score on the Cornell departmental exam for COM S 100.

Biology: Biology is not required as part of the core curriculum, although it is a popular elective, especially for students who intend to pursue health-related careers. AP credit may be earned as follows:

- 8 credits will be offered to students who receive a 5 on the CEEB AP exam;
- 6 credits will be offered to students who receive a 4 on the CEEB AP.

Those who want to study more biology should contact the Office of Undergraduate Biology, 200 Stimson Hall, to discuss proper placement.

First-year writing seminar: Two first-year writing seminars are required.

- AP credit for one first-year writing seminar may be earned by a score of 5 on either of the CEEB AP English exams.

Students who earn a score of 4 on the AP English Literature and Composition exam or the AP English Language and Composition exam will be offered 3 credits, which may be applied toward the Literature and Arts (LA) category of the Liberal Studies distribution requirement.

Liberal studies distribution: Six courses beyond two first-year writing seminars are required. Students may earn AP credit toward the liberal studies distribution by taking College Entrance Examination Board (CEEB) AP tests. AP credit earned in the liberal studies distribution cannot be used to fulfill the "upper-level" liberal studies requirements.

Modern languages: Students may earn AP credit for competence in a foreign language by taking the College Entrance Examination Board (CEEB) AP test or by taking the Cornell Advanced Standing Examination (CASE). Those who score 4 or 5 on the CEEB AP test are entitled to 3 credits. To qualify for the CASE exam, the student must score at least 65 on a college placement test (taken either in high school or at Cornell during Orientation Week). A passing score on the CASE entitles the student to 3 credits. Modern language AP credits may be used to satisfy part of the foreign language category of the liberal studies distribution or may meet an approved elective requirement, contingent on discussions with the faculty adviser.

Advanced Placement and Credit for International Credentials

Students who have successfully completed either a General Certificate of Education (GCE) Advanced ("A") Level Examination or an International Baccalaureate (IB) Higher Level Examination may be eligible for advanced placement credit in the College of Engineering as follows:

General Certificate of Education Advanced Level Examination (GCE "A")

Hong Kong Advanced Level examinations and the joint examination for the Higher School Certificate and Advanced Level Certificate of Education in Malaysia and Singapore—principal passes only—are considered equivalent in standard to GCE "A" Levels.

Subject	Marks	Credit
Biology	A or B	8 credits
Chemistry	A	8 credits (CHEM 207 and 208)
	B	4 credits (CHEM 207)
Mathematics	A, B, or C	4 credits (MATH 191/190)

Physics	A or B	4 credits for PHYS 112; 4 additional credits for PHYS 213 are granted to a combination of grades of A or B and a minimum of 4 Advanced Placement (or advanced standing) credits in mathematics.
---------	--------	---

International Baccalaureate (IB) Higher Level Examination

Subject	Marks	Credit
Biology	7	8 credits
	6	6 credits
Chemistry	6 or 7	4 credits (CHEM 207 or 211)
Computer Science	6 or 7	4 credits (COM S 100)
Physics	6 or 7	4 credits (PHYS 112)

Mathematics: No credit is given for the IB exam; students are encouraged to take the Engineering Mathematics Advanced Standing exam during orientation.

Note: Advanced placement credit based on GCE or IB results may also be awarded for courses that satisfy the liberal studies requirement in the College of Engineering. In such cases, the College of Engineering follows the AP guidelines found earlier in this publication under "General Information."

General Policies for Advanced Placement

The general policies in the College of Engineering governing awards of AP credit are as follows:

1. AP credit will not be offered in any subject area without a documented examination.
2. All AP examinations are normally taken and scored before fall-semester classes begin. Students who take CEEB AP tests in high school should have an official report of their scores sent directly to Cornell as soon as possible. Students who have completed either GCE "A" Level or IB Higher Level Examinations must present the original or a certified copy of their examination certificate to Engineering Advising, 167 Olin Hall. Those who wish to take departmental examinations should do so during Orientation Week; permission to take these tests after the start of fall-semester classes must be requested in a written petition to the college's Committee on Academic Standards, Petitions, and Credit (ASPAC).

A more detailed description of the college's policies concerning advanced placement credit and its use in developing undergraduate programs may be found in the pamphlet *Advanced Placement and Transfer Credit for First-Year Engineering Students*, which may be obtained from Engineering Advising, 167 Olin Hall.

Transfer Credit for First-Year and Continuing Students

Undergraduate students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits

for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma and must be documented as such in writing by the secondary institution. Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell. Transfer credit will not be awarded for courses taken during a semester in which the student is enrolled at Cornell.

- To apply for transfer credit, submit a transfer credit form (one form for each request), accompanied by a course description. (Forms are available from Engineering Advising or the Registrar's office and should be submitted before enrollment in the course to be transferred.) An official transcript from the offering institution (bearing the institutional seal and Registrar's signature) must be sent to the Engineering Registrar's office before official transfer credit will be awarded.
- Applications for transfer credit to satisfy requirements in math, science, engineering courses, or first-year writing seminars require approval from the department offering an equivalent course at Cornell. The department may require course materials, textbooks used, etc., in addition to the course description before approving the course.
- Departmental approval is not required for transfer credit that satisfies liberal studies distribution requirements. The course will be reviewed for approval by a representative of the Committee on Academic Standards, Petitions, and Credit (ASPAC) in Engineering Advising.
- Cornell does not award credit for courses in which a student has earned a grade less than C; schools and departments may stipulate a higher minimum grade.
- College courses completed under the auspices of cooperative college and high school programs will be considered for advanced placement credit only if students demonstrate academic proficiency by taking the appropriate AP or Cornell departmental placement examination (CASE), as described in the "Advanced Credit" section.
- Following matriculation, students may apply up to 18 credits of transfer and/or Cornell extramural credit toward B.S. degree requirements.
- At most 72 total transfer credits (taken both before and after matriculation) may be used to meet graduation requirements.
- Summer session courses taken at Cornell are not considered transfer credit.

A more detailed description of the college's regulations governing transfer credit may be found in the pamphlet *Advanced Placement and Transfer Credit for First-Year Engineering Students* as well as the *Engineering Undergraduate Handbook*, both available from Engineering Advising, 167 Olin Hall.

Transfer Credit for Transfer Students

Transfer students may transfer up to 36 credits for each year spent in full-time study at another institution, provided that the courses are acceptable for meeting graduation requirements. Transfer credit awards are determined by the majors/departments.

Academic Standing

Full-time students are expected to remain in good academic standing. The criteria for good standing change somewhat as a student progresses through the four years of the engineering curriculum. At all times, the student must be making adequate progress toward a degree, but what this actually means depends on the major.

Requirements for first-year engineering students to be in good standing at the end of the first semester are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 12 credits passed, including at least two courses from math, science, and/or engineering (phys. ed. courses and courses below the 100 level do not count)
2. At least C- in the math course
3. Semester GPA ≥ 2.0
4. No F, U, or INC grades

Requirements for unaffiliated second-semester first-year and sophomore students to be in good standing are as follows. Failure to meet these requirements will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC); a warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 14 credits passed in courses that meet B.S. degree requirements, normally at least two math, science, or engineering courses (phys. ed. courses and courses below the 100 level do not count)
2. At least C- in a math course, if one was taken
3. Semester GPA ≥ 2.0
4. No F, U, or INC grades

Academic Progress

The total number of credits required for graduation range from 123 to 133, depending on the major. Therefore, an average semester credit load ranges from 15 to 17 credits.

Because math is pivotal to the study and practice of engineering, students must earn at least C- in their four required math courses. If at least C- is not attained, the course must be repeated immediately. Failure to achieve at least C- the second time will generally result in withdrawal from the College of Engineering. Physics and advanced math courses often have math prerequisites, and having to repeat the prerequisite course may delay progress in the physics and math curricula. Students are expected to continue the core engineering math courses each semester until completed.

Dean's List

Dean's List citations are presented each semester to engineering students who have exemplary academic records. The Dean of the college determines the criteria for this honor. For 2005–2006, the requirement is a semester GPA ≥ 3.4 (without rounding); no failing, unsatisfactory, missing, or incomplete grades (even in physical education); and at least 12 letter-grade credits (not S-U). Students may

earn Dean's List status retroactively if they meet these criteria after making up incomplete grades. Students who earn Dean's List status receive certificates from the engineering registrar's office, and the honor is noted on the transcript.

Graduating with Distinction and Honors

Graduating with Distinction

Meritorious students graduating with a B.S. degree from the College of Engineering may also be designated *cum laude*, *magna cum laude*, or *summa cum laude*.

- Cum laude will be awarded to engineering students with a GPA ≥ 3.5 . Cum laude will also be awarded to engineering students who received a semester GPA ≥ 3.5 in each of the last four semesters at Cornell; in each of these semesters, at least 12 letter-graded credits must be taken with no failing, unsatisfactory, missing, or incomplete grades. If the student is an engineering co-op student, then the engineering co-op summer term will count as one of the last four. Students who were approved for prorated tuition in their final semester will be awarded cum laude if they received a semester GPA ≥ 3.5 in their last semester and meet the conditions above in the prior four semesters.
- Magna cum laude will be awarded to engineering students with a GPA ≥ 3.75 (based on all credits taken at Cornell).
- Summa cum laude will be awarded to engineering students with a GPA ≥ 4.0 (based on all credits taken at Cornell).

Note: All GPA calculations are minimums and are not rounded.

Major Honors Program

To be eligible for major honors, a student must enter a major with and maintain a cumulative GPA ≥ 3.5 . If the major has an approved honors program and both the GPA and program requirements are fulfilled, the faculty of the major may recommend that a student graduate with the additional diploma and transcript notation of "With Honors." For more information, see "Engineering Majors."

S-U Grades

Many courses may be taken either for a letter grade or for an S-U (satisfactory or unsatisfactory) grade designation. Under the S-U option, students earning the letter grade equivalent of at least C- in a course will receive a grade of S; those earning less than C- receive U. A course in which a U grade is received does not count toward graduation requirements.

Engineering students may choose to receive an S-U grade option under the following conditions:

- The course in question must be offered with an S-U option.
- The student must previously have completed at least one full semester of study at Cornell.
- The proposed S-U course must count as either a liberal studies distribution or an adviser-approved elective in the engineering curriculum.

- Students may enroll S-U in only one course each semester in which the choice between letter grade and S-U is an option. (Additional courses offered "S-U grades only" may be taken in the same semester as the elected S-U course.)

The choice of grading option for any course is made initially during the pre-enrollment period. Grading options may be changed, however, by submitting a properly completed add/drop form to the engineering registrar by the end of the third week of classes. After this deadline, the grading option may not be changed, nor will a student be permitted to add a course in which he or she was previously enrolled (in the current semester) under a different grade option.

Prorated Tuition in Final Semester

Engineering undergraduate students who have 9 or fewer credits to complete their degree requirements may apply for prorated tuition no later than the third week of the semester in which they want to prorate. If approved, students pay per credit after paying a fixed university administration fee. The application form for prorated tuition is available in the engineering Registrar's office (158 Olin Hall).

Students may not exceed the number of credits approved or full tuition will be charged. No refunds will be allowed if fewer credits than the number applied for are taken. All the eligibility guidelines must be met, and exceptions are not permitted or petitionable.

All applicants for prorated tuition should be made aware of the possible impact that this enrollment status may have on financial aid, student loans, scholarships, health insurance programs, athletic eligibility, visa status, etc. It is the responsibility of the student to resolve and rectify these situations before submitting this petition. For questions, please contact Raymond Thorpe (167 Olin Hall) or Duncan Bell (158 Olin Hall).

Residence Requirements

Candidates for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as full-time students at Cornell, including at least three semesters affiliated with an engineering major.

Students on a voluntary leave of absence may register for courses extramurally only with the approval of their major (or the college, for unaffiliated students). No more than 18 credits earned through extramural study or acquired as transfer credit (or a combination thereof) after matriculation may be used to satisfy the requirements for the B.S. degree in engineering. Students may not complete their last semester extramurally.

Degree candidates may spend periods of time studying away from the Cornell campus with appropriate authorization. Information on programs sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Cornell Abroad office, 474 Uris Hall. Programs should be planned in consultation with the staff of Engineering Advising, who can provide information on credit-evaluation policies and assist in the petitioning process.

Transferring within Cornell

It is not uncommon for students to change their academic or career goals after matriculation in one college and decide that their needs would be better met in another college at Cornell. While transfer between colleges is not guaranteed, efforts are made to assist students in this situation.

The Internal Transfer Division office is responsible for assisting students with the transfer process. Students who wish to transfer out of the College of Engineering to another college at Cornell should consult initially with Engineering Advising.

Students who wish to transfer into the College of Engineering can apply at Engineering Advising—application forms are available in 167 Olin Hall. It is preferred that students apply in the semester in which they are completing affiliation criteria for the desired major. Students who would enter the college as a second-semester sophomore or later must be accepted by a major as part of the admission process. Students who would enter as a second-semester freshman or first-semester sophomore may be accepted into the college without the requirement of major affiliation but must be sponsored by a major.

Students who wish to transfer into engineering should take courses in math, chemistry, computer science, physics, and engineering that conform to the requirements of the Common Curriculum. Students should discuss their eligibility with an adviser in Engineering Advising, 167 Olin Hall.

Leave of Absence

A leave of absence may be voluntary, medical, or required. A description of each follows:

Voluntary leave: Students sometimes find it necessary to suspend their studies. To do this, they must petition for a leave of absence for a specified period of time and receive written approval.

Affiliated students request leave through their majors. Unaffiliated students request leave through Engineering Advising; the first step is an interview to establish conditions for the leave and subsequent return. Those who take a leave before affiliating with a major and while not in good standing may be given a "conditional leave." This requires them to meet specific conditions, established at the time the leave is granted, before they will be reinstated.

A leave of absence generally is not granted for more than two years. A leave of absence granted during a semester goes into effect on the day it is requested and lasts for a *minimum of six months*. If a leave is requested after the 12th week of a semester, the courses in which the student was registered at the time of the request are treated as having been dropped (i.e., a "W" will appear on the transcript for each course). Students who owe money to the university are ineligible for a leave of absence. If courses taken during a leave are to satisfy Cornell degree requirements, they must be approved *in advance* through a formal transfer petition. (See previous section, "Transfer Credit," for details.)

Students who intend to take a leave of absence should check with the Office of Financial Aid and Student Employment to discuss financial implications; this is especially

true for those who have taken out educational loans. Medical insurance eligibility may also be affected.

To return after a leave of absence, the conditions established when the leave was granted must be satisfied, and the college must be notified in writing at least six weeks before the beginning of the semester in which the student plans to return.

Medical leave: Medical leaves are granted by the college only upon recommendation by a physician or therapist from Gannett Health Center. Such leaves are granted for at least six months and up to two years with the understanding that the student may return at the beginning of any semester after the medical condition in question has been corrected. Students must satisfy the Gannett Health Center that the condition has been corrected before they may return. The student's academic standing will also be subject to review both at the time the leave is granted and upon the student's return.

Required leave: A required leave of absence is imposed in cases in which the academic progress of a student is so poor that continuing into the next semester does not appear prudent. An example of this might be failure in key engineering courses in a semester. Unless the student is ahead in the curriculum, returning later to repeat the semester makes better academic sense than continuing without the necessary background. In many cases, the leave is dictated by courses that are offered only in the fall or spring semester. Leaves are given when the probability of success is increased substantially by deferring the student's return by one semester (or, in unusual circumstances, one year).

Rejoining the College

Students wishing to rejoin the college who have not yet affiliated with a major should request permission to rejoin in a letter to Engineering Advising; affiliated students should contact their major office. This must be done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should describe the student's activities while away from Cornell, detail any academic work completed during this time, and specify the courses the student intends to take upon return.

Withdrawal from the College

A withdrawal from the College of Engineering may be voluntary or required. Following is a description of each:

Voluntary withdrawal: Students who voluntarily withdraw from the college sever all connection with the college. Unaffiliated students who wish to withdraw should do so through Engineering Advising. Affiliated students should contact their major office. If a withdrawal is requested during the semester, courses in which the student is enrolled must be dropped in accordance with applicable regulations.

A student who fails to register in the first three weeks of the semester, without benefit of a leave of absence or permission for study in absentia, will be deemed to have withdrawn.

Students who withdraw from the College of Engineering are eligible to apply for admission to one of the other six colleges at Cornell.

The intrauniversity transfer process should be followed.

A student who has withdrawn and subsequently wishes to return must make a formal application for readmission. This is rarely granted. It is subject to a review of the student's academic background and depends on available space in the college and in the student's major.

Required withdrawal: Students are required to withdraw from the college only when their overall record indicates that they are either incapable of completing the program or not sufficiently motivated to do so. This action withdraws them only from the College of Engineering and does not, in and of itself, adversely affect their ability to transfer and complete a degree in one of the other colleges in the university.

ENGINEERING MAJORS

This section describes the majors in the College of Engineering: the programs in which an undergraduate can study to obtain a B.S. degree.

A basic requirement of any major is a GPA ≥ 2.0 . Most majors have a higher GPA requirement and may have other requirements.

Honors Program within Majors

Many of the engineering majors supplement the major with an honors program.

Eligibility

The B.S. degree with honors is granted to engineering students who, *in addition* to having completed the requirements for a B.S. degree in a major, satisfactorily complete the honors program in the major and are recommended for the degree by the honors committee of that major. An honors program student must enter with and maintain a cumulative GPA ≥ 3.5 . If the GPA drops below 3.5, the student is dropped from the honors program.

Courses taken to satisfy the honors requirement may not be used to satisfy B.S. degree requirements. At least 9 extra credit hours are required, and a student must be in the program for at least two semesters before graduation.

No research, independent study, or teaching for which the student is paid may be counted toward the honors program.

Procedures

An applicant to the honors program in a major must have an honors adviser, a faculty member from that major who will supervise the honors program and direct the research or project. The honors adviser need not be the student's adviser in the major.

The application for the honors program should be a letter from the student that describes the proposed honors program in detail and includes the explicit approval of the honors adviser.

Students must complete a written application no later than the beginning of the first semester of their senior year, but they are encouraged to make arrangements with the honors adviser during the second semester of

their junior year. Each major may place further constraints on timing.

Major-Specific Information

Each major defines the content of the honors program and may also place other requirements on the program, in terms of timing, content, and procedures. Information is given within the description of the individual majors.

BIOLOGICAL ENGINEERING

Offered by the Department of Biological and Environmental Engineering

Contact: 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

Biological and environmental engineering (BEE) addresses three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, air, biodiversity, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The biological engineering (BE) major has a unique focus on biological systems, including the environment, which is realized through a combination of fundamental engineering sciences, biology, engineering applications and design courses, and liberal studies.

An option in environmental engineering is discussed further below.

Students interested in the BE major should have a strong aptitude for the sciences and math and an interest in the complex social issues that surround technology.

Students take courses in math, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), and engineering applications. Students select upper-level engineering courses in subjects that include bioprocessing, soil and water management, biotechnology applications, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students may further strengthen their programs by completing a minor or a second engineering major. Students planning for medical school also take additional lab-based courses in biology, biochemistry, and organic chemistry. Throughout the curriculum, emphasis is placed on communications and teamwork skills, and all students complete a capstone design project.

Career opportunities cover the spectrum of self-employment, private industry, public agencies, educational institutions, and graduate and professional programs in engineering and science, as well as professional fields like medicine, business, and law. In recent years, graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management consulting, and international development.

The living world is all around us and within us. The biological revolution continues, and it has given rise to a growing demand for engineers and technical people who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, and who are sensitive to the needs of people and interested in the challenges facing society. This major is designed to educate the next generation of engineers to meet these challenges.

The major program requirements for students affiliating with the program in 2005-2006 are outlined below.

Basic Subjects	Credits
MATH 191 (or 190), 192, 293, 294	
Calculus for Engineers and Engineering Mathematics	16
PHYS 112, 213	8
General Chemistry (207 or 211 or 215)*	4
Organic Chemistry (257 or 357)*	3
BEE 151 Introduction to Computing or COM S 100M	4
Biological Sciences*	15
Introductory (BIO G 101-104 recommended)	8
Biochemistry or Microbiology	3-4
Biological science course(s) at or above 200 level	3
Major-required courses	
BEE 200 The BEE Experience or ENGRG 150	1
ENGRD 202 Mechanics of Solids	4
BEE 251 or 260, ENGR I	3
BEE 360 or CEE 351, ENGR II	3
BEE 350 Biological and Environmental Transport Processes	3
BEE 222 or ENGRD 221 Thermodynamics	3
Engineering Statistics and Probability (ENGRD 270 or CEE 304)	3-4
Fluid Mechanics (CEE 331 or M&AE 323 or CHEME 323)	3-4
Upper-level BEE courses (three courses numbered 450-489)	9
Major-approved electives and electives outside the major (200 level or above; at least one must be an approved laboratory experience course; at least one must be a BEE capstone course)	12-15
Liberal studies (two first-year writing seminars and six liberal studies electives)	24
Adviser-approved electives	6
Total (minimum)	126

*Basic accredited curriculum. Specializations (options or preprofessional study) may be accommodated by selecting additional courses in the indicated area(s).

Biological Engineering Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

The 9 credits beyond the B.S. degree requirements shall be drawn from the following, with at least 6 credits in the first category:

1. A significant research experience or honors project under the supervision of a BEE faculty member using BEE 495 BE Honors Research. A written senior honors thesis must be submitted as part of this component.
2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the department under BEE 498 Undergraduate Teaching.
3. Advanced or graduate courses. These additional courses must be technical in nature, i.e., in engineering, math, biology, chemistry, and physics at the 400+ and graduate level.

Option in Environmental Engineering

The environmental engineering option provides BE majors the opportunity to follow a structured environmental engineering concentration. Students complete a prescribed program of courses within the framework of the BE curriculum.

Chemistry/microbiology: Students must take at least two semesters of chemistry (CHEM 211/257 or 207/208). They must also satisfy the BE organic chemistry requirement either by taking organic chemistry as one of the two required chemistry courses (i.e., CHEM 257) or by taking CEE 451. The microbiology requirement of the Environmental Engineering option can also be met by taking CEE 451.

Chemistry: CHEM 211/257 or 207/208

Organic Chemistry: CHEM 257 or CEE 451

Microbiology: CEE 451 or BIOMI 290

Fluid Mechanics: CEE 331

Probability and Statistics: CEE 304

Environmental Quality Engineering: CEE 351

Environmental Engineering Lab: BEE 427 or CEE 453

Environmental Engineering: BEE 473 or 475
Watershed Engineering or Environmental Systems Analysis

CHEMICAL ENGINEERING

Offered by the School of Chemical and Biomolecular Engineering

Contact: 120 Olin Hall, 255-8656,
www.cheme.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

The undergraduate major in chemical engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Students who plan to enter the major take CHEM 208 during the freshman year. The program for the last three years is as follows:

Semester 3	Credits
MATH 293 Engineering Mathematics	4
PHYS 213 Physics II, Heat/Electromagnetism	4
CHEM 389 Physical Chemistry I (engineering distribution)	4
ENGRD 219 Mass and Energy Balances (engineering distribution)	3
Humanities or social sciences	3
Semester 4	
MATH 294 Engineering Mathematics	4
CHEME 323 Fluid Mechanics	3
CHEM 391 Physical Chemistry II (major)	
CHEM 290 Introductory Physical Chemistry Laboratory (major)	6
Biology elective*	3
Humanities or social sciences	3
Semester 5	
CHEM 357 Organic Chemistry for the Life Sciences	3
CHEM 251 Introduction to Experimental Organic Chemistry	2
CHEME 313 Chemical Engineering Thermodynamics	3
CHEME 324 Heat and Mass Transfer	3
Humanities or social sciences	3
Semester 6	
Advanced science elective**	3
CHEME 301 Nonresident Lectures	1
CHEME 332 Analysis of Separation Processes	3
CHEME 372 Introduction to Process Dynamics and Control	2
CHEME 390 Reaction Kinetics and Reactor Design	3
Humanities or social sciences	3
Semester 7	
CHEME 432 Chemical Engineering Laboratory	4
Electives***	9
Humanities or Social Sciences	3
Semester 8	
CHEME 462 Chemical Process Design	4
Humanities or social sciences	3
Electives***	3
Approved elective	3

*Every student must complete one of the five following options for the biology elective: (1) advanced placement: a score of 5 on the CEEB AP exam or a score of 7 on the IB Higher Level exam. (2) 4 credits of a pre-med biology sequence: BIO G 101 Biological Sciences, Lec (fall, 2 credits) and BIO G 103 Biological Sciences, Lab (fall, 2 credits), BIO G 102 Biological Sciences, Lec (spring, 2 credits) and BIO G 104 Biological Sciences, Lab (spring, 2 credits), BIO G 105 Introductory Biology (fall, 4 credits), BIO G 106 Introductory Biology (spring, 4 credits), BIO G 107 General Biology (summer, first half of eight-week session, 4 credits) or BIO G 108 General Biology (summer, second half of eight-week session, 4 credits). (3) 3 credits of microbiology: BIOMI 290 General

Microbiology (fall, spring, or summer six-week session, 3 credits). (4) 4 credits of biochemistry: BIOBM 330 Principles of Biochemistry, Individual Instruction (fall or spring, 4 credits) or BIOBM 333 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology (summer six-week session, 4 credits). (5) 5 credits of biochemistry: BIOBM 331 Principles of Biochemistry: Proteins and Metabolism (fall, 3 credits) and BIOBM 332 Principles of Biochemistry: Molecular Biology (spring, 2 credits).

**Advanced science electives include BIOMI 290 General Microbiology Lectures; BIOBM 330, 331, 332, and 333 Principles of Biochemistry; BME 301 (CHEME 401) Molecular Principles of Biomedical Engineering; BME 302 (CHEME 402) Cellular Principles of Biomedical Engineering; CEE 451 Microbiology for Environmental Engineering; CEE 654 Aquatic Chemistry; CHEME 470 Process Control Strategies; CHEME 472 Feedback Control Systems; CHEME 480 Chemical Processing of Electronic Materials; CHEME 481 Biomedical Engineering; CHEME 484 Microchemical and Microfluidic Systems; CHEME 520 Chemical, Polymer, Biomedical, and Electronic Materials Processing; CHEME 543 Bioprocess Engineering; CHEME 631 Engineering Principles for Drug Delivery; CHEME 640 Polymeric Materials; CHEME 661 Air Pollution Control; FD SC 417 Food Chemistry I; M&AE 423 Intermediate Fluid Dynamics; MS&E 206 Atomic and Molecular Structure of Matter; MS&E 305 Electronic, Magnetic, and Dielectric Properties of Materials; MS&E 521 Properties of Solid Polymers; MS&E 524 Materials Chemistry of Synthetic Polymeric Materials; MS&E 531 Introduction to Ceramics; MS&E 541 Nanofabrication; T&AM 310 Advanced Engineering Analysis I; T&AM 311 Advanced Engineering Analysis II; any A&EP course numbered 333 or above; any CHEM course numbered 301 or above; any PHYS course numbered 300 or above.

***The electives in semesters 7 and 8 comprise 6 credits of major-approved electives and 6 credits of advanced CHEME electives. Advanced CHEME electives include any CHEME course at the 400+ level except CHEME 490, 491, 492, 499, 520, and 572.

CIVIL ENGINEERING

Offered by the School of Civil and Environmental Engineering

Contact: 221 Hollister Hall, 255-3412, www.cee.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

While it is not necessary to do so, students may concentrate in environmental engineering, fluid mechanics and hydrology, geotechnical engineering, structural engineering, transportation, or water resource systems.

Admission Requirements

Students planning to affiliate with this major must complete ENGRD 202 Mechanics of Solids and PHYS 112 (or, for students

following the Environmental Concentration, CHEM 207 General Chemistry and CHEM 257 Organic Chemistry) with at least a C-. It is strongly recommended that ENGRD 202 be taken as an engineering distribution during the first semester of the sophomore year.

Engineering Distribution Courses

Majors are required to take ENGRD 202 Mechanics of Solids as an engineering distribution course. For the second engineering distribution course, one of the following is recommended:

ENGRD 261 Introduction to Mechanical Properties of Materials for students interested in structural engineering and geotechnical engineering.

ENGRD 241 Engineering Computation* for students interested in environmental engineering.

ENGRD 221 Thermodynamics for students interested in fluid mechanics and hydraulics/hydrology.

ENGRD 211 Computers and Programming for students interested in transportation.

Other good choices include ENGRD 219, or BIO G 101, and 103, 105, 107.

Major Program

Students may substitute CHEM 208 for PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum. (Students interested in the Environmental Concentration should follow the course requirements for the Environmental Engineering Major.)

Core Courses	Credits
ENGRD 203 Dynamics or CEE 478 Structural Dynamics	3
ENGRD 241 Engineering Computation*	3
CEE 304 Uncertainty Analysis in Engineering†	4
CEE 323 Engineering Economics and Management	3
CEE 331 Fluid Mechanics	4
CEE 341 Introduction to Geotechnical Engineering and Analysis	4
CEE 351 Environmental Quality Engineering**	3
CEE 361 Introduction to Transportation Engineering**	3
CEE 371 Structural Modeling and Behavior	4

Additional requirements include a set of two major-approved electives and three design electives from a list of approved courses that is available in the school office. In addition, students must complete one technical communications course from among the courses designated ENGRD or approved communications courses. If the technical communications course is taken as an expressive art, then an additional approved elective must be taken.

*ENGRD 241 can be used to satisfy a major requirement. If a student elects to use this course as a second distribution course, the student must take an additional major-approved elective to fulfill the core course requirements.

†ENGRD 270 may be accepted (by petition) as a substitute for CEE 304 in the major, but only if ENGRD 270 is taken before affiliation, or in some special cases where co-op or study abroad programs necessitate such a substitution.

**Students may substitute CEE 372 or CEE 471 for either CEE 351 or 361, if they complete either CEE 473 or 474. However, CEE 372 or CEE 471 then counts as a core course only and not as one of the required five CEE design courses and major-approved electives.

Civil Engineering Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

The 9 credits beyond the B.S. degree requirements shall be drawn from the following components (with no fewer than 2 credits in any selected component):

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 400 Senior Honors Thesis (1–6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component. Letter grades only.
2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the College of Engineering, i.e., ENGRG 470 Peer Teaching in Engineering or CEE 401 Undergraduate Teaching in CEE (1–3 credits per semester).
3. Advanced or graduate courses at the 500 level or above.

Procedures

Application to the program shall be a registration form for CEE 400 and a letter from the student describing the specific proposed honors program and including the explicit approval of the major adviser and the honors adviser. The program must be approved by the CEE Curriculum Committee, although the committee may delegate approval authority to the associate director for all but unusual proposals.

COMPUTER SCIENCE

Offered by the Department of Computer Science

Contact: 303 Upson Hall, 255-0982, www.cs.cornell.edu

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science.

Computer science majors take courses in algorithms, data structures, logic, programming languages, scientific computing, systems, and theory. Electives in artificial intelligence, computer graphics, computer vision, databases, multimedia, and networks are also possible. Requirements include:

- MATH 191, 192, and 294

- two semesters of introductory computer programming (COM S 100 and ENGRD 211)
- a 1-credit project (COM S 212)
- a seven-course computer science core (COM S 280, 312, 314; one of 321, 322, 421, or 428; 381, 414, and 482)
- two 400+ level computer science electives, totaling at least 6 credits (COM S 490 not allowed)
- a computer science project course (COM S 413, 415, 419, 433, 468, 473, 501, 514, or 664)
- a math elective course (e.g., ENGRD 270, MATH 293, MATH 300+, T&AM 310)
- two 300+ level courses (major-approved electives) that are technical in nature and total at least 6 credits
- a three-course specialization in a topic area other than computer science, all numbered 300 level or greater

All the major electives described above must be courses of at least 3 credits, with the exception of the COM S project course, which is at least 2 credits.

The program is broad and rigorous, but it is structured in a way that supports in-depth study of outside areas. Intelligent course selection can set the stage for graduate study or employment in any technical area or any professional area such as business, law, or medicine. With the adviser, the computer science major is expected to put together a coherent program of study that supports career objectives and is true to the aims of a liberal education.

Computer Science Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" with a set of coherent courses and research activities that satisfy the following requirements.

1. at least one COM S course (at least 3 credit hours) at or above the 500 level with at least A- (no seminars)
2. at least two 3-credit semesters of COM S 490 (independent research), with at least A- each semester

Honors determinations are made during the senior year. Students wanting to be considered for the honors program should notify the undergraduate office in the Department of Computer Science at ugrad@cs.cornell.edu. The subject line for this message should read "HONORS TRACK." Address related questions to the same e-mail address; call or stop by 303 Upson Hall, 255-0982; or visit www.cs.cornell.edu/ugrad for more information on eligibility.

ELECTRICAL AND COMPUTER ENGINEERING

Offered by the School of Electrical and Computer Engineering

Contact: Student Services Office, 223 Phillips Hall, 255-4309, www.ece.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation

Board for Engineering and Technology (ABET).

The Electrical and Computer Engineering major (ECE), leading to a B.S. degree, provides a foundation that reflects the broad scope of this engineering discipline.

