Courses of Study

1982–83
Cornell University Calendar 1982–83

**Fall Semester**

Tuesday, August 24

Monday and Tuesday, August 30 and 31

Wednesday, September 1

Monday, September 6

Monday, September 13

Wednesday, September 22

Friday–Sunday, October 1–3

Saturday, October 9

Wednesday, October 13

Friday and Saturday, October 15 and 16

Monday–Friday, November 1–12

Monday, November 29

Saturday, December 11

Sunday–Wednesday, December 12–15

Thursday, December 16

Thursday, December 23

**Winter Session**

Variable periods between Monday, December 27, and Friday, January 21

**Spring Semester**

Monday, January 17

Thursday and Friday, January 20 and 21

Monday, January 24

Monday, February 7

Friday, February 11

Saturday, March 26

Monday, April 4

Monday–Friday, April 11–22

Saturday, May 7

Sunday–Wednesday, May 8–11

Thursday, May 12

Saturday, May 21

Saturday, May 21

Sunday, May 29

**Summer Session 1983**

Three-week session

Eight-week session

Six-week session

New-student orientation begins
Residence halls open
Registration
Instruction begins, 8:00 a.m.
Add/drop/change period begins
Labor Day, University holiday
Physical education classes begin
Last day of add/drop/change period
Last day for late registration
New-Student Parents' Weekend
Fall recess: instruction suspended, 1:10 p.m.
Instruction resumes, 8:00 a.m.
Homecoming Weekend
Pre-course enrollment for spring 1983
Thanksgiving recess: instruction suspended, 1:10 p.m.
Instruction resumes, 8:00 a.m.
Instruction ends, 1:10 p.m.
Study period
Final examinations begin
Final examinations end
Residence halls close

Residence halls open

Final examinations end
Residence halls close (students who are graduating may stay through Commencement Day)
Commencement Day

Wednesday, June 1–Friday, June 24

Monday, June 13–Wednesday, August 10

Monday, June 27–Wednesday, August 10

The dates shown in this calendar are subject to change at any time by official action of Cornell University.

In this calendar, the University has scheduled classes on religious holidays. It is the intent of the University that students missing classes due to the observance of religious holidays be given ample opportunity to make up work.

The Law School and College of Veterinary Medicine calendars differ in a number of ways from the University calendar. Please consult the Announcements of those colleges for details.

The courses and curricula described in this Announcement, and the teaching personnel listed herein, are subject to change at any time by official action of Cornell University.

The rules and regulations stated in this Announcement are for information only and in no way constitute a contract between the student and Cornell University. The University reserves the right to change any regulation or requirement at any time.

The University

Cornell University is a community set among the lakes and hills of central New York and lying within the boundaries of the city of Ithaca, New York. Two men were the University's creators: Ezra Cornell and Andrew Dickson White. Cornell had begun his career as a carpenter wandering in search of work. White, the younger, was well educated, a member of America's cultural aristocracy. Cornell came to Ithaca in 1829, worked hard, sometimes failed, more often succeeded, and succeeded to the extent that in the middle 1850s he went out into the American business world. There he met Morse, inventor of the telegraph, became his partner, and was himself soon a wealthy man.

This success led him to the New York State Senate. White, a fellow senator, joined Cornell in discussing their common interest in higher education. They studied the Morrill Act of 1862, which gave land grants to the states as a means of financing state universities, and they saw here the opportunity to launch their own plan for a university. Cornell pledged half a million dollars as more financial support, and a large part of his farm in Ithaca as a university campus. Cornell University was born. The first building, Morrill Hall, opened its doors in 1868.

From the beginning the University had two obligations. First, to offer scholarships to New York State residents a land grant money made that necessary. In doing this, Cornell University acted as a public institution. And, as a private institution, it served all comers who could qualify for admission. What should it teach? White, trained in the classical tradition of the older colleges and universities, wished to teach philology, literature, government, history, and the sciences in a contemporary setting, shall we say, in terms of their usefulness to persons going out into the professions and business. Cornell put his wishes in a phrase that has become the University's motto: "I would found an institution where anyone can find instruction in any subject."

White was the University's first president. He had assembled a faculty of distinguished scholars from the United States, Canada, and Great Britain; many of whom, including a prominent Oxford professor, came to Cornell because they regarded the University's approach to education as pioneering, lively, and suited to the needs of the time. What more appropriate place than this for a spirit of pioneering. Cornell should admit its first women students in 1870.

In the last quarter of the nineteenth century the University grew rapidly and began to assume the shape it has today. As it rose to take its place among the so-called Ivy League universities, Cornell had a unique structure, part private and part public; part supported by private funds, part by grants from New York State. On the one hand were the endowed colleges: Arts and Sciences, Engineering, Law, and Agriculture; on the other were state-supported or statutory colleges: Veterinary, Agriculture, and Home Economics.

The University drew strength from its two groups of colleges. A single administration, a single president, a single board of trustees presided over the affairs of all; a single body, the University Faculty, directed educational policy. The needs of the endowed colleges called for the services of physicians, chemists, mathematicians, economists, historians, philosophers, biologists, lawyers. The needs of the statutory colleges called for many persons who had similar training, but whose study of mankind and other animals and plants followed a different path from that of the scholars in the endowed colleges. But this was for the good. The two groups of scholars had common ground for discussion. Out of diversity they could build unity.

By the early twentieth century, Cornell was well on the way to greatness. President White had served as America's ambassador to Russia and to Germany. Schurman, a later president, was to be ambassador to Germany and to China. To the University's faculty came scholars from many countries, as teachers and as students. To the University's undergraduates and graduate students came men and women from all over the world, with the result that the University became what it is today, one of the most cosmopolitan in the United States.

The student population grew from the five to six thousand of the early twentieth century to its present figure of about seventeen thousand; the faculty from about two hundred to the present fifteen hundred. More persons to study, to carry on research, and to teach mean more classrooms and laboratories, more libraries and dormitories, more places for worship and social centers, more playing fields and swimming pools. Buildings and places for outdoor recreation grew up on Ezra Cornell's farm, with a massive art gallery on the very spot where he once stood to admire Cayuga Lake and the city of Ithaca.

This growth of faculty, students, and the facilities they needed led to great specialization in the University's schools and colleges. The Engineering College divided into many parts, such as mechanical, electrical, and chemical, and among the biological sciences there were similar divisions. Among the endowed colleges a School of Hotel Administration appeared, and a Graduate School of Business and Public Administration. Among the statutory colleges the College of Agriculture took a new title, the College of Agriculture and Life Sciences. So did the College of Home Economics; it became the College of Human Ecology. The Veterinary College became the College of Veterinary Medicine. And there was a new school, the School of Industrial and Labor Relations. The process of expansion carried beyond Ithaca. A vast medical school arose in New York City; an agricultural experiment station at Geneva, New York; a marine laboratory off the New England coast; and a study center at Washington, D.C. More remote is the National Astronomy and Ionosphere Center in Puerto Rico, which has the world's largest radio-telescope.

Cornell University has come to be a place of learning whose scholars and students have reached out into every aspect of human affairs, into all forms of study relating to our planet, and to the limits of the universe as man knows them. Behind this achievement lies more than a century of steady, solid growth, the enterprise of hundreds of thousands of students, the dedication of thousands of professors, the skill of administrators, the wisdom of trustees.

The vast range of knowledge and experience assembled at Cornell gives to student and professor a sense of security. The security comes from being heir to a century of Cornell's history, and of having available in libraries and art galleries and concert halls the words of wise men and the creations of artists. And more than security. To the student, what could be more stimulating than to know that he or she has joined a community that affords infinite opportunity for study, for new friendships, and for association with persons dedicated to the pursuit of knowledge?

Frederick G. Marcham
Goldwin Smith Professor of English History emeritus

The Students

Cornell University has a student body of about 17,000 in the eleven schools and colleges at Ithaca. More than 29 percent of the students are engaged in graduate and professional study. The student body is diverse in interests and background, with 54 percent of the undergraduates from New York State, 42 percent from the remaining fifty states, and 4 percent from over ninety foreign countries.

Retention and Graduation of Undergraduates

By the spring of 1981, 82.8 percent of the students that entered endowed undergraduate units in fall 1975 (Architecture, Art, and Planning; Arts and Sciences; Engineering; and Hotel Administration) had either graduated or were still enrolled. In the statutory units (Agriculture and Life Sciences; Human Ecology; and Industrial and Labor Relations) 84.7 percent had graduated or were still working toward a Cornell degree.

It is the policy of Cornell University actively to support equality of educational and employment opportunity. No person shall be denied admission to any educational program or activity or be denied employment on the basis of any legally prohibited discrimination involving, but not limited to, such factors as race, color, creed, religion, national or ethnic origin, sex, age, or handicap. The University is committed to the maintenance of affirmative action programs which will assure the continuation of such equality of opportunity.

Cornell University is committed to assisting those handicapped students who have special needs. A brochure describing services for the handicapped student may be obtained by writing to the Office of Equal Opportunity, Cornell University, 217 Day Hall, Ithaca, New York 14853. Other questions or requests for special assistance may also be directed to that office.

Special Opportunity Programs

Cornell University administers a variety of special opportunity programs designed to provide financial assistance and other forms of assistance to (1) minority students and (2) low-income students meeting program guidelines. The emphasis of these special programs is to aid in increasing representation of students from minority groups present in New York State who historically have been underrepresented in higher education. However, participation is also available to those residing outside New York State. For details, prospective students should contact the Office of Admissions, 410 Thurston Avenue, Ithaca, New York 14850.

The Students 5
Degree Programs

Undergraduate Degrees

The undergraduate curricula at Cornell University lead to the Bachelor of Arts (A.B.) degree in the College of Arts and Sciences. The Bachelor of Science (B.S.) degree is offered by the College of Agriculture and Life Sciences, the College of Human Ecology, the School of Hotel Administration, the College of Engineering, and the School of Industrial and Labor Relations. The College of Architecture, Art, and Planning offers the Bachelor of Architecture (B.Arch.), the Bachelor of Fine Arts (B.F.A.), and the Bachelor of Science (B.S.) degrees.

Graduate Degrees

The graduate program at Cornell, with its emphasis on flexibility and independence, permits an unusual degree of accommodation to the needs and interests of the individual student. Most graduate degrees are offered through the Graduate School. Professional graduate degrees are offered through the professional schools and colleges. More information on the graduate degrees offered by Cornell may be found in the section on the Graduate School of the Undergraduate Degrees or in the various colleges and schools. Students most frequently take courses in more than one area, as well as in related fields, to construct a program to suit their interests and career objectives. Each of the following areas provides a different focus for application and use of business study and training, and students should consider carefully the implications of each program when making a choice. (Graduate study is available in the Graduate School of Business and Public Administration as well as in graduate fields following each of the undergraduate options.)

The areas most often pursued include applied economics and business management (College of Agriculture and Life Sciences), economics (College of Arts and Sciences), engineering, hotel administration, consumer economics and housing (College of Human Ecology), and industrial and labor relations.

Applied economics and business management. Economics, marketing, finance, public affairs management, food industry management, resources management, and distribution processes are examples of specific areas available. There is more emphasis on the application of these areas than on the theoretical aspects of economic theory and money, currency, and banking. (These subjects would be more easily pursued in the Department of Economics.) Instruction is appropriate for both agricultural and nonagricultural use.

Economics. This program provides a broad view of that social science concerned with the description and analysis of the production, distribution, and consumption of goods and services, the understanding of monetary systems, and the comprehension of economic theories and models. It is viewed more often as preprofessional than as training for immediate practice in business or economics.

Engineering. This area provides much of the management personnel of modern industry. Engineers frequently climb the ladders of technological management that lead to more general management responsibilities; more than half of the management-level personnel of major corporations such as General Electric, Xerox, IBM, and Du Pont have engineering degrees. In addition to becoming managers by being effective technical supervisors, many students enter engineering explicitly anticipating graduate business education, judging that an engineering background is particularly appropriate for management in a technology-oriented society.

Study in operations research and industrial engineering is particularly appropriate for those anticipating a business management career. The curriculum focuses on the design of integrated, cost-effective systems of people, materials, and equipment for manufacturing industries, public and private service organizations, and consulting firms.

Hotel administration. This undergraduate program provides managers for the hospitality industry. Capability for management of motels, condominiums, restaurants, clubs, hospitals, and land and facility development is developed through instruction in personnel and general administration, financial management, food and beverage service, and communications. Students interested in the School of Hotel Administration must have developed an explicit awareness of and commitment to this area through work experience, reading, study, and discussions with industry representatives.

Consumer economics and housing. The focus is on the economic behavior and welfare of consumers in the private, public, and mixed sectors of the economy. There is an option for special concentration on housing. Study aims at an understanding of economics, sociology, and government policy as they apply to consumer problems.

Industrial and labor relations. The world of work, especially the employee-employer relationship in the broadest sense, including the political, social, and economic forces affecting that relationship, is studied. Graduates can pursue immediate employment in industry, government, and labor organizations or choose graduate study in industrial and labor relations or such related fields as law and business and public administration.

Related Areas

Courses in areas directly related to these business programs are found in many of the University departments. For example, quantitative methods may be studied in the Departments of Mathematics and Computer Science, and courses in public administration are found in the Departments of Government, and City and Regional Planning. There are additional programs that allow students with an interest in business to focus on a particular geographic area. Examples are the Latin American Studies Program, the South Asia Program, and the Africana Studies and Research Center. Such interdisciplinary programs as the Program on Science, Technology, and Society and the various programs in international agriculture provide additional opportunities for study of interest to business students.

Combined Degree Programs

Because Cornell has the Graduate School of Business and Public Administration, special opportunities exist for highly qualified undergraduates to combine their undergraduate programs with graduate study in that school. Students in the double-registrant program generally receive a bachelor's degree after four years of study and a Master of Business Administration, Master of Public Administration, or Master of Professional Studies (Hospital and Health Services Administration) degree after the fifth year of study, rather than the usual sixth year. Students in all Cornell undergraduate colleges and schools are eligible to explore this option. There is also a program with the College of Engineering that allows qualified students to earn a B.S., M.B.A., and Master of Engineering degree in six years. Admission to these combined degree programs is limited to particularly promising applicants. Careful planning is required for successful integration of the work in the two schools.

Prelaw Study

Law schools do not prescribe any particular prelaw program nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and there is practically no subject that cannot be considered of value to the lawyer and no undergraduate course of study that is totally inappropriate. Prelaw students should, however, be guided by certain principles when selecting college courses.

1. Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.
2. Of first importance to the lawyer is the ability to express thoughts clearly and cogently both in speech and writing. Courses in the Freshman Seminar Program, required of nearly all Cornell freshmen, are designed to develop these skills. English literature and composition, and communication arts courses also serve this purpose. Logic and mathematics develop exactness of thought. Also of value are economics, history, government, and sociology, because of their close relation to law and their influence on its development, and philosophy, because of the influence of philosophic reasoning on legal reasoning and jurisprudence. Psychology leads to an understanding of human nature and mental behavior. Some knowledge of the principles of accounting and of the sciences such as chemistry, physics, biology, and engineering is recommended and will prove of practical value to the lawyer in general practice in the modern world.

3. Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students' interests, help cultivate a wider appreciation of literature, art, and music, and make better educated and well-rounded persons.

4. Certain subjects are especially useful in specialized legal careers. For some, a broad scientific background—for example, in agriculture, chemistry, physics, or engineering—when coupled with training in law, may furnish qualifications necessary for specialized work in the government, for counseling certain types of businesses, or for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important tasks are to acquire perspective, social awareness, and a critical cast of mind to develop the ability to think logically and analytically, and to express your thoughts clearly and forcefully. These are the crucial tools for a sound legal education and successful career.

The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the University to be admitted to the Law School. At the time of entry they must have completed 105 of the 120 credits required for the Bachelor of Arts degree, including 2 credits of course work in the College of Arts and Sciences.

Qualified students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology may apply for acceptance into a double registration program arranged between Cornell University and Cornell University Medical College in New York City. This program allows registered students to save one year in pursuit of the bachelor's and M.D. degrees. Further information about these programs is available from the Health Careers Program office at the Career Center, Cornell University, 14 East Avenue, Ithaca, New York 14853.

Preventerinary Study

There is no specific preventerinary program at Cornell, and students interested in veterinary medicine as a career should select an area for study that fits their interests while at the same time meeting the entrance requirements for veterinary college listed below. Most preventerinary students enroll in the College of Agriculture and Life Sciences. However, because of the statutory nature of that college, out-of-state applicants will find it extremely difficult to gain acceptance into its biological sciences or animal sciences program. These and other students, because of their secondary interests or desire for a broader undergraduate curriculum, often enter other divisions of the University, especially the College of Arts and Sciences.

The college-level prerequisite courses for admission to the New York State College of Veterinary Medicine at Cornell are English, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. The college also requires demonstrated proficiency in written and spoken English and encourages college-level work in mathematics. These requirements, necessary for admission to the New York State College of Veterinary Medicine at Cornell, may vary slightly at other veterinary colleges.

For information on additional preparation, including work experience and necessary examinations, students should consult the Announcement of the New York State College of Veterinary Medicine, obtained by writing to Cornell University Announcements, Building 2 Research Park, Ithaca, New York 14850.

Division of Unclassified Students

The Division of Unclassified Students (DUS) assists Cornell undergraduates in transferring between colleges of the University when direct internal transfer is not possible. The division also serves as a counseling agency for students whose academic and career goals have changed. Such students are advised about alternatives within the Cornell system.

To apply to the division, students must

1) Make an appointment for an interview in DUS. Telephone: 256-4386.
2) Complete the DUS application form and return it to the division office, 158 Olin Hall.
3) Submit Application for Transfer coupons to the Office of the University Registrar, 222 Day Hall, requesting transfer to DUS.

Candidates are admitted to the division when, in the judgment of the DUS Administrative Committee, there is reasonable evidence that a transfer can be accomplished and that the proposed program is consistent with the student's stated objectives. Students are admitted for one semester but may be allowed to continue in the division for a second term if that is necessary and the student is making progress toward transfer.

Premedical Study

Medical and dental schools, while not requiring or recommending any particular major course of study, do require that a particular selection of undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, physics, and a year of English composition (or a Freshman Seminar course). In addition, many medical schools require or recommend at least one advanced biological science course such as genetics, embryology, histology, or physiology.

There is no major program that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests. Students are more likely to succeed at and benefit from subjects that interest and stimulate them, and there is no evidence that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, most successful Cornell applicants to medical and dental schools have been enrolled primarily in the Colleges of Arts and Sciences, and Agriculture and Life Sciences, with some also in the Colleges of Engineering and Human Ecology. The appropriate choice depends to a great extent on the student's other interests.
Interdisciplinary Centers and Programs

Africana Studies and Research Center

For information about the programs and courses offered by the center, see page 190.

Faculty Roster

Cross, William E., Ph.D., Princeton U. Assoc. Prof., Africana Studies and Research Center
Harris, Robert L., Ph.D., Northwestern U. Asst. Prof., Africana Studies and Research Center
Turner, James E., Ph.D., Union Grad. Sch. at Antioch Coll. Assoc. Prof., Africana Studies and Research Center

Center for International Studies

M. J. Esman, director

The Center for International Studies, 170 Uris Hall, supports and coordinates Cornell's programs of international and comparative studies. By serving as a focal point for ideas, information, and advice about the University's wide range of international offerings, the center contributes to their further development. The center places particular emphasis on strengthening inquiry into issues that cut across disciplinary, professional, and regional concerns, and on providing a continuing source of innovation and experimentation in international studies. The center and its constituent programs promote interdisciplinary teaching and research in international and comparative studies. These programs are:

Area Programs
China-Japan Program (140 Uris Hall)
Committee on Soviet Studies (180 Uris Hall)
Latin American Studies Program (190 Uris Hall)
South Asia Program (170 Uris Hall)
Southeast Asia Program (120 Uris Hall)

Problem-Oriented Programs
International Political Economy Program (170 Uris Hall)
International Population Program (372 Uris Hall)
Participation and Labor-Managed Systems (490 Uris Hall)
Peace Studies Program (180 Uris Hall)
Rural Development Committee (170C Uris Hall)
Western Societies Program (166 Uris Hall)

Professional School Programs
International Agriculture (261 Roberts Hall)
International Business and Public Administration (526 Maclay Hall)
International and Comparative Labor Relations (296 Ives Hall)
International Education Program (NG09 Martha Van Rensselaer Hall)
International Legal Studies (309 Myron Taylor Hall)
Program on International Nutrition and Development Policy (114A Savage Hall)
International Studies and Planning (200 West Sibley Hall)

Cornell-in-Washington Program

Cornell-in-Washington is a program of instruction, research, and internships in the nation's capital. The program is open to qualified juniors, seniors, and graduate students from all colleges, schools, and divisions of the University. Full academic credit can be earned for the semester. Most students enroll in the seminar-internship course, Projects in Public Policy (Government 500), which involves a major research study carried out through an internship. Students may work as interns with congressional offices, executive branch agencies, interest groups, research institutions, and other organizations involved in the political process and public policy. Students also select one or two seminars from such fields as government, history, economics, human development and family studies, architectural history, and agricultural economics. In addition, special programs are offered in architecture, and industrial and labor relations. All seminars are taught by Cornell faculty and carry appropriate credit towards fulfillment of major, distribution, and other academic requirements.

Housing accommodations can be arranged for all interested participants. Fully furnished apartments are available in a newly renovated, centrally located apartment complex.

Further information concerning internships, courses, and other features of the program may be obtained from the Cornell-in-Washington office at 134 McGraw Hall (telephone 256-4030).

Program on Science, Technology and Society

Dr. Walter R. Lynn, director, 632A Clark Hall, 256-3810

The Program on Science, Technology, and Society (STS) is an academic unit that engages in teaching and research involving the interactions of science and technology with social and political institutions. In collaboration with other University departments and centers, the STS program participates in the development of interdisciplinary courses at both the graduate and undergraduate level. These courses are designed to synthesize the perspectives of several academic disciplines in the analysis of relationships between science and technology on one hand, and today's society on the other. Current course and research topics include science, technology, and public policy; biology and society; technology assessment; arms control and national defense policies; energy policy; environmental policy and ethics; health and safety regulation; biomedical ethics; science policy; science and technology for development; scientific and technological literacy; and citizen participation in technical decision making. The program draws its students, faculty, and research staff from the various divisions of the University.

Biology and Society Major

Developed initially by STS, the undergraduate curriculum in biology and society is a major in the College of Arts and Sciences; it is also offered as an option for undergraduates entering the General Studies Program of the New York State College of Agriculture and Life Sciences.

Graduate Studies

STS does not enroll students for advanced degrees. Rather, the program cooperates with departments in the various colleges to facilitate curriculum development and research interests in the interrelations of science, technology, and social policy. Faculty members in the program are also members of graduate fields of study such as anthropology, city and regional planning, ecology, the various engineering fields, government, philosophy, sociology, and toxicology. It is possible to undertake research and course work in the area of science, technology, and society within one of the aforementioned fields, as well as others. A minor concentration in science and technology policy is available within the graduate minor field of public policy, and a minor field of biology and society is currently being considered. Studies in peace science can be pursued as a major concentration within the Field of Economics. Further information about these graduate programs may be obtained by contacting the Graduate School.

Courses

STS courses are cosponsored by the University academic departments. The titles and numbers of these courses are listed below, for course content and other details, refer to the listings of the particular cosponsoring department. Further information concerning the program, including a list of STS-related courses offered throughout the University and information concerning individualized courses of study, may be obtained from the program office, 632 Clark Hall (telephone 256-3810).

Biomedical Ethics (Biological Sciences 205 and Philosophy 245)
The Politics of Technical Decisions (City and Regional Planning 541, Government 628, and Business and Public Administration NPA 515)
Social Implications of Technology (Engineering CEE 325)
Environmental Law (Engineering CEE 626)
Urban Affairs Laboratory (Government 312)
Science, Technology, and Law (Law 780)
International Politics of Energy (Government 490)
History of Biology (History 287 and Biological Sciences 201)
Environmental Ethics (Biological Sciences 206 and Philosophy 246)
Urban Affairs Laboratory (Government 312)
Science and Human Nature (Philosophy 286)
Technology, Society, and the Human Condition (Engineering M&AE 302)
Seminar in Technology Assessment (Engineering CEE 426 and College Scholar 464)
Social and Political Studies of Science (Sociology 355 and City and Regional Planning 442)
Science, Technology, and Human Needs (DEA 232)
History of Biology (History 288 and Biological Sciences 202)
The Population Biology of Health and Disease (Veterinary Medicine 330)
University Resources

Students benefit from a wide variety of resources, both human and physical, that contribute significantly to their Cornell education. The following sections provide an idea of some of the more intriguing and stimulating possibilities.

University Libraries

The Cornell University Libraries are rated as one of the major academic library systems in the United States. The sixteen campus libraries contain well over four million volumes and currently subscribe to fifty-two thousand periodicals. These libraries provide the facilities for research and study in hundreds of undergraduate major subject areas and in over eighty-five fields of study for advanced degrees.

All students at Cornell are entitled to use any of the libraries on campus, although they are assigned to stacks that may be crowded in some cases. Students are particularly encouraged to participate in the orientation sessions and tours offered by the libraries. All libraries are open long hours, some until midnight, and schedules and tour information are available at every library.

At the south end of the Arts Quadrangle is Uris Library, the building with the tower that has become the symbol of Cornell. Uris is essentially an undergraduate library for students in the liberal arts. A principal aim of this library is to bring readers and books as close together as possible. Accordingly, the stacks containing more than 128,000 volumes are open to all, and only reserve books in heavy demand are held in a special category. There are listening rooms where students, singly or in groups, may hear recordings of the spoken word, and there is a lecture room with sound and projection capabilities.

Across the walk from Uris is the John M. Olin Library, devoted more specifically to graduate and faculty research. This closed-stack library houses many special collections of books and manuscripts, among them rare books, a collection on East and Southeast Asia, an ice core collection, History of Science collections, the Archives of the University, maps, and newspapers.

The two libraries, Uris and Olin, complement each other in support of the University's program of teaching and scholarship. In addition to these facilities, the system of college and school libraries. Chief among them is the Albert R. Mann Library, serving the New York State Colleges of Agriculture and Life Sciences, and Human Ecology. Located at the east end of the Agriculture Quadrangle, Mann Library's open stacks hold half a million volumes, including the research library of the Division of Biological Sciences.

Other college libraries include the Fine Arts Library, serving the College of Architecture, Art, and Planning; the library of the College of Engineering and the New York State College of Veterinary Medicine; and the libraries serving the Graduate School of Business and Public Administration, the Law School, the School of Hotel Administration, and the New York State School of Industrial and Labor Relations. In addition, there are many large departmental libraries on the campus. For more specific information, see the Handbook of the Libraries available at all libraries.

Many of the libraries have special copying services, audiovisual facilities, bibliographic retrieval services, study rooms, microfilm and microfiche readers, typewriters, and interlibrary loan services, and some publish handbooks and bibliographies that are distributed without charge. The library issues directories of locations by subject, hours, and services that are available in all the libraries.

Orientation sessions on how to use the library are offered at the beginning of each semester by the larger campus libraries. Schedules for vacation periods, intersession, and summer session are always posted or available at the separate libraries.

Museums and Art Exhibitions

The Herbert F. Johnson Museum of Art, designed by world-renowned architect I. M. Pei, complements the architecture and vistas of the more traditionally styled campus. Its sweeping views give visitors and residents alike a new perspective on the beauty of Cayuga Lake.

The museum's collections are particularly strong in Asian art, nineteenth- and twentieth-century painting, and the graphic arts. Located on Central Avenue, the museum is open daily Tuesday through Sunday, 10:00 a.m. to 5:00 p.m.

The museum has an active membership program, and members' contributions are the main source of funds for acquiring works of art. Anyone interested in becoming a member may inquire at the reception desk or call 256-6464.

Art exhibitions. Cornell is generously supplied with art exhibitions, some permanent and some temporary. The displays range from the works of students and visiting collections to the permanent University collection housed at the Herbert F. Johnson Museum of Art. Other campus locations for art displays include the Art Room in the Straight, the John Hartell Gallery in Sibley Hall, and the galleries in Goldwin Smith Hall, Malott Hall, Martha Van Rensselaer Hall, and Olive Tjaden Hall.

Music

Students who want to participate in music making will find a wide range of opportunity through the Sage Chapel Choir, the Cornell Chorus, the University Glee Club, the University orchestras and bands, chamber music ensembles, the Opera Workshop, the Collegium Musicum, and the Indonesian Gamelan. The Cornell chimes, housed in McGraw Tower, are run by students.

The University Faculty Committee on Music sponsors programs by visiting soloists and major orchestras in the Bailey Hall Concert Series, string quartets and other groups in the Statler Series at Alice Statler Auditorium, and occasional operas, ballets, and special events. Several times each month the Department of Music sponsors free concerts and lectures by visiting artists or by Cornell faculty and students, primarily in Barnes Hall Auditorium.

The Cornell Concert Commission offers a series of student-produced popular rock, folk, soul, and jazz concerts. Other student organizations have regular performances of Gilbert and Sullivan operettas, jazz, and rock and roll. Local bluegrass and folk performers are featured in informal concerts in the Commons, a coffeehouse in Anabel Taylor Hall.

Astronomy

Cornell operates two local optical observatories, the Fuertes Observatory (near the North Campus dormitory area) and the Hartung Boothroyd Observatory, and the world's largest radio-telescope, in Arecibo, Puerto Rico.

The Spacecraft Planetary Imaging Facility, a joint undertaking of NASA's Planetary Geology Program and the University, serves as a focus for planetary studies at Cornell and is one of seven such facilities in the United States. The facility contains a comprehensive collection of thousands of images obtained by United States planetary and lunar spacecraft, as well as related cartographic and support data.

Theater

Cornell students have numerous opportunities to attend or participate in theatrical productions. Under the sponsorship and general supervision of the Department of Theatre Arts, Theatre Cornell presents a full season of classical, modern, and experimental dramas. These productions include guest professionals, graduate actors, designers, and directors from the department's professional training program as well as undergraduate majors. All students in the University who are interested in participating in theater in any capacity are eligible to audition for these productions. Auditions are held twice a year. The department also has, in its studio theater, a more informal production program, directed, acted, designed, and managed entirely by students. Staffing and casting for these events take place throughout the year.

Other theatrical opportunities can be found at Risley Residential College, which has a small theater available for student productions; with the Cornell Savoyards, who produce two Gilbert and Sullivan operettas annually; and within the Ithaca community, which has several theater groups that mount various productions during the year.

Music

The dance division of the Department of Theatre Arts sponsors a range of possibilities for students interested in dance. Informal and formal dance programs are presented through the year by student dancers and choreographers. In the spring, a dance concert presents works by guest, faculty, and student choreographers. The division also sponsors a series of performances by touring professional dance companies during the year. The Ithaca community includes several studios that present workshops and performances in a wide range of dance forms.

Students interested in social and ethnic dance will find that dancing is a popular activity. Student organizations sponsor folk, contra, and square dances frequently. Most dances are taught at these events, and beginners are welcome. The Department of Physical Education and Athletics usually offers a course in folk or square dancing each semester.

Lectures

On the more academic side of audience entertainment, there is the lecture. Dozens of extracurricular lectures are given every week, ranging from scholarly presentations on subjects of narrow interest to well-known speakers with campus-wide appeal.

Films

Throughout the year and on almost every night of the week, single film showings and film series make available educational and entertaining films at reduced rates. In addition, there are a half-dozen commercial theaters in Ithaca itself, making moviegoing among the most popular leisure-time activities. Students interested in producing their own films may participate in the filmmaking program sponsored by the Department of Theatre Arts.
Publications
Cornell students edit and publish a wide variety of publications, including a yearbook, literary magazines, and a number of magazines relating to special fields of interest, such as the Cornell Engineer, Praxis Magazine, Rainy Day, the Cornell Countryman, and the Cornell Law Review. Cornell students are in complete charge of the publication of the Cornell Daily Sun, an independent daily newspaper.

Facilities for Research
Facilities for research at Cornell offer faculty members and students a range of opportunities. The unique or specialized facilities are highlighted below.

Agricultural and Biological Sciences
Bradfield Hall houses computers, radar, and other specialized equipment used in making up-to-the-minute weather forecasts. The insect collection in Comstock Hall contains more than four million specimens, making it one of the largest university insect collections anywhere. Liberty Hyde Bailey Hortorium is the world's leading center for the study of palms, a plant family second only to grasses in economic importance. The Department of Food Science operates a full-scale dairy plant and a salesroom.

The Boyce Thompson Institute for Plant Research, housed in facilities on Tower Road, gives the University the largest concentration of plant scientists in the world.

Near the campus are a 180-acre, University-maintained bird sanctuary, Sapsucker woods, and the University Plantations, which has trails through natural areas and special collections, including peonies, rhododendrons, nut trees, an herb garden, a wildflower garden, and seasonal plantings.

The Animal Science Teaching and Research Center was established in 1973 on twenty-five hundred acres of fertile valley and hillside land near Dryden, about fifteen miles from campus. It now houses some 850 head of dairy cattle, 450 beef cattle, and 900 sheep. About one thousand acres of corn and grasses are planted and harvested each year.

The orchard laboratory conducts research on fruit crops; the popular salesroom may be reached by campus bus.

Renowned off-campus facilities include an agricultural experiment station in Geneva, New York, and the Sheals Marine Laboratory, a marine biology laboratory off the coast of Maine.

Engineering and Physical Sciences
The National Research and Resource Facility for Submicron Structures is the newest research facility on campus. It is expected to have a profound effect on the communications industry. The University operates a synchrotron radiation laboratory in conjunction with a high-energy storage ring. The Laborator for Plasma Studies provides a center for research in plasma physics and lasers. The Materials Science Center is equipped with highly sophisticated equipment for interdisciplinary research. The Ward Laboratory for Nuclear Engineering is the site of interdisciplinary research involving irradiation, isotope production, and activation analysis.

Social Sciences
The Eleanor J. Gibson Laboratory of Developmental Psychology explores the development of perception in infants. Research in infant language acquisition is carried out in Martha Van Rensselaer Hall, Uris Hall houses the Human Experimental Laboratory (of the Department of Psychology), a biopsychology laboratory, and a social psychology laboratory.

Computer Services
At Cornell computers are used by musicians, archaeologists, historians, engineers, architects, writers, linguists, accountants, doctors, scientists, and students in every discipline. Cornell Computer Services (CCS) supplies and maintains computer hardware, operating systems, and general and specialized programs to meet a broad spectrum of user needs. To make these resources readily accessible, CCS operates several public terminals, provides some free consulting services, produces informative documentation, and offers or cosponsors a variety of user education programs.

Cornell's main computers are an IBM 370/168, two IBM 4346s, and a DECSYSTEM 2060. Public terminal facilities are located in six different areas on campus. They house more than 165 workstations including 47 Terak microcomputers used for introductory programming courses. A public computer graphics area is currently under development. Cornell added a second Floating Point Systems array processor to its computing system in 1982. These specialized computers are very fast and highly cost effective for long calculations.

As a member-supplier of EDUNET, Cornell shares computer resources with other universities, colleges, and nonprofit groups associated with higher education and research.

Advanced Placement of Freshmen
The appropriate department of instruction sets the standards of achievement that must be met for advanced placement at Cornell and recommends AP credit for those who meet the standards. This recommendation is almost always based on some examination score. The student's college decides whether to award the credit. Students need not accept advanced placement. They may repeat the course, thereby relinquishing the advanced placement credit.

The Advanced Placement (AP) Program of the College Entrance Examination Board (CEEB) is the best-known and most generally used of the programs that provide students with an opportunity to document participation in a college-level curriculum at the secondary level.

Advanced placement examinations. Examinations sponsored by the Advanced Placement Program and the College-Level Examination Program (CLEP) of the College Entrance Examination Board, and the United States Armed Forces, are offered at Cornell.

Entering freshmen should have their scores sent to their college or school office (see list at the end of this section). Placement and credit on the basis of these examinations will usually be determined during the summer, and students will be notified before course scheduling.

Departmental advanced standing examinations. In certain subjects, students may also qualify for advanced placement or credit or both on the basis of departmental examinations given on campus during orientation week. A schedule of these examinations will appear in the orientation booklet that will be mailed to entering students in late summer. The departments that award advanced placement and credit on the basis of CEEB Advanced Placement Examinations, CEEB College-Level Examination Program tests, or departmental examinations are shown below.

Transfer of credit. Entering freshmen who have completed college courses for which they wish to receive credit toward their Cornell degree should send transcripts and course descriptions to their college or school office (see list at the end of this section). The award of credit or placement for such courses is determined by the appropriate departments according to individual school and college guidelines. Because policy for using advanced placement credit varies according to each college's or school's professional and academic goals, students should consult their college or school office to determine how they may use such credit.

Foreign credentials. Information regarding Cornell's advanced placement policy for foreign credentials may be obtained by contacting the Associate Director of International Admissions, Cornell University, 410 Thurston Avenue, Ithaca, New York 14850, U.S.A. Students holding foreign credentials who feel they may be eligible for advanced standing consideration should contact the International Student Office prior to enrollment for clarification of the advanced standing policy.

Written Inquiries. Many department, school, and college offices encourage students to contact them with any questions they may have. Addresses given in the following sections may be completed by adding Ithaca, New York 14853.
Biological Sciences

Students who earn a score of 4 or 5 on the CEEB Advanced Placement Examination in biology and whose performance on the special departmental examination is superior will receive eight credits and be permitted exemption from introductory biology courses. Nonmajors with a score of 4 or 5 on the AP Examination or departmental examination can receive, respectively, six or eight advanced placement credits. This satisfies part or all of the distribution requirement in biological sciences for the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology.

Biological sciences majors and other students who expect to take advanced biology courses who receive a score of 4 must fulfill the introductory biology requirement by taking Biological Sciences 103–104. These students will receive a total of eight introductory biology credits (four advanced placement credits and four course credits).

Students who feel prepared may arrange to take the departmentally administered examination by requesting permission in advance from the General Biology Office, Cornell University, 310 Roberts Hall. This examination is given only once, during orientation week. A sheet describing the examination content and format, eligibility, fee, and credit is available by writing to that office.

Chemistry

The Department of Chemistry offers two sequences that satisfy prerequisites for further work in the department: Chemistry 207–208, an eight-credit sequence that includes qualitative and quantitative analysis; and Chemistry 215–216, a nine-credit sequence that includes qualitative analysis and a departmentally administered examination by the College-Level Examination Program. College of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology.

The department will consider awarding advanced placement credit to freshmen who receive scores of 750 or above on the CEEB College Placement Test in literature or 5 on the CEEB Advanced Placement Examination. Students who seek advanced placement credit are encouraged to take as many of these tests as possible.

Students who receive scores of 700 to 749 on the CEEB College Placement Test in English composition, 700 to 709 on the CEEB College Placement Test in literature, or 4 on the CEEB Advanced Placement Examination will be eligible to take an advanced standing examination offered by the department during orientation week. These students, too, are eligible to take English 270, 271, or 272. This examination will be eligible to take as many of these tests as possible.

Advanced placement credit in Chemistry may not be used to satisfy the freshman seminar requirement, or the humanities or expressive arts requirement of the College of Arts and Sciences.

For information concerning advanced placement, consult the chairman of the Department of Classics.

Greek

For information concerning advanced placement, consult the chairman of the Department of Classics.

Economics

The Department of Economics will grant up to six advanced placement credits to a student who scores 600 or higher in the College-Level Examination Program test in introductory economics. Such a student will be admitted to courses for which Economics 101 and 102 are prerequisites.

For further information, write to the Department of Economics, Cornell University, 416 Uris Hall.

English

For exceptionally well qualified freshmen the Department of English will recommend three or six advanced placement credits, and freshmen for whom such credit has been recommended will also be eligible to enroll in English 270, 271, or 272.

The department will consider awarding advanced placement credit to freshmen who receive scores of 750 or above on the CEEB College Placement Test in literature or 5 on the CEEB Advanced Placement Examination. Students who seek advanced placement credit are encouraged to take as many of these tests as possible.

Students who receive scores of 700 to 749 on the CEEB College Placement Test in English composition, 700 to 709 on the CEEB College Placement Test in literature, or 4 on the CEEB Advanced Placement Examination will be eligible to take an advanced standing examination offered by the department during orientation week. These students, too, are eligible to take English 270, 271, or 272. This examination will be an important factor in awarding advanced placement credit. The department will also consider secondary school grades in determining whether credit will be awarded.

Advanced placement credit awarded in English may not be used to satisfy the freshman seminar requirement, or the humanities or expressive arts requirement of the College of Arts and Sciences.

If space permits, freshmen whose secondary school records indicate they are qualified may enroll in English 270, 271, or 272 during their first semester.

German Literature

The Department of German Literature will grant three credits to students with a score of 4 or 5 on the Advanced Placement Examination.

History

The Department of History will grant four credits to students who score 4 or 5 on the CEEB Advanced Placement Examination in European history and four credits to those with such scores in the American history examination. These credits may not be used to fulfill requirements of the history major or distribution requirements of the College of Arts and Sciences.

History of Art

The Department of History of Art will review examination papers of students with scores of 4 or 5 on the CEEB Advanced Placement Examination. Students may be eligible to register for 300-level courses in the Department of History of Art and may also receive three credits. Questions concerning advanced placement may be directed to the department chairman, Cornell University, 35 Goldwin Smith Hall.

Mathematics

The Cornell calculus sequences discussed below are described under "Basic Sequences" in the Department of Mathematics section of this Announcement.

The regular freshman calculus courses at Cornell do not differ substantially from calculus courses given in many high schools, and it is best to avoid repeating material that has already been covered at an appropriate level. Secondary school students who have had the equivalent of at least one semester of analytic geometry and calculus should, if possible, take one of the CEEB's two Advanced Placement Examinations (calculus AB or calculus BC) during their senior year.

Students with a grade of 4 or 5 on the BC examination may take the appropriate third-semester course (Mathematics 293 or 221) or the sequence 214–215–216–217, but students entering Mathematics 293 may have to make up some material on partial differentiation. Students with a 3 on the BC examination or a 4 or 5 on the AB examination may take the appropriate second-semester course (Mathematics 192, 122, or 112). Students with a 2 on the BC examination or a 3 on the AB examination may take one of the second-semester courses (Mathematics 192 or 112). Advanced placement credit will be awarded appropriately; however, no credit will be granted for a grade of 1 on the BC or 1 or 2 on the AB examination.

A grade of 3 or higher on the BC examination satisfies the distribution requirement in mathematics for students in the College of Arts and Sciences.

The placement examination in mathematics is offered at Cornell only during orientation week and should be taken by students who:

1) have had at least a semester of calculus but did not take a CEEB Advanced Placement Examination;
2) have received a 2 on the BC examination or a 3 on the AB examination and want to enter the upper sequence; or
3) believe that the placement assigned on the BC examination is not high enough in their case.

Students are strongly urged to take the departmental placement test even if they feel that their grasp of the material is uncertain. The grade on this test does not become part of a student's record. No advance registration for the departmental examination is necessary.

Students entering the upper sequence who have a firm grounding in the first semester of calculus but cannot omit the second may, with the consent of the Department of Mathematics, take Mathematics 122 and 221 simultaneously in their first semester. Thus students who take Mathematics 222 in the second semester may have completed the sophomore course by the end of their first year.
## Advanced Placement Program (CEEB) Examinations

---

### Modern Languages

Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a College Placement Test (CPT; formerly CEEB Achievement Test) for placement. Language course placement is made using guidelines that match CPT reading scores with various levels of courses. In cases where no CPT exists for a particular language, the Department of Modern Languages and Linguistics designates a professor to handle placement for that language. Students who have had a year of formal study or substantial informal study since they last took a CPT are permitted to take the examination again during orientation week.

Advanced standing credit may be entered on a student’s record as follows:

1. For high school work, three to eight credits may be granted for the equivalent of 200-level courses. Credit is based on performance on the CEEB Advanced Placement Examination, Cornell’s Advanced Standing Examination, or a special departmental examination. To be eligible for Cornell’s Advanced Standing Examination, students must have earned a score of 650 or above on the reading section of the College Placement Test (CPT; formerly CEEB Achievement Test). A student who has received three credits by scoring 4 or 5 on the CEEB Advanced Placement Examination is advised to take the Cornell Advanced Standing Examination. Outstanding performance on this examination could provide additional credits.

2. For formal language work at an accredited college, credit is considered by the department upon submission of a transcript and may be entered on the student’s Cornell record.

3. Native speakers of languages other than English may, upon examination by the appropriate professor, be granted a maximum of six credits if they can demonstrate proficiency equivalent to course work on the 200 level or above at Cornell. Additional credit will be considered only for those who pursue advanced work in their native language.

For further information, contact the Department of Modern Languages and Linguistics, Cornell University, 203 Morrill Hall.

### Music

Advanced placement and credit are awarded only in music theory and only on the basis of a comprehensive examination administered by the Department of Music, normally during orientation week. If special arrangements are made, the examination may be administered at other times during the academic year. All students interested in taking this examination should consult Professor S. Stucky. Inquiries may be directed to the Department of Music, Cornell University, 124 Lincoln Hall (telephone 607/256-4097).
Near Eastern Studies

For advanced placement and credit in Hebrew and Arabic, students should consult the Department of Near Eastern Studies, Cornell University, 377 Rockefeller Hall. Advanced placement and credit are determined by departmental examination.

Physics

Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (physics B or physics C), certain international examinations, or the departmental examination (which may be taken during orientation week or at other times as arranged). For permission to take the departmental examination, consult Professor R. Cotts, 522 Clark Hall. Results of the CEEB Advanced Placement Examination are reviewed individually by the Department of Physics, using the guidelines discussed below.

Physics B. Students earning a score of 4 or 5 may receive eight credits for Physics 101 or 102. Those earning a score of 5 in physics B with a score of 4 or 5 in calculus BC or a score of 5 in calculus AB may choose to accept four credits in Physics 112 or 207 instead of eight credits in Physics 101 and 102. Those earning a score of 3 will receive four credits in Physics 101.

Physics C. To receive credit in calculus-based physics courses, a student should be eligible for advanced placement or transfer credit in one semester of the mathematics calculus sequence for each physics course credited.

1) C—Mechanics Students earning a score of 4 or 5 will receive four credits in Physics 112 or 207.

2) C—Electricity and Magnetism Students earning a score of 4 or 5 may be eligible for four credits in Physics 208, and students earning a score of 5 will be eligible for four credits in Physics 213, but all such students should first meet with Professor R. Cotts, 522 Clark Hall.

Advanced placement into a next-in-sequence course depends on the completion of the appropriate mathematics prerequisites before enrolling. To qualify for advanced-placement credit, it is not necessary to continue the study of physics.

General information and advice may be obtained from Professor R. Cotts, 522 Clark Hall, or from the Department of Physics, Cornell University, 109 Clark Hall.

Psychology

Students who have scored well on the CEEB College-Level Examination Program psychology test may receive advanced placement credit in psychology. Those interested in taking further courses in psychology should consult a faculty member in the Department of Psychology, Cornell University, 214 Uris Hall.

Advanced placement based on the CEEB test may not be used to satisfy the distribution requirement in the College of Arts and Sciences. Credit toward the requirements of a major in psychology will depend on the recommendation of the student's major adviser.

Romance Studies (French and Spanish Literature)

The Department of Romance Studies grants three credits to students with a score of 4 or 5 on the CEEB Advanced Placement Examination in French or Spanish literature.

Sociology

The Department of Sociology will recommend three advanced placement credits for students who receive the equivalent of a B on the CEEB College-Level Examination Program sociology test and whose essays are considered acceptable by the department. Students receiving this credit will be eligible for placement into courses for which an introductory course in sociology is the prerequisite.

For further information, contact the Department of Sociology, Cornell University, 323 Uris Hall.

College of Arts and Sciences Regulations

Courses taken at other colleges before matriculation at Cornell may count toward the degree if the appropriate department approves. Such credit is counted as part of the 120 credits required for the degree, but not as part of the 100 credits required in College of Arts and Sciences courses unless the department concerned accepts such courses as fulfilling part of the major requirement.

Students who want to receive credit for college courses taken elsewhere during the summer before matriculation at Cornell should bring the relevant catalog descriptions when they come to campus even if the transcript is not yet available.

Freshmen who have taken courses at Cornell should ask the Office of the University Registrar, 222 Day Hall, to send transcripts to the college records office, 144 Goldwin Smith Hall.

Further Information

For further information about advanced placement, contact the person in the appropriate college or school listed below. Entering freshmen should have their advanced placement test scores sent to their school or college office.

College of Agriculture and Life Sciences

Language Placement Tests

Students who have had two or more years of language study in high school and do not have a recent CEEB College Placement Test reading score must take a CEEB College Placement Test (CPT; formerly CEEB Achievement Examination) in the language they wish to continue at Cornell. If there is no College Placement Test for that language, students must arrange a departmental interview. Language placement tests are given at the beginning of each fall and spring semester.

Information about times and places to take placement tests is available in the orientation booklet, from Academic and Career Counseling Services, and from the Department of Modern Languages and Linguistics. Students must register for these tests at Academic and Career Counseling Services, 203 Barnes Hall, and pay a fee. For more information, see the College of Arts and Sciences section on language course placement.
Special Academic Services and Programs

The Writing Workshop

The Writing Workshop, on the first floor of Rockefeller Hall (please call 256-6349 for more exact location), offers a range of services for students seeking help with writing.

Tutoring Services

Tutoring is available through many departments and organizations at Cornell. Students who need tutoring may contact their school or college offices, their faculty advisers, or their professors for information about sources of tutoring assistance.

Interfraternity Council

The Interfraternity Council (IFC) provides tutors without fee to any student who needs help with a course. Tutors are available in virtually every field. For more information, call IFC 256-5183 or stop at the IFC office, 210 Willard Straight Hall.

Field Service and Study Abroad

Field service and study abroad provide students with invaluable experiences. Most opportunities are offered through individual departments or colleges and are described in those sections. Students are also encouraged to consult the Career Center for information on programs that are not directly sponsored by the University.

Counseling and Academic Advising Services

Students who receive degrees without ever needing or wanting advice are rare. The University encourages students to ask for assistance and advice whenever they need it, and numerous advising services exist on campus.

Many students are specifically assigned a faculty adviser for all or part of their undergraduate career. Faculty members can provide a wide range of advice, from suggestions about courses to take, books to read, or facilities to use, to specific information about college or departmental regulations.

Most schools and colleges have advising programs, which are described in those sections. Offices that offer specific kinds of counseling, available to any student at Cornell, are briefly described below.

Career Center

The Career Center, with its main office located at 14 East Avenue across from Statler Hall, is part of the University counseling and advising network. Working in cooperation with the college offices, it assists all Cornellians, from first-year students to alumni.

The Career Center functions with one basic premise, a commitment to help students explore, discover, and choose a career. The primary objective is to help students devise a plan of action for seeking a career, finding employment, or furthering their education by gaining admission to graduate or professional school. Professional staff members and trained student advisers are available for advising and counseling. Current services and programs are advertised in the Career Center News, which appears in the Monday edition of the Cornell Daily Sun.

The Career Center Annex, located in 365 Olin Hall, houses the Credentials Office, a service for students and alumni, and the Health Careers Evaluation Committee. The Career Center has an office in 309 West Sibley Hall that serves the College of Architecture, Art and Planning. There is also an office in the admissions complex of Goldwin Smith Hall that serves the College of Arts and Sciences.

The center’s facilities, programs, and activities include the following:

Career Library services. The Career Center Library contains an extensive collection of information and videotapes. Students are welcome to come in and browse through our resources. Sections include information on careers, graduate and professional schools, fellowships, employers, health careers, study-abroad programs, government, overseas and summer employment, job-hunting techniques, and internship opportunities. Throughout the academic year are sessions that explain how to use the library to find a summer job, fund graduate study, pursue government employment, plan an academic semester abroad, and more.

Academic and Career Counseling Services. The ACCS (formerly the Guidance and Testing Center), which is located in 228 Barnes Hall, offers individual counseling, test assessment, and workshops for students who seek help in defining academic or career objectives or who wish to resolve academic problems. All counseling and test results are kept strictly confidential. There is a fee for the battery of tests, and it is necessary to call in advance for an appointment. Appointments can be made Monday through Friday between 8:00 a.m. and 4:30 p.m. by calling 256-5044.

The University

The Learning Skills Center

For a description of the services provided by the Learning Skills Center, see the section “Minority Education (COSPE),” p. 15.

Reading and Study Skills Program

This program offers courses in speed reading and a variety of study skills. Special emphasis is placed on how to read texts, budget time, and prepare for examinations. A credit course on reading and learning strategies is offered through the College of Human Ecology. In addition to the minicourses, audio cassettes on these topics are maintained at the center, in the Media Room of Mann Library, at the reserve desk of Mann Library, in room C111 of the College of Veterinary Medicine, and at the three student unions. The Reading and Study Skills Program is located in the Learning Skills Center, 375 Olin Hall (telephone 256-6310).
Professional and graduate school advising. The professional-graduate school advising program offers a number of information sessions that cover everything from how to prepare for an entrance exam to a step-by-step approach on how to select everything from how to prepare for an entrance exam to a step-by-step approach on how to select candidates for prestigious awards and fellowships.

Job placement services. As a starting point, the Career Center helps students secure full-time employment by conducting "how-to" sessions and programs on interviewing, résumé writing, government employment, alternatives to teaching, and effective job-hunting strategies. Each semester the Career Center publishes the Placement Manual, a comprehensive guide to the services offered, and to the entire job-hunting process. In addition, the Center administers an on-campus recruitment program for matriculated Cornellians. Any matriculated student or alumnus of Cornell may establish a credentials file at the center's Credentials Office in the Career Center Annex.

Minority planning and placement. The Minority Planning and Placement Office specializes in comprehensive career planning and placement advising for minority students. Programs include job placement workshops and graduate study programs, information seminars that address the needs and concerns of the minority community. Career conferences are also held in conjunction with minority student organizations.

Internships. A growing number of students obtain valuable career orientation and practical experience through internships. Many have found summer internships through the Cornell Internship Program (CIP), a student organization that works in cooperation with the Career Center. Locating internships in business, government, and nonprofit organizations.

Health Careers Program. The Health Careers Advising Program specializes in providing information on preparing for a health career or health professional school. The program provides career information sessions, briefings on preparation for standardized tests, application forms, and two publications: A Guide for Premedical Students at Cornell University, Part I, and A Guide for Prevetenary Students at Cornell University. Another component of the Health Careers Program is the Health Careers Evaluation Committee, which is responsible for the letters of evaluation that are part of the application to most medical and dental schools.

Services for the Disabled

As a University committed to the principle of equal opportunity, Cornell's academic and social resources must be fully available to all who are qualified, including persons with disabilities such as loss of sight, hearing impairments, neurological limitations, limited mobility, or learning disabilities.

Significant steps toward making its facilities and services accessible to the disabled have been taken by Cornell. Classes, library services, dining facilities, student residences, guest lectures, and employment opportunities are some of the settings and activities for which accessibility must be assured. Since Cornell desires to provide access in as integrated and natural a setting as possible, the emphasis is on bringing the student to the class rather than on bringing the class to the student. A campus-wide program to provide ramps, curb cuts, and remodeled rest-room facilities has been completed. Special parking permits for the disabled can be obtained from the Traffic Bureau. Housing for accessible accommodations in residence hall facilities are available for individual students.

The Career Center also serves as a distribution place for professional-graduate school admission-test applications and coordinates the nomination of candidates for prestigious awards and fellowships.

Minority Education (COSEP)

The Committee on Special Educational Programs (COSEP) at Cornell University provides various services, academic, financial, social, and personal support services for minority students.

COSEP was founded by President James A. Perkins in 1963 in accordance with Cornell's mission as a land-grant institution and its founding philosophy. "I would found an institution where any person can find instruction in any study," provides admission opportunities for minority students who want to enroll in one of Cornell's seven undergraduate schools and colleges.

Through various methods, such as recruitment, an orientation and summer prefreshman-year program, tutorial instructional courses, and counseling programs, COSEP provides educational assistance to minority students that historically have been excluded or underrepresented in higher education. The University-sponsored financial aid program supports eligible students with financial assistance that includes a COSEP scholarship.

The main goals of COSEP are:
1) To increase the enrollment of minority students at Cornell
2) To provide supportive services after admission for academic, personal, and social adjustment
3) To raise the retention and graduation rates of minority students
4) To recommend institutional policy for this group

The Learning Skills Center

The Learning Skills Center (LSC) is the academic support unit of COSEP. The LSC provides academic advising, preparatory instruction in core courses, (biology, physics, English, chemistry, and mathematics), and tutorial and study sessions. A prefreshman-year summer program gives new students an opportunity to pursue college courses before fall enrollment. The LSC has study hall accommodations and provides students access to typewriters, calculators, a reserve library, course notes, previous examinations, and tapes. Academic advising, including help in specific areas of study, scheduling, or programming information is provided by LSC staff.

State Programs (HEOP and EOP)

In 1969 COSEP was expanded by the addition of the New York State Educational Opportunity Program (Colleges of Agriculture and Life Sciences, and Human Ecology, and the School of Industrial and Labor Relations) and the Higher Education Opportunity Program (Colleges of Architecture, Art, and Planning, Arts and Sciences, and Engineering; and the School of Hotel Administration). These programs are called EOP and HEOP respectively.

HEOP gives students who would not be admitted through regular admission selection an opportunity to attend Cornell. The programs provide students with academic supportive services, counseling, and financial aid. New York State residents who are both academically and economically disadvantaged are eligible.

Student Services

Services include student activities, work-study jobs, leadership training, and assistance in development of organizational skills and implementation of programs. A general counseling-referral service is also provided by the office. COSEP has associate staff members in the Financial Aid Office, the Career Center, and Cornell Psychological Service to assist students in these areas.

International Student Office

The International Student Office, 200 Barnes Hall (telephone 607/256-5243), serves as an information center and provides arrival assistance, housing information, personal and academic advising and counseling, immigration advising, and financial planning assistance.

Financial Aid

Eligibility and Availability

Financial aid resources for undergraduate nonimmigrant foreign students are severely limited at Cornell. Consequently, the competition for these awards is keen, and only a small percentage of each entering class receives assistance. Students who receive financial aid are likely to be those with exceptional academic records, high test scores, strong potential for positive contributions to the Cornell community, and demonstrated financial need. Awards are a combination of scholarship, loan, and on-campus work.

If a student does not receive financial aid upon entering Cornell, there is little chance of obtaining aid in the future, except in the event of an unforeseen financial emergency. Should a student experience an unexpected financial problem after enrolling, he or she should immediately contact the International Student Office for assistance.

Nonimmigrant students who receive financial aid from the University must reapply for aid each year. Application forms are available from the International Student Office.

Loans and Employment

Short-term emergency loans are available through the International Student Office for students who face unexpected financial crises. Under certain circumstances, long-term loans are also available. Nonimmigrant foreign students are not eligible for the federal work-study program that is administered by the Student Employment Office. Foreign students holding F-1 visas may accept non-work-study employment on campus for up to twenty hours a week. Due to visa restrictions, foreign students may not accept any off-campus employment without permission of the United States Immigration and Naturalization Service. Questions regarding permission to work should be referred to the International Student Office.
Note: Foreign students in the School of Hotel Administration who want to fulfill their practice credit requirement by working in the United States during vacations or the summer should contact the Hotel School registrar's office.

Health Requirement
Foreign students and their dependents must present a chest X-ray taken within twelve months of registration at Cornell, or undergo an X-ray upon arrival. Free chest X-ray service is available at the Gannett Clinic. Residents of the following areas are exempt from this chest X-ray requirement: Europe, Japan, Australia, New Zealand, and Canada.

Registration
All entering nonimmigrant foreign students (including Canadians) must secure clearance from the International Student Office before registration will be permitted.

Leaves of Absence, Withdrawals, Transfers, Credit-Hour Reductions
Any nonimmigrant foreign student planning to take a leave of absence should check first with the International Student Office. Students taking a leave or withdrawing from the University normally cannot legally remain in the United States. Students graduating or leaving the University should file a Notice of Departure with the International Student Office. Students intending to transfer to other universities in the United States should check the immigration regulations regarding transfer in the International Student Office.

Visa regulations also stipulate that students must carry at least twelve credits each term. Foreign students who are petitioning to drop their course load below twelve credits should contact the International Student Office to determine how such a decision will affect their visa status and financial aid.

Personal Counseling Services

University Health Services. Counseling services are provided in the health center and the Psychological Service. For an appointment at the Psychological Service, the student should call 256-5208 or go to the center.

Cornell United Religious Work. A diverse staff of pastoral counselors and advisers, available day and night for consultation, may be reached through the office, 118 Anabel Taylor Hall (telephone 256-4214).

Empathy, Assistance, and Referral Service (EARS). EARS is a peer counseling service offered through the Office of the Dean of Students, available to the Cornell community for walk-in counseling (211 Willard Straight Hall) or telephone counseling (256-EARS or 256-RAGE).

Suicide Prevention and Crisis Service is a hotline and referral service for the entire community. In addition to crisis counseling, it provides hotline and referral services for raped or battered women (telephone 272-1616).

Office of the Dean of Students, in 103 Barnes Hall, provides short-term counseling, personal-growth workshops, consultation, and referral (telephone: 256-4221 and 256-3608).

Student Life and Activities

Office of the Dean of Students
The primary aim of the Office of the Dean of Students (ODS) is the personal, social, and intellectual development of students and the enhancement of the quality of the educational environment for the benefit of the entire community.

Specific responsibilities of the office include training and development of peer counseling groups such as EARS (Empathy, Assistance, and Referral Service), new-student programs; fraternity and sorority advising; and off-campus life and housing. The office provides personal-growth groups that address student concerns in a supportive environment, and research and organizational development for community life, and assists individuals who need to know which University department is best equipped to answer any particular question that may arise during the course of the year.

Staff serve as advocates for, and as consultants to, campus groups serving to resolve problems or improve programs. In addition, ODS assumes responsibility for organizing and supporting ad hoc groups to examine issues that cut across divisional boundaries, for example, racism, human relations, and alcohol abuse.

A further major responsibility of the office is the assessment and improvement of the University community and its members.

Various publications are prepared by the ODS, including the Cornell Calendar, Policy Notebook for Students, Faculty and Staff, and Off-Campus Housing in the Ithaca Area.

Students and staff are always welcome to drop in at the office in Barnes Hall or call (telephone 256-4221) if they have any questions or concerns.

Housing
There is sufficient variety among University residences to meet the needs and desires of most individuals. Each year, however, more students than the Department of Residence Life can accommodate want to live on campus. Acceptance to the University does not automatically guarantee a room in a residence hall, but all freshmen who apply for accommodations in residence halls are assured of an assignment their first year, although those who submit late applications may be placed in a temporary assignment at the start of the year.

Personal property is not insured by the University, nor is the University liable for loss or damage to any article of personal property. Students are encouraged to take out personal property insurance on their belongings. Information on personal property insurance is available at the Office of the Dean of Students in 103 Barnes Hall.

The Off-Campus Housing Office in 103 Barnes Hall maintains lists of accommodations that have been voluntarily submitted by local landlords. These lists are constantly changing and must be seen in the office. For more information, the booklet Guide to Off-Campus Housing may be obtained from the above office.

Information concerning University housing is available from the Department of Residence Life. Cornell University, 1142 North Beach Hall, Ithaca, New York 14853.

Dining Services

Cornell Dining provides diverse food service programs for the entire Cornell community.

Co-op Dining
Co-op Dining is a completely voluntary dining plan serving more than half Cornell's undergraduates as well as many graduate students and other qualified members of the Cornell community. Any student may join.

Co-op Dining offers twelve flexible meal-plan options. These options have a variety of time and meal periods of five- or seven-day basis. Members are not penalized for switching meal plans to better meet their individual academic routines. Maximum flexibility is included with a two-meal-a-day plan that offers a choice of breakfast or lunch, and dinner daily. Co-op members may also purchase prepaid points to supplement their chosen meal-plan options.

Members eat in convenient dining rooms, located in the residential areas or on the central campus, and are free to select the dining rooms of their choice for each meal. All dining rooms serve a variety of entries (including one vegetarian entrée at both lunch and dinner) each day. In addition, "prime nights" and specials highlight the Co-op Dining program. Specials may include outdoor barbecues, midnight breakfasts, ice cream sprees, or the Cross-Country Gourmet dinner series that has won national acclaim. Menus are posted weekly, and additional information is available through a special menu-information telephone line, 256-DINE.

The cost of each meal-plan option is set at the beginning of each academic year and is automatically billed on a semester basis. Members do not pay New York State sales tax, which is 7 percent.

The Co-op program does not provide meals during University recess periods, including fall semester break, Thanksgiving, Christmas intersession, spring recess, and summer.

The Co-op Dining program is administered by Cornell Dining, 233 Day Hall (telephone 256-5322). Each year, all new and transfer students receive a program description and contract. All terms and conditions of the Co-op Dining program are given in the contract, which all prospective members should read carefully before completing and mailing the application.

Other Dining Services
Dining at Cornell is not limited to the Co-op Dining program. Students who do not choose to join a dining plan, University faculty and staff members, and visitors may choose from a variety of dining rooms on campus. Each dining room has its own atmosphere and menu. Most dining units serve cafeteria style.

Cash a-la-carte service is available at three Cornell Dining locations seven days a week, throughout each day. All cash dining units accept cash, Cornellcard, MasterCard, and VISA cards. Dining service at each unit follows the posted hours of operation but may be limited during the summer session and University recesses such as Thanksgiving, Christmas intersession, and spring break.

The Pick-Up offers a variety of grocery items, beverages, magazines, and personal items. A convenient check-cashing service and a small game room are also provided. The Pick-Up is located on the lower level of Hoyes Lodge (telephone 256-5314).

Vending operations provide food, beverage, and snack items in many campus buildings (telephone 256-3538).

Note: Foreign students in the School of Hotel Administration who want to fulfill their practice credit requirement by working in the United States during vacations or the summer should contact the Hotel School registrar's office.

Health Requirement
Foreign students and their dependents must present a chest X-ray taken within twelve months of registration at Cornell, or undergo an X-ray upon arrival. Free chest X-ray service is available at the Gannett Clinic. Residents of the following areas are exempt from this chest X-ray requirement: Europe, Japan, Australia, New Zealand, and Canada.

Registration
All entering nonimmigrant foreign students (including Canadians) must secure clearance from the International Student Office before registration will be permitted.

Leaves of Absence, Withdrawals, Transfers, Credit-Hour Reductions
Any nonimmigrant foreign student planning to take a leave of absence should check first with the International Student Office. Students taking a leave or withdrawing from the University normally cannot legally remain in the United States. Students graduating or leaving the University should file a Notice of Departure with the International Student Office. Students intending to transfer to other universities in the United States should check the immigration regulations regarding transfer in the International Student Office.

Visa regulations also stipulate that students must carry at least twelve credits each term. Foreign students who are petitioning to drop their course load below twelve credits should contact the International Student Office to determine how such a decision will affect their visa status and financial aid.

Personal Counseling Services

University Health Services. Counseling services are provided in the health center and the Psychological Service. For an appointment at the Psychological Service, the student should call 256-5208 or go to the center.

Cornell United Religious Work. A diverse staff of pastoral counselors and advisers, available day and night for consultation, may be reached through the office, 118 Anabel Taylor Hall (telephone 256-4214).

Empathy, Assistance, and Referral Service (EARS). EARS is a peer counseling service offered through the Office of the Dean of Students, available to the Cornell community for walk-in counseling (211 Willard Straight Hall) or telephone counseling (256-EARS or 256-RAGE).

Suicide Prevention and Crisis Service is a hotline and referral service for the entire community. In addition to crisis counseling, it provides hotline and referral services for raped or battered women (telephone 272-1616).

Office of the Dean of Students, in 103 Barnes Hall, provides short-term counseling, personal-growth workshops, consultation, and referral (telephone: 256-4221 and 256-3608).
Catering
Cornell Catering serves the entire Cornell community either in its private dining rooms, located on the third floor of North Campus Union, or at functions held in many campus locations. Cornell Catering offers service for a variety of occasions or needs (telephone 256-5555).

Kosher Dining
Kosher meals are offered under the auspices of Young Israel of Cornell. Meals are served seven days a week under a wide variety of meal-plan options. Further information is available by writing to the Steward, Young Israel of Cornell, 106 West Avenue, Ithaca, New York 14850.

University Health Services
The University Health Services provides comprehensive medical care for all full-time undergraduate and graduate students enrolled at Cornell University in Ithaca. Gannett Health Center, located at 104 East Avenue adjacent to Hall Straugh Hall, is open twenty-four hours a day during the school year and is available for overnight care and emergency outpatient service outside of normal working hours Monday through Friday from 6:30 to 11:30 p.m. and from 1:00 to 4:30 p.m., and Saturday from 8:30 a.m. to 1:30 p.m. The center's medical staff, under the supervision of the medical director, consists of attending physicians and health associates from the University staff, and consulting physicians and surgeons from the Ithaca area. All medical records are strictly confidential.

For a medical appointment, a student should call 256-4082 or go to the center. For an appointment at the Psychological Service, a student should call 256-5208 or go to the offices at the center. A doctor is available for emergencies twenty-four hours a day (telephone 256-5155).

The tuition charge covers the cost of the following services for the academic year:
1) unlimited visits to Gannett Health Center
2) overnight care
3) routine diagnostic and X-ray examinations as ordered by Health Services clinicians and performed by Health Services staff
4) physical therapy services
5) counseling services at the center and in the Psychological Service

Some expenses not covered by the University Health Services program are visits to private physicians or private health care facilities; home calls; hospitalization expenses; hospital charges and fees for surgical procedures; fees for eye examinations for glasses, allergy injections, immunization vaccines and inoculations for travel abroad; initial contraceptive examinations; physical examinations for studies elsewhere or for fellowship applications; expenses for prenatal, or obstetrical, care; and expenses connected with illness or injury occurring (a) outside of Ithaca while in transit to and from college, on weekend trips, and on vacations away from Ithaca during the academic year; and (b) during the summer unless enrolled as a summer student.

To cover many of the services not provided free of charge by University Health Services, all full-time registered students and students studying in absence are automatically enrolled in an accident and sickness insurance plan, underwritten by a private insurance company, that includes a $20,000 major-medical provision. The plan covers hospital care, charges for surgical procedures, consultations with a private physician or specialist if referred by a Health Services physician, expenses connected with illness or injury outside of Ithaca, and limited reimbursement for allergy injections, prescription drugs, and most outpatient services. Students are covered by this plan for the entire twelve months. Only by returning a yearly waiver form, which is mailed with the first bursar's bill or available at Gannett Health Center, the Bursar's Office at 260 Day Hall, and at University registration, will students not be covered and not charged for this plan. The cost of this plan for 1982–83 will be approximately $135 for the entire twelve months, and the charge will appear on each student's fall tuition bill. Unless students have other health insurance to supplement medical services provided by the University Health Services, they are strongly urged to take advantage of this plan. After the waiver form has been completed, a student may be reinstated if the parent's insurance plan drops the student at a certain age or if the student's marital status changes. Application must be made within thirty days of discontinuation of other coverage.

Students who are enrolled in the accident and sickness insurance plan may also enroll their spouses and children for an annual premium. Information concerning this insurance may be obtained at Gannett Health Center or by telephoning 256-6363.

Students' spouses are eligible for benefits identical to the student health care program on a prepaid or fee-for-service basis. These services are not to be confused with the supplementary accident and sickness insurance plan. Information and forms for the spouse program may be obtained by writing or visiting the University Health Services, Gannett Health Center, Cornell University, 10 Central Avenue, Ithaca, New York 14853.

Cornell United Religious Work
Cornell United Religious Work (CURW) coordinates religious affairs at Cornell. Participants in CURW may be involved in denominational, interreligious, or nondenominational activities. The denominational programs include daily or weekly opportunities for worship, study, and interaction. CURW member groups share in support and leadership of interreligious programs such as the Sage Chapel convocations, CIVITAS (Cornell-Ithaca Volunteers-in-Training-and-Service), the Interreligious International Ministry (IRIM), noncredit courses, lectures, conferences, and involvement in varied services to the University community. A diverse staff of pastoral counselors and advisers, available day or night for consultation, may be reached through the office, 118 Anabel Taylor Hall (telephone 256-4214). This office also has information concerning weekly religious convocations in Sage Chapel and worship opportunities in the local churches and synagogue. Anabel Taylor Hall houses the Commons, a coffeehouse providing a place for informal communication between faculty, staff, and students. Closely associated with CURW but independent of it is the Center for Religion, Ethics, and Social Policy (CRESP), the nondenominational research and action component of religious affairs at Cornell.

Judicial System
The judicial administrator's office receives and investigates complaints brought by students, other members of the University, and offices on campus involving alleged violations of the Campus Code of Conduct or the Statement of Student Rights. The judicial administrator may also initiate investigations if there is reasonable cause to believe that a violation has occurred. The judicial administrator files charges and reminds the defendant of the services of the judicial adviser. Personal details of complaints and judicial actions are considered private information.

Many judicial cases are resolved by summary decision. In such decisions, the judicial administrator proposes a fine or a remedy, or both, that the parties to the case choose to accept. Either the defendant or the judicial administrator may, however, decide instead to take the case to a formal hearing. A compliant who is dissatisfied with the judicial administrator's action in a complaint may appeal that action to the University Hearing Board, which then decides whether or not to refer the case to an adjudicatory hearing.
Fraternities and Sororities

For many students, fraternity or sorority life is an integral part of the Cornell experience. There are currently fifty fraternities at the University, with about twenty-five hundred students, or 37 percent of the men undergraduate students, as members. There are twelve sororities, with about eleven hundred students, or 22 percent of the women undergraduates, as members. Each chapter has its own flavor and environment.

As one of the largest systems in the country, diversity is the key to its continuing growth. While satisfying room and board needs, fraternities and sororities provide opportunities for friendships, leadership, and personal growth. Three student-run governing boards oversee the many programs associated with fraternities and sororities. These boards are the Interfraternity Council, the Panhellenic Council, and the Black Greek Council.

Athletics

At Cornell, athletics are designed to encourage the participation of every able and interested student in varsity sports or the extensive intramural program. Cornell supports intercollegiate athletics programs for men and women in the country and belongs to the Ivy League. There is intercollegiate competition for men in baseball, basketball, crew, cross-country, fencing, football, lightweight football, golf, gymnastics, hockey, lacrosse, polo, rifle, sailing, skiing, soccer, squash, swimming, tennis, track, and wrestling.

Cornell fields sixteen intercollegiate women's teams—more than any other college or university in New York State. The women's athletics program, one of the largest in the nation, includes basketball, bowling, crew, cross-country, fencing, field hockey, gymnastics, ice hockey, lacrosse, polo, skiing, swimming, synchronized swimming, tennis, track, and volleyball.

Information Services

The Information and Referral Center assists students, faculty, staff, and visitors by distributing free literature, answering questions, and giving directions. The center responds to questions over the telephone, in the mail, and on a walk-in basis. Questions to which answers are not readily available will be researched by the center staff. The center's aim is to minimize confusion and to help people avoid the necessity of contacting several offices with their questions. The center is in Day Hall near the East Avenue entrance and is open Monday through Saturday from 9:00 a.m. to 5:00 p.m. The telephone number is 607/256-6200.

Campus tours originate from the Information and Referral Center Monday through Friday at 11:15 a.m. and Sunday at 1:00 p.m. From November 1 through March 31 the weekday tours are given at 1:30 p.m. only.

In Willard Straight Hall there is an information desk known as the Straight Desk. It differs from the Information and Referral Center in that it does not have a library of free literature and does not conduct tours. It does, however, sell snacks, magazines, and newspapers. The Straight Desk is open from 8:00 a.m. to 10:00 p.m. Monday through Friday, 9:00 a.m. to 10:00 p.m. on Saturdays, and 10:00 a.m. to 10:00 p.m. on Sundays. The telephone number is 607/256-3450.

Transportation Services

Traffic and Parking

To provide a safe walking environment for pedestrians on campus and to reduce the impact of motor vehicles on the limited campus parking facilities, Cornell has restricted vehicle access to the central campus. Cornell University encourages ride sharing and the use of alternative modes of transportation such as public transit, bicycling, and walking.

All on-campus parking (except in certain metered and time-zone areas) requires a permit only and is subject to posted restrictions; vehicle access to the exterior campus is restricted Monday through Friday from 7:30 a.m. to 5:00 p.m. Special parking restrictions are posted where applicable. Parking regulations are in effect throughout the year.

A campus bus service operates between peripheral lots and the central campus; several community bus routes connect the University with surrounding residential and commercial areas.

All members of the campus community (students, faculty, staff, and employees of non-University agencies located on University grounds) are required to register annually with the Traffic Bureau any motor vehicles (including motorcycles) in their possession which may at any time be parked on Cornell property. This registration information ensures that the owner or operator may be rapidly identified and contacted if necessary; for example, if a parked vehicle is involved in an accident, must be moved immediately, or has been left with its lights on. There is no charge for vehicle registration; however, a registration sticker is not in itself a parking permit.

Information on traffic and parking regulations is available at the traffic and information booths on campus and at the Traffic Bureau on Maple Avenue. The bureau will be glad to assist any individual with general inquiries or special problems and requests (telephone 256-4600).

Bus service. Information about the campus bus system may be obtained from the Campus Bus Service (telephone 256-3782). Schedules for on-campus and off-campus service are posted in all bus-stop shelters and are also available from the Traffic Bureau, the Information and Referral Center in the Day Hall lobby, North Campus Union, and the Willard Straight Hall Information Desk.

Public Safety Services

Emergencies

Accidents, crimes, fires, and all other emergencies on campus should be reported immediately to the Department of Public Safety (telephone 256-1111). The Department of Public Safety is located in G2 Barton Hall and is open twenty-four hours a day. Public telephones to report emergencies, seek information, or to report suspicious activity are located throughout the campus and can be readily recognized by blue lights above them.

Lost and Found

The central Lost and Found Office operated by the Department of Public Safety is located in G18 Barton Hall and is open 7:00 a.m. to 4:00 p.m. Monday through Friday (telephone 256-1944). Lost articles are often turned in to the information desks in Day Hall and Willard Straight Hall, and other central offices, but all such items are eventually turned over to this central Lost and Found.

University Services Bureau

The University Services Bureau is responsible for scheduling and staffing extra University functions that
require public safety personnel for traffic direction or crowd control. Contact the manager of the University Services Bureau at 256-7406.

Support Services Section
The Public Safety Support Services Section provides lectures and orientation to various University groups on topics ranging from general public safety services to drug abuse, crime prevention, and rape and assault prevention. Contact the manager of the Support Services Section at 256-7302 if you are interested in these free programs.

University Registration
University registration is the process by which the University registrar and colleges certify the eligibility of students to enroll in courses and purchase or use a variety of services available at the University, such as Cornellcard, Co-op Dining, libraries, special bus passes, and housing. University registration includes the issue or validation of the student identification card and the collection of information needed for the student directory and state and federal reports. University registration is held on the dates stated in the University calendar at a time and place announced well in advance of the beginning of each semester.

Late Registration
The final date for late registration coincides with the last day for adding courses. Late registrants are assessed a late processing charge. Requests to waive the charge will be acted on favorably only for reasons of academic involvement.

The University does not permit after-the-fact registration in which persons attend classes and pass courses before seeking to register and receive official course credit.

The University reserves the right to require unauthorized nonregistered persons who attend classes or in other ways seek to exercise student privileges to leave the University premises. The University registrar will notify the appropriate college or school about such cases and ask that office to contact the person concerned.

Course Add/Drop/Change Period
Students may adjust their schedules during add/drop/change periods. The length of the periods varies according to colleges. An optical-mark form is completed by the student and signed by both the student’s adviser and an appropriate representative of the department offering the course (an instructor, department staff member, or college registrar, depending on the college). The completed and signed form must be returned to the student’s college office to be processed. See chart below for course add/drop/change fee.

Course Enrollment
Course enrollment for each semester at Cornell takes place partway through the preceding semester. Dates are announced in advance and are usually posted in the school and college offices. Course enrollment generally runs for two weeks. Each college or school notifies students about special procedures. Students are often expected to meet with their advisers during this two-week period to check that the courses they plan to take will ensure satisfactory progress toward a degree. Students complete an optical-mark course enrollment form, then return the form to their college office. The forms are processed, and each student is sent a Course Confirmation Statement listing the courses processed from the enrollment form. Class schedules are distributed later by the college offices, often during the same days as University registration.

New students and transfer students are sent course enrollment instructions by their college offices before they arrive on campus. Procedures vary from college to college.

Students who fail to submit a course enrollment form during the designated period may be charged a late fee. The fees are listed in the chart in the following section.
Class Schedules and Attendance

Class Attendance and Absences

Students are expected to be present throughout each term at all meetings of courses for which they are registered.

The right to excuse a student from class rests at all times with the faculty member in charge of that class.

All lectures, recitations, and similar exercises start at 8:00 a.m., 9:05 a.m., 10:10 a.m., 11:15 a.m., 12:20 p.m., 1:25 p.m., 2:30 p.m., or 3:35 p.m. and last fifty minutes, except that on Tuesday and Thursday the first and second, the third and fourth, the fifth and sixth, and the seventh and eighth periods may be combined to allow for longer meeting times.

All laboratories and similar exercises that continue for 1 hour and 55 minutes, 2 hours and 25 minutes, or 3 hours are scheduled as shown below.

Schedule for Classes Longer than Fifty Minutes

1 Hour and 55 Minutes
8:00 a.m. – 9:55 a.m.
10:10 a.m. – 12:05 p.m.
12:20 p.m. – 2:15 p.m.
2:30 p.m. – 4:25 p.m.
7:30 p.m. – 9:25 p.m.

2 Hours and 25 Minutes
7:30 a.m. – 9:55 a.m.
10:10 a.m. – 12:35 p.m.
2:00 p.m. – 4:25 p.m.
7:30 p.m. – 9:55 p.m.

3 Hours
8:00 a.m. – 11:00 a.m.
10:10 a.m. – 1:10 p.m.
1:25 p.m. – 4:25 p.m.
7:30 p.m. – 10:30 p.m.

On Monday, Tuesday, Wednesday, and Thursday the hours of 4:25 to 7:30 p.m.; on Friday the hours after 4:25 p.m.; on Saturday the hours after 12:05 p.m.; and all day Sunday are free from all formal undergraduate class or laboratory exercises.

Evening classes are held only on Monday and Wednesday and only when regularly scheduled and included in written college announcements or when recommended by the Committee on Academic Records and Instruction. Evening lectures, recitations, and similar exercises start at 7:30 and 8:35 p.m.; evening laboratories and similar exercises start at 7:30 p.m.

Evening preliminary examinations that will be given outside of normal class hours may be scheduled on Tuesday and Thursday evenings only, for the term period 7:30–9:20 p.m. All such examinations shall be scheduled with the Examination and Room Coordinator in the Office of the University registrar. The dates and times of these examinations are listed in Courses of Study as well as in the Course and Room Roster.

Any exception to the above regulations will require permission of the dean or director of the college or school offering the course. All such exceptions shall include provision of special arrangements for the students for whom conflicts are generated by such an exception.

Final Examinations

Final examinations for undergraduate courses are scheduled by the Office of the University registrar.

Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. Examinations not listed in the registrar's examination schedule will be arranged by the professor in charge and must fall within the announced examination period, except by the express permission of the dean of the faculty in accordance with existing faculty legislation.

Auditing Courses

Summer school and extramural students may officially register as Visitors (auditors) in courses and have this entered on their permanent records if their attendance is reported as satisfactory. Graduate students may register for courses as auditors but will not have the courses listed on their transcripts. Undergraduates may not register to audit courses.

Leaves and Withdrawals

A leave of absence must be requested from the college in which the student is enrolled. A leave of absence is granted for a specified time, after which the student is expected to return to resume course work. The student should inform the college of enrollment of his or her intent to return.

A student may withdraw from the University at the student's discretion. However, a college may withdraw a student who fails to return at the end of a period of authorized leave.

Internal Transfers

A student in good standing may apply to transfer from one college to another within the University. It is necessary for an internal transfer to inform the admitting college of the acceptance of admission within seven days of the offer of admission.

Privacy of Records

According to federal law, grades are restricted information and may be released only to the student, or at the student's written request. Thus grades earned on examinations or in courses may not be posted by name. Posting by student ID number is permissible. Graded papers and examinations, if returned, must be returned to individual students and should not be accessible to anyone but the author. For example, setting batches of papers and examinations in a box or on a table is inappropriate and illegal.

Course Numbering System

The course levels have been assigned as follows:

100-Level Course—introductory course, no prerequisites, open to all qualified students.
200-Level Course—lower-division course, open to freshmen and sophomores, may have prerequisites.
300-Level Course—upper-division course, open to juniors and seniors, prerequisites.
400-Level Course—upper-division course, open to seniors and graduate students, 200- and 300-level course prerequisites or equivalent.
500-Level Course—professional level (e.g., B&PA, Law, Vet.).
600-Level Course—graduate-level course, open to upper-division students.

700-Level Course—graduate-level course.
800-Level Course—master's level, thesis, research.
900-Level Course—doctoral level, thesis, research.

Guide to Course Listings

The list of courses that follows is arranged in two broad groups:

Group 1: Divisions that offer both undergraduate- and graduate-level courses

Agriculture and Life Sciences
Architecture, Art, and Planning
Arts and Sciences
Business and Public Administration
Engineering
Hotel Administration
Human Ecology
Industrial and Labor Relations
Nutmational Sciences
Officer Education

Group 2: Graduate professional divisions

Business and Public Administration
Business Administration
Veterinary Medicine

There are no courses offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction. Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the departments. All courses, 0–999, are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

It is not possible to keep this single-volume course list completely up-to-date. The most current information regarding course schedules, sections, rooms, credits, and registration procedures may be found in the Course and Time Roster and the Course and Room Roster, each issued twice a year by the Office of the University Registrar. Students are also advised to consult the individual college and department offices for up-to-date course information.
Grading Guidelines

The official University grading system uses letter grades with pluses and minuses. Passing grades range from A+ to D−; F is failing. INC denotes incomplete, and R is the grade given at the end of the first semester of a year-long course. The grades of INC and R do not have quality-point equivalents attached. These are the quality-point equivalents:

- A+ = 4.3
- A  = 4.0
- A− = 3.7
- B+ = 3.3
- B  = 3.0
- B− = 2.7
- C+ = 2.3
- C  = 2.0
- C− = 1.7
- D+ = 1.3
- D  = 1.0
- D− = 0.7
- F  = 0.0

This is how a term average is computed:

<table>
<thead>
<tr>
<th>Course</th>
<th>Grade</th>
<th>Quality Points</th>
<th>Credits</th>
<th>Product</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chemistry 103</td>
<td>B+</td>
<td>3.3</td>
<td>3</td>
<td>9.9</td>
</tr>
<tr>
<td>English 151</td>
<td>C−</td>
<td>1.7</td>
<td>3</td>
<td>5.1</td>
</tr>
<tr>
<td>DEA 145</td>
<td>B</td>
<td>3.0 x</td>
<td>4</td>
<td>12.0</td>
</tr>
<tr>
<td>CEH 100</td>
<td>B</td>
<td>3.0</td>
<td>3</td>
<td>9.0</td>
</tr>
<tr>
<td>DEA 111</td>
<td>C</td>
<td>2.0</td>
<td>3</td>
<td>6.0</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td></td>
<td></td>
<td>16</td>
<td>42.0</td>
</tr>
</tbody>
</table>

To arrive at the term average, add the products (credits × quality points) and divide by the number of credit hours taken. Here, 42 divided by 16 equals 2.63.

The cumulative average (an average of grades from two or more terms) equals the sum of the products of all the grades at Cornell divided by the total number of credits taken.

Incomplete

The symbol of Incomplete is only appropriate when two basic conditions are met:

1) The student has a substantial equity at a passing level in the course with respect to work completed; and
2) The student has been prevented by circumstances beyond the student's control, such as illness or family emergency, from completing all of the course requirements on time.

An Incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option which may be elected at the student's own discretion.

While it is the student's responsibility to initiate a request for an Incomplete, reasons for requesting an Incomplete must be acceptable to the instructor, who establishes specific make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student's college for completing the course work. Several colleges require that a statement signed by the instructor be on file indicating the reason for the Incomplete and the restriction, if any.

It is the responsibility of the student to see that all Incompletes are made up within the deadline and that the grade has been properly recorded with the student's college registrar.

Changes in Grades

Changes in a grade may be made only if the instructor made an error in assigning the original grade.

Official Transcripts

An official transcript is one that bears the official seal of the University and the signature of the University registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the student.

University Requirements for Graduation

For degree requirements such as residency, number of credits, distribution of credits, and grade averages, see the individual requirements listed by each college or school or contact the college offices.

Physical Education

All undergraduate students must complete two terms of work in physical education unless exempted from this requirement for medical or other special reasons or by virtue of advanced standing upon admission.

For transfer students, the requirement is reduced by the number of terms satisfactorily completed, not necessarily including physical education, in a college of recognized standing before entering Cornell.

Credit in physical education may be earned by participation in courses offered by the Department of Physical Education or by participation on an intercollegiate athletic team as a competitor or manager, performing in the marching band, or participating in an athletic club or organization recognized by the director of physical education as fulfilling the physical education requirement.

Physical education is a requirement of the first two terms at Cornell. Students must register for it in each term except those in which postponements are granted, until the requirement is satisfied.

Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding twenty hours a week). The Gannett Health Center can provide certifications based on health, and the Financial Aid Office can provide certifications of employment. See the Department of Physical Education or your college office to establish postponements or waiver of the requirement.

Questionable or unusual cases may be resolved by petition to the Faculty Committee on Physical Education.

Swim Test. All new students who do not pass a basic seventy-five-yard swim test are required to include swimming in their program of physical education unless they are excused by Gannett Clinic. All nonswimmers are required to register in beginning swim classes.

Student Responsibilities

In extracurricular affairs and conduct, Cornell students have today, as they had in the University's infancy, maximum freedom to govern themselves and responsibility for the way they make of this freedom. The student, both as an individual and as a member of any student organization, however, is responsible for adhering to all applicable regulations set forth in the Policy Notebook for Students, Faculty and Staff. Copies of this booklet are available in the Office of the Dean of Students. In addition to the Campus Code of Conduct, the Policy Notebook contains a Statement of Student Rights, a Code of Academic Integrity, the University policy on access to and release of student records, information on the University judicial system, library and motor vehicle regulations, and other policies and regulations.

Students are responsible for meeting all requirements for the courses in which they are enrolled as laid down by the faculty members teaching the courses. It is also the student's responsibility to be aware of the specific major, degree, distribution, college, and
Student Records

The University policy on access to and release of student records conforms to the Family Educational Rights and Privacy Act of 1974. See the Policy Notebook for Students, Faculty and Staff for details of University policy.

Bursar Information

Tuition, Fees, and Expenses

Endowed Divisions

Tuition for Academic Year 1982–83

**Undergraduate**

Architecture, Art, and Planning $7,950

Arts and Sciences 7,950

Engineering 7,950

Hotel Administration 7,950

Unclassified 7,950

**Graduate**

Business and Public Administration

First-year student 8,500

Second-year student 7,200

Law School 8,350

Law School 1980–81 continuing students 8,150

Graduate School with special committee chairman from an endowed division 7,950

Graduate School—LL. M. degree 8,000

Statutory Divisions*

**Undergraduate**

Agriculture and Life Sciences

Resident† 3,300

Nonresident 5,350

Human Ecology

Resident† 3,300

Nonresident 5,350

Industrial and Labor Relations

Resident† 3,300

Nonresident 5,350

**Graduate**

Graduate School:

with special committee chairman from agriculture and life sciences, human ecology, or industrial and labor relations 3,800

with major field of study in veterinary medicine 5,600

Veterinary Medicine

Resident† 5,600

Nonresident 6,700

**Summer Session**

Per credit $165

**Extramural Division**

Per credit $190

*Each tuition rate proposed for 1982–83 would be reduced by $50 if there is no increase in SUNY tuition and if a state supplemental budget this summer provides for "full funding" of accessory instruction.

†Residency status is determined by the college.

Other Tuition and Fees

In absentia fees

Graduate $200

Undergraduate $15

B&PA and Law $75

Excess hours tuition rate for students in statutory units taking extra endowed credits Per term $189.0625

The amount, time, and manner of payment of tuition; fees; or other charges may be changed at any time without notice.

Fees and Expenses

Undergraduate applicants to Cornell pay a nonrefundable $35 application fee when submitting an application for admission. The graduate application fee is $30.

Accepted candidates who plan to enroll at Cornell are required to pay a one-time $50 registration fee by a date specified on the registration coupons that accompany the letter of acceptance. The fee is not applied to tuition charges and is not refundable after the stated due date.

Acceptance Deposit

Starting in the fall of 1983, an acceptance deposit of $200, applicable to the tuition for the final semester at Cornell, will be required. If a student does not enter in the semester for which the deposit is paid, or does not formally withdraw before July 1 for the fall semester or December 1 for the spring semester, or does not complete at least one semester at the University, the deposit is forfeited. This acceptance deposit only affects students entering Cornell in the fall of 1983 or in subsequent semesters.

Refund Policies

Part of the amount personally paid for tuition will be refunded if the student obtains an official certificate of Leave of Absence or Withdrawal at the office of the dean or director of the academic division involved. Students who terminate their registration in the University during a regular term in this manner will be charged tuition from the registration day to the effective date of the certificate as follows: first week, 10 percent; second week, 20 percent; third week, 30 percent; fourth week, 40 percent; fifth week, 60 percent; sixth week, 80 percent; seventh week, 100 percent; except that no charge will be made if the effective date is within the first six days, including registration day.

The University makes available tuition insurance that provides refunds in the event of leave of absence or withdrawal for medical or emotional reasons. Complete details regarding this coverage and applications accompany the August tuition bill.

Repayment policy. In addition to refunds for which students may be eligible, those receiving financial aid from the University who withdraw during a term will have their aid reevaluated, possibly necessitating repayment of a portion of aid received. Repayment to aid accounts depends on the type of aid received, government regulations, and the period of time in attendance. A partial semester will generally count as one of the eight semesters of financial aid eligibility normally allowed a student.

Billing and Payment Information

Billing

Bills cover charges for the term and any financial aid credit as of the date of preparation. The bill is
prepared based on information processed before the beginning of the term. After registration, every effort will be made to correct mistakes.

It is possible that some charges will not be listed on the first bill and will appear on a subsequent monthly bill. A student must prepare to pay any charges appearing on a subsequent bill even though the student received a financial aid stipend before the billing charges.

All bills are due by the date stated on the bill; all payments must be received by that date to avoid finance charges. We cannot process payments by postmark as we use an electronic optical character recognition (OCR) scanning system to record payments.

Please inform the Office of the Bursar of any change in billing address. Address changes made at other offices will not change the billing address.

Payments
An individual who has outstanding indebtedness to the University will not be allowed to register or re-register in the University, receive a transcript of record, have academic credits certified, be granted a leave of absence, or have a degree conferred. If students' bills show a previous unpaid balance, they must arrange for payment by August 15 if they plan to register for the fall semester. University policy precludes the use of any 1982-83 financial aid for payment of past-due charges.

The bursar's office acts as a clearinghouse for student charges and credits which are placed directly on a student's bill by several departments and offices of the University. Since the bursar's office does not have detailed records concerning many items that appear on a bill, students should contact the office involved if they have questions.

For further information, contact the Office of the Bursar, 260 Day Hall, 256-2336.

Cornell Budget Plan
Cornell will offer to the class of 1986 and each succeeding freshman class thereafter, a monthly installment plan for payment of educational expenses. The cost of this service will be $25 per year. Information about this plan will be mailed to parents of incoming freshmen and transfers in May of each year and to the parents of students already on the plan who wish to continue.

Academic Management Services
Prepayment Plan
Student whose parents are participating in the prepayment plan through Academic Management Services will have credits and charges that are placed directly on the student's bill by several departments and offices of the University. Since the bursar's office does not have detailed records concerning many items that appear on a bill, students should contact the office involved if they have questions.

For further information, contact the Office of the Bursar, 260 Day Hall, 256-2336.

Cornell Budget Plan
Cornell will offer to the class of 1986 and each succeeding freshman class thereafter, a monthly installment plan for payment of educational expenses. The cost of this service will be $25 per year. Information about this plan will be mailed to parents of incoming freshmen and transfers in May of each year and to the parents of students already on the plan who wish to continue.

Non-University Financial Aid
State loan proceeds will usually be disbursed by a check made payable to the student and Cornell University for the entire amount. The University bursar will credit this amount to the student's account when the check is submitted. Finance charges on state loan amounts are not waived unless Cornell is responsible for late processing.

National Merit Scholarships are paid to the student in the form of a check drawn by the National Merit Corporation and sent to the Office of Financial Aid. If students wish to apply the amount of the award toward payment of their bill, they must personally pick up the check from the Office of Financial Aid, 203 Day Hall, and present it to the cashier, 260 Day Hall. The National Merit Corporation has requested that the University not process their checks through use of power of attorney.

Other scholarships from sources outside the University are credited to the bill if they have been received prior to the date the bill is prepared. Outside awards received subsequent to the initial billing will be applied towards unpaid charges as they are received. Any finance charges caused by late receipt of these awards will be the student's responsibility.

It is possible that some charges will not be listed on a bill if they have been received prior to the date the bill is prepared. Outside awards received subsequent to the initial billing will be applied towards unpaid charges as they are received. Any finance charges caused by late receipt of these awards will be the student's responsibility.

It is important, therefore, that the student arrange with any outside scholarship donors to have awards mailed to the University as promptly as possible.

If non-University scholarships have been received and all charges have been paid, a check will be issued in the name of the student. These checks may be picked up in Room 260, Day Hall.

Undergraduate students receiving aid from the Office of Financial Aid must personally report receipt of any outside scholarship sources to the Office of Financial Aid.

New York State Tuition Assistance Program
Every New York State resident whose New York State net taxable family income for 1981 was $25,000 or less is, upon application to the New York State Higher Education Services Corporation, eligible to receive a New York Tuition Assistance Program (TAP) grant from $100 to $2,200 a year. These funds can be used only toward tuition. Higher income levels also qualify for an award if there are additional children in college. A student applies by completing the TAP application and forwarding it to New York State Higher Education Services Corporation.

The amount of this grant should be applied toward charges for the semester. A copy of any New York State award certificate must be submitted to the Office of the Bursar before credit can be claimed.

Students who are appointed graduate assistants, teaching assistants, research assistants, and resident advisers are obligated to apply for the award. Those who are eligible and choose not to apply will be billed $300 per semester by the Office of the Bursar.

Medical Insurance
The medical insurance charge on students' bills is for insurance for hospitalization, surgical fees, and major medical coverage for the period of August 30, 1982, through August 29, 1983. The cost of this insurance is lower than the average cost of comparable coverage under other group accident and health insurance policies.

If, because students have other insurance to pay for these medical costs, or for other reasons, they do not want to take this insurance, they must submit a completed waiver form at the time of registration or to the bursar's office by September 27, 1982.

Tuition Insurance
To provide a more comprehensive refund program, Cornell makes available the Tuition Refund Plan. This plan provides refunds of tuition in the event of absence or withdrawal due to medical or emotional reasons. Contact the bursar's office for further information.

Cornellcard
Cornellcard is a charge card issued by the bursar's office. Any registered full-time student may apply for a Cornellcard by filling out an agreement form. A $5 annual nonrefundable fee is assessed the first time a charge is made. A replacement fee for a lost card is $5. Cornellcard is accepted by the Statler cafeteria and dining room, all Cornell Dining facilities, the Cornell Campus Store, the Department of Physical Education, the Cornell University Concert Series, the Willard Straight Hall Box Office, North Campus Union, The Cornellian, and Cornell Clippers (hair styling). Itemized monthly statements are mailed to students. These bills must be paid within twenty days of the billing date shown on the statement; or finance charges of 1 1/4 percent per month (an annual rate of 15 percent) will be added to them. All accounts must be paid in full before each registration period.

Accounts with unpaid balances at the close of a semester (other than for the current monthly charges) may not be renewed, and University registration will not be permitted, nor transcripts issued or degrees conferred, until all arrears have been paid. The Cornellcard is nontransferable. Loss, theft, or possible unauthorized use should be reported immediately to the Cornellcard Office, 260 Day Hall (telephone: 607/256-6324). The maximum permissible account balance at any one time is $400. Credit privileges may be suspended on any account in excess of the credit ceiling. Changes or corrections to the Cornellcard billing address must be sent to the Cornellcard office.

Income Tax Deduction
The per-student cost of operating the University Health Services facilities is $53.30 for the 1982 spring semester and $49.50 for the fall semester. The Internal Revenue Service has advised that this amount is tax deductible for all who paid full tuition during these semesters.

Bad-Check Policy
Any check not honored by the bank will be charged to the student's University account maintained by the University bursar, and a $10 bad-check fine will be assessed. These charges will be subject to a finance charge at the rate of 1 1/4 percent per month (15 percent annually).

If students are charged with two bad checks in any semester, their check-cashing privileges will be suspended for a semester. Students who incident four bad checks are subject to disciplinary action through the University judicial system and will have their check-cashing privileges permanently suspended.
Programs of Financial Assistance

Cornell University offers a variety of scholarships, grants, employment opportunities, and loans to students who could not otherwise attend the University. To ensure that no qualified applicant is prevented from enrolling owing to lack of funds, Cornell has developed a comprehensive financial aid program. Since the requirements and application procedures for the various programs are complex, it is important for students to read the financial aid information sheet put out by the Office of Financial Aid every spring, and usually available in April or May. Questions about any aspect of applying for awards, the award announcement, and program provisions are welcome at the Office of Financial Aid, Cornell University, 203 Day Hall, Ithaca, New York 14853.

To be eligible for need-based assistance, a student must be enrolled full-time in a degree program at Cornell, be eligible to register in a college or division, and not owe a refund from any grant or loan or be in default on any loan received to attend Cornell. Students on leave of absence and undergraduates registered in absentia are not eligible to receive Cornell assistance.

New students and continuing aid recipients who have met application deadlines have top priority for receiving undergraduate aid. Continuing students applying for aid for the first time are considered on the basis of remaining funds.

Undergraduate financial aid at Cornell is awarded on the basis of financial need. The University follows closely, but does not strictly adhere to, the needs analysis procedures established by the College Scholarship Service. In addition, the composition of the financial aid package (proportion of self-help/scholarship) is influenced by the ratings of the college or school admissions selection committees. Financial aid packages will not change due to less-than-expected academic performance for at least two years. However, as in the past, aid packages may vary in subsequent years, based on changes in family financial circumstances, increased costs, and the availability of federal funds.

Applications for the 1983–84 academic year will be available from the Office of Financial Aid in December, 1982. Whether or not they are already receiving aid, undergraduates must submit applications by March 15, 1983. Consult the brochure, Financial Aid Information, 1982–83, for further information.

Financial Counseling Services

Financial Aid Information Resources is a group of work-study students. These peer counselors can answer financial aid questions and give advice on financial aid problems. To contact a student counselor, come to the Office of Financial Aid.

If students have any questions about financial aid or need assistance in budgeting, they should contact the Office of Financial Aid, Cornell University, 203 Day Hall, Ithaca, New York 14853.

Statement of Student Rights and Responsibilities

1) Students have the right to be informed of, and to apply for, all financial aid programs for which they are eligible, and have the responsibility to apply by program deadlines and to acquaint themselves with the application procedure.

2) Students have the right to know how financial need and award packages will be determined and to request a review of the financial aid package if circumstances change to negatively affect the family's ability to meet costs of attendance, and have the responsibility to notify the University if new resources become available to the student that were not originally considered.

3) Students who borrow from the University have a right to full disclosure of the terms and provisions of loan programs, including typical repayment schedules, and have the responsibility to attend preloan and exit interviews before borrowing and leaving the University. They must repay loans on a timely basis and keep the University informed of their current address.

4) Students have the right to be informed of financial aid policies and have the responsibility to be aware of all published financial aid policies and to comply with these policies.

5) Students have the responsibility to submit accurate information on all financial aid application documents and on all University documents related to the financial aid application process.

Money Management

Some students have difficulty managing their resources to meet expenses. Plan for your expenses carefully, using the cost-of-attendance figures in the brochure as a guide. Brochures are available describing housing on and off campus and dining plans.

The consequences of not paying University bills are severe. A student may not register for a new term until all charges are paid for preceding terms.

Degrees will not be conferred and transcripts will not be sent until all University charges, including Cornellcard, are paid.

Orientation Sessions

Although attendance at orientation sessions is not required, the Office of Financial Aid strongly recommends that all new undergraduate recipients of aid and their parents attend the financial aid orientation session included in the Cornell orientation program. Consult the orientation schedule for dates and times of the session.
New York State College of Agriculture and Life Sciences

Administration

David L. Call, dean
Joan R. Egner, associate dean
George J. Conneman, director of instruction
Helen K. Wardell, associate director of instruction
Theodore L. Hullar, director of research and director of the New York State Agricultural Experiment Station (Ithaca)
Lamartine F. Hood, associate director of research
Lucinda A. Noble, director of cooperative extension
Donald W. Barton, director of the New York State Agriculture Extension Station (Geneva)
Joseph F. Metz, Jr., director of international agriculture

Office of Instruction Staff

Student affairs: D. Burgett
Minority affairs: Professor D. Graham, E. Paddock-Reed
Registrar: R. Stanton
Scheduling: C. Place
Admissions: N. Cartland, R. Church, M. Grainger
Career planning and placement: W. Alberta

Department Chairpersons

Agricultural economics: O. D. Forker, Warren Hall
Agricultural engineering: N. R. Scott, Riley-Robb Hall
Agronomy: R. F. Lucey, Emerson Hall
Animal science: R. J. Young, Morrison Hall
Communication arts: D. F. Schwartz, Roberts Hall
Education: J. P. Bait, Stone Hall
Entomology: M. J. Tauber, Comstock Hall
Floriculture and ornamental horticulture: C. F. Gortzig, Plant Sciences Building
Food science: J. E. Kinsella, Stocking Hall
Microbiology: R. P. Mottlock, Stocking Hall
Natural resources: W. H. Everhart, Fernow Hall
Plant breeding and biometry: W. D. Pardee, Emerson Hall
Plant pathology: W. E. Fry, Plant Sciences Building
Pomology: W. J. Kender, Plant Sciences Building
Poultry science: R. C. Baker, Rice Hall
Rural sociology: E. C. Erickson, Warren Hall
Statistics and biometry: W. T. Federer, Warren Hall
Vegetable crops: R. D. Sweet, Plant Sciences Building

Facilities

The College of Agriculture and Life Sciences (CALS) is located on the upper campus, up the hill from the central area of Cornell University, on land that was once part of the Ezra Cornell family farm and is commonly known as the Ag Quad. Anchored on the east by Mann Library, the quadrangle buildings house classrooms, offices, and laboratories, and are flanked by greenhouses, gardens, and research facilities. Nearby are the orchards, barns, field plots, forests, and streams that extend as far as the Animal Science Teaching Research Center at Harford and the Experiment Station at Geneva. Administrative units including the dean's office and the Office of Instruction are located in Roberts Hall. Information about academic programs, student records, graduation requirements, career planning, financial aid, placement, and counseling may be obtained there. The student lounge and service center of the college is in the Alfalfa Room, across the Ag Quad in Warren Hall. Computer facilities are available in 160 Warren Hall and in 15A Riley-Robb Hall.

Advising and Counseling Services

Faculty in the College of Agriculture and Life Sciences recognize that students need information and advice to make intelligent decisions while in college. Students are assigned to a faculty adviser soon after being admitted to the college. An effort is made to match the faculty member's interests as closely as possible.

The Office of Student Affairs has overall responsibility for coordinating the college advising and counseling program. Inquiries regarding procedures and services should be directed to Dr. Donald Burgett, 17 Roberts Hall (telephone: 256-2257). Students may change advisers if their academic interests change, or if they feel their needs can be better served. Change of adviser forms are available from this office.

The Minority Affairs Office in the College of Agriculture and Life Sciences works in conjunction with the University-wide COSEP Program to provide counseling, tutoring, advising, and referrals of students to agencies that will meet their special needs. The Educational Opportunity Program (EOP) is a state-supported program intended to assist New York State students who meet specific economic and academic criteria set by the New York State Education Department. Students in the College of Agriculture and Life Sciences who are eligible should apply to the program. Forms are available in 14 Roberts Hall.

The Office of Career Planning and Placement offers a variety of services to all students and alumni of the college. For further information, contact William Alberts, 16 Roberts Hall (telephone: 256-2215).

The college registrar maintains for each student a complete record of academic achievement. A permanent record card is on file for each matriculated student and is updated whenever new information becomes available.

The progress of each student toward meeting the degree requirements is recorded in the college registrar's office on a summary of record form. The worksheet can be used by the student in planning course selection each term to assure reasonable progress toward meeting degree requirements. Staff members are available in 192 Roberts Hall to consult with students regarding the assignment of credit toward meeting distribution and elective requirements and to verify the official summary of record.

Financial Aid

Financial aid is administered through the University office in Day Hall. Endowment funds and annual donations provide supplemental aid for students in the college. Awards recommended by the College Scholarship Committee become part of the total financial package offered through the University's Office of Financial Aid.

A small loan fund is administered by the college through the Office of Instruction. The purpose of the fund is to assist students facing short-term emergencies. The loans are interest-free and are usually made for no more than ninety days. For information, contact the Office of Instruction, at 256-4569 or 256-2257.

Students

The CALS undergraduate enrollment is 3000, with about 50 percent in the upper division. Each year about 850 students are graduated, while 600 freshmen and 250 transfer students are admitted. Over 300 faculty members serve as advisors for undergraduates. About 1000 graduate students have members of the faculty of the college serving as chairpersons of their Special Committees.

The College Admissions Committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula. Most students come from New York State, but about 15 percent come from other parts of the United States or abroad. Nearly half of the undergraduates and women. About 7 percent are identified as members of minority or ethnic groups.

Transfer Students

Any student who has withdrawn from one college and has been accepted in CALS is considered a transfer student. Approximately 20 percent of the undergraduate students are transfers who have taken part of their collegiate work at community colleges, agricultural and technical colleges, or other two-year institutions. Many of these hold an Associate degree. Other transfer students, including those from other colleges at Cornell, may also be admitted.

A Cornell student in good standing may apply for intra-University transfer to pursue a course of study unavailable in his or her current college. Guidelines are available in the Admissions Office of the College of Agriculture and Life Sciences, 195 Roberts Hall. The procedure includes filing a transfer request in the Office of the University Registrar, 222 Day Hall, and submitting a letter explaining reasons for making the transfer.

Consideration is given to students who have demonstrated an interest in their intended field of study by taking appropriate prerequisite courses and courses within this area of study. Academic achievement is also considered. Students are seldom allowed to transfer during their freshman year. In some cases, students may transfer directly into CALS. In other cases, the student may be referred to the Division of Unclassified Students to study for one semester before entering the college. A second semester is considered under unusual circumstances. During this trial semester, the student must achieve a predetermined average (usually 2.7) and take approved courses to assure acceptance.

Special Students

A limited number of non-degree candidates who want to take selected courses in the college are admitted each year. Applicants should submit the standard Cornell application, a resume of their work experience, and an outline of the courses they want to take. For more information, contact the Admissions Office, 195 Roberts Hall (telephone: 256-2036).

Part-time Study

All students in the College of Agriculture and Life Sciences are expected to be enrolled as full-time students in a registered program of study. Part-time students must register in the Division of Summer Session, Extramural Courses, and Related Programs.

The Continuing Education Center, 103 Banes Hall, provides information, counseling, and special programs for mature students throughout the University (telephone: 256-4987).
Degree Programs

The College of Agriculture and Life Sciences offers programs leading to the degrees of Bachelor of Science, Master of Science, and Doctor of Philosophy as well as several professional degrees including the Master of Professional Studies and the Master of Arts in Teaching, and some registered professional licensing or certification programs.

Graduate study is organized under graduate fields that generally coincide with the departments. Graduate degree requirements are described in the Announcement of the Graduate School. Degree programs offered in the college are listed above.

The Bachelor of Science Degree

To qualify for the Bachelor of Science degree, students must fulfill requirements established by the faculty of the College of Agriculture and Life Sciences and administered through the Office of Instruction.

Summary of Basic College Requirements for Graduation

1. Minimum number of credit hours: 120
2. Residence: Eight full-time terms of residence are normally required to complete the program of study.

A maximum of 15 credits per semester may be transferred for full-time attendance at another college, but at least 60 credits must be taken at Cornell. The intra-University transfer student must complete a minimum of two semesters in CALS and complete 30 credits, at least 20 of which must be earned in courses taught in CALS. A student must enroll for and satisfactorily complete a minimum of 12 credits a term to remain in good standing. The typical program is 15 credits a term for eight semesters.

3. Distribution: 45 credits. A minimum of 9 credits are to be selected in each of the following four groups, plus 9 credits to be selected from any combination of these groups for a total of 45 credits. All courses must be taken for a letter grade.

Group A: Physical Sciences

Select at least two subjects, including 6 credits in one of the first three areas:

a. Chemistry
b. Mathematics: includes ALS 115; excludes Mathematics 109
c. Physics: except 201–205
d. Other: Agricultural Engineering 208–209; Astronomy 101–102, 103–104; Atmospheric Sciences 101, 202; Geology: 100 level only.

Group B: Biological Sciences

Select at least two subjects, including 6 credits in the first area:

a. Introductory biological science
b. Any course in the Division of Biological Sciences except Biology 108, 201–202, 205–206.
c. Other: Animal Sciences 200, 220, 221; Chemistry 251–253, 357–359; Entomology 212; Microbiology except Microbiology 100; Plant Breeding 225

Group C: Social Sciences and Humanities

Select 100-200- or 300-level courses in at least two subjects. A list of courses in various subjects approved by the faculty is available in 192 Roberts Hall.

b. Humanities: Art, Languages, Literature, Music, Philosophy, Theatre

Group D: Written and Oral Expression

Select at least 6 credits in written expression and one course in either oral or written expression.

a. Freshman seminars
b. Africana Studies 137–138
c. Communication Arts 114, 301–302, 314, 316, 413; English 280–281, 288–289
d. Education 403
The basic competencies and skills needed for the various courses of study are usually acquired through selected courses that fulfill the distribution requirements. Students should consult with their faculty advisor to be sure necessary prerequisite courses are selected for the specialization. Generally speaking, the competencies should be largely completed in the first two years of study, with courses in the specialization concentrated in the upper division.

4. Mathematics: A minimum competency in the fundamentals of mathematics is a requisite to satisfactory pursuit of a degree. Hence, the faculty of the college requires that all CALS students complete with a passing grade one course in mathematics as part of the Physical Sciences, Group A, distribution requirement. If advanced placement credit in mathematics or transfer credit in a college-level calculus course is presented, the requirement in Group A is waived.

a. The CALS Mathematics Placement Test index score is used to determine competency and help students select appropriate college mathematics courses. The test is administered just before registration each semester.

All entering undergraduates except those presenting advanced placement credit or transfer credit in college calculus are required to take the placement test which can not be repeated by any student. The placement test consists of fifty questions sampled from arithmetic, algebra, geometry, trigonometry, and a smattering of calculus. The index score is determined by the number of correct answers minus one quarter of the number of incorrect answers.

If a high index score (currently, equal to or greater than 30) is attained, the mathematics requirement in Group A is waived. If a low index score (currently, equal to or less than 12) is attained, the student should enroll in ALS 005 before selecting a mathematics course for Group A.

b. When presenting mathematics transfer credit in Group A, the student may

1) Include precalculus credits along with the calculus credits
2) Transfer up to 6 credits, if the index score is 30 or above
3) Not transfer any credit to Group A if the index score is from 13 to 30. (Credit may, however, be counted toward graduation.)
4) Not transfer any credit in mathematics if the index score is below 13.

The mathematics requirement should be completed at least by the end of the sophomore year, or, for transfer students, by the end of the first year in residence. It is the responsibility of the student to plan a program of study in consultation with the faculty advisor that meets the college requirement in mathematics and that will provide adequate prerequisites in the area of specialization.

5. Electives: 75 credits. A minimum of 45 credits must be selected from courses offered in CALS, and another 10 credits must be in the statutory units, including CALS. Electives should be used to meet requirements of the full major and specialization. Core and sequence courses for the various programs of study are described on page 29. The remaining 20 credits needed to complete the graduation requirements may be taken in any college, including CALS. Students who exceed 20 credits in the endowed division will be charged excess tuition at the rate set per credit (currently, $189.0625).

6. Grade-point average (GPA): A cumulative GPA and last-term average of 1.7 or above must be maintained. Only grades earned at Cornell and while registered in CALS are included in the cumulative average. A student who fails to obtain the minimum cumulative average of 1.7 or a final-term average of 1.7 and who wishes to receive the B.S. degree must complete, with an average of at least 1.7, a minimum of 6 credits in Cornell Summer Session or a minimum of 12 credits in a regular term in the college. To graduate, a cumulative average of at least 2.0 is required.

7. Physical Education: Completion of the University requirement (see p. 21). Transfer students receive credit toward this requirement for as many terms as they have been enrolled full time in another institution. Requests for postponement or exemption should be made in writing to the University Faculty Committee on Physical Education. Questions should be referred to Mr. Alan Gantert, Teagle Hall (telephone: 256-4286).

Students who have been in residence for eight semesters and who have met the graduation requirements will be graduated. Students are entitled to the full eight semesters even though they may have completed the graduation requirements. A student who wishes to continue study after graduation must apply for admission as a special student.

Academic Procedures and Policies

Procedures for University registration and course enrollment are described on page 19. To enroll in courses, CALS students pick up materials from the Scheduling Office. 192 Roberts Hall, plan a schedule of courses in consultation with their adviser, and return the completed forms to the Scheduling Office for verification and processing by the University computer system. Selection of specific laboratory or seminar section must be verified in the Scheduling Office; class lists are generated on the basis of the properly filed course enrollment forms.

Three schedule cards—one for the student, one for the adviser, and one for the Scheduling Office—should be prepared.

Signature of the faculty adviser indicates approval of, or at least consent of, the choice of courses made and is required before the course enrollment can be processed.

To enroll in courses that involve independent study, teaching, or research, the student must complete an Independent Study Statement, available in 192 Roberts Hall, and submit it with the course schedule. Students who will be studying off-campus should file the Student Off-Campus Form with the Scheduling Office.

All students should construct a schedule which is appropriate and shows progress toward completing their specialization as well as the graduation requirements.

Off-Campus Study

Study off-campus is of two types: 1) credit may be earned at another institution and transferred to Cornell, or 2) credit may be earned in Cornell courses that require off-campus activity.

Programs in which students study off-campus but enroll for Cornell credit include SEA semester, field study in Human Ecology or ILR, Albany semester, Washington experience, student teaching, IPM internship, and clinical microbiology internship. An Intent to Study Off-Campus form is available from the college registrar in 192 Roberts Hall. All students intending to receive Cornell credit for work done off-campus should file this form with the college registrar at the time of enrolling for courses to ensure that proper registration will occur. In some programs, adjustment in tuition is made to compensate for the reduced use of on-campus facilities.

Students who plan to enroll in courses at another institution in the United States or abroad, including those participating in the exchange program, must register for study in absentia. The petition form is available in the Office of Student Affairs, 17 Roberts Hall. The course of study that will be undertaken should be planned in consultation with the faculty adviser to assure that the study is appropriate to the student's academic program. Approval of the petition by the Committee on Academic Achievement and Petitions grants acceptance of transfer credit as long as the grades received are equivalent to C or better. A maximum of 15 credits a term may be transferred for study in absentia.

Course Changes (Add/Drop/Change)

Students are held responsible for and receive a grade for the courses for which they enroll unless they officially change such enrollment. All changes in courses, credit hours, or grading option must be made by the student at the Scheduling Office, 192 Roberts Hall, on a proper official form provided for that purpose. When a student submits a properly signed Course Change form, the change is made on the official class lists by the Scheduling Office.

An official add/drop/change period is designated each term on the University calendar: CALS students may add or drop courses during the first three weeks of the term and may drop courses until the end of the sixth week, after consultation and with approval of the adviser, by filing the properly signed forms in the Scheduling Office. Signatures are required to add or to drop a course.

Beginning with the seventh week of the semester, course changes are made only upon the approval of the Committee on Academic Achievements and Petitions. A special petition form for course changes is available in 192 Roberts Hall. Requests for course changes are approved only when the members of the committee are convinced that there are unusual circumstances that are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total work load, and scheduling prior to that time. Failure in a course is not considered an excuse for dropping it. If an illegal schedule results, petitions are generally denied unless very unusual circumstances are present.

Academic Achievement and Progress

The Committee on Academic Achievement and Petitions is a standing committee of five college faculty members and two students. On behalf of the faculty, and subject to its review, this committee

• Receives and acts on petitions from individual students asking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee;
• Reviews at the end of each semester and at other times as shall seem appropriate to the committee, the progress of all students in meeting academic requirements;
• In cases of students not making satisfactory progress, takes appropriate action, including, but not limited to, the following: issuing warnings to students, suspending them, decreeing that they may not re-register, granting them leaves of absences, and allowing them to withdraw;
• Acts upon readmission requests from persons whose previous enrollment was terminated by the committee;
• Notifies the petitioner in writing of the action taken by the committee and sends a copy of such notice to the student's adviser.
Academic Deficiency

The Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persistently fail to attend classes. In general terms, regular participation in course work with academic loads at a level sufficient to assure graduation within eight semesters and grades averaging C- or higher are prima facie evidence of satisfactory progress.

Specifically, the committee considers as possible cause for action, failure to attend and participate in courses on a regular basis or, at the end of each semester, failure to meet one or more of the following:
- semester quality-point average of at least 1.70
- cumulative quality-point average of at least 1.70
- passing 12 or more credits in academic subjects each semester
- normal progress toward meeting the University's requirements for physical education
- reasonable progress toward completion of distribution requirements and all other college and University requirements in eight semesters

Good academic standing means the student is eligible for, or has been allowed to register and to enroll in an academic course work for the semester. Whether an individual student is in good academic standing is determined by the College Committee on Academic Achievement and Petitions.

Petitioning Procedures

A student who feels he or she has grounds to be exempt from a college academic regulation may submit a petition. Petition forms are available in the college registrar's office and in the Office of Student Affairs.

A petition is usually prepared with the assistance of the student's adviser, whose signature is requested to indicate awareness of the petition. The adviser's recommendation is helpful to the committee. The committee determines whether there is evidence of mitigating and unforeseen circumstances beyond the control of the petitioner that would warrant an exemption or other action. The adviser and the student are notified in writing of the committee decision.

Withdrawal

A student who finds it necessary to leave the University permanently should file a petition for withdrawal. Such petitions are approved if the student is in good standing. Students who have withdrawn and who later decide to return must apply to the Office of Admissions.

Graduation

The student who completes requirements for the degree will be graduated. In preparation for graduation, the student should complete the Candidacy for Baccalaureate Degree form in the college registrar's office. Diplomas are prepared by the Office of the University Registrar and distributed by the college registrar to those who have completed the degree requirements and have been approved by the college faculty. A copy of the final transcript, updated to include last-term courses, is mailed to the student by the University without charge.

Special Academic Opportunities

Honors Programs

The Bachelor of Science degree with honors will be conferred upon those students who, in addition to having completed the requirements for the degree of Bachelor of Science, have satisfactorily completed the honors program in their area of major interest and have been recommended for the degree by the honors committee of that area. Undergraduates who wish to enroll in the honors program must have completed at least 55 credits, at least 30 of the 55 at Cornell. Also, the student must have attained a cumulative grade-point average of at least 3.00 at the time of entry. Interested students must make written application no later than the end of the third week of the first semester of the senior year, on the application form available from the college registrar, 192 Roberts Hall. The college registrar will verify the student's grade-point average and formally enroll the student in the program.

Academic credit may also be earned by enrolling in an appropriate independent study course. When applying for admission to the program, the student may, if appropriate, submit a budget and a modest request for funds to cover some of the costs the student incurs in doing the research.

The honors committee for each area recommends to the college registrar those students who qualify for honors. Only those who have maintained a GPA of at least 3.00 will be honored.

An honors program is offered in seven subject areas. The programs are described by area.

Animal Science

Faculty committee: W. R. Butler, chairman; J. M. Elliot, R. C. Gorewit

Program: Completion of the honors program in animal science requires the submission of a written report. This report is to be written in the style of a technical journal with one additional section, "Review of Literature." While it is expected that most students will undertake active research projects, a project totally devoted to review of literature may constitute a suitable project. When the report is submitted to the honors committee, it must be accompanied by supporting letters of evaluation from the faculty supervisor and at least one other faculty member. After reading the reports, the honors committee will interview each candidate regarding his project. It is expected that the work required for honors will be above and beyond the requirements of any course, including Animal Science 499. However, it is anticipated that many projects may grow out of work initiated under Animal Science 499 or other courses. Since application to the program must be completed early in the senior year (two semesters before graduation), students are encouraged to make prior arrangements with faculty supervisors.

A detailed description of the animal science honors program and its requirements may be obtained from the committee chairperson.

Biological Sciences

Faculty committee: K. Beyenbach (animal physiology and anatomy), P. Bruns, (genetics and development), P. Hinkle (biochemistry, molecular cell biology), H. Howland (neurobiology and behavior), D. Pimentel (ecology and systematics), H. Sinson, associate director (ex officio)

Program: Students will report on their research projects in two seminars and in an honors thesis that will be evaluated both by the committee and by two other faculty members. The students working in each section of the division will meet as a group during each semester together with the appropriate faculty member or members from the committee. These seminars must be attended by all students in the honors program. Active participation in terms of questions or comments is expected.

The thesis should be written in the form of a research report in a leading journal in the disciplinary area of research. Unless there are unusual circumstances, the thesis should not exceed twenty typewritten pages, double-spaced. The student, with guidance of the research supervisor, conducts a thorough literature search on the topic.

Three copies of the thesis need to be submitted to the honors committee by the designated date. The faculty research committee submits an evaluation of the thesis, including judgments on the significance of the problem and of the thesis. The thesis is also reviewed by two anonymous faculty members. A majority vote of the faculty committee that the thesis is acceptable is necessary for the recommendation that the student be graduated with honors.

Entomology

Faculty committee: E. W. Cupp, chairman; C. O. Berg, H. H. Hagedorn, R. A. Morse, D. Pimentel

Program: An honors program in entomology may be pursued by any qualified student in CALS. The student need not be specializing in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for study in a wide array of problems dealing with living systems. Short life cycles, species with easily managed colony requirements, and a wide range of behavioral traits provide the raw material for honors study. Cornell's diverse faculty interests and extensive library in entomology are also a major asset if one selects entomology as the area for honors study.

The honors committee requires that an undergraduate who is interested in embarking upon an honors project proceed with the following steps:
- Discuss the matter with his or her academic adviser to determine if time and effort can be allotted to such an undertaking.
- Discuss the project with an appropriate faculty member in the area of entomology. (The faculty adviser will be of assistance in determining which faculty entomologist might be the best to approach, the decision being based primarily upon the subject-matter expertise of the available faculty.)
- Prepare a brief, tentative plan of the project for discussion with, and approval of, the honors project adviser. This plan should include a determination of support needed in such matters as space, equipment, time, and supplies. (CALS provides modest funds in support of projects upon application and submission of a budget proposal.)
- Present a completed application to the chairman of the entomology honors committee no later than the end of the third week of the first semester of the senior year.
- Submit a brief progress report, approved by the project adviser, to the entomology honors committee by midterm of the semester in which the student will complete his or her graduation requirements.
- Prepare a final project report that is approved by the faculty honors project adviser to the chairman of the entomology area honors committee no later than the last day of classes in the semester in which the student anticipates graduation.

Natural Resources

Faculty committee: M. E. Richmond, chairman; J. W. Kelley, R. J. McNeil

Program: The honors program in natural resources provides an opportunity for undergraduates to participate in independent research in the areas of fisheries and aquatic science, forest science, wildlife science, and conservation. The subject matter and nature of the research experience may be quite varied in this program but requires the guidance and supervision of a faculty member with substantial interest or expertise in the problem area chosen.

In addition to meeting requirements of the college we expect the student to do the following:
- Register for the honors program in the junior year.
- Select a faculty adviser who will help identify and formulate a research problem.
- Carry out independent research effort that is original and separate from the work of others who may be investigating similar subjects.
- Describe and summarize the work in the format of a conventional master's thesis or in the form of a...
General Information Survey (HEGIS) codes for federal and state reporting. Graduate study is organized by fields which may draw faculty from different disciplines and departments in the colleges of the University. Major and minor subjects offered in each field are described in the Announcement of the Graduate School.

In 1973, to facilitate the student's choice of a major field of study, the many undergraduate options and specializations offered by CALS were organized into eight broad but relatively homogeneous program areas: agricultural and biological engineering, animal sciences, applied economics and business management, behavioral and social sciences, biological sciences, environmental studies, food science, and plant sciences. A ninth area includes a cluster of special programs.

Faculty curriculum committees in each program area identify a core sequence of courses appropriate to all students in that field. The program area may be based in one department, or faculty from several departments may constitute the committee planning the sequence.

The program areas reflect the major academic effort in the college. Within each area, courses of study are designed to provide systematic development of basic skills and concepts and the opportunity for specialization in an area of particular interest to the student.

Programs are planned with considerable flexibility, allowing students to prepare for careers, further graduate work, professional opportunities, and the responsibilities of educated citizens. Course requirements in each program area are different but all students must meet minimum distribution requirements of the college. Specific requirements are detailed in each program area.

**Agricultural and Biological Engineering**

Agricultural and biological engineering links, technology and engineering with the biological, social, and agricultural sciences. It is the branch of engineering that serves agriculture, directly concerned with the means for providing food and fiber to fill the basic needs of all people. The challenge in agricultural engineering is to develop systems that increase production of food while maintaining the quality of the environment and minimizing energy use.

Students study topics such as machinery, soil and water conservation, waste management, power and energy, structures and building design, bioengineering, community development, food engineering, construction and design of secondary roads, the teaching of agricultural mechanization, and environmental quality control.

The program is offered by the Department of Agricultural Engineering. It is housed in Riley-Robb Hall, which has one of the most complete agricultural engineering facilities in the United States.

**Agricultural Engineering**

Agricultural engineering is intended for the student who is particularly interested in the theoretical and fundamental aspects of engineering required for design and research. The student must have a strong aptitude for mathematics and physical sciences, and high motivation. Biological, social, and agricultural sciences are integrated in this specialization, but the physical sciences predominate. The specialization is jointly sponsored by the New York State College of Agriculture and Life Sciences and the College of Engineering. The curriculum, described in the Engineering College section, is accredited by the Engineer's Council for Professional Development.

Students double register in both colleges during their junior and senior years. The interdisciplinary agricultural engineering specialization provides excellent preparation for a wide variety of jobs in most industries that serve agriculture. Qualified graduates may also continue
study in a Master of Engineering, Master of Science, or doctoral degree program.

Agricultural engineering technology offers the student opportunities to take courses in such areas as agronomy, agricultural economics, natural resources, and animal science as well as plant physiology, food science, genetics, and microbiology. The emphasis is on technical aspects of the production of food, feed, and fiber. Some of the interest areas offered are the teaching of agricultural mechanization, power and machinery, soil and water management, and structures and the environment. Students may also prepare for work in cooperative extension.

Specific course requirements for agricultural engineering technology are:

A. Basic Subjects

1. Mathematics, including one semester of calculus 6
2. Chemistry 6
3. Physical sciences
   a) Physics (if no previous high school physics) 8
   b) Application of physical sciences
      (Ag Eng 208, 209) 6
4. Oral communication 3
5. Technical skills
   a) Computer programming 3
   b) Graphics 3
   c) Surveying 3
   d) Metal work or carpentry 2

B. Advanced and Applied Subjects

1. Agricultural sciences
   a) Soils 4
   b) Animal production 3
   c) Plant production 3
   d) Farm or business management 3
2. Agricultural engineering technology: five agricultural engineering courses at the 300 level or above 15

Environmental technology is directed toward students with applied science and mathematical interests who have concern for the quality of the environment and a desire to deal with environmental management problems from a technological perspective. The specialization combines basic training in physical and biological sciences, ecology, and environmental quality with a selection of courses oriented toward technical problem solving. A graduate from this area of specialization should have the ability to work with scientists and engineers in industrial and governmental agencies on environmental planning, environmental impact studies, and pollution control or in sales, development, and research.

Special course requirements for environmental technology are:

A. Basic Subjects

1. Calculus (Math 111, 112, and if graduate study is proposed, Math 214, 215, 216, 218) 6-12
2. Chemistry 6-8
3. Physics 6
4. Computer programming 3
5. Microeconomics 3
6. Introductory environmental sciences
   a) Soil science 4
   b) Natural resources 3
   c) Microbiology 3
   d) Ecology 3

B. Advanced and Applied Subjects

1. Technology
   a) Hydrology (Ag Eng 371) 2
   b) Environmental pollution (Ag Eng 325) 3
   c) Environmental systems analysis (Ag Eng 475) 3

2. Environmental sciences: three courses selected from biochemistry, limnology, microbiology, natural resources, soil and water conservation, or biometeorology 9
3. Social sciences: two courses selected from economics, government, law, or sociology 6
4. Environmental engineering: two engineering waste management courses at the 400 level or above 6

Animal Sciences

Students in this program area study the breeding, care, and production of dairy and beef cattle, horses, poultry, pigs, and sheep. Basic and biological sciences are applied to animal industries to increase the supply of food and other products by animals. The animal science program is offered jointly by the Departments of Animal Science and Poultry Science. It is housed in Morrison Hall with some facilities also in Rice Hall. The Animal Research and Teaching Center is located at Harford, New York.

Production courses are designed to provide some practical experience in animal production. Many species of animals are used for study and research, including dairy and beef cattle, horses, sheep, swine, chickens, turkeys, ducks, mink, dogs, rabbits, rats, hamsters, guinea pigs, goats, and turtles. The program has excellent facilities for housing animals, and modern, well-equipped laboratories and classrooms.

Students enroll in both basic and advanced courses and, with their advisers, develop a curriculum that may include courses in animal nutrition, animal breeding and genetics, animal physiology, meat science, and dairy cattle, livestock, and poultry production. Students who want to enter veterinary college or graduate school take additional courses in chemistry, physics, biochemistry, microbiology, and mathematics.

Students can concentrate in animal production, animal breeding and genetics, meat science, animal physiology, and animal nutrition. In consultation with their advisers, students may select sequences of courses tailored to their own interests. Students may prepare for careers in animal production or as technicians. Students whose interests and abilities warrant it usually are urged to emphasize the basic principles of economics and biological sciences. This emphasis provides preparation for graduate study, admission to veterinary colleges, or careers in teaching or research in the more specialized disciplines of animal science.

Students are required to complete a minimum of 24 credits in animal science. This includes 12 credits in basic courses, 6 credits in animal or poultry production, and 6 credits in advanced courses. Work experience is highly recommended.

Students preparing for graduate or advanced professional work in animal science should take upper-division courses in chemistry and biochemistry as well as animal science courses in cytogenetics or animal breeding, forages, meats, swine or sheep, dairy cattle, artificial insemination, lactation, nutrition, and endocrinology.

Applied Economics and Business Management

In applied economics and business management, students may choose several specializations and options. Courses in agricultural economics are supplemented by others in related areas such as economics, sociology, history, government, industrial and labor relations, hotel administration, consumer economics, animal science, plant sciences, natural resources, mathematics, and statistics.

Students with outstanding academic records may apply to coregister in the Graduate School of Business and Public Administration in their senior year. For information, contact the Admissions Office, 315 Malott Hall.

The program in applied economics and business management is based in the Department of Agricultural Economics and housed in Warren Hall. Agricultural economics provides a general program in the economics of the agricultural sector. It is an appropriate major for those students who want to survey offerings in agricultural economics, such as management, marketing, economic development, and policy and resource economics; and to prepare for graduate work in agricultural economics.

Business management and marketing applies the principles of economics and the tools of management to prepare students for careers in business. Special emphasis is given to developing decision-making skills and to the study of the structure and practices of business institutions. Market analysis, sales, banking, merchandising, and production management are fields for which students may prepare.

Farm business management and finance is intended for students with farm experience who are interested in farming or in preparing for work in farm management or farm finance, in cooperative extension, and in farm cooperatives.

Food-industry management is designed for students interested in management or sales positions with the processing, manufacturing, or distribution segments of the food industry.

Resource economics is an option for students interested in the application of the principles of economics to problems, both public and private, involving natural and human resources. Public-affairs management integrates a wide range of subjects areas designed to familiarize students with the nature of public affairs and managerial complexities created by the interaction of economic factors in social and political institutions.

The program includes six core courses in the Department of Agricultural Economics and additional courses in an optional area of concentration.

Behavioral and Social Sciences

The behavioral and social sciences (BASS) are concerned with people, their society, and their environment. Knowledge developed in agriculture and life sciences is translated into programs affecting people and the environment in which they live and work.

The program is offered by three departments in the College—Communication Arts, in Roberts Hall; and Mann Hall, Education, in Stone Hall; and Rural Sociology, in Warren Hall.

Communication Arts

Everyone must relate to others through the process of communication. As society becomes more complex and diverse, there is an increasing need for individuals who can interpret and relate to the complexities of the society and its organizations.

Students in the Department of Communication Arts study communication theory and practice. As a result, they learn both the psychology of communication and the most effective means of adapting written, interpersonal, audio, and visual communication to their audiences. The curriculum is based on a strong foundation in agriculture and the life sciences, the social and the humanities.

Students elect one of three different sequences by the beginning of their junior year: public communication, publication, or interpersonal communication. Each sequence has a required core of five to seven courses: Mass Media, Theories of Human Communication, and Introduction to Media. In addition, each student is required to take Oral Communication.
To prepare students for a career in a particular professional field, a concentration of at least 12 credits outside the department is required. This may be in a single department or related courses in several departments. The concentration allows students to plan for specific professions such as positions in public information, agricultural journalism, and personnel management and training.

Students are strongly encouraged to seek practical communication experiences through the campus media, part-time or summer employment, or an internship program. This would contribute to a portfolio of professional materials that is invaluable in obtaining a position in communication.

Public communication prepares students for careers as communication, information, or public relations specialists in a wide variety of settings. This would include agriculture, business, education, government, and community and social welfare organizations.

Required courses for this sequence are taken in communication planning and strategy, survey research, computer understanding of the substance and visual communication. In addition, there is a heavy emphasis on writing skills.

Publication provides an excellent background in writing for a variety of markets. Students can select courses to provide them with skills as editors and writers in virtually any field, for example, agricultural journalist, editor for organizational publications, or science or technical writer.

Required courses for this sequence are taken in writing, media law, publication design, and communication theory. In addition, students serve as staff members for the Cornell University for one or two terms.

Interpersonal communication prepares students for careers working less with media and more directly with people, such as personnel management, training, human services, and a variety of sales and consulting positions.

Required courses for this sequence are taken in communication research, survey research, and writing. Electives include such courses as small-group communication, listening, persuasion, intercultural communication, and organizational communication.

Detailed descriptions of the sequences and the guidelines for the selection of elective courses are available from the Department of Communication Arts, 307 Roberts Hall.

Education

The focus in the Department of Education is on how teaching and learning take place in school and nonschool settings, as well as the role of education in our society. Students study concepts and develop competencies necessary to analyze educational situations critically and to plan, implement, and evaluate changes in educational programs in an effort to increase understanding of the substance and process of education so that human potentialities can be realized.

Agricultural education is intended for students who have good academic ability, experience in agriculture, and an interest in youth and young adults who would like to study agriculture. The ability to work with and get along with people is essential. This is the only program in New York State leading to certification to teach agriculture in public schools. The agriculture program includes agricultural business, agricultural mechanization, conservation, farm production and management, horse handling and care, ornamental horticulture, and small animal science. Candidates must complete an approved curriculum leading to the baccalaureate degree, including a supervised teaching experience. During their sophomore year, students who are interested should consult Professor W. Drake, 212 Stone Hall, for technical and pedagogical requirements. Permanent certification requires graduate study.

Also available is a program that does not provide teacher certification. Students completing this specialization often find positions in businesses or industries conducting education programs. Some may enter fifth-year teacher-preparation programs. For the education specialization, each student, in consultation with an adviser, plans a program that includes:

- One introductory course, either The Art of Teaching, or Educational Consultation
- Two courses selected from educational psychology: sociology of education; and general, political, or social philosophy of education.
- Field experience under the direct supervision of the student's adviser (or some other supervisor).
- Twelve to 15 credits of electives chosen from upper-division courses in education. These courses allow students to concentrate on a particular area or pursue special interests.

By selecting a science, mathematics, or environmental education sequence, students prepare for positions in environmental centers, museums, school systems, governmental agencies, youth organizations, private conservation organizations, or industrial groups. Each student will take about 50 credits in basic science, including both the biological and the physical sciences.

Students develop competence in communicating to audiences of varying sizes in the public relations activities concerned with environmental quality and interpretation, and in transmitting ideas and reports through mass media.

Rural Sociology

Rural sociology trains students in the theory, methods, and applications of sociology in rural society, both domestic and international. Each student specializes in one of three areas: rural social organization and development, theory and policy, or methods and analysis. Such training provides a basis for sociology-related occupations and prepares undergraduates for more detailed graduate work in a number of rural development fields. Each student must complete 24 credits of courses in rural sociology and a 3-credit course in statistics. Required rural sociology courses are: 100, Introduction to Sociology, or 101, Introduction to Rural Sociology; 105, Social Organization and Rural Development; 213, Introductory Research Methods; 356, Rural Society in America; and 404, Intermediate Sociological Theory.

Biological Sciences

The program of study in biology is offered by the Division of Biological Sciences. Student enroll in either the College of Agriculture and Life Sciences or the College of Arts and Sciences.

Areas of concentration include general biology, animal physiology and anatomy; biochemistry, botany, cell biology, ecology, systematics, and evolution; genetics and development, neurobiology, and behavior; and an independent option. Programs of study are described under the Division of Biological Sciences, page 204.

Microbiology

Microbiology is a specialization based in the College of Agriculture and Life Sciences. The program provides training for technical positions in microbiology and preparation for graduate work in theoretical and applied microbiology.

Students may prepare for career options such as food microbiology or pharmaceutical and industrial microbiology, or pursue preprofessional veterinary, medical, and dental programs.

For a limited number of students who are selected for the clinical microbiology specialization, the senior year may be spent at Cornell Medical College and the New York Hospital or at Rush Medical College.

The course of study requires concurrent course work in chemistry, physics, and mathematics and is designed to fulfill the requirements for accreditation by the American Academy of Microbiology. Most students specializing in microbiology elect additional courses in the College of Liberal Arts. More information may be obtained from the Department of Microbiology, Stocking Hall.

Nutritional Sciences

The Division of Nutritional Sciences is an intercollege unit affiliated with the College of Human Ecology and the College of Agriculture and Life Sciences. Most students are admitted to the undergraduate nutrition major through the College of Human Ecology. Students in the College of Agriculture and Life Sciences who want to pursue a nutrition emphasis may plan a concentration in biological sciences, option B, or in general studies in agriculture. Other students in CALS closely related to nutritional sciences include food science, food-industry management, animal sciences and nutrition, vegetable crops, and microbiology. For more information about the curriculum, see Division of Nutritional Sciences, page 314, or consult M. Devine, associate director for academic affairs in the division.

Environmental Studies

The study of the environment and man's interaction with it is a vigorous and challenging area.

The strategy for developing reasonable solutions to environmental problems requires a strong base of scientific, ecological, and technical knowledge; the ability to understand the natural environment; and the ability to estimate the effect of man's interaction with the environment. New tools and techniques borrowed from all areas of science and technology are being applied to the solution of environmental problems.

Areas of specialization in environmental studies are the agronomic sciences relating to the atmosphere and to soils, entomology, landscape architecture, and natural resources with emphasis in wildlife, forestry, and aquatic science. The specializations are based in the departments of Agronomy, in Emerson Hall; Entomology, in Comstock Hall; Forestry and Ornamental Horticulture, in the Plant Sciences Building, and Natural Resources, in Fawore Hall.

Agronomy

Biometeorology provides students with the basic principles of meteorology and the knowledge needed to understand environmental problems related to field-crop production, soil management, and the atmosphere. The program includes practical and theoretical aspects of meteorology and climatology. Graduates should have the training necessary for employment as a meteorologist, to work in national agencies, state environmental groups, and private industry focusing on the interactions between the atmospheric environment and cultivated crops and livestock. The freshman and sophomore years of study include a year and a half of calculus and a year each of physics, chemistry, and biology. During the junior and senior years, students acquire background in plant physiology, ecology, agronomy, agricultural economics, and natural resources. To provide additional depth in the agricultural sciences, the program requires the student to elect additional courses in one of the following fields: animal sciences, entomology, foriculure and horticulture, plant pathology, pomology, and vegetable crops.

Soil science provides students with background in the basic principles of soil science and the capability of solving soil problems, taking into consideration the soil's use and environment. The program combines

**Master of Landscape Architecture (M.L.A.) degree: second professional degree curriculum.** The two-year Master of Landscape Architecture (M.L.A.) curriculum serves to broaden and enrich undergraduate education in design by providing an expanded educational experience to those who are technically skilled. Applicants are therefore expected to hold a bachelor's degree in landscape architecture or architecture from an accredited institution.

The objectives of the two-year M.L.A. curriculum are to permit students to conduct research relating to landscape architecture and to provide advanced education and training to individuals who may wish to teach, practice, or conduct applied research in landscape architecture. Students are permitted considerable flexibility in establishing programs that

take full advantage of the teaching and research resources of the University. Students admitted to the two-year M.L.A. curriculum are required to complete 60 credits of course work as approved by the members of their graduate committee. This must include at least two advanced studies, a graduate seminar, and a thesis or final master's project.

Natural Resources

This undergraduate curriculum is designed to provide an enduring and broadly applicable education. A liberal education with a strong biological and natural resources base is emphasized. Students are provided with an understanding of the world around them and are exposed to ecological concepts that may form a principal basis for their future decisions and training.

The program is based in the Department of Natural Resources and is housed in Fennow Hall. The Amot Forest Teaching and Research Center, a biological field-station laboratory within driving distance of the campus, has facilities for field-oriented courses, workshops, and opportunities for in-residence study at the Amot Camp.

The curriculum helps prepare students for many useful endeavors and can serve as a base for graduate work in many fields. Students are prepared to appreciate and understand their natural environment and the impact of man. A foundation is developed for the many students who continue with graduate professional training in natural resource conservation, wildlife science, fishery and aquatic sciences, and related resource programs.

Students are encouraged to study in each of the eight learning areas listed below:

1) Understanding basic substrates for life: geology, soils, meteorology, energy, ecology, and water resources.
2) Understanding natural processes: chemistry, physics, ecology, and field biology.
3) Understanding how organisms function: biology, physiology, anatomy, and behavior.
4) Understanding how people function: psychology, sociology, politics, government, history, anthropology, law, and economics.
5) Identifying and measuring the environment: taxonomy, resource inventory, and air photo interpretation.
6) Learning and developing basic life skills: communication, thinking, making decisions, logic, planning, philosophy, ethics, and others.
7) Learning special skills: mathematics, statistics, computer science, resource management, law, and so forth.
8) Learning about the world: students should recognize that not all learning takes place in the classroom. Exploring different careers, participating in campus and community activities, and independent research all contribute to continuing growth.

For students who wish to specialize further, natural resources offers a variety of options—wildlife science, forest science, aquatic science, and fisheries science.

Students should seek relevant work experience to complement their academic studies.

Food Science

The food science program area is designed to provide students with basic skills and the knowledge necessary to ensure an adequate food supply. Students in this program take a core of fundamental courses and in consultation with faculty advisers select courses suitable for specific career objectives.

The core is designed to meet minimum guidelines of the Institute of Food Technologists, the professional society of United States food scientists. The student thus has an opportunity to become well prepared for a career in food science. The flexibility of the food science program allows students to prepare for a variety of positions in industry, government, or education. Some of the positions and areas of work require graduate training, and it can be useful in others as well. Opportunities for graduate study exist at a number of universities, including Cornell.

The program is offered by the Department of Food Science, housed in Stocking Hall. A full-scale dairy plant, and extensive laboratory facilities are available for training, research, and employment.

During the first two years, students take courses in biology, chemistry, physics, microbiology, and introductory food science, as well as make progress in meeting general college requirements. During the last two years, students take courses dealing with the application of science and technology to the processing, preservation, distribution, and utilization of foods.

Students are required to take Introductory Food Science, Introductory Nutrition, Food Analysis, Nutritional Aspects of Food Processing, Food Engineering, Sanitation and Public Health, Food Processing I and II, Food Chemistry, Sensory and Objective Evaluations of Foods. Food Microbiology, food chemistry laboratories, and introductory statistics.

Students may choose additional courses in chemistry, microbiology, nutrition in preparation for careers in research and development; in mathematics and computer science; in processing and engineering; in marketing and business management; or in a variety of production courses related to specific commodities. Emphasis may be placed on the international aspects of food science.

Students are strongly encouraged to obtain further competence in one or more areas of emphasis. Lists of recommended courses are available for many areas, but the student is free to select courses for special objectives. The areas of emphasis include processing technology, food chemistry, nutritional aspects of processing, technology and management; dairy science; meat, poultry, and fish technology; food microbiology; and international food development.

Plant Sciences

Plant science students may specialize in general plant science, plant breeding, plant pathology, plant protection, field crops, floriculture and horticulture, pomology, and vegetable crops. Students with well-defined interests may specialize when they enter the college. Others can start in the general plant sciences curriculum and, if desired, specialize after the second year.

Study in the plant sciences is offered jointly by the Department of Agronomy in Emerson Hall, and the departments of Floriculture and Ornamental Horticulture, Plant Breeding, Plant Pathology, Pomology, and Vegetable Crops, all at the Plant Sciences Building.

Agronomy

Field crops. Courses required for all students specializing in field crops (agronomy) include general biology, botany, plant physiology, general chemistry, organic chemistry, mathematics, crops, and soils. Students who anticipate a career in agricultural production or service after completion of the B.S. degree should take additional courses in crops, soils, crop physiology, agricultural economics, communications, plant pathology, entomology, nutrition, genetics, microbiology, and climatology. Students planning graduate or professional study beyond the bachelor's degree should take advanced course work in biochemistry, botany, quantitative, and experimental chemistry; calculus; physics; and statistics.

Floriculture and Ornamental Horticulture

Horticultural science is applied to the production and marketing of forest, nursery, and turfgrass crops, and to the selection of plants for both the outdoor and indoor landscapes, as well as to plant management in these environments. Students may specialize in greenhouse and nursery-crop production, turfgrass management, landscape contracting and maintenance service, retail and wholesale marketing of nursery and florist products and services, horticultural business management, and related areas. Environmental horticulture applies the science and art of horticulture to problems and solutions in the environment, to the development and implementation of environmental public policies, and to horticultural industries with direct interest in the environment. Many students choose to pursue a general program in floriculture and ornamental horticulture and include course work in all of these areas. Similarly, programs may be designed to prepare for teaching, cooperative extension, and communications careers in horticulture. Students wishing to prepare for graduate study in horticulture may develop a program in basic sciences and their application in horticultural science.

In consultation with the faculty adviser, each student tailors a program to achieve individual educational objectives in floriculture and ornamental horticulture. Students also are encouraged to take courses in these areas: agricultural economics and business management, agricultural engineering, agronomy (soils), ecology, entomology, plant pathology, plant physiology, oral and written expression, and plant taxonomy. Use of electives to pursue study in the horticultural sciences and in other areas of special interest to the student is encouraged and provides opportunities for broadening and enriching learning experiences. Numerous opportunities to become familiar with the horticultural industries and professions are provided through field trips, guest lecturers, and optional special problem and work experience programs.

General Plant Science

General plant science is intended for students whose interest in studying plants has not yet centered on any one of the more specialized groups within this area. Students may continue with this option throughout their undergraduate years, particularly if they are likely to be interested in, and qualified for, advanced studies beyond the bachelor's degree. Students who plan to seek employment upon graduation may prefer to specialize. There are, however, opportunities for general plant science graduates in the service and supply industries as extension agents, as teachers, and as research technicians.

More than a hundred courses are offered that deal directly with some area of plant science. Other courses relating to plant science are offered in agricultural meteorology, food science, and soil science. In addition, an interest in plant science can be combined with agricultural engineering, conservation, education, extension, marketing, statistics, international agriculture, or some other area of specialization.

Undergraduates are encouraged to obtain practical experience. This may involve research under the direction of a faculty member to work in a commercial industry, research institute, or on a farm. The Department of Plant Pathology will assist students looking for positions that would provide useful experience.

Plant Breeding

Plant breeding provides undergraduates with (1) preparation for graduate study leading to advanced degrees in plant breeding and plant genetics, and (2) preparation for work in research and development of plant varieties and making varietal recommendations, and for positions in seed analysis, regulation, and quality control.
In cooperation with an adviser, each student plans a curriculum with a concentration in basic sciences supplemented by selected applied fields best suited to his or her individual goals. Options for students to choose from include plant breeding and plant genetics, genetics, cytology, and cytogenetics; mathematics (calculus) and statistics; organic chemistry and biochemistry; plant anatomy, ecology, and physiology; crop production, and plant pathology and disease control.

**Plant Pathology**

Plant pathology requires broad training in the physical and biological sciences plus a general background in the area of crop production with emphasis on crop protection. Specific requirements depend upon the career goal. Although a student is interested in, such as mycological or microbiological technician, biological research technician, technical representative for agricultural industry, cooperative extension agent, plant protection technician, or biology teacher. Students may also be interested in graduate work in plant pathology or some other area of biology.

A core of basic and applied courses is strongly suggested, including chemistry, mathematics, physics and biology, entomology, plant breeding, and plant pathology. Courses chosen from agronomy, entomology, floriculture and ornamental horticulture, pomology, or vegetable crops complete the program.

**Plant Protection**

This specialization is offered for students who are interested in pest management for plant protection. The study of insects, diseases, weeds, vertebrate pests, and other factors that prevent maximum crop production may prepare students for careers in agribusiness, the agrichemical industry, cooperative extension, pest management consulting, state and federal regulatory work, and a variety of other technical positions. Although designed as a terminal program for students desiring a practical preparation in general plant protection, this specialization may also provide an adequate background for graduate work in entomology, plant pathology, or weed science.

The following subjects are considered essential to the plant protection specialization: botany and plant physiology, general ecology, soils, crop science, and microbial ecology. Additional courses in introductory entomology, insect, plant breeding, general plant pathology, plant disease control, weed science, and pest management for plant protection are recommended. Students should plan to take a total of sixty-two to seventy credits in courses required and recommended for the specialization.

In addition, a number of other subjects pertinent to plant protection are recommended, depending upon the student's interests: agricultural economics, agricultural engineering, agronomy, biochemistry, communication arts, pathology and entomology, general physics, genetics, meteorology, mycology, pesticides in the environment, and plant anatomy. Employment between the junior and senior years involving practical experience in plant protection on a farm, at an experiment station, with an agrichemical company, or with a regulatory agency is encouraged.

**Pomology**

Pomology provides students a choice of two options: pomology or fruit production. While the two programs are quite similar, they are designed to meet the needs and interests of students preparing for two different lines of work. The pomology option is intended to provide students with somewhat more training in basic sciences in preparation for professional service with agencies concerned with fruit production, and further study at the graduate level. The fruit production option is intended to meet the needs of students planning to operate or manage fruit farms or to engage in similar work.

**Vegetable Crops**

Vegetable crops are one of the most diverse and scientifically rich fields in agriculture. In New York more than twenty economically important vegetables are produced and marketed. Vegetable crops have a high value per acre, making it economically feasible to invest relatively large sums in land, equipment, fertilizers, seed, and pesticides. Many vegetables are highly perishable; consequently, considerable expenditure is made for refrigeration and special storage facilities as well as for packaging and handling techniques that have been specifically developed for each particular crop.

The opportunities for trained personnel are numerous in all aspects of vegetable production and the closely related fields of purchasing, processing, merchandising, extension, and banking. Some students may continue their studies in graduate school in preparation for teaching, research, or cooperative extension work in colleges and universities or in private industry. Recently there has been an increased interest in growing vegetables in tropical countries and in international agriculture; a specialization in vegetable crops provides suitable training for this vocation.

The different specialties in the area of vegetable crops afford a very flexible curriculum. Courses are chosen by the student in consultation with an adviser and other members of the staff. Students take most of the courses offered by the Department of Vegetable Crops and commonly choose other courses from accounting, agricultural geography, and marketing; soils, soil fertility, and regional agriculture; plant biology, physiology, ecology, and anatomy; oral expression; food sciences, nutritional sciences; plant genetics, statistics, and plant breeding; and economic entomology and plant diseases and their control, and weed science. Students supplement their course work with study in areas in which they have particular interest.

**Special Programs and Career Options**

Some students are interested in pursuing a broad general education in agriculture and the life sciences. Others are interested in pursuing a specialized interest, while still others are uncertain about their career objectives. Such students, in cooperation with their faculty advisers, may design a general studies sequence suited to their individual interests, abilities, and objectives. Independent study outside of existing program areas must be planned with a faculty adviser. Information on these options is available in the Office of Student Affairs, 17 Roberts Hall.

**Cooperative Extension**

Students may prepare for cooperative extension careers in agricultural production. 4-H youth development, community development, and homes and grounds education. With the help of designated advisers, courses selected with specific requirements for 4-H preparation in agricultural technology in a department of the college, and (2) preparation in social sciences, communications, and program methodology. A limited number of cooperative extension agent positions are filled from each year's graduating class.

Students wanting to prepare for extension careers in commercial agriculture will complete a two-part requirement.

1. Each student must complete 15 credits or more in oral communication, written communication, psychology, and sociology with at least one course in each area. Freshman Seminars may not be used to fulfill the written communication requirement. It is strongly suggested that students also complete courses in education, particularly in curriculum development and adult education.

2. Students choose one of the specializations listed below and will work with their adviser to schedule their course work. Each student must complete the requirements for a specialization.

**Specialization**

**Adviser**

- Animal science and dairy production
  - G. Casler
- Field crops and soil science
  - T. Scott
- Floriculture and ornamental horticulture
  - G. Good
- Pomology
  - W. Kelly
- Vegetable crops
  - G. Broadwell

**General Studies in Agriculture**

This specialization allows students to design courses of study suited to their individual interests, abilities, and objectives (1) for general education in agriculture or agricultural science, (2) for temporary classification to help them define vocational interests and goals, or (3) for independent study in a specialized field not encompassed by the existing program areas. For example, undergraduates in CALS may develop a nutritional sciences concentration through the general studies in agriculture. However, most undergraduates who major in nutrition are admitted through the College of Human Ecology. See page 314.

The general agriculture option includes production as well as technical courses in agriculture. Students, with help from their advisers, will select a range of agricultural electives to provide a broad background of agricultural experience. The minimum course and distribution requirements for general agriculture are those required of all students in the college.

Advanced courses in the basic agricultural and life sciences are included. Students should contact the Office of Student Affairs for a list of advisers.

**International Agriculture**

International agriculture provides students with an understanding of the special problems of applying basic knowledge to the unique conditions of developing countries. The courses in international agriculture are designed to acquaint students with the socioeconomic factors in agricultural development, with the physical and biological nature of tropical crops and animals, and with various world food systems for which study programs exist. The study of a foreign language is required.

In addition to the college distribution requirement of 45 credits, students majoring in international agriculture must take at least 23 credits. A minimum of 5 credits in international agriculture and 8
Nondepartmental Courses

**ALS 005 Basic Review Mathematics**  
Fall or spring. 3 credits (this credit is not counted toward the 120 credits required for the degree). Primarily for entering students.  
Fall: M W F 6 (two sections) or 12:20 (two sections). Spring: M W F 12:20 (two sections).  
H. A. Geiselman and staff  
Exposes students to some of the concepts necessary for success in other mathematics and science courses. Topics include exponents and radicals, conversion of units, algebraic fractions and factoring, solving equations in one or more unknowns, ratio, proportion and variation, percent and mixture problems. Considerable emphasis is placed on the analysis and reasoning involved in the solution of verbal problems requiring the use of mathematics.

**ALS 027 Introduction to Farm Techniques**  
Fall or spring. Noncredit. Grade does not appear on transcript. For permission to register, contact the Office of Career Planning and Placement, 16 Roberts Hall.  
Fall: T or W 1:25–4:30. Spring: M T W R or F 1:25–4:30.  
Classes meet at various college farm facilities.  
W. F. Miller  
Provides supervised instruction in the basic manual skills of farming, including milking by hand and machine, handling livestock, and operating tractors and field equipment. General orientation to the practices and procedures of day-to-day farm operation.

**ALS 100 American Indian Studies: An Introduction**  
Fall. 3 credits.  
Lee, T R 10:10–11:25; disc to be arranged.  
R. Fougnie  
This course provides a foundation for the study of the American Indian. Emphasis will be placed on the social, cultural, historical, educational, and human development of the American Indian. Guest lecturers from Cornell staff and the Indian community will serve to broaden the scope of the course.

**ALS 115 Introductory College Mathematics**  
Fall or spring. 4 credits.  
M W F 9:05 (two sections), or 12:20 (two sections); lab, T 11:15 or 12:20, or R 11:15 or 12:20. Oct. 8, 8:30–10 p.m. Nov. 5, 8:30–10 p.m.; Nov. 23, 7–8 p.m.; Mar. 4, 8:30–10 p.m.; Apr. 8, 8:30–10 p.m.; Apr. 26, 7–8 p.m. H. A. Geiselman, S. C. Piliero  
Designed to give students with sound high school mathematics backgrounds a unified treatment of the basic concepts of college algebra, analytic geometry, and the elements of calculus. Considerable emphasis is placed on the concept of function, graphing, problem solving, and methods of proof. The Cornell University Computing Language (PL/C) is taught and used to strengthen and integrate the mathematical topics covered.

**ALS 400 Internship**  
Fall, spring, summer. 6 credits maximum. Not open to students who have earned internship credits elsewhere or in previous terms. S-U grades only.  
M W 7:30 p.m. One World Room, Anabel Taylor, N. E. Awa, R. A. Baer, H. Feidman, J. C. Mbata, R. J. McNeil and others.  
The theme of world community is examined in terms of the disciplines that the course suggests, with special reference to the role of the United States in translating the concept to reality. The course seeks to examine the American experience against the background of world community from the points of view of the humanities, the social sciences, the natural sciences, and religious studies.

**ALS 468 Agriculture, Society, and the Environment (also Biological Sciences 469)**  
Spring. 3 credits.  
Leets, T R 12:20; disc W evenings and by arrangement, D. Pimentel and others.  
This course, designed and conducted by Cornell students and staff, is aimed at interrelating the many facets of agriculture. The course stresses the importance of a holistic approach to agriculture by offering perspectives on many factors related to food production: soil fertility, plant breeding, pest control, ecosystems, world food problems, livestock production, energy, economics, social and political concerns, labor problems, and land and resource management. This approach is used to develop the basic framework on which future options and strategies for food production in the United States and the world are examined and evaluated.

**ALS 661 Environmental Biology (also Biological Sciences 661)**  
Fall and spring. 1–3 credits.  
Prerequisite: permission of instructor.  
Hours to be arranged. D. Pimentel.  
Focuses on complex energy-environmental problems, using a multidisciplinary approach. Task forces of nine students, each group representing several disciplines, investigate significant energy-environmental problems. Each task force spends two semesters preparing a report for publication, modeled after National Academy of Sciences reports.

**ALS 710 Nurturing Scientific Creativity**  
Fall and spring. 1 credit. Prerequisite: permission of instructor.  
S-U grades only.  
Hours to be arranged. N. L. VanDemark.  
A philosophical approach to issues relating to creative thinking and problem solving, with special emphasis on the human elements in scientific development, grantsmanship, project development, and research endeavors. Attention will be given to dealing with perceptual, emotional, cultural, and environmental blocks as well as educational, institutional, and governmental deterrents.

### Agricultural Economics

150 Economics of Agricultural Geography  
Fall. 3 credits.  
Leets, M W F 11:15 or 12:20. Prelims, R 7 p.m., Sept. 28 and Nov. 4. D. G. Sisler.  
The economics and geography of world agriculture, providing a basis for understanding past development and future changes. Elementary economic principles, historical development, physical geography, and population growth are studied in their relation to agricultural development and the
economic problems of farmers. Where possible, current domestic and foreign agricultural issues are used to illustrate principles.

220 Introduction to Business Management Fall. 3 credits.

Lec, MWF 10:10; disc, M 12:20–2:15, 2:30–4:25, or 7:30–9:25 p.m.; T, W, or F 8–9:55, 10:10–12:05, 12:20–2:15, or 2:30–4:25. In weeks when discs are held, there will be no W lecture. Discs are held instead of a lecture in all but four weeks of the term.

Principles and tools useful in performing major functions of management: planning, organizing, directing and leading, and controlling. Within this framework, consideration is given to social, legal, and economic environments; forms of business ownership; financial statements; cost behavior; and a few key concepts and tools in financial management.

221 Accounting Spring. 3 credits. Not open to freshmen.

Lecs, M 10:10; lab, T W or F 8–9:55, 10:10–12:05, 12:20–2:15, or 2:30–4:25. Two evening lectures.

A comprehensive introduction to financial accounting concepts and techniques, intended to provide a basic understanding of the accounting cycle and the elements of financial statement analysis and interpretation. Concepts rather than procedures are emphasized.

240 Marketing Spring. 3 credits.

Lecs, MWF 11:15, lab, M 2:30–4:25, T 12:20–2:15, or 2:30–4:25, W 2:30–4:25, R 12:20–2:15 or 2:30–4:25, or F 10:10–12:05. In weeks labs are held, there will be no lecture. Staff.

An introductory study of the food marketing system and the society it serves, including the goals and practices of farmers and marketers (in such areas as buying and selling, transporting, packaging, and advertising), price-making institutions (such as commodity futures markets), the behavior and purchasing practices of consumers, and the interrelationships among these groups.

250 Introduction to Energy Resources Spring. 3 credits.

Lecs, MWF 11:15, D. Chapman

An introduction to the concepts of efficiency, competitive equilibrium, and social cost. The course focuses on basic energy resources, examining production costs and demand for petroleum, natural gas, electricity, and solar energy. The ownership and regulatory structure of each energy industry is discussed, as well as selected policy issues such as price control, taxation, public ownership, conservation, and renewable resource use.

302 Farm Business Management Spring. 4 credits. Not open to freshmen. This course is a prerequisite for Agricultural Economics 402.

Lecs, MWF 10:10, lab, T W or R 12:25–4:25. On days farms are visited, the lab period is 1:25–5:30. One all-day trip and several half-day trips are taken to visit farm businesses. R. A. Miligan.

An intensive study of problems associated with planning, organizing, operating, and managing a farm business, with emphasis on the tools of managerial analysis and decision making. Topics include management information systems, business analysis, economic principles, and budgeting; and acquisition, organization, and management of capital, labor, land, and machinery.

310 Introductory Statistics Fall. 3 credits.

Prerequisite: ALS 115 or equivalent level of algebra.

Lecs, MWF 12:20; lab, M 2:30 or 3:35, T 2:30 or 3:35 or W 2:30 or 3:35. Evening exams. D. MacLaren.

An introduction to statistical methods. Topics to be covered include the descriptive analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, correlation and time series analysis, and selected nonparametric methods. Applications from business, economics, and the biological sciences are used to illustrate the methods covered in the course.

330 Business Law Fall. 3 credits. Limited to upperclass students. Prerequisite: permission of instructor.

Lecs, MWF 9:05, one evening prelim. J. B. Bugliari, D. A. Grossman.

Consideration is given chiefly to legal problems of particular interest to persons who expect to engage in business. Emphasis is on personal property, contracts, agency, real property, and partnerships and corporations.

321 Business Law Fall. 4 credits. Limited to upperclass students. Prerequisite: permission of instructor.

Lecs, MWF 9:05, disc, M 4; one evening prelim. J. B. Bugliari, D. A. Grossman.

The lecture portion is the same as Agricultural Economics 320. Discussions deal with practical applications of the legal principles covered in that course and attempt, also to give some deeper insight into the roles and functions of the lawyer and the judiciary in our society.

322 Taxation In Business and Personal Decision Making Spring. 3 credits. Recommended: background in accounting and business law.

The impact of taxation, both state and federal, on business and personal decision making. After a brief discussion of tax policy and state and local taxes, an in-depth examination is conducted of federal income and estate and gift taxes affecting individuals and business entities. Both tax management and tax reporting are stressed.

323 Managerial Accounting and Economics Fall. 3 credits. Prerequisites: Agricultural Economics 221 and Economics 102 or equivalents.

An introduction to cost accounting that emphasizes the application of accounting and economic concepts to managerial control and decision making. Major topics include basic costing, standard costing, cost behavior, cost allocation, pricing, budgeting, inventory control, transfer pricing, measuring divisional performance, and accounting for inflation.

324 Financial Management Spring. 3 credits. Prerequisites: Agricultural Economics 220 or equivalent. Recommended: Agricultural Economics 221 or equivalent.

Lecs, MWF 9:05, disc, W 2:30–4:25, R 8–9:55 or 12:20–2:15, or F 9:05–11 or 12:20–2:15. In weeks when discs are held, there will be no F lecture. Discs are held instead of lecture in all but two weeks of the term. Two evening prelims. B. L. Anderson.

Focuses on three major questions: facing management: how to evaluate capital investment decisions, how to raise the capital to finance those investments, and how to generate the sufficient cash flows to meet the firm's cash obligations. Major topics include methods to analyze capital decisions, impact of taxes, techniques for handling risk and uncertainty, effects of inflation, sources and costs of debt and equity, capital structure, leverage, and working capital management.

332 Economics of the Public Sector Spring. 3 credits. Prerequisite: Agricultural Economics 102 or equivalent.

Lecs, MWF 11:15, disc, MWF 2:30–4 or 7:30–9 p.m., R 12:20–1:50, or F 12:20–1:50. Staff.

340 Economics of Marketing Spring. 3 credits.

Prerequisites: Economics 101–102 and Agricultural Economics 240 recommended.

Lecs, MWF 12:20–1:10, L. L. Hall.

The course provides an integrative framework for analysis of marketing functions, activities, and decisions in the food industry. Producer, consumer, and government behavior in the marketing system are explored, and their interaction is discussed. The course focuses on the importance of demand, the industrial organization of the food industry, and the causes and consequences of government intervention.

342 Marketing Management Fall. 3 credits.

Lecs, MWF 10:10; disc, R 12:20–2:15 or 2:30–4:25, F 8–9:55, 10:10–12:05, or 12:20–2:15. In weeks discs are held, there is no F lecture.

D. C. Goodrich.

Deals with principles and practices in the firm's management of the marketing function. Emphasizes the revenue aspects of marketing by considering sales forecasting and strategies in product and brand selection, pricing, packaging, promotion, and channel selection. Identification and generation of economic data necessary for marketing decisions are considered.

346 Dairy Marketing Spring. 2 credits. Limited to juniors and seniors. Prerequisite: Economics 102.

Lecs, T R 8–9:30 (first 9 weeks). A. Novakovic.

A review of the structural characteristics of the dairy industry and an analysis of issues, pricing systems, and government programs, including marketing orders, price supports, and import policies.

347 Marketing Horticultural Products Fall. 3 credits. Prerequisite: Agricultural Economics 240 or equivalent.

T R 8:30–9:55. All-day field trip the last Saturday in September. R. B. How.

A study of markets, marketing channels, and marketing services for fruits, vegetables, and horticultural commodities. An evaluation of marketing alternatives facing growers, shippers, wholesalers, and retailers of horticultural products. The role of public agencies in market information and regulation. The potential for group action to improve marketing operations.

350 Resource Economics Fall. 3 credits.

Prerequisite: either Natural Resources 211 and introductory economics or permission of instructor.

Lecs, T R 10:10; disc, M or T 12:25–3:30. Several field trips to be arranged. D. J. Alle.

The application of economic and political science concepts to the use of natural resources, with varying attention to water, land, forests, and fisheries.

Considers regional growth, the impact of urban growth, and public decision making in the resources and environmental management area.

351 Farm and Food Policies Fall. 3 credits. S-U grades optional.

The course deals broadly with farm and food policies, including price support and storage or reserve policies, international food aid, agricultural protection, soil conservation, the structure of agriculture, and domestic food subsidy programs.

380 Independent Honors Research in Social Science Fall or spring. 1–6 credits. Limited to students who have met the requirements for the honors program. A maximum of 6 credits may be earned in the honors program.
402 Advanced Farm Business Management  
Spring. 3 credits. Prerequisite: Agricultural Economics 302 or equivalent. 
Emphasis is on evaluating the profitability of alternative investments and enterprises. Principal topics include the effects of income taxes on investment decisions, capital investment analysis, linear programming, and financial risk and uncertainty. Experience in computer applications to farm business management is provided.

405 Farm Finance Fall. 3 credits. Prerequisite: Agricultural Economics 302. 
The principles and practices used in financing farm businesses, from the perspectives of the farmer and the farm lender. Topics covered include sources of capital, financing entry into agriculture, financial analyses of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, leasing, and the forms of business organization.

406 Farm and Rural Real Estate Appraisal  
Spring. 4 credits. Limited to 45 students. Prerequisites: Agricultural Economics 302 or equivalent and permission of instructor. 
Lecs, T R 10:10; lab, R 1:25–4:25. On days farms are visited, the laboratory period is 1:25–5:30. One all-day trip. Staff. 
The basic concepts and principles involved in appraisal. Factors governing the price of farms and rural real estate and methods of valuation are studied. Practice in appraising farms and other rural properties.

407 Advanced Agricultural Finance Seminar  
Spring. 2 credits. Limited to 16 seniors with extensive course work in farm management and farm finance. 
Open by application prior to March 1 of the year before the course is offered. 
W 3:35–5:30. E. L. LaDue. 
A special program in agricultural finance conducted with financial support from the Farm Credit System. Includes two days at Farm Credit Banks of Springfield, one week in Farm Credit Association offices, an all-day field trip observing FHA financing during fall term, a four-day trip to financial institutions in New York City during intersession, and lecture-discussions in the spring term. 
Representatives from banking, agribusiness, finance, and similar fields participate in spring term lecture-discussion sessions.

408 Seminar in Farm Business Decision Making  
Intersession (1 week). 2 credits. Prerequisite: Agricultural Economics 302 or 405, and permission of instructor. 
Develops method of analyzing farm business management problems. Gives student experience in identifying alternatives in problem solving. Provides opportunities to analyze and evaluate actual farm situations. Two field trips and interrural work with a farm family.

409 Farm Management Workshop Fall. 1 credit. Limited to seniors and graduate students. 
T 12:20–2. B. F. Stanton and staff. 
Presentation and interpretation of research in farm management and production economics. Each participant conducts a seminar and prepares a publishable evaluation of research results directed toward farmers and extension and business leaders.

410 Seminar in Farm Business Organization and Estate Planning  
Fall (first meeting, last Monday in September). 1 credit. Prerequisite: Agricultural Economics 302 or 405. 
Designed for seniors who plan to return to the home farm or to take positions working with commercial farmers in a finance or management capacity. Topics include choice of a business structure for family farm, organizing and operating a family partnership, initiating and managing a commercial farm corporation, financing, tax, and legal problems in starting, operating, and terminating a two-generation family business, problems of farm-owning families. Class presentations are informal. Students solve case problems and prepare papers on their home farm or an assigned problem.

412 Introduction to Linear Programming  
Spring 3 credits. Primarily for juniors, seniors, and M.S. degree candidates. Prerequisite: Agricultural Economics 310 or equivalent. 
An introduction to the concepts and computational procedures of linear programming. Emphasis on interpretation of results, model building, and data requirements for estimation using standard computer programs. Topics include sensitivity analysis, parametric programming, the transportation problem, scheduling, and distribution. Primary applications are made to agriculture and business.

415 Agricultural Prices  
Spring. 3 credits. S-U grades optional. Prerequisite: An introductory course in economics, such as Economics 101–102. 
Lecs, M W F 11:15. Staff. 
An analysis of supply and demand characteristics of farm commodities, institutional aspects of pricing farm and food products, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions.

416 Price Analysis  
Spring, 2 credits. Prerequisites: Agricultural Economics 310 or equivalent and coregistration in Agricultural Economics 415. 
Lecs, M W 1:25. W. G. Tornoe. 
The course introduces students to procedures used in empirical studies of demand, supply, and price behavior for agricultural products. Multiple regression techniques are emphasized. Each student is required to specify, fit, and report on an empirical model.

420 Advanced Business Law  
Spring. Limited to upperclass students. 
Developed to provide a fairly detailed and comprehensive legal background. Selected areas covered in Agricultural Economics 320 are further developed. Particular consideration is given to the law pertaining to bailments, sales, secured transactions, bankruptcy, and negotiable instruments.

421 Advanced Business Law  
Spring. 4 credits. Limited to upperclass students. Prerequisite: permission of instructor. 
Lectures cover the same material as Agricultural Economics 420. The discussions cover aspects of estate planning, estate planning techniques, the law and use of trusts, the law of wills, and federal and New York State estate and gift taxes and probate procedures.

422 Estate Planning  
Spring. 1 credit. Limited to upperclass students. S-U grades only. Cannot be taken by students who are enrolled in or who have taken Agricultural Economics 421. 
Lecs, T 4. J. B. Buglione. 
Fourteen sessions on the various aspects of estate-planning techniques. The law and use of trusts, the law of wills, and federal and New York State estate and gift taxes, and probate procedures are covered.

424 Business Policy  
Spring. 3 credits. Limited to seniors majoring in business management and marketing. 
An integrating course that examines business policy formulation and execution from the standpoint of the general manager of an organization. Focusing on decision making at the top management level. The course is built around a series of cases. Emphasizes improving oral and written communication skills.

425 Personal Financial Management  
Spring. 2 credits. Limited to juniors and seniors. 
Lecs, M 12:20–2.5; disc to be arranged. Second hour of lec is omitted in weeks discussions are held. D. A. Grossman. 
Managing personal income to maximize financial goals and objectives. Topics covered include financial institutions, investment alternatives, insurance, retail credit, housing, income taxation, and estate planning. Discussions are devoted to problems and case studies in financial planning for students and young families.

426 Management of Cooperative Action  
Fall 3 credits. 
Investigates the unique aspects of cooperative business organizations. Topics are approached from the point of view of management, the board of directors and members, and include cooperative principles, management decision-making, legislation, financing, taxation, and methods that cooperatives attempt to handle. Primary focus is on operating cooperatives in agriculture but also includes an examination of informal group action, bargaining cooperatives, marketing orders, and marketing boards.

430 Agricultural Trade Policy  
Fall 3 credits. 
Primarily for seniors and M.S. degree candidates. Prerequisites: Agricultural Economics 351 and either Agricultural Economics 352 or Economics 311. 
An examination of the rationale and method of commodity trade policy. The course analyzes problems and issues in both developed and less-developed countries and deals with the major questions associated with the organization of international commodity markets.

443 Food Industry Management  
Spring. 4 credits. Limited to juniors and seniors. 
A case-study approach is used to examine the application of management theories and concepts to operating problems of food retailers and wholesalers. Areas included are site selection, buying, merchandising, personnel administration, private-label products, and financing expansion programs. Leading food industry specialists frequently join the W session.

448 Food Merchandising  
Fall. 3 credits. Limited to juniors and seniors. 
Prerequisite: Agricultural Economics 240. 
Lecs, T R 10:10. One sec to be arranged. G. A. German. 
Merchandising principles and practices as they apply to food industry situations. The various elements of merchandising are examined, including buying, private-label advertising, promotion, display, store layout, profit planning and control, and merchandising strategy.

499 Field Study of Marketing Institutions  
Fall 2 credits. Prerequisites: Agricultural Economics 342, previous enrollment or concurrent registration or permission of instructor. Field trips will cost approximately $175. 
W 2:30–4. Two 1-day field trips to the upstate area and a 3-day trip to the New York City area during intersession just prior to registration. Grades are not registered until February. W. Lesser, B. Anderson. 
Incorporates lectures, case problems, and field trips to give students a broad understanding of the
450 Evaluating Resource Investment and Environmental Quality

Fall, 3 credits. Primarily for juniors and seniors. Prerequisite: An introductory course in economics, a 300-level agricultural economics course, or permission of instructor.

452 Agricultural Land Policy

Spring, 3 credits. Lec., F 8-9:55, disc. F 1:25-3:25; field trips to be arranged. R. J. Kalter. Recent changes in the laws, programs, and policies at state and local levels that affect the use of farmland in the northeastern United States.

464 Economics of Agricultural Development

Spring, 4 credits. Prerequisites: Agricultural Economics 150, Economics 101-102, or permission of instructor.

T R 9-10 and T or W 1:25, D. K. Freebairn. An examination of the processes of agricultural development in Third World nations and their interactions with United States policy. Agricultural and rural development policy, the interdependence of agriculture with other sectors, alternative forms of agricultural organization, and policies tending to alleviate highly concentrated income distributions are all emphasized.

499 Undergraduate Research

Fall or spring, 1-4 credits. Limited to seniors with grade point averages of at least 2.7. Prerequisite: written permission of the staff member who will supervise the work and assign the grade; this permission must be attached to course enrollment material. S-U grades optional.

Permits outstanding undergraduates to carry out independent study of suitable problems under appropriate supervision.

608 Production Economics

Fall, 3 credits. Prerequisite: Economics 311 or equivalent. Recommended: Mathematics 108 or 111 or equivalent.

Lec., M W F 10:10, L. W. Tauer. The theory of production economics with emphasis on applications to agriculture. Topics include the derivation, estimation, and use of production cost, and supply functions. Production response over time and under risk is introduced.

650 Economic Analysis of Public Policy

Spring, 4 credits. Primarily for graduate students but open to seniors. Prerequisite: Economics 508, or permission of instructor.

T R 9:05-11:15, R. J. Kalter. The application of economic theory and analysis to governmental decision making, budgeting, and expenditure processes, with emphasis on the welfare criteria of economic efficiency and income distribution. Techniques of benefit-cost equity, and environmental analysis will be stressed. Discount rates, benefit estimation, externalities, multipliers, uncertainty and social welfare functions will be covered.

651 Economics of Resource Use

An introduction to recent literature in theory and applied analyses. Resource constraints and resource use, externality theory and its application to environmental economics, pricing and taxation, and resource use, income, and employment. Other topics as selected by class and instructors.

652 Special Problems in Land Economics

Fall or spring, 1 or more credits. Limited to graduate students. Prerequisite: permission of instructor. Hours to be arranged. D. J. Allee. Special work on any subject in the field of land economics.

660 Food, Population, and Employment

Fall, 5 credits. Enrollment limited to 15 to ensure that students have an opportunity to work individually with instructor. M W 2:30-4 and an individual weekly meeting with the instructor. T. T. Poleman. Examines the links between employment, food, and population growth in less-developed countries. Food economics and the world food situation are treated as cornerstones and examined in historical perspective. Requires a major term paper.

661 Food, Population, and Employment II

Spring, 1-3 credits. Prerequisite: permission of instructor.

Individual weekly meeting with the instructor. T. T. Poleman. Individual, guided research for students who want to carry on with projects initiated in Agricultural Economics 660 or to undertake new ones.

663 Macroeconomic Issues in Agricultural Development

Fall, 3 credits. Prerequisite: permission of instructor. Offered alternate years. Lec. to be arranged. E. Thorbecke. Issues such as the role of agriculture in economic development, agricultural sector analysis; income price and technological interactions within and between agriculture and other sectors; agricultural development strategies and their impact on output income distribution and poverty alleviation; integration of economic agricultural and nutritional planning. The approach followed is quantitative and empirical.

664 Microeconomic Issues in Agricultural Development

Spring, 3 credits. Prerequisite: Agricultural Economics 606, Economics 311, or permission of instructor. T R 11:15-12:30, R. Barker. Issues such as production efficiency, induced technological change, allocation of research resources, and the distribution of benefits from new technology are discussed. The theoretical argument is related to applied research problems.

665 Seminar on Latin American Agricultural Policy

Fall, 3 credits. Prerequisite: Agricultural Economics 464 or work in Latin American economic and social development.

T 2:30-4:25, D. K. Freebairn. An examination of policies for the development of the agricultural sector in Latin America, including an identification of policy objectives and a review of the instruments of public-policy implementation. Particular attention is paid to the interactions of agrarian structure, agricultural productivity, and rural welfare.

666 Seminar in Agricultural Development

Fall or spring, 3 credits. The seminar is normally taught when a visiting professor is available who has had recent direct experience in low-income countries. Hours to be arranged. An analysis of current problems for the development of the agricultural sector of low-income countries, with emphasis on the formulations of such problems to the definition of research.

699 M.P.S. Research

1-6 credits. Prerequisite: registration as an M.P.S. student. Credit is granted for the M.P.S. project report.

700 Topics in Agricultural Economics

Fall or spring. Limited to graduate students. Credit, class hours, and other details arranged with a faculty member.

This course is used to offer special topics in agricultural economics that are not covered in regular class offerings. More than one topic may be given each semester in different sections. The student must register in the section appropriate to the topic being covered; the section number is provided by the instructor.

708 Advanced Production Economics

Fall, 3 credits. Prerequisites: Agricultural Economics 608, 710, or equivalents.

Hours to be arranged. R. N. Boisvert. Theoretical and mathematical developments in production economics, with emphasis on estimating microproduction and macroproduction relationships, scale economies, technical change, factor substitution, and recently developed functional forms. Discussions of several other selected topics such as risk, supply response, and household production functions change from year to year based on student interest.

710 Econometrics I

Spring, 4 credits. Not open to undergraduates. Prerequisites: Statistics 416 and 601 or equivalents.

Lec., T R 2:30-4:25, W. G. Tomek. This course covers basic topics in econometrics starting with least squares estimation of the linear regression model and continuing with other standard topics. About four weeks are devoted to simultaneous-equations methods. The course is taught at an intermediate level, using matrix algebra, with emphasis on empirical research and is intended mainly for Ph.D. students who plan to become professional economists.

711 Econometrics II

Fall or spring, 4 credits. Prerequisite: Agricultural Economics 710 or equivalent. Statistics 417 recommended.

Lec., T R 10-12:05, 11/2-hour computing labs to be arranged. T. D. Mount. Coverage beyond that of Agricultural Economics 710 of generalized least squares, models with stochastic regressors, testing linear hypotheses, and the effects of specification errors. Applications include seemingly unrelated regressions, three-stage least squares, estimation with pooled data, models with stochastic coefficients, and distributed lag models. Other topics covered are principal components factor analysis, and probit and logit analysis, with extensions to deal with multinomial problems.

712 Quantitative Methods I

Fall, 4 credits. Prerequisite: Statistics 416 or equivalent. Statistics 417 suggested.

Lec., M W F 11:15, R. N. Boisvert. A comprehensive treatment of linear programming and its extensions, including postoptimality analysis, goal programming, and the transportation model. Special topics in nonlinear programming, including separable, spatial equilibrium and risk programming models. Input-output models are treated in detail. Applications are made to agricultural, resource, and regional economic problems.

713 Quantitative Methods II

Spring, 4 credits. Prerequisite: Agricultural Economics 712 or permission of instructor.

Lec., M W F 9:05-9:55, disc. F 12:20-2:15, R. A. Milzak. A study of quantitative techniques used to solve dynamic problems. The first half of the course is concerned with dynamic optimization; the second, with simulation.

717 Research Methods in Agricultural Economics

Spring, 2 credits. Limited to graduate students. M 1:25-3:20, B. F. Stanton, D. G. Sisler. Discussion of the research process and scientific method as applied in agricultural economics. Topics
A discussion of selected topics in agricultural trade which may be associated with his or her thesis. 3 credits. Limited to graduate students. Prerequisites: International Commodity Agreements. The preparation substitute in developing countries, and the role of international commodity agreements. The preparation of a term paper is an important part of the course.

742 Agricultural Markets and Public Policy Spring. 3 credits. Limited to graduate students. Prerequisites: Familiarity with multiple regression techniques on the level of Statistics and Biometry 601. T R 12:20–2:15. W. H. Lissner. Develops the concepts and methodology for applying and analyzing the effects of public-policy directives on the improvement of performance in the United States food marketing system. Topics include a survey of industrial organization principles, antitrust and other legal controls, coordination systems in agriculture, and cooperative theory and performance. An application of these techniques to analyzing marketing problems in developing economies is also presented.

743 Export Marketing Fall. 3 credits. Prerequisite: permission of instructor. Estimated cost of field trip, $85. Lec. R 2:30–4:25. Overnight field trip to New York City required. M. E. Brunk. The history and development of commercial United States exports of agricultural commodities and the mechanics and procedures of exporting. Alternatives in sales contracts, shipping, insurance, financing, business structure, researching markets, and promotion. Trading experiences of specific commodity specialists.

750 Economics of Renewable Resources Spring. 4 credits. Prerequisites: Economics 509 and Economics 518, or Agricultural Economics 713. T R 2:30–4:25. J. M. Conrad. This course focuses on recent developments in mathematical bioeconomics as they relate to the management of renewable resources. The theory and methods of dynamic optimization are briefly reviewed. Theory and applied studies in fishery, forestry, and water resource economics are examined, along with the role and effectiveness of alternative public policies.

754 Sociotechnical Aspects of Irrigation (also Rural Sociology 754) Spring. 3 credits. Hours to be arranged. R. Barker, M. L. Barnett, E. W. Coward, Jr., G. Levine.

208 Application of Physical Sciences I Fall. 3 credits. Prerequisite: a term of calculus and high school physics or a year of college physics. Lec. T R 8:20–9:55; rec. W 8 or 9:05. D. C. Ludington. The application of statics, dynamics, mechanics of materials, and fluid mechanics to physical problems in agriculture. Topics include torque, free-body diagrams, friction, energy, stress, bending, shear, fluid flow, and soil pressures. Emphasis is on problem solving.

209 Application of Physical Sciences II Spring. 3 credits. Prerequisite: Agricultural Engineering 208. Lecs. T R 8:20–9:55; rec. W 8 or 9:05. D. C. Ludington. A continuation of Agricultural Engineering 208. The laws of thermodynamics and principles of energy transfer, psychrometrics, and electricity are covered. Topics include applications in agriculture of the various gas and vapor cycles used in engines and refrigeration, heat conduction through multiple layers, convection, thermal radiation, and behavior of air and water vapor mixtures. Solving practical problems is emphasized.

211 Agricultural Mechanization: An International Perspective Fall. 2 credits. S-U grades optional. T R 9:05–9:55. J. K. Campbell. A study of the tools and machines that are used to mechanize agriculture, with emphasis on developing countries. Topics include animal and mechanical power, tillage, planting, and harvesting tools and machines, and policy considerations.

221 Plane Surveying Fall. 3 credits. Limited to 90 students (30 per lab). S-U grades optional. Lecs. T R 9:15–10:45. Staff. An introductory course in plane surveying. The use and care of equipment is stressed during field problems related to construction and mapping.

250 Engineering Applications in Biological Systems Spring. 3 credits. Prerequisite: coregistration in Mathematics 294; thermodynamics suggested or permission of instructor. Recommended for the sophomore year. Lec. M W F 12:20. R. E. Pitt. Case studies of engineering problems in agricultural and biological systems, including animal and crop production, environmental control, energy, and food engineering. Emphasis is on the application of mathematics, physics, the engineering sciences, and biology to energy and mass balances in agricultural systems.

302 Introduction to Computer Uses in Data Analysis Spring. 4 credits. Each lab limited to 36 students. Prerequisite: one course in college mathematics or statistics or permission of instructor. Lecs. T R 9:15–11:15; lab, M T or F 1:25–4:25. Staff. An introductory course in computing for those interested in using digital computers to handle data. Topics include description and preparation of data, preparing and processing computer programs, computer attributes and applications, computer library programs, and related computing facilities. No prior knowledge of computers or computer languages is necessary.

303 Principles of Navigation Fall. 4 credits. Lecs. M W F 8–12. B. D. Spalding. A course on navigation, including celestial navigation, radio navigation, and radar navigation. Topics include navigational aids, instruments, charts and observations, chronometers and currents, soundings, celestial navigation, sphere trigonometry, navigation of stars and sun, star identification, position fixing, and electronic navigation.

310 Advanced Farm Metal Work Spring. 1 credit (2-credit option in spring). Prerequisite: Agricultural Engineering 110 or permission of instructor.
regard to land disposal of wastes and agricultural production is discussed. Emphasizes basic understanding and the probabilistic nature of the processes involved, but some problem solving is done.

401 Career Development in Agricultural Engineering Fall 1 credit. Limited to seniors. S-U grades only.

A presentation and discussion of the opportunities and qualifications for, and responsibilities of positions of, service in the various fields of agricultural engineering.

Lec, W 10:10; lab, F 10:10-1:10. W. F. Miller.

A study of the principles and operation of hydraulic and mechanical-power transmission systems used in agricultural tractors and equipment. Hydraulic-power transmission includes system components, circuit diagrams, hydrostatic transmissions, and system analysis. Mechanical-power transmission includes clutches, brakes, parallel shaft and planetary transmissions, traction, and drawbar horsepower.

451 Energy Systems Engineering Spring 3 credits. Prerequisite: Agricultural Engineering 250, Mathematics 294, and thermodynamics.

Lec, M W F 12:20; lab, L. P. Walker.

This course is structured to provide engineering students with an understanding of the physical and biological principles of alternative energy technologies. Our terrestrial energy balance and its impact on energy availability will be discussed. Several technical alternatives for harvesting energy from our environment will be investigated. In addition, some of the logistical and technical problems associated with the conversion of energy technologies into agricultural and industrial production systems will be explored.

461 Agricultural Machinery Design Fall 3 credits. Prerequisite: mechanical design or equivalent.

The principles of design and development of agricultural machines to meet functional requirements. Emphasis on computer-aided analysis and design, stress analysis, selection of construction materials, and testing procedures. Engineering creativity and agricultural machine systems are also stressed.

462 Agricultural Power Spring 3 credits. Prerequisite: dynamics and thermodynamics or equivalent.

Use of energy in agriculture. Emphasis is given to basic theory and analysis and testing of internal combustion engines and suitable components for use in farm tractors and other power applications. Soil mechanics related to traction and vehicle mobility; economics and human factors in design are considered.

465 Processing and Handling Systems for Agricultural Materials Fall 3 credits. Prerequisite: Agricultural Engineering 250.

Drying, fluid flow measurement, and material handling applications, with an introduction to dimensional analysis and controls for agricultural engineering applications.

466 Engineering Design and Analysis of Food Processing Equipment Fall 3 credits. Prerequisite: Food Science 302, its equivalent, or concurrent enrollment in an engineering curriculum.

The analysis and design of food-processing equipment from the point of view of selecting and designing equipment appropriate for transporting or modifying a food product.
551–552 Agricultural Engineering Design
Project Fall and spring. 6 credits. Prerequisite: admission to the M.Eng. (Agr.) degree program or equivalent preparation. Hours to be arranged. L. D. Albright and staff. Comprehensive design projects dealing with existing engineering problems in the field. Emphasis is on the formulation of alternative design proposals that include consideration of economics, nontechnical factors, engineering analysis, and complete design for the best design solution.

652 Instrumentation Spring. 3 credits. Prerequisite: electronic systems or permission of instructor. Lecs, T R 12:20; lab to be arranged. N. R. Scott. The application of instrumentation concepts and systems to physical and biological measurements. Characteristics of instruments, signal conditioning and interfacing, shielding and grounding, transducers, data acquisition systems, microprocessors, microcomputers, and radionuclide measurement.

[672 Drainage Engineering Spring. 4 credits. Prerequisite: Agricultural Engineering 471 or permission of instructor. Offered alternate years.] Not offered 1982–83. Lecs, M W F 10:10; lab, R 1:25–4:25. T. S. Steenhuis. Analysis and design of surface, subsurface, and combined drainage systems, with emphasis on agricultural applications. The elements of surface, channel, and porous-media flow are analyzed, as well as entire systems of collectors, storage, pumps, and methods of overflow protection for large areas. Effect of drainage on water quality is reviewed.

673 Irrigation Engineering Spring. 3 or 4 credits. Prerequisites: Agronomy 200 and Agricultural Engineering 471 or permission of instructor. Offered alternate years. Lecs, M W F 10:10; lab, R 1:25–4:25. T. S. Steenhuis. Analysis and design of irrigation systems. Soil-plant-water relationships, water quality, water supplies, water delivery systems, and water distribution systems are analyzed.

677 Treatment and Disposal of Agricultural Wastes Fall. 3 credits. Prerequisite: permission of instructor. 3 lecs, hours to be arranged. R. C. Loehr. Emphasis is on the causes of agricultural waste problems and the solution of problems through application of fundamentals of treatment and control methods to minimize related pollution. Fundamentals of biological, physical, and chemical pollution control methods are applied to animal, food production, and food-processing wastes, using actual systems as examples.

678 Nonpoint Source Water Quality Models Spring 1–3 credits. Limited to upperclass or graduate students. Prerequisites: computer programming, a year of calculus, and permission of instructor. S-U grades optional. Lecs, M W F 8:00. D. A. Haltain. Mathematical models for analysis of agricultural and urban nonpoint sources. Three 1-credit sequential units: (1) stormwater models—computer models of runoff and moisture balances; (2) basic nonpoint source models—simple models for urban and agricultural runoff, land application of wastes; (3) agricultural simulation models—pesticides, nutrients, and salinity.

679 Use of Land for Waste Treatment and Disposal Spring. 3 credits. Prerequisite: permission of instructor. Lecs, T R 3:35–4:50. W. J. Jewell. Covers the social, legal, and technical factors, the properties of the urban and nonpoint systems that make land application of wastes viable, and the use of fundamentals in the development of regulations and the design of full-scale units.

685 Biological Engineering Analysis Fall 4 credits. Prerequisite: Engineering T&AM 310 or permission of instructor. M W F 12:20. R. E. Pitt. Engineering problem-solving strategies and techniques are explored. Students solve several representative engineering problems that inherently involve biological properties. Emphasis is on formulation and solution of mathematical models and the interpretation of results. The student’s knowledge of fundamental principles is used extensively.

701 Special Topics in Agricultural Engineering Fall or spring. 1–6 credits. Prerequisite: permission of instructor. S-U grades optional. Topics are arranged by the staff at the beginning of the term.

750 Orientation for Research Fall. 1 credit. Limited to newly joining graduate students. S-U grades only. Hours to be arranged. G. E. Rehkugler.

761 Power and Machinery Seminar Spring. 1 credit. Limited to graduate students. Prerequisites: permission of instructor. S-U grades optional.

771 Soil and Water Engineering Seminar Fall or spring. 1–3 credits. Prerequisite: graduate status or permission of instructor. S-U grades optional. Hours to be arranged. Staff. Study and discussion of research or design procedures related to selected topics in irrigation, drainage, erosion control, hydrology, and water quality.

775 Agricultural Waste Management Seminar Spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Hours to be arranged. W. W. Gunkele.

781 Agricultural Structures and Related Topics Seminar Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. Disc to be arranged. L. D. Albright. Consideration of farmstead production systems, with emphasis on biological, economic, environmental, and structural requirements.

785 Biological Engineering Seminar Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. Disc to be arranged. N. R. Scott, J. R. Cooke. The interactions of engineering and biology, primarily the environmental aspects of plant, animal, and human physiology, are examined in order to improve communication between engineers and biologists.

811 Theoretical Meteorology I Fall. 3 credits. Prerequisite: a year each of calculus and physics. M W F 10:00. W. W. Knapp. Fall semester topics include meteorological coordinate systems, variation of wind and pressure fields in the vertical, winds in the planetary boundary layer, surfaces of discontinuity, mechanisms of pressure change, vorticity and circulation. Topics considered in the spring term include thermodynamics of dry air, water vapor and moist air, hydromechanics and stability.

841 Physical Meteorology Fall. 3 credits. Prerequisite: a year each of calculus and physics. Offered alternate years. M W F 12:20. W. W. Knapp. Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include composition and structure of the atmosphere, atmospheric optics, acoustics and electricity, solar and terrestrial radiation, and principles of radar probing of the atmosphere.

871 Soil-Plant-Water Systems Fall or spring. 3 credits each semester. Prerequisites: either Atmospheric Sciences 411 and 412 or permission of instructor. M W F 12:20. W. W. Knapp. The interactions of engineering and biology, primarily the environmental aspects of plant, animal, and human physiology, are examined in order to improve communication between engineers and biologists.

881 Agricultural Structures and Related Topics Seminar Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. Disc to be arranged. L. D. Albright. Consideration of farmstead production systems, with emphasis on biological, economic, environmental, and structural requirements.

Agronomy

Biometeorology

101 Basic Principles of Meteorology Fall. 3 credits. Limited to 140 students. Lecs, T R 11:15; lab, M W T R 1:25–4:25. B. E. Dethier. A simplified treatment of the structure of the atmosphere: heat balance of the earth; general and secondary circulations; air masses, fronts, and cyclones; hurricanes, thunderstorms, tornadoes, and atmospheric condensation. In the laboratory, emphasis is on techniques of analysis of weather systems.

103 Basic Principles of Meteorology, Laboratory Fall. 1 credit. Prerequisite: an introductory course in meteorology without a lab. M W T R 1:25–4:25. B. E. Dethier. Techniques of analysis of weather systems and the application of dynamical and empirical methods of predicting the daily atmospheric circulation.

314 Agricultural Meteorology Fall or spring. 3 credits. Limited to 35 students. T R 10–11:25. A. B. Pack. An introduction to the relationships of radiant energy, temperature, wind, and moisture in the atmosphere near the ground. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined. Moisture relationships in the atmosphere-soil-plant continuum, the effects of environmental modification, and the bioclimatic requirements of plants are also discussed.

325–326–327–328 Meteorological Communications 325 and 327, fall; 326 and 328, spring. 1 credit each semester. Primarily for undergraduate meteorology majors. S-U grades optional. Hours to be arranged. Staff. The student becomes acquainted with facsimile, teletype, and satellite receiving equipment and the data products used in weather forecasting.

411–412 Theoretical Meteorology I and II Fall and spring. 3 credits each semester. Prerequisites: a year each of calculus and physics.

417 Physical Meteorology Fall. 3 credits. Prerequisite: a year each of calculus and physics. Offered alternate years. M W F 10:10. W. W. Knapp. Autumn semester topics include meteorological coordinate systems, variation of wind and pressure fields in the vertical, winds in the planetary boundary layer, surfaces of discontinuity, mechanisms of pressure change, vorticity and circulation. Topics considered in the spring term include thermodynamics of dry air, water vapor and moist air, hydromechanics and stability.

430 Synoptic Meteorology I Fall. 4 credits. Prerequisites: other Atmospheric Sciences 411 and 412 or permission of instructor. Lecs, W R 9:05; lab, F 2:30–4:45. D. A. Paine. The application of quasi-geostrophic theory as a diagnostic and forecasting method, including the use of minicomputer products derived from the barotropic, baroclinic, and primitive equation numerical models.
Lab work includes surface and upper air analyses and thickness and vorticity computations using radiosonde data documenting macroscale cyclogenesis.

432 Synoptic Meteorology II Spring. 4 credits. Prerequisite: Atmospheric Sciences 430 or permission of instructor.
- Lecs., W F 1:25; lab, R 2:30–4:25. D. A. Pane. The conservation laws for mass, energy, and momentum in constant entropy coordinates. Derivation and construction of adiabatic versus diabatic trajectories. Ensel's potential vorticity theorem evaluated by computer simulation. The laboratory employs the Atmospheric Sciences 430 storm data to contrast constant pressure and isentropic methods of analysis.

484 Biometeorology Spring. 2 credits. Prerequisite: permission of the instructor (no course prerequisites). Not offered 1982–83.
- Lecs., W 1:25, lab, W 2:30–4:25. D. A. Pane. Interactivity between the atmosphere and biosphere is of central concern when considering many of the challenges of this decade, such as acid rain, severe winter cold stress, soil and CO2 increase. Empirical and theoretical models of such interactivity is presented. A systems-level approach to environmental protection decisions is emphasized.

499 Undergraduate Research in Meteorology Fall and spring. 1–3 credits. Staff. Required of honors students in the physical sciences majoring in meteorology.

650 Special Topics in Meteorology and Climatology Fall or spring. 1 or more credits.
- Staff. A study of meteorological topics more advanced than, or different from, those in other courses. Subjects depend on the background and desires of those enrolled.

691 Seminar in Meteorology Fall or spring. Permission of instructor. Staff. Topic varies. Hours to be announced. B. E. Dether. Subjects such as weather modification, paleoclimatology, and atmospheric pollution.

982 Research in Meteorology Fall or spring. 1 or more credits.
- Staff. Thesis research.

Crop Science

311 Grain Crops Fall. 4 credits. Prerequisite: Agronomy 200 or Biological Sciences 241.

312 Forage Crops Spring. 4 credits. Prerequisites: Agronomy 200 or Biological Sciences 241.
- Recommended: Animal Science 112.
- Lecs., M W F 11:15, lab, M T or W 1:24–4:25. G. W. Fick. The production and management of crops used for livestock feed are considered in terms of establishment, growth, maintenance, harvesting, and preservation. Forage grasses, legumes (alfalfa, clovers), and corn are emphasized, and consideration is given to their value as livestock feed in terms of energy, protein, and other nutritional components.

314 Production of Tropical Crops Spring. 3 credits. Prerequisite: a course in crop production.
- Lecs., M W F 10:10. M. J. Wright. An introduction to the characteristics and culture of theprincipal food staple crops of the tropics and subtropics and some of the crops grown for export. Vegetables and fruits are not emphasized.

315 Weed Science Fall. 3 credits. Prerequisites: Agronomy 200, and Biological Sciences 103 and 104 or Biological Sciences 241.
- Lecs., T R 8, lab, M T or W 2–4:25. W. B. Duke. Principles of weed science are examined. Emphasis is given to (a) weed ecology, (b) chemistry of herbicides in relation to effects on plant growth, and (c) control of weeds in all crops. Laboratory covers weed identification, herbicide selectivity, herbicide injury symptoms, and farm herbicide problem solving.

