## The Station News

Vol. XVII, No. 13.

September 23,1931

Geneva, N.Y.

The series of meetings and field trips held here last week all
A BUSY:
WEEK: appeared to be highly successful and were well attended. The nut growers
expressed themselves as especially well pleased with the Station and this territory as a meeting place for their group; while the Fruit Testing Association,
of course, regards the Station as home. The meeting of the latter organization
brought in Mr.Anderson from the Hudson Valley and Mr.Gladwin from the Vineyard
Laboratory on an all too infrequent visit to the Station. The orchard soil conference held on Friday drew representatives from several of the northeastern
states who discussed problems of mutual interest. Prof. R.D.Anthony, formerly a
member of the Horticultural Department here and now with Pennsylvania State
College, attended the soil conference.

MR. GORDIN'S: It is with deep regret that we note the receipt of news of the DEATH...

death of Mrs. Sayre's father, Mr. Gordin, in Champaign, Illinois,

last week. Mr. and Mrs. Gordin were annual visitors to Geneva where they had

many friends, and Mr. Gordin had particularly endeared himself to the fishing

fraternity at the Station for his unfailing optimism (the hall-mark of a real

fisherman) in the pursuit of Seneca Lake's finny inhabitants. We extend our

sincere sympathy to Mrs. Gordin and to Mr. and Mrs. Sayre.

DR. PRICKETT: Dr. Paul S. Prickett, at one time a member of the Bacteriology PAYS A CALL:

-----: Division and now with Mead Johnson Company of Evansville, Indiana, spent the week-end in Geneva with Mrs. Prickett and the baby. Dr. Prickett left the Station a few years ago to accept a position with the U.S. Dept. of Agriculture, later going with the firm with which he is now associated. Dr. Prickett is in close touch with "Nate" True, one-time Station chemist, who is also with Mead Johnson, and states that Mrs. True, whose prolonged illness in a New York hospital was noted in the NEWS sometime ago, is now sufficiently recovered to return to her home in Evansville.

ience with an infected arm in the Geneva General Hospital last week.

DR. VAN SLYKE: Dr. Van Slyke was also on the sick list last week, and while ON THE MEND:
-----: still confined to his bed is reported to be very greatly

improved.

REPORT ON: The Bacteriology Division resumed its weekly seminars yesterday
MEETINGS: with reports on the Montreal meetings attended by members of the
-----: Division recently. Dr. Yale told of the meeting of the International
Milk Inspectors in which he participated, while Dr. Breed and Dr. Hucker reported
on the sections of the American Public Health Association which they attended.

""

It didn't take long for the two calves from the Station herd to WHO SAID: discover that they could have their favorite milk supply upon their MILK?: return from the State Fair Altho they firmly refused to touch any offering of milk from the various sources tried out in Syracuse, they were quick to accept Station milk, and are now as contented as cows, both big and little, should be.

CONFER ON: New types of short time, high temperature pasteurizers are PASTEURIZERS: to form the subject of conferences and demonstrations in the \_\_\_\_\_: Dairy and Bacteriology Divisions this week with Dr.Tiedeman of the State Department of Health; Mr.Byer of the General Ice Cream Corporation; and Mr. Putnam of the Creamery Package Manufacturing Company.

COMMENDS WORK: BETTER FRUIT, published in Portland, Oregon, and designated WITH FILBERTS: as "The Magazine of the Deciduous Fruit Industry", commenting ----: editorial on a recent statement sent out from the Station on the filbert tests here, says, "New York State is to be commended upon the importation and trial planting of filberts from Europe. Filberts are one crop that has grown here in the West by private introductions and trials. There are hundreds of varieties in southern Europe that have never been given a trial in this country. Our filbert industry needs an experimental farm. There are experimental nut farms in the East, Southeast, Southwest, and in California. But the Northwest with its greater possibilities of nut culture has none, except those owned by individuals.

THIS IS: Miss Rogers would like to learn of the whereabouts of a bound MISSING: volume of U.S. Dept. of Agriculture bulletins Nos. 646-670.

STRAW FROM: The Israelites, it will be recalled, complained bitterly about BRICKS: having to make bricks without straw, but this obstacle evidently ----: did not confront the makers of the adobe bricks out of which the early buildings of southern California, the Southwest, and Mexico, were constructed as revealed by interesting and unique researches reported recently by the University of California. Adobe bricks from various historic structures in Upper and Lower California, Arizona, and Sonora have been decomposed in water and an immense amount of plant material recovered in a good state of preservation. Identification of this material has contributed much to the knowledge of the varieties of cultivated plants grown by the early missionaries to this region and also on the probable date of introduction of numerous weeds.

LIKED THE : Commenting on things of interest seen at the State Fair, the WATER BUGS : AMERICAN AGRICULTURIST for last week mentions the Experiment -----: Station exhibit in general and the "Insect Zoo" in particular, especially the display of pond life which was recommended to those who might be interested in establishing ponds or acquariums for ornamental purposes.