Concentrations include computer architecture and organization, digital systems and computer vision; power systems, control, optimization, numerical and state-space methods; communications, computer networks, information theory and coding, signal processing; electronic circuits, VLSI, solid state physics and devices, MEMs, nanotechnology, lasers and optoelectronics; electromagnetics, radiophysics, space sciences, plasmas.

Students planning to affiliate with ECE must take ENGRD 230 as an engineering distribution course. Prospective majors are encouraged, but not required, to take ENGRD 211 as the other engineering distribution course. The major normally begins in the spring of the sophomore year. Of the courses listed below, only ENGRD/ECE 210, ECE 220, ENGRD 230, ECE 314 or CS 314, and ECE 315 are taught in both the fall and spring semesters.

Course	Credits
Major-required courses	
ECE/ENGRD 210 Introduction to Circuits for Electrical and Computer Engineers	4
ENGRD 230 Introduction to Digital Logic Design	4
ECE 220 Signals and Information	4
ECE 303 Electromagnetic Fields and Waves	4
ECE/COM S 314 Computer Organization	4
ECE 315 Introduction to Microelectronics	4
ECE 320 Systems and Networks	4
Major-approved electives (32-credit minimum in the following categories)	
Advanced ECE electives† (six lecture courses)	
Outside ECE electives‡ 9 minimum credits	
Total minimum major credits	53
ECE 310 should be taken to satisfy the college application of probability and statistics requirement. Alternatively, a student may take either ENGRD 270 or T&AM 310.	

†These electives must include two 400-level Electrical and Computer Engineering culminating design experience (CDE) courses and at least two additional courses at the 400 level or above. The remaining electives may not include independent project courses, such as ECE 391, 392, 491, or 492, and must be at the 300 level or above in Electrical and Computer Engineering.

Courses that meet the CDE requirement are described in the *Engineering Undergraduate Handbook*. The list is dynamic and changes frequently. An updated list of courses that meet the CDE requirements will be posted each semester on the bulletin board outside 222 Phillips Hall. All courses must have a college-level prerequisite.

‡Must include one course at the 300 level or above (see *Electrical and Computer Engineering Web Handbook* for details).

Undergraduate concentration is achieved through the various Electrical and Computer Engineering elective courses, as well as other courses in related technical fields within engineering, math, the physical sciences, and the analytical biological sciences. The School of Electrical and Computer Engineering offers more than 30 courses that are commonly taken as electives by undergraduates.

Academic Standards

Majors in Electrical and Computer Engineering are expected to meet the following academic standards:

1. GPA ≥ 2.3 every semester.
2. At least C- in all courses used to satisfy degree requirements in the major or that serve as a prerequisite for a subsequent Electrical and Computer Engineering course.
3. Satisfactory completion of MATH 294, PHYS 214, and two of ENGRD/ECE 210, ECE 220, and ENGRD 230 by the end of the sophomore year and adequate progress toward the degree in subsequent semesters.

Electrical and Computer Engineering Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements:

Students must apply during the first three weeks of the sixth semester. They must achieve a B or better in the three required courses taken for honors designation.

Honors Seminar

Prospective honors students must take an honors seminar in the spring semester of their junior year, for a letter grade. The 2-credit honors seminar consists of a weekly series of introductory research lectures by ECE faculty members. Each honors seminar enrollee will write two short papers on topics covered in the lecture series. Many ECE faculty members will give a lecture or short series of lectures as part of the honors seminar.

Honors Project

A student in the honors program is required to accumulate at least 3 credit hours from a senior year honors project with an ECE faculty member, consisting of either design, research, or directed reading at the 400 level. All honors projects emphasize the development of communication skills. Design- and reading-oriented honors projects explicitly require a written submission summarizing and concluding the project.

Additional Course Work

At least 3 credit hours are required of advanced (senior level) ECE course work that has at least a 300-level prerequisite. These credit hours are in addition to any credit hours required as part of the ECE major.

The requirement for at least 9 credits over and above the 128 credits required for a B.S. degree means that an honors degree requires 137 credit hours.

ENGINEERING PHYSICS

Offered by the School of Applied and Engineering Physics

Contact: 212 Clark Hall, 255-5198,
www.aep.cornell.edu

The engineering physics (EP) major is designed for students who want to pursue careers of research or development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and math fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration within this major, students may combine this physics base with a good background in a conventional area of engineering or applied science.

The industrial demand for EP B.S. graduates is high, and many students go directly to industrial positions where they work in a variety of engineering or developmental areas that either combine, or are in the realm of, various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, environmental engineering, geological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-state-device development, technical management, and financial consulting. A number of EP graduates go on for advanced study in all areas of basic and applied physics as well as in a diverse range of areas in advanced science and engineering. Examples include applied physics, astrophysics, atmospheric sciences, biophysics, cell biology, computer science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering, mathematics, mechanical engineering, medical physics, medicine, nuclear engineering, plasma physics, oceanography, and physics. The major can also serve as an excellent preparation for medical school, business school, or specialization in patent law.

The EP major fosters this breadth of opportunity because it both stresses the fundamentals of science and engineering and gives the student direct exposure to the application of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for innovative design is provided. Examples are ENGRI/A&EP 110 Lasers and Photonics; ENGRI/A&EP 102 Introduction to Nanoscience and Nanoengineering; ENGRD 242/A&EP 252 Physics of Life; ENGRD/A&EP 264 Computer-Instrumentation Design (a recommended sophomore engineering distribution course); A&EP 330 Modern Experimental Optics (a junior/senior course); A&EP 363 Electronic Circuits (a sophomore/junior course); PHYS 410 Advanced Experimental Physics; and A&EP 438 Computational Engineering Physics (a senior computer laboratory).

Students who plan to affiliate with the EP major are advised to arrange their common curriculum with their developing career goals in mind. They are encouraged to take PHYS 112 or 116 during their first semester (if their advanced placement credits permit) and are recommended to satisfy the technical writing requirement with the engineering distribution

course ENGRD 264. EP students need to take only one engineering distribution course, since A&EP 333, taken in the junior year, counts as the second one. EP students are advised to take A&EP 363 (taking ECE 210 and 230, 4 credits each, can satisfy A&EP 363). Count ECE 210 as an approved elective and ECE 230 as A&EP 363) in the spring semester of the sophomore year. Students with one semester of advanced placement in math and who have received at least A- in MATH 192 may wish to explore accelerating their math requirements so as to enroll in A&EP 321 and 322 in the sophomore year. For advice on this option, consult with the A&EP associate director.

In addition to the requirements of the Engineering Common Curriculum,* the major requirements are as follows:

Course	Credits
A&EP 333 Mechanics of Particles and Solid Bodies	4
A&EP 355 Intermediate Electromagnetism	4
A&EP 356 Intermediate Electrodynamics	4
A&EP 361 Introductory Quantum Mechanics	4
A&EP 363 Electronic Circuits	4
A&EP 423 Statistical Thermodynamics	4
A&EP 434 Continuum Physics	4
PHYS 410 Advanced Experimental Physics	4
A&EP 321 Mathematical Physics I; or MATH 421 (applied mathematics)	4
A&EP 322 Mathematical Physics II; or MATH 422 (applied mathematics)	4
Six major-approved electives (18–23 credits), of which five must be technical upper-level courses (300 or above).	

Total major credits=58 credit hours minimum

*The Engineering Common Curriculum suggests that freshmen take only four courses each semester. This course load is fully consistent with the requirements of the EP major, but freshmen with strong preparation are encouraged to consider taking an additional course during one or both semesters so that they may have additional flexibility in developing a strong, individualized educational program in their later years and for allowing options such as a semester or year abroad or early graduation.

Two of the 4 credits of PHYS 410 required for the B.S. degree in EP can be satisfied by completing A&EP/PHYS 330 or ASTRO 410. The remaining 2 credits of PHYS 410 can then be satisfied by taking PHYS 400 for 2 credits, provided that the experiments completed in PHYS 400 do not overlap with those in A&EP/PHYS 330 or ASTRO 410. (A list of experiments that are not appropriate will be prepared by A&EP faculty and made available in the A&EP office.) If a student chooses this option, A&EP/PHYS 330 or ASTRO 410 may also count as a technical elective, provided the remaining three technical electives are 4 credits each.

Choosing elective courses. The EP major provides the students with a strong opportunity to develop individualized programs of study to meet their particular educational and career goals. These can include the pursuit of a dual major or the development of a broad expertise in a number

of advanced technical and scientific areas. With at least seven electives in the sophomore, junior, and senior years, EP majors are encouraged to work closely with their adviser to develop a coherent academic program that is consistent with those goals. For students who look toward an industrial position after graduation, the electives should be chosen to widen their background in a specific area of practical engineering. A different set of electives can be selected as preparation for medical, law, or business school. For students who plan on graduate studies, the electives provide an excellent opportunity to explore upper-level and graduate courses and to prepare for graduate study in any one of a number of fields. Various programs are described in a special brochure available from the School of A&EP, Clark Hall. Students are advised to consult with their EP adviser, a professor active in their area of interest, or with the associate director of the school.

Electives need not be all formal course work: qualified students are encouraged to undertake independent study under the direction of a member of the faculty (A&EP 490). This may include research or design projects in areas in which faculty members are active.

The variety of course offerings and many electives provide flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.

Academic Standing

Students are expected to pass every course in which they are registered, to earn at least C- in specifically required courses, and to attain a semester GPA ≥ 2.3 each semester.

Engineering Physics Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

1. At least 8 credits of major-approved electives at the 400 level or higher with at least A- in each, not counting credits given for item 2.
2. Two semesters of A&EP 490 or an equivalent course, with at least 2 credits the first semester and 4 credits the second. The student will complete an independent research project or senior thesis under the supervision of an engineering or science faculty member. The level of work required for successful completion is to be consistent with the amount of academic credit granted.

Procedures

Before enrolling in A&EP 490 or the equivalent, the honors candidate must submit a brief proposal outlining the topic and scope of the project or thesis and an honors adviser's written concurrence to the associate director for undergraduate studies. This proposal will be reviewed by the A&EP Honors Committee and either approved or returned to the candidate to correct deficiencies. The proposed project or thesis is to consist of a research, development, or design project and must go beyond a literature search. The final steps in completing the honors project are a written and oral

report. The written report is to be in the form of a technical paper with, for example, an abstract, introduction, methods section, results section, conclusions section, references, and figures. This report will be evaluated by the faculty supervisor and the chair of the A&EP Honors Committee. Following completion of the written report, an oral report is to be presented to an audience consisting of the faculty supervisor, the chair of the Honors Committee, and at least one other departmental faculty member, along with the other honors candidates. A copy of the final report is to be given to the chair of the A&EP Honors Committee. The final research project course grade will be assigned by the faculty supervisor after consultation with the chair of the Honors Committee. At least A- is required for successful completion of the honors requirement.

ENVIRONMENTAL ENGINEERING

Contact: 221 Hollister Hall, 255-3142, www.cee.cornell.edu, or 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu

Environmental Engineering is the study and practice of analyzing, designing, and managing natural and engineered systems in ways consistent with the maintenance or enhancement of environmental quality and sustainability. It requires the ability to predict multiple interactions and impacts among natural and engineering-system components at various spatial and temporal scales in response to alternative design and management policies. It requires a thorough understanding of the interactions among the natural environment, the constructed environment, and human activities.

Students wishing to major in Environmental Engineering are encouraged to double major in Civil Engineering or Biological Engineering to ensure that they receive an accredited degree.

The School of Civil and Environmental Engineering and the Department of Biological and Environmental Engineering each offer a concentration in environmental engineering. With appropriate course selection, students taking these concentrations can double major in Environmental Engineering with minimal additional course requirements (as defined in the BEE and CEE undergraduate handbooks).

The major requires a GPA ≥ 2.0 in engineering and science courses and at least a C- in ENGRD 202, CHEM 257, or ENGRD 251.

Students matriculating in the College of Engineering (COE) may affiliate with this major in their second year. Students matriculating in the College of Agriculture and Life Sciences (CALS) may enroll in this major in their first semester. Students planning to affiliate with this major should take the following courses:

Mathematics-science requirements

MATH 191, 192, 293, 294

PHYS 112, 213

CHEM 207, 257

COM S 100 or BEE 151* (computer programming)

Introduction to engineering

BEE 200* The BEE Experience (required for students matriculating in CALS)

ENGRI 113 recommended

Engineering distribution courses†

ENGRD 251 Engineering for a Sustainable Society 3

ENGRD 202, 241, or 221 are recommended (other good choices include ENGRD 201, 219, or BIO G 101 and 103, 105, 107). 3-4

Major-required courses

Major Courses *Credits*

BIO G 10X Introductory Biology** (BIO G 101/103, 102/104 recommended; other good choices include 105, 107, or 110) 3-4

ENGRD 202 Mechanics of Solids** 4

ENGRD 241 Engineering Computation** 3

or

ENGRD 221 Thermodynamics** 3

CEE 304 Uncertainty Analysis in Engineering 4

CEE 331 Fluid Mechanics 4

Earth Science (one from the following list): 3-4

CEE 341 Introduction to Geotechnical Engineering and Analysis 4

or

EAS 201 (ENGRD 201) Introduction to the Physics and Chemistry of the Earth**

or

EAS 321 Introduction to Biogeochemistry

or

CSS 365 Environmental Chemistry: Soil, Air, and Water

or

BEE 371 Physical Hydrology Ecosystems

CEE 351 Environmental Quality Engineering 3

CEE 451 Microbiology for Environmental Engineering†† 3

(one from the following list):

CEE 453 Lab course Lab Research in Environmental Engineering

or

BEE 427 Water Sampling and Measurement

or

CEE 437 Experimental Methods in Fluid Dynamics

BEE 475 Environmental Systems Analysis 3

Engineering Economics:

CEE 323 Engineering Economics and Management 3

or

BEE 489 Engineering Entrepreneurship, Management, and Ethics 4

Electives

Technical communications course††† (ENGRC 335 or 350; COMM 260, 263, or 252 in liberal studies category; or CEE 453; or BEE 493 taken with BEE 473 or BEE 450; or BEE 489) 3-4

Three design electives 9-credit minimum‡

Two major-approved electives to complete total credit requirement‡‡

Two approved electives 6

Total credits (minimum) 128

*BEE 151 and 200 together satisfy the ENGRI requirement for CALS-matriculated first-year students. Students using BEE 200 to satisfy the ENGRI requirement must make up the 2-credit difference with engineering course work.

**Students using this course as a second engineering distribution must take an additional elective. BIO G 110 is not an engineering distribution course.

†Students must complete two ENGRD courses.

††Students planning graduate-level study in Environmental Engineering may take BIOMI 290 Introduction to Microbiology in place of CEE 451.

†††If the course fulfilling the technical writing requirement also fulfills another requirement (e.g., liberal studies, major-approved elective), then an additional approved elective must be substituted for this requirement.

‡To be chosen from a list of design courses. Students are encouraged to take CEE 352 or BEE 473.

‡‡The list of suggested courses covers the areas of environmental engineering, hydraulics/hydrology, environmental systems engineering, geotechnical engineering, remote sensing, air pollution, and biological and environmental engineering. The respective lists are available at the departmental offices.

Environmental Engineering Honors Program

Students interested in pursuing an honors program should contact the undergraduate program director of Biological and Environmental Engineering or the associate director of Civil and Environmental Engineering for information on the program requirements.

GEOLOGICAL SCIENCES

Offered by the Department of Earth and Atmospheric Sciences

Contact: 2124 Snee Hall, 255-5466, www.eas.cornell.edu

We live on a planet with finite resources and a finite capacity to recover quickly from human-induced environmental stresses. It is a naturally powerful planet, with natural hazards such as earthquakes, hurricanes, and volcanic eruptions that alter the course of history with little prior warning. As the

human population grows, understanding the earth and its resources becomes progressively more important to both future policymakers and ordinary citizens, who must find new sources of energy and sustain the quality of our environment. Because the human need to understand the earth is so pervasive and the earth system is so multifaceted, the major has three options, which cover the spectrum of modern earth sciences.

The three options are the geoscience option, the atmospheric science option, and the science of earth systems (SES) option. The geoscience option emphasizes the structure, composition, and evolution of our planet; the atmospheric science option covers the planetary processes producing weather and climate; and the SES option is concerned with processes on and near the earth's surface where the interactions of water, life, rock, and air produce our planetary environment.

Geoscience Option

The geoscience option reveals Earth's turbulent history from the formation of our solar system to the plate tectonic cycles and ice ages that dominate Earth's present behavior. That history is highlighted by the co-evolution of life and the Earth system—from the origin of life to the modern interglacial phase during which our species has proliferated and become able to alter the chemical and physical environment. Topics of study also include the fundamental processes responsible for earthquakes, volcanic eruptions, and mountain building. This option prepares students for advanced study in geology, geophysics, geochemistry, and geobiology and for careers in energy and mineral industries or in water and contaminant investigation (environmental geology). The option is also valuable for a pre-law or pre-med program or in preparation for a career in K–12 education.

The geoscience option stresses a balanced overview of geology with considerable flexibility and a degree of specialization achieved by careful selection of major-approved electives. Students must take ENGRD/EAS 201 as an engineering distribution course. For students interested in geobiology or paleontology, BIO G 101/103–102/104 (or BIO G 109–110) is recommended. CHEM 208 may be substituted for PHYS 214. Learning through direct observation of the natural system is highly valued, akin to design projects in other engineering majors.

The geoscience option requires these courses: the introductory outdoor field course EAS 210 and the five core courses EAS 326, 355, 356, 375, and 388. Two additional EAS major-required courses and at least one major-approved elective must be EAS 300 through 600-level courses. The core courses may be taken in any reasonable sequence, except that EAS 355 (fall course) should be taken before EAS 356 (spring course). EAS 326, 355, 356, and 375 should be taken relatively early in the program.

There are four alternatives for completing the required 4-credit advanced outdoor field experience: (1) EAS 417 Field Mapping in Argentina (3 credits) and EAS 491–492 (1 credit based on field observations), (2) EAS 437 Geophysical Field Methods (3 credits) plus at least 1 credit of EAS 491 or 492 using geophysical techniques from EAS 437; (3) EAS 491–492 Undergraduate Research (2

credits each) with a significant component of fieldwork; (4) a pre-approved outdoor advanced field course taught by another college or university (≥ 4 credits).

A selection of major-approved electives may provide specializations in geophysics, geochemistry (including petrology and mineralogy), geobiology (paleontology), and geology applied to mineral and petroleum industries, environmental problems, hydrology, and civil engineering. Students who want a more general background or want to remain uncommitted with regard to specialty must choose at least two of their major-approved electives from the same department or school. The major-approved electives outside the major may be chosen from offerings in other science or engineering areas or the liberal arts at the 300 level or above. Students may request substitution of EAS 491 and 492, Undergraduate Research, for a fourth-year major-approved elective but not if it is being used to fulfill the outdoor field requirement.

In addition to course work, students learn by involvement in research projects. Facilities include equipment for processing seismic signals and digital images of the Earth's surface, instruments for highly precise isotope and element analyses, and extensive libraries of earthquake records, satellite images, and exploration seismic records. Undergraduates have served as field assistants for faculty members and graduate students in South America, Europe, Asia, Canada, the USA, and several ocean islands. Undergraduates are encouraged to participate in research activities, frequently as paid assistants.

Atmospheric Science Option

Atmospheric science is the study of the atmosphere and the processes that shape weather and climate. The curriculum emphasizes the scientific study of the behavior of weather and climate, and applications to the important practical problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes and acquire skill and experience in the analysis, interpretation, and forecasting of meteorological events. This option satisfies both the curricular guidelines of the American Meteorological Society and the educational requirements of the National Weather Service for employment as a meteorologist, which also qualifies graduates for positions in private-sector forecasting and environmental consulting firms. The option also provides excellent preparation for graduate work in atmospheric science and related fields.

The atmospheric science option requires ENGRD 270 as an engineering distribution course as well as introductory courses in atmospheric science (EAS 131 and 133) and EAS 250 Observations and Instrumentation. Many of the upper-division major courses require EAS 341 Atmospheric Thermodynamics and Hydrostatics and EAS 342 Atmospheric Dynamics as prerequisites, which are normally taken in the junior year. The additional required major courses are EAS 331 Climate Dynamics, EAS 352 Synoptic Meteorology I, EAS 451 Synoptic Meteorology II, EAS 435 Statistical Methods in Meteorology, and EAS 447 Physical Meteorology. Major-approved electives may be chosen from EAS courses

and selected upper-division courses in other departments.

Science of Earth Systems (SES) Option

The SES option provides an integrated view of Earth processes critical to the understanding of our environment. This scientific understanding is the primary foundation used to determine to what degree human societies can modify or adapt to future change. The option is for students interested in careers or graduate study in any of the Earth system sciences or a future in environmental law, environmental engineering, science teaching, or environmental public policy. The option is part of the multidisciplinary, intercollege program in the Science of Earth Systems. Collaborations with other departments provide breadth and depth to the program.

The SES option emphasizes a strong preparation in basic math and sciences and an integrated approach to the study of the Earth system including the lithosphere, biosphere, hydrosphere, and atmosphere.

Students are required to take a second semester of chemistry (CHEM 208), two semesters of biology (BIO G 101/103–102/104 or 109–100. EAS 220 The Earth System is required. ENGRD 201 Physics and Chemistry of the Earth is recommended as an engineering distribution course. The option requires a set of three core courses, normally taken in the junior or senior years that provide breadth and integration. Five additional intermediate to advanced courses are selected—with the adviser's approval—to provide depth and a degree of specialization, and an additional major-approved elective is selected. These courses permit the student to specialize in such areas as climate dynamics, biogeochemistry, ocean sciences, environmental geosciences, ecological systems, hydrological sciences, and soil sciences.

Two of the specialization courses will count as major-required courses and three as major-approved electives. At least three of the major-approved electives must be non-EAS courses. The three SES core courses are:

EAS 302 Evolution of the Earth System—spring, 4 credits

EAS 321 Biogeochemistry (also NTRES 321)—fall, 4 credits

EAS 331 Climate Dynamics (also ASTRO 331)—fall, 3 credits

See www.eas.cornell.edu for possible specializations.

Excellent opportunities for learning through direct observation of the natural systems exist in either the spring "Environmental Semester in Hawaii," through a summer field course in geology operated in Argentina (EAS 417), or through campus-based field courses.

Field Study in Hawaii

Field study is a fundamental aspect of earth system science. Students wishing to increase their field experience may fulfill some of the requirements for the SES major by off-campus study through the Cornell Earth and Environmental Semester program (EES). The EES program, offered during the spring semester, emphasizes field-based education and research. It is based on the island of Hawaii, an outstanding natural laboratory for earth and environmental sciences. Courses

that may be applied to the SES major include EAS 240, 322, and 351. EAS 322 and 351 may also be used to fulfill requirements of the Geological Sciences major. The EES program also offers opportunities for internships with various academic, nonprofit, and government organizations. Typically, students participate in the EES program during their junior year, although exceptions are possible. For further information, see www.eas.cornell.edu/geology/classes/hawaii/course.html.

Geological Sciences Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

1. Acceptance of the written proposal of the honors project by the faculty adviser, the honors adviser, and the director of undergraduate studies.
2. An honors thesis involving research (EAS 491-492 or 499, 2 or more credits each) of breadth, depth, and quality.

INDEPENDENT MAJOR

Offered by the Independent Major Committee

Contact: Associate Dean for Undergraduate Programs, 167 Olin Hall, 255-8240

The independent major is designed for students whose educational objectives cannot be met by one of the regular majors. With the exception of certain faculty-sponsored programs, this major consists of an engineering primary area (approx. 32 credits) and an educationally related secondary area (approx. 16 credits). The primary area may be in any subject area offered by schools or departments of the college; the secondary area may be in a second engineering subject area or in a logically connected nonengineering area. The combination must form an engineering education in scope and substance and should include engineering design and synthesis as well as engineering sciences. Each program includes the normally required common-curriculum requirements and approved electives.

Students should apply to the independent major during the sophomore year. A student should seek assistance in developing a coherent program from professors in the proposed primary and secondary areas (an adviser in each area is required). The program must also be approved by the Independent Major Committee. If approved, the program is the curricular contract to which the student must adhere.

Because no single standardized curriculum exists, the independent major is not accredited. Independent major students who intend to seek legal licensing as a Professional Engineer should be aware that this nonaccredited degree program will require additional education, work, and/or experience to qualify for eligibility to take the Fundamentals of Engineering examination and may affect acceptance into engineering graduate programs.

INFORMATION SCIENCE, SYSTEMS, AND TECHNOLOGY

Offered jointly by the Department of Computer Science and the School of Operations Research and Industrial Engineering

Contact: 303 Upson Hall, 255-9837, www.infosci.cornell.edu, and 202 Rhodes Hall, 255-5088, www.orie.cornell.edu

Digital information technologies have become pervasive in science, engineering, manufacturing, business, finance, culture, law, and government, dramatically changing the way people work and live. The proliferation and significance of these new technologies demands a new focus in engineering education—one that remains rigorous and technically oriented but is simultaneously devoted to integrating engineering design, theory, and practice within the social and organizational contexts in which these complex digital information systems are employed.

The information science, systems, and technology (ISST) major studies the design and management of complex information systems. Just as structural engineers and nanofabricators use physics at radically different scales, so also there is a scale difference between the focus of the ISST major and the more traditional, look-under-the-hood majors in computer science and operations research and industrial engineering. Rather than focusing on the computing and communication technologies that underlie digital information systems, the ISST major emphasizes information systems engineering in broad application contexts, where issues at the confluence of information science, technology, and management are the primary concerns.

The ISST major has two options. The management science option educates students in methods for quantitative decision making and their application to information technology as well as the broader role that information technology plays in making these methods effective. Students in the information science option will obtain advanced training in methods for the creation, representation, organization, access, and analysis of information in digital form.

Note: Students may not double major in both COM S and ISST or OR&IE and ISST.

Engineering distribution courses

Majors are required to take ENGRD 270 Basic Engineering Probability and Statistics as an engineering distribution course. ENGRD 211 Computers and Programming is required for the major and is recommended as the second engineering distribution course.

Major program

Core courses	Credits
Probability, Statistics, and Optimization	
OR&IE 320 Optimization I	3
OR&IE 360 Engineering Probability and Statistics II	3
Information Systems	
INFO 230 Intermediate Design and Programming for the Web	3
OR&IE 311 Information Systems and Analysis	3

INFO 330 Applied Database Systems	3
Economic, Organizational, and Social Context	
ECON 301 or 313 Microeconomics	3
One of:	
ILROB 170 Introduction to Micro Organizational Behavior and Analysis	3
ILROB 175 Behavior, Values, and Performance	
INFO 245 Psychology of Social Computing	3

Requirements for the information science option:

1. Three courses from Information Systems (Area II below).
2. One course from Mathematical Modeling in IT (Area III).
3. Three electives, all from either Human-Centered Systems (Area V) or Social Systems (Area VI).
4. Two electives from any of the six areas (INFO 490 may be used to fulfill one of these electives).

Requirements for the management science option:

1. Four courses from Mathematical Models in Management Science (Area I).
2. Three electives, one from each of
 - Information Systems (Area II)
 - Mathematical Modeling in IT (Area III)
 - Information Technology Management Solutions (Area IV)
3. Two electives from any of the six areas (INFO 490 may be used to fulfill one of these electives).

Area I. Mathematical Models in Management Science

OR&IE 350 Financial and Managerial Accounting
 OR&IE 361 Introductory Engineering Stochastic Processes I
 OR&IE 480 Information Technology
 OR&IE 580 Simulation Modeling and Analysis

Area II. Information Systems

COM S 419 Computer Networks
 INFO 430 Information Retrieval
 INFO 431 Web Information Systems
 COM S 432 Introduction to Database Systems
 COM S 465 Computer Graphics I
 COM S 472 Foundations of Artificial Intelligence
 COM S 474 Introduction to Natural Language Processing
 COM S 501 Software Engineering
 INFO 530 Architecture of Large-Scale Information Systems
 COM S 578 Empirical Methods in Machine Learning and Data Mining

Area III. Mathematical Modeling in IT

- OR&IE 431 Discrete Models
- OR&IE 464 Extreme Value Analysis with Applications to Finance and Data Communications
- OR&IE 474 Statistical Data Mining I
- COM S 478 Machine Learning
- OR&IE 483 Applications of Operations Research and Game Theory to IT
- ECE 562 Fundamental Information Theory
- OR&IE 574 Statistical Data Mining II

Area IV. IT Management Solutions

- OR&IE 481 Delivering OR Solutions with Information Technology
- OR&IE 518 Supply Chain Management

Area V. Human-Centered Systems

- PSYCH/COGST 342 Human Perceptions: Applications to Computer Graphics, Art, Visual Display*
- INFO 345 Human-Computer Interaction Design
- PSYCH 347 Psychology of Visual Communications
- PSYCH 380 Social Cognition*
- PSYCH 413 Information Processing: Conscious and Unconscious
- PSYCH/COGST 416 Modeling Perception and Cognition*
- INFO 440 Advanced Human-Computer Interaction Design
- COMM 445 Seminar in Computer-Mediated Communication
- INFO 450 Language and Technology
- DEA 470 Applied Ergonomic Methods

*Students who take PSYCH 342 or 416 may also count their prerequisite, PSYCH 205 or 214. Students who take PSYCH 380 may also count PSYCH 280. At most one of these 200-level prerequisites can be counted.

Area VI. Social Systems

- SOC 304 Social Networks and Social Processes
- AEM 322 Technology, Information, and Business Strategy*
- INFO 349 Media Technologies
- INFO 355 Computers: From the 17 C. to the Dot.com Boom
- S&TS/INFO 356 Computing Cultures
- ECON 368 Game Theory (formerly ECON 467)*
- INFO 387 The Automatic Lifestyle: Consumer Culture and Technology
- LAW 410 Limits on and Protection of Creative Expressions—Copyright Law and Its Close Neighbors
- S&TS 411 Knowledge, Technology, and Property
- ECON 419 Economic Decisions Under Uncertainty
- COMM 428 Communication Law
- INFO 435 Seminar on Applications in Information Science
- OR&IE 435 Introduction to Game Theory*

- S&TS 438 Minds, Machines, and Intelligence
- INFO 447 Social and Economic Data
- ECON 476/477 Decision Theory I and II
- COMM 494 Special Topics in Communication: Copyright in the Digital Age

INFO 515 Culture, Law, and Politics of the Internet

H ADM 574 Strategic Information Systems*

*Only one of ECON 368 and OR&IE 435 may be taken for ISST credit. Only one of AEM 322 and H ADM 574 may be taken for ISST credit.

Information Science, Systems, and Technology Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

1. 8 credit hours of ISST course work at or above the 500 level (no S-U courses; no seminars or 2-credit courses)
2. 6 credit hours of INFO 490 independent study and research with an ISST faculty member, spread over at least two semesters, with at least A- each semester
or
3 credit hours of INFO 490 independent study and research with an ISST faculty member and 3 credit hours of INFO 491 teaching experience, both with grades of at least A-.

The ISST research is expected to result in a programming project or a written report (or both).

Any 500- or 600-level course taken to fulfill the honors requirements may be counted toward fulfillment of the associated primary or secondary option requirements.

Procedures

Each program must be approved by the appropriate co-director of the ISST major, and any changes to the student's program must also be approved.

MATERIALS SCIENCE AND ENGINEERING

Offered by the Department of Materials Science and Engineering

Contact: 214 Bard Hall, 255-9159, www.mse.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

Prospective majors are required to take ENGRD 261 or 262 before affiliating with the major. It is highly recommended that the course be taken as an engineering distribution during the sophomore year. The major program develops a comprehensive understanding of the physics and chemistry underlying the unique properties of modern engineering materials and processes.

Students are required to complete a series of electives to develop knowledge of materials,

such as biomaterials, ceramics, polymers, and semiconductors. Application-related courses include the areas of biotechnology and life science, energy and environment, materials for information science, nanotechnology, and technology management and ethics. These requirements are satisfied through a series of technical electives taken mainly in the senior year, selected from various engineering and science departments. Optional research involvement courses provide undergraduates with the opportunity to work with faculty members and their research groups on current projects.

The major requirements for a B.S. degree in materials science and engineering are:

1. ENGRD 261 Mechanical Properties of Materials: From Nanodevices to Superstructures *or*
ENGRD 262 Electronic Materials for the Information Age
2. 12 required major courses:
MS&E 204 Materials Chemistry
MS&E 206 Atomic and Molecular Structure of Matter
MS&E 302 Mechanical Properties of Materials, Processing, and Design
MS&E 303 Thermodynamics of Condensed Systems
MS&E 304 Kinetics, Diffusion, and Phase Transformations
MS&E 305 Electronic, Magnetic, and Dielectric Properties of Materials
MS&E 307 Materials Design Concepts I
MS&E 311 Junior Lab I
MS&E 312 Junior Lab II
MS&E 403/405 Senior Materials Lab I or Senior Thesis I
MS&E 404/406 Senior Materials Lab II or Senior Thesis II
MS&E 407 Materials Design Concepts II
3. Two materials-related electives covering two groups of different materials
4. Three application-related electives in at least two different types of applications
5. Two of the application-related electives must be taken from outside MS&E
6. One additional technical elective outside MS&E

Materials Science and Engineering Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

1. The 9 credits (giving a total of 140) of additional courses must be technical in nature, i.e., in engineering, math, chemistry, and physics at the 400 and graduate level, with selected courses at the 300 level. The courses must be approved by the major adviser.
2. Senior honors thesis (MS&E 405/406) with a grade of at least A.

