Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 830(8300) Thesis—Environmental Fluid Mechanics and Hydrology

Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 840(8400) Thesis—Geotechnical Engineering

Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 850(8500) Thesis—Environmental Engineering

Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 860(8600) Thesis—Transportation Systems Engineering

Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 880(8700) Thesis—Structural Engineering

Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 890(8800) Thesis—Civil Infrastructure Systems

Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

COMPUTER SCIENCE

C. Van Loan, chair; W. Arms, G. Bailey, K. Bala, K. Birman, C. Cardie, R. Caruana, T. Coleman, R. L. Constable, R. Elber, D. Fan, P. Francis, J. Gehrke, D. Greenberg, D. Gries, J. Halpern, J. E. Hopcroft, D. Huttenlocher, T. Joachims, U. Keich, J. Kleinberg, D. Kozen, L. Lee, S. Marschner, A. Myers, K. Pingali, R. Rugina, F. B. Schneider, D. Schwartz, B. Selman, J. Shanmugasundaram, D. Shmoys, E. G. Sier, E. Tardos, R. Teitelbaum, S. Vavasis, R. Zabih

The Department of Computer Science is part of the College of Arts and Sciences, Computing and Information Science (CIS), and the College of Engineering. For complete course descriptions, see the Computer Science listing in the CIS section.

COM S 099(1109) Fundamental Programming Concepts

Fall, summer. 2 credits. Prerequisite: freshman standing. Credit may not be applied toward engineering degree. S-U grades only.

COM S 100J(1110) Introduction to Computer Programming

Fall, spring, summer. 4 credits. Assumes basic high school mathematics (no calculus), but no programming experience.

COM S 100M(1112) Introduction to Computer Programming

Fall, spring. 4 credits. Corequisite: MATH 111, 191, or equivalent. Assumes student is comfortable with mathematics (at level of one semester of calculus) but has no prior programming experience.

COM S 101(1710) Introduction to Cognitive Science (also COGST 101[1010], LING 170[1700], PHIL 191[1910], PSYCH 102[1020])

Fall, summer. 3 credits.

For description, see COGST 101.

COM S 113(2000) Introduction to C

Fall, spring, usually weeks 1–4. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Credit granted for both COM S 113 and 213 only if 113 taken first. S-U grades only.

COM S 114(2006) Unix Tools

Fall, usually weeks 5–8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S-U grades only.

COM S 130(1300) Introductory Design and Programming for the Web (also INFO 130[1300])

Fall 3 credits. Prerequisite: none. No computer background necessary.

COM S 165(1610) Computing in the Arts (also ART 175, CIS 165[1610], MUSIC 165[1465], PSYCH 165[1650])

Spring. 3 credits. Recommended: good comfort level with computers and some of the arts.

COM S 167(1620) Visual Imaging in the Electronic Age (also ART 170[1700], CIS 167[1620], ENGR1 167[1670])

Spring. 3 credits.

For description, see ART 170.

COM S 172(1700) Computation, Information, and Intelligence (also COGST 172, ENGR1 172[1700], INFO 172[1700])

Fall. 3 credits. Prerequisite: some knowledge of differentiation; permission of instructor for students who have completed equivalent of COM S 100.

COM S 201(2710) Cognitive Science in Context Laboratory (also COGST 201[2010], PSYCH 201[2010])

Spring. 4 credits. Limited to 24 students.

Recommended: concurrent or prior registration in PSYCH 102/COGST 101/COM S 101/LING 170/PHIL 191. Knowledge of programming languages not assumed.

For description, see COGST 201.

COM S 211(2110) Computers and Programming (also ENGRD 211[2110])

Fall, spring, summer. 3 credits.

Prerequisite: COM S 100 or equivalent course in Java or C++.

COM S 212(2111) Java Practicum

Fall, spring. 1 credit. Pre- or corequisite: COM S/ENGRD 211. Letter grades only.

[COM S 213(2002) C++ Programming

Fall or spring. 2 credits. Prerequisite: COM S 100 or equivalent programming experience. Students who plan to take COM S 113 and 213 must take 113 first. S-U grades only. Not offered every year.]

COM S 214(2008) Advanced UNIX Programming and Tools

Spring, usually weeks 5–8. 1 credit.

Prerequisite: COM S 114 or equivalent. S-U grades only.

COM S 215(2004) Introduction to C#

Fall, spring, usually weeks 5–8. 1 credit.

Prerequisite: COM S/ENGRD 211 or equivalent experience. S-U grades only.

COM S 230(2300) Intermediate Design and Programming for the Web (also INFO 230[2300])

Spring. 3 credits. Prerequisite: COM S 130 or equivalent knowledge.

COM S 280(2800) Discrete Structures

Fall, spring. 3 credits. Pre- or corequisite: COM S 100 or permission of instructor.

COM S 312(3110) Data Structures and Functional Programming

Fall, spring. 4 credits. Prerequisite: COM S 211–212 or equivalent programming experience. Should not be taken concurrently with COM S 314.

COM S 314(3420) Computer Organization (also ECE 314[3140])

Fall, spring. 4 credits. Prerequisite: COM S 211 or ENGRD 230. Should not be taken concurrently with COM S 312.

[COM S 321(3510) Numerical Methods in Computational Molecular Biology (also BIOBM 321[3210], ENGRD 321[3510])

Fall. 3 credits. Prerequisites: at least one course in calculus (e.g., MATH 106, 111, or 191) and a course in linear algebra (e.g., MATH 221 or 294 or BTRY 417); COM S 100 or equivalent and some familiarity with iteration, arrays, and procedures; knowledge of discrete probability and random variables at the level of COM S 280. COM S majors and minors may use

only one of the following toward their degree: COM S 321, 322, or 421. Offered odd-numbered years.]

COM S 322(3220) Introduction to Scientific Computation (also ENGRD 322[3220])

Spring, summer. 3 credits. Prerequisites: COM S 100 and MATH 221 or 294; knowledge of discrete probability and random variables at the level of COM S 280. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, or 421.

COM S 324(3740) Computational Linguistics (also COGST 424[4240], LING 424[4242])

Fall, spring. 4 credits. Prerequisites: LING 203. Recommended: COM S 114. Labs involve work in Unix environment.

For description, see LING 424.

COM S 330(3300) Applied Database Systems (also INFO 330[3300])

Fall. 3 credits. Prerequisite: COM S/ENGRD 211. COM S majors may use only one of the following toward their degree: COM S/INFO 330 or COM S 433.

COM S 381(3810) Introduction to Theory of Computing

Fall, summer. 3 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and 481; corrective transfers between COM S 381 and 481 (in either direction) encouraged during first few weeks of instruction.

[COM S 400(4150) The Science of Programming]

Fall. 3 credits. Prerequisite: COM S 211. Not offered every year.]

[COM S 411(4110) Programming Languages and Logics]

Fall. 4 credits. Prerequisite: COM S 312 or permission of instructor. Not offered every year.]

COM S 412(4120) Introduction to Compilers

Spring. 3 credits. Prerequisites: COM S 312 (or permission of instructor) and COM S 314. Corequisite: COM S 413.

COM S 413(4121) Practicum in Compilers

Spring. 2 credits. Corequisite: COM S 412.

COM S 414(4410) Systems Programming and Operating Systems

Fall, spring, summer. 3 credits. Prerequisite: COM S 211, 212, 312 (or permission of instructor), and 314. Corequisite: COM S 415 in spring only.

COM S 415(4411) Practicum in Operating Systems

Fall, spring. 2 credits. Corequisite: COM S 414.

COM S 416(4420) Computer Architecture (also ECE 475[4750])

Fall. 4 credits. Prerequisites: ENGRD 230 and COM S/ECE 314.

For description, see ECE 475.

COM S 419(4450) Computer Networks

Spring. 4 credits. Prerequisite: COM S 211, 212, 312, and 314. Not offered every year.

COM S 421(4210) Numerical Analysis

Fall. 4 credits. Prerequisites: MATH 221 or 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, or 421.

COM S 426(4520) Introduction to Bioinformatics

Fall. 4 credits. Prerequisites: COM S/ENGRD 211, COM S 280.

[COM S 428(4510) Introduction to Computational Biophysics]

Fall. 3 credits. Prerequisite: COM S 100, CHEM 211 or equivalent, MATH 221, 293 or 294, PHYS 112 or 213, or permission of instructor. Recommended: BIOBM 330. Offered even-numbered years.]

COM S 430(4300) Information Retrieval (also INFO 430[4300])

Fall. 3 credits. Prerequisite: COM S 211 or equivalent.

COM S 431(4302) Web Information Systems (also INFO 431[4302])

Spring. 3 credits. Prerequisites: COM S 211 and some familiarity with web site technology.

COM S 432(4320) Introduction to Database Systems

Fall. 3 credits. Prerequisites: COM S 312 (or COM S 211–212 and permission of instructor).

COM S 433(4321) Practicum in Database Systems

Fall. 2 credits. Prerequisite: COM S 432 or coregistration in COM S 432. COM S majors may use only one of the following toward their degree: COM S/INFO 330 or COM S 433.

COM S 465(4620) Computer Graphics I (also ARCH 374[3740])

Fall. 4 credits. Prerequisite: COM S/ENGRD 211. May not be taken after COM S 417.

COM S 467(4630) Computer Graphics II

Spring. 3 credits. Prerequisite: COM S 465.

COM S 468(4631) Computer Graphics Practicum

Spring. 2 credits. Prerequisite: COM S 465. Corequisite: COM S 467.

COM S 472(4700) Foundations of Artificial Intelligence

Fall. 3 credits. Prerequisites: COM S/ENGRD 211 and COM S 280 or equivalent.

COM S 473(4701) Practicum in Artificial Intelligence

Fall. 2 credits. Corequisite: COM S 472.

COM S 474(4740) Introduction to Natural Language Processing (also COGST 474[4740], LING 474[4474])

Fall or spring. 4 credits. Prerequisite: COM S 211.

COM S 478(4780) Machine Learning

Spring. 4 credits. Prerequisites: COM S 280, 312, and basic knowledge of linear algebra and probability theory.

COM S 480(4870) Introduction to Cryptology (also MATH 335[3350])

Fall, spring. 3 credits. Prerequisites: COM S 100 and MATH 222 or 294. Students who take this course may not also receive credit for MATH 336.

For description, see MATH 335.

COM S 481(4810) Introduction to Theory of Computing

Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit not granted for both COM S 381 and 481; corrective transfers between COM S 481 and 381 (in either direction) encouraged during first few weeks of instruction.

COM S 482(4820) Introduction to Analysis of Algorithms

Spring, summer. 4 credits. Prerequisites: COM S 280 and 312.

COM S 483(4812) Quantum Computation (also PHYS 481/681[4481/7681])

Spring. 2 credits. Prerequisite: familiarity with theory of vector spaces over complex numbers. Not offered every year.

For description, see PHYS 481.

COM S 486(4860) Applied Logic (also MATH 486[4860])

Fall or spring. 4 credits. Prerequisites: MATH 222 or 294, COM S 280 or equivalent (e.g., MATH 332, 432, 434, 481), and some additional course in mathematics or theoretical computer science.

COM S 490(4999) Independent Reading and Research

Fall, spring. 1–4 credits.

COM S 501(5150) Software Engineering

Spring. 4 credits. Prerequisite: COM S 211 or equivalent experience programming in Java or C++.

COM S 513(5430) System Security

Fall. 4 credits. Prerequisites: COM S 414 or 419 and familiarity with Java, C, or C# programming languages.

COM S 514(5410) Intermediate Computer Systems

Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.

COM S 516(5420) Parallel Computer Architecture (also ECE 572[5720])

Spring. 4 credits. Prerequisite: ECE 475.

For description, see ECE 572.

[COM S 522(5220) Computational Tools and Methods for Finance]

Spring. 4 credits. Prerequisites: programming experience (e.g., C, FORTRAN, or MATLAB), some knowledge of numerical methods, especially numerical linear algebra. Not offered every year.]

COM S 530(5300) The Architecture of Large-Scale Information Systems (also INFO 530[5300])

Spring. 4 credits. Prerequisite: COM S/INFO 330 or 432.

COM S 565(5640) Computer Animation (also ART 273[2703], CIS 565[5640])

Fall. 4 credits. Prerequisite: none.

For description, see ART 273.

COM S 566(5642) Advanced Animation (also ART 372, CIS 566[5642])

Spring. 4 credits. Prerequisite: none.

For description, see ART 372.

COM S 572(5722) Heuristic Methods for Optimization (also CEE 509[5090], CIS 572[5722], OR&IE 533[5340])

Fall. 3 or 4 credits. Prerequisites: COM S/ENGRD 211 or 322 or CEE/ENGRD 241, or graduate standing, or permission of instructor. Not offered every year.

For description, see CEE 509.

COM S 578(5780) Empirical Methods in Machine Learning and Data Mining

Fall. 4 credits. Prerequisites: COM S 280 and 312 or equivalent.

COM S 611(6110) Advanced Programming Languages

Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.

COM S 612(6120) Compiler Design for High-Performance Architectures

Spring. 4 credits. Prerequisites: COM S 314 and 412 or permission of instructor.

COM S 614(6410) Advanced Systems

Fall or spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.

COM S 615(6460) Peer-to-Peer Systems

Fall or spring. 4 credits. Recommended: COM S 614.

[COM S 619(6450) Advanced Computer Networks

Fall. 4 credits. Prerequisite: COM S 419 or 519, or permission of instructor. Not offered every year.]

COM S 621(6210) Matrix Computations

Fall. 4 credits. Prerequisites: MATH 411 and 431 or permission of instructor.

[COM S 622(6220) Numerical Optimization and Nonlinear Algebraic Equations

Spring. 4 credits. Prerequisite: COM S 621. Offered odd-numbered years.]

COM S 624(6240) Numerical Solution of Differential Equations

Spring. 4 credits. Prerequisites: exposure to numerical analysis (e.g., COM S 421 or 621), differential equations, and knowledge of MATLAB. Offered even-numbered years.

COM S 626(6510) Computational Molecular Biology

Spring. 4 credits. Prerequisites: familiarity with linear programming, numerical solutions of ordinary differential equations, and nonlinear optimization methods.

COM S 628(6522) Biological Sequence Analysis

Spring. 4 credits. Prerequisite: none.

COM S 630(6300) Representing and Accessing Digital Information (also INFO 630(6300))

Spring. 4 credits. Prerequisites: basic knowledge of linear algebra and probability theory; basic programming skills.

COM S 632(6320) Database Systems

Spring. 4 credits. Prerequisite: COM S 432-433 or permission of instructor.

COM S 633(6322) Advanced Database Systems

Spring. 4 credits.

COM S 664(6670) Machine Vision

Fall. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 221 or equivalent.

[COM S 665(6620) Advanced Interactive Graphics

Fall or spring. 4 credits. Prerequisites: COM S 465 and 467 or equivalent and undergraduate-level understanding of algorithms, probability and statistics, vector calculus, and programming. Not offered every year.]

COM S 667(6630) Physically Based Rendering

Fall or spring. 4 credits. Prerequisites: COM S 465 and 467 or equivalent and undergraduate-level understanding of algorithms, programming, and vector calculus.

COM S 671(6762) Introduction to Automated Reasoning

Fall or spring. 4 credits. Prerequisite: COM S 611 and graduate standing or permission of instructor. Not offered every year.

COM S 672(6700) Advanced Artificial Intelligence

Spring. 4 credits. Prerequisites: COM S 472 or permission of instructor.

COM S 673(6724) Integration of Artificial Intelligence and Operations Research (also CIS 673(6724))

Spring. 3 credits.

COM S 674(6740) Natural Language Processing

Spring. 3 credits. Prerequisite: COM S 472 or permission of instructor. COM S 474 is not a prerequisite. Not offered every year.

[COM S 676(6764) Reasoning about Knowledge

Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic. Not offered every year.]

[COM S 677(6766) Reasoning about Uncertainty

Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic. Not offered every year.]

COM S 678(6780) Advanced Topics in Machine Learning

Spring. 4 credits. Prerequisites: COM S 478 or equivalent, or COM S 578 or equivalent, or permission of instructor. Not offered every year.

COM S 681(6820) Analysis of Algorithms

Fall. 4 credits. Prerequisite: COM S 482 or graduate standing.

COM S 682(6810) Theory of Computing

Spring. 4 credits. Prerequisite: COM S 381 or 481 and COM S 482 or 681 or permission of instructor.

[COM S 683(6822) Advanced Design and Analysis of Algorithms

Spring. 4 credits. Prerequisite: COM S 681 or permission of instructor. Not offered every year.]

COM S 684(6840) Algorithmic Game Theory

Fall or spring. 4 credits. Prerequisite: background in algorithms and graphs at level of COM S 482. No prior knowledge of game theory or economics assumed.

COM S 685(6850) The Structure of Information Networks (also INFO 685(6850))

Fall or spring. 4 credits. Prerequisite: COM S 482.

[COM S 686(6860) Logics of Programs

Spring. 4 credits. Prerequisites: COM S 481, 682, and MATH 481 or MATH/COM S 486. Not offered every year.]

COM S 709(7090) Computer Science Colloquium

Fall, spring. 1 credit. For staff, visitors, and graduate students interested in computer science. S-U grades only.

COM S 711(7191) Seminar in Advanced Programming Languages

Fall, spring. 3 credits.

COM S 713(7491) Seminar in Systems and Methodology

Fall, spring. 4 credits. Prerequisites: graduate course employing formal reasoning (e.g., COM S 611, 613, 671), logic course, or permission of instructor. Not offered every year.

COM S 714(7410) Topics in Systems

Fall or spring. 3 credits. Prerequisite: permission of instructor.

COM S 715(7192) Seminar in Programming Refinement Logics

Fall, spring. 4 credits. Prerequisite: permission of instructor.

COM S 717(7430) Topics in Parallel Architectures

Fall. 4 credits. Prerequisite: COM S 612 or permission of instructor. Not offered every year.

COM S 718(7690) Computer Graphics Seminar

Fall, spring. 4 credits.

COM S 719(7190) Seminar in Programming Languages

Fall, spring. 4 credits. Prerequisite: COM S 611 or permission of instructor. S-U grades only.

COM S 721(7210) Topics in Numerical Analysis

Fall, spring. 4 credits. Prerequisite: COM S 621 or 622 or permission of instructor. Not offered every year.

COM S 726(7590) Problems and Perspectives in Computational Molecular Biology (also PL BR 726(7260))

Fall, spring. 1 credit. Open to all from life sciences, computational sciences, and physical sciences. S-U grades only.

COM S 732(7320) Seminar in Database Systems

Fall, spring. 4 credits. S-U grades only.

COM S 750(7726) Evolutionary Computation and Design Automation (also CIS 750(7726), M&AE 650(6500))

Fall. 4 credits. Prerequisite: programming experience or permission of instructor. Not offered every year.

COM S 754(7490) Systems Research Seminar

Fall, spring. 1 credit. S-U grades only.

COM S 772(7790) Seminar in Artificial Intelligence

Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

COM S 775(7794) Seminar in Natural Language Understanding

Fall, spring. 2 credits.

COM S 786(7860) Introduction to Kleene Algebra

Spring. 4 credits. Prerequisite: COM S 481. Recommended: COM S 482 or 681, COM S 682, elementary logic (MATH 481 or 681), algebra (MATH 432).

COM S 789(7890) Seminar in Theory of Algorithms and Computing

Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

COM S 790(7999) Independent Research

Fall, spring. Prerequisite: permission of computer science adviser.

Independent research or master of engineering project.

COM S 990(9999) Thesis Research

Fall, spring. Prerequisite: permission of computer science adviser. S-U grades only. Doctoral research.

EARTH AND ATMOSPHERIC SCIENCES

T. E. Jordan, chair; S. J. Colucci, co-chair (CALS); directors of undergraduate studies: B. L. Isacks (Geological Sciences and Science of Earth Systems), M. W. Wysocki (Atmospheric Sciences); R. W. Allmendinger, W. D. Allmon, M. Barazangi, W. Bassett, J. M. Bird, A. L. Bloom, L. D. Brown, L. M. Cathles, J. L. Cisne, K. H. Cook, A. T. DeGaetano, L. A. Derry, P. J. Gierasch, C. H. Greene, D. L. Hysell, D. E. Karig, R. W. Kay, S. Mahlburg Kay, M. C. Kelley, W. W. Knapp, J. E. Oliver, A. J. Pershing, J. Phipps Morgan, M. Pritchard, S. J. Riha, F. H. T. Rhodes, D. L. Turcotte, W. M. White, D. S. Wilks

For complete course descriptions, see the Earth and Atmospheric Sciences listing in the College of Arts and Sciences or College of Agriculture and Life Sciences section.

EAS 101(1101) Introductory Geological Sciences

Fall. 3 credits. Staff.

EAS 102(1102) Evolution of the Earth and Life (also BIOG 170[1700])

Spring. 3 credits. J. L. Cisne.

EAS 108(1108) Earth in the News

Summer. 3 credits. S. L. Losh.

EAS 109(1109) Dinosaurs

Fall. 1 credit. J. L. Cisne.

[EAS 111(1110) To Know the Earth

Fall. 3 credits. Not offered 2005–2006. Staff.]

EAS 121(1121) Introduction to MATLAB (also CIS 121[1121])

Fall, spring. 2 credits. Prerequisites: MATH 111, 191, or equivalent. D. Schwartz.

EAS 122(1220) Earthquake! (also ENGRI 122[1220])

Spring. 3 credits. L. D. Brown. Course in Introduction to Engineering series. For description, see ENGRI 122.

EAS 131(1310) Basic Principles of Meteorology

Fall. 3 credits. 1-credit lab is EAS 133. M. W. Wysocki.

EAS 133(1330) Basic Meteorology Lab

Fall. 1 credit. Requirement for atmospheric science majors; optional for other students taking EAS 131. Prerequisite: EAS majors. Corequisite: EAS 131. M. W. Wysocki. Covers topics presented in EAS 131.

EAS 150(1500) Fortran Applications in Earth Science (also CIS 122[1122])

Spring. 2 credits. Prerequisite: CIS/EAS 121 or equivalent. Letter grades only. A. J. Pershing.

EAS 154(1540) Introductory Oceanography (also BIOEE 154[1540])

Fall, summer. 3 credits. Lec. Optional 1-credit lab is EAS/BIOEE 155. B. Monger and C. Greene.

EAS 155(1550) Introductory Oceanography Lab (also BIOEE 155[1500])

Fall. 1 credit. Lab. Corequisite: EAS 154. B. Monger and C. Greene. Covers topics presented in EAS 154.

EAS 201(2010) Introduction to the Physics and Chemistry of the Earth (also ENGRD 201[2010])

Fall. 3 credits. Prerequisites: PHYS 112 or 207. J. Phipps Morgan.

EAS 203 Fundamental Principles of Earth Science

Fall. 3 credits. Recommended: modest science background. Letter grades only. J. Phipps Morgan.

EAS 210(2100) Introduction to Field Methods in Geological Sciences

Fall. 3 credits. Prerequisites: EAS 101 or 201, or permission of instructor. 1 lec, S field trips. Staff.

EAS 213(2130) Marine and Coastal Geology

Summer. 4 credits. Prerequisite: introductory geology or ecology or permission of instructor. Staff.

EAS 220(2200) The Earth System

Spring. 3 credits. Letter grades only. Staff.

EAS 222(2220) Seminar—Hawaii's Environment

Fall. 1 credit. S-U grades only. A. Moore and L. Derry.

EAS 240(2400) Field Study of the Earth System

Spring. 5 credits. Prerequisites: enrollment in Cornell Abroad Earth and Environmental Sciences Semester in Hawaii; one semester of calculus (MATH 190, 191, 192, or 111, 112) and two semesters of any of the following: PHYS 207/208 or 112/213; CHEM 207/208; BIOG 101/103–102/104 or 105/106 or 109/110; or equivalent course work. A. Moore.

EAS 250(2500) Meteorological Observations and Instruments

Fall. 4 credits. Prerequisite: EAS 131. M. W. Wysocki and B. Monger.

EAS 268(2680) Climate and Global Warming

Spring. 3 credits. Prerequisite: basic college math. A. T. DeGaetano.

EAS 296(2960) Forecast Competition

Fall and spring. 1 credit. Prerequisite: sophomore standing in atmospheric science or permission of instructor. S-U grades only. D. S. Wilks.

EAS 302(3020) Evolution of the Earth System

Spring. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. W. M. White, W. D. Allmon, and B. L. Isacks.

EAS 315(3150) Geomorphology

Fall. 4 credits. Prerequisite: geology, hydrology, or soil science course. Two S field trips. B. L. Isacks.

EAS 321(3210) Introduction to Biogeochemistry (also NTRES 321[3210])

Fall. 4 credits. Prerequisites: CHEM 207, MATH 112, plus a biology and/or geology course. L. A. Derry and J. Yavitt.

EAS 322(3220) Biogeochemistry of the Hawaiian Islands

Spring. 4 credits. Prerequisite: EAS 240. Recommended: college-level chemistry. L. Derry.

EAS 326(3260) Structural Geology

Spring. 4 credits. Prerequisite: one semester of calculus plus an introductory geology course or permission of instructor. One weekend field trip. R. W. Allmendinger.

EAS 331(3310) Climate Dynamics (also ASTRO 331[3331])

Fall. 3 credits. Prerequisite: two semesters of calculus and one semester of physics. K. H. Cook.

[EAS 334(3340) Microclimatology

Spring. 3 credits. Prerequisite: physics course. Not offered 2005–2006. D. S. Wilks.]

EAS 341(3410) Atmospheric Thermodynamics and Hydrostatics

Fall. 3 credits. Prerequisites: one year of calculus and one semester of physics. M. W. Wysocki.

EAS 342(3420) Atmospheric Dynamics (also ASTRO 342[3342])

Spring. 3 credits. Prerequisites: one year each of calculus and physics. K. H. Cook and P. J. Gierasch.

EAS 350(3500) Dynamics of Marine Ecosystems (also BIOEE 350[3500])

Fall. 3 credits. Prerequisites: one year of calculus and a semester of oceanography (e.g., EAS 154), or permission of instructor. C. H. Greene and R. W. Howarth.

EAS 351(3510) Marine Ecosystems Field Course (BIOEE 351[3510])

Spring. 4 credits. Recommended: EAS 240. C. H. Greene, C. D. Harvell, and B. Monger.

EAS 352(3520) Synoptic Meteorology I

Spring. 3 credits. Prerequisite: EAS 341. Corequisite: EAS 342. M. W. Wysocki.

EAS 355(3550) Mineralogy

Fall. 4 credits. Prerequisites: EAS 101 or 201 and CHEM 207/211 or permission of instructor. S. Mahlburg Kay.

EAS 356(3560) Petrology and Geochemistry

Spring. 4 credits. Prerequisite: EAS 355. R. W. Kay.

EAS 375(3750) Sedimentology and Stratigraphy

Fall. 4 credits. Prerequisite: EAS 101, 102, or 201. J. L. Cisne.

EAS 388(3880) Geophysics and Geotectonics

Spring. 4 credits. Prerequisites: MATH 192 (or 112) and PHYS 208 or 213. B. L. Isacks.

EAS 401(4010) Fundamentals of Energy and Mineral Resources

Spring. 3 credits. L. Cathles.

EAS 404(4040) Geodynamics

Spring. 3 credits. Prerequisite: calculus and calculus-based physics course or permission of instructor. Offered alternate years. J. Phipps Morgan.

EAS 405(4050) Active Tectonics

Spring. 3 credits. Recommended: mechanical background equivalent to EAS 326/388. Grading optional. M. Pritchard.

EAS 417(4170) Field Mapping in Argentina

Summer. 3 credits. Prerequisites: EAS 210 and 326. Recommended: knowledge of Spanish. S. Mahlburg Kay.

EAS 425(4250) European Discovery of Impacts and Explosive Volcanism

2 credits. Prerequisite: junior, senior, or graduate students with background in geology and permission of instructor. One two-hour meeting per week plus field trip during spring break. J. Phipps Morgan.

[EAS 434(4340) Reflection Seismology

Fall. 3 credits. Prerequisites: MATH 192 and PHYS 208, 213, or equivalent. Not offered 2005-2006. L. D. Brown.]

EAS 435(4350) Statistical Methods in Meteorology and Climatology

Fall. 3 credits. Prerequisites: introductory statistics (e.g., AEM 210) and calculus course. D. S. Wilks.

EAS 437(4370) Geophysical Field Methods (also ARKEO 437[4370])

Fall. 3 credits. Prerequisite: PHYS 213 or 208 or permission of instructor. L. D. Brown.

EAS 447(4470) Physical Meteorology

Fall. 3 credits. Prerequisites: one-year each of calculus and physics. A. T. DeGaetano.

EAS 451(4510) Synoptic Meteorology II

Fall. 3 credits. Prerequisites: EAS 341 and 342. S. J. Colucci.

EAS 453(4530) Advanced Petrology

Fall. 3 credits. Prerequisite: EAS 356. R. W. Kay.

[EAS 454(4540) Advanced Mineralogy

Spring. 3 credits. Prerequisite: EAS 355 or permission of instructor. Offered alternate years. S. M. Kay.]

EAS 455(4550) Geochemistry

Fall. 4 credits. Prerequisites: CHEM 207 and MATH 192 or equivalent. Recommended: EAS 356. W. M. White.

EAS 456(4560) Mesoscale Meteorology

Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. S. J. Colucci.

[EAS 457(4570) Atmospheric Air Pollution

Fall. 3 credits. Prerequisites: EAS 341 or thermodynamics course, and one semester of chemistry, or permission of instructor. Next offered 2006-2007. M. W. Wysocki.]

[EAS 458(4580) Volcanology

Fall. 3 credits. Prerequisite: EAS 356 or equivalent. Offered alternate years. R. W. Kay and W. M. White.]

[EAS 460(4600) Late Quaternary Paleoeecology

Fall. 4 credits. M. Goman.]

[EAS 462(4620) Marine Ecology (also BIOEE 462[4620])

Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE 261. Offered alternate years; not offered 2005-2006. C. D. Harvell and C. H. Greene.]

EAS 470(4700) Weather Forecasting and Analysis

Spring. 3 credits. Prerequisites: EAS 352 and 451. M. W. Wysocki.

EAS 471(4710) Introduction to Groundwater Hydrology (also BEE 471[4710])

Spring. 3 credits. Prerequisites: MATH 294 and ENGRD 202. L. Cathles.

EAS 475(4750) Special Topics in Oceanography

Fall, spring, summer. 2-6 credits, variable. Prerequisites: one semester of oceanography and permission of instructor. Fall, spring: C. H. Greene; summer: B. C. Monger.

[EAS 476(4760) Sedimentary Basins: Tectonics and Mechanics

Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years; not offered 2005-2006. T. E. Jordan.]

[EAS 478(4780) Advanced Stratigraphy

Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years; not offered 2005-2006. T. E. Jordan.]

[EAS 479(4790) Paleobiology (also BIOEE 479[4790])

Fall. 4 credits. Prerequisites: one year introductory biology and either BIOEE 274 or 373 or EAS 375, or permission of instructor. Offered alternate years; not offered 2005-2006. W. Allmon.]

[EAS 483(4830) Environmental Biophysics

Spring. 3 credits. Offered alternate years; next offered 2006-2007. S. J. Riha.]

EAS 487(4870) Introduction to Radar and Remote Sensing (also ECE 487[4870])

Fall. 3 credits. Prerequisites: PHYS 208 or 213 or equivalent or permission of instructor. D. L. Hysell.

EAS 491-492(4910-4920) Undergraduate Research

Fall, spring. 1-4 credits. Students must complete form at 2124 Snee Hall. Staff.

EAS 494(4940) Special Topics in Atmospheric Science

Fall, spring. 8 credits max. Undergraduate level. S-U grades optional. Staff.

EAS 496(4960) Internship Experience

Fall, spring. 1-2 credits. Prerequisite: EAS 240. S-U grades only. Staff.

EAS 497(4970) Individual Study in Atmospheric Science

Fall, spring. 1-6 credits. Students must register using independent study form. S-U grades optional. Staff.

EAS 498(4980) Teaching Experience in Earth and Atmospheric Sciences

Fall, spring. 1-4 credits. Students must register using independent study form. S-U grades only. Staff.

EAS 499(4990) Undergraduate Research in Atmospheric Science

Fall, spring. Credit TBA. Students must register using independent study form. S-U grades only. Staff.

EAS 500(5000) Design Project in Geohydrology

Fall, spring. 3-12 credits. Alternative to industrial project for M.Eng. students choosing geohydrology option. May continue over two or more semesters. L. M. Cathles.

EAS 502(5020) Case Histories in Groundwater Analysis

Spring. 4 credits. L. M. Cathles.

[EAS 622(6220) Advanced Structural Geology I

Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. R. W. Allmendinger.]

EAS 624(6240) Advanced Structural Geology II

Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. R. W. Allmendinger.

[EAS 628(6280) Geology of Orogenic Belts

Spring. 3 credits. Prerequisite: permission of instructor. Not offered 2005-2006. Staff.]

[EAS 641(6410) Analysis of Biogeochemical Systems

Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years. L. A. Derry.]

[EAS 651(6510) Atmospheric Physics (also ASTRO 651[7651])

Fall. 3 credits. Prerequisite: good background in undergraduate calculus and physics. Offered alternate years; next offered 2006-2007. K. H. Cook, P. J. Gierasch, and S. J. Colucci.]

[EAS 652(6520) Advanced Atmospheric Dynamics (also ASTRO 652[7652])

Spring. 3 credits. Prerequisites: EAS 341 and 342 or equivalent. Offered alternate years; next offered 2006-2007. S. J. Colucci and P. J. Gierasch.

[EAS 656(6560) Isotope Geochemistry

Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 455 or permission of instructor. Offered alternate years. W. M. White.]

[EAS 666(6660) Applied Multivariate Statistics

Spring. 3 credits. Prerequisites: multivariate calculus, matrix algebra, and two statistics courses. Offered alternate years; next offered 2006-2007. D. S. Wilks.

EAS 675(6750) Modeling the Soil-Plant-Atmosphere System (also CSS 675[6750])

Spring. 3 credits. Prerequisite: EAS/CSS 483 or equivalent. S. J. Riha.

EAS 692(6920) Special Topics in Atmospheric Science

Fall, spring. 1-6 credits. S-U grades optional. Staff.

EAS 693(6930) Special Topics in Geological Sciences

Fall or spring. 1–3 credits, variable.
Grading optional. Staff.

EAS 700–799(7000–7990) Seminars and Special Work

Fall, spring. 1–3 credits. Prerequisite:
permission of instructor. Staff.

EAS 701–702(7010–7020) Thesis Research

701, fall; 702, spring. 1–15 credits, variable.
Grading optional. Staff.

EAS 711(7110) Upper Atmospheric and Space Physics

Fall or spring. 1–6 credits. D. L. Hysell.
Seminar.

EAS 722(7220) Advanced Topics in Structural Geology

R. W. Allmendinger.

EAS 731(7310) Planetary Geodynamics, Active Tectonics, Volcanology, Earthquakes, and Geodesy

M. Pritchard.

EAS 733(7330) Advanced Topics in Geodynamics

Spring. J. Phipps Morgan.

EAS 751(7510) Petrology and Geochemistry

R. W. Kay.

EAS 755(7550) Advanced Topics in Tectonics and Geochemistry

Fall. 3 credits. J. Phipps Morgan.

EAS 757(7570) Current Research in Petrology and Geochemistry

S. Mahlburg Kay.

EAS 762(7620) Advanced Topics in Paleobiology

W. D. Allmon.

EAS 771(7710) Advanced Topics in Sedimentology and Stratigraphy

T. E. Jordan.

EAS 773(7730) Paleobiology

J. L. Cisne.

EAS 775(7750) Advanced Topics in Oceanography

C. H. Greene.

EAS 780(7800) Earthquake Record Reading

Fall. M. Barazangi.

EAS 781(7810) Geophysics, Exploration Seismology, Ground-Penetrating Radar

L. D. Brown.

EAS 783(7830) Advanced Topics in Geophysics

B. L. Isacks.

EAS 789(7890) Lithospheric Seismology

L. D. Brown.

EAS 793(7930) Andes-Himalaya Seminar

S. Mahlburg Kay, R. W. Allmendinger,

B. L. Isacks, and T. E. Jordan.

EAS 795(7950) Low-Temperature Geochemistry

1–3 credits. S-U grades only. L. A. Derry.

EAS 796(7960) Geochemistry of the Solid Earth

W. M. White.

EAS 797(7970) Fluid-Rock Interactions

L. M. Cathles.

EAS 799(7990) Soil, Water, and Geology Seminar

Spring. L. M. Cathles and T. S. Steenhuis.

EAS 850(8500) Master's-Level Thesis Research in Atmospheric Science

Fall, spring. Credit TBA. S-U grades only.
Times TBA. Graduate faculty.

EAS 950(9500) Graduate-Level Dissertation Research in Atmospheric Science

Fall, spring. Credit TBA. S-U grades option-
al. Times TBA. Graduate faculty.

EAS 951(9510) Doctoral-Level Dissertation Research in Atmospheric Science

Fall, spring. Credit TBA. S-U grades option-
al. Times TBA. Graduate faculty.

ELECTRICAL AND COMPUTER ENGINEERING

C. R. Pollock, Director; Z. Haas, Associate Director; D. F. Delchamps, Advising Coordinator; D. H. Albonesi, A. B. Apsel, T. Berger, S. Bhawe, A. W. Bojanczyk, M. Burtscher, H.-D. Chiang, L. F. Eastman, D. T. Farley, T. L. Fine, W. K. Fuchs, D. A. Hammer, S. S. Hemami, C. R. Johnson, Jr., E. Kan, M. C. Kelley, P. M. Kintner, R. R. Kline, K. T. Kornegay, A. Lal, M. Lipson, R. Manohar, J. F. Martinez, S. A. McKee, T. W. Parks, F. Rana, A. P. Reeves, A. Scaglione, S. Servetto, C. E. Seyler, J. R. Shealy, M. G. Spencer, C. L. Tang, R. J. Thomas, S. Tiwari, L. Tong, S. B. Wicker

ECE 210(2100) Introduction to Circuits for Electrical and Computer Engineers (also ENGRD 210[2100])

Fall, spring. 4 credits. Corequisites: MATH 293 and PHYS 213. All students must enroll in a lab and a section. Fall, J. C. Belina and M. C. Kelley; spring, C. E. Seyler and M. C. Kelley.
For description, see ENGRD 210.

ECE 220(2200) Signals and Information

Fall, spring. 4 credits. Prerequisite: MATH 293. Fall, S. S. Hemami; spring, A. W. Bojanczyk.
Introduction to signal processing. Topics include frequency-based representations: Fourier series and discrete Fourier transform; discrete time linear systems: input/output relationships, filtering, spectral response; analog-to-digital and digital-to-analog conversion; continuous time signals and linear time invariant systems: frequency response and continuous-time Fourier transform.

[ECE 250(2500) Technology in Society (also ENGRG 250[2500], HIST/S&TS 250[2500])]

Fall. 3 credits. Humanities elective for engineering students. Offered alternate years; not offered 2005–2006. R. R. Kline.
For description, see ENGRG 250.]

ECE 291–292(2910–2920) Sophomore Electrical and Computer Engineering Independent Project

Fall, 291; spring, 292. 1–8 credits. Limited to: sophomores in engineering. Staff.
Individual study, analysis, and, usually, experimental tests in connection with a special

engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor and submit an Independent Project Form to the Student Services Office, 223 Phillips Hall.

ECE 298(2980) Inventing an Information Society (also AMST 292[2980], HIST 292[2920], S&TS 292[2921], ENGRG 298[2980])

Spring. 3 credits. Approved for humanities distribution.

For description, see ENGRG 298.

ECE 303(3030) Electromagnetic Fields and Waves

Fall. 4 credits. Prerequisites: grades of C or better in PHYS 213, 214, and MATH 294.
F. Rana and staff.

Maxwell's equations in differential form; wave equation; plane electromagnetic waves; phase and group velocities; Poynting's theorem, complex dielectric constant; wave reflection and transmission; guided waves on transmission lines; transient pulse propagation; and elementary dipole antenna; analysis of wireless communication links.

ECE 306(3060) Fundamentals of Quantum and Solid-State Electronics

Spring. 4 credits. Prerequisites: PHYS 214 and MATH 294. C. L. Tang.

Introductory quantum mechanics and solid-state physics necessary for modern solid-state electronic devices. Topics include the formalism and methods of quantum mechanics, the hydrogen atom, the structure of simple solids, energy bands, Fermi-Dirac statistics, and the basic physics of semiconductors. Applications include quantum wells and the p-n junction.

ECE 310(3100) Introduction to Probability and Random Signals

Spring. 4 credits. Prerequisite: MATH 294. May be used in place of ENGRD 270 to help satisfy engineering distribution requirement. Z. J. Haas.

Introduction to the theory of probability as a basis for modeling random phenomena and signals, calculating the response of systems, and making estimates, inferences, and decisions in the presence of chance and uncertainty. Applications are given in such areas as communications, and device modeling, probability, and characteristic functions; nonlinear transformations of data; expectation and correlation; and the central limit theorem.

ECE 311(3110) Electrical and Computer Engineering Honors Seminar

Spring. 1 or 2 credits. Staff.
Students registered for this course are required to attend all of the colloquia lectures. Summary papers are required. Honors students must take the seminar for letter grade and are required to write two summary papers for 2 credits. Nonhonors students must take the seminar pass/fail and are required to write one summary paper for 1 credit. Each summary paper reviews a topic presented during the semester.

ECE 314(3140) Computer Organization (also COM S 314[3420])

Fall, spring. 4 credits. Prerequisites: COM S/ENGRD 211 or ENGRD 230. ECE majors must enroll for letter grade. Fall, COM S staff; spring, S. A. McKee and D. L. Long. Spring: basic computer organization. Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic, microcoded and pipelined datapath design, memory hierarchies including caches and virtual memory, I/O devices, bus-based I/O systems. Students learn assembly language programming and design a simple pipelined processor. For fall description, see COM S 314.

ECE 315(3150) Introduction to Microelectronics

Fall, spring. 4 credits. Prerequisite: ECE/ENGRD 210. Fall, E. C. Kan; spring, M. G. Spencer. Design of digital and analog electronic circuits in the context of modern integrated circuit technology. Includes the building blocks of integrated circuits: introductory physics of semiconductors, MOS and junction transistors; digital electronics—inverters, logic circuits, and memory; and analog circuits—multi-stage and differential amplifiers.

ECE 320(3200) Networks and Systems

Spring. 4 credits. Prerequisites: ECE 220 and MATH 294. S. B. Wicker. Students develop a working understanding of the analytical and computational tools used in the design and representation of complex networks and systems. Topics include state-space techniques, finite state machines, graph-theoretic approaches to network design and analysis, complexity, phase transitions in complex systems, and scalability.

[ECE 336(3360) Nanofabrication (also ECE 536[5360], MS&E 541[5410])]

Spring. 3–5 credits. Prerequisites: PHYS 213 or 217, 214 or 218; CHEM 211 or 207; or equivalent. Not offered 2005–2006. D. Ast.

For description, see MS&E 541.]

ECE 391–392(3910–3920) Junior Electrical and Computer Engineering Independent Project

fall, 391; spring, 392. 1–8 credits. Limited to juniors in engineering. Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor and submit an Independent Project Form to the Student Services Office, 223 Phillips Hall.

ECE 402(4020) Biomedical System Design (also BME 404[4040])

Spring. 4 credits. Culminating design experience (CDE) course. Co- or prerequisites: at least one of: ECE 425, 476, 453. J. C. Belina.

Introduces techniques of measuring and conditioning low-level (biological) signals. Topics include special signal to noise improvement circuits for analog signals, techniques to remove common-mode and correlated noise, and computer-aided techniques for analyzing sampled data. Final six or seven weeks devoted to designing/prototyping a safe and effective "ambulatory microprocessor-controlled blood

pressure monitor." Formal design document is required.

ECE 411(4110) Random Signals in Communications and Signal Processing

Fall. 4 credits. Prerequisite: ECE 310 or equivalent. A. Scaglione. Introduction to models for random signals in discrete and continuous time; Markov chains, Poisson process, queuing processes, power spectral densities, Gaussian random process. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

ECE 413(4130) Introduction to Nuclear Science and Engineering

Fall. 3 credits. Prerequisites: PHYS 214 and MATH 294. K. B. Cady. Designed for juniors or seniors in any engineering field who want to prepare for graduate-level nuclear science and engineering courses at Cornell or elsewhere. Also can serve as a basic course for those who do not intend to continue in the field. Introduces the fundamentals of nuclear reactors. Topics include an overview of the field of nuclear engineering; nuclear structure, radioactivity, and reactions; interaction of radiation and matter; and neutron moderation, neutron diffusion, the steady-state chain reaction, and reactor kinetics.

ECE 415(4150) GPS: Theory and Design (also M&AE 415[4150])

Fall. 4 credits. Culminating design experience (CDE) course. Prerequisite: a 300-level engineering course with advanced math content (e.g., ECE 303 or M&AE 326). P. M. Kintner. Analysis of GPS operating principles and engineering practice with a culminating design exercise. Navigational algorithms, receiver analysis, error investigation, dilution of precision, antennas, differential GPS.

ECE 425(4250) Digital Signal Processing

Spring. 4 credits. Prerequisites ECE 411 and 521. S. S. Hemami and B. A. Hutchins. Introduces statistical signal processing. Signal representation and manipulation are covered via correlation and using the DFT/FFT to estimate other transforms; applications of these topics are then covered, including quantization, quantization effects in digital filters, multirate DSP, filter banks, delta-sigma modulation, power spectrum estimation, and introductions to Wiener and Kalman filtering and image processing.

ECE 426(4260) Applications of Signal Processing

Spring. 4 credits. Prerequisite: ECE 425 or permission of instructor. B. A. Hutchins. Applications of signal processing, including signal analysis, filtering, and signal synthesis. The course is laboratory oriented, emphasizing individual student projects. Design is done with signal-processing hardware and by computer simulation. Topics include filter design, spectral analysis, speech coding, speech processing, digital recording, adaptive noise cancellation, and digital signal synthesis.

ECE 430(4300) Lasers and Optical Electronics

Fall. 4 credits. Prerequisite: ECE 303 or equivalent. M. Lipson. Introduction to the operation and application of lasers. Cover diffraction-limited optics,

Gaussian beams, optical resonators, interaction of radiation with matter, physics of laser operation, and laser design. Discusses applications of coherent radiation to nonlinear optics, communication, and research.

ECE 432(4320) MicroElectro Mechanical Systems (MEMS)

Spring. 3 credits. Prerequisite: ECE 315 or permission of instructor. S. Bhawe. Introduction to MEMS: microsensors, microactuators, and microrobots. Fundamentals of MEMS, including materials, microstructures, devices and simple microelectro-mechanical systems, scaling electronic and mechanical systems to the micrometer/nm-scale, material issues, and the integration of micromechanical structures and actuators with simple electronics. This is an interdisciplinary course drawing content from mechanics, materials, structures, electronic systems, and the disciplines of physics and chemistry.

ECE 433(4330) Introduction to Microwave Devices and Circuits

Fall. 4 credits. Prerequisites: ECE 303 and 306. J. R. Shealy. Introduction to the properties of microwave devices and circuits and the considerations that must be appreciated when the operating frequency approaches or exceeds 1 GHz. Topics include microwave devices, microwave measurement techniques, S-parameters, signal flow diagrams, matching networks, basic circuit design considerations, and computer-aided device and circuit analysis. Labs cover basic measurement techniques for active and passive elements as well as low noise amplifier design.

ECE 437(4370) Fiber and Integrated Optics

Spring. 4 credits with project. Culminating design experience (CDE) course. Prerequisite: ECE 303 or equivalent. M. Lipson. Physical principles of optical waveguides. Wave equation solutions to the mode structure in waveguides, numerical analysis, mode coupling, dispersion and bandwidth limitations, optical materials, photonic band gap structures. Project design of planar optical components.

ECE 446(4460) Digital Communications Over Packet-Switched Networks

Fall. 4 credits. Culminating design experience (CDE) course. Prerequisites: ECE 314/COM S 314 and probability course. S. Servetto. Basic course in networking covering the design and performance analysis of communication systems operating over packet-switched networks. Aims to bridge the gap between a classical networking course and a classical digital communications course. The course is lab oriented, with a strong emphasis on programming assignments (both C and MATLAB). Topics include data compression, error control in networks, and network algorithms.

ECE 451(4510) Electric Power Systems I

Fall. 4 credits. Prerequisite: ECE 320 or equivalent. H. Chiang. Acquaints students with modern electric power system analysis and control. Stresses analysis techniques appropriate for the restructured industry and advanced protection and control systems. Topics include transmission line models, transformers and per unit system, generator models,

network matrices, power flow, system protection, computer relaying, and GPS-based measurement and control systems.

ECE 452(4520) Electric Power Systems II

Spring. 4 credits. Prerequisite: ECE 451 or permission of instructor. R. J. Thomas. Acquaints students with modern electric power system operation and control. Explores aspects of the restructuring of the industry and its implications for planning and operation objectives and methods. Topics include unit commitment, economic dispatch, optimal power flow, control of generation, system security and reliability, state-estimation, analysis of system dynamics, and system protection.

ECE 453(4530) Analog CMOS

Fall. 4 credits. Culminating design experience (CDE) course. Prerequisite: ECE 315 or equivalent. Recommended: ECE 457 as corequisite. A. B. Apsel. Overview of devices available to analog integrated-circuit designers in modern CMOS and BiCMOS processes: resistors, capacitors, MOS transistors, and bipolar transistors. Basic building blocks for linear analog integrated circuits: single-stage amplifiers, current mirrors, and differential pairs. Transistor-level design of linear analog integrated circuits, such as operational amplifiers and operational transconductance amplifiers. Layout techniques for analog integrated circuits. Throughout the course, emphasis is placed on design-oriented analysis techniques.

ECE 457(4570) Silicon Device Fundamentals

Spring. 4 credits. Culminating design experience (CDE) course. Prerequisites: ECE 315 and 306 or MS&E 262 or A&EP 450. E. C. Kan. Semiconductor carrier statistics, band diagrams, transport and their applications in diodes, MOSFET, and BJT. Emphasis is put on the CMOS operations for advanced VLSI technology. Six labs cover device measurements and design by simulation. By using the combined simulation and measurement, the course culminates in a comprehensive design project dealing with technical concerns in current VLSI industry as well as its economical, environmental, and social impacts.

ECE 467(4670) Digital Communication Receiver Design

Spring. 4 credits. Prerequisite: ECE 220. A. Scaglione. Introduction to broadband digital receiver design. Topics include PAM and QAM modulation and down-conversion, pulse-shaping, matched filtering, carrier frequency and phase recovery, baud-timing synchronization, packet marker synchronization, adaptive linear equalization, and coding. Course project: composition and testing of a MATLAB-based software receiver.

[ECE 468(4680) Telecommunication Systems

Spring. 4 credits. Prerequisite: ECE 467 or permission of instructor. Recommended: ECE 411. Not offered 2005–2006. Fundamentals of digital communications. Topics include digital source coding, Huffman coding, sampling, quantization, analog source coding; optimum receivers for digital transmission through additive white Gaussian noise (AWGN) channels, matched filters; channel capacity and error control coding;

digital transmission through bandlimited AWGN channels, inter-symbol interference (ISI), equalization techniques; phase-locked loops (PLL); trellis-coded modulation (TCM); and spread-spectrum communication systems.]

ECE 472(4720) Feedback Control Systems (also CHEME 472[4720], M&AE 478[4780])

Fall, spring. 4 credits. Prerequisites: CHEME 372, ECE 220, M&AE 326, or permission of instructor. Staff. For description, see M&AE 478.

ECE 473(4730) Optimizing Compilers

Fall. 4 credits. Prerequisite: ECE 314/COM S 314. M. Burtcher. Covers compiler optimizations for high-performance microprocessors as well as how software interacts with hardware and the operating system. The projects involve implementing, testing, and evaluating an optimizing compiler backend that generates executables for a UNIX workstation. Lecture topics include three-address code, static single assignment form, many code optimizations, code tuning case studies, feedback optimizations, machine instruction formats, system calls, and executable formats.

ECE 474(4740) Digital VLSI Design

Fall and spring. Students must enroll both semesters. 5 credits. Culminating design experience (CDE) course. Prerequisites: ENGRD 230, ECE/COM S 314. Students receive an R grade until they test their chips. K. T. Kornegay. Introduction to digital VLSI design. Topics include basic transistor physics, switching networks and transistors, combinational and sequential logic, latches, clocking strategies, domino logic, PLAs, memories, physical design, floor planning, CMOS scaling, and performance and power considerations, etc. Lecture and homework topics emphasize disciplined design, and include: CMOS logic, layout, and timing; computer-aided design and analysis tools; and electrical and performance considerations. Students tape out a small project that is tested in the following semester. The course also includes an introduction to asynchronous design.

ECE 475(4750) Computer Architecture (also COM S 416[4420])

Fall. 4 credits. Culminating design experience (CDE) course. Prerequisites: ENGRD 230 and ECE 314/COM S 314. J. F. Martínez.

Topics include instruction set principles, advanced pipelining, data and control hazards, multi-cycle instructions, dynamic scheduling, out-of-order execution, speculation branch prediction, instruction-level parallelism, and high-performance memory hierarchies. Students learn the issues and tradeoffs involved in the design of modern microprocessors. Labs involve the design of a processor and cache subsystem at the RTL level.

ECE 476(4760) Digital Systems Design Using Microcontrollers

Spring. 4 credits. Culminating design experience (CDE) course. Prerequisite: ECE 314/COM S 314. ECE 315 is highly recommended. B. R. Land. Design of real-time digital systems using microprocessor-based embedded controllers. Students working in pairs design, debug, and construct several small systems that illustrate and employ the techniques of digital system

design acquired in previous courses. The content focuses on the laboratory work. The lectures are used primarily for the introduction of examples, description of specific modules to be designed, and instruction in the hardware and high-level design tools to be employed.

ECE 482(4820) Plasma Processing of Electronic Materials (also MS&E 482[4820])

Spring. 3 credits. Prerequisites: PHYS 213 and 214 or equivalents. Offered if sufficient demand. D. A. Hammer. Fundamental principles that govern partially ionized, chemically reactive plasma discharges and their applications to processing electronic materials. Topics include simple models of low pressure, partially ionized plasmas, collision phenomena, diffusive processes, plasma chemistry and surface processes. Examples and their applications to electronic materials processing are discussed in detail.

ECE 484(4840) Introduction to Controlled Fusion: Principles and Technology (also M&AE 459[4590], NS&E 484[4840])

Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214 or equivalent background in electricity and magnetism and mechanics. Intended for seniors and graduate students in engineering and physical sciences. D. A. Hammer. For description, see NS&E 484.

ECE 486(4860) Electromagnetic Waves and Communication

Spring. 3 credits. Prerequisite: ECE 303. D. L. Hysell. Recommended for students who wish to obtain a greater understanding of the fundamentals of guided waves, high data rate electronics and wireless communication. Topics include vector and scalar potentials, transmission lines, waveguides, fiber optics, antenna arrays, and propagation in different environments including interference and diffraction.

ECE 487(4870) Introduction to Radar and Remote Sensing (also EAS 487[4870])

Fall. 3 credits. Prerequisites: ECE 220 and 486 (or grade of B or better in ECE 303). D. L. Hysell. For description, see EAS 487.

ECE 488(4880) Radio Frequency (RF) Circuits and Systems

Spring. 4 credits. Culminating design experience (CDE) course. Prerequisites: ECE 315 or equivalent. W. E. Schwartz. Basic RF circuits and applications. Receivers, transmitters, modulators, filters, detectors, transmission lines, oscillators, frequency synthesizers, low-noise amplifiers. Applications include communication systems, radio and television broadcasting, radar, radio, and radar astronomy. Computer-aided circuit analysis. Five laboratory sessions.

ECE 491–492(4910–4920) Senior Electrical and Computer Independent Engineering Project

Fall, 491; spring, 492. 1–8 credits. Limited to seniors in engineering. Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor

for this course and submit an Independent Project Form to the Student Services Office, 223 Phillips Hall.

ECE 493-499(4930-4990) Special Topics in Electrical and Computer Engineering

Spring, fall. 1-4 credits. Staff. Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

ECE 512(5120) Applied Systems Engineering I (also CEE 504[5040], COM S 504[5040], M&AE 591[5910], OR&IE 512[5120], SYSEN 510[5100])

Fall. 3 credits. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. A. R. George and R. O. Roundy.

For description, see M&AE 591.

ECE 513(5130) Applied Systems Engineering II (also CEE 505[5050], COM S 505[5050], M&AE 592[5920], OR&IE 513[5130], SYSEN 520[5200])

Spring. 3 credits. Prerequisite: CEE 504/COM S 504, ECE 512/OR&IE 512, or M&AE 591. Staff.

For description, see M&AE 592.

ECE 521(5210) Theory of Linear Systems (also M&AE 521[5210])

Fall. 3 credits. Prerequisite: ECE 320 or permission of instructor. Recommended: good background in linear algebra and linear differential equations. D. F. Delchamps. State-space and multi-input-multi-output linear systems in discrete and continuous time. The state transition matrix, the matrix exponential, and the Cayley-Hamilton theorem. Controllability, observability, stability, realization theory. At the level of *Linear Systems* by Kalilath.

ECE 526(5260) Signal Representation and Modelling

Fall. 4 credits. Prerequisites: ECE 411 and ECE 425. T. W. Parks.

Sampling and signal reconstruction. Approximation theory. Linear inversion theory. Exponential signal modelling. Multirate filter banks, wavelets, and lifting. Laboratory experiments with speech and image signals.

[ECE 531(5310) Applied Quantum Optics for Photonics and Optoelectronics]

Fall. 4 credits. Prerequisites: ECE 306 and ECE 407, or PHYS 443. Not offered 2005-2006.

Introduces the basic concepts of quantum optics and quantum electronics necessary for understanding the behavior of optical fields in photonic and optoelectronic devices and systems. Topics include quantization of the electromagnetic field, quantum mechanical properties of photon states, vacuum fluctuations, noise and quantum Langevin equations, matter-photon interactions, phase-sensitive and phase-insensitive optical amplifiers, direct and coherent photon detection, lasers, parametric oscillators, and photonic devices for quantum information processing.]

[ECE 536(5360) Nanofabrication for MENG (also ECE 336[3360], MS&E 541[5410])]

Spring. 3 credits. Prerequisites: PHYS 213 or 217, 214 or 218; CHEM 211 or 207; or equivalent. Not offered 2005-2006. For description, see MS&E 541.

ECE 547(5470) Computer Vision

Fall. 4 credits. Prerequisites: ECE 220 (or COM S 280 and 314) or permission of instructor. A. P. Reeves.

Covers computer acquisition and analysis of image data with emphasis on techniques for robot vision. Concentrates on descriptions of objects at three levels of abstraction: segmented images (images organized into subimages that are likely to correspond to interesting objects), geometric structures (quantitative models of image and world structures), and relational structures (complex symbolic descriptions of images and world structures). The programming of several computer-vision algorithms is required.

ECE 551(5510) Electric Systems Engineering and Economics (Electricity Markets) (also AEM 655[6550])

Fall. 2 credits. Prerequisites: basic calculus, microeconomics course. R. J. Thomas and T. D. Mount.

Designed to explore new arrangements in power system planning and operation brought about by the current restructuring of the electric industry. Organized around lectures on (1) how basic economic principles interact with basic engineering principles used to determine the physical and operational makeup of the system; and (2) the principles and techniques of optimization and their applications to emerging institutional arrangements in the power industry. Involves extensive laboratory work designed to test the principles under discussion. A final project is assigned, requiring building an intelligent software agent capable of performing in a competitive market with rules similar to those being set up in the electric power business today. The agents are exercised in a class competition.

ECE 554(5540) Advanced Analog VLSI Circuit Design

Spring. 4 credits. Prerequisite: ECE 453. A. B. Apse.

Advanced analog integrated circuit and system design. Topics include integrated continuous-time filter design, translinear circuits and systems, dynamic analog techniques, integrated discrete-time filter design, and Nyquist-rate data converter design.

ECE 558 (5580) Compound Semiconductor Electronic

Spring. 3 or 4 credits; 4 with a project. Prerequisite: ECE 457 or equivalent. J. R. Shealy.

Electronic properties of advanced semiconductor structures using compound semiconductor materials and heterojunctions. Fundamentals of carrier transport and scattering. Properties of direct bandgap semiconductors and quantum wells. Advanced semiconductor devices, including metal-semiconductor transistors (FETs), modulation-doped FETs, and heterojunction bipolar transistors (HBTs). High-frequency operation of compound semiconductor devices. Includes six two-week labs, which include low-temperature carrier transport, optical absorption and emission, and electrical

characterization of compound semiconductor devices.

ECE 561(5610) Error Control Codes

Fall. 4 credits. Prerequisite: ECE 320 or 521 or equivalent; strong familiarity with linear algebra. S. B. Wicker.

Introduction to the theory and practice of error control codes. Topics include algebraic codes, convolutional codes, concatenated codes, and codes on graphs. Considers the construction and decoding of Reed-Solomon (RS) codes in some detail as well as the iterative (turbo) decoding of concatenated codes and codes on graphs. The use of error control in wireless systems is discussed throughout the course.

ECE 562(5620) Fundamental Information Theory

Spring. 4 credits. Prerequisite: ECE 310 or equivalent. S. Servetto.

Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

ECE 563(5630) Communication Networks

Fall. 4 credits. Prerequisite: ECE 411 or permission of instructor. T. Berger.

Classical line-switched communication networks: point-process models for offered traffic; blocking and queuing analyses. Stability, throughput, and delay of distributed algorithms for packet-switched transmission of data over local-area and wide-area nets. Flow control and capacity assignment algorithms, ATM networks.

ECE 564(5640) Detection and Estimation

Fall. 4 credits. Prerequisites: ECE 310, 411, or permission of instructor. L. Tong.

Graduate-level introduction to fundamentals of signal detection and estimation with applications in communications. Elements of decision theory. Sufficient statistics. Signal detection in discrete and continuous time. Multiuser detection. Parameter estimations. Applications in wireless communications.

ECE 566(5660) Wireless Networks

Fall. 4 credits. Prerequisites: ECE 445 and 411. Targeted mainly at graduate students but open to undergraduates. Z. Haas.

Introductory course in mobile and wireless networks. Covers fundamental techniques and protocols in the design and operation of the first, second, and third generation of wireless networks. Examples of related topics include cellular systems, medium access control, control of a mobile session and a mobile call, signaling in mobile networks, mobility management techniques, common air interfaces (AMPS, IS-136, IS-95, GSM), wireless data (CDPD, Mobitex), satellite communication, ad hoc networks (Bluetooth), Internet Mobility, Personal Communication Services (PCS), and so on.

ECE 567(5670) Digital Communications

Spring 4 credits. Prerequisites: ECE 310, 411, or permission of instructor. A. Scaglione.

Graduate-level introduction to fundamentals of digital communications. Complex random signals. Digital modulations and optimal receiver principles. Baseband and passband

transmissions and processing. Interference channels and equalization techniques. Performance analysis including bit error rate calculation and bounds, cutoff rate and channel capacity. Applications in wireless and digital subscriber loops (DSL).

[ECE 568(5680) Mobile Communication Systems]

Spring. 4 credits. Prerequisites: ECE 411 and 467. Corequisite: ECE 468. Not offered 2005–2006.

Theory and analysis of mobile communication systems, with an emphasis on understanding the unique characteristics of these systems. Topics include cellular planning, mobile radio propagation and path loss, characterization of multipath and fading channels, modulation and equalization techniques for mobile radio systems, source coding techniques, multiple access alternatives, CDMA system design, and capacity calculations.]

ECE 572(5720) Parallel Computer Architecture [also COM S 516(5722)]

Spring. 4 credits. Co- or prerequisite: ECE 475. J. F. Martínez.

Principles and tradeoffs in the design of parallel architectures. Emphasis is on latency, bandwidth, and synchronization in parallel machines. Case studies illustrate the history and techniques of shared-memory, message-passing, dataflow, and data-parallel machines. Additional topics include memory consistency models, cache coherence protocols, and interconnection network topologies. Architectural studies presented through lecture and some research papers.

[ECE 574(5740) Advanced Digital VLSI Design]

Fall. 4 credits. Prerequisites: ECE 474, 475. Not offered 2005–2006.

Top-down approach to asynchronous design and the relation between computer architecture and VLSI design. For the asynchronous design component: high-level synthesis, design by program transformations, and correctness by construction. Topics include delay-insensitive design techniques, description of circuits as concurrent programs, circuit compilation, and electrical optimizations. Students complete a group project of the design of a pipelined microprocessor. The processor can be clocked, asynchronous, or a combination of the two.]

ECE 575(5750) High-Performance Microprocessor Architecture

Spring. 4 credits. Prerequisite: ECE 473 or 475. M. Burtscher.

Provides in-depth coverage of some of the advanced architectural features of current high-performance microprocessors. Lecture topics include trace caches, branch predictors, value predictors, confidence estimators, finite state machines, multi-threading, predication, software speculation, RISC, EPIC, case studies of modern high-end microprocessors, and research ideas. The projects involve writing simulators to evaluate architectural components on large programs that execute billions of instructions.

ECE 578(5780) Computer Analysis of Biomed Images

Spring. 4 credits. Prerequisite: instructor permission. Open to students with engineering, biomedical, or biology background. A. P. Reeves.

Powerful imaging modalities with attending computer image processing methods are evolving for the evaluation of health and the detection of disease. This course focuses on the quantitative analysis of such images and Computer Aided Diagnosis (CAD), i.e., the automatic identification and classification of abnormalities by the computer.

ECE 579(5790) Radio Frequency (RF) Integrated Circuit Design

Fall and spring. Students must enroll both semesters. 6 credits. Prerequisites: ECE 433, 453, and 488. K. T. Kornegay.

Conveys practical knowledge of advanced concepts related to the design radio-frequency (RF) integrated circuits in state-of-the-art silicon germanium (SiGe) technology. Emphasis is on the circuit architecture, design, trade-offs, optimization, and layout of RF integrated circuits for use in wireless applications. Special attention is devoted to the most important challenges facing RF circuit designers today, such as the impact of noise, power distribution, and consumption. Low noise amplifier, voltage-controlled oscillator (VCO), phase-lock loop, and high-performance mixer design are emphasized. The basic transmitter/receiver building blocks are covered, and students learn how to design and assemble them to form single-chip wireless systems.

ECE 581(5810) Introduction to Plasma Physics [also A&EP 606(6060)]

Fall. 4 credits. Prerequisite: ECE 303 or equivalent. First-year graduate-level course; open to exceptional seniors. D. A. Hammer.

Topics include plasma state; motion of charged particles in fields; drift-orbit theory; coulomb scattering, collisions; ambipolar diffusion; elementary transport theory; two-fluid and hydromagnetic equations; plasma oscillations and waves, CMA diagram; hydromagnetic stability; and elementary applications to space physics, plasma technology, and controlled fusion.

ECE 582((5820) Advanced Plasma Physics

Fall. 4 credits. Prerequisites: ECE 581 or A&EP 606. C. E. Seyler.

Boltzmann and Vlasov Equations; waves in hot-magnetized plasma; Landau and cyclotron damping; micro-instabilities; low-frequency waves and instabilities; Nonlinear phenomena: solitons, nonlinear waves, tearing, and reconnection.

ECE 587(5870) Energy Seminar I (also NSE 545[5450], M&AE 545[5450])

Fall. 1 credit. D. A. Hammer.

Energy resources, their conversion to electricity or mechanical work, and the environmental consequences of the energy cycle are discussed by faculty members from several departments in the university and by outside experts. Examples of topics surveyed include: energy resources and economics; coal-based electricity generation; nuclear reactors; solar power; energy conservation by users; and air pollution control.

ECE 588(5880) Energy Seminar II (also M&AE 546[5460])

Spring. 1 credit. D. A. Hammer.

See description for ECE 587; however, different speakers and/or topics are discussed in ECE 588.

ECE 593-599(5930-5990) Advanced Topics in Electrical and Computer Engineering

Fall, spring. 1–4 credits. Staff.

Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

ECE 608(6080) Multi-Access Communication Theory

Spring. 4 credits. Prerequisites: ECE 310, 411 and 567 or 562 or permission of instructor. L. Tong.

Graduate-level course on theory and techniques in multi-access wireless communications. Channel division multiple access (TDMA, CDMA, FDMA) techniques. Random access protocols and analysis. Multi-user detection and estimation. Multi-user information theory. Multi-access in ad hoc networks.

ECE 662(6620) Network Information Theory

Fall. 3 credits. Prerequisite: ECE 562. S. Servetto, T. Berger.

Second course in information theory, focusing on multi-terminal aspects, as covered in the textbooks of Yeung and Csiszar/Koerner.

ECE 691-692(6910-6920) Electrical and Computer Engineering Colloquium

Fall, 691; spring, 692. 1 credit each semester. For students in the graduate field of Electrical and Computer Engineering. Fall, D. H. Albonesi and S. A. McKee; spring, S. Servetto.

Lectures by staff, graduate students, and visiting authorities. A weekly meeting for the presentation and discussion of important current topics in the field. Reports required.

ECE 693-694(6930-6940) Master of Engineering Design

Fall, 693; spring, 694. 1–8 credits. For students enrolled in the M.Eng. (Electrical) degree program.

Uses real engineering situations to present fundamentals of engineering design. Each professor is assigned a section number. To register, see roster for appropriate six-digit course ID numbers.

ECE 695-699(6950-6990) Graduate Topics in Electrical and Computer Engineering

Fall, spring. 1–4 credits. Staff.

Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

ECE 791-792(7910-7920) Thesis Research

791, fall; 792, spring. 1–15 credits. For students enrolled in the master's or doctoral program. Each professor is assigned a section number. To register, see roster for appropriate six-digit course ID numbers.

ECE 793-799(7930-7990) Advanced Graduate Topics in Electrical and Computer Engineering

Fall, spring 1–4 credits. Staff.

Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

Spring. 3 credits.

[INFO 648(6648) Speech Synthesis by Rule (also LING 648[6648])]

Spring. 4 credits. Prerequisite: LING 401, 419, or permission of instructor. Offered alternate years; not offered 2005–2006.]

INFO 685(6850) The Structure of Information Networks (also COM S 685[6850])

Fall or spring. 4 credits. Prerequisite: COM S 482.

[INFO 694(6940) The Internet as a Social Phenomenon (also COMM 694[6940])]

Fall. 3 credits. Prerequisite: graduate standing; seniors by permission of instructor. Not offered 2005–2006.]

INFO 747(7400) Social and Economic Data (GR-RDC) (also ILRLE 740[7400])

Spring. 4 credits. Prerequisite: Ph.D. and research master's students.

[INFO 751(7002) Media Research and Critical Design]

Fall or spring. 4 credits. Prerequisites: graduate-level training in science and technology studies, philosophy, critical theory, communication, artificial intelligence, human-computer interaction, or equivalent, or permission of instructor. Not offered every year.]

INFO 790(7900) Independent Research

Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.

Independent research for M.Eng. students and pre-A exam Ph.D. students.

INFO 990(9900) Thesis Research

Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.

Thesis research for post-A exam Ph.D. students.

MATERIALS SCIENCE AND ENGINEERING

E. P. Giannelis, director; D. G. Ast, S. P. Baker, J. M. Blakely, R. Dieckmann, D. T. Grubb, C. Liddell, G. G. Malliaras, C. K. Ober, A. L. Ruoff, S. L. Sass, M. O. Thompson, C. C. Umbach, R. B. van Dover, U. B. Wiesner

Undergraduate Courses

MS&E 111(1110) Nanotechnology (also ENGRI 111[1110])

Fall. 3 credits. E. Giannelis.
Course in Introduction to Engineering series.
For description, see ENGRI 111.

MS&E 119(1190) Biomaterials for the Skeletal Systems (also ENGRI 119[1190])

Fall. 3 credits. C. K. Ober.
Course in Introduction to Engineering series.
For description, see ENGRI 119.

MS&E 124(1240) Designing Materials for the Computer (also ENGRI 124[1240])

Spring. 3 credits. Staff.
Course in Introduction to Engineering series.
For description, see ENGRI 124.

[MS&E 204(2040) Materials Chemistry] Spring. 4 credits. Not offered 2005–2006. U. Wiesner.]

MS&E 206(2060) Atomic and Molecular Structure of Matter (also MS&E 581[5810], M&E 312[3120])

Spring. 4 credits. G. Malliaras.
Discusses the basic elements of structure; order and disorder; ideal gas; crystals; liquids; amorphous materials; polymers; liquid crystals; composites; crystal structure; x-ray diffraction.

MS&E 261(2610) Mechanical Properties of Materials: From Nanodevices to Superstructures (also ENGRD 261[2610])

Fall. 3 credits. S. L. Sass.
For description, see ENGRD 261.

MS&E 262(2620) Electronic Materials for the Information Age (also ENGRD 262[2620])

Spring. 3 credits. Prerequisite: MATH 192.
Corequisite: PHYS 213 or permission of instructor. Staff.
For description, see ENGRD 262.

MS&E 291–292(2910–2920) Research Involvement Ila and Iib

291, fall; 292, spring. 3 credits each semester. Prerequisite: approval of department. A. Ruoff.
Supervised independent research project in association with faculty members and faculty research groups of the department. Students design experiments, set up the necessary equipment, and evaluate the results. Creativity and synthesis are emphasized. Each semester may be taken as a continuation of a previous project or as a one-semester affiliation with a research group.

MS&E 302(3020) Mechanical Properties of Materials, Processing, and Design (also M&E 312[3120], MS&E 582[5820])

Fall. 4 credits. Prerequisite: MS&E 206.
Corequisite: MS&E 304 or permission of instructor. A. Ruoff.
Stress and infinitesimal strain as second-rank Cartesian tensors. Linear elasticity and fourth-

rank Cartesian tensors. Symmetry effects (Nye, *Physical Properties of Crystals*). Design criteria for beams, shafts, and pressure vessels (Dowling, *Mechanical Behavior of Materials*). Generalized plastic flow relations. Design based on yielding, fracture toughness, fatigue, creep, and rupture with specific applications. Basis for improved materials.

MS&E 303(3030) Thermodynamics of Condensed Systems (also MS&E 583[5830])

Fall. 4 credits. Prerequisites: PHYS 214 and MATH 294. M. O. Thompson.

Introduces the three laws of thermodynamics as the fundamental basis for thermal and chemical equilibrium, coupled with statistical mechanical interpretations for entropy and specific heat capacities. Applies these principles to understanding phase equilibria and phase diagrams, heterogeneous reactions, solutions, surfaces, and defects. Introduces electrochemistry and fuel/power cells.

MS&E 304(3040) Kinetics, Diffusion, and Phase Transformation (also MS&E 584[5840])

Spring. 4 credits. Prerequisite: MS&E 303 or permission of instructor. R. Dieckmann.
Topics include phenomenological and atomistic theories of diffusion; diffusion in metals, alloys, and nonmetals, including polymers; diffusion in the presence of driving forces; fast diffusion paths; thermo- and electrotransport; interfaces and microstructure; nucleation and growth; growth of product layers (parabolic and linear kinetics); solidification of alloys; diffusional and diffusionless transformations in solids; glass transition.

MS&E 305(3050) Electronic, Magnetic and Dielectric Properties of Materials (also MS&E 585[5850])

Spring. 4 credits. Prerequisite: MS&E 206 or permission of instructor. R. B. van Dover.
Electronic structure of materials and connection to transport, magnetic, and dielectric properties. Wave and particle nature of electrons, wave packets, potential wells, barriers, tunneling. Valence electron behavior in crystals, density of states for metals, Fermi level, field and thermionic emission, Schottky barriers. Periodic potentials and band structure of crystals. Intrinsic and doped semiconductors, junction electronic and optical devices. Physical origin of magnetic behavior, ferromagnetic domains, magneto-resistance. Materials for data storage and manipulation. Polarization in dielectric materials; frequency dependence of dielectric constants and refractive indices. Ferroelectric domains. Dielectric components in devices. The close connection between fundamental concepts and current technology is emphasized.

MS&E 307(3070) Materials Design Concept I

Fall. 2 credits. Staff.
For description, see MS&E 407.

MS&E 311(3110) Junior Laboratory I

Fall. 1 credit. C. C. Umbach.
Practical laboratory covering the analysis and characterization of materials and processing. Labs are based on materials from courses in thermodynamics of condensed systems and electronic, magnetic, and dielectric properties of materials.

MS&E 312(3120) Junior Laboratory II

Spring. 1 credit. C. C. Umbach.

Practical laboratory covering the analysis and characterization of materials and processing. Labs are based on course material in kinetics, diffusion, and phase transformation and mechanical properties of materials, processing, and design.

MS&E 391–392(3910–3920) Research Involvement Ila and Iib

391, fall; 392, spring. 3 credits each semester. Prerequisite: departmental approval. A. Ruoff.

For description, see MS&E 291. May be continuation or a one-semester affiliation with a research group.

MS&E 403–404(4030–4040) Senior Materials Laboratory I and II

403, fall, 3 credits; 404, spring, 2 credits.
R. Dieckmann.

Practical laboratory covering the analysis and characterization of materials and processing. Emphasis is on design of experiments for evaluation of materials' properties and performance as related to processing history and microstructure. Projects available in areas such as plasticity, mechanical and chemical processing, phase transformations, electrical properties, magnetic properties, and electron microscopy.

MS&E 405–406(4050–4060) Senior Thesis I and II

405, fall; 406 spring. 4 credits each semester. Requirement for graduation with honors. Open to advanced undergraduates in lieu of senior materials laboratory.
J. Blakeley.

Proposals for thesis topics should be approved by the supervising faculty member before beginning the senior year. Approved thesis topics normally involve original experimental research in direct collaboration with an ongoing research program. Periodic oral and written presentations and a final written thesis are required. Students must take both semesters to complete the laboratory requirement.

MS&E 407(4070) Materials Design Concepts II

Fall. 2 credits. Staff.
Introduces materials design in the context of real world materials design projects carried out in industry. In the first portion of the course, the process of engineering design is studied in light of economic, environmental, regulatory, and safety issues. Patent searching and communication skills are addressed. In the second portion, speakers from industry lecture on case studies of materials design problems. Students give oral presentations and write technical reports based on the case studies.

MS&E 410(4100) Physical Metallurgy and Applications (also MS&E 610[6100])

Spring. 3 credits. Prerequisites: MS&E 206, 303, 304 or permission of instructor.
Offered alternate years. S. Baker.

Microstructure and properties of metals and alloys: processing, structure, defects, phase stability, diffusion, deformation, fracture, corrosion, conductivity, optical properties. Applications of metallurgical principles to high performance metallic materials include: thin films and patterned structures for use in microelectromechanical systems, superalloys for high temperature engine applications, shape memory alloys for biomedical applications, and others.

MS&E 433(4330) Materials for Energy Production, Storage, and Conversion (also MS&E 533[5330])

Fall. 3 credits. R. Dieckmann.

Concerned with materials and technologies related to energy production, storage, and conversion as well as to sensors used for monitoring the emission of pollutants. The devices discussed include solar cells, fuel cells, batteries, and electrochemical sensors. Thermodynamic, kinetic, and electrochemical concepts and materials properties critical for such devices are the central part of this course.

MS&E 461(4610) Biomedical Materials and Their Applications

Spring. 3 credits. D. Grubb.

Many types of materials are used in biomedical engineering to replace or supplement natural biological systems. Interaction with blood and tissues is always of primary importance, but depending on the use of the biomedical material, mechanical, optical, and transport properties also may be vital. After a general introduction to biomedical materials, much of the course is taken up with case studies where a physiological system is considered, then the design of artificial parts and the materials now chosen are investigated. Constraints such as methods of production, economics, regulatory approval, and legal liabilities are included in the case study. Examples may include dialysis, contact and intra-ocular lenses, heart valves, and the artificial pancreas. Every student is involved in a presentation to the class about a case study.

MS&E 481(4810) Technology Management (also MS&E 587[5870])

Spring. 3 credits. E. P. Giannelis.

Designed to provide students in engineering and the sciences with the knowledge and analytical skills to manage RD for a strategic competitive advantage. Most organizations recognize the critical importance of RD management in becoming and remaining world-class competitors. The course uses a combination of case studies, readings, discussions, and outside lectures. Topics include technology evaluation, RD portfolio, intellectual property portfolio and management, technology transfer, and technology, policy, and society.

MS&E 487(4870) Ethics and Technology

Spring. 1 credit. Staff.

Ethics influences all decisions made by a technologist. This course discusses those factors that must be considered in reaching a decision involving technology, ranging from legal impact to consideration of community expectations.

MS&E 489(4890) Colloids and Colloid Assemblies for Advanced Materials Applications (also MS&E 589[5890])

Fall. 3 credits. C. Liddell.

Recent global developments in the synthesis, modification, organization, and utilization of fine particles in nanotechnology and biotechnology fields. Underlying principles for control of particle characteristics such as mean size, shape, composition, internal homogeneous structure, layered, hollow, porous, and heterojunction structures. Methods for the formation of ordered and patterned particle arrays employed in advanced materials based on latex, ceramic colloids, metal nanoparticles, semiconductor quantum dots, nanocapsules,

and miniemulsions. Applications in photonics, biolabeling, biological screening, drug delivery, catalysis, and magnetic recording.

MS&E 491-492(4910-4920) Research Involvement IVa and IVb

491, fall; 492, spring. 3 credits each semester. Prerequisite: departmental approval. A. Ruoff.

For description, see MS&E 291. May be continuation or a one-semester affiliation with a research group.

MS&E 495(4950) Undergraduate Teaching Involvement

Fall, spring. Variable credit. Staff.

Gives credit to students who help in the laboratory portions of select MS&E courses. The number of credits earned is determined by the teaching load and is typically 1-3.

MS&E 512(5120) Mechanical Properties of Thin Films (also M&AE 513[5130])

Spring. 3 credits. Offered alternate years.

S. P. Baker.

MS&E 521(5210) Properties of Solid Polymers

Fall. 3 credits. Prerequisite: ENGRD 261.

Corequisite: MS&E 303 or permission of instructor. U. Wiesner.

Synthetic and natural polymers for engineering applications. Production and characterization of long-chain molecules. Thermodynamics of polymer mixtures. Polymer molecular weight. Gelation and networks, rubber elasticity, elastomers, and thermosetting resins. Amorphous and crystalline thermoplastics and their structure. Time- and temperature-dependent elastic properties of polymers. Glass transition and secondary relaxations. Plastic deformation and molecular orientation.

[MS&E 523(5230) Physics of Soft Materials]

Fall. 3 credits. Offered alternate years.

U. B. Wiesner.]

[MS&E 524(5240) Materials Chemistry of Synthetic Polymeric Materials]

Fall. 3 credits. Prerequisite: MS&E 521 or permission of instructor. Offered alternate years. Staff.]

[MS&E 525(5250) Organic Optoelectronics]

Fall. 3 credits. Offered alternate years.

G. G. Malliaras.]

MS&E 531(5310) Introduction to Ceramics

Spring. 3 credits. C. Liddell.

Covers ceramic processes and products, structure of ceramic crystals, structure of glasses, structural defects (point defects, dislocations), surfaces, interfaces and grain boundaries, diffusion in ionic materials (atomistic and phenomenological approach, relationships between diffusion and point defect structure), ceramic phase diagrams, phase transformations. Emphasizes physicochemical aspects of the different topics.

MS&E 533(5330) Materials for Energy Production, Storage, and Conversion (also MS&E 433[5330])

Fall. 3 credits. R. Dieckmann.

For description, see MS&E 433.

MS&E 541(5410) Nanofabrication (also ECE 336/536[3660/5360] for M.Eng.)

Spring. 3, 4, or 5 credits. Students enrolled in MS&E 541 must enroll in advanced topic, 1-credit sec. Enrollment in advanced credit section optional for students registered in ECE 336. Staff.

The previous material science course in microprocessing has been combined with ECE 336 and is taught jointly with ECE. The course consists of a two-lecture, 3-credit core course providing an introduction to the materials and processes used to fabricate integrated circuits and micro electromechanical systems. An optional extension is a hands-on, 1-credit, laboratory in which students fabricate transistors, simple integrated circuits, and MEMS structures. The recommended textbook is *The Science and Engineering of Microelectronic Fabrication* by Campbell. Course notes available to registered students on a password-protected web site.

MS&E 542(5420) Materials Design in Electronic Packaging

Spring. 3 credits. C. K. Ober.

Design, materials, and manufacturing needs for packaging technology from chip to board. Principles involved in key areas of materials science and other engineering disciplines. Packaging materials to be discussed include metals, ceramics, and polymers.

MS&E 543(5430) Thin-Film Material Science

Fall. 3 credits. Offered alternate years.

R. B. van Dover.

Provides fundamental information on the deposition, properties, reaction, and evaluation of thin films. Topics include deposition techniques, surface energies, stress in thin films, surface kinetics, homoepitaxy, heteroepitaxy and superlattices, electrical and optical properties, Schottky barriers, solid phase regrowth, interdiffusion, thin film reactions, and electromigration. The recommended textbook is *Electronic Thin Film Science for Electrical Engineers and Material Scientists* by Tu, Mayer, and Feldman.

MS&E 545(5450) Magnetic and Ferroelectric Materials

Fall. 3 credits. Prerequisites: PHYS 213 and 214 or equivalent. Offered alternate years.

R. B. van Dover.]

MS&E 546(5460) Solar Cells: Energy from the Environment

Fall. 2 or 3 credits. Limited to 10 students per lab. Lec, 2 credits; lab, 1 credit.

D. G. Ast.

Discusses the physics, design, manufacturing, testing, applications, and long-term reliability of solar cells. Topics include the energy distribution of the solar spectrum, physics of converting light into electricity, theoretical conversion efficiency of solar cells, optimal solar cell design, low fabrication of solar cells, testing and government regulations, and the lifetime of solar cell arrays. The course covers mostly solid state solar cells but provides an introduction to emerging competing technologies using polymers, nano-composites, and organic dyes. In the laboratory, students fabricate and test a solar cell. Special recitations, as needed, are offered for students lacking a semiconductor background but interested in the subject of solar cells. The recommended textbook is *Solar Cells, Operating Principles, Technology and Systems Applications* by Green.

MS&E 555(5550) Introduction to Composite Materials (also CEE/M&AE/T&AM 455[4550])

Spring. 3 credits.

For description, see T&AM 455.

MS&E 563(5630) Nanobiotechnology (also A&EP/BIO G 663[6630])

Spring. 3 credits.

For description, see A&EP 663.

MS&E 571(5710) Analytical Techniques for Material Science (also MS&E 603[6030])

Spring. 3 credits. Offered alternate years. S. Sass.

Survey of modern analytical techniques used to determine composition and structure of near-surface and bulk materials. Interaction of ions, electrons, and photons with solids; characteristics of the emergent radiation. Techniques covered include ion scattering, Auger electron spectroscopy, nuclear activation, secondary ion mass spectroscopy, UV and X-ray photoelectron spectroscopies, and X-ray techniques. Selection and design of experiments.

[MS&E 572(5720) Computational Materials Science

Spring. 3 credits. Prerequisite: MS&E 303/601 or equivalent; programming. Not offered 2005–2006. M. O. Thompson.]

MS&E 501–502(5010–5020) Special Project

501, fall; 502, spring. 6 credits each semester.

Master of engineering research project.

MS&E 581(5810) Atomic and Molecular Structure of Matter (also MS&E 206[2060], M&AE 312[3120])

Spring. 4 credits. G. Mallarias.

For description, see MS&E 206.

MS&E 582[5820] Mechanical Properties of Materials, Processing, and Design (also MS&E 302[3020], M&AE 312[3120])

Fall. 4 credits. Corequisite: MS&E 584 or permission of instructor. A. Ruoff.

For description, see MS&E 302.

MS&E 583[5830] Thermodynamics of Condensed Systems (also MS&E 303[3030])

Fall. 4 credits. M. O. Thompson.

For description, see MS&E 303.

MS&E 584(5840) Kinetics, Diffusion, and Phase Transformation (also MS&E 304[3040])

Spring. 4 credits. Prerequisite: MS&E 583 or permission of instructor. R. Dieckmann.

For description, see MS&E 304.

MS&E 585(5850) Electronic, Magnetic, and Dielectric Properties of Materials (also MS&E 305[3050])

Spring. 4 credits. R. B. van Dover.

For description, see MS&E 305.

MS&E 587(5870) Technology Management

Spring. 3 credits. E. P. Giannelis.

For description, see MS&E 481.

MS&E 589(5890) Colloids and Colloid Assemblies for Advanced Materials Applications (also MS&E 489[4890])

Fall. 3 credits. C. Liddell.

For description, see MS&E 489.

Graduate Core Courses**MS&E 601(6010) Thermodynamics of Materials**

Fall. 3 credits. Prerequisite: thermodynamics course at level of MS&E 303.

J. M. Blakely.

Topics include basic statistical thermodynamics, partition functions and thermodynamic state functions, distributions, laws of thermodynamics, free-energy functions and conditions of equilibrium, chemical reactions, statistics of electrons in crystals, heat capacity, heterogeneous systems and phase transitions, and lattice models of 1-, 2-, and 3-dimensional interacting systems. Also covers: statistical thermodynamics of alloys, free-energy and phase diagrams, order-disorder phenomena, point defects in crystals, and statistical thermodynamics of interfaces.

[MS&E 602(6020) Elasticity, Plasticity, and Fracture

Spring. 3 credits. Offered alternate years; not offered 2005–2006.]

MS&E 603(6030) Analytical Techniques for Materials Science (also MS&E 571[5710])

Spring. 3 credits. Offered alternate years. S. Sass.

For description, see MS&E 571.

[MS&E 604(6040) Kinetics of Reactions in Condensed Matter

Spring. 3 credits. Offered alternate years; not offered 2005–2006. A. L. Ruoff.]

Related Course in Another Department

Introductory Solid-State Physics (PHYS 454, A&EP 450)

Further Graduate Courses**MS&E 610 (6100) Physical Metallurgy and Applications (also MS&E 410[4100])**

Spring. 3 credits. Prerequisites: MS&E 206, 303, 304 or permission of instructor.

Offered alternate years. S. Baker.

For description, see MS&E 410.

MS&E 621(6210) Advanced Inorganic Chemistry III: Solid-State Chemistry (also CHEM 607[6070])

Fall. 4 credits. Prerequisite: CHEM 605 or permission of instructor. S. Lee.

For description, see CHEM 607.

MS&E 622(6220) Synthetic Polymer Chemistry (also CHEM 675[6750], CHEM 671[6710])

Spring. 4 credits. Prerequisites: CHEM 359–360 or equivalent or permission of instructor. Staff.

For description, see CHEM 671.

[MS&E 631(6310) Solid-State Reactions

Fall. 3 credits. Offered alternate years; not offered 2005–2006. R. Dieckmann.]

[MS&E 632(6320) Solid-State Electrochemistry

Fall. 3 credits. Prerequisite: MS&E 631 or permission of instructor. Not offered 2005–2006. R. Dieckmann.]

MS&E 655(6550) Composite Materials (also M&AE/T&AM 655[6550])

Spring. 4 credits. Staff.

For description, see T&AM 655.

MS&E 665(6650) Principles of Tissue Engineering (also M&AE/BME 665[6650])

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.

For description, see BME 665.

MS&E 671(6710) Principles of Diffraction (also A&EP 711[7110])

Fall. 3 credits. Letter grades only. Assumes some knowledge of statistical thermodynamics, crystallography, elementary quantum mechanics, and theory of rate processes. J. D. Brock.

For description, see A&EP 711.

MS&E 681(6810) Surfaces and Interfaces in Materials

Spring. 3 credits. Offered alternate years. J. Blakely.

Deals with special topics in the field of surface and interface science. The following are the main topics: statistical thermodynamics of interfaces, morphological stability, atomic structure, energetics and structure determination, electronic structure of interfaces, charge and potential distributions, surface steps, adsorption and segregation, atomic transport and growth processes at surfaces, oxidation, and other surface reactions.

Specialty Courses**MS&E 800(8000) Research in Materials Science**

Fall, spring. Credit TBA. Staff.

Independent research in materials science under the guidance of a member of the staff.

MS&E 801(8010) Materials Science and Engineering Colloquium

Fall and spring. 1 credit each semester. Credit limited to graduate students. Staff.

Lectures by visiting scientists, Cornell staff members, and graduate students on subjects of interest in materials sciences, especially in connection with new research.

MS&E 802(8020) Materials Science Research Seminars

Fall, spring. 2 credits each semester.

Prerequisite: graduate students involved in research projects. Staff.

Short presentations on research in progress by students and staff.

MECHANICAL AND AEROSPACE ENGINEERING

P. L. Auer, C. T. Avedisian, D. L. Bartel, L. J. Bonassar, J. F. Booker, J. R. Callister, M. E. Campbell, D. A. Caughey, L. R. Collins, R. D'Andrea, P. R. Dawson, P. C. T. deBoer, D. C. Erickson, E. M. Fisher, E. Garcia, A. R. George, F. C. Gouldin, C. Hui, B. J. Kirby, S. Leibovich, H. Lipson, M. Y. Louge, J. L. Lumley, M. P. Miller, F. C. Moon, F. K. Moore, S. Mukherjee, M. A. Peck, R. M. Phelan, S. L. Phoenix, S. B. Pope, M. L. Psiaki, E. L. Resler, Jr., A. Ruina, W. Sachse, S. E. Shen, K. E. Torrance, F. Valero-Cuevas, M. C. H. van der Meulen, H. B. Voelcker, K. K. Wang, Z. Warhaft, C. H. K. Williamson, N. Zabaras, A. Zehnder

General and Required Courses

M&AE 201(2010) Naval Ship Systems (also NAV S 202[2020])

Spring. 3 credits.
For description, see NAVS 202.

M&AE 117(1170) Introduction to Mechanical Engineering (also ENGRI 117[1170])

Fall. 3 credits. 2 lec and 1 lab per week.
Course in Introduction to Engineering series.
For description, see ENGRI 117.

M&AE 127(1270) Introduction to Entrepreneurship and Enterprise Engineering (also ENGRI 127[1270])

Spring. 3 credits. Open to all Cornell
students regardless of major. Prerequisites:
none.
For description, see ENGRI 127.

M&AE 212(2120) Mechanical Properties and Selection of Engineering Materials

Spring. 3 credits. Prerequisites: ENGRD/
T&AM 202 (Statics) with minimum of C-
(strictly enforced). Software fee.
Mechanics of deformable bodies and a
reinforcement of the concept of "simple
engineering elements" for mechanical analysis
associated with design. Introduction to the
broad range of properties and behaviors
of engineering materials as they relate to
mechanical performance. Emphasis is placed
on general states of stress and strain, on
elasticity and combined loading effects.
Failure criteria including yielding, buckling,
fracture, fatigue and environmental effects
are developed. A general introduction to the
function/constraints/objectives approach to
material selection associated with mechanical
design is provided with candidate material
systems coming from metals, polymers,
ceramics and/or composites. A general
overview of material processing is presented
within this context of material selection.

M&AE 221(2210) Thermodynamics (also ENGRD 221[2210])

Fall, spring, may be offered in summer. 3
credits. Prerequisites: MATH 192 and PHYS
112 or permission of instructor.
For description, see ENGRD 221.

M&AE 225(2250) Mechanical Synthesis

Spring. 4 credits. Prerequisite: ENGRD 202.
Pre- or corequisites: ENGRD 203 and 221.
Lab fee.

Hands-on introduction to the mechanical
design process. Basic prototyping skills
developed using machine tools. Mechanical
dissection used to demonstrate successful
product design and function. Design projects
provide experience from conceptualization
through prototype construction and testing.
Basic instruction on CAD and technical
sketching.

M&AE 323(3230) Introductory Fluid Mechanics

Fall; usually offered in summer through
Engineering Cooperative Program. 4
credits. Prerequisites: ENGRD 202 and
ENGRD 203 and pre- or co-registration in
ENGRD 221, or permission of instructor.
Topics include physical properties of fluids,
hydrostatics, conservation laws using control
volume analysis and using differential analysis,
Bernoulli's equation, potential flows, simple
viscous flows (solved with Navier-Stokes
equations), dimensional analysis, pipe flows,

boundary layers. Introduction to compressible
flow.

M&AE 324(3240) Heat Transfer

Spring; usually offered in summer through
Engineering Cooperative Program. 3
credits. Prerequisite: M&AE 323 or
permission of instructor.

Topics include discussion of steady and
unsteady heat conduction; forced and free
convection; external and internal flows;
radiation heat exchange; and heat exchangers
and boiling.

M&AE 325(3250) Analysis of Mechanical and Aerospace Structures

Fall; usually offered in summer through
Engineering Cooperative Program. 3
credits. Prerequisites: ENGRD 202 and
M&AE 212 (strictly enforced).

Topics in mechanics of materials applied to
analysis and design of structural components
encountered in mechanical, aeronautical
and aerospace systems. Including: torsion
and bending of nonsymmetric or curved
members, elastic stability, stress concentration,
and contact stresses, statically indeterminate
structures, bound theorems for collapse of
structures, applications to composite and
semi-monocoque structures.

M&AE 326(3260) System Dynamics

Spring; usually offered in summer through
Engineering Cooperative Program. 4
credits. Prerequisite: MATH 294, ENGRD
203. Junior standing required.

Dynamic behavior of mechanical systems:
modeling, analysis techniques, and
applications: vibrations of single- and
multi-degree-of-freedom systems; feedback
control systems. Computer simulation and
experimental studies of vibration and control
systems.

M&AE 327(3272) Mechanical Property and Performance Laboratory

Spring. 2 credits. Prerequisites: M&AE 212,
325 (strictly enforced).

This course provides an introduction to the
experimental methods, instrumentation,
and data analyses associated with material
property determination and mechanical
performance of materials. Emphasis is placed
on integration of theory and analysis with
experimental methods.

M&AE 427(4272) Fluids/Heat Transfer Laboratory

Fall. 3 credits. Fulfills technical-writing
requirement. Prerequisites: M&AE 323, 324.
Laboratory exercises in fluid mechanics
and the thermal sciences. Measurements of
flame temperature, pressure, heat transfer,
viscosity, lift and drag, fluid-flow rate, effects
of turbulence, air foil stall, flow visualization,
and spark ignition engine performance.
Instrumentation, techniques and analysis, and
interpretation of results. Biweekly written
assignments with extensive feedback.

M&AE 428(4280) Seminar on Engineering Design

Fall. 2 credits. Prerequisite: senior standing
or permission of instructor.
This course is offered to illustrate and practice
the design "process." It consists of formal
lectures and invited seminars by industrial and
academic practitioners of design. Case studies
are presented in weekly invited lectures
from a wide range of disciplines, including
thermo-fluid processes, manufacturing,
energy, mechanical design, aerospace, and

biological sciences. The invited lectures
are supplemented by one or more design
"projects" in the semester.

M&AE 429(4291) Supervised Senior Design Experience

Fall or spring. Minimum of 1 or 3 credits
depending on section chosen. Prerequisite:
senior standing or permission of instructor;
taken concurrently or after M&AE 428
(4280). Letter grades only.

Substantial design experience based on the
knowledge and skills acquired in earlier
course work and incorporating engineering
standards and realistic constraints that
include most of the following considerations:
economic; environmental; sustainability;
manufacturability; ethical; health and safety;
social; and political. Engineering design is
the process of devising a system, component,
or process to meet desired needs. It is a
decision making process (often iterative),
in which the basic sciences, mathematics,
and the engineering sciences are applied to
convert resources optimally to meet these
stated needs. Sections of this course satisfy
the BS ME senior design requirement. They
are offered in conjunction with a course
designated as "Senior Design Elective" (M&AE
386, 400, 423, 425, 435, 470, 479, or are
directed by a faculty member as an individual
or a team design exercise. Consult www.mae.cornell.edu for enrollment details.

M&AE 591(5910) Applied Systems Engineering (also CEE 504[5040], CIS 504[5040], ECE 512[5120], OR&IE 512[5120], SYSEN 510[5100])

Fall. 3 credits. Prerequisites: senior or
graduate standing in engineering field;
concurrent or recent (past two years)
enrollment in a group-based project with
a strong system design component that is
approved by course instructor.
For description, see SYSEN 510.

M&AE 592(5920) System Architecture, Behavior, and Optimization (also CEE 505[5050], COM S 505[5050], ECE 513[5130], OR&IE 513[5142], SYSEN 520[5200])

Spring. 3 credits. Prerequisites: senior
or graduate standing and completion of
Applied Systems Engineering I (CEE 504,
CIS 504, ECE 512, OR&IE 512, M&AE 591,
or SYSEN 510) or permission of instructor.
For description, see SYSEN 520.

Mechanical Systems, Design, Materials Processing, and Precision Engineering

M&AE 103(1030) Introduction to Computer-Aided Manufacture (CAM)

Fall, spring, approx. eight weeks (total 15
hrs. of instruction and 15 hrs. of lab). 1
credit. Limited enrollment. Prerequisites:
M&AE 225 or equivalent experience and
completion of Emerson Lab Product
Realization Facility's CNC seminars: An
Introduction to CNC Machining and CNC
Programming; or permission of instructor.

Completes the introduction to the
fundamentals of computer-aided manufacture
(CAM) seminars through the use of computer
numerical control (CNC) programming. The
course is the hands-on component of the
three-part series on CAM. Provides practical
applications of the use of G codes and
solid modeling software, CNC mill and/or
lathe setup, tool selection, and operation.
The course is required for students wishing

to use the CNC equipment in the Emerson Lab's Product Realization Facility for team or research projects. May not be used to fulfill any M&AE requirement.

M&AE 312(3120) Mechanical Properties of Materials, Processing, and Design (also MS&E 302 and 582[5820])

Spring. 4 credits.

For description, see MS&E 302.

M&AE 313(3130) Atomic and Molecular Structure of Matter (also MS&E 206[2060], MS&E 581[5810])

Spring. 4 credits.

For description, see MS&E 206.

M&AE 378(3780) Mechatronics

Fall. 4 credits. Prerequisite: MATH 294, PHYS 213, or permission of instructor.

At the intersection of mechanical and electrical engineering, Mechatronics involves technologies necessary to create automated systems. This course introduces students to the functional elements of modern controlled dynamic systems. Topics include analog circuits (both passive and active components); filter design; transistors; diodes; MOSFETs and power amplification; transduction mechanical and electro-mechanical devices such as electromagnetic systems; piezoelectric and shape memory material transduction; gear trains; pulse width modulation; optical encoders; discretization; aliasing; and microprocessors and programming. Laboratory experiments culminate in the design and programming of a microprocessor-controlled robotic vehicle.

M&AE 409(4090) Data Structures and Algorithms for Computational Science (also CIS 409[4090])

Fall. 4 credits. Prerequisite: COM S 100 or programming experience in any language. Not offered every year.

For description, see CIS 409.

M&AE 415(4150) CPS: Theory and Design (also ECE 415[4150])

Fall. 4 credits. Prerequisites: 300-level engineering course with advanced math content (e.g., ECE 303 or M&AE 326).

For description, see ECE 415.

M&AE 417(4170) Introduction to Robotics: Dynamics, Control, Design

Spring. 3 credits. Prerequisites: engineering math at level of MATH 293 and MATH 294 (Engineering Mathematics); some course in dynamics at level of T&AM/ENGRD 203 (Dynamics); familiarity with control concepts typical of M&AE 326 (System Dynamics).

Introductory course in the analysis and control of mechanical manipulators and related robotic machines. Topics include spatial descriptions and transformations, manipulator kinematics and inverse kinematics, differential relationships and static forces, manipulator dynamics, trajectory generation, sensors and actuators, trajectory control, and compliant motion control. Simulation and design using MATLAB and multi-body codes are used. Co-meets with M&AE 517.

M&AE 425(4251) FSAE Automotive Design Project

Fall, spring. Usually 3 credits: 3 for team members or 4 for team leaders. Prerequisite: M&AE or ECE juniors and seniors or permission of instructor.

Project course to research, design, build, develop, and compete with a Formula SAE car

for intercollegiate competition. Students work in interdisciplinary teams using concurrent engineering and systems engineering principles applied to complex mechanical, electromechanical, and electronic systems. "Senior Design Elective" if students sign up for the corresponding section of M&AE 429.

M&AE 435(4351) Advanced Mechatronics-Systems Engineering Project

Fall, spring. 7 credits over two semesters. Must be taken for two semesters.

Prerequisite: CHEME 372 or M&AE

326. By permission only. Enrollment limited to M.E. seniors satisfying their senior design elective requirement. Co-registration required for one semester in the corresponding section of M&AE 429, Supervised Senior Design Experience. Co-meets with M&AE 535.

For description, see M&AE 535.

M&AE 455(4550) Introduction to Composite Materials (also CEE 477[4770], MS&E 555[5550], T&AM 455[4550])

Spring. 4 credits.

For description, see T&AM 455.

M&AE 461(4610) Entrepreneurship for Engineers (also ENGRG 461[4610], OR&IE 452[4520])

Fall. 3 credits. Limited enrollment.

Prerequisite: enrollment open to upper-class engineers or permission of instructor. Develops skills necessary to identify, evaluate, and begin new business ventures. Topics include intellectual property, competition, strategy, business plans, technology forecasting, finance and accounting, and sources of capital. A rigorous, quantitative approach is stressed throughout, and students create financial documents and plans, analyze human resource models, and work with sophisticated valuation methods, complicated equity structures, and legal and business documents. As such, this course represents the "red meat" of entrepreneurship, and the soft skills are left for other courses. Course work consists of discussions, assignments, and the preparation and presentation of a complete business plan.

[M&AE 463(4630) Neuromuscular Biomechanics (also BME 463[4630])

Spring. 3 credits. Prerequisites: ENGRD 202 and ENGRD 203 or permission of instructor. Offered alternate years; not offered 2005–2006.

Modeling and simulation of biomechanical systems using mechanics, dynamics, and control principles. Physiology of neurons and muscles introduced and related to the production of force and movement in biological systems. Representation of neuromuscular systems as simultaneous equations. Exploration of the muscular redundancy problem using optimization methods and general-purpose languages (such as *Mathematica* or MATLAB). Selected clinical applications.]

[M&AE 464(4640) Orthopaedic Tissue Mechanics

Spring. 3 credits. Prerequisites: ENGRD 202 Mechanics of Solids and M&AE 325 Mechanical Design and Analysis or permission of instructor. Offered alternate years; not offered 2005–2006.

Applications of mechanics and materials principles to orthopaedic tissues. Physiology of bone, cartilage, ligament, and tendon and

relates it to mechanical function. Mechanical behavior of skeletal tissues in the laboratory. Functional adaptation of these tissues to their mechanical environment. Tissue engineering of replacement structures.]

M&AE 466(4660) Biomedical Engineering Analysis of Metabolic and Structural Systems (also BME 401[4010])

Fall. 3 credits. Prerequisites: ENGRD

202 Mechanics of Solids and previous course work in biology or permission of instructor.

For description, see BME 401.

M&AE 470(4701) Finite Element Analysis for Mechanical and Aerospace Design

Spring. 3 credits. Fulfills senior design requirement for M&AE students. Limited enrollment. Prerequisite: senior standing or permission of instructor. Evening exams.

Introduction to linear finite element static and dynamic analysis for discrete and distributed mechanical and aerospace structures. Prediction of load, deflection, stress, strain, and temperature distributions. Major emphasis on underlying mechanics and numerical methods. Introduction to computational aspects via educational and commercial software (such as MATLAB and ANSYS). Selected mechanical and aerospace applications. Term project. "Senior Design Elective" if students sign up for the corresponding section of M&AE 429. Co-meets with M&AE 570.

M&AE 477(4770) Engineering Vibrations

Spring. 3 credits. Pre- or corequisite: M&AE 326 or permission of instructor.

Lumped element, distributed parameter, and mixed structural vibratory systems are examined. Equations of motion are derived from Newton's law and Lagrange's equations. Eigen analysis, free and forced responses, and frequency/time domain solutions are considered. Vibration absorbers, isolators, and vibration suppression control systems using feedback approaches also are investigated. Co-meets with M&AE 577.

M&AE 478(4780) Feedback Control Systems (also CHEME 472[4720], ECE 472[4720])

Fall. 4 credits. Prerequisites: CHEM E 372 or M&AE 326 or permission of instructor.

Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the principal mathematical tools. Design techniques include root-locus and frequency response methods. Includes laboratory that examines modeling and control of representative dynamic processes. Co-meets with M&AE 578.

[M&AE 479(4791) Modeling and Simulation of Mechanical and Aerospace Systems

Fall. 3 credits. Limited enrollment.

Prerequisite: seniors in engineering or permission of instructor. Evening exams. Not offered 2005–2006. F. Valero-Cuevas.

Analysis and simulation of linear and nonlinear systems. Representation of discrete and distributed dynamical systems by state-variable models. Time- and frequency-domain simulation via general-purpose languages (such as MATLAB or Mathematica) and special-purpose simulation software (such as

Simulink). Selected applications from diverse fields. Term project. "Senior Design Elective" if students sign up for the corresponding section of M&AE 429. Co-meets with M&AE 579.]

[M&AE 513(5130) Mechanical Properties of Thin Films (also MS&E 512[5120])]

Spring. 3 credits. Offered alternate years; not offered 2005–2006.

For description, see MS&E 512.]

M&AE 514(5140) Design for Manufacture and Assembly

Fall or spring. 4 credits. Prerequisites: two and a half years of engineering mathematics through probability and statistics; some knowledge of mechanical design and manufacturing processes; good visualization and sketching skills; some experience with MATLAB and a CAD system, or permission of instructor.

Nominal DFMA (design for manufacture and assembly) and variational DFMA are covered in two parallel streams. The nominal stream is based on readings in a popular text that surveys the role of manufacturing and assembly processes in part and product design. The second stream, covered mainly through lectures, addresses dimensional variability and its control through parametric and geometric tolerances, dimensional metrology, and statistical quality and process control.

M&AE 517(5170) Introduction to Robotics: Dynamics, Control, Design

Spring. 3 credits. Graduate version of M&AE 417. Co-meets with M&AE 417.

For description, see M&AE 417.

M&AE 521(5210) Theory of Linear Systems (also ECE 521[5210])

Fall. 3 credits. Prerequisites: M&AE 326, ECE 320 (may be taken as a corequisite), or permission of instructor; a strong background in linear algebra at the level of MATH 294, and differential equations at the level of MATH 293 is required.

For description, see ECE 521.

M&AE 535(5350) Advanced Mechatronics-Systems Engineering Project

Fall, spring. 4 credits each semester; must be taken for 8 credits. Prerequisite: CHEM 372 or M&AE 326 or permission of instructor.

Project-based introduction to systems engineering with a focus on system design, systems and technology integration, and systems analysis. Approximately 30 students from the various engineering disciplines design, construct, and fully test several teams of fully autonomous, mobile robots. These teams engage in head to head competitions at the end of the spring semester. There are approximately six lectures per semester and weekly group meetings with the instructor. The project involves vehicle design, real-time feedback control and trajectory generation, microprocessor design and implementation, wireless communication, computer vision, and artificial intelligence. M. E. seniors using this course to fulfill the senior design requirement should enroll in M&AE 435. Co-meets with M&AE 435.

M&AE 565(5650) Biomechanical Systems—Analysis and Design (also BME 565[5650])

Spring. 3 or 4 credits. Prerequisites: undergraduate courses in dynamics and strength of materials (e.g., ENGRD 202 and ENGRD 203); senior or graduate standing or permission of instructor.

Mechanics and design in musculoskeletal systems. Emphasizes the modeling and analysis of bones and joints and the analysis and design of bone-implant systems for fracture fixation and joint replacement. Selected topics from the study of the human musculoskeletal system as a mechanical system. Emphasizes the modeling and analysis of bones and joints, and the analysis and design of biomechanical systems frequently encountered in orthopaedic engineering, including bone-implant systems.

M&AE 570(5700) Finite Element Analysis for Mechanical and Aerospace Design

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Evening exams. Term project. Graduate version of M&AE 470. Co-meets with M&AE 470.

For description, see M&AE 470.

M&AE 571(5710) Applied Dynamics

Fall. 3 credits. Prerequisites: graduate standing, seniors with ENGRD/T&AM 203, M&AE 326 or permission of instructor.

Introduces multibody dynamics; dynamics of rigid bodies; Newton-Euler methods, Lagrangian dynamics, principle of virtual power (Kane-Jourdain methods); and applications to robotics, space dynamics of satellites, electro-mechanical systems. Introduction to multibody simulation using Working Model.

M&AE 577(5770) Engineering Vibrations

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Graduate version of M&AE 477. Co-meets with M&AE 477.

For description, see M&AE 477.

M&AE 578(5780) Feedback Control Systems

Fall. 4 credits. Graduate version of M&AE 478. Co-meets with M&AE 478.

For description, see M&AE 478.

[M&AE 579(5790) Modeling and Simulation of Mechanical and Aerospace Systems]

Fall. 3 credits. Limited enrollment. Prerequisite: graduate standing or permission of instructor. Evening exams. Not offered 2005–2006. Graduate version of M&AE 479. Term project. Co-meets with M&AE 479.

For description, see M&AE 479.]

M&AE 655(6550) Composite Materials (also T&AM 655[6550], MSE 655[6550])

Spring. 4 credits.

For description, see T&AM 655.

[M&AE 663(6630) Neural Control (also BME 663[6630])]

Spring. 3 credits. Prerequisite: permission of instructor. Offered alternate years; not offered 2005–2006. F. Valero-Cuevas.

Advanced topics in modeling and simulation of biomechanical systems using mechanics, dynamics, and control principles. Review of current literature on neuromuscular principles

of control of vertebrate, posture, locomotion, and manipulation. Mathematical representation of the functional interactions among neurons, muscles, and skeletal structures. Numerical prediction of force and movement in biological systems, and projects exploring muscle coordination using numerical and optimization methods. Project-based investigation of basic science and clinically relevant topics.]

[M&AE 664(6640) Mechanics of Bone (also BME 664[6640])]

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.

Offered alternate years; not offered 2005–2006.

Covers current methods and results in skeletal research, focusing on bone. Topics include skeletal anatomy and physiology, experimental and analytical methods for determination of skeletal behavior, mechanical behavior of bone tissue, and skeletal functional adaptation to mechanics.]

M&AE 665(6650) Principles of Tissue Engineering (also BME 665[6650], MS&E 665[6650])

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.

L. Bonassar.

For description, see BME 665.

[M&AE 675(6750) System Identification and Control]

Fall. 3 credits. Prerequisites: (M&AE 478, ECE 471, CHEM 472), (M&AE 521, ECE 521), or equivalent. Not offered 2005–2006.

Identification of linear uncertain and nonlinear models, and their connections to control. Primary topics include black box methods, such as subspace methods, and model tuning approaches, such as recursive parameter estimation. Connections to control include the development of model uncertainties and bounds, and control approaches consistent with identified models. Discussion of current trends in model identification for control. Other state of the art topics, such as hybrid models, are presented given enough time.]

M&AE 676(6760) Model-Based Estimation

Fall. 4 credits. Prerequisites: linear algebra, differential equations, and MATLAB programming. Open to M.S./Ph.D. students or permission of instructor. Offered alternate years.

Covers a variety of ways in which models and experimental data can be used to estimate model quantities that are not directly measured. The two main estimation methods that are presented are least-squares estimation for general problems and Kalman filtering for dynamic systems problems. Techniques for linear models are taught as are techniques for nonlinear models. Both theory and application are presented.

[M&AE 678(6780) Multivariable Control Theory]

Spring, 3 credits. Prerequisites: M&AE 478 or 578 or ECE 472 (Feedback Control Systems) and M&AE 521 (Theory of Linear Systems), or permission of instructor. A strong background in classical control, linear algebra, and state space models is required. Not offered 2005–2006.

Introduction to multivariable feedback control theory in both time and frequency domain. Primary topics include state space methods, model based compensators, performance and

robustness of multivariable systems, model reduction, Linear Quadratic and H-infinity optimal control, and random processes and Kalman filtering for control. Additional topics at the discretion of the instructor include uncertainty management and robust control, discrete time control, optimal control, and nonlinear control.]

M&AE 712(7120) Mechanics of Materials with Oriented Microstructures

Spring. 4 credits. Prerequisites: T&AM 663 or equivalents; second-year standing in M.S./Ph.D. program. Offered alternate years. The focus of this course is the evaluation of mechanical properties from knowledge of the material microstructure, with attention to anisotropic elastic and plastic behaviors. Topics include mathematical and mechanics preliminaries; mathematical foundations of orientations, including parameterizations, symmetries, and fibers; construction and sampling of orientation distributions; hypotheses used to link macro and micro length scales; methods for evaluation of effective elastic and plastic moduli; evolution of orientations and orientation distributions with deformation. Applications to polycrystalline solids (metal alloys and minerals), composite materials, biomaterials (soft tissues), and polymers.

Energy, Fluids, and Aerospace Engineering

M&AE 305(3050) Introduction to Aeronautics

Fall. 3 credits. Prerequisite: T&AM/ENGRD 203; upperclass engineers or permission of instructor.

Introduction to aerodynamic design of aircraft. Principles of incompressible and compressible aerodynamics, boundary layers, and wing theory. Calculation of lift and drag for aircraft. Analysis of aerodynamic performance, stability, and control.

M&AE 306(3060) Spacecraft Engineering

Spring. 3 credits. Prerequisite: junior or senior M&AE or ECE students or permission of instructor.

Introduction to spacecraft engineering from satellite design through launch to orbital operation. Topics covered include space missions, space environment, orbital mechanics, systems engineering, and satellite design. Most spacecraft subsystems are introduced including rocket theory, attitude determination and control, thermal design, and communications. Earth-orbiting and interplanetary satellites are considered. Discussions of current problems and trends in spacecraft operation and development.

[M&AE 400(4001) Components and Systems: Engineering in a Social Context (also S&TS 400(4001))

Spring. 3 credits. Prerequisites: upperclass standing, two years of college physics. Offered alternate years; not offered 2005–2006.

This course addresses, at a technical level, broader questions than are normally posed in the traditional engineering or physics curriculum. Through the study of individual cases such as the Strategic Defense Initiative (SDI), the National Missile Defense, supersonic transport, and the automobile and its effect on the environment, the course investigates interactions between the scientific, technical, political, economic, and social forces that are involved in the development of engineering systems. "Senior Design Elective" if students

sign up for the corresponding section of M&AE 429. Co-meets with M&AE 500.]

M&AE 423(4231) Intermediate Fluid Dynamics

Spring. 3 credits. Prerequisite: M&AE 323 (Introductory Fluid Mechanics).

This course builds on the foundation of M&AE 323. Emphasis is placed on both the fundamental principles and numerical calculation of real flows (both engineering and environmental) using a computational fluid dynamics package. Topics covered include some exact solutions to the Navier-Stokes equations, boundary layers, wakes and jets, separation, convection, stratified and rotating flows, fluid instabilities, and turbulence. "Senior Design Elective" if students sign up for the corresponding section of M&AE 429. Co-meets with M&AE 523.

M&AE 449(4490) Combustion Engines and Fuel Cells

Spring. 3 credits. Prerequisites: ENGRD 221 and M&AE 323.

Introduction to reciprocating combustion engines and fuel cells, with emphasis on the application of thermodynamic and fluid-dynamic principles affecting their performance. Chemical equilibrium and kinetics, electrochemistry, thermodynamic limits on performance, deviations from ideal processes, engine breathing, combustion, knock. Formation and control of undesirable exhaust emissions.

M&AE 453(4530) Computer-Aided Engineering: Applications to Biomedical Processes (also BEE 453(4530))

Spring. 3 credits. Fulfills technical elective requirement for M&AE students. Prerequisite: Heat and Mass Transfer (BEE 350 (Biological and Environmental Transport Processes), CHEME 324 (Heat and Mass Transfer), M&AE 324 (Heat Transfer), or equivalent.

For description, see BEE 453.

M&AE 459(4590) Introduction to Controlled Fusion: Principles and Technology (also ECE 484(4840), A&EP 484(4840))

Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics. Intended for seniors and graduate students in engineering and the physical sciences. Offered alternate years.

For description, see ECE 484.

M&AE 486(4861) Automotive Engineering

Spring. 3 credits. Prerequisite: M&AE 325 or permission of instructor.

Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis on automobiles. Engines, transmissions, suspension, brakes, and aerodynamics will be discussed. The course uses first principles and applies them to specific systems. The course is highly quantitative, using empirical and analytical approaches. "Senior Design Elective" if students sign up for the corresponding section of M&AE 429.

[M&AE 500(5000) Components and Systems: Engineering in a Social Context

Spring. 3 credits. Prerequisites: graduate standing or permission of instructor, two years of college physics. Offered alternate years; not offered 2005–2006.

Co-meets with M&AE 400. For description, see M&AE 400)

M&AE 501(5010) Future Energy Systems

Spring. 3 credits. Prerequisites: ENGRD 221 (Thermodynamics) or equivalent. Recommended: M&AE 323 (Introductory Fluid Mechanics), M&AE 324 (Heat Transfer), or equivalents; open to graduate or upperclass standing or permission of instructor.

Critically examines the technology of energy systems that will be acceptable in a world faced with global climate change, local pollution, and declining supplies of oil. The focus is on renewable energy sources (wind, solar, biomass), but other non-carbon-emitting sources (nuclear) and lowered-carbon sources (co-generative gas turbine plants, fuel cells) also are studied. Both the devices and the overall systems are analyzed.

M&AE 506(5060) Aerospace Propulsion Systems

Spring. 3 credits. Prerequisite: M&AE 323 (Introductory Fluid Mechanics) and 305 (Introduction to Aeronautics) or permission of instructor. Offered alternate years.

Application of thermodynamic and fluid-mechanical principles to design and performance analysis of aerospace propulsion systems. Jet propulsion principles, including gas turbine engines and rockets. Electric propulsion. Future possibilities for improved performance of aerospace propulsion systems.

[M&AE 507(5070) Dynamics of Flight Vehicles

Spring. 3 credits. Prerequisites: M&AE 305 (Introduction to Aeronautics) and M&AE 323 (Introductory Fluid Dynamics) and M&AE 326 (System Dynamics), concurrently or permission of instructor. Offered alternate years; not offered 2005–2006.

Introduction to stability and control of atmospheric-flight vehicles. Review of aerodynamic forces and methods for analysis of linear systems. Static stability and control. Small disturbance equations of unsteady motion. Dynamic stability of longitudinal and lateral-directional motions; transient response. At the level of *Flight: Stability and Automatic Control* by Nelson.]

M&AE 523(5230) Intermediate Fluid Dynamics

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.

Intended for M.Eng. students who wish to take a single fluid dynamics course. Students desiring more intensive treatment should consider M&AE 601 and one or more of M&AE 636, 736, and 737. In addition to the normal requirements for M&AE 423, this course includes a 1-credit CFD design project due at the end of the semester. Co-meets with M&AE 423. For description, see M&AE 423.

M&AE 524(5240) Physics of Micro- and Nanoscale Fluid Mechanics and Heat Transfer

Spring. 3 credits. Prerequisite: undergraduate fluid or continuum mechanics (e.g., M&AE 323) or permission of instructor. Offered every year.

Introduction to fluid mechanics (2/3) and heat transfer (1/3) in micro- and nanofabricated devices. Fluids: physicochemical hydrodynamics, electrokinetic effects, capillarity, continuum breakdown, micro- and nanofluidic applications in chemistry and life sciences. Heat transfer: electron-

phonon energy carrier modes, kinetic theory, Boltzmann equation and its moments, transport in thin films, wires, and interfaces; models for thermal properties in micro/nanoelectronics. Co-meets with M&AE 624.

M&AE 543(5430) Combustion Processes

Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. An introduction to combustion and flame processes, with emphasis on fundamental fluid dynamics, heat and mass transport, and reaction-kinetic processes that govern combustion rates. Topics covered include thermochemistry, kinetics, vessel explosions, laminar premixed and diffusion flames, and droplet combustion. Optional topics may include complex combustion systems, turbulent flames, fuel cells, or combustion of solids.

M&AE 601(6010) Foundations of Fluid Dynamics and Aerodynamics

Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Foundations of fluid mechanics from an advanced viewpoint, including formulation of continuum fluid dynamics; surface phenomena and boundary conditions at interfaces; fundamental kinematic descriptions of fluid flow, tensor analysis, derivation of the Navier-Stokes equations and energy equation for compressible fluids; and sound waves, viscous flows, boundary layers, and potential flows.

M&AE 602(6020) Fluid Dynamics at High Reynolds Numbers

Spring. 4 credits. Prerequisite: M&AE 601. Offered alternate years. Analysis and discussion of a wide range of specific flows and flow regimes characterized by high Reynolds number are provided. Potential flows, conformal transformations, slender-body theory, and Kelvin's impulse are included. Laminar viscous flows are studied, including fully diffused flows, "exact" solutions, and boundary layers. Compressible flows are treated, including propagation and viscous decay of sound and shock waves and their decay, and the method of characteristics for analysis of such problems. Stratified flows, especially gravity and capillary waves, are analyzed. Various stability problems associated with high Reynolds number flows are discussed. Finally, certain low Reynolds number flows associated with creeping motions or with ultra-small scale are described.

[M&AE 606(6060) Spacecraft Dynamics and Mission Design

Spring. 3 credits. Prerequisites: graduate standing or permission of instructor; background in linear algebra at level of MATH 294 is required; some experience with MATLAB is expected. Not offered 2005-2006. The focus is on spacecraft dynamics and its application in core space-systems areas: mission design, operations, and autonomy. Also introduces the problem of attitude estimation and treats aspects of guidance, navigation, and control unique to the context of space mission design. Readings and lectures include examples based on flight data. Students will evolve their own MATLAB models of spacecraft linear and nonlinear dynamics.]

M&AE 608(6080) Physics of Fluids

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years.

Behavior of a gas is considered at the microscopic level. Introduction to kinetic theory: velocity distribution, collisions, Boltzmann equation. Quantum theory: postulates of quantum mechanics, internal structure, rigid rotator, harmonic oscillator, one-electron and multi-electron atoms. Statistical mechanics: partition functions, relation to thermodynamics, calculations of thermodynamic properties.

M&AE 624(6240) Physics of Micro- and Nanoscale Fluid Mechanics and Heat Transfer

Spring. 4 credits. Pre- or corequisite: undergraduate fluid or continuum mechanics (e.g., M&AE 323) or permission of instructor. Graduate version of M&AE 524. Co-meets with M&AE 524. For description, see M&AE 524.

M&AE 627(6270) Experimental Methods in Fluid Dynamics (also CEE 637[6370])

Spring. 4 credits. E. A. Cowen. For description, see CEE 637.

M&AE 631(6310) Turbulence and Turbulent Flows

Fall. 4 credits. Prerequisite: M&AE 601 (Foundations of Fluid Dynamics and Aerodynamics), graduate standing, or permission of instructor. Topics include the dynamics of buoyancy and shear-driven turbulence, boundary-free and bounded shear flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.

[M&AE 632(6320) Multiphase Turbulence: Particulates, Drops, and Polymer Suspensions

Spring. 4 credits. Prerequisites: M&AE 601 (Foundations of Fluid Dynamics and Aerodynamics), graduate standing, or permission of instructor. Not offered 2005-2006.

Covers turbulent transport of suspensions of microstructures: (1) particulates; (2) drops; and (3) polymer molecules. Topics include transport properties of individual microstructures, statistical averaging and the closure problem, Euler/Lagrangian methods, multiphase transport equations, direct numerical simulation and large eddy simulation. This course emphasizes fundamental questions concerning modeling of discrete phases by continuum means.]

[M&AE 636(6360) Elements of Computational Aerodynamics

Fall. 4 credits. Prerequisites: graduate standing and graduate-level course in fluid mechanics. Not offered 2005-2006. Topics relevant to numerical solution of problems in aerodynamics and fluid mechanics. Analysis and application of computational techniques appropriate for solution of inviscid or high Reynolds number fluid flow problems. Course has common lectures with M&AE 736 but is more applications oriented and uses commercial software for all computational exercises.]

M&AE 643(6430) Computational Combustion

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. S. B. Pope.

Examines laminar and turbulent flames and the fundamental chemical and transport processes involved. Emphasis is on using computational tools (Chemkin and Fluent) to calculate flame properties, which are compared to experimental data. Topics covered include thermodynamic equilibrium, chemical kinetics, reactor studies, conservation equations, transport properties, laminar premixed and non-premixed flames, turbulent jets, turbulence modeling, and PDF models of non-premixed turbulent combustion. A knowledge of combustion at the level of M&AE 543, Combustion Processes, is useful but not required.

[M&AE 645(6450) Turbulent Reactive Flow

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years; not offered 2005-2006.

Large turbulent reactive flows occur in combustion devices, the chemical process industry, the atmosphere, oceans, and elsewhere. In the last decade, substantial progress has been made in the understanding of these flows, through both experimental and computational approaches. This course focuses on turbulent combustion and describes the different phenomena involved, the basic processes and governing equations, experimental techniques and observations, and a range of modeling approaches. Class meets, on average, twice per week.]

[M&AE 650(6500) Evolutionary Computation and Design Automation (also COM S/CIS 750[7500])

Fall. 4 credits. Not offered every year; not offered 2005-2006. For description, see COM S 750.]

M&AE 651(6510) Conduction and Radiation Heat Transfer

Fall, weeks 1-7. 2 credits. Prerequisite: graduate standing; undergraduates by permission of instructor. An intermediate treatment of heat conduction and thermal radiation. The conductive transport equation; steady, transient, and some multidimensional conduction; the radiative transport equation; view factors and radiant exchange between surfaces and volumes. At the level of, but extends beyond, *Heat Transfer* by Bejan.

M&AE 652(6520) Convection Heat Transfer

Fall, weeks 8-14. 2 credits. Prerequisite: graduate standing; undergraduates by permission of instructor. An intermediate treatment of convection heat transfer. Governing equations developed in integral and differential forms. Boundary layers. Laminar and turbulent flows. Internal and external, forced and free convection. Entropy and system arguments for optimal design. Parameter identification. At the level of, but extends beyond, *Heat Transfer* by Bejan.

[M&AE 714(7140) Computational Sensorics: Information Technologies for Complex Continuum Systems

Fall. 4 credits. Prerequisites: exposure to computational mathematics; some background in continuum systems and processes such as fluid flow, thermal transport and/or deformation of materials/structures. Not offered 2005-2006. N. Zabaras.]

Examples of industrial control of continuum systems; mathematical preliminaries; finite element approach to partial differential equations; inverse problems and inverse problem solving; optimal control problems; numerical analysis of distributed control problems; reduced-order models for continuum systems; feedback laws for continuum systems; robust control and uncertainty; data mining of continuum systems and models; data compression and transmission techniques; advanced adaptive sensing and actuation of continuum fields.]

M&AE 733(7330) Stability of Fluid Flow
Fall, on demand. 4 credits. Prerequisite: graduate standing or permission of instructor. S-U grades only.

Basic stability and bifurcation theory in fluid systems. The initial boundary value problem. "Open" flow systems: inviscid Kelvin-Helmholtz and Rayleigh-Taylor instability. Stability of nearly parallel shear flows and boundary layers. Spatial development of linearly unstable motion: "absolute" and "convective" instability. Thermal, double-diffusive, and related instabilities. Post-bifurcation behavior: the Ginzburg-Landau (Stewartson-Stuart) and Davey-Hocking-Stewartson amplitude equations. Phase dynamics and pattern formation. Additional topics chosen from the following possibilities. Stability of periodic motion: Floquet theory. Secondary instabilities; Eckhaus instability, Busse "balloons." Energy stability theory. Effects of symmetry. Taylor-Couette instability. Instability of concentrated vortex flows. Transient growth. Boundary layer receptivity.

[M&AE 734(7340) Analysis of Turbulent Flows

Spring. 4 credits. Prerequisite: M&AE 601 Foundations of Fluid Dynamics and Aerodynamics or permission of instructor. Offered alternate years; not offered 2005–2006.

Study of methods for calculating the properties of turbulent flows. Characteristics of turbulent flows. Direct numerical simulations and the closure problem. Reynolds-stress equation: effects of dissipation, anisotropy, deformation. Transported scalars. Probability density functions (pdfs): transport equations, relationship to second-order closures, stochastic modeling, and the Langevin equation. Large-eddy simulations: filtered and residual motions, Smagorinsky, and dynamic models. This course emphasizes comparison of theory with experiment.]

[M&AE 736(7360) Theory of Computational Aerodynamics

Fall. 4 credits. Prerequisites: graduate standing, advanced course in continuum mechanics or fluid mechanics, and some higher-level (e.g., FORTRAN, MATLAB) programming experience. Not offered 2005–2006.

Numerical methods to solve inviscid and high-Reynolds-number fluid-dynamics problems, including finite-difference, finite-volume, and surface-singularity methods. Accuracy, convergence, and stability; treatment of boundary conditions and grid generation. Focus on hyperbolic (unsteady flow with shock waves) and mixed hyperbolic-elliptic (steady transonic flow) problems. Assignments require programming a digital computer.]

M&AE 737(7370) Computational Fluid Mechanics and Heat Transfer

Fall. 4 credits. Prerequisites: graduate standing; advanced course in continuum mechanics, heat transfer, or fluid mechanics; and some MATLAB, C++, or other programming experience.

Numerical methods are developed for the elliptic and parabolic partial differential equations that arise in fluid flow and heat transfer when convection and diffusion are present. Finite-difference, finite-volume, and some spectral methods are considered, together with issues of accuracy, stability, convergence, and conservation. Current methods are reviewed. Emphasis is on steady and unsteady essentially incompressible flows. Assigned problems are solved on a digital computer.

Special Offerings

M&AE 490(4900) Special Investigations in Mechanical and Aerospace Engineering

Fall, spring. Credit TBA. Prerequisite: undergraduate standing and permission of instructor.

Intended for an individual student or a small group of students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses.

M&AE 545(5459) Energy Seminar I (also ECE 587[5870], NSE 545[5450])

Fall. 1 credit.

For description, see ECE 587.

M&AE 546(5469) Energy Seminar II (also ECE 588[5880])

Spring. 1 credit.

For description, see ECE 588.

M&AE 594(5949) Enterprise Engineering Colloquium (also OR&IE 893–894[8930–8940])

Fall, spring. 1 credit each semester. Usually S-U grades.

For description, see OR&IE 893–894.

M&AE 690(6901) Special Investigations in Mechanical and Aerospace Engineering

Fall, spring. Variable credit. Prerequisite: candidacy for the M.Eng. degree in mechanical or aerospace engineering or approval of faculty member offering project.

Project-based course in the area of mechanical or aerospace engineering under the guidance of a faculty member.

M&AE 695(6950) Special Topics in Mechanical and Aerospace Engineering

Fall, spring. Credit TBA. Prerequisites: graduate standing and permission of instructor.

Special lectures by faculty members on topics of current research.

M&AE 791(7910) Mechanical and Aerospace Research Conference

Fall, spring. 1 credit each semester. For graduate students involved in research projects. S-U grades only.

Presentations on research in progress by faculty and students.

M&AE 799(7999) Mechanical and Aerospace Engineering Colloquium

Fall, spring. 1 credit each semester; credit limited to graduate students. All students and staff are invited to attend.

Lectures by visiting scientists and Cornell faculty and staff members on research topics of current interest in mechanical and aerospace science, especially in connection with new research.

M&AE 890(8900) Research in Mechanical and Aerospace Engineering

Credit TBA. Prerequisite: candidacy for M.S. degree in mechanical or aerospace engineering or approval from director.

Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

M&AE 990(9900) Research in Mechanical and Aerospace Engineering

Credit TBA. Prerequisite: candidacy for Ph.D. degree in mechanical or aerospace engineering or approval from director.

Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

NUCLEAR SCIENCE AND ENGINEERING

Faculty members in the graduate field of nuclear science and engineering who are most directly concerned with the curriculum include K. B. Cady, D. A. Hammer, R. W. Kay, and V. O. Kostroun.

NS&E 484(4840) Introduction to Controlled Fusion: Principles and Technology (also A&EP/ECE 484[4840], M&AE 459[4590])

Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students.

D. A. Hammer.

Introduction to the physical principles and various engineering aspects underlying power generation by controlled fusion. Topics include fuels and conditions required for fusion power, and basic fusion-reactor concepts; fundamental aspects of plasma physics relevant to fusion plasmas, and basic engineering problems for a fusion reactor; and an engineering analysis of proposed magnetic and/or inertial confinement fusion-reactor designs.

NS&E 545(5450) Energy Seminar (also ECE 587[5870], M&AE 545[5450])

Fall, spring. 1 credit; may be taken for credit both semesters. D. A. Hammer.

For description, see ECE 587.

NS&E 590(5900) Independent Study

Fall, spring. 1–4 credits. Letter or S-U grades. Staff.

Independent study or project under guidance of a faculty member.

NS&E 591(5910) Project

Fall, spring. 1–6 credits. Staff.

Master of engineering or other project under guidance of a faculty member.

OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

T. Apanasovich, L. J. Billera, R. G. Bland, J. R. Callister, M. J. Eisner, E. Friedman, X. Guo, S. Henderson, P. L. Jackson, R. A. Jarrow, A. Lewis, M. Lewis, W. L. Maxwell, J. A. Muckstadt, N. Prabhu, P. Protter, J. Reñegar, S. I. Resnick, R. Roundy, D. Ruppert, P. Rusmevichientong, G. Samorodnitsky, D. Shmoys, E. Tardos, M. J. Todd, H. Topaloglu, L. E. Trotter, Jr., B. W. Turnbull, D. P. Williamson

OR&IE 310(3100) Industrial Systems Analysis

Spring. 4 credits. Pre- or corequisite: ENGRD 270 or permission of instructor. Design of production facilities, including engineering economy, materials handling, process design, and facility layout. Covers operations analysis, including process scheduling, process evaluation, procedural analysis, project management, methods analysis and design, work measurement, inventory control, job evaluation, and quality engineering and control.

OR&IE 311(3800) Information Systems and Analysis

Spring. 4 credits. 3 lec plus rec. Presents a systematic and hierarchical approach to the development of information systems, featuring business case justification, requirements analysis, use case analysis, functional analysis, structural design, object-oriented modeling, database design, verification and validation, and project schedule estimation. Graphical tools of analysis (e.g., the Unified Modeling Language) are emphasized. Examples are drawn from business and industrial processes. An integrative design project resulting in a detailed information system design specification (but not necessarily implementation) is required.

OR&IE 320(3300) Optimization I

Fall. 4 credits. Prerequisite: MATH 221 or 294. Formulation of linear programming problems and solutions by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation and production planning. Introduction to interior-point methods for linear programming.

OR&IE 321(3310) Optimization II

Spring. 4 credits. Prerequisite: OR&IE 320 or equivalent. A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer programming, dynamic programming, and network optimization. Formulation and modeling are stressed as well as numerous applications.

OR&IE 350(3150) Financial and Managerial Accounting

Fall. 4 credits. Covers principles of accounting, financial reports, financial-transactions analysis, financial-statement analysis, budgeting, job-order and process-cost systems, standard costing and variance analysis, and economic analysis of short-term decisions.

OR&IE 360(3500) Engineering Probability and Statistics II

Fall. 4 credits. Prerequisite: ENGRD 270 or equivalent.

This second course in probability and statistics provides a rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

OR&IE 361(3510) Introductory Engineering Stochastic Processes I

Spring. 4 credits. Prerequisite: OR&IE 360 or equivalent. Uses basic concepts and techniques of random processes to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing, and reliability.

OR&IE 416(4100) Design of Manufacturing Systems

Fall. 4 credits. Prerequisite: senior OR&IE students or permission of instructor. Project course in which students, working in teams, design a manufacturing logistics system and conduct capacity, material flow, and cost analysis of their design. Meetings between project teams and faculty advisers are substituted for some lectures. Analytical methods for controlling inventories, planning production, and evaluating system performance are presented in lectures.

OR&IE 431(4330) Discrete Models

Fall. 4 credits. Prerequisites: OR&IE 320 and COM S 211 or permission of instructor. Covers basic concepts of graphs, networks, and discrete optimization. Fundamental models and applications, and algorithmic techniques for their analysis. Specific optimization models studied include flows in networks, the traveling salesman problem, and network design.

OR&IE 432(4320) Nonlinear Optimization

Spring. 4 credits. Prerequisite: OR&IE 320. Introduction to the practical and theoretical aspects of nonlinear optimization. Gives attention to the computational efficiency of algorithms and the application of nonlinear techniques to linear programming; e.g., interior-point methods. Introduces methods of numerical linear algebra as needed.

[OR&IE 434(4300) Optimization Modeling

Spring. 3 credits. Prerequisites: at least B- in OR&IE 321/521. Not offered 2005-2006. Emphasizes modeling complicated decision problems as linear programs, integer programs, or highly structured nonlinear programs. Besides modeling, students are required to assimilate articles from the professional literature and to master relevant software.]

OR&IE 435(4350) Introduction to Game Theory

Spring. 4 credits. Prerequisite: OR&IE 320. Broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games; cooperative and noncooperative n-person games; and games in extensive, normal, and characteristic function form. Economic market games. Applications to weighted voting and cost allocation.

[OR&IE 436(4360) A Mathematical Examination of Fair Representation

Spring. 3 credits. Prerequisites: MATH 222 or 294 or permission of instructor. Not offered 2005-2006.

Covers the mathematical aspects of the political problem of fair apportionment. The most recognizable form (in the United States) of apportionment is the determination of the number of seats in the U.S. House of Representatives awarded to each state. The constitution indicates that the apportionment should reflect the relative populations, but it does not prescribe a specific method. At first blush it appears that there is a straightforward approach that must lead to a fair, or fairest apportionment, for any fixed house size and known populations. However, indivisibility of seats leads us to interesting mathematical questions and a long, rich, and fractious political history involving many famous figures. The basic ideas extend beyond apportionment of legislatures (in both federal systems and proportional representation systems) to some other realms where indivisible resources are to be allocated among competing constituencies.]

OR&IE 451(4150) Economic Analysis of Engineering Systems

Spring. 4 credits. Prerequisites: OR&IE 320 and 350.

Topics include financial planning, including cash-flow analysis and inventory flow models; engineering economic analysis, including discounted cash flows and taxation effects; application of optimization techniques, as in equipment replacement or capacity expansion models, and issues in designing manufacturing systems. Includes a student group project.

OR&IE 452(4152) Entrepreneurship for Engineers (also M&AE/ENGRG 461[4610])

Fall. 3 credits. Prerequisite: upperclass engineers or permission of instructor. For description see M&AE 461.

[OR&IE 462(4520) Introductory Engineering Stochastic Processes II

Spring. 4 credits. Prerequisite: OR&IE 361 or equivalent. Not offered 2005-2006.

Topics include stationary processes, martingales, random walks, and gambler's ruin problems, processes with stationary independent increments, Brownian motion and other cases, branching processes, renewal and Markov-renewal processes, reliability theory, Markov decision processes, optimal stopping, statistical inference from stochastic models, and stochastic comparison methods for probability models. Applications to population growth, spread of epidemics, and other models.]

[OR&IE 464(4540) Extreme Value Analysis with Applications to Finance and Data Communications

Spring. 3 credits. Prerequisites: undergraduate and M.Eng. students; stochastic processes course at level of OR&IE 361; statistics course. Not offered 2005-2006.

Covers the basic models of extreme events used in hydrology, finance, insurance, environmental science (pollution controls), reliability, risk management. The basic models contain parameters that must be estimated, and graphical and analytic estimation methods are discussed. Extreme quantiles and very small exceedence probabilities need to be estimated, and usually the part of a distribution tail that is way beyond the range of the data needs to be considered. This

leads to discussion of estimation needed for VAR (value-at-risk) calculations. The course material intersects the related field of heavy tailed modeling and the implications of heavy tails in insurance and data networks.]

[OR&IE 467(4620) Credit Risk: Modeling, Valuation, and Management]

Spring. 4 credits. Prerequisite: OR&IE 361. Not offered 2005–2006.

Credit risk refers to losses due to changes in the credit quality of a counter party in a financial contract. The course is an introduction to the modeling and valuation of credit risks. Emphasis is on credit derivative instruments used for hedging credit risks, including credit swaps, spread options, and collateralized debt obligations.]

[OR&IE 469(4610) Financial Engineering with Stochastic Calculus II]

Spring. 4 credits. Prerequisite: OR&IE 468/568. Not offered 2005–2006.

Building on the foundation established in OR&IE 468/568, this course presents no-arbitrage theories of complete markets, including models for equities, foreign exchange, and fixed-income securities, in relation to the main problems of financial engineering: pricing and hedging of derivative securities, portfolio optimization, and risk management. Other topics include model calibration and incomplete markets.]

[OR&IE 473(4630) Operations Research Tools for Financial Engineering.]

Spring. 3 credits. Prerequisites: engineering math through MATH 294 and OR&IE 270 and 360. No previous knowledge of finance required.

Introduction to the applications of OR techniques, e.g., probability, statistics, and optimization, to finance and financial engineering. First reviews probability and statistics and then surveys assets returns, ARIMA time series models, portfolio selection, regression, CAPM, option pricing, GARCH models, fixed-income securities, resampling techniques, and behavioral finance. Also covers the use of MATLAB, MINITAB, and SAS for computation.

[OR&IE 474(4740) Statistical Data Mining I]

Fall. 3 credits. Prerequisites: OR&IE 360 and MATH 294 or equivalent; or permission of instructor.

Examines the statistical aspects of data mining, the effective analysis of large data sets. The first half of the course covers the process of building and interpreting statistical models in a variety of settings including multiple regression and logistic regression. The second half connects these ideas to techniques being developed to handle the large data sets that are now routinely encountered in scientific and business applications. Assignments are done using one or more statistical computing packages.

[OR&IE 476(4710) Applied Linear Statistical Models]

Spring, weeks 1–7. 2 credits. Prerequisite: ENGRD 270.

Topics include multiple linear regression, diagnostics, model selection, inference, one and two factor analysis of variance. Theory and applications both treated. Use of MINITAB stressed.

[OR&IE 480(4800) Information Technology]

Fall. 4 credits. Pre- or corequisites: COM S/ENGRD 211, plus either OR&IE 310 or 350.

Project course that encompasses various aspects of information technology related to operations research and industrial engineering. Topics include the design of databases and information systems, the World Wide Web, the economics and industrial organization of IT goods and services, electronic markets, and agent-based interactions.

[OR&IE 481(4810) Delivering OR Solutions with Information Technology]

Spring. 3 credits. Limited enrollment. Prerequisite: OR&IE 480.

Study of ways information technology is used to deliver operations research methodology in real applications, including decision support systems, embedded operations research techniques, packaged software, and web-based techniques. Several actual applications are investigated. Labs introduce Visual Basic for Applications (VBA) for decision support.

[OR&IE 483(4850) Applications of Operations Research and Game Theory to Information Technology]

Spring. 3 credits. Prerequisites: OR&IE 321, 361, or permission of instructor. Not offered 2005–2006.

Covers a variety of operations research and game theoretic problems arising in information technology. Examples include web searching, network routing and congestion control, online auctions, and trust and reputations in electronic interactions.

[OR&IE 490(4990) Teaching in OR&IE]

Fall, spring. Variable credit. Prerequisite: permission of instructor.

Involves working as a TA in an OR&IE course. The instructor assigns credits (the guideline is 1 credit per four hours per week of work with a limit of 3 credits).

[OR&IE 499(4999) OR&IE Project]

Fall, spring. Variable credit. Prerequisite: permission of instructor.

Project-type work, under faculty supervision, on a real problem existing in some firm or institution. Opportunities in the course may be discussed with the associate director.

[OR&IE 512(5140) Applied Systems Engineering (also CEE/CIS 504[5040], ECE 512[5120], M&AE 591[5910])]

Fall. 3 credits. Prerequisite: permission of instructor.

For description, see SYSEN 510.

[OR&IE 513(5142) Systems Analysis Architecture, Behavior, and Optimization (also CEE/CIS 505[5050], ECE 513[5130], M&AE 592[5920])]

Spring. 3 credits. Prerequisite: CEE/CIS 504, ECE/OR&IE 512, or M&AE 592.

For description, see SYSEN 520.

[OR&IE 515(5100) Design of Manufacturing Systems]

Fall. 4 credits. Prerequisite: graduate students in engineering and business school; permission of instructor.

For description, see OR&IE 416.

[OR&IE 516(5110) Case Studies]

Fall. 1 credit. Prerequisite: M.Eng. students in OR&IE.

Presents students with an unstructured problem that resembles a real-world situation. Students work in project groups to formulate

mathematical models, perform computer analyses of the data and models, and present oral and written reports.

[OR&IE 518(5126) Supply Chain Management]

Spring. 3 credits. Prerequisites: one of the following: OR&IE 310, 416, or 562. Not offered 2005–2006.

A supply chain is the scope of activities that convert raw materials (e.g., wheat) to finished products delivered to the end consumer (e.g., a box of cereal at the local P&C), usually spanning several corporations. Supply chain management focuses on the flow of products, information, and money through the supply chain. An overview of issues, opportunities, tools, and approaches. Emphasis is on business processes, system dynamics, control, design, re-engineering. Covers the relationship between the supply chain and the company's strategic position relative to its clients and its competition. Considers dimensions of inter-corporate relationships with partners, including decision-making, incentives, and risk.]

[OR&IE 519(5130) Service System Modeling and Design]

Spring. 3 credits. Prerequisites: OR&IE 320, 321, 360 361; ability to program simple algorithms in some appropriate environment (e.g., VisualBasic or MATLAB). Recommended: OR&IE 580. No instruction in programming given.

Today's economy is dominated by service industries. These systems differ from manufacturing industries in many ways, but primarily in the level of interaction with the customer. Examples of service systems include contact centers (aka call centers), airlines, and hospitals. This course covers various techniques that are useful in the analysis and design of such systems. It is structured around a number of cases that drive the need for the theory. The emphasis is on modeling and solving the models. Both operational and strategic decisions are covered through appropriate examples.

[OR&IE 520(5300) Operations Research I: Optimization I]

For description, see OR&IE 320.

[OR&IE 521(5310) Optimization II]

For description, see OR&IE 321.

[OR&IE 522(5311) Operations Research I: Topics in Linear Optimization]

Spring. 1 credit. Pre- or corequisite: M.Eng. students in OR&IE; OR&IE 520. Not open to students who have already taken OR&IE 321 or 521.

Extension of OR&IE 520 that deals with applications and methodologies of dynamic programming, integer programming, and large-scale linear programming.

[OR&IE 523(5510) Operations Research II: Introduction to Stochastic Processes I]

For description, see OR&IE 361.

[OR&IE 524(5102) Design of Manufacturing Systems II]

Spring; weeks 8–14. 2 credits. Prerequisites: OR&IE 562, 416; or permission of instructor. Not offered 2005–2006.

Project course focusing on the design and analysis of a global corporation's operations. Working in teams, students examine issues pertaining to a prototype company on the following topics: information system design,

marketing, strategy, location of facilities, organization design, manufacturing capacity, planning logistics, production planning, scheduling, inventory control, and financial analysis. Meetings between project teams and faculty are substituted for some lectures or laboratories. Analytical methods appropriate for conducting analysis are discussed in lectures.]

[OR&IE 525(5120) Production Planning and Scheduling Theory and Practice]

Fall. 4 credits. Corequisites: OR&IE 320, 360. Not offered 2005-2006.

Topics include production planning, including MRP, linear programming, and related concepts. Scheduling and sequencing work in manufacturing systems. Job release strategies and control of work in process inventories. Focus is on setup time as a determinant of plans and schedules.]

[OR&IE 528-529(5190-5191) Selected Topics in Applied Operations Research]

Fall, spring. Variable credit. Prerequisite: permission of instructor.

Current topics dealing with applications of operations research.

[OR&IE 533(5340) Heuristic Methods for Optimization (also CEE 509[5090], COM S/CIS 572[5720])]

Fall. 3 or 4 credits. Prerequisite: graduate standing or COM S/ENGRD 211, 321 or CEE/ENGRD 241 or permission of instructors.

For description, see CEE 509.

[OR&IE 551(5150) Economic Analysis of Engineering Systems]

Spring. 4 credits. Prerequisites: OR&IE 320 and 350. Lectures concurrent with OR&IE 451.

For description, see OR&IE 451.

[OR&IE 560(5500) Engineering Probability and Statistics II]

For description, see OR&IE 360.

[OR&IE 561(5560) Queuing Systems: Theory and Applications]

Fall. 3 credits. Prerequisite: OR&IE 361 or permission of instructor.

Covers basic queueing models; delay and loss systems; finite source, finite capacity, balking, reneging; systems in series and in parallel; FCFS versus LCFS; busy period problems; output; design and control problems; priority systems; queueing networks; the product formula; time sharing; server vacations; and applications to equipment maintenance, computer operations and flexible manufacturing systems.

[OR&IE 562(5122) Inventory Management]

Fall. 3 credits. Prerequisite: OR&IE 321, 361, or permission of instructor.

The first portion of this course is devoted to the analysis of several deterministic and probabilistic models for the control of single and multiple items at one of many locations. The second portion is presented in an experiential learning format. The focus is on analyzing and designing an integrated production and distribution system for a global company. Applications are stressed throughout.

[OR&IE 563(5550) Applied Time-Series Analysis]

Fall. 3 credits. Prerequisites: OR&IE 361 and ENGRD 270 or permission of instructor. Not offered 2005-2006.

The first part of this course treats regression methods to model seasonal and nonseasonal data. After that, Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. Analysis of real data is carried out. Assignments require computer work with a time-series package.]

[OR&IE 564(5520) Introductory Engineering Stochastic Processes II]

Spring. 4 credits. Prerequisite: OR&IE 361 or equivalent.

Lectures concurrent with OR&IE 462. For description, see OR&IE 462.]

[OR&IE 565(5960) Applied Financial Engineering]

Spring. 4 credits. Project satisfies M.Eng. project requirement. Prerequisite: M.Eng. students.

This course has two components: a sequence of lectures and a project. The lectures are given by the faculty for the course and by invited speakers from the financial industry.

[OR&IE 566(5540) Extreme Value Analysis with Applications to Finance and Data Communications]

Spring. 3 credits.

For description, see OR&IE 464.]

[OR&IE 567(5620) Credit Risk: Modeling, Valuation, and Management]

Spring. 4 credits. Prerequisite: OR&IE 361. Not offered 2005-2006.

For description, see OR&IE 467.]

[OR&IE 568 (5600) Financial Engineering with Stochastic Calculus I]

Fall. 4 credits. Prerequisite: knowledge of probability at level of OR&IE 360.

Introduction to continuous-time models of financial engineering and the mathematical tools required to use them, starting with the Black-Scholes model. Driven by the problem of derivative security pricing and hedging in this model, the course develops a practical knowledge of stochastic calculus from an elementary standpoint, covering topics including Brownian motion, martingales, the Ito formula, the Feynman-Kac formula, and Girsanov transformations.

[OR&IE 569(5610) Financial Engineering with Stochastic Calculus II]

Spring. 4 credits. Prerequisite: OR&IE 468. Not offered 2005-2006.

For description, see OR&IE 469.]

[OR&IE 574(4741) Statistical Data Mining II]

Spring. 3 credits. Prerequisites: OR&IE 360 and 474, MATH 294. Not offered 2005-2006.

Continuation of OR&IE 474 covering more advanced techniques such as clustering with applications to market segmentation, discriminant analysis, artificial neural networks, support vector machines, additive models, radial basis function and spline models, principal components, model assessment and selection, bagging, and boosting. Applications to business problems such as quantitative marketing and credit scoring are presented.]

[OR&IE 575(4711) Experimental Design]

Spring; weeks 8-14 (alternates with 576). 2 credits. Prerequisite: OR&IE 476.

Covers randomization, blocking, sample size determination, factorial designs, 2^{Ap} full and fractional factorials, response surfaces, Latin squares, split plots, and Taguchi designs. Engineering applications. Computing in MINITAB or SAS.

[OR&IE 576(4712) Regression]

Spring; weeks 8-14 (alternates with 575).

2 credits. Prerequisite: OR&IE 476. Not offered 2005-2006.

Covers nonlinear regression, advanced diagnostics for multiple linear regression, collinearity, ridge regression, logistic regression, nonparametric estimation including spline and kernel methods, and regression with correlated errors. Computing in MINITAB or SAS.]

[OR&IE 577(5770) Quality Control]

Fall. 3 credits. Prerequisite: ENGRD 270. Not offered 2005-2006.

Covers concepts and methods for process and acceptance control; control charts for variables and attributes; process capability analysis; acceptance sampling; continuous sampling plans; life tests; and use of experimental design and Taguchi methods for off-line control.]

[OR&IE 580(4580) Simulation Modeling and Analysis]

Fall. 4 credits. Prerequisite: OR&IE 360 (may be taken concurrently) and computing experience, or permission of instructor.

Introduction to Monte Carlo and discrete-event simulation. Emphasizes tools and techniques needed in practice. Random variate generation, input and output analysis, modeling using a discrete-event simulation package.

[OR&IE 597(5940) Systems Engineering Project]

Fall; R grade only; spring, 8 credits.

Prerequisite: M.Eng. students enrolled in systems engineering option.

Substantial, group-based design project that has a strong systems design component. The project must be approved by an ASE 1 instructor before the student enrolls in the course. (The following projects are pre-approved: FSAE, HEV, Robocup, Brain.) A formal report is required.

[OR&IE 598(5910) Master of Engineering Manufacturing Project]

Fall, R grade only; spring, 5 credits.

Prerequisite: M.Eng. students enrolled in manufacturing option.

Project course coordinated by Center for Manufacturing Enterprise.

[OR&IE 599(5980) Project]

Fall, R grade only; spring, 5 credits.

Prerequisite: M.Eng. students.

Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the OR&IE field. A formal report and oral defense of the approach and solution are required.

[OR&IE 625(6335) Scheduling Theory]

Fall. 3 credits.

Scheduling and sequencing problems, including single-machine problems, parallel-machine scheduling, and shop scheduling. The emphasis is on the design and analysis of polynomial time optimization and

approximation algorithms and on related complexity issues.

[OR&IE 626(6122) Advanced Production and Inventory Planning]

Spring. 4 credits. Not offered 2005–2006. Introduction to a variety of production and inventory control planning problems, the development of mathematical models corresponding to these problems, and a study of approaches for finding solutions.]

OR&IE 627(6127) Computational Issues in Large Scale Data-Driven Models

Fall. 3 credits. Pre- or corequisites: OR&IE 630, 650 and 670.

Availability of massive datasets such as web logs and point-of-sale transactions raises new modeling and computational issues. This course provides an introduction to this emerging research area. Topics include data-driven models in operation management, asymptotic statistics, uniform convergence of empirical process, and efficient computational methods. There is discussion of applications in engineering, economics, and marketing, along with current open research problems.

[OR&IE 629(6350) Foundations of Game Theory and Mechanism Design for Engineering Applications]

Spring. 3 credits. Prerequisite: basic knowledge of operations research at level of OR&IE 630 and 650. No prior knowledge of game theory or computer networks assumed. Not offered 2005–2006.

Provides a rigorous foundation for the applications of mechanism design and game theory to problems in engineering such as data networks and computer science. The goal is to develop a deep understanding of the fundamental issues that are important in many applications while presenting many current open research problems.]

OR&IE 630(6300) Mathematical Programming I

Fall. 4 credits. Prerequisites: advanced calculus and elementary linear algebra. Rigorous treatment of the theory and computational techniques of linear programming and its extensions, including formulation, duality theory, algorithms; sensitivity analysis; network flow problems and algorithms; theory of polyhedral convex sets, systems of linear equations and inequalities, Farkas' Lemma; and exploiting special structure in the simplex method and computational implementation.

OR&IE 631(6310) Mathematical Programming II

Spring. 4 credits. Prerequisite: OR&IE 630. Continuation of OR&IE 630. Introduces nonlinear programming, interior-point methods for linear programming, complexity theory, and integer programming. Includes some discussion of dynamic programming and elementary polyhedral theory.

[OR&IE 632(6320) Nonlinear Programming]

Fall. 3 credits. Prerequisite: OR&IE 630. Not offered 2005–2006.

Necessary and sufficient conditions for unconstrained and constrained optima. Topics include the duality theory, computational methods for unconstrained problems (e.g., quasi-Newton algorithms), linearly constrained problems (e.g., active set methods), and nonlinearly constrained problems (e.g., successive quadratic programming, penalty, and barrier methods).]

[OR&IE 633(6330) Graph Theory and Network Flows]

Spring. 3 credits. Prerequisite: permission of instructor. Not offered 2005–2006.

Topics include directed and undirected graphs; bipartite graphs; hamilton cycles and Euler tours; connectedness, matching, and coloring; flows in capacity-constrained networks; and maximum flow and minimum cost flow problems.]

OR&IE 634(6334) Combinatorial Optimization

Spring. 3 credits.

Topics in combinatorics, graphs, and networks, including matching, matroids, polyhedral combinatorics, and optimization algorithms.

OR&IE 635(6325) Interior-Point Methods for Mathematical Programming

Fall. 3 credits. Prerequisites: MATH 411 and OR&IE 630, or permission of instructor.

Interior-point methods for linear, quadratic, and semidefinite programming and, more generally, for convex programming. Discusses the basic ingredients—barrier functions, central paths, and potential functions—that go into the construction of polynomial-time algorithms and various ways of combining them. Emphasizes recent mathematical theory and the most modern viewpoints.

[OR&IE 636(6336) Integer Programming]

Fall. 3 credits. Prerequisite: OR&IE 630. Not offered 2005–2006.

Topics include discrete optimization; linear programming in which the variables must assume integral values; theory, algorithms, and applications; and cutting-plane and enumerative methods, with additional topics drawn from recent research in this area.]

[OR&IE 637(6327) Semidefinite Programming]

Spring. 2 credits. Pre- or corequisite: OR&IE 635. Not offered 2005–2006.

Covers linear optimization over the cone of positive semidefinite symmetric matrices; applications to control theory, eigenvalue optimization, and strong relaxations of combinatorial optimization problems; duality; computational methods, particularly interior-point algorithms.]

OR&IE 639(6328) Convex Analysis

Spring. 3 credits. Prerequisite: OR&IE 630 or permission of instructor.

Self-contained development of convex analysis and optimization. Convex sets and functions, subgradients, continuity, Fenchel, conic, and Lagrangian duality. Nonsmooth analysis: Clarke and limiting subgradients. Self-concordance and smooth convex optimization. Bundle methods for nonsmooth convex optimization.

OR&IE 650(6500) Applied Stochastic Processes

Fall. 4 credits. Prerequisite: one-semester calculus-based probability course.

Introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

OR&IE 651(6510) Probability

Spring. 4 credits. Prerequisite: real analysis at level of MATH 413; one-semester calculus-based probability course.

Covers sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, and conditioning.

[OR&IE 662(6540) Advanced Stochastic Processes]

Fall. 3 credits. Prerequisite: OR&IE 651 or equivalent. Not offered 2005–2006.

Topics include Brownian motion, martingales, Markov processes, and topics selected from: diffusions, stationary processes, point processes, weak convergence for stochastic processes and applications to diffusion approximations, Lévy processes, regenerative phenomena, random walks, and stochastic integrals.]

[OR&IE 665(6560) Storage and Data Communication Models]

Fall. 3 credits. Not offered 2005–2006.

Covers a selection of topics including queues, storage, insurance risk, dams, and data communication. The basic assumptions of the underlying models are discussed with emphasis on their common features. The overall objective is the study of the stochastic processes that arise from these models. The approach is based on the fluctuation theory of random walks, Levy processes, and Markov-additive processes. Further topics for discussion include stochastic comparisons and statistical inference from the models with particular emphasis on data communication models. Current research on network models with discrete and fluid inputs is discussed.]

OR&IE 670(6700) Statistical Principles

Fall. 4 credits. Corequisite: OR&IE 650 or equivalent.

Topics include review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t , and F ; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; and introduction to linear models.

[OR&IE 671(6710) Intermediate Applied Statistics]

Fall. 3 credits. Prerequisite: OR&IE 670 or equivalent. Not offered 2005–2006.

Topics include statistical inference based on the general linear model; least-squares estimators and their optimality properties; likelihood ratio tests and corresponding confidence regions; and simultaneous inference. Applications in regression analysis and ANOVA models. Covers variance components and mixed models. Use of the computer as a tool for statistics is stressed.]

[OR&IE 673(6630) Empirical and Computational Issues in Finance]

Spring. 3 credits. Prerequisites: stochastic processes course at level of OR&IE 650; statistics course at level of OR&IE 670, or permission of instructor. Not offered 2005–2006.

Designed to introduce students to existing empirical work in finance and to demonstrate the use of statistical, econometric, and numerical methods in the analysis of financial data. Topics include linear and nonlinear time series analysis, high-frequency data and market microstructure, continuous-

time models, extreme values and quantile estimation, volatility models, and MCMC methods. Numerous applications using market data are presented. MATLAB programming skills are useful.]

[OR&IE 674(6740) Statistical Learning Theory for Data Mining]

Fall. 3 credits. Prerequisites: probability course at level of OR&IE 651; statistics course at level of OR&IE 670. Not offered 2005-2006.

Provides a thorough grounding in probabilistic and computational methods for statistical data mining. Covers a subset of the following topics from supervised and unsupervised data mining: the framework of learning. Performance measures and model selection. Methodology, theoretical properties and computing algorithms used in parametric and nonparametric methods for regression and classification. Frequentist and Bayesian methods.]

[OR&IE 677(6720) Sequential Methods in Statistics]

Spring. 3 credits. S-U grades only. Not offered 2005-2006.

The statistical theory of sequential design and analysis of experiments has many applications; including monitoring data from clinical trials in medical studies and quality control in manufacturing operations. This course covers classical sequential hypothesis tests, Wald's SPRT, stopping rules, Kiefer-Weiss test, optimality, group sequential methods, estimation, repeated confidence intervals, stochastic curtailment, adaptive designs, and Bayesian and decision theoretic approaches.]

[OR&IE 678(6780) Bayesian Statistics and Data Analysis]

Spring. 3 credits. Prerequisites: OR&IE 670 and some knowledge of measure theoretic probability (e.g., co-registration in OR&IE 650). Not offered 2005-2006.

Priors, posteriors, Bayes estimators, Bayes factors, credible regions, hierarchical models, computational methods (especially MCMC), empirical Bayes methods, Bayesian robustness. Includes data analysis and MCMC computation in WinBUGS and possibly other languages such as MATLAB.]

OR&IE 680(6580) Simulation

Fall. 4 credits. Prerequisite: computing experience and OR&IE 650 or equivalent, or permission of instructor.

Introduction to Monte Carlo and discrete-event simulation. Emphasizes underlying theory. Random variate generation, input and output analysis, variance reduction, selection of current research topics.

OR&IE 728-729(7190-7191) Selected Topics in Applied Operations Research

Fall, spring. Credit TBA.

Current research topics dealing with applications of operations research.

OR&IE 738-739(7390-7391) Selected Topics in Mathematical Programming

Fall, spring. Credit TBA.

Current research topics in mathematical programming.

OR&IE 768-769(7590-7591) Selected Topics in Applied Probability

Fall, spring. Credit TBA.

Topics are chosen from current literature and research areas of the staff.

OR&IE 778-779(7790-7791) Selected Topics in Applied Statistics

Fall, spring. Credit TBA.

Topics are chosen from current literature and research of the staff.

OR&IE 790(7900) Special Investigations

Fall, spring. Credit TBA.

For individuals or small groups. Study of special topics or problems.

OR&IE 799(9999) Thesis Research

Fall, spring. Credit TBA.

For individuals doing thesis research for master's or doctoral degrees.

OR&IE 891(9000) Operations Research Graduate Colloquium

Fall, spring. 1 credit. Staff.

Weekly one and one-half hour meeting devoted to presentations by distinguished visitors, by faculty members, and by advanced graduate students on topics of current research in the field of operations research.

OR&IE 893-894(9100-9101) Enterprise Engineering Colloquium (also M&AE 594[5940])

893, fall; 894, spring. 1 credit each semester. Usually S-U grades.

Weekly meeting for master of engineering students. Discussion with industry speakers and faculty members on the uses of engineering in the economic design, manufacturing, marketing, and distribution and goods and services.

SYSTEMS ENGINEERING

P. L. Jackson, director; L. K. Nozick, director of graduate studies; M. Campbell, R. D'Andrea, R. A. Davidson, E. Garcia, A. R. George, A. S. Lewis, J. A. Muckstadt, A. F. Myers, M. Peck, R. O. Roundy, F. B. Schneider, B. Selman, C. A. Shoemaker, J. R. Stedinger, R. J. Thomas, H. Topaloglu, M. A. Turnquist

SYSEN 500(5000) Core Practices in Systems Engineering

Fall, spring, summer. 1.5 credits.

Overview of Systems Engineering Technical Process and its value in assuring successful systems design. Systems Engineering and the Corporate Product Development Process. Systems Engineering as an organizing discipline for any level of responsibility. Fundamental concepts, language, notation, and tools of systems engineering. Case-based application of tools to a systems engineering problem. Choice of integrative cases from different industries. Including aerospace, medical instruments, automotive, and e-business, and more.

SYSEN 501(5010) Core Practices in Systems Engineering

Fall, spring, summer. 1.5 credits. Intended for off-campus students.

Overview of Systems Engineering Technical Process and its value in assuring successful systems design. Systems Engineering and the Corporate Product Development Process. Systems Engineering as an organizing discipline for any level of responsibility. Fundamental concepts, language, notation, and tools of systems engineering. Case-based application of tools to a systems engineering problem. Choice of integrative cases from different industries: aerospace, medical instruments, automotive, e-business, and more. Designed for technical managers responsible for system requirements, design,

development, test, support, and disposition, but who do not have the time to invest in certificate programs.

SYSEN 510(5100) Applied Systems Engineering (also CEE/COM S 504[5040], ECE/OR&IE 512[5120], M&AE 591[5910])

Fall. 3 credits. Prerequisites: senior or graduate standing in an engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. A. R. George, M. Peck, and R. Roundy.

Fundamental ideas of systems engineering, and their application to design and development of various types of engineered systems. Defining system requirements, creating effective project teams, mathematical tools for system analysis and control, testing and evaluation, economic considerations, and the system life cycle.

SYSEN 511(5110) Applied Systems Engineering

Fall. 3 credits. Intended for off-campus students. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. Staff.

For description, see SYSEN 510.

SYSEN 520(5200) Systems Analysis Architecture, Behavior, and Optimization (M&AE 592[5920], CEE/CIS 505[5050], ECE 513[5130], OR&IE 513[5142])

Spring. 3 credits. Prerequisite: Applied System Engineering M&AE 591, CEE/CIS 504, ECE/OR&IE 512, SYSEN 520 or 521, or permission of instructor.

This is an advanced course in the application of the systems engineering process to the design and operation of complex systems. Topics include techniques for design, simulation, optimization, and control of complex systems. Case studies and system simulations in diverse areas provide context for the application of these techniques.

Students majoring in Systems Engineering enroll in SYSEN 520. Students taking the Option in Systems Engineering enroll in M&AE 592, CEE 505, CIS 505, ECE 513, or OR&IE 513. Students in Continuing Education enroll in SYSEN 521. Lectures are identical for all versions.

SYSEN 521(5210) Systems Analysis Architecture, Behavior, and Optimization

Spring. 3 credits. Intended for off-campus students. Prerequisites: Applied Systems Engineering or permission of instructor. Staff.

For description, see SYSEN 520.

SYSEN 570(5700) Special Topics in Systems Engineering

On demand. 1-4 credits. Staff.

Supervised study by individuals or small groups of one or more specialized topics not covered in regular courses.

SYSEN 571(5710) Practicum in Systems Engineering

On demand. 3 credits. Staff.

Supervised study by individuals or small groups of one or more specialized topics not covered in regular courses.

SYSEN 590(5900) Systems Engineering Design Project

Fall. 6–8 credits. Prerequisite: permission of instructor. Staff.

A design project that incorporates the principles of systems engineering for a complex system. Projects are performed by teams of students working together to meet the requirements of the project.

SYSEN 680(6800) Topics in Systems Engineering Research

Fall. 1.5 credits. Staff.

Advanced topics in systems engineering research.

SYSEN 681(6810) Topics in Systems Engineering Research

Spring. 1.5 credits. Staff.

Advanced topics in systems engineering research.

THEORETICAL AND APPLIED MECHANICS

T. J. Healey, chair; J. A. Burns, K. B. Cady, J. M. Guckenheimer, C. Y. Hui, J. T. Jenkins, S. Mukherjee, S. L. Phoenix, R. H. Rand, A. L. Ruina, W. H. Sachse, S. Strogatz, Z. J. Wang, A. Zehnder. Emeritus: H. D. Conway, E. Cranch.

Basics in Engineering Mathematics and Mechanics

T&AM 118(1180) Engineering Design: Making Digital Audio and Video Work (also ENGR1 118[1180])

Spring. 3 credits.

Course in Introduction to Engineering series. For description, see ENGR1 118.

T&AM 202(2020) Mechanics of Solids (also ENGRD 202[2020])

Fall, spring. 4 credits. Prerequisite: PHYS 112, co-registration in MATH 192, or permission of instructor.

For description, see ENGRD 202.

T&AM 203(2030) Dynamics (also ENGRD 203[2030])

Fall, spring. 3 credits. Prerequisite: T&AM 202, preregistration in MATH 293, or permission of instructor.

For description, see ENGRD 203.

Engineering Mathematics

T&AM 191(1910) Calculus for Engineers (also MATH 191[1910])

Fall. 4 credits. Prerequisite: three years high-school mathematics, including trigonometry.

For description, see MATH 191.

T&AM 192(1920) Calculus for Engineers (also MATH 192[1920])

Fall, spring, or summer. 4 credits.

Prerequisite: MATH/T&AM 191.

For description, see MATH 192.

T&AM 293(2930) Engineering Mathematics (also MATH 293[2930])

Fall, spring. 4 credits. Prerequisite: MATH/T&AM 192 plus knowledge of computer programming equivalent to that taught in COM S 100.

For description, see MATH 293.

T&AM 294(2940) Engineering Mathematics (also MATH 294[2940])

Fall, spring. 4 credits. Prerequisite: MATH/T&AM 293.

For description, see MATH 294.

T&AM 310(3100) Advanced Engineering Analysis I

Fall, spring. 3 credits. Prerequisites: MATH/T&AM 293 and 294.

Covers initial value, boundary value, and eigenvalue problems in linear ordinary differential equations. Also covers special functions, linear partial differential equations. This is an introduction to probability and statistics. Use of computers to solve problems is emphasized.

T&AM 311/511(3110/5110) Advanced Engineering Analysis II

Spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent (T&AM 311 can be taken independently of 310).

Mathematical modeling of physical and biological systems. Examples range from molecular diffusion, bacteria swimmers, chemotaxis, and physiological flows, to bird flight. The mathematics necessary to understand these phenomena is discussed in depth. They include probability theory, PDEs, stability analysis, complex variable analysis, and numerical analysis. Students from all fields are encouraged to take the course.

T&AM 610(6100) Methods of Applied Mathematics I

Fall. 3 credits. Intended for beginning graduate students in engineering and science. Intensive course requiring more time than normally available to undergraduates (see T&AM 310–311) but open to exceptional undergraduates by permission of instructor.

Emphasis is on applications. Course covers linear algebra, calculus of several variables, vector analysis, series, ordinary differential equations, and complex variables.

T&AM 611(6110) Methods of Applied Mathematics II

Spring. 3 credits. Prerequisite: T&AM 610 or equivalent.

Emphasis is on applications. Course covers partial differential equations, transform techniques, tensor analysis, and calculus of variations.

T&AM 612(6120) Methods of Applied Mathematics III

Spring. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent.

Course topics include: integral transform, methods, Wiener-Hopf technique, solutions of integral equations and partial differential equations. Problems are drawn from electromagnetics, elasticity, fluid mechanics, heat transfer, and acoustics.

T&AM 613(6130) Methods of Applied Mathematics IV

Spring. 3 credits. Prerequisite: T&AM 610–611 or equivalent. Not offered 2005–2006.]

[T&AM 614(6140) Methods of Applied Math V

3 credits. Not offered 2005–2006.]

T&AM 617(6170) Advanced Mathematical Modeling—Biological and Fluid Dynamics

Spring. 3 credits.

Course topics include ciliary propulsion (biology); Eulerian realm: fish swimming, bird flight, etc.; review of potential flows; two-

dimensional theory of lunette tails; unsteady airfoil theory; Weisfogh mechanism of insect flight.

Continuum Mechanics

T&AM 455(4550) Introduction to Composite Materials (also CEE 477[4770], M&AE 455[4550], MS&E 555[5550])

Spring. 3 credits.

Course topics include introduction to composite materials; varieties and properties of fiber reinforcements and matrix materials; micromechanics of stiffness and stress transfer in discontinuous fiber/matrix arrays; orthotropic elasticity as applied to parallel fibers in a matrix and lamina; theory of stiffness (tension, bending, torsion) and failure of laminates and composite plates, including computer software for design; and manufacturing methods and applications for composites. There is a group component design and manufacturing paper required, and a group laboratory on laminated component fabrication.

T&AM 591(5910) Master of Engineering Design Project I

Fall. 3–12 credits, variable.

M. Eng. (mechanics) project related to the master of engineering in mechanics.

T&AM 592(5920) Master of Engineering Design Project I

Spring. 3–12 credits, variable.

M. Eng. (mechanics) project related to the master of engineering in mechanics.

T&AM 655(6550) Composite Materials (also M&AE/MS&E 655[6550])

Spring. 4 credits.

Taught jointly with T&AM 455 using same lecture material, but also includes more advanced material and homework through additional lectures. Additional material includes shear-lag models of stress transfer around arrays of fiber breaks, including viscoelastic effects, statistical theories of composite strength and failure; stress distributions around holes and cuts in composite laminates; and compressive strength of composites. Laboratory on effects of holes and notches in composites.

T&AM 663(6630) Solid Mechanics I

Fall. 4 credits.

Rigorous introduction to solid mechanics emphasizing linear elasticity: tensors; deformations, rotations and strains; balance principles; stress; small-strain theory; linear elasticity, anisotropic and isotropic; basic theorems of elastostatics; and boundary-value problems, e.g., plates, St. Venant's solutions.

T&AM 664(6640) Solid Mechanics II

Spring. 4 credits. Prerequisites: MATH 610 and T&AM 663 or equivalent.

Preparation for advanced courses in solid mechanics. Topics include singular solutions in linear elasticity; plane stress, plane strain, anti-plane shear, airy stress functions; linear viscoelasticity; cracks and dislocations; classical plasticity; thermoelasticity; and three-dimensional elasticity.

[T&AM 718(7180) Topics in Bifurcation Theory

Spring. 3 credits. Offered every third year; not offered 2005–2006.]

[T&AM 751(7510) Continuum Mechanics and Thermodynamics

3 credits. Not offered 2005–2006.]

[T&AM 752(7520) Nonlinear Elasticity]
Spring. 3 credits. Not offered 2005-2006.]

T&AM 753(7530) Fracture
Spring. 3 credits. Prerequisites: T&AM 610 or 611; and 663 and 664 or equivalents. Course covers fundamentals of linear elastic fracture mechanics; K, small-scale yielding, solutions of elastic crack problems, energy concepts, J-integral. Also covers nonlinear, rate-independent, small-scale deformation fracture mechanics: plastic fracture, J-integral, small-scale yielding, fields for stationary and growing cracks; failure mechanisms of polymers, ceramics, composites, and metals; void growth, load transfer between fibers, crazing; fracture testing; fatigue testing; computation of stress intensity factors; and plate theory and fracture.

[T&AM 754(7540) Topics in Continuum Mechanics]
Spring. 3 credits. Not offered 2005-2006.]

[T&AM 757(7570) Inelasticity]
Spring. 3 credits. Offered alternate years; not offered 2005-2006.]

T&AM 759(7590) Boundary Element Methods
Fall. 4 credits. Offered alternate years.

[T&AM 796(7960) Mechanics in Terrestrial Locomotion]
Spring. 3 credits. Not offered 2005-2006.]

Dynamics and Space Mechanics

T&AM 570(5700) Intermediate Dynamics
Fall. 3 credits.

Topics include Newtonian mechanics; motion in rotating coordinate systems; introduction to analytical mechanics; virtual work, Lagrangian mechanics; Hamilton's principle; small vibration and stability theory. Newtonian-Eulerian mechanics of rigid bodies; and gyroscopes.

T&AM 578(5780) Nonlinear Dynamics and Chaos
Spring. 3 credits. Prerequisite: MATH/T&AM 293 or equivalent.

Introduction to nonlinear dynamics, with applications to physics, engineering, biology, and chemistry. Emphasizes analytical methods, concrete examples, and geometric thinking. Topics include one-dimensional systems; bifurcations; phase plane; nonlinear oscillators; and Lorenz equations, chaos, strange attractors, fractals, iterated mappings, period doubling, renormalization.

[T&AM 671(6710) Hamiltonian Dynamics]
Spring. 3 credits. Not offered 2005-2006.]

[T&AM 672(6720) Celestial Mechanics (also ASTRO 579(6579))]
Spring. 3 credits. Not offered 2005-2006.]

[T&AM 673(6730) Mechanics of the Solar System (also ASTRO 571(6570))]
Spring. 3 credits. Not offered 2005-2006.]

T&AM 674(6740) Applied Multi-body Dynamics
3 credits. Not offered 2005-2006.

T&AM 675(6750) Nonlinear Vibrations
Fall. 3 credits. Prerequisite: T&AM 578 or equivalent. Offered alternate years. Quantitative analysis of weakly nonlinear systems in free and forced vibrations, perturbation methods, averaging method. Applications to problems in mechanics,

physics, and biology. Additional topics may include Hopf bifurcation, Invariant manifolds, coupled oscillators, vibrations in continuous media, normal forms, and exploitation of symmetry.

T&AM 768(7680) Elastic Waves in Solids
Fall. 3 credits. Theory and equipment. Forward and Inverse Problems.

T&AM 776(7760) Applied Dynamical Systems (also MATH 717(7170))
Spring. 4 credits. For description, see MATH 717.

[T&AM 796(7609) Mechanics in Terrestrial Locomotion]
Spring. 3 credits. Not offered 2005-2006.]

Special Courses, Projects, and Thesis Research

T&AM 491-492(4910-4920) Project in Engineering Science
491, fall; 492, spring. 1-4 credits TBA. Projects for undergraduates under the guidance of a faculty member.

T&AM 796-800(7960-8000) Topics in Theoretical and Applied Mechanics
Fall, spring. 1-3 credits TBA. Special lectures or seminars on subjects of current interest. Topics are announced when the course is offered.