317 Seed Science and Technology Fall. 3 credits. Prerequisite: Biological Sciences 241 or equivalent. Offered alternate years. Not offered 1982–83.
- Lecs., T R 11:15; lab, R 1:25–4:25. (two all-day Saturday field trips will be scheduled during the semester.) J. S. Swanepoel. (Ithaca contact, R. L. Obendorfer.) The principles and practices involved in the production, harvesting, processing, storage, testing, quality management, certification, and use of high-quality seed from improved cultivars. Information is applicable to various kinds of agricultural seeds.

371 Undergraduate Research in Crop Science Fall or spring. Credit to be arranged. Written permission from the staff member who will supervise the work and assign the grade must be attached to the work and assign the grade. Hours to be arranged. Staff. Independent research on current problems selected from any phase of crop science.

610 Physiology of Environmental Stresses Fall. Prerequisite: Biological Sciences 242 or 341. 3 credits. Offered alternate years. Not offered 1982–83.
- Lecs., T R 10:10, P. L. Steponkus. A study of the responses of plants to environmental stresses including chilling, freezing, high temperature, and drought. Emphasis is on the physiological and biochemical basis of injury and plant resistance mechanisms at the whole-plant, cellular, and molecular levels.

611 Crop Simulation Modeling Fall. 3 credits. Prerequisite: Biological Sciences 242 or 341. 3 credits. Offered alternate years. Not offered 1982–83.
- Lecs., M W F 11:15, G. W. Fick. A study of existing crop models is followed by development and refinement of programs representing the students' work. The computer language CSMP is used. Emphasis is on quantitative formulation and testing of complex hypotheses related to crop growth. Carbon exchange, transpiration, microclimate, soil water supply, root functions, and dry matter distribution in growing crops are covered.

612 Grain Formation Spring. 3 credits. Prerequisite: plant physiology. Not offered 1982–83.

613 Ecology and Physiology Yield Fall. 3 credits. Prerequisite: plant physiology.

651 Special Topics in Crop Science Fall or spring. 1–6 credits. S-U grades optional.
- Undergraduates must attach to their course enrollment material written permission from the staff member who will supervise the work and assign the grade.
- Hours to be arranged. Staff. The topic is arranged at the beginning of the term for individual study or for group discussions.

761 Graduate Research in Crop Science Fall, spring, or summer. Credit by arrangement. Limited to members of the graduate field.
- Hours to be arranged.

790 Agronomy Seminar Noncredit. See course description in soil science section below.

Forages of the Tropics for Livestock Production (Animal Sciences 403)

Special Studies of Problems in Agriculture in the Tropics (International Agriculture 602)

Protozoan Parasite Structure and Function (Veterinary Medicine 765)

Soil Science

200 Nature and Properties of Soils Fall or spring. 4 credits. Prerequisite: Chemistry 103, 207, or 215. S-U grades optional.
- Lecs., M W F 9:05, lab, M T W or R 1:25–4:25. Fall. D. J. Lathwell; spring, T. W. Scott. A comprehensive introduction to the field of soil science, with emphasis on scientific principles and their application in solutions of practical soil management problems.

301 Genesis, Classification, and Geography of Soils Fall. 4 credits. Prerequisite: Agronomy 200 or consent of instructor. S-U grades optional.

302 Soil Morphology Fall. 1 credit. Prerequisite: Agronomy 200 or consent of instructor.
- R 1:25–4:25; all-day field trip required. R. B. Bryant. The principles for field identification of soil properties, profiles, and landscapes are presented. A series of soil pits are examined, described, classified, and interpreted in the field.

306 Soil Chemistry Spring. 3 credits. Prerequisite: Agronomy 200, Chemistry 103–104, or Chemistry 207–208.

308 Soil Chemistry Laboratory Spring. 2 credits. Prerequisite: Agronomy 200, Chemistry 103–104, or Chemistry 207–208.
Laboratory exercises are designed to measure soil-chemical properties using wet chemical and spectrophotometric methods. A weekly discussion period will follow each laboratory.

324 Soil Fertility Management Fall. 3 credits. Prerequisite: Agronomy 200 or permission of instructor. M W F 9:05. D. R. Bouldin. An integrated discussion of soil-crop yield relationships, with emphasis on the soil as a source of mineral nutrients for crops and the role of fertilizers and manure in crop production.

331 Aquatic Plant Management Fall. 3 credits. Prerequisites: Biology 101-102 and Chemistry 103-104 or equivalents. T R 11:15, T 12:25—4:25. J. H. Pevery. The chemistry and physiology of higher aquatic plants are studied from the morganic solid, solution, and gaseous phases of the environment to cellular and subcellular levels of plants. Application of the basic physical and chemical concepts presented to predict effects on aquatic plant growth are illustrated in lab and field situations.

403 Organic Soils Fall. 2 credits. Prerequisite: Agronomy 200. Offered alternate years. W 1:25—4:25; some field trips will not return before 5:30. J. M. Duxbury. The character of principal kinds of soils in the major regions of the tropics. Soil properties are related to the position in the landscape and to profile genesis. Emphasis is on soil properties as a basis for interpretation of crop management requirements and production potential. Lectures introduce principles whose applications are examined through discussions, problem solving, and independent reading.

404 Forest Soils Fall. 3 credits. Prerequisite: Agronomy 200 or permission of instructor. Lecs, T R B; lab, M or T 12:25—4:25; some field trips may not return before 5:30. J. S. J. J. Reh. Ecology of forest soils. Application of basic physical and chemical principles to the study of energy, water, and nutrient budgets of forest ecosystems. Implications for forest management.

480 Management Systems for Tropical Soils Spring. 3 credits. Prerequisite: Agronomy 401 or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1982-83. Lec, W F B; disc, W 2:30—4:25. A. Van Wambeke. Land evaluation in tropical regions, water requirements in semiarid tropics, management of tropical soils in relation with nitrogen, acidity, liming, phosphorus, and other nutrients. Effects of cropping systems on soils, soil conservation methods, and erosion control. 497 Special Topics in Soil Science Fall or spring. 1-6 credits. S-U grades optional. Undergraduates must attach to their course enrollment material written permission from the staff member who will supervise the work and assign the grade. Hours to be arranged. Staff. The topics are arranged at the beginning of the term for individual study or for group discussions.

499 Undergraduate Research in Soil Science Fall or spring. Credit to be arranged. Written permission from the staff member who will supervise the work and assign the grade must be attached to course enrollment material. Hours to be arranged. Staff. Independent research on current problems selected from any phase of soil science.

606 Advanced Soil Microbiology Fall. 1 credit. Prerequisite: Agronomy 406 or permission of instructor. S-U grades optional. For graduate students. T R 12:20. M. Alexander. Discussions of current topics in special areas of soil microbiology. Particular attention is given to biochemical problems in microbial ecology.

607 Soil Physics Fall. 3 credits. Prerequisites: Agronomy 200 and a year of college physics or permission of instructor. Offered alternate years. M W F 11:15. R. D. Miller. A study of physical properties and processes in soils, with emphasis on basic principles.

608 Water Status in Plants and Soils Fall. 2 credits. Prerequisite: permission of instructor. S-U grades optional. Offered alternate years. Lec, 1 hour to be arranged, lab, R 1:25—4:25 or as arranged. R. D. Miller. Water status of plants and the soil, including methods used in evapotranspiration studies.

701 Soil Chemistry and Mineralogy Fall. 3 credits. Prerequisites: Agronomy 200 and a year of physical chemistry, or permission of instructor. Offered alternate years.

[724 Soil Fertility Advanced Course Spring. 3 credits. Prerequisite: graduate status with a major or minor in agronomy. Offered alternate years. Not offered 1982-83. T R 8:30—9:55. D. R. Bouldin. A study of selected topics in soil-crop relationships, with emphasis on concepts of soil fertility, interpretation of experimental data, and soil fertilizer chemistry.]

760 Graduate Research in Soil Science Fall or spring. Credit by arrangement. Limited to students in the graduate field. Hours by arrangement.

970 Agronomy Seminar Fall or spring. Noncredit. Required of graduate students majoring or minoring in the department.

T 4.

Related Course in Another Department

Special Studies of Problems of Agriculture in the Tropics (International Agricultural Development 602)

Animal Sciences

100 Introductory Animal Science Fall. 3 credits. For beginning students. S-U grades optional. Lecs. W 10:10; lab. T R or F 2:45-4:25. J. M. Elliot. An introduction to animal science dealing with domestic animals and with current practices and problems of the livestock and meat industries. The place of the physical and biological sciences in animal agriculture is discussed. Emphasis is on the nutrition, physiology, breeding, and management of dairy cattle, beef cattle, sheep, swine, and horses.

105 Contemporary Perspectives of Animal Science Spring. 1 credit. Limited to freshmen, sophomores, and first-year transfers. T 1:25, W 12:20. Staff. A forum to discuss the contemporary and future role of animals in relation to human needs and career planning.

112 Livestock Nutrition Spring. 4 credits. Prerequisite: Chemistry 103 or 207. Recommended: Animal Science 100. Lecs. M W F 10:10; lab. M W R or F 2:45-4:25. R. G. Warner. An introduction to animal nutrition covering fundamentals of nutrition, the nutritive value of feeds, and the application of feeding standards to various forms of production in dairy and beef cattle, sheep, swine, and horses.
113 Nutrition of Companion Animals  Fall, weeks 1–7. 1 credit. Prerequisite: Animal Science 112 or equivalent. S-U grades optional.

W 7:30–9:25 p.m. H. F. Hintz.

Nutrition of companion animals, with emphasis on the dog and cat. Digestive physiology, nutrient requirements, feeding practices, and interactions of nutrition and disease.

200 Animal Physiology  Fall. 3 credits. Limited to sophomores and juniors except with permission of instructor. Prerequisite: a year of college biology. High-school level chemistry, physics, and math assumed.

A general introduction to animal physiology with emphasis on developing physiologic concepts and an understanding of animal function in physiologic terms. Where suitable, examples are taken from ruminants or other domestic animals. Lectures and demonstrations are designed to encourage independent supportive study. This course provides a basis for more specialized physiology courses in animal science and supports the study of nutrition and the production courses. A major paper on a free-choice topic in physiology is required.

220 Animal Reproduction and Development  Spring. 4 credits. Each lab limited to 36 students. Prerequisite: biology major or equivalent. Lecs. T R 9:05; demonstration and lab, M T W or R 2–4:25 or T or W 10:10–12:35 or F or 12:20–2:45. R. H. Foote.

An introduction to the comparative anatomy and physiology of reproduction of farm animals. The life cycle from fertilization through development and growth to sexual maturity is studied, with emphasis on the physiological mechanisms involved, relevant genetic control, and application to fertility regulation of animal and human populations. An audiotutorial lab is available for independent study to prepare for laboratory experiments.

221 Introductory Animal Genetics  Fall. 3 credits. Prerequisite: a year of college biology. Lecs. M W F 9:05; disc; T W R or F 2–4:25. E. J. Poljak.

An examination of basic genetic principles and their application to the improvement of domestic animals, with an emphasis on the effects of selection and mating systems on animal populations.

An introduction to the comparative anatomy and physiology of reproduction of farm animals. The life cycle from fertilization through development and growth to sexual maturity is studied, with emphasis on the physiological mechanisms involved, relevant genetic control, and application to fertility regulation of animal and human populations. An audiotutorial lab is available for independent study to prepare for laboratory experiments.

250 Dairy Cattle  Fall. 3 credits. S-U grades optional.

Introduces the major components of the dairy industry. Topics discussed include breeding, feeding, reproduction, milking, milk secretion, replacement, housing, disease prevention, and record keeping. Laboratories are designed to provide limited practice in animal husbandry techniques.

251 Dairy Cattle Selection  Spring. 3 credits. Prerequisite: Animal Science 250 or equivalent.

Lab, W 12:20–4:25. 1 all-day field trip.

D. M. Galton.

Emphasis on economic and type traits to be used in the selection and evaluation of dairy cattle. Practical sessions include planned trips to dairy herds in the state.

265 Horses  Spring. 3 credits. Prerequisite: Animal Science 100 or permission of instructor. S-U grades optional.

Selection, management, feeding, breeding, and training of light horses.

An introduction to meat science through a study of the characteristics of meat from slaughter to consumption. Structure, composition, inspection, grading, preservation, cutting, and processing are included. An all-day field trip to commercial meat plants is taken.

321 Seminar on Genetics of the Horse  Spring. 1 credit. Prerequisite: Animal Science 265 or permission of instructor. Recommended: Animal Science 221 or permission of instructor.

T or W 9:05. L. D. VanVeck.

A discussion of genetics of the horse, with special reference to simply inherited traits and selection for quantitative traits.

330 Commercial Poultry Production  Fall. 1 credit. Prerequisite: Animal Science 100, 230, or permission of instructor. Offered alternate years. Not offered 1982–83.

The course emphasizes production and business management aspects of commercial poultry farm operation and is designed to acquaint the student with current technology involved in commercial poultry production.

331 The Chicken in Biological Research  Fall. 2 credits. Prerequisite: one year of biology.

Lecs. T R 11:15. A. van Tienhoven and staff.

Faculty members will present lectures on the use of the chicken in biological research in the past and present and will supervise preparation of seminars to be given by students on the future use of the chicken in biological research.

340 Systems Analysis in Animal Production  Fall. 2 credits. Prerequisite: Animal Science 100. Recommended: Animal Science 250 or equivalent.

All-embracing systems concepts are applied to animal production management. The emphasis is on the principles and techniques needed in decision-making activities with examples of tactical decisions (short term) and strategic decisions (long term) from dairy herd management.

360 Beef Cattle  Spring. 3 credits. Prerequisite: Animal Science 100, 110, 220, 221, or permission of instructor.

Emphasis is on the management of reproduction, nutrition, and selection in beef cattle enterprises. A cattle growth model is studied. Laboratories acquaint students with the management skills of a beef operation. Students are required to spend several days during the semester feeding, observing calving, and caring for cattle. One all-day field trip is taken to visit beef operations in central New York.

370 Swine Production  Spring. 3 credits. Limited to 85 students; each lab limited to 45 students. Prerequisite: Animal Science 112, 220, 221 or permission of instructor.

The objective is to provide an opportunity to acquire practical knowledge and a technical basis for decisions in various types of swine enterprises. Emphasis is on the various production systems, selection and breeding programs, reproductive management, nutrition, herd health and housing facilities. Laboratories are designed to extend and apply principles discussed in lecture and to provide students with the opportunity to apply management skills.

380 Sheep  Fall. 3 credits. Prerequisite: Animal Science 100. Recommended: Animal Science 112, 220, and 221.

The breeding, feeding, management, and selection of sheep. Lectures and laboratories are designed to give the student a practical knowledge of sheep production as well as the scientific background for improved practices.

390 Meat Animal and Carcass Evaluation  Fall. 2 credits. Prerequisite: Animal Science 100 or permission of instructor.

Principles and techniques of meat animal and carcass evaluation. Grading standards, meat quality, and yield factors and criteria used to evaluate growth, development, and fattening are covered in lectures and demonstrations.

400 Livestock Production in Warm Climates  Spring. 3 credits. Prerequisite: either Animal Science 112, 220, or 221 or permission of instructor.

An analysis of the limitations the tropical environment imposes on livestock production, restrictions on contributions of animal farms incomes owing to limitations in genetic potential; feed resources; and social structures. The role of animals on small farms and the interdependence of humans and animals for food production, and non-food sources. The application of principles introduced in lectures is examined through discussions, problem solving, and independent study.

401 Dairy Production Seminar  Spring. 1 credit. Limited to juniors and seniors.

Disc. M 7:30 p.m. D. E. Bauman.

Students, with the help of faculty members, complete a study of the research literature on topics of current interest in the dairy industry. Students make oral and written reports.

402 Undergraduate Seminar  Spring. 1 credit. Limited to juniors and seniors. May be repeated. S-U grades optional.

Hrs to be arranged. L. D. VanVeck and staff.

Review of literature pertinent to topics of animal science or reports of undergraduate research and honors projects. Students present oral and written reports.

403 Forages of the Tropics for Livestock Production  Spring. 3 credits. Limited to seniors and graduate students except by permission of instructor. Prerequisites: crop production and livestock nutrition. Offered alternate years. Not offered 1982–83.

R. E. McDowell, P. J. VanSoest.

A review of tropical grasslands, sown pastures, and fodders and their use as feed resources, grass and legume characteristics; establishment and management of pastures and feed source alternatives; forage quality and utilization; problems of utilization of tropical forages as hays and silages.

410 Principles of Animal Nutrition, Lectures  Fall. 3 credits. Prerequisite: organic chemistry. Recommended: biochemistry or concurrent registration in a biochemistry course.

M W F 2; 2 discs to be arranged. C. C. McCormick.

A fundamental approach to nutrition focusing on the metabolism as well as the biochemical and physiological function of the known nutrients. The basic principles of nutrition are elaborated with examples drawn from a broad range of animal species including humans. Emphasis is also directed toward nutritional techniques and the application of the topics covered.

411 Principles of Animal Nutrition, Laboratory  Fall. 1 credit. Limited to 20 students. Prerequisite: concurrent registration in Animal Science 410.

415 Poultry Nutrition Spring. 1 credit. 
Prerequisite: Animal Science 410 or permission of instructor.
Lec, T R 11:15, F 11:15, W 8:30-9:45 or 11:00-12:15; Lab, T R 9:05, sec 1, Aug. 18-24, sec 2, Aug. 25-31.
R. H. Foote.
A practical consideration of principles of nutrition applied to feeding poultry, including use of linear programming techniques in diet formulation.

419 Animal Cytogenetics Fall. 4 credits.
Prerequisites: Animal Science 221, Biological Sciences 281, or permission of instructor.
Lec, T R 9:05; Lab, T or W 1:25–4:25; 2 other hours to be arranged. S. E. Bloom.
A study of normal and abnormal chromosomes in higher animals. Lecture topics include chromosome organization, chromosome movement, cytogenetics of aberrations, parthenogenesis, chromosomes and cancer, mitotic and meiotic errors, and human clinical cytogenetics. In laboratories, students obtain chromosome preparations from various animals and use cytochemical and photographic methods for karyotype analysis.

420 Quantitative Animal Genetics Fall. 3 credits.
Lec, T R 11:15, lab, W R or F 2–4:25.
L. D. VanVleck.
A consideration of problems involved in improvement of animals, especially farm animals, through application of the theory of quantitative genetics with emphasis on selection index.

421 Seminar in Animal Genetics Fall. 1 credit.
Prerequisite: Animal Science 221 or concurrent registration in Animal Science 240. 12 hours to be arranged. L. D. VanVleck, R. W. Everett.
A discussion of applications of principles of quantitative genetics and animal breeding to specific types of animals such as dairy cattle, meat animals, and horses.

422 Research Techniques in Quantitative Animal Genetics Fall. 1 credit. 
An introduction to methods of research in quantitative genetics and animal breeding, including estimation of heritability, repeatability, and genetic and phenotypic correlations.

427 Fundamentals of Endocrinology Fall. 3 credits. 
Prerequisite: human or veterinary physiology, or permission of instructor.
Lecs, M W F 9:00. W. R. Butler. 
The physiology of the endocrine glands and the roles played by each hormone in the regulation of normal body processes. Endocrine growth, metabolism, and reproduction is emphasized. Examples are selected from domestic species and humans.

428 Fundamentals of Endocrinology, Laboratory Fall. 2 credits. Each lab limited to 30 students.
Concurrent registration in Animal Science 427 or permission of instructor.
Labs, M W F 9:00, W. R. Butler. 
Laboratory exercises are designed to demonstrate hormonal mechanisms for each of the major endocrine glands. Laboratory techniques include animal surgery, blood collection, and hormone radioimmunoassay.

430 Artificial Breeding of Farm Animals Fall, starting August 18. 2 credits. 
Prerequisites: Animal Science 220 and 221 or their equivalent. Permission of instructor must be obtained at course enrollment.
Lecs, T R 10:00-11:20; Lab, T R 1:25–4:25, sec 1, Aug. 28–31, sec 2, Aug. 30–31; R. H. Foote.
Principles of artificial breeding and practical animal and laboratory experience in semen collection, semen evaluation, semen freezing, and artificial insemination of farm animals.

450 Immunopharmacology Spring. 3 credits. 
Prerequisite: course work in immunology and animal physiology or permission of instructor.
Lecs, M W F 11:15, J. A. Mars.
Emphasis on development and regulation of the immune system and the physiological parameters affecting and affected by immune functioning. Major topics include development immunology, immunoregulation, immunological involvement in reproduction and gonadal function, interrelationships between immune and endocrine functioning, and the immunology of aging. Other topics include tumor and transplantation immunology and autoimmune disease.

451 Physiology and Biochemistry of Lactation Spring. 3 credits. 
Prerequisite: either Animal Science 220 and Biological Sciences 231 or permission of instructor.
Lecs, T R 9:05, lab, R 2–4:25, R. C. Gorewit.
Emphasis is on mammary gland development, anatomy, physiological control of milk secretion, and biochemical synthesis of milk constituents in laboratory and farm animals.

452 Comparative Physiology of Reproduction of Vertebrates (also Biological Science 452) Spring. 3 credits. 
Prerequisite: Animal Science 247 or permission of instructor.
Lecs, M W F 1:25. One prelim at 7:30 p.m., A. van Tienhoven.
Sex and its manifestations. Neuroendocrinology of reproduction, sexual behavior, gametogenesis, fertilization, embryonic development, care of the zygote environment and reproduction, immunological aspects of reproduction.

454 Comparative Physiology of Reproduction of Vertebrates, Laboratory (also Biological Sciences 454) Spring. 2 credits. 
Prerequisite: Animal Science 452, concurrent registration in Animal Science 452, or permission of instructor.
Hours to be arranged; organizational meeting F 2:30 first week of semester. A. van Tienhoven.
Provides students with an opportunity to independently design and execute experiments with limited objectives.

459 Dairy Herd Management Spring. 4 credits. 
Prerequisite: Animal Science 112, 220, 221, 250 or equivalents. Recommended: Agricultural Economics 302.
Lecs, M W F 1:15; Lab, M T 1:25–4:25; one all-day field trip, W. G. Merrill and staff.
Application of scientific principles to practical herd management, analyses of alternatives, and decision making. Laboratories, including farm visits, emphasize practical applications, problem solving, and discussion.

486 Immunogenetics (also Biological Sciences 486) Spring. 4 credits. Limited to 25 students.
Prerequisites: a course in immunology and Animal Science 221 or Biological Sciences 281, or permission of instructor.
Lecs, M W F 10:10; disc, W or R 12:00; R. R. Dietert.
The genetic control of a variety of cellular antigens and their use in understanding biological and immunological functions. The genetics of antibody diversity, antigen recognition, immune response, transplantation, and disease resistance.

490 Commercial Meat Processing Fall. 3 credits. 
Prerequisite: Animal Science 290 or permission of instructor.
A study of the classification, formulation, and production of commercially available processed meat products. Physical and chemical characteristics of meats and meanmeal ingredients; their functional properties; various methodologies; microbiology; packaging, handling, and storage; and quality assurance are discussed.

497 Special Topics in Animal Sciences Fall or spring. 3 credits maximum. Intended for students in animal sciences. Prerequisite: permission of instructor. S-U grades optional.
Staff.
May include individual tutorial study or a lecture topic selected by a professor. Since topics may change, the course may be repeated for credit.

498 Undergraduate Teaching Fall or spring. 1 or 2 credits; 4 credits maximum during undergraduate career. Limited to students with grade point averages of at least 2.7.
Designed to consolidate the student's knowledge. A participating student assists in teaching a course, allied with the student's education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

499 Undergraduate Research Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with grade averages of at least 2.7.
Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

600 Research Fall or spring. Credit to be arranged. Hours to be arranged. All members of animal science program area.

601 Proteins and Amino Acids in Nutrition (also Nutritional Sciences 601) Fall. 2 credits.
Prerequisites: physiology, biochemistry, and nutrition, or permission of instructors.
W F 11:15, R. E. Austin, M. Morrison.
An advanced course in amino acid and protein nutrition, with emphasis on the dynamic aspects of protein digestion, amino acid absorption, protein synthesis, amino acid metabolism, and nitrogen excretion. Discussions include nutritional interrelationships, amino acid and protein requirements, assessment of nutritional status, evaluation of protein quality, bioavailability of amino acids, and techniques of amino acid analysis. Emphasis is on basic principles and their application in animal and human nutrition.

604 Vitamins Fall. 2 credits.
A discussion of the chemistry, biochemistry, and physiological functions of the vitamins, with emphasis on nutritional aspects.

605 Forage, Fiber, and the Rumen Spring. 4 credits. 
Prerequisites: either general nutrition and biochemistry or permission of instructor.
M W 12:00, disc, W 11:15 or F 1:25, P. J. Van Soest.
Ruminant nutrition; lower tract fermentation in monogastrics; nutritional biochemistry of forage plants, fiber, and cellulosic material.

607 Microbiology of the Rumen Spring. 3 credits. 
Prerequisites: general biochemistry, microbiology, and nutrition or permission of instructor. Not offered 1982–83.
Nutrition, biochemistry, physiology, taxonomy, and ecology of rumen bacteria and protozoa. Effects of rumen microbial ecology on ruminant nutrition. Manipulation of rumen fermentations to maximize host-animal performance.

809 Seminar in Poultry Biology Fall or spring. Limited to graduate students. S-U grades only. Hours to be arranged. Staff. A survey of recent literature and research in poultry biology.

810 Seminar Fall and spring. 1 credit. Required of all graduate students with a major or minor in animal science. S-U grades only. M 11-15. Department faculty.

813 Forage Analysis Spring. Spring: 2 credits. Prerequisite: permission of instructor. Lab, R 2-4. P. J. Van Soest. Chemical composition and nutritive evaluation of forage plants and related materials. The course includes a term paper summarizing results of independent laboratory study of either materials or methods.

819 Field of Nutrition Seminar Fall or spring. Noncredit. M 4:30. Current research in nutrition is presented by visitors and faculty.

820 Seminar in Animal Breeding Fall or spring. 1 credit. Limited to graduate students with a major or minor in animal breeding. S-U grades only. Hours to be arranged.

821 Seminar in Reproductive Physiology Fall and spring. 1 credit. Registration limited to graduate students. Advanced undergraduates welcome to attend. S-U grades only. W 4:30. R. H. Foote and staff. Current research in reproductive physiology is presented by staff members, graduate students, and visitors.

840 Special Topics in Animal Science Fall or spring. 1 or more credits. Hours to be arranged. Staff. Study of topics in animal science more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

720 Experimental Methods in Quantitative Genetics and Animal Breeding Spring. 3 credits. Prerequisites: matrix algebra, linear models, and mathematical statistics. Hours to be arranged. R. L. Quaas. Estimation of genetic and environmental parameters required to design efficient selection programs. Emphasis is given to interpretation of experimental and survey data with unequal subclass numbers, and prediction of genetic progress resulting from alternative selection methods.

Biological Sciences

The program of study in biology is offered by the Division of Biological Sciences. For course descriptions, see pp. 206–220.

Communication Arts

114 Writing in the Biological Sciences Fall or spring. 3 credits. Freshman Seminar designed for College of Agriculture and Life Sciences students. Concurrent registration is required in Biological Sciences 101–102, 103–104, 105–106, or 109–110.

Lec, M-W-F 9:05. A. M. Wilkinson and staff. Course will explore the relationship between writing and biology. Emphasis will be on writing rather than subject matter and on objective observation rather than subjective personal experience. Discussion of effective sentence and paragraph structure, organization, grammatical structure and usage, meaning of words, and punctuation. Objective is clear, concise, concrete writing.

150 Writing for Media Fall. 3 credits. Limited to communication arts freshmen and first-year transfer students.

Basic writing for print and broadcast. A back-to-basics approach to writing for clarity and style, using news and feature writing as a framework. Media form and style are analyzed. Frequent writing assignments, both in and outside of class, are given.

200 Theories of Human Communication Fall or spring. 3 credits. S-U grades optional. Not open to first-semester freshmen.

Lec, T R 12:20; disc, T or R 1:25. R. B. Thompson and staff.

An introduction to human communication from a multidisciplinary perspective. Contributions from philosophy, psychology, neurology, social psychology, linguistics, anthropology, and communication theory are considered.

205 Parliamentary Procedure Fall or spring. 3 credits. Limited to 40 nonfreshman students each section. No students accepted after the second week of classes. Letter grades only.

Lec, M 12:20; disc, T 2:30–4:25 or R 2:30–4:25. R. D. Martin

A detailed study of the principles and rules of parliamentary procedure using Robert's Rules of Order, newly revised, as the text. Emphasis on practical experience and the importance of a well-run meeting as an integral component of effective communication. Includes outside-meeting evaluations, preparation of bylaws, and practice in serving as a presiding officer, secretary, and committee member in a simulated meeting situation.

215 Introduction to Mass Media Fall or spring. 3 credits. Limited to 125 nonfreshman students. S-U grades optional.

History, processes, philosophies, policies, and functions of United States communication media. Each major medium is examined individually in regard to information processing and persuasion. Effects of messages, regulation of media, and other contemporary issues are examined.

230 Visual Communication Fall. 3 credits. Limited to 100 nonfreshman and communication arts freshmen students. Not recommended for art or design majors. Project materials cost about $15–$25.

Lec, M W F 9:05. R. W. S. Stephens

A basic course in the use and importance of visual communication methods and materials in today's society. Posters, charts, displays, photographs, slides, motion picture, and television are among the topics discussed. Practical projects are assigned.

231 Art of Publication Fall. 3 credits. Limited to 30 communication arts students. Project materials cost about $25–45.

Disc, M or W 12:25–4:25. Staff

A basic course designed to explore visual concepts that increase communication effectiveness through the printed word. The importance of selecting and coordinating format, layout, typographic, and illustrations is stressed. Lectures, a field trip, in-class assignments, and three outside projects examine opportunities and problems in publication design and production.

301 Oral Communication Fall, spring or summer. 3 credits. Each section limited to 24 sophomores, juniors, and seniors. Students missing the first week of classes without a University excuse are dropped so that others may register. No students accepted or allowed to drop after the second week of class.

Lecter grades only.

Disc, M W F 8:05, 10:10, or 11:15; M T W L 1:25;

A study of the basic process and principles of oral communication. Through theory and practice, the student is encouraged to develop self-confidence and competence in public speaking. Provides experience in, preparing, delivering, and evaluating oral presentations.

302 Persuasion Fall or spring. 3 credits. Prerequisite: Communication Arts 301.

Disc, M 11:15; lec, T R 11:15 or 12:20 or W F 11:15. B. O. Earle

The course concentrates on the analysis and understanding of the persuasion events around us. The oral presentations stress the application of various theories of persuasion to the interpersonal communication process.

303 Small Group Communication Fall. 3 credits. Limited to juniors and seniors. Prerequisite: Communication Arts 200 or permission of instructor.

Disc, T R 2:30–4. N. E. Awa

Theory and practice in leadership and participation in small-group communication. The course examines the values and limitations of group discussion, collaborative behavior, and conflicts in a democracy.

304 Effective Listening Fall or spring. 3 credits. Limited to 25 nonfreshman students per section. No student accepted after the second week of classes.

Disc, Lec 1, M 1:25; disc 1, W 12:20–2:15 or lec 2, T 10:10; disc 2, R 10:10–12:05. R. D. Martin.
Lecture, discussion, and demonstrations are used to present an analysis and description of the process of listening, including barriers to effective listening and techniques for improving listening skills. Students will participate in frequent skill-building exercises and tests of listening involving comprehension and retention.

M W F 10:10. R. D. Cole
An overview of the roles of radio and television in contemporary society, with particular emphasis on the development, organization, and influence of these media in the United States. Attention is given to the structure and uses of radio and television in other nations, to provide perspective on the systems here, and to the theories and constraints involved in program production.

312 Advertising and Promotion Fall, spring. 3 credits. Limited to 50 students.
M W 12:20–2:15; F 8:10–10:05. J. E. Lawrence
In the fall, the course emphasizes the planning, creation, production, and measuring of advertisements and advertising campaigns. Lectures and workshops alternate. In the spring, the emphasis is on the role of advertising and promotion in society—how advertising evolved, forms of advertising, research, creation, media, advertising regulations, testing, and advertising organizations. Lectures only, including guest lecturers.

315 Basic Newswriting for Newspapers Fall and spring. 3 credits. Limited to 30 students. Prerequisite: major in communication or permission of instructor.
Typing ability is essential.
Cornell University News Bureau.
Writing and analyzing news stories. A study of the elements that make news, sources of news, interviewing, writing style and structure, press releases, and press-society relations. Concentration on newswriting as it is practiced by newspapers in the United States. Two writing assignments each week, one done in class, one done out of class.

316 Science Writing for the Mass Media Fall and spring. 3 credits. No drops after third week.
Fall, lecture and discussion, T 12:20–1:15; Spring, lecture and discussion, T 12:20–1:15.
Writing to explain and simplify scientific and technical topics for newspaper and magazine readers, radio listeners, television viewers, and educational-material consumers. Includes frequent writing assignments. Final projects include writing a newspaper or magazine article, writing a radio program, and writing and producing a television program. Students learn interview and research methods that ensure technical accuracy. Students should become familiar with the public policy and institutional milieu that have an effect on science writing and should reflect that knowledge in their writing.

318 Radio Writing and Production Spring. 3 credits.
Scripting and recording various public information formats for possible use on local and state radio stations. Students create complete broadcasting plans and materials for public and private organizations.

319 Television Writing and Production Spring. 3 credits. Limited to 25 students. S-U grades optional.
T 8–9:55. J. E. Lawrence
Creation of television information programs, from development of idea through research, scripting, and production.

331 Survey Research Methods Spring. 3 credits.
Limited to 20 junior, senior, or graduate majors; others by permission of instructor. Prerequisites: Communication Arts 200, 215, or permission of instructor. S-U grades optional.
M W F 10:10. R. E. Otten
Analysis of public opinion polls, market research, media audience ratings, communication strategy planning, and message research. Development of clarity and research design from research question to final report. Instruction in computer use of Statistical Package for the Social Sciences (SPSS) to assist in data analysis. Familiarity with basic statistical concepts helpful.

360 Scientific Writing for Public Information Fall or spring. Not open to freshmen.
An intensive course in simplifying scientific and technical communications for a general public. Weekly assignments include instructions, descriptions, explanations, and summaries in such formats as the newsletter, brochure, and report. Audience analysis will be emphasized. Not oriented to the mass media.

363 Organizational Writing Fall or spring. Not open to freshmen.
M W F 9:05 or 10:10. J. E. Hardy
Students write as members of different organizations, in the position of supervisor, subordinate, colleague, and representatives of business, government, community, and other organizations. Emphasis on adapting tone to the audience and the purpose of the message. Weekly writing assignments include various kinds of internal and external reports, memoranda, proposals, and letters. Assignments based on case studies.

365 Writing in the Sciences and Engineering Fall and spring. Permission of instructor required.
3 credits
Students write scientific or technical material for colleagues in their own field. The objective is clear, concise writing, with attention to grammatical construction, use of paragraph development, and organization. Weekly writing assignments include scientific or technical instructions, descriptions of equipment and procedures, definition and explanation of concepts, graphic presentations, and data analysis. Familiarity with basic scientific concepts helpful.

368 Editing Spring. 3 credits. Limited to 25 junior, senior or graduate students.
Prerequisites: Communication Arts 315, 316, 360, 363, 365, or 413.
M W F 10:10–11:25. J. E. Hardy
Written and oral communication between supervisor and subordinate: examination of the structure and function of planned and unplanned organizational communication networks; techniques for analyzing management communication systems. Case studies assigned for discussion.

413 Writing for Magazines Fall or spring. 3 credits. Limited to juniors, seniors, and graduate students. No drops after third week.
Fall: M 12:20–1:15; Spring: W 9:05–10:15. M. A. Shapiro
Intensive study of technical writing to help students communicate more effectively through the medium of the printed word in magazines. Art and techniques of good writing are studied; magazines in many fields of interest are reviewed. All articles are analyzed and returned to the student to rewrite and submit to a magazine.

420 Print Media Laboratory Fall. 3 credits. Limited to junior, senior, and graduate communication arts majors. Prerequisite: Communication Arts 231, 314, 360, or 413.
Writing, editing, and layout principles practiced in publishing the Cornell Countryman. Some additional outside work sessions may be required.

421 Broadcast Media Laboratory Fall. 2 credits. Limited to junior and senior communication arts majors. Prerequisite: Communication Arts 318 or 319. Not offered 1982–83.
R 6:10–7:45. R. D. Cole
Emphasis on production of television and radio programs for various audiences. Course work is done primarily through individual tutorial arrangement.

422 Print Media Laboratory Spring. 3 credits. Limited to junior, senior, and graduate communication arts majors. Prerequisite: Communication Arts 231, 314, 360, or 413.
440 Photo Communication Fall or spring. 3 credits. Limited to 25 junior and senior communication arts majors; others by permission of instructor. For those with limited experience in photography. Students are expected to furnish their own supplies and cameras. Supplies will cost approximately $60–$70. T 1:25–4:25. C. H. Freeman. Basic photography: camera handling, film processing, projection printing, and photographic lighting. Photomontage is emphasized during the latter part of the course.

460 Video Communication Fall or spring. 2 credits. Limited to 15 seniors or graduate students. Prerequisites: Communication Arts 150, 200, or 230, and permission of the instructor by application. F 12:20–2:50. G. Gay. An overview of video communication applications. Examination of relevant organizational and visual communication theory. Development of basic competency with video ideation recording equipment, audio and visual input to video and production, and postproduction planning and editing techniques.

496 Internship Fall, spring, or summer. 1–6 credits. Students must apply to department internship committee no later than during the spring preregistration period for fall internships, or the fall preregistration period for spring or summer internships. Students must use supervising faculty member's section number to register. Prerequisites: communication arts major, 3.0 GPA, and approval of committee. V. Stephen and staff. Structured, on-the-job learning experience under supervision of professionals in a cooperating organization. Students assigned a faculty adviser by department internship committee. Faculty adviser supervises the course and the awarding of credit and grade. An examining contract is written between the faculty adviser and student, stating the conditions of the work assignment, supervision, and reporting. Minimum of 60 on-the-job hours per credit granted. May be repeated to a maximum of 6 credits.

497 Independent Study Fall or spring. 1–6 credits. Undergraduates must attach to their course enrollment material written permission from the faculty member who will supervise the work and assign the grade. Students must use the faculty member's section number to register. Staff. Group or individual study under faculty supervision. Work should concentrate on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. Attempts to implement this knowledge in a practical application are desirable.

498 Communication Teaching Experience Fall and spring. 1–3 credits each semester. Limited to juniors and seniors. Intended for undergraduates desiring classroom teaching experience. Prerequisite: permission of the faculty member who will supervise the work and assign the grade. Students must use the faculty member's section number to register. Hours to be arranged. Staff. Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to aiding with the actual instruction, each student prepares a paper on some aspect of the course.

499 Independent Research Fall or spring. 1–6 credits. Limited to senior and graduate students. Seniors must attach to their course enrollment material written permission from the faculty member who will supervise the work and assign the grade. Students must use the faculty member's section number to register. Staff. Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. S. A. W. A research should be scientific, systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

601 Intercultural Communication Spring. 3 credits. M F 10:10–11:25. N. E. Awa. A systematic analysis of sociocultural and psycholinguistic obstacles to effective communication between cultures, subcultures, and ethnic and identity groups. Also examined are the subtleties and complexities of nonverbal behavior in cross-cultural transactions. Examples are drawn from ethnolinguistic and cross-cultural studies.

612 Seminar: Interpersonal Communication Fall 3 credits. M 1:25–4:25. Staff. A study of recent advances and research in leadership, small-group interaction, and communication networks. New developments are examined as they relate to business, administration, and education.

614 Scientific Writing for Scientists Fall or spring. 3 credits. Prerequisites: research in progress and permission of the instructor. T R 8:30–9:55. A. M. Wilkinson. Workshop for students in research in progress. Discussion and lectures on writing a journal article, thesis, report, and proposal; on objectives in scientific writing, relation of metric and linguistics to scientific writing, process of publication and reviewing, preparation of tables and illustrations; and on advanced and special problems in organization, paragraph development, sentence structure, and usage.

620 Communication in Organizations Fall. 3 credits. Prerequisite: permission of instructor. W 1:25–4:25. S. A. W. Review of theories, research, and practical systems as they relate to human communication effectiveness in organizations. Includes components of interpersonal communication, group and intergroup communication, communication processes involved in organizational goal setting, renewal and change.

623 Communication in the Developing Nations Spring. 3 credits. Limited to seniors and graduate students. Not offered 1982–83. T R 2:00–3:15. An examination of existing communication patterns and systems and their contributions to the development process. Attention is given to the interaction between communication development and national development in primarily agrarian societies.

631 Studies in Communication Fall. 3 credits. Limited to graduate students in communication arts. Others by permission of instructor. T R 10:10–11:25. N. E. Awa. A review of classical and contemporary research in communication, including key concepts and areas of investigation. An exploration of the scope of the field and the interrelationships of its various branches.

632 Methods of Communication Research Fall. 3 credits. Limited to graduate students. M W 10:10–11:25. R. E. Osborn. An analysis of the methods used in communication research. Emphasis is on understanding the rationale for experimental, descriptive (empirical and nonempirical), and historical-critical research methods.

643 Frontiers in Communication Fall. 3 credits. T R 8:30–9:55. R. D. Colle. A study of recent developments in communication. Emphasis on the application of the new methods, materials, and technology in visual, print, film, oral, and telecommunication media to contemporary and future problems significantly involving communication.

650 Advanced Communication Seminar Fall or spring. 3 credits. Primarily for graduate students but open to seniors. W 10:10–12:45. R. D. Colle. An analysis of communication problems faced by various kinds of public and private sector organizations. Using case studies, the course explores some of the major components of communication strategies, particularly as they relate to communication planning. Examples are drawn from corporate communication programs, nutrition and health nonformal education projects, rural development programs, and government public information campaigns.

651 Seminar: Communication Issues Fall and spring. Noncredit. S–U grades only. Alternate Fridays, 2:30. Staff. Seminar deals with contemporary issues in communication, especially those related to the use of mass media as sources of information and influence, organizational communication, and intercultural communication.

660–691 Communication Teaching Laboratory Fall and spring. 1–3 credits each semester. Limited to graduate students. Prerequisite: permission of the faculty member who will supervise the work and assign the grade. Students must use the faculty member's section number to register. Hours to be arranged. Designed primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.

760 Advanced Communication Projects Fall or spring. 3 credits. Limited to communications arts graduate students. May not be repeated. Students must use the faculty member's section number to register. Staff. Independent studies and projects are carried out in conjunction with selected undergraduate courses.

895 Directed Graduate Study Fall or spring. 3–6 credits. S–U grades only. Students must use the faculty member's section number to register. Staff.

Education

110 Introduction to Psychology Fall and spring 4 credits.
Lec, MWF 10:10; 1 disc sec to be arranged. D. E. Hedlund

Survey of the major areas of psychological inquiry. Examination of personal application of psychological knowledge to the problems of living and to current social issues, including the ability to be an intelligent consumer of psychological research.

240 The Art of Teaching Spring, 3 credits.
Lec, T 2:30–4; labs to be arranged. G. J. Posner
This course is designed for all students interested in finding out more about teaching. Teaching is considered an activity in which people of many occupations engage, not limited to schools. Students engage in field experiences to find out what teaching involves (minimum of 2 hours a week). Class and laboratory work builds on this experience and provides skills and concepts to make the field experience more profitable.

Lec, T R 10:10–11:30. E. J. Haller
An introduction to the sociological study of schooling and education. Topics include the effects of social factors on educational achievement, the norms and values learned in schools, and the relationship between students and teachers, and the school's relationship to the economic and political systems. All levels of education, from elementary school to the university, are considered.

311 Educational Psychology Fall or spring, 3 credits. Prerequisite: introductory psychology. S-U grades optional.
Lec, MWF 11:15; R. E. Ripple. Spring, MWF F 9:05; M. D. Glock
An introductory survey course. Emphasis is on human learning and thought processes from a psychological point of view. The course is set in a broadly based teaching-learning context appropriate for prospective teachers, youth group leaders, community leaders, and those in the service-helping professions.

312 Learning to Learn Spring, 3 credits. Prerequisite: one or more courses in psychology or educational psychology.
T R 1:25; J. D. Novak.
This course is intended for persons interested in the improvement of educational programs through the application of new knowledge in learning theory. Lectures and discussions are based upon assigned readings and the contributions of class members. The major focus of the course is how and why concepts play a central role in human learning. Concept mapping and other strategies for educating will be used.

317 Psychology of Adolescence Spring, 3 credits. Prerequisite: introductory psychology. S-U grades optional.
T R 12:20–1:25; R. E. Ripple
A survey of the nature of adolescent development, with emphasis on causal factors of adolescent behavior. Focus is on an examination of the interrelationships among the major aspects of adolescent development, an examination of some of the dominant themes of adolescence, acquaintance with research on adolescent development, and implications for the educational process.

331 Introduction to Teaching Agriculture Spring 2 credits. Required of persons who plan to enter the student teaching program.
Lec, M–W–F 4–4:30. Lab, T to be arranged. W. E. Drake
An introduction to the origin, development of curricula, and methods of teaching agriculture in secondary schools. Purposes are (1) to provide exploratory experiences in agricultural education, and (2) to prepare prospective teachers for participation in the resident student-teaching program leading to teacher certification.

335 Youth Organizations Spring, 3 credits. Prerequisite: introductory psychology.
Lec, T R 10:10; lab to be arranged. R. W. Tenney
The role of selected youth organizations in providing educational experiences for youth. Factors affecting membership, purpose, design, operation, and administration are surveyed, emphasizing the roles the adult volunteer leader may play. The course is designed to give the student an in-depth learning-by-doing experience of how youth organizations function. Field experience with a recognized youth organization is required.

340 Theories of Teaching Fall, 3 credits.
M W 2:30–3:45; G. J. Posner, K. A. Strike
This course is intended to assist the student in conceptualizing the process of teaching and contexts of teaching in school and nonschool settings. The course examines representative theories of teaching and provides an opportunity for students to develop their own views.

352 Reading Statistics Fall or spring, 1 credit. Prerequisite for spring: concurrent registration in Education 351.
T R 12:20; Spring, T R 8:30–9:25; J. Millman.
An introduction to statistical vocabulary and symbolism frequently used in reporting empirical research. Emphasis is on an educational and other social sciences. Students are taught how to comprehend statistical terminology and results.

353 Introduction to Educational Statistics Spring, 3 credits. Prerequisite: Education 352 or concurrent registration in Education 352, or permission of instructor.
A study of common univariate and multivariate statistical procedures encountered in educational and psychological inquiry. Microcomputers and minicomputers are used to explain statistical concepts and to compute statistical indices. A mastery learning-teaching style is employed.

370 Issues in Educational Policy Spring, 3 credits.
M W F 10:10; K. A. Strike
An examination of the social, political, and economic issues that affect teaching and learning in schools and other settings. Included are such issues as educational opportunity, governance and policymaking, school and community, the economics of education, and the teacher in a social context.

378 Economics of Education Fall, 3 credits. S-U grades optional.
T R 10:10–11:30; D. H. Monk
An introduction to economic principles to study education and educational policy. Specific attention is given to the impact of education on economic growth, the distribution of earnings, and characteristics of the labor force. The concept of human capital is introduced and developed as a means of understanding these phenomena. Techniques of cost-benefit and cost-effectiveness analysis are used to shed light on current controversies over the effectiveness of alternative types of schooling. No formal training in economics is presupposed.

380 Independent Honors Research in Social Science Fall or spring, 1–6 credits. Limited to students who have met requirements for the honors program. S-U grades optional. A maximum of 6 credits may be taken for this research program.

Staff
401 Our Physical Environment Fall or spring, 3 credits. Prerequisite: permission of instructor.
T R 12:20–1:25; V. N. Rockcastle
A practical, nonmathematical study of some basic relationships and physical interactions in the environment, with emphasis on physics and earth science. Attention is paid to analysis for understanding and techniques for teaching. A two-week session on photography and an individual research project included. Useful for teachers and environmental educators.

403 Environmental and Natural History Writing Spring, 3 credits. Limited to upperclass and graduate students. Prerequisites: a course in composition, working knowledge of biology and ecology, permission of instructor.
T R 7:30–10 p.m. R. B. Fischer
For those who want to develop skills in changing environmental attitudes and behavior using newspapers, magazines, and radio. The class produces a weekly environmental awareness column for a local newspaper and records scripts for a weekly radio program.

404–405 Field Natural History Fall and spring, 3 credits each semester. Limited to upperclass and graduate students. Prerequisites: basic biology and ecology and permission of instructor. Education 404 is not a prerequisite to 405.
Fall: Lec, M 10:10; labs, M R 1:25–4:30; Spring: Lec, M 10:10; lab, M 1:25–4:30; D. H. Monk
This course provides students who plan to be professional environmental interpreters and educators with methods and materials for sensitizing people about the complexities and fragility of their living environment. It provides practical experiences in teaching about the environment in a variety of classroom and out-of-classroom settings.

407 Teaching Elementary Science Fall, 3 credits.
W 1:25–4:25; V. N. Rockcastle.
An analysis and synthesis of science concepts and related behaviors for children and young adults, with emphasis on sequencing and instruction in school and environmental centers. Includes practical experiences in local schools and youth centers.

411 Educational Measurement Fall, 3 credits. Prerequisite: permission of instructor.
W 3:35–6:30; M. D. Glock
Demonstrations of administration for procedural tests. Construction of achievement tests and use of other measuring instruments in classification and guidance for improvement of instruction. Emphasis is on the use of formal and informal instruments.

413 Psychology of Human Interaction Fall, 3 credits. Fee, $5.
T R 10:10–12:05; D. E. Hedlund
Designed to develop skills for understanding and effective interpersonal communication and interaction. The class is largely experiential, utilizing audio and video recordings in laboratory sessions. Students should have access to a cassette recorder.

414 Counseling Psychology Spring, 4 credits. Limited to 30 students. Prerequisites: introductory psychology, social or personality psychology, and Education 413.
T R 10:10–12:05; D. E. Hedlund
The processes of counseling are examined from the perspectives of behavioral psychology and humanistic psychology. Research on adult development, college-age and older, is reviewed, and typical adult counseling issues are examined. Implications are drawn for counseling strategy with an adult population, including psychological assessment, establishing therapeutic goals, intervention strategies, and evaluation of outcomes. Alternative models of service delivery such as outreach, consultation, and psychoeducation are emphasized.

420 (400) Field Experience Fall or spring, 1–4 credits. S-U grades optional. Undergraduates must attach to their course enrollment material written permission from the faculty member who will supervise the work and assign the grade.
Staff
Students may engage in planned, semiprofessional or professional practice in an educational enterprise.
430 Special Problems in Agricultural Education  
Fall, spring, and summer. 1-3 credits. S-U grades optional.  
Fall and summer: hours to be arranged. Spring: T R 8-9:45. R. W. Tenney.  
An opportunity to study individually selected problems in agricultural education.

432 Teaching Agriculture: Methods, Materials, Practice  
Fall: 3 credits. Prerequisite: concurrent enrollment in Education 430 and 432.  
Directed participation in teaching agriculture at the secondary school level. Programs include an intensive, four-week on-campus period where methods and materials of teaching agriculture are treated in detail, combined with a ten-week period in a student teaching center. Includes evaluation of area resources, instructional materials and facilities, development of curricula, directing work experience, planning instruction, and advising youth organizations.

434 Adult Education Programs in Agriculture  
Fall: 3 credits. Prerequisite: concurrent registration in Education 430 and 432.  
Lec to be arranged. H. D. Sutphin.  
Determining instructional needs, planning programs of instruction, teaching in groups, giving on-the-job instruction, and evaluating adult education programs in agriculture.

445 Curriculum Design  
Fall: 3 credits. Education 545 may be taken concurrently.  

446 Implementing Instruction  
Spring: 2 credits.  
A study of the elements of effective instruction in lecture, laboratory, seminar, field trip, and other modes of instruction. Practice in developing and presenting various modes of instruction, with critiques by the class.

472 Philosophy of Education  
Fall: 3 credits.  
T 2:30-4:25. K. A. Strike.  
A study of central issues in the philosophy of education. Questions of ethics, political philosophy, and the theory of knowledge are examined, and the implications for education assessed.

473 Contemporary Philosophy of Education  
Spring: 3 credits.  
M W 11-15, disc, 1 hour to be arranged.  
B. D. Gowan.  
The topic is value issues. Issues of value in education (values clarification, behavior modification, moral development) are treated philosophically by drawing on normative concepts of value (e.g., self-interest, utility, freedom, rights and duties, justice) from ethics and social philosophy. A theory of value for education is discussed.

477 Law and Educational Policy  
Spring: 3 credits. Offered alternate years.  
T 2:30-4:30. K. A. Strike.  
A study of recent federal court decisions concerning education. Emphasis on examining legal issues against a background of related educational theory and in terms of the consequences of legal decisions for the development and operation of educational institutions.

481 (435) Educating for Community Action  
Spring: 3 credits. Not offered 1982-83.  
T R 10-12:05. R. L. Bruce.  
The design and execution of educational aspects of community-action programs. Deals with the identification and statement of educational goals, selection of teaching strategies, and evaluation of outcomes.

497 Independent Study  
Fall or spring. 1-3 credits. S-U grades optional. Undergraduates must attach to their course an enrollment material written permission from the faculty member who will supervise the work and assign the grade.  
Staff.  
A student may, with approval of a faculty adviser, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

498 Undergraduate Teaching  
Fall or spring. 1 or 2 credits. 4 credits maximum during undergraduate career. Limited to students with grade point averages of at least 2.7. S-U grades optional.  
Designed to consolidate the student's knowledge. A participating student assists in teaching a course allied with the student's education and experience. The student is expected to meet regularly with a discussion or lab section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

499 Undergraduate Research  
Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with grade averages of at least 2.7.  
Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

547 Improvement of College Teaching  
Fall, spring, or summer. 2 credits.  
Staff.  
Concepts of teaching, learning, curriculum, and governance are used to guide practical activities that enhance faculty competence. Recent studies of concept mapping and learning, structure of knowledge, teaching, adult learning, and evaluation provide a conceptual basis for improving teaching. Videotape techniques will be used to provide a basis for constructive analysis of teaching performance.

557 Administration of Higher Education  
Summer: 3 credits. S-U grades optional.  
M-TR 10-12 and 2-4. Staff.  
Limited to students with grade averages of at least 2.7. S-U grades optional.  
This intensive, three-week course focuses on areas of primary importance to those who want an overview of the theory and practice of higher education. Aspects covered in the course include program planning, organizing, administering, and evaluating. Also, individualized research papers will be expected.

560 Special Topics in Education  
Fall, spring, summer. 1-3 credits. Prerequisite: permission of instructor.  
M-R 10-12 and 2-4. Staff.  
Hours to be arranged. Staff.  
Study of topics in education not otherwise provided in the course and may undertake tutorial study of an independent nature in an area of educational interest.

561 (511) Educational Psychology  
Fall. 3 credits. Prerequisite: introductory psychology. S-U grades optional.  
M W F 1:15. R. E. Ripple.  
A basic survey course for graduate students. Emphasis on psychological factors involved in human learning and the educational process. Set in a broad-based conceptual model of any behavioral setting for learning. Appropriate for those seeking an introduction to educational psychology or a refresher course in contemporary educational psychology.

562 (512) Standardized Tests: Use and Interpretation  
Fall. 3 credits.  
R 3:35-5:15, 1 additional hour to be arranged.  
Staff.  
For teachers, counselors, or personnel majors who plan to work with standardized tests.

563 (513) A Theory of Education  
Fall. 3 credits. Prerequisite: Education 311 or 511, or permission of instructor.  
T R 9:05. J. D. Novak.  
Presents a coherent theory of education combining concepts from philosophy, psychology of learning, curriculum, and instruction. Classes include discussion of student-initiated questions. Students are assisted in applying theory to their own discipline.

564 (514) Group Processes in Education  
Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional.  
Consideration of effective group membership and leadership with emphasis on the theory and practice of facilitating small-group processes. Included are the design and evaluation of structured group exercises for the classroom, the use of groups in counseling, and an examination of the consulting role as an educational strategy.

565 (515) Affective Education  
Spring. 3 credits. Prerequisite: permission of instructor.  
This course examines the conceptual base and the methodology of teaching for objectives in the affective realm. The first part of the semester is devoted to the interpersonal dynamics of individual development and the relationship of affective and cognitive learning. The second part focuses on the interactive nature of the teaching-learning transaction and the effective use of small-group dynamics in teaching. The capability to design teaching-learning experiences that incorporate affective objectives is a major goal. The course is largely experimental, providing participation in a variety of approaches to affective education.

600 (600) Internship in Education  
Fall or spring. 2-6 credits. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for supervising the work. Staff.  
An opportunity for practical experience in educational professions development.

602 (600) Special Problems in Agricultural and Occupational Education  
Fall and spring; may also be offered in summer session. 1-3 credits. S-U grades optional.  
Hours to be arranged. R. W. Tenney and staff.
The course provides an opportunity for graduate-level study of individually selected problems and issues in agricultural and occupational education. Designed for experienced teachers.

632 Teaching Agricultural and Occupational Education Spring. 3 credits. Prerequisite: an introductory course in teaching methods or permission of instructor.
The focus of the course is on the selection, use, and evaluation of methods and materials for teaching occupational subjects. Methods for both group and laboratory instruction are covered. Opportunity is provided through use of modules for students to develop teaching competencies based on their individual needs and interests. Development of self-evaluation skills is included. A class project on the selection or development of instructional materials is required.

633 Curriculum in Agricultural and Occupational Education Fall. 3 credits.
M 1:25–3:30; labs to be arranged. W. E. Drake.
Current situations affecting occupational education curricula are examined. Principles, objectives, and sources of information are developed for planning curricula. Strategies for developing occupational curricula are examined. Emphasis is given to planning, developing, and managing work experience programs. Participants have an opportunity to observe ongoing programs at the secondary and two-year-colleges level and pursue individual interests in curriculum improvement.

643 (543) Structure of Knowledge and Curriculum Spring. 3 credits. Prerequisite: permission of instructor.
A method for the critical analysis of knowledge and value claims embedded in primary sources is presented. Students analyze on materials chosen according to their own background or interest. Students develop their materials to the point where they could be used for instructional purposes. A special theory of curriculum developed by the instructor is presented.

644 (544) Curriculum Theory and Analysis Fall. 3 credits. Prerequisite: Education 311 or 511, concurrent registration in Education 511, or permission of instructor.
M W 10:00–11:30. G. J. Posner.
An examination of the basic elements involved in making curriculum decisions, and an analysis of current approaches to curriculum. Students learn to analyze a curriculum in the context of a conceptual framework. The course is the basic graduate course in curriculum.

650 (519) Methods of Educational Inquiry Fall. 1–3 credits.
Techniques of empirical research are offered in three independent units: (a) survey of empirical approaches to social science inquiry, (b) design of educational research, and (c) methods of data collection. Course credit varies, depending upon the number of units the student elects. Units a, b, and c are covered during the first, second, and third thirds of the semester respectively.

651 Writing a Thesis Proposal Fall. 1 credit. S-U grades only.
Procedures for developing and writing a master's or doctoral thesis proposal. Emphasis will be given to identifying a significant topic, conducting and describing a group mini-research study, recognizing weaknesses in illustrative proposals, and clear and concise writing. Students will be provided ample assistance in constructing a proposal on their own.

654 (546) Evaluation for Program Management Spring. 1–3 credits. S-U grades optional.

659 Special Topics in Research Methods Spring. 1–3 credits. Prerequisite: permission of instructor. S-U grades only.
Hours to be arranged. J. Millman.
Consideration of new techniques and current topics in educational research design, measurement, or evaluation of programs, products, and personnel. The course is divided into three independent modules. Students may elect one to three modules in any combination.

661 (561) Administration of Educational Organizations Fall. 3 credits.
Perspectives on the administration of educational organizations. Consideration of classic and contemporary organization theories and their application to both public and higher education. Intended for students who are considering careers as educational administrators as well as for those who want to further their understanding of schools as organizations.

T 2:30–4:30. E. J. Haller, K. A. Strike.
This course deals with the identification and conceptualization of ethical problems likely to arise in administering an educational organization. Typical problems concern rights of parents, teachers, and students; equity and due process in hiring; retention and promotion; and race relations. The course integrates case studies with appropriate philosophical literature.

Consideration of the structure of control in public education. Relationships among federal, state, and local agencies and the administrative roles in school districts. Considerable attention is directed to social and political analysis of the community.

664 (564) Educational Finance Fall. 3 credits. S-U grades optional.
Attention is focused on issues that are significant to educational administration. An introduction to the various courses of action that are relevant to the analysis of educational organizations, including some selected major works of Dewey (Democracy and Education, Experience and Education, Art as Experience). One objective of the seminar is to help students learn how to read Dewey and to compare and apply his ideas about education to current problems and issues.

665 (565) Administrative Decision Making Spring. 3 credits. S-U grades optional.
An introduction to alternative theories of decision making and their relevance to the field of educational administration. Emphasis will be placed on the analysis of the inferences that exist among different levels of decision making within educational systems. Topics will include the impact of state and federal policy on educational organizations, collective bargaining, student decision making, and the dynamics of planned technological change.

An examination of selected issues that affect the administration and development of academic and nonacademic personnel in continuing and higher education institutions.

673 Seminar in Dewey's Philosophy of Education Fall. 3 credits. Prerequisite: work in philosophy and permission of instructor. S-U grades optional.
A detailed examination of some selected major works of Dewey (Democracy and Education, Experience and Education, Art as Experience). One objective of the seminar is to help students learn how to read Dewey and to compare and apply his ideas about education to current problems and issues.

674 (574) History of American Education Fall. 3 credits.
M 3:35–5:15. Instructor to be announced.
A chronological analysis of American schools, colleges, and other educational agencies from colonial beginnings to the present. An attempt is made to view education in the context of the evolution of American norms and values.

675 (575) Educational Policy Development and Decision Making Fall. 3 credits. S-U grades optional.
This course provides an introduction to the policy-making process in and around the educational institution. After a consideration of the nature of public policy, topics included are governmental responsiveness, power and influence in policy making, political parties and interest groups, and administration as policy making. The class is organized as a seminar. Each student prepares and presents a paper relevant to one of the topics considered.

A seminar focused on a comparative analysis of educational planning as it is practiced in both industrialized and developing nations. Topics will include manpower planning, the social demand approach to educational planning, benefit-cost analysis, and incentive models of planning. Attention will be given to case studies that will be selected in accordance with students' interests. The political and economic implications of attempts to plan education will be emphasized.

A seminar dealing with the planning, financing, and administration of higher educational organizations. Topics include a critical assessment of current approaches to macrolevel planning as well as the analysis of special problems associated with the financing and administration of particular types of colleges and universities.

681 (624) Designing Extension and Continuing Education Programs Fall. 3 credits. Prerequisite: permission of instructor.
Designed to help students understand current theories, concepts, principles, and procedures relevant to the process of developing programs and curricula for the continuing education of adults. Emphasis is on such key areas as the nature and role of programming, situation analysis and needs identification, choosing among alternative courses of action, staging program objectives, and program organization.
682 (628) Community Education Development
Fall. 3 credits. For students who have interest or experience in education or development programs where community is an important concern.
An examination of the concept of community; changes in community life; the analysis of community, alternative structures of community development; patterns of response to community by universities, colleges, schools, cooperative extension, and government service agencies; and such functional dimensions of community education as community education programming as participatory decision making, paraprofessionals, volunteers, leadership development, council formation and function, interagency coordination, and change-agent roles.

683 (535) Continuing Education Programs
Spring. 3 credits. Prerequisite: prior work experience preferred.
An overview of selected theories, principles, and strategies applicable to management of decentralized, nonprofessional-staffed, nonformal educational organizations and change agencies. Content includes management functions, managerial leadership, management by objectives, and decision-making strategies. Particular attention is given to leadership of organizations with volunteer staff.

684 (634) Adult Education Programs: Organization and Direction
Fall. 3 credits. F 1:25–4:40. H. D. Dutrohrs.
Alternative procedural models for organizing and conducting adult educational courses are presented. Guidelines and procedures for implementing the models in secondary and postsecondary school settings are emphasized.

690 (601) Research Seminar
Fall and spring. Noncredit.
M 4–5:30. J. P. Ball.
Presentation of current research in the field of education by graduate students and staff. Opportunities to discuss methodology, findings, and other aspects of research.

711 Seminar in Educational Psychology
Fall 3 credits. Prerequisite: permission of instructor before first meeting. S-U grades optional. R 3:35–6. M. D. Glock.
The seminar has varied emphasis from year to year. See the instructor for current topic.

712 (611) Seminar in Educational Psychology and Curriculum
Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. Offered alternate years.
Hours to be arranged. R. E. Ripple.
Selected aspects of the relationship between curriculum and the psychology of education. Emphasis is on the psychology of human learning and its implications for structuring learning experiences and curriculum development. Appropriate for graduate students in educational psychology, curriculum, and instruction, and others with interests in the relationship between psychology and curriculum.

715 (615) Seminar in Counselling Psychology
Fall or spring. Variable credit. S-U grades only.
Topics in counseling psychology to be announced.

718 (618) Adult Learning and Development
Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. Offered alternate years.
Hours to be arranged. R. E. Ripple, R. L. Bruce.
Deals with adult development and learning behavior from points of view of educational psychology, social psychology, and sociology. Inferences are drawn from theory and research to the practice of adult continuing education. Appropriate for graduate students in educational psychology, extension, and continuing education, community service education, and others interested in adult learning and development.

730 Seminar in Agricultural and Occupational Education
For master's degree candidates who have had teaching experience and doctoral candidates with majors or minors in agricultural and occupational education. Emphasis is on current problems and research and includes discussion of student research proposals.

735 (635) Teacher Preparation in Agriculture
For persons with teaching experience interested in the preparation of occupational teachers. Involvement in the Cornell program of teacher preparation in agriculture is expected.

736 (636) Occupational Education Program: Administration and Supervision
Spring. 3 credits. Offered alternate years. W 2–4:15. J. R. Bail.
Practices and procedures of organizing, administering, and supervising programs of occupational education at the secondary and postsecondary level are stressed. The role of the supervisor in providing leadership in improving instruction, designing programs, and using resources at federal, state, and local levels is considered.

739 (639) Evaluating Programs in Occupational Education
Spring. 3 credits.
This course examines objectives, criteria, and strategies for evaluating programs of occupational education in secondary and postsecondary schools. Evaluation models, case studies, and evaluation as a function of program planning are considered. Participants examine the role of the supervisor in evaluation and have an opportunity to develop and apply evaluative instruments. Field trips and resource persons provide opportunities to observe actual evaluation problems and procedures.

745 (645) Seminar in Curriculum Theory and Research
Spring. 3 credits. Prerequisite: Education 445–454 or permission of instructor. W 9:05–11:30. J. G. Posner.
Theoretical issues in curriculum, and appropriate areas for curriculum research are discussed.

750 (619) Conceptual Problems in Educational Inquiry
Techniques and procedures for the critical appraisal of research documents. Practice in such appraisal is required, with primary emphasis on conceptual structures rather than research techniques. Students may use their own research proposals or research products as material for analysis.

751 (716) Seminar in Educational Research and Evaluation
Fall or spring. 3 credits. Prerequisite: permission of instructor. S-U grades only.
Hours to be arranged. J. Millman.
An intensive study of the literature in a particular area of research methodology. Topics in recent years have included procedures and issues in educational evaluation, the interface of instruction and measurement, and the design of educational experiments. Current topic to be announced.

752 (602) Prospective in Organization and Management of Sponsored Research
Fall and spring. 2 credits each term. S-U grades only. Prerequisite: permission of instructor. Hours to be arranged. J. A. Dunn.
Designed for doctoral students, advanced graduate students, and practitioners in the field who have responsibility for the promotion, management, or supervision of educational research, development, or evaluation projects. The seminar is devoted to an in-depth review of the history of educational research, patterns of federal support, the federal procurement process, proposal preparation, research, management, and future studies. Successful and unsuccessful proposals are analyzed. Attention is given to alternative strategies for proposal development.

762 (669) Research in Educational Administration
Spring. 3 credits. Prerequisite: one course in elementary statistics or permission of instructor. S-U grades only. Hours to be arranged. E. J. Haller.
An analysis and critique of current research in educational administration. Discussion of research priorities and strategies in the conceptual area of educational governance. For graduate students interested in the documentation of research on problems of educational governance. Students will carry out a small-scale empirical research project.

771 Seminar in the Sociology of Education
Fall. 3 credits. S-U grades only. Not offered 1982–83.
Hours to be arranged. J. L. Compton.
Intensive study of a selected topic in the sociology of education, with consideration of its organizational and policy implications.

772 Seminar in Philosophy of Education
Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional.
Hours to be arranged. K. A. Strike.
Topics to be announced.

782 (627) Behavioral Change in International Rural Modernization
Fall. 3 credits. For students who have interest or experience in international rural development or community development. Not offered 1982–83.
J. L. Compton.
An exploration of the social psychological aspects of socioeconomic development, focusing on the theoretical orientations of individual modernity, values-beliefs-motives, achievement motivation, entrepreneurship, innovation, expectations, and self-efficacy, and the applied orientations of indigenous learning and knowledge systems, adoption behavior under conditions of risk and uncertainty, appropriate social-educational-biochemical technology, communication-diffusion of innovations, and development education.

783 (629) Comparative Extension Education Systems
Spring. 3 credits. Prerequisite: Education 627 or permission of instructor. R 1:25–4.25. J. L. Compton.
Extension education in the developing nations is studied using, as an analytical frame of reference, a hypothetical model comprised of such components as community organization, community-based learning, indigenous facilitators and leaders, extension generalists and specialists, residential training, and research-training linkages. Case materials on alternative extension models and intercountry experiences provide an empirical base.

800 Master's-Level Thesis Research
Fall or spring. Credit arranged. S-U grades optional. Each registration must be approved by a faculty member who will assume responsibility for guiding the work. Staff.
Limited to students working on theses or other research and development projects.

900 Doctoral-Level Thesis Research
Fall or spring. Credit arranged. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work. Staff.
Entomology

An introduction to the external and internal anatomy of insects, with emphasis on the comparative and functional aspects. The laboratory is devoted largely to dissection.

200 Insects and Man Fall. 2 credits. S-U grades only. Prerequisite: Entomology 260 (may be taken concurrently). Lecs, T R 11:15. E. M. Raffensperger.

A presentation of the insects, with attention to their roles in nature and in civilization. Biological, historical, social, economic, and cultural aspects are discussed.

212 Insect Biology Fall. 3 credits. Prerequisite: Biological Sciences 101–102 or equivalent. Lecs, T R 9:05. E. H. Smith.

Introduces the science of entomology by focusing on basic principles of systematics, morphology, physiology, behavior, and ecology of insects. The laboratory in early fall includes field trips to collect and study insects in the natural environment. A small collection stressing ecological categories is required.

A compendium of the insects associated with crops and farm animals. Discussions of insect pest management requirements on farm and in garden, along with descriptions of control methods, materials, and equipment.

260 Introductory Beekeeping Fall. 2 credits. Lecs, T R 11-15. R. A. Morse.

Introduces the fundamentals of beekeeping, including the life history, instincts, and general behavior of honey bees. Attention is given to the biology of the honey bee. Some lectures are devoted to pollination of agricultural crops and the production of honey and beeswax.

282 The Biology of the Honey Bee Fall. 1 credit. Limited to 10 students. Prerequisite: permission of instructor. Labs, afternoons or weekends to be arranged; course will meet in September and October only. R. A. Morse.

A series of laboratories in which students perform some of the classical experiments on honey bee behavior. Various techniques of bee research are introduced.

284 Practical Beekeeping Fall. 1 credit. Limited to 20 students. Prerequisite: Entomology 260 (may be taken concurrently).

Lab, W or R 2–4:25. R. A. Morse. Fourteen laboratory sessions acquaint students with practical methods of colony management. Laboratories involve actual work with honey bee colonies and equipment. Additional laboratories cover management of bees for orders, families, and representative genera of insects, methods of collection, preservation, and study. Lectures on theory and practice of insect systematics and major features of insect evolution. Insect collections are required.

321 Introductory Insect Systematics Spring. 4 credits. Prerequisite: Entomology 212. Recommended: concurrent enrollment in Entomology 331 or permission of instructor. S-U grades only.

Disc, hours to be arranged. Q. D. Wheeler. Readings and discussion on topics in systematics coordinated with the lecture series in Entomology 331.

341 Arthropods of World Importance Fall. 2 credits. Prerequisite: Entomology 212 or 241 or permission of instructor. Lecs, T R 9:05. E. H. Smith.

The impact of arthropods on human affairs is considered. Special attention is given to problems of insect control in developing countries. How cultural, social, and economic factors influence the selection of control practices is emphasized.

370 Pesticides in the Environment Fall. 2 credits. Prerequisite: Biological Sciences 101–102 or equivalent. Lecs, T R 9:05. D. M. Soderlund.

A survey of the different types of pesticides, their uses, their distribution in the environment, and their effects on various components of the environment. For students whose main emphasis is not in pesticide usage.

420 Insect Pest Management Spring. 4 credits. Prerequisites: Entomology 212, 241, or Entomology 455 or Biological Sciences 360, or permission of instructor. Lecs, M W F 9:05; lab, M T 9:25–4:25. A. J. Sawyer.

A lecture and laboratory introduction to principles and techniques of insect pest management as these relate to the diverse problems in contemporary economic entomology.

441 Seminar in Insect Pest Management Spring. 1 credit. Limited to 10 students. Prerequisite: Entomology 212 or 440 or permission of instructor. S-U grades only.

Hours to be arranged. A. M. Shelton, A. J. Sawyer. Discussion of topics in pest management with an emphasis on insect pest management. Group discussion will focus on critical readings of the literature. Topics include the philosophy and foundations of pest management and an examination of its principal tools.

452 Medical Entomology Fall. 3 credits. Prerequisites: either Entomology 212 and Veterinary Medicine 330 or permission of instructor. Offered alternate years. Not offered 1982–83; next offered 1983–84.

A survey of arthropods of public health and veterinary importance, with emphasis on transmission dynamics of vectors, economics of vector populations, and current control concepts. Morphology and taxonomy of selected groups are examined in the laboratory, with additional exercises in vector-pathogen relationships and epidemiological techniques.

Hours to be arranged. J. P. Kramer.

Presentations, discussions, and analyses of current topics by the participants. Focus centers on microbial diseases of insects.

455 Insect Ecology, Lectures (also Biological Sciences 455) Fall. 2 credits. Prerequisites: Biological Sciences 360 and Entomology 212, or their equivalents. Recommended: concurrent enrollment in Biological Sciences 457. Offered alternate years. Not offered 1982–83; next offered 1983–84.

Ecological and evolutionary principles are integrated by thorough examination of outstanding investigations. Topics discussed include the factors responsible for the great diversity of insects, adaptive syndromes associated with climate, natural history of arthropod guilds, impact of insects on terrestrial vegetation, population regulation, and the contrast between natural and managed ecosystems.

457 Insect Ecology, Laboratory (also Biological Sciences 457) Fall. 2 credits. Limited to 16 students. Prerequisite: concurrent enrollment in Biological Sciences 455. Offered alternate years. Not offered 1982–83; next offered 1983–84.

Lab, W 1:25–4:25; F or S field trips to be arranged during the field season. R. B. Root.

Field exercises focus on insect natural history and methods of sampling populations. Laboratories devoted to rearing insects, estimating life-table parameters, and analyzing communities.

471 Ecology and Systematics of Freshwater Invertebrates Spring. 4 credits. Prerequisite: Entomology 212. Recommended: Biological Sciences 360–462–464.

Lecs, T R 9:05; labs, M W or T R 1:25–4:25. One evening prelim. B. L. Peckarsky.

The lecture explores the life histories, behavior, feeding ecology, and limitations to distributions of macroscopic freshwater invertebrates with an emphasis on insects. The laboratory involves field
collections and laboratory identification of invertebrates, and stresses the use of keys. Students may elect to conduct ecological field projects or to study the systematics of freshwater invertebrates in more depth.

483 Insect Physiology  Spring. 4 credits. Prerequisite: Entomology 212. Lecs. M W F 11:15; lab, W or F 1:25. H. H. Hagedorn. An introduction to the often unique ways that insects have met their basic needs. Each organ system is examined with emphasis on basic principles and specific examples. The student will also be introduced to some common methods used in physiological research and to the critical reading of scientific literature.

497 Special Topics for Undergraduates  Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Undergraduates must attach to their course enrollment material written permission from the staff member who will supervise the work.

499 Undergraduate Research  Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Undergraduates must attach to their course enrollment material written permission from the staff member who will supervise the work.

[621 Acrology  Fall. 4 credits. Prerequisites: Entomology 212 and permission of instructor. Offered alternate years. Not offered 1982–83; next offered 1983–84.

631 Systematics of the Coleoptera  Fall. 4 credits. Prerequisite: Entomology 331. Offered alternate years. Not offered 1982–83; next offered 1983–84.

634 Special Topics in Systematic Entomology  Fall or spring. Taught on demand. 2–4 credits. Prerequisite: permission of instructor. Hours to be arranged. Staff. Lectures on the classification, evolution, and biogeography of beetles and wasps. Collections sometimes required.

636 Seminar in Systematic Entomology  Fall or spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Hours to be arranged. Staff. Discussion of current topics in systematic entomology. Topics to be announced, including current theoretical issues in insect classification, evolution, and biogeography.

640 Pest Management Systems  Fall. 3 credits. Prerequisites: Entomology 440 or Plant Pathology 504, and a course in calculus. Recommended: an introductory course in computer science. S-U grades optional. Offered alternate years.

648 Seminar in Coevolution between Insects and Plants  Spring. 2 credits. Prerequisites: permission of instructor and either Entomology 212 and Biological Sciences 321 or equivalents. S-U grades optional. Offered alternate years. Not offered 1982–83; next offered 1983–84.

672 Seminar in Aquatic Ecology  Spring. 1 credit. Prerequisites: permission of instructor and either Entomology 471 or Biological Sciences 462, 464. Offered alternate years.

677 Biological Control  Fall. 3 credits. Prerequisites: Entomology 212, Biological Sciences 360, and permission of instructor. Offered alternate years.

685 Seminar in Insect Physiology  Spring. 1 credit. Prerequisite: permission of instructor. Hours to be arranged. H. H. Hagedorn.

690 Insect Toxicology and Insecticidal Chemistry  Spring. 4 credits. Prerequisites: general chemistry and organic chemistry. Undergraduate students by permission of instructor. Offered alternate years.

707 Special Topics for Graduate Students  Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Not for thesis research.

708 Graduate Research  Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Staff.

709 Teaching Entomology  Credit to be arranged. Staff.

710 Teaching Entomology or for extension training.

800 Master's-Level Thesis Research  Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional.

900 Doctoral-Level Thesis Research  Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional.

Jugatae Seminar  Fall and spring. A seminar conducted by Jugatae, the entomology club of Cornell University, to discuss topics of interest to its members and guests.

Floriculture and Ornamental Horticulture

Courses by Subject

Freehand drawing and illustration: see page 55.
Horticultural physiology: 401, 402, 601.
Introductory courses: 100, 105.
Landscape architecture (professionally accredited program): see pages 56–57.
Landscape horticulture: Landscape Architecture 205, 220, 224, 240, 310, 311, 521, 522.
Nursery management: 439.
Plant materials: 213, 312, 313, 322, 342, 450.
Retail floriculture: 105, 325.
Turfgrass management: 314, 318.

100 Introductory Floriculture and Ornamental Horticulture  Fall. 3 credits. Principally for freshmen. S-U grades optional for students not specializing in floriculture and ornamental horticulture.

An introduction to basic plant physiology and plant processes, control of the plant environment, and the floriculture and ornamental horticulture industry and opportunities. A required off-campus field trip is made to nearby commercial enterprises.

105 Floral Design  Fall. 2 credits. Each lab limited to 22 students. Prerequisite: permission of instructor; preference given to plant science majors, then to students in education, design, and journalism studies. Students whose careers will involve using this horticultural expertise should apply. There is a $35 charge to purchase instructional plant materials that the student will keep. Enrolled students who do not attend the first class and fail to notify the secretary in Plant Science 20 of their absence will automatically be dropped from the course.

A study of the established floral design techniques of this country, presenting the principles and the mechanics of the art to prepare the student to design...
213 Woody Plant Materials. Spring. 4 credits.
Lecs, T R 9:05, lab, T 2-4:25 and W or F 2-4:25. R. G. Mower.
A study of the trees, shrubs, and vines used in landscape plantings. Emphasis is on winter identification and their values for use as landscape material.

312 Garden and Interior Plants I. Fall. 3 credits.
Lecs, T R 10:10, lab, T 2-4:45. R. G. Mower.
A study of ornamental plants used in garden and interior situations. The first seven weeks cover primarily herbaceous annuals and perennials, and the lab devoted to various practical gardening activities. The remainder of the semester covers the major kinds of foliage and flowering plants used in the home and other interior landscape situations. Emphasis is on identification, use, and general cultural requirements.

313 Woody Plant Materials for Landscape Use. Fall. 3 credits. Limited to 30 students. Primarily for landscape architecture majors.
A study of the selection, preparation, and factors affecting the use of all supplies. Keeping quality of plant materials, emphasizing the economical use of all supplies.

314 Turfgrass Management. Fall. 3 credits.
Prerequisites: Agronomy 200. Biological Sciences 242 recommended or permission of instructor.
The scientific principles, practices, and materials for the construction and management of lawns, sports, and utility turfgrass areas. Environmental effects on growth are also studied.

318 Advanced Turfgrass Management. Fall. 2 credits.
Prerequisites: Floriculture 314 or equivalent, and permission of instructor. Hours to be arranged. A. M. Petrovic.
A continuation of Turfgrass Management 314, with emphasis on applying scientific principles to management of golf courses, athletic fields, parks, industrial grounds, and sod production.

322 Garden and Interior Plants II. Spring. 3 credits.
Prerequisites: Floriculture 314 or permission of instructor.
Lecs, M W 11:15; lab, M 2-4:25 (two sections to be arranged). R. G. Mower.
A continuation of Floriculture 312. The first seven weeks are devoted to a further study of interior plants, with emphasis on specialized groups of interior plants such as orchids, cacti and succulents, gesneriads, ferns, palms, and bromeliads. The second seven weeks are devoted to outdoor herbaceous plants such as tuberous begonias, bulbs, irises, and other spring-blooming bulbs and perennial plants. Outside laboratories emphasize practical gardening activities appropriate to the spring season.

325 Flower-Store Management. Fall. 3 credits.
Prerequisites: Floriculture 105 and permission of instructor. Lab materials charge, $35. Cost for field trips, $15 plus room and meals.
Lectures devoted to flower-shop management, business methods, merchandising, and marketing of floriculture commodities. Laboratories include the application of subject matter and the principles of commercial floral arrangement and design. Required field trips made to flower shows and to wholesale and retail florist establishments.

342 Taxonomy of Cultivated Plants (also Biological Sciences 342). Spring. 4 credits.
Lecs, M W 10:10; labs, M W 2-4:25. J. W. Ingram, Jr.
A study of ferns and seed plants, their relationships, and their classification into families and genera. Emphasis is on gaining proficiency in identifying and distinguishing families and in preparing and using analytical keys; attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

401 Principles of Plant Propagation. Fall. 3 credits.
Prerequisite: Biological Sciences 242 or 341 or permission of instructor.
Lecs, T R B 8, lab, R 1:25-4:25 (except field trips lasting until 6:30 p.m.). Evening prelims. K. W. Mudge.
Physiological, environmental, and anatomical factors involved in the propagation of plants by seed germination, rooting of cuttings, layering, grafting, budding, bulbs, tissue culture, et cetera. Examples include horticultural, agronomic, and forestry crops.

402 Physiology of Horticultural Plants. Spring. 4 credits.
Prerequisite: Biological Sciences 242 or 342 or permission of instructor.
Lecs, M W F 8, lab to be arranged. F. B. Negm.
A study of the physiology of growth and development of horticultural plants in response to their environment.

421 Principles of Nursery Crop Production. Fall. 4 credits.
Prerequisite: Floriculture 401.
Lecs, M W F 9:05, lab, M 12:20-2:15, 2:30-4:25; field trips are included in lab sessions. G. L. Good.
Problems of commercial propagation and growth of nursery plants to marketable stage, including the postharvest handling of nursery stock. Some consideration is given to the planting and culture of landscape plants.

424 Principles of Florist Crop Production. Spring. 4 credits. Limited to 40 students. Preference given to juniors. Prerequisite: Floriculture 401 and Biological Sciences 242, 342 (may be taken concurrently), or equivalent; or permission of instructor. Cost for field trips, $20 plus meals.
Lecs, M W F 9:05, lab, R 2-4:25. J. G. Seeley.
Commercial production of florist crops. Emphasis on principles of culture of ornamental plants as influenced by greenhouse environment. Field trips are made to commercial greenhouses.

425 Greenhouse Production Management. Spring. 4 credits. Primarily for seniors. Prerequisite: an elementary course in horticulture or equivalent. Cost for field trips, $100.
Lecs, T R 10:10-12:05. Two field trips are taken. R. W. Langhans.
Intended to provide the latest information on efficient greenhouse operation and administration of a commercial greenhouse, outside the sphere of production methods for specific crops. Consideration is given to the industry, centers of production, competition, location, types of structures, heating, ventilation, cooling, fertilizing, and watering systems, and business analysis and management.

450 Special Topics on Ornamental Plants. Fall or spring. Credit to be arranged. Primarily for upperclass floriculture and ornamental horticulture majors. Prerequisites: Floriculture 213, 312, 313, or the equivalent, and permission of instructor.
Hours to be arranged. R. G. Mower.
Topical subjects in plant materials. Independent and group study of important groups of woody and herbaceous plant materials. Not considered in other courses. The topic is given in the supplementary announcement.

497 Special Problems in Floriculture and Ornamental Horticulture. 1 or more credits. S-U grades only.
Prerequisite: students must satisfy the staff member under whom the work is to be taken that their background warrants their choice of problems. Undergraduates must attach to their course enrollment material written permission from the staff member who will supervise the work and assign the grade.
C. F. Gortz and staff.
Study of problems under investigation by the department or of special interest to the student.

600 Seminar. Fall or spring. For department staff and graduate students. S-U grades only. R 12:10.

601 Current Topics in Floricultural and Ornamental Horticultural Physiology. Spring. Variable credit. Prerequisite: permission of instructor.
Varied credit. Discussion of modern concepts, research, and commercial problems as reflected in current floricultural literature.

211 Freehand Drawing and Illustration. Fall or spring. 3 credits.
Each section limited to 25 students. S-U grades optional. C. F. Gortz.
A beginning course with emphasis on the drawing of natural forms: plants, animals, and landscapes. Of particular interest to students in floriculture and ornamental horticulture, landscape architecture, biological sciences, nature education, etc. Outside field notebook assignments.

A beginning course with emphasis on the drawing of natural forms: plants, animals, and landscapes. Of particular interest to students in floriculture and ornamental horticulture, landscape architecture, biological sciences, nature education, etc. Outside field notebook assignments.

210 Architectural Sketching in Watercolor. Summer. 3 credits.
M-F 3:30-12:15. R. J. Lambert.
Practice in outdoor architectural sketching primarily in watercolor, but including pen and ink, pencil, and colored pencil. Studio will develop working sketches into complete renderings. Principles of perspective are taught and applied. For any student who wishes to develop skill in handling watercolor.
Outside-of-class sketchbook work required.

211 Freehand Drawing and Illustration. Fall. 2 credits. Prerequisite: Floriculture 111 or equivalent. S-U grades optional.
6 studio hours scheduled in two- or three-hour units between 8:00 and 12:00 M T W F R. J. R. Lambert.
Progression to the organization of complete illustrations. Subject matter largely from sketchbooks, still life, and imagination. Composition, perspective, and ways of rendering in different media are considered.

214 Watercolor. Spring. 2 credits. Prerequisite: Floriculture 111 or equivalent. S-U grades optional.
6 studio hours scheduled in two- or three-hour units between 8:00 and 12:00 M T W F R. J. R. Lambert.
A survey of watercolor techniques. Subject matter largely still life, sketchbook, and on-the-spot outdoor painting.

316 Advanced Drawing. Fall or spring. 2 credits.
Prerequisite: Floriculture 211 or permission of instructor. S-U grades optional.
6 hours to be arranged. A. Elliot or R. J. Lambert.
For students who want to attain proficiency in a particular type of illustration or technique.

417 Scientific Illustration Fall. 2 credits. Prerequisite: Floriculture 211 or 316 or equivalent. S-U grades optional for graduate students only. 6 studio hours scheduled between 9:05 and 12:05 M W F by A. Elliot. A survey of methods of illustration. Training in techniques of accurate representation in media suitable for reproduction processes, including pen and ink, scratchboard, wash, and mixed media.

Landscape Architecture

201 Design I: Basic Landscape Architectural Design Fall. 5 credits. Limited to landscape architecture majors. Estimated cost of drafting equipment (to be used throughout the 6-studio sequence) and supplies, $200. Basic expenses for field trip, about $175. Lec, M 12:20; studio, M W F 1:25–4:25. Required 5-day field trip. An introduction to landscape architectural design including design process, site inventory and analysis, basic design principles, and technical considerations. This is the first course in a sequence of six studio courses required for specialization in landscape architecture.

202 Design II: Basic Landscape Architectural Design Spring. 5 credits. Prerequisite: Landscape Architecture 201. Cost of supplies, about $100. Lec, M 9:05; studio M W F 10:10–12:35. Project planning with emphasis on site-design principles and the development of design and graphic skills. Projects deal with the organization of outdoor space and the siting of structures as well as the interrelationships of vehicular and pedestrian circulation, parking, open space, earth form, and vegetation.

205 Graphic Communication Fall. 3 credits. Prerequisite: concurrent enrollment in Landscape Architecture 201 or 501 or permission of instructor. T R 9:05–11. Principles of graphic presentation, including the use of media and rendering techniques applicable to presentation drawings for landscape architecture projects. Plan graphics, orthographic projections, isometric drawing, one- and two-point perspective as well as sections, elevations, and lettering will be introduced.

220 Principles of Landscape Architecture Fall. 2 credits. Lecs, M W 9:05. Basic concepts involved in observation, analysis, and design methods as they relate to the outdoor environment. Readings and case studies deal with the application of these principles to all scales of land planning and design and include environmental systems, design theory, and American landscape history as applied to the contemporary practice of landscape architecture.

224 Plants and Design Spring. 3 credits. Limited to 30 students. Basic expenses for field trip, about $55. Lecs, M W F 1:25. Required 2-day field trip. M. L. Adamson. Planting design principles; functional uses of plants in the landscape; ecological, horticultural, and maintenance determinants affecting the selection and use of plant materials, planning considerations in highly dependent landscapes including urban landscape, interior plantscape, and roofscape; plans, specifications, and procedures involved in planting implementation.

240 Landscape Design Spring. 3 credits. Limited to 15 students; priority given to landscape horticulture majors. Prerequisite: Landscape Architecture 205 and permission of instructor.

Lec, M 12:20; studio, M W 1:25–4:25. Fundamentals of landscape design applied to residential and other small-scale site-planning projects. Work in the studio introduces design process, site-design principles, construction materials, planting design and graphics.

301 Design III: Intermediate Landscape Architectural Design Fall. 5 credits. Prerequisite: Landscape Architecture 202. Cost of supplies about $100. Basic expenses for field trip, about $175. Lec, F 9:05; studio M W F 10:10–12:35. Required 5-day field trip. Application of town-planning and urban-design techniques to specific field problems. Timely urban issues are investigated, including physical design considerations as well as the complex socioeconomic implications of urban design. Site-development problems at several scales and land-use intensities are examined.

302 Design IV: Intermediate Landscape Architectural Design Spring. 5 credits. Prerequisite: Landscape Architecture 301. Cost of supplies, about $100. Lec, F 12:20; studio M W F 1:25–4:25. Application of principles of composition, relationships to historic precedent, and use of materials in professional project design synthesis.

310 Site Construction I Spring. 4 credits. Prerequisite: permission of instructor. Lecs, M W 9:05; studio, T R 9:05–11. F. J. Trowbridge. Lectures, exercises, and projects dealing with landscape design and preparation of grading plans, calculation of earthwork, and layout of circulation systems, parking, and site utility systems. Required technical material is presented in modules with interim testing for competency in the subject areas.

311 Site Construction II Fall. 4 credits. Prerequisite: permission of instructor. Lecs, T R 1:25; studio, T R 2:30–4:25. T. H. Johnson. Construction materials and methods used by landscape architects in project implementation. Course includes student involvement in demonstration construction, lectures, field trips, studio work on details and models, and construction documentation for a selected design project.

400 Thesis-Project Seminar Fall. 1 credit. Prerequisite: concurrent registration in Landscape Architecture 401. Lec, W 12:20. Seminar and preparation of program and base material for senior thesis projects in landscape architecture. Each student is required to select a project, develop a program, collect necessary data and base material, and make a presentation to the class for discussion. Landscape architecture majors must develop an approved senior thesis-project manual as a prerequisite for Landscape Architecture 402.

401 Design V: Advanced Landscape Architectural Design Fall. 5 credits. Prerequisite: Landscape Architecture 302. Cost of supplies, about $100. Basic expenses for field trip, about $175. Lec, M 12:20; studio, M W F 1:25–4:25. Required 5-day field trip. Application and testing of site planning, planting design, and site construction knowledge and skills. Projects involve design carried to advanced stages of layout, grading, planting, and detailing. Testing includes sketching and drawings as well as the design and construction sections of the CLARB Uniform National Examination.

402 Design VI: Senior Thesis Project Spring. 5 credits. Prerequisites: Landscape Architecture 400 and Landscape Architecture 401. Cost of supplies and reproductions, about $150. Lec, F 9:05; studio, M W F 10:10–12:35. Inventory, analysis, and design methods applied to approved senior thesis-project program developed in Landscape Architecture 400. An evaluation of minimum competence in landscape architecture.

421 Professional Practice Seminar Fall. 2 credits. Prerequisite: Landscape Architecture 302 or 602. E. J. Carter. Lectures and discussions dealing with professional landscape architectural practice in public, private, and academic career tracks. The course will also include field trips to representative professional offices and lectures by practitioners.

432 Introduction to Parks and Recreation Spring. 2 credits. E. J. Carter. Park development process and the relationship of park and recreation facilities to urban, suburban, and rural recreation needs; physical and fiscal resources; environmental planning issues; overall municipal development efforts; and the planning and design professions. Lectures, discussions, readings, and short papers.

435 Urban Environmental Planning Fall. 2 credits. W. R. Trowbridge. Principles, theories, and practice of urban environmental planning dealt with in terms of (1) the planning context, (2) environment and ecology, (3) urban form, (4) urban conservation. Readings, discussions, student papers, and case study presentations.

436 Urban Environment Workshop Spring. 2 credits. Prerequisite: Landscape Architecture 435, one or more landscape architecture design studios, and permission of instructor. Application of the theories, principles, and practice of urban environmental planning to problem solving in actual site situations. Projects emphasize planning process, analysis, programming, and design strategy.

497 Independent Study in Landscape Architecture Fall or spring. 1–5 credits; may be repeated for credit. S-U grades optional. Staff. Work on special topics by individuals or small groups.

501 Graduate Landscape Architectural Design I Fall. 5 credits. Limited to graduate students in landscape architecture. Estimated cost of drafting equipment (to be used throughout the studio sequence) and supplies, $200. Basic expenses for field trip, about $175. Lec, M 12:20; studio, M W F 1:25–4:25. Basic landscape architectural design introducing design process, site inventory and analysis, design principles, and graphics. This is the first course in a sequence of five design studio courses required for students in the graduate first-professional-degree curriculum in landscape architecture prior to development of a master's thesis.

502 Graduate Landscape Architectural Design II Spring. 5 credits. Prerequisite: Landscape Architecture 501. Cost of supplies, about $100. Lec, F 9:05; studio, M W F 10:10–12:35. Principles and processes involved in site design relating to the organization of outdoor space and the interrelationships involved in the siting and design of buildings, vehicular and pedestrian circulation, parking, open space, vegetation, and topography.

520 Contemporary Issues in Landscape Architecture Fall. 2 credits.

521 History of Landscape Architecture Fall. 3 credits. *Offered through the College of Architecture, Art, and Planning.
Food Science

100 Introductory Food Science Fall. 3 credits.
M W F 10:10. N. N. Potter.
A comprehensive introduction to food science and technology—its scope, principles, and practices. Topics are constituent properties, methods of preservation, the major food groups including their handling, and processing, and current problems such as chemical additives and world fooding needs. Interrelationships between chemical and physical properties, processing, nutrition, and food quality are stressed.

101 Topics in Food Science Fall. 1 credit. Limited to food science majors taking Food Science 100. Prerequisite: Food Science 100. A required companion course to Food Science 100. Lec and disc, F 11:15. N. N. Potter and staff. Members of the staff lecture and lead discussion on selected topics.

210 Food Analysis Spring. 3 credits. Prerequisite: Chemistry 104 or 208.
Lecs, W F 12:20; lab, F 1:25–4:25 or M T 7:30–10:30 p.m. J. W. Sherbon. Designed to acquaint the student with chemical tests used by food analysts. Emphasis is on understanding and use of good analytical techniques, including gravimetric, volumetric, and spectrophotometric methods. Procedures for screening, routine quality control, and official tests for fats, proteins, carbohydrates, and selected minor nutrients are introduced.

220 Food Science for Industry Fall. 2 credits. Lecs and lab, F 12:20–4:25. Field trips. R. C. Baker. Provides understanding of food industry operations. Half the laboratories are production of food products (such as sausages and pastries) by students and half are visits to commercial plants producing these products. One or two longer field trips may be offered.

This interdisciplinary course describes various courses of postharvest food losses in developing countries and methods available to reduce the losses. Designed for all students in agriculture. Emphasis on cereal grains. Biology and control of rodents, birds, insects, and molds in stored foods, chemical causes of quality loss, simple drying and storage practices, effects of climate. Economic and social factors affecting food preservation and storage technology are discussed.

301 Physical Chemistry of Foods Fall. 3 credits. Prerequisite: Mathematics 111 or equivalent. Lecs, M W 11:15; disc, F 12:30–2:15 or 2:30–4:15. S. S. H. Rivzi.
An introduction to the principles of molecular structure, energetics, and kinetics of foods, with applications of these principles to food systems and similar biological materials. Topics include thermodynamics, properties of solutions, phase equilibria, reaction mechanisms, and transport phenomena.

302: Introduction to Food Engineering Fall. 4 credits. Prerequisites: Food Science 100 and mathematics.

304 Food Sanitation as Related to Public Health Spring. 3 credits. Prerequisite: Food Science 100.
Lecs, T R 10:10; lab, R 1:25. R. R. Zall. Deals with the sanitary principles and control measures essential in producing wholesome and safe foods. Rules and regulations of the U. S. Public Health Service, the Food and Drug Administration, the U. S. Department of Agriculture, and other organizations important to the food industry are covered.

311 Milk and Frozen Desserts Fall. 2 credits. Prerequisite: Food Science 100 or equivalent or permission of instructor. Offered alternate years. Not offered 1982–83.
Lecs, W 12:20, lab, W 1:25. W. K. Jordan, R. R. Zall. Deals with the principles and practices of processing fluid milk products and frozen desserts. The chemical, microbiological, and technological aspects of processing these dairy products are considered. Field trips to processing plants supplement the lectures and laboratory work.

351 Milk Quality Spring. 1 credit. Prerequisite: Analytical Chemistry (may be taken concurrently) or permission of instructor. Lecs, F 12:20. D. K. Bandler, R. R. Zall. Aspects of farm sanitation and milk handling as they apply to milk quality. Quality control tests, farm bacteriology, cleaning, and sanitizing. Special problems of marketing fresh and manufactured dairy products.

394 Food Microbiology Lectures Spring. 2 credits. Prerequisites: Microbiology 290 and 291.
M W 12:20. R. A. Ledford. The major families of microorganisms of importance in foods are studied systematically, with emphasis on the roles of these organisms in food preservation, food fermentations, and public health.

395 Food Microbiology Laboratory Spring. 2 credits. Graduate students must have permission of the instructor. M W 2–4. R. A. Ledford. Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and special methods for microbiological testing and control of food products, and practice in isolating and characterizing organisms of importance in foods.

401 Concepts of Product Development Spring. 2 credits. Prerequisites: Food Science 100 or equivalent. S-U grades optional. Offered alternate years. Not offered 1982–83.
M W 10:10.

*Offered through the College of Architecture, Art, and Planning.
A discussion of the sequence of events in developing and marketing new food products. Topics include packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.

Emphasis is on gaining practical experience in the development of new foods.

403 International Food Science and Development Fall. 3 credits. Offered alternate years.

F V Kosikowski.

A critical evaluation of man's needs for food in the world and the international food technologies, organizations, and policies to meet such needs. Novel extrusion, ultrafiltration, and fermentation food processes and basic nutrient foods for developing countries are described. The making of representative high-energy and protein foods, including soybean milk, tofu, sulu, and tempeh is demonstrated.

[404 Food Processing I—Drying, Freezing, Heat Preservation] Spring. 3 credits. Prerequisite: Food Science 100 or equivalent. Offered alternate years. Not offered 1982–83.

Deals with the chemistry and practices of drying, freezing, canning, and other heat treatments applied to foods. Current processing methods and their relations to the chemistry, microbiology, and technology of the ingredients and final products are discussed.

405 Food Processing II—Concentrating, Separating, Mixing] Spring. 3 credits. Prerequisite: Food Science 302 and Microbiology 290 and 291. Offered alternate years.

Deals with the principles and practices of evaporation, reverse osmosis, homogenization, size reduction, waste management, and other unit operations important to the food industry.

406 Food Processing Fermentations Lecture Fall. 3 credits. Prerequisite: background in microbiology. Offered alternate years. Not offered 1982–83.

F V Kosikowski.

Principles and practices of viniculture and enology, cheese and cultured-milk technology, and related fermentations leading to important foods from fruits, grains, vegetables, and milk, animal, and microbial sources. Taste evaluations and illustrated descriptions of wines, beers, cheeses, cultured milks, and exotic fermented foods are included.

[408 Food Processing Fermentations Laboratory] Fall. 2 credits. Enrollment limited. Prerequisite: concurrent registration in Food Science 406. Offered alternate years. Not offered 1982–83.
Lab, T 1:25–4:25. required short field trips.
F V Kosikowski.

Laboratory exercises and demonstrations in the making of wines, beers, cheeses, cultured milks, and vegetable foods. Field trips provide additional experience.

409 Food Chemistry] Fall. 3 credits. Prerequisite: Biological Sciences 330 or 331.

Lecs, T R 8-9:25.

Deals with the relationship between the chemical composition and properties of foods. Attention is given to the interactions among the components of food.

Deals with the sensory techniques used in evaluating the flavor, color, and texture of foods and the effects of these properties on consumer acceptance. Objective methods for measuring these qualities, and appropriate statistical methods for analyzing the subjective and objective results and establishing a quality-control program.

[411 Food Mycology] Fall. 3 credits. Prerequisite: Microbiology 290 or 291 or equivalent. Recommended. Microbiology 394. Offered alternate years. Not offered 1982–83.

To acquire students with important fungi, from the standpoint of their beneficial as well as their harmful effects in food production, preservation, and spoilage. Laboratories deal with morphology, culture and isolation, identification of fungi, and isolation and quantification of fungal toxins.

Lec, F 10:10.

Intended for food science majors anticipating product development, production, or quality-control assignments in the food industry. Functional properties of classes of ingredients and their potential interactions with other food constituents are discussed. Guest lecturers from ingredient suppliers participate.

415 Principles of Food Packaging Fall. 3 credits.
Lecs, M W F 9:05. J. H. Hotchkiss.

Intended primarily for students in food science and related fields. The basic properties of some packaging materials and systems are discussed and applied to specific packaging systems for meats, dairy products, fruits and vegetables, fats and oils, etc. cetera.

419 Food Chemistry Laboratory Fall. 2 credits. Prerequisites: Biological Sciences 330 or 331 and concurrent registration in Food Science 409.

Intended to complement Food 409 in developing an understanding of the chemistry of food. Laboratory exercises deal with the chemical properties of food components and systems discussed and applied to specific packaging systems for meats, dairy products, fruits and vegetables, fats and oils, etc. cetera.

497 Special Topics in Food Science Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. S-U grades optional.
Staff.

For the food science student. May include individual tutorial study, a special lecture topic selected by a professor or a group of students, or selected lectures of a course already offered. As topics may be changed, the course may be repeated for credit.

499 Undergraduate Research in Food Science Fall or spring. 4 credits maximum. S-U grades optional.
Students must attach to their course enrollment material written permission from the staff member who will supervise the work and assign the grade. Except for students enrolled in the honors program, credit will be limited to 4 credits total. Hours to be arranged. Staff.
Independent study.

600 Seminar Fall or spring. 1 credit. Required of all food science graduate students. S-U grades only.

601 Food Protein Chemistry Fall. 3 credits. Limited to graduate students and to seniors with permission of the instructor. Prerequisite: Food Science 300 or its equivalent. Students who have already had Biological Sciences 631 may not take this course for credit. Offered alternate years. Not offered 1982–83.

The chemistry and physical chemistry of proteins are discussed. Important proteins of food systems are examined in terms of methodology currently used in protein chemistry for characterization and purification. Interactions of proteins with other food components are also covered.

[603 Food Carbohydrates] Spring. 2 credits. Limited to qualified seniors and graduate students. Prerequisite: Biological Sciences 330 or equivalent. Offered alternate years. Not offered 1982–83.

A consideration of the chemistry of carbohydrates in foods including sugars, starches, pectins, gums, and cellulose. Emphasis is on their intrinsic chemistry, their origins in raw materials, and the subsequent changes occurring during processing and storage.

604 Chemistry of Dairy Products Fall. 2 credits. Prerequisites: organic chemistry, biochemistry, and knowledge of dairy-product manufacturing procedures. Offered alternate years.

A detailed study of milk constituents and their properties. Properties of various milk constituents are related to observed physical and chemical changes that occur in dairy products during and after processing. This course will emphasize current research in dairy chemistry.

606 Instrumental Methods Fall. 5 credits. Prerequisite: permission of instructor.
Lecs, M W F B. lab, W or R 1:25–4:25.
J. W. Sherbon.
Deals with instrumental methods widely used in research and industry. The major emphasis is on chromatography, spectroscopy, electrophoresis, thermal analysis, and the use of computers. The stress is on the theoretical and practical aspects of the material presented.

An introduction to theories of color perception and color spaces, followed by a survey of chemical and physical properties of the major food pigments and their stability during processing and storage. Color and pigments of selected commodities are examined.

Fundamental concepts of rheology applied to foods, with emphasis on objective methods for measuring textural properties. Principles and practice involved in measuring texture, viscosity, texture profiling, and consistency; instrumentation and correlations between objective and sensory methods of texture measurement. Examples of rheological problems in each major food group.

[610 Introductory Chemical Toxicology] Fall. 2 credits. Prerequisites: biochemistry and animal physiology. Offered alternate years. Not offered 1982–83.

An introduction to the concepts and essentials of toxicology: discussions will include sources, modes of toxicity, harmful effects, and remedial measures as they pertain to humans and the whole environment. Toxicants will include pesticides, heavy metals, air pollutants, industrial poisons, natural toxins, food additives, drugs, social poisons, and ionizing radiation.

[614 Mathematical Evaluation of Processed Packaged Foods Fall. 3 credits. Offered alternate years. Not offered 1982–83.

Lecs and disc, R 2–4:25.
Mathematical methods used to evaluate the thermal processing of packaged foods are presented in depth. These techniques are used in predicting shelf life and nutrient loss.

615 Secondary Plant Metabolites in Foods Fall. 1 credit. Prerequisite: Biological Sciences 330 or 331. Offered alternate years. Lec, T 12:20, G. Hrazdina. Deals with the biochemistry of secondary plant metabolites (e.g., sulphur-containing compounds, alkaloids, flavonoids, terpenes) and their importance to food products. Emphasis is on the chemical properties of these compounds, their reactions, their occurrence in edible plants, and their influence on food products.

International Agriculture
300 Perspectives in International Agriculture and Rural Development Fall. 2 credits. S-U grades optional. F 1:25–3:20. Staff. A forum to discuss both contemporary and future world food issues and the need for an integrated, multidisciplinary team approach in helping farmers and rural development planners adjust to the ever-changing food needs of the world.

599 International Agriculture and Rural Development Project Paper Fall and spring. 1–6 credits. Limited to M.P.S. candidates in international agriculture and rural development. S-U grades only. Staff.

600 Seminar: International Agriculture Fall and spring. Noncredit. S-U grades only. Limited to M.P.S. candidates in international agriculture and rural development. S-U grades only. Staff.

703 Seminar for Special Projects in Agricultural and Rural Development Spring. 1 credit. Required for graduate students enrolled in the M.P.S. (Agr.) degree program and majoring in international agricultural and rural development; others with permission of the program director. S-U grades only. Hours to be arranged. Staff. The seminar focuses on understanding the nature and interrelatedness of agricultural development and the social sciences, plant and animal sciences, foods and nutrition, and natural resources.

602 Special Studies of Problems in Agriculture in the Tropics Spring. 3 credits. Prerequisites: an international agriculture course and permission of instructors. Cost of field-study trip, estimated at $600 for lodging, meals, personal expenses, and transportation. R 2:30–4:25. Staff. Orient to provide students an opportunity to observe agricultural development in a tropical environment and promote interdisciplinary exchange among staff and students. The two-week field-study trip during January to Latin American countries is followed by discussions and assignments dealing with problems in agriculture and livestock production in the context of social and economic conditions.

603 Administration of Agricultural and Rural Development (also Government 682 and B&PA NCE 514) Spring. 3 credits. S-U grades optional. T 2:30–5:30. M. L. Barnett, J. L. Compton, M. J. Esman, N. T. Uphoff, L. W. Zuidema. An interdisciplinary seminar course designed to provide graduate students a multidisciplinary perspective on the administration of agricultural and rural development activities in developing countries. The course is oriented to students trained in agricultural and social sciences who are likely to occupy administrative roles during their professional careers.

604 Seminar on African Agriculture and Rural Development Fall. 2 credits. S-U grades optional. M 1:25–3:20. Staff. Strategies for increasing food production and raising rural incomes in Africa. Topics include cropping systems in Africa and the technologic analysis and interpreting data will be explored. The seminar provides the opportunity to present their special projects. It also serves as a forum for discussion of current issues in low-income agricultural and rural development, with particular attention to interdisciplinary complexities.

### Microbiology

**100 Microbes and Human Affairs**
- **Spring.** 3 credits. Not to be taken for credit after Micro 290.
  - Development of microbiology as a science. Basic characteristics of microorganisms. Importance of microorganisms in medicine, environment, agriculture, and industry. Recent advances in microbiological technology, including genetic engineering.

**290 General Microbiology Lectures**
- **Fall or spring.** 3 credits. Prerequisites: Biological Sciences 101–102 and Chemistry 104 or 208. Recommended: concurrent registration in Microbiology 291.
  - M W F 9:05 (spring only) or 11:15. Evening exam: spring, March 1, April 14, and May 5. Fall, W. C. Ghiorse; spring, P. J. VanDemark.
  - A study of the basic principles and relationships in the field of microbiology, with fundamentals necessary for further work in the subject.

**291 General Microbiology Laboratory**
- **Fall or spring.** 2 credits. Prerequisite: Microbiology 290 (may be taken concurrently).
  - M W 2–4:25 or T R 8–10:30, 11:15–1:45, or 2–4:25. Fall, W. C. Ghiorse; spring, P. J. VanDemark; summer, staff.
  - A study of the basic principles and techniques of laboratory practice in microbiology, and fundamentals necessary for further work in the subject.

**292 General Microbiology Discussion**
- **Spring.** 1 credit. Prerequisite: Microbiology 290 (may be taken concurrently). Hours to be arranged. P. J. VanDemark.
  - A series of discussion groups in specialized areas of microbiology to complement Microbiology 290.

**314 Tissue Culture Techniques and Applications**
- **Fall.** 2 credits. Prerequisites: Microbiology 290 and 291 or permission of instructor.
  - M W 2–3:30. 3 lab exercises scheduled on a rotating basis, F 3:30–5:30. C. M. Rehkugler.
  - A series of lectures and demonstrations dealing with cell culture methods, especially those required to culture cells of plants and animals from different tissue origins. The application of cell culture to the study of bacterial diseases, virus replication, and the production of biologicals is considered.

**336 Applied and Industrial Microbiology**
- **Fall.** 3 credits. Prerequisites: Microbiology 290 and organic chemistry.
  - A survey of the microbiology of industrial fermentations and public health aspects of water and wastewater.

**390 Advanced General Microbiology Lectures**
- **Fall.** 2 credits. Prerequisites: Microbiology 290 and 291 and organic chemistry. May be taken independently of Microbiology 392 and in sequence with, or independently of, Microbiology 392. Offered alternate years. Not offered 1982–83.
  - A consideration of the morphological, taxonomic, cultural, and physiological characteristics of important groups of heterotrophic microorganisms. Included will be (1) spore-forming bacteria, propionic acid bacteria, and gram-negative cocci, and (2) pseudomonads, enterics, and related forms.

**391 Advanced General Microbiology Laboratory**
- **Fall.** 2 credits. Limit to 20 students. Prerequisite: Microbiology 390 (may be taken concurrently). Offered alternate years. Not offered 1982–83.
  - Intended as a laboratory complement to Microbiology 390. The isolation, characterization, and study of the groups of heterotrophic microorganisms included in Microbiology 390.

**392 Advanced General Microbiology Laboratory**
- **Fall.** 2 credits. Prerequisites: Microbiology 290 and 291 and organic chemistry. May be taken independently of Microbiology 393 and in sequence with, or independently of, Microbiology 390. Offered alternate years.
  - A consideration of the morphological, taxonomic, cultural, and physiological characteristics of important groups of heterotrophic microorganisms. Included will be (1) lactic acid bacteria and (2) marine pseudomonads, enterics, and related forms.

**393 Advanced General Microbiology Lectures**
- **Fall.** 2 credits. Prerequisites: Microbiology 290 and 291 and organic chemistry. May be taken concurrently. Offered alternate years. Not offered 1982–83.
  - An introduction to the basic principles of microbial ecology. Attention is given to the behavior, activity, and interrelationships of bacteria, fungi, algae, and protozoa in natural ecosystems.

**400 Microbial Physiology Lectures**
- **Spring.** 3 credits. Prerequisites: Microbiology 290 and 291 and organic chemistry. M W F 11:15. R. P. Mortlock.
  - The concern is with the physiological functions of microorganisms. Consideration is given to chemical structure, regulation, growth, and the energy metabolism of prokaryotic organisms. Special attention is given to those aspects of microbial metabolism and carbohydrate catabolism not normally studied closely in biochemistry courses.

**401 Microbial Physiology Laboratory**
- **Spring.** 3 credits. Limited to 12 students. Prerequisites: Microbiology 480 (may be taken concurrently) and permission of instructor. S–U grades optional.
  - The laboratory component of Microbiology 480. Deals with laboratory experiments and techniques used in studying the physiological characteristics of microorganisms.

**404 Cytology of Prokaryotes Lectures**
- **Spring.** 3 credits. Prerequisites: Microbiology 290 and 291, and biochemistry. S–U grades optional. Offered alternate years.
  - M W F 9:05, W. C. Ghiorse.
  - An in-depth survey of morphology and life cycles of prokaryotic organisms. Form, organization, and function are considered with respect to aggregates of cells, individual cells, sub-cellular organelles, and macromolecular architecture.

**405 Cytology of Prokaryotes Laboratory**
- **Spring.** 2 credits. Enrollment limited. Prerequisite: concurrent registration in Microbiology 484 and permission of instructor. Offered alternate years. Hours to be arranged. W. C. Ghiorse.
  - Cytological techniques, including preparations for light and electron microscopy, that are especially applicable to the study of prokaryotic cells.

**406 Selected Topics in Microbial Metabolism**
- **Spring.** 2 credits. Primarily for upperclass and graduate students. Prerequisites: beginning courses in general microbiology, biochemistry, and organic chemistry. S–U grades optional.
  - Selected topics pertaining to the energy metabolism, oxidative and fermentative abilities, and biosynthetic capacities of microorganisms. Where possible and appropriate, the subject matter compares the various microbial forms.
497 Special Topics Fall. 1 credit. Limited to upperclass students specializing in microbiology who may desire to take Microbiology 499. Prerequisite: permission of instructor; S-U grades only. The course cannot be used to fulfill the specialization requirement. Hours to be arranged. Staff.

498 Teaching Experience Fall or spring. 1–3 credits. Enrollment limited. Prerequisites: previous enrollment in the course to be taught or equivalent, and written permission of instructor; S-U grades with permission of instructor. Hours to be arranged. Staff. Designed to give qualified undergraduate students teaching experience through actual involvement in grades with permission of instructor. S-U grades only. The course cannot be used to fulfill the specialization requirement.

499 Research in Microbiology Fall or spring. Variable credit. Undergraduates must attach to their course enrollment material written permission of the staff member who will supervise the work and assign the grade. This course cannot be used to fulfill the specialization requirement. Hours to be arranged. Staff.

691 Graduate Seminar in Microbiology Fall and spring. 1 credit each semester. All students in the graduate field of microbiology must enroll each semester until they have completed their A exam. Hours to be arranged. Staff.

694 Bacterial Diversity Spring. 4 credits. Prerequisites: either Microbiology 390, 392, or 480, and Biological Sciences 330 or 331 or equivalent. M W 12:20–4:25. E. P. Greenberg. Physiology, ecology, and morphology of selected groups of bacteria, including the methanogenic bacteria, spirochetes, nitrogen-fixing bacteria, photosynthetic bacteria, thermophilic bacteria, myxobacteria, and others. Behavior of bacteria in response to environmental stimuli.

698 Microbiology Seminar Fall and spring. Required of all graduate students majoring in microbiology and open to all who are interested. Hours to be arranged. Staff.

Natural Resources

200 Principles of Conservation Fall. 3 credits. Limited to natural resources majors. Not open to students who have passed Natural Resources 201. Lecs. M W F 10:10; 1-hour disc to be arranged. R. J. McNell

Principles of environmental conservation and application of those principles to the management of natural resources. Ecological concepts, a survey of the natural resources and their properties, and resource management concepts are considered. Social, political, legal, economic, and ethical aspects of environmental issues are discussed.

201 Environmental Conservation Spring. 3 credits. Not open to students who have passed Natural Resources 200. Lecs. M W F 10:10; 1-hour disc to be arranged. R. J. McNell

A survey course intended for students in any year and major. People, natural resources, and environment. Ecological principles as applied to human use of environment; survival strategies of animals and the application of these concepts to human use and misuse of environment; a survey of natural resources and problems related to their management. Current issues such as air and water pollution, disposal of radioactive wastes, human population pressures, energy supply and management, and life-style are considered. Social, political, legal, economic, and ethical aspects of environmental concerns are introduced.

210 Introductory Field Biology Fall. 3 credits. Limited to 45 students. Preference given to sophomores and transfer students in natural resources. Prerequisites: Biological Sciences 101 and 102 or equivalent. Cost of field trips, no more than $10. Lec. W 9:05; labs, M W 1:25–4:25; overnight field trips, T. A. Gavin. Introduction to methods of inventoring and identifying plants and animals. Recognition and knowledge of approximately 150 species of vertebrates and 75 species of woody plants found in New York State will be covered. Selected aspects of current ecological thinking relevant to problems in assessment of the distribution and abundance of organisms are stressed. The interaction of students with biological events in the field and accurate recording of these events are emphasized.

250 Introductory Wildlife Biology Spring. 1st term of 3. 1 credit. Prerequisite: Natural Resources 210 or permission of instructor. Lecs. M W F. A. N. Mccarthy. Introduction to the biological characteristics of wildlife species, with analyses of these characteristics in relation to ecology and management.

251 Introductory Fishery Biology Spring. Middle term of 3. 1 credit. Prerequisite: Natural Resources 210 or permission of instructor. Lec. M W F B. Staff. Importance of basic life history, ecology, and measurable parameters as a basis for fishery management. Representative commercial and recreational fisheries will be used as examples.

252 Introductory Forestry Spring. Last third of term. 1 credit. Prerequisite: Natural Resources 210 or permission of instructor. Lecs. M W B F. Staff. Appreciation of forests as a natural resource. Importance of ecology and measurement as bases for forest management. Introduction to tree biology and silviculture.

260 Introduction to Consumptive Wildlife Recreation Fall. 2 credits. Limited to 30 students. Prerequisites: natural resources majors or permission of instructor. Cost of overnight field trip, no more than $10. Lec. M F 9:05. Overnight field trip and 1 evening lab. R. A. Howard. Brief history of trapping and hunting; role of consumptive recreationists in conservation; firearms and archery nomenclature, function, ballistics, and safety; content of New York State hunter training, bowhunter education, and trapper training courses; discussion of current methods, laws, ethics, basic shooting instruction with rifles and shotguns; field exercise at Arnot Forest.

300 Natural Resources Inventories Spring. 3 credits. Lecs. M W 12:20; lab, M T W E. E. Hardy. Procedures for inventorying resources, the methods used, and theories of inventory development in relation to present needs. Examination of the processes used in generating currently used inventories, application of methods to improve existing inventories, and experience in developing inventories. Land resource inventories are emphasized.

302 Forest Ecology Fall. 3 credits. Limited to seniors and graduate students. Cost of trip, no more than $20. Lecs. M W 11:15; lab M 1:25–4:25, 1 weekend trip S through M. T. J. Fahey.

Understanding the wildland environment. Development of ability to identify and analyze what is present, what was present, and what is likely to happen in various forest ecosystems. All laboratory sessions in the field. One required weekend trip to the Adirondacks or other major forest region.

303 Woodland Management Fall. 3 credits. S-U grades optional. Lecs. T R 11:15; lab, R 1:25–4:25 (one field trip will end at 5:30). R. R. Morrow. Designed to give the student the basic information necessary to make sound woodland-management decisions. Field trips to woodlots emphasize variations in value and potential as well as biological growth. Introduction to tree identification, tree
valuation, timber estimating, tree marking, and stand improvement work. Planting, management, harvesting, marketing, and multiple use are discussed, as well as relationships of forestry to people and to the environment.

305 Maple Syrup Production  Spring. 1 credit. S-U grades only. Limited to 20 students. Prerequisite: permission of instructor.
T 12:20—4:25; 3 (3 preliminary seminars, followed by several half-days of fieldwork during the maple season). R. R. Morrow, A. Fontana.
Students work in most phases of the Amor Forest maple operation and learn modern sap-collecting techniques and quality control in making syrup. A 100-tap area is reserved for student installation of a tubing sap-collection network.

320 Winter Energetics  Spring. 1 credit. Prerequisite: Natural Resources 250
Lec, lab, and disc, all day M T W R F in residence at Amor Forest. A. N. Moon.
Field measurements of weather and range conditions in the taiga will be related to metabolism, nutrition, and behavior of free-ranging animals at the Amor Forest during the last week of the January intersession period.

330 Ecological Integration  Summer or fall. 4 credits. Prerequisite: Natural Resources 250 or permission of instructor.
Lec, lab, and disc, all day M T W R F in residence at Amor Forest. A. N. Moon.
Measurements and analyses of weather, watershed, plant community, and animal population characteristics in an integrated ecological way, stressing interrelationships within ecosystems. This course will be held at the Amor Forest during the three-week summer session beginning the week after Commencement.

407 Religion, Ethics, and the Environment  Spring. 3 credits. For juniors, seniors, and graduate students; others by permission. S-U grades optional.
M 8:30-10; W 12:20-3; several extended field trips. R. A. Malecki.
An in-depth exercise in planning the management of natural resources; others by permission of instructor. Limited to 12 seniors and graduate students majoring or minoring in the environmental sciences.

411 Techniques in Wildlife Science  Spring. 2 credits. Prerequisite: Natural Resources 410 or equivalent, or permission of instructor.
An introduction to techniques used in wildlife research and management, with emphasis on field methods and northeastern game species.

414 Selected Topics in Wildlife Resource Policy  Spring. 2 credits. Intended for juniors and seniors. Prerequisite: Natural Resources 410 or equivalent, or permission of instructor. S-U grades optional. Credit to be arranged. 
T 12:20—4:25; several field trips usually taken weekdays, one overnight field trip to Albany. H. B. Brumbsted.
A seminar devoted to analysis of selected current policy issues in wildlife management. Particular attention is given to citizen roles in policy development.

417 Wetland Resources  Summer, 1 week at Shools. 1 credit.
For description, see listing under "Courses in Marine Science" in the section on the Division of Biological Sciences.

430 Dynamics of Animal Populations  Spring. 2 credits. For seniors and graduate students in natural resources; others by permission of instructor. Offered alternate years.
A quantitative examination of the dynamics of animal populations. Interactive computing is used to assist in analysis and understanding of mortality, growth, population estimation, and population interaction.

438 Fishery Resource Management  Spring. 3 credits. Prerequisite: Natural Resources 440 or permission of instructor.
Lec, T R B. Staff.
Principles and problems in the management of freshwater and marine fishery resources, considered in relation to problems of human population and management of other natural resources.

440 Fishery Science  Fall. 3 credits. For seniors majoring in fishery science; others by permission of instructor. Prerequisites: a year of statistics and calculus. Offered alternate years.
Principles and theories involved in dynamics of fish populations. Methods of obtaining and evaluating statistics of growth, population size, mortality, yield, and production are considered.

442 Techniques in Fishery Science  Fall. 3 credits. Limited to 15 upperclass and graduate fishery students. Cost of field trips, no more than $30.
T 12:20—4:25; one or more weekend field trips.
D. A. Webster.
Emphasis is on methods of collecting fish and related data when information on population dynamics is of paramount importance. Laboratories include field experience in use of gear and instruments. Opportunities for additional experience in ongoing college fishery-research program is provided.

443 Managing the Aquatic Environment  Fall. 2 credits. Limited to 30 juniors and seniors not majoring in aquatic science.
Lec, T R 10:10. R. T. Oglesby.
The nature of aquatic environments and effects of humans on them are initial foci. Wise use of aquatic resources is surveyed in terms of human impacts on them, including the effects of toxicants and nutrients, removal or addition of particular biotic components, and modifications of the physical environment. Emphasis is on lakes, rivers, and estuaries. A case-history approach is used.

490 Practicum in Natural Resources Analysis and Management  Fall. 5 credits. For seniors in natural resources; others by permission of instructors. Hours to be arranged. Staff.
An in-depth exercise in planning the management of selected resources in a defined geographic area. Students work in groups under the supervision of a faculty committee with other faculty members acting as consulting experts. Student groups make oral and written reports on their management plans to a client, panel of faculty members and outside evaluators.

493 (498) Research in Resource Analysis and Planning  Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional.

494 Research in Fishery Science  Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional.

495 Research in Wildlife Science  Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Credit to be arranged. Limited to graduate students working on professional master's projects.

496 Research in Forestry  Fall or spring. Credit to be arranged. S-U grades; letter grade by permission of instructor.
Hours to be arranged. T. J. Fahey, J. P. Lassoie, R. R. Morrow, L. H. Weinstein.

500 Professional Projects—M.P.S.  Fall and spring. Credit to be arranged. Limited to graduate students working on professional master's projects.

601 Seminar on Selected Topics in Fishery Biology  Fall or spring. 1 credit. 
Hours to be arranged. Staff.

602 Seminar in Natural Resources Analysis for Ecologically Based Planning  Spring. 2 credits. S-U grades only.
M 2:30—4. T. J. Fahey.
Multidisciplinary graduate seminar. Theme changes each year but usually involves a case study of a specific area of land and water. Fieldwork usually required. Engineers, economists, sociologists, soil scientists, foresters, planners, and wildlife and fishery scientists are invited to bring expertise to the planning table.

603 Habitat Ecology  Spring. 2 or 3 credits.
Limited to 12 seniors and graduate students majoring in natural resources or biological sciences. Prerequisite: permission of instructor. Cost of field trips, no more than $20.
This course requires an understanding of broad ecological concepts relative to plant-wildlife interactions. The concepts of niche, habitat, and ecosystem are addressed from the standpoint of island biogeographic principles, structural and spatial heterogeneity of the vegetation, community productivity, and temporal change. Major landforms and plant-animal communities of the northeastern United States will be visited during weekend field trips. Paper required for 3-credit option.

604 Seminar on Selected Topics in Resource Policy and Planning  Fall. 1 credit. S-U grades only. Hours to be arranged. Staff.
Primarily for graduate students majoring or minorning in natural resources conservation.

605 Ecology and Management of Disturbed Aquatic Systems  Spring. 3 credits. Limited to 20 seniors and graduate students. Recommended for...
students specializing in the aquatic sciences. Prerequisite: Limnology or oceanography. Offered alternate years. R. T. Oglesby
Lectures and readings focus on responses of aquatic ecosystems to stress and on significance of such reactions. Methods and strategies of management to minimize undesirable aspects of human activities are considered. Detailed case histories are studied and discussed.

606 Marine Resources Policies Spring. 2 credits. Prerequisite: at least one related course such as Biological Sciences 364, 668, or 663, Natural Resources 438; permission of instructor S-U grades optional. Offered alternate years.
R 1:30—3:30. B. T. Wilkins
A seminar discussing the law and issues concerning current marine policy questions such as coastal-zone management, marine fish regulations, marine mammal protection, and wetland preservation.

607 Perspectives on Conservation Spring. 3 credits. For graduate students; others by written permission of instructor. S-U grades for graduate students. Offered alternate years. Not offered 1982-83.
R 1:25—3:30. B. T. Wilkins
A seminar based on extensive readings of articles highlighting varying philosophical approaches to the conservation of natural resources Viewed espoused by developmentists, preservationists, naturalists, and welfare economists are considered.

608 Policies and Management of Natural and Wild Lands Fall. 2 or 3 credits (required field trip for 3-credit option). Prerequisite: permission of instructor. S-U grades optional.
Lec, T 9:11—11:30. T. L. Haller
Lectures, discussions, special seminars, readings, and case studies on natural and wild lands, particularly those in public ownership. Major topics include the values of these lands, social and scientific basis for their establishment, analysis of the policies for preservation and use, and methods and strategies for management. National and state wilderness systems, social and biological carrying capacity, effects of special interests, and current issues are covered. An independent study of a selected area is required.

609 Effects of Ecological Perturbations on Fishes Spring. 3 credits. Prerequisite: Biological Sciences 476 or permission of instructor. Credit of field trips, no more than $14.
Lec, T R 9:05; lab, W 1:25—4:25; several field trips. S. P. Gloss
Impacts of habitat alteration and physical-chemical pollutants, with emphasis on freshwater and diadromous fish species of North America. Direct and indirect effects of a variety of industrial and land-use practices on fish and other aquatic organisms with resultant changes in structure and function of fish communities due to lethal and sublethal responses are discussed. Laboratory includes several field trips.

610 Conservation Seminar Fall and spring. Noncredit. All graduate students in natural resources are expected to participate. Hours to be arranged. Staff.

611 Seminar in Environmental Values Fall. 3 credits. For graduate students, juniors, and seniors. S-U grades optional. Cost of weekend trip, no more than $14.
W 1:25—3:50; two or three extra class sessions for presentations of papers and projects. Weekend trip in late September. R. A. Baer
How the humanities, particularly religion, philosophy, and ethics, contribute to our understanding of the environment. In successive years, topics will include (1) the role of nonlitigant values in our relationship to our natural environment, (2) land ethics, (3) new models for higher education in the age of ecology, and (4) concepts of growth and progress in Western culture and their impact on our treatment of the environment. Topic for fall 1982 The Ethics of Farmland Preservation.

612 Wildlife Seminar Fall and spring. 1 credit. Prerequisite: permission of instructor S-U grades optional.
Hours to be arranged. Staff.
Discussion of individual research or current problems in wildlife science.

613 Ecology and Management of Wetlands Fall. 3 credits. Limited to upper division and graduate students majoring in natural resource or biological sciences. Prerequisite: permission of instructor. Credit of field trips, no more than $25. Offered alternate years. Not offered 1982-83.
Lec-Labs T R 1:25—3:50. R. A. Malecki
Lectures, readings, and field trips designed to develop an understanding and appreciation of freshwater and coastal wetlands, their function, classification, plant and animal associations, regulation, and management. Major wetland types in the northeastern United States are visited during one or two weekend field trips. Independent study of a selected area is required.

800 Master's Thesis Research Fall and spring. Credit to be arranged. Limited to graduate students working on master's thesis research. S-U grades only. Staff.

900 Ph.D. Thesis Research Fall and spring. Credit to be arranged. Limited to graduate students working on Ph.D. thesis research. S-U grades only. Staff.

Plant Breeding and Biometry
W. D. Pardee, chairman; R. E. Anderson,
W. R. Coffman, D. E. Earle, H. L. Everett, V. E. Gracen, Jr., P. Gregory, C. C. Lowe, H. M. Mungen,
R. P. Murphy, M. A. Muehl, O. H. Peterson,
J. L. Plaisted, R. R. Seayen, M. E. Sorrells,
D. R. Vianos, D. H. Wallace
Biometry courses are listed under "Statistics and Biometry."

225 Plant Genetics Spring. 4 credits. Prerequisite: one year introductory biology or permission of instructor.

Lecs, M W F 9:05, lab, W or R 1:25; lab section assignments at first lecture. Labs start first week of fall. R. A. Matter. 
An overview of genetic principles is related to plant sciences. Mendelian inheritance and cell mechanics, DNA as genetic material, genetic fine structure and gene regulation, gene recombination, linkage and mapping, gene interaction, extranuclear inheritance, environmental effect on phenotypic expression, gene mutation and chromosomal alterations, variation in chromosome numbers, genes in populations, multiple gene inheritance, tissue culture, and genetic engineering. Students conduct an independent inheritance project with Brassica campestris.

401 Plant Cell and Tissue Culture Spring. 2 credits. Prerequisite: a course in plant physiology, cell biology, or genetics or permission of instructor.
Lecs, T R 10:10—11:35. E. D. Earle
Lectures and demonstrations dealing with the techniques of plant tissue, cell, protoplast, embryo, and anther culture and the applications of these techniques to biological and agricultural studies. Current and proposed methods for plant improvement via manipulations of cultured cells will be discussed.

603 Methods of Plant Breeding Fall. 4 credits. Primarily for graduate students but open to qualified seniors who expect to engage in plant breeding.
Prerequisites: Biological Sciences 101 or 102, Biological Sciences 281 or Plant Breeding 225, or equivalent; and field crops, vegetable crops, floriculture, or pomology. Students must enroll in this course by August 1.
Lecs, T R B; labs, T R 1:25—4:15 (labs till 5 during first month). Z 2 field trips, R. E. Anderson, H. L. Everette
Breeding systems for producing commercial crop varieties are considered in detail. Laboratories include selection techniques, screening for heritable variation, and controlling pollination. Special emphasis is on selection for disease resistance and improved nutritional quality and on use of exotic germ plasm.

605 Physiological Genetics of Crop Plants Spring. 3 credits. Prerequisites: genetics, biochemistry, and plant physiology, or permission of instructor.
Both genetic and environmental influences on biochemical and molecular control of plant variation in physiological phenomena like photosynthesis, respiration, translocation, self-incompatibility, male sterility, maturity, yield, and heterosis are discussed. Emphasis is on variation that can be exploited in plant breeding, particularly in breeding for higher yield and adaptability.

608 Biochemical Analyses in Crop Science Fall. 3 credits. Limited enrollment. Prerequisite: Biochemistry 330 or permission of instructor. S-U grades optional. Students must enroll in this course by Aug. 27.
Labs, lecs. M W 1:25—5:00 (some lab sessions will run longer). P. Y. Bouthyette, P. Gregory.
Acquaints the student with specialized biochemical analyses commonly used in breeding programs and related aspects of crop science. Nutrients and toxicants of several crops are studied. Importance of developing an ability to critically assess the biochemical and agronomic implications of results is emphasized.

612 Experimental Methods Spring. 2 credits. Prerequisite: Plant Breeding 601 or permission of instructor. Offered alternate years.
M W F 12:20. C. C. Lowe
The use of statistical methods and the application of experimental designs and plot techniques to problems in plant breeding and related agricultural research.
622 Seminar  Fall or spring. 1 credit. S-U grades only.  T 12:20. Staff and graduate students.

650 Special Problems in Research and Teaching Fall, spring, or summer. 1 or more credits by arrangement with instructor. Undergraduates must attach to their course enrollment material written permission of the staff member who will supervise the work and assign the grade.

717 Quantitative Aspects and Related Issues of Plant Breeding Spring. 3 credits. Prerequisites: Plant Breeding 603 and Statistics 601. S-U grades only.

718 Genetics and Breeding for Disease and Insect Resistance  Fall, first 7 weeks of semester. 1 credit. Prerequisite: Plant Breeding 603. S-U grades only.  T R 10:10. V. E. Gracen.

729 Seminar  Fall or spring. 1 credit. Required of all plant pathology majors. S-U grades only.  T 4:30–5:30. Staff.

807 Advanced Plant Pathology  Spring. 4 credits. Limited to seniors and graduate students. Prerequisites: Biological Sciences 360 or equivalent; and two of the following: Agronomy 315, Entomology 440, or Plant Pathology 402.  Lecs. M W F 10:10; labs, T 1:25–4:25 or W F 1:25–4:25. W. T. Johnson, G. W. Hudler.

841-855 Special Topics Series  Unless otherwise indicated, the following description applies to courses 841–855.

Fall or spring. 1 credit. Prerequisite: permission of instructor. S-U grades only.  Hours to be arranged. Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.
737 Bacterial Plant Pathogens Spring. 3 credits. For graduate students with a major or minor in plant pathology. Prerequisite: Plant Pathology 701 and 711 or permission of instructor. Lec, T R 9:05; lab, W or F 1:25-4:25. R. S. Dickey. Basic information on bacterial plant diseases and phytopathogenic bacteria. The laboratory includes some of the more important techniques used in the study of bacterial plant pathogens.

738 Molecular Mechanisms of Pathogenesis Fall. 2 credits. For graduate students with a major in plant pathology or special interest in molecular mechanisms of pathogenesis. Prerequisite: permission of instructor. Offered alternate years. Not offered 1982-83. Hours to be arranged. H. D. VanEtten, O. C. Yoder, and staff. This course deals with the molecular properties of both microorganisms and higher plants that control the development of host-parasite relationships. Contemporary molecular hypothesis are related to genetic mechanisms of pathogenesis. Emphasis is placed on critical evaluation of the data that are used to support such specific hypothesis.

739 Advanced Mycology Spring. 4 credits. Prerequisites: Plant Pathology 309 or equivalent, a course in genetics, and permission of instructor. Offered alternate years. Lec, M 10:10; labs, M W 1:25-4:25 and an additional 3-hour period to be arranged. Optional field trips. R. P. Korf. A detailed study of the biology and taxonomy of the major groups of plant pathogenic fungi (rusts, smuts, Fungi Imperfecti, Peronosporales), with emphasis on mechanisms of variation in fungi.

756 Advanced Plant Nematology Fall. 3 credits. For graduate students with a major in plant pathology and special interest in nematology. Prerequisite: permission of instructor. Offered alternate years. Hours to be arranged. W. F. Mai, M. B. Brodie. Emphasis is on the principles of taxonomy and nomenclature, critical evaluation of keys and monographs, and practice in identification. The Discomycetes are treated in detail.

795 Taxonomy of Fungi Fall. 4 credits Prerequisites: Plant Pathology 309 or equivalent, genetics, plant or animal taxonomy, and permission of instructor. Offered alternate years. Lec, M W 10:10; labs, M W 1:25-4:25; required field trips. R. P. Korf. Emphasis is on the principles of taxonomy and nomenclature, critical evaluation of keys and monographs, and practice in identification. The Discomycetes are treated in detail.

797 Special Topics Fall or spring. 1-5 credits. S-U grades optional. Hours to be arranged. Staff. An opportunity for independent study of a special topic.

799 Graduate Research Fall or spring. 1-5 credits. S-U grades optional. Hours to be arranged. Staff.

100 Introductory Pomology Fall or spring. 3 credits. S-U grades only for graduate students. Fall: lecs, T R 9:05; lab, T 2-4:25. R. M. Pool. Spring: lecs, T R 8; lab, T or W 2-4:25. One half-field trip required. G. H. Oberly, J. P. Tomkins. An introductory course to plant physiology and plant morphology with an emphasis on the general principles and practices of plant morphology and plant physiology. Included are tree fruits, grapes, small fruits, and nuts. Topics covered include propagation, varieties, crop management, and growth and fruiting habits. Practical work is performed in grading, pruning, site and soil selection, and planting.

208 Economic Fruits of the World Spring. 3 credits. Prerequisite: introductory biology, or permission of instructor. Offered alternate years. Not offered 1982-83. Lec, M W 10:10; lab, F 2-4:25. F. W. Liu. The more important subtropical and tropical fruits such as citrus, banana, pineapple, mango, coffee, and cacao are considered. Morphology, physiology, and adaptation to climate are stressed rather than details of culture. A broad view of world pomology is given.

302 Fruit-Tree Nursery Operation Spring, first 4V4 weeks. 1 credit. Prerequisite: Pomology 100 or permission of instructor. Offered alternate years. Not offered 1982-83. Lec, M W 9:05; lab, M 2-4:25. J. N. Cummings. This course is intended to familiarize the student with the operations and problems of the fruit-tree nursery operator. Topics include production objectives, management decisions, and cultural aspects of nursery operation. Techniques of grafting, budding, pest control, inspection, and grading of grafting-tree planting stocks are included.

304 Orchard Management I Spring. 3 credits. Prerequisite: Pomology 100. Lec, M W 8: lab, R 1:25-4:25. L. E. Powell, W. C. Stiles. A treatment of problems of concern to fruit growers such as site selection, planting and pruning systems, water relations, cold hardiness, dormancy, flowering, and fruiting. Physiological and practical aspects are emphasized.

305 Orchard Management II Fall. 3 credits Prerequisite: Pomology 100. Recommended. Lec, M W 9:05; lab, R 1:25-4:25. G. H. Oberly, L. L. Creasy. A continuation of the principles of pomology presented in Pomology 304. Subjects include the later stages of fruit development, physiology of ripening, aspects of tree nutrition, protection from pests, and regulatory policies affecting fruit production and sale.

306 Small Fruits Spring, last 9 weeks. 2 credits. Prerequisite: Pomology 100 or permission of instructor. Offered alternate years. Not offered 1982-83. Lec, M W 9:05; lab, M 2-4:25. J. P. Tomkins. A study of the general principles and practices in the commercial culture of strawberries, blueberries, currants, gooseberries, elderberries, and cranberries.

307 Viticulture Fall. 3 credits. Prerequisite: Pomology 100 or permission of instructor. Offered alternate years. Not offered 1982-83. Lec, T R 9:05; lab, T 2-4:25. R. M. Pool. Viticulture, with emphasis on the viticulture of the Great Lakes region, as a series of interrelated decisions on varieties, sites, vine management, and vine protection, is presented. Those decisions are based on ampelography, meteorology, soils, vine and grape anatomy and physiology, as well as protection of the vine and grapes from injuries, primarily physiological in nature.

310 Postharvest Physiology and Storage of Fruits and Vegetables Fall. 3 credits. Prerequisite: a course in pomology or vegetable crops, or permission of instructor. Lecs, M W 9:05; lab, F 2-4:25. One field trip is required. F. W. Liu. The chemistry and physiology of fruits and vegetables as they affect quality and marketability are studied. Maturity indices, handling methods, and storage practices are considered. Practical work includes observations of the effect of handling and storage methods on quality and condition of fruits and vegetables.

311 Fruit Crop Systematics Fall, first 4V4 weeks. 1 credit. Prerequisite: Pomology 100 or permission of instructor. S-U grades optional. Offered alternate years. Lecs, T R 9:05; lab, T 2-4:25. G. H. Oberly. The classification of fruit species is considered from a botanical and production viewpoint. The course deals with the identification and naming of fruit species and varieties and their botanical classification.

313 Utilization of Fruit Crops Fall, middle 4V4 weeks. 1 credit. Prerequisite: Pomology 100 or permission of instructor. S-U grades optional. Offered alternate years. Lecs, T R 9:05; lab, T 2-4:25. F. W. Liu. A consideration of the fate after processing of fruits produced for consumption. The coverage of fruit products is generally limited to those commercially grown and processed in New York State. Although the discussion includes methods of canning, freezing, dehydration, and other types of processing, emphasis is on the quality requirement and proper handling of raw materials and how they affect the quality of end products.

315 Fruit Variety Improvement Fall, last 4V4 weeks. 1 credit. Prerequisite: Pomology 100 or permission of instructor. S-U grades optional. Offered alternate years. Lecs, T R 9:05; lab, T 2-4:25. R. D. Way. The techniques and limitations of producing new varieties of perennial fruit crops are considered.

400 Undergraduate Seminar Spring. 1 credit. (may be taken twice for credit). Prerequisite: a course in pomology. S-U grades only. Hours to be arranged. Staff. Seminar topics and speakers selected and arranged by the students on subject areas related to pomology.

402 Special Topics in Experimental Pomology Spring. 3 credits. Open to undergraduates by permission. Offered alternate years. Hours to be arranged. Staff. Selected topics are considered with respect to the current literature or experimental techniques. Topics reflect the research interests of the professors who participate.

610 Research Fall or spring. 2 or more credits. Prerequisite: a course in advanced pomology. S-U grades optional. Undergraduates must attach to their course enrollment material written permission from the staff member who will supervise the work and assign the grade. Staff.

700 Graduate Seminar Fall. 1 credit. S-U grades only. Hours to be arranged. Staff. Reports by students on current research or literature in experimental pomology or related areas.
Rural Sociology

100 Introduction to Sociology Fall. 3 credits.
Lecs, T R 10:10-10:50, M or F 9:05, 10:10, 11:15, 12:20, 1:25, or 2:30; C. C. Geisler and staff.
An examination of the theories, concepts, and methods of sociology as they apply to sociology in general. Major topics include the origins of the discipline, its major theoretical and methodological currents, and its application to contemporary questions of power and bureaucracy, social and cultural change, materialism and sociology, social class, and community institutions. R Soc 100 is formally equivalent to 101 (offered in the spring), though less emphasis is placed on rural sociology and its problems.

101 Introduction to Rural Sociology Spring. 3 credits.
Lecs, T R 10:10-10:50, M or F 9:05, 10:10, 11:15, 12:20, 1:25, or 2:30; Staff.
An examination of the theories, concepts, and methods of sociology as they apply to rural sociology, particularly in relation to major issues concerning the United States agricultural and food systems. Major topics include change in the structure of agriculture and in rural communities, inequality in rural America, the structure and functioning of agribusiness organizations, agricultural policy, energy and environmental problems, and alternative futures for rural development in the United States. R Soc 101, though placing greater emphasis on rural society, is equivalent to 100 (offered in the fall).

104 Proseminar: Issues and Problems in Rural Society Fall. 1 credit; S-U grades only.
R 12:20-1:25. Staff.
Introduces the student to subject matter of concern to both applied and academic rural sociologists. Focuses on such subjects as migrant workers, agricultural and rural poverty, rural to urban migration, rural development, agricultural research and people, community development, small farmers in the less developed nations. These topics are explored through the use of films and group discussion.

105 Rural Sociology and World Development Problems Spring. 3 credits.
M W F 10:10-10:50; E. W. Coward, Jr.
An introduction to the analysis of some pressing social problems of contemporary Third World countries. Lectures and reading materials will present different approaches, analyses, and recommendations that follow from competing theories, in order that the student may determine which approach best explains the situation in Third World countries. Topics to be considered include visions of "development": the social organization of peasant communities and large-scale agricultural enterprises, problems of land tenure and agrarian reform, the relationships among population growth, hunger, and employment; multinational corporations, social movements, and social movement and community development.
**436 Small Towns Seminar** Spring. 2 or 3 credits. Prerequisite: Rural Sociology 100, 101, or 105. W 2:30–4:25. G. J. Cummings.

The seminar examines studies of small rural towns with a view to identifying tendencies and frameworks that examine planning and development strategies in a regional context. The objective is to develop the capacity to critically understand centralization and decentralized approaches to small town development with a view to determining how each might be utilized for enhancing the quality of small town and rural life.

**437 Aging: Issues and Strategies in the 1980s.** Summer. 3 credits.

Interplay between basic and applied knowledge in social gerontology. Environment and aging. The role of the formal and informal networks of services in the maintenance of independent living arrangements for the elderly. Differences between rural and urban elderly in status, needs, services, and service costs. The impact of budget cuts on services for the elderly.

**440 The Social Impact of Rapid Resource Development** Fall. 3 credits. T 7–10. C. Geisler.

The seminar addresses social-impact assessment (SIA), and identifies alternative models of doing social-impact assessment and the experience various rural minorities have had with SIA, especially American Indians. Students will learn certain practical research skills needed in doing SIA and will participate in an SIA simulation in rural New York.

**443 Politics and Development** Fall. 3 credits. Limited to undergraduates and graduate students. Prerequisite: Rural Sociology 100 or equivalent. S-U grades optional. Not offered 1982–83.
M W F 1:25. P. R. Eberts.

Comparative analyses of politics as a significant process affecting development in both advanced and developing societies. Politics and policies are analyzed as results of pluralism and inequalities among various socioeconomic classes; different-sized firms and communities; and mutually interdependent institutions. They also are seen as major means of social control and resource redistribution in production, allocation, and service-staffing processes.

**445 Rural Social Stratification** Fall. 3 credits. Letter grades optional. S-U grades optional.

Principal issues to be considered in the course include theories of rural stratification in primarily agricultural and advanced industrial societies; sociological organization of agricultural enterprises; interrelationships among market and non-market, agricultural and nonagricultural activities; theories of change in stratification. Appropriate for majors in development sociology and international agriculture.

**462 Health and Social-Economic Development** Spring. 3 credits. T R 2:30. G. J. Cummings.

An overview of health services is provided within the larger context of national social and economic development policies. Social-cultural, economic, and managerial factors are stressed as a basis for formulating realistic health planning and service implementation strategies. The allocation of resources to health and human service programs is examined against the backdrop of declining rates of economic growth. Conventional approaches to health services planning in industrial countries are evaluated in terms of their suitability for developing nations.

**479 Informal Study** Fall or spring. 1–3 credits (may be repeated for credit). S-U grades optional.
Undergraduates must attach to their course enrollment materials a written permission from the faculty member who will supervise the work and assign the grade.

**Staff.** Informal study may include a reading course, research experience, or public service experience.

**606 Contemporary Sociological Theories of Development** Fall. 3 credits.
M W F 11:15. F. W. Young.

A review of theory, empirical studies, and policy prescriptions as applied to communities and regions, especially those in less-developed countries. Human ecology, the Weberian tradition, central place, dependency, and symbolic structural theory are compared.

**618 Research Design I** Spring. 4 credits.
Prerequisite: one course in statistics. M W F 10:10; lab to be arranged. J. D. Francis.

First of a two-semester sequence (may be taken individually) in graduate methods. This course discusses problems of measurement, the design of measuring instruments, and problems of reliability and validity. Some common forms of measuring instruments are discussed, including multidimensional techniques. Students are expected to use actual data for labs.

**619 Research Design II** Spring. 4 credits. Prerequisite: one introductory course or a statistics course. M W F 10:10; lab to be arranged. J. D. Francis.

The second part of the sequence in graduate methods deals with sampling frames, some pragmatic sampling techniques, and some discussion of statistical analysis procedures appropriate under each. An intermediate-level treatment of the following topics: nonexperimental designs, regression analysis, analysis of variance, analysis of covariance, and causal models. A classic piece of sociological research is one source of illustration and a component of the laboratory exercises. Students are expected to use actual data to familiarize themselves with data handling and processing.

**621 Environmental Sociology** Spring. 3 credits. Not offered 1982–83.

An exploration of various sociological approaches to the study of society and its physical environment and an analysis of major issues relating to the survival base of human societies—particularly overpopulation, the energy and food crises, the imminent growth debate, and the conduct of political struggles over energy and environmental policy.

**641 Political Economy of Rural and Regional Development** Spring. 3 credits. Limited to upperclass or graduate students. S-U grades optional.

A survey of social, political, and economic factors in regional development. Theories and case studies from demography, human ecology, social organization, and planning are used to examine the emergence or retardation of regions and their implications for contemporary developing and developed societies.

**642 Regional Systems and Policy Analysis** Spring. 3 credits. Prerequisites: a social or economic theory course and statistics, or permission of the instructor. S-U grades optional. Not offered 1982–83.
Lec. F 2:20–4:30; disc to be arranged. P. R. Eberts.

A systems analysis of theoretical and research problems arising from localities' changing social organization. Major theories are examined with attention to their compatibility with modern policy analytic techniques. Topics covered center on the interplay of economic, social class, and political activities in localities.

**650 Social Organization of Agriculture** Fall. 3 credits. Not offered 1982–83.

Concentrates on a small number of significant commercial crops, examining the institutions and relationships involved in the production process: resource, credit, distribution inputs, the farm operation, processing, transportation, and marketing. Patterns at the farm and community level, including topics such as settlement, land tenure, ethnic groups, class structures, methods of communication, small farmers, labor problems, and information networks. Ecological and physical constraints on production. Emphasis on the influence of national and international structures—political, social, and economic—on the production process, including the role of government and quasi-government units. Examines the historical circumstances giving rise to the present crop systems. Concentration on the rearrangements of the political, social, and economic structures, both domestic and international, are required for change in crop systems, improvement in production, and increased social welfare.

**651 Structural Change in United States Agriculture** Fall. 3 credits.

An analysis of the structural transformations of United States agriculture in the nineteenth and twentieth centuries, particularly in terms of the role of the state in agricultural development. This course emphasizes the historical roots of the socioeconomic problems of contemporary agriculture and examines the prospects for, and limitations of, various strategies for ameliorating these problems.

**706 State, Economy, and Society** Spring. 3 credits. Recommended: one graduate-level course in classical sociological theory. Not offered 1982–83.

**710 Theoretical Issues and Methodological Alternatives in Field Research** Spring. 3 credits. Letter grade only.

A graduate seminar dealing with the design of field research, specifically the articulation of theories and methods. Readings illustrate different theoretical orientations and methodological techniques. Substantive problem areas considered include technological change, social stratification, dependency, and modes of production. Students explore theoretical issues and methodological alternatives applicable to their own research.

**712 Factor Analysis and Multidimensional Scaling** Fall. 4 credits. Prerequisite: previous course work in scaling and statistics. Not offered 1982–83.
M W F 10:10; lab to be arranged. J. D. Francis.

An advanced course in measurement and scaling, building from work by Thurstone and Coombs to multidimensional measurements. Topics include philosophy of factor analysis, factor-analysis models, factoring design, factoring techniques, and comparison with factor-analysis models. Multidimensional scaling and discriminant analyses are also discussed. As matrix algebra is an integral part of these procedures, class time is devoted to this topic.

**715 Macrosocial Accounting and Evaluation** Spring. 3 credits. Not offered 1982–83.
R 1:25–4:25. F. W. Young.

A new methodology for monitoring and evaluating rural development projects based on data from informants, field analysis with a microcomputer system, and a generalized evaluation design. The
Participation in the ongoing public service activities of the department.

871–874 Informal Study  Fall or spring. Credit to be arranged. Limited to master's and doctoral degree candidates with permission of the graduate field member concerned. S-U grades optional.

871 Rural Sociology

872 Development Sociology

873 Organization Behavior and Social Action

874 Methods of Sociological Research

881 Research  Fall or spring. Credit to be arranged. Limited to master's and doctoral degree candidates with permission of the graduate field member concerned. S-U grades optional.

Statistics and Biometry

Courses in statistics and biometry are offered by the Department of Plant Breeding and Biometry.

200 Statistics and the World We Live In  Spring. 3 credits.

Focus is on a better consumer understanding of statistical design, data collection, and information. Concepts of statistics, measurements and measuring instruments, data collection, force analysis, surveys, and the role of statistical methodology in professional life are presented.

408 Theory of Probability  Fall. 4 credits.

Prerequisite: Mathematics 106, 108, or 112, or permission of instructor.

An introduction to probability theory—combinatorics, random variables and their probability distributions, generating functions, limit laws. Biological and statistical applications are presented.

409 Theory of Statistics  Spring. 4 credits.

Prerequisite: Statistics 408 or equivalent.

Lects, M W F 10:10; disc, M 3:35. Prelims, 7:30 p.m. Mar. 3 and Apr. 14. C. E. McCulloch.

The concepts developed in Statistics 408 are applied to provide an introduction to the classical theory of parametric statistical inference. Topics include sampling distributions, parameter estimation, hypothesis testing, and linear regression. Students seeking training in statistical methodology should consider Statistics 601–607.

416 Matrix Algebra I  Fall 2 credits.

Prerequisite: precalculus mathematics. Dropping the course is not permitted after September 22.

Lects, M W F 6: disc, M 1:25–2:15 (first 7 weeks), Prelim: 7–8:30 p.m. September 30. Final: 7–8:30 p.m. October 21. Warren 101 and 201. Staff. Definitions, basic operations and arithmetic, determinants, and the inverse matrix. Emphasis is on understanding basic ideas.

417 Matrix Algebra II  Fall 2 credits.

Prerequisite: Statistics 416 or permission of the instructor.

Lects, M W F 6: disc, M 1:25–2:15 (second 7 weeks), Prelim: 7–8:30 p.m. November 18, Warren 101. Final: during University exam week. Staff Rank, linear dependence, canonical forms, linear equations, generalization of inverses, characteristic roots and vectors. Emphasis is on developing skills for applying matrix algebra.

606 Sampling Biological Populations Fall. 1 credit. Prerequisite: Statistics 601 or equivalent. Offered alternate years. Lecs, to be arranged (first 5 weeks of term), D. S. Robson. Standard methods of sample-survey design and estimation are presented, including stratified-random sampling, cluster sampling, double sampling, and variable probability sampling. Special emphasis given to methods of particular utility or specifically designed for biological sampling. Examples are taken from forestry, fisheries, and other biological areas.

607 Nonparametric and Distribution-Free Statistical Methods Spring. 1 credit. Prerequisite: Statistics 601 or equivalent. Offered alternate years. Not offered 1982–83. Nonparametric and distribution-free alternatives to normal-theory testing procedures are presented: randomization tests; location and scale tests for two populations; contingency tables; contingency tables of multi-way randomized, blocked, and balanced incomplete block designs; comparisons among several means; correlation and regression, goodness-of-fit.

699 Special Problems in Statistics and Biometry Fall, spring, or summer. 1 credit or more by arrangement with instructor. Staff.

701 Advanced Biometry Spring. 3 credits. Prerequisites: Statistics 409 and 602. T R 1:30–2:40. D. S. Robson. Bioassay methods including parametric and nonparametric statistical analyses of quantal and graded response to controlled levels of single and multifactor stimuli; directional statistics as applied to animal orientation experiments, compartment models, and analyses; enzyme kinetics and pharmacokinetic analysis; bioavailability.

713 Experiment Design Fall. 4 credits. Prerequisites: Either Statistics 416 and 602 or equivalent. Offered alternate years. Not offered 1982–83. Principles and techniques of experimentation, theoretical concepts, extensions and variations of the completely randomized, generalized blocked, and generalized row-column experiment designs, repeated measures designs, interval estimation for ranked means, transformations, unequal variances, additivity, residual analyses, sample size, variance component analyses, unequal number analyses, the place of orthogonality, balance and confounding in design, model selection, and advanced statistical methodology.

714 Treatment Design and Related Experiment Designs Fall. 4 credits. Prerequisites: Statistics 416–417 and 602. Offered alternate years. Lecs, T 8–9:50; disc to be arranged. W. T. Federer. Treatment design, the selection of treatments for an experiment, is divided into factorial, response surfaces, mixtures, and combinations of these. Single degree of freedom contrasts and error variance. Factorial designs, theory for prime powers and nonprime powers, confounding, split plot, split block, complex confounded designs, lattice designs derivable from pseudofactorial theory, fractional replication, response surface designs, and designs and analyses for mixtures, including diallel crossing designs, are covered. Statistical analyses involving residual analyses and real data are included. Emphasis is on concepts and applications rather than mathematical manipulations.

717 Linear Models Spring. 3 credits. Prerequisites: Statistics 409, 417, and 602 or Mathematics 472. S-U grades only. Offered alternate years. Not offered 1982–83. Lecs, T R 8:30–9:40. C. E. McCulloch. Introduction to orthogonal variables and distribution of quadratical forms; linear statistical models, estimable functions and testable hypotheses, regression models, experimental design models, and variance component models and combinations thereof.

799 Statistical Consulting Fall and spring. 2 credits. Limited to graduate students. Consulting, 1 hour a week; disc, 1 hour a week; hours to be arranged. Staff. Participation in the Biometrics Unit consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered by the service during previous weeks.

890–990 Research Fall or spring. Credit to be arranged. Limited to candidates for graduate degrees. Prerequisite: graduate field member concerned. S-U grades only. Research at the M.S. (890) or Ph.D. (990) level.

Vegetable Crops

123 Organic Gardening Spring. 2 credits. Each section limited to 20 students. Primarily for students not enrolled in the College of Agriculture and Life Sciences. Prerequisite: permission of instructor. M T W R 1:25–4:25. W. C. Kelly. Students must be prepared to lead a discussion and write a paper on any aspect of home gardening or amateur horticulture. Organic methods of gardening are discussed and demonstrated, but other methods are not excluded from the discussions.

210 Vegetable Types and Identification Fall. 2 credits. T 10:10–12:05 or 2–4: L. D. Topoleski. Acqui...

211 Commercial Vegetable Crops Fall. 4 credits. Each section limited to 25 students. Prerequisites: Vegetable Crops 103 and Agronomy 200.
Faculty Roster

Abawi, George S., Ph.D., Cornell U. Assoc. Prof., Agricultural Economics
Acree, Terry E., Ph.D., Cornell U. Prof., Food Science and Technology (Geneva)
Ansel, Harry R., Ph.D., Kansas State U. Prof., Animal Science
Aplin, Richard D., Ph.D., Cornell U. Prof., Agricultural Engineering
Anderson, Bruce L., Ph.D., U. of California at Berkeley. Asst. Prof., Agricultural Economics
Anderson, Ronald E., Ph.D., U. of Wisconsin. Assoc. Prof., Plant Breeding and Biometry
Aggar, Barbara J., Ph.D., Cornell U. Asst. Prof., Animal Science
Aplin, Richard D., Ph.D., Cornell U. Prof., Agricultural Economics
Amsden, Phil A., Ph.D., U. of Wisconsin. Assoc. Prof., Plant Pathology
Austin, Richard E., Ph.D., U. of California at Davis. Assoc. Prof., Poultry and Avian Sciences
Aparicio, Mark G., Ph.D., Cornell U. Asst. Prof., Communication Arts
Baer, Richard A., Ph.D., Harvard U. Assoc. Prof., Natural Resources
Bail, Joe P., Ph.D., Michigan State U. Prof., Education
Baker, Robert C., Ph.D., Purdue U. Prof., Poultry and Avian Sciences
Bandy, David K., M.P.S., Cornell U. Assoc. Prof., Food Science
Barbano, David M., Ph.D., Cornell U. Asst. Prof., Food Science
Barker, Randolph, Ph.D., Iowa State U. Assoc. Prof., Agricultural Economics
Barrett, James A., Ph.D., Purdue U. Asst. Prof., Agricultural Engineering
Bauman, Dale E., Ph.D., U. of Illinois. Prof., Animal Science
Bayer, George H., Ph.D., Cornell U. Prof., Vegetable Crops
Beer, Steven V., Ph.D., U. of California at Davis. Assoc. Prof., Plant Pathology
Beheimann, Donald H., Ph.D., U. of Wisconsin. Asst. Prof., Animal Science
Bergstrom, Gary C., Ph.D., U. of Kentucky. Asst. Prof., Plant Pathology
Berkeley, Arthur L., Ph.D., Michigan State U. Prof., Education
Bills, Nelson L., Ph.D., Washington State U. Assoc. Prof., Agricultural Economics
Bing, Arthur, Ph.D., Cornell U. Prof., Floriculture and Ornamental Horticulture
Biondoff, David, Ph.D., Manchester U. Assoc. Prof., Agricultural Economics
Bloom, George D., Ph.D., Michigan State U. Prof., Pomology
Bloom, Stephen E., Ph.D., Penn State U. Prof., Poultry and Avian Sciences
Bixler, Richard N., Ph.D., U. of Minnesota. Assoc. Prof., Agricultural Economics
Boudreau, James W., Ph.D., Penn State U. Prof., Floriculture and Ornamental Horticulture
Bouldin, Harlan B., Ph.D., Iowa State U. Prof., Plant Pathology
Bourke, John B., Ph.D., Oregon State U. Prof., Food Science and Technology (Geneva)
Bourne, Malcolm C., Ph.D., U. of California at Davis. Prof., Food Science and Technology (Geneva)
Bouchette, Pierre-Yves, Ph.D., Cornell. Asst. Prof., Plant Breeding and Biometry
Bowers, William S., Ph.D., Purdue U. Prof., Entomology (Geneva)
Broyde, Brian, Ph.D., U. of Nebraska. Asst. Prof., Animal Science
Brake, John R., Ph.D., North Carolina State U. W. L. Myers Professor of Agricultural Finance, Agricultural Economics
Broadwell, George J., Ph.D., Cornell U. Assoc. Prof., Cooperative Extension
Brodie, Billie B., Ph.D., North Carolina State U. Prof., Plant Pathology
Brown, William L., Jr., Ph.D., Harvard U. Prof., Entomology
Bruce, Robert L., Ph.D., Cornell U. Prof., Education
Brumsted, Harlan B., Ph.D., Cornell U. Assoc. Prof., Natural Resources
Brunk, Max E., Ph.D., Cornell U. Prof., Agricultural Economics
Bryant, Ray R., Ph.D., Purdue U. Asst. Prof., Agronomy
Butler, Walter R. Ph.D., Purdue U. Assoc. Prof., Animal Science
Buttle, Frederick H., Ph.D., U. of Wisconsin. Assoc. Prof., Rural Sociology
Call, David L., Ph.D., Cornell U. Prof., Agricultural Economics
Campbell, Joseph K., M.S., Cornell U. Assoc. Prof., Agricultural Engineering
Canepe, Harold R., Ph.D., Cornell U. Prof., Rural Sociology
Carruthers, Raymond H., Ph.D., Michigan State U. Asst. Prof., Entomology, Plant Breeding and Biometry
Cassida, George J., Ph.D., Purdue U. Asst. Prof., Plant Breeding and Biometry
Caster, George H., Ph.D., Purdue U. Prof., Agricultural Economics
Chapman, Lewis D., Ph.D., U. of California at Berkeley Prof., Agricultural Economics
Chase, Larry E., Ph.D., Penn State U. Assoc. Prof., Animal Science
Coffman, William R., Ph.D., Cornell U. Prof., Plant Breeding and Biometry
Collie, Royal D., Ph.D., Cornell U. Prof., Communication Arts
Combs, Gerald F., Jr., Ph.D., Cornell U. Assoc. Prof., Poultry and Avian Sciences
Compton, James L., Ph.D., U. of Michigan. Assoc. Prof., Education
Conneman, George J., Ph.D., Penn State U. Prof., Agricultural Economics
Conrad, Jon M. Ph.D., U. of Wisconsin. Asst. Prof., Agricultural Economics
Cook, Robert, Ph.D., North Carolina State U. Prof., Agricultural Engineering
Cowser, E. Walter, Ph.D., Iowa State U. Assoc. Prof., Rural Sociology

Zobel, Richard W., Ph.D., U. of California at Davis. Asst. Prof., Plant Breeding and Biometry/Agronomy
The college's courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the University. The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curriculum, the methods of teaching, and the extracurricular life of teachers and students.

Facilities

The college occupies Sibley Hall, Tjaden Hall, Rand Hall, and the Foundry. In Sibley are the facilities for architecture, and city and regional planning as well as certain administrative offices and the Fine Arts Library. The Department of Art is housed in Tjaden Hall. Sculpture and shop facilities are in the Foundry. The Green Dragon, a student lounge, is located in the basement of Sibley Hall. The college uses darkrooms that are available for general use and serve as laboratories for the photography courses. A darkroom fee must be paid by each user. Information about darkroom rules and regulations, hours, and equipment is available in the slide library.

Through the generosity of the late Mrs. Lillian P. Heller, the college also owns the home of William H. Miller, the first student to enroll for the study of architecture at Cornell and later a practicing architect in Ithaca. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

Libraries

The Fine Arts Library in Sibley Dome serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, and city and regional planning. The library, with more than 106,000 books, is capable of supporting undergraduate, graduate, and research programs. Some 1,800 serials are currently received and maintained. A slide library is maintained in Sibley Hall and contains extensive files of architectural history slides and a large and growing collection of slides of art and architecture from all parts of the world. The library now includes approximately 250,000 slides.

The facilities of the libraries of other schools and departments on campus and the Ohlin Library, designed primarily as a research library for graduate students, are also available.

Museums and Galleries

The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the University, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a new center for the visual arts at Cornell. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held. Current work of University students is shown in the exhibit areas in Sibley Hall and the gallery in Tjaden Hall.

College Academic Policies

Ownership of Student Work

All drawings, models, paintings, graphic art, and sculpture done in the college and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college for retention for academic purposes.

Exhibitions of Student Work

Exhibitions of student work will be held each semester as part of the yearly schedule of Tjaden Hall and the Hartell Gallery. These may display the work of a specific course or exhibit examples of the best recent work done.

Scholastic Standards

Term by term, a candidate for an undergraduate degree in this college is required to pass all courses in which the student is registered and have a weighted average for the term of not less than C (2.0). The record of each student who falls below the standard will be reviewed by the Student Records Committee for appropriate action, as described below:

1) Warning means that the student's performance is not up to expectations. Unless improvement is shown in the subsequent term, the student may be placed on final warning or may be suspended.

2) Final Warning indicates that the student's record is unsatisfactory. Unless considerable improvement is shown in the subsequent term, the student is subject to dismissal from the college.

3) Suspended: Academic Deficiency. The student is dismissed from the college and may not continue studies in the college. A student who has been suspended may apply for readmission after an absence of at least two semesters. Application for readmission is made by letter, addressed to the associate dean, College of Architecture, Art, and Planning. The student must submit evidence that his other time has been well spent since suspension, and, if employed, must submit a letter from an immediate superior. Readmission to the college after being suspended is at the discretion of the Admissions Committee.

4) Dismissed: May Not Reregister. College of Architecture, Art, and Planning. The student is dismissed from the college and is permanently prohibited from continuing studies in it. This dismissal does not preclude the possibility of applying for admission to another division of the University. The above actions are not necessarily sequential. A student who has received a warning may be suspended for academic deficiency at the end of the next term if the performance during that time is deemed to be grossly deficient.

It is necessary to have a cumulative average of at least C—(1.7) for graduation.

Architecture

Professional Degree Program

The first professional degree in architecture is the Bachelor of Architecture. This degree counts toward the professional registration requirements established by the various states and the National Council of Architectural Registration Boards. The professional program is normally five years in length and is designed particularly for people who, before they applied, had established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.

The program is oriented toward developing the student's ability to deal creatively with architectural problems on analytical, conceptual, and developmental levels. The sequence courses in design, consisting of studio work augmented by lectures and seminars dealing with theory and method, are the core of the program. Sequences of studies in human behavior, environmental science, structures, and building technology provide a base for the work in design.

In the first three years, the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years, this base may expand and be applied by further studies in these areas. Within the professional program, a basis for understanding architecture in its contemporary and historical cultural context is established.

The structure of the program incorporates considerable flexibility for the individual student to pursue his or her particular interest in the fourth and fifth years. By carefully planning options and electives in the fifth year, it is possible for a qualified student to apply the last year's work to the Bachelor of Architecture degree and to one of the graduate programs offered in the department. Some students are then able to complete the requirements for the master's degree in one additional year.

Washington Program

Fourth- and fifth-year students in good standing who have completed the requirements of the first three years of the curriculum are eligible for a term of study in Washington, D.C., with permission of the program director. Outstanding third-year students are admitted to the Washington program only by petition and a review of their design record. Courses offered by the department include design, introduction to the thesis, special problems in architectural design, a professional seminar, and a professional studies course. Additional courses are offered by other departments participating in the program. The Cornell facilities in Washington are in an excellent location adjoining DuPont Circle. The program provides a period of intensive exposure to the characteristics of urban development within the framework of a design studio. Content concentrates on urban design issues, restraints relative to financing, zoning, development criteria, adaptive reuse, and multiuse developments.

Overlap Program

For qualified students, the department offers an option that combines the fifth year of the undergraduate program with the first year of the Master of Architecture program. In the fall of the fourth undergraduate year, interested students petition the department to substitute Arch 601–602 for Arch 501–502 and Arch 510 (Thesis Introduction). At the same time, they complete graduate school applications and submit them with fee and portfolio to the Graduate Field Secretary for Architecture. Students accepted into the program may not normally begin until the fall of their fifth year and, once enrolled, may not transfer back into the 501–502 sequence.

Following admission into the Overlap Program, students may petition to apply toward the requirements of the master's degree a maximum of 30 credits, including Arch 601–602 and other advanced courses taken in excess of distribution requirements for the Bachelor of Architecture degree.

Transfer Students

Although the program leading to the Bachelor of Architecture is specifically directed to those who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed an undergraduate degree must also apply to transfer to the Bachelor of Architecture degree program, since the graduate program in architecture requires the Bachelor of Architecture degree or its equivalent for entrance.

Transfer students are responsible for completing that portion of the curriculum that has not been covered by equivalent work. Applicants who have had no previous work in architectural design must complete the ten-term design sequence. Since this sequence may be accelerated by attending summer terms seven or eight regular terms and two or three summer terms are typically required.

For those who would benefit from an opportunity to explore the field of architecture before deciding on a commitment to professional education, the department offers an introductory summer program that includes an introductory studio in architectural design, lectures, and other experiences designed to acquaint the participants with opportunities, issues, and methods in the field of architecture.
Admission is offered to a limited number of transfer applicants who have completed a portion of their architecture studies in other schools. Each applicant’s case is considered individually. Transfer students must complete a minimum of 70 credits and four terms in residence, taking 35 of the 70 credits (including four terms of design) in the Department of Architecture. Placement in the design sequence is based on a review of a representative portfolio of previous work.

**Nonprofessional Alternative Program**

After completing the first four years of requirements, the student may choose to receive the nonprofessional degree of Bachelor of Fine Arts (B.F.A.) in architecture.

The first two years of the professional program are considered a basic introduction to the field. It is possible after this phase to depart from the professional track and develop a concentration in some area of the broader field without the intention of becoming a licensed practicing architect. A student choosing an undergraduate nonprofessional major should apply in writing to the department chairperson by February 1 in the second year. The student will be interviewed and informed of acceptance by March 1.

A program developing a major concentration in the third and fourth years leading to the nonprofessional Bachelor of Science degree in history of architecture and urban development is available. A student attaining this degree can either terminate studies or apply to a graduate program in that area of concentration.

**History of Architecture and Urban Development**

The major in history of architecture and urban development is intended for undergraduate students interested in historical studies of architecture and planning offered in the context of a professional school. The program benefits from a tradition of pioneer work in the history of architecture and urban development that has grown at Cornell for several decades. Special features of the major are the availability of urban city and regional planning, and in preservation planning. Sixteen members of the college faculty offer courses appropriate for this major.

**Admission to the major.** Architectural history and urban development may be elected as a major if a student has completed Architecture 141 and 142 with a grade of B or better. Other students must petition for admission to the major.

**Requirements.** To satisfy the major subject requirements, a minimum of 40 credits of history coursework must be completed with a grade of C or better. Of these 40 credits, 26 must be in architectural history and urban development, with 8 of these 26 credits at the intermediate level or above. In addition, 8 credits must be taken in related fields such as history of art, archaeology, intellectual, cultural, or political history, and history of science.

Majors will be expected to meet the language requirement in the manner specified for students enrolled in College of Arts and Sciences.

**Honors program.** Students who want to enroll in the honors program must indicate their intention in writing before the end of their junior year and be accepted for the program by the history of architecture faculty. Minimum requirements for admission to candidacy for honors are:

1. a cumulative average of B— or better in all courses
2. a cumulative average of B or better in all history of architecture and urban development courses

Honors candidates will take a 4-credit research course in the fall of their senior year. In the spring there will be a 4-credit session during which they will prepare and defend an architectural history presentation or demonstration, or a paper approximately fifty pages long.

**Curriculum.** Students must have already completed the first two years of the Bachelor of Architecture curriculum, for a total of 70 credits.

**Third Year**

**Summer Term in Architecture**

The summer term offers students the opportunity of a concentrated period of design work. Design is offered at both undergraduate and graduate levels; the term is six to eight weeks in duration.

Undergraduate design sequence courses are offered at second- through fifth-year levels in Ithaca. Normally, there is also a design program abroad for the fourth- and fifth-year students. Registration is limited to students in good standing who have completed the sophomore year of study. In exceptional cases, a student who has completed only one year of study may be allowed to register.

Students from schools of architecture other than Cornell are welcome to apply to the college for admission to any summer programs.

<table>
<thead>
<tr>
<th>Fall and spring</th>
<th>Credits</th>
</tr>
</thead>
</table>
| At the graduate level, the summer term is devoted to problems forming part of the student’s program of work. The term may carry residence credit equal to that of a normal academic term. Participation in the program cannot be undertaken without the consent of the student’s Special Committee.
| **Architectural Design Courses**

A studio fee of $10 is charged each semester for every design course.

**Sequence Courses**

101 Design I Fall. 6 credits. Limited to department students. Students and lecs. M W F 2–6. Staff.

An introduction to design as a conceptual discipline directed at the analysis, interpretation, synthesis, and transformation of the physical environment. Exercises are aimed at developing an understanding of the issues, elements, and processes of environmental design.

102 Design II Spring. 6 credits. Limited to department students. A continuation of Architecture 101.

Lectures and sems. M W F 2–6. Staff. Human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

301–302 Design V and VI Fall and spring. 6 credits each term. Limited to department students. Students and sems. M W F 2–6. Staff.

401–402 Design VII and VIII Fall and spring. 6 credits each term. Programs in architectural design, urban design, or architectural technology and environmental science are offered each term.

501 Design IX Fall or spring. 6 credits. Students and sems. M W F 2–6. Staff.

502 Design X—Thesis Fall or spring. 8 credits. Required of B.Arch candidates, who must satisfactorily complete a thesis during one term of their last year in residence. Students accepted for admission to the Overlap Program are exempt from the thesis requirement. Students, M W F 2–6. Staff.

503–504 Design IX—Thesis I, and Design X—Thesis II Fall or spring. 8 credits each term. Prerequisite: permission of department. Students, M W F 2–6. Staff.

Students who have obtained approval may elect to spend two terms working on the thesis.

510 Thesis Introduction Fall or spring. 3 credits. Required of all architecture students in the year preceding work on their thesis. Lectures, seminars, and independent research leading to complete development of the student’s thesis program. General instruction in the definition, programming, and development of a thesis is followed by tutorial work with the student’s advisory committee.

601–602 Special Program in Architectural Design Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only.

603–604 Special Program in Urban Design Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only.

**Elective Design Courses**

111–112 Elective Design Studio 111, fall; 112, spring. 6 credits each term. Limited to students from outside the department. Prerequisite: permission of instructor. Students and lecs. M W F 2–6. Staff.

200, 300, 400, 500 Elective Design Fall or spring. 6 credits each term. Open by permission to transfer students who have not been assigned to a sequence course. Prerequisite: permission of department office. Each student is assigned to a class of appropriate level. Students and lecs. M W F 2–6. Staff.
Nonsequence Courses

310 Special Problems in Architectural Design
Fall or spring. Registration and credit by arrangement.
Hours to be arranged. Staff. Independent study.

[611–612 Urban Housing Developments 611, fall;
612, spring. 2 credits each term. Limited to fourth-
and fifth-year students in architecture, and graduate
students. Prerequisite: permission of instructor. Not
offered 1982–83.
Sem. hours to be arranged. O. M. Ungers.
Large-scale housing developments, particularly size,
density, and problems of infrastructure.]

[613 Transportation Fall. 2 credits. Prerequisite:
permission of instructor. Not offered 1982–83.
Sem. hours to be arranged. P. Cohen.
The impact of various transportation forms on the
environment are considered from the perspectives of
architects, engineers, planners, and human
ecologists. Readings and discussions of past,
current, and future transportation modes focuses on
aesthetic and physical aspects.]

614 Low-Cost Housing Fall or spring. 3 credits.
Prerequisite: permission of instructor.
Sem. hours to be arranged. F. O. State, H. W. Richardson.
Aspects of low-cost housing involving engineering
technology, architecture, physical planning,
economics, and sociology.

[618–619 Seminar in Urban and Regional
Design 618, fall; 619, spring. 3 credits each term.
Limited to fifth-year and graduate students. Not
offered 1982–83.
Hours to be arranged. O. M. Ungers, staff, and
guest lecturers.
A broad range of issues and problems of urban and
regional development and the context in which the
designer functions are surveyed. Selected case
studies are presented by the participants and
visitors.]

Graduate Courses

711–712 Problems in Architectural Design
Fall and spring. 9 credits each term.
Studio and seminar. Hours to be arranged.
W. Goehner.
Basic first-year design course for graduate students
whose major concentration is architectural design.

713–714 Problems in Urban Design
Fall and spring. 9 credits each term.
Studio and seminar. Hours to be arranged. C. Rowe.
Basic first-year design course for graduate students
whose major concentration is urban design.

811 Thesis or Research in Architectural Design
Fall or spring. 9 credits.
Hours to be arranged. W. Goehner.
Second-year design course for graduate students
whose major concentration is architectural design.

812 Thesis or Research in Urban Design
Fall or spring. 9 credits.
Hours to be arranged. C. Rowe.
Second-year design course for graduate students
whose major concentration is regional design.

Structures Courses

[002 Basic Mathematics
Fall or spring. 2 credits. Limited to freshmen. Credits earned for this course may not be applied toward credits required for graduation. Not offered 1982–83.
Hours to be arranged. F. W. Saul.
A review of basic mathematics.]

Sequence Courses

221 Mathematical Techniques
Fall. 3 credits. Lec., T R 10:10–11:10, 3 credits to be arranged.
Mathematics department staff.
Mathematical concepts and operations used in
architecture are introduced.

222 Structural Concepts
Fall or spring. 4 credits. Prerequisite: Architecture 221 or approved
equivalent.
Fundamental concepts of structural behavior. Statics
and strength of materials.

231 Structural Systems I
Fall. 3 credits. Prerequisites: Architecture 221 and 222.
Structural design concepts and procedures for steel
building construction.

232 Structural Systems II
Spring. 3 credits. Prerequisite: Architecture 222.
Structural design concepts and procedures for reinforced concrete building construction.

Nonsequence Courses

[323 Advanced Steel Building Design
Fall. 3 credits. Prerequisites: Architecture 321 and
permission of instructor. Not offered 1982–83.
Sem. hours to be arranged. F. W. Saul.
Design and investigation of advanced systems of
steel building structure, plastic design of continuous
beams, rigid frames, and high-rise buildings.]

326 Building Substructure
Spring. 3 credits. Prerequisites: Architecture 322 or concurrent
registration and permission of instructor.
Sem. hours to be arranged. F. W. Saul.
The principles of soil mechanics and subsurface
exploration. Design of building foundations—footings,
piles, and subgrade walls.

Architectural Principles, Theories, and Methods Courses

Sequence Courses

131 Introduction to Architecture
Fall. 2 credits. Open to students in other colleges.
Lec., T 3:35–5:30. Staff.
The built and natural environments are introduced as a
context for culture. Architecture as an
environmental-design discipline and its relation to
other fields is discussed.

231 Architectural Elements and Principles
Fall. 2 credits. Architecture students must register
concurrently with Architecture 201.
Lectures and seminars, T R 1:30–3:25. Staff.
Theory of the order, perception, and function of
architectural space. Discourse on the nature of
architectural systems and the multiplicity of ways they
are used to solve architectural problems.

232 Design Methods and Programming
Spring. 2 credits. Architecture students must register for this
course concurrently with Architecture 202.
Lectures and seminars, T 1:30–3:25. Staff.
Basic methods for developing architectural
programs. Programming as a conceptual as well as a
descriptive task is emphasized. Basic methods of
design. Analytic and synthetic skills are stressed.

Nonsequence Courses

331 Special Problems in Principles, Theories,
and Methods
Fall or spring. Registration and credit by arrangement with instructor.
Hours to be arranged. Staff. Independent study.

333–334 Computer Graphics (also Computer
Science 417–418)
333, fall; 334, spring. 4 credits. Prerequisites: two terms of calculus and Computer
Science 211, or equivalent.
Introduction to the principles of interactive computer
graphics, including input techniques, display
device, display files, interactive graphics techniques,
two- and three-dimensional computer graphics,
perceptual transformations, hidden line and hidden
surface algorithms, and color-picture generation.

335 Theory of Architecture
Fall or spring. 3 credits each term. Prerequisite: Architecture
231–232 or permission of instructor.
Lecs., T R 4:40–6:30 p.m. L. Hodgden.

337 Special Investigations in the Theory and
History of Architecture I
Fall or spring. Variable credit. Prerequisite: permission of the
instructor. Hours to be arranged. Staff. Independent study.

437–438 Special Projects in Computer Graphics
437, fall; 438, spring. Variable credit. Limited to third-year students and above.
Prerequisites: Architecture 334 plus concurrent registration in
Computer Science 314 or equivalent, and permission of
instructor.
Hours to be arranged. D. P. Greenberg.
Advanced work in computer graphics input and
display techniques, including storage tube, dynamic
vector, and color raster displays.

531–532 Computer-Aided Structural Design
531, fall; 532, spring. 4 credits each term. Limited to
fourth-year students and above. Prerequisites: Architecture
334 and Engineering CEE 3301–3302.
Structural Engineering, concurrent registration in CEE
6312, Advanced Structural Analysis, and permission
D. P. Greenberg.
Advanced topics involving interactive computer
graphics and advanced structural analysis
techniques.]

533–534 Computer-Aided Environmental Design
533, fall; 534, spring. 4 credits each term. Limited to
students in their fourth or later year. Prerequisites:
Architecture 334, 362; one year of college physics,
and permission of instructor. Not offered 1982–83.
Staff.
Advanced topics involving interactive computer
graphic and advanced environmental design
techniques. Topics may include acoustics, lighting,
and energy analyses.

635 Critical Theory in Architecture
Fall or spring. 3 credits. Prerequisite: permission of the
Hours to be arranged. Staff. An inquiry into the fundamental principles of
architectural criticism in theory and practice, with
emphasis on the philosophical problems involved.

637 Special Investigations in the Theory and
History of Architecture II
Fall or spring. Variable credit. Prerequisite: permission of the
instructor. Hours to be arranged. Staff. Independent study.

639 Principles of Design Process
Fall. 3 credits. Limited to third-year architecture students and above.
Students in other colleges must have permission of
Analysis of the major theories and techniques of
design developed during the past fifteen years, with
special emphasis on application to the solution of
whole problems in architectural design.

Note: 687–688 Architecture in Its Cultural
Context I and II is accepted as a theory course.
Architectural History Courses

Sequence Courses

141–142 History of Architecture I and II  Fall; 142, spring. 3 credits each term. Students in other colleges may take either or both terms for credit.

History of architecture as social and cultural expression of Western civilization. Selected examples from Mesopotamia to the eighteenth century are considered in 141; history of modern architecture is discussed in 142.

Nonsequence Courses

[244 History of Preindustrial Building  Spring. 4 credits. Not offered 1982–83.

Lecs, hours to be arranged. Staff.
The development of traditional architectural elements and forms; materials, methods, and design expression.]

[340 Architecture of the Ancient Near East  Spring. 3 credits. Prerequisite: Architecture 141 or permission of instructor. Not offered 1982–83.

Lecs, hours to be arranged. Staff.
Architecture of the oldest historic civilizations associated with Western tradition. Emphasis on Egypt, Mesopotamia, and Anatolia.]

[341 Architecture of the Classical World  Fall. 3 credits. Prerequisite: Architecture 141 or permission of instructor. Not offered 1982–83.

T R 9:05–11. Staff.
Architecture of the ancient Mediterranean civilizations, with emphasis on Greece and Rome.]

Lecs, T R 9:05–11. A. Senkevitch.
A survey of Russian architecture and city planning from the late tenth century to the present, with consideration of foreign influences and parallel developments.]

343 Introduction to the History of Urban Planning (also City and Regional Planning 460)  Fall. 3 credits.

Survey of urban planning in Western civilization from the Greeks and Romans through medieval Renaissance to modern Europe and colonial and nineteenth-century America.

[344 Islamic Architecture  3 credits. Prerequisite: permission of the instructor. Not offered 1982–83.

Lec, hours to be arranged.]

345 Nineteenth-Century Architecture  Spring 3 credits. Prerequisites: Architecture 141–142 or permission of instructor.

Hours to be arranged. A. Senkevitch.
An examination of architectural developments in the nineteenth century, with emphasis on the rationalist tradition developed in France and the picturesque tradition developed in England.

346 The Renaissance  Fall or spring. 3 credits.

Prerequisites: Architecture 141–142 and permission of instructor.

European architecture and city planning of the fifteenth and sixteenth centuries.

347 The Baroque  Fall or spring. 3 credits.

Prerequisites: Architecture 141–142 and permission of instructor.

European architecture and city planning of the seventeenth and eighteenth centuries.

348 American Architecture I and II  Fall and spring. 3 credits. Prerequisites: Architecture 141–142 or permission of instructor.

Lecs. M W 11:15–1:10. Staff
Fall: building in the United States from the colonial period through 1860. Spring: building after 1860.

349 Modern European Architecture  Fall or spring. 3 credits. Prerequisite: permission of instructor.

M W 11:15–1:10. C. F. Otto
A survey of nineteenth- and twentieth-century architecture and city planning in Europe.

442 Historical Seminars in Architecture  Fall or spring. 2 credits. Prerequisite: permission of instructor.

Hours to be arranged. Staff.
Using historical evidence, students prepare papers discussing problems relating to design or architecture.

445 Special Investigations in the History of Architecture  Fall or spring. Variable credit. Prerequisite: permission of instructor.

Hours to be arranged. Staff.
Independent study.

447 History Workshop  Fall or spring. Variable credit. Not offered 1982–83.

Sem, hours to be arranged. Staff.
]

448 Lectures in Architectural History  Fall or spring. Variable credit. Prerequisite: permission of instructor.

Lec, hours to be arranged. Staff.
A series of one or two lectures a week on topics related to architectural history.

542 Methods of Archival Research (also City and Regional Planning 563)  Fall. 3 credits. Prerequisite: Architecture 141 or permission of instructor.

Examination of methods of using archival materials, including documents in the Cornell archives and regional history collection, for research in the history of architecture, historic preservation, and urban development.

543 Measured Drawing  Fall. 3 credits. For undergraduate architecture students and graduate students in history and preservation. Prerequisite: permission of instructor.

Considers problems of using archival materials for the preparation and analysis of building plans and the preparation of a finished drawing for publication.

544 Problems in Contemporary Preservation Practice (also City and Regional Planning 563)  Fall or spring. Variable credit.

A review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed, presented by staff and guest lecturers.

545 Perspectives on Preservation (also City and Regional Planning 562)  Fall. 3 credits.

Introductory course for preservation planning. The rationale for, and methods of using existing cultural and aesthetic resources in the planning and design of regions and cities.

546 Documentation for Preservation Planning (also City and Regional Planning 560)  Fall. 3 credits.

Methods of collecting, recording, processing, and analyzing architectural and urban planning material.

547 Historic Preservation Planning Workshop: Surveys and Analyses (also City and Regional Planning 561)  Fall and spring. 4 credits.

Design Communication Courses

Sequence Courses

151 Design Fundamentals I Fall. 2 credits.
Studio and lec. R 2–6. Staff.
Fundamentals of visual and conceptual organization. Dynamics of perception, spatial organization and its representation. Demonstrative problems of an analytic and conceptual nature.

152 Design Fundamentals II Spring. 2 credits.
Studio and lec. R 2–6. Staff.
Theory of visual and conceptual organization, spatial perception, spatial organization and its representation, demonstrative problems of an analytic and conceptual nature.

Nonsequence Courses

251 Introductory Photo I (also Art 261) Fall or spring. 3 credits each term.
Hours to be arranged. Staff.
For course description, see Art 261.

252 Introductory Photo II (also Art 262) Spring. 3 credits. Prerequisites: Architecture 251 or 252, or Art 161–162, 261, or permission of instructor.
Hours to be arranged. Staff.
For course description, see Art 262.

262 Building Technology, Materials, and Methods Fall or spring. 3 credits.
Properties of materials—their use and application to the design of buildings and building systems. Discussion of various methods of building construction and assembly.

266 Environmental Controls—Site Planning Fall for spring. 3 credits.
The basic principles involved in design in the outdoor environment. A brief historical perspective including Italian, French, and Japanese prototypes. A development of inventory, design, and graphic communication tools and conventions. Grading, runoff, and planting design. Special attention is placed on the design of the microclimate.

267 Building Technology, Materials, and Methods Fall or spring. 3 credits.
Properties of materials—their use and application to the design of buildings and building systems. Discussion of various methods of building construction and assembly.

265 Environmental Controls—Lighting and Acoustics Fall or spring. 3 credits each term.
Basic properties and principles of sound and light. Sound phenomena, noise control, absorption, acoustical design. Light, color, and form. Natural lighting possibilities and constraints. Good and bad examples of artificial lighting.

266 Environmental Controls—Mechanical and Passive Solar Systems Fall or spring. 3 credits each term.
The mechanical engineer's task and its relation to the architectural design process. Full-scale and model studies of the role of air movement and temperature in building design. Passive and active solar energy design.

Nonsequence Courses

266 Environmental Technology Workshop I Fall. 2 credits.
Studio. Hours to be arranged. R. Crump.
The tasks of the acoustical consultant, the electrical engineer, and the illumination consultant in relation to the architect's work. Acoustical and lighting design studies using full-scale mock-ups and specific building type studies. Cost factors.

266 Environmental Technology Workshop II Spring. 2 credits. Prerequisite or corequisite: Architecture 362.
Studio. Hours to be arranged. R. Crump.
The influences of the environment on the design of buildings and urban developments. Lecture and workshop exercises use the wind tunnel and artificial sun.

561 Special Problems in Architectural Science Fall or spring. Variable credit. Prerequisite: permission of science staff instructor.
Hours to be arranged. Staff.
Independent study.

662 Environmental Control Systems Spring. 3 credits. Lecture and seminar. Prerequisite: Architecture 362.
Hours to be arranged. R. Crump.
The influences of the environment on the design of buildings and urban developments. Lecture and workshop exercises use the wind tunnel and artificial sun.

667–668 Architecture in Its Cultural Context I and II 667. Fall; 668, spring. 4 credits each term.
Prerequisite: permission of instructor.
Fall term, theory; spring term, problem solving and method. An examination of the relationship between architecture and other aspects of culture. Emphasis on the motivations for particular architectural forms and especially on theories of architecture. Examples from the United States and Asia.

Graduate Courses

761–762 Architectural Science Laboratory 761, fall; 762, spring. Variable credit. Open to graduate students only.
Hours to be arranged. Staff.
Projects, exercises, and research in the architectural sciences.

763–764 Thesis or Research in Architectural Science 763, fall; 764, spring. Variable credit. Limited to graduate students.
Hours to be arranged. Staff.
Independent study.

The Profession of Architecture

Sequences Courses

481 Professional Practice Fall or spring. 3 credits each term.
T 1:25–4:25. Staff.
An examination of organizational and management theories and practices for delivering professional design services. Included are an assessment of the building industry and its influence on practice; an analysis of the basic management functions within professional firms; and the legal concerns facing practitioners today. Sessions with selected guest participants focus on case studies.

Architectural Drawing

191 Drawing I Fall. 2 credits.
Studios, T R 9:05–11. Staff.
Freehand drawing with emphasis on line and perspective representation of form and space.

192 Drawing II Spring. 2 credits. Prerequisite: Architecture 191.
Studios, T R 9:05–11. Staff.
Freehand drawing as a means of conceiving and expressing spatial form; line weight, shades and shadows, and figure drawing.

Art

Undergraduate Program

The undergraduate curriculum in art, leading to the degree of Bachelor of Fine Arts, provides an opportunity for the student to combine a general liberal education with the studio concentration required for a professional degree. During the first three semesters, all students follow a common course of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience in painting, sculpture, photography, and the graphic arts in the last three years. Beginning with the fourth term, students concentrate on painting, sculpture, photography, or printmaking. They may elect additional studio work in any of these subjects during the last two years, with the consent of the instructor; providing the courses are taken in sequence and at the hours scheduled. These courses are designed to promote a knowledge and critical understanding of these arts and to develop the individual student's talent. All members of the faculty in the Department of Art are active, practicing artists whose work represents a broad range of expression.
Studio courses occupy approximately one-half of the student's time during the four years at Cornell; the remainder is devoted to a diversified program of academic subjects with a generous provision for electives.

The curriculum in art is an independent program of study within the College of Architecture, Art, and Planning. However, the intimate relationships between the fine arts and training in architecture and city planning is a source of special strength in the Cornell program and affords unusual benefits to the students in these three disciplines.

Although the undergraduate curriculum in art is an excellent background for a career in applied art and offers courses in the use of graphics in modern communications, no specific technical courses are offered in such areas as interior design, fashion, or commercial art.

The department discourages accelerated graduation. However, a student may petition for consideration of early graduation upon the following terms and conditions: (1) the petition must be submitted to the faculty before course enrollment in the spring semester of the student's junior year, and (2) the student must have a cumulative average that places him or her in the first quarter of the class.

A candidate for the B.F.A. degree who also wants to earn a Bachelor of Arts degree from the College of Arts and Sciences can arrange to do so. This decision should be made early in the candidate's career (preferably before the third semester) so that he or she can petition to be registered in both colleges simultaneously. Each student is assigned an adviser in the College of Arts and Sciences to provide needed guidance. Those students who are interested primarily in the history rather than in the practice of art should apply for admission to the College of Arts and Sciences with the objective of pursuing a major in the Department of History of Art in that college. Department of Art studio courses may then be taken as electives.

**Third and fourth years.** Students in the third and fourth years should plan their programs to complete 30 credits in courses in one of the following studio areas: painting, sculpture, graphics, or photography. Or, they should plan to complete 20 credits in each of the two above areas. An additional 12 credits in history of art at the 200 level or higher or in architectural history must also be completed. Students are expected to take 32 credits in their third and fourth years respectively.

The B.F.A. program is designed so that students may fulfill the degree requirement of 130 credits with a minimum of 66 credits taken in the Department of Art and a minimum of 50 credits taken outside the department. Within these ranges, students may design their own programs subject to the following limitations:

1. Of the minimum of 50 elective credits to be taken outside the Department of Art, four courses must be in English, history, or other humanities offered in the College of Arts and Sciences. In the first two years, 6 credits in history of art at the 200 level or higher or in architectural history must be completed. An additional 12 credits in art history at the 200 level or higher, or in architectural history, must be completed in the last two years.

2. Of the minimum of 66 credits to be taken within the Department of Art, the following courses must be completed in the first two years: 110, Color, Form, and Space; 111, Introductory Art Seminar; 151–152, Introductory Drawing; 251–252, Second-Year Drawing. The following sequences must also be completed in the first two years: 121–122, Introductory Painting; 141–142, Introductory Sculpture; 261, Introductory Photography I; 262, Introductory Photography II; or 361, Third-Year Photography. Credit I. Students must also take two of the following three courses by the end of the fourth semester: 131–132, Introductory Intaglio Printing; 133–134, Introductory Silk-Screen Printing; 135–136, Introductory Lithography. Students must also complete Art 310, Issues in Contemporary Art.

The University requirement of two terms in physical education must be met.

A candidate for the B.F.A. degree at Cornell is required to spend the last two terms of candidacy in residence at the University, subject to the conditions of the Cornell faculty legislation of November 14, 1962.

Students who transfer into the undergraduate degree program in art must complete a minimum of four terms in residence at Cornell and a minimum of 60 credits at the University, of which 30 credits must be taken in the Department of Art, including four terms of studio work.

**Course Information**

Most courses in the Department of Art are open to students in any college of the University who have fulfilled the prerequisites and who have permission of the instructor. Fees are charged for all Department of Art courses. For fine arts majors, the fee is $20 each semester. Students from outside the department are charged $10 a course.

Studio Courses in Graphic Arts

131–132 Introductory Intaglio Printing 131, fall; 132, spring and summer, 3 credits each term.
A basic introduction to etching techniques with emphasis on engraving, lift ground, relief printing, monotypes, and experimental techniques.

133–134 Introductory Silk-Screen Printing 133, fall; 134, spring, 3 credits each term.
A basic introduction to fine-art silk-screen printing. Students explore the use of lacquer film, paper stencil, tusche and glue, and other commonly used procedures of serigraphy.

135–136 Introductory Lithography 135, fall; 136, spring, 3 credits each term.
The theory and practice of planographic, utilizing limestone block and aluminum plate. Basic lithographic techniques of crayon, wash, and transfer art are studied.

231–232 Second-Year Intaglio Printing 231, fall; 232, spring, 3 credits each term. Prerequisite: 131 or permission of instructor.
Continuation of the study and practice of methods of intaglio printing with emphasis on techniques and color.

233–234 Second-Year Silk-Screen Printing 233, fall; 234, spring, 3 credits each term. Prerequisite: 133 or 134.
Fall: T R 1:25–4:25; spring: T R 8–11. S. Poleskie.
Continuation of silk-screen printing, including photographic stencils, three-dimensional printing, and printing on metal, plastic, and textiles.

235–236 Second-Year Lithography 235, fall; 236, spring, 3 credits each term. Prerequisite: 135 or 136.
Continuation of the study and practice of planographic printing with emphasis on color.

331 Third-Year Printmaking Fall, 4 credits. Prerequisite: 231 credits of course work in an area of specialization (intaglio, lithography, or silk-screen printing) or permission of instructor.
Fall: T R 1:25–4:25. Staff.
Study of the art of graphics through both assigned and independent projects. Work may concentrate in any one of the graphic media or in a combination of media.

332 Third-Year Printmaking Spring, 4 credits. Prerequisite: 331 or permission of instructor. Hours to be arranged. Staff.
Continuation and expansion of 331.

431 Fourth-Year Printmaking Fall, 6 credits. Prerequisites: 331–332, or permission of instructor. Hours to be arranged. Staff.
Further study of the art of graphics through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

432 Senior Thesis in Printmaking Spring, 6 credits. Prerequisite: 431 or permission of instructor. Hours to be arranged. Staff.
Advanced printmaking project to demonstrate creative ability and technical proficiency.

731–732, 831–832 Graduate Printmaking 731 and 831, fall; 732 and 832, spring. Credit as assigned; may be repeated for credit. Limited to M.F.A. candidates in graphic arts. Prerequisite: permission of instructor. Staff.
Students are responsible, under staff direction, for planning their own projects and selecting the media in which they will work. Members of the staff are available for consultation; discussion sessions of work in progress are held.

Studio Courses in Sculpture

141–142 Introductory Sculpture 141, fall and summer; 142, spring, 3 credits each term.
Sec 1, M W 8–11; sec 2, T R 8–11; sec 3, T R 3:35–6:35. Staff.
A series of studio problems introduce the student to the basic considerations of artistic expression through three-dimensional design. Modeling in Plasteline, building directly in plaster, and casting in plaster.

241–242 Second-Year Sculpture 241, fall; 242, spring, 3 credits each term. Prerequisites: nonmajors, none; majors, Art 141–142.
Various materials including clay, plaster, wood, and stone are used for exercises involving figurative modeling, abstract carving, and other aspects of three-dimensional form and design.

341 Third-Year Sculpture Fall, 4 credits. Prerequisite: 242.
Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

342 Third-Year Sculpture Spring, 4 credits. Prerequisite: 341.
Staff.
Continuation and expansion of 341.

441 Fourth-Year Sculpture Fall, 6 credits. Prerequisite: 342.
Continued study of art of sculpture through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

442 Senior Thesis in Sculpture Spring, 6 credits. Prerequisite: 441.
Staff.
Advanced sculpture project to demonstrate creative ability and technical proficiency.

741–742, 841–842 Graduate Sculpture 741 and 841, fall; 742 and 842, spring. Credit as assigned; may be repeated for credit. Limited to M.F.A. students in sculpture.
Staff.
Students are responsible, under staff direction, for planning their own projects and selecting the media in which they are to work. All members of the staff are available for individual consultation. Weekly discussion sessions of works in progress are held.

Studio Courses in Photography

261 Introductory Photo I (also Architecture 251–252) Fall, spring, or summer, 3 credits each term. Darkroom fee, $35 (may increase). Hours to be arranged. J. Locoy.
A basic lecture-studio course in black and white photography for beginners. Emphasis is on basic camera skills, darkroom techniques, and understanding of photographic imagery.

262 Introductory Photo II (also Architecture 351) Spring, 3 credits. Prerequisites: Art 261, Arch 251 or 252, or permission of instructor. Darkroom fee, $35 (may increase).
J. Locoy.
A continuation of Introductory Photo I.

361 Third-Year Photo: Color I Fall, 4 credits. Prerequisite: Art 261 or 262 or permission of instructor. Darkroom fee, $35 (may increase).
A studio course in color photographic processes, including color film developing and color printing. Emphasis is on camera skills, color techniques, image content, and creative use of color photography.