MECHANICAL ENGINEERING

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: 108 Upson Hall, 255-3573, maeug@cornell.edu, www.mae.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

This major is designed to provide a broad background in the fundamentals of the discipline as well as to offer an introduction to the many professional and technical areas with which mechanical engineers are concerned. The program covers both major streams of mechanical engineering.

Mechanical systems, design, and materials processing is concerned with the design, analysis, testing, and manufacture of machinery, vehicles, devices, and systems. Other topics covered are computer-aided design, vibrations, control systems, and dynamics. Particular areas of concentration are mechanical systems and design, vehicle engineering, biomechanics, and engineering materials.

Engineering of fluids, energy, and heat-transfer systems is concerned with the efficient conversion of energy, aerospace and surface transportation, the environmental impact of engineering activity (including pollutants and noise), aeronautics, and the experimental and theoretical aspects of fluid flow, heat transfer, thermodynamics, and combustion. Specific areas of concentration include aerospace engineering and thermo-fluids engineering.

During the fall semester, sophomores who plan to affiliate with the mechanical engineering major take ENGRD 202 (also T&AM 202) as an engineering distribution course. ENGRD 221/M&AE 221 is required for the major and is recommended as the second engineering distribution course. The Sibley School supports students who have unusual requirements, but delays or substitutions must be discussed with and receive approval of their major adviser.

The major requires 13 courses (beyond ENGRD 202 already mentioned) and five major-approved elective courses.

Required courses

M&AE 212 Mechanical Properties and Selection of Engineering Materials

ENGRD 221 Thermodynamics

M&AE 225 Mechanical Synthesis

ENGRD 203 Dynamics

M&AE 378 Mechatronics or ENGRD 210, Introduction to Electrical Circuits, Electrical and Computer Engineering, or PHYS 360, Electronic Circuits

M&AE 323 Introductory Fluid Mechanics

M&AE 324 Heat Transfer

M&AE 325 Analysis of Mechanical and Aerospace Structures

M&AE 326 System Dynamics

M&AE 327 Mechanical Property and Performance Laboratory

M&AE 427 Fluids/Heat Transfer Laboratory

M&AE 428 Seminar on Engineering Design

M&AE 429 Supervised Senior Design Experience

Electives

Students should use the flexibility provided by the major-approved electives, adviser-approved electives, and humanities, arts, and social sciences electives to develop a program to meet their specific goals.

Major-approved electives

The major includes five major-approved electives. At least three of these courses must be upper-level (300+) M&AE courses. Of these three, two must be a concentration of M&AE's upper-level courses providing breadth in a specific subject area. Standard concentrations are shown below, but students may petition for approval of two other related courses to form a custom concentration.

The standard concentrations are:

Aerospace engineering, M&AE 305, 306, 415, 423, 506, 507

Biomechanics, M&AE 463, 464, 466, 565

Engineering materials, M&AE 312, 313, 455, 464, 470, 513

Mechanical systems and design, M&AE 378*, 409, 415, 417, 435, 470, 477, 478, 479, 514

Thermo-fluids engineering, M&AE 423, 449, 453, 501, 543

Vehicle engineering, M&AE 305, 306, 425, 449, 486, 506, 507

*Students who took M&AE 378 as a required course (see above) may not use it again as a major-approved elective.

A Senior Design Experience is required for the B.S. M.E. This is satisfied with M&AE 428, Seminar on Engineering Design and M&AE 429, Supervised Senior Design Experience. In M&AE 429, students sign up for a section that is offered in conjunction with a Senior Design Elective (M&AE 386, 400, 423, 425, 435, 470, 479) or that is directed by a faculty member as an individual or a team design exercise.

One of the courses must be an approved upper-level math course taken after MATH 294. The course must include some statistics. Currently, the approved courses are T&AM 310, ENGRD 270, CEE 304, and ENGRD 241.

Technical elective

One of the major-approved electives may be any course at an appropriate level, chosen from engineering, math, or science (physics, chemistry, or biological sciences). Appropriate level is interpreted as being at a level beyond the required courses of the college curriculum. Courses in economics, business, and organizational behavior are not accepted. Advisers may approve such courses as adviser-approved electives.

Adviser-approved electives

To maximize flexibility (i.e., the option for study abroad, COOP, internships, pre-med, and flexibility during the upper-class years), the Sibley School faculty recommends that students delay use of adviser-approved (AA) electives until after the third semester. Students must seek adviser approval before taking an AA elective. Advanced placement credit may not count as an AA elective, nor may Reserve Officer Training Corps (ROTC) courses unless they are co-listed in an academic department. Students must document AA electives approved before M&AE affiliation within a month of registration as an M&AE student. The faculty encourages

students to consider the following as possible AA electives:

- an engineering distribution course
- courses stressing oral or written communications
- courses stressing the history of technology
- rigorous courses in the physical sciences (physics, biology, chemistry)
- courses in information science (mathematics, computer science)
- courses in methodologies (modeling, problem solving, synthesis, design)
- courses in technology (equipment, machinery, instruments, devices, processes)
- courses in business enterprise operations (e.g., economics, financial, legal)
- courses in organizational behavior
- courses in cognitive sciences

Other considerations

It is recommended that humanities, arts, and social sciences electives include studies in:

- history of technology
- societal impacts of technology
- history
- foreign languages
- ethics
- communications
- political science
- aesthetics
- economics
- architecture

The Sibley School encourages its students to spend a junior year abroad at foreign universities with which the college has an exchange agreement, such as the Ecole Centrale de Paris.

The technical-writing requirement of the common curriculum is satisfied by M&AE 427.

A limited set of third-year courses is offered each summer under the auspices of the Engineering Cooperative Program.

Preparation in Aerospace Engineering

There is no separate undergraduate accredited program in aerospace engineering, but students may prepare for a career in this area by majoring in mechanical engineering and taking courses from the aerospace engineering concentration. Students may prepare for the graduate program in aerospace engineering by majoring in mechanical engineering, in other appropriate engineering specialties such as electrical engineering or engineering physics, or in the physical sciences. Other subjects recommended as preparation for graduate study include thermodynamics, fluid mechanics, applied mathematics, chemistry, and physics.

OPERATIONS RESEARCH AND ENGINEERING

Offered by the School of Operations Research and Industrial Engineering

Contact: 202 Rhodes Hall, 255-5088,
www.orie.cornell.edu

This major provides a broad education in the techniques and modeling concepts needed to analyze and design complex systems and an introduction to the technical and professional areas with which operations researchers and industrial engineers are concerned. The major prepares students for a wide range of careers including operations research, industrial engineering, entrepreneurship, information technology, operations management, consulting, financial engineering, financial services, and management.

The foundation of the major is the development of basic skills in calculus, statistics, probability, mathematical optimization, and computer science. Required courses in manufacturing systems, cost accounting, and simulation build on these skills and provide engineering design experiences. In the senior year the curriculum is quite flexible. Students take OR&IE electives to broaden and deepen their expertise in applied probability and statistics, industrial systems, optimization, information technology, or financial engineering.

Because of the wide range of career goals among ORE students, the major is designed with a minimum of required courses and a large number of required electives. Students should consult with their major advisers to select electives that best meet their future goals.

Exceptional students interested in pursuing graduate studies are encouraged to speak with their faculty advisers concerning an accelerated program of study.

A student who intends to affiliate with the major in operations research and engineering should take ENGRD 270 Basic Engineering Probability and Statistics after completing MATH 192; MATH 294 should be completed before or concurrently with ENGRD 270. ORE affiliates are required to complete MATH 191, 192, and 294 (or their subject matter equivalents.) Either MATH 293, COM S 280, or MATH 304 can be used to satisfy the fourth-semester mathematics requirement. Students should discuss with their advisers which of these three courses is most appropriate to their future program of study in ORE. The following considerations should be borne in mind.

1. MATH 293 (differential equations) is essential for advanced study in financial engineering. Also, MATH 293 is a prerequisite for PHYS 214, thus students who do not take MATH 293 must plan to take CHEM 208.
2. COM S 280 provides an introduction to discrete structures and algorithms of broad applicability in the field of operations research, particularly for fundamental models in the areas of optimization, production scheduling, inventory management, and information technology; it is also a prerequisite for certain upper-class Computer Science courses in the areas of information technology and algorithmic analysis.

3. MATH 304 covers fundamentals of formal proof techniques; this material is strongly recommended for students who intend advanced (PhD-level) study in Operations Research or a related field.

Early consultation with a faculty member or the associate director for undergraduate studies can be helpful in making appropriate choices.

The required courses for the ORE major and the typical terms in which they are taken are as follows:

<i>Semester 2, 3, or 4</i>	<i>Credits</i>
ENGRD 211 Computers and Programming	3
ENGRD 270 Basic Engineering Probability and Statistics	3
<i>Semester 5</i>	
OR&IE 320 Optimization I	4
OR&IE 350 Financial and Managerial Accounting	4
OR&IE 360 Engineering Probability and Statistics II	4
Humanities/social sciences elective	3
Major-approved elective	3
<i>Semester 6</i>	
OR&IE 310 Industrial Systems Analysis (may be taken in semester 4)	4
OR&IE 321 Optimization II	4
OR&IE 361 Introductory Engineering Stochastic Processes I	4
Behavioral science (organizational behavior)†	3
Humanities/social sciences elective	3
†The behavioral science requirement can be satisfied by any of several courses, including the Johnson Graduate School of Management (JGSM) course NCC 554 (offered only in the fall), which is recommended for those contemplating the pursuit of a graduate business degree, ILROB 170, 171, and 175, H ADM 115, ENGRD 335 (which also satisfies the technical writing requirement), and others.	
The basic senior-year program, from which individualized programs are developed, consists of the following courses:	
<i>Minimum credits</i>	
OR&IE 580 Simulation Modeling and Analysis	4
Three upper-class OR&IE electives as described below	9
Three major-approved electives (at least 3 credits must be outside OR&IE)	9
Two humanities/social sciences electives	6
Two adviser-approved electives	6
Available OR&IE electives are as follows:	
Manufacturing and distribution systems: OR&IE 416, 451, 480, 481, 483, 518, 524, 525, and 562 and JGSM NBA 641	
Optimization methods: OR&IE 431, 432, 434, 435, 436, and 533	
Applied probability and statistics: OR&IE 462, 464, 474, 476 (2 credits), 561, 563, 574, 575 (2 credits), 576 (2 credits) and 577	
Financial engineering: OR&IE 467, 469, 473, and 568.	

Academic Standing

The student in the major should obtain a passing grade in every course; at least C- in ENGRD 211 and 270, OR&IE 310, 320, 321, 350, 360, 361 and 580; a GPA of 2.0 each semester; a GPA of 2.0 for ORE major courses; and satisfactory progress toward completion of the degree requirements. Each student's performance is reviewed at the conclusion of each semester.

If at least C- is not earned in a required course, the course must be repeated within one year before the next course in the sequence may be taken (OR&IE 321 and 361, in particular). Failure to achieve at least C- in the second attempt will generally result in withdrawal from the major.

Operations Research and Engineering Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

The 9 additional credits of course work shall be from one or more of the following, with at least 4 credits in the first category:

1. Advanced courses in OR&IE at the 500 level or above.
2. A significant research experience or honors project under the direct supervision of an OR&IE faculty member using OR&IE 499 OR&IE Project. A significant written report must be submitted as part of this component.
3. A significant teaching experience under the direct supervision of a faculty member in OR&IE using OR&IE 490 Teaching in OR&IE or ENGRD 470 Undergraduate Engineering Teaching.

Procedures

Each program must be approved by the associate director of undergraduate studies, and any changes to a program must be approved by the associate director.

ENGINEERING MINORS AND OPTIONS

The engineering minor is a supplement to the B.S. degree majors in the college, including the independent major. It recognizes formal study of a particular subject area in engineering normally outside the major. Students undertaking a minor are expected to complete the requirements during the time of their continuous undergraduate enrollment at Cornell. Completing the requirements for an engineering minor (along with a major) may require more than the traditional eight semesters at Cornell. In many cases, however, courses that fulfill minor requirements may also satisfy other degree requirements (e.g., distribution courses, adviser-approved, or major-approved electives), and completion within eight semesters is possible.

An engineering minor or option requires:

- successful completion of all requirements for a B.S. degree in engineering.
- enrollment in an engineering major that approves participation in the minor or option.

- satisfactory completion of six courses (at least 18 credits) in a college-approved minor (or four courses and a seminar (at least 13 credits) in the option).

Students may apply for certification of an engineering minor at any time after the required course work has been completed in accordance with published standards. An official notation of certification of a minor or option appears on the Cornell transcript following graduation.

The College of Engineering offers minors and one option in the following areas (offering units are indicated in parentheses):

Applied Mathematics (T&AM)

Biological Engineering (BEE)

Bioengineering Option (Bioengineering Program)

Biomedical Engineering (BME)

Civil Infrastructure (CEE)

Computer Science (COM S)

Electrical and Computer Engineering (ECE)

Engineering Management (CEE)

Engineering Statistics (OR&IE)

Environmental Engineering (BEE/CEE)

Geological Sciences (EAS)

Industrial Systems and Information Technology (OR&IE)

Information Science (INFO)

Materials Science and Engineering (MS&E)

Mechanical Engineering (M&AE)

Operations Research and Management Science (OR&IE)

Additional information on specific minors can be found below, in the *Engineering Undergraduate Handbook*, in the undergraduate major office of the department or school offering the minor or option, and in Engineering Advising.

MINOR: APPLIED MATHEMATICS

Offered by the Department of Theoretical and Applied Mechanics

Contact: Richard Rand, 207 Kimball Hall, 255-7145, rhr2@cornell.edu, www.tam.cornell.edu/Undergrad.html

All engineering undergraduates are eligible to participate in this minor.

Academic standards: At least C in each course in the minor.

Requirements

At least six courses beyond MATH 294, to be chosen as follows:

- At most one course from any one of the groups 1, 2, 3, or 4.
- At least three courses from groups 5 and 6.
- At most one 200-level course.
- At most one course that is offered by the student's major department.

- Analysis
T&AM 310 Advanced Engineering Analysis I
MATH 321 Manifolds and Differential Forms
MATH 420 Differential Equations and Dynamical Systems
A&EP 321 Mathematical Physics I
- Computational methods
COM S/ENGRD 322 Introduction to Scientific Computation
CEE/ENGRD 241 Engineering Computation
OR&IE 320 Optimization I
BEE 449 Computational Tools for Engineers
COM S 421 Numerical Analysis
- Probability and statistics
OR&IE/ENGRD 270 Basic Engineering Probability and Statistics
OR&IE 360 Engineering Probability and Statistics II
ECE 310 Introduction to Probability and Random Signals
CEE 304 Uncertainty Analysis in Engineering
MATH 471 Basic Probability
- Applications
A&EP 333 Mechanics of Particles and Solid Bodies
CHEME 323 Fluid Mechanics
CEE 331 Fluid Mechanics
CEE 371 Modeling of Structural Systems
COM S 280 Discrete Structures
ECE 425 Digital Signal Processing
MS&E 303 Thermodynamics of Condensed Systems
M&AE 323 Introductory Fluid Mechanics
- Advanced courses
Only one of these three:
T&AM 311 Advanced Engineering Analysis II
MATH 422 Applied Complex Analysis
A&EP 322 Mathematical Physics II
Only one of the following two:
ECE 411 Random Signals
OR&IE 361 Introductory Engineering Stochastic Processes I
Only one of these two:
COM S 381 Introduction to Theory of Computing
COM S 481 Introduction to Theory of Computing
Only one of these two:
M&AE 571 Applied Dynamics
T&AM 570 Intermediate Dynamics
Any number of these:
COM S 482 Introduction to the Design of Algorithms
OR&IE 321 Optimization II
OR&IE 431 Discrete Models

OR&IE 435 Introduction to Game Theory

OR&IE 462 Introductory Engineering Stochastic Processes II

T&AM 578 Nonlinear Dynamics and Chaos

T&AM 610 Methods of Applied Mathematics I

T&AM 611 Methods of Applied Mathematics II

6. Mathematics courses

Any 300+ level course offered by the Mathematics Department in algebra, analysis, probability/statistics, geometry, or logic, with the following exceptions:

- MATH 323 or 420, if any course from group 1 is chosen
- MATH 471, if any course from group 3 is chosen
- MATH 422, if T&AM 311 or A&EP 322 is chosen from group 5
- Only one of the following may be chosen:

MATH 332 Algebra and Number Theory

MATH 335 Introduction to Cryptology

MATH 336 Applicable Algebra

Note: ENGRG 605-606 and M&AE 664 are graduate courses with limited enrollment. First preference is given to graduate students.

MINOR: BIOLOGICAL ENGINEERING

Offered by the Department of Biological and Environmental Engineering

Contact: 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu

Students in all majors except biological engineering may participate. Students may participate in only the bioengineering option, the biological engineering minor, or the biomedical engineering minor.

Students should meet with the BE program director as soon as they decide to pursue the minor. They will receive a BEE faculty adviser, who will assist them in completing their minor.

Biological engineering is the application of engineering to living systems. Examples of engineering efforts in this field include the development of new biosensor technologies, study and control of biologically based matter transformation systems, and development of engineered devices to study and regulate fundamental biological processes. The biological engineering minor is an opportunity for students to further their understanding of living systems and to increase their knowledge of the basic transport processes that occur within these systems. Courses in the minor provide opportunities to analyze and manipulate living systems at the molecular, cellular, and system levels.

Academic standards: At least C- in each course in the minor.

Requirements

At least six courses (≥ 18 credits), as follows:

BEE 350 Biological and Environmental Transport Processes (3 credits)

1. Analysis: Two (2) of these:
 - MS&E 304 Kinetics, Diffusion, and Phase Transformations (3 credits)
 - CHEME 313 Chemical Engineering Thermodynamics (3 credits)
 - CHEME 390 Reaction Kinetics and Reactor Design (3 credits)
 - CEE 437 Experimental Methods in Fluid Dynamics (3 credits)
 - BEE 685 Biological Engineering Analysis (4 credits)
2. Application: Two (2) of these:
 - BEE 450 Bioinstrumentation (4 credits)
 - BEE/M&AE 453 Computer-Aided Engineering Applications to Biomedical Processes (3 credits)
 - BEE 454 Physiological Engineering (3 credits)
 - BEE 459 Biosensors and Bioanalytical Techniques (4 credits)
 - BEE 655 Thermodynamics and Its Applications (3 credits)
 - CHEME 543 Bioprocess Engineering (3 credits)
3. Basic Sciences: One (1) of these:
 - BIOBM 233 Introduction to Biomolecular Structure (3 credits)
 - BIOBI 290 General Microbiology (3 credits)
 - BIOBM 330-333 Principles of Biochemistry (2-4 credits)
 - BIOBM 434 Applications of Molecular Biology (3 credits)
 - BIONB 470 Biophysical Methods (3 credits)

OPTION: BIOENGINEERING

Offered by the Bioengineering Program

Contact: 270 Olin Hall, 255-7577

Students in all majors, except biological engineering, may participate. Students may participate in only one of the following: bioengineering option, biological engineering minor, or biomedical engineering minor.

The purpose of the option is to provide students with a guided, coherent, individualized plan of exploration in bioengineering. Bioengineering consists of subjects that fall at the interface between engineering and life science. It involves bioprocesses, bioenvironmental engineering, biomedical devices, biomaterials, biomolecular engineering, systems biology, and more.

Students are asked to enroll after affiliation and before the beginning of the sixth semester. Enrollment requires selecting a bioengineering adviser (in addition to the major adviser), who will help select appropriate bioengineering-related courses and provide advice on careers in bioengineering.

Academic standards: S in the bioengineering seminar and at least C- in the other courses and a 2.0 GPA in all bioengineering courses.

Requirements

At least 12 credit hours consisting of two to three bioengineering courses, one to two biological sciences courses, and 1 credit of BME 501 Bioengineering Seminar. A list of approved courses can be found in 167 Olin Hall.

MINOR: BIOMEDICAL ENGINEERING

Offered by the Department of Biomedical Engineering (BME)

Contact: 120 Olin Hall, 255-1489,
www.bme.cornell.edu/

All engineering majors are eligible to participate in this minor. Students may participate in only one of the bioengineering option, the biological engineering minor, or the biomedical engineering minor.

Educational Objectives: Biomedical engineering is the application of engineering principles and methods to a wide array of problems associated with human health. The field includes the design of biocompatible materials, prostheses, surgical implants, artificial organs, controlled drug-delivery systems, and wound closure devices. Diagnosing diseases and determining their biological origins depend upon increasingly sophisticated instrumentation and the use of mathematical models. This minor allows students in the College of Engineering to gain exposure to the breadth and depth of biomedical engineering offerings at Cornell, to prepare for advanced studies in biomedical engineering, and to obtain transcript recognition for their interest and capability in biomedical engineering.

Students are asked to complete a form declaring their interest in the minor with the biomedical engineering minor coordinator (120 Olin Hall). On the form the student will be asked to choose a BME faculty adviser that he or she can consult about the BME minor plan.

Academic standards: At least C- in each course in the minor. GPA \geq 2.0 for all courses in the minor.

Requirements

The 1-credit Bioengineering Seminar as well as at least six courses (\geq 18 credits) from the five categories listed below; two courses need to be in categories 1. Introductory biology and/or 2. Advanced biology with no more than one course from category 1. Four courses must come from the following categories: 3. Molecular and cellular biological engineering, 4. BME analysis of physiological systems, and 5. Biomedical engineering applications with courses from at least two of these categories. At least four of the six courses must not be specifically required major degree courses or cross-listings.

Required course: BME 501 Bioengineering Seminar (1 credit)

Category 1. Introductory biology (maximum of 4 credits and one course)

BIO G 110 and ENGRI 101 Biological Principles and Introduction to Biomedical Engineering Analysis

BIO G 101, 102, 103, and 104 Biological Sciences

BIO G 105 and 106 Introductory Biology

BIO G 107 and 108 General Biology

A 5 on AP biology test

Category 2. Advanced biology

BIOBM 330 Principles of Biochemistry, Individualized Instruction

BIOBM 333 Principles of Biochemistry, Proteins, Metabolism, and Molecular Biology

BIOBM 331 Principles of Biochemistry, Proteins and Metabolism

BIOBM 332 Principles of Biochemistry, Molecular Biology

BIOAP 311 Introductory Animal Physiology Lectures

BIOGD 281 Genetics

BIONB 222 Introduction to Neurobiology

BIOBI 290 General Microbiology Lectures

BIOGD 389 Embryology

Category 3. Molecular and cellular biomedical engineering

BME 301/CHEME 401* Molecular Principles of Biomedical Engineering

BME 302/CHEME 402* Cellular Principles of Biomedical Engineering

A&EP 252 The Physics of Life

BEE 360 Molecular and Cellular Bioengineering

Category 4. BME analysis of physiological systems

BME 401/M&AE 466* Biomedical Engineering of Metabolic and Structural Systems

BME 402* Electrical and Chemical Physiology

M&AE 464 Orthopaedic Tissue Mechanics

M&AE 463 Neuromuscular Biomechanics

BEE 454 Physiological Engineering

CHEME 481 Biomedical Engineering

BIONB 330 Introduction to Computational Neuroscience

BIONB 491 Principles of Neurophysiology

Category 5. Biomedical engineering applications

A&EP 470 Biophysical Methods

BEE 365 Properties of Biological Materials

BEE 450 Bioinstrumentation

BEE 453 Computer-Aided Engineering: Applications to Biomedical Processes

BEE 459 Biosensors and Bioanalytical Techniques

COM S 321 Numerical Methods in Computational Molecular Biology

COM S 426 Introduction to Computational Biology

COM S 428 Introduction to Computational Biophysics

ECE 402 Biomedical System Design

ECE 336 Nanofabrication

ECE 578 Computer Analysis of Biomedical Images

BIONB 440 Electronics in Neurobiology

BIONB 441 Computers in Neurobiology

MS&E 461 Biological Materials and Their Applications

TXA 439 Biomedical Materials and Devices for Human Body Repair

M&AE 565 Biomechanical Systems—Analysis and Design

*The M.Eng. degree in BME recommends that students complete the sequence BME 301, 302, 401, 402. A knowledge of molecular and cellular biomedical engineering and of biomedical engineering analysis of physiological systems is expected for students entering the M.Eng. in BME degree program.

MINOR: CIVIL INFRASTRUCTURE

Offered by the School of Civil and Environmental Engineering

Contact: 221 Hollister Hall, 255-3412, www.cee.cornell.edu

Students affiliated with all majors except civil engineering are eligible to participate in this minor.

The minor in civil infrastructure is intended to introduce engineering undergraduates to the engineering methodologies of mechanics, materials, analysis, design, and construction and to show how these are used in solving problems in the development, maintenance, and operation of the built environment that is vital for any modern economy.

Academic standards: At least C in each course in the minor

Requirements

At least six courses (≥ 18 credits), chosen as follows:

1. Required course: ENGRD 202 Mechanics of Solids
2. Additional courses: choose any five (groupings are for information only)*

Geotechnical engineering

CEE 341 Introduction to Geotechnical Engineering and Analysis

CEE 440 Foundation Engineering

CEE 441 Retaining Structures and Slopes

CEE 444 Environmental Site and Remediation Engineering

Structural engineering

CEE 371 Structural Modeling and Behavior

CEE 372 Structural Analysis and Mechanics

CEE 471 Fundamentals of Structural Mechanics

CEE 472 Finite Element Analysis of Solids and Structures

CEE 473 Design of Concrete, Masonry, and Steel Structures

CEE 474 Design of Metal Structures

CEE 478 Structural Dynamics and Earthquake Engineering

Other related courses

CEE 595 Construction Planning and Operations

*Other CEE courses may be approved by petition in advance

MINOR: COMPUTER SCIENCE

Offered by the Department of Computer Science

Contact: 303 Upson Hall, 255-9220, www.cs.cornell.edu

Students affiliated with all engineering majors except Computer Science are eligible to participate in this minor. This minor is for students who anticipate that computer science will play a prominent role in their academic and professional career.

Academic standards: At least C in each course in the minor.

Requirements

At least six courses (18 credits) chosen as follows:

1. Required courses

COM S/ENGRD 211 Computers and Programming

One of the following:

COM S 321 Numerical Methods in Computational Molecular Biology,

COM S/ENGRD 322 Introduction to Scientific Computing,

COM S 421 Numerical Analysis, or

COM S 428 Introduction to Computational Biophysics.

COM S/ECE 314 Computer Organization

2. Additional courses

Three COM S courses numbered 280 or higher (excluding seminars and COM S 490).

Computing courses offered by other departments cannot be applied toward the computer science minor, with the exception of ECE 314. All qualifying courses should be taken at Cornell for a letter grade. No substitutions allowed.

MINOR: ELECTRICAL AND COMPUTER ENGINEERING

Offered by the School of Electrical and Computer Engineering

Contact: 223 Phillips Hall, 255-4309, www.ece.cornell.edu

Students affiliated with all majors except Electrical and Computer Engineering are eligible to participate in this minor, but MS&E students must receive prior written approval from both MS&E and ECE, via petition.

This minor offers the opportunity to study analog and digital circuits, signals and systems, and electromagnetics and to concentrate at higher levels in one of several different areas such as circuit design, electronic devices, communications, computer engineering, networks, and space engineering.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.3 for all courses in the minor.

Requirements

At least six courses (≥ 18 credits), chosen as follows:

1. Two of the following:

ECE/ENGRD 210 Introduction to Circuits for Electrical and Computer Engineers (4 credits)

ECE 220 Signals and Information

ENGRD 230 Introduction to Digital Logic Design

2. Two of the following:

ECE 303 Electromagnetic Fields and Waves

ECE/COM S 314 Computer Organization

ECE 315 Introduction to Microelectronics

ECE 320 Networks and Systems

3. One other ECE course at the 300 level or above (3-credit minimum)

4. One other ECE course at the 400 level or above (3-credit minimum)

MINOR: ENGINEERING MANAGEMENT

Offered by the School of Civil and Environmental Engineering

Contact: 221 Hollister Hall, 255-3412, www.cee.cornell.edu

Students affiliated with all majors are eligible to participate in this minor.

This minor focuses on giving engineering students a basic understanding of engineering economics, accounting, statistics, project management methods, and analysis tools necessary to manage technical operations and projects effectively. The minor provides an important set of collateral skills for students in any engineering discipline.

Academic standards: At least C in each course in the minor.

Requirements

At least six courses (≥ 18 credits), chosen as follows:

1. Required courses (3):

CEE 323 Engineering Economics and Management

or OR&IE 451 Economic Analysis of Engineering Systems

OR&IE 350 Financial and Managerial Accounting¹

CEE 304 Uncertainty Analysis in Engineering²

or ENGRD 270 Basic Engineering Probability and Statistics

or ECE 310 Introduction to Probability and Random Signals

2. Additional courses—choose any three³

CEE 406 Civil Infrastructure Systems

CEE 490 Management Practice in Project Engineering

CEE 492 Engineers for a Sustainable World: Engineering in International Development

CEE 593 Engineering Management Methods: Data, Information, and Modeling⁴

CEE 594 Economic Methods for Engineering and Management⁴

CEE 595 Construction Planning and Operations
 CEE 596 Management Issues in Forensic Engineering
 CEE 597 Risk Analysis and Management
 CEE 598 Introduction to Decision Analysis
 NBA 507 Entrepreneurship for Scientists and Engineers
 or M&AE/ENGRG 461/OR&IE 452 Entrepreneurship for Engineers
 or BEE 489 Engineering Entrepreneurship, Management and Ethics

¹ORIE students must substitute NCC 556 or NBA 500 for OR&IE 350

²TAM 310 cannot be substituted for CEE 304

³Other courses approved by petition in advance

⁴This course is not accepted for OR&IE students

MINOR: ENGINEERING STATISTICS

Offered by the School of Operations Research and Industrial Engineering

Contact: 202 Rhodes Hall, 255-5088, www.orie.cornell.edu

Students affiliated with all majors except operations research and engineering are eligible to participate in this minor.

The goal of the minor is to provide the student with a firm understanding of statistical principles and engineering applications and the ability to apply this knowledge in real-world situations.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements

At least six courses (≥ 18 credits), chosen as follows:

- Required courses:
 - ENGRD 270 Basic Engineering Probability and Statistics
 - OR&IE 360 Basic Engineering Probability and Statistics II or ECE 310 Introduction to Probability and Random Signals
- Four of these (≥ 11 credits)*:
 - OR&IE 361 Introductory Engineering Stochastic Processes I or ECE 411 Random Signals in Communications/Signal Processing
 - OR&IE 476 Applied Linear Statistical Models
 - OR&IE 576 Regression
 - OR&IE 563 Applied Time Series Analysis
 - OR&IE 575 Experimental Design
 - OR&IE 577 Quality Control
 - OR&IE 580 Simulation Modeling and Analysis
 - MATH 472 Basic Probability or BTRY 409 Theory of Statistics
 - BTRY 602 Statistical Methods II
 - BTRY 603 Statistical Methods III or ILRST 411 Statistical Analysis of Qualitative Data

ILRST 310 Statistical Sampling
 ILRST 314 Graphical Methods for Data Analysis
 ILRST 410 Techniques of Multivariate Analysis

*Other course options approved by petition in advance. Some of these courses require others as prerequisites. All these courses are cross-listed under the Department of Statistical Science.

MINOR: ENVIRONMENTAL ENGINEERING

Offered jointly by the Department of Biological and Environmental Engineering and the School of Civil and Environmental Engineering

Contact: 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu, or 221 Hollister Hall, 255-3412, www.cee.cornell.edu

Students affiliated with all majors except environmental engineering are eligible to participate in this minor. Students majoring in biological engineering or civil engineering are eligible if they are not following the environmental concentration offered by those majors.

A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation's resources, the air in our cities, and water in our aquifers, streams, estuaries, and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements

At least six courses (≥ 18 credits), chosen from the following groups, with at least one course from each group.