T&AM 890(8900) Master's Degree Research in Theoretical and Applied Mechanics
Fall, spring. 1-15 credits TBA. S-U grades. Thesis or independent research at the M.S. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

T&AM 990(9900) Doctoral Research in Theoretical and Applied Mechanics
Fall, spring. 1-15 credits TBA. S-U grades. Thesis or independent research at the Ph.D. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

FACULTY ROSTER

Abel, John F., Ph.D., U. of California, Berkeley. Prof., Civil and Environmental Engineering, Emeritus
Ahner, Beth A., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Biological and Environmental Engineering
Albonesi, David H., Ph.D., U. of Massachusetts. Assoc. Prof., Electrical and Computer Engineering
Albright, Louis D., Ph.D., Cornell U. Prof., Biological and Environmental Engineering
Allmendinger, Richard, Ph.D., Stanford U. Prof., Earth and Atmospheric Sciences
Aneshansley, Daniel J., Ph.D., Cornell U. Prof., Biological and Environmental Engineering
Anton, A. Brad, Ph.D., California Inst. of Technology. Assoc. Prof., Chemical and Biomolecular Engineering
Apanasovich, Tatyana, Ph.D., Texas A&M U. Asst. Prof., Operations Research and Industrial Engineering
Apsel, Alyssa B., Ph.D., Johns Hopkins U. Clare Boothe Luce Assistant Professor of Electrical and Computer Engineering

Aquino, Wilkens, Ph.D., U. of Illinois. Asst. Prof., Civil and Environmental Engineering
Archer, Lynden A., Ph.D., Stanford U. Marjorie L. Hart '50 Professor of Engineering, Chemical and Biomolecular Engineering
Arms, William, Ph.D., U. of Sussex (England). Prof., Computer Science
Ast, Dieter G., Ph.D., Cornell U. Prof., Materials Science and Engineering
Avedisian, C. Thomas, Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
Baeumner, Antje J., Ph.D., U. of Stuttgart (Germany). Asst. Prof., Biological and Environmental Engineering
Bailey, Graeme, Ph.D., U. of Birmingham (England). Prof., Computer Science
Baker, Shefford P., Ph.D., Stanford U. Assoc. Prof., Materials Science and Engineering
Bala, Kavita, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science
Barazangi, Muawia, Ph.D., Columbia U. Prof., Earth and Atmospheric Sciences
Bartel, Donald L., Ph.D., U. of Iowa. Prof., Mechanical and Aerospace Engineering and Biomedical Engineering
Bartsch, James A., Ph.D., Purdue U. Assoc. Prof., Biological and Environmental Engineering
Bassett, William A., Ph.D., Columbia U. Prof. (Emeritus), Earth and Atmospheric Sciences
Berger, Toby, Ph.D., Harvard U. Irwin and Joan Jacobs Professor of Engineering, Electrical and Computer Engineering
Bhave, Sunil, Ph.D., U. of California, Berkeley. Asst. Prof., Electrical and Computer Engineering
Bird, John M., Ph.D., Rensselaer Polytechnic Inst. Prof. (Emeritus), Earth and Atmospheric Sciences
Birman, Kenneth P., Ph.D., U. of California, Berkeley. Prof., Computer Science
Bisogni, James J., Ph.D., Cornell U. Assoc. Prof., Civil and Environmental Engineering
Blakely, John M., Ph.D., Glasgow U. (U.K.). Herbert Fisk Johnson Professor of Engineering, Materials Science and Engineering
Bland, Robert G., Ph.D., Cornell U. Prof., Operations Research and Industrial Engineering
Bloom, Arthur L., Ph.D., Yale U. Prof. (Emeritus), Earth and Atmospheric Sciences
Bojanczyk, Adam W., Ph.D., U. of Warsaw (Poland). Assoc. Prof., Electrical and Computer Engineering
Bonassar, Lawrence J., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Mechanical and Aerospace Engineering and Biomedical Engineering
Booker, John F., Ph.D., Cornell U. Graduate School Prof. (Emeritus), Mechanical and Aerospace Engineering
Brock, Joel D., Ph.D., Massachusetts Inst. of Technology. Director and Prof., Applied and Engineering Physics
Brown, Larry D., Ph.D., Cornell U. Prof., Earth and Atmospheric Sciences
Brutsaert, Wilfried H., Ph.D., U. of California, Davis. William L. Lewis Prof. of Engineering, Civil and Environmental Engineering
Buhman, Robert A., Ph.D., Cornell U. John Edson Sweet Professor of Engineering, Applied and Engineering Physics
Burns, Joseph A., Ph.D., Cornell U. Irving Porter Church Professor of Engineering, Theoretical and Applied Mechanics; Astronomy

- Burtscher, Martin, Ph.D., U. of Colorado, Boulder. Asst. Prof., Electrical and Computer Engineering
- Cady, K. Bingham, Ph.D., Massachusetts Inst. of Technology. Prof., Theoretical and Applied Mechanics; Nuclear Science and Engineering
- Callister, John R., Ph.D., Cornell U. Kinzelberg Director of Entrepreneurship in Engineering
- Campbell, Mark E., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Mechanical and Aerospace Engineering
- Cardie, Claire T., Ph.D., U. of Massachusetts, Amherst. Assoc. Prof., Computer Science
- Caruana, Richard, Ph.D., Carnegie Mellon U. Asst. Prof., Computer Science
- Cathles, Lawrence M. III, Ph.D., Princeton U. Prof., Earth and Atmospheric Sciences
- Caughey, David A., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
- Chiang, Hsiao-Dong, Ph.D., U. of California, Berkeley. Prof., Electrical and Computer Engineering
- Cisne, John L., Ph.D., U. of Chicago. Prof., Earth and Atmospheric Sciences
- Clancy, Paulette, Ph.D., Oxford U. (England). Prof., Chemical and Biomolecular Engineering
- Cohen, Claude, Ph.D., Princeton U. Prof., Chemical and Biomolecular Engineering
- Coleman, Thomas F., Ph.D., U. of Waterloo (Canada). Prof., Computer Science
- Collins, Lance R., Ph.D., U. of Pennsylvania. Prof., Mechanical and Aerospace Engineering
- Colucci, Stephen J., Ph.D., SUNY Albany. Prof., Earth and Atmospheric Sciences
- Constable, Robert L., Ph.D., U. of Wisconsin. Prof., Computer Science
- Conway, Harry D., Ph.D., London U. (England). Prof. Emeritus, Theoretical and Applied Mechanics
- Cook, Kerry H., Ph.D., North Carolina State U. Prof., Earth and Atmospheric Sciences
- Cooke, J. Robert, Ph.D., North Carolina State U. Prof., Biological and Environmental Engineering
- Cool, Terrill A., Ph.D., California Inst. of Technology. Prof., Applied and Engineering Physics
- Cowen, E. A., Ph.D., Stanford U. Assoc. Prof., Civil and Environmental Engineering
- Craighead, Harold G., Ph.D., Cornell U. Charles W. Lake Jr., Prof. of Engineering, Applied and Engineering Physics
- Cranch, Edmund T., Ph.D., Cornell U. Prof. (Emeritus), Theoretical and Applied Mechanics
- D'Andrea, Raffaello, Ph.D., California Inst. of Technology. Assoc. Prof., Mechanical and Aerospace Engineering
- Datta, Ashim K., Ph.D., U. of Florida. Prof., Biological and Environmental Engineering
- Davidson, Rachael A., Ph.D., Stanford U. Asst. Prof., Civil and Environmental Engineering
- Dawson, Paul R., Ph.D., Colorado State U. Prof., Mechanical and Aerospace Engineering
- deBoer, P. C. Tobias, Ph.D., U. of Maryland. Graduate School Prof. (Emeritus), Mechanical and Aerospace Engineering
- DeGaetano, Arthur T., Ph.D., Rutgers U. Assoc. Prof., Earth and Atmospheric Science
- Delchamps, David F., Ph.D., Harvard U. Assoc. Prof., Electrical and Computer Engineering
- DeLisa, Matthew P., Ph.D., U. of Maryland. Asst. Prof., Chemical and Biomolecular Engineering
- Derry, Louis, Ph.D., Harvard U. Assoc. Prof., Earth and Atmospheric Sciences
- Dick, Richard I., Ph.D., U. of Illinois. Prof., Civil and Environmental Engineering
- Dieckmann, Rudiger, Ph.D., U. of Hannover (Germany). Prof., Materials Science and Engineering
- Duncan, T. Michael, Ph.D., California Inst. of Technology. Assoc. Prof., Chemical and Biomolecular Engineering
- Dworsky, Leonard B., M.A., U. of Michigan. Prof., Civil and Environmental Engineering
- Eastman, Lester F., Ph.D., Cornell U. Given Foundation Professor of Engineering, Electrical and Computer Engineering
- Elber, Ron, Ph.D., Hebrew U. (Israel). Prof., Computer Science
- Engstrom, James R., Ph.D., California Inst. of Technology. Prof., Chemical and Biomolecular Engineering
- Erickson, David C., Ph.D., U. of Toronto (Canada). Asst. Prof., Mechanical and Aerospace Engineering
- Escobedo, Fernando A., Ph.D., U. of Wisconsin, Madison. Assoc. Prof., Chemical and Biomolecular Engineering
- Estroff, Lara A., Ph.D., Yale U. Asst. Prof., Materials Science and Engineering
- Fan, K-Y Daisy, Ph.D., Cornell U. Asst. Prof., Computer Science
- Farley, Donald T., Ph.D., Cornell U. J. Preston Levis Professor of Engineering, Electrical and Computer Engineering
- Fine, Terrence L., Ph.D., Harvard U. Prof., Electrical and Computer Engineering
- Fisher, Elizabeth M., Ph.D., U. of California, Berkeley. Assoc. Prof., Mechanical and Aerospace Engineering
- Francis, Paul, Ph.D., U. Coll. London (England). Assoc. Prof., Computer Science
- Friedman, Eric, Ph.D., U. of California, Berkeley. Assoc. Prof., Operations Research and Industrial Engineering
- Fuchs, W. Kent, Ph.D., U. of Illinois, Urbana-Champaign. Prof., Electrical and Computer Engineering
- Gaeta, Alexander L., Ph.D., U. of Rochester. Prof., Applied and Engineering Physics
- Garcia, Ephraim, Ph.D., SUNY Buffalo. Assoc. Prof., Mechanical and Aerospace Engineering
- Gebremedhin, Kifle G., Ph.D., U. of Wisconsin. Prof., Biological and Environmental Engineering, Civil and Environmental Engineering
- Gehrke, Johannes, Ph.D., U. of Wisconsin, Madison. Assoc. Prof., Computer Science
- George, Albert R., Ph.D., Princeton U. John F. Carr Prof. of Mechanical Engineering, Mechanical and Aerospace Engineering
- Giannelis, Emmanuel, Ph.D., Michigan State U. Walter R. Read Professor of Engineering, and Director Materials Science and Engineering
- Gossett, James M., Ph.D., Stanford U. Prof., Civil and Environmental Engineering
- Gouldin, Frederick C., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
- Greenberg, Donald P., Ph.D., Cornell U. Prof., Computer Science
- Greene, Charles, Ph.D., U. of Washington. Prof., Earth and Atmospheric Sciences
- Gries, David, Ph.D., Dr rer. nat. Munich Inst. of Technology (Germany). Prof., Computer Science
- Grigoriu, Mircea D., Ph.D., Massachusetts Inst. of Technology. Prof., Civil and Environmental Engineering
- Grubb, David T., Ph.D., Oxford U. (England). Assoc. Prof., Materials Science and Engineering
- Guckenheimer, John, Ph.D., U. of California, Berkeley. Prof., Mathematics and Theoretical and Applied Mechanics
- Guo, Xin, Ph.D., Rutgers U. Asst. Prof., Operations Research and Industrial Engineering
- Haas, Zygmunt J., Ph.D., Stanford U. Prof., Electrical and Computer Engineering
- Haith, Douglas A., Ph.D., Cornell U. Prof., Biological and Environmental Engineering
- Halpern, Joseph, Ph.D., Harvard U. Prof., Computer Science
- Hammer, David A., Ph.D., Cornell U. J. Carlton Ward Prof. of Nuclear Energy Engineering; Electrical and Computer Engineering
- Hartmanis, Juris, Ph.D., California Inst. of Technology. Walter R. Read Professor Emeritus of Computer Science
- Healey, Timothy J., Ph.D., U. of Illinois. Prof., Theoretical and Applied Mechanics
- Hemami, Sheila S., Ph.D., Stanford U. Assoc. Prof., Electrical and Computer Engineering
- Henderson, Shane, Ph.D., U. of Michigan. Assoc. Prof., Operations Research and Industrial Engineering
- Hopcroft, John E., Ph.D., Stanford U., IBM Professor of Engineering and Applied Mathematics, Computer Science
- Hover, Kenneth C., Ph.D., Cornell U. Prof., Civil and Environmental Engineering
- Hui, Chung Y., Ph.D., Harvard U. Prof., Theoretical and Applied Mechanics; Mechanical and Aerospace Engineering
- Hunter, Jean B., Ph.D., Columbia U. Assoc. Prof., Biological and Environmental Engineering
- Huttenlocher, Daniel, Ph.D., Massachusetts Inst. of Technology. Prof., Computer Science/Johnson Graduate School of Management
- Hysell, David L., Ph.D., Cornell U. Assoc. Prof., Earth and Atmospheric Sciences
- Ingraffea, Anthony R., Ph.D., U. of Colorado. Dwight C. Baum Prof. in Engineering, Civil and Environmental Engineering
- Irwin, Lynne H., Ph.D., Texas A&M U. Assoc. Prof., Biological and Environmental Engineering
- Isacks, Bryan L., Ph.D., Columbia U. William and Katherine Snee Prof. of Earth and Atmospheric Sciences
- Jackson, Peter L., Ph.D., Stanford U. Prof., Operations Research and Industrial Engineering
- Jarrow, Robert A., Ph.D., Massachusetts Inst. of Technology. Prof., Operations Research and Industrial Engineering
- Jenkins, James T., Ph.D., Johns Hopkins U. Walter S. Carpenter, Jr., Professor of Engineering, Theoretical and Applied Mechanics
- Jewell, William J., Ph.D., Stanford U. Prof., Biological and Environmental Engineering
- Joachims, Thorsten, Ph.D., U. of Dortmund (Germany). Asst. Prof., Computer Science
- Johnson, C. Richard, Jr., Ph.D., Stanford U. Prof., Electrical and Computer Engineering
- Joo, Yong Lak, Ph.D., Stanford U. Asst. Prof., Chemical and Biomolecular Engineering
- Jordan, Teresa, Ph.D., Stanford U. Prof., Earth and Atmospheric Sciences
- Kan, Edwin C., Ph.D., U. of Illinois, Champaign-Urbana. Assoc. Prof., Electrical and Computer Engineering
- Karig, Daniel E., Ph.D., D. U. of California (S.I.O.). Prof. (Emeritus), Earth and Atmospheric Sciences
- Kay, Robert W., Ph.D., Columbia U. Prof., Earth and Atmospheric Sciences

- Kay, Suzanne M., Ph.D., Brown U. Prof., Earth and Atmospheric Sciences
- Keich, Uri, Ph.D., Courant Inst. Asst. Prof., Computer Science
- Kelley, Michael C., Ph.D., U. of California, Berkeley. James A. Friend family Distinguished Prof., Electrical and Computer Engineering
- Kintner, Paul M., Ph.D., U. of Minnesota. Prof., Electrical and Computer Engineering
- Kirby, Brian L., Ph.D., Stanford U. Asst. Prof., Mechanical and Aerospace Engineering
- Kleinberg, Jon M., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Computer Science
- Kline, Ronald R., Ph.D., U. of Wisconsin. Prof., Electrical and Computer Engineering (History of Technology)
- Knapp, Warren W., Ph.D., U. of Wisconsin. Prof. (Emeritus), Earth and Atmospheric Sciences
- Koch, Donald L., Ph.D., Massachusetts Inst. of Technology. Prof., Chemical and Biomolecular Engineering
- Kornegay, Kevin T., Ph.D., U. of California, Berkeley. Assoc. Prof., Electrical and Computer Engineering
- Kostroun, Vaclav O., Ph.D., U. of Oregon. Assoc. Prof., Applied and Engineering Physics
- Kozen, Dexter, Ph.D., Cornell U. Joseph Newton Pew, Jr. Professor in Engineering, Computer Science
- Kulhawy, Fred H., Ph.D., U. of California, Berkeley. Prof., Civil and Environmental Engineering
- Kusse, Bruce R., Ph.D., Massachusetts Inst. of Technology. Prof., Applied and Engineering Physics
- Lal, Amit, Ph.D., U. of California, Berkeley. Assoc. Prof., Electrical and Computer Engineering
- Lee, Kelvin, Ph.D., California Inst. of Technology. Assoc. Prof., Chemical and Biomolecular Engineering
- Lee, Lillian, Ph.D., Harvard U. Assoc. Prof., Computer Science
- Leibovich, Sidney, Ph.D., Cornell U. Samuel B. Eckert Prof. of Mechanical and Aerospace Engineering
- Lewis, Adrian, Ph.D., Cambridge U. (England). Prof., Operations Research and Industrial Engineering
- Lewis, Mark, Ph.D., Georgia Inst. of Technology. Assoc. Prof., Operations Research and Industrial Engineering
- Liddell, Chekesha, Ph.D., Georgia Inst. of Technology. Asst. Prof., Materials Science and Engineering
- Lindau, Manfred, Ph.D., Technical U. Berlin (Germany). Assoc. Prof., Applied and Engineering Physics
- Lion, Leonard W., Ph.D., Stanford U. Prof., Civil and Environmental Engineering
- Lipson, Hod, Ph.D., Technion Israel Inst. of Technology. Asst. Prof., Mechanical and Aerospace Engineering
- Lipson, Michal, Ph.D., Technion Israel Inst. of Technology. Asst. Prof., Electrical and Computer Engineering
- Liu, Philip L.-F., Sc.D., Massachusetts Inst. of Technology. Prof., Civil and Environmental Engineering
- Loucks, Daniel P., Ph.D., Cornell U. Prof., Civil and Environmental Engineering
- Louge, Michel Y., Ph.D., Stanford U. Prof., Mechanical and Aerospace Engineering
- Lovelace, Richard V. E., Ph.D., Cornell U. Prof., Applied and Engineering Physics
- Lumley, John L., Ph.D., Johns Hopkins U. Willis H. Carrier Professor (Emeritus) of Engineering, Graduate School Prof. Mechanical and Aerospace Engineering
- Luo, Dan, Ph.D., Ohio State U. Asst. Prof., Biological and Environmental Engineering
- Lynn, Walter R., Ph.D., Northwestern U. Prof., Civil and Environmental Engineering
- Malliaras, George G., Ph.D., Rijksuniversiteit Groningen (Greece). Assoc. Prof., Materials Science and Engineering
- Manohar, Rajit, Ph.D., California Inst. of Technology. Assoc. Prof., Electrical and Computer Engineering
- Marschner, Steve, Ph.D., Cornell U. Asst. Prof., Computer Science
- Martínez, José F., Ph.D., U. of Illinois, Urbana-Champaign. Asst. Prof., Electrical and Computer Engineering
- Mbwana, John, Ph.D., Cornell U. Sr. Research Assoc., Civil and Environmental Engineering
- McGuire, Stephen C., Ph.D., Cornell U. Assoc. Prof., Engineering
- McKee, Sally A., Ph.D., U. of Virginia. Asst. Prof., Electrical and Computer Engineering
- Meyburg, Arnim H., Ph.D., Northwestern U. Prof., Civil and Environmental Engineering
- Miller, Matthew, Ph.D., Georgia Inst. of Technology. Assoc. Prof., Mechanical and Aerospace Engineering
- Moon, Francis C., Ph.D., Cornell U. Joseph C. Ford Professor, Mechanical and Aerospace Engineering
- Moore, Franklin, Ph.D., Cornell U. Prof. (Emeritus), Mechanical and Aerospace Engineering
- Muckstadt, John A., Ph.D., U. of Michigan. Acheson-Laibe Prof., Operations Research and Industrial Engineering
- Mukherjee, Subrata, Ph.D., Stanford U. Prof., Theoretical and Applied Mechanics; Mechanical and Aerospace Engineering
- Muller, David, Ph.D., Cornell U. Assoc. Prof., Applied and Engineering Physics
- Myers, Andrew, Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Computer Science
- Nozick, Linda K., Ph.D., U. of Pennsylvania. Prof., Civil and Environmental Engineering
- Ober, Christopher K., Ph.D., U. of Massachusetts. Francis Norwood Bard Professor, Materials Science and Engineering
- Olbright, William L., Ph.D., California Inst. of Technology. Prof., Chemical and Biomolecular Engineering
- Oliver, Jack, Ph.D., Columbia U. Prof. (Emeritus), Earth and Atmospheric Sciences
- O'Rourke, Thomas D., Ph.D., U. of Illinois. Thomas R. Briggs Professor of Engineering, Civil and Environmental Engineering
- Papoulia, Katerina D., Ph.D., U. of California, Berkeley. Asst. Prof., Civil and Environmental Engineering
- Parks, Thomas W., Ph.D., Cornell U. Prof., Electrical and Computer Engineering
- Parlange, Jean-Yves, Ph.D., Brown U. Prof., Biological and Environmental Engineering
- Peck, Mason, A., Ph.D., U. of California, Los Angeles. Asst. Prof., Mechanical and Aerospace Engineering
- Pekoz, Teoman, Ph.D., Cornell U. Prof., Civil and Environmental Engineering
- Pershing, Andrew J., Ph.D., Cornell U. Asst. Prof., Earth and Atmospheric Sciences
- Phelan, Richard, M.M.E., Cornell U. Prof. (Emeritus), Mechanical and Aerospace Engineering
- Philpot, William D., Ph.D., U. of Delaware. Assoc. Prof., Civil and Environmental Engineering
- Phipps Morgan, J., Ph.D., Brown U. Prof., Earth and Atmospheric Sciences
- Phoenix, S. Leigh, Ph.D., Cornell U. Prof., Theoretical and Applied Mechanics; Mechanical and Aerospace Engineering
- Pingali, Keshav K., Ph.D., Massachusetts Inst. of Technology. India Professor of Computer Science, Computer Science
- Plisch, Monica J., Ph.D., Cornell U. Instr., Applied and Engineering Physics
- Pollack, Lois, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Applied and Engineering Physics
- Pollock, Clifford R., Ph.D., Rice U. Ilda and Charles Lee Prof. of Engineering, Electrical and Computer Engineering
- Pope, Stephen B., Ph.D., Imperial Coll. of Science and Technology (England). Sibley College Professor of Mechanical Engineering, Mechanical and Aerospace Engineering
- Pritchard, Matthew E., Ph.D., Princeton U. Asst. Prof., Earth and Atmospheric Sciences
- Protter, Philip, Ph.D., U. of California, San Diego. Prof., Operations Research and Industrial Engineering
- Psiaki, Mark L., Ph.D., Princeton U. Assoc. Prof., Mechanical and Aerospace Engineering
- Putnam, David A., Ph.D., U. of Utah. Asst. Prof., Chemical and Biomolecular Engineering and Biomedical Engineering
- Ralph, Daniel, Ph.D., Cornell U. Assoc. Prof., Physics
- Rana, Farhan, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Electrical and Computer Engineering
- Rand, Richard H., Sc.D., Columbia U. Prof., Theoretical and Applied Mechanics
- Reeves, Anthony P., Ph.D., U. of Kent, Canterbury (England). Assoc. Prof., Electrical and Computer Engineering
- Renegar, James, Ph.D., U. of California, Berkeley. Prof., Operations Research and Industrial Engineering
- Resler, Edwin, Ph.D., Cornell U. Prof. Emeritus, Mechanical and Aerospace Engineering
- Resnick, Sidney, Ph.D., Purdue U. Prof., Operations Research and Industrial Engineering
- Rhodes, Frank H. T., Ph.D., U. of Birmingham (England). Prof. Emeritus/President Emeritus, Earth and Atmospheric Sciences
- Richardson, Ruth E., Ph.D., U. of California, Berkeley. Asst. Prof., Civil and Environmental Engineering
- Riha, Susan, Ph.D., Washington State U. Prof., Earth and Atmospheric Sciences
- Roundy, Robin, Ph.D., Stanford U. Prof., Operations Research and Industrial Engineering
- Rugina, Radu, Ph.D., U. of California, Santa Barbara. Asst. Prof., Computer Science
- Ruina, Andy L., Ph.D., Brown U. Prof., Theoretical and Applied Mechanics; Mechanical and Aerospace Engineering
- Ruoff, Arthur L., Ph.D., U. of Utah. Class of 1912 Professor, Materials Science and Engineering
- Ruppert, David, Ph.D., Michigan State U. Prof., Operations Research and Industrial Engineering
- Rusmevichientong, Paat, Ph.D., Stanford U. Asst. Prof., Operations Research and Industrial Engineering
- Sachse, Wolfgang H., Ph.D., Johns Hopkins U. Meinig Family Prof. of Engineering, Theoretical and Applied Mechanics; Mechanical and Aerospace Engineering

- Samorodnitsky, Gennady, D.S., Technion Israel Inst. of Technology. Prof., Operations Research and Industrial Engineering
- Sansalone, Mary J., Ph.D., Cornell U. Prof., Civil and Environmental Engineering
- Sass, Stephen L., Ph.D., Northwestern U. Prof. and Stephen H. Weiss Presidential Fellow, Materials Science and Engineering
- Scaglione, Anna, Ph.D., U. of Rome (Italy). Asst. Prof., Electrical and Computer Engineering
- Schneider, Fred B., Ph.D., SUNY Stonybrook. Prof., Computer Science
- Schuler, Richard E., Ph.D., Brown U. Prof., Civil and Environmental Engineering/Economics
- Schwartz, David, Ph.D., SUNY Buffalo. Sr. Lec., Computer Science
- Scott, Norman R., Ph.D., Cornell U. Prof., Biological and Environmental Engineering
- Selman, Bart, Ph.D., U. of Toronto (Canada). Assoc. Prof., Computer Science
- Sengers, Phoebe, Ph.D., Carnegie-Mellon U. Asst. Prof., Science and Technology Studies/Computing and Information Science
- Servetto, Sergio D., Ph.D., U. of Illinois, Champaign-Urbana. Asst. Prof., Electrical and Computer Engineering
- Seyler, Charles E., Jr., Ph.D., U. of Iowa. Prof., Electrical and Computer Engineering
- Shanmugasundaram, Jayavel, Ph.D., U. of Wisconsin, Madison. Asst. Prof., Computer Science
- Shealy, J. Richard, Ph.D., Cornell U. Prof., Electrical and Computer Engineering
- Shen, Shan-Fu, Sc.D., Massachusetts Inst. of Technology. Prof. (Emeritus), Mechanical and Aerospace Engineering
- Shmoys, David B., Ph.D., U. of California, Berkeley. Computer Science and Operations Research and Industrial Engineering
- Shoemaker, Christine A., Ph.D., U. of Southern California. Joseph P. Ripley Prof. of Engineering, Civil and Environmental Engineering
- Shuler, Michael L., Ph.D., U. of Minnesota. Samuel B. Eckert Prof. of Chemical and Biomolecular Engineering and Biomedical Engineering
- Silcox, John, Ph.D., Cambridge U. (England). David E. Burr Prof. of Engineering, Applied and Engineering Physics
- Sirer, Emin Gun, Ph.D., U. of Washington. Asst. Prof., Computer Science
- Slate, Floyd O., Ph.D., Purdue U. Assoc. Prof., Civil and Environmental Engineering
- Spanwick, Roger M., U. of Edinburgh (U.K.). Prof., Biological and Environmental Engineering
- Spencer, Michael G., Ph.D., Cornell U. Prof., Electrical and Computer Engineering
- Stedinger, Jerry R., Ph.D., Harvard U. Prof., Civil and Environmental Engineering
- Steen, Paul H., Ph.D., Johns Hopkins U. Prof., Chemical and Biomolecular Engineering
- Steenhuis, Tammo S., Ph.D., U. of Wisconsin. Prof., Biological and Environmental Engineering
- Stewart, Harry E., Ph.D., U. of Massachusetts, Amherst. Assoc. Prof., Civil and Environmental Engineering
- Strogatz, Steven H., Ph.D., Harvard U. Prof., Theoretical and Applied Mechanics
- Stroock, Abraham D., Ph.D., Harvard U. Asst. Prof., Chemical and Biomolecular Engineering
- Tang, Chung L., Ph.D., Harvard U. Spencer T. Olin Professor of Engineering, Electrical and Computer Engineering
- Tardos, Eva, Ph.D., Eötvös U. (Hungary). Prof., Computer Science and Operations Research and Industrial Engineering
- Teitelbaum, R. Tim., Ph.D., Carnegie-Mellon U. Assoc. Prof., Computer Science
- Thomas, Robert J., Ph.D., Wayne State U. Prof., Electrical and Computer Engineering
- Thompson, Michael O., Ph.D., Cornell U. Assoc. Prof., Materials Science and Engineering
- Timmons, Michael B., Ph.D., Cornell U. Lester B. Knight Director of the Knight Laboratory, Prof., Biological and Environmental Engineering
- Tiwari, Sandip, Ph.D., Cornell U. Prof., Electrical and Computer Engineering
- Todd, Michael J., Ph.D., Yale U. Leon C. Welch Prof., Operations Research and Industrial Engineering
- Tong, Lang, Ph.D., U. of Notre Dame. Prof., Electrical and Computer Engineering
- Topaloglu, Huseyin, Ph.D., Princeton U. Asst. Prof., Operations Research and Industrial Engineering
- Torrance, Kenneth E., Ph.D., U. of Minnesota. Joseph C. Ford Professor, Mechanical and Aerospace Engineering
- Trotter, Leslie E., Ph.D., Cornell U. Prof., Operations Research and Industrial Engineering
- Turcotte, Donald L., Ph.D., California Inst. of Technology. Prof. (Emeritus), Earth and Atmospheric Sciences
- Turnbull, Bruce W., Ph.D., Cornell U. Prof., Operations Research and Industrial Engineering
- Turnquist, Mark A., Ph.D., Massachusetts Inst. of Technology. Prof., Civil and Environmental Engineering
- Umbach, Christopher, Ph.D., Cornell U. Asst. Prof., Materials Science and Engineering
- Valero-Cuevas, Francisco, Ph.D., Stanford U. Asst. Prof., Mechanical and Aerospace Engineering
- van der Meulen, Marjolein C. H., Ph.D., Stanford U. Assoc. Prof., Mechanical and Aerospace Engineering
- van Dover, R. Bruce, Ph.D., Stanford U. Prof., Materials Science and Engineering
- Van Loan, Charles F., Ph.D., U. of Michigan. Joseph C. Ford Professor of Engineering, Computer Science
- Varner, Jeffrey D., Ph.D., Purdue U. Asst. Prof., Chemical and Biomolecular Engineering
- Vavasis, Stephen A., Ph.D., Stanford U. Prof., Computer Science
- Voelcker, Herbert B., Ph.D., Imperial Coll. of Science and Technology (England). Charles W. Lake Jr. Professor of Engineering Graduate School Prof. (Emeritus), Mechanical and Aerospace Engineering

GRADUATE SCHOOL

ADMINISTRATION

Alison G. Power, dean

J. Ellen Gainor, associate dean

Terry D. Plater, associate dean

Sarah S. Hale, assistant dean

Students interested in professional and research master's and doctoral degrees at Cornell pursue their graduate studies through the Graduate School, which administers 94 graduate fields, ranging from aerospace engineering to zoology. Programs leading to degrees in law (J.D. and LL.M.) are administered by the Cornell Law School; the doctor of medicine (M.D.) is administered by Cornell's Weill Medical College in New York City; the doctor of veterinary medicine (D.V.M.) is administered by the College of Veterinary Medicine; and the master of business administration (M.B.A.) is earned through the Johnson Graduate School of Management.

THE GRADUATE SCHOOL

The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of master of arts, master of science, and doctor of philosophy but only such general requirements as best accomplish the aim of graduate study: a period of study in residence, mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee, who usually has the primary responsibility for directing the student's thesis or dissertation research.

REQUIREMENTS FOR ADMISSION

A successful applicant to the Graduate School must:

1. hold a baccalaureate degree or its equivalent granted by a faculty or university of recognized standing;

2. have adequate preparation for graduate work in the chosen field of study;
3. have fluent command of the English language;
4. present evidence of promise in advanced study and research; and
5. take the Graduate Record Examinations (GRE) General Test or other specific examinations required by the various fields of study.

Additionally, international applicants whose native language is not English must provide proof of competency in English as part of the admissions process. Proof can be one of the following:

1. a score of at least 213 on the Test of English as a Foreign Language (TOEFL) taken before September 1, 2005. Applicants who take the new four-part TOEFL after that date must meet the following minimum scores: writing, 20; listening, 15; reading, 20; and speaking, 22. Individual fields of study may set higher minimums.
- or
2. evidence of at least two years of study in a college or university in a country where English is both the native language and the language of instruction.

Information about the TOEFL exam and the GRE—including examination times, dates, locations, and application forms—is available online from the Educational Testing Service (www.ets.org) or by postal mail at ETS, Princeton, NJ 08541, U.S.A.

DEADLINES

Each graduate field of study has specific deadlines for fall and spring admission. The earliest deadline is December 1; many deadlines fall in mid-January. Applications should be received no later than those published dates, which are available in the application booklet or online at catalog.gradschool.cornell.edu.

INQUIRIES

Applicants should contact the fields of study for answers to specific questions about admission to their graduate programs. Contacts in the fields of study also can answer questions about facilities for advanced study and research, special requirements, and opportunities for fellowships and assistantships. Phone numbers, e-mail addresses, and other contact information are available in the application booklet or online at catalog.gradschool.cornell.edu.

General questions about graduate study can be directed to Graduate School Student Services, 255-5820, or gradschool@cornell.edu or www.gradschool.cornell.edu or by writing

to Graduate School, 143 Caldwell Hall, Cornell University, Ithaca, NY 14853-2602.

FOR MORE INFORMATION

Detailed information about the admissions process, academic programs, financial aid, and student services is available in the application booklet and at the Graduate School web site, www.gradschool.cornell.edu. The site features links to the Graduate School's online application (apply.gradschool.cornell.edu), printable forms, and links to sites of interest to graduate applicants.

SCHOOL OF HOTEL ADMINISTRATION

ADMINISTRATION

Sheryl E. Kimes, dean

Leo Renaghan, associate dean for academic affairs

Margaret Haley Ferguson, associate dean for business administration

Steven A. Carvell, assistant dean

Gary M. Thompson, executive director, Center for Hospitality Research

Jan de Roos, Richard J. and Monene P. Bradley director for graduate studies

Lisa M. Shaffer, director of student services

Brad Walp, director of enrollment management

Neoma Mullens, associate director of admissions

Walter C. Williams, director of alumni affairs and development

Christine Natsios, director of alumni affairs

Edward A. Evans, director, Center for Entrepreneurship

TBA, director of Hotel School/Culinary Institute of America Alliance

Timothy J. Durnford, director of information technologies

Dina Kristof, registrar

DEGREE PROGRAMS

	Degree
Hotel and Restaurant Administration	B.S. M.M.H. M.S. Ph.D.

FACILITIES

Statler Hall Statler Hall is a unique building designed expressly to meet the needs of the faculty and students of the School of Hotel Administration. The building serves both practical and theoretical instruction, houses classrooms, lecture rooms, laboratories, a library, a computer center, a beverage management center, a newly refurbished auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. Statler Hall and the Statler Hotel were designed expressly for the school's academic and executive education programs, providing students with training and work experience in facilities similar to those in which they will work after graduation. In the fall of 2004, the school opened the Robert A. and Jan M. Beck Center, a 35,000-square-foot addition to Statler Hall. This \$16.2 million expansion provides state-of-the-art classroom and meeting spaces, a computer laboratory, and teaching technologies that facilitate an interactive teaching style.

The School of Hotel Administration's Nestlé Library has the largest single collection of hospitality-related materials in the United States. The collection contains approximately 23,000 books, 2,000 videotapes, and more than 600 journal, magazine, newsletter, and newspaper subscriptions. Materials on lodging, foodservice, travel and tourism, real estate, and general hospitality business topics comprise the core of the library's collections. Among the library's special features are numerous computerized information resources, including *Business Source Premier*, *Proquest*, *Hotel Outlook*, *Mintel Marketing Intelligence*, and the *Hospitality and Tourism Index*, a unique index to hospitality articles. Information resources and services for the hospitality industry are available for a fee through the library's HOSTLINE service. More detailed information about the Nestlé Library can be found at www.nestlelib.cornell.edu. In addition to offering an excellent collection of materials and access to extensive electronic resources, the Hotel School library provides instruction and research support to every student.

Statler Hotel and J. Willard Marriott Executive Education Center The Statler Hotel comprises 150 guest rooms, an executive education center, restaurants, a lounge, and the university's faculty and staff club. It demonstrates the very finest in hospitality and hospitality education practices. The Statler is an independent, self-sustaining teaching hotel that provides quality food, beverage, meeting, and lodging services to the local community and campus visitors, including parents and those who visit Cornell as part of the application process. In addition, the hotel is a practice management facility for certain classes, internships, and independent study projects. It offers part-time jobs to approximately 300 students each semester with priority given to students in the hotel school.

UNDERGRADUATE CURRICULUM

The School of Hotel Administration offers education in the numerous disciplines required for modern management in the global hospitality industry. Included in the core curriculum are courses in operations, management and organizational behavior, human resource management, finance/accounting, real estate development, food and beverage management, marketing, tourism, strategy, facilities management planning and design, communication, information systems, and law. Students also are encouraged to pursue a broad range of elective courses, including those in the humanities, social sciences, and natural sciences, as preparation for assuming leadership positions in the business and local community. For more complete information about undergraduate program requirements, see the school's student handbook or course supplement (available in 180 Statler Hall).

Requirements for Graduation

Regularly enrolled undergraduate students in the School of Hotel Administration are candidates for the degree of bachelor of science. The requirements for that degree are:

1. completion of eight semesters in residence for those who entered as freshmen; semesters of residence for transfer students are determined by the amount of transfer credit awarded;
2. completion, with a minimum cumulative grade point average (GPA) of 2.0 (including a GPA of 2.0 in a full-time schedule of courses on campus in the final semester), of 120 required and elective credits, as set forth in the table on the following page;
3. qualification in one language other than English. This requirement may be met by any one of the following: (a) three years of high school study of one foreign language; (b) score of 560 on Cornell Placement Test; (c) passing language course level 121 and 122 (8 credits) or the equivalent, and attaining a minimum grade of at least C- or "Satisfactory" in each (C or above for transfer credit from other institutions); or (d) passing language course level 123 or the equivalent;
4. completion of two units of practice credit; and
5. completion of the university requirement in physical education.

Suggested course programs appear on the following pages. The core courses account for 69 of the 120 credits needed for graduation, the hotel school electives account for 12 credits, and 18 credits are allotted for distributive electives. The remaining 21 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or any other four-year college or university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval of the school in advance. Without advance approval, such credit may not count toward the degree.

Credit earned in military science, aerospace studies, or naval science courses may be counted in the 21-credit group of free electives. No credit toward the degree is allowed for "00"-level courses, such as EDUC 005.

Transfer Credit Policy

Transfer students are required to complete all degree requirements with at least 60 credits at Cornell University. In the core, transfer credit may be allowed against basic courses only (e.g., H ADM 121, 106). Others generally are waived, and an upper-level course in the area substituted. For instance, if H ADM

243 were waived, another marketing course would be required in its place. The communication courses (H ADM 165 and 365) are tailored specifically to the School of Hotel Administration and, thus, communication courses taken elsewhere generally are not accepted against core courses.

Hotel elective courses may not transfer, except from the Culinary Institute of America. Eighteen credits in distributive electives may transfer, and 21 credits in free electives may transfer.

Concentration

While completing the hotel school elective courses, undergraduates in the school may select a concentration.

Before selecting a field of concentration, students should consult the coordinator of instruction in that area during the sophomore year to plan the sequence of courses that will best fit their program.

Upon completion, the concentration will be noted on the transcript, provided a cumulative GPA of 3.0 in the concentration was attained.

Foreign Languages

Mastery of a foreign language is particularly desirable for students who are planning careers in the hospitality industry and, hence, the second language requirement for graduation. Further information on foreign language courses at Cornell, and placement in language courses, may be found under "Modern Languages, Literature, and Linguistics" and under "Advanced Placement for Freshmen" in the College of Arts and Sciences section of this catalog.

Independent Study and Research

Students may conduct independent study or research projects in any academic area of the school under the direction of a resident faculty member. Credit is arranged on an individual basis. To enroll in an independent study or research project, students must obtain written permission from the school before the add deadline. See H ADM 497, 498, 499, or 699 for more details.

Practice Credit Requirement

As part of the degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice credit requirement and submit verification thereof. Further details are set forth in the *Practice Credit Handbook for Undergraduates in the School of Hotel Administration*, available in the school's student services office, 180 Statler Hall.

Management-Intern Program

Hotel school juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the management-intern program. Students receive 12 free elective credits and 1 practice credit. While on the internship, tuition is reduced and students receive a salary from the sponsoring organization. Positions are available in the United States and internationally. Sponsors include, but are not limited to, hotels, restaurants, casinos, corporate offices, consulting firms, and clubs. Application should be made one semester in advance. Information meetings are held at the

beginning of each semester and are open to all students. See H ADM 493 and 494 for more details. More information about the management-intern program also is available in the student services office, 180 Statler Hall.

Study Abroad

All students planning to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of this catalog.

The hotel school represents the international aspects of the hospitality industry in many ways—from the large number of international students in its program, to career opportunities throughout the world. To prepare for the global nature of the industry, students are encouraged to consider studying abroad in either the fall or spring semesters (or, in some cases, both). While abroad, students have the opportunity to learn about other cultures, become more proficient in a second (or perhaps third) language and, in those programs where internships are offered, work in an international environment.

Students should start the process of investigation early, including consultation with the hotel school study abroad adviser, 180 Statler Hall, as well as with the staff in the Cornell Abroad office, 300 Caldwell Hall. Requirements for college approval include a GPA of 3.0 or higher, good academic standing, registered full-time student status, and not being in one's final semester. Credits earned abroad are considered transfer credits, and, as such, they would count against the maximum of 60 transfer credits allowed. A maximum of 15 credits may be transferred from study abroad, and students should plan on taking no less than 15 credits while abroad. Courses typically transfer into distributive and free electives. Credit for study abroad will be awarded only after successful completion (marks equivalent to a Cornell grade of C or higher) of the semester abroad and receipt of the official transcript by the college.

For further details on the application process and deadlines, see the "Cornell Abroad" section of this catalog or view the Cornell Abroad web site at www.cuabroad.cornell.edu/.

Culinary Institute of America Alliance

The School of Hotel Administration has an alliance with the Culinary Institute of America, which is located in Hyde Park, N.Y. Among other opportunities, hotel school juniors and seniors are encouraged to apply for the Culinary Institute of America immersion program in January and during the summer. More information is available in the student services office, 180 Statler Hall.

Part-Time Study

Generally, part-time study is not allowed. Exceptions may be made for employee degree candidates, students who have medical reasons for a reduced schedule, or in other very extenuating circumstances. In no event shall a student be allowed to enroll on a part-time basis during the last semester of study. Further details on part-time study may be found in the school's student handbook (available in 180 Statler Hall).

Grading System

Letter grades ranging from A+ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each semester average as follows: A is equivalent to 4.0; B to 3.0; C to 2.0; D to 1.0; F to 0. For good standing, the student must maintain a minimum average of 2.0. A maximum of 4 credits each semester may be taken on a "satisfactory-unsatisfactory" (S-U) basis. Students should be aware that a satisfactory grade equals C- or above and an unsatisfactory grade equals D+ or lower.

Students whose semester averages are at least 3.3 and who took at least 12 credits of letter grades with no unsatisfactory or incomplete grades are honored by being placed on the Dean's List.

Course Requirements for the Bachelor of Science Degree

Note: The curriculum was revised during the 2003-2004 academic year, and the following requirements are for students entering the program in the fall of 2004 or later. Students who enrolled before the fall of 2004 should check their individual graduation requirements with the student services office, 180 Statler Hall.

<i>Required courses</i>	<i>Credits</i>
Operations: H ADM 105, 106, 201, 301, 305	14
Management and Organizational Behavior: H ADM 115	3
Human Resources Management: H ADM 211	3
Finance/Accounting: H ADM 121, 221, 222, 321	12
Food and Beverage Management: H ADM 236	4
Marketing, Tourism, and Strategy: H ADM 243, 441	6
Facilities Management, Planning, and Design: H ADM 255, 355	6
Managerial Communication: H ADM 165, 365, first-year writing seminar	9
Information Systems: H ADM 174, 275	6
Law: H ADM 387	3
Economics: H ADM 141	3
<i>Specifically required credits</i>	69
<i>Hotel electives</i>	12
<i>Distributive electives</i>	18
<i>Free electives</i>	21
Total credits required for graduation	120

Typical Course Sequences

The following arrangements of courses tend to be more fixed in the freshman and sophomore years, with a greater degree of flexibility characterizing the upperclass years.

Freshman Year

Typically, a freshman schedule will consist of 15 to 16 credits each semester, to include the following:

<i>Required courses</i>	<i>Credits</i>
H ADM 105 Introduction to Hotel Operations	2
H ADM 106 Introduction to Food Service Operations	2
H ADM 115 Organizational Behavior and Interpersonal Skills	3
H ADM 121 Financial Accounting	3
H ADM 141 Microeconomics for the Service Industries	3
H ADM 165 Managerial Communication I	3
H ADM 174 Microcomputing	3
First-year writing seminar	3
Electives	6
	<hr/> 28

Sophomore Year

<i>Required courses</i>	<i>Credits</i>
H ADM 201 Hospitality Quantitative Analysis	3
H ADM 211 Human Resources Management	3
H ADM 221 Managerial Accounting	3
H ADM 222 Finance	3
H ADM 236 Culinary Theory and Practice	4
H ADM 243 Principles of Marketing	3
H ADM 255 Hotel Development and Planning	3
H ADM 275 Introduction to Information Systems Management	3
Electives	6
	<hr/> 31

Junior Year

<i>Required courses</i>	<i>Credits</i>
H ADM 301 Service Operations Management	3
H ADM 305 Restaurant Management	4
H ADM 321 Hospitality Financial Management	3
H ADM 355 Hospitality Facilities Operations	3
H ADM 365 Managerial Communication II	3
H ADM 387 Business and Hospitality Law	3
Electives	12
	<hr/> 31

Senior Year

<i>Required courses</i>	<i>Credits</i>
H ADM 441 Strategic Management	3
Electives	24
	<hr/> 27

GRADUATE CURRICULUM

The school's programs for advanced degrees include those of Master of Management in Hospitality, Master of Science, and Doctor of Philosophy. For further information on graduate programs, contact the student services office, 180 Statler Hall, 255-7245.

Required Program for Master of Management in Hospitality Degree

<i>Required courses</i>	<i>Credits</i>
H ADM 110 Dean's Distinguished Lecture Series	1
H ADM 700 Master Class	1
H ADM 703 Operations Management	3
H ADM 711 Organizational Behavior	3
H ADM 712 Human Resources Management	3
H ADM 723 Corporate Finance	3
H ADM 724 Managerial Accounting	3
H ADM 743 Hospitality Marketing	
H ADM 744 Competitive Strategies for the Hospitality Industry	3
H ADM 751 Property Development and Planning	3
H ADM 761 Managerial Communication	3
H ADM 772 Information Systems Management	3
H ADM 781 Professional Development III	0.5
H ADM 782 Professional Development IV	1
H ADM 783 Professional Development I	0.25
H ADM 784 Professional Development II	0.25
H ADM 790 Externship	1
H ADM 793 Hospitality Industry Leadership Development Institute	1
Balance of courses is electives.	
Total credits required for the master of management in hospitality program	<hr/> 48

Course Schedule Information

For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school student services office, 180 Statler Hall, 255-3076.

ORGANIZATIONAL MANAGEMENT, COMMUNICATION, AND LAW**Management and Organizational Behavior****H ADM 110(1110) Distinguished Lectures in Hospitality Management**

Fall. 1 credit. Elective. New dean TBA. The Dean's Distinguished Lecture Series is a long-standing hotel school tradition that provides a unique opportunity for successful industry leaders to share their experiences with Cornell students. In its 40-year history, the Dean's Distinguished Lecture Series has hosted the most influential and accomplished leaders from every segment of the hospitality industry. Speakers share their views about successful management styles, possible career paths, critical industry-related issues, and qualities conducive to successful business leadership. Students have an unparalleled opportunity to learn and question how hospitality leaders view the current and future status of the industry.

H ADM 115(1115) Organizational Behavior and Interpersonal Skills

Fall, spring. 3 credits. Required. J. Brownell, T. Simons, and K. Walsh. Focuses on managing people in the workplace. Students develop theoretic lenses for understanding people and organizations, and practical tools for accomplishing personal and organizational goals. Topics include: individual differences, conflict management, problem-solving, power and influence, motivation, leadership, coaching and counseling, and group process. Students learn through case studies, self-assessments, experiential exercises, readings, discussions, papers, and group activities.

H ADM 310(3310) Statler Leadership Development Program

Fall and spring. 1 credit. Elective. Prerequisite: one semester (200 hours) of employment in Statler Hotel. The SLDP is a partnership among Hotel School faculty, Statler Hotel management, and industry executives, who together teach and guide students to become tomorrow's leaders. The program enables students to progress through five different paid employment phases in the Statler Hotel, from entry level to student manager. Students who progress to the level of student manager become Statler Fellows and will travel to a major city for an all-expense-paid trip that includes forums with industry leaders, site visits of leading industry facilities, and cultural activities. Each phase requires approximately 200 hours of paid employment at the Statler Hotel and is completed through a certification process. Weekly Friday afternoon sessions (2:30-4:00 P.M.) with Statler Hotel managers include discussions, performance reflection, training sessions, and industry forums with hospitality leaders.

H ADM 314(3314) High-Performance Leadership

Fall. 3 credits. Elective. Limited to 30 students. Prerequisite: hotel school juniors and seniors; H ADM 115. Graduate students should enroll in H ADM 614. T. Simons. Explores the nature of leaders and leadership from a variety of perspectives. Discussion of current articles in leadership prepares participants to be thoughtful leaders and

discriminating consumers of leadership ideas. Topics include charismatic leadership, leadership characteristics, the exercise of power, symbolic communication, gender challenges, and related themes. Leadership is examined from the individual, small group, and organizational perspectives. Case studies further illustrate the application of course material. Students assess their own leadership style and engage in leadership development activities. Class members have opportunities to interact with hospitality leaders and to gain a better understanding of the dynamics of leadership behavior.

H ADM 410(4410) Hospitality Management Seminar

Fall. 1 credit. Elective. Limited to 30 students. Prerequisite: hotel seniors and graduate students. Co-requisite: H ADM 110. Preregistered students or students wishing to add course who do not attend first class and fail to notify secretary in 146 Statler Hall of their absence before first class automatically are moved to instructor's waiting list. Students permitted to take course will have until F, Sept. 2, 2005, to add it. Failure to do so will result in their being dropped from course. New dean TBA.

Complements H ADM 110 by giving students the opportunity to interact with guest speakers, and to participate in roundtable discussions on issues relating to the hospitality industry. The dialog can give students a better understanding of industry trends, challenges, and opportunities.

[H ADM 411(4110) Negotiations in the Hospitality Industry

Spring. 3 credits. Elective. Limited to 30 students. Prerequisite: undergraduate standing; H ADM 115 or equivalent. Not offered 2005-2006. T. Simons.

Negotiation is a critical factor in business success. This course provides hands-on experience in negotiation in the hospitality context. Through role-play exercises, discussion, and writing, students develop into tough negotiators with whom people will want to continue doing business. Students become more comfortable with negotiations, and develop their own personal negotiating style. Students also learn how to adjust their negotiating style to respond appropriately to others' different personalities and negotiation tactics.]

[H ADM 414(4414) Quality Planning in the Hospitality Industry

Spring. 3 credits. Elective. Limited to 25 students. Prerequisites: senior or graduate standing; all required hotel school undergraduate courses at 100, 200, and 300 levels. Not offered 2005-2006. T. Hinkin.

Covers the analysis of work processes and examines organizations from three perspectives: the external customer, the internal customer, and management. This course is designed to provide students with a systematic approach to identifying, prioritizing, and improving key job functions and work processes. Students learn to use the tools of quality management including cost of quality, flowcharting, statistical process control, and collecting, organizing, and presenting data. A major component of the course is HOTS, an interactive hotel simulation that is conducted as a group activity. This is a seminar course, requiring active participation in discussion of readings and case studies.]

H ADM 415(4415) Managerial Leadership in the 21st Century

Spring. 1 credit. Elective. Owing to popularity of class, priority is given in following order: seniors/second-semester grads, juniors/first-semester grads, nonemployees, extramural students, sophomores, freshmen, and Cornell employees. Space permitting, class may be added up to first day, **but absolute deadline for dropping course is 12 noon F, Feb. 10.** F Feb. 10 (1-8 P.M.), S, Jan. 28 (9 A.M.-8 P.M.), Sun, Feb. 12 (9 A.M.-5 P.M.), 2006, in Statler Auditorium. Attendance mandatory for credit. Fee for required notebook (charged to student's bursar bill; notebook distributed on first day of class): \$35. K. Blanchard.

Helps students become participant observers in their own lives through studying the field of applied behavioral science. Students will be able to use what they learn about human beings and how they function best in groups and organizations on a day-to-day basis to develop high-quality relationships between themselves and the people they support and depend upon (their boss, staff, peers/associates, and customers). When high-quality relationships exist, organizations tend to be characterized by high levels of integrity, customer satisfaction, employee empowerment, and organizational effectiveness. The concepts learned also help students create quality friendships and family relationships. A final paper is due three weeks after the last day of class.

[H ADM 611(6611) Negotiations in the Hospitality Industry

Spring. 3 credits. Elective. Limited to 30 students. Prerequisites: graduate standing; seniors by permission of instructor; H ADM 710 or equivalent. Not offered 2005-2006. T. Simons.

Negotiation is a critical factor in business success. This course provides hands-on experience in negotiation in the hospitality context. Through role-play, discussion, and writing, students develop into tough negotiators with whom people will want to continue doing business. Students become more comfortable with negotiations, and develop their own personal negotiating style. Students also learn how to adjust their negotiating style to respond appropriately to others' personalities and negotiation tactics.]

[H ADM 614(6614) High-Performance Leadership

Fall. 3 credits. Elective. Limited to 30 students. Prerequisite: H ADM 710; hotel graduate students. Juniors and seniors should enroll in H ADM 314. Not offered 2005-2006. J. Brownell.

For description, see H ADM 314.]

H ADM 711(7711) Organizational Behavior

Fall. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or written permission of instructor in advance of preenrollment. J. Brownell.

Teaches how individuals, groups, and organizations interact within a complex, globalized service environment. Students develop interpersonal skills and gain a greater awareness of how their personal style influences leadership and decision-making. They learn to motivate others, negotiate ethical decisions, manage teams, and lead organizations through change.

Human Resources Management

H ADM 211(2211) Human Resource Management

Fall, spring. 3 credits. Required. Limited to 60 students per lec. Not open to freshmen or graduate students. Prerequisite: H ADM 115. M. Sturman and B. Tracey.

Provides students with a broad yet in-depth overview of the policies, practices, and procedures that can be used to attract, select, develop, and retain quality employees. A number of factors are considered that high-influence HRM policies and practices and provide opportunities to apply course topics to substantive situations that students will face as future hospitality professionals. Lectures, discussions, case studies, and videos.

H ADM 712(7712) Human Resource Management

Spring. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or written permission of instructor in advance of preenrollment. M. Sturman.

Covers the strategies that enable companies to attract, develop, and retain high-quality employees, focusing on selection, compensation, performance appraisal, and career management. In each of these areas the focus is on the return on the human-resource investment.

Managerial Communication

H ADM 165(1165) Managerial Communication I

Fall, spring. 3 credits. Required. Limited to 18 students per lec. (Students required to take this course generally may not delay it. If extenuating circumstances exist, student must petition to drop course by end of first week of classes. Course must be taken within first two semesters in hotel school, including any semesters in Internal Transfer Division (ITD). Add/drop and sec exchange must be approved by chairperson.) Priority given to hotel students. N. Dahl, D. Jameson, D. Lennox, A. Newman, and C. Snow.

Introduction to the role and importance of effective communication in managerial work, especially in the hospitality industry. Development of abilities in analytical thinking and clear expression. The process of planning, preparing, and executing professional communications with an emphasis on written documents. Students write a series of business documents and give oral presentations.

H ADM 364(3364) Advanced Business Writing

Spring. 3 credits. Elective. Limited to 20 students per lec; priority given to hotel students. Prerequisite: junior, senior, or graduate standing or written permission of instructor; for hotel undergraduates H ADM 165 or waiver; for non-hotel undergraduates, completion of their college's writing requirement. A. Newman.

Focuses on communicating challenging messages in business contexts. Writing assignments emphasize delivering persuasive messages, working with tone and style, and developing different types of documents in professional contexts. Different kinds of assignments are offered from semester to semester. Assignments often include business letters and memos written for various contexts, procedures and policy statements, promotional materials, negative messages, and analytical reports requiring research.

H ADM 365(3365) Managerial Communication II

Fall, spring. 3 credits. Required. Limited to 22 students per lec; priority given to hotel students. Prerequisites: junior or senior standing; for hotel undergraduates, H ADM 165 and 115. N. Dahl, D. Lennox, and A. Newman.

Broad study of communication in a management context. Emphasizes the significant role of communication in developing work relationships that enable managers to achieve their goals. Presents the theories and principles of persuasive communication that allow managers to influence professional audiences. Students increase their individual communication abilities by applying these concepts in a variety of managerial contexts, including interacting one-to-one, working in groups, and formally developing and presenting ideas to larger audiences.

H ADM 462(4462) Communication and the Multicultural Organization

Spring. 3 credits. Elective. Priority given to hotel students. D. Lennox.

Designed to help managers develop proficiency communicating among and between people who do not share some of their own cultural assumptions. Students can expect to learn communication variables that differ among cultural groups, including the use of eye contact, body language, personal space, hierarchy, and time. Additional topics include persuasion and negotiation across cultures, and the ethics of communication in international business. A blend of theory and practice. Activities include lectures, guided discussions, group projects, student and guest speaker presentations, and analysis of specific cross-cultural managerial challenges, with emphasis on the service industry.

H ADM 761(7761) M.M.H. Managerial Communication

Yearlong. 3 credits. Elective. Prerequisite: M.M.H. students or written permission of instructor in advance of preenrollment. D. Lennox and C. Snow.

Managers use communication strategies that involve written and oral messages to solve problems and accomplish professional goals within the workplace. The chief goal of this course is to help students become competent, confident, and versatile communicators. Each student prepares clear and powerful messages—reports, oral presentations, letters, and memos—and learns to approach problems analytically and make thoughtful communication choices, some of which are situation-specific.

Law**H ADM 385(3385) Business Law I**

Fall, spring. 3 credits. Elective. Open to hotel school juniors, seniors, and graduate students and non-hotel students. P. Wagner.

Provides students with a presentation of three substantive areas of business law: contracts, intellectual property, and business organizations. Students read judicial opinions, learn to identify issues, and analyze the issues by applying legal principles.

H ADM 387(3387) Business and Hospitality Law

Fall, spring. 3 credits. Required. Prerequisite: junior, senior, or graduate standing. D. Sherwyn.

Provides students with an integrated presentation of employment discrimination, tort, and contract concepts as they apply to the legal aspects of hospitality management. Examines relevant federal and state cases and statutes. The overall objective is to enable students to recognize, analyze, and evaluate legal issues for the purpose of making and articulating appropriate decisions in the workplace.

H ADM 485(4485) Employment Discrimination Law and Union-Management Relations

Spring. 3 credits. Elective. Prerequisites: junior, senior, or graduate standing; H ADM 387 or permission of instructor. D. Sherwyn.

Anti-discrimination statutes and union-management relations are two of the most pervasive legal issues affecting the hospitality industry. Managers must take these issues into account whenever they make a personnel decision. This course provides students with an understanding of the discrimination law, a framework for complying with law, a method using the law to maintain positive employment relations, and an understanding of how to negotiate and administer a union contract.

H ADM 487(4487) Real Estate Law

Fall, spring. 3 credits. Elective. Prerequisite: junior, senior, or graduate standing. Recommended: completion of H ADM 387. A. Klausner.

Provides students with an understanding of the legal issues surrounding the ownership, transfer, and use and development of real estate. Students learn to recognize and evaluate legal issues to inform the decision-making process with respect to real estate, whether as a business executive, an entrepreneur, or in personal life.

H ADM 489(4489) The Law of the Internet and e-Commerce

Fall. 3 credits. Elective. Prerequisite: junior, senior, or graduate standing. A. Klausner.

The Internet has changed how business is done in the hospitality industry. The change has raised numerous legal issues that courts and legislatures are trying to decide on or enact. The purpose of this course is to allow students to identify and understand the rapid developments of the law of e-commerce. Topics are: how the Internet works; consumer protection; privacy; intellectual property (patent, trademark, and copyright); personal jurisdiction in cyberspace; and online contracts and legal disclaimers. This course introduces students to this emerging area of the law and enables them to identify issues so that they can seek counsel intelligently and understand the law as it continues to evolve.

HOSPITALITY FACILITIES AND OPERATIONS**Food and Beverage Management****H ADM 236(2236) Culinary Theory and Practice**

Fall, spring. 4 credits. Required. Prerequisite: H ADM 106. Because this course is laboratory-based, students may not drop after second full week of classes; during first two weeks of classes, students may drop only with permission of instructor and/or academic dean. T. O'Connor, R. Spies, and R. White.

Introduces the student to food-and-beverage operations through three major components: fundamental food composition and properties, food products and preparation, and food safety. Students prepare recipes, menus, and production schedules. Students develop the ability to recognize properly prepared foods by preparing, tasting, and evaluating them. They also are involved in a project where they create menus, develop and standardize recipes, and complete a plan for a dining event. Completion of a five-hour practicum experience in the Statler Hotel back-of-the-house is a required course activity.

H ADM 334(3334) Wine and Food Pairing Principles and Promotion

Fall. 2 credits. Elective. Limited to 20 students. Prerequisite: hotel school juniors, seniors, and graduate students; H ADM 430. G. Pezzotti.

Focuses on the pairing and creative marketing of wine and food. Students develop an understanding of regional and varietal wine styles, how food flavors can change a wine's flavor, and the promotion of wine and food. Topics include wine and food pairing principles, cuisines and their flavor components, food trends in restaurant and in the home, special event planning, and wine-list development. Students design and present wine and food tastings to industry guests.

[H ADM 339(3339) Wine in Culture and History—I]

Fall. 2 credits. Elective. Note: Students may not add course after second lec. Not offered 2005–2006. Faculty.

Regions: Germany and Champagne. Through lectures, videos, guided discussions, and readings (but not tastings!), students examine the history, people, culture, and production of wine in the world's great wine regions. Also covered are wine and health issues, wine and food pairing, and retail wine buying and storage strategies. Different regions are covered in the fall and spring (H ADM 439), so the course may be taken both semesters in either sequence. Neither semester is a prerequisite for the other, nor are H ADM 430 Introduction to Wines and H ADM 339 and 439 prerequisites for the others.]

H ADM 430(4430) Introduction to Wines

Fall, spring. 2 credits. Elective. Prerequisite: hotel juniors and seniors; seniors and graduate students in all other colleges. Hotel students strongly encouraged to enroll in fall semester. Students are exempt from 21-year-old age requirement under Section 65 of New York State law. Preregistered students who do not attend first class and fail to notify secretary in 274 Statler Hall of their absence before first class are automatically dropped from instructor's records. However, students

still must drop course officially with their own college. Because of high demand for this course and because a product is consumed, absolute drop deadline in fall for all students is F, Sept. 9, 2005, and drop deadline in spring is F, Feb. 3, 2006. Fee (includes cost of wine glass and tasting kit): \$30. No auditors. S. Mutkoski.

Introduction to the major wine-producing regions of the world, and what the consumer needs to know to purchase wine at retail outlets and in a restaurant setting. Lecture topics include flavor components in wine, pairing wine and food, responsible drinking, selecting quality and value wine, and wine etiquette. Samples from a variety of countries, regions, and vineyards are evaluated.

H ADM 432(4432) Contemporary Healthy Foods

Fall. 3 credits. Elective. Prerequisite: H ADM 305 or equivalent. Priority given to 20 seniors and graduate students; others may enroll, space permitting. Cost of required field trip: \$75. M. Tabacchi.

Designed to build a greater awareness and understanding among nutrition and foodservice professionals of the origins and manifestations of today's health conscious and educated foodservice patron. Addresses the marriage of nutrition and the imaginative, flavorful cuisine demanded by today's consumer. Emphasis is on the use of fresh produce, lean meats, and lack of fabricated diet foods. Creativity and nutrient density of foods served are very important components of menu design in this course. Key topics include the preparation, marketing, merchandising, and selling of healthy menus in the Statler Hotel.

H ADM 435(4435) Selection, Procurement, and Supply Management

Fall, first seven weeks of semester. 2 credits. Limited to 20 students. Prerequisite: hotel school juniors, seniors, and graduate students or permission of instructor. Add/drop deadline Sept. 2, 2005. R. Spies.

Deals with contemporary management issues related to the procurement activities of the hospitality industry. Focuses on both the food distribution industry and the hospitality industry so that students understand the role the distributor plays in the movement of food and supplies from the producer to the hospitality operator, and how the creation of distributor partnerships serves to improve efficiency and reduce costs. Topics include distribution channels and intermediaries in the supply chain, food distributor financial statement analysis, evaluation and selection of suppliers, developing buying strategies, purchase timing and inventory management, the emerging role of the Internet, and e-procurement service providers.

H ADM 436(4436) Beverage Management

Spring. 2 credits. Elective. Limited to 25 students. Prerequisites: hotel juniors, seniors, and graduate students; H ADM 430 (co-registration not allowed). S. Mutkoski.

Designed for students who intend to pursue food and beverage management as a career. Deals specifically with the management of beverage operations. Lectures cover: dram shop liability; staff training and responsible customer service; beverage pricing; food and wine pairings; wine list development; purchasing, storage, and service; wine regions; cost controls and loss prevention; and creative

beverage merchandising. Guest lectures highlight industry trends and outlooks.

H ADM 437(4437) Anheuser Busch Seminar in Quality Brewing and Fine Beer

Fall, spring, first seven weeks of semester. 2 credits. Prerequisite: H ADM 430. Elective. G. Pezzotti.

Designed for upper-level students who intend to pursue food and beverage careers. Serves to advance one's knowledge about beers in terms of managing such products in a restaurant setting or other foodservice outlet. Lecture topics include the brewing process, sensory aspects of beer, international beer types and styles, marketing malt products, purchasing and distribution, storage and service, beer and food pairings, staff training and education, cost controls, and third-party liability issues. There is one required local field trip, no fee.

H ADM 438(4438) Seminar in Culture and Cuisine

Fall. 3 credits. Limited to 20 students. Prerequisites: H ADM 165 and 290/236 or permission of instructor. Elective. R. Spies.

Explores various cuisines in terms of history, lifestyle, and foods peculiar to a culture. Through readings, research, and meal preparation, students explore various cuisines in depth. The goal of the course is to develop an awareness of several international cuisines enabling students to make comparisons and draw relationships among foodways of different cultures. Possible incorporation of each cuisine into restaurant menus is discussed as well. Each student is involved in doing research reports, oral presentations, and designing and orchestrating the preparation of menus.

[H ADM 439(4439) Wine in Culture and History—II

Spring. 2 credits. Elective. Students may not add course after second lec. Not offered 2005-2006. Faculty.

Regions: Bordeaux, Burgundy, and California. Provides students with a cultural and historical perspective on wine and its place in society. Through lectures, videos, guided discussions, and readings students examine the history, people, culture, and production of wine in the world's great wine regions. Also covered are wine and health issues, wine and food pairing, and retail wine buying and storage strategies.]

H ADM 631(6631) Growth Strategies for the Restaurant Industry

Spring, first seven weeks of semester. 2 credits. Elective. Deadline to drop seven-week course is midpoint of course. Prerequisite: graduate standing; seniors only by permission of instructor. A. Susskind.

Through a series of directed readings, case studies, and roundtable discussions with industry leaders, this course focuses on the strategic issues in the food and beverage industry that affect the growth and development of multi-unit restaurant companies. In addition to the weekly scheduled seminar time, students are required to attend two additional receptions to honor the roundtable speakers. In class students critically evaluate selected research papers related to multiunit business management to serve as the basis for class discussion and the fostering of a broader understanding

of leadership and growth strategies in the multiunit restaurant business.

Operations

H ADM 105(1105) Introduction to Hotel Operations

Fall, spring. 2 credits. Required.

Prerequisite: hotel or ITD students. Co-requisite: H ADM 106. Students enrolled in Lec 1 of H ADM 105 take Lec 1 of H ADM 106 in same semester, and vice versa.

R. McCarthy.

Designed to introduce students to the scope of the hotel industry in addition the organizational structure and operational mechanics of how the departments within the rooms division of an individual hotel operate. Understanding the scope of the industry involves understanding who the major players are and what market segments their brands serve. Students gain an understanding of how work is performed and how activities are coordinated within and between hotel departments.

H ADM 106(1106) Introduction to Food Service Operations

Fall, spring. 2 credits. Required. Limited to 30 students per sec. Prerequisite: hotel students. Co-requisite: H ADM 105. Students enrolled in Lec 1 of H ADM 106 take Lec 1 of H ADM 105 in same semester, and vice versa. B. Lang.

Introduction to the principles of food and beverage management, beginning with an overview of the foodservice industry at large. Attention is focused on major industry segments, business practices, and trends. Subsequently, detailed consideration is given to the components of the foodservice system: marketing, menu planning, logistical support, production, service, and controls and quality assurance. Product and systems differentiation in various industry segments are emphasized throughout. Completion of a work experience in the Statler Hotel is a required course activity.

H ADM 201(2201) Hospitality Quantitative Analysis

Fall, spring. 3 credits. Required. Limited to 60 students per lec. Prerequisite: hotel students. R. Lloyd.

Introductory statistics course taught from the perspective of solving problems and making decisions within the hospitality industry. Students learn some introductory probability and how to gather data, evaluate the quality of data, graphically represent data, and apply some fundamental statistical methodology. Statistical methods covered include estimation and hypothesis testing relating to one- and two-sample problems of means, simple linear regression, and multiple regression. Problems involving multiple means (one way ANOVA) are covered as a special case of multiple regression, time allowing. Minitab is used as the statistical computing software.

H ADM 301(3301) Service Operations Management

Fall, spring. 3 credits. Required. Limited to 60 students per lec. Prerequisite: hotel students. M. Pullman.

Introduces statistical and operations research methods appropriate for the hospitality industry. The goal of the course is to provide students with the skills and understanding necessary for decision making using quantitative data. Students use computer spreadsheet software extensively. A key

requirement of the course is an ability to communicate the results of the analyses in a clear manner. Topics include: probability, decision analysis, modeling, forecasting, quality management, process design, waiting lines, and project management.

H ADM 303(3303) Club Management

Fall, second seven weeks; spring, first seven weeks. 2 credits. Elective. Deadline to drop seven-week course is midpoint of course. Limited to 35 students in fall; open enrollment in spring. Prerequisites for fall: no freshmen; hotel juniors and seniors; completion of H ADM 105 or equivalent. R. James.

Study of private membership clubs and the leadership role in club administration. The application of current management principles in a not-for-profit environment is discussed and club management is compared to other areas of the hospitality industry and other not-for-profit organizations. Topics include: tournament, facility, and recreation management; legal, financial, and legislative issues; human relations and human resource considerations; and marketing, pricing policies, and quality standards.

H ADM 305(3305) Restaurant Management

Fall, spring. 4 credits. Required. Limited to 27 students per lab. Prerequisites: hotel students; H ADM 106 and 236. Cost of lab manual, certification for alcohol service, utensils for front and back of house: approx. \$85.00. **Because this is a group course, absolute deadline to drop course in fall is Sept. 1, 2005, and in spring is Jan. 31, 2006.** A. Susskind.

Offers the opportunity to synthesize the skills, concepts, and theories students have learned in other classes and apply them practically in an actual restaurant setting. Lecture topics cover pertinent issues and principles relevant to the industry at large and then, as a class, the principles are incorporated into actions that occur in the student-run operation.

H ADM 401(4401) Restaurant Entrepreneurship

Fall, spring. 3 credits. Elective. Limited to 20 students. Prerequisite: hotel students; written permission of instructor. Max. cost of five required field trips: \$350. G. Pezzotti.

Designed for students who have a strong interest in food and beverage operations and who may be considering a career as an entrepreneur. Under the supervision of the instructor and using student-developed case studies, the students visit and analyze various independently owned restaurant operations. Analysis covers, but is not limited to: the restaurant's concept (market), organization, ownership, management, physical structure, staff, front-of-the-house operations, back-of-the-house operations, and fiscal integrity. Readings relative to current topics in the restaurant industry are required. Classes alternates weekly between field trips (2:30 P.M. through dinner hour) and seminar/case presentation.

H ADM 403(4403) Specialty Food and Beverage Operations: Guest Chefs

Spring. 3 credits. Elective. Limited to 20 students. Prerequisites: H ADM 305 or 702 by permission of instructor; hotel juniors, seniors, and graduate students by permission of instructor. G. Pezzotti.

Designed for students focusing in food and beverage preparation. Students considering a career in the hotel or restaurant food and beverage environment or those who anticipate interacting with present-day culinary trends find the course especially beneficial. Over the course of the semester, the class, working in groups, is responsible for the marketing, organization, planning, production, service, financial analysis, and accounting relative to three guest-chef specialty production nights. The chef is asked to recommend the evening's menu reflecting his or her culinary background and work with the class in producing the meal for the Cornell community using the hotel facility. A required final project analyzes the relative degree of success experienced during each guest-chef event. The analysis considers consumer reaction as well as proper application of food and beverage management principles.

H ADM 404(4404) Catering and Special Events Management

Fall. 3 credits. Elective. Limited to 30 students. Prerequisites: H ADM 236 or permission of instructor. Cost of required field trip to New York City: approx. \$250. R. Spies.

The catering and special events industries are among the fastest-growing segments of the hospitality industry. This course focuses on off-premise and on-premise catering for social and business functions, and the management of large-scale independent events, such as sporting events, artistic performances, and product launches. Topics include: organizational structure, legal aspects of catering and special events management, product and service development, marketing and sales, catered function and special event planning and execution, staff recruitment and training, post-event analysis, financial success of catering, and special events businesses.

H ADM 405(4405) Principles of Timeshare and Vacation Ownership

Spring, first seven weeks of semester. 2 credits. Elective. Deadline to drop seven-week course is midpoint of course. Prerequisites: for graduate students, completion of graduate core; for undergraduates, H ADM 321 and 387. J. deRoos.

Provides an intense introduction to the rapidly growing timeshare and vacation ownership industry. Students learn how the four major business disciplines of financial management, real estate development, marketing and sales, and resort operations are specifically applied to the industry. The course is taught by industry professionals. A project gives students the opportunity to study the nuances and challenges of the business. Each week, guest lecturers from Marriott Vacation Club International present a different perspective of this growing industry segment.

H ADM 407(4407) Seminar in Hotel Operations

Spring. 3 credits. Elective. Limited to 40 students. Prerequisite: junior or senior standing. Cost of field trips: approx. \$250. R. McCarthy.

Students develop their leadership abilities through a series of hands-on projects for the Statler and Waldorf-Astoria hotels. They gain experience by identifying the requirements and challenges of a project, creating a plan, and carrying out the leadership responsibilities that will result in others successfully

implementing their recommendations.

Drawing on their specific knowledge and skills in all the academic disciplines, students gain a broader perspective on the hotel as a business organization. They investigate the combination of human and technical forces that make a hospitality business succeed or fail. Emphasis is on reconciling the real or apparent conflicts between theory, as learned in the students' college courses, and practice, as observed in actual hotel operations. Upon completion of the course, students are able to evaluate issues and formulate cogent strategies for managing hotel operations.

H ADM 408(4080) Introduction to Casino Operations

Fall. 2 credits. Elective. Prerequisite: hotel students. Cost of required field trip to Atlantic City: approx. \$250. R. McCarthy.

A vital part of the hospitality industry, casino gaming is one of the most exciting and fastest-growing industries. This course focuses primarily on the operation and ownership of commercial casinos and the hotels attached to them. It is designed to introduce students to the internal and external casino environment. It looks at the historical development of gaming in America to understand how the industry has evolved to its present form. Students learn the organizational structure of a casino hotel, how it operates, and how it makes money. Students also gain an understanding of the different companies that own casino hotels and the current issues facing these companies. Topics include: casino marketing strategies and player rating systems; the social and economic impact of gaming and the various regulatory environments within which casinos operate; and how common casino games are played and the mathematics of the various games. Students build on their food and beverage and hotel knowledge to better understand the specific challenges facing casino hotel operators.

H ADM 602(6602) Spa and Spa Hotel and Resort Development and Management

Fall, spring. 3 credits. Elective. Limited to 33 students. Prerequisite: hotel seniors and graduate students; others may enroll, space permitting. Cost of two required field trips: approx. \$120. M. Tabacchi.

Emphasizes the development, management and marketing of spas, spas in hotels and resorts, and spa restaurants. Day spas, resort spas, and destination spas are studied in depth. The feasibility of success for new spas and marketing research necessary to establish new spas is discussed. The design of menus, mental and physical fitness programs, stress management, spa medical treatments, complementary medical treatments, and other spa programs are all considered. Personnel required, safety, legal, and ethical issues regarding spas are an important part of the course. The integration of nutritious menu items into restaurant menus and their marketing and merchandising is studied. Guest speakers from spas are an integral part of the course.

[H ADM 604(6604) Service Operations Management

Fall. 3 credits. Elective. Limited to 25 students. Prerequisite: graduate standing; H ADM 775 or equivalent. Not offered 2005-2006. G. Thompson.

Improves the understanding of the operations function of service organizations. Focuses

on the role and nature of service operations and the relationship of operations to other business functions, and develops skills and provides techniques for the effective management of service operations. Topics include service design, bottleneck and layout analysis, capacity management, workforce management, and quality management. This course is intended for any graduate students interested in services management.]

H ADM 605(6605) Yield Management

Fall. 3 credits. Elective. Limited to 30 students. Prerequisite: senior or graduate standing; H ADM 301, 701, or equivalent. S. Kimes.

Helps students learn how to apply the principles of yield management effectively. Focuses on the integration of yield management techniques with information technology, internal management issues, and external marketing concerns. Topics include yield management techniques, forecasting, overbooking, group decisions, and management and marketing issues.

H ADM 606(6606) Restaurant Revenue Management

Fall. 3 credits. Elective. Limited to 40 students. Prerequisites: H ADM 701 and 702; graduate standing or permission of instructor. S. Kimes.

Revenue management is a method for profitably managing capacity. The objective of this course is to help students learn how to apply the principles of revenue management to restaurants. The course focuses on methods of managing duration and price with the intent of maximizing revenue per available seat-hour. Topics include forecasting, overbooking, reservations systems, information technology, process design, pricing, and management and marketing issues.

H ADM 609(6609) Airline Service Management

Spring. 3 credits. Elective. Priority given to 30 seniors and graduate students; others may enroll, space permitting. Cost of field trip: approx. \$75. M. Tabacchi.

A must for those interested in careers in the airlines industry. The impact of 9/11 upon the industry is investigated. Airline service and on-board services are used as competitive advantages by airline carriers. In fact, names such as Singapore Airlines and Virgin Atlantic have become synonymous with service excellence in a service economy. The strategies of developing competitive and superior service in today's erratic economic climate is a major part of class discussion. Guest speakers from American Airlines, Singapore Airlines, US Airways, Delta, Continental Airlines, Virgin Atlantic, and SkyChefs are featured. In addition to service strategies both on the ground and in the air, students study the challenge of serving meals on international flights. Strategies, planning, and forecasting by these executives are examined. Case studies based upon national and international airline business are an integral part of the course. A field trip to an airline's hub city enables students to observe first hand the industry and its personnel in action.

H ADM 700(7700) Master of Management in Hospitality Master Class

Spring, three-day immersion seminar taught by industry leaders at their establishment during Jan. winter break. 1 credit. Elective. Faculty.

Students solve problems based on real-life scenarios and present their solutions to industry leaders and the Hotel School faculty members who accompany them. A final paper is due in the spring semester immediately following the seminar.

H ADM 703(7703) Operations Management

Summer. 3 credits. M.M.H. requirement.

Prerequisite: M.M.H. students or permission of instructor. G. Thompson.

Based on principles of scientific management, concerns itself with how work is done. Gives students the skills and understanding necessary for decision-making using quantitative and qualitative data. Students use computer spreadsheet software extensively for "number-crunching" analyses and learn to communicate the results of their analyses in a clear manner. Students are provided with a "tool kit" of sophisticated Excel models for solving service operations problems.

Facilities Management, Planning, and Design

H ADM 255(2255) Hospitality Development and Planning

Fall, spring. 3 credits. Required. Limited to 24 students per sec. Prerequisite: sophomore, junior, or senior standing. S. Robson.

Introduction to the issues and opportunities inherent in the development and planning of hospitality facilities, specifically hotels and restaurants. Course components include the project development sequence, conceptual and space planning, architectural design criteria, construction management, and the interpretation of architectural design and consultant drawings. The emphasis is on setting appropriate facilities requirements, understanding industry practice, and implementing properties decisions within a balanced design, operations, and financial framework.

H ADM 351(3351) Hospitality Facilities Design

Fall. 4 credits. Elective. Limited to 36 students. Prerequisite: H ADM 251 or 751, or permission of instructor. R. Penner.

This intensive studio course provides the graphic skills important for design, and experience in applying these skills in hospitality planning and design situations. Students prepare design projects using both hand drafting and computer-aided design (CAD) software. These assignments cover basic graphic skills and layouts for typical hotel spaces including guestroom suite, lobby and lobby bar, and full-service restaurant or specialty coffee retail outlet.

H ADM 352(3352) Hotel Planning and Interior Design

Spring. 3 credits. Elective. Limited to 24 students. Prerequisites: H ADM 351 or permission of instructor. Cost of required field trip: min. \$250; cost of presentation materials: min. \$150. R. Penner.

Helps students understand how to manage the design process—how to establish the scope of work, contracts, and budgets. Builds on earlier courses to give students experience in planning and designing guestrooms, lobby, food and beverage, function, and fitness spaces. The studio course focuses on a semester-long project, in which student teams prepare the interior design for an actual hotel

development. The class visits a northeastern city, tours the project site and competitive hotels, meets with an architect or designer, and establishes an integrated concept for the hotel. Students design all the main interior spaces, modifying the architectural plan as necessary, lay out furniture and fixtures, select finishes and FF&E, and prepare a full design presentation.

H ADM 355(3355) Hospitality Facilities Operations

Fall, spring. 3 credits. Required.

Prerequisite: H ADM 255. D. Zemke.

Overview of the operation of hospitality facilities, including operating costs for various types of facilities, types and characteristics of major building systems, and the responsibilities of the engineering maintenance department. The renovation needs of hospitality facilities are examined and key managerial aspects of renovations considered.

H ADM 451(4451) Restaurant Development

Fall. 3 credits. Prerequisites: hotel seniors or graduate students; juniors by permission of instructor; for undergraduates, H ADM 255, 243, and 305; for graduate students, H ADM 702 and 751. Students who wish to develop design skills for restaurant concepts are encouraged to enroll in H ADM 453 in the following spring. S. Robson.

Exposes students to the process, challenges, and rewards of developing a restaurant concept from idea to the construction of the first unit. Specific topics include concept creation, market research, creating the delivery process, concept testing and evaluation, restaurant feasibility, site selection, facility programming, and development issues such as licensing, permitting, and construction. Visitors from industry address best practices and their own experiences in getting a restaurant concept off the ground. The course includes readings, discussions with industry leaders, and cases, and culminates with students' formulating a detailed restaurant concept and development plan.

H ADM 452(4452) Sustainable Development and the Global Hospitality Industry

Spring. 3 credits. Elective. Prerequisite: junior, senior, or graduate standing. Cost of required overnight field trip: approx. \$100 for lodging and transportation; meals additional. D. Stipanuk.

Multidimensional course introducing the global sustainability and environmental movements, their impact on the hospitality industry, and responses to and opportunities associated with sustainability. Readings are drawn from the environmental, sustainability, and hospitality literature. Students should be prepared to encounter conflicting views in the readings and in classroom discussions. The course attempts to portray a variety of viewpoints regarding issues of contemporary interest to society and the business community. Discussion of these issues is a key component of the course.

H ADM 453(4453) Foodservice Facilities Design

Spring. 3 credits. Elective. Limited to 12 students per sec. Pre- or co-requisites: H ADM 351, 305, and 451 (other commercial food production experience acceptable) or permission of instructor; hotel seniors; juniors by permission of instructor. S. Robson.

Introduction to the basic concepts of foodservice facilities design and planning with an emphasis on restaurants. Students determine space allocations for the front and back of house areas, develop production workflow in the preparation and service areas, and select equipment using standards for production capability, quality of construction, and the ease of maintenance. All documentation is produced on CAD, which is taught as part of the weekly studio. Students also use studio time for planning, designing, and writing specifications for a medium-size restaurant kitchen.

H ADM 457(4457) Hotel Development

Spring. 3 credits. Elective. Prerequisite: senior or graduate standing; juniors by permission of instructor. Cost of required overnight field trip: approx. \$100 for lodging and transportation; meals additional. D. Stipanuk.

Focuses on the management structure and systems, laws and regulations, and industry practices that most influence the successful development of hospitality real estate, including lodging and eating facilities. Topics include: market studies, franchise requirements, governmental approvals, design construction contracts, the construction process, scheduling, budgeting, and emerging issues and opportunities. Guest speakers present case studies of actual development projects.

H ADM 751(7751) Properties Development and Planning

Fall. 3 credits. M.M.H. requirement. Limited to 30 students per sec. Prerequisite: M.M.H. students or written permission of instructor in advance of preenrollment. R. Penner.

Overview of hospitality project development and planning from the perspective of an owner and manager. Students learn about the role of the development team, feasibility studies, space programming, and construction management, and about functional and design criteria for hotels and restaurants. Teams prepare program documentation for a new hotel or restaurant or one undergoing major repositioning.

MARKETING, TOURISM, STRATEGY, AND INFORMATION SYSTEMS

Marketing, Tourism, and Strategy**H ADM 141(1141) Microeconomics for the Service Industry**

Fall, spring. 3 credits. Required. Limited to 60 students per lec. Prerequisite: hotel students. B. Carroll.

Introduces students to microeconomic principles and theories in the context of applications and solutions associated with the service industry with a focus on hospitality and travel. Topics include principles of production, supply and demand, firm behavior, costs, pricing and topics specifically

associated with the travel and hospitality industry. Includes readings, lec's, discussions, problem sets, and guest speakers.

H ADM 243(2243) Marketing Management for Services

Fall, spring. 3 credits. Required. Limited to 60 students per lec. Prerequisite: hotel students excluding freshmen.

L. Klein-Pearo and R. Kwornik.

Develops an understanding of marketing management, the process through which organizations analyze, plan, implement, and control programs to develop and maintain beneficial exchanges with target buyers. Students learn about marketing management through a mix of readings, lectures, class discussions, individual and group exercises, industry guest speakers, and exams. A key element of the course involves working as part of a small team to complete a marketing plan for a business organization. The plan provides a road map of an organization's future marketing strategies and programs.

H ADM 343(3343) Marketing Research for Decision Makers

Fall. 3 credits. Prerequisite: H ADM 243. Elective. M. Lynn.

Helps students become better consumers of marketing research. Topics include issues involved in designing, conducting, and interpreting focus groups, depth interviews, surveys, experiments, and choice models. Special emphasis is placed on what each method should and should not be used for and why.

H ADM 347(3347) Consumer Behavior

Fall, spring. 3 credits. Elective. Limited to 45 students. Prerequisite: junior or senior standing; H ADM 243. M. Lynn.

Helps students become better at understanding, predicting, and influencing consumer behavior. Topics include motivation, perception, learning, decision making, attitudes, nonverbal communication, persuasion, compliance, geodemographics, and psychographics. The practical implications of psychological principles are emphasized. Specific applications involve such areas as guest frequency programs, menu design, promotional strategy, personal selling, sales and marketing planning, and marketing research. Class time is used for discussions and application exercises as well as for the presentation of relevant information.

H ADM 441(4441) Strategic Management

Fall, spring. 3 credits. Required. Prerequisites: senior standing; at least one course in each of accounting, finance, marketing, operations, economics, and information systems. Because students work in groups, absolute drop deadline is two weeks after first day of class.

A. Kalnins.

Students learn to evaluate firms, industries, and the broader environments in which they exist. Since this is a capstone course, a part of the analysis process involves integrating material learned in all of the functional disciplines. Students also evaluate specific firm strategies and their impact on competitiveness and performance. Using all of this information, students are trained to select strategies for firms and develop plans for implementing them. Topics include environmental analysis, firm resource analysis, competitive analysis, strategy formulation, strategy implementation, international strategy, and strategic control.

H ADM 442(4442) Strategic Marketing

Fall. 3 credits. Elective. Prerequisite: senior standing; marketing course. C. Dev.

Offers innovative, practical, and profitable knowledge and insights to improve revenue, profit, and customer loyalty. Concepts include underlying strategic marketing, best-practice examples, and challenges facing hospitality brands. The unique benefits of this course come from the extensive use of detailed cases in which students break into competing teams to formulate strategies and tactics in a realistic marketing environment. Brands whose marketing strategies are examined include Hilton, Marriott, Accor, Choice, Four Seasons, Club Med, Harrah's, Shangri-La, Yum Brands, Starbucks, Disney, and Southwest Airlines. Learning is assessed via in-class contributions, written analysis of cases, a mid-term, and a final exam.

H ADM 443(4443) Innovation and Dynamic Management (also AEM 328[3280])

Spring. 3 credits. Elective. Limited to 15 students. Prerequisite: senior or graduate standing. C. Enz.

University-wide seminar-style course that investigates the innovation process and how to develop good management practice. Innovative firms are studied via case analyses, and effective management skills and capabilities are explored. Emphasis is placed on examining how businesses and managers can build profitable organizations through a process of creative rethinking, re-evaluating, and discarding existing practices.

H ADM 447(4447) Managing Hospitality Distribution Strategies

Spring. 3 credits. Elective. Prerequisites: H ADM 141 and 243. B. Carroll.

Provides a framework for managing marketing distribution strategies. Presents and analyzes the structure and interrelationships among distribution channels within the travel and hospitality industry. Theories of marketing distribution management and analysis are evaluated and applied within the context of that system. Topics include dimensions of hospitality marketing distribution, economics of the major hospitality distribution segments, managing hospitality distribution strategies, and the role of convention and visitors bureaus, national tourist organizations, and associations in distribution management.

H ADM 645(6645) Services Marketing

Fall. 3 credits. Elective. Prerequisite: graduate standing; marketing course or permission of instructor. R. Kwornik.

The main goal is to develop critical analytic skills and knowledge needed to implement service strategies for competitive advantage. Topics include key differences in goods versus services marketing and service gaps analysis, services consumer behavior and satisfaction, service quality, relationship marketing, service recovery, service design (including analysis of service as theater), service blueprinting and the "servicescape," and services demand management, pricing, promotion, and distribution. Lectures, discussion of current services research, case analyses, and guest-speaker presentations. Also used are a variety of group and individual written projects and presentations, including a services-marketing audit.

H ADM 742(7742) Creating and Managing for Service Excellence

Fall. 3 credits. M.M.H. requirement.

Prerequisite: M.M.H. students or written permission of instructor in advance of preenrollment. Last offering fall 2005. M. Pullman.

How do you maintain profitability in an increasingly competitive environment? One approach is to manage for value, deliver the quality level the customer is willing to pay for, and produce it at a cost that allows a firm to prosper. This course covers the concepts, complexity, and management practices necessary to deliver consistent value in the hospitality industry (determining customer expectations; integrating marketing into operations; managing customer satisfaction; and measuring and controlling costs). Case studies, lectures, discussion, and industry experts are used, but the emphasis is on translating the strategic understanding of value into management practice.

H ADM 743 (7743) Marketing

Summer. 3 credits. M.M.H. requirement.

Prerequisite: M.M.H. students or permission of instructor. L. Klein-Pearo.

Covers the fundamental concepts of marketing management and in the techniques, analyses, and frameworks for solving marketing-management problems. Explores theories and conceptual frameworks that draw on customer, competitor, and core-capability analyses in marketing planning and implementation. Students develop decision-making capabilities in product/service development, pricing, advertising and promotions, and distribution policies. The capstone of the course is team development of a marketing plan for a new hospitality business.

H ADM 744(7440) Competitive Strategies for the Hospitality Industry

Spring. 3 credits. M.M.H. requirement.

Prerequisite: M.M.H. students or permission of instructor. C. Enz.

Strategic management considers the total enterprise, the industry, and the competitive environment in which firms operate. This integrative capstone course focuses on how firms formulate, implement, and evaluate corporate and business strategies. The goal is for students to develop a mastery of the tools used to perform analyses of the industry and competitors and to develop skill at evaluating and implementing strategies to sustain a firm's competitive advantage while generating superior value for customers.

Information Systems**H ADM 174(1174) Microcomputing**

Fall, spring. 3 credits. Required. Limited to 30 students per sec. Prerequisite: fall, hotel school freshmen and transfer students; spring, open enrollment. P. Clark, M. McCarthy, and M. Talbert.

Provides a foundation in information technology (IT) and how it relates to everyday business computing. Teaches IT concepts during lectures and reinforces these concepts in practical lab sessions using current standards of business computing. Topics include fundamental IT concepts, proficiency in Microsoft Office, and understanding the issues of tool selection, standardization, and efficiency, integration of applications, and recognizing the importance of good computer management.

H ADM 274(2274) Microcomputing

Spring. 3 credits. Elective. Limited to 30 students per lec. Prerequisite: non-hotel students. P. Clark.

Introduction to business computing to develop functional computer fluency. Students develop their skills in the areas of text, spreadsheets, presentation and file management, and web site management. The course is entirely lab-oriented and students work using Windows 2000. Software used is the latest in word processing, spreadsheet, presentation, database management, and web design.

H ADM 275(2275) Introduction to Information Systems Management

Fall, spring. 3 credits. Required.

Prerequisite: hotel students; H ADM 174. G. Piccoli and E. Wagner.

Goals are to learn about information systems; understand and be able to clearly articulate the difference between information technology and information systems; link concepts and technical jargon to the real-world uses of information systems; and learn the information-systems fundamentals needed throughout hospitality careers. Designed for students who will work within hospitality organizations as end users, user-managers, leaders, and information-systems professionals. This is not a course for technologists but rather for the general-management student. Provides the essential information that all hospitality management students should know about information systems.

H ADM 374(3374) Fundamentals of Database Management and Data Analysis

Fall. 3 credits. Elective. Limited to 30 students. E. Wagner.

Prepares students to create and manage information in a knowledge-based organization. The design and use of database and spreadsheet functionality are used to perform analyses and make decisions. Students gain a conceptual foundation and then practice applying these ideas through project activities and course readings. Topics include information and information management in organizations; fundamentals of relational database design and implementation; SQL queries; how to work in a database design team and as an individual research analyst, database design and management using Microsoft Access; how to normalize a database design to ensure effective use of the technology; analysis of the managerial decision-making process functionality within Microsoft Access and Excel; the conversion of data into information and knowledge that can be leveraged for particular business goals; the role of data and information management in contemporary society; and data management opportunities in the hospitality industry.

H ADM 375(3375) Internet Technologies for the Entrepreneur

Spring. 3 credits. Elective. Prerequisite:

H ADM 174 or equivalent. **Owing to capacity restraints in Binenkorb lab, attendance at first class is mandatory; no-show students are dropped from course to make room for stand-by students; students may not drop course after second week of class.** M. Talbert.

Introduces students to the technical underpinnings of the Internet, with an emphasis on the World Wide Web. Students survey many of the key technologies that form

the mechanism of the web, including HTML, DHTML, XML, JavaScript, VBScript, Java, Style Sheets, Browsers, Servers, ActiveX, and Active Server Pages. The goal is a managerial familiarity with a broad range of important technologies, rather than proficiency in any single technology. This is an implementation course; in other words, programming. Students should expect a considerable demand on outside time for practice necessary to gain programming fluency in the languages introduced.

H ADM 474(4474) Strategic Information Systems

Spring. 3 credits. Elective. G. Piccoli.

Targeted to students contemplating careers in general management and operations, marketing, or information systems. Managerial in nature, the course is designed to help students think strategically about IT (and, by extension, about any organizational resource) and provides students with analytical tools that can help them make effective decisions about the use (or not) of IT in organizations. Students learn the managerial implications of recent technology trends, the economic premises of the new competitive landscape dominated by pervasive networks (e.g., the Internet), how information technologies can be leveraged to create shareholder value and service customers, how information and advanced IT can create competitive advantage, and when and how a competitive advantage based on IT can be sustained. Course includes lectures, case study discussions, guest presentations, and project work. Many of the class activities center on analysis and discussion of readings and case studies. Class meetings are very interactive.

H ADM 476(4476) Visual Basic for Applications: End-user Programming

Fall, spring 3 credits. Elective. Limited to

30 students per lec. **Owing to capacity restraints in Binenkorb lab, attendance at first class is mandatory; no-show students are dropped from course to make room for stand-by students; students may not drop course after second week of class.** M. Talbert.

Introductory programming course for end-users (e.g., business managers and consultants). Students develop fluency in the popular Visual Basic for Applications (VBA) language. Using VBA, students learn how to customize and extend the Microsoft Office Suite, with an emphasis on Excel. They also develop custom information systems using Microsoft Office applications as programmable building blocks. Secondary objectives of the course are to cover fundamental design and programming principles. The course is entirely lab based.

H ADM 477(4477) Advanced Business Modeling

Fall, spring, second seven weeks of semester. 2 credits. Limited to 21 students. Prerequisite: seniors and graduate students with priority given to M.M.H. students; H ADM 174. Note: Deadline to drop seven-week course is midpoint of course. M. McCarthy and M. Talbert.

Focuses on organizational systems, planning, and decision process, and how information is used for decision support in organizations. Provides students with practical skills in developing spreadsheet computer models using Microsoft Excel. Topics include business planning and forecasting, numerical

methods, advanced formulas and functions, user-interface design, data protection and validation, importing external data, and output presentation.

H ADM 772(7720) Information Systems Management

Fall, 3 credits. M.M.H. requirement.

Prerequisite: M.M.H. students or written permission of instructor. G. Piccoli.

Information technologies (IT)-based information systems are important to almost all organizations. They are a primary means for ensuring efficient operations and effective decision-making, and they offer the potential to increase a firm's competitiveness when appropriately planned and used. Students become comfortable with all aspects of information systems decision-making, including systems analysis and design, systems selection and purchasing, and the risks in IT investments. They become familiar with the systems found in hospitality operations. The course is not overly technical, but you are expected to be comfortable researching and discussing information technologies.

FINANCE AND REAL ESTATE

Finance/Accounting

H ADM 120(1120) Personal Financial Management

Fall, spring, 2 credits. Elective. Limited to 50 non-hotel students. L. Hensley and E. Cornell.

Overview of personal financial planning including money management, tax planning, use of credit, insurance, investing, retirement planning, and estate planning.

H ADM 121(1121) Financial Accounting

Fall, spring, 3 credits. Required.

Prerequisite: hotel students. D. Dittman.

Introduction to the basic principles of accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

H ADM 221(2221) Managerial Accounting

Fall, 3 credits. Required. Prerequisites:

H ADM 121 and 174 or equivalents.

G. Potter and J. Hesford.

Focuses on the use of accounting information for management decision making and control. Topics include product costing, budgeting, management decision making, and control systems. There is one common exam at the end of the semester.

H ADM 222(2222) Finance

Fall and spring, 3 credits. Required.

Prerequisites: hotel students or permission of instructor; H ADM 121, 221, or equivalents, or permission of instructor.

L. Canina and S. Carvell.

Provides students with accounting cash flow information for financial planning, capital structure decisions, capital budgeting evaluation, and short-term and long-term financial decision-making. Topics include current asset management, short-term financing, capital budgeting, long-term financing, cost of capital, and problems in international finance.

H ADM 223(2223) Financial Accounting Principles

Fall, spring, 3 credits. Elective. Prerequisite: non-hotel students. P. Strebel.

In-depth introduction to the principles of financial accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

H ADM 225(2225) Finance

Fall, spring, 3 credits. Elective. Prerequisite: undergraduate non-hotel students. Faculty.

Students are exposed to a wide variety of corporate finance topics, including: time value of money, risk and return, valuation models, cost of capital, capital budgeting, capital structure, and dividend policy.

H ADM 321(3321) Hospitality Financial Management

Fall, spring, 3 credits. Required. Limited to 54 students per sec. Prerequisites: hotel students; H ADM 121, 221, and 222, or permission of instructor. A. N. Geller.

Integrates the areas of financial accounting, managerial accounting, and finance, and applies the interpretive and analytical skills of each to hospitality industry situations. Topics provide an understanding of: the analysis and interpretation of financial statements and operating reports, the budgeting and forecasting process, the application of C-V-P and other decision models to hospitality operations, operating agreements, capital investment analysis, financial feasibility, project and general financing, valuation techniques, and measuring value for important stakeholders.

H ADM 421(4421) Internal Control in Hospitality Operations

Fall, 3 credits. Elective. Limited to 30 students. Prerequisites: H ADM 321, 722, or equivalent. A. N. Geller.

Deals primarily with operations. Generally, hotel and restaurant operations are analyzed from the perspective of preventing fraud and embezzlement. Specifically, the design and distribution of production, accounting, information systems, and supervisory tasks are studied in a manner that ensures effective internal control and verifiable audit trails. The course relies heavily on case studies of actual frauds perpetrated in hotel and restaurant operations.

H ADM 422(4422) Taxation and Management Decisions

Fall, 3 credits. Elective. Limited to 75 students. Prerequisite: junior, senior, or graduate standing. L. Hensley.

Introduction to tax advantages and disadvantages of various organizational structures, including: corporations, partnerships, subchapter "S" corporations; financial information reporting to tax authorities and to shareholders and how these reports differ; use of depreciation methods to achieve tax reductions; and syndication techniques and the role tax laws play in promoting private investments and development.

H ADM 426(4426) Advanced Corporate Finance

Fall, 3 credits. Elective. Prerequisite: junior or senior standing; H ADM 321. Graduate students should enroll in H ADM 326. Faculty.

In-depth analysis of corporate financial management, including: financing alternatives and capital structure decisions, cash management and working capital management, capital budgeting decisions, risk analysis, valuations of real options, and Economic Value Added analysis. Although applicable to all businesses, special attention is placed on issues important to the hospitality industry. The course emphasizes analytical methods through case studies and a semester project.

H ADM 427(4427) Multinational Finance and International Risk Management

Spring, 3 credits. Prerequisites: H ADM 121, 221, 222, or equivalents. Graduate students should enroll in H ADM 627.

C. Chang.

Focuses on the international aspects of financial management important to the hospitality industry with the intention of providing an understanding of and confidence in dealing with the economic issues faced by the multinational corporation. The major areas covered are: the international financial management environment, the management of foreign exchange risk, international asset management, and international sources of funds.

H ADM 429(4429) Investment Analysis and Portfolio Management

Fall, spring, 3 credits. Elective.

Prerequisites: non-hotel students; H ADM 125 or 222. Students with background in economics, quantitative analysis, and computers are advised to consider H ADM 424. Graduate students should enroll in H ADM 629. C. Chang.

Covers basic institutional and analytical aspects of investment management. Topics include: financial markets, sources of investment information, risk-return analysis, bond and stock valuation, behavior of security prices, portfolio analysis and portfolio management, asset allocation, and mutual fund investment. While newcomers to investment management commonly believe that investing is about how to make money in the markets, this course instead focuses on identifying and managing to reasonable and feasible investment objectives in general and in today's highly competitive investment markets. To that end, students are required to apply concepts and tools to managing a simulated investment portfolio (the Investment Management Game) during the course of the semester.

H ADM 624(6624) Reporting and Analysis of Financial Statements

Fall, spring, 3 credits. Elective. Limited to 60 students. Prerequisite: junior, senior, or graduate standing. G. Potter.

Designed to provide understanding of the basic accounting model, the underlying concepts for income measurement, and the accounting rules for the valuation of assets, liabilities, and owners' equity. Emphasis is placed on understanding the economic substance of the transactions and the implication of using alternate accounting rules on the resulting numbers, especially in assessing the "earnings quality." Focus is from an outsider's view of the company, and students should be able to evaluate and interpret the published financial information, specifically in the context of valuation, debt and compensation contracts, and credit assessment.

H ADM 626(6626) Advanced Corporate Finance

Fall. 3 credits. Elective. Prerequisite: H ADM 321; graduate standing. Faculty. For description, see H ADM 426.

H ADM 627(6627) Multinational Finance and International Risk Management

Spring. 3 credits. Elective. Prerequisites: H ADM 121, 221, 222, or equivalents. Undergraduates should enroll in H ADM 427. C. Chang.

For description, see H ADM 427.

H ADM 629(6629) Investment Analysis and Portfolio Management

Fall, spring. 3 credits. Elective. Prerequisites: H ADM 125 or 122. C. Chang.

For description, see H ADM 429.

H ADM 721(7721) Financial Economics

Fall. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or written permission of instructor in advance of preenrollment. L. Canina.

Integrates corporate finance with the framework of value maximization and the competitive analysis of product and factor markets in the hospitality industry. Topics include short-term asset management, strategic valuation, capital budgeting analysis, capital structure decisions, leasing, and international financial management.

H ADM 722(7722) Hospitality Financial Management

Spring. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or written permission of instructor in advance of preenrollment. G. Potter.

Covers both managerial accounting and financial management as they are practiced in the hospitality industry. Topics include hospitality accounting systems, financial analysis, operational analysis, cost behavior, budgeting and forecasting, pricing, and feasibility analysis.

H ADM 723(7723) Corporate Finance

Summer. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. L. Canina.

Builds on the prerequisite courses in financial accounting and financial reporting. Topics include applications of discounting techniques, evaluation of capital expenditures, estimating cost of capital, bond and stock valuation, portfolio theory, asset-pricing models, and capital-structure decisions. The course emphasizes valuation skills as a means to bring together the cost of capital, financing, and operating issues faced by a firm. Students come to understand the financial impact of managerial decisions, know how to differentiate decisions that increase the value of a firm, and know how to properly evaluate investment, financing, and payout decisions. They also learn standard techniques of financial analysis, such as discounted cash-flow valuation, capital budgeting, risk analysis, and estimating the cost of debt and equity.

H ADM 724(7724) Managerial Accounting

Summer. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. J. Hesford.

This introduction to managerial accounting, which is the use of accounting information for decision-making and control, covers cost behavior, cost classification, cost-volume-profit analysis, product costing, budgeting,

variance analysis, cost estimation, cost allocations, customer-profitability analysis, managerial control systems, and performance measurement.

Real Estate Development**H ADM 420(4420) Principles of Real Estate**

Fall, spring; 3 credits. Elective. Limited to 50 students. Prerequisites: H ADM 222 or equivalent; junior or senior standing. Graduate students must enroll in H ADM 620. J. deRoos.

This survey course approaches real estate from four perspectives: investment, market, mortgage finance, and legal. Understanding these perspectives enable students to make better investment and financing decisions, use real estate resources wisely, understand public policy issues, and be prepared for additional courses in real estate investment, finance, and development.

H ADM 423(4423) Hospitality Real Estate Finance

Fall. 3 credits. Elective. Prerequisite: H ADM 321 or equivalent; junior or senior standing. Graduate students must enroll in H ADM 621. D. Quan.

Focuses on real estate financing for hospitality-oriented projects. Addresses the following topics: methods of measuring rates of return; feasibility and appraisal processes; equity and debt financing vehicles to include joint ventures, limited partnerships, construction mortgages, participating, convertible, and seller-financed mortgages; forms of operating agreements to include management contracts, leases, and franchises; and trends in international hotel franchising. Presentations by hospitality industry real estate practitioners tie course material to current industry practices.

H ADM 620(6620) Principles of Real Estate

Fall, spring. 3 credits. Elective. Prerequisite: graduate standing; H ADM 721 or equivalent. J. Corgel.

For description, see H ADM 420. Includes much of the material in H ADM 420 plus special topic sessions that feature guest speakers from industry, faculty from other colleges, and case studies.

H ADM 621(6621) Hospitality Real Estate Finance

Fall. 3 credits. Elective. Prerequisite: H ADM 722 or equivalent; graduate standing. J. de Roos.

Focuses on real estate financing for hotel and restaurant projects. Methods of measuring rates of return; feasibility and appraisal processes; equity and debt financing vehicles to include participating, convertible, and seller-financed mortgages; forms of operating agreements to include management contracts, leases, and franchises; and trends in international hotel financing. Presentations by hospitality industry real estate practitioners tie course material to current industry practices.

H ADM 622(6622) Hospitality Asset Management

Spring. 3 credits. Elective. Prerequisite: for undergraduates, H ADM 321 and completion of H ADM 420 highly recommended; for graduate students, H ADM 722 and completion of H ADM 620 highly recommended. J. deRoos.

Hotel asset management is the fiduciary responsibility of managing the hospitality investment to meet the specific objectives of ownership. The asset manager's role in building value is analyzed at both the portfolio and property levels. Lectures, assignments, cases, and guest speakers introduce the latest techniques in asset management and provide insights into current lodging-market and operational challenges. Topics include management contracts, managing the manager, benchmarking property performance, and the capital improvements decision.

H ADM 625(6625) Securitization and Structured Financial Products

Fall, spring. 3 credits. Elective. Limited to 40 students. Prerequisites: H ADM 222 or 721, and 427 or permission of instructor; senior or graduate standing. D. Quan.

Deals with the structure and analysis of securitized financial products with an emphasis on residential and commercial mortgage-backed securities (MBS). The course is intended for those who wish to acquire a working knowledge in the analysis of such securities (e.g., collateralized mortgage obligations, commercial MBS, auto loan, and credit card backed securities) and an understanding of the securitization process. The course's subject matter necessitates a highly analytic and quantitative approach, and students are required to have a strong background in finance and economics. Students who have questions about preparation or background should see the instructor.

H ADM 628(6628) Real Estate Finance and Investments

Spring. 3 credits. Elective. Limited to 40 students. Prerequisites: H ADM 323 or 621, 450 or 651; graduate standing. J. Corgel. Promotes sound real estate investment and finance decision-making, use of advanced theory, and techniques in financial economics. Real estate investment decisions are made through applications of an extended version of the after-tax discounted cash flow model, and other valuation models including option pricing models and regression models. Financing decisions are made using the techniques of modern financial analysis. A wide array of financing options are considered including participating and accrual mortgages. Securitization of equity and debt claims to real estate also are extensively covered. All types of residential and nonresidential real estate are analyzed, including hospitality properties.

OTHER**H ADM 290(2290) Introduction to Culinary Arts**

Spring. 2 credits. Elective. Limited to 28 non-hotel students; priority given to seniors and graduate students. Fee (includes cost of uniform and uniform cleaning): \$75. Preregistered students who do not attend first class are automatically dropped from instructor's record. Absolute drop deadline for this course is W of second week of classes. Students on wait list will be selected through a lottery system. All lottery participants must attend first week's class. T. O'Connor.

Study of food groups and their methods of preparation, cooking, and presentation. The

course is designed specifically for non-hotel students who are interested in learning the professional approach to food preparation and service with hands-on practice. Students are involved in food product identification, preparation and service methods, and learning the professional language of food and cooking.

H ADM 490(4490) Housing and Feeding the Homeless

Spring. Variable credit. Elective. T. O'Connor. Explores public and private sector approaches to addressing hunger and homelessness. Through lectures, class discussions, research, community service work, and a field placement practicum, students explore the economic, social, and political issues of our country's concern with housing and feeding disenfranchised and homeless people. This is a service learning course centered on community work experience. Students must choose one of three options: (1) 4 credits. Students work in pairs or small groups with a local area agency that provides services for homeless or disadvantaged people. This field practicum comprises approximately 60 credits of work during this semester, half of which is in direct contact with the agency and its clients. (2) 4 credits. Students participate in an alternative spring break in an agency(ies) in Washington, D.C., or New York City. Students work five full days in an agency that serves homeless, hungry, or disenfranchised people. Housing and transportation are arranged. This option may cost students up to \$100. Students interested in this option must see the instructor at pre-registration time. (3) 3 credits. Students do community work in the Ithaca area with an agency that serves homeless, hungry, incarcerated, or disenfranchised people. Students work on a regular weekly basis for a minimum of 30 credits during this semester.

H ADM 491(4491) Hotel Ezra Cornell (H.E.C.)

Fall and spring. Variable credit: 2-3 in fall and 3-4 in spring. Elective. Prerequisite: hotel juniors, seniors, and second-year M.M.H. students; permission of instructor. Cost of required field trip to Nov. hotel show in NYC: approx. \$200. R. McCarthy. Student-elected board members of Hotel Ezra Cornell (H.E.C.) may receive up to 3 credits in hotel electives for their participation in the planning, organizing, staffing, directing, and controlling of H.E.C. '06 to be held April 7-10, 2006. Additional credit would be in free electives only. Next year's board will continue to implement the business plan developed by the previous H.E.C. board of directors: "To establish Hotel Ezra Cornell as the premier forum to deliver a unique hospitality learning experience to industry leaders and students in an interactive setting." Board positions are limited to students in good standing with a minimum cumulative GPA of 2.5. Eligibility requirements for specific board positions can be obtained in the student services office, 178 Statler Hall. Eligible students considering a board position for H.E.C. should pre-enroll for the course and speak with the instructor; final enrollment is determined by an election process.

H ADM 493(4493) Management Intern Program I—Operations

Fall, spring. 6 credits. Elective.

Prerequisites: H ADM 105 or 115, 201, 211, 121, 221, 222, 106 or 236, 243, 255, 165, 174, and 275. Highly recommended: H ADM 321, 305, 355, and 365. Additional course work may be required for applicants considering specialized internships. Students must submit detailed plan for completion of all remaining academic requirements before acceptance into course. Faculty.

Limited to juniors and seniors in the hotel school with approval of the Management-Intern Program (MIP) faculty committee. The application process begins the semester before the planned internship. An MIP information meeting is held at the beginning of each semester. Students accepted to MIP enroll in both H ADM 493 and 494. Students enrolled in H ADM 493 receive academic credit in free electives as well as practical experience in the hospitality field. Six performance evaluations are used to determine this grade. Students must be in good academic standing and have a GPA of at least 2.0 in the preceding semester. Further information is available in the student services office, 180 Statler Hall.

H ADM 494(4494) Management Intern Program II—Academic

Fall, spring. 6 credits. Elective. Faculty.

Limited to juniors and seniors in the hotel school with approval of the Management Intern Program (MIP) faculty committee. The application process begins the semester before the planned internship. An MIP information meeting is held at the beginning of each semester. Students accepted into MIP enroll in both H ADM 493 and 494. Students enrolled in H ADM 494 receive academic credit in free electives for submission of a goals and objectives statement, four management reports, six journal entries which focus on insights gained through analysis of events occurring in the workplace, and four Hospitality Management Checklist summaries. Upon return to campus, each intern completes a debriefing and an oral presentation to fulfill the academic requirements. Students must be in good academic standing and have a GPA of at least 2.0 in the proceeding semester. Further information is available in the student services office, 180 Statler Hall.

H ADM 495(4495) Implementing Strategies for Tying Wellness Practices to Company Profit

Spring. 3 credits. Elective. Priority given to juniors, seniors, and graduate students; others may enroll, space permitting. M. Tabacchi.

There is increasing evidence linking job-induced stress to overall health and happiness or lack thereof. Adding to workplace stress are the needs of its diverse and changing population. These stresses affect the financial health of the corporation as well as the psychological and physical health of the individual. The purpose of this course is to encourage future managers to evaluate the work environment and to enhance opportunities for diverse worker productivity, which can sharpen the corporation's competitive edge. The emerging fields of complementary and alternative medicines are explored as preventive and cost-effective methods of improving workers' health. Business models for encouraging workplace wellness, systems for implementation, reward, and accountability of managers and corporate

officers are introduced in this course. Only a few corporations overtly reward managers and corporate officers for the well-being and concomitant enhanced performance and productivity of their employees.

H ADM 497(4970) Undergraduate Research

Fall, spring. Variable credit. Elective. Faculty.

Outstanding students may conduct independent research under faculty supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report. Students make two presentations coordinated by the Center for Hospitality Research (CHR): one at a preliminary stage and one at project completion. Students submit the completed report to the CHR, which will be available online through the CHR web site.

H ADM 498(4980) Undergraduate Independent Study

Fall, spring. Variable credit. Elective. Faculty.

Can be taken only by students conducting two independent studies in one semester. For more details, see H ADM 499.

H ADM 499(4990) Undergraduate Independent Study

Fall, spring. Variable credit. Elective. Faculty.

Students have the option of conducting an independent study project in any academic area. The number of credits for which students may register are arranged on an individual basis. Note: Students commit themselves to a certain number of credits of independent academic work per week per credit hour if they choose to do an independent study project, and the work must be performed in the semester for which the student is enrolled in the independent study. The usual add/drop policy applies, and retroactive credit for work commenced after an academic semester has ended is not allowed. Projects are conducted under the direction of a faculty member, and regular, frequent consultations are mandatory. Also, a written report must be produced and made available to all faculty members and students of the school after its submission to the supervising faculty member. Credit for independent study projects may not count toward the hotel school elective requirement, but, rather, toward free electives. Students cannot earn academic credit for independent study when the equivalent material is offered in a regular course, and credit is not earned for teaching a course. Students should consider all aspects of their situation before committing themselves to an independent study project. Enrollment forms are available in the student services office, 180 Statler Hall.

H ADM 698(6980) Graduate Independent Research

Fall, spring. Elective. Faculty.

Each student must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Written permission is required before course enrollment. Permission forms are available in the hotel school graduate office, 180 Statler Hall.

H ADM 699(6990) Graduate Independent Research

Spring. 2 credits. Elective. Faculty.
Each student must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Written permission is required before course enrollment. Permission forms are available in the hotel school graduate office, 180 Statler Hall.

H ADM 790(7790) Externship

Winter. 1 credit. M.M.H. requirement.
Prerequisite: M.M.H. students or permission of instructor. Faculty.

H ADM 791(7791) Professional Development III

Fall. 0.5 credits. M.M.H. requirement.
Prerequisite: M.M.H. students or permission of instructor. Faculty.
Seminar format, varies week to week.

H ADM 792(7792) Professional Development IV

Spring. 1 credit. M.M.H. requirement.
Prerequisite: M.M.H. students or permission of instructor. Faculty.
Seminar format, varies week to week.

H ADM 793(7793) Professional Development I

Summer, fall. 0.25 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. Faculty.
Seminar format, varies week to week.

H ADM 794(7794) Professional Development II

Summer. 0.25 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. Faculty.
Seminar format, varies week to week.

H ADM 797(7797) Hospitality Industry Leadership Development Institute

Summer. 1 credit. M.M.H. requirement.
Prerequisite: M.M.H. students or permission of instructor. Faculty.
A dozen or more senior executives from the hospitality industry visit the campus to evaluate students as individuals and as part of a team. They assess how well the students are able to lead, take direction, work with others, present ideas, and listen to other ideas. At the end of the class, one or more of them meet with students individually, and in teams, to evaluate performance. This centerpiece of the orientation process is designed to outline some of the personal and career goals students will want to work toward in the coming year.

H ADM 890(8890) M.S. Thesis Research

Fall, spring. Required. Faculty.

H ADM 990(9990) Ph.D. Thesis Research

Fall, spring. Required.

FACULTY ROSTER

Brownell, Judith, Ph.D., Syracuse U. Prof.
Canina, Linda, Ph.D., New York U. Assoc. Prof.
Carvell, Steven A., Ph.D., SUNY Binghamton. Assoc. Prof. and Asst. Dean

COLLEGE OF HUMAN ECOLOGY

ADMINISTRATION

Lisa Staiano-Coico, dean

Alan Mathios, associate dean

S. Kay Obendorf, associate dean

Brenda Bricker, director, undergraduate affairs

Darryl Scott, director, admission, student, and career services

Tracey L. Thompson, college registrar

COLLEGE FOCUS

The College of Human Ecology anticipates and responds to human needs in the areas of nutrition and health, economic and social well-being, environmental design and technology; as well as human development through education, basic and applied research, and the extension of knowledge. The college is distinctively characterized by the quality of its research in the natural and social sciences and the design arts, a global perspective in academic programs, a preventive approach to contemporary societal problems, multidisciplinary departments and programs, development of leadership in students and citizens, and a commitment to diverse populations. Faculty and students examine individuals in relation to their family, neighborhood, workplace, and community, seeking a balance between theory and practice that will improve the quality of everyday life.

FACILITIES

The college is housed in Martha Van Rensselaer (MVR), Savage, and Kinzelberg Halls. The buildings include administrative and faculty offices, classrooms, auditoriums, galleries, and lecture halls; wet chemistry and biochemistry laboratories for nutrition, food science, and textile science; experimental food laboratories; design studios and computer-aided design laboratories; woodworking shops; experimental observation rooms with one-way vision screens and sound-recording equipment; human factors and infant research facilities; and an audiovisual classroom for distance learning. Also included are learning resource centers for career planning, field and international study, a historical costume collection, a human metabolic research unit, an animal research facility, cold rooms, a constant temperature and humidity laboratory, and an early childhood research and care program.

Specialized equipment for teaching and research includes biochemical and chemical instruments for spectroscopy, chromatography, radioisotope analysis, electrophoresis, microscopy, and ultracentrifugation; physical testing equipment; and cameras, videotape, and sound recording equipment.

DEGREE PROGRAMS

Cornell programs in Human Ecology lead to the degrees of bachelor of science (B.S.), master of arts (M.A.), master of science (M.S.), master of professional studies in human ecology (M.P.S.), master of health administration (M.H.A.), and doctor of philosophy (Ph.D.).

General academic information concerning the bachelor of science degree is given here under "Undergraduate Study." Curricula for major studies are described under the various academic areas.

Programs leading to master and doctoral degrees are administered by the Graduate School. They are described in the *Announcement of the Graduate School* and in announcements published by the individual field offices (Design and Environmental Analysis, Human Development, Nutritional Sciences, Policy Analysis and Management, and Textiles and Apparel). For information regarding the Sloan Program in Health Services Administration, contact the Department of Policy Analysis and Management.

UNDERGRADUATE DEGREES

Bachelor of science (B.S.) degrees are offered in the following areas:

Biology and society
Design and environmental analysis
Human biology, health, and society
Human development
Individual curriculum
Nutritional sciences
Policy analysis and management
Textiles and apparel

UNDERGRADUATE AFFAIRS

Persons interested in undergraduate study in human ecology should contact the admissions office, 170 MVR (255-5471). Those interested in graduate study should contact the graduate field representative identified among the faculty of each department. Department faculty members are listed at the beginning of the course descriptions for each department.

Counselors in the Office of Admission, Student, and Career Services (172 MVR) can help prospective students understand college programs and requirements, as well as college and university resources and services. They provide a broad range of career services and personal support for all matriculated undergraduates. The college registrar and degree auditor (145 MVR) assists undergraduates with questions about academic credit and graduation requirements.

The Student Body

The College of Human Ecology undergraduate enrollment is 1,325. Roughly 400 students graduate each year; last year 265 freshmen and 115 transfer students matriculated. Ninety faculty members serve as advisers to undergraduates.

The college's undergraduate admissions committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula. Admission is highly selective. Approximately two-thirds of the student body comes from New York State, with the remainder coming from other parts of the United States and abroad. In 2004, 30 percent were identified as members of minority groups. Members of the college faculty chair the special committees of approximately 200 graduate students.

Mature Students

The college recognizes that students who interrupted their formal education and are returning to school have needs different from those of younger undergraduates. To facilitate the education of mature students, defined as those 24 years old or older at first matriculation, the college has adopted certain procedures specifically for that group. Counselors in the Office of Admission, Student, and Career Services (172 MVR) can provide information of interest to mature students. Mature students are permitted to enroll for as few as 6 credits without petitioning for permission and also are permitted to extend their residency beyond the normal eight semesters. To find out about qualifying for prorated tuition, mature students must see the college registrar during the course enrollment period in the preceding semester.

Special Students

Students eligible for special status are those visiting from other institutions and interested in particular programs in the college, those with a bachelor's degree who are preparing for graduate study or jobs and careers in human ecology-related fields, or those who have interrupted their education and are considering completing degree programs. Students accepted in the nondegree status of special student may enroll for a maximum of two semesters. During the second semester of attendance, a special student must either apply for admission as a transfer student or plan to terminate studies in the college at the end of the semester. Special students are expected to take a minimum of 12 credits each semester and to take one-half to two-thirds of their work in the statutory divisions of the university. Courses taken while a person is classified as a special student may be counted toward the requirements of the bachelor's degree. Those interested in becoming special students should make appointments to discuss admissions procedures in the Office of Admission (170 MVR, 255-5471).

Empire State Students

Occasionally a student who is completing requirements for a degree through the Empire State College Program is interested in taking a human ecology course. This can be done by registering through the Division of Summer Session, Extramural Study, and Related Programs (B20 Day Hall, 255-4987). All rules of the extramural division apply, and registrations will be accepted only on a space-available basis and with the written approval of the course instructor. At the time of registration, Empire State College students must provide the extramural division with a completed copy of Empire State College's notification of cross-registration (form number SA-22, F-031) to verify enrollment in Empire State College. Such students will be charged 25 percent of the standard extramural tuition per credit.

Transfer Students

Students may be considered transfer students once they complete 12 college credits after high school graduation. An external transfer student is one who transfers to Human Ecology from an institution outside of Cornell University. Liberal arts credits from other institutions transfer readily, but students must earn a minimum of 60 Cornell credits to graduate. Internal transfer students are admitted to Human Ecology from one of Cornell's other six undergraduate units. Students transferring internally should take special care to learn the policies of Human Ecology, because rules at the various Cornell colleges often differ. Before admission, both internal and external transfer candidates should contact the Office of Admission (170 MVR, 255-5471) to discuss credit transfer. Upon matriculation, admitted transfer students should attend the orientation and contact the Human Ecology registrar's office (145 MVR, 255-2235) to discuss how transfer credits will apply to their specific degree program.

MAJORS

The college requires students to fulfill requirements for a major to graduate. Students must declare a major by the end of the sophomore year. It is common for students to change interests during their undergraduate careers. Counselors in the Office of Admission, Student, and Career Services (172 MVR), academic advisers, and directors of undergraduate study in each of the academic departments can help students to consider their options and engage in academic planning. All changes of major require submission of the change of major form and are processed through the college registrar's office, 145 MVR. Change of major will trigger re-evaluation of all academic credit and assignment of a new faculty adviser.

DESIGN AND ENVIRONMENTAL ANALYSIS

The Department of Design and Environmental Analysis (DEA) is concerned with planning, designing, and managing the built environment and its effects on human behavior, experience, and the environment itself. The processes for creating, managing,

and maintaining the built environment, and the implications for how we live our lives face enormous challenges. These include frequent social and organizational change, technological advances, new building methods, and finite resources. The program in DEA is dedicated to preparing graduates who can help individuals, groups, and organizations meet these challenges.

Diverse faculty backgrounds and teaching approaches help students to develop multidisciplinary problem-solving and creative abilities, aesthetic judgment, and analytical thinking. Students explore innovative concepts for the design and management of interior environments through laboratory, shop, studio, and computer facilities. The relationship between people and their physical surroundings is explored through a combination of academic courses, field experience, and applied research. Examples of student class projects and faculty work are frequently on display in the MVR gallery. The DEA resource center includes books, journals, newsletters, and material samples for student use.

Options

The department offers undergraduate education in three areas: interior design, facility planning and management, and human factors and ergonomics. The interior design option is accredited by the Foundation for Interior Design Education Research (FIDER). The Facility Planning and Management Program at Cornell is an IFMA Recognized Program. This means that it meets the standards for recognition of programs established by the International Facility Management Association.

To take full advantage of the course sequences and electives, it is important to select an option as early as possible. This is particularly true in the interior design option. Transfer students in the interior design option should plan on a minimum of six semesters at Cornell to complete the program.

Option I: Interior Design

This option prepares students for professional careers in interior design. The program emphasizes a design process in which innovative solutions are based on research-derived knowledge of human behavior, values, and attitudes. Students develop an understanding of design theory and methods, design history, behaviorally based programming, and post-occupancy evaluation. They learn about design communication, building systems, furnishings, materials and finishes, and professional practice. Students may use their elective courses to develop a specialization in areas such as design history, historic preservation, theory and criticism, design leadership, interactive multimedia, design sustainability, and behavior-based design.

This program also serves as an excellent preparation for graduate study in interior design, facility management, architecture, and industrial design.

Option II: Facility Planning and Management

This option prepares students for professional careers in facility management. The program focuses on the planning, design, and management of facilities for large, complex

organizations such as corporations, health care institutions, research and development laboratories, and universities. Facility planning and management is a basic management function that coordinates and integrates information and expertise from areas such as planning and design, real estate, and business administration with human factors, ergonomics, environmental psychology, telecommunications, and building operations for the purpose of developing and managing facilities that support individual and organizational effectiveness.

Excellent career opportunities exist in the facility management divisions of private companies, institutions, the health care industry, and with private consulting firms offering facility management services. The program is also a good preparation for graduate study in business, planning, or one of the design disciplines and for advanced study in facility planning and management.

Option III: Human Factors and Ergonomics

This option focuses on the interaction between people and their physical surroundings. The program seeks to expand understanding of how the environment affects human perception, cognition, motivation, performance, health, safety, and social behavior. This knowledge is then used to help architects, planners, interior and product designers, and facility managers to plan, design, and manage safe and effective environments. The effect of human capabilities or characteristics such as family structure, lifestyle, social class, and stage-in-life cycle on environmental needs and requirements is also a focus of the program. Career opportunities are available in design firms and in urban planning and other public agencies as well as in the facility management and product design division of private companies. Human factors and ergonomics is good preparation for graduate study leading to a Ph.D. degree in the social sciences and a career in academic or other research-oriented settings in either the public or private sector. It can also serve as the basis for graduate study in an environmental planning or design discipline such as architecture, facility planning and management, interior design, landscape architecture, or city and regional planning. Electives in the social sciences and in research methods and statistics are encouraged.

Academic Advising

All DEA majors are matched with a faculty adviser during their first semester by the director of undergraduate studies, Professor Jan Jennings, E219 MVR.

Consultation with faculty advisers about future goals, departmental requirements, sequences of courses, and electives inside or outside the college helps students develop their programs. Students majoring in interior design, especially, must begin early to plan and collect materials for a portfolio of their work, which is necessary for many positions and for application to graduate schools. Faculty advisers can make recommendations on what to include. Students are free to change advisers. Although advisers must approve students' schedules during course enrollment each semester, it is the student's responsibility to keep track of his or her courses and to make sure that they meet graduation requirements for their major and college.

Ownership and Exhibition of Student Work

All design work done in studios as part of an academic program is the property of the department until it has been released by the instructor. The department is not responsible for loss or theft of student work.

HUMAN BIOLOGY, HEALTH, AND SOCIETY

The human biology, health, and society (HBHS) program permits students to combine their interests in the biological sciences while exploring human health issues from the perspectives of both the biological and behavioral sciences. HBHS majors select the issues they want to explore in depth from Human Ecology courses that address health and the broad range of factors that influence human well-being. Issues that can be explored include biology and behavior; metabolism, genetics, and health; biology, growth, and development; and food and health policy and health promotion. Most students in this program will proceed to programs of advanced study to pursue careers related to health. This major is offered by faculty in the Division of Nutritional Sciences. More information about this program can be found in a separate section of the catalog that describes the division's programs.

HUMAN DEVELOPMENT

Human development majors explore the psychological, social, cultural, and biological development of people from conception to old age, focusing on the processes and mechanisms of growth and change over the life course. A wide range of issues are included in the study of human development, including biological, cognitive, and emotional development; the role of family, neighborhood, workplace, and culture in development; and the influence that developing humans have on their environment. The human development major provides an excellent foundation for many careers, such as medicine (particularly family medicine, pediatrics, and psychiatry), clinical psychology and other mental health professions, law, business (especially human resources), child and family advocacy, and education (from preschool and elementary school teaching to school administration). The major prepares students for academic careers as professors in human development, psychology, or sociology departments. Learning about human development also helps students understand more clearly their own development and the development of those around them.

The faculty of the Department of Human Development comes from several disciplines, including developmental and clinical psychology, sociology, and education. The diversity of faculty expertise results in a wide-ranging view of human development. The research of the department's faculty is extensive. It includes basic research on issues such as the neurobiology of personality, the role of childhood attachments in the development of adult romantic relationships, the acquisition of language in infants, and the

effects of environmental stressors on children's cognitive development. It also includes applied research useful for the creation of public policy, such as studies of the causes and consequences of child maltreatment and studies of the effectiveness of reading programs for Head Start preschoolers, apprenticeship programs for high school students, and support programs for aging adults in community and congregate settings.

Curriculum

Human development is the most flexible major in the College of Human Ecology. While all students learn the fundamentals of human development, each student can focus on one or more areas of particular interest. The flexibility of the major also allows students ample opportunity to meet the requirements for admission to many professional schools, including medical, dental, law, and business schools.

Requirements specified by the College of Human Ecology make up part of each student's curriculum, and include classes in the social and natural sciences, humanities, writing, and communication. In addition, there are requirements for the human development major. Students in this major can choose up to 14 elective courses from the broad range of offerings across the Cornell campus.

Special Opportunities

Beyond formal course work, students have many other opportunities that involve ongoing individual work with Cornell faculty or other professionals. Academic credit can be earned through all of them. These opportunities include the following:

Field Placements. Human development majors can arrange internships with Urban Semester in New York City, Cornell in Washington, and Cornell Abroad programs and in local agencies. These have included hospitals, psychiatric hospitals, juvenile detention centers, senior housing, and the department's on-campus Early Childhood Program. Students have also participated in projects with the Tompkins County Office of Aging, the Tompkins County Youth Bureau, and the Law Guardian's Office of Tompkins County.

Faculty Research. Many students work as research assistants on faculty projects. Students use research techniques ranging from laboratory procedures to family observations to large surveys. They assist in study design, data collection, and data analysis. Participation in faculty research provides the type of experience that many graduate and professional schools expect from their top applicants. Recent projects have included the study of parent-infant interactions, the transition of high school students into the world of work, evaluation of pre-kindergarten programs, and the impact of poverty on stress responses in children and teens.

Independent Research. Under faculty supervision, some advanced students complete an honors thesis in an area of personal interest by designing a study and collecting and analyzing data. Recent thesis topics have included development in families that adopt school-age children, connections between speed of visual processing in infants and later scores on intelligence tests, ethnic variation in exposure to stressors in adolescence, and the relationship of religious beliefs to well-being.

Undergraduate Teaching Assistant.

Advanced students can serve as undergraduate teaching assistants. This requires close work with the professor teaching the course as well as with students taking the course.

Teaching Certification. A cooperative education program exists between the Department of Human Development and Wells College. This program requires careful planning and course scheduling. It enables students to graduate with a Cornell bachelor's degree and New York State Certification to teach nursery school through sixth grade. This certification is honored by most other states.

The program requires a minimum of a three-semester commitment. Cornell HD students take four courses at Wells College and student teach their last semester at Cornell. Although there is van transportation between Cornell and Wells College, it is important for students to have access to a car, especially while student teaching. Students will be registered at Cornell during the entire undergraduate program and usually maintain Ithaca housing. Wells College courses count as Cornell courses and are used as electives but are not included in a student's GPA. The one-semester student teaching experience is typically based in the Ithaca area, though not necessarily within the city of Ithaca.

This program is open to HD majors only. Students must have at least a 3.0 Cornell cumulative GPA upon application and must maintain a 3.0 GPA to qualify for student teaching and to complete the program. For more information, contact Judith Ross-Bernstein in G56 MVR at 255-0826.

NUTRITIONAL SCIENCES

A major in nutritional sciences (NS) focuses on the complex interrelationships of food patterns, nutritional status, and health. This field draws upon chemistry, biology, and the social sciences to understand questions such as: How are nutrients used by the body? What factors influence human food choice? What nutrients and dietary patterns are recommended to promote growth, maintain health, or reduce the risk of chronic disease? Students in this program may also fulfill the courses required for didactic training in dietetics toward registration as a dietitian (R.D.), which will enable them to be employed as nutrition counselors, clinical nutritionists, sports nutritionists, or administrators of food and nutrition services. Students also may prepare for medical school and other types of advanced degree programs through this major. The requirements for this program are outlined in the "Nutritional Sciences" section of this catalog.

Special Opportunities

Dietetics and Clinical Nutrition

Interested students should complete the academic requirements for the didactic program in Dietetics, approved by The American Dietetic Association (ADA). Courses in foods, nutrition and disease, microbiology, management, statistics, and economics are added to the core curriculum (specific requirements). Evaluation of academic credentials to qualify for a dietetic internship should be completed before graduation. Seniors should initiate this academic evaluation process in March if they

will graduate in January or in September if they will graduate in May. All students who will complete the academic requirements by graduation should participate in the evaluation process while at Cornell. Students who meet most but not all of the academic requirements are encouraged to have their academic work evaluated while they are at Cornell so that deficiencies can be identified and documented.

Advisers in the dietetics program can also help students plan to meet the experience or supervised practice component required for active membership and/or eligibility to take the Registration Examination to be registered as a dietitian (R.D.). For additional information about meeting ADA requirements, contact the DNS academic affairs office, 335 MVR, 255-4410.

Exercise Science Minor

Students can complete the applied exercise science concentration at Ithaca College, which includes courses in fitness measurements, exercise physiology, and biomechanics of human movement. Nutrition courses of special interest relate to growth and development, regulation of body weight, and community nutrition and health. For information about the applied exercise science concentration, contact the DNS academic affairs office, 335 MVR, 255-4410.

POLICY ANALYSIS AND MANAGEMENT

The policy analysis and management (PAM) major produces graduates skilled in policy analysis and program evaluation and possessing management skills applicable in the public, nonprofit, and private sectors. In addition, the PAM graduate will have concentrated knowledge in one of three policy areas: family/social welfare, health, or consumer policy. Graduates are well-qualified for a wide variety of public, not-for-profit, and private sector employment emphasizing either policy analysis and evaluation or management. The major also attracts large numbers of pre-law students, pre-M.B.A. students, and students intending to pursue graduate education in public affairs and policy analysis programs. The potential exists to pursue a five-year program resulting in a B.S. and a master of health administration.

The PAM major combines theoretical underpinnings from economics, sociology, psychology, and government to critique and analyze our society's values, laws, policies, and programs. It also gives students the knowledge to build management skills for use in public, not-for-profit, and for-profit settings. Ideas of social justice, equity, and economic efficiency will be studied. Research methods, statistics, and planning and evaluation concepts will be learned and used to direct and aid in program planning, policy analysis, program evaluation, and management.

In addition to learning basic policy analysis and management skills, the student will be expected to apply these skills within a particular concentration area—social welfare/family, health, or consumer policy. Social welfare/family policy includes a panoply of governmental and private sector income maintenance, social, and human service

delivery programs and policies that range from child adoption, neglect, and abuse policies and antipoverty programs to policies and programs that impinge on or regulate marriage, divorce, and fertility. Health programs and policies include such politically sensitive programs and issues as health care access, Medicare, Medicaid, long-term care, managed care, public health issues, and substance abuse policies. Consumer programs and policies include regulations and laws governing advertising, product safety, food and drug safety, nutrition policies, consumer credit, insurance, telecommunications, mortgage, housing, and public utility markets, and also deal with issues such as the invasion of privacy, Internet, and television. A specific focus in the consumer concentration is the role of marketing and its relationship to consumer well-being and consumer behavior.

In addition to meeting college requirements, all PAM majors are expected to take the following core courses: Introduction to Management, Introduction to Policy Analysis, Research Methods, Multivariate Statistics, Intermediate Microeconomics, and Public Sector Economics. Students also will be expected to develop a concentration of three courses in either social welfare/family, health, or consumer policy. Finally, all PAM majors are required to complete an integrative capstone experience, which may involve an experiential learning program such as Cornell in Washington, the Capital Semester, or Urban Semester, or an honors thesis. Please check with the undergraduate advising coordinator, Professor Rick Geddes, for further details.

TEXTILES AND APPAREL

The Department of Textiles and Apparel (TXA) focuses on the use of textiles and fibrous materials for apparel, composites, biomaterials, residential and contract interiors, geotechnical and other applications. Programs in the department, in keeping with the overall mission of the college, emphasize the use of materials to meet human needs. The undergraduate curriculum focuses on the development of design skills, an understanding of the properties of textile materials, knowledge of marketing, and the use of technology in the industry.

Practical problem-solving skills are developed in the department's studios and laboratories. Academic course work is further enhanced by field and international experiences. Gallery space provides the setting to display design work. In addition, the Cornell University Costume Collection, housed in the department, provides a valuable resource; items from the collection are made available to students for classroom and special study use.

Academic Advising

All TXA majors are matched with a faculty adviser by the director of undergraduate studies, Professor Anil Netravali, 201 MVR. Students are strongly urged to discuss their goals, course selection and sequence, electives, and career plans with their faculty adviser. Students in apparel design must begin working with their advisers early to develop a professional portfolio of their work. Students are free to change advisers; changes must be recorded with the director of undergraduate

studies. Although advisers must provide the PIN number to lock in courses during course enrollment each semester, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for his or her major and college.

Ownership and Exhibition of Student Work

All apparel design work done as part of the academic program is the property of the department until it has been released by the instructor. Certain exceptional work may be retained by the department to exhibit for academic purposes. The department is not responsible for the loss or theft of student work.

Course Fees

No grade will be given in a course unless the course fee has been paid and equipment returned by the last week of classes.

Options

Students may select options in apparel design, apparel/textile management, or fiber science. The curriculum is based on manipulation of form, color, and the physical characteristics and structures of fabric to solve aesthetic and functional apparel problems; the application of economic and marketing principles to consumer and industry problems in the textile-apparel sector; and the study of chemical, physical, and engineering properties of fibrous structures and polymers. Most transfer students will need at least one extra semester to fulfill the requirements of the major. Transfers in the design option should plan on two additional semesters.

Option I: Apparel Design

The apparel design major integrates design, technology, physical sciences, the humanities, and social sciences in the study of clothing, its materials, and its functions. Using a problem-solving approach, the design process is studied and applied in the creation and critique of fashion and functional apparel. The relationships between dress and human behavior, aesthetics, and fashion are studied within the context of the meaning of dress. The materials and technologies used in apparel design and the product interface with the consumer are also integral to the major. The themes of technological innovation, cultural transmission, innovation by consumers and designer, and geopolitical change are stressed as topics of engagement.

Option II: Apparel/Textile Management

Apparel and textile management combines the fields of apparel and textiles with those of economics, business management, and organizational policy. Students combine theory with case studies to find solutions to everyday problems. Course work is drawn from many interrelated disciplines, including textiles, apparel, product development, economics, business management, and communication, as well as practical field experiences. This provides students with the experience of working with professionals from a wide variety of disciplines. Students often combine this option with either Option I (apparel design) or III (fiber science).

Option III: Fiber Science

Applications for textile structures include advanced engineering composites, protective clothing for industrial and military environments, and biomedical materials, as well as the more traditional applications found in apparel and home furnishings. The fiber science option provides a strong base in mathematics and the physical sciences combined with supporting courses in engineering, consumer economics, and the social sciences.

Career Opportunities

Graduates of programs in the Department of Textiles and Apparel have found challenging employment within the textile and apparel sector, in independent and government-sponsored research, and in community organizations. Recent graduates are working in the fields of design, management, new product development, engineering, communications, and marketing. In addition, the program prepares students for graduate or professional study in fiber and polymer science, textile marketing, apparel design, textiles, or business and management.

INTERDEPARTMENTAL MAJOR IN BIOLOGY AND SOCIETY

Biology and society is a multidisciplinary program for students with special interests in such problems as genetic engineering, environmental quality, food and population, the right to medical care, and the relation between biology, society, and ethics and/or public policy. It is also designed for students who plan postgraduate study in management, health, medicine, law, or other related fields.

Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises, by including courses in the fields of biology, humanities, social sciences, and mathematics. In addition, majors take core courses in biology and society, a set of electives, and a special senior seminar.

Course work in the College of Human Ecology may be selected from concentrations in human development, health, or social policy and human services. The other basic requirements of the college must also be met. Programs incorporating those required courses are designed in consultation with a faculty adviser to accommodate each student's individual goals and interests. For further information on the major, including courses of related interest, specific course requirements, and application procedures, see Nancy Breen, director of undergraduate studies, in 205 MVR.

INDIVIDUAL CURRICULUM

A student who has educational and professional objectives that cannot be met satisfactorily within the framework of existing majors in the College of Human Ecology may petition to develop an individual curriculum. To be approved, the curriculum must be within the focus of the college and be interdisciplinary in design, include at least 40 credits in human ecology courses, and not exceed the normal number of credits allowed in the endowed divisions. A student develops

an individual curriculum in consultation with faculty advisers from at least two subject matter fields and the program coordinator, Patti Papapietro, Office of Admission, Student and Career Services (172 MVR).

Such a program of study should encompass a substantial part of the student's undergraduate education and must include at least three semesters. For this reason, a request to follow an individual curriculum should be made after the freshman year and must be made before the second semester of the junior year.

If an individual curriculum seems advisable, the individual curriculum coordinator will provide direction in developing a formal program of study. Although the coordinator must approve the course enrollment schedule during the course enrollment period each semester, it is the student's responsibility to follow the curriculum as planned or to have any necessary revision approved in writing by his or her adviser and the program coordinator before the program changes are made.

SPECIAL OPPORTUNITIES

Study Abroad

Each year over 75 Human Ecology students spend a semester or more off campus in places spanning the globe, such as Australia and Zaire. There they supplement their Cornell studies with a wide range of cross-cultural and academic experiences. Study abroad opportunities are available through Cornell-sponsored programs and other U.S. college-sponsored programs as well as by direct enrollment at foreign universities.

Residency Requirements

All study abroad students must meet college study abroad requirements and remain registered at Cornell during the overseas study. Credits earned count toward the 60 Cornell credits required for graduation (in unusual circumstances some credits earned abroad may be considered as transfer credit). Study abroad credits do not count toward the maximum number of endowed credits that Human Ecology students are permitted to earn.

Requirements for College Approval

1. GPA of 3.0 or higher, good academic standing, and well-articulated goals for students' study abroad semester.
2. Completion of the Cornell application; applications from individual programs also must be submitted to Cornell.
3. Completion of the equivalent of 15 semester credits per semester while abroad.
4. Courses taken for a letter grade (unless course is offered with only an S-U option).
5. Submission of a petition by second-semester seniors going abroad.

Application Process

Typically, students considering study abroad begin their planning at least a year before the semester abroad. Students should carefully consider what they hope to get out

of a study abroad experience (academically and culturally) when investigating program options. Resources can be found in the Cornell Abroad office (300 Caldwell Hall), through the Human Ecology study abroad adviser (170 MVR), or in the Human Ecology Career Development Center (162 MVR). Applications may be found through these resources or in the Human Ecology registrar's office (145 MVR). Completed applications must be submitted to the Human Ecology registrar's office by the following dates:

Fall and year deadlines: February 1

Spring deadline: September 15

Some programs will be filled by these dates. Use of the early deadlines is strongly recommended. These are:

Fall and year deadlines: December 15

Spring deadline: May 1

Approved applications will be signed and forwarded to the respective programs through the Cornell Abroad office.

Credits Abroad and Transfer of Credit

Most study abroad courses are transferred to the Cornell degree program as electives or liberal arts distribution credit. Study abroad credit awarded toward one's major is much less common and must be approved via signature of the student's department advising coordinator on the Cornell application. Credit for study abroad will be awarded only after successful completion of the semester abroad (marks equivalent to a Cornell grade of C or higher) and receipt of the official transcript by the college. Official transcripts should be sent to the Cornell Abroad office, which will process and forward them to the Human Ecology registrar.

Courses must be pre-approved before the student's departure. Any variances must be cleared with Human Ecology. Students must include a foreign language course in the country's native language if studying in a country where English is not the native language. All courses taken abroad and grades received will appear on the Cornell transcript. Grades earned do not, however, become part of the Cornell GPA. Students should save all written work from all classes until courses are officially transferred.

Independent Research

Research opportunities for undergraduates are extensive and valued as an important part of the learning experience. The opportunity to engage in substantive research with some of the leading scientists in their fields is so compelling that approximately half of the college's undergraduates conduct research projects. Students may become involved in research with the guidance of faculty members by conducting research assigned in a class, joining a faculty member's research group, completing an independent study research project, or carrying out an honors program project.

For further information, students should contact individual faculty members or the director of undergraduate studies (DUS) in their department.

Honors Programs

Students interested in college honors programs that lead to the degree "bachelor of science

with honors" usually apply to the appropriate honors committee no later than the end of the first semester of their junior year. A minimum GPA of 3.3 and demonstrated potential for honors-level research is required. Students take approved courses in research methodology and evaluation, attend honors seminars, complete a written thesis, and defend it in an oral examination.

In addition to the college honors program, special programs are offered by the Department of Human Development and the Division of Nutritional Sciences.

Students who are interested in the honors program should contact the director of undergraduate studies (DUS) in their department or division for information and guidelines.

Field Study and Internships

Field study and internships provide experiential learning opportunities in real-life circumstances where classroom knowledge is tested and applied. Students are able to master new skills, develop and implement plans of action, solve problems, interact in multicultural situations, and build networks for future job opportunities. By applying techniques of research methods, critical thinking, and self-directed learning, students learn to think conceptually while becoming agents of change.

Check with the director of undergraduate studies for major specific information. The Career Development Center (162 MVR) and career counselors in 172 MVR also can provide resources and assistance in finding internships and other experiential opportunities.

Concentration/Certificate in Gerontology

For students interested in pursuing study related to aging, the College of Human Ecology, under the auspices of the Bronfenbrenner Life Course Center, offers the option of completing an undergraduate concentration in gerontology. This program is designed to develop an understanding of and competence in dealing with the processes and issues of aging. Study in gerontology enriches the practical experience of students and prepares them for professional work in this area. The program draws on the resources of several departments and colleges at Cornell and Ithaca College to shape a curriculum suited to each student's professional goals and interests.

The concentration is available in combination with any major offered by the university. Twelve credit hours of course work must be completed, with 9 of these taken in the College of Human Ecology. The courses explore aging through biology, psychology, sociology, economics, and design.

Experiential learning opportunities are strongly recommended as a complement to classroom work. With faculty sponsorship, students can participate in experiences in the Ithaca area, the Urban Semester in New York City, Cornell-in-Washington, the Capital Semester, or in a placement arranged more individually.

Both Cornell and Ithaca College offer courses that incorporate a service-learning component into their curriculum. Cornell's

course Environments for Elders (DEA 472) involves service in local agencies (e.g., local nursing homes, Office of Aging, assisted-living facilities), where students gain valuable experience. Students may also join the "Elderly Partnership" through the Cornell Public Service Center to participate in local visits to elders. There also are opportunities for undergraduates to become involved in research projects examining topics such as residential changes and adjustments in the later years, nutrition and elders, social security, and design for people with dementia. In addition, senior students can apply to work as a teaching assistant for a gerontology course.

Departments and programs have designated academic advisers for the gerontology concentration who will help students plan the sequences of courses and electives needed to complete both a major and the gerontology concentration. Because many gerontology courses have prerequisites, early and careful planning is essential.

Specific program requirements may be obtained in the Human Ecology registrar's office (145 MVR, 255-2235) or from Nancy Wells, Bronfenbrenner Life Course Center (E220 MVR, 254-6330).

Concentrations

The College of Human Ecology formally recognizes as concentrations computer information sciences and international relations (both administered by the College of Arts and Sciences) and the previously described concentration in gerontology (administered by the College of Human Ecology). The college also offers a minor in education. Students interested in pursuing these concentrations should inquire with the college department offering them. If successfully completed before graduation, these concentrations will be posted as part of the student's official transcript.

Students may develop an unofficial concentration in additional fields taught at Cornell by taking 12 credits in an approved area. Africana studies, communications, and business are just a few examples of concentrations that are possible. While these unofficial concentrations are not part of a student's transcript, students may choose to publicize these concentrations on their personal résumés.

THE URBAN SEMESTER PROGRAM IN NEW YORK CITY

Multicultural Issues in Urban Affairs

Sam Beck, Ph.D., director

The Urban Semester Program is a set of courses spanning the entire year. Students choose either fall or spring semester and enroll in three classes focusing on the opportunities and barriers that a multicultural society presents and their relationship with professional, community, or public policy settings and concerns (15-credit residential program). They also intern three days each week in placements of their choosing. One day each week, students carry out community service in an inner city school (pre-K to high school). One day each week,

students participate in site visits. Seminars are incorporated into these activities. All students reside in the Olin Hall dormitory of the Weill Medical College of Cornell University.

In the eight-week summer semester (1 to 2 credits), students carry out internships in various medical settings. Students work with the program staff to locate internship placements. For information, contact the Urban Semester Program staff in 162 MVR, 255-1846, or the Urban Semester Program in New York City at 212-746-2273.

New York City offers a wide variety of internship settings. Many bilingual and bicultural internship settings are available in Chinese, Spanish, Creole, Russian, Yiddish, and other languages. Examples of internships follow:

Health and medicine—New York Presbyterian Hospital/New York Weill Cornell Medical Center, Queens Medical Center for Women and Children, South Bronx Health Center for Children and Families, Memorial Sloan Kettering Hospital, Hospital for Special Surgery, Montefiore Hospital, Bellevue Hospital, Our Lady of Mercy Hospital

Private and public law—NOW Legal Defense and Education Fund, Agenda for Children Tomorrow, Skadden Arps, Slate, Meagher & Flom, Lawyers for Children, DA's Office, Legal Aid Society, AALDEF, Committee Against Anti-Asian Violence, Center for Immigrant Rights, NAACPLDEF, Dorsey & Whitney

Government and community agencies—Cornell University Cooperative Extension, Senator Charles Schumer's office, NYC Housing Authority, Dept. of Aging, Women's Action Alliance, NYC Commission on the Status of Women, NYC Dept. of Consumer Affairs, The Center for Puerto Rican Studies, Manhattan Borough President's office, Central Park Wildlife Center, Attorney General's office, The Parks Dept., Health Dept.

Wall Street firms and other private businesses—Bloomingdales, Prudential Securities, Merrill Lynch, PricewaterhouseCoopers, Cairns & Associates, Burson Marsteller, Cushman & Wakefield, AIG-AI Underwriters, Salomon Smith Barney, Jane Clark Chermayeff Associates, DDB Needham, KCSA, William M. Mercer Consulting Co., MGM, Madison Square Garden, Gensler Architecture, Niedeffer-Henkel Century Group, American Management Association

Private not-for-profit organizations—City Lights Youth, Council on Economic Priorities, Planned Parenthood, Talbot Perkins, FEGS, National Resources Defense Council, Urban Youth Alliance Inc., Phipps Housing, The Door, Covenant House, Global Policy and International Law, UN International Assoc. of Religious Freedom, Mothers and Others for a Livable Planet, UN Child Care Center, WHEDCO, YAI, Families and Work Institute

Private and public schools—Beginning with Children, Banana Kelly High School, East Harlem School at Exodus House, The Hetrick Martin Institute, Nuestros Niños, Theodore Roosevelt High School, The Choir Academy of Harlem, El Puente, Genesis RFK Center, River East School, MS 118, Mott Haven Village

Design and arts organizations—Harlem Textiles Works, TADA!, NY Theater Workshop, Cynthia Rowley, Inc., Perry Ellis International, Museum of African Art, SOHO20 Gallery,

Lower East Side Tenement Museum, Tommy Hilfiger, Polo, The Gap, Liz Claiborne

Communications and media—Nickelodeon, *Do Something* magazine, NBC *Dateline*, CNN, CBS News-48 Hours, NBC News, ABC *One Life to Live*, MSNBC *The News w/Brian Williams*, *The Village Voice*, *Good Housekeeping*, *The New Yorker*, *Essence*, Children's Television Workshop, *Good Morning America*, MTV, HarperCollins Publishing, *Maxim Magazine*, MTV Online International

Other Off-Campus Programs

Capital Semester

William Rosen, Ph.D., director

Combine a full semester of 15 Cornell credits with a paid internship and a reduction in tuition. Students intern directly for a New York State legislator (Senate or Assembly) in Albany to explore their policy interests in greater depth. Interns attend hearings and legislative sessions, meet with lobbyists and constituents, write reports for legislation and possible publication, and generally help conduct the work of their legislator. All Cornell students, regardless of major, are encouraged to apply. The program is available during the spring semester only, and it is open to sophomores, juniors, and seniors. Interns benefit greatly when subsequently applying for future employment, law school, graduate school, or business school. Information is available from the Career Development Center (162 MVR), and applications and further information can be obtained from William Rosen (259 MVR, wr14@cornell.edu).

Cornell in Washington

Students take courses from Cornell faculty, conduct individual research projects, and work as externs while taking advantage of the rich resources of the nation's capital. For more information, visit the program office (471 Hollister Hall).

Courses at Ithaca College and Wells College

Full-time undergraduate students at Cornell may petition to enroll in courses at Ithaca or Wells College. Students pay regular full tuition to Cornell and only special fees to either Ithaca or Wells where applicable. Students are allowed to register for one course per semester and a maximum of 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods and practice teaching courses at Ithaca and Wells, and those students pursuing a concentration in exercise science through a specially arranged program with Ithaca College.

Cornell students are eligible to register only for Ithaca and Wells College courses that are relevant to their program and that do not duplicate Cornell courses. Ithaca and Wells College credit counts as Cornell credit but not as Human Ecology credit. Students are accepted on a space-available basis. Participation in this program is not guaranteed, and both Ithaca and Wells have the right to accept or reject students for any reason deemed appropriate. The program is available only during the fall and spring semesters. For further information, contact the college registrar (145 MVR, 255-2235).

Double-Registration Programs

Cornell undergraduates from PAM and other fields across the college and campus are eligible to apply to the Sloan Program in their junior year for a five-year accelerated B.S./M.P.S. degree in health administration. In their senior year, these students will take the first-year Sloan courses, which will be counted twice to satisfy both undergraduate as well as graduate requirements. At the end of their senior year, students will graduate with a B.S. degree. Students whose grades are competitive will be notified during the spring semester of their senior year that they are invited to continue for the final year of Sloan as a graduate student. Those students accepted for the five-year program will participate in a health care administrative internship during the summer after earning their B.S. degree and following the first year of Sloan academic course work. The following graduate year they will complete the second year of required Sloan courses and electives and will earn a master in professional studies, with Cornell certifying completion of the requirements for a graduate degree in health administration.

Students applying to the accelerated M.P.S. program need to complete the initial application to the Sloan five-year program through PAM in their junior year. In general, at the time of application, most of their undergraduate requirements will have been met. This application must include the GRE general test score, along with recommendations from the faculty adviser and at least one other source, as well as transcripts and the statement of purpose. During their final senior undergraduate year they also will have to submit a formal application to the graduate school. A sample schedule of the two-year curriculum for Sloan can be viewed at www.human.cornell.edu/pam/sloan/2005curric.cfm.

Double-Registration Program for Law

A small number of highly qualified applicants may be admitted to the Cornell Law School after only three years of undergraduate education. The requirements for admission under these circumstances are more stringent than for acceptance after four years of undergraduate study. Applicants must present outstanding qualifications and strong professional motivation. The junior year applicant follows the ordinary application procedures for Cornell Law School admission.

Interested students should contact the Law School director of admissions (Myron Taylor Hall, 255-5141) to discuss the admissions criteria. Because students accepted to this program will be spending their senior year away from Human Ecology, they need to plan ahead to ensure that distribution and major requirements for the B.S. degree will be met. Successful applicants need the approval of the college registrar in Human Ecology.

ACADEMIC ADVISING AND STUDENT SERVICES

Faculty Advisers

Students who choose to major in a particular department are assigned an adviser whose special interests match their need. Students

may change advisers as their own interests change by working with the director of undergraduate studies (DUS).

Faculty advisers are available to discuss course requirements and sequences, useful electives inside or outside the college, as well as future goals and career opportunities. Although advisers must provide the adviser key number (PIN) during course enrollment each semester, it is the student's responsibility to make sure that his or her course selections meet graduation requirements for the major, the college, and the university. Directors of undergraduate studies in each department are available to answer questions about the advising system and the undergraduate major. Students who are exploring alternative majors should work closely with college counselors in the Office of Admission, Student, and Career Services.

Office of Admission, Student, and Career Services

The Office of Admission, Student, and Career Services (ASCS) (170-172 MVR) is a center for undergraduate freshman and transfer admission activities; student orientation activities; academic, personal, and career advising; study abroad; and multicultural student programs.

Personal counseling, including exploration of problems or concerns of a personal nature, is available to all students. These ASCS counselors, however, are not psychiatrists or therapists; they are available to help students understand and navigate the Cornell system, and to offer support, assistance, and referral. Discussions are completely confidential. Appointments may be made through the receptionist in ASCS or by calling 255-2532.

In addition, ASCS provides support for several student organizations, including Human Ecology Ambassadors, the Mature Students Association, the Association for Students of Color, the Pre-professional Association toward Careers in Health, the Pre-law Undergraduate Society, the Orientation Committee, and Human Ecology Voices. Primary responsibilities of the office are listed below:

Academic advisement. This service is provided to all students as an adjunct to faculty advising. Counselors can assist in course scheduling, academic planning, selection of a major, graduation requirements, and related issues.

Undeclared majors. Students who have not yet declared a major are urged to work closely with student services staff to plan their program of study. For the period a student is undeclared, counselors will provide assistance during course enrollment.

Career counseling. Career counseling is designed to help students clarify the relationship between personal skills, abilities, and career goals. Services are offered on an individual or group basis. Counselors assist in identifying career outcomes of the majors, developing networking skills, suggesting course work appropriate to various career goals, and assisting students in their general internship and job searches.

Post-graduate advisement. Material pertaining to graduate and professional schools, graduate entrance examinations, courses of study, and career outcomes is readily available.

Students with disabilities. The college is committed to assisting students with disabilities. Students who have special needs are urged to contact Student Disability Services (420 CCC) when they arrive on campus.

Financial aid. Students who encounter financial difficulty or anticipate running short of funds may discuss their needs with a counselor. Complete information is available from the Office of Financial Aid, 203 Day Hall.

The Human Ecology Alumni Association Cash Award Fund. This fund provides small emergency grants to students in the college who have unexpected financial problems. Applications may be made through ASCS.

Office of the Registrar

The Office of the University Registrar (B7 Day Hall) maintains the official academic records for the university and provides students with their official university transcripts. Additional information is available on the university registrar's web site: www.sws.cornell.edu/our. The college registrar (145 MVR) maintains students' official academic records, including the audit of progress toward the degree. The college registrar also provides services such as adding and dropping courses, correcting student records, and approving the transfer of credit from other institutions. Additional information is available on the HE registrar's web site: www.human.cornell.edu/registrar.

Multicultural Programs

The College of Human Ecology at Cornell University believes that a diverse community enriches the educational process for all members of the college community. Consequently, the college focuses particular efforts on a broad range of services for students of color. This includes not only recruitment but also services for students already on campus. Additionally, the college collaborates with university and New York State programs to assure that Human Ecology students have access to the vast array of services available here.

The professional staff of Human Ecology's Office of Admission, Student, and Career Services includes a director of multicultural programs who assists in the recruitment, admission, and enrollment of the most qualified and appropriate EOP (a program for New York State residents), African American, Native American, Hispanic American, and Asian American students to the college. All EOP students are invited to a special university-wide pre-freshman summer program that introduces accepted students to the Cornell campus and its classrooms. Services for current students include EOP/COSEP; academic, career, and personal counseling; recommendation letters for employment or graduate schools; and advising and support for student activities and programs.

The Human Ecology Partnership Program provides mentorship through a network of faculty and upperclass students to all incoming students of color, particularly during their first year. In addition, this office serves as a liaison to the Office of Minority Educational Affairs (COSEP), State Programs (EOP), and the Learning Strategies Center. Students are also encouraged to visit the college's Career Development Center to enhance personal career exploration and decision making.

Selected programs include the following:

BBMTA (Black Biomedical and Technical Association). A university organization that provides enrichment activities for minority students interested in pursuing medical careers. For more information, contact Janice Turner (55 Goldwin Smith Hall, 255-9497).

ASC (Association for Students of Color). With the motto "Yesterday's vision, today's reality, and tomorrow's hope," the ASC was created to bring together Human Ecology students to provide a supportive foundation for enrollment, retention, graduation, and career placement for students of color. The goals of the ASC are to increase communication between students of color, administration, and faculty; assist in increasing enrollment of students of color in Human Ecology; and assist in increasing the retention of students of color in Human Ecology and in their selected majors. ASC's two committees are recruitment/retention and career development. For more information, contact Verdene Lee (172 MVR, 255-2532).

Human Ecology Peer Partnership Program helps incoming students of color transition to the college and university. Small groups of freshmen, usually about six to eight students, are paired with faculty and upperclass students. They meet weekly for discussions, guidance, and explorations of the Cornell campus and the Ithaca community. For more information, contact Verdene Lee (172 MVR, 255-2532); or Gary Evans (E306 MVR, 255-4775); or Lorraine Maxwell (E310 MVR, 255-1958), both in the Department of Design and Environmental Analysis.

CSTEP. The Collegiate Science and Technology Entry Program is the New York State program that provides enrichment activities for pre-med and pre-law New York State residents. Services are targeted at populations who are historically underrepresented in scientific, technical, health-related, or licensed professions and/or who are economically disadvantaged and who demonstrate interest in, and potential for, a CSTEP-targeted profession. For more information, contact Verdene Lee (172 MVR, 255-2532).

Multicultural Education

Multicultural education broadens understanding of the world's many different societies as well as the various cultures of this country. Students take courses in the Cornell programs listed below that may be used to meet degree requirements. The college encourages students to incorporate courses from these cultural programs and from study abroad experiences in their degree programs. See information on study abroad opportunities.

Africana Studies and Research Center

American Indian Program

Asian American Studies Program

East Asia Program

Feminist, Gender, and Sexuality Studies Program

Gender and Global Change

Institute for European Studies

Languages and Linguistics

Latin American Studies Program

Latino Studies Program

Peace Studies Program

Program for Contemporary Near Eastern Studies

Program in Jewish Studies

Religious Studies

South Asia Program

Southeast Asia Program

International Students

The International Students and Scholars Office (ISSO, B50 Caldwell Hall, 255-5243) provides a broad range of services to international students. All international students should maintain contact with the ISSO. Counselors in ASCS are also available for assistance.

International students in the College of Human Ecology are encouraged to meet with the college registrar to discuss any questions or concerns that they have about their academic record.

Career Planning, Graduate and Professional School, and Job Search Services

Counseling. The Office of Admission, Student, and Career Services (ASCS, 172 MVR, 255-2532) provides career counseling and resources to help students explore career options through employment and internship opportunities and professional and graduate school advising. Individual assistance is available as well as group programming, workshops, panels, and field trips. Career development is strongly encouraged and supported, including skill development in résumé writing, networking, and interviewing. Students also are instructed in the use and protocol of online résumé submissions and on-campus recruiting. The office works in conjunction with Cornell Career Services (103 Barnes Hall, 255-5221) to facilitate access to university-wide programs.

The Career Development Center (CDC, 162 MVR) is a starting point for students looking for career information. Selected resources about career planning and job search techniques, general directories to begin job or graduate school searches, and information for alumni networking are housed there. Also available are Cornell Career Services handouts and registration forms, graduate and professional school testing booklets and registration packets, study abroad, and Urban Semester program materials. Computers provide access to web-based information regarding internship and employment opportunities, as well as graduate/professional schools.

The CDC is open weekdays during the regular school semester. Student career assistants are available to provide résumé and cover letter critiques, conduct mock interviews on video, and help navigate the library resources. Final critiques can be provided by a career counselor once the student review has been completed.

Former Urban Semester Program participants comprise a portion of the CDC student staff and are available daily to answer questions about the program and its application process.

Selected services are listed below. They will help students investigate their interests, skills, and values as they relate to career options,

provide useful information and tips for a successful summer or full-time job search, and provide access to employment opportunities. In addition, please refer to the college's career services web site: www.human.cornell.edu/student.

Pre-law or Pre-med. Students who consider themselves pre-law or pre-med are encouraged to join a student group affiliated with ASCS. Those interested in a law career can join PLUS (PreLaw Undergraduate Society), which provides information on applying to law school, preparing for the LSAT, and examining career opportunities in law. Students interested in pursuing a health-related career are welcome to join PATCH (Pre-professional Association Toward Careers in Health), which serves as a link to the university health careers network and provides guidance as students prepare for the MCAT, apply to medical school, and explore the various specialties of medicine.

Extern Program. Students can spend one day to one week over winter break shadowing an alum in a career field of their choice. They observe day-to-day activities, discuss specific jobs and careers, and sometimes obtain limited hands-on experience. This service is available to sophomores, juniors, and seniors.

Fresh Program. This service is similar to the Extern Program but is available to freshmen only. Students can spend one day to one week over spring break shadowing an alum in a career field of their choice. In addition to career explorations, the Extern and Fresh programs provide excellent networking opportunities.

Internship and Employer Files. The CDC keeps files of more than 300 internships and hundreds of potential employers for student review.

Student Jobs and Internships. This is an electronic listing of information about internships and career-related summer and academic year employment that is exclusive to Cornellians.

Alumni Career Presentations. Alumni from the college come back to campus throughout the year to discuss their postgraduate or professional experiences. These meetings are ideal for exploring career outcomes of specific majors.

AlumNet. Students have access to Human Ecology alumni who can provide information on their careers and offer suggestions on a job search in their particular field or location. Students can query alumni on a host of variables and review selected alumni résumés to learn more about specific careers.

Job Search Workshops. The college hosts approximately 10 workshops every semester. These workshops are designed to help students market themselves for either summer or full-time job opportunities. Students learn how to conduct an effective job search, write a résumé and cover letter, and interview successfully.

CornellTRAK. Exclusively for Cornell students, CornellTRAK provides a listing of job opportunities available. Most are full-time jobs, although some summer opportunities are listed. Search by career field, geographic location, or both.

InterviewTRAK. This service provides access to on-campus interviews with employers interested specifically in Cornell students. Interviews occur primarily in banking and financial services, retail sales and management, facilities planning and management, and consulting, along with a few nonprofit organizations.

New York Recruiting Consortium. Available exclusively to Human Ecology and Arts and Sciences students, the New York Recruiting Consortium happens in New York City over winter break. It offers interviews for full-time employment with employers involved in banking and financial services, retail sales/management, advertising, law, health care, and consulting.

NFP in New York City and NFP in Washington, D.C. Speak with representatives from dozens of New York City or Washington, D.C., not-for-profit/public service agencies about work or internship opportunities in health, education, advocacy, government, and more (held only during the spring semester).

Communications Consortium. Interview with organizations in advertising, public relations, film and radio, and print media. National organizations come to Syracuse, N.Y., to meet with students for individual appointments. During the spring semester, a job fair is held the evening before.

GRADUATION REQUIREMENTS AND POLICIES

It is important for students to track their graduation progress by comparing their current transcript with an appropriate curriculum sheet. Official transcripts may be obtained at the Office of the University Registrar (B07 Day Hall). Curriculum sheets are available in the Human Ecology registrar's office (145 MVR). Students are responsible for planning course selections to ensure that graduation requirements are fulfilled in eight semesters. Transfer students are allowed fewer semesters based on the number of transferable credits granted at admission. Students requiring additional semesters to fulfill their graduation requirements must meet with a Human Ecology counselor (172 MVR) and request to petition for an extension.

Grade Point Average (GPA) Requirement for Graduation

- Students must earn a minimum cumulative GPA of 2.0 (C) or better to graduate. Note: Students matriculating before spring 2004 may continue to follow the older cumulative GPA standard of a 1.7 (C-) or better.

Cornell Credit Requirements

- To graduate, a student must earn a minimum of 120 academic credits. Physical education credits and "00" courses do not count toward the 120 required credits. An unlimited number of credits may be taken in Cornell's statutory colleges.
- Of the 120 credits required to graduate, at least 60 credits must be earned at Cornell University (applicable to transfer students).

- As of fall 2003, students who matriculate as freshmen may apply a maximum of 15 non-Cornell credits earned before matriculation (including AP, IB, and college credits) toward the 120 credits required for graduation. For all students, an additional pre-approved 15 in absentia credits earned after matriculation may be applied. AP, IB, and transfer courses may be applied toward fulfillment of specific requirements regardless of whether the credit is transferred (i.e., required courses may be waived). Refer to "Advanced Placement Credit" for full details.
- No college credit earned before matriculation and used to meet Cornell's minimum admission requirements may be counted in the 120 credits required for graduation. This policy does not apply to transfer students.
- Courses taught by a college in the high school setting or counted toward high school graduation are not allowed to count for either credits or fulfillment of requirements (i.e., Syracuse Project Advance).*
- Cornell extramural credit (defined below) is limited to 15 credits toward the 120 required.
- Strict limitations exist on the number of credits that can be applied toward the 120-credit minimum for special studies courses (400, 401, 402), for 403 courses, and for courses taken with an optional S-U grade. Details follow.

Human Ecology Credit Requirements

- The college divides the 120 minimum required academic credits into four general categories. (*Students should refer to curriculum sheets for their major for specific details on course selections. These sheets are available in the Office of the Registrar (145 MVR) and in the Office of Admission, Student, and Career Services (172 MVR) as well as on the college web site at www.human.cornell.edu.*)
 - Category I—College distribution requirements
 - Natural sciences
 - Social sciences
 - First-year writing seminars
 - Humanities
 - Quantitative and analytical courses (math and statistics)
 - Category II—Requirements for a major
 - Category III—Elective credits
 - Category IV—Physical education

These categories are detailed below.

- Students must complete 40 Human Ecology (HE) credits from Categories II and III.** (HE credits from Category I may not be applied toward this requirement.) A maximum of 3 credits from the 401–403 special studies series courses may be used toward this requirement. *Additional course-specific rules are listed below.*

S-U grading rules for this requirement are as follows:

1. If a course is a requirement in Category I or II, the course may *not* be taken for an S-U grade (unless it is the only grade option offered for the course).
2. Courses used to count toward Category III (electives) that are taken for an S-U grade *may* also count toward the 40-credit requirement.
3. Students should refer to the section on S-U grading rules for full S-U grading details.

- **Students must complete 9 Human Ecology (HE) credits from outside their major department from Categories I, II, or III.** Note: Biology and society majors are exempt from this requirement. A maximum of 3 credits from the 400-402 special studies series may be applied to this requirement. *Other course-specific rules for this requirement are listed below.*

S-U grading rules for this requirement are as follows:

1. If a course counting toward the 9-credit outside-the-major requirement is also a requirement in Category I or II, the course may *not* be taken for an S-U grade unless it is the only grade option offered for the course.
2. Courses used to count toward Category III (electives) that are taken for an S-U grade may also count toward the 9-credit outside-the-major requirement.
3. Students should refer to the section on S-U grading rules for full S-U grading details.

Course-specific rules that apply to both the 40 Human Ecology credit requirement and the 9 Human Ecology credit outside-the-major requirement:

1. Effective fall 2004, Human Ecology (prefix "HE") courses below the 300 level (e.g., HE 100, 101, 120, and 201) do not count toward either the 40-credit requirement or the 9-credit outside-the-major requirement. These HE-prefix courses that are below 300 level may be used as elective credit.
2. ECON 101 and 102 are considered Human Ecology credit courses and may be used to fulfill Human Ecology's 40- and 9-credit-outside-the-major requirements. If either or both courses are taken to fulfill a Category I or II requirement, they must be taken for a letter grade.
3. Experiential credit is applied to Human Ecology's 40- and 9-credit-outside-the-major requirements as follows:
 - a. Urban Semester (HE 470, 480, 490/495). Effective fall 2004, students in all Human Ecology majors earn:
 - 15 Human Ecology credits and 6 credits toward the 9-credit outside-the-major requirement.
 - b. Capital Semester (PAM 392). Effective fall 2004, PAM majors earn:
 - 15 Human Ecology credits and 7 credits as PAM credits.

Non-PAM majors earn:

- 15 Human Ecology credits and 7 credits toward the 9-credit outside-the-major requirement.

c. Cornell in Washington (PAM 406). For this entire semester, PAM majors earn:

- 8 credits toward the 40-credit requirement, which also count as 8 PAM credits.

Non-PAM majors earn:

88 credits toward the 40-credit requirement, **which also** count as 8 credits toward the 9-credit outside-the-major requirement. The remainder of the credits counts as elective credit.

Elective Credits

Students have individual objectives in choosing courses beyond the minimum requirements of the major. The university is diverse; the departments, centers, and special programs numerous; the fields of study almost unlimited. Counselors and faculty advisers are available to discuss which courses may interest students and best round out their education.

Students should consult the index in this catalog to learn where different subjects are taught in the university. Some subjects are taught in more than one division.

Elective credits can be earned in the endowed and statutory divisions of Cornell.

Endowed Colleges

Africana Studies and Research Center
College of Architecture, Art, and Planning
College of Arts and Sciences
College of Engineering
School of Hotel Administration
Johnson Graduate School of Management

Statutory Colleges

College of Agriculture and Life Sciences
College of Human Ecology
School of Industrial Relations
College of Veterinary Medicine

An unlimited number of credits may be taken in the statutory colleges of Cornell.

Human Ecology students will be billed for courses taken at endowed colleges if credits taken exceed the following limits:

- Students are allowed 21 credits of endowed courses in their major (category II) or as electives (category III); they may take more than 21 but then will be billed at the endowed rate of tuition for the extra credits (even if the endowed courses are required for the major).
- To the extent possible, courses taken in the endowed colleges will be counted to meet distribution requirements in category I. More than 40 endowed credits taken in category I, however, will count against the 21 allowed endowed elective credits.
- 5. Elective credits in category III earned in Cornell's endowed divisions during summer session, study abroad credits, in absentia credits, and transfer credits do not count against the 21 credits allowed in the endowed divisions.
- Required credits listed in the requirements charts for categories I and II are the minimums; credits taken in excess of those minimums count toward the

additional credits required in category III to make a total of 120 credits (00 courses and physical education courses do not count toward this 120-credit requirement). Students may choose to take additional courses and graduate with more than 120 credits.

Physical Education Requirements for Graduation

1. Students must earn 2 credits of physical education within their first two semesters. These 2 credits do not count as part of the 60 Cornell credits, or as part of the 120 total credits required for a degree, or toward full-time status. Students who matriculate at Cornell with 12 or more credits must complete only 1 credit of physical education. Students who transfer more than 25 credits (excluding AP credits) are not required to take physical education at Cornell, regardless of whether they took physical education at their previous college.
2. Students must pass the university's swim test. Students who transfer more than 25 credits (excluding AP credits) are exempt. Refer to "University Requirements for Graduation—Physical Education—Swim Test" in this catalog for specifics.

Minimum Semester Requirements

1. Students enrolling in the college as freshmen must complete at least 12 credits of Human Ecology courses by the end of the fourth semester, and at least 5 credits of Human Ecology courses must be taken in each of the freshman and sophomore years (ECON 101 and 102 may be used to fulfill this requirement).
2. Students must carry 12 credits each semester, excluding physical education, to be matriculated as full-time students. Mature students must carry 6 credits each semester (see "Mature Student Guidelines" for details).
3. In special cases, a student may petition to carry between 8 and 12 credits. Forms for petitioning this exception and advice on how to proceed are available in the Office of Admission, Student, and Career Services (172 MVR).

Special Studies

- Students may use only 12 credits of 400, 401, 402, or 403 courses toward graduation.
- Additional credits of 400, 401, 402, or 403 courses can be taken but will not be applied toward graduation.

"00" Courses

- "00" courses do not count toward graduation requirements but do count toward full-time semester status.

Requirements for Majors

- Students must fulfill the requirements specified for a major that are in effect at the time of their matriculation or thereafter. The requirements are detailed in curriculum sheets that are maintained for each academic year.

S-U Grade Options

- The S-U grading option may *not* be used for courses in category I or required

courses in category II unless it is the only grade option offered for those courses. S-U grades *may* be used for the 9 credits of Human Ecology course work outside of one's major and for electives in category III.

- Students may apply no more than 12 credits of S-U toward the 120 credits required for graduation. If a required course is offered only S-U, it will not count toward this limit. Also, Honors Research 499 taken S-U does not count against the 12 minimum limit. Students may take more S-Us if they choose, but the additional credit may not be applied toward graduation.

First-Year Writing Seminars

In each of their first two semesters of matriculation at the College of Human Ecology, students are required to take a Knight Program First-Year Writing Seminar. This policy also applies to transfer students. One or more of the seminars may be waived for transfer students if the college registrar grants credit for equivalent course work taken before matriculation at Cornell.

Those who do not fulfill this requirement on time will be referred to the Committee on Academic Status. Refer to "Criteria for Good Standing" for specifics on warning statuses that the committee applies to students who do not complete this requirement.

First-year writing seminars must be taken at Cornell and **may not be taken in absentia**. Students who receive a score of 5 on either the English Literature and Composition or English Language and Composition Advanced Placement (AP) exams can be exempt from *one semester* of their first-year writing seminar requirements. No other AP scores will allow a student this exemption (even if a lower score allows the student to use the course as elective credit toward graduation.) Students should be aware that the add/drop period for first-year writing seminars may be shorter in duration than the add/drop period for most Cornell classes.

Wells, Ithaca College, and Study Abroad Credits

Any credits earned with the Wells or Ithaca College exchange program are considered Cornell credits for the Refer to "Cornell Credit Requirements" for details on how many advanced placement (AP) credits can be applied toward the 120 credits needed for graduation.

purpose of fulfilling the 60 Cornell credit graduation requirement. They may not be used for Human Ecology credit. Study abroad courses may also count as Cornell credit (but not for Human Ecology credit).

Advanced Placement Credit

Students can earn advanced placement credit from one of the following:

1. The requisite score on a departmental examination at Cornell (usually given during orientation week) or on a College Entrance Examination Board (CEEB) achievement test. The requisite scores for the CEEB exams are determined by the relevant department at Cornell, vary by subject, and are listed in the beginning of this catalog. College-specific rules apply

toward many AP courses such as biology, English literature, English composition, and statistics. Details may be found at <http://human.cornell.edu/registrar/regdata/ap.cfm>.

2. A regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments have delegated the review of courses to college staff according to guidelines they have formulated. Some departments review each request individually. Some departments accept credit from virtually all accredited colleges; some do not.
3. Credit from the International Baccalaureates (IB) is evaluated individually.
4. Refer to "Cornell Credit Requirements" for details on how many Advanced Placement (AP) credits can be applied toward the 120 credits needed for graduation.

Note: Cornell does not accept credit for courses sponsored by colleges but taught in high schools to high school students, at colleges if enrollment is targeted at high school students, or if the course was used toward high school credit. This is true even if the college provides a transcript of such work. These courses also may not be used to fulfill college requirements. Students who have taken such courses may, however, take the appropriate CEEB test to qualify for credit as in paragraph 1 above. For further information and limitations on Advanced Placement credit, see the front pages of this catalog and the Human Ecology registrar's web site (www.human.cornell.edu/registrar/ap.cfm).

Foreign Language Study and Placement

Students who studied a foreign language before coming to Cornell and who want to continue must take either the CEEB test in that language or a Cornell departmental language placement test. The latter is given during orientation week in September and again in December, January, and May. Human Ecology students who plan to work with non-English-speaking people in this country or abroad often find it necessary to be proficient in another language. Many study abroad programs in non-English-speaking countries require the equivalent of two years of college-level language study.

Extramural Credit

Extramural credit is administered by the Office of Continuing Education and Summer Sessions (B20 Day Hall, 255-4987). Extramural credit is charged by the credit hour at the endowed tuition rate. Students may count only 15 credits of extramural credit toward their degree requirements. A student may enroll for extramural credit during the fall or spring semester only if he or she is not registered in the College of Human Ecology. For example, some students enroll for extramural credit before matriculating at Cornell.

An exception to this rule is credit earned in the Ithaca College or Wells College exchange programs. Students enrolled in these programs simultaneously maintain their status as students registered in the College of Human Ecology.

Humanities

Only certain classes will count for Category I, Humanities. To determine eligibility the college uses the following definition: "The humanities include the study of literature, history (including art and design history), philosophy, religion, and archaeology. Critical, historical, and theoretical studies of the arts and design are considered humanities. Languages and creative or performing arts such as the writing of fiction or poetry, painting, sculpting, designing, composing or performing music, acting, directing, and dance are not considered humanities." Additionally, social science courses such as sociology, government, anthropology, and psychology are not considered humanities.

Specifically, courses in the following list will count as humanities:

Africana Studies (literature and history)
Archaeology
Asian American Studies
Asian and Near Eastern Studies (literature and history)
Classics (literature and history)
Comparative Literature
Development Sociology 175, 318
English (literature only)
History
History of Art/History of Architecture
Landscape Architecture 282
Music and Theatre Arts (theory, literature, and history only)
Natural Resources 407, 411
Philosophy
Policy Analysis and Management 631, 634, 652
Religious Studies
Science and Technology Studies 205, 206, 233, 250, 281, 282, 286, 292, 358, 360, 389, 433, 444, 447, 472, 481, 490

PROCEDURES

Registration and Course Enrollment

Registration Requirements

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must complete course enrollment according to individual college requirements; settle all financial accounts including current semester tuition; satisfy New York State health requirements; and have no holds from the college, the Office of the Judicial Administrator, Gannett Health Center, or the Bursar's office.

Individuals must become registered students by the end of the third week of the semester. Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises.

Verification of Registration

Many insurance companies or scholarship funds require verification of full-time registration at Cornell. Should students need such verification, they should use the official university verification service at <http://certification.cornell.edu> or request an official letter from the Office of the University Registrar (B-7 Day Hall). Students who need letters of good standing should contact the Human Ecology registrar's office (145 MVR).

Bursar Bill

A bursar bill is sent to each student over the summer and winter breaks; it summarizes what is owed to the university. The bursar bill can also be viewed through Just the Facts. Any questions regarding the bursar bill can be directed to the Bursar's office (260 Day Hall, 255-2336). Initial New York State residency eligibility is determined during the admissions process, but the Bursar's office will handle any request for a status change after matriculation.

Late University Registration

A student clearing his or her financial obligations after the deadline date on the bursar's bill is considered late. **Late registrants are assessed a finance charge on the bursar's bill starting from the date the bill is due.** According to university policy, all students must be registered before the end of the third week of classes. If for any reason a student registers after that time, the Bursar's office will charge a late fee. **Students who fail to register by the third week of the semester may be withdrawn from the university. Human Ecology students who do not arrange payment agreements satisfactory to the university bursar by the last day of classes for a semester will be withdrawn from the university. Furthermore, credit for any classes attended for the semester will not be awarded regardless of the letter grade received for a class. Should withdrawn students wish to return, they must reapply through the college admissions office.**

Proration of Tuition

Except for mature students, it is seldom possible to have tuition prorated if a student carries fewer than 12 credits during a semester. See the college registrar (145 MVR) or counselors (Office of Admission, Student, and Career Services, 172 MVR) for more information. Students of mature status may carry 6 to 11 credits without petitioning but must request that their tuition be prorated. Prorated tuition will be considered only for requests of between 3 and 10 credits. All requests should be made to the college registrar (145 MVR) by the end of the pre-enrollment period in the prior semester.

Course Enrollment

Initiating the Process

"CoursEnroll" selections are only "requests" for seats in classes. Between the end of the course enrollment period and the beginning of the next semester, course requests are evaluated by the offering college department. Students can determine if their requests have been successful when final schedules are published before the add/drop period. Students are expected to make course requests for the subsequent semester during a specified time in the current semester. Those dates are advertised publicly and available on the University Registrar's web site (www.sws.cornell.edu/our). "CoursEnroll" takes place electronically, using software available through Just the Facts. During this time, each student must meet with his or her faculty adviser to discuss academic plans and to obtain the advising PIN code required for finalizing course requests. A student may enter and hold requests for courses before entering his or her PIN. Once the PIN number is entered, however, the schedule is locked and it is not possible to change until the add/drop period of the next semester. Important: students who fail to finalize the CoursEnroll process by not entering their PIN code by published deadlines **will lose all** course requests.

Information on courses is readily available in this catalog and in the *Course and Time Roster* for each semester. Both of these publications can be accessed on the web through CUInfo.

Incoming students will receive tentative schedules upon their arrival to campus, and will meet with faculty advisers during the orientation period.

Course Loads

Full-time matriculated students must carry at least 12 credits (exclusive of physical education courses) to maintain full-time status. Refer to the preceding section, "Minimum Semester Requirements," for details. The normal course load in the college ranges from 12 to 18 credits, although there is no limit to the number of statutory credits a student may take each semester. Nonetheless, students should avoid planning excessive workloads; the time required to keep abreast of courses tends to increase as the semester progresses. Students may not withdraw from courses after the seventh week of classes without petitioning and by substantiating extenuating circumstances. Students should avoid the need to drop courses by taking on a reasonable workload and using the drop period to make changes in their program.

Late Course Enrollment

Students who do not complete course enrollment during the CoursEnroll period usually must wait until the beginning of the next semester's add/drop period to enroll. Extensions are rarely granted and usually only for documented illness.

Students who do not meet the deadline for any reason should see the college registrar in 145 MVR as soon as possible. The college registrar can explain available options and course enrollment procedures under such circumstances.

Note: Students can review their course schedule via computer using Just the Facts. Students are responsible for checking their course schedule for accuracy of course numbers, credit hours, grade options, and other data. Errors must be corrected immediately. Procedures for correcting enrollment errors as well as for making any other changes are described in the following section.

Course Enrollment Changes

It is to the student's advantage to make any necessary course enrollment changes as early in the semester as possible. Adding new courses early makes it easier for the student to keep up with course work. Dropping a course early makes room for other students who may need it for their academic programs.

Ideally, students evaluate their course load carefully at the beginning of the semester. If, in the first week or two, the instructors do not discuss the amount of material to be covered and the extent of student assignments, students need to ask about course requirements.

In addition to the procedures listed below for course enrollment changes, all add/drop forms for nutritional science majors must be signed by a faculty adviser.

Deadlines for Add/Drop and Grade Option Changes

Note: Brief add/drop periods exist for first-year writing seminars and half-semester courses.

1. During the first three weeks of the semester, courses may be added, dropped, or the grade option changed. Special status courses (400, 401, 402) may be added through the 11th week of classes. 403 Teaching Apprentice courses must be added during the first three weeks of the semester.
2. From the fourth through the seventh week of the semester, courses may be dropped. **Grade option changes may not be made at this point regardless of instructor's permission.**
3. After the seventh week of the semester, any requests for course changes must be made through the petition process. Students should request an appointment with an Admission, Career and Student Services counselor in 172 MVR to initiate the process.
4. After the seventh week of the semester, any student granted permission to drop a course after petitioning will automatically receive a grade of W (Withdrawn), and the course and grade will remain on the official transcript even if repeated in a later semester.

Deadlines for Half-Semester Courses

Students may drop half-semester courses within the first three-and-one-half weeks of the course. Students may add a course after the first week of classes only with the permission of the instructor. After the first three-and-one-half weeks, students must petition to drop the course.

Time and Place for Add/Drop and Grade Option Changes

All students may adjust their schedules and grading options during the first three weeks of each semester. **To make course changes after the seventh week of the semester, a student must file a general petition form** (see "Petition Process.") Students are expected to attend classes and to do assigned work until the petition has been formally approved or denied.

Permission of Instructor

Certain courses may be taken only with the permission of the instructor as indicated in this catalog or on the official course description on the web. Undergraduates must obtain permission of the instructor to take any graduate course. Students must request the instructor's permission during the course enrollment period by placing their name on a list maintained by the departmental advising assistant.

Students interested in taking a course in the Department of Art in the College of Architecture, Art, and Planning are required to register with the departmental secretary (100 Olive Tjaden Hall) before enrolling in the course. Seniors who want to take an elective course in the Johnson Graduate School of Management are required to obtain permission of the instructor on a course authorization form that the student then files with that school's registrar in Sage Hall.

Course Enrollment while Studying Abroad

Students who plan to study abroad have several options available to enroll for their returning semester at Cornell. Students can consult with their faculty adviser before departure to consider the schedule of classes that they will take upon their return to campus. Once abroad, the student can use the web to access *Courses of Study* and the *Course and Time Roster* for the coming semester. The roster is available on the web in approximately the first week of October and the first week of March. Using these resources, the student can e-mail the course requests to the student's faculty adviser for approval; the faculty adviser can then e-mail them to the college registrar. A student who does not have access to the Internet while abroad can wait for the *Course and Time Roster* to arrive via airmail from the Cornell Abroad office. The student can then e-mail, fax, or mail the course requests to their faculty adviser and ask the faculty adviser to submit the course requests to the college registrar. The *Course and Time Roster* becomes available only the day that pre-enrollment begins; thus, students who depend on receiving the mailed copy will experience some delay in submitting their course requests. Requests must be submitted within the published deadlines. Because the faculty adviser submits requests for the students, the students do not have to finalize selections with a PIN number.

Oversubscribed Courses

Enrollment in many human ecology courses is limited. When a course is overenrolled, students are generally assigned on the basis of seniority or by criteria defined for each course as listed in this book. Students' professional goals may be considered. Those students not admitted to a course may be placed on a waiting list maintained by the professor or the department offering the course. Course instructors are responsible for determining the criteria to fill their classes from waiting lists. Waiting lists are maintained only for the first three weeks of each semester.

Limited-Enrollment Classes

Students who do not attend the first two class sessions of courses with limited enrollment may be dropped from the course list. Students can avoid being dropped from a class by notifying the instructor that unavoidable circumstances have prevented their attendance.

Cross-Listed Courses

To apply a cross-listed course to graduation requirements, students must enroll in the department for which they need the credits. If changes in department designations need to be made, this must be done during the official course add period for the semester. To do so, students must complete a special form, which can be obtained in the registrar's office in 145 MVR.

Courses with Duplicate Content

Students should scrutinize course descriptions for details about other Cornell courses with duplicate content that would preclude a student from receiving full credit for duplicate courses. For example, students may not receive 6 credits toward graduation requirements if they take D SOC 101 and SOC 101. Because both are introduction to sociology courses, only 3 credits would be allowed. To aid students in this evaluation, the college maintains a partial list (those that are commonly required in Human Ecology curricula) of Cornell courses that have duplicate content. Other courses with similar content may be found at www.human.cornell.edu/registrar/forbiddenoverlaps.cfm.

Special Studies Courses

Each department in the College of Human Ecology (DEA, HD, NS, PAM, and TXA) offers special studies courses that provide opportunities for students to do independent work not available in regular courses. One of those courses, designated 300 Special Studies for Undergraduates, is intended primarily for students who have transferred from another institution and need to make up certain course work.

The other special studies courses are 400 Directed Readings; 401 Empirical Research; and 402 Supervised Fieldwork. Juniors and seniors normally take those courses, and a faculty member in the department in which the course is offered supervises work on an individual basis. It is important for students to use the appropriate course number (300, 400, 401, or 402) for a special project.

To register for a special studies course, a student obtains a special studies form from the departmental office where he or she plans to take the course. The student discusses the proposed course with the faculty member

under whose supervision the study would be done and then prepares a plan of work. If the faculty member agrees to supervise the study, the student completes a special studies form and obtains signatures from the instructor, faculty adviser, and department chair before submitting the form to the college registrar's office (145 MVR). Special studies forms are available in 145 MVR or in departmental offices.

Semester credits for special studies courses are determined by the number of contact hours the student has with the supervising faculty member (or a person designated by the faculty member). To earn 1 credit, a student must have the equivalent of three to four hours of contact time per week for 15 weeks (a total of 45 contact hours). For additional credit, multiply the number of credits to be earned by 45 to determine the number of contact hours needed for the course. **Strict limitations exist on the number of special studies credits that can apply toward graduation and how these credits may be applied toward Category II requirements in the major. Refer to "Human Ecology Credit Requirements" for details.** To register in a special studies course taught in a department outside the college, follow the procedures established by that department.

Changes in Status

General Petition Process

The petition process permits students to request exceptions to existing regulations. Petitions are considered individually, weighing the unique situation of the petitioning student with the intent of college and university regulations. In most cases, extenuating circumstances are needed for a petition to be approved if it involves waiving a deadline. These are situations beyond a student's control, such as a documented medical emergency.

Students can avoid the necessity to petition by carefully observing the deadlines that affect their academic program. See "Course Enrollment Changes" above for some of the important deadlines. If unsure of a deadline, check with a counselor in the Office of Admission, Student, and Career Services (172 MVR) or with the staff in the college registrar's office (145 MVR).

A general petition may be needed to carry fewer than 12 credits, withdraw from a class after the seventh-week deadline, add a course after the third-week deadline, change a grade option after the third-week deadline, be exempt from one or more of the college's graduation requirements, substitute a required course in one's major with another course, or stay an additional semester to complete the graduation requirements.

Although many kinds of requests can be petitioned in the college, options other than petitioning may be preferable in some cases. To explore whether a petition is appropriate, the student may discuss the situation with a college counselor or the college registrar.

If a student decides to submit a general petition, the form is available in the registrar's office (145 MVR) and in the Office of Admission, Student, and Career Services (172 MVR) or on the web at www.human.cornell.edu/student/forms/. After completing the form and obtaining the required signatures, the

student must turn the form in to the registrar. Once a decision is made, a letter is placed in the student's college mail folder indicating approval or denial of the petition.

Students may appeal the college registrar's decision to the Committee on Academic Status. Students who elect to appeal have the option of appearing in person before the committee to state their case. A member of the counseling staff can guide a student through this process.

In Absentia Study

Under certain conditions, credit toward a Cornell degree may be given for in absentia study, that is, study done at an accredited institution away from Cornell after the student matriculates in the College of Human Ecology. In absentia study can be done during any semester: fall, winter, spring, or summer. First-year writing seminars may not be taken in absentia.

To be eligible for in absentia study, a student must be in good academic standing and must receive permission in advance from the college registrar. A student not in good standing may study in absentia but will not receive transcript credit until the Committee on Academic Status has returned the student to good standing. Students not in good academic standing who wish to finish their degree in absentia must seek pre-approval from the college's Committee on Academic Status via the general petition process. In some cases, students may petition for in absentia credit after the work has been completed, but there is no guarantee that such credit will be awarded without advance approval.

In absentia petition forms are available in the Human Ecology registrar's office (145 MVR) or on the web at www.human.cornell.edu/student/forms/. The student submits the form to the Human Ecology registrar's office (145 MVR). In absentia study during the fall or spring semester carries a nominal administrative fee. (Contact the Bursar's office, 260 Day Hall, for the current amount.) Students will receive a letter in their college mail folder from the college registrar notifying them of the petition decision.

Note: Students seeking pre-approval for in absentia course work should do so well in advance as turnaround time for the approval process can be variable.

A student may take up to 15 credits in absentia as long as the courses do not duplicate courses already taken and the in absentia courses are applicable to the requirements of the college. Students who study abroad during the summer or winter term are limited to a maximum of 9 in absentia credits. Study abroad during the fall or spring semester must be done through the Study Abroad office and is not considered in absentia study. **Students studying while on a leave of absence during the spring or fall semesters may not receive credit for nondomestic campus programs.**

On the following rare occasions a student's petition for more than 15 credits in absentia may be allowed: (1) the work taken represents a special educational opportunity not available at Cornell, (2) it relates to the student's particular professional goals, and (3) those goals are consistent with the focus of the college. The in absentia petition form

is used to request more than 15 credits in absentia. Wells and Ithaca College credit are not considered in absentia credit and are not included in the 15-credit limit.

The college registrar requests approval from the appropriate department if a student wants to apply in absentia credit to requirements in his or her major. Students seeking in absentia credit for a modern foreign language in which they have done work must obtain the approval of the Department of Modern Languages and Linguistics (College of Arts and Sciences). The department will recommend the number of credits the student should receive and may require the student to take a placement test after returning to Cornell.

The student is responsible for having the registrar of the institution where in absentia study is taken send transcripts of grades directly to the Human Ecology registrar's office (145 MVR). Only then will credit be officially assessed and applied to the Cornell degree. Credit for in absentia study will be granted *only* for those courses with grades of C- or better. Courses may not be taken for S-U grades unless it is the only grade option offered. In absentia courses appear on the Cornell University transcript, but the grades are not calculated in the student's GPA.

A student who holds a Regents' or Children of Deceased or Disabled Veterans Scholarship may claim that scholarship for study in absentia if the study is done in a college in New York State and if it is for a maximum of 15 credits acceptable to the College of Human Ecology.

The rules regarding study in absentia apply to transfer students with the additional stipulation that at least 60 credits must be taken at Cornell. At least 40 of the 60 credits must be in the College of Human Ecology at Cornell unless the student has transferred equivalent human ecology credit. (No more than 20 credits of equivalent credit may be applied to the 40 credits required in human ecology course work.)

Leaves of Absence

A student may request a leave of absence before the beginning of the semester or during the first seven weeks of the semester for which a leave is sought. A leave may be extended for a second semester by making a written request to the Office of Admission, Student, and Career Services (172 MVR).

Note: In absentia study status and leave of absence status are not the same; however, students may petition to earn credits with either status. Students on leave must notify the college registrar (145 MVR), in writing, of their intention to return to campus at least one month before the beginning of the semester.

Those whose leave period has expired will be withdrawn from the college after the seventh week of the semester they were due back.