362 Third-Year Photo: Color II Spring, 4 credits. Prerequisite: Art 361 or permission of instructor. Darkroom fee, $35 (may increase).
Hours to be arranged. S. Bowman.

363–364 Photo Processes Fall, 4 credits each term. Prerequisite: Art 261 or 262 or permission of instructor. Darkroom fee, $35 (may increase). Not offered fall 1982.
Hours to be arranged. J. Locoy.
A studio course in photo and nonsilver processes. Emphasis is on camera skills, basic techniques and processes, image content, and creative use of photo processes.

365–366 Large-Format Photography Fall, 4 credits each term. Prerequisite: Art 261 or 262 or permission of instructor. Darkroom fee, $35 (may increase). Not offered fall 1982.
Hours to be arranged. Staff.
A studio course in the use of large-format cameras, with emphasis on technique and creative use of materials and equipment.

461 Fourth-Year Photography Fall, 6 credits. Prerequisite: three semesters of photography or permission of instructor. Darkroom fee, $35 (may increase).
A studio course intended for photography majors and other qualified students.

462 Senior Thesis in Photography Spring, 6 credits. Prerequisite: Art 461 or permission of instructor. Hours to be arranged. S. Bowman.
A studio course intended for photography majors and other qualified students. Advanced photography project to demonstrate creative ability and technical proficiency.

751–752, 851–852 Graduate Photography 751 and 851, fall; 752 and 852, spring. Credit as assigned; may be repeated for credit. Limited to M.F.A. students in photography.

Studio Courses in Drawing

151–152 First-Year Drawing 151, fall or summer; 152, spring, 3 credits each term.
151: sec 1, M W 1:25–4:25; sec 2, T R 8–11; sec 3, T R 1:25–4:25. Hours to be arranged. Staff.
A basic drawing course in the study of form and techniques. Contemporary and historical examples of figure drawing are analyzed in discussion.

251–252 Second-Year Drawing 251, fall; 252, spring, 3 credits each term. Prerequisites: Art 151 or 152, or permission of instructor.
A continuation of Art 151, but with a closer analysis of the structure of the figure and a wider exploitation of its purely pictorial qualities.
82 Architecture, Art, and Planning

[531 Third-Year Drawing Fall. 3 credits. Prerequisites: Art 151, 152, 251, and 252. Not offered 1981–82.] Staff

Graduate Thesis

712 Graduate Thesis Spring. Credit as assigned. Staff.
For graduate students in their last term in the programs in painting, sculpture, and graphics.

Special Studio Courses

370 Independent Studio In Painting Fall or spring. Credit as assigned up to 5 credits; may be repeated for credit. Prerequisite: written permission of instructor.
Hours to be arranged. Staff. Advanced studio concentration in painting.

371 Independent Studio In Sculpture Fall or spring. Credit as assigned up to 5 credits; may be repeated for credit. Prerequisite: written permission of instructor.
Hours to be arranged. Staff. Advanced studio concentration in sculpture.

372 Independent Studio In Printmaking Fall or spring. Credit as assigned up to 6 credits; may be repeated for credit. Prerequisite: written permission of instructor.
Hours to be arranged. Staff. Advanced studio concentration in printmaking.

373 Independent Studio In Photography Fall or spring. Credit as assigned up to 5 credits; may be repeated for credit. Prerequisite: written permission of instructor.
Hours to be arranged. Staff. Advanced studio concentration in photography.

374 Independent Studio In Drawing Fall or spring. Credit as assigned up to 6 credits; may be repeated for credit. Prerequisite: written permission of instructor.
Hours to be arranged. Staff. Advanced studio concentration in drawing.

375 Independent Studio In Sculpture Fall or spring. Credit as assigned up to 6 credits; may be repeated for credit. Prerequisite: written permission of instructor.
Hours to be arranged. Staff. Advanced studio concentration in sculpture.

471 Independent Studio In Sculpture Fall or spring. Credit as assigned up to 6 credits; may be repeated for credit. Prerequisite: written permission of instructor.
Hours to be arranged. Staff. Advanced studio concentration in sculpture.

472 Independent Studio In Printmaking Fall or spring. Credit as assigned up to 6 credits; may be repeated for credit. Prerequisite: written permission of instructor.
Hours to be arranged. Staff. Advanced studio concentration in printmaking.

473 Independent Studio In Photography Fall or spring. Credit as assigned up to 6 credits; may be repeated for credit. Prerequisite: written permission of instructor.
Hours to be arranged. Staff. Advanced studio concentration in photography.

474 Independent Studio In Drawing Fall or spring. Credit as assigned up to 6 credits; may be repeated for credit. Prerequisite: written permission of instructor.
Hours to be arranged. Staff. Advanced studio concentration in drawing.

City and Regional Planning

Planning seeks to guide the development of the economic, social, natural, and built environments in order that some of the needs and aspirations of people may be better satisfied. Most of the activities in the department focus on a broad range of issues that are often subsumed under the labels urban, regional, or social-policy planning. There is clearly a considerable overlap among these three areas of professional and scholarly study, and the department encourages the integration of related planning activities.

Urban planning is generally concerned with the urban environment, the physical facilities as well as social and economic forces that affect this environment, and the processes of urban planning and administration.

Regional planning is usually concerned with socioeconomic issues and functional planning at the regional level, the forces that generate economic growth and social development, and the ways in which resources can be used in regional development.

Social-policy planning is generally concerned with the social decision processes involved in both city and regional planning.

International planning is an additional area in which the department offers a range of courses and activities that involve United States citizens and foreign nationals.

The programs of study are primarily at the graduate level; however, an undergraduate program in urban and regional studies offers students completing their first two years in areas of study such as social sciences, design, the humanities, or engineering an opportunity to redirect their education toward an academic understanding of the various social, political, economic, and environmental issues facing cities and regions. For further information, consult the director of the Urban and Regional Studies Program, 106 West Sibley Hall.

Course Information

Most courses in the Department of City and Regional Planning are open to students in any college of the University who have fulfilled the prerequisites and have the permission of the instructor.

There are two components to city and regional planning course numbers: (a) Courses numbered from 500--599 and 600--899 are generally considered to be introductory or first-year courses; those numbered from 700--799 and 800--899 are generally considered to be more advanced courses. Undergraduate undergraduate courses are numbered from 300--499. (Undergraduates with the necessary prerequisites and permission of the instructor may enroll in courses numbered 500 and above.) (b) Courses are grouped (by the tens digit of the course number) to represent the underlying structure of the planning curriculum as follows: theory and qualitative methods (0, 1, 2), program areas (3, 4, 5), and interprogram topics (6, 7, 8, 9).

The department attempts to offer courses according to the information that follows; however, students should check with the department at the beginning of each semester for the latest changes.

Urban and Regional Theory

[380 Contemporary Issues In Urban and Regional Studies Spring. 4 credits. Prerequisite: one course in either government, economics, or sociology. Not offered 1982--83.] Staff.
An interdisciplinary course exploring at an introductory level theories of the development and spatial patteming of cities and regions and the political and economic interactions with them. Emphasis is on the relationships between these theories and current social and urban issues.

400/500 Introduction to Urban and Regional Theory Spring. 4 credits. A first-year graduate course, open to juniors and seniors.
T 3:30--5:30. Staff.
A review of attempts by the various social sciences to understand the contemporary city and its problems, particularly as seen by planners. Material is drawn from urban and regional economics, human ecology, urban sociology, psychology, anthropology, and geography in order to explain the location, size, form, and functioning of cities. Traditional and contemporary critical theory is examined as it applies to physical, social, and economic problems of the modern city.

402 Spatial Analysis of Urban and Regional Systems I Fall. 4 credits. Staff.
An introductory review of theories dealing with the spatial distribution of population and economic activity, drawn from various social science disciplines such as geography, economics, and sociology.

403 Spatial Analysis of Urban and Regional Systems II Spring. 4 credits. Prerequisite: CRP 402. Staff.
A detailed, in-depth review of recent research dealing with such topics as population distribution, migration, location of industry and economic activity, and the spatial organization of urban and regional social systems.

404/604 Urban Economics Fall. 4 credits. Prerequisite: basic economics.
T 10:10--12:05, plus optional workshops. Staff.
S. Czarnanski.
Urban phenomena are analyzed from an economic point of view. Areas examined include economic aspects of urbanization processes and policies, determinants of urban growth and decline, urban land and housing markets, urban transportation, and urban public services. Some time will be spent in discussing problems of cities in developing countries.

708 Fieldwork or Workshop In Urban and Regional Theory Fall or spring. Credit as assigned. Staff.
Work problems in urban and regional theory in a field or laboratory setting or both.

709 Special Topics In Urban and Regional Theory Fall or spring. Credit as assigned. Staff.

800 Advanced Seminar In Urban and Regional Theory I Fall. 3 credits. Prerequisite: CRP 500 M 3.35--5.30. B. G. Jones.
The theory of urban spatial organization. Economic, technological, and social factors leading to urbanization and various kinds of spatial organizations are explored. Major theoretical contributions to the understanding of intraregional and intramural distribution of population and economic activity are reviewed.

801 Advanced Seminar In Urban and Regional Theory II Spring. 3 credits. Prerequisite: CRP 800. M 3.35--5.30. B. G. Jones.
A continuation of CRP 800, concentrating on recent developments.
Theory

809 Informal Study in Urban and Regional Theory Fall or spring. Credit as assigned. Staff

Planning Theory and Politics

413 Planning and Political Economy I Fall. 4 credits. Staff
This course deals with Marx's methodological approach and his elaborations in volume I of Capital. Topics will cover Marx's method, labor theory of value, labor-process and surplus-value, absolute and relative surplus-value, general law of capital accumulation, and transition from feudalism to capitalism.

414 Planning and Political Economy II Spring. 4 credits. Staff
This course covers the economic formulations Marx expounded in volumes II and III of Capital and in Theories of Surplus-Value, as well as current contributions on the different ensuing debates. Topics cover the circulation of capital, productive and unproductive labor, reproduction schemes, accumulation, the transformation of surplus-value into profits, the transformation of values into prices of production, the tendency of the rate of profit to fall, and crises. The end of the course treats the division of profits into profits of enterprise, interest, and, in particular, ground rent. Students must have read volume I of Capital and be generally familiar with Marx's approach.

510 Introduction to Planning Theory Spring. 3 credits. Staff
Normative and behavioral models of decision making for the provision of public goods and services. Theories of individual decision and choice are reviewed, followed by an examination of institutional contexts stressing the impact of alternative organizational and political models of social decision processes.

511 Introduction to Planning Fall. 4 credits. M W F 10:10-11. P. Clavel
The origins, history, programs, and contemporary issues of city and regional planning in the United States. Conceptions of the state, the role of planners in public action, and the dominant methods and values of planners are discussed and criticized.

A consideration of the political dimension of planning and renewal activities. Emphasis on government mandate and structure, as well as interest group and power relationships as they are related to development decision-making processes. Theory and case-study analyses.]

514 Neighborhood and Community Theory Spring. 4 credits. Not offered 1982-83. Staff
An examination of contemporary social and economic conditions of neighborhoods; community differentiation reinvestment and revitalization policies and practice; community control; and the role of the community in the provision of goods, services, and social support.

710 Politics of the Planning Process Spring. 4 credits. W 2:30-4:25. P. Clavel
Analysis of planning and political institutions in selected subjects and policy areas, relating national and subnational levels. Subjects are drawn from such areas as environmental control and use policy, industrial development, transportation, and community development. Theories of planning and politics are compared for their analytical usefulness in these areas.

711 Planning and Organization Theory Fall. 4 credits. R 3:30-5:30. P. Clavel
An examination of organizational and administrative models relevant to plan formation and implementation. Applications are made to such programs as community development, regional administration, urban renewal, and land-use control.

718 Fieldwork or Workshop in Planning Theory and Politics Fall or spring. Credit as assigned. Staff
Work on problems in planning theory and politics in a field or laboratory setting or both.

719 Special Topics in Planning Theory and Politics Fall or spring. Credit as assigned. Staff

Quantitative Methods and Systems Analysis

320 Introduction to Quantitative Methods I Fall. 3 credits. Staff
An introduction to the role and use of quantitative methods in the study of urban and regional issues. Emphasis will be on statistical, mathematical, and computer methods for the formulation, analysis, and testing of hypotheses and models of social, economic, and physical phenomena of cities and regions. Applicable methods in probability, descriptive statistics, estimation, hypothesis testing, prediction, and techniques for decision analysis will be introduced. The use of the computer as an aid in computation and modeling will also be covered in parallel with these methods and techniques.

321 Introduction to Quantitative Methods II Spring. 3 credits. Prerequisite: CRP 320 or permission of instructor. Staff
A continuation of City and Regional Planning 320.

520 Mathematical Concepts for Planning Fall. 1, 2, 3, or 4 credits. Prerequisite: permission of instructor. Mathematics 201 and Sociology 420 are acceptable substitutes for this course. T R 9:05-11. P. Brandford
Intended for students having little or no background in college mathematics. Basic concepts in matrix algebra, calculus, and probability are covered in self-contained units of one credit each. Students may register for any or all of these topics.

521 Introduction to Computers in Planning Fall. 3 credits. T R 12:20-2:15; lab to be arranged. P. Brandford
An introduction to the use of computers in the problem-solving and planning processes. Students run programs using PL/1 or another appropriate programming language. Brief introduction to computer systems and the use of library routines. Advantages and limitations of using computers are considered.

620 Planning Analysis Spring. 4 credits. Prerequisite: CRP 621. M W F 10:10-11:00; lab, T 2:30-4:25. B. G. Jones
A survey of commonly used techniques for analyzing various aspects of subnational socioeconomic systems, emphasizing planning applications.

521 Data Analysis for Planning and Policy Spring. 3 credits. Prerequisite: CRP 520 or equivalent and permission of instructor. Staff
An introduction to basic methods of data analysis, with an emphasis on their use in the decision-making process in planning. Methods for summarizing data, sampling, estimation, hypothesis testing, and prediction will be introduced.

622 Planning Information Systems Fall. 3 credits. Prerequisite: CRP 521 or equivalent. Staff
The design and use of computer-based information systems for planning and policy analysis, including conventional data processing and advanced data base systems. Technical aspects in the design and structure of such information systems are introduced along with a variety of applications.

623 Methods of Social-Policy Planning Spring. 3 credits. Prerequisite: CRP 521 or equivalent. Staff
An examination of methodologies of needs assessment, programming, and evaluation suitable for social planning problems. Many of the methodologies, survey research, social area analysis, and social indicators have been drawn from other social science disciplines but are applied to policy and planning issues. Others, such as needs assessment, social impact assessment, goal attainment, PPBS, and PERT were developed directly or were adapted for use in social planning.

720 Quantitative Techniques for Policy Analysis and Program Management Fall. 4 credits. M W 9:05-11; lab, W 2:30-3:20. D. Lewis
Selected analytical techniques used in the planning and evaluation of public policy and public investments are examined. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

721 Simulation in Planning and Policy Analysis Fall or spring. 3 credits. Prerequisites: CRP 621 and 521 or equivalent. Not offered 1982-83. T R 4:40-5:30. S. Saltzman
The design and use of simulation models in planning and policy analysis. Various approaches drawn from discrete stochastic simulation, econometric simulation, microanalytic simulation, and urban dynamics are evaluated. Applications in design, land use, regional development, and social policy are considered. Students run their own programs on the Cornell computer.

722 Decision Analysis for Policy Planning and Program Management Spring. 4 credits. Not offered 1982-83. D. Lewis
An examination of selected techniques for analyzing complex dynamic decision problems in the planning context. Topics include dynamic programming (deterministic and probabilistic), integer programming, and process simulation (queueing models).

728 Fieldwork or Workshop in Systems Planning and Analysis Fall or spring. Credit as assigned. Staff
Work on applied systems planning problems in a field or laboratory setting or both.

729 Special Topics in Quantitative Methods and Analysis Fall or spring. Credit as assigned. Staff

829 Informal Study in Quantitative Methods and Analysis Fall or spring. Credit as assigned. Staff

City and Regional Planning 83
Regional Development Planning

430 Regional Economic Development Fall. 4 credits. Prerequisite: CRP 500. Not offered 1982–83. Staff. Problems of, and theories about, development of lagging, underdeveloped, or poor regions in industrial nations, with emphasis on planning implementation.

530 Introduction to Regional Development Planning Fall. 3 credits. Prerequisite: CRP 500. Not offered 1982–83. Staff. An introduction to the history, theories, methods, and processes of regional development planning, which also focuses on specialized planning functions of various public agencies.

630 Regional Development Administration Fall or spring. 4 credits. Not offered 1982–83. M 1:25–3:20. P. Clavel. Administrative institutions relevant to regional development policies, with attention to the United States, Western Europe, and Third World countries. Approaches to theory, measurement, and spatial distribution of institutions are covered with emphasis on the design of effective programs.

730 Methods of Regional Science Fall. 4 credits. Prerequisites: basic economics and elementary matrix algebra. W 10:10–12:05, plus optional workshops. S. Czamanski. Main quantitative techniques used in regional planning are covered. Since many methods have multiple applications in planning, the topics are organized around three broad subjects: population and migration studies, regional economic analysis, and interindustry relations.

731 Optimization Techniques in Planning Spring. 4 credits. Prerequisites: basic economics, elementary calculus, and matrix algebra. T 10:10–12:05, plus optional workshops. S. Czamanski. Typology of plans and planning models. Static optimization techniques, especially linear programming, integer and quadratic programming, optimization under competition, and multibojective planning are discussed in the context of applications to land use and public facilities, and regional development. Dynamic systems including basic control theory, and introduction to dynamic programming with applications to regional growth and migration policies. Economic theory of socialism. Elements of calculus of variations and of geometry of vector spaces are covered in optional workshops.

732 Regional Industrial Development Spring. 4 credits. Prerequisites: basic economics and elementary calculus. W 10:10–12:05, plus optional workshops. S. Czamanski. The course focuses on issues of industrial, as distinct from agricultural or regional, development. Material includes problems pertinent to developed and developing countries. Relevant parts of the theories of economic growth, international trade, production and technological change, location theory, and formation of industrial complexes are examined. Planning applications and case studies are discussed.

738 Fieldwork or Workshop in Regional Development Planning Fall or spring. Credit as assigned. Staff. Work on applied problems in regional development planning in a field or laboratory setting or both.

739 Special Topics in Regional Development Planning Fall or spring. Credit as assigned. Staff.

832 Location Theory in Physical and Policy Spaces Fall or spring. 3 credits. Prerequisites: CRP 500 and 620 and Economics 311–312, or equivalent. R 7–10 p.m. W. Isard. Traditional Weberian location doctrine, transport orientation, labor orientation, agglomeration, and urban rent theory are examined in both physical and policy spaces. Interregional trade and market and supply area analysis is treated. Particular attention is paid to Loschian and Christaller systems of urban places.

833 Conflict Management in Multiregion Planning Spring. 3 credits. W. Isard. Basic elements for the analysis of conflicts among policy makers in multiregion situations are examined. Particular emphasis is given to conflicting objectives among different interest groups, regions, and nations, and diverse procedures to reach compromise solutions are examined. The use of maximizing incremental procedures, game theory, and diverse methods for establishing priorities and cooperative action as well as recursive, interactive approaches to resolve conflict are considered.

839 Informal Study in Regional Development Planning Fall or spring. Credit as assigned. Staff.

Social-Policy Planning

340 Institutional Decision Processes Fall. 3 credits. Staff. An introduction to the administrative and political environment in which urban and regional issues occur. Starting from an analysis of social decision procedures, the course then goes on to describe the characteristics of administrative and political institutions in which issues on urban and regional problems take place; some attention is also given to the underlying dynamics of economic and political development in cities and regions, and the roles that various participants play in these decision processes.

440 The Impact and Control of Technological Change (also Economics 302 and Government 302) Cosponsored by the Program on Science, Technology, and Society. Spring. 4 credits. Not offered 1982–83. R 2:30–4:25. Staff. Social, environmental, and economic implications of technological change in the context of present policies and strategies of control. Several specific cases are considered by following the investigation of the problems of a modern technological society. Alternative political and economic solutions are explored.

442 Social and Political Studies of Science (also Sociology 355) Spring. 3 credits. W 2:30–4:30. D. Nelkin. A view of science less as an autonomous activity than as a social and political institution. Focus is on its relationship to government, the media, religion, and education. Drawing from recent controversies, questions of ethics and social responsibility in science, struggles to maintain internal control over research and the teaching of science, and concepts of limits to inquiry are discussed.

540 Introduction to Social-Policy Planning Fall. 4 credits. Not offered 1982–83. Staff. The process and politics of providing public services, primarily social services, within the context of changing fiscal and social conditions. Topics include (1) a review of the nature and source of selected social problems and of the present service systems that attempt to meet these needs; (2) an analysis of the inadequacies and problems of this system in the light of changing conditions that affect service delivery, such as fiscal and service disparities, budget retrenchment, and political movements to limit spending, such as Proposition 13; and (3) an exploration of new forms or alternatives to the existing service delivery systems.

541 The Politics of Technical Decisions I (also Government 628 and B&PA NPA 515) Cosponsored by the Program on Science, Technology, and Society. Fall. 4 credits. W 2:30–4:25. D. Nelkin. Political aspects of decision making in areas traditionally regarded as technical. Subjects include the origins and characteristics of "technical politics," the role of experts in government, and the problem of expertise in a democratic system. Alternatives to current decision-making procedures are explored.

542 The Politics of Technical Decisions II (also Government 629 and B&PA NPA 516) Cosponsored by the Program on Science, Technology, and Society. Spring. 4 credits. Prerequisite: CRP 541 or permission of instructors. Hours to be arranged. D. Nelkin. A continuation of CRP 541, focusing on decision making in several technical policy areas. Students develop individual or group research projects focusing on policy decisions with a significant technical component and considerable public impact.

543 Planning, Organizing, and Public Service Delivery Fall or spring. Credit as assigned. R 10:10–12:05, J. Forester. An exploration of planners' roles with special attention to organizational and political contexts of planning and policy analysis efforts. Focus is on communicative dimensions of organizational behavior and planning practice; planning is assessed as an organizing activity extending far beyond technical problem solving.

544 Dynamics of Social Policy Institutions Spring. Credit as assigned. J. Forester. Recurring social policy themes are studied: professional power and creation of dependency, political and technical aspects of expertise, organizational and institutional settings of social policy programs and services, problems of professional altruism in service delivery.

642 Critical Theory and the Foundation of Planning Analysis Fall. Credit as assigned. J. Forester. Beginning with Weber, Marx, and Durkheim, the fundamental assumptions, theories, and frameworks structuring planning and policy analyses are explored. Positivistic, functionalist, and structuralist language, and critical perspectives are considered as they clarify or obscure questions of value, rationality, objectivity, interpretation, and action in public policy contexts.

643 Legal Aspects of Public Administration Fall. 3 credits. M W F 11:15–12:05. R. Booth. Examination of basic legal issues that commonly arise in the administration of government agencies, including, for example, agency rulemaking, protection of individual rights in administrative processes, and judicial review of agency decisions. The course is designed for persons interested in professional careers that will involve working in or with public agencies.

740 Seminar in Social Policy Research and Analysis Spring. 4 credits. Staff. Focuses on examining contemporary methods of social policy analysis, including their political implications, and developing multidisciplinary approaches to selected social policy issues. The dilemmas of action research and of implementing research findings are explored.
743 Critical Theory and Public Policy
Spring 3 credits. Prerequisite: background in political or social theory.
This seminar explores the critical theory of Jurgen Habermas, particularly its application to problems of planning and public policy analysis. We consider problems of legitimation, power, rationalization, instrumental and communicative action, ideology, and systematically distorted communications as they appear more broadly in the practice of planners, policy analysts, or professionals.

[744 Urban Financial Planning and Management
Fall: 3 credits. Not offered 1982-83.
Staff.
Introduction to the theory and practice of financial management and planning in urban government, including budgeting, capital expenditures, management of short-term assets, borrowing, taxation, and intergovernmental finance. Case studies and problem sets that require the student to make decisions are emphasized.]

[745 Urban Fiscal Analysis
Spring: 3 credits. Prerequisite: CRP 744 or a course in public finance.
Not offered 1982-83.
Staff.
Government financial information (fund accounting, financial statements, and budgets) is introduced, and this information and other data are used to identify major fiscal problems and their causes faced by cities. Alternative solutions to urban fiscal problems are evaluated using this analysis.]

746 Informal Seminar in Planning Theory
Philosophy, Ethics, and Values in Planning Fall or spring. Credit as assigned.
J. Forester.
An informal seminar to discuss problems of values, ethics, and alternative philosophical positions that are inherent in various planning proposals or perspectives. The claims of incrementalists to the contrary: can planning be ethical? Must value judgments be arbitrary?

748 Fieldwork or Workshop in Social-Policy Planning Fall or spring. Credit as assigned.
Staff.
Work on applied problems in social policy planning in a field or laboratory setting or both.

749 Special Topics in Social-Policy Planning Fall or spring. Credit as assigned.
Staff.

849 Informal Study in Social-Policy Planning Fall or spring. Credit as assigned.
Staff.

Urban Development Planning

[551 Suburbanization and Metropolitan America
Fall: 3 credits. Prerequisite: permission of instructor.
Not offered 1982-83.
I. R. Stewart.
The major issues in suburban development, metropolitan growth analysis, and the role of new communities in accommodating expected future populations.]

[552 Urban Land-Use Planning I
Spring: 3 credits. Not offered 1982-83.
S. Stein.
Surveys, analyses, and planning making techniques for guiding physical development of urban areas: location requirements, space needs, interrelationships of land uses. Emphasis on residential, commercial, and industrial activities and community facilities; housing and neighborhood conditions. Lectures, seminars, and field exercises.]

553 Urban Land-Use Planning II
Fall: 3 credits. Prerequisite: CRP 552 or permission of instructor.
W F 11:15-12:05 S. Stein.
In-depth consideration of special issues in urban land-use planning, such as public facilities, central business districts, neighborhoods, shorelines and coastal zones, energy-impacts, transportation-impacts, and others.

554 Introduction to Planning Design
Fall: 3 credits.
T R 11:15-12:15 S. Stein.
Intended for students without design backgrounds. Lectures, seminars, readings, and design exercises explore basic concepts and issues related to urban planning, urban design, and site planning. Emphasis is on professional practice.

555 Planning and Design Workshop
Fall: 2 or 4 credits. No previous graphics or design experience required.
T R 11:15-12:10 S. Stein.
A studio course focusing on planning and design problems related to the built environment. An understanding of the design process is developed, and graphic communication techniques are explored.

556 Built-Environment Education Workshop
Fall and spring: 2 or 4 credits.
Fieldwork hours to be arranged. S. Stein.
Interdisciplinary teams of students from planning, architecture, landscape architecture, historic preservation, and other environmental design disciplines work in elementary, middle school, and high school classrooms with school children and teachers to deepen their understanding of the impact of the built environment on their lives, and to encourage their participation in the shaping of their own environment. Work in local schools is emphasized.

557 Small-Town Community Design Workshop
Fall and spring: 4 credits.
S. Stein and staff.
An in-depth approach to the problems and challenges facing the small-town commercial district. Various aspects of planning, historic preservation, landscape architecture, and design, including: building and storefront rehabilitation, graphics and signage, construction details, and presentation are explored in workshop and studio settings.

558 Urban Transportation and Land-Use Planning: 4 credits.
Open to upper-level undergraduates.
S. Czamanski, K. C. Parsons.
Theoretical, analytical aspects of the relationships between land-use planning and transportation system planning; land-use transportation models; analysis of travel demand generated by land use; forecasting related to population and urban growth; methods of transportation demand analysis, modal split, project evaluation: national, regional, and local transportation policy related to regional and urban development system and segment design and aesthetics; freeway, mass transit, and local street design; relationships between local area planning and transportation improvements, including environmental aspects of noise, air pollution, erosion control.

[651 Urban Land Policy and Programs
Fall: 3 credits. Prerequisite: CRP 511 or permission of instructor.
M 12:30-3:15 J. W. Reps.
Major problems of urban land control and management, and possible solutions are considered. Subjects for discussion include taxation, compensation and betterment, large-scale public land acquisition, subsidies and incentives, and acquisition of developmental rights.]

652 The Urban Development Process
Spring: 2 credits. Enrollment limited. Prerequisite: CRP 511 or permission of instructor.
Examination of the goals, strategies, methods, and achievements of major participants in the urban land and building market: land owners, speculators, real estate brokers, developers, bankers, lawyers, nonprofit builders, and government agencies.

653 Legal Aspects of Land-Use Planning
Spring: 3 credits. Prerequisite: CRP 511 or permission of instructor.
R 12:00-2:05 T. Staff.
Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

656 Critical Areas Protection Law
Fall: 3 credits.
State governments attempt to protect critical areas such as tidal wetlands, key agricultural lands, and flood plains with planning and regulatory techniques. Significant management, implementation, and legal issues of these attempts are analyzed.

750 Urban Land Policy and Programs-Special Topics
Fall or spring. Credit as assigned.
Staff.

758 Fieldwork or Workshop in Urban Development Planning
Fall or spring. Credit as assigned.
Staff.
Work on applied problems in urban development planning in a field or laboratory setting or both.

759 Special Topics in Urban Development Planning
Fall or spring. Credit as assigned. Staff.

Special Interprogram Topics: History and Preservation

460 Introduction to the History of Urban Planning (also Architecture 343)
Fall: 3 credits.
Examination of methods of using archival materials, including documents in the Cornell archives and regional history collection, for research in the history of architecture, historic preservation, and urban development.

462 The American Planning Tradition
Fall: 4 credits. No prerequisites.
M W F 9:05 J. W. Reps.
A systematic review of American city planning history, beginning with the earliest colonial settlements and ending with the era of the New Deal. An introductory lecture course requiring no previous exposure to planning or architecture, and a prerequisite for students intending to take advanced seminars or independent studies in planning history.

560 Documentation for Preservation (also Architecture 546)
Fall: 3 credits.
M 2:30-3:30 M. A. Tornam.
Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

561 Historic Preservation Planning Workshop: Surveys and Analyses (also Architecture 547)
Fall and spring: 4 credits.
R 3:30-5:30 T. Werbicky.

City and Regional Planning
Techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles focusing on upstate New York; exploration of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasis on fieldwork with individuals and community organizations.

652 Perspectives on Preservation (also Architecture 545) Fall. 3 credits. T 1:25–4:25. M. A. Tomlan and visiting lecturers. Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.

653 Problems in Contemporary Preservation Practice (also Architecture 544) Spring. Variable credit. M. A. Tomlan. T. Werbzyk. A review and critique of ongoing preservation projects, and an investigation of areas of expertise currently being developed, presented by staff and guest lecturers.

654 Building Materials Conservation (also Architecture 646) Spring. 3 credits. Open to juniors, seniors, and graduate students. M. A. Tomlan and visiting lecturers. A survey of the development of building materials in the United States, chiefly during the nineteenth and early twentieth centuries, and a review of the measures that might be taken to conserve them.

555 American Planning in the Early Twentieth Century Fall. 3 credits. Prerequisite: introductory course in American architectural or planning history. J. W. Reps. Urban and regional plans, planners, and planning during the period between the Senate Park Commission proposals for Washington in 1902 and the beginning of World War II. Students will use the unique collection of papers of twentieth-century planners in Olin Library and the extensive holdings of early printed reports in the Fine Arts Library. Lectures, seminar discussions, and presentation of student research papers.

556 Urban Planning in Colonial and Nineteenth-Century Hispanic America Spring. 3 credits. Prerequisite: permission of instructor. J. W. Reps. The planned origins and growth of towns and cities in Latin America and in those portions of the United States colonized by Spain. Lectures, readings, bibliographic studies, translations, cartographical exercises, and seminar presentations. Each student will produce a research paper on an aspect of the subject, using library resources at Cornell and elsewhere.

660 Seminar in the History of American City Planning Spring. 3 credits. Prerequisites: 462 or permission of the instructor. J. W. Reps. A research seminar in which each student selects a topic for oral presentation followed by the completion of a research paper. Early sessions examine the scope of planning history, its relations to other disciplines, sources of written and graphic materials, and the uses of historical evidence in interpreting urban planning and development.

661 Historic Preservation Planning Workshop: Plans and Programs Fall and spring. Variable credit. Prerequisite: CRP 651. Hours to be arranged. T. Werbzyk. Preparation of elements of historic preservation plans, designs, legislation, and special studies. Individual or group projects are selected by students. Fieldwork is emphasized.

662 Seminar in American Urban History Spring. 3 credits. Prerequisite: permission of instructor. M 10:10–12:05. I. R. Stewart Seminar in the historical evolution of the American city. Emphasis on factors in urban growth, the process of urbanization, urban reform movement, and intellectual and social responses to the city.

663 Historic Preservation Law Spring. 3 credits. Offered alternate years. M W 11:15–12:05. R. Booth. Law of historic district and landmark designation; tools for preservation (such as police power, taxation, eminent domain), recent developments in state and federal historic preservation mandates.

664 Economics and Financing of Neighborhood Conservation and Preservation Fall. 2 credits. B. G. Jones. The economic and financial aspects of historic preservation and neighborhood conservation. Topics include public finance, selected issues in urban economics, real estate economics, and private financing of real estate projects.

655 Public Policy and Preservation Planning Fall. 3 credits. I. R. Stewart. An examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.

768 Fieldwork or Workshop in History and Preservation Fall or spring. Credit as assigned. Staff. Work on applied problems in history and preservation planning in a field or laboratory setting or both.

769 Special Topics in History and Preservation Fall or spring. Credit as assigned. Staff.

869 Informal Study in History and Preservation Fall or spring. Credit as assigned. Staff.

Special Interprogram Topics: International Studies

[870 Seminar in Latin American Urban Planning and Development Fall and spring. 2 credits. Not offered 1982–83. S. Stein and guest lecturers. Seminars covering the broad urban planning and development problems facing Latin American cities. Historical development; current and future physical, social, economic, and administrative issues focusing on urban areas, with consideration of their regional context. Coordinated with CRP 571.

[872 Regional Planning and Development in Developing Nations Fall. 4 credits. Prerequisite: second-year graduate standing. Not offered 1982–83. T 2:30–5. W. W. Goldsmith. Extensive case studies of development planning are analyzed. Focus is on a Marxist critique of the process of national development through urbanization, and in particular in the context of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed.

671 Seminar in International Planning Spring. 1 credit. S-U grades only. F 12:20–1:30. Staff. The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development and planning. The formal requirement for the course is a brief evaluation of the seminar of the series.]

771 Seminar in Science and Technology Policy in Developing Nations Spring. 3 credits. D. Lewis. An examination of the issues facing developing countries as they endeavor to use technology in pursuit of their national goals. Topics include alternative choices of technology and the associated impacts, the role of multinational corporations, government policy-making institutions, manpower development and utilization strategies, and policy instruments.

772 Seminar in Policy Planning in Developing Nations: Technology Transfer and Adaption Fall 1982. 3 credits. Not offered. F 10:10–12:05. D. Lewis. An exploration of the international transfer of technology to developing nations and the policies used to guide this process. Topics covered include the role of foreign aid and multinational corporations, economic rationale for choice of appropriate technology, and social cost-benefit analysis. Case studies are emphasized.

773 Seminar in Project Planning in Developing Countries Spring. 3 credits. M 1:25–3:20. D. Lewis. An examination of the problems and issues involved in the process of planning and implementing development projects in developing countries. The role of the planner is explored from several different disciplinary points of view through a series of case studies selected from agriculture, industry, rural development, and urban planning. Countries typically represented include Egypt, Ethiopia, India, Jordan, Korea, Mexico, Nepal, and the Commonwealth of Puerto Rico.

777 Theories of Development and Underdevelopment Spring. 4 credits. Prerequisite: familiarity with Marxist theory. Staff. An exploration of current debates regarding the problem of articulation of the world economy and peripheral regions.

778 Fieldwork or Workshop in Planning for Developing Regions Fall or spring. Credit as assigned. Staff. Work on applied problems in planning for developing regions in a field or laboratory setting or both.

779 Special Topics in Planning for Developing Regions Fall or spring. Credit as assigned. Staff.

876 Advanced Fieldwork or Workshop in Planning for Developing Regions Fall or spring. Credit as assigned. Staff. Work on applied problems in planning for developing regions in a field or laboratory setting or both.

879 Informal Study in Planning for Developing Regions Fall or spring. Credit as assigned. Staff.
Landscape Architecture

The Program

Program Faculty: M. Adleman, E. Carter, T. Johnson, A. Lieberman, L. Mirin, R. Trancik, P. Trowbridge

The program offers three professional degree alternatives: a two-year graduate program leading to a Master of Landscape Architecture degree, a three-year graduate program leading to a Master of Landscape Architecture degree, and a four-year undergraduate program leading to a Bachelor of Science degree (from the College of Agriculture and Life Sciences).

For further information, contact Professor Mirin. B40 East Sibley Hall.

Course Information

*201 Design I: Basic Landscape Architectural Design Fall. 5 credits.

*204 Planning Internships Fall, spring, summer. 1-4 credits.

Staff Combines a professional planning internship in a metropolitan area with academic study in order to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Safarned internships in federal or state agencies, legislative offices, and comparable settings includes development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal, urban, and regional policy from the perspective of planning practice.

795 Master's Thesis in Preservation Planning Fall. Credit as assigned.

Staff.

796 Master's Thesis in Preservation Planning Spring. Credit as assigned.

Staff.

888 Informal Studies in Environmental Health Planning Fall or spring. Credit as assigned.

Staff.

890 Planning Research Seminar I Fall. 2 credits.

Intended for doctoral candidates in city and regional planning; other students welcome.

Staff.

Presentation and discussion of current problem areas and research by advanced doctoral students, faculty, and visitors.

891 Planning Research Seminar II Spring. 2 credits.

Staff.

892 Doctoral Dissertation I Fall. Credit as assigned.

Staff.

893 Doctoral Dissertation II Spring. Credit as assigned.

Staff.

Special Interprogram Topics: Environmental Health, Housing, and Institutional Planning

480 Environmental Issues and Public Decisions Spring. 3 credits.

M W F 11:15. R. Booth.

An examination of public decisions affecting environmental quality, including the pressures that require decisions on environmental issues; the methods of influencing those decisions; the decision-makers; the criteria and rationale for the decisions; and the environmental, social, political, and economic impacts.

481 Urban Aesthetics Spring. 3 credits.

K. C. Parsons.

Investigation of historical and current thought about the visual aspects of cities, including evaluation of technological and cultural influences on urban design, and the influence of perception on urban form, relationships between urban planning and visual form in cities.

490 Tutorial in Urban and Regional Studies Fall or spring. Variable credit. S-U grades only. Limited to undergraduates or graduate students in the Urban and Regional Studies program.

Staff.

Research, reading, and/or writing project that a student and faculty member choose on a topic related to urban and regional studies.

585 Introduction to Environmental Health Issues Spring. 3 credits.

F 2:30-4:25. B. G. Jones.

An examination of concepts and issues in environmental health, particularly as they relate to planning for health care delivery systems, economic development, and other policy issues.

586 Environmental Epidemiology Spring. 3 credits.

P 10:10. R. Brandford.

Introduction to epidemiological methods. Emphasis is on the detection of changes in health status associated with changes in environmental conditions, and the significance of these findings for environmental health planning.

[586 Environmental Law, Policy, and Management Fall. 3 credits. Not offered 1982-83.

M W F 11:15-12:05. R. Booth.

Examination of selected environmental law topics from a policy management standpoint. Topics include environmental impact statement preparation and analysis, pollution control laws, and government regulatory procedures.

587 Environmental Management Workshop Spring. 3 credits.

M W F 9:05. R. Booth.

Research and analysis of environmental management topics of current interest at the state or local government level. Fieldwork is emphasized; students produce reports, recommendations, or draft legislation that contributes to solving current issues.

588 Environmental Law II: Natural Resources and Toxic Substances (also Engineering CEE 8616) Spring. 3 credits.

Prerequisite: one course in environmental law or permission of the instructors.

Sem, hours to be arranged. R. Booth, N. Orloff.

Environmental Law I (CEE 8615) introduces students to the legal system and explores the legal doctrines governing the environmental impact statement process and air pollution. This course extends that introduction on two different levels. It exposes students to the legal doctrines in the fields of natural resources and toxic substances. Topics such as resource conservation and public lands management, as well as regulation of carcinogens and disposal of hazardous wastes, are considered. It is intended to sharpen the student's nascent legal skills. Close attention is given to the analysis of legislation and judicial decisions. In addition, students prepare a major paper designed to give them experience using a law library and doing independent legal research. The course's goal is to improve the student's ability to understand the legal dimensions of national environmental policy.

[784 The Political Economy of Health Planning Spring. 3 credits. Not offered 1982-83.

R 11:15-1:45. Staff.

Lectures, reading, and fieldwork, and theoretical and practical materials are combined to develop operating skills in health planning. The critical focus is on (1) the social determinants of illness, (2) the engineering model of medicine, (3) the commodity form of medical care, and (4) the prevailing economic definition of health. These topics together comprise the social context in which health planning takes place. After an intensive institutional introduction to health planning legislation, organizations, and practices, participants in the course work in one of four health planning research projects conducted in the surrounding area. Contact with local and regional organizations in and out of health planning is included.]

785 Planning and Evaluation of Environmental Health Programs and Projects Spring. 3 credits.

Prerequisite: second-year graduate standing.

T R 9:05. P. Brandford.

An examination of the use of quantitative methods and economic analysis as aids to social decision making for action in the area of environmental health. Applications of these methods to the study of particular problems of environmental health.

786 Environmental Health Planning Fall. 2 credits.

Prerequisite: second-year graduate standing.

Introduction to concepts and issues in environmental health planning. Topics covered include the planning problems involved in the control of water quality, liquid and solid waste disposal, air quality.

[787 Health Systems Planning Fall. 3 credits. Not offered 1982-83.

T R 9:05-9:55. Staff and guest lecturers.

Issues, institutions, politics, economics, and social elements involved in the planning and administration of health problems. Special emphasis is on planning techniques and methodologies.

788 Fieldwork or Workshop In City and Regional Planning Fall or spring. Credit as assigned.

Staff.

Work on applied planning problems in a field or laboratory setting or both.

789 Special Topics in City and Regional Planning Fall or spring. Credit as assigned.

Staff.

790 Professional Planning Colloquium I Fall. 1 credit.

W 4:30-5:30. Staff.

791 Professional Planning Colloquium II Spring. 1 credit.

W 4:30-5:30. Staff.

792 Master's Thesis, Project, or Research Paper I Fall. Credit as assigned.

Staff.

Staff.

794 Planning Internships Fall, spring, summer. 1-4 credits.

Staff.

Combines a professional planning internship in a metropolitan area with academic study in order to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Safaris internships in federal or state agencies, legislative offices, and comparable settings includes development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal, urban, and regional policy from the perspective of planning practice.

795 Master's Thesis in Preservation Planning Fall. Credit as assigned.

Staff.

796 Master's Thesis in Preservation Planning Spring. Credit as assigned.

Staff.

888 Informal Studies in Environmental Health Planning Fall or spring. Credit as assigned.

Staff.

890 Planning Research Seminar I Fall. 2 credits.

Intended for doctoral candidates in city and regional planning; other students welcome.

Staff.

Presentation and discussion of current problem areas and research by advanced doctoral students, faculty, and visitors.

891 Planning Research Seminar II Spring. 2 credits.

Staff.

892 Doctoral Dissertation I Fall. Credit as assigned.

Staff.

893 Doctoral Dissertation II Spring. Credit as assigned.

Staff.

Landscape Architecture

The Landscape Architecture Program at Cornell is jointly sponsored by the College of Agriculture and Life Sciences (in association with the Department of Floriculture and Ornamental Horticulture) and the College of Architecture, Art, and Planning.

The Program

Program Faculty: M. Adleman, E. Carter, T. Johnson, A. Lieberman, L. Mirin, R. Trancik, P. Trowbridge

The program offers three professional degree alternatives: a two-year graduate program leading to a Master of Landscape Architecture degree, a three-year graduate program leading to a Master of Landscape Architecture degree, and a four-year undergraduate program leading to a Bachelor of Science degree (from the College of Agriculture and Life Sciences).

For further information, contact Professor Mirin. B40 East Sibley Hall.

Course Information

*201 Design I: Basic Landscape Architectural Design Fall. 5 credits.
2 credits.

*205 Graphic Communication  Fall. 3 credits.

*220 Principles of Landscape Architecture  Fall 2 credits.

*224 Plants and Design  Spring. 3 credits. M. I. Adelman.

*240 Landscape Design  Spring. 3 credits.

*301 Design III: Intermediate Landscape Architectural Design  Fall. 5 credits.

*302 Design IV: Intermediate Landscape Architectural Design  Spring. 5 credits.

*310 Site Construction I  Spring. 4 credits. P. J. Trowbridge.

*311 Site Construction II  Fall. 4 credits. T. H. Johnson.

*400 Thesis Project Seminar  Fall. 1 credit.

*401 Design V: Advanced Landscape Architectural Design  Fall. 5 credits.

*402 Design VI: Senior Thesis Project  Spring. 5 credits.

*421 Professional Practice Seminar  Fall. 2 credits. E. J. Carter.

*432 Introduction to Parks and Recreation  Spring. 2 credits. E. J. Carter.

*435 Urban Environmental Planning  Fall 2 credits. E. J. Carter.

497 Independent Study in Landscape Architecture  Fall or spring. 1–5 credits; may be repeated for credit.

Staff  Work on special topics by individuals or small groups.

*501 Graduate Landscape Architectural Design I  Fall. 5 credits.

*502 Graduate Landscape Architectural Design II  Spring. 5 credits.

520 Contemporary Issues in Landscape Architecture  Fall. 2 credits.

Presentations on topics of currency and significance to the environmental design and planning fields. Issues are discussed from a landscape architecture point of view by practitioners and researchers representing a range of professions.

521 History of Landscape Architecture I  Fall. 3 credits.

Lecs, Tr R 11:15–12:05; discs to be arranged. A survey, from classical times to the present, emphasizing design principles and techniques that have established the landscape architecture tradition in Europe. Particular reference is made to the manner in which environments such as gardens, streets, plazas, parks, and new towns reflect in their built form a range of response to demands of culture, economics, technology, security, the law, and ecology.

522 History of Landscape Architecture II  Spring. 3 credits.

Lecs, Tr R 11:15–12:05; discs to be arranged. L. Minir. Landscape architecture in the United States from Jefferson to the present is examined as a unique expression of the American experience. Influences exerted by the physical landscape, the frontier and utopian spirit, and the cultural assumptions of democracy and capitalism are traced as they affect the forms of urban parks, private and corporate estates, public housing, transportation planning, national parks, and other open-space designs.

530 Urban Landscape Planning and Design  Spring. 3 credits.

Lec, disc, and field trips to be arranged. L. Minir. The principles and techniques of landscape architectural development and conservation of urban open space. Areas studied include the urban landscape tradition, urban arboriculture, streets and strowlays, design controls and public space, recreation, and housing.

*531 Regional Landscape Planning I  Fall. 3 credits. A. S. Lieberman.

*532 Regional Landscape Planning II  Spring 3 credits. A. S. Lieberman.

*601 Graduate Landscape Architectural Design III  Fall. 5 credits.

*602 (500) Graduate Landscape Architectural Design IV  Spring. 5 credits.

621 Summer Internship Seminar  Fall. 2 credits. Hours to be arranged. Presentation and discussion of projects developed during summer internships.

*622 Graduate Design Research Seminar  Spring. 2 credits. T. H. Johnson.

650 Fieldwork or Workshop in Landscape Architecture  Fall or spring. 1–5 credits; may be repeated for credit.

Work on applied problems in landscape architecture in a field or studio setting or both.

701 (501) Graduate Landscape Architectural Design V  Fall. 5 credits.

Studios, MW F 1:25–4:25. Project design of complex landscape architecture problems. Emphasis on procedures and solutions responsive to historical example, natural and cultural system sensitivity, and client need. Studio work is coordinated with actual clients and involves existing sites.

800 Master's Thesis in Landscape Architecture  Fall or spring. 9 credits.

Hours to be arranged. Independent research under faculty guidance leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture.

Offered through the College of Agriculture and Life Sciences.

Faculty Roster

Shaw, John P., M.Arch., Massachusetts Inst. of Technology. Prof., Architecture
Singer, Arnold. Prof., Art
Squier, Jack L., M.F.A., Cornell U. Prof., Art
Stein, Stuart W., M.C.P., Massachusetts Inst. of Technology. Prof., City and Regional Planning
Stewart, Ian R., Ph.D., Cornell U. Assoc. Prof., City and Regional Planning
Ungers, O. Mathias, Diploma, Technical U. Karlsruhe (Germany). Prof., Architecture
Webb, Patrick M., M.F.A., Yale U. Asst. Prof., Art
Wells, Jerry A., B.Arch., U. of Texas. Nathaniel and Margaret Owings Distinguished Alumni Professor of Architecture, Architecture
## College of Arts and Sciences

### Administration

Alain Seznec, dean  
Lynne S. Abel, associate dean  
Geoffrey V. Chester, associate dean  
Urband J. Dewinter, associate dean and director of admissions  
Jack W. Lowe, director of finance and administration  
Lloyd Carter-Leavitt, director of development

### College of Arts and Sciences Calendar Supplement

All of the dates in the University calendar at the front of this volume apply to all Cornell students. Listed below are some additional dates that are of importance for students in the College of Arts and Sciences.

**Summary of Basic College Requirements for Graduation**

1. **Minimum number of courses:** 34 courses.
2. **Freshman Seminar:** Two courses.
3. **Foreign language:** Qualification in one language is required. A maximum of 6 advanced placement credits is applied to this requirement.

### Program of Study

The College of Arts and Sciences at Cornell is a traditional liberal arts college. It is composed of those departments that teach and study the humanities, the basic sciences, the social sciences, and the expressive arts. It is also a college within a university, and this wider community provides strength and diversity not available in an isolated undergraduate institution. Students may draw upon the knowledge and facilities of the professional colleges to supplement their studies. Finally, the college is a graduate school and research center attracting faculty whose active involvement in writing and research requires first-rate academic facilities, and whose energetic participation in undergraduate teaching brings to their students the most current ideas in modern scholarship. It is this combination of functions that gives the college its distinctive character.

The variety and richness of the curriculum is extraordinary; there is no course that all students must take, and there are several hundred from which they may choose. Yet the faculty believe that there should be a recognizable pattern to each student's education. That pattern includes familiarity with several different modes of thought that are reflected in the natural sciences, the social sciences, and in those achievements of intellect and imagination that are the focus of the humanities and the expressive arts. In addition to these general areas of knowledge, students study foreign languages, acquire effective writing skills, and concentrate on one particular field to develop, as fully as possible, the powers of imaginative and critical thinking. To accomplish these objectives, the college has certain requirements for graduation.

**Summary of Basic College Requirements for Graduation**

1. **Minimum number of courses:** 34 courses.
2. **Freshman Seminar:** Two courses.
3. **Foreign language:** Qualification in one language is required. A maximum of 6 advanced placement credits is applied to this requirement.

### Language Requirement

The following departments teach foreign languages or literature or both in the College of Arts and Sciences: Africana Studies and Research Center, Asian Studies, Classics, German Literature, Modern Languages and Linguistics, Near Eastern Studies, Romance Studies, and Russian Literature.

There are two ways of satisfying the language requirement:

1. By attaining proficiency in one language or
2. By attaining proficiency in two languages.

### Proficiency

Proficiency is attained by passing a specified, one-semester, 200-level course (or by equivalent achievement, to be determined by examination; see below under Advanced Standing Credit).

### Qualification

Qualification may be attained in any of the following four ways:

1. Three years of high school study in any one language gives qualification in that language. Note, however, that this route to qualification does not guarantee entrance into a 200-level course. The student who wants to continue in this language must be placed by examination.
2. Passing the requisite course: 102 or 123 in languages taught by the Department of Modern Languages and Linguistics; NES 102 or 122 in Hebrew; NES 112 in Arabic; Classics 103 or 104 in Greek; Classics 106, 107, or 108 in Latin.
3. A score of 560 or better on the College Placement Test (CPT).
4. Placement in a 200-level course by special examination (in cases where no CPT is available).

A student may submit a 560 CPT score at the end of matriculation; their performance in one other subject, for instance, they can be aggregated to count as a course within one semester. Students who have had two or more years of high school study in a language without being placed by examination. Nor can transfer students register for this purpose. Students who have advanced placement examinations, courses approved for study in absentia, and courses taken in other divisions or institutions that are certified by the major advisor as part of a student's major may be counted towards the 100 credits required within the college.

### Freshman Seminars

Each semester of their freshman year in the college, students choose a Freshman Seminar from among more than fifty courses offered by over a dozen different departments in the humanities, social sciences, and expressive arts. These courses all share one major purpose: to offer the student practice in writing English prose. They also ensure that all beginning students may have the benefits afforded by a small class.

### Language Requirement

The following departments teach foreign languages or literature or both in the College of Arts and Sciences: Africana Studies and Research Center, Asian Studies, Classics, German Literature, Modern Languages and Linguistics, Near Eastern Studies, Romance Studies, and Russian Literature.

There are two ways of satisfying the language requirement:

1. By attaining proficiency in one language or
2. By attaining proficiency in two languages.

### Proficiency

Proficiency is attained by passing a specified, one-semester, 200-level course (or by equivalent achievement, to be determined by examination; see below under Advanced Standing Credit).

### Qualification

Qualification may be attained in any of the following four ways:

1. Three years of high school study in any one language gives qualification in that language. Note, however, that this route to qualification does not guarantee entrance into a 200-level course. The student who wants to continue in this language must be placed by examination.
2. Passing the requisite course: 102 or 123 in languages taught by the Department of Modern Languages and Linguistics; NES 102 or 122 in Hebrew; NES 112 in Arabic; Classics 103 or 104 in Greek; Classics 106, 107, or 108 in Latin.
3. A score of 560 or better on the College Placement Test (CPT).
4. Placement in a 200-level course by special examination (in cases where no CPT is available).

A student may submit a 560 CPT score at the end of matriculation; their performance in one other subject, for instance, they can be aggregated to count as a course within one semester. Students who have had two or more years of high school study in a language without being placed by examination. Nor can transfer students register for this purpose. Students who have advanced placement examinations, courses approved for study in absentia, and courses taken in other divisions or institutions that are certified by the major advisor as part of a student's major may be counted towards the 100 credits required within the college.

### Freshman Seminars

Each semester of their freshman year in the college, students choose a Freshman Seminar from among more than fifty courses offered by over a dozen different departments in the humanities, social sciences, and expressive arts. These courses all share one major purpose: to offer the student practice in writing English prose. They also ensure that all beginning students may have the benefits afforded by a small class.

### Language Requirement

The following departments teach foreign languages or literature or both in the College of Arts and Sciences: Africana Studies and Research Center, Asian Studies, Classics, German Literature, Modern Languages and Linguistics, Near Eastern Studies, Romance Studies, and Russian Literature.

There are two ways of satisfying the language requirement:

1. By attaining proficiency in one language or
2. By attaining proficiency in two languages.

### Proficiency

Proficiency is attained by passing a specified, one-semester, 200-level course (or by equivalent achievement, to be determined by examination; see below under Advanced Standing Credit).

### Qualification

Qualification may be attained in any of the following four ways:

1. Three years of high school study in any one language gives qualification in that language. Note, however, that this route to qualification does not guarantee entrance into a 200-level course. The student who wants to continue in this language must be placed by examination.
2. Passing the requisite course: 102 or 123 in languages taught by the Department of Modern Languages and Linguistics; NES 102 or 122 in Hebrew; NES 112 in Arabic; Classics 103 or 104 in Greek; Classics 106, 107, or 108 in Latin.
3. A score of 560 or better on the College Placement Test (CPT).
4. Placement in a 200-level course by special examination (in cases where no CPT is available).

A student may submit a 560 CPT score at the end of matriculation; their performance in one other subject, for instance, they can be aggregated to count as a course within one semester. Students who have had two or more years of high school study in a language without being placed by examination. Nor can transfer students register for this purpose. Students who have advanced placement examinations, courses approved for study in absentia, and courses taken in other divisions or institutions that are certified by the major advisor as part of a student's major may be counted towards the 100 credits required within the college.

### Freshman Seminars

Each semester of their freshman year in the college, students choose a Freshman Seminar from among more than fifty courses offered by over a dozen different departments in the humanities, social sciences, and expressive arts. These courses all share one major purpose: to offer the student practice in writing English prose. They also ensure that all beginning students may have the benefits afforded by a small class.
The type of examination depends upon the language and the level of achievement:

1) French, German, Italian, Latin 105, Russian, and Spanish courses: CPT. Entering students who have not taken the CPT in high school and who want to continue their language study have to take the CPT at Cornell during orientation week. Students may retake this examination at Cornell if they have studied the language a year or more since last taking the test. In order to do this, students must register with the Academic and Career Counseling services, 203 Barnes Hall, and pay a fee of $5.

2) Latin (all courses except 105): departmental examination.

3) Hebrew: departmental examination.

4) Other languages: special examinations; see professor in charge.

5) High achievement (students with a CPT score of 650 or better in French, German, Hebrew, Italian, Russian, and Spanish): the Cornell Advanced Standing Examination (CASE).

A student with high achievement scores should take the Cornell Advanced Standing Examination (CASE); even if the student does not want to do any further work in the language, the CASE may provide proficiency status for the language requirement, and it may provide up to 6 hours of advanced standing credit. Students who do not have high achievement scores are eligible for the courses listed in the charts below, depending on their scores. For other languages, or for special problems, see the professor in charge.

**Advanced Standing Credit**

Advanced standing credit may be entered on a student's record as follows:

- Credit may be granted for high school work for the equivalent of language courses numbered 203, 204. The amount of credit is based on performance on one or more of the following examinations:
  - CEEB Advanced Placement Examination.
  - French, Spanish, and German: A score of 4 or 5 yields 3 credits on the French, Spanish, or German language examinations and literature examinations.
  - Hebrew: Up to 6 credits may be granted depending on the student's score on the Hebrew placement examination.

- Latin: Students should consult the Department of Classics, 120A Goldwin Smith Hall. Students may be tentatively placed in a 300-level Latin course if they achieve a score of 4 or 5 on the CEEB Advanced Placement Examination, but they must also take the department's own placement examination during orientation week. A student who is permitted to register in a 300-level course will be given 6 advanced standing credits.

- Greek: For information concerning advanced placement, students should consult the chairman of the Department of Classics, 120A Goldwin Smith Hall.

- French, Spanish, and German: A score of 4 or 5 on the CEEB Advanced Placement Examination may be used to satisfy the distribution requirement in biological sciences.

**Distribution Requirement**

The purpose of the distribution requirement is to acquaint students with a broad range of subject matter in the liberal arts and to provide them with the opportunity to explore new areas. To this end, students are divided into four groups. Each of the first three groups has two subdivisions:

- **Group 1**
  - a. Physical sciences
  - b. Biological sciences

- **Group 2**
  - a. Social sciences
  - b. History

- **Group 3**
  - a. Humanities
  - b. Expressive arts

- **Group 4**
  - a. Mathematics and computer science
  - b. One of the subdivisions not used in fulfillment of groups 1, 2, or 3

In each of groups 1, 2, and 3, students must take a sequence of two courses (6 or more credits) approved by the department in one subject chosen from either subdivision. For group 4, students are strongly urged to take courses in mathematics. Those who do not choose to satisfy the group 4 requirement with mathematics must choose two courses in one subject from an unused subdivision in group 1, 2, or 3. For example, a student who fulfills group 1 with biology, group 2 with psychology, and group 3 with theatre arts could then complete group 4 with a sequence of two courses from the list below in the physical sciences, history, or the humanities.

Courses fulfilling the distribution requirement must be taken in the College of Arts and Sciences; however, students may petition to take Architecture 141-142, History of Architecture I and II, in the Department of Architecture, Art, and Planning to fulfill the requirement in expressive arts. Here is a complete list of the courses that fulfill distribution requirements:

**Group 1: Physical or Biological Sciences**

- **a. Physical Sciences**
  - Astronomy: 101 or 111 plus 102 or 112; or Astronomy 102 or 112 plus Astronomy 332
  - Astronomy 103-104, identical to Astronomy 101-102 except for the omission of the laboratories, cannot be used to satisfy the distribution requirement.
  - Chemistry: 103, 207, or 215 followed by 104, 208, or 216.
  - Geological Sciences: 101-102

- **b. Biological Sciences**
  - Physics: Any two sequential courses such as 101-102 or 207-208, or any two general-education courses from the group 201-205.

**Group 2: Social Sciences or History**

- **a. Social Sciences**
  - Africana Studies: Any two of 171, 172, 190, 231, 290, 301, 302, 344, 345, 346, 351, 352, 410, 420, 460, 484, 485, 495, 550
  - Anthropology: Any two courses in the Department of Anthropology, or Archaeology 100 and any anthropology course listed under archaeology.
  - Courses cross-referenced but not taught by members of the department do not satisfy the distribution requirement.

  - Archaeology: Archaeology 100 and any one of the following: Anthropology 116, 150, 203, 250, 309, 317, 333, 352, 354, 355, 358, 401, 435, 456, 494, 633, 664, 666, 667
  - Economics: 101-102 or a combination of one of these courses and any course for which it is a prerequisite if the course is taught by a member of the Department of Economics.
  - Government: Any two of 111, 131, 161, 181; or any one of these courses followed by a 300-level course in the same area.
  - Linguistics: 101-112 or 111-112, or a combination of Linguistics 101 and any course for which 101 is a prerequisite.

  - Psychology: Any two courses in psychology with the exception of Psychology 123, 322, 324, 326, 360, 361, 396, 422, 425, 471, 472, 473, 476, and 491.

  - Sociology: Any two courses in sociology. Students without background are advised to choose courses at the 100 or 200 level.

  - Women's Studies: Any two of 238, 244, 277, 321, 353, 422, 671, 685; plus courses that have been taken previously, with the department's approval.

**b. History**

- History: Any two courses in the Department of History.

**Near Eastern Studies:** Any two NES history courses at the 200 or 300 level that form a reasonable sequence or combination.

- Women's Studies: Any two of 227, 238, 326, 363, 426, 626, 627, plus courses that have been taken previously, with the department's approval.
b. An unused subdivision
A sequence of courses in any of the subdivisions in groups 1–3 may not be used to fulfill that group's requirement.

The Major
In their last two years, students devote roughly one-half their time acquiring depth and competence in a major subject. A major subject is not intended to be a lifetime's occupation, although it may become that. By selecting one field of interest, students can do advanced work and focus the full extent of their imaginative and intellectual capacities on something they care about.

Students must be accepted by departments as majors before registering for courses for the junior year. Most departments and programs specify certain prerequisites for admission to the major; see the departmental listings on the following pages. A department may refuse to accept or continue as a major any student whose performance does not meet departmental standards. Some majors require courses in related subjects outside the department or outside the college, required courses taken outside the college are to be considered to be part of the 100 credits required in the College of Arts and Sciences for graduation. Majors are offered by each of the departments except the Department of Astronomy. There are also majors in African studies, American studies, archaeology, biology and society, dance, German area studies, Russian and Soviet studies, and social relations. Some students wish to pursue an interest that cannot be met within an established major. They may plan, with the help of their faculty adviser, an independent major that includes courses from several departments.

Electives
Of the thirty-four courses, or 120 credits, required for graduation, about half are free electives. Students must complete four or five courses or 15 credits in courses that are offered outside the major and are not used to fill another requirement. Electives taken in other divisions of the University may be used to gain practical training or specialized knowledge.

Courses and College Requirements
A course may not be used to fulfill more than one college requirement with the following exceptions.

1) A course may be used to fulfill a distribution requirement and also a major requirement, provided that the major department agrees.

2) A one-semester course in foreign language that is acceptable for academic credit in that language may also be used as a partial fulfillment of the distribution requirement in the humanities.

3) Students whose native language is not English who take English 211–212 may fulfill both the Freshman Seminar requirement and the humanities or expressive arts distribution requirement by taking these two Freshman Seminars offered in English, history, history of art, classics, philosophy, romance studies, Russian literature, German literature, or comparative literature.

Courses used to fulfill college requirements may be taken for S-U grades.

Residence
Normally students spend eight full-time semesters in residence. However, students who have advanced placement credit or summer school credit or who have taken additional courses in order to accelerate may graduate in six or seven terms if they satisfy all the requirements for graduation and have earned grades of C or better in at least 100 of the 120 credits. Students are normally expected to earn at least 90 credits during their terms of residence at Cornell.

Transfer students must spend a minimum of four regular semesters, excluding summer school, in residence at Cornell, earning at least 60 credits during that time.

Ninth term. Students may spend a ninth term in residence by notifying the Records and Scheduling Office, 142 Goldwin Smith Hall. Students receiving financial aid should discuss funding with an adviser in the Office of Financial Aid.

Physical Education
See University Requirements for Graduation, p. 21.

The college does not count physical education credit toward the 120 credits required for graduation.

Special Academic Options

Degree Programs
The following programs allow students to work toward more than one degree or to alter the regular college requirements or departmental requirements for the major.

Independent Major Program
The Independent Major Program allows students to design their own majors if they wish to pursue an interest that cannot be met within an established major. Proposals for an independent major must be supported by a faculty adviser and are assessed by a board of faculty members. Board members consider whether the plan is equivalent in coherence, breadth, and depth to a departmental major, whether it is well-suited to the student's education, and whether it provides a liberal education. Independent majors substitute for established majors, but students must still satisfy all the other usual requirements for the baccalaureate degree. Students should contact the director of the Independent Major Program, Office of Special Programs, 134 Goldwin Smith Hall, for further information. Deadlines for submitting independent major proposals are Oct. 10, Oct. 20, Febr. 2, and Mar. 14 in the second semester of the sophomore year.

Honors. Candidates for honors must have a cumulative average of 3.0, no grade below B in courses for the major, and a cumulative average of 3.5 for courses in the major. During their senior year, candidates for honors must complete a thesis or honors project. Interested students should confer with the director of the Independent Major Program before the start of the senior year.

College Scholar Program
The College Scholar Program frees no more than forty students in each freshman class from the usual college requirements for a degree and allows them to design their own academic programs. It is meant to serve students whose interests and talents do not easily fit into the usual departmental majors, who demonstrate exceptional promise, and who show the maturity to plan and carry out, with the help of their adviser, a well-designed program of studies. College Scholars do not all design the same kind of program; some, for example, pursue two diverse interests while others integrate a variety of courses with a common theme.

College scholars must complete 120 credits of course work (100 in the college) and, unless they receive special permission to accelerate, eight full terms in the College of Arts and Sciences. They must complete the physical education requirement. Beginning with the class of 1982 each College Scholar must complete a senior project. They are not required to complete or fulfill the distribution requirement, but interested College Scholars should consult the College Scholar Advisory Board before that requirement is a good one.

Each applicant to the College Scholar Program is asked to write an essay, which is due in May of the freshman year. Students should contact the Office of Special Programs, 134 Goldwin Smith Hall, for further information.
Honors. Candidates for honors must maintain a 3.5 average in all courses and must complete two college scholarly seminars. Nonstudents should complete one seminar in some aspect of science, and scientists at least one in the humanities or social sciences. During the senior year, candidates for honors must complete a thesis or honors project. Students interested in the honors program should confer with the director of the College Scholastic Program before the start of the senior year.

Double Majors
A student may complete a double major by fulfilling the major requirements in any two departments of the college.

Dual Degree Program
Especially able students may earn both a Bachelor of Arts degree from the College of Arts and Sciences and either (1) a Bachelor of Science degree from the College of Engineering, (2) a Bachelor of Fine Arts degree from the Department of Art in the College of Architecture, Art, and Planning, or (3) a Bachelor of Science degree in urban and regional studies from the Department of City and Regional Planning in the College of Architecture, Art, and Planning. The dual degree program ordinarily takes five years to complete. Students enter one of these colleges or the College of Arts and Sciences as freshmen and begin the dual degree program in the second or, in some cases, the third year. For further information contact Assistant Dean Rosenberg, 134 Goldwin Smith Hall. (telephone: 256-5004).

Double Registration
Double registration in the College of Arts and Sciences and with the Cornell Law School, Cornell Medical College, or SUNY Upstate Medical Center is possible. A few exceptionally well-prepared students who have earned 105 credits before the start of the senior year and have been accepted by one of the above-named professional schools may be permitted to register simultaneously in the college and in one or another of these professional schools during the seventh and eighth terms. Students registering in the college and in one of the medical colleges listed above receive the Bachelor of Arts degree after their first year of medical studies and the Doctor of Medicine degree after the remaining three years of medical college are completed.

Special Interest Options
The following options do not alter the College’s requirements to pursue rapid and thorough beginning studies on campus, with the objective of studying abroad later—in China, Japan, or Southeast Asia.

Prelaw Study
Law schools neither require nor prefer any particular program of study; they do seek students with sound training in the liberal arts. The important thing is for a student to plan a program in which he or she is interested and will do well. Beyond that, students are advised to take courses that will develop the powers of precise, analytical thinking and proficiency in writing and speaking.

The college offers a concentration in law and society. Many prelaw students pursue courses in this program because it interests them, not because it helps them get into law school.

Students who are interested in law should consult Assistant Dean Watson, 134 Goldwin Smith Hall.

Premedical Study
The breadth and depth afforded by a liberal arts education are invaluable for people who plan medical careers, whether they intend to practice or go into medical research. Such training has a profound effect upon the doctor’s usefulness to patients, and it affords the flexibility of mind that is needed for major research undertakings. Medical and dental schools do not prescribe a particular major; they do, however, require particular undergraduate courses. Students who are interested in medical careers are urged to visit the college’s Academic Advising Center and the Health Careers Office at the Career Center for help in planning their undergraduate program.

Off-Campus Programs

Study In Absentia
Many students find it appropriate to their majors or to their overall academic programs to study abroad for one or two semesters or to study at an American institution that offers programs not available at Cornell. When it makes academic sense, the college encourages its students to study in absentia and grants credit towards the degree for work satisfactorily completed. Approximately seventy students study in absentia every year. Although Cornell does not sponsor any programs abroad, the Career Center maintains contacts on hundreds of programs all over the world. Before planning a program for study in absentia, students should consult Assistant Dean Beatrice Rosenberg in the Academic Advising Center, 134 Goldwin Smith Hall. Advisers in the college will help students find the program most appropriate to their academic goals.

A request to study in absentia must have the support of the faculty adviser, and each course must be approved by the appropriate department chairperson or, in some departments, the director of undergraduate studies. Credits earned in absentia may count as part of the course or program within the College of Arts and Sciences if the field of study is represented in the college but the particular courses or program are not. Normally transfer students will not be allowed to study in absentia.

When plans are final, the student should submit an outline of the course or program and the signatures of the faculty adviser and the appropriate chairpersons to Assistant Dean Rosenberg, 134 Goldwin Smith Hall. When these conditions are met, in absentia status will be approved on condition that the student is in good academic standing the semester prior to in absentia study. The University charges $15 for each semester of study in absentia.

Off-Campus Residential Programs
A number of residential programs allow students to concentrate on one subject, under the instruction of Cornell faculty and other specialists in that field of study. These programs provide an opportunity to be involved in a shared academic adventure, in situations that demand discipline, hard work, cooperation, and tolerance. For students who have keen interest in the subject, the experience is an exciting, challenging component of a liberal education.

Summer residential programs in archaeology. During the summer months students may participate in one of the Cornell-sponsored archaeological projects in New York State, the Mediterranean region, Central America, or South America. Each project includes lectures that afford a broader understanding of the culture. The Mediterranean excavations encompass the early Bronze Age through the Roman period. The Aegean dendrochronology project will furnish scientists and archaeologists with an exceptionally accurate dating technique. Students should contact the Department of Archaeology for information about the sites in the western hemisphere, and the Departments of Classics and Near Eastern Studies for those in the Mediterranean region.

Marine Science. Shoals Marine Laboratory is a seasonal field station designed to introduce undergraduates to the marine sciences. The laboratory is located on Appledore Island, six miles off the Maine and New Hampshire coast. For information contact the Division of Biological Sciences for further information.

Cornell-in-Washington. The Cornell-in-Washington program enables a limited number of advanced students to study questions of public policy and to do supervised research during a term of residence in the capital. Students choose among several seminars taught by distinguished Cornell professors. They become familiar with the various sources of information and develop research techniques. The program also offers a unique internship program. Students who wish to serve an internship in a federal agency or congressional office take part in a public policy seminar. They define and carry out individual research projects that explore the connections between abstract policy issues and the day-to-day activities of the office. Potential internships are arranged through, and approved by, the Cornell-in-Washington program. Students are admitted to the Cornell-in-Washington program by the Department of Government. For further information, see p. 8 or inquire at 134 McGraw Hall.

Fieldwork
Sometimes it is appropriate for students to include fieldwork as part of their major. A three-member faculty committee helps the student plan the project.
arranges for ongoing supervision, and evaluates the project at the end of the term. Fieldwork must be presented to the Academic Records Committee for approval. A maximum of 15 credits in fieldwork may be earned. For further information contact Assistant Dean Unsworth, 134 Goldwin Smith Hall.

Registration and Course Scheduling

Registration with the University

All students must register with the University at the beginning of each semester. Registration materials are available for photocopying or for the use of a personal computer. A copy of each term must be deposited each term by the Office of the University Registrar.

Enrollment into Courses in the College of Arts and Sciences

College registrar Margery Clausen, 142 Goldwin Smith Hall.

New Students

The Academic Advising Center will inform incoming freshmen and transfer students about procedures for scheduling courses at briefings during orientation week.

Continuing Students

Continuing students are expected to select and schedule courses in advance during the previous term. Students who fail to sign into courses during the designated period must wait until the beginning of the semester and may have difficulty securing places in the courses they desire. Students may schedule up to 18 credits during the advance scheduling period. Information and materials will be available in the Records and Scheduling Office, 142 Goldwin Smith Hall. Before signing into courses, students should make appointments with their faculty advisers to plan their programs. Student advisers will also assist students. Any student is welcome to discuss programs and plans with an assistant dean in the Academic Advising Center, 134 Goldwin Smith Hall. The Records and Scheduling Office issues a syllabus showing last-minute changes in courses; the supplements of other divisions of the University are also available for reference in the Records and Scheduling Office. In the fall, continuing students receive their course schedules at University registration. They also receive a copy of their Permanent Record Card, which shows the courses taken, grades received, graduation requirements fulfilled, and academic actions. Copies of Permanent Record Cards are not official transcripts.

Limits on Course Enrollment

Students must take an average of four or five courses (15 credits) each semester in order to graduate in eight terms. At a minimum, students must carry three or four courses (12 credits) each semester in order to carry the required 15 credits of courses in the College of Arts and Sciences. A notation of "W" will appear on the transcript for any course dropped after the eighth week.

Leaves of Absence

Many students have found it useful to take time off from college to think about their goals and progress, or just to take a break from studying. Students in good standing who take a leave by the end of the eighth week of the term may have difficulty securing places in the courses they desire. Students who wish to transfer from one college or school at Cornell to another school should discuss their eligibility with a counselor at the new school or college.

Guidelines for part-time study:

1) A student who has completed all degree requirements as a part-time student.
2) A student who has been forced to drop a course due to financial difficulties, or for personal or academic reasons.
3) A student who is pursuing honors work and must complete extensive research away from the Academic Advising Center staff. If a student takes a leave before the end of the term, no courses taken that term will be shown on the student's record. Upon readmission, the student's graduation date will be recalculated according to the number of terms completed, the number of acceptable credits earned towards the degree, and the requirements for graduation. If a student takes courses elsewhere while on leave, the earned credits may be accepted as part of the 20 out-of-college credits of the 120 credits needed for graduation.

Withdrawals

A withdrawal is a voluntary severance of connection with the University. If a student wishes to withdraw after registering for the term, the withdrawal must be requested before the beginning of the eight week of classes. A notation of "W" will appear on the transcript for any course dropped after the eighth week. Upon withdrawal, the student is not required to register for classes in the next term.

Transferring within Cornell (Internal Transfer)

Internal transfer is attractive for many students whose intellectual interests change. Students who wish to transfer from one college or school at Cornell to another school should discuss their eligibility with a counselor at the new school or college.

In some cases the student who wishes to transfer into the College of Arts and Sciences may transfer directly. In other cases the student may be referred to the Division of Unclassified Students to be considered for admission to the College. During the term immediately preceding transfer into the College of Arts and Sciences, a student should complete at least 12 credits of courses in the College of Arts and Sciences with a grade of B or better. Students who have completed at least 12 credits of courses in the College of Arts and Sciences must apply for admission to the College.

Part-Time Study and Pro Rata Tuition

The College ordinarily accepts its students to be full-time students. Except in unusual circumstances, students who are twenty-three years of age or older, part-time attendance is permitted only in unusual circumstances.

In certain circumstances seniors who are completing their final term in the college may be allowed to register for fewer than 12 credits and pay pro rata tuition. The guidelines for granting this permission are adhered to strictly.

Guidelines for part-time study:

1) A student who has completed all degree requirements by the end of the seventh term may receive permission to study part time during the eighth term.
2) A student who has completed all degree requirements in seven terms but is majoring in a department that requires candidates for honors to complete the senior year, but may be permitted to register for fewer than 12 credits.
3) A student who has received permission to accelerate who has been forced to drop a course (for reasons beyond his or her control) and has not been able to complete the course work on schedule may be able to complete the requirements as a part-time student.
4) A student who is pursuing honors work and must complete extensive research away from the
Students who are allowed to register for part-time study in 1982-83 pay $256.25 per credit plus the full administrative and student service fees of $900.

Students who fail to meet graduation requirements in eight semesters may petition the college to enroll in the Division of Extramural Courses.

Additional Information about Courses and Credit

Attendance in classes is a matter between students and their instructors. If a student cannot attend classes because of illness or family crisis, the Academic Advisors Office will notify instructors, when requested, but students must arrange for making up examinations or other work. When students will be absent because of religious holidays, they must discuss arrangements for making up their work with their instructors. Students who have to miss an examination should be sure to contact the professor.

Transferring credit. The college evaluates credit received from either another school or college at Cornell University or from another accredited institution of collegiate rank to determine the number of courses the student may apply towards the Bachelor of Arts degree. Tentative credit evaluations are normally provided to external transfers at the time of the notification of acceptance. For information about language course placement and credit see p. 90-91. No more than 60 transfer credits or sixteen courses, including no more than 20 credits in courses not commonly given by the College of Arts and Sciences, may be applied toward the degree. Transfer students must successfully complete at least sixteen courses or 60 credits at Cornell; they must be in residence for four terms, not counting Summer Session.

Advanced placement credit. See page 10.

Summer Session credit. A student may earn credit toward the degree by completing courses in Cornell's summer session or by petitioning to take courses at other colleges. Students should consult their advisors regarding summer study plans.

Credit for summer courses not taken at Cornell must be approved in advance by the chairperson of the appropriate Cornell department. The college Records and Scheduling Office, 144 Goldwin Smith Hall, can supply forms and information. Credit earned in summer courses other than those at Cornell will not count toward the 100 credits required in the college unless the student's major adviser certifies that it is part of the major. Transcripts should be sent to the Records and Scheduling Office, 144 Goldwin Smith Hall.

Entering students who wish to receive credit toward the degree for courses completed in a summer session at Cornell or elsewhere should have transcripts sent to the Office of Records and Scheduling, 144 Goldwin Smith Hall, during the summer before matriculation.

Student-initiated courses. The college allows students to initiate proposals for new courses or modes of instruction that are not currently offered in the college or elsewhere in the University. If the proposed course falls within the jurisdiction of a particular department, students should seek the advice of a faculty member in the department or the department chairperson. For further information consult the Office of Special Programs, 159 Goldwin Smith Hall.

Noncredit courses. The college does not grant credit for all courses offered by the University. Courses in remedial or developmental reading (for instance, HE 100), writing, and mathematics; physical education; typing; shorthand; and most military training courses are among those for which credit is not given.

Auditing. There is no formal arrangement for auditing courses by undergraduates. Those who wish to sit in on a course ask permission of the course instructor.

Repeating courses. Students may repeat courses. If the instructor certifies that the course content has been changed, credit may be granted a second time. If the content has not been changed, the course may be repeated only to obtain a higher grade, but the original grade remains on the transcript and the course is repeated for 0 credit.

Students who plan to repeat a course should notify the Records and Scheduling Office, 142 Goldwin Smith Hall.

Academic Standing

Students are in good standing for the term if they successfully complete at least 12 credits by the end of the term and receive no more than one D and no F or U grades.

Honors

Dean's List

Students must earn letter grades for at least 12 credits to qualify for Dean's List. The requirements vary according to the number of credits a student has taken during the term. Students who take only 12 credits must earn all A's. Students who take 13 or 14 credits must earn A's in at least 10 credits and B's in the rest. Students who take 15 or more credits in the term must earn A's in at least 8 credits and usually A's or B's in the rest. Students who have grades of C or C+ must have an equal number of A's to the minimum of 8 to balance the C's.

Students who have received a grade of U (not including a U in physical education) or a grade of C- or lower are not qualified for the Dean's List.

Incomplete grades. Grades of Incomplete do not count towards qualification for the Dean's List. Students whose grades, excluding the Incomplete, qualify for the Dean's List will be added to the list retroactively when the Incomplete is made up, provided that they are not disqualified by the grade for the completed course.

Two-term honors programs. When students are in honors programs that require S or R grades at the end of the first semester, their final grade will be considered the appropriate grade. Students who complete the second semester as well as the second semester. If they then qualify for the Dean's List they will be added retroactively.

Grades that do not enter into computation. A grade of S does not enter into the calculation, and a course graded S may not count as part of the credits for which letter grades are required. Courses for which students of the College of Arts and Sciences may not earn credit are disregarded in the calculation of the Dean's List. See the section on Noncredit Courses, above.

Bachelor of Arts with Honors

Almost all departments offer honors programs for students who have demonstrated exceptional ability in the discipline and who seek an opportunity to explore branches of their subject not represented in the regular curriculum or to gain experience in original investigation. The honors programs are described by individual departments in the following sections. The degree of Bachelor of Arts with honors will be conferred upon students who, in addition to having completed the requirements for the degree of Bachelor of Arts, have satisfactorily completed the honors program in their major and have been recommended for the degree by their major department, the Independent Major Program, or the College Scholar Program.

Bachelor of Arts with Distinction

The degree of Bachelor of Arts with distinction in all subjects will be conferred upon students who, in addition to having completed the requirements for the degree of Bachelor of Arts, have:

1) completed at least 60 credits while registered in regular sessions in the College of Arts and Sciences;

2) received a grade of B- or better in at least three-fourths of the total number of credits taken while registered in the college;

3) received grades of A- or better for at least one-half of the total number of credits taken while registered in the college;

4) received a grade below C- in no more than one course;

5) received no failing grade;

6) maintained good standing in each of their last four terms; and

7) have no incompletes remaining on their records.

Failure to Maintain Good Standing

Students are not in good standing if they complete fewer than 12 credits, if they have more than one D or any F or U grades, if they have not made satisfactory overall progress in grades or credits (whether due to failures or incompletes) or in the requirements of the college or the major. Such students may be considered for academic action by the Committee on Academic Records. A warning is posted on a student's Permanent Record Card, but is not reported to the University registrar and does not appear on official transcripts.

Final warning. Students whose work is so seriously deficient that they risk being required to leave may be placed on final warning by the Committee on Academic Records. A final warning is posted on the student's Permanent Record Card, but is not reported to the University registrar and does not appear on official transcripts.

Required leave of absence. A student in serious academic difficulty may be required by the Committee on Academic Records to take a leave of absence normally for a full academic year. During the leave the students will be required to furnish evidence that they are ready to return before being allowed to reregister in the college. Students who request to return in less than a year must present to the committee exceptionally strong evidence of their readiness to return. "Required Leave of Absence" is posted on the student's Permanent Record Card in the college; the University registrar notifies, and "Leave of Absence" and the date will appear on the student's transcript.

May not reregister. The Committee on Academic Records may stipulate that a student may not reregister in the college on the basis of a highly unsatisfactory record for one term or for failure to make satisfactory overall progress in grades, credits, or the requirements of the major. This action expels the student permanently from the college. "May not Reregister" is posted on the student's Permanent Record Card; the University registrar is notified, and "May not Reregister in the College of Arts and Sciences" and the date will appear on the official transcript.

Students being reviewed for academic action are urged to present evidence that will help explain their poor academic performance. Students may appeal a decision or action of the committee if they have new evidence to present.
Grades

Letter Grades
See Grading Guidelines, p. 21.

S-U Grades
The S-U option allows students to explore unfamiliar subject areas without being under pressure to receive high grades. It is not meant to reduce the amount of work a student completes in a course. Students may elect within the first three weeks of the term to receive a grade of S (satisfactory) or U (unsatisfactory) instead of one of the letter grades (A through F), provided that the instructor is willing to assign such grades. A grade of S is equivalent to a grade of C- or higher; a grade of U is equivalent to any grade below C-. Students must receive the credit specified for the course. U means no credit is given. A few courses in the college are graded exclusively S-U.

Courses that will count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission. Students may elect the S-U option in courses used to satisfy the distribution and language requirements, provided that such courses do not also count toward major requirements, or serve as prerequisites for admission to the major. Students are advised to use the S-U option sparingly if they intend to apply to graduate school or for transfer to another college. There is no limit on the number of courses each term for which the S-U grade option may be elected, but within the 120 credits required for the degree, a minimum of 80 credits must be in courses for which a letter grade was given.

To elect the S-U option, students fill in the proper space on the optical scan forms during course enrollment. To change the grading option at the beginning of the term, students obtain a course change form from the Records and Scheduling Office, 142 Goldwin Smith Hall. Fill the form out to indicate the grade option change, and have it signed by the course instructor and their faculty adviser. The form must be returned to the Records and Scheduling Office within the first three weeks of the term. No change in the grading option can be made after the first three weeks of the term. Any senior planning to take a course for an S-U grade in the last semester should consult with Assistant Dean Lawrence Watson.

Incomplete Grades
A grade of incomplete signifies that a course was not completed before the end of the term for reasons beyond the student's control and acceptable to the instructor. Students must have substantial equity in the course, that is, they must be able to complete the remaining work without further registration, and must have a passing grade for the completed portion. When a grade of incomplete is reported, the instructor will state what work must be completed, when it must be completed, and the grade he or she will award if the work is not completed by that date. A course will be incomplete until the instructor changes it, and can remain as an incomplete permanently. Unless the instructor stipulates otherwise, students will be allowed one term plus one summer to make up the work. When a final grade is recorded, it is recorded alongside the incomplete, so the notation of the incomplete remains on the student's record permanently.

R Grades
R designates two-semester or year-long courses. The R is recorded on the student's Permanent Record Card at the end of the first term. The grade recorded at the end of the second term shows the student's level of performance in the course for the entire year. The total credits that will be earned for the whole course are listed each term.

Grade Reports
Grade reports for the fall term are included in spring term registration materials; grade reports for the spring term are mailed to students at their home addresses. The college does not compute term grade-point averages, cumulative averages, or class rank.

Advising
The following advisers and offices are here to provide information on college procedures and regulations, academic advising, or counseling.

Faculty Advisers
Faculty advisers help students design programs of study and advise students about ways to achieve their academic goals. Faculty members volunteer to act as advisers to new students in the college; advisers and advisees meet during orientation week to plan the student's program. Students are encouraged to see their advisers again early in the term, before it is too late to drop courses and before signing into courses for the following term, to discuss their academic program and to become better acquainted. Academic difficulties may frequently be solved or avoided if students and advisers recognize problems early.

Advisers must approve each semester's program and any course changes. Students who would like to petition for an exception to college rules should discuss the matter with their advisers; the adviser must review and sign the petition before it may be acted upon.

Advisers may also help students with study or personal problems or direct them to other offices on campus where help is available.

Student Advisers
Each new student is also assigned a student adviser who can provide information about the college's requirements, courses, and instructed, and about life at Cornell.

Major Advisers
After acceptance into a major program, students are assigned a major adviser, a faculty member in the major department, with whom they make many of their most important decisions at Cornell. The adviser must approve the student's course of study and eventually certify the completion of the major. The major adviser should be consulted by the student about all academic plans, including such aspects as acceleration and graduate study. The adviser's support is especially important if a student petitions for an exception to the requirements for the degree.

Academic Advising Center
Glenn Aitschuler, assistant dean, freshmen
Beatrice G. Rosenberg, assistant dean, sophomores
Margaret C. Unsworth, assistant dean, juniors
Lawrence Watson, assistant dean, seniors
Janice F. Turner, assistant dean for minority affairs
The Academic Advising Center, 134 Goldwin Smith Hall, serves as a resource for faculty and student advisers and for students themselves. The center's advisers are available to help students define their academic and career goals and to help with specifics such as study abroad programs, field work, etc., and they welcome all questions relating to the college. Handicapped students may see Assistant Dean Lawrence Watson.

Courses and Departments

Special Programs and Areas of Concentration
The college offers a number of special and interdisciplinary programs that are described following the departmental program descriptions. Students may devise an independent major with the aid of any of these programs or develop an informal minor field. (Informal minors are not listed on the student's official record.)

General Education Courses
The faculty of the College of Arts and Sciences has established a Board of General Education, responsible for creating and maintaining a program of courses for nonmajors. Such courses are free from the need to present the elements of an entire subject as a basis for more specialized study. They can therefore be deeper and more challenging than conventional introductions, as concerned with the general ability to write and think as they are with substantive content. Besides such courses for nonmajors, the board also seeks courses that require a relatively advanced acquaintance with a particular field, but not in the interest of further specialization. The aim of such advanced general education courses is to raise, for an informed audience, questions about the history of a field, about its methodological or philosophical presuppositions, or about its relation to other fields of knowledge.

Twice a year, at advance course enrollment, the board distributes to students and faculty in the college a set of descriptions of courses and departmental programs. These have been recommended by departments or faculty members and are considered by the board to be particularly suitable as introductory or advanced general education courses. Almost any course in the University can serve eminently well as a general education course for some student. The purpose of the board's booklet is to call attention to some of the new and existing courses or programs in the College of Arts and Sciences whose primary focus is on general education. The booklet is not intended to be used as a substitute for the full catalog in planning electives, but rather as a guide to some of the more striking possibilities to be found in that document.

Akkadian
See Department of Near Eastern Studies, p. 166.

American Studies
S. C. Strout, chairman and director of undergraduate studies (110 Rockefeller Hall, 256-4611); M. J. Colacurcio, R. L. Moore, R. Polenberg, F. Somkin

The Major
The major in American studies is basically a program of coordinated study in the history and literature of the United States. It is not a "double major." The prerequisites are minimal; one course in British or American history at the 100 or 200 level and one course in British or American literature at the 200 level. The major itself is structured and demanding, and students who expect to become American studies majors should apply to the chairman to arrange for a major adviser.
In consultation with their advisers, American studies majors elect 32 credits (or eight courses) of work in the history and literature of all three large periods into which an account of the nation’s development can be divided, defined by the period as colonial, nineteenth century, and twentieth century. In order to gain both depth and breadth, they select as an area of concentration either a single period (or the connections between two of the periods) and take either 16 credits in one period and 6 credits in each of the other two, or 12 credits in each of the two periods whose connections constitute the focus of the study and 6 credits in the third. In addition, they take one of the specially designated interdisciplinary seminars at the 400 or 600 level. When the subject matter is appropriate, such a seminar may count toward the fulfillment of the period requirements. Students may divide the work between history and literature in whatever proportion serves their interests, provided that they take no more than two-thirds of their courses in any one department.

Beyond the basic requirements in American history and American literature, 12 credits above the elementary level are required in allied subjects. Eight credits of work are in the history or literature, or both, of another related culture, and 4 credits are in American thought, society, or culture studies from the perspective of another discipline such as anthropology, economics, government, history of art, and sociology. (This last 4-credit requirement may be satisfied outside the humanities.)

Courses in American history that will satisfy the 32-credit requirement described in the second paragraph are offered by the Department of History, those in American literature are offered by the Department of English, the Department of Theatre Arts, and the American Studies Research Center. Occasionally a course that fits an individual student’s program may be offered elsewhere. Substitution will depend on the adviser’s approval. Advisers determine what courses count for the interdisciplinary seminar.

**Honors.** Candidates for honors must maintain an average of B+ in courses pertinent to the major. To be eligible for a degree with honors in American studies, a student must in the senior year (a) either write an honors essay for American Studies 493, Honors Essay Tutorial, or submit to the American Studies Committee three term papers written for courses in the major, and (b) take an oral examination in the declared area of special interest.

**Anthropology**

Anthropology grew out of curiosity about the ways past and present human societies have differed and have been similar. As a craft, anthropology has developed and borrowed many strategies to approach these question—questions of uniformities. Some are archaeological, concerned with cultures long gone or destroyed by the spread of empires. Others are sociocultural, dealing with recent and contemporary rural and urban societies in all areas of the world through a variety of social scientific and humanistic techniques. Still others are biological and evolutionary, stressing human evolution and biological uniformity. In-depth field studies, excavations, laboratory analysis, the interpretation of symbol systems, and varieties of comparative methodologies are all part of anthropology.

Five introductory courses offer choices among the different strategies for doing anthropology. Four (112, 113, 114, and 116) explore major strategies for doing anthropology, lessons learned so far, and questions still pending. Nature and Culture (Anthropology 111)

focuses on the fundamental questions raised by all these approaches to anthropology—the issues that form the core of our concerns as anthropologists. The other departmental offerings deepen and broaden the basic knowledge. All anthropology courses with numbers below 500 are open to all students, unless otherwise stated in the course description.

**The Major**

The student who majors in anthropology must:

1. Take Anthropology 111 and one additional course at the 100 level, preferably during the freshman or sophomore year (Freshman Seminars in anthropology do not fulfill this requirement).
2. Take anthropology 300, The Discipline of Anthropology, no later than the fall term of the junior year.
3. Take at least one course in each of four of the following five categories: Category III, Archaeological Courses; Category IV, Biological and Ecological Anthropology; Category V, Sociocultural Anthropology; Category VI, Theory and History of Anthropology; and Category VII, a course that focuses on some world area.
4. Develop one or more areas of specialization within the discipline in consultation with his or her faculty adviser. Examples of such specializations include sociocultural anthropology, biological anthropology, archaeology, the theory and history, area studies, and biological and ecological anthropology. Students interested in any of these specializations must consult with the director of undergraduate studies, who will refer them to an appropriate academic adviser. When appropriate, special provisions for meeting major requirements may be arranged with the adviser’s approval.
5. Take a total of 32 credits of course work, in addition to Anthropology 300, beyond the introductory level. Up to 12 credits of course work in cognate disciplines (see Category VIII) related to the student’s specialization may be accepted for the major with the permission of the faculty adviser.

**Honors.** Anthropology majors interested in the honors program should consult the director of undergraduate studies before the beginning of their senior year and apply for admission to the program. Candidates for the degree of Bachelor of Arts with honors in anthropology must complete a thesis in the spring term of the senior year. Students may enroll in Anthropology 491 or 492, Honors Thesis, after obtaining the consent of the Honors Committee. The decision to award honors and in what degree is based on the quality of the thesis and the student’s overall record.

**Facilities**

The anthropology laboratory contains a small statistical and reference library as well as basic drafting and photographic equipment.

**Special Programs**

Specialized, individual study programs are offered in Anthropology 497-498, Topics in Anthropology, open to a limited number of juniors and seniors who have obtained consent of the instructor. Undergraduates should also note that most 600-level courses are open to them if consent of the instructor is obtained.

The Department of Anthropology holds colloquia to a limited number of juniors and seniors who have obtained consent of the instructor. Undergraduates should also note that most 600-level courses are open to them if consent of the instructor is obtained.

**Anthropology arose as a novel attempt to address fundamental questions about humanity. Who are we? Where do we come from? Where are we going? Though it does not provide privileged answers to these questions, it assembles insights through a unique combination of methods and a spirit of comparative inquiry. Informed by the long view gotten from the study of human evolution and culture history, and the comparative view arising from the study of contemporary human biological and cultural diversity and uniformity, anthropology aspires to examine the relationships between the physical/biological and symbolic/moral worlds in which we live. This course examines a variety of past and current attempts to explain the relationships between nature and culture in human life.**

**112 Social Anthropology**

Spring. 3 credits (4 by arrangement with instructor).

An introduction to cultural anthropology through ethnographies, or the description of cultures, by anthropologists. Through readings and lectures students acquaint themselves with a number of cultures from several parts of the world. The cultures range in form from those of modern, complex societies to those of state societies. Throughout the course we attempt to make sense of exotic cultures in their own terms. Attention is focused on variation in cultural forms as they are expressed in social, economic, and ritual practices. In this encounter, the principles of anthropology, as a comparative enterprise that poses distinct cultural systems in relief, will be developed. Fiction, films, and exercises supplement the formal anthropological materials.

**114 Humankind: The Biological Background**

Spring. 3 credits (4 by arrangement with instructor).

Anthropological inquiries about human origins, biocultural diversity, and behavior require an understanding of the causes and the effects of evolution. This survey of biological anthropology examines controversies about human origins and antiquity, human adaptations to past environments, sociobiology, biological variability in ancient and modern populations, and the basis for the evolution of diversity of cultural behaviors. Lectures are supplemented with films, laboratory and discussion sections, and guest lecturers.

**116 Ancient Societies**

Fall. 3 credits (4 by arrangement with instructor). Not offered 1982-83.

**121 Encounters with Other Cultures**

Fall. 3 credits. Freshman Seminar. Not offered 1982-83.

**130 Apes and Languages**

Spring. 3 credits.

Freshman Seminar.

W 7:30-9:30 p.m. B. J. Isbell.

Extraordinary claims have been made about the language capacities of chimpanzees and gorillas. Are the apes talking? How does the sign language that the apes are 'trying to communicate' differ from the sign language that human beings? A selection of popular and scholarly books and articles will be studied. This seminar is intended for students who have completed 130 Apes and Languages.
[142 Rites of Passage Spring. 3 credits. Freshman Seminar. Not offered 1982-83.]

[150 The Discovery of America Spring. 3 credits. Freshman Seminar. Not offered 1982-83.]

205 Ethnographic Films Spring. 2 credits. M 7:30-9 p.m. B. J. Isbell.

Human cultural and social variability is explored through a series of ethnographic films, and readings and lectures relating to these films. The films are chosen to show peoples living in a variety of ecological situations and at different levels of social complexity in various parts of the world (i.e., Africa, Asia, Australia, the Americas). Readings and lectures will use the concepts and theories of cultural anthropology to interpret the significance of the different modes of life shown in the films.

II. Courses Intended Primarily for Majors

300 The Discipline of Anthropology Fall. 4 credits. Limited to and required of anthropology majors, who must take this course no later than the fall term of the junior year. M W F 3:35. P. S. Sangren with the anthropology faculty.

The course is an overview of the field of anthropology, it provides a systematic treatment of the discipline, the concepts that are used, the persistent questions that are asked, the speculations within the field, and the shared goals and differing viewpoints. The course is intended to help majors plan their course work.

491 Honors Thesis Fall. 4 credits. Prerequisite: consent of the Honors Committee. Intended for majors graduating in midyear.

Hours to be arranged. Staff. Independent work under the close guidance of a faculty member selected by the student.

492 Honors Thesis Spring. 4 credits. Prerequisite: consent of the Honors Committee. Hours to be arranged. Staff. Independent work under the close guidance of a faculty member selected by the student.

495 Social Relations Seminar (also Sociology 497) Spring. 4 credits. Limited to seniors majoring in social relations.

Hours to be arranged. Staff.

497-498 Topics In Anthropology 497, fall. 498, spring. Credit to be arranged. Hour(s) to be arranged. Staff. Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

III. Archaeological Courses

See also courses listed under Archaeology.

203 Early People: Human Cultural and Biological Evolution (also Archaeology 203) Fall. 3 credits. T R 1-2. 50-minute sec to be arranged. T. P. Volman.

This course surveys the archaeological and fossil record of human evolution. Contributions by researchers from a variety of scientific disciplines are highlighted, as well as the discoveries, personalities, and controversies that have enlivened the study of human evolution. Emphasis is on the cultural and biological aspects. Interpretations of the development of human capabilities, behaviors, and lifeways are critically evaluated, with consideration also of the scientific and social contexts in which hypotheses about the human career and "human nature" have been devised, promoted, debated, and tested.

[250 The Earliest Civilizations Fall. 4 credits. Not offered 1982-83.]

[352 Interpretation of the Archaeological Record Spring. 4 credits. Not offered 1982-83.]

[354 The Peopling of America Fall. 4 credits. M W F 9:05. T. F. Lynch. Prehistoric discovery of the New World, beginning with American Indian origins in Asia and ending with the largely unrecorded European medieval contact with North America. Major topics include crossing the Bering land bridge, big game hunting and excursions, postglacial adaptations to changing environments, diversified subsistence in the eastern woodlands, agricultural civilizations of the Midwest and Southwest, and Eskimo and Norse exploration and settlement across the Arctic and North Atlantic.

A consideration of the origins, development, and spread of the Olmec, Maya, Aztec, and other native civilizations of Mexico and Central America. Prehistoric cultural developments from the emergence of settled farming life, through the rise of states, to the European conquest of the Aztecs will be emphasized.

[356 The Archaeology of South America Spring. 4 credits. Not offered 1982-83.]

358 Archaeological Research Methods (also Archaeology 358) Spring. 4 credits. Prerequisite: permission of instructor.

Hours to be arranged (off campus). T. F. Lynch. Techniques of archaeological survey, excavation, and analysis, and their theoretical foundations. A wide variety of methods and problems will be considered, with emphasis on situations encountered in South America.

361 Field Archaeology in South America (also Archaeology 361) Spring. 10 credits. Prerequisite: permission of instructor.

Hours to be arranged (off campus). T. F. Lynch. Participation in archaeological survey, excavation, and laboratory work in the borderlands of southern Peru and northern Chile. This practical training session is part of a collaborative program with the Pontificia Universidad Catolica del Peru and the Universidad de Chile. Research will focus on definition of prehistoric patterns of economic complementarity, as found among the indigenous peoples of the Western Valleys, outlying Tiwanaku settlements, and the puna homeland. Training in diverse archaeological field methods will be emphasized as students take part in various aspects of a regional research project.

[493 Seminar in Archaeology: The Maya Fall. 4 credits. Not offered 1982-83.]

A detailed consideration of Aztec history and society. Emphasis is on the historical roots of the Aztec empire.

IV. Biological and Ecological Anthropology

[321 Human Biology: Variation and Adaptations of Contemporary Populations Fall. 4 credits. Not offered 1982-83.]

375 Ecology and Human Adaptation Fall. 4 credits.

An analysis of human interactions with the physical, biological, and social environment, based on the principles of general ecology. Changes over time in human interactions with the environment will be discussed, as well as the consequences in adaptive strategies of contemporary human groups living in similar and different environments.

476 Human Behavior: A Sociobiological Perspective Fall. 4 credits. Limited to juniors and seniors.

T R 2:30-4. R. Dyson-Hudson.

An attempt to look at human sociobiological behavior as possible adaptive responses to past and present environments. General categories of behavior discussed will include aggression, territoriality, dominance and hierarchy, bonding, and sex-role differences.

V. Sociocultural Anthropology

301 Biology and Society I: The Biocultural Perspective (also Biological Sciences 301 and Biology and Society 301) Fall. 3 credits (4 by arrangement with instructor). Prerequisite: one year of introductory biology. This is part of the two-semester core course for the biology and society major and is also open to other students who have fulfilled the necessary prerequisites.

M W F 9:05. D. J. Griffler.

Viewing human biology, behavior, and institutions as the ongoing products of the interactions between human biological evolution and cultural change, this course documents these interactions with reference to the following topics: the evolution of the capacity for culture; human groups and institutions; language, meaning, and cultural "realities"; and major models of human nature and human institutions.

[305 Psychological Anthropology Fall. 4 credits. Not offered 1982-83.]

[313 Urban Anthropology Spring. 4 credits. Not offered 1982-83.]

Are societies machines, theaters, religions, dramas, stories, texts, games, aesthetic forms, structural codes? We assess such possibilities in anthropological views of different cultures: from cosmologies and ceremonies of tribal systems, to expressive genres of archaic hierarchies, to differentiated arts and sports of nation states. Principles of language and culture, symbolic interpretation, and structuralism are introduced.

321 The Anthropology of Women and Gender (also Women's Studies 321) Fall. 4 credits.

An introduction to the study of sex roles cross-culturally and to anthropology's theories of sex and gender. The course examines various aspects of the place of the sexes in social, political, economic, ideological, and biological systems to emphasize the diversity in gender and sex-role definition around the world.

[322 Comparative Religious Systems Spring. 4 credits. Not offered 1982-83.]

323 Kinship and Social Organization Spring. 4 credits.

M W F 11:15. B. Lambert.

Much of this course is a survey of forms of the family, descent groups, and marriage systems. The role of age and sex in the social structure is also considered. The last part of the course is devoted to a history of the British and American family and to its fate in utopian communities.
Two movies about Navajos—one by commercial filmmakers and the other by Navajos—are examples of readings, listening, and viewing. This course concludes with the discussion of Buber's anthropological essay What Is Man? and Durrell's novel Nunquam.

R 2:30-4:25. R. Ascher.

The goal of the creation, by each student, of a portrait, profile, or life history of one other person, ideally that other person should differ from oneself in background and age, or in other significant ways. Freedom is granted—and experimentation is encouraged—in the form of observation, recording, and presentation. As a point of departure, a study is made of books such as Group Portrait With Lady and A Fortunate Man. Portraits on film include Sam and Betty Tells Her Story. The photography of Arbus, the sculpture of Giacometti, and the painting of Katz are examined critically. The second half of the semester is devoted to one-hour critiques of the work of each student.

R 2:30-4:25. R. Ascher.

The expression of anthropological ideas through original three-dimensional constructions, tapes, drawings, graphics, video, painting, film, and related media. Writing can be combined with visual expressions as, for example, in concrete poetry or photographic essays. Projects must conform to three general guidelines: (1) concern with the human condition; (2) prior knowledge of the medium chosen; and (3) the project must be one that can be developed throughout the course and benefit from its particular setting. Anthropology is introduced through readings, such as Carpenter's If Wittgenstein Had Been an Eskimo and Tutuola's The Palm-Wine Drunkard. The first half of the course consists of readings and short exercises; project summaries occupy the second half.

T 2:30-4:25. R. Ascher.

The anthropologist, having experienced the culture of others, views America with new eyes. This vision is presented in readings that range from the expository book to the creative short story. Included are works by nonanthropologists who contribute to our understanding by reason of insight, or writing style, or both. For example, we read Kafka's Ameikeula. People in the seminar write about things, processes, and scenes outside of their ordinary experiences. One might, for example, observe and describe the rituals of a religion other than his or her own. A significant portion of the seminar is given over to discussions of what people in the seminar have written.

VI. Theory and History of Anthropology

Anthropology as a discipline depends more on the establishment of its object than on the reinterpretation of central ideas. The topics of this course are the establishment of differences in ethnographic description. How is it that ethnographers determine the characteristics of the populations they study without either assimilating them to what is already known or making them so foreign as to be meaningless? Careful readings of ethnographies will be balanced by students' own exercises in description.

M W F 11:15. B. Lambert.

A survey of the assumptions social anthropologists make concerning the nature of society and culture, and the explanations they have proposed for regularities in social behavior, values, and belief systems. Among the approaches considered are processual analysis, the use of the concept of transaction, the historical method, ethnocentrism, and structuralism.

413 History of Anthropology in the United States Fall 4 credits. Not offered 1982-83.

A study of the corpus of Claude Levi-Strauss and a reading of diverse structuralist texts that raise general issues in philosophy, criticism, and the comparative method. An effort is made to assess the place of structuralism in the history of ideas.

VII. Area Courses

240 Cultures of Native North America Fall 4 credits. M W F 1:25. B. Lamberti.

A survey of the principal Eskimo and American Indian cultures north of Mexico. Selected cultures will be examined to bring out distinctive features of the economy, social organization, religion, and world view. Although the course concentrates on traditional cultures, some lectures and readings deal with changes in native ways of life that have occurred during the period of European-Indian contact.

331 The United States Fall 4 credits. M W F 9:30. C. J. Greenhouse.

How do Americans define their own culture? The course examines attitudes about work, success, the marketplace, social control and the political process in relation to central images of American identity: freedom, equality, and individualism. This is a discussion seminar that is designed to include the students' own observations as an integral part of the course in the form of field assignments. Readings combine contemporary American ethnography, with forays into popular social analysis and commentaries by foreign travelers.

333 Ethnology of the Andean Region Fall 4 credits. Not offered 1982-83.

334 Ethnology of Island Southeast Asia Spring 4 credits. Not offered 1982-83.

A survey of the peoples and cultures of mainland Southeast Asia from prehistoric to contemporary times.

336 Ethnology of Oceania Fall 4 credits. Not offered 1982-83.

This course is a general introduction to Hindu, Buddhist, tribal, and Islamic societies of South Asia, with particular attention to India, Sri Lanka, Nepal, and the Himalayan kingdoms. Through ethnographic, historical, and literary accounts, cultures of South Asian societies and cultures will be considered in contrast and dynamic communication. The course proceeds descriptively, working through myriad social, ritual, and mythic expressions, toward an understanding of variability in South Asian cultures and of comparative ethnology.
343 Religion, Family, and Community in China  Spring. 4 credits. M. W. F. 10:10. P. S. Sangren. The course provides anthropological perspectives on family and kinship, religion and values, economy and polity, and social organization in China. Both traditional society and culture and transformations in the People’s Republic of China are considered. A major goal of the course is to provide a deeper understanding of the social and cultural fabric of the world’s largest and longest-lived civilization.

[345 Japanese Society Fall. 4 credits. Not offered 1982-83.]
[343 Indians of Mexico and Central America Spring. 4 credits. Not offered 1982-83.]
[345 Andean Thought and Culture Spring. 4 credits. Not offered 1982-83.]
[456 Mesoamerican Thought and Culture  Fall. 4 credits. Not offered 1982-83.]

VIII. Related Courses in Other Departments
Introduction to Archaeology (Archaeology 100)
Popular Archaeology (Archaeology 107)
Astroastronomy (Archaeology 109)
Indian Lifeways of Ancient North America (Archaeology 111)
Method and Theory in Stone Age Archaeology (Archaeology 317)
Human Paleoantology (Biological Sciences 371)
Ethnobotany (Botany 246)
Human Growth and Development: Biological and Behavioral Perspectives (Nutritional Sciences and Human Development and Family Studies 347)
Cross-Cultural Psychology (Sociology 384 and Psychology 384)

IX. Graduate Seminars
600-level courses are open to undergraduates who have fulfilled the prerequisites or by consent of the instructor.
Southeast Asia Seminar: Vietnam (Asian Studies 601)
Southeast Asia Seminar: Thailand (Asian Studies 602)

Contemporary Sociological Theories of Development (Rural Sociology 606)
607-608 Special Problems in Anthropology 607, Fall; 608, Spring. Credit to be arranged. Hours to be arranged. Staff.
610 Myth and Mythology (also Classics 610) Spring. 4 credits. R. 2:30-4:25. T. F. Siegel, P. Pucci. An analysis of the metaphysical and social facets of “myth”; the origin of discourse and the discourse of origins. We will consider major schools of interpretation of myth and myth in ethnographic context.
[611 Principles of Social Anthropological Theory Spring. 4 credits. Not offered 1982-83.]

Methods of Assessing Child Growth (Nutritional Sciences 612)

[619 Anthropological Approaches to the Study of Buddhism in Asia Fall. 4 credits. Not offered 1982-83.]

626 Problems in Economic Anthropology Spring. 4 credits. Prerequisite: Anthropology 326 or permission of instructor. M. 2:30-4:30. P. S. Sangren. This course is designed to consider in detail problems of theory and method in economic anthropology. Among the topics discussed are theories of value and exchange, articulation of modes of production, and regional analysis. Particular attention is paid to developing productive linkages between general theories of economy and society, and participants’ specific research interests.

[627 Law in the Context of Culture Spring. 4 credits. Not offered 1982-83.]

628 Political Anthropology: Culture and Revolution in Indonesia (also Government 647) Spring. 4 credits. Not offered 1982-83.
630 Andean Systems of Production Spring. 4 credits. Not offered 1982-83.
Anthropometric Assessment (Nutritional Sciences 630)

[632 Andean Symbolism Spring. 4 credits. Not offered 1982-83.]
[633 Andean Research Fall and spring. 4 credits Not offered 1982-83.]
634-635 Southeast Asia: Readings in Special Problems 634, Fall; 635, Spring. Credit to be arranged. Hours to be arranged. A. T. Kirsch, J. T. Siegel.

[638 Regional Systems and Local Communities Spring. 4 credits. Not offered 1982-83.]

[651 Anthropological Boundaries: Graduate Spring. 4 credits. Not offered 1982-83.]

[653 Constructions and Visualizations: Graduate Fall. 4 credits. Not offered 1982-83.]

664 Problems in Archaeology: Early Man in America Fall. 4 credits. Prerequisite: Anthropology 354 or permission of instructor. T. 2:30-4:25. T. F. Lynch. The subject will be considered in historical perspective, as it has been dealt with by archaeologists, geologists, and paleoecologists. Emphasis will be on contextual analysis and environmental adaptations rather than chronology, and topics will be drawn from both North and South American archaeology.

[666 The Discovery of America Fall. 4 credits. Not offered 1982-83.]

677 Topics in Ecological Anthropology: Food Production and Social Organization Spring. 4 credits. W. 2:30-4:25. R. Dyson-Hudson. The adaptive relations between specific groups of foragers and agriculturalists, and the food-producing sectors of their habitat will be analyzed. The relation between variables of human social organization such as settlement size, kinship relations, social stratification, and spatial organization, and features of the environment will be examined through reading current articles and monographs.

Introduction to Ethnomusicology (Music 680)

[681 Topics in Biomedical Anthropology Spring. 4 credits. Not offered 1982-83.]
901-902 Field Research 901, Fall; 902, Spring. Credit to be arranged. Hours to be arranged. Staff.

Arabic and Aramaic
See Department of Near Eastern Studies, p. 166.

Archaeology

Archaeology at Cornell is conceived as an interdisciplinary field. Cornell is one of the few universities in the United States to offer a separate major in archaeology and to maintain a faculty position for this purpose. The program is administered with the help and cooperation of the faculty members involved in archaeology in several departments. This group helps to coordinate course offerings and to find opportunities for fieldwork, professional positions, or graduate study.

The Major

The basic introductory course for both majors and nonmajors is Archaeology 100. Those with a fairly serious interest in the field, particularly prospective majors, are encouraged to take the optional one-hour section, Archaeology 101. This course covers the broadest range of archaeology in terms of area and time, and deals with method as well as results. Since the major draws upon the teaching and research interests of faculty from many departments in order to present a broad view of the archaeological process, a student interested in the archaeology major should discuss his or her course of study with a participating faculty member as early as possible. In some areas of specialization, intensive language training should be coordinated with other studies as early as the freshman year.

As prerequisites to the major, a student must complete Archaeology 100 and another introductory archaeology course with grades of C or better. Once admitted to the major, the student must take an additional 30 credits in courses from the archaeology list, chosen in consultation with the major adviser. These courses should provide exposure to a broad range of archaeologically known cultures and the methods of revealing and interpreting them. They must be distributed as follows:
1) At least 20 credits at the 300 level or above
2) At least 6 credits in each of the categories below:
   a) Theory and interdisciplinary approaches
   b) Old World archaeology
   c) New World archaeology
Beyond these 30 credits, a student must elect at least 6 credits in related subjects outside the major, such as computer science, statistics, ethnology and history of appropriate areas, drafting, photography, surveying and map making, interpretation of aerial photographs, paleography, and epigraphy.
Fieldwork. Every student should gain some practical experience in archaeological fieldwork on a project authorized by his or her adviser. This requirement may be waived in exceptional circumstances. The Jacob and Hedwig Hirsch bequest provides support for a limited number of students to work at excavations sponsored by Cornell and other approved institutions.

The Concentration

Only students in other Cornell schools and colleges may elect a concentration in archaeology; they are eligible for Hirsch Scholarships in support of fieldwork. To concentrate in archaeology, the student must complete Archaeology 100 with a grade of C or better and at least four advanced courses in archaeology, distributed among the three groups stipulated in (2) in the description of the major, above.

Introductory Courses

100 Introduction to Archaeology Spring. 3 credits. MWF 1:25. T. P. Volman.

A broad introduction to archaeology— the study of material remains to answer questions about the human past. The history, methods, and theory of archaeology are presented, followed by a survey of the archaeological record from human origins, through the development of food production, to the rise and spread of civilizations. Contributions by researchers from a wide variety of disciplines are stressed.

101 Introduction to Archaeology, Section Spring. 1 credit. Optional section to be taken concurrently with Archaeology 100. Prospective archaeology majors are expected to participate in this section, although it is open to all interested students. R 12:20-1:10. T. P. Volman.

A series of practical and special topics. The section includes exposure to archaeological materials, an introduction to mapping and recording, special lectures by Cornell faculty and outside visitors, and visits to campus research facilities to gain familiarity with such techniques as tree-ring dating and soils analysis.

107 Popular Archaeology Fall and spring. 3 credits. Freshman Seminar. Fall: MWF 1:25, M. Anders. Spring: T R 2:30-3:45, T. P. Volman.

Examines the scientific basis for controversial interpretations of prehistory that have gained wide public acceptance. Readings include both popular and scholarly works. Careful and critical analysis of archaeological evidence is emphasized.

[108 The Origins and Diversity of the Family In Antiquity Not offered 1982-83]

109 Archaeoastronomy Fall and spring. 3 credits. Freshman Seminar. M WF 2:30. Staff.

Ancient peoples perceived and recorded celestial phenomena in their monuments, calendars, religions, and myths. It is clear that astronomical imagery has been an important component of human thought, and it is possible that asterisms and celestial cycles dominated cosmological thinking until relatively recently. We survey the character of ancient astronomical knowledge manifested in the archaeological record. We shall also consider the extent to which sky lore of the past is embedded in time reckoning, language, and astrology of the present day.

300 Individual Study in Archaeology and Related Fields Fall and spring. Credit to be arranged. Prerequisite: Archaeology 100 or permission of instructor.

Hours to be arranged. Staff. Students pursue topics of particular interest with the guidance of a faculty member.

Theory and Interdisciplinary Approaches

Ancient Societies (Anthropology 116)

203 Early People: Human Cultural and Biological Evolution (Also Anthropology 203) Fall. 3 credits. T R 1:25-2:15, plus occasional demonstrations, R 12:20. T. P. Volman.

Survey of the archaeological and fossil record of human evolution. Contributions by researchers from a variety of scientific disciplines are highlighted, as well as the discoveries, personalities, and controversies that have enlivened the study of human evolution for more than a century. Interpretations of the development of human capabilities, behaviors, and lifeways are critically evaluated, with consideration also of the scientific and social contexts in which hypotheses about the human career and human nature have been devised, popularized, debated, and tested.

[The Earliest Civilizations (Anthropology 250) Not offered 1982-83]

281 History of Archaeology Not offered 1982-83.

Dendrochronology of the Aegean (Classics 309) Fall.

317 Method and Theory in Stone Age Archaeology Fall. 4 credits. T R 10:10-11:25. T. P. Volman.

An introduction to the kinds of information Stone Age archaeologists try to extract from the prehistoric record, current theoretical orientations, and the wide variety of methods available to multidisciplinary archaeological research. Case studies are used to demonstrate excavation procedures, research design, and the potential of the long Stone Age record for providing insights into sociocultural behaviors, as well as information on techno-economic developments.

Geomorphology (Geological Sciences 345)

[Interpretation of the Archaeological Record (Anthropology 352) Not offered 1982-83]

358 Archaeological Research Methods (also Anthropology 358) Spring.

[Evolution of Prehistoric Technology Not offered 1982-83]

Ceramics (History of Art 423) Not offered 1982-83.

[Investigation of Andean Institutions: Archaeological Strategies (Anthropology 435) Not offered 1982-83]

Seminar in Archaeology: The Maya (Anthropology 493) Fall.

Seminar in Archaeology: The Aztecs (Anthropology 494) Spring.

Problems in Archaeology: Early Man in America (Anthropology 864) Fall.

Old World Archaeology

Freshman Seminar in Archaeology (Classics 121) Fall and spring.

[Mediterranean Archaeology (Classics 200 and Near Eastern Studies 262) Not offered 1982-83]

[Rise of Classical Greece (Classics 206) Not offered 1982-83]

Introduction to Classical Archaeology (Classics 220 and History of Art 220) Fall.

[Minoan-Mycenaean Art and Archaeology (Classics 221 and History of Art 221) Not offered 1982-83]

Archaeology in Action I (Classics 232) Fall.

Archaeology in Action II (Classics 233) Spring.

[309 Archaeology of Africa: From Human Origins to Iron Age States. Not offered 1982-83]

[Greek Architecture (Classics 328) Not offered 1982-83]

The History and Archaeology of Ancient Israel (Near Eastern Studies 243) Spring.

[Introduction to Art History: Art of Egypt and Mesopotamia (Near Eastern Studies 248 and History of Art 211) Not offered 1982-83]

[275 Ancient Seafaring (also Near Eastern Studies 261) Not offered 1982-83]

[Archaeology of Classical Greece (Classics 320 and History of Art 320) Not offered 1982-83]

[Archaeology of Cyprus (Classics 321 and History of Art 321) Not offered 1982-83]

Arts of the Roman Empire (History of Art 322)

[Painting in the Greek and Roman World (History of Art 323) Not offered 1982-83]

[Greek Vase Painting (History of Art 325) Not offered 1982-83]

Greek and Roman Coins (History of Art 327)

[Greek Sculpture (Classics 329 and History of Art 329) Not offered 1982-83]

[Art in Pompeii: Origins and Echoes (History of Art 330) Not offered 1982-83]

[History and Archaeology of Ebla (Near Eastern Studies 362 and Archaeology 362) Not offered 1982-83]

History and Archaeology of Ancient Egypt (Near Eastern Studies 367)

[The Vikings (English 601) Not offered 1982-83]

[Seminar in Aegean Archaeology (Classics 629) Not offered 1982-83]

[Seminar in Aegean Archaeology (Classics 630) Not offered 1982-83]

New World Archaeology

There is much that the archaeological record can tell us about the diverse cultural adaptations made by the Indians who explored and settled the North American continent long before the arrival of the first
European. The traces left by these ancient Americans are critically evaluated and then used to create realistic vignettes of prehistoric lifeways in which sensuous and intellectual perspectives are combined.

The Peopling of America (Anthropology 354) Fall.
Archaeology of Mexico and Central America (Anthropology 355) Spring.
The Archaeology of South America (Anthropology 356) Spring.
Field Archaeology in South America (Anthropology 361 and Archaeology 361) [Mesoamerican Thought and Culture (Anthropology 456) Not offered 1982-83.]
Andean Systems of Production (Anthropology 630) Not offered 1982-83.
[Seminar in Andean Research (Anthropology 633) Not offered 1982-83.]
Problems in Archaeology: Early Man in America (Anthropology 684) Fall.

Asian Studies

The Department of Asian Studies encompasses the geographical areas of East Asia, South Asia, and Southeast Asia and offers courses in most of the disciplines of the social sciences and the humanities. Asian studies courses through the 400 level are taught in English and are open to all students in the University. Some of these courses may be counted toward majors in other departments; others fulfill the humanities distribution requirement.

The Major

The applicant for admission to the major in Asian studies must have completed at least one area studies course selected from among those listed under the Department of Asian Studies and must receive permission for admission to the major from the director of undergraduate studies. The student must have received a minimum grade of C in this course and in all other courses counted toward the major.

A student majoring in Asian studies is required to complete two courses at the 200 level (a minimum of 6 credits with a grade of C or better) in one of the Asian languages offered at Cornell. The major consists of at least 30 additional credits (which may include up to 6 credits of further language study) selected by the student in consultation with his or her adviser from among the courses listed under the Department of Asian Studies and numbered 300 and above. Majors in Asian studies normally specialize in the language and culture of one country and often choose an additional major in a traditional discipline.

Honor. To be eligible for honors in Asian Studies, a student must have a cumulative grade average of B+ in all Asian studies courses and must successfully complete an honors essay during the senior year. Students who wish to be considered for honors should apply to the director of undergraduate studies during the second term of their junior year. The application must include an outline of the proposed project and the endorsement of a faculty adviser.

During the first term of the senior year, the student starts research for the essay in conjunction with an honors essay adviser and the director of undergraduate studies. The student must have a cumulative grade average of B+ in all Asian studies courses and must successfully complete an honors essay during the senior year. Students who wish to be considered for honors should apply to the director of undergraduate studies during the second term of their junior year. The application must include an outline of the proposed project and the endorsement of a faculty adviser.

During the first term the student must present a detailed outline of the honors essay and have it approved by the faculty sponsor and the director of undergraduate studies. The student is then eligible for Asian Studies 402, the honors course, which entails writing the essay. At the end of the senior year, the student has an oral examination (with at least two faculty members) covering both the honors essay and the student's area of concentration.

Concentration in Southeast Asia Studies
A candidate for the Bachelor of Arts or Bachelor of Science degree at Cornell may take a concentration in Southeast Asia studies by completing 15 credits of course work, including a history course and three...
courses or seminars at the intermediate or advanced level, two of which may be Southeast Asian language courses. Students taking a concentration in Southeast Asian studies are members of the Southeast Asia Program and are assigned an adviser from the program faculty. Such students are encouraged to commence work on a Southeast Asian language and to take advantage of summer intensive language training.

**Intensive Language Program (FALCON)**

For those students desiring to accelerate their acquisition of Chinese, Japanese, or Indonesian, Cornell offers a full-time intensive language program, the Full-Year Asian Language Concentration (FALCON). FALCON students spend six hours a day, five days a week, for periods of up to a full year studying only the language and thus are able to complete as many as twelve hundred hours of supervised classroom and laboratory work in one year. For further information, contact the FALCON Program Office, Department of Modern Languages and Linguistics, 203 Morrill Hall.

**Freshman Seminars**

101 Women and Social Transitions in the Twentieth Century Spring. 3 credits. Not offered 1982–83. B. deBary.

103 Revolutions and Social Values in Modern Chinese Literature Spring. 3 credits. Not offered 1982–83. E. M. Gunn.

110 People and Nature in East Asia Fall. 3 credits. Hours to be arranged. J. Nickum and staff. Students explore their own ideas of self, society, and nature in the light of East Asian (primarily Chinese and Japanese) human experience. Major perspectives from both east and west will be presented in readings and lectures spanning the fields of the natural environment, history, philosophy, literature, society, economic development, and prospects for the future. Brief analytical papers and essays will provide a vehicle for students to develop and express their ideas.

**Related Freshman Seminars in Other Departments**

**General Education Courses**

211 Introduction to Japan Fall. 3 or 4 credits. M W 11:15; disc. F 11:15, 1:25, or 2:30. K. Brazell and staff.

An interdisciplinary introduction to Japanese culture, especially designed for students not majoring in Asian studies. The first part of the course focuses on traditional aspects of Japanese culture, which are still important today, while the second part analyzes contemporary society from a variety of perspectives. Guest lecturers from five or six departments speak on their areas of expertise.

212 Introduction to China Spring. 3 or 4 credits. T R 1:25; disc. to be arranged. E. M. Gunn and staff.

An interdisciplinary introduction to Chinese culture especially designed for students not majoring in Asian studies.

**Asia—Literature and Religion Courses**

The following courses are taught entirely in English and are open to any Cornell student.

300 Dimensions of Religious Experience in Asia Fall. 3 credits. T R 10:10–11:25. R. Birnbaum.

A systematic approach to major themes of various Asian religious traditions within the context of human experience: sacred time and space, ritual behavior, pilgrimage, saints, sages, and other ideal types; views of death; relationships to the divine; meditation; art and Asian religions; etc.

307 Asian Dance and Dance Drama (also Theatre Arts 307) Fall or spring. 3 credits. Section 1: Indian Dance. Fall. 3 credits. [Section 2: Japanese Noh Theater Not offered 1982–83. Section 3: Japanese Dance. Not offered 1982–83.]

M W F 10:10. D. Sudan. Historical background and performance technique of East Indian dance. The particular dance technique that will be taught will be Odissi, which is related to Bharata Natyam, one of the four classical dance forms of India. The M W classes will be Odissi movement technique. The F class will be lecture, film, and discussion based on reading assignments and papers prepared by students. The M W classes may be taken without the F class, in which case physical education credit may be earned, but not academic credit. Students who attend all three classes and do all work may earn both physical education credit and 3 units of academic credit.

310 Readings in Korean Literature Spring. 3 credits. Hours to be arranged. D. R. McCann. A survey of works of literature most notably exemplifying the Korean cultural identity. Premodern works will include The Song of Ch'oyong, The Story of Chunhyang, and selected kasa and sijo poems. Modern works will also include both poetry and fiction. A principal theme to be considered will be the nature of the Korean perspective on the land, and of the individual writer's relationship to them.

313 The Japanese Film Spring. 3 credits. One optional film viewing M 4:30; one required viewing W 4:30; lecture, W 7:30–p.m. Discussion sections: R 9:05, or F 11:15 or 12:20. B. deBary. After an introduction to methods of film analysis, the course presents a sequence of ten films by noted Japanese directors. The aim of the course is twofold: to enhance appreciation of film as an art form and to use the formal analysis of the films to yield insights into Japanese society and culture. Particular attention is given to areas in which Japanese film, influenced by traditional arts and aesthetic principles, has resisted Hollywood editing codes.

351 Early Buddhism Fall. 4 credits. T R 2:30–3:45. R. Birnbaum. Principles, practices, and goals of Indian Buddhism from Sakyamuni to the rise and establishment of early Mahayana movements. The first part of the course will focus on the life and teachings of Sakyamuni and the practices of early monastic Buddhism, as seen from scriptural and archaeological sources. The second part of the course will concentrate on the spread of Buddhism throughout India, with attention to the role of Central Asian borderlands in the introduction of new concepts and the rise of new religious movements. The influence of Buddhism on Indian culture—including art and architecture, literature, medicine, and statecraft—will also be studied. Two guided papers and a final exam.

352 Mahayana Buddhism Spring. 4 credits. No prerequisites; Asian Studies 250 or Asian Studies 351 strongly recommended.

T R 2:30–3:45. R. Birnbaum. Principles, practices, and goals of later Buddhism in the northern Buddhist countries of China, Japan, and Tibet. Special focus on the transmission of Buddhism to these countries, its confrontation with native religious traditions, and the resulting adaptations and transformations. Important scriptures, tenets of major schools, lives of eminent teachers. Influence of Buddhism on Far Eastern culture (art, music, literature, etc.). Two guided papers and a final exam.

355 Japanese Religions Fall. 4 credits. Not offered 1982–83.

357 Chinese Religions Fall. 4 credits. T R 10:10–11:45. R. Birnbaum. A systematic survey of Chinese religious concepts and practices from the neolithic period to the twentieth century. Using historical and phenomenological approaches, the course explores Confucianism, Taoism, and Buddhism, as well as folk religious practices, will be explored. Classical texts and scriptures in translation, lives of exemplary masters, interrelationships of religion and culture (including art and music, city planning, medicine, statecraft, etc.).

373 Twentieth-Century Chinese Literature Fall. 4 credits. T R 12:55, disc. to be arranged. E. M. Gunn. A survey of the principle works in English translation, the course introduces fiction, drama, essay, and poetry of China beginning with the Republican era and continuing up to the present in the People's Republic of China, with attention to social and political issues and literary theory. One session each week will be devoted to discussion.

374 Chinese Narrative Literature Spring. 4 credits. Hours to be arranged. E. M. Gunn. Selected works in classic Chinese fiction are read in translation. Major novels such as the Dream of the Red Chamber and Water Margin are emphasized.

376 Narrativity in Modern Japanese Fiction Spring. 4 credits. M F 1:25–3:30. B. deBary. The course will trace the development of the modern Japanese novel from its antecedents in the seventeenth century geshaku (light fiction) genre. Critical writings of Todorov, Ian Watt, Barthes, and others will be studied in an attempt to assess both the usefulness and limitations of Western theories of narrativity with reference to Japanese texts.

377 Japanese Narrative Literature Fall. 4 credits. M W 2:30–3:45. K. Brazell. The major narratives from the Tale of Genji to Saikaku are studied in translation.

[379 Southeast Asian Literature in Translation Fall, offered 1982–83]

381–382 War as Myth and History in Postwar Japan (The Frederick G. Marcham Seminar; also History 381–382). 381, fall; 385 spring 4 credits each term. Fall: T R 1:25–2:15. Spring: irregular class meetings; students will pursue independent work in consultation with the instructors, and the class will meet for special events and presentations by class members. B. deBary, J. V. Koschmann.
How is the war story told in postwar Japan? The course will examine persisting manifestations of the war memory in contemporary Japanese cultural life, with emphasis on ways in which the story of World War II has been retold, reinterpreted, and given new symbolic and factual significance in light of changing historical circumstances. Class discussion will focus on the interpretation of texts, ranging from political thought and history to fiction, film, and poetry.

386 Folk Literature of East Asia Fall. 4 credits.  M W 4:30-5:30 D. McCann, J. McCoy  A survey of the folk literature of China, Japan, and Korea, with the context of a general consideration of genre and of the nature of the relationship between folk literature and the literary arts.

400 The Japanese Noh Theatre and Modern Dramatists (also Comparative Literature 400) Spring. 4 credits.  M W 2:30-3:45 K. Brazell  Several weeks will be spent studying the literary, performance, and aesthetic aspects of the noh theatre. Emphasis will be on noh as a performance system, a total theatre in which music, dance, text, costume, and props all interact to create the total effect. Then attention will turn to modern theatre people who have reacted to noh in some creative way. Choice of dramatists will depend partly on student interests, but will probably include Yeats, Brecht, Britten, Claudel, Grotowski, and Mishima. All readings may be done in English translation. For complete descriptions of courses numbered 600 and above, consult the graduate faculty representative.

601 Southeast Asia Seminar: Vietnam Fall. 4 credits  Hours to be arranged. G. McT. Kahin  Contact the Southeast Asia Program, 120 Uris Hall, 256-2378 for further information.

701-702 Seminar in East Asian Literature Fall, 701; fall, 702, spring. 1-4 credits.  Hours to be arranged. Staff.

Asia—General Courses

401 Asian Studies Honors Course Fall. 4 credits. Intended for seniors who have been admitted to the honors program. Staff  Supervised reading and research on the problem selected for honors work.

402 Asian Studies Honors: Senior Essay Fall or spring. 4 credits. Prerequisite: admission to the honors program. The student, under faculty direction, prepares an honors essay.
Chinese Historiography and Source Materials

Composition and Conversation (Indonesian 203-204)
Indonesian Reading (Indonesian 301-302)
Advanced Indonesian Conversation and Composition (Indonesian 303-304)
Astronomy 107

106 Essential Ideas in Relativity and Cosmology
Summer. 3 credits. Prerequisites: high school algebra and trigonometry.
M-F 9:30-10:45. Staff. Einstein's theories of special and general relativity, which brought about a fundamental change in our conceptual understanding of space and time, will be studied. Correspondence to, and conflicts with, common sense will be pointed out. Applications to various areas will be studied: in special relativity—space travel, equivalence of mass and energy, nuclear fission and fusion, and thermonuclear processes in the sun, in general relativity—motion of light and particles in curved space-time, cosmological models, and the question of whether the universe is open or closed.

111 Astronomy: Stars, Galaxies, and Cosmology
Spring. 4 credits. Intended for engineering and physical sciences freshmen. Prerequisite: introductory calculus or course registration in Mathematics 111 or 191.
Lecs. M W F 10:10; rec. one hour each week to be arranged; some evening labs to be arranged. S. Ostro.

201 Our Home in the Universe
Fall. 2 credits.
T R 2:30-3:45. T. Gold.
A general discussion of man's relation to the physical universe, the nature of space and time as understood in modern physics; the universe of galaxies and stars, and the particular system of planets and satellites. Evolution of the earth's crust, oceans, and atmosphere. Origin of life. Search for life in the solar system and elsewhere.

215 Information and Knowledge in Science and Engineering
Fall. 4 credits.
T R 2:30-3:45. M. Harwit.
Topics to be covered include the exact and probabilistic laws of nature; messages, information content, and entropy; the Heisenberg uncertainty principle as a fundamental limitation on what we can know about the behavior of physical systems; coding of messages, cryptography, unbreakable codes, error correcting codes, self-replicating machines, transmission of genetic information in biology, mutations and biological evolution, transmission, storage, and processing of information in machines and in animals; robots and artificial intelligence; transmission of information across the universe—astronomical data and communication with intelligent civilizations. At the Level of Scientific American.

321 Life in the Universe

32 Elements of Astrophysics
Spring. 4 credits.
Prerequisites: calculus, Physics 213. Physics 214 strongly recommended.
An introduction to astronomy with emphasis on the application of physics to the study of the universe. Physical laws of radiation. Theories of the solar system. Distance, size, mass, and age of stars, galaxies, and the universe; stellar evolution and nucleosynthesis; interstellar matter and star formation. Supernovae, pulsars, and black holes.

Directed Individual Study (Indonesian 305-306)
Advanced Readings in Indonesian and Malay Literature (Indonesian 401-402)
FALCON (full-time intensive course, Indonesian 161-162)
Elementary Javanese (Javanese 131-132)
Intermediate Javanese (Javanese 133-134)
Directed Individual Study (Javanese 203-204)
Basic Course (Tagalog 101-102)
Tagalog Reading (Tagalog 201-202)
Linguistic Structure of Tagalog (Tagalog 300)
Basic Course (Thai 101-102)
Thai Reading (Thai 201-202)
Composition and Conversation (Thai 203-204)
Advanced Thai (Thai 301-302)
Thai Literature (Thai 303-304)
Directed Individual Study (Thai 401-402)
Basic Course (Vietnamese 101-102)
Vietnamese Reading (Vietnamese 201-202)
Composition and Conversation (Vietnamese 203-204)
Advanced Vietnamese (Vietnamese 301-302)
Directed Individual Study (Vietnamese 401-402)

Professors and graduate students in astronomy at Cornell are very active in the national space exploration program, as well as in studies of infrared astronomy and theoretical astrophysics. Cornell operates two local optical observatories and the world's largest radiotelescope at Arecibo, Puerto Rico.

The department offers a number of courses that are of general interest, have few or no prerequisites, and are not intended for the training of professional astronomers. These courses are numbered from 101 to 332. The last of these, Astronomy 332, requires calculus and a year of college physics, and Astronomy 111-112 requires at least coregistration in beginning calculus. The other courses have no college prerequisites at all.

Courses numbered above 400 are intended for students who have had two to three years of college physics and at least two years of college mathematics. Astronomy 440, Independent Study, permits students to engage in individual research projects under the guidance of a faculty member. There is no undergraduate major in astronomy at Cornell because the department believes that a major in physics and mathematics is the best preparation for the study of astronomy at the graduate level. Students who are interested in becoming astronomers should major in physics as undergraduates. It is wise to get an early start in mathematics and physics, preferably by registering for Mathematics 191-192 or 193-194 or 111-112 in the freshman year and by taking Physics 112 as soon as the prerequisites have been completed.

Concentration
Students interested in astronomy are encouraged to supplement their major with a concentration in astronomy, which is somewhat less intensive than a major. All students are invited to visit the Space Sciences Building, see the exhibits on display there, and consult with a faculty member about career plans or choice of courses.

Distribution Requirement
The distribution requirement in physical sciences is met by either of the following two sequences: Astronomy 101 and 102 or Astronomy 111 and 112.

Courses
101 The Universe beyond the Solar System Fall. 4 credits.
Lecs. M W F 11:15; lab, M T W or R 7:30-10 p.m., or T W 2:30-5. One lab every other week.
An examination of the universe and our place in it, and the possible existence of life and intelligence elsewhere in the cosmos. The physical nature of stars, galaxies, and quasistellar sources. The birth, evolution, and death of stars, the formation of the chemical elements, including discussions of supernovae, pulsars, neutron stars, and black holes. The physical state, composition, and influence of the interstellar material on the evolution of our galaxy. Modern theories of the structure and evolution of the universe.

102 Our Solar System Spring. 4 credits.
Prerequisites: high school algebra and Astronomy 101 or permission of instructor.
Lecs. M W F 11:15; lab, M T W or R 7:30-10 p.m., or T W 2:30-5 p.m. One lab every other week.
J. Veverka, Labs. P. Giersch.

103 The Universe beyond the Solar System Fall. 3 credits.
Identical to 101 except for omission of the laboratory. This course does not satisfy the distribution requirement in physical sciences.

104 Our Solar System Spring. 3 credits.
Identical to 102 except for omission of the laboratory (see description above). This course does not satisfy the distribution requirement in physical sciences.

105 An Introduction to the Universe Summer. 3 credits.
Recommended: one unit of high school physics.
M-F 11-12:15; evening laboratories to be arranged.
J. Veverka, Staff.
How do we measure the size of our galaxy and the size of the universe? Is the universe round or flat? How are the stars born, why do they shine, and how do they die? What are the chemical elements and how were they formed in stars? What are quasars, pulsars, and black holes? How was the solar system formed? What are the environments of other planets like? What is the basic structure of Earth and the other planets? Will man catastrophically alter the earth? Does life exist elsewhere in the universe? How can we find out? Each student has an opportunity to make own observations with small telescopes.

111 Astronomy: Stars, Galaxies, and Cosmology
Spring. 4 credits. Intended for engineering and physical sciences freshmen. Prerequisite: introductory calculus or course registration in Mathematics 111 or 191.
Lecs. M W F 10:10; rec. one hour each week to be arranged; some evening labs to be arranged. S. Ostro.

201 Our Home in the Universe
Fall. 2 credits.
T R 2:30-3:45. T. Gold.
A general discussion of man's relation to the physical universe, the nature of space and time as understood in modern physics; the universe of galaxies and stars, and the particular system of planets and satellites. Encoring one such average star, our sun. The origin and evolution of the solar system, as revealed by modern planetary exploration. The great uncertainties that remain.

215 Information and Knowledge in Science and Engineering
Fall. 4 credits.
Topics to be covered include the exact and probabilistic laws of nature; messages, information content, and entropy; the Heisenberg uncertainty principle as a fundamental limitation on what we can know about the behavior of physical systems; coding of messages, cryptography, unbreakable codes, error correcting codes, self-replicating machines, transmission of genetic information in biology, mutations and biological evolution, transmission, storage, and processing of information in machines and in animals; robots and artificial intelligence; transmission of information across the universe—astronomical data and communication with intelligent civilizations. At the Level of Scientific American.

321 Life in the Universe

332 Elements of Astrophysics
Spring. 4 credits.
Prerequisites: calculus, Physics 213. Physics 214 strongly recommended.
An introduction to astronomy with emphasis on the application of physics to the study of the universe. Physical laws of radiation. Theories of the solar system. Distance, size, mass, and age of stars, galaxies, and the universe; stellar evolution and nucleosynthesis; interstellar matter and star formation. Supernovae, pulsars, and black holes.
Galaxies and quasars. Introduction to cosmology. Intended for students interested in astronomy, physics, and engineering.

431 Introduction to Astrophysics and Space Sciences I Fall. 4 credits. Prerequisite: Physics 214 and 318 or their equivalent.
A systematic development of modern astrophysical concepts for physical science majors. Atomic and electromagnetic processes in space. Introduction to star formation, stellar structure, stellar atmospheres, and the interstellar medium. At the level of Astrophyical Concepts, by Harwit.

432 Introduction to Astrophysics and Space Sciences II Spring. 4 credits. Prerequisite: Astronomy 431 or permission of instructor.
Formation of the chemical elements. Origin of the solar system; stellar evolution; white dwarfs, neutron stars and black holes; stellar systems, clusters, galaxies and quasars. Cosmology. At the level of Astrophyical Concepts, by Harwit.

[433 The Sun Fall. Not offered 1982-83.]

[434 The Evolution of Planets Fall. Not offered 1982-83.]

440 Independent Study in Astronomy Fall or spring. 2-4 credits. Prerequisite: consent of instructor.
Recommended: familiarity with the topics covered in Astronomy 332, 431, or 434.
Hours to be arranged. Staff.
Individual work on selected topics. A program of study is devised by the student and instructor.

[490 Senior Seminar Fall. Not offered 1982-83.]

509 General Relativity (also Physics 553) Fall. 4 credits. Prerequisite: knowledge of special relativity at the level of, for example, Classical Mechanics, by Goldstein.
A systematic introduction to Einstein's theory, with emphasis on modern coordinate-free methods of computation. Topics include review of special relativity, modern differential geometry, foundations of general relativity, laws of physics in the presence of a gravitational field, experimental tests of gravitational theories. At the level of Gravitation, by Misner, Thorne, and Wheeler.

510 Applications of General Relativity (also Physics 554) Spring. 4 credits. Prerequisite: Astronomy 509.
A continuation of Astronomy 509 with emphasis on applications to astrophysics and cosmology. Topics include relativistic stars, gravitational collapse and black holes, gravitational waves, cosmology.

[511 High-Energy Astrophysics Spring. Not offered 1982-83.]

[516 Galactic Structure and Stellar Dynamics Spring. Not offered 1982-83.]

[520 Radio Astronomy Fall. Not offered 1982-83.]

[521 Radio Astrophysics Spring. Not offered 1982-83.]

523 Signal Processing in Astronomy Spring. 4 credits. Prerequisites: mathematical background equivalent to undergraduate physics science curriculum; familiarity with FORTRAN programming.
T R 2:30-4. J. Cordes, S. Ostro.
Topics will include Fourier analysis of discrete and continuous time series, spectral analysis, parameter estimation, probability theory and stochastic processes with an orientation towards applications in observational radio astronomy and astrophysics.

Discussion of applications such as interferometry, imaging processing, scintillation theory, planetary radar, and pulsar studies. Course work will include applications on the IBM 370.

555 Theory of the Interstellar Medium (also Physics 665) Fall. 4 credits.
Summarizes observational and theoretical data: theories of ionization and thermal equilibrium of the gas; grain formation and destruction; cloud structure and star formation; interstellar effects of cosmic rays. Galactic dynamics.

575 Planetary Atmospheres Fall. 4 credits.
Hours to be arranged. P. Gierasch, J. Veverka.

[579 Celestial Mechanics (also Theoretical and Applied Mechanics 672) Fall. Not offered 1982-83.]

620 Seminar: Advanced Radio Astronomy Fall. 2 credits.
Hours to be arranged. J. Cordes.
Advanced topics in radio astrophysics and radio astronomical data accumulation and processing methods.

640 Advanced Study and Research Fall or spring. Credit to be arranged.
Hours to be arranged. Staff.
Guided reading and seminars on topics not currently covered in regular courses.

660 Cosmic Electrodynamics (also Applied and Engineering Physics 660) Spring. 2 credits.
Hours to be arranged. R. Lebowitz.
Selected topics discussed in detail: the solar corona and wind; extragalactic radio sources; magnetoacoustic disc modes and instabilities of self-gravitating systems.

671 Special Topics in Planetary Astronomy: The Saturn System Spring. 3 credits.
Topics vary. The course has focused on such topics as the interiors of planets; Martian exploration; cosmic chemistry and exobiology, and instrumental techniques.

699 Seminar: Current Problems in Theoretical Astrophysics Fall. 3 credits. May be repeated for credit.
Hours to be arranged. I. Wasserman.
Study of the latest problems in theoretical astrophysics; contents change from year to year.

Biological Sciences
R. Barker, director; H. T. Stimson, associate director and director of undergraduate studies (118 Stimson Hall, 256-5233); S. D. Miller, assistant director for academic affairs/student services (Biological Center, G20 Stimson Hall, 256-3358).

Biology is a popular subject at many universities for a variety of reasons: it is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine and environmental sciences; and deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

At Cornell the program of study in biology is offered by the Division of Biological Sciences to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences.

The biology program is designed to enable students to acquire necessary scientific foundations, to become familiar with different aspects of modern biology, and then to concentrate in a specific area of biology. Areas of concentration include animal physiology and anatomy; biochemistry; botany; cell biology; ecology, systematics, and evolution; genetics and development; or neurobiology and behavior. Special programs are available for qualified students with particular interest in areas such as marine biology, nutrition, microbiology, biophysics, or general biology. For more details see the Division of Biological Sciences section.

Burmese, Cambodian, and Cebuano (Bisayan)

See Modern Languages, Literatures, and Linguistics, p. 146.

Chemistry

The chemistry department offers a full range of courses in physical, organic, inorganic, analytical, theoretical, bioorganic, and biophysical chemistry. In addition to their teaching interests, chemistry faculty members have active research programs. The link between teaching and research is a vital one in a continuously evolving scientific subject; it ensures that students will be in touch with the most advanced information and perspectives.

The Major
The chemistry major at Cornell is not an easy option; it requires conceptual skills in mathematics and logical thinking, practical and laboratory skills, and creativity in the design of experiments. In recent years chemistry majors have gone on to graduate study in chemistry, medicine, law, and business management, as well as directly into positions with chemical, pharmaceutical, and other industrial companies. A major in chemistry can provide the basis for significant work in related areas such as...
molecular biology, chemical physics, geochemistry, chemical engineering, and solid state physics. A major in chemistry permits considerable flexibility in the detailed planning of a course program. The required courses can be completed in three years, leaving the student time to advance and independent work under the supervision of a professor.

The courses are arranged as a progression, with some courses (including mathematics and physics) prerequisite to those that are more advanced. During the first year, the student should normally register for Chemistry 215, mathematics, a Freshman Seminar course, a foreign language if necessary, or, in some instances, physics. Chemistry 215-216 is preferred. Students may begin their programs with Chemistry 207-208. Chemistry 215-216 is limited to those students with good preparation and a strong interest in chemistry. Students who do not know if their preparation is adequate should consult the instructor. In the second year the student should complete calculus and take physics and organic chemistry (Chemistry 359-360 is preferred to Chemistry 357-358). The second-year laboratory courses include 300. Quantitative Chemistry, if needed, and 301. Experimental/Chemistry I, 389-390, Physical Chemistry I 302-303. Experimental Chemistry II and III, which should be completed in the third year. Advanced work in chemistry and related subjects can be pursued in the fourth year, and, to some extent, in the early years as well. The opportunity for independent research is also available. All students with questions about details of a major program are encouraged to consult the chairperson of the Department of Chemistry or the chairperson’s representative. Entering students who are exceptionally well prepared in chemistry may receive advanced placement credit for Chemistry 207-208 and proceed to a more advanced program.

Prerequisites for admission to a major in chemistry are (1) Chemistry 101-102 or 207-208 plus 300, (2) Physics 207, and (3) Mathematics 111 or 191. Students are not encouraged to undertake a major in chemistry unless they have passed those prerequisite courses at a good level of proficiency. Knowledge of simple computer programming is essential. This may be achieved either by self-study (a syllabus is available) or by taking courses such as Computer Science I and II. These courses and additional courses that must be completed for a major in chemistry are listed below.

1) Chemistry 301, 302, 303, 359-360 (or if necessary, 357-358 may be substituted), and 389-390.
2) Mathematics 112 plus 214, 215, 216, 217, or 122 plus 221, 222, or 182 plus 293, 294.
3) Physics 208.
4) Potential majors electing to take the mathematics sequence 214-217 are strongly urged to do so in their sophomore year to avoid scheduling conflicts with Chemistry 389 in their junior year.

This sequence is a core program in chemistry. It is anticipated that students will, through elective courses, extend it substantially in whatever direction suits their own needs and interests. It is particularly important that those going on to do graduate work in chemistry recognize that these requirements are minimal, and such students are strongly urged to supplement their programs, where possible, with Chemistry 404, 405, 420, 605, 606, 607, 669, 681, and German or Russian. Even students not planning graduate work in chemistry should consider advanced work in physics and mathematics, courses in the biological sciences, and advanced work in chemistry as possible extensions of the basic program.

Honors. The honors program in chemistry offers superior students an opportunity to study independently in seminars and to gain additional experience by engaging in research during the senior year. It is particularly recommended to those who plan graduate work in chemistry. Prospective candidates should complete the introductory organic chemistry and physical chemistry sequences by the end of the junior year. However, failure to have completed those courses in the junior year does not in itself disqualify a student from honors program. Completion of the program at a high level of performance leads to the degree of Bachelor of Arts with honors in chemistry. Students will be admitted to the program by invitation of the department. Selection will be based on a superior average, including chemistry grades, and good performance in a prior research program. Prospective candidates should discuss their plans with advisers by March 1 of their junior year. Participants will be notified by early January of their senior year. To be awarded honors, candidates must show outstanding performance in at least 8 credits of undergraduate research such as courses 421, 433, 461, or 477. In addition, superior performance, including the writing of a thesis, in the honors seminar (Chemistry 498) is expected.

Laboratory Course Regulations
Students registered for laboratory courses who do not appear at the first meeting of the laboratory will forfeit their registration in that course.

Students and members of the teaching staff are required to wear safety glasses or approved eye-protective devices in all chemistry laboratories. Those who fail to cooperate with the safety program will be asked to leave the laboratories.

Students are required to pay for glassware and any other items broken or missing from their laboratory desks at the close of each semester. Students who fail to inventory their desks at the appointed time have the presence of their instructor charged a $5 fee in addition to charges for any breakage.

Courses
Preliminary examinations for all courses may be given in the evening.

103-104 Introduction to Chemistry 103, 104, spring, 3 credits each term. Enrollment limited. Prerequisite for Chemistry 104. Chemistry 103. Recommended for students who have not had high school chemistry and for those needing a less mathematical course than Chemistry 207-208. Lecs., M W 11:15 or 12:20, lab, T or R 8-11, or F 10:10-11, or M W or F 11:15-1:10, or M W or F 10:10-11. Prelims: 7:30-9:00 p.m. Oct. 7, Nov. 16, March, 3 April, 14. Fall: H. A. Scheraga; spring, D. E. U. Ekong, J. E. McMurry.

An introduction to chemistry, with emphasis on the important principles and facts of inorganic and organic chemistry.

[202 Origins of Life Spring, 3 credits. Prerequisite: one year of chemistry or biochemistry. Extra sessions will be held periodically for students without this background. S-U grades; letter grades possible after consultation with instructor. Not offered 1982-83.]

Birth of solar system and conditions on the early earth, characteristics of molecules essential to life today. Preliminary discussions of biological molecules and further chemical evolution, origin of protein synthesis and the genetic code, effect of cycles in temperature (day and night, summer and winter) and humidity on the early chemical systems; the rock record; geological and molecular fossils; other possibilities for life; different genetic material and extraterrestrial life. A determined effort is made to distinguish fact from hypothesis and from fiction; there will be much critical reading of the research literature.

The applications of organic chemistry surround us; they touch us more frequently than those of any other science. Organic chemistry is also unique among the sciences in its use of a pictographic language to record and transmit its ideas. Each of these two aspects illustrates a different human perception: a concern for shape and color to search for order in patterns that transcend personal experience. This course will examine the historical development of contemporary organic chemistry as a unique marriage of these two preoccupations. Interactions with biochemistry, inorganic chemistry, mathematics, and physics will also be considered. Readings from the original scientific literature will be analyzed in class. Students will be asked to submit regular papers on topics to be selected at regular intervals. No formal examinations will be offered, nor will any formal prerequisites be required. A talent for spatial perception, a previous exposure to French and German, and an inquiring mind will reward those who might chance to possess them.

207-208 General Chemistry 207, fall; 208, spring, 4 credits each term. Enrollment limited. Recommended for those students who will take further courses in chemistry. Prerequisite for Chemistry 207. high school chemistry. Prerequisite for Chemistry 208. Chemistry 201 or 213. Lecs. T R 9:05, 10:10, or 12:20, spring; T R 9:05 or 10:10. Lab, fall, T W R or S 8-11; F 10:10-11; T M W R or F 12:25-4:25, spring; M W or F 12:25-4:25 or S 8-11. Prelims: 7:30-9:00 p.m. Oct. 5, Nov. 9, March, 1 April. Fall: M. E. Fisher, B. Widom; spring, L. Que.

The important chemical principles and facts are covered, with considerable emphasis on the quantitative aspects and to the techniques important for further work in chemistry. Second-term laboratory includes a systematic study of qualitative analysis.

Note: Entering students exceptionally well prepared in chemistry may receive advanced placement credit for Chemistry 207-208 by demonstrating competence in the advanced placement examination of the College Entrance Examination Board or in the departmental examination given at Cornell before classes start in the fall.

215-216 General Chemistry and Inorganic Qualitative Analysis 215, fall; 216, spring. Fall, 4 credits, spring, 5 credits. Recommended for students who intend to specialize in chemistry or in closely related fields. Enrollment limited. Prerequisites: good performance in high school chemistry and physics and/or mathematics SAT I or 700 or 800. A course at the level of Mathematics 111 or 191 for students who have not taken high school calculus. Prerequisite for Chemistry 215. Fall: M W 12:20; lab, T R 12:25-4:25, spring, M W 12:20; two labs, M W 12:25, T R 10:10-11; T R 12:25-4:25 or F 12:25-4:25 and S 8-11, Prelims: 7:30-9:00 p.m. Sept. 23, Oct. 28, Nov. 23, Feb. 17, March 8, April 21. Fall, B. A. Baird; spring, T. R. Beebe, P. T. Wolczanski.

An intensive, systematic study of the laws and concepts of chemistry, with considerable emphasis on quantitative aspects. Second term includes experiments in inorganic chemistry. Laboratory work covers both qualitative and quantitative analysis.

251 Introduction to Experimental Organic Chemistry Fall, 2 credits. Recommended for non-chemistry majors. Prerequisite or corequisite: Chemistry 253 or 357 or permission of instructor. Lecs., M or F 8 (all students attend first lecture), lab, M W T or F 12:25-4:25, or T or R 8-11. Prelims: 7:30-9:00 p.m. Oct. 19, Nov. 18, D. B. Collum.

Introduction to synthesis and the separation and handling of materials, including applications of many of chromatography separations and fractional distillation, crystallization, extraction, and others.

A continuation of Chemistry 251.
253 **Elementary Organic Chemistry** Fall. 4 credits. Primarily for students in the premedical and biological curricula. Enrollment limited to 480 students. Prerequisite: Chemistry 104 with grade of C or better, or Chemistry 208 or 211 2:45-4:25 P. L. Houston; spring, A. C. Albrecht.

Lecs, M W F 9:05; lab, M T W R or F 1:25-4:25. Fall, J. R. Wiesenfeld; spring, P. L. Houston.

A systematic treatment of the fundamental principles of physical chemistry.

300 **Quantitative Chemistry** Fall. 2 credits. Prerequisite: Chemistry 208 or advanced placement in chemistry.

Lecs, F 12:20; lab, M T W R 12:20-4:25 or W 12:20 and F 1:25-4:25, 8-12 p.m. Laboratory includes one hour recitation, organizational meeting on first class day of semester, 12:20.

J. M. Burlich.

Quantitative procedures and techniques, including volumetric, gravimetric and spectrophotometric methods, are emphasized. The relationships between theories and applications are stressed.

301 **Experimental Chemistry I** Spring. 4 credits. Prerequisite: Chemistry 216 or 300, and 253 or 357. Concurrent registration in Chemistry 253 is not recommended.

An introduction to synthesis and the separation and handling of materials, including applications of many types of chromatography, simple and fractional distillation, crystallization, extraction, and others.

302 **Experimental Chemistry II** Fall. 4 credits. Enrollment limited: preference given to chemistry majors. Prerequisite: Chemistry 301.

Synthesis and quantitative analysis of both inorganic and organic compounds, instrumental methods including infrared spectroscopy, atomic absorption, NMR, mass spectroscopy, gas chromatography, GCMS, and electrochemical methods are surveyed. Trace element analysis.

303 **Experimental Chemistry III** Spring. 4 credits. Each lab limited to 18 students. Prerequisites: Chemistry 302, 389, 390; coregistration in the latter is permissible; knowledge of computer programming is essential.

Lecs, M W 9:05 (some weeks lec may be on F instead of W); 2 labs, M W 1:25-4:25 or T R 8-11 or 1:25-4:25. R. F. Porter.

An introduction to the techniques of vacuum line construction and operation; the principles and assembly of electronic measuring devices, optics, and kinetics.

357-358 **Introductory Organic Chemistry** Fall; 357, spring. 4 credits each term. Prerequisites: Chemistry 206 or 216 or advanced placement in chemistry. Recommended: concurrent registration in Chemistry 261 in the fall term or Chemistry 301 in the spring term. Prerequisite for Chemistry 358.

Chemistry 357.

Lecs, M W F 9:05; optional rec may be offered.

J. C. Clardy.

A systematic study of the more important classes of carbon compounds—reactions of their functional groups, methods of synthesis, relations, and uses.

Note: Because of duplication of material, students are not permitted to earn both 4 credits for Chemistry 253 and 3 credits for Chemistry 357. In special situations (consult instructor for details), students should take Chemistry 255 for 2 credits after having earned 3 credits for Chemistry 357. Premedical students should determine the entrance requirements of the particular medical school they wish to enter. Students may earn 6 credits by taking Chemistry 251-253 or 6 credits by taking Chemistry 253-301 or 253, 251, and 252.

255 **Elementary Organic Chemistry** Fall. 2 credits. Same course as Chemistry 253, but to be taken for reduced credit by students already having 3 credits for Chemistry 357.

287-288 **Introductory Physical Chemistry** 287, fall; 288, spring. 3 credits each term. Prerequisites: Chemistry 208 or 216 and Mathematics 111-112, or permission of instructor. Prerequisite for Chemistry 288: Chemistry 261.

A rigorous and systematic study of organic and inorganic compounds, their structures, the mechanisms of their reactions, and the ways that they are synthesized in nature and in the laboratory.

359-360 **Organic Chemistry I and II** 359, fall; 360, spring. 4 credits each term. Recommended for students who intend to specialize in chemistry or closely related fields. Enrollment limited. Prerequisites: Chemistry 216, or 208 with a grade of B or better, or consent of instructor. Prerequisite for Chemistry 360: Chemistry 359.

Lecs, M W F 9:05; make-up lecs. W 7:30 p.m. B. Ganem.

A rigorous and systematic study of organic and organometallic compounds, their structures, the mechanisms of their reactions, and the ways that they are synthesized in nature and in the laboratory.

389-390 **Physical Chemistry I and II** 389, fall; 390, spring. 4 credits each term. Prerequisites: Mathematics 214, 215, 216 or ideally, 221-222. Physics 208, Chemistry 206 or 216 or permission of instructor. Prerequisite for Chemistry 390: Chemistry 389.

Lecs, M W F 10:10; rec and make-up lec, W 7:30 p.m. Prelims: 7:30-9:00 p.m. Sept. 23, Oct. 14, Nov. 11, Dec. 9, Feb. 22, March 22, April 19. Fall, P. L. Houston; spring, A. C. Abrecht.

The principles of physical chemistry are studied from the standpoint of the laws of thermodynamics, kinetic theory, and quantum chemistry.

[404 **Advanced Measurements Laboratory** Fall 4 credits. Prerequisite: Chemistry 303. Not offered 1982-83.

Lab, M T R 1:25-4:25, plus occasional evening lec. Alternating hours may be arranged if necessary. Applications of modern experimental techniques in a variety of fields. Emphasis is on kinetics, spectroscopy, and electronics.

405 **Techniques of Modern Synthetic Chemistry** Spring. 4 credits. Enrollment limited. Prerequisite: Chemistry 302 and permission of instructor. Selection of students will be based on grades in Chemistry 301 and 302. With permission of the instructor, graduate students may perform a minimum of three two-week experiments on a prearranged schedule. Lab time required: 12 hours each week, including at least two 4-hour sessions in 2 sections (M W 1:25 or T R 1:25). First meeting will be at 4:30 on first class day of semester. Lec, first week only, at times to be arranged. J. M. Burlich.

The syntheses of complex organic and inorganic molecules will be carried out with emphasis on the following techniques: vacuum line, high pressure, high temperature solid state, inert atmosphere, nonaqueous solvents, radioactive labeling, photochemical and electrochemical methods, solid phase peptide synthesis, and macro and micro techniques. Elementary glassblowing.

[420 **Inorganic Chemistry** Spring. 4 credits. Prerequisites: Chemistry 358 (or 360) and Chemistry 389. Not offered 1982-83.

A systematic study of synthesis, structure, and reactivity of inorganic and organometallic compounds. At the level of Inorganic Chemistry, by H. N. F. }

421 **Introduction to Inorganic Research** Fall or spring. 2-4 credits. Prerequisites: Chemistry 303 and 389-390, or Chemistry 287-288, and Chemistry 290-290 with an average of B- or better, or permission of instructor.

Selected faculty.

Research in inorganic chemistry involving both laboratory and library work, planned in consultation with a faculty member.

433 **Introduction to Analytical Research** Fall or spring. 2-4 credits. Prerequisites: Chemistry 303 and 390 with an average of B- or better or permission of instructor.

Selected faculty.

Research in analytical chemistry involving both laboratory and library work, planned in consultation with a faculty member.

461 **Introduction to Organic Research** Fall or spring. 2-4 credits. Enrollment limited to those having a record of B- or better in prerequisite courses. Prerequisites: Chemistry 302 and 358 or 360 or permission of instructor.

Selected faculty.

Research in organic chemistry involving both laboratory and library work, planned in consultation with a faculty member.

477 **Introduction to Research in Physical Chemistry** Fall or spring. 2-4 credits. Prerequisites: Chemistry 390 with an average of B- or better and permission of instructor.

Selected faculty.

Research in physical chemistry involving both laboratory and library work, planned in consultation with a faculty member.

498 **Honors Seminar** Spring. No credit. Admission by departmental invitation. Additional prerequisite or corequirement: outstanding performance in either (1) two coherent 4-credit units of research in a course such as Chemistry 421, 433, 461, or 477, or (2) one 4-credit unit in a course such as Chemistry 421, 433, 461, or 477 and summer research equivalent to at least 4 credits in the same subject.

J. Meinwald, D. A. Usher.

Informal presentations and discussions of selected topics in which all students participate. Individual research is on advanced problems in chemistry under the guidance of a faculty member, culminating in a written report.

600-601 **General Chemistry Colloquium** 600, fall; 601, spring. No credit. Required of all graduate students except those majoring in organic or bioorganic chemistry. Juniors and seniors are encouraged to attend.

R. A. Cook.

A series of talks representative of all fields of current research interest in chemistry other than organic chemistry, given by distinguished visitors and faculty members.

605 **Advanced Inorganic Chemistry I: Symmetry and Structure** Fall. 4 credits. Prerequisite: Chemistry 389-390 or equivalent or permission of instructor.

Lecs, M W F 11:15, L. Que.
This is the first of a three-term sequence: Symmetry and structure of discrete molecules, transnational symmetry of arrays of molecules in crystals. Group theory at the level of Cotton's Chemical Applications of Group Theory, Schonland's Molecular Symmetry, and Hall's Group Theory and Symmetry in Chemistry. Applications include molecular orbital theory, hybridization, and molecular vibrations. Readings in the chemistry of nontransition elements at the level of Cotton and Wilkinson's Advanced Inorganic Chemistry.

606 Advanced Inorganic Chemistry II: Synthesis and Reactivity of Inorganic and Organometallic Compounds. Spring. 4 credits. Prerequisite: Chemistry 605 or permission of instructor.
Lecs, M W F 9:05. P. T. Wolczanski.
The second of a three-term sequence. Structure and reactivity of coordination complexes, including substitution processes and electron transfer mechanisms. Synthesis of organometallic compounds and mechanistic considerations of fundamental reactions. Emphasis on catalytic transformations.

Reading assignments at the level of Basolo and Pearson's Inorganic Reactlon Mechanisms and Collman and Hegedus's Principles and Applications of Organotransition Metal Chemistry.

[607 Advanced Inorganic Chemistry III: Structure and Properties Spring. 4 credits. Prerequisite: Chemistry 605 or permission of instructor. Not offered 1982-83.
Lecs, M W F 9:05. M. J. Slenclo.
The third of a three-term sequence. Introduction to ligand field theory and solid-state structure and properties, at the level of Figgs' Introduction to Ligand Fields, Kreb's Fundamentals of Inorganic Crystal Chemistry and Sach's Solid State Theory. Reading in transition metal chemistry at the level of Cotton and Wilkinson's Advanced Inorganic Chemistry.]

[622 Chemical Communication (also Biological Sciences 623) Fall. 3 credits. Limited to 30 students. Prerequisite: Chemistry 358. Biological Sciences 102, and Biochemistry 231. Intended primarily for research-oriented students. Offered alternate years. Not offered 1992-83.
Lecs, M W F 25.
The production, transmission, and reception of chemical signals in communicative interactions of animals, plants, and microorganisms. Communication involving internal and external signals; signal transduction; and chemical communication in insects is emphasized. Specific topics are treated, with varying emphasis on chemical, biochemical, neurobiological, ecological, and evolutionary principles.]

625 Advanced Analytical Chemistry I Fall. 4 credits. Open to undergraduates with permission of instructor. Prerequisite: Chemistry 288 or 390 or equivalent.
Lecs, M W F 8; exams, T 7:30 p.m. W. D. Cooke, F. W. McLafferty.
The application of molecular spectroscopy to chemical problems. Topics in ultraviolet, infrared, nuclear magnetic resonance, mass spectrometry, and elementary valence theory.}

[627 Advanced Analytical Chemistry II Spring. 3 credits. Primarily for graduate students. Prerequisite: Chemistry 288 or 390 or equivalent. Not offered 1982-83.
Lecs, T R 10:10; problem sessions and exams, T 7:30. Modern analytical methods including electron capture, mass spectrometry, Fourier transform spectrometry, methods applicable to macromolecules, and information theory.]

628 Advanced Analytical Chemistry III Spring. 3 credits. Primarily for graduate students. Prerequisite: Chemistry 288 or 390 or equivalent. Offered alternate years. Not offered 1982-83.
Lecs, T R 10:10. Modern trace, micro, and surface methods of analysis, including atomic spectrometry, solid mass spectrometry, activation analysis, microscopes, microprobcs, and electron spectrosopy.]

650-651 Organic and Organometallic Chemistry Seminar Fall, 650; spring, 651. Spring. No credit. Required of all graduate students majoring in organic or biorganic chemistry. Juniors and seniors are encouraged to attend. M 8:15 p.m.
A series of talks representative of all fields of current research interest in organic and organometallic chemistry, given by research associates and graduate faculty members, and distinguished visitors and faculty members.

685 Advanced Organic Chemistry Fall. 4 credits. Primarily for graduate students and upperclass undergraduates. Prerequisites: Chemistry 253 or 358 or 360 and 390 or equivalents or permission of instructor.
Lecs, M W F 12:20; make-up lectures and exams, W 7:30 p.m. C. F. Wilcox.
A survey of reaction mechanisms and reactive intermediates in organic chemistry. Applications of qualitative molecular orbital theory are emphasized.

666 Synthetic Organic Chemistry Spring. 4 credits. Primarily for graduate students and upperclass undergraduates. Prerequisites: Chemistry 665 or permission of instructor.
Lecs, M W F 10:10; additional lec to be arranged. D. B. Collum.
Modern techniques of synthesis, applications of organic reaction mechanisms to the problems encountered in rational multistep synthesis, with particular emphasis on modern developments in synthetic planning.

[668 Chemical Aspects of Biological Processes Fall. 4 credits. Prerequisites: Chemistry 358 or 360 or 390 or equivalents. Not offered 1982-83.
Lecs, M W F 10:10.
Biochemical systems, bioenergetics, enzymes, metabolic pathways, chemical evolution. This course forms the chemical basis for the graduate program in molecular biology.]

672 Enzyme Catalysis and Regulation Spring. 4 credits. Primarily for graduate students in chemistry and biochemistry. Prerequisites: Chemistry 358 or 360 or 390 or equivalents, and a course in general biochemistry. Not offered 1982-83.
Lecs, M W F 9:05 and occasionally W 7 p.m. G. G. Hammes.
Protein structure and dynamics; steady-state and transient kinetics; binding isotherms; chemical modification enzymes; application of NMR, EPR, and fluorescence, acid-base catalysis; allosterism; specificity of enzymes to distinguish similar enzymes.

677 Chemistry of Nucleic Acids Fall. 4 credits. Primarily for graduate students. Prerequisites: Chemistry 288 or 360, and 360 or equivalents. S-U grades only.
Properties, synthesis, and reactions of nucleic acids.

[678 Thermodynamics Spring. 4 credits. Primarily for graduate students. Prerequisite: Chemistry 288 or 390 or equivalents. Not offered 1982-83.
Lecs, T R 8:30-9:55. Disc to be arranged. Development of the general laws of equilibrium thermodynamics. Applications to the study of physicochemical equilibrium in gases, liquids, solids, and liquid solutions.]

681 Physical Chemistry III Fall. 4 credits. Prerequisites: Chemistry 288 or 390. Mathematics 214, 215, or Physics 208, or equivalents. Lecs, M W F 10:10 and occasionally W 7:30 p.m. A. C. Albrecht.
An introduction to the principles of quantum theory and statistical mechanics, atomic and molecular spectra, and elementary valence theory. At the level of Atoms and Molecules, by Karplus and Porter.}

688 Physical Chemistry of Proteins Spring. 4 credits. Primarily for graduate students. Prerequisites: Chemistry 288 or 390 or equivalents. Offered alternate years.
Lecs, M T W R F 8, and occasionally W 7:30 p.m. H. A. Scheraga.
Chemical constitution, molecular weight, and structural basis of proteins; thermodynamic, hydrodynamic, optical, spectroscopic, and electrical properties; protein and enzyme reactions; statistical mechanics of helix-coil transition in biopolymers; conformation of biopolymers; protein folding.

700 Baker Lectures Spring, on dates to be announced. No credit.
J. M. Thomas, University of Cambridge.
\[716 Selected Topics in Advanced Inorganic Chemistry Fall. 3 credits. Prerequisite: Chemistry 390 or equivalent. Not offered 1982-83.
Lecs, T R 12:20. B. K. Carpenter.\]

765 Physical Organic Chemistry I Spring. 4 credits. Primarily for graduate students. Prerequisite: Chemistry 665 or permission of instructor.
Lecs, M W F 11:15. B. K. Carpenter.
Continues and extends the approach of Chemistry 665 to more complicated organic reactions. Emphasis is on applications of reaction kinetics and isotope effects to gain an understanding of reaction mechanisms.

[766 Physical Organic Chemistry II Spring. 3 credits. Primarily for graduate students. Prerequisite: Chemistry 765 or permission of instructor. Not offered 1982-83.
Quantitative aspects of organic chemistry.]

770 Selected Topics in Organic Chemistry Fall 3 credits. Primarily for graduate students. Prerequisite: Chemistry 665-666 or permission of instructor.
Carbohydrate chemistry—the analysis, synthesis, and biological significance of complex carbohydrates.

774 Chemistry of Natural Products Fall. 3 credits. Primarily for graduate students. Prerequisites: Chemistry 665-666.
Particular attention is devoted to methods of structure determination and synthesis as applied to selected terpenes, steroids, alkaloids, and antibiotics.

780 Principles of Chemical Kinetics Spring. 4 credits. Prerequisite: Chemistry 681 or permission of instructor.
Lecs, M W F 11:15. E. R. Grant.
Principles and theories of chemical kinetics; special topics such as fast reactions in liquids, enzymatic reactions, energy transfer, and molecular beams.

[782 Special Topics in Biophysical and Bioorganic Chemistry Spring. 3 credits. Not offered 1982-83.
Lecs, T R 11:15. Topics vary from year to year.]

789 X-Ray Crystallography Spring. Offered only when sufficient registration warrants. 4 credits. Prerequisite: Chemistry 288 or 390 or permission of instructor.
Hours to be arranged. J. C. Claridy.
A beginning course in the application of X-ray crystallography to structural chemistry. Topics include symmetry properties of crystals, diffraction of X-rays by crystals, interpretation of diffraction data and refinement of structures. The chemical information available from a diffraction experiment is stressed, and theoretical aspects are illustrated by conducting an actual structure determination as a classroom exercise. At the level of Ladd and Paimal's "Structure Determination by X-Ray Crystallography."

792 Scattering Theory for Chemists
Spring. 3 credits.
Prerequisites: Chemistry 781, coregistration in Mathematics 421, and Physics 431 or equivalents or permission of instructor.
Schrodinger's equation, wave packets, uncertainty principle, WKB theory, matrix mechanics, orbital and spin angular momentum, exclusion principle, perturbation theory, variational principle, Born-Oppenheimer approximation. At the level of Bohm's "Quantum Theory."

794 Quantum Mechanics II
Spring. 4 credits.
Prerequisites: Chemistry 793 or equivalent and coregistration in Physics 432 and Mathematics 422, or permission of instructor.
Time-dependent phenomena in quantum mechanics and interactions. Group theory and applications in molecular spectroscopy and electronic structure of atoms and molecules. At the level of Tinkham's "Group Theory in Quantum Mechanics."

796 Statistical Mechanics (also Physics 562)
Spring. 4 credits. Primarily for graduate students.
Prerequisites: Chemistry 730 or equivalent.

[798 Selected Topics in Physical Chemistry
Spring. 3 credits.
Lecs. T R S 9:05. Not offered 1982-83.]

Chinese
See Department of Asian Studies, p. 102, and Modern Languages, Literatures, and Linguistics, p. 148.

Classics
The Department of Classics provides an interdisciplinary approach to the Greek- and Latin-speaking civilizations of antiquity and to the work of later writers and thinkers who used Latin as their linguistic medium. It also offers, from time to time, courses in other ancient languages of Italy and, every other year, a program in modern Greek. Historical writers, poets, philosophers, and the great architects and artists of Greco-Roman civilization are the subject matter. The department teaches them primarily for their central importance in a humanistic education. The department offers courses in Bronze Age and Classical archaeology and sponsors an archaeological dig at Alambra in Cyprus. Here at Cornell it has a fine collection of ancient artifacts, reproductions of ancient sculpture, and one of the few laboratories in the world that concentrate on tree-ring dating of ancient monuments from Greece, Cyprus, and Turkey. The archaeology courses may be used to satisfy some of the requirements for the intercollegiate program in archaeology or for the major in Classical civilization. They require no knowledge of either Greek or Latin. Similarly, the department offers a variety of courses and seminars in English on such subjects as Greek mythology, Greek and Roman mystery religions, early Christianity, Roman law, as well as ancient epic, tragedy, history, and philosophy. For those whose interest in things Greek and Roman extends no further than a desire to understand the English language a little better, the department offers a course in the Greek and Latin elements that make us up well over half of modern English usage, and programs in Latin and Greek at the elementary level; another course deals with Greek and Latin elements in English vocabulary. For the more ambitious, there are courses involving the reading, in the original, of Greek and Latin authors from Homer to St. Augustine and Bede, and periodically, the Latin works of Dante, Petrarch, and Milton. The department makes every attempt to adapt its program to the needs of each student. If there is a Classical writer you would like to study, the department will do its best to help you do so whether you are a major in the department or not.

The Majors
The Department of Classics offers majors in Classics, Greek, Latin, and Classical civilization.

Classics
Those who major in Classics must complete 24 credits in advanced courses in Greek or Latin (courses numbered 201 or above) and 15 credits in related subjects selected after a conference with the adviser.

Classical civilization
Those who major in Classical civilization must complete (a) qualification in Latin and Greek or proficiency in either; (b) 24 credits selected from the courses listed under Classical civilization, Classical archaeology, Latin, and Greek; and (c) 15 credits in related subjects (courses in the humanities selected in conference with the adviser).

Greek
Those who major in Greek must complete 24 credits of advanced courses in Greek and 15 credits in related subjects (including Latin). One or more courses offered by the Department of Comparative Literature may be counted towards the required 24 credits of Greek if the student obtains the prior approval of the major adviser.

Latin
Requirements for the major in Latin parallel those of the major in Greek.

Hons. Candidates for the degree of Bachelor of Arts with honors in Classics, Greek, Latin, or Classical civilization must fulfill the requirements of the appropriate major study as given above and also must complete successfully the special honors courses 370, 471, and 472. Credit for honors courses may be included in the credits required for the major study. Students who wish to become candidates for honors, who have a cumulative average of B- or better, and have demonstrated superior performance in Classical courses (Greek, Latin, and Classical civilization), submit an outline of their proposed honors work to the honors committee during the first month of their fifth semester.

Study Abroad
Cornell participates in the Intercollegiate Center for Classical Studies in Rome, which offers courses in Latin, Greek, ancient history, art, archaeology, and Italian. Cornell is a member of the American School of Classical Studies at Athens, whose Summer Program is open to graduate students and qualified undergraduates. The American Academy in Rome, of which Cornell is also a member institution, offers regular and summer programs for qualified graduate students. Detailed information on these programs is available in the Department of Classics office, 120A Goldwin Smith Hall.

Placement in Latin
Placement of first-year students in Latin courses is determined by an examination given by the Department of Classics during orientation week, or, if necessary, in the second half of the fall term.

Classical Civilization
[100 Word Power: Greek and Latin Elements in the English Language Fall. 3 credits. Not offered 1982-83.]
G. M. Messing.
This course gives the student no knowledge of Classical languages an understanding of how the Greek and Latin elements, which make up over half our English vocabulary, operate in both literary and scientific English usage. Attention is paid to how words acquire their meaning and to enlarging each student's working knowledge of vocabulary and grammar.

102 Word Power for the Biological Sciences Fall. 3 credits.
This course teaches the Greek and Latin word elements that combine to form most of the specialized terms in the biological sciences. The student who learns the meanings of these elements and the rules of word formation will usually recognize the basic meaning of any unfamiliar word in this field. Attention will also be paid to misinformations, common errors, and words still in use that reflect scientific theories since rejected.

[118 Freshman Seminar in Ancient Philosophy Fall or spring. 3 credits. Not offered 1982-83.]
P. T. Miltsis.
An examination of the mythic, tragic, and philosophical views of man presented in Homer, Hesiod, the Pre-Socratics, Aeschylus, Sophocles, Euripides, Plato, Aristotle, Epicurus, and the Stoics.

119 Freshman Seminar in Greek Literature Fall or spring. 3 credits.
M. W. F. B. Staff.
"Can you tell me, Socrates, whether excellence is something teachable, or not teachable but rather acquired through training; or is it neither practiced nor learned, but something which arises in men by nature or in some other way?" Selected readings from Plato, concentrating on the Meno.

120 Freshman Seminar in Latin Literature Fall or spring. 3 credits.
Fictions, ancient and modern. An examination of Robert Graves's historical novels, I Claudius and Claudius the God, together with the ancient sources on which these novels are based. Tacitus, The Annals of Imperial Rome, and Suetonius, Lives of the Caesars. Discussion will focus on narrative technique in the works of Tacitus, Suetonius, and Robert Graves. The extent to which any of the ancient or modern, can be said to reflect the past accurately.

121 Freshman Seminar in Classical Archaeology Fall or spring. 3 credits.
T. R. 9:05. Staff.
Ancient civilizations of the Mediterranean world. The ancient Mediterranean world produced such important cultures as those of the Egyptians, Myceneans and Minoans, Phoenicians, Greeks, and Romans. In this course we shall examine the rise and fall of the great civilizations of the Mediterranean basin and consider their development in terms of their writing systems, political and economic organizations, religion, trade, and architecture. Topics covered include the environment and natural resources of the Mediterranean regions, the development of writing, the opium trade in the eastern Mediterranean, and the causes of the rise and fall of Mediterranean empires.

150 Freshman Seminar in Greek and Roman Myths Fall. 3 credits.
T R 11:15. Adler.
An introductory course on the myths of Greece and Rome for students interested in acquiring a basic background in Greek and Roman myths and legends as they occur in ancient literature and art. It should serve as a foundation for those interested in pursuing various aspects of these important cultural traditions. The primary purpose will be to acquaint the student with the stories themselves, and, where appropriate, to compare Greek and Roman myths with those of the Celts and other European peoples.

[200 Mediterranean Archaeology (also Near Eastern Studies 280) Fall. 3 credits. Not offered 1982-1983.]
An examination of the archaeological bases of ancient Mediterranean civilization, with special focus on contacts and interrelationships in the Bronze Age. Topics include the rise of civilization in Egypt; the Bronze Age states of Syria-Palestine (Elam, Ugarit, Byblos, etc.); the Hittites and Bronze Age Anatolia; Minoans, Myceneans, and their eastern and western contacts; the role of Cyprus; the invention and spread of writing; and ancient shipping and trade. Lectures by instructors will be supplemented with talks by other scholars from Cornell and elsewhere.

211 The Greek Experience Fall. 3 credits.
M W F 11:15. F. M. Ahl.
An introduction to the literature and thought of ancient Greece, with special emphasis on the oral and dramatic presentation and intellectual and visual contexts. There will be an analysis of tragedy and comedy, satire, epic and lyric poetry; also selected prose works, augmented by films, slides, play readings, and individual student interpretations.

212 The Roman Experience Spring. 3 credits.
M W F 11:15. M. M. Cook.
An introduction to the civilization of the Romans as expressed in their literature, art, and social and political institutions. This course will examine not only the intellectual life of the Romans, but what it meant for men and women of all social classes to live in the Roman world. Selected readings in translation of works of literature, history, and philosophy, supplemented by slides and other visual materials.

[222 The Individual and Society in Classical Athens Spring. 3 credits. Prerequisite: Classics 211 or 220 or History 161 or 265 or 266 or permission of instructor. Not offered 1982-1983.]
From Classical Athens (fifth and fourth centuries B.C.) come many of the most outstanding achievements in Western civilization: in literature, art, philosophy, historical writing, and the sciences. This course will survey Athenian daily life and discuss Athenian society with a view to isolating aspects which facilitated the development of the individual and group achievement. Topics will include family life, education, economics, government, material culture, religion, social structure. Political and military history, while not totally disregarded, will not be of primary concern.

[224 Greek Philosophy Fall. 3 credits. Not offered 1982-1983.]
An introduction to the pre-Socratic philosophers and Plato.

[225 Hellenistic and Roman Philosophy Spring. 3 credits. Not offered 1982-1983.]
An introduction to Aristotle and later Greek and Roman philosophy, including Stoicism and Epicureanism.

[226 The Genius of Christianity Fall. 3 credits. Not offered 1982-1983.]
An evocation of the spirit of the Christian religion over the course of its history. Lectures and class discussions will examine four major themes: New Testament, monasticism, the Reformations, and modernism in theology. Authors read will include theologians, apologists, poets, and mystics from all periods.

[236 Greek Mythology (also Comparative Literature 236) Fall. 3 credits. Not offered 1982-1983.]
M W F 2:30. M. L. Cook
A survey of the Greek myths, with emphasis on the myths that have entered the postclassical Western tradition. Of the aspects of mythology to be studied the following will be among the most important: what "myth" meant to the Greeks; the factors and influences involved in the creation of myths; and the significance of myths in daily life, religion, and thought. Comparison and contrast to Roman myths, will also be included.

[237 Greek and Roman Mystery Religions Spring. 3 credits. Not offered 1982-1983.]
M W F 11:15. K. Clinton
The development and character of Mystery cults from the original Mystery of Demeter and Persephone to the Christian Mysteries. The cults include the Kabeiroi, the Great Gods of Samothrace, Dionysus, Osiris, and other cults of Asia Minor. To what extent does the analysis of the Mysteries contribute to our understanding of the Greek and Roman world?

[238 The Ancient Epic Spring. 3 credits.] M W F 11:15. K. Clinton
A close reading of the Homeric epics and Vergil's Aeneid. The Iliad and the Odyssey will be considered as oral poetry and in terms of their place in classical and in modern interpretations. The Aeneid will be read as a major rewritting of Homer designed for a new audience.

245 Greek and Roman Historians Fall. 3 credits.
Study of historical writing in antiquity through selected readings (in translation) from the Greek and Roman historians. Among the topics to be examined are the historian's task as understood by the ancients; the method, narrative technique, and accuracy of the Greek and Roman historians; their attitudes to the events which they relate.

[270 Cicero and His Age (also History 270) Spring. 4 credits. Not offered 1982-1983.]
An interdisciplinary overview of the final decades of the Roman Republic as seen through the eyes of the period's most prolific writer. Selections from Cicero's speeches, his personal correspondence, and his philosophical, political, and oratorical essays are studied for the light they throw on both the man and his times. (Students who are enrolled in Classics and History 270 and who know Latin may read selected texts in the original; an additional section each week. See Classics 319 below.)

[300 Greek and Roman Drama (also Comparative Literature 300) Spring. 4 credits. Not offered 1982-1983.]
T R 10:10-11:35. G. M. Kirkwood
A study of ancient tragedy and comedy as exemplified by representative plays, read in translation, of Aeschylus, Sophocles, Euripides, Aristophanes, Menander, Plautus, Terence, and Seneca. Main emphasis is on the development of Greek tragedy. Consideration also of the development of Greek theater (illustrated) and its relationship to the form and presentation of the drama, the origins of tragedy, and the influence of Greek tragedy and Seneca on later European drama.

[304 Roman Law Spring. 4 credits. Not offered 1982-1983.]
While based upon a history of the formal structure of Roman Law from the XII Tables to the Digest, this course will deal with Roman Law in its wider context: law as a weapon in political strategies, law as a basis for political thought and law as a basis for social and political change. Students will be required to read a wide range of sources in translation.

[331 Greek Foundations of Western Literature (also Comparative Literature 331) Fall. 4 credits. Not offered 1982-1983.]

[332 Pagans and Christians at Rome (also Comparative Literature 332) Fall. 3 credits. Not offered 1982-1983.]
A study of the history of the later Roman Empire seen through the various religious controversies of that age. Readings from a variety of original sources in translation.

[333 Latin Foundations of Western Literature (also Comparative Literature 333) Spring. 4 credits. Not offered 1982-1983.]

336 Foundations of Western Thought (also Comparative Literature 336) Fall. 4 credits.
The Greeks and Romans first raised many of the central questions that have long preoccupied Western thinkers: Is belief in a god rational or just a matter of faith? Are there objective ethical and political values? Are we responsible for our actions if everything in the world is causally determined? What is the relation of science and politics, and is scientific thinking just another form of myth? We will examine the cultural, political, and religious contexts in which such questions first arise and assess the distinctively Greek and Roman responses given by Classical tragedians, historians, philosophers, and religious thinkers. Authors examined will include Homer, Heraklitus, Aeschylus, Sophocles, Thucydides, Plato, Aristotle, Epicurus, the Stoics, St. Paul, and Augustine.

337 Ancient Philosophy of Science Spring. 4 credits.
M. Cook.
The development of scientific method by the ancient Greeks; the pre-Socratic philosophers, Aristotle, the ancient atomists, and the medical writers (Hippocrates, Galen, and the empiricists).

[339 Ancient Wit: An Introduction to the Theory and Form of Comic and Satiric Writing in Greece and Rome (also Comparative Literature 339) Spring. 4 credits. Not offered 1982-1983.]
This course is not only to provide an introduction to the comedy, satire, and other humorous writings in Greek and Roman literature, but to discuss the ancient works in light of modern theories of comedy and laughter. Discussion of the nature of laughter itself in light of both ancient and modern scholarship on the subject, from Plato's Philebus to Freud's Wit and Its Relations to the Unconscious and Koestler's The Act of Creation. Examination of select works and passages of Homer, Euipides, Aristophanes, Hierocles, Lucian, Plautus, Nonnus, Horace, Martial, Juvenal, and Petronius.

340 Ancient Greek Constitutions Spring. 3 or 4 credits. Prerequisite: survey of Greek history, a course in Greek civilization, ability to read Greek, or permission of the instructor.
The Greek word *politeia* means, "constitution," but not a single written document. It means the form of political life within a state. This course will survey briefly the variety of forms of political life in ancient Greece from Mycenaean kingdoms to the classical fourth-century Athenian democracy. The majority of time will be devoted to the history, functioning, and assessment of the Athenian democracy and Athenian law. The second major topic will be the constitution of Sparta and its role as the alternative to democracy. As each constitution is studied, the role of women will be considered. Required readings will be in translation. For those who can read Greek, an additional hour will be arranged each week to study selected documents in the original.

Women in Classical Greece and Rome
L. S. Abel.
In this course students will examine the evidence about the social and political position of women in ancient Greece and Rome. The purpose will be to trace the origins of some Western attitudes about women and to address general historical questions about the nature of the evidence, basic chronology, and the development of political systems.

Augustine
Fall. 4 credits. Prerequisites: Classics 428 or permission of the instructor. Not offered 1982-1983.

The life and works of the dominant native genius of Western medieval intellectual history. Readings are taken mainly from the works of Augustine in English translation.

The Church of the Fathers

A rigorous historical survey of the development of doctrines and ecclesiastical institutions in the early church from the second through eighth centuries. Readings from original sources in translation.

Genre and Periods in Greek and Roman Literature (also Comparative Literature)
Spring. 4 credits. Prerequisite: one upper-division course in Classics, comparative literature, English, or the modern foreign languages: senior standing, or permission of the instructor. Not offered 1982-1983.

Decline and Fall of the Roman Empire
Fall. 4 credits. Limited to 20 students. Not offered 1982-1983.

The fall of Rome has transfixed modern scholars with fascination. In the camps of the barbarian invaders, in the cloisters of the new monastic movement, and in the decaying cities of the ancient world, they seek guiding principles to help them understand how great societies can lose their vitality and how new life can spring from the ruins of the dying past. The focus will be on the ideas and events of late antiquity, but attention will be paid throughout to the implications of those events and ideas for modern scholars and modern societies.

Independent Study in Classical Civilization, Undergraduate Level
465. Fall, 466. spring. Up to 4 credits.
Hours to be arranged.

Language of Myth (also Anthropology 610)
Spring. 4 credits.
P. Pucci.
An analysis of the theories on language, leading to Levi-Strauss and Debois.

Patristic Seminar: Graduate
Fall or spring. 4 credits. Not offered 1982-1983.

Independent Study for Graduate Students in Classical Civilization
711, fall. 712.
Spring. Up to 4 credits.
Hours to be arranged.

Greek

101 Greek for Beginners
Fall and spring. 4 credits.
M T W F 12:10. Fall, G. M. Kirkwood; spring, staff.
Introduction to Attic Greek. Designed to enable the student to read the ancient authors as soon as possible.

103 Attic Greek
Fall and spring. 4 credits. Prerequisite: Classics 101 or equivalent.
M T W F 12:20. Fall, M. L. Cook; spring, staff.
A continuation of 101.

Modern Greek
Fall, 111, fall, 112, spring. 3 credits. Not offered 1982-1983.
M W F 9:05. G. M. Messing.

201 Attic Authors
Fall. 3 credits. Prerequisite: Classics 103 or equivalent.
Selected readings from Plato, Thucydides, and Euripides.

203 Homer
Spring. 3 credits. Prerequisite: Classics 103 or equivalent.
M W F 1:25. M. Cook.
Selected readings from Plato.

209 Greek Composition
Fall. 2 credits. Prerequisite: Classics 203 or equivalent. Not offered 1982-1983.

210 Greek Composition
Spring. 2 credits. Prerequisite: Classics 203 or equivalent. Not offered 1982-1983.
T R 10:10-11:35. Staff.

301 Greek Historians
Fall. 4 credits. Prerequisite: Classics 203, 204, or equivalent. Not offered 1982-1983.
J. E. Coleman.
Topic varies. In 1981-82 the course consisted of reading (in Greek) and study of selected passages from Herodotus.

302 Greek Tragedy
Fall. 4 credits. Prerequisite: Classics 203 or equivalent. Not offered 1982-1983. G. M. Kirkwood.

305 Attic Comedy
Spring. 4 credits. Prerequisite: Classics 203 or 204 or equivalent. Not offered 1982-1983.
P. Pucci.

306 Greek Melic, Elegiac, and Bucolic Poetry
Spring. 4 credits. Prerequisite: Classics 203, 204, or equivalent.
G. Kirkwood.

307 Plato
Fall. 4 credits. Prerequisite: Classics 203 or 204 or equivalent.
Plato on egoism, love, and friendship. Lyce and Symposium.

308 New Testament Greek
Spring. 4 credits. Prerequisite: two terms of 200-level Greek or permission of instructor. Not offered 1982-83. Readings in New Testament texts discussed in seminar format, with one session a week devoted exclusively to problems with language and translation exercises.

310 Greek Undergraduate Seminar
Fall or spring. 4 credits. Prerequisite: two terms of 200-level Greek or permission of instructor. Not offered 1982-1983.

Ancient Greek Constitutions
Spring. 4 credits. Prerequisites: survey of Greek history, a course in Greek civilization, ability to read Greek, or permission of the instructor.
T R 12:20. Additional section to be arranged.
L. Abel.
See description under Classical Civilization.

Latin

105 Latin for Beginners
Fall or spring. 4 credits.
Fall: M T W F 8 P. Kirkwood; M T W F 10:10 P. Kirkwood.
An introductory course in the essentials of the Latin language, designed for rapid progress toward reading the principal Latin writers.

Elementary Latin
Fall or spring. 4 credits. Prerequisite: Classics 105 or placement by departmental examination.
M W F 8, M T W F 10:10, P. Kirkwood; M T W F 1 25, P. Kirkwood.
A continuation of Classics 105, using readings from various authors.

Intensive Latin
M T W R F 8, plus an additional session to be arranged.
The course work of Classics 105 and 106 is combined in one term.

Latin in Review
Fall. 3 credits. Prerequisite: placement by departmental examination.
M W F 11:15. Staff.

Intermediate Latin
Fall. 3 credits. Prerequisite: Classics 106 or 107 or 108 or placement by departmental examination.
Sec 1, M W F 10:10. P. Kirkwood; sec 2, M W F 1:25, J. Ginsburg.
Ciceron's Pro Cluentio: a tale of murder and intrigue, with Ciceron for the defense.

Catullus
Spring. 3 credits. Prerequisite: Classics 106 or 107 or 108 or one term of 200-level Latin. Not offered 1982-1983.
Readings from Catullus's poetry with emphasis on the traditions of love poetry, the poet's relation to his society, and other literary topics.  

208 Roman Drama Spring. 3 credits. Prerequisite: Classics 106 or 107 or 108 or one term of 200-level Latin. F. M. Ahl.  

216 Vergil Spring. 3 credits. Prerequisite: one term of 200-level Latin. M. W. F 11:15 G. Kirkwood. Selections from Vergil's Aeneid will be read with emphasis on Vergil's use of the epic tradition, his own poetic milieu, his poetic techniques, and his relation to the politics of his time.  

241 Latin Composition Fall. 2 credits. Prerequisite: Classics 106 or 107 or 108 or equivalent. T. R 2:30. P. Pucci.  

242 Latin Composition Spring. 2 credits. Prerequisite: Classics 241 or equivalent. E. Adler.  

[312 Latin Undergraduate Seminar Fall or spring. 4 credits. Prerequisite: two terms of 200-level Latin or permission of instructor. Not offered 1982-1983.]  

314 The Augustan Age Fall. 4 credits. Prerequisite: two terms of 200-level Latin. M. W. F 9:05. F. M. Ahl.  

315 Roman Satire Spring. 4 credits. Prerequisite: two terms of 200-level Latin. E. Adler.  

[318 Roman Philosophical Writers Fall. 4 credits. Prerequisite: two terms of 200-level Latin. Not offered 1982-1983. P. T. Mitsis. Selected readings from Lucretius's De Rerum Natura and Cicero's De Finibus.]  

[310 Roman Elegy: Tibullus, Propertius, Ovid Fall. 4 credits. Prerequisite: two terms of 200-level Latin. Not offered 1982-1983.]  

[319 Readings in Cicero (also History 319) Spring. 1 credit. Prerequisite: two terms of 200-level Latin. Corequisite: Classics 270 (also History 270). Not offered 1982-1983. Hours to be arranged. Students who are enrolled in Classics 270 and History 270 and who know Latin may read selected texts in the original in an additional section each week.]  

[365 Cicero and His Age Fall or spring. 4 credits. Prerequisite: two semesters of 200-level Latin or permission of instructor. Not offered 1982-1983.]  

[386 Late Latin Spring. 4 credits. Prerequisite: permission of the instructor. Not offered 1982-1983.]  

[388 Medieval Latin Literature Fall. 4 credits. Prerequisite: Classics 214 or permission of the instructor. Not offered 1982-1983. Medieval Latin texts and their historical and cultural contexts are closely studied. Each term the course will concentrate on two or three topics, such as particular authors, genres, or periods.]  

411-412 Advanced Readings in Latin Literature 411, fall. 412, spring. 4 credits. For advanced undergraduates and graduate students. Prerequisite: two terms of 300-level Latin or permission of instructor. Staff.  

[411 Advanced Latin Composition Spring. 2 credits. For undergraduates who have completed Latin 241-242 and for graduate students. Not offered 1982-1983.]  

451-452 Independent Study In Latin, Undergraduate Level 451, fall; 452, spring. Up to 4 credits. Hours to be arranged.  

[460 The Latin Poems of Milton Fall. 4 credits. Prerequisite: two semesters of 300-level Latin. Not offered 1982-1983.]  

679 Seminar In Latin: Graduate (also History of Art 520) Fall. 4 credits. P. 3-5. E. Adler. The Empire in transition. Art, literature, and life in the Roman world from Nero's death to the mid-second century A.D.  

680 Seminar In Latin: Graduate Spring. 4 credits. R. 3-5. Staff. Topic to be announced.  

751-752 Independent Study for Graduate Students in Latin 751, fall; 752, spring. Up to 4 credits. Hours to be arranged.  

Classical Archaeology  

[206 The Rise of Classical Greece Fall. 3 credits. Not offered 1982-1983.]  

Archaeology of the Greek dark ages. Topics include site reports, pottery, metalworking, the introduction of the alphabet, the beginnings of coinage, and links with Anatolia and the Near East.  

220 Introduction to Classical Archaeology (also History of Art 220) Fall. 3 credits. M. W. F 9:05. J. E. Coleman. The sculpture, vase painting, and architecture of the ancient Greeks, from the Geometric period through the Hellenistic, and the art of the Romans from the early Republic to the late Empire.  

221 Minoan-Mycenaean Art and Archaeology (also History of Art 221) Spring. 3 credits. M. W. F 10:10. J. E. Coleman. The birth of civilization in Greece and the Aegean islands during the Bronze Age. The main focus is on the rise and fall of Minoan Crete and Mycenaean Greece, with consideration given to the nature and significance of Aegean interactions with Egypt, the Near East, and Anatolia. Topics also include Cyprus as an intermediary between the Aegean and the Levant, the effects of the volcanic eruptions of Thera (possibly Plato's Atlantis), and the evidence of Homer and the Greek myths.  

232-233 Archaeology in Action I and II 232, fall; 233, spring. 3 credits each term. Prerequisites: Archaeology 150, Classics 220, or permission of the instructor. M. 2:30-4:25; two labs to be arranged. P. I. Kuniholm. Objects from the Classical, Hellenistic, and Roman periods are "dug" out of Cornell basements, identified, cleaned, restored, cataloged, and photographed, and are considered in their appropriate historic, artistic, and cultural contexts.  

309 Dendrochronology of the Aegean Fall or spring. Up to 4 credits. Limited to 10 students. Prerequisite: permission of the instructor. M. 12:10-2:15; two labs to be arranged. P. I. Kuniholm. Participation in a research project of dating modern and ancient tree-ring samples from the Aegean and Mediterranean. Supervised reading and laboratory work. A possibility exists for summer fieldwork in Greece or Turkey.  

[320 Arts and Monuments of Athens (also History of Art 320) Fall. 4 credits. Prerequisite: Classics 220 or permission of instructor. Not offered 1982-1983.]  

[321 Archaeology of Cyprus (also History of Art 321) Spring. 4 credits. Prerequisite: Classics 220 or permission of instructor. Not offered 1982-1983.]  

Study of Cyprus from its first settlement in the Neolithic period until the end of the ancient world. Special emphasis on the Bronze Age, the acme of Cypriot culture, and the neighboring civilizations. Lectures and oral reports by students. Students will have the opportunity to examine and study original unpublished material from the Cornell excavation at Alambra and study the collection.  

322 Greeks and Their Eastern Neighbors (also History of Art 328) Spring. 4 credits. Prerequisite: Classics 220, 221, or permission of the instructor. J. E. Coleman. A study of the archaeological and other evidence for the interaction between Greek civilization and the Eastern and Western Mediterranean from the thirteenth to the fourteenth centuries B.C.E. The course will focus on Greek relationships with Phoenicia and the rest of the Levant, Cyprus, Anatolia, and the Etruscans in the post-Bronze Age period.  

323 Painting in the Greek and Roman World (also History of Art 323) Spring. 4 credits. Not offered 1982-1983.]  

325 Greek Vase Painting (also History of Art 325) Fall. 4 credits. Not offered 1982-1983. A stylistic and iconographical approach to an art in which the Greeks excelled. The course will be arranged chronologically, from the early (eleventh century B.C.E.) anonymous beginnings to the "personal" hands of identifiable masters of the fifth and fourth centuries B.C.E. Styles other than Attic will be stressed.]  

326 Art and Archaeology of Archiac Greece (also History of Art 326) Fall. 4 credits. Not offered 1982-1983. A study of the formative period of Classical Greek civilization, based primarily on the evidence of art and archaeology. Attention is concentrated on the beginning and developments of architecture, sculpture, and painting.  

327 Greek and Roman Coins (also History of Art 327) Spring. 3 credits. Not offered 1982-1983. A look at the varied issues of Greek cities and the Roman state. The coins will be considered as art objects as well as economic and historical documents. The changes in design, value, and metals from the origins of coinage to the Late Roman period are studied. Lectures, student presentations, work with actual examples.]  

328 Greek Sculpture (also History of Art 328) Fall. 4 credits. Not offered 1982-1983. Study of ancient Greek sculptural techniques and achievements in marble and bronze. Detailed examination of a selection of works to illustrate sculptural development.]  

