PREFACE

This work is based on research we undertook in a small village in highland Sri Lanka in 1965 and 1968. We should like to express our gratitude to the residents of that village for their many kindnesses, their patience and their interest in our work. We owe a particular debt of thanks to Mr. R.B. Ekanayake who often served as a field assistant, to Mr. K.G. Abeeratne, our landlord, who looked out for our health and welfare, and to the householders around whom this work is organized. These people and others not only contributed immeasurably to our understanding of Sinhalese language and culture but also left us with happy memories of the time spent in fieldwork.

Although many of the particulars in this work will be of interest to specialized audiences, the monograph, especially its introductory sections, has been written with the student of architecture in mind. Over the past several years Robert MacDougall has developed a series of courses organized around architecture in the perspective of the concept of culture which includes a required course for students at the undergraduate level as well as a graduate level sequence. For teaching purposes, there are many important illustrative needs still to be met in this area. They range from the most basic discussions of the study of domestic space in ethnography to case studies which show what kinds of problems can be developed in architecture as culture. This work is intended to help fill these needs.

Over the years we have benefited enormously from our associations with South Asianists and anthropologists at Cornell University. We should like to take note of the early encouragement given to our work by Professors Robert Ascher, James Gair, Gerald Kelley, Morris Opler and John Roberts. We should also like to acknowledge the support given by Professors Mary Katzenstein and Kenneth Kennedy during the preparation of this monograph.

The fieldwork on which this monograph is based was supported by the U.S. Office of Education, the Canada Council and the Cornell South Asia Program. The Cornell South Asia Program and the Center for International Studies have provided subventions for the publication. These sources of support are gratefully acknowledged. A study leave from the Department of Architecture in Fall 1977 for Robert MacDougall provided needed time for the completion of the manuscript. The support given by Professor Mario Schack, Chairman of the Department, and by Professor Kermit Parsons, Dean of the College of Architecture, Art, and Planning, is acknowledged with appreciation.

The technical problems presented by this manuscript have consumed much time. The tasks involving Sinhalese language skills have been undertaken by Bonnie MacDougall, whereas the graphic work is that of Robert MacDougall. Mrs. Renee Pierce took on the difficult task of typing
a long manuscript with numerous tables and material in three languages. She was patient and skillful, and we are much indebted to her. We should also like to thank Mr. Blake Middleton for doing the graphic work in the inventory table, and Mr. Gordon Wenneker for the Kodalith reductions of the drawings. Finally, we should like to express our appreciation to Mr. Richard Gingras of the Cornell University Graphic Arts Services who has supervised the production of the monograph.

PART I: INTRODUCTION TO THE PROBLEM AND THE SETTING .......... 1
  Introduction to the study ........................................ 1
  Research needs in Sinhalese ethnography ...................... 3
  Research needs in the comparative study of domestic
  architecture ......................................................... 4
  The study of the dwelling within the field of
  architecture ......................................................... 5
  The study of the dwelling within anthropology .............. 8
  The scope and plan of this work .................................. 10
  The physical setting ................................................ 12
  The social setting ................................................... 16
  Land and money ....................................................... 17
  The specific research setting ....................................... 19

PART II: THE INVENTORY .................................................. 28
  Introduction ................................................................ 28
  The conduct of the inventory ....................................... 28
  Transcription and translation of the entries .................. 31
  An overview of domestic articles in use in Rangama .......... 32
  Basketry (plaited and coiled) and other plaited
  articles .................................................................. 32
  Articles fashioned from wood, shells, gourds,
  leaves and vines ..................................................... 42
  Wooden containers and tools ........................................ 43
  Wooden furniture ....................................................... 46
  Articles fashioned from leaves, gourds, coconut
  shells and vines ...................................................... 49
  Traditional articles not of local manufacture:
  unglazed pottery ...................................................... 50
  Traditional articles not of local manufacture:
  metal work ................................................................ 51
  Non-traditional articles ............................................. 52
  The recycling of traditional articles ............................ 52
  Wall hangings and decorations ...................................... 53
  Architectural features and permanent fixtures ............. 53
  The inventory ............................................................ 55

PART III: THE RECORD OF HOUSEHOLD ACTIVITIES ACCORDING
  TO SPACE AND TIME ................................................... 103
  Introduction ............................................................. 103
  The waking day as a logical time unit for the study
  of domestic space .................................................... 105
  The conduct of the observation .................................... 105
  Summary of principal work activities of the adults in
  the two households during the waking day .................... 107
  The record of activities according to space and time ....... 111
PART III: THE RECORD OF HOUSEHOLD ACTIVITIES ACCORDING TO SPACE AND TIME (cont.)
Overview of household activities in the wider perspective of Rangama life ........................................ 153
The division of labor by sex: the domestic and extra domestic activities of men and women .......... 153
Daily food preparation and diet in the domestic setting ................................................................. 160
Child care in the domestic setting: children and space .............................................................. 161
Infant care: feeding ................................................. 163
Infant care: bathing ............................................. 164
Men in the domestic setting ........................................... 165
The domestic setting as a sphere for the elderly ...... 167

PART IV: OVERVIEW .................................................. 169
Introduction .......................................................... 169
The Rangama dwelling as patterned space .................... 169
The Rangama example, cultural knowledge and the architect's intuition ...................................... 171