Students considering a leave of absence should discuss their plans with a counselor in the Office of Admission, Student, and Career Services. The counselor can supply the necessary forms for the student to complete and file with the Human Ecology registrar's office (145 MVR). Leaves initiated after instruction begins will be charged a percentage of the semester tuition. (Refer to "Bursar Information" in this catalog for a billing schedule.)

Requests for a leave of absence received after the first seven weeks of the semester, or requests for a leave of absence from students who have already had two semesters' leave of absence, will be referred for action to the Committee on Academic Status. The committee may grant or deny such requests, attaching conditions to the leave as it deems necessary. Leaves of absence after the first seven weeks are generally granted only when there are compelling reasons why a student is unable to complete the semester, such as extended illness.

A student who requests a leave of absence after the first seven weeks is advised to attend classes until action is taken on the petition. A student whose petition for a leave of absence is denied may choose to withdraw or to complete the semester. If the petition for leave is approved the student's courses will remain on the transcript with W grades.

The academic records of all students who are granted a leave of absence are subject to review, and the Committee on Academic Status may request grades and other information from faculty members to determine whether the student should return under warning or severe warning or in good academic standing.

Under certain documented medical circumstances a student may be granted a **medical leave of absence**. Medical leaves are initiated by the student with Gannett Health Center. If Gannett Health Center recommends a medical leave for the student, the college registrar may grant the leave. A medical leave is for an indeterminate period of time not to exceed five years. Students who are granted a medical leave of absence should maintain contact with a counselor in the Office of Admission, Student, and Career Services (172 MVR, 255-2532) to arrange their return to campus. The counselor will advise the student on procedures to obtain a recommendation from Gannett Health Center to the college registrar for the student's return. Students should plan sufficiently in advance to assure time for Gannett Health Center and the college registrar to consider their request.

Withdrawal

A withdrawal is a termination of student status at the university. Students may withdraw voluntarily at any time by notifying a counselor in the Office of Admission, Student, and Career Services and filing a written notice of withdrawal in the Human Ecology registrar's office. A student considering such an action is urged to first discuss plans with a counselor in the Office of Admission, Student, and Career Services (172 MVR, 255-2532).

In some instances a student may be given a withdrawal by the college registrar. Students who leave the college without an approved leave of absence, or do not return after the leave has expired, will be given a withdrawal after the seventh week of the semester in which they fail to register.

A student who has withdrawn from the college or who has been given a withdrawal by the college registrar and who wishes to return at a later date must reapply through the Office of Admission for consideration along with all other applicants for admission. If the student was in academic difficulty at the time of the withdrawal, the request for readmission will be referred to the Committee

on Academic Status (CAS) for consideration, and that committee may stipulate criteria under which the student may be readmitted to the college.

GRADES AND EXAMINATIONS

Grade Definitions and Equivalents

The official university grading system uses a system of letter grades ranging from A+ to D-, with F denoting failure. An INC grade is given for incomplete work and R is given at the end of the first semester of a two-semester course. If a student is given permission to withdraw from a course after the seventh week of the semester a "W" is automatically assigned. Students can view their grades on Just the Facts after the semester has ended. See "Grading Guidelines" for more information on the official university grading policies.

To compute a semester grade point average (GPA), first add up the products (credit hours X grade quality points) and divide by the total credit hours taken. Grades of INC, R, S, SX, U, UX, and W should not be included in any GPA calculations. A grade of F has no quality points, but the credits are counted, thereby lowering the average. A cumulative GPA is simply the sum of all semester products divided by all credits taken. Refer to "Repeating Courses" for details on how GPA is affected if a student repeats a course. For further help on calculating a GPA ask at the college registrar's office (145 MVR).

These are the quality point equivalents:

A+ = 4.3	C+ = 2.3
A = 4.0	C = 2.0
A- = 3.7	C- = 1.7
B+ = 3.3	D+ = 1.3
B = 3.0	D = 1.0
B- = 2.7	D- = 0.7
	F = 0.0

Repeating Courses

Students are allowed to register a second time for a course they have already passed or in which they received an F. If a student has previously passed a course he or she is taking a second time, the second registration will not count toward the degree requirements, and the grade received will not be included in the cumulative GPA.

If a student enrolls in a course in which he or she previously received an F, the credits from the second registration will count toward the graduation requirements and the grade will be included in the cumulative GPA. The F will also remain on the record and will be included in the GPA.

S-U Grades

Some courses in the college and in other academic units at Cornell are offered on an S-U basis (see course descriptions in this book and on the Cornell web site). Courses listed as SX-UX are available only on an S-U basis and may not be taken for a letter grade. University regulations concerning the S-U system require that a grade of S be given for work equivalent to a C- or better; for work below that level, a U must be given. **No grade point assignment is given to a grade of S, and S or U grades are not included in the**

computation of semester or cumulative averages. A course in which a student receives a grade of S is, however, counted for credit. No credit is received for a U. Both the S and U grades appear on a student's record. A student who is attempting to qualify for the semester's Dean's List must take at least 12 credits of course work graded non-S-U. See "Awards and Honors" for more details about the Dean's List.

No more than 12 S-U credits will count toward a student's 120-credit graduation requirement. However, a student may take more than one S-U course in any one semester. **S-U courses may be taken only as electives or in the 9 credits required in the college outside the major** unless the requirements for a specific major indicate otherwise. Freshmen enrolled in ENGL 137 and 138 (offered for S-U grades only) are permitted to apply those courses to the first-year writing seminar requirement. If a **required** course is offered only S-U, it will not count toward the 12-credit limit.

To take a course for an S-U grade, a student must check the course description to make sure that the course is offered on the S-U basis; then either sign up for S-U credit during course enrollment, or obtain and file an add/drop form in the Human Ecology registrar's office before the end of the third week of the semester. After the third week of the semester, students cannot change grade options.

Grades of Incomplete

A grade of incomplete is given when a student does not complete the work for a course on time but when, in the instructor's judgment, there was a valid reason. A student with such a reason should discuss the matter with the instructor and request a grade of incomplete. Students are at risk of going under the minimum semester requirement if an INC grade in a course puts the total number of credit hours under 12 for the semester. For more information, refer to "Minimum Semester Requirements."

A grade of incomplete may remain on a student's official transcript for a maximum of two semesters and one summer after the grade is given, or until the awarding of a degree, whichever is the shorter period of time. The instructor has the option of setting a shorter time limit for completing the course work.

If the work is completed within the designated time period, the grade of incomplete will be changed to a regular grade on the student's official transcript. **If the work is not completed within the designated time period, the grade of incomplete automatically will be converted to an F.**

When a student wants to receive a grade of incomplete, the student should arrange a conference with the instructor (preferably before classes end and the study period begins) to work out the agreement. A form, called Explanation for Reporting a Final Grade of F or Incomplete, which must be signed by both the instructor and the student, needs to be submitted by the instructor to the Human Ecology registrar's office. This form is submitted with the final grade sheets whenever a grade of incomplete is given. This form is for the student's protection, particularly in the event that a faculty member with whom a course is being completed

leaves campus without leaving a record of the work completed in the course. If circumstances prevent a student from being present to consult the instructor, the instructor may, if requested by the student, initiate the process by filling out and signing the form without the student's signature and turning the form in to the Human Ecology registrar's office with the grade sheet. Before a student will be allowed to register for succeeding semesters, he or she must go to the Human Ecology registrar's office to fill out and sign the remainder of the form.

If the work is completed satisfactorily within the required time, the course appears on the student's official transcript with an asterisk adjacent to the final grade received for the semester in which the student was registered for the course. A student who completes the work in the required time and expects to receive a grade must take the responsibility for checking with the Human Ecology registrar's office (about two weeks after the work has been handed in) to make sure that the grade has been received. Any questions should be discussed with the course instructor.

Grade Disputes

Students who find themselves in disagreement with an instructor over grades have several options:

1. Meet with the instructor and try to resolve the dispute.
2. Meet with the chair of the department in which the instructor has their appointment.
3. Meet the associate dean for undergraduate studies of the college in which the course was taught.
4. Meet with the university ombudsman (118 Stimson Hall, 255-4321).

A student may also seek advice from his or her faculty adviser or with a counselor in the Office of Admission, Student, and Career Services (172 MVR).

Examinations

Both the preliminary and final examination schedules are printed every semester in the *Course and Time Roster*. The current exam information is also available on the university registrar's web page at www.sws.cornell.edu/our.

Final Examinations

The following is quoted from the *Cornell University Faculty Handbook*, 1990, pages 66-67:

"The University Faculty long ago established, and has never reversed, the policy that each course should require a final examination or some equivalent exercise (e.g., a term paper, project report, final critique, oral presentation, or conference) to be conducted or due during the period set aside for final examinations.

"Although not specifically prohibited, it is University policy to discourage more than two examinations for a student in one 24-hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a makeup for other

valid reasons, e.g., illness, death in the family, etc.

Legislation of the University Faculty governing study period and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the Registrar's Office without prior written permission of the Dean of the Faculty.
2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.
3. Permission will be given by the Dean of the Faculty to reschedule examinations during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time that the examination was originally scheduled. The faculty member requesting such a change will be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the Registrar's Office.
4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) in the final examination period.
5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.
6. Faculty can require students to submit papers during the week preceding the study period.
7. Take-home examinations should be given to classes well before the end of the regular semester and should not be required to be submitted during study period but rather well into the examination period.

Students have a right to examine their corrected exams, papers, and the like, in order to be able to question their grading. They do not, however, have an absolute right to the return thereof. Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester preferably until the end of the following semester, to afford students such right of review."

Preliminary Examinations

The following is quoted from the *Cornell University Faculty Handbook* (1990), pages 65-66:

"Preliminary examinations are those given at intermediate times during a course. It is common to have three of these in a semester to encourage review and integration of major segments of the course, to provide students with feedback on how well or poorly they are progressing, and to contribute to the overall basis for a subsequent final grade.

The most convenient times and places for "prelims" are the normal class times and classrooms. But many courses, particularly large ones with multiple sections, choose to examine all the sections together at one time and to design an examination that takes more than one class period to complete. In such cases the only alternative is to hold the prelim in the evening. This practice creates conflicts with other student activities, with evening classes and laboratories, and among the various courses that might choose the same nights.

To eliminate direct conflicts, departments offering large multisection courses with evening prelims send representatives annually to meet with the dean of the University Faculty to lay out the evening prelim schedule a year in advance. Instructors of smaller courses work out their own evening prelim schedules, consulting their students to find a time when all can attend. Room assignments are obtained by the faculty member through the contact person in his or her college or the Central Reservations Coordinator.

The policy governing evening examinations is as follows:

1. Evening examinations may be scheduled only on Tuesday and Thursday evenings and only after 7:30 P.M. without prior permission from the Office of the University Faculty.
 - a. Such prior permission is not, however, required for examinations or makeup examinations involving small numbers of students (generally 30 or fewer) provided that the scheduled time is acceptable to the students involved and that an alternate examination time is provided for those students who have academic, athletic, or employment conflicts at the time scheduled.
2. Permission from the Office of the University Faculty to schedule on evenings other than Tuesdays and Thursdays or at a time before 7:30 P.M. will be granted only on the following conditions:
 - a. Conditions such as the nature of the examination, room availability, large number of conflicts, etc., justify such scheduling.
 - b. An alternate time to take the exam must be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.
3. If there is a conflict between an examination listed on the schedule developed at the annual evening prelim scheduling meeting and an examination not on the schedule, the examination on the schedule shall have a priority, and the course not on the schedule must provide an alternate time to take the examination for those students faced with the conflict.
4. If there is a conflict between examinations, both of which are on the schedule developed at the annual evening prelim scheduling meeting or both of which are not on the schedule, the instructors of the courses involved must consult and agree on how to resolve the conflict. Both instructors must approach this resolution process with a willingness to provide an alternative or earlier examination.

5. Courses using evening examinations are strongly urged to indicate this in the course description listed in *Courses* and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed."

ACADEMIC STANDING

Criteria for Good Standing

The College of Human Ecology has established a set of **minimum academic standards** that all students must meet or exceed each semester. These standards are as follows:

1. A student must maintain a semester and cumulative grade point average of 2.0 or higher.
2. A student must successfully complete at least 12 credits per semester, excluding physical education courses. Mature students must carry at least 6 credits each semester, also excluding physical education.
3. Students enrolling in the college as freshmen must complete at least 12 credits of Human Ecology courses by the end of the fourth semester such that at least 5 credits must be taken by the end of the second semester (ECON 101 and 102 may be used to fulfill this requirement).
4. A student must be making "satisfactory progress" toward a Human Ecology bachelor's degree.
5. All students must complete their requirements for first-year writing seminars (FWS) during their first two semesters at Cornell. Students who do not take a required first-year writing seminar in the first semester that they matriculate at the College of Human Ecology will be placed on a warning status.

Students who have completed the second or subsequent semesters of matriculation at the college who have not taken both of the required writing seminars will be placed on a severe warning with danger of being withdrawn status. In these cases, if the student has not pre-enrolled for a FWS for the upcoming semester, a hold will be placed on the student's semester registration status until he or she is actually enrolled in an FWS. **If this requirement is not completed by the end of that semester, the student will be withdrawn from the college.**

At the end of each semester, the Committee on Academic Status (CAS) reviews each student's academic record to ensure that the **minimum academic standards** listed above are met. The committee then takes appropriate action for students whose academic achievement is considered unsatisfactory as defined by these criteria. CAS considers each case individually before deciding on a course of action. In an effort to support every student's success, the committee may take any of the following actions:

1. Place a hold on a student's university registration status for the current or upcoming semester.

2. Withdraw the student permanently from the college and Cornell University.
3. Require the student to take a leave of absence for one or more semesters.
4. Issue a warning to the student at one of the following levels:

- a. Severe warning with danger of being withdrawn
- b. Severe warning
- c. Warning

These imply that if the student does not show considerable improvement during the semester, the committee may withdraw the student.

5. Add the student's name to a review list; students with this status are monitored by the committee throughout the semester.
6. Return the student to good standing.

Students placed on a required leave must appeal to CAS to return. This appeal occurs at the end of the required leave period. Students who have been withdrawn may appeal the decision before the committee during the pre-semester appeals meeting. Students who have been placed on a warning status owing to incomplete or missing grades may request that their status be reviewed for possible updating to good standing once the grade records reflect the updates or corrections. These requests should be made using the general petition process and submitted to the college registrar.

All students with an academic warning status automatically will be reviewed for specific criteria at the end of the subsequent semester. In most cases, students put on warning, severe warning, or severe warning with danger of being withdrawn status will be informed of conditions that they are expected to fulfill to return to good standing. In general, these conditions are that a student must earn a minimum semester GPA of 2.0, complete 12 credits (exclusive of physical education), and not have any incomplete, missing, F, or U grades on his or her most recent semester record.

If a student who has been previously placed on a required leave wishes to return to the college, he or she must submit a plan of study to the committee before being rejoined.

Students who have been withdrawn from the college by CAS may request that they be readmitted. Such students have three years from the date they were withdrawn to make this appeal with assistance from a counselor in the Office of Admission, Student and Career Services (172 MVR). After three years, a former student must apply for readmission through the college's Office of Admission. A student applying for readmission should discuss his or her situation with a counselor in the Office of Admission, Student and Career Services. The student also should talk with others who may be able to help—faculty advisers, instructors, or a member of the university medical staff. Any information given to the committee is held in the strictest confidence.

Academic Integrity

Academic integrity is a critical issue for all students and professors in the academic community. The University Code of Academic Integrity states that (1) a student assumes

responsibility for the content and integrity of the academic work he or she submits, such as papers, examinations, or reports and (2) a student shall be guilty of violating the code and subject to proceedings under it if he or she:

- a. Knowingly represents the work of others as his or her own.
- b. Uses or obtains unauthorized assistance in any academic work.
- c. Gives fraudulent assistance to another student.
- d. Fabricates data in support of laboratory or field work.
- e. Forges a signature to certify completion or approval of a course assignment.
- f. Uses an assignment for more than one course without the permission of the instructor involved.
- g. Uses computer hardware and/or software to abuse privacy, ownership, or user rights of others.
- h. In any manner violates the principle of absolute integrity.

The college's Academic Integrity Hearing Board, which consists of a chairperson, three faculty members, and three students, hears appeals from students who have breached the code. It also deals with cases brought directly to it by members of the faculty.

Academic Records

Students may obtain their Cornell academic record in several ways. The **Cornell transcript**, which is the official record of the courses, credits, and grades that a student has earned can be ordered with no charge at the Office of the University Registrar (B7 Day Hall) or online at <http://transcript.cornell.edu>. For more information, call 255-4232. Students may also access their grades and course schedules electronically using **Just the Facts**. **Students should be in the habit of checking Just the Facts by the second week of every semester to confirm that their schedule and grade options are correct.** Adjustments must be made before published enrollment deadlines.

The college also maintains a **graduation progress worksheet** for each student showing progress toward the degree. At the beginning of fall semester continuing students should check their updated worksheet at <http://human.cornell.edu/student/>. It is important to check this document and bring any errors to the attention of the staff in the college registrar's office (145 MVR). Disclaimer: These worksheets are unofficial tally tools used by the college registrar and in no way substitute for a student's responsibility for tracking the progress toward completing degree requirements as outlined in the curriculum sheet for each major.

Access to Records

The Family Educational Rights and Privacy Act of 1974 assures students of privacy of their records. The law also assures students' access to their records. Information concerning a student's relationship with the university is considered restricted and may be released only at the student's specific written request. Restricted information includes the courses elected; grades earned; class rank; academic and disciplinary actions by appropriate faculty,

student, or administrative committees; and financial arrangements between the student and the university. Letters of recommendation are restricted information unless the student has specifically waived right of access.

Students who want additional information on access to their records may contact the Office of the College Registrar (145 MVR) or the Office of the University Registrar (B7 Day Hall). An inventory of those student records maintained by Cornell University offices in Ithaca, their location, and cognizant officer are available in the Office of the Dean of Students (401 Willard Straight Hall).

For specific information, refer to the university's policy "Access to Student Information" at www.univco.cornell.edu/policy/ASI.html, or talk with the college registrar.

ACADEMIC HONORS AND AWARDS

The college encourages high academic achievement and recognizes outstanding students in several ways.

Honors

Dean's List. Excellence in academic achievement is recognized each semester by placing on the Dean's List the names of students who have completed satisfactorily at least 12 credits of letter grades and who have a semester GPA of 3.7 or above. No student who has received an F or U in an academic course will be eligible.

Kappa Omicron Nu seeks to promote graduate study and research and to stimulate scholarship and leadership toward the well-being of individuals and families. As a chapter of a national honor society in the New York State College of Human Ecology, it stimulates and encourages scholarly inquiry and action on significant problems of living—at home, in the community, and throughout the world.

Students are eligible for membership if they have attained junior status and have a cumulative average of B or higher. Transfer students are eligible after completing one year in this institution with a B average.

Current members of Kappa Omicron Nu elect new members. No more than 10 percent of the junior class may be elected to membership and no more than 20 percent of the senior class may be elected. Graduate students nominated by faculty members may be elected. The president of Kappa Omicron Nu has the honor of serving as First Degree Marshall for the college during May commencement.

Bachelor of science with honors recognizes outstanding scholastic achievement in an academic field. Programs leading to a degree with honors are offered to selected students by the Department of Human Development and the Division of Nutritional Sciences. Information about admission to the programs and their requirements may be obtained from the appropriate department or division. Students in other departments who wish to qualify for honors should contact the Office of Admission, Student, and Career Services (172 MVR) during their sophomore year or the first semester of their junior year. Honors candidates must have a minimum GPA of 3.3 and have demonstrated potential

for honors-level research. To graduate with honors a student must take approved courses in research methodology and evaluation, attend honors seminars, complete a written thesis, and successfully defend it in front of a committee.

Bachelor of science with distinction recognizes outstanding scholastic achievement. Distinction is awarded to students in the top 10 percent of the graduating class based on the last 60 credits earned at Cornell. The graduating class includes students who will complete requirements for bachelor of science degrees in January or May of the same academic year or the prior August. Names of seniors who meet these requirements are presented to the faculty of the college for approval.

The primary objectives of the honor society, **Phi Kappa Phi**, are to promote the pursuit of excellence in higher education and to recognize outstanding achievement by students, faculty, and others through election to membership. Phi Kappa Phi is unique in that it recognizes scholarship in all academic disciplines. To be eligible for membership students must rank in the top 10 percent of the senior class, or in the top 5 percent of the junior class. Provisions also exist for the election of faculty members and graduate students whose work merits recognition.

Awards

The Elsie Van Buren Rice Award in Oral Communication is awarded for original oral communication projects related to the college's mission by undergraduate students in the College of Human Ecology. The contest is held each year in February and awards prizes totaling \$1,500.

The Flora Rose Prize is given biennially to a Cornell junior or senior whom, in the words of the donor, "shall demonstrate the greatest promise for contributing to the growth and self-fulfillment of future generations." The recipient receives a cash prize of \$500.

The Florence Halpern Award is named for the noted psychologist, Dr. Florence Halpern, in recognition of her lifelong interest in "innovative human service, which betters the quality of life." In that spirit the award is presented to an undergraduate in the College of Human Ecology who has demonstrated, through supervised fieldwork or community service, creativity in the search for solutions to human problems. The award carries a \$500 cash prize.

COLLEGE COMMITTEES AND ORGANIZATIONS

Student Groups and Organizations

Following are brief descriptions of some of the organizations that offer valuable experiences to human ecology students. Information about many other student activities on campus may be obtained from the Office of the Dean of Students (401 Willard Straight Hall).

The **Cornell Design League** was formed to give students interested in apparel a chance to express their creativity outside of the classroom by producing a fashion show every spring. It has become concerned with

all aspects of a professional presentation. Consequently, it also provides a creative outlet for those interested in graphics, photography, illustration, or theater production. Although many of its designers are part of the Department of Textiles and Apparel, the Design League welcomes people of all majors and schools.

Students have opportunities to work throughout the community in a variety of service capacities. They volunteer in day care centers, youth programs, health-related agencies, services for elderly people and people with disabilities, as well as nutrition programs, arts organizations, and Ithaca schools. For further information, contact the **Public Service Center** (200 Barnes Hall). Call 255-1148 for information about volunteer work or 255-1107 for information about work-study arrangements.

The **Human Ecology Ambassadors** is a group of Human Ecology undergraduates who assist the Office of Admission in the area of new student recruitment and yield. Ambassadors participate in group conferences with prospective students to provide information from a student's perspective, conduct high school visits, assist with on-campus programs for high school students and potential transfer students, and help with prospective students, phonathons, and letter writing. In addition, ambassadors attend regular meetings and serve as coordinators for activities in the Office of Admission.

For information, contact the Office of Admission, Student, and Career Services (172 MVR, 255-5471).

The mission of the **Human Ecology Voices** is to build unity among students, faculty, and staff in the College of Human Ecology. Membership consists of all representatives of all other Human Ecology student organizations and other interested students. Patti Papapietro in the Office of Admission, Student, and Career Services (172 MVR, 255-2532), serves as Voices adviser.

The **Human Ecology Mature Students Association** is an organization of students who are 24 years of age or older at the time of matriculation. Many mature students need to balance family, work, and other concerns with their academic efforts. The Mature Students Association strives to help by providing a forum for resource exchange and referral, support, socializing, and special projects depending upon expressed interest. These goals are pursued through seminars and informational meetings, the mature students listserv, supplementary orientation activities, liaison with other university offices, and the encouragement of informal networking. For more information, contact Patti Papapietro in the Office of Admission, Student, and Career Services (172 MVR).

Students interested in the relationship between the physical environment and human behavior may join the **Human-Environment Relations Students Association (HERSA)**. For more information, contact the Department of Design and Environmental Analysis.

The **International Facility Managers Association (IFMA)** also has a student chapter. Membership information is available from the Department of Design and Environmental Analysis.

The **Association for Students of Color (ASC)** unites Human Ecology students of color to provide a supportive foundation for their enrollment, retention, graduation, and career placement. ASC members work toward these goals by

1. participating in admissions hosting programs and conducting high school visitations.
2. sponsoring presentations on career and graduate school outcomes of a Human Ecology education.
3. providing volunteer services to the Cornell and Ithaca communities.
4. attending regular meetings and hosting annual fall and spring forums.

For more information, contact Verdene Lee in the Office of Admission, Student, and Career Services (172 MVR, 255-2532).

The **PreLaw Undergraduate Society (PLUS)** is sponsored by Human Ecology and welcomes members from the Cornell community. Meetings provide information and support for students considering careers in law. Programs include information on the law school admission process, law school applications, and LSAT preparations. Additionally, PLUS offers tours of the Cornell Law School and information panels with current law students. Guest speakers include practicing attorneys, law faculty, and current law school students. For more information, contact Kelly Deasy in the Office of Admission, Student, and Career Services (172 MVR, 255-2532).

The **Preprofessional Association Toward Careers in Health (PATCH)** provides support, advising, and up-to-date information to students pursuing careers in health care. Programs include academic advising, guest speakers from allopathic and alternative medicine, information on medical school admissions, exposure to complementary health care career options, MCAT preparation tips, information on research and internship opportunities, and a visit to a local medical school. This student-run organization is sponsored by Human Ecology and is open to the Cornell community. For more information, contact Paula Jacobs in the Office of Admission, Student, and Career Services (172 MVR, 255-2532).

The **Orientation Committee** consists of students and advisers interested in planning and implementing programs to acquaint new students with the College of Human Ecology. The committee is particularly active at the beginning of each semester and is always eager for new members. For more information, contact Patti Papapietro in the Office of Admission, Student, and Career Services (172 MVR, 255-2532).

Membership in the **Sloan Student Association** is open to students interested in health care and related fields. For more information, contact the president of the association (122 MVR, 255-7772).

The **Students for Gerontology (SFG)** is composed of students from a wide variety of majors who are interested in career and internship opportunities that contribute to the well-being of our aging population. Programs sponsored by this organization focus on developing linkages with community organizations and other student gerontology

groups. SFG meets monthly. For more information, contact Nancy Wells, faculty adviser, Bronfenbrenner Life Course Center (E220 MVR, 254-6330).

The Health and Nutritional Undergraduate Society (Health NUTS) promotes nutritional well-being through education, communication, and research. Members of the student chapter organize programs such as Food and Nutrition Day in March, and host on-campus speakers in nutrition and health-related fields. The student chapter is open to all students interested in nutrition education. For more information, contact Gail Canterbury (335 MVR, 255-2628).

Committees and Councils

Several official organizations exist within the college to deal with matters of policy and to provide leadership in college planning. Most include elected student and faculty representatives; the actions of these various groups affect all students directly or indirectly.

The Educational Policies Committee (EPC) has two student members, one graduate and one undergraduate, who vote along with the faculty members on all matters relating to college academic policy. Recommendations are submitted to this committee regarding revisions in degree requirements, new curriculum changes, and new course approval.

Students also have the opportunity to serve on the **Admissions Policy Subcommittee**, and the **Academic Integrity Hearing Board**.

The Selection Committee for the Chancellor's Award for Excellence in Teaching or Professional Service handles the nomination and selection process for this prestigious yearly award. The committee consists of three teaching faculty members, one professional staff member, and three undergraduate members.

The Human Ecology Alumni Association Board of Directors includes two student board members—one junior and one senior. One student is selected each spring to begin a two-year term as student representative. The two students co-chair the board's Student Activities Committee, which works to increase the visibility of the Alumni Association among the student body by funding a variety of activities. The student members also bring an important perspective to board deliberations about programming and annual goals.

The Committee on Academic Status does not include student representatives but does have a faculty representative from each department. This committee is responsible for upholding the academic standards of the college and takes action when appropriate. The committee also hears appeals regarding student petitions and requests to be readmitted to the college.

INTERDEPARTMENTAL COURSES

HE 100(1000) Critical Reading and Thinking

Fall, spring, or summer. 2 credits. Limited enrollment. Prerequisite: freshman or sophomore standing; juniors and seniors by permission of instructor. Letter or S-U grades.

Enables students to increase critical reading and thinking abilities. Examines theory and research associated with a wide range of reading, thinking, and learning skills. Emphasis is placed on developing and applying analytical and evaluative skills. Laboratory instruction is individualized and provides the opportunity to focus intensively on increasing comprehension, reading rate, and vocabulary.

HE 101(1010) College Achievement Seminar

Summer, six-week session. 2 credits. Prerequisite: Pre-freshman Summer Program students. Letter or S-U grades.

Improves the study and learning skills of incoming freshmen. Emphasis is placed on acquisition of skills necessary to achieve academic success. Topics include time management, note-taking, mapping, textbook comprehension, exam preparation, and exam strategies. The application of theory to the demands of Cornell course work is stressed. In addition, students are introduced to library and computing resources through hands-on projects.

HE 201(2010) Collaborative Leadership

Spring. 3 credits. Includes required retreat beginning Fri. afternoon, Aug. 26, and ending when bus returns to campus about 4 P.M. Sun., Aug. 28. Priority given to sophomores and juniors. Letter grades only. Lec and sec, T R 8:40–9:55. B. Bricker.

Introduces the principles of leadership theory and practice of leadership. Serves as the introduction to leadership for a new leadership certificate but is also appropriate for students who simply want to understand leadership better. Assignments are very diverse, including individual and group projects, journaling, the creation of case studies, an in-depth team project, several presentations, and a variety of other activities. More information on this course is available at the Courses of Study web site: <http://cuinfo.cornell.edu/Academic/Courses/>. Complete syllabus available on request.

HE 406(4060) Mentoring for Advanced Leadership

Spring and fall. 2 credits. Capstone course for Leadership Certificate Program. Prerequisite: permission of instructor. Letter grades only. Times TBA. B. Bricker.

Supports advanced leadership students through critical months of their junior-senior project development. Taught in a small seminar format. Emphasizes reflection on the leadership experience and planning for individual projects. Reviews leadership themes and principles. With carefully selected readings and assignments, students learn to write effective grant proposals, to design evaluation programs appropriate for their leadership programs, write press releases, and think about what makes for successful lobbying for policy change. Students work together to provide critical feedback and support for one another through

important challenges in their own leadership development.

THE URBAN SEMESTER PROGRAM IN MULTICULTURAL DYNAMICS IN URBAN AFFAIRS

Cornell in New York City provides students with many study options that focus on multicultural dynamics in urban affairs. The options available include internships, individual and group community service projects, research, independent study, collaborative learning, and mentorships. Students must enroll concurrently in the three courses HE 470, 480, and 490 or 495. Students learn through reflection and action. Program options are possible throughout the academic year, during winter break, and in the summer.

Courses of study enable students to seek out the relationship between theory and practice, apply theory to practice, identify and acquire professional practice skills, and learn about the impact of diversity on New York City. By applying ethnographic research techniques and methods, students learn to think conceptually, reflect on their actions, and be agents of change.

HE 406(4060) Fieldwork in Diversity and Professional Practice

Summer, eight-week session. Variable credit.

Students participate in a community-based medical center hospital or clinic member of New York Presbyterian Hospital and Weill Medical College of Cornell University. This is a four-day internship and one day of seminars per week.

HE 470(4700) Multicultural Issues in Urban Affairs

Fall and spring. 3 credits. Students must take course during semester they participate in Urban Semester Program.

Uses New York City as a classroom. The landscapes, built environments, and people in them are the texts. In the beginning, students study the formation of this multicultural city by traversing lower Manhattan and imagining New Amsterdam as it became New York City. Then they investigate a number of neighborhoods and speak with local leaders about diversity issues in context, in practice, and in use, to learn how multicultural issues are experienced by people and how they make sense of them.

HE 480(4800) Communities in Multicultural Practice

Fall and spring. 6 credits. Students must take course during semester they participate in Urban Semester Program.

Concerns urban children and youth in communities of color. Each week of the semester, students participate one day in the school lives of children pre-K through eighth grade in selected neighborhoods in New York City. Students keep journals of their reflections on their experiences and observations.

HE 490(4900) Multicultural Practice

Fall and spring. 6 credits. Students must take either HE 490 or 495 during semester they participate in Urban Semester Program; which is appropriate depends on student's placement and is determined by Urban Semester director.

Students explore the intersection of organizational culture with issues of diversity. They investigate the nature of organizational culture and how it engages and includes or does not include diversity. Students report back in seminars their understanding and analysis of their internship organizations and their industry's role in creating conditions and environments of inclusion or exclusion. The course explores the conditions and processes that have brought about inclusion or exclusion.

HE 495(4950) Culture, Medicine, and Professional Practice in a Diverse World

Fall and spring. 6 credits. Students must take *either* HE 490 *or* 495 during semester they participate in Urban Semester, which is appropriate depends on student's placement and is determined by Urban Semester director.

Students participate in several experiential learning environments related to medicine over the course of the semester. Students rotate in a four-week unit, supported by Pastoral Care and ER, as well as several other choices through the semester. Medical and health-related practitioners make presentations throughout the semester.

DESIGN AND ENVIRONMENTAL ANALYSIS

F. Becker, chair (E-106 MVR, 255-1950); J. Jennings, director of undergraduate studies; L. Maxwell, director of graduate studies; A. Basinger, S. Danko, J. Elliott, P. Eshelman, G. Evans, K. Gibson, R. Gilmore, A. Hedge, J. Jennings, J. Laquatra, W. Sims, N. Wells

Note: A minimal charge for photocopied course handouts may be required.

Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible.

DEA 4+1 Master's Degree Program

Outstanding students who complete their four-year undergraduate degree in DEA may apply for a master of arts/M.A. (interior design) or a master of science/M.S. (human environment relations) degree that typically requires one additional year of graduate study.

Through careful planning by the beginning of their junior year, many of the courses required in the M.A. or M.S. programs can be taken during the undergraduate years, creating an opportunity to focus the fifth year of study on completing graduate courses and thesis requirements. Typically, students will take four to five courses in their fall semester as a graduate student, and two to three courses plus their thesis research in the spring semester. Students should expect to complete their thesis by the end of the summer term of their fifth year.

Admission to the 4+1 Master's program is not automatic. Students must meet with their advisers early in their undergraduate programs to plan carefully for this possibility. In the fall of the senior year, interested students must submit an application to the Graduate School. The GRE exam and a portfolio are not required for admission, but students must submit a statement of intent, letters of

reference, and transcripts. Students who have compiled a strong undergraduate record in the department are usually good candidates for admission into the graduate program in Design and Environmental Analysis.

DEA 101(1010) Design Studio I

Fall. 3 credits. Limited to 20 students per sec. Prerequisite: DEA majors or permission of instructor; priority given to interior design majors. Option I majors must take DEA 101 in fall of first year. Must receive B- or higher and complete INC in DEA 101 to register for DEA 102 and 115. Cost of materials: approx. \$200. T R 10:10-1:10. J. Elliott.

Introduces the fundamental vocabulary and principles of two- and three-dimensional design. Students experiment with the development of image and form through problem-solving activities. Visit <http://instruct1.cit.cornell.edu/courses/dea101/>

DEA 102(1020) Design Studio II

Spring. 3 credits. Prerequisite: Option I DEA majors; B- or higher in DEA 101. Must complete INC in DEA 101 to register for DEA 201. Cost of materials: approx. \$200; shop fee: \$10. T R 1:25-4:25. P. Eshelman.

Studio course in three-dimensional design with an interior design emphasis. Explores problems in spatial organization through drawings and models.

DEA 111(1110) Making a Difference: By Design

Fall. 3 credits. Limited to 130 students. Lab fee: \$25. M W F 11:15-12:05; evening exams. S. Danko.

Students from any academic area may examine how design affects their daily lives and future professions. This course focuses on issues of leadership, creative problem-solving, and risk-taking through case study examination of leaders in business, education, medicine, human development, science, and other areas who have made a difference using design as a tool for positive social change. Using a micro to macro framework, students explore the impact of design from the person to the planet. Additional topics include nurturing innovation, visual literacy, design criticism, design and culture, semiotics, proactive/reflective decision making, and ecological issues.

DEA 115(1150) Design Graphics and Visualization

Spring. 3 credits. Limited to 18 students. Prerequisite: DEA 101 with grade of B- or higher; Option I DEA majors. Co-requisite: DEA 102. Must complete INC grade in this course to register for DEA 201. Minimum cost of materials: \$200; technology fee: \$10. M W F 9:05-11. K. Gibson.

Introductory studio course for interior designers. Emphasizes orthographic and perspective drawing and formal and conceptual presentation methods, using both manual and digital means. Reinforces graphic and design concepts through projects, readings, and field trips. Visit <http://instruct1.cit.cornell.edu/courses/dea115>.

DEA 150(1500) Introduction to Human-Environment Relations

Spring. 3 credits. M W F 12:20-1:10; evening exams. G. Evans.

Analyzes the physical environment and human behavior. Examines the interface of social and environmental sciences with application

for the design and management of built and natural habitats. Topics include environmental effects on health, mental health, aesthetics, performance, interpersonal relationships, and organizational effectiveness as well as the ecological consequences of human attitudes and behaviors. Hands-on discussion sections and two projects plus exams. Visit our web site at <http://instruct1.cit.cornell.edu/courses/dea150>.

DEA 201(2010) Design Studio III

Fall. 4 credits. Prerequisites: Option I DEA students; DEA 101, 102, and 115 (minimum grades of B-). Co-requisite: DEA 251. Recommended: DEA 111 and 150. Minimum cost of materials: \$150; lab fee: \$40; required field trip: approx. \$130. M W 12:20-4:25. J. Jennings.

Third semester in the studio sequence of eight semesters. The theme and objectives focus on design as critical thinking, introducing means by which students can think, draw, write, and build their way critically through design. Taken concurrently with DEA 251, the course applies historical theory to contemporary design projects. Also includes a collaborative project with a professor and students from another design discipline. Visit <http://instruct1.cit.cornell.edu/courses/dea201>.

DEA 202(2020) Design Studio IV

Spring. 4 credits. Prerequisites: Option I DEA students; DEA 201 and 203. Pre- or co-requisite: DEA 204. Must complete INC in this course before registering for DEA 301. Minimum cost of materials: \$120; diazo machine fee: \$8; field trip fee. T R 12:20-4:25. R. Gilmore.

Based on programmatic criteria from real clients, students learn how to design several types of interior environments, from health care facilities to local nonprofit agencies. Emphasis is on space planning, lighting design, construction of custom light fixtures, field trips to local architectural firms, and service learning, where students use design to transform the facilities of social service agencies in the community.

DEA 203(2030) Digital Communications

Fall. 2 credits. Limited to 27 students. Priority given to DEA majors. Lab fee: \$10. F 8-11 A.M. O. J. Elliott.

Digital information technologies for designers of the built environment. Students explore issues in relation to text and image through analysis and composition of form and content. Through a series of weekly projects the students work toward the development of a professional web-based portfolio of self-promotional materials. The primary objective is to reinforce principles of visual communications while learning the rudiments of vector, raster, and html graphic software. Visit <http://instruct1.cit.cornell.edu/courses/dea203/>.

DEA 204(2040) Introduction to Building Technology

Spring. 2 credits. M 2:30-4:25. W. Sims.

Introduction to building technology for interior designers and facility managers. Emphasizes developing basic understanding of buildings and building systems and their implications for interior design and facility management. Covers basic building types; structural systems; construction materials and methods; HVAC systems; plumbing, electrical, lighting, fire, and security systems; and telephone, computer, and

other communication systems. Visit <http://courseinfo.cit.cornell.edu/courses/dea204>.

DEA 250(2500) The Environment and Social Behavior

Fall. 3 credits. Limited to 16 students. Priority order: DEA seniors, juniors, sophomores, freshmen. Prerequisite: DEA 150 and written permission of instructor. Field trip fee: \$65. T R 2:55–4:10. Not offered 2005–2006. G. Evans.]

DEA 251(2510) History and Theory of the Interior

Fall. 3 credits. Limited to 35 students. Priority given to DEA majors. M W 8:40–9:55. J. Jennings.

A historic study of interior architecture and design with an emphasis on the concepts of design theory. Overarching themes encompass several time periods from the classical to the 20th century and isolate cultural patterns, spatial ideas, dialectics, design elements, and theorists. Reading, discussion, analytical exercises, essays, and a field trip are included. Visit <http://instruct1.cit.cornell.edu/courses/dea251/>.

DEA 300(3000) Special Studies for Undergraduates

Fall or spring. Credit TBA. Department faculty.

Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the college registrar's office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

DEA 301(3010) Design Studio V

Fall. 4 credits. Prerequisites: DEA 111, 150, 201, 202, 203, and 204. Co-requisites: DEA 303 and 459. Must complete INC in this course before registering for DEA 302. Minimum cost of materials: \$150; shop fee: \$10; optional field trip: approx. \$10. T R 12:20–4:25. P. Eshelman.

Intermediate-level interior design studio. Organized around a series of interior and interior-product design problems of intermediate-level complexity, three to five weeks in duration. Focuses on development of design skills and on understanding of a selected set of generic problem types.

DEA 302(3020) Design Studio VI

Spring. 5 credits. Limited to 18 students. Prerequisites: DEA 301 and 303 or permission of instructor. Co-requisite: DEA 305. Must complete INC in this course before registering for DEA 407. Minimum cost of materials: \$200; shop fee: \$10; field trip fee: \$20. M W 12:20–4:25. K. Gibson.

Sixth semester in the studio sequence of eight semesters. Emphasizes use of the microcomputer as a creative tool in the design process. Explores social, cultural, and physical factors related to the interior environment through assignments, readings, and a field trip. Design and problem-solving skills are reinforced according to project type. Visit <http://instruct1.cit.cornell.edu/courses/dea302>.

DEA 303(3030) Introduction to Furnishings, Materials, and Finishes

Fall. 2 credits. W 2:30–4:25. Cost of materials: approx. \$10. R. Gilmore.

Sustainable approach to the evaluation and selection of materials, finishes, and furnishings for the built environment has the potential to protect our planet. This course provides an introduction to sustainable sources and asks students to manipulate materials, understand performance testing, use building codes, create a life-cycle cost analysis, and complete interior specifications. Field trips provide an overview of the manufacturing process, and group projects culminate in the presentation of research on current "green" products and resources.

DEA 304(3040) Introduction to Professional Practice of Interior Design

Spring. 1 credit. Limited to 18 students. Prerequisite: Option I DEA students. F 12:20–2:15. A. Basinger.

Introduction to organizational and management principles for delivery of interior design and facility management services. Covers basic organizational structures and basic management functions within interior design and facility management organizations, work flow and scheduling, business practices, legal and ethical responsibilities and concerns, contracts, basic contract documents such as working drawings and specifications, supervision of construction and installation, and cost estimation.

DEA 305(3050) Construction Documents and Detailing

Spring. 2 credits. Prerequisites: DEA 301 and 303. Co-requisite: DEA 302. Minimum cost of materials: \$50; required field trips: \$50. F 9:05–11. R. Gilmore.

Continuous dialogue between the idea for an interior space and the reality of its final built form is contained within construction documents also known as working drawings and specifications. Students study the history of architectural documentation; the organization of construction drawings, schedules, and specifications; and the detailing of interior elements and construction methods by touring a local millwork shop. Each student completes a comprehensive set of construction documents for the renovation of an existing conference facility located on the Cornell campus.

DEA 325(3250) Human Factors: Ergonomics–Anthropometrics

Fall. 3 credits. Recommended: DEA 150. Undergraduate sec of DEA 651; shares lec but meets for an additional hour. DEA 651 has additional readings and projects. T R 8:40–9:55. A. Hedge.

Implications of human physical and physiological characteristics and limitations on the design of settings, products, and tasks. An introduction to engineering anthropometry, biomechanics, control/display design, work physiology, and motor performance. Includes practical exercises and field project work. Visit <http://ergo.human.cornell.edu>.

DEA 350(3500) Human Factors: The Ambient Environment

Spring. 3 credits. Recommended: DEA 150. Undergraduate sec of DEA 652; shares lec but meets for an additional hour. DEA 652 has additional readings and projects. T R 8:40–9:55. A. Hedge.

Introduces human-factor considerations in lighting, acoustics, noise control, indoor air quality and ventilation, and the thermal environment. Views the ambient environment as a support system that should promote

human efficiency, productivity, health, and safety. Emphasizes the implications for planning, design, and management of settings and facilities. Includes a field project. Visit <http://ergo.human.cornell.edu>.

DEA 354(3540) Facility Planning and Management Studio

Spring. 4 credits. Prerequisite: DEA 459 or permission of instructor. Letter grades only. Minimum cost of materials: \$200. T R 1:25–4:25. L. Maxwell.

For advanced undergraduates interested in facility planning and management. Purpose is to provide basic tools, techniques, and concepts useful in planning, designing, and managing facilities for large, complex organizations. Covers strategic and tactical planning for facilities, organizing to deliver facility management services, project management, space forecasting, space allocation policies, programming, relocation analysis, site selection, building assessment, space planning and design, furniture specifications, and moves. Considers sociopsychological, organizational, financial, architectural, and legal factors. Visit http://courseinfo.cit.cornell.edu/courses/dea454_654.

DEA 400–401–402–403(4000–4010–4020–4030) Special Studies for Undergraduates

Fall or spring. Credit TBA. S-U grades optional. DEA faculty.

For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of DEA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the department office. This form must be signed by the instructor directing the study and the department head and filed at course registration or within the change-of-registration period in the college registrar's office, 145 MVR, along with an add/drop slip. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department head is necessary. Students, in consultation with their advisers and the instructor should register for one of the following subdivisions of independent study.

DEA 400(4000) Directed Readings

For study that predominantly involves library research and independent reading.

DEA 401(4010) Empirical Research

For study that predominantly involves data collection and analysis or laboratory or studio projects.

DEA 402(4020) Supervised Fieldwork

For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

DEA 403(4030) Teaching Apprenticeship

For study that includes teaching methods in the field and assisting faculty with instruction. Students must have demonstrated a high level of performance in the subject to be taught and in the overall academic program.

DEA 407(4070) Design Studio VII

Fall. 5 credits. Prerequisites: DEA 302, 303, 304, and 305. Must complete INC in this course before registering for DEA 408. Minimum cost of materials: \$150; field trip: \$50. T R 12:20-4:25. R. Gilmore.

Comprehensive historic preservation design studio in which students complete each phase of the adaptive reuse of a structure in central New York. Working with real buildings and real clients, students research the market, complete a building assessment, and then design new uses for older structures. Lecture topics range from professional practice strategies, to the history of preservation, to the secretary of the interior's Standards for Rehabilitation. Components of the work include program document, code compliance, concept development, schematic and design development presentations, and construction documents.

DEA 408(4080) Design Studio VIII

Spring. 5 credits. Prerequisites: DEA 301, 302, 303, and 304. Minimum cost of materials: \$150. M W 12:20-4:25. S. Danko.

Design problem-solving experiences involving completion of advanced interior design problems. Problems are broken into five phases: programming; schematic design and evaluation; design development, including material and finish selection; design detailing; and in-process documentation and the preparation of a professional-quality design presentation.

DEA 422(4220) Ecological Literacy and Design (also ARCH 461[4601])

Spring. 3 credits. Prerequisite: junior or senior standing. Letter grades only. Cost of field trips: approx. \$25. T R 10:10-12:05. J. Elliott.

Lecture/seminar course for advanced undergraduates interested in learning about the effects of designing the built environment of the biophysical world. Course objectives are to develop sensitivities to environmental issues, construct conceptual frameworks for analysis, and demonstrate how ecological knowledge can be applied to the practice of design through participatory approaches to learning. Visit <http://instruct1.cit.cornell.edu/courses/dea422/>.

DEA 423(4230) Restaurant Design Charrette

Spring. 1 credit. Limited to 18 students. Prerequisite: permission of instructor. Letter grades only. Minimum cost of materials: \$50. Four class meetings on F 6-10 P.M. (week 1); one complete weekend (week 2) F 6-10 P.M., Sat 9 A.M.-10 P.M., and Sun 10 A.M.-8 P.M. R. Gilmore and S. Robson.

This intensive weekend-long course pushes the boundaries of current restaurant design by developing a concept plan for an innovative restaurant in a nontraditional setting. Students work in teams to develop design solutions and prepare design presentations for review by course instructors and visiting design professionals.

[DEA 430(4300) Furniture as a Social Art

Spring. 3 credits. Limited to 15 students. Prerequisite: permission of instructor. Cost of building materials: \$150. (Students also must sign up for two hours of DEA shop time each week for model building.) M W 9:05-11. Not offered 2005-2006. P. Eshelman.]

DEA 451(4510) Introduction to Facility Planning and Management

Fall. 1 credit. Letter grades only. T 3:35-4:25. F. Becker.

Introduction to the field of facility planning and management. Focuses on how the planning, design, and management of an organization's physical facilities can help it meet its business objectives. Topics include the history of the field, strategic planning, space planning and design, project management, building operations, workplace change management, real estate, and computer-aided facility management systems.

DEA 453(4530) Planning and Managing the Workplace

Fall. 3 credits. Prerequisite: junior or senior standing. M W 2:55-4:10. F. Becker.

Focuses on key issues related to the planning, design, and management of the workplace. These issues include understanding the factors that lead organizations to develop and implement the workplace strategies they do; the nature of these different workplace strategies; and their effects on individuals, teams, and the organization as a whole.

DEA 455(4550) Research Methods in Human-Environment Relations

Fall. 3 credits. Prerequisite: DEA majors or permission of instructor; statistics course. M W 1:25-2:40. N. Wells.

Develops students' understanding and competence in the use of research and analytical tools to study the relationship between the physical environment and human behavior. Emphasizes selection of appropriate methods for specific problems and the policy implications derived from research. Topics include research design, unobtrusive and obtrusive data-collecting tools, the processing of qualitative and quantitative data, and effective communication of empirical research findings.

DEA 459(4590) Programming Methods in Design

Fall. 3 credits. Letter grades only. Minimum cost of materials: \$100. T R 10:10-11:25. L. Maxwell.

Introduction to environmental programming. Emphasizes formulation of building requirements from user characteristics and limitations. Covers diverse methods for determining characteristics that will enable a particular environmental setting to support desired behaviors of users and operators. Methods include systems analysis, soft system, behavior circuit, behavior setting, and user characteristic approaches. Emphasizes selection of appropriate methods to suit problems and creation of new methods or techniques. Visit http://instruct1.cit.cornell.edu/courses/dea/459_650.

DEA 460(4600) Design City

Fall. 1 credit; may be repeated for credit. Prerequisite: DEA majors. Not open to freshmen for credit. Students must take this course to participate in field study trip to a major city. Required fee for hotel and chartered bus: approx. \$115 (billed to student's bursar account). S-U grades only. R F all day, both days. K. Gibson and J. Jennings.

Field study of historic and contemporary interiors with guided tours to architectural and interior design firms, installations, exhibits, and showrooms in New York City, Toronto, or other major cities. Topics and themes change

yearly. Visit <http://instruct1.cit.cornell.edu/courses/dea460>.

DEA 470(4700) Applied Ergonomics Methods

Spring. 3 credits. Prerequisite: DEA 325. Undergraduate sec of DEA 670; shares lec but meets for an additional hour. DEA 670 has additional readings and projects. T R 2:55-4:10. A. Hedge.

Covers ergonomics methods and techniques and their application to the design of modern work environments. Emphasizes understanding key concepts. Covers conceptual frameworks for ergonomic analysis, systems methods and processes, a repertoire of ergonomics methods and techniques for the analysis of work activities and work systems.

DEA 472(4720) Environments for Elders: Housing and Design for an Aging Population

Fall. 3 credits. Field trip fee: \$20. T 1:25-4:25. N. Wells.

Through seminars, lectures, field trips, and service learning opportunities, students examine the relationship between older adults and the physical environment. Students gain understanding of the relevance of design characteristics to the well-being of older people; an appreciation of late-life social, cognitive, and physiological changes; as well as familiarity with a variety of housing options for late life. Visit <http://instruct1.cit.cornell.edu/courses/dea472>.

DEA 499(4990) Senior Honors Thesis

Fall or spring. Variable credit. Prerequisite: permission of thesis adviser and DEA director of undergraduate studies. Letter grades only.

Opportunity for DEA majors to undertake original research and scholarly work leading to the preparation of a thesis. Students work closely with their thesis adviser on a topic of interest.

DEA 600-603(6000-6030) Special Problems for Graduate Students

Fall or spring. Credit TBA. S-U grades optional. Department faculty.

Independent advanced work by graduate students recommended by their special committee chair and approved by the head of the department and instructor.

600(6000): Special Problems. For study of special problems in the areas of interior design, human environment relations, or facilities planning and management.

601(6010): Directed Readings. For study that predominantly involves library research and independent study.

602(6020): Graduate Empirical Research. For study that predominantly involves collection and analysis of research data.

603(6030): Graduate Practicum. For study that predominantly involves field experiences in community settings.

DEA 645(6450) Dancing Mind/Thinking Heart: Creative Problem-Solving Theory and Practice

Spring. 3 credits. Limited to 24 students. Prerequisite: graduate or advanced undergraduate standing; for undergraduates, permission of instructor. M 4:30-7:30. S. Danko.

Focuses on thinking processes and techniques that support creative problem

solving. Examines theories of creative behavior and critical thinking. The course is highly participatory and experiential by design. Weekly discussions include hands-on applications of theories on short problems tailored to the backgrounds of the students. The primary goal is to demonstrate perceptual, emotional, intellectual, cultural, and environmental blocks to creative thinking and expand the student's repertoire of creative problem solving strategies for use in day-to-day professional practice. Case studies of creative individuals and organizations from a variety of fields are presented.

DEA 648(6480) Advanced Applications in Computer Graphics

Fall. Variable credit; max. 4. Limited to 15 students. Prerequisite: graduate or advanced undergraduate standing; for undergraduates, DEA 302 or permission of instructor. Minimum cost of materials: \$150; lab fee: \$35. T R 9:05–12:05. K. Gibson.

Advanced use of computer technology to create and analyze interior environments. Emphasizes the use of 3-D modeling, animation, photorealistic rendering, and emerging technologies to investigate dynamic design issues.

DEA 650(6500) Programming Methods in Design

Fall. 4 credits. T R 10:10–11:25. L. Maxwell. Intended for graduate students who want a more thorough introduction to environmental programming methods than is provided by DEA 459. Each student is required to attend DEA 459 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For more detail, see DEA 459. Visit <http://instruct1.cit.cornell.edu/courses/dea459-650>.

DEA 651(6510) Human Factors: Ergonomics-Anthropometrics

Fall. 4 credits. Recommended: DEA 150 and 3-credit statistics course. T R 8:40–9:55. A. Hedge. Intended for graduate students who want a more thorough grounding in human factors than is provided by DEA 325. Each student is required to attend DEA 325 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For more detail, see DEA 325.

DEA 652(6520) Human Factors: The Ambient Environment

Spring. 4 credits. Recommended: DEA 150. T R 8:40–9:55. A. Hedge. Intended for graduate students who want a more thorough grounding in human factors considerations than is provided by DEA 350. Each student is required to attend DEA 350 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For detailed description, see DEA 350.

DEA 653(6530) Planning and Managing the Workplace

Fall. 4 credits. Prerequisite: graduate standing. Letter grades only. M W 2:55–4:10. F. Becker. Focuses on key issues related to the planning, design, and management of the workplace. These issues include understanding the factors that lead organizations to develop

and implement the workplace strategies they do; the nature of these different workplace strategies; and their efforts as individuals, teams, and an organization. Includes an additional one-hour discussion section each week for graduate students.

DEA 654(6540) Facility Planning and Management Studio

Spring. 4 credits. Prerequisite: graduate students in facility planning and management; DEA 459/650 or permission of instructor. Letter grades only. Minimum cost of materials: \$200. T R 1:25–4:25. L. Maxwell. Visit <http://courseinfo.cit.cornell.edu/courses/dea354-654>. For description, see DEA 354.

DEA 656(6560) Research Methods in Human-Environment Relations

Fall. 4 credits. Prerequisite: DEA majors or permission of instructor; statistics course. M W F 1:25–2:15. N. Wells. Intended for graduate students who want a more thorough understanding of the use of research to study the relationship between physical environment and human behavior than is provided by DEA 455. Each student is required to attend DEA 455 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For more detail, see DEA 455.

DEA 659(6590) Introduction to Facility Planning and Management

Fall. 1 credit. For graduate students interested in careers in facility planning and management. Letter grades only. T 3:35–4:25. F. Becker. Introduction to the field of facility planning and management. Focuses on how the planning, design, and management of an organization's physical facilities can help it meet its business objectives. Topics include the history of the field, strategic planning, space planning and design, project management, building operations, workplace change management, real estate and computer-aided facility management systems.

[DEA 660(6660) The Environment and Social Behavior

Fall. 4 credits. Prerequisite: DEA 150 and written permission of instructor. Field trip fee: \$65. T R 2:55–4:10. Not offered 2005–2006. G. Evans.]

DEA 661(6610) Environments and Health

Spring. 4 credits. W 1:30–4:30. N. Wells. Examines the impact of the physical environment on human health and well-being through the life course. Environmental factors examined include characteristics of the built and natural environment, housing, and neighborhood as well as sprawl, the dominance of the automobile, and patterns of American landscape development. Health outcomes include physical health, obesity, mental health, and cognitive functioning. Working within the life course perspective, the course focuses particularly on environmental factors that may act as either protective mechanisms fostering the long-term resilience of individuals or risk factors contributing to long-term vulnerability.

[DEA 668(6680) Design Theory and Criticism Seminar

Spring. 4 credits. Limited to 15 students. T R 12:25–2:30. Not offered 2005–2006. J. Jennings.]

DEA 670(6700) Applied Ergonomics Methods

Spring. 4 credits. Limited to 20 students. Prerequisite: DEA 651. T R 2:55–4:10. A. Hedge.

Intended for graduate students who want a more thorough understanding of applied ergonomics methods than is provided by DEA 470. Each student is required to attend DEA 470 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For further detail, see DEA 470.

[DEA 691(6910) Poverty over the Life Course and Public Policy

Fall. 3 credits. W 3–6. Not offered 2005–2006. G. Evans.]

DEA 899(8990) Master's Thesis and Research

Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U grades optional. DEA graduate faculty.

HUMAN DEVELOPMENT

R. Savin-Williams, chair; B. Koslowski, director of graduate studies; E. Wethington, director of undergraduate studies; C. Brainerd, J. Brumberg, M. Casasola, S. Ceci, M. Cochran, S. Cornelius, R. Depue, J. Eckenrode, G. Evans, J. Garbarino, S. Hamilton, J. Haugaard, C. Hazan, B. Lust, K. Pillemer, V. Reyna, S. Robertson, J. Ross-Bernstein, E. Temple, Q. Wang, W. Williams. Emeritus: U. Bronfenbrenner, J. Doris, L. C. Lee, H. Ricciuti

NOTE: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible.

HD 115(1150) Human Development

Fall or summer. 3 credits. S-U grades optional. M W F 1:25–2:15. J. Garbarino. Provides a broad overview of theories, research methods, and current knowledge of human development from conception into adulthood. Covers infancy, childhood, and adolescence. Topics include biological, intellectual, linguistic, social, and emotional development as well as the cultural, social, and interpersonal contexts that affect the developmental processes and outcomes of these domains.

HD 120(1200) Exploring Human Development

Fall. 1 credit. Prerequisite: HD freshmen. Letter grades only. Disc, one hour each week; times TBA. HD faculty. Series of small group discussions with HD freshmen and an HD faculty member. Each faculty member sets the topics and style of discussion. No exams are given. Grading is based on attendance, participation, and short written assignments.

HD 216(2160) Human Development: Adolescence and Youth

Spring. 3 credits. Prerequisite: HD 115 or PSYCH 101 or permission of instructor. S-U grades optional. T R 11:40–12:55. Staff. Broad overview of theories, research, and issues in the study of human development from early to late adolescence (youth). Focuses on the major biological, cognitive, and social changes during adolescence; the

psychosocial issues of adolescence, including identity, autonomy, intimacy, sexuality, achievement, and problems; and the contexts in which adolescent development occurs, particularly families, peer groups, schools, work, and popular culture. Discusses empirical research, theories, case studies of the lives of real adolescents, and, to a lesser degree, public policies.

HD 218(2180) Human Development: Adulthood and Aging

Spring. 3 credits. Prerequisite: HD 115. S-U grades optional. T R 11:40-12:55. S. Cornelius.

General introduction to theories and research in adult development and aging. Discusses psychological, social, and biological changes from youth through late adulthood. Emphasizes both individual development within generations and differences among generations.

HD 220(2200) The Human Brain and Mind: Biological Issues in Human Development (also COGST 220[2200])

Fall. 3 credits. Prerequisite: HD 115 or PSYCH 101. S-U grades optional. T R 2:55-4:10. E. Temple.

Introduces the biology that underlies human behavior and cognitive processes such as language, reasoning, decision making, and emotion. Begins by studying fundamental concepts in neurobiology and neuroanatomy, then explores a variety of topics, including how our brain underlies our perception, thought, language, emotions, memories, and desires. Relevant human clinical disorders are discussed throughout.

HD 230(2300) Cognitive Development (also COGST 230[2300])

Spring. 3 credits. Prerequisite: HD 115 or PSYCH 101. Letter grades only. T R 2:55-4:10. Q. Wang.

Surveys current theory and research on various aspects of cognitive development across the life span, with emphasis on infancy and early childhood. Topics include perception, representation and concepts, reasoning and problem solving, social cognition, memory, metacognition, language and thought, and academic skills. Students develop a broad understanding of the mechanisms, processes, and current issues in cognitive development and learn to critically assess developmental research. The course is a combination of lecture, seminar, and fieldwork.

HD 233(2330) Children and the Law

Spring. 3 credits. Prerequisites: HD 115 and introductory statistics course. T 2-4:25. S. Ceci.

Examines psychological data and theories that shed light on the practical issues that arise when children enter the legal arena. Attempts to integrate theories, research, and methodology from several areas of psychology, including developmental, cognitive, social, and clinical. Also attempts to examine the degree to which basic research can (and should) be used to solve applied issues. Selected topics include memory development, suggestibility, theory of mind, childhood amnesia, expectancy formation, symbolic representational ability, and finally, what can (or should) an expert witness tell the court. Several actual cases involving child witnesses are presented to illustrate the application of scientific data to the courtroom.

Because of the heavy use of case materials; video and textual coverage of actual trials, it is expected that students will devote more than the usual number of hours to this course.

HD 234(2340) The Growth of the Mind

Spring. 4 credits. Recommended: course in human experimental psychology, statistics, or HD 115 or equivalent, or permission of instructor. S-U grades optional. T R 2:55-4:10. B. Lust.

Introduces the fundamental issues of cognition. Students are asked to consider several questions. What is the nature of human intelligence? How are knowledge and understanding acquired and represented in the human mind? What is the nature of mental representation? What are the cognitive characteristics of the mind at birth? What is the relation of the acquisition of knowledge and understanding to their final representation? What are the relations between language and thought? In the study of those issues, how can epistemology and experimental psychology be related through the experimental method? Basic debates within the study of cognition are introduced and discussed throughout. The course analyzes Piaget's comprehensive theory of cognitive development and experimental results. Current research in cognitive development is contrasted.

HD 238(2380) Thinking and Reasoning (also COGST 437)

Fall. 3 credits. Prerequisite: HD 115 or PSYCH 101. T R 2:55-4:10. B. Koslowski.

Examines problem solving, transfer, and creativity; pre-causal and causal reasoning; models of good thinking based on formal logic, pragmatic syllogisms, and probability theory; expert-novice differences; cognition and attitudes; extra-rational and magical beliefs; and putative racial and social class differences in intelligence. Two general themes run through the course: (1) the extent to which children and adults approximate the sorts of reasoning that are described by various psychological models; (2) the extent to which various models accurately describe the kind of thinking that actually is required by the problems and issues that arise and must be dealt with in the real world.

HD 242(2420) Participation with Groups of Young Children

Fall or spring. 4 credits. Limited to 20 students (depending on availability of placements and of supervision). Prerequisites: HD 115 and permission of instructor. S-U grades optional. W 2:30-4:25. J. Ross-Bernstein.

Designed to integrate developmental theories with supervised experience in local care and educational contexts for young children, the intention being to enhance the student's abilities to understand and to relate effectively to young children. Involves participation, observation, reflection, reading, writing, and sharing of viewpoints. Placements are in local nursery schools, day care centers, Head Start programs, and kindergartens.

HD 250(2500) Families and the Life Course (also SOC 250[2500])

Spring. 3 credits. S-U grades optional. M W F 1:25-2:15. Staff.

Introduction to social scientific research on family roles and functions in American society. Topics include the history of the family, family change over the life course, and the influence of cultural and economic forces on families.

[HD 251(2510) Social Gerontology: Aging and the Life Course (also SOC 251[2510])

Fall. 3 credits. S-U grades optional. T R 10:10-11:25. Not offered 2005-2006. E. Wethington.

Analyzes the social aspects of aging in contemporary American society from a life course perspective. Topics include (1) an introduction to the field of gerontology, its history, theories, and research methods; (2) a brief overview of the physiological and psychological changes that accompany aging; (3) an analysis of the contexts (e.g., family, friends, social support, employment, volunteer work) in which individual aging occurs, including differences of gender, ethnicity, and social class; (4) and the influences of society on the aging individual.]

HD 260(2600) Introduction to Personality (also PSYCH 275[2750])

Spring. 3 credits. Limited to 600 students (300 HD 260, 300 PSYCH 275).

Recommended: introductory psychology or human development course. T R 1:25-2:40. Staff.

Introduction to theory and research in the area of personality psychology, with special emphasis on personality development. Covers the major influences—including genetic, environmental, and gene-environment interactions—and involves in-depth study of the major theories. Examines and compares assumptions and models of human behavior that form the basis of each theoretical orientation, and reviews and evaluates the relevant empirical evidence. In addition, basic psychometric concepts and the methods for measuring and assessing personality are covered, as are the major related debates and controversies.

HD 261(2610) The Development of Social Behavior

Spring. 3 credits. Highly recommended: HD 115 or PSYCH 128. T R 1:25-2:40. Staff.

Views issues in the development of social behavior from the perspective of theory and research. Likely topics include bases of social behavior in infancy and early childhood, the role of parents, siblings, and peers, the development of prosocial and aggressive behavior, the development and functioning of attitude and value systems, and the function and limits of experimental research in the study of social development.

HD 266(2660) Emotional Functions of the Brain

Spring. 3 credits. Prerequisites: HD 220, PSYCH 223/460, or BIONB 420. Letter grades only. T R 10:10-11:25. R. Depue.

After an presenting an overview of the gross neuroanatomy of the primate brain, this course focuses on networks of brain regions that are organized around the integration of processes related to emotion and motivation. First, general features of the brain in relation to emotional evaluation and expression processes are discussed, and then the brain organization related to several specific types of emotional systems is presented, including incentive-reward motivation, social bonding, fear versus anxiety and affective aggression. Emotion, memory, and conscious awareness of emotional feelings are also discussed. Neurobiological modulation of emotional processes by neurotransmitters and neuropeptides of wide distribution in the brain are detailed as well. The latter lay the

groundwork for understanding the nature of individual differences in much of our social and emotional behavior as explored in HD 366.

HD 282(2820) Community Outreach (also PSYCH 282(2820))

Fall. 2 credits. Prerequisites: HD 115 or PSYCH 101. Students may not register concurrently with HD 327/PSYCH 327 or 328. Letter grades only. T 11:40–12:55. H. Segal.

For description, see PSYCH 282.

HD 284(2840) Gender and Sexual Minorities (also FGSS 285(2850))

Fall. 3 credits. Prerequisite: social science course. S-U grades optional. M 7:30–10 P.M. K. Cohen.

Introduces students to theories, empirical scholarship, public policies, and current controversies regarding lesbian, gay, bisexual, transgender, sexually questioning, and other gender and sexual minority populations. The major focus is on sexual development, lifestyles, and communities with additional emphasis on ethnic, racial, and gender issues. Videos supplement readings and lectures.

[HD 313(3130) Problematic Behavior in Adolescence (also PSYCH 313(3130))]

Fall. 3 credits. Prerequisite: HD 115 or PSYCH 101. T R 1:25–2:40. Not offered 2005–2006. J. Haugaard.

Explores several problematic behaviors of adolescence, including depression, drug abuse, eating disorders, and delinquency. Presents various psychological, sociological, and biological explanations for the behaviors. Reviews appropriate research; explores treatment and prevention strategies. Lectures are supplemented by several novels and movies that focus on troubled adolescents.]

[HD 320(3200) Human Developmental Neuropsychology]

Spring. 3 credits. Prerequisites: HD 220 or PSYCH 223 or BIONB 222. S-U grades optional. Offered alternate years; not offered 2005–2006. T R 1:25–2:40. E. Temple.

Human neuropsychology explores the relationship between the brain and mind with a focus on the effects of disease, disorder, and injury. As a discipline, neuropsychology seeks to gain an understanding of not only specific disorders but also the nervous system through analysis of the effects of these disorders. This course takes that approach as well, exploring issues from both perspectives. It also explores the developmental neurobiology of different human diseases, clinical disorders, disabilities, and injuries. Topics include learning disabilities, autism, ADHD, Tourette's syndrome, Down syndrome, mental illnesses, Alzheimer's disease, Parkinson's disease, and epilepsy.]

HD 327(3270) Field Practicum I (also PSYCH 327(3270))

Fall. 3 credits. Limited to 30 students. Students must commit to taking HD 328 in spring semester. Prerequisites: HD 370 or PSYCH 325 and permission of instructor. Letter grades only. M W 8:40–9:55. H. Segal.

For description, see PSYCH 327.

HD 328(3280) Field Practicum II (also PSYCH 328(3280))

Spring. 3 credits. Limited to 30 students. Prerequisites: HD 327/PSYCH 327 taken previous semester, PSYCH 325 or HD 370 and permission of instructor. Letter grades only. M W 8:40–9:55. H. Segal.

For description, see PSYCH 328.

HD 336(3360) Connecting Social, Cognitive, and Emotional Development

Fall. 3 credits. Prerequisites: HD 115 or PSYCH 101 and HD 230 and either HD 260 or 261. S-U grades optional. T R 11:40–12:55. M. Casasola.

Provides an integrated view of development from infancy through middle childhood. Students gain an understanding of how aspects of social, emotional, and cognitive abilities interact and play integral roles in each other's development.

[HD 337(3370) Language Development (also COGST 436(4360), PSYCH 436(4360), LING 436(4360)]

Spring. 4 credits. Open to undergraduate and graduate students. Supplemental lab course available (HD 437, PSYCH 437, COGST/LING 450). Graduate students also should enroll in HD 633/LING 700, supplemental graduate seminar. Prerequisite: at least one course in developmental psychology, cognitive psychology, cognitive development, neurobiology, biology, or linguistics. S-U grades optional. T R 2:55–4:10. Not offered 2005–2006. B. Lust.

Surveys basic issues, methods, and research in the study of first-language acquisition. Considers major theoretical positions in the field in the light of experimental studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The fundamental issues of relationships between language and thought are discussed, as are the fundamental linguistic issues of "Universal Grammar" and the biological foundations for language acquisition. The acquisition of communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child.]

HD 344(3440) Infant Behavior and Development

Fall. 3 credits. Limited to 60 students. Not open to freshmen. Prerequisites: HD 115, biology course, and statistics course. M W F 1:25–2:15. S. Robertson.

Examines behavior and development from conception through the first two years of life in traditional areas (e.g., perception, cognition, socioemotional theory, language, motor function). Strongly emphasizes the fundamental interconnectedness of these aspects of development as well as their relation to the biology of fetal and infant development. Emphasizes topics with implications for general theories of development (e.g., the functional significance of early behavior, the nature of continuity and change, and the role of the environment in development). Also describes conditions that put infants at risk for poor development (e.g., premature birth, exposure to environmental toxins, maternal depression) and topics with current social, ethical, or political implications (e.g., infant day care, fetal rights). Research methodology in the study of early behavior and development is emphasized throughout the course.

HD 346(3460) The Role and Meaning of Play

Fall. 3 credits. Limited to 45 students. Prerequisite: junior or senior standing; HD 115. M 7:30–10. J. Ross-Bernstein.

Examines the play of children ages three through seven. Through seminar discussions, workshops, videos, and individualized research students explore the meaning and validity of play in the lives of young children, the different ways that children play and the value of each, and the effect of the environment in enhancing and supporting play.

[HD 347(3470) Human Growth and Development: Biological and Behavioral Interactions (also B&SOC 347(3471), NS 347(3470))]

Spring. 3 credits. Limited to 150 students. Prerequisites: BIO G 101 or 109 or equivalent, and HD 115 or PSYCH 101. M W F 1:25–2:15. Offered alternate years; not offered 2005–2006. S. Robertson and J. Haas.

Concerned with the interrelationships of physical and psychological growth and development in humans during infancy. Considers intrinsic and extrinsic causes of variations in growth, including various forms of stimulation. Also examines the consequences of early growth and its variations for current and subsequent behavioral, psychological, and physical development are examined. The interaction between physical and behavioral or psychological factors is emphasized throughout the course.]

HD 348(3480) Advanced Participation with Children

Spring. 4–8 credits. Limited to 20 students (depending on availability of placements and supervision). Prerequisites: HD 115 and 242 and permission of instructor. Recommended: HD 346. S-U grades optional. R 12:20–2:15. J. Ross-Bernstein.

Supervised field-based course designed to help students deepen and consolidate their understanding of children. Students are expected to define their own goals and assess progress with supervising teachers and the instructor; to keep a journal; and to plan, carry out, and evaluate weekly activities for children within their placement. Conference groups and readings focus on the contexts of development and on ways to support children's personal and interpersonal learning. Each student is expected to do a presentation and paper on a self-selected topic within the scope of the course. Participation is in settings that serve typical and/or special needs children from three to eight years of age and provide education, care, or special-purpose interventions for them.

HD 353(3530) Risk and Opportunity Factors in Childhood and Adolescence

Fall. 3 credits. Limited to 100 students. Prerequisites: HD 115 and 250. S-U grades optional. M 7:30–10 P.M. J. Garbarino.

Explores the meaning of risk and opportunity in the lives of children and youth. Begins with understanding risk accumulation and resilience as they relate to social policy, professional practice, and community development. The concept of "social toxicity" is a central theme of the course. Assignments include writing research-based editorials and participating in a simulated public policy debate.

[HD 362(3620) Human Bonding]

Fall. 3 credits. Limited to 600 students. Recommended: introductory psychology or human development course. S-U grades optional. T R 1:25-2:40. Not offered 2005-2006. C. Hazan.

Covers the science of interpersonal relationships. Examines the basic nature of human affectional bonds, including their functions and dynamics. Covers such topics as interpersonal attraction and mate selection, intimacy and commitment, love and sex, jealousy and loneliness, the neurobiology of affiliation and attachment, and the role of relationships in physical and psychological health.]

[HD 366(3660) Psychobiology of Temperament and Personality]

Fall. 3 credits. Limited to 20 students. Prerequisite: HD 266 (no substitutions and no exceptions); permission of instructor. Letter grades only. T R 10:10-11:25. R. Depue.

For students who have an interest in the neurobiology of behavior, in general, and in temperament and personality, in particular. The course material is presented within an evolutionary biology perspective, where the development of neurobehavioral systems as a means of adapting to critical stimuli is explored as the basis of emotional traits in humans. The nature of temperament and personality is explored from psychometric, social, genetic, and biological points of view. There is a focus on the general role played by the biogenic amines (dopamine, norepinephrine, and serotonin), corticotropic hormone and opiates in determining individual differences in temperament and personality. Implications for modeling several forms of personality disorders and psychopathology are also discussed. Finally, the manner in which environmental influences across the life span may be coded in the brain and influence the development of personality is explored.

[HD 368(3680) Children's Development in Different Cultures]

Spring. 3 credits. Prerequisites: HD 115 or PSYCH 101 and college-level statistics course. Letter grades only. Times TBA. Not offered 2005-2006. Staff.

Examines the influence of ecological, cultural, and ethnic factors on the social and cognitive development of children in different cultures. Gives particular attention to research methodologies that guide us in making comparisons about parent-child development across cultures. Topics include family origin and universality, parental roles, child-family interaction, patterns of kinship, and economic and health issues.]

[HD 370(3700) Adult Psychopathology (also PSYCH 325(3250))]

Spring. 3 credits. Prerequisites: sophomore, junior, or senior standing; any course in psychology or human development. T R 10:10-11:25. H. Segal.

For description see PSYCH 325.

[HD 371(3710) Child Development and Psychopathology (also PSYCH 371(3710))]

Fall. 3 credits. Limited to 120 students. Priority given to HD and psychology majors. Prerequisites: HD 115 or PSYCH 209; HD 220 or PSYCH 223; HD 260 or PSYCH 275. Letter grades only. T R 1:25-2:40. J. Haugaard.

Explores the development and process of mental, emotional, and behavioral disorders in children such as mental retardation, autism, depression, and attention deficit disorder. Topics include (1) the classification of mental disorders; (2) biological, psychological, and sociological theories regarding the development and maintenance of mental disorders; (3) prevalence and etiology of childhood mental disorders, and (4) therapeutic and preventive interventions. If there is sufficient enrollment, an optional discussion section will be available to students who would like an opportunity to discuss readings and lecture material in greater depth.

[HD 382(3820) Research Methods in Human Development]

Spring. 3 credits. Prerequisite: HD 115. Highly recommended: background in statistics. Letter grades only. M W 8:40-9:55. M. Casasola.

Students learn about a variety of research methodologies and gain experience in conducting all aspects of a research project. Students design and conduct one descriptive and one experimental study. They also gain experience in using statistical software to analyze data.

[HD 400-401-402-403(4000-4010-4020-4030) Special Studies for Undergraduates]

Fall or spring. Credit TBA; 1-4.

Prerequisite: permission of instructor. S-U grades optional.

For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of HD not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake, on a form available from the department office in G77 MVR. This form must be signed by the instructor directing the study and the student's faculty adviser and submitted to G77 MVR, the Office of Undergraduate Education. After the form is approved, the student takes it to the college registrar's office, 145 MVR, along with an add/drop slip. To ensure review before the close of the periods, early submission of the special studies form to the Office of Undergraduate Education is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

400(4000): Directed Readings. Prerequisite: permission of instructor. For study that predominantly involves library research and independent study.

401(4010): Empirical Research.

Prerequisite: permission of instructor. For study that predominantly involves data collection and analysis, or laboratory or studio projects.

402(4020): Supervised Fieldwork.

Prerequisite: permission of instructor. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

403(4030): Teaching Assistantship.

Prerequisites: permission of instructor; juniors and seniors with minimum 3.0 GPA; either HD 115, or PSYCH 101, and two intermediate-

level HD courses, or equivalent courses in psychology or sociology. Students must have taken course and received B+ or higher. For study that includes assisting faculty with instruction.

[HD 418(4180) Aging: Contemporary Issues]

Fall. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing; HD 218, 250, or 251 or permission of instructor. Letter grades only. T R 2:55-4:10. S. Cornelius.

Seminar addressing major issues and controversies in the field of aging. Designed for upper-level students who wish to pursue an in-depth analysis of concepts such as "successful" aging and wisdom, as well as controversies surrounding issues of generational equity and the right to die. Although these issues are addressed primarily from a psychological viewpoint, interdisciplinary perspectives are considered and incorporated in both readings and discussions. Also designed for advanced undergraduates who have completed an introductory course in adulthood and aging and wish to pursue such issues in more depth. Class time is devoted primarily to discussion of assigned readings.

[HD 419(4190) Midlife Development]

Fall. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing; HD 218, 250, or 251 or permission of instructor. Letter grades only. T R 2:55-4:10. Offered alternate years; not offered 2005-2006. S. Cornelius.

This seminar-style course examines the burgeoning research literature on adult development during midlife. Focuses on research and theory examining psychological changes during middle adulthood such as relativistic and dialectical thinking, personality, identity, and sense of control. Also considers the social and physical changes that occur at this time of life especially regarding issues such as empty nest anxieties, divorce, career transitions, menopause, and cardiovascular disease. Oral presentations, class participation, and an integrative paper are required.]

[HD 431(4310) Mind, Self, and Emotion]

Fall. 3 credits. Limited to 20 students. Prerequisites: upperclass undergraduate or graduate standing; HD 115 or PSYCH 101. Letter grades only. T R 1:25-2:40. Offered alternate years; not offered 2005-2006. Q. Wang.

Examines current data and theory concerning memory, self, and emotion from a variety of perspectives and at multiple levels of analysis, particularly focusing on the interconnections among these fields of inquiry. The "scale of observation" is viewed as occurring within the person (brain mechanisms, including genetics), at the level of the person (e.g., content—goals, beliefs, desires), and between persons (relationships, and group interaction—including culture).

[HD 432(4320) Cognitive, Social, and Developmental Aspects of Scientific Reasoning]

Spring. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing; HD 115 or PSYCH 101 or permission of instructor. S-U grades optional. T R 2:55-4:10. B. Koslowski.

Examines the cognitive precursors of scientific reasoning, the way the precursors develop over time, and the way that the social context

affects whether, and if so how, scientific inquiry is carried out.

HD 433(4330) Developmental Cognitive Neuroscience

Spring. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing; HD 220 or PSYCH 223, BIONB 222. S-U grades optional. T R 1:25–2:40. Offered alternate years. E. Temple.

What are the brain mechanisms underlying human behavior and cognition? How do those underlying brain mechanisms develop? These are the questions that developmental cognitive neuroscience tries to address and those explored in this course. The course explores methods used in the field (including brain imaging techniques), recent findings on the development of brain mechanisms underlying human behaviors such as, language, attention, and memory, as well as the brain mechanisms that may underlie various developmental disorders such as developmental dyslexia, autism, and attention deficit (hyperactive) disorder (AD(H)D). Emphasis is on reading primary research literature and acquiring the skills to understand, critique, discuss, and write about primary research. The format includes lecture and discussion.

[HD 437(4370) Lab Course: Language Development (also COGST/LING 450[4500], PSYCH 437[4370])]

Spring. 2 credits. Limited to 20 students. Prerequisite: HD/COGST/PSYCH/LING 436 or equivalent. R 1:25–2:40. Not offered 2005–2006. B. Lust.

For description, see COGST 450.]

HD 440(4440) Internship in Educational Settings for Children

Fall or spring. 8–12 credits. Prerequisites: HD 115, 242 and 348; permission of instructor. Recommended: HD 346. S-U grades optional. J. Ross-Bernstein.

Offers an opportunity to integrate theory with practice at an advanced level and to further develop understanding of children ages 2 to 10 and their families. Interns function as participants in varied settings and participate in curriculum planning, evaluation, staff meetings, home visits, parent conferences, and parent meetings. Supervision by head teacher and instructor. Students are expected to define their own goals and to assess their progress, to do assigned and self-directed readings, and to keep a critical incident journal.

HD 451 Nontraditional Families and Troubled Families

Spring. 3 credits. Limited to 20 students. Prerequisites: HD juniors and seniors; HD 115 or PSYCH 209; HD 260 or PSYCH 275. Letter grades only. T R 8:40–9:55. Offered alternate years. J. Haugaard.

Advanced course designed to explore the functioning of families. The first part of the course examines family system theory and how it relates to our understanding of all families. The second part examines four types of families: two nontraditional families (e.g., adoptive families) and two troubled (e.g., families with a chronically ill child).

HD 452(4520) Culture and Human Development (also COGST 452[4520])

Fall. 3 credits. Limited to 20 students. Prerequisite: HD 115 or PSYCH 101. Open to undergraduate and graduate students. Letter grades only. T R 1:25–2:40. Offered alternate years. Q. Wang.

This seminar takes an interdisciplinary approach to address the central role of culture in human development. It draws on diverse theoretical perspectives, including psychology, anthropology, education, ethnography, and linguistics, to understand human difference, experience, and complexity. It takes empirical reflections upon major developmental topics such as cultural aspects of physical growth and development; culture and cognition; culture and language; culture, self, and personality; cultural construction of emotion; culture issues of sex and gender; and cultural differences in pathology.

[HD 456(4560) Families and Social Policy]

Spring. 3 credits. Limited to 20 students. Prerequisite: junior or senior standing; one course in the family or sociology. S-U grades optional. Hours TBA. Not offered 2005–2006. Staff.

Examines the intended and unintended family consequences of governmental policies, using case studies in areas such as social welfare, day care, and employment. Also considers the policy implications of changes in the structure and composition of families.]

[HD 457(4570) Health and Social Behavior (also SOC 457[4570])]

Fall. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing; statistics course and *one* of the following: HD 250, SOC/D SOC 101, or SOC 251. Letter grades only. T R 10:10–11:25. Offered alternate years; not offered 2005–2006. E. Wethington.

Critically examines theories and empirical research on the relationships among social group membership, social status, and physical and mental health. Lectures focus on social stress, social support, and socioeconomic status, all of which are associated with variations in physical health, mental health, and health maintenance behaviors. Students are expected to read widely from current literature in medical sociology, health psychology, public health, and epidemiology.]

[HD 458(4580) Parent-Child Development in African American Families]

Fall. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing; HD 115, 250, and college-level statistics course. Letter grades only. T R 10:10–11:25. Not offered 2005–2006. Staff.

Examines parent-child relationships in African American families. Topics include historical influences on contemporary parenting behaviors, the impact of societal forces on African American families' socialization practices, and the influence of parental child rearing beliefs, strategies, and practices on African American children's development. Particular attention is given to the relevance of mainstream theoretical formulations of African Americans' parental and familial functioning.]

[HD 464(4640) Adolescent Sexuality (also FGSS 467[4670])]

Spring. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing; permission of instructor. T R 10:10–11:25. Not offered 2005–2006. R. Savin-Williams.

Covers topics selected by students regarding theoretical, research, and applied issues on adolescent sexuality. In the second half of the course, students lead a class that focuses on a research topic of their choosing. The success of the course depends on students feeling personally engaged and committed to the course content. Students are expected to

participate fully in class discussions. Because of the multidisciplinary nature of the course, students from a variety of backgrounds in academic disciplines, gender, sexual orientation, ethnicity, race, class, and religious affiliation attend.]

HD 468(4680) Stress in Childhood and Adolescence

Spring. 3 credits. Limited to 20 students. Prerequisite: junior or senior standing. Recommended: HD 115, 250, and statistics course. Letter grades only. T R 2:55–4:10. J. Eckenrode.

Advanced seminar that reviews research related to the nature and consequences of stressful experiences in childhood and adolescence, particularly those arising in the family. Topics represent common stressors in the lives of children (e.g., divorce of parents) that have potentially damaging consequences for development (e.g., child abuse). Also covers topics in which Cornell faculty members have conducted significant research (e.g., children's memory for stressful events). In addition to considering the negative effect of stress on development, also considers issues of individual differences in stress reactivity, including the concepts of coping and resilience. These topics lead naturally into discussions of practice and policy.

[HD 478(4780) Attention Deficit/Hyperactivity Disorder in Children]

Spring. 3 credits. Limited to 15 students. Prerequisites: HD 115 or equivalent, introductory biology, statistics course. S-U grades optional. Offered alternate years; not offered 2005–2006. Hours TBA. S. Robertson.

This seminar examines in detail the nature, diagnosis, epidemiology, causes, and treatment of ADHD through a critical evaluation of the recent scientific and medical literature. Also considers implications for families, schools, and society.]

HD 483(4830) Early Care and Education in Global Perspective

Fall. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing; HD 115 and 250. S-U grades optional. T R 2:55–4:10. M. Cochran.

Examines American child care and early education policies and programs, broadly defined, in the context of policies and programs in Africa, Asia, Europe, and Latin America. Comparison and analysis are guided by several complementary conceptual frameworks. Gives particular attention to the synthesis of child care with early intervention and family support. Policy-related topics include parental leave, developmentally appropriate practices, universal pre-kindergarten, cultural diversity, parent involvement, teacher preparation, and financing the ECE system. Students specialize in the child care policies and programs of another country, work in teams to analyze a contemporary policy issue, and apply course content to an ECE issue of their choice in a final paper.

HD 498(4980) Senior Honors Seminar

Fall and spring. 1 credit. Requirement for and limited to seniors in HD honors program. S-U grades only. M 12:20–1:10. S. Cornelius.

Discussion and presentation of honors theses being completed by HD seniors.

HD 499(4990) Senior Honors Thesis

Fall or spring. Credit TBA. Prerequisite: permission of thesis adviser and coordinator of honors program. S-U grades optional. HD faculty.

The Graduate Program

HD graduate courses are open to undergraduates only by permission of instructor.

General Courses**[HD 617(6170) Adolescence]**

Fall. 3 credits. Not offered 2005–2006. R. Savin-Williams.

Critically examines seminal theoretical and empirical writings on adolescent development. Considers empirical research on specific questions chosen by students in the light of these approaches.]

HD 620(6200) First-Year Proseminar in Human Development

Yearlong. 1 credit. Prerequisite: first-year HD graduate students. S-U grades only. F 2:40–4:10. C. Hazan.

Designed as an orientation to the department and the university. Activities include attendance at research presentations, visits to departmental research laboratories, relevant informational sessions (e.g., University Committee on Human Subjects, College Grants), and guidance in preparing a public research presentation to be made at the end of spring semester.

[HD 631(6310) Proseminar on Cognitive Development]

Spring. 3 credits. Letter grades only. T 4:15–6:45. Not offered 2005–2006. Q. Wang.

Designed to help students develop a broad understanding of the mechanisms, processes, and current issues in cognitive development and learn to do critical, in-depth analyses of developmental research. Discusses how children's thinking changes over the course of development and evaluates psychological theories and research on various aspects of cognitive development. Topics include perception, representation and concepts, reasoning and problem solving, social cognition, memory, metacognition, language and thought, and academic skills.]

HD 632(6320) Cognitive Neuroscience Seminar: Applications of Brain Science to Behavioral Research

Spring. 3 credits. Limited to 25 students. Prerequisite: doctoral students; master's students and undergraduate students who are actively doing research by permission of instructor. S-U grades optional. W 7:30–10 P.M. E. Temple.

Gives graduate students the opportunity to learn about current methods of cognitive neuroscience and explore the ways cognitive neuroscience methods and current findings may affect their field of research. Initial meetings include foundational lectures on the fundamentals of cognitive neuroscience. Subsequent meetings cover current topics in cognitive neuroscience that vary year to year depending on the research fields of the graduate students enrolled. Sample topics include cognitive neuroscience of false memory formation, sexual orientation, effects of trauma, and bilingualism. Students do not need to have had previous course work in neurobiology or cognitive neuroscience but

rather to be actively engaged in planning or implementing their thesis research. Class format is graduate seminar with reading and discussion of research, student presentations, and papers.

HD 634(6340) Judgment, Decision Making, and Scientific Reasoning

Fall. 3 credits. Prerequisite: human development or psychology course. Letter grades only. T R 2:55–4:10. B. Koslowski. Seminar based on selected chapters from *The Cognitive Basis of Science*, ed. by Carruthers, Stich, and Siegal (Cambridge U. Press, 2002), an anthology that resulted from a conference of the same name. Most of the authors treat scientific reasoning very broadly, as an instance of good thinking in general. The book addresses issues of innateness and cross-cultural commonalities, modularity, the role of cognition in science, social and emotional factors in science and scientific thinking, and the role of the broader social context in scientific reasoning. Appropriate course for someone interested in current cross-disciplinary thinking about scientific reasoning as an instance of good reasoning.

[HD 636(6360) Connecting Social, Cognitive, and Emotional Development]

Spring. 3 credits. S-U or letter grades. W 10:10–12:35. Not offered 2005–2006. M. Casasola.

Opportunity for graduate students to explore several current areas of research from both a cognitive and a social-emotional perspective. Although the traditional approach to the study of development has centered on studying cognitive development as separate from social and emotional development, the current course focuses on how cognitive and socio-emotional development are integrated and how each influences the development of the other. Thus the course is intended to provide a more integrated view of development. As one example, language acquisition, which traditionally has been viewed as a cognitive achievement, depends not only on social interactions but also on achievement in social understanding and awareness. Likewise, acquiring language that describes emotional states plays an important role in developing children's understanding of others' emotional states. Topics are determined by the interests of the graduate students who enroll.]

[HD 637(6370) First-Language Acquisition]

Spring. 1–4 credits. Prerequisites: HD 337/LING/PSYCH/COGST 337 and permission of instructor. S-U and letter grades. Hours TBA. Not offered 2005–2006. B. Lust.

This seminar supplements the survey course with more advanced discussion of central issues and materials covered there. Graduate students who are taking HD 337(3370) (or who have taken it or an equivalent previously) should also enroll for this seminar.]

[HD 640(6400) Infancy]

Fall. 3 credits. R 9:05–11:25. Not offered 2004–2005. S. Robertson.

Examines development in infancy through a critical review of key research and theory in selected aspects of neurobehavior, perception, cognition, language, emotion, and social relationships. Theoretical issues considered include the role of experiences in early development, sensitive periods, continuity and discontinuity in development,

and the functional significance of early behavior. Some of the conditions that put infants at risk for poor development are also considered, such as premature birth, perinatal medical complications, and exposure to environmental toxins. Combines perspectives from developmental psychology and psychobiology.]

[HD 660(6600) Social Development]

Fall. 3 credits. Letter grades only. M 11–1. Not offered 2005–2006. Staff.

This seminar examines literature relevant to early childhood determinants and developmental processes of personality and social behavior. Addresses current research, theories, and methodological issues. Special emphasis is placed on possible interrelations between the quality of relationships with parents and with peers, and on the meaning of risk, vulnerability, and resilience in children's lives.]

HD 666(6660) Emotions and the Brain

Spring. 3 credits. Prerequisite: HD 266. Letter grades only. M 10:10–12:35. R. Depue.

Concerns networks of brain regions that are organized around the integration of processes related to emotion and motivation. Explores (1) the basic brain mechanisms for recognizing and evaluating emotionally relevant stimuli; (2) the brain mechanisms involved in emotional expression, including hormonal and behavioral variables; (3) the special nature of emotional feelings. Extends all of these basic processes by placing them within larger brain networks that support phylogenetically old emotional-motivational systems that help us to adapt to critical stimuli in the environment. Neurobiological modulation of emotional processes by several neurotransmitters of wide distribution in the brain is detailed. The manner in which emotion influences learning and memory concludes the discussion. There are two take-home essay exams.

HD 691(6910) Poverty, the Life Course, and Public Policy (also DEA 691[6910])

Fall. 3 credits. Limited to 15 students. Prerequisite: graduate standing. Letter grades only. M 4:30–7:30 P.M. G. Evans. For description, see DEA 691.

[HD 692(6920) Seminar in Translational Developmental Science]

Spring. 3 credits. Prerequisite: two semesters of graduate-level statistics. S-U or letter grades. T 12:20–2:50. Not offered 2005–2006. S. Ceci.

Provides graduate students with the knowledge and opportunities to translate developmental research into public interest positions. A secondary goal is to provide students with essential information about professional activities that are related to translational research, such as publishing in journals and applying for grants.]

HD 711(7110) Psychological Expert Testimony in the Courts (also LAW 711)

Fall. 3 credits. Prerequisite: permission of instructor. S-U or letter grades. M 6:05–7:45. J. Haugaard and A. Mooney.

The goals of this course include (1) providing law students and graduate students with the opportunity to work together on a case in which expert testimony from a psychologist will be given, (2) increasing law students'

understanding of the strengths and limitations of psychological research, psychological testing, and clinical interviewing, (3) increasing graduate students' understanding of the limits that are imposed on psychological research, testing, and interviewing when it is presented in court, (4) providing law students the opportunity to conduct an examination and a cross-examination of a psychologist expert witness, and (5) providing graduate students with the opportunity to act as an expert witness.

Individualized Special Instruction

HD 700-806(7000-8060) Special Studies for Graduate Students

Fall or spring. Credit TBA; 1-15 (3 hours work per week per credit). S-U grades at discretion of instructor. Times TBA.

Independent advanced work by graduate students recommended by their Special Committee chair with permission of the instructor.

HD 700(7000): Directed Readings. For study that predominantly involves library research and independent study.

HD 701(7010): Empirical Research. For study that predominantly involves collection and analysis of research data.

HD 702(7020): Practicum. For study that predominantly involves field experience in community settings.

HD 703(7030): Teaching Assistantship. For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

HD 704(7040): Research Assistantship. For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

HD 705(7050): Extension Assistantship. For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

HD 706(7060): Supervised Teaching. 4 credits. For advanced students who assume major responsibility for teaching a course. Supervision by a faculty member is required.

HD 806(8060): Teaching Practicum. 4 credits. For advanced graduate students independently to develop and teach an undergraduate topics course under the supervision of a faculty member.

HD 899(8990) Master's Thesis and Research

Fall or spring. Credit TBA; 1-15 (3 hours work per week per credit). Prerequisite: permission of thesis adviser. S-U grades only.

HD 999(9990) Doctoral Thesis and Research

Fall or spring. Credit TBA; 1-15 (3 hours work per week per credit). Prerequisite: permission of thesis adviser. S-U grades only.

POLICY ANALYSIS AND MANAGEMENT

R. Avery, chair (119A MVR, 255-2578); R. Geddes, associate chair and director of undergraduate studies; D. Kenkel, director of graduate studies; W. White, director of Sloan Program; B. Hollis, executive director of Sloan Program; C. Calori, associate director of Sloan Program; H. Allen, J. Allen, R. Battistella, R. Burkhauser, J. Cawley, T. DeLara, R. Dunifon, N. Fabrizio, J. Gerner, K. Joyner, J. Kuder, A. Mathios, S. Nicholson, L. O'Neill, A. Parrot, E. Peters, P. Pollak, E. Rodriguez, W. Rosen, N. Roufaiel, K. Simon, R. Swisher, S. Tennyson, D. Tobias, W. Trochim, J. Unur, M. Waller, Emeritus: R. Babcock, D. Barr, H. Biesdorf, W. K. Bryant, F. M. Firebaugh, J. Ford, J. Greene, A. Hahn, E. S. Maynes, C. McClintock, J. Mueller, L. Noble, J. Robinson, C. Shapiro, L. Street, B. L. Yerka, J. Ziegler

Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible.

PAM 200(2000) Intermediate Microeconomics

Fall or spring. 4 credits. Prerequisite: ECON 101 or equivalent. Students must enroll in a sec. J. Cawley, R. Geddes, W. Rosen, and staff.

Topics include theory of demand and consumer behavior including classical and indifference curve analyses; theories of production and cost; models for the following markets—competitive, monopoly, monopolistic competition, oligopoly, and inputs; general equilibrium; welfare economics; public goods; and risk.

PAM 204(2040) Economics of the Public Sector

Fall or spring. 3 credits. Prerequisite: PAM 200. S-U grades optional. D. Kenkel and staff.

The public sector now spends nearly two out of every five dollars generated as income in the U.S. economy. A thorough knowledge and understanding of this important sector is an essential part of training in policy analysis and management. This course provides an overview of the public sector of the U.S. economy, the major categories of public expenditures, and the main methods used to finance these expenditures. The principles of tax analysis and cost-benefit analysis are presented with a focus on the role of public policy in improving economic efficiency, promoting the goals of equity and social justice, and improving equity by altering the distribution of wealth and income.

PAM 210(2100) Introduction to Statistics

Fall or spring. 4 credits. K. Joyner, L. O'Neill, R. Swisher, and staff.

Introduces students to descriptive and inferential statistics. Topics include hypothesis testing, analysis of variance, and multiple regression. To illustrate these topics, this course examines applications of these methods in studies of child and family policy.

PAM 215(2150) Research Methods

Fall or spring. 3 credits. Prerequisite: PAM 210 or equivalent. Sec TBA. J. Kuder and M. Waller.

Students learn the logic and methods of social science research, as well as how to create researchable questions out of their issues of

interest. Readings, written assignments, and in-class exercises focus on stating hypotheses, designing studies and samples to test hypotheses, measuring variables, and simple statistical analysis. PAM majors should take this course no later than their junior year.

PAM 220(2200) Introduction to Management: Principles and Differences Among Sectors

Spring. 3 credits. D. Tobias.

Basic introduction to major management and related concepts of planning, organizing, controlling, leadership, and special topics within five major management contexts, including individual/personal, groups/families, firms, not-for-profit organizations, and governments/communities.

PAM 222(2220) Controversies about Inequality (also PHIL 195[1950], SOC/D SOC 222[2220])

Spring. 1-3 credits. Staff.

For description, see SOC 222.

[PAM 223(2230) Consumer Marketing

Fall. 4 credits. Offered alternate years; not offered 2005-2006. R. Avery.

Focuses on the structure and functioning of consumer markets. The major players in these markets are producers, consumers, and market monitoring agents (government, the media, and other independent groups). The primary focus is on the actions and activities of producers in product and service markets. Also covers the mechanisms whereby producers make their product, price, promotion, and distribution decisions. Also studies the U.S. market in terms of its demographic (target market) structure and consumption patterns.]

PAM 230(2300) Introduction to Policy Analysis

Fall. 4 credits. R. Avery.

Policy analysis is an interdisciplinary field that uses theories, concepts, and methods from disciplines such as economics, sociology, and political science to address substantive issues in the public policy arena. Students are introduced to the functions of and interactions between the major institutions (public and private) at the national, state, and local level involved in the policy making process. The course focuses on public policy analysis in the consumer, health, and family/social welfare areas and also includes an introduction to the technical skills required to undertake policy analysis.

PAM 245(2450) Neighborhoods, Families, and the Life Course

Fall. 3 credits. R. Swisher.

Considers the social policy implications of research on the effects of geographic inequalities (e.g., neighborhood poverty) on individual and family welfare across the life course. Emphasizes the consequences of neighborhood poverty in adolescence, explores the long-term effects of these early experiences for outcomes later in the life course, and contrasts them to those of working-class, middle-class, and more advantaged youth. Policy implication discussions include welfare reform, housing policy, racial and class segregation, the Moving to Opportunity demonstration program, school vouchers, and neighborhood programs aimed at promoting social capital and community policing.

PAM 303(3030) Ecology and Epidemiology of Health

Spring. 3 credits. S-U grades optional. Staff.
Covers ecological and epidemiological approaches to the problems that restrict human health within the physical, social, and mental environment. Introduces epidemiological methods and surveys the epidemiology of specific diseases such as AIDS, hepatitis, Legionnaires' disease, plague, cancer, herpes, and chlamydia. Discusses application of epidemiology to health care.

PAM 305(3050) Introduction to Multivariate Analysis

Fall or spring. 4 credits. Prerequisites: PAM 210, AEM/ILRST 210 or equivalent. Sec meets once a week. W. Rosen.
Introduces basic econometric principles and the use of statistical procedures in empirical studies of economic models. Discusses assumptions, properties, and problems encountered in the use of multiple regression procedures. Students are required to specify, estimate, and report the results of an empirical model.

[PAM 323(3230) Consumer Behavior

Spring. 4 credits. Not offered 2005-2006. R. Avery.
Focuses on the cognitive, behavioral, and environmental forces that drive consumer demand. The first half of the course draws on theories and concepts from psychology and focuses on the cognitive processes whereby consumers interpret market-provided information and other stimuli in the purchase environment. The second half draws on theories and concepts from retail anthropology to explain the behavior of consumers in the in-store environment. Particular emphasis is placed on communication institutions (advertising, television, print media), their impact on consumer decision making, and their control through government regulation. Course format is highly audiovisual and incorporates guest lectures from prominent consumer product firms, advertising agencies, and government regulators.]

[PAM 330(3300) Evaluation of Public Policies

Spring. 3 credits. Not offered 2005-2006. D. Kenkel.
Focuses on the economic evaluation of health and safety policy. The first third of the course assesses the symptoms and frames the policy problem (key steps in any policy analysis). Topics include the so-called economic costs of illness; the World Health Organization's global risk assessment and estimates of the burden of disease; and the relevance of market failures to individual health decisions. The second third covers specific evaluation methods in detail: cost-benefit analysis of policies to reduce health risks related to the environment, traffic safety, occupational safety, guns, tobacco, and alcohol; and cost-effectiveness analysis to evaluate clinical, pharmaceutical, and public health interventions. The last third discusses the use and abuse of economic evaluation methods in current practice.]

PAM 334(3340) Corporations, Shareholders, and Policy

Fall. 3 credits. Prerequisite: ECON 101. S-U grades optional. R. Geddes.
Uses economic analysis to study the interaction of the market, the corporation, and the law and how these interactions affect the well-being of shareholders and consumers. Examines the costs and benefits

of the corporate form of organization. The legal institutions defining the corporation, such as limited liability and shareholder voting, are analyzed along with regulations governing these institutions. A particular focus is mechanisms that control the behavior of managers. Those mechanisms include hostile takeovers, insider trading, outside directors on the board, the role of large investors, and executive compensation plans. Additional topics include government ownership of corporations and nonprofit enterprises.

[PAM 335(3350) Low-Income Families: Qualitative and Policy Perspectives

Spring. 3 credits. Not offered 2005-2006. M. Waller.
Examines the experiences and challenges of low-income families in the contemporary United States as documented in qualitative and policy research. Also looks at policies designed to assist these families. Considers such topics as the characteristics and causes of poverty, changes in family structure and the emergence of "fragile families," nonresident fathers' relationships with their children, families' participation in the welfare system and low-wage labor market, and socioeconomic variations in parenting and child well-being.]

PAM 340(3400) The Economics of Consumer Policy

Spring. 4 credits. Prerequisite: PAM 200 or permission of instructor. S. Tennyson.
Familiarizes students with the economic analysis of consumer policy issues. Uses the tools of microeconomic analysis to investigate the interaction between government and the marketplace, with an emphasis on how that interaction affects consumers. Examines the rationale for and effects of regulation of industry. Considers alternative theories of regulation, including the capture, economic, and public interest theories. Applies those theories to specific types of regulation, including economic regulation of specific industries (e.g., telecommunications, electricity, trucking, railroads, postal services) as well as to broader social regulation (e.g., health, safety, environmental). The effects of regulatory reform in numerous industries are also examined. An attempt is made to examine current topics relating to consumer policy.

[PAM 341(3410) Economics of Consumer Law and Protection

Fall. 3 credits. Prerequisite: ECON 101 or equivalent. S-U grades optional. Not offered 2005-2006. A. Mathios.
Economic analysis of the roles played both by the courts and by federal and state regulatory legislation in altering consumer markets, consumer behavior, and consumer welfare. Topics include economic analyses of contract law, product liability, accident law and antitrust law, and the activities of such agencies as the Federal Trade Commission, the Food and Drug Administration, and the Consumer Product Safety Commission.]

[PAM 346(3460) Economics of Social Security (also ECON 447[4470])

Fall. 3 credits. Prerequisite: PAM 200. S-U grades optional. Not offered 2005-2006. R. Burkhauser.
Provides students with an economic perspective on social security policies. The readings illustrate the use of economic analysis to predict the behavioral effects and income distributional consequences of

policy. Focuses primarily on the Old-Age, Survivors, and Disability Insurance Program but also discusses other programs such as the Supplemental Security Income and mandates, for example, the Americans with Disabilities Act, that affect the aged and those with disabilities.]

[PAM 350(3500) Contemporary Issues in Women's Health

Fall. 3-5 credits. Offered alternate years. A. Parrot.
Deals with the history of women in medicine and the historical and cultural treatment of women's health problems. Also addresses health care research and the exclusion of women from research trials and protocols. Reproductive issues, alternative approaches to treatment, medical problems, ethical issues, cancers, factors that contribute to post-traumatic stress disorders, health promotion behaviors, political issues, and routine medical recommendations are also discussed in depth. Students may take the course for a fifth credit, which requires attending a discussion section every other week and observing seven facilities (e.g., birthing center, mammogram, and ultrasound center, wellness center, hospital labor and delivery unit, LaMaze class, women's self defense class) that provide a variety of women's health care.]

PAM 371(3710) Demography and Family Policy

Spring. 3 credits. K. Joyner.
Examines from a demographic perspective family policies that concern children and adults. Toward this end, it considers the relationships between family policies and demographic behavior. It also addresses the effects of family policies and demographic behavior on the well-being of children. Although this course focuses on the United States, it considers U.S. trends against the backdrop of changes in other industrialized countries.

PAM 380(3800) Human Sexuality

Spring. 4 credits. Limited to 200 students. Prerequisite: introductory course in human development and family studies, psychology, or sociology (or equivalent social science course). Recommended: biology course. Two 75-minute lec and one sec per week. A. Parrot.
Provides students with an understanding of the interactions and interrelationships of human behavior that influence sexual development and behavior. Focuses on the evolution of sexual norms, cross-cultural customs, legislation within changing sociopolitical systems, and delivery of services related to sexual issues, needs, and/or problems. Addresses future trends in sexuality.

PAM 383(3830) Social Welfare as a Social Institution

Fall. 4 credits. S-U grades optional. J. Allen.
Provides a philosophical and historical orientation to social welfare policy, programs, and services. Examines the social, political, and economic contexts within which social welfare policies have evolved in the United States. Analyzes the ideological, political, and social processes through which public policy is formed and focuses on the significance of social justice, social and economic disparities, and the process by which public policies are translated into social welfare programs. The importance of a global perspective is emphasized in the context of present program

design, public concerns, interrelationships, and human need.

PAM 392(3920) New York State Government Affairs: Capital Semester in Albany

Spring. 15 credits; for HE students, 7 credits count toward outside-the-major requirement; for PAM majors, credits satisfy capstone requirement and 7 additional PAM credits. Prerequisite: permission of instructor; sophomores, juniors, and seniors with minimum 2.3 GPA. W. Rosen. Students participate in either the New York State Assembly or New York State Senate Intern Programs. Internships include research on legislation, support for legislator initiatives and public hearings, work on constituent and interest group issues, and other tasks. Students also participate in one "in-residence" course, and Cornell students also participate in a seminar conducted by W. Rosen. Students earn \$3,500 stipend.

PAM 400-401-402-403(4000-4010-4020-4030) Special Studies for Undergraduates

Fall and spring. Credit TBA. S-U grades optional. Staff. For advanced independent study by an individual student or for study on an experimental basis with a group of students not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the department field office. This form must be signed by the instructor directing the study, the student's faculty adviser, and the department head and filed at course registration or within the change-of-registration period in the college registrar's office, 145 MVR. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department chair is necessary. Students, in consultation with their faculty supervisor, should register for one of the following subdivisions of independent study.

PAM 400(4000): Directed Readings. For study that predominantly involves library research and independent reading.

PAM 401(4010): Empirical Research. For study that predominantly involves data collection and analysis.

PAM 402(4020): Supervised Fieldwork. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

PAM 403(4030) Teaching Apprenticeship
Prerequisite: course (or equivalent) in which student is assisting and has demonstrated high level of performance. For study that includes assisting faculty with instruction.

PAM 406(4998) Politics and Policy: Theory, Research, and Practice (also GOVT 500[4998], ALS 500[4998], AM ST 501[4998])

Fall, spring. Taught in Washington, D.C. For description, see GOVT 500.

[PAM 420(4200) Management Information Systems for the Public Sector

Spring. 3 credits. Not offered 2005-2006. L. O'Neill.]

PAM 423(4230) Risk Management and Policy

Fall. 3 credits. Prerequisite: ECON 101 and statistics course. S. Tennyson. Provides students with a broad understanding of risk management problems and solutions, a greater appreciation of the importance of risk and risk regulation in our society, and increased comprehension of the complexities of making decisions about risk. Topics include alternative ways to define and measure risk, the importance of risk-tradeoffs, and models of decision making under risk. With this background, alternative approaches to risk management are analyzed. The impact on risk management of the legal liability system and government programs, laws, and policies is also considered.

PAM 435(4350) The U.S. Health Care System

Fall. 3 credits. R. Battistella. Introduction to the health care delivery systems in the United States. Covers the interrelatedness of health services, the financing of health care, and the key stakeholders in health care delivery, including regulators, providers, health plans, employers, and consumers. Describes the history and organization of health care, behavioral models of utilization, issues of health care reform, and current trends. Provides an overview of the key elements of the field including ambulatory care services, mental health services, hospitals and clinicians, insurers, the role of public health organizations, and the politics of health care in the United States.

PAM 437(4370) Economics of Health Policy

Spring. 3 credits. Prerequisite: ECON 101 or equivalent. S-U grades optional. K. Simon.

Uses the economic tools of policy analysis to understand the health care system and critically evaluate current policy debates. In the past decade, some of the most controversial policies considered by state and federal governments have involved issues that have been studied by health economists and health services researchers. Uses the United States as its main institutional framework but also pays attention to health care topics of international concern, such as the AIDS epidemic.

PAM 440(4400) Critical Perspectives

Fall. 3 credits. J. Allen. Presents an overview of different perspectives on U.S. social policies and programs with an emphasis on health, education, social welfare, family, and consumer issues. Analyzes and contrasts historical, social, scientific, and personal perspectives. Students explore the inevitability and legitimacy of diverse perspectives on social conditions, policies, and programs. Students also gain knowledge about the social contexts, conditions, policies, and programs presented; critically analyze them; employ the conceptual frameworks presented; and evaluate policy debates by applying these insights.

PAM 441(4410) Evidence-Based Practice

Spring. 3 credits. Prerequisite: PAM seniors. W. Trochim. Focuses on the integration of science and practice, and on some of the most intensely

debated and important issues currently being addressed in policy analysis and management. This integrative capstone course is designed to help students synthesize their undergraduate course work and link it with a real-world practice experience. It introduces students to this cutting edge field, has them work with an agency or organization to identify a critical research-relevant practice issue, gather and systematically synthesize the available research on that issues, report and present findings to practitioners, and suggest how to improve the relationship between practitioner and researcher.

[PAM 444(4440) Violence against Women: Policy Implications and Global Perspectives (also FGSS 448[4480])

Fall. 3 credits. Offered alternate years; not offered 2005-2006. A. Parrot. Focuses on the historical and current reasons for and impact of the alarming rate of violence against women both domestically and internationally. Considers the impact of legislative, public, social, or religious policies on the incidence of such violence. Considers rape, child sexual abuse, homicide, battering, hate crimes, gay bashing, kidnapping, ethnic cleansing, war crimes, forced prostitution, female genital mutilation, honor killings, public beating, lashing, stoning, torture, female infanticide, trafficking of women, forced abortions, acid attacks, sexual slavery, and sati (self-immolation). Each student is required to evaluate the impact of one current policy and critique the potential value of one pending policy relating to violence against women.]

[PAM 457(4570) Innovation and Entrepreneurship in the Health Care Industry

Spring. 3 credits. Prerequisite: PAM 435 or permission of instructor. Not offered 2005-2006. J. Kuder. Designed for students interested in the management, financing, and development of innovation in the health services industry. The unique features of the health delivery system are emphasized as students learn about developing creative approaches to health services problems. Approaches to managing change are taught with case studies from a wide range of industries. Students are taught tools for critically evaluating and implementing new business concepts in for-profit and not-for-profit firms. Both the creation of new start-up companies and innovation within existing firms are explored.]

[PAM 461(4610) Public Policy and Marketing

Fall. 3 credits. Prerequisites: PAM 200 and 305. Not offered 2005-2006. A. Mathios.]

PAM 462(4620) The Welfare of America's Children

Spring. 3 credits. J. Allen. Provides an informed and critical look at child and family well-being in America and in the global context. Examines cultural, social, economic, political, and ecological perspectives in addition to related public policies that have evolved in this country and in the international arena. Emphasizes empowerment, advocacy, and social justice in addition to the consequences of social and economic disparities. Topics include economic security for families and children; early childhood education and child care; primary and secondary education; domestic violence, abuse and neglect, protective services; foster

care and adoptions; youth development services; the juvenile justice system; health and mental health care. Theories, empirical research, case studies, and the analysis of current policies, programs and services facilitate this exploration.

[PAM 473(4730) Social Policy

Spring. 3 credits. Prerequisites: GOVT 111 or SOC/D SOC 105 or permission of instructor. S-U grades optional. Not offered 2005-2006. J. Allen.

Examines the policy process and the significance of national policies as they affect the distribution of resources and services. Uses several analytical frameworks to evaluate social programs and service delivery systems in selected policy areas, including education, economic and social security, juvenile justice, child welfare, health, mental health, and housing. Explores implications for change and the significance of current competing policy priorities at the state and local levels. Field experiences in the Ithaca community are encouraged.]

PAM 499(4990) Honors Program

Fall or spring.

Provides students with the opportunity to undertake basic or applied research that will be preparation of a thesis representing original work of publishable quality. Intended for students who desire the opportunity to extend their interests and efforts beyond the current course offerings in the department. Furthermore, the program is designed to offer the student the opportunity to work closely with a professor on a topic of interest. PAM majors doing an honors program typically take PAM 499 for 3 credits a semester for three semesters. See Professor Rick Geddes for more details.

PAM 547(5470) Microeconomics for Management and Policy

Spring. 4 credits. S-U grades optional. W. White.

Introduces microeconomic theory and its application to decision making in the management and policy arenas. Places special emphasis on the economic environment of health care organizations and the problems faced by managers in this environment.

PAM 552(5520) Health Care Services: Consumer and Ethical Perspectives

Fall. 3-4 credits; 4-credit option may be used as Biology and Society senior seminar option. Limited to 30 students. Prerequisite: undergraduates by permission of instructor. A. Parrot.

Focuses on consumer and ethical issues faced by professionals in the health care field today. Broad topics discussed include ethical standards and guidelines, health care costs and accessibility of services, government role in health care delivery, health care as a right or privilege, private industry role in health care, services for the medically indigent and elderly, practitioner burnout and training, ethics of transplant surgery and funding, reproductive technology, AIDS research and funding, animals in medical research, right to die, and baby and granny Doe cases.

PAM 554(5540) Legal Aspects of Health Care

Spring. 3 credits. Prerequisites: PAM 557 or permission of instructor. Offered alternate years. H. Allen.

Introduces principles of the law that specifically are applicable to health-service delivery. Topics include the liability of

hospitals and their staff and personnel for injuries to patients; medical records and disclosure of information; consent to medical and surgical procedures; responsibility for patients' personal property; collection of bills; medical staff privileges; and confidential communications.

PAM 556(5560) Managed Health Delivery Systems: Primary-Ambulatory Care

Fall. 3 credits. Prerequisite: PAM 557 or permission of instructor. J. Kuder.

Uses the concept of primary care to enhance understanding of the direction and purpose of ongoing changes in health services organization and financing. Examines pressures on traditional indemnity insurance and solo fee for-service medicine in the context of the transition from unmanaged to managed delivery systems. The course is divided into two parts. Part one examines the development of health maintenance organizations and related forms of managed care against the backdrop of larger public policy concerns. Part two centers on administrative-financial topics associated with the design, marketing, and operation of managed delivery systems in highly competitive markets. Considerable attention is given to the relationship between physicians and management with respect to such subjects as medical practice styles, productivity, quality assurance, and outcome measurement. Many of the managerial topics are highlighted with field trips and visiting speakers.

PAM 557(5570) Health Care Organization

Fall. 3 credits. Limited to 30 students.

Prerequisite: Sloan students or permission of instructor. R. Battistella.

Graduate-level introduction to the organization of health providers in the United States, the interrelationships of health services and the major sources and methods of paying for care. Describes how health services are structured in the United States and how these different services interrelate along the continuum of care. Describes and analyzes organization, delivery, and financing issues from a variety of perspectives using specific performance criteria (e.g., equity, quality, efficiency). Also presents innovations by the public and private sectors in the delivery and reimbursement of health care.

PAM 558(5580) Field Studies in Health Administration and Planning

Fall or spring. Fall, 1 credit; spring, 3 credits; 4 total credits. Capstone course for second-year Sloan students. Staff.

Students interested in developing administrative and program-planning research skills are given an opportunity to evaluate an ongoing phase of health care agency activity in the light of sound administrative practice and principles of good medical care. In planning and carrying out the research, students work closely with a skilled practicing administrator and with members of the faculty.

PAM 559(5590) Epidemiology, Clinical Medicine, and Management Interface Issues

Spring. 3 credits. Staff.

Explores, from an empirical and analytical framework, the relationships between epidemiology, clinical medicine, and management. Reviews the epidemiology, policy issues, and treatment of selected diagnoses accounting for a significant percentage of utilization and cost of health care services. In addition, students have an opportunity to explore issues of resource allocation and

continuous quality improvement. The format is lecture, discussion, and case analysis.

[PAM 561(5610) Economics of Health and Medical Care

Fall. 3 credits. Not offered 2005-2006.

J. Kuder.

Designed for graduate students who seek an understanding of the tools, vocabulary, and means of thinking about economics as it applies to decision making in health services delivery, management, and policy. Examines the special features of medical care as a commodity, the demand for health and medical care services, the economic explanations for the behavior of providers, the functioning of insurance markets, health policy issues, federal health insurance programs, and regulation. The emphasis is on applying economic ways of thinking to critically analyze and evaluate both health system policies and the performance of health care firms.]

PAM 562(5620) Health Care Financial Management I

Spring. 3 credits. S. Nicholson.

Provides a framework for evaluating how a firm should make investment and financing decisions to create value for its shareholders or stakeholders. Most of the course focuses on profit-maximizing firms, although it also discusses whether and how the investment and financing decisions are different for nonprofit firms that are prevalent in the health care industry. Therefore, this is primarily a course on general corporate finance. Specifically, the course discusses why the net present value (NPV) of discounted cash flows is the best investment criterion; calculate NPVs; derive appropriate discount rates; estimate the value of bonds, stocks, and options; and determine the optimal amount a firm should borrow. To understand how firms make investment and financing decisions, it considers how financial markets function and how investors in those markets should make decisions.

PAM 563(5630) Health Care Financial Management II

Spring. 3 credits. Prerequisite: PAM 562 or other financial management course.

S. Nicholson.

Focuses on the financial analyses that managers in the health care industry use to make strategic and operating decisions. Begins by examining how health insurers design and price their products and manage enrollees' medical expenditures. Next reviews two different methods of valuing a medical product/service, and two methods of estimating the value of a company. The four valuation methods covered are: net present value of free cash flows, decision tree analysis/real options, multiples, and the venture capital method. Seven cases allow students to apply these skills to examine decisions/situations such as: determining why a Medicare HMO is losing money and recommending a redesigned benefit and reimbursement structure; estimating a health system's profitability by product line; valuing a pharmaceutical company; determining whether a medical device company should go public and how it should price its products.

PAM 564(5640) Information Resources Management in Health Organizations

Spring. 3 credits. Prerequisite: strong basic computer skills. S-U grades optional.

L. O'Neill.

Graduate course in health administration. Exposes students to the opportunities and challenges inherent in the use of health management information systems (HMISs) in clinical and nonclinical applications. Focuses on the manager's role in the application of HMISs to solve problems and address concerns in today's health care service industry. Students learn how an HMIS can enhance the ability to appraise multiclinical and nonclinical services of care.

PAM 566(5660) Strategic Management and Organizational Design of Health Care Systems

Fall. 3 credits. Staff.

Examines strategy and design issues faced by health care organizations. Topics include analysis of market conditions, organizational culture issues, development of a organizational mission and management strategy, the management of professionals, and the importance of roles, structure, and inter- and intra-institutional relationships within organizations. Taught via a case study approach.

PAM 567(5670) Health Policy

Spring. 3 credits. Prerequisite: Sloan MHA students, Ph.D. students, or permission of instructor. K. Simon.

Addresses major health policy issues and the critical processes that influence them. Focuses primarily on the United States, with some coverage of health policy in other countries. Topics include Medicare, Medicaid, the uninsured, public health, the effect of welfare policy on health care, managed care development and regulation, state and federal health care reform, and many others. The course analyzes the politics of health policy in terms of legislative and executive processes; the forces involved including economic, social, ethical, and political factors; and key players in health policy, such as special interest groups, public agencies, and elected officials.

PAM 569(5690) Regression Analysis and Managerial Forecasting

Fall. 3 credits. Prerequisite: at least one statistics course. L. O'Neill.

Teaches various statistical methods for managerial decision making, with a particular emphasis on regression and forecasting. Other topics include ANOVA, correlation, confounding, interaction, and statistical process control. Emphasizes applications to health care organizations.

PAM 570(5700) Health Care Accounting

Fall. 4 credits. Core course for Sloan MHA students. N. Roufael.

Introduces the basic concepts of financial and managerial accounting with emphasis on health care applications. Explains the measurement system of business operations, business valuation, financial reporting, budgeting, cost allocation, service and product costing, and special reports for managerial use. Ethical and international issues are integrated throughout the course materials with real world applications. At the conclusion of the course, students should be able to read, understand, and analyze the annual financial reports of an organization. Collaborative learning, cases, discussions, readings, researches, presentation, speakers, problem solving, videotapes, and lectures are used as teaching pedagogy.

PAM 571(5710) Organizational Development/Human Resource Management in Health Care Organization

Fall. 3 credits. N. Fabrizio.

Explores (1) the theoretical foundation of organizational theory, research, and human resource management with an emphasis on implementation; (2) real-world problems while analyzing, exploring, and discussing varied interpretations of selected cases; (3) the building blocks of managerial activity; internal organizational issues; performance issues related to organization design; and strategic issues. Key organizational change and development concepts enhance students' perspectives on how the theories, strategies, and practices relate to today's organizations. The course serves as a framework to establish the theory and both the conceptual and competency foundations necessary for applying interventions.

[PAM 572(5720) Economic Evaluations in Health Care

Fall. 3 credits. Recommended: background in microeconomics and statistical tools. S-U grades optional. Not offered 2005–2006. D. Kenkel.

Covers economic evaluation methods used for decisions in the health care sector and health policy. Economic evaluations include cost analysis, cost-benefit analysis, cost-effectiveness analysis, and cost-utility analysis. Discusses how to measure opportunity costs, monetary benefits, and health outcomes such as quality-adjusted life years. Actual economic evaluations of pharmaceuticals, health care and public health interventions, and health and safety policy are reviewed and critiqued.]

PAM 578(5780) Not-for-Profit Health Care Management and Reporting

Spring. 3 credits. N. Roufael.

Provides students with broad financial and managerial knowledge and skills needed to understand the challenges facing the complex environment in managing a not-for-profit health care organization. Builds sound management practices, financial and nonfinancial, that are tailored specifically to the nonprofit sector. Covers topics unique to not-for-profit organizations, e.g., business formation, tax implication, accounting and financial reporting, budgeting, securing financial resources and their allocation, management stewardship function and compliance responsibilities, marketing process; and motives and implications behind fast moving trend of the conversion from not-for-profit to profit organizations in the U.S health care industry. Format includes lectures, class exercises, practical cases and discussion, and professional speakers who discuss their managerial experience in not-for-profit health care management.

[PAM 579(5790) Financial Fraud, Abuse, and Compliance in Health Care

Spring. 3 credits. N. Roufael.

Hands-on course on financial fraud with a special application to the health care industry. Identifies and analyzes in occupational fraud and abuse in their relation to rules and regulations in the health care field. Covers a general introduction of fraudulent financial transactions and their investigation, prevention, and deterrence and managing health care compliance. Emphasizes on fraud-prevention techniques, evaluating fraud complaints, fraud resolution, understanding

legal and financial aspects of fraud, and the impact of fraud on organizational culpability, disciplinary mechanism, and ethical standards. Collaborative learning, case analysis, group discussion, readings, class presentation, and research are basic teaching methodologies. To enhance students' understanding of the concurrent issues in health care fraud, students are required to access and use materials and resources available on the web, watch videotapes, and examine professional journals for related topics.

PAM 600(6000) Special Problems for Graduate Students

Fall and spring. Credit TBA. S-U grades optional. Staff.

Independent advanced work by graduate students recommended by their chair and approved by the department chair and the instructor.

[PAM 601(6010) Policy Process and Theory

Fall. 3 credits. Not offered 2005–2006. R. Swisher.

Introduces students to the policy process model, of goal setting and problem formulation, identification of policy alternatives, cost-benefit analysis and policy selection, implementation, monitoring, and feedback. At each stage, students read and discuss theoretical contributions from across the social sciences and political philosophy that help to contextualize and "socially embed" this mainstream, microeconomics-driven model. Such contributions include notions of bounded-rationality, satisficing, incrementalism, and muddling-through from organizational behavior; heuristics and biases from social psychology; theories of justice from political philosophy; habitus and other pragmatic logics from anthropology; and concepts such as bureaucracy, power, status, symbolic interaction, and social learning from sociology and psychology.]

PAM 603(6030) Experimental, Quasi-Experimental, and Economic Evaluation Methods

Spring. 3 credits. Highly recommended: background in statistics (e.g., BTRY 601 or equivalent) and microeconomics (e.g., PAM 200, PAM 547, or ECON 639). E. Peters.

Focuses on quantitative methods of policy analysis and program evaluation, with an emphasis on those programs and policies that are related to health, family, and consumer issues. The first part of the course covers experimental design and methods of making causal inferences from non-experimental data. The second part covers benefit-cost analysis, explicitly incorporating both equity and efficiency considerations. Throughout the course attention is paid to the role of economic modeling in program evaluation, including the role of structural theoretical models and general equilibrium analysis.

PAM 604(6040) Qualitative, Survey, and Mixed-Method Approaches to Policy Research

Spring. 3 credits. Prerequisite: Ph.D. students. Highly recommended: previous course in social science research methods. M. Waller.

Introduces students to theories and methods of data collection techniques such as in-depth interviews, ethnography, focus groups, and surveys as well as mixed method approaches used in policy and evaluation research. Addresses the strengths and

weaknesses of various methods and the design of qualitative and mixed-method studies. Covers epistemology, ethics, induction and deduction, measurement, validity, and triangulation. Also discusses more concrete issues such as gaining access to a field site, developing a qualitative interview guide and survey questionnaire, conducting a qualitative interview, managing data, and assessing data quality.

[PAM 605(6050) Economics of Family Policy]

Fall. 3 credits. Prerequisite: PAM 639 or ECON 609 or permission of instructor. S-U grades optional. Not offered 2005-2006. E. Peters.

Examines household decision making in both single- and multiple agent (e.g., game theoretic or bargaining) frameworks. The first half of the course focuses on fertility; household production; time allocation models of behavior—decisions that are usually modeled in a single-agent framework. The second half looks at marriage markets; family formation and dissolution; bargaining models of resource allocation within the household; and intergenerational transfers across households. Empirical applications of the theoretical models are presented for both developed and developing countries. Implications for family policies such as child care subsidies, divorce laws, family planning, government subsidies to education, and social security are also discussed.]

PAM 606(6060) Demographic Techniques (also D SOC 608[6080])

Fall. 3 credits. S-U grades optional. D. Gurak and K. Joyner.

For description, see D SOC 608.

PAM 608(6080) Economics of Consumer Demand (also AEM 670[6700])

Fall. 3 credits. Prerequisite: PAM 200, ECON 313, or concurrent enrollment in one of those, and two semesters of calculus. S-U grades optional. C. Ranney.

For description, see AEM 670.

[PAM 611(6110) Social Demography]

Spring. 3 credits. Prerequisites: STBTRY 601, SOC 505, or equivalent. Not offered 2005-2006. K. Joyner.

Considers demographic behavior from a sociological perspective. Topics include fertility, cohabitation, marriage, divorce, inequality, immigration, and health. Close attention is paid to the effects of social policies on demographic behavior. To a lesser extent, this course addresses the effects of social policies and demographic behavior on individual well-being. Although a background in demographic methods is not required, some of the assigned articles are based on these methods.]

PAM 631(6310) Ethics, Public Policy in American Society

Fall. 3 credits. Prerequisite: senior or graduate standing. J. Ziegler.

Explores current issues of ethics and public policy against a background of theories of ethical behavior. Examines questions of how public officials and managers of public and nonprofit agencies and private enterprises act. How do standards of ethical behavior in the professions get established? How are public policy issues with ethical implications resolved? Readings are drawn from political philosophy, contemporary social science,

and imaginative writing. Class participation is essential.

[PAM 632(6320) The Intergovernmental System: Analysis of Current Policy Issues]

Fall. 3 credits. Prerequisite: graduate students or seniors who have had course in American government. Not offered 2005-2006. J. Ziegler.

Offers advanced policy analysis of current political/social/economic issues in the context of the intergovernmental system. Pays particular attention to how certain policy and human service issues are played out at the federal, state, and local levels of government, and to the formulation of federal and state budget policy. Considers general public administration theory. Students work in teams on a policy/administrative research project and report to the class.]

[PAM 633(6330) Seminar in Pharmaceutical Policy Issues]

Fall. 2 credits. S-U grades optional. Meets once a week. Not offered 2005-2006. S. Tennyson

Exposes students to, and fosters critical thinking about, consumer and health policy issues related to pharmaceuticals and the pharmaceuticals industry. A key component of the seminar is invited presentations from practitioners and researchers in pharmaceutical policy. Specific topics vary and depend in part on the interests of the invited speakers. Students are required to write critiques of invited papers and a literature review on a selected topic in pharmaceutical policy.]

[PAM 639(6390) Microeconomics for Policy Analysis]

Fall. 4 credits. Prerequisites: intermediate economics and calculus course; Ph.D. students; undergraduates by permission of instructor. Not offered 2005-2006. J. Cawley.

The goal of this comprehensive course is to train graduate students in the use of the tools of microeconomics in order to prepare them to conduct high quality research in the social sciences. Covers microeconomic theory and its application to public policy analysis. Topics include consumer decision-making, the theory of the firm, general equilibrium, welfare economics, monopolies and oligopolies, strategy, and market imperfections.]

[PAM 640(6400) Consumers, Information, and Regulatory Policy]

Spring. 3 credits. Prerequisites: PAM 639 or calculus and intermediate microeconomics. Not offered 2005-2006. R. Geddes.

Examines information problems in markets and how they affect consumers, focusing on market mechanisms and regulatory actions that address those information problems. Major theoretical topics include price and quality uncertainty, moral hazard, adverse selection, and principal-agency theory. The course gives an overview of market mechanisms that deal with information issues such as marketing, advertising, warranties, third-party certification, licensing, and self regulation; the major regulatory institutions that govern consumer policy including the Food and Drug Administration and the Federal Trade Commission; and the way the legal system provides consumer protection. The market for pharmaceuticals is a particular focus. Primary reading material is drawn from economics and policy journals, and

papers from the *Journal of Public Policy and Marketing*.]

PAM 691(6910) Health Economics I (also ECON 691[6910])

Spring. 3 credits. First course in Ph.D.-level health economics sequence. Prerequisites: Ph.D.-level courses in microeconomic theory and econometrics. J. Cawley.

Comprehensive course covering microeconomic theory and its application to health and health care markets. Topics include consumer decision making, the theory of the firm, welfare economics, monopolies and oligopolies, and market imperfections. Applications in health economics include the demand for health, rational addiction, the industrial organization of health care, cost-effectiveness analysis, price discrimination by health care providers, how consumers respond to information about health care, adverse selection in health insurance, and the moral hazard created by physician compensation strategies. Each student writes a research paper, testing predictions from microeconomic theory by acquiring suitable data and estimating the appropriate econometric model, and presents his or her findings in a research seminar.

PAM 692(6920) Health Economics II

Fall. 3 credits. Prerequisites: Ph.D.-level courses in microeconomic theory and econometrics. D. Kenkel.

Covers microeconomic theory and its applications to health and health care markets. Topics include consumer demand for health and health behaviors, the supply side of health promotion, the industrial organization of health care, and cost-benefit and cost-effectiveness analysis of health interventions. Second course in Ph.D.-level health economics sequence, but the courses may be taken in any order.

PAM 760(7600) Challenges and Trends in the Health Services Industry

Fall and spring. 1 credit. S-U grades only. Staff.

Provides students with information and exposure to current and emerging issues in the health services industry. Topics may include financial management of health care facilities, human resource management, information systems, cost-effective clinical decision making, quality measurement and outcomes, public health, and entrepreneurship in the health services industry.

PAM 899(8990) Master's Thesis and Research

Fall and spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U grades optional.

PAM 999(9990) Doctoral Thesis and Research

Fall and spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U grades optional.

TEXTILES AND APPAREL

A. Lemley, chair (209 MVR, 255-3151);
C. C. Chu, director of graduate studies;
A. Netravali, director of undergraduate studies;
S. Ashdown, N. Breen, C. Coffman, M. Frey,
C. Jirousek, V. D. Lewis, S. Loker,
S. K. Obendorf, A. Racine

TXA 114(1140) Introduction to Computer-Aided Design

Fall, summer (six-week session). 3 credits. Limited to 14 students per sec. Priority given to TXA students. S-U grades optional.

Minimum cost of materials: \$80. A. Racine.

Studio course that explores the creative potential of microcomputers. Uses AutoCAD software program as a design tool for generating a wide variety of visual images. Introduces basic Photoshop software commands. Includes daily hands-on demonstrations and studio work. Students develop two- and three-dimensional designs based on historical, cultural, and museum sources for portfolios and display.

TXA 117(1170) Fashion Graphics (Drawing the Clothed Figure)

Spring. 3 credits. Limited to 21 students. Priority given to apparel design students. Prerequisite: basic drawing course. Letter grades only. Minimum cost of supplies: \$125; lab fee: \$30. V. D. Lewis.

Students develop both familiar and unfamiliar methods that enable them to draw the fashioned body and ancillary expressions of fashion. Drawing is explored as a communicative medium for visual research and as a creative tool for image creation.

TXA 125(1250) Art, Design, and Visual Thinking

Fall. 3 credits. S-U grades optional. C. Jirousek.

Introduction to the visual arts and design that explores aesthetic and cross-cultural dimensions of visual experience. Augmented by slide presentations, artifacts, video, and an Internet-based electronic textbook, lectures emphasize the varieties of visual expression seen in works of art and design. Discusses social, cultural, and historic interpretations of visual expression.

TXA 135(1350) Fibers, Fabrics, and Finishes

Spring. 3 credits. S-U grades optional. M. Frey.

Introduction to fibers, fibrous materials, and dyes and finishes. Gives special emphasis to the use of fibrous materials in apparel, residential and contract interiors, and industrial applications. Topics include fiber properties, fabric structure, coloration of fibrous materials, dimensional stability, flammability, product specifications, and performance standards.

TXA 136(1360) Fiber and Yarn Analysis Laboratory

Spring. 1 credit. Co-requisite: TXA 135. Letter grades only. M. Frey.

Consists of 14 laboratory sessions, in which students learn techniques to identify and test fibers and yarns. A midterm and final exam are based on using the methods learned to identify an unknown fiber (midterm) and an unknown bi-component yarn (final).

TXA 145(1450) Introduction to Apparel Design

Spring. 4 credits. Limited to 30 students; 15 per lab. Priority given to TXA students and students transferring into TXA. Prerequisite: TXA 114. Letter grades only. Apparel design majors should take course during first year. Minimum cost of materials: \$200. A. Racine.

Intensive study of principles and processes of flat-pattern design with emphasis on creative expression in children's apparel. Students

develop an understanding of the techniques needed to produce apparel from sketches, including patternmaking and garment assembly.

TXA 237(2370) Structural Fabric Design

Fall. 3 credits. Prerequisite: TXA 135.

Recommended: college algebra. S-U grades optional. M. Frey.

Covers the elements of technical fabric design with an emphasis on woven and knitted fabrics. Topics include structure of woven and knitted fabrics, openness, manufacturability, equivalence, and color effects.

TXA 264(2640) Draping

Fall. 4 credits. Limited to 30 students; 15 per lab. Prerequisites: TXA 125 and 145. Recommended: drawing course. Letter grades only. Minimum cost of materials: \$250; lab fee: \$10. S. Ashdown.

This studio course examines the process of creating a three-dimensional garment from the two-dimensional fabric. The principles and processes of draping, advanced flat pattern making, and fitting are studied through projects. Drawing exercises focus on the communication of three-dimensional garments in two-dimensional sketches. Assigned problems require students to make judgments regarding the design process, the nature of materials, body structure, function, and fashion.

TXA 265(2650) Apparel Patternmaking

Spring. 3 credits. Limited to 30 students. Prerequisites: TXA 114, 117, 125, 145, and 135 (may be taken concurrently). Letter grades only. Minimum cost for fabrics, studio, and portfolio supplies: \$250. A. Racine.

The goal of this apparel studio course is to expand student competencies in flat pattern design and analysis and fitting techniques. Students generate original design concepts using fashion sources from historic to contemporary times. The Cornell Costume Collection is used for inspiration and instruction. Full-scale samples in various levels of completion, from paper patterns to muslins to finished garments, include detailed technical drawings for portfolios.

TXA 266(2660) Apparel Design: Product Development

Spring. 3 credits. Prerequisites: TXA 114, 145; and TXA 117 and 265 (may be taken concurrently). Letter grades only. Minimum cost of materials: \$250; lab fee: \$10. S. Ashdown.

Project-based course in which students explore the relationship between technology and design. Students learn computer-aided patternmaking, grading, manufacturing technologies, communication of technical details, flats, specifications, and costing of garments and how those factors affect design. Designs are developed to various stages from conceptual work to final garment.

TXA 300(3000) Special Studies for Undergraduates

Fall or spring. Credit TBA. Staff.

Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the college registrar's office. The form, signed by both the instructor directing the study and the

department chair, is filed at course registration or during the change-of-registration period.

TXA 325(3250) Color and Surface Design of Textiles

Fall. 4 credits. Was TXA 225. Limited to 18 students. Priority given to TXA apparel design majors. Recommended: TXA 114 and 135. Minimum cost of materials: \$100; lab fee: \$75. C. Jirousek.

Studio experience in the surface design of textiles combined with exercises in color theory. Textile projects use techniques such as block printing, shibori, batik, silk painting, silk screen, and stitchery to produce a portfolio of textile designs. Studio work is augmented by lectures on pattern and color theory illustrated by slides and textile examples.

TXA 332(3320) Designers as Entrepreneurs

Spring. 1 credit. Limited to 40 students.

Prerequisite: any design course. S-U grades optional. S. Loker.

Presents issues that are critical to designers who are entrepreneurs, such as product development and maintenance; sourcing materials, assembly, and other services; copyright, trademark, and patents; branding and licensing; mass customization; distribution options including e-commerce; and social responsibility in business. The course draws extensively on guest speakers and case studies.

TXA 335(3350) Fiber Science

Fall. 3 credits. Limited to 20 students.

Prerequisites: college chemistry and physics. S-U grades optional. A. Netravali.

Covers fibers commonly used in various engineering, medical, and apparel applications. Topics include the nature of polymer molecules, the chemical structure of organic fibers, inorganic fibers, micro-macro structure of fibers, fiber dimensions, environmental effects, and mechanical, optical, thermal, and frictional properties of fibers. The following fiber uses are discussed: composites in aerospace and other structural components, circuit boards, bulletproof vests, sutures, artificial arteries, geotextiles, sporting goods, and others.

[TXA 336(3360) Fundamentals of Color and Dyeing

Fall. 3-4 credits. 3 credits for lec only; 4 credits for lec and lab. Fiber science students required to take lab. Prerequisite: college natural science requirements. S-U grades optional. Lab fee: \$15. Not offered 2005-2006. C. C. Chu.

Color is extremely important and useful in daily life. This course emphasizes theories and scientific principles of color, providing a framework for the use of color in design, marketing, or research. Addresses how colorants are used to dye fabrics. Although fabrics are chiefly used to illustrate color in the class, much of the information and knowledge is useful to nontextile majors. Guest lecturers from the industry address the practical aspects of color in business.]

TXA 346(3460) Design Process

Fall. 4 credits. Limited to 30 students.

Prerequisites: TXA 135, 145, 264, and 265.

Letter grades only. Minimum cost of materials: \$250; lab fee: \$10. V. D. Lewis.

Exposition of the methods used by the creative fashion designer. Aims to develop students' personal handwriting as designers. Unites a provocative design issue with the

requirement of functionality and emphasizes pattern cutting as a way of realizing design ideas.

TXA 369(3690) Style, Fashion, and the Apparel Industry

Fall. 2 credits. Was TXA 269. Limited to 30 students. Not open to freshmen. Prerequisites: TXA 125, 135, and 237. Priority given to TXA majors. Letter grades only. A. Racine.

Illustrated lectures focus on changes in the U.S. apparel industry and fashion from the 19th century to the present day resulting from social forces, technological developments, and shifting demographics. The Cornell Costume Collection is used for discussion. Students write a term paper on issues relating to the fashion industry.

TXA 370(3700) History of Color and Design in Textiles

Spring. 3 credits. Prerequisite: TXA 125 or permission of instructor. S-U grades optional. Offered alternate years. C. Jirousek.

Explores color theory principles, color trends, science and technology of color measurement, color and design in textile construction and embellishment, design use of pigments and dyes, and history of textile design as a designer resource. Students complete hands-on exercises, two exams, and a paper.

TXA 400-401-402-403(4000-4010-4020-4030) Special Independent Studies for Undergraduates

Fall, summer, or spring. Credit TBA. S-U grades optional. Staff.

For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of TXA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the department office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration along with an add/drop slip in the college registrar's office (145 MVR). To ensure review before the close of the course registration or change-of-registration period, early submission of the special-studies form to the department chair is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

TXA 400(4000): Directed Reading. For study that predominantly involves library research and independent reading.

TXA 401(4010): Empirical Research. For study that predominantly involves data collection and analysis, or laboratory or studio projects.

TXA 402(4020): Supervised Fieldwork. S-U grades only. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

TXA 403(4030): Teaching Apprenticeships. Fall or spring. 2-4 credits. Prerequisites: upperclass standing, demonstrated high level of performance in subject to be taught and in overall academic program, and permission of

instructor and department chair. S-U grades optional. Staff. Apprenticeship includes both a study of teaching methods in the field and assisting the faculty with instruction.

TXA 431(4310) Apparel Production and Management

Spring. 3 credits. Limited to 40 students. Prerequisites: ECON 101 and 102 and upper-division course in either apparel or textiles. S-U grades optional. S. Loker.

Introduction to the global textile and apparel industry, particularly the technical and economic aspects of apparel production. Includes analysis of specific apparel manufacturing and management issues such as international sourcing, Quick Response, mass customization, production and information technology, labor, and logistics.

TXA 432(4320) Product Quality Assessment

Spring. 3 credits. Limited to 36 students in lec, 18 per lab. Prerequisites: TXA 135 and statistics course. S-U grades optional. Lab fee: \$15. N. Breen.

Covers evaluation of fibers, yarns, fabrics, and garments, with emphases on the meaning of standards, testing philosophy, quality control, and statistical analysis. Discusses day-to-day tests done in the textile and apparel industry. Laboratory sections introduce students to various test methods, data generation for analysis, and evaluation.

TXA 436(4360) Fiber Chemistry

Spring. 3 credits. Prerequisite: senior or first-year graduate standing. S-U grades optional. Offered alternate years. C. C. Chu.

Discusses the chemical and physical structure of several commercially important fibers, such as cotton, wool, silk, polyesters, nylons, acrylics, polyolefins and spandex, and their polymerization process. Gives the general chemical and physical properties of each. Discusses degradation reactions for certain fibers such as polyolefins and acrylics.

TXA 439(4390) Biomedical Materials and Devices for Human Body Repair (also BME 539(5390))

Spring. 2-3 credits; 2 credits meets T only; 3 credits meets T and R. Prerequisites: junior or senior standing; college natural science requirement (Chemistry or biology). S-U grades only for 2 credits, letter grades only for 3 credits. C. C. Chu.

Surveys materials and devices for repair of injured, diseased, or aged human tissues/organs. Includes properties of synthetic and biological materials, wound healing processes, medical devices for repair of wounds, blood vessels, hearts, joints, bones, nerves, male impotence, vision/hearing/voice, and drug control/release.

TXA 444(4440) Apparel/Textile Retailing and Distribution

Fall. 3 credits. Prerequisites: junior or senior standing; TXA 135 and marketing course. S-U grades optional. N. Breen.

Overview of the business of design, production, distribution, marketing, and merchandising of apparel and related products from a management perspective. Includes the organization and structure of both domestic and international retailers along with pricing strategies, merchandise planning, inventory management, and sales promotion. New uses of computer systems and information technologies are emphasized throughout.

[TXA 466(4660) Textiles, Apparel, and Innovation

Fall. 3 credits. Prerequisite: TXA 237. Recommended: TXA 432. S-U grades optional. Cost of field trip: \$100. Offered alternate years; next offered 2006-2007. S. Ashdown.

Designed for students in all TXA options. Explores the relationship between materials and design with a concentration on the use of innovative textile materials in apparel. Both aesthetic and functional issues are addressed. The course consists of a combination of lecture, discussion of readings, oral reports, a research paper, and project work. There is a one-day field trip to New York City.]

TXA 470(4700) Fashion Presentation: Portfolio Development

Fall. 3 credits. Limited to 25 students. Prerequisites: TXA 117, 264, 265, and 346. Minimum cost of materials: \$250. V. D. Lewis.

Students gain an understanding of presentation methods currently used by fashion designers, runway illustrative journalists, forecasting artists and fashion editorial illustrators. Skills in fashion illustration, image manipulation and photography are developed. To satisfy personal philosophies of fashion, students discover and adopt current presentation techniques with new and original effects. Students must bring all past project work for possible inclusion in the portfolio.

TXA 499(4990) Honors Thesis Research

Fall and spring. 1-6 credits; max. 6 credits for graduation. Prerequisite: TXA students admitted to college honors program. S-U grades optional. Staff.

Independent research leading to the honors thesis. Students must follow college honors program guidelines.

TXA 600(6000) Special Problems for Graduate Students

Fall or spring. Credit TBA. S-U grades optional. Staff.

Independent advanced work by graduate students recommended by their chair and approved by the department chair and instructor.

[TXA 620(6200) Physical Properties of Fiber-Forming Polymers and Fibers

Spring. 3 credits. Prerequisite: permission of instructor. Offered alternate years; next offered 2006-2007. A. Netravali.

Covers formation and properties of fiber-forming polymers, rubbery, glassy, and crystalline states and their interconnection. Discusses fiber structure, relationship between chemical structure and physical properties of manufactured and natural fibers, mechanical, thermal, and viscoelastic properties of fibers and testing methods.]

[TXA 626(6260) The Chemistry of Textile Finishes and Dyeing

Spring. 3 credits. Prerequisites: TXA 336 or equivalent and organic chemistry course or permission of instructor. S-U optional. Offered alternate years; next offered 2006-2007. C. C. Chu.

Discusses chemical aspects of textiles with emphasis on finishes and dyeing. Studies industrially important textile chemicals used for dyeing and enhancing fiber and fabric properties, such as durable press, anti-soiling, water repellency. Emphasizes the correlation of the observed effect with chemical structure.

end-use influences, interaction with fabric and fibers, sources, and synthetic routes. Briefly discusses the environmental effect of these textile chemicals and current federal regulation.]

TXA 637(6370) Research Seminars in Apparel Design

Fall and spring. 1 credit; repeat of course each semester encouraged for all apparel design graduate students. Prerequisites: permission of individual instructor for advanced undergraduates. S-U grades only. Apparel Design faculty.

TXA 639(6390) Mechanics of Fibrous Assemblies

Fall. 3 credits. Prerequisite: solid mechanics course or permission of instructor. Offered alternate years. S-U grades optional. Staff.

Studies the mechanics of fiber assemblies: idealized yarn and fabric models; statistical bundle theories; deformation of yarns and fabrics in tensile, shear, and compressive stress; bending and buckling; and the mechanical behavior of nonwoven textile materials.

TXA 664(6640) Human Factors: Anthropometrics and Apparel

Spring. 3 credits. Open to advanced undergraduates. Prerequisites: statistics course and permission of instructor. S-U grades optional. Offered alternate years. S. Ashdown.

Seminar course focusing on the human form and its relationship to clothing. Includes discussion of quantification of body sizes and human variation; historical, cultural, and aesthetic concepts of fit; apparel sizing techniques; national and international sizing systems and standards; impact of sizing systems on various populations (e.g., elderly, disabled).

TXA 666(6660) Fiber Formation: Theory and Practice

Spring. 3 credits. Prerequisites: organic chemistry, college physics, TXA 436, 620, or permission of instructor. S-U grades optional. Offered alternate years. M. Frey.

Covers the practical and theoretical analysis of the chemical and physical principles of the methods of converting bulk polymer to fiber; rheology; melt, dry, and wet polymer spinning; fiber drawing; heat setting; and general theory applied to unit processes.

TXA 670(6700) Fashion Theory

Spring. 3 credits. Limited to 25 students. Prerequisite: TXA 346 for undergraduates or similar course for graduates. Letter grades only. Offered alternate years. Minimum cost of materials: \$250. V. D. Lewis.

Provides students with the theoretical tools that will enable them to conduct debates and create strategy about the design of fashion. Debates support visual outcomes, conceptual foundations, and methodologies that are unequivocal in practice, criticism, education, management, and the cultural context of fashion design.

[TXA 675(6750) Aesthetics and Meaning in World Dress

Spring. 3 credits. Prerequisites: TXA 125 or course in history of art, costume history, or other history. S-U grades optional. Offered alternate years; next offered 2006–2007. C. Jirousek.

Examines the aesthetic and social/psychological relationship between body and clothing in the context of various cultures. Students develop a research topic to be presented orally and in a term paper, and they participate in the development of an exhibition.]

TXA 899(8990) Master's Thesis and Research

Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U grades optional. Staff.

TXA 999(9990) Doctoral Thesis and Research

Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U grades optional. Staff.

DEGREE PROGRAMS

	Degree
Industrial and Labor Relations	B.S.
	M.I.L.R.
	M.P.S.
	M.S.
	Ph.D.

THE SCHOOL

The School of Industrial and Labor Relations at Cornell (ILR) is a small school within a large university. It tries to maintain the small-college atmosphere expected of an institution that has about 780 undergraduates and approximately 200 graduate students, even as ILR students participate fully in the activities of the larger Cornell community.

ILR students study in modern, technologically advanced lecture halls, seminar rooms, and libraries.

Almost half of the school's typical freshman class comes from the greater New York City area. Another 30 percent live in other parts of New York State. Students from other states and a few from foreign countries make up the rest of the class. Women constitute about 50 percent of entering classes, and minority students comprise about 25 percent of freshmen and transfer students.

Students enrolled in the School of Industrial and Labor Relations at Cornell may take a substantial number of courses in the other six undergraduate colleges and schools of the university, including the College of Arts and Sciences. Cornell students have access to all of the libraries and other services of the university.

The school operates in four areas: (1) resident instruction, (2) extension and public service, (3) research, and (4) publications. It provides instruction to undergraduates and graduate students who are preparing for careers in industrial and labor relations, as well as to men and women already engaged in industrial

relations activities and the general public through its Extension and Public Service Division.

The school's Conference Center, part of the extension division, initiates and hosts conferences covering the full scope of industrial and labor relations. The center provides continuing education and information to practitioners and scholars.

The Research Division develops materials for resident and extension teaching and originates studies in industrial and labor relations. The Publications Division publishes and distributes the research results.

GRADUATE DEGREES

More than 200 students on the Cornell campus are enrolled in graduate study in industrial and labor relations, one of the largest graduate fields in the university. Students may work toward the degrees of master of industrial and labor relations, master of professional studies, master of science, and doctor of philosophy. For further information on graduate programs, contact the Graduate Office, School of Industrial and Labor Relations, Cornell University, 214 Ives Hall, Ithaca, NY 14853-3901.

DEPARTMENTS OF INSTRUCTION

Courses in the school are organized into six departments:

Collective Bargaining, Labor Law, and Labor History

In the study of workers, employers, and the government policies affecting them, members of this faculty concentrate on subjects of industrial and labor relations best understood by reliance on the fields of administration, economics, history, and law. Courses explore subjects within the framework of American society, stress fundamental forces of change, and analyze texts and empirical data with methods drawn from the social sciences, the humanities, and the legal professions.

Human Resource Studies

The Department of Human Resource Studies consists of world-class faculty members engaged in research, teaching and practice. These faculty members play integral roles in the administration of the Center for Advanced Human Resource Studies (CAHRS), an ILR-based research center funded by over 50 corporations, and the ILR Executive Education Program, which offers advanced training to HR practitioners. The goal in teaching is to balance a rigorous academic research approach with a real-world practice orientation. In this way students are provided with state-of-the-art knowledge relevant to managing human resources in organizations.

International and Comparative Labor

The Department of International and Comparative Labor is concerned with industrial and labor relations systems and labor markets in other parts of the world. The world-renowned faculty members are authorities on the labor markets of Western Europe, Asia, Latin America, South America and Africa and bring this knowledge to bear on the courses they teach as they prepare their students to understand the global marketplace.

Labor Economics

The Department of Labor Economics deals with labor markets, that is, the institutional arrangements, terms, and conditions under which workers supply their labor and under which firms demand their labor. Faculty members are especially concerned with understanding the workings of labor markets and the effects of various public policies. The topics dealt with in courses and research include analysis of the labor force, employment and unemployment, wages and related terms of employment, income distribution, income security programs, health and safety in industry, retirement, pensions and social security, economic aspects of collective bargaining, and economic demography.

Organizational Behavior

The psychologists and sociologists in the Department of Organizational Behavior use discipline-based theoretical perspectives to examine an array of empirical workplace phenomena. Their teaching and research focus on the impact of environmental, technological, and interpersonal relationships on work group and organizational dynamics.

Social Statistics

Faculty members in the Department of Social Statistics conduct research in the field of economic and social statistics. In applying their research results to their teaching, they provide their students with cutting-edge training on the principles of statistical reasoning, statistical methods, and the application of statistical tools of analysis.

A full list of required and elective courses is available from the Office of Student Services, 146 Ives Hall.

RESIDENT INSTRUCTION

This division conducts the on-campus programs leading to the degrees of bachelor of science, master of industrial and labor relations, master of professional studies, master of science, and doctor of philosophy from Cornell.

Office of Student Services

Staff members from the Office of Student Services, 146 Ives Hall, work closely with faculty members and faculty committees to

administer degree programs for the school and many of the school's support services. The office's responsibilities include admitting and orienting new students, maintaining students' personal and academic records, and counseling students on personal and academic problems. The office also works closely with seniors who are planning graduate study.

Counseling and Advising

New students are advised on orientation, academic procedures, and course registration by counselors in the Office of Student Services.

Each of the school's academic departments names faculty members to serve as advisers for students who wish to consult with them regarding career possibilities in the field, postgraduate programs, or similar matters. Questions or issues related to graduation requirements, course registration, and related academic procedures should be directed to counselors in the Office of Student Services.

Minority Programs

The School of Industrial and Labor Relations values diversity and is responsive to the unique social, academic and cultural contributions and needs of minority students. The School is committed to providing students with support that will enhance academic achievement, career development, and personal growth. The associate director of minority education in the Office of Student Services works in conjunction with many university programs to provide services that ensure academic success and an enjoyable quality of life for ILR minority students. For more information, see the Minority Affairs web site: www.ilr.cornell.edu/student-services/ac/minority.html.

STUDY OPTIONS

Several study options are open to ILR undergraduates, making it possible to tailor a program to fit special circumstances.

One such option is the five-year ILR master's degree. With early planning, some students may earn the M.S. degree in the fifth year. Some students elect to spend a semester in New York City, Albany, or Washington, D.C., with a chance to observe actual labor problem solving as interns in congressional offices, labor organizations, personnel offices, and state and federal agencies. For more information, see "Special Academic Programs" below.

Study abroad options are also available at a number of foreign universities. Qualified students may spend a semester or a full year studying abroad.

A number of ILR courses deal directly with today's problems and involve fieldwork in the Ithaca area and elsewhere in New York State.

The ILR program allows juniors and seniors who want to conduct their own research to receive course credit for individually directed studies if the program is supervised by a faculty member.

Study in Absentia

Registration in absentia enables a student to seek admission in another American institution for a semester or a year and transfer credit

toward completion of the Cornell degree. This study option requires the development of a plan of study, a statement of appropriate reasons for study away from the university (e.g., availability of courses not offered at Cornell), good academic standing, approval of the plan by the director of student services, and payment of a special in absentia registration fee.

Leave of Absence or Withdrawal

Students who desire to withdraw or take a leave of absence from the university should schedule an interview with a counselor in the Office of Student Services. Counselors will assist students in petitioning for approval of a leave of absence and in contacting the appropriate offices or departments of the university.

REQUIREMENTS FOR GRADUATION

To earn the Cornell bachelor of science degree in industrial and labor relations, a student must successfully complete 120 credits. This requires eight semesters for an average of 30 credits a year although some students accelerate their studies.

New Curriculum effective Fall 2005

First Year

FALL

First-year writing seminar*	3
ILR colloquium (introduction to ILR School, ILRID 150)**	1
Introduction to Micro Organizational Behavior and Analysis (ILROB 170)**	3
History of American Labor (ILRCB 100)**	3
Introductory Microeconomics (ECON 101)*	3
Elective	(3)
PE (university requirement)	

SPRING

First-year writing seminar*	3
Introduction to Macro Organizational Behavior and Analysis (ILROB 171)**	3
Introductory Macroeconomics (ECON 102)*	3
Electives	(6)
PE (university requirement)	

Sophomore Year

FALL

Statistical Reasoning (ILRST 212)**	4
Labor and Employment Law (ILRCB 201)**	3
Human Resource Management (ILRHR 260)**	3
Electives	(6)

SPRING

Cultural Perspectives*,**	3
Elective	(3)

Junior and Senior Years

Advanced Writing†	3
Science and Technology†	3
ILR Elective courses—40 credits	40

- Must include at least one course from an approved list in each of the following three areas: International and Comparative elective, Labor History elective and Economic Policy elective
- Minimum of 24 credits of ILR course work, including 495 Honors, 499 Independent Study—with a maximum of 16 credits for non-ILR courses at Cornell as approved in ILR departments.
- Maximum of 12 credits from foreign language or advanced math
- May include up to 9 credits for one semester abroad or 15 credits for a full year abroad
- Maximum of 12 credits in a credit internship program

Additional general elective credits (in addition to distribution requirements) 12

Minimum total credits required for graduation 120

*Required courses usually taken in the College of Arts and Sciences

**Required courses taken in the ILR School

†Distribution credits (courses you choose that satisfy requirements in certain categories)

Physical Education credit does not count toward the 120 credits

Students who take more than 50 credits in the endowed colleges (the College of Architecture, Art, and Planning; the College of Arts and Sciences; the Johnson Graduate School of Management; the College of Engineering; the School of Hotel Administration; and the Law School) must pay for each credit taken in excess of 50, whether or not the courses are passed. For the precise fee per credit, students should call the Office of the Bursar.

The number of credits that may be taken in the endowed colleges at no additional cost to the student may be changed at any time by official action of the school.

ILR Math Requirement

A student who took AP calculus in high school and scored a 3 or better on the AB exam or subscore of BC exam has fulfilled the ILR math requirement. If AP calculus wasn't completed, or if the scores noted above were not achieved, the student is expected to take and pass the ILR Math Assessment before registering for required courses in Statistics and Labor Economics. The Math Assessment is based on materials covered in New York State Regents Exams for Courses 2 and 3. (Calculus is not covered in those courses.)

The ILR Math Assessment is scheduled in August, January, and May. Those who do not pass in the first attempt are expected to register in an appropriate math course and pass the assessment *before the beginning of their third semester* in the school. Any student who cannot meet the requirement by the beginning of the third semester is enrolled for a terminal semester and is expected to leave the school thereafter.

Transfer students are expected to meet the same standards in math: either present the score required by Cornell University for AP calculus (AB or BC) credit or pass the ILR Math Assessment before being permitted to register in ILRST 212 or ILRLE 240 with a terminal semester possible after failing the assessment given at the beginning of a third semester as an ILR student.

SCHEDULING AND ATTENDANCE

Schedule Changes

Occasionally it may be necessary for a student to request changes in his or her course schedule either before a semester begins or during the semester. Such requests must be directed to the Office of Student Services to avoid possible loss of academic credit.

Class Attendance

It is each student's responsibility to attend all scheduled classes unless excuses have been approved by the faculty members. In some courses an instructor may permit a maximum number of class absences without a grade penalty or dismissal from the course. An explanation for absence from class may occasionally be secured from the Office of Student Services in advance of the expected absence. An approved absence may be warranted by:

1. participation in authorized university activities such as athletic events, dramatic productions, or debates;
2. medical problems supported by a record of clinic or infirmary treatment;
3. serious illness or death in the immediate family;
4. other circumstances beyond the student's control.

A request for explanation of an absence should, when possible, be made to the Office of Student Services before the date of expected absence. A reported and explained absence does not relieve a student from fulfillment of academic requirements during the period of absence. The course instructor has the authority to determine what work must be completed. The office can only confirm the explanation for absence. Students should inform the Office of Student Services of any problems they have meeting course requirements.

STANDING AND GRADES

Academic Integrity

In 1987 the faculty of the School of Industrial and Labor Relations approved a revised code of academic integrity. This code, while based on the Cornell University code, varies somewhat.

Absolute integrity is expected of all Cornell students in all academic undertakings. They must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity. The code specifically prohibits:

1. knowingly representing the work of others as one's own;
2. using or obtaining unauthorized assistance in any academic work;
3. fabricating data in laboratory or field work;
4. giving fraudulent assistance to others;
5. fabricating data in support of laboratory or field work.

Full details on the applications of those prohibitions to course work, term papers, examinations, and other situations are listed in the code. Copies are available from the Office of Student Services, 146 Ives Hall.

Dean's List

A Dean's List is compiled for each of the four undergraduate classes each semester on the seventh day following receipt of final grades from the registrar. Eligibility for the Dean's List is determined by applying all of the following criteria:

1. achievement of a semester average for freshmen of 3.3 or better; for sophomores of 3.4 or better; and for juniors and seniors of 3.6 or better;
2. a minimum course load for the semester of 12 letter-graded credits;
3. completion of all courses registered for at the beginning of the semester;
4. satisfaction of all good-standing requirements.

Academic Standing

Good standing requires that all of the following criteria be met at the end of each semester:

1. an average of C- (1.7) for the semester's work, including a minimum of 8 completed and letter-graded credits;
2. no failing grades in any course, including physical education;
3. a cumulative average of C- (1.7) for all completed semesters.

If at the end of any semester a student fails to maintain good standing, or if overall academic performance is so marginal as to endanger the possibility of meeting school and university degree requirements, his or her record is reviewed by the Committee on Academic Standards and Scholarships. The committee may issue a written warning to the student at that time. If a student who does not improve after the written warning, he or she may be denied permission to register for the next semester.

Involuntary Separation from the School for Academic Reasons

A student may be denied permission to reregister at the end of any semester when he or she has failed:

1. to establish good standing after a semester on warning;
2. to maintain an average of 1.7 in any semester after a previous record of warning;
3. to achieve good standing after being on warning any two previous semesters;

4. two or more classes in one semester or has a semester average of 1.0 or below.

The Academic Standards and Scholarship Committee may decide to permit a student to remain on warning more than one semester if there has been significant improvement even though the cumulative average is still below 1.7.

S-U Grading Policy

An undergraduate may register to receive a final grade of S (Satisfactory) or U (Unsatisfactory) in courses that offer this option—either in the school or in other divisions of the university—subject to the following conditions:

1. the S-U option may be used in ILR and in out-of-college course electives only, not in directed studies;
2. students are limited to registering in *two* S-U courses a semester;
3. S-U registration is limited to 4 credits for each course;
4. students registering for S-U grades must be in good standing;
5. students must fulfill the graduation requirement of 105 letter-graded credits.

ILR faculty members assign a grade of U for any grade below C- and a grade of S for any grade of C- or better. A grade of U is considered equal to an F in determining a student's academic standing, although it is not included in the cumulative average.

No change of grading (from letter to S-U or from S-U to letter) may be made after the first three weeks of class. There are no exceptions to this restriction, and appeals will not be accepted.

Grades of Incomplete

A grade of incomplete (INC) is assigned when a course has not been completed for reasons that are acceptable to the instructor. It is understood that the work will be completed later and credit given. Instructors may grant a grade of incomplete for a limited number of clearly valid reasons, but only to students with substantial equity in a course. A firm and definite agreement on the conditions under which the work may be made up must be made with the instructor. The school's policy allows a maximum of two full semesters of residence for removal of a grade of incomplete. If it is not made up within this time, the grade automatically becomes an F.

SPECIAL ACADEMIC PROGRAMS

To meet the special academic objectives of some students, the school's faculty has established several special academic programs. For additional information, students should contact a counselor in the Office of Student Services. Counselors will explore the program with students to help them decide if it suits their interests.

Five-Year Master of Science Degree Program

With early planning it is possible to earn the M.S. degree in a fifth year of study. This program is designed specifically for those who wish concentrated study in an area of specialization

in the school for a master of science degree. Students considering this program should consult a counselor in the Office of Student Services after their freshman year.

Internships

Many ILR students decide to participate in the ILR Credit Internship Program, working in cities all over the country, typically during the junior year. Most sponsors expect that interns will have completed the introductory required courses before coming to work with them, so the junior year is the earliest opportunity to test out what's been learned in the classroom. The majority of ILR interns are located in either New York City, Washington, D.C., or the ILO in Geneva, Switzerland. Contact ILR's Off-Campus Programs office and visit Professor Clete Daniel's ILR Credit Internship web site at www.ilr.cornell.edu/creditinternships/.

Summer Internships

What is a summer internship? During the summer, a student who works in a job that is related to industrial and labor relations may find that the employer refers to that job as an internship. Their terminology differs from that used by ILR and Cornell to refer to credit-bearing internships. Academic credits earned: ILR considers an internship to be a learning experience engaged in during the academic year, for which students earn academic credit, are supervised by a faculty member, are evaluated, have a grade recorded, and pay tuition. With very few exceptions (the Clem Miller Scholarship, Saul Wallen internship, Chaim and Ida Miller Scholarship, all of which are summer support provided to selected ILR students) summer employment has little in common with the semester credit internship program. Approval is required in advance. Some companies tell students that they cannot be employed unless they receive academic credit for a summer internship. Cornell does not grant credit unless a student is registered, pays tuition, has a faculty supervisor, and is in a position approved for internship credit.

Programs in Washington

Two Washington programs are available to ILR students: the ILR Credit Internship Program and the Cornell in Washington program, sponsored through the College of Arts and Sciences.

ILR Credit Internship Program: Interns work approximately 30 hours per week for the 15 weeks of the semester, in ILR-related organizations approved by the ILR faculty. They also work on a research project related to their internship, which is graded by their ILR faculty supervisor. The credit hours that they earn are ILR elective credits. Internships are available in New York City and Washington, D.C., as well as other locations. Cornell in Washington interns find placement in practically any and every operation in Washington, work there about 20 hours per week, and attend Cornell classes taught in Washington by Cornell faculty members. Interns are expected to complete a major thesis project that is related to their course work and internship and for which they receive a grade.

Selecting a program: Most ILR students who wish to be interns in Washington, D.C., apply to the ILR Credit Internship Program. Occasionally, an ILR student identifies

an interest that cannot be met by the ILR program. The student may then apply to the Cornell in Washington program but will be expected to secure ILR faculty approval of his or her plans and academic eligibility before applying to the Cornell in Washington program.

Application procedure: Interested students are expected to discuss the program with Professor Daniel, ILR's academic coordinator for internships, before proceeding with applications.

Honors Program

Undergraduates who are ranked in the top 20 percent of their class at the end of the junior year may propose a two-semester research project, an honors thesis, for review by the Committee on Academic Standards and Scholarships. When approved, the candidate for graduation with honors works for two semesters (for 4 credits each semester) to research, write, and then defend the thesis.

Study Abroad

Students in ILR who plan to study in another country usually do so in the junior year, occasionally in the senior year. They may study in one of the programs that is sponsored by Cornell, in one sponsored by another institution and endorsed by Cornell, or in an approved externally sponsored program. Information about study abroad is available in OSS (146 Ives Hall) or the Cornell Abroad office (300 Caldwell Hall).

Students are expected to register for a full course load, the equivalent of 15 credit hours in a semester or 30 hours in a year, when they study abroad. Some courses will be the equivalent of general elective credit or distribution credit, but others may be accepted as ILR elective credit if evaluated and approved by the relevant ILR department chairs. A student may satisfy up to 9 hours of the ILR elective requirement in a single semester abroad and up to 15 hours in a year of foreign study.

Application for foreign study requires that the student meet the schedules of the program of interest and Cornell's schedule. Applications include tentative class schedules, recommendations from faculty members, approval of the application by an ILR faculty committee, essays, and transcripts. After being approved in ILR, the application is sent to the Cornell Abroad office and then to the program for which the student is applying. For more information, contact Kevin Harris, ILR study abroad coordinator, 146 Ives Hall, 255-2223, kfh4@cornell.edu, or the Cornell Abroad office, 300 Caldwell Hall, 255-6224, CornellAbroad@cornell.edu, www.cuabroad.cornell.edu/.

COLLECTIVE BARGAINING, LABOR LAW, AND LABOR HISTORY

R. Lieberwitz, chair (387A Ives Hall, 255-3289); M. Cook, J. Cowie, C. Daniel, I. DeVault, M. Gold, L. Gray, J. Gross, H. Katz, S. Kuruvilla, D. Lipsky, N. Salvatore, L. Turner

ILRCB 100(1100) Introduction to U.S. Labor History

Fall and spring. 3 credits. J. Cowie, C. Daniel, I. DeVault, and N. Salvatore. Introductory survey covering the major changes in the nature of work, the workforce, and the institutions involved in industrial relations from the late 19th century to the present.

ILRCB 201(2010) Labor and Employment Law

Fall and one sec in spring. 3 credits. M. Gold, J. Gross, R. Lieberwitz, and K. Stone. Survey and analysis of the law governing labor relations and employee rights in the workplace. The first half of the course examines the legal framework in which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half surveys the laws against discrimination based on race, religion, sex, national origin, age, and disability. Also serves as an introduction to judicial and administrative systems.

ILRCB 205(2050) Collective Bargaining

Fall and spring. 3 credits. M. Cook, H. Katz, D. Lipsky, S. Kuruvilla, R. Seeber, and L. Turner. Comprehensive introduction to industrial relations and collective bargaining in the United States; the negotiation, scope, and day-to-day administration of contracts; the major substantive issues in bargaining, including their implication for public policy; industrial conflict; the major challenges facing unions and employers today; U.S. industrial relations in international and comparative perspective.

ILRCB 301(3010) Labor Union Administration

Fall. 4 credits. Staff. Study and analysis of the structure and operations of American unions, including the complicated internal life of the organizations; the varied environments in which unions develop and grow or decline; the relationship of national unions, local unions, and members in the many different sections of internal union government; the ways in which unions are set up to handle organizing, collective bargaining, contract administration, and political activity; and the widespread movement toward merger and consolidation of unions that began in the sixties and continues today. All of these involve a study of union constitutions and other primary documents, in addition to secondary readings. Attention is given to relevant legislation, current problems of unions, and the eternal problems of attaining union democracy.

ILRCB 302(3020) Strangers and Citizens: Immigration and Labor in U.S. History

Fall or spring. 4 credits. I. DeVault. Explores immigrant workers' experiences in the 19th and 20th centuries from different perspectives. Students examine what it meant to the immigrants themselves to arrive as

strangers in the United States while also examining the ways in which preexisting American groups defined these immigrants as "strangers." Similarly, students look at U.S. citizens in their roles as greeters of immigrants, detractors of immigrants, and as models for the aspirations of immigrants. The main examples are taken from the industrial and union realms.

ILRCB 303(3030) Working-Class America in Mass Media and Popular Culture

Spring. 4 credits. J. Cowie.

Examines a variety of representations of working people found in commercial popular culture throughout the 20th century as a means to explore the ways in which history, memory, and politics are shaped through popular discourse. Uses sources as diverse as popular music, Hollywood movies, the mainstream press, and television sitcoms to understand the ideological and political influences on our pre-conceptions of workers, and how those forces influence our notions of authenticity, the historical experience, and the politics of social class.

ILRCB 304(3040) Seminar in American Labor and Social History

Fall or spring. 4 credits. Prerequisite:

permission of instructor. J. Cowie, C. Daniel, I. DeVault, and N. Salvatore.

Undergraduate seminar whose topic changes depending on semester and instructor.

ILRCB 305(3050) Introduction to Labor Arbitration and Alternative Dispute Resolution

Fall. 4 credits. J. Gross.

Introductory survey that focuses on the U.S. labor arbitration process in the private and public sectors (legal issues, discipline and discharge, contract language interpretation, remedies, and procedures) and on alternative dispute resolution systems in the United States and other countries. Student participation in class discussion is expected, and assignments include an original research paper.

ILRCB 306(3060) Recent History of American Workers: From the 60s through the 90s

Fall. 4 credits. J. Cowie.

Focuses on the social history of American workers and the role of organized labor in American life since the 1960s. Course themes often center on the complexities of social class in the United States. Topics include the transformations of liberalism, the civil rights and black power movements, the Vietnam War, the rise and fall of the New Left, industrial restructuring, the rise of neoconservatism, changes in civic identity, and sources of cultural conflict. Course ends with an examination of globalization, changes in the major political parties, the future of work, and prospects for social change.

ILRCB 307(3070) U.S. Business History Since the Civil War

Spring. 4 credits. R. Applegate.

Surveys the history of U.S. business enterprise since the establishment of a nationally unified political economy. Focuses on the corporation's emergence as the dominant form of business organization in the context of changing government-business relations. Students examine distinctive features of American business development—such as the preeminence of "big business," corporate governance by managerial hierarchies, and the multinational scope of corporate

operations—by exploring the circumstances of their creation, the private-sector limits of their reach, and their consequences for economic development and industrial relations.

[ILRCB 384(3840) Women and Unions (also FGSS 384(3840))]

Fall or spring. 4 credits. Not offered 2005–2006. I. DeVault.

Explores women's participation in the United States labor movement in the 19th and 20th centuries. Issues covered include women workers' relations with male-dominated union movements, the role of cross-class alliances of women in organizing women workers, interactions with radical parties and organizations, problems faced by women union leaders and activities, and others.]

ILRCB 385(3850) African American Social History, 1865 to 1910: The Rural and Urban Experience

Fall. 4 credits. N. Salvatore.

Examines the experience of black Americans from Emancipation through the experience of the first generation born after slavery. Topics include the changing nature of work; political organization and the rise of Jim Crow; protest, accommodation, and separatism; and the continued evolution of black social and cultural expression after slavery.

ILRCB 386(3860) African American Social History, 1910 to the Present: Race, Work, and the City

Spring. 4 credits. N. Salvatore.

Examines the experience of black Americans from the start of the Great Migration just before World War I. Topics include the effects of migration on work experiences and unionization patterns, the impact of depression and two world wars on black social structure and economic status, the growth of the Civil Rights movement, and the impact of migration and urbanization on a variety of social and cultural institutions.

ILRCB 400(4000) Union Organizing

Spring. 4 credits. Prerequisites: ILRCB 201 and 205; 500 and 501. K. Bronfenbrenner.

Explores various aspects of unions' attempts to organize workers: including why some workers join unions and others do not; strategy and tactics implemented by unions and management during organizing campaigns; present status of labor law as it affects organizing; creative approaches to union organizing; and the organizing model of unionism.

ILRCB 404(4040) Contract Administration

Fall. 4 credits. Prerequisites: ILRCB 205 and 201 or 500 and 501. K. Bronfenbrenner.

Focuses on the practice, nature, and challenges of union representation under collective bargaining agreements. Working with union contracts, constitutions, and by-laws from a diversity of national and local public and private sector agreements, the course examines how U.S. unions represent their members in different industries and different collective bargaining environments. Issues addressed include union representative/steward rights and responsibilities, contract enforcement structures and practice, access to information, new work systems, hours of work and scheduling, contingent staffing arrangements, workplace discrimination, health and safety, promotional opportunities, downsizing, leadership development, membership involvement and commitment, internal organizing, community coalition

building, and decertification campaigns. Students practice hands-on work in interpreting contract language and preparing and presenting grievances and unfair labor practices.

ILRCB 407(4070) Contemporary Trade Union Movement

Spring. 4 credits. Prerequisites:

undergraduates, ILRCB 100; graduate students, ILRCB 502. R. Seeber and R. Hurd.

Examination of contemporary trade union issues, including union power, political action, collective bargaining approaches, and organizing efforts. Covers structural, functional, and strategic aspects of contemporary unions. Speakers from the union movement address the class.

ILRCB 482(4820) Ethics at Work

Fall or spring. 4 credits. Prerequisite: junior or senior standing or permission of instructor. M. Gold.

Examines major theories of ethics, then applies them to issues in the employment relationship such as genetic screening of job applicants, random drug testing of employees, affirmative action, discipline for off-duty conduct, whistle-blowing, worker safety and cost/benefit analysis, comparable worth, strikes by employees providing crucial services, and crossing a picket line.

ILRCB 488(4880) Liberty and Justice for All

Fall or spring. 4 credits. Prerequisite: junior or senior standing or permission of instructor. M. Gold.

Examines major theories of ethics, then applies them to contemporary issues such as affirmative action and reverse discrimination, the right to life (from abortion to capital punishment), comparable worth, and constitutional rights such as freedom of speech.

ILRCB 495(4950) Honors Program

Fall and spring (yearlong). 4 credits each semester. Students are eligible for ILR senior honors program if they (1) are in the upper 20 percent of their class at end of junior year; (2) propose an honors project, entailing research leading to completion of a thesis, to an ILR faculty member who agrees to act as thesis supervisor; and (3) submit the project, endorsed by the proposed faculty sponsor, to Committee on Academic Standards and Scholarships.

Accepted students embark on a two-semester sequence. The first semester consists of determining a research design, familiarization with germane scholarly literature, and preliminary data collection. The second semester involves completion of the data collection and preparation of the honors thesis. At the end of the second semester, the candidate is examined orally on the completed thesis by a committee consisting of the thesis supervisor, a second faculty member designated by the appropriate department chair, and a representative of the Academic Standards and Scholarship Committee.

ILRCB 497–498(4970–4980) Internship

Fall and spring. 497, 4 credits; 498, 8 credits. Staff.

All requests for permission to register for an internship must be approved by the faculty member who will supervise the project and the chairman of the faculty member's academic department before submission for approval by the director of off-campus credit

programs. Upon approval of the internship, the Office of Student Services will register each student for 497, for 4 credits graded A+ to F for individual research, and for 498, for 8 credits graded S-U, for completion of a professionally appropriate learning experience, which is graded by the faculty sponsor.

ILRCB 499(4990) Directed Studies

Fall and spring. 4 credits.
For individual or group research projects conducted under the direction of a member of the ILR faculty, in a special area of labor relations not covered by regular course offerings. Sophomores, juniors, and seniors with a preceding semester of 3.0 semester average are eligible to submit projects for approval by the Academic Standards Committee. Students should consult with a counselor in the Office of Student Services at the time of CourseEnroll to arrange for formal submission of their directed study.

ILRCB 500(5000) Collective Bargaining

Fall. 3 credits. Prerequisite: graduate standing. Recommended: previous or concurrent enrollment in ILRCB 501. M. Cook, H. Katz, S. Kuruvilla, and L. Turner.
Comprehensive introduction to the industrial relations system of the United States. Covers the negotiation, scope, and day-to-day administration of contracts; union and employer bargaining structures; implications of industrial relations issues for U.S. competitiveness and public policy; industrial conflict; and U.S. industrial relations in international and comparative perspective.

ILRCB 501(5010) Labor and Employment Law

Fall. 3 credits. Prerequisite: graduate standing. L. Compa, M. Gold, and R. Lieberwitz.
Survey and analysis of the law governing labor relations and employee rights in the workplace. The first half of the course examines the legal framework in which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half surveys additional issues of rights in employment, including such topics as employment discrimination, the developing law of "unjust dismissal," and union democracy. Also serves as an introduction to judicial and administrative systems.

ILRCB 502(5020) History of Industrial Relations in the United States since 1865

Fall or spring. 3 credits. Prerequisite: graduate standing. J. Cowie, C. Daniel, I. DeVault, and N. Salvatore.
Introductory survey course emphasizing historical developments in the 20th century. Special studies include labor union struggles over organizational alternatives and such other topics as industrial conflicts, working-class lifestyles, radicalism, welfare capitalism, union democracy, and the expanding authority of the federal government.

ILRCB 504(5040) The U.S. Industrial Relations System

4 credits. Offered only in New York City for M.P.S. program. Staff.
Examines the development, operation, and outcomes of the U.S. industrial relations

system in a comparative context. Specifically, the course contrasts the American experience with industrial relations institutions and outcomes with the experience of several other countries in Europe and Asia. Students look at the process of union formation, the practice of collective bargaining at different levels, the methods of dispute resolution, and the legal regime germane to industrial relations. The course also focuses on both processes and outcomes of different country systems, focusing on the degree of collaboration or conflict, wage levels and wage inequality, and practices in different industries and firms. Finally the role played by industrial relations and human resource policy in economic and social development in these nations is addressed.

ILRCB 602(6020) Arbitration

Fall and spring. 4 credits. Limited to 21 students. Prerequisites: ILRCB 201, 205, 500 and 501. J. Gross and R. Lieberwitz.
Study of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of a mock arbitration hearing, and the preparation of arbitration opinions and post-hearing briefs.

ILRCB 603(6030) The Economics of Collective Bargaining in Sports

Fall or spring. 4 credits. L. Kahn.
Surveys economic and industrial issues in the sports industry. Topics include salary determination, including free agency, salary caps, salary arbitration; competitive balance and financial health of sports leagues; antitrust issues in sports; labor disputes, union history, and contract administration issues in sports leagues; discrimination in sports; and performance incentives.

ILRCB 605(6050) Readings in the History of Industrial Relations in the United States

Fall. 4 credits. Prerequisite: senior or graduate standing. C. Daniel and N. Salvatore.
Intensive seminar covering original printed sources and scholarly accounts for different periods in American history.

ILRCB 606(6060) Theories of Industrial Relations Systems

Fall or spring. 4 credits. Prerequisite: senior or graduate standing; ILRCB 100, 205, 500. H. Katz.
Traces the evolution of theory and research on industrial relations. Topics include theories of the labor movement; institutional models and evidence regarding what unions do; the origins of internal labor markets and their relationship with unionization; models of strikes; empirical assessments of arbitration; research on union decline; and empirical evidence of the impacts of new technology.

ILRCB 607(6070) Values in Law, Economics, and Industrial Relations

Fall and spring. 4 credits. Limited to 21 students. Prerequisites: ILRCB 201, 205, 500, 501. J. Gross.
Examination of the often hidden values and assumptions that underlie the contemporary U.S. systems of employment law, work and business, and industrial relations. Classroom discussions and student research projects use novels and short stories (as well as the literature of industrial and labor relations) to focus on issues such as discrimination; law,

economics, and the state; work and business; power, conflict, and protest; and rights and justice.

ILRCB 608(6080) Sex Discrimination and the Law

Fall or spring. 4 credits. Prerequisites: ILRCB 201, 501, or permission of instructor. R. Lieberwitz.
Lec 01—Examines various legal issues relevant to discrimination on the basis of sex. Problems analyzed include sexual harassment, pornography, reproductive rights, prostitution, work-family conflict, inequality in employment opportunities, gay and lesbian rights, welfare rights, and affirmative action.

ILRCB 608(6080) Collective Bargaining Simulation

Fall. 4 credits. Limited to 18 students. Prerequisite: junior, senior, or graduate standing. Recommended: previous or concurrent enrollment in collective bargaining theory and labor law course. Attendance at first class mandatory. Up to two required evening extended bargaining sessions. H. Kramer.
Lec 04—Students prepare for and participate in a simulated negotiation between a hypothetical corporation and a hypothetical union in a typical big company with mid-size single site bargaining unit context. Students are assigned, usually in line with preferences, to either a management or union bargaining team. The course stresses the negotiation process over settlement or substantive outcomes. Negotiation problems are as real life as possible, constrained by student time needs and with attention given to dynamic legal, political, economic, and communications concerns as well as power, information, and time factors. Participants plan for negotiations, reach agreements in principle and negotiate language, bargain wages, pensions, health care and noneconomic items in the context of a company and union with an established contract, policies, and culture. This is a hands-on program with active participation essential.

ILRCB 608(6080) Labor and Employment Law and Immigrant Workers in the United States

Fall. 4 credits. Prerequisites: ILRCB 201, 502. L. Compa.
Lec 05—Immigrant workers have surged into the U.S. labor force in recent years, creating new problems and new agendas for the labor law system. This course examines labor and employment law developments affecting documented and undocumented immigrant workers. Because labor economics and immigration policy obviously set the framework for legal developments, some early classes and assignments address these issues. Most of the course is then devoted to federal and state legislation and case law on immigrant workers, focusing on labor and employment matters rather than immigration law as such.

ILRCB 610(6011) Negotiation: Theory and Practice

Fall or spring. 4 credits. Prerequisites: ILRCB 205 or 500, background in economics and social sciences, or permission of instructor. D. Lipsky and R. Seiber.
Deals with negotiation and bargaining, focusing on process, practice, and procedures. Focuses on the use of negotiation and bargaining to resolve conflicts and disputes between organizations and groups. Discusses various

theories of negotiation, including conventional, "positional" bargaining, interest-based bargaining, the use of power in negotiation, and game theoretic approaches to bargaining. Examples, cases, and exercises are used to illustrate general principles. This is a generic negotiation course and thus does not deal with labor relations nor does it focus on any particular type of negotiation. Rather, it examines negotiation and bargaining generally, using examples drawn from several contexts, including employment relations, environmental disputes, real estate transactions, and other settings.

ILRCB 611(6012) Managing and Resolving Conflict

Fall or spring. 4 credits. Prerequisites: ILRCB 205, 500, background in economics and social sciences, or permission of instructor. D. Lipsky and R. Seeber.

Deals principally with managing and resolving workplace conflicts but also covers conflict resolution outside the workplace. Does not focus on the use of mediation and arbitration within collective bargaining but examines the use of these techniques and others outside collective bargaining and in nonunion settings. Covers two related topics: (1) third-party dispute resolution, including alternative dispute resolution. Among the dispute resolution techniques discussed are mediation, arbitration, fact-finding, facilitation, mini-trials, early neutral evaluation, peer review, and the ombuds function; (2) conflict management in organizations, including the recent development of conflict management systems. The course reviews the factors that have caused the growth of ADR and conflict management systems in the workplace, and it explores the implications of these recent developments for our system of justice.

ILRCB 650(6013) Service Work and Workers in Historical Perspective

Fall or spring. 4 credits. I. DeVault.

Takes a historical perspective on the development of a service economy in the United States. Readings include general and theoretical works, but the main focus is recent historical scholarship on specific occupations and situations in the "nonproductive" workforce. Students explore primary sources for research on the subject and write research papers.

ILRCB 651(6014) Industrial Relations in Transition

Spring. 4 credits. Prerequisite: senior or graduate standing. H. Katz.

Considers whether recent developments such as concession bargaining, worker participation programs, and the growth of nonunion firms represent a fundamental transformation in industrial relations practice. Reviews recent research and new theories arguing that such a transformation is occurring, including the work of Piore and Sabel, Bluestone and Harrison, and Kochan, McKersie, and Katz. Also reviews the counterarguments and evidence put forth by those who believe no such transformation is under way. Course material focuses on industrial relations practice in the private sector in the United States, although some attention is paid to developments in Western Europe, the United Kingdom, and Japan.

ILRCB 655(6014) Employment Law I

Fall. 4 credits. Prerequisites: ILRCB 201, 501, or permission of instructor. Attendance and participation mandatory. May be taken either before or after ILRCB 656. L. Adler.

Takes a similar approach to ILRCB 656, but the subject matter differs. Topics include employment at will and its exceptions; the role of the Constitution in the U.S. workplace; the law of electronic and traditional privacy at work; and the slowly evolving rights of contingent workers in the old and new economies. One study reviews primarily federal and state court decisions and focuses upon the way that employees' rights are advanced or constricted by law. There are considerable reading responsibilities.

ILRCB 656(6016) Employment Law II

Spring. 3 credits. Prerequisites: ILRCB 201, 501, or permission of instructor. Attendance and class participation mandatory. May be taken either before or after ILRCB 655. L. Adler.

Takes a similar approach to ILRCB 655, but the subject matter differs. Topics include the meaning and validity of preemployment arbitration agreements; the critical distinctions in the status and thus the rights of employees, independent contractors, and contingent workers; what rights the working poor, the homeless, and workfare individuals have on the "job;" and the origin and application of the workers' compensation laws that apply when people are injured or contract disease from their work. One study reviews primarily federal and state court decisions and focuses on the way that employees' rights are advanced or constricted by the law. There are considerable reading responsibilities.

ILRCB 681(6810) International Labor Law

Fall or spring. 4 credits. Prerequisites: undergraduates, ILRCB 201; graduate students, ILRCB 501. Fulfills ILRIC distribution requirement for ILR students. L. Compa.