330 Art in Pompeii: Origins and Echoes (also History of Art 330) Spring. 4 credits. Not offered 1982-1983. Greek and Roman art in the context of the daily life of a provincial Italo-Greek town. The interrelation of art and household objects in classical culture will be stressed, and earlier traditions will be described. Subsequent development of Roman minor arts will be covered, as well as the discovery of Pompeii and its effect on European taste.]  

350 Arts of the Roman Empire (also History of Art 322) Spring. 4 credits. M. W. F 9:05. A. Ramage. The visual arts in the service of the first world state. The course starts with the Etruscan and Republican period but concentrates on monuments of the
imperial era in Italy and the provinces until the time of Constantine.

423 Ceramics (also History of Art 423) Spring. 4 credits. Prerequisite: permission of instructor. W 2:30-4:30. A. Ramage.

620 Seminar in Classical Archaeology Fall. 4 credits. Not offered 1982-1983. The seminar will focus on the shaft graves at Mycenae and will examine the evidence from the shaft graves for mainland continuity and for influences from Crete, the Cycladic islands, and abroad.

630 Seminar in Classical Greek Archaeology; Graduate Spring. 4 credits. Not offered 1982-1983.

Classical Linguistics

420 History of the Greek Language Fall. 3 credits. M W F 9:05. G. M. Messing. Graduate students in Classics will be expected, in addition, to register in Classics 419. Advanced Greek Composition. Lectures and assigned readings will cover the evolution of Greek from Indo-European and its subsequent development up to the Koine.

422 History of the Latin Language Spring. 3 credits. G. M. Messing.

423 Vulgar Latin Spring. 4 credits. See also Romance Linguistics. Not offered 1982-1983. Selected inscriptions such as the Peregrinatio ad loca sancta will be used to chart the changes in Latin that contributed to the development of the Romance languages.

424 Italic Dialects Fall or spring. 4 credits. Not offered 1982-1983.

Honors Courses

370 Honors Course Spring. 4 credits. To be taken in the junior year. A program of reading and conferences centered on an author or topic chosen in accordance with the special interests of the student and instructor.

471 Honors Course Fall. 4 credits. To be taken in the senior year. A continuation of Classics 370, with change of author or topic.

472 Honors Course: Senior Essay Spring. 4 credits. For students who have successfully completed Classics 471. Topics must be approved by the honors adviser at the end of the first term of the senior year.

Comparative Literature

W. W. Holdheim, chairman (244 Goldwin Smith Hall, 256-4155); C. M. Carmichael, W. Cohen (director of undergraduate studies), W. J. Kennedy, with J. Culler (English), D. L. Grossvogel (Romance Studies), P. Hohtzdi (German, E. Rosenberg (English)).

A broad spectrum of courses in various literary problems (imitation and influence, Marxist aesthetics, literature and history), major authors (Dostoevsky, Ibsen, Dante), key themes (the, hero the city, the detective, stylistic modes (satire, parody, allegory), generic forms (drama, novel, short fiction), and historical periods (medieval, Renaisance, modern) are offered by the department. For the student who chooses to major in another literature, courses in comparative literature offer a rich background that supplements his or her specialization.

The Major

The major is designed to integrate students' knowledge of Western literature, to develop their critical reading abilities, and to train them for careers that demand analytical, interpretive, and evaluative skills. By the beginning of the sophomore year, proficiency in at least one foreign language is required. By the end of sophomore year, students normally have taken the introductory courses surveying the literature of two or more national traditions (such as German, English, Romance studies, Russian, Classics, Near Eastern studies, or Asian studies). Students then select 52 credits of advanced courses in those literatures and in comparative literature to form a sequence that combines an education in a wide range of literatures with techniques of analyzing, interpreting, and evaluating literary texts.

Freshman Seminars

Any 100-level course may be used toward satisfying the Freshman Seminar requirements.

Courses

201-202 Great Books Fall. 201, fall; 202, spring. 4 credits. Comparative Literature 201 is not a prerequisite for 202. Fall: T R 12:20-1:35. T. Bahlit. Spring: M W F 10:10, W. Cohen. A reading each semester of seminal texts that represent and have often shaped Western culture, and ought to be part of every college student's education. By analyzing, interpreting, and evaluating them students will develop essential critical reading abilities. 201: selections from Homer, Sophocles, Plato, the Bible, Virgil, Ovid, Augustine, Dante, and Petrarch. 202: selections from Voltaire, Austen, Goethe, Dickinson, Balzac, Ibsen, T. S. Eliot, Pirandello, Garcia Marquez, and others.

312 Comedy Fall. 4 credits. M W F 12:20. W. J. Kennedy. Discussion of comic styles (classical, colloquial, improvisational, absurd) and modes of comedy (satire, romance, farce, grotesque) in drama and narrative fiction from Aristophanes to Nabokov, with special attention to Chaucer, Rabelais, Moliere, Shaw, and Ionesco.

315 Rhetoric and Technology Spring. 4 credits. M W F 12:20. W. J. Kennedy. A study of the ways in which communication between authors and audiences undergoes changes through the influence of various media in texts from oral, literate, and advanced technological cultures. Readings include works by Plato, Dante, Swift, Nietzsche, Joyce, Borges.

343 Medieval Literature Fall. 4 credits. M W F 12:20. R. E. Kaske. Analysis and interpretation of great medieval literary works in translation. Though readings will vary somewhat from year to year, a typical program would Include Ecclesiastical, WANGENHAGG, a romance of Chrestien, Wolfram's Parzival; Gottfried's Tristan and/or Sir Gawain and the Green Knight.

344 Dante in Translation (also Italian 334) Spring. 4 credits. M W F 12:20. G. Mazzotta. The literary, intellectual, and moral complexities of this fundamental work in our poetic and spiritual history are examined critically. From close readings of some celebrated passages in Inferno, Purgatorio, and Paradiso, the lectures and discussions map out Dante's own interpretations of myths and concerns in classical and Christian litiae. We pursue, for instance, Dante's sense of the crisis in the earthly city and how Vergil and St. Augustine are brought to bear on Dante's elaboration. Issues such as utopia, chiliasm, impetus, and eschatology are given ample treatment, just as the problem of "how to read" the past and Dante's own formulations is kept steadily in focus.

352 Classic and Renaissance Drama (also Theatre Arts 325) Spring. 4 credits. M W F 11:15. W. Cohen. A program of reading from the Greeks to the mid-seventeenth century. Emphasis on relations among history, ideology, theater, and dramatic form, approached primarily from a Marxian perspective. Readings in Aeschylus, 4 credits; Sophocles, Aristophanes; Plautus, medieval drama; Shakespeare, Lope de Vega, Calderon, Corneille, Moliere, and others.

354 Modern Drama (also Theatre Arts 327) Spring. 4 credits. M W F 12:15. A. Caputi. A study of the major currents of modern drama against the background of modern culture. Readings will include Ibsen, Strindberg, Chekov, Shaw, Pirandello, O'Neill, Brecht, Beckett, Genet, and others.

363-364 The European Novel Fall and spring. 4 credits. Comparative Literature 363 is not a prerequisite for 364. Fall: M W F 12:15. W. Cohen. Spring: T R 10:10-11:25. E. Rosenberg. Close reading of several works each term. 363: from Cervantes to Dostoevsky. 364: from Tolstoy to Gide. Authors to be read will be Flaubert, Dostoey, Balzac, Stendhal, Dickens, Flaubert, Hardy, and Mann. The works discussed will include novelistic subgenres such as the picaresque novel, the novel of manners, the philosophical tale, the historical novel, the detective story, and the Bildungsroman.

369 The Reader in the Novel (also Romance Studies 393) Fall. 4 credits. T R 12:20-1:35. K. Vernon. Devoted to an examination of the image of the reader and the act of reading as thematized in classic and contemporary texts, and the implications for our own reading experience. Works in translation by Cervantes, Fielding, Diderot, Nabokov, and others.

379 The Russian Connection (also Russian Literature 379) Spring. 4 credits. M W F 10:10. P. Carden. Russian literature in its European context. We will discuss great works of the Russian prose tradition in their reciprocal relations with European prose. Among the Russian authors to be studied will be Pushkin, Gogol, Lermontov, Tolstoy, and Dostoevsky. Among the European authors whose work helped to shape or was in some degree shaped by Russian literature, we will look at Rousseau, Goethe, Constant, Sterne (Tristram Shandy), Hoffmann, and Stendhal (The Charterhouse of Parma). In English translation.
391 Readings in Modern Poetry  Spring. 4 credits.

An intensive introduction to five major modern poets: Baudelaire, Mallarme, Yeats, Hillel, and Stevens. Questions will elucidate the relations of self and language; the poet, history, and myth; "Romanticism" and "modernity"; and the intrinsic difficulty and interest of poetry. Bilingual texts will be used.

399 The Divided Self in Women's Writing  Spring. 4 credits.

A thematic and structural investigation of women's writing to explore the tension between the highly developed self-awareness of narrator and/or heroine and the desire for wholeness. We will trace some of the ways in which women writers have tried to resolve or transcend this problem of identity by retreat, acceptance, or new synthesis. The list of authors includes Virginia Woolf, Dora Lessing, and Sylvia Plath, as well as translations of contemporary German women novelists.

400 The Japanese Noh Theatre and Modern Dramatists (also Asian Studies 400)  Spring. 4 credits.

M W 2:30-3:45. K. Brazell.

Several weeks will be spent studying the literary, performance, and aesthetic aspects of the Noh theatre. Emphasis will be on Noh as a performance system, a total theatre in which music, dance, text, costume, and props all interact to create the effect. Then attention will turn to modern theatre people who have reacted to Noh in some creative way. Choice of dramatists will depend partially on student interests but will probably include Yeats, Brecht, Britten, Claudel, Grotowski, and Mishima. All readings may be done in English translation.

Prerequisite: a 200-level or higher course in one of the following: Hebrew or Yiddish language or literature, English or comparative literature.

R 2:30-4:25. C. Kronfeld.

This course investigates the issue of the typical modernist metaphor against the background of interdisciplinary theories of metaphor. Examples are taken from three different literatures and branches of modernism: Hebrew anti-formalist poetry, the Yiddish introspective poets, English and American imagists, etc. Readings will include Fogel, Amichai, Glatsenstein, Sulzkever, Eliot, Stevens, Williams, and others. Discussions and readings in English; students will have the option of reading these texts in Hebrew and/or Yiddish.

410 What Is Literature?  Fall. 4 credits.

M W 2:30-3:45. T. Bahti.

A seminar for advanced majors in this and the other literature departments, designed to enable them to reflect upon their object of study in a general but rigorous way. Literary works (in translation) representing different traditions, genres, and periods will be paired with theoretical or philosophical works representing different traditions and approaches. Shakespeare's Tempest and Frye's Anatomy of Criticism; Holderlin's "Bread and Wine" and Heidegger's "Origin of the Work of Art;" Faubert's Madame Bovary and Arostite's Poetics.

411 Freud as Imaginative Writer and Reader  Spring. 4 credits. Limited to 15 students.

Prerequisite: at least one literature course at the 200 level or above.

T R 2:30-3:45. C. Chase.

This course will introduce Freud as an imaginative writer and a reader of imaginative writing—the source of psychoanalytic criticism. Works will include those by Freud, Shakespeare, Sophocles, and E. T. A. Hoffmann. No previous familiarity with Freud's writings or with psychoanalytic theory is necessary.

419-420 Independent Study  Fall and spring. Variable credit. Comparative Literature 419 is not a prerequisite for 420. Hours to be arranged. Staff.

420 Readings in the New Testament  Fall. 4 credits. Limited to 25 students.

M W F 1:25. J. P. Bishop.

Close-reading of representative texts from the New Testament in modern scholarly editions, with the help of appropriate commentary, introductory and specialized. The focus in 1982 will be on the synoptics. Mark, Matthew, and Luke. All readings will be in English, but repeated reference to the Greek original will be made. Graduate students and undergraduates from other colleges who are interested in the material should not feel inhibited from enrolling. The approach will be primarily expository, that is, we will try to find out what the texts say and what they mean by what they say. Thus we can hope to stay open to scholarly and religious issues alike.

432 Problems in Romanticism: Holderlin and Keats (also German Literature 633)  Fall. 4 credits.

600-level credit can be granted to graduate students after consultation with the instructor.

M 2:30-4:25. T. Bahti.

A seminar on two of the major poets of European romanticism. Points of focus will include their different Hellenisms; their ways of handling narrative within various poetic forms; and their different treatments of the problems of art, representation, and poetic language. While some attention will be given to their early works, the accent will be on Holderlin's late hymns and Keats's late odes and the Hyperion project. Reading knowledge of German extremely useful but not required.

452 English Renaissance Drama and Its European Contexts (also Theatre Arts 452)  Fall. 4 credits. 600-level credit can be granted to graduate students after consultation with the instructor.

A study of Shakespeare's leading contemporaries in relation to sixteenth- and seventeenth-century drama in France, Spain, and Italy. The aim of the course is to define and assess the specificity of the Elizabethan and Jacobean stage by viewing it against the background of European Renaissance theater as a whole. Considerable attention will be given to the connections among dramatic genre, theatrical institution, ideology, and social and political history, primarily from a Marxist point of view. Complementary or opposing perspectives are welcome. Readings from Marlowe, Jonson, Marston, and Webster; Corneille, Moliere, and Racine; Lope de Vega and Calderon, and others. All texts available in English.

458 Petrarach, Ronsard, and Donne  Spring. 4 credits.

600-level credit can be granted to graduate students after consultation with the instructor.

A close study of the poetry of Petrarach; of his Renaissance emulator, Ronsard; and of the Baroque poet who reshaped Petrarachian forms, Donne.

459 Italy and the Transalpine Renaissance: Petrarch, Ronsard, and Donne  Fall. 4 credits. 600-level credit can be granted to graduate students after consultation with the instructor.

The impact of Italian literature upon English and French literature of the sixteenth century, studied through the interrelationships among Orlando Furioso, La Foree Queene, and Gargantua and Pantagruel.

472 Ibsen and Chekhov (also Theatre Arts 442)  Fall. 4 credits. Prerequisite: permission of the instructor.

T 2:30-5. S. Williams.

A study of selected minor and major plays by Ibsen and Chekhov, with particular attention being paid to how the playwrights evolved a dramaturgy that suitably expressed the artistic problems of their time. Aspects of performance and staging will also be discussed.

477 The Bildungsromane in Modern Literature  Fall. 4 credits. 600-level credit can be granted to graduate students after consultation with the instructor.

T 2:30-4:25. W. H. Holzherrh.

Seminar for graduates and advanced undergraduates on the novel of education and development, from Goethe, Balzac, Stendhal, and Dickens via Flaubert and Henry Adams to Gide and Thomas Mann (Magic Mountain, Felix Krull). Discussion will relate the problems of development in time to the form of the novel. Related subjects (such as the Kunstrroman and the novel of cultural diagnosis) will be taken up.

495 The Aesthetic Theory of the Frankfurt School (also German 495)  Spring. 4 credits.

T R 2:30-4:25. P. Hohendahl.

The course is designed as an introduction to the history of the Frankfurt School and the essential concepts of critical theory. The emphasis will be placed on the theory of culture and its application to the understanding of literature and aesthetics. The reading material will be taken from the works of Max Horkheimer, Theodor W. Adorno, Walter Benjamin, and Jurgen Habermas.

619-620 Independent Study  Fall and spring. Variable credit. Comparative Literature 619 is not a prerequisite for 620.

HOURS to be arranged. Staff.

671 Baudelaire and Hugo  Fall. 4 credits.

Study of Baudelaire's verse and prose, and comparison of his poetry with the early and late poetry of Hugo. Conducted in English. Good reading knowledge of French required.

596 Proust and Mystery (also Romance Studies 596)  Spring. 4 credits.

In my opinion is what arouses curiosity through the unexplained, the inexplicable, or merely the secret, three possibilities are adumbrated for literature: the text as discussion about the ontological evidence, as revelation of the ontological sense, or the reduction of that sense for the sake of a game. The course proposes to read substantial portions of A la Recherche du Temps Perdu as the focus of these three kinds of concern, and alongside other texts that focus more specifically on one or the other of these three possibilities.

Related Courses in Other Departments

Many of these courses are conducted in English, and readings are in translation.

On the Bias: New Designs on Literary Criticism (Society for the Humanities 425-426)

The Language(s) of Politics in the Renaissance (Society for the Humanities 425-428)

The Age of Symbollism (Russian 498)
Computer Science

The Department of Computer Science is in both the College of Arts and Sciences and the College of Engineering. A student in either college can major in computer science. The following describes the College of Arts and Sciences major.

The Major

The major has three components: a core (a minimum of 42 credits), a group of electives in computer science and related fields (a minimum of 9 credits), and a concentration outside computer science (a minimum of 14 credits). The core focuses on the central topics within computer science: the logical design of programs, data structures, and algorithms. The remaining components of the major—the related electives and the outside concentration—provide a flexible extension to the core program. Students are expected to choose in consultation with their advisers the electives and the outside concentration that best suit their graduate and career plans.

Students interested in pursuing an advanced degree in theoretical computer science should concentrate in mathematics. Students preparing for advanced work in scientific computation should take Computer Science 621 (instead of Computer Science 321) and Computer Science 622 (as a related elective) and concentrate in some branch of applied mathematics. Qualified students are encouraged to concurrently major in mathematics.

Admission

The prerequisites for admission to the major are:

1) Completion of Computer Science 100-211;
2) Completion of Mathematics 111-122-221 or Mathematics 191-192-293;
3) A 2.75 grade-point average in all computer science and mathematics courses; and
4) Acceptance by the department's admission committee.

After admission, students are expected to maintain at least a 2.75 grade-point average in their major courses.

Core

The core consists of the following courses:

1) Calculus and linear algebra: Mathematics 111-122-221 or Mathematics 191-192-293
2) One of the following discrete mathematics courses: Computer Science 280, Mathematics 392, 393, 435
3) Basic programming: Computer Science 100 and 211
4) Computer systems: Computer Science 314 and 410
5) Theory of computation: Computer Science 481 and 482
6) Numerical analysis: Computer Science 321

Related Electives

The related electives requirement consists of three courses. Two must be computer science courses numbered above 410; the other one is to be selected from the following:

Electrical engineering courses numbered 230 or higher.
Operations research courses numbered 260 or higher.
Mathematics courses numbered 381 or higher.

Students are expected to select related electives that complement their concentration.

Concentration

This component encourages the student to study some discipline outside of computer science in reasonable depth. The concentration consists of an approved sequence of four courses (at least 14 credits) numbered 200 or higher in some field related to the theoretical or practical aspects of computing. A list of approved concentrations is available in the Computer Science Office, 405 Upson Hall. Students may also design their own concentrations, subject to the approval of their adviser. The concentration requirement is waived for students who concurrently major in a related field such as mathematics, linguistics, or psychology.

Other Requirements

Computer science majors must also satisfy the College of Arts and Sciences and University requirements. In particular, the spirit of the 15-credit electives requirement will be strictly followed. This requirement helps insure breadth of education and, consequently, no computer- or mathematics-related course can be used toward its fulfillment. In general, no course may be used to fulfill more than one requirement. There are two exceptions: first, appropriate core courses may be used to satisfy the Group IV distribution requirement, and second, in the case of a double major, the same course may be applied to both majors.

Probability and statistics courses. Computer science majors are encouraged to include at least one course in the field of probability and statistics in their program of study. Although there is no formal requirement, students are encouraged to take at least one mathematics course and one statistics course.

Courses

For complete course descriptions, see the computer science listing in the College of Engineering.

100 Introduction to Computer Programming

Fall, spring, summer. 4 credits. S-U grades optional. Students who plan to take both Computer Science 101 and 100 must take 101 first. 2 lecs, 1 rec (optional). 3 evening exams, final.

101 The Computer Age

Spring, summer. 3 credits. S-U grades optional. Students who plan to take both Computer Science 101 and 100 must take 101 first. 2 lecs, 1 rec.

211 Computers and Programming

Fall, spring, summer. 3 credits. Prerequisite: Computer Science 100 or equivalent programming experience. 2 lecs, 1 rec.

280 Discrete Structures

Fall, 4 credits. Prerequisite: Computer Science 211 or permission of the instructor. 3 lecs.

305 Social Issues in Computing

Fall, 3 credits. Prerequisite: Computer Science 100 or 101 or permission of instructor. Not offered 1982-83.

314 Introduction to Computer Systems and Organization

Fall, spring, summer. 4 credits. Prerequisite: Computer Science 211 or equivalent. 2 lecs, 1 lab.

321 Numerical Methods

Fall, spring. 4 credits. Prerequisites: Mathematics 221 or 293, and knowledge of FORTRAN equivalent to what is taught in Computer Science 100. 3 lecs.

410 Data Structures

Fall, summer. 4 credits. Prerequisite or corequisite: Computer Science 314 or permission of instructor. 3 lecs.

414 Systems Programming and Operating Systems

Spring. 4 credits. Prerequisite: Computer Science 314 or permission of instructor. 3 lecs.

417 Interactive Computer Graphics (also Architecture 334)

Spring. 4 credits. Enrollment limited for 1982-83. Prerequisite: Computer Science 314. 2 lecs, 1 lab.

432 Introduction to Database Systems

Spring. 4 credits. Prerequisite: Computer Science 211. 2 lecs, 1 rec.

481 Introduction to Theory of Computing

Fall. 4 credits. Prerequisites: Computer Science 211 and Computer Science 280 or equivalent mathematics or, permission of instructor. 3 lecs.

482 Introduction to Analysis of Algorithms

Spring. 4 credits. Prerequisites: Computer Science 410 and 481 or permission of instructor. 3 lecs.

490 Independent Reading and Research

Fall, spring. 1-4 credits.

600 Computer Science and Programming

Fall. 1 credit. Prerequisite: graduate standing in computer science or permission of instructor. 3 lecs.

611 Advanced Programming Languages

Fall. 4 credits. Prerequisite: Computer Science 410 or permission of instructor. 3 lecs.

612 Translating Writing

Spring. 4 credits. Prerequisites: Computer Science 410 and 481 or permission of instructor. 3 lecs.

613 Concurrent Programming and Operating Systems Principles

Fall. 4 credits. Prerequisites: Computer Science 410 and 600 or permission of instructor. 3 lecs.

615 Machine Organization

Spring. 4 credits. Prerequisite: Computer Science 314 or permission of instructor. Not offered 1982-83.

621-622 Numerical Analysis

621, fall, 622, spring. 4 credits each term. Prerequisites: Computer Science 321 and Mathematics 411 and 431. 3 lecs.

623 Short Course on Linear and Nonlinear Least Squares

Fall. 2 credits. Prerequisite: Computer Science 321 or permission of instructor. Not offered every year.

624 Short Course on Spline Approximation

Fall. 2 credits. Prerequisite: Computer Science 321 or permission of instructor. Not offered every year.

632 Database Systems

Fall. 4 credits. Prerequisites: Computer Science 410 and either Computer Science 432 or permission of instructor. 2 lecs.
635 Information Organization and Retrieval
Fall, spring. 4 credits. Prerequisite: Computer Science 410 or equivalent. 2 lecs.

643 Design and Analysis of Computer Networks
Fall. 4 credits. Prerequisite: Computer Science 414 or permission of instructor. Not offered every year. 2 lecs.

681 Analysis of Algorithms
Fall. 4 credits. Prerequisite: Computer Science 481 or permission of instructor. 3 lecs.

682 Theory of Computing
Spring. 4 credits. Prerequisite: Computer Science 481 or permission of instructor. 3 lecs.

709 Computer Science Graduate Seminar
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in computer science. 1 sem.

711 Theory of Programming Languages
Spring. 4 credits. Prerequisites: Computer Science 481 and 611. Not offered every year.

712 Theoretical Aspects of Compiler Construction
Spring. 4 credits. Prerequisite: Computer Science 612. Not offered every year.

713 Seminar in Operating Systems
Fall, spring. 4 credits. Prerequisite: Computer Science 613 or permission of instructor. 1 sem.

719 Seminar in Programming
Fall or spring. 4 credits. Prerequisite: Computer Science 611 or permission of instructor. 1 sem.

721 Advanced Numerical Analysis
Fall. 4 credits. Prerequisite: Computer Science 621 or 622 or permission of instructor. Alternates with Computer Science 722. Not offered every year.

722 Advanced Numerical Analysis
Spring. 4 credits. Alternates with Computer Science 721. Not offered every year.

729 Seminar in Numerical Analysis
Fall, spring. 4 credits. Prerequisite: permission of instructor.

733 Selected Topics in Information Processing (also Operations Research and Industrial Engineering 789)
Not offered 1982-83.

734 Seminar in File Processing
Fall Credit and hours to be arranged. Prerequisite: Computer Science 733.

739 Seminar in Information Organization and Retrieval
Fall, spring. Credit and hours to be arranged. Prerequisite: Computer Science 635.

749 Seminar in Systems Modeling and Analysis
Fall, spring. 4 credits. Prerequisite: permission of instructor. 1 sem.

781 Advanced Theory of Computing
Fall. 4 credits. Prerequisites: Computer Science 681 and 682 or permission of instructor. Alternates with Computer Science 782. Not offered every year.

782 Advanced Theory of Computing
Spring. 4 credits. Alternates with Computer Science 781. Not offered every year.

789 Seminar in Theory of Algorithms and Computing
Fall, spring. 2-4 credits. Prerequisite: permission of instructor. 1 sem.

790 Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser.

890 Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser.

990 Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser.

Dutch

Economics

The study of economics provides an understanding of the way economies operate and insight into public issues. The department offers a broad range of graduate courses in such fields as money and banking, international and comparative economics, econometrics, theory; history; growth and development; and the organization, performance, and control of industry.

The Major

Students who wish to major in economics must have completed Economics 101-102 or equivalent courses and Mathematics 111 or its equivalent with grades of C or better. Prospective majors should apply at the department office. Students considering a major in economics are encouraged to take Economics 313 and 314 instead of Economics 311 and 312. The requirements for a major are (1) Economics 319, 313 and 314 or (with the advisor's approval) 311 and 312; and (2) 20 credits of other economics courses listed by the Department of Economics, except that Economics 399 will not count toward the 20-credit requirement. With the permission of the major adviser, one or (in exceptional cases) two economics courses offered outside the College of Arts and Sciences may be applied to fulfill this requirement. Also with the major adviser's permission, a statistics course offered by another department may be substituted for Economics 319.

Students who have taken Economics 311 or 312 before or during the 1981-82 academic year should not take Economics 313 or 314. These students will be permitted to apply 311-312 toward requirement (1). Students planning graduate work in economics or business are strongly encouraged to prepare themselves well in mathematics and econometrics.

Courses

101 Introductory Microeconomics
Fall or spring and summer. 3 credits. Economics 101 is not a prerequisite for 102.

Lecs and disc. Explanation and evaluation of how the price system operates in determining what goods are produced, how goods are produced, and who receives income, and how the price system is modified and influenced by private organizations and government policy.

102 Introductory Macroeconomics
Fall or spring and summer. 3 credits. Economics 101 is not a prerequisite for 102.
Lecs and disc. Analysis of aggregate economic activity in relation to the level, stability, and growth of national income. Topics discussed may include the determination and effects of unemployment, inflation, balance of payments deficits, and economic development, and how these may be influenced by monetary, fiscal, and other policies.

301 Economics of Market Failure
Fall. 4 credits. Prerequisite: Economics 101 and 102.

The course will review briefly the welfare properties of the perfectly competitive market model and will then consider a range of situations in which these properties are modified and where there may be a case for some form of government intervention. The cases to be considered will include (a) the presence of externalities, pollution, and the economics of the environment; (b) the provision of public goods; the free-rider problem; (c) uncertainty and imperfect information, an analysis in the context of labor and insurance markets, and the market for medical care; (d) the regulation of natural monopoly and public utility pricing; (e) the failure of the market to achieve desired redistributional objectives; (f) direct and indirect taxation as instruments of redistribution.

302 The Impact and Control of Technological Change (also Government 302 and City and Regional Planning 440)
Spring. 4 credits. Examines social, environmental, and economic implications of technological change in the United States in the context of possible policies and strategies of control. Several specific cases will be considered in detail, followed by a broader investigation of the problems of a modern technological society. Alternative political-economic solutions will be explored.

304 Economics and the Law
Spring. 4 credits. Prerequisite: Economics 311 or 313 or permission of instructor.

An examination, through the lens of economic analysis, of legal principles drawn from a variety of legal fields including contracts, property, torts, and procedure. No legal training is required.

306 Economics of Defense Spending
Spring. 4 credits. Prerequisite: Economics 101 and 102. Not offered 1982-83.

The economic aspects of defense spending are analyzed. Emphasis is on the procurement of weapons systems. Topics to be covered include an overview of the defense budget, special characteristics of the defense market, the structure of the defense industry, and the economic behavior of defense firms.

307 Introduction to Peace Science
Fall. 4 credits. Prerequisite: Econ 101-102 or permission of instructor.

Introduction to theories and research on conflict resolution. Topics include conflict, its role and impact upon society; theories of aggression and altruism; causes of war, game theory, conflict management procedure and other analytical tools and methods of peace science; alternatives to war.

308 Economic Analysis of Government (also Engineering CEE 322)
Spring. 4 credits. Prerequisites: one year of college-level mathematics plus Engineering CEE 321 or Economics 311 or 313. Government intervention in a market economy is analyzed. Public goods, public finance, cost-benefit analysis, environment regulation, and macroeconomic topics are covered.

309 Capitalism and Socialism (also Industrial and Labor Relations 347)
Fall. 4 credits.
Prerequisite: permission of instructor. Not offered 1982-1983.
311 Intermediate Microeconomic Theory Fall or spring and summer. 4 credits. Prerequisites: Economics 101-102 or permission of instructor. History of the changing structure of American business, from 1800 to the present, with major emphasis upon developments after the Civil War. The focus of the course will be the changing structure of challenges (for example, the rise of unions, development of a national capital market, changing role of government) and the various responses of business organizations and entrepreneurs to those challenges.

312 Intermediate Macroeconomic Theory Fall or spring and summer. 4 credits. Prerequisites: Economics 101-102 or permission of instructor. The theory of national income determination and economic growth in alternative models of the national economy is introduced. The interaction and relation of aspects of these models of empirical aggregate economic analysis is examined.

313 Intermediate Microeconomic Theory Fall or spring. 4 credits. Prerequisites: Economics 101-102 and calculus. See Economics 311 for course description.

314 Intermediate Macroeconomic Theory Fall or spring. 4 credits. Prerequisite: Economics 101–102 and calculus. See Economics 312 for course description.

315 History of Economic Thought Spring. 4 credits. Prerequisites: Economics 101–102 or permission of instructor. Selected readings from the works of Adam Smith, T. Malthus, D. Ricardo, J. S. Mill, L. Walras, J. A. Schumpeter, A. Marshall, and J. M. Keynes.

317 Intermediate Mathematical Economics I Fall. 4 credits. Introduction of calculus and matrix algebra; problems of maximization of a function of several variables. Economic examples are used to illustrate and teach the mathematical concepts.

318 Intermediate Mathematical Economics II Spring. 4 credits. Advanced techniques of optimization and application to economic problems.

319 Quantitative Methods Fall. 4 credits. Prerequisite: thorough understanding of microeconomic and macroeconomic theory and elementary calculus. The use of quantitative analysis in economics is introduced. Topics include index numbers, input-output analysis, elementary decision theory, and an introduction to hypothesis testing and the formulation and estimation of econometric models.

320 Quantitative Methods Spring. 4 credits. Prerequisites: thorough understanding of microeconomic and macroeconomic theory and some elementary calculus. The use of quantitative analysis in economics is introduced. Topics include index numbers, input-output analysis, elementary decision theory, and an introduction to hypothesis testing and the formulation and estimation of econometric models.

322 American Economic History Fall. 4 credits. Problems in American economic history from the first settlements to early industrialization are surveyed.

324 American Economic History Fall. 4 credits. Prerequisites: Economics 101–102 or permission of instructor. A survey of problems in American economic history from the Civil War to World War I.

325 Economic History of Latin America Fall. 4 credits. Open to upperclass students with some background in economics or history, or with permission of instructor.

326 History of American Enterprise. Spring. 4 credits. Prerequisites: Economics 101–102 or equivalents.

329 Eastern European Today: Economics, Government, Culture (also Government 326 and Russian 329) Spring. 4 credits. Economics majors cannot use this course to fulfill major requirements. Introductory, interdisciplinary survey of Poland, Hungary, Czechoslovakia, and Yugoslavia since World War II, with emphasis on contemporary development. The goals of the course are to examine differences (the common elements) among East European countries, the common elements (for example, political relations with the USSR), domestic situations, the economy, culture, economy.

330 The Soviet Union: Politics, Economics, and Culture (also Government 330 and Russian 330) Fall. 4 credits. Economics majors cannot use this course to fulfill major requirements. Introduction to the history and economic, political, and cultural aspects of the Soviet Union. The interdisciplinary survey of the USSR since the Revolution, with emphasis on contemporary developments.

331 Money and Credit Spring. 4 credits. Prerequisites: Economics 101–102. A systematic treatment of the determinants of the money supply and the volume of credit. Economic analysis of credit markets and financial institutions in the United States.

333 Theory and Practice of Asset Markets Fall. 4 credits. Prerequisites: Economics 311 or 313 and 312 or 314. The theory and decision making in the presence of uncertainty, and the practical aspects of particular asset markets are examined.

335 Public Finance: Resource Allocation and Fiscal Policy Fall. 4 credits. Prerequisites: Economics 101–102 and calculus. The role of government in a free market economy is analyzed. Topics covered include the federal debt, taxes, the budget, and government regulation. Current topics of an applied nature will vary from term to term.

336 Public Finance: Resource Allocation and Fiscal Policy Spring. 4 credits. Prerequisites: Economics 101–102, one semester of calculus or permission of instructor. A continuation of Public Finance, Economics 335, covering noninstitutional topics. Subjects covered include cost-benefit analysis, choice of public discount rate, optimal commodity taxation, local public good, collective choice, and other topics depending on the interests of the instructor and the class.

338 Macroeconomic Policy Fall. 4 credits. Prerequisite: Economics 311, 351, and some knowledge of calculus. The use of fiscal and monetary policies for achieving economic goals. Among the topics likely to be covered are the determination of aggregate demand, the role of fiscal and monetary policy in controlling inflation and unemployment.

342 Problems in Labor Economics (also Industrial and Labor Relations 345) Fall. 4 credits. Prerequisites: Economics 311 or 313 or Industrial and Labor Relations 240. Not offered 1982-83. The theory and empirical analysis of labor markets and their applications to policy issues are considered in depth. Specific topics vary each semester. The course is designed to increase students' competence in applying microeconomic theory and econometrics to policy issues through an econometric research project.

351 Industrial Organization Fall. 4 credits. Prerequisites: Economics 311 or 313 or permission of instructor. An examination of the ways in which markets in a modern industrial economy differ from the atomistically competitive model, the consequences of those deviations, and (if appropriate) the cures for them. This course covers the economic theories of monopoly and oligopoly, including issues involving mergers and vertical integration, and analyzes efforts of the United States, primarily through its antitrust laws, to deal with perceived shortcomings in the behavior of the American economy.

352 Advanced Topics in Industrial Organization Spring. 4 credits. Prerequisites: Economics 311, 351, and some knowledge of calculus. This course examines some of the major issues raised in the industrial organization literature. Major topics include market structure, information and advertising, pricing and entry, regulation, research and development and technological progress, integration, and antitrust policy. Typically, about half of these topics will be covered in any given year. The course will blend empirical and institutional analysis, with a heavy emphasis on theoretical modeling.

354 Economics of Regulation Spring. 4 credits. A study of the economics of direct regulation of industry. Concentration will be on the application of economic principles to common problems of regulation, with equal emphasis on institutional problems—the characteristics and problems of the regulatory process itself, the prorogation and definition of the regulatory body, and recognition throughout the necessary for reconciling economic and non-economic goals.

355 Economics of the American System of Private Enterprise Spring. 4 credits. Prerequisites: Economics 311 or 313 or 312 or 314 or equivalents.

356 Economics of the American System of Private Enterprise Spring. 4 credits. Prerequisites: Economics 311 or 313 or 312 or 314 or equivalents.

357 Economics of Imperfect Information Fall. 4 credits. Prerequisites: Economics 101–102 and calculus. The course covers the variety of topics in the economics of uncertainty, including basic decision theory, search theory, risk insurance, and equilibrium price dispersion.

358 Current Economic Issues Fall or spring. 3 or 4 credits. Prerequisites: Economics 101–102. (A research paper will be required if the 4-credit option is chosen.) The emphasis will be on the application of simple microeconomics and institutional economic concepts to the formulation of public policy in the present and recent past. Among the topics likely to be covered will be policies relating to energy, communications, transportation, the financing and delivery of medical care, public utility, and other kinds of regulation, and the economics of inflation.

361 International Trade Theory and Policy Fall. 4 credits. Prerequisites: Economics 101–102 or permission of instructor. The theories that have guided the formulation of international trade and commercial policies are surveyed. The evolution of the theory of international trade, principles and practices of commercial policy, problems of regional integration and customs unions, and institutions and practices of state trading are considered.
530 Quantitative Methods Fall. 4 credits.
Prerequisites: good control of microeconomic and macroeconomic theory and some knowledge of calculus, linear algebra, and probability, or permission of instructor.
The application of quantitative analysis to testing of economic theories provides a framework for study and evaluation of cross-section and time-series data, methodology and theory of economic measurement, statistical techniques, empirical studies, and economic forecasting.

523 American Economic History Fall. 4 credits.
See Economics 323 for course description.

524 American Economic History Spring. 4 credits.
See Economics 324 for course description.

525 Economic History of Latin America Fall. 4 credits.
See Economics 325 for course description.

535 Public Finance: Resource Allocation and Fiscal Policy Fall. 4 credits.
See Economics 335 for course description.

536 Public Finance: Resource Allocation and Fiscal Policy Spring. 4 credits.
See Economics 336 for course description.

551 Industrial Organization Fall. 4 credits.
See Economics 351 for course description.

552 Public Regulation of Business Spring. 4 credits.
See Economics 352 for course description.

555 Economics of the American System of Private Enterprise Fall. 4 credits.
See Economics 355 for course description.

556 Economics of the American System of Private Enterprise Spring. 4 credits.
See Economics 356 for course description.

557 Economics of Imperfect Information Fall. 4 credits.
Prerequisites: Economics 509 and statistics. The purpose of the course is to consider some major topics in the economics of uncertain information. Although the precise topics considered will vary from year to year, subjects such as markets with asymmetric information, signalling theory, sequential choice theory, and search theory will be discussed.

561 International Trade Theory and Policy Fall. 4 credits.
See Economics 361 for course description.

562 International Monetary Theory and Policy Spring. 4 credits.
See Economics 362 for course description.

565 Economic Problems of Latin America Spring. 4 credits.

567 Comparative Economic Systems: Soviet Union and Europe Fall. 4 credits.
See Economics 367 for course description.

571 Economic Development Spring. 4 credits.
See Economics 371 for course description.

572 Applied Economic Development Spring. 4 credits.
See Economics 372 for course description.

573 International Specialization and Economic Development Spring. 4 credits.
See Economics 373 for course description.

578 Economics, Population, and Development Fall. 4 credits.
See Economics 378 for course description.

581 Economics of Participation and Worker Management Fall. 4 credits.
See Economics 381 for course description.

582 The Practice and Implementation of Self-Management Fall. 4 credits.
See Economics 382 for course description.

599 Readings in Economics Fall or spring. Variable credit. Independent study.

603 Seminar in Peace Science Fall. 4 credits.
Among topics to be covered at an advanced level are game theory, coalition theory, bargaining and negotiation processes, cooperative procedures, microbehavior models, macrosocial processes, and general systems analysis.

605 Advanced Social Theory for Peace Scientists Spring. 4 credits. Prerequisites: Economics 505 and knowledge of microeconomic theory. Study of diverse social science hypotheses and theories as they relate to, and can be synthesized within, multiregional, multinational, and generally multigroup conflict and cooperative frameworks. Particular attention will be given to developments stemming from microeconomics and general systems theory. Dynamic analyses will be emphasized.

611 Advanced Microeconomic Theory Fall. 4 credits.

612 Advanced Macroeconomic Theory Fall. 4 credits.

617 Mathematical Economics Fall. 4 credits.

618 Mathematical Economics Spring. 4 credits.

619 Econometrics Fall. 4 credits. Prerequisites: calculus and linear algebra. Recommended: Economics 520 or equivalent. Detailed examination of regression models at the level of H. Theil, Principles of Econometrics. Emphasis is on theoretical aspects rather than practical applications. Topics include distribution theory and the use of sufficient statistics, the classical regression model, generalized least squares, modified generalized least squares, and the multivariate regression model.

620 Econometrics Spring. 4 credits. Prerequisites: calculus and linear algebra plus Economics 619 or permission of instructor. Recommended: Economics 520 or equivalent. Advanced topics in econometrics, such as asymptotic distribution theory, errors in variable and latent variable models (e.g., factor analysis), simultaneous equation models with particular attention to problems of identification, time series analysis, qualitative response models, and aggregation.

623 American Economic History Fall. 4 credits. Not offered 1982-83.

624 American Economic History Spring. 4 credits. Not offered 1982-83.

631 Monetary Theory and Policy Fall. 4 credits.

632 Monetary Theory and Policy Spring. 4 credits.

635 Public Finance: Resource Allocation and Fiscal Policy Fall. 4 credits.

636 Public Finance: Resource Allocation and Fiscal Policy Spring. 4 credits.

641 Seminar in Labor Economics Fall. 4 credits.

642 Seminar in Labor Economics Spring. 4 credits.

647 Economics of Evaluation (also Industrial and Labor Relations 647) Spring. 4 credits. See Industrial and Labor Relations 647 for course description.

651 Industrial Organization and Regulation Fall. 4 credits.

652 Industrial Organization and Regulation Spring. 4 credits.

661 International Economics: Pure Theory and Policy Fall. 4 credits.

662 Seminar in International Economics Spring. 4 credits. Prerequisites: Economics 661, acquaintance with conventional trade analysis, or permission of the instructor. The course will cover advanced topics in international economics normally covered in International Economics 661.

664 International Economics: Balance of Payments and International Finance Spring. 4 credits.

670 Economic Demography and Development Fall. 4 credits. Not offered 1982-83.

671 Economics of Development Fall. 4 credits.

672 Economics of Development Fall. 4 credits. Not offered 1982-83.

673 Economic Development Spring. 4 credits. Prerequisites: Economics 509, 520. The course is concerned with theoretical and applied works that seek to explain economic development, or lack thereof, in countries at low-income levels. Specific topics vary each semester.

678 Economic Growth in Southeast Asia Spring. 4 credits. Not offered 1982-83.

681 Economic Theory of Participation and Self-Management Fall. 4 credits.
The theory of labor-management economies is developed systematically, and literature on that and related subjects is surveyed. Theories of the participatory firm, industry, and general equilibrium are covered together with microeconomic theory and analysis of special dimensions of the system. Efficient decision-making processes within the firm are also studied. Illustrative references to Yugoslavia and other real instances of labor participation are made throughout.

682 Seminar on Economics of Participation and Labor-managed Systems Fall. 4 credits.

684 Seminars in Advanced Economics Fall and spring. 4 credits.
English

The Department of English offers a wide range of courses in English and American literature, as well as in creative writing and expository prose. Literature courses vary widely in content and objectives. Some courses focus on a particular period or genre, while others are more general in scope. English and American literature courses are available at the 100-200, 300-400, and 500 levels. The 100-200 level courses provide an introduction to the study of major literary texts, while the 300-400 level courses offer a more in-depth exploration of these texts. The 500 level courses are designed for advanced students and provide opportunities for independent study.

Courses for Nonmajors

Courses for Freshmen

The English Literary Tradition

Fall. 201, 202. Separate courses for freshmen in European and American literature. Literature courses at the 100 level are open to qualified freshmen, while courses at the 200 level are open to sophomores. English majors may not count up to two 200-level courses toward the major from Courses Approved for the Major, listed below.

201-202 The English Literary Tradition

Fall, 201, 202; Spring, 4 credits each term. Open to all undergraduates. English 201 is a prerequisite to 202.

Courses for Sophomores

Among the courses approved for the major, English 201 and 202 are especially recommended for English majors and should be taken by the end of the sophomore year. Not every English major will choose its major courses with a view toward covering the historical range of English and American literature. Literature courses at the 300 level are open only to students who have completed one or two honors seminars (English 491 or 492) during their junior year, as well as a 400-level course in the field in which they plan to work during their senior year. The work of the senior year is a year-long tutorial (English 493 and 494) on a special topic of the candidate’s choosing, culminating in the writing of a scholarly honors thesis of approximately fifty pages, or a book-length work of high quality in creative writing completed for English 480-481. More information about the program may be found in the department’s brochure for honors candidates.

Courses for Nonmajors

For students not majoring in English, the department makes available a variety of courses at all levels. Some courses at the 200 level are open to qualified freshmen, and all of them are open to sophomores. Courses at the 300 level are open to juniors and seniors, and to upperclass students with permission of the instructor. The suitability of courses at the 400 and 600 levels for nonmajors will vary from topic to topic, and permission of the instructor is required.

Courses for Freshmen

As part of the Freshman Seminar Program, the Department of English offers many one-semester courses concerned with various forms of writing (narrative, biographical, expository), with the study of specific areas in English and American literature, and with the relation of literature to culture. Students may elect any two of these courses during their first year to satisfy the Freshman Seminar requirement.

Courses for Sophomores

Although courses numbered in the 200s are primarily for sophomores, some of them are open to qualified freshmen and to upperclass students. Courses approved for the major are English 201, 202, and all courses numbered 300 or above except English 496. In addition to English 201-202, students may count up to two 200-level courses toward the major from Courses Approved for the Major, listed below.

201-202 The English Literary Tradition

Fall, 201, 202; Spring, 4 credits each term. Open to all undergraduates. English 201 is not a prerequisite to 202.

Courses for Majors

Students majoring in English are required to complete 6 credits of foreign language study (preferably in the literature of a foreign language) in courses for which qualification is a prerequisite. Majors are urged to complete this requirement by the end of their sophomore year, and students who enter Cornell without sufficient preparation should therefore begin studying a language during their freshman year. In addition to satisfying the requirements outlined above, English majors must take a minimum of 36 credits in courses approved for the major and complete them with passing letter grades. Courses approved for the major are English 201, 202, and all English courses numbered 300 or above except English 496. In addition to 201-202, students may count up to two courses for the major from the category entitled “200-Level Courses Approved for the Major.” Students may also offer in satisfaction of the major as many as three courses numbered 300 or above in a foreign literature, in comparative literature, or in special courses such as those sponsored by the Humanities. Majors may use these options as courses approved for their major.

Courses Primarily for Nonmajors

205-206 Readings in English and American Literature

Fall, 205; Spring, 3 credits each term. Open to all undergraduates. English 205 is not a prerequisite to 206.

216 Medieval Romance: The Voyage to the Otherworld

Spring. 3 credits. M W F 10:10. T. D. Hill

The course will survey some representative medieval narratives concerned with voyages to the otherworld, or with the impingement of the otherworld upon ordinary experience. The syllabus will normally include some representative Old Irish otherworld literature, selections from the Malorygrun, selections from the Lais de Marie de France, Chretien de Troyes’s Erec, Yvain, and Lancelot, the Middle English Sir Orfeo, Sir Gawain and the Green Knight, and the Tarrin ballads. We will finish by looking at a few modern otherworld romances, such as those by Joyce Carol Oates, J. R. R. Tolkien, and Madeleine L’Engle. All readings will be in modern English. Requirements: two brief (two to three typed pages) papers, a class midterm examination, and a final examination.

227 Shakespeare

Fall or spring. 3 credits. Each section limited to 25 students. M W F 10:10 or 1:25, or T R 12:20-1:35 or 2:30-3:45. C. Levy and others.

A critical study of representative plays from the principal periods of Shakespeare’s career.

265 Contemporary Afro-American Literature

Spring. 3 credits. Limited to 15 students. T R 8:40-9:55. K. McClane

If one wishes to understand the inner workings of a neighbor's household, it is often a good idea to consult the maid. By the same token, if one wishes to understand American society, to understand it fully, one must ask those who have experienced its rhythms—powerful and deep—which characterize Third World consciousness. Novels, poetry, and plays by Zora Neale Hurston, Gwendolyn Brooks, Imamu Baraka,
Toni Morrison, James Baldwin, Alice Walker, Langston Hughes, and others.

288-289 Expository Writing 288, fall; 289, spring. 3 credits each term. Each section limited to 18 students.
M W 8:05 or 10:10 or 2:30, or T R 11:15 or 2:30, plus conferences to be arranged.
This course is intended to meet the needs of undergraduates from a range of disciplines who wish to gain skill in expository writing. Under the instructor's direction, students will write on topics related to their own interests. A substantial amount of new writing or a revision of an earlier essay will be expected each week. Since the class is the primary audience for the paper, emphasis will be on the process of revising and participation in discussion by all students are essential. In addition to regularly scheduled class meetings, instructors will hold frequent conferences with students.

200-Level Courses Approved for the Major

Students may take up to two of the following courses for credit toward the English major.

207 Twentieth-Century Biography Spring 4 credits
An introduction to some forms of modern biography, traditional and experimental, to see how writers have represented the self and the public person and the achievement. Subjects range from Leonardo da Vinci and Martin Luther to George Washington, F. Scott Fitzgerald, and Marilyn Monroe; writers from Freud and Lenin to Lytton Strachey, Virginia Woolf, and Norman Mailer. Consideration of the values of biography, biographical "truth," the relation of biography to history, psychology, ethics, and the novel.

248 Feminist Issues in Nineteenth- and Twentieth-Century Literature (also Women's Studies 249) Spring 4 credits
An introductory course in writing by and about women, exploring the relation between women, literature, and feminism. There will be five main areas of concern: work and home; education and marriage; sexuality; motherhood; and the woman artist or writer herself. Readings will include novels by Charlotte Brontë, Charles Dickens, George Eliot, Thomas Hardy, Virginia Woolf, Sylvia Plath, Margaret Atwood, and Adrienne Rich, as well as a variety of texts drawn from women on women and feminism from Mary Wollstonecraft to the present day.

251 Twentieth-Century Women Novelists (also Women's Studies 250) Fall 4 credits.
M W F 12:25.
In this course we will be especially concerned with self-consciously experimental novels and with the questions such novels raise about vision or style. Novels we will be reading include Virginia Woolf's The Waves, Gertrude Stein's Three Lives, Djuna Barnes's Nightwood, Doris Lessing's The Golden Notebook, and Margaret Atwood's Surfacing.

253 The Modern Novel Fall 4 credits
A survey of English, European, and American novels and shorter fiction, with some attention to their contemporaneous historical and intellectual contexts. Works by such writers as Conrad, Joyce, Lawrence, Forster, Woolf, Mann, Kafka, Nabokov, Faulkner, and one or two contemporary Americans will be considered.

267 Twentieth-Century Southern Fiction Spring 4 credits
The course will deal exclusively with the fiction of the twentieth-century American South—arguably, in time and place, the richest concentration of writers we have—and will proceed more or less chronologically. After a brief background survey, the course will begin with William Faulkner, then move to Thomas Wolfe, James Agee, and Robert Penn Warren. The stories and short novels of Katherine Anne Porter, Flannery O'Connor, Carson McCullers, and Eudora Welty will make up one part of the course, as will the short work of three black writers, Richard Wright, Ernest Gaines, and Gayl Jones. The semester will end with novels by two or three of Flannery O'Connor, Shirley Jackson, and Walker Percy, and, if time permits, by one or two others. Short interpretative papers and class discussion.

273 Irish Culture Fall 4 credits
An interdisciplinary survey of Irish culture from earliest times to the present—Bellow, Chekhov, Conrad, Faulkner, Joyce, and short novels of Katherine Anne Porter, Flannery O'Connor, Carson McCullers, and Eudora Welty will be considered. The modern literary revival will receive particular attention, and major works by Yeats, Synge, Joyce, O'Casey, and others will be studied in relation to both historical and political developments from the Young Ireland movement of the 1840s to the Revolution and Civil War of 1916-23. The course will conclude with a consideration of post-Revolutionary literature and of the continuing Ulster crisis. No prerequisites.

290 Literature and Value Spring 4 credits
Each week a different member of the department discusses a particular literary work, story, play, or novel that is of particular importance to him or her, perhaps as a work that contributed to the person's decision to devote a lifetime to the study of literature or the writing of fiction or verse, perhaps as a work that has affinity with his or her present-day attitudes and values. In following meetings that week, class members will discuss in detail the same or related works. Students will be encouraged to explore in their papers for the course as well as their discussions, the relationship between specific texts and their own experiences, attitudes, and values.

Courses that Satisfy the Major Prerequisite

270 The Reading of Fiction Fall or spring. 3 credits. Each section limited to 22 students.
Recommended for prospective majors in English. Fall: open to freshmen who have received advanced placement in English. Spring: open to other qualified freshmen. Upperclass students admitted as space permits. May be used to satisfy either the Freshman Seminar requirement or the distribution requirement in the humanities, but not both.
Forms of modern fiction, with emphasis on the short story and novel. Critical study of works by English, American, and continental writers from 1880 to the present—Bellow, Chekhov, Conrad, Faulkner, Joyce, Mann, Kafka, and others.

271 The Reading of Poetry Fall or spring. 3 credits. Each section limited to 22 students.
Recommended for prospective majors in English. Fall: open to freshmen who have received advanced placement in English. Spring: open to other qualified freshmen. Upperclass students admitted as space permits. May be used to satisfy either the Freshman Seminar requirement or the distribution requirement in the humanities, but not both.
Designed to sharpen the student's ability to understand and respond to poetry. Readings in the major periods, modes, and genres of poetry written in English.

272 Introduction to Drama Fall or spring. 3 credits. Each section limited to 22 students.
Recommended for prospective majors in English. Fall: open to freshmen who have received advanced placement in English. Spring: open to other qualified freshmen. Upperclass students admitted as space permits. May be used to satisfy either the Freshman Seminar requirement or the distribution requirement in the humanities, but not both.
M W F 11:15 or T R 2:30-3:45. Selected masterworks by such playwrights as Sophocles, Ibsen, and Shaw introduce the chief idioms and styles of Western dramatic tradition. The course work will consist of discussions and papers, as well as a special project related to the plays being produced by the Department of Theatre Arts. The course will be taught in small sections.

275 The American Literary Tradition Fall or spring. 3 credits. Recommended for prospective majors in American studies.
The problem of an American national literature is explored through the reading and discussions of eight texts representing the four principal periods in American literary history. Not a survey, this course focuses on the relations of the texts to each other, the role of Americanness in those relationships, and the assumptions about history with which critical appreciation must engage. Works by such writers as Franklin, Hawthorne, Dickinson, Melville, Twain, Wharton, James, Stein, and Hemingway.

280-281 Creative Writing 280, fall; 281, spring. 3 credits each term. Each section limited to 18 students.
Fall: open to other qualified freshmen. Upperclass students admitted as space permits. May be used to satisfy either the Freshman Seminar requirement or the distribution requirement in English. Prerequisite for English 281: recommendation from English 280 instructor.
M W 8:05, 10:10, 12:20, 2:30, or T R 9:05, 12:20, 2:30.
An introductory course in the theory and practice of writing narrative prose, poetry, and allied forms.

Courses for Sophomores, Juniors, and Seniors

Courses at the 300 level are open to juniors and seniors, and to others with the permission of the instructor. There are no specific prerequisites, except as noted for English 382-383 and 384-385.

Major Periods of English Literature

310 Old English Literature in Translation Fall 4 credits.
Cultural backgrounds, reading, and critical analysis of Anglo-Saxon poetry and translation, pagan and Christian epic, elegy, heroic legend, and other forms. Attention will be given to the relations of this literature to that of later periods.

320 The Sixteenth Century: Tudor Culture Spring 4 credits.
The development of English as an imaginative and persuasive medium, from Wyatt and Ascham through Sidney, Spenser, Marlowe, Shakespeare (the nondramatic verse), and Hooker. Consideration in particular of lyric verse, pastoral, epic, and epyllion; prose stylistics and metrical doctrine; such early prose fiction as that of Greene, Lodge, and Nashe; with some attention to Elizabethan drama other than Shakespearean. Offered in 1985 and every other year thereafter.

330 Restoration and Eighteenth-Century Literature Spring. 4 credits
A course in the history of English literature from 1660 to 1790, concentrating on generic evolution and on the relationships between literature and society. Major themes will include the development of the novel, the nature of satire, the literary characteristics of sentimentalism, the rise of "prreromantic" poetry, and the interactions among all these phenomena. Works by Milton, Wycherley, Dryden, Swift, Pope, Richardson, Fielding, and Johnson.
The course will center on a close reading of the poems of Blake, Coleridge, Wordsworth, Byron, Shelley, and Keats, together with some of their their own interests in class reports and achievement.

327 Shakespeare
319 Chaucer
Required; course participants will be encouraged to take advantage of the poems' value to them. Prior recordings of the poets will be available to them. Prior arrangements for the national literature: Irving, Cooper, Poe, and Hawthorne.

363 The Age of Realism and Naturalism Fall. 4 credits. M W F 10:10. M. Seltzer. The literary expression of new attitudes toward American society and culture between the Civil War and the early years of the twentieth century. We will read representative works by writers such as Mark Twain, W. D. Howells, Henry James, Edith Wharton, Stephen Crane, Kate Chopin, and Theodore Dreiser.

364 American Literature in the Twentieth Century Fall. 4 credits. M W F 9:05. C. Stout. A study of important writers from the time of the first World War to the end of the second who deal with characteristically modern problems, whether as innovators or traditionalists. The major focus will be on novel, but memoirs and essays will be included. Such writers as Adams, Cather, Lewis, Hemingway, Fitzgerald, Dos Passos, Steinbeck, Cozzens, Wright, McCarthy, Faulkner, and Bellow will be considered.

365 American Literature since 1945 Spring 4 credits. Limited to 55 students. M W F 11:15. J. Bishop. This course will alternate with English 364, which surveys American literature between the world wars. It will accordingly be concerned with a sequence of texts that can be taken to represent aspects of the cultural moment we are still accustomed to think of as our own. Prose fiction by Ellison, Salinger, Bellow, Updike, Pynchon, and Morrison may be included, together with poetry by Lowell, Ginsberg, and Plath and nonfictional prose by Trilling, Mailer, and Didion. These texts will be read as witnesses to what certain Americans have found possible or impossible to believe in through these years.

Genres and Special Topics

Creative and Expository Writing

382-383 Narrative Writing Spring. 4 credits each term. Each section limited to 15 students. Prerequisite: English 280-281 or permission of instructor. M W F 11:15 or 2:30, or T R 12:20 or 1:25; plus conferences to be arranged. Instructors to be announced. The writing of fiction; study of models; analysis of students' work.

384-385 Verse Writing Spring. 4 credits each term. T R 10:10-11:25 and conferences to be arranged. S. McMillin. A course in autobiographical writing and reading. Students will keep journals, which will be the source of the first drafts. Autobiographical essays. Readings in such genres as the essay, the interview, and the memoir. Interested students should submit a writing sample to Professor McMillin before the beginning of the term.

389 The Art of the Essay Spring. 4 credits. Limited to 18 students. Prerequisite: permission of instructor. Interested students should submit a writing sample to Professor Levy before the beginning of the term.

C. Levy. For both English majors and nonmajors who have done well in such courses as Freshman Seminars or English 288-289 and who desire intensive practice in writing personal essays, but not exclusive emphasis on expository techniques of analysis and persuasion.

Courses for Advanced Undergraduates

Enrollment in courses at the 400 level is limited by prerequisite or permission of instructor.

401 Topics in Criticism: Literature and Ideology Spring. 4 credits. M W F 12:20. L. Green. An introduction to critical assumptions underlying semiotics, such as the belief that signs and, consequently, texts have value only within a cultural and historical context. As one of the field's originators, Saussure, put it, semiotics is "the study of the life of signs within society." The course will examine the possibilities of cultural and historical criticism inherent in semiotics. We will read texts by Saussure, Marx, and Freud as well as their revisionary descendants, Derrida, Foucault, and Althusser. In addition, we will explore practical applications of such theorizing in the literary criticism of Barthes, Eagleton, and Jameson.

408 Evolution of Epic Spring. 4 credits. T R 10:10-11:25. M. A. Radzinowicz. The course is concerned with the poetic and thematic transformation of a genre often and profoundly called dead. It will explore such topics as epic tradition and poetic originality; the bard and his presence or absence; the social and historical components of heroic voice; and unity and fragmentation in long poems. Readings, sometimes in selections, will include Spenser, The Faerie Queene, Milton, Paradise Lost; Dryden, The Hind and the Panther; Blake, Milton, Wordsworth, The Prelude; Whitman, Song of Myself, and O'Casey, Claret, and William Carlos Williams, Paterson. A final epic poem may be chosen by the class from among Berryma, Dream Songs; Lowell, History; or David Jones, Anathemata.

409 Freud as Imaginative Writer and Reader (also Comparative Literature 411) Spring. 4 credits. Limited to 15 students. T R 2:30-3:45. C. Chase.
This course will introduce Freud as an imaginative writer and a reader of imaginative writing—the source of psychoanalytic criticism. Texts will include works by Freud, Shakespeare, Sophocles, and E. T. A. Hoffmann. No previous familiarity with Freud's writings or with psychoanalytic theory is necessary. Open to all students who have taken at least one literature course at the 200-level or above.

421 Spenser Fall. 4 credits. M W F 2:30. C. Kasler. The course will be organized around questions of identity and life-style. Shorter poems—Epithalamion, Muropotamos, Foure Hymnes, selections from the Shepherdes Calendar, Colin Clouts Come Home Againe, and Mutabilitie Cantos—will occupy the first third of the course. The rest will concern Books I, III, and VI of Spenser's epic, The Faerie Queene.

427 Studies in Shakespeare: Critical Approaches Spring. 4 credits. T R 2:30-3:45. T. Murray. The course will focus on critical approaches to five Shakespeare plays (including The Tempest, Othello, and King Lear). Discussion of the plays in terms of psychoanalysis, linguistics, social theory, semiotics, and deconstruction will explore such topics as socio-political conflicts; antinarrativity; racism-sexism; scapegoats and strangeness; the representation of authority; displacement of stage and place; the problem of Shakespeare. In addition to attentive readings of the plays, several critical essays will be discussed. Students will be asked to lead seminar discussions based on two short written analyses of plays and a final term paper.

448 The Art and Poetry of William Blake Spring. 4 credits. M 2:30-4:25. J. Viscomi. An examination of the complete Blake: printmaker, painter, poet. Special attention will be paid to the illustrated books, color-print drawings, and tempera paintings, and the techniques by which they were made.

450 The History of the Book Spring. 4 credits. Limited to 20 students. Prerequisite: permission of instructor.

451 Twentieth-Century Women Writers Fall. 4 credits. M W 2:30-3:45. B. Roecance. A consideration of selected fiction by British women writers from the turn of the century to the present day, including writers of English, Irish, Australian, Canadian, and South African origin. Critical study of stories and novels will emphasize evolutions in the craft and artistic consciousness of women writers in this period. We will draw upon works of such writers as Sarah Grand, Olive Schreiner, Ada Leverson, Dorothy Richardson, Virginia Woolf, Katherine Mansfield, Elizabeth Bowen, Jean Rhys, Barbara Pym, Rebecca West, Marie-Claire Blais, Iris Murdoch, Doris Lessing, Nadine Gordimer, Margaret Atwood, Margaret Drabble, Antonia (Drabbie) Byatt, and Susan Hill. The emphasis will be on lesser-known novelists within the earlier period and on both well- and lesser-known contemporary writers.

452 Yeats and Lawrence Fall. 4 credits. M W F 9:05. P. L. Marcus. A close reading of major novels and stories by Lawrence and poetry and plays by Yeats, with some attention to both authors' non-fictional prose. Topics to be explored include the impact of World War I, the search for values, formal experimentation, and the question of influence.

453 The Trial of Oscar Wilde Fall. 4 credits. T R 10:10-11:25. S. Siegel. What influence do Art and Life have on one another? Is all Art moral or immoral? Should some Art be censored? What are the limits of privacy? These Victorian preoccupations were addressed and acted out at the trial of Oscar Wilde. Reports of the trial in the periodical press contributed greatly to the shaping of the legend of the Wilde we have come to know. The "text" for this seminar will be the transcripts of the trial, the reports that circulated in the press, and works by Wilde, particularly those that authorized that legend, but simultaneously served to displace it. The seminar will encourage the use of primary sources, with the expectation of gaining a clearer picture of British social thought at the turn of the century.

460 The Politics of Realism Fall. 4 credits. T R 10:10-11:25. M. Seitzer. This course will investigate the ways in which the American realist novel represents the subject of power. We will focus on the relationship between techniques of representation and technologies of power in the late nineteenth century. Emphasis will be primarily on the fiction—novels by Twain, Howells, James, Norris, Dreiser, Crane. But the course will be essentially interdisciplinary, and we will read these novels against the backdrop of American society, economy, and polities. Discourses of writers such as Adams, William James, Yeelen, and Beard.

462 Dickinson and Whitman Spring. 4 credits. T R 10:10-11:25. D. Fried. A close study of poems and selected letters of Emily Dickinson, and Leaves of Grass and selected prose of Walt Whitman. Related readings in American poetry and poetics of the nineteenth century, and some attention to the varieties of critical responses these two idiosyncratic writers continue to invite, including recent feminist interest. Primary focus will be on questions of poetic form, the creation of an American literary voice, and the special problems of interpretation posed by Dickinson and Whitman. Requirements will include class reports and two short papers culminating in a longer essay.

463 The Personal Novel in America Fall. 4 credits. Limited to 15 students. R 1:25-3:20. C. Strout. A study of ideas, historical contexts, and methods of politically oriented novels by important writers from after Civil War to the present. Long novels by such figures as Adams, Choshunt, Steinbeck, Bos Passos, Hemingway, Wright, Ellison, Cozzens, and Vidal (among others) will be included. Previous work in American literature, history, or government recommended.

464 American History and the Literary Imagination Spring. 4 credits. T R 2:30-3:45. C. Strout. The interplay between the literary and historical imaginations in various forms of narrative is examined. Certain controversial American events are focused on, such as the Salem Witchcraft trial, the Nat Turner slave revolt, Huey Long's career, the Oppenheimer Security Hearing, the Rosenberg spy case, and the March on the Pentagon; texts to include literary works by Whitman, Hawthorne, Adams, Twain, Mailer, Styron, Warren, Miller, and Doctorow; pertinent documents and readings in controversies over interpretation and the overlap between history and literature.

466 Poetry of the 50s and 70s: The Feminine Sensibility (also Women's Studies 467) Fall. 4 credits. T R 10:10-11:25. J. Janowitz. This seminar will attempt to define what is meant by a feminine sensibility, can it be differentiated from a masculine one in poetry of the 1950s and 1970s? We will consider problems relating to theme, voice, language, styf, imagery, diction, and subjectivity, while reading the works of poets such as Levine, Bishop, Pluck, Plath, Kumin, Ammons, Ashbery, Lowell, Ginsberg, Strand, Merwin, and others. A long paper and several oral reports.

470 Studies in the Novel: Dickens and Thomas Mann Fall. 4 credits. Limited to 25 students. Primarily for upperclassmen.

T R 12:20-1:35. E. Rosenberg. Reading of eight novels: Oliver Twist, Bleak House, Little Dorrit, Great Expectations; Death in Venice, Magadze, Faustus, Felix Krull, and one or two of the major novels. Two short papers or one long paper; midterm exam; occasional oral reports. Primarily for third- and fourth-year students.

473 Trends in Contemporary Criticism Fall. 4 credits. Limited to 20 students. M W F 11:15. J. Culler. Study of a range of critical and interpretive writings to identify the methods and principles on which they rely. This course will touch upon the major schools of recent criticism. It will focus less on literary theory and attendant philosophical problems than on the strategies and presuppositions of various critical interpretations. Critics read will include Barthes, Bloom, Booth, Burke, de Man, Fisher, Jameson, Leviš, Lukacs, Poulenc, and Sartre.

474 Irish Fiction Spring. 4 credits. M W F 9:05. P. L. Marcus. A close reading of major Irish novels and stories from Maria Edgeworth's Castle Rackrent (Fannie O'Brien's At Swim-Two-Birds. Other authors to be studied include George Moore, Somerville and Ross, Yeats, Joyce, James Stephens, O'Connor, O'Faolain, and O'Flaherty. The texts will be analyzed in relation to the Irish literary movement of the nineteenth and twentieth centuries and to corresponding historical and political developments, but no previous study of these topics is expected.

474 Satire Fall. 4 credits. T R 2:30-3:45. P. Holland. This course will explore the nature of satire through a survey of works from antiquity to modern times, with an emphasis on intellectual satire and encyclopedic forms. We will begin with Greek and Roman satire, then move to four socratic classics of the Renaissance, by Erasmus (Praise of Folly), More (Utopia), Rabelais (Gargantua and Pantagruel), and Burton (The Anatomy of Melancholy). After a brief look at women writers by Spenser, Jonson, Butler, and Rochester, we will proceed to Dryden (MacFlecknoe), Swift, (A Tale of a Tub), Pope (The Dunciad), Johnson (The Vanity of Human Wishes), Sterne (Tristram Shandy), and Blake (An Island in the Moon). We will also read Dostoevsky (Fyodor Dostoevsky's The Idiot), Flaubert (Bouvard and Pécuchet), Twain (Letters from the Earth), Melville (The Confidence Man), Dostoevsky (Notes from Underground), and Beckett (Watt) if time permits. Our readings should give us a basis for consideration of such topics as irony, parody, persona, Menippean satire, satire, and inversive rituals such as those of carnival and holiday, and the theoretical approaches to satire and the novel by the Russian scholar Mikhail Bakhtin.

479 On Reading Women Poets (also Women's Studies 478) Spring. 4 credits. T R 12:20-1:35. S. Siegel. An examination of an traditional controversy over whether or not reading, writing, and gender are related to one another. Discussion will concern the autobiographical, critical, and poetic writings of such authors as Amy Lowell, Hilda Doolittle, Marianne Moore, Sylvia Plath, Audre Lorde, June Jordan, and Adrienne Rich. The seminar will consider departures from conventional poetic modes and themes and the pressures each poet has felt to be significant in her attempt to shape herself, her esthetics, and her poetry. The seminar will begin with a specific question, which will recur throughout the semester: How would Virginia Woolf have read these poets?
take him as our model "Hawthorne critic? What can
and to other traditions equally arcane or occult?
allusions—to the "annalists" of American Puritanism
positions in the history of English poetry. Reading
of recognizing a great predecessor, and conceptions
the Romantics found important for their sense of their
writing—the role of allusion, the psychological effect
three of the Romantic poets for whom his influence
was essential: Blake, Wordsworth, and Shelley.
This course will focus on the poetry of Milton and on
of history and poetry drawn from reading
the chairperson of the honors committee.
For students who, with the consent of a professor,
will be granted only to students who present an
agreement of a faculty member to serve as
supervisor for the project throughout the term.

Geological Sciences

As an intercollege unit, the Department of Geological Sciences have departmental programs in both the College of Arts and Sciences and the College of Engineering. Within the past few years, studies of the earth have become increasingly important. The need for increased understanding of plate tectonics, limited energy and mineral reserves, awareness of natural hazards such as earthquakes and volcanic eruptions, and an increasing concern for our environment encourage studies of the earth by geologists. Consequently, interest in geology courses and the employment of geologists have greatly increased.

There are fifteen faculty members, including Cornell's President, in the department, and forty to fifty undergraduate majors. A variety of courses provides our students with a broad and solid foundation. The department is particularly strong in geophysics, petrology and geochemistry, structural geology, and tectonics.

Students study the deeper parts of the earth's crust using many techniques but concentrating on seismic methods. High-pressure, high-temperature mineralogy research uses the diamond anvil and Cornell's synchrotron as research tools. Undergraduates have served as field assistants for faculty and graduate students who work in Greenland, British Columbia, the Aleutian Islands, Scotland, Barbados, the South Pacific, and various parts of the continental United States. Undergraduates are encouraged to participate in research activities, sometimes as paid assistant.

Students who major in geological sciences are encouraged to take courses in the other sciences and mathematics, appropriate to their interests. In order to develop skills in observing the natural earth, geology majors attend a six-week summer field camp, usually during the summer following their junior year. Cornell has recently established a joint summer field camp with Harvard and Yale in the Sierra Madre of Wyoming.

The Major

The prerequisites for admission to a major in geological sciences in the College of Arts and Sciences are two of the two-semester sequences of courses chosen from the following, or their equivalents. Biological Sciences 101-103 and 102-104, Chemistry 207-208, Mathematics 191-192, and Physics 112-213. Geological Sciences 101-102 is recommended, but a student with a strong foundation in mathematics and science may be accepted as a major without completion of 101-102.

Majors take the five core courses in geological sciences, a summer field geology course, 6 credits of additional course work from geological sciences courses numbered 300 or 400, and a third two-semester sequence chosen from the courses in biological sciences, chemistry, mathematics, and physics listed above, plus an additional course in one of these fields at an intermediate or advanced level.

Core Courses
325 Structural Geology
355 Mineralogy
356 Petrology and Geochemistry
376 Sedimentology and Stratigraphy
388 Geophysics and Geotectonics

Prospective majors should consult one of the following departmental major advisors: W. A. Bassett, 222 Kimball Hall; W. B. Travers, 219 Kimball Hall; J. Oliver, 209 Kimball Hall; A. L. Bloom, 211 Kimball Hall; or A. K. Gibbs, 224 Kimball Hall, as early as possible for advice in planning a program. Students majoring in geological sciences may attend the departmental seminars and take advantage of courses, field trips, and conferences offered through the Department of Geological Sciences.

Courses offered at the 100 and 200 level are open to all students. Certain 300-level courses in geology may be of particular interest to students majoring in Chemistry, biology, ecology, and physics. Students are encouraged to inquire about courses that interest them at the department office, 210 Kimball Hall.

Honors. An honors program is offered by the Department of Geological Sciences for superior students. Candidates for honors must maintain an overall 3.0 grade-point average in the department and complete the senior thesis (Geological Sciences 490). Students interested in applying should contact their advisers during the senior year.

German Literature
P. Hohendahl, chairperson; H. Deinert, director of undergraduate studies; E. A. Blackall, I. Ezergalis, S. L. Gilman, A. Groos, P. W. Nutting.

The Department of German Language offers courses in German, Yiddish, and Old Icelandic literatures. These courses select the heterogeneous composition of the department. They range from close readings of major texts through courses in culture and intellectual history. Major areas of specialization cover the period from the early Middle Ages to the eleventh century, with emphasis on the eighteenth and nineteenth centuries. The department often sponsors courses with other departments in the humanities, such as music and the history of art.

For information about majors and courses, see Modern Languages, Literatures, and Linguistics, p. 146.

Government

To accommodate new courses or course changes, a supplementary announcement is prepared by the department. Before enrolling in courses or registering each term, students are requested to consult the current supplement listing courses in government, available in 125 McGraw Hall.

The Major
For a major in government the following requirements must be completed: (1) three of the following introductory courses: Government 111, 131, 161, 181; (2) a minimum of 24 additional credits in government department courses numbered 300 or above; (3) in related subjects, a minimum of 12 credits selected with the approval of the adviser from courses numbered 300 or above in the Departments of Anthropology, Economics, History, Philosophy, Psychology, and Sociology. S-U options are not allowed for any course taken to fulfill major requirements.

Juniors and seniors majoring in the Department of Government who have superior grade records may apply for supervised study in government with a particular instructor, whose consent is required. Admission is by application only.

Cornell-in-Washington program. Government majors also have an opportunity to apply to the Cornell-in-Washington program, in which students take courses and undertake a closely supervised internship during a fall or spring semester. For further information see p. 8 and p. 93.

European Studies Concentration. Government majors may elect to group some of their required and optional courses in the area of European studies, drawing from a wide variety of courses in relevant departments. Students are invited to consult Professors P. Katzenstein, Scheinman, and Tarrow for advice concerning course selection, foreign study programs, etc. cetera.

Honors. A small number of exceptionally well qualified students are accepted each year in the honors program. Admission is by application and is competitive. Students who wish to be considered must complete an application in the spring semester of their sophomore or junior year. Those who are admitted will register for Government 400. Successful completion of Government 400 entitles the student to write an honors thesis (Government 494, 8 credits) in the senior year, provided other requirements have been met. The decision to award honors and in what degree will be based on the quality of the thesis or paper, the student's record in government courses, and the student's overall record at Cornell. Interested students should consult the supplement available in the departmental office in 125 McGraw Hall. Further inquiries may be addressed to the director of undergraduate studies.

Introductory Courses
Students registering for introductory courses should register for the lecture only. Sections will be assigned during the first week of class.

111 The Government of the United States
Spring. 3 credits.
T. J. Lowi.
An introduction to government through the American experience. Concentration on analysis of the institutions of government and politics as mechanisms of social control.

131 Introduction to Comparative Government and Politics
Spring. 3 credits.
M. J. Esman.
A survey of the institutions, processes, and major problems of politics and government in contemporary states. The structures and ideologies of different regimes, the relationships of individuals and groups to the state, the shaping and implementation of public policy, the regulation of political conflict, and the adaptation of political systems to changing conditions.
A general education course for students at the sophomore or higher levels. Law is presented not as a body of rules, but as a set of varied techniques for resolving conflicts and dealing with social problems. The roles of courts, legislatures, and administrative agencies in the legal process are analyzed, considering also the constitutional limits on their power and practical limits on their effectiveness. Readings consist mainly of judicial and administrative decisions, statutes and rules, and commentaries on the legal process.

424 Political Change in the United States 4 credits.

M. K. Shetler.

This seminar analyzes the sources and consequences of major realignments in American politics. Half the semester will be devoted to examining earlier realignment periods and half will be devoted to analyzing changes in the structure of contemporary American politics.

429 Government and Public Policy: An Introduction to Analysis and Criticism 4 credits.

Fall and spring 4 credits each. Open to undergraduates with permission of the instructor.

T. J. Lowi.

The analysis and criticism of public policies and the governments and policies responsible for them is stressed in Government 429. 429 is a weekly workshop for a smaller group, concentrating on problems for research, writing, and publication.

Comparative Government 131 is recommended.

326 Eastern Europe Today: Economics, Government, and Culture (also Russian Literature 329 and Economics 329) 4 credits.

Spring 4 credits.

353 The Feminist Movement and Public Policy (also Women's Studies 353) Fall 4 credits.

M. Katzenstein.

The course examines the aims and strategies of the feminist movement in the United States and the response of both society and the state to feminist claims. It is, thus, a course about public protest and the capacity of American political institutions to promote, shape, as well as to counter social change. In examining the law and public policy on such issues as job discrimination, wire battery, rape, abortion, etc., the course explores the contradictions and incongruities between and the congruence of the dual ideals of individual choice and group equality.

132  Size of the State 4 credits. Not offered 1982-83.

194 The Administrative State 4 credits.

J. Rabkin.

The course will examine the problem of how or whether legitimate governmental authority can be distinguished from arbitrary coercion in the modern era of pervasive regulation. It will consider different theoretical approaches to this problem, as illustrated in the works of modern legal and social theorists, in some landmark cases in the history of American administrative law, and in a representative sampling of modern cases. The course will also look at several case studies of the regulatory process in today's world, suggesting the difficulties of applying—or putting much reliance on—these accepted approaches in actual practice.

424 Political Change in the United States 4 credits.

M. K. Shetler.

This seminar analyzes the sources and consequences of major realignments in American politics. Half the semester will be devoted to examining earlier realignment periods and half will be devoted to analyzing changes in the structure of contemporary American politics.

429 Government and Public Policy: An Introduction to Analysis and Criticism 4 credits.

Fall and spring 4 credits each. Open to undergraduates with permission of the instructor.

T. J. Lowi.

The analysis and criticism of public policies and the governments and policies responsible for them is stressed in Government 428. 429 is a weekly workshop for a smaller group, concentrating on problems for research, writing, and publication.

Comparative Government 131 is recommended.

326 Eastern Europe Today: Economics, Government, and Culture (also Russian Literature 329 and Economics 329) 4 credits.
347 Chinese Government and Politics Fall 4 credits.
M. Bernal. An examination of the politics of modern China including the breakdown of the traditional order and the revolutionary struggle of the Chinese Communist party. Primary emphasis on the institutions, methods, policies, and problems of the Communist regime since 1949.

348 Politics of Industrial Societies Fall 4 credits. Not offered 1982-83.

349 Political Role of the Military Fall 4 credits. B. Anderson. A comparative study of selected modern states and types of political systems in which the military has played a major role in domestic politics. Attention is given to the social and ideological character of the politicized military and various forms of military government.

350 Comparative Revolutions Fall 4 credits. M. Bernal. An analysis of major twentieth-century revolutions, treating in particular those with political origins as well as their ideology and organization. Special emphasis will be given to the nature of the state to which they are opposed and the course of the revolutionary struggle.

351 Democracy in Britain and France Fall 4 credits. Not offered 1982-83.

352 Society and Politics in Saudi Arabia (also Near Eastern Studies 398) Spring 4 credits. J. Goldberg. The emergence of the Wahhabi state and its transformation into the present Saudi kingdom will be examined, as well as the structure of society in Saudi Arabia and the ways it was affected by modernization and oil, and the power structure of the state and its foreign policy.

354 America in the World Economy Spring 4 credits. P. Katzenstein. Unemployed auto workers in Detroit and the woodstoves in New England signal an important change in America's relation to the world economy. This course explains how foreign idioms influence foreign policy.

356 Elites and Society: The Political Economy of Power Spring 4 credits. N. T. Uphoff. For students who have an interest in the nature and uses of power in politics. Consideration of how power has been treated by earlier political thinkers and by contemporary political scientists. Propositions will be formulated and critiqued about the distribution and consequences of power in America, other industrialized societies, and in the Third World. Their implications for the making of public policy. A game-simulation, "Third World Power Play," is undertaken at the end of the course.

357 Political Development in Western Europe Fall 4 credits. Not offered 1982-83.

358 Politics of the Middle East (also Near Eastern Studies 294) Fall 4 credits. I. Rabinovich. An examination of the Middle East conflict, including the breakdown of the traditional order and the power structure of the state and its foreign policy.

365 Social Movements and Politics in Industrial Societies Fall 4 credits. S. G. Tarrow. Studies of historical and contemporary social movements and left-wing parties in Western Europe and the United States, with an emphasis on the relations between movement strategies, between political alliances and policy outcomes.

425-426 The Language(s) of Politics in the Renaissance (also Society for the Humanities 425-426) Fall and spring 4 credits. J. M. Najemy. The political experience of the Italian city-republics was represented and transformed through a variety of "foreign" idioms, or languages: in particular, those of the Aristotelian polis, of Roman rhetoric, virus, and law; and of Christian sin and redemption. This seminar will explore the creative tensions generated by the adaptation of these languages to a political culture whose roots lay in the communal and corporate traditions of the Italian middle ages. The objectives will be 1) to test the hypothesis of a language of political experience existing apart from (or prior to the imposition of these idioms); 2) to sample the reception of foreign idioms into republican discourse; and 3) to investigate this confrontation of political languages (which took place in two actual languages, Latin and Italian) in selected texts. The fall term will deal with the period 1250-1400, focusing on the generation of Dante and Marsilius of Padua. The spring term will cover the period 1400-1530, from the Florentine civic humanists to Machiavelli and his contemporaries.

446 Comparative Communism 4 credits. Not offered 1982-83.

451 India: Social and Economic Change in a Democratic Polity Spring 4 credits. M. Katzenstein. This course explores the social, economic, and political forces that have shaped India's development since independence. It considers why democratic political institutions in India have proved so resilient and what effect these institutions have on the economic and social policies that are pursued. The importance of international as well as domestic forces in shaping India's economic and political choices is also assessed.

Political Theory

Government 161 is recommended.

361 Modern Ideologies: Liberalism and Its Critics Spring 4 credits. I. Kramnick. Since the rise of capitalism, one political ideology has been dominant in the Western world—liberalism. However, its hegemony has been questioned by a series of critics: democracy, socialism, anarchism, conservatism, Fascism, and feminism. This course will study the tensions between liberalism and these critics and speculate on the possible survival or extinction of this venerable and very American ideology.

363 Classical Political Thought Spring 4 credits. Not offered 1982-83.

The Repressed Feminine in the Writings of Marx 4 credits. Not offered 1982-83.

467 Current Topics in Political Philosophy (also Women Studies 467)  Spring. 4 credits. D. Meyers. This course will explore the philosophical dimensions of current political issues. Topics will vary but could include equal opportunity, capital punishment, free speech, and the like. Emphasis will be placed on careful analysis of issues and methods of normative justification.

International Relations
Government 181 is recommended.

382 Integration in the World System 4 credits. S. Jackson. This seminar explores theories of interdependence, regional integration, and dependency as particular applications of the generalized concept of integration in the world system. Readings include works by Deutsch, Haas, Keohane, Nye, Lenin, Cardoso.

383 Theories of International Relations Spring. 4 credits. R. Rosecrance. A survey of relevant theories of international relations, emphasizing war prevention and conflict resolution. Theories will be tested against the international experience of the past two centuries.

385 Contemporary American Foreign Policy Fall. 4 credits. R. Rosecrance. An analysis of the dilemmas that have confronted American foreign policy since 1945, both specific problems and more general questions of capabilities, priorities, and morality.

386 Structure and Process in the Global Political Economy 4 credits. S. Jackson. We will examine the global structures and transnational processes which constrain and condition economic development, the operations of multinational corporations, international trade, and world debt. We will also investigate transnational decision making at the nongovernmental, official bilateral, and official multilateral level, with an emphasis on North-South relations.

387 The United States and Asia Fall. 4 credits. G. Mct. Kahin. The relations of the United States with the major states of Asia and with those smaller countries (especially Vietnam) with which it has been particularly concerned are analyzed. Attention is also given to the relationship of American policy to the Asian policies of France, Great Britain, and Soviet Russia.

390 The Foreign Policy of China 4 credits. Not offered 1982-83.

478 Accumulation on a World Scale 4 credits. S. Jackson. In Accumulation on a World Scale, Samir Amin has developed the nearest thing to a comprehensive explanation for underdevelopment in the periphery of the world system to emerge from recent critical theorists of global political economy. In this course, we will examine Amin chapter by chapter, looking at the growing body of systematic evidence relevant to an evaluation of Amin’s theory.

479 Dependencia and the State 4 credits. S. Jackson. In this course we will examine closely a sampling of the principal theoretical and empirical works that seek to explain the constraints on and possibilities for state action in dependent societies, focusing particularly on those factors arising directly from the location of countries in the global system, including the role of multinational corporations, the World Bank, and military aid.

480 Foreign Economic Policies of Advanced Industrial States Spring. 4 credits. P. Katzenstein. An examination of the contemporary crisis of the international economy. Of primary concern is the manner in which domestic economic policies condition the foreign economic policies of the United States, Britain, France, and the Federal Republic of Germany. Case studies to be considered will include agricultural, commercial, financial, and energy policy.

481 Foreign Policy of the USSR 4 credits. Not offered 1982-83.

482 Imperialism and Dependency 4 credits. Not offered 1982-83.

483 Political and Economic Interdependence 4 credits. Not offered 1982-83.

484 Defense Policy and Arms Control Fall. 4 credits. S. Larrabee. The requirements for military defense and the problems caused by it are analyzed. Subjects covered include nuclear deterrence reasoning, military strategy, approaches to disarmament, the working of military-industrial complexes, and defense budgeting and policy procedures.

485 Logic and Methods of Research in International Relations 4 credits. Not offered 1982-83.

Political Methodology

Honors Courses

400 Honors Seminar: Political Analysis Fall. 4 credits. Limited to honors students. M. Shetter.

494 Honors Thesis Fall or spring. 6 credits. In their senior year, honors students will be required to take Government 494, in which they will prepare and write an honors thesis—an extended piece of original independent research. Before the end of the semester that precedes the semester in which the thesis is to be written, each participant must submit an approved proposal to the department office. Proposal forms may be obtained from the undergraduate secretary in 125 McGraw Hall. Honors theses are given to a second reader for evaluation, and students are examined orally on their work by the two faculty members involved. In cases where students feel the need for a period of preparatory work before undertaking an honors thesis, they may make use of the option available under Government 499.

Supervised Study

Except under very unusual circumstances, supervised study, Government 499, is open only to government majors doing superior work in the major. The application form may be obtained in 125 McGraw Hall and must be approved by the director of undergraduate studies for credit to be granted. There is no limit established for the total number of credits in 499 a government major may take while at Cornell, but he or she may count no more than 4 credits toward fulfillment of the major. Students who wish to continue taking Government 499 for more than one semester must select a new theme or subject each semester, and applicants must present an approved proposal to the department office. Proposal forms are available through the undergraduate secretary in 125 McGraw Hall. Honors theses are given to a second reader for evaluation, and students are examined orally on their work by the two faculty members involved. In cases where students feel the need for a period of preparatory work before undertaking an honors thesis, they may make use of the option available under Government 499.

499 Readings Fall or spring. 1-4 credits. Staff.
American Government and Institutions

Public Policy

[628-629] Politics of Technical Decisions I and II (also B&IPA N5A 516 and City and Regional Planning 541) Fall and spring. 4 credits each. D. Nelkin.

Political aspects of decision making in areas traditionally regarded as technical. Subjects include the origins and characteristics of "technical politics," the role of experts in government, and the problem of expertise in a democratic system. Alternatives to current decision-making procedures are explored.

Comparative Government

A review, analysis, and evaluation of the major theoretical literature on the genesis, expression, and management of political conflict resulting from ethnic, religious, racial, and linguistic pluralism.

The substantive focus is on economic, social, and political change in Third World countries, particularly with reference to rural development. The analytical approach integrates economic, social, and political factors into a common framework for dealing with policy choices and political action. Special attention is given to different instruments for promoting rural development in Third World countries.

An assessment of the historical evolution of Vietnamese nationalism, with particular emphasis on the twentieth century.

[659] Politics in Postwar Western Europe Fall. 4 credits. S. G. Tarrow.

This course is a survey of the post-World War II European political systems, which will use some major approaches to the politics of advanced industrial democracies to analyze the main periods and problems of postwar European politics. The periods and topics covered are Reconstruction, the transition to mass democracy and the growth of the welfare state, mature party-systems, neocorporatism and the "end" of ideology, the resurgence of class conflict, party realignment and "postindustrial" cleavages, no-growth politics, realignment, and attacks on the welfare state. Students will prepare critical review essays on particular theoretical problems or on particular countries in Western Europe.

Political Theory

[670] Toward a Feminist Social Theory 4 credits Not offered 1982-83.

Economic Models of Politics Fall. 4 credits. E. W. Kelley.

Both economic factors influencing the structures of political systems and economic models of such systems are considered. The rationalistic presumptions underlying such models are introduced and modified. Applications to enduring policy arenas may be made.

International Relations

[687] International Relations of Asia Spring. 4 credits. G. McT. Kahin.

American Southeast Asian policies: their genesis, character, impact, and long-term consequences. Elements involved in the formation of American policies toward Southeast Asia by the several postwar administrations (Truman through Carter), including international factors and American domestic politics. The ways in which these policies have been applied and their influence on political forces within the countries of Southeast Asia and upon American policies towards other countries.

The political, bureaucratic, economic, and technical environments of administration for agricultural and rural development; the various functions involved in administration (personnel management, planning, budgeting, economic analysis, information systems); several major tasks (research, extension, services, and infrastructure development); and specific problems of integrating activities, interfacing with rural populations, and utilizing external assistance. Intended primarily for persons who expect to have some future responsibilities in agricultural or rural development administration in Third World countries.

History

The popularity of history among Cornell students is due to its usefulness as preparation for graduate, professional, or law school and for any career that requires critical thinking and good writing; the reputation of the faculty for scholarship, teaching, and advising; and, most of all, the intrinsic interest of the discipline. A wide variety of introductory and advanced courses is offered. The department is particularly strong in ancient, medieval, and modern European history; in American, Latin American, Chinese, and Southeast Asian history; and in the history of science.

The Major
To complete the history major, a student must fulfill the requirements listed below:

1) Complete the prerequisite requirement by taking either Introduction to Western Civilization (History 151-152) or Introduction to Asian Civilization (History 190-191) or, alternatively, three courses in European history—one in ancient history; one in medieval history; and one in modern history.

2) Take history department courses totaling 36 credits (which may include the prerequisite courses) and complete all these courses with a grade of C or better—of the 36 credits, a minimum of 20 must be taken in courses numbered 250 and above.

3) Take a minimum of 8 credits in each of two of the following fields: American, European, Asian, Latin American history, or history of science; alternatively, a student may elect to take a total of 16 credits in three of these fields. Credits taken to fulfill the prerequisite requirement (see item 1, above) do not count toward this requirement.

4) Take at least one course at the advanced (400 or higher) level.

5) Take two courses above the elementary level offered by other departments that relate to the student’s area of special interest.

Prospective majors may wish to discuss their projected program with the director of undergraduate studies before formally enrolling with the department.

Honors. History majors with an overall B+ average in all their history courses are eligible to enroll in History 400, the Honors Proseminar, which is normally taken in the junior year or, at the latest, in the fall of senior year. (Honors candidates are strongly encouraged to take another 400-level seminar during their junior year.) Upon successful completion of the proseminar, students may become candidates for the degree of Bachelor of Arts with honors in history by submitting to a prospective faculty adviser a written thesis proposal delineating the general area of inquiry for an honors essay, and having the proposal approved by the adviser. The proposal should be submitted as soon as possible after the completion of History 400, normally during the junior year or at the beginning of the senior year.

After acceptance of the proposal by an adviser, honors candidates should then enroll with their advisers in History 302, Supervised Research, during the first term of their senior year. History 302 is a four-credit course that permits honors candidates to conduct research and to begin writing the honors essay. At the end of the first semester of the senior year, as part of the requirements for History 302, the student will submit to his or her adviser a ten- to fifteen-page overview of the entire thesis or a draft of some substantial section of the thesis and will undergo an oral examination on the broad field of history that the student researched. The examination will be administered by a committee consisting of the student’s adviser and one other department member, who will eventually serve as a reader of the thesis. The committee will then recommend whether the student may proceed to enroll in History 401. Honors Guidance, during the final semester of senior year. History 401 is a 4-credit course that permits honors candidates to complete the honors essay and to prepare both to defend the essay and to demonstrate their understanding of the general historical interests they have pursued within the major. Students who do not take History 400 in their junior year must submit both the thesis proposal and the prospectus by the end of the fall semester of their senior year in order to be eligible to enroll in History 401 by their final semester.

Honors candidates must complete a minimum of 40 credits in history, 8 of which must be History 400-401. The completed thesis will be examined by three readers, including the two faculty members who administered the preliminary oral examination.

The text of the honors essay may not exceed sixty pages except by permission of the chairperson of the honors committee and the student’s adviser. Two copies will be due during the third week of April. In May each honors candidate will complete the honors essay and to prepare both to defend the essay and to demonstrate their understanding of the general historical interests they have pursued within the major. Students who do not take History 400 in their junior year must submit both the thesis proposal and the prospectus by the end of the fall semester of their senior year in order to be eligible to enroll in History 401 by their final semester.

To qualify for a Bachelor of Arts degree with honors in history, a student must (1) sustain at least a B+ cumulative average in all history courses; and (2) earn at least a cumulative grade on the honors essay and on the oral examination.

Students considering the honors program should consult with Professor Wyatt during the second term of their sophomore year or early in their junior year.

The state's attempts to maintain stability, and the

[146 America in the Camera's Eye Not offered 1982-83.
R. L. Moore]

161 The Heroic Ideal In Antiquity Spring 3 credits.
M W 2:30-3:45. B. Strauss.
An examination of one of the outstanding figures of antiquity: the hero. The course studies the origin and growth of the heroic ideal in four civilizations: Mesopotamia, Israel, Greece, and Rome. We will consider the differences between each civilization's concept of heroism, what these differences indicate more generally about each civilization's spirit and values, and the lessons of ancient heroism for modern times. Readings in translation from the Epic of Gilgamesh, the Bible, Homer, Aeschylus, Sophocles, Plato, and Plutarch.

171 Revolution and Russian Society Fall 3 credits.
The state's attempts to maintain stability, and the tension between the dissenting intelligentsia and the mass of the population are examined. Russia before and after the revolution of 1917 is discussed.

174 Foodways: A Social History of Food and Eating Spring 3 credits.
M 2:30-4:30. S. L. Kaplan.
An interdisciplinary examination of the validity of the adage "man is what he eats." Among the topics: food and nutrition; food and social structure; the politics of food control; food and modernization; taste making; and food in religion and literature. Illustrative examples are drawn from throughout history, from ancient Egypt to the present.

[192 Japan and the West Not offered 1982-83.
J. V. Koschnann]

[193 China and the West before Imperialism Not offered 1982-83; next offered 1983-84.
C. A. Peterson]

[194 Chinese Views of Themselves Spring Not offered 1982-83.
S. Cochran]

Underclass Seminars

209 Political History of North American Indians during the Eighteenth and Nineteenth Centuries Fall 4 credits. Prerequisite: permission of instructor.
An investigation of political organization and evolution among Indian societies. Discussions and assignments examine forms of tribal government, diplomacy, and warfare, as well as political relations with European colonizers and the United States. Specific topics include pan-Indian federacies, colonial policies and treaties, federal-state-tribal sovereignties, and Indian strategies of autonomy and resistance through the plains wars.

222 Public Life and Literature in Tudor England Fall 4 credits. Prerequisite: permission of instructor.
M W F 1:25. C. A. Peterson.
A study of the chief developments in the political, governmental, and religious life of England in the sixteenth century, and weekly discussions of a selection of Tudor prose, poetry, and drama.

223 Public Life and Literature in Stuart England Spring 4 credits. Prerequisite: permission of instructor.
M W F 9:05. F. G. Marcham.
A study of the chief developments in the political, governmental, and religious life of England in the seventeenth century, and weekly discussions of a selection of Stuart prose, poetry, and drama.

225 Public Life and Literature in Nineteenth-Century Great Britain Fall 4 credits. Prerequisite: permission of instructor.
T R 9:05. F. G. Marcham.
British political, constitutional, economic, and imperial history are studied in the light of Victorian prose, poetry, and drama. History and literature are both considered: history through lectures and discussions of constitutional documents; literature through comment upon readings. Authors assigned include Macaulay, Carlyle, Tennyson, Mill, Darwin, Huxley, Gilbert and Sullivan, and Shaw.

226 Public Life and Literature in Twentieth-Century Great Britain Spring 4 credits. Prerequisite: permission of instructor.
T R 9:05. F. G. Marcham.
A study of British political, social, and constitutional history is paralleled by the reading of plays. Both history and literature are considered. The development of parliamentary democracy in Great Britain, the consequences for her of the two world wars, the emergence of the welfare state, the application to the economy of nationalization, and Great Britain's withdrawal from imperialism are presented. Among the writers read and discussed are Shaw, Barrie, Maugham, O'Casey, Sherrif, and Eliot.

227 Modern American Sex Roles in Historical Perspective (also Women's Studies 227) Fall 4 credits. Intended primarily for sophomores. Limited to 20 students.
A reading and discussion course. The class will begin by examining sex roles in the United States in the 1980s, looking at a variety of sources like popular magazines and contemporary commentaries. We will then move backwards in time in an attempt to uncover the roots of current attitudes. The students will help to determine which topics the class will investigate in detail.

232 The City In History Spring 4 credits. Limited to 12 students.
R 10:10-12:05. S. Blumin.
Reading and discussion of classic interpretations of the rise, role, and character of cities in ancient Greece, medieval Europe, and nineteenth- and twentieth-century Europe and America. Further reading on the history of a particular city of the student's own choice. Several short papers.

Comparative History

380 Early Warfare, East and West Fall 4 credits.
M W F 1:25. C. A. Peterson.
A study of the principal modes of warfare found both in the East and the West from ancient times up to the eighteenth century. Tactical evolution and the impact of innovations are stressed, but attention is also paid to the general social background and the role of nonmilitary factors.

History of Science

281-282 Science in Western Civilization 281, fall; 282, spring. 4 credits each term. History 281 is not a prerequisite to 282.
T R 8-10. L. Pearce Williams.
The development of scientific thought from antiquity to the present. Readings and discussions of original sources.

287 History of Biology (also Biological Sciences 201) Fall 3 credits. Prerequisite: one year of introductory biology.
An examination of the history of biology, emphasizing the interaction of biology and culture. Covers the period from Charles Darwin to the present.

[288 History of Biology Not offered 1982-83.
W. Provine]

[380 Social History of Western Technology Not offered 1982-83; next offered 1983-84.
J. Weiss]

447 Seminar In the History of Biology Fall. 4 credits. No prerequisites.
T 2:30-4:25. W. Provine.
An examination of geneticists' attitudes toward race differences and race crossing in the twentieth century, emphasizing the period 1950 to the present.

L. P. Williams]

680 Seminar In the History of Nineteenth-Century Physical Science Spring. 4 credits. Hours to be arranged. L. P. Williams.

American History

[201 Introduction to American History: From the Beginning to 1885 Fall Not offered 1982-83.
F. Somkin]

[202 Introduction to American History: From the Civil War to Recent Times Spring Not offered 1982-83]

275 Crime and Punishment: From the Puritans to Mickey Spillane Fall 4 credits.
T R 1:25. F. Somkin.
Social sanctions and the transgressor will be examined in selected novels and other materials. Texts include fiction by Hawthorne, Cooper, Stowe, Melville, Van T. Clark, Cain, Hammett, Chandler, and Spillane.

303 American Dreams Fall 4 credits. Limited enrollment. Recommended: a fair knowledge of American history. Permission of instructor required.
M 2:30-4:25. F. Somkin.
A reading-discussion course on the origins and development of key themes whose character has given a distinctive shape to American culture: the collective dream of national mission; the individual dream of personal success; the dream of material abundance: the dream of social redemption through education; the dream of a democratic art; the dream of equal justice under law.

311-312 The Structure of American Political History 311, fall; 312, spring. 4 credits each term. History 311 examines the course of American politics from 1677 to the Civil War, focusing on the nature of decision making, popular and legislative voting behavior, and the role of interest groups, political parties, and political elites in shaping our political history; 312 continues discussion from 1865 to the present.

[313-314 History of American Foreign Policy Not offered 1982-83.
W. LaFeber]

[318 American Constitutional Development Not offered 1982-83; next offered 1984-85.
M. B. Norton]

321 The Origins of American Civilization Spring. 4 credits.
M W F 1:25. M. Kammen.
The colonial genesis of American culture and society, with emphasis upon the emergence of distinctive
Institutions, attitudes, and social patterns. Topics include race relations, religion, politics, movements of protest, and cultural developments.

325 Age of the American Revolution, 1783-1815. Fall 4 credits.
An examination of the process by which the thirteen English colonies became an independent and united nation, with emphasis on political thought and practice, social and economic change, and cultural development.

326 Women in the American Society, Past and Present. Spring 4 credits.
A survey of women’s experiences in America, from the seventeenth century to the present. Among the topics to be discussed are women’s familial roles, the changing nature of household work, the women’s rights movement, employment of women outside the home, and contemporary feminism.

327-328 American Frontier History. 327, fall; 328, spring. 4 credits each term.
Survey of exploration, settlement, and expansion across North America since the sixteenth century. First term covers international rivalry over territory, frontier trade systems, Indian-colonial relations, and the early administration of United States territories. Topics in second term include the evolution of Indian and Indian policies, life in frontier communities, and political movements and economic change in the American West.

332-333 The Urbanization of America Society. 332, fall; 333, spring. 4 credits per term. First term not prerequisite to the second.
M W F 11:15. S. Blumin.
An examination of the process of urbanization in America from the earliest European settlements to the present. Emphasis will be placed on the development of urban forms, institutions, classes and life-styles, and on the changing impact of cities upon nonurban areas and the nation as a whole. First term covers the period up to the emergence of the industrial city (ca. 1860); the second term covers the period from 1860 to the present.

340-341 Recent American History, 1917 to the Present. 340, fall; 341, spring. 4 credits each term. First term is not prerequisite to the second.
T R 12:20; discussion section to be arranged. R. Polenberg.
History 340 topics include radicalism and repression in World War I, individualism and conformity in the 1920s, Franklin Roosevelt and the New Deal, World War II, the atomic bomb, and the Holocaust. 341 considers the Hiss, Rosenberg, and Oppenheimer cases; the Supreme Court and civil rights; Kennedy, Johnson, and social reform; the Vietnam war and the protest movement; the Carter and Reagan presidencies.

344 American Ideas: From Puritanism to the Civil War. Spring 4 credits.
M W F 2:30; discussion section to be arranged. F. Somkin.

Ideas, thinkers, feeling, and expression from the founding of New England to the death and rebirth of the Republic. Topics include Puritanism, the Enlightenment, the Great Awakening; the theory of republicanism; Jeffersonian and Jacksonian democracy; Manifesto of Social Reform (temperance, women’s rights, abolition); the southern attack on natural rights; Lincoln and the mystic Union.

345 The Modernization of the American Mind. Fall 4 credits.
M W F 11:15; discussion to be arranged. R. L. Moore.
American thought and culture from 1890 to the present. Course emphasizes the intellectual impact of major political and economic events and the adaptation of social ideas and values to new conditions.

346 Major Themes in American Religious History. Spring 4 credits.
M W F 9:05; discussion to be arranged. R. L. Moore.
An examination of the impact of American religions upon American culture and politics from the first settlement of Massachusetts Bay to the Civil War. Major topics include the Puritans and American Calvinism, religion and the American revolution, the evangelical movement and the antebellum political order, and the cultural meaning of religious diversity.

414 Motivations of American Foreign Policy. Fall. 4 credits. Prerequisites: History 314 and permission of instructor.
R 2:30-4:25. W. L. Faeder.

418 Undergraduate Seminar in the History of the American South. Spring. 4 credits. Prerequisite: permission of instructor. M 3-5. J. H. Silbey.

419 Seminar in American Social History. Fall. 4 credits. Prerequisite: permission of instructor.
R 2:30-4:30. S. Blumin.
Topic for 1982: The emergence of the middle class, 1750-1900. The hypothesis of middle-class formation will provide a common theme for reading, discussion, and individual research.

421 Constitutionalism as a Cultural Problem in America. Spring. 4 credits.
T 1:25. M. Kammen.
This seminar (for juniors and seniors) will examine the changing role of the U. S. Constitution in American politics and ideological controversy. Coverage will begin with the John Marshall era, but our major concern will be the period 1880-1980.

426 Undergraduate Seminar in Early American History. Spring 4 credits. Prerequisite: permission of instructor. Preference will be given to students who have completed History 326. Topic for 1983: Adams, Jefferson, and Madison.
This seminar will examine in depth the lives and political thought of three of the most influential founding fathers of the United States: John Adams, Thomas Jefferson, and James Madison. The class will read widely in the political writings of each and interpret those writings in light of each man’s life and experiences. Discussion will focus on their individual and collective contributions to the shaping of the American political system.

430 Law and Authority in America: Freedom, Restraint, and Judgment. Spring 4 credits. Prerequisite: permission of instructor.
R 2:30-4:25. F. Somkin.

A reading-discussion course. Selected themes in the history of law and authority will be studied. Topics may include treason; the law of business and industry; criminal law; mob violence; the gun, sex and liquor regulation; and the despoilment of the courts.

440 Undergraduate Seminar in Recent American History. Fall. 4 credits. Prerequisite: permission of instructor. T R 2:30-3:45. R. Polenberg.

621 Problems of American Cultural History. Fall. 4 credits. R 2:30. M. Kammen.
This seminar will examine various modes of examining American culture, using iconography and artifacts as well as historical and literary texts. Special attention will be given to historians’ use of the “culture concept” as it has developed in anthropology, and to the potential of cultural history as the theoretical basis for a fresh synthesis in American historical writing.

710 Colloquium in American History. Fall. 4 credits. Required of all first-year American history graduate students. Time to be arranged. J. H. Silbey.
Examination of the major themes, epochs, and interpretations of American history.

Asian History

190 Introduction to Asian Civilizations. Spring. 4 credits.
An introduction to the distinctive cultures of China, India, and Japan, which features an intensive examination of selected topics and periods of particular significance in the history of each.

191 Introduction to Asian Civilizations in the Modern Period. Fall. 4 credits.
The history of Asian civilizations in modern times is introduced, focusing on the relationship between key figures and societies. English translations of
autobiographies, novels, short stories, diaries, and other documents written by Asians are used to assess the perspectives, social priorities, and historical significance of intellectual and political leaders.

381-382 War as Myth and History in Postwar Japan (Frederick G. Marcham Seminar, also Society for the Humanities 381-382 and Asian Studies 381-382) 381, fall, 382, spring 4 credits each term.
Fall T R 1:25. Spring: irregular class meetings; students will pursue independent work in consultation with the instructors, and the class will meet for special events and presentations by class members. B. deBary, J. V. Koschmann.
How is the "war story" told in postwar Japan? The course will examine persistent manifestations of the war memory in contemporary Japanese cultural life with emphasis on ways in which the story of World War II has been retold, reinterpreted, and given new symbolic and factual significance in light of changing historical circumstances. Class discussion will focus on the interpretation of texts, ranging from political thought and history to fiction, film, and poetry.

493 Self and Society in Late Imperial and Twentieth-Century China Fall 4 credits. Prerequisite: History 191, 394, or permission of instructor.
R 2:30-4:30. S. Cochran.
Conceptions of self and relationships between the individual and society in China from the seventeenth century to the present.

691 Chinese Historiography and Source Materials Fall 4 credits. Prerequisite: permission of instructor. C. A. Peterson.

693-694 Problems in Modern Chinese History 693 fall; 694, spring 4 credits each term. Prerequisite: permission of instructor. Hours to be arranged. S. Cochran.

695-696 The Historiography of Southeast Asia 695, fall; 696, spring 4 credits each term. Prerequisite: permission of instructor. Hours to be arranged. O. W. Wolters, D. K. Wyatt.

[793-794 Seminar in Modern Chinese History] 793, fall; 794, spring 4 credits each term. Prerequisite: permission of instructor. Hours to be arranged. S. Cochran.

795-796 Seminar in Southeast Asian History 795, fall; 796, Spring 4 credits each term. Hours to be arranged. D. K. Wyatt.

Ancient European History

265 Ancient Greece from Homer to Alexander the Great Fall. 4 credits. Open to freshmen. M W 11:15, disc to be arranged. B. Strauss.
A survey of Greece from the earliest times to the end of the Classical Period in the fourth century B.C. The course focuses on the Greek genius: its causes, its greatness, its defects, and its legacy. The Heroic Age, the city-state, ancient democracy, and the intellectual ferment of the Greek Enlightenment are the main topics of study. Readings in translation from Homer, Aristophanes, Sophocles, Herodotus, Thucydides, Plato, Aristotle, and from the evidence of ancient inscriptions, coins, art, and architecture.

373 The Greek City from Alexander to Augustus Spring 4 credits.
M W 11:15; disc to be arranged. B. Strauss.
A two-fold search: for Alexander the conqueror and the man, and for the character of the world he created, in which the Greek city was planted as far as Egypt and India. These new cities saw a change from republicanism to monarchy, from community values to individualism, from particularism to ecumenicism, embraced the new philosophies of Stoicism and Epicureanism; and were the hothouses of a new religion. Christianity. Readings in translation include Arian, Plutarch, Aristophanes, Menander, Theocritus, Polybius, the Bible, Epicurus, Lucretius.

452 The Tragedy of Classical Athens, 462-404 B.C. Fall 4 credits. Prerequisite: History 265, 373, or permission of instructor.

M 2:30-4:30. B. Strauss.
The rise and fall of Athenian democracy, imperialism, and enlightenment in Athens' great age. The course will examine the influence of Athenian political life on the great tragedies of the age and the influence of tragedy on the Athenians' conception of their character and history. Readings from Herodotus, Thucydides, Aeschylus, Sophocles, Euripides, Aristophanes, Plato, Aristotle, Plutarch.

[453 Crisis of the Greek City-State, 415-301 B.C. Not offered 1982-83. B. Strauss.]

[460 Roman Imperialism Not offered 1982-83. A. H. Bernstein.]

[461 The Roman Revolution Not offered 1982-83. A. H. Bernstein.]

[661 Graduate Seminar in Ancient Classical Literature Not offered 1982-83. A. H. Bernstein.]

Medieval, Renaissance, and Early Modern European History

151-152 Introduction to Western Civilization 151, fall, 152, spring 4 credits each term. History 151 is not a prerequisite to 152. Neither 151 nor 152 may be taken as Freshman Seminars. Fall T R 11:15, plus disc to be arranged. C. Holmes, Spring T R 11:15, plus disc to be arranged, W. Provine.
A survey of European history, History 151 covers antiquity to the Reformation. 152 spans the seventeenth century to the present day. The major political and social developments and the intellectual heritage of the West are both studied. A considerable portion of the reading is drawn from contemporary sources.

A survey of the government, social organization, and cultural and religious experience of the English, laying particular stress on the unification of the realm, the rise of Parliament, changes in agrarian organization, and the development of urban and commercial classes.

A survey of medieval civilization from ca. 300 to ca. 1100, dealing with religious, intellectual, political, and economic developments in Western Europe.

264 The High Middle Ages Fall 4 credits. T R 10:11-12:25. B. Tierney.
A survey of medieval civilization from ca. 1100 to ca. 1450, dealing with religious, intellectual, political, and economic developments in Western Europe. Lectures and class discussions.

[359 The Early Development of Anglo-American Common Law also Law 532 Spring 4 credits. Prerequisite: 257 or permission of instructor. Hours to be arranged. C. Holmes.
A survey of the English legal system from the Anglo-Saxon period to the age of Blackstone. The class will
consider the development and the powers of the major legal institutions, the relationship between precedent, equity, and positive legislation in English law, and those constitutional conflicts that vitally affected the nature of the system.

[366] Medieval Culture, 1100-1300 Spring. 4 credits. Prerequisite. History 264 or permission of instructor. T R 2:30-3:45. J. J. John. The origin and development of the universities will be studied as background for a consideration of the scholastic mentality and its influence on the art, literature, philosophy, science, script, and theology of the period. Readings from Abelard, Hugh of St. Victor, Bonaventure, Thomas Aquinas, Dante, etc.

[367] Church and State During the Middle Ages Not offered 1982-83: next offered 1983-84. B. Tierney.

[368] Francis of Assisi and the Franciscans Fall. 4 credits. Limited to 12 students. Prerequisite: any introductory course in a medieval subject. W 2:30-4:30. B. Tierney. A seminar with lectures, class papers, and class discussions. The course will begin with a detailed study of the early lives of Francis in translation, then consider the impact of the Franciscans on the medieval church and vice versa.

466 Population, Family, and Society in Eighteenth-Century England Fall. 4 credits. Hours to be arranged. L. Bonfield. The seminar will focus on two themes: the social and economic effects of demographic change in preindustrial England, and the nature and organization of the family. Specific topics to be discussed will be demography, marriage, land ownership, migration, crime, and the poor laws.

484 Communities in Early Modern Europe Fall. 4 credits. R 2:30-4:30. S. D. Amussen. Communities—families, villages, churches, and nations—were essential to social order and social definition in early modern Europe. We will explore the social role of communities as well as the norms, expectations, and rituals that held them together and the conflicts that divided them. Most of the readings will focus on England, but comparative material will be drawn from the continent, and students will be asked to consider how and why the English experience differed from that on the continent.

485 The Transformation of Feudal Society Fall. 4 credits. Hours to be arranged. C. Holmes. The seminar will examine the ideas of a number of scholars who have suggested that England experienced a major shift in the nature of social organization and relations in the sixteenth century. Theories about feudal society and its collapse will be tested against contemporary legal and literary sources concerning the political, social, and religious experience of the English people in the middle ages.

664-665 Seminar in Latin Paleography 664, fall; 665, spring. 4 credits each term. Hours to be arranged. J. J. John.

666 Seminar in Medieval History Fall. 4 credits. Hours to be arranged. J. J. John.

Modern European History

152 Introduction to Western Civilization Spring. 4 credits. No prerequisite. 152 may not be taken as a freshman seminar. T R 11:15, plus disc to be arranged. W. Provine. The origin and development of the universities will be studied as background for a consideration of the scholastic mentality and its influence on the art, literature, philosophy, science, script, and theology of the period. Readings from Abelard, Hugh of St. Victor, Bonaventure, Thomas Aquinas, Dante, etc.

352 The End of the Austro-Hungarian Monarchy, 1848-1918 Fall. 4 credits. M W 9:05; disc W 10:10 and W 1:25.1. V. Hull. The decline and fall of the multinational empire. Emphasis is on the political and social problems presented to the monarchy both by industrialization and by the increasingly restive subject nationalities (Poles, Czechs, Serbs, Croats). How did the monarchy handle these problems? Why did it fail? Focus is on cultural matters. Readings are drawn from Freud, Schnitzler, Hoffmannstatl, Karl Kraus, Joseph Roth, and others.

353-354 European Intellectual History in the Nineteenth and Twentieth Centuries 353, fall; 354, spring. 4 credits each term. First term is not a prerequisite to the second. Not offered 1982-83. D. C. LaCapra.

355 The Old Regime, France in the Seventeenth and Eighteenth Centuries. Not offered 1982-83. S. L. Kaplan.

356 The Era of the French Revolution and Napoleon Spring. 4 credits. T R 2:30-3:45. S. L. Kaplan. A study of the failure of the traditional system, its dismantling and replacement in France, and the international consequences. Focus will be on the meaning of the revolutionary experience, the tension between the desires to destroy and to create, and the implications of the Revolution for the modern world.

358 Survey of German History, 1890 to the Present Spring. 4 credits. Open to freshmen. M W 9:05; disc. W 10:10 and W 1:25. I. V. Hull. The “German problem” is examined. Major topics include tensions caused by rapid industrialization, precisely over by a preindustrial, political elite; origins of World War I; growth of anti-Semitism; social dislocations of World War I; failure of the socialist revolution of 1918-19, unstable Weimar democracy and the rise of Nazism; the Nazi state; World War II; the two Germanies.

362 Russian History to 1800 Fall. 4 credits. Open to freshmen. T R 10:10-11:25. W. M. Pintner. The origin and development of the fundamental social, political, economic, and cultural institutions that determined the nature of contemporary Soviet society.

363 Russian History since 1800 Spring. 4 credits. Open to freshmen. T R 10:10-11:25. W. M. Pintner. Nineteenth- and twentieth-century Russia, with emphasis on the major social, political, and economic changes that have transformed Russia since the mid-nineteenth century.

383-384 Europe in the Twentieth Century 383, fall; 384, spring. 4 credits each term. History 383 is not a prerequisite to 384. M F 1:25, and disc to be arranged. J. Weiss.

An investigation of the major developments in European history since 1900. Emphasis upon the development of democratic political systems and their alternatives. 383 topics include the reorientation of liberalism and democratic socialism, the transforming effects of war and depression, the dynamics and diplomacy of fascism, the European response to the economic and ideological influence of America and the Soviet Union, and the interaction between politics and social structure. 384 topics include the origins and course of the cold war in Europe, the emergence of welfare states, the movement for European unity, ethnic and regional movements, the crises of 1968, the end of dictatorship in Spain and the Socialist experiment in France, and the politics of the arms race.

409 Seminar on Work in Europe and America Fall. 4 credits. W 2:30-4:30. S. L. Kaplan. A comparative study of the meaning of work in different societies from premodern times to the present. Emphasis on the "representations" of work of the actors themselves who worked, as well as of those who for various critical reasons did not work. The seminar will examine not only ideology but also the organization, practice, and physical place of work. It will explore theory as well as "cases," and draw on anthropological and sociological as well as historical material.

456 Seminar on Germany, 1890-1918 Spring 4 credits. Prerequisite: permission of instructor. M 1:25-3:25. I. V. Hull. A consideration of the many paradoxes of the Wilhelminian age—the last decades of the monarchy, as it wrestled with economic and social change.
Seminar in European Fascism

Fall. 4 credits. Prerequisite: permission of instructor. M T 25-325. I. V. Hult.

An attempt to define and understand the social, political, and intellectual origins, mechanisms, and goals of European fascist movements of the 1920s and 1930s by detailed study of German National Socialism, Italian Fascism, and the Action Francaise.

Seminar in Welmar and Nazi Germany, 1918-1945

Not offered 1982-83.

D. A. Baugh.

The Making of the English Ruling Class, 1660-1780

Not offered 1982-83.

D. A. Baugh.

Seminar in Modern European Political History

Spring. 4 credits. Prerequisite: History 383 or permission of the instructor.

Hours to be arranged. J. H. Weiss.

Topic for 1983: Resistance, collaboration, and retribution in World War II. A study of the response of individuals, social groups, and political bodies to the extreme pressure of occupation, imprisonment, civil war, and Nazi extermination actions. The concluding section focuses primarily on the war-crimes trials at Nuremberg.

Russian Social and Economic History

Spring. 4 credits. M 2:30-4:30. W. M. Pinter.

A seminar devoted to an examination of the transformation of Russia from a backward agrarian nation to the second of the world's superpowers.

Topics in Modern European Intellectual History

Spring. 4 credits. W. 125-325. D. LaCapra.

Topic for 1982-83: French conservative thought in the nineteenth century. The course will focus on the transformations of "conservative" thought in different genres of writing. Readings will include Maistre, Tocqueville, Babel, Baudelaire, and Dunkheim as well as recent critics such as Sartre, Barthes, Jameson, and Girard.

Documenting the Depression: Film, Literature, and Memory

Not offered 1982-83; next offered 1983-84.

J. H. Weiss.

Seminar on the Politics of the Enlightenment

Fall. 4 credits. M 2:30-4:30. S. L. Kaplan.

An inquiry into the historical origins of European (especially French) political, social, and economic thought, beginning in the 1780s at the zenith of Louis XIV's absolutism and culminating in the French Revolution a century later. Emphasis is on the relationship of criticism and theory to actual social, economic, religious, and political conditions. An effort is made to assess the impact of enlightened thought on the eighteenth-century world and to weigh its implications for modern political discourse. Readings in translation from such authors as Bayle, Montesquieu, Voltaire, Rousseau, Diderot, etc., as well as from modern scholarly and polemical literature.

Seminar in Eighteenth-Century French Social History

Not offered 1982-83.

S. L. Kaplan.

Twentieth Century Britain

Not offered 1982-83.

D. A. Baugh.

Seminar in Modern European Social History

Fall. 4 credits.

Hours to be arranged. J. H. Weiss.

Topic for 1982: Getting ahead: historical perspectives on sociopolitical and professional advance. Case studies from Modern European and American history investigate why societies are stratified as they are, how some individuals/land groups rise to the top and some fall, how those at the top remain there, and the role of education, professionalism, and ideology in shaping these processes.

Seminar in Eighteenth-Century British History

Not offered 1982-83.

D. A. Baugh.

Seminar in Nineteenth-Century British History

Not offered 1982-83.

D. A. Baugh.

Seminar in the French Revolution

Not offered 1982-83.

S. L. Kaplan.

Seminar in European Intellectual History

Not offered 1982-83.

D. LaCapra.

Seminar in European Intellectual History

Spring. 4 credits. Hours to be arranged: D. LaCapra.

Seminar in Russian History

Spring 4 credits. Hours to be arranged: W. M. Pinter.

Seminar in Modern European Social History

Spring. 4 credits. Hours to be arranged: J. H. Weiss.

Seminar in European History

Not offered 1982-83.

S. L. Kaplan.

Latin American History

295 Colonial Latin America

Fall. 4 credits. M W F 10:10. T. H. Holloway.

Survey of Latin America from the rise of pre-Columbian civilizations through the European conquest, establishment of the Spanish and Portuguese colonial societies, imperial rivalries in the New World, background of the independence movements, and the achievement of political independence.

296 Latin America in the Modern Age

Survey of the Latin American nations from independence to the present. Major themes include the persistence of neocolonial economic and social institutions, the development of nationalist and populist politics, revolutionary movements of the twentieth century, and United States-Latin American relations.

Agrarian Societies in Latin American History

Spring. 4 credits. T R 2:30-3:50. T. H. Holloway.

The development of rural patterns of wealth, status, and power focusing on the role of country people in the larger society. Topics include disruption of the conquest, evolution from encomienda to hacienda, rise of plantation agriculture and export enclaves, decline of Indian communities, peasant protest, and land reform and development programs of the recent past.

Twentieth-Century Brazil (also Sociology 368)

Not offered 1982-83.

T. H. Holloway, J. Kahl.

Undergraduate Seminar in Latin American History

Fall. 4 credits. Prerequisite: permission of instructor.

M 2:30-4:30. T. H. Holloway.

Topic for 1982-83: Race and class in Latin American history.

Seminar in Latin American History

Not offered 1982-83.

T. H. Holloway.

Honors and Research Courses

201 Supervised Reading

Fall or spring. 2 credits. Open only to upperclass students. Prerequisite: permission of instructor.

202 Supervised Research

Fall or spring. 3 or 4 credits. Open only to upperclass students. Prerequisite: permission of instructor.

400 Honors Proseminar

Fall or spring. 4 credits. Limited by 15 students. For prospective honors candidates who have permission of instructor. Fall: T 2:30, M. Kammen. Spring: W 2:30-4:30, R. L. Moore.

An introduction to historical writing and modes of research; emphasizing the possibilities and limitations of historical inquiry.

401 Honors Guidance

Fall or spring. 4 credits. Prerequisites: History 400 and permission of instructor.

703-704 Supervised Reading

703, fall 704, spring. 4 credits each term. Open only to graduate students. Prerequisite: permission of instructor.

Society for the Humanities

Seminars of Interest to History Students

The Language(s) of Politics in the Renaissance (Society for the Humanities 425-426) 425, fall; 426, spring.

J. Najemy.

Scientists and Political Revolutions (Society for the Humanities 415-416) 415, fall; 416, spring.

B. Reeves.

Eighteenth-Century Scottish Moral Science (Society for the Humanities 417) Fall.

D. Lieberman.

Cultural History as a Subversive Activity (Society for the Humanities 423) Fall.

S. Buck-Morss.

History of Art

The visual arts—painting, sculpture, and architecture—are a principal mode of human expression. Art historians investigate works of art to understand them in their artistic, historic, and cultural contexts. Courses offered by the department cover the mainstream of Western art (classical, medieval, Renaissance, baroque, nineteenth and twentieth century) and non-Western art, including Oriental and tribal traditions. Art history is an integral part of interdisciplinary programs such as the Archaeology Program, African Studies, the China-Japan Program, Medieval Studies, and the Southeast Asia Program.

Course offerings vary in scope from introductory courses designed to acquaint the student with the mainstream of Western art to advanced seminars that concentrate on more specialized topics. The resources of the Herbert F. Johnson Museum of Art frequently serve as the focus for discussion sections and research assignments.

The Major

Students who wish to major in the history of art should complete two courses in the Department of
History of Art by the end of their sophomore year. These courses should be completed with a grade of C or better and are prerequisites for admission to the major, but may not be counted toward fulfillment of the major requirements. In their junior and senior years majors work closely with their advisers to determine acceptable programs in the major field. The program should include at least 30 credits in history of art courses (24 of which must be at the 300 level or higher) and a minimum of two additional courses in this department or in a related area approved by the major adviser. Courses at the 200 level or above taken in the freshman or sophomore years may be counted toward the major provided that the courses are in addition to those taken as prerequisites to the major. Majors are encouraged to take studio courses offered by the Department of Art, but these are considered to be electives and do not fulfill major requirements.

Honors. In order to become a candidate for the degree of Bachelor of Arts with honors in the history of art, a student must have a cumulative average of B for all courses taken in the department. Admission into the program requires application to the departmental chairperson during the second term of the junior year; the application must include a summary of the proposed project, an endorsement by a faculty sponsor, and a copy of the student’s transcript. In the senior year, the honors candidate will include among the regular requirements History of Art 493 and 494, which entail the preparation of a senior thesis. This program may not be condensed into one semester.

Freshman Seminars
The history of art courses listed below are offered in the Freshman Seminar Program and as freshman electives, but may not be used to satisfy the distribution requirement.

<table>
<thead>
<tr>
<th>103 Freshman Seminar in Visual Analysis</th>
<th>Fall or spring. 3 credits.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fall: M W F 10:10, 12:20; T 10:10-11:25</td>
<td></td>
</tr>
<tr>
<td>The nature of man-made objects, from tools to cities, including such conventional categories as painting, sculpture, and architecture is examined. Students are introduced to the problems of perceiving such objects and articulating the visual experience. The course is organized by media and themes rather than chronology, and it is a supplement, not a prerequisite, to art history.</td>
<td></td>
</tr>
</tbody>
</table>

*Honors.*

<table>
<thead>
<tr>
<th>104 How to Look at Works of Art</th>
<th>Fall. 3 credits. Not open to students who have taken History of Art 103.</th>
</tr>
</thead>
<tbody>
<tr>
<td>M W F 9:05</td>
<td>Staff.</td>
</tr>
<tr>
<td>Several major works of art, primarily paintings, are examined in detail. The cultural and historical contexts in which the works were created and their unique qualities as works of art are considered.</td>
<td></td>
</tr>
</tbody>

| 105 Myth and Image in Modern Society (also Sociology 103) | 3 credits. Not offered 1982-83. |

<table>
<thead>
<tr>
<th>106 Art in a Landscape: Traditional Arts in Southeast Asia</th>
<th>Spring. 3 credits.</th>
</tr>
</thead>
<tbody>
<tr>
<td>M W F 11:15, S. J. O’Connor.</td>
<td>The traditional arts in Southeast Asia, such as textiles, ceramics, architecture, sculpture, and puppet theatre, will be examined in the varying social and physical contexts. The aim of the course will be to introduce the works themselves and to explore the way they are, or were, implicated in daily life. We will encounter works located in the palaces and monasteries of the centralized kingdoms, as well as those that are part of the village world. Among the topics to be discussed: Wayang theatre, a world of shadows; batik art; the dyer’s art; the life of Buddha in art; stoneware and porcelain ceramics from Thailand, Cambodia, and Vietnam; ritual art in Bali; and the cosmic mountain in architecture. Emphasis will be on writing short papers.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>107 Principles of Architecture</th>
<th>Fall. 3 credits.</th>
</tr>
</thead>
<tbody>
<tr>
<td>M W F 11:15, T. M. Brown.</td>
<td>Through analysis, readings, and discussions, examination of some theoretical and practical aspects of architecture as it affects our lives.</td>
</tr>
</tbody>

</thead>
<tbody>
<tr>
<td>T R 10:50-12:05, R. G. Calkins.</td>
<td>An introduction to the approaches to art history through a study of selected works of art from the Middle Ages: architecture, sculpture, painting, manuscript illumination, metal work, and ivory.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>240 Introduction to Art History: The Renaissance</th>
<th>Fall. 3 credits.</th>
</tr>
</thead>
<tbody>
<tr>
<td>M W F 9:05, plus one discussion section, M 10:10, 1:25, 2:30; or T 9:05. E. G. Doison.</td>
<td>A study of selected works of architecture, sculpture, and painting in Italy and northern Europe from about 1300 to about 1575. Major artists considered include Donatello, Jan van Eyck, Michelangelo, and Brueghel. Various approaches to the understanding of works of art and various interpretations of the Renaissance are explored.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>250 Introduction to Art History: The Baroque Era</th>
<th>Spring. 3 credits.</th>
</tr>
</thead>
<tbody>
<tr>
<td>M W F 10:10, C. Lazzaro.</td>
<td>A survey of the art and architecture of Italy, France, Spain, Holland, and Flanders in the seventeenth century. A few artists, such as Bernini, Rembrandt, and Velazquez, will be emphasized and placed within the context of the major trends and ideas of the time. In addition to distinguishing artistic styles and aesthetic concerns, the course will consider other cultural factors shaping the work of art, such as patronage, religion, politics, and economics.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>261 Introduction to Art History: Modern Art</th>
<th>Fall or spring. 3 credits.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fall. T 10:10, plus one disc, T 12:20, 2:30, R 10:10, 12:20, or 2:30; R. C. Hobbs.</td>
<td>A topical discussion of some of the major artists, movements, and ideas that make up modern art. Emphasis is on European and American painting of the nineteenth and twentieth centuries.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>270 Introduction to Art History: American Art</th>
<th>3 credits. Not offered 1982-83.</th>

| 329 Greek Sculpture (also Classics 329) | 4 credits. Not offered 1982-83. A. Ramage. |

[345] Dutch Painting in the Seventeenth Century Fall. 4 credits. Limited to 40 students.

[348] The Middle Ages Fall or spring. 4 credits. Not offered 1982-83. C. Kaske.

[357] An historical and critical survey of the architecture of Washington. Attention will be given to the periods, styles, architects, and clients—public and private—of the notable buildings and to the urban-scape of the nation's capital. The vocabulary of architectural analysis and criticism will be taught. Field trips are required.

[361] Approached topically, an examination of the issues of two- and three-dimensional visual art and design within the context of a mass-technological world. Discussion will revolve around topics presented, as well as required weekly reading.

[362] Introduction to the Arts of China Fall. 4 credits.

[363] A one-semester course designed for those students who have had no previous experience in art history or knowledge of China. Although the course has a general chronological framework, it is not a survey of Chinese art but an examination of selected masterpieces of Chinese expression in the visual arts, from ancient bronze vessels to modern landscape paintings. Special emphasis will be put on the art of the later centuries, and the course will end with a discussion of art in contemporary China. The collection of the Herbert F. Johnson Museum of Art will be used in conjunction with the discussion sections. There will be two short papers and a final take-home examination.

[364] Introduction to the Arts of China Fall. 4 credits.

[366] A one-semester course designed for those students who have had no previous experience in art history or knowledge of China. Although the course has a general chronological framework, it is not a survey of Chinese art but an examination of selected masterpieces of Chinese expression in the visual arts, from ancient bronze vessels to modern landscape paintings. Special emphasis will be put on the art of the later centuries, and the course will end with a discussion of art in contemporary China. The collection of the Herbert F. Johnson Museum of Art will be used in conjunction with the discussion sections. There will be two short papers and a final take-home examination.

[371] Seminar Courses at the 500 level are open to upperclass students, majors, and graduate students. Seminars at the 500 level are primarily for graduate students, but qualified upperclass students may be admitted. All seminars involve the writing and presentation of research papers. Enrollment is limited, and permission of the department or instructor is normally required. Students may repeat 500-level courses that cover a different topic each semester.

[372] Independent Study Fall or spring. 2-4 credits. May be repeated for credit. Prerequisite: permission of instructor or department faculty member.

[373] Individual investigation and discussion of special topics not covered in the regular course offerings, by arrangement with a member of the department.

[374] Independent Study Fall or spring. 2-4 credits. May be repeated for credit. Prerequisite: permission of a department faculty member. Hours to be arranged. Staff. Individual investigation and discussion of special topics not covered in the regular course offerings, by arrangement with a member of the department.

[378] Ceramics Spring. 4 credits. Prerequisite: permission of instructor.

[380] Greek and Roman pottery specimens from several Near Eastern and Mediterranean sites will be studied to provide direct experience in one of the basic prerequisites of archaeological excavation—the identification and dating of pottery types. A report, delivered in class, will concern ancient ceramic materials or particular types and periods. Practical experience in making and decorating pottery will be encouraged.

[382] Mannerism and the Early Baroque Era in Italy Fall. 4 credits.

[388] The Art and Poetry of William Blake (also English 448) Spring. 4 credits.

[390] An examination of the complete Blake: printmaker, painter, and poet. Special attention will be paid to the illuminated books, color-print drawings, and tempera paintings, and the techniques by which they were made.

[394] E. G. Dotson.

[397] Topics in Modern Art Fall, 4 credits.

[399] Topic for fall 1982 to be announced.
Studies In Modern Art  4 credits.  Fall.  Topic for spring 1983 to be announced.

The Arts In Modern China  4 credits.  Not offered 1982-83.  M. W. Young.

Ceramic Art of Asia  4 credits.  R 2:30-4:25.  S. J. O'Connor.  The Herbert F. Johnson Museum of Art's collection of Asian ceramics will provide a principal resource of study. Lectures, reports, and discussions.

Chinese Art of the T'ang Dynasty  4 credits.  Not offered 1982-83.  M. W. Young.

Traditional Arts of Southeast Asia  4 credits.  R 2:30-4:25.  S. J. O'Connor.  The course will focus on the art and archaeology of Thailand.

Honors Work In Art History  4 credits.  Prerequisite: History of Art 493.  Hours to be arranged.  Staff.  Intended for senior art history majors who have been admitted to the honors program.  S-U grades only.

Honors Work Fall or spring.  4 credits.  Intended for senior art history majors who have been admitted to the honors program.  S-U grades only.

Honors Work Fall or spring.  4 credits.  Prerequisite: History of Art 493.  Hours to be arranged.  Staff.  Intended for senior art history majors who have been admitted to the honors program.  S-U grades only.

Honors Seminar In Renaissance Art  4 credits.  Not offered 1982-83.  A. Ramage.

Seminar In Baroque Art  4 credits.  M 2:30-4:30.  C. Lazzaro.  Topic for fall 1982.  The artist's self-image in the Renaissance and baroque.  An investigation of the status and position of the artist and the perceived nature of artistic activity in the Renaissance and baroque periods.  These ideas and developments will be studied against the background of writings by and about artists and of artists' images of themselves in both self-portraits and allegories.  The changing role of the artist and the changed perception of the nature of artistic creativity will be at the core of these investigations.  Corresponding with the developments of the periods themselves, the Renaissance will be studied chiefly through writings and the baroque through images.

Supervised Reading  4 credits.  Prerequisite: permission of the instructor.  M 2:30-4:25.  R. G. Calkins.  An examination of various methods of investigation in the history of art and architecture.  Required of all graduate students.

Methodology Seminar II Fall.  4 credits.  Prerequisite: permission of the instructor.  S-U grades only.

Cultural History as a Subversive Activity (Society for the Humanities 432)
A Case Study In Materialist Pedagogy: Nineteenth-Century Paris (Society for the Humanities 424)
The Age of Symbolism (Russian 498)

Cultural History as a Subversive Activity  4 credits.  See courses listed under Classics.

Mathematics is the language of modern science, basic training in the discipline is essential for those who wish to understand, as well as for those who wish to take part in, the important scientific developments of our time. Acquisition of mathematics is also extremely useful for students in the social sciences and valuable for anyone interested in the full range of human culture and the ways of knowing the universe in which we live.

The Department of Mathematics faculty has strong groups specializing in algebra, number theory, real and complex analysis, Lie groups, topology and geometry, logic, probability and statistics, mathematical physics, and applied mathematics. Related departments at Cornell have specialists in computer science, operations research, linear programming, and game theory, and courses in these topics can be integrated readily into the mathematics major.

The department offers a rich variety of undergraduate courses, and many of its beginning graduate courses are suitable for advanced undergraduates as well. Under some conditions, a student may carry out an independent reading and research project for college credit, under the supervision of a faculty member.

Members of the department are available to discuss with students the appropriate course for their levels of ability and interest, and students are urged to avail themselves of this help.

Students who wish to take any of the courses numbered 300 or above are invited to confer, before registering, with the instructor concerned. The level of a course is indicated by the first digit of the course number roughly: 1, 2, indicate undergraduate classes; 3, 4, upperclass courses; 5, 6, graduate courses. The subject matter of courses is indicated by the second digit: 0, general; 1, 2, analysis; 3, 4, algebra; 5, 6, topology and geometry; 7, probability and statistics; 8, logic; 9, other.

Midterm grades, when required, will be S or U only, except in special circumstances. In all 600-level courses, final grades will be S-U only, with the exception of 690. In courses with numbers below 600, students will receive letter grades, with the exception of non-mathematics majors who have requested an S-U grade.

Advanced Placement

Secondary school students are strongly urged to take one of the two advanced placement examinations of the College Entrance Examination Board in their
The Major

The mathematics major adapts to a number of purposes. It can emphasize the theoretical or the applied. It can be appropriate for professionals and nonprofessionals alike. It can be broad or narrow. Questions concerning the major should be brought to a departmental representative.

The prerequisites and requirements below apply to students who enroll in the mathematics major after January 1, 1981. Students who enrolled before that date may fulfill either the requirements below or the old requirements.

Prerequisites: The preferred prerequisites are Mathematics 221-222 or 293-294. A unit on infinite series is required. Before Fall 1982, such a unit is offered in Mathematics 122, 293, and 217. In Fall 1982 it will also be offered in 293. Starting Fall 1982, it will be offered in 112, 122, 192, and, for a two-year transition period, in 217. Students with two semesters of advanced placement usually have had the equivalent of 217.) Normally students will be admitted to the major only when they have grades of B- or better in all sophomore-level mathematics courses they have taken. Alternate prerequisites are Mathematics 214-215-216-217-218-231, normally with grades of B+ or better.

Requirements

There are five requirements for the major:
1) Computer Science 100. Students are urged to take this course before the end of the sophomore year.
2) Two courses in algebra. Eligible courses are Mathematics 431, 433, 432 or 434 or 332, 336.
3) Two courses in analysis. Eligible courses are Mathematics 411 or 413, 412 or 414, 421, 422, 423, 418.
4) Further high-level mathematical courses. Any one of the following is sufficient:
   a) three mathematics courses numbered 371 or higher, other than those used to satisfy the previous two requirements. Computer Science 621 and/or 622 may also be used toward satisfying this requirement.
   b) four Computer Science courses numbered 314 or higher.
   c) four Operations Research and Industrial Engineering courses numbered 390 to 383 or 431 to 472, but not 350.
5) One course dealing with mathematical models. Any one of the following is sufficient:
   a) Mathematics 305 (not offered every year).
   b) Physics 208, 213, or 217.
   c) Computer Science 211, provided no Computer Science course has been used toward satisfying the previous requirement.
   d) One course other than Physics 112 or 207 from outside mathematics with serious mathematical content and dealing with scientific matters, provided the course has not been used toward satisfying the previous requirement.

Major advisers can alter these requirements upon request of an advisee, provided the intent of the requirements is met.

Sample Major Programs

Below are some suggestions for what the schedule of a student with a mathematics major might look like. Many variations are possible.

For Graduate School in Mathematics

First two years: Mathematics 111-122-221-222, Computer Science 100, Physics 207-208

Last two years: Mathematics 433-434, 413-414, 453-454, two of 418, 428, 471.

The sophomore courses 221-222 are more suitable than 293-294 in this case. A student planning to enter graduate school may get by with 411-412 and 431-432 instead of the honors versions 413-414 and 433-434, but the honors versions are strongly recommended.

For Many Technical Careers

First two years: Mathematics 111-122-221-222 or 191-192-293-294, Computer Science 100-211, Physics 112-213 or 207-208.

Last two years: Mathematics 431-336, 421-422, 428, 471-472.

Two or more semesters of computer science are highly recommended.

For Emphasis on Computer Science

First two years: Mathematics 111-122-221-222, Computer Science 100-211

Last two years: Mathematics 431-432, 421-422, Computer Science 314, 321, 410, 414, 481.

Requirement 5 is met by Computer Science 481 in this sample program. Students interested in computer science should give consideration to a double major in mathematics and computer science.

For Emphasis on Operations Research

First two years: Mathematics 111-122-221-222 or 191-192-293-294, Computer Science 100-211

Last two years: Mathematics 431-432-421-422, OR&IE 320, 321, 361; two of 431, 432, 435; and possibly 462 or 471.

For Prelaw or Premed (first example)

First two years: Mathematics 111-122-221-222, Computer Science 100, Physics 207-208.

Last two years: Mathematics 431-336, 411-421, 381, 471-472.

The sophomore courses 221-222 are recommended rather than 293-294 in this sample program because they provide better preparation for 411.

For Prelaw or Premed (second example) or Prabusiness

First two years: Mathematics 111-112-214-215-216-217-218, Computer Science 100-211.

Last two years: Mathematics 332-336, two of 411-421-428; and also 381, 403, 451.

A course in statistics is also strongly recommended.

Honors. Honors in mathematics will be awarded on the basis of a high level of performance in departmental courses. Further requirements, if any, will be announced during the year.

Distribution Requirement

The distribution requirement is satisfied in mathematics by any 6 credits, not including more than one course from 100, 105, 107, 403. Computer Science 100 may be used for three of these credits. The mathematics distribution requirement is also satisfied by a score of 3 on the CEEB calculus BC examination. Mathematics 109 and ALS 115 (College of Agriculture and Life Sciences) do not satisfy the requirement.

Basic Sequences

Pre calculus

Description

1) Algebra and trigonometry to prepare students for calculus
2) Algebra, analytic geometry, elements of calculus

Mathematics 109 and ALS 5 do not carry credit for graduation.

**Students who want a second semester of mathematics after ALS 115 may take Mathematics 107 or 105 or, if they need more calculus, 111 or 113. They may not, however, receive credit for both ALS 115 and Mathematics 108.

Calculus

Mathematics Course Numbers

Description

1) Standard 3-semester sequence for students who do not expect to take advanced courses in Mathematics

111 (or 113)-112-214-215-216-217-218

2) Usual sequence for prospective mathematics majors and others Who expect to take advanced courses in mathematics

111 (or 113)-112-221-222

3) Calculus for engineers

191 (or 193)-(also taken by some physical science majors)

192-293-294

Mathematics 191 (or 193) may be substituted for 111 (or 113) in sequences 1 and 2. Mathematics 113 and 193 are variants of 111 and 191 for students who have had some calculus in high school but have not received advanced placement. Sequences 2 and 3 are two-year sequences that include some linear algebra.

Students who take sequence 1 may learn some linear algebra by taking Mathematics 231. A student whose performance in Mathematics 112 is exceptional may switch to sequence 2 and take 221, but 217 must then be taken concurrently.

Special Purpose Sequences

Mathematics Course Numbers

Description

1) Finite mathematics and calculus for biology majors

105-107

2) Finite mathematics and calculus for students in the more descriptive areas of the social sciences. (This is normally a terminal sequence. It does not fulfill the mathematics requirement for biology majors.)

105-111 or 107-111

3) Other possible finite mathematics and calculus sequences

108 (possible without 107)

Students who wish to take two semesters of calculus are advised to take the first two semesters of one of the three calculus sequences. It is also possible to follow Mathematics 106 with 112 or 222, or, in exceptional circumstances (with consent of the instructor), with 214-218. Although 108 is normally a terminal course, students who do extremely well in it may take 112.

Switching between calculus sequences is often difficult, especially at the 200 level. Students should not attempt such a switch without consulting the associate chairman.

Courses with Overlapping Content

Because the department offers many courses with overlapping content, students must choose their courses carefully to ensure that they will receive credit for each course they take. Listed below are groups of courses with similar content. Students will receive credit for only one of the courses in each group:

105 and 107

108 and ALS 115 (College of Agriculture and Life Sciences)

106, 108, 111, 113, 191, 193

112, 122, and 192

112 and 217**

214 and 293

216 and 294

217 and 293**

218 and 293**
221 and 214
221 and 216
216 and 192
217 and 122
211, 294, and 231
372 and 472

**This pair of courses will have overlapping content beginning fall 1982.**

This pair of courses will have overlapping content in fall 1982.

### Basic Sequences

**103 Mathematics for Architects (also Architecture 221)** Fall. 3 credits.
Lec, T 10:10, plus 2 recs to be arranged.
Rudiments of calculus and introduction to vectors and matrices.

**105 Finite Mathematics for Biologists (also Theoretical and Applied Mechanics 106)** Fall. 3 credits.
Prerequisite: three years of high school mathematics including trigonometry and logarithms.*
Lecs, T R 12:20, plus 2 hours to be arranged.

**106 Calculus for Biologists (also Theoretical and Applied Mechanics 106)** Spring. 3 credits.
Prerequisite: Mathematics 105 or Mathematics 109 or ALS 115 or consent of instructor. (A strong background in functions is required.) Mathematics 111, rather than 106, is recommended for those planning to take Mathematics 112.*
Lecs, T R 11:15, plus 2 hours to be arranged.

**107 Finite Mathematics** Fall and summer. 3 credits.
Prerequisite: three years of high school mathematics, including at least two years of high school algebra. This course cannot be used toward fulfillment of the mathematics requirement for biology majors.*
Lecs, T R 12:20, plus 2 hours to be arranged.

**108 Introduction to Calculus** Spring. 3 credits.
Prerequisite: three years of high school mathematics including trigonometry and analytic geometry of the line and circle. Recommended: Mathematics 107. This course does not normally provide adequate preparation for any higher course in mathematics, nor can it be used toward fulfillment of the mathematics requirement for biology majors.*
Lecs, T R 12:20, plus 2 hours to be arranged.

**111 Calculus** Fall, spring, and summer. 4 credits.
Prerequisite: students who have a good background in high school mathematics but who have not studied calculus (see Mathematics 113.) Prerequisite: Mathematics 109 or three years of high school mathematics including trigonometry.
Fall: lecs, M W F 12:20, plus 2 hours to be arranged. Spring: lecs, M W F 11:15, plus 2 hours to be arranged. Prelims: fall, 7:30 p.m. Oct. 7, Oct. 26, Dec. 7, spring, 7:30 p.m. Feb. 15, Mar. 15, Apr. 19.
Plane analytic geometry, differentiation and integration of algebraic and trigonometric functions, applications of differentiation, logarithmic and exponential functions.

**112 Calculus** Fall, spring, and summer. 4 credits.
Prerequisites: Mathematics 106 or 111 or 113 with a grade of C or better, or exceptional performance in Mathematics 108. Those who do extremely well in Mathematics 111 or 113 should take 122 instead of 112, unless they plan to continue with Mathematics 214.
Fall: lecs, M W F 11:15, plus 2 hours to be arranged. Spring: lecs, M W F 10:10, 11:15, 12:20, plus 2 hours to be arranged. Prelims: fall, 7:30 p.m. Oct. 7, Oct. 26, Dec. 7; spring, 7:30 p.m. Feb. 15, Mar. 15, Apr. 19.
Applications of integration, methods of integration, plane curves and polar coordinates, vectors and solid analytic geometry, infinite series, complex numbers, introduction to partial derivatives.

**113 Calculus** Fall. 4 credits.
Prerequisite: Mathematics 109 or three years of high school mathematics, including trigonometry. This course covers the same material as Mathematics 111, but it is intended for students who have had enough calculus to be able to differentiate polynomial functions.*

**122 Calculus** Fall or spring. 4 credits.
Prerequisite: performance at a high level in Mathematics 111 or 113 or permission of the department. Students planning to continue with Mathematics 214-218 are advised to take 112 instead of this course.*
Differential and integration of elementary transcendental functions, the techniques of integration, applications, polar coordinates, infinite series, and complex numbers, as well as an introduction to proving theorems. The approach is more theoretical than in Mathematics 112.

**191-193 Calculus for Engineers** Fall. 4 credits.
Prerequisite: three years of high school mathematics, including trigonometry. Mathematics 193 is a course parallel to 191 for students who have had a substantial amount of calculus in high school but who did not place out of 191. Although the same topics will be covered in 193 as in 191, some may be treated in greater depth in 193.*
191: lecs, M W F 11:15, plus 2 hours to be arranged. 193: lecs, M W F 9:05 or 11:15, plus 2 hours to be arranged. Prelims: 7:30 p.m. Oct. 7, Oct. 26, Dec. 7.
Plane analytic geometry, differential and integral calculus, and applications.

**192 Calculus for Engineers** Fall, spring, and summer. 4 credits.
Prerequisite: Mathematics 191 or 193.*
Fall: lecs, M W F 9:05 or 11:15, plus 2 hours to be arranged. Spring: lecs, M W F 9:05 or 11:15, plus 2 hours to be arranged. Prelims: fall, 7:30 p.m. Oct. 7, Oct. 26, Dec. 7; spring, 7:30 p.m. Feb. 15, Mar. 15, Apr. 19.
Methods of integration, polar coordinates, vectors and parametric equations, vector functions of one variable, infinite series, complex numbers, introduction to partial derivatives.

**213 Calculus Summer**
This course covers the same material as Mathematics 214-215-216-217-218.

**214-215-216-217-218** Fall or spring. 1 credit each.
Prerequisite: Mathematics 111 or 122. These courses are taught as a unified third-semester calculus package, but students may register for any subset of these courses in accordance with their interests and needs and subject to the credit regulations explained at the end of the introduction. Students in doubt about their choices should consult their advisers and the course instructors. The courses are offered in sequence (though not necessarily in numerical order) through the semester, and each lasts three to four weeks. The expected order is Mathematics 218, 216, 214, 215, but some variation is possible. (Note: Infinite series and complex numbers are prerequisites for 214 and 215. Multivariable calculus is prerequisite for 216.) Beginning in fall 1982, the content of 217, Infinite Series and Complex Numbers, will be taught in 112. For a two-year transition period, 217 will still be offered, primarily for students who took 112 before fall 1982. It will be taught during the same four-week period as 218, Multivariable Calculus, which is intended for students who take 112 during fall 1982 or thereafter.
Lecs, M W F 10:10, plus 2 hours to be arranged.
All students should attend the first lecture of the semester to learn the order in which the course will be taught, the dates for each exam, the examination dates, and the structure of the whole.
Prelims will be given some evenings at 7:30 p.m.

**214 Introduction to Differential Equations**
Prerequisite: Mathematics 217 or equivalent material from Mathematics 112 or 122.
Simple first- and second-order equations with applications, series solutions. See also the entire 214-215-216-217-218 description above.

**215 Differential Equations (Continued)**
Prerequisites: Mathematics 214 and 217 or equivalent material from Mathematics 112, 122, or 293.
Introduction to numerical methods of solution, systems of differential equations, elementary partial differential equations, and boundary value problems.
Applications: See also the entire 214-215-216-217-218 description above.

**218 Vector Analysis**
Vectors, vector valued functions, line integrals. See also the entire 214-215-216-217-218 description above.

**217 Infinite Series and Complex Numbers**
See the entire 214-215-216-217-218 description above.

**218 Multivariable Calculus**
See the entire 214-215-216-217-218 description above.

**221 Linear Algebra and Calculus** Fall or spring. 4 credits.
Prerequisite: Mathematics 122 with a grade of B or better, or permission of instructor. Students who obtain permission to use Mathematics 112, taken before fall 1982, must possess adequate preparation in infinite series and complex numbers before taking Mathematics 217 and 221 concurrently.*
Fall: M W F 9:05, 10:10, or 11:15. Spring: M W F 10:10 or 11:15.
Linear algebra and differential equations. Topics include vector algebra, linear transformations, matrices, linear differential equations, as well as an introduction to proving theorems.

**222 Calculus** Fall or spring. 4 credits.
Prerequisite: Mathematics 221
Fall: M W F 11:15 or 12:20. Spring: M W F 9:05 or 10:10 or 11:15.
Vector differential calculus, calculus of functions of several variables, multiple integrals.

**263 Engineering Mathematics** Fall or spring. 3 credits.
Prerequisites: Mathematics 192 or 194, plus a
knowledge of computer programming equivalent to that taught in Engineering Common Courses 105. In exceptional cases, Mathematics 129 and 293 may be taken concurrently. *

Fall: Secs, M W 10:10, 11:15, or 12:20; plus one hour to be arranged. Spring: Secs, M W 10:10 or 12:20; plus one hour to be arranged. Prerequisites: fall, 7:30 p.m. Oct. 5, Nov. 4, Dec. 7; spring, 7:30 p.m. Feb. 24, Mar. 22, Apr. 26.

Note: there will be a curriculum change beginning spring 1983. Fall: infinite series, complex numbers, first- and second-order ordinary differential equations with applications in the physical and engineering sciences. Spring: partial derivatives, multiple integrals, first- and second-order ordinary differential equations with applications in the physical and engineering sciences.

294 Engineering Mathematics Fall, spring, and summer. 4 credits. Prerequisite: Mathematics 293. *

Fall: Secs, M W F 10:10 or 12:20; plus one hour to be arranged. Spring: Secs, M W F 10:10, 11:15, or 12:20; plus one hour to be arranged. Prerequisites: fall, 7:30 p.m. Oct. 5, Nov. 4, Dec. 7; spring, 7:30 p.m. Feb. 24, Mar. 22, Apr. 26.

General Courses

Students who want a general introductory mathematics course are advised to take Mathematics 107-108, described above.

401 Honors Seminar Fall or spring. 4 credits. Prerequisite: permission of instructor. General students will discuss selected topics under the guidance of one or more members of the staff.

[403 History of Mathematics Spring. 4 credits. Prerequisite: one term of calculus and permission of instructor. Not offered 1982-83.

T R 10:10-11:25.

Topics in mathematics from antiquity to the present.]

[408 Development of Modern Mathematical Thought Spring. 4 credits. Limited to students who are completing a major in mathematics or in a related subject with a strong concentration in mathematics. Prerequisites: Mathematics 411 or 421, and 431 or 231. Not offered 1982-83.

Selected topics tracing the development of mathematics from antiquity to the present (including harmonic analysis and music, calculus, foundations, and modern physics), chosen to shed light on general questions such as What is Mathematics? How does it develop? How does it relate to other areas of knowledge? Students will be expected to write expository papers.)

690 Supervised Reading and Research Variable credit (up to 6 credits each term).

Applied Mathematics and Differential Equations

[305 Mathematics in the Real World Fall or spring. 4 credits. Not offered 1982-83.]

421 Applicable Mathematics Fall, spring, and summer. 4 credits. Prerequisites: high level of performance in Mathematics 294, or 217 and 222, or 214-217 and 301. Students who need mathematics extensively in their work and who have had a solid advanced calculus course and complex variables course as undergraduates should take Mathematics 515-516. With less preparation, they should take Mathematics 421-422-423. Students who have not had infinite series, some linear algebra, and some ordinary differential equations should take Mathematics 214-218, 231, and then Mathematics 421-422-423.

423 Applicable Mathematics Fall. 4 credits. Prerequisite: Mathematics 421; however, students who have not taken 422 should talk to the instructor before taking this course. T W R F 12:20.

[425 Numerical Solutions of Differential Equations Spring. 4 credits Prerequisites: Mathematics 222 or 294, one course numbered 300 or higher in mathematics, and Computer Science 321, or consent of the instructor. This course is a natural sequel to Computer Science 321. Not offered 1982-83.

M W F 11:15.

427 Introduction to Ordinary Differential Equations Fall. 4 credits. Prerequisite: Mathematics 222 or 294, or permission of instructor. Offered alternate years. TR 10:10-11:25.

Covers the basic existence, uniqueness, and stability theory together with methods of solution and methods of approximation. Topics include singular points, series solutions, Sturm-Liouville theory, transform methods, approximation methods, and application to physical problems.

[428 Introduction to Partial Differential Equations Spring. 4 credits. Prerequisite: Mathematics 222 or 294 or permission of instructor. Not offered 1982-83.

T R 10:10-11:25.

Topics selected from first-order quasilinear equations, classification of second-order equations, with emphasis on maximum principles, existence, uniqueness, stability, Fourier series methods, approximation methods.]}

Analysis

411-412 Introduction to Analysis Fall and second term. Prerequisite: Mathematics 222. Students who need measure theory and Lebesgue integration for advanced probability courses should take Mathematics 413-414 or arrange to audit the first few weeks of Mathematics 521. Undergraduates who plan to attend graduate school in mathematics should take Mathematics 413-414. TR 8:40-9:55.

An introduction to the theory of functions of real variables, stressing rigorous logical development of the subject rather than technique of applications. Topics include Euclidean spaces, the real number system, continuous and differentiable functions, Riemann integral, uniform convergence and approximation theorems, Fourier series, calculus in several variables, and differential forms.

413-414 Introduction to Analysis Fall, second term. Prerequisite: Mathematics 222 or 294. Spring. 4 credits each term. Prerequisite: Mathematics 222 or 294.

TR 8:40-9:55.

Honors version of Mathematics 411-412. Metric spaces are included in 413, and 413 proceeds at a faster pace than 411. The second semester includes an introduction to the Lebesgue integral.

418 Introduction to the Theory of Functions of One Complex Variable Spring. 4 credits. Prerequisite: Mathematics 222 or 294 or 214-218. May be offered only in alternate years.

A rigorous introduction to complex variable theory. Complex numbers. Differential and integral calculus for functions of a complex variable including Cauchy’s theorem and the calculus of residues. Elements of conformal mapping.

Algebra

231 Linear Algebra Spring. Summer. 3 credits. Prerequisite: one year of calculus. *

MWF 10:10.

Vectors, matrices, and linear transformations; affine and Euclidean spaces, transformation of matrices, and eigenvalues.

332 Algebra and Number Theory Fall only. 4 credits. Prerequisite: one year of calculus. (Also one course from 221, 231, and 294, effective 1982-83). Mathematics 332 does not satisfy prerequisites for courses numbered 500 and above.

M W F 9:05.

Various topics from modern algebra and number theory, usually including rings, fields, and finite groups. Motivation and examples are derived mostly from geometry, arithmetic, and congruence problems on the integers.

336 Applicable Algebra Spring. 4 credits. Prerequisites: Mathematics 221, or 294, or 217 and 231.

M W F 9:05.

An introduction to concepts and methods of abstract algebra that are of importance in science and engineering. Applications of the theory to concrete problems will be stressed. Each year the course will treat aspects of the following topics: partially ordered sets, lattices, graph theory, and Boolean algebra; finite machines and languages; applications of groups, fields, and modular arithmetic, such as Latin squares; elementary concepts of coding theory; or Fourier transform; difference equations. Additional topics may be chosen by the instructor.

431-432 Introduction to Algebra Fall and second term. Prerequisite: Mathematics 221 or 231. Undergraduates who plan to attend graduate school in mathematics should take Mathematics 433-434.

M W F 10:10.

431: an introduction to linear algebra, including the study of vector spaces, linear transformations, matrices, and systems of linear equations; quadratic forms and inner product spaces; canonical forms for various classes of matrices and linear transformations; determinants. 432: an introduction to various topics in abstract algebra, including groups, rings, fields, factorization of polynomials and integers, congruences, and the structure of finitely generated modules over Euclidean domains with application to canonical forms of matrices.

433-434 Introduction to Algebra Fall and second term. 4 credits each. Prerequisite: Mathematics 221 or 231.

M W F 10:10.

Honors version of 431-432. Mathematics 433-434 will be more theoretical and rigorous than 431-432 and will include additional material such as multilinear and exterior algebra.
451-452 Classical Geometries 451, fall; summer, 452, spring. 4 credits each term. Prerequisite: 221 or 231 or permission of instructor. [Mathematics 452 not offered 1982-83.]
M W F 11:15. Foundations of geometry. Various geometric topics, including Euclidean, non-Euclidean, and projective geometry and rigidity theory.

453 Introduction to Topology Fall. 4 credits. Prerequisites: Mathematics 411 and 221, or permission of instructor.
M W F 12:20. Basic point set topology, connectedness, compactness, metric spaces, fundamental group. Application of these concepts to surfaces such as the torus, the Klein bottle, the Moebius band.

454 Introduction to Differential Geometry Spring. 4 credits. Prerequisite: Mathematics 222 or 294. Mathematics 453 is not a prerequisite.
M W F 12:20. Differential geometry of curves and surfaces. Curvature, geodesics, differential forms. Introduction to n-dimensional Riemannian manifolds. This material provides some background for the study of general relativity, connections with the latter will be indicated.

Probability and Statistics

372 Elementary Statistics Spring. 4 credits. Prerequisites: one year of calculus; also Computer Science 100 or 101 or 108, or permission of instructor. A terminal course for students who will take no further courses in statistics.
M W F 9:05. Prelims: 7:30 p.m. Feb. 17, Mar. 17, Apr. 21. Introduction to the principles underlying modern statistical inference, to the practical application of statistical techniques, and to the rationale underlying the choice of statistical methods in various situations. Topics in probability that are essential to an understanding of statistics. Homework involves statistical analysis of data sets on hand calculators and on a computer by means of packaged programs.

471 Basic Probability Fall. 4 credits. Prerequisite: Mathematics 221. May be used as a terminal course in basic probability. Intended primarily for those who will continue with Mathematics 472.
Leve, M W F 11:15, rec. R 12:20. Prelims: 7:30 p.m. Sep. 30, Oct. 28, Dec. 2. Topics covered include combinations, important probability laws, expectations, moments, moment-generating functions, limit theorems. Emphasis is on diverse applications and on development of use in statistical applications. See also the description of Mathematics 571.

472 Statistics Spring. 4 credits. Prerequisite: Mathematics 471 and knowledge of linear algebra such as taught in Mathematics 221.*
M W F 11:15. Prelims: 7:30 p.m. Feb. 17, Mar. 17, Apr. 21.*
Classical and recently developed statistical procedures are discussed in a framework that emphasizes the basic principles of statistical inference and the rationale underlying the choice of these procedures in various settings. These settings include problems of estimation, hypothesis testing, large sample theory.

473 Further Topics in Statistics Fall. 4 credits. Prerequisite: Mathematics 472 or 574. For corresponding subject matter taught in more detail, see description of Mathematics 573 and 875.
M W F 9:05.

Mathematical Logic

381 Elementary Mathematical Logic Spring. 4 credits. Prerequisite: Mathematics 122.

Graduate Courses

503 History of Mathematics Spring. 4 credits. Prerequisites: Mathematics 511 and 531. Intended for graduate students in the mathematical sciences. May not be offered 1982-83.
This course will be devoted to the history of mathematics in the nineteenth century from the original sources, with emphasis on the history of the foundations of analysis and of the foundations of commutative algebra. Typical authors in algebra who will be studied are Lagrange, Ruffini, Gauss, Abel, Galois, Dirichlet, Kummer, Kronecker, Dedekind, Weber, M. Noether, Hilbert, Steinitz, Artin, and E. Noether. Typical authors in analysis who will be studied are Cauchy, Fourier, Bolzano, Dirichlet, Reimann, Weierstrass, Heine, Cantor, Peano, and Hilbert. If time permits, a sketch will be given of the history of probability and statistics from Bernoulli to Pearson. Students will be required to read and explain one important nineteenth century paper.

511-512 Real and Complex Analysis
511: measure and integration, functional analysis. 512: complex analysis, Fourier analysis, and distribution theory.

515-516 Mathematical Methods in Physics
515: fall, 516, spring. 4 credits each. Intended for graduate students in physics or related fields who have had a strong advanced calculus course and at least two years of general physics. A knowledge of the elements of finite dimensional vector space theory, complex variables, separation of variables in partial differential equations, and Fourier series will be assumed. The course overlaps with parts of Mathematics 491-492-493. Undergraduates will be admitted only with permission of instructor.
Mathematics 515 is a prerequisite for 516.
M W F 12:20.
Topics designed to give a working knowledge of the principal mathematical methods used in advanced physics. A brief discussion of some basic notions: metric space, vector space, linearly, continuity, integration. Generalized functions (Schwartz distributions), Fourier series and Fourier integrals. Saddle point method. Linear operators. Differential operators and integral operators, the equations and eigenvalues of differential operators with them, and their special functions arising from them. Elements of group theory. The rotation group and its representations.

517-518 Ordinary Differential Equations
Not offered 1982-83.
Basic theory of ordinary differential equations.

519-520 Partial Differential Equations
521 Measure Theory and Lebesgue Integration
Measure theory, integration, and LP spaces.
522 Applied Functional Analysis
Spectral theorem for bounded operators, spectral theory for unbounded operators in Hilbert space, compact operators, distributions, applications.

527 Analysis of Numerical Methods for Partial Differential Equations
Not offered 1982-83.
Tools for analyzing practical numerical methods, especially with regard to asymptotic convergence. Finite difference and finite element method.

531-532 Algebra
531: finite groups, field extensions, Galois theory, rings and algebras, tensor and exterior algebra. 532: Wedderburn structure theorem, Brauer group, group cohomology. Ext. Dedekind domains, primary decomposition, Hilbert basis theorem, local rings. Additional topics selected by instructor.

537 Elementary Number Theory
Prerequisites: Mathematics 432 and 412. Not offered 1982-83.
Introduction to number theory, suitable for first-year graduate students and advanced undergraduates. Choice of topics discussed depends upon the instructor. In previous years the text has been A Course in Arithmetic by J. P. Serre; the topics covered have included quadratic forms, quadratic reciprocity, and modular forms.

549-550 Lie Groups and Differential Geometry

551 Introductory Algebraic Topology
Fundamental group and covering spaces. Homotopy theories for complexes and spaces.

552 Differentiable Manifolds
Prerequisites: advanced calculus and some elementary point-set topology (e.g., knowledge of the concepts of continuity, compactness, and connectedness). This course will be an introduction to differential topology, intended for undergraduate seniors and beginning graduate students. The first part of the course will emphasize examples and constructions of manifolds. Topics will include Cr and analytic structures, non-smooth manifolds, immersions and imbeddings, tangent bundles, tubular neighborhoods, transversality, cobordism, vector fields and dynamical systems, foliations.

561 Geometric Topology
Not offered 1982-83.
Topics from general topology. Introduction to geometric properties of manifolds.

571-572 Probability Theory

571-574 Probability and Statistics
This course is a prerequisite to all advanced courses in statistics. 571: same as Mathematics 571 above. 574: topics include an introduction to statistical decision theory, the method of maximum likelihood; the classical tests of hypotheses and their power; the theory of confidence intervals; the basic concepts of statistical decision theory, the fundamentals of sequential analysis. Intended to furnish a rigorous introduction to mathematical statistics.

573 Experimental Design, Multivariate Analysis

575 Sequential Analysis, Multiple Decision Problems
Not offered 1982-83.
581 Logic
Basic topics in mathematical logic, including propositional and predicate calculus, formal number theory and recursive functions; completeness and incompleteness theorems.

611-612 Seminar in Analysis
Topological vector spaces. Banach and Hilbert spaces. Banach algebras. Additional topics to be selected by instructor.

613 Functional Analysis
Topological vector spaces. Banach and Hilbert spaces. Banach algebras. Additional topics to be selected by instructor.

627 Seminar in Partial Differential Equations
631-632 Seminar in Algebra
635 Topics in Algebra I
Selection of advanced topics from algebra, algebraic number theory, and algebraic geometry. Course content varies.

637 Algebraic Number Theory
639 Topics in Algebra II
Selection of advanced topics from algebra, algebraic number theory, and algebraic geometry. Course content varies.

640 Homological Algebra
651-652 Seminar in Topology
653-654 Algebraic Topology
Duality theory in manifolds, applications, cohomology operations, spectral sequences, homotopy theory, general cohomology theories, categories and functors.

657-658 Advanced Topology
Selection of advanced topics from modern algebraic, differential, and geometric topology. Course content varies.

661-662 Seminar in Geometry
667 Multivariate Analysis
Not offered 1982-83.

670 Topics in Statistics
A course taught occasionally to cover special topics in theoretical statistics not treated in other listed courses. Typical of the subjects that will be treated are time series analysis, and classification and cluster analysis.

671-672 Seminar in Probability and Statistics
674 Multivariate Analysis
Not offered 1982-83.

675-678 Statistical Decision Theory
677-678 Stochastic Processes
681-682 Seminar in Logic
683 Model Theory
684 Recursion Theory

685 Metamathematics
Topics in metamathematics. Course content varies.

687 Set Theory
Not offered 1982-83.

688 Automatic Theorem Proving
Fall. Prerequisites: Math 581. Some feeling for what is computationally feasible, using existing and near-term technologies, would be helpful. Automatic theorem proving is that area of formal logic concerned with proof-theoretic computational efficiency. This course will survey the following areas: (1) Machine-oriented predicate calculus systems (reduction and natural deduction styles); (2) the computational complexity of the decidable fragments of predicate calculus and other frequently occurring decidable theories (e.g. Presburger arithmetic); (3) rewrite rule systems, which simplify expressions in algebraic theories to normal forms and the basic theorems in universal algebra that guarantee that such normal forms exist; (4) languages for knowledge representation, which facilitate the accessing according to content of possibly useful prior results; (5) heuristic systems, which discover proofs through educated guesses (e.g., which variable one should induct on to prove the associativity of addition); (6) artificial intelligence systems, which aim to simulate the evolution of mathematics by automatically generating new concepts, generalizations, conjectures from existing theorems.

690 Supervised Reading and Research

Modern Languages and Linguistics

The Department of Modern Languages and Linguistics offers courses in linguistics (the study of the structure of language) and elementary, intermediate, and advanced courses in the minor as well as the major languages of Europe and South, Southeast, and East Asia. Students take these courses because they are interested in the structure of language or because they are interested in the area in which the language is spoken.

See Modern Languages, Literatures, and Linguistics, below.

Modern Languages, Literatures, and Linguistics
Courses in modern languages, literatures, and linguistics are offered by various departments of the college. Most courses in modern languages and linguistics are offered by the Department of Modern Languages and Linguistics (see Linguistics, p. 155). Literature courses, and certain language courses as well, are taught by the following departments:

African Studies and Research Center: Swahili
Asian Studies: Chinese, Japanese
Classics: Greek, Latin
German Literature: German
Near Eastern Studies: Akkadian, Arabic, Aramaic, Hebrew
Romance Studies: French, Italian, Spanish
Russian Literature: Russian

The Full-Year Asian Language Concentration (FALCON Program) offers intensive instruction in Chinese, Japanese, or Indonesian to students wishing to gain fluency in the language in a single year.

Arabic
See listings under Near Eastern Studies.

Burmese
101-102 Elementary Course
Fall; 101, spring. 6 credits each term. Prerequisite for Burmese 102: Burmese 101 or equivalent. Hours to be arranged. R. B. Jones. A semi-intensive course for beginners or for those who have been placed in the course by examination. The purpose of the course is to give a thorough grounding in all the language skills: listening, speaking, reading, and writing.

201-202 Burmese Reading
Fall; 201, spring. 3 credits each term. Prerequisites: for Burmese 201, qualification in Burmese; for Burmese 202, Burmese 201.

Hours to be arranged. R. B. Jones.

203-204 Composition and Conversation
Fall; 203, spring. 3 credits each term. Prerequisites: for Burmese 203, qualification in Burmese; for Burmese 204, Burmese 203.

Hours to be arranged. R. B. Jones.

301-302 Advanced Burmese Reading
Fall; 301, spring. 4 credits each term. Prerequisites for Burmese 301, Burmese 202 or permission of instructor.

Hours to be arranged. R. B. Jones.

Cambodian (Khmer)
101-102 Elementary Course
Fall; 101, spring. 6 credits each term. Prerequisite for Cambodian 102: Cambodian 101 or equivalent.

Hours to be arranged. F. E. Huffman.

201-202 Cambodian Reading
Fall; 201, spring. 3 credits each term. Prerequisites: for Cambodian 201, qualification in Cambodian; for Cambodian 202, Cambodian 201.

Hours to be arranged. F. E. Huffman.

203-204 Composition and Conversation
Spring. 3 credits each term. Prerequisites: for Cambodian 203, qualification in Cambodian; for Cambodian 204, Cambodian 203.

Hours to be arranged. F. E. Huffman.

301-302 Advanced Cambodian
Spring. 4 credits each term. Prerequisites: for Cambodian 301, Cambodian 201-202 or the equivalent; for Cambodian 302, Cambodian 301.

Hours to be arranged. F. E. Huffman.

401-402 Directed Individual Study
Spring. 4 credits each term. Prerequisite: permission of instructor.

Hours to be arranged. F. E. Huffman.

404 Structure of Cambodian
Spring. 4 credits. Prerequisite: Linguistics 101-102 or equivalent.

Hours to be arranged. F. E. Huffman.

Cebuano (Blasian)
101-102 Basic Course
Fall; 101, spring. 6 credits each term. Prerequisite for Cebuano 102. Cebuano 101 or equivalent.

Hours to be arranged. J. U. Wolff.

A semi-intensive course for beginners.
Chinese

Languages and Linguistics

101-102 Elementary Course 101, fall; 102, spring. 6 credits each term. Prerequisite for Chinese 102: Chinese 101 or equivalent.
Lecs, M W F 9:05; drill, M-F 2:30. C. Ross, W. Wang, and staff.
A semi-intensive course for beginners or for those who have been placed in the course by examination. The course gives a thorough grounding in all the language skills: listening, speaking, reading, and writing.

111-112 Cantonese Basic Course 111, fall; 112, spring. 6 credits each term. Prerequisite: permission of instructor.
Conversation in standard Cantonese and readings in modern expository Chinese with Cantonese pronunciation.

201-202 Intermediate I 201, fall; 202, spring. 4 credits each term. Prerequisite: qualification in Chinese.
M-F 9:05 or 11:15. P. Wang and staff.

211-212 Intermediate Cantonese I 211, fall; 212, spring. 4 credits each term. Prerequisite: Cantonese 112 or permission of instructor.
Hours to be arranged. S. Fessler.

213-214 Introduction to Classical Chinese 213, fall; 214, spring. 3 credits each term. Prerequisite: qualification in Chinese or permission of instructor.
This course may be taken concurrently with Chinese 101-102, 201-202, or 301-302. 213: M W F 11:15, plus 1 hour to be arranged. 214: hours to be arranged. Staff.

301-302 Intermediate Chinese II 301, fall; 302, spring. 4 credits each term. Prerequisite: for Chinese 301, Chinese 202 or equivalent; for Chinese 302, Chinese 301.
M W F 11:15. P. Ni.
Readings and drill in modern expository Chinese.

303-304 Chinese Conversation—Intermediate 303, fall; 304, spring. 1 credit each term. May be repeated for credit. Prerequisite: Chinese 201-202. S-U grades only.
T R 1:25. Staff.
Guided conversation and oral composition and translation. Corrective pronunciation drill.

311-312 Intermediate Cantonese II 311, fall; 312, spring. 4 credits each term. Prerequisite: Cantonese 212 or permission of instructor.
Hours to be arranged. S. Fessler.

315-316 Chinese Composition 315, fall; 316, spring. 4 credits each term. Prerequisite: Chinese 202 or 212.
M W F 10:00. P. Ni.
Special emphasis on developing the style and vocabulary of modern written Chinese through practice and example.

401 History of the Chinese Language Fall or spring, according to demand. 4 credits. Prerequisite: permission of instructor.
S-U grades only. T R 1:25. Staff.
Survey of phonological and syntactic developments in Chinese.

[403 Linguistic Structure of Chinese: Phonology and Morphology Fall or spring according to demand. 4 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1982-83.
Hours to be arranged. C. Ross.
Introductory course in the phonology of modern Mandarin Chinese.

[404 Linguistic Structure of Chinese: Syntax Fall or spring, according to demand. 4 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1982-83.
C. Ross.
Syntax of modern Mandarin Chinese.

405 Chinese Dialects Fall or spring, according to student demand. 4 credits. Prerequisite: permission of instructor.
Hours to be arranged. J. McCoy.
Introductory survey of modern dialects and their distinguishing characteristics.

411-412 Readings in Modern Chinese Literature 411, fall; 412, spring. 4 credits each term. Prerequisite: Chinese 302.
M W F 1:25. P. Ni.

607 Chinese Dialect Seminar Fall or spring on student demand. 4 credits. Prerequisite: Chinese 405 and permission of instructor.
Hours to be arranged. J. McCoy.
Analysis and field techniques in a selected dialect area.

FALCON

161-162 Intensive Mandarin Course 161, fall; (parallels first 16 credits of instruction in regular program); 162, spring (parallels second 16 credits of instruction in regular program). Prerequisite: permission of instructor.
J. McCoy and staff.

Literature

313 Chinese Philosophical Texts Fall or spring on demand. 4 credits. Prerequisite: Chinese 214.
T. L. Mei.

314 Classical Narrative Texts Spring. 4 credits. Prerequisite: Chinese 214.
E. M. Gunn.

420 Tang and Sung Poetry Fall or spring on demand. 4 credits. Prerequisite: permission of instructor.
T. L. Mei.

421-422 Directed Study Fall or spring or both. 2-4 credits each term. Prerequisite: permission of instructor.
Staff.

424 Readings in Literary Criticism Fall or spring on demand. 4 credits. Prerequisite: permission of instructor.
T. L. Mei.

430 Readings in Folk Literature Fall or spring on demand. 4 credits. Prerequisite: permission of instructor.
J. McCoy.
Readings and drill in modern expository Chinese with Cantonese pronunciation.

461-462 Reading Course 461, fall; 462, spring. 3 each term. Prerequisite: permission of instructor.
Hours to be arranged. F. C. Van Coeswem.

[Seminar in Dutch Linguistics (German 740)
Not offered 1982-83.]

English

Intensive English Program, see p. 193.

102 English as a Second Language Fall. 6 credits. Prerequisite: placement by the instructor.
M-F 9:05. M. Martin.
Intermediate spoken and written English, with emphasis on speaking, understanding, and reading.

103 English as a Second Language Spring. 3 credits. Prerequisite: English 102 or placement by the instructor.
M W F 2:30. M. Martin.
Designed for those who have completed English-102 and who require or desire further practice. Emphasis is on developing control of written as well as spoken language.

211-212 English as a Second Language 211, fall; 212, spring. 3 credits each term. Prerequisite: placement by the instructor.
M W F 10:15. 230; T R 2:30-4. M. Martin.
Advanced reading and writing, with emphasis on improving vocabulary and control of college-level written English.

213 English for Nonnative Speakers. Spring. 3 credits. Prerequisite: placement by the instructor.
T R 10:10, plus a weekly interview. M. Martin.
Designed for those whose writing fluency is sufficient for them to carry on regular academic work but who feel the desire for refining and developing their ability to express themselves clearly and effectively. As much as possible, students receive individual attention.

Freshman Seminar

215-216 English for Later Bilinguals 215, fall; 216, spring. 3 credits each term. Not designed for students whose schooling has been entirely in English.
M W F 2:30. M. Martin.
A course designed to strengthen the English language skills of students who have studied for one to five years in American high schools and whose language in the home is not English. Intensive work in written English is offered, with emphasis on sentence structure, cohesion, vocabulary expansion, grammatical structure, and maturity of style.

French

J. Béreaud, chairman; D. Brewer, A. M. Colby-Hall, I. Daly, N. Furman (director of undergraduate studies), 262 Goldwin Smith Hall, 256-8222), D. I. Grossvogel, J. Herschansohn, R. Klein, P. Lewis, S. A. Littauer, E. P. Morris, J. S. Nobitt, A. Szene, L. R. Waugh

The Major

The major in French is designed to give students proficiency in the oral and written language, to acquaint them with French literature and culture, and to develop skills in literary and linguistic analysis.

While prospective majors should try to plan their programs as far ahead as possible, no student will be refused admission merely because of a late start. It is even possible for a student to begin French at Cornell and become a major. Students wishing to major in French should consult the director of undergraduate studies, Professor Furman.
Department of Romance Studies, who will admit them to the major. After their admission, students will choose an advisor from among the French faculty. Students interested in the linguistics option should consult Professor Waugh, Department of Modern Languages, Literatures, and Linguistics.

The major has a core, required of all majors, and two options that attempt to reflect the variety of student interests yet maintain the focus for a coherent and substantial program of studies.

The Core
1) All majors are expected to acquire a sound degree of competence in language. This competence is demonstrated by the successful completion of French 312 or by the passing of a special examination to be taken no later than the end of the junior year. A typical program will involve two semesters of language at the 200 level (to be taken no later than the end of the sophomore year) and two semesters of language at the 300 level (311-312). Students may bypass any part of the sequence through placement examinations.

2) In addition, all majors are expected to take French 201 and French 202. At least one of these should be completed successfully no later than the end of the sophomore year.

The Options
The following groups intentionally overlap in part, yet each is intended to emphasize different aspects of French culture.

The literature option
1) The successful completion of six additional courses in French literature or civilization at the 300 level or above. These courses will be selected in consultation with the student's major advisor and will normally include at least one course from each of the three major periods of French literature (medieval to Renaissance, the seventeenth and eighteenth centuries, and the nineteenth and twentieth centuries).

2) The successful completion of two related courses in one of the following: (a) French literature; (b) French linguistics; (c) French history, culture, music, or history of art or architecture; (d) courses in linguistic theory, history of language, psycholinguistics, or philosophy of language.

The linguistic option
1) The successful completion of six courses in French and general linguistics (in addition to Linguistics 101-102). These courses will include at least one course in the history of French and one course in French literature.

2) The successful completion of two courses (preferably a sequence) in one of the following: (a) French literature and civilization; (b) psycholinguistic or philosophy of language; (c) anthropological linguistics.

Whatever option a student chooses, he or she is urged to take advantage of the ample flexibility offered by the French major. Students who wish to pursue careers in business, law, medicine, or teaching may coordinate their work with preprofessional programs. Similarly, interdisciplinary work is strongly encouraged; students may elect to enrich their major with related courses in history, archaeology, Classics, comparative literature, English and American literature, anthropology, music, history of art, philosophy, government, linguistics, and other literatures and languages.

French majors may study in France for a semester or a year during their junior year under any of the several study-abroad plans that are recognized by the Department of Romance Studies and the Department of Modern Languages and Linguistics and allow for the transfer of credit. The director of undergraduate studies has information about such plans.

Honors. The honors program encourages well-qualified students to do independent work in French, outside the structure of courses. The preparation of the senior honors essay, generally involving three terms, provides a unique learning opportunity, since it allows for wide reading, careful outlining, and extensive rewriting to a degree not practically possible in the case of course papers. At each stage of their work, the students will have regular weekly meetings with faculty tutors.

No special seminars or courses are required of honors students. The junior tutorial (ordinarily two terms) will be devoted to intensive study of selected problems or authors and to the choice of a topic for the honors essay; the senior tutorial is devoted to the writing of the essay. Honors students may release from one or two courses in either the junior or senior year to have adequate time for honors work. (Credit is obtained by enrolling in French 419-420.) Students will take an informal oral examination at the end of the senior year. Honors students are selected on the basis of their work in French language and literature courses in the freshman and sophomore years. Students interested should consult Professor Béreux for details no later than the spring term of the sophomore year, and earlier if possible. Honors work in French linguistics will be supervised by Professor Waugh.

Fees. Depending on the course, a small fee may be charged for copies of texts for course work.

Languages and Linguistics
121-122 Elementary Course 121, fall; 122, spring. 4 credits each term. Intended for beginners or students placed by examination. Prerequisite for French 122: French 121 or equivalent. Students who obtain a CPT score of 560 after French 121-122 attain qualification and may enter the 200-level sequence; otherwise French 123 is required for qualification.

Lec, R 9:05, 10:10, 11:15, or 12:25; drills, M T W F 8:30-9:20, 9:05, 10:10, 11:15, 12:20, 12:25, 1:25, 2:30, or 3:35.

N. Gaenslen.

A thorough grounding in all the language skills is given: listening, speaking, reading, and writing. Language practice is in small groups. Lectures cover grammar, reading, and cultural information.

123 Continuing French Fall or spring, 4 credits. Limited to students who have previously studied French and have a CPT achievement score between 450 and 559. Satisfactory completion of French 123 fulfills the qualification portion of the language requirement.

Lec, T 10:10 or 12:20, drills, M W F R 8:30-9:05, 9:05, 10:10, 11:15, 12:20, 12:25, 1:25, 2:30, or 3:35.

J. Herschensohn.

An all-skills course designed as the final course in the sequence. A review of grammar is included in class; slides and recordings will accompany lectures.

204 Intermediate Composition and Conversation Fall or spring, 3 credits. Prerequisite: French 201 or 211. Fulfillment of the language requirement. Offered by the Department of Modern Languages and Literatures. Prerequisite: French 201 or 211, or placement by Advanced Standing Examination offered by the Department of Modern Languages and Literatures or the Department of Romance Studies.

Fall: lec, T 2:30, drills, M W F 10:10, 11:15, or 12:25; drills, M W F 9:05, 10:10, 11:15, 12:20, or 1:25. S. A. Littauer.

Emphasis on conversation. Weekly grammar review in addition to composition.

205 Intermediate Composition and Conversation Fall or spring, 3 credits. Enrollment limited. Prerequisite: French 201 or 211. Placement by Advanced Standing Examination offered by the Department of Modern Languages and Literatures or the Department of Romance Studies.

Fall: lec, T 2:30, drills, M W F 10:10, 11:15, or 12:25; drills, M W F 9:05, 10:10, 11:15, 12:20, or 1:25. S. A. Littauer.

Emphasis on conversation with some grammar review and composition. All based on contemporary texts. Taught in French.

211 Intermediate French Fall. 3 credits. Offered by the Department of Romance Studies. Prerequisite: qualification.

M W F 10:10 or T R 10:10-11:25. Staff.

Provides an systematic grammar review with emphasis on written responses. Reading competence is acquired through the study of short stories. Taught in French.

212 Intermediate French Spring. 3 credits. Offered by the Department of Romance Studies. Prerequisite: French 211 or 203, or placement by Advanced Standing Examinations administered by either the Department of Modern Languages and Literatures or the Department of Romance Studies.

M W F 11:15 or 12:20. Staff.

Concerned with vocabulary expansion and the development of analytical reading ability. Taught in French.

310 Advanced Conversation Fall or spring. 2 credits. Enrollment limited. Prerequisite: French 203 or 211 (or an equivalent on the Cornell CASE placement examination).

T R 10:10-11:25 or 2:30-3:45. J. Béreux and staff.

This course is based on audio-visual materials used in class; slides and recordings will accompany extensive discussion. A modest amount of reading each week will aim at increasing students' vocabulary.

311 Advanced Conversation and Conversation Fall. 4 credits. Offered by the Department of Romance Studies. Prerequisite: French 204 or 212 or placement by the CASE test.

M W F 10:10 or 12:25, or T R 10:10-11:25. Staff.

All-skills course. Detailed study of present-day syntax. Reading and discussion of texts of cultural relevance.

312 Advanced Conversation and Conversation Spring. 4 credits. Prerequisite: French 311 or placement by CASE test.

M W F 10:10 or 12:25, or T R 10:10-11:25. Staff.

Continuation of work done in French 311. Grammar will be curtailed; reading and discussion of literary texts and of topics of general interest will be increased.

401 History of the French Language Fall 4 credits. Prerequisites: qualification in French and Linguistics 101, or permission of instructor. Offered alternate years. Not offered 1982-83.

M W F 2:30 J. Herschensohn.

Diachronic development of French from Latin, with emphasis on phonological and morphological change. Course work will be directed toward problems in reconstruction, textual analyses, discussions of theoretical topics, and external history.

407 Applied Linguistics: French Fall. 4 credits. Prerequisite: qualification in French.

M W F 10:10 J. S. Nobilst.

Designed to equip the student with the ability to apply linguistic descriptions in teaching French, with special emphasis on phonetics and morphology.

408 Linguistic Structure of French Spring. 4 credits. Prerequisite: qualification in French and Linguistics 101, or permission of instructor. Offered alternate years.

M W F 2:30 J. Herschensohn.
A descriptive analysis of modern French, with emphasis on its phonology, morphology, and syntax.

[410 Semantic Structure of French] Fall or spring. 4 credits. Prerequisite: permission of instructor. Open to various levels. Not offered 1982-83; next offered 1983-84.

Hours to be arranged. L. R. Waugh. Introduction to French semantic elements—morphological, lexical and syntactic—from a Jakobsonian and functional perspective.

[602 Linguistic Structure of Old and Middle French] Spring. 4 credits. Prerequisite: French 408 or permission of instructor. Not offered 1982-83. Next offered 1983-84.

Hours to be arranged. J. S. Nobbitt. Through the study of Old and Middle French texts, students analyze synchronically aspects of the grammar of the language at different periods.

[604 Contemporary Theories of French Grammar] Fall. 4 credits. Prerequisite: permission of instructor.

Hours to be arranged. Staff. Selected readings of twentieth-century French linguistics.

700 Seminar in French Linguistics Fall or spring, according to demand. 4 credits.

Hours to be arranged. Staff. Seminars are offered according to faculty interest and student demand. Topics in recent years have included current theories in French phonology, current theories in French syntax, semantics of French.

Literature

[109 Freshman Seminar: An Introduction to Semiotics (also Romance Studies 109)] Fall and spring. 3 credits.

TR 10:10. Staff.

In its broadest meaning semiotics is the study of signs that carry information: roadside signs, fashions, advertisements, publicity posters, literary modes. This course, which does not presuppose prior technical knowledge, will introduce the students to a critical reading of signs: the signifier (the concrete expression of the sign) and the signified (the message) and their various interactions. Readings will include such books as R. Barthes, Mythologies, or T. Hawkes, Structuralism and Semiotics. Exercises will be essays on how to analyze various signs taken from practical experience, such as advertisements from magazines or TV or from cultural phenomena (fashion codes, artistic modes).

201 Introduction to French Literature Fall or spring. 3 credits. Prerequisite: qualification. French 201 serves as a prerequisite for all 300-level courses in French literature and is required of all majors. The course is divided into small sections of three types: those conducted in French; those that use more French as the term progresses; those conducted in English. The reading in each section is in French and is the same; students may write their principal papers in English. Relative freedom to change from one section of the course to another is given during the first two weeks.

Fall: M W F 9:05, 10:10, 11:15, or 12:20, or T R 8:40-9:55 or 10:10-11:15. (Tentatively, the section primarily conducted in English will be M W F 9:05; the sections primarily conducted in French will be M W F 10:10, M W F 11:15, and T R 8:40-9:55. The sections using both French and English will be M W F 12:20 and T R 10:10-11:25.) Spring: M W F 11:15 or 12:25, or T R 10:10-11:25. D. Grossvogel and staff.

The work of five or six major French authors from the nineteenth and twentieth centuries is introduced (films, novels, plays, poems). Stress is on the development of reading skills and, more specifically, on questions referring to cultural, sociological, and aesthetic implications of the texts. Readings will include the works of such authors as Baudelaire, Mallarme, Proust, Sartre, Camus, Beckett, and Ionesco.

202 Studies in French Literature Fall or spring. 3 credits. Prerequisite: French 201 or a CEEB achievement score of 650 or more (students who have not taken French 201 should obtain consent of instructor; those with scores in the 560-649 range should see the description of French 200 and 201). Required of all majors, but not limited to them. A fee is charged for a number of short texts distributed by the instructor.

Study of the classic literature of seventeenth-century France (Corneille, Racine, Moliere, Madame de Lafayette) and its immediate forebears (Montaigne) and successors in the Enlightenment (Voltaire, Rousseau, Diderot, Beauharnais).

The history of French theater is followed from Romanticism to the present, with emphasis on theatrical experiments in the twentieth century. Plays to be studied will be chosen from works by such authors as Hugo, Musset, Vigny, Dumas, Claudel, Giraudoux, Cocteau, Sartre, Beckett, Ionesco, Genet.

[334 The Novel as Masterwork: French Novels of the Nineteenth Century.] Not offered 1982-83; next offered 1983-84.

[358 Gustave Flaubert] Fall. 4 credits.

M W F 11:15-12:05. N. Furman.

Facts and fiction: the question of realism seen in Flaubert's work. The primary goals of this course.

[369 Comic Theater in the Seventeenth Century] Spring. 4 credits.

T R 2:30. P. Lewis.

The principal focus of this course will be the comedies of Corneille and Moliere. In addition, there will be an attempt to follow the evolution of a half-century of comic theater (1625 to 1785) with attention to some interesting, if relatively minor works by Racan, Maret, Scarron, and Racine. Conducted in French.

389 French Romanticism Spring. 4 credits.

TR 12:20-1:35, N. Furman.

The history and literature of the French Romantic period will be studied through the works of Stendhal, Hugo, Vigny, Nerval and Balzac. Taught in French.

395 Camus and His Contemporaries Fall. 4 credits.

T R 12:20-1:35. S. Tarrow.

This course deals with the epic and the theater. 1936-1956 were years of political and social crisis in Western Europe. The impact of that crisis on the fiction of leading French writers will be studied in readings from Camus, Malraux, Sartre, Mauriac, Drieu La Rochelle, and Duras. Patterns of continuity and discontinuity will be traced through such themes as tradition, rebellion, and revolution.

410-420 Special Topics in French Literature

419, fall, 420, spring. 2-4 credits each term. Prerequisite: permission of instructor. Staff.

Guided independent study of special topics.

429-430 Honors Work in French 4 credits each term, with permission of the adviser. Open to juniors and seniors. Consult the director of the honors program, J. Bératou.

447-448 Medieval Literature 447, fall; 448, spring. 4 credits each term. Prerequisite: French 201 or consent of the instructor. First term not prerequisite to the second.

M W F 9:05. A. Colby-Hall.

French 447 deals with the epic and the theater. 448 with the romance and the lyric. Facility in reading Old French and appreciation of these four major genres are the primary goals of this course.

This course will serve to introduce students to the work of three major figures in sixteenth-century poetry. Greatest emphasis will fall on the Deile of Sceve, a work whose Petrarchan and Neoplatonic themes will organize our reading of these poets.

This course will focus on Voltaire's major writings, set within the literary, intellectual, social, and ideological framework of enlightenment. Voltaire's texts will be read as illustrating and problematizing various types of strategies or discourse: philosophical, satiric-ironic, aesthetic, political-historical, and literary-fictional.

[483 Feminism and French Literature (also Women's Studies 483)] Not offered 1982-83.

The German Major

Students majoring in German are encouraged to design their programs in a manner that will allow for diversity in their courses of study. It should enable them to become acquainted with an adequate selection of major works, authors, and movements of German literature and to develop their skill in literary analysis. Students majoring in German will normally proceed through German 201, 202, 203, 204. Students who, because of previous training, are qualified to enroll in 300- or 400-level courses will be permitted to do so. For details, students may consult the major advisers, H. Deinert, in the Department of German Literature, or H. L. Kufner, in the Department of Modern Languages. Students majoring in German are expected to complete successfully a minimum of six 300- and 400-level courses in addition to German 303-304. These courses should be a representation of subjects in German literature, Germanic linguistics, or both. The attention of students majoring in German is called to the courses offered by the Department of Comparative Literature, many of which complement the course offerings in German.

Students majoring in German are expected to become competent in the German language. This competence is normally demonstrated by the successful completion of German 304. Placement of German majors who have done no work in German at Cornell will be determined by the level of preparation they have obtained elsewhere. For information, students should consult the major advisers, H. Deinert or H. L. Kufner. All German majors, particularly those who have had no German prior to coming to Cornell, are encouraged to spend at least part of their junior year abroad.

German Area Studies Major

The German area studies major is intended for students who are interested in subject matter related to German-speaking countries, but not necessarily or not exclusively in German literature or linguistics. Students will select appropriate courses offered in history, government, economics, music, theatre arts, or other suitable subjects. These students will select a committee of two or more faculty members to help them design a program and supervise their progress. One committee member must be from the German faculty of either the Department of Modern Languages and Linguistics or the Department of German Literature. The other member(s) should represent the student’s main area of interest.

The student majoring in German area studies is expected to become competent in the German language. Such competence is normally demonstrated by successful completion of German 304. A minimum of six area courses above the 200 level is required for the major.

Honors. The honors program in German is open to superior students who wish to work independently in an area of their own choice. Students are free to select any faculty member of the Field of Germanic Studies (in the case of area studies majors, the appropriate member of their committee) to assist them in designing their honors program, to supervise their work, and to help them select a suitable topic for an honor essay. The independent study courses, German 451 and 452, may form part of the program.

Freshman Seminar Requirement

The following courses will satisfy the Freshman Seminar requirement: German 109, 151, 211, and 312. For details please consult the instructors.

Languages and Linguistics

121-122 Elementary Course 121, fall 122, spring. 4 credits each term. Prerequisite for German 122. German 121 or equivalent. Intended for beginners or students placed by examination. Students who obtain a CPT score of 560 after German 121-122 attain qualification and may enter the 200-level sequence; otherwise German 123 is required for qualification.

Lec: T 9:05, 11:15, or 2:30; drills, M W R F 8, 9:05, 10:10, 11:15, 12:20, 1:25, or 2:30; H. L. Kufner. A thorough grounding in all the language skills is given: listening, speaking, reading, and writing. Language practice is in small groups. Lectures cover grammar, reading, and cultural information.

123 Continuing German Fall or spring. 4 credits. Limited to students who have previously studied German and have a CPT achievement score between 450 and 559. Satisfactory completion of German 123 fulfills the qualification portion of the language requirement.

An all-skills course designed to prepare students for study at the 200 level.

203 Intermediate Composition and Conversation Fall or spring. 3 credits. Prerequisite: qualification in German.

204 Intermediate Composition and Conversation Fall or spring. 3 credits. Prerequisite: German 203 or permission of instructor.

303-304 Advanced Composition and Conversation 303, fall; 304, spring. 4 credits each term. Prerequisite for German 303: German 204 or equivalent. Prerequisite for German 304: German 303 or equivalent.

305 Elementary French 4 credits. Prerequisite: German 304 or equivalent. M W F 11:15. E. Augsberger.

401 Introduction to Germanic Linguistics Fall. 4 credits. Prerequisite: Linguistics 101 or permission of instructor.

Hours to be arranged. W. E. Harbert.

Survey of major issues in Germanic linguistics, with emphasis on historical and dialectal problems.

402 History of the German Language Spring. 4 credits. Prerequisite: German 204 and Linguistics 101 or permission of instructor. Offered alternate years.

Hours to be arranged. F. van Coesem. Phonological, syntactic, and semantic developments from pre-Old High German times to the present.
403 Modern German Phonology Fall. 4 credits. Prerequisites: German 304 or equivalent, and Linguistics 101 or 601. Hours to be arranged. F. van Coetsem. The phonological system of German is viewed from various theoretical approaches.

404 Modern German Syntax Spring. 4 credits. Prerequisites: German 304 or equivalent, and Linguistics 101 or 601. Hours to be arranged. W. E. Harbert. An application of selected theoretical syntactic models to problems in the syntax of modern German.

405 German Dialectology Fall. 4 credits. Prerequisite: German 304 or equivalent, and Linguistics 101 or equivalent. Not offered 1982-83. H. L. Kufner. Survey of German dialects, the work done at the Sorachatlas, and a discussion of modern approaches to dialectology.

406 Runology Fall. 4 credits. Prerequisite: German 401. Hours to be arranged. F. van Coetsem. A study of the inscriptions in the older futhark and their relevance to historical Germanic linguistics.

407 Applied Linguistics: German Fall. 4 credits. Not offered in 1982-83. H. L. Kufner. Designed to equip the teacher of German with the ability to apply current linguistic theory to the second-language learning situation.

408 Linguistic Structure of German Spring. 4 credits. Prerequisites: German 204 and Linguistics 101-102, or permission of instructor. Not offered 1982-83. Hours to be arranged. H. L. Kufner. A descriptive analysis of present day German, with emphasis on phonology and syntax.

502 Gothic Fall. Spring. 4 credits. Prerequisite: Linguistics 101. Not offered 1982-83. Hours to be arranged. F. van Coetsem. Linguistic structure of Gothic, with extensive readings of Gothic texts.

604 Old Low Franconian, Old Frisian Fall. 4 credits. Prerequisite: Linguistics 102. Offered in alternate years. Hours to be arranged. F. van Coetsem.

605 Structure of Old English Fall. 4 credits. Prerequisite: German 401. Not offered 1982-83. Hours to be arranged. W. E. Harbert. Linguistic overview of Old English, with emphasis on phonology and syntax.

608 Topics in Historical Germanic Fall. 4 credits. Prerequisite: German 401. Not offered 1982-83. Hours to be arranged. F. van Coetsem. The development of the sound system from Proto-Germanic to its daughter languages.

611 Readings in Old High German and Old Saxon Spring. 4 credits. Hours to be arranged. J. Jasanoff. Texts are chosen to suit the interests of the students taking the course but normally include selections from the more extensive Old High German and Old Saxon sources (Otfrid, Tatian, Helian) as well as representative shorter works, such as Hildebrandlied, Muspilli, and Genesis.

612 Germanic Tribal History Spring. 4 credits. Prerequisite: German 401. Hours to be arranged. F. van Coetsem. The history of the Germanic tribes from about 500 B.C. to A.D. 500; introduces the study of Proto-Germanic, and the separation of the Germanic languages.

631-632 Elementary Reading I Fall: 631. Fall; 632. Spring. 3 credits each term. Limited to graduate students. Prerequisite for German 632: German 631 or equivalent.

670 Seminar in Comparative Germanic Linguistics Fall or spring. Subject to the needs of students and to the limitations of staff time. 4 credits. Not offered 1982-83. W. E. Harbert.

670 Seminar in Comparitive Germanic Linguistics Fall or spring. Subject to the needs of students and to the limitations of staff time. 4 credits. Not offered 1982-83. W. E. Harbert.

702 Seminar in Comparative Germanic Linguistics Fall or spring. Subject to the needs of students and to the limitations of staff time. 4 credits. Not offered in 1982-83. Hours to be arranged. Staff. Topics include phonology, morphology, syntax, and dialectology of the older German languages.

703 Seminar in German Linguistics Fall or spring. Subject to the needs of students and the limitations of staff time. 4 credits. Not offered in 1982-83. Hours to be arranged. Staff. Selected topics including the history, structure, and dialects of German.

740 Seminar in Dutch Linguistics Spring, subject to the needs of students and to the limitations of staff time. 4 credits. Not offered in 1982-83. Hours to be arranged. F. van Coetsem. Selected topics including the history, structure, and dialects of modern Dutch.

Literature

Freshman Seminars

109 Folk Tales and Folk Poetry Fall and spring. 3 credits each term. M W F 8 or T R 8:40-9:55. I. Ezergalis and staff. Discussion and analysis of various types of folk literature from primitive legends, myths, and ballads to contemporary literary tales. Aims to develop reading skills that can be redirected to the student's own expository writings. Readings (in English translation) range from Grimm's Fairy Tales to stories by J.R.R. Tolkien.

151 Kafka, Hesse, Brecht, and Mann Fall and spring. 3 credits each term. T R 8-9:50. H. Deinert and staff. This course will be based on complete works (in English translation) by four representative German authors of the first half of the century. Although dealing with works of great popular appeal (Demian, Siddharta, Death in Venice, The Metamorphosis, Mother Courage, Galileo, and others), the emphasis of the course will be on the development of the two Germanies, and their societies. The emphasis is on cultural and social institutions such as mass media, educational systems, and political parties. Students will have the opportunity to practice their spoken and written German.