Group A. Environmental engineering processes:

BEE 251 Engineering for a Sustainable Society
 CEE 351 Environmental Quality Engineering
 CEE 451 Microbiology for Environmental Engineering
 CEE 452 Water Supply Engineering
 CEE 453 Laboratory Research in Environmental Engineering
 CEE 454 Sustainable Small-Scale Water Supplies
 BEE 476 Solid Waste Engineering
 BEE 478 Ecological Engineering
 CEE 444 Environmental Site and Remediation Engineering
 BEE 651 Bioremediation
 CEE 653 Water Chemistry for Environmental Engineering

CEE 656 Physical/Chemical Process
 CEE 657 Biological Processes
 CEE 658 Microbial Biodegradation and Biocatalysis Lab

Group B. Environmental systems

ENGR/CEE 113* Water Treatment Design (*may count only if taken before the junior year)
 BEE 475 Environmental Systems Analysis
 CEE 597 Risk Analysis and Management
 CEE 623 Environmental Quality Systems Engineering

Group C. Hydraulics, hydrology, and environmental fluid mechanics

CEE 331 Fluid Mechanics (CHEME 323 or M&AE 323 may be substituted for CEE 331)
 CEE 332 Hydraulic Engineering
 BEE 371 Physical Hydrology for Ecosystems
 BEE 471 Introduction to Groundwater
 CEE 432 Hydrology
 CEE 436 Case Studies in Environmental Fluid Mechanics
 CEE 437 Experimental Methods in Fluid Dynamics
 BEE 473 Watershed Engineering
 BEE 474 Water and Landscape Engineering Applications
 CEE 631 Computational Simulation of Transport in the Environment
 CEE 633 Flow in Porous Media and Groundwater
 CEE 655 Transport, Mixing, and Transformation in the Environment
 BEE 671 Analysis of the Flow of Water and Chemicals in Soils
 BEE 672 Drainage

MINOR: GEOLOGICAL SCIENCES

Offered by the Department of Earth and Atmospheric Sciences

Contact: 2124 Snee Hall, 255-5466, www.eas.cornell.edu

Students affiliated with all majors except geological sciences are eligible to participate.

Some of the major problems facing mankind in this century involve earth science, especially the generation of new energy sources for a growing world population, and engineers will be challenged to solve these problems. This minor will prepare engineering students to understand the natural operating systems of Earth and the tools and techniques used by Earth scientists to understand and monitor these solid and fluid systems.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements

At least six courses (≥ 18 credits), chosen as follows:

- At least one or two of these courses:
ENGRD 201 Introduction to the Physics and Chemistry of the Earth
EAS 210 Introduction to Field Methods in Geological Sciences
EAS 220 The Earth System
- At least two of these courses:
EAS 302 Evolution of the Earth System
EAS 321 Introduction to Biogeochemistry
EAS 326 Structural Geology
EAS 331 Climate Dynamics
EAS 355 Mineralogy
EAS 356 Petrology and Geochemistry
EAS 375 Sedimentology and Stratigraphy
EAS 388 Geophysics and Geotectonics
- Additional EAS courses at the 300 level or higher. These may include, e.g., additional courses from the above lists, undergraduate research courses, and outdoor field courses.

MINOR: INDUSTRIAL SYSTEMS AND INFORMATION TECHNOLOGY

Offered by the School of Operations and Industrial Engineering

Contact: 202 Rhodes Hall, 255-5088, www.orie.cornell.edu

Students affiliated with all majors except operations research and engineering are eligible to participate in this minor.

The aim of this minor is to provide an in-depth education in the issues involved in the design and analysis of industrial systems, and the tools from information technology that have become an integral part of the manufacturing process. Students will become familiar with the problems, perspectives, and methods of modern industrial engineering and be prepared to work with industrial engineers in designing and managing manufacturing and service operations. That is, rather than providing a comprehensive view of the range of methodological foundations of operations research, this minor is designed to give the student a focused education in the application area most closely associated with these techniques.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements

At least six courses (≥ 18 credits), chosen as follows:

- At least three of the following:
ENGRD 270 Basic Engineering Probability and Statistics
OR&IE 310 Industrial Systems Analysis
OR&IE 320 Optimization I
OR&IE 480 Information Technology
- The remaining courses chosen from:
OR&IE 350 Financial and Managerial Accounting
OR&IE 416 Design of Manufacturing Systems

OR&IE 451 Economic Analysis of Engineering Systems

OR&IE 525 Production Planning and Scheduling Theory and Practice

OR&IE 577 Quality Control

OR&IE 580 Simulation Modeling and Analysis

MINOR: INFORMATION SCIENCE

Offered by the Department of Computer Science

Contact: Undergraduate Programs Office, 303 Upson Hall, 255-9837, www.infosci.cornell.edu

Students affiliated with any major except information science, systems, and technology are eligible to participate in this minor.

The interdisciplinary field of information science covers all aspects of digital information. The program has three main areas: information systems, human-centered systems, and social systems. Information systems studies the computer science problems of representing, storing, manipulating, and using digital information. Human-centered systems studies the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examines information in its economic, legal, political, cultural, and social contexts.

The minor has been designed to ensure that students have substantial grounding in all three areas in addition to having a working knowledge of basic probability and statistics necessary for analyzing real-world data.

Academic standards: At least C in all courses in the minor; S-U courses are not allowed.

Requirements

Note: These requirements apply to students in the College of Engineering. Students who are not in the College of Engineering should refer to the IS minor requirements listed in the CIS section of this publication.

At least six courses (18 credits) chosen as follows:

- Statistics: one course (must be ENGRD 270 or CEE 304)
- Information systems (primarily computer science): two courses
- Human-centered systems (human computer interaction and cognitive science): one course
- Social systems (social, economic, political, cultural, and legal issues): one course
- Elective: one additional course from either human-centered systems or social systems

Statistics

An introductory course that provides a working knowledge of basic probability and statistics and their application to analyzing real-world data.

ENGRD 270 Basic Engineering Probability and Statistics

CEE 304 Uncertainty Analysis in Engineering

MINOR: MATERIALS SCIENCE AND ENGINEERING

Offered by the Department of Materials Science and Engineering

Contact: 214 Bard Hall, 255-9159, www.mse.cornell.edu

Students affiliated with all majors except materials science and engineering are eligible to participate in this minor.

Material properties are the foundation of many engineering disciplines including mechanical, civil, chemical, and electrical engineering. This minor provides engineers in related areas with a fundamental understanding of mechanisms that determine the ultimate performance, properties, and processing characteristics of modern materials.

Academic standards: At least C in each course in the minor.

Requirements

At least six courses (≥ 18 credits), chosen as follows:

1. ENGRD 261 Mechanical Properties of Materials: From Nanodevices to Superstructures, or ENGRD 262 Electronic Materials for the Information Age
2. Two of:
 MS&E 204 Materials Chemistry
 MS&E 206 Atomic and Molecular Structure of Matter
 MS&E 302 Mechanical Properties of Materials, Processing, and Design
 MS&E 303 Thermodynamics of Condensed Systems
 MS&E 304 Kinetics, Diffusion, and Phase Transformations
 MS&E 305 Electronic, Magnetic, and Dielectric Properties of Materials
3. Three electives chosen from:
 Any MS&E course at the 300 level or above.

Selected courses in materials properties and processing (at the 300 level or above) from A&EP, CHEME, CEE, ECE, M&AE, PHYS, and CHEM, as approved by the MS&E undergraduate major coordinator.

MINOR: MECHANICAL ENGINEERING

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: 108 Upson Hall, 255-3573, www.mae.cornell.edu

Students affiliated with all majors except mechanical engineering are eligible to participate in this minor. Students intending to earn a minor in mechanical engineering should seek advice and pre-approval of their minor academic program from the associate director of undergraduate affairs in mechanical engineering before taking courses toward the minor.

Academic standards: At least C- in each course in the minor.

Requirements

At least six courses (≥ 18 credits) from among the following: M&AE courses at the 200 level or above; ENGRD 202 Mechanics of Solids; ENGRD 203 Dynamics.

Rules for selecting courses:

1. The selection of courses must satisfy the following three requirements.
 - a. At least two courses must be numbered above 300.
 - b. At least one course must be either (i) numbered above 500 or (ii) numbered above 326 and have as a prerequisite ENGRD 202, 203, or a M&AE course.
 - c. Each course must be worth at least 3 credits.
2. All courses used to satisfy the M&AE minor must be M&AE courses, ENGRD 202 or 203. No substitutions will be accepted from other departments at Cornell or elsewhere. Transfer credit may not be used to satisfy the M&AE minor.

MINOR: OPERATIONS RESEARCH AND MANAGEMENT SCIENCE

Offered by the School of Operations Research and Industrial Engineering

Contact: 202 Rhodes Hall, 255-5088, www.orie.cornell.edu

Students affiliated with all majors except operations research and engineering are eligible to participate in this minor.

Operations research and management science aims to provide rational bases for decision making by seeking to understand and model complex situations and to use this understanding to predict system behavior and improve system performance. This minor gives the student the opportunity to obtain a wide exposure to the core methodological tools of the area, including mathematical programming, stochastic and statistical models, and simulation. The intent of this minor is to give a broad knowledge of these fundamentals, rather than to train the student in a particular application domain. With this preparation, students can adjust their advanced courses and pursue either methodological or application-oriented areas of greatest interest and relevance to the overall educational goals of their program.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements

At least six courses (≥ 18 credits), chosen as follows:

1. At least three of these courses:
 ENGRD 270 Basic Engineering Probability and Statistics
 OR&IE 320 Optimization I
 OR&IE 321 Optimization II
 OR&IE 360 Engineering Probability and Statistics II
 OR&IE 361 Introduction to Engineering Stochastic Processes I
 OR&IE 580 Simulation Modeling and Analysis
2. Any OR&IE courses at the 300 level or higher (including those in 1).

MASTER OF ENGINEERING DEGREES

Office of Research, Graduate Studies, and Professional Education (ORGSPE), 222 Carpenter Hall, www.engineering.cornell.edu/grad

The following one-year (30-credit) professional master of engineering (M.Eng.) degrees are offered (giving also the administering unit)

M.Eng. (Aerospace): mechanical and aerospace engineering

M.Eng. (Agricultural and Biological): biological and environmental engineering

M.Eng. (Biomedical): biomedical engineering

M.Eng. (Chemical): chemical and biomolecular engineering

M.Eng. (Civil and Environmental): civil and environmental engineering

M.Eng. (Computer Science): computer science

M.Eng. (Electrical): electrical and computer engineering

M.Eng. (Engineering Mechanics): theoretical and applied mechanics

M.Eng. (Engineering Physics): applied and engineering physics

M.Eng. (Geological Sciences): earth and atmospheric sciences

M.Eng. (Materials): materials science and engineering

M.Eng. (Mechanical): mechanical and aerospace engineering

M.Eng. (Nuclear): graduate field of nuclear science and engineering

M.Eng. (OR&IE): operations research and industrial engineering

M.Eng. (Systems): systems engineering

These degrees are discussed below because the curricula are integrated with the undergraduate majors.

Many Cornell baccalaureate engineering graduates spend a fifth year at Cornell, earning an M.Eng. degree, although the program is also open to qualified graduates of other schools.

Requirements for admission vary by program. In general, the standard M.Eng. application requirements include:

- Statement of purpose
- Complete transcripts from each college or university attended
- At least two letters of recommendation
- Graduate Record Examination (GRE) scores—may not be required by all M.Eng. programs

Many M.Eng. programs waive the GRE requirement and one of the letters of recommendation for students with Cornell Engineering B.S. degrees. Check with the appropriate office for specific program requirements. A list of links and general admission information is posted on www.engr.cornell.edu/grad.

Superior Cornell students who will have between 1 and 8 credits remaining in their last undergraduate semester may petition for early admission to the M.Eng. program. They spend the last semester in both programming, finishing up their B.S. degree and also doing their first semester of the M.Eng. program.

Master of Engineering Options

The following M.Eng. options are offered:

- bioengineering
- financial engineering
- manufacturing
- engineering management
- systems engineering

Cooperative Program with the Johnson Graduate School of Management

Undergraduates may be interested in a cooperative program at Cornell that leads to both master of engineering and master of business administration (M.B.A.) degrees. With appropriate curriculum planning, such a combined B.S./M.Eng./M.B.A. program can be completed in six years at Cornell, with time out for work experience. For undergraduates

from other schools, it may be feasible to complete the M.Eng./M.B.A. program in two years, possibly with an intervening summer or time out for work experience if they do not already have it on coming to Cornell. This accelerated program often incorporates the Twelve-Month M.B.A. Program of the Johnson Graduate School of Management (JGSM).

Because 95 percent of the students in the JGSM have work experience, there will typically be a gap for work experience between the M.Eng. and M.B.A. portions of the program for students who do not already have it when beginning the M.Eng. portion.

For further details, go to Engineering Advising (167 Olin Hall), the M.Eng. office (222 Carpenter Hall), the JGSM office in Sage Hall, or the office of your intended undergraduate major.

Lester Knight Scholarship Program

The Lester Knight Scholarship Program is designed to assist and encourage Cornell Engineering students and alumni interested in combining their engineering education with a business degree. The program offers three options or categories of financial support:

- Alumni Knight Scholarship
- Undergraduate Knight Scholarship
- Six-Year Knight Scholarship

Each program has different qualifications and is open to Cornell engineering students and alumni at different stages of their educational or professional career. Participation in the program requires admission by each respective academic program (M.Eng, M.B.A.) as well as an application to participate in the Knight Scholarship Program.

Contact ORGSPE or refer to the Knight Scholarship web site (www.engr.cornell.edu/grad/knight) for program specifics.

MASTER OF ENGINEERING (AEROSPACE)

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: 107 Upson Hall, 255-5250, www.mae.cornell.edu

The M.Eng. (Aerospace) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include aerodynamics, acoustics and noise, turbulent flows, nonequilibrium flows, combustion, dynamics and control, and computational fluid dynamics.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty adviser. This program and any subsequent changes must also be approved by the chair of the M&AE Master of Engineering committee. An individual student's curriculum includes a 4- to 8-credit design course, a minimum of 12 credits in aerospace engineering or a closely related field, and sufficient technical electives to meet the total

degree requirement of 30 credits (of which at least 28 credits must have letter grades).

Design projects must have an aerospace engineering design focus and have the close supervision of a faculty member. The projects may arise from individual faculty and student interests or from collaboration with industry.

All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the approval of the M&AE master of engineering chair.

Check with the M&AE graduate field office (107 Upson Hall) for additional degree requirements.

Students enrolled in the M.Eng. (Aerospace) degree program may take courses that also satisfy the requirements of the bioengineering, engineering management, or systems engineering options.

MASTER OF ENGINEERING (AGRICULTURAL AND BIOLOGICAL)

Offered by the Department of Biological and Environmental Engineering

Contact: 207 Riley Robb Hall, 255-2173, www.bee.cornell.edu

This degree is intended primarily for students who plan to enter engineering practice. The program is planned as an extension of an undergraduate major in biological and environmental engineering but can accommodate graduates of other engineering disciplines. The required 30 credits of courses are intended to strengthen the students' fundamental knowledge of engineering and develop their design skills. Of the 30 credits, 3 to 9 are earned for an engineering design project that culminates in a written and oral report.

Students may concentrate in one of the following areas: biological engineering, energy, environmental engineering, environmental management, food processing engineering, international agriculture, local roads, machine systems, soil and water engineering, and structures and environment. Elective courses are chosen from among engineering subject areas relevant to the student's interests and design project. Courses in technical communication, math, biology, and the physical sciences may also be taken as part of a coherent program. Students can qualify for the Dean's Certificate in energy, manufacturing, or bioengineering by choosing their design project and a number of electives from the designated topic areas.

MASTER OF ENGINEERING (BIOMEDICAL)

Offered by the Department of Biomedical Engineering

Contact: 361 Olin Hall, 255-2573,
www.bme.cornell.edu

Our mechanistic understanding of biology has increased rapidly over the past 20 years, and many expect biology to drive engineering and technology in the next 50 years in much the same way that physics drove them in the 20th century. As biology has become more mechanistic, the opportunities to apply engineering approaches have increased enormously. Simultaneously, humanitarian needs and economic opportunities for the application of engineering to improve health care have increased significantly. Engineers who understand biology and can apply their knowledge and skills to improve human health are increasingly in demand. A professional degree in BME will prepare students to fill this increasing critical need.

The breadth and depth of knowledge needed in biomedical engineering makes a four-year B.S. degree program impractical. By combining the M.Eng. in BME with a strong B.S. program, a student can obtain the knowledge and skills necessary to be an effective professional biomedical engineer.

Students will acquire an in-depth knowledge of an essential area of biomedical engineering as well as a broad perspective of the biomedical engineering discipline that complements their undergraduate education in engineering or science. Graduates will be equipped to design biomedical devices and develop therapeutic strategies within the bounds of health care economics, the needs of patients and physicians, the regulatory environment for medical devices and pharmaceuticals, and stringent ethical standards.

Students will acquire depth by extending undergraduate concentrations, by selecting one of three areas for concentrated study, and by completing a design project in their area of concentration. The areas are biomedical mechanics and materials; bioinstrumentation/diagnostics; and drug delivery and cellular/tissue engineering. Design projects will be carried out in teams to take advantage of the diversity of student backgrounds and, when possible, projects will be done in collaboration with industrial or clinical partners.

Students from a wide variety of backgrounds in engineering and science are encouraged to apply. They are expected to have completed two semesters of calculus-based physics, at least three semesters of math, starting with calculus, and introductory computer science.

A knowledge of molecular- and cellular-based biomedical engineering and engineering analysis of physiological systems at the level of BME 301, 302, 401, and 402 is highly recommended. This knowledge can be demonstrated through appropriate undergraduate course work (at least C in each class) or by passing a diagnostic exam. Students lacking the appropriate background will need to complete additional courses (beyond the normal 30 credits) to demonstrate appropriate knowledge in these two subject areas.

MASTER OF ENGINEERING (CHEMICAL)

Offered by the School of Chemical and Biomolecular Engineering

Contact: 358 Olin Hall, 255-4550,
www.cheme.cornell.edu

This degree is awarded at the end of one year of graduate study with successful completion of 30 credits of required and elective courses in technical fields including engineering, math, chemistry, physics, and business administration. Courses emphasize design and optimization based on the economic factors that affect design alternatives for processes, equipment, and plants. General admission and degree requirements are described at the beginning of the section "Master of Engineering Degrees."

Specific requirements include

1. 12 credits in CHEME courses distributed among chemical and biomolecular engineering fundamentals (CHEME 711, 731, and 751) and chemical and biomolecular engineering applications (partial list: CHEME 480, 481, 484, 520, 543, 572, 631, 640, and 661).
2. A minimum of 3 credits of an individual or group project, CHEME 565.
3. Knowledge of business practices and techniques for pollution abatement and control. This knowledge may have already been acquired by students as undergraduates. If not, then CHEME courses (e.g., CHEME 572 and 661) or other courses covering these topics are required.

MASTER OF ENGINEERING (CIVIL AND ENVIRONMENTAL)

Offered by the School of Civil and Environmental Engineering

Contact: 219 Hollister Hall, 255-7560,
www.cee.cornell.edu

The master of engineering degree is a course work and project-oriented program. It is normally completed in nine months of intensive study. Thirty credit hours consisting of course work in major and supporting areas and a project are required.

Master of engineering students in civil and environmental engineering may focus their studies in one of the following major subject areas: civil engineering materials, civil infrastructure systems, structural engineering, geotechnical engineering, environmental engineering, environmental fluid mechanics and hydrology, environmental and water resource systems engineering, and transportation systems engineering. For the M.Eng. program in civil and environmental engineering, each program typically consists of course work in a major concentration and supporting areas as well as a project. Some concentrations require a course in professional practice or management. Courses in supporting areas come from many disciplines, including microbiology, materials science, operations research, computer science, economics, architecture, historic preservation, and engineering management to name just a few.

MASTER OF ENGINEERING (COMPUTER SCIENCE)

Offered by the Department of Computer Science

Contact: 4126 Upson Hall, 255-8593,
www.cs.cornell.edu/grad/meng

The M.Eng. program in computer science can be started in either the fall or spring semester. This program is designed to develop expertise in system design and implementation in many areas of computer science, including computer networks, Internet architecture, fault-tolerant and secure systems, distributed and parallel computing, high-performance computer architecture, databases and data mining, multimedia systems, computer vision, computational tools for finance, computational biology (including genomics), software engineering, programming environments, and artificial intelligence.

A typical program includes several upper-division and graduate courses and a faculty-supervised project. The flexible requirements allow students to build up a program that closely matches their interests. In fact, slightly under half the courses may be taken outside the computer science department (many students choose to take several business administration courses). Project work, which may be done individually or in a small group, can often be associated with ongoing research in the Department of Computer Science in one of the areas listed above.

Cornell seniors may use the early admission option to effectively co-register for the M.Eng. program while completing the undergraduate degree. This option can be started in either the fall or spring semester. It applies to students who have 1 to 8 credits remaining to complete their undergraduate program. All remaining undergraduate degree requirements must be satisfied by the end of the first semester the student is enrolled in the M.Eng. "early admit" program.

Undergraduates majoring in computer science may be interested in a program that can lead, in the course of six years, to B.S., M.Eng. (computer science), and M.B.A. degrees. See "Master of Engineering Degrees."

MASTER OF ENGINEERING (ELECTRICAL)

Offered by the School of Electrical and Computer Engineering

Contact: Student Services Office, 223 Phillips Hall, 255-8414, www.ece.cornell.edu/meng.html

The M.Eng. (Electrical) degree program prepares students either for professional work in Electrical and Computer Engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the master of science degree mainly in its emphasis on professional skills, engineering design, and analysis skills rather than basic research.

The program requires 30 credits of advanced technical course work beyond that expected in a typical undergraduate program, including at least four graduate-level courses in Electrical and Computer Engineering. The

required Electrical and Computer Engineering design project may account for 3 to 8 credits of the M.Eng. program. Occasionally, students take part in very extensive projects and may petition to increase the project component to 10 credits. Students with special career goals, such as engineering management, may apply to use up to 11 credits of approved courses that have significant technical content but are taught in disciplines other than engineering, math, or the physical sciences.

Although admission to the M.Eng. (Electrical) program is highly competitive, all well-qualified students are urged to apply. Further information is available at the web site listed above.

MASTER OF ENGINEERING (ENGINEERING MANAGEMENT)

The M.Eng. program in Engineering Management is aimed at engineers who want to stay in a technical environment but advance to managerial roles. Students learn to identify problems, formulate and analyze models to understand these problems, and interpret the results of analyses for managerial action.

A student's program of study is designed individually in consultation with an academic adviser and then submitted to the school's Professional Degree Committee for approval.

For the M.Eng. program in Engineering Management, the requirements are:

1. Four core courses: These include: CEE 590 Project Management, CEE 593 Engineering Management Methods, and CEE 591 Management Project.
2. Two focus courses, including at least one of CEE 594, CEE 597, or CEE 598.
3. Two managerial breadth courses.
4. Three disciplinary or functional electives.

The School of Civil and Environmental Engineering cooperates with the Johnson Graduate School of Management in a joint program leading to both master of engineering and master of business administration degrees. See the beginning of the section "Master of Engineering Degrees."

MASTER OF ENGINEERING (ENGINEERING MECHANICS)

Offered by the Department of Theoretical and Applied Mechanics

Contact: 212 Kimball Hall, 255-0988,
www.tam.cornell.edu/meng1.html

This two-semester professional degree program stresses applications of Engineering Mechanics and Applied Mathematics and Modeling. The centerpiece of the program is a project, either single or team-based on important real-world problems.

Engineering Mechanics: Students in this program will deepen and broaden their knowledge of mechanics as applied to different material systems. The course work centers on additional study of solid mechanics, fracture mechanics, materials

and computational methods widely used in industries such as the finite element method. Potential employers are companies interested in computer modeling of mechanical systems and failure and reliability analysis.

Applied Mathematics and Modeling: Students in this program do course work in mathematical modeling and computational methods. They will have great flexibility in their choice of studies. Students who graduate from this program are in a good position to pursue higher degrees or work for financial or informational organizations.

Laboratories: T&AM has many laboratories related to research areas and courses of study for the M.Eng. program:

- Ultrasonic and Materials Characterization Laboratory—*Wolfgang Sachse*
- Bio-robotics and Locomotion Laboratory—*Andy Ruina*
- Granular Flow Research Laboratory—*Jim Jenkins*
- Composites Laboratory—*Leigh Phoenix and Petru Petrina*
- Fracture Mechanics Laboratory—*Alan Zehnder*
- Dynamics Laboratory—*Dan Mittler*
- Mechanics of Solids Laboratory—*Dan Mittler*
- Biological Fluid Dynamics Laboratory—*Jane Wang*

Course Work:

(project 10–12 credit hours)

Current Interesting Projects

1. Animal, Human and Robotic Locomotion—*Andy Ruina*
2. Dynamical Systems—*Richard Rand*
3. Stress Rupture Testing of High-Performance Fibers and Yarns—*S. Leigh Phoenix*
4. Mathematics of Finance (capital budgeting, economic analysis Scholes—Black Diffusion Theory)—*K. Bingham Cady*
5. Fracture and Reliability—*Hui, Phoenix, Zehnder*
6. Response Theory—*K. Bingham Cady*
7. Nuclear Reactor Theory—*K. Bingham Cady*
8. Determination of Elastic Constance of Composite Materials Using Ultrasonics—*Wolfgang Sachse*

Engineering Mechanics

Fall semester

Course	Title	Credits
T&AM 663	Solid Mechanics I	4
T&AM 570	Intermediate Dynamics	3
or		
T&AM 610	Methods of Applied Mathematics I	3
T&AM 800	Seminar	1

Spring semester

or		
CEE 672	Finite Element Analysis of Solids and Structures	3
T&AM 800	Seminar	1

MASTER OF ENGINEERING (ENGINEERING PHYSICS)

Offered by the School of Applied and Engineering Physics

Contact: 212 Clark Hall, 255-5198,
www.aep.cornell.edu

The M.Eng. (Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, nanostructure

science and technology, device physics, materials characterization, or software engineering. Wide latitude is allowed in the choice of the required design project.

Students plan their program in consultation with the program chair. The objective is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering; those who have majored in an engineering discipline generally seek to strengthen their physics base. Candidates coming from industry usually want instruction in both areas. Students granted the degree will have demonstrated competence in an appropriate core of basic physics. If this has not been accomplished before entering the M.Eng. program, undergraduate classes in electricity and magnetism, classical mechanics, and quantum mechanics may be required in addition to the classes taken to satisfy the M.Eng. requirements.

The degree requires 30 credits of graduate-level courses or their equivalent, with at least C- in each course, and distributed as follows:

1. a design project in applied science or engineering with a written final report (6 to 12 credits)
2. an integrated program of graduate-level courses, as discussed below (17 to 23 credits)
3. a required special-topics seminar course (1 credit)

The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the university faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory physics course is required.

The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. Its purpose is to provide an appropriate combination of physics and physics-related courses (applied math, statistical mechanics, applied quantum mechanics) and engineering electives (e.g., courses in biophysics, chemical engineering, electrical engineering, materials science, computer science, mechanical engineering, or nuclear engineering). Additional science and engineering electives may be included. Some courses at the senior level (400) are acceptable for credit toward the degree; other undergraduate courses may be required as prerequisites but may not be credited toward the degree.

MASTER OF ENGINEERING (GEOLOGICAL SCIENCES)

Offered by the Department of Earth and Atmospheric Sciences

Contact: 2124 Snee Hall, 255-5466,
www.eas.cornell.edu

The M.Eng. (Geological Sciences) degree program is a one-year course of study that provides future professional geologists or engineers with the geological and

engineering background they will need to analyze and solve engineering problems that involve geological variables and concepts. Individual programs are developed within two established options: geohydrology and environmental geophysics.

Incoming students are expected to have a strong background in mathematics, the physical sciences, and chemistry and have a strong interest and substantial background in the geological sciences. The 30-hour M.Eng. program is intended to extend and broaden this background to develop competence in four subject categories. Typical categories for the geohydrology option are porous media flow, geology, geochemistry, and numerical modeling. Typical categories for the environmental geophysics option are geophysics, geology, porous media fluid flow, and computer methods. The courses a student selects in a category will vary depending on the student's background. No courses may be required in some categories, and the categories can be adjusted to the student's interest and needs. Alternatives to numerical modeling in the geohydrology option could be economics or biochemistry, for example. To count toward the 30-credit degree requirement, courses must be at a graduate or advanced undergraduate level.

At least 10 of the 30 hours in the program must involve engineering design. Much of this requirement is normally met through a design project, which can account for over a third of the program (12 of 30 credits) and must constitute at least 3 credits. The design project must involve a significant geological component and lead to concrete conclusions or recommendations of an engineering nature. The project topic can be drawn from a student's nonacademic work experience but carried out or further developed with advice from a Cornell faculty member with expertise in the project area selected by the student. A design project in geohydrology would normally involve groundwater flow and mass transport. A design project in environmental geophysics might involve implementation of a field survey using seismological, geoelectrical, or ground-penetrating radar methods to map subsurface stratigraphic or structural features that control groundwater flow or contamination at a site. Projects are presented both in written form and orally in a design seminar at the end of the year.

MASTER OF ENGINEERING (MATERIALS SCIENCE AND ENGINEERING)

Offered by the Department of Materials Science and Engineering

Contact: 214 Bard Hall, 255-9159,
www.mse.cornell.edu

Students who have completed a four-year undergraduate program in engineering or the physical sciences can be considered for admission into the M.Eng. (Materials) program. This 30-credit program includes course work and a master's design project. The project, which requires individual effort and initiative, is carried out under the supervision of a faculty member. Twelve credits are devoted to the project, which is normally experimental in

nature, although computational or theoretical projects are also possible.

Courses for the additional 18 credits are selected from the graduate-level classes in materials science and engineering and from other related engineering fields approved by the faculty. Typically half of the courses are from MS&E. One 3-credit technical elective must include advanced math (modeling, computer application, or computer modeling), beyond the MS&E undergraduate requirements.

MASTER OF ENGINEERING (MECHANICAL)

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: 107 Upson Hall, 255-5250,
www.mae.cornell.edu

The M.Eng. (Mechanical) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

Candidates may concentrate on any of a variety of specialty areas, including biomechanical engineering, combustion, propulsion and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, and mechanical systems and design.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty adviser. This program and any subsequent changes must also be approved by the chair of the M&AE Master of Engineering committee. An individual student's curriculum includes a 4- to 8-credit design course, a minimum of 12 credits in mechanical engineering or a closely related field, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have a mechanical engineering design focus and have the close supervision of a faculty member.

All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have special approval of the M&AE master of engineering chair.

The technical electives may be courses of appropriate level in math, physics, chemistry, or engineering; a maximum of 3 credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. Students are expected to use technical electives to develop proficiency in math beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering math or statistics are particularly recommended.

Check with the M&AE graduate field office (107 Upson Hall) for additional degree requirements.

Students enrolled in the M.Eng. (Mechanical) degree program may take courses that also satisfy the requirements of the bioengineering, engineering management, or systems manufacturing programs leading to special dean's certificates in those areas.

MASTER OF ENGINEERING (NUCLEAR)

Offered by the Nuclear Engineering Program

Contact: 312 Rhodes Hall, 255-1453,
www.gradschool.cornell.edu/academics_
research/fields/nucl-sci.html

The two-semester curriculum leading to the M.Eng. (Nuclear) degree is intended primarily for individuals who want a terminal professional degree, but it may also serve as preparation for doctoral study in nuclear science and engineering. The course of study covers the basic principles of nuclear reactor systems with a major emphasis on reactor safety and radiation protection and control.

The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate concentrations. The recommended background is (1) an accredited baccalaureate degree in engineering, physics, or applied science; (2) physics, including atomic and nuclear physics; (3) math, including advanced calculus; and (4) thermodynamics. Students should see that they fulfill these requirements before beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. General admission and degree requirements are described in the college's introductory section.

The following courses, or equivalents, are included in the 30-credit program:

Fall semester

NS&E 509 Nuclear Physics for Applications
Technical elective

Spring semester

NS&E 545 Energy Seminar
Technical elective
Engineering design project
Mathematics or physics elective

Note: Engineering electives should be in a subject area relevant to nuclear engineering, such as energy conversion, radiation protection and control, feedback control systems, magnetohydrodynamics, controlled thermonuclear fusion, and environmental engineering. The list below gives typical electives.

A&EP 606/ECE 581 Introduction to Plasma Physics (fall, 4 credits)

A&EP 607 Basic Plasma Physics (spring, 4 credits)

A&EP 661 Microcharacterization (fall, 3 credits)

ECE 457 Silicon Device Fundamentals (fall, 4 credits with lab)

M&AE 478/CHEME 372 Feedback Control Systems (fall, 4 credits)

MS&E 459 Physics of Modern Materials Analysis (spring, 3 credits)

MS&E 603 Analytical Techniques for Materials Science (spring, 4 credits)

NS&E/A&EP/ECE 484/M&AE 459 Introduction to Controlled Fusion: Principles and Technology (spring, 3 credits)

NS&E 521 Radiation Effects in Materials (fall, 1-3 credits)

MASTER OF ENGINEERING (OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING)

Offered by the School of Operations Research and Industrial Engineering

Contact: 201 Rhodes Hall, 255-9128,
www.orie.cornell.edu

This two-semester professional degree program stresses applications of operations research and industrial engineering. The centerpiece of the program is a team-based project on a significant real-world problem. The course work centers on additional study of analytical techniques, with particular emphasis on engineering applications, especially in the design or improvement of systems in manufacturing, information, finance, and nonprofit organizations.

General admission and degree requirements are described in the introductory "Degree Programs" section. The M.Eng. (OR&IE) program is intended for three groups of students: graduates of the undergraduate major in ORE who wish to expand their practical knowledge of the field; Cornell undergraduates in other math-based area who want to broaden their exposure to OR&IE; and qualified non-Cornellians with strong backgrounds from other programs in the United States and abroad.