Examines labor rights and labor standards in a world economy regulated by bilateral and multilateral trade agreements, in a context of sharp competition among countries and firms. Readings and discussions focus on the intersections of labor, human rights, and international trade law and policy in this new global economic context. A prior course in a related topic may be helpful but is not required—the first classes are meant to establish a foundation in each area. While labor law is a unifying theme, the course is more policy-oriented than legalistic. After the introductory classes on labor rights, human rights, and trade, the focus turns to a series of topics that reflect the links between labor rights and trade.

ILRCB 683(6830) Research Seminar in the History of Industrial Relations

Fall or spring. 4 credits. Prerequisites: ILRCB 100, 502. J. Cowie, C. Daniel, I. DeVault, and N. Salvatore.

Areas of study are determined each semester by the instructor offering the seminar.

ILRCB 684(6840) Employment Discrimination and the Law

Fall or spring. 4 credits. Prerequisite: ILRCB 201/501 or equivalent. M. Gold and R. Lieberwitz.

Examines the laws against employment discrimination based on race, color, religion, sex, national origin, age, and disability.

ILRCB 686(6860) Collective Bargaining in the Public Sector

Fall or spring. 4 credits. Prerequisites:

ILRCB 205 and 201; 500 and 501. H. Katz.

Examination of the development, practice, and extent of collective bargaining between federal, state, and local governments and their employees. Considers the variety of legislative approaches to such matters as representation rights, unfair practices, scope of bargaining, impasse procedures, and the strike against government along with implications of collective bargaining for public policy and its formulation.

ILRCB 687(6870) Introduction to Labor Research

Spring. 4 credits. Limited to 20 students. K. Bronfenbrenner.

Designed to provide students interested in the labor field with the skills necessary to understand and use social science research as it relates to the labor movement. The course's four major goals are to (1) develop the skills to critically evaluate a wide variety of research relating to unions and the workplace; (2) introduce a number of both quantitative and qualitative research techniques used by unions and those who study the labor movement; (3) familiarize students with the broad range of library and computer resources that can be used for labor and corporate research; and (4) provide students with an opportunity to design and conduct a research project for a national or local union.

ILRCB 689(6890) Constitutional Aspects of Labor Law

Fall or spring. 4 credits. R. Lieberwitz.

In-depth analysis of the Supreme Court decisions that interpret the United States Constitution as it applies in the workplace. Focuses on the First Amendment, Fifth Amendment, Fourteenth Amendment, and Commerce Clause, with issues including freedom of speech and association, equal protection, due process, and other issues in the area of political and civil rights. The course entails a high level of student participation in class discussion, and assignments include a research paper.

ILRCB 703(7030) Qualitative Research Methods in Industrial Relations and Human Resources

Spring. 4 credits. Prerequisite: M.S. and Ph.D. students; ILRCB 500. Recommended: statistics course beyond level of ILRST 510. S. Kuruvilla.

Advanced doctoral seminar that focuses on the philosophy of inquiry, generally, as well as the various paradigms governing research on work. The course further focuses on selected qualitative research methods used in research in industrial relations, human resource management, and organizational behavior.

ILRCB 705(7050) The Economics of Collective Bargaining

Spring. 3 credits. Prerequisites: ILRCB 500, ILRLE 540 or equivalents and an understanding of multiple regression analysis; or permission of instructor. Staff. Focuses on both the economic analysis of unions and collective bargaining in our economy and the economic forces that affect collective bargaining. The method is

to identify and conceptualize the structural determinants of relative bargaining power. On this basis, the course examines both the economic outcomes of collective bargaining and current bargaining trends in a variety of industries. Tentative theoretical analyses of unionism (neoclassical, institutionalist) are compared. The statistical techniques and empirical results of research on the union effect on economic outcomes (wages, prices, inflation, profits, productivity, earnings inequality) are also evaluated. The effect of technology, corporate structures, and public policy on union bargaining power is outlined, and a number of case studies of collective bargaining in the private sector are reviewed. A term paper is required.

ILRCB 706(7060) Labor in Global Cities

Fall. 3 credits. L. Turner
Examines urban and labor literature, targeting selected cities to assess union influence and strategies in local politics, organizing, and coalition building. Each student chooses a city of particular interest and becomes an expert on that city's key unions, political actors, and corporations. The idea is to develop overall pictures of new union vitality (if and where it exists) based not only on particular unions, industries, and nations but also on regions, coalitions, and local politics.

ILRCB 708(7080) Negotiations in Practice

Fall. 3 credits. S. Kuruvilla.
Provides opportunities for students to develop their negotiating abilities for use in organizational and other settings. The course is premised on the assumption that negotiating concepts are best learned through practice that is grounded in rigorous analysis and reflection. While theoretical principles and concepts from various reference disciplines (e.g., social psychology, sociology, and economics) are presented through lectures and readings, this course focuses primarily on improving practical skills. Participants learn not only to enhance their individual abilities in dyadic and group situations but also to analyze contexts for the most effective application of these skills.

ILRCB 783(7081) Seminar in American Labor History (also HIST 683[6830])

3 credits. Prerequisite: graduate standing and permission of instructor. N. Salvatore.
Explores the relationship of scholarly biographical writing to the field of American social history. More and more historical biographies look to incorporate social analyses at the center of their biographical structures. Students read, discuss, and analyze the varied strengths and weaknesses of a number of these efforts. The author's understanding of the play between biographical subject and the larger social context, and its meaning for the structure of the book, are a point of inquiry that encourages numerous approaches and interpretations. A research paper is required.

ILRCB 790(7900) ILR M.P.S. Program

Fall and spring. 1-9 credits. Staff.
Supervised research only for those enrolled in the ILR M.P.S. program.

ILRCB 798(7980) Internship

Fall and spring. 1-3 credits.
Designed to grant credit for individual research under direction of a faculty member by graduate students who have been selected for an internship. All requests for permission to register for ILRCB 798 must be approved

by the faculty member who will supervise the project.

ILRCB 799(7990) Directed Studies

Fall and spring. Credit TBA.
For individual research conducted under the direction of a member of the faculty.

ILRCB 980(9800) Workshop in Collective Bargaining, Labor Law, and Labor History

Fall and spring. 2 credits. Prerequisite: M.S. and Ph.D. candidates in department. S-U grades only. Staff.

Provides a forum for the presentation of current research being undertaken by faculty members and graduate students in the Department of Collective Bargaining, Labor Law, and Labor History, and by invited guests. All M.S. and Ph.D. candidates in the department who are at work on their theses are strongly urged to enroll. Each student is expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of his or her thesis research.

HUMAN RESOURCE STUDIES

L. Dyer, chair (393 Ives Hall, 255-8805);
R. Batt, B. Bell, J. Bishop, V. Briggs,
C. Collins, K. Hallock, J. Hausknecht, L. Nishii,
Q. Roberson, S. Snell, W. Wasmuth, P. Wright

ILRHR 260(2600) Human Resource Management

Fall. 3 credits. Prerequisite: ILR students or permission of instructor. Staff.
Intended to introduce students to the field of human resource management (HRM). Students learn theories and applications involved in effectively managing people in organizations. In addition, this course covers current topics in HRM that have resulted from environmental and organizational challenges, e.g., technology, globalization, legislation, restructuring, work/life balance, changing labor markets, and so on. Emphasis is placed on developing relevant problem solving and critical thinking skills, as the basic concepts of HRM and the skills developed in this course are applicable to all types of organizations and jobs in which students will eventually work.

ILRHR 266(2660) Essential Desktop Applications

Fall, spring, and summer. 2 credits. Limited enrollment. C. Homrighouse.
Provides skills in the use of personal computers that run the Windows operating system. Covers the basics and time-saving techniques for Windows, Lexis Nexis, and Microsoft Excel, Access, and PowerPoint. Emphasizes hands-on experience and development of PC-based solutions by using examples that address human resource and other practical real-world issues. The skills developed in this course are useful prerequisites for several elective courses in human resource management and essential in the 21st-century workplace.

ILRHR 360(3600) Human Resource Economics and Public Policy

Fall and spring. 4 credits. Prerequisite: sophomore, junior, or senior standing. V. Briggs and J. Bishop.
Review of labor-market trends, data collection systems, and theories pertaining to public

efforts to develop the employment potential of the nation's human resources and to combat unemployment. Examines the major segments of the nation's educational training enterprise (e.g., public education, higher education, employer-provided training, apprenticeship, and special training programs for the economically disadvantaged). Also covers policies issues pertaining to welfare reform, direct job creation, worker relocation, economic development, and targeted tax credits.

ILRHR 362(3620) Career Development: Theory and Practice

Fall, spring, seven weeks. 2 credits.
Limited to 30 students. S-U grades only.
L. Gasser.

Covers the components of career management, individual factors, and organizational realities in the development of both careers and organized programs for career management. Two complementary learning tasks are required: information-gathering for career decision making based on self-assessment activities, and comprehension of organizational circumstances and practices encountered as careers develop. Grades are based on short writing assignments and a research paper.

ILRHR 367(3670) Employee Training and Development

Fall. 4 credits. Prerequisite: ILRHR 260.
B. Bell.

Faced with increasing competition, globalization, technological complexities, and dynamic labor markets, firms increasingly are struggling to determine the best approaches to training and developing their workforces. This course introduces the issues, concepts, and processes with which firms are wrestling, as well as specifics on planning, designing, implementing, and evaluating training and development programs. After completing this course, participants should be able to conduct a needs assessment, evaluate employee readiness, evaluate the strengths and weaknesses of various training and development techniques, solve transfer of learning problems, and design evaluation procedures.

ILRHR 456(4600) International Human Resource Management

Fall. 4 credits. Prerequisite: ILRHR 260 or equivalent. L. Nishii.
Illustrates how cultural context affects the structure and implementation of HR practices. The first part focuses on comparative human resource management or the study of how HRM differs across cultures, with a primary emphasis on comparing American HRM practices with those in East Asia and a secondary focus on Western European HRM practices. Class readings and discussions are grounded in theories of cultural variation. The second part focuses on IHRM, or the HRM issues facing multinational corporations. Topics include expatriation and repatriation, global leadership, compensation, and training.

ILRHR 461(4610) Working in the New Economy: The Sociology of Work

Spring. 4 credits. R. Batt.
Seminar that draws on qualitative studies of the workplace to examine how workers and managers are affected by changes in technologies, business strategies, labor markets, and other external factors. What dilemmas and conflicts emerge, how are they managed, and what are their outcomes?

Readings cover firsthand accounts of people's experiences in a wide range of occupations and industries, including professional, service, and factory workers.

ILRHR 462(4620) Staffing Organizations

Spring. 4 credits. C. Collins and J. Hausknecht.

Seminar designed to provide an overview of the processes by which organizations staff positions with both internal and external applicants. Through a combination of lectures, cases, and projects, the course covers theory, research, and legal foundations that inform organizational staffing actions. Topics include staffing strategy and context, measurement of staffing effectiveness, job/competency analysis, human resource planning, recruitment and job choice, retention, and internal and external selection practices.

ILRHR 463(4630) Diversity and Employee Relations

Fall. 4 credits. Q. Roberson.

Designed to provide an opportunity for students to understand the importance of, and develop competencies for, promoting organizational justice and building inclusive work environments. The first half of the course focuses on identifying differences and similarities in the experiences, needs, and beliefs of people from diverse backgrounds as well as assisting students in developing sensitivity to such differences. The second half focuses on stimulating critical thinking regarding the management of diversity and employee relations in organizations as well as increasing students' knowledge of HR policies and practices designed to manage these issues effectively. To achieve these goals, the course uses an experiential design that includes readings, exercises, cases, and class discussion.

ILRHR 464(4640) Business Strategy

Fall. 4 credits. C. Collins.

Integrative course focusing on strategic management. The main purpose is to provide an opportunity for students to study and analyze issues associated with strategic thinking in complex business situations, top management decision making, and the functions of corporations as a whole. Allows students to bring together all of the functional skills they have learned in other business or related classes (e.g., marketing, accounting, finance, human resources) and to apply this knowledge to business problems faced by top management in existing organizations. Class format includes lectures and case studies.

ILRHR 465(4650) Globalization at Work

Spring. 4 credits. R. Batt.

Seminar that examines how firms are responding to globalization and compares the strategies and outcomes of restructuring in manufacturing and service enterprises. While globalization has been a continuing phenomenon in manufacturing, recent changes in multilateral agreements, advances in information technology, and market deregulation have led to a process of globalization in service activities as well. Outcomes for firms, employees, consumers, and unions are examined.

ILRHR 468(4680) Human Resources Management Simulation

Fall, seven weeks. 2 credits. Limited to 30 students. Prerequisite: junior or senior standing; ILRHR 260 or equivalent. Regular attendance mandatory. W. Wasmuth.

Uses a simulation model and an open-systems approach as means to enhance students' skills in strategic planning and managerial decision making. Attention is given to the implications and efforts of strategic human resource managerial and supervisory decisions as measured by 10 organizational performance indicators, including quality of work life, employee productivity, customer satisfaction, employee retention, internal control, and the bottom line. Each student is assigned to a group (team) of five members and must be committed to the work of that group. An individual research paper is also required.

ILRHR 469(4690) Immigration and the American Labor Force

Spring. 4 credits. V. Briggs.

Assesses the role that immigration policy plays as an instrument of human resource development in the United States. Places immigration policy in an evolutionary context but gives primary attention to the post-1965 revival of mass immigration. In addition to legal immigration, policies pertaining to illegal immigration, border commuters, "maquiladoras," refugees, asylees, and nonimmigrant workers are examined. Comparisons are also made with immigration systems of other nations.

ILRHR 495(4950) Honors Program

Fall and spring (yearlong). 4 credits each semester.

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRHR 497-498(4970-4980) Internship

Fall and spring. 4 and 8 credits.

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRHR 499(4990) Directed Studies

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRHR 560(5600) Human Resource Management

Fall and spring. 3 credits. Prerequisite: graduate standing. Staff.

Survey course covering the major areas of the management of human behavior in work organizations. Consideration is given to aspects of strategic human resource management such as staffing, training and development, performance management, compensation, and employee relations. Emphasis is on exploring these issues from both strategic and tactical levels to increase organizational effectiveness.

ILRHR 564(5640) Human Resources Management in Effective Organizations

Fall or spring. 4 credits. Offered only in New York City for M.P.S. program. Staff.

Offers students the opportunity to become better prepared to make effective decisions about human resources. Successful organizations depend on people, their human resources. The first module examines strategic human resource management and the effects of HR decisions on organization success and fair treatment of people. The second module focuses on alternative systems used to staff and develop people. The third module focuses on compensating and rewarding people. The final module includes employee relations and alternative work systems. Case and field studies are used throughout the course.

ILRHR 653(6601) Research on Education Reform and Human Resource Policy

Spring. 4 credits. J. Bishop.

State and local efforts to improve K-12 education are employing a variety of (sometimes contradictory) reform strategies. This research seminar critically examines the case that is made for (and against) each of the major reform proposals and review studies that provide objective evidence on their effectiveness. The education reform strategies examined include vouchers, charter schools, small schools, career academies, direct instruction versus discovery learning, extending the school day and year, better preparation and selection of new teachers, better professional development, ending tenure, merit pay, state standards and school accountability, ending social promotion, and externally set end-of-course examinations.

ILRHR 654(6602) Introduction to HR Information Systems

Fall, seven weeks. 1 credit. Prerequisite: ILRHR 266 or equivalent; use of Access or similar database package for at least data entry and report generation. S-U grades only. C. Homrighouse.

Focuses on understanding how and why human resource information systems are developed, maintained, and managed. A database is designed from the ground up, beginning with basic instruction on the need for and how to create a relational database. Once the initial design is in place, the data are manipulated to create reports, forms, and queries to assist in human resource decisions. The course examines ways to make databases efficient and consistent. Production database systems such as PeopleSoft also are reviewed and used. All instruction is hands-on and supplemented with assigned readings and guest lecturers.

ILRHR 660(6600) HR Leadership: Views from the Top

Fall. 4 credits. Limited to 30 students.

Prerequisites: ILRHR 260/560 or equivalent, senior or graduate standing, and permission of instructor. L. Dyer.

Hands-on course offering students a unique opportunity to learn about strategic business and human resource issues from the perspectives of senior HR executives. Five chief human resource officers (CHROs) from major corporations meet with the class for lively give-and-take sessions on subjects of strategic and topical interest to their organizations. Before their visits, teams prepare background papers on the speakers, their companies, and their topics. Students discuss these papers before the visits to assure readiness to address the issues at hand when the CHROs arrive. During the visits the teams host the CHROs and usually have an opportunity to interact informally with them. After the visits, the teams revise their background papers into white papers that reflect insights gleaned from their research and discussions. Subsequently, all five white papers are assembled in a book that is shared with the CHROs and others.

ILRHR 661(6610) Applied Personal and Organization Development

Fall. 4 credits. Prerequisite: senior or graduate standing. C. Warzinski.

Experiential course that deals with OD and its role in the organizational change process. Combines the opportunity for hands-on practice in a workshop setting. Students

are responsible for researching and writing a paper that examines a specific method, technique, or critical issue; preparing an in-class demonstration/presentation illustrating applications of a chosen subject; and completing a final project requiring a comprehensive proposal that describes an appropriate and logically supported intervention strategy.

ILRHR 662(6620) The Agile Enterprise: Exploring the Dynamics of Marketplace and Organizational Agility

Fall. 4 credits. Prerequisites: ILRHR 260/560 and additional course work in business and human resource strategy. L. Dyer. Increasingly, dynamic external environments are encouraging active experimentation with new (i.e., nonbureaucratic) organizational paradigms. One such paradigm is the agile enterprise. This course explores the dynamics of the agile enterprise with particular emphasis on underlying justification and rationale, approaches to pursuing marketplace agility, and infrastructure designs and human resource strategies, as well as new approaches to leadership. But learning about the agile enterprise is one thing, learning to operate and live in one is another. Thus this course is mostly experiential and is conducted as much like an agile enterprise as is possible in an academic setting. In pursuit of a vision and armed with a few basic principles, students learn to self-organize and function autonomously, albeit with accountability, and to use their experiences to enhance their, and others', learning about the pluses and minuses of life in an agile enterprise.

ILRHR 663(6630) Managerial Financial Analysis

Fall. 4 credits. Prerequisite: ILRHR 560 and one statistics course or permission of instructor. Q. Roberson. Intended for students with limited knowledge of accounting and finance who want a better understanding of financial statements and measures that are affected directly or indirectly by the HR function. Provides a comprehensive introduction to financial statement and cash flow analysis with the goal of teaching students to compare firms' historical, current, and prospective financial condition and performance. Examines the basic concepts of accounting, major groups of accounts, financial statements that make up a company's annual report, and commonly used financial ratios.

ILRHR 664(6640) HR Online Research and Reporting Methods for Executive Decision-Making

Spring. 4 credits. Limited to 20 students. Prerequisite: ILRHR 560/260 or equivalent. S. Basefsky. Designed to develop key HR competencies and skills for researching and presenting information necessary for executive decision-making. Includes a comprehensive overview of primarily web-based resources available to HR executives. Emphasizes hands-on training in the best techniques and methods for extracting conceptual frameworks, checklists, best practices, competitive intelligence, legal information, statistical data, and academic research on topics of current interest to industry. Interviewing skills, report writing and presentation methods are imparted. Following five weeks of intense information instruction and hands-on experience, students

act as consultants in a combined classroom and workplace setting as they work on special projects and topics posed by HR executives of primarily Fortune 500 companies. These team-based assignments give students exposure to different companies, their cultures, and executives while providing real work experience.

ILRHR 665(6650) Business Strategy and Human Resources

Fall. 4 credits. Limited enrollment. Prerequisite: ILRHR 260/560; three other courses in human resource studies; permission of instructor. P. Wright. In this capstone course in HR studies, students integrate the theories and practices learned in other courses, to explore the linkages between business strategy and HRM. Extensive fieldwork is involved. The field projects are designed to make students explore and understand business strategy and draw upon and integrate their course work in HR staffing, training and development, compensation and rewards, and new work systems.

ILRHR 666(6660) Strategic HR Metrics

Spring. 4 credits. Prerequisites: ILRHR 260/560 or equivalent, one statistics course, one elective in HR studies. B. Wright. The search for the ideal strategic HR metrics misses the larger issue of taking a more analytical approach toward HR decision making. Analytics requires understanding the process through which knowledge is gained, and then applying the tools and techniques to gather and analyze the right kind of data relevant to the question at hand. This course covers topics such as philosophy of science, theory development, research methodology, data analysis and interpretation as well as data and practices commonly used to assess the effectiveness of HR activities. Consequently, the class simultaneously addresses the types of information needed for HR decision making, as well as the processes and techniques necessary to gather, integrate, and analyze the data.

ILRHR 667(6670) Diversity and Inclusion in Organizations

Spring. 4 credits. Prerequisite: ILRHR 260/560 or permission of instructor. Q. Roberson. Explores diversity management in organizations. The primary goals are to increase students' knowledge of strategic and tactical uses of HR practices and policies to effectively manage organizational diversity issues and to create inclusive work climates. In addition, the course aims to develop students' skills in the practical management of diversity, particularly linking diversity strategy to business strategy and developing diversity initiatives to help improve organizational competitiveness and enhance bottom-line outcomes.

ILRHR 668(6680) Staffing Organizations

Spring. 4 credits. Prerequisites: ILRHR 260/560, one statistics course, or permission of instructor. C. Collins and J. Hausknecht. Seminar providing an overview of the processes by which organizations staff positions with both internal and external applicants. Because staffing is one of the primary human resource activities, it is critical for human resource professionals to understand how theory, research, and legal foundations can inform staffing decisions.

Therefore, this course focuses on theories, research, policies, and practices concerning job recruitment and selection. Topics include staffing strategy and context, measurement of staffing effectiveness, job/competency analysis, human resource planning, recruitment and job choice, and internal and external selection practices.

ILRHR 669(6690) Managing Compensation

Spring. 4 credits. Limited to 30 students. Prerequisites: ILRHR 260/560 or equivalent, ILRHR 266 and basic statistics or permission of instructor. Staff. Focuses on managing employee compensation in contemporary organizations. The major objectives are to examine the current state of compensation decision making, to examine how recent theoretical and research developments inform compensation decisions, and to offer students an opportunity to develop competencies in making compensation decisions.

ILRHR 690(6900) Comparative Human Resource Management

Fall. 4 credits. Prerequisite: ILRHR 260/560 or permission of instructor. L. Nishii. Provides students with an understanding of the complexities associated with international human resource management. The central theme of the course is to identify whether and in what ways HRM practices need to be adapted across cultures to be effective. Course material reflects a focus on comparing American HRM practices with those in East Asia and Western Europe. In addition, the major topic areas of concern to IHRM managers are covered, including the selection, training, compensation, and performance management of international managers (expatriates), coordination across subsidiaries of a company, the development and tracking of global leaders, and cross-cultural communication and negotiation.

ILRHR 693(6930) Training and Development in Organizations

Spring. 4 credits. Prerequisite: ILRHR 260/560 or permission of instructor. B. Bell. Acquaints students with aspects of learning in organizations. Begins by discussing organizational learning and then focuses more narrowly on specific ways in which learning is achieved through the training and development functions. Topics include how learning is linked to organizational strategy, how to determine that training is needed, issues regarding the design of training programs, current training techniques, evaluation strategies, and management development practices.

ILRHR 694(6940) Competing in Services: Management, Marketing, and HR Strategies

Spring. 4 credits. Prerequisites: HR 560 or equivalent; permission of instructor. R. Batt. Examines alternative service management strategies and outcomes, with particular focus on customer relationship management. Priority is given to analyzing the relationship between business strategy, marketing, customer segmentation, organizational structures, and human resource practices. Student projects focus on critical analysis of service management in particular companies and settings, using live cases where possible.

ILRHR 695(6950) Education, Technology, and Productivity

Fall. 4 credits. J. Bishop.

This seminar investigates the nexus between the education and training in schools and at the workplace and the technological progressiveness, productivity, and competitiveness of firms, individuals, and nations. Students investigate how technological progress is changing the nature of work and what this implies for reform of education and training; how education and training contribute to growth and competitiveness; why educational achievement has declined; and how the responsibility for education and training should be apportioned among individuals, firms, private nonprofit organizations, and government.

ILRHR 696(6960) Knowledge Management

Fall. 4 credits. Prerequisite: senior or graduate standing. S. Snell.

Designed to acquaint students with the systems and strategies used to manage a firm's intellectual capital. Focuses on foundation concepts and frameworks related to intellectual capital (human, social, and organizational), knowledge management, and HRM. Discussions cover both the point of view of the organization (e.g., competitive challenges, core competencies) and the employees (e.g., psychological contracts, employment relationships). Ultimately, the goal is to integrate these views to develop a framework of how both the organization and the individual maximize value. The course also explores the processes that drive knowledge management. In particular, students focus on how firms create, transfer, and integrate knowledge to support learning and innovation. Discusses the managerial methods that support knowledge processes and cover various models and frameworks for integrating elements of knowledge management and intellectual capital.

ILRHR 697(6970) Special Topics in Resource Studies

Fall or spring. 4 credits. Staff.

Areas of study are determined each semester by the instructor offering the seminar.

ILRHR 698(6980) International Human Resource Policies and Institutions

Spring. 4 credits. J. Bishop.

Comparative study of human resource policies and institutions in Western Europe, North America, Japan, and East Asia (with special emphasis on math and science education) and of the effects of these institutions on productivity, growth, and equality of opportunity. The institutions studied include primary and secondary education, apprenticeship, employer training, and higher education. Data on the consequences of policies are presented and an effort made to understand how human resource policies and institutions have contributed to the rapid growth and low levels of inequality in Europe and East Asia. An important focus of the course is understanding the causes of the low levels of achievement of American high school students relative to their counterparts abroad.

ILRHR 699(6990) Advanced Desktop Applications

Spring. 1 credit. Prerequisite: ILRHR 266 or significant experience (two to four years) using office applications. Letter grades only. C. Homrighouse.

Explores advanced topics for common desktop applications including Windows,

Word, Excel, Access, PowerPoint, and basic HTML. The course is designed based on student input and instructor recommendations, covering those subjects that students feel would be most useful and relevant in the job market. Examples of areas include working with tables, columns, or sections in Word, pivot tables in Excel; taking a PowerPoint presentation "on the road"; and using join tables to create relationships in Access.

ILRHR 760(7600) Seminar in Human Resource Studies

Fall or spring. 3 credits. Prerequisites:

ILRHR 560, ILRST 510/511, and ILRHR 669 and permission of instructor. Staff.

"Floating" seminar designed to give faculty and students an opportunity to pursue specific topics in detail, with an emphasis on theory and research. Topics vary from semester to semester. Interested students should consult current course announcements for details.

ILRHR 763(7630) Interdisciplinary Perspectives on the Organization of Work

Fall or spring. 4 credits. R. Batt.

Ph.D. seminar examining the theoretical and empirical literature on the organization of work. Topics include studies of group effectiveness, teams, social capital, and recent critical and international research. Draws on alternative perspectives from psychology, sociology, engineering, organization studies, economics, and industrial relations.

ILRHR 790(7900) ILR M.P.S. Program

Fall and spring. 1-9 credits.

Supervised research only for those enrolled in the ILR M.P.S. program.

ILRHR 798(7980) Internship

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRHR 799(7990) Directed Studies

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRHR 960(9600) Workshop in Human Resource Studies

Fall and spring. 2 credits. Prerequisite: M.S. and Ph.D. candidates. S-U grades only. Staff.

Provides a forum for the presentation and critical discussion of current research being undertaken by graduate students, faculty members, and invited guests in the field of human resource studies. All M.S. and Ph.D. candidates in the Department of Human Resource Studies are urged to enroll; candidates in other departments are cordially invited. Each participant has an opportunity to benefit from the collective wisdom of the others in the formulation, design, and execution of his or her research, as well as to become current on the latest developments in the field.

ILRHR 961(9610) Doctoral Research Seminar in Human Resource Management

Fall or spring. 3 credits. Prerequisite: Ph.D. candidates. Staff.

Aimed at reading, understanding, and conducting research in HRM. Students should obtain thorough understanding of the current research in traditional areas of HRM such as validation, job analysis, EEO, selection, performance appraisal, compensation, and training and should develop the skills necessary to evaluate, criticize, and contribute to the literature on HRM.

ILRHR 962(9620) Doctoral Research Seminar in Strategic Human Resource Management

Fall or spring. 3 credits. Prerequisite: Ph.D. candidates. Staff.

Aimed at reading, understanding, and conducting research in SHRM. The course should enable students to obtain a thorough understanding of the current research in SHRM and to develop the skills necessary to evaluate, criticize, and contribute to the literature on SHRM.

ILRHR 963(9630) Research Methods in HRM/Strategic Human Resource Management

Fall and spring. 3 credits. Prerequisite: Ph.D. candidates. Staff.

Designed to build social science research skills, particularly in the area of human resource studies (HRS). Topics include measurement reliability, construct validity, design of studies, external validity, meta-analysis, critiquing/reviewing HRS research, publishing HRS research, and applications of statistical models of HRS issues.

INTERNATIONAL AND COMPARATIVE LABOR

G. Fields, chair (250 Ives Hall, 255-4561); J. Abowd, R. Batt, J. Bishop, F. Blau, G. Boyer, V. Briggs, M. Cook, I. DeVault, L. Kahn, H. Katz, S. Kuruvilla, L. Turner

ILRIC 333(4330) Politics of the Global North

Fall. 4 credits. L. Turner.

Covers current global debates, comparative political economy of Europe, the United States, and Japan, with a focus on labor and environmental coalitions for domestic reform and global justice.

[ILRIC 339(3390) The Political Economy of Mexico

Spring. 4 credits. Not offered 2005-2006. M. Cook.

Explores the range of challenges affecting contemporary Mexican politics, society, and economic development—from democratization to immigration to NAFTA. Provides both an introduction to Mexican political economy for those with no prior background and an opportunity for students with more knowledge of Mexico to explore a research topic in greater depth.]

ILRIC 499(4990) Directed Studies

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRIC 533(6330) Politics of the Global North

Fall. 4 credits. Prerequisite: graduate standing. L. Turner.

For description, see ILRIC 333. Graduate students also submit an analytical term paper at the end of the semester.

ILRIC 630(6331) Special Topics

Fall. 4 credits. M. Cook.

Devoted to new topics in the field. The specific content and emphasis vary depending upon the interests of the faculty member teaching the course.

ILRIC 631(4310) Comparative Labor Movements in Latin America

Fall. 4 credits. M. Cook.

Examines the historical development of labor movements in Latin America, their role in national political and economic development, and the impact of economic liberalization, authoritarianism, and redemocratization on contemporary labor organizations in the region. Countries examined include, but are not limited to, Mexico, Brazil, Argentina, Chile, Peru, and Guatemala.

ILRIC 632(6320) Revitalizing the Labor Movement: A Comparative Perspective

Spring. 4 credits. Prerequisite: graduate students; seniors by permission of instructor. L. Turner.

Graduate seminar examining contemporary efforts in the United States and Europe to revitalize unions and reform industrial relations. The first half of the course examines contemporary reform efforts in the United States. The second half covers Britain, Germany, Italy, Spain, the "Europeanization" of labor, and/or related topics depending on student interest.

[ILRIC 633(6331) Labor, Industry, and Politics in Germany]

Fall. 4 credits. Prerequisite: graduate standing; seniors by permission of instructor. Not offered 2005-2006. L. Turner.

Is the successful postwar "social partnership" model of organized capitalism in the Federal Republic of Germany viable in the 21st century? To answer this question, this course looks at the works councils and codetermination, the rise of a strong postwar labor movement, the contemporary German version of social partnership, with an emphasis on current events and the new challenges for German industry and labor posed by German unification and European integration.]

[ILRIC 635(4350) Labor Markets and Income Distribution in Developing Countries]

Spring. 4 credits. Prerequisite: ILRLE 240/540 or ECON 313 or permission of instructor. Not offered 2005-2006. G. Fields.

Analyzes who benefits and how much from economic growth in developing countries and how income distribution would be affected by various public policies. Topics include poverty, inequality, economic mobility, and social welfare; poverty profiles, earnings functions, and decompositions; employment, unemployment, wages, and labor markets; and an introduction to public economics and development policy.]

ILRIC 636(6360) Comparative History of Women and Work (also FGSS 636(6360))

Spring. 4 credits. Prerequisite: permission of instructor. I. DeVault.

Explores the similarities and differences between different cultures' assumptions about the work of women as well as women's experiences in varying work circumstances throughout history. Beginning with theoretical pieces and overviews of the history of women and work, most of the course consists of in-depth examinations of specific work situations or occupations across time and geography. Comparative examples are taken from the United States, Europe, and the Third World.

ILRIC 637 Labor Relations in Asia

Fall. 4 credits. Prerequisite: permission of instructor. S. Kuruvilla.

Comparative survey of the industrial relations systems of selected Asian nations such as Japan, South Korea, Thailand, Malaysia, Singapore, Hong Kong, China, and several others. Emphasizes economic development strategies and industrial relations policies in these countries. Industrial relations practices, the extent of union organization, and labor force demographics of these countries are examined. The primary objective is to provide students with an introduction to industrial relations systems in Asia. The countries chosen are representative but not exhaustive.

[ILRIC 638(6380) Labor, Free Trade, and Economic Integration in the Americas]

Fall. 4 credits. Limited enrollment. Prerequisite: senior or graduate standing; juniors by permission of instructor. Not offered 2005-2006. M. Cook.

Analyzes the contemporary movements toward free trade and regional economic integration in the Western Hemisphere. Special attention is paid to labor's role and to transnational movements in the region. Examines the origins and implications of the North American Free Trade Agreement (NAFTA) and looks at integration schemes in South America (Mercosur), Central America, and the Caribbean and at hemisphere-wide initiatives. A research paper is required.]

ILRIC 639(6390) Building a "Social Europe": Regional Integration in the Global Economy

Spring. 4 credits. Limited enrollment. Prerequisite: graduate standing; seniors by permission of instructor. L. Turner.

Seminar addresses questions such as, what have the European Union and its member nations done to develop and reform the social dimension since the 1990s? How are the major actors—labor, government, and business—positioned to influence social policy and industrial relations reform, and what strategies are they pursuing? What are the prospects for "social Europe" in an increasingly deregulated global economy?

ILRIC 730(7300) Research Seminar on Labor Markets in Comparative Perspective

Fall and spring. 3 credits. Prerequisite: M.S. and Ph.D. students. G. Fields.

Research seminar for students writing theses or dissertations on economic aspects of labor markets in comparative perspective. Addresses research questions, methodologies, and contributions in the areas of employment and unemployment, income and earnings, educational and human resource development, welfare economics, and economic growth. Presentations and written papers are required.

[ILRIC 731(7310) Industrial Relations in Latin America]

Spring. 4 credits. Not offered 2005-2006. M. Cook.

Faced with the competitive pressures brought on by globalization, employers and governments throughout the region are transforming practices, laws, policies, and institutions that shape the industrial relations arena. This course analyzes and compares the extent and character of these changes, the responses and strategies of trade unions and other political and social actors, and the

implications of industrial relations changes in the region for economic development, political stability, and democracy. The aim is to introduce students to the key issues in contemporary Latin American industrial relations and, through individual research papers, to enable students to become familiar with a specific country or sector/theme in two or more countries of the region.]

[ILRIC 737(7370) Special Topics: Labor, Democracy, and Globalization in the South]

Spring. 4 credits. Not offered 2005-2006. M. Cook.

Labor movements in developing countries face distinct challenges from those in advanced industrial countries. This course examines two of the most important recent changes to affect countries in the developing "South" in recent years: democratization and the adoption of market-oriented economic reforms. It focuses on how these "dual transitions" affect workers and labor organizations in developing countries and on labor's responses to political and economic change. Among the issues examined are labor's role in political democratization, factors driving market reform and labor responses, the effects of economic liberalization on labor, national versus industry analyses of change, labor law and policy reform, national protections for labor rights and international labor standards, global trade and Southern country alliances, and issues in North-South labor relations.]

ILRIC 739(7390) The Political Economy of Mexico

Spring. 4 credits. M. Cook.

For description, see ILRIC 339. Graduate students attend ILRIC 339 lectures, meet with the professor, and write a research paper.

ILRIC 790(7900) ILR M.P.S. Program

Fall and spring. 1-9 credits.

Supervised research only for those enrolled in the ILR M.P.S. program.

ILRIC 799(7990) Directed Studies

For description, see "Collective Bargaining, Labor Law, and Labor History."

Other courses approved to fulfill the ILRIC distribution requirement**ILRCB 304(3040) Latin American Labor History**

Fall. J. Cowie.

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRCB 681(6810) International Labor Law

Spring. L. Compa.

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRCB 706(7060) Labor in Global Cities

Fall. Prerequisite: graduate standing. L. Turner.

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRHR 690(6900) Comparative Human Resource Management

Fall. L. Nishii.

For description, see "Human Resource Studies."

ILRHR 698(6980) International Human Resource Policies and Institutions

Spring. J. Bishop.

For description, see "Human Resource Studies."

ILRLE 444(4440) The Evolution of Social Policy in Britain and America (also ECON 444(4440))

Fall, spring. G. Boyer.

For description, see "Labor Economics."

ILRLE 446(4460) Economy History of British Labor (also ECON 459(4590))

Spring. G. Boyer.

For description, see "Labor Economics."

ILRLE 448(4480) Topics in 20th-Century Economic History: The Economics of Depression and the Rise of the Managed Economy (also ECON 458(4580))

Fall. G. Boyer.

For description, see "Labor Economics."

ILRLE 642(6420) Economic Analysis of the Welfare State (also ECON 460(4600))

Fall. 4 credits. R. Hutchens.

For description, see "Labor Economics."

INTERDEPARTMENTAL COURSES**ILRID 150(1500) Freshman Colloquium**

Fall. 1 credit. Prerequisite: ILR freshmen. S-U grades only. Staff.

Acquaints first-year students with issues and disciplines in the field of industrial and labor relations and to establish acquaintanceship among members of the ILR faculty and small, randomly assigned groups of students. Includes a plant visit and several meetings early in the semester designed to introduce issues encountered in studying the employment relationship.

ILRID 250(2500) Diversity in the Workplace

Spring. 1 credit. Limited to 30 students. Prerequisite: ILR sophomores. Attendance at all sessions mandatory, as is participation in group discussions and completion of written work. S-U grades only. E. Lawler. Not offered 2005–2006.

Exposes students to issues of diversity and discrimination in corporate, union, and legal environments. The purpose is to understand, analyze, and discuss the experience of being part of a culturally and ethnically diverse workplace. The goals of the course are to sensitize students to the subtle ways that prejudice and discrimination can arise in the workplace; to bring students into direct contact with practitioners in corporations,

labor unions, and law firms to familiarize students with current practices for addressing the opportunities and challenges of racial, ethnic, gender, and other forms of diversity in the workplace; and to analyze and discuss with practitioners ways to reduce prejudice and discrimination in workplaces.]

ILRID 450(4500) Workplace Diversity: Stepping into the 21st Century

Spring. 1 credit. Limited to 30 students; priority given to seniors. Prerequisite: ILRHR 260; ILR students. S-U grades only. P. Henderson and S. Woods.

Provides an orientation to diversity in the workplace and to the expectations and challenges presented for future workplace leadership. With an emphasis on hands-on experiential learning, the course begins by familiarizing class participants with current practitioner approaches to diversity awareness training and competency building. Course focus then shifts to examine diversity as an issue of organizational change. Students consider the range of policies, practices and procedures being used to create workplaces that are both diverse and inclusive. Dialogues and case study presentations with invited workplace diversity leaders offer participants an opportunity to learn from an insider's perspective about the experiences, successes, and challenges of making diversity work. Students are required to complete a "case study" of an organization.

ILRID 451(4510) Science, Technology, and the American Economy

Spring. 4 credits. V. Briggs.

The industrial revolution did not begin in the United States, but the nation became the world's first technological society. Attention is given to the evolutionary confluence of science, technology, mathematics, religion, and capitalism in the formation of the U.S. economy, its institutions, and its labor force. Primary attention is given to post-World War II economic developments. The vantage point is the linkage with employment, unemployment, income, and productivity considerations. Public policy issues (e.g., the employment impact of the computer, research and development policy, national defense influences, the "agricultural revolution," savings and investment rates, and labor force preparedness) are explored. Critical concerns pertaining to environmental impacts, income polarization, and consumerism are also examined.

ILRID 566(5660) Public Policy

Spring. 4 credits. Offered only in New York City for M.P.S. program. Staff.

The government's influence on the workplace and the role of public policy in the use and preparation of the nation's human resources for employment is assessed. Areas of study include the government's historical role in the labor market and the effect of efficiency, price stability and economic growth, equity, and immigration policy and its market implications.

ILRID 790(7900) ILR M.P.S. Program

Fall and spring. 1–9 credits.

Supervised research only for those enrolled in the ILR M.P.S. program.

LABOR ECONOMICS

L. Kahn, chair (264 Ives Hall, 255-0510);

J. Abowd, F. Blau, G. Boyer, J. DeVaro,

R. Ehrenberg, G. Fields, R. Hutchens,

G. Jakobson, R. Smith

ILRLE 240(2400) Economics of Wages and Employment

Fall and spring. 3 credits. Prerequisites:

ECON 101–102 or permission of instructor.

Applies the theory and elementary tools of economics to the characteristics and problems of the labor market. Considers both the demand (employer) and supply (employee) sides of the market to gain a deeper understanding of the effects of various government programs and private decisions targeted at the labor market. Topics include employment demand, basic compensation determination, education and training, benefits and the structure of compensation, labor-force participation and its relation to household production, occupational choice, migration, labor-market discrimination, and the effects of unions.

ILRLE 440(4400) Labor Market Analysis (also ECON 341(3410))

Spring. 4 credits. Note: ILR students can substitute ILRLE 440 for 240 by permission of instructor. J. DeVaro.

For description, see ILRLE 240. Designed for ECON majors with calculus.

ILRLE 441(4410) Income Distribution (also ECON 455(4550))

Spring. 4 credits. Prerequisite: ILRLE 240 or ECON 341. Students who have taken PAM 370 may not receive credit for 441.

R. Hutchens.

Explores income distribution in the United States and the world. Topics include functional and size distributions of income, wage structure, income-generating functions and theories, discrimination, poverty, public policy and income distribution, and changing income distribution and growth.

ILRLE 442(4420) The Economics of Employee Benefits (also ECON 456(4560))

Fall. 4 credits. Prerequisite: ILR 240 or equivalent. Not offered 2005–2006. Staff.

In-depth treatment of the economics and financial management and administration of all employee benefits: health care, insurance, retirement income, family-care benefits, executive incentive plans, and other compensation provided as a service or contingent financial package to employees. Includes detailed international comparisons of health care and retirement systems are included.]

ILRLE 443(4430) Compensation, Incentives, and Productivity (also ECON 443(4430))

Fall. 4 credits. Prerequisite: ILRLE 240 or equivalent. J. DeVaro.

Examines topics in labor economics of particular relevance to individual managers and firms. Representative topics include recruitment, screening, and hiring strategies; compensation (including retirement pensions and other benefits); training, turnover, and the theory of human capital; incentive schemes and promotions; layoffs, downsizing, and buyouts; teamwork; and internal labor markets. Focuses on labor-related business problems using the analytic tools of economic theory and should appeal to students contemplating careers in general business,

consulting, and human resource management as well as in economics.

ILRLE 444(4440) The Evolution of Social Policy in Britain and America (also ECON 444[4440])

Fall and spring. 4 credits. Prerequisite: ILRLE 240 or equivalent. G. Boyer.

Surveys the history of social policy in Great Britain and the United States from 1800 to the adoption of the British welfare state after World War II. Topics include the role of poor relief in the early 19th century; the changing relationship between public relief and private charity; the adoption of social insurance programs and protective labor legislation for children and women; government intervention in the Great Depression; and the beginnings of the welfare state.

[ILRLE 445(4450) Women in the Economy (also ECON 457[4570], FGSS 446[4460])]

Fall. 4 credits. Prerequisite: ILRLE 240 or equivalent. Not offered 2005–2006. Staff.

Examines the changing economic roles of women and men in the labor market and in the family. Topics include a historical overview of changing gender roles; the determinants of the gender division of labor in the family; trends in female and male labor force participation; gender differences in occupations and earnings; the consequences of women's employment for the family; and a consideration of women's status in other countries.]

ILRLE 446(4460) Economic History of British Labor 1750 to 1940 (also ECON 459[4590])

Fall or spring. 4 credits. Prerequisite: ILRLE 240 or equivalent. G. Boyer.

Examines various aspects of British labor history from the beginning of the Industrial Revolution until World War II. Specific topics include monetary and nonmonetary changes in workers' living standards; internal migration and emigration; the London labor market; the extent of poverty and the evolution of the welfare state; Luddism and Chartism; and the development of trade unions.]

ILRLE 447(4470) Social and Economic Data (also ILRLE 740[7400], INFO 447[4470])

Spring. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, at least one upper-level social science course, or permission of instructor. J. Abowd.

Teaches the basics required to acquire and transform raw information into social and economic data. Legal, statistical, computing, and social science aspects of the data "manufacturing" process are treated. The formal U.S., Eurostat, OECD, and UN statistical infrastructure is covered. Major private data sources are also covered. Topics include basic statistical principles of populations and sampling frames; acquiring data via samples, censuses, administrative records, and transaction logging; the law, economics, and statistics of data privacy and confidentiality protection; data linking and integration techniques (probabilistic record linking; multivariate statistical matching); analytic methods in the social sciences. Grading is based on a group term project.

ILRLE 448(4480) Topics in 20th-Century Economic History: The Economics of Depression and the Rise of the Managed Economy (also ECON 458[4580])

Spring. 4 credits. Prerequisite: ILRLE 240 or ECON 314. G. Boyer.

Examines the anatomy of the Great Depression through the experiences of the two most important economies of the time: the United States and Great Britain. Also examines the development of macroeconomic policy in the United States and Britain in the 1920s and 1930s and its evolution in the postwar world, culminating with the decline of Keynesian-style demand management policy under Reagan and Thatcher.

ILRLE 495(4950) Honors Program

Fall and spring (yearlong). 4 credits each semester.

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRLE 497–498(4970–4980) Internship

Fall and spring. 4 and 8 credits.

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRLE 499(4990) Directed Studies

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRLE 540(5400) Labor Economics

Fall. 3 credits. Requirement for M.I.L.R. candidates. Prerequisites: ECON 101–102 or equivalent. G. Fields.

Course in labor market economics for prospective managers in the corporate, union, and governmental sectors. Begins with demand and supply in labor markets, presenting the tools of decision analysis for workers and firms. It then goes on to consider various topics for managers including deciding on the optimal mix of capital and labor to employ; attracting and retaining talent; pay and productivity; hiring and training investments; and pensions and retirement. The final section of the course covers other important labor market issues including unemployment, discrimination, poverty and inequality, and analysis of public policies.

[ILRLE 544(5440) Labor Market and Personnel Economics]

4 credits. Offered only in New York City for M.P.S. program. Not offered 2005–2006. Staff.

Four-module course in which the first module covers the basic elements of supply and demand in the labor market, the second and third modules cover the "new personnel economics" (emphasizing economic issues in a firm that relate to selecting, training, assigning, motivating, and compensating workers), and the final module covers key institutions and economic security issues (including unemployment, pensions, disability, discrimination, and unions). The goals of this course are for students to learn to analyze both business and public policy problems, taking into account both basic principles of economic theory and the relevant institutional environments.]

ILRLE 642(6420) Economic Analysis of the Welfare State (also ECON 460[4600])

Fall. 4 credits. R. Hutchens.

Uses the tools of public economics to analyze modern welfare states. Although examples are drawn from several countries, the course focuses on the United States, Canada, and

Sweden. What are the rationales for the level of government intervention in these states, and how do these rationales square with notions of market failure? What are the economic costs and benefits of taxes, transfers, and regulations in these states? Can voting models explain the growth and operation of welfare states? The possible answers to these questions are discussed.

ILRLE 648(6480) Economic Analysis of the University (also ECON 342[3420])

Fall. 4 credits. Staff.

Seeks to illustrate the complexity of decision making in a nonprofit organization and to show how microeconomic analysis in general, and labor market analysis in particular, can usefully be applied to analyze resource allocation decisions at universities. Topics include financial aid, tuition, admissions policies, endowment policies, faculty salary determination, the tenure system, mandatory retirement policies, merit pay, affirmative action, comparable worth, collective bargaining, resource allocation across and within departments, undergraduate versus graduate education, research costs, libraries, athletics, and "socially responsible" policies. Lectures and discussions of the extensive readings are supplemented by presentations by Cornell administrators and outside speakers who have been engaged in university resource allocation decisions or have done research on the subject.

ILRLE 740(7400) Social and Economic Data (GR RDC) (also INFO 447[4470])

Spring. 4 credits. J. Abowd.

Teaches the basics required to acquire and transform raw information into social and economic data. Graduate materials emphasize methods for creating and certifying laboratories in which data privacy and confidentiality concerns can be controlled and audited. Legal, statistical, computing, and social science aspects of the data "manufacturing" process are treated. The formal U.S., Eurostat, OECD, and UN statistical infrastructure are covered as are major private data sources. Topics include basic statistical principles of populations and sampling frames; acquiring data via samples, censuses, administrative records, and transaction logging; the law, economics, and statistics of data privacy and confidentiality protection; data linking and integration techniques (probabilistic record linking; multivariate statistical matching); analytic methods in the social sciences. Graduate students are assumed to be interested in applying these techniques to original research in an area of specialization, and are required to do individual projects.

ILRLE 741(7410) Applied Econometrics I (also ECON 748[7480])

Fall. 4 credits. Prerequisite: graduate core sequence in econometrics or permission of instructor. S-U or letter grades. G. Jakubson.

Considers methods for the analysis of longitudinal data, that is, data in which a set of individual units are followed over time. Focuses on both estimation and specification testing of these models. Students consider how these statistical models are linked to underlying theories in the social sciences. Course coverage includes panel data methods (e.g., fixed, random, mixed effects models) factor analysis, measurement error models, and general moment structure methods.

ILRLE 742(7420) Applied Econometrics II (also ECON 749[7492])

Spring. 4 credits. Prerequisite: ILRLE 741 or permission of instructor. Letter or S-U grades. G. Jakubson.

Continues from ILRLE 741 and covers statistical methods for models in which the dependent variable is not continuous. Covers models for dichotomous response (including probit and logit); polychotomous response (including ordered response and multinomial logit); various types of censoring and truncation (e.g., the response variable is only observed when it is greater than a threshold); and sample selection issues. Includes an introduction to duration analysis. Covers not only the statistical issues but also the links between behavioral theories in the social sciences and the specification of the statistical model.

[ILRLE 743(7430) Applied Econometrics III]

Spring. 4 credits. Prerequisites: ILRLE 741-742 or permission of instructor. ILRLE 741, 742, and 743 constitute Ph.D.-level sequence in applied microeconomics. Letter grades only. Not offered 2005-2006. G. Jakubson.

Covers topics not covered in ILRLE 741-742, including further development of duration analysis, panel data methods for nonlinear models, quantile regression and related techniques, and an introduction to nonparametric and semiparametric methods. Additional topics as suggested by their use in applied areas of social science. Covers not only the statistical issues but also the links between behavioral theories in the social sciences and the specification of the statistical model. Also develops a general framework for the techniques covered in the ILRLE 741-742-743 sequence.]

ILRLE 745(7450) Seminar in Labor Economics I (also ECON 742[7420])

Fall. 3 credits. Note: ILRLE 744, 745, and 746 constitute Ph.D.-level sequence in labor economics.

Includes reading and discussion of selected topics in labor economics. Stresses applications of economic theory and econometrics to the labor market and human resource areas.

ILRLE 746(7460) Seminar in Labor Economics II (also ECON 743[7430])

Spring. 4 credits. Note: ILRLE 744, 745, and 746 constitute Ph.D.-level sequence in labor economics.

Includes reading and discussion of selected topics in labor economics. Stresses applications of economic theory and econometrics to the labor market and human resource areas.

[ILRLE 747(7470) Economics of Education (also ECON 647[7470])]

Spring. 4 credits. Prerequisite: economics and labor economics Ph.D. students or permission of instructor. Not offered 2005-2006. R. Ehrenberg.

Survey of the econometric research on a wide variety of higher education issues. Topics at the higher education level include public and private funding, financial aid and tuition policies, faculty labor markets, and Ph.D. production. Topics at the elementary and secondary level include school finance policies, the class-size debate and teacher labor markets.]

[ILRLE 748(7480) Economics of Employee Benefits]

Fall. 4 credits. Not offered 2005-2006. Staff. Students attend the lectures in ILRLE 442 (see description for 442) but have additional course requirements. If enrollment warrants, they also meet separately at a time TBA for discussion of topics in 442 and additional topics.]

ILRLE 749(7490) Economics of Development (also ECON 772[7720])

Spring. 4 credits. Prerequisites: first-year graduate economic theory and econometrics. Staff.

Takes analytical approaches to the economic problems of developing nations. Topics include old and new directions in development economics thinking; the welfare economics of poverty and inequality; empirical evidence on who benefits from economic development; labor market models; project analysis with application to the economics of education; and development policy.

ILRLE 790(7900) ILR M.P.S. Program

Fall and spring. 1-9 credits. Supervised research only for those enrolled in the ILR M.P.S. program.

ILRLE 798(7980) Internship

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRLE 799(7990) Directed Studies

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRLE 940(9400) Workshop in Labor Economics

Fall and spring. 3 credits. Intended for Ph.D. students who have started to write their dissertations.

Presentations of completed papers and work in progress by faculty members, advanced graduate students, and speakers from other universities. Focuses on the formulation, design, and execution of dissertations.

ORGANIZATIONAL BEHAVIOR

P. Tolbert, chair (379a Ives Hall, 255-9527); S. Bacharach, J. Goncalo, M. Haas, T. Hammer, E. Lawler, M. Lounsbury, W. Sonnenstuhl

ILROB 170(1700) Introduction to Micro Organizational Behavior and Analysis: The Social Psychology of the Workplace

Fall. 3 credits. Staff.

Introductory (survey) course considering the basic individual and group processes in the workplace. At the individual level, students study personality, motivation, perception, attitude formation, and decision making. On the group level, group dynamics, leadership, power and influence, and culture are emphasized.

ILROB 171(1710) Introduction to Macro Organizational Behavior and Analysis

Spring. 3 credits. Staff.

Discusses the relationship between industry and the economy as a whole and its implications for other social institutions in American society (including stratification, politics, and American values). The course moves from classical sociological theory to the analysis of complex organizations. The central focus is the study of industrial

organizations and of complex organizations in general, emphasizing authority relations, goals, the division of labor, bureaucracy, and organizational design.

ILROB 175(1750) Behavior, Values, and Performance

Fall and spring. 3 credits. Not open to ILR students. Staff.

Examines the modern technology-based organization as a workplace. With global competitive dynamics as a backdrop, the course explores how organizational structures, processes, and practices have evolved to meet environmental challenges and will define the behavioral implications of those changes for practicing engineers and designers and managers who work with them. Interpreting such changes and building a capacity for professional effectiveness in this environment requires students to develop a working familiarity with an array of social and behavioral science literature, dealing with such matters as personal identity, motivation, and job design; creativity and the organizational enablers to innovation; group dynamics and project effectiveness; perception, communication, and cross-cultural understanding; and ethical decision making in a high-stress environment. The teaching cases/situations used reflect the orientation of the course toward technology-based organizations.

ILROB 320(3200) The Psychology of Industrial Engineering

Fall. 4 credits. T. Hammer.

Study of the human factors in the industrial engineering of work, workplaces, tools, and machinery. Examines the aspects of individual and social psychology that operate in the work setting and that should be taken into account in the design of jobs. These include limitations of the human sensory system; individual difference in skills, abilities, motives, and needs; group dynamics; intrinsic motivation; job satisfaction; and conflict.

ILROB 321(3210) Group Solidarity (also SOC 311[3110])

Fall. 4 credits. M. Macy.

What is the most important group that you belong to? What makes it important? What holds the group together, and how might it fall apart? How does the group recruit new members? Make and enforce rules? Do some members end up doing most of the work while others get a free ride? This course explores these questions from an interdisciplinary perspective, drawing on sociobiology, economics, and social psychology. Alternative theories of group solidarity are applied to a series of case studies such as urban gangs, spiritual communes, the civil rights movement, pro-life activists, athletic teams, work groups, and college fraternities.

ILROB 322(3220) Service Learning (also SOC 323[3230])

Fall. 4 credits. M. Lounsbury.

Course-based, credit-bearing educational experience in which students participate in organized service that contributes to community well-being. Students reflect on the service to gain further understanding of course content, a broader appreciation of the discipline, and an enhanced sense of civic responsibility. The course includes a service-learning requirement that is designed to involve students in projects at local governmental and community organizations. Students draw on sociological

readings to examine the relationship between organizations, society, and social change. Theoretical perspectives learned in class complement field-based activity; students develop a richer understanding of how organizations and their members are connected to society.

ILROB 329(3290) Organizational Cultures

Fall or spring. 4 credits. Prerequisite: one or more courses in OB and/or sociology. W. Sonnenstuhl.

Reviews the concept of culture as it has evolved in sociology and anthropology, applying it to formal organizations in workplaces such as corporations and unions. The course first examines the nature of ideologies as sense-making definitions of behavior, concentrating on the cultural forms that carry these cultural messages, rituals, symbols, myths, sagas, legends, and organizational stories. Considerable attention is given to rites and ceremonials as a cultural form in organizational life that consolidates many of these expressive forms into one. The course examines types of ceremonial behavior such as rites of passage, rites of enhancement, and rites of degradation, including the role of language gestures, physical settings, and artifacts in ceremonial behavior. The presence of subcultures and countercultures in organizational behavior also receive attention, especially the part played by occupational subcultures in formal organizations.

ILROB 370(3700) The Study of Work Motivation

Fall. 4 credits. Prerequisite: junior or senior standing. T. Hammer.

Designed to acquaint students with the basic concepts and theories of human motivation with implications for job design and organizational effectiveness. Focuses on theories of worker motivation and on research approaches and results as they apply to the performance of individuals and groups in formal organizations. Readings are predominantly from the field of organizational psychology, supplemented by relevant contributions from experimental and social psychology. Each student designs, executes, and analyzes a research study of his or her own.

ILROB 420(4200) Contemporary Organizational Behavior Applications

Fall or spring. 4 credits. Prerequisites: ILROB 170 and 171. L. Gasser.

Explores current practical applications of OB theory in organizations. Using a range of contemporary resources, students sift through practitioner articles and research; manage discussions; meet with managers, consultants, and employees; and explore organizational issues and problems from micro and macro perspectives in a political and legal context. Students also develop a toolbox of knowledge and skills to effectively carry out several organizational interventions or development initiatives. Choice of topics may differ to focus on contemporary issues such as emotional intelligence, influencing organizational climate and morale, engaging strategic planning processes, managing large-scale participative techniques, using job or workplace design concepts, applying SWOT analysis, developing effective teamwork, managing diversity, and applying quality management tools.

ILROB 422(4220) Organizations and Deviance

Fall or spring. 4 credits. Limited to 60 students. W. Sonnenstuhl.

Focuses on the deviant actions of organizations, including such behaviors as price fixing, environmental pollution, illegal campaign contributions, and discrimination in hiring and promotion. Examines the origins of such behaviors in organizations, the processes by which they became institutionalized, and the processes by which they become defined as deviant organizational actions. Within this context, the course examines such contemporary cases as Exxon's Valdez oil spill, Iran-Contragate, drug testing, and the federal savings and loan scandal. These events raise troubling questions about what it means to live and work in an organizational society, and they cannot be dismissed as instances of a few individuals gone bad.

ILROB 425(4250) Seminar in Organizational Culture

Spring. 4 credits. Limited to 20 students.

Prerequisite: ILROB 329 (3290) and permission of instructor. W. Sonnenstuhl. Expands on the theoretical ideas developed in the earlier course through more focused reading, intensive fieldwork, and paper writing. Students are accepted into the seminar based on their research projects for ILROB 329 and work with the professor to develop a more detailed reading list and more focused data collection strategy for expanding upon their earlier projects. The seminar also is taught as an intensive writing experience.

ILROB 426(4260) Managing Creativity

Fall. 4 credits. J. Goncalo.

Although most people can agree that creativity is an important concept, there is often very little agreement about what creativity is and how we can achieve it. This course surveys basic theories of creativity with the goal of applying this knowledge to the management of creativity in organizations. It focuses primarily on (1) cognitive theories about creative thought, (2) personality theories about exceptionally creative individuals (3) social-psychological theories about creative groups, and (4) the points at which these approaches interact. The course concludes by questioning whether, given the costs involved, anyone would willingly follow the path of a creative individual or implement the practices of the most innovative firms.

ILROB 427(4270) The Professions: Organization and Control

Fall. 4 credits. Prerequisite: permission of instructor. P. Tolbert.

Focuses on the sources of power and control exercised by professional groups in contemporary society. A number of issues are examined in this context, including the role of professions in society, processes through which an occupational group becomes defined as a profession, sources of control that professional associations have over their members, relations between professionals and nonprofessionals in organizations, and the relationship between unionization and professionalization of occupations.

ILROB 428(4280) Blue-Collar Work in America

Spring. 4 credits. Prerequisites: ILROB 170, 171. S. Bacharach and W. Sonnenstuhl.

Although America is often described as a post-industrial society in which service jobs predominate, the term "blue collar" remains

relevant for understanding workplace relationship and their consequences. This course examines the nature of blue-collar work in the 21st century. It takes an in-depth look at a number of blue-collar occupations to understand workers experiences. Special attention is paid to the manner in which management exercises control over blue-collar workers, the strategies workers use to gain greater discretion over their work, and the social and psychological consequences that follow from this struggle. This course uses lectures, readings, and interviews/discussions with blue-collar workers to illuminate workers' experiences. It uses long-distance learning technology to bring New York city-based blue-collar workers into the Ithaca classroom.

[ILROB 429(4290) Organizational Politics and Institutional Change

Spring, seven weeks. 2 credits.

Prerequisite: junior or senior standing; permission of instructor. Students should see instructor before first class. Not offered 2005-2006. S. Bacharach.

Examines the market, cultural, political, and structural forces that change the organizational "rules of the game," how those changes affect individuals and organizations, and the distortions that occur as individuals and organizations attempt to adjust to a new unstable order. Issues examined include power, corruption, dealmaking, rationality, uncertainty, and competition. Course requirements include completing a major research paper and leading a class discussion.]

[ILROB 470(4700) Group Processes

Fall. 4 credits. Prerequisites: ILROB 170 and 171 or equivalent; permission of instructor. Not offered 2005-2006. E. Lawler.

Review of theoretical approaches and selected research on group phenomena, including the formation of groups, the structure of group relations, and group performance. Specific topics include conformity and obedience, status and power relations, tactics of influence, solidarity and commitment, the management of emotion, the emergence and change of microcultures, and the role of groups in networks and organizations.]

[ILROB 472(4720) Applied Organizational Behavior

Fall. 4 credits. Prerequisites: ILROB 170 and 171. Not offered 2005-2006. S. Bacharach.

Introduces students to intermediate theory of organizational behavior. Concentrates specifically on teaching students to use organizational theories for analytical and applied purposes. Topics include organizational structure, work processes, organizational politics, organizational design, job design, incentive systems, and quality-of-work-life programs.]

ILROB 495(4950) Honors Program

Fall and spring (yearlong). 3 credits each semester.

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILROB 497-498(4970-4980) Internship

Fall and spring. 4 and 8 credits.

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILROB 499(4990) Directed Studies

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILROB 520(5200) Organizational Behavior and Analysis

Fall or spring. 3 credits. Staff.

Survey of concepts, theories, and research from the fields of organizational and social psychology as these relate to the behavior of individuals and groups in organizations. Job attitudes, motivation, performance, leadership and power, group formation, perception, and organizational climate. A preliminary course for advanced work in organizational behavior.

ILROB 525(5250) Organizational Behavior

Fall, spring. 4 credits. Offered only in New York City for M.P.S. program. Staff.

Applies theories and methods from the behavioral sciences to the analysis of behavior in organizations. Areas of study include classical and modern theories of organization and their underlying assumptions of human nature, the relationship between organizations and their environment, the role of power, politics, and decision-making in organizations, industrial history, and leadership culture.

ILROB 622(6220) Sociology of Markets

4 credits. M. Lounsbury.

Since World War II, the diffusion of markets in Asia, Eastern Europe, and Latin America as well as changes in the structure of Western economies has reinvigorated questions about how markets are socially structured. Drawing on the literature in economic sociology, this course explores the social, cultural, economic, and political factors that shape the emergence and dynamics of markets. Among the issues addressed are the social organization of markets, market discrimination, the cooperative aspects of market formation and functioning, the role of government and other institutional arrangements, the relationship of economic change to broader social forces such as social movements, and the shift toward globally market-oriented economies.

ILROB 624(6240) Dynamics of the Social Sector

Fall. 4 credits. M. Lounsbury.

Over the past couple of decades, the social sector has been undergoing a dramatic transformation. Standard solutions to social problems offered by public agencies and nonprofit organizations increasingly are being reconfigured by the entrance of new social enterprises that focus more on revenue generation than service provision. The emergence of this social entrepreneurship has been motivated by a combination of factors including the devolution of social services and related responsibilities from the federal government to state and local governments, as well as a general increase in financial pressures on public agencies and nonprofits. This course aims to provide students with a broad perspective on the historical evolution of the nonprofit sector, introduce students to the changing nature of the contemporary social sector, and explore the phenomenon of social entrepreneurship by examining a variety of new and creative ways in which social problems are being addressed.

[ILROB 625(6250) Conflict, Power, and Negotiation

Fall. 4 credits. Limited enrollment.

Prerequisite: senior or graduate standing; permission of instructor. Not offered 2005–2006. E. Lawler.

Theoretical seminar that adopts a power perspective on bargaining and conflict resolution. Examines how power relations and

power processes affect tactics in bargaining and also when power relations inhibit or promote conflict resolution. "Power" is viewed in the course as a capability, embedded in a social structure, and tactics are the action based on or using such power. The seminar gives an overview of several theoretical approaches to conflict and bargaining (e.g., rational choice, cognitive, social exchange) and places the power perspective in this context.]

ILROB 626(6260) Organizations and Social Inequality

Spring. 4 credits. P. Tolbert.

Examines the central role that organizations in industrial societies play in allocating income, status, and other resources to individuals. A variety of theoretical explanations of social inequality are examined, and the social policy implications of each are considered.

ILROB 627(6270) Leadership in Organizations

Spring. 4 credits. Prerequisite: graduate standing; seniors by permission of instructor. T. Hammer.

Examination of theories and research findings from the behavioral sciences that are relevant to leadership and the influence process in groups and organizations. Discusses personality, situational factors, intergroup processes, interpersonal perception as well as the motivation to both lead and follow. Explores the implications for leadership training, organization development, and action research.

ILROB 679(6790) Methods of Observation and Analysis of Behavior

Fall or spring. 4 credits. Limited to 25 students. Prerequisite: permission of instructor. W. Sonnenstuhl.

Focuses on qualitative methods and emphasizes learning by doing. Examines different approaches to the collection and analysis of data. Students learn a variety of data collection techniques for understanding individual and collective behavior, including participant observation, in-depth interviews, and working with archival materials. The course also emphasizes the constant comparative method as a basic technique for data analysis. This technique is the basis of such qualitative computer programs as Ethnograph and Nudist. Students conduct their own research projects. Students who wish to use qualitative methods either for a senior honors thesis, master's thesis, or doctoral dissertation are encouraged to take this course.

ILROB 721(7210) Advanced Micro Organizational Behavior

Spring. 3 credits. Staff.

Examines the historical development of psychological theories of organizational behavior and contemporary issues in micro organizational research. Emphasizes reading and analysis of primary source material.

ILROB 722(7220) Advanced Macro Organizational Behavior

Fall. 3 credits. Prerequisite: ILROB 520. Staff.

Examines the historical development of sociological theories of organizations and contemporary issues in macro organizational research. Emphasizes reading and analysis of primary source material.

ILROB 724(7240) Managing Social Influence

Fall. 3 credits. J. Goncalo.

Survey of basic theories of social influence and how they are applied (and sometimes misapplied) to managing people in organizations. Theories covered include social facilitation, social norms, group polarization, conformity and minority influence. Emphasizes the evaluation of certain popular management techniques in light of social influence processes.

ILROB 725(7250) Analysis of Published Research in Organizational Behavior

Fall. 3 credits. Prerequisites: ILROB 520 and one year of statistics. Staff.

Advanced research methods course that critically examines published research papers in the field of organizational behavior in terms of research design and method as well as theory.

ILROB 726(7260) Selected Topics in Organizational Behavior

Fall. 3 credits. Prerequisites: ILROB 520 and permission of instructor. Staff.

Advanced proseminar that seeks to develop an interdisciplinary perspective on selected topics in organizational behavior. The topics themselves change from year to year depending on participants' interests. Course is designed to allow students and the instructor to jointly pursue significant scholarly inquiry into one or more arenas of organizational theory. Emphasis is placed on exploring the relevance of tradition in related disciplines (e.g., anthropology, linguistics, philosophy, sociology) that may enrich our understanding of organizational life.

ILROB 728(7280) Theories of Motivation and Leadership

Spring. 4 credits. Prerequisite: ILROB 520. T. Hammer.

Introduction to basic concepts of human motivation in general, with particular emphasis on the theories that explain and predict work motivation. Students examine the empirical research that tests the validity of the theories and shows how and under what conditions different motivation models can be used for practice in work organizations. Several current microtheories of leadership and power and related research are examined. The disciplinary perspective employed is social organizational psychology, and the level of analysis emphasized is action and experience of individuals in groups.

ILROB 729(7290) Organizational Change and Intervention

Fall. 3 credits. Prerequisite: graduate standing.

Seminar concerned with planned and unplanned change in organizations. It is designed to analyze theory in practice. Particular attention is paid to the role of internal and external change agents. Students are encouraged to analyze contemporary changes such as mergers and acquisitions and workforce reductions. Participants submit weekly workforce journals.

ILROB 772(7720) The Social Construction of Economic Life

Spring. 3 credits. M. Lounsbury.

Drawing on the literature in economic sociology, this course emphasizes how economic activities are constituted and shaped by the social, cultural, and historical contexts in which they are situated. It surveys

various empirical and theoretical approaches used to study the genesis and influence of broader-scale organizational and institutional arrangements. Provides students with an opportunity to formulate and refine their own research questions and perspectives.

ILROB 776(7760) Globalization and Its Discontents: The Organizational Implications of Global Competition

Fall. 4 credits. Core course in master of engineering/manufacturing option degree program. Staff.

Aimed at helping students develop an understanding of organizations as complex social systems, and at helping them understand the behavioral implications of new manufacturing initiatives. Uses case studies to study the introduction of a variety of innovations in contemporary manufacturing firms, including manufacturing cells and teams, concurrent engineering, total quality management, and just-in-time material flow. Analyses emphasize the impact of such innovations on individuals' role definitions and relationships, organizations' communication requirements and patterns, group dynamics, leadership behaviors, labor relations, and human resource management systems.

ILROB 778(7780) Solidarity in Groups (also SOC 778(7780))

Fall. 3 credits. Not offered 2005-2006. E. Lawler.

Examines sociological and social psychological theories about how social solidarity or a "sense of community" comes about and is maintained in groups and organizations. Distinguishes emotional, normative, and instrumental bases for social solidarity and shows how these promote or inhibit subgroup formation in organizations, commitment of individuals to organizations, and organizational citizenship behavior.]

ILROB 790(7900) ILR M.P.S. Program

Fall and spring. 1-9 credits. Supervised research only for those enrolled in the ILR M.P.S. program.

ILROB 798(7980) Internship

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILROB 799(7990) Directed Studies

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILROB 920(9200) Organizational Behavior Workshop

Fall. 2 credits. Prerequisite: M.S. and Ph.D. candidates in department. All M.S. and Ph.D. candidates in department at work on their theses are strongly urged to enroll. S-U grades only. Staff.

This workshop is designed to provide a forum for the presentation of current research undertaken by faculty members and graduate students in the Department of Organizational Behavior and by invited guests. Each student is expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of his or her thesis research.

SOCIAL STATISTICS

T. DiCiccio, chair (358 Ives Hall, 255-8643); J. Bunge, P. Velleman, M. Wells

ILRST 212(2120) Statistical Reasoning

Fall and spring. 4 credits. Prerequisite: ILR undergraduates. P. Velleman and staff.

Introduction to the basic concepts of statistics and data analysis with applications, particularly to the social sciences. Focuses on descriptive methods, normal theory models, and inference procedures for univariate, bivariate, and multivariate data. Basic statistical designs, an introduction to probability, and applications of the Binomial and Normal distributions are considered. Estimation, confidence intervals, and tests of significance are introduced and discussed in detail for means and proportions of a single population and for differences between means and proportions of two populations. Also covers inference in the contexts of two-way contingency tables, correlations, and simple and multiple linear regression models. A statistics computer package is used throughout the course, both in class and for weekly homework assignments.

ILRST 310(3100) Statistical Sampling

Fall. 4 credits. Prerequisite: two semesters of statistics. J. Bunge.

Theory and application of statistical sampling, especially in regard to sample design, cost, estimation of population quantities, and error estimation. Assessment of nonsampling errors. Discussion of applications to social and biological sciences and to business problems. Includes an applied project.

[ILRST 311(3110) Practical Matrix Algebra

Fall or spring. 4 credits. Not offered 2005-2006. Staff.

Matrix algebra is necessary for statistics courses such as regression and multivariate analysis and for other research methods courses in various other disciplines. One goal of this course is to provide students in various fields of knowledge with a basic understanding of matrix algebra in a language they can easily understand. Topics include special types of matrices, matrix calculations, linear dependence and independence, vector geometry, matrix reduction (trace, determinant, norms), matrix inversion, linear transformation, eigenvalues; matrix decompositions, ellipsoids and distances, and some applications of matrices.]

ILRST 312(3120) Applied Regression Methods

Fall and spring. 4 credits. Prerequisite: ILRST 212 or equivalent. M. Wells and P. Velleman.

Reviews matrix algebra necessary to analyze regression models. Covers multiple linear regression, analysis of variance, nonlinear regression, and linear logistic regression models. For these models, least squares and maximum likelihood estimation, hypothesis testing, model selection, and diagnostic procedures are considered. Illustrative examples are taken from the social sciences. Computer packages are used.

ILRST 410(4100) Techniques of Multivariate Analysis

Spring. 4 credits. Prerequisite: ILRST 312 or equivalent; some knowledge of matrix notation. P. Velleman.

Discusses techniques of multivariate statistical analysis and illustrates them using examples from various fields. Emphasizes application, but theory is not ignored. Deviation from assumptions and the rationale for choices among techniques are discussed. Students are expected to learn how to thoroughly analyze real-life data sets using computer-packaged programs. Topics include multivariate normal distribution, sample geometry and multivariate distances, inference about a mean vector, comparison of several multivariate means, variances, and covariances; detection of multivariate outliers; principal component analysis; factor analysis; canonical correlation analysis; discriminant analysis; and multivariate multiple regression.

ILRST 411(4110) Statistical Analysis of Qualitative Data

Spring. 4 credits. Prerequisite: two statistics courses or permission of instructor.

T. DiCiccio.

Advanced undergraduate and beginning graduate course. Includes treatment of association between qualitative variates; contingency tables; log-linear models; binary ordinal and multinomial regression models; and limit dependent variables.

ILRST 499(4990) Directed Studies

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRST 510(5100) Statistical Methods for the Social Sciences I

Fall. 3 credits. Staff.

First course in statistics for graduate students in the social sciences. Covers descriptive statistics, probability and sampling distributions, estimation, hypothesis testing, simple linear regression, and correlation. Students are instructed on the use of a statistics computer package at the beginning of the semester and use it for weekly assignments.

ILRST 511(5110) Statistical Methods for the Social Sciences II

Fall and spring. 3 credits. Prerequisite: ILRST 510 or equivalent introductory statistics course. T. DiCiccio.

Second course in statistics that emphasizes applications to the social sciences. Topics include simple linear regression; multiple linear regression (theory, model building, and model diagnostics); and the analysis of variance. Computer packages are used extensively.

ILRST 515(5150) Statistical Research Methods

Fall or spring. 4 credits. Offered only in New York City for M.P.S. program. Staff. Students learn basic skills for conducting qualitative and survey research. They work through an introductory review course at home on their own time. After passing an exam, they attend a two-week immersion course in Ithaca taught by the on-campus faculty in July. Topics include an introduction to surveys and discrete analysis, basic regression, and integration of qualitative and quantitative research methods.

[ILRST 715(7150) Likelihood Inference

Fall. 3 credits. Prerequisites: graduate courses equivalent to ORIE 670 and 671. Not offered 2005-2006. Staff.

In most statistical models, exact distribution theory for testing hypotheses or constructing confidence intervals is either unavailable or

computationally cumbersome. Inferences are routinely performed by using large-sample approximations to the distributions of test statistics. This course provides a survey of some recent higher-order asymptotic approximations for likelihood-based methods of inference.]

ILRST 717(7170) Analysis of Longitudinal Data

Spring. 3 credits. Prerequisites: extensive knowledge of SAS; advanced linear models; probability and statistics (at level of text by Casella and Berger). Staff.

Comprehensive introduction to the analysis of longitudinal data. Involves three major components: a modeling component, an analysis component, and a diagnostic component. Linear and nonlinear mixed effects models are used for the modeling portion; likelihood and estimating function methodology are used for the analysis portion. Diagnostic tools for studying the validity of various assumptions are also developed. Modeling and methodology for the analysis of missing data are also incorporated in the curriculum. SAS is used extensively.

ILRST 799(7990) Directed Studies

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILR EXTENSION

Statewide

The following courses are open to participants in the Extension Division's statewide credit programs in labor studies and management studies. Extension offices are based in Buffalo, Albany, Rochester, Ithaca, New York City, and Long Island. These courses are not open to undergraduate or graduate students matriculated in the Ithaca ILR programs. Courses and course credits earned in Extension Division certificate programs are not automatically accepted as transfer credits or as a basis of admission to the resident ILR undergraduate and graduate programs in Ithaca. Student applications for course transfer are evaluated by the ILR school on an individual basis.

204(2040) Managing Conflict

Fall or spring. 3 credits. Staff. Provides students with opportunities to apply conflict resolution theory to specific situations, based on real-life problems that require resolution. Students examine situations, analyze the facts and perceptions driving the actors, and engage in applying communication, negotiation, and mediation techniques to reduce or eliminate the conflict.

205(2050) Oral Skills for Conflict Management

Fall or spring. 3 credits. Staff. Emphasizes development of oral communications skills required to successfully manage conflict both as a party to a dispute and as a third party who is charged with helping to resolve a dispute. Presents simulations to help the participants practice their skills.

206(2060) The Nature of Conflict

Fall or spring. 3 credits. Staff. Provides students with the conceptual foundation to engage in further study of conflict management and conflict resolution.

After taking the course, students are able to identify and describe types of conflict; identify the various sources of conflict; apply a conceptual model of conflict to interpersonal, organizational, and international conflict situations; describe conflict situations in terms of social psychological aspects using a "person perception" or "attribution" theoretical orientation; and identify their personal response styles to conflict.

209(2090) Leadership in Unions

Fall or spring. 3 credits. Staff. What role does leadership play in the vitality of the labor movement? Is there a crisis of leadership in contemporary unions? Does the political context of a democratic membership organization affect the quality of leadership? Will changing workforce demographics create a demand for increased leadership opportunities by women and minorities in their unions? This course examines theories of leadership including a comparison of leadership styles and skills in the context of changing needs of the labor movement. The dynamic relationship of leaders and followers is examined in regard to emerging internal union organizing strategies that aim to increase membership and to activate current members.

212(2120) Labor, Technology, and the Changing Workplace

Fall or spring. 3 credits. Staff. Technological changes are having a profound impact on both work and society. But what do these changes mean for workers and their unions? Is resisting technological change equivalent to obstructing progress? What can we do to influence how work is shaped and performed? These and other questions are the central concerns of this course. The course is divided into three sections: Skills, Technology, and the Labor Process; Industrial Change and Worker Responses; Four Historical Case Studies; Unions, Technology, and the Future of Work.

240(2400) Union Organizing

Fall or spring. 3 credits. Staff. Students learn which unions are organizing successfully today and which workers are joining unions. Through case studies, discussion, and in-class exercises, they learn about targeting, house calls, building rank and file organizing committees, how to talk union, inoculating against anti-union campaigns, legal aspects of organizing, and innovative ways to organize outside of government-run certification elections.

241(2410) Arbitration

Fall or spring. 3 credits. Staff. Study of the place and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of an arbitration hearing, and the preparation of an arbitration opinion.

242(2420) Public Sector Collective Bargaining

Fall or spring. 3 credits. Staff. Introduction to collective bargaining in the public sector. Examines the historical development of bargaining in public employment, the evolution of state and federal and bargaining theory and practices, as well as impasse resolution techniques frequently found in this sector. Special emphasis is given to developing an understanding of the

similarities and differences between public and private sector bargaining and how they have affected tactics and strategies employed by the parties.

245(2450) Public Sector Labor Law

Fall or spring. 3 credits. Staff. Survey and analysis of the New York State Public Employees Fair Employment Act and compares it with other state laws covering public employees. Examines the extent to which the law protects and regulates concerted actions by employees in the public sector. The intent is to study and understand the law as written but more important to understand how it has been interpreted by the courts of New York State in its application. Major emphasis is on employee and employer rights, including recognition and certification, improper practices, strikes, grievances, and disciplinary procedures of the New York State Public Employment Relations Board.

247(2470) Labor and the American Economy

Fall or spring. 3 credits. Staff. Helps the student understand how economic theories relate to the economic problems confronting the American citizen in general and the American union member in particular. Emphasis is placed on contemporary economic theories and how their proponents attempt to solve American economic problems.

248(2480) Employment Practices Law

Fall or spring. 3 credits. Staff. Considers laws and regulations that directly affect managers and employers. Students examine issues and laws such as Equal Employment Opportunity, Employee Retirement Income Security Act, Federal Wage and Hour Laws, Occupational Safety and Health Act, unemployment laws, and other topics. Students focus on the practical application of laws and their impact on the workplace.

250(2500) New York Workers' Compensation Law for Trade Unionists and Injured Workers

Fall or spring. 3 credits. Staff. There is a collective perception that the workers' compensation system in New York compounds an injured personal predicament with Byzantine responses that lead to despair. Unions and injured workers' organizations believe that, if properly empowered, they can be just as effective as lawyers in looking after their injured colleagues' claims. This course is structured to meet both of these realities. Students delve into every nook and cranny of New York Workers' Compensation law. The course is entirely practical. Skills teaching, how to present a case, decorum, ethics, and persuasiveness are built into the course. Experts on how the system really works are used.

251(2510) Principles and Practices of Management

Fall or spring. 3 credits. Staff. Presents the theory and processes of management with an emphasis on supervision. Includes management functions of planning, organizing, staffing, and evaluating. Presents concepts and theories and analyzes case studies. Emphasizes motivating people, exercising leadership, and effectively developing employees.

252(2520) Contract Bargaining

Fall or spring. 3 credits. Staff.

Examines the principles of contract bargaining, including bargaining environments and structures as well as standards used in bargaining. Students learn to prepare bargaining demands, cost economic items, draft noneconomic contract language, negotiate economic and noneconomic issues, and resolve a contract bargaining impasse. The course considers the impact of contract bargaining outcomes on workers, unions, employers, and the public.

253(2530) Contract Administration

Fall or spring. 3 credits. Staff.

Focuses on the role of the steward in administering the union contract in the workplace. Students evaluate grievance and arbitration contract clauses, the grievance procedure in practice, the role of the union steward, the role of local and international unions, negotiation of grievances, and preparation for arbitration. Students analyze the impact of grievance and arbitration procedures on workers, unions, and employers.

254(2540) Labor Law

Fall or spring. 3 credits. Staff.

Examines the principles of labor law by looking at social philosophy and the historical context of federal labor legislation from the 1930s. Students concentrate on major provisions of the National Labor Relations Act, examining how the National Labor Relations Board and the federal courts have interpreted the national labor laws. Discussion includes new directions in labor legislation and interpretation with consideration given to the impact of labor law on workers, unions, and employers.

255(2550) Labor History

Fall or spring. 3 credits. Staff.

Reviews American labor history from the perspective of workers' social dimensions of the development of the working class, reform and revolutionary movements, and the emergence of craft, industrial, and public employee unions. Includes a discussion of the development of trade union institutions and leaders, and the evolution of union political activities and collective bargaining. Special attention is paid to the involvement of women and minority workers with unions.

256(2560) Dispute Resolution

Fall or spring. 3 credits. Staff.

Examines third-party participation in dispute resolution in private and public sector collective bargaining. Develops dispute resolution methods in American labor relations; issues and practices in neutral, binding arbitration of grievances and mediation; conciliation; and fact finding procedures are discussed. Use of exclusive labor-management mechanisms to settle industry disputes is also examined.

259(2590) Union Administration

Fall or spring. 3 credits. Staff.

Focuses on the principles and practices of effective union administration. Students study the dynamics of democratic organizations and the development of organizational leadership. The course explores alternative methods of decision making and lines of responsibility. The legal obligations of unions and union officials are discussed and analyzed. The course also examines the structure and

evolution of relationships inside the labor movement.

264(2640) Contemporary Labor Problems

Fall or spring. 3 credits. Staff.

Survey of the major challenges that confront the American labor movement. Students are briefed on the background of each problem and discuss and analyze a broad range of solutions proposed by the experts.

367(3670) Safety and Health in the Workplace

Fall or spring. 3 credits. Staff.

Provides basic education and training in workplace safety and health. Focuses on applicable federal and state laws, standards for safety and health, industrial hygiene, and such health concerns as asbestos, radon, and AIDS. Practical experience is provided through workplace walk-through safety and health inspections and in use of industrial hygiene equipment to measure noise, temperature, humidity, airflow, and airborne toxins.

FACULTY ROSTER

Abowd, John M., Ph.D., U. of Chicago.

Edmund Ezra Day Prof. of Industrial and Labor Relations, Labor Economics

Applegate, Ronald, Ph.D., SUNY Binghamton. Lec., Collective Bargaining, Labor Law, and Labor History

Bacharach, Samuel, Ph.D., U. of Wisconsin. Jean McKelvey-Alice Grant Prof. of Labor Management Relations, Organizational Behavior

Batt, Rosemary, Ph.D., Massachusetts Inst. of Technology. Alice Cook Professorship in Women and Work; Assoc. Prof., Human Resource Studies

JOHNSON GRADUATE SCHOOL OF MANAGEMENT

ADMINISTRATION

Robert J. Swieringa, dean

L. Joseph Thomas, associate dean for academic affairs

Cathy S. Dove, associate dean for M.B.A. Program and administration

Richard A. Shafer, associate dean for corporate relations

Thomas B. Hambury, director of executive programs

Daniel Szapiro, director of Boardroom Executive M.B.A. Program

Natalie M. Grinblatt, director of admissions

Karin S. Ash, director of career services

Rhonda H. Velazquez, director of student activities and special events

Ann W. Richards, financial aid director and associate director of admissions

Kerwin-Michael Smith, college registrar

The Johnson Graduate School of Management prepares men and women for managerial careers in business. The school offers course work in many disciplines to provide potential managers with an understanding of the complexities of the professional world in which they operate and of the organizations of which they will become a part.

A bachelor's degree or its equivalent is required for admission to the two-year program leading to the master of business administration (M.B.A.) degree. Nearly half of the students have a background of undergraduate studies in arts and sciences, and about one-quarter in engineering. Five percent of the students begin their graduate training immediately after receiving their bachelor's degrees and the remaining 95 percent following work experience.

Combined degree programs allow highly qualified Cornell students to co-register in the school during their senior year, thereby earning a master's degree in less than the usual time.

The doctoral program, administered through the Graduate School, provides an advanced level of education in business for those who seek careers in teaching and research at leading universities.

More detailed information about these programs is available from the Office of Admissions and Student Affairs, Johnson Graduate School of Management, 111 Sage Hall.

Students in other graduate programs and undergraduate students registered with the university are welcome in most classes. See the Johnson School web site: www.johnson.cornell.edu/currentstudents/ for information on enrollment and a complete course roster.

UNDERGRADUATE ONLY

NBA 300(3000) Entrepreneurship and Enterprise

Fall, spring. 3 credits. Prerequisite: non-Johnson School students. Johnson School students, see NBA 564. D. BenDaniel.

Uses Cornell-developed case studies and lectures to address entrepreneurial management in start-up ventures and new-business development in existing companies. Topics include valuation of business, planning, obtaining resources, management of growth, and cashing out. Guest lecturers speak on specialized topics such as corporate and patent law, bankruptcy and workouts, leveraged buyouts, and valuations of businesses. Students team up to write and present business plans. The course attempts to integrate marketing, finance, operations, and human-resource topics in the context of high-growth business ventures.

NBA 471(4710) Cornell Management Simulation

Fall. 3 credits. Highly recommended: previous courses in accounting, finance, and marketing. S. Smidt.

Provides experience in managing a company and an investment portfolio in a realistic business environment. After initial training, small teams of students make periodic marketing, production, and finance decisions for one of five firms in the same industry (meeting at their convenience). At the beginning of the simulation, each team writes a strategic intent paper. Before the last decision is made, each team presents an analysis of its performance and strategy at a "board of directors" (BOD) meeting. The management component of the grade is based primarily on the stock market performance of the team's firm (relative to others in the industry). The team's strategic intent paper, its performance at the BOD meeting, and the contribution of team members are also considered. Each student actively manages stock portfolios of companies in two investment performances compared with performances of passive benchmark portfolios in the same industries.

COURSES FOR NON-JOHNSON SCHOOL STUDENTS

NBA 507(5070) Entrepreneurship for Scientists and Engineers

Fall, spring. 3 credits. Prerequisite: M.Eng., Ph.D., and M.S. students; priority given to seniors as undergraduates. J. Nesheim and G. Schneider.

Designed for mentored independent study, this course uses streaming video, guest speakers, distance learning, and special lectures/tutorials. There is no homework and few required class meetings. Work is focused on one project: Students form a start-up team, choose a technical business idea, and develop and found a business that can attract venture investors. Tutorial sessions with instructors

apply lessons to the team business plan. Students learn how high-technology ideas are converted into world-class businesses in venture-backed start-up companies and in new business development in existing companies. Slides take the student from idea to initial public offering. Grading is based on a final exam focusing on the video lectures, a written business plan, and its final presentation to a judging panel.

NBA 553(5530) Accounting and Financial Analysis for Engineers

Spring. 3 credits. Prerequisite: non-Johnson School students. J. D'Souza. Focuses on basic financial and managerial accounting and the economic and financial concepts that have a bearing on managerial decisions. The goals are to (1) give students a working knowledge of the accounting process and the value and limitations of the data that come out of the accounting information system; (2) familiarize students with key concepts in managerial accounting and the application of cost information to pricing and operating decisions; (3) promote an understanding of the use of economic theory in the evaluation of capital investment projects. The teaching methods consist of lectures and cases. Students are evaluated on the basis of exams.

NCC 550(5500) Financial Accounting

Fall, spring. 3 credits. Prerequisite: non-Johnson School students. Similar in content to M.B.A. core course NCC 500. Staff. Introductory accounting course that examines the subject from the viewpoint of users external to the organization. Topics include transaction analysis; the accounting cycle; financial-statement preparation, use, and analysis; revenue recognition and cost measurement; present value; and problems in financial-accounting disclosure.

NCC 553(5530) Marketing Management

Fall, spring. 3 credits. Prerequisite: non-Johnson School students. Similar in content to M.B.A. core course NCC 503. Staff. Addresses controllable and uncontrollable marketing variables that managers in multiproduct firms face in today's business environment. Topics include customer behavior, product planning, distribution, advertising and promotion, pricing, and competitive strategy.

NCC 554(5540) Management and Leading in Organizations

Fall, spring. 3 credits. Prerequisite: non-Johnson School students. Similar in content to M.B.A. core course NCC 504. Staff. Takes a resource-based approach to management by arguing that organizations should link their strategy to their internal resources and capabilities. Develops this theme by addressing (1) the strategic value of internal resources and capabilities; (2) the role of human resources and organizational behavior in formulating and implementing strategy; and (3) the importance of structure and the design of organizations in formulating and implementing strategy.

Topics include how firms create sustainable competitive advantage through internal resources and capabilities; best practices for managing people; effects of best practices on attitudes and behaviors; why putting the customer first is not necessarily best practice from a resource-based perspective; why organizational culture is central to organizational effectiveness; why the formal organizational chart and structure of an organization are important; how organizations innovate; how organizations change through re-architecture and re-engineering; what firms gain and lose through pursuing core competencies; and what firms gain through strategic alliances and networks. The course makes extensive use of case materials.

NCC 556(5560) Managerial Finance

Fall, spring, 3 credits. Prerequisite: non-Johnson School students. Similar in content to M.B.A. core course NCC 506. Letter grades only. Staff.

Introduces business finance through theory and case studies. Topics include stock and bond valuation, the capital budgeting decision, portfolio theory, the asset-pricing models, raising capital, capital structure, mergers and acquisitions, costs of capital, option pricing, and risk management. International applications are considered within each topic area. Grading is based on an exam, group case reports, homework, and class participation.

IMMERSIONS

Only the Johnson School offers learning immersion courses in manufacturing, managerial finance, investment banking, brand management, and entrepreneurship. Immersions offer a semester of continuous focus, real-world problem solving, and site visits to dozens of companies.

MFI—Managerial Finance Immersion

Prerequisite: NCC 506 with grade of B or better.

Specifically designed for students planning to pursue finance careers. Some students interested in nonfinance careers (including consulting) may wish to consider this course, but they should recognize that it is not specifically designed for this purpose. A major objective is to help students make more informed choices about how to launch their finance careers.

NBA 502(5020) Managerial Cost Accounting 3 credits.

NBA 506(5060) Financial Statement Analysis 1.5 credits.

NBA 549(5490) Managerial Finance—Practicum 1.5 credits.

NBA 558(5580) Corporate Financial Policy 1.5 credits.

NBA 565(5650) Corporate Governance 1.5 credits.

NBA 656(6560) Valuation Principles 1.5 credits.

NCC 508(5080) Managing Operations 2.5 credits.

NCC 504(5040) Managing and Leading in Organizations 2.5 credits.

IBI—Investment Banking Immersion

Prerequisite: NCC 506 with grade of B or better.

Specifically designed for students planning to pursue careers in investment banking. Inappropriate for students interested in following a finance career in nonfinancial industry or nonfinance careers (including consulting).

This course is designed to meld the practical and the theoretical aspects of the field. A great deal of interaction and discussion is expected between students, participating faculty, and visiting practitioners. While the course is designed to make its students more attractive as candidates for employment in the investment banking profession, and it is expected that some of the participating firms will be using their visits to identify candidates for summer internships, obtaining relevant summer internships remains the responsibility of the students.

NBA 500(5000) Intermediate Accounting 3 credits.

NBA 511(5110) Financial Modeling 1.5 credits.

NBA 516(5160) Introduction to Quantitative Portfolio Management 1.5 credits.

NBA 556(5560) Investment Banking—Practicum 1.5 credits.

NBA 558(5580) Corporate Financial Policy 1.5 credits.

NBA 656(6560) Valuation Principles 1.5 credits.

NCC 508(5080) Managing Operations 2.5 credits.

NCC 504(5040) Managing and Leading in Organizations 2.5 credits.

RS&T—Research, Sales, and Trading Immersion

Prerequisite: NCC 506 with grade of B or better.

Specifically designed for students planning to pursue careers in research (both buy-side and sell-side), sales, and trading, either at Wall Street firms (sell-side) or at buy-side firms such as mutual funds. Melds the practical and theoretical aspects of the field. A great deal of interaction and discussion is expected between students, participating faculty, and visiting practitioners. While the course is designed to make its students more attractive as candidates for employment in the investment management profession, and it is expected that some of the participating firms will use their visits to identify candidates for summer internships, obtaining relevant summer internships remains the responsibility of the students.

NBA 500(5000) Intermediate Accounting 3 credits. *or*

NBA 543(5430) Financial Markets 3 credits.

NBA 506(5060) Financial Statement Analysis 1.5 credits. *and*

NBA 516(5160) Introduction to Quantitative Portfolio Management 1.0 credit.

NBA 511(5110) Financial Modeling 1.5 credits. *or*

NBA 674(6740) Derivatives II 1.5 credits. *and*

NBA 673(6730) Introduction to Derivatives I 1.5 credits.

NBA 583(5830) Research, Sales, and Trading Practicum 1.5 credits.

NBA 627(6270) Fundamentals of Equity and Fixed-Income Markets 1.0 credit.

NBA 656(6560) Valuation Principles 1.5 credits.

NCC 508(5080) Managing Operations 2.5 credits.

NCC 504(5040) Managing and Leading in Organizations 2.5 credits.

SBM—Immersion in Brand Management

Limited enrollment. Prerequisites: NCC 500, 501, 502, 503, and 506; permission of instructor.

Full-time program for the semester; students are not able to take other courses concurrently. The course objective is to begin developing students to think and act like brand managers, some of the best trained and most upwardly mobile professionals in industry. It provides students with a unique opportunity to begin internalizing the concepts, principles, and tools necessary to achieve success in brand management. While the course focuses on managing traditional consumer brands, high-tech products, services, and global branding are also addressed. In-class methods consist of (1) academic and industry lecturers; (2) on-site visits with marketing and manufacturing professionals; (3) case and project discussions and presentations; and (4) a brand management simulation. Course requirements consist of (1) discussion of readings; (2) individual case write-ups and presentations; (3) group projects and presentations (including a capstone simulation); and (4) in-class exams. There is considerable off-campus travel for field study.

NBA 502(5020) Managerial Cost Accounting 3 credits.

NBA 620(6200) Marketing Research 3 credits.

NBA 624(6240) Brand Management—Practicum 4.5 credits.

NCC 508(5080) Managing Operations
2.5 credits.

NCC 504(5040) Managing and Leading in Organizations
2.5 credits.

SIM—Semester in Manufacturing

Limited enrollment. Prerequisite: NCC 501 and 506 for Johnson School students; permission of instructor.

Full-time program for the semester; students cannot take other courses concurrently. The course is concerned with the integration of technological, human-resource, logistical, and financial considerations to produce a manufacturing enterprise that can respond quickly and effectively to market requirements. The course is taught by a team of faculty and industrial practitioners, and much of the student work is team-oriented. There is off-campus travel for field study of various manufacturing plants.

NBA 502(5020) Cost Accounting
2.5 credits.

NBA 650(6500) Semester in Manufacturing Practicum
7.5 credits.

NCC 508(5080) Managing Operations
2.5 credits.

NCC 504(5040) Managing and Leading in Organizations
2.5 credits.

E&PE—Entrepreneurship and Private Equities Immersion

Comprehensive course that integrates the technical, strategic, and economic aspects of entrepreneurship; is the student's full course load for the semester. David J. BenDaniel, the Don and Margi Berens Professor of Entrepreneurship at the Johnson School, leads the faculty team for this immersion.

NBA 502(5020) Managerial Cost Accounting
3 credits.

NBA 519(5190) Responsible Entrepreneurship
1.0 credit.

NBA 532(5320) Due Diligence in Private Equity Investments
0.5 credit.

NBA 535(5350) Special Readings in Private Equity
0.5 credit.

NBA 559(5590) Venture Capital Industry
0.5 credit.

NBA 564(5640) Entrepreneurship and Private Equity—Practicum
3 credits.

NBA 653(6530) Strategic Alliances
1.0 credit.

NBA 656(6560) Valuation Principles
1.5 credits.

NCC 508(5080) Managing Operations
2.5 credits.

NCC 504(5040) Managing and Leading in Organizations

2.5 credits.

NCC COMMON CORE COURSES

NCC 500(5000) Financial Accounting

Fall. 2.5 credits. Johnson School core course. Limited enrollment. R. Libby. Introductory accounting course that examines the subject from the viewpoint of users external to the organization. Topics include transaction analysis; the accounting cycle; financial-statement preparation, use, and analysis; revenue recognition and cost measurement; present value; and problems in financial-accounting disclosure.

NCC 501(5010) Statistics for Management

Fall. 2.5 credits. Johnson School core course. Limited enrollment. J. McClain. Introduction to decision making under conditions of uncertainty. Topics include descriptive statistics, probability theory, classical statistics, statistical decision theory, and simple and multiple regression analysis. Applications in finance, marketing, and operations management are discussed.

NCC 502(5020) Microeconomics for Management

Fall. 2.5 credits. Johnson School core course. Limited enrollment. R. Hilton. Introduces microeconomic theory and applies it to problems faced by managers. Topics include supply and demand, consumer behavior, pricing when a firm has market power, and the role of contracts. The course employs a lecture format and emphasizes problem solving. Grading is based on a midterm and a final exam.

NCC 503(5030) Marketing Management

Fall. 2.5 credits. Johnson School core course. Limited enrollment. D. Stayman and E. Eisenstein. Designed to convey the key concepts of marketing and how they fit into the larger context of management strategy and decisions. Presents both the practical "how" and the fundamental "why" of marketing activities in the light of contributions from behavioral science, economics, and statistics. The goals are to provide sufficient understanding for those who need only to interact with the marketing function, as well as communication concepts and developing processes that can provide the foundation for further course work and future experience in marketing. The course makes extensive use of case materials.

NCC 504(5040) Managing and Leading in Organizations

Spring. 2.5 credits. Johnson School core course. Limited enrollment. E. Mannix and K. O'Connor.

Stories are central to how we know and remember events, people, and facts and to how we communicate knowledge and history. Most of the jobs we aspire to involve a particular form of story-telling—the CEO's vision, the analyst's report, the planner's strategy, the salesperson's pitch, the consultant's analysis, and the manager's brand. What distinguishes these as business stories is that they are often analytical (based on a set of objective facts and statistics) and reflect a deep understanding of the complex interactions of individuals and organizations.

This course has two goals: (1) to make students appreciate the complexity of the issues that often arise in organizations, and (2) to develop and refine students' analytical story-telling abilities. To achieve these goals, the course is taught by the case-study method, an efficient way to expand the student's experience base with respect to such issues as motivation, power, leadership, ethics, structure, design, and change. Students learn how to make good inferences about what will and won't work in particular situations, and how to learn from their own experiences and those of others.

NCC 506(5060) Managerial Finance

Fall. 2.5 credits. Johnson School core course. Limited enrollment. Letter grades only. R. Michaely.

Introduces students to the basic concepts of finance. In particular, the course addresses what type of investments firms and individuals should take on and how these investments should be financed. Understanding these concepts is essential to financial managers and professional investors and has important applications to many aspects of financial decisions all of us have to make on a daily basis (e.g., is getting an M.B.A. a good investment?). These issues involve capital budgeting decisions, stock and bond valuation, how to assess and account for risk through the capital asset pricing model (CAPM), option pricing, capital structure and cost of capital, and market efficiency. Grading is based on exams, quizzes, group case reports, homework, and class participation.

NCC 508(5080) Managing Operations

Spring. 2.5 credits. Johnson School core course. Limited enrollment. Prerequisite: NCC 501 or permission of instructor. R. Zhang and L. Robinson.

Focuses on managing processes: actions that convert inputs into outputs. Almost any business function can be modeled as a network of processes. The first part of the course examines processes, both individually and as part of a larger system; students see that good process design reflects both the volume and the variety of the product. A common course theme is the deleterious effect of variability (in demand, supply, quality, or capacity) in complex systems. Queuing theory and simulation are particularly helpful for analyzing process capabilities. The second part analyzes how goods and services are produced. After describing the strategic role of operations, it examines forecasting systems, inventory management, and just-in-time and logistic management. Constrained optimization models provide information about managing with finite resources. The final part examines process improvement through quality and productivity management and corporate learning.

NCC 509(5090) Strategy

Fall. 2.5 credits. Johnson School core course. Limited enrollment. V. Kadiyali and J. Johnson.

Among the critical tasks facing any senior manager are the creation, implementation, and evaluation of a business unit's strategy. This course seeks to provide the management student with the tools and frameworks essential to carrying out these tasks. Many of these tools and frameworks are based on recent advances in game theory, industrial organization, and organization theory, although the course also draws from the

older business policy tradition. Students who successfully complete this course are able to analyze industries, identify areas of strategy advantage and disadvantage, and devise strategies that exploit advantages and remedy disadvantages.

NBA MANAGEMENT ELECTIVE COURSES

Accounting

NBA 500(5000) Intermediate Accounting

Spring. 3 credits. Prerequisite: NCC 500 or equivalent. M. Nelson.

Based on the essential concepts and terminologies of financial accounting introduced in the accounting core course. Students learn to evaluate financial statements through the use of case studies drawn from actual corporate financial reports.

NBA 502(5020) Managerial Cost Accounting

Fall, spring. 3 credits. Prerequisites: NCC 500, 501, and 502, or equivalent. R. Hilton and R. Bloomfield.

Designed both for those responsible for internal accounting information and those who use such information for decision making. Topics include budgeting, accumulating costs for product costing, activity-based costing, standard costs, the analysis of cost variances, cost estimation and prediction, cost-price-volume decisions, performance measurement, nonmanufacturing cost analysis, cost allocation, and transfer pricing. Instruction is a mixture of lecture and case discussion. Student evaluation is based on a midterm exam, a final exam, a project, and class participation.

NBA 503(5030) Strategic Cost Management

1.5 credits. R. Hilton.

Focuses on the role of cost management and related issues in helping a firm compete successfully in the global market. Topics include activity-based costing, activity-based management, value chain analysis, the lean enterprise, confronting competition in an industry dominated by lean enterprises, re-engineering, process value analysis, identification of non-value-added activities and costs, target costing, Kaizen costing, continuous improvement, time-based competition, cost versus quality, and benchmarking. The course is based almost entirely on cases, many of them lean enterprises in Japan.

NBA 506(5060) Financial Statement Analysis

Spring. 1.5 credits. Prerequisite: NCC 506, NBA 500 (or concurrent enrollment), or permission of instructor. Not open to students who have completed 3-credit version of NBA 506. S. Bhorraj and P. Hribar.

Develops a set of core skills essential to financial statement analysis. Covers strategic ratio analysis, cash flow analysis, pro forma financial statements, financial modeling, credit analysis, bond rating and bankruptcy predictions, and firm valuation using discounted cash flow techniques. Emphasizes practical applications. The course format is a combination of case studies and lectures. The

lectures communicate subtler aspects of the material while the cases provide hands-on experience. There is an exam.

NBA 509(5090) Advanced Financial Analysis

Fall. 1.5 credits. Prerequisites: NBA 506, finance immersion course, or permission of instructor. Not open to students who have completed 3-credit version of NBA 506. S. Bhorraj.

Builds on the core financial analysis skills developed in NBA 506. Topics include equity valuation, residual income models, quality of earnings assessments, earnings manipulation detection, market efficiency issues, fairness opinions in MBOs, and large sample stock screening strategies. The overall focus is on using accounting-based information to make investment decisions. Emphasis is on practical applications, and special attention is given to cultivating analytical and communication skills. Features both lectures and cases. There is a group term project but no final exam.

NBA 511(5110) Financial Modeling

Fall, spring. 1.5 credits. Prerequisites: NBA 506 or permission of instructor; mastery of basic Excel skills. P. Hribar.

Financial modeling is the art and science of constructing spreadsheet models of firms' future financial statements. This course builds on the brief introduction to financial modeling in NBA 506 by modeling the effect on the income statement, balance sheet, and statement of cash flows of more complicated financial transactions such as leveraged buyouts, mergers and acquisitions, and corporate reorganizations. The class meets in the state-of-the-art Parker Center computer lab, and active student participation is emphasized.

Economics

NBA 524(5240) Macroeconomics and International Trade

Fall. 3 credits. Prerequisite: NCC 502 or equivalent or permission of instructor. I. Azis.

Applies basic macroeconomic theory to such problems as inflation, unemployment, economic growth, and productivity and examines how those problems interact with international trade and finance. Students learn to be informed observers of national and international economic policies and discerning users of economic analyses and forecasts. Uses a lecture/discussion format.

NBA 527(5270) Applied Price Theory

Spring. 4 credits. R. Frank.

Emphasizes how economic analysis can help firms and individuals make the most of their opportunities. Of special interest to managers and consultants is the focus on examples that illustrate how faulty economic reasoning leads to inefficient outcomes. Also emphasizes strategic thinking and instructs students in the art of "economic naturalism"—the use of economic reasoning to understand and explain everyday patterns of individual and firm behavior.

Entrepreneurship

NBA 519(5190) Sustainable Business—The Challenge of the 21st Century

Fall, eight sessions. 1 credit. F. Keller.

Gives students an overview of the emerging sustainable business model. By examining current writings and comparing them to the actual experiences of the lecturer's own

business, students draw conclusions about how this business model could be employed in their individual career paths. Students learn that, in addition to traditional financial analysis, business decisions can benefit from considering the impacts of social and ecological capital. This so-called "triple bottom line" of sustainable business is so new that most information on the subject has been written in the past four years. Students read about actual cases and the logic of how this model has been constructed. There is dialogue about the advantages as well as the barriers and challenges of applying sustainable principles.

NBA 521(5210) Investing in Distressed Corporations

Fall. 1 credit. J. Rubin, R. Symington, and J. Hass.

Focuses on the burgeoning practice of investing in distressed companies. Once a backwater, this \$680 billion (face amount) field of finance is now a "must have" in virtually all institutional portfolios. In 2001 alone, \$63 billion of additional defaults entered this universe, with continued high inflows projected for the next few years. Corporate reorganization finance techniques are now necessary tools for individuals in a variety of other disciplines, as it is now highly likely that finance professionals and managers encounter distressed situations in their careers. Using a "bottoms-up" approach, the curriculum first seeks to develop the building blocks of this field: research, valuation, legal issues, and strategies. Issues such as target capital structure location, control/passive strategies, value creation through reorganizations/liquidations and new/old money plans are explored. These principles are then applied to real-world situations using case studies.

(NBA 525(5250) Social Entrepreneurship

Spring. 1 credit. Not offered 2005-2006. M. Lounsbury.

Social entrepreneurship involves blending nonprofit and for-profit logics to address problems in the social sector in novel ways. The emergence of social entrepreneurship has been motivated by factors including the devolution of social services and related responsibilities from the federal government to state and local governments, as well as a general increase in financial pressures on public agencies and nonprofits. Once perceived as part of the problem, business is increasingly embraced for its dynamism, market discipline, focus on efficiency, and as a source of innovation to reinvent how socially important goods and services are organized and delivered. This course aims to introduce students to social entrepreneurship by examining a variety of ways in which social problems are being addressed in new and creative ways. To encourage practical application, students are expected to participate actively in real-world case discussions.]

NBA 530(5300) Entrepreneurship Lab

Fall. 3 credits. Prerequisites: M.B.A. students; NBA 564 or concurrent enrollment or permission of instructor. G. Schneider.

Students team up with entrepreneurs in the greater Ithaca area on defined projects that are integral to the companies' operations, such as production planning, new product launches, or assessing organizational structure.

Students gain first-hand exposure to the application of functional knowledge in a start-up setting, while bringing real value to the host company.

NBA 531(5310) Venture Start-up

Spring, eight lec over two weeks. 1 credit. R. Ryan.

Short course by Professor Rob Ryan, founder of Ascend Communications and of Entrepreneur America, a boot camp for start-ups. Uses Ryan's book *Smartups*. The lectures contain analyses of various styles of entrepreneurship, ways of determining the viability of technical businesses and hints for negotiation with venture capital sources, among other important topics.

NBA 535(5350) Special Readings in Private Equity

Spring, four meetings. 0.5 credit. D. BenDaniel.

Covers the transformation of a public corporation to private equity to increase value. Discusses the advantages and disadvantages of private equity but focuses on financial models. These models show the economic advantages of private equity as well as how to achieve that status.

NBA 557(5570) Case Studies in Venture Investment and Management

Fall. 1.5 credits. F. Beste and Y. Hochberg. Consists of a series of cases that focus on the venture capital investment process and the subsequent management of such ventures. The primary perspective is that of the venture capitalist in assembling and evaluating information, preparing forecasts, assessing risks, developing and negotiating investment structure and terms, and deciding whether to invest. Cases also focus on management and financial problems and on policy issues and the relationship between venture capitalists and entrepreneurs. The secondary perspective is that of the entrepreneur and the techniques and skills employed in managing growing enterprises. Presentations by venture capitalists and entrepreneurs supplement student discussion and analysis of cases. Grades are based on written reports, quality of classroom participation, and a final exam.

NBA 559(5590) The Venture Capital Industry and Private Equity Markets

Spring. 0.5 credit. D. BenDaniel.

Focuses on the industry from the practitioners' perspective. Topics include (1) an introduction to the private equity market focusing on the transactions that define the industry, its structure, participants, history, and trends; (2) institutional private equity investing—now an increasingly important and dynamic part of the asset allocation mix; and (3) issues in private equity investing such as concentration in fewer, larger funds and the critical role of a new class of gatekeeper/consultants for limited partners. Involves four lectures and a final paper.

NBA 563(5630) The IPO Process and Deal Structure Alternatives

Fall, spring. 3 credits. Z. Shulman.

Gives students an in-depth look at initial public offerings and deal structures from a practitioner's point of view. With respect to initial public offerings, the course covers the applicable statutory framework, pre-offering corporate preparations, the due diligence process, the implementation of corporate governance policies appropriate for a public company, the offering registration process,

liability under federal securities laws, the Securities and Exchange Commission review process, underwriting arrangements, and selection of a trading forum. Regarding deal structures, the course explores choosing an appropriate transaction structure, deal financing alternatives, due diligence, public company transaction issues, and crucial legal aspects of the acquisition, such as caps/collars, letters of intent, successor liability, continuity of employees, and noncompetition agreements.

NBA 564(5640) Entrepreneurship and Private Equities

Fall, spring. 3 credits. D. BenDaniel.

Uses Cornell-developed case studies and lectures to address entrepreneurial management in start-up ventures and new-business development in existing companies. Topics include valuation of business, planning, obtaining resources, management of growth, and cashing out. Guest lecturers speak on specialized topics such as corporate and patent law, bankruptcy and work-outs, leveraged buy-outs, and valuations of businesses. Students team up to write and present business plans. The course attempts to integrate marketing, finance, operations, and human-resource topics in the context of high-growth business ventures.

NBA 653(6530) Strategic Alliances

Spring. 1 credit. J. Suwinski.

A wide variety of strategic alliances are being used today as companies try to leverage their resources for competitive advantage. This course gives an overview of the spectrum of alliances, examining the strategic rationale and pros and cons of each major type of alliance. The primary focus is on joint ventures as a specific form of strategic alliance, where the success rate is less than 50 percent. The course develops a set of principles that have contributed to success for Corning Incorporated. The course is taught from the perspective of the general manager of a major business unit.

NBA 678(6780) Lectures on the Venture Capital Industry

Spring. 1.5 credits. Prerequisites: NBA 564, 300, 401, or permission of instructor.

J. Bartlett and D. BenDaniel. Internet course with one classroom lec by Prof. Bartlett.

Focuses on venture capital financing, including the problems and issues facing emerging growth companies as they progress from early stage, start-up status to mature public companies. Emphasizes practical skills: hands-on examination, for example, of how deals are negotiated and valuations arrived at, the principal focus being the so-called Series A, or first professional, round of financing. Views the early stage space from three perspectives: (1) the entrepreneur, or founder, (2) the professional investors, or VCs, and (3) the key executives, i.e., the major players in emerging growth finance. Reviews economics, finance, tax, securities, corporate and employment law considerations, and custom and usage in the industry.

NBA 689(6890) Law for High-Growth Business

Fall, spring. 3 credits. Z. Shulman.

In-depth analysis of key issues that an emerging high-growth business must consider and address, including (1) choosing type of business entity, (2) protecting confidential information and inventions, (3) sources of capital (in

both bull and bear market environments), (4) understanding capitalization structures (e.g., common stock, preferred stock, warrants), (5) using stock options as employee incentives, (6) fundamental fair employment practices, (7) proper establishment and use of boards of directors and advisory boards, (8) technology licensing and commercialization, (9) negotiating relationships with distributors, resellers, and customers, (10) the Foreign Corrupt Practices Act, and (11) dealing with creditors.

Finance

NBA 512(5120) Applied Portfolio Management

Fall, spring. 3 credits each semester. Limited enrollment. Students must commit to taking course in fall and spring semesters.

Priority given to second-year M.B.A.s who successfully completed either NBA 506 or finance immersion. Students must apply formally; if number of applicants exceeds 12, admission is competitive and merit-based. B. Swaminathan.

Focuses on the management of an investment fund. For full description, see Charles Lee.

NBA 529(5290) Securities Analysis

Spring. 1.5 credits.

[NBA 539(5390) Essentials of Corporate Finance

Fall. 1.5 credits. Not offered 2005–2006.

H. Bierman.

Designed for students who want to understand the essential elements of corporate finance; at the same time lays the foundation for those who want to follow a career in corporate finance. Topics include preferred stock (PERCS) and (MIPS), cost of common stock equity, convertible debt, capital structure, the use of debt to add value, distribution policy, mergers and acquisitions, corporate restructuring, and private equity.]

NBA 540(5400) Advanced Corporate Finance

Fall. 1.5 credits. Prerequisite: NBA 539.

H. Bierman.

Relevant for both investment banking and the treasurer's activities of an operating corporation. Most class sessions are lecture-discussion, but there may be several corporate finance cases. Topics include debt securities (duration, convexity, inverse floaters, bond refunding, term structure), interest rate and other types of swaps, exotic new securities, financial strategies, and the buy versus lease decision. Investigates corporate financial policy decisions from a normative-quantitative point of view and develops skill in formulating financial models and evaluating models. Uses basic mathematics. The goal is to develop an approach to analyzing corporations' financing decisions.

NBA 542(5420) Investment and Portfolio Management

Fall, spring. 3 credits. Prerequisites:

NCC 501, 502, and 506; comfort with quantitative methods. H. Li.

Deals with several important issues pertaining to investments in securities markets. Covers (1) portfolio diversification theory, asset allocation, asset pricing models (e.g., CAPM and APT), and empirical anomalies such as size effect and January effect; (2) the issue of evaluating portfolio performance and mutual fund performance; (3) investment strategies based on patterns in historical security

returns (may be loosely considered technical analysis); (4) investment strategies based on publicly available information related to accounting and other market statistics and the use of earnings forecasts (may be considered as fundamental analysis); (5) frictions to trading imposed by the institutional structure of securities markets. The goal of this course is to train students in the latest tools and techniques in portfolio theory and familiarize them with the latest developments in securities market research and applications. This is a highly quantitative course involving extensive analysis of security market data using regression analysis and other statistical tools. Grades are based on midterm and final exams, cases, a project, and a trading game.

NBA 543(5430) Financial Markets and Institutions

Fall, spring. 3 credits. Prerequisite: NCC 506 (finance core). M. O'Hara.

Applies principles of finance to understand modern financial markets. Central themes are the structure of financial markets, their pricing function, the interaction between financial markets and macroeconomic conditions, and the processes of innovation and regulation in these markets. Students look at the workings of a variety of markets and develop an understanding of the different problems that different types of markets address. Studies the question of market efficiency and the interaction between government policies and financial markets. Analyzes issues in innovation and regulation with basic principles of financial economics. Throughout the course, the relevance of these issues for the practical corporate, portfolio, or public sector decision maker is considered. The course includes ideas and evidence from academic research along with historical, institutional, and international perspectives. Recent events are used to illustrate concepts and develop analytic skills. Spreadsheet assignments and a term project requiring data analysis develop research skills and illustrate academic concepts. Exams consist of computational, short answer, and short essay questions.

NBA 552(5520) Cases in Corporate Finance

Fall. 3 credits. Prerequisites: second-year MBAs and Twelve-Month Option (TMO) students; NCC 506 or equivalent. Recommended: NBA 540. Not open to students who took NBA 535 and/or 536, 1.5-credit version. H. Bierman.

Consists of discussions of corporate finance cases. In addition to the normal class sessions, students form groups and formally present one case and critique a second. Cases deal with mergers, acquisitions, valuation, corporate restructuring, LBOs, MBOs, merchant banking, and the financing of corporations. The material applies equally to careers in investment banking and managerial finance. The course does not deal with sales trading or the details of managing an investment banking firm. Several executives working in corporate finance present cases.

NBA 554(5540) International Finance

Spring. 3 credits. Prerequisite: NCC 506 (finance core) or permission of instructor. W. Bailey.

Applies principles of finance to the international setting. International finance is different in two basic respects: (1) the existence of multiple currencies adds risk to investment and financing decisions; (2) when

corporations and portfolio investors cross international borders, both problems and opportunities arise. This course focuses on these issues and highlights how finance theory can be extended to address them. Students apply the basic principles of international finance to a variety of problems. The course helps students understand the ideas and research results of international finance and adapt what they learn to the practical problems in the increasingly globalized business world. The first part of the course outlines exchange rate volatility, barriers to international capital flows, and the value of international diversification. The second part presents a variety of problems, examples, and applications from the three basic themes described in part one. Spreadsheet assignments and a term project requiring data analysis develop research skills and illustrate academic concepts. Exams consist of computational, short answer, and short essay questions.

NBA 555(5550) Fixed-Income Securities and Interest Rate Options

Fall. 3 credits. Prerequisites: NCC 506 (finance core), NCC 501 (statistics core). R. Jarow.

Designed to study the pricing, hedging, and risk management of fixed-income securities and interest rate derivatives. Topics include the term structure of interest rates, interest rate swaps (caps, floors, collars), the risk structure of interest rates, credit risk spreads, and corporate bond valuation. The method of instruction is lectures and discussion, and computer illustrations are an integral part of the course content.

NBA 558(5580) Corporate Financial Policy

Fall, spring. 1.5 credits. Prerequisite: NCC 506 (finance core). Y. Grinstein.

Provides an understanding of the financial decisions of corporations. Discusses the factors that affect corporate financial decisions and how they determine firms' financing, investment, and hedging policies. These factors include taxes, transaction costs, contracting (between managers and shareholders and between shareholders and other claimholders such as bondholders), and asymmetric information. Much of the material is presented using examples and cases designed to demonstrate how financial decisions create, destroy, or modify value.

NBA 565(5650) Corporate Governance

Spring. 1.5 credits. Prerequisites: NCC 506 and NBA 656 or permission of instructor. Y. Grinstein.

Deals with the ways in which different investors assure themselves of getting a return on their investments. How do investors get managers to return some of the profits to them? How do they make sure that managers do not invest their money in bad projects? These questions are extremely relevant for almost any organization, from start-ups to Forbes 500 companies. This course explores these issues through a series of case studies and examples. Topics depend on time availability. Career focus: M.B.A. students aspiring to top corporate offices, regardless of functional area, or envisioning a career in M&A/investment banking, financial management, or consulting firms.

NBA 655(6550) Advanced Valuations

Spring. 1.5 credits. Prerequisites: IBI immersion or written permission of instructor. B. Swaminathan.

Builds on the valuation principles course. Applies discounted cash flow (DCF) valuation and valuation by multiples using comparables to multinational contexts. Considers mergers and acquisitions, and multinational project and firm valuations, from the viewpoint of a U.S. manager. Discusses issues such as differences in parent and project cash flows, accounting differences, exchange risks, political risks, and valuation in developing countries. Examine the contingent claims valuation approach, with emphasis on flexibility in managerial decision-making. Focuses on the valuation of strategic options, growth options, and flexibility in capital investments using traditional and nontraditional option pricing techniques. Discusses valuation of growth options, expansion options, natural resource investments, land development, R&D, young-high-growth companies, etc., using the Black-Scholes option pricing model and its variants. Grading is based on cases, a valuation project involving a foreign company, and a final exam.

NBA 656(6560) Valuations Principles

Spring. 1.5 credits. D. Weinbaum.

Deals with the principles of valuation for publicly traded firms, divisions of publicly traded firms, or private firms that have publicly traded comparables, using discounted cash flow (DCF) valuation. The definitions of cash flow and discount rate depend on whether we want to value the entire firm or value only equity. Discusses (1) how to compute free cash flows based on historical income statements and balance sheets; (2) the concept of value drivers and economic value added (economic profits or residual income); (3) operating risk and financial risk, the relation between financial leverage and cost of capital, the leveraging and unlevering of equity betas, capital asset pricing model, computing cost of equity, cost of debt, cost of preferred stock, weighted average cost of capital, divisional cost of capital, etc. These concepts are applied; (4) to computing cost of capital. Introduces valuation by multiples using comparables and discuss its applications to valuing divisions of multibusiness firms.

NBA 673(6730) Introduction to Derivatives, Part 1

Fall, spring. 1.5 credits. Prerequisite: NCC 506 (finance core) or permission of instructor. X. Zhang.

Introduces students to the pricing and hedging of derivative securities. Briefly covers forward contracts, futures contracts, and swaps. The primary emphasis is on option contracts. Underlying assets include stocks, currencies, and commodities.

NBA 674(6740) Introduction to Derivatives, Part 2

Fall, spring. 1.5 credits. Prerequisite: NCC 506 (finance core) or permission of instructor. X. Zhang.

For description, see NBA 673.

General Management

[NBA 537(5370) Information in Markets

Spring. 1.5 credits. Not offered 2005-2006. R. Bloomfield.]

NBA 538(5380) Inclusive Leadership

Spring. 1.5 credits. P. Stepp.

Prepares students for leadership in diverse organizations of today and the future. Uses discussions and readings about accountability, fairness, stereotyping, mentoring, networking, and the impact of challenging assignments to help students become aware of ways they may discriminate against, judge, or exclude people, and to help students initiate and develop relationships with people different from themselves. The primary teaching methods are case studies, group activities, a diversity awareness profile, and written assignments that require students to reflect critically on situations where they felt excluded.

NBA 544(5440) Labor Economics for Managers

Spring. 1.5 credits. G. Fields.

Covers labor market economics in the corporate and nonprofit sectors. Begins with demand and supply in labor markets, presenting the tools of decision analysis for workers and firms. Considers various topics for managers, including hiring the right quantity and types of workers; identifying, attracting, and retaining top talent; individual labor supply decisions; and strategic budget constraints.

NBA 550(5500) Risk Management

Fall. 1.5 credits. R. Jarrow.

Studies advanced topics in derivatives and risk management. The first part of the course covers topics in derivatives and develops the tools necessary for analysis, and the second part covers their application to risk management.

NBA 560(5600) Business Law I (also AEM 320[3200])

Fall. 3 credits. Requirement for students intending to be professional accountants. Highly recommended for finance students. Prerequisite: junior, senior, or graduate standing. D. Grossman.

Introduces the basic tenets of law as they apply to businesses and their operations. Topics include personal property, contracts, agency, real property, and landlord-tenant concerns. Uses text readings and case studies.

NBA 561(5610) Business Law II (also AEM 321[3210])

Spring. 3 credits. Prerequisite: NBA 560 or permission of instructor. D. Grossman.

The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited-liability companies. The second portion covers selected topics in business law, such as employment discrimination, secured transactions, product liability, unfair competition, and international business law.

NBA 562(5620) Estate Planning (also AEM 422[4220])

Fall, 14 sessions. 1 credit. Prerequisite: junior, senior, or graduate standing. D. Grossman.

Covers law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and probate procedures.

NBA 567(5670) Management Writing

Fall, spring. 1.5 credits. Priority given to M.B.A. students; open to other graduate students and employee degree candidates if room. B. Mink, A. Pike, and C. Rosen.

Students learn to write clearly and effectively by focusing on the writing process as well as the finished product. Topics include audience perspective, style, organization, strategy, and persuasion. There is a writing assignment every week. Students receive instructor and peer feedback.

NBA 568(5680) Oral Communication

Fall, spring, seven weeks. 1.5 credits.

Priority given to M.B.A. students; open to other graduate students and employee degree candidates if room. B. Mink, A. Pike, and C. Rosen.

Focuses on improving the presentation skills of management students. Covers speaking formats (impromptu, extemporaneous, manuscript), delivery, organization, visual aids, and question/answer. Student speeches constitute the bulk of class time, with each student presenting seven or eight speeches. The small class size allows for significant individual attention. Students receive feedback from classmates and the instructor, and have the opportunity to review in tutorials the videotapes of most of their presentations.

NBA 569(5690) Management Consulting

Fall, spring. 3 credits. A. McAdams.

Case study-oriented course focusing on strategic consulting. Objectives are to (1) provide students with the opportunity to understand the role of the consultant and for them to gain indirect experience in that role through dealing with a broad range of practical and real-world issues; (2) help students improve their analytic skills through practice with case studies; (3) provide students with information that they are unlikely to gain in other courses, as well as experience in making group presentations and evaluating them. Students are required to write a comprehensive analytic term paper.

NBA 570(5700) Leadership in Management

Spring, five full-day training sessions.

1 credit; attendance required at each day of course to receive credit. Prerequisite: M.B.A. students. E. Mannix, RPW Executive Development, and other Johnson School faculty.

Partnership with RPW Executive Development to provide M.B.A. students with the self-awareness and interpersonal skills required to be effective leaders (the general principles of leadership course is NBA 668). The first two days focus on self-awareness and employ several experiential exercises and self-assessment instruments, including the Campbell Leadership Index (CLI), Myers-Briggs Type Indicator (MBTI), the Fundamental Interpersonal Relations Orientation-Behavior (FIRO-B), the Kirton Adaptation/Innovation inventory (KAI), and the Ambiguity Preference Scale (APS). Students are also trained in giving and receiving feedback from team members and faculty. Midweek activities consist of various leadership and team challenges, including a business simulation. Note: Most of the self-assessment instruments listed above need to be completed before the first day of class to allow for scoring and analysis.

NBA 571(5710) Cornell Management Simulation

Fall. 1.5 credits. Prerequisite: second-year M.B.A. students. Not open to students who have completed NBA 549. Letter grades only. S. Smidt.

This computer-based simulation is played by self-selected teams of four students who

make marketing, production, and finance decisions for one of five companies operating competitively in the same industry. After the first week, during which the rules of the simulation are explained and the software used by each team is demonstrated, the teams make periodic decisions (meeting at their own convenience). At the beginning of the simulation, each team writes a strategic intent paper and, before the results of the last decision have been determined, presents an in-depth analysis of its performance and its strategy for the future in a "board of directors" (BOD) meeting. Grades are based on the value created for the company's shareholders (relative to other firms in the same industry), the team's strategic intent paper, and the instructor's evaluation of team's performance at the BOD meeting. Meetings are periodic throughout the semester.

NBA 572(5720) Environmental Management Policy

Fall. 1.5 credits. D. Chapman.

The seminar assists participants in remaining current with the rapidly evolving state of the art in the analysis and management of environmental policy and practice in enterprises. Although it focuses on the private sector, it also gives attention to understanding the economic basis for government's role in environmental protection. Another focus is the analysis of the operational significance of the concepts of sustainability, ecoefficiency, and market-based environmental policies. Seminar speakers from finance, marketing, electricity, forest products, construction, and other businesses with environmental responsibilities meet with the class. Readings and Harvard Business School (HBS) case studies are distributed throughout the semester. Each student makes a case study of an individual enterprise or organization.

NBA 573(5730) Seminar in Sustainable Development

Spring. 1-3 credits, variable. A. McAdams.

Involves readings and discussion of issues in environmental management and features four significant outside speakers on the subject of environmental management. (Students interested in doing consulting projects in environmental management are accommodated in NBA 575 Management Projects.)

NBA 575(5750) Management Projects

Fall, spring (yearlong). 3 credits.

A. McAdams, J. Thomas, and R. Allen. Designed to apply consulting processes to real business projects. Students form consulting teams focused on specific strategic, process improvement, or operational problems in companies. A faculty member and the consultant in residence (CIR) advisers, are closely engaged in the teams' work. The teams meet with the faculty advisers weekly. Sessions focus on cross-team learning about the application of the consulting process to a variety of consulting engagements. The faculty adviser and/or CIR also meet as needed with each team to work through real-time issues presented by each consulting project. Projects include local small-business clients, not-for-profits, Big Red Incubator, and large national and multinational companies. At the end of the project, each student and team receive 360-degree feedback from the faculty adviser, CIR, the client, and other team members.

NBA 578(5780) Consulting Process

Fall, spring, half semester. 1.5 credits.
R. Allen.

Focuses on understanding and applying the basic consulting process by covering the elements of a consulting engagement, including selling the engagement, scoping the project, contracting with the client, forming the consulting team, creating consultant/client work teams, defining deliverables, developing a work plan, conducting analysis, creating a communication and change plan, managing the project, overcoming resistance and barriers, developing recommendations, presenting the deliverables/implementation plan, and developing potential follow-on work. The course is organized around a real client engagement, examining the consulting process from the perspective of the case. Several guest speakers from the consulting engagement add both client and consulting perspectives. The course is intended for students with no or limited consulting experience who have an interest in exploring consulting as a career or who want to sharpen their analytical and organizational change skills.

NBA 579(5790) Cases in Business Strategy

Fall. 1.5 credits. Prerequisite: second-year M.B.A. students. J. Suwinski.

Focuses on the process of effective strategy formulation from the perspective of the general manager of a business unit. Discusses corporate strategy and its interaction with business unit strategies; tools for industry and company analysis; and situational analysis. Complements the core strategy course, with emphasis on understanding and practicing frameworks that are useful in case-based interviews. Draws heavily on the instructor's experience developing strategy for numerous businesses at Corning Incorporated. Guest speakers from industry and strategy consulting firms and from industry present their approaches to strategy and discuss the analytical tools they find most effective in working on business strategy. Students gain experience, via assigned cases, in analyzing business problems/opportunities, using the strategic process to formulate effective business strategies, and in presenting their recommendations in written and oral form. A major case write-up and presentation in a mock board environment at the end of the course gives each student an opportunity to play the role of a strategy consultant working on a real case.

International Management**NBA 524(5240) Macroeconomics and International Trade**

Spring. 3 credits. I. Azis.

Applies basic macroeconomic theory to such problems as inflation, unemployment, economic growth, and productivity and examines how those problems interact with international trade and finance. Students learn to be informed observers of national and international economic policies and discerning users of economic analyses and forecasts.

NBA 548(5480) International Political Risk Management

Spring. 1.5 credits. E. Iankova.

When investments remain domestic political risks are easier for executives to understand and manage. International business opens executives to new forms of risk and to risks that are less well understood. New

political cultures, government instability, unpredictability in local tax and regulation regimes, corruption, civil unrest, globalization of trade and economic integration, increasing power of transnational social movements, and international terrorism have raised new challenges to foreign investors, and have demanded new management strategies. The aim of this course is to introduce students to the political risks involved in international business operations and to develop students' general understanding of the field of international political risk analysis and management. The course focuses on the various techniques used by risk assessment agencies in their attempt to assess and analyze political risks on a global scale, and on the various strategies used by foreign investors in their attempt to manage political risks. Through a combination of readings, lectures, and case discussions, the course further intends to develop practical skills in evaluating and assessing political risk on a global scale.

NBA 576(5760) World Geopolitical Environment of Business

Fall. 3 credits. J. Katz.

The geopolitical face of the world is changing at a pace that few could have envisioned even five years ago. The unification of Germany, the fall of communism and institution of sweeping economic restructuring in the former Soviet Union, the move toward democracy with market economies in eastern Europe, the movement of Europe toward a unified economy, and the flirtations with reform and its implications in China are just a few examples of the changing world environment of business. Topics include developments in western and eastern Europe, the former Soviet Union, the Pacific Rim, Central and South America, and the Middle East and the role and fate of developing countries in the world economy. Guest speakers include leading scholars from Cornell and other universities and leaders in business and government.

NBA 580(5800) Strategies for Global Competitiveness

Fall, spring. 3 credits. Can be used to fulfill strategy requirement. A. McAdams.

Initially, students explore the role of government in several private-market industrialized nations—Japan, France, Germany, the United Kingdom, and Italy—for lessons the United States might learn and use. Students investigate the impact in each of those countries of government policies on the global competitiveness of the country's firms. Special emphasis is given to differential policies appropriate to each of a range of industries, from the mature to the high tech (including computers, telecommunications, and electronics), and to stages of development in each economy. Possible lessons are then tested for less developed countries that might include Venezuela and Malaysia and newly emergent countries such as Singapore. Classes are run in a discussion format.

NBA 584(5840) International Competitive Strategy

Fall and spring. 1.5 credits. J. Katz.

Focuses on the development of competitive strategies in the global environment—including the identification of internationally relevant strengths and weaknesses, the movement and use of resources to gain competitive advantage, and strategies to confront competitors, both domestic and multinational.

NBA 586(5860) Cross-National Management

Fall. 1.5 credits. J. Katz.

Focuses on the differences in managerial style across countries and develops skills to deal with these differences. Most of the material is applicable to all countries, though two specific countries are highlighted each semester.

NBA 587(5870) International Mergers and Acquisitions

Spring. 1.5 credits. J. Hanks.

Addresses the principal business and legal issues in cross-border mergers and acquisitions, including forms and techniques of combining two businesses, negotiation, pricing and other economic terms, due diligence, issuance of securities, antitrust, duties of managers, and the resolution of employee and other social issues. The graded work is a written proposal for an M&A transaction between two existing companies in different countries prepared by small teams. Proposals are based on publicly available financial, business, legal, and other documents and data and any other information obtained. The goal of the written work is to simulate the process in which business people, investment bankers, and lawyers work together to structure transactions across national borders. The reading covers the basic business and legal issues most frequently encountered in international mergers and acquisitions. Class discussion occasionally refers to the reading but generally covers other issues.

NBA 590(5900) Business in Transition Economies

Fall, half semester. 1.5 credits. E. Iankova.

Explores business development and strategy in the transition economies of central and eastern Europe, Russia and the Commonwealth of Independent States, and China. Traces the divergence in the processes of political democratization and economic restructuring, with a special emphasis on marketization, liberalization, and privatization issues. Specifically examines the emergence and consolidation of new business organizations in the course of economic restructuring, as well as foreign investment trends and foreign investors strategies in various transition economies. More specific issues of entrepreneurship, management restructuring, marketing, enterprise employment relations and human resource management, as well as the impact of culture are also discussed. To understand better the pressures for change in the transition economies in their complexity and entirety, students become personally involved in case discussions of organizations and ventures operating in different transition countries and sectors of the economy.

NBA 592(5920) Experience in International Management

Fall, spring. 1.5 credits. Fee charged for required faculty-approved study trip.
J. Katz.

Combines classroom sessions and international experience with an increased awareness of business environments outside the United States. On trips, students visit local businesses, subsidiaries of foreign multinationals, government officials, local business school students, and others. Students also must attend two pre-trip meetings (1 1/4 hours each) and two Saturday meetings during spring semester (2 1/2 hours each). Those meetings are used to present information on international business conditions, industrial structures,

management styles, and also to develop cross-cultural skills. A final paper, integrating the material learned in the classroom with their experiences, is required.

NBA 593(5930) International Entrepreneurship

Spring. 1.5 credits. M. Goldman.
Venture capital firms, corporate venture funds, and "angels" have increased their financing in high-growth start-up activities outside of their countries of origin. This course provides an overview of the diffusion of entrepreneurship institutions outside of the United States vis-à-vis traditional forms of start-up finance (i.e., family backing, intrapreneurship). It also focuses on the process of selecting, financing, managing, and exiting venture capital deals abroad. The course is designed to provide practical insights through the participation of guest speakers involved in various stages of international entrepreneurship activities (e.g., European corporate funds in the United States, venture capital firms in Europe, U.S.-based venture capital, and "angel" initiatives investing abroad).

NBA 595(5950) Economics of Financial Crises

Spring. 1.5 credits. I. Azis.
Familiarizes students with the analysis of the causes, nature, and consequences of financial crises, and equips them with tools of analyses to better understand the economics of financial instability and alternative strategies for dealing with them. The first part of the course concentrates on financial instability/crisis by way of explaining the empirical episodes of the crisis in various emerging market countries, and elucidating the relevant theoretical concepts in each of the cases. The second part is devoted to discussions of post-crisis episodes, emphasizing the different paths of recovery and major policy responses to the crisis. The latter includes financial and monetary policies and the unsettled relationship between interest rates and exchange rates.

NBA 599(5990) Business in the European Union

Fall, half semester. 1.5 credits. E. Iankova.
Explores the impact of the process of European integration on business organization and strategy. The foundations, institutions, and common policies of the European Union are discussed first. The course further examines how the establishment of the Economic and Monetary Union and the 2004 enlargement to the east are shaping the strategies of multinational corporations with operations in Europe. To understand better the pressures for change in a "deepening" and "widening" European Union in their complexity and entirety, students become personally involved in problem-solving through issue and case discussions, such as determinants and policy of entrepreneurship in a European-U.S. comparison; corporate networks in a European-U.S. comparison; trade policy and the European Union's trade disputes with the United States; competition policy and Microsoft's antitrust battles in European courts; environmental policies and corporate sustainability issues in Europe; the common agricultural policy of the European Union and the impact of global trade talks on European farm subsidies; work conditions in Europe and the Wal-Mart experience with doing retail business in Europe; and a variety of other mini-cases.

NBA 625(6250) International Marketing

Fall. 1.5 credits. Recommended: background in core marketing. J. Katz.
Designed to train students to take a domestic product and successfully expand it into international markets. Discusses market selection, international market research issues, and international marketing strategies. The term project (submitted in three parts throughout the semester) requires students to choose a product and develop a plan for taking it abroad. Because each class includes cases, class preparation is essential. Grading is based on the term project, a final exam, and class participation.

NBA 642(6420) Global Corporate Citizenship

Spring. 1.5 credits. E. Iankova.
Through a combination of readings, lectures and case discussions, and specific individual and group assignments, this course introduces students to the various practices developed by multinational corporations in their attempt to redefine their role on a world stage as "global citizens"—actively participating in creating a safer, more humane, sustainable world. Students discuss in detail and debate the various manifestations of corporate citizenship, such as community engagement models, philanthropy and corporate social responsibility practices, respect for human rights and international labor standards, development of enhanced environmental policies and practices, creation of public/private partnerships and activities in corporate governance, and redefinition of business ethics on a global scale.

Management Information Systems

NBA 518(5180) Introduction to Data Management Systems

Spring. 1.5 credits. J. Gehrke.
Introduces modern data management systems and their use in the business context. Focuses on the capabilities of modern database systems and their role in the enterprise instead of going into technical detail. Topics include data models and modeling, query languages, transactions, database tuning, application servers, service-oriented and three-tier architectures, capacity planning, and data mining. Students perform several hands-on exercises involving a commercial database system.

NBA 600(6000) The Strategic Role of Information Technology

Fall, spring. 3 credits. D. Huttenlocher.
Beyond the hype surrounding the rise and fall of the dot-com era, information technology has had a wide-ranging impact on business activities. For instance, search costs and transaction costs have plummeted, while concurrently new ways of pricing and of organizing commercial transactions have emerged. Such changes are affecting how firms are managed as well as how they interact with their customers, employees, and business partners. This course explores how firms can use information technology to create business value and looks at strategies that can help ensure they capture part of that value. Examines small and large companies in a variety of industries, including financial services, travel, retail, software, and manufacturing. Prior knowledge of information technology is not presumed; relevant technologies are covered in class or

in assigned readings. The course format is a combination of lectures and cases.

NBA 601(6010) Electronic Commerce

Spring. 3 credits. Letter or S-U grades. L. Orman.
Electronic commerce, the use of information technology in conducting economic transactions and managing businesses over computer networks, has captured public attention because of its wide-ranging implications for businesses, markets, public institutions, and the general public. Electronic commerce involves a wide variety of cooperating technologies (e.g., communications, networks, databases, expert systems, and multimedia) and affects a wide variety of managerial issues. It created a new emphasis on information technologies and systems in management; led to the development of new technologies and new combinations of existing technologies to support management; and occasionally radically altered business practices and the role of management. Students in this course learn to conduct economic transactions and manage businesses on the Internet. All major technical and managerial issues are covered through computer exercises on the Internet and case studies and examples of businesses on the Internet.

NBA 608(6080) The Business of Biotechnology: Taxonomy and Analysis

Spring. 1.5 credits. B. Ganem.
Breakthrough scientific discoveries in biotechnology will continue to drive medical advances in the new millennium. As it now enters the post-genomic era, the field of biotechnology comprises some 1,400 U.S. companies having \$13 billion in worldwide sales and \$10 billion in research expenditures. This broad spectrum of biotech businesses presents numerous challenges to professional securities analysts attempting to track progress and map future growth in this sector. This course introduces JGSM students to the main scientific advances in modern biotechnology and life sciences research, with the dual goals of developing new organizational models of this corporate sector and helping students perform financial and business evaluations of current and emerging technologies more effectively.

NBA 612(6120) Disruptive Technologies

Fall. 3 credits. Priority given to students with technology of science backgrounds. Prerequisite: working knowledge of computers. D. Greenberg.
Begins by presenting historical technological advances that created major paradigm shifts for communications. Presents advances in computer technology emphasizing the fundamentals behind the increases in processing power, video and computer graphics capabilities, and network transmission. The second half of the course covers the effect of these scientific advances on many discipline-specific areas including photography, the film industry, the entertainment and animation industry, television broadcasting, publishing, and the computer industry itself. Sessions are devoted to the social and legal issues rising from the rapid advances in electronic communication. In attempting to predict the disruptive changes of the future, it is best to understand the technologies themselves. The course is especially tailored to a business school

and industrial concerns and has interactive live demonstrations at the state-of-the-art laboratory of the Program of Computer Graphics. No prior knowledge of computer science is required.

Management and Organizations

NBA 522(5220) Negotiations: The Global Perspective

Spring. 3 credits. Students must attend first class and all classes in which they negotiate. W. Adair.

Covers all the topics in NBA 666 with a focus on issues particular to an international setting. These include culture (e.g., its effect on strategy, goals, communication), government at the table, currency issues, and ethics. The capstone exercise is a two-party cross-cultural team negotiation matching a student's native culture with that of his or her classmates.

[NBA 538(5380) Inclusive Leadership

Spring. 1.5 credits. Not offered 2005-2006. P. Stepp.

Prepares students for the organizations of today and the future. Includes readings, discussions, and activities that explore diversity, barriers for nontraditional employees, and what is needed to change them. Assignments prepare students for inclusive leadership to address systemic barriers on organizational and personal levels. Students have the opportunity to work with major companies such as Lincoln Financial, Shell, Cigna, Citigroup, Merck, JP Morgan Chase, IBM, General Mills, Sun Microsystems, BMS, and Johnson & Johnson to explore these issues.]

NBA 663(6630) Managerial Decision Making

Fall. 3 credits. J. Russo.

Presents practical concepts from the behavioral sciences that can serve as guides to managerial action. Uses lectures, cases, and exercises to acquaint students with new perspectives on decision making, critical thinking, problem solving, and group processes. Taken together, these perspectives offer a trouble-shooter's guide to the uncertainty, complexity, and conflict in the business world.

NBA 666(6660) Negotiations

Fall, spring. 3 credits. Staff.

Judgment is the art and science of transforming perception into thought or opinion. Negotiation is the art and science of securing agreements between two or more interdependent parties. The purpose of this course is to understand the theory and processes of negotiation as it is practiced in a variety of settings. It is designed to complement the technical and diagnostic skills learned in other courses. A basic premise is that while a manager needs analytical skills to develop optimal solutions to problems, he or she also needs a broad array of negotiation skills for these solutions to be accepted and implemented. The course highlights the components of an effective negotiation and teaches students to analyze their own behavior in negotiations. It is largely experiential, giving students an opportunity to develop their skills by participating in negotiations and integrating their experiences with the principles presented in the assigned readings and course discussions.

NBA 668(6680) Leading Teams and Organizations

Fall. 3 credits. Priority given to M.B.A.s. M. Thomas-Hunt.

Focuses on general principles for successfully leading teams and organizations [the personal development course is NBA 570]. Draws on the latest research in team decision making and organizational leadership to address questions such as: what is the difference between leadership and management? how does a leader establish trust and commitment to an organization? and how do leaders transform organizations? Consists primarily of case studies of leaders but also includes some experiential and group activities. Grading is based on class participation, group case analyses, and a final individual case analysis. Priority is given to MBAs.

NBA 670(6700) Perspectives on Leadership

Fall. 1.5 credits. D. Radcliffe.

What is leadership? What are its recognized styles? What skills and personal attributes are associated with these leadership styles? How are leadership traits and abilities manifested in different organizations and social environments? This course considers these and other questions on leadership. Most class sessions are discussions of cases comprising excerpts from classic texts in literature, politics, and philosophy. Each case also includes both a contemporary article exemplifying themes found in the classic work and a brief review of relevant leadership theory. The course begins by examining Louis Gerstner's leadership in IBM's major turnaround in the early 1990s. This case serves as a frame of reference for examining two recent contributions to leadership studies: Daniel Goleman's research on emotional intelligence and Howard Gardner's cognitive approach to leadership. The final paper invites students to work out their own views on leadership.

NBA 671(6710) Business Ethics

Fall, spring. 1.5 credits. D. Radcliffe.

Poor moral judgment can ruin a manager's career or even sink a company. In general, an organization cannot survive without the trust of numerous stakeholders, and ethical lapses destroy trust and threaten vital stakeholder relationships. In today's volatile and fiercely competitive business environment, a manager must be able to identify and effectively resolve ethical issues that inevitably arise in the pursuit of business (and career) objectives. This course is designed to enhance students' skills in moral reasoning as it applies to managerial decision-making. It begins by examining normative concepts and principles that typically enter into moral reasoning, then uses those concepts and principles to analyze cases. Discussions seek to understand the moral issues confronting the decision makers in the cases and explore how those issues might be addressed in ethically responsible ways.

NBA 672(6720) Goal Setting and Coaching for Leadership Success

Fall. 1.5 credits. P. Stepp.

Designed as a follow-up to NBA 570 Leadership Assessment for Managers. Provides structured support for personal change through personal learning plans, learning and development strategies, and feedback and coaching support from peers. Includes a workshop on establishing a personal values

statement to help guide personal learning plans and align them with career aspirations. Employs a web-based, follow-through support system to facilitate further leadership growth by prompting students regularly to assess and document their progress. Learning coaching strategies and serving as a coach for the year for a classmate further enhance leadership growth. The course is scheduled throughout the year to allow students time to develop personal goals and provide numerous opportunities to practice coaching.

NBA 682(6820) Negotiation Essentials

Fall. 1.5 credits. Not open to students who have taken NBA 666. Staff.

Designed to complement the technical and diagnostic skills learned in other courses at the Johnson School. While a manager needs analytical skills to develop optimal solutions to problems, he or she also needs a broad array of negotiation skills for these solutions to be accepted and implemented. The course is largely experiential, giving students an opportunity to develop their skills by participating in negotiations and integrating their experiences with the principles presented in the assigned readings and discussions.

Marketing

NBA 620(6200) Marketing Research

Fall, spring. 3 credits. Prerequisites: NCC 501 and 503 or equivalent. S. Gupta and Y. Park.

Deals with marketing research as a critical support function in corporations. The broad objective is to provide a fundamental understanding of marketing research methods employed by better-managed firms or proposed by leading academicians. The course is aimed at the manager, the ultimate user of marketing information, who is responsible for the scope and direction of research activities involved in obtaining, analyzing, and interpreting results of research. Covers the use of secondary sources of marketing information for designing studies and collecting primary data. Students are exposed to up-to-date methods in research design, qualitative research, measurement, data collection, and analysis. The emphasis is on evaluating research methods and on interpretation and use of results rather than on mathematical derivations. Students are also exposed to the practical side of marketing research through case studies, problem sets, and projects.

NBA 621(6210) Marketing Communications

Fall. 1.5 credits. Prerequisite: NCC 503 (marketing core). D. Stayman.

Designed to give students an understanding of the advertising and promotion management process. Covers the components of a successful advertising campaign and helps students develop an appreciation of the issues involved in advertising planning and decision making. They also learn how recent social science findings and theory can facilitate advertising management.

NBA 622(6220) Marketing Strategy

Fall. 3 credits. Prerequisite: NCC 503 (marketing core). S. P. Raj.

A sound marketing strategy is essential for the long-term success of a firm. Marketing strategies, while guided by environmental conditions, also seek to anticipate, exploit, and sometimes shape changes in the

environment to gain competitive advantage. This requires an understanding of how customer needs evolve, how product-market boundaries shift, and how competitors are likely to react. The strategic roles of existing and new products need to be assessed, appropriate resource allocations made, and marketing strategies developed to ensure sustained growth. Successful development of marketing strategy requires an equal measure of analytical and creative thinking. This course is designed to give students opportunities to learn about the theoretical and applied perspectives of marketing strategy from readings, case analyses, and guest speakers.

NBA 623(6230) Customer-Based New Product Development

Fall. 3 credits. Prerequisites: NCC 501 and 503. P. Kumar.

The successful introduction of new products requires careful planning and systematic screening and testing. This course covers models and methods that are useful to managers in the development and marketing of new products. Heavy emphasis is placed on the measurement of consumer preferences. Students are required to complete a group project, consisting of a measurement instrument, data collection (from at least 30 respondents) and data analysis, for a self-chosen product category. The method of instruction consists of a combination of lectures and discussion of cases and articles. Performance is evaluated primarily based on exams and the group project.

NBA 626(6260) Consumer Behavior

Spring. 3 credits. Staff.

Topics include factors that influence response to advertising of various kinds, purchase decisions, product perceptions, response to promotion, consumer satisfaction, and the basic methodologies for understanding consumer behavior.

NBA 633(6330) Marketing and E-Commerce

Spring. 3 credits. Y. Park.

Explores the effect of the Internet on marketing. Topics include an overview of the online industry, business models for the Internet, advertising and promotions on the Internet, marketing research on the Internet, loyalty programs for Internet marketing, and disintermediation or channel conflict resulting from Internet distribution. The course comprises industry speakers from Cendant, CSC, Netcentives, H-P, 1st USA, Catalina marketing, Bausch and Lomb, and others. Course requirements include write-ups on a subset of speakers, and a final report and presentation on an Internet marketing issue of the student's choice. NBA 638(6380) is restricted to M.B.A. II's because the same information is available for M.B.A. I's in the strategy core.

NBA 639(6390) Data-Driven Marketing

Spring. 3 credits. S. Gupta.

Deals with the use of data to make marketing decisions. Introduces concepts, methods, and applications of decision modeling to address marketing issues such as segmentation, targeting, positioning, promotions, advertising, and sales force decisions. Unlike marketing courses that focus on conceptual material, this course provides skills to translate conceptual understanding into specific operational plans—a skill in increasing demand in organizations today. The course is particularly valuable to students planning careers in

management consulting, marketing, and market research. It is designed for students who have some background in quantitative methods and have a willingness to deal with mathematical concepts.

NBA 692(6920) Economics of Pricing

Fall. 1.5 credits. J. Johnson.

One of the most common and important decisions for a manager to make is the pricing decision. This course provides an economics perspective on the pricing decision. The goal is for students to learn to think rigorously about a variety of pricing issues. Specific topics include price discrimination, peak-load pricing, channel pricing, and durable goods pricing.

Operations Management

NBA 641(6410) Business Logistics Management

Spring. 3 credits. Prerequisite: NCC 508, ORIE 410, or permission of instructor. L. J. Thomas.

Covers supply-chain integration, which involves strategic management of the values chain from materials to customer. Students discuss operations strategy issues that are important to both manufacturing and service. The course emphasizes written and oral communication skills. About a fourth of the classes are spent on case studies that are analyzed by small groups. There is one midterm exam, but the majority of the grade is evaluated based on projects and class participation. There is an option of replacing some assignments with a "live case," a project with a local company.

NBA 643(6430) Managerial Spreadsheet Modeling

Fall, spring. 1.5 credits. L. Robinson.

The goal of this hands-on, lab-style course, taught in the Parker Center, is to develop proficiency in quantitative modeling within the environment of Microsoft Excel. Students develop and use spreadsheets to analyze a variety of business problems. The course has two principal components: spreadsheets and models. Spreadsheet topics include principles of good spreadsheet design, the effective presentation of information through spreadsheets (including graphical controls like sliding bars), and advanced Excel features (e.g., data validation, conditional formatting, scenarios). Modeling topics include the art of finding the appropriate level of modeling detail, practice in dealing with vague and unstructured problems, sensitivity analysis, and working with incomplete and unreliable data.

NBA 647(6470) Advanced Spreadsheet Modeling

Fall. 1.5 credits. L. Robinson.

The goal of this hands-on lab course, taught in the Parker Center, is to develop proficiency with Excel's quantitative tools of Solver (for optimization) and @Risk (for simulation). Building on their brief introduction in the Managing Operations core course, students use these advanced tools to analyze problems and cases in finance, marketing, and operations. Although the bulk of this course is devoted to case analysis, occasional lectures introduce some advanced features of these two powerful modeling tools, including integer and nonlinear programming and sensitivity analysis within optimization, and correlated random variables, scenario analysis, and valid statistical analysis within simulation.

NMI AND NRE RESEARCH AND ADVANCED STUDIES

NMI 500-502(5000-5020) Directed Reading and Research

Fall, spring. 1-3 credits. Prerequisite: approval of advisers and faculty members involved in research. Staff.

Students undertake special-interest research under the supervision of faculty members.

NMI 510(5100) Multicultural Work Environments

Spring. 1 credit. Prerequisite: students whose summer internships are in a country other than that of their citizenship or prior work experience. Students should register for course in spring semester before internship after obtaining an internship offer and completing paperwork for course instructors. International students obtain and process work authorization forms with the International Students office. See Charlotte Rosen (304 Sage Hall) for further details about academic and immigration requirements for NMI 510. C. Rosen and B. Mink.

Independent study. Promotes an understanding of the cultural assumptions we bring to the work environment and the effects of cultural differences on organizational interactions and productivity. Grades are posted in the following fall semester after completion of the course project (a 10-page paper).

DOCTORAL SEMINARS

NRE 502(5020) Doctoral Seminar In Marketing

3 credits. Prerequisite: permission of instructor; graduate-level course in mathematical statistics or econometrics (may be waived in special cases). Staff.

Introduces students to empirical research in marketing. Although there is a strong focus on the historical development of econometric specifications of consumer choice models (with an emphasis on heterogeneity and issues of dynamic consumption patterns) and Bayesian methods in marketing, the content is to some extent driven by the students. Teaching is interactive, and each student is expected to present one of the papers studied to the rest of the class and to replicate the results of one of the papers, requiring him or her to write the necessary code and briefly discuss their findings. Students are welcome to sit in on parts of the class (e.g., the section on Bayesian Methods is broad enough that students from other areas may find the presentation useful).

NRE 504(5040) Judgment and Decision Making, Research and Accounting

3 credits. Prerequisite: Ph.D. students. M. Nelson and R. Libby.

This seminar provides a rigorous and integrative exposure to those aspects of the literature in accounting, behavioral economics, and psychology that are related to questions of accounting and auditing theory and research.

NRE 518(5180) Marketing Models

Spring. 3 credits. Y. Park.

Studies model-based research in the marketing literature. The three main objectives are to (1) develop the student's knowledge of the

technical details of various techniques for analyzing data; (2) expose students to "hands-on" use of various computer programs for carrying out statistical data analyses; (3) ask students to propose a model of consumer/market behavior that potentially constitutes a contribution to the literature.

NRE 523(5230) Doctoral Seminar in International Management

Spring. 3 credits. A. Un.

Provides an overview of the evolution of the field of international management: its domain and professional organization, the key issues and how they have changed over time, and the evolving links between the approaches of this field and related disciplines. Readings focus on the classics of the field and some more recent work that both extends and challenges the established approaches. The seminar is organized in three parts that reflect the interdisciplinary character of international management research. The first and second parts review the existence of MNEs from the perspective of economics/political economy and sociology/organization studies. The third part reviews selected topics on the management of firms across different institutional environments and the impact of the transformation of those environments on firms.

FACULTY ROSTER

Adair, Wendi, Ph.D., Northwestern U. Asst. Prof., Management and Organizations
 Bailey, Warren B., Ph.D., U. of California, Los Angeles. Assoc. Prof., Finance
 BenDaniel, David J., Ph.D., Massachusetts Inst. of Technology. Don and Margi Berens Professor of Entrepreneurship
 Bhojraj, Sanjeev, Ph.D., U. of Florida. Asst. Prof., Accounting
 Bierman, Harold, Jr., Ph.D., U. of Michigan. Nicholas H. Noyes Professor of Business Administration
 Bloomfield, Robert J., Ph.D., U. of Michigan. Assoc. Prof., Accounting
 Botti, Simona, Ph.D., U. of Chicago. Asst. Prof., Marketing
 Bradley, James R., Ph.D., Stanford U. Asst. Prof., Production and Operations Management
 D'Souza, Julia, Ph.D., Northwestern U. Assoc. Prof., Accounting
 Dyckman, Thomas R., Ph.D., U. of Michigan. Ann Whitney Olin Professor of Accounting
 Eisenstein, Eric M., Ph.D., U. of Pennsylvania. Asst. Prof., Marketing
 Farahat, Amr A., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Operations Management
 Frank, Robert, Ph.D., U. of California, Berkeley. Prof., Economics
 Gavirneni, Srinagesh (Nagesh), Ph.D., Carnegie Mellon U. Asst. Prof., Operations
 Greenberg, Donald P., Ph.D., Cornell U. Prof., Management Information Systems
 Grinstein, Yaniv, Ph.D., Carnegie Mellon U. Asst. Prof., Finance
 Gupta, Sachin, Ph.D., Cornell U. Assoc. Prof., Marketing
 Hart, Stuart, Ph.D., U. of Michigan. Samuel C. Johnson Chair in Sustainable Global Enterprise; Prof., Management
 Hass, Jerome E., Ph.D., Carnegie-Mellon U. Prof., Finance and Business Strategy
 Hilton, Ronald W., Ph.D., Ohio State U. Prof., Accounting

Hochberg, Yael V. Ph.D., Stanford U. Asst. Prof., Entrepreneurship and Finance
 Hribar, S. Paul, Ph.D., U. of Iowa. Asst. Prof., Accounting
 Huttenlocher, Daniel P., Ph.D., Massachusetts Inst. of Technology. John P. and Rilla Neafsey Professor, Computing and Information Systems and Business
 Isen, Alice M., Ph.D., Stanford U. S. C. Johnson Professor, Marketing
 Jarrow, Robert A., Ph.D., Massachusetts Inst. of Technology. Ronald P. and Susan E. Lynch Professor of Investment Management; Prof., Finance and Economics
 Johnson, Justin, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Economics
 Kadiyali, Vrinda, Ph.D., Northwestern U. Assoc. Prof., Marketing and Economics
 Lee, Charles M. C., Ph.D., Cornell U. Prof., Accounting and Finance, Henrietta Johnson Louis Professor of Management; Director, The Park Center for Investment Research
 Libby, Robert, Ph.D., U. of Illinois. David A. Thomas Professor of Management, Prof., Accounting and Behavioral Science
 Macey, Jonathan R., Ph.D.; Yale U. J. DuPratt White Professor of Law, Prof., Business Administration
 Mannix, Elisabeth, A., Ph.D., U. of Chicago. Assoc. Prof., Management and Organizations

 Nesheim, John L., M.B.A., Cornell U. Visiting Lec., President, Aladdin Systems, Inc.
 Schuler, Richard E., Ph.D., Brown U. Prof., Economics, Prof. Civil and Environmental Engineering

LAW SCHOOL

The Law School prepares attorneys for both public and private practice. Graduates are trained to provide the highest-quality professional services to their clients and to contribute to the development and reform of law and legal institutions. The curriculum is designed to prepare students for admission to the bar in all American states and territories. Students who pursue the three-year Doctor of Law degree (J.D.) must have a bachelor's degree or equivalent. Students wishing to concentrate in international law may be admitted to a program leading to the J.D. "with specialization in international legal affairs." The Law School also offers a limited number of students an opportunity to earn both a J.D. degree and an LL.M. (Master of Laws) degree in international and comparative law.

Students may pursue combined graduate degree programs with the Johnson Graduate School of Management; the Department of City and Regional Planning of the College of Architecture, Art, and Planning; the School of Industrial and Labor Relations; the graduate divisions in economics, history, and philosophy of the College of Arts and Sciences; the Université de Paris I (Pantheon-Sorbonne); L'Institut d'Etudes Politiques de Paris; and Humboldt University.

Each year a limited number of students from abroad pursue the LL.M. degree (Master of Laws) and the J.S.D. degree (Doctor of the Science of Law). A small number of law graduates also may be admitted as special students, to pursue advanced legal studies without seeking a degree. Students in other graduate programs and qualified undergraduate students registered with the university are welcome in many classes with the permission of the instructor. In addition, highly qualified undergraduates in the College of Arts and Sciences may register in the Law School during their senior year.

For further information, refer to the Law School web site, or contact the Office of the Registrar, Myron Taylor Hall. Course descriptions are current as of June 2005. For updated law descriptions visit: www.lawschool.cornell.edu

FIRST-YEAR COURSES

LAW 500(5001) Civil Procedure

Full year. 6 credits. S-U option unavailable.
K. M. Clermont, B. J. Holden-Smith,
F. F. Rossi.

An introduction to civil litigation, from commencement of an action through disposition on appeal, studied in the context of the federal procedural system. Also, a detailed consideration of federalism and ascertainment of applicable law; jurisdiction, process, and venue; and former adjudication.

LAW 502(5021) Constitutional Law

Fall. 4 credits. S-U option unavailable.
S. L. Johnson, B. Meyler, T. W. Morrison,
G. J. Simson.

A study of basic American constitutional law, including judicial review, some structural aspects of the Constitution as developed particularly in light of the passage of the Civil War amendments, and certain of its rights provisions.

LAW 504(5041) Contracts

Full year. 6 credits. S-U option unavailable.
R. A. Hillman, R. S. Summers.

An introduction to the nature, functions, and processes of exchange, contract, and contract law. The course focuses on the predominant rules and principles governing contract and related obligation, including the substantive reasons underlying the rules and principles.

LAW 506(5061) Criminal Law

Spring. 4 credits. S-U option unavailable.
S. P. Garvey, T. W. Morrison.

An introductory study of the criminal law, including theories of punishment, analysis of the elements of criminal liability and available defenses, and consideration of specific crimes as defined by statute and the common law.

LAW 508(5081) Lawyering

Full year. 4 credits. S-U option unavailable.
P. S. Anderson (spring), J. B. Atlas,
J. Ciani-Dausch, J. C. Dole (fall),
E. M. McKee, A. J. Mooney, A. B. Schutz.

Introduces first-year students to lawyering skills, with primary emphasis on legal writing, analysis, and research. In the context of a law office, students create some of the essential legal writings that lawyers produce. Students determine and investigate the essential facts to support their client's case by interviewing or deposing various witnesses. Students may also write a client letter, using plain English to explain to their client the law and the merits of the case, and advise the client on the best course of conduct. Finally, students develop their oral and written advocacy skills and start thinking about litigation strategy by researching and writing persuasive memoranda or legal briefs for a trial or appellate court. At the end of the year, students orally argue their case. Instruction occurs not only in class meetings but also in individual conferences. Each student receives extensive editorial and evaluative feedback on each written assignment.

LAW 512(5121) Property

Spring. 4 credits. S-U option unavailable.
G. S. Alexander, E. L. Sherwin.

Course in basic property law covering acquisitions of rights in property, estates in land, concurrent ownership, landlord/tenant relations, and regulation of land use.

LAW 515(5151) Torts

Fall. 4 credits. S-U option unavailable.
M. Heise, J. A. Henderson, Jr.,
W. B. Wendel.

An introduction to the principles of civil liability in the tort field: intentional wrongs, negligence, and strict liability. Attention is also given to the processes by which tort disputes are handled in our legal system.

GRADUATE COURSES

LAW 607(6071) Advanced Legal Research—U. S. Legal Research for LL.M. Students

Fall, first 6 1/2 weeks of semester. 1 credit. Graduate program grading—H, S, U. Limited to graduate students. Limited enrollment. P. G. Court.

Introduces LL.M. students to basic legal research in U.S. materials that are valuable to them in their course work at Cornell and in practice. The focus is on understanding and finding primary legal sources, including statutory codes, session laws, administrative regulations, and court decisions, as well as explanatory materials, such as law reviews and treatises. To a large extent, instruction uses online materials that are most likely to be available to the students in their future careers. There are short introductory lectures, as well as hands-on computer lab and Reading Room sessions. Students complete five assigned exercises using the resources learned in class, and there is no final exam. The final grade is based on the five assigned exercises (20% each).

LAW 622(6221) Contracts in a Global Society

Fall. 4 credits. Graduate program grading—H, S, U. Limited to graduate students.
T. Allen.

Designed for foreign-trained lawyers who are familiar with basic contract law in their own country. It surveys the Anglo-American common law of contracts and related civil obligations. The pedagogic approach focuses on the case method and is Socratically based, similar to the traditional first-year course in Contracts. Graduate students who wish to study contract law are generally expected to take this one-semester course. They are free to enroll instead in the first-year Contracts course, but if they do so, they must take that course for the full year.

LAW 676(6761) Principles of American Legal Writing

Fall, spring. 2 credits. Graduate program grading—H, S, U. Limited enrollment. Limited to graduate students. L. Knight.

Introduces foreign-trained lawyers to the American legal system and essential principles of legal writing in the U.S. Students have an opportunity to practice some of the forms of writing common to American legal practice, by drafting documents such as client letters, memoranda, briefs, and pleadings, in the context of representing hypothetical clients.

LAW 899(8991) Thesis

Fall, spring. 5 credits. Graduate program grading—H, S, U; J.D./LL.M. program. S-U option unavailable. Limited to graduate students and students completing the joint J.D.-LL.M. program.

Arrangements for a master's thesis are made by the student directly with a faculty member, who may require the student to submit a detailed outline of the proposed thesis, as well as a summary of previous writing on the subject or other appropriate information. The work is completed during the academic year under the supervision of a law faculty member.

LAW 990(9901) Graduate Research

Fall, Spring. Limited to J.S.D. students.

UPPERCLASS COURSES**LAW 600(6001) Accounting for Lawyers**

Spring. 2 credits. S-U option available. R. A. Sarachan.

An introduction to the basic concepts and fundamentals of financial accounting. The focus is on (1) accrual accounting concepts, principles and conventions, (2) presentation of financial statements, (3) interpretation and analysis of financial statements, and (4) use and misuse of accounting information. The goal of the course is to enable students to critically review a company's financial statements. It is intended primarily for students with little or no prior background in bookkeeping or accounting and is limited to students who have had no more than 6 credit hours of accounting (or its equivalent) or permission of instructor.

LAW 601(6011) Administrative Law: The Law of the Regulatory State

Fall, Spring. 3 credits. S-U option unavailable. Limited enrollment. C. R. Farina, J. J. Rachlinski.

An introduction to the constitutional and other legal issues posed by the modern administrative state. Topics include: procedural due process, separation of powers, procedural modes of administrative policymaking; judicial review of agency action; and the oversight and control relationships between agencies and Congress or the President. The course provides a working familiarity with the fundamentals of administrative procedure, as well as a larger inquiry into the role of agencies in our constitutional system—and the effect of legal doctrine on shaping that role.

LAW 606(6061) Advanced Legal Research—International and Foreign Law

Fall. 2 credits. S-U option available. Limited enrollment. T. Mills.

Globalization has led to the internationalization of the practice of law. This course provides an overview of research resources, methods, and strategies for international and foreign law. Topics include both public and private international law, the European Union, and the United Nations. The course includes lectures followed by computer lab and library training sessions. Selected readings are available online and on reserve; there is no required textbook. There are seven assignments of equal weight on material covered in class, but no final exam.

LAW 610(6101) Antitrust Law

Fall. 3 credits. S-U option unavailable. G. A. Hay.

The antitrust laws of the U.S. protect competitive markets and limit the exercise of

monopoly power. Topics include: price fixing, boycotts, and market allocation agreements among competitors; agreements between suppliers and customers; joint ventures; monopolization; and mergers.

LAW 612(6121) Bankruptcy

Spring. 3 credits. S-U option unavailable. Not open to students who have taken Debtor-Creditor Law. T. Eisenberg.

Selected topics in the law of bankruptcy. An overview of the various bankruptcy chapters and a detailed study of the bankruptcy provision of most general applicability. The relationship between the rights of an Article 9-secured creditor and the bankruptcy trustee's power to avoid liens. Related topics in the enforcement of money judgments and the law of fraudulent conveyance.

LAW 613(6131) Business Organizations (formerly Corporations)

Fall, Spring. 4 credits. S-U option available. Limited enrollment. R. C. Hockett, M. A. Perino.

An introduction to the legal rules and principles, as well as some of the economic factors, that pattern the conduct of productive enterprise in the U.S. The principal focus is on the large, publicly traded corporation that dominate much of the U.S. business environment—in particular, its financing, its control, and the potentially conflicting interests that the form must mediate. Legal topics include shareholder and executive compensation, basic fiduciary obligations, shareholder voting rights, shareholder suits, corporate reorganization and control transactions. We also devote some attention to partnerships, closely held corporations and other business forms, and take note of particular industries' and divergent (generally, non-American) jurisdictions' dominant forms of productive organization, to place what is distinctive about the principal American form into bolder relief. No prior background in business law or economics is assumed.

LAW 615(6151) Chinese Law

Spring. 3 credits. S-U option available. J. Grimheden.

An examination of the law and practice in contemporary PRC. After a brief overview of Chinese legal history and legal development, the course covers specific sections devoted to the overall legal reform, the status and reform of legal actors, and various aspects of commitment and compliance with international human rights standards. A section also deals with Chinese law in a comparative perspective how it is and has been viewed in China and outside. Much of the course material consists of academic articles as well as various reports by for example the United Nations. Chinese case law, statutes and other documents are also examined. The course ends with a discussion on possible scenarios on the future of legal development in China.

LAW 615(6153) Comparative Antitrust Law

Spring. 2 credits. S-U option available. T. Calvani.

There are now about 100 jurisdictions with competition (antitrust) laws. Although there are many differences, the two most prominent models are those of the U.S. and the European Union (EU). The course focuses on a comparison of the U.S., EU, and Ireland (which encompasses aspects of both, but is nevertheless unique). The course considers six topics: (1) the rationale for competition

law, (2) public and private enforcement with attention to the organization and operations of the enforcement authorities, (3) the treatment of horizontal restraints, (4) monopolization and abuse of dominance, (5) vertical restraints, and (6) merger analysis. It concludes with some consideration of the internationalization of competition enforcement.

LAW 615(6154) Comparative Law: Asian Legal Systems

Spring. 3 credits. S-U option available. A. Riles.

A consideration of elements and motifs of (1) legal systems of the Asia Pacific region; and (2) the discipline of comparative law—its aims, tradition, methods and achievements. The course uses materials and problems from the Asia Pacific region to reflect critically and programmatically on a disciplinary project that traditionally defines itself in predominantly Euro-American terms. The course also aims to provide students with a prism for thinking about legal questions in their own society through the comparison of other cultures and conceptions of law. Each student writes a 12- to 15-page paper the aim of which is to provide an interesting reading of the materials for the week that develops the methodological, disciplinary, and substantive problems of the discipline of comparative law. The paper is due Monday of the week's readings that it addresses and counts for 30% of the final grade. There also is a final take-home examination of not more than 12 typed, double-spaced pages. Ten percent of the final grade depends on class participation.

LAW 616(6161) Comparative Law: The Civil Law Tradition

Spring. 3 credits. S-U option available. M. Lasser.

An introduction to the institutional and conceptual organization of "civil law" legal systems (which govern most of Western and Eastern Europe and Latin America, as well as significant portions of Africa and Asia). The course thus provides a broad overview of "civilian" private law and procedure, criminal procedure, administrative law, and constitutional law. The course is particularly interested in the differences between common law and civil law understandings of the relationship between law-making, legal interpretation, and the judiciary.

LAW 619(6191) Conflict of Laws

Spring. 3 credits. S-U option available. G. J. Simson.

Focuses primarily on the choice-of-law methods used by courts in the U.S. to decide the applicable law in cases that, in their parties or events, involve more than one state or country. The course examines in detail the nature, logic, and constitutionality of such methods. In addition, the course devotes substantial attention to recognition and enforcement of judgments and, in particular, to the obligation imposed by the Constitution's Full Faith and Credit Clause to respect the judgments of other states' courts.

LAW 620(6201) Constitutional Law II: The First Amendment

Spring. 3 credits. S-U option available. S. H. Shiffrin.

A comprehensive discussion of freedom of speech, press, and association. The free-exercise-of-religion clause and the establishment clause of the First Amendment are treated less extensively.

LAW 624(6241) Corporate and White Collar Crime

Fall. 3 credits. S-U option available.
S. P. Garvey.

An examination some of the principal statutes used to prosecute corporate and white collar crime. Theories of liability we consider include traditional white collar offenses like mail and wire fraud, insider trading, false statements, perjury, and obstruction of justice. They also include more recent entries into the field such as RICO, money laundering, and laws enacted to combat government contract fraud. In addition the course provides an introductory look at the workings of the Federal Sentencing Guidelines.

LAW 626(6261) Criminal Procedure I

Fall. 3 credits. S-U option available.
J. H. Blume.

A survey of the law of criminal procedure, with emphasis on the constitutional constraints that regulate the pretrial stage of the criminal process. More specifically, the course focuses on the law of interrogations and confessions, the admissibility of evidence, and the right to counsel throughout all stages of the criminal process.

LAW 626(6262) Criminal Procedure II

Spring. 3 credits. S-U option available.
Students may enroll in Criminal Procedure II who have not previously taken Criminal Procedure. S. D. Clymer.

Covers federal constitutional and statutory rules that govern the criminal justice process from the post-arrest court appearance through trial and sentencing. Topics include bail and pre-trial detention; the charging decision; discovery, including the prosecution's obligation to disclose exculpatory evidence; plea-bargaining and guilty pleas; the defendant's right to speedy indictment and trial; jury selection; the defendant's right to remain silent at trial; the defendant's right to present evidence and confront witnesses; and sentencing.

LAW 630(6301) Directed Reading

Fall, spring. 1 or 2 credits. S-U option only. Arrange directly with instructor.
Registration form available from registration site or registrar's office.

An examination of a topic through readings selected by arrangement between the instructor and an individual student or group of students (not exceeding eight).

LAW 631(6311) Education Law

Spring. 3 credits. S-U option available.

Focuses on selected legal issues that arise in the public and private education context, with emphasis on the elementary and secondary school setting. Topics include the legal and policy dimensions of the rights of students, parents, educators, and the state with respect to such issues as access to, control over, and regulation of the education setting and institutions. Issues germane to equal education opportunity, school finance, and school governance and regulation receive particular attention.

LAW 632(6321) Employment Discrimination and the Law [also ILRCB 684]

Fall. 3 credits. S-U option available.
R. Lieberwitz.

A study of laws against employment discrimination based on race, religion, sex, national origin, age, and disability.

LAW 633(6331) Employment Law

Spring. 3 credits. S-U option available.
A. Hyde.

A survey of common law doctrines and selected federal statutes affecting the employer-employee relationship, but not including union formation and collective bargaining. Common law topics include: the "employment at will" rule and its exceptions; employee duties of loyalty, trade secrets, covenants not to compete, and other post-termination obligations; and employee reputation and privacy interests. Constitutional topics include free speech and privacy rights of public employees. Federal statutory topics include brief introductions to the Employee Retirement Income Security Act, and either federal antidiscrimination law or the Occupational Safety and Health Act.

LAW 636(6361) Environmental Law

Spring. 3 credits. S-U option unavailable.
Recommended prerequisite: Administrative Law. J. J. Rachlinski.

A survey of the major environmental laws, with a primary focus on federal statutes. The various sources of liability to both individuals and corporations from common law, statutory provisions, administrative regulation and enforcement policy are emphasized. Corporate successor liability through mergers and acquisitions is included, including the increasing importance of performing a full range due diligence review for environmental conditions in such transactions. Special attention is paid to the economic, social, and political obstacles to efficient regulation of the environment.

LAW 640(6401) Evidence

Fall, spring. 3 credits. S. D. Clymer. S-U option available. S-U option unavailable.
Limited enrollment. F. F. Rossi.

The rules of evidence in civil and criminal cases with emphasis on relevance, hearsay, authentication, witnesses, and experts. The course focuses on the Federal Rules of Evidence, with some attention to how they diverge from the common law.

LAW 642(6421) Family Law

Fall. 3 credits. S-U option available.
R. Graycar.

An examination of data around the organization of families and evaluation of assumptions and beliefs about the appropriateness of several current laws regulating families. We examine the evolution of our society's understanding of and expectations for marriage, as well as shifts over the past several decades in the nature of and justification for state regulation of that institution. Substantial attention is devoted to the social and legal consequences of marriage dissolution. Other topics include: definitions, policy, and trends in American family law; the legal significance of marriage rights and obligations; private ordering within the marital context; and non-marital relationships and their regulation.

LAW 643(6431) Federal Courts

Spring. 4 credits. S-U option available.
Prerequisite: Constitutional Law and second semester of Civil Procedure.
Students without such background should consult the instructor. C. R. Farina.

An examination of the various constitutional and judge-made doctrines that control access to the federal courts to vindicate federal rights. It is particularly valuable for those planning a

career in public interest or the public sector, anyone else expecting to litigate extensively in federal court, and students who have or hope to obtain a judicial clerkship. Topics include: case or controversy limitations, including standing; constitutional and statutory limits on jurisdiction; causes of action for constitutional and statutory rights, including 42 U.S.C. §1983 and Bivens actions; bars to such actions, including the various abstention doctrine and the emerging law on 11th Amendment and sovereign immunities.

LAW 644(6441) Federal Income Taxation

Fall, spring. 4 credits. S-U option available.
Limited enrollment. R. A. Green, T. Seto.
A basic course designed to develop understanding of tax concepts and ability to work effectively with the Internal Revenue Code, regulations, cases, and other tax materials.

LAW 646(6461) Financial Institutions [formerly Banking Law]

Fall. 4 credits. S-U option available. Not open to students who have taken Banking Law and Regulation. R. C. Hockett.
An introduction to the regulatory structures as well as some of the economic and technological factors, that pattern the conduct of financial intermediation in the U.S. The principal focus is on commercial banks, and to a slightly lesser extent investment companies, insurance companies, pension funds and securities firms in so far as these institutions discharge a common set of economic functions and give rise to a common set of systemic economic risks. We also devote some attention to "alternative" financial service providers and take note both of divergent jurisdictions' dominant modes of financial intermediation and of the "globalization" of finance, both to place what is distinctive about the dominant American forms into bolder relief and better to understand the forces operating behind recent and still unfolding changes to the American (and global) financial and finance-regulatory environments. No prior background in financial law or economics is assumed.

LAW 647(6471) Health Law

Fall. 2 credits. S-U option available.
H. R. Beresford.
Considers legal aspects of the organization, financing, and distribution of health care in the U.S. Emphasizes issues of access, costs, and quality, and addresses the use of regulation, litigation and market-driven strategies to confront emerging problems. Readings are from a health law casebook, supplemented by occasional handouts of current materials. The goal is to convey an appreciation of the challenges involved in providing health care to those in need and of the role of law and lawyers in meeting these challenges.

LAW 648 (6481) The History of the Common Law in England and America

Spring. 3 credits. S-U option available.
B. Meyler.
An examination of the history and theory of the common law with the aim of demonstrating its continuing relevance. Three principal strands run through the class. The first traces the substantive and procedural evolution of the common law from its early English roots and writs to its role in the American legal system today, with particular emphasis on the 16th through 17th centuries. Another thread emphasizes conceptions of

the common law, including both historical accounts derived from the writings of Sir Edward Coke, Jeremy Bentham, and Oliver Wendell Holmes, and more recent theoretical contributions by Guido Calabresi and Ronald Dworkin, among others. Finally, the course examines certain central institutions of the common law, including the judge who follows precedent and the jury, and compares common law modes of adjudication with the alternative methods employed by the Chancellor in equity and judges in the civil law system. Source materials include historical cases and documents as well as secondary articles.

LAW 649(6491) The IPO Process and Deal Structure Alternatives (also NBA 563)

Fall. 3 credits. S-U option available.
Prerequisite: Corporations/Business Organizations. Limited enrollment.
J. Nozell.

An in-depth look at initial public offerings and deal structures from a practitioner's point of view. With respect to initial public offerings, the course covers: the applicable statutory framework, pre-offering corporate preparations, due diligence process, implementation of corporate governance policies appropriate for a public company, the offering registration process, liability under federal securities laws, Securities and Exchange Commission review process, underwriting arrangements, selection of a trading forum, and the role of securities analysts. Regarding deal structures, the course explores: choosing an appropriate transaction structure, deal financing alternatives, due diligence, public company transaction issues, and crucial legal and business aspects of the acquisition, such as caps/collars, letters of intent, successor liability, continuity of employees, and noncompetition agreements and reacting to hostile bids.

LAW 650(6501) Insurance Law

Fall. 3 credits. S-U option available.
M. Heise.

Provides a working knowledge of basic insurance law governing insurance contract formation, insurance regulation, property, life, health, disability, and liability insurance and claims processes. The emphasis throughout the course is on the links between insurance theory, doctrine, and modern ideas about the functions of private law.

LAW 651(6511) Intellectual Property

Spring. 3 credits. S-U option available.
R. A. Pottage.

An introduction to the domestic and international context of intellectual property law with a review of state and federal law relating to intellectual property, principally copyright, patent, and trademark law. Intellectual property issues raised by new information technologies are emphasized throughout the course.

LAW 652(6521) International Business Transactions

Fall. 2 credits. S-U option available.
L. M. Brennan.

Overview of different commercial legal systems. Analysis of private and public law aspects of international business transactions, and the legal rules governing such transactions. Private international law transactions would include international sale of goods, letters of credit and commercial documents. Selection of appropriate mechanism for international business.

Overview of Foreign Direct Investment, Debt Financing, and technology transfers. Review of the applicable dispute resolution mechanisms including issues such as governing law, choice of forum, and applicable treaties. Analysis of international implications of US law including US Foreign Corrupt Practices Act and US antitrust law.

LAW 653(6531) International Commercial Arbitration

Fall. 3 credits. S-U option available.
(Students who have taken the international commercial arbitration course in the Paris program receive 1 credit; all others receive 3 credits.) J. J. Barceló III.

A study of arbitration as a dispute resolution process for international trade and business disputes. The course analyzes institutional and ad hoc arbitration, the authority of arbitral panels, enforcement of agreements to arbitrate, challenging arbitrators, procedure and choice of law in arbitral proceedings, and enforcement of international arbitral awards. The course gives special attention to the international convention on the recognition and enforcement of international arbitral agreements and awards (New York Convention) and the UNCITRAL (U.N. Commission of International Trade Law) arbitral rules and model law. It focuses on commercial arbitration as an international phenomenon and not on arbitration under any particular national system.

LAW 656(6561) International Organizations and International Human Rights

Fall. 3 credits. S-U option unavailable.
M. B. Ndulo.

Comprises two segments: (a) international organizations and (b) International Human Rights. In the first segment, the course aims to provide a comprehensive legal analysis of problems concerning membership, the structure of the UN organization, and its functions in the context of the UN Charter. It also considers the use of force under international law with specific reference to the UN Charter. The course further considers the structure, jurisdiction and functions of the International Court of Justice. The second segment, introduces the theory, norms, and institutions central to the international human rights legal regime. The course explores the emergence and enforcement of international human rights norms, the international machinery for the protection of human rights in the world community including the UN Human Rights Committee, European Court of Human Rights, Inter-American Court of Human Rights, and International Criminal Court. Relevant decisions of these courts and of municipal courts are studied as well as basic documents.

LAW 658(6582) International Taxation

Fall. 3 credits. S-U option available.
Prerequisite: Federal Income Taxation.
T. Seto.

An exploration of the U.S. tax treatment of U.S. citizens and corporations that invest and earn income abroad and the U.S. tax treatment of aliens and foreign corporations which invest and work in the U.S..

LAW 659(6592) Labor Law

Fall. 3 credits. S-U option available.
A. Hyde.

This course focuses on federal law regulating employee collective action and labor unions. Topics include union organizational campaigns,

strikes and other economic weapons, and the negotiation and enforcement of collective agreements. The course also considers issues involving employee group action without formal organization, or through organizations other than labor unions.

LAW 660(6601) Land Use and Zoning

Fall. 2 credits. S-U option available.
S. Brock.

An examination of the various legal tools used to control the environment in which people live and work. Zoning techniques are examined, including use districts, special use permits, planned unit developments, and variances. Private tools such as nuisance litigation are also considered. The course also explores constitutional limits on land use controls in many contexts.

LAW 614(6141) Law and Ethics of Business Practice

Fall. 3 credits. S-U option available. Pre- or co-requisite: Corporations/Business Organizations or (for graduate students) an equivalent course elsewhere. Satisfies professional responsibility requirement. Enrolling in this course does not prohibit enrollment in another professional responsibility course. S. J. Schwab.

Each week a distinguished guest lecturer from the business world present a business-law problem. The problems cover a wide variety of topics, such as reincorporating a business from a foreign jurisdiction into Delaware, or complying with the Sarbanes-Oxley audit requirements. Students are assigned to teams. Over the course of the semester, each student wrote two-four 5-page papers on a particular week's topic and provide written comments on other student papers in the other weeks, as well as participate in class discussions. No final examination.

LAW 662(6621) Law and Social Change: International Experience

Spring. 3 credits. S-U option available.
M. E. Greenberg.

Intended for students interested in law reform and international development. This course draws from an international base of experience while focusing on national laws in the context of socioeconomic change. Issues are illustrated by case studies drawn from Eastern Europe, Asia, Latin America, and Africa. Social change topics range from women's rights, gender and the family, to democracy-building and environmental protection. Requirements are two short "think pieces" (2-3 pages) and a final analytical paper of 10-15 pages on a student-selected topic.

LAW 663(6631) Law for High Growth Companies (also NBA 689)

Fall. 3 credits. S-U option only. Limited enrollment. First priority to BRL students in both colleges. Z. J. Shulman.

An in-depth analysis of key issues that an emerging high growth business must consider and address, including: (i) choosing type of business entity, (ii) protecting confidential information and inventions, (iii) sources of capital, (iv) understanding capitalization structures, (v) use of stock options as employee incentives, (vi) fundamental fair employment practices, (vii) proper establishment and utilization of Boards of Directors and Advisory Boards, (viii) technology licensing and commercialization, (ix) negotiating relationships with distributors, resellers and customers, (x) the Foreign Corrupt Practices Act, and (xi) dealing with creditors and lawyers.

LAW 664(6641) The Law Governing Lawyers

Spring. 3 credits. S-U option unavailable. Satisfies professional responsibility requirement. Enrolling in this course does not prohibit enrollment in another professional responsibility course. W. B. Wendel.

A comprehensive overview of the law governing lawyers in a variety of practice settings, including transactional, counseling, and civil and criminal litigation. The course is not focused merely on the ABA's Model Rules, but draws extensively from judicial decisions in malpractice and disqualification cases, the new Restatement of the Law Governing Lawyers, and other sources of law. A major theme is the relationship between state bar disciplinary rules and the generally applicable law of tort, contracts, agency, procedure, and crimes. Another significant theme is the prevention of attorney discipline and malpractice liability through advance planning.

LAW 665(6651) Law of Branding and Advertising: Trademarks, Trade Dress, and Unfair Competition

Fall. 2 credits. S-U option available. N. D. St. Landau.

Fundamental trademark, trade dress, and false advertising laws are examined in the context of assisting clients to execute branding and marketing strategies. Special focus is given to branding as it relates to: "consumer products companies;" the impact of e-business and the internet on branding strategies and acquisitions; and complex proof issues in trademark and domain name litigation. Marketing strategies embody fundamental and long-established principles of the trademark laws. The Lanham Act is used to address issues ranging from confusingly similar words and designs, to false and unsubstantiated advertising claims, and public appropriation—and misappropriation—of long-established corporate icons in today's e-commerce world. This course examines the basics of this rapidly changing body of law.

LAW 666(6661) The Law of the European Union

Fall. 3 credits. S-U option available. M. Lasser.

Introduction to the law and institutions of the European Union. The course examines the composition, organization, functions and powers of the Union's governing bodies; analyzes the Union's governing treaties and constitutional law; and studies the Union's decision-making processes. The course also explores broader questions of political, economic and legal integration, such as the proper relation between the Union's law and the domestic law of the Union's Member states, and the desirability and feasibility of using the E.U. as a model on which to pattern other transnational agreements.