312 Intensive Workshop in Germanic Studies for Freshmen Fall. 4 credits. May be used to satisfy the Freshman Seminar requirement. T R 2:30-4:30. P. U. Höhendahl. Taught in German. Designed primarily as a sequel to German 201. Emphasis is on developing the two Germanies, and their societies. The emphasis is on cultural and social institutions such as mass media, educational systems, and political parties. Students will have the opportunity to practice their spoken and written German.

355 The Age of Goethe Not offered 1982-83.

57 Heinrich von Kleist Fall. 4 credits. Prerequisite: German 201, 202, or permission of instructor. Taught in German. W 2:30-4:30. H. Deinert. A seminar, the course will treat a representative selection of Kleist's drama and prose.
359 Fin de Siecle Vienna  Spring. 4 credits.
Prerequisite: German 201-202 or 203 or permission of instructor. Taught in German.
M W F 9:05. Staff.
At the close of the last century, artists, intellectuals, and literati in Austria were aware that they stood at the end of one age and at the beginning of another. The Viennese fin de siecle is the resulting decade-long revolt against tradition and search to define the modern. This course will focus on short works of Kraus, Hofmannsthal, Freud, Schnitzler, lectures in German on the intellectual background of the period. Discussion may be in English if necessary.

361 Contemporary Literature Spring. 4 credits.
Prerequisite: German 202 or permission of instructor. Taught in German.
Drama, poetry, and prose of the sixties and seventies from both Germanies, Austria, and Switzerland. Writers to be discussed include Christa Wolf, Johannes Bobrowski, Guenther Kunert, Sarah Kirsch, Heiner Muller, Paulus Paulus, Ingeborg Bachmann, Peter Weiss, Thomas Bernhard, Peter Handke, and Max Frisch.

[365 Lyrical Poetry Not offered 1982-83.]

Courses in English Translation

[314 Nietzsche, the Man and the Artist Not offered 1982-83.]

[315 Topics in German Literature I: The Modern German Novel in English Translation Not offered 1982-83.

[324 Old Icelandic Literature Not offered 1982-83.

[350 Yiddish Literature in English Translation Not offered 1982-83.

Graduate and Advanced Undergraduate Courses

405-406 Introduction to Medieval German Literature 405. Fall. 406. spring. 4 credits each term. Prerequisite for German 405. 406 or the equivalent.
M W F 9:05. A. Groos. 405 will emphasize learning Middle High German in a literary context, using the Nibelungenlied and a romance of Hartmann von Aue. 406 will survey the classical period, emphasizing Wolfram von Eschenbach's Parzival, Gottfried von Strassburg's Tristan und Isolde, and major poets of the Minnesang, especially Walther von der Vogelweide.

[417-418 The Great Moments of German Literature I, II Not offered 1982-83.]

438 Modern Austrian Narrative, 1900-1935 Fall. 4 credits. Taught in German.
Close reading of classics of modernist fiction by Schnitzler, Rilke, Kafka, Musil, and Broch against the background of the collapse of the Hapsburg monarchy and resulting social and political upheaval.

451-452 Independent Study 451. Fall. 452. spring. 1-4 credits each term. Prerequisite: permission of instructor.
Hours to be arranged. Staff.

Seminars

For complete descriptions of courses numbered 600 or above consult the appropriate instructor.

611 Seminar in Old Icelandic Literature I Fall. 4 credits.
Hours to be announced. J. C. Harris.

612 Seminar in Old Icelandic Literature II Not offered 1982-83.

[623 Seminar in Medieval German Literature I Not offered 1982-83.]

[624 Seminar in Medieval German Literature II Not offered 1982-83.]

[625 The Northern Renaissance and Reformation Not offered 1982-83.]

[627 Baroque Not offered 1982-83.]

[629 The Enlightenment Not offered 1982-83.]

[631 From Wilhelm Melanter to Buddenbrooks Not offered 1982-83.]

[632 The Age of Goethe Fall. 4 credits.
M 1:25-3:30. A. Groos. The seminar will treat the major works of Goethe before 1800.

[633 Problems in Romanticism: Hoelderlin and Keats (also Comparative Literature 433) Spring. 4 credits.
M 2:30-4:30. T. Banti. A seminar on two of the major poets of European romanticism. Points of focus will include their different Hellenisms; their ways of handling narrative, in various poetic forms; and their different treatments of the problems of art, representation, and poetic language. While some attention will be given to their early works, the accent will be on Hoelderlin's late hymns and Keats's late odes and the Hyperion project. Reading knowledge of German extremely useful but not required; qualified undergraduates admitted with permission of instructor.

636 Nineteenth-Century Drama: Grillparzer and Hebbel Spring. 4 credits.

[637 Seminar in Realism Not offered 1982-83.]

[638 Twentieth-Century German Literature Not offered 1982-83.]

639 Modern Lyric Poetry Fall. 1-4 credits. Hours to be arranged. I. Ezergailis.

[641 The Modern German Novel Not offered 1982-83.]

[650 Graduate Seminar in Medieval Literature (also English 710) Not offered 1982-83.]

[682 Seminar on Richard Wagner (also Music 152) Not offered 1982-83.]

[753 Tutorial in German Literature Not offered 1982-83.]

754 Tutorial in German Literature: Thomas Mann Spring. 1-4 credits. Prerequisite: permission of instructor.
Hours to be arranged. I. Ezergailis.

Malayo-Polynesian Linguistics (Linguistics 655-656)

Italian

A. Grosvozgel, director of undergraduate studies, (261 Goldwin Smith Hall, 256-3980); G. Mazzotta, C. Rosen

The Major

Students who wish to major in Italian should choose a faculty member to serve as a major adviser; the general plan and the details of the student's course of study will be worked out in consultation. Italian majors are encouraged to take courses in related subjects such as history, art, history, music, philosophy, anthropology, Classics, linguistics, and other modern languages and literatures. While a major often occupies only the junior and senior years, it is wise for students to seek faculty advice about the major as early as possible.

Students who elect to major in Italian ordinarily should have completed Italian 203-204 and the 201-202 sequence in Italian literature by the end of their sophomore year. Exemptions can be made on the basis of an examination. Students majoring in Italian are expected to become conversant with a fair portion of the masterworks of Italian literature to acquaint themselves with the outlines of Italian literary history, and to develop some skill in literary analysis. To this end, students will be expected to complete successfully 24 credits of Italian literature courses at the 300 level or higher, with papers to be written in Italian or English. One or more courses offered by the Department of Comparative Literature may be counted toward the required 24 credits if students obtain the prior approval of their major adviser. Italian 402, History of the Italian Language, and 403, Structure of Italian, may be counted toward the 24 credits required for the major (an introductory linguistics course is a prerequisite of Italian 402 and 403).

Students majoring in Italian also will be expected to acquire competence in the handling of the language. That competence may be demonstrated by passing an oral and written examination to be arranged with the adviser.

Italian majors may study in Italy. Generally during their junior year, under any one of those study-abroad plans organized by American universities that allow the transfer of grades and credit, such as the Syracuse Semester in Italy, in Florence. Fees. Depending on the course, a small fee may be charged for copies of texts for course work.

Languages and Linguistics

121-122 Elementary Course 121, fall; 122, spring. 4 credits each term. Prerequisite for Italian 122: Italian 121 or equivalent. Intended for beginners or students placed by examination. Students who obtain a CPT score of 560 or Italian 121-122 attain qualification and may enter the 200-level sequence; otherwise Italian 123 is required for qualification. Lec. T 10:15 or 12:20, drills, M W R F 9:05, 11:15, 12:20, 1:25, or 2:30. C. Rosen and staff.

A thorough grounding is given in all the language skills: listening, speaking, reading, and writing. Language practice is in small groups. Lectures cover grammar and cultural information.

123 Continuing Italian Fall. 4 credits. Limited to students who have previously studied Italian and have a CPT achievement score between 450 and 559. Students who meet the qualification portion of the language requirement. M-F, 11:15. C. Rosen and staff.

203-204 Composition and Conversation 203, fall; 204, spring. 3 credits each term. Prerequisites: for Italian 203, qualification in Italian; for Italian 204, 203 or equivalent. M W F 1:25 or 2:30. C. Rosen and staff.

Guided conversation, composition, reading, pronunciation, and grammar review emphasizing the development of accurate and idiomatic expression in the language.

Note: Students placed in 200-level courses also have the option of taking courses in introductory literature; see separate listings under Italian 200, 201, and 202 for descriptions of these courses, any of which may be taken concurrently with the Italian 203-204 language courses described above. The introductory literature courses are offered by the respective literature departments, and the 203-204 language courses by the Department of Modern Languages and Linguistics.

300 Advanced Italian: Language in Italian Culture. Spring. 3 credits. Prerequisite: Italian 204 or equivalent or permission of instructor. M W F 11:15. C. Rosen and staff.

Further development of all skills, with emphasis on self-expression. Readings center on two themes (1) contemporary Italian life, its trials and joys, as seen by the satirical columnist Luca Goldoni and others; (2) the Italian language, its origins, development and present state, including the role of the dialects. Emphasis on vocabulary building and awareness of stylistic levels.

402 History of the Italian Language Spring. 4 credits. Prerequisite: Linguistics 101 (or equivalent), or qualification in Italian, or permission of the instructor. Not offered 1982-83.

403 Structure of Italian Fall. 4 credits. Prerequisite: Linguistics 102 and qualification in any Romance language. Offered alternate years. Next offered 1983-84.

432 Italian Dialectology Spring, according to demand. 4 credits. Not offered 1982-83. C. Rosen.

[700 Seminar in Italian Linguistics Offered according to demand. 4 credits. Not offered 1982-83. C. Rosen.]

Literature

201 Introduction to Medieval and Renaissance Literature 3 credits. Prerequisite: reading knowledge of Italian. M W F 10:10. A. Grosvozgel and staff.

The course will focus on the students' texts and topics of medieval and Renaissance literature with an eye on the wider cultural context of Italy. We will begin with readings and discussions of the poems of the Sweet New Style (Guinizzelli, Cavalcanti, and Dante); selections from Petrarch's Canzoniere and Boccaccio's Decameron. Finally we shall look at some poems of Michelangelo, one canto from Ariosto's Orlando Furioso, and Machiavelli's The Prince.

202 Introduction to Modern Italian Literature 3 credits. Prerequisite: reading knowledge of Italian. M W F 10:10. A. Grosvozgel and staff.

A reading of masterpieces of modern Italian literature with attention to the context in which they arose. Highlights of Galileo and Vico's writing. Selections of novels from romanticism to the contemporary period. The theater of Goldoni and Pirandello. Poetry from Leopardi to Montale.

All the regions of Italy will be studied in terms of their historical, literary, artistic, and sociological aspects in conjunction with the projection of the film series L'Italia Vista dal Cielo by Folco Quilici. The multiple reasons for still strongly felt regional boundaries, within which diversity and independence are maintained, will be studied mainly through contemporary literary texts.
[326 Twenty-First-Century Novel Not offered 1982-83]

[327-328 Dante: La Divina Commedia 327, fall; 328 spring. 4 credits. Fall: T 2:30-4:25. Spring: W 2:30-4:25. G. Mazzotta. The course will study medieval doctrines. Focus is on some critical questions (such as politics, history, language, and exile) that the Divine Comedy poses.

[334 Dante In Translation (also Comparative Literature 344) Spring. 4 credits. M W F 1:20. G. Mazzotta. The hub of the course will consist in a detailed study of Vico's Poetics, the continuity of the Platonic tradition, and the baroque theories of metaphor in a dramatic works of the two major Italian playwrights of the eighteenth century. Carlo Gozzi's La battaglia di Firenze, Agamennone, Saul, Mirra.

[335 Boccaccio Not offered 1982-83]

[336 Boccaccio Not offered 1982-83]

[345 Modern and Contemporary Short Fiction In Italy Not offered 1982-83]

[347 Petrarch and the Renaissance Lyric Not offered 1982-83]

[353 Vico and the Renaissance Esthetics Fall. 4 credits. T R 10:10-11:25. G. Mazzotta. After a survey of the medieval background, the course will examine the Renaissance debate on Aristotle's Poetics, the continuity of the Platonic tradition, and the baroque theories of metaphor in a text such as Tesauro's Eighteenth-Century Thought.

[350-350 The Italian Renaissance Not offered 1982-83]

[352 Seventeenth-Century Prose Not offered 1982-83]

[370 Eighteenth-Century Thought Not offered 1982-83]

[371 Goldoni and Allieri: From Comedy to Tragedy. Fall. 4 credits. M W F 9:05. A. Grossvogel. Readings for this course will concentrate on the dramatic works of the two major Italian playwrights of the eighteenth century. Carlo Gozzi's La battaglia di Firenze, Agamennone, Saul, Mirra.

[381 Verga, Svevo, and Pirandello Not offered 1982-83]

[387 Nineteenth Century Poetry: Leopardi Not offered 1982-83]

[390 Contemporary Narrative in Italy Not offered 1982-83]

[395 Twenty-First-Century Prose: Contemporary Italian Short Fiction Not offered 1982-83]

[419-420 Special Topics in Italian Literature 419, fall; 420, spring. 2-4 credits each term. Prerequisite: permission of instructor. Guided independent study of specific topics.

[429-430 Honors in Italian Literature (also Italian 628) 429; fall; 420, spring. 4 credits each term. Limited to seniors. Prerequisite: permission of instructor.

[437 Petrarch: Canzoniere Not offered 1982-83]

[472 Eighteenth-Century Theater Not offered 1982-83]

[485 The Nineteenth Century: I promessi sposi Fall. 4 credits. W 2:30-4:25. A. Grossvogel. Manzoni's novel together with Foscolo's Il supplizio di Nersi and Leopardi's Operette morali constitute the now acknowledged major contributions to the renewal of literary prose in the nineteenth century in Italy. A close reading of the texts, of their poetics, and their proximity will bring out intentions, achievements, and the unwilling reciprocity of the three major Italian writers of the century as they set out, in the brief span of a quarter of a century, to constitute modern prose.

[486 The Nineteenth Century Not offered 1982-83]

[488 Glacomo Leopardi and Modern Italian Poetry In the Nineteenth Century Italian Not offered 1982-83]

[527 Dante: La Divina Commedia 527, fall; 528, spring. 4 credits. Fall: T 2:30-4:25. Spring W 2:30-4:25. G. Mazzotta. See Italian 327 for description.

[635 Boccaccio Not offered 1982-83]

[639-640 Special Topics In Italian Literature 639, fall; 640, spring. 4 credits each term. Staff.

Accelerated training in listening, speaking, reading, and writing for students who have already acquired a limited facility in Japanese through residence in Japan or brief formal study, but who require additional training to qualify for admission to Japanese 102.

141-142 Introductory Japanese for Business Purposes 141, fall; 142, spring. 4 credits each term. Prerequisite for Japanese 142: Japanese 141 or permission of instructor. (For undergraduates only. Graduates see Japanese 541-542.) M-F 1:25. E. H. Jorden and staff. Introductory Japanese for students interested in international business and economics.

201-202 Intermediate Japanese I 201, fall; 202, spring. 3 credits each term. Prerequisites: for Japanese 201, Japanese 102 or equivalent, for Japanese 202, Japanese 201 or 205 or equivalent. Lecs. M W F 1:25; drill, W 10:10 or 2:30 (with Japanese 205-206). Staff. Reading of selected modern texts with emphasis on expository style.

203-204 Intermediate Japanese II 203, fall; 204, spring. 4 credits each term. Prerequisites: for Japanese 203, Japanese 102 or equivalent, for Japanese 204, Japanese 203 or 205 or equivalent. Lecs. M W F 2:30 or 10:10 or 2:30 (with Japanese 205-206). Staff. Training in listening and speaking for students who have acquired a basic oral proficiency.

205-206 Intermediate Japanese I and Conversation 205, fall; 206, spring. 6 credits each term. Prerequisites: for Japanese 205, Japanese 102 or equivalent, for Japanese 206, Japanese 205 or equivalent. Lecs. M W F 1:25; drill, M-F 10:10 or 2:30. Staff. A combination of Japanese 201-202 and 203-204, for students interested in developing both written and oral skills.

241-242 Intermediate Japanese for Business Purposes 241, fall; 242 spring. 4 credits each term. Prerequisites: for Japanese 241, Japanese 142 or equivalent; for Japanese 242, Japanese 241 or equivalent. (For undergraduates only. Graduates see Japanese 543-544.) Hours to be arranged. E. H. Jorden and staff. Intermediate Japanese for students in international business and economics.

301-302 Intermediate Japanese II 301, fall; 302, spring. 4 credits each term. Prerequisites: for Japanese 301, Japanese 202 or 206 or equivalent; for Japanese 302, Japanese 301 or equivalent. M W F 2:30. Staff. Reading of selected modern texts with emphasis on expository style.

303-304 Communicative Competence 303, fall; 304, spring. 3 credits each term. May be repeated for credit. Prerequisite for Japanese 303, Japanese 204 or 206 or equivalent; for Japanese 304, Japanese 303 or equivalent. M W F 1:25. E. H. Jorden and staff. Drill in the use of spoken Japanese within the constraints set by Japanese social settings.

401-402 Advanced Japanese 401, fall; 402, spring. 4 credits each term. Prerequisites: for Japanese 401, Japanese 302 or equivalent; for Japanese 402, Japanese 401 or equivalent. M W F 2:30. Staff. Reading of selected modern texts with emphasis on expository style.

404 Linguistic Structure of Japanese Spring 4 credits. Prerequisites: Japanese 102 or permission of instructor, and Linguistics 101. Not offered 1982-83. Hours to be arranged. E. H. Jorden.]
407-408 Oral Narration and Public Speaking

407, fall; 408, spring. 2 credits each term.
Prerequisite: Japanese 304 or permission of instructor.
T R 1:25. Staff.
Instruction in storytelling, lecturing, and speechmaking, with emphasis on both the construction of discourse and Japanese patterns of oral delivery.

421-422 Directed Readings
421, fall; 422, spring.
Credit to be arranged. Prerequisite: permission of instructor.
Hours to be arranged. Staff.
Topics are selected on the basis of student needs.

541-542 Introductory Japanese for Business Purposes
For graduate students only; undergraduates register for Japanese 141-142.
M-F, six hours each day. E. H. Jorden and staff.

543-544 Intermediate Japanese for Business Purposes
For graduate students only; undergraduates register for Japanese 241-242.
See Japanese 241-242 above.

FALCON

161-162 Intensive Japanese (FALCON)
161, fall; 162, spring. 16 credits each term. Prerequisite: permission of instructor.

See Japanese 141-142 above.

545-546 Intermediate Japanese for Business Purposes
For graduate students only; undergraduates register for Japanese 241-242.
See Japanese 241-242 above.

Literature in Japanese

405 Introduction to Modern Literary Japanese
Fall. 4 credits. Prerequisite: Japanese 302 or permission of instructor.
B. deBary.
Readings of selected works of modern Japanese literature.

406 Introduction to Classical Japanese
Spring. 4 credits. Prerequisite: Japanese 405 or permission of instructor.
K. Brazel.
An introduction to the grammar and styles of premodern Japanese. Selected readings from literature of various periods.

421-422 Directed Readings
421, fall; 422, spring.
Credit to be arranged. Prerequisites: for Japanese 421, Japanese 402 or equivalent; for Japanese 422, Japanese 421 or equivalent.
Hours to be arranged. Staff.
Topics are selected on the basis of student needs.
For complete descriptions of courses numbered 600 or above, consult the appropriate instructor.

611 Seminar in Modern Literature
Fall or spring on demand. 2-4 credits. Prerequisite: permission of instructor.
Hours to be arranged. B. deBary.

612 Seminar in Classical Literature
Fall or spring on demand. 2-4 credits. Prerequisite: permission of instructor.
Hours to be arranged. K. Brazel.

621-622 Advanced Directed Readings
621, fall; 622, spring. Credit to be arranged. Prerequisite: permission of instructor.
Hours to be arranged. Staff.
See courses listed under Department of Asian Studies for Japanese literature courses in translation.

Javanese

131-132 Elementary Course
131, fall; 132, spring. 3 credits each term. Prerequisites: for Javanese 131, qualification in Indonesian; for Javanese 132, Javanese 131 or equivalent.

Hours to be arranged. J. U. Wolff.
An elementary language course for those who have had no previous experience in the language.

133-134 Intermediate Course
133, fall; 134, spring. 3 credits each term. Prerequisites: for Javanese 133, Javanese 132 or equivalent; for Javanese 134, Javanese 133 or equivalent.
Hours to be arranged. J. U. Wolff.

203-204 Directed Individual Study
203, fall; 204, spring. 3 credits. Prerequisite: Javanese 134 or equivalent.
Hours to be arranged. J. U. Wolff.
This is a practical language course on an intermediate level in which the students will work through readings and conversations under the guidance of a native speaker for three contact hours a week.

Old Javanese
See Linguistics 651-652.

Linguistics

Linguistics, the systematic study of human speech, lies at the crossroads of the humanities and the social sciences, and much of its appeal derives from the special combination of intuition and rigor that the analysis of language demands. The interests of the members of the Department of Modern Languages and Linguistics span most of the major subfields of linguistics—phonetics and phonology, the study of speech sounds; syntax, the study of sentence structure; semantics, the study of meaning; historical linguistics, the study of language change in time; sociolinguistics, the study of language as a social and cultural artifact; and applied linguistics, which relates the results of linguistic research to problems of bilingual education, second-language learning, and similar practical concerns. In theory, the gulf between the study of language in general and the study of particular languages, such as Spanish or German, is very wide: in practice, however, the two are intimately connected, and a high proportion of the students who enroll in linguistics courses at Cornell owe their initial interest in the discipline to a period of exposure to a foreign language in college or high school.

There are two introductory course sequences in linguistics: 111-112, which stresses the relationship of linguistics to other disciplines in the humanities and social sciences, and 101-102, which is designed for language majors, linguistics majors, and others who think that they may wish to do further work in the subject. The Cornell Linguistic Circle, a student organization, sponsors weekly colloquia on linguistic topics; these meetings are open to the public, and anyone wishing to learn more about linguistics is most welcome to attend.

The Major

The major in linguistics has three prerequisites: (1) completion of Linguistics 101-102, (2) qualification in two languages, one from the familiar European group (Latin, Greek, French, Italian, Portuguese, Spanish, German, Russian) and one from the other major languages offered at Cornell, and (3) 6 credits of course work beyond qualification in one of the languages studied. Some students may be unable to attain qualification in a non-European language before entering the major, in which case the requirement may be completed after admission to the major.

Completion of the major requires:
1) Linguistics 301, 310, or 303 (Syntax I);
2) a course at or beyond the 300 level in the structure of English or some other language or a typological or comparative structure course such as Linguistics 401;
3) a course in historical method, such as Linguistics 404, 410, or the history of a specific language or family; and
4) a minimum of 8 additional credits in linguistics chosen in consultation with the student's adviser.

With the adviser's approval, 4 such credits may be in a course in a related discipline with a significant linguistic component, such as psychologists, language acquisition, or anthropological linguistics.

Prospective majors should see Professor Gair, 407 Morrill Hall. For other courses relevant to linguistics, see anthropology, psychology, human development and family studies, computer science, and philosophy.

Honors. Applications for honors should be made during the junior year. Candidates for admission must have a 3.3 (B) average overall and should have a 3.2 average in linguistics courses. In addition to the regular requirements of the major, the candidate for honors will complete an honors thesis and take a final oral examination in defense of it. The thesis is usually written during the senior year but may be begun in the second term of the junior year when the student's program so warrants. The oral examination will be conducted by the honors committee, consisting of the thesis adviser and at least one other faculty member in linguistics. Members of other departments may serve as additional members if the topic makes this advisable. Linguistics 493 and 494 may be taken in conjunction with thesis research and writing but are not required.

Distribution Requirement

The distribution requirement in the social sciences may be satisfied by taking either Linguistics 101 or any other course in linguistics or (2) any other course offered by the Department of Modern Languages and Linguistics for which one of these introductory linguistics courses is a prerequisite.

See also Modern Languages, Literatures, and Linguistics, p. 146.

101-102 Theory and Practice of Linguistics
101, fall; 102, spring. 4 credits each term.
M W F 9:05; section to be arranged. C. Rosen.
An introductory course designed primarily for those who intend to major in a language or in general linguistics. (See Linguistics 111-112 for a course designed for nonmajors.) Linguistics 101 plus any other course in linguistics or any DLL course for which Linguistics 101 is a prerequisite satisfies the social science distribution requirement.

111 Themes in Linguistics
Fall. 4 credits.
Intended primarily for nonmajors. (Prospective linguistics majors should see Linguistics 101-102.)
M W F 10:10. Staff.
Basic linguistic concepts are introduced; relationship of linguistics to other disciplines is explored; emphasis on biological, psychological, social, and cultural contexts of language use. This course together with any other linguistics course other than 101 satisfies the social science distribution requirement.

112 Themes in Linguistics
Spring. 4 credits.
Prerequisite: Linguistics 111 or permission of instructor. Not offered 1982-83.
Special topics.

113-114 English of Spanish-English Bilinguals
113, fall; 114, spring. 3 credits each term. Linguistics 113 is not a prerequisite for 114.

Freshman Seminar. An introductory sociolinguistics course on the English language as used in Spanish-English bilingual communities. Fall semester topics include linguistic interference, code-switching, gender-related differences, and variation related to social function. Spring semester topics concentrate on variation in the use of English in the different Spanish-English communities established in the United States.

201 Phonetics
Fall. 3 credits.
T R 1:30-2:45. J. E. Grimes.
An introductory-level study of practical and theoretical aspects of phonetics; emphasis on identifying, producing, and transcribing speech sounds.
A general survey focusing on the relationship of Arts and Sciences permission of instructor.

**204 Instrumental Phonetics** Spring. 3 credits. Prerequisite: Linguistics 201. Hours to be arranged. J. S. Bowers. Intermediate-level study of practical, experimental, and theoretical aspects of articulatory and acoustic phonetics.

**205 Understanding the Language of Television Images** Fall. 4 credits. T R 9:05-10:20, M. 2:30-3:45. L. Waugh and R. Goldsen. TV images convey connotative and denotative meanings that are widely understood. How do we read these images? What is the underlying, grammar-like structure that arranges them as signs and symbols in a shared meaning system? Using the techniques and concepts of content analysis (from sociology) and semiotics (from linguistics), we will decode images in product commercials.

**244 Language and the Sexes (also Women's Studies 244)** Fall or spring. 4 credits. Prerequisites: Linguistics 101 or 111, or Psychology 215, or permission of instructor. Not offered 1981-82. M W F 1-2:15. S. McConnell-Ginet.

**264 Language, Mind, and Brain** Spring. 4 credits. For nonmajors or majors. T R 9:05-10:20. J. S. Bowers. A survey of what is currently known about the structure and function of natural language, with emphasis on the following topics: the basic biology of language; language acquisition; processing models; theories of mental representation and universal grammar; language and cognition.

**300 Multilingual Societies and Cultural Policy** Spring. 4 credits. T R 2:30-4:45. D. F. Solá. An interdisciplinary analysis of the impact of bilingualism on society, particularly in education and communication arts. The FLEX model is used to suggest a method of evaluating policy and program alternatives.

**301-302 Phonology I-II** Fall. 4 credits. Prerequisite: Linguistics 101 or 111 or 601 or the equivalent. T R 9:05-10:20, J. S. Bowers, J. W. Gair. A general survey of phonemics and of Jakobsonian distinctive feature theory, as well as selected other topics in autonomous phonology.

**303-304 Syntax I, II** 303, Fall; 304, Spring. 4 credits each term. Prerequisite for Linguistics 304: Linguistics 303. T R 9:05-10:20, J. S. Bowers. 303 introduces the theory of syntax within a generative-Transformational framework. 304 is an advanced course on syntax and the relation of syntax to semantics.

**306 Functional Syntax** Fall. 4 credits. Prerequisite: Linguistics 102 or permission of instructor. T R 9:05-10:20. M. L. K. Knefer. A general survey of syntactic theories that highlight grammatical function, and reveal its role in discourse structure.

**308 Dialectology** Spring. 4 credits. Offered alternate years. Hours to be arranged. Staff. Methods and procedures of dialectological study with introduction to the major dialect attitudes.

**310 Morphology** Spring. 4 credits. Prerequisite: Linguistics 101 or 111 or 601 or the equivalent. T R 8:30-9:45. L. R. Waugh. A general survey focusing on the relationship of meaning and form in morphology.

**311-312 The Structure of English** 311, Fall; 312, Spring. 4 credits each term. Prerequisite: for Linguistics 311, Linguistics 102 or permission of instructor, for Linguistics 312, Linguistics 311 or permission of instructor. T R 9:05-10:20. M. W. F. 11:15. J. S. Bowers. 311 provides an overview of the syntactic structure of English, drawing on relevant theoretical approaches. 312 deals with phonology, morphology, and special problems of English structure and semantics.

**313 English for Teachers of English** Fall. 4 credits. Prerequisite: for undergraduate majors, Linguistics 101-102 or equivalent, for graduate students: concurrent registration in Linguistics 601. T R 12:20-1:30, J. S. Bowers. A course in modern English for teachers of nonnative speakers. An analysis of the phonetics, grammar, and semantics of the language in terms applicable to both classroom teaching and materials development.

**314 Teaching English as a Foreign Language** Spring. 4 credits. Prerequisite: Linguistics 313. T R 12:20-1:30. M. Martin. Methods and techniques used in the teaching of English language skills to nonnative speakers are examined. Attention is given to materials design and to current issues and trends in the field.

**318 Style and Language** Spring 4 credits. Prerequisite: Linguistics 101 or permission of instructor. T R 1-2:15. G. M. Messing. Hours to be arranged. J. W. Gair, G. Kelley. Cross-family influences in an area of interaction over a long time span are considered. No knowledge of Indian languages is expected.

**400 Semiotics and Language** Spring. 4 credits. Prerequisites: a background in linguistics, anthropology, or literary theory, or permission of instructor. Not offered 1981-82. Monday 3:30-6: R. L. Waugh. An introduction to the field of semiotics in general and to particular semiotic theories (for example, those of Saussure, Perie, Jakobson) and to language as a semiotic system.

**401 Language Typology** Fall. 4 credits. Prerequisite: Linguistics 101-102 or 601-602 or equivalent. T R 9:05-10:20. M. W. F. 1-2:15. C. Rosen. Study of a basic question of contemporary linguistics: in what ways do languages differ, and in what ways are they all alike? Efforts to characterize the total repertory of contrasts available to natural languages. Common morphological devices and their syntactic correlates. Emphasis on two approaches to universals: (1) relational grammar; (2) the work of Joseph Greenberg.

**402 Languages in Contact** Fall. 4 credits. Prerequisite: Linguistics 101-102 or permission of instructor. Offered in alternate years. T R 9:05-10:20. M. W. F. 9:05. H. L. Knefer. Examination of a variety of areas where languages exhibit interference phenomena: diglossia, bilingualism, dialects, second-language acquisition.

**403 Applied Linguistics and Second-Language Acquisition** Spring. 4 credits. Prerequisite: a course in the structure of a language at the 400 level. T R 10:10-11:25, J. S. Bowers. Examination of the theoretical bases of applied linguistics, including current language-teaching methodologies.

**404 Comparative Methodology** Fall. 4 credits. Prerequisite: Linguistics 101 or 601 or permission of the instructor. T R 2:30-3:45, R. B. Jones, Jr. Exemplification of the methods of comparative reconstruction of proto-languages, using problems selected from a variety of language families; methods of evaluating reconstructions.

**405-406 Sociolinguistics** 405, Fall; 406, Spring. 4 credits each term. Prerequisites: Linguistics 101-102 or 111-112 or permission of instructor. Linguistics 405 is not a prerequisite to 406. T R 2:30-3:45, J. U. Wolff. Social influences (ethnic, socioeconomic, educational) on linguistic behavior; shifts in register, style, dialect, or language in different social situations.

**410 Historical Linguistics: Methods and Approaches** Spring. 4 credits. Linguistics 102 or permission of instructor. Not offered 1982-83. Hours to be arranged. J. Jasinoft. A survey of the basic mechanisms of linguistic change, with special attention to comparative and internal reconstruction.

**415-416 Social Functions of Language** 415, Fall; 416, Spring. 4 credits each term. Prerequisites: Linguistics 101 or 111, or permission of instructor. Not offered 1982-83. G. Kelley. The function of language in society, social constraints on linguistic behavior, including taboos, jargons, registers, social and socially perceived dialects.

**417 History of the English Language** Fall. 4 credits. Prerequisite: permission of instructor. T R 2:30-3:45, G. M. Messing. Development of modern English: external history, phonological, grammatical, and lexical change. The English language in America.

**421 Linguistic Semantics** Fall. 4 credits. Not offered 1982-83. S. McConnell-Ginet.

**440 Dravidian Structures** Fall or spring, according to demand. 4 credits. Prerequisite: Linguistics 102. Hours to be arranged. G. Kelley. A comparative and contrastive analysis of the structures of several Dravidian languages.

**442 Indo-Aryan Structures** Fall or spring, according to demand. 4 credits. Prerequisite: Linguistics 102. Hours to be arranged. J. W. Gair. Typological discussion of the languages of the subfamily, phonology and grammar.

**493 Honors Thesis Research** Fall. 4 credits. Hours to be arranged. Staff. May be taken before or after Linguistics 494, or may be taken independently.

**494 Honors Thesis Research** Spring. 4 credits. Hours to be arranged. Staff. May be taken as a continuation of, or before, Linguistics 493.

**600 Field Methods** Fall or spring. 4 credits. Prerequisite: Linguistics 101 or 201. Hours to be arranged. F. E. Huffman. Elicitation, recording, and analysis of data from a native speaker of a language not generally known to or spoken by the investigator.

**601-602 Proseminar: Introduction to Graduate Study** 601, Fall; 602, Spring. 4 credits each term. Primarily for entering graduate students majoring in general linguistics, but, with permission of instructor, open to those minorling in linguistics or majoring in the linguistics of specific languages. M W F 10:10 and M 3:30. Staff. A survey of the major subareas of linguistics. Emphasis is on basic concepts, current issues and their background, and methodology, with discussions and data-oriented problems based on extensive readings.

**603 History of Linguistics** Fall. 4 credits. T R 1-2:15. G. M. Messing. The history of linguistics from early Greek and Sanskrit grammarians to the modern period.
607 Schools of Linguistics Fall. 4 credits. Prerequisites: Linguistics 102 or 602 and permission of instructor. Hours to be arranged. J. E. Grimes. Readings and descriptions of major schools of linguistic thought in the twentieth century.

[608 Discourse Analysis Spring. 4 credits. Prerequisite: permission of instructor. Not offered 1982-83. J. E. Grimes. Linguistic theory applied to relationships beyond the sentence.]

610 Topics in Transformational Grammar Fall or spring. 3 credits. Prerequisite: permission of instructor. Hours to be arranged. J. S. Bowers. A survey of the development and current state of generative grammatical theory.

621-622 Hittite 621, fall; 622, spring. 4 credits each term. Prerequisites: for Linguistics 621, permission of instructor; for Linguistics 622, Linguistics 621 or permission of instructor. [621 not offered fall 1982.] 622 offered spring 1983. Hours to be arranged. J. Jasanoff.

[631-632 Comparative Indo-European Linguistics 631, fall; 632, spring. 4 credits each term. Prerequisites: for Linguistics 631, permission of instructor; for Linguistics 632, Linguistics 631 or permission of instructor. Not offered 1982-83. J. Jasanoff. Fall: Introduction to phonology, branches of the family. Spring: Grammar.]

640 Elementary Pall Fall or spring, according to demand. 3 credits. Hours to be arranged. J. W. Gair. An introduction to the language of the canonical texts of Theravada Buddhism. Reading of authentic texts, with emphasis on both content and grammatical structure.

[641-642 Elementary Sanskrit 641, fall; 642, spring. 3 credits each term. Prerequisite for Linguistics 642. Linguistics 641. Not offered in 1982-83. Hours to be arranged. G. Messing, fall; J. Jasanoff, spring.]

651-652 Old Javanese Fall or spring, according to demand. 4 credits. Hours to be arranged. J. U. Wolff. Grammar and reading of basic texts.

653-654 Seminar in Southeast Asian Linguistics 653, fall; 654, spring. 4 credits each term. Prerequisite: Linguistics 303 or permission of instructor. Linguistics 653 is not a prerequisite for 654. Hours to be arranged. R. B. Jones. Languages of mainland Southeast Asia. Topics, chosen according to student interests, may include description, dialectology, typology, comparative reconstruction, and historical studies.

655-656 Seminar in Malay-Polynesian Linguistics 655, fall; 656, spring. 4 credits each term. Prerequisites: for Linguistics 655, Linguistics 102 and permission of instructor; for Linguistics 656, Linguistics 655. Hours to be arranged. J. U. Wolff. Descriptive and comparative studies of Malay-Polynesian languages.

657-658 Seminar in Austroasiatic Linguistics 657, fall; 658, spring. 4 credits each term. Prerequisites: Linguistics 102 and permission of instructor. Hours to be arranged. F. E. Huffman. Descriptive and comparative studies of Austroasiatic languages.

671 Comparative Slavic Linguistics Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1982-83. E. W. Browne. Sounds and forms of the Slavic languages and of prehistoric common Slavic; main historical developments leading to the modern languages.

[672 Comparative Slavic Linguistics Fall. 4 credits. Prerequisite: Linguistics 671 or permission of instructor. Not offered 1982-83. E. W. Browne.]

700 Seminar Fall or spring, according to demand. Credit to be arranged. Hours to be arranged. Staff. Seminars are offered according to faculty interest and student demand. Topics in recent years have included subject and topic; Montague grammar; speech synthesis; linguistic computation; classical and autonomous phonology; Japanese sociolinguistics; relational grammar; semantics and semiotics, and others.

701-702 Directed Research 701, fall; 702, spring. 1-4 credits. Hours to be arranged. Staff.

751 Thai Dialectology Fall. 4 credits. Prerequisites: Linguistics 303 and permission of instructor. Hours to be arranged. R. B. Jones, Jr. Geographical distribution of the Thai languages and methods of classifying and subgrouping.

752 Comparative Thai Spring. 4 credits. Prerequisites: Linguistics 404 or equivalent, and permission of instructor. Hours to be arranged. R. B. Jones, Jr. Comparative reconstruction of Proto-Thai, including various points of view and criteria for subgrouping.

753 Tibeto-Burman Linguistics Fall. 4 credits. Prerequisites: Linguistics 404 or equivalent, and permission of instructor. Hours to be arranged. R. B. Jones, Jr. Comparative reconstruction of Tibeto-Burman, with emphasis on the Lolo-Burmese branch and historical study of Burmese.

Pall See Linguistics 640.

Polish

131-132 Elementary Course 131, fall; 132, spring. 3 credits each term. Prerequisite: qualification in Spanish. M W F 11:15. D. F. Solé. A beginning conversation course in the Cuzco dialect of Quechua.

133-134 Intermediate Course 133, fall; 134, spring. 3 credits each term. Prerequisites: for Quechua 133. Quechua 131-132 or equivalent; for Quechua 134. Quechua 133 or equivalent. Hours to be arranged. D. F. Solé. An intermediate conversation and reading course. Study of the Huarochari manuscript.

700 Seminar In Quechua Linguistics Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Hours to be arranged. D. F. Solé.

Romanian

[131-132 Elementary Course 131, fall; 132, spring. Offered according to demand. 3 credits. Prerequisite for Romanian 132: Romanian 131 or equivalent. Not offered 1982-83.]

[133-134 Elementary Course II 133, fall; 134, spring. Offered according to demand. 3 credits. Prerequisite for Romanian 134: Romanian 133 or equivalent. Not offered 1982-83.]

Romance Studies

Languages and Linguistics 321, fall; 322, spring. 4 credits each term. Prerequisite for Romance Studies 322: Romance Studies 321. Offered alternate years. M W F 1:25. J. Herschensohn. Diachronic development of the Romance languages from Latin, with emphasis on Spanish, French, Italian, and Romanian. 321 concentrates on external history and phonological changes; 322 concentrates on morphological and syntactic developments.

[323-324 Comparative Romanic Linguistics 323, fall; 324, spring. 4 credits each term. Prerequisite for Romance Studies 324: Romance Studies 323. Not offered 1982-83; next offered 1983-84. C. Rosen. Basic characteristics of the Romance language family; salient features of eight Romanic languages; broad and localized trends in phonology, syntax, and the lexicon; elements of dialectology.]

620 Area Topics In Romance Linguistics Spring. 4 credits. May be repeated for credit.
Russian and English, a final exam, and one semester paper (10-12 pages) to be written in English on a topic of the student's choice.

M/W/F 10-12. C. Emerson. Designed as the first course in Russian literature taken entirely in Russian—both readings and class discussions. But daily assignments are short and considerable guidance is provided; there is no presumption of fluency. The course begins with an introduction to students to major genres (lyric poetry, fairy tale, drama, narrative prose)—sample widely differing literary styles, and to accomplish both without recourse to English. Readings from the following centuries: Pushkin, Gogol, Tolstoy, Dostoevsky, supplemented by twentieth-century poetry. Whenever possible, selected texts are also studied in "translated"—first the original, then an illustrated film strip, poetic reading, musical setting, or excerpt from an opera libretto (Musorgsky's Boris Godunov, Rimsky-Korsakov's Tsar Saltan, Prokofiev's War and Peace).

307 Themes from Russian Culture Fall. 4 credits. Formal requirements: regular attendance and class participation; two in-class midterms; one semester paper which may be rewritten in place of a take-home final exam.

M W F 1:25. C. Emerson. Russia is a difficult culture to understand in part because she has been, at least until the 20th century, two cultures: a westernized elite and a conservative, Orthodox peasantry. Many of the greatest works of Russian culture are attempts to bring these two cultures together in the spirit of Gogol and Dostoevsky in literature, Mussorgsky in music, Repin in visual arts. To appreciate this great flowering of Russian culture in the nineteenth century, some understanding of the traditional values of Old Russia (and the transitional values of New Russia) is essential. This course looks at the visual art of Russian culture in the 17th century; the lives of its saints, the image of the city (Petersburg), and the cultural crisis that resulted from the collision of East and West. Developments in music are included if students express an interest. Works of moderate length by Pushkin, Gogol, Dostoevsky, Tolstoy, and Chekhov are read as cultural artifacts—with the goal of determining, by the end of the course, what constitutes a "Russian" theme.

308 Themes from Russian Culture Spring. 4 credits. Formal requirements: same as Russian 307.

M W F 1:25. C. Emerson. Continuation of 307 into the Soviet period, although either course may be taken separately. Themes include the liberating (and later enslaving) effect of war and revolution on Russian culture. The Revolution, the politicization of Russian literature, and "socialist realism" vs. the realistic tradition of Tolstoy and Chekhov. A survey of Russian poetry with primary emphasis on analysis of individual poems by major poets.

322 Russian Theatre and Drama Spring. 4 credits.

T R 2:30-3:45. S. Senderovich. A survey of Russian theatre and drama from the beginning to the present time. Reading and discussion of major plays in English translation.

349 Gogol's Posterity: Satire under the Soviets. Fall. 4 credits.

T R 2:30-3:45. A. Zholkovsky. An introduction to an appreciation and analysis of some of the best satirical writing produced inside Russia since the Revolution. In English translation.

350 Tolstoy and the Disciplines (also College Scholar 350) Spring. 4 credits.

M 2:30-4:25 plus one hour to be arranged. P. Carden.

"What he should or do be is . . . only a pedagogical question" (Lukacs). A central question for Western thought has been how worthy activity in the world (the program for the citizen, parent, spouse, friend, lover in their ideal relationships with others) and a worthy form of being (pursuit of happiness and fulfillment) could be fostered by self-development and in particular by the forms of pedagogy practiced by parents, teachers, circles of friends, and society. In this seminar we will examine this high tradition of philosophical pedagogy. The center of our inquiry will be Tolstoy's War and Peace, an exemplary novel of the complexities of finding a way to act and be. Other texts that we will study from this point of view will be Plato's Phaedo, Rousseau's Emile, Schiller's On Naive and Sentimental Poetry, Dostoevsky's Notes from Underground, and Faubert's Sentimental Education.

387 The Russian Novel Not offered 1982-83.

388 Soviet Literature Not offered 1982-83.

389 Dostoevsky Not offered 1982-83.

373 Chekhov Fall. 4 credits.

A special section is offered for students who read Russian; this section may be used toward the 12 credits of Russian literature in the original language for the Russian major.

T R 9:20-10:35. S. Senderovich. Reading and discussion of Chekhov's works in English translation, with main emphasis on the short story. The course is designed for nonspecialists as well as literature majors. A variety of approaches will be employed: informed lectures and discussions.

379 The Russian Connection (also Comparative Literature 378) Spring. 4 credits.

M W F 9:05. P. Carden. Russian literature in its European context. We will discuss great works of the Russian prose tradition in their reciprocal relations with European prose. Among the Russian authors to be studied will be Pushkin, Gogol, Lermontov, Tolstoy, and Dostoevsky. Among the European authors whose work helped to shape or was in some degree shaped by Russian literature, we will look at Rousseau, Goethe, Constant, Sterne (Tristram Shandy), Hoffmann, and Stendhal (The Charterhouse of Parma). In English translation.

380 Modern Literature in Poland, Czechoslovakia, and Yugoslavia (also Comparative Literature 380) Not offered 1982-83, next offered 1986.

393 Honors Essay Tutorial Fall or spring. 4 credits.

Hours to be arranged. Staff.

431 Short Russian Prose Spring. 4 credits.

Prerequisites: Russian 202 or the equivalent, and permission of instructor. This course may be counted towards the 12 credits of Russian literature in the original language for the Russian major.

T R 9:05-9:55, plus one hour to be arranged. G. Gibian.

[432 Pushkin Not offered 1982-83]

491 Reading Course: Russian Literature in the Original Language Fall or spring. 1 credit each term. Prerequisite: permission of instructor. To be arranged. Staff.

This course is to be taken in conjunction with any Russian literature course in English translation. Students will receive one credit for reading and discussing works in Russian in addition to their normal course work.

492 Supervised Reading in Russian Literature Fall or spring. 1-4 credits each term. Hours to be arranged. Staff.

[493 Tolstoy's War and Peace and Children's Stories: Thematic Invariance and Plot Structure Not offered 1982-83]

[494 Early Literary Semiotics, East and West Not offered 1982-83]

[498 The Age of Symbolism Fall. 4 credits.

M W F 2:30-3:20. P. Carden. This course will cover the period 1890-1910, focusing in particular on the developments associated with Symbolism. Among the authors to be read will be Sologub, Merezhkovsky, Gippius, Remizov, and the early work of Blok and Belyi. Among phenomena from the other arts of the age, we will consider the contributions to the visual arts of Vrubel and Borisov-Musatov, and the contributions to the theater of the Ballets-russe group, Stanislavsky and early Meyerhold. This course forms a sequence with Russian 499, though each course may be taken independently. A section for Russian readers can be arranged. In English translation.

[499 Russian Modernism Not offered 1982-83]

611 Supervised Reading and Research Fall or spring. 2-4 credits. Prerequisite permission of the department.

Hours to be arranged. Staff.

[617-618 Russian Stylistics Not offered 1982-83]

[620 Studies in Modern Poetry Not offered 1982-83]

[621 Russian Literature from the Beginnings to 1700 Fall. 4 credits.

R 4-6. S. Senderovich.

622 Eighteenth-Century Literature Spring. 4 credits.

R 4-6. S. Senderovich.

[624 Russian Romanticism Not offered 1982-83]

671 Seminar in Nineteenth-Century Russian Literature Spring. 4 credits.

W 2:30-4:30. G. Gibian. Topic: Three hackneyed terms in Russian literary history: narodnost', Realism, Formalism. (Various definitions and applications of the terms. Could they become meaningful if approached in fresh ways?)

672 Pasternak Fall. 4 credits.

T 4-6. A. Zholkovsky.

[701 Proseminar: Methods in Research and Criticism Not offered 1982-83]

Courses in Russian

201-202 Readings in Russian Literature

203–204 Composition and Conversation 203, fall, 204, spring. 3 credits each term. Prerequisites: for Sinhala 203, Sinhala 202 or permission of instructor; for Sinhala 204, Sinhala 203 or equivalent. Hours to be arranged. J. W. Gair.

Spanish

The Major
The major is designed to give students proficiency in the oral and written language to acquaint them with Hispanic culture, and to develop their skill in literary and linguistic analysis. Satisfactory completion of the major should enable students to meet language and literature requirements for teaching, to continue graduate work in Spanish, or to satisfy standards for acceptance into the training programs of the government, social agencies, and business concerns. A Spanish major combined with another discipline may also allow a student to undertake preprofessional training for graduate study in law or medicine. Students interested in a Spanish major are encouraged to seek faculty advice as early as possible. For acceptance into the major, students should consult the director of undergraduate studies in Spanish, Professor Titter (269 Goldsmith Smith Hall), who will admit them to the major, and choose an adviser from the Spanish faculty of either the Department of Romance Studies or the Department of Modern Languages and Linguistics. Spanish majors will then work out a plan of study in consultation with their advisers. Previous training and interests as well as vocational goals will be taken into account when the student's program of courses is determined.

Spanish 201 and 204 (or equivalent) are prerequisite to entering the major in Spanish. All majors will normally include the following core courses in their programs:

1) two literature courses of the 315–316–317 series. 3 credits each term. Prerequisites: 121-122 Elementary Course

Spanish majors have great flexibility in devising their programs of study and areas of concentration. Some typical options of the major are:

1) Spanish literature, for which the program of study normally includes at least 24 credits of Spanish literature beyond the core courses. Literature majors are strongly urged to include in their programs courses in all the major periods of Hispanic literature.

2) Spanish linguistics, for which the program normally includes Spanish 401, 407, 408, and at least 12 additional credits in general or Spanish linguistics. (Linguistics 101–102 are recommended before entering this program.) Students interested in including linguistics in their programs should consult with the coordinator of Spanish for the Department of Modern Languages and Linguistics (Professor M. Suer). 3 credits each term. Prerequisites: 101-102 Elementary Course

3) A combination of literature and linguistics.

4) Any of the above options with certain courses in other disciplines counted towards the major.

Spanish majors are encouraged to spend all or part of the junior year in a Spanish-speaking country on one of the study-abroad programs organized by American universities that allow the transfer of grades and credits. The J. Q. White Prize and Scholarships are available annually to students who achieve excellence in Spanish.

Honors: Honors in Spanish may be achieved by superior students who wish to undertake guided independent reading and research in an area of their choice. Students in the senior year select a member of the Spanish faculty from either the Department of Romance Studies or the Department of Modern Languages and Linguistics to supervise their work and direct the writing of their honors essays (see Spanish 429–430).

 Fees: Depending on the course, a small fee may be charged for copies of texts for course work.

Languages and Linguistics

121–122 Elementary Course 121, fall; 122, spring. 4 credits each term. Prerequisite for Spanish 122: Spanish 121. Special sections of this course are available for students with qualification in another language. Intended for students who have previously studied Spanish but not in American universities that allow the transfer of grades and credits. The J. Q. White Prize and Scholarships are available annually to students who achieve excellence in Spanish.

123 Continuing Spanish Fall or spring. 4 credits. Limited to students who have previously studied Spanish and have a CPT achievement score between 540 and 550. Satisfactory completion of Spanish 123 fulfills the qualification portion of the language requirement.

131–132 Elementary Course 131, fall; 132, spring. 3 credits each term. Prerequisite for Serbo-Croatian 132: Serbo-Croatian 131 or equivalent. Not offered 1982-83.

133–134 Intermediate Course II 133, fall; 134, spring. 3 credits each term. Prerequisites: for Serbo-Croatian 133: Serbo-Croatian 132 or equivalent, for Serbo-Croatian 134: Serbo-Croatian 133 or equivalent. Not offered 1982-83.

Advanced Composition and Conversation (formerly 303) Fall 4 credits. Prerequisite: Spanish 204 or equivalent. M W F 12:20. M. Randel. Advanced language skills, developed through reading, grammar review and intensive practice in speaking, writing, and translation. Analysis of present-day Spanish usage in a wide variety of oral and written texts.

Advanced Composition and Conversation Spring 4 credits. Continuation of 311 but may be taken separately. Required of Spanish majors. M W F 12:20. M. Randel. Readings and class discussion will focus on the stylistic analysis of modern texts. Increased emphasis, through weekly essays, on students’ development of an effective Spanish prose style.

History of the Spanish Language 401, fall; 402, spring. 4 credits each term. Prerequisites: Linguistics 101 and qualification in Spanish, or permission of the instructor. Not offered 1982-83. A historical analysis of the phonology, morphology, syntax, and lexicon of the Spanish language up to the seventeenth century. Selected medieval documents are read and discussed.

Applied Linguistics: Spanish Fall 4 credits. Prerequisites: qualification in Spanish and Linguistics 101, or permission of instructor. M W F 1:25. M. Saffer. Designed to equip the teacher of Spanish with the ability to apply current linguistic theory to second-language learning.

The Grammatical Structure of Spanish Spring. 4 credits. Prerequisites: qualification in Spanish and Linguistics 101, or permission of instructor. M W F 11:15. C. Perea. Survey of the salient morphological and syntactic characteristics of contemporary Spanish.

Hispanic Dialectology Fall, according to demand. 4 credits. Not offered 1982-83. Survey of dialects to Latin America and the Caribbean.

Linguistic Structure of Ibero-Romance Fall or spring, according to demand. 4 credits. M 2:30-4:30. C. Perea. Phonological, morphological, and syntactic characteristics of the Romance languages (Catalan, Galician, Portuguese, Sephardic) and of the main dialects of the Iberian Peninsula, studied in relation to each other and to Castilian Spanish.

Contemporary Theories of Spanish Phonology Fall or spring, according to demand. 4 credits. Hours to be arranged. Staff. The sounds of Spanish analyzed according to Prague, structuralist, generative, and natural generative theory.

Contemporary Theories of Spanish Grammar Fall or spring, according to demand. 4 credits. Hours to be arranged. M. Saffer. Selected readings of contemporary Spanish linguists who exemplify different theoretical points of view.

Seminar in Spanish Linguistics Fall or spring, according to demand. Variable credit. Hours to be arranged. Staff. Topics in synchronic and diachronic Spanish linguistics.

Introduction to Hispanic Literature Fall or spring. 3 credits. Prerequisite: qualification in Spanish or permission of instructor. Conducted mainly in Spanish. (The literature course that normally follows Spanish 201 is 315, 316, or 317.) Fall: M W F 9:05, 12:20, or T R 10:10-11:25. Spring: M W F 9:05, 10:10, or 12:20-1:35. J. Kronik and staff. An intermediate reading course in which texts from Spain and Spanish America are read and analyzed. The course is designed to increase reading and speaking facility in Spanish and to develop critical and analytical skills in the appreciation of literary texts.

Introduction to Hispanic Culture Spring. 3 credits. M W F 1:25. DeWinter. An intermediate reading course in which texts from Spain and Spanish America are read and analyzed. Texts have been selected primarily for their interpretations of unique aspects of Hispanic culture.

Spanish Civilization Not offered 1982-83. Note: Spanish 315, 316 and 317 can be taken in any order.

Readings in Sixteenth- and Seventeenth-Century Hispanic Literature Fall. 4 credits. Prerequisite: Spanish 201 or 4 years of high school Spanish or permission of instructor. This course is not a prerequisite for Spanish 316 or 317. M W F 10:10. M. Randel. Readings and discussion of representative texts of the period from both Spain and her colonies in the New World: Garci de la Vega, Lazarillo de Tormes, San Juan de la Cruz, Cervantes, Lope de Vega, Calderon, and others.

Readings in Modern Spanish Literature Fall. 4 credits. Prerequisite: Spanish 201 or 4 years of high school Spanish or permission of instructor. M W F 9:05. J. Titter. T R 10:10, K. Vernon. Readings and discussion of representative texts from Spain from the Romantic period to the present: Bécquer, Galdos, Unamuno, Garcia Lorca, and others.

Readings in Latin American Civilization Fall. 4 credits. M W F 10:10. E. Santi, T R 10:10. J. Titter. Readings and discussion in Spanish. The first half of the course will examine the historical development of Latin American society, its culture, and institutions; the second half will be devoted to oral presentations and in-depth discussion of topics of contemporary interest that students will have chosen and researched (for example, the political and economic crisis in Central America, Caribbean literature, Mexican muralism, etc.). The final paper will be based on that presentation. Class discussion in Spanish. Readings in Spanish and English. Note: The prerequisite for the following courses, unless otherwise indicated, is Spanish 315 or 316 or 317 or permission of instructor.

The Modern Drama in Spain (also Comparative Literature 335) Not offered 1982-83. Fall: M W F 12:20. J. Kronik. A study of the short narrative genre as it has been practiced in Spanish America during the past two centuries. In addition to representatives of the Romantic, Realist, Modernist, and cristiadistas schools, the course focuses on contemporary writers such as Arreola, Borges, Cortazar, Fuentes, Garcia Marquez, and Rulfo.

The New Latin-American Narrative in Translation (also Comparative Literature 335 and General Education) Not offered 1982-83.

Popular Culture in Contemporary Spanish-American Prose Fiction Not offered 1982-83.

Spaniard Drama of the Golden Age Not offered 1982-83; next offered 1983-84.

The Picaracho Novel in a European Perspective (also Comparative Literature 335) Not offered 1982-83.

Spanish Lyric Poetry of the Golden Age Spring. 4 credits. M W F 9:05. M. Randel. Analysis of selected poetry of Garcilasso, Luis de Leon, San Juan de la Cruz, Gongora, Quevedo, and others. Discussion of the theoretical problems of poetry and the poetic tradition.

The Birth of the Novel in Spain: Toward Don Quixote Not offered 1982-83.

The Contemporary Spanish Novel Spring. 4 credits. M W F 2:30. K. Vernon. Reading and discussion of selected texts by today’s major novelists: Marin-Santos, Goytisolo, Marin-Gaité, and Benet among others.

Sociology and Literature in Twentieth-Century Spain Not offered 1982-83.

The Post-Civil War Drama in Spain Not offered 1982-83.

Valle-Inclan and the Twentieth-Century Vanguard Theater in Spain Spring. 4 credits. T R 10:10-11:25. J. Kronik. A comprehensive study of Valle-Inclan as playwright, including the "esperpentos," with additional readings in the Spanish experimental theater (Unamuno, Azorín, Grau) and in its European background.

The Reader In The Novel (also Comparative Literature 368) Fall. 4 credits. T R 12:20. K. Vernon. Devoted to an examination of the image of the reader and the act of reading as thematized in classic and contemporary texts, and the implications for our own reading experience. Works in translation by Cervantes, Fielding, Diderot, Nabokov, and others.

Art and Politics In Latin America Not offered 1982-83.

The Novel in Spain after the Civil War Fall. 4 credits. M W F 1:25. J. Kronik. A study of the Spanish novel of the 1940s and 50s as an instrument of protest against the social structure of Franco Spain and against traditional narrative forms. Among the novelists to be considered are Cela, Delibes, Laforet, Matute, Sanchez Ferlosio, with supplementary readings of Faulkner, Dos Passos, and Camus.

Modern Latin American Poetry in Translation (also Comparative Literature 396). Not offered 1982-83.

Modern Hispanic Poetry Not offered 1982-83.

Literature and Ideas in Modern Spain Fall. T R 8:40-9:55 B. DeWinter. The course will focus on the intellectual and literary achievements of the so-called Generations of 1898.
and 1914. Among the topics to be discussed are Spanish perceptions of Spain and Europe; the concept of history and intrahistory; the problem of regionalism and universality; symbols of decadence and regeneration; the search for new forms of expression in the essay and the novel; the role of the intellectual in the political life of Spain. Authors to be read include Unamuno, Azorin, Valle-Inclan, Ortega y Gasset, Perez de Ayala, Manuel Azana, and others.

409-410 Special Topics in Hispanic Literature 419, fall; 420, spring. 2-4 credits each term. Prerequisite: permission of instructor. Staff.

429-430 Honors Work in Hispanic Literature 429, fall; 430, spring. 4 credits each term. Limited to seniors. Prerequisite: permission of instructor.

419-420 Special Topics in Hispanic Literature 419, fall; 420, spring. 2-4 credits each term. Limited to seniors, Prerequisite; permission of instructor.

639-640 Special Topics in Hispanic Literature 639, fall; 640, spring. 4 credits each term. To be taken by all new graduate students.

647 Studies in the Literature of Fifteenth-Century Spain Fall. 4 credits.

689 Carlos Fuentes Not offered 1982-83.)

690 Graduate Seminar: Baroque and Neo-Baroque Spring.

691 Ortega y Gasset's The Dehumanization of Art and Ideas of the Novel (1925) (also Comparative Literature 680) Not offered 1982-83.)

201-202 Tagalog Reading 201, fall; 202, spring. 3 credits each term. Prerequisites: for Tagalog 201, qualification in Tagalog; for Tagalog 202, Tagalog 201 or equivalent.

Hours to be arranged. J. U. Wolff.

300 Linguistic Structure of Tagalog Fall or spring. 4 credits. Prerequisite: Linguistics 101.

Hours to be arranged. J. U. Wolff.

Thai
101-102 Elementary Course 101, fall; 102, spring. 6 credits each term. Prerequisite for Thai 102: Thai 101 or equivalent. Intended for beginners or students placed by examination.

Lecs, T 11:15, Drills, M-F 10:10. R. B. Jones, Jr. A thorough grounding is given in all the language skills: listening, speaking, reading, and writing.

201-202 Thai Reading 201, fall; 202, spring. 3 credits each term. Prerequisites: for Thai 201, qualification in Thai; for Thai 202: Thai 201 or equivalent.

M W F 2:30. R. B. Jones, Jr.

203-204 Composition and Conversation 203, fall; 204, spring. 3 credits each term. Prerequisites: for Thai 203, qualification in Thai; for Thai 204, Thai 203. Hours to be arranged. R. B. Jones, Jr.

301-302 Advanced Thai 301, fall; 302, spring. 4 credits each term. Prerequisite: Thai 301-302 or equivalent.

Hours to be arranged. R. B. Jones, Jr.

Hours to be arranged. R. B. Jones, Jr.

Reading of significant novels, short stories, and poetry written since 1850.

401-402 Directed Individual Study 401, fall; 402, spring. 4 credits each term. For advanced students. Prerequisite: permission of instructor.

Hours to be arranged. R. B. Jones, Jr.

Turkish
131-132 Introduction to the Turkish Language 131, fall; 132, spring. 3 credits each term.

Hours to be arranged. L. Babby.

This year-long introduction to structure of the Turkish language is intended primarily for linguists wishing to acquire a working knowledge of a syntactically complex non-Indo-European language. It can also be taken by students primarily interested in learning Turkish.

Ukrainian
[131-132 Elementary Course 131, fall; 132, spring. 3 credits each term. Prerequisite for Ukrainian 132: Ukrainian 131 or equivalent. Not offered 1982-83.

E. W. Browne.]

Vietnamese
101-102 Elementary Course 101, fall; 102, spring. 6 credits each term. Prerequisite for Vietnamese 102: Vietnamese 101 or equivalent. Intended for beginners or students placed by examination.

Lecs, T 11:15, Drills, M-F 10:10. R. B. Jones, Jr. A thorough grounding is given in all the language skills: listening, speaking, reading, and writing.

201-202 Vietnamese Reading 201, fall; 202, spring. 3 credits each term. Prerequisites: for Vietnamese 201, qualification in Vietnamese; for Vietnamese 202, Vietnamese 201.

Hours to be arranged. F. E. Huffman.

203-204 Composition and Conversation 203, fall; 204, spring. 3 credits each term. Prerequisites: for Vietnamese 203, qualification in Vietnamese; for Vietnamese 204, Vietnamese 203. Hours to be arranged. F. E. Huffman.

Hours to be arranged. F. E. Huffman.

Vietnamese
101-102 Elementary Course 101, fall; 102, spring. 6 credits each term. Prerequisite for Vietnamese 102: Vietnamese 101 or equivalent. Intended for beginners or students placed by examination.

Lecs, T 11:15, Drills, M-F 10:10. R. B. Jones, Jr. A thorough grounding is given in all the language skills: listening, speaking, reading, and writing.

201-202 Vietnamese Reading 201, fall; 202, spring. 3 credits each term. Prerequisites: for Vietnamese 201, qualification in Vietnamese; for Vietnamese 202, Vietnamese 201.

Hours to be arranged. F. E. Huffman.

203-204 Composition and Conversation 203, fall; 204, spring. 3 credits each term. Prerequisites: for Vietnamese 203, qualification in Vietnamese; for Vietnamese 204, Vietnamese 203. Hours to be arranged. F. E. Huffman.

Hours to be arranged. F. E. Huffman.
Music 163

401-402 Directed Individual Study 401, fall; 402, spring. 4 credits each term. Prerequisite: permission of instructor. Intended for advanced students. Hours to be arranged. F. E. Huffman.

Yiddish

[171-172 Elementary Yiddish. Not offered 1982-83.]

Music

Musical Performance and Concerts

Musical performance is an integral part of Cornell's cultural life, and an essential part of its undergraduate academic programs in music. The department encourages music-making through its offerings in individual instruction and through musical organizations and ensembles, which are directed and trained by members of the faculty. Students from all colleges and departments of the University join with music majors in all of these ensembles:

- Cornell Symphony Orchestra
- Cornell Chamber Orchestra
- Cornell Symphonic Band
- Cornell Wind Ensemble
- Small wind and brass ensembles
- Collegium Musicum
- Cornell Eighteenth-Century Orchestra
- Cornell Gamelan Ensemble
- Chamber music ensembles
- Cornell Chorus
- Cornell Glee Club
- Chamber Singers
- Sage Chapel Choir

Information about requirements, rehearsal hours, and conditions for academic credit can be found in the following listings for the Department of Music:

- Announcements of auditions are posted during registration each fall term and, where appropriate, each spring term as well. The department office, 125 Lincoln Hall (256-4097), can always supply up-to-date information.
- The Department of Music and the Faculty Committee on Music sponsor nearly one hundred formal and informal concerts each year by Cornell's ensembles, faculty, and students, and by distinguished visiting artists. A special feature is the annual Cornell Festival of Contemporary Music. The great majority of these concerts are free and open to the public. These concerts are listed in special monthly posters and the usual campus media; further information is available from the department office.

Nonmajors

In addition to its performing, instructional, and concert activities, the department offers numerous courses for nonmajors, many of which carry no prerequisite and presuppose no previous formal training in music. Consult the following course listings, and for further information apply to the department office, 125 Lincoln Hall (256-4097), or to the director of undergraduate studies, Professor D. R. M. Paterson, 213 Lincoln Hall (256-3531).

The Major

Two options are available to the student planning to major in music. Each carries the study of music to an advanced level through the integration of performance, music theory, and music history. Option I is a general course, not necessarily oriented toward eventual graduate or professional work in music.

Option II is a more specialized and concentrated program suited to students who wish to prepare for eventual graduate or professional work in music. All students contemplating a major in music under either option should arrange for placement examinations and advising in the department during the orientation period of the freshman year, or earlier if all possible. Information from the department office, 125 Lincoln Hall (256-4097); from the director of undergraduate studies, Professor D. R. M. Paterson, 213 Lincoln Hall (256-3531); or from the chairman, Professor James Webster, 124 Cornell Hall (256-3671). All students are expected to have chosen an adviser from among the department faculty at the time of application for major status.

Option I presupposes some musical background before entering Cornell. Prerequisites for admission to the major are the satisfactory completion of Music 152, at latest by the end of the sophomore year (the freshman year is preferable), with a final grade of C or better, including an average grade of C or better in all the musicianship components of Music 152, and failure in none of them; and the passing of a simple piano examination (details are available from the department office). Students must apply to the department for formal acceptance as a music major.

The requirements for the Bachelor of Arts degree with a major in music under Option I comprise the following:

1) in music theory:
   a) Music 251-252, 351, and 352,
   b) passing of a simple piano test in music, normally, by the end of the junior year (details are available in the department office).

2) in music history:
   a) six credits in courses numbered at the 300 level or above listed under Music History. At least two of these courses must be drawn from the three-course sequence Music 381-383;
   b) four semesters of participation in a musical organization or ensemble sponsored by the Department of Music.

Option II presupposes considerable musical study before entering Cornell. Prerequisites for admission into the Option II program are previous acceptance as an Option I major and satisfactory completion of Music 252, normally by the end of the sophomore year. Students must apply to the department for formal acceptance as a music major. An Option II major concentrates in one of the three areas listed below. For Option II in performance, exceptional promise must be demonstrated, in part by a successful solo recital before the end of the sophomore year.

The requirements for the Bachelor of Arts degree with a major in music under Option II are:

1) completion of all the requirements for Option I, except as noted below; and
2) in addition:
   a) in performance:
      i) the requirement for four semesters of participation in a musical organization or ensemble is waived (but such majors are expected to participate actively in chamber and other ensembles sponsored by the department); and
      ii) the six credits in individual instruction in the student's major instrument, or voice, earned by taking Music 391-392 throughout the junior and senior years;
   b) in theory or composition or in history:
      i) for the two of the four semesters of participation in a musical organization or ensemble, Music 462 or 463 may be substituted;
      ii) twelve additional credits in the area of concentration at the 300 level or above, of which either four may be earned in Music 301 or 302 when taken once for four credits, or eight may be earned in Music 401-402.

Honors. The honors program in music is intended to provide special distinction for the department's ablest undergraduate majors. To become a candidate for honors in music, a student must be invited by the faculty at the beginning of the second semester of the junior year. As soon as possible thereafter, the student will form a committee of three faculty members to guide and evaluate the honors work. In the senior year the candidate will enroll in Music 401-402, with the chairperson of the honors committee as instructor. Candidates will be encouraged to formulate programs that will allow them to demonstrate their total musical ability. The level of honors conferred will be based on the whole range of the independent work in this program, of which a major part will culminate in an honors thesis, composition, or recital to be presented not later than April 1 of the senior year, and a comprehensive examination to be held not later than May 1.

Distribution Requirement

The distribution requirement in the expressive arts may be satisfied with 6 credits in music, except Freshman Seminars and Music 122. A maximum of 4 credits in Music 321-322 and a maximum of 3 credits in Music 331 through 338, and 441 through 450 may be used to satisfy this requirement.

Facilities

Music Library. The Music Library, in Lincoln Hall, has an excellent collection of the standard research tools. Its holdings consist of approximately ninety thousand books and scores and fifteen thousand records. Particularly noteworthy are the collections of opera scores, libretti, and recordings from all periods; twentieth-century scores and recordings; and the large microfilm collection of Renaissance sources, both theoretical and musical. In addition, the Department of Rare Books, in Olin Library, houses a collection of early printed books on music and musical manuscripts.

Musical instruments. The Veene S. Swan collection of about thirty musical instruments is especially rich in old stringed instruments. A small Chalis harpsichord and clavichord are available for practice; a Dowd harpsichord, a Hubbard harpsichord, and replicas of a Stein fortepiano and a Graf fortepiano are reserved for advanced students and concerts. Among the recital pianos available for use are Steinway and Mason & Hamlin concert grands, and a Bosendorfer Imperial. There is an Aeolian-Skinner organ in Sage Chapel, a Schicker organ at Barnes Hall, and a Helmuth Wolff organ in Anabel Taylor Chapel. A studio for electronic music is housed in Lincoln Hall.

Freshman Seminars

111 Sound, Sense, and Ideas Fall or spring. 3 credits. Each section limited to 20 students. No prerequisites; students do not need to have studied music. May not be counted for the distribution requirement in the expressive arts.

Sec 1, M W F 10:10, P. Wili, sec 2, M W F 11:15, C. Eisen.

Ways of listening, thinking, talking, and writing about music. Non-Western and world music are considered, as well as Western classical music. Student performances in class are welcome.

113 Opera Fall. 3 credits. Limited to 20 students. No prerequisites; students do not need to have studied music. May not be counted for the distribution requirement in the expressive arts.

M W F 9:30, N. Zaslav

An attempt to deepen understanding of and appreciation for opera through listening to operas, discussing them, and writing about them. Historical, dramatic, literary, and personal points of view will be considered as well as musical ones.

114 Contemporary Music Spring. 3 credits. Limited to 20 students. No prerequisites; students do not need to have studied music. May not be counted
The ingredients of music as they present themselves for the distribution requirement in the expressive arts. Counterpoint; original composition of four-part and Debussy. Systematic introduction to Southeast Asia. Topics include pitch, scale, rhythm, meter, timbre, and forms of instrumental and vocal play with sound. Listening to and analyzing live and recorded music.

105-106 (formerly 141-142) Introduction to Music Theory

Fall, Fall. 3 credits. Some familiarity with music is desirable. Prerequisite for Music 106: 105 with grade of B- or better. Music 105 is limited to 50 students.

112 Elementary Musicianship

Spring. 2 credits. Limited to 20 students. Prerequisite: permission of instructor. May not be counted for distribution in the expressive arts.

115-116 Elementary Tonal Theory

Fall, Fall. 4 credits. Prerequisite: Music 112, with a grade of B- or better, and failure in no individual component, satisfies the prerequisites for Music 151.

Music Theory

151-152 Elementary Tonal Theory

151, Fall; 152, Spring. 5 credits each term. Some familiarity with music is desirable. Prerequisite for Music 152: 151 with grade of B- or better. Music 151 is limited to 50 students.

245-246 Theory and Practice of Gamelan

Fall, Fall; Spring, Spring. 2 credits each term. Prerequisite: concurrent enrollment in Music 445 or 446, and permission of instructor. Music 245 is not a prerequisite for 246. M W F 12:20 (any two of these three hours) plus 1 hour to be arranged. M. Hatch.

Reading, listening, and concentrated instruction in the literature, repertories, and practices of Indonesian gamelan traditions. Related aspects of culture—dance, drama, literature, and oral poetry—will be studied in their influence on musical practice. Research into performance styles and the history of instruments.

251-252 Intermediate Tonal Theory

Fall, Fall; Spring. 4 credits each term. Prerequisite for Music 251: 152 or the equivalent, or a suitable level of experience on a proficiency test given by the department during orientation each fall term. Prerequisite for Music 252: 251.

M W F 10:10; 2 disc hours to be arranged. S. Neff; 252: R. Parker.

Introduction to writing two- and three-part counterpoint in the style of J. S. Bach. Continuation of the study of harmony by composition and analysis, including seventh chords, secondary dominants, and chromatic harmony. Students are expected to write several short pieces in eighteenth- and nineteenth-century styles and forms, such as two-part inventions, and minuets scored for string quartet. Continuation of analysis of forms, with emphasis on large forms, e.g., sonata form. Ear training, keyboard harmony, figured bass, sight singing, dictation, and score reading.

255 Advanced Tonal Theory

Fall. 4 credits. Prerequisite: Music 252 or equivalent.

M W F 9:05. S. Neff.

Inventions, chromatic harmony, analysis of larger forms and nineteenth-century music, ear training, score reading, and advanced keyboard studies including figured bass.

352 Materials of Twentieth-Century Music

Spring. 4 credits. Prerequisite: Music 351.

M W F 9:05. E. Murray.

Introduction to some techniques of composers from 1900 to 1950, including expanded tonal resources, atonality, and new approaches to form and rhythm. Analysis of representative smaller works by Bartok, Hindemith, Schoenberg, Stravinsky, Webern, and some American composers. Writing assignments in various styles.

451 Counterpoint

Spring. 4 credits. Prerequisite: Music 351 or equivalent.

3rd, 4th, 5th, and 6th species of counterpoint. Analysis and writing of canons, augmentation, diminution, and other stylistic elements.

452 Form and Analysis

Spring. 4 credits. Prerequisite: Music 351 or equivalent. Not offered 1982-83.

458 Orchestration

Fall. 4 credits. Prerequisite: Music 352 or permission of instructor.

[462] Electronic Music Composition

Spring. 3 credits. Limited to 10 students. Prerequisites: Music 251 and permission of instructor. Not offered 1982-83.

M W F 12:00-2:15. M. Stith and staff.

463 Choral Conducting

Spring. 2 credits. Prerequisite: Music 252 or permission of the instructor. Not offered 1982-83.

F 2:30-4:10. T. A. Sokol.

464 Choral Style

Spring. 2 credits. Prerequisite: Music 252 or permission of the instructor. Not offered 1982-83.

F 2:30-4:10. T. A. Sokol.

Music History

[218] Chopin, Chalkovski, Musorgski

Spring. 3 credits. Students may wish to register concurrently in Music 219. Not offered 1982-83.

M W F 11:15-12:05. Disc to be arranged. W. W. Austin, G. Gibian, and staff.

[219] Chopin, Chalkovski, Musorgski

Spring. 1 credit. Prerequisite: Music 245. Limited to students concurrently enrolled in Music 218. Not offered 1982-83.

[221] Popular Music

Spring. 3 credits. No previous formal training in music is required. Not offered 1982-83.

222 History of Jazz

Spring. 3 credits. No previous formal training in music is required. Not offered 1982-83.

M W F 11:15-12:05. Disc to be arranged. K. Nenfield. Lectures will be devoted to a musical survey of jazz from around 1900 to the 1970s. Sections will emphasize progressive exercises in the fundamental rhythmic, harmonic, and tono-coloristic aspects of jazz. Focus: the recorded anthologies Smithsonian Collection of Classic Jazz.

277 Baroque Instrumental Music

Fall. 3 credits. Prerequisite: Any 3- or 4-credit course in music, or permission of the instructor.

A survey, based primarily on study of a few key works, of the history of opera, and its forms and conventions. Emphasis will be placed on the technical, literary, and theatrical contexts of opera, as well as on musical style. Composers to be studied may include Monteverdi, Handel, Mozart, Verdi, Wagner, Debussy, and Berg.

281 Music of the Baroque Period

Fall or spring, every third semester. 3 credits. Prerequisite: any 3- or 4-credit course in music, or permission of the instructor.

The history of music from the rise of opera and instrumental art-music in the eighteenth century to the culmination of Baroque style in the music of Bach, Handel, and their contemporaries. Emphasis on the music of Monteverdi, Schutz, Purcell, Bach, and Handel.

282 Music of the Classical Period

Fall or spring, every third semester. 3 credits. Prerequisite: any 3- or 4-credit course in music, or permission of the instructor.

The history of music from the opera of Gluck to the rise of instrumental music in the eighteenth century. Emphasis on the music of Handel, Haydn, Mozart, and Beethoven.

283 Music of the Romantic Era

Fall or spring, every third semester. 3 credits. Prerequisite: any 3- or 4-credit course in music, or permission of the instructor.

M W 2:30. R. Parker.

The history of music from Schubert to Mahler, with a preliminary consideration of Beethoven. The course will concentrate on major figures, and will focus attention on the following genres: solo song, piano music, chamber music, orchestral opera, and music history.

374 **Opera** Fall. 4 credits. Prerequisite: Music 152 or equivalent. M W F 11:15. N. Zaslaw.
The same as Music 274, but with one additional meeting a week devoted to technical discussion of individual works.

381 **Music of the Baroque Period** Fall or spring, every third semester. 4 credits. Prerequisite: Music 152 or equivalent. Spring 1983: M W F 2:30. N. Zaslaw.
The same as Music 281, but with one additional meeting per week devoted to technical discussion of individual works.

[382] **Music of the Classical Period** Fall or spring, every third semester. 4 credits. Prerequisite: Music 152 or equivalent. Not offered 1982-83. J. Webster.

383 **Music of the Romantic Era** Fall or spring, every third semester. 4 credits. Prerequisite: Music 152 or equivalent. M W F 2:30. R. Parker.
The same as Music 283, but with one additional meeting per week devoted to technical discussion of individual works.

[389] **The Study of Non-Western Musics** 4 credits. Prerequisite: Music 152 or permission of the instructor. Not offered 1982-83. M. Hatch.

[481] **Music in Western Europe to Josquin des Prez** Fall. 4 credits. Prerequisite: Music 381, 382, or 383, or permission of the instructor. Not offered 1982-83. T R 10:10-11:25. D. Randel.

482 **Josquin des Prez to Monteverdi** Spring. 4 credits. Prerequisite: Music 381, 382, 383, or permission of the instructor. T R 10:10-11:25. D. Randel.
A survey of the music of the principal composers, and of the principal styles and genres, of the high and late Renaissance in music (roughly, the sixteenth century).

**Independent Study**

301-302 **Independent Study in Music** 301, fall; 302, spring. Credit to be arranged. Prerequisite: departmental approval. Hours to be arranged. Staff.

The **Honors Program**

401-402 **Honors in Music** 401, fall; 402, spring. 4 credits each term. Limited to honors candidates in their senior year. Staff.

**Musical Performance**

321-322 **Individual Instruction in Voice, Organ, Harpsichord, Piano, Strings, Woodwinds, Brass, and Guitar.** The number of places is strictly limited. Prerequisite: successful audition with the instructor. Students may register only with the prior permission of the instructor. Students may register for this course in successive years. For more information, consult the department office, 125 Lincoln Hall, 256-4087.

**Without credit:** Basic fee for one-half-hour lesson weekly during one term, $90; fees for a scheduled practice schedule of six half-hour lessons and one double practice schedule earn 2 credits each term, provided that the student has earned, or is earning, at least 3 credits in courses listed under the rubrics Introductory Courses (except Music 120), Music History, or Music Literature for every 4 credits in Music 321-322 (except that the first 3 academic credits must be earned prior to, or simultaneously with, the first 2 credits in 321-322).

The basic fees are multiplied by one and one-half (lesson fee becomes $135; practice fees $67.50, $33, or $10).

All fees are non-refundable once classes begin, even if registration is subsequently cancelled by the student. A music major receives a scholarship equal to the full lesson fee, and a member of a Cornell musical organization or ensemble sponsored by the Department of Music receives a scholarship of one-half the lesson fee when the lessons are taken in the student’s primary performing medium. The department offers a very limited number of additional partial scholarships for lesson fees for cases of both need and special merit.

Students who wish to study instruments not taught at Cornell or who, because of limitations of space, cannot be admitted to Music 321-322, may, under certain conditions, receive credit for performance study outside Cornell by registering for Music 321h-322h.

321a-322a **Individual Instruction in Voice** 321a, fall; 322a, spring. 2 credits each term. Hours to be arranged. B. Troxell.

321b-322b **Individual Instruction in Organ** 321b, fall; 322b, spring. 2 credits each term. Hours to be arranged. D. R. M. Paterson.

321c-322c **Individual Instruction in Piano** 321c, fall; 322c, spring. 2 credits each term. Hours to be arranged. M. Biston and staff.

321d-322d **Individual Instruction in Harpsichord** 321d, fall; 322d, spring. 2 credits each term. Hours to be arranged. D. R. M. Paterson.

321e-322e **Individual Instruction in Violin or Viola** 321e, fall; 322e, spring. 2 credits each term. [321e is not offered 1982-83.]

Hours to be arranged. S. Monosoff.

321f-322f **Individual Instruction in Cello or Viola da Gamba** 321f, fall; 322f, spring. 2 credits each term. [322f is not offered 1982-83.]

321g-322g **Individual Instruction in Brass** 321g, fall; 322g, spring. 2 credits each term. Hours to be arranged. J. Hsu.

321h-322h **Individual Instruction outside Cornell.** 321h, fall; 322h, spring. 2 credits each term. Hours to be arranged. Staff.

All the standard orchestral and band instruments and guitar may, under certain conditions, be studied for credit with outside teachers. This course is available primarily for the study of instruments not taught at Cornell, and for the use of those who, for reasons of space cannot be admitted to Music 321a-g or 322a-g. Prior approval by a member of the faculty in the department is required. For information and a list of approved teachers, consult the department office, 125 Lincoln Hall, 256-4097.

**MUSICAL ORGANIZATIONS AND ENSEMBLES**

391-392 **Advanced Individual Instruction** 391, fall, 392, spring. 4 credits each term. Open only to juniors and seniors who are majoring under Option II with concentration in performance, and to graduate students. Music 391 is not a prerequisite to 392.

Hours to be arranged. Staff.

**Musical Organizations and Ensembles**

Students may participate in musical organizations and ensembles throughout the year. Permission of the instructor is required, and admission is by audition only, except that the Sage Chapel Choir and the Cornell Gamelan Ensemble are open to all students without prior audition. Registration is permitted in two of these courses simultaneously, and students may register in successive years, but no student may earn more than 6 credits in these courses. Membership in these musical organizations and ensembles is also open to qualified students who wish to participate without earning credit.

331-332 **Sage Chapel Choir** 1 credit. No audition for admission. M 7-8:30 p.m., R 7-8:30 p.m., Sunday 9:30 a.m. D. R. M. Paterson.

333-334 **Cornell Chorus or Glee Club** 1 credit. Prerequisite: permission of instructor. Chorus: T 7:15-9:15 p.m., plus 2 hours to be arranged. Glee Club: W 7:15-9:15 p.m., plus 2 hours to be arranged. D. Conte and T. A. Sokol.

335-336 **Cornell Orchestra** 1 credit. Prerequisite: permission of the instructor. Chamber orchestra limited to more experienced players. Rehearsals for the Cornell Symphony Orchestra: full orchestra, W 7:30-10 p.m.; sectional rehearsals, alternate T or R 7:30-10 p.m. Rehearsals for the Cornell Chamber Orchestra, R 7:30-10 p.m. T. A. Sokol and E. Murray.

337-338 **University Bands** 1 credit. Symphonic band: fall or spring, and W 4:30-5:45. Wind ensemble: fall, M 7:30-9:30 p.m.; spring, M 7:30-9:30 p.m. and R 4:30-5:45. M. Stith.

Students interested in participating in the Big Red Marching Band may inquire at the Department of Athletics, Teagle Hall.

441-442 **Chamber Music Ensemble** 1 credit. Prerequisite: permission of instructor. J. Hsu, S. Monosoff, and staff.

Study and performance of chamber music literature; string and wind groups; piano trios and quartets, trio sonatas, etc. Emphasis on musical problems, with some practice in sight reading.

443-444 **Chamber Singers** 1 credit. Prerequisite: permission of instructor. F 4:30-5:30. T. A. Sokol.

Study and performance of selected vocal music for small choir.

445-446 **Cornell Gamelan Ensemble** 1 credit. No previous knowledge of music notation or experience in music performance necessary. Attendance at all full rehearsals and one small group lesson per week required for credit.

Basic performance techniques and theories of central Javanese gamelan. Tape recordings of gamelan and elementary cypher notation are provided. Some instruction by Indonesian musicians is offered in most years.

447-448 **Collegium Musicum** 1 credit. Basic performance techniques and theories of central Javanese gamelan. Tape recordings of gamelan and elementary cypher notation are provided. Some instruction by Indonesian musicians is offered in most years.
Graduate Courses

Open to qualified undergraduates with permission of instructor.

601 Introduction to Bibliography and Research Fall. 4 credits. M 1:30-4:25. L. Coral.

[653 Topics in Tonal Theory and Analysis Fall. 4 credits. Not offered 1982-83.]

659-660 Composition 659. fall; 660, spring. 4 credits. T 2:30-4:25. K. Husa.

662 Orchestral Conducting Spring. 4 credits. T 10:10-12:05. K. Husa. Score-reading and conducting technique on intermediate and advanced levels, with emphasis on twentieth-century styles and repertoires.

669-670 Debussy to the Present 669. fall; 670. spring. 4 credits each term. Not offered 1982-83. M W F 11:15; 1 disc hour to be arranged. 669: W. W. Austin, with S. Stucky; 670: S. Stucky, with W. W. Austin.

[673 Music and Poetry in France: Late Middle Ages and Renaissance (also Music 373 and French 817) Fall. 4 credits. Not offered 1982-83.]

The Department

The Department of Near Eastern Studies offers courses in the archaeology, history, languages, and literatures of the Near East. Students are encouraged to take an interdisciplinary approach to the cultures of this region that has had such an important impact on the development of our own civilization and that plays so vital a role in today's world community. The department's course offerings treat the Near East from ancient times to the modern period and emphasize methods of historical and literary analysis. Near Eastern Studies also provides the basic courses in the Program of Jewish Studies.

The Major

The student who majors in Near Eastern Studies may concentrate in one of the following four areas:

I. Near Eastern Languages and Literatures

II. Ancient Near Eastern Studies

III. Judaic Studies

IV. Islamic Studies

The precise sequence and combination of courses chosen to fulfill the major is selected in consultation with the advisor; all majors, however, must satisfy the following requirements (S-U options not allowed):

1) Qualification in one of the languages offered by the department.

2) Eight NES courses (which may include intermediate and advanced language courses).

3) Four courses in subjects related to the student's concentration, which may, in some cases, be taken outside the department.

Prospective majors should discuss their plans with the director of undergraduate studies before formally enrolling with the department. To qualify as a major, a cumulative grade average of C or better is required.

Near Eastern Studies

Program of Jewish Studies

The field of Jewish studies encompasses a broad spectrum of disciplines that includes language, literature, philology, and history. The Department of Near Eastern Studies offers students the opportunity to take a wide variety of courses in Jewish studies whose subjects are not represented in this department. Students interested in planning a program in Jewish studies should consult the Department of Near Eastern Studies.

Akkadian

333-334 Elementary Akkadian 333, fall; 334, spring. 4 credits each term. T R 2:30-3:45. D. I. Owen. An introduction to the Semitic language of the Akkadians and Babylonians of ancient Mesopotamia. Utilizing the inductive method, students are rapidly introduced to the grammar and the cuneiform writing system of Akkadian through selected readings in the Code of Hammurapi, the Descent of Ishtar, and the Annals of Sennacherib. Secondary readings on the history and culture of Mesopotamia provide the background for the study of the language. Knowledge of another Semitic language helpful but not essential.

335 Readings in Akkadian Texts Fall or spring. 3 credits. Prerequisite: NES 333-334. Hours to be arranged. D. I. Owen. Selected readings in Akkadian texts.

Arabic

111-112 Elementary Arabic 111, fall; 112, spring 6 credits each term. Prerequisite for NES 112: 111 or permission of instructor.

The fundamentals of literary Arabic are introduced through practice in reading, writing, listening, and speaking. Short selections from all periods of Arabic literature are studied.

[113-114 The Spoken Arabic of Egypt 113, fall; 114 spring. 6 credits each term. Not offered 1982-83.]

211-212 Intermediate Arabic 211, fall; 212, spring, 3 credits each term. Not offered 1982-83.

311 Advanced Arabic: The Short Story Fall. 4 credits. Prerequisites: NES 212 or permission of the instructor.

The short story is the most important prose genre in modern Arabic literature. This course will examine
the short story from both literary and linguistic points of view and will include the review of grammar and syntax.

312 Advanced Arabic: Qur'an and Tafsir Spring. 4 credits.

419 Independent Study Fall or spring. Variable credit. Prerequisite: permission of instructor. Staff.

Aramaic

[238 Aramaic] Spring. 3 credits. Not offered 1982-83.

Hebrew

101-102 Elementary Modern Hebrew I and II 101, fall; 102, spring. 6 credits each term. Prerequisite for NES 102: 101 or permission of instructor. Satisfactory completion of 102 fulfills the qualification portion of the language requirement.
Sec 1, M W F 10:10; sec 2, M W F 10:10; sec 3, M W F 11:15; sec 4, M F 1:25. N. Scharf, E. Kadar. Intended for beginners. A thorough grounding is given in all the language skills: emphasizing reading, writing, grammar, listening, and speaking.

121-122 Elementary Classical Hebrew See course descriptions under Hebrew Literature.

201-202 Intermediate Modern Hebrew I and II 201, fall; 202, spring. 3 credits each term. Prerequisite for NES 201: 102 or permission of instructor. Prerequisite for NES 202: 201 or permission of instructor. Satisfactory completion of NES 202 fulfills the proficiency portion of the language requirement.
Sec 1, M W F 10:10; sec 2, M W F 11:15; N. Scharf, E. Kadar. Second-year modern Hebrew. Continued development of reading, writing, composition, listening, and speaking skills.

221-222 Readings In Classical Hebrew Literature: The Art of Biblical Narrative See course description under Hebrew Literature.

231-232 Advanced Modern Hebrew I and II 231, fall; 232, spring. 3 credits each term. Prerequisite for NES 231: 201 or equivalent with permission of instructor. Prerequisite for NES 232: 201 or equivalent with permission of instructor. This sequence may be used as literature to fulfill the humanities distribution requirement.
T R 10:10-11:25. C. Kronfeld. Advanced study of Hebrew through the analysis of literary texts and expository prose. This course employs a double perspective: the language is viewed through the literature and the literature through the language. Students will develop composition skills by studying language structures, idioms, and various registers of style.

409 Independent Study Fall or spring. Variable credit. Prerequisite: permission of instructor. Staff.

Turkish

131-132 Introduction to the Turkish Language (also Turkish 131-132) 131, fall; 132, spring. 3 credits each term. Hours to be arranged.

Ugaritic

[337 Ugaritic] Fall. 3 credits. Not offered 1982-83.

Arabic Literature

[251 Studies In the Popular and Courtly Literatures of the Islamic Middle East Fall. 3 credits. Not offered 1982-83.]

254 Society, Politics, and the Modern Arabic Novel. Fall. 3 credits.
T R 12:20-1:35. P. D. Molan. Some Arabic Nights tales, such as Sinbad the Sailor and Ali and Sinbad, and the Modern Arabian Novel. Some Arabic Nights tales, such as Sinbad the Sailor and Ali and Sinbad, and the Modern Arabian Novel. Students will explore the aesthetics of the Arabic novel as well as its impact on society and politics. Readings in English translation or in Arabic at the student's discretion. No prerequisites.

256 The Arabian Nights In the East and the West. Spring. 3 credits.
T R 12:20-1:35. P. D. Molan. Some Arabian Nights tales, such as Sinbad the Sailor and Allahin and the Wonderful Lamp, have become a part of our own childhood lore, but the whole work is less known or appreciated. In this undergraduate seminar, students will explore three aspects of the Arabian Nights: the aesthetics of the work as viewed from the perspectives of folkloric and literary criticism, the place of the Nights in Arabic literature, at large, and the impact of the Nights on Western literature. Readings are drawn from the major translations of the Nights and from works of medieval, Renaissance, and modern European authors from Chaucer to Jane Austen and Saul Bellow. There are no prerequisites.

Biblical Literature

[125 Freshman Seminar In Biblical Literature: Heroes and Heroines of the Bible Fall. 3 credits. Not offered 1982-83.]

221-222 Readings In Classical Hebrew Literature: The Art of Biblical Narrative. See course description under Hebrew Literature.

225 Judaic Literature In Late Antiquity: Dead Sea Scrolls and Sectarian Literature Spring. 3 credits. Not offered 1982-83.

[291 Tradition and the Literary Imagination Fall. 3 credits. Not offered 1982-83.]

322 Undergraduate Seminar in Biblical Literature: Prophecy in Ancient Israel Spring. 4 credits. Prerequisite: one course in Bible or literature.
M W F 1:25. M. Collins. A study of the speeches of ancient Israel's famous rhetoricians (such as Amos, Hosea, Isaiah, Jeremiah, and Ezekiel). The focus is on major issues that the prophets address (the human state and divine rule, man and society, freedom and responsibility, war and peace, exile and restoration) and on the polemics and rhetoric of these texts as literature. All readings in English translation. Students have the option of reading the texts in Hebrew.

429 Independent Study Fall or spring. Variable credit. Prerequisite: permission of instructor. M. Collins.

Related Courses In Other Departments

Comparative Literature 326 Christianity and Judaism Spring. 4 credits.
M W F 11:15. C. M. Carrick.

Rabbinic Literature

[342 Biblical Interpretation In Rabbinic Literature Spring. 4 credits. Not offered 1982-83.]

448 Independent Study Fall or spring. Variable credit. Prerequisite: permission of instructor. Staff.

Hebrew Literature

121-122 Elementary Classical Hebrew 121, fall; 122, spring. 4 credits each term. Prerequisite for NES 122: 121 or equivalent with permission of instructor.
M W F 11:15. C. Kronfeld. An introduction to Biblical Hebrew that focuses on acquisition of basic language structures and vocabulary and on fluency in reading and translating. In the second term, readings include the Book of Ruth and selections from the Book of Genesis. This course provides the basis for understanding the role of Biblical Hebrew in shaping Modern Hebrew and for an understanding of the historical development of the Hebrew language.

207 Modern Hebrew Literature In Translation: Modern Hebrew Poetry Fall. 3 credits. Open to freshmen.
T 2:30-5. C. Kronfeld. The dominance of poetry in modern Hebrew literature will be explored against the background of aesthetic, cultural, and political trends, and in the context of influential developments in European and American poetry. Readings will represent a variety of approaches to poetry, from the traditional and romantic tones of Bialik and Tchernichovsky to the contemporary irony of Amichai and Zach. Students with some background in Hebrew will be provided with bilingual texts whenever possible.

208 Modern Hebrew Literature In Translation: The Modern Hebrew Short Story Spring. 3 credits. Open to freshmen.
T 2:30-5. C. Kronfeld. This course examines the emergence and development of modern Hebrew prose fiction through its most perfected genre, the short story. A close analysis of texts will be combined with an overview of the diverse heritage that these texts manifest: biblical norms of narration, traditions of storytelling and oral narration, Western aesthetics, and, in recent times, the overwhelming influence of one writer, S. Y. Agnon. In addition to Agnon, readings will include Mendele, Peretz, Bialik, Brenner, Gnessin, Yizhak, Oz, Orpaz, and Yehoshua.

221-222 Readings In Classical Hebrew Literature: The Art Of Biblical Narrative Fall. 3 credits. Not offered 1982-83.

See course description under Hebrew Literature.

301-302 Advanced Modern Hebrew I and II 301, fall; 302, spring. 3 credits each term. Prerequisite for NES 301: 202 or equivalent with permission of instructor. Prerequisite for NES 302: 301 or equivalent with permission of instructor. This sequence may be used as literature to fulfill the humanities distribution requirement.
T R 10:10-11:25. C. Kronfeld. Advanced study of Hebrew through the analysis of literary texts and expository prose. This course employs a double perspective: the language is viewed through the literature and the literature through the language. Students will develop composition skills by studying language structures, idioms, and various registers of style.

492 Independent Study Fall or spring. Variable credit. Prerequisite: permission of instructor. M. Collins.

Near Eastern Studies 167
Yiddish, English, and American Poetry (also Comparative Literature 405) Spring. 4 credits. Prerequisite: a 200-level or above course in one of the following: Hebrew or Yiddish language or literature, English, or comparative literature.
This course investigates the issue of the modernist metaphor against the background of interdisciplinary theories of metaphor. Three groups of questions guide the investigation: a) What are metaphors and how do they work in poetry? b) What is the modernist poetic experience? c) How does a specific cultural context affect the production and reception of poetry? Examples are taken from three different literatures, and various branches of modernism are represented, such as Hebrew anti-formalistic poetry, the Yiddish introspectivists, English and American imagists, etc. Readings will include Fogel, Amchai, Glatstein, Sutzkever, Eliot, Stevens, Williams, and others. Discussions and readings in English; students will have the option of reading texts in Hebrew and/or Yiddish.

408 Independent Study Fall or spring. Variable credit. Prerequisite: permission of instructor. C. Kronfeld.

Yiddish Language and Literature
[171-172] Elementary Yiddish 171, fall; 172, spring. 4 credits each term. Not offered 1982-83.

[375] The Shetel in Modern Yiddish Fiction in English Translation (also German Literature 375) Fall. 4 credits. Not offered 1982-83.

[377] Topics in Yiddish Literature (also German Literature 377) Spring. 4 credits. Not offered 1982-83.

405 Metaphor, Modernism, and Cultural Context: The Use of Metaphor in Modernist Hebrew, Yiddish, English, and American Poetry (also Comparative Literature 405) See course description under Hebrew Literature.

479 Independent Study Fall or spring. Variable credit. Prerequisite: permission of instructor. C. Kronfeld.

Related Course In Another Department
[Yiddish Literature in Translation (German Literature 350)] Not offered 1982-83.

Islamic Studies
151 Islamic Civilization Fall. 3 credits. May be used to satisfy the distribution requirement in history or the humanities, or the Freshman Seminar requirement.
An overview of Islamic civilization during the classical period (A.D. 600-1258), when Islam expanded both as a political structure and as a religious and intellectual community. The course will examine the social, economic, and intellectual forces that shaped the Muslim world and molded its interactions with the West. Readings of primary texts in translation.

[251 Studies in the Popular and Courtly Literatures of the Islamic Middle East. See course description under Arabic Literature. Not offered 1982-83.]

[252 Islamic Law and Society Spring. 3 credits. Not offered 1982-83.]

258 Islamic History 600-1050 Spring. 3 credits.
A survey of Islamic history from Muhammad and the rise of Islam to the middle of the Abbasid period. The course will examine the process whereby, within a century after the Arab conquests of the Near East, the cultural and administrative legacy of the Byzantines and Persians was transformed into a new and dynamic, international Islamic civilization. Close reading of primary texts in translation.

355 Jews under Islam. Fall. 4 credits.
M W F 12:00. D. Powers.
The history of the Jews in the Islamic world from the seventh century A.D. to the present. Topics: the contribution of Judaism to the formation of Islamic civilization; the social, economic, and legal status of Jews living in Islamic countries; Jewish-Muslim polemics; Judeo-Islamic culture.

458 Independent Study Fall or spring. Variable credit. Prerequisite: permission of instructor.

History of the Jewish People
[243 History of Ancient Israel to 450 B.C.E. Spring. 4 credits. Not offered 1982-83.]

449 Independent Study Fall or spring. Variable credit. Prerequisite: permission of instructor. D. I. Owen.

Introduction to Biblical Archaeology
Spring. 3 credits. Not offered 1982-83.

M W F 1:25. I. Rabinowich.
An introduction to the history of Turkey, the Arab lands, Israel, and Iran since the beginnings of modernization at the end of the eighteenth century to the present. The focus is on the clash between the realities of modern traditional society and the West, and the changing social patterns, political systems, and ideologies in this context.

[394 Contemporary Egypt (also Government 450) 4 credits. Not offered 1982-83.]

398 Society and Politics in Saudi Arabia Spring. 4 credits. Enrollment limited to 25.
T R 2:30-3:45. J. Goldberg.
The emergence of the Wahhabi state and its transformation as the present Saudi kingdom will be examined, as well as the role of the structure of society in Saudi Arabia and the ways it was affected by modernization and oil, and the power structure of the state and its foreign policy.

451 Politics and Development in the Arabian Gulf (also Business and Public Administration NCE 451) Spring. 3 credits. Open to seniors with permission of instructor.
To be announced. F. Bent.
This course will be focused on the Arabian Gulf sheikhdoms (Kuwait, Bahrain, Qatar, The United Arab Emirates, and Oman) and Saudi Arabia. The issues to be studied include the political processes and administrative characteristics of governance; the impact of internal development and growth; the energy policies of the individual countries, OPEC and AOPEC; the relationships between multinational oil companies and host governments; and the external relations of these Arab states with other Middle Eastern countries, Europe, and the United States.

Near Eastern and Biblical History and Archaeology
243 The History and Archaeology of Ancient Israel to 450 B.C.E. Spring. 4 credits.
A detailed survey of the history and archaeology of the land of Canaan from the traditional origins of the Israelite tribes in the early second millennium/middle Bronze Age (ca. 2000 B.C.E.) through the Babylonian exile to the arrival of Ezra and Nehemiah (ca. 450 B.C.E.). Lectures on, and discussions of, biblical and Near Eastern literary sources relating to the history of ancient Israel, as well as an analysis of the archaeological evidence, will form the basis of the course.

[261 Ancient Seafarers (also Archaeology 275) Fall. 3 credits. Not offered 1982-83. D. I. Owen.]

[262 Mediterranean Archaeology (also Classics 200) Fall. 3 credits. Not offered 1982-83.]
Directed readings on the history, culture, and civilization of the ancient Near East.

Honors Course

499 Independent Study: Honors Fall or spring. Variable credit.

Directed readings and conferences center on the candidate's honors thesis. The thesis topic must be approved by the honors adviser at the end of the second term of the junior year.

Philosophy

The study of philosophy provides students with an opportunity to become familiar with some of the great ideas and great works in the history of thought, while developing analytical skills that are valuable in practical as well as academic affairs. It affords the excitement and satisfaction that come from understanding and working toward solutions of fascinating and important intellectual problems. The curriculum includes substantial offerings in history of philosophy, logic, philosophy of mathematics and science, ethics, social and political philosophy, metaphysics, and theory of knowledge. Any philosophy course numbered in the 100s or 200s is suitable for beginning study in the field. Sections of Philosophy 100 are part of the Freshman Seminar program; they are taught by various members of the staff on a variety of philosophical topics, and because of their small size (twenty students at most), they provide ample opportunity for discussion. Students who want a broad introduction to philosophy may take Philosophy 101. Philosophical Classics, which focuses on some recognized classics in the principal areas of philosophy. Philosophy 131, Logic, Evidence and Argument, deals with the analysis and evaluation of arguments of all sorts. It is not a general introduction to philosophy, but develops skills useful in all areas of study, including philosophy. Many students with special interests find that the best introduction to philosophy is a 200-level course in some particular area of philosophy; such courses have no prerequisites and are usually open to freshmen.

The Major

Students expecting to major in philosophy should begin their study of it in their freshman or sophomore year. Admission to the major is granted by the director of undergraduate studies of the department on the basis of a student's work during the first two years. Eight philosophy courses of at least three credits each are required for the major. They must include at least one course in ancient philosophy, at least one course in the history of philosophy other than ancient philosophy, and a minimum of three courses of at least 3 credits each, numbered above 300, at least one of which must be numbered above 400 (with the exception of Philosophy 490). A course in mathematical logic (either Philosophy 231 or 331), while not required, is especially recommended for majors or prospective majors. Philosophy majors must also complete at least 6 credits of course work in related subjects approved by their major advisers. Occasionally majors may serve as teaching or research aides, working with faculty members familiar with their work.

Honors. A candidate for honors in philosophy must be a philosophy major with a B- or better for all work in the College of Arts and Sciences and an average of B or better for all work in philosophy. In either or both terms of the senior year a candidate for honors enrolls in Philosophy 480 and undertakes research leading to the writing of an honors essay by the end of the final term. Prospective candidates should apply at the Department of Philosophy office, 218 Goldwin Smith Hall.

Fees

In some courses there may be a small fee for photocopying materials to be handed out to students.

Introductory Courses

These courses have no prerequisites; all are open to freshmen.

100 Freshman Seminar in Philosophy Fall or spring. 3 credits. Limited to freshmen who have not taken Philosophy 101. Independent sections, each limited to 20 students. Letter grade only.

Fall. M W F 9:05, staff; M W F 11:15, C. Ginet; M W F 1:25, J. Bennett.

Spring. M W F 11:15, M. W. F 2:30, staff; T R 8:40-9:55, staf; T R 10:10-11:25, staff; T R 12:20-1:35, staff; T R 2:30-3:45, staff.

Spring. M W F 9:05, staff; M W F 11:15, staff; M W F 1:25, staff; M W F 2:30, staff; T R 10:10-11:25, H. Hodges.

101 Introduction to Philosophy Fall or spring. 3 credits.

Fall. T R 10:10-11:25, A. Wood. Spring. M W F 9:05, S. Shoemaker. Readings in classic works of philosophy (such as Plato, Aquinas, Descartes, Hume, Mill, Russell), concerned with any of several central philosophical issues—foundations of knowledge, reality and illusion, the basis of morality, the existence of God.

131 Logic: Evidence and Argument Spring 3 credits.

T R 8:40-9:55, A. Krontlid. An introduction to the fundamental principles of inference, intended to systematize and develop skills in evaluating arguments. Both deductive and inductive arguments will be considered. The course is not a general introduction to philosophy, but develops skills useful in all areas of study, including philosophy.

[201 Philosophical Problems Spring, 4 credits. Not offered 1982-83.]

211 Ancient Philosophy Fall. 4 credits. T R 12:20-1:35, M. Burnyeat. An introduction to the major arguments and theories of ancient Greek and some Roman philosophers, pre-Socrates, Plato and Aristotle, the Stoics and Epicureans. Questions to be considered include What is the nature of the universe, and how can it be known? What are the nature and limits of human knowledge? Is there any rational basis for moral beliefs? Has man free will?

212 Modern Philosophy Spring. 4 credits. T R 12:20-1:35, A. Wood. A survey of some major philosophical problems in the Rationalists, Empiricists, and Kant. Typical problems include the nature and limits of knowledge; perception; the existence of God; free will and determinism; mind and body. Readings from Descartes, Spinoza, Locke, Berkeley, Hume, and Kant.

213 Existentialism Spring. 4 credits. T R 2:30-3:45, A. Wood. A study of selected writings, literary as well as philosophical, by four major thinkers to whom the term existentialist has often been applied; Soren Kierkegard, Friedrich Nietzsche, Fyodor Dostoevsky, Jean-Paul Sartre.

[214 Philosophical Issues in Christian Thought Not offered 1982-83.]

215 Medieval Philosophy Spring. 4 credits. T R 8:40-9:55, N. Kretzmann. An introduction to medieval philosophy, concentrating on such topics as the relationship of faith and reason, the nature of truth, the existence of God, universals in knowledge and reality, and the freedom of the will, as discussed by such writers as Augustine, Boethius, Anselm, Aquinas, Scotus, and Ockham. Some attention to the historical development of philosophy from the end of antiquity through the fourteenth century.

231 Formal Logic Fall. 4 credits. M W F 10:10, H. Hodges. Analysis and evaluation of deductive reasoning in terms of formalized languages. The logic of sentences, predicates, and quantifiers. (This course, rather than 331, is the recommended introductory formal logic course for students unsure of their mathematical aptitude or without mathematical background.)

241 Ethics Spring. 4 credits. M W F 10:10, D. Lyons. Introduction to the philosophical study of moral problems and ethical theories through both historical and contemporary sources. Topics typically include relativism and scepticism; egoism and utilitarianism, and one or more specific moral issues such as abortion, rules or war, or reverse discrimination.

242 Social and Political Theory Fall. 4 credits. T R 2:30-3:45, R. Miller. A historical survey of philosophical thinking about the nature and norms of human society, including such questions as the nature and limits of liberty, the function and justification of state authority, the origins of inequality, and the rationale for revolution. Classic works in social and political theory will be discussed in detail in an effort to analyze their main arguments, determining the views of psychology, society, and ethics on them.

243 Aesthetics Fall. 4 credits. M W F 11:15, B. D. Lyons. An introduction to philosophical questions about the arts. For example, What is art? Are there correct principles for the interpretation of works of art? Does art have any special relation to the emotions? What makes good art good? What is the value of art? The course emphasizes the connections between these questions about the arts and traditional philosophical issues.
245 Biomedical Ethics (also Biological Sciences 205) Fall. 3 credits. Primarily for sophomores, juniors, and seniors; permission of instructor required for graduate students.
M W F 1:25. C. Hughes.
Critical analysis of the conceptual framework in which ethical problems in biology and medicine are to be understood, defined, analyzed, and solved. Problems include experimentation on living subjects; reproductive technologies (eugenes, population control); contraception, abortion, and infanticide; euthanasia and suicide; the allocation of scarce medical resources; physician-patient relationships; and health care systems.

246 Environmental Ethics (also Biological Sciences 206) Spring. 3 credits. Open to sophomores, juniors, and seniors; permission of instructor required for graduate students.
M W F 1:25. C. Hughes.
Critical analysis of the conceptual framework in which environmental policies are formulated and judged. Problems include private interest versus the public good; the relation of individual rights to the collective welfare with respect to property, compensation, regulation, and the exercise of eminent domain; moral obligations to the poor and to future generations; and the ideas of diversity, balance, and stability in the natural environment.

282 Philosophy of Mind Fall. 4 credits.
Discussion of a number of problems about the nature of mind. For example, can thoughts and feelings be physical events in the brain? Might computers or robots be conscious beings? What is it that constitutes a person's identity—the unity of his consciousness? Is there a conflict between free will and determinism?

283 Religion and Reason Fall. 4 credits.
Recent and traditional literature will be taken into account in the examination of such topics as evidence for and against the existence of a god, philosophical problems associated with the attributes of God as described in the great monotheistic religions, and philosophical problems associated with the relationship of God to the physical universe and to man.

286 Science and Human Nature Spring. 4 credits.
M W F 11:15. K. Guyot.
An examination of attempts in the biological and social sciences to offer scientific theories of human nature and human potential and to apply such theories to explain important social and psychological phenomena. Topics vary and may include issues in psychology such as behaviorism, Freudianism, and artificial intelligence, or issues in the foundations of historical theory such as methodological individualism and economic determinism, as well as relevant issues in the biological sciences. Topic for 1982-83: Darwin, social Darwinism, and sociobiology.

Intermediate Courses
Some of these courses have prerequisites.

309 Plato Not offered 1982-83.
310 Aristotle Not offered 1982-83.
311 Modern Rationalism Fall. 4 credits.
M W F 2:30. C. Ginot.
Topic for 1982-83: the philosophy of Leibniz.
312 Modern Empiricism Not offered 1982-83.
314 Topics in Ancient Philosophy Not offered 1982-83.

315 Special Topics in the History of Philosophy Spring. 4 credits.
T R 12:20-1:35. N. Kretzmann.
Topic for 1982-83: fate, the future, foreknowledge, and freedom.

316 Kant Not offered 1982-83.
317 Hegel Not offered 1982-83.
318 Twentieth-Century Philosophy Fall. 4 credits.
M W F 2:30-3:45. S. Shoemaker.

319 Philosophy of Marx Spring. 4 credits.
W 7:30-10:30 p.m. R. Miller.
An investigation of Marx's theories of economics, politics, and ideology in modern societies, his materialist framework for explaining social change, and his view of postcapitalist society. Attention will be paid to the philosophy of science implicit in Marx's arguments, their implications for issues in moral philosophy, and their relevance to contemporary moral and political controversies concerning war, racism, national liberation, political repression, and social inequality. Readings will be from all periods in Marx's development, including the early writings, Capital, and the writings on French political history.

331 Introduction to Formal Logic Spring. 4 credits.
M W F 11:15. R. Stankaner.
Sentential logic and first-order quantification theory. Covers the same material as 231 but in more depth and with additional metamathesis. This is the recommended course of the two, for students with good mathematical background or aptitude.

341 Ethical Theory Not offered 1982-83.
342 Law, Society, and Morality (also Law 666) Fall. 4 credits.
M W F 2:30. J. Bennett.
An introduction to legal philosophy, concentrating on the nature of law. Law has been conceived as divine command, as command of an earthly sovereign, as exercise of power by the state, as rule-governed social behavior, and as the process of discovering the moral relations between citizens. The course looks at these views as expressed in the works of Thomas Aquinas, Jeremy Bentham, John Austin, John Gray, Oliver Wendell Holmes, H. L. A. Hart, and Ronald Dworkin.

361 Metaphysics and Epistemology Spring. 4 credits.
M W F 1:25. R. Stankaner.

363 Topics in the Philosophy of Religion Not offered 1982-83.

381 Philosophy of Science Fall. 4 credits.
M 7-9:30 p.m. R. Boyd.
An examination of central epistemological and metaphysical issues raised by scientific theorizing: the nature of evidence, scientific objectivity, the nature of theories, models and paradigms, the character of scientific revolutions. In addition to the contemporary literature in the philosophy of science, readings are also drawn from the history of science and from the works of modern philosophers such as Locke, Hume, and Descartes.

382 Philosophy and Psychology Spring. 4 credits.
M 7:30-10:30 p.m. R. Boyd.
Philosophy of psychology as a special case of the philosophy of science; problems of measurement, theory construction, experimental design, and the relation of psychology to other sciences.

383 Philosophy of Choice and Decision Not offered 1982-83.
387 Philosophy of Mathematics Not offered 1982-83.
388 Social Theory Not offered 1982-83.
390 Informal Study Fall or Spring. To be taken only in exceptional circumstances. Credit to be arranged. Must be arranged by the student with his or her adviser and the faculty member who has agreed to direct the study.
Staff.

Advanced Courses and Seminars
These courses are offered primarily for majors and graduate students.

395 Majors Seminar Spring. 4 credits. Limited to junior and senior philosophy majors. S-U grades only.
T 2:30-4:25. R. Stankaner.
An examination of some contemporary discussions of three or four classical philosophical issues for example, free will versus determinism, personal identity, the objectivity of moral claims, problems in the philosophy of language.

412 Medieval Philosophy Not offered 1982-83.
413 Plato and Aristotle Fall. 4 credits.
T 3:45-5:40. M. Burney.
Topic to be announced.
414 German Philosophy after Kant Fall. 4 credits.
Topic for 1982-83: Between Kant and Hegel. The course will study writings of post-Kantian idealism and speculative philosophy. Texts will include Kant, Prolegomena (1783); Herder, God (1787); Fichte, Science of Knowledge (1795); Schelling, System of Transcendental idealism (1800); Schelling, Exposition of My System of Philosophy (1801); Hegel, Phenomenology of Spirit: Preface (1807).

431 Deductive Logic Not offered 1982-83.
433 Philosophy of Logic Not offered 1981-82.
436 Intentional Logic Not offered 1982-83.
437 Problems in the Philosophy of Language Fall. 4 credits.
M W F 2:30. H. Hodes.
Topic for 1982-83: Intentionality.
441 Contemporary Ethical Theory Spring. 4 credits.
T 3:45-5:40. J. Bennett.
A thorough study of two recent views of social ethics: that of Robert Nozick, in Anarchy, State, and Utopia, and that of John Rawls in A Theory of Justice and elsewhere.

442 Ethics and the Philosophy of Mind Not offered 1982-83.
443 Topics in Aesthetics Not offered 1982-83.
444 Contemporary Legal Theory (also Law 720) Fall. 4 credits. Limited enrollment; preference given to law students; others must apply to the instructor. This is a Law School seminar, scheduled according to the Law School calendar. The first meeting will be August 24.
Recent work on the nature of law and its relations to morality, with an emphasis on the writings of H. L. A. Hart and Ronald Dworkin.

461 Metaphysics Not offered 1982-83.
462 Theory of Knowledge Not offered 1982-83.
481 Problems in the Philosophy of Science
Spring. 4 credits.
Hours to be announced. R. Rynasiewicz.
Topic for 1982-83. The philosophy of space and
time.

490 Special Studies in Philosophy
Fall or spring.
4 credits. Open only to honors students in their senior
year.
Staff.

[611 Ancient Philosophy
Not offered 1982-83.]

[621 Medieval Philosophy
Spring. 4 credits.
W 3:45-5:40. N. Kretzmann.
Topic to be announced.]

[613 Modern Philosophers
Not offered 1982-83.]

[619 History of Philosophy
Not offered 1982-83.]

[631 Logic
Not offered 1982-83.]

[632 Semantics
Not offered 1982-83.]

[633 Philosophy of Language
Not offered 1982-83.]

[641 Ethics and Value Theory
Not offered 1982-83.]

[681 Theory of Knowledge
Not offered 1982-83.]

862 Philosophy of Mind
Spring. 4 credits.
M 3:45-5:40. S. Shoemaker.
Topic for 1982-83 to be announced.

662 Philosophy of Science
1982-83.
Topic for 1982-83: Ether and relativity.

681 Philosophy of Science
Fall. 4 credits.
Hours to be announced. R. Rynasiewicz.
Topic for 1982-83: Ether and relativity.

D. F. Holcomb, chairman and director of
undergraduate studies (109 Clark Hall, 256-7561);
V. Ambeagkoo, N. W. Ashcroft, K. Berkelman,
H. A. Bethke (emeritus), D. G. Gassel, G. V. Chester,

R. H. Silsbee, S. E. Stilman, P. C. Stein, R. M. Talmah,
S. A. Teukolsky, M. Tigner, J. W. Wilkins, K. G. Wilson,
T. M. Yan, D. R. Yennie

Research in the Department of Physics centers on
two major resources, the Laboratory of Atomic and
Solid State Physics (LASSP) and the Laboratory of
Nuclear Studies (LNS). LASSP has achieved national
eminence both in solid-state and in low-temperature
physics. LNS has concentrated on high-energy
particle physics. Presently it operates, on campus, an
electron-positron colliding-beam storage ring and the
world’s largest electron synchrotron. Students who are
advanced and interested enough have access to the
latest and most exciting developments through a
full schedule of seminars and colloquia. There are
opportunities for research participation and summer
jobs.

Three introductory physics sequences are open to freshmen: 101-102, 112-213-214, and 207-208.
In addition, there is a cluster of general-education
courses, Physics 200 through 205. Physics 101-102,
a self-paced audiotutorial course, is designed for
students who do not intend to go into physics and
who do not have preparation in calculus. Physics 112
and 207 both require calculus (Mathematics 191 or
111), and additional mathematics is required for
subsequent courses in sequence. Physics 101-102
or 207-208 may be taken as terminal physics
sequences. The three- or four-term course
112-213-214 (-315) is recommended for physics
majors and engineers.

For those who wish to pursue some physics beyond
the introductory level, several courses may be
appropriate: Physics 330, Modern Experimental
Optics, Physics 360, Introductory Electronics.
Advanced placement and credit are offered as
outlined in Advanced Placement of Freshmen, or
students may consult Professor Cotts, 522 Clark Hall.
Transfer students requesting credit for physics
courses taken at another college should consult the
department office.

The Major

Various options permit the student to concentrate
heavily on physics or to take less physics and pursue
an accompanying constellation of courses in a related
area. Those desiring a physics concentration as
preparation for professional or graduate work should
complete Physics 112-213-214 or 112-217-218 (and
preferably 315) by the end of the sophomore year.
A basic preparation for professional or graduate
work in physics requires Physics 112-213-214 or
207-208. In either case, it is necessary to complete a
concurrent sequence of mathematics courses.

Mathematics 191-192-293-294 or 193-194-295-296
are normally recommended, except for students
especially interested in continuing the study of pure
mathematics, for whom Mathematics 111-122-
221-222 (or equivalent) may be preferred.

Prospective majors are urged to make an early
appointment at the physics office for advice
planning their programs. Acceptance into the major
is normally granted after completion of a year of
physics and mathematics at a satisfactory level; the
student should propose a tentative plan for
completing his or her graduation requirements as well
as those for the major. The plan may change from
time to time, but it must be approved by the major
adviser. The major requirements have two
components—core and concentration.

Core requirements for the major include:
1) Physics 112-213-214 (or 112-217-218) or
207-208
2) An intermediate physics course in each of four
areas: (a) mechanics—Physics 318 or 431, (b)
mechanics—Physics 325 or 432,
(c) electricity and magnetism—Physics 325 or 432,
(d) modern physics—Physics 318 or 433, and
(d) laboratory physics—Physics 330, 360, or 410.

Mathematics courses prerequisite for these physics
courses are also necessary. The choice of core is
influenced by the intended concentration. For a
concentration in physics, Physics 112-213-214 (or
112-217-218), 318, 325, 315, or 443, and 410 is
appropriate, while for concentrations outside physics,
part (2) of the core might consist of, for example,
Physics 315, 360, 431, 432. Concentration reflects
the student’s interest in some area related to physics;
the array of courses must have internal coherence.
The concentration must include at least 15 credits,
with at least 8 credits in courses numbered above
300. Students have chosen to concentrate in physics,
bio- and chemical-physics, astro-physics, geophysics;
natural sciences; history and philosophy of
computation; computer physics; physics and
business. The concentration in physics is recommended
as preparation for professional or graduate work in
physics or a closely related discipline. Twelve credits
from physics courses above 300, in addition to those
selected for part (2) of the core, are required; the
program must include Physics 410. The following
courses are strongly recommended: Physics 443,
Mathematics 421, 422, and 423; and at least one of
Physics 341, 444, 454, Applied and Engineering
Physics 401, Astronomy 431-432, or Geological
Sciences 485. Students with a concentration in
physics who wish to emphasize preparation for
astronomy or astrophysics should consult the
Astronomy Section of this Announcement. A
combined biology-chemistry concentration is
recommended for premedical students or those who
wish to prepare for work in biophysics. The
concentration in natural science is particularly
appropriate for teacher preparation.

Foreign language requirement. Students interested
in eventual graduate work in physics are advised to
meet this requirement with French, German, or
Russian.

Honor. A student may be granted honors in physics
upon the recommendation of the Physics Advisers
Committee of the physics faculty.

Distribution Requirement

The requirement in physical sciences is met by any
two sequential courses such as Physics 101-102 or
207-208, or by any two general-education courses
from the group 200-205.

Course Prerequisites

Prerequisites are specified in physics course
descriptions to illustrate the materials that students
should have mastered. Students who wish to plan
programs different from those suggested by the
prerequisite ordering are urged to discuss their
preparation and background with a physics adviser
or with the instructors in the course. In many cases
an appropriate individual program can be worked out
without exact adherence to the stated prerequisites.

Courses

101-102 General Physics
101, fall, except by special permission, 102, spring (may also be offered
during summer session). 4 credits each term.
Prerequisites: three years of high school
mathematics, including some trigonometry.
Prerequisite for Physics 102. Physics 101 or 112 or
207. Includes more modern physics and less
207-208, and more mathematical analysis than Physics 207-208 or
112-213-214, but more mathematics than Physics
200 to 205. (Students planning to major in a physical
science should elect Physics 207-208 or
audiotutorial format; students work in a learning
center at hours of their own choice. Repeated tests
on each unit are given until mastery is demonstrated.
One large orientation meeting on R Sept. 2, 10:10
or 12:20, or on T Feb. 2, 7:30 p.m. Staff.
Basic principles treated quantitatively but without calculus. Major topics for 211: Particle structure of matter; kinematics; forces and fields (including electric fields); momentum, angular momentum, energy (including nuclear energy); relativity; sound waves. 102: Electromagnetics; optics; thermal physics; quantum physics. Laboratory emphasizes instrumentation, measurement and interpretation of data. Text: Physics for College Students—with Applications to the Life Sciences, by Tiley and Thurn.

112 Physics I: Mechanics and Heat Fall or spring (may also be offered during summer session). 4 credits. Primarily for students of engineering and for prospective physics majors. Prerequisite: coregistration in Mathematics 192 (or 194 or 112), or substantial previous content with introductory calculus, combined with coregistration in Mathematics 191 (or 193 or 113).

Lecs, M W F 10:10 or 12:20; 2 recs each week; one 2-hour lab alternate weeks. Evening exams: fall, Oct. 14, Nov. 30; spring, Mar. 3, Apr. 5. Fall, staff, spring, R. Littauer.

200 Relativity Spring. 3 credits. Intended for nonscientists; does not serve as a prerequisite to further science courses. Assumes no scientific background but will use some high school algebra and plane geometry.

Lecs, M W F 2:30; disc. T 12:20 or 2:30. N. D. Mermin.

For most people, the special theory of relativity calls to mind Einstein’s famous equation E=mc². Many students have heard of other results from the theory, notions such as time dilation (moving yardsticks shrink in length, ”moving clocks run slowly,” etc). Nevertheless, the theory that yields these extraordinary conclusions—largely a logical analysis of the nature of time—is little known to those without a professional interest in science, even though literally no mathematics beyond elementary high school algebra is required for its formulation. The challenge in learning special relativity lies not in mastering arcane mathematical skills, but in shedding some prejudices about the nature of time that are so deeply held as to be unrecognized as assumptions that might, in fact, be false.

201-202 Great Ideas of Physics Fall, spring. 3 credits. Intended for nonscientists; does not serve as a prerequisite to further science courses. Assumes no scientific background but may use some high school mathematics.

Lecs, M W F 2:30; disc. T 12:20 or 2:30. J. Vieslanetsch.

The Physics 201 and 202 courses have in recent semesters focused on a topic (or group of topics) of particular interest for nonscientists. Among the recent choices: energy and thermodynamics, the nature of light, astronomy and cosmology, and meaning of time. Consult the instructor for updated information. Either term may be taken separately, although they do form a pair.

203 The Physics of Space Exploration Spring. 3 credits. Intended for nonscientists; does not serve as a prerequisite to further science courses. Assumes no scientific background, but may use some high school mathematics.

Lec, M W F 2:30. E. Salpeter.

The principles of physics (plus simple mathematics) are applied to gain knowledge about atoms, planets, stars, and galaxies. The physics behind space probes (and their limitations) is discussed. Interpretation of data from astronomical observations are described. The level of the course will be at the level of a typical article in Scientific American and of Pasachoff’s Astronomy Now.

[204 Physics of Musical Sound Not offered 1982-83.]

205 Reasoning about Luck Fall. 3 credits. Intended for nonscientists; does not serve as a prerequisite for further science courses. Assumes no scientific background, but will use some high school algebra.

Lecs, M W F 2:30, disc to be arranged. V. Ambegaokar.

An attempt to explain how and when natural scientists can cope rationally with chance. Starting from simple questions (such as how one decides if an event—meeting someone with the same birthday, being dealt a bridge hand all in one suite—is likely, unlikely, or just incomprehensible), the course will attempt to reach an understanding of more subtle points: why is, for example, that in large systems likely events can become overwhelmingly likely. From these last considerations, it may be possible to introduce the interested students in a nontrivial way to the second law of thermodynamics, that putative bridge built with each term, each step of the physical theory, quantum mechanics, in which chance occurs—though in a somewhat mysterious way—may be touched on.

207-208 Fundamentals of Physics 207, fall; 208, spring. 4 credits each term. Prerequisites for Physics 207: high school physics plus coregistration in Mathematics 191 or 113. Prerequisites for Physics 208: Physics 207 (or 112 or 101) and at least coregistration in Mathematics 112. Physics 207-208 is intended as a two-semester introduction for students majoring in a physical science, mathematics, or an analytically oriented biological science.

Lecs, M W 9:05 or 11:15; 2 recs each week; one 3-hour lab alternate weeks. Evening exams: fall, Oct. 14, Nov. 18; spring, Mar. 3, Apr. 5. Fall, R. Cotts; spring, R. Poynter.

Core-plus-branch plan. The first nine weeks of each semester are devoted to core material (lec/discussion/lab format): 207. particle mechanics and waves; 208, electromagnetic fields and circuits. For the last five weeks of each term, each student selects one branch topic, and the work on this topic is done on an unstructured, self-paced basis. Possible branches: 207. thermodynamics, acoustics and the physics of music, special relativity, gravitation, 208, optics, introduction to quantum mechanics, nuclear physics, electronics. Core at the level of Physics/ by P. A. Tipler.

213 Physics II: Electricity and Magnetism Fall or spring (may also be offered during summer session). 4 credits. Primarily for students of engineering and for prospective physics majors. Prerequisites: Physics 112 and coregistration in the continuation of the mathematics sequence required for 112.

Electrostatics, behavior of matter in electric fields, magnetic fields, Faraday’s law, electromagnetic oscillations and waves, magnetism. At the level of Fundamentals of Physics, by Halliday and Resnick. Laboratory covers electrical measurements, DC and AC circuits, resonance phenomena.

214 Physics III: Optics, Waves, and Particles Fall or spring. 3 or 4 credits. Primarily for students of engineering and for prospective majors in physics. Prerequisites: Physics 213 and Mathematics 191 or 112.

Lecs, T R S 11:15; rec, T 3:35; lab, R 1:30-4:30.

Evening exams may be scheduled. Fall, R. Littauer; spring, D. Cassel.

A more rigorous version of Physics 213, at the level of Electricity and Magnetism by Purcell (Vol. II, Berkeley Physics Series).

218 Physics III: Optics, Waves, and Particles Fall or spring. 3 or 4 credits. A special section of Physics 214. Conditions governing enrollment are similar to those of Physics 217. Students are required to do the laboratory work offered in Physics 214 or to enroll concurrently in Physics 310 (in which case credit for Physics 218 is reduced to 3 credits).

Lecs, T R S 11:15; sec, T 2:30; lab, see Physics 214 or 310. Evening exams may be scheduled. Staff.

A more rigorous version of Physics 214.

310 Intermediate Experimental Physics Fall or spring. 3 credits. Prerequisite: Physics 208 or 213. May be taken concurrently with Physics 214 or 216 in place of the lab work offered in Physics 214, with permission of student’s instructor.

Labs, R F 1:25-4:25. Fall, P. Hartman; spring, J. Reppy.

Students select from a variety of experiments and may work on experiments of their own design if equipment is available. An individual, independent approach is encouraged. Facilities of the Physics 410 lab are available for some experiments.

315 Phenomena of Microphysics Fall or spring. 3 credits. Primarily for students of engineering and for prospective majors in physics. Prerequisites: Physics 214 and Mathematics 294.

Introduction to the physics of atoms, solids, and nuclei, emphasizing the description of phenomena using the results of elementary quantum and statistical physics. At the level of Introduction to Modern Physics, by Richtmyer, Kenndall, and Cooper.

318 Analytical Mechanics Spring. 4 credits. Prerequisites: Physics 208 or 214 plus one of Mathematics 421, 422, or 423, or permission of instructor. Intended for physics majors concentrating in physics. Similar material is covered in Physics 431 at a less demanding analytical level. (Applied and Engineering Physics 333 is approximately equivalent.)

Newtonian mechanics of particles and systems including rigid bodies; oscillating systems; gravitation and planetary motion; moving coordinate systems, relativistic kinematics, wave propagation; Euler’s equations; Lagrange’s equations; Hamilton’s equations; normal modes and small vibrations. At the level of Classical Dynamics, by Marion.

325 Electricity and Magnetism Fall. 4 credits. Prerequisites: Physics 208 or 214 plus coregistration in one of Mathematics 421, 422, or 423, or permission of instructor. Intended for physics majors concentrating in physics. Similar material is covered in Physics 432 at a less demanding analytical level.

Lecs, T R S 11:15; T 3:35. J. Wilkins.

Electrostatics: electric charge and fields, potential, quantum effects, matter waves; uncertainty principle; introduction to wave mechanics.

217 Physics II: Electricity and Magnetism Fall or spring. 4 credits. Intended for students who have done very well in Physics 112 and desire a more analytic treatment than that of Physics 213. Prospective physics majors are encouraged to select Physics 217. Prerequisites: permission of instructor and approval of student’s adviser before course enrollment. Prerequisites also include a knowledge of the fundamentals of electricity and magnetism and a good mathematical background, including the use of vector calculus.

Lecs, T R S 11:15; rec, T 3:35; lab, R 1:30-4:30.

Evening exams may be scheduled. Fall, R. Littauer; spring, D. Cassel.

A more rigorous version of Physics 213, at the level of Electricity and Magnetism by Purcell (Vol. II, Berkeley Physics Series).

326 Electromagnetic Waves and Physical Optics Spring. 4 credits. Prerequisite: Physics 325.

330 Modern Experimental Optics Spring. 3 credits. Prerequisite: one year of physics.

Lec, M 2:30-3:20, T W R of F 1:25-4:15. A practical, laboratory-based course for students of physical and biological sciences. Students select four or five subject units to match their interests and backgrounds. The units include physics of lasers, image formation, holography, spectrosopy, light pulses, coherence and correlation, diffraction and interference, light sources and detectors. Each unit involves one or more experiments from a set of varying difficulty, instructor direction, and readings supplementary notes, and problems. An introduction to modern optical techniques and equipment used in current research in such fields as biology, chemistry, physics, and astronomy.

341 Thermodynamics and Statistical Physics Fall. 4 credits. Prerequisites: Physics 214 and Mathematics 294.

360 Introductory Electronics (also Applied and Engineering Physics 363) Fall or spring. 4 credits. Prerequisite: Mathematics 294 or permission of instructor.

Selected topics in experimental concepts and techniques. About seven different experiments are available in acoustics, optics, spectroscopy, electrical circuits, electronics and ionics, magnetic resonance, x-rays, low-temperature, solid-state, cosmic rays, nuclear physics. The course forms three to six diverse experiments, depending on difficulty, selected to meet individual needs and interests. Independent work is stressed.

431-432 Introductory Theoretical Physics I and II Fall, 432; spring, 4 credits each term. Prerequisites: Physics 431 Physics 207-208 or equivalent; Mathematics 294 or equivalent. Primary for majors with concentrations outside physics, and for graduate students in a science other than physics (such as chemistry, engineering, biology, geology). Physics 318 and 325 cover similar material at a higher analytical level and are intended for physics majors concentrating in physics.

Lecs, M W F 10:10 and F 1:25. Fall, R. Talman; spring, D. Yennie. 431: Mechanics. Includes Newtonian mechanics, Lagrange's and Hamilton's equations, central forces, rigid-body motion, and small oscillations. At the level of Classical Dynamics, by Marsden; 432: Electricity and Magnetism. Includes electrostatics, magnetostatics, boundary value problems, dielectric and magnetic media, circuit theory. Maxwell's equations and electromagnetic waves. At the level of Electricity and Magnetism, third ed., by Bleaneley and Bleaneley.

443 Introductory Quantum Mechanics Fall. 4 credits. Prerequisites: Physics 318 and 325, or 431-432; Physics 315 and Mathematics 421 or permission of instructor.

Lecs, M W F 9:05, M 3:35. Introduction to concepts and techniques of quantum mechanics, at the level of Introduction to Quantum Mechanics, by Dicke and Wittke.

444 Nuclear and High-Energy Particle Physics Spring. 4 credits. Prerequisite: Physics 443 or permission of instructor.

Lecs, M W F 9:05, F 1:25. M. Gliehrer. Behavior of high-energy particles and radiation; elementary particles; basic properties of nuclei; nuclear reactions; nuclear forces; cosmic rays; general symmetries and conservation laws. At the level of Subatomic Physics, by Frauenfelder and Henley.

454 Introductory Solid-State Physics Spring. 4 credits. Prerequisite: Physics 443 or Chemistry 793, or permission of instructor.

Lecs, T R S 10:10, R 3:35. R. Stlbe. An introduction to modern solid-state physics, including lattice structure; lattice vibrations, thermal properties, electron theory of metals and semiconductors, magnetic properties, and superconductivity. At the level of Introduction to Solid State Physics, fifth edition, by C. Kittel.

500 Informal Graduate Laboratory Fall or spring. Variable credit.

Lec, M W F 11:15. Fall, P. Lepage; spring, K. Wilson.

508 Design of Electronic Circuitry Spring. 3 credits.

Lec, M W 9:05, D. Hartill. Circuit techniques and design in electronic measurement and instrumentation, with emphasis on applications to physics experiments. At the level of Integrated Electronics, by Millman and Hakka.

510 Advanced Experimental Physics Fall or spring. 3 credits.

Labs, T W 1:25-4:25. R. Siemann and staff. About seven different experiments are available in acoustics, optics, spectroscopy, electrical circuits, electronics and ionics, magnetic resonance, x-rays, low-temperature, solid-state, cosmic rays, nuclear physics. Students perform four to eight experiments selected to meet individual needs. Independent work is stressed.

520 Projects in Experimental Physics Fall or spring. 1-3 credits. To be supervised by faculty members.

Projects of modern topical interest that involve some independent development work by student. Opportunity for more initiative in experimental work than is possible in Physics 510.

551 Classical Mechanics Fall. 3 credits.

Lecs, T R S 10:10. E. Sigga. Lagrangian and Hamiltonian formulation of classical mechanics and modern applications in nonlinear dynamics. The foundations will be taught at the level of the Landau and Lifshitz's tract on mechanics, together with selected portions from V. I. Arnold, Mathematical Methods of Classical Mechanics. Approximately the latter third of the course will be directed at questions of stability and stochasticity in nonlinear systems and nonlinear waves such as solitons.

553-554 General Relativity (also Astronomy 509-510) 553, fall; 554, spring. 4 credits.

Prerequisite: knowledge of special relativity at the level of Classical Mechanics, by Goldstein. Offered alternate years.

Physics 553 is a systematic introduction to Einstein's theory, with emphasis on modern coordinate-free methods of computation. Topics include review of special relativity, modern differential geometry, foundations of general relativity, laws of physics in the presence of a gravitational field, experimental tests of gravitational theories. At the level of General Relativity, by Misner. Physics 554 is a continuation of 553 that emphasizes applications to astrophysics and cosmology. Topics include relativistic stars, gravitational collapse and black holes, gravitational waves, cosmology.

561 Classical Electrodynamics Fall. 3 credits.

Lecs, M W F 9:05. S. Teukolsky. Maxwell's equations, electromagnetic potentials, electrodynamics of continuous media (selected topics), special relativity, radiation theory. At the level of Classical Electrodynamics, by Jackson.

562 Statistical Mechanics (also Chemistry 796) Spring. 4 credits. Primarily for graduate students.

Prerequisite: Chemistry 793 or equivalent.

572 Quantum Mechanics I Fall or spring. 4 credits.

Lecs, M W F 11:15. Fall, P. Lepage; spring, K. Wilson.
The formulation of quantum mechanics in terms of states and operators. Symmetries and the theory of angular momentum. Stationary and time-dependent perturbation theory. Fermi's golden rule, and variational methods. The elements of scattering theory. At the level of Quantum Mechanics, by Merzbacher, and Quantum Mechanics, by Landau and Lifshitz. Familiarity with elementary aspects of the Schroedinger equation is assumed, including its application to simple systems such as the hydrogen atom.

574 Quantum Mechanics II Spring. 4 credits.
Required of all majors in theoretical physics. Lecs, M W F 11:15.
Discussion of various applications of quantum mechanics, such as collision theory, theory of spectra of atoms and molecules, theory of solids, emission of radiation, relativistic quantum mechanics. At the level of Intermediate Quantum Mechanics, by Bethe and Jackiw.

612 Experimental Atomic and Solid-State Physics Fall. 3 credits.
Lecs, M W F 1:25. S. Gregory.
Lectures on techniques and design principles. Emphasis on study of solids by their interactions with electromagnetic fields. Topics: sources and detectors, scanning and resonance techniques, signal processing, sample preparation, characterization, environmental control.

635 Solid-State Physics I Fall. 3 credits. First semester of a two-semester sequence of solid-state physics for graduate students who have had the equivalent of Physics 572 and 582 and some prior exposure to solid-state physics, such as Physics 454. Lecs, T R S 11:15. A. Sievers.
Electronic and phonon properties of metals and insulators, including transport processes. Discussions at the level of Solid State Physics, by N. W. Ashcroft and N. D. Mermin.

636 Solid-State Physics II Spring. 3 credits. Lecs, M W F 10:10. J. Wilkins.
Concepts developed in Physics 635 are extended and applied in a survey of the following: band theory and Fermi surface in localized states, magnetism, neutron and light scattering, phenomenological superconductivity, and other topics of current interest in condensed-matter physics.

645 High-Energy Particle Physics Fall. 3 credits.
Lecs, M W F 11:15. K. Gottfried.
Introduction to the physics of nucleons and mesons. Strong, electromagnetic, and weak interactions. Relevance of symmetry laws to particle physics. Introduction to the quark model. Unification of weak and electromagnetic interactions. At the level of Introduction to High Energy Physics, by Perkins.

646 High-Energy Particle Physics Spring. 3 credits.
Topics of current interest, including hadron electroproduction, electron positron annihilation and high-energy neutrino reactions, are surveyed. Lectures and reading material are at the level of High Energy Hadron Physics, by Perl. Students share in leading the discussions.
Note: Only S-U grades will be given in courses numbered 650 or above.

651 Advanced Quantum Mechanics Fall. 3 credits.
Relativistic quantum mechanics with emphasis on perturbation techniques. Extensive applications to quantum electrodynamics. Introduction to renormalization. At the level of Relativistic Quantum Mechanics, by Bjorken and Drell.

652 Quantum Field Theory Spring. 3 credits.
Lecs, M W F 11:15. T. Kinoshita.
Canonical field theory, model field theories. Green's functions, renormalization. Introduction to analytic properties of scattering amplitudes and dispersion relations. Applications to strong interactions. At the level of Relativistic Quantum Fields, by Bjorken and Drell.

653 Statistical Physics Fall. 3 credits. Normally taken by students in their second or later years. Prerequisites: competence in the basic principles of quantum mechanics, statistical mechanics, and thermodynamics.
Lecs, M W F 9:05. N. Ashcroft.
Survey of topics in modern statistical physics, including the theory of simple classical and quantum fluids; the theory of ordered systems such as superfluids and superconductors; kinetic theory and the Boltzmann equation; phenomenological Fermi liquid theory and hydrodynamics; theories of inhomogeneous systems. The contents of the course vary with the current interests of the instructor. There is rarely any set text, though Statistical Physics, by Landau and Lifshitz, gives an idea of the level.

654 Theory of Many-Particle Systems Spring. 3 credits. Prerequisites: Physics 562, 574, 635, 636, and 653.
Lecs, T R 10:10-11:35. V. Ambegaokar.
Equilibrium and transport properties of microscopic systems of many particles studied at zero and finite temperatures. Thermodynamic Green's function techniques introduced and applied to such topics as normal and superconducting Fermi systems, superfluidity, magnetism, insulating crystals.

685 Topics in Theoretical Astrophysics (also Astronomy 550) Fall. 4 credits.
Lecs, M W F 2-3. E. Salpeter.
Lecs, T 11:15-11:45. E. Salpeter.
686-689 Special Topics Offerings are announced each term. Typical topics are group theory, analyticity in particle physics, weak interactions, superfluids, stellar evolution, plasma physics, cosmic rays, general relativity, low-temperature physics, X-ray spectroscopy or diffraction, magnetic resonance, phase transitions, and the renormalization group.

690 Independent Study in Physics Fall or spring. Variable credit.
Special graduate study in some branch of physics, either theoretical or experimental, under the direction of any professional member of the staff.

Portuguese
See Modern Languages, Literatures, and Linguistics, p. 145.

Psychology
Topics of current interest, including hadron electroproduction, electron positron annihilation and high-energy neutrino reactions, are surveyed. Lectures and reading material are at the level of High Energy Hadron Physics, by Perl. Students share in leading the discussions.
Note: Only S-U grades will be given in courses numbered 650 or above.

Psychology

The major areas of psychology represented in the department are human experimental psychology, biopsychology, and personality and social psychology. These areas are very broadly defined, and the courses are quite diverse. Biopsychology includes such fields as animal learning, neuropsychology, interactions between hormones, other biochemical processes, and behavior. Human experimental psychology includes such courses as cognition, perception, memory, and psycholinguistics. Personality and social psychology is represented by courses and fieldwork in psychopathology as well as courses in social psychology and personality (such as theories of personality, beliefs and attitudes, and sex roles). In addition to the three major areas mentioned above, the department also emphasizes the statistical and logical analysis of psychological data and problems.

The Major
Prerequisites for admission to the major are:
1) any three courses in psychology (students often begin with Psychology 101);
2) no grade below C+ in any psychology course; and
3) acceptance by the Majors and Advising Committee of the Department of Psychology.
Application forms may be obtained at the department office and should be filed two weeks before the course enrollment period.

Requirements for the major are:
1) a total of 40 credits in psychology (including prerequisites), from which students majoring in psychology are expected to choose, in consultation with their advisers, a range of courses that covers the basic processes in psychology (laboratory and/or field experience is recommended); and
2) demonstration of proficiency in statistics before the beginning of the senior year. (See the section below on the Statistics Requirement.)
Normally it is expected that all undergraduate psychology majors will take at least one course in each of the following three areas of psychology.
1) Human experimental psychology,
2) Biopsychology,
3) Social, personality, and abnormal psychology.

The following classification of Department of Psychology offerings is intended to help students and their advisers choose courses that will ensure that such breadth is achieved.

2) Biopsychology: Psychology 123, 322, 324, 326, 361, 386, 422, 425, 491. Note: Courses in the biopsychology area other than 123 have 123 and/or introductory biology among their prerequisites.
3) Social, personality, and abnormal psychology: Psychology 206, 275, 277, 280, 284, 325, 327, 328, 361, 383, 384, 385, 402, 426, 467, 468, 469, 480, 481, 482, 483, 486, 488 or 489.

The major adviser determines to which group, if any, the following courses may be applied.

With the permission of the adviser, courses in other departments may be accepted toward the major requirements.

Fieldwork, Independent study, and teaching. The department requires students to observe the following limits on fieldwork, independent study, and teaching.
1) Undergraduates may not serve as teaching assistants for psychology courses if they are serving as teaching assistants for any other course during the same semester.
2) An undergraduate psychology major cannot apply more than 12 of the credits earned in independent study (including honors work) and fieldwork toward the 40 credits required by the major.

**Statistics requirement.** Proficiency in statistics can be demonstrated in any of the several ways listed below:

1) Passing Psychology 350 or Psychology 471.
2) Passing an approved course or course sequence in statistics in some other department at Cornell. The approved list of courses and sequences may change. It has Basic Education 352–353, Industrial and Labor Relations 210–311, and Sociology 325. An up-to-date list is posted outside of 278 Uris Hall. Requests that a particular course be added to this list may be made to Professor Gilovich.
3) Passing a course or course sequence in statistics at some other college, university, or college-level summer school. The course or sequence must be equivalent to at least 6 semester credits. The description of the course from the college catalog and the title and author of the textbook used must be submitted to Professor Gilovich for approval.
4) Passing an exemption examination. This examination can be given at virtually any time during the academic year if the student gives notice at least one week before. Students who have completed a theoretical statistics course in a department of mathematics or engineering and who wish to demonstrate competence in applied statistics usually find this option the easiest.

Students planning this option should discuss it in advance with Professor Gilovich. Sample examination questions are posted outside of 278 Uris Hall.

**Concentration in Biopsychology**

Psychology majors interested in psychology as a biological science can elect to specialize in biopsychology. Students in this concentration must meet all of the general requirements for the major in psychology and must also demonstrate a solid background in introductory biology; the physical sciences, including at least introductory chemistry; and mathematics. Students will design with their advisor an integrated program in biopsychology built around courses on physiological, chemical, anatomical, and ecological determinants of human and nonhuman behavior offered by the Department of Psychology. Additional courses in physiology, anatomy, organic chemistry, biochemistry, neurochemistry, neuropsychology, and behavioral biology may be designated as part of the psychology major after consultation between the student and his or her biopsychology advisor.

**Concentration in Personality and Social Psychology**

This concentration is offered in cooperation with the Department of Sociology. Psychology majors who wish to specialize in social psychology are expected to meet the general requirements for the major in psychology and to demonstrate an interest in social psychology by enrolling in one or more courses in sociology, cultural anthropology, experimental psychology, social methodology, and several aspects of personality and social psychology. Seniors in the concentration may elect advanced and graduate seminars, with the permission of the instructor.

**Honors Program.** This program is intended to give students an opportunity to examine selected problems in depth and to carry out independent research under the direction of a faculty member. During the spring term of the junior year, an honors student will take Psychology 494 and will develop a proposal and begin work on a research project. The student will arrange a meeting with an honors adviser and a faculty sponsor. At the end of the spring term, a report of the semester’s work will be submitted for faculty review.

By the fall term of the senior year, honors students will have begun work in their final research projects. They will also enroll in a senior honors seminar. Psychology 498, in which research projects will be discussed. Thesis research will continue in the spring with enrollment in Psychology 499, Senior Honors Dissertation. Final honors status is based on a written thesis and an oral defense of the thesis as well as on general academic performance.

Prospective applicants are advised to file applications early in the fall term of their junior year. Decisions on these applications will be made by the faculty at the end of the fall semester. It is possible for a student who has satisfactorily completed independent study or research to be admitted to the program at the end of the junior year. For consideration by the honors committee of the Department of Psychology, applicants must have a minimum cumulative grade average of at least a B+ in all courses in psychology.

**Distribution Requirement**

The distribution requirement in the social sciences is satisfied by any two courses in psychology with the exception of Psychology 123, 352, 324, 326, 350, 361, 396, 422, 425, 451, 471, 472, 473, 476, 477, 479, 491, and 693.

**Courses**

101 Introduction to Psychology: The Frontiers of Psychological Inquiry

Fall. 3 credits. Students may not receive credit for both Psychology 101 and Education 110. Students who would like to take a discussion seminar should also enroll in Psychology 103.

The study of human behavior. Topics include brain functioning and mind control, psychophysiology of sleep and dreaming, psychological testing, perception, learning, motivation, personality, abnormal behavior, social psychology, and other aspects of applied psychology. Emphasis is on developing skills to critically evaluate claims made about human behavior.

103 Introductory Psychology Seminar

Fall. 1 credit. Limited to 400 students. Prerequisites: concurrent enrollment in Psychology 101. Hours to be arranged; 32 different time options.

A weekly seminar that may be taken in addition to Psychology 101 to provide an in-depth exploration of selected areas in the field of psychology. Involves extensive discussion and a term paper related to the seminar topic. Choice of seminar topics and meeting times will be available at the second lecture of Psychology 101.

123 Introduction to Psychology: Biopsychology

Fall. 3 credits. May not be taken for credit by students who are registered in or have completed one or more courses offered by the Section of Neurobiology and Behavior of the Division of Biological Sciences, or two or more biopsychology courses.

W M W F 10:10. E. Adams Regan and staff.

A survey of behavior emphasizing evolutionary and physiological approaches, designed to introduce students to the interface between biology and psychology. Both human and nonhuman behavior is included, together with theoretical issues pertaining to the application of biological principles to human behavior.

190 Thought and Intelligence

Spring. 4 credits.

Open to juniors and seniors in any field, or to freshmen and sophomores who have had a course in psychology.

W M W F 9:05. U. Neisser.

The concepts underlying the measurement of intelligence are discussed, and methods for interpreting such measurements are considered in the context of psychological studies of problem solving and thinking. Topics include introspective accounts of thought, experiments on problem solving and concept formation, cross-cultural studies of thinking, the history of the concept of intelligence, reliability and validity of tests, heritability of intelligence, and recent relevant research.

201 Introduction to Psychology as a Laboratory Science

Fall. 3 credits. Prerequisite: one course in psychology (normally Psychology 101, 123, or 190). High school credit in psychology may meet this prerequisite with permission of instructor. Not offered 1983–84. Staff.

205 Perception

Fall. 3 credits. Open to first-year students. Limited to 50 students.

Basic concepts and phenomena in the psychology of perception, with emphasis on stimulus variables and sensory mechanisms. All sensory modalities are considered: visual and auditory perception are discussed in detail.

208 Psychology in Business and Industry (also Hotel Administration 314)

Spring. 3 credits. Limited to 35 psychology students. Prerequisites: Psychology 101, 123, or 190, or permission of instructor. Not recommended for upperclass students in ILR.

The principles of psychology applied to industrial and business systems: personnel selection; placement and training; problems of people at work, including evaluation, motivation, efficiency, and fatigue; and the social psychology of the work organization.

207 Motivation Theory: Contemporary Approaches and Applications

Spring. 4 credits. Prerequisite: an introductory psychology course. Not offered 1982–83.

W M W F 11:15. Staff.

Models and research in human motivation are examined and integrated. Traditional approaches are used as departure points for the study of more current themes, such as intrinsic motivation and achievement motivation. Attention is given to how pertinent various themes are to real-life behavioral settings.

209 Developmental Psychology

Spring. 4 credits. Prerequisite: an introductory psychology course.

T R 12:20–1:45; sec. to be arranged. P. Keil.

A comprehensive introduction to current thinking and research in developmental psychology. Topics include perceptual and cognitive development in infancy and childhood, attachment, language development, pragmatics (research and teaching), moral development, cross-cultural perspectives, and socialization.

214 Introduction to Cognitive Psychology

Spring. 3 credits. Prerequisite: one course in psychology.

An introduction to psychology, emphasizing the perceptual and cognitive processes that underlie human behavior. The course is designed to introduce the student to topics such as perception, memory, language, thinking, decision making, and problem solving, and decision making. Techniques for investigating problems in these areas are discussed.

215 Language and Communication

Spring 3 or 4 credits; the 4-credit option involves a term paper or project. Open to first-year students. Limited to 40 students.

W M W F 12:5. J. Cutting.

Topics include the nature of language, its origin and acquisition, the relation between language structures and psychological processes; also animal communication, sign language, aphasias, black English, and reading.

275 Introduction to Personality Psychology

Fall. 3 credits. The additional (or fourth) credit is given for attendance at the optional section meeting, and the term paper. Prerequisite: an introductory psychology course.
277 Psychology of Sex Roles (also Women's Studies 277 and Sociology 277) Spring. 3 or 4 credits. An examination of basic theory, data, and processes in the psychology of sex roles, including psychological anthropology, women's conflict over achievement, the male sex role, equalitarian marriage relationships, gender-liberated child-rearing, female sexuality, homosexuality, and transsexualism.

280 Introduction to Social Psychology (also Sociology 280) Spring. 3 or 4 credits; the additional (or fourth) credit is given for an optional term paper. Prerequisite: an introductory psychology course.

284 Social-Psychological Theories and Applications (also Sociology 284) Fall. 3 credits. Prerequisite: introductory psychology. Emphasis is given to those aspects of personality and social psychology that have led to effective practical applications or that provide reasonable insights into the genesis of and/or amelioration of social and personal problems.

305 Visual Perception Spring. 3 or 4 credits, depending on whether the student elects to do an independent laboratory project. Prerequisite: Psychology 205 or permission of instructor.

307 Chemosensory Perception Fall. 3 or 4 credits; the optional (or fourth) credit is for an independent laboratory project. Not offered 1982-83; next offered 1983-84.

308 Perceptual Learning Fall. 3 credits. Prerequisite: Psychology 205, 209, 305, or permission of instructor. Not offered 1982-83.

309 Development of Perception and Attention Spring. 3 credits. Prerequisite: Psychology 205, 209, 214, 365, or permission of instructor.

313 Perceptual and Cognitive Processes Fall. 3 credits. Prerequisite: Psychology 205 or 214, or permission of instructor.

314 The Social Psychology of Language Spring. 4 credits. Prerequisite: a course in linguistics or psycholinguistics and in social or personality psychology, or permission of instructor.

316 Auditory Perception Spring. 3 or 4 credits; the 4-credit option involves a laboratory project or paper. Prerequisites: Psychology 205, 209, 214, or 215 (other psychology, linguistics, or biology courses could serve as prerequisite with permission of the instructor).

322 Hormones and Behavior (also Biological Sciences 322) Spring. 3 or 4 credits; the 4-credit option involves a one-hour section once a week. Prerequisites: Psychology 205 or permission of instructor. Students will be expected to participate in discussion and read original papers in the field. Limited to juniors and seniors; open to sophomores only by permission. Prerequisites, one year of introductory biology plus a course in psychology or Biological Sciences 321, S-U grades optional.

324 Biopsychology Laboratory (also Biological Sciences 324) Spring. 3 credits. Limited to 25 juniors and seniors. Prerequisite: Psychological 201 or Biological Sciences 103-104 or Psychology 123 or Biological Sciences 321, and permission of instructor. S-U grades optional.

325 Introductory Psychopathology Fall. 3 or 4 credits; the 3-credit option entails lectures, readings, and two exams; the 4-credit option requires an additional seminar-credit, structure, and assessment of personality as well as personality development and change. Biological and sociocultural influences on personality are also considered.

386 Evolution of Human Behavior Fall. 4 credits. Prerequisite: Psychology 123, an introductory biology course, or junior or senior status.

390 Fieldwork in Psychopathology and the Helping Relationship Fall. 2 credits. Prerequisites: Psychology 325 or concurrent registration in 325 and permission of the instructor. Students do not enroll in advance for this course. Field placement assignments are made in Psychology 325 during the first two weeks of the semester. Students who have already taken Psychology 325 must contact the instructor during the first week of the semester. Enrollment is limited by the fieldwork placements available. Fee, $20.

391 Continuing Fieldwork in Psychopathology and the Helping Relationship Fall or spring. 2 credits each term. Prerequisites: Psychology 325, 327, and permission of instructor. S-U grades optional. May not be taken more than twice. Students do not enroll in advance for this course. Students in Psychology 327 should inform their teaching assistant before the end of the semester of their desire to take Psychology 328. Students not currently in a field placement who want to take Psychology 328 should contact the instructor during the first week of the semester. Field placement assignments will be made during the first two weeks of the semester. Enrollment is limited by the fieldwork placements available. Fee, $20.

396 Afro-American Perspectives in Experimental Psychology (also Africana Studies and Research Center 345) Spring. 3 or 4 credits. Prerequisite: introductory course in psychology or ASARC 171. Not offered 1982-83.

T R 12:20-2:15, sec to be arranged. D. Bern. An introduction to research and theory in personality psychology, emphasizing contemporary approaches. Topics include the history of personality, structure, and assessment of personality as well as personality development and change. Biological and sociocultural influences on personality are also considered.
entertained and critiqued. Finally, the research process is evaluated as a potential tool for analysis and action in black communities.

347 Psychology of Visual Communications Spring. 4 credits. Limited to 12 students. Prerequisites: Psychology 101 and permission of instructor.
T 10:10-12:05; lab to be arranged. J. Maas.
An exploration of theories of perception, attitude, and behavior change as they relate to the effectiveness of visually based communication systems. Emphasis is on an empirical examination of the factors that determine the nature and effectiveness of pictorial representations of educational messages in nonprint media.

350 Statistics and Research Design Fall. 4 credits. Prerequisite: a course in the behavioral sciences.
Acquaints the student with the elements of statistical description (measures of average, variation, correlation of change) and more importantly, develops an understanding of statistical inference. Emphasis is placed on those statistical methods of principal relevance to psychology and related social sciences.

361 Biochemistry and Human Behavior (also Nutritional Sciences 361) Fall. 3 credits. Prerequisites: Biological Sciences 101-102, Chemistry 103-104, Psychology 123, or permission of instructor.
M W F 11:15. D. Levitsky.
The course is intended to survey the scientific literature on the role of the brain and body biochemical changes as determinants of human behavior. The topics covered include action and effects of psychopharmacologic agents, biochemical determinants of mental retardation, biochemical theories of psychosis, effects of nutrition on behavior. A fundamental knowledge of human biology and chemistry is essential.

381 Person Perception and Expression (also Sociology 381) Spring. 4 credits. Prerequisite: one course in social psychology or personality, or one course in psychology and one course in sociology, or permission of instructor.
T R 1-2:15. L. Melzer.
An intermediate course in social psychology, focusing on people’s judgments of one another and on their attraction to and rejection by others. Emphasis will be on how others judge them. Impressions, attributions, biases, self-concept, self-disclosure, self-presentation, deception, body language, conversational style, and facial expressions are relevant topics.

383 Social Interaction (also Sociology 383) Spring. 4 credits. Prerequisite: a course in social psychology.
Fine-grain analyses of social behavior, its structure, changes, and determinants. Extensive practice in analysis of filmed and taped interactions. Student research is required throughout the course.

384 Cross-Cultural Psychology (also Sociology 384) Spring. 4 credits. Prerequisites: a course in psychology and one in either sociology or social or cultural anthropology, or permission of instructor.
A critical survey of approaches, methods, discoveries, and applications in emerging attempts to study human nature, experience, and behavior cross-culturally. Focus on studies of cognition, values, socialization, influences, and personality attributes, stereotype, ideology, socioeconomic development, and mental illness. Problems of how one can learn another culture will also be dealt with.

385 Theories of Personality (also Sociology 385) Fall. 4 credits. Prerequisite: Psychology 101, 214, or 275, or permission of instructor.
An intermediate analysis of comparative features of the historically and currently important theories of personality, with an evaluation of their systematic empirical contributions and applicability to study, to psychology, and to other behavioral sciences.

396 Introduction to Sensory Systems (also Biological Sciences 396) Spring. 3 credits. No auditors. Prerequisites: an introductory course in biology or psychology, plus a second course in neurobiology or behavior or perception or cognition or biopsychology. Students will be expected to have elementary knowledge of perception, neurophysiology, behavior, and chemistry. S-U grades optional for graduate students only.
M W F 9:05. B. P. Hall.
This course will be taught using the Socratic method, in which the instructor asks questions of the students. Students read, analyze, and discuss in class difficult original literature dealing with both those characteristics of sensory systems that are common across living organisms and those sensory properties that represent adaptations of animals to particular habitats or environments. The principles and limitations of major methods used to examine sensory systems will be considered. For Spring 1983, general principles of sensory systems, and auditory, visual, and somatosensory systems will be covered. One aspect of each system, e.g., localization of objects in space by sound, color vision, thermoreception, will be selected for special attention. At the level of the Neurons without Impulses, edited by Roberts and Bush, and Recognition of Complex Acoustic Signals, edited by Bullock.

T R 12:05-2:15, sec to be arranged. Staff.
Current research and theory on the nature and etiology of psychopathology, the affective disorders, and psychosis. Approaches from various disciplines are considered. Minimal attention to psychotherapy.

410 Undergraduate Seminar in Psychology Fall or spring. 2 credits. Written permission of section instructor required for registration. Nonmajors may be admitted, but psychology majors are given priority. Hours to be arranged. Staff.
Information on specific sections for each term, including instructor, prerequisites, and time and place may be obtained from the Department of Psychology office, 211 Ulls Hall.

411 Memory and Human Nature Fall. 4 credits. Limited to 20 students. Prerequisite: several courses in psychology or permission of instructor. No nonpsychology majors with backgrounds in literature or anthropology are encouraged to apply.
The human activity of remembering is considered from various perspectives: personal, developmental, experimental, cross-cultural, etc. The focus is on the natural and social context of memory; laboratory studies are considered when they help clarify ordinary remembering. Specific topics include memory for remote events and childhood, for controversial and unacceptable material; for stories and conversations and events; individual, developmental, and cultural differences in remembering and thinking; mnemonics and memorists. Class periods are devoted to seminar discussions.

418 Psychology of Language Fall. 4 credits. Prerequisite: Psychology 215 or permission of instructor.
T R 12:00-1:15. F. Kellet.
An advanced treatment of the nature of the human capacity of language. Topics include the nature of linguistic theory, syntax and semantics, aspects of language use (comprehension, memory and knowledge, thought and action, communication), and language acquisition.

422 Developmental Biopsychology Spring. 4 credits. Prerequisites: a course in introductory biology and a course in biopsychology or neurobiology (such as Psychology 123 or Biological Sciences 321).
M W F 9:05. B. Finlay.
We will discuss the relationship of the development and evolution of the brain to the development of behavior. Topics include normal neuroembryology, how neurons are generated, find targets, and establish connections; the emergence of reflexive and complex behavior; how experience affects the developing brain: evolutionary perspectives on the development of perception, memory, and communication systems; and abnormal development.

425 Brain and Behavior Fall. 3 or 4 credits; 4-credit option includes a discussion section and requires an additional paper. Prerequisites: a course in introductory biology and a course in biopsychology or neurobiology (such as Psychology 123 or Biological Sciences 321).
M W F 9:05. B. Finlay.
We will study the relation between structure and function in the central nervous systems. Human neuropsychology and the contribution of work in animal nervous systems to the understanding of the human nervous system will be stressed. Some topics to be discussed include visuo-spatial perception, the organization of motor activity, emotion and motivation, psychosurgery, and memory and language.

426 Seminar and Practicum in Psychopathology Spring. 4 credits. Limited to 16 students.
Prerequisites: Psychology 325, permission of instructor required in all cases. Students should apply to the course during preregistration in fall semester. Acceptance into the course will be announced before the end of the fall semester.
T R 2:30-4:25, fieldwork to be arranged. R. Mack.
A seminar and fieldwork course for advanced students who have mastered the fundamental concepts of personality and psychopathology. An opportunity to explore in depth the various facets of psychopathology, etiology, and treatment, to discuss these in seminar, and to work with mental health professionals and those who seek their help. The course includes an experiential component that will be described when applying for the course.

438 Language Development (also Human Development and Family Studies 438) Spring. 3 or 4 credits. Prerequisites: at least one course in cognitive psychology, cognitive development, or linguistics. Offered in alternate years. Not offered 1983-84. Next offered 1982-84.
T R 10:10-12:05. B. Lust.
A survey of basic literature in language development. Major theoretical positions in the field are considered in the light of studies in first-language acquisition of phonology, syntax, and semantics from infancy onward. The fundamental issue of relations between language and cognition will be discussed. The acquisition of communicative systems in nonhuman species such as chimpanzees, and problems of language pathology will also be addressed, but main emphasis will be on normal language development in the child.

440 Sleep and Dreaming Spring. 4 credits.
Limited to 15 students. Prerequisites: advanced undergraduate or graduate standing and permission of instructor. Not offered 1982-83.
T R 2:30-4. H. Levin.
The basic problems of sleep and dreams, the research on the ethnic, racial, and sexual bases of intelligence will be taken as the primary example with which to discuss political and social influences on the choice of research topics, the methods of investigation, and the interpretation of results. Some
insights about these issues are available from historical changes in the research and by the comparison of research in various countries, particularly the United States and Great Britain. The writings of Jensen, Herrnstein, Burt, Eysenck, Kamin, and their critics will be studied. The genetics of intelligence will not be covered.

451 Quasi Experimentation. Spring, first seven weeks only. 1 credit. Prerequisite: Psychology 350 or equivalent. Offered in odd-numbered years. T R 10:10-12:05. R. Darlington. Methods for approaching the rigor of laboratory experiments in field settings.

465 Mathematical Psychology Spring. 4 credits. Prerequisites: one year of college mathematics (finite mathematics or calculus), a course in probability or statistics, and a course in psychology. T R 10:10-11:40. J. Cunningham. Mathematical approaches to psychological theory are discussed. Possible topics include choice and decision, signal detectability, measurement theory, scaling, stochastic models, and computer simulation.

467 Seminar: The Examined Self—A Psychohiological View Spring. 4 credits. Prerequisites: 6 credits of Psychology 325 or equivalent, and permission of instructor before course enrollment. T 12:20-1:25. H. Feinstein. The seminar will be devoted to an analysis of insanity as a psychological and historical phenomenon. Selected readings by the mentally ill and their defenders will be studied.

468 American Madness Spring. 4 credits. Limited to 15 students. Prerequisites: Psychology 325 or equivalent, and permission of instructor before course enrollment. T 7:30-10:30 pm. R. Mack. A seminar on the nature of psychotherapy. Issues related to therapeutic goals, differing views of the nature of man, ethical concerns, and research problems are also considered. Presentations by therapists of differing orientations, and experiential and role-play exercises may be an integral part of the seminar experience.

470 Undergraduate Research in Psychology Fall or spring. 1-4 credits. S-U grades optional. Written permission from the staff member who will supervise the work and assign the grade must be included with the course enrollment material. Students should enroll in the section listed for that staff member. A section list is available from the Department of Psychology. Hours to be arranged. Staff. Practice in planning, conducting, and reporting independent laboratory, field, and/or library research.

471 Statistical Methods in Psychology I Fall. 4 credits. Prerequisite: Psychology 201 or equivalent, or permission of instructor. M W F 10:10. J. Cunningham. Basic probability, descriptive and inferential statistics. Topics include parametric and nonparametric tests of significance, Bayesian inference, correlation, and simple linear regression. The level of the course is that of W. L. Hays, Statistics for Psychologists.

472 Statistical Methods in Psychology II Spring, first seven weeks only. 2 credits. Prerequisites: Psychology 471 or equivalent, or permission of instructor. M W F 10:10. J. Cunningham. Analysis of variance, experimental design, and related topics. The level of the course is that of G. Keppel, Design and Analysis: A Researcher’s Handbook.

473 Statistical Methods in Psychology III Spring, last seven weeks only. 2 credits. Prerequisites: Psychology 472 or permission of instructor. M W F 10:10. R. Darlington. Multiple regression, at the level of Multiple Regression in Behavioral Research, by F. Keating and E. Pedhazur.

475 Analysis of Nonexperimental Data Fall, first seven weeks only. 2 credits. Prerequisite: Psychology 473 or permission of instructor. Not offered 1982-83; next offered 1984-85. T R 10:10-12:05. R. Darlington. Factor analysis and other multivariate correlation methods.

476 Representation of Structure in Data Spring. 3 credits. Prerequisites: one year of college mathematics (finite mathematics or calculus) and a course in the social sciences. Not offered 1982-83. T R 10:10-11:40. J. Cunningham. Representation of structure, as dominance data, psychological distances, and similarities will be discussed. Topics include unidimensional and multidimensional scaling, unfolding, individual differences scaling, hierarchical clustering, and graph-theoretic analysis.

477 The General Linear Model Fall, last seven weeks only. 2 credits. Prerequisite: Psychology 473 or equivalent. Not offered 1982-83; next offered 1984-85. T R 10:10-12:05. R. Darlington. Applications of multiple regression to problems in analysis of variance, analysis of covariance and nonlinear relationships.

478 Psychometric Theory Fall, first ten weeks only. 3 credits. Prerequisite: Psychology 473 or equivalent. Offered 1982-83; next offered 1984-85. T R 10:10-12:05. R. Darlington. Statistical methods relevant to the use, construction, and evaluation of psychological tests.

479 Multisample Secondary Analysis Fall, last four weeks only. 1 credit. Prerequisite: 350 or equivalent. Not offered 1982-83; next offered 1985-86. T R 10:10-12:05. R. Darlington. Statistical methods for analyzing and integrating the results of many independent studies on related topics.

480 Seminar: Attitude Theory (also Sociology) Fall. 4 credits. Prerequisites: some familiarity with the topic of attitudes from prior courses, or permission of instructor. R 2-4:25. L. Melzer. Attitudes are viewed as emotionally charged thoughts, which underlie ideologies, values, interpersonal feelings, and religion. The seminar will analyze the historical roots and current status of three approaches to the systematic analysis of attitudes: (1) the reasoned action theory of Fishbein and Ajzen; (2) the balance theory of Fritz Heider, and its many derivatives; (3) the functional theories in psychology (Daniel Katz), psychoanalysis (Freud and others), and social and cultural anthropology (Marvin Harris). Students will read original source material rather than textbooks.

481 Advanced Social Psychology (also Sociology 481) Fall. 4 credits. Limited to 30 students. Prerequisite: a course in social psychology or permission of instructor. T R 2:30-3:45. D. Regan. Selected topics in social psychology are examined in depth, with heavy emphasis on experimental research. Readings are usual. Original research reports. Topics discussed may include social comparison theory, social and cognitive dissonance, attribution processes, interpersonal attraction, and research methods in social psychology.

482 Death and Dying Spring. 4 credits. Limited to 40 juniors and seniors. Prerequisites: 5 credits in sociology or psychology, and permission of instructor. Sec 1, T 7:30-9:30, sec 2, T R 2:30-4:25. W. Collins. Issues of death and dying in modern American society are explored from the perspectives of psychology, sociology, and the health-related professions. Possible inadequacies in current practice are examined and alternatives discussed.

483 Socialization and Maturity (also Sociology 483) Spring. 4 credits. Limited to upperclass and graduate students or those who receive permission of instructor. Prerequisite: some work in psychology, sociology, or anthropology; some background in statistics is assumed. Not offered 1982-83; next offered 1983-84. T R 12:20-2:15. W. Lambert. Research in theories of socialization at different ages are analyzed, focusing particularly on the underlying processes. The newer topic of personal and sociocultural maturity is also analyzed, and its relation to socialization processes is evaluated in terms of recent evidence.

486 Interpersonal and Social Stress and Coping (also Sociology 486) Spring. 4 credits. Limited to 25 upperclass students. Prerequisites: background in psychology and introductory statistics, or permission of instructor. Not offered 1982-83; next offered 1984-85. M W F 12:20. W. Lambert. A critical review of work in interpersonal, interpersonalsituational, and sociocultural sources of stress, and the major psychophysiological concomitants of such stress; resultant coping strategies and aids to coping. Data from laboratory, industry, and other cultures will be analyzed.

488 Research Practicum in Socialization (also Sociology 488) Spring. 4 credits. Prerequisites: two courses in social psychology or human development and one course in statistics, or permission of instructor. R 2:30-4:25. U. Bronfenbrenner. Supervised participation in field and experimental studies bearing on the impact of family support systems on socialization outcomes. The work concentrates on the American phase of a project being conducted cooperatively in five industrialized societies.

489 Seminar: Selected Topics in Social Psychology and Personality (also Sociology 489) Fall. 4 credits. Prerequisites: one course in psychology, and one course in sociology or permission of instructor. T 7:30-9:40. Staff. The specific topics of discussion vary, but the general emphasis is on a critical examination of the study of individuals in social contexts.

490 History and Systems of Psychology Fall. 4 credits. Intended for juniors, seniors, graduate students, majors, and nonmajors. Prerequisites at least three courses in psychology or related fields or permission of the instructor. M W F 2:30. N. Levin. The course aims to acquaint students with the recent history of psychology and to help them to identify important trends and underlying assumptions in contemporary writings. After a discussion of relevant nineteenth-century developments, a number of the major historical systems will be surveyed: the introspectionist, functionalist, behaviorist, and Gestalt
psychologies. Emphasis will be on the ideas that have shaped modern psychology.

491 Principles of Neurobiology, Laboratory (also Biological Sciences 491) Fall. 4 credits. Limited to 24 students. Prerequisite: Biological Sciences 396 or Psychology 396, or permission of instructors. Laboratory practice with neurobiological preparations and experiments, designed to teach the techniques, experimental designs, and research strategies used to study biophysical and biochemical properties of excitable membranes, sensory receptors, and the central nervous system transformations of afferent activity, as well as the characteristic composition and metabolism of neural tissue. Theoretical content at the level of Aidley's *The Physiology of Excitable Cells*.

494 Junior Honors Spring. 4 credits. Prerequisite: admission to the department honors program.

498 Senior Honors Dissertation Fall. 4 credits. Prerequisite: admission to the department honors program.

499 Senior Honors Dissertation Spring. 4 credits. Prerequisite: admission to the department honors program.

Advanced Courses and Seminars

Advanced seminars are primarily for graduate students, but with the permission of the instructor, they may be taken by qualified undergraduates. The selection of seminars to be offered each term is determined by the needs of the students.

A supplement describing these advanced seminars is available at the beginning of each semester and can be obtained from the department office. Except where indicated, the following courses may be offered either term, and carry 4 credits unless otherwise indicated.

502 Professional Writing in Psychology Spring. 1 credit. Limited to 15 students. Prerequisite: permission of instructor.

503 Psychological Tests
504 Topics in Psychopathology and Personality
505 Methods in Social Psychology
506 Methods of Child Study

511 Human Development and Behavior

512-514 Visual Perception
513 Learning
515 Motivation
517 Language and Thinking
518 Psycholinguistics
519-520 Cognition
521 Psychobiology
522 Topics in Perception and Cognition
523 Physiological Psychology
525 Mathematical Psychology
531 History of Psychology
535 Animal Behavior
541 Statistical Methods

543 Psychological Tests
544 Topics in Psychopathology and Personality
545 Methods in Social Psychology
547 Methods of Child Study

549 Human Development and Behavior

571 Seminar in Human Experimental Psychology Fall or spring. 4 credits. Not offered 1982-83; next offered 1983-84. W-F 11:10-12:40 J. Cutting. Research and theory will be surveyed in the areas of perception, memory, attention, language development, cognition, and quantitative methods, with the goal of providing the graduate student with a broad framework of issues in contemporary human experimental psychology.

573 Seminar in Biopsychology Fall or spring. 4 credits. Offered every 1½ years. First offered spring 1983; next offered 1984-85. Hours to be arranged. Staff. Survey of research and thought on the evolution and mechanisms of behavior.

580 Experimental Social Psychology (also Sociology 580)
582 Sociocultural Stress, Personality, and Somatic Pathology (also Sociology 582)
583-584 Proseminar in Social Psychology (also Sociology 583-584)
585 Social Structure and Personality (also Sociology 585)
586 Interpersonal Interaction (also Sociology 586)
587 Personality (also Sociology 587)
588 Social Change, Personality, and Modernization (also Sociology 588)

591 Educational Psychology
595 Teaching of Psychology
596 Improvement of College Teaching

600 General Research Seminar 0 credit.

613 Seminar on Obesity and Weight Regulation (also Nutritional Sciences 613) 3 credits. Prerequisites: a fundamental knowledge of psychology, physiology, and nutrition is essential. Offered in alternate years. Not offered 1982-83; next offered spring 1984.

625 Seminar in the History of Psychology 0 credit.

627 Social Psychology (also Sociology 627)
628 Seminar in Interaction (also Sociology 628)
629 Seminar: Sell and Identity (also Sociology 629)

630 Seminar in Psychology of Aging (also Sociology 630)
632 Seminar in Group Processes (also Sociology 632)
635 Seminar in Social Psychology (also Sociology and Women's Studies 635)

682 Social Psychology (also Sociology 682)
683 Seminar in Interaction (also Sociology 683)
684 Seminar: Sell and Identity (also Sociology 684)

685 Sex Differences and Sex Roles (also Sociology and Women's Studies 685). Fall. Not offered 1982-83; next offered 1983-84. Hours to be arranged. S. Bem.

690 Nutrition and Behavior (also Nutritional Sciences 690) Spring. 3 credits. Prerequisites: a fundamental knowledge of psychology, physiology, and nutrition is essential. Offered alternate years. M W F 1:15 D. Levitsky.

This lecture-seminar surveys the literature of the possible role nutrition may play as a determinant of human behavior. Topics covered include hypoglycemia, food additives and hyperkinesia, ketogenic diets, malnutrition and intellectual development, megavitamin therapy, choline and memory. Emphasis is placed on the analysis of the arguments raised, their history, and review of studies advocating and refuting claims.

700 Research in Biopsychology
710 Research in Human Experimental Psychology
720 Research in Social Psychology and Personality
730 Research in Clinical Neuropsychology Limited to Clinical Neuropsychology Program trainees.

800 Master's Thesis Research in Biopsychology
810 Master's Thesis Research in Human Experimental Psychology
820 Master's Thesis Research in Social Psychology and Personality
900 Doctoral Thesis Research in Biopsychology
910 Doctoral Thesis Research in Human Experimental Psychology
920 Doctoral Thesis Research in Social Psychology and Personality

Summer Session Courses

The following courses are also frequently offered in the summer session, though not necessarily by the same instructor as during the academic year. Not all of these courses will be offered in a particular summer. Information regarding these courses and additional summer session offerings in psychology is available from the department before the end of the fall semester.

101 Introduction to Psychology: The Frontiers of Psychological Inquiry
124 Introduction to Psychology: The Cognitive Approach
128 Introduction to Psychology: Personality and Social Behavior
209 Developmental Psychology
215 Introduction to Linguistics and Psychology
281 Interpersonal Relations and Small Groups (also Sociology 281)
286 Nonverbal Behavior and Communication (also Sociology 286)
325 Introductory Psychopathology
381 Social Psychology
Sinhala
See Modern Languages, Literatures, and Linguistics, p. 146.

Sociology

Sociology is concerned with the way individuals are organized into groups, networks, classes, institutions, and communities of varying influence and power. Its specialties include analyses of social conflict and accommodation, population trends, organizational and institutional change, and the structure of the family, law, religion, medicine, and science. All public policy, local or national, is affected by these sociological issues.

The Department of Sociology offers the opportunity to develop fundamental theoretical insight and practical research skills appropriate for the study of social life. Graduates of the department take up careers in social science (in university, government, and private settings) and in law, business, applied engineering, public policy planning, architecture, education, and other professions seeking men and women who demonstrate a disciplined understanding of society and social issues. The department office has a list of course offerings for each semester.

The Major
The director of undergraduate studies will consult with each student to discuss a specific course of studies relevant to the individual’s interests as well as to the requirements of the major, and will select a faculty adviser for each student who is accepted into the program.

The following are the minimum requirements for a major in sociology:
1. The introductory course, Sociology 101; (2) two courses in the foundations of sociological analysis: Sociology 201, 301, 311, and one 400-level theory-type course such as Sociology 403, 423, or 441; (3) 22 additional credits in sociology, including at least 4 credits in small seminars offered by the department to its advanced students. These 22 credits may include up to 12 credits in courses at the 300 level or above offered by related departments if approved by the director of undergraduate studies.

The Department of Sociology has particular strengths in (a) research methods; (b) American institutions and public policy; (c) personality and social psychology; (d) population studies; and (e) social relations, offered jointly with the Department of Anthropology. Courses in these subjects may be grouped together in an area of concentration. More detailed descriptions of these concentrations along with recommended courses of study are available in the department office, 323 Uris Hall.

The director of undergraduate studies may waive or modify specific requirements for students who present evidence of substantially comparable preparation.

Supervised research. A small number of exceptionally qualified sociology majors are invited to participate with faculty members in conducting research supported by the social science research centers at the University: the Center for International Studies, the International Population Program, and the Cornell Institute for Social and Economic Research.

Honor program. The honors program provides sociology majors with an opportunity to study selected problems in depth and to carry out independent research under the guidance of a faculty member. Application for the honors program should be made late in the junior year. To qualify for a Bachelor of Arts degree with honors in sociology a student must maintain a cumulative average of at least B in all sociology courses and earn a grade of cum laude or higher on the honors essay.

Courses
101 Introduction to Sociology Fall and spring, 3 credits.
Fall: M W 12:20. Spring: M W 11:15, plus one hour to be arranged. One midterm evening preterm each term. Staff.

Virtually the entire professional staff of the Department of Sociology participates in teaching this course, each professor lecturing on his or her own specialty. Topics covered include most of the following: socialization, culture, deviance, social control, interpersonal interaction, small groups, organizations, bureaucracy, family, inequality, mobility, race and ethnic relations, population dynamics, urbanization, public opinion, social change, social movements, modernization, methods of research, applications. Weekly section meetings actively involve students in the practical utilization of sociology. Course histories and application exercises are analyzed concerning social problems such as urban tensions, cultural differences, racial conflict, gender identity, expanding populations, and high rates of crime.

107 Introduction to Sociology: Conflict and Cooperation Spring, 3 credits. Limited to freshmen and sophomores.
M W F 10:10. R. M. Williams, Jr.
Are human societies fundamentally cooperative or conflictual? In what ways? Why? And with what consequences? Examination of contemporary sociological analyses and the views of such precursors as Hobbes, Machiavelli, and Simmel. Data from recent studies of conflict and conflict reduction are discussed.

120 Society, Industry, and the Individual I (also Industrial and Labor Relations 120) Fall. 3 credits.
M W 2:30, plus one hour to be arranged.
S. Bacharach.
The relationship between industry and the economy as a whole and its implications for other social institutions in American society (including stratification, politics, and American values) is discussed. The nature of industrial organization and of complex organizations in general, emphasizing authority relations, goals, the division of labor, and bureaucracy.

[141 Introduction to Sociology: Applications to Policy Fall. 3 credits. Not offered 1982-83.
M W F 10:10. S. Caldwell.
Concentrates on sociology applied to actual decisions by regulatory commissions, executive agencies, courts, Congress, and other public policy makers. How does sociology become useful? Who makes it useful? What effects do personal values have on its uses? How well does expert knowledge coexist with political process? The course will cover topics such as welfare reform, teenage pregnancies, Social Security, day-camp effectiveness, a national family policy, and energy.]

172 Introduction to Sociology: Urban Society Spring, 3 credits.
M W F 9:05. B. Bowser.
The sociological analysis of urbanism and urbanization. Alternative explanations of industrial urban development are assessed with a specific focus on historical and contemporary urban community studies that serve as models of social structure and group (class, ethnic, race) divisions. Trends in the mobility and residential mobility in other countries are also examined, using such information as a basis for considering contemporary problems and the urban future.

201 Sociological Analysis of Contemporary Issues Fall. 3 credits. M W F 1:25. R. Breiger and staff.

With its focus on the interpretation of case studies and research reports, this course aids in the development of analytical skills and critical abilities. An introduction to the foundations of sociological analysis is followed by student presentations and group analysis of selected topics. The course concentrates on one social issue of vital concern while illustrating the distinctive ways in which sociologists define questions of social research. The course offers opportunities for computer experience and for the close reading of original monographs both classic and contemporary. Module topics: (a) Inequality in Schools, (b) Solving the Population Problem, (possibly) Work and the Family, and International Development.

205 Understanding the Language of Television Images (also Linguistics 205) Fall. 4 credits. T R 9:05 and M 2:30. L. Waugh, R. Goldsen.

Images coming to us through the television screen convey connotative and denotative meanings that are widely understood, quite apart from the verbal language of dialogue and narration. How do we read these images? What is the underlying grammar-like structure that arranges them as signs and symbols in a shared meaning system? The course addresses these questions, using the techniques and concepts of content analysis (from sociology) and semiotics (from linguistics) to decode images in television's most ubiquitous, repetitive, and stylized form—product commercials. Readings include works in semiotics as well as in the social sciences. Students are encouraged to prepare their own projects. Extensive use is made of visual materials, class discussions, and frequent short papers.

207 Ideology and Social Concerns Fall. 3 credits (4-credit option available). M W F 11:15. R. M. Williams, Jr.

Analysis of social and cultural bases of public policies at national, state, and local levels. Relates demographic, economic, and political factors to the changing recognition of problems and to shifting modes of collective action, such as direct mobilization, legislation, administration, and adjudication. Public issues examined include affirmative action, civil rights, environmental regulation, military affairs, social security and income maintenance, health, medicine, bioethics, centralization, and local control. Deals with two basic dilemmas of social choice: the problem of the commons and the problem of collective action.

222 Studies in Organizational Behavior: Regulating the Corporation (also Industrial and Labor Relations 222) Fall. 3 credits. M W 2:30-3:45. R. Stern.

Public and private power from an organizational perspective. The resource dependence approach to organization-environment relations provides a framework for interpreting government attempts at the regulation of corporate behavior. Topics cover the structure and functioning of government regulatory agencies and corporate responses to regulation, including strategy, change, and political influence. The role of 'governmental' groups such as consumer or citizen organizations is also considered. Research and case materials focus on the implementation of environmental protection, occupational health and safety, equal opportunity, antitrust, and rate-setting regulations.

230 Population Problems Spring. 3 credits (4-credit option available). T R 10:10-11:25, plus one hour to be arranged. J. M. Sylos.

The practical and scientific significance of population growth and contemporary population implications, and mortality in relation to social and cultural factors and in relation to questions of population policy. National and international data receive equal emphasis.

238 American Women and the Female Professions, 1815 to the Present (also Women's Studies 238 and Human Development and Family Studies 258) Fall. 3 credits. T R 2:30-4. J. Brunberg.

The historical evolution of the female professions in America, including prostitution, midwifery, nursing, teaching, librarianship, social work, and medicine. Lectures, readings, and discussions are geared to identifying the cultural patterns which fostered the conception of gender-specific work and the particular historical circumstances which created these different work situations. The evolution of professionalism and the consequences of professionalism for women, family structure, and American society are also discussed.

240 Personality and Social Change Spring. 3 credits (4-credit option available). T R 2:30-4:45. B. C. Rosen.

An analysis of social and psychological factors that affect and reflect social change. Topics to be examined will include models of man and society, national character, modern melancholy, feminism, family and sex roles, industrial and economic development, and psychocultural conflict.

This course will examine the nature and origin of the welfare state and social policy in historical, comparative, and statistical evidence, we ask how particular welfare state programs (such as Social Security, health, housing, income maintenance, etc.) affect individuals, families, communities, and eventually the entire economy and society. How would life be different without welfare state programs? How serious are the problems facing the Western welfare states? What social choices face welfare states, and what are the most likely directions in the future?]

243 Family Fall and summer. 3 credits (4-credit option available). T R 10:10, plus one hour to be arranged. Fall. B. C. Rosen.

A social and historical analysis of the family both in the West and cross-culturally. Specific areas examined include sex roles, socialization, mate selection, sex and sexual controls, internal familial processes, divorce, disarmament, and social change.

245 Inequality in America Fall. 3 credits (4-credit option available). M W F 1:25. J. Kahl.

Recent trends in the unequal distribution of income, occupation, and education in the United States; inheritance of riches and poverty; importance of ethnic membership; sex differences; deliberate attempts by government policy to alter these trends; evaluation of the war on poverty.

248 Politics in Society Spring. 3 credits (4-credit option available). Not offered 1982-83. T R 2:30-4. Staff.

An examination of the relations between economic, social, and political structures in industrial societies, with particular emphasis on the United States. Topics included are democratic forms of participation in organizations and society at large, social movements, party systems, the war and its legitimation, and voting behavior.

252 Public Opinion Spring. 4 credits. T R 9:05, plus one hour to be arranged. R. Goldsen.

Analysis of the impact of communications systems on the institutional habitat within which public opinion forms. Use of communications techniques and their social significance are analyzed.

253 Sociology of Science and Technology Fall. 3 credits (4-credit option available). Not offered 1982-83. T R 2:30, plus one hour to be arranged. How the growth of knowledge is facilitated and impeded by the social behavior of scientists, including competition, teamwork, communication, secrecy, conformity, and deviance: causes and consequences of social revolutions; factors affecting scientific careers; history of science as a social institution.

264 Race and Ethnicity Fall. 3 credits (4-credit option available). T R 10:10-11:25. C. Hirschman.

An examination of the dynamics of race and ethnic relations in the United States and other societies. Alternative explanations—melting pot assimilation theories, internal colonialism, and group psychology—perspectives—are compared and evaluated. Topics include an historical comparison of black and white immigrants, the case of Asian-Americans, the causes and consequences of residential racial segregation, and women as a minority group. Other multiethnic societies, such as South Africa and Malaysia, are also studied.

265 Hispanic Americans Spring. 3 credits (4-credit option available). T R 2:30-4. H. Velez.

Analysis of the present-day Hispanic experience in the United States. An examination of sociohistorical backgrounds as well as the economic, psychological, and political factors that converge to shape and influence a Hispanic group-identity in the United States. Perspectives are developed for understanding the diverse Hispanic migrations, the plight of Hispanics in urban and rural areas, and the unique problems faced by the different Hispanic groups. Groups studied include Dominicans, Chicanos, Cubans, and Puerto Ricans.

277 Psychology of Sex Roles (also Psychology 277 and Women's Studies 277) Spring. 3 credits (4-credit option available). Prerequisite: an introductory psychology course. T R 2:30-4. S. Bem.

This course addresses the question of why and how adult women and men come to differ in their overall lifestyle, work and family roles, personality patterns, cognitive abilities, etc. This broad question is examined from five perspectives: (a) the psychoanalytic perspective, (b) the biological perspective, (c) the historical and cultural evolutionary perspective, (d) the child development perspective, and (e) the social-psychological and contemporary perspective. Each of these perspectives is also brought to bear on more specialized phenomena relating to the psychology of sex roles, including psychological androgyny, women's conflict over achievement, the male sex role, equitarian marriage relationships, gender-liberated child-rearing, female sexuality, homosexuality, and transsexuality.

280 Introduction to Social Psychology (also Psychology 280) Spring. 3 or 4 credits. The additional (or fourth) credit is given for attendance at the optional section meeting, and the term paper. Prerequisite: an introductory psychology course. T R 10:10-11:25. T. Gilovich.

An introduction to research and theory in social psychology. Topics include human processing of social information; social influence, persuasion, and attitude change, social integration and its breakdown; the psychology of individual and group phenomena. The application of social psychological knowledge to current social problems will also be discussed.
284 Social-Psychological Theories and Applications (also Psychology 284) Fall. 3 credits.
TR 9:05 (S class is held at discretion of instructor). L. Melzer.

Emphasis is given to those aspects of personality and social psychology which have led to effective practical applications or which provide reasonable insights into the genesis and/or amelioration of social and personal problems.

301 Evaluating Statistical Evidence Spring. 4 credits.
M W F 11:15. R. Breiger.

A first course in the basic statistical evidence in the social sciences. Theory is supplemented with numerous applications. Includes an introduction to multivariate causal analysis.

307 Collective Behavior and Social Movements (also Human Development and Family Studies 307) Fall. 3 credits (4-credit option available). Not offered 1982-83.
TR 2:30-4. G. Elder.

An inquiry into social behavior that breaks with institutionalized or conventional forms, such as acting crowds, rots, social movements, and revolution. Analysis of antecedent conditions, emergent forms, processes, and consequences. Historical and contemporary studies are covered.

310 Sociology of War and Peace Spring. 4 credits.
M W F 9:05. R. M. Williams, Jr.

Every human group, community, or society presents many examples of altruism, helping, cooperation, agreement, and social harmony. Each grouping or society also manifests numerous examples of competition, rivalry, opposition, disagreement, conflict, and violence. Both conflict and cooperation are permanent and common aspects of the human condition. Collective conflicts, especially wars and revolutions, are frequent and dramatic events. But "peace" and usually active social processes, not passive happenings. This course describes various commonly accepted but erroneous notions of the causes and consequences of war and deterrence. It deals with the major theories concerning the sources of war in international and intranational social systems. The last half of the course analyzes the modes, techniques, and outcomes of efforts to restrict, regulate, and resolve international conflicts.

311 Primary Data Collection and Design Fall. 4 credits.
Prerequisite: a course in sociology.
TR 2:30-4:30. D. Hayes.

Foundations of sociological analysis; issues arising from using humans as data sources; the quality of our primary data; methods of its collection; research designs in wide use and their limitations; pragmatic considerations in doing research on humans, organizations, communities, and nations.

324 Organizations and Deviant Behavior (also Industrial and Labor Relations 324) Spring. 3 credits.
Limited to 40 students. Prerequisite: one or more courses in both sociology and psychology. Not offered 1982-83.
H. Trice.

Focus is on the relationship between organizations and deviant behavior. Covers (1) the nature and etiology of psychiatric disorders, particularly schizophrenia, the psychoneuroses, and psychosomatic disorders; (2) organizational factors related to these disorders and to the more general phenomena of role conflict and stress; (3) an examination of alcoholism as a sample pathology, in terms of personality characteristics and precipitating organizational factors; (4) evaluation of organizational responses to deviant behavior; (5) the nature of self-help organizations such as Alcoholics Anonymous; and (6) the structure and functioning of the mental hospital.

329 Sociological Analysis of Organizations (also Industrial and Labor Relations 329) Fall. 3 credits. Prerequisites: I&LR 120 and 121 or equivalent. Not offered 1982-83.
S. Bacharach.

This course attempts to introduce students to the basic issues involved in the sociological analysis of organizations. It traces organizational theory from Max Weber to the most recent research. Among the themes to be discussed are internal structure of organizations, communication in organizations, decentralization, organizational change, organizational technology, and organizational environment.

348 Sociology of Law Fall. 4 credits. Not offered 1982-83.
M W 1:25, plus one hour to be arranged. J. Jacobs.

The subject matter and course materials vary. In 1979 the course focused on civil rights and civil liberties in the context of institutions of social control. The main theme is that the extension of constitutional rights to such "marginal" citizens as prisoners, mental patients, students, and soldiers has created something of a crisis in the authority for the institutions with which these groups are associated. The basis of institutional authority and order is explored in light of the drive to expand personal rights. Readings consist of a casebook of legal decisions and excerpts from legal and sociological studies.

352 Prisons and Other Institutions of Coercion Spring. 4 credits. Prerequisite: a course in the social sciences. Not offered 1982-83.
J. Jacobs.

355 Social and Political Studies of Science (also Science, Technology, and Society 355) Spring. 3 credits.

A view of science, less as an autonomous activity than as a social and political institution. The focus is on its relationship to government, the media, religion, and education. Drawing from recent controversies over science, this course examines questions as ethics and social responsibility in science, struggles to maintain internal control over research and over the teaching of science, and the concept of limits to inquiry are discussed.

356 Contemporary Sociology for Scientists and Engineers Spring. 3 credits. Prerequisite: elementary mathematics or consent of the instructor. Not offered 1982-83.
R. McGinnis.

357 Medical Sociology Fall. 4 credits.
Prerequisite: a course in the social sciences.
M W F 9:05. B. Edmonston.

Health, illness, death, and the health institutions from a sociological perspective. Factors affecting health care; organization of the medical professions; health and illness behavior; social epidemiology; and key issues in policies affecting the administration and delivery of medical care in the United States.

358 Criminology Spring. 4 credits. Not offered 1982-83.
M W 2:30, plus one hour to be arranged. J. Jacobs.

This course examines crime as a social phenomenon. It takes both a historical and cross-cultural approach in order to investigate the processes by which different societies generate different crime problems. Attention is paid to the historical evolution of criminology as a discipline and to the most prevalent theories of criminology and crime causation. Special attention is also placed on such topics as white-collar crime, organized crime and youth gangs. In light of the analysis of crime as a social phenomenon, various strategies of social control are considered critically.

367 After the Revolution: Mexico and Cuba Spring. 4 credits.
Prerequisites: two courses in the social sciences.
M W F 1:25. J. Kahl.

A comparison of the economic, political, and social development of Mexico and Cuba following their revolutions. Assigned readings will be in English.

384 Cross-Cultural Psychology (also Psychology 384) Spring. 4 credits.
Prerequisite: a course in social psychology and one in either sociology or social or cultural anthropology, or permission of instructor.

A critical survey of approaches, methods, discoveries, and applications in emerging attempts to study human nature, experience, and behavior cross-culturally. Focus on studies of cognition, values, socialization, sociolinguistics, personality, attitudes, stereotyping, ideology, cultural development, and mental illness. Problems of how one can learn another culture will also be dealt with.

385 Theories of Personality (also Psychology 385) Fall. 4 credits.
Prerequisite: Psychology 101 or 275, or permission of the instructor.

An intermediate analysis of comparative features of the historically and currently important theories of personality, with an evaluation of their systematic empirical contribution to modern personality study, to psychology, and to other behavioral sciences.

401 Intermediate Sociological Theory (also Rural Sociology 404) Fall. 4 credits.
TR 10:10-12:05. P. Eberts.
An advanced undergraduate seminar for senior majors in sociology and rural sociology. The course will focus on (1) the central concepts of the sociological tradition; (2) major classical theorists (Marx, Weber, Durkheim, de Tocqueville) and contemporary counterparts; (3) application of the classical ideas in contemporary research.

422 Sociology of Industrial Conflict (also Industrial and Labor Relations 425) Spring. 4 credits. R. Stern. The focus is on the variety of theoretical and empirical evidence available concerning social, economic, and political causes of industrial conflict. The manifestations of conflict such as strikes, labor turnover, absenteeism, and sabotage, and the influence of the environments in which they occur is emphasized.

423 Evaluation of Social Action Programs (also Industrial and Labor Relations 423) Fall. 3 credits. Not offered 1982-83. Hours to be arranged. H. Trice. A consideration of the principles and strategies involved in evaluation research, experimental research designs, process evaluation, and adaptations of cost benefits and cost efficiency to determine the extent to which intervention programs in fields such as training and therapy accomplish their goals. The adaptation of these strategies to large social contexts such as child guidance clinics, mental health clinics, and programs in the poverty areas such as Head Start is considered. Fieldwork and emphasis assesses program of implementation.

424 Multivariate Analysis with Quantitative Data Spring. 4 credits. Prerequisite: a college course in statistics (such as Sociology 301) and matrix algebra. M W F 10:10-11:40. R. McGinnis. The general linear regression model with interval scaled variables. Detecting violations of assumptions of the model in real data and providing remedies. Both single and multiple equation models (including path analysis).

425 Categorical and Longitudinal Data Analysis Fall. 4 credits. Prerequisite: Sociology 424 or equivalent. T 2:30-4. S. Caldwell. Techniques for including categorical (discrete) variables in multivariate models and for analyzing longitudinal data. Linear probability, log-linear, logit, probit, and dummy variable forms are covered. Real and simulated data exercises are used to examine the relationship of research design to analysis and also to demonstrate the advantages of longitudinal data. Emphasis on applications.

428 Policy Research (also Rural Sociology 428) Spring. 3 credits. Prerequisite: a course in multivariate analysis, and a current student of 1982-83. Hours to be arranged. S. Caldwell. Case studies of recent research sponsored and carried out with the explicit purpose of affecting policy. Since policy research often requires unusually rigorous evidence, we assess the strength and weaknesses of alternative research designs: experimental versus observational; aggregate versus micro, longitudinal versus cross-sectional; large samples versus case studies. Since policy research often faces strong pressures, we examine the politics of putting research questions on the agenda, pressuring the policy field for independence, and interpreting research results. Other topics include academic and nonacademic settings for policy research; policy research and the disciplines: forecasting; simulations; careers in policy research.

427 The Professions: Organization and Control (also Industrial and Labor Relations 427) Fall. 4 credits. Not offered 1982-83. M W F 10. Reading assignments cover the professions (including medicine, law, and several others) and the case studies were used in this course to examine issues of occupational organization and control, professional associations, and the economic, and political causes of industrial conflict. How do such associations function and how successful is their attempt at regulation of professional conduct? How might the potential transformation of some professional associations into union-style organizations be interpreted? These issues are considered in the context of the role of professions in contemporary society.

429 Theories of Industrial Society (also Industrial and Labor Relations 429) Fall. 4 credits. Prerequisite: ISLR 120 or any 100- or 200-level sociology course, and permission of instructor. Not offered 1982-83. Hours to be arranged. S. Bacharach. Some of the critical issues in social theory to be found in the works of Durkheim, Marx, Pareto, and Weber. The views of these theorists and their relation to society are compared to the views of such literary figures as Balzac, Beckett, Camus, Flaubert, Goethe, Sartre, Standahl, and Zola.

430 Social Demography Spring. 4 credits. Prerequisite: junior class standing or permission of instructor. Not offered 1982-83. T R 2:30-3:45. C. Hirschen. A survey of the methods, theories, and problems of contemporary demography. Special attention is directed to the social determinants and consequences of fertility, mortality, and migration. The populations of both developed and developing areas are examined.

431 Techniques of Demographic Analysis Fall. 4 credits. Prerequisite: Sociology 230 or 330. T R 2:30-4:30. B. Edmonston. A description of the nature of demographic data and the specific techniques used in their analysis. Emphasis will be on international comparisons and on the methodology of field research.

432 Human Fertility in Developing Nations Spring. 4 credits. Prerequisite: Sociology 230 or permission of instructor. Offered alternate years. W 3:30-6. J. M. Stycos. A review of major literature dealing with the social causation of variation in human fertility. Emphasis will be on international comparisons and on the methodology of field research.

433 Social and Demographic Changes in Southeast Asia Fall. 4 credits. R 2:30-5. C. Hirschen. Survey of population trends including fertility, mortality, marriage, migration, and urbanization in Southeast Asia. Demographic patterns are studied as determinants and consequences of changes in social, economic, and familial institutions in different societies. General demographic theory and methods will be introduced as necessary to understand contemporary studies of demographic change in Southeast Asia.