Undergraduates majoring in operations research and engineering may be interested in a program that can lead, in the course of six years, to B.S., M.Eng. (Operations Research and Industrial Engineering), and M.B.A. degrees. See "Master of Engineering Degrees."

To ensure completion of the program in two semesters, the entering student should have completed courses in probability and statistics and in computer science, as well as four semesters of mathematics, through differential equations, linear algebra, and multivariate calculus.

Program requirements include a core of OR&IE courses plus technical electives chosen from a broad array of offerings. The choice of a particular elective sequence plus a specific project course results in completion of one of several options within the program. These include the applied operations research option, the manufacturing option, the financial engineering option, the systems engineering option, the information technology concentration, and the Semester in Manufacturing. These options are offered jointly with various other Cornell departments and schools and they provide the opportunity to interact on projects and in class with specialists in other engineering fields and in business. Many students select the applied operations research option, offered only by OR&IE, which has project teams made

up entirely of OR&IE M.Eng. students and offers the broadest choice of elective courses and career alternatives, in business and elsewhere. Students interested in an option other than the applied operations research option should obtain further information from the following: manufacturing option, Center for Manufacturing Enterprise, 291 Grumman Hall, 255-5545; financial engineering option, systems engineering option, and information technology option, 201 Frank H. T. Rhodes Hall, 255-9128; semester in manufacturing option, 304 Sage Hall, 255-4691. For students lacking an undergraduate degree in operations research, the financial engineering option, which is highly specialized, may entail additional prerequisites or more than two semesters.

1. For matriculants with preparation comparable to that provided by the undergraduate major in operations research and engineering:

<i>Fall semester</i>	<i>Credits</i>
OR&IE 516 Case Studies	1
OR&IE 893 Applied OR&IE Colloquium	1
M.Eng. project	1
Technical electives	12

Spring semester

OR&IE 894 Applied OR&IE Colloquium	1
M.Eng. project	minimum of 4
Technical electives	10

2. For matriculants from other majors who minimally fulfill the prerequisite requirements (students who have the equivalent of OR&IE 520, 523, and 560 will take other OR&IE electives in their place):

<i>Fall semester</i>	<i>Credits</i>
OR&IE 560 Engineering Probability and Statistics II	4
OR&IE 520 Optimization I	4
OR&IE 522 Topics in Linear Optimization	1
OR&IE 516 Case Studies	1
OR&IE 580 Simulation Modeling and Analysis	4
OR&IE 893 Applied OR&IE Colloquium	1
M.Eng. project	1

Spring semester

OR&IE 523 Introduction to Stochastic Processes I	4
OR&IE 894 Applied OR&IE Colloquium	1
M.Eng. project	minimum of 4
Technical electives	5

For both of the above pro forma schedules, at least 12 credit hours of the specified electives must be chosen from the list of courses offered by the School of Operations Research and Industrial Engineering. For scheduling reasons, some options may require an additional summer, depending on the student's preparation.

The project requirement can be met in a variety of ways. Common elements in all project experiences include working as part of a group of three to five students on an engineering design problem, meeting with a faculty member on a regular basis, and oral and written presentation of the results

obtained. Most projects address problems that actually exist in manufacturing firms, financial firms, and service organizations such as hospitals.

Additional program requirements are described in the *Master of Engineering Handbook*. For further details, see the contact information at the beginning of this section.

As part of their undergraduate ORE major or M.Eng. (OR&IE) curriculum, students may study several subjects that are required for the Johnson Graduate School M.B.A. This early start on business degree requirements may make it possible to get both the M.Eng. and the M.B.A. in two years, rather than the usual three. For details, see "Cooperative Program with the Johnson Graduate School of Management" under "Master of Engineering Degrees," and contact the OR&IE M.Eng. office, 201 Rhodes Hall.

MASTER OF ENGINEERING (SYSTEMS)

Offered by the System Engineering Program

Contact: 203 Rhodes Hall, 254-8998,
www.systemseng.cornell.edu

Today's engineering environment is uncertain. Due in part to emerging technologies and globalization, engineers must think in terms of integrated, globally optimized solutions to devise designs that address the complexity of the real world. Success in this environment requires a comprehensive understanding of systems engineering.

The Systems Engineering Program emphasizes the fundamentals of requirements analysis, systems architecture, product development, project management, optimization, simulation, and systems analysis. The program's strength in these areas helps promote an understanding of the systems process throughout an organization and prepares students to transition from designing and managing independent engineering projects to creating integrated solutions that meet customer needs.

The M.Eng. (Systems) program is designed for students who want to specialize in Systems Engineering. It requires a minimum of 30 credit hours. Students must complete the following required courses:

Applied Systems Engineering (3 credits)

Systems Architecture, Behavior, and Optimization (3 credits)

Project Management (4 credits)

Systems Engineering Project (6–8 credits)

Approved electives account for the remaining credits to reach the minimum of 30 credits required for the degree and are to be chosen from the following areas:

Systems Modeling and Analysis (at least one course)

Courses that enrich the understanding of generic methods to design and analyze systems including courses in simulation, feedback and control, decision-making, or risk analysis.

Systems Applications

Courses that provide depth in the design and operation of specific systems such as power,

communication, software, manufacturing, or transportation.

Systems Management (at most one course)

Courses that enhance student understanding of the management activities and processes which are necessary to successfully design and operate systems.

In addition to the Master of Engineering degree in Systems, the Systems Engineering Program offers a second course of study: the Option in Systems Engineering. The SE Option is designed for students who want Systems Engineering as part of the Master of Engineering degree in another engineering discipline.

ENGINEERING COURSES

Courses offered in the College of Engineering are listed under the various departments and schools.

Courses are identified with a standard abbreviation followed by a three-digit number.

Engineering Communications	ENGR C
Engineering Distribution	ENGR D
Engineering General Interest	ENGR G
Introduction to Engineering	ENGR I
Biological and Environmental Engineering	BEE
Applied and Engineering Physics	A&EP
Chemical and Biomolecular Engineering	CHEME
Civil and Environmental Engineering	CEE
Computer Science	COM S
Earth and Atmospheric Sciences	EAS
Electrical and Computer Engineering	ECE
Information Science	INFO
Materials Science and Engineering	MS&E
Mechanical and Aerospace Engineering	M&AE
Nuclear Science and Engineering	NS&E
Operations Research and Industrial Engineering	OR&IE
Theoretical and Applied Mechanics	T&AM

ENGINEERING COMMON COURSES

Engineering Communications Courses

Courses in this category, offered by the Engineering Communications Program (ECP), develop writing and oral-presentation skills needed by engineers.

ENGR C 334(3340) Independent Study in Engineering Communications

1–3 credits, variable. Letter grades. TBA with instructor.

Members of the ECP occasionally give independent (also called "directed") studies in engineering communications, typically with students who are ready for advanced work in technical writing. A student doing a directed study works one-on-one with an ECP instructor to pursue an aspect of professional communications in more depth than is possible in the ECP's regular courses. Various

types of projects are possible, e.g., studying forms of technical documentation, creating user manuals, analyzing and producing technical graphics, reading and writing about problems in engineering practice, and writing about technical topics for the public.

ENGR C 335(3350) Communications for Engineering Managers

Fall, spring. 3 credits. Fulfills college technical-writing requirement. May be used as free or approved elective in expressive arts. Intended for juniors and seniors. Limited to 20 students per sec. Prerequisite: two first-year writing seminars and field affiliation.

This seminar focuses on communications in organizational contexts common to engineering graduates. Topics may include internal and external communications; balancing visual and verbal elements in documents and oral presentations; teamwork and leadership; running and attending meetings; management strategies; and communicating with colleagues, superiors, subordinates, and clients. Students develop writing and management strategies that they apply in individual and team assignments. They learn how to organize technical and managerial information, articulate and support ideas, and communicate with technical and nontechnical audiences. (Note: Absences are limited to three, after which sharp penalties occur.)

ENGR C 350(3500) Engineering Communications

Fall and spring. 3 credits. Designed for juniors and seniors. Fulfills college technical-writing requirement. May be used as free or approved elective in expressive arts. Limited to 20 students per sec. Prerequisite: two first-year writing seminars and affiliation with a major. Letter grades.

The ability to communicate well is a factor in being hired as well as being promoted; the higher an engineer rises, the more writing and presentation he or she will do. This course prepares students for these important activities. They write various types of documents (e.g., letters, memos, executive summaries, problem analyses, proposals, progress reports), give oral presentations, and incorporate graphics in both their oral and written work. Students learn how to communicate specialized information to different audiences (e.g., technical and nontechnical people, colleagues and clients, peers and supervisors, in-house departments, and government agencies), work in teams, and address organizational and ethical issues. The course material is drawn from professional contexts, principally engineering, and it generates lively discussion. The class size ensures close attention to each student's work. (Note: Absences are limited to three, after which sharp penalties occur.)

Engineering Distribution Courses

Courses in this category are sophomore-level courses cross-listed with a department. These courses are intended to introduce students to more advanced concepts of engineering and may require pre- or corequisites.

ENGR D 201(2010) Introduction to the Physics and Chemistry of the Earth (also EAS 201(2010))

Fall. 3 credits. Prerequisite: PHYS 112 or 207. J. Phipps Morgan.

Covers the formation of the solar system: accretion and evolution of the earth; the rock

cycle: radioactive isotopes and the geological time scale, plate tectonics, rocks and minerals, earth dynamics, mantle plumes; the hydrologic cycle: runoff, floods and sedimentation, groundwater flow, contaminant transport; and the weathering cycle: chemical cycles, CO₂ (weathering), controls on global temperature (CO₂ or ocean currents), oil and mineral resources.

ENGRD 202(2020) Mechanics of Solids (also T&AM 202(2020))

Fall, spring. 4 credits. Prerequisite: PHYS 112, co-registration in MATH 192, or permission of instructor.

Covers principles of statics, force systems, and equilibrium; frameworks; mechanics of deformable solids, stress, strain, statically indeterminate problems; mechanical properties of engineering materials; axial force, shearing force, bending moment, plane stress; bending and torsion of bars.

ENGRD 203(2030) Dynamics (also T&AM 203(2030))

Fall, spring. 3 credits. Prerequisite: ENGRD/T&AM 202, preregistration in MATH 293, or permission of instructor.

Newtonian dynamics of a particle, systems of particles, a rigid body. Kinematics, motion relative to a moving frame. Impulse, momentum, angular momentum, energy. Rigid-body kinematics, angular velocity, moment of momentum, the inertia tensor. Euler equations, the gyroscope.

ENGRD 210(2100) Introduction to Circuits for Electrical and Computer Engineers (also ECE 210(2100))

Fall, spring. 4 credits. Corequisites: MATH 293 and PHYS 213. All students must take a lab and a section. Fall, J. C. Belina and M. C. Kelley; spring, C. E. Seyler and M. C. Kelley.

First course in electrical circuits and electronics that establishes the fundamental properties of circuits with application to modern electronics. Topics include circuit analysis methods, operational amplifiers, basic filter circuits, and elementary transistor principles. The laboratory experiments are coupled closely with the lectures.

ENGRD 211(2110) Computers and Programming (also COM S 211(2110))

Fall, spring, summer. 3 credits. Prerequisite: COM S 100 or equivalent course in Java or C++.

Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, object-oriented programming (classes, objects, types, sub-typing), graphical user interfaces, algorithm analysis (asymptotic complexity, big "O" notation), recursion, data structures (lists, trees, stacks, queues, heaps, search trees, hash tables, graphs), simple graph algorithms. Java is the principal programming language.

ENGRD 219(2190) Mass and Energy Balances (also CHEME 219(2190))

Fall. 3 credits. Corequisite: physical chemistry course or permission of instructor. W. L. Olbricht.

Engineering problems involving material and energy balances. Batch and continuous reactive systems in the steady and unsteady states. Introduction to phase equilibria for multicomponent systems. Examples drawn from a variety of chemical and biological processes.

ENGRD 221(2210) Thermodynamics (also M&AE 221(2210))

Fall, spring, may be offered summer. 3 credits. Prerequisites: MATH 192, Calculus for Engineers, and PHYS 112, Physics I, Mechanics.

Presents the definitions, concepts, and laws of thermodynamics. Topics considered include applications to ideal and real gases, vapor and gas power systems, refrigeration, and heat pump systems. Examples and problems are related to contemporary aspects of energy and power generation and broader environmental issues.

ENGRD 230(2300) Introduction to Digital Logic Design

Fall, spring. 4 credits. Prerequisite: COM S 100. Fall, D. L. Long and W. E. Swartz; spring, D. H. Albonesi and D. L. Long.

Introduction to the design and implementation of practical digital circuits. Topics include transistor network design, Boolean algebra, combinational circuits, sequential circuits, finite state machine design, and analog and digital converters. Design methodology using both discrete components and hardware description languages is covered in the weekly laboratory portion of the course.

ENGRD 241(2410) Engineering Computation

Spring. 3 credits. Prerequisites: COM S 100 and MATH 293. Corequisite: MATH 294. Recommended: completion of MATH 294. C. A. Shoemaker.

Introduction to numerical methods, computational mathematics, and probability and statistics. Development of programming and graphics proficiency with MATLAB and spreadsheets. Topics include: Taylor-series approximations, numerical errors, condition numbers, operation counts, convergence, and stability, probability distributions, hypothesis testing. Included are numerical methods for solving engineering problems that entail roots of functions, simultaneous linear equations, statistics, regression, interpolation, numerical differentiation and integration, and solution of ordinary and partial differential equations, including an introduction to finite difference methods. Applications are drawn from different areas of engineering. There is a group project using these methods on a realistic engineering problem.

ENGRD 251(2510) Engineering for a Sustainable Society (also BEE 251(2510))

Fall. 3 credits. Corequisite: MATH 293.

Case studies of contemporary environmental issues including pollutant distribution in natural systems, air quality, hazardous waste management, and sustainable development. Emphasis is on the application of mathematics, physics, and engineering sciences to solve energy and mass balances in environmental sciences. Students are introduced to the basic chemistry, ecology, biology, ethics, and environmental legislation relevant to the particular environmental problem.

ENGRD 252(2520) The Physics of Life (also A&EP 252(2520))

Fall. Prerequisites: MATH 192, CHEM 207 or 211, and co-registration in or completion of PHYS 213. L. Pollack.

Introduces the physics of biological macromolecules (e.g., proteins, DNA, RNA) to students of the physical sciences or engineering who have little or no

background in biology. The macromolecules are studied from three perspectives. First, the biological role or function of each class of macromolecules is considered. Second, a quantitative description of the physical interactions that determine the behavior of these systems is provided. Finally, techniques that are commonly used to probe these systems, with an emphasis on current research, are discussed.

ENGRD 260(2600) Principles of Biological Engineering (also BEE 260(2600))

Spring. 3 credits. Corequisite: MATH 293. Offered spring 2006 and fall 2006 and every fall thereafter.

Focuses on the integration of biological systems with engineering, math, and physical principles. Students learn how to formulate equations for biological systems in class and then practice it in homework sets. Topics range from molecular principles of reaction kinetics and molecular binding events to macroscopic applications, such as energy and mass balances of bioprocessing and engineering design of implantable sensors.

ENGRD 261(2610) Mechanical Properties of Materials: From Nanodevices to Superstructures (also MS&E 261(2610))

Fall. 3 credits. S. Sass.

Examines the mechanical properties of materials (e.g., strength, stiffness, toughness, ductility) and their physical origins. The relationship of the elastic, plastic, and fracture behavior to microscopic structure in metals, ceramics, polymers, and composite materials is explored. Effects of time and temperature on materials properties are discussed. This course emphasizes considerations for design and optimal performance of materials and engineered objects.

ENGRD 262(2620) Electronic Materials for the Information Age (also MS&E 262(2620))

Spring. 3 credits. Prerequisite: MATH 192. Corequisite: PHYS 213 or permission of instructor. Staff.

Examines the electrical and optical properties of materials. Topics include the mechanism of electrical conduction in metals, semiconductors and insulators, the tuning of electrical properties in semiconductors, the transport of charge across metal/semiconductor and semiconductor/semiconductor junctions, and the interaction of materials with light. Applications in electrophotography, solar cells, electronics, and display technologies are discussed.

ENGRD 264(2640) Computer-Instrumentation Design (also A&EP 264(2640))

Fall, spring. 3 credits. Prerequisite: COM S 100; permission of instructor for seniors. 1 lec, 1 lab. T. Cool.

Covers the use of a small computer in an engineering or scientific research laboratory. The experiments and devices investigated include: analog to digital converters (ADC), digital to analog converters (DAC), digital input/output (I/O), counter/timers, serial port communications, digital temperature control, error analysis, nonlinear least squares fitting of experimental data, viscosity of fluids, a robot arm, and thermal diffusion. Both C++ programming and graphical programming with LabVIEW™ are used for computer interfacing to hardware. A second goal of the course is to

develop effective written communication skills in the context of science and engineering. Students prepare progress reports, technical reports, and formal articles based on the experiments.

ENGRD 270(2700) Basic Engineering Probability and Statistics

Fall, spring, summer. 3 credits.

Prerequisites: MATH 191 and 192. MATH 294 should be completed before or concurrently with ENGRD 270.

Gives students a working knowledge of basic probability and statistics and their application to engineering. Includes computer analysis of data and simulation. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.

[ENGRD 321(3510) Numerical Methods in Computational Molecular Biology (also BIOBM 321[3210], COM S 321[3510])]

Fall. 3 credits. Prerequisites: at least one calculus course (e.g., MATH 106, 111, or 191) and a linear algebra course (e.g., MATH 221 or 294 or BTRY 417); COM S 100 or equivalent and some familiarity with iteration, arrays, and procedures; knowledge of discrete probability and random variables at the level of COM S 280. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, or 421. Offered even-numbered years.

An introduction to numerical computing using MATLAB organized around five applications: the analysis of protein shapes, dynamics, protein folding, score functions, and field equations. Students become adept at plotting, solving linear equations, least squares fitting, and cubic spline interpolation. More advanced problem-solving techniques that involve eigenvalue analysis, the solution of ordinary and partial differential equations, linear programming, and nonlinear minimization are also treated. The goal of the course is to develop a practical computational expertise with MATLAB and to build mathematical intuition for the problems of molecular biology.]

ENGRD 322(3220) Introduction to Scientific Computation (also COM S 322[3220])

Spring, summer. 3 credits. Prerequisites: COM S 100 and MATH 221 or 294; knowledge of discrete probability and random variables at the level of COM S 280.

COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, 421.

An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. Uses the MATLAB computing environment. Stresses sectorization, efficiency, reliability, and stability. Special lectures cover computational statistics.

Courses of General Interest

Courses in this category are of general interest and cover technical, historical, and social issues relevant to the engineering profession. These courses may also include seminar or tutorial type courses.

ENGRG 100J(1000J) Cooperative Workshop for COM S 100J(1000J)

Fall, spring. 1 credit. Corequisite: COM S 100J. S-U grades only.

Academic Excellence Workshop for COM S 100J. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in COM S 100J.

ENGRG 100M(1000M) Cooperative Workshop for COM S 100M(1000M)

Fall, spring. 1 credit. Corequisite: COM S 100M. S-U grades only.

Academic Excellence Workshop for COM S 100M. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in COM S 100M.

ENGRG 150(1050) Engineering Seminar

Fall. 1 credit. Prerequisite: freshman standing. S-U grades only.

First-year engineering students meet in groups of 18 to 20 students weekly with their faculty advisers to discuss a range of engineering topics. Discussions may include the engineering curriculum and student programs, what different types of engineers do, the character of engineering careers, active research areas in the college and in engineering in general, and study and examination skills useful for engineering students. Groups may visit campus academic, engineering, and research facilities.

ENGRG 160(1060) Exploration in Engineering Seminar

Summer. 1 credit. Designed for junior and senior high-school students.

Introduction to several engineering fields, such as: bioengineering, chemical engineering, civil engineering, computer science, earth sciences, electrical and computer engineering, engineering physics, materials science, mechanical engineering, operations research. Hands-on experience in weekly labs, as well as design projects to introduce concepts of the engineering design process.

ENGRG 190(1090) Cooperative Workshop for MATH 190(1900)

Fall. 1 credit. Corequisite: MATH 190. S-U grades only.

Academic Excellence Workshop for MATH 190. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 190.

ENGRG 191(1091) Cooperative Workshop for MATH 191(1910)

Fall. 1 credit. Corequisite: MATH 191. S-U grades only.

Academic Excellence Workshop for MATH 191. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 191.

ENGRG 192(1092) Cooperative Workshop for MATH 192(1920)

Fall, spring. 1 credit. Corequisite: MATH 192. S-U grades only.

Academic Excellence Workshop for MATH 192. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 192.

ENGRG 210(1010) Cooperative Workshop for COM S 211(2110)

Fall, spring. 1 credit. Corequisite: COM S 211. S-U grades only.

Academic Excellence Workshop for COM S 211. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in COM S 211.

ENGRG 211(1011) Cooperative Workshop for CHEM 211(2110)

Fall, spring. 1 credit. Corequisite: CHEM 211. S-U grades only.

Academic Excellence Workshop for CHEM 211. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CHEM 211.

[ENGRG 250(2500) Technology in Society (also ECE/HIST 250[2500], S&TS 250[2501])]

Fall. 3 credits. Humanities elective for engineering students. Offered alternate years; not offered 2005–2006. R. R. Kline.

Investigates the history of technology in Europe and the United States from ancient times to the present. Topics include the economic and social aspects of industrialization; the myths of heroic inventors like Morse, Edison, and Ford; the government's regulation of technology; the origins of mass production; and the spread of the automobile and microelectronics cultures in the United States.]

ENGRG 293(1093) Cooperative Workshop for MATH 293(2930)

Fall, spring. 1 credit. Corequisite: MATH 293. S-U grades only.

Academic Excellence Workshop for MATH 293. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 293.

ENGRG 294(1094) Cooperative Workshop for MATH 294(2940)

Fall, spring. 1 credit. Corequisite: MATH 294. S-U grades only.

Academic Excellence Workshop for MATH 294. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 294.

ENGRG 298(2980) Inventing an Information Society (also ECE 298[2980], AM ST 292[2980], HIST 292[2920], S&TS 292[2921])

Spring. 3 credits. Approved for humanities distribution. R. R. Kline.

Explores the history of information technology from the 1830s to the present by considering the technical and social history of telecommunications, the electric-power industry, radio, television, computers, and the Internet. Emphasis is placed on the changing relationship between science and technology, the economic aspects of innovation, gender and technology, and other social relations of this technology.

ENGRG 323(3230) Engineering Economics and Management (also CEE 323[3230])

Spring, usually offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors. Students must register under CEE 323. D. P. Loucks.

Introduction to engineering and business economics and to project management. Intended to give students a working knowledge of money management and how to make economic comparisons of alternative engineering designs or projects. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and project-management problems.

ENGRG 357(3570) Engineering in American Culture (also AM ST 356[3570], S&TS 357[3571], HIST 357[3570])

Fall. 4 credits. Approved for humanities distribution. Offered alternate years. R. R. Kline.

The history of engineering in the United States from 1800 to the present. Investigates the education of engineers, how engineering changed from a masculine profession to one more open to women, the building of monumental projects, public images of the engineer, enthusiasm and disasters, and engineering in a global setting.

ENGRG 360(3600) Ethical and Social Issues in Engineering (also S&TS 360[3601])

Spring. 3 credits. Open to sophomores. P. Doing.

Studies major ethical and social issues involved in engineering practice. The issues include responsibility for designing products that do not harm public health, safety, and welfare; rights of engineers in large corporations; risk analysis and the principle of informed consent; conflict of interest; whistleblowing; trade secrets; and broader concerns such as environmental degradation, cost of health care, computer ethics, and working in multinational corporations. Codes of ethics of the professional engineering societies, ethical theory, and the history and sociology of engineering are introduced to analyze these issues.

ENGRG 461(4610) Entrepreneurship for Engineers (also M&AE 461[4610], OR&IE 452[4152])

Fall. 3 credits. Prerequisite: upper-class engineers or permission of instructor. For description, see M&AE 461.

ENGRG 678(6780) Teaching Seminar

Fall, spring. 1 credit. S-U grades only. Independent study promoting reflection on teaching styles and experiences for teaching assistants in the College of Engineering. Participants must be concurrently fulfilling a TA assignment. Requirements include participation in the College of Engineering's TA Development Program, consisting of an initial one and one-half day training session, followed by one evening microteaching session early in the semester; participation in the TA midterm evaluation process, followed by a formal feedback session with program staff; and completion of a reflective journal on teaching experiences. All components are designed to provide TAs with the opportunity to process their understanding of teaching and learning through the formulation of

questions, concepts, and theories related to their experiences.

Introduction to Engineering Courses

Courses in this category are freshman-level courses intended to introduce students to various aspects of engineering. They have no prerequisites and are always cross-listed with a department.

ENGRI 101(1010) Introduction to Biomedical Engineering Analysis (also BME 101[1010])

Spring. 1 credit. Corequisite: BIO G 110. Lec and lab. D. Grubb and S. D. Archer. Integrated with BIO G 110 to provide examples of engineering analysis of biological topics described in BIO G 110. Emphasizes molecular, cellular, and physiological systems.

ENGRI 102(1020) Introduction to Nanoscience and Nanoengineering (also A&EP 102[1020])

Fall, spring. 3 credits. Lecture/laboratory course designed to introduce freshmen to some of the ideas and concepts of nanoscience and nanotechnology. Topics include nanoscience and nanotechnology—what they are and why they are of interest; atoms and molecules; the solid state; surfaces; behavior of light and material particles when confined to nanoscale dimensions; scanning tunneling microscopy (STM), atomic force microscopy (AFM), microelectromechanical systems (MEMS) design; basic micromachining and chemical synthesis methods, i.e., "top-down" and "bottom-up" approaches to nanofabrication; how to manipulate structures on the nanoscale; physical laws and limits they place on the nanoworld; some far-out ideas. In the laboratory, students use an AFM to record atomic resolution images, use a MEMS computer-aided design software package to model the entire manufacturing sequence of a simple MEMS device, examine the simulated behavior of the device and compare it with real behavior, construct a simple STM and learn through hands on experience the basic workings of the device.

ENGRI 110(1100) Lasers and Photonics (also A&EP 110[1100])

Fall. 3 credits. A. Gaeta. Lasers have had an enormous impact on communications, medicine, remote sensing, and material processing. This course reviews the properties of light that are essential to understanding the underlying principles of lasers and these photonic technologies. There also is a strong, hands-on laboratory component in which the students build and operate a nitrogen laser and participate in several demonstration experiments such as holography, laser processing of materials, optical tweezers, and fiber optics.

ENGRI 111(1110) Nanotechnology (also MS&E 111[1110])

Fall. 3 credits. E. Giannelis. Nanotechnology has been enabling the Information Revolution with the development of even faster and more powerful devices for manipulation, storing, and transmitting information. In this hands-on course students learn how to design and manipulate materials to build devices and structures in applications ranging from computers to telecommunications to biotechnology.

ENGRI 112(1120) Introduction to Chemical Engineering (also CHEME 112[1120])

Fall. 3 credits. Prerequisite: freshman standing. T. M. Duncan. Design and analysis of processes involving chemical change. Students learn strategies for design, such as creative thinking, conceptual blockbusting, and (re)definition of the design goal, in the context of contemporary chemical and biomolecular engineering. Includes methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.

ENGRI 113(1130) Water Treatment Design (also CEE 113[1130])

Spring. 3 credits. M. L. Weber-Shirk. Students learn how to design: reservoirs to provide water during droughts, aqueducts to transport water, and water treatment plants to prevent waterborne diseases. The course includes field trips, building a computer-controlled miniature water treatment plant, and exploring new technologies for making safe drinking water.

ENGRI 115(1101) Engineering Applications of Operations Research

Fall, spring. 3 credits. Not open to OR&IE upperclass majors. Introduction to the problems and methods of operations research and industrial engineering focusing on problem areas (including inventory, network design, and resource allocation), the situations in which these problems arise, and several standard solution techniques. In the computational laboratory, students encounter problem simulations and use some standard commercial software packages.

ENGRI 116(1160) Modern Structures (also CEE 116[1160])

Fall. 3 credits. M. Sansalone. Introduction to structural engineering in the 21st century—the challenges structural engineers face and the innovative approaches they are using to address them. Using case studies of famous structures, students learn to identify different structural forms and understand how various forms carry load—using principles of statics, mechanics, and material behavior. In addition, the historical, economic, social, and political context for each structure is discussed. Case studies of failures are used to explain how structures fail in earthquakes and other extreme events, and students are introduced to analytical and experimental approaches (shake table and wind tunnel testing) to quantifying loads on structures subjected to extreme events. Types of structures considered include skyscrapers, bridges, aircraft, and underground structures.

ENGRI 117(1170) Introduction to Mechanical Engineering (also M&AE 117[1170])

Fall. 3 credits. 2 lec and 1 lab per week. Introduction to fundamentals of mechanical and aerospace engineering. The lectures cover basic topics of mechanical and aerospace engineering. Students learn and understand materials characteristics, the behavior of materials, and material selection for performing engineering function. They also learn fundamentals of fluid mechanics, heat transfer, automotive engineering, engineering design and product development, patents and intellectual property, and engineering ethics.

There is a final project in which students use the information learned to design and manufacture a product.

ENGRI 118(1180) Engineering Design: Making Digital Audio and Video Work (also T&AM 118[1180])

Spring. 3 credits. W. Sachse.

This course examines the broad range of systems and engineering technologies required to build today's remarkable music/data and video sources. Students will be introduced to elements of mechanical, electrical, materials, manufacturing, and computer engineering as they relate to the CD/DVD/MP3 players and media. Subsystems will be examined from the view of the basic science, the engineering disciplines primarily responsible, and the issues of integration with other subsystems of these devices. Laboratory sessions, demonstrations, homework and a digital audio (Exploratorium) are used to illustrate the principles of design.

ENGRI 119(1190) Biomaterials for the Skeletal System (also MS&E 119[1190])

Fall. 3 credits. C. K. Ober.

Biomaterials are at the intersection of biology and engineering. This course explores natural structural materials in the human body, their properties and microstructure, and their synthetic and semi-synthetic replacements. Bones, joints, teeth, tendons, and ligaments are used as examples, with their metal, plastic, and ceramic replacements. Topics include strength, corrosion, toxicity, wear, and bio-compatibility. Case studies of design lead to consideration of regulatory approval requirements and legal liability issues.

ENGRI 122(1120) Earthquake! (also EAS 122[1220])

Spring. 3 credits. L. D. Brown.

Explores the science of natural hazards and strategic resources. Covers techniques for locating and characterizing earthquakes, and assesses the damage they cause; methods of using sound waves to image the earth's interior to search for strategic materials; and the historical importance of such resources. Includes seismic experiments on campus to probe for groundwater, the new critical environmental resource.

ENGRI 124(1240) Designing Materials for the Computer (also MS&E 124[1240])

Spring. 3 credits. Staff.

Introduces the materials, processes, and properties of the semiconductors, polymers, ceramics, and metals used in the microelectronics industry to form integrated circuits, electronic devices, and displays. Examines lithographic processing, metallization, diffusion, ion implantation, oxidation, and other processes used in fabricating electronic devices and their packages. Discusses the technology of displays, including liquid crystal displays and light-emitting devices.

ENGRI 126(1260) Introduction to Signals and Telecommunications

Spring. 3 credits. D. F. Delchamps.

Introduces the concepts that underlie wired and wireless communication systems. Students achieve a rudimentary understanding of basic ideas such as coding and data compression; frequency content, bandwidth, and filtering; sampling and reconstruction; and time- and frequency-division multiplexing. Discussions of practical applications focus on areas such as the public switched telephone network,

ISDN, ATM, and TCP/IP. Students also develop an appreciation for the historical development of the field. The course includes both lectures and laboratory demonstrations.

ENGRI 127(1270) Introduction to Entrepreneurship and Enterprise Engineering (also M&AE 127[1270])

Spring. 3 credits. Open to all Cornell students regardless of major. Prerequisites: none.

Provides a solid introduction to the entrepreneurial process to students in engineering. The main objective is to identify and to begin to develop skills in the engineering work that occurs in high-growth, high-tech ventures. Basic engineering management issues, including the entrepreneurial perspective, opportunity recognition and evaluation, and gathering and managing resources are covered. Technical topics such as the engineering design process, product realization, and technology forecasting are discussed.

ENGRI 165(1610) Computing in the Arts (also ART 175, CIS 165[1610], COM S 165[1610], PSYCH 165[1650])

Fall. 3 credits. Complements ART 171+ and MUSIC 120+. S-U grades optional.

For description, see COM S 165.

ENGRI 167(1670) Visual Imaging in the Electronic Age (also CIS 167[1620], COM S 167[1620])

Spring. 3 credits. S-U grades optional.

For description, see ART 170.

ENGRI 172(1700) Computation, Information, and Intelligence (also COGST 172, COM S/INFO 172[1700])

Fall. 3 credits. Prerequisites: some knowledge of differentiation; permission of instructor for students who have completed equivalent of COM S 100.