LAW 667(6672) Law Practice Technology

Spring. 1 credit. S-U option available. Course meets first 6 1/2 weeks of term. Limited enrollment. J. M. Jones.

Technological advances are dramatically altering the lives of practicing attorneys. This course introduces students to a variety of technologies and software applications they use in the practice of law, integrated with advanced legal research strategies. Focus is on both present and future trends, and the resulting alteration of the legal landscape. Topics include law practice management, the "paperless" law office, e-discovery, courthouse technologies, and underlying ethical issues.

LAW 668(6681) Legal Aspects of Foreign Investment in Developing Countries

Spring. 3 credits. S-U option unavailable. M. B. Ndulo.

Studies legal aspects of foreign investments in developing countries. The course seeks to identify legal problems that are likely to affect a commercial investment in a developing country. Inter alia, it deals with the public international law principles and rules governing the establishment by foreign businesses of various factors of production (persons and capital) on the territory of other states and the protection of such investments. The course includes a discussion of economic development and foreign capital; obstacles to the flow of investments to developing countries; guarantees to investors and investment codes; bilateral treaties; nationalization; joint ventures; project financing; transfer of technology; arbitration; investment insurance; unification of trade law; and the settlement of investment disputes.

LAW 673(6731) Dispute Resolution

Fall. 2 credits. S-U option available. Limited enrollment. S. Yusem.

Explores the characteristics of negotiation, mediation and arbitration as well as the ethical concerns inherent in them, employing not only Socratic dialogue but also interactive and videotape dispute simulations, enabling the student to engage as a negotiator, dispute resolution advocate and a neutral.

LAW 675(6751) Partnership Taxation

Spring. 2 credits. S-U option available. R. A. Green.

An introduction to the taxation of partnerships and limited liability companies. The course focuses on the tax issues arising upon the formation, operation, and liquidation of a partnership or LLC.

LAW 678(6781) Products Liability

Spring. 3 credits. S-U option unavailable. J. A. Henderson, Jr.

Applications of products-liability doctrine and theory to a variety of problems drawn from or closely approximating actual litigation. An overview of the relevant case law, statutes, and administrative regulations, including the new Restatement Third of Torts: Products Liability.

LAW 681(6811) Secured Transactions

Fall. 2 credits. S-U option available. A. Shapiro.

A study of the law regarding security interests in personal property, primarily Article 9 of the Uniform Commercial Code. Topics include the creation of security interests, the rules for determining priorities among secured creditors and other claimants to property, and creditors' remedies and debtors' rights upon default. We use a practical, problem-oriented approach.

LAW 682(6821) Securities Regulation

Fall. 3 credits. S-U option available. M. A. Perino.

Focuses on the regulation of two key aspects of the capital markets in the U.S.: the primary markets for the raising of capital from public investors governed by the 1933 Securities Act (33 Act), and the trading of securities in the secondary market governed by the 1934 Securities Exchange Act (34 Act). The course features extended discussion of the complex substantive and financial disclosure obligations required under US federal securities laws. Throughout, students also are asked to consider the role and development of the Securities and Exchange Commission (SEC), first authorized under the 34 Act, as

a significant actor in the rise of the modern regulatory state.

LAW 683 (6831) Social Security Law

Spring. 3 credits. S-U option available. Online course. P. W. Martin.

Focuses especially on how Social Security's benefit rules relate to employment, families, and household composition and how its procedures address the challenge of adjudicating the massive numbers of benefit claims that arise each year. It introduces the general features of the Social Security Act's entitlement, benefit formulae, and procedural rules; highlights those that pose the greatest difficulty to administrators and advocates; and surveys current proposals for change.

LAW 684(6841) Sports Law

Spring, meets for 10 weeks. 2 credits. S-U option available. Recommended prerequisites: Antitrust Law and Labor Law.

Traces the development of sports law in the U.S. Particular attention is given to the relationship of sports with antitrust and labor law. Contemporary issues involving arbitration, collective bargaining, amateur athletics, agents, franchise movement, and constitutional law are addressed.

LAW 686(6861) Supervised Teaching

Fall, spring. 1 or 2 credits. S-U option only. Arrange directly with instructor. Registration form available from registration site or registrar's office.

LAW 687(6871) Supervised Writing

Fall, spring. 1, 2, or 3 credits. S-U option only.

Arrange directly with instructor. Registration form available from registration site or registrar's office.

LAW 688(6881) Supervised Teaching and Supervised Writing—Lawyering Program Honors Fellows

Full year. 4 credits. S-U option only. Prerequisite: application process. Registration form available from registration site or registrar's office.

Lawyering Program Honors Fellows serve for the full year as teaching assistants in the Lawyering course. With training and guidance from the Lawyering faculty, the Fellows work one-on-one with the first-year students on the various writing projects. Fellows may help design writing and research assignments, prepare model memoranda, participate in role-playing exercises during mock interviewing or negotiating sessions, judge oral arguments, and assist the librarians with research training. The Fellows are also responsible for teaching and holding classes on the Bluebook. Additionally, Fellows serve as mentors to entering students to help them make the most of the foundational first year of law school. The Fellows may hold workshops on basic law school skills and, during the spring semester, under the direction of the Dean of Students, a small group of Fellows may tutor first-year law students.

LAW 689(6891) Taxation of Corporations and Shareholders

Fall. 3 credits. S-U option available. Prerequisite: Federal Income Taxation. R. A. Green.

Examines the federal income taxation of corporate transactions, including incorporations, dividends, redemptions, liquidations, and reorganizations.

LAW 690(6901) Terrorism and the Law

Spring. 3 credits. Availability of S-U option TBA at first class. S. D. Clymer.

Focuses on the legal responses in the U.S. to the threat of terrorism. Topics likely include: legal definitions of terrorism and the process of designating "Foreign Terrorist Organizations"; constitutional challenges and legislative fixes to the material support prohibition; detention of enemy combatants; use of the material witness provision as a tool to investigate terrorism; terrorist financing; changes in immigration laws in response to terrorism concerns; the USA Patriot Act.

LAW 692(6921) Trial Advocacy

Spring. 4 credits. S-U option available. Pre- or co-requisite: Evidence. Limited enrollment. G. G. Galbreath.

The study of the trial. Fundamental skills are taught in the context of challenging procedural and substantive law problems. Each stage of the trial is examined. In addition to exercises every week on a particular segment of a trial, the student does a full-day jury trial at the end of the course. Video equipment is used to teach and critique student performance. Occasional written assignments; class attendance is mandatory.

LAW 694(6941) Trusts and Estates

Fall. 4 credits. S-U option available. G. S. Alexander.

A survey of the basic law of succession to property, including wills and intestate succession, and the law of trusts. This is not a course on estate taxation as such, rather a survey course that introduces the student to aspects of estate planning. While tax aspects of wealth succession are not studied in detail, they are mentioned from time to time.

LAW 698(6981) WTO and International Trade Law

Spring. 3 credits. S-U option available. J. J. Barceló III.

The law of the World Trade Organization (WTO), including international trade theory, the basic WTO rules and principles limiting national trade policy, and the WTO dispute settlement process. A study of national (U.S.) fair and unfair trade law within the WTO framework. Consideration also is given to non-trade values within the WTO system.

PROBLEM COURSES AND SEMINARS

All problem courses and seminars satisfy the writing requirement. Limited enrollment. Admission to all problem courses and seminars determined by lottery.

LAW 700(7002) Advanced Civil Procedure

Spring. 3 credits. S-U option unavailable. Limited enrollment. Satisfies writing requirement. K. M. Clermont.

A complement to the first-year civil procedure course. Topics normally just touched on in the first year are studied in greater depth. Students working in groups produce a short paper every other week on assigned problems. This year's topics are trial and appeal.

LAW 702 (7021) Advanced Criminal Procedure

Spring. 3 credits. Limited enrollment. Satisfies writing requirement. S-U option available. P. Warth.

This seminar provides an in-depth analysis of specific advanced areas of criminal law and procedure. Students analyze and

discuss several topics, including: the vast discretion afforded prosecutors in charging and plea bargaining decisions and the limits on prosecutorial discretion; the right to effective assistance of counsel as it pertains to counseling criminal clients about plea bargaining; the reach of the Confrontation Clause after the U.S. Supreme Court's landmark decision in *Crawford v. Washington*. Students read and analyze decided cases and various prosecutor and defense pleadings. They are required to write and present papers on self-selected topics or write a motion advocating a new rule with regard to police interrogations, identification procedures, or any other topic related to the areas of law addressed during the seminar. Students meet individually with the professor at the beginning of the seminar to discuss possible paper topics and again toward the end after completing an initial draft of their paper.

LAW 703(7031) Advanced Legal Research

Spring. 3 credits. S-U option unavailable. Prerequisite: Lawyering. Limited enrollment. Satisfies writing requirement. P. G. Court.

This seminar teaches cutting-edge research techniques to prepare students for practice in the law office of the future. It focuses on desktop electronic legal research and covers U.S., international, and foreign law, as well as multidisciplinary research. It is designed to teach students, whose careers begin in a period of information transition, how to handle traditional and electronic sources and formats and make efficient choices.

LAW 705(7051) Advanced Persuasive Writing

Spring. 3 credits. S-U option available. Limited enrollment. Satisfies writing requirement. C. Grumbach.

Students master persuasive writing and the rhetoric of law by studying examples of persuasive writing and by writing briefs. We read and critique U.S. Supreme Court briefs and other persuasive writings to assess why they work or fail. Students prepare short critical papers each week, commenting on the writing to be discussed that week. Additionally, students produce their own persuasive writing, first revising a brief, and then writing from scratch, perhaps writing a reply to, or devising a hypothetical amicus brief for, a brief we critiqued. Students present for the class a portion of the revised brief and critique and peer-edit a portion of a colleague's original work. We consider devices taught in the first-year Lawyering course; hone in on advanced principles of rhetoric; pay a good deal of attention to how legal writers tailor their writing for a specific audience; determine whether good briefs comport with received wisdom about legal writing and attempt to develop best practices as well as a rule of thumb for when artistic license should trump conventional legal writing approaches; discuss interesting writing or writing-related questions.

LAW 708(7081) Appellate Advocacy

Fall. 3 credits. S-U option unavailable. Limited enrollment. Satisfies writing requirement. J. B. Atlas.

This seminar examines the law and skills integral to representing a client on appeal. It is loosely divided into three parts: (1) the principles of appellate law, including standards of review, the preservation doctrine, harmless-error analysis, and remedies; (2) the

unique role of appellate counsel, including ethical duties to the court and client; and (3) appellate skills, including client counseling, issue selection, brief-writing, and oral argument. Miscellaneous additional topics include motion practice, leave applications, and the role of law clerks in the decision-making process. Students read and analyze the record of a criminal proceeding, assess and research potential appellate issues, and prepare a brief (including a rewrite) for either the prosecution or defense. Each student also orally argues the case in a moot-court session.

LAW 708(7081) Appellate Advocacy

Spring. 3 credits. S-U option unavailable. Limited enrollment. Satisfies writing requirement. B. R. Bryan.

Combines theory and practice to give students the skills needed to write a highly effective appellate brief and deliver a highly persuasive oral argument. The professor emphasizes "switching sides" with the court, and asks how a given point or technique are perceived by the audience. Students write a brief in stages, with one-on-one critiques of each section and a written critique of the final brief. Students also critique briefs of the professor and judicial opinions. Both federal and state procedures are taught. Students give multiple practice oral arguments, judged by both a professor and student panels, and a final oral argument judged by a professor. Guest speakers include former federal prosecutors, appellate specialists, and judges of the New York Court of Appeals and the U.S. Court of Appeals for the Second Circuit. Importance of professionalism and ethics is stressed throughout the course.

LAW 709(7091) Biblical Law

Spring. 3 credits. S-U option available. Limited enrollment. Satisfies writing requirement. C. M. Carmichael.

Analysis of law and narrative in the Bible from the perspective of ancient law and legal history. Topics include the nature of the law codes, legal issues in the narratives, law and morality, law and religion, the transformation of extralegal relations into legal ones, legal interpretation in antiquity, social factors in legal development, and aspects of criminal, family, and private law.

LAW 710(7101) Central Topics in Jurisprudence and Legal Theory

Fall. 3 credits. S-U option unavailable. Limited enrollment. Satisfies writing requirement. R. S. Summers.

This seminar addresses four related topics that arise within all discrete law school courses: (1) the overall forms and complementary material or other components of the main functional legal units of a system of law, including those that are institutional such as legislatures and courts, preceptual such as rules and principles, and enforceive such as sanctions and remedies, (2) the distinctive bearing of various concepts of justice on the make-up and operation of functional legal units and other phenomena of law, (3) the special and extensive nature of the resources of reason and argument in the law, and (4) the major facets of the "legal positivism vs. natural law" debate. Assigned materials include a forthcoming book by the instructor, selected jurisprudential readings, judicial opinions, statutes, and other primary sources. There is extensive opportunity for discussion. The grade is based on a paper and class discussion.

LAW 711(7111) Children at the Intersection of Law and Psychology

Fall. 3 credits. S-U option available. Limited enrollment. Satisfies writing requirement.

J. J. Haugaard, A. J. Mooney.

Focuses on the complementary nature of legal and social science research in cases involving conflicts between the rights of children and the rights of either their parents or the state. The first part of the course includes discussions on the use of social science research in the courts, including arguments for limiting its use or expanding it. In the second part, law students and psychology graduate students work together to prepare appellate briefs challenging an actual or hypothetical court decision in which social science research played an important role. Each group prepares one petitioner's brief and one respondent's reply brief and argue their briefs before a mock court.

LAW 713(7131) Comparative Civil Procedure

Fall., meets for 6 1/2 weeks during term. 3 credits. S-U option available. Limited enrollment. Satisfies writing requirement. JD students electing this course must also enroll in a minimum of 12 credits hours for the semester. S. Goldstein.

The seminar concentrates on the primary structural similarities and differences between common law and civil law procedural systems, as well as within each procedural family, both in terms of first instance proceedings and the appellate process. Current efforts to "harmonize" the different procedural systems are examined in this regard. The seminar also is concerned with comparative aspects of current attempts to reform the processes of civil procedure. In addition, it deals with the comparative aspects of some specific procedural mechanisms. All participants are expected to prepare the reading assignments and participate actively in all discussions. Each student must prepare a paper on a topic of his or her choice and make an oral presentation based on a preliminary draft of the paper, which is circulated to all participants before the presentation. The seminar grade is based primarily on the final draft of the paper, but it may be altered upwards or downwards by one or two steps of a gradation based on the oral presentation and performance in the seminar discussions.

LAW 714 (7141) Comparative Constitutional Law

Fall. 3 credits. S-U option unavailable. Limited enrollment. Satisfies writing requirement. M. Lasser.

This seminar examines the rapidly changing face of Continental European constitutional law. It begins by examining national constitutional/governmental structures, federalism regimes, mechanisms for judicial and administrative review of executive and legislative action, and modes of civil rights protection. Next it analyzes the increasingly important role played by transnational European legal institutions in these areas. Finally, the seminar addresses the complex relationship between the national constitutional orders and the European Union's ongoing constitutional convention.

LAW 715(7151) Constitutional Law and Political Theory

Spring. 3 credits. S-U option available. Limited enrollment. Satisfies writing requirement. S. H. Shiffrin.

Exploration of theories of freedom of speech and theories of equality. How are the ideas of freedom, equality, association, and community linked in doctrine, and how should they be linked? Neoconservative, liberal, radical, feminist, and Marxist writings are considered.

LAW 717(7171) Corruption Control

Spring. 3 credits. S-U option available. Limited enrollment. Satisfies the writing requirement. R. C. Goldstock.

Analysis of the types of corruption that exist in both the public and private sectors, the means by which a variety of criminal and non-traditional remedies may be used to reduce the frequency and impact of corrupt activities, and the constitutional and statutory problems implicated by such approaches.

LAW 719(7191) eLaw

Fall. 3 credits. S-U option unavailable. Limited enrollment. Satisfies writing requirement. P. W. Martin.

An exploration of the impact of the digital information and communication technology on how core activities of the "law" are carried out. The seminar traces the rapid spread of electronic systems of creation, storage, and dissemination of primary legal information, beginning with the emergence of viable commercial online systems in the 1980s. It looks at the current state of and issues raised by electronic self-publication on the part of legislative bodies, courts, and administrative bodies and investigate other issues of law and practice generated by the transformation of a paper and print-based legal system to one premised on nearly ubiquitous access to computers and electronic communication. Among the latter are questions of copyright, citation practice, "official publisher" designation, the role of the commercial sector and NGOs like Cornell's Legal Information Institute in the dissemination and application of law, post-release editorial revision, the privacy interests of those involved in legal proceedings, filing formats, and adjudicative procedures. While the course focuses initially on these phenomena and issues as they are playing out within the U.S., student projects may pursue any of these topics from a comparative perspective.

LAW 720(7201) Empirical Studies of Leading Civil Rights Issues

Fall. 3 credits. S-U option unavailable. Limited enrollment. Satisfies writing requirement. T. Eisenberg.

This seminar focuses on empirical studies of selected topics, including the death penalty and punitive damages.

LAW 722(7221) Ethical Issues in Criminal Practice

Fall. 3 credits. S-U option available. Limited enrollment. Satisfies the professional responsibility requirement and writing requirement. Enrolling in this course does not prohibit enrollment in another professional responsibility course. C. Grumbach.

Using simulated problems, we explore the ethical duties of and practical quandaries faced by prosecutors and criminal defense attorneys. We examine topics in the context of hypothetical and famous trials that involve such issues as coaching, playing the race card, and blaming the victim, or arrests based upon racial profiling or planted evidence. The writing assignments are in the form of persuasive trial memoranda prepared on behalf of or to prosecute simulated clients.

At the end of the semester we hold mock hearings based upon these simulated cases.

LAW 726(7261) Feminist Jurisprudence

Fall. 3 credits. S-U option unavailable. Limited enrollment. Satisfies writing requirement. R. Graycar.

This seminar examines the role of law, and, more generally, the role of the state, in perpetuating and remedying inequities against women. We study several paradigmatic feminist legal theories, including equality, difference, dominance, and various anti-essentialist theories. Among the questions considered are: How does the law help to construct gender? In what ways does it interact with cultural images and assumptions regarding women to perpetuate women's disadvantaged status in society? To what extent can a set of institutions implicated in women's marginalization be used to remedy it? Can a legal system predicated on the liberal assumption of a unitary, autonomous individual self accommodate feminist accounts of social construction, constrained choice, or decentered subjects?

LAW 728(7281) First Amendment Theory

Fall. 3 credits. S-U option available. Limited enrollment. Satisfies writing requirement. S. H. Shiffrin.

An examination of competing theories about the scope and justification of freedom of speech, freedom of press, and freedom of religion. The seminar considers free speech theories focused on liberty, formal equality, self-government, public morality, dissent, and anti-domination; the relationship of various conceptions of democracy to freedom of press; and various conceptions regarding the optimal relationship between church and state. Among the more specific topics at issue in some of the readings are commercial speech, pornography, flag burning, subsidies of the arts, campaign finance, the structure of the mass media, government involvement with religious symbols, and vouchers to religious schools.

LAW 729(7291) Global and Regional Economic Integration: The WTO, EU, and NAFTA

Spring 3 credits. S-U option available. Limited enrollment. Satisfies the writing requirement. J. J. Barceló III.

A study of the process of international economic integration occurring both globally and regionally. In the global context it takes up a basic introduction to WTO law and selected problems. In the regional context it takes up a basic introduction to the European Union, including the institutional and lawmaking processes, the direct effect and supremacy of EU law, and the development of the four freedoms (goods, services, persons, and capital). A basic introduction to NAFTA is also included. Student papers may deal with issues arising within any of the three regimes. Comparative studies are encouraged.

LAW 730(7301) Habeas Corpus

Fall. 3 credits. S-U option unavailable. Limited enrollment. Satisfies writing requirement. T. W. Morrison.

This seminar examines habeas corpus from three perspectives: (1) the origins and development of habeas in English and American legal history; (2) the contemporary role of habeas in providing federal judicial review of executive detention, especially in immigration cases and post-9/11 cases involving alleged "enemy combatants"; (3) the contemporary role of habeas in providing

federal judicial review of state criminal convictions, especially in capital cases. The second and third parts of the seminar are an opportunity to think about specific habeas-related issues against the backdrop of broader constitutional principles of separation of powers and federalism.

LAW 731(7311) Immigration and Refugee Law

Fall. 3 credits. S-U option unavailable. Prerequisite: Constitutional Law. Limited enrollment. Satisfies writing requirement. S. W. Yale-Loehr.

Exploration of the evolving relationship between U.S. immigration policy and our national purposes. Immigration plays a central role in contemporary American life, significantly affecting our foreign relations, human rights posture, ethnic group relations, labor market conditions, welfare programs, public services, and domestic politics. The course raises some of the most basic problems that our legal system must address, including the rights of insular minorities, the concepts of nationhood and sovereignty, fair treatment of competing claimants for scarce resources, the imperatives of mass administrative justice, and pervasive discrimination. The course draws on diverse historical, judicial, administrative, and policy materials.

LAW 731(7313) Intellectual Property Rights and Global Bio-Economics

Spring. 3 credits. S-U option available. Limited enrollment. Satisfies writing requirement. R. A. Pottage.

This seminar explores the role of intellectual property rights in the expansion of contemporary bio-economies. The principal sectors of the global bio-economy each have their own historical trajectories and social contexts, and these are relevant to any inquiry into the role of intellectual property rights and institutions. Focusing on selected examples and illustrations from these industrial fields, the seminar examines the emergence of transnational intellectual property regimes, the history of bio-economies, the difficulties of framing intellectual property rights in biological materials, institutional responses to the practice of bio-prospecting, and the legal and political agents involved in global bio-economies.

LAW 732(7321) International Criminal Law

Spring. 3 credits. S-U option unavailable. Limited enrollment. Satisfies the writing requirement. M. B. Ndulo.

The seminar examines the questions surrounding international criminal law as a separate discipline and the sources of and basic principles underlying the subject. Particular attention is paid to the question of jurisdiction over international crimes. It considers international crimes, the treatment of past human rights violations in post-conflict situations, and procedural aspects of international criminal law and the forums that deal with international crimes. The format is class discussions of assigned readings. Final assessment is based on participation in discussions and a written paper on a subject falling within the themes of the seminar. Paper topics must be submitted to the instructor for review no later than the third week of class. Each student is expected to give a class presentation based on his or her paper.

LAW 734(7341) International Environmental Law

Spring. 3 credits. Availability of S-U option TBA at first class. Limited enrollment.

Satisfies writing requirement. D. A. Kysar. This seminar aims to analyze and assess the various principles and rules of international law that have been developed to deal with problems of global environmental import, including the processes by which they have been drafted, implemented, and enforced. Specific topics may include control of air and water pollution, environmental disasters, disposal of hazardous wastes and trade in hazardous chemicals, ozone depletion, climate change, conservation of natural resources and biological diversity, management of international rivers, and the relationship between environmental protection and economic development.

LAW 734(7343) International Human Rights Seminar

Spring. 3 credits. S-U option available. Limited enrollment. Satisfies writing requirement. J. Gremheden.

This seminar examines aspects of law and practice in international human rights law. After an overview of global and regional instruments and mechanisms, more detailed studies follow on various aspects of international human rights law: substantive areas representing the full spectrum of rights such as fair trial and the right to education, procedural solutions such as the United Nations Human Rights Committee and the European Court of Human Rights, the intersection between law and politics as regards for example the work and possible reform of the United Nations Commission on Human Rights, and recent developments related to regional mechanisms in Europe and Asia. Course material largely consists of academic writings.

LAW 737(7371) Introduction to Islamic Law

Spring. 3 credits. S-U option available. Limited enrollment. Satisfies writing requirement. D. S. Powers.

This seminar is designed to introduce law students to the terminology, principles, and concepts of Islamic law. Part 1 examines the historical formation of Islamic law and the development of its principles of jurisprudence. Part 2 analyzes court cases that took place in Morocco and Spain between 1300 and 1500, with special attention to judicial procedure, personal status law, property law, and penal law. Part 3 examines the modern transformation of Islamic law by focusing on the example of Egypt, addressing issues such as codification, legal reform, and constitutional law. Discussions are based largely on primary sources in English translation.

LAW 740(7401) Law and Economics

Fall. 3 credits. S-U option unavailable. Limited enrollment. Satisfies the writing requirement. E. A. Kades.

The seminar explains why some legal rules (consciously or not) are consistent with economic reasoning, and why others lack such consistency. We also consider situations in which conventional economics seems inapposite because key assumptions do not hold. After an economic reconsideration of the common law, we investigate the applicability of economics to a range of other topics selected by students. The course assumes no background in economics. Readings and discussions avoid technical economic

models. Rather, we attempt to make economic arguments in plain English that lawyers would feel comfortable using before judges, juries, and other lawyers. Students are required to submit weekly questions on the readings, and a substantial paper on a topic of their choosing, subject to approval by the instructor.

LAW 741(7411) Law and Higher Education

Spring. 3 credits. S-U option unavailable. Prerequisite: Constitutional Law or Administrative Law. Limited enrollment.

Satisfies writing requirement. J. J. Mingle. Higher education is a complex, idiosyncratic institution. Universities and colleges have a unique mission—teaching, research, and public service—and a uniquely challenging task of accommodating the various constituencies and organizations, both internal and external that influence how they are managed and how policies are shaped. This seminar explores the dynamic tensions, high expectations, and complex legal-policy issues universities and colleges face in fulfilling their mission.

LAW 741(7412) Law and Humanities Colloquium

Spring. 3 credits. S-U option unavailable. Limited enrollment. Satisfies writing requirement. B. Meyler.

Brings together scholars working at the forefront of legal history, law, and literature, law and culture, and critical theory from the institutional vantage points of both law and the humanities. Those who present materials speak not only about their specific research but also address where their work is situated within new developments in law and humanities as a whole. The course begins with three weeks of seminar designed to apprise students of the history of law and humanities to date and to situate current developments within this history. The rest of the course is organized around a series of speakers, some from Cornell and some from other universities. The students convene for a half hour at the beginning of the session, which is then opened to a larger community, including faculty members, for the talk itself. Students are required to write seven three- to five-page papers responding to the speakers' pre-circulated talks; these are due in advance of the class session and shown to those lecturing to prompt and enhance discussion. Everyone who wishes to take the course for credit must attend the first class.

LAW 754(7541) Law and Violence Against Women

Spring. 3 credits. S-U option unavailable. Limited enrollment. Satisfies writing requirement. E. A. Sussman.

This seminar examines violence against women from theoretical and practical perspectives. We begin with a general introduction to various feminist theories, including equality feminism, difference feminism, dominance feminism, anti-essentialist feminism, and post-modernism. We examine these theories to provide us with frameworks for analyzing concrete manifestations of violence against women in society. The seminar seeks to apply theories to practice and uses the issues that arise in legal practice to further cultivate/refine the theories. By focusing on both theory and practice, students collectively work toward developing legal strategies for contending with violence against women. This seminar encourages students to critique existing frameworks and to assume the role of social movement lawyers.

Students write a substantial research paper focusing on a substantive problem related to violence against women.

LAW 756(7561) Legal Aspects of Commercial Real Estate Development

Spring. 3 credits. S-U option unavailable. Limited enrollment. Satisfies writing requirement. J. E. Blyth.

Through the use of several written memoranda and one oral presentation, this seminar addresses considerations basic to commercial real estate development. It focuses on purchase agreements, options, rights of refusal, and memoranda thereof; representations and warranties; disclosure required of brokers and sellers; attorneys as brokers; notarial misconduct; conveyancing and surveys; commercial leases; conventional financing; conflicts between commercial tenants and institutional lenders; alternatives to conventional financing; title insurance; attorney opinion letters; and choice of real estate entity. About half of the semester is devoted to commercial leases, conventional financing, and alternatives to conventional financing.

LAW 756(7563) The Legal Construction of Indian Country: Interdisciplinary Studies in American Indian Law

Spring. 3 credits. S-U option unavailable. Limited enrollment. Satisfies the writing requirement. E. Cheyfitz.

While its focus is the historical development of U.S. federal Indian law, this course will also address fundamental theoretical issues implicit in this development such as the cultural limits of Western law, and the situation of indigenous peoples in a postcolonial context.

LAW 757(7571) Legal Narratives

Spring. 3 credits. S-U option unavailable. Limited enrollment. Satisfies writing requirement. E. L. Sherwin.

An in-depth look at the factual, legal, and social background of notable legal decisions. The seminar is based on a recently published series of texts presenting the "stories" behind well-known first year cases. After reading and discussing a selection of cases from these sources, each student prepares and presents a case history of a case selected by the student, working from briefs, related legal material, secondary sources, and, if possible, contacts with lawyers and parties. Grades are based on papers and presentations.

LAW 758(7581) Making the Punishment Fit the Criminal

Spring. 3 credits. S-U option available. Limited enrollment. Satisfies writing requirement. S. P. Garvey.

This seminar begins with an investigation into the moral psychology of wrongdoing and its relationship to the justification of punishment. We then take the insights of that investigation and apply them to various issues and controversies arising within the substantive criminal law. In this connection we examine among other topics the defense of provocation, depraved heart murder, negligent homicide, duress, hate crimes, and imperfect self-defense. We also ask whether and how an offender's punishment should depend on the fact that his or her conduct actually resulted in harm, and whether an offender's punishment should depend on the motives with which he or she commits the crime.

LAW 759(7591) Mergers and Acquisitions

Spring. 3 credits. S-U option available. Satisfies writing requirement. M. I. Greene.

Develops the lawyering skills required by an attorney advising a client who is selling or acquiring a business. Individual drafting exercises, as well as client interview/strategy discussions and negotiations by student teams acting as counsel to the buyer or seller, are interspersed with lectures on the business acquisition process and analysis of selected publicly available documentation of actual acquisition transactions.

LAW 760(7601) Organized-Crime Control

Fall. 3 credits. S-U option available. Limited enrollment. Satisfies writing requirement. R. C. Goldstock.

This seminar explores the challenges organized crime poses to society and to traditional law enforcement techniques. Students undertake a simulated investigation using physical and electronic surveillance, the analysis of documentary evidence, and the examination of recalcitrant witnesses before the grand jury. The RICO statute is explored in detail as well as a variety of non-criminal remedies including forfeiture and court-imposed trusteeships.

LAW 761(7611) Philosophical Foundations of Legal Ethics

Fall. 3 credits. S-U option unavailable. Limited enrollment. Satisfies writing requirement. Satisfies professional responsibility requirement. W. B. Wendel.

This seminar examines legal ethics from the standpoint of moral and political philosophy. We examine such questions as the relationship between ordinary morality and professional obligations; whether professionals may be blamed morally for their clients' ends or for activities taken pursuant to professional roles; and the relationship between legal and political institutions and moral values. In addition to reading classic and recent articles, we apply theoretical models to the sorts of practical ethical dilemmas faced by lawyers. No background in philosophical ethics is presumed. We begin with a brief introduction to the subject through Bernard Williams's short book *Ethics*. This seminar satisfies the law school and ABA professional responsibility requirements, but it is not intended as preparation for the MPRE or as an introduction to the law governing lawyers.

LAW 763(7631) Pretrial Practice, Litigation Strategies, and Remedies in Commercial Litigation

Spring. 3 credits. S-U option available. Prerequisite: Contracts or Contracts in a Global Society. Limited enrollment. Satisfies writing requirement. Satisfies professional responsibility requirement. Y. G. Harmon.

This seminar studies the strategies of complex commercial litigation, focusing on case development in the pretrial period. It addresses pretrial discovery and remedies in the context of difficult and unclear legal issues. Damages theories and development are also explored, as are the use of litigation to achieve business goals. Hardball litigation techniques as well as ethical considerations are considered. Actual litigated cases are dissected. Since 90% of commercial cases settle before trial, this seminar is a real life presentation of the commercial litigation process.

LAW 765(7651) The Psychology/Human Behavior of the Lawyer/Negotiant

Spring. 3 credits. S-U option unavailable. Limited enrollment. Satisfies writing requirement. M. I. Powers.

Designed for the lawyer and/or negotiant who is compelled to heighten awareness of gestures, postures, tones, and reactions that play in the courtroom. Because negotiations are always present, lawyers and negotiants must be able to read the people in the courtroom. Reading is being able to identify the profile of a person by observation. The attorney/negotiant is able to identify their settings in the courtroom and at the table. The person may be any actor in the courtroom. The courtroom is riddled with the theatrical audience that may/may not assist you in getting the best interest for your client.

LAW 768(7681) The Religion Clauses of the First Amendment

Fall. 3 credits. S-U option unavailable. Limited enrollment. Satisfies writing requirement. G. J. Simson.

This seminar examines various issues relating to the First Amendment's Establishment and Free Exercise Clauses. In the first half of the semester the seminar meets to discuss assigned readings. The second half is devoted to the presentation of seminar papers. Each student must submit a substantial paper on an approved topic and brief written critiques of two other students' papers.

LAW 778(7781) Theories of Property

Spring. 3 credits. S-U option unavailable. Prerequisite: Property. Limited enrollment. Satisfies writing requirement. G. S. Alexander.

This seminar explores the various ways that people have conceived of, or understood, and argued about property, both in general and in specific institutional settings. The materials studied are eclectic and interdisciplinary. They include readings on commonses, commodification, and women and property, as well as the classical justifications for private property (libertarian, utilitarian, etc).

LAW 778(7782) Transnational Labor Standards

Fall. 3 credits. Availability of S-U option TBA at first class. Limited enrollment. Satisfies writing requirement. A. Hyde.

A critical examination of public and private institutions that attempt to regulate basic labor conditions in countries with low labor standards. It examining for each the law on the books, the actual achievements, and the theoretical potential in light of economics of trade. We start with a brief introduction to the economics of trade. We then examine several public and private institutions that attempt to regulate labor standards: the International Labor Organization and its standards.

LAW 779(7791) Truth and Reconciliation Commissions

Fall. 3 credits. S-U option available. Limited enrollment. Satisfies writing requirement. B. J. Isbell.

An examination of the politics of truth, reconciliation and justice in democratizing countries of Africa and Latin America. We begin with foundational discussions of human rights and justice and examine the way in which the Nuremberg trials established crimes against humanity and individual human rights in international law. We evaluate the ability of Truth and Reconciliation Commissions to write a definitive truth of the authoritarian era

and to contribute to building the rule of law. We compare the South African experience with that in Latin America, where the room for maneuver of truth commissions has been more limited. We conclude by examining the increasing role of international human rights tribunals, especially the International Criminal Court and the UN Criminal Tribunals on Rwanda and the former Yugoslavia. Course requirements: leading in-class discussions on readings (30% of grade); 15- to 20-page final term paper (50%). Drafts of the papers are due for class distribution for session 13. Each student presents a critique of another student's paper (10%). Oral summaries of papers (10%) and critiques are presented in sessions 13 and 14.

CLINICAL COURSES AND EXTERNSHIPS

All clinical courses and externships have limited enrollment. Admission to all clinic courses is instructor selected.

LAW 780(7801) Asylum and Convention Against Torture Appellate Clinic

Spring. 4 credits. S-U option available. Limited enrollment. E. M. McKee, S. W. Yale-Loehr.

Students write appellate briefs to the Board of Immigration Appeals on behalf of clients who have petitioned to remain in the U.S. because they fear persecution or torture in their home countries. These clients have represented themselves pro se in Immigration Court. During the first part of the semester students learn substantive and procedural asylum and Convention Against Torture (CAT) law. Classes may also cover practical knowledge needed for effective representation, such as advanced research and writing skills. During the second part, students work in teams of two on appellate briefs that not only entail serious legal analysis, but may also require sociocultural and political research, so that the students can effectively write about the conditions of the client's home country. Students communicate with clients during this time. Students may also locate expert and other witnesses and draft affidavits and motions. The students' cases provide a basis for more in-depth substantive learning, as well as practical skills and attorney-client issues. In class, each team also discusses the legal and practice issues that arise in their case, so that all students can benefit from and ass.

LAW 781(7811) Capital Punishment Clinic: Post-Conviction Litigation

Spring. 4 credits. S-U option available. Prerequisite: permission of instructor; Criminal Procedure or criminal law experience preferred. Limited enrollment. J. H. Blume.

Death penalty post-conviction litigation: investigation and the preparation of petitions, memoranda, and briefs. Students work on two or three capital cases. Case selection depends on both pedagogical factors and litigation needs of the inmates. Students read the record and research legal issues. Some students are involved in investigation, while others assist in the preparation of papers. All students are included in discussions regarding the necessary investigation, research, and strategy for the cases.

LAW 783(7832) Criminal Defense Trial Clinic

Spring. 4 credits. S-U option available. Prerequisite: Evidence recommended or permission of instructor. Limited enrollment. L. Salisbury.

Students represent defendants in non-felony, non-jury criminal cases. The course has a classroom and courtroom component. The classroom component focuses on all aspects of handling of a criminal case, including criminal law and procedure, ethics, trial strategy, plea bargaining and trials. The courtroom component involves attending court proceedings, including pre-trial conferences. Each student interviews clients and witnesses, prepares clients and witnesses for trial, conducts negotiations, does legal research, conducts fact investigation, prepares discovery demands, and engages in motion practice.

LAW 783(7831) Full-Term Externship

Fall, spring. 12 credits. S-U option only. Prerequisite: permission of instructor. Limited enrollment. G. G. Galbreath (fall), J. M. Miner (spring).

Students earn 12 credit hours as externs working full time at approved placement sites during the fall semester of their third year. Written application for the course must be submitted to the instructors in March of the preceding spring semester. The instructors review the applications and grant students conditional approval, contingent on acceptance by the placement and identification of an attorney at the placement who supervises and mentors the extern. In addition to work responsibilities for the placement, the extern prepares weekly journal entries, provides samples of written work product, engages in regular electronic communication with the instructors, hosts the instructors for a site visit, and does a written evaluation of the placement experience.

LAW 784(7841-3) Government Benefits Clinic 1 or 3

Spring. 6 credits. S-U option available. Limited enrollment. B. Strom.

The course has a substantive component, in which a broad conceptual understanding of a complex and controversial area of law and public policy is developed, and a live client clinical experience, in which those concepts can be applied in solving actual client problems. The substantive component provides an introduction to government benefits law by examining various social insurance and need-based benefit programs. Case handling involves the representation of clients in government benefits cases in state and federal administrative hearings. The course also includes a lawyering skills classroom component, Clinical Skills 1 or Clinical Skills 3. See Public Interest Clinic 1 or 3 for a description of these classes.

LAW 785(7851-3) Government Benefits Clinic/Neighborhood Legal Services Externship 1 or 3

Spring. 6 credits. S-U option available. Limited enrollment. B. Strom.

A combination of Government Benefits and the Neighborhood Legal Services Externship and either Clinical Skills class 1 or 3. The course is the same as Government Benefits except that the case handling component involves handling cases for the Ithaca office of Neighborhood Legal Services. See that description for additional details.

LAW 785(7854) International War Crimes Research Clinic

Spring. 4 credits. S-U option unavailable. Prerequisite: permission of instructor; Public International Law, International Human Rights, International Humanitarian Law, International Criminal Law or relevant experience preferred. Students must submit their resume, transcript and brief statement of interest during course pre-registration. Limited enrollment. M. Sterio.

Students undertake research and submit legal memoranda to assist the Office of Defense of the Special Court for Sierra Leone. The course begins with an overview of international war crimes, including genocide, crimes against humanity, terrorism, and torture. It then explores specific issues involving the prosecution of international war crimes, including jurisdiction, individual criminal responsibility, and substantive defenses. Requirements include several research projects on specific topics throughout the semester and submission of well-documented legal memoranda on such topics, which may ultimately be sent to the Special Court for Sierra Leone Principal Defender. Class format is discussion of assigned readings. Final assessment is based on participation in class discussions and on written memoranda submitted during the course of the semester.

LAW 786(7861) Judicial Externship

Fall, Spring. 4 credits.; 6-credit option possible if student and placement are willing to have student there two days a week. S-U option available. Limited enrollment. G. G. Galbreath.

Students work with a trial court judge. Work involves courtroom observation, conferences with the judge, research and writing memoranda, and drafting decisions. The emphasis is on learning about judges, judicial decision-making process, and trials. There are weekly class meetings with readings and discussions of topics related to the externship experience. While the primary focus is the student's work at the placement, each student also does class presentations, weekly journal entries, provides written work samples and meets individually with the faculty member.

LAW 787(7871) Labor Law Clinic

Spring. 4 credits. S-U option available. Limited enrollment. A. B. Cornell.

Provides students a practical opportunity to learn labor law, while making meaningful contributions to the labor movement and working people. This clinic combines a substantive component with practical experience. Students (1) advise labor unions on a variety of legal issues that surface during the semester and may have the opportunity to represent unions in different forums; (2) communicate directly with union representatives and are required to sort through the facts, research the issues, and provide information and advice; (3) draft legal memoranda, prepare and file pleadings and briefs as required; (4) may have the opportunity to represent unions at hearings, mediation or arbitration. Effort is made to expose students to the nature of collective bargaining. A small number of students have the opportunity to dedicate their clinical time to international labor law. Interested students can support the ongoing work of the International Commission for Labour Rights, which has several country-specific projects. Student contribution in this area is likely to be research oriented.

LAW 788(7881) Law Guardian Externship

Fall, Spring. 4 credits. S-U option available.
Limited enrollment. J. M. Miner.

Students are placed at the Tompkins County Law Guardian office, where they assist the attorneys in the representation of children in abuse and neglect cases, juvenile delinquency proceedings, and PINS (Person in Need of Supervision) cases. Students also may have their own cases, in which they assume primary responsibility for the representation. Duties may include interviewing, investigation, drafting memoranda and motions, and trial preparation. There are several meetings with the instructor during the semester. Bi-weekly journals are also required.

LAW 790(7901) Legislative Externship

Fall. 3 credits. S-U option available.

Students selected by Assemblywoman

Lifton. Limited enrollment. B. Strom.

Students work with the local New York State Member of Assembly. Work involves drafting legislation, tracking legislation for constituents, legal research and writing, and responding to constituent requests that particularly require legal research of an explanation of law. The emphasis is on learning about legislative process, drafting of legislation, understanding the reasons for statutory ambiguity, and developing various skills. There are several informal meetings with the faculty supervisor related to the externship experience.

LAW 791(7911-2-3) Neighborhood Legal Services Externship 1, 2 or 3

Fall, Spring. 4 credits. S-U option available.
Limited enrollment. B. Strom.

Classroom component is provided by Clinical Skills 1, 2 (fall), or 3 (spring) depending on whether the student has previously been enrolled in a course in which Clinical Skills 1 was a component. Cases involve the representation of clients of a legal services office, the Ithaca office of Neighborhood Legal Services (NLS). Along with case handling, this externship includes a classroom component, provided by Clinical Skills 1, 2, or 3. The classes are devoted to the development of lawyering skills and issues related to professional responsibility and the role of an attorney. In addition, each student meets periodically with the faculty supervisor for review of the placement experience.

LAW 792(7921) Prosecution Trial Clinic

Fall. 4 credits. S-U option available.

Prerequisite: Evidence or permission of instructor. Limited enrollment.

R. A. Sarachan.

An opportunity for students to prosecute non-felony non-jury trials in Ithaca City Court. The course has two components: (1) The classroom component involves lecture, discussion, and trial simulation exercises. Topics include criminal law and procedure, prosecution ethics, trial strategy and preparation, trial conduct including direct and cross-examination, plea-bargaining and professional judgment; (2) the courtroom component involves regular attendance at Ithaca City Court's non-jury terms. Students observe and critique trials and prosecute offenses. Each student is expected to conduct multiple trials, depending on docket volume. Students also are expected to prepare witnesses, conduct plea-bargaining negotiations, case research and fact investigation, respond to discovery demands, and engage in motion practice and appellate practice as needed.

LAW 793(7931) Public Interest Clinic 1

Fall. 4 credits. S-U option available.

Limited enrollment. J. Miner, B. Strom.

Students handle civil cases for low-income clients of the Public Interest Clinic under the supervision of clinic faculty. Students interview and counsel; investigate and analyze facts; interrelate substantive and procedural law with facts in the context of actual representation; develop strategies to handle clients' problems; identify and resolve professional responsibility issues; do legal writing; negotiate and settle cases; and represent clients in hearings. Classroom component is provided by the Clinical Skills 1 class, in which students develop interviewing, counseling, and advocacy skills through the use of readings, videotapes, discussions, and simulation exercises.

LAW 793(7932) Public Interest Clinic 2

Fall. 4 credits. S-U option available.

Prerequisite: Public Interest Clinic 1 or a clinic course that included the Clinical Skills 1 classroom component. Limited enrollment. J. Miner, B. Strom.

Students handle civil cases, participate in a classroom component, Clinical Skills 2, and help supervise participants in Public Interest Clinic 1. Cases are handled as described in the course description for Public Interest 1. Students represent the clinic's clients in both federal and state courts. Clinical Skills 2 builds on the skills taught in Clinical Skills 1.

LAW 793(7933) Public Interest Clinic 3

Spring. 4 credits. S-U option available.

Prerequisite: Public Interest Clinic 1 or a clinic course that included the Clinical Skills 1 classroom component. Limited enrollment. G. G. Galbreath.

Students handle civil cases, participate in a classroom component, Clinical Skills 3, and help supervise participants in Public Interest Clinic 1. Cases are handled as described in the course description for Public Interest 1. Students represent the clinic's clients in both federal and state courts. Clinical Skills 3 builds on the skills taught in Clinical Skills 1 and 2.

LAW 795(7951-2) US Attorney's Office Clinic I or II

Fall, Spring. 6 credits. S-U option available.
Limited enrollment. C. E. Roberts.

A program in which law students work 12–15 hours per week for the U.S. Attorney's Office in Syracuse, N.Y. Each student is assigned to work for an Assistant U.S. Attorney. Students perform research and writing and trial assistance as needed. Students may qualify to appear in court under the supervision of their attorney and are encouraged to observe court proceedings in the U.S. Courthouse. Students also attend a two-hour seminar once a week at Cornell that focuses on writing in practice, including critiques of briefs, motions, and a petition for certiorari. Additional topics include federal criminal and civil practice, prosecutorial discretion, and habeas corpus. Guest speakers may include judges, a special prosecutor, and U.S. Department of Justice officials.

LAW 796(7961) Water Law in Theory and Practice

Fall. 4 credits. S-U option available.

Limited enrollment. K. S. Porter.

This course will present water law in theory and in practice. It will provide students practical opportunities to learn water law, and to experience its multiple aspects through meaningful contribution.

NON-PROFESSIONAL COURSES—NOT OPEN TO LAW STUDENTS**LAW 313 Government (3131) The Nature, Functions, and Limits of Law**

Spring. 4 credits. S-U option unavailable.

Undergraduates only. R. A. Hillman.

A general-education course for students at the sophomore and higher levels. Law is presented not as a body of rules but as a set of techniques for resolving conflicts and dealing with social problems. The course analyzes the roles of courts, legislatures, and administrative agencies in the legal process, considering also constitutional limits on their power and practical limits on their effectiveness. Assigned readings consist mainly of judicial and administrative decisions, statutes and rules, and commentaries on the legal process.

LAW 402(4021) Competition Law and Policy

Spring. 3 credits. S-U option available.

No legal training or background required. ECON 101 (Elementary Microeconomics) or its equivalent is a prerequisite; no advanced mathematics is used.

Undergraduates only. G. A. Hay.

Intended for non-law students; interested law students should take the Antitrust Law course. An examination of issues that arise when a country attempts to implement and maintain a "competition policy" as a way of promoting economic growth and efficiency. The basic reading material starts with actual cases and uses those cases to probe the legal, economic, and broad policy issues that the cases raise.

LAW 405(4051) The Death Penalty in America

Fall. S-U option available. 3 credits.

Undergraduates only. J. H. Blume, S. L. Johnson.

A survey of the legal and social issues that arise in the administration of the death penalty. The reading is largely reported death penalty cases, but is augmented by a other sources, including empirical studies of the death pen. Although the focus is on capital punishment as practiced in the U.S., we also consider international and comparative perspectives. Guest speakers provide a range of views, and law students with experience working on capital cases lead discussion sections.

LAW 408(4081) Law, Science, and Sustainability

Spring. 3 credits. S-U option available.

Undergraduates only. D. A. Kysar.

Concerns empirical, philosophical, and legal dimensions of the emerging sustainability paradigm—i.e., society's efforts to promote human development and economic growth while maintaining the collective impact of human activity within environmentally sustainable parameters. Topics include: the nature of environmental risk and how it is assessed by both experts and the public; international political dimensions of sustainable development; the moral status of future generations; and, most important, the variety of legal tools that have been or could be used to promote sustainability. These theoretical topics are examined in conjunction with case studies of specific global environmental issues. Intended for students from a variety of fields and adopts a broadly interdisciplinary approach; no prior study in law is required.

ADMINISTRATION

Stewart J. Schwab, dean and professor of law
 Barbara J. Holden-Smith, associate dean for academic affairs and professor of law
 Claire M. Germain, law librarian and professor of law
 Richard D. Geiger, associate dean and dean of admissions and financial aid
 Anne Lukingbeal, associate dean and dean of students
 Richard F. Robinson, associate dean for administration and finance
 Karen V. Comstock, assistant dean for public service
 Charles D. Cramton, assistant dean for graduate legal studies
 John R. DeRosa, assistant dean for student services
 Nan A. Colvin, registrar

FACULTY ROSTER

Alexander, Gregory S., J.D., Northwestern U. A. Robert Noll Prof.
 Barcelo, John J. III, S.J.D., Harvard U. William Nelson Cromwell Professor of International and Comparative Law
 Blume, John H., J.D., Yale U. Assoc. Prof.

 Yusem, Stephen G., J.D., U of Pennsylvania. Adjunct Prof.

DIVISION OF NUTRITIONAL SCIENCES

ADMINISTRATION

Cutherto Garza, director

J. Thomas Brenna, director of undergraduate studies

Charles McCormick, associate director of undergraduate studies

Christine Olson, director of graduate studies, field of nutrition

THE DIVISION

Nutritional science draws upon the chemical, biological, and social sciences to understand the complex relationships between human health, nutritional status, food and lifestyle patterns, and social and institutional environments. Understanding these relationships includes the study of the metabolic regulation and function of nutrients, nutrient requirements throughout the life span, the role of diet in reducing risk of chronic disease, the nutritional quality of foods, and interventions and policies designed to promote the nutritional health of individuals, communities, and populations.

The focus of this broad field of study at Cornell is the Division of Nutritional Sciences, which brings together specialists from many disciplines. Faculty members are involved in undergraduate and graduate teaching, research, and extension of research-based knowledge throughout New York State, the nation, and the world.

The division is affiliated with both the College of Human Ecology and the College of Agriculture and Life Sciences. The undergraduate program in Nutritional Sciences is offered to students enrolled in both colleges. The undergraduate program in Human Biology, Health, and Society is offered through the College of Human Ecology. A program of study in nutrition for biological science majors is offered in collaboration with the undergraduate program in biology. Graduate study in the field of nutrition is administered by faculty members throughout the university.

FACILITIES

Most of the faculty members of the division work in Savage Hall, Kinzelberg Hall, and Martha Van Rensselaer (MVR) Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities. Savage Hall also has a graduate reading room.

UNDERGRADUATE PROGRAMS

The Division of Nutritional Sciences (DNS) offers three programs leading to a B.S. degree:

Nutritional Sciences (NS), College of Human Ecology: this program provides students with a strong foundation in the broad field of nutritional sciences as well as thorough training in chemistry and biology. Students may prepare for a variety of career interests, including medicine and other health careers, fitness and sports nutrition, nutrition counseling, clinical nutrition, dietetics, nutritional biochemistry, community nutrition, and nutrition education.

Nutritional Sciences (NS), College of Agriculture and Life Sciences: this program is for students who want strong training in human nutrition combined with supportive course work in agriculture and the life sciences. Strong preparation in biology, chemistry, and math is required. Students in the Nutrition, Food, and Agriculture program supplement the nutrition curriculum with courses in areas such as food science, animal science, plant science, advanced biology, business and economics, education, and communication.

Human Biology, Health, and Society (HBHS), College of Human Ecology: established in 1997, this program gives students a strong foundation in biology. It then goes on to explore human health issues from the perspectives of both biology and the social sciences. Students complete a rigorous curriculum in the natural sciences and then, choosing from a wide array of courses offered in the College of Human Ecology, focus their studies on health issues of their choice. Students can explore such topics as gene expression and metabolism related to disease states, biological and social aspects of growth and development, and policies and programs influencing health.

The division also offers the **Program of Study in Human Nutrition for biological sciences majors** who may be enrolled in the College of Agriculture and Life Sciences or College of Arts and Sciences. The Program of Study in Human Nutrition offers biology majors courses on the nature and biochemical function of essential and nonessential nutrients, nutrient requirements, the role of nutrients in gene expression, and the role of diet in both risk of chronic disease and treatment of existing disease states. Students in this program of study are encouraged to complete a diverse set of advanced courses that afford a perspective on current knowledge of nutrient requirements and function and how this knowledge can be put to use. With the exception of a core course in the structure and function of nutrients, the course requirements are unspecified.

Faculty advisers work with individual students to develop a curriculum that fits the students' interests. As part of their program, students are encouraged to obtain laboratory experience either through course work or research. Students completing the program in nutrition most often choose to continue their education in medical or graduate school and pursue careers in the applied

aspects of nutrition or in laboratory-based or epidemiological research.

THE CURRICULUM

Undergraduate students in these programs complete the requirements of their colleges as well as the courses required by the program of their specific interest.

Both the NS and HBHS programs require a rigorous sequence of courses in chemistry and biology, including introductory chemistry and biology, organic chemistry, biochemistry, and physiology. A minimum competency in college algebra is required with an additional math and/or statistics requirement for some programs and career paths. Students in the HBHS major also complete a course in physics and two additional courses in advanced biology.

All students complete the introductory course NS 115 Nutrition, Health, and Society. The NS program requires the completion of four other core courses: NS 245 Social Science Perspectives on Food and Nutrition; NS 345 Nutritional and Physicochemical Aspects of Foods; NS 331 Physiological and Biochemical Bases of Nutrition; and NS 332 Methods in Nutritional Sciences. Students in these programs also must select a minimum of 9 credits in advanced courses in the nutritional sciences.

The HBHS major requires a minimum of 6 credits from courses that integrate biology and the social sciences as they examine health issues. In addition, students must complete 9 credits of advanced electives in courses focused on human biology, health, and society.

Undergraduate students in these programs have a faculty adviser with whom they meet at least twice a year. Advisers help students plan their course schedules and can suggest opportunities for individual study or experience outside the classroom.

In both undergraduate programs the correct sequencing of biology, chemistry, and/or nutrition courses is very important. Students considering these programs should obtain detailed information about course requirements from the division's Academic Affairs office, 335 MVR. This office offers a wide range of advising materials to help students develop a program of study that matches their interests and needs.

CAREER OPTIONS AND COURSE PLANNING

Requirements for the programs are the minimum set of courses necessary for a bachelor's degree in these fields. Students should supplement their requirements with elective courses and other learning experiences that will prepare them for entry-level jobs or advanced study in their field(s).

of interest. A summary of suggested electives for different career interests follows:

Medicine and Other Health Careers:

Recommended courses for pre-med students include calculus and two semesters of physics. Specific information about medical school admissions requirements can be obtained from the university's Health Careers office, 203 Barnes Hall. Students interested in other health careers should acquire specific information about those requirements. Courses of interest may include those related to the biological and social determinants of health; human growth, development, and behavior through the life course; interpersonal communications; advanced biology; sociology; psychology; and ethics.

Dietetics: Students who wish to work in the areas of clinical nutrition, nutrition counseling, sports nutrition, community nutrition, or food and nutrition management should complete the academic requirements for The American Dietetic Association (ADA). Courses in foods, nutrition and disease, microbiology, management, statistics, and nutritional care are added to the courses required for the nutrition programs. For more information about meeting ADA requirements, contact the DNS Academic Affairs office, 335 MVR.

Exercise, Nutrition, and Health

Promotion: Students should complete a course in physiology and a course in anatomy after introductory biology. Students can complete the Applied Exercise Science Concentration at Ithaca College, which includes courses in kinesiology, exercise physiology, and biomechanics. Students who wish to apply to graduate schools to study physical therapy should complete a year of introductory physics, a course in statistics, a course in ethics, and three courses in psychology. Students should check the specific requirements of their schools of interest. For information about the Applied Exercise Science Concentration, contact the DNS Academic Affairs office, 335 MVR.

Biomedical Research/Nutritional

Biochemistry: Recommended electives include calculus, physics, genetics, advanced biology and chemistry, toxicology, and nutritional sciences courses related to the physiology, biochemistry, and metabolism of different nutrients and disease states.

Public Health and Community

Nutrition: Suggested electives include courses in communications, education, human development, policy analysis and management, maternal and child nutrition, geriatric nutrition, nutrition and disease, and food economics.

Nutrition, Food, and Business:

Recommended electives include courses in management, marketing, economics, communications, hotel administration, and food science.

Nutrition and Agriculture: Recommended electives include courses in food science, animal science, plant sciences, international agriculture, agricultural economics, biological sciences, and rural sociology.

International Nutrition: Recommended electives include courses in language, anthropology, agricultural economics, policy, economics, rural sociology, international agriculture, and nutritional sciences related to maternal and child health and problems of developing nations.

Biology and Behavior: Recommended electives include courses in psychology, human development, and neurobiology.

Food, Nutrition, and Health Policy:

Recommended electives include courses in economics, sociology, government, policy analysis, and management.

SPECIAL EXPERIENCES

Undergraduates can enhance their experiences by participating in structured field experiences or study abroad. Academic credit can be earned for field experiences in a community agency, health care facility, or business. The Urban Semester in the College of Human Ecology provides students with an opportunity to study and gain field experience in New York City. All students intending to spend a semester off-campus in field experience or study abroad must plan their courses well in advance to be sure that all program requirements can be met.

INDEPENDENT STUDY ELECTIVES

Independent study courses (NS 400, 401, 402) can be used to obtain credit for more diverse or intensive experience than the classroom can offer, whether this involves laboratory work, library research, or field study. Any student interested in independent study should obtain the sponsorship of a faculty adviser and the approval of the associate director for academic affairs or consider applying to the honors program.

HONORS PROGRAM

The honors program, which leads to a B.S. degree with honors in the College of Human Ecology or a B.S. degree with distinction in research in the College of Agriculture and Life Sciences, gives official recognition to students who have demonstrated excellence in their academic work and their capacity for independent study.

In addition to fulfilling the requirements for a major, students in the honors program take seminars in designing and evaluating research, complete an original piece of research (at least 6 credits of NS 499), and prepare an honors thesis. The honors project may be laboratory or field research or deal with policy and program development. For more information, students should contact Professor J. Thomas Brenna, B38 Savage Hall, or Professor Carole Bisogni, 328 MVR.

COURSES RECOMMENDED FOR NONMAJORS

Courses in nutritional sciences can strengthen programs of study in biological sciences, biology and society, communications, food science, human development, human services, and other fields.

NS 115 Nutrition, Health, and Society is open to all students. After NS 115, nonmajors with limited backgrounds in chemistry and biology may elect NS 245 Social Science Perspectives on Food and Nutrition; NS 247 Food for Contemporary Living; NS 275 Human Biology

and Evolution; NS 306 Nutritional Problems of Developing Nations; NS 315 Obesity and the Regulation of Body Weight; NS 347 Human Growth and Development: Biological and Behavioral Interactions; NS 450 Public Health Nutrition; NS 451 Epidemiology and Health of Human Communities. Nonmajors with strong backgrounds in chemistry and the biological sciences may consider NS 331 Physiological and Biochemical Bases of Human Nutrition, as well as many advanced nutritional sciences courses, such as NS 345 Nutritional and Physicochemical Aspects of Foods; NS 431 Mineral Nutrition and Chronic Disease; NS 441 Nutrition and Disease; NS 455 Nobel Prizes in Biomedical Research; and NS 475 Mechanisms Underlying Mammalian Development Defects.

GRADUATE PROGRAMS

Graduate study is administered by the field of nutrition, a group of about 40 faculty members from throughout the university who have a common interest in nutritional problems. In the M.S. and Ph.D. degree programs, students may specialize in molecular and biochemical nutrition, human or animal nutrition, community nutrition, or international nutrition. Research is emphasized in all graduate programs. Field experience may be an important component of concentrations in community, international, and public health nutrition and nutrition education. Teaching experience and participation in the graduate student seminar (NS 703) are important aspects of graduate training.

The specialties and interests represented by faculty in the field of nutrition provide almost unlimited opportunity for graduate study. Cornell's extensive laboratory and agricultural facilities ensure that students interested in experimental nutrition have exceptional choices and thorough training. As the largest faculty in the country devoted to the study of human nutrition, the field includes specialists in biochemical, metabolic, epidemiological, and sociocultural research. Opportunities to work with community and federal agencies are available to students interested in applied nutrition and public policy. Students in international nutrition are expected to conduct their thesis research abroad.

For more information about the graduate program, students should write for the brochure *Graduate Study in Nutrition*, available from the director of graduate studies, field of nutrition, Cornell University, 335 MVR Hall, Ithaca, NY 14853-4401, 255-2628, nutrition_gfr@cornell.edu, or www.nutrition.cornell.edu/grad.html.

COURSES

NS 115(1150) Nutrition, Health, and Society

Fall. 3 credits. S-U grades optional. M W F 1:25. D. Levitsky.

Discusses the facts and fallacies concerning the role that nutrition, exercise, and other health behaviors play in preventing disease, maintaining good health, and maximizing athletic performance. Emphasis is on understanding the biological mechanisms through which good nutrition and regular exercise affect psychological and physical health.

NS 116(1160) Personalized Concepts and Controversies

Fall. 1 credit. Limited to 10 students per sec. Prerequisite: freshman or transfer standing. Co-requisite: NS 115. S-U grades only. Times TBA. J. Swanson.

Provides students enrolled in NS 115 individualized assistance in many skills including using computers to analyze diets, finding and using scientific references, understanding and criticizing scientific articles, and reviewing material presented in lectures.

NS 120(1200) Nutrition and Health: Issues, Outlooks, and Opportunities

Spring. 1 credit. Limited to 120 students. Prerequisite: freshman, sophomore, or junior standing or permission of instructor. Not an introductory nutrition course for nonmajors. S-U grades only. W 12:20. DNS staff.

For students interested in exploring careers in the broad fields of food, nutrition, and health. Experts representing different areas discuss their work, focusing on current issues and trends as well as the requisite knowledge and skills. This course introduces many of the disciplines that are drawn upon in addressing human problems related to food, diet, and health. Students explore career opportunities through a variety of assignments.

NS 222(2220) Maternal and Child Nutrition

Fall. 3 credits. Limited to 25 students. Prerequisites: NS 115 and college biology or permission of instructor. Students must preregister in 335 MVR Hall. S-U grades optional. Some Sat classes required. T R 1:25-2:40. C. Garza and P. Brannon.

Focuses on the biological bases of nutritional requirements in pregnancy, lactation, infancy, and childhood through adolescence. Stresses critical analyses of beneficial and adverse outcomes of diverse nutrient intakes and dietary patterns, assessment of nutritional status, and the integration of nutrition, other life sciences, and social conditions in understanding nutritional needs during these life stages. Topics include oral contraception and health; relationships between maternal diet and pregnancy outcomes; breast- and formula feeding; childhood and adolescent obesity; and the nutritional needs of young children and adolescents.

NS 230(2300) Sophomore Seminar: Functional Foods; Where Food Science and Nutrition Meet (also FD SC 230(2300))

Spring. 2 credits. Limited to 15 students; priority given to sophomores who have completed two first-year writing seminars and an introductory course in either food science or nutritional sciences. W 2:30-4:25. S. J. Mulvaney and R. Parker.

Functional foods are foods whose nutrient composition has been modified to achieve targeted health outcomes. This course explores the interface where nutritional science and food science can work together to design and produce foods to meet certain health goals using a case study approach. Each case study involves interdisciplinary discussion and a writing assignment that includes both technical (e.g., scientific basis for diet-health claims) and nontechnical (e.g., personal experience and opinions related to functional foods) content.

This is a special seminar sponsored by the John S. Knight Institute's Sophomore Seminars

Program. Seminars offer discipline-intensive study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the discipline's outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.

NS 245(2450) Social Science Perspectives on Food and Nutrition

Fall. 3 credits. Prerequisite: NS 115. S-U grades optional. T R 10:10-11:25. C. Bisogni and J. Sobal.

Uses theories, concepts, and methods from the social sciences to examine food, eating, and nutrition. Uses the food choice process as a conceptual model for examining the scope of social science aspects of nutrition.

NS 247(2470) Food for Contemporary Living

Fall and spring. 2 credits. Limited to 32 students per sec. Highly recommended: NS 115. Students must preregister in 335 MVR during course enrollment period. S-U grades optional. Lab coat required. Fall, T 1:25-4:25; spring, T 1:25-4:25 or R 9:05-12:05. E. Gier.

During this laboratory course, the understanding of food ingredients and techniques of food preparation is applied to positive nutritional practices and health promotion goals. Course content includes food science principles, nutrition principles, food safety and sanitation, sensory evaluation, and social-cultural influences on food choices. The course explores basic food science principles through food preparation, recipe modification, and sensory evaluation (taste testing required). The course introduces students to basic cooking skills and techniques and recipe modification. Each student prepares assigned recipes during each lab. Assignments and projects introduce students to basic menu planning and meeting nutritional requirements while restricted to a budget. Lab performance and a lab practical factor into final student evaluation; thus attendance at all labs is expected.

[NS 275(2750) Human Biology and Evolution (also BIOEE/ANTHR 275(2750))]

Fall. 3 credits. S-U grades optional by permission of either instructor. M W F 10:10; disc, M; lec, W and F; occasional lec, M. Offered alternate years; not offered 2005-2006. K. A. R. Kennedy and J. D. Haas.

For description, see BIOEE 275.]

NS 300(3000) Special Studies for Undergraduates

Fall or spring. Prerequisite: permission of instructor. S-U grades optional. DNS faculty.

Special arrangements can be made to establish equivalency for courses not transferred from a previous major or institution. Students prepare a description of the study they want to undertake using a form available from the college registrar's office. The form, signed by both the instructor directing the study and the associate director for academic affairs, is filed at course registration or during the change-of-registration period.

[NS 306(3060) Nutritional Problems of Developing Nations]

Spring. 3 credits. Prerequisite: NS 115. S-U grades optional. T R 10:10. Offered alternate years; next offered 2006-2007. R. Stoltzfus.

Students gain an overview of the most important nutrition problems facing developing countries today and an in-depth understanding of the nutrition problems of one country, chosen as a case study for the course. The course uses the health/care/nutrition framework to analyze the causes of these nutrition problems. Instruction is through lectures and readings. Evaluation is through individual assignments, a group project, and exams.]

NS 315(3150) Obesity and the Regulation of Body Weight (also PSYCH 613(3150))

Spring. 3 credits. Prerequisites: junior or senior standing; NS 115, PSYCH 101. S-U grades optional. Offered alternate years. T R 1:25-3:00. D. Levitsky.

Multidisciplinary discussion of the causes, effects, and treatments of human obesity. Topics include the biopsychology of eating behavior, the genetics of obesity, the role of activity and energy metabolism, the psychosocial determinants of obesity, anorexia nervosa, therapy and its effectiveness, and social discrimination.

NS 320(3200) Introduction to Human Biochemistry

Fall. 4 credits. Prerequisites: one year college biology; one year college general chemistry; and CHEM 257 or 357-358; or permission of instructor. S-U grades optional. M W F 10:10, sec, T 1:25. P. Stover.

Presents the principles of biochemistry within the context of human health and disease. Teaches the metabolism of carbohydrates, lipids, proteins, and selected micronutrients from a perspective that emphasizes their role in supporting the structure and physiological functions of the major organs of the body. Incorporates the concepts of enzyme catalysis, enzyme regulation, hormone action, and bioenergetics within this framework. Covers the fundamental concepts of eukaryotic DNA structure, function, and gene expression with reference to their importance in regulating metabolism and the impact of a changing nutrient environment.

NS 331(3310) Physiological and Biochemical Bases of Human Nutrition

Spring. 4 credits. Prerequisites: BIOBM 330 or 331, or NS 320, or equivalent. S-U grades optional. Lec, M W F 10:10; disc, W 12:20 or R 8:00. C. McCormick.

Examines the biochemical and physiological bases of human nutritional requirements. Uses an integrated approach to cover the digestion and metabolism of nutrients (carbohydrates, proteins, lipids, vitamins, and minerals). Metabolic and chronic diseases related to nutrition are discussed throughout the semester. The discussion sections and problem sets provide an opportunity to examine in greater depth selected topics from lecture.

NS 332(3320) Methods in Nutritional Sciences

Fall. 3 credits. Limited to 18 students per sec. Prerequisites: NS 345, NS 331 preferred or concurrent registration. Students must preregister for lab in 335 MVR during course preregistration. Lec, M

12:20; lab, M W 1:25-4:25 or T R 10:10-1:10; one evening prelim. M. N. Kazarinoff. Laboratory introduction to principles and analytical techniques of nutritional research. Emphasizes analytical concepts and skills required to determine nutrient function and nutritional status of individuals. Topics include methods of nutrient, metabolite, and enzyme analysis in body fluids; methods for assessing individual food intake and nutritional status; and methods for assessing the composition of foods.

NS 341(3410) Human Anatomy and Physiology

Spring. 4 credits. Limited to 18 students per lab. Prerequisite: college biology. Recommended: NS 115. **Students must complete lab permission forms in 335 MVR during course enrollment period. Attendance required at first lab or placement forfeited.** For further information, go to 335 MVR. Letter grades only. Lec, M W F 11:15; lab, W 2:30-4:25 or R 9:05-11:00 or R 2:30-4:25. V. Utermohlen.

Introduces human anatomy and physiology with particular emphasis on aspects of relevance to the nutritional sciences and medicine. Covers all major organ systems. Laboratories emphasize location, recognition, and description of anatomical structures. Testing of physiological functions focuses on tests with nutritional and medical relevance.

NS 345(3450) Nutritional and Physicochemical Aspects of Food

Spring. 3 credits. Prerequisite: college organic chemistry or biochemistry. S-U grades optional. T R 1:25-2:40. B. Parker and B. Lewis.

Studies the nutritional, physical, and chemical properties of foods including composition, food structure, enzymic and nonenzymic phenomena, processing/preparation, and how these relate to food quality. Also discusses issues related to food safety and regulation.

NS 346(3460) Introduction to Physicochemical Aspects of Foods—Laboratory

Spring. 1 credit. Limited to 18 students per sec. Prerequisites: dietetics students in DNS; NS 345 or concurrent registration; college organic chemistry and permission of instructor during course registration. Students must obtain permission of instructor forms from and return them to 335 MVR. Letter grades only. M 12:20-3:20 or T 9:05-12:05. B. Parker and B. Lewis. Laboratory exercises are designed to illustrate principles related to food quality and ingredient functionality and to introduce students to the analytical methodology associated with food evaluation.

[NS 347(3470) Human Growth and Development: Biological and Behavioral Interactions (also HD/BSOC 347(3470))]

Spring. 3 credits. Prerequisites: BIO G 101 or 109 or equivalent; HD 115 or PSYCH 101 or equivalent. M W F 1:25. Offered alternate years; next offered 2006-2007. J. Haas and S. Robertson. For description, see HD 347.]

NS 361(3610) Biology of Normal and Abnormal Behavior (also PSYCH 361(3610))

Spring. 3 credits. Limited to 40 students. Prerequisites: junior or senior standing; BIO G 101-102 and PSYCH 101 or permission of instructor; fundamental knowledge of biology and psychology. S-U grades optional. M W F 9:05. B. Strupp. Serves as a critical evaluation of biological factors thought to influence behavior and/or cognitive functioning. Biological, psychological, and societal influences are integrated. Topics include nutrition and behavior, psychiatric disorders, developmental exposure to environmental toxins and abused drugs, biopsychology of learning, memory, intelligence, and related cognitive disorders.

NS 398(3980) Research in Human Nutrition and Health

Fall. 1 credit. Requirement for students in honors research program sponsored by DNS. Open to all students. S-U grades only. Not offered spring 2006. M 2:30. J. T. Brenna and C. Bisogni. Lecture course focusing on the structures and practice of professional research conducted in human nutrition and health, a field that encompasses questions ranging widely from subcellular components to population-level issues. Introduces the various approaches and methods used by researchers and addresses the topics of ethics and research controls. Describes the structure of scientific literature, preparation of research proposals, roles of scientific organizations, and funding sources. Students are required to attend and report on research seminars on campus.

NS 400-401-402-403(4000-4010-4020-4030) Special Studies for Undergraduates

Fall or spring. Credit TBA. S-U grades optional. DNS faculty.

For advanced independent study by an individual or group of students who want to study a field of nutritional sciences not otherwise provided through course work in the division or elsewhere in the university. Students prepare a description of the study they want to undertake on a form to be signed by the instructor directing the study and the associate director for academic affairs. The form, available from the division office, is filed at course registration or within the change-of-registration period along with an add/drop slip in the Human Ecology registrar's office. To ensure review before the close of the course registration or change-of-registration period, students should submit the special-studies form to the associate director for academic affairs as early as possible.

NS 400(4000) Directed Readings

Study that predominantly involves library research and independent reading.

NS 401(4010) Empirical Research

Study that predominantly involves data collection and analysis or laboratory or studio projects.

NS 402(4020) Supervised Fieldwork

Study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

NS 403(4030) Teaching Apprenticeship

Study that includes assisting faculty with instruction.

NS 421(4210) Nutrition and Exercise

Spring. 3 credits. Limited to 12 students per sec. Prerequisites: BIOAP 311 or NS 341 and NS 115 or 331; nutrition majors or permission of instructor; priority given to seniors. S-U grades optional. Lec, T R 11:15; sec, T or R 8:00-9:55. S. Travis.

Examines the interaction between nutrition, exercise, and athletic performance. Topics include the biological, psychological, and sociological aspects of nutrition as it relates to exercise performance. Lectures cover current research on nutritional needs in response to exercise, including fluids, energy nutrient requirements and caloric distribution, supplementation, ergogenic aids, pre-/post-event recommendations. Makes applications to various sports. Critical thinking skills are enhanced by critiques of studies on sports nutrition-related topics and the evaluation of popular sports nutrition claims. Students learn educational strategies for communicating with the recreational and professional athlete, coach, and trainer.

NS 425(4250) Nutrition Communications and Counseling

Spring. 3 credits. Limited to 20 students. Prerequisites: NS 115, 245; junior or senior standing; dietetics/nutrition majors preferred. Letter grades only. Lec, M 1:25; sec, W 1:25-3:15 or F 8:00-9:55. S. Travis. Students learn the theoretical basis of effective health promotion communications and develop effective nutrition communication skills through application in a variety of settings. The course provides hands-on experiences in counseling, educational program development, and oral and written communications.

NS 431(4310) Mineral Nutrition and Chronic Disease

Fall. 3 credits. Prerequisite: NS 331 or permission of instructor. S-U grades optional. T R 10:10. C. McCormick. Students evaluate the evidence from primary literature that dietary calcium, sodium, and iron play an important role in the development of osteoporosis, hypertension, and anemia, respectively. An additional goal of the course is to review the molecular processes that are involved in the homeostasis of each mineral and the recommendations for daily nutrient intakes. Class discussion of key research articles is conducted and evaluated.

NS 441(4410) Nutrition and Disease

Fall. 4 credits. Prerequisites: NS 331 and human physiology course. S-U grades optional. M W F 10:10, F 8:00. V. Utermohlen.

Studies the anatomical, physiological, and metabolic abnormalities in acute and chronic illness and the role of nutritional therapy in their prevention and care. Topics include nutritional assessment, nutritional pharmacology, starvation, infection, trauma, cancer, diabetes mellitus, and renal, cardiovascular, pulmonary, skeletal, neurological, liver, and gastrointestinal disorders.

NS 442(4420) Implementation of Nutrition Care

Fall. 3 credits. Prerequisites: NS 115, 247, concurrent registration in NS 441 (or equivalent background in either course). S-U grades optional. M W F 9:05; evening prelim. E. Gier.

Develops skills necessary to implement medical nutrition therapy (MNT). Emphasizes the clinical setting, although long-term care and outpatient settings are addressed. Students develop a working knowledge of the nutrition care planning process and an understanding of the application of appropriate nutrition principles and interventions in clinical nutrition practice involving acute and chronic disease conditions. Course content includes principles of MNT, menu planning for disease states, the role of other allied health practitioners in assuring nutritional health, and reimbursement and legislation in dietetics practice. Students have the opportunity to perform basic nutrition assessment skills in a local clinical and/or long-term care setting.

NS 450(4500) Public Health Nutrition

Spring. 3 credits. Prerequisites: NS 115 and one course dealing with population-level studies (e.g., NS 245, HD 250, PAM 201/303, D SOC 101/200). Students must complete section forms in 335 MVR during course enrollment period. M W F 11:15; disc. TBA. K. Rasmussen and D. Pelletier.

Public health nutrition is the major professional career track for nutritionists outside of dietetics. It deals with efforts to improve the diets and nutritional status of whole populations by working at the community, state, and national levels. This course helps prepare students to work in public health nutrition by describing methods used in the assessment of nutrition problems, the development of nutrition-related policies, and the delivery of health, nutrition, and food assistance programs.

NS 451(4510) Epidemiology and Health of Human Communities

Fall. 3 credits. Pre- or co-requisite: one semester of statistics. Intended for advanced undergraduates and graduate students interested in health, human biology, nutrition, or epidemiology. M W F 1:25. E. Frongillo.

Examines through a series of case studies the role of epidemiological investigation in understanding, assessing, and improving the health and nutrition of human communities and populations. Students read and discuss scientific research and public policy literature on specific topics of current interest. Emphasis is on the conceptualization of epidemiology as an ecological science that studies the interdependence and interaction of humans with their social, cultural, and physical environment.

NS 452(4520) Molecular Epidemiology and Dietary Markers of Chronic Disease

Spring. 3 credits. Prerequisites: upper-level biology course, introductory statistics (can be taken concurrently), or permission of instructor. S-U grades optional. T R 1:25–2:40. P. Cassano.

Introduces chronic disease epidemiology and covers the natural history of the major chronic diseases affecting the U.S. population. Focuses on the use of biological markers in understanding the etiology of cardiovascular disease, cancer, and lung disease. Integrates

biological and epidemiological information as well as public health considerations and concepts related to the prevention of disease. Topics include gene-nutrient interaction in relation to cardiovascular risk, micronutrients and cancer risk, and nutritional influences on the immune system in relation to asthma risk. The course provides a health context that enriches the learning experience in other advanced courses, particularly in biology and nutrition.

NS 455(4550) Nobel Prizes in Biomedical Research

Spring. 3 credits. Prerequisites: college biochemistry and/or cell biology (e.g., BIOBM 330, 331–332, 432, NS 320). Times TBA. S-U grades optional. D. Manor.

Covers in detail key topics in biomedical research through discussions of selected Nobel prizes. For each specific biomedical problem addressed, the discussion encompasses detailed analysis of the relevant experiments and ensuing data, evaluation of the impact of the findings on public health, and retrospective assessment in view of present-day knowledge. The course focuses mainly on breakthroughs associated with two major public health issues: infectious diseases and cancer. Other topics discussed include vitamins, lipid metabolism, prions, and technical breakthroughs such as DNA synthesis, mutagenesis, and PCR.

NS 457(4570) Economics of Hunger and Malnutrition (also ECON 474[4740])

Spring. 3 credits. Prerequisites: ECON 101 and introductory statistics, or permission of instructor. S-U grades optional. M W F 9:05. D. Sahn.

Focuses on the analysis of global hunger and malnutrition. Students analyze the dimensions, causes, and solutions to hunger and malnutrition, particularly in developing countries. Grades are based on a midterm and a final exam, a term paper, and class participation.

[NS 475(4750) Mechanisms Underlying Mammalian Developmental Defects (also BIOAP 475[4750])]

Spring. 3 credits. Prerequisites: BIOBM 330, 331–332 or 333 (may be taken concurrently). Lec, M W 9:05; lab, R 2:00. Offered alternate years; next offered 2006–2007. D. Noden and P. Stover.

Developmental defects are present in nearly 5 percent of humans. Drawing upon current research, this course explores the causes of birth defects, emphasizing the interplay between genetic and environmental factors in the regulation of developmental processes. Emphasis is on nutritional disruptors, teratogens, and regulatory gene networks that are well characterized through animal studies and are associated with morphological, physiological, reproductive, or behavioral abnormalities in humans.]

NS 488(4880) Applied Dietetics in Food Service Systems

Spring. 3 credits. Limited to 27 students. Prerequisites: food service management course, BIOMI 290. White lab coat required. Fee for special supplies/training and activities: approx. \$60. Lec, T 12:20–1:10; lab, T 12:25–4:25. E. Gier.

Students gain experience in facility design; equipment selection, use, and care; job analysis and evaluation; human resources planning; management of financial resources; recipe development and volume food

production; computer-assisted management; employee training; and applied safety and sanitation standards. Through planning and executing a themed event, students develop other skills required to operate/manage a food service program. The application of quality management in food service operations and facility management is stressed. Laboratories are arranged through Cornell Dining. Completion of a professional portfolio is required. ServSafe training and examination is conducted; successful completion results in ServSafe certification.

NS 490(4900) Manipulating the Mouse Genome (also BIOGD 490[4900])

Fall. 1 credit. Prerequisites: BIOGD 280, 281, or 282 and BIOBM 330, 332 or 333, or NS 320. S-U grades optional. M 1:25. P. Soloway.

Functional genomic analysis has benefited enormously from experimental manipulation of the genomes of many organisms. The mouse has been the model of choice for such studies in mammals. This course explores the tools available for experimental manipulation of the mouse genome, including transgenesis, gene targeting, gene trapping, chemical mutagenesis, and cloning by nuclear transplant. Also discussed are use of recombinant inbred mice for complex trait analysis. Readings from the scientific literature focus on seminal applications of these methods.

NS 499(4990) Honors Problem

Fall and spring. Credit TBA. Prerequisite: acceptance into honors research program. Students who have been accepted into the honors research program work on their projects under the guidance of their faculty mentors. Honors research students must complete a minimum of 6 credits of NS 499, typically spread over two or more semesters. The student and the mentor determine the appropriate number of credits for each semester. Research activities may include reviewing the literature, writing a proposal, developing research methods, collecting data in the field or laboratory, analyzing data, and writing the honors thesis.

NS 600(6000) Special Problems for Graduate Students

Fall or spring. Credit TBA. Prerequisite: graduate students recommended by their chair and approved by instructor in charge. S-U grades optional. DNS faculty. Emphasizes independent advanced work. Experience in research laboratories in the division may be arranged.

NS 602(6020) Lipids (also BIOAP 619[6190])

Fall. 2 credits. T R 11:15. A. Bensadoun. Advanced course on the molecular aspects of lipid transport. Topics include plasma lipoproteins, molecular biology of lipoprotein receptors, transcriptional regulation of cholesterol homeostasis, lipid transfer factors, lipolytic enzymes, and molecular aspects of atherosclerosis.

[NS 603(6030) Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also AN SC 603[6030])]

Fall. 2 credits. Prerequisites: biochemistry, physiology, and nutrition courses. Letter grades only. T 2:00–4:00. Offered alternate years; next offered 2006–2007. X. G. Lei and C. C. McCormick.

Advanced course that emphasizes metabolism, gene regulation, antioxidant, and genetic defects related to mineral nutrition. Team-taught lectures cover topics ranging from single-gene mutation to social and environmental aspects of mineral nutrition and mineral-related disorders. Effective approaches to improve global mineral nutrition by agriculture and food systems are discussed.]

NS 605(6050) Nutritional Biochemistry Colloquium

Fall and spring. 1 credit. S-U grades only.

R 12:20. Nutritional biochemistry faculty.

Graduate seminar series that focuses on recent advances in biochemical nutrition. Weekly presentations are made by faculty members, postdocs, and graduate students and are based on the primary literature. The presentations are followed by a discussion involving all participants.

NS 607(6070) Nutrition as an Integrating Discipline: Concepts and Paradigms

Fall. 3 credits. Prerequisite: course work or experience in nutrition or permission of instructor. M W F 10:10. M. N. Kazarinoff, R. Parker, and DNS faculty.

Overview course for beginning graduate students that introduces them to the full breadth of nutritional science disciplines, including quantitative and qualitative sciences. Also suitable for seniors as an integrating course. The course presents concepts and paradigms of molecular biology, biochemistry, clinical nutrition, epidemiology, anthropology, economics, program planning and administration, policy development, and ethics. The course uses vitamin A as the example. Emphasis is placed on the integration of factual and conceptual knowledge to solve nutrition problems in human societies.

NS 608(6080) Epigenetics (also BIOGD 608(6080))

Fall. 2 credits. Prerequisites: BIOGD 281 and BIOBM 330, 332, or 333 or NS 320.

Letter grades only. W F 11:15. P. Soloway.

Epigenetic effects refer to reversible alterations in chromatin structure that can stably and heritably influence gene expression. These changes include covalent modifications to DNA itself or to proteins bound to DNA as well as noncovalent remodeling of chromatin. This course examines selected epigenetic phenomena described in several eukaryotes, mechanisms regulating these effects, and their phenotypic consequences when normal regulation is lost. Reading materials are from current literature, and participation in class discussion is required.

[NS 611(6110) Molecular Toxicology (also TOX 611(6110))]

Spring. 3 credits. Prerequisite: TOX 610 or permission of instructor. Offered alternate years; not offered 2005-2006. T R 10:10. S. Bloom, R. Dietert, D. Muscarella, and B. Strupp.

Focuses on the metabolism of drugs and environmental toxicants to reactive forms that can modify DNA and proteins and induce target organ toxicity as well as mutations and cancer. Also emphasizes factors and pathways that can modulate toxic effects, including polymorphic drug-metabolizing enzymes, stress-activated signal transduction, and DNA repair. Discusses the uses of molecular and cellular stress markers for assessment of toxicant exposure and health risks.]

NS 614(6140) Topics in Maternal and Child Nutrition

Fall. 3 credits. Prerequisites: for undergraduates only; NS 331, 222 or 347, BIOAP 311 or NS 34, and permission of instructor. T R 8:30-9:55. K. Rasmussen.

Advanced course on the role of nutrition during pregnancy and lactation. The feeding and growth of infants and children in health and disease is considered. Critical evaluation of current literature is emphasized via lecture, discussions, and a term paper.

NS 615(6150) Nuclear Hormone Receptors

Spring. 2 credits. S-U grades optional. W 7:30 P.M. N. Noy.

Focuses on hormone-gene interactions mediated by the superfamily of ligand-inducible transcription factors termed nuclear hormone receptors. Lectures address the mechanisms of action, regulatory features, and biological activities of nuclear receptors, including steroid-, retinoic acid-, and peroxisome proliferator-activated receptors. Also discusses the use of nuclear receptors as therapeutic targets in disease states such as cancer and diabetes.

NS 617(6170) Teaching Seminar

Fall or spring. 0 credits. Prerequisite: DNS graduate students or permission of instructor. S-U grades only. DNS staff and D. Way.

Provides individualized instruction focusing on development of teaching skills for guiding learning in lecture, discussion, and laboratory setting, and reflection on the impact of these skills on teaching and learning. Students identify the aspects of the specific teaching assignments they wish to develop and work with instructors on independent learning projects that may include preparation for lecturing, preparation of exams, efficient grading, and so on. Optional videotaping provides opportunities for practice and analysis.

NS 618(6180) Teaching Experience

Fall or spring. 0 credits. Prerequisite: DNS graduate students or permission of instructor. S-U grades only. DNS staff.

Designed to provide experience in teaching nutritional sciences by direct involvement in college courses under supervision of a faculty member. The aspects of teaching and the degree of involvement vary, depending on the needs of the course and the experience of the student.

NS 619(6190) Field of Nutrition Seminar (also AN SC 619(6190))

Fall or spring. 0 credits. S-U grades only. M 4:00. Faculty and guest lecturers.

Lectures on current research in nutrition.

NS 620(6200) Food Carbohydrates (also FD SC 620(6200))

Spring. 2 credits. Prerequisite: BIO BM 330 or equivalent. Letter grades only. T R 10:10. Offered alternate years; not offered 2006-2007. J. Brady and B. Lewis.

Considers the chemistry of carbohydrates, including sugars and complex carbohydrates (starches, pectins, hemicelluloses, gums, cellulose, and glycoconjugates). Emphasizes intrinsic chemistry, functionality in food systems, and changes occurring during food processing and storage.

NS 625(6250) Community Nutrition in Action

Fall. 3 credits. Prerequisite: dietetic interns. M 1:00-3:30. S. Travis.

Provides students enrolled as dietetic interns with supervised, in-depth experiences in a community nutrition program and fosters the integration of research, theory, and practice. Through placements in community programs, students gain experience in program administration and in assessing, designing, implementing, and evaluating food and nutrition programs for targeted populations through public and private organizations. In weekly seminars (and other seminars and observations as arranged) students integrate theory and practice, reflect upon their placement experience, learn about community nutrition research, and explore the many issues facing community food and nutrition practitioners.

NS 626(6260) Special Topics in Food

Fall. 2 credits. Times TBA. B. Lewis.

Provides a discussion of current research on specific topics related to functional foods and nutraceuticals/phytochemicals.

[NS 630(6300) Anthropometric Assessment]

Spring, five weeks. 1 credit. Prerequisite: NS 331 or equivalent and permission of instructor. W 1:25-4:25. Offered alternate years. J. Haas.

Topics in this lecture/lab course include biological basis of anthropometry for nutritional status assessment, quality control of anthropometric data, applications to special groups (infants, children, adolescents, pregnant women, and the elderly), statistical analysis and presentation of anthropometric data, references standards and interpretation, measurement techniques of anthropometry, and body composition assessment.]

NS 635(6350) Introduction to Community Nutrition Research for Dietetic Interns

Fall. 2 credits. Prerequisites: enrollment in Cornell Dietetic Internship Program or equivalent background and research placement. M 10:00. C. Bisogni.

Introduces the paradigms, concepts, methods, and issues involved in community nutrition research. Dietetic interns conduct individual research projects at their community nutrition placement sites. Lectures, readings, and activities support students as they design their projects, develop research methods, collect data, and interpret findings. Students write a proposal, apply for human subjects approval, collect data, prepare a written report, and present an oral report and a poster session.

NS 637(6370) Epidemiology of Nutrition

Spring. 3 credits. Prerequisites: graduate standing; BTRY 601 and concurrent registration in BTRY 602 or equivalent knowledge; basic knowledge of nutritional aspects of growth and development and nutritional biochemistry. T 2:00-4:00. P. Cassano and J-P. Habicht.

Covers principles of nutritional epidemiology, impact assessment of nutrition intervention programs, and nutritional surveillance. Presents principles of using nutritional information in decision making. Shows how the biochemistry and physiology of nutrition can be related to epidemiological assessment and research strategies.

NS 638(6380) Epidemiology of Nutrition Seminar

Spring. 3 credits. Prerequisites: graduate students planning field intervention studies; permission of instructor; NS 637. Times TBA.

Covers the meta-analysis, design, measurement, and analytic issues involved in developing, implementing, and analyzing studies of field interventions with nutritional impact.)

NS 640(6400) Social Science Theories in Nutrition

Fall. 3 credits. Limited to 20 students. Prerequisite: graduate standing. T R 2:55–4:10. J. Sobal.

Social science theories from sociology, psychology, anthropology, economics, political science, geography, and history that contribute to understanding food, eating, and nutrition are discussed to understand how paradigms, theories, and models apply to nutrition topics, issues, and problems.

NS 642(6420) Globalization, Food Security, and Nutrition (also AEM 652[6520])

Fall. 2 credits. Prerequisites: permission of instructor, graduate standing, and basic understanding of economics and nutrition. Letter grades only. W 11:15–12:05. P. Pinstrup-Andersen.

Directed readings course with a weekly one-hour discussion session. The course is aimed at graduate students in nutrition, agricultural economics, and other relevant fields, who wish to explore how globalization may affect poverty, food security, and nutrition in developing countries and how national policies and international agreements and institutions may influence the outcome. The discussion sessions are based on assigned readings for each week.

NS 644(6440) Community Nutrition Seminar

Fall and spring. 1 credit. S-U grades only. Fall M 11:15, spring M 12:20. A. Gillespie.

Sponsored by the Cornell Community Nutrition Program. Graduate students and faculty learn about current research in the program and related fields within and outside Cornell and about community nutrition theories and research methodologies. The seminar also provides a forum to discuss participants' own research and current issues in community nutrition.

NS 646(460) Seminar in Physicochemical Aspects of Food

Spring. 1–3 credits. Prerequisite: college organic chemistry or biochemistry. S-U grades optional. T R 1:25–2:40. B. Parker and B. Lewis.

Introduces physicochemical aspects of food to graduate students who have had limited or no work in this area. Uses the lectures of NS 345 as a basis for supplementary readings and critical review of research on selected topics.

NS 650(6500) Assessing Food and Nutrition in a Social Context

Fall. 4 credits. Prerequisite: social sciences course. Letter grades only. T R 1:25–2:40. D. Pelletier and G. Pelto.

Food and nutrition problems in developed and developing countries may manifest themselves in biological or functional terms, but their causes and solutions ultimately are rooted in the sociopolitical world. This course provides multidisciplinary perspectives and

some policy analytic frameworks needed to assess and analyze the social context of nutrition problems. The course is relevant to developed and developing countries and to research and practice related to community nutrition as well as nutrition policy.

NS 660(6660) Special Topics in Nutrition

Fall or spring. 3 credits max. each semester; because topics change, may be repeated for credit. Prerequisite: permission of instructor. DNS faculty.

Designed for students who want to become informed in any specific topic related directly or indirectly to nutrition. The course may include individual tutorial study, experience in research laboratories, a lecture series on a special topic selected by a professor or a group of students, and/or selected lectures of another course already offered.

[NS 680(6800) International Nutrition Problems, Policy, and Programs

Spring. 3 credits. Prerequisite: permission of instructor. T R TBA. Offered alternate years. International Nutrition faculty.

Designed for graduate students who want to learn about the important nutritional problems of developing countries. The major forms of malnutrition related to poverty and their underlying causes are discussed. Emphasis is placed on programs and policies that can help poor countries and communities improve their nutritional and health status.]

NS 685(6850) Empirical Methods for the Analysis of Household Survey Data: Applications to Nutrition, Health, and Poverty (also ECON 771[7711])

Spring. 3 credits. Prerequisites: intermediate microeconomics, intermediate statistics or econometrics (through multiple regression and limited dependent variable models), or permission of instructor. M W TBA. D. Sahn.

Focuses on empirical methods for the analysis of household survey data. Students examine a series of measurement and modeling issues focused on health and nutrition, education, and poverty. In addition, they explore methods to evaluate social programs. Course readings and data that are used for hands-on empirical exercises are largely from Africa and Asia.

NS 690(6900) Trace Element and Isotopic Analysis (also CHEM 628[6280])

Spring. 3 credits. Prerequisite: CHEM 288 or 390, 302 or CHEM 208 and MATH 112, or permission of instructor. Primarily for graduate students and advanced undergraduates. S-U grades optional. T R 11:15. Offered alternate years; not offered 2006–2007. J. T. Brenna.

Survey course in modern high-precision isotope ratio mass spectrometry (IRMS) techniques and trace/surface methods of analysis. Topics include dual inlet and continuous flow IRMS, thermal ionization MS, inductively coupled plasma MS, atomic spectroscopy, ion and electron microscopies, X-ray and electron spectroscopies, and biological and solid state applications. The first five weeks focus on IRMS instrumentation and are offered as a separate 1-credit special topics course (NS 660).

NS 698(6980) International Nutrition Seminar

Fall and spring. 0 credits. No grades given. R 12:20–1:10. E. A. Frongillo.

Consists of presentations by Cornell faculty and graduate students and invited outside speakers. Speakers cover a range of topics relating to nutritional problems, policy, and programs in nonindustrialized countries.

NS 699(6990) Special Topics in International Nutrition

Fall and spring. 3 credits max. each semester; because topics change, may be repeated for credit. Prerequisite: permission of instructor. International Nutrition faculty. Designed for graduate students, mainly those with a concentration in international nutrition, who wish to become familiar with some specific topic related to international nutrition that is not adequately covered in an existing course. It consists of tutorial study on an agreed-upon topic.

NS 702(7020) Seminar in Toxicology (also TOX 702[7020])

Fall or spring. 1 credit. S-U grades only. F 12:20. Staff.

Covers varied topics in biochemical, genetic, nutritional, veterinary, and regulatory toxicology, ecotoxicology, and environmental chemistry. Includes presentations of basic research studies, fundamental concepts, and research activities involving environmental problems of a toxicological nature. Presentations are given by speakers from Cornell and visitors.

NS 703(7030) Seminar in Nutritional Sciences

Fall and spring. 1 credit. S-U grades only. T 12:20 or W 12:20. DNS faculty.

Presentations of original articles pertinent to the nutritional sciences. Students read and learn how to critically analyze and interpret original articles published in a wide variety of journals. Students learn how to make professional presentations and how to critique the presentations given by others.

NS 899(8990) Master's Thesis and Research

Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U grades optional. DNS graduate faculty.

NS 999(9990) Doctoral Thesis and Research

Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U grades optional. DNS graduate faculty.

OFFICER EDUCATION

Military instruction began at Cornell University in 1868 under the provisions of the Morrill Act of 1862. Since that time, officer education has been highlighted by the construction of Barton Hall in 1914 and the establishment of a formal Reserve Officers Training Corps (ROTC) unit in 1917. The program evolves to keep pace with the latest military changes and emphasizes the development of leadership and managerial skills.

The Officer Education Programs prepare students for a commission as an officer in either the United States Army, Navy, Air Force, or Marine Corps. Each service program is headed by a senior military officer who also serves as a full professor on the Cornell faculty.

MILITARY SCIENCE

Lieutenant Colonel Glenn Reisweber, Artillery, United States Army, Professor of Military Science and Commanding Officer

Major Dean Swartwood, Engineer, United States Army Reserves

Major Richard Brown, Engineer, United States Army Reserves

Captain Kurt Belawske, Aviation, United States Army

United States Army ROTC Program

The primary objective of the Army Officer Education Program at Cornell is to commission the future officer leadership of the United States Army. Intermediate objectives are to provide students with an understanding of the fundamentals of responsibility, integrity, and self-discipline, as well as an appreciation of the citizen's role in national defense. The application of the decision-making process to a variety of situations is given major emphasis as a valuable aid in developing leadership potential. These objectives are achieved through a program normally covering four years. A two-year program is available for those who qualify. The program includes specific courses in military science, more general academic subjects that assure a well-rounded education, practical training in leadership through participation in the Cadet Corps (including attendance at one five-week summer camp at Ft. Lewis, Wash.), and the opportunity to participate in a number of extracurricular activities. This combination prepares the student for commissioning and effective performance in the many branches of the Army. The student's academic major, academic performance, leadership ability, personal desires, and the needs of the Army determine the branch of the Army into which the student is commissioned upon graduation.

Requirements for Enrollment

Applicants must be citizens of the United States and be able to obtain a Secret level security clearance before being commissioned as lieutenants. (Noncitizens may enroll in

selected portions of the program.) Students must meet Army medical requirements. Overall sound mental and physical condition is essential; students are required to undergo periodic physical fitness tests. Enrollment and continuation in the program is subject to the approval of the Professor of Military Science. Enrollment in specific courses by students not formally enrolled in the program must be approved by course instructors. Contracted students must register for letter-grade military science classes and leadership laboratories for the purpose of commissioning into the United States Army.

Four-Year Program

The Four-Year Program is open to students in their freshman year or, with the approval of military and university authorities, to sophomores in a five-year degree program. Veterans of the Armed Forces of the United States and students entering Cornell with AROTC credit from secondary or military schools (Junior Division AROTC) may receive advanced standing, if qualified. Under the Four-Year Program students enroll in the Basic Course (MIL S I and II) during the first two years, and the Advanced Course (MIL S III and IV) during the next two years. A total of 12 credits of military subjects are taken. In addition, academic enrichment courses are required in such fields as written communications, computer science, and military history. All cadets attend a five-week camp, with pay, between their junior and senior years. All cadets participate in physical fitness training three days per week. Each year selected cadets are sent to the Army Airborne School, Winter Survival School, and Air Assault Course, depending upon availability and student standings within the ROTC program.

Scholarships

Scholarships are awarded on the basis of merit and may be available for two, three, or four years. AROTC scholarships are awarded each year to entering freshmen and students in the freshman and sophomore classes. Scholarships pay up to full tuition and mandatory fees. Scholarship cadets and enrolled juniors and seniors also receive between \$250 and \$400 a month for up to 10 months a year. Scholarship cadets also receive \$900 per year toward the cost of textbooks.

Service Obligations

ROTC graduates may serve on active duty, in the Army Reserve, or in the National Guard, depending upon the needs of the Army and the leadership abilities of the cadet. Officers beginning active duty attend the Officer Basic Course (normally 10 to 16 weeks) of their assigned branch. Upon completion, officers are assigned to a unit and location determined by the desires of the individual and the requirements of the Army. Officers selected for reserve duty attend the Officer Basic Course, after which they are released to reserve status.

ROTC graduates generally serve four years on active duty and four years in reserve status; however, some may serve eight years on reserve duty.

Graduate Study

Active duty deferments, or educational delays, may be granted to individuals who want to attend graduate school at their own expense. Requests will be considered on the basis of the needs of the service. Admission to graduate school is the student's responsibility.

Military Science Courses

All cadets take one course and a leadership laboratory each semester in military science. The number of hours a week spent in the classroom varies from semester to semester, as does the credit received for each course.

Freshman Year (MIL S I)

MIL S 101(1101) Foundations of Officership

Fall. 1 credit. Required. Captain Belawske. Students examine the U.S. defense structure in terms of organization, mission, personnel, and relationships among and between military forces and branches and departments of the government. The U.S. Army force structure is examined at all levels. The complexities and magnitude of operating the defense organization are studied to provide a framework for subsequent instruction. Students develop skills in conducting oral and written presentations.

MIL S 102(1102) Basic Leadership

Spring. 1 credit. Required. Captain Belawske.

Allows students to develop a basic understanding and appreciation of theories of social and organizational psychology and behavior as they apply to the military setting. Attention is given to leader types, the source and exercise of authority, and the impact of varying styles of leadership, resource management, motivation, and organizational effectiveness. The student is instructed in the concepts of integrity, ethics, and professionalism. Classes on historical events and strategy are also presented.

Sophomore Year (MIL S II)

MIL S 201(2201) Individual Leadership Studies/Teamwork

Spring. 1 credit. Required. Prerequisite: MIL S 102 or permission of instructor. Instructor TBD.

Students learn the basic principles of group dynamics at the level of the smallest military unit, the squad. Troop-leading procedures are introduced through case studies and role-playing exercises. Leadership theories introduced in MIL S 102 are examined in a variety of realistic settings. The practical application of behavioral theories is explored in the context of small military organizations. The course also provides practical knowledge of the various forms of topographic representation. Students use maps

in terrain association and land navigation. Knowledge of topography is complemented by an orientation on significant environmental influences of physical, social, and climatic factors. Portions of the course offer experience in land navigation and orienteering.

MIL S 321(3321) Armed Conflict in Society

Fall. 2 credits. Required. Captain Brown. Provides practical knowledge in American military history. It is primarily an overview course designed to provide an understanding of the art and nature of warfare and particularly how warfare has affected the United States. The course consists of three primary areas of instruction with an emphasis on American military history. The first area of instruction addresses the art and theory of modern warfare. It analyzes America's first attempt at war, the American Revolution, and ends with the development of modern warfare under Napoleon Bonaparte. The second phase focuses on America at war in the 19th century. It places particular emphasis on the American Civil War and the strategy of annihilation versus the strategy of attrition. The final phase looks at warfare in the 20th century and finishes with an analysis of the future of warfare for the military of the United States.

Junior Year (MIL S III)

MIL S 301(3301) Leadership and Problem Solving

Fall. 2 credits. Required. Captain Brown. After an initial introduction to techniques of presenting briefings, students are provided with a broad understanding of the principles and application of teamwork in military organizations. Particular emphasis is given to the leadership responsibilities of the commander as the team coordinator. This course helps students develop an understanding of the roles and contributions of the various branches of the Army in support of the military team.

MIL S 302(3302) Leadership and Ethics

Spring. 2 credits. Required. Prerequisite: MIL S 301. Captain Brown. Takes on the nature of decision making and the tactical application of the military team. Through the use of conferences and extensive practical exercises, students develop familiarity with the factors influencing a leader's decisions and the process of planning, coordinating, and directing the operations of military units through operation plans and orders.

Senior Year (MIL S IV)

MIL S 401(4401) Leadership and Management

Fall. 2 credits. Required. Lieutenant Colonel Reisweber. Provides an overview of the functions, responsibilities, and interrelationships among small-unit leaders, the commander, and the staff. Discussions focus on actions of small-unit leaders, communication skills, army operations, the logistical support of the army in the field, and the army training system. The course focuses on the dynamics of leadership in battle through the detailed analysis of a series of case studies. Just war theory, ethics, and professionalism are also addressed in a seminar fashion.

MIL S 402(4402) Officership

Spring. 2 credits. Required. Lieutenant Colonel Reisweber.

A continuation of MIL S 401. Conferences and seminars examine the techniques of effective military leadership, with special attention given to professionalism and ethical considerations in the armed forces during both peacetime and conflict. Army operations and basic doctrine are also discussed. This is a capstone course designed to prepare the student for commissioning.

Practical Leadership Training

All Army Officer-Education Students

No credit is given for leadership training, but participation is required for successful completion of the AROTC program. Students receive physical education credit for the laboratory. Each semester, cadets register for the appropriate leadership laboratory, consisting of physical fitness training three times per week, two hours of military training each week, and one or two weekend training exercises per semester.

MIL S I Leadership Laboratory I

Fall.	Spring.
0 credits. S-U.	0 credits. S-U.
MIL S 151(1111)	MIL S 152(1111)

MIL S I cadets meet for two hours each week to learn a variety of military skills including rappelling, first aid, drill and ceremonies, weapons familiarization, and physical fitness training.

MIL S II Leadership Laboratory II

Fall.	Spring.
0 credits. S-U.	0 credits. S-U.
MIL S 251(2211)	MIL S 252(2211)

Cadets meet for two hours each week as members of the cadet organization to participate in practical leadership exercises. Types of practical activities include rifle marksmanship, orienteering, drill and ceremonies, signal communications, physical fitness training, first aid, tactics, and field exercises.

MIL S III Leadership Laboratory III

Fall.	Spring.
0 credits.	0 credits.
Required. S-U.	Required. S-U.
MIL S 351(3311)	MIL S 352(3311)

Cadets meet for two hours a week and occasional weekends to prepare for a five-week summer camp that follows their junior year. Emphasis is placed on the development of individual practical and leadership skills. Cadets rotate through leadership positions to practice applying decision-making skills in a myriad of situations.

MIL S IV Leadership Laboratory IV

Fall.	Spring.
0 credits.	0 credits.
Required. S-U.	Required. S-U.
MIL S 451(4411)	MIL S 452(4411)

Senior cadets plan and operate the leadership laboratory programs for MIL S I-III cadets. The development of planning and supervisory skills is emphasized. Cadets have an opportunity to practice leadership skills developed during previous ROTC training and summer camp experiences. Includes two to three hours a week devoted to physical fitness.

Professional Military Education (PME) Requirements

In addition to the ROTC classes and leadership laboratories listed above, a number of courses are required as part of the contracted student's academic program. These courses are offered by the university and round out the student's professional education. The PME component of the ROTC program requires at least one college course in each of the following areas: communication skills, military history, and an introduction to computers. These courses must be completed before graduation and commissioning. Courses that meet these requirements are approved by the Professor of Military Science.

NAVAL SCIENCE

Captain C. Klyne, United States Navy, Professor of Naval Science and Commanding Officer, Naval ROTC Unit

Lieutenant Colonel Terry Stautberg, United States Marine Corps

Lieutenant Garland Buchanan, United States Navy

Lieutenant Jon Leisner, United States Navy

Lieutenant W. Towcimak, United States Navy

The objective of the Naval Officer Education Program is to prepare students for service as commissioned officers in the United States Navy or United States Marine Corps; this is done by supplementing undergraduate education with instruction in essential concepts of naval science and by fostering qualities of leadership, integrity, and dedication to country. The program is compatible with most undergraduate major fields of study, including five-year baccalaureate degree programs.

The program covers four years and combines specific courses in naval science and specified academic subjects. These courses supplement weekly professional development sessions in which the practical aspects of naval science and leadership procedures are stressed. It also includes at least one summer-at-sea period.

Though the Navy-Marine Corps Program has been designed to prepare future officers, naval science courses are open to all students at Cornell as space limitations allow.

Requirements for Enrollment

An applicant for the Naval ROTC program at Cornell must be a citizen of the United States. Applicants must have reached their 17th birthday by June 30 of the entering year and be less than 27 years of age on June 30 of the calendar year in which they are commissioned. Waivers of the upper age limit may be available for applicants who have prior active duty military service. Applicants must also meet physical and medical requirements. Interested students can visit the Naval ROTC Unit in Barton Hall or contact their local officer recruiter.

Programs

There are two programs: the Scholarship Program and the College Program. The two programs differ primarily in benefits given to the student.

Scholarship Program

The Scholarship Program provides approximately 1,000 scholarships in more than 70 universities nationwide to selected students who want to serve in the Navy or Marine Corps. Financial support is provided to students during college preceding the award of the baccalaureate degree.

Benefits

The program offers scholarships that provide *full tuition* and are not need-based. While on scholarship, students also receive money for instructional fees, textbooks, nonconsumable supplies, and a stipend of \$250–\$400 a month for a maximum of 40 months.

Successful completion of the Scholarship Program leads to a commission in the Navy or Marine Corps Reserve. At Cornell University, over 90 percent of NROTC students have a scholarship. Students entering NROTC without a prior scholarship award are entitled to compete for two- or three-year scholarships controlled by the Chief of Naval Education and Training.

Entering the Scholarship Program

There are three ways to enter the Scholarship Program:

1. by applying to the national competition each year. This process entails filling out and submitting an appropriate application; being interviewed; having a physical examination; and applying to, and being accepted by, one of the colleges or universities throughout the country that offers an NROTC program.
2. by enrolling in the College Program at Cornell and being recommended by the Professor of Naval Science for a scholarship after at least one semester in the program.
3. by entering through the Two-Year Scholarship Program.

College Program

Two College Programs are available. Both lead to a commission in the Naval or Marine Corps Reserve.

Starting in the junior year, each of these programs provides textbooks for naval science courses, uniforms, and a subsistence allowance of \$350–\$400 a month.

The regular College Program is four years long. Academic requirements for students in this program are somewhat fewer than those for scholarship students, as noted in the curriculum section of this book.

The Two-Year College Program begins the summer before the junior year; students attend a required program, with pay, at the Naval Science Institute in Newport, R.I.

Summer Training

Each summer, students in the Scholarship Program spend approximately four to six weeks on a Navy ship, or participate in a naval activity that may take place anywhere in the world, for on-the-job training. College Program students attend one summer training session of the same duration between the junior and senior years.

Active Duty Requirements

Scholarship midshipmen commissioned in the Navy or Marine Corps Reserve serve on active duty for a minimum of four years. College program midshipmen commissioned in the Naval or Marine Corps Reserve serve a minimum of three years. In some cases, following commissioning, specialized training such as aviation or nuclear power will add additional active duty requirements.

Choice of Assignment

Graduates have the opportunity to request the duty they prefer upon graduation. These requests are given careful consideration, and every effort is made to assign newly commissioned officers to their duty of choice.

Among the assignments available are duties in naval aviation as either a pilot or naval flight officer, on submarines, and on surface ships. Other specialties, such as special warfare or medical service corps, may be available on a limited basis.

Marine Corps Options

The United States Marine Corps is an integral part of the Naval Services and is commanded by the Commandant of the Marine Corps. One-sixth of the NROTC scholarship students may be Marine selectees who will be designated Marine-option midshipmen. Upon successful completion of the program they will be appointed second lieutenants in the United States Marine Corps Reserve.

Marine-option midshipmen follow the same program as other NROTC midshipmen for the first two years. Beginning with the junior year, Marine-option midshipmen are taught Marine-oriented courses by a Marine Officer Instructor. For First Class summer training (after the junior year), Marine-option students travel to Quantico, Va., where they undergo six weeks of intensive training known as the USMC Officer Candidate School. Upon commissioning the following year as second lieutenants, they are assigned to the Basic School at Quantico, Va. After the Basic School, the Marine officer is assigned duty in a variety of occupational fields. Among the duties available are infantry, aviation, artillery, tracked vehicles, engineering, communications, electronics, supply, administration, and computer science. The officer may serve on board naval vessels or at shore installations of the Marine Corps or Navy, either in this country or overseas.

The Marine Corps has a postgraduate training system similar in objectives and organization to that of the Navy. Marine officers selected for aviation receive flight training at the Naval Air Station, Pensacola, Fla., along with their Navy counterparts.

Curriculum

A student has three categories of requirements to fulfill as a midshipman. The first of these requirements is a weekly naval professional development session each semester. The second requirement is a naval science course each semester. The last set of requirements consists of further courses prescribed by the Navy to meet the growing need for more and better technically educated junior officers.

Naval Professional Laboratories

NAV S 141-142, 241-242, 341-342, or 441-442(1141, 2241, 3341, 4441)

All students in the program participate in a two-hour professional development session each week. The session is held from 2:30 until 4:30 on Wednesday afternoons and consists of both drill and professional information briefings. Students gain experience in actual leadership situations and learn the fundamentals of seamanship, military formations, movements, commands, discipline, courtesies, and honors. During information briefings, special emphasis is given to applied leadership as it relates to the administrative and managerial aspects of a Navy or Marine Corps officer's duties.

Naval Science Courses

All Navy and Marine midshipmen take one naval science course each semester during their freshman and sophomore years. Navy-option students continue to take a naval science course each semester during their junior and senior years. Marine-option students have slightly different curriculum requirements for their junior and senior years.

Freshman Year (Navy and Marines)

NAV S 101(1101) Fundamentals of Naval Science

Fall. 0 credits. G. Buchanan and W. Towcimak.

Involves a study of fundamental aspects of naval science. This includes contributions to sea power, different warfare communities involved in the physical development of naval forces, and study of resource management and naval science prospects for the future. Naval uniforms, customs, and traditions are also covered.

NAV S 102(1102) Sea Power and Maritime Affairs

Spring. 3 credits. G. Buchanan.

Discussions examine the history of the Navy as a force in diplomacy and an instrument of U.S. foreign policy. Relationships between Congress and the military for determining the national defense policy are also explored. An integrated examination of current events and issues lends historical perspective throughout the course.

NAV S 157(1480) Small Boat Sailing (also PE 1480)

Fall and spring. Physical education credit. TBA.

This is a course of instruction in basic sailing skills and safety principles. Students sail small boats on Cayuga Lake. Focus is on U.S. Navy Class B inshore skipper certifications.

Sophomore Year (Navy and Marines)

NAV S 201(2201) Leadership and Management I

Fall. 3 credits. C. Klyne.

The theme of the course is the "evolving role of the manager, organizational decision maker, and leader." The course begins by briefly covering the theoretical principles of management and progresses through practical skills used by managers and leaders. Lectures, reading assignments, films, and discussions provide students with an excellent opportunity to consider complex managerial and leadership issues. The goal of this course is for students to begin to develop a sound personal leadership philosophy that will

enable them to more effectively accomplish the assigned responsibilities of leading men and women in today's demanding and high-tech naval environment.

NAV S 202(2201) Naval Ship Systems I (also M&AE 201[2010])

Spring. 3 credits. W. Towcimak.

Introduces primary ship-systems and their interrelationships. Basic principles of thermodynamics, propulsion, mechanical operation, internal communications, electronics, ship structure, and other marine systems are covered.

Junior Year (Navy)

NAV S 301(3050) Principles of Navigation (also BEE 305[3050])

Fall. 4 credits. J. Leisner.

Introduces the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. Covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, star identification, use of the nautical almanac, and study of tides and currents. Electronic navigation systems are discussed.

NAV S 302(3302) Naval Operations

Spring. 3 credits. J. Leisner.

Covers the application of the nautical rules and maneuvering board in order to avoid collisions at sea. Other aspects of naval surface ship operations that are introduced include visual and electronic communications methods, tactical disposition of forces, ship handling theory, and deck seamanship topics.

Senior Year (Navy)

NAV S 401(4401) Naval Ships Systems II (Weapons)

Fall. 3 credits. G. Buchanan.

Examines the principles and theories used in the development of naval weapons systems. Initially, extensive study is made of detection systems, especially radar and sonar, followed by discussions of ancillary systems for computing, stabilizing, tracking, and weapons control and delivery.

NAV S 402(4402) Leadership and Ethics

Spring. 3 credits. C. Klyne.

Reviews a variety of topics important to the naval officer for both professional and managerial development. The material is designed to provide the midshipman with an understanding and appreciation of leadership and ethics in preparation for assignments in the naval service. Through the use of lectures, case studies, and role-playing, the student learns various aspects of naval leadership and ethical decision making. Marine-option students may also take this course.

Junior or Senior Year (Marine Options)

NAV S 310(3310) Evolution of War

Spring. 3 credits. T. Stautberg.

A study of warfare that examines the relationship of military strategy to geography, economics, sociology, technology, and national political realities. This course includes study of the evolution of warfare, including principles of war, weapons, and associated equipment, and the effects of nuclear weapons and guerrilla warfare on traditional concepts of national strategy.

NAV S 410(4410) History of Amphibious Warfare

Spring. 3 credits. T. Stautberg.

The history of the development, theory, techniques, and conduct of amphibious operations from 490 BC to the present. Special emphasis is placed on amphibious operations conducted in the central Pacific during World War II and on the future of amphibious operations.

Other Required Courses

Navy-Option Scholarship Program

To be eligible for a commission in the United States Navy, midshipmen must successfully complete all the requirements for a baccalaureate degree in any field of study offered by Cornell University, and complete courses in the following subjects (specified courses to be approved by the Professor of Naval Science):

American military affairs or national security policy (one semester)

English (one year)

calculus (one year)

calculus-based physics (one year)

computer science (one semester)

The calculus requirement must be satisfied by the end of the sophomore year and the physics requirement by the end of the junior year.

Although free choice of academic majors is permitted, students are encouraged to pursue majors in engineering and the physical sciences so that they may be best prepared to meet the technological requirements of the modern Navy.

Navy-Option College Program

Navy-option College Program students must complete one year of college-level study in mathematics, physical science, and English as a prerequisite for commissioning. The mathematics course must be completed by the end of the junior year; the physical science course by the end of the senior year. In addition, one semester of computer science is required. College Program students who desire entry into the Navy-option Scholarship Program should fulfill all of the requirements applicable to Navy-option scholarship students if they wish to be eligible for a scholarship controlled by the Chief of Naval Education and Training.

Marine Option

Any midshipman, in either the Scholarship Program or the College Program, who completes all of Cornell University's degree requirements in any academic major, is eligible for a commission in the U.S. Marine Corps or U.S. Marine Corps Reserve. Marine-option students take the same naval science courses and naval professional laboratories as Navy-option students for the freshman and sophomore years. During the junior and senior years, Marine-option students have slightly different naval science course requirements than their Navy-option counterparts. Two semesters of courses (a minimum of 3 hours each) in the area of American Military Affairs or National Security Policy are required. One semester of a modern foreign language must be completed.

Extracurricular Activities

The NROTC midshipman at Cornell is offered a broad range of activities, including sail training and a comprehensive intramural sports program. Midshipmen participate in a myriad of social events, including the annual Navy/Marine Corps Birthday Ball.

DEPARTMENT OF AEROSPACE STUDIES

Colonel Peter Gray, United States Air Force, Professor of Aerospace Studies and Commander, Air Force ROTC Detachment 520

Captain Marcus A. Whitten

Major Tracy A. Higgins, United States Air Force

Major Robert B. Breese, United States Air Force

The objective of the Air Force Officer Education Program at Cornell is to prepare men and women for positions as officers in the United States Air Force. The program is designed to teach students about the mission and organization of the Air Force, the historical development of airpower, leadership, and management. Students study national security policy and the role of the military in a democratic society. This program includes specific courses in aerospace studies and practical leadership laboratories.

Requirements for Enrollment

The Air Force Officer Education Program is open to any qualified undergraduate or graduate student enrolled in any major field of study. An applicant must be a United States citizen to become a commissioned officer. Noncitizens may enroll and will receive certificates acknowledging completion of the course but cannot receive a commission.

All applicants receive physical examinations at no cost and must meet certain physical requirements to be accepted. Students who are interested in qualifying for flying categories (pilot, navigator, or air battle manager) must meet more stringent physical requirements. In addition, students enrolled in the commissioning program must meet specified physical fitness requirements.

Though the program is designed to prepare future Air Force officers, academic courses in the Department of Aerospace Studies are open to all students at Cornell.

Four-Year Program

The Four-Year Program is open to all qualified freshmen. Sophomores may also enter a condensed version of the four-year program in coordination with the AFROTC staff.

Veterans of the U.S. armed forces and students entering Cornell from military schools may receive advanced standing, subject to approval by the Professor of Aerospace Studies.

The Four-Year Program consists of General Military Courses (GMC) and Professional Officer Courses (POC). For four-year scholarship cadets, the first year of the GMC carries no military commitment, and students may withdraw at any time. For nonscholarship cadets, both years of the GMC carry no military commitment, and students may withdraw at any time.

General Military Course

Students in General Military Courses (GMC) take a 1-credit Aerospace Studies course each semester. During the freshman year, the student examines the organization and mission of the United States Air Force and the environment of the Air Force officer. In the sophomore year, the student studies the history and development of American air power. In both years, officership and professionalism within the United States Air Force are emphasized.

Students also spend two hours a week in a leadership laboratory. Leadership laboratories provide cadets with an opportunity to put into practice the skills they have learned in their aerospace studies classes. These laboratories focus on the development of officer qualities through such activities as drill and ceremonies, group leadership problems, confidence-building exercises, and guest lecturers. In addition, all students participate in summer field training for four weeks between their sophomore and junior years.

Professional Officer Course

The Professional Officer Courses (POC) provide a two-year advanced program of instruction. Students who are accepted for the POC must have successfully completed or validated the basic course and must meet academic and physical standards. Each cadet accepted into the POC must sign an agreement to complete the program and accept, if offered, a commission in the United States Air Force upon graduation.

Classroom study in the POC is a 3-credit course each semester. In the junior year, cadets study Air Force leadership and management at the junior officer level. During the senior year, cadets study the elements of national security and the military's role in American society. Leadership laboratory requires two hours a week in the junior and senior years. In leadership laboratory, cadets are exposed to advanced leadership experiences and apply principles of leadership learned in the classroom.

Two-Year Program

The Two-Year Program consists of the last two years (Professional Officer Courses) of the regular Four-Year Program plus a five-week summer training course.

The Two-Year Program is open to all qualified students with two years of academic study remaining at Cornell (graduate or undergraduate) or at schools supported under a crosstown agreement.

One- and One and One-Half-Year Program(s)

There are limited opportunities for students to enter a one-year program. Call 255-4004 for more details and current availability.

Scholarships

The Air Force offers three- and four-year scholarships to high school seniors and one-, two- and three-year scholarships to college students. Four-year scholarships are offered on a competitive basis to high school seniors. Scholarship information can be obtained from a high school guidance counselor, from Air Force ROTC officers at Cornell (AFROTC phone number is 255-4004), from a local Air Force recruiter via the web at www.afrotc.com.

com, or from the Air Force ROTC scholarship section, Maxwell AFB, AL 36112-6106, 334-953-2869. The deadline for submitting a four-year scholarship application is December 1 of the year preceding the academic year in which a student wants to enter the program. Students should apply early.

Scholarships for two and three years.

Applications for these scholarships should be made to the Professor of Aerospace Studies during the freshman, sophomore, or junior years of college. All selections are based on the student's major, scores achieved on the Air Force Officer Qualifying Test, the student's overall grade point average, and the recommendation of the Professor of Aerospace Studies. Scholarships include amounts ranging from \$3,000 per year to full tuition and fees. There is a monthly \$250-\$400 nontaxable allowance during the school year. A \$600 per year textbook allowance is included in every scholarship. Scholarships do not include the cost of room and board.

Fees

An initial uniform deposit of \$50 is required on entry into AFROTC. Before commissioning, cadets may purchase uniforms with their deposit or return uniforms and receive their deposit back.

Benefits

All cadets in the advanced program (POC)—whether they are on scholarship or not—receive a \$250-\$400-a-month, nontaxable subsistence allowance during the academic year. During the four- or five-week summer field training (see below), each cadet receives a pay allowance plus an allowance for travel to and from the field site. Textbooks and supplies required for Department of Aerospace Studies courses are provided.

All cadets are eligible to participate in AFROTC-sponsored field trips made to Air Force bases throughout the country as well as voluntary summer programs for professional development. Scholarship and advanced cadets (POC) are entitled to space-available travel on Air Force aircraft flying within the continental United States.

Field Training

Two types of field training are available: a four-week course for cadets in the Four-Year Program and a six-week course for Two-Year Program applicants.

Field training is designed to stimulate the development of military leadership skills through meaningful experiences. The curriculum consists of aircraft, aircrew, and survival orientation; junior officer training; physical training; small arms training; a social-actions program; and supplemental training. The six-week training program includes 60 hours of Air Force ROTC academic course work that substitutes for the freshman and sophomore Aerospace Studies courses.

Cadets may also volunteer for one of many Advanced Training Programs. These programs include but are not limited to the Air Force Academy Free-Fall Parachute Training, Research and Development Experiences, the Academy Soaring Program, and Army Airborne Training.

Commissioning Obligations

All students who successfully complete the AFROTC advanced program (POC) are awarded a baccalaureate degree, tendered a commission, and enter the Air Force as second lieutenants.

Second lieutenants commissioned in nonflying categories are required to serve on active duty for four years. Pilots are required to serve on active duty for 10 years after completing flying training. Navigators and Air Battle Managers serve six years after completing training.

Air Force Careers

The Air Force assigns new officers to a career field based on mission requirements, educational background, and officers' preferences. Students in the engineering-scientific category may be assigned to practice in their specialty in research and development, communications, electronics, aeronautics, astronautics, the biological sciences, computer design and maintenance, meteorology, space, or other engineering and scientific fields. Graduates in the nontechnical category can anticipate assignments in manpower management, information management, logistics, law enforcement and investigation, intelligence, personnel, transportation, accounting and finance, and other career fields.

Any undergraduate major is suitable for those who are qualified and interested in entering the space and missile career fields or in becoming pilots, navigators, or air battle managers. After completion of flying training, personnel are assigned to a specific type of aircraft.

Curriculum

Students in the Four-Year Program are required to take all courses listed below. Students in the Two-Year Program are required to take all of the courses listed for the junior and senior years. There are no prerequisites for any Aerospace Studies courses.

Freshman Year

AIR S 161(1161) The Foundations of the United States Air Force I

Fall. 1 credit. Major R. B. Breese.

This is a survey course designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps. Featured topics include: mission and organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer opportunities, group leadership problems, and an introduction to communication skills. Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with followership experiences.

AIR S 162(1162) The Foundations of the United States Air Force II

Spring. 1 credit. Major R. B. Breese.

Continuation of AIR S 161.

Sophomore Year

AIR S 211(2211) The Evolution of USAF Air and Space Power I

Fall. 1 credit. Colonel P. Gray.

This course is designed to examine general aspects of air and space power through a historical perspective. The course covers

a time period from the first balloons and dirigibles to the role of air power in Afghanistan. Historical examples are provided to illustrate the development of Air Force capabilities and functions to demonstrate the evolution of what has become today's USAF air and space power. The course examines several fundamental truths associated with war in the third dimension, and provides students with an understanding of the general element and employment of air and space power from an institutional, doctrinal, and historical perspective. In addition, students continue to discuss the importance of the Air Force core values.

AIR S 212(2212) The Evolution of USAF Air and Space Power II

Spring. 1 credit. Colonel P. Gray.
Continuation of AIR S 211.

Junior Year

AIR S 331(3331) Air Force Leadership Studies I

Fall. 3 credits. Major R. B. Breese.
This course is a study of leadership required of an Air Force junior officer; it has applicability to any entry-level professional as a junior executive. The course investigates theories and styles of leadership, power and influence, the meaning and function of followership in the military context, critical thinking, problem solving and team building, group conflict management, situational leadership, and management functions and principles. Film and case studies are used for analysis of theories and principles studied. Students receive instruction and practice effective writing (e.g., background and position papers) and briefing skills (e.g., informative and advocacy briefings) for professional communications; students practice both modes of communication. The course also provides professional officer education in terms of defining professional and unprofessional relationships, working with civilian personnel, and the profession of arms. The course is open to any student. For officer candidates, a mandatory leadership laboratory complements this course.

AIR S 332(3332) Air Force Leadership Studies II

Spring. 3 credits. Open to any student.
Major R. B. Breese.
A continuation of AIR S 331. The course investigates advanced skills in leadership: dynamic subordination; effective supervision; essentials of counseling; corrective supervision; authority, responsibility, and accountability. The course also investigates the meaning and application of ethical and moral leadership, professional officer ethics, military ethics in joint operations, and the Core Values of the USAF. Film and case studies are used for analysis of course content. Written and briefing practice continues. For officer candidates, a mandatory leadership laboratory complements this course.

Senior Year

AIR S 401(4401) National Security Affairs/Preparation for Active Duty I

Fall. 3 credits. Major T. A. Higgins.
This course is concerned with the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Other topics include the military as a profession, officership, military justice, civilian control of the military, preparation for active duty, and current issues affecting

military professionalism. Continued emphasis is given to refining communication skills. A mandatory leadership laboratory complements this course by providing advanced leadership experiences, giving students the opportunity to apply the leadership and management principles described in this course.

AIR S 402(4402) National Security Affairs/Preparation for Active Duty II

Spring. 3 credits. Major T. A. Higgins.
Continuation of AIR S 401.

Leadership Laboratory Courses

All Air Force cadets spend two hours a week throughout the academic year in a leadership laboratory, for which no academic credit is given. Occasionally laboratories are held at times other than the normally scheduled period. All cadets are expected to participate in a formal dinner and to meet minimum physical fitness and weight standards each semester. Leadership lab is open to students qualified to compete for an Air Force commission.

AIR S 141-142(1141) Initial Military Experiences

Fall and spring. 0 credits. Required. S-U grades.

Introduction to the responsibilities, life, and work of an Air Force officer. Basic knowledge of drill and ceremonies, military courtesies, and the wearing of the uniform. This course includes a field trip to a local military installation.

AIR S 241-242(2241) Intermediate Military Experiences

Fall and spring. 0 credits. Required. S-U grades.

Designed to help students develop skill in giving commands for drill and ceremonies. Students are also introduced to the Air Force base environment in which the officer functions. Career areas available based on academic majors are described. Students participate in military drills and ceremonies and go on a field trip to a local military installation.

AIR S 341-342(3341) Junior Officer Leadership Experiences

Fall and spring. 0 credits. Required. S-U grades.

Cadets assume leadership responsibilities similar to those of a junior officer. Emphasis is on the importance of applying effective human relations skills in dealing with superiors, peers, and subordinates. Cadets also gain insight into the general structure and progression patterns of selected Air Force officer career fields.

AIR S 441(4441) Advanced Leadership Experiences

Fall. 0 credits. Required. S-U grades.
Cadets assume command leadership responsibilities to operate a military organization. Cadets apply effective leadership and managerial techniques with individuals and groups and participate in self-analysis of leadership and managerial abilities.

AIR S 442(4442) Precommissioning Laboratory

Spring. 0 credits. Required. S-U grades.
Factors that facilitate transition from civilian to military life are reviewed. The need for military security, base services and activities, personal finances, travel regulations, and social obligations are introduced.

DEPARTMENT OF PHYSICAL EDUCATION AND ATHLETICS

ADMINISTRATION

Alan E. Gantert, director

COURSES

The courses and fees described in this catalog are subject to change or cancellation at any time by official action of Cornell University. For current fee information on physical education courses, call 255-4286; for outdoor education courses, call 255-6183 or visit www.coe.cornell.edu.

Enrollment in any course is limited by the space available. Other restrictions are included in the course description. Most courses are coeducational. The specific time and place of class meetings, as well as information about fees, are available at the physical education course registration or may be found on "Bear Access," a package of software for accessing a variety of network services at Cornell. Course fees are billed through the Office of the Bursar.

Additional course offerings may be listed at registration, as the curriculum is frequently reviewed and changed. Drop deadlines for outdoor education courses are earlier than university deadlines, and often earlier than physical education deadlines. Cornell Outdoor Education (COE) courses may be added any time by calling 255-6183, or registering at www.coe.cornell.edu.

Aquatic Courses

PE 1100 Swimming, Introduction to

Fall, spring, and summer (six weeks). Instruction and practice in skills leading to passing the basic swimming proficiency test.

PE 1101 Swimming, Advanced Beginning

Spring. Ideal for all who have taken one semester of Beginning Swimming, regardless of whether the test was successfully completed. Areas of special emphasis are the crawl stroke and rotary breathing, back crawl, elementary backstroke, diving, treading water, and underwater swimming. The primary objective is to strengthen the student's confidence and competence.

PE 1102 Swimming, Intermediate

Fall and spring. Practice of basic skills and five basic strokes: front crawl, back crawl, elementary backstroke, breaststroke, sidestroke.

PE 1103 Swimming, Advanced

Fall and spring. Practice of nine strokes: front crawl, back crawl, elementary backstroke, breaststroke, inverted breaststroke, sidestroke, overarm sidestroke, trudgeon, and butterfly.

PE 1104 Swimming Conditioning

Fall and spring. Prerequisite: reasonable swimming ability. Introduction to, and practice of, different training methods. Final objective: to swim

2,500 yards during class period. Primarily a conditioning and not an instructional course.

PE 1110 Lifeguard Training

Fall and spring. Fee charged. Prerequisite: swimming test consisting of 500 yards, demonstrating three strokes, treading water without the use of hands, and retrieving a brick from 7 feet of water. Three classes per week.

American Red Cross certification course. Practice and execution of lifeguarding first aid and CPR skills and techniques. Certification is awarded in lifeguarding, first aid, O2, AED, and CPR upon satisfactory completion of the course.

PE 1111 Lifeguard Training Instructor

Spring. Fee charged. Prerequisites: current Red Cross ICT or instructor card, written and skill tests in lifeguarding, first aid, and CPR techniques. Students must not miss first class. 2 classes a week.

American Red Cross lifeguarding instructor and CPR-FPR certifications are awarded upon successful completion.

PE 1120 Water Safety Instructor

Spring. Fee charged. Prerequisite: passing of written and skill water tests given on first day.

American Red Cross water safety instructor certification is awarded upon satisfactory completion of the course. This is not a course for a casual participant. Approximately 45 hours of work is required.

PE 1130 Scuba, Open-Water

Fall, spring, and summer (six weeks). Fee charged.

Program includes classroom work, skill training in a pool, and open-water training in Cayuga Lake. P.A.D.I. open-water certification awarded upon successful completion.

PE 1131 Scuba, Advanced Open-Water

Fall and spring. For those who have completed open-water course. Fee charged.

Advanced-level open-water training in Cayuga Lake.

PE 1132 Rescue Diver

Fall and spring. For those who have completed Advanced Open-Water Scuba certification. Fee charged.

Advanced course for scuba divers interested in learning rescue and safety techniques.

PE 1133 Dive Master

Fall and spring. Open only to those who have completed Rescue Diver course. Fee charged.

Advanced-level scuba course. Note: This is a long, time-consuming course, which requires the student to be in good physical and swimming shape.

PE 1134 Specialty Scuba Diving

Fall and spring. Fee charged. Courses offered in the following specialty diving areas: navigation, search and recovery, night diving, deep diving, underwater photography, wreck, multi-level, boat, tropical fish identification and buoyancy control, and underwater naturalist.

PE 1135 Scuba Diving Trips

Spring, offered during spring intersession period. Fee charged.

Scuba trips to various destinations such as the Bahamas. Locations change from year to year. See the information sheet at the registration table.

Bowling Courses

PE 1300 Bowling

Fall and spring. Fee includes shoe rental. For the beginning and intermediate bowler.

PE 1301 Intermediate Bowling

Fall and spring. Fee charged. For players with previous bowling experience (e.g., bowling classes, yaba, tournament)

Skills emphasized are timing, balance, and release.

Dance Courses

Develop flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with rhythmic accuracy, clarity of body design, and fullness of feeling. Auditions are required for admission to all advanced courses, since they require the mental and physical ability to perform more complex phrases in various styles.

PE 1150 Ballroom Dancing

Fall, spring, and summer. Fee charged. Students and their partners must sign up at course registration.

Includes instruction in the waltz, swing, cha cha, calypso, tango, and others.

PE 1155 Belly Dancing I

Fall and spring. Fee charged. Belly dancing is an exciting Middle Eastern folk art that can help in the development of flexibility, body awareness, and overall body tone. The class begins with warm-ups and continues with basic movements and rhythms, then puts them together in a dance to music of the Middle East.

PE 1156 Belly Dancing II

Spring. Fee charged. Advanced belly dance movements and combinations that include putting basic and advanced movements to the Beledi, Masmouodi, and Karsilma dance rhythms of the Middle East. A drum solo, taqsim (fluid, graceful movements of the arms and hands), floor work (level changes with the dance), and techniques in playing finger cymbals are also a part of this class.

PE 1160 Latin Dance

Fall and spring. Fee charged. Partner sign-in required. This is an introductory course that teaches salsa, mambo, Latin, and meringue. Emphasis on listening, feeling, and expressing Latin rhythms with precise detail and technique.

PE 1161 Latin-Israeli Dance

Fall and spring. Covers some of the hundreds of dances that make up Latin-Israeli dancing and the thousands of dances that make up Israeli dancing, with a clear emphasis on the dances of the past 10 years.

PE 1170 Introduction to Swing Dance

Fall and spring. Fee charged.

No partners are needed. Beginners can expect to develop significant capacity for enjoyment of two forms of swing dance: jitterbug and street boogie. Partners are rotated throughout the course. Effort are made at registration to equalize male and female ratios.

PE 1171 Swing Dance II

Fall and spring. Fee charged.

Those who have taken the introductory course.

PE 1180 Dance Technique I (also THETR 124[1240])

Fall and spring.

First Aid/CPR Courses**PE Emergency Response**

Fall. Fee charged.

This advanced-level first aid course is the most comprehensive available without NYS certification. Sixty hours of training includes CPR for the Professional Rescuer and oxygen administration, as well as many of the first aid skills taught in a basic EMT class. American Red Cross certification is valid throughout the United States and is accepted by many states as a Certified First Responder equivalent. Certification is valid for three years. This certification would be appropriate for camp medical directors and those who work closely with pre-hospital medical staff.

PE 1210 NYS Emergency Medical Technician—Basic

Two-semester course. Fee charged.

Intensive 130-hour course taught throughout both the fall and spring semesters. Includes training in CPR for the Professional Rescuer, oxygen administration, airway management, fracture management, bleeding control, expanded patient assessment, spinal immobilization, medical anti-shock trousers, and defibrillation. Students qualify for the NYS EMT Certification Exam upon successful completion of this course. Rigid attendance and participation requirements are strictly enforced.

PE 1211 NYS Emergency Medical Technician—Critical Care

Two-semester course. Prerequisite: current certification as NYS EMT. Fee charged.

Intensive 160-hour course taught throughout both fall and spring semesters. Includes training in CPR for the Professional Rescuer, oxygen administration, airway management, fracture management, bleeding control, expanded patient assessment, spinal immobilization, medical anti-shock trousers, manual defibrillation, EKG interpretation, pharmacology, and IV administration. Clinical rotations, in the field and hospital, are also required. Students qualify for the New York State AEMT-CRITICAL CARE certification exam upon successful completion of the course. Attendance and participation requirements are strictly enforced.

Fishing Courses**PE 1310 Introduction to Freshwater Angling**

Fall. Fee charged.

Acquaints the student with freshwater spinning, casting, and fly fishing equipment; tackle; and techniques through on-the-water experiences. It also seeks to promote an awareness of the angling opportunities that exist close to Cornell and in the Finger Lakes

region of New York. The course consists of an orientation and outings to various locations around the area such as Cayuga Lake and the Susquehanna River.

PE 1311 Fly Fishing and Basic Flytying Techniques, Level I

Fall and spring. Fee charged.

Learn the art of tying several of your own artificial flies while you learn the art of fly casting. Students must have a valid NYS fishing license and their own wader boots. All other materials provided.

Fitness Courses**PE 1129 Cardio Combo**

Fall, spring, and summer (six weeks). Fee charged.

Dance program designed to keep the cardiovascular system in top shape by making the body demand increased amounts of oxygen.

PE 1130 Cardio Crazy

Fall and spring. Fee charged.

Designed to acquaint the student with the various types of indoor aerobic training equipment, rowing machines, tread mills, stair machines, exercycles, and Nordic Tracks, and to teach them to design a personal fitness program incorporating the equipment.

PE 1231 Aerobic Instructor

Fall. Fee charged.

Helps prepare the student to teach aerobics and prepares them for the AFAA Primary Aerobic Instructor or Step Certification. Topics include the theory behind all basic components of a good class, applications, and practical uses in the class settings.

PE 1233 Bootcamp

Fall and spring. Fee charged.

Designed as a modern military-style workout program with an emphasis on both aerobic and anaerobic fitness.

PE 1234 Athletic Performance Enhancement

Fall and spring. Fee charged.

Train like an athlete! Workouts are designed to enhance all aspects of athletic performance: strength, power, speed, balance, force application, dynamic flexibility, anaerobic, and aerobic conditioning.

PE 1235 8 O'Clock Rock

Fall and spring. Fee charged.

Combines the best of the principles of weight training and cardio training.

PE 1240 Pilates Mat Work

Fall and spring. Fee charged.

Conditioning program designed to increase body awareness, improve alignment and breathing, and build endurance, flexibility, coordination, and strength through a highly focused flow of movement.

PE 1245 Spinning

Fall and spring. Fee charged.

Indoor stationary cycling class that combines basic cycling movements with motivational coaching, breathing awareness, and heart rate training.

PE 1246 Spinning Instructor

Fall. Fee charged.

Prepares students for the Johnny G spinning Certification. The course is intended to provide the fundamental theoretical knowledge and the practical skills necessary

to assume the role of a certified spinning program instructor.

PE 1261 Fitness and Conditioning

Fall and spring.

Physical fitness program that embodies features of stretching exercises, weight lifting, and jogging. Students work on their individual training needs.

PE 1265 Wellness and Fitness

Fall and spring. Fee charged.

"Here's to a Healthier You"—a wellness experience for the busy student. This course assesses the student's physical fitness status, blood-cholesterol levels, and overall lifestyle health habits. Each student receives an individual exercise prescription and has access to the Wellness Program fitness room in Helen Newman Hall. Lectures on nutrition and stress management are also presented. This course has been made possible through the generosity of the Bateman family in memory of Ms. Dorothy Bateman, Cornell's first director of women's sports and physical education (1920 to 1962).

PE 1270 Jogging

Fall and spring.

Covers running and stretching techniques. It comprises a conditioning program with the objective to develop the capacity to run 3 miles after 12 weeks of training.

PE 1271 Jogging Tours—Distance Running

Fall and spring.

Designed for the intermediate runner who can run an average of 3 miles in 30 minutes. Most tours are 3–4 miles long and go through campus and nearby countryside.

PE 1275 Triathlon

Fall and spring.

Designed to acquaint students with the components of, and conditioning for, triathlon (running, swimming, and bicycling).

Equitation Courses**PE 1305 Basic, Intermediate, Advanced**

Fall, spring, and summer (six weeks). Fee charged.

All riding classes are held at the Cornell Equestrian Center located on Pine Tree Road near East Hill Plaza. Detailed information will be offered by the equitation staff at the registration sign-up table. Basic—never ridden; Intermediate I—completed basic with knowledge of walk/trot/canter; Intermediate II—walk/trot/canter with control over two-foot-high jumping course; Advanced—strong jumping/dressage skills with experience hunting/showing/eventing. Students must fill out a release form to participate in any riding class.

Golf Courses**PE 1320 Golf, Introduction to**

Fall and spring. Fee charged. Equipment furnished.

PGA program of instruction geared to all levels of experience and ability. The objective is to give beginners enough skill to play, and to give more advanced players direction in their thinking, practice, and play, through a thorough understanding of fundamentals.

PE 1321 Golf, Recreational

Fall and spring. Prerequisite: experienced golfers. Fee covers a semester's membership. Students must provide clubs. Students must play a minimum of 10 rounds of nine holes to receive credit.

Gymnastics Courses**PE 1290 Introduction to Gymnastics**

Fall and spring. Open to both male and female participants.
Deals with a majority of the Olympic events. Focuses on beginner-level skills.

Ice Skating Courses**PE 1540 Introduction to Skating**

Fall and spring. For beginning to intermediate skaters. Fee charged; students provide skates or rent them at Lynah Rink. Covers forward and backward skating, turns, and stops.

PE 1546-1547 Figure Skating, Beginning, Intermediate, and Advanced Levels

Fall and spring. Fee charged; students provide skates or rent them at Lynah Rink. Instruction and practice in basic figure-skating techniques: forward, backward, crossovers, turns, and spirals.

Martial Arts—Self-Defense Courses**PE 1345-1346 Boxing, Introduction to, Intermediate**

Fall and spring. Fee charged.
Covers the basic skills of footwork, defensive, and offensive techniques. Skipping rope, shadow boxing, and heavy bag work are taught as methods for individual aerobic conditioning.

PE 1350 Chi Gong

Fall and spring.
Chi Gong, or "the art of breathing," is an ancient Taoist exercise system from China. Like Tai Chi, Chi Gong is an internal martial art that links movement, breathing, and visualization to enhance physical strength and mental clarity. In ancient times, this gentle system was used by warriors preparing for battle. They believed it would make their bodies impervious to weapons of the day. The movements used in Chi Gong are generally less complex than those of Tai Chi and can be learned more quickly. Meditation is an important element of the practice.

PE 1355 Judo, Introduction to

Fall and spring. Fee charged.
Conditions and increases suppleness. Continues to develop skills in the two parts of judo: standing techniques (throws and trips) and mat techniques.

PE 1356 Judo, Intermediate

Fall and spring. Fee charged.
Conditions and increases suppleness. Continues to develop skills in the two parts of judo: standing techniques (throws and trips) and mat techniques.

PE 1360 Jun Fan/Jeet Kune Do

Fall and spring. Fee charged.
Blended system of martial arts. Developed by the late Bruce Lee and taught to his personal apprentice at the time, Dan Inosanto, Jun Fan Gung Fu is the foundation from which Jeet Kune Do eventually evolved. The system emphasizes footwork and agility, economy of motion, counter ability, and strong practical self-defense. This realistic, modern training

approach cultivates strong physical, mental, and emotional development in the student.

PE 1365 Karate, Introduction to

Fall and spring. Fee charged.
Beginning course taught by professional black-belt instructors. Involves mastery of basic blocks, kicks, and punches.

PE 1366 Karate, Advanced

Fall and spring. Fee charged.
Open to those who have taken basic karate or the equivalent.

PE 1370 Kung Fu

Fall and spring. Fee charged.
Explores conditioning and fitness procedures used in the major martial arts, such as karate or judo. Covers circular movement for generating strong blocks, kicks, and punches.

PE 1375 Tae Kwon Do, Introduction to

Fall and spring. Fee charged.
Korean martial art distinguished by emphasis on high and powerful kicks. Basic kicking, punching, and blocking emphasized.

PE 1376 Tae Kwon Do, Intermediate

Fall and spring. Fee charged.
Korean martial art distinguished by its emphasis on high and powerful kicks. Intermediate-level kicking, punching, and blocking are emphasized.

PE 1377 Tae Kwon Do, Advanced

Fall and spring. Fee charged.
A Korean martial art distinguished by its emphasis on high and powerful kicks. Advanced-level kicking, punching, and blocking are emphasized.

PE 1380-1381 T'ai Chi Chuan, Introduction to, and Intermediate

Fall and spring. Fee charged.
Introduction to T'ai Chi, a system of graceful exercises that aims at nurturing relaxation, deep breathing, and improved circulation.

PE 1385 Thai Boxing

Fall and spring. Fee charged.
Martial art system developed from the unique culture of Thailand that is a blend of art, science, and sport.

PE 1390 Self-Defense and Empowerment for Women

Fall and spring. Fee charged.
Basic methods of physical protection for women.

PE 1395 Self-Defense and Personal Safety in the Modern World

Fall and spring. Fee charged.
Provides students an opportunity to learn a system of practical, proven self-defense techniques and educates the individual in the strategies of personal safety and awareness.

PE 1520 Fencing, Introduction to

Fall and spring. Fee charged. Equipment furnished.
Includes warm-up exercises and offensive and defensive moves.

PE 1521 Fencing, Intermediate

Spring. Prerequisite: Introduction to Fencing or equivalent. Fee charged.
Equipment furnished.
Interclass competition is stressed.

PE 1525 Fencing, Classical

Fall and spring. Fee charged.
Martial art that uses the practice of the sword to cultivate self-mastery.

PE 1526 Renaissance Fencing

Fall and spring. Prerequisite: Introduction to Fencing or permission of instructor. Fee charged.
Focuses on the fundamental techniques of 16th- to 17th-century fencing with an emphasis on safety, balance, line, focus, and distance.

Outdoor Education Program

For further information, class schedules, or to register at any time, call 255-6183 or visit www.coe.cornell.edu.

Climbing Courses**OUTED 1640 Basic Rock Climbing**

Fall, spring, and summer. Fee charged.
Six indoor climbing sessions at the Lindseth Climbing Wall.

OUTED 1642 Basic Rock Climbing for Women

Fall, spring. Fee charged.
Six indoor climbing sessions at the Lindseth Climbing Wall taught by and for women.

OUTED 1643 High Adventure

Fall, spring. Fee charged.
Six sessions combining classes at the Lindseth Climbing Wall and the Hoffman Challenge Course.

OUTED 1644 Basic Outdoor Rock Climbing

Fall. Fee charged. Includes fall break trip.
Two indoor classes and a four-day climbing trip to the Shawangunks introduce basic safety, techniques, equipment, and methods for outdoor rock climbing.

OUTED 1645 Basic Rock Climbing for 24 and Over

Fall. Fee charged. Noncredit course.
Four indoor climbing sessions at the Lindseth Climbing Wall for people age 24 and older.

OUTED 1646 Wellness Rock Climbing

Fall, spring. Fee charged. Noncredit course.
Nine one-hour climbing sessions at the Lindseth Climbing Wall for Wellness Program members only.

OUTED 1650 Performance Rock Climbing

Fall, spring. Fee charged.
Six indoor sessions at the Lindseth Climbing Wall that introduce and practice more advanced climbing techniques.

OUTED 1651 Intermediate Outdoor Rock Climbing

Fall, spring. Fee charged.
Two indoor classes and two weekend trips to the Shawangunks introduce intermediate-level climbing techniques and systems for top-rope anchors.

OUTED 1652 Shawangunks Rock Climbing

Fall, spring. Fee charged. Includes fall-break or senior-week trip.
Two indoor classes and a four-day advanced climbing camp at the Shawangunks introduce advanced climbing techniques and systems for outdoor multi-pitch rock climbing.

OUTED 1654 Ice Climbing

Spring. Fee charged.
Basic top-rope ice climbing instruction, including a weekend trip.

OUTED 1655 Gunks Bouldering

Fall. Fee charged.
In recent years bouldering, or climbing near the ground without ropes or harnesses, has

become a sport unto itself. Bouldering is easy to learn, requires very little gear, and is amazingly addictive. Gunks Bouldering will introduce you to the basics of climbing low: locations, spotting, safety, and all those hard-earned climbing tips and tricks that make the impossible possible. We will spend one day at the climbing wall, then head out for a weekend of climbing and camping. Reserve the following weekend in case of rain!

OUTED 1657 Tree Climbing

Fall. Fee charged. All equipment is included in the course fee. No experience necessary.

Whether you are a rain forest canopy researcher, an arborist, or just a kid at heart, everyone loves to climb trees. Recall the excitement and your sense of adventure when you first crawled into the branches to look inside a bird's nest. Then you swung from limb to limb without a thought of ropes and harnesses. But what about that big tree down the street you always wanted to climb, but couldn't reach the first branch? Cornell Outdoor Education's Tree Climbing course will teach you how to get up into the canopy of any tree, to move around, even to climb from one tree to another without touching the ground.

Backpacking Courses

OUTED 1606 Trail Maintenance

Fall, spring. Free with 100 percent attendance, otherwise fee charged. Fee charged for personal rental equipment.

Learn basic trail construction and outdoor living skills on local outings and overnights. Projects may include designing and creating new trails, switchback construction, bridge building, water bar construction, and erosion control. Course includes day outings and one weekend trip.

OUTED 1610 Backpacking the Finger Lakes

Fall, spring. Free with 100 percent attendance, otherwise fee charged.

Escape from campus on day outings and two weekend trips to explore the glens, forests, waterfalls, vistas, and trails in the local area. This fantastic introduction to backpacking skills covers basic outdoor living skills, including hiking, navigation, camping, equipment selection and use, backcountry cooking, and safety. No experience necessary. Fee charged for personal rental equipment.

OUTED 1611 Southwest Backpacking

Spring. Fee charged. Includes spring break trip.

OUTED 1613 Women's Backpacking

Fall. Fee charged for personal rental equipment.

Explore the local trails, glens, forests, and waterfalls in the company of other women. Covers basic outdoor living skills, equipment, camping, cooking, navigation, and safety. No experience necessary.

OUTED 1619 Adirondack Winter Camping

Spring. Fee charged. Includes winter break trip. Prerequisite: some backpacking experience; permission of instructor.

Learn the fundamentals of winter travel and camping. Course covers trip planning, equipment selection, snowshoe travel, snow shelter construction, and winter safety. A four-day trip to the Adirondacks at the end of winter break includes a peak ascent attempt.

Spend spring break exploring the wide open spaces of the Southwest. Destination changes year to year. Trip heads to either Utah's stunning and remote Escalante Canyon country or Arizona's Sonoran Desert wilderness of the Superstition Mountains. Visit www.coe.cornell.edu for trip destination and full details.

Biking Courses

OUTED 1664 Mountain Biking

Fall, spring. Fee charged. Participants provide own mountain bike.

Explore local bike trails and develop off-road riding skills. Course covers essential cycling skills for riding single track, managing steep terrain, and negotiating obstacles, as well as bike repair, riding etiquette, navigation, and outdoor safety.

OUTED 1665 Mountain Biking in Vermont

Fall. Includes fall break trip. Fee charged. Participants provide own mountain bike and helmet.

Develop and hone skills for riding a variety of trails, ranging from moderate fire roads to technical single track.

Canoeing Courses

OUTED 1670 Adirondack Canoe Camping

Fall. Fee charged. Includes fall-break trip. Learn basic canoeing and wilderness camping skills. Experience the blazing Adirondack autumn foliage as this fall-break trip explores lakes and rivers of upstate New York.

OUTED 1684 River Canoeing

Spring. No prerequisites. Fee charged. Explore local rivers by canoe. Learn skills to safely navigate quick-moving currents and class I to easy class II water. Course covers strokes, braces, eddy turns, peel outs, ferrying, river dynamics, self-rescue, and river safety. Culminates with a weekend river trip.

Caving Courses

OUTED 1630 Caving

Fall, spring. Fee charged. Learn about the basic safety, techniques, and equipment for caving, finishing with a weekend caving trip.

Hiking Courses

OUTED 1605 Day Hiking

Fall, spring. Fee charged. Hike and explore Ithaca's spectacular gorges, state forests, and extensive trail system. Course covers planning and packing for a hike, dressing for the outdoors, map reading, outdoor safety, navigation, and natural history of the area.

OUTED 1607 Snowshoeing

Spring. Fee charged. Outings in the local state forests build skills and confidence in the winter. Learn winter safety; snowshoe history; equipment selection, care, and use; navigation; and natural history—all while enjoying a great workout.

OUTED 1608 Trail Running

Fall, spring. Fee charged. Covers stretching, basic trail-running techniques, navigation, injury prevention, training tips, and a scenic tour of local trails. Develop a training routine, learn to stay found, set running goals. Prerequisite: ability to jog two consecutive miles easily.

OUTED 1609 Snowshoeing, for 24 and Over

Spring. Fee charged. Noncredit course. Learn basic winter travel and snowshoe skills while exploring some local winter hiking destinations.

OUTED 1612 Wilderness Survival Skills

Fall. Fee charged. Hands-on course covers principles of survival, shelter building, navigation, fire starting, and water procurement as well as nature observation skills and local natural history. Evening and weekend outings.

Kayaking Courses

OUTED 1674 Sea Kayak Touring

Fall, spring. Fee charged. Learn basic sea kayaking skills and enjoy a weekend trip to the Adirondacks. Course covers equipment, safety, paddling techniques, rescues, trip planning, navigation, considerations for overnight trips, and camping and travel skills.

OUTED 1680 Pool Paddling

Fall, spring. Free with 100 percent attendance, otherwise fee charged. Learn a broad range of kayaking skills in the warm comfort and calm waters of the pool. Course introduces whitewater kayaks, canoes, and sea kayaks, while covering strokes, leans, braces, effective boat-handling skills, kayak Eskimo rolls, and rescues. Pool games, slalom gate courses, and video taping are used to hone an understanding of skills and refine techniques.

OUTED 1681 Whitewater Kayaking

Fall, spring, summer. Prerequisite: ability to swim with comfort in deep water without a flotation aid. Fee charged. Basic kayaking techniques and equipment use, culminating in a full weekend of whitewater paddling. Pool sessions and local outings develop skills to read water, scout, ferry, brace, power stroke, and execute eddy turns, peel outs, and Eskimo rolls.

OUTED 1682 1,000 Islands Sea Kayaking

Fall. Fee charged. Includes fall break trip. International travel documentation to Canada required.

Learn fundamental sea kayak touring skills in the Thousand Islands region of the St. Lawrence River. Course covers equipment, safety, paddling techniques, rescues, trip planning, navigation, considerations for overnight trips, camping, cooking, and travel skills.

OUTED 1683 Sea Kayaking in Georgian Bay, Canada

Summer. Fee charged. Located in Lake Huron, the Georgian Bay harbors a stunning archipelago of rugged granite shorelines, expansive open bays, and windswept sand dune islands. This week-long kayak touring course includes hands-on introduction to basic paddling techniques, equipment selection and care, deep water rescues, trip planning, natural history, navigation, camping, cooking, and touring skills.

OUTED 1685 Kayak Rolling Seminar

Fall, spring. Noncredit course. Fee charged. Learn kayak rolling techniques in two evening sessions. Classes take place at the Helen Newman pool.

OUTED 1686 Introduction to Sea Kayaking Seminar

Fall, spring, summer. Fee charged. Noncredit course.

Class covers equipment, basic paddling techniques, deep water rescues, and considerations for day trips.

OUTED 1687 Introduction to Slalom Racing Seminar

Spring. Noncredit course. Prerequisite: comfortable maneuvering in class II water or completion of COE whitewater class. Fee charged.

Covers slalom racing introduction and whitewater techniques for effectively navigating slalom courses.

OUTED 1688 Paddle to the Sea (A Shoals Marine Lab Program)

Fall. Fee Charged. Noncredit course.

On Appledore Island you can follow your dreams and expand your horizons while discovering the magic of the Isles of Shoals. Join our team of instructors from Cornell Outdoor Education and the Shoals Marine Laboratory and become an amateur naturalist and paddler. Kayaking excursions around Appledore and neighboring islands (weather permitting!) will include visits to Duck Island's harbor seal colony and White Island's common tern restoration project site. As you travel along inlets and coves you will become familiar with the flora and fauna of the Isles of Shoals while learning the art of paddling a sea kayak. Personalized kayak instruction will include an introduction to basic strokes, safety practices, and travel skills. This program will be as varied and unique as the subjects we will study--you will learn what makes an island community special, and discover a new side of yourself! The total cost of this program includes all gear and supplies.

Outdoor Leadership and Teambuilding Courses**OUTED 1618 Outdoor Leadership**

Fall, spring. Prerequisite: backpacking and camping experience. Fee charged. Includes fall or spring break trip.

Learn and practice the skills of outdoor leadership and education. Focus is on refining wilderness skills, outdoor judgment, group facilitation, decision making, and teaching skills. Course culminates in a fall- or spring-break trip where participants plan and lead portions of the trip.

First Aid Courses**OUTED 1620 Wilderness First Aid**

Fall, spring, summer. Fee charged.

Full weekend of wilderness first aid. Includes CPR certification.

OUTED 1621 Wilderness First Responder

Fall, spring. Offered in Jan., over winter break; offered late May/early June. Fee charged.

Eight days of instruction and practical application of backcountry first aid. Participants earn nationally recognized CPR and Wilderness First Responder certifications. Taught by Wilderness Medical Associates.

Skiing Courses**OUTED 1690 Cross-Country Skiing**

Spring. Fee charged.

Four sessions learning basic cross-country skiing skills and exploring trails.

OUTED 1691 Cross-Country Skiing, for 24 and Over

Spring. Noncredit course.

Fee charged. Four sessions learning basic cross-country skiing skills and exploring local trails.

OUTED 1693 Basic Telemark Skiing

Spring. Fee charged.

Four classes at Song Mountain Ski Area.

OUTED 1694 Intermediate Telemark Skiing

Spring. Fee charged.

Four classes at Song Mountain Ski Area.

Personal Growth Courses**PE 1400 Body-Mind**

Fall and spring.

Activities are drawn from ancient Eastern practices as well as modern Western psychology, and are designed to give the student first-hand experience of the interaction between their own bodies and minds.

PE 1401 Mindful Group Movement and Process

Fall and spring. Fee charged.

Teaches students to use the wisdom of the body, movement, and voice. Each class provides an opportunity to increase mindfulness of the present moment. By cultivating openness and respect, students provide the necessary foundation for working with others. Students practice processing and exploring spontaneous experiences of their own and others with precision, gentleness, and curiosity.

PE 1405 Living Routines

Fall and spring.

Provides the opportunity to explore a variety of ancient and modern methods designed to bring one to the state of meditation.

PE 1410 Introduction to Massage

Fall, spring, and summer. Fee charged.

Provides an experiential introduction to several types of massage. Included are Swedish, shiatsu, polarity, and sports massage. Class members participate in group exercises and practice on each other during class time. All exercises and techniques can be done while wearing street clothing.

PE 1411 Shiatsu Massage

Fall and spring. Fee charged.

Gain an experimental understanding of your body and learn certain shiatsu massage techniques.

PE 1412 Swedish Massage

Fall, spring, and summer. Fee charged.

Learn to give a relaxing, stress-reducing Swedish massage. Students master the basic strokes of Swedish massage and learn about their application to the different parts of the body. Students use oils and lotions as a part of their training.

PE 1413 Swedish Massage II

Fall and spring. Fee charged.

Students build on skills learned in Swedish massage as they participate in instruction practice sessions every week. Additional massage techniques and applications are added to basic skills. Some techniques from other types of massage are also introduced.

PE 1414 Thai Massage

Fall and spring. Fee charged.

Thai massage is a holistic, intuitive style of healing from the East. It encourages the flow of energy through the receiver's body that promotes good health. The person giving Thai massage uses his or her hands and feet supported by body weight to apply pressure along the energy channels that run through the receiver's body.

PE 1415 Weekend Massage Workshop

Fall and spring. Fee charged.

This introductory course in massage is taught in an intensive, weekend workshop format. It includes sessions on Friday evening and Saturday and Sunday during the day. Students are introduced to massage skills and techniques and then practice on each other in a structured and supervised format. Basics of touch awareness, palpation skills, and techniques from Swedish and oriental (shiatsu) massage are taught. Students learn to massage the back, shoulders, neck, legs, feet, arms, and hands to reduce stress. Professional massage tables are used.

PE 1420 Introduction to Meditation

Fall and spring. Fee charged.

Provides the opportunity to explore a variety of ancient and modern methods designed to bring one to the state of meditation. The methods serve to evoke the deep relaxation from which heightened awareness and creativity arise.

PE 1421 Relaxation and Stress Management

Fall and spring.

Introduction to basic relaxation techniques for the reduction of everyday stress. Teaches techniques that can be used in normal everyday living situations.

PE 1422 Meditation and Relaxation

Fall and spring. Fee charged.

Designed to assist students in learning to meditate, or to deepen an existing practice. As students learn to practice meditation and relaxation exercises, they find that as little as 15 minutes a day can benefit physical, mental, emotional, and spiritual health.

PE 1425 The Winning Mindset

Fall and spring. Fee charged.

Contains a wealth of knowledge and experience to guide athletes of all levels and abilities to achieve outstanding levels of performance. Students learn the principles to help them achieve success, whether it be tapping inner strength or overcoming the obstacles that limit performance.

PE 1430 Yoga, Introduction to

Fall, spring, and summer (six weeks). Fee charged.

Fundamentals of hatha yoga. Covers basic postures, breathing techniques, and deep relaxation. Introduces chanting.

Racquet Sports Courses**PE 1440 Badminton, Introduction to**

Fall and spring. Helen Newman Hall.

Fundamental shots, scoring, and general play.

PE 1441 Badminton, Intermediate

Fall and spring. Helen Newman Hall.

Review of fundamental shots, scoring, and general play.

PE 1445 Tennis, Introduction to

Fall, spring, and summer. Fee charged. Basic skills taught include forehand, backhand, serve, and volley. Scoring methods taught.

PE 1446 Tennis, Intermediate

Fall, spring, and summer. Fee charged. Review basic strokes plus topspin and underspin. Doubles strategy emphasized.

PE 1447 Tennis, Advanced

Fall, spring. Fee charged. Advanced strokes and doubles play emphasized. Recommended for tournament players or those with previous team experience.

PE 1453 Tennis, Indoor-Recreational

Fall and spring. Fee charged. Prerequisite: high school or college tournament experience or a rating of 3.5 or higher from USTA. **NO BLACK-SOLED SHOES ALLOWED ON COURTS!** Play is conducted at the new Reis Tennis Center. Matches are played in both doubles and singles. Equipment furnished.

PE 1460 Racquetball, Introduction to

Fall, spring, and summer. Fee charged; equipment furnished. Protective eyewear required. Instruction for beginners.

PE 1465-1466 Squash, Introduction to, Intermediate

Fall, spring, and summer. Fee charged. Equipment furnished. Protective eyewear required. Classes for appropriate level of play.

Sailing Courses**PE 1480 Small-Boat Sailing, Introduction to**

Fall, spring, and summer (six weeks). Fee charged. Learn basic skills necessary to sail small sailboats and basic keelboats safely.

PE 1481 Small-Boat Sailing, Competitive

Fall and spring. Fee includes one-year membership in university sailing team program. Vanguard 420 sailboat used for the course. USYRA Rules Book used as a text for the course.

PE 1335 Water Skiing

Fall only. Fee charged. Introductory course for beginning water skiers. Classes are conducted from East Shore Marina.

PE 1482 Introduction to Large-Boat Sailing

Fall. Fee charged. Students learn how to sail on 24- and 26-foot sailboats. Skills learned include sailing terminology, safety and etiquette, boat handling, sail trimming, use of spinnakers, and heavy wind selection and ship systems.

Skiing and Snow Boarding**PE 1330, 1331 Downhill Skiing and Snowboarding**

Spring. Fee charged. Transportation, instruction, ski-lift fees, and skiing time are offered in a package deal. Greek Peak and Song Mountain personnel are present at registration to explain the program and accept fees. Bus transportation to Greek

Peak is provided six afternoons a week for six weeks.

Cross-Country Skiing—See Outdoor Program.

Target Shooting Courses**PE 1500 Archery, Introduction to**

Fall and spring. Fee charged. Two classes a week.

Instruction in the care of equipment; seven basic steps for shooting; scoring; practice shooting at 20, 30, and 40 yards.

PE 1515 Handgun Safety, Introduction to

Fall, spring, and summer (six weeks). Fee charged.

Instruction in use of pistol in the three modes of 50-foot competitive target shooting—slow fire, timed fire, and rapid fire. Emphasis on safety and responsibility while firing.

PE 1510 Riflery

Fall and spring. Fee charged. Instruction and practice in the techniques of target riflery from various shooting positions.

PE 1505 Trap and Skeet

Fall, spring, and summer (six weeks). Fee charged. Guns and shells furnished. Includes lectures and shooting at the Tompkins County Rod and Gun Club range.

Team Sports Courses**PE 1550 Ice Hockey, Introduction to**

Fall and spring. Prerequisite: basic skating ability. Fee charged. Students provide own skates and sticks; all other equipment furnished.

Stick handling, passing, and shooting are stressed. Some scrimmaging.

PE 1551 Ice Hockey, Intermediate

Fall and spring. Fee charged. Prerequisite: beginning hockey or previous participation in organized hockey.

This course is designed for the intermediate hockey player. Advanced techniques taught include positioning, power play, penalty killing, and offensive and defensive attack. Each session emphasizes game situations and scrimmaging. Skates and hockey sticks must be supplied by the participants.

PE 1560 Basketball

Fall and spring. Fundamental drills in passing, shooting, and dribbling. Scrimmages each class session.

PE 1565 Soccer

Fall and spring. Introduction to the game. Includes basic individual skills (passing, trapping, shooting) and team play and strategy.

PE 1570 Volleyball, Introduction to

Fall and spring. Fundamentals of ball handling, serves, defensive blocks, and position play are stressed. Classes scrimmage.

PE 1571 Volleyball, Intermediate

Fall and spring. Passing and blocking strategy; scrimmages in class.

PE 1572 Volleyball, Advanced

Fall and spring. Offensive and defensive team strategy is emphasized in class scrimmages.

Weight Training Courses**PE 1580 Principles of Weight Training**

Fall and spring. Fee charged. Introduces the proper use of Olympic weights for improving physical condition and muscular strength. Instruction with focus on the relation between high-rep light weight lifting, low-rep heavy lifting, and the development of bulk, strength, and endurance.

Independent Study**PE 1999 Independent Study**

Fall and spring. Designed for those who have difficulty fitting any of the regularly scheduled courses into their academic program. Class activities are based on personal fitness programs. A term paper is required. Permission to enter this program must be granted by the program director.

COLLEGE OF VETERINARY MEDICINE

ADMINISTRATION

Donald F. Smith, dean

Robert O. Gilbert, associate dean

Alfonso Torres, associate dean for veterinary public policy and director, NYS Animal Health Diagnostic Laboratory

Hollis N. Erb, secretary of the college

Katherine M. Edmondson, assistant dean for learning and instruction

Robert F. Gilmour Jr., associate dean for research and graduate education

Claude M. Johnson, assistant dean for alumni affairs and development

Bonita S. Voiland, assistant dean for hospital operations

Gene R. Wheeler, assistant dean for finance and administration

Douglas F. Antczak, director, James A. Baker Institute for Animal Health

Carol S. Gary, director of student financial planning

Erla Heyns, director, Flower Sprecher Veterinary Library

Mary Beth Jordan, director of human resources

Douglas D. McGregor, director of leadership and training initiatives

TBA, director of admissions

Jai Sweet, director of student services and multicultural affairs

DEPARTMENT CHAIRS

Biomedical Sciences: M. Kotlikoff

Clinical Sciences: R. Hackett

Microbiology and Immunology: D. Russell

Molecular Medicine: G. Weiland

Population Medicine and Diagnostic Sciences: Y. Grohn

THE COLLEGE

The College of Veterinary Medicine offers a professional program that requires four years of full-time academic and clinical study of the normal and abnormal structure and function of the animal body and the diagnosis, treatment, and prevention of animal disease.

Graduates of the college receive the doctor of veterinary medicine (D.V.M.) degree, which is recognized by licensing boards throughout the world. Graduates generally enter private practice or academia, or become engaged in one of an increasing number of biomedical activities.

Admission requires a minimum of three years of college work, including specific prerequisite courses and experience.

Applications must be filed approximately one year before the proposed matriculation date. The competition for admission is keen, since there are many more qualified applicants than can be admitted.

Graduate programs in veterinary research and postdoctoral training in clinical specialties are open to doctors of veterinary medicine and some highly qualified holders of baccalaureate degrees and lead to the degree of master of science or doctor of philosophy.

More detailed information is available at the College of Veterinary Medicine web site, www.vet.cornell.edu/.

Note: 500- and 600-level courses are open only to veterinary students except by written permission from the instructor.

The College of Veterinary Medicine's professional curriculum comprises courses (designated with the prefix "VTMED") in two categories: foundation courses and distribution courses.

The Professional Curriculum

FOUNDATION COURSES

Foundation courses are interdisciplinary and represent approximately 70 percent of the professional curriculum. In Foundation courses I, III, and IV (VTMED 510, 530, 540), students work in small groups under the guidance of a faculty tutor. Case-based exercises are used to facilitate the understanding of basic science concepts within the context of clinical medicine. In some courses, three two-hour tutorial sessions are scheduled each week. These are complemented by lectures, laboratories, and discussion sessions or other organized learning opportunities specific to the individual course. Faculty are available to respond to questions that arise as a result of the case-based exercises.

Tutorial sessions and all other organized learning programs are scheduled primarily during the mornings, thereby reserving time in the afternoon for independent study. By learning in a clinical context, students are better able to integrate material from the basic and clinical sciences and are encouraged to develop an understanding of the clinical reasoning process from the beginning of the curriculum. The tutorial-based educational format creates an atmosphere that requires students to be involved actively in their learning and allows them to develop skills in communication, information retrieval, and analysis.

Note: Courses listed in brackets [] are approved courses that are not offered during the 2005–2006 academic year.

VTMED 510(5100) The Animal Body (Foundation Course I)

Fall. 12 credits. Prerequisite: first-year veterinary students. Letter grades only. A. J. Bezuidenhout and staff.

Designed to enable students to understand the principles of veterinary anatomy at the gross, microscopic, and ultrastructural levels. Emphasizes developmental anatomy to the extent that it reflects determination of adult form and species differences. Radiologic and related imaging techniques are used throughout the course to assist in the understanding of normal structural anatomy. Understanding of the anatomic basis of common surgical procedures is achieved during the various dissection procedures. The course is based on tutorials with significant emphasis on practical laboratories. Lectures and modules complement student learning.

VTMED 517(5701) Animals, Veterinarians, and Society: Part A (Foundation Course VIIa)

Fall. 1.5 credits. Prerequisite: first-year veterinary students. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby.

Complements and augments material learned in VTMED 510 (Foundation Course I—The Animal Body). The class is divided into small groups and each group meets for four to five hours each week during the first 11 weeks of the fall semester. Using live dogs, cats, horses, and cows as models for learning how to perform a physical examination, this laboratory course teaches the skills of observation, auscultation, palpation, and percussion as well as related basic diagnostic procedures. The body systems are examined sequentially and follow the order of study in Foundation Course I.

VTMED 520(5200) Cell Biology and Genetics (Foundation Course II)

Fall and spring. 8 credits. Prerequisite: first-year veterinary students; VTMED 510. Letter grades only. R. A. Levine and staff.

Designed to develop an appreciation of the molecular and cellular basis of animal health and disease. Students gain an understanding of the molecular mechanisms that regulate cell function, the molecular signaling processes that form the basis of integrated function and the response to disease, and the mechanisms underlying inherited traits and genetic disease. Emphasis is placed on defining and characterizing normal cell function and on understanding how mutations in specific genes promote disease. Students become familiar with the common molecular procedures being used to develop new diagnostic and therapeutic tools to maintain health and combat disease. The course is divided into two parts separated by a midterm exam. The first part is made up of three sections: Principles of Cell Biology, Cell Signaling, and Medical Genetics. The second half builds on and expands these principles, using examples from veterinary medicine including wound repair and cancer. In both parts, clinical cases are used to illustrate the concepts presented.

VTMED 522(5220) Neuroanatomy

Spring. 1 credit. Prerequisite: first-year veterinary students. Letter grades only. Faculty TBA.

Designed to give students the necessary background for the understanding of neurophysiology and clinical neurology. Students will gain a basic understanding of the gross anatomy of the Central Nervous System (CNS), pathways involved in somatosensory and motor systems, as well as some exposure to modern imaging of the CNS (CT and MRI correlates with gross coronal sections of the CNS).

VTMED 527(5702) Animals, Veterinarians, and Society: Part B (Foundation Course VIIb)

Last part of fall semester through end of winter session. 1.5 credits. Prerequisite: first-year veterinary students; VTMED 517. Letter grades only. Fee charged for course guide. Lects average two hours each week; lab, 10 hours spread throughout course. Live animals used in course instruction. N. L. Irby.

Consists of both lectures and laboratory sessions. Lectures partially complement materials learned in VTMED 520 (Foundation Course II—Cell Biology and Genetics) but for the most part focus primarily on veterinary medical ethical issues related to animal use, animal welfare, genetics counseling, and clinical day-to-day ethics. The laboratory reviews basic equine and bovine husbandry skills and the small-animal physical examination.

VTMED 530(5300) Function and Dysfunction: Part I (Foundation Course IIIa)

Spring. 9 credits. Prerequisite: first-year veterinary students; VTMED 520. Letter grades only. Live animals used on limited basis for demonstration or noninvasive procedures. R. Rawson and staff.

Designed to develop students' understanding of how an animal maintains itself as a functional organism; how the maintenance of function is achieved through the integration of different organ systems; how tissue structure relates to tissue function; how injury alters structure and leads to dysfunction, manifested as clinical signs; how organ function can be assessed; and how organ function can be modulated pharmacologically. The course incorporates aspects of physiology, biochemistry, cell biology, histology, pathology and histopathology, clinical pathology, and pharmacology.

VTMED 531(5310) Function and Dysfunction: Part II (Foundation Course IIIb)

Fall. 7 credits. Prerequisite: second-year veterinary students; VTMED 530. Letter grades only. R. Rawson and staff. Continuation of VTMED 530 Function and Dysfunction: Part I.

VTMED 537(5703) Animals, Veterinarians, and Society: Part C (Foundation Course VIIc)

Spring. 1 credit. Prerequisite: first-year veterinary students; VTMED 527. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby.

Introduces students to medical record keeping and to the communication skills and techniques necessary for effective communication with clients. In addition, students are introduced to the human-animal bond and its implications for veterinary medicine, animal death, and grief counseling. This course gives students the opportunity to

practice interviewing clients while refreshing their physical exam skills. The opportunity to gain an appreciation of the role of animal husbandry in veterinary medicine is provided through a milking experience at the college's dairy barn.

VTMED 540(5400) Host, Agent, and Defense (Foundation Course IV)

Fall. 12 credits. Prerequisite: second-year veterinary students; VTMED 531. Letter grades only. D. Bowman (course leader) and others.

Divided into six sections: the host response, intracellular environment, extracellular environment, somatic environment, external environment, and surrounding environment. Using this approach, students develop an understanding of the host response to insult, a familiarity with groups of important pathogens, an understanding of how pathogens manipulate the host and how the host defends itself against attacks, and an understanding of the roles played by the external environment and human intervention in the epidemiology of infectious organisms.

VTMED 541(5410) Veterinary Parasitology

Spring. 2.5 credits. Prerequisite: second-year veterinary students. Letter grades only. D. D. Bowman.

Provides a basic introduction to animal parasites of veterinary importance, concentrating mainly on the biology, control, and diagnosis of protozoan and metazoan parasites. Emphasizes parasites representative of significant disease processes or of significant clinical importance to veterinarians. Elaborates on the biology and pathogenesis of these major pathogens with the ultimate goal being to maximize the recognition of the major disease manifestations induced by the different groups of organisms. Laboratories stress certain aspects of some important parasite groups.

VTMED 547(5704) Animals, Veterinarians, and Society: Part D (Foundation Course VIId)

Fall. 1 credit. Prerequisite: second-year veterinary students; VTMED 537. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby.

Complements and augments material learned in VTMED 540 (Foundation Course IV—Host, Agent, and Defense). Emphasizes veterinary public health. Topics include animal bites, routes of disease transmission, rabies control programs, zoonotic diseases, and preventive health care programs including vaccination protocols in large and small animals. One rotation in the Community Practice service and small group discussions are required of each student.

VTMED 550(5500) Animal Health and Disease: Part I (Foundation Course V)

Spring. 10 credits. Prerequisite: second-year veterinary students; VTMED 540. Letter grades only. R. Hackett.

Integrates the clinical sciences of medicine, surgery, anesthesiology, radiology, and theriogenology, which are themselves integrated subjects, with systems pathology and relevant aspects of applied pharmacology. The course is presented on a systems basis, moving from clinical signs of alteration in function, to pathophysiology of clinical signs, to strategies for diagnosis and treatment.

Specific examples are used to establish a cognitive framework and knowledge of the most important diseases. This course provides a sound foundation for clinical rotations in Foundation Course VI. It builds on the strengths developed in earlier courses by an increased exposure to case examples in a more directed way, taking advantage of the diversity of skills and special knowledge of both faculty and students. A variety of educational techniques are used, including lectures in which interaction is encouraged, laboratories, demonstrations, case discussions, and autotutorials.

VTMED 551(5510) Animal Health and Disease: Part II (Foundation Course V, continued)

Fall. 20 credits. Prerequisite: third-year veterinary students; VTMED 550. Letter grades only. R. Hackett and staff. Continuation of VTMED 550 Animal Health and Disease: Part I.

VTMED 552(5520) Veterinary Clinical Oncology

Spring. 1 credit. Prerequisite: VTMED 540; third- and fourth-year veterinary students. Letter grades only. K. M. Rassnick.

Presents the common cancers affecting small and large animals. Emphasizes biological behavior and patient management. Discusses surgery, chemotherapy, and radiation therapy as important methods to treat cancers in veterinary patients. Course format includes lectures. Attendance is required.

VTMED 553(5530) Veterinary Diagnostic Imaging

Spring. 1.5 credits. Prerequisite: VTMED 540; third- and fourth-year veterinary students. Letter grades only. P. Scrivani.

Designed to emphasize the relevance of a solid foundation in veterinary anatomy as it is clinically applied to diagnostic imaging. Additionally, the course is designed to provide students with an understanding of the strengths and limitations of diagnostic imaging by discussing interpretation principles, pitfalls and interpretations, and measurements obtained through lectures, laboratory exercises, weekly quizzes, and reading assignments. Integration of these objectives culminates in weekly laboratory exercises where students must make or evaluate decisions regarding patient management based on evaluation of clinical signs and imaging examinations. The "Roentgen-Sign" approach to diagnostic imaging interpretation is used as a model.

VTMED 557(5705) Animals, Veterinarians, and Society: Part E (Foundation Course VIIe)

Spring. 1 credit. Prerequisite: second-year veterinary students; VTMED 547. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby.

Laboratory course that provides a basic instruction to clinical skills students will need when they start their clinical rotations in the Cornell University Hospital for Animals. Includes a brief review of the physical examination of the dog, horse, and cow. Clinical procedures include but are not limited to ear examination and treatment, IM and SQ injections, fluid administration, naso- and orogastric tube placement, urinary catheterization, and IV catheterization.

VTMED 558(5706) Animals, Veterinarians, and Society: Part F (Foundation Course VIII)

Fall. 1.5 credits. Prerequisite: third-year veterinary students; VTMED 557. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby.

Complements material learned in VTMED 551 Foundation Course V—Animal Health and Disease. Examines governmental regulation of the veterinary profession, including proper drug usage, extra label drug use (FDA), controlled substances (DEA), professional liability and malpractice insurance, professional and unprofessional conduct, hazardous materials in the workplace (OSHA), and environmental issues (EPA). Also includes sessions relating to the control and prevention of the spread of animal diseases and the role of USDA and specifically APHIS in these regulatory functions. The laboratory component consists of one night in the Equine and Farm Animal Hospital and one independent study exercise.

VTMED 560(5600) Ambulatory and Production Medicine

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). First- and second-year veterinary students encouraged to take one week early if slots available; those who take two weeks total get at least one week at end of curriculum after large-animal classes. Letter grades only. M. E. White and staff.

Clinical service rotation in which students accompany ambulatory clinicians on farm and stable calls and learn the skills and procedures necessary for operation of a modern veterinary practice offering primary care to large animal clients. Routine herd health visits are conducted for cattle, horses, sheep, goats, and swine. Reproductive evaluations (including pregnancy and fertility examinations), nutritional evaluation, and disease prevention are stressed. Herd health programs also include vaccinations, parasite control, mastitis prevention, and routine procedures. With appropriate herds, analysis of computerized performance data is conducted and discussed with the owner. In addition to assisting with routine scheduled work, students participate in diagnosis and medical or surgical treatment of ill or injured animals. This includes rotating assignments for night and weekend duty.

VTMED 561(5601) Community Practice Service: Medicine

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. W. E. Hornbuckle and staff.

Structured to provide supervised clinical experience in the practice of companion small-animal medicine. The course is conducted in the Companion Animal Hospital of the Cornell University Hospital for Animals. Students interact directly with clients presenting their pets for primary medical care. Under the supervision of the clinical faculty and staff, the students are expected to formulate and carry out plans for the diagnostic evaluation and medical management of these patients. After review, students explain their plans to the clients and provide follow-up care and management of these patients.

VTMED 563(5602) Small-Animal Medicine

Fall, spring, winter, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. S. C. Barr, S. A. Center, J. F. Randolph, K. W. Simpson, and R. Goldstein.

Structured to provide supervised clinical experience in the practice of companion small-animal medicine. The course is conducted in the Companion Animal Hospital of the Cornell University Hospital for Animals. Students interact directly with clients presenting their pets for primary or referral medical care. Under the supervision of the clinical faculty and staff, the students are expected to formulate and carry out plans for the diagnostic evaluation and medical management of these patients.

VTMED 564(5603) Small-Animal Soft Tissue Surgery Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. H. J. Harvey and small-animal surgery faculty.

Clinical service rotation that exposes the student to the practice of surgery under hospital conditions. Students participate in the diagnostic techniques; planning of therapy; and daily care of dogs, cats, and exotic species under the direction of a faculty veterinarian. Students assist experienced surgeons in the operating room and, with house-officer supervision, are responsible for patients undergoing elective ovariohysterectomy or castration. Client communications and the basics of efficient practice are emphasized.

VTMED 564(5611) Small Animal Orthopedic Surgery Service

Fall, winter, spring, and summer. 2 credits. Letter grades only. E. Trotter and small animal surgery faculty.

Clinical service rotation that exposes the student to the practice of surgery under hospital conditions. Students participate in the diagnostic techniques; planning of therapy; and daily care of dogs, cats, and exotic species under the direction of a faculty veterinarian. Students assist experienced surgeons in the operating room and, with house-officer supervision, are responsible for patients undergoing elective ovariohysterectomy or castration. Client communications and the basics of efficient practice are emphasized.

VTMED 566(5604) Large-Animal Medicine Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. D. Ainsworth, T. Divers, G. Perkins, and M. Flaminio.

Students assigned to this service assist the faculty, technicians, and residents of the Large-Animal Medicine Service in the diagnosis and care of patients. The goal of this course is for students working on this service to acquire knowledge and skills in history taking, physical examination, election and completion of appropriate ancillary tests, diagnosis, treatment, and patient care. Daily rounds and discussions are used to monitor patient progress and further educate students. If time allows, sit-down rounds to discuss medical disorders are provided.

VTMED 567(5605) Large-Animal Soft Tissue Surgery Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. A. J. Nixon and staff.

Clinical rotation structured to provide supervised clinical experience in the practice of large-animal surgery. Under the direction of faculty and house staff, students participate in the diagnosis, surgical treatment, and care of patients presented to the Equine and Farm Animal Hospital. Training through patient care is supplemented by formal rounds and didactic instruction.

VTMED 567(5612) Large-Animal Orthopedic Surgery Service

Fall, winter, spring, and summer. 2 credits. Letter grades only. N. Ducharme, A. Nixon, L. Fortier, and staff.

Clinical rotation structured to provide supervised clinical experience in the practice of large animal surgery. Under the direction of faculty and house staff, students participate in the diagnosis, surgical treatment, and care of patients presented to the Equine and Farm Animal Hospital. Training through patient care is supplemented by formal rounds and didactic instruction.

VTMED 568(5606) Anesthesiology Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. R. D. Gleed, J. W. Ludders, L. P. Posner, A. A. Smith, and staff.

Designed to provide clinical experience in the use of anesthetics in small companion animals, horses, and some food animals. Students participate in selecting suitable anesthetic techniques for patients in the Cornell University Hospital for Animals and then implement those techniques under the supervision of faculty and residents. The goal is for students to learn the skills and thought processes necessary to perform safe anesthesia in a modern veterinary practice.

VTMED 569(5607) Dermatology Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. W. H. Miller and D. W. Scott.

During this clinical rotation, students participate in the diagnosis and management of skin disorders in small and large animals. Patients are examined by appointment and through consultation with other hospital services.

VTMED 570(5608) Ophthalmology Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. R. C. Riis, T. Kern, and N. Irby.

Combines clinical experience with beginning skills in diagnostic ophthalmology. Students learn how to apply the ophthalmic diagnostic tests. A competent ocular examination is the goal of this rotation. Confidence in using direct and indirect ophthalmoscopes, slit lamps, tonometers, gonioscopes, conjunctival cytology, and surgery comes with the practice provided by this rotation. Students are required to review the introductory orientation videotapes in the autotutorial center titled *Ocular Examination I and II* before the start of the rotation. This rotation provides surgical experience and consultations. A high percentage of the consultations are referral

cases that usually challenge the service. Adequate routine case material is presented to prepare most students for practice.

VTMED 571(5609) Pathology Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. S. P. McDonough and staff.

Involves the hands-on diagnostic necropsies of a wide variety of mammalian species that are presented to the Section of Anatomic Pathology necropsy service. Students work in groups of three to five for the two-week rotation. Necropsies are performed under the guidance of pathology faculty and residents. Students prepare written reports of necropsies performed, review microscopic hematology and cytology slides, perform urinalyses, and discuss case studies.

VTMED 572(5610) Radiology Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. N. L. Dykes and staff.

Two-week clinical experience in the imaging section of the Cornell University Hospital for Animals. Students use radiographic, ultrasonographic, CT, MRI, and nuclear medicine imaging techniques to evaluate animal patients under treatment in the Cornell University Hospital for Animals. Students obtain and interpret radiographic studies with guidance from radiology faculty and technical staff. Autotutorial teaching films are used to familiarize students with radiographic examples of common diseases of large- and small-animal species. Small-group discussions are scheduled to present and discuss the teaching files and current cases. The safe use of X-ray-producing equipment and radioisotopes is discussed.

VTMED 573(5612) Fourth-Year Seminar

Fall and spring. 1 credit. Required component of Clinical Rotations (Foundation Course VI). First-, second-, and third-year students and all staff members also invited and encouraged to attend. S-U grades only. F. H. Fox, chair of Senior Seminar Committee.

Gives the student the responsibility and opportunity of selecting and studying disease entity on the basis of a case or series of cases, or to conduct a short-term, clinically oriented research project under the direction of a faculty member. In either case, an oral report is presented at a weekly seminar. A written report is also submitted at the time of the seminar. All participants are encouraged to foster an atmosphere in which discussion, exchange of ideas, and the airing of controversial opinions might flourish.

DISTRIBUTION COURSES

Distribution courses comprise 30 percent of the curriculum and are usually scheduled during the first half of each spring semester. During the first two years, many of the distribution courses are oriented to the basic sciences. During years three and four, students have additional distribution course offerings from which to choose. Some emphasize clinical specialties, whereas others integrate basic science disciplines with clinical medicine and are co-taught by faculty representing both areas. Students from different classes have the

opportunity to take many of these courses together.

Grading options for distribution courses are either letter or S-U.

VTMED 601(6100) Anatomy of the Carnivore

Spring. 3 credits. Prerequisite: VTMED 510 or permission of instructor; first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. P. S. Maza.