440 Educational Institutions Spring. 4 credits. Not offered 1982-83. T 2:30-3:45. Staff. The role of educational institutions in industrialized societies is studied. The primary focus will be on the debate between those who see educational institutions as extending opportunity and assimilating marginal groups and others who see them as arenas of conflict in which privileged groups successfully struggle to maintain their advantages.

441 Structure and Functioning of American Society Fall. 4 credits. Prerequisite: a course in sociology or permission of instructor. Not offered 1982-83. M W F 9:05. R. M. Williams, Jr. Analysis of a total societal system. Critical study of the institutions of kinship, stratification, the economy, the family, education, and religion. Special attention is given to values and their interrelations, and to deviance and evasion. A survey of the groups and associations making up a pluralistic nation is included.

443 Seminar: Community Studies Spring. T 2:30-4:30. J. Kahl. Reading and discussion, in a seminar style, of some classic studies of small towns and urban districts in the United States. Some likely selections will be Middletown, Yankee City, Street Corner Society, Urban Villagers, Tailor's Corner, Behind Ghetto Walls, Small Town in Mass Society.

444 Contemporary Research in Social Statistics Fall. 4 credits. T R 2:30-5. R. Breiger. Stratification and mobility as paired concepts requiring mutual articulation. The interplay of structure (occupational group, market, organizations, classes) and process (tracking, career trajectories, socioeconomic attainment).

445 Law and Social Theory Spring. 4 credits. Prerequisite: Sociology 348 or permission of instructor, or graduate standing. Not offered 1982-83. T R 3:35-5:30. J. Jacobs. Major intellectual traditions contributing to what is loosely called the sociology of law. Attention is paid to the classical theorists—Weber, Durkheim, and Marx—as well as to contemporary American and European legal and sociological scholarship. The underlying theme is the relationship of law to social order.

454 Religion and Secularism in Western Society Spring. 4 credits. Prerequisite: Sociology 101 or permission of instructor. Not offered 1982-83. M W F 9:05. Staff. The interrelationship of culture, society, and religion. Religion and social stratification, religion and economic and political institutions, and religion and social order. The major emphasis will be on American society and American religious institutions.

482 Society and Consciousness Spring. 4 credits. Limited to 15 students. Prerequisite: permission of instructor. M W F 10:10-11:35. R. Goldsen. An examination of the role of communications systems in the formation of human consciousness.

480 Seminar: Attitude Theory (also Psychology 480) Fall. 4 credits. Prerequisite: some familiarity with the topic of attitudes from prior courses, or permission of instructor. R 2-4:45. L. Melzer. Attitudes are viewed as emotionally charged thoughts, which underlie ideologies, values, interpersonal feelings, and religion. The seminar will analyze the historical roots and current status of three approaches to the systematic analysis of attitudes: (1) the reasoned action theory of Fishbein and Ajzen; (2) the balance theory of Fritz Heider, and its many derivatives; (3) the functional theories of psychology (Daniel Katz, psychoanalysis (Freud and others), and cultural anthropology (Marvin Harris). The historical roots and current status of each approach will be analyzed and students will read original source material rather than textbooks.

481 Advanced Social Psychology (also Psychology 481) Fall. 4 credits. Limited to 30 students. Prerequisite: a course in social psychology or permission of instructor. R 2:30-3:45. D. Rogan. Selected topics in social psychology are examined in depth, with heavy emphasis on experimental
research. Readings are usually original research reports. Topics discussed may include social comparison theory, social and cognitive determinants of the emotions, cognitive dissonance, attribution processes, interpersonal attraction, and research methods in social psychology.

483 Socialization and Maturity (also Psychology 483) Spring. 4 credits. Limited to upperclass and graduate students or those who receive permission of instructor. Prerequisite: some work in psychology, sociology, or anthropology and some background in statistics is assumed. Not offered 1982-83.

Representative theories of research on socialization at different ages are analyzed, focusing particularly on the underlying processes. The newer topic of personal and sociocultural maturity is also analyzed and its relation to socialization processes is evaluated in terms of recent evidence.

488 Interpersonal and Social Stress and Coping (also Psychology 488) Spring. 4 credits. Limited to 25 upperclass students. Prerequisite: background in psychology and introductory statistics, or permission of instructor. Not offered 1982-83.

A critical review of work in interpersonal, interpersonal, and sociocultural sources of stress, the major psychophysiological concomitants of such stress; resultant coping strategies and aids to coping. Data from the laboratory, industry, and other cultures will be analyzed.

498 Research Practicum in Socialization (also Psychology 498) Spring. 4 credits. Prerequisites: two courses in social psychology or human development and one course in statistics, or permission of instructor.

R 2:30-4:25. U. Bronfenbrenner.

Supervised participation in field and experimental studies bearing on the impact of family support systems on socialization practices and outcomes. The work concentrates on the American phase of a project being conducted cooperatively in five industrialized societies.

501 Selected Topics in Sociology Fall or spring. 2-4 credits. Prerequisite: permission of instructor. Hours to be arranged.

505 Honors Research: Senior Year Fall or spring. 4 credits. Prerequisite: Sociology 495. Hours to be arranged. D. Hayes and staff.

506 Theses: Senior Year Fall or spring. 4 credits. Prerequisite: Sociology 495. Hours to be arranged. D. Hayes and staff.

507 Social Relations Seminar (also Anthropology 495) Spring. 4 credits. Limited to seniors majoring in social relations.

Staff.

Graduate Seminars

These seminars are primarily for graduate students but may be taken by qualified advanced undergraduates who have permission of the instructor. Which seminars are to be offered any term is determined in part by the interests of the students, but it is unlikely that any seminar will be offered more frequently than every other year. Lists and descriptions of seminars are available from the department well in advance of each semester. The list below indicates seminars that are likely to be offered 1982-1983, but others may be added. Students should check with the department before each term. All seminars are offered for 4 credits unless otherwise specified. Graduate students may enroll in courses numbered 400 or above where appropriate, for example, Sociology 420, 424, and 425.

515 The Politics of Technical Decisions (also Science, Technology, and Society 541; City and Regional Planning 541, and Business and Public Administration NPA 515) Fall. 4 credits.

This is a seminar dealing with the relationship between knowledge and power, between technology and democracy. The topics discussed include the political uses of scientific knowledge, the politics of expertise, and the questions of political versus professional control that are raised by controversial technology choices. Our central concern will be the clash between technological and democratic values.

521 Organizational Behavior II (also Industrial and Labor Relations 521) Spring. 3 credits.

R. Stern.

Formal organizations are studied from the perspectives of classical organization theory, human relations theory, and comparative and cross-cultural analysis. Contemporary theories and quantitative approaches to organizational structure are also considered in some detail. Intended to be preliminary to more intensive work in organizational behavior.

523 Analysis of Data with Measurement Error Fall. 4 credits. Prerequisite: Sociology 424 or equivalent. Not offered 1982-83.

Hours to be arranged. Staff.

531 Population Policy (also Biology and Sociology 403) Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Not offered 1982-83, 1983.

The ways in which societies try to affect demographic trends. Special focus is on government policies and programs to influence fertility.

541 Social Organization and Change Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.

Systematic review and research, with emphasis on substantive knowledge and testable hypotheses. Subjects include social processes, social structures, cultural content, and social and cultural change. Attention is given to the nature and size of the social system (small groups, communities, large organizations, societies) and also to both macro- and micro-social processes and properties (integration, authority, conformity, and deviance).

585 Social Structure and Personality (also Psychology 585) Fall. 4 credits. Not offered 1982-83.

R 2:30-4:30. B. C. Rosen.

An analysis of the ways in which social and psychological factors interact to affect the development of personality, the rates of individual and group behavior, and the functioning of social systems.

603 Seminar: Marx, Durkheim, Weber Fall. 4 credits.

T 2:30-4:30. J. Kahl.

Hours to be arranged. Staff.

An examination of the patterns of linkage between people, organizations, and institutions as constituting the foundation of social structure. These patterns and their implications are explored in areas such as the sociology of science and the study of power and influence. Theoretical and methodological issues receive equal attention.

645 Social Networks Spring. 4 credits.

Not offered 1982-83.

R 2:30-4:30. J. Kahl.

658 The Course of Life: Developmental and Historical Perspectives (also Human Development and Family Studies 568) Spring. 4 credits. Enrollment limited to 5. Prerequisite: permission of instructor. S-U grades optional. College of Human Ecology students must register for HDFS 686. Hours to be arranged. G. Elder.

An introduction to the life course as a theoretical orientation, methodology, and field of study. Special emphasis is devoted to multidisciplinary convergence on life course problems; to theory and research on the interaction of social, psychological, and biological processes from birth to death, and to historical influences.

670 Community, Housing, and Local Political Processes (also Consumer Economics and Housing 670) Spring. 3 credits. S-U grades optional. Offered alternate years. Not offered 1982-83, next offered 1983-84.

T 12:30-4:25. A. Shay.

A seminar linking local political processes, housing, and community change. Focus is on the social costs of fiscal and physical planning and the mechanisms producing power differentials through the nexus of property ownership. Values underlying the perceived desirability of particular housing patterns and the construction and implementation of local policies are considered. The prospects and possibilities for eliminating social and spatial barriers that impede local equality are explored.

671 Power, Participation, and Public Policy (also Consumer Economics and Housing 671) Spring. 3 credits. S-U grades optional. Offered alternate years.

T 12:30-4:25. A. Shay.

This course seeks to explore the sources of American political stability by concentrating on the ways in which political power and participation are managed within the public policy arena. The first part of the course will be theoretical. It will focus on competing theories of political stability and legitimacy as represented by pluralist, democratic elitist, mass society, power elite, bureaucratic-rationalization, and class conflict perspectives; on political processes and values of political action; and will examine power structuration, focusing on the empirical literature that examines the link between the activity of power wielders and class structure. The consequences of the structuring of power within particular social groups and the particular (i.e., policy) outcomes will be examined within the context of the reproduction of the larger political order.

677 Seminar in Field Research (also Industrial and Labor Relations 677) Spring. 3 credits. Enrollment limited. Prerequisite: permission of instructor. Not offered 1982-83.

H. Trice.

Recent research efforts are examined and the dynamic nature of the research process is emphasized. The realities of field research are explored, including problems of gaining and sustaining rapport, the initial design, research interviews and observation data, and their conversion to quantitative instruments. Participants to share in the exploration of appropriate theories and concepts, and the possibility of actual field participation in an ongoing research project is explored.

683 Social Interaction (also Psychology 683) Spring. 4 credits.

Hours to be arranged. D. Hayes, L. Metzler.
[685] Sex Differences and Sex Roles (also Psychology 685 and Women's Studies 685) Fall. 4 credits. Not offered 1982-83. Hours to be arranged. S. Bern.

691-692 Directed Research Fall or spring. Up to 4 credits, to be arranged. Prerequisite: permission of instructor.

695 Thesis Research Fall or spring. Up to 6 credits, to be arranged. Prerequisite: permission of thesis director.

Theatre Arts

Drama, Dance, Film

D. L. Fredericksen, chairman, R. Archer, V. A. Becker, R. C. Shank, J. Thorp, A. Van Dyke, S. Williams

Through its courses and production laboratories, the department provides students with a wide range of opportunities in drama, dance, and film. It offers a major in theatre arts with a concentration in drama or film, and a major in dance. These majors provide students with an education in theatre, dance, and film that is in accordance with the general liberal arts ethic of the college, and they also provide some measure of preprofessional training in these arts. The department also provides the Cornell community with opportunities to participate in productions on an extracurricular basis.

Theatre Arts Major

Prerequisites for admission to the major (to be completed by the end of the sophomore year):

1) Theatre Arts 240.
2) Either Theatre Arts 250 or 280.
3) A grade of C or better in the above courses.
4) Consultation with the department's director of undergraduate studies.

Drama Concentration

Requirements:

1) Theatre Arts 240, 250, 280.
2) A minimum of four laboratory courses chosen from Theatre Arts 151, 155, 251, 351, 451, and 551. At least one term of 151 and 155 must be taken.
3) Majors are required to take at least one laboratory course a year in their junior and senior years.
4) Two courses in theatre studies chosen from Theatre Arts 325, 326, 327, 333, 334, 335, 336, 424, 434, 436, 442.
5) Four courses (at least 12 credits) in other departmental courses.
6) Two courses in related areas outside the department.
7) Courses in which a student receives a grade below C cannot be used to fulfill the requirements for the major.

Film Concentration

Requirements:

1) Theatre Arts 240, 250, 280.
2) Theatre Arts 374 with a grade of C+ or better.
3) 16 credits in film that should include:
   a) two courses chosen from Theatre Arts 375, 376, 378, and 379.
   b) Theatre Arts 377.
   c) either Theatre Arts 475 or 477.
4) 8 credits in other theatre arts courses.
5) 12 additional credits of related work outside the department.
6) An average of C+ or better in all theatre arts courses.

Dance Major

The dance program is housed in Helen Newman Hall. To be admitted to the major, students must have completed or shown competence in intermediate modern technique by the beginning of the junior year.

Requirements:

1) A minimum of one technique class each term chosen from Theatre Arts 304, 306, or 308, one credit each term for four terms.
2) Theatre Arts 210, 211, 312 or 316, 314, 315.
3) 20 additional credits in related fields chosen in consultation with advisors.

Departmental Honor Program. Candidates for the degree of Bachelor of Arts with honors in theatre arts must fulfill the requirements of the major and maintain an average of B+ in departmental courses and an average of B in all courses. Any such student may, at the beginning of the second semester of the junior year, form a committee of three faculty members to guide and evaluate the honors work. The work will culminate in an honors thesis or practicum to be presented not later than April 1 of the senior year, and an examination to be held not later than May 1.

Teatre Colloquium

On announced dates during the year, the entire department—faculty, undergraduate and graduate students—meets on Fridays, 12:20-2:00 p.m. in 101 Lincoln Hall. These sessions, which take the form of guest lectures, demonstrations, research presentations, and critiques of major Theatre Cornell productions, are designed to encourage a broad, coherent understanding of the integration of all components of theatre in its various forms.

Teatre Laboratories

Theatre Cornell, the department's producing organization, annually presents a season of classic and modern dramas, dance concerts, and experimental theatre. This organization functions as the department's principal laboratory for developing actors, directors, designers, playwrights, designers, technicians, stage managers, and arts administrators.

Production experiences are under the direct supervision of the department's staff and are organized into laboratory courses according to the skill and level of involvement. Students may register for the laboratories most appropriate for their participation.

1) Design and Technology Laboratories: Students may enroll either term in Theatre Arts 151, 152, 251, 351, and 451. These courses progress from elementary crew participation to full design, technical, and stage management assignments. Laboratories should be scheduled along with allied content courses when possible.
2) Rehearsal and Performance Laboratory: Students may enroll in Theatre Arts 155 after being assigned roles through auditions in theatre or dance productions. All production laboratory courses listed above may be repeated for credit and may be added without penalty at any time during the term with the permission of the instructor. They may be dropped only with the permission of the instructor. Students are also encouraged to participate in Theatre Cornell productions at any time on an extracurricular basis.

The Dance Program

In addition to courses in composition, history, and movement sciences, courses in dance technique are offered each semester. Four levels of modern and three of ballet. Registration takes place in Teagle Hall. Technique classes are intended to develop strength, flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with rhythmic accuracy, clarity of body design, and fullness of expression. The more advanced classes require the mental, physical, and emotional flexibility to perform more complex phrases in various styles. Tai Chi, a Chinese system of movement for health, self-defense, and meditation, and other dance styles and forms such as jazz, Japanese Noh, and Indian and Javanese dance are offered on a rotating basis. Students may satisfy the physical education requirement by taking any of these courses. Up to four academic credits may be earned (one each semester) for enrollment in intermediate or advanced technique only (see Theatre Arts 304, 306, 308). The schedule for technique classes is available in the Dance Office, Helen Newman Hall. Students may receive credit for performance in student-faculty concerts. Repetory and performance workshops are offered, in which staff choreograph and conduct rehearsals for performance of original dance works. Admission is with permission of the instructor. Hours are arranged through the Dance Office, Helen Newman Hall. One academic credit (S-U grades only) may be earned for such work (see Theatre Arts 155, Rehearsal and Performance).

Film Study Abroad

The College of Arts and Sciences, through this department and in consort with seventeen other colleges and universities, offers up to a full year’s study at the Inter-University Center for Film and Critical Studies. The center’s program is theoretical, critical, and historical. It is most useful to students pursuing an independent major in film studies and serves as an intensive supplement to their Cornell film courses. Fluency in French is required, and Theatre Arts 374, 375, and 376 are prerequisites. Inquiries should be addressed to Professor Fredericksen, Cornell’s liaison with the center.

Scholarship

The Charles B. Moss Scholarship is administered by the department. The recipient is chosen from among those majors in the department who demonstrate exceptional ability.

Freshman Seminar Requirement

The Freshman Seminar requirement may be satisfied by Theatre Arts 108, 120, 130, or 140.
Freshman Seminars

108 Writing about Film (also English 108) Fall and spring. 3 credits.
T R 10:10-12:05. A. Van Dyke. This course is designed not as an introduction to film analysis, but as a writing seminar that takes cinema as its primary object of attention. Some attempt will be made to explore the usefulness of basic aspects of film, such as framing or montage, as illustrative analogues to principles of writing and to examine cinema’s rhetorical power as a way of raising questions about our own use of persuasion in writing. Students will view a wide range of popular and art films (some of them silent and/or foreign), including Citizen Kane, October, and The Rules of the Game. They will be required to attend a two-hour screening outside of class approximately once a week. The writing requirement comprises five papers, averaging five pages in length, and eight to ten short writing assignments. No familiarity with film theory or analysis is expected.

120 Writing about the Modern Theatre Fall and spring. 3 credits.
T R 12:20-1:35. Staff. This course works by major European and American playwrights from 1880 to the present to provide the basis for training in the art of essay writing. Readings from the plays of Ibsen, Chekhov, Pirandello, Ionesco, Stoppard, Pinter, and modern American dramatists.

130 Writing about the American Myth in the Theatre Fall and spring. 3 credits
M W F 12:20. Staff. This course examines the images of America presented on the twentieth-century stage. How do Americans view themselves? Are they seen by foreign dramatists? To what ends do dramatists use the American myth?

140 From Script to Stage: Writing about the Theatrical Process Fall and spring. 3 credits
M W F 9:00. Staff. In this course students will explore and write about the process through which drama becomes theatre, how the methods of playwright, actor, director, and designer dovetail to create the theatrical piece. Students will be asked to apply the rhetorical strategies of theatre to their own essay writing. Texts will include Theatre Cornell productions.

Rehearsal and Performance Laboratory

155 Rehearsal and Performance Fall and spring. 1-2 credits; 1 credit per production experience per term up to 2 credits per term. Limited to students who are assigned roles by tryouts at the department’s scheduled auditions. Students should add this course only after they have been assigned roles. S-U grades only. Staff. The study, development, and performance of roles in departmental theatre or dance productions.

Acting

280 Introduction to Acting Fall or spring. 3 credits. Each section limited to 16 students. Prerequisite: registration only through department roster in 104 Lincoln Hall. Sec 1, T R 2:30-4:25 (primarily for prospective majors and those interested in extended study in acting), A. Van Dyke; sec 2, M W 10:10-12:15, staff; sec 3, T R 12:20-2:15, B. Gilles; sec 4, T R 12:20-2:15, V. Hardon; sec 5, T R 12:20-2:15, L. Lonergan; sec 6, T R 12:20-2:15, D. Shock; sec 7, T R 12:20-2:15, C. Ventress. Introduction to the problems and techniques of acting through history, theory, and practice. Appreciation of the actor’s function as a creative artist and social interpreter through selected readings, lectures, and play attendance. Examination of the actor’s craft through improvisation and exercises in physical, emotional, and intellectual skills.

281 Acting I—Basic Technique Fall or spring. 3 credits. Each section limited to 14 students. Prerequisites: Theatre Arts 280 and audition; registration only through department roster in 104 Lincoln Hall. Sec 1, M W 12:20-2:15, A. Van Dyke; sec 2, M W 12:20-2:15, J. Thorp. Practical exploration of the actor’s craft through improvisation, exercises in physical and psychological action; problems in the use of imagination, observation, and research as tools for exploring the script.

282 Introduction to Voice and Speech for Performance Fall. 2 credits. Limited to 12 students. Primarily for department majors. Prerequisite: registration only through department roster in 104 Lincoln Hall. T R 8:05-9:55. E. Johnson. Study and practice in the correct physical use of the voice through exercises in relaxation, alignment, breath control, support, and freedom in exploring range and resonance potential.

283 Voice and Speech for Performance Spring. 2 credits. Limited to 12 students. Primarily for department majors. Prerequisite: Theatre Arts 282. Registration only through department roster in 104 Lincoln Hall. T R 8:05-9:55. Development of vocal technique with additional emphasis on articulation and basics of standard American pronunciation.

284 Acting II—Characterization Fall or spring. 3 credits. Limited to 12 students. Prerequisites: Theatre Arts 281 and permission. Registration only through department roster in 104 Lincoln Hall. T R 10:10-12:05. Fall, J. Thorp; spring, S. Cole. Scene study and improvisational work designed to develop consistency in the student’s use of communicative action and emotional support in creating a role. Emphasis on text analysis; use of imagery in handling dramatic language, and exercises in emotional and sense memory.

381 Acting III—Styles Fall. 3 credits. Limited to 10 students. Prerequisites: Theatre Arts 380 and permission; registration only through department roster in 104 Lincoln Hall. T R 10:10-12:05. S. Cole. Practice and application of skills and methods to various styles of dramatic literature; practical exploration of historical and social influences as determinants of style.

575 American Mime Orientation I Fall. 2 credits. Prerequisite: Theatre Arts 280. Students enrolled in American Mime must contact the Department of Theatre Arts about supplies one month before the beginning of classes. Registration only through department roster in 104 Lincoln Hall. F 2-4:25. P. Curtis and other teachers from the American Mime Theatre. American Mime is a unique performing art created by American Mime Theatre. It is a complete training of playwriting, acting, moving, pantomime, and theatrical equipment. It is a complete actor/director training. May be repeated for credit. Limited to professional actor training. May be repeated for credit.

701 Stage Movement and Combat Fall and spring. 2 credits. May be repeated for credit. Limited to students in M.F.A. professional actor training. M-F 9:05-10:30. Staff. Development of the physical body for expression through various techniques and practice, including effort-shape; improvisation; composition; modern dance and ballet; period dance; stage combat techniques in foil, epee, saber, and dagger; tumbling; akido and stage fighting; combat choreography.

730 Dramatic Text Analysis Fall and spring. 2 credits. May be repeated for credit. Limited to students in M.F.A. professional actor training program. Others by permission of instructor. M W F 1:15-2:15. Fall, R. Shank; spring, E. Johnson. An examination of selected works of dramatic literature for theatre artists. Intensive study of the play’s text for techniques in interpretation, character development, plot articulation, and the aesthetics of prose and poetry for performance.

751 Rehearsal and Performance Fall. 2 credits. Limited to students in M.F.A. professional actor training. May be repeated for credit. R. Shank. Study, development, and performance of assigned roles.

752 Rehearsal and Performance Spring. 2 credits. Limited to students in M.F.A. professional actor training. May be repeated for credit. R. Shank. Study, development, and performance of assigned roles.

780 Acting Technique I Fall and spring. 2 credits. May be repeated for credit. Limited to students in first-year M.F.A. professional actor training. M W T R 2:30-4:25. S. Cole. Study and practice of fundamental techniques and methods. Exploration and use of the basic dynamics of the actor’s organism.

781 Acting Technique II Fall and spring. 2 credits. Prerequisite: Theatre Arts 780. Limited to students in second-year M.F.A. professional actor training. May be repeated for credit.

782 Voice Technique I Fall and spring. 2 credits. May be repeated for credit. Limited to students in the first-year M.F.A. professional actor/director training. M W F 10:45-12:30, T R 1:15-2:15. E. Johnson. Emphasis on correct use of the vocal instrument through exercises designed to achieve the freedom, flexibility, control, and power required for the professional actor.

783 Voice Technique II Fall and spring. 2 credits. May be repeated for credit. Prerequisite: Theatre Arts 782. Limited to students in second-year M.F.A. professional actor training. T R 10:45-12. E. Johnson. Practice, development, and expansion of work presented in Theatre Arts 782. Use of text to explore vocal action and voice as an integral part of developing characterization.

784 Speech Technique I Fall and spring. 2 credits. May be repeated for credit. Limited to students in first-year M.F.A. professional actor/director training. T R 10:45-12. A. Van Dyke. Early training in pronunciation of vowels, consonants, and diphthongs through exercises; sound symbolization through use of the International Phonetic Alphabet (IPA); eradication of regionalisms; development of standard American speech.

785 Speech Technique II Fall and spring. 2 credits. Prerequisite: Theatre Arts 784. May be
repeated for credit. Limited to students in second-year M.F.A. professional actor training.
M W 10:45-12:15. A. T. Hackney. Refinement of sound distinction and execution; study of dramatic texts in prose and poetry to develop techniques in scansion, emphasis, rhythm, range, and melody.

**Cinema**

374 Introduction to Film Analysis: Meaning and Value Summer or fall. Not offered fall 1982; next offered summer 1983. 4 credits. T R 10:10-11:30. D. Fredericksen. Consideration of the ways films generate meaning and of the ways they attribute meaning and value to films. Discussion ranges over commercial narrative, documentary, and personal film types.

375 History and Theory of the Commercial Narrative Cinema Fall. 4 credits. Fee for screening expenses, $10. (this fee is paid in class.) T R 2-4:25. D. Fredericksen. Consideration of a broad spectrum in the history of the commercial narrative film, viewed as an artistic medium and as a system requiring the massive consumption of artifacts. Emphasizes the early articulation of the cinematic language, realism as an artistic style, the nature and functions of popular film, and modernism. Major figures include Griffith, Eisenstein, Murnau, Von Stroheim, Dreyer, Chaplin, Renoir, Ford, Hitchcock, W. A. AU, Antonioni, Fellini, Bergman, Bunuel, Resnais, Godard, and Herzog.

376 History and Theory of Documentary and Experimental Film Fall. 4 credits. Not offered 1982-83; next offered 1983-84. Fee for screening expenses, $10. (this fee is paid in class.) T R 2-4:30. D. Fredericksen. Documentary figures covered include Vertov, Flaherty, Grierson, Ivens, Lorentz, Riefenstahl, Capra, and Jennings. Within the history of the experimental and personal film, emphasis are the avant-garde of the twenties, the movement toward documentary in the thirties, and American experimental and personal film from the forties to the present.

377 Fundamentals of 16-mm Filmmaking Fall or spring. 4 credits. Limited to 12 students each semester. Prerequisite: permission of instructor. Fee for maintenance costs, $10 (this fee is paid in class). The average cost to each student for materials and processing is $150. M W F 2-4:25. M. Rivchin. The mechanics and expressive potential of 16-mm filmmaking, including nonsynchronous sound. Each student makes two short films and retains ownership of them. No prior filmmaking experience is assumed.

378 Russian Film of the 1920s and French Film of the 1930s Spring. 4 credits. Prerequisite: Theatre Arts 375. Not offered 1982-83; next offered 1984-85. Fee for screening expenses, $10 (this fee is paid in class.) T R 2-4:30. D. Fredericksen. An intensive treatment of two distinct periods of innovation in film theory and history. Emphasis on the relationship between theory and practice. Major figures include Eisenstein, Pudovkin, Vertov, Dozhenko, Godard, Truffaut, Resnais, Robbe-Grillet, Eustache, Rivette, and Bresson.

379 International Documentary Film from 1945 to the Present Spring. 4 credits. Prerequisite: Theatre Arts 376. Not offered 1982-83; next offered 1983-84. Fee for screening expenses, $10 (this fee is paid in class.) T R 2-4:30. D. Fredericksen. Emphasis on the contemporary documentary film as a sociopolitical force, as an ethnographic tool within and without a filmmaker’s own culture, and as an artistic form with a distinct history and set of theoretical questions. Major figures, structures, and movements covered include Jennings, Rouch, Leacock, Malick, Rohu, Solanas, national film boards, Challenge for Change, direct cinema, cinema verité, and revolutionary documentary of the Third World.

477 Intermediate Film Projects Spring. 4 credits. Limited to 4 students. Prerequisites: Theatre Arts 377 or equivalent, and permission of instructor. Fee for maintenance costs, $10 (this fee is paid in class). The average cost to each student for materials and processing is $150; students retain ownership of their films.

Hours to be arranged. M. Rivchin. The development and completion of individual projects, with emphasis on personal and documentary modes. Includes preparation of an original script or storyboard, direction, cinematography, synchronous sound recording, editing, and follow-through to a rough print.

**Related Courses In Other Departments**

The Japanese Film (Aslan Studies 313) Documenting the Depression: Film, Literature, and Memory (History 476) Inter-University Center for Film and Critical Studies in Paris Cornell is part of a consortium supporting the center. Cornell students may earn full Cornell credit for study at the center. For course listings and other information, contact Professor Don Fredericksen.

**Dance**

See description of Theatre Laboratories for information concerning credit for participation in dance productions.

200 Introduction to Dance I Fall or summer. 3 credits. Prerequisite: registration only through department roster in 302 Helen Newman Hall. Concurrent enrollment in a dance technique class at the appropriate level is required. T R 12:20-1:50. J. Morgenroth. Movement improvisation and composition, readings in dance aesthetics and twentieth-century dance history. Film and video tapes are used.

201 Introduction to Dance II Spring. 3 credits. Prerequisite: Theatre Arts 200 or permission of instructor. T R 12:20-1:50. J. Morgenroth. Continuation of Theatre Arts 200.

[205 Contemporary Composers and Choreographers 3 credits. Not offered 1982-83.]

210 Beginning Dance Composition and Music Resources (also Physical Education 210) Fall. 4 credits. Prerequisites: intermediate technique level, or permission of instructor. Registration only through department roster in 302 Helen Newman Hall. Prerequisites for dance majors only: Music 141. Concurrent enrollment in a technique class at the appropriate level is required. M W 6:30-8 p.m. P. Gaither, D. Borden. This course is designed to develop resources in movement and in music as it relates to dance. Students will prepare studies concerned with use of space, time, body design, and dynamics. Various approaches to the structure of movement and music will be the basis for the study of form as it applies to dance and music.

304 Intermediate Ballet Technique (also Physical Education 134) Fall or spring. 1 credit. May be repeated for up to 4 credits. Prerequisite: Physical Education 131 or permission of instructor. M W F 1:50-2:40. P. Saul. Study and practice of traditional training exercises and the classical ballet vocabulary; work is done on strengthening the body and using it as an expressive instrument.

306 Intermediate Modern Dance Technique (also Physical Education 136) Fall or spring. 1 credit. May be repeated for up to 2 credits. Prerequisite: Physical Education 136 or permission of instructor. M W 2:30-4. J. Morgenroth. Study and practice of training exercises and an expressive contemporary movement vocabulary; work is done on strengthening the body and using it as an expressive instrument.

307 Asian Dance and Dance Drama (also Asian Studies 307) Fall. 3 credits. May be repeated for credit. M W F 10:10-11. J. Morgenroth. Section 1: Indian dance. Historical background and performance technique of East Indian dance. The particular dance technique that will be taught will be Odissi, which is related to Bharata Natyam, one of the four classical dance forms of India. The M W classes will be Odissi movement technique. The F class will be lecture, film, and discussion based on reading assignments and papers prepared by students. The M W classes may be taken without the F class, in which case physical education credit may be earned, but not academic credit. Students who attend all three classes and do all work may earn both physical education credit and 3 units of academic credit. Not offered 1982-83. Section 3: Javanese Dance. Not offered 1982-83.

308 High-Intermediate Modern Dance Technique (also Physical Education 138) Fall or spring. 1 credit; may be repeated for up to 4 credits. Prerequisite: Theatre Arts 306 or permission of instructor. T R 4:40-6:10. P. Gaither. Continuation of Theatre Arts 306.

310 Advanced Dance Composition (also Physical Education 311) Spring. 4 credits. Prerequisite: Theatre Arts 310 or permission of instructor. P. Gaither. Further problems in composition for groups. Not offered 1982-83.

312 Physical Analysis of Movement 3 credits. Not offered 1982-83.

316 Human Biology for the Performing Arts 5 credits. Not offered 1982-83.

318 Historical Dances Spring. 2 credits. Prerequisite: Ballet II or Modern Dance II. M W F 9:10-10. M. Lawler. A sampling of the social dances from the Renaissance to the present, with emphasis on pinpointing basic differences in movement styles and customs in the various periods. A major part of class time will be spent learning and performing the dances.
410 Individual Problems in Composition (also
Physics Education 410) Fall or spring. 3 credits. Prerequisite: Theatre Arts 211 or permission of instructor.
Hours to be arranged. Staff. Individual problems in composition.

[418 Seminar in History of Dance Spring. 3 credits. Prerequisite: Theatre Arts 315 or permission of instructor. Not offered 1962-63.]

Directing

398 Directing I Fall. 3 credits. Prerequisites: Theatre Arts 250, 280, and permission of instructor. M W 2:30-4:25. R. Shank.
An exploration of the role of the director through study and exercises; the process of conceptualization, use of visual, temporal, and dramatic values for interpretation of the script; directorial text analysis; applied projects.

498 Directing II Spring. 4 credits. Prerequisite: Theatre Arts 388 or permission of instructor. M W F 2:30-4:25. R. Shank.
Use of movement and space; character development techniques; rehearsal process; production procedures; applied project in performance.

499 Projects in Directing Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. R. Shank.
The planning and execution of directing projects by advanced students in the public performance facilities of the Department of Theatre Arts.

698 Directing Technique Fall and spring. 4 credits. May be repeated for credit. Limited to students in the M.F.A. professional director training; others by permission of the instructor. R. Shank.
Approaches to directorial controls for text, actors, time, structure, movement, space, and design, towards the development of a production concept from script to stage to audience. Practicums include work with actors, assistant director assignments, and the directing of complete short works.

798 Form and Style in Directing Fall and spring. 4 credits. May be repeated for credit. Limited to students in the M.F.A. professional director training; others by permission of instructor. R. Shank.
An exploration of major dramatic forms through analytical, interpretative, psychological, and technical methods for the director's realization of inherent values towards a coherent production style. Practicums include the direction of full-length works each term.

Playwriting

348 Playwriting Fall and spring. 4 credits. Prerequisite: permission of instructor. T 2-4:25. Staff.
A laboratory for the discussion of student plays. Following exercises in dramatic structure and technique, students will be expected to write two or three one-act plays.

349 Advanced Playwriting Fall and spring. 4 credits. May be repeated for credit. T 2-4:25. Staff.
A continuation of Theatre Arts 348.

Theatre Design and Technology Laboratories

151 Production Laboratory I Fall and spring. 1-2 credits. May be repeated for credit. Orientation meeting in Willard Straight Theatre at 7:30 p.m. on the second day of classes. Staff.
Instruction and practice at the introductory level on the basic techniques of construction and operation of scenery, costumes, lighting and/or sound. Instruction is supervised by the design/technology faculty and is directed towards the production of plays for the Theatre Cornell season.

251 Production Laboratory II Fall and spring. 1-3 credits. May be repeated for credit. Prerequisite: Theatre Arts 151 or permission of the instructor. Orientation meeting in Willard Straight Theatre at 7:30 p.m. on the second day of classes. Staff.
Practical production experience that involves specialized instruction and specific responsibilities in positions such as light board operator, wardrobe mistress, set or properties crew head, and assistant stage manager. There is also preparatory work in specific areas of more advanced construction in scenery, costumes, lighting, sound and management. Instruction includes significant responsibilities as stage manager, major crew head, or similar position. All work is guided and supervised by appropriate faculty and is an active part of the Theatre Cornell season.

351 Production Laboratory III Fall and spring. 1-3 credits. May be repeated for credit. Prerequisite: Theatre Arts 251 or permission of the instructor. Orientation meeting in Willard Straight Theatre at 7:30 p.m. on the second day of classes. Staff.
Practical production experience that involves an opportunity for advanced positions in design, technology, and stage management. These include full responsibility for an aspect of a smaller production; major responsibilities as an assistant on a major production; or significant responsibilities as stage manager, major crew head, or similar position. All work is guided and supervised by appropriate faculty and is an active part of the Theatre Cornell season.

451 Production Laboratory IV Fall and spring. 1-4 credits. May be repeated for credit. Prerequisite: Theatre Arts 351 or permission of the instructor. Orientation meeting in Willard Straight Theatre at 7:30 p.m. on the second day of classes. Staff.
Practical production experience requiring full design, technical, or management responsibility of an aspect of a play produced within the Theatre Cornell season. Student designer, technician, or stage manager will be assigned an appropriate faculty supervisor.

551 Production Laboratory V Fall and spring. 1-6 credits. May be repeated for credit. Prerequisite: permission of the instructor. Hours by arrangement. Staff.
Production design, technical, or management responsibilities for graduate students.

Theatre Design and Technology

250 Fundamentals of Theatre Design/Technology Fall or spring. 4 credits. Not offered to first-term freshmen. Lec-lab, M W F 2:30-4:25. Staff.
An introduction to the design and technical experience in the theatre, with particular attention to the unique collaboration of director, designer, and technician. Lectures, discussions, and practical project work will relate the visual principles of designing scenery, costumes, and lighting to the production techniques by which designs are realized on the stage. This course is prerequisite to all higher level courses in design and technology for the theatre.

260 Visual Concepts for the Theatre Spring. 3 credits.
T R 10:10-12:05. V. Becker.
A studio examination of the visual expression of ideas and concepts that focuses on developing the creative design process. Begins with the translation of simple thoughts and emotions into the visual language by which a designer can communicate with an audience and the practical application of this process to the complex objectives of design and directing in the theatre.

281 Production Concepts for the Theatre Fall 3 credits.
T R 10:10-12:05. R. Archer.
A studio examination of the physical expression of environment within the theatre, which focuses upon the personal understanding and application of spatial and structural concepts of proportion, texture, and other elements are explored as techniques for achieving the design and technical objectives of theatre production.

362 Lighting Design and Technology Fall. 4 credits. For both majors and qualified nonmajors in related fields. Prerequisite: Theatre Arts 250 or permission of the instructor. M W 12:20-2:15. Staff.
An exploration of the role of light as an expressive design medium for the interpretation of plays in the theatre. Will explore the visual nature and dramatic impact of light, the design process and its associated communication techniques, and lighting practices in the professional world.

364 Scene Design and Technology Fall and spring. 4 credits. For both majors and qualified nonmajors in related fields. Prerequisite: Theatre Arts 250 or permission of the instructor. T R 12:20-2:15. R. Dressier.
A study of the basic problems of design and technology of scenery for the stage. Will explore the design process, use of research and imagery, techniques of design communication, materials and associated tools for the realization of designs on the stage.

366 Costume Design/Technology Fall. 4 credits. For both majors and qualified nonmajors in related fields. Prerequisite: Theatre Arts 250 or permission of the instructor. T R 10:10-12:05. S. Perkins and staff.
An introduction to costume design and technology which includes: the analysis of the play and its characters, the use of period research as a source of style and construction techniques, and the practical application of materials, tools and techniques to the process by which literary characters are given visual dramatic form on the stage.

370 Theory and Practice of Stage Management Spring. 1-4 credits. Prerequisite: Theatre Arts 250 or permission of the instructor. T R 4:40-6: Staff.
An introduction to the concepts and techniques of stage management. The course will explore the collaborative nature of theatre production, the development of communication skills by which the central artistic vision of a production is defined and executed, and the centrality of the stage manager in these processes.

462 Advanced Lighting Design and Technology Spring. 4 credits. May be repeated for credit. Prerequisite: Theatre Arts 362 and permission of the instructor. T R 10:10-12:05. R. Dressier.
An exploration of lighting design/technology on a more advanced level, with particular stress upon project work and occasional production assignments.

464 Advanced Scene Design/Technology Fall 4 credits. May be repeated for credit. Prerequisite: Theatre Arts 364 and permission of the instructor. M W 12:20-2:15. Staff.
An exploration of scenic design and technology on a more advanced level, with particular stress upon project work and occasional production assignments.

466 Advanced Costume Design/Technology Spring. 4 credits. May be repeated for credit. Prerequisite: Theatre Arts 366 and permission of the instructor. T R 10:10-12:05. S. Perkins and staff.
An exploration of costume design/technology on a more advanced level, with particular stress upon project work and occasional production assignments.
550 Design Studio I  Fall and spring. 1-6 credits. May be repeated for credit. Prerequisite: permission of the instructor.  
M W 9:05-10:45. Staff.  
Lecture and studio work in the principles of production design for graduate students and advanced undergraduates with professional-level interest. Focuses upon the development of personal design processes for the profession.

560 Design Techniques Studio I  Fall and spring. 1-4 credits. May be repeated for credit. Prerequisite: permission of the instructor.  
M W F 10:00-12:05. Staff.  
Advanced studio work in the language of design; the representation of environments for the stage in both two- and three-dimensional form. Will include selected topics in drafting, painting, perspective, and color theory.

562 Lighting Techniques I  Spring. 4 credits. May be repeated for credit. Prerequisite: permission of the instructor.  
T R 2:30-4:25. Staff.  
Lecture and studio work in the principles of lighting, for graduate students and advanced undergraduates with professional-level interest. Focuses upon professional practices and standards.

564 Scenic Techniques I  Spring. 4 credits. May be repeated for credit. Prerequisite: permission of the instructor.  
T R 10:00-12:05. Staff.  
Lecture and studio work in the principles of scenery for graduate students and advanced undergraduates with professional-level interest. Focuses upon development of a personal design process for the profession.

566 Costume Techniques I  Fall. 4 credits. May be repeated for credit. Prerequisite: permission of the instructor.  
M W 9:05-10:45. Staff.  
Lecture and studio work in principles of costumes for the stage. For graduate students and advanced undergraduates with professional-level interest. Will focus upon the relationship of design to the skills by which designs are visualized and realized on the stage.

650 Design Studio II  Fall and spring. 1-6 credits. May be repeated for credit. Prerequisite: permission of the instructor.  
M W 1:10-12:05. V. Becker and staff.

670 Design Studio III  Fall and spring. 1-6 credits. May be repeated for credit. Prerequisite: permission of the instructor.  
F 9:05-12:05. Staff.

Theatre History, Literature, and Theory

240 Introduction to the Theatre  Fall, spring, and summer. 3 credits.  
M W F 11:15. Staff.  
A survey of the elements of drama and theatre, intended to develop appreciation and rational enjoyment of the theatre in all its forms. Not a production course.

300 Independent Study  Fall or spring. 1-4 credits; no more than 4 credits each semester. May be repeated for credit. Limited to upperclass students. Prerequisite: permission of the department staff member directing the study.  
Staff.  
Individual study of special topics.

325 Classic and Renaissance Drama (also Comparative Literature 352)  Spring. 4 credits.  
Readings in world drama from the Greeks to Shakespeare, including dramatists such as Aeschylus, Sophocles, Euripides, Aristophanes, Plautus, Seneca, Calderon, Kyd, Marlowe, Shakespeare, Jonson, and Webster, with emphasis on the Greek and Elizabethan periods.

[328 European Drama, 1660 to 1900 (also Comparative Literature 353)  Spring. 4 credits. Not offered 1982-83; next offered 1983-84.  
Readings from major dramatists from Moliere to Ibsen, including such authors as Racine, Congreve, Sheridan, Schiller, Goethe, Hugo, Buchner, Gogol, Turgenev, Zola, Hauptmann, and Chekhov.]

327 Modern Drama (also Comparative Literature 354)  Spring. 4 credits.  
M W F 1:25. A. Capuoli.  
Readings from major dramatists of the twentieth century, including Ibsen, Chekhov, Strindberg, Shaw, Pirandello, Ionesco, Brecht, Beckett, and Pinter.

[333 History of the Theatre I  Spring. 4 credits. Not offered 1982-83; next offered 1983-84.  
M W F 11:15. S. Williams.  
A survey of the characteristics of primitive theatre and of theatrical styles and production modes in Classical Greece and Rome, medieval Europe, Renaissance England, France, Italy, and Spain.]

334 History of the Theatre II  Fall. 4 credits.  
A survey of theatrical styles and production modes from 1660 to 1914. Among the periods considered are the English Restoration, the eighteenth and nineteenth centuries in England, France and Germany, and the international modernist theatre. The course will conclude with a brief survey of the Oriental Theatre, with particular reference to its influence on European symbolism.

335 History of the Theatre III: 1918 to the Present  Spring. 4 credits.  
A survey of the modern and contemporary theatre, from expressionism to the present day. Particular emphasis will be placed on the question of formal experimentation and its relation to the modern theatre as a cultural institution.

336 American Drama and Theatre  Fall. 4 credits.  
A study of the American theatre and representative American plays, with emphasis on drama from O'Neill to the present.

372 English Drama (also English 372)  Spring. 4 credits.  
M W F 10:00-10:50. S. McMillan.  
Important events in the English theatre from the beginning to the twentieth century. Plays by Marlowe, Shakespeare, Jonson, Webster, Dryden, Wycherly, Behn, Congreve, Sheridan, Shelly, Shaw, and others. Relationships between playhouses, dramatic texts, and politics.

424 Dramaturgy: Play and Period  Spring. 4 credits. Prerequisites: permission of instructor and some upper-level work in literary analysis or theatre history.  
T R 2:30-3:45. M. Hays.  
An intensive study of the theatrical and cultural background of Shaw's early plays.

434 Theatre and Society  Fall. 4 credits. Prerequisite: permission of the instructor. Students will be expected to have had some upper-level experience in one of the following areas: literary analysis, theatre history, sociology, psychology, history, anthropology, or philosophy.  
An examination of the role theatre has played in Western civilization. Topics for Fall 1982: Medieval and Renaissance theatrical structures.

436 Theory of the Theatre and Drama  Fall. 4 credits. Prerequisite: permission of instructor.  
A survey of various theories of dramatic form and presentation from Aristotle and Horace to Goethe and Schiller.

442 Ibsen and Chekhov (also Comparative Literature 472)  Fall. 4 credits. Prerequisite: permission of instructor.  
T 2:30-5. S. Williams.  
A study of selected minor and major plays by Ibsen and Chekhov, with particular attention being paid to how the playwrights evolved a dramaturgy that suitably expressed the artistic problems of their time. Aspects of performance and staging will also be discussed.

452 English Renaissance Drama and Its European Contexts (also Comparative Literature 652)  Fall. 4 credits.  
A study of Shakespeare's leading contemporaries in relation to sixteenth and seventeenth century drama in France, Spain, and Italy. The aim of the course is to define and assess the specificity of the Elizabethan and Jacobean stage by viewing it against the background of European Renaissance theatre as a whole. Considerable attention will be given to the connections among dramatic genre, theatrical institution, ideology, and social and political history, primarily from a Marxist point of view. Complementary or opposing perspectives are welcome. Readings from Marlowe, Jonson, Marston, and Webster, Conneille, Moliere, and Racine; Lope de Vega and Calderon; and others. All texts available in English.

495 Honors Research Tutorial  Fall or spring. 1-4 credits. Prerequisites: senior standing and departmental acceptance as an honors candidate. Hours to be announced. Staff.  
Methods and modes of research for honors project.

496 Honors Thesis Project  Fall or spring. 1-4 credits. Prerequisites: senior standing and departmental acceptance as an honors candidate. Hours to be announced. Staff.  
Preparation and presentation of honors thesis or practicum.

[633 Seminar in Theatre History  Fall. 4 credits. T 2:30-4:30. Not offered 1982-83, next offered 1983-84.]

636 Seminar in Dramatic Criticism  Fall. 4 credits.  
T 2:30-5. S. Williams.  
Subject: Ibsen and Chekhov.

637 Seminar in Dramatic Theory  Spring. 4 credits.  
T 3:35-5:30. Phenomenology and hermeneutics for the theatre. Key texts of hermeneutic and phenomenological critics will be discussed and applied to the drama and theatrical productions. Texts by Dilthey, Gadamer, and Ingerland will be discussed and applied to a study of Sophocles, Racine, and Kleist.

638 Seminar in Theory of the Theatre  Spring.  
T 2:30-5. Staff.  
Subject to be announced.

672 Tragedy: Philosophy and Theory (also English 672)  Spring. 4 credits. T. Murray.  
Hours to be announced.

[699 Seminar in the Theories of Directing  Not offered 1982-83.]

700 Introduction to Research and Bibliography in Theatre Arts  Fall. 1 credit. Enrollment restricted to students in 636.  
T 2:30-5. S. Williams.  
A study of methods and materials relevant to the solution of problems in theatre arts, including
Students should submit:
1) a statement of why they want to be an Africana studies major;
2) a tentative outline of the area of study they are considering (African or Afro-American) for the undergraduate concentration; and
3) a full transcript of courses taken and grades received.

The center’s undergraduate faculty representative will review the applications and notify students within two weeks of the status of their request.

After acceptance as a major in the Africana Center, a student must maintain a C+ cumulative average in the center’s courses while completing the major program. The Africana major must complete 36 credits in courses offered by the center, to include the following four core courses: AS&RC 231, 290, 360, 431. Beyond the core courses, the student must take 6 credits of center courses numbered 200 or above and 15 credits numbered 300 or above. Within this selection the student must take at least one of the following AS&RC courses: 203, 204, 263, or 301. The program of an undergraduate major may have a specifically Afro-American focus or a specifically African focus.

Joint Majors
The center encourages joint majors in the College of Arts and Sciences and in other colleges. Joint majors are individualized programs that must be worked out between the departments concerned. The center’s undergraduate faculty representative, Professor Cross, will assist students in the design and coordination of joint major programs. However, in any joint major program the center will require at least 16 credits be taken in Africana studies courses, including AS&RC 290.

Double Majors
In the case of double majors (as distinct from joint majors) students undertake to carry the full load of stipulated requirements for a major in each of the two departments they have selected.

Honors
The honors program offers students the opportunity to complete a library research thesis, a field project in conjunction with a report on the field experience, or a project or experiment designed by the student. The requirements for admission to the honors program for all students—regular majors, joint majors, and double majors—are a C+ cumulative average in all courses and a B+ cumulative average in the center’s courses. Each student accepted into the honors program will have an honors faculty committee consisting of the student’s adviser and one additional faculty member, which is responsible for final evaluation of the student’s work. The honors committee must approve the thesis or project before May 1 of the student’s junior year. The completed thesis or project should be filed with the student’s faculty committee by May 10 of the senior year.

Distribution Requirement
Two Africana Studies and Research Center courses from the appropriate group may be used in fulfillment of one of the following distribution requirements:

History: AS&RC 203, 204, 231, 283, 344, 350, 360, 361, 370, 381, 405, 460, 475, 483, 490.

Note: Students who are not AS&RC majors may petition to satisfy a second requirement with center courses if they are carrying a heavy program at the center.

Language Requirement
Swahili fulfills the College of Arts and Sciences language requirement. Successful completion of AS&RC 131, 132, 133, and 134 provides qualification in Swahili. Successful completion of AS&RC 202 gives proficiency in Swahili. Africans majors are not required to take Swahili, but the center recommends the study of Swahili to complete the language requirement.

131 Swahili Fall. 4 credits.
T W 10:10. A. NANJI.
Beginning Swahili; grammar, part 1.

132 Swahili Spring. 4 credits. Prerequisite: Swahili 131. or previous study of the language.
T W 12:20. A. NANJI.
Elementary reading and continuation of grammar.

133 Swahili Fall. 4 credits. Prerequisites: Swahili 131 and 132.
A. NANJI.
Advanced study in reading and composition.

134 Swahili Spring. 4 credits. Prerequisites: Swahili 131, 132, and 133 or permission of the instructor.
A. NANJI.
Advanced study in reading and composition.

137 Afro-American Writing and Expression
Fall. 4 credits.
T R 10:10.
Designed to promote clear and effective communication skills, using black-oriented materials as models for writing assignments and oral discussions.

138 Applied Writing Methods on Afro-American Topics
Spring. 3 credits.
Hours to be arranged.
A writing skills course that explores traditional and nontraditional research sources, using Afro-American experiences as the primary subject matter.

171 Infancy, Family, and the Community
Fall. 4 credits.
T R 3:10. W. CROSS.
Survey of key psychological dimensions of the black experience, covering such issues as (1) race and intelligence; (2) black identity; (3) black family structure; (4) black English; (5) black middle class; and (6) nature of black psychology.

172 Teaching and Learning in Black Schools
Spring. 4 credits. Intended for freshmen and sophomores.
T R 3:10. W. CROSS.
A course designed for freshmen and sophomores that will be devoted to the history and contemporary issues of black education, such as the struggle for black studies, the development of independent black grammar; and problems of public schools in black communities.

190 Introduction to Modern African Political Systems
Fall. 4 credits.
M W 1:25–2:15.
This course directs attention to the salient characteristics of Africa’s political systems and assesses the way the systematic characteristics impinge on development efforts. It is particularly concerned with the responses of the systems of the legacy of colonially imposed institutions, the efforts of post colonial constitutional engineering, the creation of integrative institutions in answer to the problem of multiethnic fragmentation, the place of traditionalism in the modern political context, the locus of power in the systems, and the level of institutionalizations reached, if any, to ensure stable continuity into the future.

202 Swahili Literature Fall. 4 credits. Prerequisite: Swahili 134. Offered on demand.
A. NANJI.
Students gain mastery over spoken Swahili and are introduced to the predominant Swahili literary forms.

The patterns of racism and segregation are dealt with in a historical context, using southern Africa and North America as case histories. Study is undertaken within a theoretical framework that broadly defines racism and segregation and their implications.

[219 Issues In Black Literature Fall 4 credits. Not offered 1982-83.
An examination of literature written for black children, including an analysis of the literature as it pertains to black life from the present. Students write a pamphlet containing their essays, fiction, and poetry, and compile a bibliography of literature for black children.]

231 Black Political Thought In the United States Fall. 3 credits. M W F 12:20-1:10.

This is an introductory course that will review and analyze the major political formulations developed and espoused by black people in the struggle for liberation. Such themes as slave resistance, nationalism, Pan-Africanism, emigration, anti-imperialism, socialism, and the political thought of black women will be discussed. Black political thought will be viewed in its development as responses to real conditions of oppression and exploitation.

A study of black political movements in South Africa and North America and their responses to the situations of race relations that formed the contexts of their operations.]

285 Black Drama Spring. 3 credits. Not offered 1982-83.

This course is intended to serve as an introduction to the history of black drama and to provide the means through which students can cultivate their interests in dramaturgical criticism and production techniques. Each student in the course will read a number of black plays, write a critical paper on black drama, and participate in the production of a play.

An introductory course to the sociology of the black experience and to the field of Afro-American studies. Required for all undergraduate students majoring at the Africana Center.

301 Seminar: Psychological Aspects of the Black Experience Spring. 4 credits. Prerequisite permission of the instructor.

Existing research is used to raise specific questions about new cultural and political currents in the black community. The focus is on individual conversion experiences within the context of social movements. The transformations of political groups (for example, Black Panther Party) and outstanding activists and intellectuals (such as Malcolm X) are used as reference points for analytical discussion of theory.

302 Social and Psychological Effects of Colonialization and Racism Spring. 4 credits. Offered in alternate years; not offered 1982-83. Staff.

303 Blacks in Communication Media and Film Workshop Spring. 3 credits. Not offered 1982-83.
The focus is on the general theory of communication as the function of media in an industrialized society, and the social, racial, and class values implied in the communication process. There are group writing projects, a term paper, and the screening of significant American and Third World films.

The course is designed to explain why Africa's public administrations in the postcolonial era have generally failed to move from the colonialist ethos to becoming primary instruments for initiating and guiding the processes of development. The reality of colonialism was bureaucratic centralism—the closest approximation to the ideal type of a pure administrative state specializing in law and order. Colonial administrations resembled armies in their paramilitary formation and ethos and were, indeed in a number of cases, the instruments of military men. Much attention focuses on the internal characteristics of bureaucratic organizations and on their relationship to their social and political environments.

345 Afro-American Perspectives In Experimental Psychology Fall/Spring 3 or 4 credits. Prerequisite: An introductory course in psychology or AS&RC 171. Offered alternate years. W. Collins.

346 African Socialism and Nation Building Spring. 4 credits.

An exploration and critical analysis of the various theories of African socialism as propounded by theorists and practitioners. Those ideas, extending from Nyerere's Ujamaa (for example, traditional social and economic patterns of African society) to Nkrumah's Scientific Socialism (such as the desirability and practicality of the Marxian type of socialism in Africa) are compared.

This course will address the social organizations, political protests, and political ideologies written by or about black women in the United States, from slavery to the 1980s. Topics will include the special role of black women in slavery, the political-protest thought of black women writers in the nineteenth and twentieth centuries (for example, Mary Church Terrell, Ella Baker, Mary McLeod Bethune, Eleanor Holmes Norton, Angela Davis), the emergence of black feminism, and the various social-political controversies surrounding the relationship between black women to both the Civil Rights and Black Power Movements.

351 Politics in the Afro-Caribbean World: An Introduction Fall or spring, according to demand. 4 credits.
A study of the social, political, economic, and psychological forces that have shaped Caribbean societies.

A historical study of Pan-Africanism that reviews and analyzes the literature and activities of early black Pan-African theorists and movements.

Introduction to African history beginning with early civilizations in pre-European Africa.

361 Afro-American History (from African Background to the Twentieth Century) Fall. 3 credits. M W F 10:10. R. Harris.
Designed to explore major themes of the black historical experience. Emphasis is from African origin to the twentieth century. A major concern is the changing status of black people over time and their attempts to cope with bondage, racism, circumscription, and oppression.

An exploration of major themes of the black historical experience in America during the twentieth century. The socioeconomic, political, and cultural condition of Afro-Americans is assessed, after their presence in this country for more than three hundred fifty years.

A survey of the present problems on the African continent as they appear from 1500 to the present time. Important topics include the impact of the Atlantic slave trade, the European Scramble of 1884, and the rise of African nationalism and nationalism. The post-1945 context of French and British occupation in 1914, and the prospects of protracted social unrest in Africa south of the Zambezi River.

382 Comparative Slave Trade of Africans in the Americas Fall. 3 credits. T R 1:25-2:30.
The focus is on eighteenth- and nineteenth-century slave societies in Virginia and South Carolina in North America and the eighteenth-century slave societies in San Domingue or Haiti and to some extent in Jamaica. The slave society in Cuba during the latter part of the nineteenth century is studied.

400 Political Economy of Ideology and Development In Africa Spring. 4 credits. Not offered 1982-83.
T R 11:15.
This course explores the processes of the historical underdevelopment of Africa, drawing upon the assumptions of the underdevelopment theory. It then takes up the problems of development by examining the different ideologies and strategies of the period, Booker T. Washington and W. E. B. DuBois, other personalities and leaders within Black social and political history will be examined—including Marcus Garvey, T. Thomas Fortune, A. Philip Randolph, Charles S. Johnson, William Monroe Trotter, and James Weldon Johnson. Major black issues, such as the intellectual debates between DuBois and Washington, and DuBois versus Garvey, will constitute a critical part of the discussion.

A review of the intellectual and political history of the black United States experience from 1890 to the eve of World War II. Although the course concentrates on five black leaders in Virginia and South Carolina, it is a socio-historical investigation and evaluation of the variety of political practical activities among black people in the States.

420 Social Policy and the Black Community In the Urban Economy Spring. 4 credits. Offered alternate years.

J. Turner.
Examination of the social, political, and economic factors contributing to the development and perpetuation of the so-called ghetto, principally in urban areas. Particular emphasis will be placed on the current conditions in black communities.

The main focus is on the basic themes in the twentieth-century literature produced by Africans south of the Sahara.]
An examination of the role that black labor has played in the historical development of United States monopoly, capitalism, and imperialism. Emphasis is on the theory and method of political economy and a concrete analysis of the exploitation of black people as slave labor, agricultural labor, and proletarian labor.

488-99 Independent Study 498, fall; 499, spring Hours to be arranged. Africana Center faculty. For students working on special topics, with selected reading, research projects, etc., under the supervision of a member of the Africana Studies and Research faculty.

500 Political Theory, Planning, and Development In Africa Spring. 4 credits. Not offered 1982-83.

T R 11:15-12:45.
The course explores the processes of underdevelopment of Africa from the epoch of slavery through colonial and neocolonial phases of domination, drawing on the assumptions of "underdevelopment" theory a la G. Frank, Walter Rodney, and others. It then takes up the different content and empiric and capital strategies by highlighting the interaction of political and economic forces. Case studies are drawn from Ghana, Kenya, and Tanzania.

505 Workshop In Teaching About Africa 4 credits. Prerequisites: AS&RC 203 and 204 or AS&RC 360 and 361 or permission of the instructor.

Offered alternate years.

C. Mbata.

510 Historical Geography and Sources: The Development of Afro-American History Fall. 4 credits. Prerequisite: upperclass or graduate standing or permission of the instructor.

T 9:30-12:05. R. Harris.

Through a critical examination of the approach, methodology, and philosophy of major writers in this field, such as James W. C. Pennington, George Washington Williams, W. E. B. DuBois, Carter G. Woodson, John Hope Franklin, Benjamin Quarles, Lerone Bennett, Jr., and Vincent Harding, the evolution of Afro-American history is traced from its origin to the present. The nature and purpose of Afro-American history, especially the role of the black historian in the context of a racist and oppressive society, is analyzed. Attention is given to sources for studying black history, and each participant fashions a conceptual framework for application to the materials and evidence of the black experience in America.

515 Comparative Political History of the African Diaspora 4 credits. Prerequisites: upperclass or graduate standing or two of the following courses: AS&RC 203, 204, 283, 360, 361, 475, 484, 490. Offered alternate years. Not offered 1982-83.

520 Historical Method, Sources, and Interpretation Fall. 4 credits. Prerequisite: upperclass or graduate standing or two of the following courses: AS&RC 203, 204, 361, 475, 484, 490. Offered alternate years. Not offered 1982-83.

C. Mbata.

550 Transnational Corporations in Africa and Other Developing Countries Spring. 4 credits. Prerequisites: upperclass or graduate standing or permission of the instructor. Not offered 1982-83.

Examines the role of transnational enterprises as an economic and political factor in the Third World, their relations with the host government, and their interaction with both the private and public sectors of the economy of the host country. Special emphasis on Africa and Latin America.

551 Political History of Social Development in the Caribbean Offered according to demand. 4 credits. Prerequisite: upperclass or graduate standing or permission of the instructor. Not offered 1982-83.

The Major

Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises, including introductory courses in the fields of biochemistry, chemistry, mathematics, genetics, ecology, ethics, and history. In addition, majors are required to take a two-semester core sequence in biology and society, a set of electives, and a special senior seminar. Programs incorporating these required courses are designed in consultation with faculty advisors to accommodate each student's individual goals and interests. For further information on the major, including course requirements, specific course requirements, and application procedures, contact Professor Davydd J. Greenwood, Program on Science, Technology, and Society, 632 Clark Hall.

Honors (for students in the College of Arts and Sciences only)

Basic requirements. The basic requirements for a Bachelor of Arts with honors for students majoring in biology and society shall be: 1) a seminar (4 credits) taken during the first semester of the senior year; 2) a tutorial (4 credits) taken during the second semester of the senior year; and 3) a satisfactory honors thesis. Students wishing to do honors work must make formal application at the time of registering for their first-semester honors seminar. The honors seminar may be one of the regular biology and society senior seminars specially adapted for the development of an honors thesis.

Candidates for the degree of Bachelor of Arts with honors in biology and society must 1) submit an application to the chairperson of the major, explaining how the honors thesis is expected to fit into the candidate's undergraduate program, and 2) have an average of B in all subjects and B+ in biology and society courses.

The honors thesis. Work on the honors thesis shall begin in the honors seminar with the preparation of an outline and bibliography and shall be completed in the honors tutorial. An honors thesis outline and
bibliography shall be submitted prior to the beginning of the final examination period of the first semester; a polished first draft at least five weeks prior to the final examination period of the second semester.

The honors thesis shall be written under the direction of two honors thesis faculty advisers. Candidates for honors shall first find a member of the Biology and Society Major Committee willing to serve as an adviser, and the student and this adviser shall then find a second adviser from among the faculty at large. The purpose of the second adviser is to guarantee expertise in the subject matter covered by the thesis.

When a thesis has been completed in a form generally satisfactory for purposes of evaluation, the candidate shall meet with the thesis advisers and formally defend it.

**Evaluation and recommendation.** Following the formal defense of the thesis, the thesis advisers shall submit to the chairman of the Major Committee a recommendation regarding the level of honors to be awarded. This recommendation shall include: 1) an evaluation of the thesis; 2) an evaluation of the student's academic record in the biology and society major; and 3) a justification for the level of honors proposed.

This recommendation shall be circulated to the members of the Biology and Society Major Committee for information and ratification. Unless there is serious disagreement, the recommendation of the advisers shall stand. If there is serious disagreement, the chairperson of the committee shall make the decision after consultation with the interested parties.

**Courses**

**287 History of Biology (also History 287 and Biological Sciences 201)** Fall. 3 credits. Prerequisite: one year of introductory biology. S-U grades optional.

(288 History of Biology (also History 288 and Biological Sciences 202)) Spring. 3 credits. Prerequisite: one year of introductory biology. S-U grades optional. Not offered 1982-83. W. Provine.

**301 Biology and Society I: The Biocultural Perspective (alsoAnthropology 301 and Biological Sciences 301)** Fall. 3 or 4 credits (4 credits with discussion section). Prerequisite: one year of introductory biology. S-U grades optional. This is part of the two-semester core sequence for the biobgy and society major and is also available to other students who have fulfilled the necessary prerequisites.

Lecs, M W F 9:05. D. Greenwood, S. Risch. Human biology, behavior, and institutions are viewed as the ongoing products of the interactions between human biological evolution and cultural change. These interactions are documented with reference to the capacity for culture, human groups and institutions; language, meaning, and cultural realities; and major models of human nature and human institutions.

**302 Alternative Food Production Systems (also Biological Sciences 302)** Spring. 3 or 4 credits (4 credits by arrangement with instructor). Prerequisite: Anthropology/Biology and Society/Biological Sciences 301 or permission of instructor. S-U grades optional. This is one of two courses fulfilling the second-semester core sequence requirement for the biology and society major and is also available to other students who have taken 301.

Lecs and disc, T R 10:10-11:30. S. Risch. Substantiation is presented for the claim that significant changes in our food production system are needed. The inadequacies in our current system are examined from a multidisciplinary perspective, with consideration of the relevant scientific, social, public policy, and ethical issues. Current controversies on such issues as energy use in agriculture, crop breeding programs, soil conservation, chemicals in agriculture, and international food policy are considered. Emphasis is placed on developing alternatives to current practices. Lectures covering assigned readings are followed by discussion sessions.

**310 Issues in Biology and Society: Chemicals, Enzymes, and Maladies** Fall. 3 or 4 credits (4 credits by arrangement with instructor). Prerequisite: Anthropology/Biology and Society/Biological Sciences 301 and permission of instructor. This is one of two courses fulfilling the second-semester core course requirement for the biology and society major and is also available to other students who have taken Biology and Society 301.

Lecs and disc, T R 10:10-11:30. J. Fessenden-Raden. The biochemical effects of toxic chemicals as potential health hazards will be examined from a multidisciplinary perspective. Scientific, social, public policy, and ethical issues will be critically analyzed. Topics include occupational and environmental chemical hazards within a biochemical examination of the role of specific chemicals such as carcinogens, allergens, mutagens or teratogens. Chemical diseases will also be discussed. Lectures with assigned readings will be followed by a discussion period.

**311 Issues in Biology and Society: Professional Ethics** Spring. 4 credits. Limited to 20 students. R 2:30-4:30. S. Brown, Jr. An examination of the role of professions in our society and a comparison of the setting of professional standards and problems of professional ethics in medicine, engineering, law and other professions.

**375 Independent Study** Fall or spring. Credit to be arranged. Hours to be arranged. Staff.

**Biology and Society Senior Seminars (Biology and Society 400-405)**

**400 Seminar in the History of Biology (also History 447)** Fall. 4 credits. No prerequisites. T 2:30-4:25. W. Provine. Mechanism, design, and ethics in relation to modern biology.

**401 Human Fertility In Developing Nations (also Sociology 434)** Spring. 4 credits. Prerequisite: Sociology 230 or permission of instructor. W 3:30-8. J. M. Sylos. A review of the major literature dealing with the social causation of variation in human fertility. Emphasis will be on international comparisons and on the methodology of field research.

**402 The Ecological Consequences of Nuclear War (also Peace Studies 402)** Fall. 4 credits. Prerequisite: Biological Sciences 260 or 360, or Government 312 or 384 or permission of instructor. Hours to be arranged. M. Harwell. This course will examine the most serious environmental problem that exists today: the total consequences for humans of nuclear war. This course will concentrate on the long-term effects on humans that are mediated through ecosystems (e.g., ozone depletion, climatic changes, pest outbreaks, shortages in subsistence necessities, genetic alterations, ecosystems alterations).

**403 Seminar in the History of Biology (also History 448)** Spring. 4 credits. Prerequisite: knowledge of elementary genetics. T 2:30-4:25. S. Brown.
The intensive nature of the program leads to a command of the language in all its aspects—listening, speaking, reading, and writing—in the shortest possible time.

Integrated courses are offered both fall and spring semesters at three levels: beginning (Test of English as a Foreign Language [TOEFL] score below 370), intermediate (TOEFL score below 450), and advanced.

Students who have gained full admission to, or who already are registered in, degree-granting programs at Cornell should consult the section Modern Languages, Literatures, and Linguistics for information regarding courses in English as a second language.

The intensive English program is administered by the Department of Modern Languages and Linguistics, Cornell University, Morrill Hall, Ithaca, New York 14853, U.S.A. Application materials and information are available directly from the program or by calling 607/256-4863.

**Independent Major Program**

Dean Lynne Abel, director, 134 Goldwin Smith Hall, 256-3386

The Independent Major Program is described in the introductory section, p. 92.

**351 Independent Study** Fall or spring. 1-4 credits. Prerequisite: permission of the program office.

**499 Honors Research** Fall or spring. 4-8 credits; a maximum of 8 credits may be earned for honors research. Prerequisite: permission of program director. Each participant must submit a brief proposal approved by the honors committee.

**International Relations**

One of the University's strongest, most diverse fields is international relations. Cornell offers dozens of courses in many departments and several colleges that provide a strong education in the field, including courses in government, economics, history, anthropology, rural sociology, nutrition, modern languages and literatures, international comparative labor relations, and many others too numerous to list and keep current.

The Concentration

The purpose of a concentration is to provide a structure for students who have a general interest in the field or who plan to specialize in careers in international law, economics, agriculture, foreign trade, international banking, government service, international organizations, or another cultural or scholarly activity. Some students will major in one of the traditional departments: history, government, economics, foreign literature, and so on. Others will design an independent major. Still others will major in a different discipline, perhaps altogether unrelated, but would like to have a basic understanding of international problems.

For students in any of these categories, the requirements for a concentration in international relations are the following six courses or options:

1. *Government 181, Introduction to International Relations*
2. One appropriate 300-level government course, either in international relations or in the foreign policy of a particular nation
3. *Economics 361, International Trade Theory*
4. *Economics 362, International Monetary Theory*
5. *History 314, History of American Foreign Policy II*
6. Any history course dealing with a modern nation

*Numbers 3 and 4 can be replaced by choosing two courses from the following:

- **a)** Economics 371, Public Policy and Economic Development
- **b)** Economics 372, Applied Economic Development
- **c)** Economics 373, International Specialization and Economic Development
- **d)** Economics 374, National and International Food Economics

The typical choices among the sequences listed above would be to study European history and government with Economics 361-362 or Third World history and government with Economics 371-374. Reasonable substitutions can also be arranged.

Students are also urged as strongly as possible to acquire full proficiency in, not merely a passing acquaintance with, a modern foreign language. Studying the language as well as the language of a culture is important. Since, however, students will begin the concentration with varying backgrounds in language and since proficiency is the minimal expectation, no required number of courses is specified.

Students electing the international relations concentration will be assigned an adviser in that field, if appropriate, in addition to their departmental adviser. They should see Prof. Richard Rosecrance, Center for International Studies, 170 Uris Hall.

**Center for International Studies**

See Interdisciplinary Centers and Programs, p. 8.

**Program of Jewish Studies**

D. I. Owen, director (Near Eastern and ancient Jewish history and archaeology); M. F. Collins, (Bible, Dead Sea Scrolls, apocryphal and rabbinic literature); W. J. Dannhauser (Jews and Germans, contemporary Jewish thought, Gershon Scholem); S. L. Gilman (Yiddish literature, German-Jewish history and literature); A. G. Korman (Holocaust studies, Jewish labor movements), Z. V. Linhart (Hebrew language, Hebrew and Yiddish literature), A. S. Lieberman (physical geography and natural history of Israel), D. S. Powers, (History of Jews in Islamic lands), E. Rosenberg (Jews in modern European and Anglo-American literature), M. A. Zober (community development and social policies in Israel).

The Program of Jewish Studies is included in the framework of the Department of Near Eastern Studies. The program has grown out of the conviction that Judaic civilization merits its own comprehensive and thorough treatment and that proper understanding of any culture is inconceivable without adequate knowledge of the language, literature, and history of the people that created it. Accordingly, the offerings in the areas of Hebrew language and literature have been considerably expanded, and courses in ancient, medieval, and modern Jewish history have been added to the program.

Although further expansion of the program is anticipated, it presently enables students to obtain basic instruction and specialization in the fields of Semitic languages; the Hebrew Bible; the Apocryphal and Tannaitic literatures; medieval Hebrew literature; modern Jewish thought; modern Hebrew literature; ancient, medieval, and modern Jewish history; and Yiddish language and literature. In some of these fields students may take courses both on graduate and undergraduate levels. Faculty in other departments provide additional breadth to the program by offering courses in related areas of study.

Courses offered 1982-83:

- **Modern Hebrew Literature In Translation: Modern Hebrew Poetry (Near Eastern Studies 207)**
- **Modern Hebrew Literature In Translation: The Modern Hebrew Short Story (Near Eastern Studies 208)**

**The History and Archaeology of Ancient Israel to 450 B.C.E. (Near Eastern Studies 243)**

**Undergraduate Seminar In Biblical Literature: Prophecy In Ancient Israel (Near Eastern Studies 322)**

**Jews under Islam (Near Eastern Studies 355)**

**Jewish Workers In Europe and America, 1789-1948 (Industrial and Labor Relations 381)**

**Metaphor, Modernism, and Cultural Context: The Use of Metaphor In Modernist Hebrew, Yiddish, English, and American Poetry (Near Eastern Studies 405 and Comparative Literature 405)**

Courses that are not offered 1982-83:

- **Freshman Seminar In Biblical Literature: Heroes and Heroines of the Bible (Near Eastern Studies 126)**
- **Jews of the Ancient and Muslim Near East: 450 B.C.E.-1204 C.E. (Near Eastern Studies 244)**
- **The Emergence of the Modern Jew: 1476-1948 (Near Eastern Studies 245)**
- **Tradition and the Literary Imagination (Near Eastern Studies 291)**
- **Seminar In Modern Hebrew Literature: The Short Story (Near Eastern Studies 303)**
- **Seminar In Modern Hebrew Literature: The Novel (Near Eastern Studies 304)**
- **Folklore In the Ancient Near East (Near Eastern Studies 338)**
- **Evolution of Jewish Law (Near Eastern Studies 341)**
- **The Jewish Community Throughout History (Near Eastern Studies 343)**
- **Age of the Patriarchs (Near Eastern Studies 344)**
- **Judiasm and Christianity In Conflict (Near Eastern Studies 347)**
- **The History and Culture of Ancient Mesopotamia (Near Eastern Studies 363)**
- **History of the Ancient Near East In Biblical Times (Near Eastern Studies 365)**
- **Tolerance and Intolerance: The Image of the Jew In Western Civilization (Comparative Literature 320)**
- **Literature of the Holocaust (Comparative Literature 323)**
- **Yiddish Literature In Translation (German Literature 350)**
- **The Shetel In Modern Yiddish Fiction In English Translation (German Literature 375 and Near Eastern Studies 375)**
- **Tolerance and Intolerance: The Image of the Jew In Western Civilization (Comparative Literature 320)**

**Latin American Studies**

The Latin American Studies Program encourages and coordinates faculty and student interests in Latin America. A variety of special lectures, films, and seminars supplement the regular course offerings. Undergraduate students may arrange a Latin American concentration or an independent major in Latin American studies, and graduate students may pursue a minor in Latin American studies while majoring in the graduate field of their choice. The College of Arts and Sciences offers Latin American studies courses in anthropology, economics, government, history, and sociology. In addition, there is a varied language, literature, and linguistics curriculum in Spanish, Portuguese, and Quechua. The student may also pursue Latin American studies in the College of Agriculture and Life Sciences; the College of Architecture, Art, and Planning; the College of Human Ecology; and the School of Industrial and Labor Relations.

For further information contact the program office, 190 Uris Hall.

**Law and Society**

C. Greenhouse (anthropology), director; J. Bennett (philosophy), C. Carmichael (comparative literature), G. Hay (economics), C. Holmes (history), J. Jacobs (sociology), J. Rebkin (government), D. B. Lyons (philosophy), M. B. Norton (history), D. Powers (Near Eastern studies), D. T. Regan (psychology)

The Law and Society Program is an interdisciplinary concentration for undergraduates who are interested in the law from the perspectives of the social sciences and the humanities: anthropology, comparative literature, economics, government, history, philosophy, psychology, and sociology. Students who wish to graduate with a concentration in law and society should consult one of the advisers listed above to develop a coherent program of study, including at least four courses from the law and society list of courses.

**Anthropology 328 Law and Culture**

**Anthropology 329 Politics and Culture**

**Classics 340 Ancient Greek Constitutions**

**Economics 354 Economics of Regulations**

**Government 313 The Nature, Functions, and Limits of Law**

**Government 328 Constitutional Politics: The United States Supreme Court**

**Government 353 The Feminist Movement and Public Policy**

**History 275 Crime and Punishment: From the Puritans to Mickey Spillane**

**History 359 The Early Development of Anglo-American Common Law**

**History 430 Law and Authority In America: Freedom, Restraint, and Judgment**

**Philosophy 342 Law, Society, and Morality**

**Philosophy 441 Contemporary Ethical Theory**

**Philosophy 444 (also Law 720) Contemporary Legal Theory**

**Center for Applied Mathematics**

The Center for Applied Mathematics administers a broadly based interdisciplinary graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. This program is based on a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student's program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, contact the director of the Center for Applied Mathematics, 275 Olm Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an applied-oriented program in mathematics may select an appropriate program in either the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

**Medieval Studies**

Undergraduates interested in medieval studies have an opportunity to take courses in the following areas of instruction: medieval Hebrew, Arabic, and Latin; Old English, Middle English, and medieval Irish and Welsh; Old Provengal and medieval French; medieval Spanish and Italian, Old Saxon, Old High German, Middle High German (Old Saxon and Old Icelandic), and Old Russian; comparative literature; medieval art and architecture; medieval history; Latin paleography; medieval philosophy; musicology; comparative Slavic; comparative Romance linguistics, and comparative Germanic linguistics.

Undergraduates who wish to undertake an independent major or a concentration in medieval studies should consult the director of the program, Professor Groos, 180 Goldwin Smith Hall.

Information for prospective graduate students is contained in the Annual Report of the Graduate School and in a brochure on medieval studies, which can be obtained from the director.

**101 The Literary Adventure of the Middle Ages**

**Fall and spring. 3 credits.**

**102 King Arthur and His Knights**

**Fall and spring. 3 credits.**

103 Drama and Music from the Middle Ages through the Renaissance

**Fall and spring. 3 credits.**

Hours to be arranged. Staff

European drama developed as part of the sung liturgy of the church in the early Middle Ages. Drama and music gradually separated but later became reunited in Renaissance experiments that culminated in opera. Short reading and listening assignments will explore liturgical plays on Biblical subjects; secular dramas ranging from satirical farce to tales of daring-don't (Robin and Marian); cycle plays and morality plays (Everyman); a Renaissance madrigal cycle; and the music dramas of Monteverdi (The Return of Ulysses, The Coronation of Poppea). Discussion will focus on dramatic dialogue, characterization, problems of theme or structure, and ways that music serves dramatic purposes.

Knowledge of music not required.

**Related Courses**

Courses in various aspects of medieval studies are offered each year in numerous cooperating departments, including Classics, Comparative Literature, English Literature, History, History of Art, Modern Languages and Literatures (including German Literature, Romance Studies, and Russian Literature), Music, Near Eastern Studies, Philosophy, and the Society for the Humanities. An up-to-date listing of the courses offered in each term will be made available at the office of the Department of German Literature (185 Goldwin Smith Hall) as soon as the Courses and Time Roster is published. For further information about the courses offered or about the program for independent majors in medieval studies, students should contact the program director, Professor A. Groos, 180 Goldwin Smith Hall.

**Religious Studies**

Religious studies is an interdisciplinary program reflecting a wide variety of academic interests and disciplines. The intention of the program is to provide a formal structure for the study of the religions of mankind at the undergraduate level. A student may fulfill the requirement for a concentration in religious studies by completing a minimum of four courses that have been approved by an advisor in the area of concentration. The program is administered by a committee. The chairman is Professor Kretzmann, 320 Goldwin Smith Hall.

Courses in religious studies offered in 1982-83 include the following:

**Natural Resources 407 Religion, Ethics and the Environment**

**Spring. 3 credits.**

R. Baer

**Comparative Literature 429 Readings In the New Testament**

**Fall. 4 credits.**

J. Bishop

**Comparative Literature 326 Christianity and Judaism**

**Spring. 4 credits.**

C. Carmichael

Near Eastern Studies 322 Undergraduate Seminar In Biblical Literature

**Spring. 4 credits.**

M. Collins

Asian Studies 250 Dimensions of Religious Experience

**Fall. 3 credits.**

A. Grapard

Asian Studies 351 Early Buddhism

**Fall. 4 credits.**

A. Grapard
courses must include two courses from each of the following disciplines: anthropology, social psychology, sociology; 2) at least one course in methods, to be selected from the following: anthropological methods, techniques of data orientation (psychology), methods in sociology, advanced psychological statistics, philosophy of science or of social science, or advanced statistics (such as Industrial and Labor Relations 311); 3) at least one course in theory related to social relations; and 4) the senior seminar in social relations (Sociology 490 or Anthropology 495).

A list of the courses that may be used to satisfy the requirements for a major in social relations is available from any of the major advisers.

**Society for the Humanities**

(A. D. White Center for the Humanities)

Norman Kretzmann, acting director, fall 1982;
Eric A. Blackall, director, spring 1983. Fellows for 1982–83: Barbara J. Bonn (University of Michigan), Susan Buck-Morss (Cornell University), David Lieberman (St. Catharine’s College, Cambridge), Mary Lydon (University of Wisconsin), John Najemy (Cornell University), Barbara J. Reeves (Harvard University)

The Society awards annual fellowships for research in the humanities in three categories: senior fellowships, faculty fellowships, and junior postdoctoral fellowships. The fellowships offer, in line with their research, informal seminars intended to be exploratory or interdisciplinary. Unlike other courses, the seminars offered by the Society begin the second week of each semester. These seminars are open to graduate students who have completed their undergraduate work. Students wishing to attend should telephone the Society (256-4725) early in the first week of the term to arrange a short interview with the Fellow offering the course. There are no examinations, and it is at the discretion of the Fellow whether to require only oral reports of, or in addition, a research paper. Students wishing credit for the course should formally register in their own college. Persons other than those officially enrolled may attend as visitors with permission of the Fellow.

All seminars are held in the A. D. White Center for the Humanities, 27 East Avenue.

Frederick G. Marcham Scholar Program. Each year the Frederick G. Marcham Scholar Program supports a special seminar program. For information contact Anne-Marie Garcia, Society for the Humanities (256-4084).

**101 Freshman Seminar. Science as Literature: Science as Metier**

Fall and spring. 3 credits.

Robert Orinstein claims that science turns the impossible into the boring. Einstein contends that science, in its purest form, "uncovers the grandeur of reality in an incomparable way." In readings ranging from Darwin to Einstein to Asimov, we shall try to discover how a discipline can be so variously defined and described.

**102 Freshman Seminar. Science as Literature: The Impact of Science on Self-Image**

Spring. 3 credits.

M W F 9:05. J. Lumsley.

Man’s rational perception of his place in nature frequently clashes with his emotional need to elevate himself above nature. In the last three hundred fifty years, science has had the uncomfortable habit of dethroning him as master of the universe. In this course, with readings from Galileo, Darwin, Freud, and others, we shall follow man’s journey from a position of dominance in a geocentric, divinely ordered universe to that of a genetically programmed organism in a decaying biosystem. We shall examine how well, or how completely, he has accommodated his dreams to the new worlds born of science.
419 Feminist Theory: Franco-American Currents Fall. 4 credits. T 1:25–3:10. M. Lydon. The aim of this course will be to explore the complex relationships that both unite and separate American and French feminism. This course will inevitably lead us round that great promontory, Freud: safe anchorage for some feminists (mostly continental), treacherous reef for others (mostly American). One of the main questions the course will address is: What is the position of the feminist scholar in relation to the Franco-American currents that now create such a powerful undertow in literary theory and in the academic world at large? This is simply a localized version of the questions posed by Virginia Woolf in Three Guineas (1938): What is this "civilization" in which we find ourselves? What are these ceremonies, and why should we take part in them? What are these professions, and why should we make money out of them? Where in short is it leading, the procession of the sons of educated men?

420 On the Bias: New Designs on Literary Criticism. Spring. 4 credits. T 1:25–3:10. M. Lydon. "Tell all the world that it’s a lie—Success in circuit lies." Literary criticism has always had its work cut out for it, but the complexity of its task has rarely been so apparent as it is today. Should the critic adopt Derrida’s strategy, or should she repudiate obliquity in favor of straight confession? Both styles are currently in vogue. We will examine the fashion in which they cross and overlap with the objective not only of tracing a pattern but of producing new designs. Reading for the course, which will take up some of the threads of Feminist Theory: Franco-American Currents (Semester 1), will include literary, philosophical, and psychoanalytical texts as well as literary criticism.

423 Cultural History as a Subversive Activity Fall. 4 credits. W 1:25–3:10 S. Buck-Morss. If the past cultural treasures have become the inheritance of the rulers, how might a critical humanist read the bourgeois intellectual tradition against the grain of its collusion with domination? Subversive strategies of interpretation will include Theodor Adorno’s and Walter Benjamin’s strategies. Should she repudiate what is likely to be a too-familiar critical means of reading, or should she adopt Dickinson’s strategy, or should she repudiate obliquity in favor of straight confession? Both styles are currently in vogue. We will examine the fashion in which they cross and overlap with the objective not only of tracing a pattern but of producing new designs. Reading for the course, which will take up some of the threads of Feminist Theory: Franco-American Currents (Semester 1), will include literary, philosophical, and psychoanalytical texts as well as literary criticism.

424 A Case Study in Materialist Pedagogy: Nineteenth-Century Paris Spring. 4 credits. W 1:25–3:10 S. Buck-Morss. Benjaminian approaches to the images and texts of Paris in the era of high capitalism. Cultural documents will include architecture, city planning, commercial art, political cartoons, and photographs, as well as historical and literary texts.

425–426 The Language(s) of Politics in the Renaissance. 425, fall; 426, spring. 4 credits each term. W 3:35–5:20 J. M. Najemy. The political experience of the Italian city-republics was represented and transformed through a variety of "foreign" idioms, or languages, in particular, those of the Aristotelian pole, of Roman rhetoric, virut, and law, and of Christian sin and redemption. This seminar will explore the creative tensions generated by the adaptation of these languages to a political culture whose roots lay in the communal and corporate traditions of the Italian middle ages. The objectives will be 1) to test the hypothesis of a language of political experience existing apart from (or prior to the imposition of) these idioms, 2) to sample the reception of foreign idioms into republican discourse, and 3) to investigate this confrontation of political languages (which took place in two actual languages, Latin and Italian) in selected texts. The fall term will deal with the period 1250–1430, focusing on the generation of Dante, Petrarck, and Marsilius of Padua. The spring term will cover the period 1400–1530, from the Florentine civic humanists to Machiavelli and his contemporaries. Students may enroll in either semester or both.

433–434 Guided Reading Fall and spring. 2 credits each term.

435–436 Guided Research Fall and spring. 4 credits each term.

South Asia Program

The South Asia Program exists to encourage and correlate teaching and research in South Asian studies dealing with Bangladesh, India, Nepal, Pakistan, and Sri Lanka (Ceylon). The program faculty includes members from a number of disciplines. Undergraduate interest in South Asia may major in Asian studies with a concentration in South Asia. Languages regularly offered are Hindi, Sinhalese, Tamil, Telugu, and Urdu. Cornell currently has a charter member of the American Institute of Indian Studies (AIIS), and undergraduates as well as graduate students are eligible for AIIS three-month summer or nine-month intensive language programs in India. For details on the major, see the Department of Asian Studies listing in this volume. Students wishing further information should see the director, South Asia Program, 130 Uris Hall.

South Asia seminar

South Asia studies at Cornell is included within the framework of the Department of Asian Studies. Seventeen full-time faculty members in the Colleges of Arts and Sciences and Agriculture and Life Sciences participate in an interdisciplinary program of teaching and research on the history, culture, and societies of the region stretching from Burma through the Philippines. Courses are offered in such fields as agricultural economics, anthropology, and rural sociology. Instruction is also offered in a wide variety of Southeast Asian languages: Burmese, Cebuano (bisayan), Indonesian, Javanese, Khmer (Cambodian), Tagalog, Thai, and Vietnamese.

The Concentration

Undergraduate students who wish to graduate with a concentration in women’s studies should consult with the director of undergraduate studies in women’s studies to select an adviser. In collaboration with that adviser, students will design a coherent program in women’s studies to complement their major. Before graduation, students will submit a final summary to their adviser on their completed work in women’s studies. The concentration is open to students in all colleges of the university. The concentration in women’s studies consists of four courses. Typically, two courses are selected from the list of general courses and two from the list of specialized courses (see below). Freshman seminars, related courses, or independent study in women’s studies may be substituted for specialized courses in the concentration with the prior approval of the adviser.

Distribution Requirement

Distribution requirements are satisfied by any two of

Women’s Studies courses in any of the following categories:

Social Sciences: any two of 238, 244, 277, 321, 353, 422, 671, 685, plus courses that have been taken previously, with the department’s approval.

History: any two of 227, 238, 326, 363, 428, plus courses that have been taken previously, with the department’s approval.

Humanities: any two of 248, 249, 251, 399, 451, 467, 478, 479, 493, plus courses that have been taken previously, with the department’s approval.
Courses

Keeping in mind that women's studies is interdisciplinary, it is useful to distinguish six core areas or foci within the program: ideology and culture, institutions and society, history, literature and the arts, psychology and human development, and natural sciences.

The program offers undergraduate and graduate courses in all of the core areas, both independently and in cooperation with other departments. Women's studies courses are grouped into four categories to assist students in selecting the level or degree of specialization suited to their program:

I) Freshman seminars.

II) General courses (which provide a general introduction to a broad subject area or core focus within Women's Studies).

III) Specialized courses and seminars (which have specialized topics within each of the core areas).

IV) Related courses and seminars (which need not focus exclusively upon Women's Studies issues, but include significant consideration of sex differences, feminist criticism, or gender).

I. Freshman Seminars

103 Writing as Women (also English 104) Fall and spring. 3 credits. M W F 12:20. B. Schwartz.

Students explore their experience as girls and women through introspective, autobiographical writing. In seminars and individual conferences we stress development of a clear, individual writing style. Students critique each other's papers and discuss a variety of writing—short fiction, essays, poetry, journals, interviews—from a wide selection of twenty-first-century women writers, including Adrienne Rich, Virginia Woolf, Toni Morrison, Tillie Olsen, and Maxine Hong Kingston, among others.

104 Women and Social Transitions in the Twentieth Century (also Asian Studies 101) Spring. 3 credits. Not offered 1982-83. B. deBarry.

105 Feminine and Masculine Ideals in Japanese Culture (also Asian Studies 105) Fall. 3 credits. Not offered 1982-83. K. Brazelton.

106 Reading about Women (also English 106) Fall and spring. 3 credits. T R 10:10-11:25. L. Berlant.

This course develops analytical skills in reading and composition by studying women writers. The focus is on literature, especially fiction, augmented by relevant essays drawn from related disciplines. Class time will include discussions of problems raised by feminism, specifically about representations of women and the significance of writing for women. The themes of the course will encompass the home, the world, and the text. The reading—journals, expository imitations, interpretive evaluations, and small-scale research essays—will be critical and self-critical responses to the reading.

II. General Courses

214 Biological Basis of Sex Differences (also Biological Sciences 214) Prerequisite: one year of introductory biology. Lecs. T R 8:35-9:55, and occasional discs to be arranged. J. E. Fortune.

The structural and functional differences between the sexes are examined. Emphasis is placed on mechanisms of mammalian reproduction and, where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, mental and physical capabilities) is discussed. The course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.

227 Modern American Sex Roles in Historical Perspective (also History 227) Fall. 4 credits. T R 10:10-11:25. M. Katzenstein.

A reading and discussion course. The class will begin by examining sex roles in the United States in the 1980s, looking at a variety of sources like popular magazines and contemporary commentaries. We will then move backwards in time in an attempt to uncover the roots of current attitudes. The students will help to determine which topics the class will investigate in detail.

244 Language and the Sexes (also Linguistics 244) Spring. 4 credits. Prerequisites: Linguistics 101 or 111, or Psychology 215, or permission of instructor. Not offered 1982-83. S. McConnell-Ginet.

An introductory course in writing by and about women, exploring the relation between women, literature, and feminism. There will be five main areas of concern: work and home; education and marriage; sexuality; motherhood; and the woman artist or writer herself. Readings will include novels by Elizabeth Gaskell, Charles Dickens, George Eliot, Thomas Hardy, Virginia Woolf, Sylvia Plath, and Margaret Atwood, as well as a variety of texts drawn from writers on women and feminism from Mary Wolstonecraft to Adrienne Rich.

277 Psychology of Sex Roles (also Psychology 277) Spring. 3 or 4 credits. Prerequisite: an introductory psychology course. T R 2:30-4. S. Bem.

Addresses the question of why and how adult women and men come to differ in their overall life styles, work and family roles, personality patterns, cognitive abilities, etc. This broad question is examined from five perspectives: (a) the psychoanalytic perspective; (b) the biological perspective, (c) the historical and cultural evolutionary perspective, (d) the child development perspective, and (e) the social-psychological and contemporaneous perspective. Each of these perspectives is also brought to bear on more specialized phenomena relating to the psychology of sex roles. Sex differences, gender ambiguities, and the changing nature of household work, the women's movement in the United States and the response of both sociocultural and feminist critics. Is it, thus, a course about political protest and the capacity of American political institutions to promote, shape, as well as to counter social change. In examining the law and government policy on such issues as job discrimination, wage equity, rape, abortion, etc., the course explores the contradictions between and the congruence of the dual ideals of individual choice and group equality.

299 The Divided Self in Women's Writing (also Comparative Literature 399) Spring. 4 credits. T R 10:10-11:25. L. Ezergailis.

A thematic and structural investigation of women's writing to explore the tension between the highly developed self-awareness of narrator and/or heroine and the desire for wholeness. We will trace some of the ways in which women writers have tried to resolve or transcend this problem of identity by retreat, acceptance, or new synthesis. The list of authors includes Virginia Woolf, Doris Lessing, and Sylvia Plath, as well as translations of contemporary German women novelists.

321 Sex and Gender in Cross-Cultural Perspective (also Anthropology 321) Fall. 4 credits.

An introduction to the study of sex roles cross-culturally and to anthropological theories of sex and gender. The course examines various aspects of the place of the sexes in social, political, economic, ideological, and biological systems to emphasize the diversity in gender and sex-role definition around the world.

A survey of women's experiences in America, from the seventeenth century to the present. Among the topics to be discussed are women's familial roles, the changing nature of household work, the women's rights movement, employment of women outside the home, and contemporary feminism.

353 The Feminist Movement and Public Policy (also Government 353) Fall. 4 credits.

The course examines aims and strategies of the feminist movement in the United States and the response of both sociocultural and feminist critics. Is it, thus, a course about political protest and the capacity of American political institutions to promote, shape, as well as to counter social change. In examining the law and government policy on such issues as job discrimination, wage equity, rape, abortion, etc., the course explores the contradictions between and the congruence of the dual ideals of individual choice and group equality.

III. Specialized Courses and Seminars

238 The Historical Development of Women as Professionals, 1800-1980 (also Sociology 238 and Human Development and Family Studies 258) Fall. 3 credits. Students in endowed units must register for Women's Studies or Sociology 238. M W 2:30-4. F. Dudden.

The historical evolution of the female professions in America (midwifery, nursing, teaching, librarianship, prostitution, home economics, and social work) as well as women's struggles to gain access to medicine, law, the clergy, the academy. Lectures, reading, and discussion are geared to identifying the cultural patterns that fostered the conception of gender-specific work and the particular historical circumstances that created these different work opportunities. The evolution of professionalism and the consequences of professionalism for women, family structure, and American society is also discussed.

251 Twentieth-Century Women Novelists (also English 251) Fall. 4 credits. M W F 12:25. M. Hite.

In this course we will be especially concerned with self-consciously experimental novels and with the questions such novels raise about vision or style. Novels we will be reading include Virginia Woolf's The Waves, Gertrude Stein's Three Lives, Diana Barren's Nighthowl, Doris Lessing's The Golden Notebook, and Margaret Atwood's Surfacing.

398 The Divided Self in Women's Writing (also Comparative Literature 398) Spring. 4 credits. T R 10:10-11:25. L. Ezergailis.

422 Special Problems in the Anthropology of Women and Gender (also Anthropology 422 and Biology and Society 406) Spring. 4 credits. Prerequisite: Women's Studies/Anthropology 321 or permission of instructor. R 2:30-4:25. K. S. March.

Each year this seminar focuses on a particular area of concern within the anthropology of women, building on work done in Anthropology 321. The topic for Spring 1983 will be gender symbolism. Primary attention will be directed to the meaningfulness of gender cross-culturally, simultaneously drawing on
theories of symbolism in anthropology and exploring how the study of sex and gender can inform these theories.

451 Twentieth-Century Women Writers (also English 451) Fall. 4 credits.
Hours to be arranged. B. Rosecrance.
A consideration of selected fiction by British women writers from the turn of the century to the present day, including writers of English, Irish, Australian, Canadian, and South African origin. Critical study of stories and novels will emphasize evolutions in the craft and artistic consciousness of women writers in this period. We will draw upon works of such writers as Sarah Grand, Olave Schreiner, Ada LeVesona, Dorothy Richardson, Virginia Woolf, Katherine Mansfield, Elizabeth Bowen, Jean Rhys, Barbara Pym, Rebecca West, Christian Stead, Iris Murdoch, Doris Lessing, Nadine Gordimer, Margaret Atwood, Margaret Drabble, Antonia (Drabble) Byatt, and Susan Hill. The emphasis will be on lesser-known novelists within the earlier period and on both well- and lesser-known contemporary writers.

467 Poetry of the 60s and 70s: The Feminine Sensibility (also English 468) Fall. 4 credits.
This seminar will attempt to define what is meant by a feminine sensibility: can it be differentiated from a masculine one in poetry of the 1960s and 70s? We will consider problems relating to theme, voice, language, style, imagery, distancing, and subjectivity, while reading the works of poets such as Levertov, Bishop, Piercy, Swenson, Gluck, Plath, Kumin, Ammons, Ashbery, Lowell, Ginsberg, Strand, Merwin, and other, younger poets. One long paper and several oral reports.

478 Women and Writing (also English 478) Fall. 4 credits. Not offered 1982-83.
M. Jacobus.
An examination of the traditional controversy over whether or not reading, writing, and gender are related to one another. Detailed study of the autobiographical, critical, and poetic writings of such authors as Amy Lowell, Hilda Doolittle, Marianne Moore, Sylvia Plath, Audre Lorde, June Jourdan, and Adrienne Rich. The seminar will consider salient departures from conventional poetic modes and themes, and the pressures each poet has felt to be significant in her attempt to shape herself, her aesthetic, and her poetry. Discussion will begin with a specific question which will recur throughout the semester: How would Virginia Woolf have read these poets?

493 French Feminisms (also French 493) Fall. 4 credits. Not offered 1982-83.
N. Furman.

499 Directed Study Fall or spring. Variable credit.
Prerequisite: one course in women's studies and permission of the faculty member of the Women's Studies Executive Board.
Hours to be arranged. Staff.

M. B. Norton.

M. B. Norton.

767 Toward a Feminist Social Theory (also Government 670) Spring. 4 credits. Not offered 1982-83.
S. Buck-Morss.

585 Seminar in Sex Differences and Sex Roles (also Psychology and Sociology 685) Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1982-83.
S. Bem.

IV. Related Courses and Seminars

305 Psychological Anthropology (also Anthropology 305) Fall 4 credits.
Not offered 1982-83.
B. J. Isbell.

329 Race, Gender, and Politics (also Government 329) Fall. 4 credits. Open to sophomores and juniors. Limited to 5 students.
Hours to be arranged. M. Katzenstein.
A writing workshop for sophomores and juniors that focuses on readings about gender, class, and race in American society. This is a class in how to read analytically and in how to write clear, organized analytical papers. It will be taught in individual tutorials of about an hour-long meeting each week with a paper due every other week.

357 American Families In Historical Perspective (also Sociology and Human Development and Family Studies 359) Spring. 3 credits.
Prerequisite: Human Development and Family Studies 150 or one 200-level social science or history course. Students in endowed units must register for Women's Studies 357 or Sociology 359.
T R 2:30-4. D. F. Dunne.
An introduction to and overview of, problems and issues in the historical literature on American families and the family life cycle. Reading and lectures will demonstrate the pattern of American family experience in past time, focusing on class, ethnicity, sex, and region as important variables. Analysis of the private world of the family in past time will deal with changing cultural conceptions of sexuality, sex roles, generational relationships, stages of life, and life events. Students will be required to do a major research paper on the history of their family, covering at least two generations, and demonstrating their ability to integrate life-course development theory, data drawn from the social sciences, and historical circumstances.

358 American Families In Modern Society (also Sociology and Human Development and Family Studies 358) Fall. 4 credits.
Prerequisite: Human Development and Family Studies 150.
T R 12:20-1:35. S. Siegel.
A writing workshop for sophomores and juniors that focuses on readings about gender, class, and race in American society. This is a class in how to read analytically and in how to write clear, organized analytical papers. It will be taught in individual tutorials of about an hour-long meeting each week with a paper due every other week.

565 Seminar in Sex Differences and Sex Roles (also Psychology and Sociology 685) Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1982-83.
S. Bem.

The Family in Modern Society (Human Development and Family Studies 150) Fall. 3 credits.
Staff.

Human Sexuality: A Biosocial Perspective (Human Development and Family Studies 315) Fall and spring. 3 credits.
Staff.

Theories of Adult Interpersonal Relationships (Human Development and Family Studies 456) Fall. 3 credits. H. Feldman.

Families and Social Policy (Human Development and Family Studies 456) Fall. 3 or 4 credits.
P. Moen.

Women at Work (Industrial and Labor Relations 366) Spring. 4 credits. F. Miller.

The Heart of my Mystery: The Alliance of Sexuality and Power in the Principal Plays of William Shakespeare (Society for the Humanities 413-414) 413, fall, 414, spring. 4 credits each term.

Feminist Theory: Franco-American Currents (Society for the Humanities 418) Fall. 4 credits.
M. Lydon.

On the Bias: New Designs on Literary Criticism (Society for the Humanities 420) Spring. 4 credits.
M. Lydon.

Cultural History as a Subversive Activity (Society for the Humanities 423) Fall. 4 credits.
S. Buck-Morss.

Faculty Roster

Abrams, Meyer H., Ph.D., Harvard U. Class of 1916
Professor of English, English

Adams, Barry B., Ph.D., U. of North Carolina, Prof., English

Ahl, Frederick M., Ph.D., U. of Texas at Austin, Prof., Classics

Albrecht, Andreas C., Ph.D., U. of Washington, Prof., Chemistry

Ambagakor, Vinay, Ph.D., Carnegie Inst. of Technology, Prof., Physics/Laboratory of Atomic and Solid State Physics

Ammons, Archie R. B.S., Wake Forest Coll. Goldin Smith Professor of Poetry, English

Anderson, Benedict R., Ph.D., Cornell U. Prof., Government

Archer, Richard J., M.A., U. of Missouri at Kansas City. Asst. Prof., Theatre Arts

Arroyo, Ciraco M., Ph.D., U. of Munich (Germany), Emerson Hinchliff Professor of Spanish Literature, Romance Studies

Ascher, Robert, Ph.D., U. of California at Los Angeles, Prof., Anthropology

Ashcroft, Neil W., Ph.D., Cambridge U. (England), Prof., Physics/Laboratory of Atomic and Solid State Physics

Austin, William W., Ph.D., Harvard U. Goldwin Smith Professor of Musicology, Music

Bagby, Leonard H., Ph.D., Harvard U. Prof., Modern Languages and Linguistics

Bacharach, Samuel B., Ph.D., U. of Wisconsin. Assoc. Prof., Industrial and Labor Relations/Sociology

Bahl, Timothy H., Ph.D., Yale U. Asst. Prof., Comparative Literature

Baird, Barbara Ph., Cornell U. Asst Prof., Chemistry

Baugh, Daniel A., Ph.D., Cambridge U. (England). Prof., History

Becker, Victor, M.F.A., Brandies U. Asst. Prof., Theatre Arts

Beckwith, Steven W., Ph.D., California Inst. of Technology, Asst Prof., Astronomy/Center for Radiophysics and Space Research
Teskey, Gordon L., Ph.D., U. of Toronto. Asst. Prof., English
Teukolsky, Saul A., Ph.D., California Inst. of Technology. Assoc. Prof., Physics/Astronomy
Thorbecke, Erik, Ph.D., U. of California at Berkeley. H. Edward Babcock Professor of Economics and Food Economics, Nutritional Sciences/Economics
Tierney, Brian, Ph.D., Cambridge U. (England). Bryce and Edith M. Bowmar Professor in Humanistic Studies, History
Tigner, Maury, Ph.D., Cornell U. Prof., Physics/Laboratory of Nuclear Studies
Titter, Jonthan P., Ph.D., Cornell U. Asst. Prof., Romance Studies
Toce, Harrison M., Ph.D., U. of Wisconsin. Prof., Industrial and Labor Relations/Sociology
Troxell, Barbara, M.S., Curtis Inst. of Music. Assoc. Prof., Music
Tsang, Sho-Cheih, Ph.D., London School of Economics. (England). Prof., Economics
Uphoff, Norman T., Ph.D., U. of California at Berkeley. Assoc. Prof., Government
Usher, David A., Ph.D., Cambridge U. Assoc. Prof., Chemistry
Usner, Daniel H., Jr., Ph.D., Duke U. Asst. Prof., History
vanCoetsem, Frans, Dr. Phil., U. of Louvain (Belgium). Prof., Modern Languages and Linguistics
Vanek, Jaroslav, Ph.D., Massachusetts Inst. of Technology. Carl Marks Professor of International Studies, Economics
VanRomm, Kathleen M., Ph.D., U. of Chicago. Asst. Prof., Romance Studies
Veverka, Joseph F., Ph.D., Harvard U. Prof., Astronomy/Center for Radiophysics and Space Research
Wahlbin, Lars, Ph.D., U. of Goteborg (Sweden). Assoc. Prof., Mathematics
Wang, Henry Y., Jr., Ph.D., Massachusetts Inst. of Technology. Prof., Economics
Wasserman, Ira M., Ph.D., Harvard U. Asst. Prof., Astronomy/Center for Radiophysics and Space Research
Waugh, Linda R., Ph.D., Indiana U. Prof., Modern Languages and Linguistics
Webster, James, Ph.D., Princeton U. Prof., Music
Weick, Karl E., Ph.D., Ohio State U. Prof., Psychology
Weiss, John H., Ph.D., Harvard U. Asst. Prof., History
West, James E., Ph.D., Louisiana State U. Prof., Mathematics
Widom, Benjamin, Ph.D., Cornell U. Prof., Chemistry
Wiesanfeil, John R., Ph.D., Case Inst. of Technology Assoc. Prof., Chemistry
Wilcox, Charles F., Jr., Ph.D., U. of California at Los Angeles. Prof., Chemistry
Wilkins, John W., Ph.D., U. of Illinois. Prof., Physics/Laboratory of Atomic and Solid State Physics
Williams, L. Pearce, Ph.D., Cornell U. John Stambaugh Professor of History, History
Williams, Robin M., Jr., Ph.D., Harvard U. Henry Scarborough Professor of Social Sciences, Sociology
Williams, Simon, Ph.D., U. of East Anglia (England). Asst. Prof., Theatre Arts
Wilson, Kenneth G., Ph.D., California Inst. of Technology. James A. Weeks Professor in Physical Sciences, Physics/Laboratory of Nuclear Studies
Wolczanski, Peter T., Ph.D., California Inst. of Technology. Asst. Prof., Chemistry
Wolff, John U., Ph.D., Yale U. Prof., Modern Languages and Linguistics
Wolters, Oliver W., Ph.D., U. of London (England). Goldwin Smith Professor of Southeast Asian History, History
Wood, Allen W., Ph.D., Yale U. Prof., Philosophy
Wyatt, David K., Ph.D., Cornell U. Prof., History
Yan, Tung-mow, Ph.D., Harvard U. Prof., Physics/Laboratory of Nuclear Studies
Yano, Makoto, Ph.D., U. of Rochester. Asst. Prof., Economics
Young, Martie W., Ph.D., Harvard U. Prof., History of Art
Zaslav, Neal A., Ph.D., Columbia U. Assoc. Prof., Music
Zhokovskov, Alexander K., Cand. Phil., Moscow U. (USSR). Prof., Russian Literature
Division of Biological Sciences

The Division of Biological Sciences provides a unified curriculum for undergraduate majors enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell.

Graduate study in the biological sciences is administered by more than a dozen specialized fields within the Graduate School as described in the Announcement of the Graduate School.

Organization

The Division of Biological Sciences is composed of six major sections: Biochemistry, Molecular and Cell Biology; Genetics and Development; Ecology and Systematics; Neurobiology and Behavior; Physiology; Plant Biology; and two smaller units, the L. H. Bailey Hort国内外 of the College.

The offices, research laboratories, and classrooms of biology faculty members are located in many different buildings on the campus, primarily in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Veterinary Medicine.

The division's Office for Academic Affairs and the behavioral Biology Center are centrally located in Stimson Hall to provide academic advice, counseling, and information to undergraduates. The Office for Academic Affairs also follows the progress of biology majors and works closely with faculty advisers. Additional services and resources of the Biology Center include academic program planning, tutoring, lecture tapes, examination files, and information on undergraduate research opportunities. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides advising and career counseling for students interested in the marine sciences and administers the SEA Semester Program for Cornell students pursing studies at Woods Hole or aboard the schooner Westward.

Distribution Requirement

In the College of Agriculture and Life Sciences, the biological sciences distribution requirement (Group B) is for a minimum of 9 credits, including at least 6 credits of introductory biology satisfied by Biological Sciences 109-110, or 101-102, or 105-106. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) satisfies the requirement for introductory biology. The additional credits may be satisfied by any biological sciences courses except Biological Sciences 108, 201, 202, 205, 301, 302, or 304, or by certain other non-biological sciences courses specified by the college.

In the College of Arts and Sciences, the biological sciences distribution requirement is for two semester introductory biology sequences selected from Biological Sciences 100, 103–104, or 105–106, or 101–103 plus 102–104. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) also satisfies the distribution requirement in the biological sciences.

In the College of Human Ecology, the natural sciences distribution requirement is for at least 6 credits selected from Biological Sciences 109–110, 101–103, 102–104, 105–106, or from specified courses in chemistry or physics. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) also satisfies the distribution requirement in the natural sciences.

Note: Biological Sciences 100, offered during the six-week Cornell Summer Session for 7 credits, also satisfies the distribution requirement.

Biological Sciences 101–102–103–104 should be taken as a unit by students of any college. Switching from one introductory biology course to another at midyear may not be possible due to variation in presentation of topics. Students must receive permission of instructor to switch sequences. Taking sequences in reverse or inconsecutive order is strongly discouraged.

The Major

The Division of Biological Sciences offers a major in biological sciences to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Before course registration for the junior year, all students intending to major in biological sciences must apply for final acceptance to the major with the Associate Director for Academic Affairs in 118 Stimson Hall.

Acceptance into the major requires completion of the course sequences in the four subjects listed below. Students are not encouraged to undertake the major in biological sciences unless they indicate in these four subjects gives evidence of capacity to do superior work at a more advanced level. A 2.75 Cornell cumulative grade-point average is required for final acceptance into the major except for those students admitted to the College of Agriculture and Life Sciences students only or as transfers.

1) One year of introductory biology for majors: Biological Sciences 101–103 plus 102–104, or 105–106. Biological Sciences 100, offered during the six-week Cornell Summer Session for 7 credits, also satisfies the introductory biology requirement for majors. Students may choose to accept advanced placement if they have received a score of 5 on the Advanced Placement Examination of the College Entrance Examination Board (CEEB). Students with a score of 4 must fulfill the introductory biology requirement by taking Biological Sciences 103–104. These students receive a total of eight introductory biology credits (4 AP credits + 4 course credits). Freshmen who have not taken the CEEB examination may be placed in a departmentally administered examination in biology that is given during fall orientation week.

2) One year of general chemistry: Chemistry 207–208,* or 213–214,* or 103–104.

3) One year of college mathematics, including at least one semester of calculus: Mathematics 111–112,* or 113–112,* or 105–106, or 111–105, or 113–105.

4) At least one semester of organic chemistry lectures: Chemistry 258, or 357, or 359. (See below for complete organic chemistry requirement for the major.)

*When possible, students should include introductory biology, chemistry, and mathematics in their freshman schedule and complete the organic chemistry lecture course by the end of the freshman year.

Students in the process of completing the above prerequisites for admission to the major may be accepted on a provisional basis. Final acceptance into the major is required for graduation with a biological sciences major. It is the student's responsibility to assure that final acceptance has been granted.

In addition to the introductory courses in biology, chemistry, and mathematics, each student majoring in biological sciences must complete the following:

1) Organic chemistry. Chemistry 253 and 251, or 253 and 301, or 357–358 and 251, or 357–358 and 301, or 359–360 and 251, or 359–360 and 301.

3) Genetics. Biological Sciences 281.

4) Biochemistry. Biological Sciences 330 or 331.

5) One of the concentration areas outlined below.

6) The breadth requirement outlined below.

7) As an alternative to 5 and 6 above, the Program in General Biology outlined below.

8) Foreign language: students registered in the College of Agriculture and Life Sciences must satisfy the foreign language requirement of the Division of Biological Sciences by (a) presenting examination of the College Entrance Examination Board (CEEB) achievement test, or (b) achieving “qualification” status in a language as defined by the Division of Arts and Sciences, or (c) successfully completing at least 6 college credits.

The meaning of “qualification” is given above in the list of courses that provide this orientation.
Concentration Areas and Requirements

Students accepted into the biological sciences major must choose a concentration area or the Program in General Biology. The concentration requirements are designed to help students achieve depth in one area of biology while ensuring that the selected advanced courses form a coherent and meaningful unit. Due to the flexibility allowed in satisfying these requirements, students should consult their faculty advisers when choosing appropriate courses in statistics.

1) Animal Physiology and Anatomy: Bio S 274, The Vertebrates; Bio S 316, Cellular Physiology,* and an introductory biology course (or course sequence) in the biological sciences. Bio S 311 and 319 or 416 and 418, and at least 4 additional credits selected from the following courses: Bio S 212, Invertebrate Zoology; Bio S 317, The Biology of the Tissues; Bio S 315 and 317, Ecological Animal Physiology, Bio S 385, Developmental Biology, Bio S 389, Embryology; Bio S 414, Vertebrate Morphology (or Bio S 470, General Cell Biology); Bio S 458, Mammalian Physiology, An Sc 427 and 428, Fundamentals of Endocrinology. Students who elect to take one of the 3-credit courses (Biological Sciences 212, 315, 385, 414, 432, or Animal Science 427) may complete the four credits by taking Bio S 410, Seminar in Anatomy and Physiology.

2) Biochemistry: Chemistry 300 or 215–216. Quantitative Chemistry, must be taken. One of the following organic chemistry laboratory sequences also must be taken: Chemistry 301–302, or 251–252–302, or 301, or 251–252–252. In addition, students must take a physical chemistry course (Chemistry 389–390 or 287–288) and a biochemistry course (Biological Sciences 638 or 430 or 434). It is recommended that students take the more rigorous organic chemistry and physics sequences (Chemistry 387–389 or 359–369; Physics 207–209) and a third semester of calculus.

Students interested in biochemistry should complete a year of introductory chemistry other than Chemistry 103–104 before the start of their sophomore year. Students are also urged to complete introductory biology in their freshman year.

3) Botany: Five courses (including a plant physiology laboratory course) in the concentration requirement as follows: (a) Bio S 242 and 244 or 341 and 349, Plant Physiology; (b) Bio S 343, Taxonomy of Vascular Plants; (c) either Bio S 345, Plant Anatomy, or Bio S 347, Cytology; and (d) either Bio S 241, Plant Biology; Bio S 348, Phycology; Bio S 444, Comparative and Developmental Morphology of the Embryophyte, Bio S 448, Plant Evolution and the Fossil Record; Bio S 463 and 465, Plant Ecology; or Pt Pa 309. Introductory Mycology. Students are encouraged to take Bio S 499, Undergraduate Research in Biology. Students may elect to complete the required five courses by taking both courses in group (c) rather than taking any in group (d).

4) Cell Biology: Chemistry 300 or 215–216. Quantitative Chemistry, in Cell Biology, or Bio S 430. Basic Biochemical Methods, and one of the following two options:

Option 1: Bio S 432, Survey of Cell Biology, and 8 additional credits distributed between Groups A and B and approved by the adviser.

Option 2: Two courses selected from Group A and 6 additional credits distributed between Groups A and B and approved by the adviser.

Group A: Bio S 433, Cell Structure and Physiology; Bio S 438, Cell Proliferation and Oncogenic Viruses; Bio S 483, Molecul ar Aspects of Development.

Group B: Bio S 305, Basic Immunology, Lectures; Bio S 307, Basic Immunology, Laboratory. Bio S 313, Histology of the Tissues; Bio S 345, Plant Anatomy; Bio S 347, Cytology; Bio S 485, Microbial Genetics, Lectures; Bio S 488, Immunogenetics; Bio S 496, Cellular Neurobiology and Behavior. An Sc 419, Animal Cytogenetics; Micro 290, General Microbiology Laboratory; Micro 291, General Microbiology Laboratory; Micro 484, Cytology of Protokaryotes; Laboratory Micro 485, Cytology of Karyones Laboratory.

Students interested in cell biology should complete a year of introductory chemistry other than Chemistry 103–104 before the start of their sophomore year. Students are also urged to complete introductory biology in their freshman year.

Students anticipating graduate work in cell biology should consider taking a physical chemistry course (Chemistry 389–390 or 287–288).

5) Ecology, Systematics, and Evolution: Bio S 360, General Ecology; Bio S 477, Organic Evolution; a plant or animal physiology course, and at least one 400-level course with accompanying laboratory from within the concentration offerings. In addition to students in this area must select at least two laboratory courses beyond those required of all biology majors (i.e., introductory biology, genetics, and organic chemistry). The two laboratory courses may include the physiology course, or courses count toward fulfillment of the breadth requirement, or both. It is strongly recommended that students planning graduate study take a course in statistics (S&LR 210 or 311).

6) Genetics and Development: Nine credits, usually selected from the following courses: Bio S 282, Human Genetics; Bio S 347, Genetics; Bio S 385, Developmental Biology; Bio S 389, Embryology; Bio S 446, Cytogenetics; Bio S 477, Organic Evolution; Bio S 481, Population Genetics; Bio S 483, Molecular Aspects of Development; Bio S 484, Molecular Genetics; Bio S 485 and 487, Microbial Genetics; Bio S 486, Immunogenetics; Bio S 499, Undergraduate Research in Biology; Bio S 644, Plant Growth and Development; An Sc 419, Animal Cytogenetics; Pt Br 605, Physiological Genetics of Crop Plants.

7) Neurobiology and Behavior: The introductory course, Neurobiology and Behavior (Biological Sciences 221), and 12 additional credits, including a second course from the neurobiology and behavior offerings. Biological Sciences 420, 498, 499, and 720 may not be used as the second course. The remaining 12 credits may be in any course (such as physiology, developmental biology, cellular biology, ecology, or vertebrate or invertebrate biology) approved by the adviser as appropriate for preparation for work or advanced study in neurobiology and behavior or in related subjects. Courses used to fulfill the concentration requirements may not be counted toward fulfillment of the breadth requirement.

8) Independent Option: Special programs for students interested in biophysics, microbiology (College of Arts and Sciences students only), or nutrition are available under this option. In addition, students who want to undertake a course of study not covered by the seven existing concentration areas, special programs, or the Program in General Biology may petition the Division of Biological Sciences Curriculum Committee. Information on independent options and Curriculum Committee petition forms are available in the Office for Academic Affairs, 118 Stimson Hall.

Breadth Requirement

To fulfill the breadth requirement in the biological sciences major, students must pass a total of two courses outside of their concentration area selected from two of the categories listed below. Students may not count two courses for breadth credit if one course is a prerequisite to the other course. Students should consult their faculty advisers when choosing the courses to meet this requirement.

1) Animal Physiology and Anatomy: Biological Sciences 212, 214, 319, 427, 416.

2) Botany: Biological Sciences 241, 242 and 244, 341 and 349, 343, 345, 348, 441; Plant Pathology 309.

3) Cellular and Developmental Biology: Biological Sciences 305, 347, 385, 432, 483, Microbiology 290.

5) Neurobiology and Behavior: Biological Sciences 221.

Note: Biological Sciences 471, 472, 475, or 476 may not be used as a breadth course if Biological Sciences 274 is counted as a breadth course.

Biological Sciences 385, 432, 471, 472, 475, and 476 may not be used as breadth courses by students concentrating in animal physiology and anatomy.

Biological Sciences 347 may not be used as a breadth course by students concentrating in botany.

Biological Sciences 305, 313, 345, 347, 432, 483, and Microbiology 290 may not be used as breadth courses by students concentrating in cell biology.

Biological Sciences 347, 385, 399, 477, and 483 may not be used as breadth courses by students concentrating in genetics and development.

Program in General Biology

Students who choose the general biology option must fulfill all the general requirements for the biology major (chemistry, genetics, biochemistry, etc.) except one of the concentration areas and the breadth requirements. The specific requirements for the program are:

1) Ecology (Biological Sciences 260 or 360).

2) Neurobiology and Behavior (Biological Sciences 471).

4) One course from the following: Bio S 212, Invertebrate Zoology, Bio S 241, Plant Biology, Bio S 274, The Vertebrates, Bio S 343, Taxonomy of Vascular Plants; Bio S 348, Phylogeny; Entom 212, Insect Biology; Micro 290 and 291, General Microbiology.

5) At least one course concentrating on plants. This may be satisfied by a course that also fulfills requirement 3 or 4.

6) At least one course with a laboratory. This may be satisfied by a course that also fulfills requirement 3 or 4.

Independent Research and Honors Program

Individual research projects under the direction of a faculty member are encouraged as part of the program of study within a concentration. Applicants for research projects are accepted by the individual faculty members, who take into account students' previous academic accomplishments, interests, and goals, and the availability of space and equipment suitable for the proposed project. Students accepted for independent research enroll for credit in Biological Sciences 419 (Undergraduate Research in Biology) with the written permission of the faculty supervisor. Any faculty member in the Division of Biological Sciences may act as a supervisor. Faculty supervisors outside the division are acceptable only if a faculty member of the division agrees to take full responsibility for the quality of the work. Information on faculty research activities and undergraduate research opportunities is available in the Behrman Biology Center, G20 Stimson Hall.

Research credits may not be used in completion of the following concentration areas: animal physiology and anatomy; biochemistry; botany; cell biology; ecology, systematics, and evolution. No more than 4 credits of research may be used in completion of the following concentration areas: genetics and development, and neurobiology and behavior.

The Honors Program in biological sciences is designed to offer advanced training in laboratory or field research through the performance of an original research project under the direct guidance of a faculty member. Applications for the honors program are available in the Office for Academic Affairs, 118 Stimson Hall, and must be submitted to the Honors Program Committee by the first week of classes of the senior year. To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 30 credits at Cornell, and have an overall Cornell cumulative grade-point average of at least 3.00. In addition, students must have at least a 3.00 Cornell cumulative grade-point average in all biology, chemistry, mathematics, and physics courses. (Grades earned in courses in other departments that are used to fulfill major requirements are included in this computation.) In addition, candidates must have a faculty member to supervise their research. Any faculty member in the Division of Biological Sciences may act as a supervisor. Faculty supervisors outside the division are acceptable only if a faculty member of the division agrees to take full responsibility for the quality of the work. In rare cases, research done elsewhere may be presented for honors, provided that prior approval of the Honors Program Committee has been given. An honors candidate usually enrolls for credit in Biological Sciences 499 (Undergraduate Research in Biology) under the direction of the faculty member acting as honors supervisor. Requirements of the honors program include participation in honors research seminars during two semesters, submission of an acceptable honors thesis, and maintenance of the 3.00 Cornell cumulative grade-point average through graduation. Recommendation to the faculty that a candidate graduate with honors is the responsibility of the Honors Program Committee.

Students interested in the honors program should consult their faculty advisers early during their junior year. Students are strongly encouraged to begin their research projects in their junior year, although they are not formally admitted to the honors program until the beginning of their senior year. Details pertaining to thesis due dates, seminars, and other requirements may be obtained from the chairperson of the Honors Program Committee or from the Office for Academic Affairs, 118 Stimson Hall. Information on faculty research activities is available in the Behrman Biology Center, G20 Stimson Hall.

Curriculum Committee

Many decisions pertaining to the curriculum, to division-wide requirements, and to concentration and breadth areas are made by the Curriculum Committee of the division. The committee consists of faculty and students, and it provides advice and suggestions from all interested persons.

Advising

Students in need of academic advising or counseling are encouraged to consult their advisers; come to the Behrman Biology Center, G20 Stimson Hall, or contact the Associate Director for Academic Affairs, 118 Stimson Hall.

Students interested in marine biology should visit the Cornell Marine Programs Office, G14 Stimson Hall.

Students interested in the multidisciplinary program Biology and Society should see the pages on Special Programs and Interdisciplinary Studies in the College of Arts and Sciences section.

Index of Courses

The middle digits of biological sciences course numbers are used to denote courses in specific areas: 0, general; 1, animal physiology and anatomy; 2 and 9, neurobiology and behavior; 3, biochemistry and cell biology; 4, botany; 6 and 7, ecology, systematics, and evolution; 8, genetics and development. The middle digit 5 is used when all other course numbers in a particular area have already been assigned.

General Courses

101–102 Biological Sciences, Lectures 101, fall; 102, spring. 2 credits each term. Prerequisite: concurrent enrollment in Biological Sciences 103 (fall) or 104 (spring). Passing grade (D or better) in 101 is prerequisite to 102 unless instructor is authorized to enroll students on a pass/fail or S/U grade basis. S-U grades optional, with
permission of instructor. May not be taken for credit after Biological Sciences 105–106 or 109–110.

Lecs. M W F 9:05 or 10:10; 2 lecs each week; to accommodate these, students must reserve all 3 lecs each week. Evening prelims to be arranged. K. K. Adler.

Designed both for students who intend to specialize in biological sciences and for those specializing in other subjects, such as the social sciences or humanities, who want to obtain a thorough knowledge of biology as part of their general education. Plant and animal materials are considered together rather than in separate units. The fall semester covers the chemical and physical basis of life, energy transformations, anatomy, physiology, and behavior. The spring semester covers genetics and development, evolution, ecology, the origin of life, and the diversity of living organisms. Each topic is considered in the light of modern evolutionary theory.

103–104 Biological Sciences, Laboratory 103, fall; 104, spring. 2 credits each term. Prerequisite: concurrent enrollment in Biological Sciences 101 (fall) or 102 (spring), or written permission of instructor. May not be taken for credit after Biological Sciences 105–106 or 109–110. 

Lab. M T W or F 1:25–2:45, M W or T 7:30–10:30 p.m., T R 10:10–11:30; 1 lec each week and a weekly 1-hour lab section for disc, special lec, etc. To accommodate weekly lec section, students must reserve M W and F 9:05 or 10:10 and keep the day of the lec section varies throughout the semester. J. C. Glase, P. R. Ecklund, and staff.

A laboratory course emphasizing the methods used by biologists to discover new knowledge. Students design and perform investigations in biology. In preparation for this, exposure is given to basic biological concepts, research methodologies, relevant data analysis techniques, and statistics. Instrumentation, and laboratory technique in all of the major areas of biology. Research projects include investigative design, data analysis, and communication of investigative results and conclusions.

105–106 Introductory Biology 105, fall; 106, spring. 4 credits each term (or 2 credits for transfer students, with written permission of instructor). Prerequisite: 105 is prerequisite to 106 unless written permission is obtained from instructor. S-U grades optional, with permission of instructor. No admittance after second week of classes.

Lab. M T W or F 1:25–2:45, M W or T 7:30–10:30 p.m., T R 10:10–11:30; 1 lec each week and a weekly 1-hour lab section for disc, special lecs, etc. To accommodate weekly lec section, students must reserve M W and F 9:05 or 10:10 and keep the day of the lec section varies throughout the semester. J. C. Glase, P. R. Ecklund, and staff.

Prerequisites: permission of instructor. Students who do not plan to major in biology may take this broad introductory course in modern biology. It is not a course in social biology, but addresses themselves to biological principles with academic rigor. The content is designed to appeal to anyone who seeks a comprehensive knowledge of biology as part of a general education. Laboratory sections may be arranged with the course staff and are used for problem-solving experiments, demonstrations, and discussions.

200 Special Studies in Biology Fall or spring. 1–3 credits. Prerequisites: written permission of instructor and of the Associate Director of the Division of Biological Sciences (a special form for this purpose is available in Stimson 118). S-U grades optional, with permission of instructor. Hours to be arranged. Staff.

For students who want to take only a portion of a regular biological course—for example, only the lectures or only the laboratory in a course that includes both. This course is taken only by transfer students who have already had training equivalent to the portion of the regular course that is to be omitted. May not be substituted for 100-level courses.

201 History of Biology (also Biology and Society 287 and History 287) Fall. 3 credits. Prerequisite: one year of introductory biology. S-U grades optional. Lecs. T 10:10–11:30; W. B. Provine.

An examination of the history of biology, emphasizing the interaction of biology and culture. Covers the period from Charles Darwin to the present.

[202 History of Biology (also Biology and Society 288 and History 288)] Spring. 3 credits. Prerequisite: one year of introductory biology. S-U grades optional. Not offered 1982–83.

W. B. Provine.

205 Biomedical Ethics (also Philosophy 245) Fall. 3 credits. Primarily for sophomores, juniors, and seniors; permission of instructor required for graduate students.

Critical analysis of the conceptual framework in which ethical problems in biomedical science and medicine are understood, debated, and solved. Problems include experimentation on living subjects; reproductive technologies (eugenics, population control); contraception, abortion, and infanticide; euthanasia and suicide; the allocation of scarce medical resources; physician-patient relationships; and health care systems.

206 Environmental Ethics (also Philosophy 246) Spring. 3 credits. Open to sophomores, juniors, and seniors; permission of instructor required for graduate students.

Critical analysis of the conceptual framework in which environmental policies are formulated and judged. Problems include private interest versus the public good, the relation of individual rights to the collective welfare with respect to property, compensation, regulation, and the exercise of eminent domain. Moral obligations to the poor and to future generations; and the ideas of diversity, balance, and stability in the natural environment.

301 Biology and Society I: The Biocultural Perspective (also Anthropology 301 and Biology and Society 301) Fall. 3 or 4 credits (4 credits by arrangement with instructor). Prerequisite: one year of introductory biology. S-U grades optional. This is part of the two-semester core course for the biology and society major and is also available to other students who have fulfilled the necessary prerequisite.

Human biology, behavior, and institutions are viewed as the ongoing products of the interactions between human biological evolution and human culture. These interactions are documented with reference to the evolution of the capacity for culture, human groups and institutions, language, meaning, and cultural "realities", and major models of human nature and human institutions.

302 Alternative Food-Production Systems (also Anthropology 302 and Biology and Society 302) Spring. 4 credits (4 credits by arrangement with instructor). Prerequisite: Biological Sciences 301 or permission of instructor. S-U grades optional. This course fulfills the second-semester core-course requirement for the biology and society major and is also available to other students who have taken 301.

Substantiation is presented for the claim that significant changes in our food production system are needed. The inadequacies of our current system are examined from a multidisciplinary perspective, with consideration of the relevant scientific, social, public-policy, and ethical issues. Current controversies on such issues as energy use in agriculture, crop-breeding programs, soil conservation, chemicals in agriculture, and international food policy are considered.

Emphasis is placed on developing alternatives to current practices. Lectures covering assigned readings are followed by discussion sessions.

304 Chemicals, Enzymes, and Maladies (also Biology and Society 310, Issues in Biology and Society: Chemicals, Enzymes, and Maladies) Fall. 3 credits (3 credits by arrangement with instructor). Prerequisites: Biological Sciences 301 or previous or concurrent enrollment in 330 or 331, or permission of instructor. S-U grades optional. This course fulfills the second-semester core-course requirement for the biology and society major and is also available to other students who meet the prerequisites. Offered fall 1982, spring 1984, and each spring term thereafter.

The biochemical effects of toxic chemicals as potential health hazards are examined from a multidisciplinary perspective. Scientific, social, public-policy, and ethical issues are analyzed critically. Topics include the biochemical examination of occupational and environmental hazards posed by specific chemicals acting as carcinogens, allergens, mutagens, or teratogens, and chemical diseases. Lectures covering assigned readings are followed by discussion sessions.

305 Basic Immunology, Lectures (also Veterinary Medicine 315) Fall. 2 credits. Recommended: basic courses in microbiology and biochemistry.

Course material covers current concepts in immunology at an elementary level, with special emphasis on the biological functions of the immune response.
307 Basic Immunology, Laboratory (also Veterinary Medicine 316) Fall. 2 credits. Prerequisite: a course in basic microbiology or permission of instructor. Concurrent enrollment in Biological Sciences 305. Labs, T R 10:10–1:10. N. L. Norcross. Designed to illustrate immunological concepts presented in Biological Sciences 305. Laboratory exercises are selected to familiarize students with basic humoral and cellular immune phenomena and to offer firsthand experience in immunological laboratory techniques.

309 Techniques in Animal Handling and Surgery Intersession. 2 credits. Limited to 12 students, with preference given to students who are registered in the independent research course. Prerequisite: written permission of instructor. S-U grades only. Fee, $10. Lects and labs, M T W R 9–4:30 for 3 weeks. A. van Tienhoven. Audiovisual materials and actual experience are used in this minicourse to teach students techniques needed for independent research and honors projects.

498 Teaching Experience Fall or spring. 1–4 credits. Enrollment limited. Prerequisites: previous enrollment in the course to be taught or equivalent, and permission of instructor. S-U grades optional, with permission of instructor. Students in the College of Arts and Sciences may not count credits from this course toward the 100 Arts College credits required for graduation. Hours to be arranged. Staff. Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring. Biological Sciences courses currently offering such experience include Biological Sciences 105–106, 274, 324, 330, 430, 464, 468, and 475.

499 Undergraduate Research in Biology Fall or spring. Variable credit. Prerequisite: written permission of staff member who supervises the work and assigns the grade. Each student must submit an independent study statement describing the proposed research project during course registration. (Special forms for this purpose are available in the college offices.) S-U grades optional. Any faculty member of Biological Sciences may act as a supervisor. Faculty supervisors outside the division are acceptable only if a faculty member of the division agrees to take full responsibility for the quality of the work. The course is divided into multiple sections as printed in the Course Rosters. Students must register under supervisor's assigned section number, or under section 01 if supervisor was not assigned a section number. Students registering under section 01 should notify the Office for Academic Affairs in Stimson 118. Hours to be arranged. Staff. Practice in planning, conducting, and reporting independent laboratory and library research programs. Research credits may not be used in completion of the following concentration areas: animal physiology and anatomy; biochemistry; botany; cell biology; and ecology, systematics, and evolution. No more than 4 credits of research may be used in completion of the following concentration areas: genetics and development, and neurobiology and behavior.

600 Introduction to Scanning Electron Microscopy Fall or spring, weeks 1–4. 1 credit. Primarily for graduate students, but open to seniors who can demonstrate a need for the course. Limited to 10 students. Prerequisite: permission of instructor. S-U grades only. Lect and lab to be arranged. M. V. Parthasarathy, M. K. Campenot. A general introduction to the principles and the proper use of the scanning electron microscope. Emphasis is on using the instrument to observe biological specimens and on methods of preparing biological material for scanning electron microscopy.

602 Advanced Electron Microscopy for Biologists I Spring, weeks 1–3. 1 credit. Primarily for graduate students. Limited to 8 students. Prerequisites: Biological Sciences 603 or equivalent, and permission of instructor. S-U grades only. Lect: T 11:15; disc: T 1:25–4:25; labs, T R 1:25–4:25. M. V. Parthasarathy. High-resolution electron microscopy; problems of obtaining high-resolution electron micrographs of biological specimens; visualization of macromolecules.

603 Electron Microscopy for Biologists Fall 3 credits. Primarily for graduate students, but open to upperclass students. Limited to 12 students, with preference given to students with research projects requiring electron microscopy. Prerequisites: either Biological Sciences 313, 420, or 437, or equivalent, and written permission of instructor. Registration during course enrollment recommended. S-U grades optional. Lect: T 11:15; labs, M W 1:25–4:25, T R 1:25–4:25; or W F 8–11. M. V. Parthasarathy. Principles of electron microscopy: historical techniques for electron microscopy, such as ultrathin sectioning, negative staining, and metal shadowing; and interpretation of results. A brief introduction to scanning electron microscopy is also included.

604 Advanced Electron Microscopy for Biologists II Spring. 1 credit. Primarily for graduate students. Limited to 8 students. Prerequisites: Biological Sciences 603 or equivalent, and permission of instructor. S-U grades only. Lect: T 11:15; disc to be arranged; labs, T R 1:25–4:25. M. V. Parthasarathy. Principles of autoradiography at both light microscopy and electron microscopy levels; incorporation of radioactive material into biological specimens for autoradiography; problems of resolution and quantitative aspects of autoradiography.

606 Advanced Electron Microscopy for Biologists III Spring, weeks 7–9. 1 credit. Primarily for graduate students. Limited to 8 students. Prerequisites: Biological Sciences 603 or equivalent, and permission of instructor. S-U grades only. Lect: T 11:15; disc to be arranged; labs, T R 1:25–4:25. M. V. Parthasarathy. Principles of freeze fracturing and freeze substitution techniques; freezing artifacts and interpretation of images.

608 Advanced Electron Microscopy for Biologists IV Spring, weeks 10–14. 1 credit. Primarily for graduate students. Limited to 6 students. Prerequisites: Biological Sciences 603 or equivalent, and either Biological Sciences 602, 604, or 606. S-U grades only. Hours to be arranged. M. V. Parthasarathy. Project in biological ultrastructure.

702 X-Ray Elemental Analysis in Biology Spring. 1 credit. Limited to 8 students. Prerequisites: Biological Sciences 600 or 603, and permission of instructor. S-U grades only. Offered alternate years. Lect and lab to be arranged. M. V. Parthasarathy, M. K. Campenot. Principles of x-ray elemental analysis are discussed, with special reference to the energy-dispersive system. Emphasis is on quantitative elemental analysis of biological specimens and preparation of material for such analysis. A brief introduction to quantitative elemental analysis is also given.

A general introduction to the principles and the proper use of the scanning electron microscope. Emphasis is on using the instrument to observe biological specimens and on methods of preparing biological material for scanning electron microscopy.

Related Courses in Other Departments

- **Biology and Society Senior Seminars (Biology and Society 400–405)**
- **Issues in Biology and Society: Professional Ethics (Biology and Society 311)**

### Animal Physiology and Anatomy

**311 Introductory Animal Physiology, Lectures (also Veterinary Medicine 346)** Fall. 3 credits. Prerequisites: one year of college biology, chemistry, and mathematics. May not be taken for credit after Biological Sciences 416. Lects, M W F 11:15. Evening prelms: Sept. 23, Oct. 21, and Nov. 18. K. A. Houpt and staff. A general course in vertebrate physiology emphasizing the basic characteristics of the circulatory, nervous, pulmonary, renal, and gastrointestinal systems; endocrinology; and reproductive physiology. Neural and hormonal control of function is emphasized.

**313 Histology: The Biology of the Tissues** Fall. 4 credits. Prerequisite: one year of introductory biology. Recommended: background in vertebrate anatomy and organic chemistry or biochemistry. Lects, T R 11:15, labs, T R 2–4:25. W. A. Wimsatt. Provides the student with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates, as well as the methods of analytic morphological techniques. The dynamic states of structure, function, and chemistry in cells and tissues are studied.
315 Ecological Animal Physiology, Lectures Fall. 3 credits. Prerequisite: one year of introductory biology for majors. Offered alternate years. Not offered 1982-83.
Lecs, M W F 10:10. W. N. McFarland and staff.
An introductory course for students interested in ecology and physiology. The characteristics of the physical environment and its importance to organisms are discussed; and representative physiological, behavioral, and morphological adaptations of vertebrate and invertebrate animals to their environments are analyzed.

316 Cellular Physiology Spring. 4 credits. Limited to 100 students, with preference given to students concentrating in animal physiology and anatomy. Each lab section limited to 25 students. Prerequisite: concurrent or previous enrollment in Biological Sciences 330 or 331.
Lecs, M W F 9:00. lab, M T W or R 1:25-4:25. R. A. Corradi.
Lectures introduce students to the most current information on the ways cells regulate themselves and neighboring cells and on what molecules are involved in these regulatory processes. Laboratories are closely related to lectures and provide practical experience with experiments on such cellular functions as nutrient transport, macromolecular biosynthesis, and cell proliferation.

317 Ecological Animal Physiology, Laboratory Fall. 1 credit. Limited to 24 students. Prerequisite: concurrent enrollment in Biological Sciences 315. Offered alternate years. Not offered 1982-83.
Exercises involve measurement of important environmental factors in local habitats and laboratory experiments to familiarize students with the use of ecophysiological concepts.

319 Introductory Animal Physiology, Laboratory (also Veterinary Medicine 348) Fall. 2 credits. Limited to 80 students, with preference given to students concentrating in animal physiology and anatomy. Each lab section limited to 20 students. Prerequisites: courses in animal or plant physiology and an independent project work supplementary to the course. Enrollment limited. Graduate student auditors allowed with written permission of instructor.
Lab, M T W or R 10:10. A. van Tienhoven.
An introduction to elementary biophysical properties of biological membranes; theoretical aspects of vertebrate and invertebrate animals to their environments are analyzed.

316 Cellular Physiology Spring. 4 credits. Limited to 100 students, with preference given to students concentrating in animal physiology and anatomy. Each lab section limited to 25 students. Prerequisite: concurrent or previous enrollment in Biological Sciences 330 or 331.
Lecs, M W F 9:00. lab, M T W or R 1:25-4:25. R. A. Corradi.
Lectures introduce students to the most current information on the ways cells regulate themselves and neighboring cells and on what molecules are involved in these regulatory processes. Laboratories are closely related to lectures and provide practical experience with experiments on such cellular functions as nutrient transport, macromolecular biosynthesis, and cell proliferation.

Experiments in the study of the physiology of animal tissues. Specific topics discussed include respiration, metabolism, circulation, excretion, body mechanics, muscle contraction, nerve action, sensory reception, and central nervous system function. A quantitative, systems-theoretical approach is emphasized.

418 General Animal Physiology, Laboratory Spring. 2 credits. Prerequisite: concurrent enrollment in Biological Sciences 416 or equivalent. Lec, W 7:30 p.m.; lab, M or T 1:25-4:25. H. C. Howland.
Students are introduced to basic techniques used in the study of the physiology of animal tissues. Experiments deal with respiration, properties of muscle, circulation, activity of nerves, and osmotic phenomena.

450 (610) Mammalian Neurophysiology (also Veterinary Medicine 753) Spring. 3 credits. Prerequisites: two years of college biology. Lecs and disc, T 10:10; lab, R 1:25-4:25. A. van Tienhoven.
The anatomy and physiology of the mammalian nervous system are examined through classical and modern laboratory studies. Sensory, central integrative, and motor functions are explored primarily by electrophysiologically recording spontaneous and evoked unit and field potentials. Behavioral, pharmacological, and histological methods are used where appropriate.

452 Comparative Physiology of Reproduction of Vertebrates, Lectures (also Animal Science 452) Spring. 3 credits. Prerequisite: Animal Science 427 or permission of instructor. Lecs, M W F 1:25. A. van Tienhoven.
Sex and its manifestations. Neuroendocrinology, endocrinology of reproduction, sexual behavior, gametogenesis, fertilization, embryonic development, care of the young, reproduction, and immunological factors in reproduction.

454 Comparative Physiology of Reproduction of Vertebrates, Laboratory (also Animal Science 454) Spring. 2 credits. Prerequisite: concurrent or previous enrollment in Biological Sciences 452 or permission of instructor.
Lab to be arranged. Organizational meeting first F of semester at 2:30. A. van Tienhoven.
The laboratory provides students with an opportunity to design and execute independent experiments with limited objectives.

458 Mammalian Physiology Spring. 6 credits. Enrollment limited. Graduate student auditors allowed in lectures. Prerequisite: Biological Sciences 311 or 416; or equivalent with written permission of instructor. Lecs, M W F 8; lab, M or W 1:25-4:25. K. W. Beyenbach.
Selected topics in mammalian physiology are discussed in the lecture and concurrently studied in the laboratory. Topics are selected from the following: physiology of membranes and epithelia; nerve and muscle; heart and circulation; autonomic, somatic, and sensory nervous systems; respiration; digestion; salt and water balance; acid-base balance; and endocrine regulation.

615 Nutrition and Physiology of Mineral Elements (also Veterinary Medicine 759 and Nutritional Sciences 659) Fall. 2 credits. Prerequisites: courses in basic physiology, intermediary biochemistry, and general nutrition. Offered alternate years.
Lectures on nutritional aspects and physiological, biochemical, and hormonal relationships of the prominent macroelements and microelements, with emphasis on recent developments. Information is included on methodologies of mineral research and the essentials, requirements, transport, function, homeostasis, interrelationships, and toxicity of various mineral elements.

616 Radioisotopes in Biologic Research (also Veterinary Medicine 750) Fall. 4 credits. Minimum enrollment of 15 students required for fall 1982.
Lecs, T R 11:15; lab, T 1:25-5. F. W. Lengemann.
Lectures and laboratories deal with the radioisotope as a tool in biological research. Among the topics considered are the use and detection of beta-emitting isotopes, gamma spectrummetry, Cerenkov counting, neutron activation, autoradiography, and isotope dilution. Emphasis is placed on liquid scintillation and the use of C14 and H3 as metabolic tracers. Experiments are designed to present basic principles, using plants and animals as subject material.

617 Applied Electrophysiology (also Veterinary Medicine 652) Fall. 2 credits. Open to seniors, graduate students, and second-, third-, and fourth-year veterinary students. Prerequisites: physics and two years of college biology, or permission of instructor. Lecs, W 8; lab, R 2-4:25. E. L. Gasteiger.
Theory and practice of electrophysiological techniques currently used for study of the nervous and muscular systems in normal and diseased states. Topics include electrophysiology, electromyography, electroretinography, and evoked potentials.

618 Biological Membranes and Nutrient Transfer (also Veterinary Medicine 752) Spring. 2 credits. Prerequisites: courses in animal or plant physiology, quantitative and organic chemistry, and physics, and Animal Science 427 or permission of instructor. Lecs, T R 11:15. R. H. Wasserman.
An introduction to elementary biophysical properties of biological membranes; theoretical aspects of
permeability and transport; and mechanism of transfer of inorganic and organic substances, primarily across epithelial membranes.

619 Lipids (also Nutritional Sciences 602) Fall. 2 credits. Prerequisite: Biological Sciences 330 or 331.
Lecs. T R 11:15. A. Bensadoun.
Advanced course on biochemical, metabolic, and nutritional aspects of lipids. Emphasis on critical analysis of current topics in lipid methodology, lipid absorption; lipoprotein secretion, structure, and catabolism; mechanism of hormonal regulation of lipolysis and fatty acid synthesis; and cholesterol metabolism and atherosclerosis.

[558 Molecular Mechanisms of Hormone Action (also Veterinary Medicine 758)] Spring. 2 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1982–83.
An advanced course developed from the current literature on endocrine mechanisms.

711–718 Special Topics in Physiology Fall or Spring. 1 or 2 credits for each topic. May be repeated for credit. Each topic limited to 20 students, with preference given to graduate students in physiology. Lectures, laboratories, discussions, and seminars on specialized topics.

Fall 1982: four topics are offered.

711 Epithelial Transport of Salt and Water 1 credit.
Lec., 1 hour each week to be arranged.
K. W. Beyenbach.

713 Role of Prostaglandins in Reproduction 2 credits.
Lec-disc, 2 hours each week to be arranged.
W. Hansel.

715 Synovial Physiology: The Function of Joints 2 credits.
Lec., 2 hours each week to be arranged. G. Lust.

717 Degenerative Processes in the Vertebrate Retina 2 credits.
Sem., 1 1/2 hours each week to be arranged.
E. R. Low.
Spring 1983: four topics are offered.

712 Hormonal Regulation of Gonadal Function 1 credit.
Sem., 1 hour each week to be arranged.
J. E. Fortune.

714 Seminar in Insect Physiology (also Entomology 685) 1 credit. Prerequisites: concurrent or previous enrollment in Entomology 483 and permission of instructor.
Sem., 1 hour each week to be arranged.
H. H. Hagedorn.

716 Sterotoxic Techniques to Study Neuroendocrine Relationships 2 credits.
Lab., 4–5 hours each week for 6 weeks to be arranged. A. van Tienenhoven.

718 Principles and Procedures of Radioimmunoassay 1 credit.
Lec-disc, 1 hour each week to be arranged.
T. J. Reimers.

719 Graduate Research in Animal Physiology (also Veterinary Medicine 600) Fall or spring. Variable credit. Prerequisites: written permission of section chairperson and of staff member who supervises the work and assigns the grade. S-U grades optional.
Hours to be arranged. Staff.
Similar to Biological Sciences 495 but intended for graduate students who are working with faculty members on an individual basis.

132 Orientation Lectures in Biochemistry Spring, weeks 1–3. 0 credit. Primarily for freshmen, sophomores, and transfer students. S-U grades only (registered students receive an unsatisfactory grade for nonattendance).
Lecs. S 10:10–11:30 for first 3 Saturdays of semester. Section chairperson and staff.
Lectures illustrate modern research and training in biochemistry and molecular and cell biology.

231 General Biochemistry Fall. 3 credits.
Intended for students who have not studied biochemistry previously and who do not expect to pursue it further. Not recommended for students who have taken organic chemistry. Prerequisite: Chemistry 104 or 206 or equivalent. S-U grades optional.
A brief introductory section relatingorganic chemistry to biochemistry is given, followed by the biochemical material in the usual one-semester introductory courses. Topics of general interest are also included.

330–331 Principles of Biochemistry Introductory biochemistry is offered in two formats: individualized instruction (330) and lectures (331). Individualized instruction is offered to a maximum of approximately 200 students each semester. Lectures given fall semester only.

330 Principles of Biochemistry, Individualized Instruction Fall or spring. 4 credits. Prerequisite: Chemistry 253 or 358 or equivalent. May not be taken for credit after Biological Sciences 331.
Discs, M W F 8 or 10:10. Additional hours to be arranged. No formal lecs. Fall: M. Ferger and staff; spring: M. Ferger and staff.

335–346 Undergraduate Biochemistry Seminar 4 credits. Fall, spring. 1 credit each term. May be repeated for credit. Limited to upperclass students.

432 Survey of Cell Biology Spring; also offered during the 3-week summer session. 3 credits.
Prerequisite: Biological Sciences 330 or 331 or equivalent.
Lecs. M W F 11:15. J. T. Lis, A. P. Bretscher, M. V. Hinkle, and staff.
A survey of material covered in depth in Biological Sciences 433, 438, and 483. The course covers a wide array of topics, including microscopic techniques, membrane activities, cell junctions, organelles, cell movement, cell division, chromosome structure and the control of gene expression, and cellular differentiation.

433 Cell Structure and Physiology Fall. 2 credits.
Prerequisite: Biological Sciences 330 or 331 or permission of instructor.
The functional aspects of cells and their organelles: bioenergetics, transport, movement, growth, nutrition, and structure are examined in detail in free-living cells, differentiated cells, and highly specialized cells. The course attempts to integrate current knowledge about cell biochemistry, structure, and function with the role of the cell in its environment and in its relationship with other cells.

434 Laboratory in Cell Biology Spring. 4 credits. Enrollment limited. Prerequisites: a course in biochemistry or cell biology, and permission of instructor.
The course stresses techniques for handling and experimenting with cells of different kinds and provides experience in experimental design.

435–436 Undergraduate Biochemistry Seminar 4 credits. Fall, spring. 1 credit each term. May be repeated for credit. Limited to upperclass students.
Prerequisite: Biological Sciences 330 or 331, or written permission of instructor. S-U grades optional, with permission of instructor.

Sem to be arranged. Organizational meeting first W of each semester at 4 p.m. Fall: J. Gibson; spring: J. M. Calvo.

Selected papers from the literature on a given topic are evaluated critically during six or seven two-hour meetings. Fall: protein transport across membranes; spring: control of gene expression in eucaryotes.

438 Cell Proliferation and Oncogenic Viruses Spring. 2 credits. Prerequisite: Biological Sciences 330 or 331. Recommended: Biological Sciences 281.

A description of the growth properties of animal cells in culture, followed by discussions of the changes in cells that are induced by tumor viruses and carcinogens. Topics include macromolecular growth factors, contact inhibition, cell surface properties, cell cytoskeleton, transcription and translation of viral and host genomes, and integration of viral DNA into host chromosomes.

456 Molecular Biology of Yeast Spring. 3 credits. Prerequisites: Biological Sciences 281 and a course in organic chemistry. Not offered 1982–83.

Lecs, M W F 9:05. Staff.

Saccharomyces cerevisiae, a single-celled lower eucaryote, possesses physiological, biochemical, and genetic characteristics that make it an ideal organism for investigating many fundamental aspects of gene expression in eucaryotes. These characteristics are discussed, together with current research methodologies (fbrad analysis, fine structure mapping, mutator isolation, transformation, and recombinant DNA techniques) and their application in understanding phenomena such as cell division and determination of mating type.

631 Protein Structure and Function Fall. 2 or 3 credits (3 credits with discussion).

Prerequisites: introductory biochemistry, physical chemistry, and organic chemistry, or permission of instructor. S-U grades optional, with permission of instructor.

Lecs, M W 8: disc, F 8: G. W. Faigenson and staff. Lectures on protein structure and the nature of enzymatic catalysis. Discussions cover some of these areas in more depth, through recent research papers.

632 Bioenergetics and Membranes Spring. 2 credits. Prerequisite: Biological Sciences 330 or 331, and either Chemistry 358 or 360; or written permission of instructor. Recommended: physical chemistry.

Oxidative phosphorylation, photophosphorylation, active transport, and the structure of biological membranes.

633 Biosynthesis of Macromolecules Fall. 2 credits. Prerequisite: Biological Sciences 330 or 331.

Lecs, T R 9:05; J. W. Roberts, D. B. Wilson. DNA, RNA, and protein synthesis; regulation of gene expression; and other topics.

634 Biochemistry of the Vitamins and Coenzymes (also Nutritional Sciences 634) Spring. 2 credits. Prerequisites: Biological Sciences 330 or 331 or equivalent, and either Chemistry 358 or 360. Offered alternate years. Not offered 1982–83.

The chemical, biochemical, and nutritional aspects of the vitamins and coenzymes.

635 Metabolic Regulation (also Nutritional Sciences 635) Spring. 2 credits. Prerequisites: Biological Sciences 330 or 331, and either Chemistry 358 or 360; or written permission of instructor. Recommended: physical chemistry.

Lecs, T R 9:05. Staff.

The study of enzymes and the molecular mechanisms of metabolic regulation.

837 Integration and Coordination of Energy Metabolism (also Nutritional Sciences 636) Fall. 3 credits. Prerequisite: Biological Sciences 330 or 331 or equivalent.

Lecs, M W F 9:05. Evening prelims to be arranged. W. J. Arion and staff.

The elements and dynamics of energy metabolism in higher animals are developed systematically through biochemical characterizations of the metabolic components and structure of major tissues and organs. Emphasis is placed on correlations with physiologic functions and mechanisms that control energy metabolism within individual tissues and coordinate these processes in the intact animal are analyzed in the contexts of selected physiologic and pathologic stresses.

638 Intermediate Biochemical Methods Spring. 4 credits. Primarily for undergraduates majoring in biochemistry and for graduate students minorig in biochemistry. Prerequisites: Biological Sciences 330 or 331, and permission of instructor. Undergraduates must obtain permission of instructor by the last day of the course enrollment period.

Selected experiments on proteins, enzymes, DNA, and biochemical methods illustrate basic biochemical principles. The course emphasizes quantitative aspects and techniques currently used in biochemical research.

731–737 (732–738) Current Topics in Biochemistry Fall or spring. 1/2 or 1 credit for each topic. May be repeated for credit. Students registering for 1/2 credit should not fill in the credit-hour column on the optical-mark registration form: the computer is programmed to register students automatically for 1/2 credit.) Prerequisite: Biological Sciences 330 or 331 or equivalent. S-U grades only. Lectures and seminars on specialized topics.

Fall 1982: four topics are offered.

Spring 1983: three topics are offered.

751 Dilemmas in Toxicology Fall. 2 credits. Prerequisite: advanced standing graduate standing in toxicology or permission of instructor. S-U grades optional. Offered alternate semesters.

Sem, 2 hours each week to be arranged. J. M. Fessenden-Raden.

Discussions of case studies of dilemmas faced by practicing toxicologists in academia, industry, and government. Readings of scientific, ethical, and general papers provide background for discussions. Topics for consideration include laboratory safety, testing in humans and animals, conflicts of interest, freedom of information, determination of safety regulations, and professional code of ethics.

830 Biochemistry Seminar Fall or spring. 0 credit.

Sem, F 4:15. Staff.

Lectures on current research in biochemistry, presented by distinguished visitors and staff members.

831 Advanced Biochemical Methods I Fall. 6 credits. Limited to graduate students majoring in biochemistry. Labs and discus, 12 hours each week to be arranged. Organizational meeting first R of semester at 10:10. D. B. Wilson and staff.

To learn the basic techniques of biochemical research, each student completes a set of experiments.

832 Advanced Biochemical Methods II Spring. 6 credits. Limited to graduate students majoring in biochemistry. S-U grades only.

Lab to be arranged. Staff (coordinator: J. K. Moffat).

Research in the laboratories of three different professors chosen by the student. Arrangements are made jointly between the field representative and the research adviser.

833 Research Seminar in Biochemistry Fall and spring. 1 credit each term. (Students must register for 2 credits each term, since an "R" grade is given at the end of the fall term.) May be repeated for credit.

Required of, and limited to, graduate students (first-year students excepted) majoring in biochemistry. S-U grades only.

Sem, M 5–6:30 p.m. E. Racker, V. M. Vogt; J. K. Moffat.

Botany

241 Plant Biology Fall. 3 credits. Enrollment may be limited, with preference given to sophomores and juniors majoring in agronomy, botany, environmental education, floriculture, horticulture, natural resources, plant sciences, vegetable crops, and wildlife.

Prerequisite: one year of introductory biology for majors or equivalent.

Lecs, T R 9:05. lab, M T W R or F 1:25–4:25, or M or W 7:30–10:30 p.m. Evening prelims: Oct. 7 and Nov. 18. Lab practicum hours to be arranged (Oct. 13–15). K. J. Niklas.

Introductory botany for those who plan to specialize in or use some aspect of the plant sciences. Emphasizes structure reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plant materials, including identification. First and second weeks of laboratory are field trips, starting with the first day of classes. Those who register for an evening laboratory are still required to attend the afternoon field trips.

242 Plant Physiology, Lectures Spring. 3 credits. Primarily for undergraduates in agricultural sciences.

Prerequisites: one year of introductory biology and introductory chemistry; concurrent enrollment in Biological Sciences 244 or written permission of instructor required for undergraduates. May not be
244 Plant Physiology, Laboratory Spring. 2 credits. Prerequisite: concurrent enrollment in Biological Sciences 349. May not be taken for credit after Biological Sciences 349. Lab, M T W or R 1:25-4:25; disc, M T W R or 12:20. Lab and disc must be on same day. C. Reiss. Experiments simplify concepts covered in Biological Sciences 242 and offer experience in a variety of biological and biochemical techniques, including use of small amounts of radioisotopes.

246 Ethnobotany Spring. 3 credits. Limited to 20 students. Prerequisite: written permission of instructor. Lecs, T R 11:15; lab, R 2-4:25. D. M. Bates. A consideration of the role of plants in primitive and lay societies, with emphasis on the nature of the plant resource base, the manner in which man uses this base, and the extent to which it enters his folklore and has influenced his cultural development. Laboratories provide a practical introduction to the plant kingdom by stressing plant organization and identification and plant crafts.

247 Poisonous Plants Fall. 2 credits. S-U grades optional. Lecs, T R 9:05. Staff. A discussion of incidence and conditions of poisoning in man and animals, poisonous principles from plants, and effects of toxic plants on vertebrates.

341 Plant Physiology, Lectures Fall. 3 credits. Prerequisites: one year of introductory biology, organic chemistry, and either concurrent enrollment in Biological Sciences 349 or written permission of instructor. May not be taken for credit after Biological Sciences 242 unless written permission is obtained from instructor. Lecs, T R 10-10:45; M 7:30 p.m. A. T. Jagendorf. The behavior, growth, transport processes, and environmental response of plants. Topics include membrane properties, solute and water transport, and function of osmotic forces; mineral and organic nutrition; stress resistance; growth and development controls; metabolism, including photosynthesis and respiration; and responses to environmental influences.

342 Taxonomy of Cultivated Plants (also Floriculture and Ornamental Horticulture 342) Spring. 4 credits. Prerequisite: one year of introductory biology or written permission of instructor. May not be taken for credit after Biological Sciences 343. Lecs, M W 10-10:15; labs, M W 2-4:25. J. W. Ingram. A study of farms and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing among cultivated plants in preparing and using analytical keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

343 Taxonomy of Vascular Plants Fall. 4 credits. Prerequisites: one year of introductory biology and written permission of instructor. May not be taken for credit after Biological Sciences 342. Lecs and discs, T R 9:05; labs, M W or T R 2-4:25. M. D. Whalen. An introduction to the classification of vascular plants, with attention to principles, methods of identification, and literature. Field trips are held during laboratory periods in the first half of the term.

345 Plant Anatomy Fall. 4 credits. Limited to 46 students. Prerequisite: one year of introductory biology or a semester of botany. Not intended for general education. Emphasis is placed on the level of preparedness or the role of the course in their curricula are encouraged to consult the instructor before registering. Lecs, M W 9:05; labs, M W 2-4:25 or T R 10-12:15. D. J. Paolillo. A descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.

347 Cytology Fall. 4 credits. Prerequisite: one year of introductory biology for majors. Recommended: Biological Sciences 281. Lecs, M W 9:05; labs, M W or T R 10-12:15. C. H. Uh. A study primarily of the structure of cells and their components, and the relation of these to function and heredity. Special attention is given to chromosomes. Both plant and animal materials are used.

348 Physiology Spring. 4 credits. Prerequisites: Biological Sciences 281 and 246. "Lecs, M W T 9:05-11:00. M. W. Oh. An introduction to freshwater and marine algae, including consideration of their economy as members of the plankton and benthos and their importance to man. The laboratory uses field material and cultures from an extensive living collection to illustrate lecture topics, provide familiarity with algae in the field, and introduce the student to techniques used in isolating, culturing, and studying algae in the laboratory.

349 Plant Physiology, Laboratory Fall. 2 credits. Prerequisite: concurrent enrollment in Biological Sciences 341. May not be taken for credit after Biological Sciences 244. Lab, T W R 1:25-4:25; disc, T W R F 12:20. Lab and disc must be on same day. C. Reiss. Experiments on concepts covered in Biological Sciences 341 and offer experience in a variety of biological and biochemical techniques, including use of small amounts of radioisotopes.

400 Plant Geography Spring. 2 credits. Prerequisite: Biological Sciences 343 or equivalent. Recommended: Biological Sciences 463 or 477 or both. S-U grades optional, with permission of instructor. Offered alternate years. Lecs, T R 10:10. M. D. Whalen. Patterns of distribution and variation of plant species and higher taxa, endemism and dijuction and their causes, influences of past continental movements and climatic change on plant distributions; geographical aspects of plant specialization; major biomes and floristic regions of the world; and methods of physiographic analysis.

442 Biology of Plant Species Spring. 2 credits. Prerequisite: Biological Sciences 343 or equivalent. Recommended: Biological Sciences 463 and 477. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1982-83. Lecs, T R 10-10:45. M. D. Whalen. A comprehensive introduction to the nature and origin of plant species, with coverage of plant evolutionary genetics, race formation and modes of speciation, evolution of reproductive isolating mechanisms, types of species complexes, and the nature and origin of higher taxa.

443 Research Methods in Systematic Botany Fall. 2 credits. Limited to 10 students. Prerequisite: Biological Sciences 343 or equivalent. Offered alternate years. Lab, F 1:25-4:25; additional hours to be arranged. Bailey Hortorium staff. An introduction to the methodology of plant systematic research: field studies; sampling and collecting methods; preparation of taxonomic revisions and monographs; numerical methods of data analysis; and laboratory methods in cytogenetics, comparative anatomy, and comparative chemistry, as applied to problems in plant systematics.

444 Comparative and Developmental Morphology of the Embryophyta Spring. 4 credits. Prerequisite: Biological Sciences 345. Offered alternate years. Lecs, T R 8-10; labs, T R 2-4:25. D. J. Paolillo. The life histories of bryophytes, vascular cryptograms, and seed plants are examined for their developmental attributes and for their bearing on concepts of evolution and group relationships. The course reviews the awareness of the integration between morphology and other disciplines in biology.

445 Photosynthesis (also Engineering A&EP 601) Fall. 3 credits. Prerequisites: Chemistry 104 or 208; Mathematics 106, 111, or 113; and either Physics 102 or 208; or permission of instructor. Offered alternate years. Lecs, M 1-10; T R 10-10:10. R. K. Clayton. A detailed study of the process by which plants use light in order to grow; physical and photosynthetic aspects of the problem are emphasized.

446 Cytogenetics Spring. 3 credits. Prerequisites: Biological Sciences 281 and 347, or their equivalents. Offered alternate years. Lecs, M W 9:05, lab, M or W 10:10-12:35. C. H. Uh. Deals mainly with the cellular mechanisms of heredity, including recent research in cytology, cyogenetics, and cytoanalysis.

448 Plant Evolution and the Fossil Record Spring. 3 credits. Prerequisite: Biological Sciences 281 or equivalent, or written permission of instructor. Offered alternate years. Not offered 1982-83. Lecs, T R 9:05; lab, R 12-20:21-25: J. K. Nikolai. An introduction to evolution, surveying major changes in plants from the origen of life to the present. Emphasis is placed on plant form and function, adaptations to particular ecologic settings, and evolutionary theory as it relates to plants.

640 Applied Plant Anatomy Spring. 3 credits. Prerequisites: Biological Sciences 345 or equivalent, and permission of instructor. Lecs anddiscs, T R 9:05; lab, W 10:10-11:10 or by arrangement with instructor. N. W. Uhl. The use of anatomy in vascular plants for diagnosis of structure, taxonomic relationships, evolutionary sequences, and ecological adaptations, with emphasis on recent research. The laboratory provides experience in techniques and interpretation.

642 Topics in Ultrastructure of Plant Cells Spring. 3 credits. Primarily for graduate students, although upperclass students with adequate background are allowed to enroll. No auditors. Prerequisites: Biological Sciences 345 or 347, and written permission of course coordinator. Offered alternate years. Lecs, M W 10-10:10; optional disc, F 1:25 or to be arranged. Staff (coordinator: M. V. Parthasarathy). An advanced course dealing with organelles in depth, and in breadth where necessary. Topics include salient ultrastructural features of some plant groups and certain specialized cells and processes. Content of the course and staff direction vary to some extent from year to year.
Techniques

643 Plant Physiology, Advanced Laboratory Techniques Fall. 4 credits. Primarily for graduate students in the plant sciences. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. S-U grades only. Lab, T or W 8–5; disc, M 4:30–5:30. A. T. Jagendorf and staff.

An introduction to some modern methods in experimental plant biology.

644 Plant Growth and Development Spring 3 credits. Prerequisites: Biological Sciences 345 and either 242 or 341, or their equivalents, or written permission of instructor. Offered alternate years. Not offered 1982–83.

Lecs, M W F 9:05. P. J. Davies, D. J. Paolillo.

Explores the changes that occur during plant growth and development and their control: morphological and anatomical changes in apices, tissue formation, organ formation, embryo development, gene regulation, hormone action and interaction, the influence of light in development, flowering, fruiting, dormancy, abscission, and senescence.

645 Families of Tropical Flowering Plants Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Offered alternate years. Not offered 1982–83.

Lec and disc, F 11:15. D. M. Bates.

The families of flowering plants encountered solely or chiefly in tropics are considered in lectures, discussions, and demonstrations, with the aim of providing basic points of recognition for, and an understanding of, diversity and relationships in these families for the student venturing into the tropics.

646 Families of Tropical Flowering Plants: Field Laboratory Intersession. 3 credits. Limited to 20 students, with preference given to seniors and graduate students from member institutions of the Organization for Tropical Studies. Prerequisite: Biological Sciences 342 or 343 or equivalent. Recommended: Biological Sciences 645, S-U grades only. For registration and application, contact the L. H. Bailey Hortorium, 467 Mann Library. Offered alternate years. Not offered 1982–83.

Bailey Hortorium staff.

An intensive orientation to families of tropical flowering plants represented in forests of the American tropics. Emphasis on field identification combined with laboratory analysis of available materials in a "whole-biology" context.

647 Seminar in Systematic Botany Spring 1 credit. May be repeated for credit. Prerequisite: written permission of course coordinator required for undergraduates. S-U grades optional. Sem to be arranged. Organizational meeting first F of semester at 1:25. Staff (coordinator: D. M. Bates).

Lectures and discussions led by staff, visitors, and students on topics of current importance to systematic botany.

648 Plant Biochemistry Spring. 3 credits. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. Offered alternate years.

Selected areas of plant biochemistry are reviewed in the context of the plant life cycle and responses to the environment. Topics include metabolism of lipids, carbohydrates, organic acids, and proteins; nitrogen and sulfur assimilation; respiration; photosynthesis; development and replication of chloroplasts, and cell-wall composition and properties. Attention is paid to operation of control mechanisms.

649 Transport of Solutes and Water in Plants Fall. 3 credits. Prerequisite: Biological Sciences 341 or equivalent. Offered alternate years. Not offered 1982–83.

Transport of ions, water, and organic materials in plants; mechanisms of ion transport; relationships between ion transport and metabolism; ion uptake and transport in higher plants, phloem transport; and water relations of single cells and whole plants.

651 Quantitative Whole-Plant Physiology Fall. 3 credits. Prerequisites: introductory physics, calculus, and plant physiology. S-U grades only. Offered alternate years.

Lecs, T R 10–10:15, 10:30. R. M. Spanwick.

An exploration of the extent to which physiological processes and their interactions can be formulated in a quantitative manner and integrated to describe various aspects of plant behavior, including growth and yield. Consideration is given to characterization of the plant environment, energy balance, gas exchange, water relations, photosynthesis, respiration, translocation, nutrient supply, and the timing of developmental events.

652 Botanical Latin Spring. 1 credit. Prerequisite: written permission of instructor. S-U grades optional. Offered alternate years.

Lec and disc to be arranged. Bailey Hortorium staff.

Basic grammar and vocabulary and exercises in writing and reading the Latin of plant taxonomy, as well as applications to botanical nomenclature.

Lec and disc to be arranged. Bailey Hortorium staff.

An analysis of the International Code of Botanical Nomenclature and its application to various plant groups.

655 Topics in Paleobotany Spring. 1 credit. Prerequisite: Biological Sciences 448 or equivalent background in evolution, or written permission of instructor.

Lab and disc to be arranged. K. J. Niklas.

A series of selected topics designed to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.

657 Literature of Taxonomic Botany Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades optional. Offered alternate years. Not offered 1982–83.

A survey of the basic reference works in taxonomy from the pre-Linnaean literature drawn on by Linnaeus to contemporary publications, with comments on the peculiarities of the books (when appropriate), publication dates, typographic devices, and intricacies of bibliographic citation.

740 Plant Biology Seminar Fall and spring. 0 credit (no official registration). Required of graduate students doing work in plant physiology. Sem, F 11:15. Staff.

Lectures on current research in plant biology, presented by visitors and staff.

749 Graduate Research in Botany Fall or spring. Variable credit. May be repeated for credit. S-U grades optional.

Hours to be arranged. Staff.

Similar to Biological Sciences 499 but intended for graduate students who are working with faculty members on an individual basis.

840 Current Topics in Plant Physiology Fall or spring. 2 credits. May be repeated for credit. S-U grades only.

Sem to be arranged. Staff.

Seminar reports by graduate students on current literature in experimental plant physiology or related areas.

Ecology, Systematics, and Evolution

260 Introductory Ecology Fall. 3 credits.

Prerequisite: one year of introductory biology or written permission of instructor. May not be taken for credit after Biological Sciences 360.

Lecs, T R 11:15, disc, T or R 1:25, 2:30, or 3:35. S. J. Reich, C. A. S. Hall.

An introduction to biological phenomena that occur at the population, community, and ecosystem levels of organization. The relevance of ecological principles to current environmental and resource problems is examined.

274 The Vertebrates Spring. 5 credits. Primarily for sophomores; this course is a prerequisite for many advanced courses in vertebrate biology, anatomy, and physiology. Each lab limited to 21 students.

Prerequisite: one year of introductory biology for majors. Fee, $10.

Lecs, T R 10–10, labs, M W 1:25–5, M W 7–10 p.m., or T R 1:25–5. Evening preim to be arranged.

An introduction to the evolution, classification, comparative anatomy, life history, and behavior of vertebrate animals. Laboratory dissection and demonstration are concerned with structure, classification, systematics, biology of species, and studies of selected aspects of vertebrate life.

360 General Ecology Fall or spring. 3 credits. For students concentrating in ecology or a related subject. Not open to freshmen in fall semester.

Prerequisite: one year of introductory biology for majors. May not be taken for credit after Biological Sciences 260.

Lecs, T R 8:05, disc, W or R 1:25, 2:30, or 3:35.

Fall: P. P. Feeny, P. L. Marks, spring: staff.

Principles concerning the interactions between organisms and their environment; influence of competition, predation, and other factors on population size and dispersion, analysis of population structure and growth; processes of speciation, interspecific competition and the niche concept, success and community concepts, influence of climate and past events on the diversity and stability of communities in different regions of the world; and role of energy flow and biogeochemical cycling in determining the structure and productivity of ecosystems. Modern evolutionary theory is stressed throughout, and attention is given to conflicting ecological hypotheses.
371 Human Paleontology Fall. 4 credits. Prerequisite: one year of introductory biology or Anthropology 114, or permission of instructor. Lecs, M W F 2:30; lab, 1 hour each week to be arranged; occasional field trips. K. A. R. Kennedy. A broad survey of the fossil evidence for human evolution, from the evidence of teeth and cranial bones to the evolution of the dental and cranial anatomy, geological contexts, paleoecology, dating methods, archaeological associations, and the current theories of primate phylogeny.

[455 Insect Ecology, Lectures (also Entomology 465) Fall. 2 credits. Prerequisites: Biological Sciences 360 and Entomology 212, or their equivalents. Recommended: concurrent enrollment in Biological Sciences 457. Offered alternate years. Not offered 1982–83. Lecs, W F 11:15; R. B. Root. Ecological and evolutionary principles are integrated by thorough examination of outstanding investigations. Topics discussed include the factors responsible for the great diversity of insects, adaptive syndrome associations with climate, natural history of insects, and their aquatic environment. The physical, chemical, and biological interactions that determine the distribution and abundance of insect populations are considered.]

361 Principles of Plant Ecology Fall. 4 credits. Prerequisite: concurrent enrollment in Biological Sciences 463. Lecs, W F 10:10; M. Alexander. Laboratory and field exercises in plant ecology. Field studies of plant communities and techniques for the analysis of community data are emphasized. Lab. F 12:05–5; P. L. Marks.

466 Microbial Ecology (also Agronomy 486 and Microbiology 465) Spring. 3 credits. Prerequisite: an elementary course in some facet of microbial biology. Offered alternate years. Lecs, M W F 10:10; M. Alexander. An introduction to the basic principles of microbial ecology. Attention is given to the behavior, activity, and interrelationships of bacteria, fungi, algae, and protozoa in natural ecosystems.

468 Systems Ecology Spring. 4 credits. Prerequisite: Biological Sciences 260 or 360 or equivalent. Recommended: Computer Science 102 and calculus. S-U grades optional. Offered alternate years. Not offered 1982–83. Lecs, M W F 10:10; disc, T or R 2:30–4:05. C. A. S. Hall.

469 Agriculture, Society, and the Environment (also ALS 469) Spring. 3 credits. Prerequisite: one year of introductory biology or permission of instructor. Lecs, T R 12:20; disc, W evenings and by arrangement, D. Pimantel and staff. This course stresses the importance of an integrated systems approach to agriculture. Included are assessments of the interrelationships of land and water management, soil productivity, plant breeding, livestock production, pest control, energy, economics, social science, and history and ecosystems. This ecological approach is used to assess sustainable biological systems that can produce adequate food for the United States and the world in future decades.

[470 Undergraduate Ecology Seminar Fall or spring. 1 or 2 credits. May be repeated for credit. From time to time different seminars are offered. Not offered 1982–83.]

471 Mammalogy Fall. 4 credits. Recommended: Biological Sciences 274. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1982–83. Fee, $15. Lecs, M W F 9:05; lab, M T 1:25–4:25, 1 weekend field trip required. P. J. Parker.

472 Herpetology Fall. 4 credits. Recommended: Biological Sciences 274. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1982–83. Fee, $5. Lecs and labs, T R 12:20–4:25; occasional field trips and special projects. F. H. Pough. Lectures cover various aspects of the biology of amphibians and reptiles, including evolution, zoogeography, ecology, behavior, and physiology. Laboratory includes systematic, functional, and entire systems. Frequently there is an applied orientation. Topics associated with clade, Tor R 1:25. J. P. Bartow.}

473 Botany of Fishes Fall. 4 credits. Prerequisite: Biological Sciences 274, or equivalent experience in vertebrate zoology with written permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Lecs, M W F 9:05; lab, 1 hour each week to be arranged. Staff. An introduction to the study of fishes: their structure, classification, evolution, distribution, ecology, physiology, and behavior.

477 Organic Evolution Fall. 4 credits. Prerequisite: Biological Sciences 281 or permission of instructor. Recommended: Biological Sciences 260 or 360. Lecs, T R 11:15; lec or disc, R 12:20; optional sessions to be arranged. P. F. Brussard. Lectures and class discussions on organic evolution, including the origin and evolution of genes, genetic mechanisms, the properties of populations, the ways in which adaptation and specialization occur, and the resultant major patterns of organic diversity.

[478 Biology of Fishes, Laboratory Fall. 1 credit. Limited to 15 students. Prerequisite: concurrent enrollment in Biological Sciences 476. Offered alternate years. Lab, M 1:25–4:25; plus irregular hours as required for experiments and some required field trips. Staff. A laboratory and fieldwork on structure, identification, ecology, physiology, and behavior of fishes, with emphasis on local species.

479 Physical Anthropology: History and Theory Fall. 2 credits. Prerequisite: one year of introductory biology or Anthropology 114, or permission of instructor. Not offered 1982–83. Sem, W 7:30–9:30 p.m. K. A. R. Kennedy. The historical background of present-day concepts of man's evolutionary variations and adaptations in space and time is surveyed. The formation of biological anthropology as an area of scientific inquiry within the social sciences is reviewed.

[660 Field Studies in Ecology and Systematics Fall or spring. Variable credit. Prerequisites: Biological Sciences 260 or 360, a taxon-oriented course, and permission of instructor. Estimated cost of room and board (exclusive of transportation) to be announced. Not offered 1982–83. Lecs and labs to be arranged. Staff. /]
This course provides students an opportunity to learn techniques and a new biota by participating in an intensive series of field exercises. An extended field trip is scheduled either during intersession or spring break. The requirements, objectives, and other details are announced by the instructor in charge in the division's catalog supplement issued at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.

661 Environmental Biology (also ALS 661) Fall and spring. 1-3 credits each semester. Limited to 12 students. Prerequisite: permission of instructor.

Hrs to be arranged. D. Pimentel. This course uses a multidisciplinary approach to focus on complex energy-environmental problems. Each task force spends two semesters preparing a report for publication. Modeled after National Academy of Sciences reports.

662 Mathematical Ecology (also Statistics and Biometry 662) Fall. 2 credits. Prerequisites: one year of calculus and a course in statistics. Recommended: a general ecology course. S-U grades optional, with permission of instructor. Offered alternate years.

664 Seminar in Coevolution between Insects and Plants (also Entomology 664) Spring. 2 credits. Intended for seniors and graduate students. Limited to 15 students. Prerequisites: courses in entomology, ecology, and organic chemistry, and written permission of instructor. S-U grades optional. Offered alternate years.

Sem, 1 evening each week to be arranged. P. P. Feeny. Presentations and discussions by students on the evolution of patterns of interaction between plants and insects, emphasizing critical evaluation of concepts and evidence.

665 Limnology Seminar Fall. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Prerequisite: permission of instructor. Recommended: a seminar course on advanced limnological topics.

Sem and disc, M W F 9:05. B. F. Chabot and staff. A seminar course on advanced limnological topics.

666 Marine Ecology Spring. 3 credits. Prerequisite: Biological Sciences 260 or 360, or written permission of instructor. Recommended: Biological Sciences 461. S-U grades optional. Lecs, M W F 9:05. J. P. Barlow. An introduction to a biological oceanography, including adaptation of organisms to marine environments, ecosystem evolution, and organic chemistry, and written permission of instructor. S-U grades optional. Offered alternate years.

Sem to be arranged. G. E. Likens. A seminar course on advanced limnological topics.

668 Phytoplankton Ecology: An Experimental Approach Spring. 2 credits. Prerequisites: Biological Sciences 360 and Agronomy 410, or permission of instructor. S-U grades optional. Offered alternate years.

Lecs and disps to be arranged. G. L. H. Rhee. Ecological observations in nature interpreted with respect to the findings of algal culture studies. Emphasis placed on photosynthesis, nutrient limitation, temperature, irradiance, diel periodicity, and other physiological and environmental variables. The theory and use of various culture methods are also emphasized.

669 Plant Ecology Seminar Spring. 1 credit. May be repeated for credit. Suggested for students majoring in minor in plant ecology. S-U grades optional.

Sem to be arranged. P. L. Marks. Includes review of current literature, student research papers, selected topics of interest to participants.

670 Graduate Seminar in Vertebrate Biology Fall or spring. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional.

Sem to be arranged. Vertebrate biology staff. Seminar presentations and discussions by students on areas of current research in vertebrate biology. Topics vary from semester to semester.

674 Principles of Systematics (also Entomology 674) Spring. 4 credits. Limited to 15 students. Prerequisite: permission of instructor. Recommended: an introductory biological systematics course.

Lecs and labs, M W F 1:25–4:25; disc to be arranged. C. D. Wheeler and staff. An introduction to modern theory and methods of systematic biology. Lectures on the historical development of the science, and the classification, species concepts, systematic orders and families, and the functional properties of ecosystems, from simple systems to the biosphere as a whole.

767 Population Biology of Health and Disease (Veterinary Medicine 338) Spring. 3 or 4 credits (4 credits with term paper). Prerequisite: Biological Sciences 360 or equivalent, or written permission of instructor. Offered alternate years.

Lecs, T R 10:10–12:05. J. H. Whitlock and staff. Analysis of problems of the diseases of humans and animals. Examples are drawn from the whole spectrum of parasites and diseases of both plants and animals. These structures and functions are examined as adaptive phenomena of parasitology, sociological, and economic points of view. In the demonstrations, specific diseases or symbioses are presented for discussion either through the medium of motion pictures or by specialists (such as epidemiologists, virologists, plant nematologists, and insect pathologists) from the Cornell staff.

Genetics and Development

281 Genetics Fall or spring. 3 credits. Not open to freshmen or junior biology majors. Enrollment may be limited to 200 students. Prerequisite: one year of introductory biology or equivalent. Students who have taken Biological Sciences 282 may register only with written permission of instructor. No admittance after first week of class. Lecs. T R 10:10-12:05; Lab. M T W or F 2:30-4:25; additional hours to be arranged. Lab sections may also be scheduled T or R 6:9:55, W or F 10:10-12:05, F 2:30-4:25, or S 10:10-12:05 if enrollment requires it. Students do not choose lab sections during course enrollment; lab assignments are made during first day of class. Staff. A general study of the fundamental principles of genetics in eucaryotes and procaryotes. Discussions of gene transmission, gene action and interaction, gene linkage and recombination, gene structure, gene and chromosome mutations, genetic aspects of differentiation, genes in populations, breeding systems, and extrachromosomal inheritance. In the laboratory, students perform experiments with microorganisms and conduct an independent study of inheritance in Drosophila.

282 Human Genetics Spring, 3 credits. Each disc section limited to 25 students. Prerequisite: one year of introductory biology or equivalent. Students who have taken Biological Sciences 281 may register only with written permission of instructor. Lecs. M W F 10:10, disc. R or F 10:10 or 11:15 (1 disc section R 10:10, 2 sections R 11:15, 4 sections F 10:10, and 1 section F 11:15). A. M. Srb. An introduction to biological heredity through consideration of human genetics. Advances in the science of genetics are having a profound effect on our understanding of ourselves and on our potential for influencing our present and future well-being. The course is intended primarily to contribute to the student's general education in these matters. Although certain aspects of genetics are considered with some rigor, the course is not designed to serve as a prerequisite to advanced courses in genetics.

389 Embryology Fall; also offered during the 6-week summer session in odd-numbered years. 4 credits. Prerequisite: one year of introductory biology. Offered alternate years. Not offered 1982-83. Lecs. M W 11:15, labs. M W 2:4-2:45. A. W. Blackler. A course in the embryonic development of animals, with emphasis directed to the vertebrate groups and to the comparative aspects of morphogenesis and function. Invertebrate material is used on occasion to illustrate embryological principles. The laboratory has a strong morphogenetic theme, and stresses the comparative aspects of developmental anatomy.

480 Seminar in Developmental Biology Spring, weeks 1-7. 1 credit. May be repeated for credit. Limited to upperclass students. S-U grades only. Not offered 1982-83. Sem to be arranged. Staff (coordinator: A. W. Blackler).

481 Population Genetics Spring. 3 credits. Prerequisite: Biological Sciences 281 or equivalent. Lecs. M W 10:10. Staff. A study of factors that influence the genetic structure of Mendelian populations and that are involved in race formation and speciation.

483 Molecular Aspects of Development Spring. 3 credits. Prerequisite: Biological Sciences 330 or 331. Offered alternate years. Lecs. M W F 11:15. Staff.
An examination of the molecular biology of developing systems. Emphasis on understanding the mechanisms involved in gene expression in developing systems, both at the transcription and translation levels. Specific topics include regulation of RNA synthesis and use, nucleo-cytoplasmic interactions, and induction of cell-specific protein synthesis. Examples are discussed from both higher and lower eucaryotic systems.

484 Molecular Evolution Spring. 3 credits. Prerequisites: Biological Sciences 281 and organic chemistry. Offered alternate years. Not offered 1982-83. Lecs. T R 11:15. R. J. MacIntyre.
An analysis of evolutionary changes in proteins and nucleic acids, and gene-enzyme variability in natural populations. The role of natural selection in effecting these changes and maintaining genetic variation at the molecular level is critically examined. Theories on the evolution of the genetic code and the construction of phylogenetic trees from biochemical data are discussed.

485 Microbial Genetics, Lectures Fall. 2 credits. Limited to upperclass and graduate students. Prerequisites: Biological Sciences 281 and Microbiology 290, or written permission of instructor. S-U grades optional, with permission of instructor. Lab. W 7:30-9:25 p.m. S. A. Zahler. Genetics of bacteria and their viruses, with emphasis on the mechanisms of genetic phenomena.

486 Immunogenetics (also Animal Science 486) Spring. 4 credits. Enrollment limited. Prerequisites: Biological Sciences 281 or Animal Science 221, and a course in immunology or permission of instructor. Lecs. M W F 10:10, disc. W or R 12:20. R. R. Dietert.
The genetic control of a variety of cellular antigens and their use in understanding biological and immunological systems. The genetics of antibody diversity, antigen recognition, immune response, transplantation, and disease resistance are discussed.

487 Microbial Genetics, Laboratory Fall. 3 credits. Primarily for upperclass students. Limited to 20 students. Prerequisites: concurrent or previous enrollment in Biological Sciences 281 or Microbiology 291 or equivalent, and written permission of instructor. Lab. T 1:25-4:25; additional hours to be arranged. S. A. Zahler. Problem solving in bacterial genetics.

780 Current Topics in Genetics Fall or spring. 2 credits. May be repeated for credit. Primarily for graduate students, with preference given to majors in the Field of Genetics; written permission of instructor required for undergraduates. Limited to 20 students. No auditors. S-U grades optional, with permission of instructor. Staff. A seminar course with critical presentation and discussion by students of original research papers in a particular area of current interest. Content of the course and staff direction vary from term to term and are announced a semester in advance.

Neurobiology and Behavior

322 Hormones and Behavior (also Psychology 322) Spring. 3 or 4 credits (4 credits with discussion and term paper). Primarily for upperclass students; permission of instructor required for sophomores. Prerequisites: one year of introductory biology, and Biological Sciences 221 or a course in psychology. S-U grades optional. Lecs. T R 10:10-11:30; disc to be arranged. E. A. R. Hogan. The relationship between endocrine and neuroendocrine systems and the behavior of animals, including humans. Major emphasis is on sexual, parental, and aggressive behavior.

324 Biopsychology Laboratory (also Psychology 324) Spring. 3 credits. Limited to 25 upperclass students. Prerequisites: laboratory experience in biology or psychology, Biological Sciences 221 or Psychology 123, and permission of instructor. S-U grades optional. Labs. T R 12:45-1:45. Staff. Experiments designed to provide research experience in animal behavior (including learning) and its neural and hormonal mechanisms. A variety of techniques, species, and behavior patterns are included.
396 Introduction to Sensory Systems (also Psychology 396) Spring. 3 credits. No auditors. Prerequisites: an introductory course in biology or biopsychology, and a second course in neurobiology or behavior or perception or cognition or biopsychology; students are expected to have elementary knowledge of perception, neurophysiology, behavior, and chemistry. S-U grades optional. Lecs., M W F 9:05. B. P. Halpern.

Students read, analyze, and discuss in class difficult original literature dealing with both those characteristics of sensory systems that are common across living organisms and those sensory properties that represent adaptations of animals to particular habitats or environments. The principles and limitations of methods used to examine sensory systems are considered. General characteristics of sensory systems and auditory, visual, and somesthetic systems are to be covered in spring 1983. One seminar paper is required from each graduate student interested in field research on animal behavior. Lecture-discussion areas include design of field experiments, hypothesis testing, data analysis, and current topics in sensory ecology and behavior. Laboratory field sessions acquaint students with observation techniques; research methods; and the behavioral biology of plants, insects, fishes, amphibians, birds, and mammals of upstate New York.

420 Seminar in Neurobiology and Behavior Fall or spring. Variable credit. May be repeated for credit. Primarily for undergraduates. S-U grades optional. Sem to be arranged. Organizational meetings first week. W. C. Dilger.

421 Comparative Vertebrate Ethology Fall, also offered during the 3-week summer session. 3 credits. Prerequisites: one course each in introductory biology for majors, Biological Sciences 221, and permission of instructor. S-U grades optional. Lecs., T R 9:05; lab to be arranged. Independent research project (e.g., localization of objects in space by sound, color vision, and thermoreception) is selected for special emphasis. The course is taught in the Socratic method, in which the Instructor questions the student. At the level of Neurons without Impulses, edited by Roberts and Bush, and Recognition of Complex Acoustic Signals, edited by Bullock.

423 Animal Communication Fall. 4 credits. Limited to 32 students. Prerequisites: Biological Sciences 221 and either Physics 102 or 208. Offered alternate years. Not offered 1982-83. Lecs., T R 10:10; lab, T or R 1:25-4:25; other meetings to be arranged. R. R. Capranica, R. R. Halpern. The functional aspects of biological signals, their physical properties, and the physiological mechanisms underlying their generation and reception. Lectures examine in detail selected biological communication problems from each of the known sensory modalities. Discussion covers signal analysis, transmission properties, and the limitations of each form of communication. Laboratory includes behavioral observations under both field and captive conditions, and individual experience with the techniques of signal recording and analysis.

427 Vertebrate Social Behavior Fall. 3 credits. Prerequisites: Biological Sciences 221, and either Biological Sciences 260 or 360. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1982-83. Lecs., M W F 4:10; disc to be arranged. S. T. Emlen.

The study of the adaptive bases of social behavior is examined. The first half of the course deals with ecological sociobiology, the effects of ecological constraints on resource dispersion and predation pressures on the structure of animal societies; the adaptiveness of territoriality and coloniality; the evolution of communal social systems; and the functioning of monogamous, polygamous, and promiscuous mating systems. The second half of the course emphasizes genetic sociobiology: the predictions from individual and kin-selection theory for various types of social interactions, e.g., female choice during male selection; the role of the male in parental care; parent-offspring conflict; behavioral nepotism, and the evolution of phenotypic altruism. Finally, the course examines the impact of the emerging field of sociobiology on its sister biological and social sciences.

491 Principles of Neurobiology, Laboratory (also Psychology 491) Fall. 4 credits. Limited to 24 students. Prerequisite: Biological Sciences 396 or 496, or written permission of instructor. Labs, M W or T R 12:20-4:22; additional hours to be arranged. B. R. Land.

Laboratory practice with neurobiological preparations and experiments, designed to teach the techniques, experimental designs, and research strategies used to study biophysical and biochemical properties of excitable membranes, sensory receptors, and the central nervous system mechanisms of brain activity, as well as the characteristic composition and metabolism of neural tissue. Theoretical content at the level of Adiley's The Physiology of Excitable Cells.
627 Quantitative Approaches to Animal Behavior Spring. 3 credits. Primarily for graduate students; written permission of instructor required for undergraduates. Enrollment limited. Prerequisite: Biological Sciences 221 or equivalent. S-U grades optional, with permission of instructor. Offered alternate years. T R 10:10–11:30. G. Hausfater. This course emphasizes a quantitative approach to research on animal behavior. Lectures, discussions, and readings focus on the formulation of precise, testable hypotheses for behavior research, especially mathematical models, and on the use of systematic sampling techniques in observational research. Basic probability distributions are introduced and used in the analysis of behavior sequences and interaction patterns. Stochastic models of behavior are also discussed.

692 (691) Developmental Neurobiology Spring. 2 credits. Prerequisite: Biological Sciences 496 or permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. T R 9:05; discs, 2–3 hours each week to be arranged. R. R. Campenot. The embryologic development of the nervous system is considered in the light of both historical and current research. Emphasis is on cellular issues, that is, how do nerve cells differentiate both morphologically and biochemically, and how do they interact to produce a properly wired nervous system?

695 Physiological Optics Fall. 3 credits. Limited to 24 students. Recommended: courses in elementary biology or psychology, and physics, and courses in the optical track (see below). Offered alternate years. Not offered 1982–83. T R 9:05; lab, R 1:25–4:25. H. C. Howland. The course is primarily for upperclass students who intend to pursue research or clinical clinical work in vision. Topics include geometrical optics, clinical refraction, measurement of MTF and contrast sensitivity, and the vegetative physiology of the eye relevant to optical quality of the optical image.

Laboratory work is divided into three tracks: (1) Clinical track for students intending to work in optometry or medicine, (2) Psychophysical track for students intending to conduct research in human or animal vision, and (3) Engineering track for students intending to use optical techniques for which the human eye is a component in the system. Grades are based on the student's accomplishments within the chosen track, in view of the background brought to it.

698 Neuroethology Spring 4 credits. Prerequisites: Biological Sciences 221 and 496, or their equivalents, or permission of instructor. Offered alternate years. Not offered 1982–83. T R 9:05; discs, 2–3 hours each week to be arranged. J. M. Camhi. The mechanisms through which the natural behavior of animals is produced by the nervous system. Topics include principles of ethology, visual worlds and behavior, auditory worlds and behavior, principles of feature detection, central commands for movement, organization of rhythmic behaviors, feedback control of behavior, and plasticity in the nervous system and behavior. Discussions cover these topics in greater detail. To prepare for the dissections, students are required to read several research papers each week.

720 Seminar: In Advanced Topics in Neurobiology and Behavior Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Sem to be arranged. Staff and students.

Designed to provide several study groups each semester on specialized topics. A group may meet for whatever time is adequate to enable coverage of the selected topics. Ordinarily, topics are selected and circulated during the preceding semester. Suggestions for topics should be submitted by faculty or students to the chairperson of the Section of Neurobiology and Behavior.

724 (723) Graduate Seminar in Vertebrate Social Behavior Spring. 2 credits. May be repeated for credit. Enrollment limited. Prerequisites: Biological Sciences 221, 360, and 477, or their equivalents, and written permission of instructor. S-U grades only. Sem to be arranged. S. T. Emlen, G. C. Eickworth, G. Hausfater, R. W. Sherman. Intended as a graduate-level follow-up to Biological Sciences 427 and 429. An advanced, participatory seminar dealing with various aspects of the evolution of social organization in vertebrates.

Courses in Marine Sciences

Although there is no concentration in marine sciences offered to Cornell undergraduates, there is extensive opportunity to prepare for more advanced study at the graduate level. Students interested in the marine sciences may enroll in courses offered at Cornell's Shoals Marine Laboratory (SML), a seasonal field station located on ninety-five-acre Appledore Island, six miles off the Maine and New Hampshire coasts. The Ithaca campus functions of the Shoals Marine Laboratory are centered in the Cornell Marine Programs Office in G14 Stimson Hall. The office serves as an advising center for students interested in the marine sciences, maintains a browsing library with updated information on graduate study and career opportunities as well as on marine programs at other institutions, and administers the SEA Semester, a 17-credit program offered in cooperation with the Sea Education Association.

The following marine sciences courses are currently administered by the Cornell Marine Programs Office.

312 Anatomy and Behavior of the Gull Summer. 2 credits. Prerequisite: one year of introductory college biology. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and application, consult the SML office, Stimson G14. Estimated cost (includes tuition, room and board, and ferry transportation), $1,175.

Daily lees, labs, and fieldwork for 2 weeks. Team-taught by a diving-safety officer, a faculty member, and graduate students.

For competent divers only. Covers special problems of underwater research, including random sampling, use of dive tables, underwater instrumentation, special diving equipment, photographic techniques, integration with boat and shore facilities, and emergency procedures. Students are required to conduct a transect study on both soft and hard substrates.

365–370 SEA Semester In cooperation with the Sea Education Association (SEA), the Cornell Marine Programs Office offers a semester-length sequence of courses designed to provide college undergraduates with a thorough academic, scientific, and practical understanding of the sea. This sequence is repeated approximately once every two months throughout the year. Students spend the first half of SEA Semester (the six-week shore component) in Woods Hole, Massachusetts, receiving instruction in oceanography, marine biology, and marine science. The second half of SEA Semester (the six-week sea component) is spent at sea aboard R/V Western Star. Applicants are interviewed in Ithaca before admission. Enrollment is open to men and women judged capable of benefiting from SEA Semester; no specific prior training or study is required. Cornell students enrolled in the SEA Semester must take the SEA Semester.

For more details and application, consult the Cornell Marine Programs Office, G14 Stimson Hall. Program costs to be paid in place of regular Cornell tuition and fees: tuition for entire 17-credit SEA Semester, about $4,000; room and board for sea component (six weeks) only, about $800.
Instructors for the SEA Semester include faculty of the SEA, the Woods Hole Oceanographic Institution, and others.

Shore Component (six weeks)

366 SEA Introduction to Oceanography 3 credits. Prerequisites: laboratory course in physical or biological science, and concurrent enrollment in Biological Sciences 367 and 368. A survey of the characteristics and processes of the global ocean. Oceanographic concepts are introduced and developed from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent Westward cruise. Guest lecturers from the Woods Hole research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

367 SEA Introduction to Maritime Studies 3 credits. Prerequisite: concurrent enrollment in Biological Sciences 366 and 368. An interdisciplinary consideration of our relationship with the marine environment. Considers elements of maritime history and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

368 SEA Introduction to Nautical Science 3 credits. Prerequisites: college algebra or equivalent, and concurrent enrollment in Biological Sciences 366 and 368. An introduction to the technologies of operation at sea. The concepts of navigation (plotting, celestial, and electronic), naval architecture, ship construction, marine engineering systems, and the physical and electronic), naval architecture, ship construction, marine engineering systems, and the physical and functioning of marine plants and animals, with emphasis on selected algal and invertebrate examples from the Gulf of Maine. Topics covered include photosynthesis in the marine environment; respiration in intertidal organisms; carbohydrates, proteins, and lipids as nutrients in the sea; accretion and tolerances, and biological responses to competition and grazing. Field and laboratory exercises explore principles and procedures used to characterize the physical, chemical, and biotic environments of intertidal and shallow subtidal organisms, including determination of temperature, light, salinity, oxygen and nutrient levels, and in vivo functional analyses of metabolic phenomena.

441 Field Geology Summer. 4 credits. Prerequisite: Biological Sciences 364 or general familiarity with marine geology. S-U grades optional. A special 3-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and application, consult the SML office, Stimson G14. Estimated cost (includes tuition, room, and board, and ferry transportation), $910. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.

447 Chemical Oceanography in the Field Summer. 4 credits. Prerequisites: one year of introductory college chemistry and an introductory marine science course at the college level. S-U grades optional. A special 3-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and application, consult the SML office, Stimson G14. Estimated cost (includes tuition, room, and board, and ferry transportation), $925. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.

473 Topics in Marine Vertebrates Summer. 4 credits. Prerequisite: Biological Sciences 364 or 274 or a course in vertebrate biology. S-U grades optional. A special 3-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and application, consult the SML office, Stimson G14. Estimated cost (includes tuition, room, and board, and ferry transportation), $925. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.

482 Invertebrate Embryology Summer. 4 credits. Prerequisite: Biological Sciences 364 or a course in invertebrate zoology, S-U grades optional. A special 3-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and application, consult the SML office, Stimson G14. Estimated cost (includes tuition, room, and board, and ferry transportation), $910. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.

483 Topics in Vertebrate Embryology A laboratory-oriented course emphasizing processes of fertilization and early development through the metamorphosis of larval sea species selected from an extensive variety of local marine invertebrates. Practical experience in the laboratory and design and execution of basic experiments on eggs and embryos. Lectures complement laboratory work through phylogenetic examination of classical vertebrate embryology and modern experimental developmental biology.

Coastal and Oceanic Law and Policy (Natural Resources 306) Summer. 1 credit. A special 1-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and application, consult the SML office, Stimson G14. Estimated cost (includes tuition, room and board, and ferry transportation), $315. Daily lecs and discs for 1 week. SML faculty.

Geology of Our Coast: Terrestrial and Maritime Aspects (Geological Sciences 201) Summer. 1 credit. Prerequisite: an introductory course in geology or permission of instructor. A special 1-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and application, consult the SML office, Stimson G14. Estimated cost (includes tuition, room and board, and ferry transportation), $340. Daily lecs, labs, and fieldwork for 1 week. SML faculty.

With “the New England coast” defined as beginning at the -200-meter isobath and proceeding westward, this course examines specific geological events and processes important in shaping the area’s bedrock and surficial sediments. Petrology, geophysics, and the Pleistocene geology of the region are investigated. Consideration of the geological history of New England within the plate tectonic model is emphasized. Examination of insular geology is used to integrate micro-, meso-, and macroscale geological evolution of continental margins in general. Marine geology is approached through basic geophysical exploration and bottom-sediment collection followed by data analysis and interpretation. The course introduces the students to the geologic history of the coastal research vessel as an integral part of the course.

Introduction to Marine Pollution and Its Control Summer 2 credits. Prerequisite: Biological Sciences 364 or permission of instructor. A special 2-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more
Courses in Biophysics

Biophysics is an interdisciplinary undergraduate and graduate program. A special program for undergraduate students interested in biophysics is offered as an independent concentration in the biological sciences major (see option 8 under Concentration Areas and Requirements). Information on this independent option is available in the Office for Academic Affairs, 118 Stimson Hall. Students interested in graduate work in biophysics should inquire at the Program in Biophysics office, 210 Clark Hall.