An introduction to computer science using methods and examples from the field of artificial intelligence. Topics include game playing, search techniques, learning theory, compute-intensive methods, data mining, information retrieval, the web, natural language processing, machine translation, and the Turing test. This is not a programming course; rather, "pencil and paper" problem sets are assigned. Some calculus required.

APPLIED AND ENGINEERING PHYSICS

J. D. Brock, director; B. R. Kusse, associate director for undergraduate studies; F. W. Wise, director of graduate studies; R. A. Buhrman, T. A. Cool, H. G. Craighead, A. I. Gaeta, V. O. Kostroun, M. Lindau, R. V. E. Lovelace, D. Muller, L. Pollack, J. Silcox, W. W. Webb, C. Xu. Adjunct faculty: D. H. Bilderback, S. Heinekamp. Senior research associate: E. J. Kirkland. Instructor: M. J. Plisch, L. Wickham

A&EP 102(1020) Introduction to Nanoscience and Nanoengineering (also ENGRI 102[1020])

Spring. 3 credits.

Course in Introduction to Engineering series. For description, see ENGRI 130.

A&EP 110(1110) Lasers and Photonics (also ENGRI 110[1100])

Fall. 3 credits. A. Gaeta.

Course in Introduction to Engineering series. For description, see ENGRI 110.

A&EP 217(2170) Electricity and Magnetism (also PHYS 217[2217])

Fall, spring. 4 credits. Prerequisites: permission of adviser and instructor; co-registration in PHYS 216 or knowledge of special relativity at level of PHYS 116; MATH 192 or equivalent and co-registration in MATH 293 or equivalent. Staff.

Intended for students who have done well in PHYS 112 or 116 (or equivalent) and in mathematics who desire a more analytic treatment than that of PHYS 213. At the level of *Electricity and Magnetism* by Purcell. Recommended for prospective engineering physics majors. Placement quiz may be given early in semester, permitting students who find material too abstract or analytical to transfer into PHYS 213 without difficulty.

A&EP 252(2520) The Physics of Life (also ENGRD 252[2520])

Fall. Prerequisites: MATH 192, CHEM 207 or 211, and co-registration in or completion of PHYS 213. L. Pollack.

For description, see ENGRD 252.

A&EP 264(2640) Computer-Instrumentation Design (also ENGRD 264[2640])

Fall, spring. 3 credits. Prerequisites: seniors by permission of instructor; COM S 100. 1 lec, 1 lab.

For description, see ENGRD 264.

A&EP 321(3210) Mathematical Physics I

Fall, summer. 4 credits. Prerequisite: MATH 294. Intended for upper-level undergraduates in physical sciences. B. Kusse.

Review of vector analysis; complex variable theory, Cauchy-Riemann conditions, complex Taylor and Laurent series, Cauchy integral formula and residue techniques, conformal mapping; Fourier Series; Fourier and Laplace transforms; ordinary differential equations; separation of variables. Texts: *Mathematical Methods for Physicists* by Arfken and *Mathematical Physics* by Butkov.

A&EP 322(3220) Mathematical Physics II

Spring. 4 credits. Prerequisite: A&EP 321. Second of two-course sequence in mathematical physics intended for upper-level undergraduates in physical sciences. B. Kusse.

Topics include partial differential equations, Bessel functions, spherical harmonics, separation of variables, wave and diffusion equations, Laplace, Helmholtz, and Poisson's Equations, transform techniques, Green's functions; integral equations, Fredholm equations, kernels; complex variables, theory, branch points and cuts, Riemann sheets, method of steepest descent; tensors, contravariant, and covariant representations; group theory, matrix representations, class and character. Texts: *Mathematical Methods for Physicists* by Arfken and *Mathematical Physics* by Butkov.

A&EP 324(3240) Maple Supplement to Mathematical Physics 321 and 322

Spring. 1 credit. R. V. E. Lovelace.

Gives a broad introduction to Maple in applications to problems of mathematical physics similar to those covered in A&EP 321 and 322. Uses Maple to solve differential equations—both linear and nonlinear. Makes extensive use of plotting capabilities of Maple. Also covers matrices, complex functions, Laplace and Fourier transforms (and FFTs), and group theory. Gives an introduction to LaTeX.

A&EP 330(3330) Modern Experimental Optics (also PHYS 330(3300))

Fall. 4 credits. Limited enrollment.

Prerequisite: PHYS 214 or equivalent.
E. Bodenschatz.

Practical laboratory course in basic and modern optics. The various projects cover a wide range of topics from geometrical optics to classical wave properties such as interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology, and engineering. Students are also introduced to digital imaging and image processing techniques.

A&EP 333(3330) Mechanics of Particles and Solid Bodies

Fall, summer. 4 credits. Prerequisites: PHYS 112 or 116 and co-registration in A&EP 321 or equivalent or permission of instructor.

Covers Newton's mechanics; constants of the motion; many-body systems; linear oscillations; variational calculus; Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; and basic introduction to relativistic mechanics. Emphasis is on mathematical treatments, physical concepts, and applications. (At the level of *Classical Dynamics* by Marion and Thorton.)

A&EP 355(3550) Intermediate Electromagnetism

Fall, summer. 4 credits. Prerequisites: PHYS 214 or 217 and co-registration in A&EP 321 or equivalent, or permission of instructor.

Topics include vector calculus, electrostatics, analytic and numerical solutions to Laplace's equation in various geometries, electric and magnetic multipoles, electric and magnetic materials, energy in fields, quasistatics, and magnetic circuit design. Emphasis is on developing proficiency with analytical and numerical solution techniques in order to solve real-world design problems.

A&EP 356(3560) Intermediate Electrodynamics

Spring. 4 credits. Prerequisite: A&EP 355 and co-registration in A&EP 322 or equivalent, or permission of instructor.

Topics include electromagnetic waves, waveguides, transmission lines, dispersive media, radiation, special relativity, interference phenomena. Emphasis is on physical concepts and developing ability to design/analyze microwave circuits and antenna arrays.

A&EP 361(3610) Introductory Quantum Mechanics

Spring. 4 credits. Prerequisites: A&EP 333 or PHYS 318. Corequisite: A&EP 322 or equivalent; A&EP 356 or PHYS 326.

First course in the systematic theory of quantum phenomena. Topics include wave mechanics, the Dirac formalism, angular momentum, the hydrogen atom, and perturbation theory.

A&EP 363(3630) Electronic Circuits (also PHYS 360(3360))

Fall, spring. 4 credits. Prerequisites: PHYS 208 or 213 or permission of instructor.

No previous experience with electronics assumed; however, course moves quickly through introductory topics such as basic

DC circuits. Fall semester usually less crowded. 1 lec, 2 labs. Fall: E. Kirkland; spring: J. Alexander.

Students analyze, design, build, and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits: resistors, capacitors, operational amplifiers (linear amplifiers with feedback, oscillators, comparators), filters, diodes, and transistors. Digital circuits: combinatorial (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging.

A&EP 423(4230) Statistical Thermodynamics

Fall. 4 credits. Prerequisite: introductory three-semester physics sequence and one year junior-level mathematics.

Quantum statistical basis for equilibrium thermodynamics, microcanonical, canonical and grand canonical ensembles, and partition functions. Classical and quantum ideal gases, paramagnetic and multiple-state systems. Maxwell-Boltzmann, Fermi-Dirac, and Bose-Einstein statistics and applications. Introduction to systems of interacting particles. At the level of *Thermal Physics* by Kittel and Kroemer and *Statistical Physics* by Rosser.

A&EP 434(4340) Continuum Physics

Spring. 4 credits. Prerequisites: A&EP 333 and 356 or equivalent.

Topics: Elasticity and Fluid Mechanics: basic phenomena of elasticity, simple beams, stress and strain tensors, materials equations, equations of motion, general beam equations, waves; fluids: basic phenomena, Navier Stokes equation, scaling laws, Reynolds and Froude numbers, Poiseuille flows, Stokes drag on sphere, boundary layers, inviscid and incompressible flows, potential flow, conservation laws, Bernoulli equation, vorticity and circulation, life of wings, jets, instabilities, introduction to turbulence. Projects in combination with A&EP 438 possible. At the level of *Continuum Mechanics* by Lai, Rubin, and Krepl and *Introduction to Fluid Mechanics* by Tritton.

A&EP 438(4380) Computational Engineering Physics

Spring. 3 credits. Prerequisites: COM S 100, A&EP 321, 333, 355, 361, or equivalent, or permission of instructor; co-registration in 361 permitted.

Numerical computation (e.g., derivatives, integrals, differential equations, matrices, boundary-value problems, relaxation, Monte Carlo methods) is introduced and applied to engineering physics problems that cannot be solved analytically (e.g., three-body problem, electrostatic fields, quantum energy levels). Computer programming required (in C or optionally C++, FORTRAN, or Pascal). Some prior exposure to programming assumed but no previous experience with C assumed.

A&EP 440(4440) Quantum and Nonlinear Optics

Spring. 4 credits. Prerequisites: A&EP 356, 361, or equivalent.

Introduction to the fundamentals of the interaction of laser light with matter. Topics include the propagation of laser beams in bulk media and guided-wave structures, the origins of optical nonlinearities, harmonic generation, self-focusing, optical bistability, propagation of ultrashort pulses, solitons,

optical phase conjugation, optical resonance and two-level atoms, atom cooling and trapping, multiphoton processes, spontaneous and simulated scattering, and ultra-intense laser-matter interactions.

A&EP 450(4500) Introductory Solid State Physics (also PHYS 454(4454))

Fall. 4 credits. Highly recommended: some exposure to quantum mechanics at level of PHYS 443, A&EP 361, or CHEM 793.

Introduction the physics of crystalline solids. Covers crystal structures; electronic states; lattice vibrations; and metals, insulators, and semiconductors. Computer simulations of the dynamics of electrons and ions in solids. Covers optical properties, magnetism, and superconductivity as time allows. The majority of the course addresses the foundations of the subject, but time is devoted to modern and/or technologically important topics such as quantum size effects. At the level of *Introduction to Solid State Physics* by Kittel or *Solid State Physics* by Ashcroft and Mermun.

A&EP 470(4700) Biophysical Methods (also BIONB 470(4700))

Fall. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level.

Recommended: some knowledge of cellular biology. Letter grades only.

Overview of the diversity of modern biophysical experimental techniques used in the study of biophysical systems at the cellular and molecular level. Topics include methods that examine both structure and function of biological systems, with emphasis on the applications of these methods to biological membranes. The course format includes assigned literature reviews by the students on specific biophysics topics and individual student presentations on these topics. The course is intended for students of the engineering, physics, chemistry, and biological disciplines who seek an introduction to modern biophysical experimental methods.

A&EP 484(4840) Introduction to Controlled Fusion: Principles and Technology (also ECE/NS&E 484(4840), M&AE 459(4590))

Spring. 3 credits. On demand.

Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students.

For description, see NSE 484.

A&EP 490-491(4900-4910) Independent Study in Engineering Physics

Fall, spring. Credit TBA.

Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the faculty. The study can take a number of forms; for example, design of laboratory apparatus, performance of laboratory measurements, computer simulation or software developments, theoretical design and analysis. Details TBA with respective faculty member.

A&EP 550(5500) Applied Solid State Physics

Spring. 3 credits. Prerequisites: A&EP 356, 361, 423, 450 or equivalent.

Directed at students who have had an introductory course in solid state physics at the level of Kittel. Concentrates on the application of the quantum mechanical theory of solid state physics to semiconductor

materials, solid state electronic devices, solid state detectors and generators of electro-magnetic radiation, superconducting devices and materials, the nonlinear optical properties of solids, ferromagnetic materials, nanoscale devices, and mesoscopic quantum mechanical effects. The course stresses the basic, fundamental physics underlying the applications rather than the applications themselves. At the level of *Introduction to Applied Solid State Physics* by Dalven.

**A&EP 571(5710) Biophysical Methods
Advanced Laboratory**

Spring, first three weeks of Jan. or TBA during spring semester. 3 credits. Prerequisite: A&EP 470 highly recommended but qualified students who have not taken A&EP 470 also accepted. Letter or S-U grades. M. Lindau.

Offered to students in the engineering, physics, chemistry and biological disciplines who are interested in research at the interface between physical sciences/engineering and life sciences. In groups of two, participants perform five experiments in research laboratories on state-of-the-art equipment. Lab training sessions are arranged individually in January and throughout the spring semester. Typically each experiment is two days in the lab plus one day for analysis and report writing. The course is intended for students who seek hands-on introduction to modern biophysical experimental methods.

**A&EP 607(6070) Advanced Plasma
Physics (also ECE 582[5820])**

Spring. On demand. 4 credits.
Prerequisites: ECE 581 and A&EP 606.
For description, see ECE 582.

**A&EP 633(6330) Nuclear Reactor
Engineering (also NS&E 633[6330])**

Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. K. B. Cady.

For description, see NSE 633.

A&EP 661(6610) Nanocharacterization

Fall. 3 credits. Prerequisites: Fourier transforms, basic electromagnetism, and undergraduate quantum mechanics or chemistry. Undergraduates should consult with instructor before enrolling.

Graduate-level introduction to the tools used to image and probe optical, electronic, chemical, and mechanical properties at the nanoscale and below. Discussion centers on the physics of the interaction processes used for characterization, quantification, and interpretation of the collected signals, common artifacts, the engineering trade-offs made in constructing the actual instruments, and the fundamental detection limits for each method. Topics include the interaction of electrons, ions, and photons with materials; scanned probe and force microscopy; scanning and transmission electron microscopy; x-ray microanalysis; electron energy loss spectroscopy; and a brief survey of non-imaging methods such as RBS, XPS, and SIMS.

**A&EP 662(6620) Micro/Nano-fabrication
and Processing**

Spring. 3 credits.

Introduction to the fundamentals of micro- and nano-fabricating and patterning thin-film materials and surfaces, with emphasis on electronic and optical materials, micro-mechanics, and other applications. Vacuum and plasma thin-film deposition processes.

Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes. At the level of Brodie and Muray.

**A&EP 663(6630) Nanobiotechnology (also
BIO G 663[6630], MS&E 563[5630])**

Spring. 3 credits. Letter grades only.
C. Batt.

Upper-level undergraduate and graduate-level course that covers the basics of biology and the principles and practice of microfabrication techniques. The course focuses on applications in biomedical and biological research. A team design project that stresses interdisciplinary communication and problem solving is one of the course requirements. The course meets twice weekly with 75-minute classes. All lectures are teleconferenced to NBTC associate institutes.

**A&EP 711(7110) Principles of Diffraction
(also MS&E 671[6710])**

Fall. 3 credits. Letter grades only.
J. D. Brock.

Graduate-level introduction to diffraction/scattering phenomena in the context of solid-state and soft condensed-matter systems. The primary topic is using the scattering and absorption of neutron, electron, and X-ray beams to study physical systems. Particular emphasis is placed on issues related to synchrotron X-ray sources. Specific topics that are covered in the course include: elastic and inelastic scattering; diffraction from two- and three-dimensional periodic lattices; the Fourier representation of scattering centers and the effects of thermal vibrations and disorder; diffraction, reflectivity, or scattering from surface layers; diffraction or scattering from gases and amorphous materials; small angle scattering; X-ray absorption spectroscopy; resonant (e.g., magnetic) scattering; novel techniques using coherent X-ray beams; and a survey of dynamical diffraction from perfect and imperfect lattices.

A&EP 751(7510) M.Eng. Project

Fall, spring. 6–12 credits TBA. Requirement for M.Eng. (engineering physics) students. Independent study under the direction of a member of the university faculty. Students participate in an independent research project through work on a special problem related to their field of interest. A formal and complete research report is required.

**A&EP 753(7530) Special Topics Seminar
in Applied Physics**

Fall. 1 credit. Requirement for M.Eng. (engineering physics) students; recommended for seniors in engineering physics. Prerequisite: undergraduate physics.

Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.

**[A&EP 781(7810) Advanced Plasma
Physics I: Cosmic Plasma Physics]**

Fall. 3 credits. Not offered 2005–2006.
R. Lovelace.

Uses *Cosmic Plasma Physics* by Somov and covers the following topics: charged particles and EM fields, statistical description of plasma, distribution functions and the Vaslov equation, propagation of particles, motion of particles in given fields, wave particle interactions, Coulomb collisions, hydrodynamic description of plasmas, magnetohydrodynamic description of plasmas, and cosmic plasma flows.]

**A&EP 782(7820) Advanced Plasma
Physics (also ECE 682[6820])**

Spring. 3 credits. Prerequisite: ECE 581.
C. E. Seyler.

For description, see ECE 682.

BIOLOGICAL AND ENVIRONMENTAL ENGINEERING

M. F. Walter, chair; B. A. Ahner, L. D. Albright, D. J. Aneshansley, A. J. Baumann, J. A. Bartsch, J. R. Cooke, A. K. Datta, K. G. Gebremedhin, D. A. Haith, J. B. Hunter, L. H. Irwin, W. J. Jewell, D. Luo, J.-Y. Parlange, N. R. Scott, R. M. Spanswick, T. S. Steenhuis, M. B. Timmons, L. P. Walker

For complete course descriptions, see "Biological and Environmental Engineering" under "College of Agriculture and Life Sciences" or visit the department web site, www.bee.cornell.edu.

**BEE 102(1102) Introduction to
Microcomputer Applications**

Fall, spring. 3 credits. Graduating seniors guaranteed admittance. All students must attend first lec to guarantee admittance and select a lab sec.

**BEE 110(1030) Introduction to Metal
Fabrication Techniques**

Spring. 3 credits. Limited to 20 students per lab.

**BEE 132(1040) Introduction to Wood
Construction**

Fall. 3 credits. Limited to 16 students per lab.

**BEE 151(1510) Introduction to Computer
Programming**

Fall. 4 credits. Limited to 22 students per lab and rec. Pre- or corequisite: MATH 191 or equivalent.

BEE 200(1200) The BEE Experience

Spring. 1 credit.

**BEE 222(2220) Bioengineering
Thermodynamics and Kinetics**

Spring. 3 credits. Prerequisites: MATH 192, BIO G 110, PHYS 213, and chemistry course.

**BEE 251(2510) Engineering for a
Sustainable Society (also ENGRD
251[2510])**

Fall. 3 credits. Corequisite: MATH 293.

**BEE 260(2600) Principles of Biological
Engineering (also ENGRD 260[2600])**

Spring. 3 credits. Corequisite: MATH 293.

**BEE 299(3299) Sustainable Development:
A Web-Based Course**

Spring, summer. 3 credits. Prerequisite: at least sophomore standing. S-U grades optional.

BEE 305(3050) Principles of Navigation (also NAV S 301[3050])
Fall. 4 credits.

BEE 310(1050) Advanced Metal Fabrication Techniques
Spring. 1-2 credits. Prerequisite: BEE 110 or permission of instructor.

BEE 325(3250) Environmental Management
Fall. 3 credits.

BEE 350(3500) Biological and Environmental Transport Processes
Fall. 3 credits. Pre- or corequisites: MATH 293 and fluid mechanics course.

BEE 360(3600) Molecular and Cellular Bioengineering (also BME 360[3600])
Spring. 3 credits. Prerequisite: biochemistry course or A&EP 252 or permission of instructor.

BEE 365(3650) Properties of Biological Materials
Spring. 3 credits. Pre- or corequisite: ENGRD 202.

BEE 368(3680) Biotechnology Applications: Animal Bioreactors
Fall. 3 credits. Prerequisite: biochemistry course or permission of instructor.

BEE 371(3710) Physical Hydrology for Ecosystems
Spring. 3 credits. Prerequisite: MATH 192 or permission of instructor.

BEE 401(4010) Renewable Energy Systems
Spring. 3 credits. Prerequisite: college physics.

BEE 427(4270) Water Sampling and Measurement
Fall. 3 credits. Prerequisites: soils and/or fluids or hydrology courses and MATH 191.

BEE 435(4350) Principles of Aquaculture
Spring. 3 credits. Prerequisite: at least junior standing.

BEE 450(4500) Bioinstrumentation
Spring. 4 credits. Prerequisites: MATH 294, BEE 151, PHYS 213, or permission of instructor.

BEE 453(4530) Computer-Aided Engineering: Applications to Biomedical Processes (also M&AE 453[4530])
Spring. 3 credits. Prerequisite: heat and mass transfer course (BEE 350 or equivalent).

BEE 454(4540) Physiological Engineering
Fall. 3 credits. Corequisite: fluid mechanics course.

[BEE 456(4560) Biomechanics of Plants (also BIOPL 456[4560])]
Fall. 3 credits. Prerequisites: upper-division undergraduate or graduate standing, completion of introductory sequence in biology, and one year of calculus, or permission of instructor. S-U grades optional. Not offered 2005-2006.]

[BEE 459(4590) Biosensors and Bioanalytical Techniques
Spring. 4 credits. Prerequisite: biochemistry course or permission of instructor. Not offered 2005-2006.]

BEE 464(4640) Bioseparation Processes
Fall. 3 credits. Prerequisites: introductory biochemistry and physics, MATH 192, BEE 260, or permission of instructor.

BEE 471(4710) Introduction to Groundwater (also EAS 471[4710])
Spring. 3 credits. Prerequisites: MATH 293, fluid mechanics or hydrology course.

BEE 473(4730) Watershed Engineering
Fall. 3 credits. Prerequisite: fluid mechanics or hydrology course.

BEE 474(4740) Water and Landscape Engineering Applications
Spring. 3 credits. Prerequisite: fluid mechanics course, hydrology course, or permission of instructor.

BEE 475(4750) Environmental Systems Analysis
Fall. 3 credits. Prerequisites: computer programming course and one year of calculus.

BEE 476(4760) Solid Waste Engineering
Spring. 3 credits. Prerequisites: one semester of physics and chemistry.

BEE 478(4780) Ecological Engineering
Spring. 3 credits. Prerequisite: junior-level environmental quality engineering course or equivalent.

BEE 481(4791) LRFD-Based Engineering of Wood Structures (also CEE 481[4791])
Spring. 3 credits. Prerequisite: ENGRD 202.

BEE 482(4820) Biothermal Engineering for Humans
Fall. 3 credits. Prerequisites: BEE 350 or equivalent and introductory biology.

BEE 484(4840) Metabolic Engineering
Spring. 3 credits. Prerequisite: biochemistry course or permission of instructor. S-U grades optional.

BEE 487(4870) Sustainable Energy Systems
Spring. 3 credits. Prerequisites: BEE 350 and thermodynamics course.

BEE 489(4890) Engineering Entrepreneurship, Management, and Ethics
Spring. 4 credits. Prerequisites: ENGRD 270 or CEE 304 or equivalent; junior standing.

BEE 493(4930) Technical Writing for Engineers
Fall, spring. 1 credit. Corequisite: BEE 450 (spring), 473 (fall).

BEE 494(4940) Fundamentals of Tissue Engineering
Spring. 3 credits. Prerequisites: biochemistry course, BEE 350. Priority given to graduating seniors.

BEE 495(4950) BEE Honors Research
Fall, spring. 1-6 credits. Prerequisite: enrollment in BEE Honors Research Program.

BEE 496(4960) Capstone Design in Biological and Environmental Engineering
Fall, spring. 1 credit. Corequisite: BEE 435 or 473 or 478, or 481. Students must register using independent study form (available in 140 Roberts Hall).

BEE 497(4970) Individual Study in Biological and Environmental Engineering

Fall, spring. 1-4 credits. Prerequisite: written permission of instructor and adequate ability and training for work proposed. Normally reserved for seniors in upper two-fifths of their class. Students must register using independent study form (available in 140 Roberts Hall). S-U grades optional.

BEE 498(4980) Undergraduate Teaching
Fall, spring. 1-4 credits. Prerequisite: written permission of instructor. Students must register using independent study form (available in 140 Roberts Hall).

BEE 499(4990) Undergraduate Research
Fall, spring. 1-4 credits. Prerequisites: written permission of instructor; adequate training for work proposed. Normally reserved for seniors in upper two-fifths of their class. Students must register using independent study form (available in 140 Roberts Hall).

BEE 501(5010) Bioengineering Seminar (also BME 501[5010])
Fall, spring. 1 credit. Prerequisite: junior, senior, or graduate standing.

BEE 520(5900) M.P.S. Project
Fall, spring. 1-6 credits. Requirement for all M.P.S. candidates in field.

BEE 551(5950) Master of Engineering Design Project
Fall, spring. 3-6 credits. Prerequisite: admission to M.Eng. (agricultural and biological) degree program.

BEE 625(6250) Environmental Management
Fall. 3 credits. Prerequisite: graduate standing.

BEE 647(6470) Water Transport in Plants (also BIOPL 651[6510])
Fall. 2 credits. Offered alternate years.

[BEE 649(6490) Solute Transport in Plants (also BIOPL 649[6490])]
Fall. 3 credits. Offered alternate years; not offered 2005-2006.]

BEE 651(6510) Bioremediation: Engineering Organisms to Clean Up the Environment
Spring. 3 credits. Prerequisites: BIOMI 290 or 398 or 331 or permission of instructor.

BEE 655(6550) Thermodynamics and Its Applications
Fall. 3 credits. Prerequisite: MATH 293 or equivalent. Offered alternate years.

[BEE 659(6590) Biosensors and Bioanalytical Techniques]
Spring. 4 credits. Prerequisites: biochemistry course and permission of instructor. Not offered 2005-2006.]

[BEE 671(6710) Analysis of the Flow of Water and Chemicals in Soils]
Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics course. Offered alternate years; not offered 2005-2006.]

BEE 672(6720) Drainage
Spring. 4 credits. Prerequisite: BEE 471 or 473. S-U grades optional.

BEE 673(6730) Sustainable Development Seminar (also NBA 573[5730])

Spring. 1–3 credits. Prerequisite: upper-division undergraduate or graduate standing or permission of instructor.

BEE 685(6850) Biological Engineering Analysis

Spring. 4 credits. Prerequisite: T&AM 310 or permission of instructor.

BEE 687(6870) The Science and Engineering Challenge to the Development of Sustainable Bio-Based Industries

Fall. 1 credit. Prerequisite: graduate standing.

BEE 694(6940) Graduate Special Topics in Agricultural and Biological Engineering

Fall, spring. 1–4 credits. S-U grades optional.

BEE 697(6970) Graduate Individual Study in Agriculture and Biological Engineering

Fall, spring. 1–6 credits. Prerequisite: permission of instructor. S-U grades optional.

BEE 700(7010) General Seminar

Fall. 1 credit. S-U grades only.

BEE 740(6430) Veterinary Perspectives on Pathogen Control in Animal Manure (also VT MED 740[6430], BIOMI 740[6430])

Spring. 2 credits. Prerequisite: graduate standing or permission of instructor.

BEE 750(7000) Orientation to Graduate Study

Fall. 1 credit. Prerequisite: newly joining graduate students. S-U grades only.

BEE 754(7540) Watershed Management

Spring. 2–3 credits. Prerequisite: graduate standing or permission of instructor.

BEE 760(7600) Nucleic Acid Engineering (also BME 760[7600])

Spring. 2 credits. Prerequisite: BEE 360 or permission of instructor.

BEE 771(7710) Soil and Water Engineering Seminar

Fall, spring. 1–3 credits. Prerequisite: graduate standing or permission of instructor. S-U grades optional.

BEE 781(7810) Structures and Related Topics Seminar

Spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades only.

BEE 785(7850) Biological Engineering Seminar

Spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades only.

BEE 787(7870) Industrial Ecology of Agriculturally Based Bioindustries

Spring. 3 credits. Prerequisites: one year calculus, MATLAB, BEE 687, graduate standing.

BEE 788(7880) Biomass Conversion of Energy and Chemicals

Fall. 3 credits. Prerequisites: one year college calculus and chemistry; minimum of one course in thermodynamics and computer programming.

BEE 800(8900) Master's-Level Thesis Research

Fall, spring. 1–15 credits. Prerequisite: permission of adviser. S-U grades only.

BEE 900(9900) Doctoral-Level Thesis Research

Fall, spring. 1–15 credits. Prerequisite: permission of adviser. S-U grades only.

BIOMEDICAL ENGINEERING

M. L. Shuler, director; D. L. Bartel, associate director; W. L. Olbricht, director of graduate studies; L. J. Bonassar, D. A. Putnam, Y. Wang, W. R. Zipfel, Senior lecturers: S. D. Archer, D. Lipson

BME 101(1010) Introduction to Biomedical Engineering Analysis (also ENGRI 101[1010])

Spring. 1 credit. Corequisite: BIO G 110. Lec and lab. D. T. Grubb and S. D. Archer. For description, see ENGRI 101.

BME 301(3010) Molecular Principles of Biomedical Engineering (also CHEME 401[4010])

Fall. 3 credits. Prerequisite: BIO G 110, BIOBM 330, BIOMI 290, or equivalent. Lec and lab. M. P. DeLisa and S. D. Archer.

Introduction to genomics, proteomics, bioinformatics, and computational biology with an emphasis on the engineering challenges for these areas. Covers cytoskeletal and motor proteins and their relationship to nano- and micro-machines and nanobiotechnology. Existing and emerging technologies and instrumentation critical to molecular-level analysis in biomedical engineering.

BME 302(3020) Cellular Principles of Biomedical Engineering (also CHEME 402[4020])

Spring. 3 credits. Prerequisite: BME 301 or course work in BIO G 110, BIOBM 330, BIOMI 290 or equivalent plus mathematics through differential equations (e.g., MATH 221 or 294), or permission of instructor. Lec and lab. D. A. Putnam and S. D. Archer.

Integration of mammalian cell biology with engineering modeling principles, put into the context of medical pathology and disease states. Consists of three modules: (1) cell culture techniques/receptor ligand interactions, (2) cellular trafficking, and (3) signal transduction.

[BME 330(3300) Introduction to Computational Neuroscience (also BIONB/PSYCH/COGST 330[3300])

Fall. 3 or 4 credits; 4 credits includes lab providing additional computer simulation exercises. Limited to 25 students. Prerequisites: BIONB 222 or permission of instructor. S-U grades optional. Lec, MW 2:55–4:10. Offered alternate years. C. Linster.

For description, see BIONB 330.]

BME 360(3600) Molecular and Cellular Bioengineering (also BEE 360[3600])

Spring. 3 credits. Prerequisite: biochemistry course or A&EP 252.

For description, see BEE 360.

BME 401(4010) Biomedical Engineering Analysis of Metabolic and Structural Systems (also M&AE 466[4660])

Fall. 3 credits. Prerequisite: basic biology course work. Highly recommended: solid mechanics and fluid mechanics courses. Lec and lab. L. Bonassar and S. D. Archer. Presents the quantitative biology of the renal, respiratory, cardiovascular, and musculoskeletal systems. Includes mathematical modeling of physiological processes involving mechanics and transport in solid and fluid organs.

BME 402(4020) Electrical and Chemical Physiology

Spring. 3 credits. Prerequisite: BME 301, 302, or 401 or biology background or permission of instructor. Lec and lab. D. Lipson and S. D. Archer.

Focuses on understanding how circulating agents and bioelectric activity comprises inter-organ and central nervous system communication, and control of the human body. Additional emphasis includes examining medical devices involved in the treatment of human disease.

BME 404(4040) Biomedical System Design (also ECE 402[4020])

Spring. 1–4 credits. Pre- or corequisites: at least one of ECE 425, 476, 453. J. C. Belina. For description, see ECE 402.

BME 440(4400) Electronics in Neurobiology (also BIONB 440[4400])

Fall. 4 credits. Prerequisite: junior, senior, or graduate standing; calculus course. S-U grades optional. Lec, T R 8:40–9:55; lab, W 1:25–4:25. Offered alternate years. B. R. Land.

For description, see BIONB 440.

BME 441(4410) Computer in Neurobiology (also BIONB 441[4410])

Fall. 4 credits. Prerequisite: junior, senior, or graduate standing; calculus course. S-U grades optional. Lec, T R 8:40–9:55; lab, W 1:25–4:25. Offered alternate years. B. R. Land.

For description, see BIONB 441.

[BME 463(4630) Neuromuscular Biomechanics (also M&AE 463[4630])

Spring. 3 credits. Prerequisite: ENGRD 202 and 203 or permission of instructor. Offered alternate years.

For description, see M&AE 463.]

BME 464(4640) Orthopaedic Tissue Mechanics (also M&AE 464[4640])

Spring. 3 credits. Prerequisites: ENGRD 202 and M&AE 325 or permission of instructor. Offered alternate years.

For description, see M&AE 464.

BME 481(4810) Biomedical Engineering (also CHEME 481[4810])

Spring. 3 credits. Prerequisite: CHEME 324 or equivalent or permission of instructor. W. L. Olbricht.

For description, see CHEME 481.

BME 491(4910) Principles of Neurophysiology (also BIONB 491[4910])

Spring. 4 credits. Limited to 20 students. Prerequisite: BIONB 222 or written permission of instructor. S-U grades optional for graduate students by permission of instructor. Lec, M W 10:10; lab, M or T 12:20–4:25. B. R. Johnson.

For description, see BIONB 491.

BME 501(5010) Bioengineering Seminar (also BEE 501[5010])

Fall, spring. 1 credit. Prerequisite: junior, senior, or graduate standing. Staff.

Broad survey of all aspects of bioengineering, including biomedical, bioprocess, biological, and bioenvironmental engineering and aspects of biotechnology. Sessions may be technical presentations or discussions. Sessions may occasionally be held outside of scheduled times.