Studies carnivore anatomy by detailed systematic and regional dissection of the cat, with comparison to the dog. Student dissection is supplemented with prosections, radiographs, palpation of live cats, and exercises focusing on surgical approaches. There are opportunities to dissect other carnivores, such as the ferret and the fox, depending on availability of specimens. The lectures augment the laboratory dissection and introduce the student to functional morphological comparative features in the Order Carnivore. Students do an independent project on the carnivore species of their choice and give an oral presentation on this to the class.

VTMED 602(6101) Anatomy of the Horse

Spring. 3 credits. Prerequisite: VTMED 510; first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. A. J. Bezuidenhout.

Organized as a traditional anatomy course that relies primarily on students learning the anatomy of horses through hands-on dissection laboratories augmented by lectures and highlighted by clinical correlations. An understanding of anatomy that provides the foundation for surgery and is directly relevant to clinical practice is emphasized in the regional approach to dissection. Most lectures emphasize structural-functional correlations that are unique or important in the horse. Microscopic anatomy is integrated into the course in selected areas to lay a foundation for the later study of pathology or when it reinforces concepts of structure and function that are difficult to understand by a study of the gross anatomy alone (i.e., hoof). Student dissection cadavers are supplemented by skeletal materials, radiographs, models, preserved predissected specimens, and fresh specimens when available.

VTMED 603(6102) Anatomy of the Ruminant

Spring. 3 credits. Prerequisite: VTMED 510 or permission of instructor; first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. L. A. Mizer.

Covers the regional anatomy of several ruminant species using dissection laboratories, lectures, and large-group discussions. Emphasizes the functional consequences of structural modifications and anatomical features relevant to clinical practice. Correlates microscopic anatomy with gross anatomy when appropriate to relate structure to function and to provide a foundation for later study in pathology. Student dissection material is supplemented by skeletal materials, radiographs, models, predissected specimens, and postmortem specimens. Students are required to complete an independent study project on a relevant subject of their choice. Assessment includes written and practical exam.

VTMED 605(6103) Comparative Anatomy: Pattern and Function

Spring. 3 credits. Prerequisite: VTMED 510; first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only.

J. Hermanson.

The goal of this course is to study anatomical variability among amniote (mammals, birds, and reptiles) and anamniote (amphibian and fish) species. This is accomplished by relating the anatomy of major organ systems in each species to a common basic pattern and considering the differences in a functional perspective. Five major systems are explored (integumentary, locomotory, cardiorespiratory, digestive, and urogenital) in a variety of species as available.

[VTMED 606(6520) Advanced Clinical Neurology

Spring. 1 credit. Prerequisite: VTMED 521; third- and fourth-year veterinary students. Letter grades only.

Further the experience and confidence of the student in the diagnosis and understanding of clinical neurological disorders. Continues the student's correlation of anatomy, physiology, and pathology in the diagnosis of diseases of the nervous system and the understanding of their pathogenesis. Neurological disorders that are not covered in the foundation course are considered here. The course is based entirely on case examples presented on videotapes and slides.]

[VTMED 607(6720) The Literature and Subject Matter of Natural History

Spring. 1 credit. Minimum enrollment 10; maximum 30. Prerequisite: third- and fourth-year veterinary students. S-U grades only. H. E. Evans.

Introduces natural history literature. Shows and discusses materials relating to the earth sciences and the biology of plants and animals from around the world. Students are required to show and discuss a book that concerns natural history in a country of their choice and submit a one-page book report for duplication. (A recommended reference text is *The Cambridge Illustrated Dictionary of Natural History* by R. J. Lincoln and G. A. Boxshall, 1990.) Golden Guides for mammals, birds, reptiles, fishes, insects, and plants are given to participants.]

VTMED 609(6120) Anatomy and Histology of Fish

Spring. 2 credits. Minimum enrollment 4; maximum 6. Prerequisite: first-, second-, third-, and fourth-year veterinary students or written permission of instructor. S-U grades optional. P. R. Bowser.

Provides an overview of the diversity of anatomy and histology of fish. Students participate in lecture, discussion, and laboratory exercises to review the major organ systems. Extensive use of library resources for assigned readings is expected. Each student prepares a term project and makes one oral presentation.

VTMED 610(6721) Veterinary Aspects of Avian Biology

Spring. 1.5 credits. Minimum enrollment 10; maximum 60. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. G. V. Kollias.

Introduction to avian biology for veterinary students. Includes lectures and laboratories involving avian anatomy, physiology, and

natural history. One laboratory involves live birds to demonstrate physical examination. The course emphasizes the development of a strong foundation in avian biology that is applied in VTMED 616 Diseases of Birds and VTMED 652 Avian Medicine and Surgery.

**VTMED 613(6722) AQUAVET I:
Introduction to Aquatic Veterinary
Medicine**

Four weeks of full-time instruction at Woods Hole, Mass., immediately after spring semester. 4 credits. Maximum enrollment 24 students from Cornell U., the U. of Pennsylvania, and other U.S. colleges and schools of veterinary medicine. Available, by competitive application process, to veterinary and graduate students. S-U grades only. Fee charged. P. R. Bowser.

Sponsored by Cornell U., the U. of Pennsylvania, and three marine-science institutions at Woods Hole: the Marine Biological Laboratory, Woods Hole Oceanographic Institution, and Northeast Center of the National Marine Fisheries Service. Introduces veterinary students to aquatic-animal medicine. The marine environment is described and visited on field trips in the Woods Hole area. Specific aspects of the comparative anatomy, physiology, nutrition, microbiology, pathology, and medicine of a variety of marine and freshwater species are discussed. Some emphasis is placed on systems of aquaculture. The specific diseases of a few selected species are presented as examples. The course is taught by an invited faculty of 35 individuals who are leaders in their respective fields of aquatic-animal medicine. Students present seminars on appropriate topics.

**VTMED 614(6521) AQUAVET II:
Comparative Pathology of
Aquatic Animals**

Two weeks of full-time instruction at Woods Hole, Mass., immediately after spring semester. 2 credits. Maximum enrollment 18. Prerequisites: formal course work in diseases of aquatic animals or appropriate experience and permission of instructor. S-U grades optional. Fee charged. Available, by competitive application process, to veterinary and graduate students. P. R. Bowser.

Advanced course (sponsored by Cornell U., the U. of Pennsylvania, and three marine-science institutes at Woods Hole: the Marine Biological Laboratory, Woods Hole Oceanographic Institution, and Northeast Center of the National Marine Fisheries Service) covering the comparative pathology of aquatic invertebrates and vertebrates commonly used as laboratory animals. The material presented consists of discussions of the diseases of aquatic animals as well as extensive use of the microscope to examine the histopathology associated with these diseases. The course is taught by an invited faculty of 12 individuals who are leaders in their respective fields of aquatic-animal medicine.

**VTMED 615(6723) Veterinary Medicine in
Developing Nations**

Spring. 2 credits. Maximum enrollment 20. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. S-U grades only. Offered even-numbered years. K. A. Schat.

Veterinary medicine has an important role to play in developing nations in developing and providing economical sources of animal proteins for human consumption and protecting ecological resources. This seminar course provides interested veterinary students with information on and insight into the multitude of complex issues facing U.S. veterinarians working in developing nations.

VTMED 616(6522) Diseases of Birds

Spring. 2 credits. Minimum enrollment 10; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. G. V. Kollias and staff.

Designed to introduce second-, third-, and fourth-year veterinary students to a basic and practical knowledge of the most common infectious and noninfectious diseases affecting a variety of avian species. Emphasizes the latest diagnostic and control approaches. The course format is a combination of didactic lectures and discussions.

**[VTMED 617(6523) Basic Nutrition for
Veterinary Students**

Fall. 1 credit. Prerequisite: Foundation Course III (VTMED 531). S-U grades only. F. A. Kallfelz, J. J. Wakshlag, and K. J. Hurley.

Introduction to nutrition, including basic concepts of the need for and metabolism of energy, protein, minerals, and vitamins in domestic animals. Discusses the functions of essential nutrients, including differences between nutrients needed in herbivores, carnivores, and omnivores. Includes identification and use of various forages and concentrates for large animal feeding.]

**VTMED 622(6420) Foreign Infectious
Diseases of Animals**

Spring. 1 credit. Minimum enrollment 20. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. A. Torres.

Describes the etiology, pathogenesis, clinical signs, gross pathology, differential diagnosis, methods of spread, reservoir hosts, and control of foreign animal diseases that present serious economic threats to the United States. The format is student-seminar presentations with each student responsible for presenting one seminar or writing a paper on the outcome of a foreign animal disease outbreak. The spread of FMD, avian flu virus, and BSE emphasizes the importance of these diseases to producers, consumers, and practicing veterinarians. Several foreign animal diseases are also important zoonosis affecting public health.

**VTMED 624(6524) Feline Infectious
Diseases**

Spring. 1 credit, two 50-min. lec each week for eight weeks. Minimum enrollment 10; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. S. C. Barr.

Emphasizes the clinical aspects of feline infectious diseases common to cats in North America and complements knowledge acquired in Foundation Courses IV and V. The overall objective is to provide details about specific infectious diseases a future small-animal practitioner may need to know to effectively diagnose and treat diseases. Etiology, epidemiology (prevalence and transmission), pathogenesis, clinical findings, diagnosis, pathologic findings, therapy prevention, and public health considerations are emphasized. Most lectures are presented

from a clinician's point of view, and therefore the material is oriented toward practical skills in managing clinical cases. Grades are based entirely on the result of a written exam (usually multiple-choice format) given in the final period.

VTMED 625(6525) Osteoarthritis

Spring. 1 credit. Minimum enrollment 8; maximum 30. Prerequisite: graduate and second-, third-, and fourth-year veterinary students. Letter grades only. G. Lust.

Provides a basis at the molecular, cellular, and tissue levels for understanding the function of mammalian diarthrodial joints. Includes a description of a diarthrodial joint and the composition and metabolism of articular cartilage, subchondral bone, ligaments, meniscus, capsule, and synovium. Considers the interrelationships of synovium, synovial fluid, articular cartilage, joint lubrication, biomechanical considerations, and enervation are considered. Canine hip dysplasia is a focus during the early class sessions. The osteoarthritis associated with canine hip dysplasia serves as a basis for discussion of the etiopathogenesis of the disease. Canine osteoarthritis is emphasized, but the disease in animal models such as mice, guinea pigs, rabbits, and sheep is mentioned. Therapies such as nonsteroidal anti-inflammatory drugs, glucocorticoids, and others may be discussed.

**VTMED 626(6421) Epidemiology of
Infectious Diseases**

Spring. 1 credit. Maximum enrollment 8. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. H. Mohammed and staff.

Introduces the epidemiologic methods used in infectious disease investigations. Also discusses the importance of surveillance systems in detecting modern epidemics and in the development of effective disease prevention and control strategies. Emphasizes understanding the relationships between the host, the agent, and the environment as they relate to disease causation. Explores contemporary epidemiologic methods applicable to old diseases that remain real or potential problems, newly emerging infectious diseases, and nosocomial infections. Selected diseases are discussed to clarify the role of epidemiology in understanding the pathogenesis of infectious processes in individuals and groups of animals. Students have the opportunity to apply the methods learned to actual disease problems and write an epidemiologic report that might lead to a publication in a peer-reviewed scientific journal.

VTMED 628(6320) Clinical Pathology

Spring. 2 credits. Minimum enrollment 25; maximum 75. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. T. Stokol and T. W. French.

Addresses a range of issues related to laboratory medicine and interpretation of laboratory results. General topic areas include hematology, clinical chemistry and immunology, and urinalysis. The primary mode of instruction is student-driven small-group (untutored) exploration of case materials followed by faculty-moderated large-group discussions. Selected lectures and laboratory sessions supplement and expand on issues generated by the case discussions. This course builds on concepts previously addressed in Foundation Courses III and IV and provides additional experiences in

practical clinical pathology procedures and microscopy.

VTMED 630(6422) Clinical Biostatistics for Journal Readers

Spring. 1 credit. Minimum enrollment 3; maximum 12. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades. H. N. Erb.

Students become familiar with the statistical methods commonly used in veterinary clinical articles, learn to recognize obvious misuse of those methods, and become able to interpret the statistical results.

VTMED 631(6423) Clinical Diagnostic Parasitology

Fall and spring. 0.5 credits for attending eight one-hour parasitology sessions; student usually can easily obtain 2 hours on each of the five participating rotations (Ambulatory, Community Practice Service, Dermatology, Pathology, and Wildlife). Prerequisite: VTMED 551; third- and fourth-year veterinary students. S-U grades only. Times TBA. M. K. Frongillo and D. D. Bowman.

Gives students experience in diagnosing parasitic infections. Students perform appropriate parasitological testing methods on clinical samples from patients on their rotation. They also evaluate the test results in terms of treatment or management of the infections. If clinical specimens are not available, appropriate materials are provided for study and evaluation. Ambulatory students typically do qualitative and quantitative flotations on samples from large animal cases they have encountered that week. In CPS, one hour is spent testing samples from current dog and cat patients, while a second hour is devoted to a discussion of the treatment of common endo- and ecto-parasites. Pathology students typically examine and identify intact parasites they retrieved from various organs at necropsy. This course is considered to be a logical extension to Foundation Course IV, Host, Agent, and Defense, and is expected to build on the didactic material presented in Large and Small Animal Parasitology.

VTMED 632(6724) Senior Seminar

Fall and spring. 1 credit. Does *not* fulfill 1-credit Set VII minimum. Prerequisite: first-, second-, and third-year veterinary students. Must be completed in two consecutive semesters (either fall to spring or spring to fall). S-U grades only. R. O. Gilbert.

Attendance at 14 of the senior seminar sessions presented during the academic year constitutes acceptable completion of this course.

VTMED 635(6726) Introduction to the Professional Literature

Spring. 1 credit. Minimum enrollment 6; maximum 20. Prerequisite: first-, second-, third-, and fourth-year veterinary students. Letter grades only. S. Whitaker.

Introduces veterinary students to the professional and biomedical literature, including development of critical reading skills. Students become familiar with the broad range of professional and biomedical literature and are encouraged to develop a rigorous approach to journal and scientific article review. Secondary emphasis is on developing skills in library and bibliographic search techniques and strategies for personal information management, as well as

exploring the use of veterinary-related online information.

VTMED 637(6727) Introduction to Community Practice Service

Fall, winter, spring, and summer. 1 credit. Prerequisite: first- and second-year veterinary students, permission of instructor. S-U grades optional. W. E. Hornbuckle.

Introduces veterinary students to primary care small-animal clinical practice through direct exposure to the Community Practice Service of the Cornell University Hospital for Animals. Students observe and assist with restraint, examination, and routine treatment of pets and communication with clients. Successful completion requires satisfactory participation during 10 half-days of clinical service.

VTMED 638(6526) Veterinary Nutrition

Spring. 2 credits. Minimum enrollment 10; maximum 90. Prerequisite: second- and third-year veterinary students or permission of instructor. Recommended for second- and third-year veterinary students. Letter grades only. F. A. Kallfelz.

The first half of this course provides information on the requirements for and metabolic uses of the essential nutrients of large and small animals as well as on formulation and evaluation of practical rations for species of veterinary interest. These concepts are applied in discussion of life stage nutritional needs, including growth, adult maintenance, gestation, lactation, aging, performance, and production. The second half covers clinically relevant diseases of nutritional deficiency and excess, including obesity, as well as the role of nutrition in the management of diseases of the various organ systems—e.g., renal, lower urinary tract, cardiac, G-I, hepatic, and musculoskeletal system disease. Other topics include the role of nutrition in managing cancer and hypersensitivity disorders and in critical care, including enteral and parenteral nutrition. The course also includes an introduction to nutrition for exotic and zoo animals.

VTMED 640(6527) Veterinary Aspects of Captive Wildlife Management

Spring. 2 credits. Minimum enrollment 10; maximum 40. Prerequisite: first-, second-, third-, and fourth-year veterinary students. Letter grades only. G. V. Kollias.

Concentrates on principles of captive wildlife management, both clinical and nonclinical. Students are challenged to learn and integrate a variety of disciplines that are essential to managing wildlife successfully in a captive or semi-free-ranging environment. These disciplines include but are not limited to species-specific (1) behavior and behavioral requirements, (2) nutritional requirements and problems, (3) natural history, (4) zoonotic and toxicological problems, (5) manual restraint and anesthesia, (6) preventive medicine, and (7) medical and legal ethics. In even-numbered years the course emphasizes non-North American wildlife species (e.g., African, Asian, Australian, and Central and South American species), and in odd-numbered years it focuses more on the North American (native) wildlife species.

VTMED 641(6424) Approaches to Problems in Canine Infectious Diseases

Spring. 1 credit. Minimum enrollment 10; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. S. C. Barr.

Emphasizes the clinical aspects of the more common canine infectious diseases. The overall objective is to provide details about specific infectious diseases a future small-animal practitioner may need to know to effectively diagnose and treat these diseases. Clinical signs, presentation, clinicopathologic data, diagnostic choices, treatment plans, and prevention are emphasized. Most lectures are presented by clinical faculty and therefore the material is oriented toward practical skills in managing clinical cases. Grading is based entirely on the result of a written exam (usually multiple-choice format) given in the final period.

VTMED 642(6321) Management of Fluid and Electrolyte Disorders

Spring. 2 credits. Minimum enrollment 20; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. R. Rawson.

Students focus on clinical manifestations and the pathophysiologic mechanisms associated with fluid, electrolyte, and metabolic acid-base disturbances in domestic animals. The course is divided into segments dealing with salt and water imbalances, potassium abnormalities, metabolic acidosis, metabolic alkalosis, and mixed acid-base disturbances.

VTMED 644(6528) Equine Surgical and Anesthetic Techniques

Winter, one-week period over winter intersession. 1 credit. Minimum enrollment 3; maximum 21. Enrollment by lottery. Prerequisite: VTMED 602; third- and fourth-year veterinary students. S-U grades only. S. Fubini (coordinator) and other large-animal surgeons.

Consists of five laboratories performing surgical procedures on ponies and cadaver specimens. It is the intent of this course not to make the students proficient in these procedures but to familiarize them with some specialized surgical techniques and to make them more enlightened referring practitioners. The course, therefore, is intended for students anticipating equine practice after graduation.

VTMED 645(6529) Food-Animal Surgical and Anesthetic Techniques

Winter, one-week period over winter intersession. 1 credit. Minimum enrollment 6; maximum 21. Enrollment by lottery. Prerequisite: VTMED 603; third- and fourth-year veterinary students. S-U grades only. S. Fubini and other large-animal surgeons.

Consists of five laboratories performing surgical procedures on sheep, calves, cadaver specimens, and adult cattle. It is the intent of this course not to make the students proficient in these procedures but to familiarize them with surgical techniques and to make them more enlightened referring practitioners. The course, therefore, is intended for students anticipating food-animal practice after graduation.

VTMED 646(6530) Llama Tutorial

Fall, spring, summer. 1 credit. Prerequisite: VTMED 540; second-semester second-, third-, and fourth-year veterinary students. S-U grades only. Independent study. M. C. Smith.

Autotutorial or group tutorial course covering common problems of llamas and alpacas. Participants are provided with study guides consisting of brief case descriptions and sample study questions. Reference is made to textbooks, journal articles, videotapes, and (if available) a teaching llama or alpaca to assist students in finding the answers to the questions efficiently. Grading is based on an oral exam.

VTMED 647(6531) Poisonous Plants

Fall. 1 credit. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. S-U grades only. M. C. Smith.

Field trips demonstrate toxic plants growing in natural or cultivated settings. Lectures address economically important poisonous plants native to the United States. Information presented includes plant identification, natural habitat, toxic principles, clinical signs of toxicity, and treatment and prevention of poisoning in animals. Some of the major toxic principles found in plants and considered in detail in the course are nitrates, cyanide, oxalates, photodynamic agents, alkaloids, and mycotoxins.

VTMED 648(6728) Clinical Management of Native Wildlife

Fall, spring, summer (credit given in fall). 1 credit. Maximum enrollment 30 students per semester. Prerequisite: first-, second-, third-, and fourth-year veterinary students. Letter grades only. G. V. Kollias and staff.

Introduces veterinary students to primary care for native wildlife and to wildlife issues that practicing veterinarians face on a daily basis. Students are responsible for the assessment, physical examination, and medical care of native wildlife presented to the Cornell University Hospital for Animals by the public and local wildlife rehabilitators. Student activities are directly supervised and assessed by faculty and residents on a daily basis. Successful completion of the course requires 40 hours of satisfactory supervised participation per semester in the clinic. Clinic times are appropriately scheduled throughout the semester. Students are required to submit two case summaries, or alternatives approved by the course leader, before the end of the semester and a log of their clinical hours.

VTMED 649(6729) Introduction to Equine Practice

Spring. 0.5 credit. Maximum enrollment 30. Prerequisite: first- and second-year veterinary students. Intended for students with little or no experience working with horses. Letter grades only. R. Hackett and C. Collyer.

Introductory course in equine husbandry. Lecture topics include horse breeds and colors, housing facilities and fencing, and overview discussions of the racing, showing, and breeding industries. Laboratories emphasize basic equine handling and restraint as well as feeds and bedding.

VTMED 652(6532) Avian Medicine and Surgery

Spring. 2 credits. Minimum enrollment 20; maximum 40. Prerequisite: third- and fourth-year veterinary students. Letter grades only. Live birds used in some laboratories. G. V. Kollias and staff.

Designed to introduce third- and fourth-year veterinary students to the principles and practice of clinical avian medicine and surgery. The course is taught in a basic didactic lecture and discussion format with laboratories that reinforce concepts presented in the lectures.

VTMED 653(6533) Advanced Equine Lameness

Spring. 1.5 credits. Minimum enrollment 7; maximum 21. Enrollment by lottery.

Prerequisite: third- and fourth-year veterinary students. Letter grades. Live animals used for learning. N. Ducharme, A. Nixon, A. Yeager, D. Dykes, and staff.

Designed to teach students the methodology of equine lameness diagnosis. Places a strong emphasis on a hands-on approach to learning and is primarily laboratory-based. During laboratories, students work in small groups on live horses to diagnose the cause of their lameness. To this end, students learn both the practical skills, such as perineural and intra-articular blocks, as well as the methodology necessary to systematically work up a lameness case. Laboratories also provide students with the opportunity to practice field radiography and gain ultrasound skills as they pertain to equine lameness. Additionally, students have the opportunity to practice basic farrier skills. Lecture topics are intended to round out the students' understanding of lameness by providing them with a knowledge base of the common causes of lameness, organized by response to local anesthesia. Radiographic interpretation is emphasized through case discussions. The course is recommended for students anticipating entry into equine practice. Students seeking hands-on experience with horses are also welcome.

VTMED 654(6534 lec, 6535 lab) Equine Theriogenology

Spring. Lec, 1 credit; lab, 0.5 credit. Minimum lab enrollment 12; maximum 24. Lab enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. Lab co-requisite: enrollment in lec. Letter grades only. D. H. Volkmann.

Covers advanced aspects of equine reproductive physiology. Discusses reproductive management of mares and stallions using natural and artificial breeding strategies. Stresses diagnosis, treatment, and prevention of common reproductive disorders. The laboratory component builds on skills acquired during foundation courses and provides experience in techniques important in equine theriogenology.

VTMED 655(6536 lec, 6537 lab) Dairy Cow Theriogenology

Spring. Lec, 1 credit; lab, 1 credit. Minimum lab enrollment 12; maximum 24. Lab enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. Lab co-requisite: enrollment in lec. Letter grades only. D. Volkmann and R. Gilbert.

Offers lectures and labs that provide both theoretical and practical training in current approaches to the veterinary aspects of dairy-cow reproductive care and management. The

aim is to empower the student with entry-level, current knowledge and skills for the reproductive aspects of any modern dairy practice.

VTMED 656(6538) Special Problems in Equine Medicine

Spring. 1.5 credits. Minimum enrollment 10; maximum 30. Enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. S-U grades only. T. Divers and staff.

Intended for students anticipating equine practice. In-depth study of important diseases, review of recent literature, health management, and hands-on procedures or demonstrations are the core of this course.

VTMED 657(6539) Disorders of Large-Animal Neonates

Spring. 1 credit. Minimum enrollment 10; maximum 100. Prerequisite: first-, second-, third-, and fourth-year veterinary students. Letter grades only. G. Perkins.

Introductory neonatology course. The emphasis is on the medical and surgical problems of foals in the early neonatal period with some information presented about calves, small ruminants, and camelid neonates. Students also spend several hours in the neonatal intensive care unit providing medical care of hospitalized patients under staff supervision.

VTMED 659(6540) Equine Soft-Tissue Surgery

Spring. 1 credit. Minimum enrollment 6; maximum 24. Enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. Letter grades only. R. Hackett and staff.

Intended for students anticipating equine practice after graduation. Builds on material presented in the foundation courses to provide supplemental instruction in surgical disorders of the horse. Lectures are case based and emphasize disorders likely to be encountered in equine practice (colic, traumatic injuries, upper respiratory tract disorders, prepurchase examination). Laboratories emphasize diagnostic and therapeutic procedures in which an entry-level equine practitioner should be competent.

VTMED 661(6541) Surgical Pathology

Spring, summer, fall. 1-2 credits, variable; one or two weeks, approx. eight hours per day for 1 credit per week. Prerequisite: second-, third-, and fourth-year veterinary students by permission of instructor. Letter grades only. S. McDonough.

Provides hands-on experience in the Surgical Pathology Service of the Department of Biomedical Sciences. Working with the attending pathologist, students examine tissue specimens histologically, propose diagnoses, and discuss their interpretations. Students may enroll in this course only through the Office of Student Records *within the official add/drop period*. All requests to enroll must be accompanied by the Supplemental Enrollment Form indicating Dr. McDonough's approval of the enrollment and the amount of credit to be awarded. *Second-year students* should not enroll for any term other than summer *unless* they have actually reserved a January or spring-break slot through Dr. McDonough.

VTMED 665(6542) Medical and Surgical Problems of Dairy Cattle: Emphasis on the Individual Animal

Spring. 1.5 credits. Minimum enrollment 6; maximum 28. Prerequisite: third- and fourth-year veterinary students. Letter grades only. S. Fubini and staff.

Provides students who have a special interest in dairy practice the opportunity for in-depth discussions of special problems in bovine medicine and surgery. Emphasizes case discussions, physical examination techniques, and ethical and practical matters. Emphasizes individual cow treatment.

VTMED 667(6543) Special Problems in Small-Animal Medicine

Spring. 1 credit. Minimum enrollment 10; maximum 40. Prerequisite: third- and fourth-year veterinary students. S-U grades only. K. Simpson (coordinator) and staff.

Students work through selected problems in small-animal medicine in two-hour weekly seminars. The focus is on the medical problems associated with cases using historic, clinical, clinical pathologic, and pathologic findings to elucidate basic pathophysiologic principles of disease. The overall objective is to give future small-animal practitioners skills in the approach to clinical problems with specific emphasis placed on history taking, clinical signs and examination skills, assessment of clinical pathology data and diagnostic materials (radiographs, ultrasounds), treatment plans, and prevention. The course expands knowledge gained in Foundation Course V and, under the instruction of a clinical faculty member, is aimed at facilitating the use of that knowledge into the practical skills of managing clinical cases.

VTMED 668(6544) Practice Management

Spring. 2 credits. Prerequisite: second-, third-, and fourth-year veterinary students. S-U grades only. M. Kraus, J. Ludders, J. Morrissey, and K. Cummings.

Professional practice and financial managers teach veterinary medical students the essential elements of a successful practice, concentrating on management and organizational skills. Topics include basic practice organization, leadership styles, career planning, communication skills, facility management, human resource management, marketing, building and maintaining clients, practice growth, personal finances, money management, insurance, animals and the law, malpractice, medical records, inventory and pharmacy management, and contracts.

VTMED 669(6545 lec, 6546 lab) Sheep and Goat Medicine

Spring. Lec, 1 credit; lab, 0.5 credit. Prerequisite: third- and fourth-year veterinary students. Lab co-requisite: Sheep and Goat Medicine lec. S-U grades only. M. C. Smith.

Discusses diagnosis, treatment, and prevention of medical and surgical problems of individual small ruminants and of sheep and goat herds. Basic information on breeds, behavior, nutritional requirements, and management systems is supplied. Economically important contagious or metabolic diseases are discussed in depth. The diagnostic evaluation and differential diagnoses for common clinical presentations such as skin disease, neurologic disease, lameness, and mastitis are considered. Herd monitoring of economically important parameters and necropsy diagnosis of

abortions and neonatal losses are addressed. Breeding systems, pregnancy diagnosis methods, correction of dystocias, and common surgical procedures are discussed and demonstrated in laboratory sessions.

VTMED 672(6324) Antimicrobial Drug Therapy in Veterinary Medicine

Spring. 1 credit. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. W. S. Schwark.

Familiarizes students with antimicrobial drugs used in veterinary practice. Builds on fundamental pharmacological and microbiological principles covered in Foundation Courses III and IV and considers antibacterial, antifungal, antiparasitic, and anticancer drugs from the point of view of unique pharmacokinetic properties, indications for clinical use, and potential toxicities as the basis for rational use.

VTMED 676(6547) Clinical Ophthalmology

Spring. 0.5 credit. Prerequisite: third- and fourth-year veterinary students. S-U grades only. R. Riis, N. Irby, and T. Kern.

The principles and practice of entry-level veterinary ophthalmology introduced in Foundation Course V, Introduction to Veterinary Ophthalmology, are supplemented by lectures and discussions that emphasize species differences, basic surgical decision-making, and recognition of ocular conditions appropriate for referral. One of the four class periods is devoted to ocular surgical techniques performed on cadaver tissues.

VTMED 677(6548) Dairy Production Medicine

Fall. 2 credits. Minimum enrollment 6; maximum 14. Prerequisite: third- and fourth-year veterinary students. S-U grades only. C. Guard.

Intermediate course in techniques and procedures used by veterinarians in modern dairy practice. Many of these activities fall outside the traditional boundaries of medicine, surgery, and theriogenology and might include housing, facilities, manure management, and employee education. Data analysis, disease and productivity monitoring, and evaluation of deviations from targeted performance are used to plan cost-effective interventions or corrections, followed by continued surveillance to monitor their effect. Students are introduced to the dominant software currently used in dairy management. Local dairy herds serve as additional laboratories for class projects.

VTMED 678(6549) Small-Animal Theriogenology

Spring. 1 credit. Minimum enrollment 6; maximum 100. Prerequisite: third- and fourth-year veterinary students. Letter grades only. D. H. Volkmann.

Distribution course in a lecture-based format designed to complement the knowledge gained in the theriogenology component of Foundation Course V, Animal Health and Disease. Content includes discussion of breeding management, infectious and noninfectious causes of infertility, and pathology of the male and female reproductive tracts, their diagnosis, and management. The course emphasizes conditions affecting dogs and cats.

VTMED 679(6550) Clinical Pharmacology

Spring. 0.5 credit. Prerequisite: third- and fourth-year veterinary students. S-U grades only. W. S. Schwark.

Offered after Foundation Courses I-V and formal exposure to pharmacology course work is completed. The course is designed to familiarize students with drug use in the clinical setting and uses ongoing cases in the Cornell University Hospital for Animals as a teaching tool. Pharmacological concepts are emphasized, with a focus on the rationale for drug choice, alternative drug choices available, pharmacokinetic considerations, and potential drug interactions/toxicities. This course is offered at the time students are about to embark on their clinical rotations. It is designed to emphasize practical aspects of pharmacology in the clinical setting, using basic concepts obtained during formal course work. The onus is placed on the student to explain/rationalize drugs employed in clinical cases in the teaching hospital.

VTMED 680(6730) Behavior Problems of Horses

Spring. 1 credit. Prerequisite: one semester of veterinary curriculum; first-, second-, third-, and fourth-year veterinary students. S-U grades only. K. A. Houpt.

The goal of this course is to give veterinary students the ability to treat the behavior problems of horses. History-taking, counseling, diagnostic tests, follow-up, the importance of cooperation with the referring veterinarian, prevention of behavior problems, training techniques of value to the practitioner, and socialization of foals are presented.

VTMED 681(6731) Behavior Problems of Small Animals

Spring. 1 credit. Minimum enrollment 10. Prerequisite: one semester of veterinary curriculum; first-, second-, third-, and fourth-year veterinary students. S-U grades only. K. A. Houpt.

The goal of this course is to give veterinary students the ability to treat the behavior problems of cats and dogs. History-taking, counseling, and follow-up methods are presented. Each student has the opportunity to participate in three cases. Behavioral and pharmacological treatments for behavior problems are presented.

VTMED 692(6327) Current Concepts in Reproductive Biology (also BIOAP 757[7570])

Fall. 3 credits. Minimum enrollment 6. Prerequisite: first-, second-, and third-year veterinary students and appropriate undergraduate/graduate training. Letter grades only. Offered odd-numbered years. J. Fortune, W. R. Butler, and staff.

Team-taught survey course in reproductive physiology/endocrinology. Lectures are given by a number of reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, and sperm physiology/function); female reproductive function (endocrinology, ovarian development and function, oocyte physiology/function); fertilization and early embryo development; pregnancy; parturition; puberty; and reproductive technology. Students participate in the form of discussions and/or presentations.

[VTMED 695(6221) Genetic Basis of Eye Diseases]

Spring. 1 credit. Minimum enrollment 6; maximum 14. Prerequisite: first-, second-, third-, and fourth-year veterinary students. Letter grades only. G. Aguirre.

Covers the molecular and genetic basis of inherited eye diseases in domestic and laboratory animals. It is aimed at the professional student in the veterinary curriculum but is open to graduate-level students. The course is given in a combination lecture/seminar format, with students leading and actively participating in discussions. The students are expected to do assigned and independent outside research, both for class discussions and the paper.]

[VTMED 696(6552) Fundamental Principles and Techniques of Small-Animal Anesthesia: Dogs, Cats, and Birds]

Spring. 1 credit. Minimum enrollment 15. Prerequisite: third- and fourth-year veterinary medical students. J. W. Ludders, R. D. Gleed, and L. P. Posner.

Designed for the veterinary student interested in small-animal practice. Consists of lectures, case discussions, and development of anesthetic protocols for routine and complicated cases. Subjects include anesthetic management for elective and emergency surgery, management of the high-risk patient, fluid therapy, drug interactions, pain management, and the management of anesthesia-related complications, cardiopulmonary resuscitation, and post-anesthetic management. While fundamental concepts and recent advances in anesthesia are discussed, the practical application of anesthetic principles and techniques are a major objective of the course.]

[VTMED 697(6553) Fundamental Principles of Large-Animal Anesthesia: Equine and Mixed Animal Practice]

Spring. 1 credit. Minimum enrollment 15. Prerequisite: third- and fourth-year veterinary medical students. R. D. Gleed, J. W. Ludders, and L. P. Posner.

Designed for the veterinary student interested in equine or mixed-animal practice. Consists of lectures, case discussions, and development of anesthetic protocols for routine and complicated cases. Subjects include anesthetic management for elective surgery, field anesthesia, management of the high-risk patient, fluid therapy, drug interactions, pain management, and the management of anesthesia-related complications, cardiopulmonary resuscitation, and post-anesthetic management. While fundamental concepts and recent advances in anesthesia are discussed, the practical application of anesthetic principles and techniques is a major objective of the course.]

[VTMED 698(6798) Special Projects in Veterinary Medicine]

Fall, winter, spring, summer. 1-4 credits, variable. TBA with College of Veterinary Medicine tenure-track faculty member. S-U grades optional.

Provides students the opportunity to work individually with a faculty member to pursue an area of particular interest and, typically, not part of the established curriculum. Specific course objectives and course content are flexible and reflect the scope and academic expertise of the faculty.

[VTMED 699(6199, 6299, 6399, 6499, 6599) Research Opportunities in Veterinary Medicine]

Fall, winter, spring, summer. 1-4 credits, variable. TBA with College of Veterinary Medicine tenure-track faculty member. S-U grades optional.

Provides students the opportunity to work in the research environment of faculty involved in veterinary or biomedical research. Specific course objectives and course content are flexible and reflect the specific research environment. Research projects may be arranged to accumulate credit toward requirements in Distribution Sets I, II, III, IV, and V.

[VTMED 700(6600) Theriogenology Service]

Spring. 2 or 4 credits. Maximum enrollment 5 per rotation. Prerequisite: VTMED 551; third- and fourth-year veterinary students. Letter grades only. D. H. Volkmann and staff.

Exposure to clinical procedures in theriogenology as provided by Cornell University Hospital for Animals patient load and augmented by teaching herd animals.

[VTMED 701(6601) Cardiology Service]

Fall and spring. 2 credits. Minimum enrollment 1 per rotation; maximum 2. Prerequisite: VTMED 551; third- and fourth-year veterinary students. Letter grades only. S. Moise.

Provides students with the opportunity to put into practice what they have learned in the foundation years. The management of the most common cardiac diseases is emphasized, including congestive heart failure, arrhythmias, and secondary cardiac diseases. All species are examined, large and small, although the majority are small animals. Diagnostics, including cardiovascular physical examination, electrocardiography, radiography, and echocardiography, are taught. The rotation includes clinical work, didactic teaching, and self-initiated digging for information.

[VTMED 702(6602) Laboratory-Animal Medicine]

Fall and spring. 2 credits. Maximum enrollment 2 per rotation. Prerequisite: VTMED 551; third- and fourth-year veterinary students. Letter grades only. M. Bailey and staff.

The practice of laboratory animal medicine requires a combination of preventive programs, clinical skills, knowledge of various species' biologies, familiarity with research methodology, and acquaintance with state and federal regulations. This course is an introduction to that specialty. Students accompany laboratory-animal veterinarians on clinical rounds of Cornell's research-animal housing and participate in laboratory diagnostic work. Review sessions are conducted on the biology, medicine, pathology, and husbandry of rodents, rabbits, and primates and on current legislation regulating the care and use of research animals. The course may include field trips to other institutions.

[VTMED 703(6603) Clinical Wildlife-, Exotic-, and Zoo-Animal Medicine]

Fall, winter, spring, summer. 2 credits. Maximum enrollment 3 per rotation (plus one intern or extern). Prerequisite: VTMED 551; third- and fourth-year veterinary students. Letter grades only. G. V. Kollias and staff.

Introduces students to primary medical care of nontraditional pet species, zoo animals, and native wildlife. Students, directly supervised by the attending clinician, are responsible for the assessment, physical examination, and medical management of exotic animal species presented to the Cornell University Hospital for Animals. Other opportunities available to assist in the development of clinical skills in wildlife-, zoo-, and exotic-animal medicine include the wildlife clinic cases, ongoing wildlife research and service projects, and trips to the Rosamond Gifford Zoo. Successful completion of the course requires satisfactory performance during this 14-day clinical rotation.

[VTMED 704(6604) Quality Milk]

Fall or spring. 2 credits. Prerequisite: VTMED 551; third- and fourth-year veterinary students. Letter grades only. R. Gonzalez and QMPS staff.

Covers the causes, diagnosis, treatment, and prevention of bovine mastitis. Stresses the role of management practices. Includes lectures, readings, discussions, laboratory exercises, and farm visits as part of the Quality Milk Production Services. Participants are expected to complete a case study on a dairy farm with udder-health problems and present their findings to the producer and farm personnel. Grading is on performance during the course and a final exam.

[VTMED 705(6605) Special Opportunities in Clinical Veterinary Medicine]

Fall, spring, and summer. Prerequisite: VTMED 551; third- and fourth-year veterinary students. S-U grades only. W. Miller and N. Ducharme.

Provides opportunities for students finished with Foundation Course V to explore professional areas not available through the regular curriculum. Blocks of two to four weeks are usually spent at other teaching hospitals, research laboratories, or zoological facilities. Student proposals are submitted to the assistant dean for learning and instruction for review and approval. On-site supervisors of the block are required to evaluate each student formally.

[VTMED 707(6607) Poultry Medicine and Production Rotation]

Fall, two-week rotation that takes place at University of St. Hyacinthe or University of Guelph in alternating years. 2 credits.

Prerequisite: VTMED 551; third- and fourth-year veterinary students.

Recommended: VTMED 616. K. A. Schat.

Provides an introduction in practical poultry medicine by a combination of lectures, discussions, and laboratory sessions including postmortem examinations. Students also visit hatcheries, broiler, layer, and turkey farms.

[VTMED 708(6608) Clinical Oncology]

Fall and spring. 2 credits. Maximum enrollment 4 per rotation. Prerequisite: VTMED 551; third- and fourth-year veterinary students. Letter grades only. K. M. Rassnick.

Management and prevention of cancer in companion animals represents a significant component of the practice of veterinary medicine. The focus of this clinical rotation is the development of a comprehensive set of skills necessary for a veterinarian to become an advocate for the client/patient with cancer. These skills include appropriate initial evaluation of animals with cancer; sensitive and effective client and referring-veterinarian

communication; ability to access relevant information from numerous sources related to cancer management; and ability to understand and apply principles of surgical, medical, and radiation oncology as well as techniques specifically related to minimize pain and treatment-related effects in cancer patients.

VTMED 709 (5611) Small-Animal Clinical Emergency and Critical Care Medicine

Fall, winter, spring, and summer. 2 credits. Prerequisite: third- and fourth-year veterinary students. S-U grades only. N. Dhupa.

Management of both emergent and critical cases represents a significant component of the practice of veterinary medicine. The focus of this clinical rotation is the development of a knowledge base and a comprehensive set of skills necessary for a veterinarian to perform adequately in these areas, within a structured format. These skills include the appropriate evaluate (triage) and stabilization of emergency patients, the management of post-operative and other critical patients, and sensitive and effective client communication. Participants access relevant information from various sources related to emergency and critical care medicine and understand and apply these principles to clinical cases. Participants have patient care responsibilities in the Intensive Care and Intermediate Care units and work closely with technicians and clinicians to develop familiarity with technical and nursing procedures. Students also participate in the management of incoming emergency cases. The clinical emergency and critical care medicine rotation are primarily an overnight rotation.

VTMED 710(6609) Animal Behavior Clinic

Fall, winter, spring, and summer. 2 credits. Maximum enrollment 2 per rotation. Prerequisite: VTMED 681; third- and fourth-year veterinary students. S-U grades only. K. A. Houpt.

Students participate fully in the Animal Behavior Clinic: answering telephone, mail, and e-mail inquiries, observing and taking charge of behavior cases. To answer inquiries, the student is expected to consult several behavioral textbooks or other sources. Taking charge of the cases includes reading the entire behavioral history, interviewing the owner, forming a diagnosis, conferring with Dr. Houpt or a behavioral resident as to the proper behavioral and pharmacological treatment, demonstrating behavior-modification techniques and writing a letter to the client. Follow-up calls to earlier cases may be made.

VTMED 711(6610) Herd Health and Biosecurity Risk Evaluation Using the NYS Cattle Health Assurance Program (NYSCHAP) Model

Summer, fall. 2 credits. Minimum enrollment 5. Prerequisites: VTMED 540 and 743; third- and fourth-year veterinary students or permission of instructor. Letter grades only. K. Kaufman, F. L. Welcome, D. V. Nydam, and Diagnostic Lab faculty.

Introduces students to the identification of disease risk and the evaluation of cattle operations, focusing on animal health, food safety, and the environment. The course combines information on risk assessment, creation of herd plans, biosecurity, Johne's disease, standard operating procedures, global trade, and environmental issues. Additionally, two local farms are visited to give students the

opportunity to implement knowledge gained in lectures.

VTMED 712(6613) Equine Specialty Rotation

Fall. 2 credits. Minimum enrollment 5; maximum 10. Prerequisite: VTMED 551. Priority given to fourth-year veterinary students in equine pathway. Letter grades only. Live animals used for learning. N. G. Ducharme, G. Perkins, and S. Fubini.

The objective of the rotation is to teach students basic diagnostic recognition and clinical skills for those interested in equine practice. These skills prepare students to respond on equine-related calls on their first day of work. The Cornell horse population is used to teach these practical skills. The emphasis of this elective is hands-on with discussion, rounds and lectures. The rotation includes lectures and corresponding discussion groups to cover the scientific basis, controversies, industry specific state of the art and clinical indications, contraindications, and potential complications of the various modalities.

VTMED 713 Large-Animal Clinical Emergency and Critical Care

Summer and spring. 2 credits. Prerequisite: third- and fourth-year veterinary students. S-U grades only. F. Caldwell.

The evaluation and management of the critical patient represent a significant component of the practice of veterinary medicine. As emergency cases will routinely be presented to the large animal practitioner, it is imperative that they be adequately prepared. The focus of this clinical rotation is the development of a knowledge base and a comprehensive set of skills necessary for a veterinarian to perform adequately in these areas, within a structured format. These skills include the appropriate evaluation and stabilization of emergency patients, and the management of post-operative cases and other critical patients. Participants access relevant information from various sources related to emergency and critical care medicine and understand and apply these principles to clinical cases. Participants primarily have patient care responsibilities in the Large Animal Care Unit of the Cornell University Hospital for Animals and work closely with technicians and clinicians to develop familiarity with technical and nursing procedures. The clinical emergency and critical care medicine rotation are primarily an after-hours rotation.

VTMED 720(6425) Issues and Preventive Medicine in Animal Shelters

Spring. 1 credit. Minimum enrollment 5; maximum 40. Prerequisite: VTMED 540; third- and fourth-year veterinary students. Letter grades only. J. M. Scarlett and staff from American Society for Prevention of Cruelty to Animals.

Veterinarians often work for or with animal shelters, serve on shelter boards of directors, act as community resources for issues relating to companion animal welfare, participate in spay and neuter programs, and influence the quality of the human-animal bond. This course addresses the history of the humane movement, role of the veterinarian in relation to shelters, preventive and palliative health management, issues surrounding euthanasia, reasons for relinquishment, programs for behavior modification, and the legal concerns of shelters. These issues are addressed using lectures and large-group discussions.

VTMED 721(6426) Timely Topics in Veterinary Parasitology: Large-Animal

Spring. 0.5 credit. Minimum enrollment 2. Prerequisite: third- and fourth-year veterinary students. S-U grades only. D. D. Bowman.

In-depth look at one or a few parasites of special interest relative to large-animal medicine. Presents details of taxonomy, biology, epidemiology, clinical presentation, and preventive and curative treatment. Efforts are made to discuss those aspects of the disease as it relates to the practical control of these and in-depth coverage of primary literature relating to the parasite being discussed. Topics vary annually. The course is presented in a lecture/discussion format.

VTMED 722(6427) Timely Topics in Veterinary Parasitology: Small-Animal

Spring. 0.5 credit. Minimum enrollment 2. Prerequisite: third- and fourth-year veterinary students. S-U grades only. D. D. Bowman.

In-depth look at one or a few parasites of special interest relative to small-animal medicine. Presents details of taxonomy, biology, epidemiology, clinical presentation, and preventive and curative treatment. Efforts are made to discuss those aspects of the disease as it relates to the practical control of these and in-depth coverage of primary literature relating to the parasite being discussed. Topics vary annually. The course is presented in a lecture/discussion format.

VTMED 726(6554) Reptile Medicine and Surgery

Spring. 1 credit. Minimum enrollment 10; maximum 40. Prerequisite: third- and fourth-year veterinary students. Letter grades only. G. V. Kollias.

Designed to introduce third- and potentially fourth-year veterinary students to the principles and practice of reptile medicine and surgery. Taught in a basic lecture and discussion format.

[VTMED 730(6428) Vaccines: Theory and Practice

Spring. 1 credit. Minimum enrollment 10; maximum 40. Prerequisite: introductory immunology course or VTMED 540 or VETMI 315; second-, third-, and fourth-year veterinary students and graduate students or others by permission of instructor. Letter grades only. Offered odd-numbered years. T. Clark.

Provides an overview of vaccines used in clinical practice as well as an in-depth look at vaccine development. Emphasizes the most recent advances in vaccine design and delivery, including the use of recombinant DNA techniques for targeting specific immunological responses. Lectures touch on vaccines commonly used in veterinary practice and address in detail the use of carriers, adjuvants, and immunostimulants; attenuated pathogens; recombinant subunit vaccines; viral and bacterial vectors for vaccine delivery; synthetic antibodies; and genetic immunization with "naked" DNA. Grades based on final exam and one term report.]

VTMED 732(6438) Veterinary Clinical Toxicology

Spring. 1.5 credits. Prerequisite: second-, third-, and fourth-year veterinary students. S-U grades optional. K. Bischoff.

Provides veterinary students with a solid introduction to concepts and principles of toxicology and how they are applied in the clinical setting. Students learn about specific common toxicants, clinical signs in affected animals, and treatment protocols for the toxicants in question. Students also gain an understanding of the clinical approach to suspected or unknown toxicoses, sample collection and handling, and resources available for clinical toxicologic problems. The course is conducted with two one-hour lectures per week and one hour-long large-group discussion per week. Grades are based on weekly homework assignments, a midterm, and a final exam.

VTMED 733(6429) Selected Infectious Diseases of Swine

Spring. 1.5 credits. Minimum enrollment 6; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. S-U grades optional. K. Earnest-Koons.

Provides veterinary students with a solid introduction to concepts and principles of swine infectious diseases and how they are treated in the clinical setting. Students learn about specific infectious diseases, clinical signs in affected animals, and treatment protocols for the diseases in question. Students also gain an understanding of the clinical approach to suspected or unknown infectious agents, sample collection and handling, and resources available for infectious disease diagnosis. The course is conducted with two one-hour lectures per week and one hour-long large-group discussion per week. Meets three days per week for one hour each. Grades are based on weekly quizzes, a final exam, a short paper and/or oral presentation.

VTMED 735(6614) Special Topics in Ambulatory and Production-Animal Medicine

Fall, winter, spring, and summer. 1-2 credits, variable. Prerequisite: second-, third-, and fourth-year veterinary students; VTMED 560 and permission of instructor. Letter grades only. M. E. White and staff.

Provides specialized experiences in the Ambulatory and Production Medicine Service. Consists of participation in scheduled and emergency farm calls and completion of projects designed to provide experience in herd problem solving, records analysis, and implementing herd-health programs. Clinical service assignments are planned to meet individual student goals. Examples of focus areas available include livestock production medicine, dairy reproductive examinations, small-ruminant medicine, and equine ambulatory practice.

[VTMED 737(6239) Principles of Pathology

Spring. 1.5 credits. Minimum enrollment 6; maximum 40. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. S. McDonough.

Intended for students who wish to strengthen and broaden their knowledge of the pathologic basis of disease. Fundamental biologic processes as revealed by gross and microscopic pathologic changes are emphasized. Molecular mechanisms are integrated into the discussion where appropriate. General pathologic processes are organized into a logical and uniform system to facilitate comprehension and learning with particular attention paid to definition and proper usage of terminology. The course

includes two lectures per week and a one-hour large-group discussion. The large-group discussion allows students to apply general knowledge gained in lecture to a specific problem.]

VTMED 740(6430) Veterinary Perspectives on Pathogen Control in Animal Manure

Spring. 2 credits. Prerequisite: third- and fourth-year veterinary students. Letter grades only. D. D. Bowman.

In-depth look at the management of pathogens in animal manures. Reviews the pathogens involved, the role of governing agencies, the survival of pathogens in the field, and methods of pathogen destruction. Discusses commercial methods of manure processing for the control of these pathogens for the protection of other animals and the human population. Concludes with class discussions with major stakeholders representing the dairy, beef, pork, and poultry industries and their understanding of the problem as it relates to veterinary students.

VTMED 741(6431) Microbial Safety of Animal-Based Foods

Spring. 1 credit. Minimum enrollment 10; maximum 20. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. B. L. Njaa and M. Wiedmann.

In the first two weeks, the instructor provides an overview of food-safety issues relevant to the veterinary profession. The following four weeks are dedicated to student presentations on selected food-borne pathogens and food-safety issues. In the final two weeks, lectures and discussion led by the instructors focus on emerging new issues in food safety and on farm-to-table technologies and approaches that can be used to assure the safety of animal-based foods.

VTMED 742(6555) Dairy Business Management and Health Economics

Spring. 2 credits. Minimum enrollment 5; maximum 15. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. L. Warnick and C. Guard.

Helps veterinary students understand basic principles of dairy economics and business management and develop specific skills used by veterinarians in health economic decision making. Covers three main topic areas: (1) overview of dairy economics from regional, national, and global perspectives; (2) the terminology and concepts used in dairy business financial analyses and economic decision making; (3) dairy health economics, including the application of economic tools to decisions related to disease treatment, health maintenance, and productivity.

VTMED 743(6732) Interaction with the Animal Health Diagnostic Laboratory for Investigating Herd Problems

Spring. 1 credit. Minimum enrollment 5. Prerequisite: third- and fourth-year veterinary students or permission of instructor. Letter grades only. D. V. Nydam and others.

This seminar course uses an interactive format and multiple experts from their fields to introduce future veterinarians how best to use the services of a diagnostic laboratory when investigating herd problems. The course combines logistical and factual matters such as appropriate sample submission, tests available for various pathogens, and relative test interpretation with practical case-based discussion of the various diagnostic

modalities. Topics include virology (e.g., BVD), bacteriology (e.g., *Salmonella*), parasitology (e.g., *Cryptosporidium*), serology (e.g., Johnes Disease), molecular techniques (e.g., *E. coli*), herd-level test interpretation, and outbreak investigation.

VTMED 744(6733) Veterinarians and Food-Animal Production Systems: An Introduction

Spring. 1 credit. Minimum enrollment 5.

Prerequisite: first- and second-year veterinary students or permission of instructor. Letter grades only. D. V. Nydam and invited speakers.

This seminar course uses an interactive format and multiple experts from their fields to introduce future veterinarians to various food-animal production systems, how veterinarians interact with them, and the synergy between these systems and veterinarians in society. Each week the production structure of the dairy, beef, swine, poultry, or aquaculture industry, veterinarians' role in them, and career opportunities and expectations are discussed. The offering is intended for first- or second-year students so that they can plan appropriately to take additional courses or set up externships in the following years.

VTMED 745(6556) Dynamics of Dairy Herd Health and Management

Spring. 1 credit. Prerequisite: third- and fourth-year veterinary students. Letter grades only. L. D. Warnick, D. V. Nydam, and Y. T. Grohn.

Veterinarians are increasingly asked to advise dairy producers on productivity and management decision making. This course addresses the relationships of dairy cattle diseases with herd-performance parameters. Through a combination of lectures and laboratory exercises, students learn analytic techniques and computer software skills to evaluate dairy herd disease and production problems. Topics include: (1) how often production diseases occur and when, (2) how they are interrelated, (3) the impact of disease on milk production, reproductive performances, and risk of culling, and (4) how to use this information in production medicine.

VTMED 746(6432) Fish Health Management

Spring. 1.5 credit. Minimum enrollment 8; maximum 16. Prerequisite: first-, second-, third-, and fourth-year veterinary students or written permission of instructor. S-U grades optional. P. R. Bowser.

Lecture and laboratory course providing an overview of the aquatic environment and the important infectious and noninfectious diseases of fish. Covers important diseases encountered in commercial aquaculture, aquarium systems, and natural waters. The laboratory is designed to provide students with a knowledge base and hands-on diagnostic experience in diseases of fish. Students also maintain and manage aquarium systems during the course to gain an appreciation for the science behind the operation of those systems. The laboratory requires time outside the normal scheduled class sessions (to be scheduled by the students) for management of the aquarium systems. Each student also makes a presentation on a topic in aquatic animal health during the course.

VTMED 747(6557) Exotic Small Mammals as Pets

Spring. 1.5 credits. Maximum enrollment 80. Prerequisite: third- and fourth-year veterinary students and graduate students. Students enrolled in VTMED 703 encouraged to enroll. Letter grades only. J. K. Morrisey.

Concentrates on the husbandry, clinical presentation, diagnosis, and treatment of common diseases of nontraditional small mammals that are kept as pets. These species include ferrets, rabbits, guinea pigs, chinchillas, rats, mice, hamsters, gerbils, hedgehogs, sugar gliders, and other animals. Grading is based on a midterm and final exam.

VTMED 748(6222) Canine and Feline Medical Genetics

Spring. 2 credits. Minimum enrollment 10; maximum 40. Prerequisites: VTMED 520, 530, and 531. S-U grades optional. V. N. Meyers-Wallen.

Covers the genetic and pathophysiologic mechanisms underlying inherited diseases in dogs and cats that may be encountered in small-animal practice. Specific disorders of clinical importance are presented in a lecture format to illustrate the distribution, diagnosis, and control of inherited diseases in individuals and populations. Ethical considerations regarding treatment, prevention, and control measures are discussed.

VTMED 749(6433) Anaerobic Infections of Animals

Spring. 1 credit. Minimum enrollment 10; maximum 80. Prerequisite: VTMED 540. S-U grades only. P. L. McDonough and staff.

Presents anaerobic infections in clinical context as an adjunct to the material covered in Foundation Course IV. Students gain an understanding of the diversity and biology of anaerobic bacteria and the niches that they occupy in the animal and avian body. A basic, clinically oriented taxonomy is presented, and students learn about the virulence and pathogenesis of the major anaerobes that they will encounter in clinical practice. The clinical signs of anaerobic infections, laboratory identification and susceptibility testing, and the use of specimen transport media are also covered. Treatment of common infections, including wound care, is covered and vaccines currently available are discussed in detail. In the second four weeks of the course, students learn about the major clinical syndromes caused by anaerobes. Course format consists of two one-hour lectures per week for eight weeks.

VTMED 750(6434) Managing Infectious Diseases in Small Animal Populations

Spring. 1 credit. Minimum enrollment 3; maximum 20. Prerequisite: third- and fourth-year veterinary students. Highly recommended: VTMED 720. Letter grades only. J. M. Scarlett.

Intended as a sequel to the Issues and Preventive Medicine in Animal Shelters course offered in the C Distribution block. In light of the time constraints in the Issues course, the principles of prevention and control to specific diseases (e.g., ringworm, kennel cough) commonly encountered in small animal populations are not discussed. This course encourages students to apply principles of infectious disease, epidemiology,

and preventive medicine to infectious disease problems in small animal populations, with a particular emphasis on disease problems in shelters. Mention of modification to fit other small animal populations (e.g., catteries, kennels) is made.

VTMED 751(6558) Applied Dairy Nutrition for Practitioners

Spring. 2 credits. Minimum enrollment 5; maximum 25. Prerequisite: veterinary students or permission of instructor. S-U grades only. T. Overton, D. Nydam, and others.

Provides a foundation in the principles of dairy cattle nutrition for veterinary students interested in dairy production medicine. Emphasizes integration of the principles of dairy cattle nutrition with practical rational formulation with troubleshooting on dairy farms, both preventive and curative.

VTMED 752(6558) Advanced Small Animal Clinical Oncology

Spring. 1 credit. Minimum enrollment 10. Prerequisite: VTMED 552. Letter grades only. K. M. Rassnick.

Elective course designed to complement the required course VTMED 552 Veterinary Clinical Oncology. Cancer is among the leading causes of death in dogs and cats and remains the number one concern of pet owners. Management and prevention of cancer in companion animals represents a significant component of the practice of small animal veterinary medicine. This advanced course emphasizes the biologic behavior and patient management of cancers in dogs and cats more thoroughly than addressed in VTMED 552. Additionally, molecular and cytogenetic methodologies that are likely to affect cancer diagnosis and management in the future are discussed. Finally, students are provided with the skills necessary to critically read and evaluate clinically based publications in the professional literature.

Biomedical Sciences**VTBMS 346(3460) Introductory Animal Physiology (also BIOAP 311[3110]) (Undergraduate)**

Fall. 3 credits. Prerequisites: BIOG 105, 106, or 101, 102, 103, 104, 107, 108; CHEM 207, 208, or 206, or 215, 216; MATH 106, 111 or 191 or AP credit for any of the above; or one year college-level biology, chemistry, and math. S-U grades optional. E. R. Loew.

General course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure-function relationships are stressed along with underlying physical-chemical mechanisms.

VTBMS 400(4000) A Genomic Approach to Studying Life

Fall. 3 credits. Prerequisites: one year introductory biology or equivalent plus BIOGD 281 or BIOBM 330 or 333 or 331/332 or permission of instructor. Letter grades only. J. Schimenti.

Introduction to principles underlying the organization or genomes and the methods of studying them, emphasizing genome-wide approaches to research. Covers the application of genomics methodologies for addressing issues including evolution, complex systems, genetic and gene:phenotype relationships.

Includes periodic, in-depth discussions of landmark or timely genomic papers.

VTBMS 401(4010) Genomics Analysis

Spring. 3 credits. Prerequisites: upper-level undergraduates and graduate students; BIOGD/VTBMS 400 or equivalent by permission of instructor. Letter grades only. T. O'Brien.

Overview of approaches and tools used in genomic research. Covers experimental and computational technologies as well as theoretical concepts important for the study of genomes and their function. Topics include high-throughput DNA sequencing and genotyping, genetic mapping of simple and complex traits, RNA expression profiling, proteomics, genome modification and transgenesis, and computational genomics.

VTBMS 600(6000) Special Projects in Anatomy

Fall, spring. 1 credit per 2.5-hour period. Prerequisite: permission of instructor. S-U grades only. Biomedical science staff.

VTBMS 610(6100) Genomes as Chromosomes

Fall. 1 credit. Prerequisites: upper-level undergraduates and graduate students; others by permission of instructor or BIOGD 281 and BIOBM 332. Letter grades only. T. O'Brien and P. Cohen.

The eukaryotic genome is partitioned into discrete structural units, the chromosomes. This course examines how chromosomes organization is related to chromatin structure, gene expression, DNA replication, repair and stability. Special emphasis is placed on how the linear arrangement of sequence features along the chromosome, such as genes and regulatory modules, relate to the functional organization of the genome in the nucleus. Experimental and computational approaches used to address chromosome structure and function are studied.

VTBMS 611(6110) Genomes Maintenance Mechanisms

Fall. 1 credit. Prerequisites: upper-level undergraduates and graduate students. BIOGD 281, BIOBM 330, or 333, or 331/332 or equivalents. S-U grades optional. R. Weiss.

Focuses on the molecular mechanisms used by eukaryotic cells to preserve genomic integrity. Topics include endogenous and exogenous sources of mutation, DNA repair pathways, and cell cycle checkpoint mechanisms. Also addresses how genome maintenance impacts genome plasticity and evolution, as well as the relationship between genomic instability and disease, including cancer.

VTBMS 612(6120) Overview of Model Genetic Organisms

Spring. 1 credit. Prerequisites: upper-level undergraduates and graduate students; BIOGD 281, or BIOGD/VTBMS 400 or permission of instructor. S-U grades optional. J. Schimenti.

Presents the features of various model organisms and their relative merits for conducting various types of genomics/genetics research. Model systems discussed are: *Arabidopsis*, yeast, *Drosophila*, *C. Elegans*, zebrafish, and mice.

VTBMS 620(6200) Research Fellowship in Biomedical Sciences

Fall, spring. 1-12 credits. Cannot be used to fulfill formal course requirements for DVM curriculum. Prerequisite: permission of instructor. S-U grades only.

Offered by individual faculty members in the Department of Biomedical Sciences for DVM students undertaking research in research fellowship.

VTBMS 628(6280) Graduate Research in Animal Physiology (also BIOAP 719[7190]; Graduate)

Fall, spring. 1-3 credits. Prerequisite: written permission of department chairperson and faculty mentor who will supervise work and assign grade. S-U grades optional.

Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

VTBMS 700(7000) Predictions of Form or Phylogeny

Fall. 1 credit. Prerequisite: permission of instructor. S-U grades optional. J. W. Hermanson.

Form and function are often discussed as a correlated entity in biology. This seminar group starts with the question, Does form really predict function? This is addressed initially with respect to the analysis of paleobiology but then encompasses examples of experimental functional morphology. In particular, there is a growing body of experimental data demonstrating that diverse functions can be achieved with nearly identical morphologies, and that the functional diversity may better be explained by behavior or environmental factors. Might these observations refute current theories about the origin of flight in extinct organisms (i.e., the cursorial or ground-up theory of flight versus the arboreal gliding theory of flight evolution)? Specific topics pursued are selected by participants in this course. Participation is open to interested graduate students, advanced undergraduate students, and veterinary students.

VTBMS 701(7010) Mouse Pathology and Transgenesis (also TOX 701[7010])

Spring. 1 credit. Maximum enrollment 12 students. Priority given to graduate students, pathology residents, interns, and post-docs; third and fourth-year veterinary students may attend if space permits. Prerequisite: permission of instructor. Highly recommended: basic histology course (BIOAP 413) or equivalent. Letter grades only. A. Nikitin and staff.

Introductory course on contemporary mouse pathology explains principles and methods of pathology and transgenesis. In addition to covering development, anatomy, histology and pathology of organs and systems, the course focuses on systematic evaluation of new genetically modified mice, with particular attention to such topics as experimental design, validation of mouse models, and identification of novel phenotypes. This course includes supervised mouse necropsy.

VTBMS 713(7130) Cell Cycle Analysis

Spring. 1 credit. S-U grades only. A. Yen. Presents a brief historical review of the cell cycle; a summary of cell cycle regulatory processes; and practical methods for cell cycle analysis, including mathematical representations. Topics include growth control of bacterial cell cycle, including

chemostats, mammalian cell tissue culture, cell synchronization, flow cytometry, age-density representation, G1 regulation, labile regulatory protein models, cell transformation, regulation by growth factors and the cytoskeleton, cyclin/E2F/RB regulatory model, practical examples for analysis of cell cycle phase durations, cell cycle phase specific growth factor sensitivity, timing of RB protein phosphorylation within the cell cycle. The objective of the course is to present graduate students with methods for cell cycle analyses that will be used in their research.

VTBMS 720(7200) Special Problems in Physiology (Graduate)

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional.

Laboratory work, conferences, collateral readings, and reports. Adapted to the needs of students.

VTBMS 788(7880) Seminar in Surgical Pathology

Fall, spring. 1 credit. Intended for residents in anatomic pathology; third- and fourth-year veterinary students may attend. Letter grades only. B. A. Summers and staff.

The major objective of this discussion and seminar course is to introduce the residents to the discipline of surgical pathology. Selected material from the Surgical Pathology Service is prepared in advance for independent review by the residents. The material is presented in a slide-seminar format by the residents under the review of the faculty. Emphasis is placed on pathogenesis, etiology, and pathologic descriptions of the lesions. In addition, appropriate guest lecturers cover specific areas of interest and special topics not encountered in the departmental service programs.

Clinical Sciences**VETCS 299(2990) Research Opportunities in Clinical Sciences**

Summer, six-week session. 6 credits; minimum 120 hours lab time expected per 3 credits. Prerequisites: one year basic biology (scores of 5 on Biology Advanced Placement Examination of College Entrance Examination Board or BIO G 100 level). Letter grades only. Clinical science faculty.

Mentored research apprenticeship program designed to give laboratory experience to qualified unmatriculated high school students (participating in Cornell Summer College). Students are placed in a research laboratory with a designated project under the direct supervision of a research associate (upper-level graduate student, post-doc, or faculty member). Students are graded on preparation, participation in laboratory academic life, and appropriate acquisition of techniques. At the end of the session, students are expected to give brief (15- to 20-minute) oral presentations on their work and submit manuscripts in a form suitable for publication. The faculty director of the laboratory has ultimate responsibility for evaluating the student's work and assigning the grade.

[VETCS 700(7000) Pathophysiology of Gastrointestinal Surgery

Fall. 1.5 credits. S-U grades only. Offered every third year. S. L. Fubini.

Initially presents normal anatomy and physiology of the gastrointestinal system in carnivores, herbivores, and ruminants. This is followed by in-depth discussion of

the pathophysiological mechanisms and sequelae of gastrointestinal obstructions including reperfusion injury, peritonitis, adhesions, and short bowel syndrome. This course emphasizes development of an advanced understanding of surgically relevant gastrointestinal problems leading to appropriate decision making.]

[VETCS 701(7010) Pathophysiology of Orthopedic Surgery (Graduate)

Spring. 1.5 credits. Prerequisites: D.V.M., M.D., or equivalents or permission of instructor. S-U grades only. Offered every third year. A. J. Nixon.

Provides specialized training in the anatomic, physiologic, and pathologic process of musculoskeletal diseases in animals and humans, with special emphasis on surgical diseases of tendons, bones, and joints.]

VETCS 702(7020) Pathophysiology of Cardiopulmonary Surgery (Graduate)

Fall. 1.5 credits. Prerequisite: D.V.M. or equivalent. S-U grades only. Offered every third year. R. P. Hackett, S. L. Fubini, and N. G. Ducharme.

Using lectures and group discussions, the objective of this course is to explain the pathophysiology of various cardiovascular diseases (cardiac arrest, cardiac arrhythmia under anesthesia) and airway disease (thoracic and upper-airway disease). As a basis for these abnormalities, cardiopulmonary hemodynamics and biomechanical aspects of ventilation are reviewed. The emphasis is placed on understanding these mechanisms and outlining the surgeon's response to them.

VETCS 703(7030) Surgical Principles and Surgery of the Integumentary System (Graduate)

Spring. 1.5 credits. Prerequisite: graduate D.V.M.s or equivalent in residency or graduate training programs. S-U grades only. Offered every third year. S. Fubini.

Designed for surgery residents and graduate students. It is largely discussion format and examines surgical principles and surgery of the integumentary system.

[VETCS 704(7040) Pathophysiology of Urogenital Surgery (Graduate)

Fall. 1.5 credits. Prerequisite: graduate D.V.M.s or equivalent in residency or graduate training programs. S-U grades only. Offered every third year; next offered 2006. S. Fubini.

Designed to review and discuss urogenital surgical procedures in animals and the rational basis for them. Pathophysiology is stressed. Some classes consist of reprints with discussion.]

[VETCS 705(7050) Animal Pain and Its Control

Spring. 2 credits. Prerequisite: permission of instructor. Open to third- and fourth-year veterinary medical students, interns, residents, graduate students, and postdoctoral associates interested in fundamental and applied concepts of pain in animals. S-U grades optional. Offered odd-numbered years. R. D. Gleed, J. W. Ludders, P. F. Moon, and L. P. Posner.

Emphasizes the physiologic and pathophysiological mechanisms involved in pain perception by animals, their responses (physiological and behavioral) to pain, and the pharmacologic mechanisms underlying analgesic therapy. The subject material is presented through lectures, group discussions,

group readings, and group evaluation of analgesic protocols.]

[VETCS 706(7060) Pathophysiology of Neurologic Surgery (Graduate)]

Spring. 1.5 credits. Prerequisite: D.V.M.s, M.D.s, or equivalent or permission of instructor. S-U grades only. Offered every third year; next offered 2007. A. J. Nixon. Provides specialized training in neurosurgical techniques and application and discusses pathophysiologic implications of neurosurgical and neurologic diseases.]

VETCS 710(7100) Advanced Veterinary Anesthesiology I

Fall. 1 credit. Prerequisite: VTMED 568 or permission of instructor; third- and fourth-year veterinary students, graduate students, interns, and residents. S-U grades only. L. P. Posner, R. D. Gleed, and J. W. Ludders.

Designed to prepare students for the American College of Veterinary Anesthesiology examinations. Also suitable for interns and for residency training in other areas such as surgery and internal medicine. Speakers are from both inside and outside the college. Topics cover the basic sciences as they apply to anesthesiology such as physics and engineering, applied pharmacology, physiology, and pathology. Clinically oriented lectures are also given concerning specific anesthetic techniques and species-specific differences in response to anesthetic drugs.

VETCS 711(7110) Advanced Veterinary Anesthesiology II

Spring. 1 credit. Prerequisite: VTMED 568 or permission of instructor; third- and fourth-year veterinary students, graduate students, interns, and residents. S-U grades only. L. P. Posner, R. D. Gleed, and J. W. Ludders.

Designed to prepare students for the American College of Veterinary Anesthesiology examinations. Also suitable for interns and for residency training in other areas such as surgery and internal medicine. Speakers are from both inside and outside the college. Topics cover the basic sciences as they apply to anesthesiology such as physics and engineering, applied pharmacology, physiology, and pathology. Clinically oriented lectures are also given concerning specific anesthetic techniques and species-specific differences in response to anesthetic drugs.

Microbiology and Immunology

VETMI 299(2990) Research Opportunities in Microbiology and Immunology

Summer, six-week session. 6 credits; minimum 120 hours lab time expected per 3 credits. Prerequisites: one year of basic biology (scores of 5 on Biology Advanced Placement Examination of College Entrance Examination Board or BIO G 100 level). Letter grades only. Microbiology and Immunology faculty.

Mentored research apprenticeship program designed to give laboratory experience to qualified unmatriculated high school students (participating in Cornell Summer College). Students are placed in research laboratory with designated project under the direct supervision of a research associate (upper-level graduate student, post-doc, or faculty member). Students are graded on preparation, participation in laboratory academic life, and appropriate acquisition of techniques. At the end of the session, they are expected to give

brief (15- to 20-minute) oral presentations on their work and submit manuscripts in a form suitable for publication. The faculty director of the laboratory has ultimate responsibility for evaluating the student's work and assigning the grade.

VETMI 315(3150) Basic Immunology (also BIO G 305[3050]; Undergraduate)

Fall. 3 credits. Highly recommended: basic courses in microbiology, genetics, and biochemistry. S-U grades optional. J. A. Marsh.

Survey of immunology, with emphasis on the cellular and molecular bases of the immune response. More information is available at the BIOG 305 courseinfo web site.

VETMI 331(3310) General Parasitology (also BIOMI 331[3310]; Undergraduate)

Spring. 2 credits. Prerequisites: zoology or biology course; any of the following: BIOES 261, 264, 267, 274, 275, 278; BIOG 101, 102, 103, 104, 106, 107, 108, 109, 110, 170, 202, 207; BIOMI 192, 290, or equivalent courses. Letter grades only. D. D. Bowman.

Introduction to the basic animal parasites, stressing systematics, taxonomy, general biology, ecological interactions, and behavior of non-medically important groups. Also introduces the major animal parasites, protozoan, nematode, platyhelminth, acanthocephalan, annelid, and arthropod.

VETMI 404(4040) Pathogenic Bacteriology and Mycology (also BIOMI 404[4040])

Spring. 2 or 3 credits; 3 credits with lec and sem. Requirement for graduate students. Maximum enrollment for seminar portion 15. Prerequisites: BIOMI 290 and 291; open to undergraduates by permission of instructor. Letter grades only. D. P. Debbie.

Course in medical microbiology, presenting the major groups of bacterial and mycotic pathogens important to human and veterinary medicine. Emphasizes infection and disease pathogenesis. Topics include disease causality; interactions of host, pathogen, and environment, including immunity to bacteria and fungi; and principles of antimicrobial therapy and drug resistance. A companion seminar addresses the current and classic literature related to microbial pathophysiology on the cellular and molecular levels.

VETMI 409(4090) Principles of Virology

Fall. 3 credits. Prerequisites: BIOMI 290 and 291 or permission of instructor. Recommended: BIOMI 408, BIOMI 330-332, 432. G. Whittaker and S. Lazarowitz.

Covers the principles of virology, focusing mainly on animal viruses but also including plant viruses and bacteriophage. Topics include the classification of viruses, virus entry, genome replication and assembly, and virus pathogenesis. Particular emphasis is placed on virus-host cell interactions and common features between different viral families.

VETMI 431(4310) Medical Parasitology (also BIOMI 431[4310]; Undergraduate)

Fall. 2 credits. Prerequisites: zoology or biology course; any of the following: BIOEE 261, 263, 264, 267, 274, 275, 278; BIOG 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 170, 202, 207; BIOMI 192, 290, 398, or equivalent course. Letter grades only. D. D. Bowman.

Systematic study of arthropod, protozoan, and helminth parasites of public health importance, with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasitisms.

VETMI 605(6050) Special Projects in Microbiology (Undergraduate)

Fall, spring. 1-3 credits. Prerequisite: permission of instructor; good background in microbiology or immunology. Recommended: background in pathogenic microbiology and immunology. S-U grades only. Microbiology staff.

Normally provides an opportunity for the student to work in a research laboratory or carry out a special project under supervision.

VETMI 620(6200) Research Fellowship in Microbiology and Immunology

Fall, spring. 1-12 credits. Cannot be used to fulfill formal course requirements for DVM curriculum. Prerequisite: permission of instructor. S-U grades only. Faculty TBA. Offered by individual faculty members in the Department of Microbiology and Immunology for DVM students undertaking research in Research Fellowship.

VETMI 700(7000) The Biology of Animal and Plant Viruses (Graduate and Upper-level Undergraduate)

Fall. 2 credits. Letter grades only. Offered odd-numbered years. C. R. Parrish and virology faculty.

Examines current topics in studies of animal viruses, including some comparisons with plant viruses where similar mechanisms apply. Selected topics are examined in depth, including the structures of viruses and their components, viral nucleic acids and replication strategies, details of the interactions between viruses and their host cell components and metabolism. Other topics include the evolution and selection of viruses, novel approaches to the prevention of virus infection, and methods for antiviral chemotherapy.

VETMI 705(7050) Advanced Immunology (also BIO G 705[7050]; Graduate)

Spring. 3 credits. Prerequisite: VETMI 315 or permission of instructor. Letter grades only. Offered even-numbered years. J. Marsh and staff.

Coverage at an advanced level of molecular and cellular immunology.

VETMI 707(7070) Advanced Work in Bacteriology, Virology, and Immunology (Graduate)

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional. Microbiology staff.

Designed primarily for graduate students with a good background in pathogenic microbiology and immunology. May be elected by veterinary students who are properly prepared.

VETMI 712(7120) Seminars in Infection and Immunity

Fall, spring. 1 credit. Requirement for graduate students in Department of Microbiology and Immunology and field of immunology. S-U grades only. D. Russell. Invited speakers in immunology and infection biology acquaint students with current advances in the field.

VETMI 713(7130) Biological and Biomedical Sciences Program—Teaching Experience

Fall, spring. 1 credit. Requirement for first-year graduate students. S-U grades only. D. G. Russell.

All graduate students who are a part of the Biological and Biomedical Sciences Program must complete this 1-credit teaching experience. The goal is for each graduate student to increase his or her knowledge in a biology area and simultaneously increase confidence in his or her teaching abilities. Specific teaching assignments are administered through the CVM's Office of Graduate Education. A faculty mentor provides ongoing feedback throughout the experience.

[VETMI 719(7190) Immunology of Infectious Diseases (also BIO G 706[7060]; Graduate)

Spring. 2 credits. Prerequisite: VETMI 315 or permission of instructor. S-U grades optional. Offered odd-numbered years. E. Y. Denkers and staff.

Focuses on molecular and cellular mechanisms underlying the immunity to infectious diseases caused by viral, bacterial, protozoan, and helminth pathogens. Topics include immune response initiation; antigen presentation pathways; Th1 and Th2 cytokines in protection and pathology; mechanisms of cytotoxicity; immune evasion strategies; vaccines. Lectures are based on recent advances in the field and are accompanied by relevant readings from the current literature.]

VETMI 723(7230) Current Topics in Immunology

Fall, spring. 1 credit. Registration each semester required of field of immunology graduate students. Prerequisite: graduate standing. S-U grades only. Immunology faculty.

Immunology discussion group in which students present research papers from the contemporary scientific literature.

VETMI 725(7250) Mechanisms of Microbial Pathogenesis (also BIOMI 725[7250])

Spring. 3 credits. Prerequisites: BIOMI 404, 409, 417 or equivalent course; written permission of instructor for undergraduates. Letter grades only. D. Debbie, M. Hesse, H. Marquis, J. Parker, M. Scidmore, and G. Whittaker.

Covers the mechanisms of pathogenesis of bacteria, fungi, parasites, and viruses. Addresses the need for a course covering the breadth of microbial pathogenesis. Emphasizes, at the molecular and cellular levels, the methods microbial pathogens use to enter, survive, and cause damage to their hosts. By studying the molecular mechanisms of all the major microbial pathogens together, students will be able to appreciate the commonality of pathogenic mechanisms as well as see the unique properties of each group of organisms. The contribution of the host response to the pathogenesis process will be covered, but in less detail as

this information is addressed in VETMI 719 Immunology of Infectious Diseases.

VETMI 737(7370) Advanced Work in Animal Parasitology (Graduate)

Fall, spring. 1–3 credits. Prerequisite: advanced undergraduate, graduate, and veterinary students. Letter grades only. D. D. Bowman and other faculty. Intended for advanced undergraduate, graduate and veterinary students with interests in parasitology research.

VETMI 770(7700) Advanced Work in Avian Diseases (Graduate)

Fall, spring. 1–3 credits. Letter grades only. Times TBA. K. A. Schat.

VETMI 772(7720) Advanced Work in Aquatic Animal Diseases (Graduate)

Fall, spring. 1–3 credits. S-U grades only. Times TBA. P. R. Bowser.

VETMI 773(7730) Advanced Work in Avian Immunology

Fall, spring. Variable credit. Letter grades only. K. A. Schat.

VETMI 783(7830) Seminars in Parasitology (Graduate)

Fall, spring. 1 credit. Prerequisite: veterinary or graduate students or permission of instructor. S-U grades only. D. D. Bowman.

Seminar series designed to acquaint students with current research in the field of parasitology. The range of topics is determined, in part, by the interests of those participating and may include such topics as the ecology of parasitism, parasite systematics, wildlife parasitology, and parasitic diseases of plants and animals, including humans.

Molecular Medicine**[VETMM 299(2990) Undergraduate Research in Pharmacology**

Summer, six-week session. 3 to 6 credits; minimum 120 hours of lab time expected per 3 credits. Prerequisites: one year basic biology (score of 5 on Biology Advanced Placement Examination of College Entrance Examination Board or BIO G 100 level). Letter grades only. R. A. Cerione.

Mentored research apprenticeship program designed to give laboratory experience to qualified unmatriculated high school students (participating in Cornell Summer College) or Cornell underclassmen. Students are placed in a research laboratory with a designated project under the direct supervision of a research associate (upper-level graduate student, post-doc, or faculty member). Students are graded on preparation, participation in laboratory academic life, and appropriate acquisition of techniques. At the end of the session, students are expected to give brief (15- to 20-minute) oral presentations of their work and submit a manuscript in a form suitable for publication. The faculty director of the laboratory has ultimate responsibility for evaluating the student's work and assigning the grade.]

VETMM 470(4700) Biophysical Methods (also AEP/BIOMB 470[4700])

Fall. 3 credits. Prerequisite: permission of instructor. Prerequisite: basic knowledge of physics and mathematics. Recommended: some knowledge of physical chemistry, molecular and cell biology, or neurobiology. Letter grades only. M. Lindau.

Overview of the diversity of modern biophysical experimental techniques used in the study of biological systems at the cellular and molecular level. Topics include light microscopy, fluorescence microscopy, Fourier optics and image processing, confocal and multiphoton microscopy, phase contrast, electron microscopy, X-ray diffraction and protein structure determination, multidimensional NMR, spectroscopy, calcium measurements, resonance energy transfer, membrane biophysics, electrophysiology, ion channels, action potentials, ligand-gated channels, fluctuation analysis, patch-clamp, molecular biology of ion channels, rapid kinetics, caged compounds, transmitter release, capacitance measurements, amperometry, optical traps, and molecular force measurements. The course is intended for students in the engineering, physics, chemistry, and biological disciplines who seek an introduction to modern biophysical experimental methods.

VETMM 571(5710) Biophysics Methods Advanced Laboratory (also AEP 571[5710])

Spring, taught daily during first three weeks of Jan. 3 credits. Prerequisites: VETMM 470. S-U grades optional. Times TBA. M. Lindau. For description, see AEP 571.

[VETMM 610(6100) Cellular and Molecular Pharmacology

Fall. 2 credits. Prerequisite: permission of instructors. S-U grades optional. Offered even-numbered years. C. M. S. Fewtrell and field of pharmacology faculty. Graduate-level course surveying the molecular and cellular aspects of receptor mechanisms, signaling pathways, and effector systems. Topics include drug-receptor interactions; ligand- and voltage-gated ion channels; G protein pathways; growth factor signaling; calcium; nutrient and nitric oxide signaling; mechanisms of receptor-mediated effects on neural excitability, electrical pacemakers, muscle contraction, gene expression; and chemotherapy, including antimicrobial agents and cancer chemotherapy.]

VETMM 611(6110) Systems Pharmacology

Spring. 2 credits. Prerequisite: permission of instructors. S-U grades optional. Offered even-numbered years. C. M. S. Fewtrell and field of pharmacology faculty. Graduate-level course surveying system- and organ-related aspects of pharmacology. Topics include drug disposition; pharmacokinetics; autonomic pharmacology; central nervous system pharmacology; pharmacology of inflammation, allergy, and platelet function; and cardiovascular, gastrointestinal, and endocrine pharmacology.

VETMM 700(7000) Calcium as a Second Messenger in Cell Activation

Spring. 2 credits. Prerequisite: permission of instructor. Lec-disc. S-U grades only. Offered even-numbered years. C. M. S. Fewtrell.

Focuses on regulation of intracellular calcium and techniques for studying calcium movements and distribution in cells. Topics include calcium channels and exchangers, calcium-binding proteins, and calcium stores; phosphatidylinositol turnover, release of calcium from intracellular stores, and activation of calcium influx; calcium gradients and oscillations; mechanisms of

exocytosis and the proteins involved. Each topic is introduced with a lecture followed by discussion of recent papers from the literature.

[VETMM 701(7010) Organ-System Toxicology]

Fall. 1 credit. Prerequisite: graduate students in environmental toxicology. S-U grades only. Offered even-numbered years. W. S. Schwark.

Minicourse on molecular mechanisms involved in chemical toxicity. Considers specific examples of toxicity in organ systems such as the nervous system, kidney, liver, respiratory tract, and cardiovascular system.]

[VETMM 703(7030) Receptor-Ligand Interactions]

Fall. 2 credits. Prerequisite: permission of instructors. S-U grades optional. Offered odd-numbered years. G. A. Weiland and R. E. Oswald.

Covers both the practical and theoretical tools for the study of ligand-receptor interactions, emphasizing the quantitative and physical chemical aspects of receptor theory. Topics discussed are basic methods of radioligand binding assays, including separation and measurement of bound and free ligand; characterization of receptor function; analysis of receptor structure; thermodynamic basis of the binding; methods of analyzing equilibrium binding; equilibrium binding for complex binding mechanisms; and kinetics of simple and complex binding mechanisms.

VETMM 704(7040) CNS Synaptic Transmission

Fall. 2 credits. Limited to 20 students. Prerequisite: senior or graduate standing; permission of instructor. S-U grades optional. Offered odd-numbered years. L. M. Nowak.

Survey course in vertebrate central nervous system physiology and pharmacology, that focuses on mechanisms of neuro-transmitter action at the membrane and cellular levels. Roles of selected neurotransmitters in normal brain and neurological disorders are covered. Topics are introduced in lectures and followed up by discussions of recent journal articles.

VETMM 705(7050) Chemistry of Signal Transduction

Fall. 2 credits. S-U grades optional. Offered odd-numbered years. R. A. Cerione.

Focuses on the mechanisms of action of GTP binding proteins. Examines several receptor-coupled signaling systems, including adenylyl cyclase, vertebrate vision, phosphatidylinositol lipid turnover, receptor systems regulating various ion channels, and receptors involved in cell growth regulation.

VETMM 706(7060) Growth Factor-Coupled Signaling (also BIOBM 734(7340))

Fall. 0.5 credit. Prerequisite: permission of instructor. S-U grades optional. Offered odd-numbered years. R. A. Cerione.

The general theme of this course is mitogenic signaling pathways. Receptor tyrosine kinases, src, ras, and ras-regulatory proteins are covered.

VETMM 707(7070) Protein NMR Spectroscopy (also BIOBM 730(7300))

Spring. 2 credits. Prerequisites: CHEM 389 and 390 or 287 and 288 or permission of instructor. S-U grades optional. Offered odd-numbered years. R. E. Oswald and L. K. Nicholson.

The student acquires the tools necessary for in-depth understanding of multidimensional, multinuclear NMR experiments. Schemes for magnetization transfer, selective excitation, water suppression, decoupling, and others are presented. The application of these techniques to proteins for resonance assignments, structure determination, and dynamics characterization is studied.

VETMM 709(7090) Topics in Cancer Cell Biology

Fall and spring. 0.5-1 credit per sec. Prerequisite: graduate standing. S-U grades optional. Offered odd-numbered years. Students may select modules (sections) of interest to them. B. U. Pauli.

Sec 1—Cell Adhesion Molecules, Signaling, and Cancer

Spring. 0.5 credit. J. Guan.
Introduces the role of cell adhesion receptors in cancer. Emphasis is on the integrin and cadherin families of cell adhesion molecules and their roles in signal transduction and cancer. Topics include the structure and function of integrins, integrin interactions with cytoskeleton, intracellular signaling pathways in cell-matrix interactions, integrin-mediated signaling in cell migration, proliferation and survival, changes of integrins in tumors and metastasis, structure and function of cadherins, signaling mechanisms in cell-cell interactions in normal development and cancer.

Sec 2—Cell-Cycle Analysis

Fall and spring. 1 credit. A. Yen.
Presents graduate students with methods for cell-cycle analyses that will be useful in their research. Includes a brief historical review of the cell cycle; a summary of cell-cycle regulatory processes; and practical methods for cell-cycle analysis, including mathematical representations. Topics include growth control of bacterial cell cycle including chemostats, mammalian cell tissue culture, cell synchronization, flow cytometry, age-density representation, G1 regulation, labile regulatory protein models, cell transformation, regulation by growth factors and the cytoskeleton, cyclin/E2F/RB regulatory model, practical examples for analysis of cell-cycle phase durations, cell-cycle phase specific growth factor sensitivity, timing of RB protein phosphorylation within the cell cycle.

Sec 3—Principles of Metastasis

Fall or spring. 0.5 credit. B. U. Pauli.
Discusses the molecular basis of cancer progression leading to metastasis (clonal evolution of metastatically competent cancer cells: contribution of specific oncogenes and tumor suppressor genes); the routes of metastatic spread; the process of intravasation emphasizing the roles of matrix-degrading proteases and angiogenesis; host effect on circulating cancer cells: immunological and hemodynamic considerations; organ-preference of metastasis: the roles of tumor cell/endothelial cell adhesion receptor/ligand pairs; chemokines and chemokine receptors; extracellular matrix components; etc.; emergence of micrometastases: the roles of adhesion-and/or chemokine-mediated

signaling in intravascular growth promotion of arrested cancer cells; and, animal model of metastasis and anti-metastasis treatment strategies.

Sec 4—Angiogenesis in Normal Development, Cancer, and Other Diseases

Fall. 0.5 credit. B. U. Pauli.

Topics include vasculogenesis versus angiogenesis; tumor angiogenesis: the angiogenic switch; molecular and cellular principles of tumor vessel formation; structure and function of tumor vessels, e.g., chaotic architecture and blood flow; high vascular permeability; altered endothelial surface markers; paracrine- and perfusion-driven tumor growth stimulus; role of hematopoietic stem cells in promoting tumor angiogenesis; angiogenesis in non-neoplastic disease: hypoxia-driven pathological angiogenesis and vascular remodeling; inflammation-induced angiogenesis and vascular remodeling (special emphasis: wound healing); and therapeutical perspectives: promises and problems.

Sec 5—Current Topics in Oncogenic Viruses

Fall. J. Casey.

Sec 6—Growth Factor-Coupled Signaling (also VETMM 706(7060))

Fall. 0.5 credit. R. Cerione.

The general theme is mitogenic signaling pathways. Covers receptor tyrosine kinases, src, ras, and ras-regulatory proteins.

VETMM 720(7200) Patch-Clamp Techniques in Biology

Spring, daily during second and third weeks of Jan. 2 credits. S-U grades only. Times TBA. L. M. Nowak.

Students learn theoretical background for patch-clamp studies in morning lectures. The experimental techniques of conventional and permeabilized patch whole-cell recording and single-channel recordings in cell-attached and -excised membrane patches are taught in 15 hours of afternoon laboratory instruction per student. Lab training sessions are arranged individually throughout the spring semester.

VETMM 730(7300) Graduate Research in Pharmacology or Molecular Medicine

Fall, spring, and summer. 1-12 credits. May not be used to fulfill formal course requirements for field of pharmacology. Prerequisite: permission of instructor. S-U grades only.

Offered by individual faculty members in the Department of Molecular Medicine and the graduate field of pharmacology for graduate students undertaking research toward M.S. or Ph.D. degrees.

VETMM 740(7400) Special Projects and Research in Pharmacology

Fall, spring, and summer. 1-3 credits each topic. May not be used to fulfill formal course requirements for field of pharmacology. Letter or S-U grades. Times TBA. Field of pharmacology faculty.

Enables students to undertake research in an area related to the research interests of a faculty member in the graduate field of pharmacology. Topics include but are not limited to Mechanisms of Growth-Factor Action—R. A. Cerione; The Role of Calcium in Stimulus-Secretion Coupling—C. M. S. Fewtrell; Mechanisms of Neurotransmitter Release—M. Lindau; Central Nervous System Neurotransmitters—L. M. Nowak; Structure-Function of the Nicotinic Acetylcholine Receptor—R. E. Oswald.

VETMM 760(7600) Directed Readings in Pharmacology

Fall, spring, and summer. 1-3 credits each topic. Letter or S-U grades. Reading and disc. Times TBA. Field of pharmacology faculty.

Individual members of the graduate field of pharmacology offer directed readings and discussions on pharmacological topics to small groups or to individual students. Topics include but are not limited to Receptor Mechanisms—G. A. Weiland; Biochemical Neuropharmacology—G. A. Weiland; Amino Acid Neurotransmitters—L. M. Nowak; Stimulus-Secretion Coupling—C. M. S. Fewtrell; Cell Calcium—C. M. S. Fewtrell.

Population Medicine and Diagnostic Sciences**VTPMD 299(2990) Undergraduate Research in Epidemiology**

Fall, spring, and summer. 3 credits; minimum 120 hours of lab time expected per 3 credits. Prerequisite: undergraduate standing; one year of basic biology (score of 5 on Biology Advanced Placement Examination of College Entrance Examination Board or BIOG 100 level) or permission of instructor. J. Scarlett, H. Erb, Y. Grohn, L. Warnick, H. Mohammed, and Y. Schukken.

Mentored research apprenticeship program designed to give laboratory experience in applied epidemiology to qualified unmatriculated high school students (participating in Cornell Summer College) or Cornell underclassmen. Students are placed in a research laboratory with a designed project under the direct supervision of a research associate (upper-level graduate student, post-doc, or faculty member). Students are graded on preparation participation in laboratory academic life and appropriate acquisition of techniques. At the end of the six-week session, they are expected to give a brief (15- to 20-minute) oral presentation on their work and submit a manuscript in a form suitable for publication. The faculty director of the laboratory has ultimate responsibility for evaluating each student's work and assigning the grade.

VTPMD 664(6640) Introduction to Epidemiology (Graduate)

Fall. 3 credits. Co-requisite: BTRY 601 (College of Agriculture and Life Sciences) or permission of instructor. S-U grades optional. H. N. Erb.

Lectures and discussion deal with the fundamentals of epidemiology. Topics include outbreak investigation, causal association, data quality, the design and ethical constraints of clinical trials, and infectious-disease epidemiology.

VTPMD 665(6650) Study Designs (Graduate)

Spring. 2 credits. Prerequisites: VTPMD/VETCS 664 and BTRY 601 (College of Agriculture and Life Sciences). S-U grades optional. H. O. Mohammed.

Design and interpretation of cross-sectional, case-control, and cohort studies (including controlled clinical trial). Design issues include sample size, bias, and relative advantages and disadvantages. Course objectives are (1) to know the difference between different epidemiologic study designs and relative advantages and disadvantages of each; (2) given a problem (usually a field situation), be

able to design an appropriate epidemiologic study; (3) be able to effectively analyze and criticize published epidemiologic studies. Consists of lectures on the principles of epidemiologic study design and related issues (sample size calculations, validity and precision, and identification and minimizing of bias); basic analysis of epidemiologic data; and discussion of published epidemiologic studies. These studies include observational cohort studies (prospective and retrospective), cross-sectional studies, case-control studies, and hybrid studies (ambidirectional and other hybrid designs).

VTPMD 666(6660) Advanced Methods in Epidemiology (Graduate)

Fall. 3 credits. Prerequisites: VTPMD/VETCS 665 and BTRY 602 (College of Agriculture and Life Sciences). S-U grades optional. Y. T. Grohn.

Concepts introduced in VTPMD 664 and 665 are developed further, with emphasis on statistical methods. Topics include interaction, effect modification, stratified analysis, matching and multivariate (logistic regression) methods, survival analysis, and strategies for the analysis of epidemiologic data.

VTPMD 700(7000) Special Projects in Diagnostic Endocrinology

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Recommended: AN SC 427. Letter grades only. N. J. Place. Independent study course. Students have the opportunity to research a particular topic in diagnostic/clinical endocrinology of animals.

VTPMD 701(7010) Special Projects in Infectious Diseases

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional. Diagnostic laboratory faculty. Provides laboratory experience with attention to specific aspects of infectious disease problems.

VTPMD 702(7020) Special Topics in Infectious Diseases

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional. Diagnostic laboratory faculty. Offers a broad exposure to various aspects of infectious diseases.

VTPMD 704(7040) Master's-Level Thesis Research (Graduate)

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. S-U grades only. Diagnostic Laboratory faculty. Research leading to an M.S. degree.

[VTPMD 707(7070) Clinical Biostatistics (Graduate)]

Spring. 2 credits. Minimum enrollment 2; maximum 15. Prerequisite: veterinary residents and graduate students. Letter grades only. Offered odd-numbered years. J. M. Scarlett, H. N. Erb and H. O. Mohammed. Explains the theory behind and interpretation of parametric and nonparametric statistical techniques commonly used in research/clinical medicine. Students analyze small data sets using a commercial statistical-software package.]

VTPMD 708(7080) Epidemiology Seminar Series (Graduate)

Fall, spring. 1 credit. S-U grades only. Epidemiology faculty. Discusses advanced theoretical and analytical epidemiologic concepts and techniques.

VTPMD 766(7660) Graduate Research (Graduate)

Fall, spring, summer. Credit and times TBA. Prerequisite: master's and Ph.D. students; permission of graduate faculty member concerned. S-U grades only. Epidemiology faculty.

Enables students outside the section of epidemiology to receive graduate research credits for projects with epidemiological components.

VTPMD 769(7690) Doctoral-Level Thesis Research

Fall, spring, and summer. Credits and times TBA. Prerequisite: master's and Ph.D. students in epidemiology. S-U grades only. Epidemiology faculty.

Enables students in the section of epidemiology to receive graduate research credits for their doctoral research.

VTPMD 799(7990) Independent Studies in Epidemiology

Fall, spring. 1-3 credits. H. N. Erb, Y. T. Grohn, H. O. Mohammed, and J. M. Scarlett.

The purpose of this course is to investigate an epidemiologic topic with one of the instructors. It provides experience in problem definition, research design, and the analysis of epidemiologic data.

FACULTY ROSTER

Abou-Madi, Noha, D.V.M., U. of Montreal (Canada). Lec., Clinical Sciences
Ainsworth, Dorothy M., Ph.D., U. of Wisconsin, Madison. Prof., Clinical Sciences

COLLEGE OF ARTS AND SCIENCES

ADMINISTRATION

Peter Lepage, dean—255-4146

Paul Houston, senior associate dean—255-4147

Harry Shaw, senior associate dean—255-4147

David DeVries, associate dean of undergraduate admissions and education—255-3386

Jonathan B. Monroe, associate dean and director of writing programs—255-4061

Jane V. Pedersen, associate dean of administration—255-7507

Nicolas van de Walle, associate dean for international studies—255-1097

PROGRAM OF STUDY

Introduction

The College of Arts and Sciences is a community of about 4,000 undergraduates and 600 faculty members. It is also a graduate school and research center. Altogether it attracts faculty members whose research and scholarly and creative work require first-rate academic facilities and who bring to all their students the profound questioning and exciting ideas of current scholarship. Finally, the college exists within a university of other colleges at Cornell—about 19,000 undergraduate and graduate students and 1,500 faculty members. This wider community provides depth and diversity of applied and professional studies beyond what a college of the liberal arts and sciences alone can offer. Students studying the liberal arts and sciences may draw upon the knowledge and facilities of the other colleges at Cornell to complement their studies. Abundant variety and outstanding quality in many fields, including interdisciplinary fields, and emphasis on individual academic freedom and responsibility give the college and the university its distinctive character.

The richness of the college's undergraduate curriculum is extraordinary; there is no course that all students must take, and there are nearly 2,000 from which they may choose. By choosing courses each semester, students design their own education. They develop known interests and explore new subjects. An education in the liberal arts and sciences means honing one's critical and imaginative capacities, learning about oneself in nature and culture, and gaining experience with views of the world radically unlike one's own. All this is highly individual, and the college relies on each student and faculty adviser to design a sensible, challenging, and appropriate course of study.

Yet the college faculty believes that each student's education should have certain common qualities. These include familiarity with several different ways of knowing that are reflected in the various disciplines and fields of study. In addition to these general areas of knowledge, students acquire effective writing and quantitative skills, study foreign

languages, achieve cultural breadth, and concentrate on one particular field through which they deepen their imaginative and critical thinking as fully as possible. To accomplish these objectives, the college has certain requirements for graduation.

The College of Arts and Sciences awards one undergraduate degree, the Bachelor of Arts degree.

Summary of Requirements

1. First-year writing seminars: two courses. (See "John S. Knight Institute for Writing in the Disciplines," p. 587.)
2. Foreign language: for **graduating classes of 2006 or earlier**, proficiency in one language or qualification in two; zero to four courses. For **graduating classes of 2007 or later**, completion of one course at the nonintroductory level or above (Option 1) or at least 11 credits in one language (Option 2); one to three courses.
3. Distribution: nine courses (may overlap with courses counting toward a major). **Please note the two sets of distribution requirements, one for the graduating classes of 2006 and earlier and one for the graduating classes of 2007 and later.**
4. Breadth: two courses (may overlap with courses for distribution, major, or electives).
5. Major.
6. Electives: four or five courses (at least 15 credits) not used to fulfill other requirements (other than the breadth requirements) and not in the major field.
7. Residence: eight full-time semesters, unless a student can successfully complete all other requirements in fewer than eight semesters and meet the additional criteria to accelerate graduation. (See "Acceleration" below.)
8. 34 courses: a 3- or 4-credit course counts as one course. A 2-credit course counts as half a course; a 1-credit course does not normally count toward the requirement; a 6-credit language course counts as one and one-half courses. (See "Courses and Credits" for some 1-credit courses in music, dance, and theatre performance that can be cumulated to count as one-half course and for counting 5- and 6-credit courses.)
9. Credits: a total of 120 academic credits, of which 100 must be taken in the College of Arts and Sciences at Cornell. (See "Noncredit Courses" below for courses that do not count as academic credits or courses.)
10. Physical education: completion of the university requirement (passing a swim test and two 1-credit nonacademic courses). Note: Physical education credit does not count toward graduation or toward the 12-credit minimum required for good academic standing each semester.
11. Application to graduate. (See "Graduation.")

Explanation of Requirements

Foreign Language Requirement

(Note different requirements for the classes of 2006 and earlier and the classes of 2007 and later. Placement into language courses is the same for all.) The faculty considers competence in a foreign language essential for an educated person. Studying a language other than one's own helps students understand the problematics of language, our fundamental intellectual tool, and enables students to understand another culture. The sooner a student acquires competence, the sooner it will be useful. Hence, work toward the foreign language requirement should be undertaken in the first two years. Courses in foreign languages and/or literature are taught in the College of Arts and Sciences by the following departments: Africana Studies and Research Center, Asian Studies, Classics, German Studies, Linguistics, Near Eastern Studies, Romance Studies, and Russian Literature.

For students in the graduating classes of 2006 and earlier, the language requirement may be satisfied in one of two ways:

1. by attaining *proficiency* (competence at the intermediate level) in one language **OR**
2. by attaining *qualification* (mastery of an introductory sequence) in two languages.

Proficiency

Proficiency may be attained in languages by passing an intermediate (200 level) Cornell course of 3 or more credits (or CHIN or JAPAN 161). Introductory courses in some less commonly taught languages are taught at the 200 level or above (e.g., ancient Egyptian and Welsh); these do not confer proficiency. Proficiency can also be earned by examination. A score of 4 or 5 on an AP *literature* exam in French, Italian, or Spanish earns proficiency and 3 credits. Students with those scores should also take the Cornell Advanced Standing Examination (CASE), given during orientation week, to obtain appropriate placement for further language study. A score of 4 or 5 on an AP *language* exam earns 3 credits but *does not* carry with it proficiency. However, a student who receives a score of 4 or 5 on an AP language exam can earn proficiency by earning a high score on the CASE. Students with appropriate scores on Cornell Language Placement tests or SAT II examinations are also eligible to take the CASE (see chart below). Native or bilingual speakers and writers of a language other than English may earn proficiency and 3 credits by taking the CASE or an individual exam (if no CASE is available and a qualified examiner is here).

Qualification

Qualification may be attained in any of the following ways:

1. Three years of high school study in any one language gives qualification in that language. No demonstration of competence is necessary. Note, however, that this route to qualification does not guarantee entrance into an intermediate-

level course. Students who want to continue studying the language must be placed in the appropriate course through an examination. Being placed below the intermediate level does not cancel the qualification.

2. Passing the requisite Cornell course, the last course of the introductory sequence.

Note: Except in the case of Sanskrit, completion of language sequences 131–132 does not constitute qualification.

3. Achieving the requisite score (see chart) on the SAT II taken in high school or a score of 56 or higher on the appropriate Cornell LP (Language Placement) test.

Students may earn a score of 56 on the placement test at the end of a course numbered 122 (second semester of the introductory sequence) and consequently attain *qualification* without taking 123, the third semester of the introductory sequence.

4. By departmental or (when no placement test is available) individual examination at Cornell (if a qualified examiner is here).

For students in the graduating classes of 2007 and later:

Option 1: Passing (a) a nonintroductory foreign language course of 3 or more credits at Cornell at the 200 level or above or (b) any other nonintroductory course conducted in a foreign language at Cornell. **OR**

Option 2: Passing at least 11 credits of study in a single foreign language at Cornell. Students undertaking intensive introductory language study elsewhere should consult the relevant department about applying that study toward Option 2. In most cases this will require satisfactory performance on an examination.

Students whose speaking, reading, and writing competence in a language other than English is at the same level we would expect our entering freshmen to have in English (as shown by completing high school in that language or by special examination during their first year here at Cornell) are exempt from the college's language requirement.

Placement

Entering students who have had two or more years of high school study in a language, who have been awarded credit for language work at another college or university, or who are native speakers, bilingual, or have spoken the language at home, may enroll in a course in the same language only after being placed by examination. The placement exam may have been taken in high school (SAT II, taken after the last course, or AP, if the score was 4 or 5) or at Cornell (LP test). Students may, but need not, retake a language test if a year or more has passed since last taking it. Being placed by examination into the first course at a non-introductory level does not earn credit toward the degree. Degree credit is earned only for demonstrated mastery of work equivalent to the first course at an intermediate level at Cornell and placement into the second intermediate course. Students should seek to satisfy the language requirement in their first years at Cornell. Those with test scores one or more years old may be required to take a Cornell placement test if the instructor deems the student is not adequately prepared for the level in which he or she has enrolled.

French

Placement Tests LPG	SAT II	Language Courses	Literature Courses
below 37	below 410	121	
37–44	410–480	112 or 122	
45–55	490–590	123

Placement Tests and Advanced Placement Credit

- The following language placement and advanced standing tests are scheduled at the beginning of each semester:
 - Chinese, Japanese, and Korean (schedule available from Department of Asian Studies, 350 Rockefeller Hall);
 - German (schedule available from Department of German Studies, 183 Goldwin Smith Hall);
 - French, Italian, and Spanish (schedule available from Department of Romance Studies, 303 Morrill Hall);
 - Russian (schedule available from Department of Russian, 226 Morrill Hall).

The advanced standing examination in French, German, Italian, Russian, and Spanish, is called the CASE (Cornell Advanced Standing Examination). Eligibility for the CASE may be determined from the placement tables. *In Russian only, all students seeking placement take the CASE.*

Native speakers of Spanish who have completed their secondary education in a Spanish-speaking country do not take the CASE. For these students, the Spanish program offers a walk-in service, the Native Language Accreditation for Spanish, in the third week of September and the first week of February. Students interested in this service should contact Eleanor Dozier in 414 Morrill Hall. Speakers of Spanish who completed their secondary education in a non-Spanish-speaking country are required to present either SAT II or AP or LPS scores for placement, or for eligibility to take the CASE exam.

- Arabic: departmental examination, Department of Near Eastern Studies, 409 White Hall.
- Greek, ancient: departmental examination, Department of Classics, 120 Goldwin Smith Hall.
Greek, modern: departmental examination, Department of Near Eastern Studies, 409 White Hall
- Hebrew: departmental examination, Department of Near Eastern Studies, 409 White Hall.
- Latin: departmental examination, Department of Classics, 120 Goldwin Smith Hall.

Substitutions to the Language Requirement

Outright waivers of the requirement are never granted. However, rarely and as appropriate, alternatives to language acquisition are approved. Legitimate requests for substitutions require strong, convincing evidence of inability to learn foreign languages in a classroom setting. A poor grade in a Cornell introductory language course or taking the LP exam repeatedly and unsuccessfully is not adequate evidence of disability.

Students who wish to request a substitution for this requirement should meet with Dean Peggy Walbridge, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall. If Dean Walbridge determines that the

request has merit, the student meets with the Language Substitution Review Committee. This committee makes the final decision for or against a substitution. If a substitution is allowed, the committee works with the student to select appropriate substitute courses.

Placement in Language Courses and Advanced Placement Credit

Placement into language courses and advanced placement credit are separate results of examinations.

Distribution Requirements

(Note different requirements in the arts, humanities, and social sciences for the graduating classes of 2006 and earlier and the graduating classes of 2007 and later. The science and quantitative reasoning requirement is the same for both groups.)

In satisfying the distribution requirements, students become acquainted with a broad range of subject matter and points of view among disciplines in the college and explore areas that may be entirely new to them. Or, to look at it the other way, as first-year students explore subjects that interest them, they begin to satisfy distribution requirements. Consequently, first-year students should take courses to prepare for possible majors and to explore subjects new to them and take no course only in order to satisfy a distribution requirement. Although students may complete distribution requirements over eight semesters, they can take advanced courses in subjects they (perhaps unexpectedly) find intriguing only if they have completed the introductory prerequisites. Consequently, students should not postpone satisfying distribution requirements until the last semesters. Once sure of a major, students should consider which distribution requirements are yet unfulfilled and how to fulfill them with courses that complement their overall program.

Students in the graduating classes of 2006 and earlier must take a total of nine courses

of 3 or more credits each for the distribution requirements: four courses from Groups I (science) and II (quantitative reasoning) below, at least two of which are from Group I and at least one of which is from Group II (e.g., one chemistry, one physics, one geology, and one mathematics); five courses from Groups III (social science) and IV (humanities and the arts) below, with at least two in each group and two in the same department (e.g., one course in sociology, one in history, one in history of art, and two in theatre arts). Courses that satisfy distribution requirements are listed and described in their departmental sections. The Roman numeral—I, II, III, or IV—indicates which group each course satisfies. If there is no numeral at all, the course satisfies no distribution requirement. Courses in the major may be applied to the distribution requirements (unless prohibited by one of the restrictions noted under restrictions on applying AP credit, transfer credit, and Cornell courses to distribution requirements).

I. Physical and Biological Sciences

In fulfilling the four courses in science and quantitative reasoning, students must take at least two science courses. At least one of these must be from the primary list of courses in science departments in the College of Arts and Sciences:

Primary list:

(The courses listed individually are all cross-listed in an A&S science department.)

Animal Science

427 Fundamentals of Endocrinology

Anthropology

208 Anthropology of Human Mating
275 Human Biology and Evolution
371 Human Paleontology
474 Lab and Field Methods in Human Biology

Applied and Engineering Physics

217 Physics II: Electricity and Magnetism
330 Modern Experimental Optics
363 Electronic Circuits
450 Introduction to Solid-State Physics
470 Biophysical Methods

Archaeology

285 Art, Archaeology, and Analysis

Astronomy: all 3- or 4-credit courses

Biological Sciences: all 3- or 4-credit courses (including any combination of two courses from BIO 101–104) *except* BIO G 209, 299, 498; BIOEE 362; BIOMI 172; BIOBM 321; BIONB 423 and BIOSM 204. BIO G 200 and 499 require permission from the Office of Undergraduate Biology.

Biological and Environmental Engineering

441 Computer in Neurobiology
456 Biomechanics of Plants

Biology and Society

214 Biological Basis of Sex
447 Seminar in the History of Biology
461 Environmental Policy

Chemistry and Chemical Biology

all 3- or 4-credit courses

Cognitive Studies

111 Brain, Mind, and Behavior
330 Introduction to Computational Neuroscience

Crop Science

398 Environmental Microbiology

Earth and Atmospheric Sciences

all courses *except* 150, 250, 435

Engineering

122 Earthquake
185 Art, Archaeology, and Analysis

Entomology

325 Insect Behavior
400 Insect Development
452 Herbivores and Plants
453 Historical Biogeography
455 Insect Ecology
456 Stream Ecology

Feminist, Gender, & Sexuality Studies

214 Biological Basis of Sex

Food

394 Applied and Food Microbiology

History

287 Evolution
415 Seminar in the History of Biology

History of Art

200 Art, Archaeology, and Analysis

Horticulture

243 Taxonomy of Cultivated Plants

Music

204 Physics of Musical Sound

Natural Resources

321 Introduction to Biogeochemistry
456 Stream Ecology

Nutritional Science

- 275 Human Biology and Evolution
- 475 Mammalian Birth Defects

Physics

all courses *except* 205, 209

Plant Pathology

- 407 Nature of Sensing and Response

Psychology

- 111 Brain, Mind, and Behavior
- 322 Hormones and Behavior
- 324 Biopsychology Laboratory
- 330 Introduction to Computational

Neuroscience

- 332 Biopsychology of Learning and Memory
- 396 Introduction to Sensory Systems
- 424 Neuroethology
- 429 Olfaction and Taste: Structure and Function
- 431 Effects of Aging on Sensory and Perception Systems
- 460 Human Neuroanatomy
- 492 Sensory Function

Science and Technology Studies

- 287 Evolution
- 447 Seminar in the History of Biology

Visual Studies

- 492 Sensory Function

Students may select additional science courses from the following **supplementary list**:

Animal Science

- 100 Domestic Animal Biology I
- 150 Domestic Animal Biology II
- 212 Animal Nutrition

Anthropology

- 101 Human Evolution: Genes, Behavior, and the Fossil Record
- 370 Environmental Archaeology
- 375 Evolutionary Theory and Human Behavior
- 390 Primate Behavior and Ecology
- 463 Zooarchaeological Method
- 464 Zooarchaeological Interpretation

Applied and Engineering Physics

- 110 The Laser and Its Applications in Science, Technology, and Medicine

Archaeology

- 370 Environmental Archaeology
- 463 Zooarchaeological Method
- 464 Zooarchaeological Interpretation

Dance

- 312 The Moving Body: Form and Function

Electrical Engineering

- 430 Lasers and Optical Electronics

Engineering

- 110 The Laser and Its Applications in Science, Technology, and Medicine

Entomology

- 212 Insect Biology

Food

- 200 Introductory Food Science

Materials Science and Engineering

- 281 The Substance of Civilization

Natural Resources

- 201 Environmental Conservation
- 210 Introductory Field Biology
- 301 Forest Ecology

Nutritional Science

- 115 Nutrition and Health
- 361 Biology of Normal and Abnormal Behavior

Psychology

- 223 Introduction to Biopsychology
- 326 Evolution of Human Behavior
- 361 Biology of Normal and Abnormal Behavior

II. Mathematics and quantitative reasoning

In completing four courses in science and quantitative reasoning, students must take at least one of the following courses (note that EDUC 115 Introductory College Mathematics, counts neither toward the college degree nor toward distribution):

Applied Economics and Management

- 210 Introductory Statistics

Biochemistry, Molecular and Cell Biology

- 321 Numerical Methods in Computational Molecular Biology

Biometry

- 301 (formerly 261) Statistical Methods

City and Regional Planning

- 321 Introduction to Quantitative Methods
- 328 Quantitative Methods in Policy Planning

Cognitive Studies

- 172 Computation, Information, and Intelligence
- 424 Computational Linguistics
- 476 Decision Theory
- 477 Decision Theory II

Computer Science

- 100 Introduction to Computer Programming
- 172 Computation, Information, and Intelligence
- 211 Computers and Programming
- 280 Discrete Structures
- 312 Structure and Interpretation of Computer Programs
- 321 Numerical Methods in Computational Molecular Biology
- 424 Computational Linguistics
- 486 Applied Logic

Ecology and Evolutionary Biology

- 362 Dynamic Models in Biology

Earth and Atmospheric Science

- 435 Statistical Methods in Meteorology and Climatology

Economics

- 319 Introduction to Statistics and Probability
- 320 Introduction to Econometrics
- 321 Applied Econometrics
- 325 Cross Section and Panel Econometrics
- 327 Time Series Econometrics
- 368 Game Theory
- 405 Auction Seminar
- 431 Monetary Economics
- 470 Economics of Information
- 476/477 Decision Theory

Engineering

- 115 Engineering Applications of OR&IE
- 172 Computation, Information, and Intelligence
- 211 Computers and Programming
- 321 Numerical Methods in Computational Molecular Biology

Industrial and Labor Relations

- 210 Statistical Reasoning I
- 211 Statistical Reasoning II

Linguistics

- 424 Computational Linguistics
- 483 Intensional Logic
- 485 Topics in Computational Linguistics

Mathematics

all courses *except* 101 and 109

Philosophy

- 231 Introduction to Deductive Logic
- 330 Foundations of Mathematics
- 331 Deductive Logic
- 383 Choice, Chance, and Reason
- 431 Mathematical Logic
- 432 Topics in Logic
- 436 Intensional Logic

Physics

- 205 Reasoning about Luck
- 209 Relativity and Chaos

Policy Analysis and Management

- 210 Introduction to Statistics

Psychology

- 350 Statistics and Research Design

Sociology

- 301 Evaluating Statistical Evidence

If students choose two courses from this list to satisfy part of the distribution requirement, those two courses may not have significant overlap. For example, students may not choose two beginning courses in statistics. Nor may they earn credit toward the degree for overlapping courses: BTRY 301 (formerly 261) Statistical Methods I, CRP 223 Introduction to Statistical Reasoning, ECON 321 Applied Econometrics, ILRST 212 Statistical Reasoning, MATH 171 Statistical Theory and Application in the Real World, PSYCH 350 Statistics Research and Design, SOC 301 Evaluating Statistical Evidence.

III. Social sciences and history

The following departments are included in Group III, social sciences and history. Most (although not all) courses in these departments satisfy distribution in this group. Students should consult the departmental listings for options that are noted as satisfying Group III.

Anthropology
Economics
Government
History
Linguistics
Psychology
Sociology

In addition, interdisciplinary departments and programs offer courses in Group III. Again, students should consult the departmental and program listings and note which courses satisfy Group III.

Africana Studies
American Studies
Archaeology
Asian Studies
Asian American Studies
Biology and Society
Cognitive Studies
Feminist, Gender, & Sexuality Studies
Near Eastern Studies
Religious Studies
Science and Technology Studies

Finally, CRP 100 The American City and CRP 101 Global City and ENGRG 250 Technology in Society and ENGRG 298 Inventing an Information Society satisfy distribution in Group III.

IV. Humanities and the arts

The following departments are included in Group IV, humanities (literature and philosophy) and the arts. While language and logic courses do not count for distribution

in this group, most (although not all) other courses in these departments do. Students should consult the departmental listings for options that are noted as satisfying Group IV.

Asian Studies
Classics
Comparative Literature
English
German Studies
History of Art

Music: If a student applies one course in music toward distribution, it must be in music history, culture, or theory. If a student applies more than one course, an acceptable sequence may include 4 credits (two half courses) in musical performance, organizations, or ensembles combined with theory, history, and culture courses. Students may count performance credits as only one course toward distribution.

Philosophy
Romance Studies (French, Italian, and Spanish Literature)
Russian Literature
Theatre, Film, and Dance

In addition, the following interdisciplinary departments and programs offer courses in Group IV. Again, students should consult the departmental and program listings to find which courses satisfy Group IV.

Africana Studies
American Studies
Anthropology
Archaeology
Asian American Studies
Biology and Society
Feminist, Gender, & Sexuality Studies
Near Eastern Studies
Religious Studies
Science and Technology Studies
Visual Studies

Students in the graduating classes of 2007 and later must complete four courses in science and quantitative reasoning as described for the classes of 2006 and earlier. In addition, they must complete five courses of 3 or more credits each from the following five categories of courses in the humanities and social sciences; they must include at least one course from four different categories and no more than three in the same department. How an individual course is categorized is indicated with the appropriate abbreviation in its description.

Cultural Analysis (CA)

Courses in this area study human life in particular cultural contexts through interpretive analysis of individual behavior, discourse, and social practice. Topics include belief systems (science, medicine, religion), expressive arts and symbolic behavior (visual arts, performance, poetry, myth, narrative, ritual), identity (nationality, race, ethnicity, gender, sexuality), social groups and institutions (family, market, community), power and politics (states, colonialism, inequality).

Historical Analysis (HA)

Courses in this group interpret continuities and changes—political, social, economic, diplomatic, religious, intellectual, artistic, scientific—through time. The focus may be on groups of people, dominant or subordinate, a specific country or region, an event, a process, or a time period.

Knowledge, Cognition, and Moral Reasoning (KCM)

Offerings in this area investigate the bases of human knowledge in its broadest sense, ranging from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to form and justify moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science, cognitive psychology, linguistics, or philosophy. Courses focusing on moral reasoning explore ways of reflecting on ethical questions that concern the nature of justice, the good life, or human values in general.

Literature and the Arts (LA)

Offerings in this area explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, observing, and hearing and encourage reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

Social and Behavioral Analysis (SBA)

Courses in this area examine human life in its social context through the use of social scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, stigmas, conflict resolution).

Breadth Requirements

Students must include in their undergraduate program at least one Arts and Sciences course that focuses on an area or a people other than those of the United States, Canada, or Europe and one course that focuses on an historical period before the 20th century. Courses that satisfy the geographic breadth requirement are marked with an @ when described in this catalog. Courses that satisfy the historical breadth requirement are marked with a *. Many courses satisfy both requirements, and students may in fact use the same course to satisfy both. Students may use courses satisfying distribution, major, or elective—but not writing—requirements in satisfaction of either of the breadth requirements. They may also apply Cornell courses (not credit from an examination) conferring proficiency in a non-Western language toward the geographical breadth requirement.

Restrictions on Applying AP Courses and Credit from Other Institutions to the Distribution Requirements

Students may not apply AP credit or transfer credit from another institution to the

breadth requirements or to any distribution requirement in the arts, humanities, or social sciences, which include the categories of CA, HA, KCM, LA, and SBA.

Students in the graduating classes of 2006 and earlier may apply up to two courses of approved advanced placement or transfer credit toward distribution requirements in Groups I and II (physical/biological sciences and quantitative/formal reasoning), as long as they take at least one course from the primary list in an Arts and Sciences science department at Cornell. Transfer credit applied to distribution in Group II (quantitative/formal reasoning) must be in mathematics, statistics, or computer science; it may not be in other quantitative subjects. Courses taken at other institutions in mathematics or computer science must be approved for transfer and distribution credit by the Departments of Mathematics or Computer Science respectively. Statistics courses taken at other institutions in social science departments must be approved by the relevant department in Arts and Sciences (e.g., psychology or sociology); statistics courses taken in mathematics or statistics departments must be approved by the Department of Mathematics.

Students in the graduating classes of 2007 and later may apply no advanced placement or transfer credit to distribution in science and quantitative reasoning.

Students who transfer to the college from another institution are under the above rules for advanced placement credit, but are eligible to have credit for post high school course work taken during regular semesters (not summer school) at their previous institution count toward all distribution requirements. Transfer students receive a detailed credit evaluation when they are accepted for admission.

Restrictions on Applying Cornell Courses to the Distribution and Breadth Requirements

1. First-year writing seminars may not count toward any other college requirement.
2. No single course may satisfy more than one distribution requirement.
3. Students may count courses in their major toward distribution and breadth.

The Major

In their last two years, students devote roughly one-half their time to acquiring depth and competence in a major subject. The major does not necessarily define a student's intellect or character or lead directly to a lifetime occupation, although it sometimes does some of each. Through the major, students focus and develop their imaginative and intellectual capacities through a subject they find especially interesting.

Most departments and programs specify certain prerequisites for admission to the major; they are found on the following pages in the descriptions of each department and program.

Students may apply for acceptance into the major as soon as they have completed the prerequisites and are confident of their choice. This may be as early as the second semester of freshman year, and must be no later than second semester of sophomore year.

To apply, they take a copy of their official transcript to an appointment with the director of undergraduate studies in their prospective major. A department or program may refuse admission into the major if the applicant's performance does not meet established standards. A student without a major at the beginning of the junior year is not making satisfactory progress toward the degree. That student must meet with an advising dean and may not be allowed to continue in the college.

Available majors

Majors are offered by each of the departments. There are also majors in American Studies, archaeology, biology and society, information science, religious studies, science of earth systems, and Feminist, Gender, and sexuality studies.

Some students want to pursue a subject that cannot be met within an established major. They may plan, with the help of their faculty adviser, an independent major that includes courses from several departments and even colleges. See "Independent Major Program," under "Special Academic Options." Whatever the major—chemistry, math, philosophy, or music—graduates from the College of Arts and Sciences earn the one degree the college awards, a Bachelor of Arts.

Double majors

Only one major is required for graduation. Some students choose to complete two or even more majors. No special permission or procedure is required; students simply become accepted into multiple majors and find an adviser in each department. All completed majors are posted on the official transcript. However, even though courses in a second major count among the required 15 credits of electives (see immediately below), double majoring can constrict the variety of electives that might be valuable for an education in the liberal arts and sciences. Students should "double major" only if their intellects and deep interests direct them to do so.

Electives

Of the 34 courses and 120 credits required for graduation, almost one-third are free electives. How students use these electives frequently makes the difference between an ordinary and a truly interesting course of study. Students must complete at least four courses and at least 15 credits offered outside the major field and not used to fill another requirement except breadth. AP credits not otherwise used may fulfill elective requirements. Students may group electives to complete one of the established interdisciplinary concentrations or may form their own unofficial concentration or "minor" separate from their major. Students may also group electives into a second major. Since only one major is required, students may count courses in a second major as electives. Some students choose to explore a variety of subjects; some develop a concentration in a department or subject outside Arts and Sciences to gain applied training or specialized knowledge.

Residence

The College of Arts and Sciences is a residential community for students who devote their energy and spirit to full-time study. The faculty believes that integrated, full-time study for a defined period best promotes

intellectual and creative development and best prepares people for citizenship and careers.

Consequently, eight semesters of full-time study in the College of Arts and Sciences are integral to earning the B.A. degree. Even if the minimum requirements can be met in fewer semesters, the faculty of the college expects students to take advantage of the resources of the university for eight full semesters and obtain as rich and advanced an education in the liberal arts and sciences as possible. Students may complete their undergraduate degrees with credits earned at other institutions or as part-time or summer students at Cornell only if they have completed their eight full-time semesters of residence or satisfied the criteria listed below under "Part-time study in final semester."

For transfer students from other institutions, each full semester of study at their previous institution counts as one of the eight semesters of residence. However, even if transfer students have completed more than four full semesters at their previous institution, they must spend a minimum of four semesters on the Cornell campus in Ithaca enrolled in the College of Arts and Sciences. Internal transfers from other colleges at Cornell must spend four semesters on campus in Ithaca as students in the Internal Transfer Division or in the college.

Approved study abroad, SEA Semester, Urban Semester, FALCON, and Cornell in Washington are considered semesters of residence but not semesters on the Cornell campus. Students may spend no more than two semesters on such programs and must be on campus during their last semester. Semesters of extramural study in Cornell's School of Continuing Education, semesters of study at other institutions while on leave from Cornell, and summer sessions anywhere do not count as semesters of residence.

Acceleration

Some students decide that they do not need eight semesters of residence to obtain a solid undergraduate education. These students must compress the first four semesters and spend four full semesters in the major. Benefitting from opportunities for advanced, seminar, and independent (sometimes honors) work is what best characterizes undergraduate education in the college. Students considering acceleration should discuss their plans with their major adviser.

Accelerants apply to graduate one semester before their intended new graduation date. They obtain an "Application to Graduate" for this purpose in the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall. Accelerants must complete:

1. All graduation requirements except for the residency requirement (120 total credits, 100 Arts and Sciences credits, 34 courses, all college requirements, and the university's physical education requirement).
2. Either condition *a* or *b*:
 - a. 60 credits before beginning their last four semesters in the college and the prerequisites for admission to the major in time to spend *four* semesters in the major.
 - b. 48 credits in College of Arts and Sciences courses numbered 300 and

above and prerequisites for admission to the major in time to spend *four* semesters in the major. Upper-level courses taken in other colleges at Cornell University may count toward the 48 only if approved as part of the major.

3. 100 credits at Cornell at "C" (not C-) or above. Courses completed with a grade of "S" will count toward the 100 credits. Advanced placement and transfer credits do not count toward this requirement.
4. Students may not use credits earned while on leave of absence to reduce their terms of residence. In other words, they must be eligible to accelerate without applying any credit toward the degree that they earned while on leave.
5. Accelerants may not finish the degree with credits earned in summer or winter session, through part-time study (unless they meet the guidelines for part-time study), or at an off-campus program, including Cornell in Washington, SEA Semester, Urban Semester, or study abroad. That is, they may not exit through any program other than a regular, full-time Cornell semester in Ithaca.

Students matriculating as freshmen may not compress their undergraduate education into fewer than six semesters of residence. Transfer students, both from other institutions and from other colleges at Cornell, must satisfy the eight-semester residence requirement and must spend at least four semesters in the college on campus in Ithaca.

Ninth semester

Students who can graduate in eight semesters should do so. If a worthy academic plan for a full ninth or tenth semester is approved, the student enrolls in the college as a special student for the additional work. Such a status allows enrollment in a full schedule of courses and full access to campus resources for full tuition, but allows financial aid only from loans or outside agencies, not from Cornell funds. Students who need fewer than 12 credits in a ninth or tenth semester to graduate should complete the outstanding courses and pay prorated tuition. Students may spend a ninth semester with Cornell aid only with permission of the Committee on Academic Records. Such permission is normally granted only to:

1. Students who have been ill or experienced other untoward circumstances beyond their control.
2. Students who were academically underprepared for the curriculum at Cornell and needed to begin with a lighter schedule of courses than normal. (See Dean Turner, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, about this option.)

Part-time study

Students in good academic standing may take a personal leave of absence and enroll in the School of Continuing Education, but such semesters of extramural study do not count as terms of residence and credits from such semesters may not be used to reduce the terms of residence.

Part-time study in special circumstances

The college and university support students (with financial aid and services) as best they can to make full-time study possible. Occasionally, however, extraordinary but nonfinancial personal, academic, or medical circumstances make studying part-time temporarily necessary and appropriate. Students in good academic standing who face extraordinary situations may petition the Committee on Academic Records for a part-time schedule and proration of tuition in the college.

Part-time study in final semester

Students may complete their degrees with part-time study and pay prorated tuition at Cornell after fewer than eight semesters of full-time residence only if:

1. They have completed all requirements by the end of the sixth or seventh semester, met the criteria for accelerated graduation, and are remaining to complete study beyond what is required for the degree.
2. They are writing an honors thesis in the eighth semester and can complete all degree requirements by taking exactly two courses, one of which is the thesis itself. They must register for the thesis and one additional course.

Students must obtain approval of an advising dean and complete the prorated tuition form in the semester before or during the first three weeks of the semester and confirm their status and registration with college registrar Sally O'Hanlon in 55 Goldwin Smith Hall.

Courses and Credits

Counting courses and credits

Students must complete at least 34 courses to graduate—that is, an average of four courses during each of six semesters and five courses during each of two semesters. A 3- or 4-credit course counts as one course; a 2-credit course counts as one-half course. Single-credit courses do not count as part of the 34 except in certain cases when they form a part of a series and two in the same series can be aggregated to count as one-half course (certain offerings in the Department of Music and Department of Theatre, Film and Dance fall into this category). Three 1-credit courses do not aggregate to count as one course. A 6-credit language course counts as 1 1/2 courses, while the summer FALCON Programs in Asian languages count as 8 credits and two courses each and regular semester FALCON counts as 16 credits and four courses. Archaeology and geology fieldwork for more than 6 credits counts as two courses each. BIOGD 281 counts as 1 1/2 courses. Other 5- or 6-credit courses count as one course. Courses students place out of with AP credit count toward the 34.

Students must also complete 120 credits, 100 of which must be from courses taken in the College of Arts and Sciences at Cornell. Liberal arts courses approved for study abroad during a semester or academic year of full-time study (not summer study) and courses taken in certain off-campus Cornell residential programs may be counted toward the 100 credits required in the college. Advanced placement credits, credits earned in other colleges at Cornell, or credits earned in any subject at institutions other than Cornell

do not count as part of the 100. The only exceptions to the above restrictions are for courses (usually no more than three) that certain departments accept from other colleges at Cornell as fulfilling major requirements (and substituting for A&S courses) and for up to two courses that an adviser accepts as part of a completed and formally established cross-college, interdisciplinary concentration.

Using courses toward more than one requirement

A course may fulfill more than one college requirement in the following situations:

1. A course may be used to fulfill a distribution, breadth, and also a major requirement (except as noted under previous section of restrictions on applying AP credits, transfer credits, and Cornell courses to distribution requirements).
2. A one-semester course in foreign literature (not language) or culture that is acceptable for achieving proficiency or certifying Option I in that language may also be applied to the relevant distribution requirement and, if appropriate, to the breadth requirement.
3. Courses may count toward breadth requirements and toward any other requirement except first-year writing seminars.
4. Courses in a second major may count as electives.

Auditing

The college encourages its students to take advantage of its rich curriculum by sitting in on courses that interest them but that they prefer not to take for credit. As long as the instructor agrees, students are welcome to visit courses. Small seminars and language courses are sometimes not open to visitors. Audited courses do not appear on the student's schedule or transcript.

Repeating courses

Students occasionally need to repeat courses. If the instructor certifies that the course content is different, credit is granted a second time. If the content is the same, both grades nonetheless appear on the transcript and are included in any GPA that is calculated, but the course and credit count toward the degree only once; students considering repeating a course under this circumstance should discuss the matter with their adviser and an advising dean. Students who plan to repeat a course submit a petition to the college registrar, Sally O'Hanlon, 55 Goldwin Smith Hall. If the original course grade was F, no petition is necessary.

Courses that do not count toward the degree

The college does not grant credit toward the degree for every course offered by the university. Courses in military training, training as emergency medical technician, service as a teaching assistant, physical education, remedial or developmental reading, precalculus mathematics (including EDUC 115), supplemental science and mathematics offered by the Learning Strategies Center, English as a second language, keyboarding, and shorthand are among those for which degree credit and credit toward the 12 credits required for good academic standing are not given.

Students enrolled in courses for undergraduate teaching assistants may petition once to have the nondegree credits count toward good academic standing. This would allow continued eligibility for graduating with distinction in all subjects, but would disqualify the student from being on the dean's list that semester.

Advanced placement credit

See p. 8-10. Advanced placement credits count as part of the 120 credits and 34 courses required for the degree. They do not count as part of the 100 credits required in Arts and Sciences at Cornell; their application to distribution and breadth requirements is restricted or prohibited, as explained previously under "Restrictions." AP credits are posted on the transcript during the summer between the freshman and sophomore years, after students have decided whether to accept the credit or forfeit it by taking the Cornell course they had placed out of.

Summer session credit

A student may earn credit toward the degree by completing courses in Cornell's summer session or by successfully petitioning for credit for summer courses at other colleges. Students should consult their advisers regarding summer study plans.

Credit for summer courses not taken at Cornell must be approved by the appropriate Cornell department. Approval forms and information are available online, www.arts.cornell.edu, and in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall. Transcripts for completed work at other institutions must be sent to Robin Perry, 172 Goldwin Smith Hall. Credit approved for summer courses away from Cornell (including summer courses abroad) counts toward the 120 credits and 34 courses required for the degree, but not toward the 100 credits required in the college at Cornell. For students in the **graduating classes of 2006 or earlier**, it may be applied to part of the Group I and II distribution requirements. For all students, it may not be applied to breadth requirements but may be applied to elective requirements and to major requirements (with the approval of the department).

Entering students who want to receive credit toward the degree for courses completed before matriculation in a summer session away from Cornell should obtain approval forms as soon as possible and have transcripts sent to Robin Perry, 172 Goldwin Smith Hall. Credits completed in Cornell summer sessions will be awarded automatically.

Summer session at Cornell or elsewhere does not count toward the eight-semester residence requirement. Students are permitted to earn up to 12 credits in one summer.

Transferring credit earned away from Cornell while on leave of absence

See "Leaves of Absence."

Transferring credit (for transfer students from another institution or from another Cornell college)

Transfer students must satisfy all normal requirements for the degree, including eight semesters of full-time study. They must always complete at least 60 credits and 16 courses at Cornell and be in residence on campus in the college for at least four regular semesters

(summer session does not count toward the residence requirement). The college evaluates credit and residence earned either at another school or college at Cornell University or at another accredited institution of collegiate rank and determines the number of credits and courses the student may apply toward the various requirements for the bachelor of arts degree at Cornell. In addition, it reevaluates advanced placement credit allowed by another institution, including another college at Cornell. Evaluations of transfer credits are normally provided when students are notified of their admission. Once matriculated in Arts and Sciences at Cornell, transfer students must adhere to the same rules for transferring credit earned on leave as all other students.

SPECIAL ACADEMIC OPTIONS

Degree Programs

The following four programs allow students to alter the regular college or major requirements or to work toward more than one degree.

College Scholar Program

The College Scholar Program is meant to serve students whose interests and talents would benefit from a little more academic freedom than other students have, who demonstrate exceptional promise, and who show the maturity to plan and carry out, with the help of their adviser, a well-designed program of study. College Scholars design idiosyncratic programs: some pursue diverse interests; others integrate a variety of courses into a coherent subject. Up to 40 students in each class are accepted into the program.

College Scholars must complete 120 credits of course work (100 in the college), 34 courses, and, unless they receive permission from the program to accelerate, eight full terms of undergraduate study but are not required to fulfill the other usual college requirements for the degree. They must, however, also complete the university's physical education requirement. All college scholars must complete a senior project. Although they are not required to complete or fulfill the general education requirements, members of the College Scholar Advisory Board believe that the spirit of those requirements is good.

Each applicant to the College Scholar Program is asked to write an essay, which is due the last Wednesday of classes before final exams in spring of the freshman year. Students should contact Dean Ken Gabard, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, for further information.

Dual-Degree Program with Other Colleges

The Dual-Degree Program enables especially ambitious undergraduate students to pursue programs of study in two colleges. Dual-degree candidates may earn both a Bachelor of Arts degree from the College of Arts and Sciences and: (1) a bachelor of science degree from the College of Engineering; or (2) a bachelor of fine arts degree from the Department of Art in the College of Architecture, Art, and Planning; or (3) a bachelor of science degree in urban and regional studies from the Department of City and Regional Planning in the College of Architecture, Art, and Planning; or (4) a bachelor of science degree in architectural

history from the Department of Architecture in the College of Architecture, Art, and Planning. Students enter one of these colleges as freshmen or sophomores and begin the Dual-Degree Program with the second college in the second or, in some cases, the third year. The Dual-Degree Program ordinarily takes five years to complete, and students are eligible for 10 semesters with financial aid. For further information contact Dean Kay Wagner in the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Independent Major Program

The Independent Major Program allows students to design their own interdisciplinary majors and pursue a subject that cannot be found in an established major. Proposals for an independent major must be equivalent in coherence, breadth, and depth to a departmental major, well suited to the student's academic preparation, and consistent with a liberal education. Proposals must also be supported by a faculty adviser and are assessed by a board of faculty members. Independent majors substitute for established majors, but students must still satisfy all the other requirements for the bachelor's degree. Students should contact Dean Jim Finlay, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, for further information. Deadlines for submitting independent major proposals are listed on the calendar supplement for the College of Arts and Sciences.

Double Registration with and Early Admission to Professional Schools

Registration in the senior year of the College of Arts and Sciences and the first year of Cornell Law School or the Johnson Graduate School of Management is occasionally possible. A very few exceptionally well-prepared students who have earned 105 credits before the start of the senior year and have been accepted by one of the above-named professional schools may be permitted to register simultaneously in the college and in one or another of these professional schools during the seventh and eighth terms. They earn the B.A. degree after the first year of professional school.

Students with 8 or fewer credits and two or fewer courses to complete may apply to enter the Master's of Engineering program during (but no earlier than) their eighth semester; dual-degree students may enter this program no earlier than the ninth semester. They earn the bachelor degree(s) after one semester of graduate school.

Students interested in the joint program with the Law School or the Graduate School of Management, or in early admission to the master's of engineering program should apply to the relevant program. All candidates should confirm their eligibility with an advising dean, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Double-registered students must, of course, complete all requirements for the B.A. degree, including 100 credits in Arts and Sciences courses.

Teacher Education

Students at Cornell may pursue teaching credentials in agriculture, biology, chemistry, earth science, general science, mathematics,

and physics. Cornell students from any college are encouraged to apply for admission to the Cornell Teacher Education Program during their sophomore or junior year. Those who are admitted complete their undergraduate major in an agricultural science, mathematics or one of the sciences, while taking education courses. They are then able to complete a master of arts in teaching (MAT) in one year and earn certification in New York State.

For more information, contact the program coordinator at 255-9573.

Special-Interest Options

The following options enable students to pursue special interests within the usual degree programs.

Concentrations

Established interdisciplinary concentrations, described in alphabetical order along with departments in the pages following, provide structures for organizing electives. Completed concentrations are noted on the transcript.

Informal Minors

Some students organize electives within a discipline or department in Arts and Sciences or another college. Such informal minors can be developed with the help of the departmental directors of undergraduate studies. They are not noted on the transcript.

Independent Study

Independent study affords students the opportunity to pursue special interests or research not treated in regularly scheduled courses. A faculty member, who becomes the student's instructor for the independent course, must approve the proposed study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study (proposal forms are available at www.arts.cornell.edu and in the Office of Undergraduate Admissions and Advising, 55 and 172 Goldwin Smith Hall). In one semester students may earn up to 6 credits with one instructor or up to 8 credits with more than one instructor.

Undergraduate Research

An excellent way to benefit from being an undergraduate at a research university, at Cornell in particular, is to become an apprentice in ongoing faculty research. About 400 students participate each year in creating new knowledge and earn independent study credit for what they learn and contribute. They sharpen their critical and creative abilities and test their interest in pursuing a research career. Sometimes they publish their work.

The Cornell Undergraduate Research Board, an undergraduate organization, conducts an annual open house to help students get started in research and an annual forum at which undergraduates present their work. See www.rso.cornell.edu/curb/.

Students interested in this program should consult Dean David DeVries in the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall, or consult www.research.cornell.edu/undergrad/.

Language Study

FALCON (Full-Year Asian Language Concentration). FALCON allows students who are interested in the Far East to study Chinese or Japanese exclusively for one year. They gain proficiency in the language and familiarity with the culture. Students who are interested in the Far East should be aware of the opportunities to pursue rapid and thorough beginning studies on campus with the objective of studying abroad in China or Japan. Students interested in this program should contact the Department of Asian Studies, 350 Rockefeller Hall; e-mail: falcon@cornell.edu.

Language House Program

A complement to classroom cultural and linguistic instruction, the Language House Program combines residential and academic opportunities for developing and practicing conversational skills in French, German, Italian, Japanese, Mandarin Chinese, and Spanish. It helps prepare students who plan to study abroad and helps returning students share their cultural experiences while further increasing their language skills. Students interested in this program should contact Clare McMillan, 726 University Ave., 255-6453.

Prelaw Study

Law schools seek students with sound training in the liberal arts and sciences; they neither require nor prefer any particular program of study. Students should therefore study what they love and do well. While doing that, they should also develop their powers of precise, analytical thinking and proficiency in writing and speaking. Students in the College of Arts and Sciences who are applying to law school may consult Lisa Harris in the Office of Arts and Sciences Career Services, 55 Goldwin Smith Hall.

The college offers a concentration in law and society. This program offers a broad scope, complements almost any major, and attracts many students not intending to become lawyers as well as a subset of those intending to.

Premedical Study

The breadth and depth afforded by a liberal arts education are invaluable for students planning medical careers, whether they intend to practice or go into research. Such education has a profound effect on the doctor's understanding of the world and hence usefulness to patients, and it affords the flexibility of mind that is needed for major research undertakings. Medical and dental schools do not prescribe or even prefer a particular major; they do, however, require particular undergraduate courses, and most students are well advised to begin chemistry in their freshman year. Students who are interested in medical careers are urged to visit the Health Careers Office, 203 Barnes Hall.

The adviser for students in the College of Arts and Sciences who are planning careers in medicine is Dean Janice Turner, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall.

Off-Campus Programs

Many students find it important to their majors or to their overall academic programs to study off campus or abroad for one or two

semesters. When it makes academic sense, the college encourages its students to pursue such studies and grants credit toward the degree for work satisfactorily completed. It rarely approves students' participation in more than one off-campus program.

Study Abroad

The College of Arts and Sciences encourages study, both on campus and abroad, that provides a greater understanding of the world's peoples, cultures, economies, and environments, and prepares graduates for the challenges of international citizenship in the 21st century. Study abroad is open to students in any major who meet the college requirements and have a strong academic goal. Well-chosen and well-planned study abroad contributes a global or comparative dimension to your chosen field, enhances critical thinking and communications skills, and provides firsthand immersion in and appreciation of another culture. Focused academic work in the right institution abroad can be excellent preparation for advanced study or honors work in your final semesters at Cornell, and can lead to a career with a global component.

Requirements

- acceptance into a major
- area-studies course work
- fulfillment of the College of Arts and Sciences residence requirement
- GPA of 3.0 or higher and good academic standing
- language study at the required level
- fulfillment of the requirements of the foreign university or program

Cornell Study Abroad students must study alongside degree candidates in their host institutions rather than in self-contained programs that offer courses specially designed for foreigners. The college will approve only those study-abroad proposals that demonstrate realistic and coherent academic goals that are consistent with the philosophy of a liberal arts education.

The college advocates study abroad that enables students to become competent in another language, so that they can engage fully in daily life in another culture, develop social relationships, and complete formal course work in that language. To study abroad in a country where the host language is not English, the student must demonstrate competence in the language as a prerequisite.

For study abroad in Western Europe and Latin America, students must complete at least **two semesters of the appropriate foreign language at the 200 level** at Cornell; additional course work is strongly encouraged and will increase students' chances for acceptance into the most highly competitive programs. Consult this catalog for the required level of course work in specific languages. For study abroad in Asia, Eastern Europe, the Middle East, and parts of Africa, course work entirely in the host language is not always practical, even after several semesters of language preparation at Cornell. Students should still plan to complete as much language preparation as possible within the Cornell curriculum, at least one to two years of study, and may be approved for language-intensive programs (at least half of the

permitted 15 credits) with appropriate course work in English. If Cornell does not offer instruction in the language of the proposed host country, the student may be approved for a program that combines intensive language instruction with subject course work in English. All students must continue to formally study the language of the host country while abroad.

For study abroad in English-speaking countries, direct university enrollment is approved and expected. Cornell students will engage in a full course of study, generally in their major field, alongside regular degree candidates in the host country. In general, the college requires that at least 50 percent of the classes the student enrolls in be advanced-level course work in their major field.

Students will need to acquire background knowledge of the country or region where they intend to study. At least one area-studies course or one course in the history, culture, economics, politics, or social relations of the country of destination (3 or more credits) *in addition to language study* should be part of every student's preparation for study abroad. Some especially competitive programs require substantial prior course work in the proposed course of study as a prerequisite to acceptance. Students who intend to enhance their major with study abroad may need advanced course work in that field. As with language study, area-studies preparation beyond the minimum is highly recommended.

All A&S students must be formally accepted into a major before going abroad, and should ideally be accepted into a major before beginning the application process. Most students plan a significant amount of academic work toward the major while abroad. Whether or not students intend to earn major credit, the college requires that time spent abroad will not impede their progress toward the degree. The student's faculty adviser and departmental director of undergraduate studies must review and approve the study-abroad plans before the application is submitted to the college.

Study abroad can earn up to 15 A&S credits per semester of full-time course work as long as the curriculum abroad is consistent with that of the college. Completion of one trimester of study earns a maximum of 10 credits. Two terms at Oxford or Cambridge may earn up to 20 credits. You must carry a full course load as defined by the host institution, which should be equivalent to at least 15 credits at Cornell, and all courses must be taken for a letter grade. Courses that fall outside the scope of the liberal arts and sciences may only be taken with the **prior approval** of Dean Wasyliv, and will earn non-A&S credits. Some foreign universities offer courses for visiting students that do not carry any academic credit. Students may **not** earn additional credit for enrolling in extra courses during the semester or year abroad.

Credit for study abroad will be awarded only after completion of the semester abroad, and after the college receives your official transcript. To receive credit, students must fill out a **Request for Credit from Study Abroad** form and submit it to the advising office along with a copy of their transcript. All courses taken abroad will appear on the Cornell transcript and grades earned are reported in the system of the host institution. Grades earned through course work abroad

do not become part of the Cornell GPA, since grades at other institutions are rarely equivalent to grades at Cornell. **Students must save all written work from all courses until their grades are received and recorded on their Cornell transcript.**

The maximum length of study abroad that can count toward A&S degree requirements is two semesters, which is also the amount of time recommended for true immersion in another culture and language. Approved semesters away from campus include Cornell in Washington, Urban Semester, and SEA Semester as well as all Cornell Abroad destinations. Students who transfer to Cornell must complete a minimum of four semesters of residence on campus in Ithaca and may not study abroad during any of those four semesters. Internal transfers must complete four semesters of residence on campus in the Internal Transfer Division and/or the College of Arts and Sciences. Students interested in the Cornell in Rome Program should contact Dean Wasyliv.

All applicants for study abroad during the academic year must go through the Cornell Abroad office after being approved by the College of Arts and Sciences. For more information, see Dean Patricia Wasyliv, 55 Goldwin Smith Hall. The full A&S study-abroad policy can be found on the Cornell Abroad web site.

Summer Residential Programs in Archaeology

During the summer months students may participate in a Cornell-sponsored archaeological project. In recent years the program has organized archaeological projects in Central America, Greece, Israel, Italy, Turkey, and New York State. Students should contact the Archaeology Program for information about the sites currently available. Students planning on attending field schools organized by other institutions should see Professor Peter Kuniholm, B48 Goldwin Smith Hall.

Marine Science

Shoals Marine Laboratory is a seasonal field station that offers a variety of courses and experiences designed to introduce undergraduates to the marine sciences. The laboratory is located on Appledore Island, six miles off the Maine/New Hampshire coasts. Students should contact the Shoals Marine Laboratory Office, G14 Stimson Hall, for further information.

Cornell in Washington

The Cornell in Washington program offers students from all colleges in the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty members, conduct individual research projects, and work as externs. The Cornell in Washington program offers two study options: (1) studies in public policy, and (2) studies in the American experience. The program also offers unique externship opportunities: students serve as externs in a federal agency, congressional office, or nongovernmental organization and take part in a public policy or humanities seminar. They define and carry out individual research projects under the supervision of Cornell faculty members. Potential externships are arranged through, and approved by, the Cornell in Washington

program. For further information, see p. 22 or inquire at M101 McGraw Hall, 255-4090. Study in Washington during a final semester of residence is allowed rarely and only by petition. Students should consult with the dean of seniors, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

ACADEMIC INTEGRITY

Academic integrity is the heart of intellectual life—both in learning and in research. All members of the university community simply must support each other's efforts to master new material and discover new knowledge by sharing ideas and resources, by respecting each other's contributions, and by being honest about their own work. Otherwise the university will fail to accomplish its most central and important goals.

Cornell's Code of Academic Integrity and policy about acknowledging the work of others are among the documents new students receive. Students should read them carefully and not assume they understand what integrity and cheating are and are not. Academic integrity implies more here at the university than it usually did in high school. The standards of integrity are those that prevail in professional life. This means that students must acknowledge and cite ideas they adopt from others (not just direct quotations) and help they receive from colleagues or parents. With productive emphases on collaborative learning and writing, students must understand the general standards and policies about academic integrity and be sure they understand the expectations in individual courses as well. When in doubt, ask the instructor.

ADVISING

The following advisers and offices provide academic advising, help with problems, and information on college procedures and regulations.

Faculty Advisers

Each new student is assigned a faculty adviser. Advisers help students plan programs of study and advise them about ways to achieve their academic goals. Advisers may also help students with study or personal problems or may direct them to other offices on campus where help is available. Academic difficulties may frequently be solved or avoided if students and advisers recognize and address problems early.

Advisers and new advisees meet first during orientation week to discuss course selection. New students are encouraged to see their advisers again early in the semester, before it is too late to drop courses, to discuss their academic progress and to become better acquainted. Advisers and advisees meet at least once each semester to discuss courses for the following semester, and more often if advisees wish to discuss academic or personal issues or to petition for an exception to college rules.

Student Advisers

Student advisers pass on lore about the college and life at Cornell and help new students understand requirements and negotiate the university.

Major Advisers

After acceptance into a major, students are assigned a major adviser, a faculty member in the major department, with whom they shape and direct their course of study. The adviser eventually certifies the completion of the major. Students should consult their major adviser about all academic plans, including honors, study abroad, acceleration, and graduate study. The adviser's support is especially important if a student petitions for an exception to the normal procedures or requirements.

Office of Undergraduate Admissions and Advising

This office, located in 55 Goldwin Smith Hall, 255-5004, and 172 Goldwin Smith Hall, 255-4833, is a resource for faculty and student advisers and for individual students and their parents. Advising deans are available to help students define their academic and career goals, to help with special academic options and exceptions to college rules, and to help when problems arise:

David DeVries, associate dean for undergraduate admissions and advising and undergraduate research, 255-3386

Yolanda Clarke, juniors, seniors, internal transfers, and minority students, 255-4833

Juliette Corazon, minority students and liaison to Latino Studies Program, 255-4833

Maria Davidis, juniors, seniors, Dean's Scholars, Cornell Presidential Research Scholars, Mellon Mays Fellows, and postgraduate fellowships, 255-4833

James Finlay, first- and second-year students, Independent Major Program, Dean's Scholars, Cornell Presidential Research Scholars Fellowships, undergraduate research, 255-5004

Ken Gabard, first- and second-year students and College Scholar Program, 255-5004

Lisa M. Harris, career services and pre-law advising, 255-6926

Ray Kim, student ambassadors, 255-4833

Irene Komor, career counseling, 254-5295

Clare McMillan, Language House Program, 255-6543

Diane J. Miller, career services, 255-6924

Sally O'Hanlon, registrar, 255-5051

Janice Turner, minority students and pre-med advising, 255-9497

Catherine Wagner, juniors, seniors, and dual-degree students, 255-4833

Peggy Walbridge, juniors, seniors, transfer students, and students with disabilities, 255-4833

Patricia Wasyliv, first- and second-year students, academic integrity, study abroad, and peer advisers, 255-5004

Committee on Academic Records

The college faculty's standing Committee on Academic Records has two main tasks: (1) to decide on students' petitions for exceptions

to college requirements or rules and (2) to review the records of students who fail to maintain good academic standing and to take appropriate action. It accomplishes both those tasks without formulae and with attention to each individual situation. Its overriding goal is to help students achieve the best undergraduate education possible.

Petitions

The college faculty takes graduation requirements seriously, and the faculty's Committee on Academic Records virtually never waives a requirement outright. However, some students, with the support of their advisers, propose structuring their educations or fulfilling the spirit of college requirements in ways other than the specified norms. The Committee on Academic Records decides on such requests. Students who find that their undergraduate education would be better realized by satisfying requirements or proceeding in a way that requires an exception to normal rules should meet with an advising dean in the Office of Undergraduate Admissions and Advising. The deans are expert in the college's expectations and procedures and can help the student formulate a petition, if appropriate. The committee decides petitions on the basis of their educational merit.

Actions

The College of Arts and Sciences has no minimum grade requirement for graduation beyond the guideline that at least 100 Cornell credits of the 120 total required for graduation be passed with grades of C (not C-) or above. Consequently, only through actions of the Committee on Academic Records, described below under "Academic Standing," does the college maintain the quality of the degree and attend to individual situations when things academic are not going well.

REGISTRATION AND COURSE SCHEDULING

Enrollment in Courses in the College of Arts and Sciences

New Students

During orientation week, new students attend briefings and other information sessions, meet with faculty advisers, and sign into courses. The college reserves spaces in courses for its incoming students.

Continuing Students

Continuing students select and schedule up to five courses of 3 or more credits and as many 1- and 2-credit courses as they would like during the semester before the one in which the courses will be taken. Students who do not "pre-enroll" during the designated period must wait until the beginning of the semester and may have difficulty securing places in the courses they most want. Before enrolling in courses, students plan their programs and discuss long-range goals with their faculty advisers. In addition, all students are welcome to discuss programs and plans with an advising dean in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall.

At the beginning of each semester, students find their schedules on "Just the Facts." Periodically during the semester, they should confirm the accuracy of their records.

Limits on Numbers of Courses and Credits

To meet the 34-course requirement, students must normally take four courses during each of six semesters and five courses during each of two semesters. To meet the 120-credit requirement, students must average 15 credits per semester. (Note: AP credit and/or summer credits may reduce the average numbers of courses and credits required each semester.)

Minimum number of credits per semester

To maintain good academic standing as a full-time student, students must complete at least 12 degree credits per semester; if for compelling personal or academic reasons students need to carry fewer than 12 credits, they should consult their faculty adviser and an advising dean. Permission is by petition only; it is freely given for first-year students.

Maximum number of credits per semester

First-semester freshmen must petition to enroll in more than 18 credits; other students may enroll in up to 22 credits if their previous semester's average was 3.0 or higher and they are in good academic standing. No more than 22 credits may be taken in a regular semester without permission of the college faculty's Committee on Academic Records. Students who fail to receive approval for excess credits from the committee may count only 18 or 22 credits, depending on their previous semester's average, toward the degree for that semester.

Attendance

Attendance in classes is expected. Absences are a matter between students and their instructors. If a student cannot attend classes because of illness or family crisis, the Office of Undergraduate Admissions and Advising will notify instructors at the request of the student or the family. Nonetheless, the student must arrange to make up examinations or other work with each instructor. A student who will be absent because of religious holidays or athletic competitions must discuss arrangements for making up work with his or her instructors well in advance of the absence. A student who must miss an examination must also consult with the professor in advance. Alternative arrangements are at the discretion of the instructor.

Student athletes should discuss scheduled absences with their instructors at the beginning of the semester. Courses vary in their tolerance of absences. Instructors are not obligated to approve absences for purposes of participating in extracurricular activities, although most will be as flexible as is sensible for a student's academic program.

Adding and Dropping Courses

After course enrollment (also known as pre-enrollment), students may not adjust their schedules until the new semester begins. During the first three weeks of the semester, students may change courses without petitioning. (Note: the add period for first-year writing seminars is only two weeks.)

After the third week of classes, students must petition to add courses and may add them only for a letter grade. They may drop courses

through the seventh week of the semester if no issue of academic integrity is at stake. Between the seventh and 12th weeks students may petition to withdraw from courses, if (1) the instructor approves; (2) the adviser approves; (3) an advising dean approves; (4) the drop does not result in fewer than 12 credits; and (5) no issue of academic integrity is at stake. Students must meet with an advising dean to obtain petition forms.

Courses officially dropped after the seventh week will be noted on the transcript by a "W" where the grade would normally appear.

This is a matter of record and cannot be petitioned. Petitions to withdraw from courses may not be submitted after the end of the 12th week in the semester.

Deadlines for short courses will be adjusted according to the length of the courses.

The effective date of all course changes will be the day the student submits all completed paperwork to the Office of Undergraduate Admissions and Advising.

Leaves of absence (LOAs)

Taking time off from college to gain experience or funds, or to find direction, is sometimes useful. In general, students arrange in advance for leaves to take effect the following semester. Students in good academic standing may take a personal leave of absence up to the beginning of the semester (defined as the first day of classes). Students not in good academic standing may pursue a conditional leave of absence from the college up to the first day of classes. If medical issues are involved, students must consult Gannett: Cornell University Health Services about the advisability of a medical leave of absence. **Any student who wishes to take a leave of absence must consult with an advising dean in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall.**

Students sometimes find it necessary to take a leave of absence at some point during the semester. In addition to the serious financial consequence of taking leaves after the semester has begun (see the Proration Schedule for Withdrawals and Leaves of Absence in the General Information section of this catalog), all leaves taken during the semester are granted at the discretion of the college. Students should discuss their need for a LOA with an advising dean.

Leaves of Absence are of four types:

1. *Personal leaves* impose no conditions concerning reentering the college except for the five-year limit (see "Return from Leave," below). Readmission is automatic upon written request made by August 1 for a fall semester, or January 1 for a spring semester.
2. *Conditional leaves* are granted by the college for students who wish to take a leave but are not in good academic standing, or for students who wish to take a leave during the current semester. In consultation with the student, an advising dean and the Committee on Academic Records set the conditions for the student's return. Students may not return from conditional leaves for at least two semesters and/or until specific and individual conditions, such as completing unfinished work, have been met. Students may be granted conditional leaves after

the 12th week of a semester only under extraordinary circumstances and with the approval of the faculty's Committee on Academic Records.

3. **Medical leaves** are granted by the college only upon the recommendation of Gannett, and are usually issued for at least six months. The college may attach additional conditions appropriate to the individual situation. The student's academic standing is also subject to review at the time of the leave and on return. Students must then receive clearance from both Gannett and the college to be readmitted to study. Students wishing to return from a medical leave should contact Gannett several months in advance to initiate the return process, and only then contact the college.
4. **Required leaves.** The Committee on Academic Records may require a leave of absence if a student is not making satisfactory progress toward the degree. See "Academic Actions."

Students on conditional or required leaves of absence (LOA) may not attend any classes at Cornell through the School of Continuing Education and Summer Sessions. Students on a medical LOA may not register for classes at Cornell unless they obtain the permission of the college and a recommendation from Gannett. Courses taken without college permission will not count toward degree requirements.

Return from Leave

Students wishing to return from leave must contact the college and, where appropriate, provide documentation that all conditions for readmission have been satisfied. All requests for readmission must be received by the college by August 1 for the fall semester and January 1 for the spring semester. In the case of conditional and/or medical leaves, substantial advance consultation with both the college and Gannett: Cornell University Health Services is necessary. On readmission, the student's graduation date will be recalculated. Five years is the maximum length of time a student may be on leave before being withdrawn from the college.

Transferring Credits Earned While on Leave

Students who take courses elsewhere in the United States while on leave may petition to have credits transferred. Petitions are available in 55 and 172 Goldwin Smith Hall and at www.arts.cornell.edu. Approval depends on acceptable grades and the judgment of the relevant departments about the quality of the courses. If approved, these credits may be applied toward the 120 credits and 34 courses needed for graduation, but not toward the 100 credits required in the college. They may be applied to elective requirements or to the major, as allowed by the department, but not to breadth requirements or to distribution in the humanities and the social sciences. For students in the **graduating classes of 2006 or earlier**, they may be applied to part of Group I and II distribution requirements. For students in the **graduating classes of 2007 and later**, they may not be applied to any distribution requirement at all. **Credits earned during a leave do not count toward the eight semesters of residence and may not be used to reduce the terms**

of residence below the required eight. See "Residence."

Study Abroad and International Students on Leave of Absence

Study abroad undertaken during a leave of absence will not receive academic credit. International students on leave of absence from the College of Arts and Sciences may enroll in courses at a college or university in their home country **only**, as such enrollment is not defined as study abroad. They may petition for transfer of credit upon return to Cornell. If approved, the credit will count as described in the previous paragraph.

Withdrawals

A withdrawal is a permanent severance from the university and from candidacy for the degree. Students planning to withdraw should consult an advising dean. Students not requesting a leave and failing to register for a semester will be withdrawn from the college. The college faculty's Committee on Academic Records may require a student to withdraw because of a highly unsatisfactory academic record.

Transferring within Cornell (Internal Transfer)

Internal transfer from one college or school at Cornell into another is attractive for many students whose intellectual interests change (or become more focused). Students who want to transfer should discuss their eligibility with a counselor in the new school or college.

In some cases, students who want to transfer into the College of Arts and Sciences may transfer directly. In other cases, they may be referred to the Internal Transfer Division. During the semester immediately preceding transfer into the College of Arts and Sciences, students should complete at least 12 credits of courses in the College of Arts and Sciences with a 3.0 average and with no grades of *Incomplete*, S-U grades (unless only S-U grades are offered for that particular course), or grade below C (C- is below C). Satisfying this minimum requirement does not, however, guarantee admission. Admission to the college is based on consideration of the student's entire record at Cornell and the high school record, not just the work of one semester. It is also based on ability to complete the B.A. degree within a reasonable time. Internal transfers are required to spend four semesters in Arts and Sciences and thus should initiate the transfer process no later than the second semester of sophomore year. They also must complete at least 100 credits at Cornell with grades of C (not C-) or above. Interested students should see Dean Yolanda Clarke, 172 Goldwin Smith Hall.

ACADEMIC STANDING

Students are in good academic standing for the semester if they successfully complete at least 12 degree credits by the end of the semester and earn no more than one D and no F or U grades. If a student completes only three courses, all grades must be above D. In addition, students are expected to make satisfactory progress toward satisfying requirements for the degree and to earn grades of C (not C-) or better in at least 100 of the 120 credits for the degree. Courses listed

under "courses that do not count toward the degree" do not count toward good academic standing in a semester.

Academic Actions

Students who are not in good academic standing will be considered for academic action by the college faculty's Committee on Academic Records or by one of the advising deans of the college. Students are urged to explain their poor academic performance and submit corroborating documentation. Students may appeal a decision or action of the committee if they have new relevant information and documentation. They must consult an advising dean about appealing.

Warning

Any student who fails to maintain good academic standing will, at a minimum, be warned. A warning is posted on a student's college record but is not reported to the university registrar and does not appear on official transcripts.

Required leave of absence

A student in serious academic difficulty may be required by the faculty Committee on Academic Records to take a leave of absence, normally for a full year. Usually, but not always or necessarily, the Committee on Academic Records warns students before suspending them. Before being allowed to return and reregister in the college, students must document what they did on leave and how they resolved their problems, and they must submit a plan for completing the degree. In some cases students will be required to furnish evidence that they are ready to return or satisfy other conditions before being allowed to reregister in the college. Students who request to return in less than a year must present to the committee extraordinarily convincing evidence of their readiness to return. "Required leave" is posted on the student's official transcript.

Required withdrawal

The faculty Committee on Academic Records may dismiss a student from the college because of a highly unsatisfactory record for one semester or for failure to make satisfactory overall progress in grades, credits, or degree requirements. This action expels the student permanently from the college. "Required withdrawal" is posted on the student's official transcript.

Forgery or Fraud on Forms

Forging signatures or credentials on college forms is an academic offense and constitutes academic fraud. In all cases of forgery on academic forms, the effect of the forged documents shall be negated; such incidents will be recorded in the Academic Integrity Hearing Board's confidential file for forgeries. If the student forges more than once, or if the forgery would advance the student's academic standing unfairly or fraudulently, or if for any reason the situation requires some response in addition to the uniform penalty, the Academic Integrity Hearing Board might recommend further action, such as a notation on the student's transcript, suspension, or dismissal.

GRADES

Letter Grades

See "Grading Guidelines," p. 15.

S-U Grades

The S-U (satisfactory-unsatisfactory) option allows students to explore unfamiliar subjects or take advanced courses in subjects relatively new to them without being under pressure to compete with better-prepared students for high grades. Students are expected to devote full effort and commitment to a course and complete all work in a course they take for an S-U grade. The S-U option is contingent upon the instructor's willingness to assign such grades. **Students must select their grading option and obtain the instructor's approval for the S-U option during the first three weeks of the semester.** No exceptions to this deadline are permitted, and consequently students adding courses after the third week of the semester must add them for a letter grade. A grade of S is equivalent to a grade of C- or higher; a grade of U, which is equivalent to any grade below C-, is a *failing* grade equal to an F. S means the student receives the credit specified for the course. U means no credit is given. A few courses in the college are graded exclusively S-U; in that case, the final grade appears on the transcript as SX or UX.

Prerequisite courses for graduate school and courses counting toward the major should not be taken for an S-U grade, unless the department grants permission. Students may elect the S-U option in courses used to satisfy distribution and elective requirements, provided that such courses do not also count toward major requirements or serve as prerequisites for admission to the major. First-year writing seminars and most language courses disallow the S-U option. In any case, students are advised to use the S-U option sparingly, if they intend to apply to graduate school or for transfer to another college. There is no limit on the number of courses each semester for which students may elect the S-U grade, but within the 120 credits required for the degree, a minimum of 80 credits must be in courses for which a letter grade was received.

Note of Incomplete

An incomplete (INC) signifies that a course was not completed before the end of the semester for reasons beyond the student's control and acceptable to the instructor. Students must have substantial (normally at least 50 percent) equity in the course, be able to complete the remaining work, and have a passing grade for the completed portion. When a grade of incomplete is reported, the instructor submits a form stating what work must be completed, when it must be completed, and the grade (or permanent—"frozen"—incomplete) earned if the work is not completed by that date. When a final grade is determined, it is recorded on the official transcript with an asterisk and a footnote explaining that this grade was formerly an incomplete.

Students must resolve (make up or "freeze") any incompletes with their instructors before graduation.

Note of R (Yearlong Courses)

R is recorded for satisfactory progress at the end of the first semester of a two-semester course. Students enroll in such courses both semesters, each time for the full number of credits for the whole course. The grade recorded at the end of the second semester evaluates the student's performance in the course for the entire year.

Grade Reports

Grade reports are available online on Just the Facts; they are not mailed to students. Students should periodically check their courses and grades to be sure that they are recorded correctly.

Class Rank

The college does not compute class rank.

Dean's List

Inclusion on the Dean's List is an academic honor bestowed by the dean of the college semester by semester. Based on grades, the criteria include about the top 30 percent of students and vary with the number of credits the student completes. The criteria are subject to slight changes from semester to semester and are available at www.arts.cornell.edu/stu-adv/deanslist.asp and in the Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall.

GRADUATION

The Degree

The College of Arts and Sciences grants only one degree (no matter the student's major): the A.B. (or B.A.). A.B. is the abbreviation of the Latin name for the degree, "artium baccalarius," or translated into English, B.A., "Bachelor of Arts."

Application to Graduate

In the first semester of their senior year, students complete an application to graduate. The application allows the college to check each student's plan for fulfilling college requirements. This process is intended to help seniors identify problems early enough in the final year to make any necessary changes in course selection to satisfy those requirements. *Nonetheless, meeting graduation requirements is the student's responsibility*; problems that are discovered, even late in the final semester, must be resolved by the student before the degree can be granted.

Degree Dates

There are three degree dates in the year: May, August, and January. Students who plan to graduate in August may attend graduation ceremonies in the preceding May. Students graduating in January are invited to a special recognition ceremony in December; they may also attend graduation ceremonies the following May.

Honors

Bachelor of Arts with Honors

Almost all departments offer honors programs for students who have demonstrated exceptional accomplishment in the major and

succeeded in research. The honors programs are described by individual departments. The degree of Bachelor of Arts *cum laude*, *magna cum laude*, or *summa cum laude* will be conferred upon a student who, in addition to having completed the requirements for the degree of Bachelor of Arts, has been recommended for a level of honors by the major department, the Independent Major Program, or the College Scholar Program. Concentrations do not offer honors programs.

Bachelor of Arts with Distinction

The degree of Bachelor of Arts with distinction in all subjects will be conferred on students who have completed the requirements for the degree of Bachelor of Arts, if they have met the following requirements by the end of their final semester:

1. completed at least 60 credits while registered in regular sessions at Cornell;
2. ranked in the upper 30 percent of their class at the end of the seventh semester, or next-to-last semester for transfers and accelerants;
3. received a grade below C- in no more than one course;
4. received no failing grade;
5. have no frozen *Incompletes* on their records; and
6. maintained good academic standing, including completing a full schedule of at least 12 credits, in each of their last four semesters.

CALENDAR SUPPLEMENT

All of the dates in the university calendar at the front of this volume apply to all Cornell students. Listed below are some additional dates that are of importance for students in the College of Arts and Sciences.

	Fall 2005	Spring 2006
Last day for adding courses without petition	Sept. 16	Feb. 10
Last day for adding a first-year writing seminar	Sept. 9	Feb. 3
Last day for changing grade option to S-U or letter	Sept. 16	Feb. 10
First deadline for submitting independent major requests. Go to 172 Goldwin Smith Hall for further information.	Sept. 26	Feb. 27
Last day for dropping courses without petition	Oct. 14	March 10
Last day to petition to withdraw from a course	Nov. 18	April 21
Second deadline for submitting independent major requests. Go to the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall, for further information.	Nov. 27	April 3

Deadline for requesting internal transfer to the College of Arts and Sciences for the following semester.	Dec. 3	May 6
Deadline for applying to the College Scholar Program.		May 4
Deadline for applying Office, to study abroad	See Cornell Abroad	474 Uris Hall
Course enrollment (preregistration) for the following semester.	TBA	TBA

Departments, Programs and Courses

AFRIKAANS

See "Department of German Studies (Dutch)."

AFRICANA STUDIES AND RESEARCH CENTER

S. Hassan, Director (255-0528); A. Adams, N. Assië-Lumumba, A. Bekerie, L. Edmondson, R. Harris, A. Mazrui, A. Nanji, D. Ohadike J. Turner. Offices: 310 Triphammer Road, 255-4625 or 255-4291.

The Africana Studies and Research Center is concerned with the examination of the history, culture, intellectual development, and social organization of Black people and cultures in the Americas, Africa, and the Caribbean. Its program is structured from an interdisciplinary and comparative perspective and presents a variety of subjects in focal areas of history, literature, social sciences, and African languages. African languages such as Swahili are consistently offered fall and spring semesters and also taught during summer/winter session.

The center offers a unique and specialized program of study that leads to an undergraduate degree through the College of Arts and Sciences and a graduate degree, the Master of Professional Studies (African and African-American), through the university's Graduate School.

A student may major in Africana Studies; however, another attractive alternative is the center's minor concentration program. This program enables the student to complete a major in any of the other disciplines represented in the college while at the same time fulfilling requirements for a minor in Africana Studies. This requires only a few more credits than is usually the case when one completes a single major course of study. Courses offered by the center are open to both majors and nonmajors and may be used to meet a number of college distribution requirements, including historical/temporal breadth (#) and geographical breadth (@) requirements, such as first-year writing seminars, language (Swahili), expressive arts, humanities, social sciences, and history.

The center also brings distinguished visitors to the campus, sponsors a colloquium series, and houses its own library.

The Africana Major

The undergraduate major offers interdisciplinary study of the fundamental dimensions of the African-American, African, and Caribbean experiences. Because of the comprehensive nature of the program, it is to students' advantage to declare themselves Africana majors as early as possible. The following are prerequisites for admission to the major.

Students should submit:

1. a statement of why they want to be an Africana Studies major;
2. a tentative outline of the area of study they are considering (African, African-American, or Caribbean) for the major; and
3. a full transcript of courses taken and grades received.

The center's director of undergraduate studies, A. Bekerie, will review the applications and notify students within two weeks of the status of their request.

After acceptance as a major in the Africana Center, a student must maintain a C+ cumulative average in the center's courses while completing the major program. The Africana major must complete 36 credits in courses offered by the center, to include the following four core courses: AS&RC 205, 231, 290, and 422. Beyond the core courses, the student must take 8 credits of center courses numbered 200 or above and 15 credits numbered 300 or above. The program of an undergraduate major may have a specifically Afro-African focus or a specifically African focus.

Joint Majors (Minor Concentration)

The center encourages joint majors (minor concentration) in the College of Arts and Sciences and in other colleges. Joint majors are individualized programs that must be worked out between the departments concerned. The center's director of undergraduate studies, A. Bekerie, will assist students in the design and coordination of joint major programs. However, in any joint major program, the center will require that at least 16 credits be taken in Africana Studies courses, including AS&RC 290.

Double Majors

In the case of double majors (as distinct from joint majors) students undertake to carry the full load of stipulated requirements for a major in each of the two departments they have selected.

Certificate in African Studies

In conjunction with the Institute for African Development, the Africana Studies and Research Center administers an undergraduate Certificate in African Studies program. The certificate is offered as a minor concentration available to students in all of the undergraduate colleges at Cornell. Many of the courses in the program might be used to fulfill other course distribution requirements. By pursuing this certificate, students acquire an interdisciplinary understanding of Africa. After developing a foundation of knowledge on the culture, society, and development of Africa in the core course, AS&RC 191 Africa: The Continent and Its People, students

pursue 15 credit hours in a humanities or development studies track or a combination of the two, including an additional core course, either AS&RC 205, African Civilizations and Cultures or CRP 477/677 Issues in African Development. The requirements for the certificate are a minimum of 18 credit hours, including the core courses. Students interested in the certificate program must contact A. Bekerie (the center's director of undergraduate studies), who will register them in the program and assign them a faculty adviser from their own college. The faculty adviser will be responsible for determining completion of the certificate requirements.

Honors

The honors program offers students the opportunity to complete a library research thesis, a field project in conjunction with a report on the field experience, or a project or experiment designed by the student. The requirements for admission to the honors program for all students—regular majors, joint majors, and double majors—are a B- cumulative average in all courses and a B+ cumulative average in the center's courses. Each student accepted into the honors program will have an honors faculty committee consisting of the student's adviser and one additional faculty member, which is responsible for final evaluation of the student's work. The honors committee must approve the thesis or project before May 1 of the student's junior year. The completed thesis or project should be filed with the student's faculty committee by May 10 of the senior year.

Language Requirement

Courses in Swahili may be used to satisfy the College of Arts and Sciences language requirement. In Swahili, successful completion of AS&RC 131, 132, 133, and 134 provides qualification, and the addition of 202 provides proficiency. AS&RC majors are not required to take an African language, but the center recommends the study of Swahili to complete the language requirement.

AS&RC 111/112(1104/1105)

Elementary Arabic I and II (also NES 111/112)

Fall/Spring. 4 credits. *AS&RC 112 provides language qualification.* M. Younes.
For description, see NES 111/112.

AS&RC 113/212(1106/2101)

Intermediate Arabic I and II (also NES 113/210)

Fall/Spring. 4 credits. *AS&RC 212 @ provides language proficiency and satisfies Option 1.* M. Younes.
For description, see NES 113/210.

AS&RC 308/312(3100/3101) Advanced Intermediate Arabic I and II @ (also NES 311/312)

Fall/Spring. 4 credits. *AS&RC 308 provides language proficiency and satisfies Option 1.* M. Younes.
For description, see NES 311/312.

AS&RC 131(1100) Swahili

Fall. 4 credits. Language lab times TBA.
A. Nanji.
Beginner's Swahili. Part 1—Grammar for speaking, reading, and writing. Requires no knowledge of language. Swahili is spoken in the East and Central parts of Africa.

AS&RC 132(1101) Swahili

Spring. 4 credits. Prerequisite: AS&RC 131. A. Nanji.

Continued study of the basic grammatical formation of the language and the introduction of reading material ranging from songs to short stories. A great many drills are used in this course to help develop the student's comprehension of the language. Swahili tapes are used during all of these sequences.

AS&RC 133(1102) Swahili

Fall. 4 credits. Prerequisites: AS&RC 131 and 132. Language lab times TBA. A. Nanji.

Advanced study in reading and composition.

AS&RC 134(1103) Swahili

Spring. 4 credits. *Provides language qualification.* Prerequisite: AS&RC 133. A. Nanji.

Places more emphasis on the development of reading ability and the acquisition of writing skills. Students are expected to read and comprehend selected Swahili stories and write compositions on chosen topics. Ample consideration is given to oral practice in the classroom.

AS&RC 171(1600) Black Families and the Socialization of Black Children (III) (SBA)

Fall. 3 credits. G. Jackson.

Examination of the evolution of the Black family from its roots in Africa, the evolution of family forms, the impact of social policy, and a consideration of the literature stressing family and child well-being. Among the major topics considered are male/female relationships, childbearing and parental roles, the extended family, and economic and health issues. The component of the course focusing on youth primarily covers child and adolescent development.

AS&RC 172(1601) The Education of Black Americans: Historical and Contemporary Issues (III) (SBA)

Spring. 3 credits. G. Jackson.

Devoted to the history of educating Black Americans. Considerable attention is given to contemporary issues. The major topics of focus include an examination of the debates concerning the type of the education needed, public and private schooling efforts, the Africana Studies movement, community control issues, busing, affirmative action, resegregation debates, and new initiatives in education including vouchers and charter schools.

AS&RC 191(1300) Africa: The Continent and Its People @ (III) (HA)

Fall. 3 credits. L. Edmondson.

Introductory interdisciplinary course focusing on Africa's geographical, ecological, and demographic characteristics; indigenous institutions and values; the triple cultural heritage of Africanity, Islam, and Western civilization; main historical developments and transitions; and contemporary political, economic, social, and cultural change. Africa's ties with the United States (from trans-Atlantic slavery to the present), its impact on the emerging world order, and its contribution to world civilization are also explored.

AS&RC 202(2100) Swahili Literature @ (IV) (LA)

Fall. 4 credits. *Provides language proficiency and satisfies Option 1.* Prerequisite: AS&RC 134. A. Nanji.

Students gain mastery over spoken Swahili and are introduced to the predominant Swahili literary forms.

AS&RC 205(2300) African Cultures and Civilizations # @ (III) (CA)

Spring, summer. 3 credits. A. Bekerie.

Concerned with the peoples of Africa and the development of African cultures and civilizations from the earliest times to the present day. Focuses on the near modern civilizations of Africa south of the Sahara, and the ancient civilizations of Egypt and the Nile Valley, together with their contributions to the development of the major world civilizations. Also deals with the sociopolitical organization of African societies, their kinship systems, cross-cutting ties, rites of passage, gender relations, and arts (including music, dance, folklore, architecture, sculpture, painting, and body decoration).

AS&RC 206(2502) Introduction to Black Theatre (also THETR 206[2060]) (IV) (LA)

Fall. 3 credits. Successful completion of course gives students priority for limited enrollment in AS&RC 207 Black Theatre, which produces a public performance in spring. L. Grady-Willis.

Performance-based course introducing students to the evolution of Black Theatre in the United States through the study and interpretation of classic and contemporary plays. Students read works often overlooked in mainstream theatre and literature courses, while experiencing firsthand the challenges and triumphs of creating theatre together. Students participate in both individual and group presentations of dramatic materials. Through dialogue as well as hands-on exploration, students gain insight into various aspects of performance and production, while exploring the works of such renowned playwrights as Lorraine Hansberry and Douglas Turner Ward.

AS&RC 207(2500) Black Theatre (also THETR 207[2070])

Spring. 3 credits. L. Grady-Willis.

Performance-based course introducing students to Black Theatre through the interpretation of classic and contemporary plays. Students read works often overlooked in mainstream theatre and literature courses, while experiencing firsthand the challenges and triumphs of creating theatre together. Students participate in individual and/or group presentations of dramatic materials. Through dialogue as well as hands-on exploration, students gain insight into various aspects of performance and production. This course culminates in a public performance. Students serve as actors as well as members of the production team.

AS&RC 210(2501) Major Works of Black World Writing (IV) (LA)

Fall. 3 credits. C. Anyadike.

Surveys classic texts by African American, Caribbean, and African writers. Focus is on literary texts by authors such as Langston Hughes, Toni Morrison, James Baldwin, Maryse Conde, and Chinua Achebe, with a view toward analyzing common experiences, references, themes, and literary strategies across the Black world. Works of fiction, poetry and drama that constitute the central material of the course are supplemented by essays and biographies from other authors who have influenced the creative vision and

the movement of the peoples of Africa and the Diaspora.

[AS&RC 231(2601) Afro-American Social and Political Thought (III) (SBA)]

Spring. 3 credits. Not offered 2005-2006. J. Turner.]

AS&RC 255(2503) African Literature (also ENGL 255[2550])

Fall. 4 credits. B. Jeyifo.

For description, see ENGL 255.

[AS&RC 290(2602) The Sociology of the African-American Experience (III) (SBA)]

Fall. 3 credits. Not offered 2005-2006. J. Turner.]

AS&RC 299 Achebe and the African Novel

Fall. 3 credits. C. Anyadike.

A course on the pioneering role and continuing influence of Chinua Achebe's *Things Fall Apart* on the development of the novel writing tradition in Africa. From the perspectives of Achebe's seminal essays, and commentaries, articles by other writers and critics of African novels, the course examines how some selected African novels continue and contrast with the artistic and ideological concerns expressed in *Things Fall Apart* in an effort to get a good understanding of the growth of a novel writing tradition in Africa. Particular attention will be paid to women's writing and different approaches to narrative and social vision. Other authors studied may include Ayi Kwei Armah, Ngugi Wa Thiong'o, Buchi Emecheta, and Tsi Tsi Dangrembaga.

[AS&RC 301(3200) Politics of Global Africa @ (III) (SBA)]

Fall. 3 credits. Not offered 2005-2006. A. Mazrui.]

AS&RC 304(3500) African American Art (also ART H 377[3500])

Spring. 3 credits. C. Finley.

Presents a survey of the different forms of visual arts production by African Americans from 1619 to the present. Begins with an overview of African art and the experiences of the Middle Passage and slavery in relation to African American traditions in the decorative arts (furniture, ironwork, quilt-making, basketry), architecture and archeology. The core of the course is centered in the 20th century and today with an examination of the fine arts of painting and sculpture as well as photography, performance, film and video. Special attention is given to rich periods of artistic production, including the Harlem Renaissance and the Black Arts Movement. Slides and films are used extensively to illustrate topics discussed in addition to original examples of African American art and artifacts in the special collections of the Kroch Library and the Johnson Museum on campus.

AS&RC 310(3501) Introduction to African Art (also ART H 378[3510]) @ (IV) (LA)

Fall. 3 credits. S. Hassan.

Survey of the visual art and material cultural traditions of sub-Saharan Africa. Aims at investigating the different forms of visual artistic traditions in relation to their historical and sociocultural context. Explores the symbolism and complexity of traditional African art through the analysis of myth, ritual, and cosmology. Uses in-depth analysis of particular African societies to examine the relationship of the arts to indigenous concepts of time, space, color, form, and sociopolitical

order. Also explores new and contemporary art forms associated with major socioeconomic changes and processes of assimilation and acculturation. These include tourist art, popular art, and elite art.

AS&RC 311(3600) Government and Politics in Africa @ (III) (SBA)

Fall. 3 credits. A. Mazrui.

Deals with power and political participation in Africa. Topics include: the colonial background and its political consequences, the precolonial continuities in the post-colonial politics; ethnicity and allegiance in the African polity; and the monarchical tendency in African political culture. Discussion covers a spectrum of topics from the warrior tradition to the military coup in the post-colonial era; from the elder tradition to presidential gerontocracy; from the sage tradition to intellectual meritocracy. Other major topics include class versus ethnicity in African politics; the one-party versus the multiparty state; sociocultural versus socioeconomic ideologies; the gender question in African politics; the soldier and the state; and the African political experience in a global context.

AS&RC 320(3202) Race in U.S. Cinema 1895 to 1930 (also VISST 320, FILM 320(3200)) (IV) (CA)

Spring. 4 credits. M. Wallace.

Cultural stereotypes and clichés of blacks as inept and clownish were rife in the illustrated press at the time (the turn of the century) that the earliest films were brief and cheap to produce, allowing for a range and variety of imagery that quickly overwhelmed the most compelling racial stereotypes on stage and in performance. In the teens, as the U.S. film industry began to consolidate westward in California, there was the emergence of a powerful new set of racial stereotypes mobilized around the perception of slavery as having been most beneficial for all concerned, culminating in such films as *Gone with the Wind* in 1939. In the meanwhile, in the '20s and '30s, the U.S. film industry remained capable of a modicum of diversity and self-contradiction as black entertainers and peoples of color were becoming internationally famous for their extraordinary gifts as musicians, dancers and performers. Some of the performers in this list include Jack Johnson, Noble Johnson, Mme. Sul-te-Wan, Bert Williams, Paul Robeson, Fredi Washington, Louise Beavers, Hattie McDaniel, Anna Mae Wong, Nina Mae McKinney, Bessie Smith, Louis Armstrong, Josephine Baker, and Ethel Waters.

AS&RC 325 New Postcolonial Black Lit @ (IV) (LA) (also ENGL 399, COM L 325)

Spring. 4 credits. C. Anyadike.

Devoted to the study of exciting and important new voices of the last decade from the so-called postcolonial societies with a view to highlighting how this body of work has broadened or gone beyond the issues which engaged their predecessors: the colonial experience, imperialism, globalization, culture clash, identity and gender issues. Special attention is paid to women's writing, which has benefited from the upsurge of interest in gender studies during the period. Authors considered may include Edwidge Danticat, Yvonne Vera, Arundhati Roy, Pamela Jooste, Chimaanda Adiche. By reading representative works of writers close to them in age, students may become well informed

and issues important to young people in situations and cultures different from their own.

AS&RC 332(3201) 20th-Century Black Cultural Movements (also COM L 387) @ (IV) (CA)

Fall. 4 credits. A. Adams.

Examines the major cultural currents of the 20th century in the Black World. Major movements/currents considered include the Harlem Renaissance, Negritude, Indigenismo, Black Arts Movement, Creolité. Basing the study primarily in the reading of literary texts, the artistic/cultural movements are studied within the historical, social, and political forces that produced or influenced them, e.g., religion, colonialism, social protest, African and Caribbean independence, womanism. Particular attention is given to comparisons across geographic regions, principally the African continent, North America, and the Caribbean. The reading of the literary texts is supported by theoretical readings as well as references to other artistic forms, such as visual arts and music.

AS&RC 342(3504) Topics in Black World Writing (IV) (LA)

Spring. 4 credits. A. Adams.

Provides rotating topics in African and Diaspora literary texts for students at the intermediate level. The rotating topics include: "In Living Color: African and Diaspora Autobiography"; "The Afro-Europeans: African Diaspora in Europe"; "Africa Seen through the Eye of the Diaspora." Although a lecture course, with specific, required readings, this class also provides an opportunity for students to read independently selected texts for individual projects.

AS&RC 352(3601) Pan-Africanism and International Politics (III) (SBA)

Spring. 3 credits. L. Edmondson.

Pan-Africanism addresses the shared experiences and aspirations of African people around the world, focused on a search for greater linkages and unifying measures. Informed by an exploration of the racial factor in international relations, this course examines Pan-African theories, ideologies, and movements, past and present, in their political, socioeconomic, and cultural manifestations, focusing mainly on the African continent, the Caribbean, and Black America.

[AS&RC 362(3602) Global Perspectives on Gender @ (III)]

Spring. 4 credits. Not offered 2005–2006. N. Assié-Lumumba.]

[AS&RC 380(3300) African History: Earliest Times to 1800 # @ (III) (HA)]

Fall. 3 credits. Not offered 2005–2006. A. Bekerie.]

AS&RC 404(4200) Afrocentricity: Paradigm and Critical Readings @ (III) (CA)

Fall. 4 credits. A. Bekerie.

What is Afrocentricity? It is a theoretical framework designed to study and interpret the histories and cultures of peoples of Africa and African descent by locating them at the center of their experiences. In other words, it is a method of knowing the life experiences of African peoples from the inside out. The course examines—through the writings of Asante, Keto, Clarke, Jean, Myers, Amin, Mazrui, Gates, Appiah, Richards, Schlesinger, and Thiongo—the conception and depth of the paradigm, its relevance in the production

and utilization of knowledge, particularly emancipatory knowledge, the history of the paradigm, and the debate it generates among a wide range of thinkers and scholars.

[AS&RC 410(4300) African American Politics (III) (HA)]

Spring. 4 credits. Not offered 2005–2006. J. Turner.]

AS&RC 413 Lynching Violence in America (also S HUM 413)

Fall. 4 credits. N. Barnes.

For description, see S HUM 413.