The following courses are available for students interested in biophysics:

- **Animal Communication (Biological Sciences 423)**
- **Bioenergetics and Membranes (Biological Sciences 632)**
- **Biomechanical Systems—Analysis and Design**
  (Engineering M&E 655)
- **Chemistry of Nucleic Acids (Chemistry 677)**
- **Electron Microscopy for Biologists (Biological Sciences 600, 602, 603, 604, 606, 608)**
- **Enzyme Catalysis and Regulation (Chemistry 672)**
- **Introduction to Biophysics (Engineering A&EP 206)**
- **Membrane Biophysics (Engineering A&EP 615)**
- **Modern Physical Methods in Macromolecular Structure Determination (Engineering A&EP 616)**
- **Neuroelectric Systems (Biological Sciences 422 and Electrical Engineering 422)**
- **Photosynthesis (Biological Sciences 445 and Engineering A&EP 601)**
- **Physical Chemistry of Proteins (Chemistry 686)**
- **Physics of Macromolecules (Physics 464)**
- **Principles of Neurobiology, Laboratory (Biological Sciences 491 and Psychology 491)**
- **Protein Structure and Function (Biological Sciences 631)**
- **Special Topics In Biophysical and Bioorganic Chemistry (Chemistry 782)**
- **Special Topics In Biophysics (Engineering A&EP 614)**
- **Transport of Solutes and Water In Plants**
  (Biological Sciences 649)
- **Vision**
  (Biological Sciences 395 and Engineering A&EP 611)

Faculty Roster

**New York State College of Agriculture and Life Sciences**

Adler, Kraig K., Ph.D., U. of Michigan. Prof., Neurobiology and Behavior

Berger, Robert F., Ph.D., U. of California at Berkeley. Prof., Biochemistry, Molecular and Cell Biology*

Barlow, John P., Ph.D., Harvard U. Assoc. Prof., Ecology and Systematics

Bates, David M., Ph.D., U. of California at Los Angeles. Prof., Bailey Hortorum

Beyenbach, Klaus W., Ph.D., Washington State U. Asst. Prof., Physiology/Veterinary Physiology*

Brus, Peter J., Ph.D., U. of Illinois. Prof., Genetics and Development*

Brussard, Peter F., Ph.D., Stanford U. Assoc. Prof., Ecology and Systematics*

Cade, Thomas J., Ph.D., U. of California at Los Angeles. Prof., Environmental Science*

Calvo, Joseph M., Ph.D., Washington State U. Prof., Biochemistry, Molecular and Cell Biology

Camhi, Jeffrey M., Ph.D., Harvard U. Prof., Fisheries Management

Clayton, Roderick K., Ph.D., California Inst. of Technology. Liberty Hyde Bailey Professor of Plant Biology, Plant Biology/Applied and Engineering Physiology

Davies, Peter J., Ph.D., U. of Reading (England). Assoc. Prof., Plant Biology

Edelstein, Stuart J., Ph.D., U. of California at Berkeley. Biochemistry, Molecular and Cell Biology*

Eisner, Thomas, Ph.D., Harvard U. Jacob Gould Schurman Professor, Neurobiology and Behavior

Fink, Gerald R., Ph.D., Yale U. Prof., Biochemistry, Molecular and Cell Biology/Genetics and Development

Fox, Thomas D., Ph.D., Harvard U. Assoc. Prof., Genetics and Development

Gibson, Jane, Ph.D., U. of London (England). Prof., Biochemistry, Molecular and Cell Biology

Hopkin, Ronald C., Ph.D., Stanford U. Stanly U. Asst. Prof., Neurobiology and Behavioral Neurochemistry

Hausfater, Glenn, Ph.D., U. of Chicago. Assoc. Prof., Neurobiology and Behavior

Hopkins, Carl D., Ph.D., Rockefeller U. Prof., Neurobiology and Behavior*

Ingram, John W., Jr., Ph.D., U. of California at Berkeley. Assoc. Prof., Bailey Hortorum

Jagendorf, Andre T., Ph.D., Yale U. Liberty Hyde Bailey Professor of Plant Biology, Plant Science

Keller, Elizabeth B., Ph.D., Cornell U. Assoc. Prof., Biochemistry, Molecular and Cell Biology

Kingsbury, John M., Ph.D., Harvard U. Prof., Plant Biology/Climatology

Lis, John T., Ph.D., Brandeis U. Asst. Prof., Biochemistry, Molecular and Cell Biology

Loew, Ellis R., Ph.D., U. of California at Los Angeles. Asst. Prof., Physiology/Veterinary Physiology*

MacDonald, Russell E., Ph.D., U. of Michigan. Prof., Biochemistry, Molecular and Cell Biology

MacIntyre, Ross J., Ph.D., Johns Hopkins U. Prof., Genetics and Development

Marks, Peter L., Ph.D., Yale U. Assoc. Prof., Ecology and Systematics

Moffat, J. Keith, Ph.D., Cambridge U. (England). Assoc. Prof., Biochemistry, Molecular and Cell Biology

Niklas, Karl J., Ph.D., U. of Illinois. Assoc. Prof., Plant Biology

Oeller, Dominick J., Jr., Ph.D., U. of California at Davis. Prof., Plant Biology

Parthasarathy, Mandyav N., Ph.D., Cornell U. Assoc. Prof., Plant Biology*

Potting, F., Harvey, S., U. of California at Los Angeles. Assoc. Prof., Ecology and Systematics/Physiology

Roberts, Jeffrey W., Ph.D., Harvard U. Assoc. Prof., Biochemistry, Molecular and Cell Biology

Root, Richard B., Ph.D., U. of California at Berkeley. Prof., Ecology and Systematics/Entomology

Spanswick, Roger M., Ph.D., U. of Edinburgh (Scotland). Prof., Plant Biology

Srb, Adrian M., Ph.D., Stanford U. Jacob Gould Schurman Professor, Genetics and Development*

Stinson, Harry T., Jr., Ph.D., Indiana U. Prof., Genetics and Development

Tye, E. K., Massachusetts Inst. of Technology. Asst. Prof., Biochemistry, Molecular and Cell Biology

Uhl, Charles G., Ph.D., Cornell U. Assoc. Prof., Plant Biology

Uhl, Natalie W., Ph.D., Cornell U. Assoc. Prof., Bailey Hortorum
College of Arts and Sciences

Blackler, Antonie W., Ph.D., U. of London (England)

Prof., Development and Genetics

Bretschner, Anthony, Ph.D., Leeds (England)
Asst. Prof., Biochemistry, Molecular and Cell Biology

Campenot, Robert B., Ph.D., Massachusetts Inst. of Technology, Asst. Prof., Neurobiology and Behavior/Capranica, Robert R., Sc.D., Massachusetts Inst. of Technology, Prof., Neurobiology and Behavior/Electrical Engineering

Chabot, Brian F., Ph.D., Duke U. Assoc. Prof., Ecology and Systematics

Dilger, William C., Ph.D., Cornell U. Assoc. Prof., Neurobiology and Behavior

Ecklund, P. Richard, Ph.D., Oregon State U. Lecturer, Neurobiology and Behavior

Ferger, Martha F., Ph.D., Cornell U. Medical College. Lecturer, Biochemistry, Molecular and Cell Biology

Gleason, Jon C., Ph.D., Cornell U. Sr. Lecturer, Neurobiology and Behavior

Griffiths, Joan M., Ph.D., Cornell U. Lecturer, Biochemistry, Molecular and Cell Biology

Hesser, John B., Ph.D., Cornell U. Lecturer, Ecology and Systematics

Hinkle, Maaja V., Ph.D., New York U. Medical School. Lecturer, Biochemistry, Molecular and Cell Biology

McFadden, Carol H., Ph.D., Cornell U. Lecturer, Physiology

Reiss, H. Carol, M.S., Cornell U. Lecturer, Plant Biology

Savitzky, Alan H., Ph.D., U. of Kansas. Lecturer, Ecology and Systematics

Wilkinson, Maria L., Ph.D., U. of Chile. Lecturer, Biochemistry, Molecular and Cell Biology

Joint Appointees

Alexander, Martin, Liberty Hyde Bailey Professor of Soil Science, Agronomy/Ecology and Systematics

Bloom, Stephen E., Assoc. Prof., Poultry and Avian Sciences/Biological Sciences

Borror, Arthur C., Adjunct Prof., U. of New Hampshire/Biological Sciences

Brown, William L., Jr., Prof., Entomology/Ecology and Systematics

Butler, Walter R., Asst. Prof., Animal Science/Physiology

Currie, W Bruce, Assoc. Prof., Animal Science/Physiology

Delwiche, Eugene A., Prof., Microbiology/Biological Sciences

Foote, Robert H., Jacob Gould Schurman Professor, Animal Science/Physiology

Kor, Richard P., Prof., Plant Pathology/Bailey Hortorium

LaRue, Thomas A., Adjunct Prof., Boyce Thompson Institute/Plant Biology

Leonard, A. Carl, Adjunct Prof., Boyce Thompson Institute/Plant Biology

Madison, James T., Adjunct Asst. Prof., USDA Science and Education Administration/Biological Sciences

Novak, Joseph D., Prof., Education/Biological Sciences

Pimentel, David, Prof., Entomology/Ecology and Systematics

Richmond, Milo E., Assoc. Prof., USDA Fish and Wildlife Service/Natural Resources/Ecology and Systematics

Szydlak, Aladar A., Adjunct Asst. Prof., Boyce Thompson Institute/Biological Sciences

Thompson, John F., Adjunct Prof., USDA Science and Education Administration/Plant Biology

vanDemark, Paul J., Prof., Microbiology/Biological Sciences

van Tienhoven, Art, Prof., Poultry and Avian Sciences/Physiology

Walcott, Charles, Prof., Lab of Ornithology/Neurobiology and Behavior

College of Arts and Sciences

Other Teaching Personnel

Eberhard, Carolyn, Ph.D., Boston U. Sr. Lecturer, Plant Biology

Schafer, William R., Ph.D., Cornell U. Lecturer, Ecology and Systematics

Joint Appointees

Hammes, Gordon G., Horace White Professor of Chemistry and Biochemistry, Chemistry/Chemistry

Provine, William B., Assoc. Prof., History/Biological Sciences

Rhee, G-Yull, Adjunct Assoc. Prof., New York State Department of Health/Ecology and Systematics

New York State College of Veterinary Medicine

Carradino, Robert A., Ph.D., Cornell U. Assoc. Prof., Physiology/Veterinary Physiology

Gasteger, Edgar L., Ph.D. U. of Minnesota. Prof., Physiology/Veterinary Physiology

Hansel, William, Ph.D., Cornell U. Liberty Hyde Bailey Professor of Animal Physiology/Veterinary Physiology Animal Science+

Langemann, Frederick W., Ph.D., U. of Wisconsin at Madison. Prof., Physiology/Veterinary Physiology

Risch, Stephen J., Ph.D., Cornell U. Prof., Physiology/Veterinary Physiology

Savitzky, Alan H., Ph.D., U. of Kansas. Lecturer, Ecology and Systematics

Wilkinson, Maria L., Ph.D., U. of Chile. Lecturer, Neurobiology and Behavior/Electrical Engineering

Levin, Simon A., Ph.D., U. of Maryland at College Park. Prof., Ecology and Systematics

Likens, Gene E., Ph.D., U. of Wisconsin at Madison. Prof., Ecology and Systematics

McCary, Richard E., Ph.D., Johns Hopkins U. Prof., Biochemistry, Molecular and Cell Biology

McFarland, William N., Ph.D., U. of California at Los Angeles. Prof., Ecology and Systematics

Parker, Pamela J., Ph.D., Yale U. Asst. Prof., Ecology and Systematics

Podleski, Thomas R., Ph.D., Columbia U. Assoc. Prof., Neurobiology and Behavior

Rabinowicz, Deborah, Ph.D., U. of Chicago. Assoc. Prof., Ecology and Systematics

Racker, Efraim, M.D., U. of Vienna (Austria). Albert Einstein Professor of Biochemistry, Biochemistry, Molecular and Cell Biology

Salpeter, Miriam M., Ph.D., Cornell U. Prof., Neurobiology and Behavior/Appplied and Engineering Physics

Sherman, Paul W., Ph.D., U. of Michigan. Asst. Prof., Neurobiology and Behavior

Torgerson, Robert, Ph.D., Carleton U. (Canada). Asst. Prof., Plant Biology

Wilson, David B., Ph.D., Stanford U. Assoc. Prof., Biochemistry, Molecular and Cell Biology

Wimsatt, William A., Ph.D., Cornell U. Prof., Genetics and Development/Physiology

Wy, Ray, Ph.D., U. of Pennsylvania. Prof., Biochemistry, Molecular and Cell Biology

### Graduate School of Business and Public Administration

**Administration**

David A. Thomas, dean
Harold Bierman, Jr., associate dean
Edward T. Lewis, associate dean for external affairs
Robert H. Smiley, associate dean for academic affairs
James W. Schmottle, assistant dean for admissions and student affairs
Albert E. Brill, director of placement
JoAnne F. Kloppenburg, director of financial aid and registrar
Ann L. Calkins, director of external affairs
Harriet A. Peters, assistant director of placement
Caroline Violette, director of student activities and special projects

The Graduate School of Business and Public Administration prepares men and women for managerial careers in private business, public service, and health care. The school offers course work in many disciplines to provide potential business, public, and health managers with an understanding of the complexities of the professional world in which they will operate and of the organizations of which they will become a part.

A bachelor's degree or its equivalent is required for admission to the two-year program leading to the Master of Business Administration [M.B.A.], Master of Public Administration [M.P.A.], or Master of Professional Studies (Hospital and Health Services Administration) [M.P.S. (H.H.S.A.)]. Students may also earn an M.B.A. with a concentration in public or health administration. Nearly half of the students have a background in arts and sciences, and one-quarter in engineering. One-quarter of the students begin their graduate training immediately after receiving their bachelor's degrees and the remaining three-quarters following work experience.

Combined degree programs allow highly qualified Cornell students to register in the school during their senior year, thereby earning a master's degree in less than the usual time.

The doctoral program, administered through the Graduate School of Business and Public Administration, provides an advanced and comprehensive education in administration, primarily for those who seek careers in teaching and research.

More-detailed information about these programs is available in the Announcement of the Graduate School of Business and Public Administration, obtainable from the Assistant Dean for Admissions and Student Affairs, Graduate School of Business and Public Administration, Malott Hall.

Faculty Roster

Battistella, Roger M., Ph.D., U. of Michigan. Prof., Medical Care Organization
Begun, James W, Ph.D., U. of North Carolina. Asst. Prof., Health Care Administration
Bent, Frederick T., Ph.D., U. of Chicago. Assoc. Prof., Public Administration
Bierman, Harold, Jr., Ph.D., U. of Michigan. Nicholas H. Noyes Professor of Business Administration, Business Administration
Brooks, Earl, M.S., American U. Prof., Administration
Bugiari, Joseph B., J.D., Cornell U. Prof., Agricultural and Business Law
Chan, Louis, Ph.D., Rochester U. Asst. Prof., Finance
Dyckman, Thomas R., Ph.D., U. of Michigan. Ann Whitney Olin Professor of Accounting, Accounting
Eastough, Steven R., Sc.D., Johns Hopkins U. Asst. Prof., Health Economics and Hospital Finance
Elliott, John A., Ph.D., Cornell U. Asst. Prof., Accounting
Flash, Edward S., Jr., Ph.D., Cornell U. Assoc. Prof., Public Administration
Gautschi, David A., Ph.D., U. of California at Berkeley, Asst. Prof., Marketing
Hass, Jerome E., Ph.D., Carnegie-Mellon U. Prof., Managerial Economics and Finance
Hilton, Ronald W, Ph.D., Ohio State U. Assoc. Prof., Accounting
Jarrow, Robert A., Ph.D., Massachusetts Inst. of Technology Asst. Prof., Finance
Krackhardt, David, Ph.D., U. of California-Irvine. Asst Prof., Organizational Behavior
Lind, Robert C., Ph.D., Stanford U. Prof, Economics and Public Administration
McClellan, Alan K., Ph.D., Stanford U. Assoc. Prof., Managerial Economics
McClain, John O., Ph.D., Yale U. Prof., Quantitative Analysis
Morse, Dale, Ph.D., Stanford U. Asst. Prof., Accounting
O'Hara, Maureen, Ph.D., Northwestern U. Asst. Prof., Finance
Oldfield, George S., Ph.D., U. of Pennsylvania. Assoc. Prof., Economics and Finance
Ormacenoglu, Levant, Ph.D., Northwestern U. Asst. Prof., Computer Management
Rao, Vithala R., Ph.D., U. of Pennsylvania. Emerson Electric Company Professor of Marketing, Marketing/Quantitative Analysis
Sabavala, Danus J., Ph.D., Columbia U. Asst. Prof., Marketing and Management Science
Smith, Seymour, Ph.D., U. of Chicago. Nicholas H. Noyes Professor of Economics and Finance, Managerial Economics
Smiley, Robert H., Ph.D., Stanford U. Assoc. Prof., Economics and Public Policy
Swenina, Robert J., Ph.D., U. of Illinois. Prof., Accounting
Thomas, David A., Ph.D., U. of Michigan. Prof., Accounting
Thomas, L. Joseph, Ph.D., Yale U. Prof., Production and Quantitative Analysis
Weick, Karl E., Ph.D., Ohio State U. Nicholas H. Noyes Professor of Organizational Behavior, Psychology and Organizational Behavior
Wittink, Dick R., Ph.D., Purdue U. Assoc. Prof., Marketing and Quantitative Methods

Adjunct and Visiting Faculty

Abelow, William J., J.D., Columbia U. Visiting Assoc. Prof., Labor Relations in the Health Industry
Brown, Douglas R., Ph.D., Syracuse U. Coordinator, Health Services Development and Continuing Education
Chester, Theodore E., C.B.E., J.D., U. of Manchester. Visiting Prof., Comparative Development in Health Services
Crane, Robert M., M.B.A., Cornell U. Visiting Prof., Health Policy
Cunningham, James P., Ph.D., California at San Diego. Asst. Prof., Psychology
Daly, Robert W., M.D., SUNY at Syracuse. Visiting Prof., Administrative Medicine
Delporte, Christian, Ph.D., Cornell U. Visiting Associate Prof., Production Management
Dotson, Arch T., Ph.D., Harvard U. Prof., Government
Esman, Milton J., Ph.D., Princeton U. John S. Knight Professor of International Studies
Kaplan, Eugene A., M.D., SUNY at Syracuse. Upstate Medical Center. Visiting Prof., Administrative Medicine
Kern, John E., M.P.A., Cornell U. Visiting Prof., Health Policy and Planning
LaCosta, Cosmo J., M.P.A., New York U. Visiting Prof., Hospital Administration
Ley, Allyn B., M.D., Columbia U. Visiting Prof., Administrative Medicine
Sercu, Piet, D.B.A., Katholieke Universiteit-Leuven (Belgium). Visiting Prof., Finance
Thompson, David D., M.D., Cornell U. Visiting Prof., Hospital Administration
Yanni, Frederick, M.P.A., Cornell U. Visiting Prof., H.M.O. Development and Management

Lecturers

Richardson, Gordon D., Ph.D. Candidate, Cornell U., Lec., Accounting
Rosen, Charlotte, Ph.D., Cornell U. Lec., Management Communication

Adjunct and Visiting Faculty

Richardson, Gordon D., Ph.D. Candidate, Cornell U., Lec., Accounting
Rosen, Charlotte, Ph.D., Cornell U. Lec., Management Communication
Graduate programs, which are administered by the Graduate School, are described in the Announcement of the Graduate School and the special Announcement Graduate Study in Engineering and Applied Science. Two programs that are closely related to undergraduate study in the College of Engineering—the Master of Engineering degree program and a special master's degree program that combines studies in engineering and in business administration—are described below.

The Master of Engineering Degree Program
One-year Master of Engineering (M.Eng.) programs are offered in eleven fields. These programs are discussed in this Announcement in connection with the corresponding undergraduate programs because the curricula are integrated. Cornell baccalaureate engineering graduates frequently continue their studies in the M.Eng. program, although the program is also open to qualified graduates of other schools. The eleven Master of Engineering degrees, and the academic areas under which they are described, are listed below.

M.Eng. (Aerospace): Mechanical and aerospace engineering
M.Eng. (Agricultural): Agricultural engineering
M.Eng. (Chemical): Chemical engineering
M.Eng. (Civil): Civil and environmental engineering
M.Eng. (Computer Science): Computer science
M.Eng. (Electrical): Electrical engineering
M.Eng. (Engineering Physics): Applied and engineering physics
M.Eng. (OR&IE): Operations research and industrial engineering
M.Eng. (Materials): Materials science and engineering
M.Eng. (Mechanical): Mechanical and aerospace engineering
M.Eng. (Nuclear): Nuclear science and engineering

Cornell engineering graduates in the upper half of their class will generally be admitted to the program; however, requirements for admission vary by field. Other applicants must have a baccalaureate degree from an engineering program accredited by the Accreditation Board for Engineering and Technology or its equivalent, in an area of engineering or science that is judged appropriate for the proposed field of study. They must also present evidence of undergraduate preparation equivalent to that provided by a Cornell undergraduate engineering education: a transcript, two letters of recommendation, and a statement of academic purpose. A candidate who is admitted with an undergraduate background that is judged inadequate must make up any deficiencies in addition to fulfilling the regular course requirements for the degree. Application forms and further information are available from the chairperson of the Graduate Professional Programs Committee, Hollister Hall.

Cooperative Program with the Graduate School of Business and Public Administration
A dual program culminating in both Master of Engineering and Master of Business Administration degrees is available for students with suitable undergraduate background. The curriculum generally requires two years of study beyond the baccalaureate, rather than the three years such a program would normally require, with appropriate choice of undergraduate courses, it is possible to earn the Bachelor of Science, the Master of Engineering, and the Master of Business Administration degrees in six years.

Students interested in this special program should plan their undergraduate curricula with this in mind. Advice and information should be sought from the undergraduate engineering department in which the student is taking an upperclass field program. Information about admission to the graduate program and about special scholarship aid that is available may be obtained from the Graduate Professional Programs Committee, Hollister Hall.

Undergraduate Study
Bachelor of Science (B.S.) degrees are offered in the following areas:
- Agricultural engineering*
- Chemical engineering
- Civil and environmental engineering
- College program
- Computer science
- Electrical engineering
- Engineering physics
- Geological sciences
- Materials science and engineering
- Mechanical engineering
- Operations research and industrial engineering

Students in the College of Engineering begin their undergraduate curriculum in the Division of Basic Studies. Subsequently, most students enter field programs, which are described separately for each academic area. Alternatively, students may enter the College Program (described below), which permits them to pursue a course of studies adapted to individual interests.

A student interested in bioengineering may arrange a suitable curriculum within one of the field programs or through the College Program. Information about options is available in the Engineering Advising and Counseling Center, 167 Olin Hall.

The undergraduate curriculum in engineering was revised in 1981. Students belonging to the class of 1984 and earlier classes must complete their studies according to the course program in effect at the time of their matriculation. The upperclass program with which these students should now be affiliated is, in most cases, a field program beginning in their junior year. Such a field program requires twelve field-designated courses, four liberal-studies electives, two free electives, and two technical electives. The overall degree requirement is forty courses totaling at least 127 credits.

Under this course program, the four-year curriculum includes at least eight liberal-studies courses giving a minimum of 24 credits. These liberal-studies electives may include courses in the humanities, social sciences, modern foreign languages, and expressive arts, at least two (giving a minimum of 6 credits) must be at the upperclass level (300- or 400-level courses).

Students of the class of 1985 and subsequent classes must fulfill the requirements for graduation outlined below.

* major in agricultural engineering, students enroll in the College of Agriculture and Life Sciences for the first and second years, and jointly in that college and the College of Engineering for the third and fourth years.
Requirements for Graduation

To receive the Bachelor of Science degree, students must meet the requirements of the Common Program, as set forth by the College of Engineering, as well as the requirements of the field program, as established by the school or department with which they become affiliated. The Common Program is composed of courses in eight categories.

Type of course Credits
1) Mathematics 15
2) Physics 12
3) Chemistry 4
4) Freshman Seminar 6
5) Computing: computer programming plus one approved course in computing applications 4
6) Engineering distribution (4 courses) 12
7) Humanities and social sciences (6 courses) 18
8) Electives: Approved electives 9
Free electives 6
Technical electives 6  
Credits for courses in the field program vary between 36 and 43, depending on which program is chosen. Because of this variation, the credits needed for graduation range between 128 and 140. Two terms of physical education must be taken in the freshman year to satisfy a University requirement.

Mathematics
The normal program in mathematics includes Mathematics 191 or 193, 192, 293, and 294. Students who have little or no acquaintance with the calculus take Mathematics 191. Students with some knowledge of the calculus, but not enough for advanced placement, take Mathematics 193.

Physics
The normal program in physics includes Physics 112, 213, and 214. Students in the Field Program in Civil and Environmental Engineering may substitute Chemistry 208 for Physics 214.

Chemistry
Chemistry 207 is required for all students and is normally taken in the first freshman semester.

Freshman Seminars
Each semester of their freshman year, students choose a Freshman Seminar from among more than fifty courses offered by over a dozen different departments in the humanities, social sciences, and expressive arts. These courses all offer the student practice in writing English prose. They also assure beginning students the benefits of a small class.

Computing
In either the first or second term of their freshman year, students take Engr 105, introduction to Computer Programming. Before graduation, they must take an additional course with a significant amount of computing applications. Courses that satisfy this requirement are Engr 211, Engr 321, CEE 301, EE 624, MAE 489, MAE 570, and MAE 575.

Engineering Distribution
Four engineering distribution courses (12 credits) are required. These courses must be selected from four of the seven areas listed below. A student may use only one of the possible substitutions described.

1) Scientific computing
   - Engr 211, Computers and Programming
   - Engr 321, Numerical Methods
   - Students in the Field Program in Civil and Environmental Engineering may substitute CEE 301 for Engr 321
2) Materials science
   - Engr 261, Introduction to Mechanical Properties of Materials
   - Engr 262, Introduction to Electrical Properties of Materials
3) Mechanics
   - Engr 202, Mechanics of Solids
   - Engr 203, Dynamics
   - Students in the Field Program in Applied and Engineering Physics may substitute AEP 333 for Engr 203
4) Probability and statistics
   - Engr 260, Introduction to Engineering Probability
   - Engr 270, Basic Engineering Probability and Statistics
   - Students in the Field Program in Electrical Engineering may substitute Ele E 310 for Engr 260
   - Students in the Field Program in Applied and Engineering Physics may substitute Ele E 310 or Mathematics 471 for Engr 260
5) Electrical sciences
   - Engr 210, Introduction to Electrical Systems
   - Engr 219, Mass and Energy Balances
   - Engr 221, Thermodynamics
6) Thermodynamics and energy balances
   - Engr 219, Mass and Energy Balances
   - Engr 221, Thermodynamics

Introduction to engineering
Several courses are offered each year to introduce freshmen to the various fields of engineering. These courses, which are numbered consecutively beginning with Engr 110, are not included in this Announcement. A separate list will be made available.

Humanities and Social Sciences
The six required courses in the humanities and social sciences must be chosen from approved courses in three categories: (a) humanities or history, (b) social sciences, and (c) expressive or communication arts. The contents of these categories are listed below. At least three courses must be chosen from category (a), and no more than one course may be chosen from category (c).

a) Humanities or History
   This category includes all courses designated by the College of Arts and Sciences as fulfilling its distribution requirements in humanities and history (see p. 91), as well as the following:
   - History of Art: all courses numbered 200 and above;
   - Music: all introductory courses (except 122) and all theory and history courses;
   - Theater Arts: all history, literature, and theory courses, and all cinema courses except 377 and 477.

b) Social Sciences
   This category includes all courses designated by the College of Arts and Sciences as fulfilling its distribution requirements in social sciences (see p. 91), as well as the following:
   - College of Agriculture and Life Sciences: Agricultural Economics 150, 250, 332: Communication Arts 200, 215, 302, 303, 404; Education 110, 271, 317; Natural Resources 201, 407; Rural Sociology, all courses.
   - College of Architecture, Art, and Planning: Architecture 141, 142, 343, 545; City and Regional Planning 340, 400, 402, 403, 404, 413, 414.
   - College of Arts and Sciences: Economics, all courses except 317, 318, 319, 320,
   - School of Industrial and Labor Relations: All courses except those in economic and social statistics.
   - Division of Nutritional Sciences 115.

c) Expressive or Communication Arts
   This category includes all courses designated by the College of Arts and Sciences as fulfilling its distribution requirements in expressive arts (see p. 92), as well as the following:
   - College of Agriculture and Life Sciences: Communication Arts, all courses; Floriculture 111.
   - College of Architecture, Art, and Planning: Art, all courses, except those in economic and social statistics.
   - College of Arts and Sciences: All language courses.

Electives
There are three kinds of electives: approved, free, and technical. Approved electives must be an appropriate part of an overall educational plan or objective. This constraint allows flexibility for individual goals while maintaining a coordinated, nontrivial program. Free electives may be any course in the University, although all course selections must be approved by the student's faculty adviser. Technical electives are generally taken in the junior and senior years. They are usually upper-level courses in engineering, mathematics, or the physical sciences, but they also may be courses in other areas. Each field maintains a list of courses suggested as approved and technical electives.

Division of Basic Studies

All students are enrolled in the Division of Basic Studies during their freshman year. They remain in this division until they enter a field program or the College Program. Engineering courses taken at this level are listed under Engineering Common Courses. Following is a typical curriculum for freshmen. Many variations are possible, depending on the individual student's background, advanced placement credits, and career goals. Those acquainted with the calculus may take Physics 112 in term one. Students who intend to enter the Field Program in Chemical Engineering should take Chemistry 208 in term two as an approved elective. Students with an interest in bioengineering may take biology in terms one and two as approved electives.

Field Program
The specific program for each field is described in the following pages. Students with a grade-point average of at least 2.0 who are making normal progress toward their degree may choose to enroll in a field program at the beginning, middle, or end of their sophomore year. Some fields require a specific engineering distribution course as a prerequisite for the upperclass upperclass sequence. These are:

- Applied and Engineering Physics: Engr 221
- Chemical Engineering: Engr 219
- Civil and Environmental Engineering: Engr 202
- Computer Science: Engr 211
- Electrical Engineering: Engr 210
- Mechanical and Aerospace Engineering: Engr 202
- Operations Research and Industrial Engineering: Engr 260
College Program

Individually arranged courses of study under the College Program are possible for those whose educational objectives cannot be met by one of the regular fields of study. The requirement is an interdisciplinary area. Each program is developed by the student in consultation with faculty advisers and must be approved by the College Program Committee, which is responsible for supervising the student’s work.

Students apply to enter the College Program early in the second term of the sophomore year. A student may receive assistance in developing a coherent program from professors in the proposed major and minor subject areas. If approved, the program is the curricular contract to which the student must adhere.

Every curriculum in the College Program, with the exception of certain faculty-sponsored programs, must comprise an engineering major and a minor. The major may be in any subject area offered by the College Program, and the minor may be in any second subject area or in a logically connected noneengineering area. The combination must clearly form an engineering education in scope and substance and should include engineering design and synthesis as well as engineering sciences. In addition to fourteen courses in the major and minor subjects, including at least seven engineering courses, each program includes humanities and social sciences electives and free electives.

Further information about the College Program may be obtained from the College Program Office, 253 Carpenter Hall.

Dual Degree Option

A special academic option, intended for superior students, is the dual degree program, in which both Bachelor of Science and Bachelor of Arts degrees can be earned in five years. Students registered in either the College of Engineering or the College of Arts and Sciences may apply and, after acceptance of their application, begin the dual program in their second or third year. Those interested should contact Associate Dean M. S. Burton, 253 Carpenter Hall.

Engineering Cooperative Program

A special program for undergraduates in most fields of engineering is the Engineering Cooperative Program, which provides an opportunity to supplement course work with carefully monitored, paid jobs in industry and other engineering-related enterprises. Sophomores in the upper half of their class are eligible to apply for the program; students from foreign countries must have visas that allow them to work in the United States.

Prospective co-op students are interviewed by representatives of cooperating companies and select their work assignments from any offers they receive. Those students who are offered assignments and elect to join the program take their fifth-term courses at Cornell during the summer following their sophomore year and begin their first co-op work assignment that fall. They return to Cornell to complete term six with their classmates, and then undertake a second work assignment with the same company the following summer. Co-op students return to campus for their senior year and graduate with their classmates.

Further information may be obtained from the Engineering Cooperative Program office, 105 Hollister Hall.

Advanced Placement Credit

A growing number of freshmen entering the College of Engineering are eligible to receive advanced placement (AP) credit toward degree requirements, in recognition of their completed academic proficiency. Students may qualify for AP credit in one of two ways:

1) by receiving sufficiently high scores on advanced placement examinations given and scored by the College Entrance Examination Board (CEEB); or
2) by receiving sufficiently high scores on Cornell's departmental placement examinations, which are given during orientation week before fall-term classes begin. Advanced placement is granted only to first-term freshmen, and the placement examinations are scored before the students begin classes.

Advanced placement academic credit is intended to permit students to develop more challenging and stimulating programs of study. Two ways in which freshmen may use such credit are detailed below.

1) AP credit can be used to fulfill basic requirements, thus permitting advanced study in the same area or enrollment in additional technical elective courses.

2) In a few cases, students may receive enough AP credit to complete the B.S. degree requirements ahead of time.

The college's policies concerning placement credit and its use in developing undergraduate programs are fully described in the publication Advanced Placement for Engineers, which may be obtained at the Division of Basic Studies, 167 Olin Hall, or the Engineering Admissions Office, 221 Carpenter Hall.

Transfer Credit

Entering freshman and entering transfer students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma.

College courses completed under the auspices of cooperative college—high school programs may be considered for an exception to these general policies concerning advanced standing. Credit for such courses is not automatically given, however; students must be prepared to demonstrate academic proficiency by taking the appropriate CEEB or Cornell departmental placement examination, as described above.

Academic Standing

The requirements for good standing in the college vary slightly among the different divisions. Freshmen must have a grade-point average of 1.7 or higher with no failing or unsatisfactory, or incomplete grades. Sophomore requirements are the same, except that the grade-point average must be at least 2.0. Upperclass requirements depend upon the field of registry.

Dean's List citations are presented each semester to those engineering students with exemplary academic records. The criteria for this honor are determined by the dean of the college. In 1981–82 a term average of 3.25 or higher was required, with no failing, unsatisfactory, or incomplete grades, and 12 credits or more of letter grades.

Agricultural Engineering

Bachelor of Science Curriculum

Students in the Field Program in Agricultural Engineering are usually enrolled in the College of Agriculture and Life Sciences during the freshman and sophomore years, and jointly enrolled in that college and the College of Engineering in the junior and senior years (pursuing the college engineering tuition in the junior year). The curriculum is outlined below.

Basic Subjects

Advanced and Applied Subjects

Engineering sciences (Fluid Mechanics, Dynamics; Ag Eng 153, Ag Eng 256), and four agricultural engineering courses above 450 (for a minimum of 12 credits), excluding seminar or special-problems courses.

Biology or biological sciences 12

Free electives 6

Total credits 128 to 130

Master of Engineering (Agricultural) Degree Program

The program for the M.Eng. (Agricultural) degree is intended primarily for those students who plan to enter engineering practice rather than for those who expect to study for the doctorate. The curriculum is planned as an extension of the Cornell undergraduate program in agricultural engineering but can accommodate graduates of other engineering programs. The curriculum consists of 30 credits of courses intended to strengthen the students' fundamental knowledge of engineering and develop their design skills. Six of the required thirty credits consist of an engineering design project that culminates in a professional-level report.

A candidate for the M.Eng. (Agricultural) degree may choose to concentrate in one of the subareas of agricultural engineering or take a broad program without specialization. The subareas are (a) power and machinery, (b) soils and water engineering, (c) agricultural structures and associated systems, (d) electric power and processing, (e) energy management, (f) agricultural waste management, (g) bioengineering, (h) secondary-road design and construction, and (i) food engineering. Engineering electives are chosen from among subject areas relevant to agricultural engineering, such as thermal engineering, mechanical design and analysis, theoretical and applied mechanics, structural engineering, hydraulics, environmental engineering, soil engineering, waste management, and electronics.

Applied and Engineering Physics

The engineering physics curriculum is designed for students who want to pursue careers in research or development in applied science or advanced
technology. Its distinguishing feature is a focus on fundamentals, both experimental and theoretical, that have broad applicability in engineering and in science.

The industrial demand for baccalaureate graduates is high, and many students go directly into industrial positions. However, most graduates go on to advanced study in a variety of fields, including astrophysics, atmospheric sciences, biophysics, chemical physics, energy conversion, environmental science, geophysics, materials science and engineering, nuclear engineering, nuclear physics, oceanography, plasma physics, quantum optics, optics, and solid-state electronics.

Underclass students who are planning to enter the Field Program in Engineering Physics are encouraged to register in honors sections of mathematics during the first two years. Those who matriculate in the college with advanced standing in mathematics may take Physics 112 in the fall term of their freshman year and Applied Mathematics* in the spring term of their sophomore year. A course in thermodynamics is required for entry into the program. Engr 221, taken as an engineering distribution course, will satisfy this requirement. A&EP 333 (Mechanics of Particles and Solid Bodies) is an approved upperclass substitute for Engr 203, the engineering distribution course in dynamics, but students who place out of Physics 112 (Mechanics and Heat) may still wish to take Engr 203.

Mathematics 471 (Basic Probability) or Ele E 310 (Probability and Random Signals) may be substituted for Engr 260, the engineering distribution course in probability. Finally, students in engineering physics classes wishing to take an engineering distribution course in computer science are urged to take Engr 321 (Numerical Methods).

A judicious choice of approved electives during the freshman and sophomore years can open up valuable opportunities later on. Examples include Chemistry 208 and Engr 110 for students with an interest in chemical physics, Geol 101 for students with an interest in geophysics, A&EP 217 for students with an interest in physics, and Heat) may still wish to take Engr 203.

The following curriculum is a typical upperclass field program. The general requirement for the degree is a total of 30 credits for graduate-level courses or their equivalent, earned with a grade of C or better and distributed as follows:

1) a design project in applied science or engineering (not less than 6 nor more than 12 credits);
2) an integrated program of graduate-level courses, as discussed below (14 to 20 credits);
3) a required special-topics seminar course (4 credits).

The design project, which is proposed by the student and approved by the program chairman, is carried out on an individual basis under the guidance of a member of the engineering faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory physics course is required.

The individual program of study consists of a correlated sequence of courses focused on a specific area of applied physics or engineering. It is planned to provide an appropriate combination of physics and physics-related courses (applied mathematics, statistical mechanics, applied quantum mechanics) and engineering electives (such as courses in electrical engineering, materials science, computer science, mechanical engineering, physical biology, or bioengineering). Additional science and engineering electives may be included. Some courses at the senior level are acceptable for credit toward the degree; other undergraduate courses may be required as prerequisites but are not credited toward the degree.

Chemical Engineering

Bachelor of Science Curriculum

The undergraduate Field Program in Chemical Engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Special programs in biological engineering and polymeric materials are available. Students who plan to enter the field program take Chemistry 208 as an approved elective during the freshman year. The program for the last three years, for students who have taken two engineering distribution courses during the first year, is as follows:

<table>
<thead>

Classes of '83 and '84 6
Classes of '85 and after 3
Liberal studies elective** 3

*It is recommended that Engr 211 or 321 be taken as one of the engineering distribution courses, since it will also satisfy the requirement of an additional course in computing applications.

**Students in the Engineering Cooperative Program substitute Chem 253, Organic Chemistry (a 4-credit course), for Chem 357; and Chem E 421, Industrial Organic Processes (a 2-credit course), for Chem 358.

The elective courses, is given below.

Civil and Environmental Engineering

School of Civil and Environmental Engineering:
R. N. White, director; J. J. Bisogni, associate director
Department of Structural Engineering: A. H. Nilsen, chairman; J. J. Bisogni, associate director

Program in Environmental Sensing, Measurement, and Evaluation: T. Liang, G. B. Lyon, W. R. Philipson

Bachelor of Science Curriculum

The School of Civil and Environmental Engineering contains two departments as well as the Program in Environmental Sensing, Measurement, and Evaluation. Undergraduate specialties can be arranged in a number of subject areas encompassed by these units. The Department of Structural Engineering offers instruction in analysis, behavior, and design of structures; structural materials; and geotechnical engineering. Within the Department of Environmental Engineering there are five subject areas: environmental quality engineering; fluid mechanics and hydraulics; public systems and environmental systems engineering; transportation; and water resources planning and analysis.

Students planning to enter the Field Program in Civil and Environmental Engineering are required to take Mechanics of Solids (Engr 202) during the sophomore year. It is recommended that they also take Introductory Engineering Probability (Engr 260) and either Dynamics (Engr 203) or Mechanical Properties of Materials (Engr 261). These three courses are required in the field program.

At the upperclass level the curriculum is planned to provide an introduction to the several diverse areas within the field of civil and environmental engineering and to permit more detailed study in at least one area through appropriate selection of electives. A recommended sequence, including the required courses, is given below.

Term 5
Engr 203, Dynamics* 3
CEE 331, Fluid Mechanics I 4
CEE 371, Structural Engineering I 4
Engr 260, Introductory Engineering Probability* 3
Liberal studies elective 3

Term 6
Engr 261, Introduction to Mechanical Properties of Materials 3
CEE 351, Environmental Quality Engineering 4
CEE 341, Introductory Soil Mechanics 3
CEE 323, Engineering Economics and Systems Analysis 3
Liberal studies elective 3

Term 7
Civil and environmental engineering distribution courses (2 courses)‡ 6
Technical elective 3
Free elective 3
Liberal studies elective 3

Term 8
Civil and environmental engineering distribution courses (2 courses)‡ 6
Technical elective 3
Free elective 3
Liberal studies elective 3

*Satisfactory completion of these engineering core science courses in the Division of Basic Studies increases the number of technical electives accordingly.

**Information about distribution requirements may be obtained from the student's faculty adviser.

Master of Engineering (Civil) Degree Program

The Master of Engineering (Civil) degree program is designed to prepare a student for professional practice in civil and environmental engineering. Requirements, in addition to the general ones for the degree (see the introductory section under College of Engineering), include three required courses: one in professional engineering practice and two in design (CEE 861 and 502). The design sequence requires the completion of a project involving synthesis, analysis, decision making, and application of engineering judgment, and includes an intensive, full-time, three-week session between semesters.

The remainder of a student's program of study is designed individually in consultation with an academic adviser and then submitted to the school's Professional Degree Committee for approval. The objectives in course planning are to provide breadth in the fundamentals of civil and environmental engineering, and specialization in one area with some concentration in a related area. Most students will have achieved the necessary breadth during their undergraduate years. Some, however, may require additional course work in the graduate program to fulfill the breadth requirement. Students in the School of Civil and Environmental Engineering may avail themselves of a number of graduate course offerings in fields related to their major interest but outside of the school.

The School of Civil and Environmental Engineering, in conjunction with the Cornell Graduate School of Business and Public Administration, now offers a six-year, joint program leading to the degrees of Bachelor of Science, Master of Engineering, and Master of Business Administration. Participating students receive the baccalaureate degree after four years and the two professional master's degrees in the next two years.

Applications should be submitted at the beginning of the sixth term of study.

Computer Science

The Field Program in Computer Science is intended for students who are interested in the computing process and in the fundamental structure of algorithms, data, and languages that underlie that process. Those interested in the application of computers in some particular area are ordinarily advised to major in the area of application and take elective course work in computer science.

A student entering the Field Program in Computer Science must take Com S 211 and a fourth-term mathematics course approved in the Engineering Common Program before beginning the upperclass sequence. Apart from these requisites and those of the College, the courses required for the Field Program in Computer Science are:

Bachelor of Science Curriculum

The Field Program in Computer Science is intended for students who are interested in the computing process and in the fundamental structure of algorithms, data, and languages that underlie that process. Those interested in the application of computers in some particular area are ordinarily advised to major in the area of application and take elective course work in computer science.

A student entering the Field Program in Computer Science must take Com S 211 and a fourth-term mathematics course approved in the Engineering Common Program before beginning the upperclass sequence. Apart from these requisites and those of the College, the courses required for the Field Program in Computer Science are:
Course Work

Systems sequence 8

Com S 314, Systems and Organization
Com S 410, Data Structures

Theory sequence 12

Com S 280, Discrete Structures
Com S 481, Theory of Computing
Com S 482, Analysis of Algorithms

Numerical analysis 4

Com S 321, Numerical Methods

Ele E 230

Technical or free electives 15

Liberal studies electives 12

Master of Engineering (Computer Science) Degree Program

A recent addition to the academic offerings in computer science is the one-year program leading to the degree of Master of Engineering (Computer Science). The program is very small; from two to five students a year are admitted. Admission standards are the same as those applied to doctoral candidates. A good undergraduate background in mathematics or computer science is required.

In the curriculum, the emphasis can be on programming languages and systems, on theory of algorithms and theory of computation, on numerical analysis, or on information processing, which includes data bases and information organization and retrieval. (Students who are interested in logical design or computer architecture will find it more appropriate to apply for admission to a graduate program in electrical engineering.) The required design project could be, for example, the design of a compiler for a large subset of a general-purpose programming language.

Electrical Engineering

Bachelor of Science Curriculum

Reflecting the large scope of this engineering discipline, the undergraduate Field Program in Electrical Engineering provides a broad foundation in a number of important areas in addition to specialization in one or more.

Students can choose, for example, to concentrate in bioengineering, computer engineering, control systems; electronic circuit design; information, communications, and decision theory; microwave electronics; plasma physics; power and energy systems; quantum and optical electronics; radio and atmospheric physics; or semiconductor devices and applications.

In addition to courses for completion of the Common Program requirements, the electrical engineering Bachelor of Science curriculum requirements are as follows:

Course Credits
Ele E 210, Introduction to Electrical Systems 3
Ele E 230, Introduction to Digital Systems† 3
Ele E 301, Electrical Signals and Systems I 4
Ele E 303, Electromagnetic Theory I 4
Ele E 306, Fundamentals of Quantum and Solid-State Electronics 4
Ele E 315, Electrical Laboratory I 4
Ele E 410, Electrical Laboratory II 4
Electrical engineering electives (at least 6) 19

*Engineering distribution course.
†Satisfactory completion of Ele E 230 as an approved elective permits the substitution of a technical elective for this requirement.

Of the six electrical engineering electives, two courses must be selected from Ele E 302, 304, 310, or 435. Two must be laboratory courses.

**Credits in excess of 45 may be used to fulfill approved, technical, or free elective requirements of the common program.

Specialization is achieved through the four tenor-year electrical engineering electives, which are selected from more than sixty offerings of the school.

A brochure describing the field program and concentrations in detail may be obtained from the School of Electrical Engineering, Phillips Hall.

Master of Engineering (Electrical) Degree Program

The degree of Master of Engineering (Electrical) prepares the student either for professional work in this area of engineering or for more advanced graduate study in the doctoral program. The Master of Engineering differs from the Master of Science degree program mainly in its emphasis, which is on design capability rather than basic research. The 30-credit curriculum includes two two-term course sequences in electrical engineering, and the design project, which alone may account for 3 to 10 credits. General admission and degree requirements are described in the college's introductory section.

Geological Sciences

D. L. Turcotte, chairman; S. B. Bachman.

Bachelors of Science Curriculum

Study in geological sciences is offered for students who are preparing for careers in solid earth science, for those who want a broad background in the geological sciences as preparation for careers in other fields, and for those who want to combine geological training with other sciences such as agronomy, astronomy and space science, biological sciences, chemistry, economics, mathematics, physics, or various fields of engineering. The Department of Geological Sciences is organized as an intercollege department in the College of Arts and Sciences and the College of Engineering. College of Arts and Sciences students should consult that college's section on geological sciences as well as the course listing here.

Students in the College of Engineering who plan to enter the Field Program in Geological Sciences should take certain courses during their freshman and sophomore years. These are Geol 101 and 102, Chemistry 208, and, for those interested in geology, Biological Sciences 101-103 and 102-104. The usual upperclass curriculum for students entering the field as juniors is listed below. Students entering as sophomores must meet the same basic field requirements.

Term 5 Credits
Geol 355, Mineralogy 4
Geol 376, Sedimentology and Stratigraphy 4
Required science course 3 or 4
Liberal studies elective 3
Technical or free elective 3 or 4

Term 6
Geol 356, Petrology and Geochemistry 4
Geol 325, Structural Geology 4
Required science course 3 or 4
Liberal studies elective 3
Geol 704, Western Field Course 6
or Technical or free elective 3 or 4
A summer field course is required unless approval for an alternative field experience is granted.

Term 7
Geology elective, 300 or 400 level 3 or 4
Required science course 3 or 4
Liberal studies elective 3
Technical or free elective 3 or 4

Term 8
Geol 388, Geophysics and Geotechnics 4
Required science course 3 or 4
Liberal studies elective 3
Technical or free elective 3 or 4
Free elective 3 or 4

Students intending to specialize in geophysics should select their required sciences from the following courses or their equivalents:

Math 421-422-423, Applicable Mathematics
IAM 310-311, Advanced Engineering Analysis I and II
A&EP 355, Intermediate Electromagnetism
A&EP 333, Mechanics of Particles and Solid Bodies
A&EP 354, Continuum Physics
Phys 410, Advanced Experimental Physics
IAM 450, Introduction to Continuum Mechanics

Students intending to specialize in geochemistry (including petrology and mineralogy) should select their required sciences from the following courses or their equivalents:

Chem 287-288, Introductory Physical Chemistry
Chem 300, Introductory Quantitative Analysis
Chem 301, Experimental Chemistry I
Chem 302, Experimental Chemistry II
Chem 303, Experimental Chemistry III
Chem 357-358, Introductory Organic Chemistry
Chem 389-390, Physical Chemistry I and II
MS&E 331, Structure and Properties of Materials
MS&E 335, Thermodynamics of Condensed Systems

Students intending to specialize in geology should select their required sciences from the following courses or their equivalents:

Bio S 212, Invertebrate Zoology
Bio S 330-331, Principles of Biochemistry
Bio S 241, Plant Biology
Bio S 248, Plant Evolution and the Fossil Record
Bio S 360, General Ecology
Bio S 274, The Vertebrates
Bio S 477, Organic Evolution
Bio S 281, Genetics
Chem 253, Elementary Organic Chemistry

Students who want to pursue further training or immediate employment in applied geology (environmental and engineering geology, ground
Materials Science and Engineering

Bachelor of Science Curriculum

Students who major in materials science and engineering are required to take Engr 261, Introduction to Mechanical Properties of Materials, before the end of their junior year. They are strongly urged to take it as part of the engineering distribution course requirement during their sophomore year. The usual upperclass curriculum for students entering the field as juniors is listed below. Students entering as sophomores must meet the same basic field requirements.

Term 5

*The research involvement option gives undergraduates the opportunity to work with faculty members and their research groups on current projects. The alternative-option elective provides students interested in industrial careers an additional opportunity to broaden their engineering education.

Mechanical and Aerospace Engineering

Bachelor of Science Curriculum in Mechanical Engineering

The upperclass Field Program in Mechanical Engineering is designed to provide a broad background in this basic branch of engineering, as well as an introduction to the many professional and technical areas in which mechanical engineering is particularly concerned. Two main areas of concentration, corresponding to the two major streams of mechanical engineering technology, are offered in the program.

Mechanical systems and design treats the design, analysis, testing, and manufacture of machinery, vehicles, devices, and systems. Particular areas of concentration include mechanical design and analysis, computer-aided design, vehicle engineering, vibrations and control systems, and manufacturing engineering.

Engineering of energy and fluid systems has as its main concern the development of fossil, solar, and other energy sources for uses such as electric power generation, industry, and terrestrial and aerospace transportation; the use of heating, air conditioning, refrigeration, and noise and pollution control techniques to modify the human environment; and theoretical and experimental aspects of heat transfer and fluid flow.

In addition to the Common Program requirements, the current Field Program in Mechanical Engineering requires for the Bachelor of Science degree follow. (Requirements listed are those now in effect for the class of 1985 and beyond and are subject to change by the M&AE faculty. Requirements for earlier classes differ somewhat from those listed here.)

The computer applications requirement of the Common Program may be satisfied by several courses including M&AE 489, M&AE 570, and M&AE 575.

The engineering elective is chosen from an approved list of technical courses. The mathematics elective is chosen from an approved list composed of courses from several departments and generally is taken in the upperclass years. The two field electives are selected from an approved list of courses offered by the School of Mechanical and Aerospace Engineering.

Certain courses can be chosen so as to satisfy requirements of both the Common Program and the field program. Specifically, the Mechanics of Solids (Engr 202) requirement of the field program will be waived if the course is used to satisfy the Engineering distribution requirement of the Common Program. Similarly, the Dynamics (Engr 203) requirement of the field program will be waived if the course is used to satisfy either the approved elective or free elective requirement of the Common Program. However, if
other field program requirements are used to satisfy Common Program requirements, they must be replaced by alternative technical electives. If Introduction to Mechanical Properties of Materials (MS&E 261) is taken before entry into the field program, Materials and Manufacturing Processes (M&AE 311) may be replaced by an alternate technical elective, although M&AE 311 is still recommended.

Introduction to Electrical Systems (Elec E 210) may be replaced or supplemented by Introductory Electronics (Phy E 196W).

The undergraduate Field Program in Mechanical Engineering is a coordinated sequence of courses beginning in the second year and extending through the fourth year. Mechanics of Solids (Engr 202) must be taken in the second year, and both Dynamics (Engr 203) and Thermodynamics (Engr 221) should also be taken at that time, since they are prerequisites for courses that generally follow in the third year.

A limited set of third-year courses is offered each summer under the auspices of the Engineering Cooperative Program.

More detailed materials describing the field program and possible concentrations may be obtained from the School of Mechanical and Aerospace Engineering, Upson Hall.

Preparation in Aerospace Engineering Although there is no separate undergraduate program in aerospace engineering, students may prepare for a career in this area by majoring in mechanical engineering and taking a number of aerospace engineering electives such as M&AE 405, 506, 507, and 536. Students may prepare for the graduate program in aerospace engineering by majoring in mechanical engineering, in other appropriate engineering specialties such as electrical engineering or engineering physics, or in the physical sciences. Other subjects recommended as preparation for graduate study include thermodynamics, fluid mechanics, applied mathematics, chemistry, and physics.

Master of Engineering (Aerospace) Degree Program

The Master of Engineering (Aerospace) program is designed to increase the student's facility in the application of the basic sciences to important professional problems. Because aerospace engineering is continually engaged in new areas, an essential guideline for the program is to reach beyond present-day practices and techniques. This is achieved by supplying the student with the fundamental background and the analytical techniques that will remain useful in all modern engineering developments.

General admission and degree requirements are described in the introductory section under "College of Engineering."

Required courses for the M.Eng. (Aerospace) degree include two related sequences from the following list:

- Core Courses Available
- M&AE 459, Plasma Energy Systems 3
- M&AE 506, Aerospace Propulsion Systems 3
- M&AE 507, Dynamics of Flight Vehicles 3
- M&AE 530, Fluid Dynamics 3
- M&AE 531, Boundary Layers 3
- M&AE 543, Combustion Processes 3
- M&AE 569, Mechanical and Aerospace Structures I 3
- M&AE 570, Mechanical and Aerospace Structures II 3
- M&AE 601, Foundations of Fluid Dynamics and Aerodynamics 4

M&AE 602, Incompressible Aerodynamics 4
M&AE 603, Compressible Aerodynamics 4
M&AE 606, Physics of Fluids I 4
M&AE 609, Physics of Fluids II 4
M&AE 610, Gas Dynamics 4
M&AE 630, Atmospheric Turbulence and Micrometeorology 4
M&AE 649, Seminar on Combustion 4
M&AE 653, Experimental Methods in Fluid Mechanics and Combustion 4
M&AE 704, Theory of Viscous Flows 4
M&AE 707, Aerodynamic Noise Theory 4
M&AE 733, Stability of Fluid Flow 4
M&AE 734, Turbulent and Turbulent Flow 4
M&AE 737, Numerical Methods in Fluid Flow and Heat Transfer 4

Also required are 6 credits of technical electives. A list of suggested electives is available from the M.Eng. (Aerospace) program representative in Upson Hall. Further requirements include 6 credits of mathematics (T&M 610–611 or Mathematics 415–416 or the equivalent), participation in the weekly colloquium (1 credit each term), one advanced seminar (2 credits), and one professional design project (2 credits). A total of 30 credits, including the project, are required.

The school has particular strengths in the areas of fluid dynamics, aerodynamics, high-temperature gasdynamics, turbulence, chemical kinetics, aerodynamic noise, sonic boom, nonlinear waves, atmospheric flows, combustion processes in low-pollution engines, and solution of flow problems by finite element and numerical methods. Professional design projects may be arranged in any of these areas.

Master of Engineering (Mechanical) Degree Program

The Master of Engineering (Mechanical) degree program provides a one-year course of study for those who want to develop a high level of competence in current technology and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These areas include bioengineering, machine dynamics and control, mechanical analysis and development, vehicle and propulsion, propulsion engines, energy systems, thermal environment, manufacturing engineering, and materials removal. An individual student's curriculum includes a 4-credit design course, a major consisting of a minimum of 12 credits, and sufficient technical electives to meet the degree requirement of 30 credits.

The design course (M&AE 590), which may be undertaken individually or by a small team, is a significant part of the program. Although "design" is interpreted broadly, the project should clearly involve the creation and evaluation of alternative solutions to an engineering problem. Some recent projects have been concerned with the design and analysis of crankshaft and crankcase structures, the thermal design of spacecraft components, the design of orthopedic implants, the university's energy policy, energy self-sufficiency, a new type of wind turbine, pollution control in automobile engines, motorcycle suspensions, and the analysis and design of flywheel—internal combustion engine hybrid drives for short-range cars.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty adviser. The proposed curriculum together with a statement of the overall objectives and a statement of the purpose of the major is submitted for approval to the Master of Engineering Committee. Any subsequent changes must also be approved by this committee.

The courses that constitute the major must be graduate-level courses in mechanical and aerospace engineering or a closely related field such as theoretical and applied mechanics. At least 21 credits of the total for the degree must be in mechanical engineering or related areas, and in general all courses must be beyond the level of those required in the undergraduate program in mechanical engineering. Credit may be granted for an undergraduate, upper-level first course in some subject area if the student has done little or no previous work in that area, but such courses must set the special approval of the Master of Engineering Committee.

The technical electives may be courses of appropriate level in mathematics, physics, chemistry, or engineering, a maximum of 6 credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.

Nuclear Science and Engineering

Faculty members in the graduate Field of Nuclear Science and Engineering who are most directly concerned with the Master of Engineering (Nuclear) curriculum include K. B. Cady (faculty representative), D. D. Clark, H. H. Fleischmann, D. A. Hammer, and V. O. Kostroum.

Undergraduate Study

Although there is no special undergraduate field program in nuclear science and engineering, students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives within regular field programs (such as those in engineering physics, materials science and engineering, and civil, chemical, electrical, or mechanical engineering) or within the College Program.

College Programs

Master of Engineering (Nuclear) Degree Program

The two-term curriculum leading to the degree of Master of Engineering (Nuclear) is intended primarily for individuals who want a terminal professional degree, but it may also serve as preparation for doctoral study in nuclear science and engineering. The course of study covers the basic principles of nuclear reactor systems with a major emphasis on reactor safety and radiation protection and control. The special facilities of the Ward Laboratory of Nuclear Engineering are described in the Announcement of the Graduate School.

The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate specializations. The recommended background is (1) an accredited baccalaureate degree in engineering, physics, or applied science.
(2) physics, including atomic and nuclear physics; (3) mathematics, including advanced calculus; and (4) thermodynamics. Students should see that they fulfill these requirements before beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. General admission and degree requirements are described in the college's introductory section.

The following courses are included in the 30-credit program:

**Fall term**
- A&EP 612. Nuclear Reactor Theory I
- Technical elective

**Spring term**
- A&EP 651. Nuclear Measurements Laboratory
- Technical elective
- Engineering design project
- Mathematics or physics elective

Engineering electives should be in a subject area relevant to nuclear engineering, such as energy conversion, radiation protection and control, feedback control systems, magnetohydrodynamics, controlled thermonuclear fusion, and environmental engineering. The list below gives typical electives.

- M&AE 651, Transport Processes II
- Ele E 681, Introduction to Plasma Physics
- Ele E 582, Advanced Plasma Physics
- Ele E 571, Feedback Control Systems
- Ele E 572, Digital Control Systems
- A&EP 613, Nuclear Reactor Theory II
- A&EP 652, Advanced Nuclear and Reactor Laboratory
- A&EP 636, Seminar on Thermonuclear Fusion Research
- A&EP 638, Intense Pulsed Electron and Ion Beams: Physics and Technology
- NS&E 603, Interaction of Radiation and Matter
- Chem E 627, Nuclear: Chemical Engineering
- MS&E 705, The Effects of Radiation on Materials

**Term 5**

**Credits**
- OR&IE 320, Optimization I
- OR&IE 350, Cost Accounting, Analysis, and Control
- OR&IE 370, Introduction to Statistical Theory with Engineering Applications
- Com S 211, Computers and Programming
- Liberal studies elective

**Term 6**

**Credits**
- OR&IE 321, Optimization II
- OR&IE 361, Introductory Engineering Stochastic Processes
- Technical elective 3
- Liberal studies elective 3

*If Com S 211 is completed during the sophomore year, an appropriate 3-credit technical elective must be substituted.

The behavioral science requirement can be satisfied by any one of several courses of an advanced nature, including Business and Public Administration NCE 540 (recommended for those contemplating the pursuit of a graduate business degree), B&PA NCE 541; Hotel Administration 211; ISLR 120, 121, 150, 151, 260, and 320. The adviser must approve the selection.

The basic senior-year program, from which individualized programs are developed, comprises the following courses:

**Minimum credits**
- OR&IE 580, Digital Systems Simulation 4
- Four courses consisting of sequences as described below 12
- Technical elective 3
- Two liberal-studies electives 6
- Two free electives 6

Available OR&IE sequences are as follows:

- Industrial systems: two or four courses selected from OR&IE 410; 417, 421, and 562*, and B&PA NBA 562
- Optimization methods: OR&IE 431 and 435
- Applied probability and statistics: two or four courses selected from OR&IE 462, 471, 472, 561, 563, and 570

*OR&IE 410 and 421 must be selected by students who plan to participate in the cooperative program with the Graduate School of Business and Public Administration.

Students who wish to apply OR&IE methodology in other technological areas may substitute one course sequence appropriate to the outside discipline for one of the required OR&IE sequences. Examples of possible sequences outside OR&IE can be obtained from the school office and must be approved by the adviser.

These options, together with an appropriate choice of technical electives, enable a student to earn at least 12 credits in a technological field other than OR&IE. Through an appropriate choice of free electives also, as many as 18 credits can be earned in the secondary discipline.

Scholastic requirements for the field are a passing grade in every course, an overall average of at least 2.0 for each term the student is enrolled in the school, an average of 2.0 or better for OR&IE field courses, and satisfactory progress toward the completion of the degree requirements. The student's performance is reviewed at the conclusion of each term.

**Master of Engineering (OR&IE) Degree Program**

This one-year professional degree program stresses applications of operations research and industrial engineering and requires completion of a project. The course work centers on additional study of analytical techniques, with particular emphasis on engineering applications, especially in the design of new or improved man-machine systems, information systems, and control systems.

General admission and degree requirements are described in the introductory Degree Programs section. The Master of Engineering (OR&IE) program is integrated with the undergraduate Field Program in Operations Research and Industrial Engineering. Also welcome are requests for admission from Cornell undergraduates in engineering programs other than OR&IE, or from qualified non-Cornellians. To ensure completion of the program in one calendar year, the entering student should have completed courses in probability theory and basic probabilistic models and in computer programming, and should have acquired some fundamental knowledge of economic concepts required for decision making.

**I. For matriculants with preparation comparable to that provided by the undergraduate Field Program in Operations Research and Industrial Engineering**

**Fall term**
- OR&IE 516, Mathematical Models—Development and Application
- OR&IE 580, Digital Systems Simulation
- OR&IE 893, Applied OR&IE Colloquium
- OR&IE 599, Project

**Spring term**
- OR&IE 551, Advanced Engineering Economic Analysis
- OR&IE 894, Applied OR&IE Colloquium
- OR&IE 599, Project

**Fall term**
- OR&IE 370, Introduction to Statistical Theory with Engineering Applications
- OR&IE 580, Digital Systems Simulation
- OR&IE 622, Operations Research I
- OR&IE 516, Mathematical Models—Development and Application
- OR&IE 580, Digital Systems Simulation
- OR&IE 893, Applied OR&IE Colloquium
- OR&IE 599, Project

**Spring term**
- OR&IE 623, Operations Research II
- OR&IE 551, Advanced Engineering Economic Analysis
- OR&IE 894, Applied OR&IE Colloquium
- OR&IE 599, Project

**I. For matriculants from other fields who minimally fulfill the prerequisite requirements. Students who have the equivalent of OR&IE 370, 622, and 623 will take technical electives in their place.**

**Fall term**
- OR&IE 370, Introduction to Statistical Theory with Engineering Applications
- OR&IE 622, Operations Research I
- OR&IE 516, Mathematical Models—Development and Application
- OR&IE 580, Digital Systems Simulation
- OR&IE 893, Applied OR&IE Colloquium
- OR&IE 599, Project

**Spring term**
- OR&IE 623, Operations Research II
- OR&IE 551, Advanced Engineering Economic Analysis
- OR&IE 894, Applied OR&IE Colloquium
- OR&IE 599, Project

Students fulfill the project requirement by working as part of a group of no more than four students on an operational systems problem that actually exists in some organization. Appropriate problems are suggested by various operating organizations such as manufacturing firms, retailing organizations, service organizations, government agencies, and educational institutions.

**Cooperative Program with Business and Public Administration**

Undergraduates majoring in operations research and industrial engineering may be interested in a cooperative program at Cornell that leads to both Master of Engineering and Master of Business
Administration (M.B.A.) degrees. With appropriate curriculum planning, such a combined B.S.--M.Eng.--M.B.A. program can be completed in six years.

An advantage for OR&IE majors is that they study, as part of their undergraduate curriculum, several subjects that are required for the Master of Business Administration degree. This is because modern management is concerned with the operation of production and service systems, and much of the analytical methodology required to deal with operating decisions is the same as that used by systems engineers in designing the systems.) Getting started early on meeting the business-degree requirements permits students accepted into the cooperative program to earn both the Master of Engineering (OR&IE) and Master of Business Administration degrees in two years rather than the three years such a program would normally take.

Essential aspects of the program as it pertains to the M.B.A. degree are:

1) By the end of the fifth year, the candidate completes—through course work, advanced standing, or exemption examinations—the core course work required for the M.B.A. degree, except for B&PA NBP 503, Business Policy.

2) A maximum of 30 credits toward the M.B.A. degree can be earned for courses taken before the start of the sixth year; these credits may be earned in the undergraduate B.S. program, in the M.Eng. program, or in the School of Business and Public Administration.

3) During the sixth year, over a period of two semesters, the candidate earns 26 credits in elective courses approved by the business school, plus 4 credits for B&PA NBP 503, Business Policy.

In accordance with this plan, the candidate would qualify for the Bachelor of Science degree at the end of four years, the Master of Engineering (OR&IE) degree at the end of five years, and the Master of Business Administration degree at the end of six years.

Further details and application forms may be obtained at the office of the School of Operations Research and Industrial Engineering, Upson Hall.

Theoretical and Applied Mechanics

Undergraduate Study

The Department of Theoretical and Applied Mechanics is responsible for courses in engineering mechanics and engineering mathematics, some of which are part of the underclass engineering curriculum in the Division of Basic Studies.

College Program in Engineering Science

A student may enroll in the College Program in Engineering Science, which is sponsored by the Department of Theoretical and Applied Mechanics. The College Program is described in the section on undergraduate study in the College of Engineering.

Engineering Courses

Courses offered in the College of Engineering are listed under the various departments and schools. Courses are identified with a standard abbreviation followed by a three-digit number.

Engineering Common Courses

Engineering Common Courses 102 Drawing and Engineering Design (also M&AE)

102 Fall or spring. 4 credits. Half-term course offered twice each semester. Recommended for students without previous mechanical drawing experience. S-U grades optional.

An introduction to elementary computer programming concepts. Emphasis is on techniques of problem analysis and algorithm and program development. The subject of the course is programming, not a particular programming language. The principal programming language used is PL/1: FORTRAN is introduced and used for final problems. The course does not presume previous programming experience. An introduction to numerical computing is included, although no college-level mathematics is presumed. Programming assignments are tested and run on interactive, stand-alone microcomputers.

Mechanics of Solids

202 Fall or spring. 3 credits. Prerequisite: coregistration in Mathematics 293.

An introduction to elementary computer programming concepts. Emphasis is on techniques of problem analysis and algorithm and program development. The subject of the course is programming, not a particular programming language. The principal programming language used is PL/1: FORTRAN is introduced and used for final problems. The course does not presume previous programming experience. An introduction to numerical computing is included, although no college-level mathematics is presumed. Programming assignments are tested and run on interactive, stand-alone microcomputers.

Dynamics

203 Fall or spring. 3 credits. Prerequisite: coregistration in Mathematics 294.

Newtonian dynamics of a particle, systems of particles, and rigid bodies. Kinematics, motion relative to a moving frame. Impulse, momentum, angular momentum, energy. Rigid-body kinematics, angular velocity, moment of momentum and the inertia tensor. Euler equations, the gyroscope.

Introduction to Electrical Systems

210 Fall or spring. 3 credits. Prerequisites: Mathematics 192 and Physics 112. 3 lec.

Circuit elements and laws, natural response of linear systems, impedance and pole-zero concepts, complex frequency and phasors, forced response and power systems, transfer function and frequency response, low-frequency terminal characteristics of diodes and transistors, linear models of electronic devices, bias circuits and frequency response of amplifiers, operational amplifiers, feedback, and oscillators.

Introduction to Systems Science

211 Fall or spring. 3 credits. Prerequisite: Computer Science 100 or Engr 105 or equivalent programming experience.

Introduction to computer science. Topics include program development, invariant relations, block structure, recursion, parallel processing, data structures, analysis of algorithms, and a brief introduction to machine architecture and machine-level programming. PL/I is the principal programming language used.

Thermodynamics

221 Fall or spring. 3 credits. Prerequisites: Mathematics 191--192 and Physics 112. 3 lec.

Introductory Engineering Probability

260 Fall or spring. 3 credits. Prerequisite: first-year calculus. 3 lec.

The basic tools of probability and their use in engineering. 260 may be the last course in probability for some students, or it may be followed by OR&IE 363. Stochastic Processes I, or by OR&IE 370. Statistics. Definition of probability, random variables, probability distributions, density functions, expected values; jointly distributed random variables; distributions of functions of random variables; laws of large numbers; exponential and normal random variables; central limit theorems.

Introduction to Mechanical Properties of Materials

261 Fall or spring. 3 credits. 2 lec. 1 lab. 3 rec.

The relation of elastic deformation, plastic deformation, and fracture properties to structure and defects on a microscopic scale in metals, ceramics, polymers and composite materials. Design and processing of materials to achieve high modulus, damping capacity, hardness, fracture strength, creep resistance or fatigue resistance. Failure-tolerant design methods using fracture mechanics.
262 Introduction to Electrical Properties of Materials  Spring. 3 credits.
2 lecs, 1 rec or lab. Electrical and structural properties of semiconductors, oxide layers and metal films that are used in modern integrated circuits. Crystal structure, growth of semiconductors, deposition of thin films, electrical conductors, semiconductors, transistors, and light-emitting diodes. Interplay between structural and electrical properties and their application to the design of semiconductor devices and integrated circuits.

270 Basic Engineering Probability and Statistics  Fall or spring. 3 credits. Students who intend to enter the upperclass Field Program in Operations Research and Industrial Engineering should take ORIE 260 instead of this course. Prerequisite: first-year calculus.
3 lecs. At the end of this course a student should command a working knowledge of basic probability and statistics as they apply to engineering work. For students who want to have greater depth in probability and statistics, a course in probability (ORIE 260) followed by a course in statistics (ORIE 370) is recommended.

321 Numerical Methods (also Com S 321)  Fall or spring. 4 credits. Prerequisites: Mathematics 293 or 221 and knowledge of FORTRAN equivalent to what is taught in Com S 100.

Applied and Engineering Physics

110 The Laser and Its Applications in Science, Technology, and Medicine  Fall, spring. 3 credits. This is a course in the "Introduction to Engineering" series.
2 lecs, 1 lab. T. A. Cool and A. Lewis. The principles of laser action, types of laser systems, and the applications of lasers in science, technology, and medicine are discussed. In the laboratory the student builds and operates a nitrogen laser and a tunable dye laser. Demonstration experiments with several types of lasers illustrate phenomena such as holography, laser-induced chemistry, Raman spectroscopy, frequency doubling, and interferometry. Guest lectures by prominent medical and industrial scientists introduce the student to current fields of laser application and research.

206 Introduction to Biophysics  Fall. 3 credits. Prerequisite: concurrent registration in Physics 213 or permission of instructor.
3 lecs. A. Lewis. The use of quantitative principles to elucidate biological systems. Intended for students of the physical sciences and engineers who want to see how biological systems exemplify the ultimate in design. Topics, chosen to show the interdependence of all living matter, are photosynthetic energy conversion, the products of photosynthetic energy conversion, photosynthetic energy conversion, and the photosynthesis of hemoglobin and metabolism/membranes, and perception and replication.

217 The Physics of Energy  Spring. 3 credits. Prerequisite: Physics 213.
2 lecs, 1 rec-lab. T. N. Rhodin. The basic physical principles and the fundamental engineering problems associated with present and potential approaches to large-scale energy conversion. In particular, the basic principles and fundamental limitations of the use of nuclear energy (both fission and fusion) and solar energy are presented. One objective of the course is to give a current view of present status and future directions of research and development in energy-related phenomena.

303 Introduction to Nuclear Science and Engineering I (also NS&E 303)  Fall. 3 credits. Prerequisite: Physics 214 or Mathematics 294. This course and A&EP 304 form a coordinated, two-semester sequence designed for students or seniors from any engineering field who want to prepare for graduate-level nuclear science and engineering courses at Cornell or elsewhere. The sequence can also serve as a basic foundation for those who do not intend to continue in the field; 303 is a reasonably self-contained unit that can be taken by itself by those desiring only one term.
3 lecs. D. A. Hammer. Introduction to the fundamentals of nuclear reactors. Topics include an overview of the field of nuclear engineering; nuclear structure, radioactivity, and reactions; interaction of radiation and matter; and neutron moderation, neutron diffusion, the steady-state chain reaction, and reactor kinetics. At the level of Introduction to Nuclear Engineering, by Lamarch.

304 Introduction to Nuclear Science and Engineering II (also NS&E 304)  Spring. 3 credits. Prerequisite: A&EP 303.
3 lecs. D. O. Clark. Introduction to aspects of nuclear reactor engineering and to controlled fusion. Topics include heat-transfer and safety problems in fission reactors; principles, configurations, and engineering problems of proposed fusion reactors; radiation detection, shielding, biological effects of radiation, and materials damage.

333 Mechanics of Particles and Solid Bodies  Fall. 4 credits.
3 lecs, 1 rec. J. Silcox. Newton's laws, coordinate transformations; generalized coordinates and momenta. Lagrangian and Hamiltonian formulation; applications to oscillator, restrained motion, central forces, small vibrations of multiparticle systems, motion of rigid body.

355 Intermediate Electromagnetism  Fall. 4 credits. Prerequisites: Physics 214 and coregistration in Mathematics 421 or T&M 610, or permission of instructor.
3 lecs, 1 rec. B. Kusse. Topics: vector calculus; electrostatics, magnetostatics, and spherical systems; dielectrics, paramagnetic and diamagnetic materials, electric and magnetic forces, energy storage, skin effect, quasistatics. Emphasis on physical concepts and applications.

356 Intermediate Electrodynamics  Spring. 4 credits. Prerequisites: A&EP 355, coregistration in Mathematics 422 or T&M 611, or permission of instructor.
3 lecs, 1 rec. M. Nelkin. Development of electromagnetic wave phenomena, Laplace's equation solutions in Cartesian, cylindrical, and spherical systems; dielectrics, paramagnetic and diamagnetic materials, electric and magnetic forces, energy storage, skin effect, quasistatics. Emphasis on physical concepts and applications.

361 Introductory Quantum Mechanics  Spring. 4 credits. Prerequisites: A&EP 333 or Physics 318; coregistration in Mathematics 422 or T&M 611 and in A&EP 355 or Physics 332.
3 lecs, 1 rec. V. O. Kostroun. A first course in the systematic theory of quantum phenomena. Topics include the square well, harmonic oscillator, Coulomb potential, and perturbation theory. At the level of Chapters 4–9 of Modern Physics and Quantum Mechanics by Anderson.

363 Electronic Circuits (also Physics 360)  Fall or spring. 4 credits. Prerequisite: Physics 208 or 213 or permission of instructor, no previous experience with electronics is assumed. Fall term is generally less crowded.
1 sec, 2 labs. Spring: A. Kuckes. This laboratory course focuses on designing, building, and testing analog, digital, and microprocessor-based circuits that are useful in electronic instrumentation. Analog topics include basic circuit concepts, applications of operational amplifiers in linear circuits, oscillators and comparators, transistor circuits, and diodes in power supplies, waveform shaping circuits, and protective circuits. Students also build digital circuits that incorporate Schmitt triggers, comparators, combinational and sequential logic using medium-scale integrated circuits. The above circuits are also interfaced to a microprocessor whose architecture, machine instruction set, and programming principles are studied. At level of Principles of Electronic Instrumentation by Diefenderfer.

401 Physics of Atomic and Molecular Processes  Fall. 3 credits. Prerequisite: A&EP 361, Physics 443, or permission of instructor. Not offered 1982–83. An introduction to the basics of contemporary problems in the physics of atomic and molecular processes, including atomic structure, chemical bonding, polarization, radiation resonance processes, and atomic and molecular spectroscopy.

423 Statistical Thermodynamics  Spring. 4 credits. For engineering physics seniors; others by permission of instructor.
3 lecs, 1 rec. B. R. Kusse. Quantum statistical basis for equilibrium thermodynamics, canonical and grand canonical ensembles, and partition functions. Quantum and classical ideal gases and paramagnetic systems. Fermi-Dirac, Bose-Einstein, and Maxwell-Boltzmann statistics. Introduction to systems of interacting particles. At the level of Thermal Physics by Kittel and Statistical and Thermal Physics by Reif.

434 Continuum Physics  Fall. 4 credits. Prerequisite: A&EP 333 and 356 or equivalent.
3 lecs, 1 rec. M. Nelkin. Local conservation laws; stress, strain, and rate-of-strain tensors; equations of motion for elastic and viscous reagents; waves in solids and fluids; dislocations, ideal fluids, potential flow, Benioff's equation, vorticity and circulation; lift viscous incompressible flow and the Navier-Stokes equations, Reynolds number, Poiseuille flow in a pipe, Stokes drag on a sphere, boundary layers, Blasius equations; flow instabilities, Rayleigh-Benard convection and the onset of chaotic flow. Introduction to turbulent flow.

490 Informal Study in Engineering Physics  Credit to be arranged.
Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the staff.

501 Photosynthesis (also Biological Sciences 445)  Fall. 3 credits. Prerequisites: Chemistry 104 or 208, Mathematics 106 or 111, and Physics 102 or 206, or permission of instructor. Offered alternate years.
R. K. Clayton. A detailed study of the process by which plants use light in order to grow, emphasizing physical and physiochemical aspects.

506 Introduction to Plasma Physics (also Electrical Engineering 581)  Fall. 3 credits. Prerequisites: A&EP 335, 356, or equivalent. Open to fourth-year students at discretion of instructor.
3 lecs. R. N. Sudan.
Plasma state; motion of charged particles in fields; collisions, coulomb scattering; transport coefficients, ambipolar diffusion, plasma oscillations and waves; hydromagnetic equations; hydromagnetic stability and microscopic instabilities; test particle in a plasma; elementary applications.

Advanced Plasma Physics (also Ele E 582) Spring. 3 credits. Prerequisite: A&EP 606.
3 lecs. R. S. Sudan
Boltzmann and Vlasov equations; waves in hot plasmas; Landau damping, micro-instabilities; drift waves, low-frequency stability, collisional effects; method of dressed test particles; high-frequency conductivity and fluctuations; classical toroidal diffusion, high-powered beams.

R. V. Lovelace
Selected topics discussed in detail: (a) the solar corona and the solar wind; (b) hydrodynamic and magnetohydrodynamic flows around compact objects in galactic nuclei; (c) global electrodynamics of double radio sources.

Low-Energy Nuclear Physics Fall. 4 credits.
Prerequisite: a year of advanced calculus and some nuclear physics. 3 lecs. V. Kostroun
The nuclear interaction. Properties of ground and excited states of nuclei; models of nuclear structure, alpha, beta, gamma radioactivity, low-energy nuclear reactions—resonant and nonresonant scattering, absorption, and fission. At the level of Introduction to Nuclear Physics by Enge.

Vision (also Biological Sciences 395) Fall. 3 credits.
Prerequisites: Chemistry 104 or 208, Mathematics 106 or 111, Physics 102 or 208, or permission of instructor. Offered alternate years. R. V. Clayton
Study of the mechanisms of seeing, embracing biological, physical, and chemical approaches to the subject.

Nuclear Reactor Theory I Fall. 4 credits.
Prerequisites: a year of advanced calculus and some nuclear physics. 3 lecs. K. B. Cadgy
Physical theory of fission reactors. Fission and neutron interactions with matter; theory of neutron diffusion, slowing down, and thermalization; calculability of criticality and neutron flux distribution in nuclear reactors. Reactor kinetics. At the level of Nuclear Reactor Theory by Lamm and Lapidus.

Nuclear Reactor Theory II Spring. 3 credits. A&EP 612, primarily intended for students planning research in nuclear reactor engineering, or permission of instructor. Offered alternate years. R. A. Buhrman
A group design study of a selected nuclear system. Emphasis is on safety, quality, and radiation protection in the design of nuclear systems.

K. B. Cadgy
The fundamentals of nuclear reactor engineering, reactor siting and safety, fluid flow and heat transfer, control, and radiation protection.

Modern Physical Methods in Macromolecular Structure Determination (parallels Physics 464) Spring. 3 credits. Prerequisites: permission of instructor and graduate students. Offered alternate years. A. Lewis
Modern physical methods of macromolecular characterization, with emphasis on techniques such as subpicosecond and picosecond fluorescence and absorption spectroscopy, excited and ground-state dipole-moment measurement, tunable laser optical spectroscopy, tunable laser Raman and coherent anti-Stokes Raman spectroscopy of ground and excited molecular states, and the measurement of vibrational optical activity. The course should appeal to students who are interested either in the use of such physical techniques for characterizing materials or in the physics of macromolecules and macromolecular assemblies. Macromolecular systems used as examples are of biological interest or are physically interesting polymeric materials.

Electron Optics Spring. 3 credits. Offered alternate years. M. S. Isaacson
Basic electron optics with emphasis on the fundamental principles of the production and focusing of charged-particle beams. Special consideration is given to the optics appropriate for beam transport and probe forming systems and systems useful in materials characterization. Included are discussions of the calculation of trajectories in multicomponent optical systems, comprehensive treatments of optical aberrations, and practical considerations of electron optical design.

Nuclear Engineering Fall. 4 credits.
Prerequisite: introductory course in nuclear engineering. K. B. Cadgy.
The fundamentals of nuclear reactor engineering, reactor siting and safety, fluid flow and heat transfer, control, and radiation protection.

K. B. Cadgy
A group design study of a selected nuclear system. Emphasis is on safety, quality, and radiation protection in the design of nuclear systems.

Seminar on Thermonuclear Fusion Reactors Fall. 3 credits. Prerequisite: basic course in plasma physics or nuclear reactor engineering, or permission of instructor. Not offered 1982–83.
A. A. Hammer
Analysis of various technological and engineering problems in design and construction of fusion reactors. Topics include basic reactor schemes; materials, mechanical and heat transfer problems; radiation and safety; superconducting magnets, energy conversion, plasma impurities, and economics.

Seminar on Thermonuclear Fusion Reactors Spring. 3 credits. Prerequisite: permission of instructor. Not offered 1982–83.
A. A. Hammer
Analysis of various technological and engineering problems in design and construction of fusion reactors. Topics include basic reactor schemes; materials, mechanical and heat transfer problems; radiation and safety; superconducting magnets, energy conversion, plasma impurities, and economics.

Intense Pulsed Electron and Ion Beams: Physics and Technology Spring. 2 credits.
Prerequisites: Ele E 581, 582 (A&EP 605: 607), or equivalent; or permission of instructor. A. Hammer.
Topics include (1) theoretical aspects of intense electron and ion beams, such as equilibrium and stability; (2) technology of intense beam production, such as pulsed-power generator principles, and electron and ion diode operation, and (3) applications of intense beams, such as to controlled fusion, microwave generation, and laser pumping. Extensive discussion of experimental results.

Nuclear Measurements Laboratory Spring. 4 credits. Prerequisite: some nuclear physics.
2 1/2-hour afternoon periods plus 1 lec. Staff.
Lectures on interaction of radiation with matter, radiation biology, nuclear instruments and measurements. Fifteen experiments are available (from which eight are selected) on nuclear physics, radiation instrumentation and measurements, activation analysis, neutron moderation, and reactor physics and engineering; the subcritical reactor assembly and TRIGA reactor are used. At the level of Nuclear Radiation Detection by Price and Radiation Detection and Measurement by Knoll.

Advanced Nuclear and Reactor Laboratory Spring. 3 credits. Prerequisites: A&EP 651 and 609 or 612. Offered on independent study basis or, with sufficient demand, as a formal course.
Two 2 1/2-hour afternoon periods. Laboratory experiments and experimental methods in nuclear physics and reactor physics. Ten experiments are available, some using the Zero Power Reactor critical facility.

Special Topics Seminar in Applied Physics Fall or spring. 4 credits. Prerequisite: undergraduate physics. Required for candidates for the M Eng. (Engineering Physics) degree and recommended for seniors in engineering physics.
Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the student. Effort is made to integrate the subject within selected areas of atomic, plasma, biological, and solid-state physics, as suggested by the students and coordinated by the instructor.

Microcharacterization Fall. 3 credits.
Prerequisites: Physics 112, 213, and 214, or an introductory course in modern physics. M. S. Isaacson.
The basic physical principles underlying the many modern microanalytical techniques available for characterizing materials. Discussion centers on the physical processes of the interaction process by which the characterization is performed, the advantages and limitations of each technique, and the instrumentation involved in each characterization method (including the charged-particle optics when appropriate).

Microprocessing of Materials Spring.
Special topics include quantum superconducting devices, physics of submicron conductors, nonlinear fluctuations, biophysical processes, molecular structures.

Principles of Diffraction (also MS&E 510) Fall. 3 credits. Offered alternate years. B. W. Batterman.
Introduction to diffraction phenomena as applied to solid-state problems. Scattering and absorption of neutrons, electrons, and X-ray beams, with particular emphasis on synchrotron radiation X-ray sources. Diffraction from two- and three-dimensional periodic lattices. Fourier representation of scattering centers, and the effect of thermal vibrations. Diffraction from almost-periodic structures, surface layers, gases, and amorphous materials. Calculation of diffraction from perfect and imperfect lattices. Several laboratory experiments will be conducted.

Project 751, 752 Project 751, fall; 752, spring. Credit to be arranged.
Informal study under the direction of a member of the University staff. Students are offered some research experience through work on a special problem related to their field of interest.
761 Kinetic Theory (also Ele E 681) Fall. 3 credits. Prerequisites: Ele E 407 or Physics 561 or permission of instructor. Offered alternate years. 2 lecs. R. L. Liboff. See Electrical Engineering 681 for course description.

762 Physics of Solid Surfaces and Interfaces Spring. 3 credits. Lecture course primarily for graduate and qualified senior students. Prerequisites: Physics 454 and A&EE 361. Similar to MS&E 703. Offered alternate years. T. N. Rhodin. A critical presentation of current understanding of the physics and chemistry of surface and interface phenomena in metals, semiconductors, and ionic solids. Application of quantum and statistical mechanics to a discussion of the microscopic behavior of electrons, atoms, ions, and molecules at phase boundaries in condensed matter. Emphasis on the electron structure, surface crystallography, and chemical reactivity of both ideal and practical solid surfaces. Theory and application of modern methods of electron spectroscopy in ultrahigh physics. Material drawn from the current research literature is presented at the level of The Nature of the Surface Chemical Bond, edited by Rhodin and Ertl.

Chemical Engineering

101 Nonresident Lectures Fall. Noncredit. 1 lec. Given by lecturers invited from industry and from selected departments of the University to assist students in their transition from college to industrial life.

219 Mass and Energy Balances (also Engr 219) Fall. 3 credits. Prerequisite: one year of freshman chemistry. Chemical Engineering 219 is intended for students who cannot take Chemical Engineering 219. R. G. Thorpe. See description under Engineering Basic Studies.

220 Mass and Energy Balances (also Engr 220) Summer. Not offered during the academic year; available during summer. 3 credits. Prerequisite: one year of freshman chemistry. Chemical Engineering 220 is intended for students who cannot take Chemical Engineering 219. R. G. Thorpe. Self-paced audiovisual instruction in the material of Chemical Engineering 219. See description under Engineering Basic Studies.

311 Chemical Engineering Thermodynamics I Fall. 3 credits. Thermodynamics of continuous media. 3 lecs. 1 computing session. W. B. Streett.

312 Chemical Engineering Thermodynamics II Spring. 3 credits. Thermodynamics of fluids; applications of thermodynamics to compressors, power cycles, refrigeration; thermodynamic analysis of processes. 3 lecs. 1 computing session. K. E. Gubbins.

410 Reaction Kinetics and Reactor Design Fall. 3 credits. Prerequisites: Chem E 312 and 430. A study of chemical reaction kinetics and principles of reactor design for chemical processes. 3 lecs. J. F. Cucchietto.

421 Industrial Organic Chemical Processes Spring. 2 credits. Prerequisite: Chemistry 253 or 357. Study of commercial manufacturing processes for important organic chemicals. 2 lecs. F. Rodriguez.

430 Introduction to Rate Processes Fall. 3 credits. Prerequisites: Chem E 219 and-engineering mathematics sequence. A study of chemical reaction kinetics and principles important organic chemicals. 3 lecs. 1 computing session. C. Cohen. Fundamentals of fluid mechanics and heat transfer, solutions to problems involving viscous flow, heat conduction and convection, friction factors and heat transfer coefficients, macroscopic balances, elementary applications.

431 Analysis of Separation Processes Spring. 3 credits. Prerequisites: Chem E 430 and familiarity with FORTRAN or PL/I. A study of the first and second laws, with application to batch and flow processes. Thermodynamic phase diagrams. Estimation methods. Heat effects, properties of fluids; applications of thermodynamics to compressors, power cycles, refrigeration; nuclear chemical engineering.

432 Chemical Engineering Laboratory Fall. 3 credits. Prerequisites: Chem E 430, 431. Laboratory experiments in fluid dynamics, heat and mass transfer, other operations. Correlation and interpretation of data. Technical report writing. Special laboratory projects involving bench-scale or pilot-plant equipment.

461 Chemical Process Evaluation Fall. 3 credits. P. Harriss. Study of some important chemical processes, covering raw material sources, analysis of reaction conditions, and product purification.

462 Chemical Process Synthesis Spring. 4 credits. Prerequisite: Chem E 432. R. L. Von Berg and staff. A consideration of process and economic alternatives in selected chemical processes, design and assessment.

463 Computer Applications in Chemical Engineering Spring. 3 credits. Prerequisite: Com S 100 or equivalent. P. Clancy. Modern computing techniques for solving current problems in chemical engineering. Basic research and applications both in industry and in the university. Computer graphics, on-line data analysis, and numerical manipulation. Extensive hands-on opportunities.

561 Design Project Spring. 3 or 6 credits. Prerequisites: Chem E 563, 564. Staff. Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw material preparation, food processing, waste disposal, or some other aspect of chemical processing.

566 Computer-Aided Process Design Spring. 3 credits. Prerequisite: concurrent registration in 462 or a previous course in process design. An introduction to the synthesis and use of computer systems for steady-state simulation and optimization of chemical processes.

595 Special Projects in Chemical Engineering Fall or spring. Credit variable. Research or studies on special problems in chemical engineering.

611 Phase Equilibria Fall. 3 credits. Prerequisite: physical chemistry. P. Harriss. Energy resources and projected consumption. Gasification and liquefaction of coal and oil shale. Synthesis of methane, methanol, and hydrogen.

621 Petroleum Refining Spring. 3 credits. H. F. Wiegandt. A study of processes used to refine petroleum. Recent process developments, including those for selected petrochemicals.

627 Nuclear Chemical Engineering Fall. 2 credits. Prerequisite: permission of instructor. Not offered 1982–83. R. G. Thorpe. Uranium refining, isotope separation, fuel manufacturing, spent-fuel processing, radioactive waste disposal, radiation damage, radiation chemistry.

640 Polymers Laboratory Fall. 3 credits. F. Rodriguez. Chemistry and physics of the formation and characterization of polymers. Principles of fabrication.

641 Physical Polymer Science Fall. 3 credits. P. Harriss. Chemistry and physics of the formation and characterization of polymers. Principles of fabrication.

642 Polymeric Materials Laboratory Spring. 2 or 3 credits. F. Rodriguez. Experiments in the formation, characterization, fabrication, and testing of polymers.

644 Microbial Engineering Spring. 3 credits. Prerequisites or corequisites: Chemistry 288 and any course in microbiology.

671 Kinetic Theory (also Ele E 681) Fall. 3 credits. Prerequisites: Ele E 407 or Physics 561 or permission of instructor. Offered alternate years. 2 lecs. R. L. Liboff. See Electrical Engineering 681 for course description.
671 Process Control Laboratory Spring. 1 credit. Prerequisite: concurrent registration in Chem E 671. 1 lab. J. F. Cocchetto. Experiments on controller calibration, dynamics of first- and second-order systems, and dynamics and control of actual or simulated process systems.

673 Applied Surface Chemistry and Physics Spring. 2 credits. R. P. Merrill. Topics in the chemistry and physics of solid surfaces and their applications to practical problems. In 1983 the course will concentrate on the physics and chemistry of catalytic systems from a fundamental viewpoint. Discussion of several practical catalytic systems will be included.

692, 693, 694 Research Project Fall or spring. 3 credits; additional credit by special permission. Prerequisite: Chem E 430. Research on an original problem in chemical engineering.

711 Advanced Chemical Engineering Thermodynamics Fall. 3 credits. Prerequisite: Chem E 312 or equivalent. 3 lecs. K. E. Gubbins. Application of general thermodynamic methods to advanced problems in chemical engineering. Evaluation, estimation, and correlation of properties; chemical and phase equilibrium.

713 Applied Chemical Kinetics Fall. 3 credits. Prerequisite: physical chemistry. R. P. Merrill. Fundamentals of the kinetics of reacting systems. Collision theory, unimolecular rate theory, transition-state theory, and the use of simple statistical models to represent reacting chemical systems are stressed. The application of these concepts to nonideal environments, solvent effects, and reactions on solids is presented with some emphasis on catalytic phenomena.

751 Mathematical Methods of Chemical Engineering Analysis Spring. 4 credits. 4 lecs. R. J. Stern. Application of advanced mathematical and numerical techniques to chemical engineering analysis. Linear and nonlinear ordinary differential equations, partial differential equations, vector and tensor analysis.

772 Theory of Molecular Liquids Spring. 3 credits. Prerequisite: Chem E 711 or equivalent. K. E. Gubbins. Theory of intermolecular forces, and equilibrium statistical mechanics for nonpolar molecules. Distribution functions. Applications to thermodynamics of such fluids using integral equation and perturbation technique. Mixture properties, phase diagrams for mixtures with polar or quadrupolar components. Surface properties.

790 Seminar Fall and spring. 1 credit each term. General chemical engineering seminar required of all graduate students majoring in the Field of Chemical Engineering.

792 Advanced Seminar in Thermodynamics Fall or spring. 1 credit. K. E. Gubbins. A forum for talks by graduate students and faculty members on topics of current interest in thermodynamics and statistical mechanics.

891, 892, 893 Thesis Research Fall or spring. Thesis research for the M.S. degree in chemical engineering.

891, 992, 993, 994, 995 Thesis Research Fall or spring. Thesis research for the Ph.D. degree in chemical engineering.

Civil and Environmental Engineering

The numbering of courses in the School of Civil and Environmental Engineering has been changed. The middle digits of course numbers now designate specific areas of study: 1, Environmental Sensing, Measurement, and Evaluation; 2, Public and Environmental Systems Engineering; 3, Fluid Mechanics and Hydrology; 4, Geotechnical Engineering; 5, Environmental Quality Engineering; 6, Transportation Engineering; 7 and 8, Structural Engineering; 9, Water Resources Planning and Analysis; and 0, Professional Practice.

301 Numerical Solutions to Civil Engineering Problems Fall. 3 credits. Introduction to numerical and computer methods through consideration of typical problems drawn from a number of disciplines within civil and environmental engineering. Topics include computer use, computer programming, data handling, numerical analysis, and the role of computing in the civil engineering profession.

304 Uncertainty Analysis in Engineering Fall. 4 credits. Prerequisite: first-year calculus. J. R. Sedinger. An introduction to probability theory, statistical techniques, and uncertainty analysis, with examples drawn from civil, environmental, agricultural, and related engineering disciplines. The course covers data presentation, probability theory, commonly used
probability distributions, parameter estimation, goodness-of-fit tests, confidence intervals, hypothesis testing, simple linear regression, and some nonparametric statistics and decision theory. Examples include structural reliability, models of vehicle arrivals, analysis of return-period calculations, and distributions describing wind speeds, floods, pollutant concentrations, and soil and material properties.

310 Surveying for CEE Facilities Fall. 3 credits. Prerequisites: Physics 112, Math 192. Recommended: Engr 260 or C 270.
2 lecs, 1 lab, Evening tests. G. B. Lyon.
This course specifically focuses on surveying and use of results from surveying operations for planning, design, and construction of civil engineering facilities. Topics include measurements and data reduction for determination of position, and changes therein, of terrestrial features; development and use of criteria for quality control; highway curves, earthwork quantities and distribution analysis for minimum construction cost; terrestrial and photogrammetric compilation of topographic maps; use of topographic maps in planning and design; and selected topics in the construction of civil and environmental engineering facilities.

321 Microeconomic Analysis (also Economics 311) Fall. 4 credits. Prerequisite: one year of college-level mathematics. A liberal elective for engineers.
L. M. Falkson.
Intermediate microeconomic analysis similar to Economics 311 but emphasizing mathematical techniques. Theory of households, firms, monopoly and competitive markets, distribution and equilibrium welfare economics.

322 Economic Analysis of Government (also Economics 306) Spring. 4 credits. Prerequisites: one year of college-level mathematics, plus CEE 321 or Economics 311.
R. E. Schuler.
Analysis of government intervention in a market economy. Public goods, public finance, cost-benefit analysis, environmental regulation, and macroeconomic topics.

323 Engineering Economics and Management Spring. 3 credits. Aimed at juniors and seniors; not intended for students with substantial background in business economics or methods of operations research.
J. R. Steding.
Intended to give the student a working familiarity with the principles for making economic comparisons and for reaching decisions about alternative engineering projects. Project management, inflation, taxation, financial planning and basic operations-research techniques are discussed.

325 Social Implications of Technology Fall. 3 credits. Approved liberal elective. Not open to freshmen.
W. R. Lynn.
Examines selected issues pertaining to the development, implementation, and assessment of technology. Special emphasis is given to social, political, and economic aspects of current problems that have important technological components.

331 Fluid Mechanics Fall. 4 credits. Prerequisite: Engr 203 (may be taken concurrently).
3 lecs, 1 rec. Evening exams. Staff.
Hydrostatics, the basic equations of fluid flow, potential flow, dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, selection of turbomachinery.

332 Hydraulic Engineering Spring. 3 credits. Prerequisite: CEE 331.
2 lecs, 1 lab, field trips. Staff.
Steady open-channel flow, river modeling, unsteady pipe flow, theory of turbomachinery. Laboratory includes number of experiments in hydraulic and river engineering.

341 Introductory Soil Mechanics Spring. 3 credits.
2 lecs, 1 lab-tutorial. T. D. O'Rourke.
Soil as an engineering material. Chemical and physical nature of soil. Engineering properties of soil. Stresses and stress analysis in soil. Introduction to stability, earth pressure, and other design problems. Introduction to laboratory testing.

351 Environmental Quality Engineering Spring. 3 credits.
J. M. Gossett.
Introduction to engineering aspects of environmental quality control. Emphasis on water quality control concepts, theory, and methods. Elementary analysis pertaining to the modeling of pollutant reactions in natural systems, and introduction to design of unit processes for water and wastewater treatment.

352 Water Supply Engineering Fall. 3 credits. Prerequisite: CEE 351 or permission of instructor.
R. I. Dick.

361 Introduction to Transportation Engineering Spring. 3 credits.
M. A. Turnquist.
Introduction to technological, economic, and social aspects of transportation. Emphasis on the form and functioning of transportation systems and their components. Vehicle and system technology, traffic flow and control, terminal operations, supply-demand interactions, system planning and management, and institutional issues.

371 Structural Engineering I Fall. 4 credits. Prerequisite: Engr 202.
3 lecs, 1 two-hour lab. Evening exams. P. Gergely.

372 Structural Engineering II Spring. 4 credits. Prerequisite: CEE 371.
3 lecs, 1 two-hour lab. Evening exams. J. F. Abel.

373 Structural Engineering III Fall. 4 credits. Prerequisites: CEE 372 or permission of instructor; CEE 376 and Engr 261 are also required, but may be taken concurrently.
Evening exams. T. Pekoz.
Describes the study of the behavior and design of steel and concrete members and structures. Structural elements, connections, and systems. Plastic analysis of steel frames.

374 Structural Engineering IV Spring. 4 credits. Prerequisite: CEE 373.
M. D. Grigoriu.
Intended to develop an understanding of the structural design process. Comprehensive design project. Lectures on preliminary design, composite construction, prestressed concrete, and various structural systems such as bridges, roofs, tall buildings, and seismic design.

375 Structural Behavior Laboratory Spring. 2 credits. Prerequisite (may be taken concurrently): CEE 372.
F. N. White.
A laboratory course on behavior of structures, utilizing small-scale models. Elastic, inelastic, and nonlinear behavior of structural components and systems. Projects.

376 Engineering Materials Fall. 3 credits.
2 lecs, 1 lab. F. O. Slate.
Engineering properties of concrete, steel, wood, and other structural materials. Design characteristics and significance of test results of materials used in engineering works. Extensive laboratory testing and report writing.

426 Seminar in Technology Assessment Spring. 3 credits. Open to graduate and upperclass undergraduates.
N. Orloff.
An interdisciplinary seminar dealing with the social consequences of technological developments and making it clear which technology can be guided in socially beneficial directions.

430 Descriptive Hydrology Spring. 2 credits. Interdisciplinary seminars on major issues. Prerequisite: permission of instructor. Not offered 1982-83.
W. H. Brutsaert.
Introduction to hydrology as a description of the hydrologic cycle and the role of water in the natural environment. Topics include precipitation, infiltration, evaporation, ground water, surface runoff, floods, and droughts.

501 Civil and Environmental Engineering Design Project I Fall. 3 credits. Required for students in the M.Eng. (Civil) program.
Fall. 3 credits. Required for students in the M.Eng. (Civil) program. Prerequisite: CEE 501.
School faculty and visiting engineers.
Design of major civil engineering project. Planning and preliminary design in fall term; final design in January intersession (CEE 502).

502 Civil and Environmental Engineering Design Project II Spring (work done during January intersession). 3 credits. Required for students in the M.Eng. (Civil) program. Prerequisite: CEE 501.
Spring.
School faculty and visiting engineers. Design of major civil engineering project. Planning and preliminary design in fall term; final design in January intersession (CEE 502).

503 Professional Practice in Engineering Spring. 3 credits. Required for and limited to students in the M.Eng. (Civil) program. Prerequisite: CEE 501.
W. R. Lynn.
Introduction to nontechnical aspects of engineering practice: legal, financial, social, and ethical aspects; personnel management; communications; professional organizations.

601 Numerical Solutions to Civil Engineering Problems Fall. 3 credits.
Introduction to numerical and computer methods through consideration of typical problems drawn from a number of disciplines within civil and environmental engineering. Topics include computer use, computer programming, data handling, numerical analysis at the graduate level, and the role of computing in the civil engineering profession.

610 Remote Sensing: Fundamentals Fall. 3 credits. Prerequisite: permission of instructor.
2 lecs, 1 lab. W. R. Philipson.
Fundamentals of sensing earth resources with sensors of electromagnetic radiation. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

611 Remote Sensing: Environmental Applications Spring. 3 credits. Prerequisite: permission of instructor.
2 lecs, 1 lab. W. R. Philipson.
Applications of remote sensing in various environmental disciplines. Emphasis is on the use of aircraft and satellite imagery for studying surface features in engineering, planning, agriculture, and natural resource assessments.

[612 Physical Environment Evaluation Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1982–83. 2 lec. 1 lab. T. Liang. Physical environmental factors affecting engineering planning decisions: climate, soil and rock conditions, water sources. Evaluation methods: interpretation of meteorological, topographic, geologic, and soil maps, aerial photographs, and subsurface exploration records.]

[613 Image Analysis I: Landforms Fall. 3 credits. Prerequisite: permission of instructor. 2 lec. 1 lab. T. Liang. Analysis and interpretation of aerial photographs for a broad spectrum of soil, rock, and drainage conditions. Specific fields of application are emphasized.]

[614 Image Analysis II: Physical Environments Fall. 3 credits. Prerequisite: CEE 612 or 613. 2 lec. 1 lab. T. Liang. Study of physical environments using aerial photographs and other remote sensing methods. Conventional photography, spectral, space, and sequential photography; thermal and radar images. Arctic, tropical, and humid climate regions. Project applications.]

[616 Project—Remote Sensing On demand. 1–6 credits. Staff. Students may elect to undertake a project in remote sensing and environmental evaluation. The work is supervised by a professor in this subject area.]

[617 Research—Remote Sensing On demand. 1–6 credits. Staff. For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.]

[618 Special Topics—Remote Sensing On demand. 1–6 credits. Staff. Supervised study in small groups on one or more special topics not covered in the regular courses. Special topics may be of a theoretical or applied nature.]

[619 Seminar in Remote Sensing Spring. 1 credit. S-U grades only. W. R. Phillipson. Presentation and discussion of current research, developments, and applications in remote sensing. Lectures by Cornell staff and invited specialists from government and industry.]

[624 Legal Process Spring. 3 credits. Limited to graduate students and undergraduates. Not offered 1982–83. N. Orriff. An introduction to the structure and operation of our legal system. Development of legal skills and the ability to do one's own basic legal research.]

[625 Environmental Law I Fall. 4 credits. Limited to graduate students and seniors; other undergraduates with permission of instructor. Not offered 1982–83. N. Orriff. An introduction to how the legal system handles environmental problems. Study of federal statutes such as the National Environmental Policy Act, the Clean Air Act, and the Clean Water Act, the regulations issued to implement them, and the important judicial decisions that have been handed down under each.]

[626 Environmental Law II Spring. 3 credits. Limited to graduate students and seniors; other undergraduates with permission of instructor. N. Orriff, R. Booth. Analysis of additional components of environmental law, such as those pertaining to toxic substances, hazardous wastes, and management of public lands.]

[628 Public Systems Analysis Spring. 3 credits. Prerequisite: CEE 323 or an introductory optimization course. C. A. Shoemaker. Use of systems analysis in engineering design for solutions to public-sector and environmental problems. Applications to water-resource, energy-production and facility-location problems.]

[629 Environmental and Water Resources Systems Analysis Colloquium Fall or spring. 1 credit. Staff. Lectures in various topics related to environmental or water-resources systems planning and analysis.]

[630 Advanced Fluid Mechanics Fall. 3 credits. Prerequisite: CEE 331. 3 lecs. P. L.-F. Liu. Introduction to turbulent flow, conservation of mass, momentum, and energy from a rigorous point of view. Study of exact solutions of the Navier-Stokes equations. Asymptotic approximations at low and high Reynolds numbers. Similarity and modeling. Laminar diffusion of momentum, mass, and heat.]

[631 Dynamic Oceanography Fall or spring. 3 credits. Prerequisite: CEE 331. W. H. Brutsaert. The statics and dynamics of oceans and lakes. Currents in homogeneous and stratified bodies of water; tidal motions; waves in a stratified ocean.]

[635 Coastal Engineering I Spring. 3 credits. Prerequisite: CEE 331. W. H. Brutsaert. Linear wave theory, wave generation by wind, analysis of fluid forces on floating and fixed coastal structures, and modification of waves and currents by these structures. Coastal processes and coastal sediment motion.]

[636 Environmental Fluid Mechanics I Fall. 3 credits. Prerequisite: CEE 331. 3 lecs. G. H. Jirka. Introduction to mass and heat transport processes due to pollutant discharges into the environment. Turbulent diffusion equation and its solution for instantaneous and continuous releases. Concept of longitudinal dispersion in shear flow. Applications to pollutant-transport prediction in lakes, rivers, estuaries, and coastal zones, as well as the atmosphere. Relative role of hydromagnetic transport to the air-water interface. Convective transport due to density currents. Jet mixing and the design of outfall structures.]

[637 Project—Hydraulics On demand. Variable credit. Hours to be arranged. Staff. The student may elect a design problem or undertake the design and construction of special equipment in the fields of fluid mechanics, hydraulic engineering, or hydrology.]

[638 Hydraulics Seminar Spring. 1 credit. Open to undergraduates and graduates who are interested in hydraulics or hydraulic engineering. The work is supervised by a professor in this subject area.]

[641 Retaining Structures and Slopes Spring. 3 credits. Prerequisite: CEE 341 or permission of instructor. 3 lecs. P. L.-F. Liu. Design of shallow and deep foundations. Earth pressure theories. Design of rigid, flexible, braced, tied back, slurry, and reinforced earth walls. Stability of excavation, cut, and natural slopes.]

[642 Highway Engineering (also Agricultural Engineering 491) Fall. 3 credits. Prerequisite: CEE 341 or permission of instructor. 2 lecs. 1 lab. L. H. Irwin. See Agricultural Engineering 491 for course description.]

[643 Bituminous Materials and Pavement Design (also Agricultural Engineering 492) Spring. 3 credits. Prerequisite: CEE 642 or permission of instructor. 3 lecs. L. H. Irwin. See Agricultural Engineering 492 for course description.]

[647 Design Project in Geotechnical Engineering On demand. 1–6 credits. Students may elect to undertake a design project in geotechnical engineering. The work is supervised by a professor in this subject area.]

[648 Seminar in Geotechnical Engineering Fall or spring. 1 credit. Staff. Presentation and discussion of topics of current research and practice in geotechnical engineering.]

Civil and Environmental Engineering 239
649 Special Topics in Geotechnical Engineering Fall. 1-6 credits. Supervised study of special topics not covered in the formal courses.

651 Microbiology of Water and Wastewater Fall. 2 credits. Prerequisites: one semester of college chemistry.
J. M. Gossett.
Microbiological phenomena pertinent to analysis of natural systems and design of engineered microbial processes in pollution control. Quantitative aspects of growth and substrate utilization will be stressed.

653 Chemistry of Water and Wastewater Fall. 3 credits. Prerequisite: one semester of college chemistry or permission of instructor.
J. M. Gossett.
Principles of physical, organic, inorganic, and biological chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters.

654 Aquatic Chemistry Spring. 3 credits. Prerequisite: CEE 653 or Chemistry 267–268.
L. B. Dworsky.
An analysis of the treatment and disposal of industrial wastewaters, profuse wastewaters. Regulatory and legal aspects, pretreatment, treatment and disposal processes for conventional, nonconventional, and toxic pollutants, industrial-waste survey, case studies of specific industries, opportunities for recycle and reuse. Emphasis is on understanding the constraints on industrial-waste discharges and the processes and approaches to meet those constraints.

655 Industrial Waste Management Spring. 3 credits. Prerequisites: CEE 351 and 653 or permission of instructor.
J. J. Bisogni.
An introduction to the treatment and disposal of industrial wastes, profuse wastewaters. Regulatory and legal aspects, pretreatment, treatment and disposal processes for conventional, nonconventional, and toxic pollutants, industrial-waste survey, case studies of specific industries, opportunities for recycle and reuse. Emphasis is on understanding the constraints on industrial-waste discharges and the processes and approaches to meet those constraints.

656 Environmental Quality Management Fall; spring on demand. 3 credits (4 with approval of instructor). For upperclass or graduate students. May not be offered 1982–83.
R. C. Loehr.
An introduction to environmental quality management. Nature, cause, and control of environmental problems; interaction of physical, social, and cultural environments; emphasis on the interdependent social, economic, developmental, and environmental issues confronting society.

658 Sludge Treatment, Utilization, and disposal Spring. 3 credits. Prerequisites: CEE 351 and 653 or permission of instructor.
R. I. Dick.
An analysis of the quantity and quality of residuals produced from water and wastewater treatment facilities as a function of process design and operation. The alternatives for reclamation or ultimate disposal of residuals with assessment of potential environmental impacts and factors influencing the magnitude of those impacts; the fundamental factors influencing performance of treatment processes; altering sludge properties prior to ultimate disposal; and considerations in selection and integration of sludge management processes to approach optimal design.

659 Environmental Quality Engineering Seminar Fall or spring. 1 credit. Open to undergraduates with permission of the instructor.
Presentation and discussion of current topics and problems in sanitary engineering and environmental quality engineering.

660 Urban Transportation Planning Fall. 4 credits.
G. P. Fisher.
The urban transportation problem: its roots, manifestations, and implications; the systems analysis approach to transportation: demand and supply side of transportation; the urban transportation planning process and its modeling components; generation and evaluation of alternatives. A laboratory period is designed for study-teams using computerized planning system packages.

661 Travel Demand Theory and Applications Spring. 3 credits. Prerequisite: CEE 660 or permission of instructor.
A. H. Meyburg.
This course concentrates on new methods for estimating and predicting travel demand. In particular, it considers techniques based on a treatment of the individual as an economic or psychological decision-making unit. Theoretical background to the models, empirical estimation, measurement of attributes, and practical applications are considered. Practical problems and directions of present and future research is outlined. Survey sampling is introduced.

663 Transportation Systems Analysis Fall. 3 credits. Prerequisites: CEE 361, OP/E 320 or equivalent.
M. A. Turnquist.
Application of operations research and systems analysis techniques to transportation systems, both passenger and freight. Network flows, Design of networks, routes, and schedules. Terminal operation and design.

664 Transportation Systems Design Spring. 3 credits. Prerequisite: CEE 663. Not offered 1982–83.
M. A. Turnquist.
Advanced techniques for design of transportation systems, including networks of fixed facilities and route networks. Time-staging of improvements, use of low-capital cost options, and the role of demonstration projects. Evaluation of alternative designs.

666 Transportation Economics Spring. 3 credits. Prerequisite: CEE 621 or equivalent.
A. H. Meyburg.

668 Operations, Design, and Planning of Public Transportation Systems Spring. 3 credits. Recommended: CEE 361 or CEE 660.
M. A. Turnquist.
Financing and organization of mass transportation. Design of route networks. Scheduling of services. Use of computer-aided design methods. Fare policy and planning for provision of integrated services. The role of innovative technology.

669 Freight Transportation Spring. 3 credits. Recommended: CEE 361 or CEE 660. Not offered 1982–83.
G. P. Fisher.

670 Timber Engineering Spring. 1 credit. Prerequisite: CEE 373.
R. N. White.

672 Fundamentals of Structural Mechanics Fall. 3 credits. Prerequisite (may be taken concurrently instead): CEE 373.
M. D. Grof.
Theory of elasticity, energy principles, plate flexure, failure theorems, inelastic stress-strain relationships, stress concentration, introduction to fracture, fatigue.

673 Advanced Structural Analysis Fall. 3 credits. Prerequisites: CEE 372 and computer programming. A. R. Ingraffea.
Direct stiffness and flexibility methods in matrix formulation, standard analysis programs, error detection, substructuring, and special analysis procedures.

674 Structural Model Analysis and Experimental Methods Fall. 3 credits.
2 lecs, 1 lab. R. N. White.
Dimensional analysis and similitude. Model materials, fabrication, loading, and instrumentation techniques. Experimental stress analysis.

675 Advanced Plain Concrete Spring. 3 credits. Prerequisite: CEE 367 or equivalent.
2 lecs, 1 conferences. F. O. State.
Topics such as history of cementing materials, air entrainment, light-weight aggregates, petrographic, durability, chemical reactions, properties of aggregates, and construction. Relationships among internal structure, physical properties, chemical properties, and mechanical properties.

676 Structure and Properties of Materials Spring. 3 credits. Limited to graduate students in engineering or physical sciences, or undergraduates by permission of instructor. Offered alternate years.
Not offered 1982–83.
Inclines, conferences. F. O. State.
Topics such as chemistry of cementing materials, air entrainment, light-weight aggregates, petrographic, durability, chemical reactions, properties of aggregates, and construction. Relationships among internal structure, physical properties, chemical properties, and mechanical properties.

678 Low-Cost Housing Primarily for Developing Nations Spring. 3 credits. Offered alternate years.
2 lecs, conferences. F. O. State.
A multidisciplinary course. Students work intensively, usually in their own discipline, for a term project while also being introduced to problems and approaches of other disciplines. Engineers investigate the technological aspects of the subject and other aspects that influence technological decisions, such as cultural and economic factors.

F. O. State.
Discussions and workshops on physical planning, site selection, choice of materials, and detailed design of individual structures and groupings.

680 Structural Engineering Seminar Fall and spring. 1 credit. Limited to qualified seniors and graduate students.
R. I. Dick.
Presentation of topics of current interest in the field of structures.

691 Water Resources Problems and Policies Fall. 3 credits. Intended primarily for graduate engineering and nonengineering students but open
to qualified upperclass students. Prerequisite: permission of instructor.

692 Stochastic Hydrologic Modeling

On demand. 2–3 credits. Prerequisite: ORAE 370 or CEE 304.

J. R. Stedinger.

Develops statistical techniques used to analyze and model stochastic processes. Lectures examine Box-Jenkins, fractional-Brownian noise, and other streamflow models; drought- and flood-frequency estimation; analysis of simulation output; parameter estimation and Bayesian inference.

[693 Water Quality Modeling] Spring. 3 credits.

Prerequisites: CEE 323 or Agricultural Engineering 475. Not offered 1982–83.

D. P. Loucks.

Predictive models of the behavior of biological and chemical substances in bodies of water and in surface runoff. Regional management of water quality.

694 Water Resources Systems Planning I

Fall. 3 credits. Prerequisite: CEE 323 or equivalent.

D. P. Loucks.

Application of deterministic optimization and simulation techniques in water resources planning. River-basin modeling, including irrigation planning and operation, hydropower capacity development, flow augmentation, flood control and protection, and water quality models.

695 Water Resources Systems Planning II

Spring. 3 credits. Prerequisites: CEE 304 and CEE 694 or permission of instructor.

J. R. Stedinger, D. P. Loucks.

Optimization and simulation models for water-resource planning under uncertainty. Basics of stochastic hydrologic modeling and stochastic river-basin and reservoir models.

721 Environmental and Water Resources Systems Analysis Design Project

On demand. Credit variable. Prerequisite: permission of instructor. May extend over two semesters. Staff.

Design or feasibility study of environmental or water resources systems, supervised and assisted by one or more faculty advisors, individual or group participation. Final report required.

722 Environmental and Water Resources Systems Analysis Research

On demand. Credit variable. Prerequisite: permission of instructor. Preparation must be suitable to the investigation to be undertaken. Investigations of particular environmental or water resources systems problems.

729 Special Topics in Environmental or Water Resources Systems Analysis

On demand. Credit variable. Staff.

Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

730 Coastal Engineering II

Fall. 3 credits.

Prerequisite: CEE 635.

Review of gravity wave theories, applicability of different wave theories to engineering problems, wave-energy transmission, tsunami, boundary-value problems in wave hydrodynamics, behavior of submerged and floating bodies, harbor agitations, ship waves.

[731 Environmental Fluid Mechanics II] Spring. 3 credits. Prerequisite: CEE 636 or permission of instructor. Offered alternate years. Not offered 1982–83.

3 lecs. G. H. Jirka.

Mechanics of discreetly and continuously stratified fluids: internal waves, density currents, blocking, selective withdrawal, and internal jumps. Interfacial stability and mixing. Observed characteristics of turbulent fluid flow in environmental applications, including interaction with buoyancy. Integral techniques for self-similar flows: jets, plumes, and mixing layers. Experimental approaches to environmental fluid problems.

732 Unsteady Hydraulics

Spring. 3 credits.

Prerequisite: CEE 332 or permission of instructor. J. A. Liggert.

The physical and mathematical basis for unsteady processes in hydraulic engineering, especially unsteady open-channel flow. Water hammer, unsteady sediment transport, long waves on large bodies of water, circulation. Numerical methods of solution.

733 Environmental Planning and Operation of Energy Facilities

Spring. 3 credits. Mixed lecture and seminar format. Prerequisites: CEE 636 or equivalent. Not offered 1982–83.

G. H. Jirka.

Survey of analytical methodologies for predicting and controlling the environmental impacts of individual energy facilities or of energy systems. Estimation of construction and operating impacts; pollutant sources, models for pollutant dispersal, modeling the relationship of pollutant concentration and ecological, health, and socioeconomic damages. Pollutant-abatement strategies and transient release techniques. Models for regional energy-facility siting.

734 Experimental Methods in Hydraulics

On demand. 2 credits. Prerequisite: CEE 331. Not offered 1982–83.

J. R. Stedinger, D. P. Loucks.

Methods used in planning and conducting laboratory and field experiments in hydraulics and fluid mechanics. Dynamic similarity, modeling laws and applications. General operating principles and performance characteristics of measurement instruments. Specific devices for measurement of fluid properties, pressure, and flow. Data acquisition, processing, and signal analysis. Laboratory demonstrations.

735 Research in Hydraulics

On demand. Variable credit. Staff.

The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge in the form of a research report.

740 Engineering Behavior of Soils

Fall. 3 credits.

Prerequisite: CEE 341.

3 lecs. I. Ishibashi.

Detailed study of physicochemical nature of soil. Stress states and strain-time behavior. In-depth evaluation of the strength, compressibility, and permeability of natural soils. Study of special deposits such as sensitive, organic, frozen, and man-made soils.

741 Rock Engineering

Fall. 3 credits.

Prerequisite: CEE 341 or permission of instructor. Recommended: introductory geology.

2 lecs, 1 lab. F. H. Kulhawy.

742 Graduate Soil Mechanics Laboratory

Fall. 3 credits.

Prerequisite: CEE 740.

I, Ishibashi.

Laboratory measurement of soil properties, from introductory to advanced techniques. Emphasis on strength, compressibility, and permeability tests. Critical evaluation of laboratory methodology.

3 lecs. Staff.

A continuation of CEE 640, with detailed emphasis on special topics in soil-structure interaction. Typical topics include lateral and pullout loading of deep foundations; pile group behavior; foundations for offshore structures; pile-driving dynamics; foundations for special structures.

745 Soil Dynamics

Spring. 3 credits. Prerequisite: permission of instructor.

3 lecs. I. Ishibashi.

Principles of analysis and design for earth and rockfill dams. Materials, construction methods, internal and external stability, seepage and drainage, performance monitoring, abutment and foundation evaluation. Introduction to tailings dams.

Staff.

748 Tunnel Engineering

Spring. 2 credits.

Prerequisites: CEE 641 and 741.

Principles of analysis and design for earth and rock tunnels. Materials, construction methods, stability and support systems, deformations, and performance monitoring.

749 Research in Geotechnical Engineering

On demand. 1–6 credits.

Staff.

For the student who wants to pursue a particular geotechnical topic in considerable depth.

752 Water Quality Laboratory

Fall. 1 credit.

Enrollment limited. Prerequisites: CEE 653 (students may enroll concurrently in CEE 653) and permission of instructor. J. M. Gossett.

Laboratory methods for analysis of pollutants in water and wastewater.

755 Environmental Engineering Processes I

Fall. 3 credits (4 with lab). Prerequisite: CEE 653 or permission of instructor.

3 lecs. 1 lab. L. W. Lion.

Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes, and to their transformation in receiving waters. Analysis and design of treatment processes and systems. Residuals control and treatment. Pertinent laboratory studies.

756 Environmental Engineering Processes II

Spring. 3 credits (4 with lab). Prerequisite: CEE 755 or permission of instructor.

3 lecs. 1 lab. J. M. Gossett.
Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes, and to their transformation in receiving waters. Biokinetic analysis and design of biological treatment processes. Pertinent laboratory studies.

757 Design Project in Sanitary Engineering
On demand. Variable credit. Prerequisite: CEE 351 or equivalent.
Staff
The student chooses or is assigned a problem in the design of water or wastewater treatment, pollution-control facilities, or a laboratory project.

758 Sanitary Engineering Research
On demand. Variable credit. Prerequisites will depend on the particular investigation to be undertaken.
Staff
For the student who wants to study a problem in greater depth than is possible in formal courses. Study may be any combination of literature, laboratory, or computational research.

759 Special Topics in Sanitary Engineering
On demand. Variable credit. Hours to be arranged. Staff
Supervised study in special topics not covered in formal courses.

761 Transportation Design Project
On demand. Variable credit. Staff
Design or feasibility study of transportation systems, supervised by one or more faculty advisers.

762 Transportation Research
On demand. Variable credit. Staff
In-depth investigation of a particular transportation planning or engineering problem mutually agreed upon between the student and one or more faculty members.

763 Transportation Colloquium
Fall or spring. 1 credit. Staff
Lectures in various topics related to transportation planning and analysis.

764 Special Topics in Transportation
Fall or spring. Variable credit. Staff
Consideration of subject matter not covered in depth in regular courses. Topics vary from year to year but may include such topics as terminal operations, airport planning and design, traffic-flow theory, marine transportation.

770 Engineering Fracture Mechanics
Spring. 3 credits. Prerequisite: CEE 772 or permission of instructor. Offered alternate years.
2 lecs, 1 lab. A. R. Ingraffea.

771 Structural Stability: Theory and Design
Spring. 3 credits. T. Pekoz.

772 Finite-Element Analysis
Spring. 3 credits. Prerequisites: CEE 672 and 673, or permission of instructor. J. F. Abel.

773 Structural Reliability
Fall. 3 credits. Prerequisite: CEE 373. May not be offered 1982–83. M. D. Grigoriu.
Review of probability theory, practical measures for structural reliability, second-moment reliability indices, probability models for strength and loads, load combinations, probability-based design codes, reliability of structural systems with applications, introduction to random vibration, applications to wind and seismic design.

774 Prestressed Concrete Structures
Fall. 3 credits. Prerequisite: CEE 373, Recommended: CEE 374.
3 lecs, A. H. Nilson.

775 Advanced Reinforced Concrete
Spring. 3 credits. Prerequisite: CEE 373 Recommended: CEE 374.
3 lecs. A. H. Nilson.
General flexure, deflection analysis, columns with uniaxial and biaxial bending, beam-supported slabs, flat-plate slabs, composite steel-deck slabs, ground-supported slabs, yield line theory, limit state analysis, footings, retaining walls, deep beams, tall buildings, and seismic design.

776 Advanced Design of Metal Structures
Fall. 3 credits. Prerequisite: CEE 373.
W. McGuire.
Behavior and design, with emphasis on connections, plate girders, and cold-formed steel structures. Torsion of steel members. Fatigue and fracture.

777 Advanced Behavior of Metal Structures
Spring. 3 credits. Prerequisite: CEE 373.
W. McGuire.
Behavior of beams, beam-columns, and single and multistory frames. Analysis and design of tall-building systems. Cable-supported structures.

778 Shell Theory and Design
Spring. 3 credits. Offered alternate years. P. Gergely.
Fundamentals of practical shell theory. Differential geometry of surfaces, membrane and bending theory of shells; analysis and design of cylindrical shells, polygonal domes, and paraboloids.

779 Structural Design for Dynamic Loads
Spring. 3 credits. P. Gergely.
Modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

780 Optimum Structural Design
Fall. 3 credits. Offered alternate years. Not offered 1982–83.
Design of minimum weight or cost structures. Includes full-stressed design, classical, minimization procedures, and mathematical programming methods.

781 Numerical Methods in Structural Engineering
Fall. 3 credits. Prerequisites: CEE 672 and 673. Offered alternate years. Not offered 1982–83. J. F. Abel.
Numerical techniques for structural and geotechnical engineering, such as residual, variational, finite-difference, and finite-element methods. Selected numerical analysis topics and solution algorithms with emphasis on line equations and eigenvalue problems.

782 Advanced Topics in Finite-Element Analysis
Fall. 3 credits. Prerequisite: 772. Offered alternate years. Not offered 1982–83. J. F. Abel.
Lectures and colloquia on selected advanced topics and research in progress, including dynamics, nonlinear analysis, shells, fracture mechanics, fluid dynamics, and computer graphics.

783 Civil and Environmental Engineering Materials Project
On demand. 1–3 credits. F. 0. State.
Individual projects or reading and study assignments involving environmental materials.

784 Design Project in Structural Engineering
Fall or spring. Variable credit. Students may elect to undertake a design project in structural engineering. The work is supervised by a professor in this subject area.

785 Research in Structural Engineering
On demand. Variable credit. Hours to be arranged. Staff
Pursuit of a branch of structural engineering further than can be done in regular courses. Theoretical or experimental investigation of suitable problems.

786 Special Topics in Structural Engineering
On demand. Variable credit. Hours to be arranged. Staff
Individually supervised study or independent research in specialized topics not covered in regular courses.

810 Thesis—Remote Sensing
Fall and spring. 1–12 credits. Students must register for credit with the professor at the start of each term. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

851 Thesis—Environmental Engineering
Fall and spring. 1–12 credits. Students must register for credit with the professor at the start of each term. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

860 Thesis—Structural Engineering
Fall and spring. 1–12 credits. Students must register for credit with the professor at the start of each term. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Computer Science

The Department of Computer Science is organized as a department in both the College of Arts and Sciences and the College of Engineering.

100 Introduction to Computer Programming (also Engineering 105)
Fall, spring, summer. 4 credits. S-U grades optional. Students who plan to take both CSE 101 and 100 must take 101 first.
2 lecs, 1 rec (optional). 3 evening exams, final.
An introduction to elementary computer programming concepts. Emphasis is on techniques of problem analysis and algorithm and program development. The subject of the course is programming, not a particular programming language. The principal programming language used is FORTRAN. The course is intended for students new to programming and is about half of that taught in Computer Science 100. Each student writes a term paper on some aspect of computing. The aims of the course are to make the student an intelligent consumer of what the computer has to offer and to develop an appreciation of algorithmic thinking.

101 The Computer Age
Spring, summer. 3 credits. S-U grades optional. Credit cannot be granted for both Com S 100 and 101 unless 101 is taken first.

2 lecs, 1 rec.
Introduction to computer science and programming for students in nontechnical areas. Topics include the history of computation; microtechnology; the retrieval and transmission of information; scientific computing; computer graphics, art, and music; robotics, natural language processing, and machine intelligence. Students become acquainted with the notion of an algorithm by writing several PL/I programs using the Cornell Program Synthesizer. The amount of programming is about half of that taught in Computer Science 100. Each student writes a term paper on some aspect of computing. The aims of the course are to make the student an intelligent consumer of what the computer has to offer and to develop an appreciation of algorithmic thinking.

211 Computers and Programming (also Engineering 211)
Fall, spring, summer. 3 credits. Prerequisite: Com S 100 or equivalent programming experience.
2 lecs, 1 rec.
Intermediate programming in a high-level language and introduction to computer science. Topics include program development, invariant relations, block structure, recursion, introduction to data structures, analysis of algorithms, and a brief introduction to machine architecture and machine-level programming. PL/I is the principal programming language used.

280 Discrete Structures
Fall. 4 credits. Prerequisite: Com S 211 or permission of instructor.
3 lecs.
Covers mathematical aspects of programming and computer architecture. Topics will be chosen from the following: mathematical induction; logical proof; combinatorics and discrete mathematics covering manipulation of sums, recurrence relations, generating function techniques, introduction to recursive functions, relations, partially ordered sets, and the predicate calculus.

305 Social Issues in Computing
Fall. 3 credits. Prerequisite: Com S 100, 101, or permission of instructor. Not offered 1982–83.
2 lecs.
Economic, political, legal, and cultural impact of computers and computer-related technology; the role of computers in coordinating diversity and reducing disorder; the effect of computers on the individual; data banks and privacy; on machine creativity and machine intelligence.

314 Introduction to Computer Systems and Organization
Fall, spring, summer. 4 credits. Prerequisite: Com S 211 or equivalent.
2 lecs, 1 lab.
Logical structure of digital computers, representation of information, machine-assembly language, the input-output channel, hierarchical storage systems, and microprogramming.

321 Numerical Methods (also Engineering 321)
Fall, spring. 4 credits. Prerequisites: Mathematics 221 or 293, and knowledge of FORTRAN equivalent to what is taught in Com S 100.
3 lecs.

410 Data Structures
Fall, summer. 4 credits. Prerequisite or corequisite: Com S 314.
Recommended: Com S 280. 3 lecs.
Lists, trees, graphs, arrays, and other forms of data structure and their implementation. Relation between language and data structure. Dynamic storage allocation and memory management. Detailed study of searching and sorting methods. Analysis to determine the more efficient algorithm in a given situation.

414 Systems Programming and Operating Systems
Spring. 4 credits. Prerequisite: Com S 314 or permission of instructor.
3 lecs.
The logical design of systems programs with emphasis on multiprogrammed operating systems. Covers input-output methods, process synchronization, memory management, sharing, file systems. Case studies. Project to implement a small system.

417 Interactive Computer Graphics (also Architecture 334)
Spring. 4 credits. Enroll limited for 1982–83. Requires instructor's signature. Prerequisite: Com S 314.
2 lecs, 1 lab.
Introduction to the software and hardware concepts of interactive computer graphics. Topics include input methods, graphic data structures, geometric modeling, surface description methods, hidden-line/hidden-surface algorithms, image processing, color perception, and realistic image synthesis. Examples of computer-aided design applications are presented. Assignments consist of hands-on experience on storage tube, vector refresh, and color raster displays. Course makes use of the Computer-Aided Design Instructional Facility.

432 Introduction to Database Systems
Spring. 4 credits. Prerequisite: Com S 211.
2 lecs, 1 rec.
Introduces modern database systems, including data models, processing and query languages, file organization schemes and problems associated with distributed and concurrent processing.

481 Introduction to Theory of Computing
Fall. 4 credits. Prerequisites: Com S 211 and 280, equivalent mathematics, or permission of instructor.
3 lecs.
Introduction to modern theory of computing. Covers automata theory, formal languages, effective computability.

482 Introduction to Analysis of Algorithms
Spring. 4 credits. Prerequisites: Com S 410 and 481 or permission of instructor.
3 lecs.
Major paradigms used in the creation and analysis of algorithms. Combinatorial algorithms, computational complexity, NP-completeness, and intractable problems.

611 Advanced Programming Languages
Fall. Prerequisites: Com S 410 and 481 or permission of instructor.
3 lecs.
Introduction to techniques for formal specification of programming languages and data types, including term rewriting systems and Scott's denotational techniques; use of formal semantics in comparing and classifying languages; other advanced concepts including logic programming, functional programming, and data-flow languages.

612 Translator Writing
Spring. 4 credits. Prerequisites: Com S 410 and 481 or permission of instructor.
3 lecs.
Discussion of the models and techniques used in the design and implementation of compilers. Topics include lexical analysis in translators, compilation of arithmetic expressions and simple statements, specifications of syntax, algorithms for syntactic analysis, code generation and optimization techniques, bootstrapping methods, and translator writing systems.

613 Concurrent Programming and Operating Systems Principles
Fall. 4 credits. Prerequisites: Com S 414 and 600 or permission of instructor.
3 lecs.
Covers advanced techniques and models of concurrent systems; synchronization of concurrent processes; parallel programming languages; deadlock verification.

615 Machine Organization
Spring. 4 credits. Prerequisite: Com S 314 or permission of instructor. 3 lecs. Not offered 1982–83.

621–622 Numerical Analysis
621, fall; 622, spring. 4 credits each term. Prerequisites: Com S 321 and Mathematics 411 and 431.
3 lecs.
The analysis and implementation of algorithms for the numerical solution of basic mathematical problems. Emphasis is placed on the estimation of error, the analysis of stability, and how to design efficient and reliable numerical algorithms. During both terms the student solves representation problems by writing original programs and by making use of high-quality, state-of-the-art software. Fall term: direct methods for linear equations, interpolation, least squares, and polynomial approximation, nonlinear equations, and optimization. Spring term: Quadrature, ordinary and partial differential equations, methods for sparse systems of linear equations, and eigenvalue problems.

623 Short Course on Linear and Nonlinear Least Squares
2 credits. Fall. Prerequisite: Com S 321 or permission of instructor. Not offered every year. Topics include orthogonal matrix methods for the least squares (LS) problem, using LINPACK to solve the LS problem, the Lawson-Hanson codes, variable projection methods for fitting sums of exponentials, and software for general nonlinear least squares problems.

624 Short Course on Spline Approximation
2 credits. Fall. Prerequisite: Com S 321 or permission of instructor. Not offered every year. Practical introduction to curve and surface fitting with splines. Topics include interpolation with cubic splines, parabolic spline interpolation, B-splines, smoothing, and splines under tension. The deBoor spline package is extensively used.

632 Database Systems
Fall. 4 credits. Prerequisites: Com S 410 and either 432 or permission of instructor.
2 lecs.

635 Information Organization and Retrieval
Fall, spring. 4 credits. Prerequisite: Com S 410 or permission of instructor.
2 lecs.

643 Design and Analysis of Computer Networks
Fall. 4 credits. Prerequisite: Com S 414 or permission of instructor. Not offered every year.
2 lecs.
A course in computer networks and layered protocols. The following topics are presented: network topology design, data transmission within the physical layer; data-link sliding-window protocols; network layer in point-to-point long-haul networks, satellite and packet radio networks and local networks; transport and session layer protocols; internetworking. Selected topics from the presentation and application layers will also be discussed.

681 Analysis of Algorithms
Fall. 4 credits. Prerequisite: Com S 481 or permission of instructor.
3 lecs.
Major paradigms used in the creation and analysis of algorithms. Complexity measures; advanced data structures, algorithms on graphs, lower bounds, reducibilities, and polynomial complete problems. Special topics in analysis of algorithms. This course includes the contents of Com S 482.

682 Theory of Computing
Spring. 4 credits. Prerequisite: Com S 481 or permission of instructor.
3 lecs.
Advanced treatment of theory of computation, computational complexity theory, and other topics in computing theory.

709 Computer Science Graduate Seminar
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in computer science.
1 sem.
A weekly meeting for the discussion and study of important topics in the field.

711 Theory of Programming Languages
Spring. 4 credits. Prerequisites: Com S 481 and 611. Not offered every year.
2 lecs.
Advanced topics in formal semantics. Topics may include mathematical semantics, program verification systems, application of formal semantics to language design, variable-free languages, and correctness of implementations.

712 Theoretical Aspects of Compiler Construction
Spring. 4 credits. Prerequisites: Com S 612. Not offered every year.
2 lecs.

713 Seminar in Operating Systems
Fall, spring. 4 credits. Prerequisite: Com S 613 or permission of instructor.
1 sem.
Discussion of contemporary issues in operating systems.

719 Seminar in Programming
Fall, spring. 4 credits. Prerequisite: Com S 611 or permission of instructor.
1 sem.

721 Advanced Numerical Analysis
Fall. 4 credits. Prerequisite: Com S 621 or 622 or permission of instructor. Alternates with Com S 722. Not offered every year.
2 lecs.
Topics are chosen at instructor's discretion. Sample topics include matrix computations, numerical optimization, numerical solution of ordinary differential equations and partial differential equations.

722 Advanced Numerical Analysis
Spring. 4 credits. Alternates with Com S 721. Not offered every year. See description of Com S 721, above.
2 lecs.

729 Seminar in Numerical Analysis
Fall, spring. 4 credits. Prerequisite: permission of instructor.

733 Selected Topics in Information Processing
(also OR&E 789) Not offered 1982–83.
3 lecs.

734 Seminar in File Processing
Fall. Credit and hours to be arranged. Prerequisite: Com S 733.

739 Seminar in Information Organization and Retrieval
Fall, spring. Credit and hours to be arranged. Prerequisite: Com S 635.
Hours to be arranged.

749 Seminar in Systems Modeling and Analysis
Fall, spring. 4 credits. Prerequisite: permission of instructor.
1 sem.
Discussion of advanced topics in modeling and analysis of computer systems and networks, with emphasis on performance.

781 Advanced Theory of Computing
Fall. 4 credits. Prerequisites: Com S 681 and 682, or permission of instructor. Alternates with Com S 782. Not offered every year.
A list of advanced topics, possibly including automata, computability, computational complexity, program schemata, symbolic computation, and analysis of algorithms.

782 Advanced Theory of Computing
Spring. 4 credits. Alternates with Com S 781. Not offered every year.

789 Seminar in Theory of Algorithms and Computing
Fall, spring. 2–4 credits. Prerequisite: permission of instructor.
1 sem.

790 Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser.
Independent research.

890 Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser.
Master's degree research.

990 Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser.
Doctoral research.

Electrical Engineering

210 Introduction to Electrical Systems (also Engineering 210)
Fall or spring. 3 credits.
Prerequisites: Mathematics 192 and Physics 112.
3 lecs.
Circuit elements and laws; natural response of linear systems; impedance and pole-zero concepts, complex frequency and phasors; forced response and power systems; transfer function and frequency response; low-frequency terminal characteristics of diodes, triodes, and transistors; linear models of electronic devices; bias circuits and frequency response of amplifiers; operational amplifiers, feedback, and oscillators.

230 Introduction to Digital Systems
Fall or spring. 3 credits.
2 lecs, 5 lab experiments.
Introduction to basic analysis and design techniques and methodology of digital and computer systems. Boolean algebra, integrated circuit components used in digital-system implementation; codes and number systems; logic design of combinational circuits; logic design of sequential circuits; microprocessors and microcomputers; application of microprocessors and microcomputers to digital-system design.

301 Electrical Signals and Systems I
Fall. 4 credits. Prerequisites: Elec E 210 and Mathematics 294 or equivalents.
3 lecs, 1 rec-computing session.
Formulation of circuit equations, steady-state response; Laplace transform and applications; system functions, state description of linear systems; natural modes, initial conditions, forced response; two-port circuit descriptions; models for active circuits.

302 Electrical Signals and Systems II
Spring. 4 credits. Prerequisite: Elec E 301.
3 lecs, 1 rec-computing session.
Single-sided and bilateral Laplace transforms; applications of complex functions and contour integration to system response; stability criteria; Fourier series and transforms; discrete and fast Fourier transforms; sampling.

303 Electromagnetic Theory I
Fall. 4 credits. Prerequisites: Physics 214 and Mathematics 294.
3 lecs. 1 rec-computing session.
Foundation of electromagnetic theory. Topics include Maxwell's equations; boundary conditions and the Laplace equation; plane waves, wave propagation and reflection at boundaries, the Dipole theorem; guided TEM, TM, and TE waves, impedance transformation, and matching. Introduction to simple antenna systems.

304 Electromagnetic Theory II
Spring. 4 credits. Prerequisites: Elec E 301 and 303.
3 lecs. 1 rec-computing session.
Fundamentals of electromagnetic theory with emphasis on wave propagation and guidance, radiating systems, and the effects of the medium on transmission. Topics include retarded potentials; relation of radiation fields to source distributions, antenna gain concepts, and techniques in antenna design; wave guide systems, separation of variables, cavities, and losses; propagation in inhomogeneous and anisotropic media, complex permittivity, plasma and magnetic field effects.

306 Fundamentals of Quantum and Solid-State Electronics
Spring. 4 credits. Prerequisites: Physics 214, Mathematics 294, and Elec E 303.
3 lecs. 1 rec-computing session.
Introduction to quantum mechanics and solid-state physics necessary for understanding lasers and modern solid-state electronic devices. Quantum mechanics is presented in terms of wave functions, operators, and solutions of Schroedinger's equation. Topics include the formalism and methods of quantum mechanics, the hydrogen atom, the structure of simple solids, energy bands, Fermi-Dirac statistics, and the basic physics of semiconductors. Applications studied include a simple metal, thermionic emission, and the p-n junction.

310 Probability and Random Signals
Spring. 4 credits. Prerequisite: Mathematics 294.
3 lecs, 1 rec-computing session.
Introduction to modeling random phenomena and signals and applications of these models. Topics include concepts of probability, conditional probability, independence, random variables, expectation and random processes. Applications to problems of inference, estimation, and linear system response in communications, computers, control, and pattern classification.

315 Electrical Laboratory I Fall. 4 credits.
Prerequisites: Elec E 210 and coregistration 301.
2 lecs, 2 labs.
Basic electrical and electronic instrumentation and measurements involving circuits and fields of both active and passive elements; an experimental introduction to solid-state theory and devices.

316 Electrical Laboratory II Spring. 4 credits.
Prerequisites: Elec E 303 and 315.
2 lecs, 2 labs.
Laboratory studies of solid-state phenomena and devices; experiments illustrating the use of the digital computer in electrical engineering; laboratory studies of high-frequency phenomena and devices; and introduction to AC and DC machinery.

407 Quantum Mechanics and Applications Fall.
Prerequisites: Elec E 206. 3 lecs, 1 rec-computing session. R. Liboff.

421 Bioinstrumentation Fall. 3 credits (4 credits with lab).
Prerequisites: Elec E 301 and 316.
3 lecs, 1 lab.
The acquisition and processing of biological signals. Topics include electrodes, ion-selective electrodes, temperature transducers, pressure transducers, flow transducers, force transducers, displacement transducers, operational amplifiers, instrumentation amplifiers, analog signal processing, D/A and A/D conversion, and digital processing with microcomputers and microprocessors.

422 Neuroelectric Systems (also Biological Sciences 422) Spring.
Prerequisites: either Elec E 301 or 421 or Biological Sciences 423 or 496; written permission of instructor required for lab. Offered alternate years.
Disc, demonstration, and lab to be arranged.
Application of microprocessors for neuroelectric data acquisition and systems analysis. Lectures cover electrical activity of single nerve cells, electrodes and instrumentation techniques, analysis of electrophysiological data, and coding principles in the nervous system, as well as appropriate background material for the use of microprocessors in neurobiology. Laboratory exercises provide experience in the actual use of microprocessors.

423 Active and Digital Network Design Fall.
3 credits (4 credits with lab).
Prerequisite: Elec E 301.
3 lecs, 1 lab. W. H. Ku.

Prerequisites: Elec E 301.
3 lecs. Modern techniques for solving electrical engineering problems on the digital computer. Emphasis on efficiency and numerical stability rather than on theoretical implications. Solution of linear and nonlinear algebraic equations; integration; solution of ordinary and partial differential equations; random number generators. Applications to power systems, control systems, communication systems, circuit design, and problems in electrophysics.

426 Advanced Digital Signal Processing Spring.
Prerequisites: Elec E 423 or permission of instructor.
3 lecs. Topics include FIR and IIR filter design; the DFT, FFT, and CZT; spectral analysis; data compression; adaptive filters; and speech synthesis. Laboratory involves design of filters using microcomputer-based design tools and implementation of real-time digital filters with microprocessor-based filter systems. At the level of Rabiner and Gold, Theory and Application of Digital Signal Processing.

427 Fundamentals of Analog and Discrete-Time Circuits Fall.
Prerequisite: Elec E 302.

428 Analog and Discrete-Time Circuit Application Spring.
Prerequisites: Elec E 423, 427, or equivalent.

430 Introduction to Lasers and Optical Electronics Spring.
Prerequisite: Elec E 306 or equivalent (such as Physics 443).
2 lecs, 1 lab.
An introduction to stimulated emission devices such as masers, lasers, and optical devices based on linear and nonlinear responses to coherent fields. Material discussed includes the basic mechanical results, employs phenomenological theories and stresses applications to modern devices. Discussions of applications include the operating principles of a variety of optical transducers, and the relation to electro-optic and acousto-optic modulators, and an introduction to integrated optics. Labs present an opportunity to work with a variety of lasers and processes discussed in lectures.

431-432 Electronic Circuit Design Fall, 4 credits; spring, 3 or 4 credits.
Prerequisites: Elec E 320 and 316.
3 lecs, 1 lab. N. H. Bryant.
Design techniques for circuits used in electronic devices; crystals, band structure, electron and hole transport, interfaces and contacts, optical properties related to junction diodes, bipolar and MOS transistors, lasers, and solar cells. In the second semester, the basic principles learned will be applied in the study of devices and technologies commonly used in integrated circuits. Computer modeling of devices.

442 Fundamentals of Acoustics (also T&AM 666) Spring.
3 credits.
See T&AM 666 for course description.

451-452 Electric Energy Systems I and II Fall, 451; spring, 4 credits each term.
Prerequisites for 451: Elec E 316 or permission of instructor.
3 lecs, 1 lab-computing session. S. Linke.
Engineering principles underlying operation of modern electric-power systems under steady-state and transient conditions emphasizing major power-system parameters. Digital computer used as dynamic "laboratory" model of complex power systems for loadflow, stability, and economic-dispatch studies. At the level of Elements of Power System Analysis, by Stevenson.

455 Advanced Power Systems Analysis I Fall.
Prerequisites: Elec E 302 and concurrent registration in 451, or permission of instructor.
Analysis of power-system components. These components include rotating machines and systems for excitation control, automatic voltage regulation, boiler-turbine control, and speed regulation as well as ancillary three-phase networks. Emphasis on derivation of mathematical models from first principles, development of algorithms for the formation of applicable network matrices.

456 Advanced Power Systems Analysis II Spring.
Prerequisites: Elec E 455 and concurrent registration in 452 or permission of instructor.

475 Computer Structures Fall. 4 credits.
Prerequisite: Elec E 230 or equivalent.
1 lab. N. M. Vrana.
Organization and design of digital computers. Hardwired and microprogrammed control sequences, arithmetic hardware, and I/O systems. Emphasis on instruction set design in an actual laboratory design group will design and construct a small digital computer.

476 Microprocessor Systems Spring.
Prerequisite: Elec E 475.
3 lecs, 1 lab. N. M. Vrana.
System design using microprocessors. Hardware and software techniques employed for logic design, interfacing, instrumentation, and control. The use of development systems.

480 Thermal, Fluid, and Statistical Physics for Engineers Spring. 3 credits.
Prerequisite: Physics 214.
R. Liboff.

481 Elementary Plasma Physics and Gas Discharges Fall.
3 credits.
Prerequisite: Elec E 303 and 304 or equivalent.
2 lecs, 1 lab, field trips.

484 Introduction to Controlled Fusion: Principles and Technology (also NS&E 484) Spring. 3 credits. Prerequisites: Ele E 301 and Ele E 303 or permission of instructor. Intended for seniors and graduate students.

3 lecs, D. A. Hammer
Introduction to the physical principles and technology underlying controlled fusion power. Topics include fundamental aspects of the physics of ionized gases at high temperature (thermonuclear plasmas), requirements (in principle) for achievement of net power from fusion, technological problems of an actual fusion reactor, and progress of the fusion program toward overcoming these problems. Both magnetic and inertial confinement fusion are discussed, and comparisons are made between fusion and fission.

489 Magnetohydrodynamics Spring. 3 credits. Prerequisite: Ele E 581 or equivalent. C. E. Seyler
The theory of ideal and resistive magnetohydrodynamical equations with emphasis on application to controlled thermonuclear fusion. Topics: derivation and domain of applicability, invariants, wave characteristics, static and stationary equilibrium; Grad-Shafarvon equation; magnetic islands and 3-D equilibrium; linearized equations and normal-mode stability analysis; energy-principle and variational techniques; continuous spectrum; sharp-boundary model; cylindrical and toroidal confinement geometries; stability conditions, resistive effects. At the level of MHD Instabilities, by G. Bateman.

491–492 Senior Project 491, fall; 492, spring. 3 credits
Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required.

531 Quantum Electronics I Fall. 4 credits. Prerequisites: Ele E 306 and 407 or Physics 443. 3 lecs, 1 rec-computing session.
A detailed treatment of the physical principles underlying lasers and masers, related fields, and applications. Topics include a review of quantum mechanics and the quantum theory of angular momentum; the interaction of radiation and matter; including emission, absorption, scattering and macroscopic material properties; theory of the laser, including methods of achieving total and partial population inversion; optical resonators; output power of amplifiers and oscillators; dispersive effects and laser oscillation spectrum.

532 Quantum Electronics II Spring. 4 credits. Prerequisites: Ele E 333 or permission of instructor 3 lecs, 1 rec-computing session.
A continuation of Ele E 531. Topics include spectroscopy of atoms, molecules, and ions in crystals as examples of laser media; density matrix; nonlinear optics and optical processes: theory of coherence; integrated optics and optical communication.

533 Solid-State Microwave Devices and Circuits I Fall. 3 credits. Prerequisite: Ele E 304. 2 lecs, 1 lab.
Theoretical and experimental studies of circuits, amplifiers, oscillators, detectors, receivers, and electrical noise at microwave frequencies. Typical topics: one- and two-port resonators; negative resistance amplifiers; oscillator load characteristics, locking and stabilization; microwave transistor amplifiers; intermodulation effects, resistor and shot noise; noise temperature, FM noise.

534 Solid-State Microwave Devices and Circuits II Spring. 3 credits. Prerequisite: Ele E 533. 2 lecs, 1 lab.
Basic theories of solid-state devices at microwave frequencies. Specific devices studied: varactors, avalanche diodes; transferred electron diodes; npn oscillator diodes; tunnel diodes; pin diodes; and microwave transistors. Studies of experimental methods of characterizing these devices include use of h.p. network analyzer and other microwave equipment.

536 Integrated Circuit Technology Spring. 4 credits. Prerequisite: Ele E 435 or permission of instructor. 2 lecs, 1 lab. P. Krusius
Integrated-circuit fabrication techniques for solid-state circuits in the fields of computer hardware, telecommunication systems, and opto-electronics, with emphasis on processing, device design and logic-gate design. Lithography, crystal growth, diffusion, implantation, oxidation, chemical-vapour deposition, epitaxy, microelectronics, molecular beam epitaxy, etching, and in-process measurements. Silicon IC technologies with emphasis on bipolar and MOS devices and circuits. Standard processes, device and logic-gate design. Systems on chip. At the level of current papers in IEEE Transactions on Electron Devices.

561 Algebraic Coding Theory Fall. 3 credits. Prerequisites: probability and linear algebra.
An introduction to the theory of error-correcting linear block codes. Maximum likelihood decoding of linear block codes over discrete memoryless channels. Shannon's theorem for linear block codes over the binary symmetric channel. The Hamming sphere-packing, Singleton and Gilbert-Varshamov bound. Algebra: groups, rings, and fields, with special emphasis on Galois fields. The construction and decoding of Bose-(Ray-)Chaudhuri-Hocquenghem (BCH) and Reed-Solomon (RS) codes, concatenated codes, burst error-correcting codes.

562 Fundamental Information Theory Spring. 3 or 4 credits (4 with lab). Prerequisite: Ele E 310 or equivalent. Prerequisite for lab only. Ele E 561 with lab. 3 lecs, 1 lab.
Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal communications. Gaussian sources and channels. Lab projects investigate problems of statistical characterization of sources and channels using computer simulation.

564 Decision Making and Estimation Fall. 4 credits. Prerequisite: Ele E 310 or equivalent. Utilizing theory and applications of Bayesian, Neyman-Pearson decision theorems. Bayes and maximum likelihood estimation: Cramer-Rao bound, Fisher information, efficient and consistent estimates. Applications drawn from the areas of pattern classification, detection, and communications.

567 Communication Systems I Fall. 4 credits. Prerequisite: Ele E 310 or equivalent. 2 lecs, 1 rec. Analog and digital signal representation, spectral analysis, linear-signal processing, modulation and demodulation systems. Time and frequency division multiplex systems. Introduction to random processes and noise in analog and digital systems.

568 Communication Systems II Spring. 4 credits. Prerequisite: Ele E 567 or equivalent. An introduction to digital communications. Discrete representations for signals: pulse-code modulation (PCM), delta modulation (DM), differential pulse-code modulation (DPCM), companding and Huffman coding. Digital modulator/demodulators (MODEMs) signal sets (e.g., phase shift keying (PSK), frequency shift keying (FSK), maximum a posteriori (MAP) and maximum likelihood (ML) receivers, probability of errors, symbol timing and carrier tracking loops and intersymbol interference (ISI). Coded systems: convolutional codes, Viterbi and sequential decoding. Multiplexing: time division (TDM), frequency division (FDM), code division (CDM). Spread spectrum.

571 Feedback Control Systems Fall. 4 credits (4 with lab). Prerequisite: Ele E 302 or permission of instructor. 3 lecs, 1 lab. C. R. Johnson
Analysis techniques, performance specifications, and analog-feedback-compensation methods for continuous-time systems. Design techniques include root-locus and frequency-response methods. Laplace transforms and transfer functions are the major mathematical tools. Laboratory work provides experience with measurement of system frequency-response and design of compensators. Laboratory work will consist of computer-aided design, digitally simulated evaluation, and microprocessor implementation. Laboratory emphasis is on correlation of theoretical and experimental results.

572 Digital Control Systems Spring. 3 credits (4 with lab). Prerequisite: Ele E 571 or permission of instructor. 3 lecs, 1 lab. C. R. Johnson.
Analysis and design of feedback control systems using digital devices to implement compensation. Z-transforms, digital filters, root-locus, frequency-responses, PID, deadbeat, and state-variable techniques will be used. Quantization and sample-rate effects in sampled-data control systems will be considered. Laboratory work will consist of computer-aided design, digitally simulated evaluation, and microprocessor implementation. Laboratory emphasis is on practical process-control configurations.

573 Estimation and Control in Discrete Linear Systems Fall. 4 credits. Prerequisites: Ele E 302 and 310 or permission of instructor. 3 lecs.
Optimal control, filtering, and prediction for discrete-time linear systems with extensive use of the APL system. Approximation on discrete point sets. The principle of optimality. Kalman filtering. Stochastic optimal control.

574 Optimal Control and Estimation for Continuous Systems Spring. 4 credits. Prerequisite: Ele E 573 or permission of instructor. 3 lecs.
Control system design through parameter optimization. With and without constraints. The minimum principle; linear regulations, minimum time and minimal fuel problems. Computational techniques; properties of Lyapunov and Riccati equations.
577 Computer Processor Organization and Memory Hierarchy Fall. 4 credits. Prerequisites: Ele E 476 and 310, or permission of instructor. Design and evaluation of processor and memory architectures are examined in light of actual implementations of both large-scale and small-scale (microprocessor) systems. Topics include microprogramming and directly executable languages, number representation and instruction set trade-offs, parallel and pipelined architectures, interleaved memories, cache and virtual memories, multilevel memory hierarchies, and protection mechanisms.

578 Computer Networks and Distributed Architecture Spring. 4 credits. Prerequisite: Ele E 577 or permission of instructor. Methods and approaches to input-output processing, parallel processing, task partitions and resource allocations, distributed processing, interconnection topology, microcomputer and microcomputer networks, interprocessor communications, protocols and performance evaluations.

579 Current Topics in Computer Engineering Fall. 3 credits. Prerequisite: Ele E 577 or coregistration in 577. In-depth treatment of current and emerging computer engineering research and development activities. Topics vary from year to year and are chosen from research reports and published journal articles. Subjects may include fault tolerant computing, reliability studies, innovative microcomputer structures, direct execution of high-level languages, and impact of very-large-scale integration technologies on computer organizations.

581 Introduction to Plasma Physics (also A&EP 608) Fall. 4 credits. First-year graduate-level course; open also to fourth-year students at discretion of instructor. Prerequisites: Ele E 303 and 304 or equivalent. 3 lecs.

582 Advanced Plasma Physics (also A&EP 607) Spring. 4 credits. Prerequisite: Ele E 581. 3 lecs.

583 Electrodynamics Fall. 4 credits. Prerequisite: Ele E 304 or equivalent. 3 lecs.

584 Microwave Theory Spring. 4 credits. Prerequisite: Ele E 304 or equivalent. 3 lecs. P: McIsaac.

585–586 Upper Atmospheric Physics I and II Fall, 585, Spring, 586. 3 credits each term. Not offered 1962–83. 9 lecs.

587 Electromagnetic Wave Propagation I Fall. 3 credits. Prerequisite: Ele E 304 or equivalent. 3 lecs.

588 Electromagnetic Wave Propagation II Spring. 3 credits. Prerequisite: 587. 3 lecs.

591–599 Graduate Topics in Electrical Engineering 1–3 credits. Seminar, reading course, or other special arrangement agreed upon between the students and faculty members concerned.

633 Opto-Electronic Devices Fall. 4 credits. Prerequisites: Ele E 304 and 435 or equivalent. 3 lecs, 1 rec.

639 VLSI Digital System Design Fall. 4 credits. Prerequisites: Ele E 436 and 476. Theory of operation of MOS devices and circuits and their fabrication; the foundations of LSI system design and implementation; examination of design techniques, solutions of design equations using Monte Carlo techniques, role of velocity overshoot in short-channel devices, comparison of elemental and compound semiconductor devices, submicron-scale phenomena in MOSFETs and bipolar devices, implications for circuit design.

661–662 Random Processes in Electrical Systems 661, Fall; 662, Spring. 4 credits each term. Prerequisites: Ele E 302 and 310. 3 lecs.

663 Advanced Topics in Information Theory Fall. 4 credits. Prerequisites: Ele E 562 and either 661 or Mathematics 571 or permission of instructor. 3 lecs. An in-depth treatment of an information-theory research area. The topic varies from year to year and is chosen from the following subjects: source encoding (rate-distortion theory), decentralized systems, multiterminal communication networks, ergodic theory and information, complexity and instrumentalities of coding schemes, coding for computer memory.

664 Foundations of Inference and Decision Making Spring. 3 credits. Prerequisite: a course in probability and some statistics, or permission of instructor.
Understanding the natural earth; weathering, erosion, the evolution of coast lines and river valleys, glaciation, the origins of earthquakes and mountains, the genesis of volcanoes, and the drifting of continents. Studies of ground water, mineral deposits, petroleum, and coal. Recognizing major minerals and rocks, interpretation of topographic and geologic maps.

102 Introduction to Historical Geology
Spring. 3 credits. Prerequisite: Geol 101 or permission of instructor.
2 lecs, 1 lab. Evening exams. J. L. Cisne.
A continuation of Geol 101. History of the earth and life in terms of evolutionary processes. The geologic record, its formation and interpretation of earth history. Introduction to the evolution of life and to fossils and their use in reconstructing past environments and dating rocks.

[103 Earth Science Laboratory Fall. 1 credit. To be taken concurrently with Geol 103, Earth Science Laboratory. Not offered Fall 1982–83. A. L. Bloom.
Astronomical determination of position and seasonal events. Topographic mapping and map interpretation. Minerals and rocks, world climatic regions.]

107 Frontiers of Geology I Fall. 1 credit. May be taken concurrently with or after Geol 101.
1 lec. J. L. Cisne and staff.
Lectures by members of the department on selected fundamental topics of current interest, such as continental drift and related tectonic processes, volcanoes, earthquake prediction, natural energy sources, and mineral resources.

108 Frontiers of Geology II Spring. 1 credit. May be taken concurrently with or after Geol 101 or 102.
1 lec. J. L. Cisne and staff.
Lectures by members of the department on selected fundamental topics of current interest such as plate tectonics, the evolution of mountain belts and arcs, the deep structure of continents, ecology and evolution of fossil organisms, correlation of strata by fossils, sea-level changes, and fossil fuels.

[131 Geology and the Environment Fall. 3 credits. Field trips. Not offered 1982–83.
2 lecs, 1 lab.
The principles of geological science, with emphasis on the physical phenomena and rock properties as they influence the natural environments of man.]

210 Introduction to Methods in Geologic Sciences Fall. 2 credits. Prerequisite: Geol 101 or coregistration. Field trips.
Staff.
A broad introduction to the methods by which rocks are used as a geological data base. Students will be familiarized with such field methods as use of brunton compass, construction of geologic maps and sections from field data, and description of strata. Meetings will be held on Saturday mornings. All work will be done in the Ithaca area with the exception of one more-distant weekend field trip.

262 Mineral and Energy Resources and the Environment Spring. 3 credits. No prerequisites.
2 lecs, 1 lab. A. K. Gibbs.
A topical look at energy resource systems, their organization, and some of the physical, temporal, economic, and political constraints within which they operate. Not a survey course in geology or economics; instead, the focus is on a few exemplary problems and commodities.

Geological Sciences
Freshman and Sophomore Courses

101 Introductory Geological Sciences Fall or spring. 3 credits.
2 lecs, 1 lab, field trips. Evening exams. W. B. Travers, fall; A. L. Bloom, spring.
Introduction to hydrocarbon exploration and development. Source rock and fluid migration studies, oil and gas entrapment, reservoir rocks. Exploration techniques including basin analysis, development. Source rock and fluid migration and economics, career development. Processing seismic mapping, seismic stratigraphy. Introduction to hydrocarbon exploration and thermal structure, elevation, heat flow, and gravity; ocean trenches—the structure and mechanics of the geological observations as ocean ridges—their ranges.

3 lecs. D. L. Turcotte.

Use of mathematical analysis to explain such geological observations as ocean ridges—their thermal structure, elevation, heat flow, and gravity; ocean trenches—the structure and mechanics of the bending lithosphere; folding—buckling, viscous, and plastic flow, faulting—a detailed mechanical and geological study of the San Andreas fault, intrusives—geothermal power.

431 The Earth's Crust: Structure, Composition, and Evolution. Fall. 3 credits. Prerequisites: Geol 356 and 388. Not offered 1982–83.

3 lecs. L. D. Brown.

Structure and composition of the crust from geophysical observations, analysis of xenoliths, and extrapolation of petrological laboratory data. Radiometric considerations. The nature of the crust-mantle boundary. Thermal and rheological structure of the crust. Oceans vs. continental crust. Origin and evolution of oceanic and continental crust.

432 Digital Processing and Analysis of Geophysical Data. Spring. 3 credits. Prerequisites: Geol 488 and familiarity with a programming language. Not offered 1981–82.

3 lecs. L. D. Brown.

433 Interpretation of Seismic Reflection Data. Spring. 3 credits. Prerequisite: Geol 488 or equivalent.

2 lecs, 1 lab. L. D. Brown, S. Kaufman.

Techniques for inferring geologic structure and lithology from multichannel seismic reflection data. Data processing sequences, migration, velocity analysis, correlation criteria, resolution considerations, wave-form analysis, and synthetic seismograms. Synergistic approaches to interpretation. Seismic stratigraphy.

454 Modern Petrology. Fall. 3 credits. Prerequisite: Geol 356. Offered alternate years. Not offered 1982–83.

2½ lecs, ½ lab. R. W. Kay.

Magma and metamorphism in the context of plate tectonics. Major and trace element chemistry and phase petrology as monitors of the creation and modification of igneous rocks. Temperature and stress in the crust and mantle and their influence on reaction rates and textures of metamorphic rocks. Application of petrological studies to natural systems. Reading from the literature and petrographic examination of pertinent examples.

455 Isotope Geology. Fall. 3 credits. Prerequisite: Geol 355–356 or equivalent. Not offered 1982–83.

3 lecs. R. W. Kay.

456 Chemical Geology. Spring. 3 credits. Prerequisite: Geol 355 or permission of instructor.

2 lecs, 1 lab. W. A. Bassett.

Crystallography and chemical crystal symmetry of minerals and the methods of their study. Thermodynamic evaluation of homogeneous and heterogeneous equilibrium and disequilibrium processes of geologic interest. Topics include crystal symmetry, mineral structures, X-ray diffraction, mineral equilibrium, and diffusion in minerals.

461 Mineral Deposits I. Fall. 4 credits. Prerequisite: Geol 356 or permission of instructor.

3 lecs, 1 lab, field trip. A. K. Gibbs.

Introduction to mineral resources, sedimentary and magmatic deposits, topics in geochemistry, ore microscopy, and exploration methods.

462 Mineral Deposits II. Spring. 4 credits. Prerequisite: Geol 461 or permission of instructor.

3 lecs, 1 lab, field trip. A. K. Gibbs.

Hydrothermal ore deposits: sulphide systems, related geochemical topics, mineral exploration.

471 Invertebrate Paleontology and Biostratigraphy. Fall. 4 credits. Prerequisite: Geol 102 and 376 or permission of instructor. Recommended prerequisite: some knowledge of biology. Not offered 1982–83.

2 lecs, 1 lab. J. L. Cisne.

Fossil invertebrates. Anatomy, classification, and identification of stratigraphically important groups. Applications of paleontology to geochronology and reconstruction of past environments.

473 Sedimentation and Tectonics. Spring. 3 credits. Prerequisite: Geol 376 or permission of instructor.

2 lecs, 1 disc. S. B. Bachman.

Interaction of sedimentation and tectonics in development of stratigraphic sequences. Framework of deep ocean, active margin, passive margin, and cratonic sedimentation and stratigraphy. Seismic stratigraphy and the effects of sea-level changes on the stratigraphic record; sedimentary petrology and tectonism. Examples of margin and cratonic development throughout the geologic record. Problems with applying plate tectonic models to very old rocks.

483 Marine Tectonics. Fall. 3 credits. Prerequisites: Geol 325 and a course in physics or geophysics.

2 lecs, possible field trips. D. E. Karig.

Study of geophysical and geological characteristics of the earth's crust beneath the oceans. Review of strengths and limitations of marine exploration techniques. Emphasis on recent geologic data concerning plate margins in the ocean, especially the island arc systems.

485 Physics of the Earth I. Fall. 3 credits. Limited to upperclass engineers, majors in the physical sciences, and others by permission of instructor. Not offered 1982–83.

2 lecs, 1 lab. D. L. Turcotte.

Rotation and figure of the earth, gravitational field, magnetic and electrical methods of exploration.

488 Introduction to Geophysical Prospecting. Fall. 3 credits. Prerequisites: Physics 112 and 213 and Mathematics 191–192. or equivalents, or permission of instructor.

2 lecs. S. Kaufman.

Physical principles, instrumentation, operational procedures, and interpretation techniques in geophysical exploration for oil, gas, and minerals. Seismic reflection, seismic refraction, gravity, and magnetic and electrical methods of exploration.
Materials Science and Engineering

Undergraduate Courses

201 Elements of Materials Science (also Engineering 111) Fall or spring. 3 credits. Prerequisite: Geol 388. 3 lecs. 3 recs. 1 lab. This course is designed to introduce students to the fundamental principles of materials science and engineering. Topics covered include the structure and properties of materials, and the relationship between microstructure and properties.

261 Introduction to Mechanical Properties of Materials (also Engineering 261) Fall or spring. 3 credits. 2 lecs. 1 rec or lab. This course covers the mechanical properties of materials, including stress, strain, and deformation. It also introduces the concepts of ductility, brittleness, and fracture mechanics.

331 Structural Characterization and Properties of Materials Fall. 4 credits. 2 lecs. 1 lab. This course focuses on the structural characterization of materials using techniques such as X-ray diffraction, electron microscopy, and optical microscopy.

332 Electrical and Magnetic Properties of Materials Spring. 3 credits. 2 lecs. 1 lab. This course covers the electrical and magnetic properties of materials, including electrical conductivity, magnetic permeability, and ferromagnetism.

333 Research Involvement Fall. 3 credits. Prerequisite: approval of department. This course provides students with research experience in the materials science and engineering field.
446 Current Topics in Materials Fall. 3 credits.
Speakers from industry and other institutions will give case studies of design problems. Each student is expected to research, write an extensive term paper, and give a company-rate talk on a materials-design problem involving economic factors.

447 Introduction to Ceramics Fall. 3 credits.
Prerequisite: MS&E 261 or permission of instructor. Offered alternate years.
3 lecs.
Engineering applications of ceramic materials and processes. Chemical structure and ionic bonding of ceramic materials; structure of glasses, point defects, point-defect chemistry and relation to nonstoichiometry; line defects and grain boundaries; diffusion in stoichiometric and nonstoichiometric oxides; phase diagrams; phase transformations and the design of glass-ceramics; grain growth and sintering.

448 Properties of Solid Polymers Spring. 3 credits.

450 Physical Metallurgy Spring. 3 credits.
The service and design requirements of engineering alloys, the testing and characterization of materials, and the properties of important alloy systems. The selection and design of alloys for various engineering requirements, such as ASME design codes.

452 Processing of Glass, Ceramic, and Glass-Ceramic Materials Spring. 3 credits. Offered alternate years.
Conventional and unconventional techniques for processing glass, glass-ceramic, and ceramic materials. Case studies illustrate the design, engineering, and scientific aspects of such processes. Vapor processes for high-purity optical fibers, hot-processing of ceramic turbine blades, photosensitive materials, and powder processing and sintering of ceramics will be discussed. This course is team-taught with two scientists from the research and development laboratory of Corning Glass Works.

455 Analysis of Manufacturing Processes (also M&AE 512) Spring. 3 credits. Prerequisite: M&AE 311.
3 recs. See M&AE 512 for course description.

459 Physics of Modern Materials Analysis Fall. 3 credits.
The interaction of ions, electrons, and photons with solids, and the characteristics of the emergent radiation in relation to the structure and composition of materials. Aspects of atomic physics that are necessary for understanding techniques of modern materials analysis, such as Auger electron spectroscopy, ion scattering, and secondary ion mass spectroscopy.

Graduate-Level Professional Courses

553-554 Special Project Fall, 553; fall, 554, spring. 8 credits each term.
Research on a specific problem in the materials area.

Graduate Core Courses

601 Thermodynamics of Materials Fall. 3 credits.

602 Elasticity and Physical Properties of Crystals Fall. 3 credits.
Cartesian tensors, elastic stress and strain, constitutive relations between stress and strain, symmetry of crystals, generalized tensor representation of elasticity and other irreversible and irreversible properties of crystals, mathematical theory of infinitesimal elasticity with applications, including wave propagation and stress fields of dislocations, mathematical theory of yield stress and plasticity, origin of elastic behavior, including rubberlike behavior. At the level of Physical Properties of Crystals, by Nye.

603 Kinetics of Solid State Reactions Spring. 3 credits.

604 Structure of Solids Spring. 3 credits. Prerequisites: MS&E 601 and 602, or equivalent.
Binding energies in perfect crystals. Structure and energetics of point; point and planar defects in crystals, including metals, ionic solids, covalent solids, and polymers. Interactions between defects. Bonding and random packing in amorphous materials. Observation of defects in crystalline materials. Structural analysis of amorphous materials.

605 Plastic Flow and Fracture of Materials Fall. 3 credits.
Experimental and theoretical aspects of the deformation and failure of structural materials. Although the emphasis is on metals and alloys, consideration is given also to glasses, ceramics, and polymeric materials. Some of the topics included are theory and practice of mechanical testing, deformation behavior of polycrystal and single-crystal metals, phenomenological theories of deformation, micromechanical theories of plastic flow and creep, relationship of microstructure to mechanical properties, brittle and ductile fracture of materials.

Related Course In Another Department

Introductory Solid-State Physics (Physics 454)

Further Graduate Courses

610 Principles of Diffraction (also A&E 711) Fall. 3 credits. Offered alternate years. Not offered 1982-83. Introduction to diffraction phenomena as applied to solid-state problems. Scattering and adsorption of neutrons, electrons, and X-ray beams. Particular emphasis on synchrotron radiation X-ray sources.

Materials Science and Engineering 251

612 Phase Transformations 3 credits.
Prerequisite: MS&E 601 and 603 or equivalent preparation. Compositional and structural transitions in condensed systems, including spinodal decomposition, cellular transformations, and diffusionless transformations; clustering and ordering in solid solutions, radiation-induced precipitation, condensation and evaporation phenomena; order-disorder transformations; transitions in magnetic, ferroelectric, and superconducting materials; phase equilibria and transitions in surface and grain-boundary phenomena. Phase transformations in metallic, ceramic, semiconducting, and polymeric systems. Thermodynamic, statistical thermodynamic, micromechanical theories of plastic flow and creep, and the imaging of crystal defects. Dynamic theory of diffraction as applied to the calculation of the images of crystal defects. Instruction in the use of the microscope.

616 Electrical and Magnetic Properties of Materials 3 credits. Prerequisite: Physics 454 or equivalent.
Electronic transport properties of metals and semiconductors, semiconductor devices, optical and dielectric properties of insulators and semiconductors, laser materials, dielectric breakdown, structural aspects of superconducting materials, ferromagnetism and magnetic materials. At the level of Physics of Semiconductor Devices, by Sez: Ferromagnetism, by Bobzworth, and current review articles.

Specialty Courses

702 Amorphous and Semicrystalline Materials 3 credits. Prerequisite: Physics 454 or equivalent.
Topics related to the science of the amorphous state selected from within the following general areas: structure of liquids and polymers, surface. Some of the topics included are theory and practice of mechanical testing, deformation behavior of polycrystal and single-crystal metals, phenomenological theories of deformation, micromechanical theories of plastic flow and creep, relationship of microstructure to mechanical properties, brittle and ductile fracture of materials.

703 Solid Surfaces and Interfaces 3 credits. Prerequisites: MS&E 601 and knowledge of solid-state physics. Similar to A&E 762. Offered alternate years.
Topics to be covered include atomic structure of surfaces, surface electronic thermodynamics, interaction of surfaces with gases, defects at surfaces, surfaces of alloys, semiconductor and insulator interfaces, heterogeneous catalysis, mass transport, oxidation of crystals.

704 Advanced Topics in Crystal Defects 3 credits. Prerequisites: MS&E 601, 602, and 604, or equivalent.
The structure and properties of point, line, and planar crystal defects treated from a fundamental point of view. Thermodynamics and kinetics of point defects. Atomic and continuum theories of dislocations. Thermodynamic treatment of grain boundaries.
Structure of grain boundaries. Emphasis given throughout to interactions between the various types of defects and to their roles in important phenomena such as diffusion, precipitation, plasticity, radiation damage.

705 The Effects of Radiation on Materials 3 credits. Cross section for atom displacement; orientation dependence of the threshold energy; interatomic potentials; the atomic collision cascade; focusing of atomic collisions; mass transport along collision spectrums within a cascade; range concepts and measurements in polycrystalline and single crystal materials and semiconductors; channeled particles and the effect of crystal imperfections on the range; Rutherford back-scattering and channeling and their application to the lattice location of impurity atoms; sputtering of single and polycrystalline metals; recovery mechanisms for radiation damage; void formation in metals irradiated to high fluxes, and the problem of swelling in liquid-metal fast breeder reactors; the first-wall problem in controlled thermonuclear reactors. At the level of Defects and Radiation Damage in Metals, by M. W. Thompson; The Observation of Atomic Collisions in Crystalline Solids, by R. S. Nelson; Ion Bombardment of Solids, by G. Carter and J. S. Colligon; and selected papers and review articles.

706 Amorphous Semiconductors 2 credits. Prerequisite: knowledge of the theory of crystalline semiconductors on the level of Kittel. The preparation, characterization, and the electronic transport of amorphous semiconductors from an experimental point of view. Particular emphasis is given to amorphous, hydrogenated Si. Some potential device applications, such as in amorphous Si solar cells and the metal-base transistor, are described.

707 Solar Energy Materials 3 credits. Photovoltaic energy conversion: (1) theory (on the level of Hovel); (2) the role of crystal defects and grain boundaries on the conversion efficiency, and schemes to passivate these defects; (3) current investigations in the JPL program to produce large scale, solar grade semiconducting Si.

708 Ceramic Materials 3 credits. Prerequisites: MS&E 601 and some familiarity with crystal structures. Crystal structure and bonding of typical ceramic materials; structure of silicate and non-silicate glasses; imperfections in oxides; point defects and point-defect chemistry, line defects, extended defects; dimeric and non-stoichiometric ceramics; phase transformations; equilibrium and nonequilibrium phases; grain growth and sintering; plastic deformation and creep; topics from research papers.

775 Advanced Topics in Mechanical Properties 3 credits. Prerequisite: MS&E 605 or permission of instructor. 3 lecs. Topics from current research in mechanical properties of structural materials, selected from the following: modern theories of deformation and fatigue, high-strength alloys, effects of nuclear radiation, amorphous solids, cyclic deformation and fatigue, fracture of brittle and ductile solids, anelasticity and internal friction. Lectures are based largely on current literature.

779 Special Studies in Materials Sciences Fall or spring. Credit variable. Supervised studies of special topics in materials science.

798 Materials Science and Engineering Colloquium Fall and spring. 1 credit each term. Credit limited to graduate students. Lectures by visiting scientists, Cornell staff members, and graduate students on subjects of interest in materials science, especially in connection with new research.

799 Materials Science Research Seminars Fall and spring. 2 credits each term. For graduate students involved in research projects. Short presentations on research in progress by students and staff.

800 Research in Materials Science Fall and spring. Credit to be arranged. Prerequisite: candidacy for Ph.D. in Materials Science. Independent research in materials science under the guidance of a member of the staff.

801 Research in Materials Science Fall and spring. Credit to be arranged. Prerequisite: candidacy for M.S. in Materials Science. Independent research in materials science under the guidance of a member of the staff.

Mechanical and Aerospace Engineering

General and Required Courses

101 Naval Ship Systems (also Naval Science 102) Spring. 3 credits. Limited to freshmen and sophomores. R. L. Wehe.

102 Drawing and Engineering Design Fall, spring. 1 credit. Half-term course offered twice each semester. Recommended for students without previous mechanical drawing experience. S-U grades optional. 2 lecs, 1 lab.

103 Introductory Fluid Mechanics Spring. 3 credits. Prerequisites: Engr 202 and 203. 4 recs, 1 lab.

104 Statics, Kinematics, Potential Flow, Dynamics, Momentum and Energy Relations. Thermodynamics of compressible flow; dimensional analysis; real fluid phenomena; laminar and turbulent motion, boundary layer; lift and drag; supersonic flow.

324 Heat Transfer Fall, spring, may be offered in Engineering Cooperative Program. Prerequisite: M&E 323. 2 lecs, 1 rec. Evening prelims.

325 Mechanical Design and Analysis Fall, spring; usually offered in Engineering Cooperative Program. 4 credits. Prerequisites: Engr 202 and 203. 4 recs. Evening prelims.

326 Systems Dynamics Fall, spring, may be offered in Engineering Cooperative Program. 4 credits. Prerequisite: M&E 325. Evening prelims. Dynamic behavior of mechanical systems, modeling, analysis techniques and applications, digital- and analog-computer simulation, balancing of rotating and reciprocating machinery, vibrations of single and multi-degree-of-freedom systems, linear control systems. PDF control, stability analysis.

327 Mechanical Engineering Laboratory Fall, spring. 4 credits. Prerequisites: M&E 323, 325, and concurrent registration in M&E 324 and 326. 1 lec, 2 labs. Laboratory exercises in instrumentation, techniques, and tools used in mechanical engineering. Measurements of pressure, temperature, heat flow, drag, fluid flow rate, solar energy, thermoelectricity, displacement, force, stress, strain, vibrations, noise.

Mechanical Systems and Design and Manufacturing

464 Design for Manufacturing Fall. 3 credits. Prerequisites: M&E 311 and 325, or permission of instructor. Design for casting, forging, stamping, welding, machining, heat treatment, and assembly; beneficial stressing, improving the distribution of loads and deflections. Selection of materials: dimensioning and fits, joints, fasteners, and shaft mountings. Specifications for manufacturing and maintenance to minimize fatigue failure and improve reliability. Short design projects.

483 Mechanical Reliability Fall. 3 credits. Prerequisites: Engr 260 or 270 or equivalent. S. L. Phoebus. Classic system reliability, hazard-function concepts, reliability bounds; static and time-dependent material-strength models, weakest-flaw models; structural system reliability, static and time-dependent

486 Automotive Engineering Spring. 3 credits. Prerequisite: M&AE 325. Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis is on automobiles, trucks, and related vehicles. Powerplant, driveline, brakes, suspension, and structure. Other vehicle types may be considered.

489 Computer-Aided Design Spring. 3 credits. Limited to juniors and seniors. 2 lec-recs, 1 computing lab; term project. A broad introduction to computational methods in mechanical design. Problems with emphasis on interaction techniques.

512 Analysis of Manufacturing Processes (also MS&E 455) Spring. 3 credits. Prerequisite: M&AE 311. 3 lec.

514 Numerical Control in Manufacturing Fall. 3 credits. Prerequisite: upperclass standing in engineering.

536 Mechanical Components Spring. 3 credits. Prerequisite: M&AE 325. Advanced analysis of machine components and structures. Application to the design of new configurations and devices. Selected topics from the following: lubrication theory and bearing design, fluid configurations and devices. Selected topics from the Advanced analysis of machine components and computer-aided design/computer-aided machine tool dynamics.

583 Mechanical and Aerospace Structures I Fall. 3 credits. Prerequisite: M&AE 325 or permission of instructor. A study of advanced topics in the analysis of stress and deformation of deformable bodies, with applications to the analysis and design of mechanical and aerospace systems. Topics selected from advanced strength of materials, energy methods in structural analysis, strength theories, and experimental stress analysis.

587 Mechanical Vibrations Spring. 3 credits. Prerequisite: M&AE 320 or equivalent. Enroll limited; intended for graduate students; open to qualified undergraduates who have permission of instructor. Prerequisite: background in basic laboratory electronics assumed. Further development of vibration phenomena in single-degree- and multidegree-of-freedom linear and nonlinear systems, with emphasis on engineering problems involving analysis and design.

588 Feedback Control Systems Fall. 3 credits. Open to qualified undergraduates. Prerequisite: M&AE 326 or permission of instructor. Further development of the theory and implementation of feedback control systems, with particular emphasis on the application of pseudo-derivative-feedback (PDF) control concepts to the decision and operation of linear and nonlinear systems.

589 Dynamics of Vehicles Fall. offered on demand. 3 credits. Prerequisite: Engr 203. Further development of the modeling, analysis, and design of vehicle systems. Emphasis on the handling behavior and stability of the automobile, tire theory, suspension analysis. Performance and comfort criteria are developed. Further topics are included to reflect interests of the class.

616 Finite Element Methods in Thermomechanical Processes Fall. 4 credits. Prerequisites: introductory course work in finite-element methods and elasticity, or in analysis of manufacturing processes. P. R. Dawson. Application of finite-element methods in the analyses of mechanical deformation processes that are nonlinear and influenced by coupling to thermal or electrical behavior. Elastic, elasto-plastic, visco-plastic, and thermally coupled analyses applied to problems in large deformation, bulk forming, polymer flows, and welding.

672 Experimental Methods in Machine Design Fall. 4 credits. Prerequisite: M&AE 325 or equivalent. Not offered 1982–83.

677 Advanced Mechanical Vibrations Fall. 4 credits. Prerequisite: M&AE 577 or equivalent. Offered alternate years. Not offered 1982–83.

D. L. Taylor.

Vibratory response of multidegree-of-freedom systems, matrix formulation, concepts of mean-square, mobility, frequency response, and complex modal shapes. State-of-the-art techniques such as FFT, sine sweep, and single-point random excitation. Nonlinear vibration, limit-cycle analysis, parametric resonance, self-excited oscillations, and nonconservative systems. Random vibrations and stochastic excitation. Introduction to vibrations of elastic bodies.

679 Digital Simulation of Dynamic Systems Fall. 4 credits. Open to qualified undergraduates who have permission of instructor. Prerequisite: previous exposure to systems dynamics and digital programming. Offered alternate years. Not offered 1982–83.

J. F. Booker.

Designing assistants those having a general knowledge of solid and fluid mechanics with the special problems and literature currently of interest in various fields of hydrodynamic lubrication. General topics include equations of viscous flow in thin films, self-acting and externally pressurized bearings with liquid and gas lubricant films, bearing-system dynamics, and computational methods. Also selected special topics, such as elastohydrodynamic lubrication.

685 Optimum Design of Mechanical Systems Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. Not offered 1982–83.

S. L. Phoenix.

Advanced course in random loading and statistical failure processes in mechanical systems. Continuous and discrete random loadings, random vibrations of mechanical structures, random fatigue processes in materials, order statistics and statistical estimation of reliability, simulation, and computation in mechanical structures, coherent systems and monotone load-sharing, stochastic failure of bundles and composites.

686 Hydraulic Lubrication: Fluid-Film Bearings Fall; offered on demand. 4 credits.

J. F. Booker.

Designed to design those having a general knowledge of solid and fluid mechanics with the special problems and literature currently of interest in various fields of hydrodynamic lubrication. General topics include equations of viscous flow in thin films, self-acting and externally pressurized bearings with liquid and gas lubricant films, bearing-system dynamics, and computational methods. Also selected special topics, such as elastohydrodynamic lubrication.

688 Advanced Mechanical Reliability Fall. 4 credits. Prerequisite: M&AE 483 or permission of instructor. Offered alternate years. Not offered 1982–83.

689 Digital Simulation of Dynamic Systems Fall. 4 credits. Open to qualified undergraduates who have permission of instructor. Prerequisite: previous exposure to systems dynamics and digital programming. Offered alternate years. Not offered 1982–83.

J. F. Booker.

Designing assistants those having a general knowledge of solid and fluid mechanics with the special problems and literature currently of interest in various fields of hydrodynamic lubrication. General topics include equations of viscous flow in thin films, self-acting and externally pressurized bearings with liquid and gas lubricant films, bearing-system dynamics, and computational methods. Also selected special topics, such as elastohydrodynamic lubrication.

A. R. George.

448 Combustion Engines Fall. 3 credits. Prerequisite: Engr 221 and concurrent registration in M&AE 323.

459 Plasma Energy Systems Spring. Offered on demand. Prerequisite: Physics 214, undergraduate or graduate standing in engineering. Not offered 1982–83. Fundamental aspects of plasma physics. An elementary treatment of principles on which the concepts of controlled thermonuclear (fusion) reactors are based. Comparisons between fusion and fusion systems and treatment of other plasma devices (e.g., MHD converters) as time permits.

506 Aerospace Propulsion Systems Spring. 3 credits. Prerequisite: M&AE 323 or permission of instructor. Offered alternate years.

Application of thermodynamics and fluid mechanics to design and performance of the conceptual methods of space propulsion.

530 Fluid Dynamics Fall. 3 credits. Prerequisite: M&AE 323; senior, graduate standing, or permission of instructor. Inviscid fluid dynamics and aerodynamics, including incompressible and supersonic flows, flow over bodies, lift, and drag. One-dimensional steady and unsteady compressible flows. Shock waves, wave drag, flow in jet and rocket engines. Course 530 and 531 are of interest primarily to seniors and M.Eng. students; however, incoming M.S. or Ph.D. students who will not major in fluid mechanics but need competence in problem solving and basic fluid dynamics should be interested also. The courses may be taken independently or as a sequence.

531 Boundary Layers Spring. 3 credits. Prerequisite: M&AE 323; senior or graduate standing, or permission of instructor. Recommended. M&AE 530 or equivalent. Navier-Stokes equations for laminar and turbulent flows. Boundary layers, laminar and turbulent; skin friction, separation and transition. Jets and wakes, if time allows.

536 Turbomachinery and Applications Spring. 3 credits. Prerequisite: M&AE 323 or equivalent. 3 lecs. Aerodynamic design of turbomachines in general, energy transfer between fluid and rotor in specific types, axial and radial devices, compressible flow. Three-dimensional effects, surgeing.

543 Combustion Processes Spring. 3 credits. Prerequisites: M&AE 323, 324. 3 lecs. An introduction to combustion and flame processes with emphasis on fundamental fluid dynamics, heat and mass transport, and reaction-kinetic processes that govern combustion processes. Both premixed and diffusion flames are considered.

555 Direct Energy Conversion and Storage Spring. 3 credits. Prerequisite: Engr 221 or equivalent. Offered alternate years, 3 lecs. Primarily a survey of methods for the direct conversion of heat into electrical energy, with emphasis on efficiency, maximum power, practical applications, and limitations. Turbomachines and generators and refrigerators. Thermionic generators. Solar cells. Batteries. Fuel cells.

556 Power Systems Fall. 3 credits. Prerequisite: M&AE 323 or equivalent. F. K. Moore. A broad survey of methods of large-scale power generation, emphasizing energy sources, thermodynamic cycle considerations, and component description. Power industry, economic, and environmental factors. Trends and projections.

557 Future Energy Systems Seminar Spring. 3 credits. Prerequisite: an energy-related course. Options for future energy-conversion systems or power generation, transportation, and other end-use applications. Technical feasibilities, benefits, and environmental impacts are considered. Classes or seminars based on study projects that reflect student preparation and interests, conducted with faculty advice.

559 Introduction to Controlled Fusion: Principles and Technology (also M&AE 484) Spring. 3 credits. Prerequisites: Physics 112, 213 and 214, or equivalent background in electricity and magnetism and mechanics, with permission of instructor. Intended for seniors and graduate students. 3 lecs. D. A. Hammer. Introduction to the physical principles and technology underlying controlled fusion power. Topics include fundamental aspects of the physics of ionized gases at high temperature (thermonuclear plasmas), requirements (in principle) for achievement of net power from fusion, technological problems of an actual fusion reactor, and progress of the fusion program toward overcoming these problems. Both magnetic and inertial confinement fusion are discussed, and comparisons are made between fusion and fission.

601 Foundations of Fluid Dynamics and Aerodynamics Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Foundations of fluid mechanics from an advanced viewpoint. Aspects of kinetic theory as it applies to the formation of continuum fluid dynamics. Surface phenomena and boundary conditions at interfaces. Fundamental kinematic description of fluid flow, tensor analysis, derivation of the Navier-Stokes equations for compressible fluids. Vorticity dynamics. Basic inviscid and viscous flows. Shock and contact discontinuities, conservation laws. Laminar and turbulent flows.

603 Compressible Aerodynamics Fall. 4 credits. Prerequisite: M&AE 601 or equivalent or permission of instructor. Basic conservation laws and fundamental theorems of compressible fluid flow. Shock waves, method of characteristics, wave interactions. Perturbation theories and similarity rules. Linearized supersonic flow, wing theory, wave drag. Nonlinear theory of supersonic flow.

610 Gasdynamics Spring. 4 credits. Offered on demand. E. L. Resler, Jr. A survey of the nonlinear theory of characteristics as applied to two-dimensional steady supersonic flows and one-dimensional unsteady flows. The role of chemical reactions in these flows is treated, as well as the experimental techniques to measure chemical reaction rates. Among the topics treated are heat capacity lag and its effects on acoustics, gasdynamic lasers, and shock-tube techniques. Magneto-acoustics and magnetically driven shock waves are also covered.

630 Atmospheric Turbulence and Micrometeorology Spring. 4 credits. Offered alternate years. Open to qualified undergraduates with permission of instructor. Z. Warhaft. Basic problems associated with our understanding of the structure of the velocity field and the transport of scalars such as temperature and moisture in the lower atmosphere, from both theoretical and experimental viewpoints. Topics include the second-order turbulence equations and their closure. Monin-Obukhov theory, diffusion of scalars, spectral characteristics of atmospheric variables, experimental techniques including remote sensing, and the analysis of random-time series.

[648 Seminar on Combustion Spring. 4 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1982–83. 3 recs. Discussion of contemporary problems in combustion research with emphasis on modern experimental and analytical techniques. Typical problems include formation and removal of pollutants in combustion systems, combustion of alternative fuels, coal combustion, and modification of combustion systems for energy-efficiency improvement.]
650 Transport Processes I Fall. 4 credits.
Prerequisite: graduate standing or permission of instructor.

651 Transport Processes II Spring. 4 credits.
Prerequisite: graduate standing or permission of instructor.

652 Boiling and Two-Phase Flow Fall. 4 credits.
On demand. Prerequisite: graduate standing or permission of instructor.
C. T. Avedisian

653 Experimental Methods in Fluid Mechanics, Heat Transfer, and Combustion Fall. 4 credits.
2 lecs, 1 lab, F. C. Gouldin.
Study of experimental techniques for measuring pressure, temperature, velocity, and composition of gases, with emphasis on experimental capabilities and principles underlying the techniques. Topics include laser velocimetry, hot-wire anemometry, and spectroscopy.

704 Viscous Flows Spring; offered on demand. 4 credits.
Prerequisite: M&AE 601 or permission of instructor.
S. F. Shan

707 Aerodynamic Noise Theory Offered on demand. 4 credits.
Prerequisites: M&AE 601 or permission of instructor.
Advanced topics in acoustics relevant to aerodynamic and transportation noise sources and control. Random processes. Geometrical acoustics in inhomogeneous moving media, Kirchhoff and Poisson formulas, diffraction, scattering, and reflection. Lightfield-Curtice formulations for sound generation. Absorption and transmission in fluids and at boundaries. Applications to aerodynamic noise sources.

733 Stability of Fluid Flow On demand. 4 credits.
Prerequisite: Graduate standing or permission of instructor.
S. Leibovich

734 Turbulence and Turbulent Flow Fall. 4 credits.
Prerequisites: M&AE 601 or permission of instructor.
J. L. Lumley
Topics include the dynamics of buoyancy and shear-driven turbulence, boundary-free and bounded shear flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.

735 Dynamics of Rotating Fluids Offered on demand. 4 credits.
Prerequisites: M&AE 601 or permission of instructor.
S. Leibovich

737 Numerical Methods in Fluid Flow and Heat Transfer Spring. 4 credits.
Prerequisites: graduate standing and some FORTRAN programming experience.
K. E. Torrance

738 Nonlinear Wave Propagation Offered on demand. 4 credits.
Prerequisite: M&AE 601 or permission of instructor.
S. Leibovich
Mathematical treatment of nonlinear effects associated with waves in continua. Examples are taken primarily from geophysical fluid dynamics and gas dynamics. Methods of averaging, variational methods, wave interactions, and exact solutions of nonlinear evolution equations.

Special Offerings

393 Current Topics in Biomechanics Fall or spring. 0 or 1 credit.
May be taken twice for credit.
Prerequisite: permission of instructor.
S. Leibovich
Current topics in biomechanics. Focus on current research and new directions in the field.

394 Special Investigations in Mechanical and Aerospace Engineering Fall or spring. Credit to be arranged.
Prerequisite: permission of instructor.
J. L. Lumley
Special investigations in mechanical and aerospace engineering. Projects may arise from department research interests or industrial collaboration.

490 Mechanical Engineering Design Spring.
4 credits.
Prerequisite: M&AE 304 or 355.
L. D. Clark
Formal consideration of the complete design process (including creativity, planning, scheduling, cost analysis, management, and analytical methods) in the context of one or more specific projects carried out by the students. Projects may arise from department research interests or industrial collaboration.

592 Seminar and Design Project in Aerospace Engineering Fall and spring. 2 credits each term.
Prerequisite: M&AE 304 or 355.
S. F. Shan
Seminar and design project in aerospace engineering under the guidance of a member of the staff.

Nuclear Science and Engineering

A number of courses in nuclear science and engineering are offered through the School of Applied and Engineering Physics; see A&EP 609, 612, 613, 633, 634, 636, 638, 651, and 652.

303 Introduction to Nuclear Science and Engineering I (also A&EP 300) Fall. 3 credits.
Prerequisite: Physics 214 or Mathematics 294.
D. A. Hammer
This course introduces the fundamentals of nuclear science and engineering, with an emphasis on the practical applications of nuclear technology. Topics include the history and development of nuclear science and engineering, the basic principles of nuclear reactions, and the role of nuclear technology in society.

304 Introduction to Nuclear Science and Engineering II (also A&EP 304) Spring. 3 credits.
Prerequisite: A&EP 303.
D. D. Clark
This course continues the study of nuclear science and engineering, with an emphasis on the applications of nuclear technology to specific fields such as medicine, industry, and energy. Topics include the use of nuclear reactors in power generation, the use of radiation in medicine and industry, and the environmental and safety implications of nuclear technology.
Introduction to aspects of nuclear reactor engineering and to controlled fusion. Topics include heat-transfer and safety problems in fission reactors; principles, configurations, and engineering problems of proposed fusion reactors; radiation detection, shielding, biological effects of radiation, and materials damage.

305 Introduction to Nuclear Science and Engineering III Spring. 1 credit. Prerequisite: NSAE 303.
1 lec. D. D. Clark.
A one-hour reading and lecture course providing a more extensive development of the topics in nuclear physics introduced in NSAE 303. Recommended as a supplement to 303–304 for students who plan graduate work in nuclear science or engineering.

484 Introduction to Controlled Fusion: Principles and Technology (also Electrical Engineering 484 and M&AE 559) Spring. 3 credits. Prerequisites: Phys 112, 213 and 214, or equivalent background in electricity and magnetism and mechanics, with permission of instructor. Intended for seniors and graduate students.
Introduction to the physical principles and technology underlying controlled fusion power. Topics include fundamental aspects of the physics of ionized gases at high temperature (thermonuclear plasmas), requirements (in principle) for achievement of net power from fusion, technological problems of an actual fusion reactor, and progress of the fusion program toward overcoming these problems. Both magnetic and inertial confinement fusion are discussed, and comparisons are made between fusion and fission.

605 Interaction of Radiation and Matter Spring. 4 credits. Prerequisite: a course in modern physics, including quantum mechanics.
3 lecs. V. O. Kostroun.
Quantization of the electromagnetic field; relativistic wave equation of the electron; electrons interacting with radiation field—emission, absorption, dispersion, photoelectric effect, Compton scattering, scattering of two electrons, bremsstrahlung, pair production, and annihilation; passage of heavy charged and neutral particles through matter. Examples and applications from low-energy nuclear, plasma, and solid-state physics.

Operations Research and Industrial Engineering

260 Introductory Engineering Probability (also Engineering 260) Fall or spring. 3 credits. Prerequisite: first-year calculus.
3 lecs. See description under Engineering Common Courses.

270 Basic Engineering Probability and Statistics Fall or spring. 3 credits. Prerequisite: first-year calculus.
3 lecs. See description under Engineering Common Courses.

320 Optimization I Fall. 4 credits. Prerequisite: Mathematics 293 or 221.
3 lecs. 1 rec.
Formulation of linear programming problems and solution by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation and production planning.

321 Optimization II Spring. 4 credits. Prerequisite: OR&E 320 or equivalent.
3 lecs. 1 rec.
A variety of optimization methods, stressing extensions of linear programming and its applications but also including topics drawn from integer, dynamic, and nonlinear programming. Formulation and modeling are stressed, as well as numerous applications. The computer is used in solving typical problems.

350 Cost Accounting, Analysis, and Control Fall or spring. 4 credits.
3 lecs. 1 computing-disc.
Principles of accounting, financial reports; job-order and process cost systems—historical and standard costs; cost characteristics and concepts for control, analysis, and decision making.

361 Introductory Engineering Stochastic Processes I Spring. 4 credits. Prerequisite: OR&E 260 or equivalent.
3 lecs. 1 rec.
Basic concepts and techniques of random processes are used to construct models for a variety of problems on practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing and reliability.

370 Introduction to Statistical Theory with Engineering Applications Fall or spring. 4 credits. Prerequisite: OR&E 260 or equivalent.
3 lecs. 1 rec.
Provides a working knowledge of basic statistics as it is most often applied in engineering, and a basis in statistical theory for continued study. Topics include a review of distributions of special interest in statistics; testing simple and composite hypotheses; point and interval estimation; correlation; linear regression; curve fitting.

410 Industrial Systems Analysis Spring. 4 credits. Prerequisites: OR&E 350 and 370.
3 lecs. 1 computing session.
Engineering economic analysis, including engineering economy, replacement, taxation effects, decision making based on economic considerations. Operations analysis including process flow, process evaluation, procedural analysis, resource layout, methods analysis and design, work measurement, job evaluation, quality control elements. Project planning and control.

417 Layout and Material Handling Systems Spring. Prerequisite: OR&E 361
2 lecs. 1 rec.
Design of the layout of processes and storage areas and the material handling system for movement of items. Typical equipment used. The functions of identification control, storage, movement, batching, merging, and dispersion. Introduction to new technologies.

421 Production Planning and Control Fall. 4 credits. Prerequisites: OR&E 320 and 361 or permission of instructor.

431 Discrete Models Spring. 3 credits. Prerequisite: OR&E 320 or permission of instructor.
3 lecs-rect.
Basic concepts of graphs, networks, and discrete optimization. The use of finite mathematical techniques to model contemporary problems selected from operations research, including voting procedures and decision making, efficient and equitable allocations, energy and environment, traffic and urban systems.

436 Introduction to Game Theory Fall. 3 credits.
A broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games; cooperative and noncooperative n-person games; games in extensive, normal, and characteristic function form. Economics, market games. Structure theory for games arising from complex organizations.

3 lecs. V. O. Kostroun.
A selection of topics from the following: martingales, Markov and semi-Markov processes, optimal stopping. Examples and applications are drawn from several areas.

471 Applications of Statistics to Engineering Problems Fall. 4 credits. Prerequisite: OR&E 370 or equivalent.
3 lecs. 1 rec.
Sample size calculations for one- and two-sample tests; theory of multiple linear regression and applications to problems in engineering and the sciences, including graphic and analytic techniques useful in model building; analysis of data from experiments with qualitative factors including one-way and two-way Anova models. Use of the computer as a tool for statistics is stressed.

[472 Statistical Decision Theory Spring. 3 credits. Prerequisite: OR&E 471 or equivalent. Not offered 1982–83.
3 lecs.

516 Mathematical Models—Development and Application Fall. 4 credits. Prerequisites: OR&E 320 and 361 or permission of instructor.
4 rec-labs.
A laboratory course concerned with structuring problems and operational systems as mathematical models. A sequence of situations for which students must construct representative models is considered. Models are examined for their usefulness in analysis, synthesis, and design.