BME 539(5390) Biomedical Materials and Devices for Human Body Repair (also TXA 439[4390])

Spring. 2-3 credits. Prerequisites: college natural science requirement (chemistry or biology). C. C. Chu.

For description, see TXA 439. Extra project required; same lectures as TXA 439.

BME 550(5500) Product Engineering and Design in Biomedical Engineering

Spring. 3 credits. Prerequisite: graduate standing; requirement for M.Eng. students majoring in BME. D. Lipson.

A beginning to a cornerstone understanding of engineering, regulatory business, and individual issues for new medical product development. Student background and interests may be highly varied. To accommodate these varied perspectives, the initial focus of the class is on the engineering perspectives of design and development, enabling those undertaking projects (BME 591) to have timely exposure to key enabling concepts.

BME 565(5650) Biomechanical Systems—Analysis and Design (also M&AE 565[5650])

Spring. 3 or 4 credits. Prerequisites: undergraduate courses in dynamics and strength of materials (e.g., T&AM/ENGRD 202 and 203); senior or graduate standing or permission of instructor.

For description, see M&AE 565.

BME 570(5700) Biophysical Methods (also BIONB/A&EP 470[4700])

Fall. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level. Recommended: some knowledge of cellular biology. Letter grades only.

For description, see A&EP 470.

BME 578(5780) Computer Analysis of Biomed Images (also ECE 578[5780])

Spring. 4 credits. Prerequisite: permission of instructor. A. P. Reeves.

For description, see ECE 578.

BME 591(5910) Design Project

Fall, spring. 3-6 credits. Requirement for M. Eng. students majoring in BME. Students encouraged to register for two semesters as continuing course.

Design and economic evaluation of a biomedical engineering device or therapeutic strategy. Team projects are encouraged.

BME 607(6070) Principles of Magnetic Resonance Imaging (MRI)

Fall. 3 credits. Prerequisite: graduate standing; knowledge of basic physics, electricity, magnetism, and Fourier Transforms or permission of instructor; Y. Wang.

Physical principles and engineering techniques of MRI. Applications in human medicine. Co-taught with Weill Medical College.

BME 631(6310) Engineering Principles for Drug Delivery (also CHEM 631[6310])

Fall. 3 credits. Prerequisites: graduate standing and background in organic and polymer chemistry or permission of instructor. D. A. Putnam.

Application of engineering design principles to problems in drug formulation and delivery. Specific topics include traditional drug formulation, mechanisms and kinetics of pharmaceutical stability, stimuli-sensitive systems, controlled release devices, prodrugs, targeted drug delivery, biomaterials, gene therapy, and governmental regulatory issues.

[BME 663(6630) Advanced Topics in Neuromuscular Biomechanics (also M&AE 663[6630])

Spring. 3 credits. Prerequisite: permission of instructor. Offered alternate years. F. Valero-Cuevas.

For description, see M&AE 663.]

BME 664(6640) Mechanics of Bone (also M&AE 664[6640])

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years.

For description, see M&AE 664.

BME 665(6650) Principles of Tissue Engineering (also M&AE/MS&E 665[6650])

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. L. Bonassar.

Covers introductory concepts in tissue engineering, including polymeric biomaterials used for scaffolds, mechanisms of cell-biomaterial interaction, biocompatibility and foreign body response, cell engineering, and tissue biomechanics. This knowledge is applied to engineering of several body systems, including the musculoskeletal system, cardiovascular tissues, the nervous system, and artificial organs. These topics are discussed in the context of scale-up, manufacturing, and regulatory issues.

BME 703(7030) Graduate Student Teaching Experience

Fall, spring. Variable credit. S-U grades optional. Staff.

Guided individual experience in laboratory instruction and/or lectures/recitation instruction. Provides a preparatory teaching experience for graduate students considering an academic career.

BME 711(7110) Fundamentals of Biomedical Engineering Research I

Fall. 3 credits. Prerequisite: graduate standing; priority given to M.S./Ph.D. graduate students with major or minor in BME. W. L. Olbricht and staff.

First part of a two-semester sequence that introduces students to a variety of subjects in biomedical engineering including nanobiotechnology, biomechanics, systems and computational biology, biomaterials, tissue engineering, statistics, and experimental design. The course also covers associated subjects including professional development, ethics, writing a scientific paper, authorship issues, patents, technology transfer, conflicts of interest, and preparing a research proposal. The course is a combination of lectures and discussions, with students taking an active role in the instruction.

BME 712(7120) Fundamentals of Biomedical Engineering Research II

Spring. 3 credits. Prerequisite: BME 711 or permission of instructor. W. L. Olbricht and Staff.

Continuation of BME 711.

BME 716(7160) Immersion Experience in Medical Research and Clinical Practice

Fall and spring. 6 credits. Prerequisite: Ph.D. students in BME. D. L. Bartel and Y. Wang.

Six-week immersion at Weill Medical College. Students participate in lectures, rounds, and seminars; observe surgeries; and solve medical problems presented by the staff.

[BME 731(7310) Advanced Biomedical Engineering Analysis of Biological Systems

Fall. 3 credits. Prerequisite: graduate standing; priority given to M.S./Ph.D. and M.Eng. students majoring in BME. Not offered 2005-2006. Staff.

Covers the fundamentals of quantitative analysis of biological systems. Illustrates analytical methods applicable to a variety of biological systems, ranging from molecular to cellular to organ to application of whole-body systems.]

BME 760(7600) Nucleic Acid Engineering (also BEE 760[7600])

Spring. 3 credits. Prerequisite: BEE 360 or permission of instructor.

For description, see BEE 760.

BME 790(7900) Biomedical Engineering Seminar

Fall, spring. 1 credit. Prerequisite: graduate standing. M. L. Shuler.

Research-based seminars. May meet with other seminar series as appropriate.

BME 890(8999) M.S. Thesis Research

Fall, spring. Variable credit.

Thesis research for the M.S. degree in BME.

BME 990(9999) Ph.D. Thesis Research

Fall, spring. Variable credit.

Thesis research for the Ph.D. degree in BME.

CHEMICAL AND BIOMOLECULAR ENGINEERING

P. Clancy, director; A. B. Anton, L. A. Archer, A. M. Center, C. Cohen, M. P. DeLisa, T. M. Duncan, J. R. Engstrom, F. A. Escobedo, Y. L. Joo, D. L. Koch, K. H. Lee, W. L. Olbricht, D. A. Putnam, M. L. Shuler, P. H. Steen, A. D. Stroock, J. D. Varner

CHEME 112(1120) Introduction to Chemical Engineering (also ENGR 112[1120])

Fall. 3 credits. Prerequisite: freshman standing. T. M. Duncan.

Course in the Introduction to Engineering series. For description, see ENGR 112.

CHEME 219(2190) Mass and Energy Balances (also ENGRD 219[2190])

Fall. 3 credits. Corequisite: physical or organic chemistry course or permission of instructor. W. L. Olbricht.

For description, see ENGRD 219.

CHEME 301(3010) Nonresident Lectures

Spring. 1 credit. P. Clancy.
Lecturers from industry and from selected departments of the university provide information to assist students in their post-graduate plans.

CHEME 313(3130) Chemical Engineering Thermodynamics

Fall. 3 credits. Prerequisite: physical chemistry II. F. A. Escobedo.
Studies the first and second laws and their consequences for chemical systems. Covers thermodynamic properties of pure fluids, solids, and mixtures; phase and chemical reaction equilibrium; heat effects in batch and flow processes; and power cycles and refrigeration.

CHEME 323(3230) Fluid Mechanics

Spring. 3 credits. Prerequisites: CHEME 219 and engineering mathematics sequence. D. L. Koch.
Fundamentals of fluid mechanics. Macroscopic and microscopic balances. Applications to problems involving viscous flow.

CHEME 324(3240) Heat and Mass Transfer

Fall. 3 credits. Prerequisite: CHEME 323. C. Cohen.
Fundamentals of heat and mass transfer. Macroscopic and microscopic balances. Applications to problems involving conduction, convection, and diffusion.

CHEME 332(3320) Analysis of Separation Processes

Spring. 3 credits. Prerequisites: CHEME 313 and 324. Y. L. Joo.
Covers the analysis of separation processes involving phase equilibria and mass transfer. Topics include phase equilibria; equilibrium-based separations; rate-based separation processes (membrane separations, sorption operations); introduction to bioseparations and process simulators; choosing a separation option; and the design and synthesis of separation processes.

CHEME 372(3720) Introduction to Process Dynamics and Control

Spring. 2 credits. Prerequisites: CHEME 313 and 323. A. B. Anton.
Modeling and analysis of the dynamics of chemical processes, Laplace transforms, block diagrams, feedback control systems, and stability analysis.

CHEME 390(3900) Reaction Kinetics and Reactor Design

Spring. 3 credits. Prerequisites: CHEME 313 and 323. J. R. Engstrom.
Study of chemical reaction kinetics and principles of reactor design for chemical processes.

CHEME 391(3910) Physical Chemistry II (also CHEME 391[3910])

Spring. 4 credits. Prerequisite: engineering students.
For description, see CHEME 391.

CHEME 401(4010) Molecular Principles of Biomedical Engineering (also BME 301[3010])

Fall. 3 credits. Prerequisite: BIO G 110 or BIOBM 330. M. P. DeLisa.
For description, see BME 301.

CHEME 402(4020) Cellular Principles of Biomedical Engineering (also BME 302[3020])

Spring. 3 credits. D. A. Putnam.
For description, see BME 302.

CHEME 432(4320) Chemical Engineering Laboratory

Fall. 4 credits. Prerequisites: CHEME 323, 324, 332, and 390. A. M. Center and staff.
Laboratory experiments in fluid dynamics, heat and mass transfer, separations, other operations. Correlation and interpretation of data. Technical report writing.

CHEME 462(4620) Chemical Process Design

Spring. 4 credits. Prerequisite: CHEME 432. A. M. Center and staff.
Students prepare a full-scale feasibility study of a chemical process including product supply and demand forecasts, process design including reaction system design, separations scheme development, heat integration via application of pinch technology, and economic analysis of the process. Students develop presentation and teamwork skills through weekly presentations.

CHEME 470(4700) Process Control Strategies

Spring. 3 credits. A. M. Center.
Introduction to how control concepts are represented, control valve sizing and selection, process control strategies, dynamic response of process systems as it relates to control loop tuning, statistical process control, advanced process control methods both for chemical and biological processes and programmable logic controllers and distributed control systems.

CHEME 472(4720) Feedback Control Systems (also ECE 472[4720], M&AE 478[4780])

Fall. 4 credits. Prerequisites: CHEME 372, ECE 220, M&AE 326, or permission of instructor.

For description, see M&AE 478.

CHEME 480(4800) Chemical Processing of Electronic Materials

Spring. 3 credits. A. B. Anton.
Introduction to chemical processing of semiconductor materials for the manufacture of microelectronic devices, with specific emphasis on thermodynamics, transport phenomena, and kinetics. Topics include semiconductor properties and behavior, microelectronic device operation, thermochemistry of deposition and etching reactions, vacuum transport, plasmas, PVD, oxidation, diffusion, CVD, and statistical process control.

CHEME 481(4810) Biomedical Engineering (also BME 481[4810])

Spring. 3 credits. Prerequisite: CHEME 324 or equivalent or permission of instructor. W. L. Olbricht.

Special topics in biomedical engineering, including cell separations, blood flow, design of artificial devices and artificial organs, biomaterials, image analysis, biological transport phenomena, pharmacokinetics and drug delivery, tissue engineering, and analysis of physiological processes such as adhesion, mobility, secretion, signaling, and growth.

CHEME 484(4840) Microchemical and Microfluidic Systems

Fall. 3 credits. Prerequisite: CHEME 390 or permission of instructor. J. R. Engstrom.

Principles of chemical kinetics, thermodynamics, and transport phenomena applied to microchemical and microfluidic systems. Applications in distributed chemical production, portable power, micromixing, separations, and chemical and biological sensing and analysis. Fabrication approaches (contrasted with microelectronics), transport phenomena at small dimensions, modeling challenges, system integration, case studies.

CHEME 490(4900) Undergraduate Projects in Chemical Engineering

Fall, spring. Variable credit.
Research or studies on special problems in chemical engineering.

CHEME 499(4990) Senior Seminar

Fall, spring. 1 credit. Prerequisite: CHEME seniors. Staff.
Students attend seminars of their selection and write one-page summaries. Eligible seminars include all listings at "Colloquia and Seminars in Physics and Related Fields" which includes the weekly seminars in, for example, Chemical and Biomolecular Engineering, Chemistry and Chemical Biology, Earth and Atmospheric Sciences, History and Ethics of Engineering, and Materials Science and Engineering.

CHEME 520(5200) Chemical, Polymer, Biomedical, and Electronic Materials Processing

Fall, spring. 1-6 credits; 1 credit per sec.

520.1 An Overview of Chemical Processing

Spring, first third of semester. 1 credit.
Prerequisite: nonchemical engineers. T. M. Duncan.

Introduction to chemical engineering design and analysis-mathematical modeling, graphical methods and dynamic scaling.

520.2 Introduction to Biomedical Engineering

Spring, first third of semester. 1 credit.
W. L. Olbricht.
Meets concurrently with CHEME 481.

520.3 Introduction to Electronic Materials Processing

Spring, first third of semester. 1 credit.
A. B. Anton.
Meets concurrently with CHEME 480.

520.4 Introduction to Polymer Processing

Spring, second third of semester. 1 credit.
L. A. Archer.
Overview and simple quantitative analyses of several plastic processes with an emphasis on the role of rheology in polymer processing.

520.5 Chemical Engineering Tools and Equipment

Spring, first third of semester. 1 credit.
A. M. Center.

Introduces the hardware used in chemical engineering processes and a discussion of how these mechanical devices are configured to meet their process objectives. Also includes an introduction to the evaluation techniques and trouble-shooting methods frequently used by chemical engineers.

520.6 Introduction to Petroleum Refining

Fall, second third of semester. 1 credit.
A. M. Center.
Covers the petroleum refining industry including crude oil evaluation, fuel quality, refining processes, refinery configurations, and refinery economics.

520.7 Turbomachinery Applications

Fall, last third of semester. 1 credit.
A. M. Center.

Introduction to pumps, compressors, steam turbines and gas turbines. How they are specified and selected for services in the chemical process industries.

CHEME 543(5430) Bioprocess Engineering

Fall. 3 credits. Prerequisite: CHEME 390 or permission of instructor. No prior background in biological sciences required. M. L. Shuler.

Discusses principles involved in using microorganisms, tissue cultures, and enzymes for processing. Primary emphasis is on production of biopharmaceuticals, but biological waste treatment and medical systems are also considered.

CHEME 565(5650) Design Project

Fall, spring. 3 or 6 credits. Requirement for M.Eng. (chemical) students.

Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

CHEME 572(5720) Managing New Business Development

Fall. 3 credits. Prerequisites: graduate standing or permission of instructor.
A. M. Center.

Case study approach introducing the typical fundamental factors driving a business venture, examines how to develop implementation strategies for the venture, and teaches the project management skills necessary to successfully implement the venture.

CHEME 590(5999) Special Projects in Chemical Engineering

Fall, spring. Variable credit. Prerequisite: graduate standing.

Nonthesis research or studies on special problems in chemical engineering.

CHEME 631(6310) Engineering Principles for Drug Delivery (also BME 631[6310])

Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.

For description, see BME 631.

CHEME 640(6400) Polymeric Materials

Fall. 3 credits. C. Cohen.

Covers chemistry and physics of the formation and characterization of polymers; principles of fabrication.

CHEME 661(6610) Air Pollution Control

Spring. 3 credits. P. H. Steen.

Covers origin of air pollutants, U.S. emission standards, dispersion equations; design of equipment for removal of particulate and gaseous pollutants formed in combustion and chemical processing.

CHEME 675(6750) Synthetic Polymer Chemistry (also MS&E 622[6220], CHEME 671[6710])

Spring. 4 credits. Prerequisites: CHEME 359-360 or equivalent or permission of instructor.

For description, see CHEME 671.

CHEME 711(7110) Advanced Chemical Engineering Thermodynamics

Fall. 3 credits. Prerequisite: CHEME 389-390 and CHEME 313 or equivalent. A. B. Anton.
Molecular thermodynamics of gases, lattices, and liquids, including special applications to problems in chemical engineering.

CHEME 713(7130) Chemical Kinetics and Transport

Spring. 5 credits. Prerequisite: CHEME 390 or equivalent. F. A. Escobedo and A. D. Stroock.

Topics include microscopic and macroscopic viewpoints; connections between phenomenological chemical kinetics and molecular reaction dynamics; reaction cross sections, potential energy surfaces, and dynamics of bimolecular collisions; molecular beam scattering; transition state theory. Unimolecular reaction dynamics; complex chemically reacting systems: reactor stability, multiple steady states, oscillations, and bifurcation; reactions in heterogeneous media; and free-radical mechanisms in combustion and pyrolysis.

CHEME 731(7310) Advanced Fluid Mechanics and Heat Transfer

Fall. 3 credits. Prerequisites: CHEME 323-324 or equivalent. Y. L. Joo.

Topics include derivation of conservation equations; conductive heat transfer; low Reynolds number fluid dynamics; lubrication theory; inviscid fluid dynamics; boundary layer theory; forced convection; and introduction to non-Newtonian fluid mechanics (polymeric liquids and suspensions), microfluidics, stability analysis, and turbulent flow.

CHEME 741(7410) Selected Topics in Biochemical Engineering

Fall, spring. 1 credit; may be repeated for credit. Prerequisite: permission of instructor. K. H. Lee, D. A. Putnam, and M. P. DeLisa.

Discussion of current topics and research in biochemical engineering for graduate students.

CHEME 745(7450) Physical Polymer Science I

Fall. 3 credits. Corequisite: CHEME 711 or equivalent. Offered alternate years; next offered 2005-2006. L. A. Archer.

CHEME 751(7510) Mathematical Methods of Chemical Engineering Analysis

Fall. 4 credits. D. L. Koch.

Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbations, multiple scales, asymptotic analysis, linear and nonlinear ordinary and partial differential equations, statistics, data analysis, and curve fitting.

[CHEME 753(7530) Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation]

Fall. 3 credits. Prerequisite: CHEME 751 or equivalent. Offered alternate years; next offered 2006-2007. P. H. Steen.]

CHEME 790(7900) Seminar

Fall, spring. 1 credit each semester. Requirement for all graduate students in field of chemical and biomolecular engineering.

General chemical engineering seminar.

CHEME 890(8999) Thesis Research

Fall, spring. Variable credit.
Thesis research for the M.S. degree in chemical engineering.

CHEME 990(9999) Thesis Research

Fall, spring. Variable credit.
Thesis research for the Ph.D. degree in chemical engineering.

CIVIL AND ENVIRONMENTAL ENGINEERING

J. M. Gossett, director; L. W. Lion, associate director; J. F. Abel, W. Aquino, L. Banks-Sills, J. J. Bisogni, Jr., W. H. Brutsaert, P. G. Carr, E. A. Cowen, R. A. Davidson, R. I. Dick, L. B. Dworsky, K. Gebremedhin, M. D. Grigoriu, D. A. Haith, K. C. Hover, A. R. Inghraffa, F. H. Kulhawy, P. L-F. Liu, D. P. Loucks, J. R. Mbwana, W. McGuire, A. H. Meyburg, L. K. Nozick, T. D. O'Rourke, K. D. Papoulia, T. Peköz, P. Petrina, W. D. Philpot, C. ReVelle, R. E. Richardson, M. J. Sansalone, R. E. Schuler, C. A. Shoemaker, J. R. Stedinger, H. E. Stewart, C. H. Trautmann, M. A. Turnquist, F. Wayne, M. Weber-Shirk, R. N. White

Courses in the School of Civil and Environmental Engineering are offered in three broad mission areas: Civil Infrastructure, Environment, and Engineering Systems and Management. Within each mission area are several areas of specialization. The following are the course numbers and titles listed by specialization within each mission area. Some courses are listed in two or more mission areas because the course content is relevant to multiple areas. The school also offers a number of general courses that are not unique to one mission area. Full course descriptions follow in the subsequent section and are listed in numerical order.

General

CEE 113 Water Treatment Design (also ENGRI 113) (s,3)

CEE 116 Modern Structures (also ENGRI 116) (f,3)

CEE 304 Uncertainty Analysis in Engineering (f,4)

CEE 308 Introduction to CADD (f,s,1)

CEE 309 Special Topics in Civil and Environmental Engineering (f,s,var.)

CEE 323 Engineering Economics and Management (also ENGRG 323) (s,su,3)

CEE 400 Senior Honors Thesis (f,s,var.)

CEE 401 Undergraduate Engineering Teaching in CEE (f,s,var.)

Civil Infrastructure

See also: CEE 116, 241, 304, 308, 503, and 595

Geotechnical Engineering

CEE 341 Introduction to Geotechnical Engineering and Analysis (s,4)

CEE 440 Foundation Engineering (f,3)

CEE 441 Retaining Structures and Slopes (s,3)

CEE 444 Environmental Site and Remediation (s,3)

CEE 501/502 Design Project in Geotech/Structures (f,s,3)

- CEE 602 Seminar—Civil Infrastructure (f,s,1)
- CEE 640 Foundation Engineering (f,3)
- CEE 641 Retaining Structures and Slopes (s,3)
- CEE 644 Environmental Applications of Geotechnical Engineering (s,3)
- CEE 649 Special Topics in Geotechnical Engineering (f,s,var.)
- CEE 740 Engineering Behavior of Soils (f,3)
- CEE 741 Rock Engineering (f,3)
- CEE 744 Advanced Foundation Engineering (s,2)
- CEE 745 Soil Dynamics (s,3)
- CEE 746 Embankment Dam Engineering (s,2)
- CEE 749 Research in Geotechnical Engineering (f,s,var.)
- CEE 840 Thesis—Geotechnical Engineering (f,s,var.)

Structural Engineering

- CEE 116 Modern Structures (f,3)
- CEE 371 Structural Modeling and Behavior (s,4)
- CEE 372 Structural Analysis and Mechanics (f,4)
- CEE 471 Fundamentals of Structural Mechanics (f,4)
- CEE 472 Finite Element Analysis of Solids and Structures (s,3)
- CEE 473 Design of Concrete, Masonry, and Steel Structures (f,4)
- CEE 474 Design of Metal Structures (f,3)
- CEE 475 Introduction to Composite Materials (s,3)
- CEE 477 Concrete Materials and Construction (s,3)
- CEE 478 Structural Dynamics and Earthquake Engineering (s,3)
- CEE 479 Collaborative Distance Design of Structural Systems (f,s,8)
- CEE 481 LRFD-Based Engineering of Wood Structures (s,3)
- CEE 501/502 Design Project in Structural Engineering (f,s,3)
- CEE 602 Seminar—Civil Infrastructure (f,s,1)
- CEE 671 Structural Mechanics (f,3)
- CEE 672 Finite Element Analysis of Solids and Structures (s,3)
- CEE 673 Design of Concrete, Masonry, and Steel Structures (f,4)
- CEE 675 Concrete Materials and Construction (s,3)
- CEE 677 Engineering Analysis (f,3)
- CEE 678 Structural Dynamics and Earthquake Engineering (s,3)
- CEE 679 Evaluation and Failure of Structures (s,3)
- CEE 697 Special Topics in Structural Engineering (f,s,var.)
- CEE 770 Engineering Fracture Mechanics (f,3)
- CEE 771 Stochastic Mechanics (f,3)
- CEE 772 Random Vibration (f,3)
- CEE 773 Structural Reliability (f,3)
- CEE 774 Advanced Structural Concrete (f,3)
- CEE 775 Nonlinear Finite Element Analysis in Solid Mechanisms (f,3)
- CEE 776 Advanced Topics in Stability (f,3)
- CEE 777 Computational Solids and Structural Mechanics (s,4)
- CEE 781 National Disaster Risk Assessment and Management (s,3)
- CEE 783 Civil and Environmental Engineering Materials Project (f,s,var.)
- CEE 785 Research in Structural Engineering (f,s,var.)
- CEE 880 Thesis—Structural Engineering (f,s,var.)

Environment

See also CEE 113, 241, and 304

Environmental Engineering

- CEE 113 Water Treatment Design (s,3)
- CEE 351 Environmental Quality Engineering (s,3)
- CEE 451 Microbiology for Environmental Engineering (f,3)
- CEE 452 Water Supply Engineering (s,3)
- CEE 453 Laboratory Research in Environmental Engineering (s,3)
- CEE 454 Sustainable Small-Scale Water Supplies (f,3)
- CEE 501/502 Design Project in Environmental Engineering (f,s,3)
- CEE 601 Seminar—Water Resources and Environmental Engineering (f,1)
- CEE 653 Water Chemistry for Environmental Engineering (f,3)
- CEE 654 Aquatic Chemistry (s,3)
- CEE 655 Transport, Mixing, and Transformation in the Environment (f,3)
- CEE 656 Physical/Chemical Process (f,3)
- CEE 657 Biological Processes (s,3)
- CEE 658 Microbial Biodegradation and Biocatalysis Lab (s,3)
- CEE 659 Seminar—Environmental Quality Engineering (s,1)
- CEE 750 Research in Environmental Engineering (f,s,var.)
- CEE 759 Special Topics in Environmental Engineering (f,s,var.)
- CEE 850 Thesis—Environmental Engineering (f,s,var.)

Environmental Systems

See Engineering Systems and Management mission areas for a listing of courses in Environmental and Public Systems.

Environmental Fluid Mechanics and Hydrology

- CEE 331 Fluid Mechanics (f,su,4)
- CEE 332 Hydraulic Engineering (s,4)
- CEE 431 Introduction to Groundwater Hydrology (also EAS 445, BEE 471) (s,3)
- CEE 432 Hydrology (s,3)
- CEE 435 Coastal Engineering (s,3)
- CEE 436 Case Studies in Environmental Fluid Mechanics (s,4)

- CEE 437 Experimental Methods in Fluid Dynamics (s,3)

- CEE 601 Seminar—Water Resources and Environmental Engineering (f,1)
- CEE 631 Computational Simulation of Transport in the Environment (s,3)
- CEE 632 Hydrology (s,3)
- CEE 633 Flow in Porous Media and Groundwater (f,3)
- CEE 634 Boundary Layer Meteorology (f,3)
- CEE 635 Small and Finite Amplitude Water Waves (s,3)
- CEE 636 Environmental Fluid Mechanics (s,3)
- CEE 637 Experimental Methods in Fluid Dynamics (s,4)
- CEE 638 Seminar—Hydraulics (s,1)
- CEE 639 Special Topics in Hydraulics (f,s,var.)
- CEE 655 Transport, Mixing, and Transformation in the Environment (f,3)
- CEE 735 Research in Hydraulics (f,s,var.)
- CEE 830 Thesis—Fluid Mechanics and Hydrology (f,s,var.)

Engineering Systems and Management

CEE 113(1130) Water Treatment Design (also ENGR 113[1130])

Spring, 3 credits. Students must register under ENGR 113. M. L. Weber-Shirk. Course in Introduction to Engineering series. For description, see ENGR 113.

CEE 116(1160) Modern Structures (also ENGR 116[1160])

Fall, 3 credits. Students must register under ENGR 116. M. Sansalone. Course in Introduction to Engineering series. For description, see ENGR 116.

CEE 304(3040) Uncertainty Analysis in Engineering

Fall, 4 credits. CEE Engineering co-op students may substitute summer ENGRD 270. Prerequisite: first-year calculus. Staff. Introduction to probability theory and statistical techniques, with examples from civil, environmental, biological, and related

disciplines. Covers data presentation, commonly used probability distributions describing natural phenomena and material properties, parameter estimation, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Examples include structural reliability, windspeed/flood distributions, pollutant concentrations, and models of vehicle arrivals.

CEE 308 (3080) Introduction to CADD

Fall, spring, 1 credit. Students should enroll in only one sec. Preenrollment limited to CEE students. All other students by permission of instructor and only after first meeting of sections. Course begins second full week of classes. Staff.

Students learn to employ computer-aided design and drafting (CADD) to construct 2D drawings and 3D models using a variety of AutoCAD 2004 techniques. Alternative software tools for 3D visualization and solid modeling are introduced. Course meets in ACCEL once per week for 12 weeks, and grades are based on attendance, weekly exercises completed in class, and a semester project.

CEE 309(3090) Special Topics in Civil and Environmental Engineering

Fall, spring, 1-6 credits. Staff. Supervised study by individuals or groups of upper-division students on an undergraduate research project or on specialized topics not covered in regular courses.

CEE 323(3230) Engineering Economics and Management (also ENGR 323[3230])

Spring; usually offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors. D. P. Loucks.

For description, see ENGR 323.

CEE 331(3310) Fluid Mechanics

Fall; usually offered in summer for Engineering Co-op Program. 4 credits. Pre- or corequisite: ENGRD 202. Staff.

Covers hydrostatics, the basic equations of incompressible fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, laminar and turbulence boundary layer, flows around obstacles, and open-channel flow. Includes small-group laboratory assignments.

[CEE 332(3320) Hydraulic Engineering

Spring, 4 credits. Prerequisite: CEE 331. Offered alternate years. M. L. Weber-Shirk.]

CEE 341(3410) Introduction to Geotechnical Engineering and Analysis

Spring, 4 credits. Prerequisites: ENGRD 202, CEE 331 (or equivalent), or permission of instructor. Letter grades only. H. E. Stewart.

Fundamentals of geotechnical engineering. Topics include origins and descriptions of soil and rock as engineering materials, subsurface exploration methods, principles of effective stresses, stress distribution and ground settlements from surface loads, steady-state and time-dependent subsurface fluid flow, soil strength and failure criteria, geoenvironmental applications, and introduction to hazardous waste containment systems.

CEE 351(3510) Environmental Quality Engineering

Spring, 3 credits. J. J. Bisogni.

Introduction to engineering aspects of environmental quality control. Quality parameters, criteria, and standards for water and wastewater. Elementary analysis pertaining to the modeling of pollutant reactions in natural systems, and introduction to design of unit processes for wastewater treatment.

CEE 361(3610) Introduction to Transportation Engineering

Spring; usually offered in summer for Engineering Co-op Program. 3 credits. A. H. Meyburg and J. Mbwana.

Introduction technological, economic, and social aspects of transportation. Emphasizes design and functioning of transportation systems and their components. Covers supply-demand interactions; system planning, design, and management; traffic flow, intersection control and network analysis; institutional and energy issues; and environmental impacts.

CEE 371(3710) Structural Modeling and Behavior

Spring, 4 credits. Prerequisite: ENGRD 202. Corequisite: MATH 294. A. R. Ingraffea.

Introduction to the structural engineering enterprise including aspects of design, loads, behavior, form, modeling, mechanics, materials, analysis, and construction/manufacturing. Case studies involve different scales and various materials. Topics include analytical and finite-element computational modeling of structural systems, including cables, arches, trusses, beams, frames, and 2-D continua; deflections, strains, and stresses of structural members, systems, and 2-D continua by analytical and work/energy methods, with a focus on linear elastic behavior; the foundations of matrix structural analysis; and the application of finite-element software.

CEE 372(3720) Structural Analysis and Mechanics

Fall, 4 credits. Prerequisites: MATH 294, CEE 371. K. D. Papoulia.

Builds upon the prerequisites to create a strong foundation of mechanics and analysis for advanced courses in structural design, behavior, materials, or mechanics and in geotechnical, mechanical, or aerospace engineering. Intermediate topics in structural mechanics include shearing deformation in beams, effect of temperature changes and initial strains, complex loading on members, plane stress and strain, and modeling of linear and nonlinear material behavior. The theory, formulation, and application of matrix analysis, particularly finite-element displacement analysis, of structural systems such as trusses, frames, and continua, are covered. Special topics include symmetry in structural analysis, the force method in FEA and matrix analysis, and introductory material and geometric nonlinear analysis.

CEE 400(4000) Senior Honors Thesis

Fall, spring, 1-6 credits. For students admitted to CEE Honors Program. Staff. Supervised research, study, and/or project work resulting in a written report or honors thesis.

CEE 401(4010) Undergraduate Engineering Teaching in CEE

Fall, spring, 1-3 credits. Prerequisite: permission of instructor. Staff. Methods of instruction developed through discussions with faculty and by assisting with the instruction of undergraduates under the supervision of faculty.

CEE 406(4060) Civil Infrastructure Systems

Spring. 3 credits. Prerequisites: probability and statistics (CEE 304 or equivalent) and engineering economics (CEE 323 or equivalent) course. Letter or S-U grades. L. K. Nozick.

Introduction to the framing and solution of civil infrastructure problems using a systems engineering approach. Systems tools, such as optimization, life-cycle cost analysis, decision analysis, simulation, and risk analysis are examined through case studies related to civil infrastructure.

CEE 411(4110) Remote Sensing: Resource Inventory Methods (also CSS 411[4110])

Spring. 3 credits. Prerequisite: permission of instructor. A. Lembo.
For description, see CSS 411.