[AS&RC 420(4605) Public Policy and the African-American Urban Community (III) (SBA)]

Spring. 4 credits. Not offered 2005–2006. J. Turner.]

AS&RC 422(4501) African Literature @ (IV) (LA)

Spring. 4 credits. G. Anyadike.

With such great focus, both inside and outside Africa, on issues of Africa's "development," what place does "literature" take? Is African literature influencing or influenced by the mundane realities of daily living faced by African people? Or does African literature concern itself with philosophical ideas and ideals that transcend those realities to embrace the general human condition? Or, does it do both? The texts read in this course are approached in terms of these issues of "African development" and "the universal human experience".

AS&RC 426 Rastafari, Race, and Resistance (also S HUM 425)

Spring. 4 credits. P. Archer-Straw.

For description, see S HUM 425.

AS&RC 437(4203) Black Feminism and Photography (IV) (CA)

Fall. 4 credits. M. Wallace.

Looks at recent academic and intellectual developments in black feminist thought. Interrogates contemporary investigations by feminist visual culture into the increasing awareness, documentation and photography of American poverty from the turn of the century through the fifties. How did photographic images of the poor go from being regarded as picturesque to successfully provoking efforts of social reform? How were sexuality and gender roles re-inscribed within a series of social class expectations rendered newly explicit by the technological innovations of halftone printing and the illustrated press? Most important, were these images racially deterministic, merely reportorial or perhaps (as Walker Evans and James Agee might suggest) perennially and deeply poetic? These images form the basis of our national legacy, made increasingly available and affordable for all of us thanks to the Internet. As such, this is a timely and useful field of inquiries for today's undergraduates in the humanities and the arts.

AS&RC 451(4600) Politics and Social Change in the Caribbean @ (III) (SBA)

Fall. 4 credits. L. Edmondson.

Study of the historical, geostrategic, political, economic, and social (including racial and cultural) forces affecting the domestic and international experiences of Caribbean societies. Special attention is given to conflicting definitions and perceptions of the Caribbean; contending theories of Caribbean social structure and models of development; the continuing salience of struggles for change

and transformation; prospects of regional integration; and Caribbean challenges to the global system, especially with regard to the region's relations with the United States and the region's position in the Third World in the context of the North-South cleavage.

AS&RC 455(4500) Caribbean Literature @ (IV) (LA)

Fall. 4 credits. A. Adams.

Examines the prose literature of the Caribbean islands. Through the reading of several novels and short stories from the various languages and cultural strains that comprise the Caribbean societies, students study the points of commonality and the diversity within this body of literature. The recurrence of certain historical, social, and cultural issues that have formed the multi-ethnic Caribbean peoples are analyzed in their varying manifestations across the linguistic and other boundaries to uncover the underlying shared experience.

AS&RC 459(4601) Innovation in Africa and the Diaspora (also EDUC 459[4590]) @ (III) (SBA)

Fall. 4 credits. N. Assiè-Lumumba.

Deals with educational innovations geared to promoting equal opportunity based on gender, race, and class in Africa and the African diaspora. After introducing the concepts of education and innovations and the states of innovation as planned change, the course focuses on concrete historical and contemporary cases of educational innovations. The case studies in the United States include the creation and expansion of historically black institutions such as Lincoln University, Spelman College, Tuskegee Institute (now Tuskegee University), and other schools in the South, and the Westside Preparatory School in Chicago. The African cases studied include African languages for instruction with a focus on a Nigerian case, Ujamaa and education for self-reliance in Tanzania, and the case of Cote d'Ivoire, which adopted television as a medium of instruction.

[AS&RC 463(4201) Islam in Global Africa (III) (CA)]

Fall. 4 credits. Not offered 2005-2006.

A. Mazrui.]

AS&RC 468-469(4900-4901) Honors Thesis

468, fall; 469, spring. Prerequisite: permission of AS&RC director of undergraduate studies. Africana Center faculty.

For senior Africana Studies majors working on honors theses, with selected reading, research projects, etc., under the supervision of a member of the Africana Studies and Research Center faculty.

[AS&RC 475(4301) Black Leaders and Movements in African-American History (III) (HA)]

Fall. 4 credits. Not offered 2005-2006.

R. Harris.]

AS&RC 478(4606) The Family and Society in Africa (also SOC 478) @ (III) (SBA)

Fall. 4 credits. N. Assiè-Lumumba.

The family, as a social institution, is structured according to historical, socioeconomic, political, and cultural factors. Course topics include the concepts of the nuclear and extended family; the roles, rights, and obligations of age groups and generations; and marriage and its related issues, including parenthood, childrearing, and gender roles.

Other issues examined are reproductive health, family planning, sexuality and fertility (particularly during adolescence), family codes, and legal implications. The course deals also with structural change and continuity, the impact of westernization, urbanization, formal education, and the contemporary economy on the structure and challenges of the family in Africa. Finally, the legacy of African family values and traditions in the African Diaspora, with a focus on the African-American experience, is discussed.

AS&RC 479(4602) Women and Gender Issues in Africa @ (III) (SBA)

Spring. 4 credits. N. Assiè-Lumumba.

There are two contrasting views of the status and role of women in Africa. One view portrays African women as dominated and exploited by men. According to another view women have a favorable social position in Africa: indigenous ideologies consider women to be the foundation of society, they are economically active and independent and they have an identity independent of men. In this seminar we discuss the status and role of women in Africa historically as well as in the contemporary period. Topics include women in non-westernized/precolumbian societies; the impact of colonial policies on the status of women; gender and access to schooling, participation in the economy and politics; women and the law; women and health issues; gender issues in southern Africa; womanism and feminism; the United Nations Decade of Women; and the four World Conferences on Women (Mexico 1975, Copenhagen 1986, Nairobi 1985, and Beijing 1995).

AS&RC 484(4603) Politics and Social Change in Southern Africa @ (III) (SBA)

Spring. 4 credits. L. Edmondson.

Focuses on the legacies of apartheid and the challenges of transformation toward a post-apartheid society in South Africa. Topics include the rise and decline of apartheid; the historical continuity of Black resistance against racism; women under, against, and after apartheid; South Africa's relations with its neighbors; geo-political, economic, and racial dimensions of the American connection; politics of negotiation and transition to majority rule; prospects for stability, democracy, and equality; and South Africa's new role in the African continental and global arenas. Instructor's lectures are supplemented by films and class discussions.

AS&RC 490(4302) Nile Valley Civilization: Ethiopia, Nubia, and Egypt @ (IV) (HA)

Spring. 4 credits. A. Bekerie.

Focuses on Nile Valley civilizations and their contributions to African and world history. Since natural and human resources provide the foundation for civilizations, the course also examines the ecological and cultural compositions of the river. Concentrates on the Aksumite civilization of Ethiopia, Nubian civilizations of the Sudan, and the Kemetic civilizations of Egypt. Uses archaeological, literary, oral, biological, and religious sources to study civilization centers along the Nile. Students discuss civilizations as artifacts that have material, spiritual, social, and philosophical dimensions. Students are introduced to the Ethiopic writing system as a practical lesson in the conception and understanding of aspects of African civilizations.

AS&RC 498-499(4902-4903) Independent Study

498, fall; 499, spring. Africana Studies faculty.

For students working on special topics, with selected reading, research projects, etc., under the supervision of a member of the Africana Studies and Research Center faculty.

[AS&RC 501(6200) Global Africa: Comparative Black Experience]

Fall. 4 credits. Not offered 2005-2006.

A. Mazrui.]

AS&RC 502(6600) Education and Development in Africa

Spring. 4 credits. N. Assiè-Lumumba.

Human capital theory establishes a positive and linear relationship between formal education and individual productivity and socioeconomic attainment and economic growth and development of nations. While enjoying considerable popularity in industrial and developing countries, including African countries, education has also been perceived as a hindrance to development. The concept of human capital and paradigms of development including modernization, dependency, and Third World Forum are first introduced. Specific issues discussed include schooling and nonformal education; the role of primary, secondary, and higher education in development; and language, access, output, and outcome based on social class, ethnicity, race, and gender. Employment, migration and international brain drain, the information and communication technologies, indigenous knowledge systems, and the role of higher education in regional and international cooperation are also examined.

AS&RC 504(6201) Political Change in Africa

Fall. 4 credits. A. Mazrui.

The study of Africa can be approached dialectically (focusing on the tension between opposing forces) or thematically (focusing on themes as chapters of experience). This course borrows from both those approaches. In their class assignments and examinations students are free to use either approach. The first approach explores the dialectic between continuity and change; tradition and modernity; dependency and liberation; foreign and indigenous influences; anarchy and order; political decay and political development; democracy and authoritarianism; and socialism and capitalism. The thematic approach examines African nationalism; race consciousness and Pan-Africanism; political parties and interest groups; executive power; ethnicity in politics; class-formation; civil-military relations; economic and cultural dependency; sub-regional and continental Pan-Africanism; crisis of the African state; and Africa in world politics.

AS&RC 506(6500) Contemporary African Diaspora Art (also ART H 506[5505])

Spring. 4 credits. C. Finley.

Since the 1950s, projects of black liberation and empowerment have influenced the work of African Diaspora artists in the black Atlantic. Pivotal historic events, such as the Civil Rights Movement, the dismantling of colonial rule in Africa and the Brixton race riots in England, have urged black artists to reexamine issues of memory, identity, history and belonging. This course considers those artists who trace a visual genealogy of the African Diaspora and work in what has been identified as a practice of remembrance. The

focus is on artists working after 1960, but students also study the roots of this tradition in the beginning of the 20th century and in earlier periods.

AS&RC 530(6505) Womanist Writing in Africa and the Caribbean

Spring. 4 credits. A. Adams.

Theoretical essays on the nature, relevance, and articulation of feminist thought from African and Caribbean writers complement literary texts. Gender issues, as manifested both at home and in emigrant situations abroad are examined in texts by such writers as Sistren, Conde, Dangarembga, Aidoo, Warner-Vieyra, Ba, Emecheta, Kincaid, and W. Mandela. (Francophone works may be read in the original by individuals who so desire.)

AS&RC 532(6202) 20th-Century Black Cultural Movements (also COM L 690[6900])

Fall. 4 credits. A. Adams.

Examines the major cultural currents of the 20th century in the Black World. Major movements/currents considered include the Harlem Renaissance, Negritude, Indigenismo, Black Arts Movement, Creolité. Basing the study primarily in the reading of literary texts, the artistic/cultural movements are studied within the historical, social, and political forces that produced or influenced them, e.g., religion, colonialism, social protest, African and Caribbean independence, womanism. Particular attention is given to comparisons across geographic regions, principally the African continent, North America, and the Caribbean. The reading of the literary texts is supported by theoretical readings as well as references to other artistic forms, such as visual arts and music.

AS&RC 542(6502) Topics in Black World Writing

Spring. 4 credits. A. Adams.

Provides rotating topics in African and Diaspora literary texts for students at the intermediate level. The rotating topics include: "In Living Color: African and Diaspora Autobiography"; "The Afro-Europeans: African Diaspora in Europe"; "Africa Seen through the Eye of the Diaspora." Although a lecture course, with specific, required readings, this class also provides an opportunity for students to read independently selected texts for individual projects.

AS&RC 598-599(6900-6901) Independent Study

598, fall; 599, spring. Variable credit.

Prerequisite: graduate standing. Africana Studies faculty.

AS&RC 601-602(6902-6903) Africana Studies Graduate Seminar

601, fall; 602, spring. 4 credits. Africana Studies faculty.

Designed for first-year AS&RC graduate students. The seminar is coordinated and supervised by one professor but team-taught by three or four faculty members per semester. Each participating faculty member is responsible for a topical *segment* of the course related to her or his areas of specialization or an area of interest pertaining to theory and methodology of Africana Studies.

AS&RC 610 Hurston and Afro-American Folklore (IV) (LA) (also ENGL 684, AM ST 610, FGSS 609)

Fall. 4 credits. M. Wallace.

Looks at the ethnographies and literature produced by Zora Neale Hurston. As an exemplary native-born Modernist, Hurston's approach to African American culture was generally celebratory. Nonetheless, she often hinted otherwise, rendering her work also a first rate guide through a full range of perspectives on the diasporic black experience in the '20s, '30s, and '40s. As students read most of her published works, as well as a range of work recently published about her (letters, new biography, WPA materials), they ponder the remaining mysteries of her life's work: what did she wish to teach us about African American oral traditions? What were her own religious and/or philosophical beliefs and did they change throughout her lifetime?

AS&RC 611 Ellison—Modernism and the Blues (also ENGL 679)

Spring. 4 credits. M. Wallace

Looks at Ralph Ellison's elegant restructuring of the canon of Modernist literature both through the self-creation of his own fiction and his non-fiction essays. With the assistance of a first-rate biographer (Lawrence Jackson in *Emergence of Genius*), students consider some of Ellison's formative culture experiences, including his childhood and adolescence in Oklahoma City and his coming of age through his time as a music student at Tuskegee. In the politically progressive atmosphere of New York, Ellison met and learned from the unfolding reputations of Langston Hughes, Richard Wright, Paul Robeson, and James Baldwin. He wrote *Invisible Man* already in his middle years and was unable to publish another novel within his lifetime.

AS&RC 698-699(8900-8901) Thesis

698, fall; 699, spring. Prerequisite: AS&RC graduate students. Africana Studies faculty.

AMERICAN STUDIES

M. Jones-Correa, director; G. Altschuler, E. Baptist, R. Bensel, S. Blumin, M. P. Brady, J. Brumberg, D. Chang, E. Cheyfitz, J. Cowie, J. Frank, J. E. Gainor, M. C. Garcia, F. Gleach, S. Haenni, R. Harris, K. Jordan, M. Kammen, R. Kline, I. Kramnick, F. Logevall, T. J. Lowi, B. Maxwell, K. McCullough, L. L. Meixner, R. Mize, R. L. Moore, V. Nee, M. B. Norton, J. Parmenter, R. Polenber, S. Pond, J. Rabkin, A. Sachs, N. Salvatore, S. Samuels, M. E. Sanders, V. Santiago-Irizarry, M. Shefter, A. Simpson, H. Spillers, T. Tu, N. Waligora-Davis, M. Washington, S. Wong, M. Woods. Affiliated faculty: J. E. Bernstock, H. Gottfried, M. Hatch, L. Herrin, J. Jennings, P. McClelland, J. Peraino, P. Sawyer. Emeritus: D. E. McCall, J. Porte, J. Silbey

The Major

The major in American Studies, appropriate for a wide array of future professions, began as a program of coordinated study in the history, literature, and politics of the United States. These remain the core elements, but

American Studies aims to be inclusive in its subject matter. Given the nation's diverse population and cultures, the program wants its majors to examine American experience in broad terms, drawing on the materials and methods of a variety of disciplines.

Students who contemplate becoming American Studies majors are encouraged to speak with the program director as early as possible to arrange for a major adviser.

All students majoring in American Studies must take a minimum of 12 courses selected from the American Studies roster. No more than six of these courses can come from any one discipline. Of the 12 courses at least three must have a substantial focus on material before 1900, at least two must deal with American diversity (AM ST 109 and 110 are especially recommended), and at least one must be a 400 level seminar, either an American Studies 430 course or an appropriate substitute seminar at the 400 level (AM ST 500/501, taught in Washington, D.C., does not fulfill the seminar requirement though it counts as one course toward the major). Note: A single course may satisfy more than one of these requirements: e.g., a course on Native Americans in the 1800s is both a course dealing substantially with pre-1900 material and one dealing with American diversity.

Although a good bit of freedom is encouraged in the selection of courses, American Studies majors, in consultation with their adviser, must define an area of concentration and complete six courses in that area. The area of concentration can be designed to fit the particular interests of a student, but it must include subjects in at least two disciplines. Possible areas of concentration include "visual studies," "cultural studies," "race and ethnicity," "legal and Constitutional studies," "American institutions," "class and social structure," "the American environment". (Courses taken to satisfy the concentration may be used to fulfill other requirements for the major.)

Students may find courses relevant to American experience that they wish to take but that are not on the American Studies course list. With their adviser's approval, students may count two such courses toward fulfilling the major.

Honors

Candidates for honors must maintain an average of B+ in courses pertinent to the major and have taken at least one course in which they wrote a research paper. Normally, at the end of the junior year students who wish to write a senior honors essay must approach a member of the American Studies faculty and discuss their ideas for a project. With approval from the faculty member students may then register in the fall of their senior year for AM ST 493, the honors essay tutorial. At the end of the fall semester, honors candidates meet with their adviser and a second member of the American Studies faculty to discuss their progress. If satisfactory, honors students complete their honors essays in the spring by enrolling in AM ST 494.

Prerequisite Courses (see also under appropriate departments)

[AM ST 101(1101) Introduction to American Studies: History and Literature, the 19th Century # (III or IV) (LA)]

4 credits. Not offered 2005-2006.

G. C. Altschuler and D. McCall.

Interdisciplinary course analyzing American values and behavior as the intersection of culture, politics, literature, and society by examining eight "great" classic texts written between 1776 and 1900. The historical context of these texts is explored in lecture, and they are treated as literature and historical/cultural documents. Texts include *Common Sense* by Thomas Paine; *The Blithedale Romance* by Nathaniel Hawthorne; The Lincoln-Douglas Debates; Henry James' *The Bostonians*; Mark Twain's *Huckleberry Finn*; and William Dean Howells' *The Rise of Silas Lapham*.]

[AM ST 102(1102) Introduction to American Studies: History and Literature, the 20th Century (III or IV) (LA)]

4 credits. Not offered 2005-2006.

G. Altschuler and D. McCall.

Interdisciplinary course analyzing American values and behavior as the intersection of culture, politics, literature, and society. It does so by examining eight "great" or classic texts written between 1900 and the present. Texts include Joseph Wood Krutch, *The Modern Temper*; Hemingway, *A Farewell to Arms*; Fitzgerald, *The Great Gatsby*; Reinhold Niebuhr, *Children of Light*; *Children of Darkness*; Faulkner, *The Sound and the Fury*; Ellison, *Invisible Man*; Roth, *American Pastoral*; and Updike, *Rabbit Is Rich*.]

[AM ST 109(1109) Introduction to American Studies: New Approaches to Understanding American Diversity, the 19th Century # (III) (HA)]

4 credits. Not offered 2005-2006.

N. Salvatore.

Examines the first century and one-half of American national life and asks a series of interrelated questions about the changing meaning of national identity during this time. What did it mean to become an American, a process often urged on new immigrants, in light of the values and perceptions immigrants brought with them? What did democracy, a core element of becoming that American, mean if one were African or Native American? Irish or German? Jewish or Chinese? In what ways did racial and ethnic perceptions help structure political and cultural life during this period; and how does understanding the diverse historical reactions to these perceptions aid us in understanding the complexity of American life? This is an interdisciplinary course in which students analyze historical, literary, and cultural evidence in exploring these and other issues.]

[AM ST 110(1110) Introduction to American Studies: New Approaches to Understanding American Diversity, the 20th Century (also HIST 161[1610], LSP 110[1110], AAS 111[1110]) (III or IV) (HA)]

4 credits. Not offered 2005-2006.

M. C. Garcia and D. Chang.

Examines American national life in the 20th century and asks questions about the changing meaning of national identity. What does it mean to be an American in the 20th

century? What does it mean to assimilate: can one assimilate structurally and yet maintain a distinct cultural identity? In what ways do racial and ethnic perceptions structure political, economic, and cultural life? This is an interdisciplinary course in which students analyze historical, literary, and cultural evidence in exploring these and other issues.]

American Studies 430 Seminars

AM ST 430.2(4302) The South as an American Problem: History, Culture, and Memory (also HIST 411[4111])

Spring. 4 credits. Prerequisite: permission of instructor. Priority given to American Studies and history majors. E. Baptist.

The South in America considers the problem of the relationship of the South to the rest of the United States. We will discuss the idea of Southern distinctiveness from its earliest roots in the 18th century and what it came to mean, beginning with the early 1800s and proceeding through the sectional conflict to Civil War. We will investigate how writers, scholars, politicians, and ordinary citizens on both sides of the Mason-Dixon line came to believe that the South was different from the rest of the country. After the war, we'll show how the issue of reunion and reconstruction in the South came to have important consequences for the whole country, and for both the idea and the lived realities of race in America. As the course moves into the 20th century, we'll find some of the roots of Southern literature, New Deal policies, African-American migration, the national defense state, new forms of Protestant evangelicalism, and the rise of the new right in America in the South and its alleged distinctiveness. We'll finally ask and try to answer two questions: Is the South like the rest of the United States? Or has the rest of the United States become like the South?

AM ST 430.3(4303) Literature as History: The Americas (also ENGL 430[4300])

Spring. 4 credits. Prerequisite: permission of instructor. B. Maxwell.

Beginning with William Carlos Williams's *In the American Grain* (1925), this course will consider modernist innovations in the telling of history by literary means. Responding to what they felt as "deadness" of conventional historiography, writers such as Williams, Charles Reznikoff, John Sanford, Muriel Rukeyser, Melvin Tolson, and Paul Metcalf produced imaginative American histories that made a new world of historical narration, and in the process found new objects of historical attention, one of which was the plural, transnational America of the hemispheric Americas. This reconfiguration anticipated and in some cases shaped recent revisionist critiques of the European presence on American soil (Eduardo Galeano, Leslie Marmon Silko, David Stannard, Ward Churchill, Noam Chomsky, Ana Castillo); accordingly, students will read examples, some polemical, of that later work.

AM ST 430.4(4304) America Reborn?: Conservatives, Liberals, and American Political Culture Since 1945

Spring. 4 credits. Prerequisite: permission of instructor. N. Salvatore.

This seminar will examine the enormous changes in American political life in the last half of the 20th century. Among the topics we will cover in readings and discussion: the changing fate of liberalism and the legacy of

the New Deal; the emergence of the modern conservative movement; the impact of the 1960s on the decades that followed; and the revival of a vibrant, Christian, and politically engaged presence in American politics. In addition to the weekly book, there will be a series of short essays and a research paper selected in consultation with the instructor.

AM ST 430.5(4301) The Rabinor Seminar (also HIST 448[4480])

Fall. 4 credits. Prerequisite: permission of instructor. E. Cheyfitz.

The Rabinor Seminar explores the role of diversity in the formation of a distinct American tapestry. The specific topic varies each year, but the general subject is the promise and experience of pluralism. Topic for fall 2005: American Indian Philosophies. This course will focus on Native American (Alaskan, Hawaiian, and Indian) thought from the pre-invasion period (before 1492) to the present as it is contained in both oral narratives and written texts (nonfiction, fiction, and poetry). The purpose of the course will be twofold. First, to understand how and in what forms Native Americans from a range of cultures think about subject matters in a range of areas: social, spiritual, legal, political, aesthetic, scientific, environmental, and historical. Second, to ask how Native philosophies can help us answer the following question: what is a just community?

Narratives and texts will be taken from a list that includes: Paul Zolbrod, trans. *Diné bahañe: The Navajo Creation Story*; Greg Sarris, *Keeping Slug Woman Alive: A Holistic Approach to American Indian Texts*; Radin and Blowsnake, *The Trickster*; Julie Cruikshank, Angela Sidney, Kitty Smith, and Annie Ned, *Life Lived Like a Story*; William Apress, *A Son of the Forest*; Charles Eastman, *The Soul of the Indian*; Black Elk and Neihardt, *Black Elk Speaks*; Linda Hogan, *Power*; Leslie Marmon Silko, *Ceremony*; Haunani-Kay Trask, *From a Native Daughter: Colonialism and Sovereignty in Hawai'i*; Taijiake Alfred, *Peace, Power, Righteousness: An Indigenous Manifesto*; Gerald Vizenor, *Manifest Manners: Narratives on Postindian Survivance*; Winona LaDuke, *All Our Relations: Native Struggles for Land and Life*; Greg Cajete, *Native Science: Natural Laws of Interdependence*; Vine Deloria, Jr. and Clifford M. Lytle, *America Indians, American Justice*; and Wendy Rose, *Bone Dance*.

AM ST 430.6(4300) The Milman Seminar

Fall. 4 credits. Prerequisite: permission of instructor. G. C. Altschuler.

The Milman Seminar: Baseball in American Culture. Through a reading of fiction and nonfiction, we examine the role of baseball as it has shaped and reflected the attitudes and values of Americans. Novels assigned include Bernard Malamud, *The Natural*; Mark Harris, *Bang the Drums Slowly*; Philip Roth, *The Great American Novel*; and Robert Coover, *The Universal Baseball Association*. Nonfiction works include Warren Goldstein, *Playing for Keeps*; Robert Peterson, *Only the Ball Was White*; and Andrew Zimbalist, *Baseball and Billions*. Each student writes a 25- to 35-page research paper.

AM ST 430.7(4305) The Postmodern Presidency (also GOVT 405[4051])

Spring. 4 credits. Prerequisite: permission of instructor. D. Rubenstein.

This course examines the presidencies of Reagan, G. H. W. Bush, Clinton, and

G. W. Bush in relation to what scholars have called "the postmodern presidency." While this term has been utilized by institutionalist students of the presidency as a periodizing hypothesis, this course emphasizes the work of cultural critics and historians. We will address the slippage between fact and fiction in cinematic and popular representations of the presidency (biography, novels, television). The construction of gender normativity (especially masculinity) will be an attendant subtheme. The postmodern presidency is read as a site of political as well as cultural contestation. The larger question of this approach to the presidency concerns the relationship between everyday life practices and citizenship as well as the role of national fantasy in American political culture today. Readings will include Frances Fitzgerald's *Way Out There in the Blue*, Edmund Morris' *Dutch*, Lydia Millet's *George Bush, Dark Prince of Love*, and Michael Rogin's *Independence Day, or How I Learned to Stop Worrying and Love the Enola Gay*, and Ronald Reagan, *the Movie*. We will examine films/film excerpts including *Dave*, *Mars Attacks*, *Forrest Gump*, *Independence Day*, *Primary Colors*, *Murder at 1600*, *JFK*, *Nixon*, and *House of Yes*.

Anthropology, Sociology, and Economics

[AM ST 221(2721) Anthropological Representation: Ethnographies of Latino Culture (also ANTHR/LSP 221[2721])

3 credits. Not offered 2005–2006.
V. Santiago-Irizarry.

For description, see ANTHR 221.]

[AM ST 231(2300) Latino Communities (also D SOC/LSP 230[2300])

Fall. 4 credits. R. Mize.
For description, see D SOC 230.

[AM ST 235(2350) Archaeology of North American Indians (also ANTHR 235[2355])

Spring. 4 credits. K. Jordan.
For description, see ANTHR 235.

[AM ST 353(3453) Anthropology of Colonialism (also ANTHR 353[3453])

Fall. 4 credits. A. Simpson.
For description, see ANTHR 353.

[AM ST 375(3750) Comparative Race and Ethnicity (also D SOC/LSP 375[3750])

Spring. 4 credits. R. Mize.
For description, see D SOC 375.

[AM ST 377(3777) The United States (also ANTHR/LSP 377[3777])

Fall. 4 credits. V. Santiago-Irizarry.
For description, see ANTHR 377.

Literature and Theatre Arts

[AM ST 206(2030) Introduction to American Literature (also ENGL 203[2030])

Fall. 4 credits. E. Cheyfitz.
For description, see ENGL 203.

[AM ST 219(2060) The Great American Novel (also ENGL 206[2060])

Fall. 4 credits. M. Hite.
For description, see ENGL 206.

[AM ST 230(2760) Survey of American Film (also FILM 276[2760], VISST 230[2300]) (IV) (LA)

Spring. 4 credits. Each student must enroll in a section and attend one screening per week. S. Haenni.

Focusing mostly on Hollywood film, this course surveys some major developments in and approaches to 20th-century American cinema. We trace changes in film aesthetics and film style, the development of the American cinema as an institution that comprises an industrial system of production, social and aesthetic norms and codes, and particular modes of reception. The course introduces methodological issues in American film history—especially questions of narrative, genre, stardom, and authorship—and focuses on the ways film shapes gender, race, class, ethnic, and national identities. Screenings include work by D. W. Griffith, John Ford, Howard Hawks, Orson Welles, Vincente Minnelli, Robert Altman, Charles Burnett, Spike Lee, and others and are supplemented by readings in film criticism and history.

[AM ST 240(2641) Survey in U.S. Latino Literature (also ENGL[2400]/LSP 240[2640])

4 credits. Not offered 2005–2006.
M. P. Brady.

For description, see ENGL 240.]

[AM ST 252(2510) 20th-Century Women Writers (also ENGL/FGSS 251[2510])

Fall. 4 credits. E. DeLoughrey.
For description, see ENGL 251.

[AM ST 253(2520) Late 20th-Century Women Writers and Visual Culture (also ENGL/FGSS/VISST 252[2520])

4 credits. Not offered 2005–2006.
For description, see ENGL 252.]

[AM ST 260(2600) Introduction to American Indian Literature (also ENGL 260[2600])

4 credits. Not offered 2005–2006.
E. Cheyfitz.

For description, see ENGL 260.]

[AM ST 262(2620) Asian American Literature (also ENGL/AAS 262[2620])

4 credits. S. Wong.
For description, see ENGL 262.

[AM ST 268(2680) The Culture of the 1960s (also ENGL 268[3680])

4 credits. Not offered 2005–2006.
P. Sawyer.

For many people, the sixties was a time of revolutionary hopefulness, when the civil rights movement, the Cold War, and the Vietnam War stimulated impassioned critiques and alternative experiments in living that changed American society forever. What can the experiences of young "boomers" and others who lived through that famously turbulent decade teach a later generation living through similar times of social crisis and war? This course tries to answer that question and others by combining a political overview with the close reading of

texts. The main topics are racial justice, the Vietnam War, the counterculture, the New Left, the woman's movement, and the movement for gay and lesbian rights. Texts include *The Autobiography of Malcolm X*, *Dispatches*, *Slaughterhouse Five*, the poems of Ginsburg and Rich, speeches of King, films, manifestos, and music.]

[AM ST 275(2750) The American Literary Tradition (also ENGL 275[2750])

4 credits. Not offered 2005–2006.
N. Waligora-Davis.

The problem of an American national literature is explored through the reading, discussion, and close analysis of texts across the range of American literary history. Not a survey, this course focuses on the relations of the texts to each other, the shaping of national identities in those relationships, and the assumptions about history, language, and the self that underlie them.]

[AM ST 293(2650) Survey in African American Literature (also ENGL 293[2930])

4 credits. Not offered 2005–2006.
H. Spillers.

For description, see ENGL 293.]

[AM ST 335(3370) Contemporary American Theatre (also THETR/ENGL 337[3370])

Fall. 4 credits. S. Warner.
For description, see THETR 336.

[AM ST 338(3440) American Film Melodrama (also FILM/ENGL 344[3440])

Spring. 4 credits. Not offered 2005–2006.
S. Haenni.

For description, see FILM 344.]

[AM ST 348(3480) Film Noir (also FILM 346[3460]) (IV) (LA)

Spring. 4 credits. Recommended: some course work in film. Not offered 2005–2006. S. Haenni.

At the close of World War II, the French coined the semester "film noir" to describe a new, "dark," and "gloomy" set of Hollywood films that were populated by femmes fatales, criminal gangs, private eyes, and lovers on the run, and that centered on issues of violence, crime, paranoia, betrayal, pessimism, and self-doubt. Deriving from hard-boiled detective fiction, and influenced by German expressionist cinema, *film noir* has now become one of the most acclaimed genres in Hollywood film. In this course we explore both the stylistic characteristics and thematic and cultural contexts of *film noir*. We examine the history and function of "noir" as a critical semester, the influence of hard-boiled fiction, and the evolution of *noir* style and *noir* narratives. We investigate how *film noir* articulates anxieties about postwar masculinity and about the sexual and social roles of women; how it popularizes psychology; how it portrays the city as an "urban jungle"; and how it represents a response to fears about communism and the atomic bomb. Screenings include major studio features such as *Double Integrity* and *Laura*, B-pictures such as *Detour* and *Gun Crazy*, and "neo-noirs" such as *Chinatown* and *Devil in a Blue Dress*. The discussion of films is guided by readings in film criticism and history.]

[AM ST 361(3610) Studies in the Formation of U.S. Literature: Emerson to Melville (also ENGL 361[3610])]

[AM ST 393(3930) International Film of the 1970s (also FILM 393[3930])]

Spring. 4 credits. S. Haenni.
More than being characterized by a retreat from political, critical cinema and by the reemergence of the Hollywood blockbuster such as *The Godfather*, *Star Wars*, and *Jaws*, the seventies were also a period of enormous innovation and cross-fertilization in film history and film style. Profound changes in the film industry and film technology along with larger social, political, and cultural developments, enabled new ways of understanding—and using—the cinematic image as well as film sound. In this course, we focus on the transnational nature of seventies film; the influence of European art cinema on American film; the reworking and rejuvenation of genre films (neo-noir, western, horror film, road movie, etc); European responses to and appropriation of American film genres, film conventions, and subject matter; Asian influence in the United States particularly the marital arts film; the emergence of film subcultures, such as

black independent film and blaxploitation. Screenings include work by Arthur Penn, Robert Altman, Francis Ford Coppola, Steven Spielberg, Charles Burnett, John Cassavetes, Mario Van Peebles, Gordon Parks, Milos Forman, Sergio Leone, Michelangelo Antonioni, Lina Wertmüller, Bertrand Blier, Louis Malle, Eric Rohmer, Chantal Akerman, Rainer Werner Fassbinder, Wim Wenders, Nicholas Roeg, and Stanley Kubrick and are guided by readings in film criticism and history.

4 credits. Not offered 2005-2006.
D. Rubenstein.

Addresses 19th- and 20th-century European travel writing about America from Alexis de Tocqueville's landmark work, *Democracy in America*, to Jean Baudrillard's polemical *America* and Umberto Eco's *Travels in Hyperreality*. Concerned with the question of what America, as both "utopian" ideal and as a living example, represents for the European philosophical voyager. For example, what role does national fantasy play in the encounters revealed in Julia Kristeva's excursion to American universities in *The Samurai* or in Simone de Beauvoir's guided (by Richard Wright) tour as recounted in her diary *America Day by Day*? Also discusses Francois-René de Chateaubriand's *René* and *Atala* as a literary limit case of intercultural exchange. Also considers how race is implicated in these writings (e.g., de Tocqueville, de Beauvoir; Kristeva's consideration of "the foreigner") and the pertinence of American genres such as the captivity narrative for readings of Chateaubriand or de Tocqueville and Beaumont's writings on prison.]

Fall and spring. 8 credits each semester.
S. Jackson.

Offered in Cornell in Washington Program. This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell in Washington Program.

History**AM ST 103(1530) Introduction to American History (also HIST 153[1530])**

Fall. 4 credits. J. Parmenter.
A survey of American history from the beginning through the Civil War. Topics include cultural encounters in the age of Columbus, European colonization, the American Revolution, the early republic, antebellum reform movements, and the coming of the Civil War.

AM ST 104(1531) Introduction to American History (also HIST 154[1531])

Spring. 4 credits. D. Chang.
An introductory survey of the development of the United States since the Civil War.

AM ST 124(1240) Democracy and Its Discontents: Political Traditions in the United States (also HIST 124)

Summer. 3 credits. N. Salvatore.
An examination of democracy and its critics. The course explores the evolution of democracy in America, focusing on some of the dramatic and important episodes in American history. It considers the struggles over the emancipation of slaves in the 19th century and expanded rights for women and working people in the 20th century, free-speech issues, the civil-rights movement, religious-based critiques of American culture, and conservative critiques of American liberalism. The course serves as an investigation of the ways in which political expression takes forms in modern American culture. In addition to lectures, the course features several afternoon programs that include guest lecturers and hands-on instruction in how to use the modern electronic research library.

[AM ST 201(2010) Popular Culture in the United States, 1900 to 1945 (III or IV) (HA)]

4 credits. Not offered 2005–2006.
G. Altschuler.

AM ST 201 deals with American popular culture in the period between 1900 and the end of World War II. As we examine best-sellers, films, sports and television, radio, ads, newspapers, magazines, and music, the goal is to better understand the ways in which popular culture as "contested terrain," the place where social classes, racial and ethnic groups, women and men, the powerful and the less powerful, seek to "control" images and themes. Topics include: the Western; Cultural Heroes and the Cult of Individualism in the 1920s; The Hays Code and the Black Sox scandal; Mae West and the "New Women"; Advertising in an Age of Consumption; Gangsters and G-Men; and Jackie Robinson and the American Dilemma.]

[AM ST 202(2020) Popular Culture in the United States, 1945 to Present (III or IV) (HA)]

4 credits. Not offered 2005–2006.
G. Altschuler.

AM ST 202 treats the period from 1945 to the present as we examine best-sellers, films, sports and television, radio, ads, newspapers, magazines, and music. We try to better understand the ways in which popular culture shapes and/or reflects American values. The course also depicts popular culture as "contested terrain," the place where social classes, racial and ethnic groups, women and men, the powerful and less powerful, seek to "control" images and themes. Topics include: *The Honeymooners* and 1950s television, soap operas; "gross-out" movies; Elvis; the Beatles and Guns 'n Roses; gothic romances; and *People Magazine* and *USA Today*.]

AM ST 203(2033) Wilderness in North American History and Culture (also HIST 203[2030])

Fall. 4 credits. A. Sachs.
For description, see HIST 203.

For description, see HIST 209.]

[AM ST 210(2100) The Emergence of Modern Conservative Movement: From Strom Thurmond to Ronald Reagan]

4 credits. Limited to 15 students. Priority given to sophomores. Not offered 2005–2006. N. Salvatore.

This course explores the social and cultural roots of modern American conservatism and its rise to political prominence in the post-1945 era. We examine the movement's intellectual origins, social and cultural attitudes, and the political figures who presented conservatism's analysis to the public. The interplay between this revived political movement and a more liberal approach deeply grounded in the New Deal and its legacy receives attention as well.]

[AM ST 309(3090) The Cinema and the American City (also FILM 342[3420])

4 credits. Not offered 2005-2006.
S. Haenni.

The emergence of the cinema in the late 19th century coincided with the emergence of a new kind of metropolis, characterized by, among other things, new traffic systems (elevated train, subway, automobile); new racial, ethnic, and sexual regimes; and new urban planning. The cinema was inevitably affected by the ways in which the city developed, while at the same time it also made the city legible. In this course we examine how American cities and towns have been represented in film in different ways, as, for instance, musical symphonies, mysteries to be deciphered, or post-apocalyptic wastelands. We explore how gender, racial, ethnic, class, and sexual identities are negotiated in the modern, cinematic city. Screenings range from silent and early sound films, such as *The Crowd* and 1930s musicals, to contemporary cinema, such as *Do the Right Thing* and *Blade Runner*; our viewings are guided by readings in film and urban theory and history.]

[AM ST 312(3140) History of American Foreign Policy (also HIST 314[3140])

Spring. 4 credits. F. Logevall.

[AM ST 324(3240) Varieties of American Dissent, 1880 to 1990 (also HIST 324[3240])

Fall. 4 credits. N. Salvatore.
The idea of dissent in American society raises a variety of images. Civil rights activists, striking workers, and student radicals of the 1960s are familiar enough symbols of dissent. But might we understand a Pentecostal believer, filled with the spirit of his or her God in critiquing contemporary society, as an example of American dissent? This course explores the varieties of economic, political, and cultural dissent in American between 1880 and 1990, and examines how understanding dissent in its specific historical context illuminates major aspects of American life and culture.

4 credits. Prerequisite: permission of instructor. Not offered 2005-2006.
J. Brumberg.
For description, see HD 417.]

AM ST 419(4190) Seminar in American Social History (also HIST 419[4190])
Spring. 4 credits. Taught in Washington, D.C. S. Blumin.
For description, see HIST 419.

[AM ST 420(4220) Asian American Communities (also HIST 420[4200], AAS 424[4240])]
4 credits. Limited to 15 students. Not offered 2005–2006. D. Chang.
For description, see HIST 420.]

[AM ST 421(4120) Undergraduate Seminar in American Cultural History (also HIST 421[4210], ART H 421[4021])]
4 credits. Prerequisite: permission of instructor. Not offered 2005–2006. M. Kammen.
For description, see HIST 421.]

[AM ST 426 The West and Beyond: Frontiers and Borders in American History and Culture (also HIST 426[4260])]
4 credits. Not offered 2005–2006. A. Sachs.
For description, see HIST 426.]

AM ST 427(4261) Sex, Rugs, Salt, and Coal (also HIST 426[4261])
Spring. 4 credits. A. Sachs.
For description, see HIST 426.

AM ST 439(4039) Reconstruction and the New South (also HIST 439[4390])
Spring. 4 credits. Limited to 15 students. M. Washington.
For description, see HIST 439.

[AM ST 440(4400) Undergraduate Seminar in Recent American History (also HIST 440[4400])]
4 credits. Prerequisite: permission of instructor. Not offered 2005–2006. R. Polenber.
For description, see HIST 440.]

[AM ST 444(4440) American Men (also HIST 444[4440])]
4 credits. Not offered 2005–2006. E. Baptist.
For description, see HIST 444.]

[AM ST 466(4660) Iroquois History (also HIST 466[4660])]
4 credits. Not open to freshmen. Not offered 2005–2006. J. Parmenter.
For description, see HIST 466.]

AM ST 499(4900) New World Encounters, 1500 to 1800 (also HIST 499[4900])
Spring. 4 credits. J. Parmenter.
For description, see HIST 499.

AM ST 500(4997) Research Seminar in American Studies (also HIST 500[4997])
Fall or spring. Offered in Cornell in Washington Program only. S. Blumin and others.
For description, see HIST 500.

Music and Visual Studies

[AM ST 105(1311) Popular Music in America: 1850 to 1985 (also MUSIC 101[1311])]
3 credits. Not offered 2005–2006. S. Pond.
For description, see MUSIC 101.]

AM ST 222(1313) A Survey of Jazz (also MUSIC 222[1313])
Fall. 3 credits. S. Pond.
For description, see MUSIC 222.

AM ST 223(1312) History of Rock Music (also MUSIC 221[1212])
Spring. 3 credits. J. Peraino.
For description, see MUSIC 221.

AM ST 227(2091) The Immigrant Imagination (also ART H 209[2190], AAS 209[2090])
Fall. 4 credits. T. Tu.
For description, see ART H 209.

[AM ST 270(2700) Mapping America (also ART H 270[2700])]
4 credits. Not offered 2005–2006. L. L. Meixner.
For description, see ART H 270.]

AM ST 282(2820) The American Landscape (also LA 282[2820])
Fall. 3 credits. H. Gottfried.
For description, see LA 282.

AM ST 355(3605) U.S. Art from FDR to Reagan (also ART H 365[3605])
Fall. 4 credits. J. E. Bernstock.
For description, see ART H 365.

[AM ST 360(3740) Painting and Everyday Life in 19th-Century America (also ART H 360[3740])]
4 credits. Not offered 2005–2006. L. L. Meixner.
For description, see ART H 360.]

AM ST 390(3810) American Architecture and Building I (also ARCH 390[3810])
Fall. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. M. Woods.
For description, see ARCH 390.

AM ST 391(3811) American Architecture and Building II (also ARCH 391[3811])
Spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. M. Woods.

[AM ST 397(3818) Special Topics in the History of Architecture and Urbanism (also ARCH 398[3818])]
3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered 2005–2006. M. Woods.
For description, see ARCH 398.]

AM ST 412(4113) Race, Technology, and Visuality (also ART H 413[4113], AAS 413[4130])
Fall. 4 credits. T. Tu.
For description, see ART H 413.

[AM ST 462(4762) Topics in Early Modernism (also ART H 462[4762])]
4 credits. Not offered 2005–2006. L. L. Meixner.
For description, see ART H 462.]

AM ST 463(4761) Art and Social Histories (also ART H 461[4761])
Fall. 4 credits. L. L. Meixner.
For description, see ART H 461.

Honors

Please see description of major for information about registration in these courses.

AM ST 493–494(4993–4994) Honors Essay Tutorial
493, fall; 494, spring. Up to 8 credits each semester. See M. Jones-Correa for appropriate advisers.

ANTHROPOLOGY

D. Holmberg, chair; N. Russell, director of graduate studies; A. Clark Arcadi, director of undergraduate studies—fall; K. Jordan, director of undergraduate studies—spring; D. Boyer, J. Fajans, M. Fiskejso, D. Greenwood, J. Henderson, B. Lambert, K. Jordan, K. March, H. Miyazaki, V. Munasinghe, J. Rigi, A. Riles, J. Siegel, A. Simpson, M. Small, T. Volman, A. Willford. Emeritus: R. Ascher, B. J. Isbell, J. Murra, R. Smith.

Anthropology is one of the most diverse disciplines in the university. Spanning human evolution, the development and heterogeneity of language and culture, human history, and the diversity of cultures past and present, the field has broad scope, uses a variety of methods, addresses basic issues about human origins and human life, and maintains commitment to understanding social life and using this understanding to improve society. Anthropology is an ideal “liberal arts” major. It also serves as a major that, when well designed by the student with his or her adviser, prepares students for a wide range of professional careers, e.g., law, medicine, foreign service, human rights, social services, international development, and business, among others.

Courses for nonmajors: Anthropology welcomes nonmajors into many of its courses. Unless prerequisites are explicitly stated, 200- and 300-level courses do not have formal prerequisites and can be taken by students without prior experience in anthropology. Such students are welcome in these upper-level courses. For additional information to assist nonmajors and students from other colleges in selecting anthropology courses, see the anthropology department web page (falcon.arts.cornell.edu/Anthro/).

The Major

The range and complexity of the field of anthropology requires active collaboration between the student and a faculty adviser in developing an individualized program of study. To enter the anthropology major, a student must pass one course in each of the two broad introductory areas of anthropology: “Nature and Culture” and “Culture and History” listed below under “Introductory Courses.” Provisional acceptance into the major is possible before completing these courses, with permission from the director of undergraduate studies in anthropology. Students are encouraged to contact the director of undergraduate studies or other faculty members as soon as possible in their studies to discuss their interests and a possible major in anthropology.

Students see the director of undergraduate studies to apply to the major and get an adviser. They prepare a short statement about their interests and goals for the major, then meet with their adviser to develop a course plan reflecting these special interests. This concentration should include at least 32 credits in addition to the two introductory courses used to enter the major. Examples of possible concentrations are myth and ritual; ethnicity and identity; action research; nature and culture in human history; anthropology and literature, or law, or the arts, or medicine; human origins; ethnomusicology; primate and human behavior; prehistory of the Americas,

or Europe, or Africa; cultural construction of the person. When warranted, the adviser is free to approve up to two cognate courses from other departments totaling up to 8 credit hours to fulfill the 32-credit requirement. Students may revise their program of study in consultation with their adviser as they move through their studies. Our goal is to provide a close and supportive advising relationship and a strong and coherent structure for the student's major.

All anthropology majors are required to take one anthropology seminar at the 400 level during their senior year (463, 420, and 458 are not seminar courses and do not fill the requirement). These seminars are designed to provide broad integrating perspectives on the field of anthropology by engaging important issues in contemporary anthropology.

Study abroad and off-campus study programs: The Department of Anthropology encourages students to consider a semester of study abroad or off-campus study developed as an integral part of the student's major concentration. The director of undergraduate studies serves as the anthropology study abroad adviser.

The Cornell-Nepal Study Program: The Cornell-Nepal Study Program is a joint program of Cornell University and Tribhuvan University, the national university of Nepal. Qualified juniors, seniors, and first- or second-year graduate students work with faculty from both universities to prepare for and undertake field research projects in Nepal. Students receive 15 credits per semester; students may enroll for either fall or spring semester, or for the entire year; application is through Cornell Abroad. For further information, consult David Holmberg or Kathryn March in the Department of Anthropology.

Other anthropologically relevant study abroad options, using existing Cornell Abroad and off-campus options, can be worked out in consultation with the major adviser, the anthropology study abroad adviser, and Cornell Abroad.

Honors

Honors in anthropology are awarded for excellence in the major, which includes overall GPA and completion of an honors thesis. Anthropology majors interested in the honors program should consult the chair of the Honors Committee in their junior year. To qualify for entrance into the honors program, a student must have at least a 3.0 GPA overall and 3.3 GPA in the major, and the consent of a faculty member in anthropology who will guide the honors thesis. After applying to the program and being admitted as a candidate by the Honors Committee, the student conducts research and writes a thesis. This thesis is evaluated by the faculty research adviser and two other faculty members. Honors (i.e., cum laude, magna cum laude, or summa cum laude) are awarded based on the quality of the thesis and the student's overall record. Honors candidates must start this process by consulting their major adviser about the honors program early in their junior year.

In addition, students may enroll in ANTHR 483 (fall or spring) Honors Thesis Research. To complete the thesis, students must enroll in 491 (fall or spring) Honors Thesis Write-up. Only ANTHR 483 may count toward hours for completion of the anthropology major

requirements. The credit hours for these courses are variable, grades for these courses are given by the faculty research adviser, and they are based on performance during thesis research and writing.

Any honors candidate whose research directly involves working with human subjects must receive approval for the project from the Cornell University Committee on Human Subjects.

Special Programs and Facilities

Collections: the department has an extensive collection of archaeological and ethnological materials housed in the anthropology collections. A limited number of students can make arrangements to serve as interns in the anthropology collections. Olin Library houses some of the most extensive collections of materials on the ethnology of Southeast Asia, South Asia, East Asia, and Latin America to be found anywhere in the United States. The biological anthropology laboratory (B65 McGraw Hall) houses an extensive collection of materials for teaching purposes, including (1) human skeletal remains, (2) articulated skeletons and cranial casts of primates, and (3) casts of important fossils in the human lineage.

Independent Study: specialized individual study programs are offered in ANTHR 497, Topics in Anthropology, a course open to a limited number of juniors and seniors who have obtained permission and supervision of a faculty member. Undergraduates should note that many 600-level courses are open to them by permission of the instructor.

Colloquia: The Department of Anthropology holds colloquia almost every week of the semester on Friday at 3:30 P.M. in 215 McGraw Hall. Faculty members from Cornell and other universities participate in discussions of current research and problems in anthropology. Students are encouraged to attend.

For more complete information about the anthropology major, see the director of undergraduate Studies or visit the Department of Anthropology web page (falcon.arts.cornell.edu/Anthro/).

I. Introductory Courses

A. Nature and Culture:

ANTHR 101(1300) Human Evolution: Genes, Behavior, and the Fossil Record (I/PBS Supplementary List)

Fall. 3 credits. Lab usage and maintenance fee: \$5. A. Clark Arcadi.

Explores the evolution of humankind through the fossil record, studies of the biological differences among current human populations, and a comparison with our closest relatives, the primates. Investigates the roots of human biology and behavior with an evolutionary framework.

ANTHR 103(1401) The Scope of Anthropology

Spring. 1 credit. Does not satisfy major requirement to take two broad introductory courses. Pre- or co-requisite: ANTHR 101 or 102. S-U grades only. Staff. Intended for majors or prospective majors in anthropology. Each week a different member of the faculty in anthropology at Cornell makes a presentation on the nature of his or

her work within the field and discusses their interests with students. The course is meant to introduce the range of approaches found within anthropology and help students in planning future course work.

ANTHR 203(2200) Early People: The Archaeological and Fossil Record (also ARKEO 203[2200]) # (III) (HA)

Spring. 3 credits. T. Volman.

Survey of the archaeological and fossil record of human evolution. Highlights contributions by researchers from a variety of disciplines as well as the discoveries that have enlivened the study of human evolution for more than a century. Stresses critical evaluation of evidence and interpretation. Demonstrations and films supplement the lectures.

[ANTHR 211(2411) Sophomore Seminar: Nature and Culture @ (III) (SBA)]

Spring. 4 credits. Limited to 15 students. Sophomore writing seminar. Not offered 2005-2006. S. Sangren.

Special seminar sponsored by the John S. Knight Institutes Sophomore Seminars Program. Seminars offer discipline-specific study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the disciplines outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Limited to 15 students. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.]

[ANTHR 275(2750) Human Biology and Evolution (also BIOEE/NS 275[2750]) (I) (PBS)]

Fall. 3 credits. Offered alternate years; not offered 2005-2006. J. D. Haas.]

B. Culture and History:

ANTHR 100(1200) Ancient Peoples and Places (also ARKEO 100[1200]) # @ (III or IV) (HA)

Fall. 3 credits. J. Henderson.

Broad introduction to archaeology—the study of material remains to answer questions about the human past. Case studies highlight the variability of ancient societies and illustrate the varied methods and interpretive frameworks archaeologists use to reconstruct them. This course can serve as a platform for both archaeology and anthropology undergraduate majors.

ANTHR 102(1400) The Comparison of Cultures @ (III) (CA)

Spring. 3 credits. A. Riles.

Introduction to cultural anthropology through ethnographies, or the descriptive accounts of anthropologists. Through readings and lectures, students acquaint themselves with a number of cultures from several parts of the world. The cultures range in form from those of small-scale tribal societies to those of state societies. Throughout the course, students attempt to make sense of exotic cultures in their own terms. Attention is focused on variation in cultural patterns as they are expressed in social, economic, and ritual practices. In this encounter, the principles of anthropology as a comparative enterprise that pose distinct cultural systems in belief are developed. Fiction, films, and exercises supplement the formal anthropological materials.

ANTHR 103(1401) The Scope of Anthropology

Spring. 1 credit. Does not satisfy major requirement to take two broad introductory courses. Pre- or co-requisite: ANTHR 101 or 102. S-U grades only. Staff. For description, see section I.A, "Introductory Courses."

ANTHR 200(1420) Cultural Diversity and Contemporary Issues @ (III) (SBA)

Fall. 3 credits. A. Willford.

Introduces students to the meaning and significance of forms of cultural diversity for understanding contemporary issues. Drawing from films, videos, and selected readings, students are confronted with different representational forms that portray cultures in various parts of the world and they are asked to critically examine their own prejudices as they influence the perception and evaluation of cultural differences. The course approaches cultures holistically, assuming the inseparability of economies, kinship, religion, and politics, as well as interconnections and dependencies between world areas (e.g., Africa, Latin America, the West). Among the issues considered are "political correctness" and truth; nativism and ecological diversity; race, ethnicity, and sexuality; sin, religion, and war; and global process and cultural integrity.

[ANTHR 215(2215) Stone Age Art (also ARKEO 215(2215)) # (III) (CA)

Fall. 3 credits. Not offered 2005-2006. T. Volman.]

[ANTHR 240(2240) Old World Prehistory (also ARKEO 240(2240)) # (III) (HA)

Fall. 3 credits. Not offered 2005-2006.]

II. Honors and Independent Study**ANTHR 483(4980) Honors Thesis Research**

Fall or spring. Credit TBA. Prerequisite: permission of Honors Committee. Staff. Independent work under the close guidance of a faculty member selected by the student.

ANTHR 491(4990) Honors Thesis Write-Up

Fall or spring. Credit TBA. Staff.

ANTHR 497(4910) Independent Study: Undergrad I

Fall or spring. Credit TBA. Prerequisite: undergraduate standing. Staff. Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 498(4920) Independent Study: Undergrad II

Fall or spring. Credit and Times TBA. Prerequisite: undergraduate standing. Staff. For description, see ANTHR 497, section II, "Honors and Independent Study."

III. Understanding Cultures and Societies

Anthropologists examine the diversity of human behaviors, social relationships and structures, economies, political and legal orders, worldviews, logics, languages, symbols, myths, and religions among the many other means human beings invent to create and reproduce social life around the world. Anthropologists work from a holistic perspective to account for differences and

similarities across cultures. Anthropologists also take small-scale societies and local sociocultural systems as the object of analysis. They collect data primarily through ethnographic fieldwork, that is, months or years of participating in and observing of the societies they study. Anthropologists see inherent linkages between the practical and the meaningful dimensions of human existence.

A. Anthropological Approaches to Economy, Society, Law, and Politics:

The courses below take as their starting point what are usually defined as the social, political, legal, and economic practices and structures of human life and show how they are shaped culturally and how they shape culture.

ANTHR 228(2428) Slavery and Human Trafficking

Fall. 4 credits. M. Fiskesjo.

Study of slavery and trafficking in human slaves in the world today, as well as its roots and history in Asia, Africa, as well as in medieval Scandinavia, and in America and Europe today. Makes use of anthropological perspectives to look at influential historical and Classical definitions of slavery, such as Aristotle's idea of the "natural slave," and ask how ownership and domination over fellow humans have been justified in different societies. While introducing themes of gender, race, ethnicity, etc., and basic philosophical issues regarding autonomy and dependence, the course also examines the economic forces of exploitation in the floating world of economic migration, people smuggling, and human trafficking.

ANTHR 310(3410) Nationalism and Revivalism (III) (CA)

Spring. 4 credits. A. Willford.

Explores the growing phenomenon of religious and ethnic nationalism within modern nation-states. Also examines ways in which religious and ethnic revivalism present alternative models of modernity and group identity, often defined in opposition to state-sponsored nationalist ideologies.

[ANTHR 312(3512) Work and Workplaces in Japan @ (III) (SBA)

Spring. 4 credits. Not offered 2005-2006. H. Miyazaki.]

ANTHR 314(3514) Learning in Japan

Spring. 4 credits. H. Miyazaki.

Approaches contemporary Japanese society through the lens of ongoing debates about learning, education, and educational institutions. In recent years, education has emerged as one of the most urgent and contested social issues in Japan. This course covers a wide range of topics from the debate about history textbooks to the competition for admittance to preschools and primary schools, the reorganization of universities and other research institutions and the notion of Japanese workers as experts in knowledge creation through learning. The goal of the course is to reevaluate the celebrated Japanese commitment to learning and to understand the changing significance of education in Japan.

ANTHR 321(3421) Sex and Gender in Cross-Cultural Perspective (also ANTHR 621[6421], FGSS 321/631[3210/6310]) @ (III) (SBA)

Fall. 4 credits. K. March.

Introduction to the study of sex roles cross-culturally and to anthropological theories of sex and gender. Examines various aspects of the place of the sexes in social, political, economic, ideological, and biological systems to emphasize the diversity in gender and sex-role definitions around the world.

ANTHR 323(3423) Kinship and Social Organization (III) (SBA)

Spring. 4 credits. B. Lambert.

Much of this course is a survey of forms of the family, descent groups, and marriage systems. The role of age and sex in the social structure is also considered. The last part of the course is devoted to a history of the British and American family and to its fate in utopian communities.

ANTHR 325(3425) Anthropology of the University (III) (SBA)

Fall. 4 credits. D. Greenwood.

Turning an anthropological gaze on the contemporary university as a social and cultural system, this seminar involves an examination of the convergences and divergences between the trajectories of the sciences and engineering, the humanities, and the social sciences in contemporary universities; and some international comparisons with the trajectories of universities around the world. The overall aim is to link an ethnographic analysis of the microstructures of departmental differentiation, professional hegemonies, and local financing with the larger-scale processes of transformation of universities' place in society under the pressures of corporatization, globalization, and competition from a host of alternative higher-education institutions.

[ANTHR 326(3426) Economic Anthropology (III) (SBA)]

Fall. 4 credits. Not offered 2005-2006.]

ANTHR 328(3428) Conflict, Dispute Resolution, and Law in Cultural Context (III) (SBA)

Fall. 4 credits. V. Santiago-Irizarry.

Rule-making and dispute resolution are integral aspects of social reality in any culture. The ways in which conflict is treated and interpreted—to be then deflected or resolved—articulate with other cultural domains such as religion, politics, and economics as part of the material and symbolic processes that enable sociocultural interaction. At issue then are the formal and processual means that the treatment of conflict takes in different societies. These means constitute frames for the definition of social experience that are used by social actors in the interpretation of events within the terms of an overriding sociocultural logic that is in turn refigured by these interpretive frames.

ANTHR 351(3451) Global Flows of Cultural Heritage

Spring. 4 credits. M. Fiskesjo.

In this course we explore "cultural heritage" as an idea, and as objects that change hands across continents. Our focus is the global trade of fragments of monuments, statues, tomb furnishings and other antiquities derived from poorer areas of the world, ranging from Benin and Afghanistan to China and Cambodia, transferred to collectors and museums in wealthier countries. We use anthropological perspectives to explore a range of issues such as contested spoils of war, looting and international law, auctions and collecting, value and representation, as

well as the role of knowledge, the academy, and world public opinion.

ANTHR 353(3453) Anthropology of Colonialism (also AIS 353[3530], AM ST 353[3453]) (III) (CA)

Fall. 4 credits. A. Simpson.

Examines the relationship between colonialism and anthropology and the ways in which the discipline has engaged this global process locally in North America. One of the aims of this course is to gain an appreciation of colonialism both as a theory of political legitimacy and as a set of governmental practices. As such, North America is reimagined in light of the colonial project and its technologies of rule such as education, law, policy that worked to transform indigenous notions of gender, property and territory. This is done to appreciate the ways in which these forms of knowledge and practice advanced the settlement of space and place and both settled and unsettled peoples. This course is comparative in scope but is grounded within the literature from Native North America.

[ANTHR 382(3482) Human Rights, Cultural Rights, and Economic Rights: Views from the South]

Spring. 4 credits. Not offered 2005-2006. J. Schoss.]

[ANTHR 385(3485) The Anthropology of Intellectuals (III) (CA)]

Fall. 4 credits. Not offered 2005-2006. D. Boyer.]

[ANTHR 388(3488) Masks of Power and Strategies of Resistance and Subversion (also ANTHR 688) @ (III) (SBA)]

Fall. 4 credits. Not offered 2005-2006. J. Rigi.]

[ANTHR 422(4422) Anthropology and Environment @ (III) (SBA)]

Fall. 4 credits. Prerequisite: anthropology majors or permission of instructor. Not offered 2005-2006. D. Holmberg.]

[ANTHR 426(4426) Ideology and Social Production (also ANTHR 726[7426]) (III) (SBA)]

Spring. 4 credits. Not offered 2005-2006. S. Sangren.]

ANTHR 429(4429) Anthropology and Psychoanalysis @ (III) (SBA)

Spring. 4 credits. S. Sangren.

Psychoanalysis holds that desire emerges from the clash between individuals' predisposition and the need to accommodate to others in society. Yet anthropology has been resistant to the role that psychoanalytic theory might play in linking individual desire to culture. Does psychoanalysis have anything to offer cultural anthropology? Can an understanding of collective institutions be advanced with reference to theories of individual motivation and desire? Conversely, can collective life be understood without reference to individual motivation and desire? Is desire best understood as sexual in nature, or is it better understood in more abstract and existential terms? With such questions in mind, this course surveys anthropology's engagements with psychoanalysis. Students read theoretical works as well as ethnographically grounded case studies on topics including religious experience, mythic narratives, the cultural construction of gender and desire, and modern popular culture.

[ANTHR 440(4440) Ethnographic Approaches to Studying Professionals and Institutions (III) (SBA)]

Spring. 4 credits. Not offered 2005-2006. D. Boyer.]

[ANTHR 442(4542) Violence, Symbolic Violence, Terror, and Trauma in South Asia and the Himalayas (also ANTHR 642[6542]) @ (III) (CA)]

Spring. 4 credits. Not offered 2005-2006. D. Holmberg.]

[ANTHR 444(4444) God(s) and the Market @ (III) (CA)]

Spring. 4 credits. Not offered 2005-2006. H. Miyazaki.]

ANTHR 470(4270) Political Economy in Archaeology (also ANTHR 770[7270], ARKEO 470/770[4270/7270])

Fall. 4 credits. K. Jordan.

Political economy is a theoretical approach that emphasizes power relations, social tensions, and contradictions and how they mediate access to wealth and basic resources. This seminar explores applications of political-economic theory in archaeological analysis. Begins with some key approaches to political economy within sociocultural anthropology to assess how these works can (and cannot) assist the interpretation of archaeological evidence. Particular attention is paid to questions of methodology: do certain field or analytical techniques facilitate or hinder political-economic interpretations? Case studies apply political-economic approaches to past societies at a variety of analytic and social scales, illustrating the intersection between archaeological political economy and issues of culture change, domination and resistance, ideology, gender, and agency.

ANTHR 475(4475) Governmentality, Citizenship, and Indigenous Political Theory

Spring. 4 credits. A. Simpson.

This seminar explores the ways in which Indigenous peoples have theorized, deployed, critiqued notions of "nationhood", "citizenship" and "sovereignty" in order to articulate and claim rights to territory, to jurisdiction and to the past. Our aim is to gain an appreciation of what these critical concepts mean in the literature of anthropology, political theory and Native American Studies as well as to examine the ways in which Indigenous peoples understand and critique state practices, maintain and construct their own modes of governance and mobilize politically to achieve these ends. This course is comparative in scope, literature and cases will be drawn from various sites but will dwell largely within Native North America.

[ANTHR 479(4479) Ethnicity and Identity Politics: An Anthropological Perspective (also AAS 479[4790]) (III) (SBA)]

Spring. 4 credits. Not offered 2005-2006. V. Munasinghe.]

B. Interpretive Approaches in Cultural Anthropology:

These courses stress symbolic or textual approaches to human society. They take as their object of analysis structures of meaning in such diverse areas as performance and text, myth and religion, views of the self, gender, and the sociology of knowledge. These same topics arise in many of the area-focused

courses as well (Section D) but take center stage in the following courses.

ANTHR 232(2432) Media, Culture, and Society (III) (SBA)]

Fall. 3 credits. D. Boyer.

Introduction to understanding the relationship between media and culture from an anthropological perspective. The primary goal is to help students develop an ethnographic awareness of the complex factors influencing mass media production, representation, and reception. The course works toward this goal by studying how media technologies effect the representation and reproduction of cultural identities, how mass media representations mediate the negotiation of national identities and moralities, how institutional situations and professional practices influence media production, and how state and market forces both create and restrict possibilities of media expression. A wide range of social and historical cases are covered by both reading and lectures. Course materials include print, visual, and electronic media. Assignments encourage students to engage the contemporary American media both analytically and critically.

[ANTHR 250(2450) The Anthropology of Food and Cuisine @ (III) (CA)]

Spring. 4 credits. Not offered 2005-2006. J. Fajans.]

ANTHR 320(3420) Myth, Ritual, and Symbol (also RELST 320[3720]) @ (III) (CA)]

Spring. 4 credits. D. Holmberg.

Examines how systems of thought, symbolic forms, and ritual practice are formulated and expressed in primarily non-Western societies. Focuses on anthropological interpretations of space, time, cosmology, myth, classificatory systems (e.g., color, totems, food, dress, kinship), taboos, sacrifice, witchcraft, sorcery, and rites of passage (birth, initiation, marriage, death). Examines both the roles of specialists (e.g., spirit mediums, curers, priests, ascetics) and nonspecialists in producing these cultural forms.

[ANTHR 343(3553) Anthropology through China Ethnography @ (III) (SBA)]

Fall. 4 credits. Not offered 2005-2006. S. Sangren.

For description, see section III. C.

"Understanding Cultures and Societies."]

ANTHR 369(3269) Gender and Age in Archaeology (also ANTHR 669[6269], ARKEO 369/669[3269/6269], FGSS 370/670[3700/6700])

Fall. 4 credits. N. Russell.

In recent years, feminist theory has begun to have an impact on archaeological thought. It is now recognized that gender is likely to have been a relevant dimension of social organization in past societies. Some archaeologists are also trying to take into account the differing interests and experiences of children, adults of reproductive age, and the elderly. This course is not limited to any period or geographical area, but ranges widely in examining how feminist theory has been applied to archaeological data and models. Considers whether it is necessary to identify women and men, adults and children in the archaeological record to take gender and age into account. Also examines the uses of archaeological data by contemporary feminists.

C. Cultures in Anthropological Perspective:

Anthropology constructs its theories in the comparison of different social and cultural systems and thus depends integrally on knowledge about particular places. The courses below are all focused on the cultures and societies of particular areas of the world and organize knowledge about these areas in reference to key anthropological questions. Students without prior experience in anthropology are welcome in these courses.

[ANTHR 210(2410) Sophomore Seminar: South Asian Diaspora (also AAS 210(2110)) (III) (CA)]
Spring. 3 credits. Limited to 15 students.
Sophomore writing seminar. Not offered 2005–2006. V. Munasinghe.

This is a special seminar sponsored by the John S. Knight Institutes Sophomore Seminars Program. Seminars offer discipline-specific study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the disciplines outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Limited to 15 students. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.]

[ANTHR 221(2721) Anthropological Representation: Ethnographies on Latino Culture (also LSP 272(2721), AM ST 221(2721)) (III) (CA)]
Fall. 3 credits. Not offered 2005–2006.

ANTHR 230(2730) Cultures of Native North America @ # (III) (CA)]
Fall. 4 credits. B. Lambert.

Survey of the principal Eskimo and American Indian culture areas north of Mexico. Selected cultures are examined to bring out distinctive features of the economy, social organization, religion, and worldview. Although the course concentrates on traditional cultures, some lectures and readings deal with changes in native ways of life that have occurred during the period of European-Indian contact.

[ANTHR 260(2560) Japanese Popular Culture @ (III) (CA)]
Fall. 3 credits. Not offered 2005–2006.
H. Miyazaki.]

ANTHR 303(3703) Asians in the Americas: A Comparative Perspective (also AAS 303(3030)) (III) (CA)]
Fall. 4 credits. V. Munasinghe.

The common perception of ethnicity is that it is a "natural" and an inevitable consequence of cultural difference. "Asians" overseas, in particular, have won reputé as a people who cling tenaciously to their culture and refuse to assimilate into their host societies and cultures. But, who are the "Asians"? On what basis can we label "Asians" an ethnic group? Although there is a significant Asian presence in the Caribbean, the category "Asian" itself does not exist in the Caribbean. What does this say about the nature of categories that label and demarcate groups of people on the basis of alleged cultural and phenotypical characteristics? This course examines the dynamics behind group identity, namely ethnicity, by comparing and contrasting the multicultural experience of Asian populations in the Caribbean and the United States. Ethnographic case studies focus on the East Indian and Chinese experiences in the Caribbean and the Chinese, Korean, Japanese, Filipino, and Indian experiences in the United States.

[ANTHR 312(3512) Work and Workplaces in Japan]
Spring. 4 credits. Not offered 2005–2006.

Spring. 4 credits. H. Miyazaki.
For description, see section III A.
"Understanding Cultures and Societies."

ANTHR 316(3516) Power, Society, and Culture in Southeast Asia @ (III) (CA)]
Fall. 4 credits. A. Willford.

Southeast Asia is a region where anthropologists have played great attention to the symbolic within cultural and social processes. While this intellectual orientation has produced contextually rich accounts of cultural uniqueness, there has been a tendency within "interpretive" ethnographies to downplay the role of power and domination within culture and society. This course aims to use the traditional strengths of symbolic anthropology by examining the roles of ritual, art, religion, and "traditional" values within contemporary Southeast Asian societies. In doing so, however, it examines how these practices and ideas can also structure ethnic,

class, and gender inequalities. Understanding how "traditional" cultural practices and ideologies fit within contemporary nation-states requires an examination the effects of colonialism, war, and nationalism throughout the region. In addition to providing a broad and comparative ethnographic survey of Southeast Asia, this course investigates how culturally specific forms of power and domination are reflected in national politics, and in local and regional responses to the economic and cultural forces of globalization.

ANTHR 335(3535) The Situation of China's Minorities: Anthropological Perspectives]

Fall. 4 credits. M. Fiskesjo.
Survey of the situation of China's minorities, using a relational approach that includes the majorities and their views, too. Studies several different minority peoples on the margin of the Middle Kingdom—sometimes crossing over into Southeast Asia—in imperial Chinese history, mythology, and today, and such aspects as the eroticizing, demonizing, and feminizing of minority groups and social outcasts; the place of minorities in Chinese law and politics, and Chinese affirmative action. Also considers the historical civilized/barbarian dynamic and compares the Chinese "Other" with the Noble Savage and other Western ideas, thus challenging Eurocentric generalizations about civilization and culture, and opening for discussion of global terms for identity production, race, and ethnicity.

[ANTHR 336(3536) Change and Continuity in the Pacific Islands @ (III) (CA)]
Fall. 4 credits. Not offered 2005–2006.

S. Sangren.]

ANTHR 355(3255) Ancient Mexico and Central America (also ARKEO 355(3255)) @ # (III) (HA)]

Spring. 4 credits. J. Henderson.
Survey of the cultural history of ancient Mexico and Central America, emphasizing Aztec and Maya civilizations. The use of ethnographic and historical information to enrich archaeological interpretation is a general theme. Specific topics include the emergence of settled farming life, the rise of civilization and the state, and the development of mechanisms that linked the many societies in the region into a single sphere of interaction.

[ANTHR 356(3256) Archaeology of the Andes (also ARKEO 356(3256)) @ # (III) (HA)]
Spring. 4 credits. Not offered 2005–2006.
J. Henderson.]

ANTHR 377(3777) The United States (also LSP/AM ST 377(3777)) (III) (CA)

Fall. 4 credits. V. Santiago-Irizarry.
The anthropological inquiry into one's own culture is never a neutral exercise. This course explores issues in the cultural construction of the United States as a "pluralistic" society. Looks at the ideological context for the production of a cultural profile predicted upon ideas that are intrinsic to American images of identity such as individualism, freedom, and equality and the way these are applied in practice. Readings include historic documents and accounts, popular writing, and recent ethnographies on the United States.

[ANTHR 383(3683) Topics in African Ethnography: The State and Civil Society in Colonial and Contemporary Africa @ (III) (SBA)]

Fall. 4 credits. Not offered 2005-2006.
J. Schoss.]

ANTHR 384(3684) Africa in the Global Economy (also ANTHR 784[7684]) @ (III) (SBA)

Fall. 4 credits. J. Schoss.
Examines the shifting and various ways in which African societies and nation states have been and continue to be enmeshed in global economic structures. Topics include: past and present African engagement in global trade; the nature of commodity marketing, consumption and advertising in colonial and post-colonial Africa; the burgeoning African tourist industry; the intersection between local communities and international development efforts, and the crucial but ambivalent role of primary commodities export industries, with particular consideration of diamond mining. Readings focus on a few key ethnographic and/or social historical texts. These texts are supplemented by materials from mass media sources, contemporary African films, and critical commentaries by African scholars.

[ANTHR 413(4513) Religion and Politics in Southeast Asia (also ASIAN 413[4413]) @ (III) (CA)]

Spring. 4 credits. Not offered 2005-2006.
A. Willford.]

[ANTHR 421(4621) Comparative Islamic Movements]

Fall. 4 credits. Not offered 2005-2006.
J. Rigi.]

ANTHR 423(4523) Making History on the Margins: The China-SE Asia Borderlands (also ANTHR 723[7523])

Spring. 4 credits. M. Fiskejso.
This seminar course is a new in-depth look at classical issues regarding the making of history, revisiting the mountain borderlands in between China and Southeast Asia made famous by anthropologists (Leach, Lévi-Strauss, Kirch, and Friedman) attempting to understand structure, history, and center-periphery transformations. Are the peoples of this region (Kachin, Wa, Naga, etc.) predetermined by fateful forces and processes beyond their control, as prisoners of geography and circumstance, or what role do they have in the making of their own history? The course addresses themes from regional ethnography as well as theoretical issues, and forms an introduction to field research in this fertile region.

ANTHR 441(4541) Himalayan Ethnographies (also ANTHR 741[7541]) @ (III) (CA)

Fall. 4 credits. D. Holmberg.

Focuses on a systematic reading of the monographic literature on the peoples and cultures of Himalayas. Classic and contemporary ethnographies are juxtaposed in an attempt to trace the history of the anthropology of the Himalayas. Although students read studies focused on Tibetan cultures and Hindu cultures continuous with those of India, the majority of monographs are drawn from the literature on Nepal because the greatest number of ethnographies on Himalayan peoples and cultures have been produced in reference to Nepal. Engagement with this ethnographic literature is the context for assessing the state of anthropological study of the Himalayas on topics as diverse as the environment, ritual, and gender. The course is framed in a more general reflection on problems in ethnographic research and writing as they have emerged in critiques of ethnography in the past two decades.

[ANTHR 442(4542) Violence, Symbolic Violence, Terror, and Trauma in South Asia and the Himalayas (also ANTHR 642[6542]) @ (III) (CA)]

Spring. 4 credits. Not offered 2005-2006.
D. Holmberg.]

ANTHR 450(4852) Europe (also ANTHR 750[7852]) (III)

Spring. 4 credits. D. Boyer, D. Greenwood, J. Rigi.

Rotating seminar dealing with diverse topics related to the anthropology of Europe. Examples are postsocialist transitions, the ethnographic representation of transnational relations and institutions in Europe, integration in the West and disintegration in the East of Europe, immigration, regionalism, and ethnic conflict. Each year it is staffed by one of the three Europeanists in the Department of Anthropology—Dominic Boyer (post-Socialist transition), Davydd Greenwood (ethnicity and nationalism), and Jakob Rigi (post-Socialist capitalism). The course serves to balance the area curriculum of the department by adding Europe to our offerings. It also serves the Modern European Studies Concentration and the International Relations Concentration directly as an additional, much-needed offering at the upper levels. Because the topics and professors shift, students may take more than one of these seminars.

ANTHR 455(4455) Anthropology in the Real World

Spring. 4 credits. J. Schoss.
Designed to expose students to the range of ways and fields within which practitioners employ anthropological theory, methods and perspectives. Course format includes both seminar discussions and workshop sessions with invited speakers. Both the invited speakers and the discussion topics represent different broadly defined fields in which anthropologists practice. Through class discussion and writing, students are expected to critically consider such issues as: research ethics, professional responsibility, the academic versus activist role, methodological practices, and the relationship between individual practitioners and the national, international, and organization contexts within which they work. Students produce a major research paper examining a particular field of "practical" anthropology of their interest.

[ANTHR 456(4256) Mesoamerican Religion, Science, and History @ # (III) (CA)]

[ANTHR 412(4421) Contemporary Anthropological Theory (III) (CA)]

Spring. 4 credits. Not offered 2005–2006.]

[ANTHR 420(4420) Development of Anthropological Thought (also ANTHR 720[7420]) (III) (SBA)]

Spring. 4 credits. Prerequisite: for undergraduates, two prior anthropology courses or permission of instructor.
H. Miyazaki.

Examination of the history and development of anthropological theory and practice. Focuses on the differences and continuities among the various national and historical approaches that have come to be regarded as the schools of anthropology.

[ANTHR 458(4258) Archaeological Analysis (also ANTHR 658[6258], ARKEO 458/658[4258/6258]) (III) (SBA)]

Spring. 4 credits. Limited to 15 students. Prerequisite: archaeology course or permission of instructor. Not offered 2005–2006. J. Henderson.]

[ANTHR 459(4259) Archaeology of the Household (also ANTHR 659[6259], ARKEO 459/659[4259/6259]) # (III) (HA)]

Fall. 4 credits. Not offered 2005–2006.]

[ANTHR 463(4263) Zooarchaeological Method (also ANTHR 463[4623]) (I/PBS Supplementary List)]

Fall. 5 credits. N. Russell.

Hands-on laboratory course in zooarchaeological method: the study of animal bones from archaeological sites. Designed to provide students with a basic grounding in identification of body part and taxon, aging and sexing, pathologies, taphonomy, and human modification. Deals only with mammals larger than squirrels. Though students work on animal bones from prehistoric Europe, most of these skills are easily transferable to the fauna of other areas, especially North America. This is an intensive course that emphasizes laboratory skills in a realistic setting. Students analyze an assemblage of actual archaeological bones. Highly recommended: ANTHR/ARKEO 464 Zooarchaeological Interpretation (offered in spring).

[ANTHR 464(4264) Zooarchaeological Interpretation (also ARKEO 464[4264]) (I/PBS Supplementary List)]

Spring. 4 credits. Prerequisite: permission of instructor. N. Russell.

Follows from the previous semester's Zooarchaeological Method. Emphasis shifts from basic skills to interpretation, although students continue to work with

archaeological bones. Begins by examining topics surrounding the basic interpretation of raw faunal data: sampling, quantification, taphonomy, seasonality. Then explores how to use faunal data to reconstruct subsistence patterns, social structure, and human/animal relations.

[ANTHR 467(4267) Origins of Agriculture (also ARKEO 467[4267]) # (III) (HA)]

Spring. 4 credits. Not offered 2005–2006.]

[ANTHR 480(4480) Anthropology and Globalization (also ANTHR 680[6480]) (III)]

Spring. 4 credits. A. Willford.

Examines anthropological perspectives on globalization and assesses the cultural, political, and social implications of contemporary global processes. In exploring the factors that are contributing to the production of diasporic consciousness, the intensity and variety of transnational flows of culture, commodities, corporations, and people are considered to assess challenges these processes pose to the modern nation-state. Has culture been liberated from the control of the nation-state through the emergence of new cultural networks created by immigration, electronic media, tourism, and multinational corporations and organization? Or, has the acceleration of global processes within the modern world system created new tools of domination within an increasingly stratified global economy? This course addresses these and related questions using both anthropological theories of and ethnographic studies on globalization, ethnicity, diaspora, and nationalism.

[ANTHR 487(4900) Field Research Abroad]

Fall or spring. Credit TBA. Prerequisite: undergraduate standing. Staff.

Field research abroad as part of the Cornell-Nepal Studies Program, the Cornell-Honduras Program, or other departmentally approved programs. Topics are selected and project proposals prepared by students in consultation with faculty. Fieldwork typically involves extended research (usually four to six weeks) in a foreign setting with faculty supervision, culminating in a major paper or report.

[ANTHR 494(4294) Seminar in Archaeology: The Archaeology of Human Origins (also ARKEO 494[4294]) (III) (HA)]

Spring. 4 credits. T. Volman.

Exploration of the archaeological record associated with early modern and near-modern humans as well as their nonmodern contemporaries, such as the Neanderthals. Major issues include: what behaviors and capabilities are indicated for various populations, and how and why did these change over the course of the later Pleistocene? To what extent does the archaeological record support the "Out-of-Africa" hypothesis of a recent, African origin for all modern humans?

V. Human History and Archaeology

Archaeology tells the story of human origins, the invention of farming and settled life, the rise of complex social institutions and technologies, and the worldviews of the past, while also teaching field and laboratory methods for uncovering the human past.

[ANTHR 203(2200) Early People: The Archaeological and Fossil Record (also ARKEO 203[2200]) # (III) (HA)]

T. Volman.]

[ANTHR 235(2235) Archaeology of North American Indians (also ARKEO 235[2235] AIS/AM ST 235[2350]) # (III) (HA)]

Spring. 3 credits. K. Jordan.

Introductory course surveying archaeology's contributions to the study of American Indian cultural diversity and change in North America north of Mexico. Lectures and readings examine topics ranging from the debate over when the continent was first inhabited to present-day conflicts between Native Americans and archaeologists over excavation and the interpretation of the past. Reviews important archaeological sites such as Chaco Canyon, Cahokia, Lamoka Lake, and the Little Bighorn battlefield. A principal focus is on major transformations in lifeways such as the adoption of agriculture, the development of political-economic hierarchies, and the disruptions that accompanied the arrival of Europeans to the continent.

[ANTHR 240(2240) Old World Prehistory (also ARKEO 240[2240]) # (III) (HA)]

[ANTHR 348(3248) Iroquois Archaeology (also ANTHR 648[6248], ARKEO 348/648[3248/6248], AIS 348/648[3480/6480])

Spring. 4 credits. K. Jordan.

Surveys the long-term development of Iroquois (Haudenosaunee) culture from an archaeological perspective. Issues examined include the geographic origins of the Iroquois; material culture, settlement, and subsistence; the founding of the Iroquois Confederacy; Iroquois responses to European-borne diseases, the fur trade, and territorial encroachment; the practicalities of doing Indian archaeology in New York State; and contemporary Haudenosaunee perspectives on archaeology. The Six Nations Iroquois is emphasized, with some material drawn from surrounding Northern Iroquoian groups. Visits to local archaeological sites and museum collections supplement classroom instruction. Requirements differ at the 300 and 600 levels.

[ANTHR 355(3255) Ancient Mexico and Central America (also ARKEO 355[3255]) @ # (III) (HA)]

Spring. 4 credits. J. Henderson.

Spring. 4 credits. T. Volman.
For description, see section IV, "Anthropological Thought and Method."

VI. Nature and Culture

Thinking about nature and culture and their interaction is central to contemporary anthropology. The courses in this section present a biological and evolutionary perspective on behavior, focus on the interplay between nature and culture, and discuss the controversies surrounding these relationships between these dimensions of human life.

[ANTHR 211(2411) Sophomore Seminar: Nature and Culture @ (III) (SBA)]

Spring. 4 credits. Not offered 2005-2006.
S. Sangren.

For description, see section IA, "Introductory Courses."

This is a special seminar sponsored by the John S. Knight Institutes Sophomore Seminars Program. Seminars offer discipline-specific study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the disciplines outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Limited to 15 students. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.]

VII. Graduate Seminars

The graduate program in anthropology is described in much greater detail on the anthropology department web page at falcon.arts.cornell.edu/Anthro/. The seminars described immediately below pertain to the program in sociocultural anthropology. For information about graduate study in archaeology and biological anthropology, see the anthropology department web page.

A core set of seminars is required of all graduate students in sociocultural anthropology: ANTHR 600 and 601. ANTHR 603 is strongly recommended. These courses are open to graduate students from other related fields. This sequence, and the graduate curriculum in general, is premised on the

idea that anthropology is best defined as the comparative study of human social life. This definition resists institutional pressures in the academy to distinguish social science from humanistic or cultural studies and scholarly from more worldly applications. Our most important method, ethnography, is at once scientific and humanistic; disciplinary aspirations refuse to view cultural interpretation and analytic explanation as separable values. Furthermore, theory in anthropology is directly related to practice in the world whether in relation to research or more action-oriented pursuits. Consequently, the core sequences as well as most other courses for graduate students are oriented explicitly toward subverting an ideological construction of social life as separable into cultural and social (or political-economic) domains.

ANTHR 600(6000) Proseminar: Culture and Symbol

Fall. 6 credits. D. Boyer.

Focuses on an appreciation of symbolic, expressive, and representational forms and processes both as producers and products of social activities. Through the study of symbolic anthropology, structuralism, exchange, myth and ritual, religion, gender, personhood, linguistics, semiology, etc., the course investigates how identity and meaning are linked to the practical exigencies of social life. While emphasizing aspects of the discipline generally associated with cultural anthropology, the course endeavors to set the stage for a dialectical understanding of social, political, economic, and symbolic activities as interrelated phenomena. The works of de Saussure, Levi-Strauss, Dumont, Geertz, Victor Turner, Sahlins, among others, as well as contemporary theories are given careful attention.

ANTHR 601(6010) Proseminar: Social Organization

Spring. 6 credits. J. Rigi.

Focuses on linkages between culture and social institutions, representations and practices. The nature of these linkages is debated from strongly contesting points of view in social theory (structuralist, poststructuralist, utilitarian, hermeneutic, Marxist). Unlike debates in critical theory where the form of contestation has been mainly philosophical, in anthropology, these issues have developed in ethnographic analyses. The course briefly surveys kinship theory and economic anthropology with a focus on implications for general issues in social theory. Discussion of attempts to develop dialectical syntheses around the motion of "practice" follows. The issues addressed in this section carry over into the next, colonialism and post-colonialism, in which poststructuralist readings of history are counterposed to Marxist ones. Finally, Lacanian and Marxist visions of ideology as they relate to anthropological theory and ethnographic analysis are examined with particular emphasis on the cultural and social production of persons.

[ANTHR 681(6481) Empire and Imperialism

Spring. 4 credits. Not offered 2005-2006.
J. Rigi.]

ANTHR 682(6482) Perspectives on the Nation

Fall. 4 credits. V. Munasinghe.
Critical examination of the key texts that have informed our understanding of the nation and nationalism. Beginning with some of the founding texts such as Hahn Kohn's "The Idea of Nationalism: A Study in its Origins and Backgrounds" (1994), Plamenatz's "Two Types of Nationalism" (1976), and Renan's "What is a Nation" (1939), the course moves on to more contemporary writings by Gellner, Hobsbawm and Anderson and ends with alternate analytical approaches that have been informed by the "national question" in the "Third World" such as Partha Chatterjee's "Nationalist Thought and the Colonial World." A central theme is how notions of culture, power, and history are implicated in constructions of "the Nation." Also explores the possibilities of an ethnographic approach to the nation and ask if such an analytical/methodological move may help us better grapple with the perplexing emotive dimension of nationalisms. The intersection of gender and nation also form a section of this course.

[ANTHR 690(6420) Ritual and Myth: Structure, Process, Practice

Spring. 4 credits. Not offered 2005-2006.]

[ANTHR 693(6593) Law and Social Movement in East Asia (also LAW 744)

Spring. 4 credits. Not offered 2005-2006.
A. Riles.]

ARCHAEOLOGY

S. Baugher, director (Landscape Architecture), R. G. Calkins (History of Art), K. M. Clinton, director of graduate studies (Classics), J. E. Coleman (Classics), K. L. Gleason (Landscape Architecture), J. S. Henderson (Anthropology), K. Jordan (Anthropology), K. A. R. Kennedy (Ecology and Evolutionary Biology), P. I. Kuniholm (Lab of Dendrochronology), R. McNeal (Asian Studies), D. I. Owen (Near Eastern Studies), A. Ramage (History of Art), E. Rebillard (Classics), N. Russell (Anthropology), B. S. Strauss (History), M. A. Tomlan (City and Regional Planning), T. P. Volman, director of undergraduate studies (Anthropology), J. R. Zorn (Near Eastern Studies).

Archaeology is an interdisciplinary field at Cornell, which is one of the few universities in the United States to offer a separate archaeology major and a master's degree. Program faculty members, affiliated with several departments, coordinate course offerings and help students identify opportunities for fieldwork, graduate study, and professional positions.

The Major

Prospective majors must complete ARKEO 100 or one of the basic courses as defined below before they will be admitted to the major. This course is not counted toward the major requirements.

Because the major draws on the teaching and research interests of faculty from many departments to present a broad view of the archaeological process, interested students should discuss their course of study with a participating faculty member as early as possible. In some areas of specialization, intensive language training should be coordinated with other studies as early as the freshman year.

Once admitted to the major, students must take at least 32 additional credits from the courses listed below, or from related fields selected in consultation with a major adviser of their choosing. The courses chosen should provide exposure to a broad range of cultures known through archaeology and the methods

of uncovering and interpreting them. Sixteen of the credit hours should be at the 300 level or above. At least two courses must be taken from each of the following categories: II. Anthropological Archaeology; III. Classical, Near Eastern, and Medieval Archaeology; and IV. Methodology and Technology. Only 4 credits of ARKEO 300 Individual Study or other supervised study can count toward the major.

Courses basic to the discipline of archaeology are marked with the word "Basic" after the number of credit hours. It is recommended that majors who are planning to pursue graduate studies in archaeology take at least two of the basic courses in each category. Further courses in languages and geology are also recommended.

Honors. Honors in archaeology are awarded on the basis of the quality of an honors essay and the student's overall academic record. Prospective honors students should have at least a 3.5 GPA in the major and a 3.0 grade point overall. They should consult with the director of undergraduate studies before the beginning of the senior year. The honors essay is normally prepared over two semesters in consultation with a faculty adviser during the senior year. Students enroll in ARKEO 481 Honors Thesis Research, and to complete the thesis, they enroll in ARKEO 482 Honors Thesis Writeup. Both courses are offered in the fall and spring. Only ARKEO 481 may count toward hours for completion of the archaeology major requirements. The credit hours for these courses are variable.

Fieldwork. Every student should gain some practical experience in archaeological fieldwork on a project authorized by his or her adviser. This requirement may be waived in exceptional circumstances. The Jacob and Hedwig Hirsch bequest provides support for a limited number of students to work at excavations sponsored by Cornell and other approved institutions.

The Concentration

Students in Cornell schools and colleges other than Arts and Sciences may elect a concentration in archaeology. To concentrate in archaeology, the student must complete five courses, all with a grade of C or better. The five courses must consist of either (1) ARKEO 100 and four other courses from categories II–IV (described above), at least three of which must be basic courses, or (2) five courses from categories II–IV, at least four of which must be basic courses. Concentrators are encouraged to gain some fieldwork experience. They are eligible for Hirsch Scholarships in support of fieldwork on the same basis as majors.

First-Year Writing Seminars

For course descriptions, see the First-Year Writing Program brochure.

I. Introductory Courses and Independent Study Courses

ARKEO 100(1200) Ancient Peoples and Places (also ANTHR 100[1200]) # @ (III or IV) (HA)

Fall. 3 credits. Basic. J. Henderson.
Broad introduction to archaeology: the study of material remains to answer questions about the human past. Case studies highlight the

variability of ancient societies and illustrate the varied methods and interpretive frameworks archaeologists use to reconstruct them. This course can serve as a platform for both archaeology and anthropology undergraduate majors.

ARKEO 300(3000) Individual Study in Archaeology and Related Fields

Fall and spring. Credit TBA. Prerequisite: ARKEO 100 or permission of instructor. Students pursue topics of particular interest with the guidance of a faculty member.

ARKEO 481(4981) Honors Thesis Research

Fall or spring. 4 credits, variable.
Prerequisite: admission to honors program. Independent work under the close guidance of a faculty member.

ARKEO 482(4982) Honors Thesis Writeup

Fall or spring. 4 credits, variable.

ARKEO 600(6000) Special Topics in Archaeology

Fall and spring. 4 credits, variable.
Students pursue advanced topics of particular interest under the guidance of a faculty member(s).

ARKEO 681–682(8901–8902) Master's Thesis

681, fall; 682, spring. 4 credits, variable.
Prerequisite: master's students in archaeology. S–U grades only.
Students, working individually with faculty member(s), prepare a master's thesis in archaeology.

II. Anthropological Archaeology

ARKEO 203(2200) Early People: The Archaeological and Fossil Record (also ANTHR 203[2200])

Spring. 3 credits. Basic. T. P. Volman.
For description, see ANTHR 203.

[ARKEO 215(2215) Stone Age Art (also ANTHR 215[2215])

J. Suh, E. Tagliacozzo, N. Uphoff, J. Whitman, A. Willford

The Department of Asian Studies encompasses the geographical areas of East Asia, South Asia, and Southeast Asia and offers courses in most of the disciplines of the social sciences and the humanities. Forty-five members of the department specialize in languages, linguistics, literatures, and religions, while associated faculty throughout the university teach courses on Asia in their own disciplines, from art history and government to rural sociology. Asian Studies courses through the 400 level (ASIAN is the prefix) are taught in English and are open to all students in the university. Some of these courses may be counted toward majors in other departments; others fulfill various distribution requirements.

The Major

A student majoring in Asian Studies normally specializes in the language and culture of one country and often chooses an additional major in a traditional discipline.

Majors complete two courses at the 200 level (a minimum of 6 credits with a grade of C or better) in one of the Asian languages offered at Cornell. The major consists of at least 30 additional credits (which may include up to 6 credits of further language study) of courses numbered 200 and above selected by the student in consultation with his or her adviser from among the Asia content courses offered by the Department of Asian Studies and by Asia specialists in other departments.

The applicant for admission to the major in Asian Studies must have completed at least

two Asia content courses, one of which can be a language course. Students must receive permission for admission to the major from the director of undergraduate studies. The student must have received a minimum grade of C in those courses and in all other courses counted toward the major.

Honors

To be eligible for honors in Asian Studies, a student must have a cumulative GPA of 3.7 in all Asian Studies area courses, exclusive of language study only, and must successfully complete an honors essay during the senior year. Students who wish to be considered for honors should apply to the director of undergraduate studies during the second semester of their junior year. The application must include an outline of the proposed project and the endorsement of a supervisor chosen from the Asian Studies faculty. During the first semester of the senior year the student does research for the essay in conjunction with an appropriate Asian Studies course or ASIAN 401. By the end of the first semester the student must present a detailed outline of the honors essay or other appropriate written work and have it approved by the project supervisor and the director of undergraduate studies. The student is then eligible for ASIAN 402, the honors course, which entails writing the essay. At the end of the senior year, the student has an oral examination (with at least two faculty members) covering both the honors essay and the student's area of concentration.

Concentration in East Asia Studies

A candidate for the bachelor of arts or science degree at Cornell may take a concentration in East Asia studies by completing at least 18 credits of course work in East Asia studies.

Students normally take five courses in East Asian Studies at the 200 level or above from those East Asian courses listed (China, Japan, Korea) either under Asian Studies or Asian-related courses. Of these, two courses might be Asian language courses at the 200 level or beyond. East Asian graduate courses may also be taken for the concentration, as well as East Asia-related courses with a research paper on an East Asian topic. Appropriate courses taken through Cornell Abroad in East Asia may also be counted toward the concentration. Students concentrating in East Asian Studies should select an adviser from the East Asia Program faculty for consultation on their course of study. For more information, contact the Department of Asian Studies at 350 Rockefeller Hall, 255-5095.

Concentration in South Asia Studies

A candidate for the bachelor of arts or science degree at Cornell may take a concentration in South Asian Studies by completing at least 18 credits of course work in South Asian Studies, including ASIAN 215 (Introduction to South Asia) and four courses or seminars at the intermediate or advanced levels, two of which may be South Asian language courses.

Students taking a concentration in South Asian Studies are considered members of the South Asia Program and will have an adviser from the program faculty. (This adviser will be for the student's concentration and is not a substitute for a student's academic adviser in his or her major.)

One South Asian graduate course may be taken for the concentration with permission of both the instructor and the adviser. The same applies for one South Asia-related course with a research paper on a South Asian subject. Additional courses may be added if offered with comparable South Asia content.

Concentration in Southeast Asia Studies

A candidate for the bachelor of arts or science degree at Cornell may take a concentration in Southeast Asian Studies by completing 18 credits of course work in Southeast Asian Studies. A recommended plan would include ASIAN 208 and four courses at the intermediate or advanced stage, two of which could be a Southeast Asian language. Students taking a concentration in Southeast Asian Studies are members of the Southeast Asia Program and are assigned an adviser from the program faculty. Such students are encouraged to commence work on a Southeast Asian language either at the 10-week intensive courses offered by the Southeast Asia Studies Summer Institute (SEASSI) or by studying for one semester at IKIP Malang, Indonesia; Khon Kaen University, Thailand; or Hanoi University, Vietnam; fellowships are available for undergraduates through the Cornell Abroad Program.

Intensive Language Program (FALCON)

The FALCON Program offers intensive instruction in Japanese or Chinese. Aside from the exclusive language schools of some government agencies, FALCON is the only program in the world that offers a full year of intensive instruction beginning at the elementary level and continuing to the advanced level. FALCON is a full-time program; the degree of intensity does not allow students to enroll simultaneously in other courses or to work, except perhaps on weekends. Students typically take the entire sequence of 160, 161, and 162, but they may take any other portion of the program if they have the necessary background as determined by a placement interview. Students often choose to apply only to the summer portion. The spring semester of the Chinese program is expected to be offered in Beijing at Tsinghua University.

Students must formally apply to the program. To guarantee course availability, applications must be received by March 1. After that, applicants are reviewed on a rolling basis and acceptance is contingent on the availability of spaces. Applications are available in 388 Rockefeller Hall or on the FALCON web site at <http://lrc.cornell.edu/falcon>.

Study Abroad

There are many strong options for study abroad in Asia. Cornell Abroad helps students plan a year or semester abroad as part of their Cornell undergraduate degree. Cornell has affiliations with several programs and institutions in Asia and sends students to those and others.

Cornell is affiliated with IUP, the Inter-University Program for Chinese Language Studies in Beijing (at Tsinghua University) and is a member of CIEE and IES, organizations sponsoring study abroad programs offering Chinese language instruction at several levels as well as courses in Chinese studies in the

humanities and social sciences. Students may also study at other programs in China, Hong Kong, and Taiwan. The Chinese FALCON program includes a spring semester in Beijing.

Cornell is a member of the consortium of the Kyoto Center for Japanese Studies, an undergraduate semester or year program in Japanese language and Japanese studies. An agreement with International Christian University (ICU), outside Tokyo, permits Cornell students to attend that institution. Cornell students have attended CIEE and IES programs as well as other programs and institutions in Japan.

Cornell is a member of the American Association of Indian Studies, which offers fellowships for intensive study in India or Hindi, Bengali, and Tamil. There are study abroad options in universities or other organizations in various regions of India.

In cooperation with Tribhuvan National University of Nepal, Cornell organizes the Cornell-Nepal Study Program for undergraduate and graduate students wishing to spend a semester or year studying and conducting research in Nepal.

Students may spend a semester or year in Mongolia, Korea, Vietnam, Indonesia, Thailand, Singapore, or the Philippines or choose to study about Asia at the School of Oriental and African Studies in London, or the Faculty of Asian Studies at the Australian National University. Undergraduates should consult Cornell Abroad; graduate students should inquire at the East Asia Program, Southeast Asia Program, or South Asia Program offices.

First-Year Writing Seminars

See John S. Knight Institute brochure for times, instructor, and descriptions.

General Education Courses

ASIAN 125(1125) Introduction to the Urdu Script (also URDU 125(1125))
Spring. 1 credit. Prerequisite: HINDI 101 or permission of instructor. Staff.
For description, see URDU 125.

ASIAN 191(1191) Introduction to Modern Asian History (also HIST 191[1910]) @ (III) (HA)
Fall. 4 credits. T. Loos and S. Cochran.
For description, see HIST 191.

[ASIAN 192(1192) Introduction to World Music: Asia (also MUSIC 104[1302]) @ (IV) (CA)
Fall. 3 credits. Not offered 2005-2006.
M. Hatch.]

ASIAN 201(2201) Sophomore Seminar: Buddhist Felicities (CA) (IV)
Spring. 4 credits. A. Blackburn
Is there a Buddhist heaven? Where is nirvana? Should Buddhists desire nirvana? What is the pleasure and reassurance of monasticism, meditation, and ritual? With reference to materials from historical and contemporary South and Southeast Asia, and the American Buddhist diaspora, this course examines some of the central felicities of Buddhism and reflect on the scholarly move to study Buddhism in terms of emotion, ritual, narrative, and material culture. Writing projects include responses to films, art objects, and ethnographic writing, as well as close readings of short Buddhist texts.

This is a special seminar sponsored by the John S. Knight Institutes Sophomore Seminars Program. Seminars offer discipline-specific study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the disciplines outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Limited to 15 students. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.

[ASIAN 206(2206) The Occidental Tourist: Travel Writing and Orientalism in Southeast Asia (also HIST 207/507[2070/5070]) @ (III)]

Fall. 4 credits. Not offered 2005–2006.
T. Loos.

For description, see HIST 207.]

[ASIAN 208(2208) Introduction to Southeast Asia @ (III or IV) (CA)]

Fall. 3 credits. T. Chaloeintarana.

For anyone curious about the most diverse part of Asia; defines Southeast Asia both as the nation-states that have emerged since 1945 (Brunei, Burma, Cambodia, Indonesia, Laos, Malaysia, Philippines, Singapore, Thailand, and Vietnam) and as a larger cultural world extending from southern China to Madagascar and Polynesia. Students find a serious, organized introduction to a variety of disciplinary and topical approaches to this region, including geography, linguistics, history, religion and ideology, anthropology, marriage and family systems, music, literacy and literature, art and architecture, agriculture, industrialization and urbanization, politics and government, warfare and diplomacy, ecological and human degradation, and business and marketing. The course teaches both basic information and different ways of interpreting that information.

[ASIAN 211(2211) Introduction to Japan: Japanese Texts in History @ # (IV) (HA)]

Fall. 3 credits. B. deBary.

Introduction to Japanese studies for nonmajors. Takes up diverse cultural artifacts and demonstrates how the meanings and readings generated by these artifacts have changed over time. Considers the eighth-century *Kojiki*, the courtly narrative *Tale of Genji*, puppet theater, Ainu autobiography, and films and comic books dealing with themes of nuclear warfare.

[ASIAN 212(2212) Introduction to China @ # (IV) (CA)]

Spring. 3 credits. R. McNeal.

Interdisciplinary introduction to Chinese culture especially designed for students not majoring in Asian Studies. Explores literature, history, religion, art and archaeology, and other aspects of China's rich and diverse heritage, from earliest times to the present.

[ASIAN 215(2215) Introduction to South Asian Civilization @ (IV) (HA)]

Spring. 3 credits. A. Blackburn.

Interdisciplinary introduction to the cultures and histories of South Asia, with special attention to religion, political authority, and the arts.

[ASIAN 218(2218) Introduction to Korea (also HIST 218[2180]) @ (III or IV) (CA)]

Spring. 3 credits. M. Shin.

Multidisciplinary introduction to Korean history, society, and culture. The first part

of the course examines sources of Korean tradition in their historical contexts. The second part, on the transition to a modern society, covers the mid-19th century to the Korean War. The last part is devoted to contemporary society.

Asia—Literature and Religion Courses

The following courses are taught entirely in English and are open to any Cornell student.

[ASIAN 219(2219) Women in South Asia (also HIST/FGSS 219[2190]) @ (III) (HA)]

Fall. 4 credits. D. Ghosh.

For description, see HIST 219.

[ASIAN 220(2220) Buddhism in America (also RELST 220[2200]) (IV)]

Winter. 3 credits. Not offered 2005–2006.

J. M. Law.]

[ASIAN 228(2228) The Indian Ocean World (also HIST 228[2280]) @ (III) (HA)]

Spring. 4 credits. Limited to 15 students.

E. Tagliacozzo.

For description, see HIST 228.

[ASIAN 241(2241) China's Literary Heritage: An Introduction in Translation @ # (IV) (LA)]

Spring. 3 credits. D. X. Warner.

Survey course designed for, though not limited to, nonmajors with or without any knowledge of Chinese language, history, or culture. Students read a broad selection in translation of poems, prose, and narrative writings from the pre-modern period on a variety of themes, including the individual and society, man and nature, love and sorrow, fate and faith, life and death. Lectures and guided discussions explore the interrelation between the Chinese literary tradition and its culture, history, philosophy, religions, and visual art. The goal is to help students toward informed and enjoyable reading of Chinese literature while gaining a deeper understanding of the Chinese and cultural heritage.

[ASIAN 245(2245) Gamelan in Indonesian History and Cultures (also MUSIC 245[1341]) @ (IV) (LA)]

Fall or spring. 3 credits. Permission of instructor. M. Hatch.

For description, see MUSIC 245.

[ASIAN 249(2249) Peddlers, Pirates, and Prostitutes: Subaltern Histories of Southeast Asia, 1800 to 1900 (also HIST 249[648]) @ # (III) (HA)]

Spring. 4 credits. Not offered 2005–2006.

E. Tagliacozzo.

For description, see HIST 249.]

[ASIAN 250(2250) Introduction to Asian Religions (also RELST 250[2250]) @ # (IV) (HA)]

Spring. 3 credits. D. Boucher.

Explores a range of religious traditions in South Asia (Pakistan, India, and Sri Lanka) and East Asia (China and Japan) including Hinduism, Buddhism (South and East Asian), Confucianism, Daoism, and Shinto. We concentrate on these religions in traditional times in order to understand better the historical foundations that have influenced much of what these cultures are today. The course format includes lectures and discussion sections.

[ASIAN 277(2277) Meditation in Indian Culture (also RELST 277[2277]) @ # (IV) (CA)]

Spring. 3 credits. D. Gold.

Probes the truths behind traditional claims of the priority of internal practice in Indian traditions. Students are expected to experiment with some basic meditation practices and situate them within larger South Asian worldviews as suggested by doctrines, rituals, iconic forms, and literary texts. Grades are based on short papers.

[ASIAN 282(2282) Japanese Animation and New Media @ (IV) (CA)]

Fall. 3 credits. T. LaMarre.

Introduces Japanese animation and new media, with an emphasis on analysis of myth, genre, and media.

[ASIAN 284(2284) Southeast Asia in the World System: Capitalism and Incorporation, 1500 to Present (also HIST 284[2840]) @ # (III)]

Fall. 4 credits. Not offered 2005–2006.

E. Tagliacozzo.

For description, see HIST 284.]

[ASIAN 293(2293) History of China up to Modern Times (also HIST 293[2930]) @ # (III) (HA)]

Fall. 4 credits. Not offered 2005–2006.

C. Peterson.

For description, see HIST 293.]

[ASIAN 294(2294) History of China in Modern Times (also HIST 294[2940]) @ (III) (HA)]

Spring. 4 credits. Not offered 2005–2006.

Staff.

For description, see HIST 294.]

[ASIAN 298(2298) The U.S.–Vietnam War (also HIST 289[2890]) @ (III) (HA)]

Fall. 3 credits. K. Taylor, F. Logevall.

Analyzes events in Vietnam, the United States, and elsewhere related to the U.S. policy of intervention in Vietnam between 1954 and 1975. Readings include historical narratives, memoirs, and literature. The course evaluates the standard winner (Hanoi) and loser (U.S.) narratives and how they have silenced southern Vietnamese voices.

[ASIAN 299(2299) Buddhism (also RELST 290) @ # (IV) (CA)]

Fall. 4 credits. Not offered 2005–2006.

D. Boucher.]

[ASIAN 301(3301) Schools of Thought—Ancient China @ # (IV) (HA)]

Fall. 4 credits. R. McNeal.

Introduces students to early Chinese thought through readings in translation from classical works on moral and political philosophy. Addresses critically the traditional conception of the Six Schools of thought in ancient China, including the Taoists, Confucians, and Legalists. Examines newly discovered materials and recent research that helps clarify the relationships among early intellectual traditions and the social and intellectual world from which they emerged.

[ASIAN 302(3302) Art of War in Ancient China @ # (IV) (HA)]

Fall. 4 credits. R. McNeal.

Sun-tzu's *Art of War* is one of the most widely translated and circulated books of all time. Businessmen in Asia swear by it, professional coaches invoke it when planning strategy, and students of political science plumb its depths for timeless wisdom on how to defeat an enemy without taking to the battlefield. This

course examines Sun-tzu's text in its historical context, along with several other early military and strategic works. Students treat the works as a genre and read them not as manuals for modern-day success, but as a record of a complex and sophisticated conceptualization of the role of warfare and all its components in the broader mission of the state.

[ASIAN 306(3306) Zen Buddhism (also RELST 306) @ # (IV) (KCM)]

Spring. 4 credits. Limited to 15 students. Prerequisites: any university-level course in Buddhism or ASIAN/RELST 250, or permission of instructor. Graduate students can take this course for credit and sign up for an additional credit hour for an extra session. Not offered 2005-2006. J. M. Law.]

[ASIAN 312(3312) Intellectuals in Early Modern Korea @ # (IV) (HA)]

Spring. 4 credits. Prerequisite: one course on modern Japan or Korea. M. Shin. Introduction to early modern Korean history (early 19th century to 1945) through a survey of its major intellectuals. Gives an overview of the political and socioeconomic background that gave rise to these intellectuals and then examines how they commented on and tried to shape the conditions of their times. Topics include critiques of feudal society, the origins of modern literature and historiography, socialism/communism, liberation movements, Christianity, and feminism. Readings include secondary sources, Korean texts in translation, and works by Korean intellectuals written in English.

[ASIAN 326(3326) Comparative Civil War]

Spring. 4 credits. K. Taylor.

[ASIAN 328(3328) Construction of Modern Japan (also HIST 328[3280]) @ # (III) (HA)]

Spring. 4 credits. Not offered 2005-2006. J. V. Koschmann. For description, see HIST 328.]

[ASIAN 342(3342) History of Modern South Asia 1700 to 1947 (also HIST 342[3420]) (III) (HA)]

Fall. 4 credits. D. Ghosh. For description, see HIST 342.

[ASIAN 346(3346) Modern Japanese Politics (also GOVT 346[3463]) @ (III)]

Spring. 4 credits. R. Weiner. For description, see GOVT 346.

[ASIAN 347(3347) Tantric Traditions (also RELST 349) @ # (IV) (CA)]

Fall. 4 credits. D. Gold. Treats the development of tantric traditions in the Indian subcontinent and beyond. Discusses philosophical, socio-religious, cultic, and visionary dimensions of tantra. Different Hindu and Indo-Tibetan traditions are studied, and some attention is paid to tantric developments in East Asian Buddhism.

[ASIAN 348(3348) Indian Devotional Poetry (also RELST 348[3348]) @ # (IV) (LA)]

Spring. 4 credits. Not offered 2005-2006. D. Gold.]

[ASIAN 351(3351) Indian Religious Worlds (also RELST 351[3351]) @ (IV) (CA)]

Fall. 4 credits. Not offered 2005-2006. D. Gold.]

[ASIAN 354(3354) Indian Buddhism (also RELST 354[3354]) @ # (IV) (HA)]

Fall. 4 credits. Not offered 2005-2006; next offered 2007-2008. D. Boucher.]

[ASIAN 355(3355) Japanese Religions (also RELST 355[3555]) @ (IV) (CA)]

Spring. 4 credits. Not offered 2005-2006. J. M. Law.]

[ASIAN 356(3356) Theravada Buddhism (also RELST 363) @ (IV) (CA)]

Fall. 4 credits. Not offered 2005-2006. A. Blackburn.]

[ASIAN 357(3357) Chinese Religions (also RELST 357[3357]) @ # (IV) (CA)]

Fall. 4 credits. Not offered 2005-2006. D. Boucher.]

[ASIAN 359(3359) Japanese Buddhism: Texts in Context (also RELST 359[3359]) @ # (IV) (HA)]

Spring. 4 credits. J. M. Law. Focuses on six figures in Japanese Buddhism: Saichō (767-822), Kūkai (774-835), Hōnen (1113-1212), Nichiren (1222-1282), Dogen (1200-1253), and Hakuin (1686-1769). Studies their lives, writings, core practices, and doctrines and a central religious dynamic the work of each embodies: establishment of a Mahayana ordination, esoteric practice, the popularization of Buddhism, Buddhist pro-nationalist ideologies, and establishment of Zen meditation as iconic "Japanese" Buddhism.

[ASIAN 373(3373) 20th-Century Chinese Literature @ (IV) (LA)]

Fall. 4 credits. E. Gunn. A survey of the principal works in English translation, the course introduces fiction, drama, essays, and poetry of China beginning with the Republican era and continuing up to the present in the People's Republic and Taiwan, with attention to social and political issues and literary theory.

[ASIAN 374(3374) Chinese Narrative Literature (also COM L 376) @ # (IV) (LA)]

Spring. 4 credits. E. Gunn, D. X. Warner. Selected works in classical Chinese fiction are read in translation. Major novels, such as *The Dream of the Red Chamber* and *Water Margin*, are emphasized.

[ASIAN 379(3379) Southeast Asian Literature in Translation @ (IV) (LA)]

Spring. 4 credits. L. Paterson. Introduction to modern Southeast Asian literature in translation, concentrating on contemporary short stories and novels from the mainland. Explores the literature thematically with reference to such issues as modernization, decolonization, changing gender roles and relationships, and the urban-rural dichotomy.

[ASIAN 380(3380) Vietnamese Literature in Translation @ # (IV) (LA)]

Fall. 4 credits. K. Taylor. Survey of Vietnamese literature available in translation from all eras beginning with earliest times to the contemporary period. Includes both poetry and prose, with particular attention to literary forms and considerations of how those forms relate to their ostensible contents. Also addresses how the idea of a national literature arose and how the substance of this idea was constructed.

[ASIAN 385(3385) History of Vietnam (also HIST 388/688[3880/6880]) @ # (IV) (HA)]

Spring. 4 credits. Meets concurrently with ASIAN 685. Graduate students may enroll and attend a seminar sec. K. Taylor. Survey of Vietnamese history and culture from earliest times to the present.

[ASIAN 386(3386) Southeast Asia through Film @ (IV) (CA)]

Spring. 4 credits. L. Paterson. Explores the portrayal in Western cinema of countries of Southeast Asia in juxtaposition with films produced in the countries themselves. In what ways is this exotic region constructed through Western eyes? To what degree has Southeast Asian cinema itself imitated this Occidental construct? The earliest Western films shot in Southeast Asia, the rise of local cinemas, and the most recent Hollywood blockbusters are examined. Through close analysis of these films, students explore the process of visual translation from reality to fantasy, in both the local and international contexts, throughout the 20th century.

[ASIAN 387(3387) Literature and Film of South Asia (also COM L 386[3860]) @ (IV) (CA)]

Fall. 4 credits. A. Banerjee. For description, see COM L 386.

[ASIAN 388(3388) Theorizing Gender and Race in Asian Histories and Literatures (also ASIAN 688[6688], COM L 398/668[3980/6680]) @ (IV) (CA)]

Fall. 4 credits. N. Sakai. Students are allowed to take this course as ASIAN 388 or 688, although those who have studied Japanese for more than four years are strongly encouraged to register in ASIAN 688. Those who register in AS 688 have to spend additional time in class to deal with texts in Japanese. ASIAN 388: mainly for undergraduate and graduate. Prerequisite: none. The type and amount of written work required: oral presentations in class and two term papers (8 to 12 pages double-spaced each).

[ASIAN 392(3392) Divination Sciences in Antiquity (also CLASS 392[3692], NES 392) @ # (IV) (HA)]

Fall. 4 credits. Not offered 2005-2006. C. Minkowski.]

[ASIAN 395(3395) Classical Indian Philosophical Systems (also CLASS 395[3695], RELST 395) @ # (IV) (KCM)]

Spring. 4 credits. Prerequisite: some background in philosophy or in classical culture. Not offered 2005-2006. C. Minkowski.]

[ASIAN 396(3396) Southeast Asian History from the 18th Century (also HIST 396[3960]) @ (III) (HA)]

Spring. 4 credits. T. Loos and E. Tagliacozzo. For description, see HIST 396.

[ASIAN 397(3397) Premodern Southeast Asia (also HIST 395[3950]) @ # (III) (HA)]

Fall. 4 credits. E. Tagliacozzo. For description, see HIST 395.

[ASIAN 409(4409) Archipelago: The Worlds of Indonesia (also HIST 410[4100]) @ (III) (HA)

Spring. 4 credits. Not offered 2005–2006.
E. Tagliacozzo.

For description, see HIST 410.]

ASIAN 410(4410) Chinese Film (also VISST 410) @ (IV) (LA)

Spring. 4 credits. E. Gunn.

Additional film viewing hours TBA. The course surveys Chinese films from the 1920s to the present and various responses to them. Films from mainland China, Hong Kong, and Taiwan are included, together with critical studies employing a variety of different critical methods.

[ASIAN 411(4411) History of the Japanese Language (also LING 411[4411], JAPAN 410[4410]) @ # (III) (HA)

Fall. 4 credits. Not offered 2005–2006.

J. Whitman.

For description, see LING 411.]

[ASIAN 412(4412) Linguistic Structure of Japanese (also LING 412[4412]) (III) (KCM)

Spring. 4 credits. Not offered 2005–2006.

J. Whitman.

For description, see LING 412.]

ASIAN 413(4413) Religion and Politics in Southeast Asia (also ANTHR 413[4413]) @ (III) (CA)

Spring. 4 credits. A. Willford.

For description, see ANTHR 413.

ASIAN 414(4414) Second Language Acquisition I (also LING 414[4414]) (III) (KCM)

Fall. 4 credits. Y. Shirai.

For description, see LING 414.

ASIAN 416(4416) Gender and Sexuality in Southeast Asian History (also HIST/FGSS 416[4160]) @ (III) (CA)

Spring. 4 credits. T. Loos.

For description, see HIST 416.

ASIAN 417(4417) Second Language Acquisition II (also LING 415[4415]) (III) (KCM)

Spring. 4 credits. Y. Shirai.

For description, see LING 415.

[ASIAN 421(4421) Religious Reflections on the Human Body (also RELST 422) (IV) (KCM)

Spring. 4 credits. Prerequisites: one religious studies course or permission of instructor. Not offered 2005–2006.

J. M. Law.]

ASIAN 424(4424) Scars and Bars: Asian Trauma Memoirs @ (IV) (CA)

Spring. 4 credits. L. Paterson.

From the Chinese Cultural Revolution to Khmer Rouge Cambodia, social upheaval in Asia has given rise to a genre of trauma memoir. This course examines how periods of societal terror are represented and remembered within these personal narratives. Through reading such accounts in conjunction with secondary scholarship, students examine various issues of representation such as intended audience, construction of memory, and framing of individual experience. They also examine to what extent these accounts contribute to, or contradict, national narratives of the respective countries. Readings include memoirs from Cultural Revolution China, post-war Vietnam,

Khmer Rouge Cambodia, Burma under military rule, and contemporary Thailand.

ASIAN 425(4425) Theories of Civilization (also HIST 494[4940]) @ # (III or IV) (HA)

Spring. 4 credits. K. Taylor.

Survey of theories about how to define civilization and how civilizations arise and decline, based on the writings of Confucius and Mneciu, Ibn Khaldun, Giambattista Vico, Oswald Spengler, and Arnold Toynbee.

[ASIAN 430(4430) Structure of Korean (also LING/KOREA 430[4430]) (III) (KCM)

Spring. 4 credits. Not offered 2005–2006.

J. Whitman.

For description, see LING 430.]

ASIAN 436(4436) Topics in Indian Film @ (IV) (LA)

Spring. 4 credits. No knowledge of an Indian language required. D. Gold.

Treats various aspects of Indian film, with focal topics to vary from year to year. These topics include religion in Indian film, Indian art films, and the golden age of Indian film. All topics are discussed in relation to the conventions of mainstream Bollywood cinema and their social and cultural significances. Attendance at weekly screenings is required.

[ASIAN 438(4438) Monks, Texts, and Relics: Transnational Buddhism in Asia (also ASIAN 638[6638], RELST 438) (IV) (CA)

Spring. 4 credits. Prerequisites: one 300-level or above course in ASIAN or RELST or permission of instructor. Not offered 2005–2006. A. Blackburn.]

[ASIAN 439(4439) Japanese Politics (also GOVT 439[4439]) @ (III) (SBA)

Fall. 4 credits. Not offered 2005–2006.

R. Weiner.

For description, see GOVT 439.]

ASIAN 441(4441) Mahayana Buddhism (also RELST 441[4441]) @ # (IV) (CA)

Spring. 4 credits. D. Boucher.

Explores the origins and early developments of a movement in Indian Buddhism known as the Mahayana, focusing on a small slice of this movement's voluminous literature. Topics include the career of the bodhisattva, the lay/monk distinction, attitudes of Mahayanists toward women and other Buddhists, and the development of Buddhist utopias and transcendent Buddhas.

ASIAN 443(4443) Neoliberalism and Culture (also S HUM 421)

Spring. 4 credits. Limited to 15 students.

Nae-hui Kang.

For description, see S HUM 421.

[ASIAN 445(4445) Japanese Imperialism in East Asia @ (IV) (HA)

Fall. 4 credits. Limited to 15 students

Prerequisite: at least one course on modern East Asia. Not offered 2005–2006. M. Shin.]

ASIAN 449(4449) History and Methods of the Academic Study of Religion (also RELST 449[4449]) @ (III) (KCM)

Spring. 4 credits. Prerequisite: one course satisfying religious studies major.

J. M. Law.

Provides advanced students in religious studies or the humanities familiarity with important methodological issues in the academic study of religion. Following a

brief historical outline, major approaches to the academic study of religion currently used and discussed in religious studies are examined. Students read works from the following approaches to the study of religion: anthropology, philosophical hermeneutics, phenomenology, history of religions, the sociology of religion and critical ideological studies. In the final segment, the course focuses on recent developments in the field of religious studies.

[ASIAN 450(4450) Crime and Diaspora in Southeast Asian History (also HIST 451[4510]) @ # (III)

Fall. 4 credits. Not offered 2005–2006.

E. Tagliacozzo.

For description, see HIST 451.]

ASIAN 453(4453) Immortality and Enlightenment in Chinese Religions @ # (IV) (CA)

Spring. 4 credits. D. Boucher.

Examines techniques of spiritual cultivation in both the Daoist and Buddhist traditions of China, comparing and contrasting methods that focus on the manipulation of bodily energies and fluids, particularly in the early and medieval Daoist traditions, with the Buddhist emphasis on cognitive transformation, particularly in the Chan school. Discussions also look beyond China to include Indian and Western techniques leading to mystical awareness, as well as to the debates on the nature of mystical states as "pure consciousness events" on the one hand, or culturally specific constructions on the other.

ASIAN 460(4460) Indian Meditation Texts (also RELST 460[4460]) @ # (IV) (KCM)

Fall. 4 credits. No knowledge of Indian languages required. D. Gold.

Draws on approaches from literary criticism, anthropology, and religious studies to explore texts that record religious experience. Readings are drawn from classical meditation manuals of Hinduism and Buddhism and later yogic and devotional texts.

[ASIAN 462(4462) Religion, Colonialism, and Nationalism in South and Southeast Asia (also ASIAN 662[6662], RELST 462) (IV) (CA)

Spring. 4 credits. Prerequisites: one course in ASIAN, RELST, HIST, ANTHR at 300 level or above or permission of instructor. Not offered 2005–2006. A. Blackburn.]

ASIAN 482(4482) Seminar: Gender Adjudicated (also HIST 480[4800]) @ (III)

Fall. 4 credits. T. Loos.

For description, see HIST 480.

ASIAN 483(4483) Internationalism, Nationalism, and Modern Japanese Discursive Space @ (III) (KCM)

Spring. 3 credits. N. Sakai.

In the late 19th and early 20th centuries, nation-states formed in Britain, France, Japan, Germany, and the United States sought to become imperial powers; and "internationalism" virtually collapsed. Focusing on Japanese examples, but not excluding other cases, this course studies modern national subjectivity with a view to the problems of ethnicity, colonialism, sexism, historical memory, post-coloniality, and academic knowledge.

[ASIAN 486(4486) Ritual and Performance in Japanese Religions (also RELST 486)] (IV) (CA)

Spring. 4 credits. Limited to 12 students. Prerequisites: for undergraduates, permission of instructor. Ability to read Japanese not required, but there are optional readings in Japanese. Graduate students may sign up for this as graduate-level course. Not offered 2005-2006. J. M. Law.]

[ASIAN 487(4487) Vedanta Among the Shastras @ # (IV) (HA)

Spring. 4 credits. Prerequisite: primarily for seniors/majors and graduate students; background in subject; permission of instructor. Not offered 2005-2006. C. Minkowski.]

ASIAN 492(4492) Undergraduate Seminar in Medieval Chinese History (also HIST 492[4920]) @ (III) (HA)

Fall. 4 credits. Prerequisites: ASIAN/HIST 293, HIST 360, or permission of instructor. C. Peterson.

Topic: The life of the Chinese literati—social, cultural, and intellectual—as seen through literature, art, and other materials. For description, see HIST 492.

[ASIAN 493(4493) Problems in Modern Chinese History (also HIST 493/693[4930/6930]) @ (III) (HA)

Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2005-2006. S. Cochran.

For description, see HIST 493.]

ASIAN 496(4496) Tokugawa Literature and Thought @ # (IV) (HA)

Spring. 4 credits. N. Sakai.

Introduction (in English translation) to literary, theatrical, and intellectual works of the Tokugawa period (1600-1868). Examines the characteristics of the literary and theatrical works of the Tokugawa Japan. Students read the philosophical and philological works on the classics by writers such as Ogyu Sorai and Motoori Norinaga to discuss the issues of literary modernity.

[ASIAN 499(4499) Problems in Modern Chinese History (also HIST 499/694[4990/6940]) @ (III) (HA)

Spring. 4 credits. Prerequisite: permission of instructor. Not offered 2005-2006. S. Cochran.

For description, see HIST 499.]

[ASIAN 507(5507) The Occidental Tourist (also HIST 207/507[2070/5070], ASIAN 206[2206])]

Fall. 4 credits. Not offered 2005-2006. T. Loos.

For description, see HIST 207.]

Asia—Graduate Seminars

For complete descriptions of courses numbered 600 or above, consult the director of graduate studies.

[ASIAN 601(6601) Southeast Asia Area Seminar: Thailand (also HIST 487/687[4870/6870])]

Fall. 4 credits. Not offered 2005-2006. Staff.]

ASIAN 602(6602) Southeast Asia Seminar

Spring. 4 credits. Staff.

[ASIAN 604(6604) Southeast Asia Topical Seminar]

Spring. 3-4 credits. Not offered 2005-2006. T. Chaloeontiarana.]

[ASIAN 605-606(6605-6606) Master of Arts Seminar in Asian Studies]

605, fall; 606, spring. 2-4 credits. Not offered 2005-2006. Staff.]

[ASIAN 610(6610) SLA and the Asian Languages (also LING 609[6609])]

Fall. 4 credits. Not offered 2005-2006. Y. Shirai.

For description, see LING 609.]

ASIAN 612(6612) Japanese Bibliography and Methodology

Fall. 1 credit. Requirement for honors students and M.A. candidates. Prerequisite: permission of instructor. F. Kotas.

ASIAN 613(6613) Southeast Asian Bibliography and Methodology

Fall. 1 credit. Requirement for honors students and M.A. candidates. Prerequisite: permission of instructor. Recommended: reading knowledge of at least one Southeast Asian language or other Asian language (especially Chinese or Japanese) and a major European language (especially French, Spanish, or Dutch). Staff.

Designed to instruct students in methods of identifying and locating resources for the study of Southeast Asia. Emphasis is on the practical aspects of using various types of bibliographical tools to identify both primary and secondary sources in Southeast Asian and Western languages. Electronic databases and online services as well as traditional printed resources are covered. Relevant arcana of library science is explained as necessary.

ASIAN 618(6618) Gender and Sexuality in Southeast Asian History (also ASIAN 416[4416], HIST 416/616[4160/6160])]

Spring. 4 credits. Prerequisite: graduate standing. T. Loos.

For description, see HIST 416.

ASIAN 619(6619) Graduate Seminar: Translation in Theory

Spring. 4 credits. B. de Bary.

The study of translation, often figured as invisible, brings hidden histories to light. Translation may be a practice of power, or its undoing; it may consolidate hegemonies, or decenter them. Translation is a prominent motif in philosophy and art. The course introduces theories of translation significant for post-modern, post-colonial, and visual studies.

ASIAN 626(6626) The 18th Century and the Emergence of Literary Modernity

Spring. 4 credits. N. Sakai.

ASIAN 634(6634) Buddhist Studies Seminar

Fall. 4 credits. Prepares graduate students studying Asian religions for A examination; other graduate students by permission of instructor. A. Blackburn.

Reviews central historical developments in the field of Buddhist studies, as well as recent methodological debates and innovations.

[ASIAN 638(6638) Monks, Texts, and Relics: Transnational Buddhism in Asia (also RELST 438)]

Spring. 4 credits. Prerequisites: one 300-level or above course in ASIAN or RELST

or permission of instructor. Not offered 2005-2006. A. Blackburn.]

ASIAN 650(6650) Seminar in Asian Religions

Fall. 4 credits. Limited to 10 students. Prerequisite: graduate standing. Recommended: reading knowledge of modern Japanese. J. M. Law.

[ASIAN 651(6651) Crime and Diaspora in Southeast Asian History (also HIST 451/650[4510/6510])]

Fall. 4 credits. Not offered 2005-2006. E. Tagliacozzo.

For description, see HIST 650.]

[ASIAN 654(6654) Indian Buddhism (also ASIAN 354[3354], RELST 354/654[3354/6654])]

Fall. 4 credits. Graduate students attend ASIAN 354 and arrange additional meetings with instructor. Not offered 2005-2006; next offered 2007-2008. D. Boucher.

For description, see ASIAN 354.]

[ASIAN 662(6662) Religion, Colonialism, and Nationalism in South and Southeast Asia (also RELST 462)]

Spring. 4 credits. Prerequisites: one course in ASIAN, RELST, HIST, ANTHR at 300 level or above or permission of instructor. Not offered 2005-2006. A. Blackburn.]

[ASIAN 671(6671) Paleoanthropology of South Asia (also BIOEE 671[6710], ANTHR 671[6371])]

Fall. 3 credits. Limited to 15 students. Not offered 2005-2006. K. A. R. Kennedy.

For description, see BIOEE 671.]

ASIAN 676(6676) Southeast Asia Reading Seminar: The Early Thai Novels

Fall. 4 credits. T. Chaloeontiarana.

ASIAN 680(6680) Vietnamese Literature in Translation (also ASIAN 380 [3380])]

Fall. 4 credits. L. Paterson.

For description, see ASIAN 380.

[ASIAN 684(6684) Southeast Asia in the World System: Capitalism and Incorporation, 1500 to Present (also HIST 284/684[2840/6840])]

Fall. 4 credits. Not offered 2005-2006. E. Tagliacozzo.

For description, see HIST 684.]

ASIAN 685(6685) History of Vietnam (also HIST 388/688[3880/6880] and ASIAN 385[3385])]

Spring. 4 credits. K. Taylor.

For description, see ASIAN 385.

ASIAN 688(6688) Theorizing Gender and Race in Asian Histories and Literature (also ASIAN 388[3388])]

Fall. 4 credits. Prerequisite: reading knowledge of Japanese. N. Sakai.

For description, see ASIAN 388.

[ASIAN 693(6693) Problems in Modern Chinese History (also HIST 493/693[4930/6930])]

Fall. 4 credits. Not offered 2005-2006. S. Cochran.

For description, see HIST 493.]

[ASIAN 694(6694) Problems in Modern Chinese History (also HIST 499/694[4990/6940])]

Spring. 4 credits. Not offered 2005-2006. S. Cochran.

For description, see HIST 499.]

ASIAN 696(6696) Modern Southeast Asia: Graduate Proseminar (also HIST 396/696[3960/6960])

Spring. 4 credits. T. Loos and E. Tagliacozzo.

For description, see HIST 396.

ASIAN 698(6698) Seminar in Japanese Thought (also HIST 698[6980])

Fall. 4 credits. Limited to 15 graduate students. Prerequisite: reading knowledge of Japanese. V. Koschmann.

For description, see HIST 698.

ASIAN 701-702(7701-7702) Seminar in East Asian Literature

701, fall; 702, spring. 1-4 credits. Staff.

ASIAN 703-704(7703-7704) Directed Research

703, fall or spring; 704, fall or spring. 1-4 credits. Staff.

ASIAN 705(7705) Crosslinguistic Topics—Language Acquisition (also LING 700.2)

Fall. 4 credits. Y. Shirai.

For description, see LING 700.2.

ASIAN 899(8899) Master's Thesis Research

Fall, spring. 2-4 credits. Staff.

ASIAN 999(9999) Doctoral Dissertation Research

Fall, spring. 2-4 credits. Staff.

Honors Courses

ASIAN 401(4401) Asian Studies Honors Course

Fall or spring. 4 credits. Prerequisite: senior standing; admission to honors program. Staff.

Supervised reading and research on the problem selected for honors work.

ASIAN 402(4402) Asian Studies Honors: Senior Essay

Fall or spring. 4 credits. Prerequisite: admission to honors program. Staff.

The student, under faculty direction, prepares an honors essay.

ASIAN 403-404(4403-4404) Asian Studies Supervised Reading

Fall, spring, or both. 1-4 credits.

Prerequisite: permission of instructor; majors and other qualified students.

Intensive reading under the direction of a member of the staff.

Bengali

BENGL 121-122(1121-1122) Elementary Bengali

121, fall; 122, spring. 4 credits each semester. *BENGL 122 provides language qualification.* Prerequisite: for BENGL 122, BENGL 121 or examination.

Enables students to read and comprehend basic Bengali texts as well as speak and write in the language. The introduction of the Bengali script is complemented by detailed instruction in grammar.

BENGL 201-202(2201-2202) Intermediate Reading and Conversation @

201, fall; 202, spring. 4 credits each semester. *BENGL 201 provides language proficiency and satisfies Option 1.* Prerequisites: for BENGL 201, BENGL 122 or examination; for BENGL 202, BENGL 201 or examination.

Building on skills mastered at the elementary level and continuing grammar instruction, this course is designed to advance students' oral competence and enhance comprehension skills through reading and listening. Its aim is to enable students to interact productively when immersed in the environment and/or to carry out research in primary material in the language.

BENGL 203-204(2203-2204) Intermediate Bengali Composition and Conversation

203, fall; 204, spring. 2 credits each semester. Prerequisites: for BENGL 203, BENGL 122 or examination; for BENGL 204, BENGL 203 or examination.

Complements the verbal skills developed in BENGL 201-202 by improving writing skills.

BENGL 300(3000) Directed Studies

Fall or spring. 1-4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor.

Taught on a specialized basis to address particular student needs.

BENGL 303-304(3303-3304) Bengali Literature I, II

303, fall; 304, spring. 4 credits each semester. Prerequisites: BENGL 203-204 or equivalent.

Designed in consultation with students to address their specific needs. Through reading literary texts organized around social and cultural theme-clusters, the course aims to refine the students' breadth of understanding and develop literary/critical skills.

Burmese

Note: Contact S. Tun in 405 Morrill Hall before classes begin for placement or other testing and organizational information.

BURM 103-104(1103-1104) Burmese Conversation Practice

103, fall; 104, spring. 2 credits each semester. *BURM 104/122 fulfills qualification portion of language requirement.* Prerequisites: for BURM 104, BURM 103 and 121. May not be taken alone; must be taken simultaneously with BURM 121-122. S. Tun.

Additional drills, practice, and extension of materials covered in BURM 121 and 122. These courses are designed to be attended simultaneously with BURM 121-122 respectively, allowing students to obtain qualification within a year.

BURM 121-122(1121-1122) Elementary Burmese

121, fall; 122, spring. 4 credits each semester. *BURM 122 provides language qualification. BURM 104/122 fulfills qualification portion of language requirement.* Prerequisites: for BURM 122, BURM 121. May be taken alone or simultaneously with BURM 103-104. S. Tun.

A thorough grounding is given in all language skills: listening, speaking, reading, and writing.

BURM 123(1123) Continuing Burmese

Fall. 4 credits. *Provides language qualification.* Prerequisite: BURM 122. S. Tun.

Continuing instruction in conversational and reading skills to prepare students for 200-level courses.

BURM 201-202(2201-2202) Intermediate Burmese Reading @

201, fall or spring; 202, fall or spring. 3 credits each semester. *BURM 201 provides language proficiency and satisfies Option 1.* Prerequisites: for BURM 201, BURM 123; for BURM 202, BURM 201. S. Tun.

Continuing instruction in Burmese, with emphasis on consolidating and extending conversational skills, and on extending reading ability.

BURM 300(3000) Directed Studies

Fall or spring. 1-4 credits, variable.

Prerequisite: permission of instructor.

Times TBA with instructor. S. Tun.

Taught on a specialized basis to address particular student needs.

BURM 301-302(3301-3302) Advanced Burmese

301, fall or spring; 302, fall or spring. 3 credits each semester. Prerequisites: for BURM 301, BURM 202 or permission of instructor; for BURM 302, BURM 301. S. Tun.

Continuing instruction on conversational and literary skills, but with special emphasis on reading. Students encounter various genres and styles of written Burmese. Readings include articles on current events, and either several short stories or a novel. Focus is on developing reading skills, particularly on vocabulary development, consolidating and expanding grammar, and appreciating stylistic and cultural differences.

BURM 303-304(3303-3304) Advanced Burmese II

303, fall or spring; 304, fall or spring. 3 credits each semester. Prerequisite: for BURM 303, BURM 202 or permission of instructor; for BURM 304, BURM 303. S. Tun.

For students who have good conversational ability in Burmese and some familiarity with Burmese culture, but who need to strengthen reading skills and further enrich their vocabulary. Students, in consultation with the instructor, are able to select reading materials. There is also an opportunity for those who need it, to strengthen listening skills, through the study of current films, TV, and radio programs in Burmese.

BURM 401-402(4401-4402) Directed Individual Study

401, fall; 402, spring. 2-4 credits, variable, each semester. Prerequisite: permission of instructor. S. Tun.

Designed to accommodate the needs of advanced or specialized students, and faculty interests. Topics of reading and discussion are selected on the basis of student need.

Cambodian

See "Khmer."

Chinese

Note: Testing for placement, except for those with near-native abilities (particularly those schooled in a Chinese setting up until the age of about 12), takes place in registration week, before classes begin. Time and place will be posted at <http://Lrc.cornell.edu/asian/> programs/ placement and on the bulletin board outside 350 Rockefeller Hall. Students with some Chinese schooling who want to obtain 3 credits for their proficiency will be tested at

the beginning of the second week of classes. Again, the time and place will be announced.

CHIN 101-102(1101-1102) Elementary Standard Chinese (Mandarin)

101, fall; 102, spring. 6 credits each semester. *CHIN 102 provides language qualification.* Limited to 10-12 students per sec. Prerequisite: for CHIN 102, CHIN 101 or permission of instructor. Students must enroll in lec and one sec. Because of limited sec size, students missing first two class meetings without university excuse are dropped so others may register. No students added after second week of classes. Letter grades assigned unless student receives exceptional permission from course coordinator for S-U. S. Divo and staff.

For beginners only, providing a thorough grounding in conversational and reading skills. Students with some facility in the spoken language (because Chinese is spoken at home) but who do not read characters should take 109-110. Students who read Chinese, but who speak "dialects," such as Cantonese or Amoy, should enroll in CHIN 215.

CHIN 109-110(1109-1110) Beginning Reading and Writing (Standard Chinese)

109, fall; 110, spring. 4 credits each semester. *CHIN 110 provides language qualification.* Prerequisite: permission of instructor. Students who complete CHIN 110 normally continue with CHIN 209 and 210. Because of high demand, students missing first two meetings without university excuse are dropped so others may register. Y. Lee Mehta.

Intended primarily for students who speak some Chinese (e.g., at home), but who have had little or no formal training. The focus is on characters, reading comprehension, basic composition, standard grammar, and reading aloud with standard Chinese (Mandarin) pronunciation.

CHIN 111-112(1111-1112) Elementary Cantonese

111, fall; 112, spring. 4 credits each semester. *CHIN 112 provides language qualification.* Prerequisite: for CHIN 111, permission of instructor; for CHIN 112, CHIN 111 or equivalent. Students with Mandarin background should enroll in CHIN 112. H. Huang.

CHIN 111 is for beginners with no or very limited Chinese/Cantonese language background from heritage or previous formal training. CHIN 111/112 gives comprehensive training in oral/aural reading/writing in Cantonese spoken and used in Canton and Hong Kong. CHIN 111 focuses more on oral and aural skills training than on reading and writing Cantonese characters. CHIN 112 covers more training on reading and writing Cantonese characters than does CHIN 111. For more details, see <http://lrc.cornell.edu/asian/courses/ch/chin111>.

CHIN 201-202(2201-2202) Intermediate Standard Chinese (Mandarin) @

201, fall or summer; 202, spring or summer. 4 credits each semester. *CHIN 201 provides language proficiency and satisfies Option 1.* Prerequisites: for CHIN 201, CHIN 102 with grade of C+ or above or equivalent; for CHIN 202, CHIN 201 or equivalent. Q. Teng and staff.

Continuing instruction in written and spoken Chinese with particular emphasis on consolidating basic conversational skills and improving reading confidence and ability.

CHIN 209-210(2209-2210) Intermediate Reading and Writing @

209, fall; 210, spring. 4 credits each semester. *CHIN 209 provides language proficiency and satisfies Option 1.* Prerequisites: for CHIN 209, CHIN 110 or equivalent; CHIN 210, CHIN 209. After completing 210, students may take only 400-level courses in Chinese. Staff.

Continuing focus on reading and writing for students with spoken background in standard Chinese; introduction of personal letter writing and other types of composition.

CHIN 211-212(2211-2212) Intermediate Cantonese @

211, fall; 212, spring. 4 credits each semester. *CHIN 211 provides language proficiency and satisfies Option 1.* Prerequisites: for 211, permission of instructor and completion of CHIN 112 or elementary conversational skills in Cantonese from heritage but very limited formal training in Cantonese character reading and writing. For 212, CHIN 211 or equivalent. H. Huang.

Gives comprehensive training in oral and written Cantonese at a higher level than CHIN 111-112. Oral training covers conversational Cantonese expression on daily life topics. Written training includes reading aloud and writing Cantonese characters as well as simple composition writing skills in Chinese characters. For more details, see <http://lrc.cornell.edu/asian/courses/ch/chin211>.

CHIN 213-214(2213-2214) Intermediate Reading and Writing for Cantonese Speakers @

213, fall; 214, spring. 4 credits each semester. *CHIN 213 provides language proficiency and satisfies Option 1.* Prerequisite: for 213, Cantonese speakers who have no major problems in oral communication in Cantonese and have very basic ability in reading and writing Chinese characters; for 214, 213 or equivalent. H. Huang.

Intended primarily for students who are Cantonese speakers from heritage or previous formal training and who have very basic ability in Chinese character reading and writing. The training focuses on reading and writing Cantonese characters as well as composition/essay writing in Cantonese characters. Students also learn some basic knowledge of Cantonese oral and written translation vs. English or Mandarin. For more details, see <http://lrc.cornell.edu/asian/courses/ch/chin213>.

CHIN 215(2215) Mandarin for Cantonese Speakers @

Fall. 4 credits. *Provides language proficiency and satisfies Option 1.* Limited to 15 students. Prerequisite: advanced Cantonese with native-like reading and writing ability. Staff.

Works on standard Chinese pronunciation and differences in vocabulary and grammar between Cantonese and Mandarin.

CHIN 300(3000) Directed Studies

Fall or spring. 1-4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. Staff.

Taught on a specialized basis to address particular student needs.

CHIN 301-302(3301-3302) High Intermediate Chinese @

301, fall; 302, spring. 4 credits each semester. *CHIN 301 provides language proficiency and satisfies Option 1.* Prerequisites: for CHIN 301, CHIN 202 or equivalent; for CHIN 302, CHIN 301. Y. Lee-Mehta.

Continuing instruction in spoken Chinese and in various genres and styles of written Chinese.

CHIN 304(3304) Advanced Mandarin Conversation

Spring. 1 credit. Limited to 10 students. Prerequisite: CHIN 202, 215, 301, or permission of instructor. Staff.

Offers a wonderful speaking and listening opportunity to students who wish to maintain/increase their language proficiency by engaging in guided discussions of various topics.

CHIN 411-412(4411-4412) Advanced Chinese: Fiction, Reportage, Current Events @

411, fall; 412, spring. 4 credits each semester. Prerequisites: for CHIN 411, CHIN 302 or equivalent; for CHIN 412, CHIN 411 and permission of instructor. Q. Teng.

Reading, discussion, and composition at advanced levels.

CHIN 425(4425) Special Topics

Spring. 4 credits. Prerequisite: permission of instructor. Staff.

Chinese FALCON (Full-year Asian Language CONcentration)

For full information, brochures, etc., see the FALCON Program coordinator in 388 Rockefeller Hall or e-mail: falcon@cornell.edu or <http://lrc.cornell.edu/falcon>

FALCON is designed to help students develop "copability" in Chinese by bringing them to the level where they can make progress on their own even with no further instruction. The full-year program provides over 1,800 hours of language exposure—which exceeds even the exposure that students living in China typically receive. This allows students to develop levels of fluency, accuracy, and control that are not achieved in other academic settings. By taking the entire full-year sequence, students can complete as much Chinese in one calendar year as they would complete in three or more years of regular study at most academic institutions. The full-year sequence is Chinese 160 (summer), 161 (fall), and 162 (spring). Students typically take the entire sequence, but they may take any other portion of the program if they have the necessary background as determined by a placement interview. Students often choose to apply only to the summer portion. The spring semester of the Chinese program is expected to be offered in Beijing at Tsinghua University. In the summer and fall, three small interactive classes per day are conducted entirely in Chinese, and one lecture is conducted in both Chinese in English. In the spring semester,

all four classes are conducted entirely in Chinese. In the summer and fall, students are also required to spend two one-hour sessions per day in the language lab. Additional preparation time in the language lab of up to three hours is necessary in the evenings.

Students must formally apply to the program. To guarantee course availability, applications must be received by March 1. After that, applicants are reviewed on a rolling basis and acceptance is contingent on the availability of spaces. Applications are available in 388 Rockefeller Hall or at <http://lrc.cornell.edu/falcon>.

CHIN 160(1160) Introductory Intensive Mandarin

Summer only. 8 credits. *Provides language qualification.* Students who complete this course with grade of at least B are normally eligible to enroll in CHIN 201. S. Divo and staff.

Introduction to spoken and written Mandarin. Lectures on linguistic and cultural matters, intensive practice with native speakers, and laboratory work.

CHIN 161-162(1161-1162) Intensive Mandarin @

161, fall; 162, spring. 16 credits each semester. *CHIN 161 provides language proficiency and satisfies Option 1.* Prerequisites: for CHIN 161, CHIN 160 or equivalent or permission of instructor; for CHIN 162, CHIN 161 or placement by FALCON staff before beginning of spring semester. Students must apply formally to program; open to all Cornell students and students from other institutions. S. Divo and staff.

Work on spoken and written Chinese from an intermediate to an advanced level. This is a full-time program and full academic load; the demands of the program do not normally permit students to take other courses simultaneously. With a sequence of 160, 161, and 162, in only one calendar year a student can complete as much Chinese as would be gained in three or more years of regular study at most academic institutions. This course sequence also serves to fulfill the language requirement for the M.A. in Asian Studies and the joint M.B.A./M.A. in Asian Studies. CHIN 162 is scheduled to be held in Beijing, People's Republic of China. For more information and application forms, please contact the FALCON Program office.

Literature in Chinese

CHLIT 213-214(2213-2214) Introduction to Classical Chinese @ # (LA)

213, fall; 214, spring. 3 credits each semester. *CHLIT 213 provides language proficiency and satisfies Option 1.* Prerequisite: qualification in Chinese or permission of instructor. May be taken concurrently with CHIN 101-102, 201-202, 301-302. Open to students who have studied at least two years of any language that employs Chinese writing system (e.g., Mandarin, Cantonese, Japanese). Staff.

Two-part introductory course. Students learn the fundamental grammar and vocabulary of classical Chinese by analyzing and translating short passages.

CHLIT 300(3300) Reading from the Early Masters @ # (HA)

Fall. 4 credits. Prerequisites: CHLIT 213-214 or permission of instructor. R. McNeal.

Students read and discuss several passages from early classical texts, including the Confucian Analects, the Mozi, the Guanzi, and others. Attention is paid to grammar, historical context, and methodology.

[CHLIT 307(3307) Readings in Classical Chinese Literature @ # (IV) (LA)]

Spring. 4 credits. Prerequisite: CHLIT 214 or permission of instructor. Not offered 2005-2006. D. X. Warner.]

CHLIT 420(4420) Tang Poetry: Themes and Contexts (also CHLIT 620(6620)) @ # (IV) (LA)

Fall. 4 credits. D. X. Warner.

A guided reading in Chinese of selected works on shared themes written by selected poets of the Tang dynasty (618-907). Focuses on developing the essential skills for reading Tang poems while giving attention to their social, cultural, and historical contexts.

CHLIT 421-422(4421-4422) Directed Study

Fall or spring. 2-4 credits each semester.

Prerequisite: permission of instructor. Staff. Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop course content.

CHLIT 423(4423) Readings in Chinese History @

Spring. 4 credits. *Provides language proficiency and satisfies Option 1.* Staff.

[CHLIT 435(4435) Chinese Buddhist Texts @ # (IV) (LA)]

Fall. 4 credits. Prerequisite: one year of classical Chinese or permission of instructor. Open to students in any area of East Asia with an interest in developing skills in Buddhist texts. Not offered 2005-2006. D. Boucher.

Seminar designed to introduce students to the idiom of Buddhist Chinese. The aim is to gain a grasp of the vocabulary and syntax that came to characterize literary Buddhism in China.]

[CHLIT 497(4497) Disjuncture: Text and Exegesis @ # (IV) (LA)]

Spring. 4 credits. Prerequisite: permission of instructor; completion of equivalent of CHLIT 214 and any CHLIT course at 300 level. Not offered 2005-2006. R. McNeal.]

CHLIT 603(6603) Seminar in Chinese Fiction and Drama

Fall. 4 credits. Prerequisite: permission of instructor. E. Gunn.

Engages students in contemporary fiction and drama and published criticism of them to build the students' scholarly and critical abilities. Texts are in Chinese, with some criticism published in English.

[CHLIT 605(6605) Seminar in Chinese Fiction and Drama]

Spring. 4 credits. Prerequisite: permission of instructor. Not offered 2005-2006. Staff.]

[CHLIT 610(6610) Chinese Cultural Criticism]

Spring. 4 credits. Not offered 2005-2006. E. Gunn.]

CHLIT 615(6615) Seminar: Ideas and Literature of Medieval China

Spring. 4 credits. D. X. Warner.

Offers study of the language and genres of Medieval Chinese literature in the context of Medieval Chinese intellectual history. Students

read from a range of primary works—including poetry, prose, literature treatises, philosophical essays, and historical writings—from the Later Han to the Sui and early Tang, in addition to a selection of modern scholarly essays in the field. The primary aim is to re-examine the interrelationship between the history of ideas and the formation of a medieval poetics during the period of Chinese literary history.

[CHLIT 618(6618) Seminar on Ancient China]

Fall. 4 credits. Also fulfills Humanities requirement. Prerequisite: CHLIT 213-214 or permission of instructor. Not offered 2005-2006. R. McNeal.]

CHLIT 620(6620) Tang Poetry: Themes and Contexts (also CHLIT 420(4420))

Fall. 4 credits. D. X. Warner.

For description, see CHLIT 420.

CHLIT 621-622(6621-6622) Advanced Directed Reading: Chinese Historical Syntax

621, fall; 622, spring. 2-4 credits.

Prerequisite: permission of instructor. Staff. Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop class readings.

[CHLIT 697(6697) Disjuncture: Text and Exegesis]

Spring. 4 credits. Prerequisite: permission of instructor; completion of equivalent of CHLIT 214 and any CHLIT course at 300 level. Not offered 2005-2006. R. McNeal.]

Hindi

HINDI 101-102(1101-1102) Elementary Hindi-Urdu

101, fall; 102, spring. 6 credits each semester. *HINDI 102 provides language qualification.* Prerequisite: for HINDI 102, HINDI 101 or equivalent. Staff.

For those students who have had very little or no exposure to Hindi-Urdu. Designed to enable such students to read, write, and converse in the language with confidence and enjoyment. Hindi and Urdu are sister languages and share an identical grammar and elementary vocabulary. The language presented is colloquial. The Hindi script is taught first and the Urdu script is taught as an additional course in the spring semester. Students who have some experience of Hindi-Urdu or a closely related language are suited for HINDI 109-110 and should check with the instructor.

HINDI 109-110(1109-1110) Accelerated Elementary Hindi-Urdu

109, fall; 110, spring. 3 credits each semester. *HINDI 110 provides language qualification.* Prerequisite: for HINDI 110, HINDI 109 or equivalent. Completion of this sequence, including satisfactory performance on exam given at end of HINDI 110, constitutes level of performance equal to 101-102 sequence and is thus considered to fulfill qualification for language requirement plus eligibility for 200-level Hindi-Urdu courses. Check with instructor regarding placement. Staff.

Entry-level sequence for students with some prior exposure to Hindi-Urdu or a closely related language. Provides a thorough

grounding in all the language skills: listening, speaking, reading, and writing.

HINDI 201-202(2201-2202) Intermediate Hindi Reading @

201, fall; 202, spring. 3 credits each semester. *HINDI 201 provides language proficiency and satisfies Option 1.* Prerequisites: for HINDI 201, HINDI 102; for HINDI 202, HINDI 201 or permission of instructor. Staff.

HINDI 203-204(2203-2204) Intermediate Composition and Conversation @

203, fall; 204, spring. 3 credits each semester. *HINDI 203 provides language proficiency and satisfies Option 1.* Prerequisites: for HINDI 203, HINDI 102; for HINDI 204, HINDI 203 or permission of instructor. Staff.

HINDI 300(3000) Directed Studies

Fall or spring. 1-4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. Staff. Taught on a specialized basis to address particular student needs.

HINDI 301-302(3301-3302) Advanced Readings in Hindi Literature @

301, fall; 302, spring. 4 credits each semester. Prerequisites: for HINDI 301, HINDI 202; for HINDI 302, HINDI 301 or equivalent. Staff.

Selected readings in modern Hindi literature.

Indonesian

Students who have completed INDO 121-122-123 or its equivalent have the option of taking a one-semester program in Malang, East Java, during the junior year. The program combines a variety of cultural and artistic options with area course work and advanced language study. Complete information is available through Cornell Abroad.

Students who have completed a minimum of 18 credits or the equivalent are eligible to apply for a summer program in the Advanced Indonesian Abroad Program. Further information is available from the Southeast Asia Program (180 Uris Hall, 255-2378).

INDO 121-122(1121-1122) Elementary Indonesian

121, fall; 122, spring. 4 credits each semester. Prerequisite: for INDO 122, INDO 121. T. Savella and staff.

Gives a thorough grounding in basic speaking and listening skills with an introduction to reading.

INDO 123(1123) Continuing Indonesian

Fall. 4 credits. *Provides language qualification.* Prerequisite: INDO 122 or equivalent. T. Savella and staff.

Improves speaking skills, such as fluency and pronunciation, focusing on verbal communication skills; offers a wide range of readings and sharpens listening skills.

[INDO 203-204(2203-2204) Intermediate Composition and Conversation @

203, fall; 204, spring. 3 credits each semester. *INDO 203 provides language proficiency and satisfies Option 1.* Prerequisites: for INDO 203, INDO 123; for INDO 204, INDO 203 or permission of instructor. Not offered 2005-2006. T. Savella and staff.]

INDO 205-206(2205-2206) Intermediate Indonesian @

205, fall; 206, spring. 3 credits each semester. *INDO 205 provides language proficiency and satisfies Option 1.* Prerequisites: for INDO 205, INDO 123 or equivalent; for INDO 206, INDO 205 or equivalent. T. Savella and staff.

Develops all four skills: reading, writing, speaking, and comprehension.

[INDO 300(3000) Directed Studies

Fall or spring. 1-4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. Not offered 2005-2006. T. Savella and staff.]

INDO 305-306(3305-3306) Directed Individual Study

305, fall; 306, spring. 2-4 credits. Prerequisites: INDO 301-302 and 303-304 or equivalent knowledge of Indonesian or Malay. T. Savella and staff.

Practical language course on an advanced level in which the students read materials in their own field of interest, write reports, and meet with the instructor for two hours a week for 2 credits and twice a week for 4 credits.

Japanese

JAPAN 101-102(1101-1102) Elementary Japanese

101, fall; 102, spring. 6 credits each semester. *JAPAN 102 provides language qualification.* Prerequisite for 102: JAPAN 101 or placement by instructor during registration period. Intended for beginners or those who have been placed in the course by examination. Students must enroll in one lec and one sec. Undergraduates may not enroll for S-U grade option. Graduate students must enroll for a letter grade and may change to S-U by permission of instructor. R. Sukle, Y. Nakanishi, and staff.

Gives a thorough grounding in all four language skills—speaking, listening, reading, and writing—at the beginning level but with a special emphasis on oral communication and use of the language in social contexts. Homework is largely work on the skill aspects through practice on the Internet, with CDs, or with tapes. The lecture provides explanation, analysis, and cultural background necessary for successful interaction with Japanese people. Sections are conducted entirely in Japanese. Materials covered are *not* the same as for JAPAN 141-142.

JAPAN 141-142(1141-1142) Beginning Japanese at a Moderate Pace

141, fall; 142, spring. 4 credits each semester. Prerequisite: for JAPAN 142, JAPAN 141 or placement by instructor during registration. Y. Nakanishi and staff. Beginning-level training in listening, speaking, reading, and writing, with more emphasis on written skills than JAPAN 101-102. Classroom activities focus on oral communication skills. Homework for the course is largely written exercises. Fewer credits and fewer class contact hours than JAPAN 101-102; the course meets five hours per week (M T W R F). Materials covered are *not* the same as for JAPAN 101-102.

JAPAN 201-202(2201-2202) Intermediate Japanese Conversation @

201, fall and summer; 202, spring and summer. 4 credits each semester. *JAPAN 201 provides language proficiency and*

satisfies Option 1. Prerequisites: for JAPAN 201, JAPAN 102 or placement by instructor during registration; for JAPAN 202, JAPAN 201 and 203 or placement by instructor during registration. Students must enroll in lec and one sec. Y. Katagiri.

For students with an elementary level of Japanese to continue study of the language and acquire widely applicable oral proficiency. Sections are conducted entirely in Japanese to develop listening comprehension and speaking ability through practical situational practices. Lectures give versatile knowledge of essential structural patterns systematically, with audiovisual aids (e.g., Japanese TV) to demonstrate use in actual situations.

JAPAN 203-204(2202-2204) Intermediate Japanese Reading I @

203, fall; 204, spring. 2 or 3 credits each semester. *JAPAN 203 provides language proficiency and satisfies Option 1.* Prerequisites: for JAPAN 203, JAPAN 102 or 142, or placement by instructor during registration; for JAPAN 204, JAPAN 203 or 241, or placement by instructor during registration. Y. Kawasaki.

Reading of intermediate texts emphasizing practical materials, with development of writing skills.

JAPAN 241-242(2241-2242) Intermediate Japanese at a Moderate Pace

241, fall; 242, spring. 4 credits each semester. *JAPAN 241 provides language qualification and satisfies Option 1.* *JAPAN 242@ provides language proficiency and satisfies Option 1.* Prerequisites: for JAPAN 241, JAPAN 142 or placement by instructor during registration period; for JAPAN 242, JAPAN 241 or placement by instructor. N. Larson.

Training in listening, speaking, reading, and writing for those students who have acquired a basic beginning-level command.

JAPAN 300(3000) Directed Studies

Fall or spring. 1-4 credits variable. Prerequisite: permission of instructor. Times TBA with instructor. Staff.

Taught on a specialized basis to address particular student needs.

JAPAN 301-302 Communicative Competence @

301, fall; 302, spring. 3 credits each semester. *JAPAN 301 provides language proficiency and satisfies Option 1.* Prerequisites: for JAPAN 301, JAPAN 202 or 242 and placement by instructor during registration; for JAPAN 302, JAPAN 301 or placement by instructor during registration. Y. Kawasaki and staff.

For students who have learned basic Japanese grammar and oral skills and would like to use the language for natural conversation and effective oral communication. The course is intended to (1) expand vocabulary for daily life use; (2) brush up on knowledge of basic grammar for fluency; and (3) develop communicative skills for varied situations.

JAPAN 303-304(3303-3304) Intermediate Japanese Reading II @

303, fall; 304, spring. 4 credits each semester. *JAPAN 303 provides language proficiency and satisfies Option 1.* Prerequisites: for JAPAN 303, JAPAN 202 or placement by instructor during registration; for JAPAN 304, JAPAN 303 or placement by instructor during registration. K. Selden.

Reading of selected modern texts, including excerpts and brief complete pieces by outstanding writers of Japanese prose.

JAPAN 401-402(4401-4402) Oral Narration and Public Speaking

401, fall; 402, spring. 2 credits each semester. Prerequisites: for JAPAN 401, JAPAN 302 or placement by instructor during registration; for JAPAN 402, JAPAN 401 or placement by instructor during registration. Conducted entirely in Japanese, using Japanese audiovisual and written materials. Y. Katagiri.

Advanced course to develop skills in oral delivery in formal settings. Students increase vocabulary and patterns used in public occasions, e.g., class presentations, speeches, discussions, interviews and debates. Fluency and listening comprehension are emphasized. Also for those interested in academic settings, e.g., research students or conference participants.

JAPAN 403-404(4403-4404) Advanced Japanese Reading @

403, fall; 404, spring. 4 credits each semester. Prerequisite: JAPAN 304 or permission of instructor.

Section I: Area of humanities. May not be used for distribution. Reading of selected modern texts, including newspaper columns and writings by representative authors and critics. K. Selden.

Section II: Area of economics and social science. May not be used for distribution. Y. Kawasaki. Reading of selected modern texts with emphasis on expository style.

[JAPAN 410(4410) History of the Japanese Language (also LING/ASIAN 411(4411)) @ # (III) (HA)]

Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2005-2006. J. Whitman.]

JAPAN 421-422(4421-4422) Directed Readings

421, fall; 422, spring. 1-4 credits. Prerequisite: advanced students; placement by instructor during registration. Selected texts from modern and contemporary short stories. K. Selden.

Japanese FALCON (Full-year Asian Language Concentration)

Web site: <http://lrc.cornell.edu/falcon>.

Director: R. Sukle, 388 Rockefeller Hall, 255-0734 or rjs19@cornell.edu.

Program coordinator: 388 Rockefeller Hall, 255-6457 or falcon@cornell.edu.

FALCON is designed to develop "copability" in students by bringing them to the level where they can make further progress on their own even with no further instruction.

The full-year program provides over 1,800 hours of language exposure—which exceeds even the exposure that students living in Japan typically receive. This intensive work in Japanese allows students to develop levels of fluency, accuracy, and control of the language that is not achieved in any other type of academic setting. The full-year FALCON sequence is Japanese 160 (summer), 161 (fall), and 162 (spring). By taking this entire sequence, students can complete as much Japanese in one calendar year as they would complete in three or more years of regular

study at most academic institutions. Because of FALCON's intensive nature, graduate students can complete their language work in minimal time. Undergraduates, including freshmen, achieve levels of competency that far exceed what is normally achieved in a four-year program, provided that they continue studying Japanese after FALCON. Three small interactive classes per day are conducted entirely in Japanese, and one lecture is conducted in both Japanese in English. The interactive classes are conducted by experienced and highly trained teachers, and the lecture is taught by an expert in the structure of the Japanese language. In addition to time spent in these classes, students also are required to spend two one-hour sessions per day in the language lab. Additional preparation time in the language lab of up to three hours is necessary in the evenings.

JAPAN 160(1160) Introductory Intensive Japanese (FALCON)

Summer only. 8 credits. *Provides language qualification.* R. Sukle and staff.

Formal application to FALCON is required. Admission is open to all students, not just those planning to take the full year. Students from other institutions are also welcome to apply. Applications must be received by March 1. After the deadline, applications are considered provided that space is available. This is the first semester of FALCON. It is a full-time, intensive, nine-week course that meets Monday through Friday from 8:30 A.M. to 4:30 P.M.; 160 starts at the absolute beginning level, in terms of speaking, listening, and rudimentary reading and writing. Students who complete this course and plan to continue at Cornell may take the fall and spring FALCON courses (JAPAN 161 and 162). Students interested in other options for continuing after FALCON should consult the FALCON director, Robert Sukle, at rjs19@cornell.edu or 255-0734.

JAPAN 161-162(1161-1162) Intensive Japanese (FALCON) @

161, fall; 162, spring. 16 credits each semester. *JAPAN 161 provides language proficiency and satisfies Option 1.*

Prerequisites for 161: JAPAN 160, JAPAN 102 at Cornell, or placement by FALCON staff before beginning of fall semester; for 162, JAPAN 161 or placement by FALCON staff before beginning of spring semester. R. Sukle and staff.

Formal application to FALCON is required. Admission is open to all students, including those from other institutions. Applications must be received by March 1. After the deadline, applications are considered provided that space is available. Work on spoken and written Japanese from an intermediate level to an advanced level. This is a full-time program and a full academic load. The schedule is Monday through Friday, approximately 9:00 A.M. to 4:30 P.M. The demands of the program do not permit students to take other courses simultaneously. The 160-161-162 sequence fulfills the language requirement for the M.A. in Asian Studies and the joint M.B.A./M.A. in Asian Studies.

Literature in Japanese

JPLIT 406(4406) Introduction to Classical Japanese @ #

Fall. 4 credits. *Provides language proficiency and satisfies Option 1.* Prerequisite: permission of instructor. K. Selden.

Introduction to the fundamental grammar and vocabulary of classical Japanese.

JPLIT 408(4408) Readings in Classical Japanese @ #

Spring. 4 credits. *Provides language proficiency and satisfies Option 1.*

Intended for students who have completed JAPAN 403/404 sequence or equivalent.

Prerequisite: JPLIT 406 or permission of instructor. K. Selden.

Readings of excerpts and complete brief pieces from representative premodern Japanese literature mostly with the use of standard modern annotated editions. Different selections and themes are introduced each year.

JPLIT 421-422(4421-4422) Directed Readings

421, fall; 422, spring. 2-4 credits.

Prerequisite: for JPLIT 421, JAPAN 404 or equivalent; for JPLIT 422, JAPAN 421 or equivalent. Staff.

Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop class readings.

JPLIT 456(4456) Heian Narrative @ (IV) (LA)

Fall. 4 credits. Recommended: some knowledge of classical Japanese.

T. LaMarre.

Centers on Heian monogatari, with an emphasis on narrative analysis and problems of power and visibility. Primary readings in English with supplementary materials in modern Japanese.

[JPLIT 613(6613) Seminar in Tokugawa Culture and Thought]

Spring. 2-4 credits. Prerequisite: permission of instructor. Not offered 2005-2006. N. Sakai.]

[JPLIT 614(6614) Seminar in Modern Japanese Literature: Historicizing the Postmodern (also COM L 695(6950))]

Spring. 4 credits. Prerequisite: permission of instructor. Not offered 2005-2006. B. de Bary.]

[JPLIT 617(6617) Modern Japanese Philosophy]

Fall. 4 credits. Not offered 2005-2006. N. Sakai.]

[JPLIT 618(6618) Japanese Philosophical Discourse II]

Fall. 4 credits. Prerequisite: reading knowledge of Japanese. Not offered 2005-2006. N. Sakai.]

JPLIT 624(6624) Advanced Readings in Modern Japanese Literature

Spring. 4 credits. Prerequisite: permission of instructor. B. de Bary.

JPLIT 625(6625) Directed Readings

Fall or spring. 4 credits. Staff.

Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop class readings.

[JPLIT 700-701(7700-7701) Seminar: Reading of Historical Materials—Japanese Imperial Nationalism and Its Literature]

700, fall; 701, spring. 4 credits. Not offered 2005-2006. N. Sakai.]

Khmer (Cambodian)**KHMER 121-122-123(1121-1122-1123) Elementary Khmer**

121, fall; 122, spring; 123, fall. 4 credits each semester. *KHMER 123 provides language qualification.* Prerequisite: for KHMER 122, KHMER 121; for KHMER 123, 122; for beginners or those placed in course by examination. Staff.

Gives a thorough grounding in speaking and reading.

KHMER 201-202(2201-2202)**Intermediate Khmer Reading @**

201, fall; 202, spring. 3 credits each semester. *KHMER 201 provides language proficiency and satisfies Option 1.* Prerequisites: for KHMER 201, KHMER 102; for KHMER 202, 201. Staff.

Continuing instruction in spoken and written Khmer.

[KHMER 203-204(2203-2204)]**Intermediate Composition and Conversation @**

203, fall; 204, spring. 3 credits each semester. *KHMER 203 provides language proficiency and satisfies Option 1.* Prerequisites: for KHMER 203, KHMER 102; for KHMER 204, 203. Not offered 2005-2006. Staff.]

KHMER 300(3000) Directed Studies

Fall or spring. 1-4 credits variable. Prerequisite: permission of instructor. Times TBA with instructor. Staff.

Taught on a specialized basis to address particular student needs.

KHMER 301-302(3301-3302) Advanced Khmer

301, 302, fall. 4 credits each semester. Prerequisites: for KHMER 301, KHMER 202 or equivalent; for KHMER 302, 301. Staff. Continuing instruction in spoken and written Khmer; emphasis on enlarging vocabulary, increasing reading speed, and reading various genres and styles of prose.

[KHMER 401-402(4401-4402) Directed Individual Study

401, fall; 402, spring. 2-4 credits each semester. Prerequisite: advanced students; permission of instructor. Not offered 2005-2006. Staff.]

Korean**KOREA 101-102(1101-1102) Elementary Korean**

101, fall; 102, spring. 6 credits each semester. *KOREA 102 provides language qualification.* H. Diffloth and staff.

Covers basics of speaking, reading, and writing. Introduces Hangul writing system and grammar.

KOREA 109-110(1109-1110) Elementary Reading

109, fall; 110, spring. 3 credits each semester. *KOREA 110 provides language qualification.* Prerequisite: permission of instructor. H. Diffloth and staff.

For students who have spoken some Korean in the home, but whose reading and writing skills are limited or nonexistent. If in doubt about eligibility, see instructor.

KOREA 201-202(2201-2202) Intermediate Korean @

201, fall; 202, spring. 4 credits each semester. *KOREA 201 provides language proficiency and satisfies Option 1.* Prerequisites: for KOREA 201, KOREA 102 or permission of instructor; for KOREA 202, 201. H. Diffloth and staff.

Covers the basics of speaking, reading, and writing at the intermediate level.

KOREA 209-210(2209-2210) Intermediate Reading @

209, fall; 210, spring. 4 credits each semester. *KOREA 209 provides language proficiency and satisfies Option 1.* Prerequisites: for KOREA 209, KOREA 110 or permission of instructor; for KOREA 210, 209 or permission of instructor. If in doubt about eligibility, see instructor. H. Diffloth and staff.

Intermediate level of reading comprehension and writing course for students who have acquired basic oral proficiency. Introduces some reading and writing with Chinese characters.

KOREA 300(3000) Directed Studies

Fall or spring. 1-4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. H. Diffloth. Taught on a specialized basis to address particular student needs.

KOREA 301-302(3301-3302) Advanced Korean @

301, fall; 302, spring. 4 credits each semester. *KOREA 301 provides language proficiency and satisfies Option 1.* Prerequisites: for KOREA 301, KOREA 202 or placement by instructor; for KOREA 302, 301 or placement by instructor. H. Diffloth and staff.

Reading of advanced texts, including newspapers and Chinese character material, together with advanced use of the spoken language.

[KOREA 430(4430) Structure of Korean (also LING/ASIAN 430(4430)) (III) (KCM)]

Spring. 4 credits. Prerequisites: fluency in Korean and permission of instructor. Not offered 2005-2006. M. Shin.]

Nepali**The Cornell Nepal Study Program**

Cornell and the central campus of Tribhuvan National University (in Kirtipur, Kathmandu) cosponsor a semester or year in Nepal at the Cornell Nepal Study Program for both undergraduate and graduate students. North American students live and study with Nepali students at the Cornell program houses near the university, taking courses taught in English by faculty from Tribhuvan University. After an intensive orientation, semester courses include intensive spoken and written Nepali language, Contemporary Issues in Nepal, and Research Design and Methods in a wide variety of fields in the social and natural sciences and the humanities. (Language instruction in Tibetan and Newari may also be arranged.) There is a 10-day study tour and field trip during the semester, and students execute their research proposal during four weeks of guided field research, writing up their findings for presentation at the end of the semester.

Juniors, seniors, and graduate students from any field may apply. Students should have a desire to participate in a program featuring relatively intense cultural immersion and to undertake rigorous field research. Instruction is in English, but prior study of Nepali language is strongly recommended for Cornell students. Those interested in the program should consult Cornell Abroad (cuabroad@cornell.edu).

NEPAL 101-102(1101-1102) Elementary Nepali

101, fall; 102, spring; 101-102, summer. 6 credits each semester. *NEPAL 102 provides language qualification.* Prerequisite: for NEPAL 102, NEPAL 101 or examination. S. Oja.

Intended for beginners. The emphasis is on basic grammar, speaking, and comprehension skills, using culturally appropriate materials and texts. Devanagari script for reading and writing is also introduced.

NEPAL 201-202(2201-2202) Intermediate Nepali Conversation @

201, fall; 202, spring; 201-202, summer. 3 credits each semester. *NEPAL 201 provides language proficiency and satisfies Option 1.* Prerequisites: for NEPAL 201, NEPAL 102 or examination; for NEPAL 202, 201 or examination. S. Oja.

Intermediate instruction in spoken grammar and verbal comprehension skills, with special attention to developing technical vocabularies and other verbal skills appropriate to students' professional fields.

NEPAL 203-204(2203-2204) Intermediate Nepali Composition @

203, fall; 204, spring; 203-204, summer. 3 credits each semester. *NEPAL 203 provides language proficiency and satisfies Option 1.* Prerequisites: for NEPAL 203, NEPAL 102 or examination; for NEPAL 204, 203 or examination. S. Oja.

Systematic review of written grammar and reading comprehension, with special attention to the technical vocabularies, necessary writing skills, and published materials typical of advanced students' professional fields.

NEPAL 300(3000) Directed Studies

Fall or spring. 1-4 credits, variable.

Prerequisite: permission of instructor.

Times TBA with instructor. S. Oja.

Taught on a specialized basis to address particular student needs.

NEPAL 301-302(3301-3302) Advanced Nepali @

301, fall; 302, spring; 301-302, summer. 3 credits each semester. Prerequisite: NEPAL 204 or permission of instructor. S. Oja.

Reading of advanced texts, together with advanced drill on the spoken language.

Pali**[PALI 131-132(1131-1132) Elementary Pali**

131, fall; 132, spring. 3 credits each semester. This language series may not be used to satisfy language requirement. Not offered 2005-2006. Staff.]

[PALI 151(1151) Accelerated Elementary Pali

Spring. 3 credits. Prerequisite: background in Sanskrit or permission of instructor. Not offered 2005-2006. A. Blackburn.]

PALI 300(3000) Directed Studies

Fall or spring. 1-4 credits, variable.

Prerequisite: PALI 132, 151, or two years of Sanskrit. Times TBA with instructor.

A. Blackburn.

Taught on a specialized basis to address particular student needs.

Sanskrit**SANSK 131-132(1131-1132) Elementary Sanskrit (also CLASS 191-192(1331-1332), LING 131-132(1131-1132))**

131, fall; 132, spring. 4 credits each semester. *SANSK 132 provides language qualification.* Offered alternate years. Staff.

Introduces the essentials of Sanskrit grammar to enable students to read classical and epic Sanskrit as quickly as possible.

[SANSK 251-252(2251-2252)

Intermediate Sanskrit (also CLASS 291-292(2351-2352), LING 251-252(2251-2252)) @ # IV

251, fall; 252, spring. 3 credits each semester. *SANSK 251 provides language proficiency and satisfies Option 1.*

Prerequisite: SANSK 132 or equivalent. Offered alternate years. Not offered 2005-2006. Staff.]

Literature in Sanskrit**[SNLIT 467-468(4467-4468) Reading in Sanskrit Literature: The Vedas @ # (IV)**

Spring. 3 credits. Prerequisite: permission of instructor. Not offered 2005-2006. C. Minkowski.]

Sinhala (Sinhalese)**SINHA 101-102(1101-1102) Elementary Sinhala**

101, fall; 102, spring. 6 credits each semester. *SINHA 102 provides language qualification.* Prerequisite: for SINHA 102, SINHA 101 or equivalent. Staff.

Semi-intensive course for beginners. A thorough grounding is given in all the language skills; listening, speaking, reading, and writing.

SINHA 160(1160) Intensive Sinhala

Summer only. 6 credits. Intended for beginners. Offered alternate years.

Six-week intensive introduction to one of Sri Lanka's two official languages, and central to many scholarly and applied projects in Sri Lanka. Provides an unusual opportunity to obtain basic competence in the language during a single summer. Spoken language skills are emphasized during the program, which also introduces the writing system and colloquial reading materials. This lays the foundation for later study of literary Sinhala. When possible, students who already possess basic skills in colloquial Sinhala are admitted for more advanced studies in colloquial and/or literary Sinhala.

SINHA 201-202(2201-2202) Intermediate Sinhala Reading @

201, fall; 202, spring. 3 credits each semester. *SINHA 201 provides language proficiency and satisfies Option 1.* Prerequisites: for SINHA 201, SINHA 102; for SINHA 202, 201 or equivalent. Staff.

[SINHA 203-204(2203-2204) Intermediate Composition and Conversation @

203, fall; 204, spring. 3 credits each semester. *SINHA 203 provides language proficiency and satisfies Option 1.* Prerequisites: for SINHA 203, SINHA 102 or permission of instructor; for SINHA 204, 203 or equivalent. Not offered 2005-2006. Staff.]

SINHA 300(3000) Directed Studies

Fall or spring. 1-4 credits, variable.

Prerequisite: permission of instructor.

Times TBA with instructor. Staff.

Taught on a specialized basis to address particular student needs.

Tagalog**TAG 121-122(1121-1122) Elementary Tagalog**

121, fall; 122, spring. 4 credits each semester. Prerequisite: for TAG 122, TAG 121. T. Savella.

Gives a thorough grounding in basic speaking and listening skills with an introduction to reading.

TAG 123(1123) Continuing Tagalog

Fall. 4 credits. *Provides language qualification.* Prerequisite: TAG 122 or equivalent. T. Savella.

Improves speaking skills, such as fluency and pronunciation, focusing on verbal communication skills; offers a wide range of readings; and sharpens listening skills.

TAG 205-206(2205-2206) Intermediate Tagalog @

205, fall; 206, spring. 3 credits each semester. *TAG 205 provides language proficiency and satisfies Option 1.*

Prerequisites: for TAG 205, TAG 123 or equivalent; for TAG 206, 205 or equivalent. T. Savella.

Develops all four skills: reading, writing, speaking, and comprehension.

TAG 300(3000) Directed Studies

Fall or spring. 1-4 credits, variable.

Prerequisite: permission of instructor.

Times TBA with instructor. T. Savella.

Taught on a specialized basis to address particular student needs.

TAG 301-302(3301-3302) Advanced Tagalog @

301, fall; 302, spring. 3 credits each semester. *TAG 301 provides language proficiency and satisfies Option 1.*

Prerequisite: TAG 206 or equivalent. T. Savella.

Continuing instruction on conversational skills but with emphasis on reading and writing. Selected core readings in contemporary Tagalog literature are used, but students, in consultation with the instructor, may select some of the reading materials.

Thai**THAI 101-102(1101-1102) Elementary Thai**

101, fall; 102, spring. 6 credits each semester. *THAI 102 provides language qualification.* Prerequisite: for THAI 102, THAI 101 or equivalent. Intended for beginners or students placed by examination. N. Jagacinski.

Gives a thorough grounding in all the language skills: listening, speaking, reading, and writing.

THAI 201-202(2201-2202) Intermediate Thai Reading @

201, fall; 202, spring. 3 credits each semester. *THAI 201 provides language proficiency and satisfies Option 1.* Prerequisites: for THAI 201, THAI 102; for THAI 202, 201 or equivalent. N. Jagacinski.

Continuing instruction in spoken and written Thai.

THAI 203-204(2203-2204) Intermediate Composition and Conversation @

203, fall; 204, spring. 3 credits each semester. *THAI 203 provides language proficiency and satisfies Option 1.* Prerequisites: for THAI 203, THAI 102; for THAI 204, 203. N. Jagacinski.

Intermediate instruction in spoken and written grammar and reading comprehension.

THAI 300(3000) Directed Studies

Fall or spring. 1-4 credits, variable.

Prerequisite: permission of instructor.

Times TBA with instructor. N. Jagacinski.

Taught on a specialized basis to address particular student needs.

THAI 301-302(3301-3302) Advanced Thai @

301, fall; 302, spring. 4 credits each semester. *THAI 301 provides language proficiency and satisfies Option 1.* Prerequisite: THAI 202 or equivalent. N. Jagacinski.
Selected readings in Thai writings in various fields.

THAI 303-304(3303-3304) Thai Literature @

303, fall; 304, spring. 4 credits each semester. *THAI 303 provides language proficiency and satisfies Option 1.* Prerequisite: THAI 302 or equivalent. N. Jagacinski.
Reading of significant novels, short stories, and poetry written since 1850.

THAI 401-402(4401-4402) Directed Individual Study

401, fall; 402, spring. 4 credits each semester. For advanced students or students with special problems or interests. Prerequisite: permission of instructor. N. Jagacinski.

Urdu

See also listings under HINDI/ASIAN 125.

URDU 125(1125) Introduction to the Urdu Script (also ASIAN 125[1125])

Spring. 1 credit. Prerequisite: HINDI 101 or permission of instructor. Staff.
Provides instruction in the basics of the Urdu script. Intended primarily for students who have had some exposure to Hindi or Urdu but who have had little or no formal training in the script. The course focuses on mastering the script and pronunciation. It does not provide instruction in grammar.

URDU 300(3000) Directed Studies

Fall or spring. 1-4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. Staff.
Taught on a specialized basis to address particular student needs.

Vietnamese**VIET 101-102(1101-1102) Elementary Vietnamese**

101, fall; 102, spring. 6 credits each semester. *VIET 102 provides language qualification.* Prerequisite: for VIET 102, VIET 101 or equivalent. Intended for beginners or students placed by examination. T. Tranviet.
Gives a thorough grounding in all language skills: listening, speaking, reading, and writing.

VIET 201-202(2201-2202) Intermediate Vietnamese @

201, fall; 202, spring. 3 credits each semester. *VIET 201 provides language proficiency and satisfies Option 1.* Prerequisites: for VIET 201, VIET 102 or equivalent; for VIET 202, 201. T. Tranviet.
Continuing instruction in spoken and written Vietnamese.

VIET 203-204(2203-2204) Intermediate Vietnamese Composition and Reading @

203, fall; 204, spring. 3 credits each semester. *VIET 203 provides language proficiency and satisfies Option 1.* Prerequisite: permission of instructor. T. Tranviet.

Designed for students and "native" speakers of Vietnamese whose speaking and listening are at the advanced level, but who still need to improve writing and reading skills.

VIET 300(3000) Directed Studies

Fall or spring. 1-4 credits variable. Prerequisite: permission of instructor. Times TBA with instructor. T. Tranviet.
Taught on a specialized basis to address particular student needs.

VIET 301-302(3301-3302) Advanced Vietnamese @

301, fall or spring; 302, fall or spring. 3 credits each semester. *VIET 301 provides language proficiency and satisfies Option 1.* Prerequisites: for VIET 301, VIET 202 or permission of instructor; for VIET 302, 301. T. Tranviet.

Continuing instruction in spoken and written Vietnamese; emphasis on enlarging vocabulary, increasing reading speed, and reading various genres and styles of prose.

VIET 401-402(4401-4402) Directed Individual Study

401, fall; 402, spring. 2-4 credits, variable, each semester. Prerequisite: permission of instructor. Intended for advanced students. T. Tranviet.
Various topics according to need.

Vietnamese Literature**[VTLIT 222-223(2222-2223) Introduction to Classical Vietnamese @ #**

222, fall; 223, spring. 3 credits. *VTLIT 222 provides language proficiency and satisfies Option 1.* Prerequisite: qualification in Vietnamese or permission of instructor. Not offered 2005-2006. K. Taylor.]

ASIAN AMERICAN STUDIES PROGRAM

The Asian American Studies Program is a university-wide academic program housed administratively within the College of Arts and Sciences. Its aim is to promote teaching, research, and educational activities related to Asian Americans and to serve as a resource to the campus and regional communities. The program's undergraduate courses, offered within the program and cross-listed with departments in various colleges, meet distribution requirements and count toward a concentration in Asian American Studies. The program does not offer a graduate course of study, but students can undertake graduate work in Asian American Studies within selected disciplines of the university.

Undergraduate Concentration

The program's undergraduate concentration affords students an opportunity to develop a multidisciplinary approach to the study of Asians in the hemispheric Americas. The course of study stresses developments within the United States, but also underscores the transnational and comparative contexts of Asian America and the field's connections with African American, American Indian, Latino, and Women's Studies. Students must work with a faculty adviser from among the program's affiliated faculty and must complete at least 15 units of credits as follows: (1) AAS 110 and two additional courses in Asian American Studies; (2) one course in African American, American Indian, U.S. Latino Studies, or Feminist, Gender, & Sexuality Studies*; and (3) one course in East Asian, South Asian, or Southeast Asian Studies.* (*These courses must be approved by the student's faculty adviser, and they should address issues of race, gender, or the histories and cultures of Asian peoples.) Students must file an application for the concentration with the Asian American Studies Program.

Resource Center

The program's Asian American Studies Resource Center, located in 420 Rockefeller Hall, provides meeting space for the more than 40 undergraduate student organizations of the Cornell Asian Pacific Student Union and the graduate student Asian Pacific American Graduate Association. It also holds a modest print collection of books, periodicals, and newspapers; a current news clipping file; a comprehensive database of publications on Asian Americans since 1977; and a sizable collection of videotapes as well as music CDs on the Asian American experience.

Research

The program encourages faculty and student research on Asian Americans by sponsoring guest lectures, conferences, film festivals, readings, and exhibits. It also funds research projects and student travel to conferences and research sites. The Asian American Studies Workshop is the program's principal research initiative, engaging Cornell's faculty and students with invited faculty from other universities in a yearlong intensive study of selected themes.

Core Faculty

D. Chang, V. Munasinghe, T. Tu, S. Wong

Advisory Board

T. Chaloeintiarana (Southeast Asia Program), B. de Bary (Asian Studies), D. Chang (history), S. Han (sociology), V. P. Kayastha (Kroch Library), J. V. Koschmann (history), V. Munasinghe (anthropology), V. Nee (sociology), N. Sakai (Asian Studies), S. Samuels (English), A. M. Smith (government), K. W. Taylor (Asian Studies), T. Tu (history of art), Wai-Kwong Wong (Gannett Health Center), S. Wong, director (English), D. Yeh (vice president student/academic services)

Courses**AAS 110(1100) Introduction to Asian American Studies (III or IV) (CA)**

Spring. 3 credits. Can be used to satisfy either social science or humanities distribution requirement. T. Tu.

The purpose of this course is fourfold: (1) to introduce students to the multifaceted experiences of Asians in the United States; (2) to examine how a diverse group of people came to be identified as "Asian Americans"; (3) to understand the role of difference—gender, class, ethnic—in the formation of "Asian American" identities; and (4) to link historical experiences with contemporary issues.

[AAS 111(1110) Introduction to American Studies: New Approaches to Understanding American Diversity, the 20th Century (also AM ST/LSP 110[1110], HIST 161[1610]) (III or IV) (HA)]

Fall. 4 credits. Not offered 2005–2006.

D. Chang and M. C. Garcia
 For description, see AM ST 110.]

AAS 209(2090) Sophomore Seminar: The Immigrant Imagination (also ART H 209[2190], AM ST 209[2091]) (III) (HA)

Spring. 4 credits. Limited to 15 students.
 T. Tu.

Explores how contemporary immigrant experiences are expressed through visual culture. Examines a variety of expressive forms—including visual and material arts,

video/performance art, and film—produced by recent immigrants and considers the ways in which they function as a type of "migration narrative." By doing so, connections are made between visual representations and other modes of narration, including literary and musical. Asks the following questions: How do the visual arts operate within immigrant communities as a mode of story-telling or history-making? How have immigrants employed visual culture to narrate their cross-cultural movements, community-building efforts, political struggles, and cultural memories? Is there such a thing as "immigrant art?" If so, what are its characteristics and how does it help to reshape our understanding of contemporary artistic productions?

[AAS 210(2110) Sophomore Seminar: South Asian Diasporic Locations (also ANTHR 210[2110]) (III) (CA)]

Spring. 4 credits. Not offered 2005–2006.
 V. Munasinghe.

This interdisciplinary course, with an emphasis on anthropology, introduces students to the multiple routes/roots, lived experiences, and imagined worlds of South Asians who have traveled to various lands—Fiji, South Africa, Mauritius, Britain, Malaysia, the United States, and Trinidad—as well as within South Asia itself, at different historical moments. The course begins with the labor migrations of the 1830s and continues to the present. Compares and contrasts the varied expressions of the South Asian Diaspora to critically evaluate transnational identity.

This is a special seminar sponsored by the John S. Knight Institute's Sophomore Seminars Program. These seminars offer discipline-specific study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the disciplines outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Limited to 15 students. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.]

[AAS 211(2110) Sophomore Seminar: Race and the American City: Reading San Francisco and New York (also ENGL 211) (IV) (LA)]

Fall. 4 credits. Not offered 2005–2006.
 S. Wong.]

[AAS 212(2120) American Diversity in the 20th Century (also HIST 264[2640], AM ST 211) (III) (HA)]

Fall. 4 credits. Not offered 2005–2006.
 D. Chang.

For description, see HIST 213.]

[AAS 213(2130) Asian American History (also HIST 264[2640]) (III) (HA)]

Fall. 4 credits. Not offered 2005–2006.
 D. Chang.

For description, see HIST 263.]

AAS 262(2620) Asian American Literature (also ENGL 262[2620]) (IV) (LA)

Fall. 4 credits. S. Wong.

For description, see ENGL 262.

AAS 303(3030) Asians in the Americas: A Comparative Perspective (also ANTHR 303) (III) (CA)

Fall. 4 credits. V. Munasinghe.