[CEE 432(4320) Hydrology

Spring. 3 credits. Prerequisite: CEE 331. Intended for undergraduates. Lec concurrent with CEE 632. Next offered 2006–2007. W. H. Brutsaert.]

CEE 435(4350) Coastal Engineering

Spring. 4 credits. Prerequisite: CEE 331. P. L-F. Liu.
Covers the following topics: review of hydrodynamics; small-amplitude wave theory; wave statistics; wave-structure interactions; coastal processes.

[CEE 436(4360) Case Studies in Environmental Fluid Mechanics

Spring. 4 credits. Prerequisite: CEE 331 or equivalent. Next offered 2006–2007. E. A. Cowen.]

CEE 437(4370) Experimental Methods in Fluid Dynamics

Spring. 3 credits. Pre- or corequisites: CEE 331 or equivalent and CEE 304 or equivalent. E. A. Cowen.
Same as CEE 637 but no project required. For description, see CEE 637.

CEE 440(4400) Foundation Engineering

Fall. 3 credits. Prerequisite: CEE 341. F. H. Kulhawy.
Covers soil exploration, sampling, and in-situ testing techniques; bearing capacity, stress distribution, and settlement; design of shallow and deep foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

CEE 441(4410) Retaining Structures and Slopes

Spring. 3 credits. Prerequisite: CEE 341. T. D. O'Rourke.
Covers Earth pressure theories; design of rigid, flexible, braced, tied-back, slurry, and reinforced soil structures; stability of excavation, cut, and natural slopes; and design problems stressing application of course material under field conditions of engineering practice.

CEE 444(4440) Environmental Site and Remediation Engineering

Spring. 3 credits. Prerequisite: CEE 341. T. D. O'Rourke.
Covers the principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasizes environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are

based on real projects and involve visits from practicing engineers.

CEE 451(4510) Microbiology for Environmental Engineering

Fall. 3 credits. Prerequisites: two semesters of college chemistry; organic chemistry or permission of instructor. R. E. Richardson.
Introduction to the fundamental aspects of microbiology and biochemistry that are pertinent to environmental engineering and science. Provides an overview of the characteristics of bacteria, Archaea, unicellular Eukaryotes (protozoa, algae, fungi), and viruses. Includes discussions of cell structure, bioenergetics and metabolism, and microbial genetics. Focus is then applied to topics pertinent to environmental engineering: pathogens; disease and immunity; environmental influences on microorganisms; roles of microbes in the carbon, nitrogen, and sulfur cycles; enzymes; molecular microbiology; and microbial ecology. This is an introductory course and is inappropriate for those who have taken BIOMI 290 or equivalent.

CEE 452(4520) Water Supply Engineering

Fall. 3 credits. Prerequisite: CEE 351. J. J. Bisogni.
Analysis of contemporary threats to human health from water supplies. Covers criteria and standards for potable-water quality; water-quality control theory; design of water supply facilities.

CEE 453(4530) Laboratory Research in Environmental Engineering

Fall. 3 credits. Prerequisite: CEE 351 or permission of instructor. M. L. Weber-Shirk.
Laboratory investigations of reactor flow characteristics; acid rain/lake chemistry; contaminated soil-site assessment and remediation; and wastewater treatment. Design of laboratory experiments, data analysis, computerized process control, and model development are emphasized.

[CEE 454(4540) Sustainable Small-Scale Water Supplies

Fall. 3 credits. Offered alternate years; next offered 2006–2007. M. L. Weber-Shirk.]

CEE 463(4630) Transportation and Information Technology

Fall. 3 credits. J. R. Mbwana.
Improving the use of existing facilities has become an important objective in transportation planning. Examines the role of computer and telecommunications technologies to achieve these improvements. Focuses specific attention on the development of analyses to evaluate the benefits of inclusion of these technologies in transportation systems.

CEE 464(4640) Transportation Systems Design

Spring. 3 credits. Prerequisite: CEE 361. M. A. Turnquist.
Advanced techniques for physical and operational design of transportation systems, including analytical modeling techniques underlying design criteria. Evaluation of alternative designs. Management and operating policies, including investment strategies. Facility location decisions, networks, and passenger and freight terminals.

CEE 471(4710) Fundamentals of Structural Mechanics

Fall. 3 credits. Prerequisites: ENGRD 202, MATH 294. M. D. Grigoriu.

Topics include beam bending; beams on elastic foundations; stability analysis for columns and beam-columns; linear elasticity; numerical solutions for linear elasticity problems; and applications including stress concentration, torsion, and plates.

CEE 472(4720) Finite Element Analysis of Solids and Structures

Spring. 3 credits. Prerequisites: CEE 371, 372, and 471. W. Aquino.
Covers the formulation of the finite element method in 2-D and 3-D continuum, basic 2-D and 3-D continuum isoparametric elements, plate and shell elements, modeling and programming aspects of the finite element method, and static and transient problems. A large part of the course is devoted to understanding element formulations, testing elements (patch test), and addressing problems such as shear and volumetric locking, among others. Emphasis is placed on understanding fundamental aspects of the method for making intelligent use of commercial software and obtaining a strong background for moving to further study and research. Problems are drawn primarily from structural and solid mechanics.

CEE 473(4730) Design of Concrete, Masonry, and Structures

Fall. 4 credits. K. C. Hover.
Centered on the design of a multi-story building that is initially planned with masonry bearing walls and precast-prestressed concrete floors. The masonry walls are then replaced with steel beams and columns. In the next phase the precast concrete is replaced with cast-in-place reinforced concrete. Finally, the structural steel elements will be replaced with a reinforced concrete framing system. The course explore gravity loads, wind loads, and earthquake loads, and the behavior of individual members and the structure as a whole.

[CEE 474(4740) Design of Metal Structures

Spring. 4 credits. T. Peköz.]

CEE 475(4750) Concrete Materials and Construction

Spring. 3 credits. K. C. Hover.
Covers the materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Topics include cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

[CEE 476(4760) Evaluation and Failure of Structures

Spring. 3 credits. Prerequisites: ENGRD 202, 261, and 203; CEE 371 and 473. Offered alternate years. M. J. Sansalone.]

CEE 477(4770) Introduction to Composite Materials (also M&E/T&AM 455[4550], MS&E 555[5550])

Spring. 3 credits. L. Phoenix.
For description, see T&AM 455.

CEE 478(4780) Structural Dynamics and Earthquake Engineering

Spring. 3 credits. M. D. Grigoriu.
Covers modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

[CEE 479(4790) Collaborative, Distance Design of Structural Systems (also M&AE 491[4910])

Fall, spring, 4 credits. Next offered 2006–2007. Staff.]

CEE 481(7491) LRFD-Based Engineering of Wood Structures (also BEE 481[4791])

Spring, 3 credits. Prerequisite: ENGRD 202. For description, see BEE 481 under "College of Agriculture and Life Sciences."

[CEE 490(4900) Management Practice in Project Engineering]

Fall, 3 credits. Prerequisite: permission of instructor. Next offered 2007–2008. K. C. Hover.

Introduction to the principles of project management. Covers planning, organizing, communicating, scheduling, and controlling of engineering work done in project teams.]

CEE 492(4920) Engineers for a Sustainable World: Engineering in International Development

Fall, 3 credits. R. A. Davidson and P. Doing.

Engineering-based group service projects offer real-life engineering research and design experience, from problem formulation through implementation. They may be international or local, and may relate to any kind of engineering. Students work on interdisciplinary teams with a project supervisor and a partner community organization. Course readings and a writing assignment cover the relationship between engineering and international development, the philosophy and politics of technology, and ethics in engineering practice.

CEE 501-502 Design Project

Fall, spring, 3 credits each semester.

Requirement for students in M.Eng. (civil and environmental) program. Staff.

CEE design projects present students with an exemplary design experience that reflects those carried out in the course of professional practice. Projects are typically performed by student design groups, and the topics reflect the diverse specialty areas of the civil and environmental engineering field as described below.

CEE 501-502(5021-5022) Project in Environmental and Water Resources Systems

CEE 501-502(5031-5032) Project in Environmental Fluid Mechanics and Hydrology

M. L. Weber-Shirk.

CEE 501-502(5041-5042) Project in Geotechnical Engineering

Design of major geotechnical engineering project. Planning and preliminary design during fall semester; final design completed in January intersession.

CEE 501-502(5051-5052) Project in Environmental Engineering

M. L. Weber-Shirk.

CEE 501-502(5061-5062) Project in Transportation Engineering

Systems analysis of a substantial transportation service.

CEE 501-502(5071-5072) Project in Structural Engineering

T. Peköz.

Design of a major civil engineering project. Planning and a preliminary design are

completed during the fall semester; the final design is completed in the January intersession.

CEE 501-502(5081-5082) Project in Civil Infrastructure Systems

R. A. Davidson.

Analysis of a problem in civil infrastructure.

CEE 501-502(5073-5074) Project in Civil Engineering Materials

K. C. Hover.

CEE 504(5240) Applied Systems Engineering (also COM S 504[5040], ECE/OR&IE 512[5120], M&AE 591[5910], SYSEN 510[5100])

Fall, 3 credits. Prerequisite: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. A. R. George and R. Roundy.

For description, see SYSEN 510.

CEE 505(5252) System Architecture, Behavior, and Optimization (also COM S 505[5050], ECE 513[5130], OR&IE 513[5142], M&AE 592[5920], SYSEN 520[5200])

Spring, 3 credits. Prerequisite: CEE/COM S 504, ECE/OR&IE 512, M&AE 591, or SYSEN 520. Staff.

For description, see SYSEN 520.

CEE 509(5290) Heuristic Methods for Optimization (also COM S/CIS 572[5720], OR&IE 533[5330])

Fall, 3 or 4 credits. Prerequisites: graduate standing or COM S, ENGRD 211 or 321; ENGRD 241 or permission of instructor. C. A. Shoemaker.

Teaches heuristic search methods including simulated annealing, tabu search, genetic algorithms, derandomized evolution strategy, and random walk developed for optimization of combinatorial- and continuous-variable problems. Application project options include wireless networks, protein folding, job shop scheduling, partial differential equations, satisfiability, or independent projects. Statistical methods are presented for comparing algorithm results. Advantages and disadvantages of heuristic search methods for both serial and parallel computation are discussed in comparison with other optimization algorithms.

CEE 590(5800) Project Management

Fall, spring, 4 credits. Prerequisite: permission of instructor. F. J. Wayno.

Core graduate course in project management for people who will manage technical or engineering projects. Focuses both on the "technical" tools of project management (e.g., methods for planning, scheduling, and control) and the "human" side (e.g., forming a project team, managing performance, resolving conflicts), with somewhat greater emphasis on the latter.

CEE 591(5910) Engineering Management Project

Fall, 3 credits. Prerequisite: permission of instructor. Staff.

Intensive evaluation of the management aspects of a major engineering project or system. Most students work on a large group project in the area of project management, but students may also work singly or in small groups on an engineering management topic of special interest to them.

CEE 592(5920) Engineering Management Project

Spring, 3 credits. Prerequisite: permission of instructor. Staff.

Continuation of CEE 591.

CEE 593(5930) Engineering Management Methods: Data, Information, and Modeling

Fall, 3 credits. Prerequisites: CEE 323 and 304 or equivalent. M. A. Turnquist.

Methods for managing data and transforming data into information. Modeling as a means to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods and optimization to managerial problems in project design, scheduling, operations, forecasting, and resource allocation.

CEE 594(5940) Economic Methods for Engineering and Management (also ECON 494[4940])

Fall, 4 credits. Prerequisite: calculus, probability and statistics, and economics course; senior or graduate standing or permission of instructor. R. E. Schuler.

Introduces economic concepts and uses them to select, calibrate and apply proper analytic decision tools in engineering design and management. Topics include market analysis and pricing strategies; production choices and cost estimation; input acquisition and employee motivation; project evaluation and the cost of capital; decision-making in risky and uncertain environments; industry structure, bidding strategies and game theory; plus the regulatory and ethical consequences of overall managerial strategies.

CEE 595(5950) Construction Planning and Operations

Fall, 3 credits. K. C. Hover.

Covers the fundamentals of construction planning: organization of the work site; construction planning, scheduling, and cost estimating; bidding; temporary structures; contract documents and the relationships among owners, designers, contractors, suppliers, and developers.

[CEE 596[5960] Management Issues in Forensic Engineering]

Fall, 3 credits. P. G. Carr.]

CEE 597(5970) Risk Analysis and Management (also TOX 597[5970])

Spring, 3 credits. Prerequisite: introduction to probability and statistics (e.g., CEE 304, ENGRD 270, ILRST 210, BTRY 261, or AEM 210); two semesters of calculus; senior or graduate standing or permission of instructor. J. R. Stedinger.

Develops a working knowledge of risk terminology and reliability engineering, analytic tools and models used to analyze environmental and technological risks, and social and psychological risk issues. Discussions address life risks in the United States historical accidents, natural hazards, threat assessment, transportation risks, industrial accidents, waste incineration, air pollution modeling, public health, regulatory policy, risk communication, and risk management.

CEE 598(5980) Introduction to Decision Analysis

Fall, 3 credits. Prerequisite: introduction to probability and statistics (e.g., CEE 304, ENGRD 270, ILRST 210, BTRY 261 or AEM 210); senior or graduate standing or permission of instructor. R. A. Davidson.

Framework to structure the way we think about decision situations that are complicated by uncertainty, complexity, and competing objectives. Specific decision analysis concepts and tools, such as decision trees, sensitivity analysis, value of information, and utility theory. Applications to all areas of engineering and life. Includes a group project to analyze a real-world decision.

CEE 601(6020) Seminar—Water Resources and Environmental Engineering

Fall. 1 credit. Staff.
Presents topics of current interest.

CEE 602(6070) Seminar—Civil Infrastructure

Fall, spring. 1 credit. Requirement for first-year graduate students. Staff.
Presents topics of current interest.

CEE 603(6080) Seminar—Engineering Systems and Management

Fall, spring. 1 credit. Staff.
Presents topics of current interest.

CEE 605(6050) Seminar—Issues in Risk Analysis (also NTRES 605[6050])

Fall. 1 credit. S-U grades optional. Staff.
Discussion of current issues and ongoing research on risk analysis issues from many perspectives with an emphasis on environmental risk analysis. Speakers address problem formulation, quantitative/qualitative methods in assessment of risk, communication issues, and challenges to risk assessment methodologies. Some sessions held jointly with other seminar series. Enrollment in seminar requires short reports and participation in two required discussion meetings for class members designed to integrate the issues raised during the semester.

CEE 606(6860) Civil Infrastructure Systems

Fall. 3 credits. Prerequisites: probability and statistics course (CEE 304 or equivalent) and engineering economics course (CEE 323 or equivalent). Letter or S-U grades. L. K. Nozick.
Introduction to the framing and solution of civil infrastructure problems using a systems engineering approach. Systems tools, such as optimization, life-cycle cost analysis, decision analysis, simulation, Markov modeling, and risk analysis, are examined through case studies related to civil infrastructure.

[CEE 610(6100) Remote Sensing Fundamentals (also CSS 660[6100])]

Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2006–2007.
W. D. Philpot.]

[CEE 615(6150) Digital Image Processing]

Spring. 3 credits. Prerequisite: facility with algebra, trigonometry, and basic statistics or permission of instructor. Next offered 2006–2007. W. D. Philpot.]

CEE 617(6015) Special Topics—Remote Sensing

On demand. 1–6 credits. W. D. Philpot.
Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

CEE 620(6200) Water-Resources Systems Engineering

Spring. 3 credits. Prerequisites: CEE 323 and 593 or BEE 475. D. P. Loucks.
Development and application of deterministic and stochastic optimization and simulation

models for water-resources planning and management. Covers river-basin modeling, including reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, and water-quality prediction and control.

[CEE 621(6210) Stochastic Hydrology]

Spring. 3 credits. Prerequisites: CEE 304 or permission of instructor. J. R. Stedinger.]

[CEE 623(6230) Environmental Quality Systems Engineering]

Fall. 3 credits. Prerequisites: MATH 294, optimization, and graduate standing or permission of instructor. C. A. Shoemaker.]

CEE 628(6021) Seminar—Environmental and Water Resources Systems Analysis

Spring. 1 credit. Prerequisite: permission of instructor. C. A. Shoemaker.

Graduate students and faculty members give informal lectures on various topics related to ongoing research in environmental or water resources systems planning and analysis.

CEE 631(6310) Computational Simulation of Flow and Transport in the Environment

Spring. 3 credits. Prerequisites: MATH 294 or equivalent, ENGRD 241 or experience in numerical methods and programming, and elementary fluid mechanics.
P. L.-F. Liu.

Covers fundamental equations of saturated and unsaturated flow in porous media; flow in fractured media; numerical modeling of transport in porous media; diffusion and advective diffusion in one, two, and three dimensions; anisotropy; and additional terms for reactive substances. Teaches various numerical methods including finite difference, finite elements, and boundary elements.

[CEE 632(6320) Hydrology]

Spring. 3 credits. Prerequisite: CEE 331.
W. H. Brutsaert.]

[CEE 633(6330) Flow in Porous Media and Groundwater]

Fall. 3 credits. Prerequisite: CEE 331.
W. H. Brutsaert.]

[CEE 634(6340) Boundary Layer Meteorology]

Fall. 3 credits. Prerequisite: CEE 331 or permission of instructor. W. H. Brutsaert.]

CEE 635(6350) Small and Finite Amplitude Water Waves

Spring. 3 credits. P. L.-F. Liu.
Reviews linear and nonlinear theories of ocean waves. Discusses the applicability of different wave theories to engineering problems.

CEE 636(6360) Environmental Fluid Mechanics

Spring. 3 credits. Staff.
Covers analytic and modeling perspectives of environmental flows; mechanics of layered and continuously stratified fluids: internal waves, density currents, baroclinic motions, and turbulence; jets and plumes and their behavior in the environment; turbulent diffusion, shear flow dispersion, and wave-induced mixing processes; and applications to mixing processes in rivers, lakes, estuaries, and the coastal ocean.

CEE 637(6370) Experimental Methods in Fluid Dynamics (also M&E 627[6272])

Spring. 4 credits. Pre- or corequisites: CEE 331 or equivalent and CEE 304 or equivalent. E. A. Cowen.
Introduction to experimental data collection and analysis, in particular as they pertain to fluid flows. Covers computer-based experimental control, analog and digital data acquisition, discrete sampling theory, digital signal processing, uncertainty analysis. Also covers analog transducers, acoustic and laser Doppler velocimetry, full-field (2-D) quantitative imaging techniques. Includes laboratory experiments and a project.

CEE 638(6030) Seminar—Hydraulics

Spring. 1 credit. Requirement for graduate students majoring in hydraulics or hydraulic engineering. Open to undergraduates and graduates. Staff.
Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

CEE 639(6035) Special Topics in Hydraulics

On demand. 1–6 credits. Staff.
Special topics in fluid mechanics, hydraulic engineering, or hydrology.

CEE 640(6400) Foundation Engineering

Fall. 3 credits. Prerequisite: CEE 341.
F. H. Kulhawy.
Covers soil exploration, sampling, and in-situ testing techniques; bearing capacity, stress distribution, and settlement; design of shallow and deep foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

CEE 641(6410) Retaining Structures and Slopes

Spring. 3 credits. Prerequisite: CEE 341.
T. D. O'Rourke.
Covers Earth pressure theories; design of rigid, flexible, braced, tied-back, slurry, and reinforced soil structures; stability of excavation, cut, and natural slopes; and design problems stressing application of course material under field conditions of engineering practice.

CEE 644(6440) Environmental Site and Remediation Engineering

Spring. 3 credits. Prerequisite: CEE 341 or equivalent or permission of instructor.
T. D. O'Rourke.
Covers principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasizes environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.

CEE 649(6045) Special Topics in Geotechnical Engineering

On demand. 1–6 credits. Staff.
Supervised study of special topics not covered in the formal courses.

CEE 653(6530) Water Chemistry for Environmental Engineering

Fall. 3 credits. Prerequisite: one semester of college chemistry or permission of instructor. L. W. Lion.
Covers principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical

thermodynamics, reaction kinetics, acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. Focuses on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

[CEE 654(6540) Aquatic Chemistry]

Spring. 3 credits. Prerequisite: CEE 653 or CHEM 287-288. J. J. Bisogni.

Applies concepts of chemical equilibria to natural aquatic systems. Topics include acid-base reactions, buffer systems, mineral precipitation, coordination and redox reactions, Eh-pH diagrams adsorption phenomena, humic acid chemistry, and chemical-equilibria computational techniques. In-depth coverage of topics covered in CEE 653.]

CEE 655(6550) Transport, Mixing, and Transformation in the Environment

Fall. 3 credits. Prerequisite: CEE 331. Staff. Application of fluid mechanics to problems of transport, mixing, and transformation in the water environment. Introduction to advective, diffuse, and dispersive processes in the environment. Boundary interactions: air-water and sediment-water processes. Introduction to chemical and biochemical transformation processes. Applications to transport, mixing, and transformation in rivers, lakes, and coastal waters.

CEE 656(6560) Physical/Chemical Process

Fall. 3 credits. Pre- or corequisite: CEE 653 or permission of instructor. J. J. Bisogni. Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Analysis and design of treatment processes and systems.

CEE 657(6570) Biological Processes

Spring. 3 credits. Prerequisites: introductory microbiology and CEE 656, or permission of instructor. J. M. Gossett.

Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Bioenergetics analysis, stoichiometry, biokinetic, and design of biological treatment process.

CEE 658(6580) Microbial Biodegradation and Biocatalysis Lab

Spring. 3 credits. Prerequisites: CEE 451 or BIOMI 290 or equivalent; CEE 351 or CHEME 390 or permission of instructor. R. E. Richardson.

Students explore the use of microbes in biodegradation and biocatalysis as well as the molecular techniques (i.e., analysis of DNA, RNA, and proteins) commonly used in these applications. Lectures cover enzyme classes and kinetics, selective isolation of organisms with desired bioconversion capabilities, effects of environmental parameters and cell-to-cell communication on gene expression, methods in microbial molecular biology, and contemporary case studies in biodegradation and biocatalysis. Laboratory sessions give students hands-on experience in molecular and analytical methods. Student teams design and then construct a bioreactor employing their own environmental isolates that degrade

a selected contaminant or produce a desired compound.

CEE 659(6051) Seminar—Environmental Quality Engineering

Spring. 1 credit. Prerequisite: graduate students in environmental engineering. R. E. Richardson.

Presentation and discussion of current research in environmental engineering.

CEE 661(6610) Urban Transportation Planning and Modeling

Fall. 3 credits. Prerequisite: CEE 361 or permission of instructor. Offered alternate years. A. H. Meyburg.

Covers modern transportation planning practice and the analytical tools that are necessary to engage in this field. Emphasizes passenger transportation in the urban context. The legislative, political, and economic contexts of urban transportation planning (UTP) are discussed. The course presents the travel demand estimation process and the associated models and approaches and provides insights in travel survey data acquisition.

CEE 662(6620) Urban Transportation Network Design and Analysis

Fall. 3 credits. Prerequisite: CEE 361 or permission of instructor. L. K. Nozick.

Covers the development and use of mathematical models for the design and analysis of urban transportation networks, including formulations and solution procedures based on user equilibrium and stochastic user equilibrium. Students apply these tools to a substantive real-world case study.

CEE 663(6630) Network Flows and Algorithms

Spring. 3 credits. Prerequisite: CEE 662 or permission of instructor. Offered alternate years. M. A. Turnquist.

Algorithms for network flow problems encountered in transportation systems modeling, including shortest path, multi-objective shortest path, minimum cost flows, multi-commodity flows and generalized flows, are presented. Applications to vehicle routing, dynamic vehicle allocation, and network design are included.

CEE 668(6060) Seminar—Transportation System Engineering

Fall, spring. 1 credit. Staff. Presents topics of current interest.

CEE 671(6710) Fundamentals of Structural Mechanics

Fall. 3 credits. Prerequisites: ENGRD 202, MATH 294. M. D. Grigoriu.

Topics include beam bending, beams on elastic foundation, stability analysis for columns and beam-columns, linear elasticity, numerical solutions for linear elasticity problems, and applications including stress concentration, torsion, and plates.

CEE 672(6720) Finite Element Analysis of Solids and Structures

Spring. 3 credits. Prerequisites: CEE 371, 372, and 471. W. Aquino.

Covers the formulation of the finite element method in 2-D and 3-D continuum, basic 2-D and 3-D continuum isoparametric elements, plate and shell elements, modeling and programming aspects of the finite element method, and static and transient problems. A large part of the course is devoted to understanding element formulations, testing elements (patch test), and addressing

problems such as shear and volumetric locking, among others. Emphasis is placed on understanding fundamental aspects of the method for making intelligent use of commercial software and obtaining a strong background for moving to further study and research. Problems are drawn primarily from structural and solid mechanics.

CEE 673(6730) Design of Concrete Structures

Fall. 4 credits. Prerequisite: CEE 371 or permission of instructor. K. C. Hover.

Centered on the design of a multi-story building that is initially planned with masonry bearing walls and precast-prestressed concrete floors. The masonry walls are then replaced with cast-in-place reinforced concrete. Finally, the structural steel elements are replaced with a reinforced concrete framing system. The course explores gravity loads, wind loads, and earthquake loads, and the behavior of individual members and the structure as a whole.

[CEE 674(6740) Design of Metal Structures]

Spring. 4 credits. Prerequisite: CEE 371 or permission of instructor. Staff.]

CEE 675(6750) Concrete Materials and Construction

Spring. 3 credits. K. C. Hover.

Covers the materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Topics include cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

[CEE 677(6770) Engineering Analysis]

Fall. 3 credits. Prerequisite: permission of instructor. M. D. Grigoriu.]

CEE 678(6780) Structural Dynamics and Earthquake Engineering

Spring. 3 credits. M. D. Grigoriu.

Covers modal analysis, numerical methods, and frequency-domain analysis. Introduces earthquake-resistant design.

CEE 679(6760) Evaluation and Failure of Structures

Spring. 3 credits. M. J. Sansalone.

Teaches material and structural evaluation through the lens of failure. Builds upon and integrates what students have learned in courses in physics, mechanics, dynamics, materials science, structural modeling/analysis, and design. In addition, the course teaches the physics of methods used for condition assessment of structures (e.g., stress wave propagation, electromagnetic wave propagation, heat flow), introduces students to structural damage and assessment of damage caused by earthquake/wind loads on structures, and introduces students to blast/impact loadings on structures.

CEE 692(6095) Special Topics In Engineering Management

On demand. 1-6 credits. Staff.

Individually supervised study of one or more specialized topics not covered in regular courses.

CEE 697(6075) Special Topics In Structural Engineering

On demand. 1-6 credits. Staff.

Individually supervised study or independent design or research in specialized topics not covered in regular courses. Occasional

offering of such special courses as Shell Theory and Design, and Advanced Topics in Finite Element Analysis.

CEE 710(7010) Research—Remote Sensing

On demand. 1–6 credits. W. D. Philpot.
For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

CEE 722(7020) Environmental and Water Resources Systems Analysis Research

On demand. 1–6 credits. Prerequisite: permission of instructor. Preparation must be suitable to investigation to be undertaken. Staff.

Investigations of particular environmental or water resources systems problems.

CEE 729(6025) Special Topics in Environmental and Water Resources Systems Analysis

Offered on demand. 1–6 credits. Staff.
Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

CEE 735(7030) Research in Hydraulics

On demand. 1–6 credits. Staff.
The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge in the form of a research report.

CEE 740(7400) Engineering Behavior of Soils

Fall. 3 credits. Prerequisite: CEE 341.
H. E. Stewart.
Detailed study of the physiochemical nature of soil. Stress states due to geostatic loading and stress-history effects. In-depth evaluation of stress-strain-strength, compressibility, and hydraulic conductivity of natural soils.

CEE 741(7410) Rock Engineering

Fall. 3 credits. Prerequisite: CEE 341 or permission of instructor. Recommended: introductory geology. T. D. O'Rourke.
Geological and engineering classifications of intact rock, discontinuities, and rock masses. Includes laboratory and field evaluation of properties. Covers: stress states and stress analysis; design of foundations on, and openings in, rock masses; and analysis of the stability of rock slopes.

CEE 744(7440) Advanced Foundation Engineering

Spring. 2 credits. Prerequisite: CEE 640.
F. H. Kulhawy.
Continuation of CEE 640, with detailed emphasis on special topics in soil-structure interaction. Typical topics include lateral and pullout loading of deep foundations, pile group behavior, foundations for offshore structures, foundations for special structures.

CEE 745(7450) Soil Dynamics

Spring. 3 credits. Prerequisite: permission of instructor. H. E. Stewart.
Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Covers design of

embankments and retaining structures under dynamic loading conditions.

CEE 746(7460) Embankment Dam Engineering

Spring. 2 credits. Prerequisites: CEE 641 and 741, or permission of instructor.
F. H. Kulhawy.
Principles of analysis and design for earth and rockfill dams. Materials, construction methods, internal and external stability, seepage and drainage, performance monitoring, abutment and foundation evaluation. Introduction to tailings dams.

CEE 749(7040) Research in Geotechnical Engineering

On demand. 1–6 credits. Staff.
For students who want to pursue a particular geotechnical topic in considerable depth.

CEE 750(7050) Research in Environmental Engineering

On demand. 1–6 credits. Staff.
For students who want to study a particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design and analysis procedures.

CEE 759(6055) Special Topics in Environmental Engineering

On demand. 1–6 credits. Staff.
Supervised study in special topics not covered in formal courses.

CEE 762(7620) Practicum in Modeling Transportation Systems

Fall. 3 credits. Prerequisites: CEE 661, 662, and 663. Next offered 2006–2007.
L. K. Nozick.]

CEE 764(6065) Special Topics in Transportation

On demand. 1–6 credits. Staff.
Advanced subject matter not covered in depth in other regular courses.

CEE 770(7700) Engineering Fracture Mechanics

Fall. 3 credits. Prerequisite: CEE 672 or 772 (M&AE 680/T&AM 666) and T&AM 753, or permission of instructor. Offered alternate years. A. Ingraffea.

Computational and physical modeling of crack growth processes. Finite and boundary element-based simulation of brittle fracture initiation and propagation, fatigue crack growth, and elasto-plastic and cohesive approaches to inelastic crack growth. Element formulation, meshing and remeshing, interactive steering. Case studies across scales from geomechanics to micromechanics, and including metals, ceramics, and polymers. Laboratory techniques for fracture toughness, crack growth rate, and trajectory testing.

[CEE 771(7710) Stochastic Mechanics in Science and Engineering

Fall. 3 credits. Prerequisite: permission of instructor. M. D. Grigoriu.]

CEE 772(7720) Random Vibration

Fall. 3 credits. Prerequisites: M&AE 326 and OR&IE 260, or equivalent, and permission of instructor. M. D. Grigoriu.
Reviews random-process theory, simulation, and first-passage time. Linear random vibration: second-moment response descriptors and applications from fatigue; seismic analysis; and response to wind, wave, and other non-Gaussian load processes. Nonlinear random vibration: equivalent linearization, perturbation techniques,

Fokker-Planck and Kolomogorov equations, Itô calculus, and applications from chaotic vibration, fatigue, seismic analysis, and parametrically excited systems.

[CEE 773(7730) Structural Reliability

Fall. 3 credits. Prerequisite: permission of instructor. M. D. Grigoriu.]

CEE 774(7740) Advanced Structural Concrete

Fall. 3 credits. Staff.
Covers the fundamental aspects of the mechanical behavior of concrete subjected to axial and multiaxial states of stress, rate effects, time-dependent deformations, and multiscale modeling. Includes the behavior of reinforced concrete membrane elements subjected to plane states of stress, torsion, limit analysis, and gives an introduction to finite element modeling of reinforced concrete structures.

CEE 775(7750) Nonlinear Finite Element Analysis in Solid Mechanics

Fall. 3 credits. W. Aquino.
Covers fundamental aspects of nonlinear finite element analysis including geometric and material nonlinearity. Also covers total and updated lagrangian formulations, implementation of constitutive models, numerical solutions of global nonlinear systems of equations, and regularization techniques for softening materials.

CEE 776(7760) Advanced Topics in Stability

Fall. 3 credits. Prerequisite: CEE 374 or equivalent. T. Peköz.]

[CEE 777(7770) Computational Solid and Structural Mechanics

Spring. 3 credits. K. D. Papoulia.]

[CEE 781(7810) Natural Disaster Risk Assessment and Management

Spring. 3 credits. Offered alternate years.
R. A. Davidson.

Explores ways to define, measure, and manage natural disaster risk using systems engineering, civil engineering, and social science perspectives and analysis tools. Considers multiple hazards and multiple viewpoints (local, international, individual, public sector, private sector).

CEE 783(7073) Civil and Environmental Engineering Materials Project

On demand. 1–3 credits. Staff.
Individual projects or reading and study assignments involving engineering materials.

CEE 785(7070) Research in Structural Engineering

On demand. 1–6 credits. Staff.
Pursues a branch of structural engineering beyond what is covered in regular courses. Theoretical or experimental investigation of suitable problems.

CEE 810(8100) Thesis—Remote Sensing

Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. W. D. Philpot.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 820(8200) Thesis—Environmental and Water Resource Systems