The common perception of ethnicity is that this is a "natural" and an inevitable consequence of cultural difference. "Asians" overseas, in particular, have won reputation

as a people who cling tenaciously to their culture and refuse to assimilate into their host societies and cultures. But who are the "Asians"? On what basis can we label Asians an ethnic group? Although there is a significant Asian presence in the Caribbean, the category "Asian" itself does not exist in the Caribbean. What does this say about the nature of categories that label and demarcate groups of people on the basis of alleged cultural and phenotypical characteristics? This course examines the dynamics behind group identity, namely ethnicity, by comparing and contrasting the multicultural experience of Asian populations in the Caribbean and the United States. Ethnographic case studies focus on the East Indian and Chinese experiences in the Caribbean and the Chinese, Korean, Japanese, Filipino, and Indian experiences in the United States.

AAS 413(4130) Race, Technology, and Visuality (also ART H 413[4113]) (IV) (CA)

Fall. 4 credits. T. Tu.

Examines how new information and communication technologies have altered the ways we visualize and perform racial identities. Questions the popular assumption that the "information revolution" has made it possible and even desirable to transcend racial differences by exploring the following: how racial hierarchies have informed debates around techno-literacy, creativity, ownership, and agency; how race is embodied (through visual and linguistic cues) in the ostensibly disembodied domains of virtual media; and how the emergence of interactive, online, electronic entertainment, and mobile technologies have allowed artists to generate new images of and ideas about racial and ethnic identities.

AAS 414(4140) Popular Culture in Asian America (also ART H 414[4114]) (IV) (CA)

Spring. 4 credits. Prerequisite: permission of instructor. T. Tu.

Through a variety of "case studies," this course examines the forms and practices of Asian American popular culture (including music, film, video, print and visual, decorative, and performance arts), within the historical, social, political, and economic contexts that have shaped their production. What is the relationship of these popular forms to the histories of Asian American community arts? How have Asian Americans' engagements with "the popular" altered "traditional" modes of individual and collective representation, artistic production, cultural exchange, and political critique? The course also considers how the circulation of Asian popular culture in the United States (from anime to Bollywood and beyond) has altered our understanding of "Asian American culture" and "Asianness" more generally.

AAS 424(4240) Asian American Communities (also HIST/AM ST 420[4220]) (III) (HA)

Fall. 4 credits. D. Chang.

For description, see HIST 420.

[AAS 438(4380) Immigration and Ethnic Identity (also SOC 438)]

Spring. 4 credits. Not offered 2005-2006.

Fall. 4 credits. Not offered 2005-2006.

S. Wong.]

[AAS 478(4780) Self and Nation in Asian-American Literature (also ENGL 478)]

4 credits. Not offered 2005-2006. S. Wong.]

[AAS 479(4790) Ethnicity and Identity Politics: An Anthropological Perspective (also ANTHR 479[4749]) (III) (SBA)]

Spring. 4 credits. Not offered 2005-2006.

V. Munasinghe.]

AAS 495(4950) Independent Study

Fall or spring. 1-4 credits. Topic and credit hours TBA arranged between faculty and student. Independent study forms must be approved by Asian American Studies Program office. Staff.

[AAS 497(4970) Jim Crow and Exclusion-Era America (also HIST 497/697) (III) (HA)]

Spring. 4 credits. Limited to 15 students.

Not offered 2005-2006. D. Chang.

Seminar examining America during the overlapping eras of segregation and immigration exclusion. Beginning with contests over the meaning of freedom during reconstruction and running through the institution of Jim Crow legislation and immigration exclusion, the course ends with an evaluation of mid-20th century movements for civil rights and equality. Themes include the links between racial and economic oppression, legal and de facto restriction, everyday resistance, and struggles for equality.]

ASTRONOMY

J. F. Veverka, chair (312 Space Sciences Bldg., 255-3507); G. J. Stacey, director of undergraduate studies (212 Space Sciences Bldg., 255-5900); J. F. Bell, J. A. Burns, D. B. Campbell, D. F. Chernoff, J. M. Cordes, E. E. Flanagan, P. J. Gierasch, R. Giovanelli, P. F. Goldsmith, M. P. Haynes, T. L. Herter, J. R. Houck, D. Lai, J. P. Lloyd, R. V. E. Lovelace, J.-L. Margot, P. D. Nicholson, C. J. Salter, S. W. Squyres, Y. Terzian, S. A. Teukolsky, I. M. Wasserman, J. York. Emeritus: T. Hagfors, M. O. Harwit, E. E. Salpeter

Cornell's Astronomy faculty, research staff, graduate, and undergraduate students are active in diverse areas of modern astronomy ranging from theoretical astrophysics and general relativity to radio and radar astronomy, infrared and optical astronomy, and the exploration of the solar system. Cornell operates two local optical observatories, the world's largest radio telescope at Arecibo, Puerto Rico, and with two other institutions, the 200-inch optical telescope at Mt. Palomar in California. With Caltech, Cornell is carrying out a design study for a large submillimeter telescope in the high Atacama desert in Chile. Several members of the department faculty are also principal investigators on major NASA space and planetary exploration missions.

The department offers a number of courses to satisfy a general interest in astronomy. These courses have few or no prerequisites and are not intended for the training of professional astronomers. Among the introductory courses, several choices are available, depending on background and on the requirements to be fulfilled. The 100-level courses are designed primarily for nonscience majors. The alternative introductory sequence ASTRO 211-212 is geared toward sophomore physical

science and engineering majors and requires co-registration in beginning calculus. ASTRO 201 and 202 are intended for students with an interest in astronomy but no scientific background; they are topical rather than survey-oriented. ASTRO 332 is designed for physical science and engineering majors as an introduction to astrophysics. Other courses at the 200 and 300 levels may appeal to students of various backgrounds and interests, as indicated in the individual course descriptions.

Courses numbered above 400 are intended for students who have had two to three years of college physics and at least two years of college mathematics. ASTRO 440 Independent Study permits students to engage in individual research projects under the guidance of a faculty member.

Interested students are encouraged to become members of the undergraduate Cornell Astronomy Club. The club has access to the Fuertes Observatory on campus and conducts regular observing and astrophotography sessions. All students are invited to visit the Space Sciences Building, see the exhibits on display there, and consult faculty members about career plans or choice of courses.

The Major

The purpose of the major in Astronomy is to provide in-depth knowledge and education about the nature of the universe. Astronomy relies heavily on preparation in physics and mathematics. Consequently, many courses in these fields are included as prerequisites. In preparation for the major, students normally elect the introductory physics sequence PHYS 112-213-214 or 116-217-218 and the complementary pathway in mathematics, MATH 111-222-221-222 or 191-192-293-294 (or equivalent). Students who anticipate undertaking graduate study are urged to elect the honors physics sequence PHYS 116-217-218-318-327 if possible. The sophomore seminar ASTRO 233 Topics in Astronomy and Astrophysics provides an introduction to current research in astronomy and astrophysics for prospective majors, but is not required of students who elect to major in Astronomy after the sophomore year. Students are also urged to acquire computer literacy. ASTRO 234 is designed to give students hands-on experience with the methods of analysis, visualization, and simulation needed in astrophysical research. Acceptance to the major is first considered after completion of three semesters of introductory physics and mathematics and in general requires a GPA of 3.2 in physics and mathematics courses.

The major requirements stress the importance of building a strong preparation in physical science. The following upper-level courses are normally required:

PHYS 314 or 318, 316, 323 or 327, 341 and 443
A&EP 321-322 (or equivalent, e.g., MATH 420 and 422)

ASTRO 410, 431, and 432.

With permission of the major adviser, students interested in planetary studies may substitute appropriate advanced courses or may pursue an independent major under the program in the Science of Earth Systems. Majors are encouraged to supplement the above courses with any astronomy, physics, or other appropriate courses at or above the 300 level. Advanced seniors can enroll in astronomy graduate courses with the permission of the instructor. Students are also encouraged to

work with faculty members on independent study projects under the course ASTRO 440 or to apply to a variety of programs at Cornell, Arecibo, and elsewhere that offer undergraduates summer employment as research assistants. Nearly all undergraduate majors and concentrators become involved in research projects in the junior and senior years.

Students whose interest in astronomy is sparked somewhat late in their undergraduate career are encouraged to discuss possible paths with the director of undergraduate studies in Astronomy.

Honors. A student may be granted honors in Astronomy upon the recommendation of the Astronomy Advisers Committee of the Astronomy faculty.

Double majors. A double major in Astronomy and another subject is possible in many circumstances. However, the set of courses used to fulfill the requirements for each major must be completely independent.

Concentration. The concentration in Astronomy for other majors normally requires 12 credits, at least eight of which must be at the 300 level or above. ASTRO 233 and 234 are recommended for sophomores planning to concentrate in Astronomy.

Distribution Requirement

All courses in astronomy, except ASTRO 233 and 234, may be used to fulfill the science distribution requirement in the College of Arts and Sciences.

Courses

ASTRO 101(1103) The Nature of the Universe (I) (PBS)

Fall. 4 credits. Limited to 22 students per lab, 30 per disc. Prerequisites: none. T. Herter, labs: J.-L. Margot and staff.

Introduces students to the cosmos. The birth, evolution, and death of stars, the formation of the chemical elements, and the nature of white dwarfs, neutron stars, and black holes are discussed. An introduction to the theories of special relativity and general relativity is given. The course covers the search for other worlds outside the solar system and the possible existence of life and intelligence elsewhere in the universe. Modern theories of cosmology are presented, and the origin, structure, and fate of the universe are discussed. Most of the course notes as well as sample exams and simulations are made available on the web.

ASTRO 102(1102) Our Solar System (I) (PBS)

Spring. 3 credits. Limited to 30 students per disc. S. Squyres and J.-L. Margot; labs: G. Stacey and staff.

The past few decades have seen incredible advances in the exploration of our solar system. In this course students learn about the current state and past evolution of the Sun and its family of planets, moons, asteroids, and comets. The course emphasizes images and other data obtained from current and past NASA space missions and how these data provide insights about the important processes that have shaped the evolution of solar system objects. General astronomical concepts relevant to the study of the solar system are also discussed. Critical focus is on developing an understanding of the Earth as a planetary

body and discovering how studies of other planets and satellites influence models of the climatic, geologic, and biologic history of our home world. Other topics include impact hazards, the search for life in the solar system, and future missions.

ASTRO 103(1101) The Nature of the Universe (I) (PBS)

Fall. 3 credits. T. Herter.

Identical to ASTRO 101 except for omission of the laboratory.

ASTRO 104(1104) Our Solar System (I) (PBS)

Spring. 4 credits. Limited to 22 students per lab, 30 students per disc sec. J.-L. Margot and S. Squyres.

Identical to ASTRO 102 except for addition of the laboratory.

ASTRO 105(1105) An Introduction to the Universe (I) (PBS)

Summer. 3 credits. Recommended: high school physics. D. Kornreich.

How do we measure the size of our galaxy and the size of the universe? Is the universe round or flat? How are the stars born, why do they shine, and how do they die? What are the chemical elements, and how were they formed in stars? What are quasars, pulsars, and black holes? How was the solar system formed? What are the environments of other planets like? What is the basic structure of Earth and the other planets? Will we catastrophically alter the earth? Does life exist elsewhere in the universe? How can we find out? Each student has an opportunity to make observations with small telescopes.

ASTRO 106(1106) Essential Ideas in Relativity and Cosmology (I) (PBS)

Summer. 3 credits. Prerequisites: high school algebra and trigonometry. R. A. Saenz.

Explanation of Einstein's theories of special and general relativity, which brought about a fundamental change in our conceptual understanding of space and time. Correspondence to, and conflicts with, common sense. Applications to various areas in special relativity (space travel, the equivalence of mass and energy, nuclear fission and fusion, and thermonuclear processes in the sun) and in general relativity (motion of light and particles in curved space-time, cosmological models, and the question of whether the universe is open or closed).

ASTRO 107(1107) An Introduction to the Universe (I) (PBS)

Summer. 4 credits. D. Kornreich.

Identical to ASTRO 105 except for the addition of the afternoon laboratory that emphasizes mathematical problem-solving. This option is recommended for potential majors in science and engineering.

ASTRO 195(1195) Observational Astronomy (I) (PBS)

Fall. 3 credits. Limited to 24 students. Prerequisite: permission of instructor required (forms available in SS610). G. Stacey.

Provides a "hands-on" introduction to observational astronomy intended for liberal arts students at the freshman and sophomore level. High school mathematics is assumed, but otherwise there are no formal prerequisites. The course objective is to teach how we know what we know about the universe. The course is set up with two

lectures and one evening laboratory per week. Not all of the evening sessions are used. Planned exercises include five or six observational labs (star gazing with binoculars and small telescopes, telescopic observations and CCD imaging of star clusters, nebulae, and the planets, solar observations, radio observations of the Milky Way Galaxy), plus a selection of exercises from the following: experiments in navigating by the stars; construction and use of simple instruments such as optical spectroscopes and sun dials; laboratory spectroscopy; experiments in planetary cratering; collection and study of micrometeorites; computer simulations of the orbits of planets and their satellites; and cosmological explorations using data from the Hubble Space Telescope available on the web.

ASTRO 201(2201) Our Home in the Universe (I) (PBS)

Fall. 3 credits. Prerequisite: freshman or sophomore standing. No scientific background assumed. Lec 1: J. Lloyd; lec 2: R. Giovanelli, M. Haynes.

General discussion of our relation to the physical universe and how our view of the universe has changed from ancient to modern times. Several main themes are covered over the course of the semester: the evolution of our view of the sky from that of ancient cultures to that of space telescopes; the death of stars and the formation of black holes; dark matter and the structure of galaxies; and the origin, evolution, and fate of the universe. Presents a nonmathematical introduction to these subjects and discuss uncertainties and unresolved issues in our understanding.

ASTRO 202(2202) Our Home in the Solar System (I) (PBS)

Spring. 3 credits. Prerequisite: freshman or sophomore standing; some background in science. J. Veverka.

Writing course designed to develop an understanding of our home planet as a member of a diverse family of objects in our solar system. Discussion centers on how studies of other planets and satellites have broadened our knowledge and perspective of Earth, and vice versa. We study, debate, and learn to write critically about important issues in science and public policy that benefit from this perspective. Topics discussed include global warming, the impact threat, the searches for extrasolar planets and extraterrestrial intelligence, and the exploration of Mars.

ASTRO 211(2211) Astronomy: Stars, Galaxies, and Cosmology (I) (PBS)

Fall. 4 credits. Intended for first- and second-year engineering and physical sciences students. Prerequisite: introductory calculus or co-registration in MATH 111 or 191 or permission of instructor. J. Houck.

Topics discussed include: the formation and evolution of normal and extreme stars, the structure and evolution of galaxies, and cosmology.

ASTRO 212(2212) The Solar System: Planets, Satellites, and Rings (I) (PBS)

Spring. 4 credits. Intended for first- and second-year engineering and physical sciences students. Prerequisite: introductory calculus or co-registration in MATH 111 or 191; some knowledge of classical physics (mechanics and thermodynamics). D. Campbell and P. Nicholson.

Introduction to the solar system, with emphasis on the application of simple physical principles. Topics include: the Sun, nucleosynthesis of the elements, radioactive dating, seismology and planetary interiors, planetary surfaces and atmospheres including greenhouse models, orbital mechanics and resonances, interrelations between meteorites, asteroids and comets, the Jovian planets, icy moons and ring systems, and the search for extra-solar planets.

ASTRO 233(2233) Sophomore Seminar: Topics in Astronomy and Astrophysics: The Origin of Cosmic Structures

Fall. 2 credits. Limited to 15 students. Intended for sophomores planning to major in Astronomy or related fields. Prerequisites: PHYS 112 or 116 and 213 or 217, MATH 112, 122 or 192 or permission of instructor. D. Campbell and M. Haynes. Course theme may change yearly. The fall 2005 course is offered as a Knight sophomore seminar and explores the theme "From Rocks to the Universe: How Modern Telescopes Are Being Used to Answer the Major Questions in Astronomy." These questions include the formation of stars and planets; the prevalence of extra-solar planetary systems, including ones containing earth-like planets; how and when the first galaxies formed; the nature of dark energy and dark matter; and the structure of the universe.

This is a special seminar sponsored by the John S. Knight Institutes Sophomore Seminars Program Seminars offer discipline-specific study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the disciplines outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Limited to 15 students. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.

ASTRO 234(2234) Modern Astrophysical Techniques

Spring. 2 credits. Intended for sophomores majoring or concentrating in Astronomy or related fields. Prerequisites: two semesters of introductory physics and two semesters of calculus plus ASTRO 233 or permission of instructor; some experience with computer programming. J. Lloyd. Reviews the basic techniques employed in astrophysical research, both observational and theoretical, to explore the universe. Basic methods and strategies of data acquisition and image and signal processing are discussed. Students gain hands-on experience with visualization techniques and methods of error analysis, data fitting, and numerical simulation. Exercises address the processes by which astrophysicists piece together observations made with today's foremost astronomical instruments to solve questions concerning the origin of planets, stars, galaxies, and the universe itself.

ASTRO 280(2280) Space Exploration (I) (PBS)

Fall. 3 credits. No special background in physical sciences, math, or engineering assumed. S. Squyres. Provides an overview of space science, with particular emphasis on the solar system, and a detailed examination of a few selected objects, including the planet Mars, the satellites in the outer solar system, and comets. The focus

is on methods of collecting information and especially on spacecraft and space missions. Topics include the design and limitations of instruments. Ethical and political questions associated with space exploration are discussed. Intended for students with an interest in science, technology, and associated policy issues.

ASTRO 290(2290) Relativity and Astrophysics (I) (PBS)

Spring. 4 credits. Prerequisites: freshman physics, calculus, and geometry. I. Wasserman. Provides a geometrically based introduction to special and general relativity, followed by consideration of astrophysical applications. Includes discussion of tests of Einstein's theory of space, time, and gravitation; the physics of white dwarfs, neutron stars, and black holes; an introduction to modern cosmology.

ASTRO 299(2299) Search for Life in the Universe (I) (PBS)

Spring. 4 credits. Prerequisites: two courses in any physical science subject or permission of instructors. J. Cordes and Y. Terzian. Surveys the contents of the universe. Reviews theories of cosmic and stellar evolution, and of the formation and evolution of planetary systems, planetary atmospheres, and surfaces. Questions regarding the evolution of life and the development of technology are discussed. Methods to detect extraterrestrial life with emphasis on radio telescopes and associated instrumentation are presented. Hypothetical communication systems are developed and discussed.

ASTRO 310(3310) Planetary Imaging Processing (I) (PBS)

Fall. 3 credits. Intended for sophomores or juniors majoring or concentrating in Astronomy or related fields. Prerequisites: two semesters of introductory physics and some experience with computer programming; permission of instructor required (form available in SS610). J. Bell. Reviews the basic techniques employed in the collection and processing of spacecraft images of planets, moons, rings, asteroids, and comets, from both the observational and theoretical perspectives. Students gain hands-on experience with digital image manipulation, including visualization, calibration, statistics, and error analysis. Specific examples involve the processing and analysis of imaging data from missions like Voyager, Clementine, Galileo, NEAR, Mars Pathfinder, Mars Global Surveyor, and the Hubble Space Telescope. Exercises encompass the range of techniques used by planetary scientists to acquire and process spacecraft data that are then used to address questions on the geology, composition, and evolution of solar system bodies.

ASTRO 331(3331) Climate Dynamics (also EAS 331(3331)) (I) (PBS)

Fall. 4 credits. Prerequisite: MATH 112 or 192 or equivalent or permission of instructor. K. Cook. Processes that determine climate and contribute to its change are discussed, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Contemporary climate change issues are investigated and discussed in the context of natural variability of the system.

ASTRO 332(3332) Elements of Astrophysics (I) (PBS)

Spring. 4 credits. Prerequisites: MATH 112, 122, 192, or equivalent; PHYS 213 or 217. R. Giovanelli and M. Haynes. Introduction to astronomy, with emphasis on the application of physics to the study of the universe. Covers: physical laws of radiation; distance, size, mass, and age of stars, galaxies, and the universe; stellar evolution and nucleosynthesis; supernovae, pulsars, and black holes; galaxies and quasars. Introduction to cosmology. Mainly intended for students of science, engineering, and science education interested in astronomy and astrophysics.

ASTRO 342(3342) Atmospheric Dynamics (also EAS 342(3420)) (I) (PBS)

Spring. 3 credits. Prerequisites: one year each of calculus and physics. K. H. Cook. Introduction to the basic equations and techniques used to understand motion in the atmosphere, with an emphasis on the space and time scales typical of storm systems (the synoptic scale). The governing equations of atmospheric flow are derived from first principles and applied to middle latitude and tropical meteorology. Topics include balanced flow, atmospheric waves, circulation, and vorticity.

ASTRO 410(4410) Experimental Astronomy (I) (PBS)

Fall. 4 credits. Prerequisites: PHYS 214/218 (or 310 or 360), PHYS 323/327 (or co-registration) and permission of instructor required (form available in SS610). J. Bell, J. Cordes, and J. Houck. Observational astrophysics. Major experiments involve techniques in CCD (charge-coupled-device) imaging, optical photometry, optical spectroscopy, radiometry, radio spectroscopy and radio astronomy. The experiments involve use of the Hartung-Boothroyd Observatory's 24-inch telescope, a laboratory two-element radio interferometer, and a radio telescope mounted on top of the Space Sciences Building. The laboratory covers the fundamentals of using astronomical instrumentation and data analysis as applied to celestial phenomena: asteroids, normal stars, supernova remnants, globular clusters, planetary nebulae, the interstellar medium, OH masers, and galaxies.

ASTRO 431(4431) Introduction to Astrophysics and Space Sciences (I) (PBS)

Fall. 4 credits. Prerequisites: mathematics above 200 level and physics above 300 level. Recommended: PHYS 443. D. Lai. Overview of modern astrophysical concepts for physical science majors. Major topics include stellar formation, structure, and evolution; stellar atmospheres; compact objects (white dwarf, neutron star, and black holes); planets; and brown dwarfs. Current research problems in these areas are introduced along the way. The emphasis is on using fundamental principles of physics to explain astronomical phenomena. A variety of physics, including elements of atomic and molecular physics, solid state physics and fluid mechanics, are introduced or reviewed in a quick, practical fashion to be put to use in solving astrophysics puzzles.

ASTRO 432(4432) Introduction to Astrophysics and Space Sciences II (I) (PBS)

Spring. 4 credits. Prerequisite: ASTRO 431 or permission of instructor. D. Chernoff. Covers two broad topics: the astrophysics of the interstellar medium and cosmology. The interstellar medium section covers thermal equilibrium and radiative transport in HII regions, atomic gas regions, and molecular clouds. The cosmology section includes expansion of the universe, metrics, Friedmann equations, dark matter, cosmological tests, the early universe, and the cosmological production of the elements.

[ASTRO 434(4434) The Evolution of Planets (I) (PBS)]

Spring. 4 credits. Not offered 2005–2006. Staff.]

ASTRO 440(4940) Independent Study in Astronomy

Fall or spring. 2–4 credits. Prerequisite: permission of instructor; to register: obtain an independent study form in department office, 610 Space Sciences Bldg. Recommended: familiarity with topics covered in ASTRO 332, 431, or 434. Individuals work on selected topics. A program of study is devised by the student and instructor.

ASTRO 445(4445) Introduction to General Relativity (also PHYS 445(4445)) (I) (PBS)

Fall. 4 credits. E. Flanagan. For description, see PHYS 445.

ASTRO 490(4490) Senior Seminar Critical Thinking (I) (PBS)

Fall. 3 credits. Prerequisites: none. Open to all students. Y. Terzian. Critical thinking in scientific and nonscientific contexts with selections from the history of astronomy. Topics include elements of classical logic, including standards of evidence. Case studies include examples of competing hypotheses in the history of science, as well as examples from borderline sciences. Stress is put on creative generation of alternative hypotheses and their winnowing by critical scrutiny. Topics include the nature and history of the universe, the nature of time, the nature of reality, the possibilities of life on other planets, and artificial intelligence. Fallacies, illusions, and paradoxes are also be discussed on controversial topics. The course includes debates by the students on controversial topics such as: Can machines think? Is science and technology to be blamed for Hiroshima and 9/11? Should the genome be improved?

[ASTRO 509(6509) General Relativity (also PHYS 553(6553))]

Fall. 4 credits. Prerequisite: knowledge of special relativity and methods of dynamics at level of *Classical Mechanics* by Goldstein. Not offered 2005–2006. J. York. Systematic introduction to Einstein's theory using both modern and classical methods of computation. Topics include review of special relativity, differential geometry, foundations of general relativity (GR), laws of physics in the presence of gravitational fields, GR as a dynamical theory, experimental tests of GR. At the level of *Gravitation* by Misner, Horne, and Wheeler.]

[ASTRO 510(6510) Applications to General Relativity (also PHYS 554(6554))]

Spring. 4 credits. Prerequisite: ASTRO 509. Not offered 2005–2006. J. York. Continuation of ASTRO 509 that emphasizes applications to astrophysics and cosmology. Topics include relativistic stars, gravitational collapse and black holes, gravitational waves and cosmology, use of dynamics to formulate astrophysical and cosmological computations.]

[ASTRO 511(6511) Physics of Black Holes, White Dwarfs, and Neutron Stars (also PHYS 525(6525))]

Spring. 4 credits. Prerequisites: all of physics at upper-division undergraduate level. Not offered 2005–2006. I. Wasserman.

Compact objects (neutron stars, black holes, and white dwarfs) are the endpoints of stellar evolution. They are responsible for some of the most exotic phenomena in the universe, including supernova explosion, radio pulsars, bright X-ray binaries, magnetars, and gamma-ray bursts. Supermassive black holes also lie at the heart of the violent processes in active galactic nuclei and quasars. The study of compact objects allows one to probe physics under extreme conditions (high densities, strong magnetic fields, and gravity). This course surveys the astrophysics of compact stars and related subjects. Emphasis is on the application of diverse theoretical physics tools to various observations of compact stars. There are no astronomy or general relativity prerequisites. At the level of *Physics of Black Holes, White Dwarfs, and Neutron Stars* by Shapiro and Teukolsky.]

ASTRO 516(6516) Galactic Structure and Stellar Dynamics

Fall. 4 credits. D. Chernoff. Introduction to the study of the structure of galaxies via the laws of modern physics. Topics include the observed kinematics and spatial distribution of stars in the vicinity of the Sun, shapes and properties of stellar orbits, the gravitational N-body problem, collisional relaxation in stellar systems, spiral structure, galaxy classification and evolution, and cosmological results in galaxy formation.

ASTRO 520(6520) Radio Astronomy

Fall. 4 credits. J. Cordes and D. Campbell. Covers radio astronomy telescopes and electronics; antenna theory; observing procedures and data analysis; concepts of interferometry and aperture synthesis.

[ASTRO 523(6523) Signal Modeling, Statistical Inference, and Data Mining in Astronomy]

Fall. 4 credits. Not offered 2005–2006. J. Cordes.

Aims to provide tools for modeling and detection of various kinds of signals encountered in the physical sciences and engineering. Data mining and statistical inference from large and diverse databases are also covered. Experimental design is to be discussed. Basic topics include probability theory; Fourier analysis of continuous and discrete signals; digital filtering; matched filtering and pattern recognition; spectral analysis; Karhunen-Loeve analysis; wavelets; parameter estimation; optimization techniques; Bayesian statistical inference; deterministic, chaotic, and stochastic processes; image formation and analysis; maximum entropy techniques. Specific applications are chosen from current areas of interest in astronomy,

where large-scale surveys throughout the electromagnetic spectrum and using non-electromagnetic signals (e.g., neutrinos and gravitational waves) are ongoing and anticipated. Applications are also chosen from topics in geophysics, plasma physics, electronics, artificial intelligence, expert systems, and genetic programming. The course is self-contained and is intended for students with thorough backgrounds in the physical sciences or engineering.]

[ASTRO 525(6525) Techniques of Optical/Infrared and Submillimeter Astronomy]

Spring. 4 credits. Not offered 2005–2006. G. Stacey and staff.

Optical/infrared and submillimeter telescopes and instrumentation are discussed and related to current research in these fields. Includes telescope design and general optical design (ray tracing). CCD, photoconductor, photovoltaic, holometer, impurity band conduction, and heterodyne detection systems are presented. The instrumentation discussion includes general instrument design and specific applications to cameras, spectrographs, and interferometers. Detection limits of various systems, cryogenic techniques, and astronomical data analysis techniques are also discussed. Special topics include speckle interferometry and adaptive optics.]

ASTRO 530(6530) Astrophysical Processes

Spring. 4 credits. R. Giovanelli, M. Haynes, and D. Lai.

Thermal and nonthermal radiation processes encountered in studies of stars, the interstellar and intergalactic media, galaxies, and quasars. Fundamentals of radiative transfer, bremsstrahlung, synchrotron radiation, and Compton scattering are covered, as well as spectral line transfer, gas heating and cooling, and topics in atomic and molecular spectroscopy. These topics are discussed within the framework of astrophysical situations, such as star formation, interstellar gas and dust clouds, jets, active galactic nuclei, clusters of galaxies, and cosmology.

[ASTRO 555(6555) Theory of the Interstellar Medium]

Fall. 4 credits. Not offered 2005–2006. D. Chernoff, P. Goldsmith, J. Cordes, and Y. Terzian.

Covers global theories of the interstellar medium-mass and energy exchange between the different phases; the role of shock waves and energetic outflows in the thermal equilibrium and ionization state of gas in the galaxy; basic astrophysical fluids and plasmas; galactic dynamics; and observation techniques, current problems and results.]

[ASTRO 560(6560) Theory of Stellar Structure and Evolution (also PHYS 667(7667))]

Fall. 4 credits. Not offered 2005–2006. D. Chernoff.

Intended to provide a systematic development of stellar astrophysics, both theory and observations. Topics include hydrostatic equilibrium; equation of state; radiation transfer and atmospheres; convection and stellar turbulence; nuclear burning and nucleosynthesis; solar neutrinos; star formation; pre-main sequence stars; brown dwarfs; end states of stellar evolution (white dwarfs, neutron stars, and black holes); supernovae; interacting binary stars; stellar

rotation and magnetic fields; stellar pulsations; winds and outflows. The prerequisites for the course are all undergraduate-level physics. Though helpful, no astronomy background is required.]

ASTRO 570(6570) Physics of the Planets
Fall. 4 credits. P. Nicholson.

Introductory survey of planetary science with an emphasis on the application of physical principles. Planetary dynamics, including satellite orbits, tidal interactions, resonances, and ring dynamics. Introduction to the theory of planetary interiors, gravitational fields, heat sources, and rotational mechanics. Physics of planetary atmospheres, including radiative transfer, convection, and thermal structure. Important observational results, including those of ground-based optical, infrared, radio, and radar astronomy, as well as those made by spacecraft, are discussed. Intended for graduate students and seniors in astronomy, physics, and engineering.

[ASTRO 571(6571) Mechanics of the Solar System (also T&AM 673[6730])]

Spring. 3 credits. Not offered 2005-2006.
J. Burns.

For description, see T&AM 673.]

[ASTRO 579(6579) Celestial Mechanics (also T&AM 672[6720])]

Spring. 3 credits. Not offered 2005-2006.
J. Burns.

For description, see T&AM 672.]

[ASTRO 590(6590) Galaxies and the Universe]

Fall. 4 credits. Not offered 2005-2006.
T. Herter.

The universe, its constituents, its large-scale structure, and its history in the light of the major thrusts of extragalactic research. The morphology, photometry, dynamics, and kinematics of galaxies and their subsystems. Determination of masses, mass-to-light ratios, and the "missing mass." Activity in Seyferts, radio galaxies, and quasars. Binaries, groups, clusters, and superclusters. The extragalactic distance scale. Galaxy formation and evolution. Confrontation of cosmological theories with observational results.]

ASTRO 599(6599) Cosmology (also PHYS 599[6599])

Spring. 4 credits. Prerequisites: statistical physics, quantum mechanics, and electromagnetic theory courses. R. Bean. Intended to provide a detailed theoretical development of current ideas in cosmology. Topics include observational overview; growth of irregularities, galaxy formation, and clustering; big bang cosmology, recombination, nucleosynthesis; very early universe, symmetry breaking, inflationary scenarios. At the level of *Principles of Physical Cosmology* by Peebles.

[ASTRO 620(7620) Seminar: Advanced Radio Astronomy]

Spring. 2 credits. Prerequisites: for advanced undergraduates, by permission of instructor. Recommended: some background in astronomical spectroscopy. Not offered 2005-2006. J. Cordes, R. Giovanelli, and M. Haynes.

Emphasizes large-scale surveys in radio astronomy, an interest stimulated by the forthcoming L-band (18-23 cm wavelength) array receiver (ALFA) at the Arecibo Observatory in late 2004. This instrument will revolutionize our ability to search for

pulsars, hidden and low-mass galaxies, and transient sources and to probe the structure of the Milky Way. The seminar focuses on (1) major surveys carried out in radio and at other wavelengths in recent years, their scientific goals, and technical challenges, and (2) plans and prospects for major surveys that are likely to take place in this decade with the L-band feed array at Arecibo. Large surveys require new paradigms for observational astronomy, particularly in connection with data acquisition, excision of artificial and natural interference, the management of extremely large databases, the development of robust tools for data mining, and the timely delivery of data products to archives that are accessible to the wider community.]

ASTRO 621(7621) Seminar: Planetary Radar Astronomy

Spring. 3 credits. Prerequisites: upper-level undergraduates and graduate students in Astronomy, engineering, and geology; good background in undergraduate mathematics and physics. D. Campbell and J.-L. Margot.

Application of radar to the study of the surfaces of planets, planetary satellites, asteroids, and comets. Topics include target detectability and the specification of the needed antennas, transmitters, and receiving systems; data processing techniques; imaging techniques including delay-Doppler imaging, synthetic aperture radar (SAR) and interferometric SAR; target characterization from cross section, scattering laws, and polarization measurements; results from earth-based and spacecraft radar observations of Mercury, Earth, the Moon, Mars, the satellites of Jupiter, the rings of Saturn, asteroids, and comets.

ASTRO 640(6940) Advanced Study and Research

Fall or spring. Credit TBA.

Guided reading and seminars on topics not currently covered in regular courses.

[ASTRO 651(7651) Atmospheric Physics (also EAS 651[6510])]

Fall. 3 credits. Not offered 2005-2006.
S. Colucci and P. Gierasch.

For description, see EAS 651.]

[ASTRO 652(7652) Advanced Atmospheric Dynamics (also EAS 652[6520])]

Spring. 3 credits. Not offered 2005-2006.
S. Colucci and P. Gierasch.

For description, see EAS 652.]

ASTRO 660(7660) Cosmic Electrodynamics (also A&EP 608[6080])

Spring. 2 credits. R. Lovelace.

Selected topics discussed in detail: the solar wind, stellar winds, Bondi accretion, Bondi-Hoyle accretion, accretion disks with B fields, magneto-rotational instability, magneto-centrifugal winds and jets from disks, Poynting jets, funnel flows, the propeller stage of accretion, advection and convection dominated accretion flows, fast dynamo processes in astrophysics.

ASTRO 671(7671) Seminar: Star Formation

Fall. 3 credits. P. Goldsmith.

Focuses on the astrophysics of star formation and reviews observational data about young stars and their connection with the interstellar medium from which they form. Students

consider the physical processes in molecular clouds, including stability, formation of dense cores, and protostars. The impact of young stars on their surroundings—an important part of the overall process of star formation—is considered for both low- and high-mass stars. Students review the evolution of pre-main-sequence stars and examine star formation on both galactic and extragalactic scales. The class is conducted in a seminar format; students make presentations on selected topics and write and deliver a research paper.

ASTRO 671(7671) Seminar: Micron to Millimeter Astronomy

Spring. 3 credits. J. Houck, T. Herter, J. Lloyd, and G. Stacey.

Covers topics of current interest in infrared and submillimeter astrophysics, including extrasolar planets; star formation in the galaxy; nearby dwarf, starburst, and ultraluminous galaxies; and distant "proto"-galaxies. Recent results obtained with Spitzer Space Telescope and ground-based facilities are covered. The seminar includes lectures from faculty and staff and also student presentations from the readings during the course.

[ASTRO 673(7673) Seminar: Planetary Atmospheres]

Spring. 2 credits. Not offered 2005-2006.
P. Gierasch.

Deals with motions in planetary atmospheres. Among the topics discussed are the Venus general circulation, dust and water transports on Mars, alternating jets on the outer planets, and compositional layering in the outer planets.]

ASTRO 690(7690) Seminar: Computational Astrophysics (also PHYS 480/680[4480/7680])

Spring. 3 credits. Prerequisite: working knowledge of FORTRAN. Staff.

For description, see PHYS 480/680.

[ASTRO 699(7699) Seminar: Problems in Theoretical Astrophysics (also PHYS 665[7665])]

Fall. 2 credits. Not offered 2005-2006.
D. Lai.

Informal seminar that explores current research problems in astrophysics, with focus on high-energy and relativistic phenomena. Possible topics include compact stars, supermassive black holes, high-energy cosmic rays, and neutrino and gravitational wave astronomy. Both the theoretical and observational/experimental aspects are discussed by the lecturer and among the participants. This seminar is open to all graduate students.]

[ASTRO 699(7699) Seminar: Observational High-Energy Physics]

Spring. 2 credits. Highly recommended: ASTRO 511 (PHYS 525) as co- or prerequisite. Not offered 2005-2006. Staff.]

BIOLOGICAL SCIENCES

Biology is a popular subject at many universities for a variety of reasons: it is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to

understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences at Cornell is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Student services provided by the Office of Undergraduate Biology, 216 Stimson Hall, are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include animal physiology; biochemistry; computational biology; ecology and evolutionary biology; general biology; genetics and development; insect biology; microbiology; molecular and cell biology; neurobiology and behavior; nutrition; plant biology; and systematics and biotic diversity. Students interested in the marine sciences may consult the Shoals Marine Laboratory Office (G14 Stimson Hall, 255-3717) for academic advising. For more details about the biology curriculum, see the "Biological Sciences" section of this catalog or visit the Office of Undergraduate Biology web site, www.bio.cornell.edu.

BIOLOGY & SOCIETY MAJOR

B. Chabot, director of undergraduate studies, College of Arts and Sciences; N. Breen, advising coordinator, College of Human Ecology; D. Gurak, advising coordinator, College of Agriculture and Life Sciences; E. Adkins-Regan, D. Bates, B. Bedford, R. Boyd, J. T. Brenna, R. Calvo, R. Canfield, S. Ceci, B. Chabot, C. C. Chu, W. Crepet, J. Davis, P. Dear, R. Depue, C. Eberhard, G. W. Feigenson, J. Fortune, C. Geisler, W. Ghiorse, C. Goodale, C. Greene, J. Haas, L. Harrington, A. Hedge, S. Hilgartner, H. C. Howland, G. Hudler, B. Johnson, K. A. R. Kennedy, B. Knuth, A. Lemley, C. Leuenberger, D. Levitsky, B. Lewenstein, B. A. Lewis, M. Lynch, S. McCouch, J. Merwin, A. Netravali, N. Noy, S. K. Obendorf, P. Parra, A. Parrot, D. Pelletier, M. Pfeffer, T. Pinch, A. G. Power, R. Prentice, W. Provine, J. V. Reppy, S. Robertson, E. Rodriguez, M. Rossiter, T. Sacco, J. Shanahan, R. Stoltzfus, J. Tantillo, N. Uphoff, V. Utermohlen, K. Vogel, R. Wayne, E. Wethington, T. Whitlow, S. Wolf, Emeritus; U. Bronfenbrenner, J. Fessenden MacDonald, J. Mueller, D. Pimentel, J. M. Stycos

The Biology & Society major is suited for students who wish to combine training in biology with perspectives from the social sciences and humanities on the social, political, and ethical aspects of modern biology. In addition to providing a foundation in biology, Biology & Society students gain a background in the social dimensions of modern biology and in the biological dimensions of contemporary social issues.

The Biology & Society major, which involves faculty from throughout the university, is offered by the Department of Science and Technology Studies. Students in the College of Arts and Sciences, the College of Human Ecology, and the College of Agriculture

and Life Sciences are eligible for the major. The major is coordinated for students in all colleges through the Biology & Society Office. Students can get information, specific course requirements, and application procedures for the major from the Biology & Society office in 306 Rockefeller Hall, 255-6047.

Because the major is multidisciplinary, students must attain a basic understanding of the several disciplines it comprises. The curriculum includes courses in ethics; statistics; history, philosophy, and social studies of science and biology; and basic biology (e.g., genetics and development; biochemistry and molecular-cell biology; ecology; evolutionary biology), as well as integrative courses offered through Biology & Society. Majors are required to take a core course and must develop a theme, an intellectually coherent grouping of courses representative of their special interest in Biology & Society. Recommended themes in the Biology & Society major include biology, behavior, and society; biology and human population; biology and public policy; environment and society; and health and society. Students may also develop their own individually tailored themes (which in recent years have included topics such as biotechnology and society and agriculture, environment, and society). In consultation with their faculty adviser, students select courses that meet the foundation and core course requirements so as to build a coherent theme. Sample curricula for the recommended themes and for several student-developed themes are available in the Biology & Society office. A list of all course descriptions is available in 306 Rockefeller Hall.

Faculty members are available (according to posted office hours or by appointment) in the Biology & Society offices, 306 Rockefeller Hall, to answer questions and to provide assistance.

Admission to the Major

All students should have completed a year of college-level biology before submitting an application during their sophomore year. Juniors are considered on a case-by-case basis. Upper-division applicants should realize the difficulties of completing the major requirements in fewer than two years. Freshmen admitted to the Colleges of Agriculture and Life Sciences and Human Ecology as Biology & Society majors are considered to have been admitted to the major on a provisional basis, contingent on successful completion of the course sequence in introductory biology and submission of the application to the university major. The application includes (1) a one-page statement explaining the student's intellectual interests in the Biology & Society major and why the major is consistent with the student's academic goals and interests; (2) the theme the student wishes to pursue in the major; (3) a tentative plan of courses fulfilling Biology & Society requirements, including courses already taken and those the student plans to take; and (4) a transcript of work completed at Cornell University (and elsewhere, if applicable), current as of the date of application.

Acceptance into the major requires completion of the course sequence in introductory biology. Sophomores in the process of completing this prerequisite may be admitted to the major on a *provisional* basis. It is the student's responsibility to assure that

final acceptance is granted upon satisfactory completion of the introductory biology sequence. Although only introductory biological science is a prerequisite for acceptance, students find it useful to have completed some of the other requirements (listed below) by the end of their sophomore year, preferably by the end of the first semester. Students who are considering the major may also find it beneficial to take S&TS 201, *What Is Science?*, in their freshman or sophomore year. Human Ecology students should also consult the current Human Ecology guide and meet with the college advising coordinator, Nancy Breen, 205 Martha Van Rensselaer Hall, 255-1928.

Major Requirements

No single course may satisfy more than one major requirement. All courses must be taken for a letter grade.

1. Basic courses

- BIO G 101-104 or 105-106 or 107-108 (prerequisite for admission to Biology & Society).
- College calculus (one course):* MATH 106, 111, 112 or any higher-level calculus.
- Recommended but not required: General chemistry (one-year sequence) (prerequisite to biochemistry and other chemistry courses): CHEM 103-104, 206, 207-208, or 215-216.

2. Foundation Courses (should be completed by end of junior year). Foundation courses are intended to provide a broad introduction to methodology and theory in their area.

These courses must be above the 100 level, at least 3 credit hours, and taken for a letter grade.

- Ethics: one course; B&SOC 205 (also S&TS 205) or B&SOC 206 (also S&TS 206, PHIL 246).**
- Social sciences/humanities foundation: two courses; one from any two of the following subject areas: history of science; philosophy of science; sociology of science; politics of science; and science communication.**
- Biology foundation (breadth requirement): three courses; one each from three of the following subject areas: biochemistry, molecular and cell biology (BIOBM 330 or 331 or 333 or NS 320); ecology (BIOEE 261); genetics and development (BIOGD 281 or 282 or PL BR 225); evolutionary biology (BIOEE 278); animal behavior (BIONB 221); neurobiology and behavior (BIONB 222); physiology and anatomy (BIOAP 311 or NS 341 but *not* BIOAP 212); biological diversity (BIOPL 241 or BIOMI 290 or BIOEE 373 or 274 or 470 and 472 or 471 or 475 or 476 or ENTOM 212 or PL PA 309); nutrition (NS 115).
- Biology foundation (Depth requirement): one biology course for which one of the above (2c) is a prerequisite.***
- Statistics: one course selected from MATH 171, BTRY 301, AEM 210, SOC 301, PSYCH 350, ECON 319, PAM 210.

3. **Core Course** (one course).** Should be completed by end of junior year.
B&SOC 301 Life Sciences and Society (also S&TS 301); or S&TS 286 Science and Human Nature (also PHIL 286).

4. **Theme** (five courses that correspond to the theme selected by the student). These courses must be above the 100-level, at least 3 credit hours, and taken for a letter grade. Choose these courses as follows:

- Natural science issues/biology elective (two courses). Select from the list of B&SOC approved natural science issues courses or choose course(s) with introductory biology as a prerequisite from: ALS, AN SC, BIOSCI(NOT A COURSE PREFIX), ENTOM, FD SC, HD, NS, NTRES, PL BR, PL PA, PSYCH, VTMD.
- Humanities/social sciences electives** (two courses). Courses from the list of senior seminars may be used as theme electives if not used to meet another requirement, or select humanities or social sciences courses in consultation with the faculty adviser.
- Senior seminar** (one course taken senior year). Courses change yearly.

- * Students may petition to take a second statistics course (an advanced course, in sequence with the statistics course taken in the foundation) in place of the calculus requirement.

- ** Among the courses taken to meet the social sciences and humanities requirements (2.A, 2.B, 3, 4.B, and 4.C), a minimum of two social science courses and two humanities courses must be chosen. History of science, philosophy of science, and ethics courses may be counted toward the humanities requirement for the major.

- *** A list of approved depth courses using NS 115 as a prerequisite is available in 306 Rockefeller Hall.

Independent Study

Projects under the direction of a Biology & Society faculty member are encouraged as part of the program of study in the student's theme area. Applications for research projects are accepted by individual faculty members. Students may enroll for 1-4 credits in B&SOC 375 Independent Study with written permission of the faculty supervisor and may elect either the letter grade or the S-U option. Applications and information on faculty research, scholarly activities, and undergraduate opportunities are available in the Biology & Society office, 306 Rockefeller Hall. Independent study credits may not be used in completion of the major requirements.

The Honors Program

The honors program is designed to provide independent research opportunities for academically talented undergraduate students whose major is Biology & Society (B&SOC). Students who enroll in the honors program are expected, with faculty guidance, to do independent study and research dealing with issues in Biology & Society. Students participating in the program should find the experience intellectually stimulating and

rewarding whether or not they intend to pursue a research career.

Biology & Society majors are considered for entry into the honors program at the end of the second semester of the junior year. Application forms for the honors program are available in the Biology & Society office, 306 Rockefeller Hall. The honors program is available to Biology & Society majors from the Colleges of Arts and Sciences and Agriculture and Life Sciences. Biology & Society majors in the College of Human Ecology must be selected by an honors committee within their college. To qualify for the Biology & Society honors program, students must have an overall Cornell cumulative grade point average (GPA) of at least 3.3, have formulated a research topic, and have found a project supervisor (with an academic appointment at Cornell) and another faculty member willing to serve as their advisers. At least one of these must be a member of the Biology & Society major. Applications will be reviewed by a committee headed by the director of undergraduate studies, who will notify students directly of the outcome. Students will be permitted to register for the honors program only by permission of the department. Students must enroll for both the fall and spring semesters. B&SOC 499 is now cross-listed with the College of Agriculture and Life Sciences as ALS 499. Students wishing to receive CALS credit can sign up for ALS 499. They must attend the honors seminar during the fall semester. More information on the honors program is available in the Biology & Society Office, 306 Rockefeller Hall, 255-6047.

People to contact for Biology & Society honors information:

In Arts and Sciences: Brian Chabot, director of undergraduate studies, bfc1@cornell.edu

In Agriculture and Life Sciences: David Pimentel, faculty representative to CALS Honors Committee, dp18@cornell.edu

In Human Ecology: Nancy Breen, advising coordinator, CHE, neb5@cornell.edu

I. First-Year Writing Seminars and Introductory Courses

Consult the John S. Knight Institute web site for times, instructors, and descriptions. Web site: www.arts.cornell.edu/Knight_institute/index.html

S&TS 101(1101) Science and Technology in the Public Arena

Fall. 3 credits. Recommended as introduction to field. Not required; may not be used to fulfill major requirement. S&TS 101 and 102 can be taken separately or in any order. R. Prentice.

For description, see S&TS listings, S&TS 101.

S&TS 102(1102) Histories of the Future

Spring. 3 credits. Recommended as an introduction to the field. Not required; may not be used to fulfill a major requirement. S&TS 101 and 102 may be taken separately or in any order. R. Prentice, S. Seth. For description, see S&TS listings, S&TS 102.

II. Foundation Courses

A. Ethics (one course)

B&SOC 205(2051) Ethical Issues in Health and Medicine (also S&TS 205(2051)) (IV) (KCM)

Fall. 4 credits. Limited to 150 students. Not open to freshmen. K. Vogel.

In today's rapidly changing world of health and medicine, complex ethical issues arise in many contexts—from the private, interpersonal interactions between doctor and patient to the broad, mass-mediated controversies that make medicine into headline news. This course examines ethical problems and policy issues that arise in contemporary medicine, health care, and biomedical research. Tools for ethical analysis are applied to a variety of cases and fundamental questions in bioethics. Perspectives from social science, history, and law also inform the course. The course explores ethical questions that arise in a number of substantive contexts, including the doctor-patient relationship, medical decision making near the end of life, human experimentation, genetics and reproductive technology, public health, and the allocation of scarce resources.

B&SOC 206(2061) Ethics and the Environment (also S&TS 206(2061), PHIL 246(2460)) (IV) (KCM)

Spring. 4 credits. Limited to 50 students. Open to all undergraduates; freshmen by permission of instructor. J. Turner.

Aims to acquaint students with moral issues that arise in the context of the environment and environmental policy. Our concerns about the environment bring to our attention the importance of economic, epistemological, legal, political, and social issues in assessing our moral obligations to other humans and the natural world. The attempt is then to explore how different factors come into play in defining our responsibilities to the environment and to examine the grounds for our environmental policy decisions. A background in basic ecology or environmental issues or ethics is helpful.

B. Social Sciences/Humanities Foundation (two courses, one from any two areas)

1. History of Science

S&TS 233(2331) Agriculture, History, and Society: From Squanto to Biotechnology

Fall. 3 credits. M. Rossiter. For description, see S&TS listings, S&TS 233.

S&TS 282(2821) Science in Western Civilization (also HIST 282(2820))

Spring. 4 credits. P. Dear. For description, see HIST 282.

S&TS 287(2871) Evolution (also BIOEE 207(2070), HIST 287(2870))

Fall or summer. 3 credits. May not be taken for credit after BIOEE 278. W. Provine.

For description, see BIOEE 207.

S&TS 355(3551) Computers: From the 17 C. to the Dot.com Boom (also INFO 355[3551], COMM 355[3551])
Fall. 4 credits. S&TS 355 and 356 may be taken separately or in any order.
K. Lambert.
For description, see S&TS listings, S&TS 355.

S&TS 356(3561) Computing Cultures (also COMM 356[3561], INFO 356[3561], VISST 356[3560])
Spring. 4 credits. S&TS 355 and 356 may be taken separately or in any order.
P. Sengers.
For description, see S&TS 356.

[S&TS 390(3901) Science in the American Polity: 1800 to 1960 (also GOVT 308[3080], AM ST 388[3881])
Fall. 4 credits. Not offered 2005–2006. Staff.
For description, see S&TS 390.]

S&TS 433(4331) International History of Science
Spring. 4 credits. M. Rossiter.
For description, see S&TS listings, S&TS 433.

S&TS 444(4441) Historical Issues of Gender and Science (also FGSS 444[4440])
Spring. 4 credits. M. Rossiter.
For description, see S&TS listings, S&TS 444.

S&TS 447(4471) Seminar in the History of Biology: Why Is Evolutionary Biology So Controversial? (also BIOEE 467[4670], B&SOC 447[4471], HIST 415[4150])
Fall or summer (six-week session). 4 credits. Limited to 18 students. S-U grades optional. Not offered fall 2005. W. Provine.
For description and prerequisites, see BIOEE 467.

2. Philosophy of Science

S&TS 201(2011) What Is Science? An Introduction to the Social Studies of Science and Technology (also SOC 210[2100])
Spring. 3 credits. T. Pinch.
For description, see S&TS listings, S&TS 201.

S&TS 286(2861) Science and Human Nature (also PHIL 286[2860])
Spring. 4 credits. May be used to meet philosophy of science requirement *if not* used to meet core course requirement.
R. Boyd.
For description, see PHIL 286.

S&TS 381(3811) Philosophy of Science: Knowledge and Objectivity (also PHIL 381[3810])
Fall. 4 credits. R. Boyd.
For description, see PHIL 381.

3. Sociology of Science

B&SOC 301(3011) Life Sciences and Society (also S&TS 301[3011]) (III) (SBA)
Fall. 4 credits. May be used to meet sociology of science requirement *if not* used to meet core course requirement.
C. Silverman.
For description, see Core Courses.

[B&SOC 442(4421) Sociology of Science (also S&TS 442[4421], SOC/CRP 442[4420]) (III) (SBA)
Fall. 4 credits. Not offered 2005–2006. Staff.
For description, see S&TS listings, S&TS 442.]

HD 452(4520) Culture and Human Development
Fall. 3 credits. Q. Wang.
For description, see HD 452.

NS 245(2450) Social Science Perspectives on Food and Nutrition
Fall. 3 credits. C. Bisogni and J. Sobal.
For description, see NS 245.

[D SOC 208(2080) Technology and Society
Fall. 3 credits. Not offered 2005–2006.
C. Geisler.
For description, see D SOC 208.]

D SOC 220(2200) Sociology of Health and Ethnic Minorities (also LSP 220[2200])
Fall. 3 credits. P. Parra.
For description, see D SOC 220.

S&TS 201(2011) What Is Science? An Introduction to the Social Studies of Science and Technology (also SOC 210[2100])
Spring. 3 credits. T. Pinch.
For description, see S&TS listings, S&TS 201.

S&TS 311(3111) The Sociology of Medicine
Spring. 4 credits. C. Leuenberger.
For description, see S&TS 311.

S&TS 411(4111) Knowledge, Technology, and Property
Spring. 4 credits. S. Hilgartner.
For description, see S&TS 411.

4. Politics of Science

B&SOC 407(4071) Law, Science, and Public Values (also S&TS 407[4071])
Spring. 4 credits. M. Lynch.
For description, see S&TS listings, S&TS 407.

[CRP 380(3800) Environmental Politics
Fall. 4 credits. Not offered 2005–2006.
R. Booth.
For description, see CRP 380.]

PAM 230(2300) Introduction to Policy Analysis
Fall. 4 credits. R. Avery.
For description, see PAM 230.

S&TS 324(3241) Environment and Society (also D SOC/SOC 324[3240])
Spring. 3 credits. C. Geisler.
For description, see D SOC 324.

S&TS 391(3911) Science in the American Polity: 1960 to Now (also GOVT 309[3091], AM ST 389[3891])
Spring. 4 credits. S. Hilgartner.
For description, see S&TS 391.

[S&TS 427(4271) Politics of Environmental Protection (also GOVT 420[4201])
Summer. 4 credits. Not offered 2005–2006.
S. Yearley.]

5. Science Communication

COMM 260(2600) Scientific Writing for Public Information
Fall and spring. 3 credits. Limited to 25 non-freshmen or graduate students per section. Not open to freshmen. S. Conroe.
For description and prerequisites, see COMM 260.

COMM 421(4210) Communication and the Environment
Spring. 3 credits. May be used in Foundation only if **not** taken as senior seminar. Staff.
For description, see COMM 421.

S&TS 285(2851) Communication in the Life Sciences (also COMM 285[2850])
Spring. 3 credits. B. Lewenstein.
For description, see COMM 285.

S&TS 352(3521) Science Writing for the Mass Media (also COMM 352[3520])
Fall. 3 credits. B. Lewenstein.
For description and prerequisites, see COMM 352.

S&TS 466(4661) Public Communication of Science and Technology (also COMM 466[4660])
Fall. 3 credits. Limited to 15 students. May be used in Foundation only if **not** taken as senior seminar. B. Lewenstein.
For description and prerequisites, see COMM 466.

C. Biology foundation (breadth requirement): Three courses: one from three of the following subject areas:

1. Biochemistry, Molecular and Cell Biology

BIOBM 330(3300) Principles of Biochemistry, Individual Instruction
Fall and spring. 4 credits. J. Blankenship, P. Hinkle, and staff.
For description and prerequisites, see BIOBM 330.

BIOBM 331(3310) Principles of Biochemistry: Proteins and Metabolism
Fall. 3 credits. May not be taken for credit after BIOBM 330 or 333. G. Feigenson.
For description and prerequisites, see BIOBM 331.

BIOBM 333(3330) Principles of Biochemistry, Lectures
Summer. 4 credits. H. Nivison.
For description and prerequisites, see BIOBM 333.

NS 320(3200) Introduction to Human Biochemistry
Fall. 4 credits. P. Stover.
For description and prerequisites, see NS 320.

2. Ecology

BIOEE 261(2610) Ecology and the Environment
Fall and summer. 4 credits. Not open to freshmen. B. Chabot and N. Hairston.
For description and prerequisites, see BIOEE 261.

3. Genetics and Development

BIOGD 281(2810) Genetics
Fall, spring, and summer. 5 credits. Limited to 200 students. Not open to freshmen fall semester. M. Goldberg, T. Fox, and R. MacIntyre.
For description and prerequisites, see BIOGD 281.

BIOGD 282(2820) Human Genetics

Spring. 2 or 3 credits; 2 credits if taken after BIOGD 281; must be taken for 3 credits to fulfill Biology & Society requirements. Limited to 25 students per disc. M. Goldberg.

For description and prerequisites, see BIOGD 282.

PL BR 225(2250) Plant Genetics

Spring. 3 credits. M. Mitschler.

For description, see PL BR 225.

4. Evolutionary Biology**BIOEE 278(2780) Evolutionary Biology**

Fall and spring. 3 or 4 credits. Fall,

R. Harrison; spring, M. Shulman and staff.

For description, see BIOEE 278.

5. Animal Behavior**BIONB 221(2210) Neurobiology and Behavior I: Introduction to Behavior**

Fall. 3, 4, or 5 credits. C. Walcott and staff.

For description and prerequisites, see BIONB 221.

6. Neurobiology and Behavior**BIONB 222(2220) Neurobiology and Behavior II: Introduction to Neurobiology**

Spring. 3 or 4 credits. R. Booker and staff.

For description and prerequisites, see BIONB 222.

7. Physiology and Anatomy**BIOAP 311(3110) Introductory Animal Physiology, Lectures (also VTBMS 346)**

Fall. 3 credits. E. Loew and staff.

For description and prerequisites, see BIOAP 311.

NS 341(3410) Human Anatomy and Physiology

Spring. 4 credits. Prerequisite: permission of instructor. Students must preregister for lab in 309 Martha Van Rensselaer Hall during course enrollment period.

V. Utermohlen.

For description and additional prerequisites, see NS 341.

8. Biological Diversity**BIOMI 290(2900) General Microbiology Lectures**

Fall, spring, and summer. 2 or 3 credits; must be taken for 3 credits to fulfill major requirement. B. Batzing (summer) and W. Ghiorse.

For description and prerequisites, see BIOMI 290.

BIOPL 241(2410) Introductory Botany

Fall. 3 credits. K. Niklas.

For description, see BIOPL 241.

BIOEE 274(2740) The Vertebrates: Structure, Function, and Evolution

Spring. 4 credits. B. McGuire.

For description and prerequisites, see BIOEE 274.

BIOEE 373(3730) Biology of the Marine Invertebrates

Fall. 5 credits. D. Harvell and J. Morin.

For description and prerequisites, see BIOEE 373.

[BIOEE 470(4700) Herpetology, Lectures

Spring. 2 credits; must be taken in conjunction with 472 to count for major credit. Not offered 2005-2006. H. Greene.

For description and prerequisites, see BIOEE 470.]

[BIOEE 471(4710) Mammalogy

Fall. 4 credits. Not offered 2005-2006. Staff.

For description and prerequisites, see BIOEE 471.]

[BIOEE 472(4720) Herpetology, Laboratory

Spring. 2 credits; must be taken in conjunction with 470 to count for major credit. Not offered 2005-2006. H. Greene.

For description and prerequisites, see BIOEE 472.]

BIOEE 475(4750) Ornithology

Spring. 4 credits. D. Winkler.

For description and prerequisites, see BIOEE 475.

[BIOEE 476(4760) Biology of Fishes

Fall. 4 credits. Not offered 2006-2007.

A. McCune.

For description and prerequisites, see BIOEE 476.]

ENTOM 212(2120) Insect Biology

Fall. 4 credits. C. Gilbert.

For description and prerequisites, see ENTOM 212.

PL PA 309(3090) Introductory Mycology

Fall. 3 credits. K. Hodge.

For description and prerequisites, see PL PA 309.

9. Nutrition**NS 115(1150) Nutrition, Health, and Society**

Fall. 3 credits. D. Levitsky.

For description, see NS 115.

D. Biology foundation (depth requirement): one course for which one of the above breadth requirement courses (2C) is a prerequisite.

E. Statistics (one course)**AEM 210(2100) Introductory Statistics**

Spring. 4 credits. C. VanEs.

For description and prerequisites, see AEM 210.

BTRY 301(3010) Statistical Methods I

Fall. 4 credits. P. Sullivan.

For description and prerequisites, see BTRY 301.

ECON 319(3190) Introduction to Statistics and Probability

Fall and spring. 4 credits. Y. Hong and F. Molinari.

For description and prerequisites, see ECON 319.

MATH 171(1710) Statistical Theory and Application in the Real World

Fall and spring. 4 credits. Staff.

For description, see MATH 171.

PAM 210(2100) Introduction to Statistics

Fall and spring. 4 credits. K. Joyner.

L. O'Neill, R. Swisher, and staff.

For description, see PAM 210.

PSYCH 350(3500) Statistics and Research Design

Fall. 4 credits. Staff.

For description, see PSYCH 350.

SOC 301(3010) Evaluating Statistical Evidence (also D SOC 302[3020])

Fall. 4 credits. Limited to Arts and Sciences students. Staff.

For description, see SOC 301.

III. Core Courses**B&SOC 301(3011) Life Sciences and Society (also S&TS 301[3011]) (III) (SBA)**

Fall. 4 credits. Limited to 50 students.

Prerequisite: two semesters of social science or humanities and one year of introductory biology or permission of instructor. C. Silverman.

Critical thinking about the diverse influences shaping the life sciences. Topics include evolution and natural selection, heredity and genetic determinism, biotechnology, and reproductive interventions. Students interpret episodes, past and present, in biology in light of scientists' historical location, economic and political interests, use of language, and ideas about causality and responsibility. Readings, class activities, and written assignments are designed so that students develop interpretive skills and explore their own intellectual and practical responses to controversies in biology and society.

S&TS 286(2861) Science and Human Nature (also PHIL 286[2860])

Spring. 4 credits. R. Boyd.

For description, see PHIL 286.

IV. Themes**A. Natural Science Issues/Biology**

Elective (two courses). Select from the following list of B&SOC approved natural science issues courses or choose course(s) with intro biology as a prerequisite from: ALS, AN SC, VTBMS, ENTOM, FD SC, HD, NS, NTRES, PL BR, PL PA, PSYCH, VTMED.

B&SOC 214(2141) Biological Basis of Sex Differences (also BIOAP/FGSS 214[2140]) (I) (PBS)

Spring. 3 credits. J. Fortune.

For description, see BIOAP 214.

B&SOC 347(3471) Human Growth and Development: Biological and Behavioral Interactions (also HD/NS 347[3470])

Spring. 3 credits. Offered alternate years.

J. Haas and S. Robertson.

For description and prerequisites, see HD 347.

[BIOEE 275(2750) Human Biology and Evolution (also ANTHR/NS 275[2750])

Fall. 3 credits. Not offered 2005-2006.

K. Kennedy and J. Haas.

For description, see BIOEE 275.]

[BIOEE 673(6730) Human Evolution: Concepts, History, and Theory (also ANTHR 673[6733])

Fall. 3 credits. Not offered 2005-2006.

K. Kennedy.

For description, see BIOEE 673.]

BIO G 305(3050) Basic Immunology

Fall. 3 credits. J. Marsh.

For description, see BIO G 305.

[BIOPL 247(2470) Ethnobiology

Fall. 3 credits. Not offered 2005-2006.

D. Bates.

For description, see BIOPL 247.]

ENTOM 210(2100) Plagues and People

Fall. 3 credits. L. Harrington.
For description, see ENTOM 210.

EAS 322(3220) Biogeochemistry of the Hawaiian Islands

Spring. 4 credits. Students must apply via Cornell Abroad for the Hawaii program.
L. Derry.
For description, see EAS 322.

EAS 351(3510) Marine Ecosystems Field Course

Spring. 4 credits. Students must apply via Cornell Abroad for Hawaii program.
C. Greene and B. Monger.
For description, see EAS 351.

HD 220(2220) Biological Issues in Human Development: The Human Brain and Mind

Fall. 3 credits. E. Temple.
For description, see HD 220.

HD 266(2660) Emotional Functions of the Brain

Spring. 3 credits. R. Depue.
For description, see HD 266.

HD 320(3200) Human Developmental Neuropsychology: Neurobiology of Human Diseases and Disorders

Spring. 3 credits. E. Temple.
For description, see HD 320.

HD 344(3440) Infant Behavior and Development

Fall. 3 credits. Not open to freshmen.
S. Robertson.
For description and prerequisites, see HD 344.

HD 366(3660) Psychobiology of Temperament and Personality

Fall. 3 credits. R. DePue.
For description and prerequisites, see HD 366.

HD 433(4330) Developmental Cognitive Neuroscience

Spring. May be used as depth course if BIONB 221 or 222 taken as breadth. 3 credits. E. Temple.
For description, see HD 433.

HD 436(4360) Language Development (also LING/PSYCH/COGST 436)

Spring. 4 credits. B. Lust.
For description, see HD 436.

NS 222(2220) Maternal and Child Nutrition

Fall. 3 credits. Limited to 25 students.
C. Garza and P. Brannon.
For description and prerequisites, see NS 222.

NS 331(3310) Physiological and Biochemical Bases of Human Nutrition

Spring. 4 credits. C. McCormick.
For description and prerequisites, see NS 331.

NS 361(3610) Biology of Normal and Abnormal Behavior (also PSYCH 361[3610])

Fall. 3 credits. Prerequisite: junior or senior standing. B. Strupp.
For description and prerequisites, see NS 361.

NS 452(4520) Molecular Epidemiology and Dietary Markers of Chronic Disease

Spring. 3 credits. P. Cassano.
For description and prerequisites, see NS 452.

[NS 475(4750) Mechanisms of Birth Defects

Spring. 3 credits. Not offered 2005–2006.
P. Stover.
For description and prerequisites, see NS 475.]

NTRES 201(2010) Environmental Conservation

Spring. 3 credits. T. Fahey.
For description, see NTRES 201.

[PSYCH 223(2230) Introduction to Biopsychology

Fall. 3 credits. Not offered 2005–2006. Staff.
For description, see PSYCH 223.]

[PSYCH 326(3260) Evolution of Human Behavior

Spring. 4 credits. Not offered 2005–2006.
B. Johnston.
For description and prerequisites, see PSYCH 326.]

Examples of biology electives**AN SC 300(3000) Animal Reproduction and Development**

Spring. 3 credits. J. Parks.
For description, see AN SC 300.

HD 366(3660) Psychobiology of Temperament and Personality

Fall. 3 credits. R. DePue.
For description and prerequisites, see HD 366.

NS 331(3310) Physiological and Biochemical Bases of Human Nutrition

Spring. 4 credits. C. McCormick.
For description, see NS 331.

B. Humanities/Social Science elective (two courses)

Courses listed earlier as social science/humanities foundation courses (2B) are particularly appropriate as social science/humanities electives. However, a single course cannot be used to meet both requirements. Examples of recommended social science or humanities electives are listed below. A more complete list is available in 306 Rockefeller Hall.

Examples of social science electives**AEM 464(4640) Economics of Agricultural Development (also ECON 464[4640])**

Fall. 3 credits. R. Christy.
For description, see AEM 464.

[ANTHR 211(2411) Nature and Culture

Spring. 4 credits. Not offered 2005–2006.
For description, see ANTHR 211.]

B&SOC 331(3311) Environmental Governance (also S&TS 331[3311], NTRES 331[3310])

Spring. 3 credits. S. Wolf.
For description, see NTRES 331.

BIOEE 671(6710) Paleoanthropology of South Asia (also ANTHR 671[6371])

Fall. 3 credits. K. Kennedy.
For description, see BIOEE 671.

[CRP 451(4510) Environmental Law (also CRP 551[5510])

Fall. 4 credits. Not offered 2005–2006.
R. Booth.
For description, see CRP 451.]

D SOC 205(2050) Rural Sociology and International Development (also SOC 206[2060])

Spring. 3 credits. P. McMichael.
For description, see D SOC 205.

[D SOC 261(2610) Sociology of Sustainable Development

Fall. 3 credits. Not offered 2005–2006. Staff.
For description, see D SOC 261.]

[D SOC 333(3330) Genomics and Society (also S&TS 333[3331])

Fall. 3 credits. Not offered 2005–2006. Staff.
For description, see D SOC 333.]

SOC 410(4100) Health and Survival Inequalities (also FGSS 410[4100])

Fall. 4 credits. A. Basu.
For description, see SOC 410.

[DEA 422(4220) Ecological Literacy in Design (also ARCH 464.01[4601])

Spring. 3 credits. Not offered 2005–2006.
J. Elliott.
For description, see DEA 422.]

[HD 241(2410) History of Childhood in the United States

Spring. 3 credits. Recommended for sophomores and juniors. Not offered 2005–2006. J. Brumberg.
For description, see HD 241.]

HD 251(2510) Social Gerontology: Aging and the Life Course

Spring. 3 credits. Limited to 60 students. Highly recommended: HD 250 or equivalent, to be determined by instructor. E. Wethington.
For description, see HD 251.

[HD 258(2580) The History of Women in the Professions 1800 to Present (also HIST 238[2380], FGSS 238[2380], AM ST 258[2581])

Spring. 3 credits. Not offered 2005–2006.
J. Brumberg.
For description, see HD 258.]

[HD 336(3360) Connecting Social, Cognitive, and Emotional Development

Fall. 3 credits. Not offered 2005–2006.
P. Casasola.
For description and prerequisites, see HD 336.]

[HD 362(3620) Human Bonding

Fall. 3 credits. Not offered 2005–2006.
C. Hazan.
For description, see HD 362.]

HD 370(3700) Adult Psychopathology (also PSYCH 325[3250])

Spring. 3 credits. H. Segal.
For description, see HD 370.

HD 417(4170) Female Adolescence in Historical Perspective

Spring. 3 credits. J. Brumberg.
For description, see HD 417.

[HD 457(4570) Health and Social Behavior (also SOC 457[4570])

Fall. 3 credits. Not offered 2005–2006.
E. Wethington.
For description, see HD 457.]

NS 421(4210) Nutrition and Exercise

Spring. 3 credits. Limited to nutrition majors, others by permission of the Instructor. S. Travis.
For description and prerequisites, see NS 421.

NS 450(4500) Public Health Nutrition

Spring. 3 credits. K. Rasmussen and D. Pelletier.
For description, see NS 450.

NS 650(6500) Food and Nutrition Assessment in a Social Context
Fall. 3 credits. D. Pelletier and G. Pelto.
For description and prerequisites, see NS 650.

[NS 651(6510) Food and Nutrition Action in a Social Context]
Spring. 3 credits. Not offered 2005-2006.
D. Pelletier and G. Pelto.
For description and prerequisites, see NS 651.]

NTRES 333(3330) Environmental Issues and Indigenous People
Spring. 3 credits. M. Muskett.
For description, see NTRES 333.

[NTRES 407(4070) Religion, Ethics and the Environment]
Fall. 3 credits. Not offered 2005-2006.
R. Baer.
For description, see NTRES 407.]

PAM 303(3030) Ecology and Epidemiology of Health
Fall. 3 credits. Staff.
For description, see PAM 303.

PAM 350(3500) Contemporary Issues in Women's Health
Fall. 3 credits. A. Parrot.
For description, see PAM 350.

PAM 380(3800) Human Sexuality
Spring. 4 credits. A. Parrot.
For description, see PAM 380.

PAM 435(4350) U.S. Health Care System
Fall. 3 credits. R. Battistella.
For description, see PAM 435.

PAM 437(4370) Economics of Health Policy
Spring. 3 credits. K. Simon.
For description, see PAM 437.

PAM 568(5680) Long-Term Care and the Aged: Alternative Health and Social Service Delivery Systems
Spring. 3 credits. Staff.
For description, see PAM 568.

[SOC 340(3400) Health, Behavior, and Policy]
Spring. 4 credits. Not offered 2005-2006.
S. Caldwell.
For description, see SOC 340.]

Examples of humanities electives

PHIL 241(2410) Ethics
Spring. 4 credits. T. Gendler.
For description, see PHIL 241.

S&TS 481(4811) Philosophy of Science (also PHIL 481/681[4810/6810])
Spring. 4 credits. R. Boyd.
For description, see PHIL 681.]

C. Senior Seminars.

[B&SOC 404(4041) Human Fertility in Developing Nations (also D SOC 408[4080])]
Spring. 3 credits. Not offered 2005-2006.
J. Stycos.
For description, see D SOC 408.]

B&SOC 420(4201) The Darwinian Scientific Revolution (also S&TS 420[4201]) (IV) (HA)
Fall. 4 credits. Offered one time only, fall 2005. K. Lambert.

Looks at the emergence of Darwinism in the social and scientific context of 19th-century industrial Britain, asking how both scientists and a newly emerged mass audience viewed the controversies raised by Darwinian and

non-Darwinian theories of evolution. By listening in on these conversations about class, race, sex, and religion, the class explores science as an integral part of the culture and society of the Victorian period.

B&SOC 425(4251) From "Cold Mothers" to "Autistic Dads"—Autism in 20th-Century America (also S&TS 425[4251]) (III) (SBA)
Spring. 4 credits. Offered spring 2006 only.
C. Silverman.
For description, see S&TS 425.

[B&SOC 427(4271) Politics of Environmental Protection (also S&TS 427[4271], GOVT 420[4201])]
Summer. 4 credits. Not offered 2005-2006.
S. Yearley.
For description, see S&TS 427.]

B&SOC 447(4471) Seminar in the History of Biology (also BIOEE 467[4670], HIST 415[4150], S&TS 447[4471]) (I) (PBS)
Summer. six-week session. 4 credits.
W. Provine.
For description, see BIOEE 467.

B&SOC 461(4611) Environmental Policy (also BIOEE/ALS 661) (I) (PBS)
Fall and spring (yearlong); must be started in fall. 3 credits each semester. Limited to 12 students. D. Pimentel.
For description and prerequisites, see BIOEE 661.

[B&SOC 471(4711) The Dark Side of Biology: Biological Weapons, Bioterrorism, and Biocriminality (also S&TS 471[4711]) (III) (SBA)]
Fall. 4 credits. Prerequisites: at least one course in S&TS and one semester of biology beyond introductory biology. Not offered 2005-2006. K. Vogel.
Rapid advances in biotechnology, as well as changing social and political climates, have created new public fears that the malicious release of pathogens and toxins by states and/or terrorist groups is a serious threat. Debates have also emerged as to what biological research and publications should be restricted and censored to prevent misuse. The course explores the scientific, social, political, legal, and ethical discussions surrounding historical and current work on dangerous pathogens and toxins. This course also takes a look at the role that the expert and lay communities play in the shaping of popular perceptions and public policies in these threat discussions.]

COMM 421(4210) Communication and the Environment
Spring. 3 credits. Staff.
For description, see COMM 421.

CSS 410(4100) Environmental Impacts of Agricultural Biotechnology
Spring. 3 credits. D. Buckley.
For description, see CSS 410.

HD 336(3360) Connecting Social, Cognitive and Emotional Development
Fall. 3 credits. M. Casasola.
For description, see HD 336.

HD 366(3660) Psychobiology of Temperament and Personality
Fall. 3 credits. R. Depue.
For description and prerequisites, see HD 366.

HD 416(4160) Development Perspectives on Legal Psychology
Spring. 3 credits. K. Mueller-Johnson.
For description, see HD 416.

HD 417(4170) Female Adolescence in Historical Perspective (also FGSS 438[4380], HIST 458[4580], AM ST 417[4170])
Spring. 3 credits. J. Brumberg.
For description, see HD 417.

HD 418(4180) Aging: Contemporary Issues
Fall. 3 credits. S. Cornelius.
For description, see HD 418.

[HD 419(4190) Midlife Development]
Spring. 3 credits. Not offered 2005-2006.
S. Cornelius.
For description, see HD 419.]

HD 432(4320) Cognitive, Social, and Developmental Aspects of Scientific Reasoning
Spring. 3 credits. B. Koslowski.
For description, see HD 432.

[HD 464(4640) Adolescent Sexuality (also FGSS 467)]
Spring. 3 credits. Not offered 2005-2006.
R. Savin-Williams.
For description, see HD 464.]

HD 468(4680) Stress in Childhood and Adolescence
Spring. 3 credits. J. Eckenrode.
For description, see HD 468.

[HD 660(6600) Social Development]
Spring. 3 credits. Prerequisite: for undergraduates, permission of instructor. Not offered 2005-2006. K. Greene.
For description, see HD 660.]

NS 452(4520) Molecular Epidemiology and Dietary Markers of Chronic Disease
Spring. 3 credits. P. Cassano.
For description, see NS 452.

PAM 552(5520) Health Care Services: Consumer and Ethical Perspectives
Fall. 3-4 credits; if using as senior seminar, B&SOC majors must take for 4 credits.
A. Parrot.
For description, see PAM 552.

PAM 556(5560) Managed Care
Fall. 3 credits. J. Kuder.
For description, see PAM 556.

PAM 559(5590) Epidemiology, Clinical Medicine, and Management Interface Issues
Spring. 3 credits. Staff.
For description, see PAM 559.

SOC 410(4100) Health and Survival Inequalities (also FGSS 410[4100])
Spring. 3 credits. A. Basu.
For description, see SOC 410.

D SOC 438(4380) Population and Development (also SOC 437[4370])
Fall. 3 credits. D. Gurak.
For description, see D SOC 438.

[D SOC 495(4950) Population, Development, and Environment in Sub-Saharan Africa]

Fall. 4 credits. Not offered 2005–2006.
P. Eloundou-Enyegue.
For description, see D SOC 495.]

S&TS 411(4111) Knowledge, Technology, and Property

Spring. 4 credits. S. Hilgartner.
For description, see S&TS 411.

S&TS 453(4531) Knowledge and Society (also SOC 453[4530])

Fall. 4 credits. C. Leuenberger.
For description, see S&TS 453

S&TS 431(4311) From Surgery to Simulation

Fall. 4 credits. R. Prentice.
For description, see S&TS 431.

[S&TS 446(4461) Biomedical Ethics (also B&SOC 446[4461])]

Spring. 4 credits. Not offered 2005–2006.
N. Sethi.
For description, see S&TS listings, S&TS 446.]

S&TS 466(4661) Public Communication of Science and Technology (also COMM 466[4660])

Fall. 3 credits. B. Lewenstein.
For description and prerequisites, see COMM 466.

S&TS 475(4751) Historical Issues of Science, Technology, Race, and Colonialism

Fall. 4 credits. S. Sethi.
For description, see S&TS 475.

[S&TS 490(4901) Integrity of Scientific Practice]

Fall. 4 credits. Not offered 2005–2006.
S. Hilgartner.]

S&TS 495(4951) Social Studies of the Human Sciences

Spring. 4 credits. C. Leuenberger.
For description, see S&TS 495.

V. Other Courses**B&SOC 375(3751) Independent Study**

Fall or spring. 1–4 credits. Prerequisite: biology and society majors; written permission of faculty supervisor.
Projects under the direction of a Biology and Society faculty member are encouraged as part of the program of study within the student's concentration area. Applications for research projects are accepted by individual faculty members. Students may enroll for 1 to 4 credits in B&SOC 375 Independent Study with written permission of the faculty supervisor and may elect either the letter grade or the S-U option. Students may elect to do an independent study project as an alternative to, or in advance of, an honors project. Applications and information on faculty research, scholarly activities, and undergraduate opportunities are available in the Biology and Society Office, 306 Rockefeller Hall. *Independent study credits may not be used in completion of the major requirements.*

B&SOC 499(4991/4992) Honors Project I and II (also ALS 499[4991/4992])

Fall and spring (yearlong). Prerequisite: senior biology and society students by permission of department; overall GPA of 3.3. Students should apply in 306 Rockefeller Hall. Arts and Sciences

students should enroll in B&SOC 499 to receive Arts and Sciences credit. CALS students should enroll in ALS 499 to receive College of Agriculture and Life Sciences credit.

Students who are admitted to the honors program are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research, and the completed work should be of wider scope and greater originality than is normal for an upper-level course. The student must find a project supervisor and a second faculty member willing to serve as faculty reader; at least one of these must be a member of the Biology and Society faculty.

Students must register for the total credits desired for the whole project each semester (e.g., 8 credits for fall and 8 credits for spring). After the fall semester, students receive a letter grade of "R"; a letter grade for both semesters is submitted at the end of the second semester whether or not the student completes a thesis or is recommended for honors. Minimally, an honors thesis outline and bibliography should be completed during the first semester. In consultation with the advisers, the director of undergraduate studies will evaluate whether the student should continue working on an honors project. Students should note that these courses are to be taken in addition to those courses that meet the regular major requirements.

If students do not complete the second semester of the honors project, they must change the first semester to independent study to clear the "R" and receive a grade. Otherwise, the "R" will remain on their record and prevent them from graduating.

CATALAN

See "Department of Romance Studies."

CENTER FOR APPLIED MATHEMATICS

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. This program is based on a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student's program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of graduate studies of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics.

Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

A listing of selected graduate courses in applied mathematics can be found in the description of the center under "Interdisciplinary Centers, Programs, and Studies."

CENTER FOR INTERNATIONAL STUDIES

See "Interdisciplinary Centers, Programs, and Studies."

CHEMISTRY AND CHEMICAL BIOLOGY

H. D. Abruña, chair (122 Baker Laboratory, 255-4175); G. W. Coates, associate chair; M. A. Hines, director of undergraduate studies; H. D. Abruña, J. Almy, B. A. Baird, T. P. Begley, J. M. Burlitch, B. K. Carpenter, R. A. Cerione, G. Chan, P. J. Chirik, G. W. Coates, D. B. Collum, B. R. Crane, H. F. Davis, F. J. DiSalvo, S. E. Ealick, G. S. Ezra, R. C. Fay, J. H. Freed, B. Ganem, M. A. Hines, R. Hoffmann, P. L. Houston, S. Lee, R. F. Loring, J. A. Marohn, T. McCarrick, J. E. McMurry, J. Njaroarson, D. Y. Sogah, D. T. McQuade, J. Meinwald, S. Russo, D. A. Usher, B. Widom, C. F. Wilcox, P. T. Wolczanski, D. B. Zax

The Department of Chemistry and Chemical Biology offers a full range of courses in physical, organic, inorganic, analytical, theoretical, bioorganic, and biophysical chemistry. In addition to their teaching interests, chemistry and chemical biology faculty members have active research programs. The link between teaching and research is a vital one in a continuously evolving scientific subject; it ensures that students will be provided with the most advanced information and perspectives, and affords opportunities for students to participate in research.

The Major

To fit the widely varying needs of our undergraduate majors, the department offers two different tracks that both lead to the same undergraduate degree:

Standard Major—The standard major provides a comprehensive background in all fields of chemistry. Most students who complete the standard major go on to graduate study in chemistry or to medical school, although some students proceed directly to a position in the chemical industry. With additional independent research (which is not required), the standard chemistry major is fully accredited by the American Chemical Society.

Alternative Major—The alternative major offers a flexible program of study that is primarily designed for students who intend to double major in another field. For example, students majoring in biology can complete the alternative major with little additional class work. This program might also be attractive for students interested in law (especially patent law), as a double major in government

or economics plus chemistry is quite feasible. This program is not suited to further graduate work in chemistry. With few exceptions, students in the alternative major are not chosen to participate in the honors program in chemistry. The alternative major is not accredited by the American Chemical Society.

Either version of the major can be completed in three years of study. Most students, however, complete all of the requirements in their first three years with the exception of CHEM 410 Inorganic Chemistry, which is usually taken in the fall semester of the senior year. The typical chemistry course sequence is:

first year: general chemistry and mathematics

second year: organic chemistry, analytical and organic laboratories, and physics

third year: physical chemistry lectures and laboratories

fourth year: inorganic chemistry

Admission to the Major

Admission to the chemistry major requires the satisfactory completion of a number of introductory courses which, when taken together, demonstrate an ability to complete the major. These courses include (1) CHEM 215-216 or 207-208 (CHEM 211, 208 or 206, 208 are accepted but not recommended); (2) CHEM 300; (3) PHYS 207 or 112 or 116; and (4) MATH 111 or 191. Second-semester sophomores (or beyond) who have completed all but one of these requirements may be admitted to the major provided that they have a plan for completing the major on schedule.

The Standard Major

In addition to the courses required for admission to the major, the following additional courses must be completed for the standard major:

1. CHEM 301-303, 359-360 (357-358 may be substituted), 389-390, and 410,
2. MATH 112, 213; or 122, 221-222; or 192-293,
3. PHYS 208 or 213.

Most standard majors also perform independent research at some point in their academic career, either during the semester or in the summer. Many students take advanced courses to complement this program.

The Alternative Major

In addition to the courses required for admission to the major, the following courses must be completed for the alternative major:

1. CHEM 251, 257, 287, 289 and 410 (CHEM 357-358 or 359-360 may be substituted for CHEM 257. CHEM 389-390 can be substituted for CHEM 287. Any of these options also will fulfill the advanced chemistry course requirement.)
2. MATH 112 or 122 or 192
3. PHYS 208 or 213
4. One additional 3- or 4-credit advanced chemistry course at the 300 level or above
5. Three additional courses, of 3 or more credits each, that form a cohesive unit and are not at the introductory level.

These three courses must be approved by a departmental committee.

The three additional courses may be in another field of study, such as biochemistry, physics, biology, materials science, economics, government, or education. Many students who double major use courses from their second major to satisfy this requirement.

Like the standard majors, many alternative majors perform independent research, either in the chemistry department or in another department.

Honors

Any student who completes the requirements for a standard major in chemistry with a cumulative GPA of 3.5 or higher shall be awarded a degree with honors (cum laude).

In addition, senior chemistry majors who have superior grades in chemistry and related subjects and who have had good performance in at least 8 credits of undergraduate research (or the equivalent) in chemistry or a related field (e.g., biochemistry) may be nominated for the honors program. To ensure that the nomination process runs smoothly, all students who are interested in the honors program should discuss this possibility with their adviser early in the fall semester of the senior year. Admission to the honors program is by invitation only. Students completing the alternative major are only eligible for the honors program in exceptional cases.

Students in the honors program participate in the honors seminar (CHEM 498) and write a senior thesis. The successful completion of the honors program leads to the degree of bachelor of arts with honors or high honors in chemistry.

Program for Science Teachers

Chemistry majors who wish to become teachers will be interested to know that Cornell University offers a certification program for teachers of secondary (grades 7-12) science. Interested students apply to the program during their sophomore or junior years. If accepted, students integrate some course work in education with the rest of their undergraduate studies. All chemistry majors who enter this program will remain in the College of Arts and Sciences to complete the major.

After earning the bachelor's degree, certification students enter the graduate field of education to complete a fifth year of study at Cornell. Following this fifth year, students are eligible for a master's degree from Cornell and a teaching certificate from New York State. Additional information is available from Susie Slack, 424 Kennedy Hall, 255-9255, or Professor Deborah Trumbull, 426 Kennedy Hall, 255-3108.

Laboratory Course Regulations

Students registered for laboratory courses who do not appear at the first meeting of the laboratory will forfeit their registration in that course.

Students and members of the teaching staff are required to wear safety goggles and lab aprons in all chemistry laboratories. Closed-toed footwear is required (no sandals). Students are reminded to take their goggles and lab aprons to the first laboratory session.

Those who fail to cooperate with the safety program will be asked to leave the laboratories.

Students in organic and analytical labs are required to pay for glassware and any other items broken or missing from their laboratory desks at the close of each semester. Students who fail to inventory their desks at the appointed time in the presence of their instructor are charged a \$20 fee in addition to charges for any breakage.

Courses

Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible.

Preliminary examinations for all courses may be given in the evening.

CHEM 105(1150) The Language of Chemistry (I) (PBS)

Fall, 3 credits. Contributes to satisfying CALS physical science requirement of one course in chemistry. S-U or letter grades. Lec, M W F; prelims in normal class period. J. Meinwald.

In his autobiography, A. Kornberg (Nobel Laureate in Medicine, 1959) wrote, "much of life can be understood in rational terms if expressed in the language of chemistry. It is an international language, a language for all time, a language that explains where we came from, what we are, and where the physical world will allow us to go." Through careful examination of a few milestone investigations of naturally occurring biologically important compounds (e.g., the antimalarial quinine, bombikol, and the sperm attractants of algae), the principles of chemistry to which Kornberg refers are developed. Methods of analyzing chemical problems are emphasized, rather than the memorization of specific results or formulas. There is an opportunity for students, working in small groups, to prepare and present short reports on topics of particular current interest at the interface between chemistry and biology.

CHEM 106(1160) The World of Chemistry (I) (PBS)

Spring, 3 credits. Contributes to satisfying CALS physical science requirement of one course in chemistry. S-U or letter grades. Lec, M W F; prelims, March 7, April 6. R. Hoffman.

Chemistry is the art, craft, business, and science of substances and their transformations. Since we've learned to look inside, we know that within those substances undergoing change are persistent groupings of atoms called molecules. So chemistry is also played out on the microscopic level. This is a course that looks at the way chemistry enters all aspects of the everyday world and the way it interacts with culture and the economy. Students try to gain a feeling for the way science is done and grasp the interplay of chemistry and biology.

CHEM 206(1560) Introduction to General Chemistry (I) (PBS)

Fall or summer, 4 credits. Limited enrollment. Nonrefundable lab fee (covers cost of safety goggles, lab apron, and breakage): \$20. Lec, M W F; lab, M, T, W, R, or F; prelims, Sept. 29, Nov. 10. R. Hoffmann.

Introduction to chemistry, both quantitative and qualitative, for those needing a less

intensive introduction to chemistry than 207–208.

CHEM 207–208(2070–2080) General Chemistry (I) (PBS)

207, fall or summer; 208, spring or summer. 4 credits each semester. Prerequisite: for CHEM 208, CHEM 206 or 207. CHEM 207 nonrefundable lab fee (covers cost of safety goggles, lab apron, and breakage): \$20. Entering students exceptionally well prepared in chemistry may receive AP credit for CHEM 207 by demonstrating competence in advanced placement examination of the College Entrance Examination Board or in departmental examination given at Cornell before classes start in fall. Taking CHEM 208 after 215 is not recommended and may be done only by permission of 208 instructor. Lec, T R; lab, M T W R F; secs, M T W R F; prelims, Oct. 6, Nov. 10, Feb. 28, April 11. Fall: P. J. Chirik; spring: H. F. Davis.

Covers fundamental chemical principles, with considerable attention given to the quantitative aspects and to the techniques important for further work in chemistry.

CHEM 211(2110) Chemistry for the Applied Sciences (I) (PBS)

Fall or spring. 4 credits. Limited enrollment. Prerequisite: high school chemistry or permission of instructor. Co-requisite: calculus course at level of MATH 111 or 191. Recommended for students who intend to take only one semester of chemistry. Entering students exceptionally well prepared in chemistry may receive advanced placement credit for General Chemistry by demonstrating competence in the advanced placement examination of the College Entrance Examination Board or in the departmental examination given at Cornell before classes start in the fall. Nonrefundable lab fee (covers cost of safety goggles, lab apron, and breakage): \$20. Lec, M W F; lab, M T W R F; prelims, Sept. 27, Oct. 20, Nov. 22, Feb. 28, Mar. 16, Apr. 18. Fall: B. R. Crane; spring: G. K. Chan.

Covers important chemical principles and facts with the objective of understanding the role of chemistry in other fields. Emphasis is on topics such as solid-state materials, periodic trends, and specific classes of compounds, such as polymers and semiconductors.

CHEM 215–216(2150–2160) Honors General and Inorganic Chemistry (I) (PBS)

Fall, 215; spring, 216. 4 credits each semester. Limited enrollment. Prerequisites: good performance in high school chemistry, physics, and mathematics. Co-requisite: calculus course at level of MATH 111 or 191 for students who have not taken high school calculus; for CHEM 216, CHEM 215. Recommended for students who intend to specialize in chemistry or in related fields. Taking CHEM 208 after CHEM 215 is not recommended and may be done only by permission of 208 instructor. Nonrefundable lab fee (covers cost of safety goggles, lab apron, and breakage): \$20. Lec, M W F; lab, M T W R or F; prelims, Oct. 6, Nov. 10, Feb. 28, Apr. 11. Fall: B. Widom; spring: S. Lee.

Intensive systematic study of the laws and concepts of chemistry, with considerable emphasis on quantitative aspects. Second

semester includes systematics of inorganic chemistry. Laboratory work covers qualitative and quantitative analysis, transition metal chemistry, and spectroscopic techniques.

[CHEM 233(2330) Introduction to Biomolecular Structure]

Fall. 2 credits. Limited to 30 students. Prerequisites: CHEM 207–208 or equivalents. Lec, T R. Not offered 2005–2006. S. E. Ealick.

Intended for students with a basic understanding of chemistry who are considering a program of study in biochemistry. Explores the interrelationship of the structure and function of biologically important molecules. Emphasizes understanding the way in which the three-dimensional arrangements of atoms determine the biological properties of both small molecules and macromolecules such as proteins and enzymes. The study of molecular structure is aided by interactive computer graphics for visualizing three-dimensional structures of molecules.]

CHEM 251(2510) Introduction to Experimental Organic Chemistry

Fall, spring, or summer. 2 credits. Limited enrollment. Co-requisite: CHEM 257 or 357. Recommended for nonchemistry majors. Lec, fall, R or F; spring, R; lab, M T W R or F; prelims, fall: Nov. 15; spring: Apr. 27. S. Russo.

Introduction to the synthesis, separation, and handling of materials, including applications of many types of chromatography, simple and fractional distillation, crystallization, extraction, and others.

CHEM 252(2520) Elementary Experimental Organic Chemistry

Spring. 2 credits. Prerequisite: CHEM 251. Recommended for nonchemistry majors. Lec, T; lab, W, R; prelim, Apr. 27. S. Russo. Continuation of CHEM 251.

CHEM 257(1570) Introduction to Organic and Biological Chemistry (I) (PBS)

Spring or summer. 3 credits. Prerequisite: CHEM 206 or 207. Because CHEM 257 is only a 3-credit course, it does not provide a practical route to satisfying medical school requirements. Because of duplication of materials, students who take both 257 and 357 will receive graduation credit only for CHEM 257. Lec, M W F; prelims, Feb. 16, Mar. 14, April 11. D. A. Usher.

Introduction to organic chemistry with an emphasis on those structures and reactions of organic compounds having particular relevance to biological chemistry.

CHEM 287–288(2870–2880) Introductory Physical Chemistry (I) (PBS)

287, fall; 288, spring. 3 credits each semester. Prerequisites: CHEM 208 or 216 and MATH 111–112 and PHYS 208, or permission of instructor; for CHEM 288, CHEM 287 or 389. Lec, M W F; 287: rec, M or W, T; 288: rec, M or W; prelims: 287: Oct. 6, Nov. 22. 288: Mar. 9 or Apr. 18. Fall: R. Loring; spring: J. H. Freed.

Survey of the fundamental principles of physical chemistry, focusing in the fall on thermodynamics, chemical and enzyme kinetics, and an introduction to quantum mechanics. In the spring the course is oriented to the application of physical chemistry to biological systems, including statistical mechanics, phenomena in

condensed phases, transport, electrochemistry, spectroscopy. CHEM 287 satisfies the minimum requirement for physical chemistry in the alternative chemistry major.

CHEM 290(2900) Introductory Physical Chemistry Laboratory

Fall or spring. 2 credits each semester. Lec, fall, R; spring, R; lab: fall, M T; spring, M T R F T. McCarrick.

Survey of the methods basic to the experimental study of physical chemistry, with a focus on the areas of kinetics, equilibrium, calorimetry, and molecular spectroscopy.

CHEM 300(3000) Quantitative Chemistry

Fall. 2 credits. Prerequisite: CHEM 208 or 216 or advanced placement in chemistry. Lec, R; lab, M T W R; prelims, Oct. 20, Nov. 22. D. B. Zax.

Volumetric, spectrophotometric, and potentiometric methods are emphasized. Techniques are learned by analysis of knowns, and then are used on unknowns. Lectures and problem sets stress the relationship between theory and applications.

CHEM 301(3010) Honors Experimental Chemistry I (I) (PBS)

Spring. 4 credits. Prerequisites: CHEM 300 and 357 or 359. Lec, M W F; 2 labs, M W or T R. D. B. Collum.

Introduction to the techniques of synthetic organic chemistry. A representative selection of the most important classes of organic reactions is explored in the first half of the semester, augmented by lectures on the reaction chemistry and the theory of separation and characterization techniques. The second half of the semester is devoted to a special project, part of which is designed by the student. An opportunity to use inert atmosphere techniques is included.

CHEM 302(3020) Honors Experimental Chemistry II (I) (PBS)

Fall. 4 credits. Limited enrollment; priority given to chemistry majors. Prerequisite: CHEM 301. Lec, M W F; 2 labs, M W, T R. F. T. McCarrick.

Instrumental methods of analysis, including chemical microscopy, visible and infrared spectroscopies, and gas chromatography. Basic concepts of interfacing are covered.

CHEM 303(3030) Honors Experimental Chemistry III (I) (PBS)

Spring. 4 credits. Limited to 10 students per lab. Prerequisites: CHEM 302, 389, 390; co-registration in latter permissible. Lec, M W F; 2 labs, M W, or T R. M. A. Hines.

Introduction to experimental physical chemistry, including topics in calorimetry, spectroscopy, and kinetics. The analysis and numerical simulation of experimental data is stressed.

CHEM 357–358(3570–3580) Organic Chemistry for the Life Sciences (I) (PBS)

Fall or summer, 357; spring or summer, 358. 3 credits each semester. Prerequisite: for CHEM 357, CHEM 208 or 216 or advanced placement; for CHEM 358, CHEM 357 or permission of instructor. Recommended: concurrent registration in CHEM 251 or 300. Because of duplication of material, students who take both CHEM 257 and 357 will receive graduation credit only for CHEM 257. Lec, M W F, optional rec may be offered; prelims, Sept. 22, Oct. 18, Nov. 10, Feb. 16, Mar. 14, Apr. 13. Fall: B. Ganem; spring: G. W. Coates.

Study of the more important classes of carbon compounds—especially those encountered in the biological sciences. Emphasizes their three-dimensional structures, mechanisms of their characteristic reactions, their synthesis in nature and the laboratory, methods of identifying them, and their role in modern science and technology.

CHEM 359-360(3590-3600) Honors Organic Chemistry I and II (I) (PBS)

359, fall; 360, spring. 4 credits each semester. Limited enrollment. Prerequisites: CHEM 216 with grade of B or better, CHEM 208 with grade of A or better, or permission of instructor; for CHEM 360, CHEM 359. Recommended: co-registration in CHEM 300-301-302. Recommended for students who intend to specialize in chemistry or closely related fields. Lec, M W F; disc, W; prelims, Sept. 14, Oct. 12, Nov. 9, Spring: Feb. 9, Mar. 1, Apr. 12. Fall: J. Njardarson; spring, T. P. Begley. Rigorous and systematic study of organic compounds, their structures, the mechanisms of their reactions, and the ways they are synthesized in nature and in the laboratory.

CHEM 389-390(3890-3900) Honors Physical Chemistry I and II (I) (PBS)

Fall, 389; spring, 390. 4 credits each semester. Prerequisites: MATH 213 or, ideally, 221-222; PHYS 208; CHEM 208 or 216 or permission of instructor; for CHEM 390, CHEM 389. Lec, 389: M W F; rec, M or W or T. Lec, 390: M W F; prelims: 389, Sept. 27, Oct. 25, Nov. 22; 390, Feb. 16, Mar. 14, Apr. 13. Fall: J. H. Freed; spring: 390: G. S. Ezra.

Studies the principles of physical chemistry from the standpoint of the laws of thermodynamics, kinetic theory, statistical mechanics, and quantum chemistry.

CHEM 391(3910) Physical Chemistry II (also CHEM 391(3910)) (I) (PBS)

Spring. 4 credits. Prerequisites: engineering students only; MATH 293; PHYS 112, 213; CHEM 389 or permission of instructor. Co-requisite: MATH 294. Lec, M W F; rec, M or T. T. M. Duncan.

(1) Classical thermodynamics—empirical laws that convert measurable quantities pressure, temperature, volume, and composition into abstract quantities enthalpy, entropy and Gibbs energy to describe chemical systems; and (2) chemical kinetics—reaction rate laws from experimental data and reaction mechanisms; approximation methods and applications to photolithography, polymerization, and catalysis.

CHEM 404(4040) Entrepreneurship in Chemical Enterprise

Spring. 1 credit. Lec, T. B. Ganem. Designed to acquaint students with the problems of planning, starting, and managing a new scientifically oriented business venture, the course consists of six weekly 90-minute meetings focusing on case studies and assigned reading, as well as outside lectures by entrepreneurs in the chemical, pharmaceutical, and biotechnology industries. Topics include new technology evaluation and assessment, business formation, resource allocation, management development, as well as manufacturing and sales issues.

[CHEM 405(4050) Techniques of Modern Synthetic Chemistry (I) (PBS)]

Spring. 3 or 6 credits; to receive 3 credits, students must perform minimum of three

two-week experiments; 6 credits given for three additional experiments; completion of five exercises in elementary glass-blowing counts as one experiment. Limited enrollment. Prerequisites: CHEM 302 and permission of instructor. Lab time required: 16 hours each week, including at least two four-hour sessions in one sec (M W 1:25). Lec, first week only. Not offered 2005-2006. J. M. Burlitch.]

CHEM 410(4100) Inorganic Chemistry (I) (PBS)

Fall. 4 credits. Prerequisites: CHEM 358 or 360, and 287 or 390. Lec, M W F; prelims, Sept. 22, Oct. 20, Nov. 10. D. Manke. Systematic study of the synthesis, structure, bonding, reactivity, and uses of inorganic, organometallic, and solid-state compounds.

CHEM 421(4210) Introduction to Inorganic Chemistry Research

Fall or spring. 2-4 credits. Prerequisites: CHEM 303 and 389-390, or 287-288, and 289-290 with average of B- or better, or permission of instructor. Selected faculty. Research in inorganic chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 433(4330) Introduction to Analytical Chemistry Research

Fall or spring. 2-4 credits. Prerequisites: CHEM 303 and 390 with average of B- or better or permission of instructor. Selected faculty.

Research in analytical chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 440(4400) Bio-Inorganic Chemistry (I) (PBS)

Spring. 3 credits. Prerequisites: CHEM 215-216 or 207-208, 357-358, 359-360 or equivalent. Lec, M W F. B. R. Crane. Addresses important aspects of inorganic chemistry in biological systems. Topics include: (1) the distribution and properties of metals in biology; (2) coordination chemistry of biological metals; (3) properties of metal-containing macromolecules; (4) redox processes and long-range electron transfer; (5) metallocofactors and metal clusters; (6) Lewis acid catalysis; (7) metal-oxygen reactions in biology; and (8) metal trafficking and metalloprotein assembly.

[CHEM 450(4550) Principles of Chemical Biology (I) (PBS)]

Spring. 3 credits. Prerequisites: CHEM 357-358, 359-360 or equivalent. Lec, M W F. Not offered 2005-2006. B. R. Crane. Covers topics at the interface of chemistry and biology with a focus on problems where organic chemistry has made a particularly strong contribution to understanding the mechanism of the biological system. Topics include the organic chemistry of carbohydrates, proteins and nucleic acids, strategies for identifying the cellular target of physiologically active natural products, combinatorial chemistry, and chemical aspects of signal transduction, cell division and development.]

CHEM 461(4610) Introduction to Organic Chemistry Research

Fall or spring. 2-4 credits. Prerequisites: CHEM 302 and 358 or 360 with grade of B- or better or permission of instructor. Selected faculty.

Research in organic chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 477(4770) Introduction to Physical Chemistry Research

Fall or spring. 2-4 credits. Prerequisite: CHEM 390 with average of B- or better or permission of instructor. Selected faculty. Research in physical chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 498(4980) Honors Seminar

Spring. 0 credits. Admission only by department invitation. Additional pre- or co-requisites: outstanding performance in two coherent 4-credit units of research in course such as CHEM 421, 433, 461, 477; or equivalent amount of research in another context. D. T. McQuade. Challenges students to consider postgraduation, publication, presentation, and other issues germane to emerging scientists, through discussion and guest lectures. Participants report on their research in a paper and an oral presentation.

CHEM 600-601(6000-6010) General Chemistry Colloquium

600, fall; 601, spring. 0 credits. R. Staff. Series of talks representative of all fields of current research interest in chemistry given by distinguished visitors and faculty members.

CHEM 602(6020) Information Literacy for the Physical Scientist

Spring. 1 credit. Primarily for graduate students and undergraduate chemistry majors doing research. Lec, T. L. Solla. Introduction to physical science information research methods, with hands-on exploration of print and electronic resources. Much important information can be missed and valuable time wasted without efficient information research strategies. Topics include finding chemical and physical properties, reaction and analytical information; patents, web resources; using specialized resources in chemistry, physics, biochemistry, and materials science; and managing citations.

CHEM 605(6050) Advanced Inorganic Chemistry I: Symmetry, Structure, and Reactivity

Fall. 4 credits. Prerequisite: CHEM 389-390 or equivalent or permission of instructor. Lec, M W F. P. Wolczanski.

Introduction to chemical bonding and applications of group theory, including valence bond theory, and spectroscopy as applied to main group and transition-metal coordination compounds. An introduction to reactivity covers substitution, electron transfer, and related reactions. Readings are at the level of Bishop's *Group Theory and Chemistry* and Jordan's *Reaction Mechanisms of Inorganic and Organometallic Systems*.

[CHEM 606(6060) Advanced Inorganic Chemistry II: Synthesis, Structure, and Reactivity of Coordination Compounds, and Bioinorganic Chemistry]

Spring. 4 credits. Prerequisite: CHEM 605 or equivalent or permission of instructor. Lec, M W F. Not offered 2005-2006. P. T. Wolczanski.

Synthesis, structure, and reactivity of main group and modern coordination compounds and bioinorganic systems. The mechanisms of transition-metal reactions are emphasized, and evaluation of the current literature are

stressed. Background readings are at the level of *Reaction Mechanisms of Inorganic and Organometallic Systems* by Jordan.]

CHEM 607(6070) Advanced Inorganic Chemistry III: Solid-State Chemistry

Fall. 4 credits. Prerequisite: undergraduate inorganic chemistry or permission of instructor. Lec, M W F. S. Lee.

Third in a three-semester sequence.

Interdisciplinary approach to solids. Topics include solid-state structure and X-ray diffraction, phase diagrams, electronic structure, and physical properties of solids. Texts: Mueller: *Structural Inorganic Chemistry*; Glusker and Trueblood: *Primer on X-ray Crystallography*; and Hoffmann: *Solids and Surfaces*. Readings from inorganic chemistry and solid-state primary literature.

CHEM 608(6080) Advanced Inorganic Chemistry I: Symmetry, Structure, and Reactivity

Spring. 4 credits. M W F. P. T. Wolczanski. Synthesis, structure, and reactivity of organometallic compounds. Evaluation of the current literature is emphasized, and background readings are at the level of *Reaction Mechanisms of Inorganic and Organometallic Systems* by Jordan and *Principles and Applications of Organotransition Metal Chemistry* by Collman, Hegedus, Finke, and Norton.

[CHEM 622(6220) Chemical Communication]

Fall. 3 credits. Lec, M W F. Not offered 2005–2006. J. Meinwald and T. Eisner. For description, see BIONB 623.]

CHEM 625(6250) Advanced Analytical Chemistry I

Spring. 4 credits. Prerequisite: CHEM 288 or 390 or equivalent. Lec, M W F; occasional prelims, W. D. B. Zax. Application of high-resolution NMR spectroscopy to chemical problems. Depending on the time and class interest, either infrared and mass spectroscopy or some practical experience in NMR are offered.

[CHEM 627(6270) Advanced Analytical Chemistry II]

Spring. 3 credits. Primarily for graduate students. Prerequisite: CHEM 793 or equivalent preferable. Lec, M W F. Not offered 2005–2006. D. B. Zax.

Modern techniques in nuclear magnetic resonance. Little overlap is expected with CHEM 625, as this course focuses on more general questions of experimental design, understanding of multipulse experiments, and aspects of coherent averaging theory. Examples taken from both liquid and solid-state NMR. May also be of interest to other coherent spectroscopies.]

[CHEM 628(6280) Isotopic and Trace Element Analysis (also NS 690(6900))]

Spring. 3 credits. Primarily for graduate students and advanced undergraduates. Prerequisite: CHEM 288 or 390 or 302, or CHEM 208 and PHYS 208, or permission of instructor. Lec, T R. Offered alternate years; not offered 2005–2006. J. T. Brenna.

Survey course in modern high-precision isotope ratio mass spectrometry (IRMS) techniques and trace/surface methods of analysis. Topics include dual inlet and continuous flow IRMS, thermal ionization MS, inductively coupled plasma MS, atomic spectroscopy, ion and electron microscopies,

X-ray and electron spectroscopies, and biological and solid state applications.]

CHEM 629(6290) Electrochemistry

Spring. 4 credits. Primarily for graduate students and junior and senior undergraduates. Prerequisite: CHEM 390 or equivalent. Recommended: MATH 213. Lec, T R. H. D. Abruna.

Fundamentals and applications of electrochemistry. Topics include the fundamentals of electrode kinetics, electron transfer theory, the electrical double layer, diffusion, and other modes of transport. A wide range of techniques and their application as well as instrumental aspects are covered.

CHEM 650–651(6500–6510) Organic and Organometallic Chemistry Seminar

650, fall; 651, spring. 0 credits. Requirement for graduate students majoring in organic or bioorganic chemistry. Juniors and seniors encouraged to attend. M. Staff.

Series of talks representative of all fields of current research interest in organic organometallic chemistry, given by research associates, faculty members, and distinguished visitors.

CHEM 665(6650) Advanced Organic Chemistry

Fall. 4 credits. Primarily for graduate students and junior and senior undergraduates. Prerequisites: CHEM 358 or 360, and CHEM 390 or equivalents, or permission of instructor; some knowledge of elementary quantum mechanics. Lec, M W F. B. K. Carpenter.

Discussion of the properties and reactivities of organic molecules and the underlying physical phenomena that affect them.

CHEM 666(6660) Synthetic Organic Chemistry

Spring. 4 credits. Primarily for graduate students and upperclass undergraduates. Prerequisite: CHEM 665 or permission of instructor. Lec, T R. J. Njardarson.

Modern techniques of organic synthesis; applications of organic reaction mechanisms and retrosynthetic analysis to the problems encountered in rational multistep synthesis, with particular emphasis on modern developments in synthesis design.

CHEM 668(6680) Chemical Aspects of Biological Processes

Fall. 4 credits. Prerequisite: CHEM 360 or equivalent. Lec, T R. T. P. Begley.

Examines a representative selection of the most important classes of enzyme-catalyzed reactions from a mechanistic perspective. Topics include the chemical basis of enzymatic catalysis, techniques for the elucidation of enzyme mechanism, cofactor chemistry, and the biosynthesis of selected natural products. The application of chemical principles to understanding biological processes is emphasized.

[CHEM 669(6690) Organic and Polymer Synthesis Using Transition Metal Catalysts]

Fall. 4 credits. Prerequisite: primarily for graduate students; CHEM 359/360 or equivalent or permission of instructor. Not offered 2005–2006. G. W. Coates. Transition metal-based catalysts are invaluable in both organic and polymer synthesis. This course begins with a brief overview of organometallic chemistry and catalysis.

Subsequent modules on organic and polymer synthesis are then presented. Topics of current interest are emphasized.]

CHEM 670(6700) Fundamental Principles of Polymer Chemistry

Fall. 4 credits. Prerequisite: CHEM 389/390 and 359/360 or equivalent or permission of instructor. Primarily for graduate students and advanced undergraduates. No previous knowledge of polymers required. Lec, T R. D. Y. Sogah.

Emphasizes general concepts and fundamental principles of polymer chemistry. The first part of the course deals with general introduction to classes of polymers, molar masses and their distributions, and a brief survey of major methods of polymer synthesis. The second part deals with characterization and physical properties. These include solution properties—solubility and solubility parameters, solution viscosity, molecular weight characterizations (gel permeation chromatography, viscometry, light scattering, osmometry); bulk properties—thermal and mechanical properties; and structure-property relationships.

CHEM 671(6710) Synthetic Polymer Chemistry (also MS&E 671(6710), CHEM 675(6750))

Spring. 4 credits. Prerequisites: minimum of organic chemistry at level of CHEM 359/360. Students without this organic chemistry background should see instructor before registering. Primarily for graduate students and advanced undergraduates. Recommended: knowledge of material covered in CHEM 670 or MSE 452. Lec, T R. D. Y. Sogah.

Emphasizes application of organic synthetic methods to the development of polymerization methods and control of polymer architecture. Emphasizes modern concepts in synthetic polymer chemistry and topics of current interest: the study of new methods of polymer synthesis, the control of polymer stereochemistry and topology, and the design of polymers tailored for specific uses and properties. Topics on synthesis are selected from the following: step-growth polymerization with emphasis on high-performance materials, recent developments in the synthesis of vinyl polymers with special emphasis on living polymerization methods and ring-opening metathesis polymerizations. The role polymers in nanotechnology is also covered.

[CHEM 672(6720) Kinetics and Regulation of Enzyme Systems]

Spring. 4 credits. Primarily for graduate students with interests in biophysical chemistry. Prerequisite: CHEM 288 or 390, BIONB 331, or equivalents or permission of instructor. Lec, M W F. Not offered 2005–2006. B. Baird.

Focus is on protein interactions with ligands and consequent changes in structure and activity. Topics include protein structure and dynamics; thermodynamics and kinetics of ligand binding; steady state and transient enzyme kinetics; enzyme catalysis and regulation; and the role of cell membrane receptors in regulating cellular activities.]

CHEM 677(6770) Chemistry of Nucleic Acids

Fall. 4 credits. Primarily for graduate students. Prerequisites: CHEM 358 or 360, and 390 or equivalents. Lec, M W. D. A. Usher.

Structure, properties, synthesis, and reactions of nucleic acids from a chemical point of view. Special topics include RNAi, antisense and antigen technology, ribozyme reactions (including the ribosome), mutagens, PCR, recent advances in sequencing, DNA as a computer, and alternative genetic materials.

[CHEM 681(6810) Introduction to Quantum Chemistry]

Fall. 4 credits. Prerequisites: one year of undergraduate physical chemistry, three semesters of calculus, one year of college physics. Lec T R. Not offered 2005-2006. G. S. Ezra.

Introduction to the application of quantum mechanics in chemistry. Covers many of the topics in CHEM 793-794 at a more descriptive, less mathematical level. Designed for advanced undergraduates, chemistry graduate students with a minor in physical chemistry, and graduate students from related fields with an interest in physical chemistry. At the level of *Quantum Chemistry* by Levine or *Molecular Quantum Mechanics* by Atkins.]

CHEM 686(6860) Physical Chemistry of Proteins

Fall. 4 credits. Primarily for graduate students. Prerequisite: CHEM 288 or 390 or equivalents. Letter grades for undergraduate and graduates. Lec, M W F. P. Chen.

Physical properties of proteins are presented from a quantitative perspective and related to biological function. Topics include: chemical, structural, thermodynamic, hydrodynamic, electrical and conductive properties of soluble and membrane proteins; conformational transitions, protein stability and folding; photochemistry and spectroscopic properties of proteins; and protein-protein interactions and single molecular studies.

CHEM 700(7000) Baker Lectures

Fall, on dates TBA. 0 credits. Lec, T R. This year's lecturer: Robert H. Grubbs, California Institute of Technology.

Distinguished scientists who have made significant contributions to chemistry present lectures for approximately six weeks.

[CHEM 701(7010) Introductory Graduate Seminar]

Fall. 0 credits. Highly recommended for all senior graduate students in any field of chemistry. Lec, W. Not offered 2005-2006. R. Hoffmann.

Discussion of professional issues facing young chemists as well as life skills: academic and industrial trends, presentations, employment, immigration, publication, research funding, and ethics.]

[CHEM 716(7160) Introduction to Solid State Organic Chemistry]

Spring. 3 credits. Recommended: CHEM 607 or some exposure to or course in solid state chemistry and quantum mechanics; good undergraduate physical chemistry course may be sufficient for quantum theory; PHYS 443 or CHEM 793 or 794 are at substantially higher level than what is needed. Lec, M W F. Not offered 2005-2006. S. Lee.

Examines some principles of crystallography and also electronic structure theory of solids. We then consider properties such as conduction, superconductivity, ferroelectricity and ferromagnetism. The final portion of this course is concerned with structure-property relations.]

CHEM 765(7650) Physical Organic Chemistry I

Spring. 4 credits. Primarily for graduate students. Prerequisite: CHEM 665 or permission of instructor. Lec, M W F. B. Carpenter.

Explores contemporary tools for calculating molecular structures and energies of species of all sizes. The course uses computers extensively but requires only a limited knowledge of mathematics (mainly linear algebra).

[CHEM 774(7740) Chemistry of Natural Products: Combinatorial Chemistry]

Spring. 3 credits. Prerequisites: CHEM 360 and BIOBM 330 or equivalent. Lec, M W F. Not offered 2005-2006. T. P. Begley.

Combinatorial chemistry has revolutionized the way organic chemists think about structure function studies on biological systems and the design of inhibitors. This course explores the design, synthesis, screening, and use of natural (i.e., peptide, protein, nucleic acid, carbohydrate) and unnatural (i.e., totally synthetic) libraries.]

CHEM 780(7800) Chemical Kinetics and Molecular Reaction Dynamics

Fall. 4 credits. Prerequisite: CHEM 681 or permission of instructor. Lec, T R. P. L. Houston.

Principles and theories of chemical kinetics and molecular reaction dynamics. Topics include potential energy surfaces, transition state theory, and statistical theories of unimolecular decomposition. Depending on class interest, the course also includes special topics such as surface reactions and photochemistry.

CHEM 787(7870) Mathematical Methods of Physical Chemistry

Fall. 4 credits. Prerequisites: one year of undergraduate physical chemistry, three semesters of calculus, and one year of college physics. Lec, T R. G. S. Ezra.

Provides the mathematical background for graduate courses in physical chemistry, such as quantum mechanics and statistical mechanics, as well as for research in experimental and theoretical physical chemistry. It includes linear algebra, matrices, and the eigenvalue problem; methods of solution of relevant differential equations; special functions; partial differential equations; integral transforms; functions of a complex variable. The program *Mathematica*® is employed extensively for both analytical and numerical applications. At the level of *Mathematical Methods for Scientists and Engineers* by McQuarrie.

CHEM 788(7880) Macromolecular Crystallography (also BIOBM 738(7380))

Fall. 3 credits. Prerequisite: permission of instructor. Lec, T R. S. E. Ealick.

Lectures cover the fundamentals of x-ray crystallography and focus on methods for determining the three-dimensional structures of macromolecules. Topics include crystallization, data collection, phasing methods, model building, refinement, structure validation, and structure interpretation.

[CHEM 791(7910) Molecular Spectroscopy]

Spring. 4 credits. Prerequisite: CHEM 793 or PHYS 443 or equivalent. Lec, M W F. Not offered 2005-2006. J. H. Freed.

Principles of molecular rotational, vibrational, and electronic spectroscopy. Topics include

interaction of molecules with radiation; Born-Oppenheimer approximation; diatomic molecules; polyatomic molecules; feasible operations and the molecular symmetry group; and spectroscopy, dynamics, and IVR. At the level of *Molecular Rotation Spectra* by Kroto.]

[CHEM 792(7920) Molecular Collision Theory]

Spring. 4 credits. Lec, T R. Not offered 2005-2006. G. S. Ezra.

The concepts and methods of scattering theory are described with particular emphasis on applications to problems of chemical interest. At the level of Child's *Molecular Collision Theory* and Taylor's *Scattering Theory*.]

CHEM 793(7930) Quantum Mechanics I

Fall. 4 credits. Prerequisites: CHEM 390, co-registration in A&EP 321, or CHEM 787 or equivalents or permission of instructor. Lec, M W F. M. A. Hines.

Topics include Schrodinger's equation, wave packets, uncertainty principle, matrix mechanics, orbital and spin angular momentum, exclusion principle, perturbation theory, and the variational principle. At the level of R. Shankar, *Quantum Mechanics*.

CHEM 794(7940) Quantum Mechanics II

Spring. 4 credits. Prerequisites: CHEM 793 or equivalent and CHEM 787 or equivalent or co-registration in A&EP 322, or permission of instructor. Lec, M W F. B. Widom.

Topics include WKB theory; virial theorems; Born-Oppenheimer approximation; non-crossing rule; non-adiabatic transitions; time-dependent perturbation theory; electromagnetic radiation interacting with matter; density matrices; line shape; scattering theory; Hartree-Fock and density-functional theories of electronic structure; energy bands in extended structure.

CHEM 795(7950) Statistical Thermodynamics

Fall. 4 credits. Primarily for graduate students. Prerequisite: CHEM 390 or equivalent. Pre- or co-requisite: CHEM 681 or 793 or equivalent. Lec, M W F. G. Chan.

Classical thermodynamics at the level of *Thermodynamics and an Introduction to Thermostatistics* by Callen and statistical thermodynamics at the level of the first 12 chapters of *Statistical Mechanics* by McQuarrie. Topics in the first part include the first and second laws, free energy and Legendre transforms, convexity, thermodynamic potentials, densities and fields, phase equilibrium, thermodynamics of dilute systems, and the third law. Topics in the second part include ensembles and partition functions, fluctuations, ideal gases, ideal harmonic crystals and black-body radiation, the third law (again), chemical-equilibrium constants, imperfect gases, and the quantum ideal gases (Fermi-Dirac and Bose-Einstein statistics).

CHEM 796(7960) Statistical Mechanics

Spring. 4 credits. Prerequisites: CHEM 678 and 793 or equivalent. Lec, T R. R. T. Loring.

Continuation of CHEM 678. Statistical mechanics of interacting systems. Topics include liquid state theory, computational statistical mechanics, critical phenomena, renormalization group theory, and nonequilibrium statistical mechanics

applied to chemical reactions, transport and spectroscopy.

[CHEM 798(7980) Bonding in Molecules

Spring. 4 credits. Prerequisite: some exposure to quantum mechanics; good undergraduate physical chemistry course or CHEM 681 PHYS 433 or CHEM 793–794 are at substantially higher level than what is needed; students should consult instructor if in doubt. Lec, T R. Not offered 2005–2006. R. Hoffmann.

Aims to build a qualitative picture of bonding in all molecules, including organic, inorganic, organometallic systems and extended structures (polymer, surfaces, and three-dimensional materials). The approach uses molecular orbital theory to shape a language of orbital interactions. Some basic quantum mechanics is needed, more is taught along the way. The course is directed at organic, inorganic, and polymer chemists who are not theoreticians; it is useful for physical chemists, engineers, and physicists as well.]

CHINA AND ASIA-PACIFIC STUDIES

S. Cochran, director (450 McGraw Hall, 255-8862). A. Carlson, J. Chen, S. Divo, E. Gunn, P. Katzenstein, W. LaFeber, F. Logevall, T. J. Lowi, J. J. Suh. Affiliated faculty: M. Evangelista, J. Kirshner, J. V. Koschmann, T. Lyons, V. Nee, C. Peterson, E. Sanders, M. Shin, E. Tagliocozzo, K. Taylor.

web site: www.einaudi.cornell.edu/caps

China and Asia-Pacific Studies (CAPS) offers a unique approach to the study of the China's language, history, politics, society, and foreign relations by providing students with experience both on- and off-campus, including three years in Ithaca, one semester in Washington, D.C., and one semester in Beijing.

The Major

To be admitted to the major, a student must pass the gateway course, CAPS 282 (GOVT 282).

To complete the major, a student must pass 12 additional courses, completing each of them with a grade of "C" or higher:

In Ithaca, CHIN 101–102 and 201–202; CAPS 400; and two of the following: CAPS 385 (also GOVT 385), CAPS 313–314 (also HIST 313–314).

In Washington, D.C. (in fall of junior year), CAPS 300.

In Ithaca or Washington D.C. (before fall of senior year), CHIN 301–302.

In Beijing (in fall of senior year), CAPS 310 and 350.

Students interested in this major should speak to the program director to arrange for a major adviser.

Externships

CAPS majors hold externships in government, business, the media, or other organizations during their semesters in Washington, D.C., and Beijing. They are encouraged to coordinate the two experiences. For example, in successive years they might hold externships at the Chinese embassy in Washington and the U.S. embassy in Beijing, or at the China desk of the *Washington Post*

in Washington and the China bureau of the *Washington Post* in Beijing.

Honors

To become a candidate for honors, a CAPS major must maintain a grade average of B+ and have approval for a senior essay proposal from a faculty advisor. During senior year, a CAPS honors student completes the research and writing of a senior essay in the course of taking two tutorials, CAPS 401 in Beijing and CAPS 402 in Ithaca.

Prerequisite Course

CAPS 282(2827) China and the World (also GOVT 282(2827))

Spring. 4 credits. A. Carlson.

This course comes to terms with the dramatic rise of China by reviewing Chinese foreign policy since the establishment of the People's Republic of China. In particular, it concentrates on major developments during the 1980s and 1990s. Such a wide-ranging survey encompasses not only China's relations with its major bilateral partners but also its broader relationship with the international system.

Courses in Ithaca

CHIN 101-102(1101-1102) Elementary Standard Chinese (Mandarin)

101, fall; 102, spring. 6 credits each semester.

For description, see CHIN 101–102 under "Asian Studies."

CHIN 201-202(2201-2202) Intermediate Standard Chinese (Mandarin)

201, fall; 202, spring. 4 credits each semester.

For description, see CHIN 201–202 under "Asian Studies."

CHIN 301-302(3301-3302) High Intermediate Chinese

301, fall; 302, spring. 4 credits each semester.

For description, see CHIN 301–302 under Asian Studies.

CAPS 352(3520) Twentieth Century Asian-American Relations (also HIST 352)

Fall. 4 credits. J. Chen.

For description, see HIST 352.

CAPS 385(3857) American Foreign Policy (also GOVT 385)

Spring. 4 credits. J. J. Suh.

For description, see GOVT 385.

[CAPS 313(3130) U.S. Foreign Relations, 1750 to 1912 (also HIST 313)]

Fall. 4 credits. F. Logevall. Not offered 2005–2006; next offered 2006–2007.

For description, see HIST 313.]

CAPS 314(3140) U.S. Foreign Relations, 1914 to Present (also HIST 314(3140))

Spring. 4 credits. F. Logevall.

For description, see HIST 314.

[CAPS 400(4000) Senior Seminar on China's Foreign Relations

Spring. 4 credits. S. Cochran. Not offered 2005–2006; next offered 2007–2008.]

[CAPS 402(4020) Honors Essay Tutorial

Spring. 4 credits. See S. Cochran about making arrangements with appropriate advisers. Not offered 2005–2006; next offered 2007–2008.]

Courses in Washington, D.C.

CHIN 301(3301) High Intermediate Chinese

Fall. 4 credits.

For description, see CHIN 301 under "Asian Studies."

[CAPS 300(3000) Seminar on American Relations with China

Fall. 4 credits. Not offered 2005–2006. Next offered 2006–2007. S. Cochran.

Like other "core" seminars at Cornell in Washington, this one provides guidance for research under the supervision of a faculty member. In addition, several sessions are led by officials, business people, journalists, lobbyists, representatives of nongovernmental organizations and others who have worked in China or have participated in the making of U.S. policy toward China.]

Courses in Beijing

[CAPS 310(3100) Survey of Chinese History, Politics, and Foreign Relations

Fall. 4 credits. Q. Jia. Not offered 2005–2006; next offered 2007–2008.]

[CAPS 350(3500) Seminar on China

Fall. 4 credits. Not offered 2005–2006; next offered 2007–2008.]

[CAPS 401(4010) Honors Essay Tutorial

Fall. 4 credits. See S. Cochran about making arrangements with appropriate advisers. Not offered 2005–2006; next offered 2007–2008.]

CHINESE

FALCON Program (Chinese)

See Department of Asian Studies.

CLASSICS

H. Pelliccia, chair, L. S. Abel (director of undergraduate studies), F. M. Ahl, C. Brittain (director of graduate studies), K. Clinton, J. E. Coleman, G. Fine, M. Fontaine, G. Holst-Warhaft, T. Irwin, D. Mankin, K. McDonnell, A. Nussbaum, P. Pucci, H. R. Rawlings III, E. Rebillard, A. Ruppel, J. Rusten, B. Strauss. Emeritus: G. M. Kirkwood.

The Department of Classics at Cornell is one of the oldest in the country. It embraces both the traditional core studies of the languages, literature, philosophy, art, and history of ancient Greece and Rome, and the different approaches to its material yielded by comparative study of Mediterranean civilizations, peace studies, and feminist and literary theory. The broad range of instruction includes courses offered by professors with related interests in the Departments of History, Philosophy, Comparative Literature, History of Art, Linguistics, and Near Eastern Studies, and in the programs of Archaeology, Medieval Studies, and Religious Studies.

The department offers a wide variety of classical civilization courses in English translation on such subjects as Greek mythology, ancient mystery religions, early Christianity, and Greek and Roman society; ancient epic, lyric, tragedy, comedy, satire,

novels, and love-poetry; Periclean Athens, Republican Rome, the Roman Empire, and Plato, Aristotle, and Hellenistic philosophy. These courses are designed to introduce aspects of classical antiquity to the students with very divergent primary interests. Other classical civilization courses with a wide appeal are those on art and archaeology, and dendrochronology. These courses make use of the university's large collections of ancient coins and of reproductions of sculptures, inscriptions, and other ancient objects. For example, since 1976 over 500 Cornell students have worked in the Aegean Dendrochronology Project's laboratory, measuring the annual rings on thousands of samples of wood and charcoal, and using the rings to date structures as old as 7000 BC. In the summers selected students have participated in collecting trips around the eastern end of the Mediterranean (see web site at www.arts.cornell.edu/dendro). Students who wish to gain first-hand archaeological experience may also join one of several summer Cornell-sponsored field projects in Greece and Turkey.

The study of language is a vital part of classics. The department offers courses ranging from 100-level classes designed to further the understanding of English through the study of the Latin and Greek sources of much of its vocabulary, to courses in linguistics on the morphology and syntax of the ancient languages, comparative grammar, and Indo-European (the reconstructed source of the family of languages that includes Greek, Latin, Sanskrit, and most modern European languages). The core function of the department is the study of ancient Greek and Latin. Elementary Greek and Latin are taught in both two-semester courses and intensive summer or one-semester courses. (For students whose Latin is a bit rusty, the department also offers a rapid, one-semester review class.) Students with a more advanced knowledge of Greek or Latin can take advantage of a wide selection of courses, from intermediate language classes at the 200 level, which brush up and broaden knowledge of syntax and vocabulary, to graduate and faculty reading groups. All of these courses use exciting literary texts, whether the poems of Catullus and Virgil, or the dialogues of Plato and Xenophon, at the 200 level, or, in the advanced reading groups, the latest papyrological discoveries, such as the "new" fragments of Empedocles' cosmic poem or the "new" epigrams of Posidippus.

The primary purpose of language instruction is to enable the study at first hand of the extraordinary range of powerful and challenging ideas and texts in Greek and Latin. The department offers undergraduate and graduate seminars on literary, linguistic, historical, and philosophical topics, studied through the Greek and Latin works of authors from Homer (probably from the eighth century BCE) to Boethius (sixth century CE), and occasionally from later writers such as Dante, Petrarch, or Milton. The department strives to adapt its program to the needs of individual students from all disciplines.

Majors in Classics

The Department of Classics offers majors in classics, Greek, Latin, and classical civilization.

The following are the requirements for students declaring their majors after

spring 2003. (Students who declared their majors before fall 2003 should follow the requirements set out in the course catalog for the year in which they declared. They should use the course numbers in square brackets in this catalog to determine their major requirements.) Students need to pass the required courses with a C- or better to graduate as a classics major.

Classics

The classics major has two requirements: (1) six courses in Greek and Latin numbered 201 or above; and (2) three courses in related subjects selected in consultation with the student's departmental adviser (see below). Classics majors are required to take a minimum of one 300-level course in one language and two 300-level courses in the other.

Students who are considering graduate study in classics are strongly advised to complete the classics major.

Greek

The Greek major has three requirements: (1) CLASS 104 [201]; (2) five courses in Greek numbered 201 [203] or above; and (3) three courses in related subjects selected in consultation with the student's departmental adviser (see below). The courses in Greek must include at least three at the 300 level.

Latin

The Latin major has three requirements: (1) CLASS 109 or 205; (2) five courses in Latin numbered 206 or above; and (3) three courses in related subjects selected in consultation with the student's departmental adviser (see below). The courses in Latin must include at least three at the 300 level.

Classical Civilization

The classical civilization major has four requirements: (1) one 200-level course in Greek or Latin; (2) CLASS 211 or HIST 265, CLASS 212 or HIST 268, and CLASS 220; (3) five courses selected from those listed under classical civilization, classical archaeology, ancient philosophy, Greek (numbered 104 or above), and Latin (numbered 109 or above); and (4) three courses in related subjects selected in consultation with the student's departmental adviser (see below).

With the permission of the director of undergraduate studies, other survey courses may be substituted for the those listed in (2).

Related Subjects

Classics is an interdisciplinary field concerned with the study of Mediterranean civilizations from the 15th century BCE to the sixth century CE. Subjects in the field include Greek and Latin language, literature, and linguistics; ancient philosophy, history, archaeology, and art history; papyrology, epigraphy, and numismatics. In addition to the required courses in language and literature, the majors include a requirement for related courses intended to give breadth and exposure to the other disciplines within the field and to enrich the student's study of classical languages and literature. Since the influence of the Greek and Roman world extended far beyond antiquity, a related course may focus on some aspect of the classical tradition in a later period. Students select related courses in

consultation with their departmental advisers or the director of undergraduate studies.

Honors

Candidates for the degree of bachelor of arts with honors in classics, Greek, Latin, or classical civilization must fulfill the requirements of the appropriate major and complete the two-semester honors course, CLASS 472. (Credit for the honors course may be included in the credits required for the major.) Candidates for honors must have a cumulative average grade of 3.0 and an average of 3.5 in their major. Students choose an honors adviser by the end of their sixth semester, in consultation with the departmental honors committee or the DUS. By the second week of their seventh semester, they submit an outline of their proposed research to their adviser and the committee. The thesis is written in the second semester of the course, under the supervision of the student's honors adviser. The level of honors is determined by the committee, in consultation with students' advisors. Copies of successful honors theses are filed with the department. Further details about this program are provided in the brochure *Guidelines for Honors in Classics*, available in the department office, 120 Goldwin Smith Hall, or on the department web page: www.arts.cornell.edu/classics/honors.asp.

Independent Study

Independent study at the 300 level may be undertaken by undergraduates upon completion of one semester of work at the 300 level in the relevant field and only with the permission of the director of undergraduate studies.

Study Abroad

Cornell is associated with four programs that provide opportunities for summer, semester, or yearlong study abroad in Greece and Italy. The American School of Classical Studies at Athens offers a summer program for graduate students and qualified undergraduates; College Year in Athens offers semester-long courses (consult Cornell Abroad for details). The Intercollegiate Center for Classical Studies in Rome provides semester-long courses in Latin, Greek, ancient history, art, archaeology, and Italian; the American Academy in Rome offers both full-year and summer programs for qualified graduate students. The Department of Classics awards several travel grants each year for graduate students from the Townsend Memorial Fund; undergraduates are eligible for the Caplan Travel Fellowships (see "Caplan Fellowships," below). Detailed information on these programs is available in the department office, 120 Goldwin Smith Hall.

Summer Support for Language Study

The Department of Classics has at its disposal resources to assist students who wish to enroll in intensive Latin or Greek in the Cornell summer session. These courses are designed to enable students to enter second-year Latin or Greek the following fall. Preference is given to undergraduate majors in classics and other students needing Latin or Greek for completion of their majors or graduate programs; dyslexic students are accorded additional preference. Two different kinds of support are available: (1) The Kanders-Townsend Prize Fellowship provides a \$3,100

stipend to cover living expenses and full tuition for either CLASS 103 or 107, and is open only to freshman or sophomore classics majors (or potential classics majors) who have already begun one classical language and wish to start the other in the summer. (2) Classics department tuition support is open to Cornell undergraduate and graduate students and provides some level of tuition support, up to the full amount; no stipend for living expenses is offered. Applications are due to the chair of the Department of Classics by March 31. See also "Caplan Fellowships," below.

Placement in Greek and Latin

Placement of first-year students in Greek and Latin courses is determined by examinations given by the Department of Classics during orientation week. For details concerning these examinations, contact the director of undergraduate studies.

Satisfying the College Language Requirements with Ancient Greek or Latin

Greek: option 1 is satisfied by taking CLASS 201 or above; option 2 is satisfied by taking either CLASS 101, 102, and 104 or CLASS 103 and 104.

Latin: option 1 is satisfied by taking CLASS 205 or above; option 2 is satisfied by taking either CLASS 105, 106, and 109 or CLASS 107 and 109.

Language courses at the 100 level are offered for letter grades only. S-U grades are available at the 200 level only under extraordinary circumstances. Students with fluency in Greek or Latin may satisfy option 1 with an advanced course appropriate to their background and interest; contact the director of undergraduate studies for further information. Modern Greek is offered by the Department of Near Eastern Studies. Contact NES for more information.

First-Year Writing Seminars

The department offers first-year writing seminars on a wide range of classical and medieval topics. Consult John S. Knight Writing Seminar Program brochures for times, instructors, and descriptions.

Caplan Fellowships

The Harry Caplan Travel Fellowships are awarded annually to one or two outstanding juniors by the College of Arts and Sciences for travel in Europe or the Near East. Interested juniors should consult the director of undergraduate studies.

Classical Civilization

[CLASS 171(1609) English Words: Histories and Mysteries (also LING 109(1109)) # (III or IV) (HA)]

Fall. 3 credits. Was CLASS 109. Not offered 2005–2006. M. Weiss.
For description, see LING 109.]

[CLASS 211(2601) The Greek Experience # (IV) (CA)]

Fall. 3 credits. Limited to 50 students. F. Ahl.
Introduction to the literature and thought of ancient Greece. Topics include epic and lyric poetry, tragedy and comedy, and historical,

political, philosophical, and scientific writings. Some attention is also given to the daily life of ordinary citizens, supplemented by slides of ancient art and architecture.

[CLASS 212(2620) The Roman Experience # (IV) (CA)]

Spring. 3 credits. Not offered 2005–2006. D. Mankin.

Introduction to the civilization of the Romans as expressed in their literature, religion, and social and political institutions.]

[CLASS 215(2629) Introduction to the New Testament (also NES 229[2629], RELST 229) @ # (IV) (HA)]

3 credits. K. Haines-Eitzen.
For description, see NES 229.

[CLASS 217(2603) Initiation to Greek Culture # (IV) (LA)]

Fall. 4 credits. Limited to 18 students. Intended especially for freshmen. Students must apply in writing to chair, Department of Classics, 120 Goldwin Smith Hall. Not offered 2005–2006. P. Pucci and L. Abel.

Knowledge of Greek or Latin is not necessary, since all texts are in translation. What is necessary is the willingness to participate in three one-hour seminars each week and also a supplementary one- or two-hour session, during which the class participates in workshops with specially invited guests. This course covers a wide range of Greek literary and philosophical works as well as modern critical and philosophical writings on the Greeks. The focus throughout is on the status of language, the many forms of discourse that appear in the literature, and the attempts the Greeks themselves made to overcome the perceived inadequacies and difficulties inherent in language as the medium of poetry and philosophy. The course inquires into the development of philosophy in the context of a culture infused with traditional, mythological accounts of the cosmos. Asks how poetic forms such as tragedy responded to and made an accommodation with philosophical discourse while creating a most emotional effect on the audience; how the first historians, using literary and philosophical discourse, created space for their own inquiry; and discusses how these issues persist and are formulated in our own thinking.]

[CLASS 222(2642) Ancient Fiction # (IV)]

Fall. 3 credits. All readings in English. Not offered 2005–2006.]

[CLASS 223(2641) The Comic Theater (also COM L 223, THETR 223[2230]) # (IV) (LA)]

Spring. 3 credits. Not offered 2005–2006. J. Rusten.

The origins of comic drama in ancient Greece and Rome, and its subsequent incarnations especially in the Italian renaissance (*Commedia erudita* and *Commedia dell'arte*), Elizabethan England, 17th-century France, the English Restoration, and Hollywood in the thirties and forties. Chief topics include the growth of the comic theatrical tradition and conventions; techniques and themes of comic plots (trickster, parody, farce, caricature); and the role of comedy in society. All readings in English.]

[CLASS 226(2646) Atheism Then and Now (also RELST 226[2646]) # IV (KCM)]

Spring. 3 credits. Limited to 18 students. J. Coleman.
Introduction to atheism, defined as the belief that the entities commonly called gods have

no real existence. Begins with the origins of western atheism in ancient Greece. Students then read and discuss a selection of later writings illustrating the historical development of atheism and its relationship with deism, naturalism, and modern science. Students are encouraged to make critical use of some of the extensive resources available on the web at atheist, freethinker, and secular humanist sites. Particular themes considered in class discussions and student presentations include: faith vs. reason as means of knowledge; scientific evidence for and against the existence of divinity; the comparison of nonreligious moral and ethical codes with religious ones; atheist critiques of historical Christian attitudes toward science and slavery; the problem of the existence of multiple exclusive religions; and the positive aspects of atheism. Students must give two oral presentations of particular questions chosen in consultation with the instructor that are subsequently written up as 12-page papers; two in-class preliminary exams and a final exam.

[CLASS 229(2650) War and Peace in Greece and Rome (also HIST 228) # (III or IV)]

Fall. 4 credits. Not offered 2005–2006. B. Strauss.

For description, see HIST 228.]

[CLASS 231(2661) Ancient Philosophy (also PHIL 211[2110]) # (IV) (KCM)]

Fall. 4 credits. G. Fine.

For description, see PHIL 211.

[CLASS 234(2320) Seminar: Eyewitness to War in the Ancient World (also HIST 232) # (III or IV) (HA)]

Spring. 3 credits. Not offered 2005–2006. B. Strauss.

Study of ancient soldier-historians who participated in the campaigns about which they later wrote. Topics include historicity, autobiography, propaganda, prose style. Readings include selections from Thucydides, Xenophon, Julius Caesar, Josephus, Ammianus Marcellinus as well as, for comparative purposes, modern soldier-historians.]

[CLASS 236(2604) Greek Mythology (also COM L 236) # (IV) (LA)]

Fall. 3 credits. Limited to 200 students. D. Mankin.

Survey of the Greek myths, with emphasis on the content and significance of the myths in Mediterranean society, including the place of myth in Greek life and consciousness; the factors and influences involved in the creation of myths; and the use of myths for our understanding of Greek literature, religion, and moral and political concepts.

[CLASS 237(2607) Greek Religion and Mystery Cults (also RELST 237) # (IV) (CA)]

Spring. 3 credits. Not offered 2005–2006. K. Clinton.

Greek religion constitutes one of the essential features of ancient Greek civilization and distinguishes it from later Western civilization. Since religion permeates Greek culture, including the major art forms (epic poetry, tragedy, comedy, architecture, painting, and sculpture), the course investigates the interaction of religion with these forms—an investigation that is fruitful both for the understanding of Greek religion and the forms themselves, some of which, like tragedy, originated in cult. A representative variety

of cults and their history are studied with special emphasis on mystery cults, such as the Eleusinian mysteries of Demeter and Persephone, the Kabiroi, the Great Gods of Samothrace, and Bacchic rites.]

[CLASS 238(2640) The Ancient Epic and Beyond # (IV) (LA)]

Spring. 3 credits. Not offered 2005-2006. K. Clinton.

This course moves, Odysseus-like, to the West: beginning with Homer's *Iliad* and *Odyssey*, it continues in the Hellenistic and Augustan eras with Apollonius of Rhodes' *Argonautica* and Virgil's *Aeneid*. A shift in space and time has the course conclude with two New World maritime epics: Herman Melville's *Moby Dick* and Derek Walcott's *Omeros*.]

[CLASS 258(2682) Periclean Athens # (IV) (HA)]

Spring. 4 credits. H. R. Rawlings, III.

The first five weeks provide a synoptic view of Athens' historical and cultural achievement in the middle of the fifth century BCE—the traditional pinnacle of "The Glory that was Greece." Readings are taken from Greek historians, philosophers, poets, and documentary texts. At least two of the (75-minute) lectures are devoted to art history and delivered by a guest speaker. The next seven to eight weeks follow the course of the Peloponnesian War to its end; readings from Thucydides are interwoven with contemporaneous texts composed by the dramatists (Sophocles, Euripides, and Aristophanes) and the sophists (supplemented with readings from Plato). The remaining classes consider the fate of Socrates and a few other fourth-century developments. The basic aim of the course is to approach an understanding of how and why a vital and creative society came unglued. There are weekly discussion sections.

[CLASS 260(2662) Conceptions of the Self in Classical Antiquity # (IV) (KCM)]

Spring. 4 credits. Prerequisites: none. All readings in English. Not offered 2005-2006. C. Brittain.

The idea of a person or a "self" seems to be something determined by nature: we each have one mind, a unique personality, and the capacity to act as moral agents. But the way in which we conceive of ourselves also depends on our beliefs about human nature, rationality, freedom, luck, and society. This course examines a variety of very different conceptions of the self from the period 700 BCE to 400 CE, using a range of texts from Greek and Roman literature (including epic and tragedy), medical theory, and philosophy (both pagan and Christian).]

[CLASS 265(2650) Ancient Greece from Homer to Alexander the Great (also HIST 265[2650]) # (III) (HA)]

4 credits. Open to freshmen. Not offered 2005-2006. B. Strauss.

For description, see HIST 265.]

[CLASS 267(2683) History of Rome I (also HIST 267[2670]) # (III) (HA)]

Fall. 4 credits. Open to freshmen. Not offered 2005-2006. E. Rebillard.

Rome's beginnings and the Roman Republic. A general introduction to Roman history from the foundation of Rome in the middle of the eighth century BC to the end of the Republic (31 BC). The course is the first part of a two-semester survey of Roman history up

to the deposition of the last Roman emperor in the West (AD 476). Examines the rise of Rome from a village in Italy to an imperial power over the Mediterranean world and consider the political, economic, and social consequences of that achievement.]

[CLASS 268(2684) History of Rome II (also HIST 268[2671]) # (III) (HA)]

Spring. 4 credits. Open to freshmen. Not offered 2005-2006. E. Rebillard.

Roman History II: the Roman Empire. This course, the second part of a two-semester survey of Roman history, examines the history of the Roman Empire from the beginnings of the Augustan Principate (31 BC) to the fall of the Western Empire in the fifth century (AD 476). Students consider the creation and development of the imperial regime, explore the various types of challenges (military, cultural, and religious) to the hegemony of the Roman state, and try to understand the transformations of Roman society and culture down to the middle of the fifth century AD.]

[CLASS 293(2691) Classical Indian Narrative (also ASIAN 291) @ # (IV)]

Spring. 3 credits. Was CLASS 291. Not offered 2005-2006. C. Miñkowski.]

[CLASS 333(3643) Greek and Roman Mystery Cults and Early Christianity (also RELST 333) # (IV) (CA)]

Fall. 4 credits. Recommended: classics course (civilization or language) or RELST 101. Not offered 2005-2006. K. Clinton.

Study of the controversial question of religious continuity between paganism and early Christianity. After a brief survey of classical mystery cults and Hellenistic religion, the course focuses on such Hellenistic and Roman cults as the mystery cults of Isis, Bacchus, Mithras, and Attis and the Great Mother and on the distinctive features that contributed to their success. Discussion of Christian liturgy and beliefs to determine what Christianity owed to its pagan predecessors and to isolate the factors that contributed to its triumph over the "rival" pagan cults of late antiquity.]

[CLASS 339(3669) Plato (also PHIL 309[3090]) # (IV) (KCM)]

Fall. 4 credits. Prerequisite: at least one philosophy course. Not offered 2005-2006. G. Fine.

For description, see PHIL 309.]

[CLASS 340(3664) Aristotle (also PHIL 310[3100]) # (IV) (KCM)]

Spring. 4 credits. Not offered 2005-2006. Staff.

Aristotle's practical and productive works (his *Ethics*, *Politics*, *Rhetoric*, and *Poetics*), with attention to their grounding in his theoretical works.]

[CLASS 341(3661) Hellenistic Philosophy (also PHIL 308) (IV) (KCM)]

Fall. 4 credits. Prerequisite: CLASS 231 or philosophy course. Not offered 2005-2006. C. Brittain.

Studies the philosophical developments of the Hellenistic period (c. 321-45 BCE), which were in part a reaction to Plato and Aristotle. The focus is on the systematic doctrines and arguments of the Stoics and Epicureans, particularly their epistemologies and ethical theories, and the Sceptics' responses to them. Also looks at some relevant developments in medical theory. Topics include scepticism, the psychology of action, theories of language, concept development and content, determinism and responsibility,

personal identity, virtue ethics, and scientific epistemologies. Since most of the work of the Hellenistic philosophers is available only through either "fragments" or reports in later texts, students need to think to some degree about the appropriate methods for reconstructing this recently rediscovered—and influential (e.g., on 17th-century philosophers such as Descartes and Locke)—part of the history of philosophy.]

[CLASS 345(3645) The Tragic Theater (also COM L 344[3440], THETR 345) # (IV) (LA)]

Fall. 4 credits. Limited to 40 students. Not offered 2005-2006. F. Ahl.

Tragedy and its audiences from ancient Greece to modern theater and film. Topics: origins of theatrical conventions; Shakespeare and Seneca; tragedy in modern theater and film. Works studied include: Aeschylus' *Agamemnon*; Sophocles' *Oedipus Tyrannus*, *Philoctetes*; Euripides' *Alcestis*, *Helen*, *Iphigeneia in Aulis*, *Orestes*; Seneca's *Thyestes*, *Trojan Women*; Shakespeare's *Julius Caesar*, *Titus Andronicus*, *Othello*; Strindberg's *The Father*; Dürrenmatt's *The Visit*; Bergman's *Seventh Seal*; Cacoyannis' *Iphigeneia*.]

[CLASS 346(3646) Art of Subversive Writing (also COM L 346[3460]) # (IV) (LA)]

Spring. 3 credits. Not offered 2005-2006. F. Ahl.

For description, see COM L 346.]

[CLASS 357(3685) Ancient Athens and Sparta # (IV) (HA)]

Spring. 4 credits. Not offered 2005-2006. L. Abel.

Herodotus and Thucydides tell us much of what we know about Athens and Sparta in the sixth and fifth centuries BC—about the development, flourishing, and disastrous conflict of these two very different emblematic city-states. Students read Herodotus and Thucydides in English translation, compare what they tell us with other evidence (including Aristotle and Xenophon), and analyze their narratives as historical, historiographical, and literary texts. Students attend to how these formative thinkers and writers created an authoritative version of events.]

[CLASS 382(3642) Greeks, Romans, and Victorians (also COM L 382[3820]) # (IV) (LA)]

Spring. 4 credits. F. Ahl.

Explores how 19th-century (and especially Victorian English and Irish) poets, dramatists, and to a lesser extent, novelists, present Greco-Roman antiquity. The varied influences of Vergil and Homer, Seneca and Sophocles, Plautus and Aristophanes, Horace, and Greek lyric poetry are discussed in selected works of Thomas More, Shelley, Byron, Swinburne, W. S. Gilbert, Oscar Wilde, and the pre-Raphaelites and Victorian poets.

[CLASS 387(3686) Independent Study in Classical Civilization, Undergraduate Level]

Fall and spring. Up to 4 credits.

[CLASS 392(3692) Cosmology and Divination in Antiquity (also ASIAN/ NES 392[3392]) @ # (IV) (HA)]

Fall. 4 credits. Not offered 2005-2006. Staff. For description, see ASIAN 392.]

[CLASS 395(3695) Classical Indian Philosophical Systems (also ASIAN/RELST 395[3395]) @ # (IV) (KCM)]

Spring. 4 credits. Prerequisite: some background in philosophy or classical Indian culture. Not offered 2005–2006. Staff.

For description, see ASIAN 395.]

CLASS 402(4603) Theories and Narratives of Decline (also S HUM 420)

Spring. 4 credits. Limited to 15 students. J. Rusten.

Critical look at some theories of the decadence of states and cultures, and also of the rhetorical or programmatic uses of the discourse of decline itself: describing decadence can serve not merely analytical purposes but also diagnostic, antiquarian, or revolutionary ones. Observes distinctions between decline-narratives and catastrophes, and considers whether modern faith in technology has rendered decline unpersuasive. Most readings from ancient Greek sources, including myths (Hesiod, Atlantis), historians (Thucydides) and philosophers (Plato, Aristotle), but comparing the decline-projects of Gibbon and Spengler, narratives of Marxism, Habermas and others, and recent books like Jared Diamonds Collapse and the Left Behind series of novels.

CLASS 404(4604) Socrates (also S HUM 424)

Spring. 4 credits. Limited to 15 students. S. Jedrkieicz.

Seminar focusing on one aspect of the crisis affecting Athens in the final years of the Peloponnesian War: the ideological conflict between Socrates and the Athenian polis. Readings include Aristophanes' *Wasps*, Xenophon's *Apology* and Plato's *Apology* and *Crito*, together with a choice of connected contemporary works, relevant comments, and modern studies.

CLASS 405(4665) Augustine's Confessions (also RELST 405[4665], PHIL 415[4150])

Spring. 4 credits. C. Brittain.

Augustine's *Confessions* set out a psychological theory of the human mind (and its development) through an analysis of his own experience. This course studies Augustine's conception of the mind, focusing on his analysis of memory, desire, and understanding and its relation to Greek and Latin philosophical antecedents.

CLASS 436(4320) Topics in Ancient Greek History (also HIST 432[4320])

Spring. 4 credits. Limited to 15 students. B. Strauss.

Topic: The Trojan War, Myth and Reality.

CLASS 442(4662) Topics in Ancient Philosophy (also PHIL 413[4130]) # (IV) (KCM)

Fall. 4 credits. Was CLASS 413.

Mind, self, and psychopathology in ancient philosophy.

[CLASS 445(4685) Classic Modern Historiography of Ancient Greece (also HIST 435[4350]) (III)]

Fall. 4 credits. Prerequisite: introductory course in ancient Greek history or civilization or permission of instructor. Not offered 2005–2006. B. Strauss.

Upper-level seminar introducing some of the main themes, directions, and controversies in modern research on ancient Greece.

Students read selections from the leading works of scholarship on ancient Greece from the 19th and 20th centuries, including such authors as Grote, Burckhardt, Cornford, Glotz, Momigliano, M. I. Finley, Ste. Croix, Vernant, Vidal-Naquet, and the current crop of scholars.]

[CLASS 450(4680) The Peloponnesian War (also HIST 450/630[4500/6300]) # (III)]

Fall. 4 credits. Prerequisites: CLASS 211 or 217, HIST 265, or permission of instructor. Not offered 2005–2006. B. Strauss.

For description, see HIST 450.]

[CLASS 461(4641) Sacred Fictions

Fall. 4 credits. Not offered 2005–2006. K. Haines-Eitzen.

For description, see S HUM 411.]

[CLASS 469(4689) Equality and Inequality in Ancient Greece (also HIST 469) # (III or IV)]

Fall. 4 credits. Prerequisite: HIST 265, CLASS 211 or 217, or written permission of instructor. Not offered 2005–2006. B. Strauss.

For description, see HIST 469.]

CLASS 475(4625) The Christianization of the Roman World, 300 to 600 CE (also RELST 475[4225], HIST 483, NES 475[4675]) # (III or IV) (HA)

Fall. 4 credits. E. Rebillard.

In the fourth century CE the emperors decided to favor Christianity and shortly thereafter to forbid non-Christian activity. The "end of paganism" however did not occur all at once if it ever did. The study of the Christianization of the Roman world is concerned both by the impact of Christian belief and practice on the late antique society and by the resistance and/or persistence of the old belief and practices. This seminar focuses on the approaches to the problem of Christianization and on its documentation. Through readings and discussion, it charts the transformations of the Roman world from 300 to 600 CE and attempts to better understand what remains of one of the most fascinating historical problems of the ancient world.

CLASS 545(7345) Graduate TA Training

Fall and spring. 1 credit. Staff.

Pedagogical instruction and course coordination. Requirement for all graduate student-teachers of CLASS 105–106 and Classics first-year writing seminars.

[CLASS 555(7355) Graduate Proseminar

Fall. 1 credit. Not offered 2005–2006. Staff.

Introduces graduate students to the tools, techniques, and methods of classical scholarship.]

[CLASS 632(7682) Topics in Ancient History: Pagan, Jewish, and Christian Apologetics in the First to Third Centuries AD (also HIST 630[6300]) (HA)]

Spring. 4 credits. Not offered 2005–2006. E. Rebillard.

As a consequence of religious pluralism in the Roman empire there emerged the practice of writing religious apologies against actual or perceived opponents. Students study a variety of selected texts by Josephus, Philo, Justin, Aristides, Minucius Felix, Tertullian, Philostratus, Origen, and Lactantius, focusing on the rhetorical construction of identity and comparing these literary constructions with what we can learn from other evidence.]

CLASS 700(9900) Doctoral Dissertation Research

Fall and spring. 0 credits. Letter grades only. Staff.

CLASS 703(7690) Independent Study for Graduate Students in Classical Civilization

Fall and spring. Up to 4 credits. Was CLASS 711–712.

Greek

CLASS 101(1101) Elementary Ancient Greek I

Fall. 4 credits. K. Clinton.

Introduction to Attic Greek. Designed to enable the student to read the ancient authors as soon as possible.

CLASS 102(1102) Elementary Ancient Greek II

Spring. 4 credits. Was CLASS 103. *Provides language qualification.* Prerequisite: CLASS 101 or equivalent. Staff.

Continuation of CLASS 101, prepares students for CLASS 104.

CLASS 103(1103) Intensive Greek

Summer. 6 credits. Was CLASS 104.

Provides language qualification. Staff.

Intensive introduction combining the fundamentals of ancient Greek grammar with readings from a variety of classical authors in the original Greek. Prepares students in a single semester for CLASS 104.

CLASS 104(1105) Elementary Ancient Greek III #

Fall. 3 credits. Was CLASS 201. *Provides language proficiency.* Prerequisites: CLASS 102, 103, or placement by departmental exam. H. Rawlings, III.

Introduces students to reading Greek literary texts (Xenophon's *Anabasis*) and a dialogue of Plato. Covers complex syntax and reviews the grammar presented in CLASS 102 or 103.

CLASS 197–198(1141–1142) Elementary Modern Greek I and II (also NES 121–122[1340–1341])

197, fall; 198, spring. 4 credits each semester. Limited to 15 students.

M. Hnaraki.

For description, see NES 121–122.

CLASS 199–298(1143–1144) Intermediate Modern Greek (also NES 127–222[1342–1343])

199, fall; 298, spring. 4 credits each semester. M. Hnaraki.

For description, see NES 127–128.

[CLASS 201(2101) Greek Prose # (IV) (LA)]

3 credits. *Provides language proficiency and satisfies Option 1.* Prerequisite: CLASS 104. Not offered 2005–2006. Staff.]

CLASS 202(2105) The Greek New Testament (also NES 230[2730], RELST 202[2105]) # (IV) (LA)

Spring. 3 credits. Prerequisites: at least one year of ancient Greek (CLASS 101–103 or 104) or permission of instructor.

E. Rebillard.

Sequel to NES 229/CLASS 215. Selections in Greek from all four gospels, the letters of Paul, and Acts.

[GREEK 203(2103) Homer # (IV) (LA)

Spring. 3 credits. *Provides language proficiency and satisfies Option 1.*
Prerequisite: CLASS 104. Not offered 2005-2006. Staff.

Readings in the Homeric epic.]

CLASS 204(2104) Euripides: Alcestis # (IV) (LA)

Spring. 3 credits. *Provides language proficiency and satisfies Option 1.*
K. Clinton.

With *Alcestis*, we encounter Greek tragedy in one of its Euripidean versions: serious events and comic happenings interlace and weave a most mysterious analysis of human responses to death, to marriage, to myth. The text has no long choruses and therefore is easier for students with limited experience of Greek. This is a wonderful introduction to Greek Tragedy.

[CLASS 301(3101) Greek Epic # (IV) (LA)

Spring. 4 credits. *Provides language proficiency and satisfies Option 1.* Not offered 2005-2006. Staff.

Undergraduate seminar.]

[CLASS 302(3102) Greek Historiography and Oratory # (IV) (HA)

Spring. 3 credits. *Provides language proficiency and satisfies Option 1.* Not offered 2005-2006. Staff.

Undergraduate seminar.]

CLASS 303(3103) Undergraduate Seminar: Greek Drama (IV) (LA)

Fall. 3 credits. *Provides language proficiency and satisfies Option 1.*
P. Pucci.

Topic: Euripides.

[CLASS 304(3104) Greek Philosophy and Rhetoric: Plato and the Orators (IV) (LA)

Fall. 4 credits. Prerequisite: one 200-level Greek course. Not offered 2005-2006. Staff.

Undergraduate seminar.]

CLASS 305(3629) Introduction to the New Testament Seminar (also NES 329(3629), RELST 329)

Fall. 1 credit. Created to offer extra credit option for students who have had one year of Greek, to read portions of New Testament and other Christian writings in Greek. Does not count toward classics major requirement as 300-level Greek course. Prerequisite: one year of Greek. Co-requisite: enrollment in NES 229.

[CLASS 310(3110) Special Topics in Greek Literature # (IV) (LA)

Fall and spring. 4 credits. *Provides language proficiency and satisfies Option 1.* Prerequisite: two 200-level Greek courses or permission of instructor. Not offered 2005-2006.]

CLASS 313(3113) Hellenistic Poetry # (IV) (LA)

Spring. 4 credits. H. Pelliccia.

The Hellenistic Greek poetry of Callimachus, Theocritus, Apollonius of Rhodes and others is often studied as the bridge between archaic and classical Greek poets and Latin poets such as Catullus, Virgil and Ovid. This course gives consideration to these important interrelationships only after attempting to understand and appreciate the accomplishments of the Hellenistic authors on their own terms.

[CLASS 316(3116) Greek Prose Composition (IV) (LA)

Spring. 4 credits. *Provides language proficiency and satisfies Option 1.*

Prerequisite: CLASS 104. Not offered 2005-2006. P. Pucci.]

CLASS 385(3185) Independent Study in Greek, Undergraduate Level

Fall and spring. Up to 4 credits. Was CLASS 225-226 and 307-308. Prerequisite: permission of DUS in the case of documented schedule conflict. Staff.

[CLASS 417(4101) Advanced Readings in Greek Literature # (IV) (LA)

Fall. 4 credits. Not offered 2005-2006. Staff.]

CLASS 418(4102) Advanced Readings in Greek Literature # (IV) (LA)

Spring. 4 credits. P. Pucci.

Topic: Greek epic.

[CLASS 419(4116) Advanced Greek Composition (IV) (LA)

Spring. 4 credits. Prerequisite: CLASS 316 or equivalent. Not offered 2005-2006. Staff.]

[CLASS 605-606(7105-7106) Graduate Survey of Greek Literature

605, fall; 606, spring. 4 credits each semester. Prerequisite: linguistic proficiency to be determined by instructor. Not offered 2005-2006. Staff.

Survey of Greek literature in two semesters. 605: Greek literature from Homer to the mid-fifth century. 606: Greek literature from the late fifth century to the Empire.]

CLASS 611(7111) Greek Philosophical Texts (also PHIL 411(4110))

Fall and spring. Up to 4 credits. Was CLASS 511. Prerequisites: knowledge of Greek and permission of instructor. G. Fine.

Readings of Greek philosophical texts in the original.

CLASS 671(7171) Graduate Seminar in Greek

Fall, spring. 4 credits. Fall: K. Clinton; spring: P. Pucci.

Topic: fall, Greek religion; spring, Herodotus and Homer (Corhali Conference).

CLASS 672(7172) Graduate Seminar in Greek

Fall, spring. 4 credits. Fall: B. Strauss and H. Pelliccia; spring: H. Rawlings III.

Topic: fall, Herodotus; spring, Thucydides.

CLASS 701(7910) Independent Study for Graduate Students in Greek

Fall and spring. Up to 4 credits. Was CLASS 701-702.

Latin**CLASS 105(1201) Elementary Latin I**

Fall. 4 credits. Staff.

Introductory course designed to prepare students to start reading Latin prose at the end of a year. The class moves swiftly and meets daily. Work includes extensive memorization of vocabulary and paradigms; study of Latin syntax; and written homework, quizzes, tests, and oral drills.

CLASS 106(1202) Elementary Latin II

Spring. 4 credits. *Provides language qualification.* Prerequisite: 105 or equivalent. Staff.

Continuation of CLASS 105, using readings from various authors; prepares students for CLASS 109.

CLASS 107(1203) Intensive Latin

Spring and summer. 6 credits. Students must register for CLASS 107 and 107.1. Staff.

Intensive introduction that quickly instills the essentials of Latin grammar before progressing to readings in the original Latin. Prepares students in a single semester for CLASS 109.

CLASS 108(1204) Latin in Review

Fall. 4 credits. *Provides language qualification.* Prerequisite: placement by departmental examination. M. Fontaine.

Designed to accommodate students who have had some Latin, but are insufficiently prepared to take 106. It begins with review of some material covered in 105 and then continues with second-semester Latin material (106). The class moves swiftly and meets daily. Work includes extensive memorization of vocabulary and paradigms; study of Latin syntax; and written homework, quizzes, tests, and oral drills. Students should be ready for LATIN 205 by the end of the course.

CLASS 109(1205) Elementary Latin III

Fall and spring. 3 credits. Was CLASS 205. *Provides language proficiency.*

Prerequisites: CLASS 106, 107, 108 or placement by departmental exam. Fall, F. Ahl; spring, K. Clinton.

Introduces students to reading a literary Latin text (Cicero's *Speeches against Catiline*). Covers complex syntax and reviews the grammar presented in CLASS 106, 107, or 108.

CLASS 205(2201) Latin Prose #

Fall. 3 credits. *Provides language proficiency and satisfies Option 1.*

Prerequisite: CLASS 109 or grade of A- or above in CLASS 106, 107, 108 or placement by departmental exam. H. Rawlings, III.

Speeches of Cicero, including (as time allows) the defense of the actor Roscius, the prosecution of the provincial governor Verres, and the abuse of Marcus Antonius (Philippics).

CLASS 206(2202) Ovid: Erotic Poetry # (IV) (LA)

Spring. 3 credits. *Provides language proficiency and satisfies Option 1.*

Prerequisites: CLASS 109, 205, or placement by departmental exam. D. Mankin.

Ovid's erotic poetry is relatively easy to translate but rich in its literary structure and influence.

[CLASS 207(2203) Catullus # (IV) (LA)

Fall. 3 credits. *Provides language proficiency and satisfies Option 1.*

Prerequisite: CLASS 109. Not offered 2005-2006. Staff.

Aims to present the poems of Catullus within their cultural and historical context. The poems are read and translated, and their significance both individually and as products of Late Roman Republican culture discussed in class. Selections from the works of Catullus's contemporaries are assigned in translation.]

[CLASS 208(2204) Roman Drama # (IV) (LA)

3 credits. Prerequisite: CLASS 205. Not offered 2005-2006. Staff.]

CLASS 209(2205) Virgil # (IV) (LA)

Spring. 3 credits. Was CLASS 216. *Provides language proficiency and satisfies Option 1.* Prerequisite: CLASS 109. M. Fontaine.

[CLASS 210(2206) Roman Letters # (IV) (LA)]

Spring. 3 credits. Not offered 2005–2006. Staff.

Offers an overview of prose letter-writing in the Late Republic and Empire. Selections from the correspondence of Cicero, Seneca, and Pliny are read, translated, and discussed in class. Selections from other authors are assigned in translation. Among other topics, the discussion focuses on the issues of transmission, circulation, and publication of letter-collections, as well as on the political and cultural context in which the letters were written.]

CLASS 306(3201) Roman Epic # (IV) (LA)

Spring. 3 credits. *Provides language proficiency and satisfies Option 1.* Prerequisite: 200-level Latin. P. Pucci.

Undergraduate seminar.

[CLASS 307(3202) Roman Historiography # (IV) (LA)]

Spring. 4 credits. Was CLASS 317. *Provides language proficiency and satisfies Option 1.* Prerequisite: one semester of 300-level Latin or permission of instructor. Not offered 2005–2006. M. Fontaine.

Undergraduate seminar. Focuses on Roman historiography through close readings of the authors Sallust, Livy, and Tacitus, with some attention paid to Caesar and the fragmentary historians. Principal objectives include analysis of competing literary styles, scholarly methods, and authorial biases. Special emphasis is placed on the development of historical writing over time.]

[CLASS 308(3203) Roman Poetry: Virgil, Eclogues and Georgics (LA)]

Fall. 3 credits. *Provides language proficiency and satisfies Option 1.*

Prerequisite: one 200-level Latin course. Not offered 2005–2006. Staff.

Undergraduate seminar.

[CLASS 309(3204) Roman Prose # (IV) (LA)]

Fall. 3 credits. *Provides language proficiency and satisfies Option 1.*

Prerequisite: one 200-level Latin course. Not offered 2005–2006. Staff.

Undergraduate seminar.]

CLASS 314(3205) The Augustan Age # (IV) (LA)

Fall. 4 credits. E. Rebillard. *Provides language proficiency and satisfies Option 1.* Prerequisites: two semesters of 200-level Latin or permission of instructor.

Introduction to the literature of the age of Augustus. Briefly reviews the history (the fall of the Republic, the rise to power of Augustus, the creation of a new political system) so that the literature of the period can be read in a comprehensible context. Students read selections from Livy's History, some Epistles of Horace, selections from the Aeneid of Vergil, and selections from the Fasti of Ovid. Attention is also given to the art and architecture of the period, especially as it relates to the literature.

CLASS 317(3217) Latin Prose Composition # (IV) (LA)

Fall. 4 credits. *Provides language proficiency and satisfies Option 1.*

Prerequisite: one semester of 200-level Latin. A. Nussbaum.

[CLASS 369(3629) Intensive Medieval Latin Reading # (IV) (LA)]

Summer only. 4 credits. Not offered 2005–2006. Staff.

Web site: www.arts.cornell.edu/classics/Courses/Classes/369/Med_Latin.html

CLASS 386(3286) Independent Study in Latin, Undergraduate Level

Fall and spring. Variable to 4 credits. Was CLASS 227–228. Prerequisite: permission of DUS in the case of documented schedule conflict. Staff.

[CLASS 411(4201) Advanced Readings in Latin Literature # (IV) (LA)]

Fall. 4 credits. Not offered 2005–2006. Staff.]

[CLASS 412(4202) Advanced Readings in Latin Literature # (IV) (LA)]

Spring. 4 credits. Not offered 2005–2006. Staff.]

[CLASS 414(4216) Advanced Latin Prose Composition # (IV) (LA)]

Spring. 4 credits. Was CLASS 441. Prerequisite: graduate standing; undergraduates who have completed LATIN 317 and have permission of instructor. Not offered 2005–2006. Staff.]

[CLASS 603(7207) Later Latin Literature: Late Antique and Medieval Hagiography]

Spring. 4 credits. Not offered 2005–2006. Staff.]

CLASS 625–626(7205–7206) Graduate Survey of Latin Literature

625, fall; 626, spring. 4 credits each semester. Prerequisite: linguistic proficiency to be determined by instructor. M. Fontaine.

Survey of Latin literature in two semesters.

CLASS 679(7271) Graduate Seminar in Latin: Cicero: De Divinatione

Fall. 4 credits. C. Brittain.

Cicero's *De Divinatione* is a philosophical dialogue on the possibility of communication between the divine and human beings. It is also the earliest surviving theoretical discussion of Roman religion. This course examines Cicero's use of the dialogue form, the various theories of divination, and their relation to contemporary religious and political practice.

CLASS 680(7272) Graduate Seminar in Latin: Virgil

Spring. 4 credits. Not offered 2005–2006. F. Ahl.

CLASS 702(7920) Independent Study for Graduate Students in Latin

Fall and spring. Up to 4 credits. Staff. Was CLASS 751–752.

Classical Art and Archaeology**CLASS 220(2700) Introduction to Art History: The Classical World (also ART H 220(2200)) # (IV) (HA)**

Fall. 4 credits. Each student must enroll in a sec. K. McDonnell.

Overview of the art and archaeology of the Greek and Roman world.

[CLASS 221(2726) Minoan-Mycenaean Art and Archaeology (also ARKEO 221(2726), ART H 221(2226)) # (IV) (CA)]

Spring. 3 credits. Not offered 2005–2006. J. Coleman.

The birth of civilization in Greece and the Aegean islands during the Bronze Age. The main focus is on the rise and fall of Minoan Crete and Mycenaean Greece, with consideration given to the nature and significance of Aegean interactions with Egypt, the Near East, and Anatolia.]

[CLASS 232(2723) Archaeology in Action I (also ARKEO 232(2723), ART H 224) # (IV)]

3 credits. Prerequisite: permission of instructor. Not offered 2005–2006. P. I. Kuniholm.]

[CLASS 233(2724) Archaeology in Action II (also ARKEO 233(2724), ART H 225) # (IV)]

3 credits. Prerequisite: permission of instructor. Not offered 2005–2006. P. I. Kuniholm.

For description, see ART H 225.]

[CLASS 240(2725) Greek Art and Archaeology # (IV) (CA)]

Spring. 3 credits. Not offered 2005–2006. J. Coleman.

Introduction to the material culture of Greece from the Early Iron Age to the coming of the Romans (ca. 1000 BC to 31 BC). Focuses not only on famous monuments such as the Parthenon but also on the evidence for daily life and for contact with other civilizations of the Mediterranean. A critical attitude is encouraged toward the interpretation of archaeological remains and toward contemporary uses (and misuses) of the past.]

[CLASS 256(2756) Practical Archaeology (also ARKEO 256(2756)) (III or IV) (HA)]

Spring. 3 credits. Not offered 2005–2006. J. Coleman.

Introduction to the aims and methods of field archaeology. Topics include remote sensing (satellite images and aerial photos); surface survey; subsurface investigations by magnetometer, ground penetrating radar; the layout and development of a land excavation; underwater excavations; the collection, description, illustration, and analysis of artifacts and data, such as pottery, lithics, botanical samples, and radiocarbon samples. Hands-on experience with potsherds and other artifacts from prehistoric and Classical Greece and Cyprus in the university's collections is intended to prepare students for work in the field.]

CLASS 321(3721) Mycenae and Homer (also ARKEO 321(3721), ART H 321(3226)) # (IV) (HA)

Fall. 4 credits. Prerequisite: at least one course in archaeology, classics, or history of art. J. Coleman.

Studies the relationship between the Mycenaean period of Greece (known primarily from archaeology) and the Homeric *Iliad* and *Odyssey*. Topics include Mycenaean architecture, burial customs, kingship, and military activities; the reasons for the collapse of the Bronze Age palatial economies; the archaeological evidence for society in the "Dark Ages" that followed; the writing systems of Mycenaean Greece (Linear B) and the Iron Age (the Semitic/Greek alphabet); the nature

of the Homeric poems and their value as historical sources.

[CLASS 322(3722) Greeks and Their Neighbors (also ART H 328) # (IV) (HA)]

Fall. 4 credits. Prerequisite: CLASS 220 or 221, or permission of instructor. Not offered 2005-2006. J. Coleman.

Studies the archaeological and other evidence for the interaction between Greek civilization and the peoples of the eastern and western Mediterranean from the 13th to the fourth centuries BCE. Focuses on Greek relationships with Egypt, Phoenicia, Cyprus, Anatolia, and Italy in the post-Bronze Age period.]

[CLASS 324(3719) Art in the Daily Life of Greece and Rome (also ART H 319) # (IV)]

Spring. 4 credits. Was CLASS 319. Not offered 2005-2006. A. Ramage.

For description, see ART H 319.]

[CLASS 325(3725) Greek Vase Painting (also ART H 325[3205]) # (IV) (LA)]

Spring. 4 credits. Not offered 2005-2006. A. Ramage.

For description, see ART H 325.]

[CLASS 327(3727) Greek and Roman Coins (also ART H 327) # (IV) (LA)]

Spring. 4 credits. A. Ramage.

For description, see ART H 327.

[CLASS 329(3729) Greek Sculpture (also ART H 329) # (IV) (LA)]

4 credits. Not offered 2005-2006.

J. Coleman.

Examines ancient Greek sculpture, both three-dimensional and two-dimensional, from the Archaic to the Hellenistic period. Aspects of the works studied include technological advances, changing ideology of the sculptors, regionalism of styles, and taste of individual patrons.]

[CLASS 330(3750) Dendrochronology of the Aegean (also ARKEO 309, ART H 309[3090]) # (IV) (HA)]

Fall and spring. 4 credits. Was CLASS 309. Limited to 10 students. Prerequisite: permission of instructor. Letter grades only. P. I. Kuniholm.

For description, see ART H 309.

[CLASS 350(3740) Arts of the Roman Empire (also ART H 322[3202]) # (IV) (HA)]

Fall. 4 credits. A. Ramage.

For description, see ART H 322.

[CLASS 431(4731) Ceramics (also ARKEO/ART H 423[4231]) # (IV) (CA)]

Fall. 4 credits. Was CLASS 423. Prerequisite: permission of instructor. A. Ramage.

For description, see ART H 423.

[CLASS 434(4734) The Rise of Classical Greece (also ARKEO 434[4734], ART H 434[4254]) # (IV) (HA)]

Spring. 4 credits. Recommended: CLASS 220 or 221, ART H 220 or 221, or permission of instructor. P. I. Kuniholm.

For description, see ARKEO 434.

[CLASS 435(4735) Seminar on Roman Art and Archaeology (also ARKEO 435[4207], ART H 427[4207]) # (IV) (CA)]

Spring. 4 credits. Prerequisite: permission of instructor. A. Ramage.

For description, see ART H 427.

[CLASS 629(7729) The Prehistoric Aegean (also ARKEO 629[7729])]

Fall. 4 credits. Not offered 2005-2006.

J. Coleman.

Seminar with focus on the Aegean and neighboring regions in the Neolithic and Early Bronze Ages.]

[CLASS 630(7750) Seminar in Classical Archaeology (also ARKEO 520, ART H 520[5200])]

Spring. 4 credits. Not offered 2005-2006.

P. Kuniholm.

For description, see ARKEO 520.]

[CLASS 705(7970) Independent Study for Graduate Students in Classical Archaeology]

Fall and spring. Up to 4 credits.

Was CLASS 721-722. Staff.

Greek and Latin Linguistics

[CLASS 421(4451) Greek Comparative Grammar (also LING 451[4451]) (III) (KCM)]

Spring. 4 credits. Prerequisite: thorough familiarity with morphology of classical Greek. A. Nussbaum.

The prehistory and evolution of the sounds and forms of ancient Greek as reconstructed by comparison with the other Indo-European languages.

[CLASS 422(4452) Latin Comparative Grammar (also LING 452[4452]) (III) (KCM)]

Fall. 4 credits. Prerequisite: thorough familiarity with morphology of classical Latin. Not offered 2005-2006. M. Weiss.

The prehistory and evolution of the sounds and forms of Classical Latin as reconstructed by comparison with the other Indo-European languages.]

[CLASS 425(4455) Greek Dialects (also LING 455[4455]) (III) (KCM)]

Fall. 4 credits. Not offered 2005-2006.

A. Nussbaum.

Survey of the dialects of ancient Greek through the reading and analysis of representative epigraphical and literary texts.]

[CLASS 426(4456) Archaic Latin (also LING 456[4456]) (III or IV) (LA)]

Spring. 4 credits. Prerequisite: reading knowledge of Latin. Not offered 2005-2006. A. Nussbaum.

Reading of epigraphic and literary pre-Classical texts with special attention to archaic and dialectal features. The position of Latin among the Indo-European languages of ancient Italy, the rudiments of Latin historical grammar, and aspects of the development of the literary language.]

[CLASS 427(4457) Homeric Philology (also LING 457[4457]) # (III) (LA)]

Spring. 4 credits. Prerequisite: ability to read Homeric Greek. A. Nussbaum.

The language of the Homeric epics: dialect background, archaisms, modernizations. The notion of a *Kunstsprache*: its constitution, use, and internal consistency. The phonological and morphological aspects of epic compositional technique.

[CLASS 429(4459) Mycenaean Greek (also LING 459[4459]) (III) (LA)]

Spring. 4 credits. Prerequisite: thorough familiarity with morphology of Classical Greek. Not offered 2005-2006. A. Nussbaum.]

Sanskrit

[CLASS 191-192(1331-1332) Elementary Sanskrit (also LING/SANSK 131-132[1131-1132])]

191, fall; 192, spring. 4 credits each semester. Was CLASS 131-132. CLASS 192 provides language qualification. Staff.

Introduction to the essentials of Sanskrit grammar. Designed to enable the student to read classical and epic Sanskrit as quickly as possible.

[CLASS 291-292(2351-2352)]

Intermediate Sanskrit (also LING/SANSK 251-252[2251-2252]) @ # (IV)

291, fall; 292, spring. 3 credits each semester. Was CLASS 251-252. CLASS 291 provides language proficiency and satisfies Option 1. Prerequisite: CLASS 192 or equivalent. Not offered 2005-2006. Staff.

Readings from the literature of Classical Sanskrit. Fall: selections from the two Sanskrit epics, the *Mahabharata* and the *Ramayana*. Spring: more selections from the epics, and from either Sanskrit story literature or from Sanskrit dramas.]

[CLASS 391(3391) Independent Study in Sanskrit, Undergraduate Level]

Fall and spring. Variable to 4 credits. Was CLASS 403-404. Staff.

[CLASS 490(4490) Sanskrit Comparative Grammar (also LING 459[4459]) (III) (LA)]

Fall. 4 credits. A. Nussbaum.

Survey of the historical phonology and morphology of Sanskrit in relation to the Indo-Iranian and Indo-European comparative evidence.

[CLASS 704(7950) Independent Study for Graduate Students in Sanskrit]

Fall and spring. Variable to 4 credits. Was CLASS 703-704. Staff.

See also CLASS 293, 390, and 395 (under "Classical Civilization" listings).

Honors Courses

[CLASS 472(4720) Honors Course: Senior Essay]

Fall and spring. 8 credits. Student must choose adviser by end of sixth semester. Topics must be approved by Standing Committee on Honors by beginning of seventh semester.

See "Honors" under Classics front matter.

COGNITIVE STUDIES PROGRAM

T. Gendler (philosophy) and M. Spivey (psychology), co-directors. G. Gay, J. Hancock (communication); C. Cardie, R. Constable, J. Halpern, D. Huttenlocher, J. Joachims, L. Lee, B. Selman, R. Zabih (computer science); A. Hedge (design and environmental analysis); K. Basu, L. Blume, D. Easley (economics); J. Dunn, R. Ripple, D. Schrader (education); S. Wicker (electrical and computer engineering); M. Casasola, S. Ceci, B. Koslowski, B. Lust, S. Robertson, E. Temple, Q. Wang, E. Wethington, W. Williams (human development); K. O'Connor, J. Russo (Johnson Graduate School of Management); J. Bowers, A. Cohn, C. Collins, M. Diesing, W. Harbert, S. McConnell-Ginet, A. Miller-Ockhuizen, M. Rooth, C. Rosen, Y. Shirai, J. Whitman, D. Zec (linguistics); A. Nerode, R. Shore (mathematics); F. Valero-Cuevas (mechanical and aerospace engineering); R. Harris-Warrick, H. Howland, R. Hoy, C. Linster, H. K. Reeve (neurobiology and behavior); R. Boyd, T. Gendler, C. Ginet, D. Graff, B. Hellie, H. Hodes, S. Shoemaker, Z. Szabo (philosophy); M. Christiansen, J. Cutting, R. Darlington, T. DeVoogd, D. Dunning, S. Edelman, M. Ferguson, D. Field, B. Finlay, T. Gilovich, M. Goldstein, B. Halpern, A. Isen, R. Johnston, C. Krumhansl, U. Neisser, E. Adkins Regan, M. Spivey (psychology); M. Macy (sociology). R. Canfield, S. Hertz (associate members).

Cognitive Studies comprises a number of disciplines that are linked by a major concern with fundamental capacities of the mind, such as perception, memory, reasoning, language, the organization of motor action, and their neural correlates. In the College of Arts and Sciences these disciplines are represented in the departments of Computer Science, Economics, Linguistics, Mathematics, Neurobiology and Behavior, Philosophy, Psychology, and Sociology. Elsewhere in the university they are represented in the Departments of Computer Science, Mechanical and Computer Engineering, and Mechanical and Aerospace Engineering (College of Engineering), the Departments of Design and Environmental Analysis and Human Development (College of Human Ecology), the Departments of Communication and Education (College of Agriculture and Life Sciences), and the Johnson Graduate School of Management.

The issues addressed in Cognitive Studies arise at several levels. At the broadest level are problems of characterizing such basic notions as "mind," "knowledge," "information," and "meaning." At a more specific level are questions regarding the abstract operating principles of individual components of the mind, such as those underlying visual perception, language ability, and understanding of concepts. These principles concern the organization and behavior of the components and how they are biologically represented in the brain. At the most specific level are questions about the properties of the elementary computational structures and processes that constitute these components.

Important insights into issues of these kinds have been achieved in recent years as a result of the various Cognitive Studies disciplines converging in their theoretical and methodological approaches. It is this convergence, in fact, that warrants grouping the disciplines together under the single term "Cognitive Studies." Even greater progress can be expected in the future as a consequence of increasing cooperation among the disciplines.

Undergraduate Concentration

An interdisciplinary undergraduate concentration in Cognitive Studies is available to Cornell University undergraduates in the College of Arts and Sciences. Students from other colleges who seek such a concentration should discuss such possibilities with the Cognitive Studies office, which will provide information and contacts concerning such concentrations.

The undergraduate concentration in Cognitive Studies is designed to enable students to engage in a structured program directly related to the scientific study of cognition and the mind. The concentration provides a framework for the design of structured, supervised programs of study in this growing interdisciplinary field. Such programs of study serve as complements to course work in a single discipline as represented by an individual department. It is considered crucial that students gain a strong background in their major, independent of their work in the concentration. Independent majors and college scholars may also apply. Colleges vary in their procedures for formal recognition of this concentration (contact the Cognitive Studies office for details). The Cognitive Studies Program faculty have designed five structured "tracks" that offer students different ways of satisfying the concentration. In addition, students are always able to construct their own programs of study subject to approval by their concentration adviser. The courses listed under each track are program suggestions. The student should consult with his or her Cognitive Studies adviser to develop a more customized curriculum. In some cases, students may want to combine or cross tracks.

In general, it is expected that students in the concentration will take COGST 101, a lab course such as COGST 201, and three courses at the 300 or 400 level in at least two departments. Even though only five courses are required to complete the concentration, we expect that students interested in Cognitive Studies will often end up taking more, and we encourage them to do an independent research project (COGST 470) and a research workshop such as COGST 471.

The five typical tracks are as follows. The first track involves a particular approach to the study of cognition. The other four tracks are structured around specific content domains and consist of sets of suggested course clusters. Note that many of these courses have substantial prerequisites.

1. Cognitive Studies in Context: The Workplace, the Classroom, and Everyday Life

Foundational issues in cognitive science are intimately relevant to real world settings. The Cognitive Studies in Context track offers students the opportunity to learn and independently explore how theory and research on the mind

can help us better understand how we use information in much of our daily activities, whether it be the workplace, the classroom, or any other aspect of everyday life. Students will come to better understand the cognitive ergonomics of such diverse settings as an aircraft cockpit, a quality control station on an assembly line, or an anesthesia station in a surgical suite. They will come to better understand the perceptual constraints that help tailor the nature of visual communication systems, or the linguistic constraints that help tailor text-based communication. They will come to see how the functional architecture of human memory guides the presentation and use of information in a wide array of settings. They will also learn how design constraints on computer hardware and software interact with human capacities and biases.

COGST 101/COM S 101/LING 170/PHIL 191/PSYCH 102 Introduction to Cognitive Science
COGST/COM S/PSYCH 201 Cognitive Science in Context Laboratory
COGST/PSYCH 342 Human Perception: Applications to Computer Graphics, Arts, and Visual Display
COGST/PSYCH 416 Modeling Perception and Cognition

In addition, three more upper-level approved courses in Cognitive Studies areas normally will be expected.

2. Perception and Cognition

This track focuses on psychological, computational, and neurobiological approaches to the interface between perception and cognition. Students will develop a grasp of the continuum between sensory impressions and complex thought.

COGST 101/COM S 101/LING 170/PHIL 191/PSYCH 102 Introduction to Cognitive Science
COGST/COM S/PSYCH 201 Cognitive Science in Context Laboratory
COGST/PSYCH 214 Cognitive Psychology
COGST/PSYCH 342 Human Perception: Applications to Computer Graphics, Art, and Visual Display
COGST/PSYCH 416 Modeling Perception and Cognition
COGST 450/HD 437/LING 450/PSYCH 437 Lab Course: Language Development
BIONB 326 The Visual System
PSYCH 305 Visual Perception
PSYCH 316 Auditory Perception
PSYCH 412 Laboratory in Cognition and Perception
PSYCH 418 Psychology of Music
PSYCH 419 Neural Networks Laboratory
COGST 465/COM S 392/PSYCH 465 Topics in High-Level Vision

3. Language and Cognition

This track focuses on the representation, processing, and acquisition and learning of language, as well as its role in cognition and culture. Students will acquire skills and knowledge in formal and applied linguistic theory, psycholinguistic experimentation, and computational modeling techniques.

COGST 101/COM S 101/LING 170/PHIL 191/PSYCH 102 Introduction to Cognitive Science

 PSYCH/BIONB 396 Introduction to Sensory Systems
 PSYCH 419 Neural Networks Laboratory
 PSYCH 425 Cognitive Neuroscience
 PSYCH 440, The Brain and Sleep

A Cognitive Studies undergraduate laboratory and computer facility is available for all students in a Cognitive Studies concentration. This facility will help link resources from different laboratories across the Cornell campus as well as providing a central location for developing and conducting experimental research in Cognitive Studies.

Students who complete the concentration requirements will have their concentration in Cognitive Studies officially represented on their transcript. In addition, students who have made substantial progress toward completing the requirements for the concentration will be eligible for enrollment in the graduate courses in Cognitive Studies during their senior year.

Concentration Application Procedures.

Initial inquiries concerning the undergraduate concentration should be made to the Cognitive Studies Program coordinator, Linda LeVan, cogst@cornell.edu, 255-6431, who will provide application materials and set up a meeting with a relevant member of the Undergraduate Concentration Committee. This committee will assist the student with selection of a concentration adviser with expertise in the student's main area of interest.

To formally initiate the concentration in Cognitive Studies, a student must gain approval for a selection of courses from a concentration adviser (one of the program faculty). The courses selected must form a coherent cluster that makes sense to both the adviser and the student. To be admitted to the concentration, the student must submit this plan of study to the Cognitive Studies undergraduate faculty committee for final approval.