519 OR&E Project Fall or spring. Credit to be arranged. Prerequisite: permission of instructor.
Project-type work, under faculty supervision, on a real problem existing within some firm or institution, usually a regional organization. Opportunities in the course may be discussed with the associate director.

551 Advanced Engineering Economic Analysis Spring. 4 credits. Prerequisites: OR&E 350 and knowledge of linear programming and statistics, or permission of instructor.
3 lecs.
The economics of production. Topics concerning economic decision making at the level of the firm include long-range planning, budgeting and control, and project investment decisions under certainty and uncertainty. Topics in industrial economics include productivity, technical change, and industrial development.

561 Queuing Theory and Its Applications Fall. 3 credits. Prerequisite: OR&E 361 or permission of instructor.
3 lecs.
582 Inventory Theory  Spring. 4 credits.  
Prerequisite: OR&E 421 or permission of instructor.  
3 lecs, 1 rec.  
Discussion of the nature of inventory systems and their design and control. Periodic and continuous review policies for single-term and single-location problems. Multi-item and multi-echelon extensions. Dynamic and static models are discussed. Redistribution methods are analyzed. Applications are stressed.

583 Applied Time Series Analysis  Spring. 3 credits.  
Prerequisite: OR&E 361, Com S 211, or permission of instructor.  
2 lecs, 1 rec; final project.  
Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. Long-range dependence models and the related statistics are considered. As time permits, other topics such as spectral analysis, filtering, the sampling and aliasing problem, and the fast Fourier transform algorithm are discussed. Applications to econometrics and hydrology are emphasized. Assignments require computer work.

[570 Statistical Methods in Quality and Reliability Control  Spring. 3 credits.  
Prerequisite: OR&E 370 or equivalent. Not offered 1982–83.  
3 lecs.  
Control concepts and methods for attributes and variables; process capability analysis; acceptance sampling plans; elementary procedures for variables; acceptance-rejection procedures. Reliability concepts; exponential and normal distributions in reliability; life and reliability analysis of components and systems; redundancy.]

580 Digital Systems Simulation  Fall. 4 credits.  
Prerequisites: Com S 211 and OR&E 370 or permission of instructor.  
2 lecs, 1 rec.  
Digital computer programs to simulate the operation of complex discrete systems in time. Modeling, program organization, random number and deviate generation, simulation languages, statistical considerations; applications to a variety of problem areas.

599 Project  Fall and spring. 5 credits. For M.Eng. students.  
Identification, analysis, design, and evaluation of feasible solutions to some applied problem within the OR&E field. A formal report and oral defense of the approach and solution are required.

[614 Facilities Location and Design  Spring. 3 credits.  
Prerequisite: OR&E 260 or 270 or permission of instructor. Not offered 1982–83.  
3 lecs.  
Formulation, analysis, and solution techniques for location and facility design problems. Applications in industrial environmental and regional areas.]

622 Operations Research I  Fall. 3 credits. Not open to students who have had OR&E 260.  
3 lecs.  
Survey of deterministic models. Models are drawn from linear, mixed-integer, nonlinear, and dynamic programming. Network theory, game theory, and deterministic inventory models. Modeling and applications are stressed.

623 Operations Research II  Spring. 3 credits. Not open to students who have had OR&E 361.  
Prerequisite: OR&E 260 or 270 or permission of instructor.  
3 lecs.  

[625 Scheduling Theory  Fall. 3 credits.  
Prerequisite: permission of instructor. Not offered 1982–83.  
3 lecs.  
Scheduling and sequencing problems. Single resource scheduling, parallel processing, flow shop scheduling. Methodology is drawn from dynamic and integer programming; simulation techniques and heuristic methods.]

[628 Advanced Production and Inventory Planning  Spring. 3 credits. Not offered 1982–83.  
3 lecs.  
Introduction to a variety of production and distribution planning problems; the development of mathematical models corresponding to these problems; a study of approaches for finding solutions.]

630–631 Mathematical Programming I and II  Fall, 630; Fall, 631; Spring, 3 credits each term.  
Prerequisite: advanced calculus.  
3 lecs.  

[632 Nonlinear Programming  Fall. 3 credits.  
Prerequisite: OR&E 630. Not offered 1982–83.  
3 lecs.  
Necessary and sufficient conditions for unconstrained and constrained optimality. Computational methods, including interior (e.g., penalty functions), boundary (e.g., gradient projection), and exterior (e.g., cutting plane) approaches.]

635 Game Theory I  Fall. 3 credits.  
Prerequisite: Mathematics 441 or permission of instructor.  
3 lecs.  
The minimax theorem for two-person zero-sum games. Two-person general sum games and noncooperative n-person games; Nash equilibrium points. Cooperative n-person games; the core, stable sets, Shapley value, bargaining set, kernel, nucleolus.

637 Dynamic Programming  Spring. 3 credits.  
Prerequisite: concurrent registration in OR&E 660 and Mathematics 411 or equivalent.  
3 lecs.  
Optimization of sequential decision processes. Deterministic and stochastic models, infinite horizon Markov decision models, policy iteration, contraction mapping methods. Applications drawn from inventory theory, production control; discrete combination examples.

641 Integer Programming  Spring. 3 credits.  
Prerequisite: OR&E 630. Not offered 1982–83.  
3 lecs.  
The theory of finite dimensional convex sets is developed through the study of real-valued convex functions and Fenchel duality. Separation of convex sets, polarity correspondences, recession cones, theorems of Helly and Caratheodory.

[643 Graph Theory and Network Flows  Fall. 3 credits.  
Prerequisite: permission of instructor.  
3 lecs.  

644 Combinatorial Optimization  Spring. 3 credits.  
Prerequisite: permission of instructor.  
3 lecs.  
Topics in combinatorics, graphs, and networks. These include matching, matroids, polyhedral combinatorics, and optimization algorithms.

660 Applied Probability  Fall. 4 credits.  
Prerequisite: advanced calculus.  
3 lecs, 1 rec.  

661 Applied Stochastic Processes  Spring. 4 credits.  
Prerequisite: OR&E 660 or equivalent.  
3 lecs.  
An introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes.

682 Advanced Stochastic Processes  Fall. 3 credits.  
Prerequisite: OR&E 661 or equivalent.  
3 lecs.  
A selection of topics from the following: stationary processes, Levy processes, diffusion processes, point processes, martingales, regenerative phenomena, stochastic calculus, weak convergence.

[685 Advanced Queueing Theory  Fall. 3 credits.  
Prerequisite: OR&E 660 or equivalent. Not offered 1982–83.  
3 lecs.  
A study of stochastic processes arising in a class of problems including congestion, storage, dams, and insurance. The treatment is self-contained. Transient behavior of the processes is emphasized. Heavy-traffic situations are investigated.]

670 Applied Statistics  Spring. 4 credits.  
Prerequisite: OR&E 660 or equivalent.  
3 lecs, 1 rec.  
Review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t, and F; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation, maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson lemma and likelihood ratio principle; confidence interval construction.

671 Intermediate Applied Statistics  Fall. 4 credits.  
Prerequisite: OR&E 670 or equivalent.  
3 lecs, 1 rec.  
Statistical inference based on the general linear model; least squares estimators and their optimality properties; likelihood ratio tests and corresponding confidence regions; simultaneous inference. Applications in regression analysis and ANOVA models. Variance components and mixed models. Correlation, ridge regression. Use of the computer as a tool for statistics is stressed.

672 Statistical Decision Theory  Fall. 3 credits.  
Prerequisite: OR&E 471 or 670 or equivalent.  
3 lecs.  

[673 Nonparametric Statistical Analysis  Spring. 3 credits.  
Prerequisite: OR&E 670 or permission of instructor. Not offered 1982–83.  
3 lecs.  
Estimation of quantiles, cdfs, and pdf's. Properties of order statistics and rank-order statistics. Hypothesis testing in one- and several-sample situations; sign
674 Design of Experiments Spring. 4 credits. Prerequisite: OR&IE 671 or permission of instructor. 3 lecs.
Use and analysis of experimental designs such as randomized blocks and Latin squares, analysis of variance and covariance; factorial experiments; statistical problems associated with finding best operating conditions; response-surface analysis.

675 Qualitative Data Analysis Spring. 3 credits. Prerequisite: OR&IE 671.
Varieties of categorical data; cross classifications and contingency tables; tests for independence; multidimensional tables and log-linear models; maximum likelihood and weighted least squares estimation; tests of goodness of fit; analysis of incomplete tables, life tables; paired comparisons experiments.

729 Selected Topics In Applied Operations Research Fall or spring. Credit to be arranged. Current research topics dealing with applications of operations research.

736 Game Theory II Spring. 3 credits. Prerequisite: OR&IE 635. Not offered 1982–83. 3 lecs.
A continuation of OR&IE 635, including in-depth treatment of some of the same topics plus such additional topics as games in extensive form, games without side payments, economic market games, and games with infinitely many players.

738 Selected Topics In Game Theory Fall or spring. Credit to be arranged. Current research topics in game theory.

739 Selected Topics In Mathematical Programming Fall or spring. Credit to be arranged. Current research topics in mathematical programming.

752 Advanced Inventory Control Spring. 3 credits. Prerequisite: permission of instructor. Not offered 1982–83. 3 lecs.
The theoretical foundation of inventory theory. Both single-item, single-location problems and multi-item, multi-echelon inventory systems are analyzed. Topics covered include a study of static and dynamic (s,S) policies under a variety of assumptions concerning the demand process and system structure, as well as computational techniques.

764 Deterministic and Stochastic Control Spring. 3 credits. Prerequisite: OR&IE 661 or equivalent. Not offered 1982–83. 3 lecs.
Topics include elements of calculus of variations, Pontryagin’s maximum principle, Markov decision processes, dynamic programming. Problems in filtering and prediction, production planning and inventory control, congestion phenomena, storage models, and environmental management are discussed.

769 Selected Topics In Applied Probability Fall or spring. Credit to be arranged. Topics are chosen from current literature and research areas of the staff.

[773 Statistical Selection and Ranking Procedures Fall. 3 credits. Prerequisite: OR&IE 674 or permission of instructor. Not offered 1982–83. 3 lecs.
A study of multiple-decision problems in which a choice must be made among two or more courses of action. Major emphasis is on selection and ranking problems involving choosing the “best” category where goodness is measured in terms of a particular parameter of interest. Statistical formulation of such problems; indifference-zone, subset, and order relationships. Single-stage, two-stage, and sequential procedures. Applications. Recent developments.]

779 Selected Topics In Applied Statistics Fall or spring. Credit to be arranged. Topics chosen from current literature and research interests of the staff.

790 Special Investigations Fall or spring. Credit to be arranged. For individuals or small groups. Study of special topics or problems.

799 Thesis Research Fall or spring. Credit to be arranged. For individuals doing thesis research for master’s or doctoral degrees.

891 Operations Research Graduate Colloquium Fall or spring. 1 credit. A weekly 1 1/2-hour meeting devoted to presentations by distinguished visitors, by faculty members, and by advanced graduate students, on topics of current research in the field of operations research.

893–894 Applied OR&IE Colloquium 893: fall, 894: spring. 1 credit each term. A weekly meeting of M.Eng. students. Discussion of assigned topics, presentations by practitioners in the field.

Theoretical and Applied Mechanics

202 Mechanics of Solids (also Engineering 202) Fall or spring. 3 credits. Prerequisite: coregistration in Mathematics 293. 2 lecs, 1 rec, 4 labs each semester. Evening exams. See description under Engineering Common Courses.

203 Dynamics (also engineering 203) Fall or spring. 3 credits. Prerequisite: coregistration in Mathematics 294. 2 lecs, 1 rec, 4 labs each semester. Evening exams. See description under Engineering Common Courses.

293 Engineering Mathematics (also Mathematics 293) Fall. 3 credits. Prerequisite: Mathematics 192 or 194. Evening exams (see Mathematics 293). Partial derivatives and multiple integrals; first- and second-order ordinary differential equations with applications in the physical and engineering sciences.

Engineering Mathematics

310 Advanced Engineering Analysis I Fall and spring. 3 credits. Prerequisite: Mathematics 294 or equivalent. 2 lecs, 1 rec. Ordinary differential equations as applied in engineering context. Analytical and numerical methods. Special functions, initial value, boundary value and eigenvalue problems in linear partial differential equations, introduction to nonlinear ordinary differential equations.

311 Advanced Engineering Analysis II Spring. 3 credits. Prerequisite: T&M 310 or equivalent. Functions of several variables, introduction to complex variables, analytic functions, conformal mapping, method of residues. Application to the solution of Laplace’s equation, and transform inversion techniques. Examples drawn from fluid mechanics, heat transfer, electromagnetics, and elasticity.

610 Methods of Applied Mathematics I Fall. 3 credits. Intended for beginning graduate students in engineering and science. An intensive course, requiring more time than is normally available to undergraduates (see T&M 310–311), but open to exceptional undergraduates with permission of instructor. 3 lecs.
Emphasis is on applications. Linear algebra, calculus of several variables, vector analysis, series, ordinary differential equations, complex variables.

611 Methods of Applied Mathematics II Spring. 3 credits. Prerequisite: T&M 610 or equivalent. 3 lecs.
Emphasis on applications. Partial differential equations, tensor analysis, calculus of variations.

613 Methods of Applied Mathematics IIIa Fall. 2 credits. Prerequisite: T&M 611 or equivalent. First of an 8-credit sequence (T&M 613, 614, 615, 616) that develops advanced mathematical techniques for engineering problems. Review of complex variable theory; conformal mapping; complex integral calculus. Nonlinear partial differential equations; general theory of characteristics.

614 Methods of Applied Mathematics IIIb Spring. 2 credits. Prerequisite: T&M 613 or equivalent. Integral transforms for partial differential equations. Green’s function; asymptotics, including steepest descent and stationary phase. Wiener-Hopf technique. Problems drawn from vibrations and acoustics, fluid mechanics and elasticity, heat transfer, and electromagnetics.

615 Methods of Applied Mathematics Iv Fall. 2 credits. Prerequisite: T&M 611 or equivalent. In context of applications: regular and singular perturbation theory, method of matched asymptotic expansions, two timing (method of multiple scales), WKBJ approximation.

616 Methods of Applied Mathematics Ivb Spring. 2 credits. Prerequisite: concurrent registration in T&M 614 or equivalent. In context of applications: Hilbert-Schmidt and Fredholm theories of integral equations, Wiener-Hopf equations with application to finite interval, Carleman equation and its generalization, effective approximations.

Experimental Mechanics

640 Experimental Mechanics Fall. 3 credits. 1 lec.
Each student is expected to perform six to ten experiments in mechanics, selected to meet his or her individual interests. Topics: elastic, viscoelastic, microplastic, and plastic response of materials; linear
and nonlinear vibration of discrete and continuous systems; acoustic and elastic wave propagation and scattering phenomena; dynamical/stability of rigid bodies; analog and digital simulation of dynamical systems; magnetoeistestic interactions; signal processing.

### Continuum Mechanics and Inelasticity

**[450] Introduction to Continuum Mechanics**  Fall. Offered alternate years. 3 credits. Not offered 1982–83. Provides a foundation for further studies in fluid and solid mechanics, materials science, and other branches of engineering. Vector and tensor analysis; kinematics of deformation; analysis of stress and strains; balance laws of physics; constitutive equations; examples of elasticity and fluid mechanics.

### Topics in Continuum Mechanics

**752** Topics in Continuum Mechanics  Spring. 3 credits. Prerequisite: T&AM 651. Offered alternate years. Polymeric rheology using functions or state variables. Continuum theory for rapid shear flows of granular materials. Chemically driven flows, percolation, and finite deformation in biological poro-elastic solids.

### Elasticity and Waves

**574** Mechanical Vibrations and Waves  Spring. 3 credits. Two 1 1/4-hour lecs; 4 labs each semester. Review of vibrations of discrete systems, including mult-degree-of-freedom vibrations. Unified treatment of vibrations and wave phenomena in continuous elastic systems including strings, rods, beams, membranes, and plates. Approximate methods for finding natural modes and frequencies. Dispersion and group velocity. Transient response of discrete and continuous systems.

**663** Applied Elasticity  Fall. 3 credits. Two 1 1/4-hour lecs. Thin curved bars. Plane stress and strain in cylinders; effects of pressure, rotation, and thermal stress. Small (and large) deflection theory of plates; classical, approximate, and strain-energy methods. Thin cylindrical shells. A first course in elastic deformable bodies with numerous engineering applications.

**664** Theory of Elasticity  Spring. 3 credits. Two 1 1/4-hour lecs. Analysis of stress and strain. Any's stress function solutions under Fourier series and integrals. Torsion theory. Three-dimensional solutions. Bending of prismatical bars. Axially loaded circular cylinder and half space. All topics are illustrated by engineering applications.

### Dynamics and Space Mechanics

**668** Fundamentals of Acoustics (also Electrical Engineering 690)  Spring. 3 credits. 3 lecs, biweekly labs. Introduction to the principles and theories of acoustics. The vibrations of strings, bars, membranes, and plates; plane and spherical acoustic waves; transmission phenomena, resonators and filters; waves in solids and fluids. Application is made to sonic and ultrasonic transducers, music and noise, and architectural acoustics, and an introduction is given to the digital processing of acoustic signals. At the level of Fundamentals of Acoustics, by Kinsler and Frey.

**570** Intermediate Dynamics  Fall. 3 credits. Two 1 1/4-hour lecs. Newtonian mechanics: years for single particles and systems of particles, conservation laws, central-force motion; special relativity; Eulerian mechanics for rigid bodies, tops, gyroscopics; generalized coordinates, D'Alembert's principle, Lagrangian equations, analytic mechanics for particles and rigid bodies.

**671** Advanced Dynamics  Spring. 3 credits. Prerequisite: T&AM 570 or equivalent. Offered alternate years. Review of Lagrangian mechanics: Hamilton's principle, the principle of least action, and related topics from the calculus of variations; Hamilton's canonical equations; approximate methods for two-dimensions of freedom systems (Birkhoff's transformation); canonical transformations and related topics from topological dynamics; Hamilton's principle for continuous systems, applications to shell dynamics.

**672** Celestial Mechanics (also Astronomy 579)  Fall. 3 credits. Offered alternate years. Not offered 1982–83. Two 1 1/4-hour lecs. Description of orbits; 2-body, 3-body and n-body problems; Hill curves, libration points and their stability; capture problems; viral theorem. Osculating elements, perturbation equations: effects of gravitational potentials, atmospheric drag, and solar radiation forces on satellite orbits; secular perturbations, resonances.

**[776] Qualitative Theory of Dynamical Systems**  Spring. 3 credits. Prerequisite: T&AM 675 or equivalent. Offered alternate years. Not offered 1982–83. Review of planar (single-degree-of-freedom) systems. The concept of dynamical systems, local and global analysis. N-dimensional systems, types of solutions, Poincaré maps, stability. Structural stability and bifurcations in planar systems. Discrete dynamical systems, maps and difference equations, homoclinic and heteroclinic motions, the Smale Horseshoe and other complex invariant sets. Implications for systems of dimension greater than three, global bifurcations, strange attractors and chaos in free and forced oscillator equations. Applications to problems in solid and fluid mechanics.

### Special Courses, Projects, and Thesis Research

**491–492** Project in Engineering Science  fall, 492, spring. 1 to 4 credits, as arranged. Projects for undergraduates under the guidance of a faculty member.

**798** Selected Topics in Theoretical and Applied Mechanics  Fall. 1–4 credits, as arranged. Special lectures or seminars on subjects of current interest. Topics are announced when the course is offered.

**799** Topics in Theoretical and Applied Mechanics—Fracture Mechanics  Spring. 3 credits. Introduction to linear elastic fracture mechanics. Topics covered are linear elastic crack problems, crack-field fields, stress intensity factor, and energy release rate. The second part of the course covers nonlinear fracture mechanics. Topics covered are small-scale yielding, J integral, crack-tip fields, elastic plastic crack solutions, analysis of crack growth, and time-dependent fracture mechanics.

**890–899** Research in Theoretical and Applied Mechanics  Fall or spring. 1–6 credits; 890–1–9 credits, 899. 90 credits. Thesis or independent research at the M.S. (890) or Ph.D. (899) level on a subject of theoretical or applied mechanics. Research is under the guidance of a faculty member.

Graduate School

Administration

Alison P. Casaretto, dean
John F. Wootten, associate dean
Benjamin P. Bowser, assistant dean
Richard Lance, secretary of the graduate faculty

Graduate study at Cornell is pursued through the Graduate School, which administers the many graduate fields of study, and through the various graduate professional schools and colleges.

Programs leading to the degrees of Doctor of Law (J.D.), Doctor of Medicine (M.D.), Doctor of Veterinary Medicine (D.V.M.), Master of Business Administration (M.B.A.), Master of Public Administration (M.P.A.), and Master of Professional Studies in Hospital and Health Services Administration (M.P.S.(H.H.S.A.)) are not administered by the Graduate School. Information on those programs can be obtained from the Law School, the Medical College (New York City), the College of Veterinary Medicine, and the Graduate School of Business and Public Administration, respectively.

Graduate School

The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of Master of Arts, Master of Science, and Doctor of Philosophy, but only such general requirements that best accomplish the aim of graduate study: a period of study in residence, the mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a thesis, and a satisfactory thesis. Certain advanced professional degree programs have specific course or credit requirements; these are announced by the faculty of the professional school or college in which the degrees are offered.

A close working relationship with faculty members is essential to the graduate program at Cornell. Under the Special Committee system, the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chairperson of the Special Committee and usually has the primary responsibility for directing the student's thesis research.

Students who want to use the University's facilities for intensive specialized training only, and who do not want to become degree candidates, may apply for admission as nondegree candidates.

Requirements for Admission

To be admitted to the Graduate School, an applicant should:

1) hold a baccalaureate degree granted by a faculty or university of recognized standing or have completed studies equivalent to those required for a baccalaureate degree at Cornell;
2) have adequate preparation for graduate study in the chosen field of instruction;
3) have fluent command of the English language;
4) present evidence of promise in advanced study and research; and
5) have a combined score of at least 1200 in the verbal and quantitative Aptitude Tests of the Graduate Record Examinations for those fields which require the GREs.

Students from United States colleges and universities should be in the top third of their graduating class.

Before admission can be final, all applicants whose native language is not English must provide proof of competency in the English language. Acceptable proof could be:

1) a Test of English as a Foreign Language (TOEFL) score of 550 or higher
2) a degree from a college or university in a country where the native language is English; or
3) two or more years of study in an undergraduate or graduate program in a country where the native language is English.

Information on times and places for the TOEFL examination and Graduate Record Examinations and an application form may be obtained from the Educational Testing Service, Princeton, New Jersey 08540, U.S.A.

Applications for admission to the Graduate School may be submitted at any time during the year. Many fields, however, require that applicants for fall admission submit their completed applications by January 15.

Applicants who are applying simultaneously for Cornell Graduate School Fellowship consideration must submit their completed applications and supporting credentials by January 15.

Inquiries regarding admission and fellowships should be addressed to the Graduate School Admissions Office, Cornell University, Sage Graduate Center, Ithaca, New York 14853.

Information concerning admission requirements and courses of study for professional degrees may be obtained from the several schools and colleges that administer them.

Inquiries regarding facilities for advanced study and research in a given field, special requirements for such study and research, and opportunities for teaching and research assistantships should be addressed to the graduate faculty representative in the particular field.

Graduate students will find more thorough information in the Announcement of the Graduate School and the Guide to Graduate Study. Both publications are available from the Graduate School, Cornell University, Sage Graduate Center, Ithaca, New York 14853.
School of Hotel Administration

Administration

John J. Clark, Jr., dean
James J. Easter, assistant dean for academic affairs
Norman L. Pecknapha, assistant dean for business and administration
Peter Rainford, assistant dean for external affairs
Michael H. Redlin, graduate field representative
Marianna Desmet, M.P.S. program director
Cheryl S. Farrell, director of admissions and financial aid
Harry R. Keller, director of placement and alumni affairs
Joan S. Livingston, executive editor,
Harry R. Keller, director of placement and alumni affairs
Cheryl S. Farrell, director of admissions and financial aid
Michael H. Redlin, graduate field representative
Margaret J. Oaksford, librarian

Degree Program

Hotel and Restaurant Administration

Facilities

Statler Hall is a unique educational building designed expressly to meet the needs of the faculty and students of the School of Hotel Administration. The building has three parts: a classroom section, a practice inn, and an auditorium with full stage facilities. The five-story classroom section is supplemented by office, classroom, and laboratory space in the Alice Statler Auditorium wing. These two sections comprise lecture rooms, auditoriums, laboratories, and offices for instruction and research in hotel administration.

The Howard B. Meek Library provides an extensive collection of publications on hotel and restaurant operation and related subjects. The library has received many gifts of display materials and personal collections—among them the Herndon and Vehlen collections.

Statler Inn, the school's practice laboratory, contains fifty-two guest rooms, including two suites, a fully equipped front office, and lounge areas. The inn also has a variety of restaurants seating a total of 1,000 people: a formal dining room for 200, live private dining rooms for 8 to 100, two self-service restaurants for 150 and 200, a cocktail lounge, and a ballroom for 400.

The inn's facilities provide a realistic laboratory for the instruction of students in the operational procedures and managerial responsibilities of the hospitality industry. The school offers its students both theoretical and practical instruction through the use of Statler Inn.

In 1980 the school acquired a former retirement home overlooking Cayuga Lake. This spacious facility will house some of the school's nonacademic functions and serve as a conference center and an international training center for the hospitality industry.

Curriculum

The School of Hotel Administration offers training in the numerous disciplines required for modern management, including accounting, finance, marketing, operations, and human-resources development. The school's graduates hold executive positions in a variety of industries, but are especially well represented in the management of hospitality-related enterprises, including the lodging, food-service, and travel industries.

Students are encouraged to pursue a broad range of courses, including those in the humanities, as preparation for assuming positions in the business community. Included in the basic curriculum are courses in financial management, food and beverage operations, administration, and physical-plant management. Students receive firsthand training through the operation of Statler Inn.

To satisfy degree requirements, every undergraduate enrolled in the School of Hotel Administration must complete a minimum of two summer periods of ten weeks each or their equivalent of full-time, supervised employment, and file acceptable reports for each work period.

The basic program leading to the degree in hotel administration, as set forth below, can be further enriched with a broad selection of elective courses offered by the school and elsewhere in the University. For instance, the student who wants to specialize in financial management, food and beverage management, or any other area should consult the list of elective courses offered within the school and the index of courses offered by other University divisions.

The school's programs for advanced degrees include those of Master of Professional Studies, Master of Science, and Doctor of Philosophy. For more complete information about undergraduate program requirements, see the Announcement of the School of Hotel Administration. For further information on graduate programs, the reader should consult the Announcement of the Graduate School or contact Professor Michael H. Redlin, the school's graduate field representative.

Requirements for Graduation

Regularly enrolled students in the School of Hotel Administration are candidates for the degree of Bachelor of Science. The requirements are:

1) Completion of eight terms in residence.
2) Completion, with a minimum average of 2.0, of 122 required and elective credits, as set forth in the table below.
3) Completion of two units of practice credit prior to the last term of residence, as defined below.
4) Completion of the University requirement in physical education during the first two terms of residence.
5) Attainment of a grade-point average of at least 2.0 in the final semester.

Suggested course programs also appear on the following pages. The required courses account for 48 of the 122 credits needed for graduation. From the hotel electives, some combination of courses totaling at least 14 credits must be taken. The remaining 24 credits may be earned in courses chosen from the offerings of any college of the University, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or elsewhere or who propose to attend any other university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval of the school in advance. Without advance approval, such credit will not count toward the degree.

Credit earned in military science, aerospace studies, or naval-science courses may be counted in the 24-credit group of free electives.

All students are required by the University to take two courses in physical education, but no credit toward the academic degree is allowed for these courses.

Grading System

Letter grades ranging from A+ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical weight for each term average as follows: A+ to 4.0, A to 3.9, B+ to 3.0, B to 2.9, C to 2.0, D to 1.0, F to 0.0. For good standing, the student must maintain a minimum average of 2.0. In order to graduate, a cumulative average of 2.0 or better and a final-term average of 2.0 are required as minimums. Of the free elective courses, a maximum of four credits may be taken on a "satisfactory-unsatisfactory" (S-U) basis.

Students whose term average is at least 3.3 and is composed of at least 12 credits of letter grades with no unsatisfactory or incomplete grades are honored by being placed on the dean's list.

Practice Requirement

As part of degree requirements, every undergraduate enrolled in the School of Hotel Administration must complete a minimum of two summer periods of ten weeks each of full-time, supervised employment and file acceptable reports for each work period. This requirement may also be satisfied by completing one summer work period and sufficient part-time work to equal ten full-time work weeks. Again, acceptable reports must be filed. Students entering the school who have extensive work experience may satisfy one half of the work-experience requirement if they make application for approval to the Practice Credit Committee at the time of matriculation and submit an acceptable report by the stated deadline. Students are not permitted to register for the final term of residence until they have satisfied the practice requirement in full.

Since cadets in the Army and Air Force Reserve Officer Training Corps are expected to spend six weeks in camp during the summer before their senior year, it is especially desirable that hotel students who plan to join the corps and to take the advanced courses in military science make every effort to expedite their practice work. Similarly, students enrolled in the Naval Reserve Officer Training Corps who must make summer cruises should anticipate the practice requirement as much as possible.

Although the practice requirement is an essential part of the student's program, the school does not guarantee summer positions. Through the school's numerous contacts with the hotel and restaurant industry, a considerable number of openings are available for students. Because jobs suitable for foreign students are considerably less numerous than jobs for students who are American citizens, the foreign student should anticipate some difficulty in finding a position. The school gives what assistance it can to foreign students, but it cannot guarantee placement or assume responsibility for it.

Many of the major hotel and restaurant organizations provide special opportunities for Cornell students to gain wide-ranging experience through unique apprenticeship arrangements.

A limited number of upperclass students are encouraged to enroll in management-intern programs that entail six to eight months of on-the-job managerial instruction and experience. For the details of these programs, see Directed Study on the following pages.

*As set forth in the Practice Instruction Handbook, supplied on request from the School of Hotel Administration.*
Course Requirements for Graduation

Specifically required courses Credits
Administrative and general management: Hotel Administration 101 0
Human-resource management: Hotel Administration 111, 211 6
Accounting and financial management: Hotel Administration 121, 122, 125, 221, 222 15
Food and beverage management: Hotel Administration 131, 132, 231, 232, 331 12
Law: Hotel Administration 341, 344 6
Properties management: Hotel Administration 251, 351, 352, 451 12
Communication: Hotel Administration 165, 265 6
Science and technology: Hotel Administration 171, 172, 173, 174 12
Economics, marketing, and tourism: Hotel Administration 281, 282, 384 9
Humanities and social-sciences electives 6
Specifically required credits 84
Hotel electives 14
Free electives 24
Total credits required for graduation 122

Undergraduate Program of Study

This typical arrangement of courses, year by year, is offered for illustration.

The curriculum of the School of Hotel Administration is continually being revised and expanded. In some cases, the numbers of old and new courses overlap. Students are reminded that the most accurate information regarding courses offered during any given semester may be found in the supplement issued for that semester by the school's registrar.

Freshman Year

Typically, a freshman schedule will consist of 15 to 17 credits each semester, selected from the following courses.

Specifically required courses Credits
H Adm 165, Basic Business Writing 3
H Adm 111, Introductory Psychology 3
H Adm 101, Orientation 0
H Adm 174, Information Systems 3
H Adm 121, Financial Accounting 3
H Adm 122, Hospitality Accounting Systems 3
H Adm 125, Finance 3
H Adm 131, Introduction to Food and Beverage Operation and Management 2
H Adm 132, Techniques of Food Production 1
H Adm 171-172, Food Chemistry I and II 7
H Adm 173, Sanitation in the Food-Service Operation 2

Suggested electives* Credits
H Adm 102, Lectures in Hotel Management 1
H Adm 161, Typewriting 2

Sophomore Year

Specifically required courses Credits
H Adm 211, Management of Human Resources 3
H Adm 221, Managerial Accounting 3
H Adm 222, Managerial Accounting in the Hospitality Industry 3
H Adm 231, Meat Science and Management 3
H Adm 233, Food Production Systems: Cafeterias 3
H Adm 291, Macroeconomics 3
H Adm 282, Microeconomics 3
H Adm 251, Property-Management Graphics 3

*Fourteen credits of hotel electives are to be taken during the four-year undergraduate program.

H Adm 265, Effective Communication 3
H Adm 331, Food Production Systems: Restaurants 3

Suggested electives Credits
H Adm 274, Hotel Computing Applications 3
H Adm 223, Front-Office Machine Accounting 1
H Adm 234, Food and Beverage Control 2
H Adm 261, Report Typing 2

Junior Year

Specifically required courses Credits
H Adm 341, Law of Business I 3
H Adm 344, Law of Innkeeping 3
Adm 351-352, Hotel Mechanical and Electrical Problems I and II 6
H Adm 384, Principles of Marketing 3

Suggested electives Credits
H Adm 205, Resort and Condominium Management 3
H Adm 305, Rooms-Division Management—Housekeeping and Laundry Operations 2
H Adm 304, Rooms-Division Management—Front Office and Reservations 2
H Adm 314, Psychology in Business and Industry 3
H Adm 381, Advertising and Public Relations 2
H Adm 483, Psychology of Advertising 3
H Adm 322, Investment Management 2
H Adm 323, Financial Analysis and Planning 3
H Adm 326, Introduction to Statistical Analysis and Inference 3
H Adm 204, Franchising in the Hospitality Industry 2
H Adm 284, Tourism 3
H Adm 342, Law of Business II 3
H Adm 306, General Survey of Real Estate 2
H Adm 301, Development of a Hospitality Property 3
H Adm 353, Introductory Food-Facilities Engineering 3
Business and Public Administration NBA 505, Auditing 3

Senior Year

Specifically required courses Credits
H Adm 451, Physical-Plant Planning and Construction 3
H Adm 382, Cases in Hospitality Marketing 2
H Adm 311, Union-Management Relations in Private Industry 3
H Adm 401, Seminar in Management Principles 2
H Adm 285, Hotel Sales 2
H Adm 601-602, Management Intern Program 30
H Adm 421, Internal Controls in Hotels 2
H Adm 610, Undergraduate Independent Research in Human-Resources Management 3
H Adm 620, Undergraduate Independent Research in Financial Management 3
H Adm 333, Corporate Restaurant Management 3
H Adm 336, Purchasing 2
H Adm 630, Undergraduate Independent Research in Food and Beverage Management 3
H Adm 640, Undergraduate Independent Research in Law 3

†With the exception of the Management Intern Program, only the first three credits of independent study in any area may be counted toward hotel electives. The rest will be credited against free electives.

H Adm 364, Facilities Equipment Design and Layout 3
H Adm 453, Seminar in Environmental Control 3
H Adm 454, Seminar in Hotel Planning 3
H Adm 455, Seminar in Restaurant Planning 3
H Adm 650, Undergraduate Independent Research in Properties Management 1
H Adm 364, Advanced Business Writing 2
H Adm 660, Undergraduate Independent Research in Communication 2
H Adm 670, Undergraduate Independent Research in Science and Technology 1
H Adm 680, Undergraduate Independent Research in Economics, Marketing, and Tourism 1

Programs in Special Areas

While completing the required courses leading to the bachelor's degree, undergraduates in the school have the option of concentrating their studies in a major area of instruction. These include administration, financial management, food and beverage management, hotel and motel planning and design, management, marketing, and food science, among others.

When the student selects one of these major fields of concentration, he or she should consult the coordinator of instruction in that area during the sophomore year to plan the sequence of elective courses that will best fit his or her program.

A list of elective courses offered in the school's special areas of instruction is provided below.

Undergraduate Elective Courses in Hotel Administration

Administrative and General Management Credits
H Adm 102, Lectures in Hotel Management 1
H Adm 200, Personal Real-Estate Investments 2
H Adm 203, Club Management 2
H Adm 204, Franchising in the Hospitality Industry 2
H Adm 205, Resort and Condominium Management 3
H Adm 206, General Insurance 3
H Adm 301, Development of a Hospitality Property 3
H Adm 302, Principles of Management 3
H Adm 304, Rooms-Division Management—Front Office and Reservations 2
H Adm 305, Rooms-Division Management—Housekeeping and Laundry Operations 2
H Adm 306, General Survey of Real Estate 2
H Adm 307, Hotel Security and Crime Prevention 2
H Adm 401, Seminar in Management Principles 2
H Adm 402, Hotel Management Seminar 2
H Adm 404, Management Organization of the Small Business 3
H Adm 407, Seminar in Hotel Operations 2
H Adm 408, Casino Management 2
H Adm 409, T.A. Training in Administrative and General Management 1-3
H Adm 600, Undergraduate Independent Research in Administrative and General Management 1-3
H Adm 601, Management Intern Program I 6
H Adm 602, Management Intern Program II 6

Human-Resources Management Credits
H Adm 311, Union-Management Relations in Private Industry: A Survey 3
H Adm 313, Training Human Resources in the Hospitality Industry 3
H Adm 314, Psychology in Business and Industry 3
H Adm 411, Hotel Manpower Management 3
H Adm 414, Organizational Behavior and Small-Group Processes 3

### Encouraged Elective Credits
- 39 credits specifically required credits
- 25 elective credits

### Total credits required for M.P.S. track I students
- 64 credits

### Directed Study

**Independent Research**
Students may conduct independent research projects in any academic department of the school under the direction of a faculty member. Credit is charged on an independent basis. Only the first 3 credits of directed study may be credited against hotel electives during the undergraduate years. Additional directed study is credited against free electives, with the exception of the management-intern program of 12 credits. To enroll in an independent research project, students must obtain written permission from the school before course registration.

**Management-Intern Program**
This program is open only to upperclass and graduate students. Students accepted into the program earn 12 credits. Students enrolled in the program may have an opportunity to combine managerial instruction with on-the-job management experience. Application for admission should be made one semester in advance. Instruction is provided by the school's faculty and by the organizations participating in the management-intern arrangements. Management-intern programs are currently in operation at several locations, including the Statler Inn on the University campus. Students receive both academic credit and practice credit and appropriate financial remuneration for the period of the program. The student is charged reduced tuition.

### Course Information
For the most current and detailed information on course offerings of the School of Hotel Administration, the student should consult the supplementary course announcement issued each semester by the school's registrar.
Seminar groups of two to four students develop a hospitality project. All aspects of development are covered, from the feasibility study, site acquisition, franchising, construction management, operational preopening, marketing, personnel training, and furniture and fixture installation, through the opening of the hotel, motor inn, or restaurant.

302 Principles of Management Fall or spring. 3 credits. Prerequisite: Hotel Administration 211 or equivalent. Hotel elective. Prerequisite for Hotel Administration 401.

A basic course designed to examine management processes, concepts, and principles, and to improve personal competence in decision making, problem solving, and communication. Required readings highlight both classical and modern concepts of management.

304 Rooms-division Management—Front Office and Reservations Fall. 2 credits. Hotel elective. Estimated cost of field trip to Washington, D.C., $50.

F 10:10-12:05. S. Weisz and visiting lecturers. This course will present an operational view of the housekeeping and laundry functions of a hotel.

306 Hospitality-industry Real Estate Fall or spring. 2 credits. Prerequisites: Hotel Administration 281 and 282 or equivalent, or written permission of instructor. Hotel elective.

M 2:30-4:25. S. Sher.

A practical survey of real estate as the capital-investment decision in the hospitality industry and related industries. Lectures and case studies cover the role and importance of real estate in the retail environment, the relationship of real estate to the marketing strategy of a company and its investment decisions; the marketing and merchandising of real estate; the financing of real estate; and the effects of real-estate financing on a company's overall corporate financial structure and on its future borrowing ability.

M-F 9-4. J. E. H. Sherry and school faculty. Designed to provide corporate hotel management with a practical orientation for resolving the operational losses related to personal and physical-premises security. Faculty members discuss aspects of legal liability, insurance protection, architectural and interior-design controls, financial controls, and personnel administration.

401 Seminar in Management Principles Fall or spring. 2 credits. Limited to 20 seniors and graduate students. Hotel elective. Prerequisite: Hotel Administration 302 or equivalent.

T 11:15-11:00. P. L. Gaurier. This course uses the case-study approach to management principles and concepts. Each student prepares a comprehensive analytical report, based on previous work, for class discussion and analysis.

402 Hotel-management Seminar Fall. 1 credit. Limited to 20 seniors and graduate students. Hotel elective.

F 2:30. Dean J. C. Clark. Meeting with Hotel Administration 102 speakers. The subject matter varies, depending on the visitor and his or her area of expertise. Students are expected to ask questions and participate in discussions.

404 Management Organization of the Small Business Fall or spring. 3 credits. Limited to 24 seniors and School of Hotel Administration graduate students. Prerequisite: Hotel Administration 221 or Agricultural Economics 323 or equivalent. Hotel elective. Approximate cost of field trips, $75.

A comprehensive survey of management fundamentals basic to planning, organizing, directing, and controlling the small enterprise. Course work includes a team term project, selected readings, case studies, and field exercises.

406 Integrated Case Studies in the Hospitality Industry Fall or spring. 3 credits. Limited to 24 seniors and graduate students. Hotel elective.

407 Seminar in Hotel Operations Spring. 2 credits. Limited to 30 seniors and graduate students. Hotel elective. Estimated cost of field trip, $30.

F 10:10-12:05. P. L. Gaurier. Intended to provide a working knowledge of the terminology, concepts, and procedures utilized by hotel management in developing information and making decisions relevant to forecasting and controlling manpower requirements consistent with fluctuating business conditions. Major topics include staff planning, budgeting, scheduling and payroll control, forecasting technique and practice, and hotel case studies oriented toward productivity analysis. A field trip, usually in the third week, is required.

408 Casino Management Spring. 2 credits. Limited to 50 School of Hotel Administration seniors and graduate students. Hotel elective. Estimated cost of field trip, $100.

M 2:30-4:25. Faculty.

The management responsibility of casino operations. Overview and analysis of casino administration, with emphasis on the relationship between the hotel general manager and casino manager, their various responsibilities, marketing and junkets, physical layout, licensing, government regulation, personnel and training, internal controls, and security systems. General instruction in basic casino games, including odds, percentages, and strategy. Includes a weekend field trip to Atlantic City.

409 T.A. Training in Administrative and General Management Fall or spring. 1-3 credits.

Prerequisite: written permission of instructor. Hotel elective.

Hours to be arranged. Faculty.

The student planning to be a teaching assistant in administrative and general management is exposed to recommended techniques of instruction and such other methodology, readings, et cetera, as the professor in charge of the course may require.

701 Graduate Seminar in Hotel Operations Fall. 2 credits. Limited to 30 graduate students. Hotel elective. Estimated cost of field trip, $75.

F 10:10-12:05. P. L. Gaurier. Intended to provide a working knowledge of the terminology, concepts, and procedures utilized by hotel management in developing information and making decisions relevant to forecasting and controlling manpower requirements consistent with fluctuating business conditions. Major topics include staff planning, budgeting, scheduling and payroll control, forecasting technique and practice, and hotel case studies oriented toward productivity and financial-statement analysis, and hotel case studies oriented toward productivity analysis.

901 Development of a Hospitality Property Spring, 3 credits. Hotel elective.

A required field trip to the participating hotel is an integral part of the study program. The field trip is usually scheduled for the second week of classes; to prepare adequately for this trip, all students are required to attend the first week of classes. Students who intend to return to school one week late should not preregister for this course.

Human-Resources Management Courses

111 Introductory Psychology Fall or spring 3 credits. Required. Lecs, M W F 9:05; 2-hour lab to be arranged. F. Berger. An introductory study of psychological principles essential for understanding human behavior. Basic concepts integral to effective hotel management are treated, including perception, motivation, learning, and personality.

211 Management of Human Resources Fall or spring 3 credits. Prerequisite for hotel students: Hotel Administration 111. Required. Lecs, M W F 11:15 or 12:20; 1-hour lab to be arranged. S. W. Davis. Problems of personnel management, including an introduction to the personnel function; recruitment, selection, and placement of personnel; the role of supervision with emphasis on induction, training, communications, performance appraisal, and leadership style; wage and salary administration; motivation; and union-management relations. Emphasis is on class discussion and analysis of case problems from business and industry.

311 Union-Management Relations in Private Industry: A Survey Fall. 3 credits. Limited to juniors, seniors, graduate students, and those who have received written permission of the instructor. Hotel elective. M 1:25–3:15, W 1:25; F. W. M. Lees. Major areas of study include the development of the trade-union movement in the United States, with emphasis on the history and structure of unions active in all phases of the hospitality industry; federal and state laws governing the bargaining relationship, including the role of the National Labor Relations Board; the collective bargaining process, including negotiations and contract administration; and the critical role of conciliation procedures (such as mediation and arbitration) in keeping industrial peace.

313 Training Human Resources in the Hospitality Industry Fall. 3 credits. Limited to 40 students. Prerequisites: Hotel Administration 211 or 314, or equivalent. Hotel elective. M 12–20–2 and R 12:20; S. W. Davis. A basic course in the fundamentals of training manpower. Starting with the psychology of learning, the course will move quickly into the applications of training techniques in solving hotel and restaurant manpower-utilization problems. Each student will be required to develop a training program for a job or task. Emphasis will be on improving performance through the management of training.

314 Psychology in Business and Industry Fall or spring 3 credits. Limited to 50 School of Hotel Administration students. Prerequisites: Hotel Administration 111 and 211, or equivalent. Hotel elective. D. H. Ferguson. The principles of psychology applied to industrial and business systems; personnel selection, placement and training; problems at work, including evaluation, motivation, efficiency, and fatigue, and the social psychology of the work organization.

411 Hotel Manpower Management Simulation Spring. 3 credits. Limited to 15 School of Hotel Administration seniors and graduate students. Hotel elective. R 2–4:25. S. W. Davis. The course, based on the simulation of a profit-making facility and of a nonprofit facility, provides advanced training in the use of simulation as a training device. Groups of four or five students develop a simulation exercise.

414 Organizational Behavior and Small-Group Processes Fall or spring 3 credits. Open to a limited number of hotel seniors and graduate students by written permission of the instructor. Hotel elective. M 2–4:25. F. Berger. Current research will be examined to provide a conceptual framework for understanding group processes within organizations. In addition, students will participate in experiential laboratories aimed at enhancing their effectiveness as members or leaders of groups. Topics that will be studied include stages of group development, leadership, decision making, motivation, power, and organizational change.

416 Special Studies in the Management of Human Resources Fall. 3 credits. Limited to seniors and graduate students, except for those who have received written permission of the instructor. Hotel elective. M 7:30–9:30 p.m., T 1:25–2:15; S. W. Davis, F. Berger. A case-study approach to the problems and challenges of managing people in business organizations. Actual cases are presented for discussion by individuals who were involved in the cases.

419 T.A. Training in Human-Resources Management Fall or spring. 1–3 credits. Prerequisite: written permission of instructor. Hotel elective. M 2:30–4:25. S. W. Davis. The student planning to be a teaching assistant in human-resources management is exposed to recommended techniques of instruction and such other methodology, recordings, etc., as the professor in charge of the course may require.

711 Dispute Resolution in Service Industries Spring 3 credits. Limited to graduate students and seniors who have received written permission of instructor. Hotel elective. Not offered 1982–83. W 2:30–5:30; F. W. M. Lees. The nature of conflict, its resolution during negotiation of new labor contracts (interest disputes), and those that arise over the meaning and interpretation of labor contracts already in force (grievance disputes). Methods for resolving conflicts in unionized properties are also explored. Picketing, recognition, certification and decertification, unfair labor practices, successor rights and obligations, preselection behavior, and the practical applications of grievance handling through the final step of the procedure (usually arbitration) are discussed and illustrated.

Accounting and Financial Management Courses

120 Basic Principles of Accounting and Financial Management Fall or spring 2 credits. Limited to students outside the School of Hotel Administration. May be taken with Hotel Administration 322 to include the investment aspects of financial management. M 2:30–4:25. F. M. Waters. A survey of accounting principles, financial statements, cash forecasting, cash budgeting, and an introduction to financial analysis. Intended for students who desire a general knowledge of the language of business and finance.

121 Financial Accounting Fall, 3 credits. Required. Limited to School of Hotel Administration students. Lecs, M W F 10:10; 1-hour lab to be arranged. D. H. Ferguson. An introduction to the basic principles of accounting, involving transactions analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner equity.

122 Hospitality Accounting Systems Fall or spring, 3 credits. Prerequisite: Hotel Administration 121 or equivalent. Required. Fall, T 9:05; spring, T R 10:10; 2-hour lab to be arranged. D. C. Dunn. The accounting systems recommended by the American Hotel and Motel Association, the National Restaurant Association, and the Club Managers Association of America for hotels, motels, restaurants, and clubs. Topics include hotel and motel front-office accounting; accounting for the restaurant and other sales areas; special journals and ledger accounts peculiar to hospitality-accounting systems; the flow of accounting transactions through the accounting system; and the preparation and interpretation of financial statements.

125 Finance Fall or spring, 3 credits. Prerequisite: Hotel Administration 121 or equivalent. Required. M 11:15; 1-hour T lab to be arranged. D. M. Chase. An objective study of financial management in profit-oriented enterprises. Important concepts include cash flow, the time value of money, and capital budgeting. Emphasis is on the analysis of accounting information, problem solving, and decision making.

220 Financial Accounting Principles Fall or spring, 3 credits. In the fall, limited to students outside the School of Hotel Administration; in the spring, hotel students may substitute this course for Hotel Administration 121. Lecs, M W F 11:15–1:10; D. C. Dunn. The basic principles of accounting, including transactions analysis and flow of accounting data to the financial statements. Emphasis is on accounting for revenues, expenses, assets, liabilities, and owner’s equity.

221 Managerial Accounting Fall or spring 3 credits. Prerequisites: Hotel Administration 121 and 125, or equivalent. Required. Lecs, T R 10:10, 2-hour lab to be arranged. Two evening exams to be arranged. A. N. Geller. The use of accounting information for managerial planning, control, and evaluation. Particular emphasis is on differential accounting and its role in extracting relevant decision variables. Other topics are accounting systems, behavior of costs, budget preparation, standard costs, the analysis of variance from standard costs, and performance reports.

222 Managerial Accounting in the Hospitality Industry Fall or spring, 3 credits. Prerequisites: Hotel Administration 122 or 221 or equivalent. Required. Lecs, T R 10:10; 1-hour lab to be arranged. A. N. Geller. Methods of operational analysis for hospitality properties were evaluated and used in ratio, comparative, and cost-volume-profit analyses. Other topics include internal control, operational budgeting, and the use of feasibility studies in long-term capital-budgeting decisions. Stress is on presenting analysis results in management letters.

223 Front-Office Machine Accounting Fall or spring 1 credit. Prerequisite: Hotel Administration 121 or equivalent. Hotel elective. M 2–4:25. D. C. Dunn. Two-hour practice lab to be arranged. D. C. Dunn. Students learn the operation of the NCR front-office posting machine by completing a series of practical exercises ranging from simple posting of charges and credits to error correction and the night audit.
[321] Hotel Management Contracts Fall, weeks 2–8. 1 credit. Limited to 80 juniors, seniors, and second-year graduate students. Hotel elective. Not offered 1982–83. M 12:20–1:25; J. J. Oester and guest lecturers. A critical analysis of the negotiation and administration of hotel management contracts. Topics include advantages, disadvantages, and risks of contracts to both owners and operators; owner and operator concerns during negotiations and their resolution; organizational and operator concerns during administration of the contract; and the future role of contract use. Guest lecturers include owners and operators.

322 Investment Management Fall or spring. 2 credits. Limited to juniors, seniors, and graduate students. Hotel elective. T 9:45–10:45; A. Arbel.
The course covers institutional and analytical aspects of security analysis and investment management, securities markets, sources of investment information, and stocks valuation models, risk-return analysis, behavior of security prices, portfolio analysis, and portfolio management. The course also covers capital asset pricing theory, and the practical aspects of security selection and investment management. Computer-assisted analysis is discussed and applied in a realistic manner using interactive computer programs. Background in economics, accounting, and finance recommended.

323 Financial Analysis and Planning Fall. 3 credits. Prerequisite: Hotel Administration 222. Hotel elective. M 9:05–11; Faculty.
After defining and describing the environment in which a business organization must design its strategies, an examination will be made of financial-analysis and planning techniques necessary to operate in that environment. Focus is on discussion and case studies involving the following areas of financial management: the tax environment, profit planning and forecasting, budgeting, capital-budgeting techniques, and cost-of-capital determination.

324 Financial Charts and Graphs Spring, weeks 2–8. 1 credit. Limited to 20 students. Prerequisite: Hotel Administration 251 and 221. Hotel elective. W 2:30–4:25; R. H. Penn.
An introduction to and concentrated study of financial charting—the visual presentation of quantitative data. Includes a review of the several types of charts and graphs and their use to show relative or proportionate similarities between numbers and to emphasize trends and relationships. Students will prepare and evaluate charts from annual reports and the media, and design charts to communicate data effectively.

328 Cost Accounting Spring. 3 credits. Prerequisite: Hotel Administration 221 or equivalent. Hotel elective.
T 10:10; R 10:10–12:05; D. H. Ferguson. Emphasis is on the use of cost-accounting information for managerial planning, control, analysis, and evaluation. The course will include the principles of cost accounting, cost-accounting systems, budgetary control, and analysis and control, as well as the special topics of joint products and by-products, transfer pricing, responsibility accounting, and performance measurement. The course explores advanced managerial accounting concepts and their application to the hospitality industry. Case studies will be used.

421 Internal Control in Hotels Spring. 2 credits. Limited to seniors and other students who have received permission of instructor. Prerequisite: Hotel Administration 122 or equivalent. Hotel elective. M 6:55.
Discussion of problems encountered in distributing the accounting and clerical work in hotels to ensure a good system of internal control. Study of many actual cases of the failure of internal control and the analysis of the causes of the failure. Practical problems and actual techniques of functioning systems of internal control are examined.

422 Personal and Corporate Taxation Fall. 2 credits. Limited to 50 juniors, seniors, and graduate students. Hotel elective. W 2:30–4:25; 1-hour rec to be arranged; A. J. Scarabba.
An introduction to tax advantages and disadvantages of various organizational structures, including corporations, partnerships, and Subchapter S corporations; financial-information reporting to tax authorities and shareholders; use of depreciation methods to achieve tax reductions; syndication techniques; and the role tax laws play in promoting private investment and development.

429 T.A. Training in Accounting and Financial Management Fall or spring. 1–3 credits. Prerequisite: written permission of instructor. Hotel elective.
Hours to be arranged; Faculty. The student who plans to be a teaching assistant in accounting and financial management is exposed to recommended techniques of instruction and such other methodology, readings, etc., as the professor in charge of the course may require.

722 Graduate Managerial Accounting in the Hospitality Industry Spring. 3 credits. Required M.P.S. course.
T R 11:15–1:10; D. H. Ferguson. Hotel and restaurant accounting systems that provide decision-making tools to hotel management are reviewed. Methods of operational analysis for hospitality properties are evaluated and utilized to include ratio, comparative, and cost-volume-profit analysis; Other decision problems in financial analysis, budgeting, operational budgeting, and the use of feasibility studies in long-term capital-budgeting decisions. Stress is on communicating analysis results using management letters.

723 Graduate Corporate Finance Fall. 4 credits. Prerequisite: Hotel Administration 722.
Recommended: knowledge of algebraic techniques and elementary statistics (students who have not recently had a statistics course are urged to purchase and study programmed review books in mathematics and elementary statistics). A list of recommended books is available at the Careers Store will be distributed at registration. Required M.P.S. course.
Lecs, T R 2:30–4:25; 2-hour sec to be arranged; A. Arbel.
An introduction to the principles and practices of business finance, including the development of theory and its application in case studies. Specific topics include types of securities and their uses, valuation concepts, capital budgeting, cost of capital, capital structure, divided policy, long-term financing and bank relations, short- and intermediate-term financial management, mergers and consolidations, and the legal aspects of financial management.

724 Interpretation and Analysis of Financial Statements Spring. 3 credits. Limited to 20 second-year graduate students. Prerequisite: all required hotel accounting courses. Hotel elective. Sem, R 2–5; A. N. Geller.
The various financial-accounting issues encountered in preparing the results of operations of corporate enterprises are discussed. A macro view of the firm will be taken, with emphasis on both outsiders' views of the operation and decision making through interpretation of the published statements. Current, generally accepted accounting principles and future extensions of financial statements are discussed. Emphasis is on the components of financial statements, how and why they are reported, and their impact on the overall financial position of the firm.

Food and Beverage Management Courses

131 Introduction to Food and Beverage Operation and Management Fall or spring. 2 credits. Required.
W 11:15–11:00; T. J. Kelly and faculty. An introductory course designed to familiarize students with the language and systems of commercial food and beverage operations. The language of food production, equipment, utilities, preparation, cooking, beverages, and service will compose the major portion of the course.

132 Food-Production Techniques Fall or spring. 1 credit. Prerequisite: Hotel Administration 131. Required.
3-hour sec to be arranged; T. A. O'Connor. A laboratory-based course designed to familiarize students with the language and systems of commercial food and beverage operations. Practical application of information gained in Hotel Administration 131. Each student must supply cook's knife.

231 Meat Science and Management Fall or spring. 3 credits. Required. Estimated cost of field trip, $75.
Lec, M 2:30–4:25; 2-hour lab to be arranged; G. X. Norkus, B. A. Schmidt. Deals with the major phases of meat, poultry, and fish service from the hotel, restaurant, club, and institutional standpoints, nutritive value, structure, and composition; sanitation; selection and purchasing; cutting, freezing, portion control, and specifications; cooking, carving, and miscellaneous topics. A three-day field trip to visit purveyors in New York is required.

233 Food-Production Systems: Cafeterias Fall or spring. 3 credits. Prerequisites: Hotel Administration 131, 132, 172, 173, 231 (possible corequisites). Required.
Lec. M 1:25, 6-hour afternoon lab; A. L. Colucci. A cafeteria food-production course in which the student participates as a team member in hot food, cold-food, dessert, and bakery production. Lectures cover principles of cafeteria menu planning, truth-in-menus, recipe standardization, support areas, sanitation, calculating raw food costs, menu-pricing systems, convenience foods, and types of production systems. Students are required to purchase their own french, boning, and paring knives, measuring spoons, and food thermometers. Students work six to seven weeks in each of two different cafeterias.

234 Food and Beverage Control Spring. 2 credits. Prerequisite: Hotel Administration 122 or written permission of instructor. Hotel elective.
M 10:10–12:05; Faculty.
Food and beverage operation from the position of the food and beverage controller and analyst are studied. Control systems and analytical techniques are discussed and applied to operational situations.

331 Food-Production Systems: Restaurants Fall or spring. 3 credits. Prerequisites: Hotel Administration 231 and 233. Required. Estimated cost of clothing and uniforms, $95.
Lec. M 1:25; 8-hour lab; M, T, W, or R; T. J. Kelly, R. White.
This course is designed to provide the student with the skills necessary to perform the management functions of a restaurant.

337 Survey of Beverages Fall or spring. 2 credits. Limited to seniors and second-year students in the School of Hotel Administration. Hotel elective.
W 2:30–4:25; 4 night sessions to be arranged; V. A. Christian.
An introduction to wines, beers, spirits, and other beverages as they relate to the hospitality industry. Samples from a variety of countries, regions, and vineyards are evaluated.
An in-depth look into the functions of a purchasing department within a hotel or restaurant facility. The managerial aspects of purchasing, such as setting up a purchasing department, the function of the purchasing agent, purchasing specifications, purchasing forms, and controls are considered. Includes many of the products purchased by a food facility, such as china, flatware, glasses, fabric, meat, frozen foods, canned goods, produce, and dairy products. The products are displayed by leading purveyors and discussed in detail.

430 Introduction to Wine and Spirits Fall or spring. 2 credits. Limited to seniors and graduate students outside the School of Hotel Administration. S-U grade only.

434 Production and Merchandising of Desserts Fall or spring. 3 credits. Prerequisites: Hotel Administration 232, 331, or 732. Hotel elective.

437 Seminar in Culinary Cuisines Fall. 3 credits. Prerequisites: Hotel Administration 331 or 732 and permission of the instructor. Hotel elective.

439 T.A. Training in Food and Beverage Management Fall or spring. 1–3 credits. Prerequisite: written permission of the instructor. Hotel elective.

731 Graduate Food and Beverage Management Fall or spring. 3 credits. Required M.P.S. course. Estimated cost of field trip, $100.

732 Graduate Operational Food-Production Systems Fall or spring. Limited to 30 students. Prerequisite: Hotel Administration 731 or equivalent. Required M.P.S. course. Estimated expense for clothing and utensils, $95.

430 Introduction to Wine and Spirits Fall or spring. 2 credits. Limited to seniors and graduate students outside the School of Hotel Administration. S-U grade only.

212 of their absence are automatically dropped from the course.

437 Seminar in Culinary Cuisines Fall. 3 credits. Prerequisites: Hotel Administration 331 or 732 and permission of the instructor. Hotel elective.

Law Courses

247 Law and the Woman Employee Spring. 3 credits. Hotel elective. M WF 12:00. J. E. Sherry. [Designed to enable management to deal with the legal problems of female employees as these problems affect the hospitality industry, and to provide information regarding the emerging legal rights of women generally.]

341 Law of Business I Fall. 3 credits. Limited to juniors and seniors. Required. M WF 12:00. J. E. Sherry. A basic introduction to law and legal relationships in business. A variety of subjects are covered, all intended to aid managers in decision making.

342 Law of Business II Spring. 3 credits. Prerequisite: Hotel Administration 341. Hotel elective. MWF 10:10. J. E. Sherry. A continuation of 341 for those students who desire more extensive legal training to further their business careers. Emphasis is on the laws pertaining to the Uniform Commercial Code (sales and negotiable instruments); bailments; trusts and estates; transfers by will, unfair competition and trade regulation; bankruptcy; and insurance.

343 Law of Securities Regulation Fall. 1 credit. Open to juniors, seniors, and graduate students. Best taken after an introductory course in business law.

731 Graduate Food and Beverage Management Fall or spring. 3 credits. Required M.P.S. course. Estimated cost of field trip, $100.

732 Graduate Operational Food-Production Systems Fall or spring. Limited to 30 students. Prerequisite: Hotel Administration 731 or equivalent. Required M.P.S. course. Estimated expense for clothing and utensils, $95.

Law Courses

247 Law and the Woman Employee Spring. 3 credits. Hotel elective. M WF 12:00. J. E. Sherry. [Designed to enable management to deal with the legal problems of female employees as these problems affect the hospitality industry, and to provide information regarding the emerging legal rights of women generally.]

341 Law of Business I Fall. 3 credits. Limited to juniors and seniors. Required. M WF 12:00. J. E. Sherry. A basic introduction to law and legal relationships in business. A variety of subjects are covered, all intended to aid managers in decision making.

342 Law of Business II Spring. 3 credits. Prerequisite: Hotel Administration 341. Hotel elective. MWF 10:10. J. E. Sherry. A continuation of 341 for those students who desire more extensive legal training to further their business careers. Emphasis is on the laws pertaining to the Uniform Commercial Code (sales and negotiable instruments); bailments; trusts and estates; transfers by will, unfair competition and trade regulation; bankruptcy; and insurance.

343 Law of Securities Regulation Fall. 1 credit. Open to juniors, seniors, and graduate students. Best taken after an introductory course in business law.

437 Seminar in Culinary Cuisines Fall. 3 credits. Prerequisites: Hotel Administration 331 or 732 and permission of the instructor. Hotel elective.

439 T.A. Training in Food and Beverage Management Fall or spring. 1–3 credits. Prerequisite: written permission of the instructor. Hotel elective.

430 Introduction to Wine and Spirits Fall or spring. 2 credits. Limited to seniors and graduate students outside the School of Hotel Administration. S-U grade only.

212 of their absence are automatically dropped from the course.

434 Production and Merchandising of Desserts Fall or spring. 3 credits. Prerequisites: Hotel Administration 232, 331, or 732. Hotel elective.

437 Seminar in Culinary Cuisines Fall. 3 credits. Prerequisites: Hotel Administration 331 or 732 and permission of the instructor. Hotel elective.

Law Courses

247 Law and the Woman Employee Spring. 3 credits. Hotel elective. M WF 12:00. J. E. Sherry. [Designed to enable management to deal with the legal problems of female employees as these problems affect the hospitality industry, and to provide information regarding the emerging legal rights of women generally.]
451 Physical-Plant Planning and Construction
Fall or spring. 3 credits. Prerequisite: Hotel Administration 352 or 752. Required.
The construction, renovation, and maintenance of hotels and other facilities are discussed and analyzed. Procedures, methods, and materials used in new construction projects are covered, as are repair, rehabilitation, and renovation of existing structures. Building codes, trade practices, materials, cost estimation, and management responsibilities are emphasized.

453 Seminar in Energy-Audit/Retrofit Techniques
Fall or spring. 3 credits. Limited to 16 students. Prerequisite: Hotel Administration 352 or 752. Hotel elective.
T R 2:30-3:45. M. H. Redlin, R. H. Penner.
A seminar intended to acquaint students with the procedures needed to (1) plan and conduct detailed energy audits of hotels, (2) establish and operate effective energy-management programs, and (3) identify and evaluate effective systems of energy-rental measures for hotels. Actual case studies will be developed by the students.

454 Seminar in Hotel Planning
Fall. 3 credits. Limited to 12 students. Prerequisites: Hotel Administration 351 and permission of instructor prior to registration. Hotel elective. A field trip may be required. Estimated cost, $200. Not offered 1982-83.
The hotel planning process, emphasizing program development, site selection, conceptual design, and building systems. Discussion of space allocation, hotel equipment and furnishings, establishing budgets, and responsibilities of the development team. One or two team projects are developed.

455 Seminar in Restaurant Planning
Spring. 3 credits. Limited to 12 students. Prerequisites: Hotel Administration 351 and permission of instructor. Hotel elective. Estimated cost of optional field trip, $150.
The procedures followed in the planning of a restaurant facility. Primary emphasis is on design, engineering, and construction. Discussions of space allocation, trade practices, building and health codes, equipment and furnishings, cost estimations, and management responsibilities when working with professional planners. Case studies are used, and a project is developed.

459 T.A. Training in Properties Management
Fall or spring. 1-3 credits. Prerequisite: written permission of instructor. Hotel elective.
Hours to be arranged. Faculty. The student who plans to be a teaching assistant in properties management is exposed to recommended techniques of instruction and such other methodology, readings, et cetera, as the professor in charge of the course may require.

751 Graduate Study in Project Development and Construction
Fall. 3 credits. Required M.P.S. course.
Lee, T R 6:40-9:55; 2-hour lab to be arranged. M. H. Redlin, R. H. Penner.
The major elements of project development and the construction process are presented and developed from an engineering-management viewpoint. Topics include feasibility studies, functional planning and design, financing techniques, the bidding process, construction contracts, project scheduling, and actual building construction. Techniques for effective graphic communication are developed and integrated into the design process.

752 Graduate Study in Electrical and Mechanical Systems
Spring. 3 credits. Required M.P.S. course.
Lecs. T R 8:30-9:45; 2-hour lab to be arranged. F. T. Smothers.

The major electromechanical systems of large buildings and lodging properties are considered from a capital-cost versus operating-cost viewpoint. Includes consideration of water, heating, refrigeration, air-conditioning, electrical, and lighting systems. Concepts of energy conservation and efficient utilities management, from the original selection of equipment through operational procedures, are emphasized. Students analyze case studies, criticize papers and reports, and suggest new systems and modifications.

Communication Courses

161 Typewriting
Fall or spring. 2 credits. Hotel elective.
M W F 10:10, 11:15, or 12:20, or T R F 9:05. B. B. David.
A course in elementary typewriting, designed for students who want to learn touch-typing.

185 Introduction to Business Writing
Fall or spring. 3 credits. Each section limited to 20 students. Required.
This course focuses on strengthening skills in outlining, organizing, understanding, and using research sources, and developing skills in writing clearly and precisely. To apply these skills, students write both internal and external reports.

281 Report Typing
Fall or spring. 2 credits. Limited to 32 students. Prerequisite: Hotel Administration 161 or equivalent. Hotel elective.
A course in electric touch-typing designated for students who can improve their speed and accuracy. Special emphasis is placed on the typewritten report as a form of communication.

282 Typewriting and Business Procedures
Fall or spring. 3 credits. Limited to 24 students. Prerequisite: Hotel Administration 161 or equivalent. Hotel elective.
Students who already know touch-typing develop sufficient speed and accuracy on typewriters to meet business standards for an executive assistant. The course involves practice in the typing of business letters and other promotion materials. How to plan and execute a job-hunting campaign, both before college graduation and later in one's career, is discussed. Students prepare résumés, letters of application, and follow-up messages adapted to their individual needs.

469 T.A. Training in Communication
Fall or spring. 1-3 credits. Prerequisite: written permission of instructor. Hotel elective.
Hours to be arranged. Faculty. The student who plans to be a teaching assistant in communication is exposed to recommended techniques of instruction and such other methodology, readings, et cetera, as the professor in charge of the course may require.

Science and Technology Courses

171 Food Chemistry I
Fall. 3 credits. Required.
Lecs. M W F 8; 1-hour lab on R to be arranged. M. H. Tabachnick.
Principles and concepts of inorganic and organic chemistry, with emphasis on chemical reactions associated with fats, carbohydrates, and proteins. Heat transfer and energy as they relate to food chemistry are discussed.

172 Food Chemistry II
Spring. 4 credits. Required.
Prerequisite: Hotel Administration 171 or equivalent. Required.
Lecs. M W F 8; 3-hour lab to be arranged. M. H. Tabachnick.
The chemistry of fats, carbohydrates, and proteins is emphasized in relation to food products and food-processing techniques. The role of additives in food, colloidal phenomena, food processing, and reconstitution techniques are studied.

173 Sanitation in the Food-Service Operation
Fall or spring. 3 credits. Required.
Lecs. T 1:25; 2-hour lab to be arranged. B. Richmond.
The causes and prevention of food spoilage and food-borne disease. Sanitary principles applied to the
hospitality industry, including laws, rules, and regulations. Practice in general methods of microbiological testing, and isolating and characterizing organisms of importance in the food-service industry.

174 Information Systems Fall or spring. 3 credits. Required. M 1:25 and W 1:25–3:20. H. A. Records. An introduction to information systems and computing machines. Students learn basic programming skills for application to selected business problems. The concept of file processing is introduced to provide the student with an understanding of computing as it applies to the hospitality industry. Programs are executed on the University’s computing system.

274 Hotel Computing Applications Fall or spring. 3 credits. Prerequisite: Hotel Administration 174 or equivalent. Hotel elective. Lecs. T 2:30–4:25, R 1:25, 2-hour lab to be arranged. R. Alvarez. The course exposes students to concepts of data-base management and management information systems as they relate to computing technology in the hospitality industry. Specific areas covered are hotel systems, wide-based reservations systems, computer food and beverage systems. Laboratories will provide actual experience with computer-based systems.

371 Principles of Nutrition Spring 3 credits. Prerequisites: Hotel Administration 171 and 172 or equivalent chemistry courses. Elective. M W F 10:10. M. H. Tabacchi. Designed especially for students interested in the food industry. The nutrient composition of fresh and processed foods, nutrient handbooks, recommended daily allowances, nutrition labeling, additives, special diets, fat diets, and weight control are considered. The uses of nutrients and nutrient interactions are emphasized.

374 Advanced Programming and Systems Design Spring. 3 credits. Elective. Prerequisite: Hotel Administration 174 or 174 or equivalent. T R 12:20, plus rec to be arranged. R. Alvarez. Programming in Business Basic, an interactive, easily learned computer language commonly used on small business computers: installing a computerized business system and processing information; and designing a business computer system using data-base-mapping languages on an IBM 5110 computer. The course is intended for students who expect to be working with computer systems and desire experience in hospitality electronic data processing.

479 T.A. Training in Science and Technology Fall or spring. 1–3 credits. Prerequisite: written permission of instructor. Hotel elective. Hours to be arranged. Faculty. The student who plans to be a teaching assistant in science or technology is exposed to recommended techniques of instruction and such other methodology, readings, et cetera, as the professor in charge of the course may require.

771 Graduate Food Chemistry Fall. 4 credits. Required. M.P.S. course. Lecs. M W F 10:10. 3-hour lab to be arranged. M. H. Tabacchi. The chemistry of fats, carbohydrates, and proteins is emphasized in relation to food products and food-production techniques. Additives in foodstuffs, coloration phenomena, food processing, and reconstitution techniques are studied. Heat transfer and energy as they relate to food chemistry are discussed.

774 Computers and Hotel Computing Applications Fall or spring. 3 credits. Limited to 30 students. Required M.P.S. course. Lecs. M 2:30–4:25, W 12:20, 2-hour lab to be arranged. R. Alvarez. The first segment of the course is devoted to learning computer concepts and programming in Basic. During the second part of the course, the introduction of the computing machine to the hospitality industry is examined from several viewpoints: managerial impact, cost justification, user reaction, and guest satisfaction. The various successes and failures of hotel computing systems are analyzed in detail. Students in the course work with various small hotel and restaurant systems.

Economics, Marketing, and Tourism Courses

281 Macroeconomics Fall. 3 credits. Required. M W 10:10, 1-hour sec to be arranged. C. W. Hart. Modern economic problems are examined in historical perspective, as national issues, and in the economic context of business decisions.

282 Microeconomics Spring. 3 credits. Required. M W F 12:20, rec to be arranged on R or F. C. W. Hart. An analytical look at the basis of production and consumption behavior, market structures, the pricing system, resource allocations, market failures, and public policies directed toward these failures.

284 Tourism Fall. 3 credits. Hotel elective. T 1:25, R 2:30–4:25. M. A. Noden. The primary characteristics of foreign and domestic tourism. Areas of concern include geographic considerations, development of infrastructure and superstructure in host countries, travel delivery systems, and the social and cultural aspects of tourism. Transportation, the travel-service industries, and the socioeconomic effects of tourism on developing countries are emphasized. Consideration is also given to travel research and marketing.

285 Hotel Sales Fall or spring. 2 credits. Hotel elective. Not offered 1982–83. R 2:30–4:25. Faculty. A practical approach to the selling of hotel space, with particular emphasis on selling to and effectively serving groups.

381 Advertising and Public Relations Fall. 2 credits. Limited to juniors, seniors, and graduate students. Hotel elective. Not offered 1982–83. F 11:15–1:10. Faculty. This is the first of two courses covering the essential phases of hotel-motel marketing. Topics include advertising, publicity, public relations, and sales communication.

382 Cases in Hospitality Marketing Spring. 2 credits. Prerequisite: Hotel Administration 384 or 781. Hotel elective. M 1:25–3:15, W. H. Kaven. A case-study course focusing on market planning; marketing-strategy formulation; price, promotion, place, and product program design.

383 Seminar in Selected Topics in Hospitality Marketing Fall or spring. 2 credits. Prerequisite: an introductory course in management or written permission of the instructor. Hotel elective. W 2:30–4:25, W. H. Kaven. The marketing strategy and its development through opportunity analysis, research, and target-market selection. A continuing seminar that changes focus each semester over a four-semester cycle. Devoted to topics of current interest each semester. Course topic announced in advance each semester.

384 Principles of Marketing Fall or spring. 3 credits. Required. T R 8:30–9:45. L. M. Renaghan. The economic principles of marketing with emphasis on the marketing of services.

Independent Research Courses

600–580 Undergraduate Independent Research Fall or spring. Variable credit. Prerequisite: written permission. Hotel elective. Only the first three credits of directed study may count as hotel electives during the student’s undergraduate academic career. Additional directed study, if taken, is applied toward free electives, except for the management-intern program of 12 credits. Permission in writing is required before course enrollment. Faculty. Students pursue independent research projects under the direction of a faculty member.

600 Administrative and General Management

601 Management Intern Program I—Operations 6 credits.

602 Management Intern Program II—Academic 6 credits.

610 Human-Resources Management

620 Accounting and Financial Management

630 Food and Beverage Management

640 Law

650 Properties Management

660 Communication

670 Science and Technology

680 Economics, Marketing, and Tourism
700–900 Graduate Independent Research  Fall or
spring. Variable credit. Limited to graduate students.
Prerequisite: permission of instructor. Obtain
permission form from the school’s graduate office.
Faculty.
The student plans a project and selects a faculty
member willing to supervise the study.

700 Administrative and General Management

710 Human-Resources Management

720 Accounting and Financial Management

730 Food and Beverage Management

740 Law

750 Properties Management

760 Communication

770 Science and Technology

780 Economics, Marketing, and Tourism

800 Monograph I

801 Monograph II

802 Master of Science Thesis Research

803 Graduate Teaching Internship

900 Doctoral Thesis Research

Yesawich, Peter C., Ph.D., Visiting Assoc. Prof.
New York State College of Human Ecology

Administration
Jerome M. Ziegler, dean
Nancy Safford, associate dean; assistant director, Cornell University Agricultural Experiment Station
Lucinda A. Noble, associate dean; director of Cooperative Extension
Carol L. Anderson, assistant dean; associate director of Cooperative Extension
William H. Gauger, assistant dean; undergraduate education and student services
Nancy S. Meltzer, assistant to the dean
Carolyn Cook, director, alumni affairs
Brenda Bricker, director, admissions
Peggy Anne Frazer, director, International Program
Joyce McAllister, registrar
Clarence H. Reed, director, special educational projects
Timothy K. Stanton, director, Field Study Office
Lynne M. Wiley, director, Placement Office
Nevart Yaghlian, director, Counseling Office

Facilities
The College of Human Ecology is housed in Martha Van Rensselaer Hall. The Division of Nutritional Sciences, an intercollege division supported jointly by this college and the College of Agriculture and Life Sciences, has space in Savage Hall and in Martha Van Rensselaer Hall.

The physical plant includes administrative offices, faculty offices, classrooms, auditoriums, and lecture halls; wet chemistry and biochemistry laboratories for nutrition, food science, and textile science; household equipment laboratories; experimental food laboratories; design studios; woodworking shops; a children’s creative art laboratory; experimental observation rooms with one-way vision screens and sound-recording equipment; educational television studios; and a printing and reproduction facility. Also included are learning resource centers (human development and family studies, home economics education, interior and product design, nutritional sciences), a historical costume collection, a human metabolic research unit, research animal facility, cold rooms, a constant temperature and humidity laboratory, and an experimental nursery school.

Specialized equipment for teaching and research includes biochemical and chemical instruments for spectroscopy, chromatography, radioscopie analysis, electrophoresis, microscopy and ultracentrifugation; physical testing equipment such as an instron; and cameras, videotape, and sound-recording equipment.

Special Students
Students eligible for special status are those visiting from other institutions and interested in particular programs in the college, those with bachelor degrees preparing for graduate study or jobs and careers in human ecology-related fields; or those who have interrupted their educations and are considering completing degree programs. Students accepted in the program planning. All students majoring in consumer economics and housing are assigned a faculty adviser by the advising coordinator. The earlier a student decides to major in the department, the greater the opportunity to develop a program that will meet individual educational or career goals. Transfer students are urged to discuss their plans with a faculty adviser as soon as possible. An appointment to talk with either an adviser or the advising coordinator, Ramona Heck, may be made directly with the faculty member or through the secretary in 116 Martha Van Rensselaer Hall.

Interdepartmental Major in Social Planning and Public Policy. The Department of Consumer Economics and Housing participates in the interdepartmental major in Social Planning and Public Policy with the Department of Human Service Studies. See the description of the major, p. 276.

Options
Two options are offered to undergraduates majoring in the department: consumer economics or housing. Either provides excellent preparation for employment in government, business, and continuing education programs such as Cooperative Extension. They also provide an excellent undergraduate foundation for further studies in law, economics, and business.

In addition to courses to be taken within the department, each option presents alternatives for the thorough development of a related interest.

The Students

The College of Human Ecology undergraduate enrollment is 1,150, with 53 percent in the upper division. About 312 students are graduated each year; about 250 freshmen and 100 transfer students are admitted. About 100 faculty members serve as advisers for undergraduates. About 200 graduate students have members of the college’s faculty chairing their special committees.

The college admissions committee selects applicants who are academically well prepared and appear most likely to profit from the college’s various curricula. About fifty master’s degrees and thirty doctorates are awarded each year. Admissions is selective; about 63 percent of the freshmen were in the top 10 percent of their high school graduating classes. Mean Scholastic Aptitude Test (SAT) scores for freshmen entering in fall 1981 were 561 verbal and 595 math.

Approximately 80 percent of the student body comes from New York State, with the remainder from other parts of the United States or abroad. Eighteen percent are identified as members of minority or ethnic groups.

Students of Mature Status

The college recognizes that students who interrupted their formal education and are returning to school have problems different from those of the average undergraduate. To facilitate the education of mature students, defined as those twenty-four years old or older at matriculation, the college has adopted certain procedures specifically for that group.

Mature students are permitted to enroll for as few as 6 credits without petitioning and also are permitted to extend their residency beyond the normal eight terms.

It is highly recommended that mature students contact Vivian Geller, the director of Continuing Education Information Center, 158 Olin Hall, for information on services available through that office.

Special Students

Students eligible for special status are those visiting from other institutions and interested in particular programs in the college, those with bachelor degrees preparing for graduate study or jobs and careers in human ecology-related fields; or those who have interrupted their educations and are considering completing degree programs. Students accepted in the program planning. All students majoring in consumer economics and housing are assigned a faculty adviser by the advising coordinator. The earlier a student decides to major in the department, the greater the opportunity to develop a program that will meet individual educational or career goals. Transfer students are urged to discuss their plans with a faculty adviser as soon as possible. An appointment to talk with either an adviser or the advising coordinator, Ramona Heck, may be made directly with the faculty member or through the secretary in 116 Martha Van Rensselaer Hall.

Interdepartmental Major in Social Planning and Public Policy. The Department of Consumer Economics and Housing participates in the interdepartmental major in Social Planning and Public Policy with the Department of Human Service Studies. See the description of the major, p. 276.

Options
Two options are offered to undergraduates majoring in the department: consumer economics or housing. Either provides excellent preparation for employment in government, business, and continuing education programs such as Cooperative Extension. They also provide an excellent undergraduate foundation for further studies in law, economics, and business.

In addition to courses to be taken within the department, each option presents alternatives for the thorough development of a related interest.

Consumer Economics and Housing

Increasing concern with the welfare of the consumer in society is evident at all levels of government and in private industry. The Department of Consumer Economics and Housing (CEH) offers students an opportunity to focus on social and economic policies affecting individuals and families. The program encourages an understanding of economics and sociology, particularly as they relate to the consumption of both privately and publicly supplied goods and services. Students who complete their undergraduate work in this department are well prepared for a variety of positions within a developing field of consumer-related work in business, banking, government, and public agencies.

The CEH major is flexible and allows individual program planning. All students majoring in consumer economics and housing are assigned a faculty adviser by the advising coordinator. The earlier a student decides to major in the department, the greater the opportunity to develop a program that will meet individual educational or career goals. Transfer students are urged to discuss their plans with a faculty adviser as soon as possible. An appointment to talk with either an adviser or the advising coordinator, Ramona Heck, may be made directly with the faculty member or through the secretary in 116 Martha Van Rensselaer Hall.

Empire State Students

Occasionally a student who is completing requirements for a degree through the Empire State College Program is interested in taking a human ecology course. This can be done by registering through the Division of Summer Session, Extramural Courses, and Related Programs, B12 Ives Hall. All rules of the extramural division apply, and registrations will be accepted only on a space-available basis and with the written approval of the course instructor.

At the time of registration, Empire State College students who are completing a course in the Empire State College “Notification of Cross-Registration” form number SA-22, F-031, to verify enrollment in Empire State College. Such students will be charged 25 percent of the standard extramural tuition per credit.

Academic Advising

When students decide to major in a particular department, they are assigned to a faculty adviser by the advising coordinator in that department. Talking with the advising coordinator can help match the student’s needs with the special interests of a faculty member. Students are free to change advisers as their interests change and should discuss this with the advising coordinator to discuss such a change. Faculty advisers are available to discuss course requirements and sequences, and electives inside or outside the college, as well as future goals and career opportunities. Although advisers must sign the green schedule card during course enrollment each term, it is the student’s responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college. Advising coordinators in each department are happy to answer questions about the advising system and the undergraduate major. Students who are exploring alternative majors need to work closely with a college counselor who is available for planning and referral to department resource faculty.
Option I: Consumer Economics

Consumer economics is concerned with the economic behavior and welfare of consumers in the private and public sectors of the economy: how consumers allocate their scarce resources, especially time and money. This option requires an understanding of the market economy, of consumers' rights and responsibilities, and of household production, consumption, and management. Some courses are required in the major fields. This option requires a two-year commitment of study. The option in consumer economics focuses on both fashion and functional considerations in the design of body coverings. The program emphasizes a problem-solving approach based upon knowledge of buildings and their associated systems, furnishing, and interior products, human-environment relations, and design principles. Some students choose this program with option III.3.

Careers are available in interior design and space planning, interior architecture, facility planning, housing, and building technology. The program also serves as a preparation for graduate study in human-environment relations, design, and architecture.

Option II: Apparel Design

The option in apparel design focuses on both fashion and functional considerations in the design of body coverings. The program emphasizes a problem-solving approach that enables the student to integrate knowledge of design, human-environment relations, and textiles in the apparel design process. Some students combine this option with option III.3. The program also serves as an excellent preparation for graduate study in interior design, facility management, and architecture.

Graduates have found challenging employment in the textile and apparel industries, in independent and government-sponsored research projects, and in community organizations.

Option III: Textiles

Students explore the chemical and physical structures and properties of textiles, textile products, and other materials. Some courses are required in the major fields, including textile science and technology, business, public policy, consumer affairs, and apparel design. Some students combine this option with option I.2. The program also serves as an excellent preparation for graduate study in many fields, including textile science and technology, business, public policy, consumer affairs, and apparel design.

Careers are available in the textile and apparel industries, government, and education. Recent graduates are active in new product development and evaluation, research, technical marketing services, consumer information, and product safety.

Option IV: Apparel and Textile Management

The fields of textiles and apparel, or textiles and interior design are combined with those of business management and organizational policy. Students learn to apply theoretical and scientific information to the apparel design process. Courses are drawn from many related disciplines and include history, visual design, textile science, business management, human development, and environmental design.

Students learn to work effectively with professionals from a wide variety of disciplines including textile science, design, manufacturing, state and federal regulatory agencies, and retailing.

Option V: Human-Environment Relations

Human-environment relations is an applied behavior science program. It is a field that seeks to expand our understanding of how the environment affects human perception, cognition, motivation, performance, health, safety, and social behavior such as cooperation, conflict, and friendship formation. Its applied orientation stresses using knowledge about human behavior as a basis for designing and managing settings that support both individual and organizational objectives. Some students combine this option with option I. This program is a good preparation for graduate study in environmental psychology, environmental sociology, human factors, architecture, interior design, landscape architecture, and city and regional planning. The program also serves to prepare students for entry-level positions in facility planning and management departments in large public and private organizations and institutions.

Human Development and Family Studies

The programs of the Department of Human Development and Family Studies (HDFS) are concerned with how people develop and change throughout the entire span of life. Of equal interest is the family as a context for individual development and as a part of the larger structure of society. An ecological perspective—the person in interaction with complex situational and environmental conditions of everyday life—is featured in many departmental courses.

Major social sciences disciplines concerned with the development of individuals and with the structure and function of families are represented among faculty members with backgrounds in psychology, sociology, history, and early-childhood education. The department's programs of instruction, public service, and research provide diverse opportunities for students to prepare for careers or to acquire the bases for graduate study. University teaching and research, medicine, law, and clinical psychology require graduate education. Positions as research technicians, program assistants, personnel supervisors, youth counselors, and child-care workers may be available to graduates with the bachelor's degree. The department does not offer programs leading to teaching certification at any level.

The Curriculum

HDFS majors may take a broad and general program or a more specialized one. Areas of specialization available within HDFS include adolescent development, adult development and aging, atypical development, child development, cognitive development, family studies, and social-personality development. Some students combine an HDFS major with premedical or prelaw training, or with specialized work in an area outside the department, such as communication arts, business, or government.

During their first two years, students are expected to complete a variety of liberal arts courses with three HDFS core courses. HDFS 105 (Human Development: Infancy and Childhood), HDFS 116 (Human Development: Adolescence and Youth), and HDFS 150 (The Family in Modern Society). This course work prepares students for graduate study. Positions within the department vary from lectures and discussions to research and independent study. All students are required to participate in a laboratory or field setting. An HDFS major also takes at least one second-level course in each of three areas: cognitive development, personality-social development, and family and society. Courses deal with language and learning, individual, social, personality, and cognitive development, and the study of human behavior.
development; the family in its traditional and contemporary forms; and settings for human development outside the home.

**Honors Program**

The Honors Program leading to a Bachelor of Science degree with honors in HDFS is designed to provide in-depth research experience for students interested in graduate school and to challenge students who enjoy research. Interested students should notify the chairperson of the Honors Program during the second term of their sophomore year, although students may enter at a later date with special permission from the honors director.

A grade-point average of 3.5 is recommended for entry into the program, although promising students who lack the grade-point average also may apply if they can otherwise demonstrate their potential for honors work. Honors students must take a course in experimental research design before their senior year.

Students spend their senior year working on a thesis under faculty supervision, completing the project by the end of April. All thesis work must be completed by May, when the student's oral examination is held. More information is available in the department chairperson's office, NG14 Martha Van Rensselaer Hall.

**Human Service Studies**

The curricula in the Human Service Studies (HSS) prepare students for professional careers in human services. Graduates of the department may want to enter a variety of professions, including teaching home economics, social work, adult health, and community activities. HSS graduates work in schools, social agencies, cooperative extension services, and community development agencies and serve children, youth, the elderly, and families. The range of career opportunities depends both on the option and on electives chosen to meet individual career objectives.

HSS is unique in that it integrates a broad spectrum of studies, offered by several departments and colleges, and focuses them for professional practice in the human services.

All HSS students take three core courses that together provide a base for understanding the community and community services, organizational behavior and group processes, program planning, and research analysis. Regardless of their specific professional goals, students acquire an understanding of the commonalities and differences of related professions and the ways they can collaborate to improve the human condition.

The curricula in HSS are demanding; each of the HSS options requires breadth and depth in several areas. The core courses (HSS 202, HSS 203, and HSS 292) must be taken in the freshman and sophomore years, and prerequisites for each of the options should be completed before the junior year. If possible. (Special provisions are made for junior transfers.) Each student must have a practicum supervised by HSS faculty that is tied directly to his or her professional preparation.

It is important for a student who is interested in majoring in human service studies to declare that major and select an option as early as possible. Once the major is declared, the departmental advising coordinator, Eddy Conway, assigns an adviser from the HSS faculty. A student who is unsure about which option to pursue should talk with a faculty adviser. With judicious planning, opportunity to change options or to major can be built into the program. When an option is changed, the student is reassigned to an appropriate adviser for that program.

Every student in the department is required to have a supervised field experience directly related to his or her career objectives.

**Interdepartmental Major in Social Planning and Public Policy**

The Department of Human Service Studies participates in the Interdepartmental Major in Social Planning and Public Policy with the Department of Consumer Economics and Housing. See the description of the major, p. 276.

**Options**

Two options are available in the department: (1) community and family life education, and (2) social work.

Students who elect the option in community and family life education focus on the educator's role in a variety of organizational settings (schools, cooperative extension, social and government agencies, and business) with learners of all ages. Students may choose to emphasize an area of adult and community education or the teaching of home economics in a school or a nonschool setting.

Students who wish to teach home economics in schools (kindergarten through twelfth grade) select a sequence of courses that meet New York State certification requirements.

Students who pursue the accredited social work option are prepared for entry-level jobs in social work and are eligible to apply for a year's advanced standing in graduate schools of social work.

**Option I: Community and Family Life Education**

This option prepares participants to plan, implement, teach, and evaluate innovative educational programs in formal and informal learning environments. Students from this option may take positions in cooperative extension, schools, outreach programs (teenage pregnancy centers, half-way houses, consumer and homemaking programs), drug rehabilitation programs, community centers, continuing education centers, and business and government agencies.

Course work combines a liberal education with professional preparation and integrates field-based learning to link theory with practice.

Building on basic courses taken early in the programs, students select an area of concentration based on their interests, background, and professional goals that permits them to study the relationships between a particular area and individual, family, and community life. With careful planning, students often are able to meet the requirements of a second major closely related to the area of concentration and thus widen their career choices.

Faculty advisers help students develop a plan for course work that may include courses from basic disciplines or other departments, tutorials, fieldwork, and research. Plans should be completed by spring course registration during the student's sophomore year.

Students who wish to teach home economics in schools select a sequence of courses that lead to certification for teaching kindergarten through twelfth grade in New York State and many other states. This certificate is exchanged for a provisional certificate when the student takes a home economics teaching position. Permanent certification requires two years of teaching experience and a master's degree. Students who want to qualify for certification in other states or in New York City should investigate the special requirements of each. Most can be met by making careful choices of electives.

Students who plan an emphasis on adult and community education do not need to meet home economics teacher certification requirements, although by careful planning this may be accomplished.

**Option II: Social Work**

The undergraduate program in social work at Cornell has three major goals: to prepare students for positions in the field that do not require advanced degrees; to prepare students for graduate education in social work; and to contribute to the enrichment of a general college education by helping students understand social-welfare needs, services, and issues.

The social-work curriculum is based on the biological and social sciences, the humanities, and three core courses in the department, HSS 202, HSS 203, and HSS 292. These requirements generally are completed during freshman and sophomore years.

Introductory courses in social work, HSS 370, Introduction to Social Welfare as a Social Institution, and HSS 246, Ecological Determinants of Human Behavior, should be taken in the sophomore year as prerequisites for HSS 471–472, Social-Work Practice, in the junior year. A grade of C+ or better in the introductory courses (HSS 246 and HSS 370) is required to continue in the option.

HSS 471–472, Social-Work Practice, is a year-long methods course that includes fieldwork. Students are placed with agencies within a fifty-mile radius of Ithaca. Students spend Tuesdays and Thursdays in the field and Mondays and Wednesdays on campus in seminars. Students are expected to pay the costs of transportation, but the department will reimburse part or all of the travel costs of placements outside the Ithaca area within the limits of its resources. A driver's license is highly desirable. Students must have permission of the instructor to register for HSS 471. Satisfactory work in the field placement and a grade of B- or better is required in HSS 471 for a student to continue with HSS 472.

**Accreditation.** The social-work program is accredited by the Council on Social Work Education. Students who complete all requirements are eligible to apply for advanced standing in graduate schools of social work, or they may seek employment as professional social workers.

**Nutritional Sciences**

See p. 314.

**Interdepartmental Major in Biology and Society**

Biology and society is a multidisciplinary program for students with special interests in such problems as genetic engineering, environmental quality, food and population, the right to medical care, and the relation between biology, society, and ethics and/or public policy, as well as for students who plan postgraduate study in management, health, medicine, law, or other related fields.

Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises by including introductory courses in the fields of biochemistry, chemistry, mathematics, genetics, ecology, ethics, and history. In addition, majors are required to take two core courses in biology and society, a set of electives, and a special senior seminar. Course work in the College of Human Ecology must be taken in two of the following three concentrations: Human Development and the Environment, Health, and Social Policy and Human Services. The other basic requirements of the college must also be met. Programs incorporating these required courses are designed in consultation with a special group of faculty advisers to accommodate
The legislative trend in the United States that is moving public policy development from the federal to the state and local levels emphasizes the need for trained personnel in social planning and public policy. The Interdepartmental Major in Social Planning and Public Policy is designed to meet this need. The program is sponsored jointly by the Departments of Consumer Economics and Housing, and Human Service Studies.

Students increase their knowledge of (1) the historical development of, and the current issues in, social planning and public policy, (2) the ways policies and plans for communities are formulated, implemented, evaluated, and changed, (3) social systems, from the structure and functioning of contemporary society to the dynamics of individual and group behavior, and (4) values that help maintain some policies and plans rather than others.

Students electing this major have opportunities to improve their skills in policy analysis, evaluative research, developing information systems, engaging in the planning and policy-making process, and budgeting. The focus on policy and planning also make this major very attractive to students wishing to use it as a prelaw or pregraduate business program.

Faculty advisers whose interest and experience lie in the fields of social planning and public policy are available to counsel students on career goals and to help plan curricula.

Advising coordinators Keith Bryant and Alan Hahn will be glad to answer questions about the advising system.

Options
Two options are available in the major: a student selects the one most suited to his or her interests and career plans and completes the necessary requirements. Either option prepares a student for graduate or professional study.

Option I: Social Planning. The option in social planning prepares students for careers in planning the organization and delivery of human services. Social planners are employed in local, regional, and state planning agencies and assist public and private health and social agencies in the design, development, and evaluation of regional and local programs.

Option II: Public Policy. This option is planned for students who are especially interested in the evaluation of public policy alternatives, especially implications of these policies for consumers and households. Graduates may build careers as researchers or policy analysts in planning departments or other public or private agencies at the local, regional, state, or federal level in areas related to housing, welfare, income, and employment, or consumer affairs.

Individual Curriculum
Students in the college who find that none of the major curricula meet their educational objectives may want to investigate designing their own program of study. An individual curriculum must be within the focus of the college and must be better suited to a student’s objectives than is an existing major. The individual program must include at least 40 credits in human ecology courses and may not exceed the normal number of credits allowed in the endowed divisions of Cornell.

Such a program of study should encompass a substantial part of the student’s undergraduate education and must include at least three semesters. For this reason, a request to follow an individual curriculum should be made as early as possible and always before the second semester of the junior year. If objectives meet the requirements, the student should discuss plans with a counselor. If an individual curriculum seems a possibility, Barbara Morse, in the Counseling Office, will help the student formally develop a program.

Special Opportunities
Several special programs allow students to receive academic credit for fieldwork and internship experience, to study in absentia, or to enter particular graduate programs after the junior year.

Human Ecology Field Study
Field study enables students to learn through participation in a community setting and through reflection on that experience through discussion, reading, and writing. This process of integrating theory with practice distinguishes field study from work experience and provides the rationale for granting academic credit.

The Human Ecology Field Study Office, 159 Martha Van Rensselaer Hall, offers interdepartmental, prefield preparation and field-based courses with an interdisciplinary problem-solving approach to social issues. Field placement sites are located in the Ithaca area, New York City, Albany, Washington, D.C., and elsewhere. College departments offer field-study opportunities that emphasize professional exploration or training related to particular majors.

Human Ecology International Program
The International Program provides students with an opportunity to add an international dimension to their human ecology program through course work focusing on internationals and intercultural understanding, and through occasional intersession study tours. In addition, cooperative arrangements between the College of Human Ecology and overseas universities enable students to undertake foreign study as an integral part of their Cornell program.

Course work in the foreign institution will, in general, be planned to increase knowledge of the people and institutions of the country concerned; field work will provide guided experience in family, community, or agency situations in an area related to individual student interest in human ecology. A core course in the college, HE 360, Preparing for International or Training Related to Special Majors, will be met. Successful applicants need the approval of the college’s director of special educational projects.

A limited number of highly qualified students from Cornell undergraduate divisions, including Human Ecology, may be accepted by the Cornell School of Business and Public Administration after their junior year. Students need the approval of the B&PA admissions office and the director of special educational projects in the College of Human Ecology. Accepted students should be aware that if the B&PA course work taken in their senior year is in excess of the 21 additional credits allowed in the Cornell endowed divisions, they will be charged for the additional credits on a per-credit basis.

Law School
A small number of highly qualified applicants may be admitted to the Cornell Law School after only three years of undergraduate education. The requirements for admission under these circumstances are more stringent than for acceptance after four years of undergraduate study. Applicants must present outstanding qualifications and strong professional motivation. The junior-year applicant follows the ordinary application procedures for Cornell Law School admission. Interested students should contact the Law School director of admissions to discuss the extraordinary admissions criteria. Since students accepted to this program will be spending their senior year in the Cornell Law School, they need to plan ahead to ensure that distribution requirements for the B.S. degree from the College of Human Ecology will be met. Successful applicants need the approval of the college’s director of special educational projects.

A limited number of highly qualified students from Cornell divisions, including the College of Human Ecology, may be accepted by the Cornell Medical College after the junior year. To be considered for this program, the student must have completed 105 credits toward graduation by the end of the junior year. Students also need to plan ahead to ensure that distribution requirements for the Bachelor of Science degree will be met. Accepted students receive 15 credits toward the B.S. degree from their first year of study at the College of Medicine.

A limited number of highly qualified students from any Cornell division may be admitted to the Cornell Medical College. Interested students should contact the Health Careers Program office in the Health Careers Program office in the Office Center, 14 East Avenue.

A limited number of highly qualified students from any Cornell division may be admitted to the Cornell Medical College. Interested students should contact the Health Careers Program office in the Office Center, 14 East Avenue.

Off-Campus Programs
New York State Assembly Internships
A limited number of session internships with the New York State Assembly are available in spring semester to students of sophomore status and above who are...
enrolled in New York State colleges or universities. Human ecology students apply to the program through the student's major department. The New York State Assembly also sponsors a summer internship. Further information about internship programs may be obtained through the Field Study Office.

Ithaca College
Full-time undergraduate students at Cornell may petition to enroll in courses at Ithaca College, if any are charged. Students are allowed to register for one course a term and may take no more than 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods-and-practice teaching courses at Ithaca College. Cornell students are eligible to register only in Ithaca College courses that are relevant to their program and that do not duplicate Cornell courses. Acceptance of Cornell students into Ithaca College courses is on a space-available basis. Participation in this program is not guaranteed, and Ithaca College has the right to accept or reject students for whatever reason it deems appropriate. The program is available from fall and spring semesters. For further information, contact Joyce McAllister, 146 Martha Van Rensselaer Hall.

Planning a Program of Study

Majors
Each department offers a major, and within most departmental majors there are specific options. The college also offers an interdepartmental major. Selecting a major means choosing one option in one department. Although a student may satisfy the requirements of more than one major option, he or she is officially certified to graduate under only one. The college urges students who satisfy more than one major or option to make note of this in the credentials they file in the Placement Office and to seek recommendations from faculty associated with the options completed. Majors include the following options:

2. Design and Environmental Analysis (DEA): interior design, apparel design, textiles, apparel and textile management, human-environment relations.
3. Human Development and Family Studies (HDFS): does not have specific options; courses focus on cognitive, personality, and social development; infant through adolescent development; atypical development; and family studies.
5. Nutritional Sciences (NS): consumer food science, consumer food and nutrition, community nutrition, clinical nutrition, nutritional biochemistry. (Careful planning, students may satisfy the minimum academic requirements of the American Diabetic Association.)
6. Interdepartmental Major in Biology and Society (ID-BS).

Individual Curriculum: It is possible to develop an individual program of the above programs that fit particular educational and career objectives.

Changing Majors
Because any student's interests and goals may change as new options emerge, the college provides ways for students to change their majors. When a declared major no longer seems to meet a student's educational goals, a counselor or faculty adviser may be able to point out alternatives. If the student decides to make a change, a change-of-major form (available from the Office of the College Registrar) is required. The change is sent to the department in which the student wishes to major so an adviser can be assigned to the student.

Completing a Major
A summary of record is kept for each student in the Office of the College Registrar. At fall registration each continuing student receives a copy showing which major and graduation requirements have already been met. It is important to check this summary and to bring any questions to the attention of staff members in the Office of the College Registrar. Although a student may complete the requirements of more than one major, he or she is officially certified to graduate under only one.

Electives
Students have individual objectives in choosing courses beyond the minimum requirements of the major. The University is diverse; the departments, programs, and students are taught in more than one division of the University. Those with interests are interested in courses in the University almost unlimited. Counselors and departmental advisers are available to discuss which courses may interest students and found out their educating.

Students should consult the index of this Announcement for information on where different subjects are taught in the University. Some subjects are taught in more than one division of the University.

Foreign Language Study and Placement
Students who studied a foreign language before coming to Cornell and who want to continue must take either the College Entrance Examination Board (CEEB) achievement test in that language or a departmental language placement test. The latter is given during orientation week in September and again in December, January, and May. Students in human ecology who plan to work with non-English-speaking people in this country or overseas often find it necessary to be proficient in another language. For more detailed information, see the Advanced Placement of Freshmen section.

Graduation Requirements
To graduate, students need:
1) to meet college credit and distribution requirements,
2) to complete the requirements for a major,
3) a cumulative average of 1.7 (C—) or better,
4) to fulfill residency requirements, and
5) to fulfill the physical education requirement.

College Requirements
These are the general areas of study and specific courses and credits required of every student in the college.

I. Natural and Social Sciences (24 credits)
A. Natural sciences (6 credits) selected from:
B. Social Sciences (6 credits) selected from:
   1. Economics 101 or 102, Psychology 101, or History of Art 107 and 207 are selected to meet requirements for section I, credits in the endowed divisions allowed for section IV will be reduced accordingly.

V. Physical Education (2 credits)
Students who have successfully fulfilled these requirements should have completed at least two terms of physical education in their freshman year.

Related Policies
College course requirement: Freshmen and sophomores are required to enroll in at least one course in the College of Human Ecology a semester. Students who fail to comply with this requirement will be reviewed by the Committee on Academic Status for appropriate action.
Effective spring 1983, students applying as undergraduates who do not have the required academic unit in biology, chemistry, or physics are required to show evidence of having made up this deficiency prior to matriculation in the college.

Section V. Freshmen are required to take two semesters of physical education during their freshman year.

Residency Requirements

All college curricula are planned to fit within an eight-semester program. An average schedule of 15 credits a semester (in addition to physical education) is considered standard, and if pursued for eight semesters will provide the credits needed for graduation. If the student completes all the requirements—for the major, for distribution, for total credits, and for cumulative average—in fewer than eight semesters, the degree may be conferred at the end of the semester in which the last requirements are met. Students who plan to receive their degrees early should notify the registrar at the beginning of the semester so that their summaries of record may be prepared and their names placed on the list of degree candidates.

Sometimes a student (particularly a transfer student) may need an additional semester to complete a program. To register for a semester beyond the eighth, the student submits a written request to the director of special educational projects. The request should detail the reasons for wanting to enroll for the extra semester and include a list of courses planned for the additional semester. Such requests usually are granted when there appears to be no feasible way for the student to complete the professional curriculum or the degree requirements without the extra semester.

Freshmen entering the college with 15 transfer credits have seven semesters in which to complete the degree. Transfer students must complete at least 60 credits at Cornell.

Mature students (those at least twenty-four years old at the time of matriculation) are not required to petition the director of special educational projects for approval to study beyond the usual eight semesters.

Exemptions from Requirements

Students who want an exemption from a specific graduation or major requirement may petition the director of special educational projects. Approval may be given under certain circumstances. For example, transfer students may have problems scheduling courses to meet college distribution requirements, and the director of special educational projects may approve alternative courses. If the requirement for which the student seeks exemption is one specified by the major, the director of special educational projects will refer the petition to the department for consideration.

Petition forms are available in the Counseling Office, N101 Martha Van Rensselaer Hall.

Procedures

Course Enrollment

Students are expected to complete course enrollment during a designated period each semester. Failure to do so carries a $10 penalty that can be waived only if circumstances are completely beyond the student's control. It is the student's responsibility to find out the dates of course enrollment.

Before or during course enrollment, students talk to a department adviser or counselor or both in the Counseling Office about their program plans. Students must have their course enrollment schedule
signed by their departmental faculty adviser or by a college counselor if they have not declared a major. A listing of course changes plus directions for course enrollment are issued by the Office of the College Registrar before the start of course enrollment. Last-minute changes are posted in that office as well as in the Counseling Office, N101 Martha Van Rensselaer Hall. Students will also need the Course and Time Roster, issued by the Office of the University Registrar each semester before advance course enrollment.

Since new students starting at midyear do not have an opportunity to enroll in courses until after they arrive on campus, the college tries to reserve places for them in human ecology courses. A specified time for enrolling in such courses is listed on the orientation schedule given to all new students. For the first three weeks of the term, new students have an opportunity to add courses in other divisions of the University as well as in human ecology. Freshmen and transfer students registering for the first time in the University in the fall term enroll in their courses during the summer before they arrive on campus. Continuing students enroll for courses for fall semester in March or April; for spring semester in October or November preceding the beginning of the term. Course enrollment materials are mailed to each new student; continuing students are notified of course enrollment dates by posters and notices in the Cornell Daily Sun. Course enrollment materials are available from the Counseling Office and must be completed and filed in the Office of the College Registrar by the announced deadline.

Permission of the Instructor

Certain courses may be taken only with the permission of the instructor, as indicated in the course descriptions. The instructor's permission must be obtained before the student enrolls in the course. After gaining permission, the instructor initials the green registration schedule or signs the optical-mark course-enrollment form that can be obtained from the Office of the College Registrar or the Counseling Office.

Students interested in taking a course in the Department of Art in the College of Architecture, Art, and Planning are required to register with the departmental secretary before enrolling in the course. Students who waive a core course in the School of Business and Public Administration are required to obtain permission of the instructor on a courseauthorization form that the student then files with the school's registrar, 312 Malott Hall.

Special Studies Courses

Each department in the College of Human Ecology offers special studies courses that provide an opportunity for students to do independent work not available in regular courses. One of these, 300, Special Studies for Undergraduates, is intended primarily for students who have transferred from another institution and need to make up certain course work.

The other special studies courses are 400, Directed Readings; 401, Empirical Research; and 402, Supervised Fieldwork. These courses are normally taken by upperclass students, and work is supervised on an individual basis by a faculty member in the department in which the course is offered. It is important to enroll in the appropriate course number (300, 400, 401, or 402) for the special project.

Students who want to take a special studies course must talk with the faculty member under whose supervision the study would be done and then prepare a plan of work. If the faculty member agrees to supervise the study, a multicycle description of the study to be pursued must be filed out. Signatures of the instructor and the department chairman as well as the student's departmental adviser must be on the form before it is taken to the office of the college registrar, where the student will officially register for the course by filling out an optical-mark course-registration form. All instructions are available in the Counseling Office.

To register in a special studies course taught in a department outside the college, students should follow the procedures established for that department.

Course Loads

The normal course load in the college ranges from 12 to 18 credits. During the course enrollment period no student may enroll for more than 15 credits or five courses, whichever is greater, without special permission from the college registrar. To receive permission, the student attaches a note to the hardback green course schedule citing reason(s) for carrying a heavier load before handing it in to the Office of the College Registrar.

Credits beyond 15 may be added during the change-of-registration period at the beginning of the semester without special permission.

Students should avoid planning excessive work loads: the time required to keep abreast of courses tends to increase as the semester progresses. Courses cannot be dropped after the seventh week of classes without petitioning, so students should try to avoid the need to drop courses.

Except for those with mature-student status, a student must carry at least 12 credits (exclusive of physical education). In special cases, a student may petition to carry between 6 and 12 credits. Forms for petitioning and advice on how to proceed are available from the Counseling Office.

Students who petition before the beginning of the term to carry less than 12 credits may be eligible for proration of tuition. To apply for proration, students obtain a form from the bursar's office in Day Hall or from the Office of the College Registrar. After the petition to carry less than 12 credits is approved, the proration form signed by the college registrar must be returned to the Office of the Bursar, 260 Day Hall.

Students of mature status may carry 6 to 12 credits without petitioning. However, at the beginning of each term, mature students planning to take a light course load should pick up a proration of tuition form from the Office of the College Registrar, fill it out, have it signed by the college registrar, and return it to the bursar's office in Day Hall.

Oversubscribed Courses

Enrollment in many human ecology courses is limited. When a course is overenrolled, students are generally assigned on the basis of seniority. The student's professional goals may be considered. Those students not admitted to a course may be placed on a waiting list and will find a note to that effect attached to the course enrollment printout.

Late Course Enrollment

Students who fail to enroll in courses by the deadline usually must wait until the beginning of the semester to enroll and must pay a $10 fee. Extensions are sometimes granted if requested from the college registrar before the end of course enrollment.

Students who fail to meet the deadline for any reason should see a counselor in the Counseling Office as soon as possible. In some cases, if the delay was circumstances beyond the student's control (for example, illness), a student petitioning for medical reasons should provide substantiating medical evidence with the petition.

After the third week of the term, instructors have the right to consider students' requests for course changes on an individual basis or to announce at the beginning of the term a specific date between the fourth and seventh weeks beyond which they will no longer approve course changes.

Procedures

Students who need to make course enrollment changes should make them as soon as possible. It is to the student's advantage to add the desired courses as soon as possible, and it is helpful to other students if unwanted courses are dropped promptly.

University Registration

Students go to Barton Hall for University registration at times announced by the Office of the University Registrar. At registration, students fill out and return materials that are given to them, and their IDs are validated.

After completing University registration, students proceed to the College of Human Ecology table in Barton Hall. At that table they hand in their college registration card and in return receive a computer printout of courses for which they are officially enrolled. It is the student's responsibility to check the listing for accuracy of course numbers, credits, and other data. If there are errors, they should be corrected immediately. Procedures for making changes because of errors in the printout as well as for other reasons are described below.

During University registration for the fall semester, each continuing student receives a copy of his or her summary of record from the Office of the College Registrar. The summary shows which graduation and major requirements have been completed. Students who have any questions about the summary's accuracy should see a counselor in the Counseling Office or someone in the Office of the College Registrar.

Late University registration. A student who misses registration day may pay a $30 penalty during the first three weeks. The late-registration fee is increased by $10 each week for the fourth, fifth, and sixth weeks and $25 for each additional week beyond. Late University registration is held during the first three weeks of the term. After the first week of classes, students must have the written permission of the college registrar before they will be allowed to register in the University. After the third week of classes, students registering late must also have the permission of the Office of the University Registrar in addition to the written permission of the college registrar, and pay the late fee. After completing late University registration, students must take their college registration cards to the Office of the College Registrar, where they will then receive computer printouts of the courses for which they are officially registered. Students who fail to register by the seventh week of the term will be withdrawn from the University. Students who want to return must reapply through the Admissions Committee.

Course Enrollment Changes

Deadlines

• During the first three weeks of the term, courses may be added or dropped without charge.

• From the fourth through the seventh week of the term, course changes may be made without petitioning for permission of the instructor and payment of a $10 processing fee.

• After the seventh week of the term, no course changes may be made without petitioning for approval. Petitions are usually granted only in circumstances beyond the student's control (for example, illness). A student petitioning for medical reasons should provide substantiating medical evidence with the petition.

• After the third week of the term, instructors have the right to consider students' requests for course changes on an individual basis or to announce at the beginning of the term a specific date between the fourth and seventh weeks beyond which they will no longer approve course changes.

Procedures

Students who need to make course enrollment changes should make them as soon as possible. It is to the student's advantage to add the desired courses as soon as possible, and it is helpful to other students if unwanted courses are dropped promptly.
Study in Absentia

Under certain conditions, credit toward a Cornell degree may be given for study in absentia, that is, study done at an accredited institution away from Cornell after entering the College of Human Ecology. To be eligible for credit for such study, a student must be in good academic standing and must receive permission in advance from the college registrar. Study in absentia is limited to the term, the procedures outlined above for changes in enrolment must be followed, except that the instructor must sign the official forms. A student may not receive credit until the petition has been formally approved.

Some of the same procedures are required for course enrollment changes as were necessary for course enrolment—for example, permission of the instructor must be obtained for a course requiring it, and the same forms for special studies courses must be filled out. In addition to the procedures listed below for course enrollment changes, all course change forms for nutritional science majors must be signed by the departmental faculty advisor.

Specific procedures for making course changes during the change-of-enrollment period (first three weeks of classes) are listed below. The student should:

1) Obtain an optical-mark course change form from the Office of the College Registrar or from the Counseling Office.

2) Fill the form out and take it to the appropriate office for signature: for human ecology courses, the forms should be taken to the Office of the College Registrar; for courses outside the college, the forms should be taken to the appropriate departmental offices.

3) Ask the person handling the class lists to add the student to the list of enrolled students for a course being added or to remove his or her name from the class list for a course being dropped. That person should sign the optical-mark course change form in the appropriate place.

4) Turn all signed forms in to the Office of the College Registrar, including the forms for out-of-college courses. Enrollment cannot be officially changed until the signed forms are filed in the registrar's office. For example, students who fail to "cancel" a course are no longer attending and are in danger of receiving an F in the course because they are still unofficially enrolled. There is no charge for course changes during the first three weeks of classes.

5) Receive carbon copies of each optical-mark course change form at the time it is turned in. These copies are stamped with the date of receipt. It is important to keep these copies in case they are needed to verify later that the forms were filed.

A student who wants to have his or her name placed on a waiting list for a human ecology course should be aware that such lists are compiled during the change-of-course-enrolment period on a first-come-first-served basis, without regard to seniority or other factors. Students must check their status on the waiting lists in person every forty-eight hours, and if space has not opened up, request that their names be kept on the list. Names are automatically dropped if they are not updated.

If a student is enrolled in a human ecology course with a limited enrollment and has not attended the first two class sessions, he or she will be dropped from the course unless circumstances have prevented him or her from attending class and the instructor has signed the official forms. After the third week and through the seventh week of the term, the procedures outlined above for changes made during the first three weeks of the semester are followed, except that the instructor must sign the course change form for the human ecology courses, and a $10 fee must be paid.

After the seventh week of classes, a student may not make course changes without petitioning for approval. Students should realize that they are expected to attend classes and do assigned work until the petition has been formally approved.

Students should assess their work loads carefully at the beginning of each term. If in the first week or two the instructors do not discuss the amount of material to be covered and the extent of assignments, students should be advised to ask about course requirements.

Requests for leaves of absence received after the first seven weeks of the semester, or requests for a leave of absence from students who have already had two semesters' leave of absence will be referred for action to the Committee on Academic Status. The committee may grant or deny such requests, attaching conditions as it deems necessary. Leaves of absence after the first seven weeks generally are granted only when there are compelling reasons why the student is unable to complete the semester, such as extended illness.

If a leave of absence is requested after the first seven weeks, students are advised to attend classes until action is taken on their requests. A student whose petition for a leave of absence is denied may choose to withdraw or to complete the semester.

The academic records of all students who are granted a leave of absence are subject to review, and the Committee on Academic Status may request grades and other information from faculty to determine whether the student should return under warning, severe warning, or in good academic standing.

Students who leave the college without an approved leave of absence or do not return after the leave has expired will be given a withdrawal after the seventh week of the term in which they failed to register. A withdrawal is a termination of student status at the University. Students may voluntarily withdraw at any time by notifying a counselor and the Office of the College Registrar. A student who is withdrawn from the college and who wants to return at a later date must reapply through the Committee on Admissions for consideration along with all other applicants for admission.

Petition Process

There are two kinds of petition forms: the General Petition Form, which is multicopied, and the In-Absentia Petition Form, which is a single sheet and has no copies attached. Both types of forms are available from the Counseling Office, N-101 Martha Van Rensselaer Hall.

The use of the General Petition Form is described in the human ecology Student Guide. After completing the petition, the student should file the General Petition Form in N-101 Martha Van Rensselaer Hall. He or she will find out if the petition has been granted or denied by checking his or her mail folder in the foyer.

The In-Absentia Petition Form is used when the student wishes to study at another institution. (See the human ecology Student Guide for regulations concerning in-absentia study.) This form is also used for students who wish to take more than 15 credits in absentia during their college career. Catalog descriptions of the courses the student wishes to take at the other institution must be attached to the petition form. After completing the petition, the student should file the In-Absentia Petition Form in 146 Martha Van Rensselaer Hall. A letter in the mail will inform the student of the decision.

It should be noted that although many kinds of requests are petitionable in the college, some kinds of situations are governed by college faculty legislation and cannot be altered by filing a petition. If the student is in doubt about whether a request could be considered by petition, he or she may discuss the problem with the college registrar or the director of special education projects.
Grades

See the Grading Guidelines section for information on the official University grading policies.

S-U Grades

Some courses in the college and in other academic units at Cornell are offered on an S-U basis; that fact is indicated in the course description. University regulations concerning the S-U system require that a grade of S be given for work equivalent to a C- or better. For work below that level, a U must be given. No grade-point average is given to S, and S or U grades are not included in the computation of semester or cumulative averages. A course in which a student receives an S is, however, counted for credit. If credit is required for a U, both the S and U grades appear on a student's record. A student who is attempting to qualify for the Dean's List must take at least 12 credits for the usual A-F grades.

Only juniors and seniors may take courses for an S-U grade in which the grade of S or U is optional. Sophomores may take one course offered for S-U grades during his or her college career; however, more than one S-U course cannot be taken in one semester. S-U courses may be taken only as electives or in the 15 credits required in the college outside the major unless the requirements for a specific major indicate otherwise. Credit earned in English 137 and 138 (offered for S-U grades only) are permitted to apply to these courses to the Freshmen Seminar requirement.

To take a course for an S or U, a student must first make sure by checking the course description that the course is offered on that basis, then obtain the permission of the instructor and file a special S-U form with the instructor's signature and the add/drop/change form in the Office of the College Registrar before the end of the third week of the term. After the third week of the term, the student must petition the registrar to change S-U grading status. Forms are available in the Office of the College Registrar and in the Counseling Office.

Incomplete

A grade of INC (Incomplete) is given when a student does not complete the work for a course on time, but when, in the instructor's judgment, there was a valid reason. A student with such reason should discuss the matter with the instructor and request an INC. A grade of Incomplete remains permanently on a student's official transcript even after the work is completed and a final grade recorded. A student who receives an INC in a course may be permitted a maximum of two semesters and a summer in which to complete the work and receive a regular grade; if the work is not completed by that time, the INC remains on the record, and no credit is given for the course.

When a student wants to receive a grade of INC, a conference should be arranged with the instructor (preferably before classes end and the study period begins) to work out the agreement. A form, called Explanation for Reporting a Final Grade of F or Incomplete, which has been signed by both the instructor and the student, must be submitted by the instructor. This form is submitted with the final grade sheets whenever an Incomplete is given.

This form is for the student's protection, particularly in the event that a faculty member with whom a course is being taken is absent or leaves campus without leaving a record of the work completed in the course.

If circumstances prevent a student from being present to consult the instructor, the instructor may, if requested by the student, initiate the process by filling out and signing part of the form and turning it in to the Office of the College Registrar with the grade sheet. Before a student will be allowed to register for succeeding semesters, he or she must go to the Office of the College Registrar to fill out and sign the remainder of the form.

If the work is satisfactorily completed within the required time, the course appears again on the student's official transcript, with the final grade received, for the semester in which the course was completed.

A student who completes the work in the required time and expects to receive a grade must take the responsibility for checking with the Office of the College Registrar (about two weeks after the work has been handed in) to make sure that the grade has been received. Any questions should be discussed with the course instructor.

Academic Honors

The college encourages high academic achievement and recognizes outstanding students in several ways.

Dean's List. Excellence in academic achievement is recognized each semester by placing on the Dean's List the names of students who have completed satisfactorily at least 12 credits with letter grades other than S or U and who rank in the top 10 percent of their class for the semester. No student who has received an F or U in an academic course will be eligible.

Omnicron Nu seeks to promote graduate study and research and to stimulate scholarship and leadership toward the well-being of individuals and families. A chapter of a national honor society in the New York State College of Human Ecology, it stimulates and encourages students who have made significant contributions to significant problems of living—home, in the community, and throughout the world.

Students are eligible for membership when they have attained junior status and if they have a cumulative average of no less than B. Transfer students are eligible after completing one year in this institution with a B average. Current members of Omnicron Nu elect new members. No more than 10 percent of the junior class may be elected to membership, and not more than 20 percent of the senior class may be elected. Graduate students nominated by faculty members may be elected.

Bachelor of Science with honors recognizes outstanding scholastic achievement in an academic field. Programs leading to a degree with honors are offered to selected students by the Department of Human Development and Family Studies and the Division of Nutritional Sciences. Information about admission to the programs and their requirements may be obtained from the appropriate department or division.

Bachelor of Science with distinction recognizes outstanding scholastic achievement. Consideration will be given to students whose academic standing at the end of seven semesters is in the top 10 percent of the graduating class. The honor is conferred on those seniors who are in the top 5 percent of the class after grade-point averages have been adjusted by including grades for transfer work and after grades earned in the fifth, sixth, and seventh terms have been given double weighting in the final average. The graduating class includes students who will complete requirements for Bachelor of Science degrees in January, May, or August of the same calendar year.

To be eligible for consideration, transfer students must have completed 45 credits at Cornell. In determining the academic standing of a transfer student, previous work taken at another institution is included in the computation of the student's academic average. Names of seniors who meet these requirements are presented to the faculty of the college for approval.

International Education Program

P. Frazier, director

The International Education Program both prepares students for international and intercultural education, and grants credit for foreign study at approved institutions. For information about the cooperating foreign institutions, see the director of the program.

350 Preparing for International or Intercultural Experience

Fall or spring, 2 credits. S-U grades optional. Prerequisites: two social science courses, or permission of instructor. M-Th 3:45-4:40, 138. P. Frazier.

Introduces students to intercultural differences in preparation for work and study in developing nations and for work with subcultural groups in the United States. Topics will include cultural differences in attitudes toward work and play, personal space, time and place, the environment, language, religion, food, and role-taking situations. Lectures, slides, films, and case studies provide the basis for class discussion of the many problems involved in intercultural relationships. Students receive 2 credits for the classroom component of this course; an additional 3-credit option is available if a January study tour is offered.

361-362 Study Abroad

Fall and spring, 6-15 credits. Prerequisites: ID 100, HE 360, satisfactory completion of any necessary foreign language requirement, a grade-point average of 2.5, and permission of academic adviser and assistant dean for undergraduate education. Deadline for receipt of applications in assistant dean's office: February 15 for following fall semester; September 15 for following spring semester. Students register for their first semester of foreign study under 361, and for a second semester under 362.

A full-semester, off-campus program of courses, at least one of which includes field experience at a cooperating university in another country. Designed to provide both theoretical background in factors relevant to the human ecology of the geographical area concerned and practical understanding of agencies and institutions concerned with human well-being in that environment. Presently, the cooperating universities are Birkbeck College of the University of London, Trinity College, Dublin, the University of Haifa, Israel, and the University of Puerto Rico.

Students must plan their program well ahead of time with the help of their academic adviser, who must approve the plan before the application is submitted to the assistant dean. An application for study abroad and list of courses at the foreign university approved for human ecology distribution requirements is available at 146 or 159 Martha Van Rensselaer Hall. Students should plan to take at least 6 credits, of which 2 credits should be in credits approved for human ecology (Groups III or IV or other approved courses).
Division of Student Services

W. H. Gauger, assistant dean for student services
B. Bricker, director of admissions
J. McAllister, college registrar
L. Wiley, director of placement
N. Yaghlian, director of counseling
B. Morse, R. Richardson, M. Thomas

Special studies sponsored by faculty members in the division involve such topics as counseling theory and practice in relation to various student populations, the career development process in fields related to human ecology, and the delivery of student services.

400–401–402 Special Studies for Undergraduates

Fall or spring. Credits to be arranged. S–U grades optional.

Hours to be arranged. Staff.

For independent study by an individual student in advanced work provided in departments or for study on an experimental basis, with a group of students, in advanced work not otherwise provided in departments. Students prepare a multicopy description of the study they want to undertake, on forms available from the Counseling Office. This form must be signed by the student services faculty member directing the study, the office director, and the assistant dean for student services, and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the assistant dean is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

400 Directed Readings

For study that predominantly involves library research and independent reading.

401 Empirical Research

For study that predominantly involves data collection analysis or laboratory or studio projects.

402 Supervised Fieldwork

For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

600 Special Problems for Graduate Students

Fall or spring. Credit to be arranged. S–U grades optional.

Limited to graduate students recommended by their charperson and approved by the assistant dean for student services and the member of the staff in charge of the problem for independent, advanced work. Hours to be arranged. Staff.

Interdepartmental Courses

Field Study Office

T. Stanton, director; D. Giles, M. Holzer, M. Whitham

100 Orientation to Field Study: Skills for Learning in the Field

Fall or spring. 2 credits. Limited to 15 students per section. Prerequisites: permission of instructor. S–U grades optional.

14 sessions meeting through first 7 weeks of semester; Tr 10:10–12:05 or Tr 2:30–4:25. D. Giles.

Workshops train students in skills that will help them become more effective field learners and better able to cope with the complex demands of a field placement. Topics include cross-cultural communication, participant observation, investigative interviewing, understanding nonverbal communication, identifying sources of information in the community, and analyzing verbal presentations. All of the concepts are applied to assignments in the field.

200 Preparation for Fieldwork: Perspectives in Human Ecology

Fall or spring. 4 credits. Limited to 25 students a semester. Prerequisite: permission of instructor. For students interested in preparing themselves for field experience. Enrollment priority given to students of at least sophomore standing who intend to do field study the following semester. Tr 10:10–12:05 or Tr 2:30–4:25. D. Giles.

Introduces students to field skills (such as interviewing, observation, public speaking, and leading discussion) and provides opportunities in practice and develop those skills. Additionally, small student task forces consider case studies highlighting complex issues at local, community, state, and national levels. Students work together to define problems, analyze and synthesize data from a variety of sources, and make group presentations.

400 Directed Readings

For study that predominantly involves library research and independent reading.

401 Empirical Research

For study that predominantly involves data collection analysis and research.

402 Supervised Fieldwork

Fall, spring, or summer. 9–15 credits. S–U grades optional for up to 12 credits. Limited to 20 students. Prerequisite: ID 100. Enrollment by permission of instructor. Applications due in the Field Study Office during the preceding semester's course enrollment period.

Hours to be arranged. Staff.

Supervised field study involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice. Credit is variable to allow for combined departmental and interdepartmental sponsorship and supervision.

Information on placement opportunities is available in the Field Study Office, 159 Martha Van Rensselaer Hall. Students should begin planning at least a semester in advance for field study.

403 Teaching Apprenticeship

For study that includes assisting faculty with instruction.

406 Sponsored Field Learning or Internships

Fall, spring, or summer. 6–15 credits. S–U grades optional for up to 12 credits. Limited to 20 students, intended for juniors and seniors. Prerequisite: ID 200. Enrollment by permission of instructor. Applications due in the Field Study Office during the preceding semester's course enrollment period.

Supervision of all projects is provided jointly by the course instructor and appropriate agency personnel. In addition, each project is subject to review twice during the semester by an oversight committee composed of community and faculty representatives with relevant expertise. Completion of the course is signified by formal presentation of project results to the contracting organization's staff, board of directors, or other appropriate administrative units, and members of the oversight committee, together with submission of an academic analysis of the implementation process to the course instructor.

Credit is variable to allow students to arrange for combined interdepartmental and departmental sponsorship and supervision.

Information on projects is available during course enrollment in the Field Study Office, 159 Martha Van Rensselaer Hall. Students must present in the planning and project-identification process by making their interests known to the office a full semester before intended enrollment in the course.

408 The Ecology of Urban Organizations: New York City

Fall or spring. 15 credits. Limited to 20 students, intended for juniors and seniors. Prerequisite: ID 200. Enrollment by permission of instructor. Applications due in the Field Study Office during the preceding semester's course enrollment period.

A full-semester, off-campus field course in New York City, designed to help students begin to understand how organizations function within an urban setting, while at the same time understanding the urban context and the people who live within it, in a way that is personally meaningful and through active participation in an urban organization.

Students work 3½ days a week in field placements that can represent every sector of the urban environment from large corporations and government agencies to small businesses and Grassroots community groups. Placements focus on different...
Consumer Economics and Housing Courses

Consumer Economics and Housing Courses 283

kinds of skills: providing information, planning and making policy, providing services to clients and customers, and designing apparel or living-work environments. Students should focus on selecting the kind of skill which interests them when entering the 408 placement process. A full-day seminar each week is designed to include support sessions, organizational analysis exercises, simulations, guest speakers, and field trips to various parts of New York. Regular reflection on the work experience is required through papers and meetings with site supervisor and field instructor. As a unifying theme, students participate in small group discussions covering current issues in New York. Recent topics have been the New York City fiscal crisis, the energy crisis, Reaganomics, and women and work.

Information on field placements is available in 159 Van Rensselaer Hall. Students should begin planning at least one full semester before they apply to ID 408.

ID 409 The Ecology of Organizations in the Upstate Region. Fall or spring. 3-15 credits. Limited to 25 students. Prerequisite: ID 100. Recommended: ID 200. Enrollment by permission of instructor. Applications are due in the Field Study Office during the preceding semester’s course enrollment period.

Sern, T 1:30-4:25; hours in the field to be arranged. M. Whitham.

A variable-credit, Ithaca-area course designed to give students an understanding of contemporary organizations and the forces that shape and influence them. The course combines participation in a community setting within commuting distance of the Cornell campus with a weekly seminar that provides the skills, concepts, and theories necessary for understanding organizations and the critical issues they face. Credit is variable to allow students to arrange for combined interdepartmental and departmental sponsorship and supervision.

Information on placement opportunities is available in the Field Study Office, 159 Van Rensselaer Hall. Students should begin planning at least a semester in advance for field study. Applications are due in the Field Study Office during preregistration of the term prior to field placement.

Consumer Economics and Housing Courses

110 Introduction to Consumer Economics I. Fall. 3 credits. S-U grades optional. Students who have taken Economics 102 or another introductory microeconomics course should not register for this course.

M W F 10:10. Staff.

Principles of microeconomics with an emphasis on applications to consumers, household economics, and housing. Introduction to the concepts of opportunity cost, time as a resource, consumer demand, household production, market failure, and the impact of government regulation of the market on consumers.

111 (100) Introduction to Consumer Economics II. Spring. 3 credits. S-U grades optional. Students who have taken Economics 101 or another introductory macroeconomics course should not register for this course.

This course introduces students to the issues and concepts in macroeconomics. The course is topical, focusing on current issues in the macroeconomy. The goal of the course is to give students a working knowledge of economic terms, issues, and theories so that they can understand issues as presented in the popular press. Topics covered include national income accounting, Keynesian versus monetarist theories of income determination, the workings of financial markets and institutions, income distribution, and the role of monetary and fiscal policy in dealing with the problems of inflation and unemployment.

148 Sociological Perspectives on Housing. Spring. 3 credits. Enrollment limited to 6 sections of 20 students each. S-U grades optional.

Lecs, T 10:10; secs. M W F or 2-3:00. (2) T 11:15, W 10:10 or 2:30. A. Shaly.

An introductory sociology course analyzing the distribution of housing and population within urban areas. Students focus on the link between social and spatial structure to have the quality of urban life. Topics include urban ecology, mobility and migration patterns, suburbanization, segregation, urban social stratification, community power, crime, and poverty.

233 Marketing and the Consumer. Spring. 3 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional.

Lecs, T 8:30-9:55. E. S. Maynes.

A study of marketing functions, institutions, policies, and practices with emphasis on how they create consumer satisfaction. In addition to the instructor, students will select one of several optional marketing projects with a nearby consumer products firm under the designation of CEH 401; 2 credits. W 7-9 p.m.

247 (147) Housing and Society. Fall. 3 credits. S-U grades optional.

Lecs, M W F 11:15. P. Zorn.

A survey of contemporary American housing issues as related to the individual, the family, and the community. The course focuses on the current problems of the individual housing consumer, the resulting implications for housing the American population, and governmental actions to alleviate housing problems.

300 Special Studies for Undergraduates. Fall or spring. Credits to be arranged.

Hours to be arranged. Staff.

Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake, on forms available from the Counseling Office. The form, signed by both the instructor directing the study and the department chairman, is filed at course registration or during the change-of-registration period.

312 Family Resource Management. Fall or spring. 3 credits. S-U grades optional. Limited to 40 students. Open to freshmen; preference given to human ecology juniors, seniors, and transfer students.

A systems approach identifies and analyzes components of family management. The focus is on the contribution of management to consumer needs. Students prepare a multicopy description of the study they want to undertake, on forms available from the Counseling Office. This form must be signed by the instructor directing the study and the department chairman and filed at course registration or during the change-of-registration period.

315 (330) Personal Financial Management. Fall or spring. 3 credits. Prerequisite: given to human ecology students; not open to freshmen. Students prepare a multicopy description of the study they want to undertake, on forms available from the Counseling Office. This form must be signed by the instructor directing the study and the department chairman.

355 Wealth and Income. Fall. 3 credits. Open to sophomores, seniors, and juniors. Graduate students may elect to audit and write a research paper for one to two credits under CEH 600. Prerequisites: CEH 110-111 or equivalent. S-U grades optional.

M W F 9:05. W. K. Bryant.

Examination of contemporary economic problems that affect the welfare of families in the United States. Examples are affluence and poverty, monetary and fiscal policies as these affect families; and efficacy of the delivery of public services in the areas of health, education, and subsidized housing. Where relevant, the historical origin of these problems will be studied.

400-401-402 Special Studies for Undergraduates. Fall or spring. Credits to be arranged. S-U grades optional.

Hours to be arranged. Staff.

For advanced, independent study by an individual student or for study on an experimental basis with a group of students in a field of CEH not otherwise provided through course work in the department or elsewhere at the University. Students prepare a multicopy description of the study they want to undertake, on forms available from the Counseling Office. This form must be signed by the instructor directing the study and the department chairman and filed at course registration or during the change-of-registration period.

404 Directed Research. Fall or spring. For study that predominantly involves library research and independent reading.

405 Empirical Research. Fall or spring. For study that predominantly involves data collection and analysis or laboratory or studio projects.
402 Supervised Fieldwork. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for the integration of theory and practice.

411 Time as a Human Resource. Fall. 3 credits. Prerequisites: one course in sociology. Recommended: one course in microeconomics. S-U grades optional.

A seminar based on historical and contemporary readings. Examines and explores time management concepts and theories. Investigates changes in time use of family members in relation to social concepts and applications. Investigates changes in this integration of theory and practice.

412 (313) An Ecological Approach to Family Decision Making. Spring. 3 credits. S-U grades optional. Recommended: one course in sociology. Limited to 20 students; not open to freshmen; preference given to juniors and seniors. Offered alternate years.

Family decision making is studied from an ecosystem perspective. Special attention is given to how such decisions may affect the quality of family life as well as the larger society.

TR 8–9:15. W. Gauger.

The course focuses on leisure-time use, and views recreational activities as consumer goods that are subject to economic decisions on the allocation of time and money. Empirical observations and data are examined for theoretical insights.]

430 The Economics of Consumer Policy. Fall. 3 credits. Prerequisites: CEH 110–111, or permission of instructor. S-U grades optional.

Students are acquainted with basic approaches to consumer policy and perform economic analyses of specific consumer policy issues. Consumer sovereignty, the consumer interest, and consumer representation and actions, along with economic analyses of current and enduring consumer policy proposals and programs.

441 Housing, Consumer Credit, and Real Estate Finance. Spring. 3 credits. Prerequisites: CEH 110–111 and 247. S-U grades optional.

Examines the residential and consumer credit-financing process, alternative credit instruments, and sources of credit. The differences between instruments and their effects on consumer decision making will be studied. The role of credit in the economy and the influence of government policy on the supply of credit will also be discussed. (When R. Heck teaches the course, there will be relatively more emphasis on consumer credit. When M. Lea teaches the course, there will be a discussion of topics in commercial and rental real estate finance.)

443 Social Aspects of Housing and Neighborhood. Fall. 3 credits. Prerequisite: CEH 247 or CEH 148. S-U grades optional.

The relationship between housing and social behavior and organization is examined. Levels of analysis include the physical features of housing that influence residents' behavior, the social quality of life; the housing composition of neighborhoods, the congruency between local housing and population composition, patterns of interaction, and the physical dimensions of community; housing as an expression of the chronology of family life; and housing as a bundle of property rights that confer or deny political rights, local status, and citizenship and provide or more or less control over one's life.

444 Housing for the Elderly. Spring. 3 credits. S-U grades optional. Prerequisite: CEH 247 or permission of instructor. Offered alternate years.

TR 2:30–3:45. P. Chi.

This course focuses on the housing needs of the elderly, their current housing conditions—living arrangements, tenure patterns, housing quality and housing expense burden—and socioeconomic and psychological aspects of elderly housing environment. Attention is also given to government housing programs for the elderly, integrating housing and related social service activities, and options for alternative housing.

Analysis of state and local government tax, expenditure, and regulatory activities that affect the housing market. Detailed consideration will be given to property taxation, provision of local public goods, zoning, housing and building codes, and other governmental policies that deal with housing and neighborhood environment.]

449 Housing Policy and Housing Programs. Spring. 3 credits. Prerequisites: CEH 111 or equivalent. S-U grades optional.

Critical examination of the development and current condition of federal and selected state housing policies. Beginning with the rationales for governmental housing policy, the course examines the objectives and purposes of housing programs and assesses their operation and potential for continued effective functioning. Topics include public housing, cash-based housing programs, tax legislation, and the operation of the secondary mortgage market.

450 Economics of Health, Health-Care Expenditures, and Health Policy. Spring. 3 credits. Prerequisite: CEH 110 or equivalent.

A study of the health-care market as distinguished from other markets due to the relative information disadvantage on the part of the consumer. Topics include a theoretical and institutional analysis of the health-care system and its role in the consumer decision-making process, and the conflicts of interest between institutional objectives of health-care providers and public and private health-care insurers as they relate to inefficient provision of medical services, and the role of government intervention and alternative systems of medical care provision in reducing medical costs and in increasing assessability.

[465 Consumers and the Law. Fall. 3 credits. Prerequisite: CEH 111 or equivalent. S-U grades optional. Not offered 1982–83.

The operations of federal agencies and the courts in various consumer areas, including compensation for injury from defective products, deceptive advertising, the Fairness Doctrine in television and radio broadcasting, the regulation of food and pharmaceutical drugs, class actions, fraud, and the proposed consumer protection agency.]

[472 Community Decision Making. Fall. 3 credits. Prerequisite: Government 111 or equivalent. S-U grades optional. Not offered 1982–83.

Identification and discussion of factors that influence the outcomes of community issues. Topics include political participation, decision-making processes, the interests and resources of key decision makers, and community change. Concurrent participation in community activities is desirable but not required.]
This course examines the determinants of the supply and demand for housing in metro areas, and the role of household size and structure in residential location. It will focus on housing markets and the institutions that govern them, and on the economic and social consequences of changes in these markets.

[S66 Seminar on Consumer Law Problems] Spring. 3 credits. Open to CEH graduate students and to others with permission of instructor. Enrollment limited to 20 students. S-U grades optional. Not offered 1982-83. T 10:10-12:05. Staff. A study of areas of current interest to consumers involving the law as developed by regulatory commissions and the courts, with emphasis on the institutional and economic background. Encourages critical examination of policy issues and their social and economic effects on families.

[S670 (620) Community, Housing, and Local Government] Spring. 3 credits. S-U grades optional. Offered alternate years. Not offered 1982-83; next offered 1983-84. T 12:25-2:25. A. Shlay. A seminar linking local political processes, housing, and community change. Focus is on the social costs of fiscal and physical planning and the mechanisms producing power differentials through the nexus of property ownership. Values underlying the perceived desirability of particular housing patterns, and the construction and implementation of local policies are considered. The prospects and possibilities for eliminating social and spatial barriers that impede local equality are explored.

[S671 Power, Participation, and Public Policy] Spring. 3 credits. S-U grades optional. Offered alternate years. T 1:25-4:25. A. Shlay. This course explores the sources of American political stability by concentrating on the ways in which political power and participation are managed within the public policy arena. The first part of the course will be theoretical. It will focus on giving histories of political stability and legitimacy as represented by pluralist, democratic elitist, mass society, power elitist, bureaucratic-rationalization, and classical-spillover perspectives, and on political processes and modes of political action. It will examine power structuration, focusing on the empirical literature that examines the link between the activity of power wielding and class structure. The consequences of the structuring of power within particular social groups and the particular (i.e., policy) outcomes will be examined within the context of the reproduction of the larger political order.

[S680 Applied Welfare Economics—Policy Issues] Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. M W F 9:05. S. Clemhout. Topics vary from year to year. The objective of the course is to evaluate the economic impact of various policies in conjunction with the efficiency of existing institutions. Policy issues covered include education (effects of automation and so forth), health, and environmental problems (urban development or transportation, theoretical). Attention is given to the interrelationship of policy and planning within the larger economic and sociopolitical framework.

[S697 Seminar] Fall or spring. Noncredit course. M 3:30-5. Staff. Planned to orient students to graduate work in the field, to keep students and faculty abreast of new developments and research findings, to acquaint them with topics in related areas, and to examine and discuss problems of the field.
A study of visual organization including problems of color and visual perception. Emphasizes the development of visual sensitivity, imagination, and problem structuring. Utilizes simple materials to produce abstract solutions.

111 Theory of Design

Spring, 3 credits. Enrollment limited to 25 students. Priority given to DEA majors.

MWF 11:15. C. Williams.

Introduction to the field of design for the student in any academic discipline. The course reviews the spectrum of design activities, examining various movements in the visual arts and differences among designers in philosophical premises, social and functional roles, and cultural positions. Also examined are requirements in the man-made environment as affected by the interaction of people, design, and materials. Lectures and visual material are presented by faculty members and visiting design professionals.

115 Drawing

Fall or spring, 3 credits. Each section limited to 25 students. Priority given to DEA majors. Minimum cost of materials, $15.

MWF 1:25-4:25 or 7:30-10:30 p.m. C. Williams.

A studio drawing course. Short demonstrations or lectures on the idea and techniques of drawing are presented every second week. The student is introduced to the functions of line, shape, and value as they apply to design. Drawing from the figure and inanimate objects, perspective, and conceptual drawing are emphasized.

117 Drawing the Clothed Figure

Spring, 3 credits. Enrollment limited to 25 students. Prerequisites: DEA 115 or equivalent. Priority given to DEA Option 2 and 3 majors. S-U grades optional. Approximate cost of text, $25; supplies, $35.

MWF 9:05-10:10, 10:10-11:10, 10:10-12:05. L. Markowski.

An introduction to the residential design process. A thorough analysis of construction techniques and mechanical systems of human habitation. Topics include a historical overview of shelter and architectural styles of the 1900s, site selection and analysis, building materials, structural design, water and waste systems, electrical lighting systems, energy conservation techniques, and contemporary passive solar-energy systems. The course ends with a minor design problem intended to integrate technology and the design process.

120 Elements of House Design: Technology

Spring, 3 credits.

An introduction to the residential design process. A thorough analysis of construction techniques and mechanical systems of human habitation. Topics include a historical overview of shelter and architectural styles of the 1900s, site selection and analysis, building materials, structural design, water and waste systems, electrical lighting systems, energy conservation techniques, and contemporary passive solar-energy systems. The course ends with a minor design problem intended to integrate technology and the design process.

135 Textiles I

Fall, 3 credits. Each lab limited to 20 students. Prerequisite or corequisite: Chemistry 103 or 207. Maximum cost of supplies and textbook, $30.

An introduction to the basic properties of textile materials, with consideration of their technology, consumer uses, and economic importance. Behavior of textile materials is observed in a variety of environmental conditions that influence aesthetics, comfort, and performance. This course is designed to provide a basis for further study in textiles, but it also contains sufficiently broad coverage of the subject to be used as an elective course.

145 Apparel Design I

Fall or spring, 4 credits. Prerequisite: basic sewing skills. Those with formal course work in pattern design may take an exemption exam by contacting the first day of registration. Minimum cost of materials, $60.

Fall: labs, TR 1:25-4:25. Spring: labs, MWF 7:30-10:30 p.m. A. Racine.

Intensive study of principles and processes of flat pattern design and fitting techniques with emphasis on development of creative expression.

150 Introduction to Human-Environment Relations

Fall, 3 credits. Required for DEA majors. MWF 12:20-1:10. F. Becker, E. Ostrander, B. Sims, G. Shaver.

An introduction to the influence of the physical environment on human behavior. Topics include environmental influences on social behaviors such as crowding, noise, and the influence of friendliness, environmental needs associated with social characteristics such as different stages in life cycle, life styles, social class, family structures, and handicaps; basic consideration in personal-environmental interaction such as lighting, acoustics, and thermal comfort; an introduction to human factors and systems analysis; the effects of environmental form on human behavior; and the human form and to develop awareness of the functions of line, shape, and value as their applications to design. Drawing from the figure and inanimate objects, perspective, and conceptual drawing are emphasized.

201 Design III: Basic Interior Design

Fall, 5 credits. Each section limited to 18 students. Prerequisites: DEA 101, DEA 102, and a 3-credit drawing course (DEA 115 strongly recommended). Coregistration in DEA 203 is required. Recommended: DEA 111 and DEA 150. Minimum cost of materials, $120; shop fee, $10; optional field trip, approximately $60.

Beginning interior design studio. Focus is on development of basic proficiency in design skills. The course is structured around a series of elementary interior and interior-product design problems of 3 to 5 weeks in length.

202 Design IV: Basic Interior Design

Spring, 5 credits. Each section limited to 18 students. Prerequisites: DEA 201, 203. Prerequisite or corequisite: DEA 111, 150, and 204. Minimum cost of materials, $120: dangon fees, $12. Dynamics of collaboration; user-responsive design; the participatory design process; research in programming; and postoccupancy evaluation.

203 Design Communications

Fall, 1 credit. Enrollment limited to 25 students. Priority given to DEA Option 1 majors. MWF 1:25. P. Eshelman.

Communication techniques for interior designers. Focus is on a selected set of prepramamatical techniques useful to designers in understanding and developing design proposals during the design process, and on communicating interior design proposals to clients and users. Plans, sections, perspectives, isometrics, rendering techniques, models, and model photography, and techniques for presentations of design proposals to audiences will be covered.

204 Introduction to Building Technology

Spring, 1 credit.

MWF 1:25. Staff.

Introduction to building technology for interior designers and facility managers. Emphasis is placed on developing basic understanding of buildings and building systems and their implications for interior design and facility management. Covers basic building types, structural systems, construction materials and methods, HVAC systems; plumbing, electrical, lighting, and security that affect the designer's ability to design and occupy buildings. Approximate cost, $200 to $300.

210 Science for Consumers

Fall, 3 credits. Each lab limited to 20 students. Not open to students who have taken DEA 434. Prerequisite: high school chemistry or physics. S-U grades optional. Offered alternate years. Not offered in 1982-83; next offered 1983-84.

Lecs, T R 9:05-10:05, lab, 12:00-1:00 or MWF 9:05-10:05. A. Racine.

An examination of some underlying scientific principles of today's complex technology. Designed to enable students to identify, understand, and better evaluate current problems that have a basis in the physical sciences and are of concern to society. Some areas to be covered: air and water quality; conservation; energy; environmental regulations. Course relates principles of the natural sciences to specific applications that affect people and their environment.

215 Textiles II

Spring, 4 credits. Each lab limited to 16 students. Prerequisites: DEA 135 and 1 semester of chemistry. Recommended: 2 semesters of chemistry.

Lecs, T R 9:05-10:05, lab, 11:00-12:00 or MWF 9:05-10:05. S. K. Obendorf.

A study of critical performance characteristics of textiles and the relationships of these characteristics to use of textile articles. Emphasis is on comfort, durability, and special performance characteristics. Also included is study of the purposes, scope, and limitations of laboratory textile testing and the relations between laboratory testing and end-use performance.

240 Clothing through the Life Cycle

Spring, 3 credits. Not open to students who have taken DEA 445.

An introduction to clothing as it affects the physical and psychological well-being of the individual. Emphasis is on the functional aspects of clothing for individuals from infancy through old age and for groups such as the handicapped or those in special occupations. Students explore the resources available to the designer for solving clothing problems.

242 Apparel Industry: Field Experience

January intersession or spring-term break, 1 credit. Approximate cost, $250 to $300.

A one-week field experience in a major apparel center. Students are responsible for field-trip expenses. Students will have the opportunity to observe design firms, manufacturers, retailers, promotion and media establishments, and museums in the multifaceted apparel and textile industry.

245 Dress: A Reflection of American Women's Roles

Fall, 3 credits. Enrollment limited to 40 students. S-U grades optional. Because the class meets only once a week, attendance at each session, especially the first, is very important. MWF 7:30-10:30 p.m. A. Racine.

A historical survey of changing patterns of American women's dress from the colonial period to present day, as well as the sociocultural forces that affected women's development within the social class structure. The Cornell Costume Collection and illustrated lectures are used to develop an awareness
of historic costume, while assigned readings focus on expected roles. Students investigate topics dealing with the impact of design on cultural assimilation of immigrant women in America.

250 The Environment and Social Behavior Fall. 3 credits. Prerequisite: DEA 150 or permission of instructor. T R 2:30-4. F. Becker. A combination seminar and lecture course for students interested in the social sciences or design. Using a series of exercises, students examine and apply the ways environmental form influences social behaviors such as aggression, cooperation, community, and characteristics such as stage in life cycle, family structure, and social class influence environmental needs and purposes. The implications for the planning, design, and management of complex environments such as offices, hospitals, schools, and housing are emphasized.

251 Historic Design I: Furniture and Interior Design Fall. 3 credits. Prerequisite: DEA 101 and 111. Recommended sequence: DEA 251, 252, and 353. M W F 11:15. G. C. Milican. A study of the patterns of historical development and change in architecture, furniture, and interiors from man’s earliest expressions to the present as they reflect the changing cultural framework of Western civilization, excluding America.

252 Historic Design II: Furniture and Interior Design Spring. 3 credits. Prerequisite: DEA 101. Corequisite: DEA 111. Recommended sequence: DEA 251, 252, and 353. M W F B. G. Milican. A study of the patterns of historical development and change as revealed through American furniture and interiors, 1650–1885. Design forms are considered individually, collectively, and in their historical context as they express the efforts, values, and ideals of American civilization.

261 Fundamentals of Interior Design Fall. 3 credits. Enrollment limited to 20 students. Prerequisite: DEA 101. Minimum cost of materials, $30. T R 1:25–4:25. G. C. Milican. A studio course that emphasizes the fundamental principles of design applied to the planning of residential interiors and coordinated with family and individual needs. Studio problem explores choices of materials, space planning, selection and arrangement of furniture, light, and color. Illustrated lectures, readings, and introductory drafting and rendering techniques are presented.

264 Apparel Design II Fall. 3 credits. Prerequisite: DEA 145 and completion of, or concurrent registration in, DEA 101 and 135, or permission of instructor. Recommended: DEA 115 and 240. Apparel design majors should take DEA 264 and DEA 367 in the same academic year. Minimum cost of materials, $60. T R 1:25–4:25. B. Ziegert. A studio course in integrating two techniques for designing apparel: draping and advanced flat pattern. Problems require the student to make judgments regarding the design process, nature of the materials, body structure, and function.

300 Special Studies for Undergraduates Fall or spring. Credit to be arranged. Hours to be arranged. Department faculty Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multiplicity description of the study they want to undertake, on forms available from the Counseling Office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

301 Design V: Intermediate Interior Design Fall. 5 credits. Prerequisites: DEA 111, 150, 201, 202, 203, 353. Corequisite: DEA 459. Minimum cost of materials, $120; shop fee, $10; optional field trip, approximately $60. M 2:30–4:25 and T W R 1:25–4:25. Staff. Intermediate-level interior design studio. The course is organized around a series of interior and interior-product design problems of intermediate-level complexity, 3 to 5 weeks in duration. Focus is on development of design skills and on understanding of a selected set of generic problem types.

303 Introduction to Furnishings, Materials, and Finishes Fall. 1 credit. M 1:25. C. Williams. Basic understanding of furniture types and systems; interior products and equipment such as workstations; window, wall, and floor coverings; ceiling and lighting systems; and materials and finishes. Emphasis is placed on criteria for selection of furnishings, materials, and finishes for typical interior design and facility management problems.

304 Introduction to Professional Practice of Interior Design Spring. 1 credit. M 1:25. Staff. Introduction to organizational and management principles for delivery of interior design and facility management services. Covers basic organizational structures and basic management functions within interior design and facility management organizations, work flow and scheduling, legal responsibilities, and contracts, contract documents such as construction drawings and specifications, supervision of construction and installation, and cost estimation.

325 Human Factors: Ergonomics-Anthropometrics Fall. 3 credits. Recommended: DEA 150. T R 10:10–11:30. G. Sloan. Implications of human physical and physiological characteristics and limitations on the design of settings, products, and tasks. An introduction to engineering anthropometry, biomechanics, work physiology, and motor performance. Attention is given to the needs of special populations such as the physically handicapped.

335 Textiles III: Structure and Properties Spring. 3 credits. Prerequisites: DEA 235, Physics 101, 112, or 207, and Chemistry 253 and 251, or 357–358 and 251. Lecs. M W F 9:05; lab, T R 1:25–4:25. C. C. Chu. An in-depth study of the structure of textile materials and their component parts, from polymer molecules through fibers and yarns to fabrics, and the techniques of controlling structure to achieve desirable end-use properties. Emphasis is on properties important to the consumer, including easy care, elasticity, durability, comfort, and aesthetics.

Laboratory experimentation illustrates the important interrelationships among structures and properties of polymers, fibers, yarns, and fabrics.

338 Textiles for Interiors and Exteriors Spring. 3 credits. Prerequisite: DEA 135 or permission of instructor. S-U grades optional. T R 2:30–4:25. V. White. This course reviews developments and trends in textiles for the home and for contract interiors. Consideration is given to exterior appearance, performance and test method standards and specifications, and to the environments on which these textiles are used. Field trips are arranged when feasible.

343 Design: Introductory Textile Printing Fall. 3 credits. Each section limited to 15 students. Prerequisite: DEA 135 or at least one other studio design course. Minimum cost of materials, $50. M W 1:25–4:25 or T R 10:10–1:10. C. Straight. A studio design course covering the silk screen method of designing and printing fabric. All projects are printed on fabric using permanent fiber-reactive dyes. Projects cover the study of color, design, surface pattern, texture, and composition for fabrics.

348 Environmental Graphics and Signing Fall. 3 credits. Prerequisite: DEA 201 or design background or permission of instructor. Limited to 20 students. Prerequisite given to DEA majors. Approximate cost of materials, $25. M W 10:10–1:10. M. Boyd. A studio course dealing with both the functional and decorative aspects of environmental graphics. Includes projects in interior and exterior graphics, signing, and directional systems.

349 Graphic Design Spring. 3 credits Enrollment limited to 20 students. Prerequisite: DEA 201 or permission of instructor. Priorly given to DEA majors. Approximate cost of materials, $25. M W 10:10–1:10. M. Boyd. A studio course in the design, development and presentation of written and visual information. Emphasis is placed on the use and design of print. Students are encouraged to work in areas of interest to them.
288 Human Ecology

stylistic forces that shape the design forms of the present and includes a critical analysis of selected works of furniture, fabrics, and interiors.

361 Residential Design Spring 3 credits.
Prerequisite: DEA 201 or 261, or permission of instructor. Recommended: DEA 135 and 350. Approximate cost of materials, $30.

An introduction to residential architectural design. While designing a solution for specific occupant needs, students consider site, orientation, climate, and materials. Drafting work consists of plans, elevations, perspectives, and presentation of solutions. Lectures, discussions, and required readings.

367 Apparel Design III Spring 4 credits.
Prerequisites: DEA 111, 115, 150, 240, and 264 or permission of instructor. Corequisites: DEA 235 and 117.

Apparel design majors should take DEA 264 and DEA 367 in the same academic year. Minimum cost of materials, $60.

Advanced apparel students prepared to challenge and refine their design skills will be presented with a variety of complex studio problems in apparel design. The Cornell Costume Collection is used for illustration and inspiration.

400–401–402 Special Studies for Undergraduates Fall or spring. Credits to be arranged. S-U grades optional.

Hours to be arranged. Department faculty.

For advanced, independent study by an individual student or for study on an experimental basis with a group of students in a field of DEA not otherwise provided through coursework in the department elsewhere at the University. Students prepare a multicity description of the study they want to undertake, on forms available from the Counseling Office. This form must be signed by the instructor directing the study and the department chairman and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department chairman is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study:

400 Directed Readings
For study that predominantly involves library research and independent reading.

401 Empirical Research
For study that predominantly involves data collection and analysis, or laboratory or studio projects.

402 Supervised Fieldwork
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

430 The Textile and Apparel Industries Fall. 3 credits. Prerequisites: CEH 233, DEA 235, or permission of instructor.

M W 12:20–2:15.

A critical review of the textile and apparel industries, including structure and marketing practices, and government policies that affect industry decisions and operations in such areas as energy, the environment, safety, international trade, and employee benefits and opportunities. The role of trade unions also is explored. A one-day field trip is arranged when feasible.

431 The Textile and Apparel Industries—Field Experiences Second week of January intersession. 1 credit. Prerequisites or concomitance: DEA 430. S-U grades only. Offered alternate years. Students are responsible for trip expenses, approximately $175.

A one-week field experience in the textile regions of the South. Students have the opportunity to see various textile processes, including fiber production, knitting, weaving, dyeing, and finishing, and designing. In addition, seminars with executives of each participating firm relate theory to current practice.

434 Care of Textiles Fall. 2 credits. Prerequisite: DEA 235. Not open to students who have taken DEA 230. Not offered 1982–83.

The interaction of textiles with soils and stains, cleaning agents, and cleaning equipment. Topics include characteristics of soils, mechanisms for bonding soils to substrates, textile properties and changes related to care processes, functional finishes, wet- and dry-cleaning processes, the supplies and techniques used in cleaning, and instructions for care.

436 Textiles IV: Textile Chemistry Fall. 4 credits.
Prerequisites: DEA 235; Chemistry 253 and 251 or Chemistry 357–358 and 251.

An introduction to the chemistry of the major classes of natural and man-made fibers, including their structure, properties, and reactions. Labs include the qualitative identification of textile fibers and consideration of chemical damage to fabrics, finishes, and dyes.

438 Apparel Textiles Fall. 3 credits. S-U grades optional. Prerequisites: DEA 235 and 264, or permission of instructor.

M W 2:30–4:25. Two-day field trips will be arranged when feasible. V. White.

A study of the interrelationships of aesthetics, fashion and function, and other trade-offs of concern to the consumer. Consideration of the use of standards, specifications, and other means of communication at conferences, seminars, and other occasions, and the legal implications.

439 Textile Materials for Biomedical Use Fall. 2 credits. S-U grades optional for non-DEA majors. Prerequisites: DEA 135, 235, or permission of instructor.

Focuses on chemical and physical properties of textiles and the performance of textile materials (including structures for general hospital use and internal and external structures to the laboratory. Typical materials include sutures, surgical dressings, elastic stockings, surgical apparel, and prosthetic materials. The impact of governmental regulations also is examined.

445 Apparel Design IV: Theory of Functional Clothing Fall. 3 credits. Prerequisite. DEA 367. It may be possible for students outside the major with sufficient background to waive the prerequisite with permission of the instructor.

Application of the principles of physical science to problems in clothing design. Problems require the student to relate three aspects of apparel design: the needs and functions of the human body, structural properties of materials, and apparel forms. Information gained from study and testing of textiles and garment forms is applied to the problems of movement, warmth, impact protection in active-sports equipment, and other topics related to comfort and function of clothing.

455 Research Methods in Human-Environment Relations Spring. 3 credits. Prerequisites: DEA 150 or permission of instructor. Recommended: a statistics course.

M W F 10:10. E. Oslander.

The course develops the student's understanding and competence in the use of research and analytical tools to study the relationship between the physical environment and human behavior. Emphasis is placed on selection of appropriate methods for specific problems and the policy implications derived from research. Topics include unobtrusive and obtrusive data-gathering tools, the processing of qualitative and quantitative data, and effective communication of empirical research findings.

459 Programming Methods In Design Spring. 3 credits.

An introduction to environmental programming, with an emphasis on the formulation of systems requirements that follow from characteristics and limitations. Diverse methods for determining the characteristics required of a particular environmental setting (in order that it support the desired behaviors of the users) are considered, taking into account the system's design analysis, behavior-circuits approach, behavior-settings approach, and user-characteristics approach. The student's ability to select appropriate methods to suit problems or, when necessary, to devise new methods or techniques is accentuated.

465 Apparel Design V Spring. 3 credits.

V. White.

Prerequisite: DEA 135 and 267, or permission of instructor. Recommended: DEA 102 and 445. Minimum cost, $60.

Through studio problems in fashion design, students examine qualitative and quantitative data and the cost on the apparel designer. Lines of garments are developed to various stages, from sketches to finished samples.

499 Design VII: Advanced Interior Design Fall and spring. 1–8 credits. (The first time a student enrolls in DEA 499, it must be for a minimum of 4 credits. Students may elect up to 4 additional credits in DEA 499, to be taken concurrently or in a subsequent semester. Students are strongly encouraged to satisfy the basic 4-hour DEA 499 requirement in the fall semester and to continue with an additional 4-hour studio in the spring semester.)

Prerequisites: DEA 301, 302, 303, and 304. DEA 302 and DEA 499 may not be taken concurrently. Minimum cost of materials, $120.

Advanced interior design studio. A comprehensive design—problem-solving experience involving completion of an advanced interior design problem from inception of implementation. Focus is on attainment of advanced proficiency in the application of substantive and procedural material from previous courses to a complex interior design problem selected by the student and approved by the instructor. The course is structured around five phases of activity of 3 or 4 weeks in duration: environmental assessment and programming, generation of alternative designs, evaluation of alternatives, development and refinement of selected alternative, design of implementation measures, and the preparation of a professional-quality report documenting the proposed design and the rationale and procedures utilized.

600 Special Problems for Graduate Students Fall or spring. Credit to be arranged. S-U grades optional.

Hours to be arranged. Department faculty.

Independent, advanced work by graduate students recommended by their chairmen and approved by the head of the department and instructor.

608 Special Field Work Fall. 3 credits. Undergraduates and non-DEA majors: DEA 135 and 267; permission of instructor. Recommended: DEA 430. S-U grades only.

Hours to be arranged. C. Williams.

A combination seminar and lecture course. Historical aspects of housing structures and materials, energy constraints, construction and manufacture, cost, physical and psychological human needs, and survey of housing patterns.
630 Physical Science In the Home
Fall: 2 or 3 credits (3 credits require laboratory attendance). Prerequisite: college chemistry. S-U grades optional. Consult instructor before registering. Lecs. T R 10:10-11:30, plus hour to be arranged. Lab, W 12:20-2:15. M. Purchase. Applied physical science for professionals working with consumers and home appliances. Energy conservation is considered, selected principles from physics are applied to household equipment, and the chemistry of cleaning supplies and cleaning processes is studied.

635 Special Topics In Textiles
Spring. 3 credits. Prerequisite: DEA 235 or 436 or permission of instructor. M W F 11:15, C. C. Chu. Contemporary topics in polymers, fibers, and textiles. Emphasis on chemist, sociologist, and mechanical properties, and environmental effects on these properties. Current research results and research trends also are discussed. Topic changes each year; consult the instructor for more information.

636 Advanced Textile Chemistry
Spring. 4 credits. Prerequisite: DEA 436. Offered alternate years. Not offered 1982–83. The chemistry and physicochemical properties of natural and synthetic rubbers, polyurethanes and other elastomeric materials, high-temperature polymers, and organic fabrics, and some of their applications in textile fibers, and the relationship between their chemistry and functional properties as textile materials. Other topics will include polymerization processes, textile finishing processes, dyes and dyeing, and degradation of textile materials under environmental conditions.

637 Seminar: Frontiers In Textiles
Fall and spring. 1 credit a term. S-U grades optional. Open to advanced undergraduates who have permission of instructor. T 4:30–5:45. V. White. New developments, research findings, and other topics of major concern to the field of textiles are discussed by faculty members, students, and guest speakers from industry, government, and academia. Seminars are of special interest not only to graduate students in textiles, but to students and faculty members concerned with textile end products such as apparel, interiors, housing, and industrial applications. Students electing to take the seminar for credit are required to write a paper in their first term, to present a proposal on a technical subject to be arranged for the second term, and to report on their findings in their third or fourth term.

639 Mechanics of Fibrous Structures
Fall. 3 credits. Prerequisites: DEA 235 or equivalent or permission of instructor. Corequisite: DEA 335. Offered alternate years. Hours to be arranged. P. Schwartz. A study of the pioneering research in the mechanics of textile structures: creep phenomena and the dynamic properties of fibers and yarns, idealized yarn and fabric models and their relationship to research data; special topics in the deformation of yarns and fabrics in tension, shear, compression stress; fabric bending and buckling; and the mechanical behavior of nonwoven textile materials.

648 Standards and the Quality of Life
Spring. 3 credits. S-U grades optional. Limited to graduate students. Open to advanced undergraduates who have permission of instructor. Hours to be arranged. V. White. This course is designed to provide an awareness of the development and use of standards. What are standards? Who makes them? How do they affect the individual, the nation, business, industry, and government? Consumer product standards as a category will be considered, and both voluntary (such as ISO, ANSI, ASTM) and governmental regulatory procedures in the development of standards are reviewed. The development and use of standards are studied using case histories; for example, solar housing, apparel sizing, textile labeling, meat products, recreation safety). Lectures, discussion, and simulation of a variety of standards-development activities give students opportunities to participate in the process. Consideration is given to interactions among government, industry, and consumer groups, and to the interfaces between voluntary and governmental standards and between national and international standardization systems.

650 Programming Methods In Design
Spring. 4 credits. Recommended: DEA 425, 350, and 455. T R 10:10–11:30, plus hour to be arranged. G. Sloan. A course intended for the graduate student who wants a more thorough introduction to environmental programming methods that is provided by DEA 459. Each student is required to attend DEA 459 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects.

653 Psychology of Office Design
Spring. 3 credits. Prerequisite: DEA 250 or permission of instructor. M W 2:30–4. F. Becker. Intended for students interested in the management of office environments. The role of the designer in the planning process and in the workplace is emphasized. Consideration is given to the social and organizational impact of the furniture and electronic equipment systems, as well as work done in alternative settings such as the home, also is discussed. Consideration is given to social forces underlying the development of office environments, including office standards and planning processes. Emphasis is on the planning, design, and implementation of office environments.

655 Dynamics of Collaboration In the Design Process
Fall. 3 credits. Prerequisite: a course in elementary psychology and DEA 250, 350, and 455. M W F 11:15, E. Ostrander. The role of clients, designers, users, and special consultants in working collaboratively to develop physical and social systems for living, working, and recreation. The structuring of group process to maximize effective collaboration. The procedures for collating and integrating behavioral data into formats that nonresearchers can understand as a basis for decision making. Familiarity with interaction process models that can be applied to the special problems of interdisciplinary work with the design and management professions.

656 Research Methods In Human-Environment Relations
Spring. 4 credits. Letter grades only. Prerequisites: DEA 150 or permission of instructor. M W F 10:10, plus hour to be arranged. E. Ostrander. This course develops the graduate student's understanding and competence in the use of research and analytical tools to study the relationship between the physical environment and human behavior. Students attend DEA 455 lectures, but have more extensive readings and projects and meet an additional hour each week.

659 Seminar on Facility Planning and Management
Fall or spring. 1 credit. S-U grades optional. Prerequisite: the chairperson of the graduate committee and the instructor. M W F 11:15. F. Becker. Seminar on current issues and content in the field of facility planning and management. Discussion by faculty, students, and invited guests.

660 The Environment and Social Behavior
Fall. 4 credits. Prerequisite: DEA 150 or permission of instructor. T R 2:30–4, plus hour to be arranged. F. Becker. A seminar on current issues and content in the field of facility planning and management. Discussion by faculty, students, and invited guests.

699 Master's Thesis and Research
Fall or spring. Credit is by arrangement. Prerequisite: permission of the chairperson of the graduate committee and the instructor. S-U grades optional. Open to advanced undergraduates who have permission of instructor. Fall or spring. 3 credits. Not open to first-semester freshmen. M W F 11:15. P. Schoggen. An an in-depth method of observing people and the settings in which they behave in order to develop observational skills, increase understanding of behavior and its development, and acquaint students with basic methodological concepts underlying the scientific study of behavioral development. Direct experience in applying observational methods in laboratory and real-life settings is emphasized. Discussion groups accompany the observation experience.

115 Human Development: Infancy and Childhood
Fall or summer. 3 credits. S-U grades optional. M W F 11:15. S. Ceci. Provides a broad overview of theories, research methods, and the status of scientific knowledge about human development from infancy through childhood. Attention is focused on the interplay of psychological factors, interpersonal relationships, social structure, and cultural values in changing individuals and shaping the individual's life course and the evolution of human development and family studies courses.
the culture as a whole is also considered. Familial, peer group, educational, and work contexts for development are discussed.

Provides a general introduction to theories and research in adult development and aging. Psychological, social, and biological changes from youth through late adulthood are discussed. Both individual development within generations and differences among generations are emphasized.

Designed to explore the means and materials suitable for creative expression for children of different ages, as well as for adults. Students are expected to acquire competence in evaluating and utilizing various media and understanding the creative process. Experimentation in paint, clay, chalk, crayon, paper, wire, plaster, wood, and other materials.]

150 The Family in Modern Society Fall or summer. 3 credits. S-U grades optional. M W F 1:25. Staff.

Contemporary family roles and functions are considered as they change over the life cycle, and as they are influenced by the locales in which families live and the social forces that impinge on them.

Examines the period of the life course during which the biological and social processes of young adulthood occur. The impact of these changes on individual behavior, interpersonal relations with peers and family, the relationship of the individual to society, and individual psychological processes. Limited in general are explored. The course places heavy emphasis on writing skills (several five-page papers) and critical thinking (critiques of published research).

Examines the period of the life course during which development and socialization occur. The impact of these changes on individual behavior, interpersonal relations with peers and family, the relationship of the individual to society, and individual psychological processes. Limited in general are explored. The course places heavy emphasis on writing skills (several five-page papers) and critical thinking (critiques of published research).

Explores effects on individual and society when many people well beyond puberty are not yet granted full adult status or do not assume typical adult roles and responsibilities (for example, students, transients, people experimenting with alternative life-styles). Considers both the unique developmental potentials and the risks of youth associated with questioning of what it means and what it takes to become a full member of adult society. Intimacy, vocational choice, life-style choice, religious and political commitment, moral judgment, caring, functioning, and orientation, self-concept, and authority and dependence relationships are treated as developmental and stressful issues of this period, and several of these are examined in depth.

242 Participation with Groups of Children in the Early Years Fall and spring. 4 credits (3 credits with permission of instructor). Limited to 22 students (limit depends on availability of placements and of supervision). Prerequisite: HDFS 115. Recommended: HDFS 111 or ID 100. S-U grades optional. Fall: W 12:20–2:15. Spring: W 10:10–12:05. Plus two half-days of fieldwork (for 4 credits) or one half-day of fieldwork (for 3 credits). Staff. A field-based course designed to combine experience in child-care centers with theory and supervision intended to develop the student’s ability to understand and relate effectively to young children. Course structure integrates lectures and discussions, workshops, films, projects, reading, writing, and sharing of field experiences. Students are placed in local nursery schools, day-care centers, Head Start programs and kindergartens.

243 Participation with Groups of Children Ages Six through Twelve Spring. 4 credits (3 credits with permission of instructor). Limited to 20 students (limit depends on availability of placements). Prerequisite: HDFS 115. Recommended: HDFS 111 or ID 100. S-U grades optional. R 10:10–12:05, plus two half-days of fieldwork (for 4 credits) or one half-day of fieldwork (for 3 credits). P. Ziegler.

A field-study course structured to integrate knowledge from practicum, lectures, discussions, and readings to provide a better understanding of children’s development in the school setting. Each student will work in one classroom with an experienced teacher.

258 (also Women’s Studies and Sociology 238) Historical Development of Women as Professionals, 1800–1980 Fall. 3 credits. S-U grades optional. Recommended: HDFS 115, Psychology 101, or Sociology 101.

The historical evolution of the female professions in America (midwifery, nursing, teaching, librarianship, prostitution, home economics, and social work), as well as women’s struggles to gain access to medicine, law, the clergy, and the academy. Consideration of history of women in medicine and law as well. Lectures, reading, and discussion are geared to identifying the cultural patterns that fostered the conception of gender-specific work and the particular historical circumstances that created "different work opportunities." The revolution of "professionalism" and the consequences of professionalism for women, family structure, and American society is also discussed.

Introduction to the psychology and education of exceptional individuals. Attention is given to the etiology and characteristics of major types of exceptionality, including learning disorders, intellectual giftedness, creativity, perceptual impairments, and the bicultural individual.

300 Special Studies for Undergraduates Fall or spring. Credit to be arranged. Hours to be arranged. Department faculty.

Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multiplicity of description of the study they want to undertake, on forms available from the Counseling Office. The form, signed by both the instructor and the director of the department, is filed at course registration or during the change-of-registration period.

302 Family and Community Health Fall or spring. 3 credits. S-U grades optional. Not offered 1982–83.

[367 (also Sociology 307) Collective Behavior and Social Movements Fall. 4 credits. Prerequisite: a course in sociology or another social science. Held: M W F 12:10–2:15. S. Cornelius.

An inquiry into social behavior that breaks with institutionalized or conventional forms, such as acting crowds, riots, social movements, and revolution. Analysis of antecedent conditions, emergent forms, processes, and consequences. Historical and contemporary studies are covered.]

313 Problematic Behavior in Adolescence Spring. 3 credits. Prerequisite: HDFS 116 and one other course on adolescence. Staff.

Focuses primarily on juvenile delinquency and other problems of adolescence such as drug abuse, alcohol, pregnancy, suicide, and other social and personal issues.

315 (also HSS 315) Human Sexuality: A Biosocial Perspective Fall, spring. 3 credits. Limited to 500 students. Prerequisites: an introductory course in HDFS, psychology, or sociology (or an equivalent social science course), plus one course in biology or anthropology.

R 12:25. Sec to be arranged. A. Eggleston. The aim of this course is to delineate the major psychological and sociological components of human sexual attitudes and behavior. Three central themes are addressed: the development of sexual orientation over the life cycle, the evolution of sexual norms and customs within changing social systems, and the biological components of human sexual development. An underlying issue is the role of moral assumptions and contemporary ethics in generating research and theory on human sexuality in the social sciences. Materials are drawn from interdisciplinary sources including biology, history, anthropology, and law.

333 Cognitive Processes in Development Fall. 3 credits. Prerequisite: HDFS 115 or equivalent. M W F 11:15. G. Suci.

A survey of theories and problems in the development of selected cognitive processes: attention, perception, memory, language, and thought.

338 The Development of Creative Thinking Spring. 3 credits. Prerequisite: HDFS 115, Psychology 101, or Education 110. Not to be taken concurrently with HDFS 141. M W F 10:10. W. L. Brittain.

A study of theories of creativity and a review of the research on creative behavior. Emphasis is on the conditions and antecedents of creative thinking.

342 Models and Settings in Programs for Young Children Fall. 3 credits. Prerequisite: HDFS 115. T R 12:20–1:35. S. West.

Examines the theoretical and philosophical bases and specific implementation of a wide variety of programs (i.e., Montessori, behavioral, Piaget, Bank Street Model). Students are encouraged to develop their own positions in regard to values and psychological theories. Applications of various approaches to programs for children and families with special needs are also studied.

344 Infant Behavior and Development Spring. 3 credits. Prerequisite: HDFS 115 or equivalent. Not offered 1982–83.

T R 12:20–1:35. H. Recchi. Nature and determination of major developmental changes in infant behavior from birth to two years. Special attention is directed to the role of major environmental influences on perceptual and cognitive, and social and emotional development.
The aim of this course is to examine the play of children aged three through seven. Through seminar discussions, workshops, films, and individualized research, the student will explore the meanings and validity of play in the lives of young children, the different ways that children play and the value of each, and the effect of the environment in enhancing and supporting play.

347 (also NS 347) Human Growth and Development: Biological and Social Psychological Considerations Spring. 3 credits. Prerequisites: Biological Sciences 101 or 109 or equivalent, HDFS 115 or Psychology 101, and NS 115 or equivalent. M W F 1:25. J. Haas, H. Ricciuti. A review of major patterns of physical growth from the fetal period through adolescence, with consideration given to biological and socioenvironmental determinants of growth, as well as to physical and psychological consequences of variations in growth patterns. Normal patterns of growth are examined, followed by an analysis of major sources of variations in growth (normal and atypical).

348 Advanced Participation in Preschool Settings Fall and spring. 3 credits. Limited enrollment. Prerequisites: HDFS 242 and permission of instructor. Prerequisite or corequisite: HDFS 346. Two half-days participation (morning or afternoon) and an hour conference each week. An advanced, supervised fieldwork experience with a focus on helping children build relationships to support learning and personal development. Students are expected to define their own goals and assess progress with supervising teacher and instructor; to keep a journal, and to plan, carry out, and evaluate activities for children in a variety of curriculum areas.

352 Contemporary Family Forms in the United States Spring. 3 credits. S-U grades optional. T R 12:20-1:35. L. C. Lee. Variations in family formation, organization, and functioning are investigated with an emphasis on research findings about each of the family types. Family forms in the rural, family type to the more contemporary urban family. The functions of each family form are considered as they apply to the individual, the family, and to the society.

354 The Family In Cross-cultural Perspective Spring. 3 credits. Prerequisites: HDFS 115 or 116, Psychology 101 or Education 110, and HDFS 150 or Rural Sociology 100, or equivalent. S-U grades optional. M W F 10:10. E. Kain. The sociological study of families from a comparative perspective, looking at similarities and differences across cultures and across ethnic groups. A major focus is on the interdependence of the family system and social institutions.

356 Theories of Adult Interpersonal Relationships Fall. 3 credits. S-U grades optional. R 2-4:25. H. Feldman. Selective theories of the basic disciplines in social psychology, sociology, and psychology are reviewed and their pertinence to understanding of adulthood examined. Students generate hypotheses about these theories and test one of them through either a literary or empirical paper. A journal is kept to interrelate the concepts and to suggest practical applications.

359 (also Sociology 359 and Women's Studies 357) American Families in Historical Perspective Spring. 3 credits. S-U grades optional. Prerequisites: HDFS 150 or one 200-level social science or history course. Human ecology students must register for HDFS 359.

T R 2:30-4. J. Brumberg. This course provides an introduction to, and overview of, problems and issues in the historical literature on American families and the family life cycle. Reading and lectures demonstrate the pattern of American family experience in the past, focusing on class, ethnicity, sex, and region as important variables. Analysis of the private world of the family deals with changing cultural conceptions of sexuality, sex roles, generational relationships, stages of life, and life events. Students are required to do a major research paper on the history of their family, covering at least two generations and demonstrating their ability to integrate life-course development theory, data drawn from the social sciences, and historical circumstances.

360 Personality Development in Childhood Fall. 3 credits. Prerequisites: HDFS 115 or Psychology 101, plus one other course in HDFS or psychology. M W F 10:10. Staff. Study of relevant theoretical approaches to and implications for finding the development of the child's personality. The influence of parents and other environmental factors on the child are examined. Topics covered include attachment, autonomy, identification, moral development, and social behavior.

361 The Development of Social Behavior Spring. 3 credits. Prerequisites: HDFS 115 or Psychology 128. M W F 11:15. J. Condy. Issues in the development of social behavior are viewed from the perspective of theory and research. An attempt is made to apply our understanding of social behavior to education, childbearing, and group behavior. Likely topics include bases of social behavior in early childhood, the role of peers, the development of aggressive behavior, the development and functioning of attitude and value systems, conformity and deviation, and the function and limits of experimental research in the study of social development.

365 The Study of Lives Spring. 3 credits. Prerequisites: HDFS 115 and 116. M W F 10:10-11:20. E. Walker. The study of personality development through the analysis of individual life histories. Biological, sociological, and psychodynamic influences are given approximately equal emphasis. There is extensive discussion of the development of motives, decision making, and personal relationships. The term paper is a psychological analysis of a specific individual based on a published biography or autobiography.

371 Behavioral Disorders of Childhood Fall. 3 credits. Prerequisites: Psychology 101 or Education 110, and a course in personality development (such as HDFS 270 or an equivalent). M W F 12:20. E. Walker. Considers the psychological disorders of childhood ranging from transient adjustment reactions to psychoses. The disorders will be studied in view of theories regarding etiology, treatment, and primary prevention.

380 Aging and Health Fall. 3 credits. Prerequisite: HDFS 117. M W F 9:05. J. Harding. General introduction to health problems of the elderly and arrangements for dealing with them. The course discusses normal biological changes with advancing age, major age-related diseases, the American health-care system, and the use of health services by the elderly. Some attention is given to health care for the elderly in other Western societies and to current policy issues in the United States.

397 Experimental Child Psychology Fall. 4 credits. Prerequisites: one course in statistics and permission of instructor. Extended primarily for students interested in entering graduate programs involving further research training. Offered alternate years. Not offered 1982-83. T R 10:10-11:40; lab, hours to be arranged. L. C. Lee. A course in experimental methodology in research with children. Includes lectures, discussions, and practicum experiences covering general experimental design, statistics, and styles and strategies of working with children.

400-401-402-403 Special Studies for Undergraduates Fall or spring. Credits to be arranged. S-U grades optional. Hours to be arranged. Department faculty. For advanced, independent study by an individual student or for study on an experimental basis with a group of students in a field of HDFS not otherwise provided through course work in the department or elsewhere at the University. Students prepare a multiplicity description of the study they want to undertake, on forms available from the Counseling Office. This form must be signed by the instructor directing the study and the department chairman and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department chairman is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

404 Directed Readings For study that predominantly involves library research and independent study.

401 Empirical Research For study that predominantly involves data collection and analysis, or laboratory or studio projects.

402 Supervised Fieldwork For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

403 Teaching Apprenticeship For study that includes assisting faculty with instruction.

404 (also Government 500) Projects in Public Policy Fall and spring. 4-6 credits. Limited to juniors, seniors, and graduate students. Enrollment by permission of instructor and HDFS faculty sponsor. Hours to be arranged. Chairman, Cornell-in-Washington Program and staff. A full-semester internship in Washington, D. C., designed to afford students an opportunity to study the federal formulation of public policy. Types of placement include assignment in a Congressional office, in an executive department or
agency, with a political campaign organization, or with a lobby or interest group. Students spend at least twenty-five hours each week in their placement, two hours biweekly in group seminar, and have a weekly conference with the instructor, who is a member of the Cornell-in-Washington staff. Since enrollment is limited and students must apply to agencies with openings and be accepted by them, students desiring to participate in this program should contact the course instructor, indicating their interest by the middle of the semester preceding the semester of desired participation. Prior to enrollment in this course students must also identify an HDFS faculty sponsor who is knowledgeable in the subject area in which they wish to do the required research report. The Departmental Advising Coordinator may be contacted for the names of prospective faculty sponsors.

410 Field Experience in Adolescent Development: The Individual in Community Settings Fall 1-9 credits. Prerequisite: permission of instructor. M 7:30 p.m. C. Howard.

411 Field Experience in Adolescent Development: Social Policy toward Youth Spring. 3-9 credits. Enrollment limited by availability of fieldwork placements. Prerequisite or corequisite: HDFS 313 or HDFS 414, a skills training course or equivalent experience, and permission of instructor. S-U grades optional. Offered alternate years. Not offered 1982-83.

412 Language Development: The Individual in Community Settings Fall. 3 credits. Prerequisites: HDFS 115 or equivalent. Not offered 1982-83.

432 Intellectual Development and Education Spring. 3 credits. Prerequisite: HDFS 115 or equivalent. Not offered 1982-83.

434 Piaget's Theory of Cognitive Development Spring. 4 credits. Open to undergraduate and graduate students. Prerequisite: HDFS 115 or equivalent. S-U grades optional. Offered alternate years. Not offered 1982-83.

436 (also Psychology 436) Language Development Spring. 4 credits. Prerequisites: at least one course in developmental psychology, cognitive psychology, cognitive development, or linguistics. Recommended: a course in linguistics. T 10:10-12:05. B. Lust.

437 Creative Expression and Child Growth Fall. 4 credits. Limited to 25 students. May be added during first week only. T 10:10-11:30. Saturday mornings should be free to provide time for participation with children. W. L. Bgtain.

438 Thinking and Reasoning Spring. 3 Credits. HDFS 333 or permission of instructor. T 2:30-4. B. Koslowski.

440 Internship in Cornell Nursery School Fall or spring. 10-12 credits. Prerequisites: HDFS 115 and 242. Recommended: HDFS 346 and HDFS 348.

441 The Development of the Black Child Fall. 4 credits. Limited to juniors, seniors, graduate students, and students who have permission of the instructor. Prerequisite: HDFS 115 or equivalent. S-U grades optional. Not offered 1982-83.

445 Innovative Programs of Parent Intervention and Community Action Spring. 3 credits. Limited to 10 students. Permission of the instructor required before course enrollment. Not offered 1982-83.

451 Families and Social Policy Fall. 3-4 credits. Prerequisite: one course in the area of the family or in sociology. S-U grades optional. Not offered 1982-83.

483 Development in Context Spring. 3 credits. Open to juniors, seniors, and graduate students. Prerequisites: one course in statistics and two courses in social sciences, or one in human biology and one in social sciences. M W F 9:05. U. Bronfenbrenner.

490 Historical Roots of Modern Psychology Spring. 4 credits. Prerequisites: 3 courses in the behavioral sciences or permission of instructor. Students who are registered in a college offering this course must register for the course through their own college. Not offered 1982-83.

M W F 12:20-1:10. Staff.

A survey of the major historical antecedents of contemporary psychology, including the philosophical tradition (from Aristotle through the Enlightenment), the medical-therapeutic tradition, and the rise of modern science and experimental psychology. Scholars from throughout the University give course presentations as their specialties. Students do concentrated work in their own areas of interest.

Selected student comments:
499 Senior Honors Thesis Fall or spring. Credit to be arranged. Prerequisite: permission of thesis adviser and director of honors program. S-U grades optional. Department faculty.

Topics Courses
Fall or spring. 2-4 credits. Prerequisites and enrollment limits vary with topic being considered in any particular term. Permission of the instructor required. Hours to be arranged. Department faculty. This series of courses provides an opportunity for advanced undergraduates to explore an issue, theme, or body of research in the areas of departmental concentration. Topics vary each time the course is offered. Descriptions are available at the time of course registration. Although the courses are usually taught as seminars, a subject may occasionally lend itself to lecture, practicum, or other format.

415 Topics in Adolescent Development
435 Topics in Cognitive Development
445 Topics in Early Childhood Education and Development
455 Topics in Family Studies
465 Topics in Social and Personality Development
475 Topics in Atypical Development
485 Topics in the Ecology of Human Development

The Graduate Program
Human development and family studies graduate courses are open to undergraduates only with instructor’s permission.

Methodology Courses
[601 Research Design and Methodology Spring. 3 credits. Not offered 1982–83. T R 10:10–12:05. Staff. The seminar consists of three components: (1) discussion of representative literature on problems of research design, methodology, and data collection; (2) analysis of methodological issues involved in empirical studies employing different kinds of research designs and methods, both in laboratory and field settings; and (3) a practicum in which students formulate research designs for their own problems, to be evaluated and criticized at each stage of development and pretesting.]

General Courses
[603 Development in Context Fall. 3 credits. Not offered 1982–83. T R 2:30–4:25. U. Bronfenbrenner. This seminar examines issues of theory, substance, and research design related to human development in the actual contexts in which people live. Emphasis is placed on the interaction of processes (biological, psychological, and social) and social systems in the course of development in a variety of settings. The seminar is recommended for graduate students entering the field.]

617 Adolescence Fall. 3 credits.
Time to be announced. M. Basseches. Critical examination of some seminal theoretical writings on adolescent development, along with recent work relevant to intellectual development, ego development, and social development during late adolescence. Three approaches to human development that have stressed the importance of adolescence—psychoanalysis, structural developmental theory, and critical social theory—are interrelated. Empirical research on specific questions chosen by students is considered in the light of these approaches.

631 Cognitive Development Spring. 3 credits. T R 2:30–4:25. E. Kosowski. Overview of current research and theoretical issues in cognitive development with special emphasis on the sorts of areas relevant to real-world (as opposed to laboratory) behavior and on the sorts of cognitive phenomena that can be detected by human observers (rather than phenomena that can be detected only with the aid of technical equipment).

[640 Infancy Fall. 3 credits. Not offered 1982–83. T R 10:10–12:05. H. Pitts. Critical review of major issues of contemporary concern in the field of infant behavior and development, based on readings of selected research papers and review articles. The overall intent is to develop an analytic understanding of where the field stands at present with respect to various topical issues and to identify directions for future research.]

641 Early-Childhood Education Fall. 3 credits. M 12:20–2:15. M. Potts. Survey of major issues in the theoretical and research literature of early-childhood education.

650 Contemporary Family Theory and Research Fall. 3 credits. Lecs., M W 9:05; sec., M W 10:10. E. Kain. The uses of sociological theories and research in the study of the family are studied with particular reference to the relationship between the family and society and between the family and its individual members.

660 Personality and Socialization Fall. 3 credits. W 2:30–4:25. J. Condry. Major issues in personality development and socialization, with special emphasis on theoretical models and empirical issues.

670 Atypical Development Spring. 3 credits. Prerequisites: undergraduate course in abnormal psychology or psychopathology. W 1:25–4:25. E. Walker. Overview of current theories and empirical research on functional and organically based psychological disorders. Topic areas to be covered include autism, schizophrenia, neuroses, and personality disorders. Focus is on developmental aspects of abnormal behavior.

686 (also Sociology 658) The Course of Life: Developmental and Historical Perspectives Spring. 3 credits. S-U grades optional. Enrollment limited to 15. Prerequisites: permission of instructor. Human ecology students must register for HDFS 686. Time to be announced. G. Elder. An introduction to the life course as a theoretical orientation, methodology, and field of study. Special emphasis is devoted to multidisciplinary convergence on life-course problems; to theory and research on the interaction of social, psychological, and biological processes from birth to death; and to historical influences.

691 Research Practicum in the Ecology of Human Development Fall and spring. 3–4 credits. Open to graduate students and upperclass students by permission of the instructor. Hours to be arranged. U. Bronfenbrenner. M. Cochran, W. Cross. Students have the opportunity to participate in various phases of an ongoing five-nation study on the impact of family support systems on family function and the development of the child.

699 Seminar in the Ecology of Human Development Topics include development of self-concept, sex-role identity, observational methods, and interviews in developmental research.

700 Seminars offered irregularly, with changing topics and instructors. Content, hours, credit, and instructors to be announced. Seminars offer concentrated study of specific theoretical and research issues.

618 Seminar in Adolescence Topics include peer relations, parent-teen relationships, self-esteem, youth and history, work, and moral development.

633 Seminar on Language Development Topics include acquisition of meaning in infancy, precursors of language in early infancy, and atypical language development.

635 Seminar in Cognitive Development Topics include early attention, perception, memory, and communication. Assessment and intervention in relation to these processes will be considered when possible.

645 Seminar on Infancy Topics covered in depth include the role of emotions in early development, infant stimulation and early experience, and the assessment of infant developmental competencies.

646 Seminar in Early-Childhood Education Topics include analysis of models and settings, design of assessment techniques, program evaluation, and early childhood in a cross-cultural context.

655 Seminar in Family Studies Topics include the sociology of marital status, the single-parent family, work-family linkages, women and work, and families and social change.

665 Seminar in Personality and Social Development Topics selected are usually taught as seminars, a subject may include learning disabilities, therapeutic interventions in atypical development, child abuse and maltreatment, family factors in the etiology of functional disorders, and cognitive characteristics of atypical groups.

685 Seminar in Human Development and Family Studies Topics include development of self-concept, sex-role identity, observational methods, and interviews in developmental research.

690 Seminar on Ecology of Human Development Topics include the institutional setting as a determinant of behavior, the poor family, and the identification and measurement of ecological variables.

Individualized Special Instruction 700–706 Special Studies for Graduate Students Fall or spring. Credits and hours to be arranged. S-U grades at discretion of instructor. Department faculty.

700 Directed Readings For study that predominantly involves library research and independent study.

701 Empirical Research For study that predominantly involves collection and analysis of research data.

702 Practicum For study that predominantly involves field experience in community settings.
Human Service Studies Courses

202 Structure of Community Services Fall and spring. 3 credits.
A lecture and discussion course designed as an introduction to the community base of services. The presence or absence of educational, social, and planning services, as well as their place and performance, are examined in the context of theoretical and empirical community dimensions. Examples of such dimensions include community complexity, differentiation, modernity, ethnicity, and community role.

203 Groups and Organizations Fall and spring. 3 credits.
M W F 10:10 R. Babcock.
A basic course in the social psychology of small groups and human service organizations. Study of group processes includes self-perception and interpersonal perception of roles, norms, communication, power, and leadership. Students apply what they have learned to small groups to the study of human service organizations (for example, goals, evaluation, structure, technology, relationships between organizations and clients, environment, and change).

246 Ecological Determinants of Behavior Fall. 3 credits. Preference given to HSS Option II students. Prerequisites: introductory sociology and psychology.
M W 2:30-3:45. D. Ritchie.
A human development course, and permission of instructor.

294 Human Ecology

293 Teaching Assistantship For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

294 Research Assistantship For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

705 Extension Assistantship For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

708 Supervised Teaching For advanced students who assume major responsibility for teaching a course. Supervision by a faculty member is required.

899 Master's Thesis and Research Fall or spring.
Credit to be arranged. S-U grades only. Prerequisite: permission of thesis adviser.
Department graduate faculty.

999 Doctoral Thesis and Research Fall or spring. Credit to be arranged. S-U grades only. Prerequisite: permission of thesis adviser.
Department graduate faculty.

400-408 Special Studies for Undergraduates Fall or spring. Credits to be arranged. S-U grades optional. Limited to HSS, interdepartmental, and independent majors.

490 Directed Readings For study that predominantly involves library research and independent readings.

401 Empirical Research For study that predominantly involves library research and analysis or laboratory or studio projects.

402 Supervised Fieldwork For study that predominantly involves library research and analysis of a community or classroom setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

411 Introduction to Adult Education Fall or spring. 3 credits. Limited to 45 students. Preference given to HSS majors. S-U grades optional.
A research course examines a full range of adult learning activities by conducting in-depth interviews with selected adult learners. The interests, motivations, needs, and learning patterns of adult learners are considered in relationship to adult learning theory. Skills in conducting interviews, in analyzing qualitative data, and in presenting findings are developed.

412 Practicum Fall or spring. 6 credits. Sec A limited to HSS Option I or II majors who have completed the prerequisites planned with their adviser; sec B limited to Interdepartmental Option I majors. Prerequisite: permission of the option adviser and agency field supervisor.
Department graduate faculty.
An opportunity for a student to assume a professional role and responsibilities under the guidance of a preceptor in a community-service organization. Conferences involving the student, field preceptor, and college supervisor are arranged in a block, scheduled throughout the semester, or completed in the summer session, depending on the nature and location of the student's fieldwork.

415 The Adult Learner in Macroperspective Fall. 3 credits. Not offered 1982-83.
W 7:30-10:30 p.m. A. Eggleston.
Focuses on the variety of adult-education programs and college and community settings and the influences of the settings on learning. Topics include adult learning theory, skills in conducting interviews, and analyzing qualitative data.
conferences on adult education. UNESCO adult-education publications, and international community development are analyzed in relationship to each student's exploration of adult education in a single country. Description of adult education in other countries is shared by international students.

A critical analysis of the meaning of help in American society from the perspective of power, alienation, sexism, and racism.

417 The Politics of Power in the Human Services 3 credits. Prerequisites: permission of instructor and HSS 416 or HSS 370 or equivalent courses.

T 1:25-2:15, R 2:20-3:15. D. Barr

The framework of the course will take an analytical world view with some understanding of a capitalist political economy and the historically colonial relationship between the African and African-American cultures and peoples of color, the poor, and the powerless. In addition, the course will analyze the effects of these structural and historical facts on people's lives today. The relationship to content areas of class, race, and women's history and the human services will also be included by exploring the nature of empowerment. The course will focus systematically on both the micro- and macro-levels.

439 Program Planning in Community and Family-Life Education Spring. 3 credits. M W F 9:00-9:50. E. Conway.

Students analyze factors that influence program planning and change, and apply principles of program development to plan for and with groups or individuals in different personal and organizational structures. Plans should reflect a knowledge of client; issues in the problem area; regulatory and legislative constraints; the philosophy of the specific program, organization, and community; the psychology of learning; interpersonal and intrapersonal structures and cooperation; human and fiscal resources; and evaluation planning.

441 The Art of Teaching Fall, weeks 1-7. 2 credits. Prerequisites: HSS 339 and HSS 439. To be taken concurrently with HSS 442 and HSS 443. May involve some expense for field visits.

T 10:10-12:05, R 10:10-12:05, plus additional hours arranged during the week of independent study following student teaching. E. Conway.

An orientation for the student-teaching practicum. Major topics interrelated are classroom atmosphere, discipline, and management, evaluation of the teaching-learning processes in relation to personal goals and unit objectives; philosophy, creativity, and teaching techniques; professionalism; selected materials for the student-teaching practicum are developed.

442 Teaching Internship Fall, student teaching full-time, weeks 8-14. 6 credits. Prerequisites: HSS 339 and HSS 439. To be taken concurrently with HSS 441 and HSS 443. Transportation and off-campus living costs need to be planned for in advance. Living arrangements are determined by the student; expenses may or may not be more than on campus, depending on choices made.

M. Minot; E. Conway, A. McLennan

Guided student-teaching experience with student assigned to cooperating public schools. Student teachers are required to live in school communities and work under the guidance of local teachers and department faculty. Cooperating schools are located in different types of communities, represent a variety of organizational structures, and have cooperative programs. Students should indicate their intent as early as possible to facilitate communication and scheduling.

443 Critical Issues in Education Fall, weeks 1-7. 3 credits. No students are admitted to the class after the first session. S-U grades optional except for HSS Option I students.

T R 2:30-4:25, plus one hour to be arranged. D. Desher.

An examination of current issues in education. Analysis of historical, philosophical, social, and political factors that affect these issues.

444 Career Environmental and Individual Development Spring, weeks 1-7. 2 credits. Limited to 25 students. S-U grades optional. No students are admitted to the class after the first session.

T 12:20-1:15, R. Babcock.

An analysis of how work, jobs, and careers relate to each other and the community. Students will design and develop their own occupational plans. Topics include theories of occupational choice, job satisfaction, structure of the labor force, manpower projection, and career planning. The course provides opportunities to meet with career students and professionals.

446 Teaching for Reading Competence: A Content-Area Approach Fall. 2 or 3 credits. S-U grades optional.

M 7:30-9:30 p.m. E. Conway.

The teaching of reading through various content areas. Intended for future educators and community service professionals as well as those already working in these fields. This course focuses on the need for improvement in reading, evaluation of reading materials, teaching of reading skills basic to various content areas, and development of materials to be used in a setting appropriate for the student. Opportunity to use the materials in a field setting, formal or informal, may be arranged if desired. Fieldwork is selected; the cost of transportation to the field setting is to be provided by the student.

452 Advanced Field Experience in Community and Family-Life Education Spring. 2-6 credits. Enrollment limited by availability of field placements. Prerequisites vary depending on the field placement; however, one of the following is required: HSS 339, 411, 439, 446, or 471, or Education 311. Permission of instructor required. Because field placements take time to complete, it is important to contact instructor well in advance of course registration. S-U grades optional. Transportation to field sites must be provided by the student.

W 3:35, plus hours to be arranged for fieldwork. E. Conway.

Direct intervention with individuals, families, or groups in the community. Topics include the design and implementation of educational materials for handicapped adults, developing preschool programs, teaching nutrition through school lunch programs, and evaluating programs for the elderly. An introduction to the field of social work, the student will complete a yearlong field placement and will be awarded an M.S. degree.

471-472 Social Work Practice I and II Introduction to concepts and methods used in a generalist, task-centered model of social work practice. Examination of the values and ethics of professional practice. Microcounseling skills are taught using role playing and video feedback. Class content is integrated with concurrent supervised fieldwork. Placements are made in social agencies in Thompson, Tioga, Chemung, Cortland, and Schuyler counties. Students are encouraged to provide their own transportation, but car pools will be arranged for those who cannot. The department reimburses transportation costs when funds are available, but students may have to pay their own expenses. Each student must have a current driver's license.

471 Social Work Practice I Fall. 9 credits. Limited to 25 social work students. Prerequisites: introductory psychology, introductory sociology, one course in human development, grades of C- or better in HSS 246 and HSS 370, and permission of instructor before registration.

Lecs, M W 10:10-12:05, fieldwork, T R for 8 hours each day, Sec 1, C. Shapiro, sec 2, D. Ritchie.

472 Social Work Practice II Spring. 9 credits. Limited to 25 social work students. Prerequisite: grade of B- or better in HSS 471 and satisfactory performance in fieldwork.

M W 10:10-12:05, fieldwork, T R for 8 hours each day, Sec 1, C. Shapiro, sec 2, D. Ritchie, T. Madden.

473 Senior Seminar in Social Work Spring. 3 credits. Prerequisites: HSS 471-472. S-U grades optional.

M 2:30-3:45, W 2:30-3:20. M. Mueller

Building on the junior-year practice courses, this seminar will integrate intermediate-level theory and practice content and examine recurring themes in professional practice.

474 Program Planning in Social Services Fall. 3 credits. Limited to juniors and seniors.

M W 3:35-4:50. M. Hopp

The course will introduce students to planning concepts and processes. The demographic, geographic, economic, and public health components of field planning will be discussed. The students will be given specific planning assignments and asked to work in team planning projects.

475 Social Policy Spring. 3 credits. Prerequisites: HSS 370 or Government 111 or Sociology 141. S-U grades optional. Students should have field or work experience in a human-service program before or while taking this course.

M W 9:05. J. Allen

An examination of the policy-making process and the significance of national policies as they affect the distribution of social services. Frameworks for analyzing social policy are used to evaluate existing social programs and service delivery systems. Implications for change in policies at the national, state, and local levels are discussed.

The Graduate Program

Human service studies graduate courses are open to undergraduates only with the instructor's permission.

The courses listed below will be taught regularly (annually or in alternate years).

600 Special Problems for Graduate Students Fall or spring. Credits to be arranged. For students recommended by their chairperson and approved by the instructor in charge for independent, advanced work. S-U grades optional. Department faculty.

[601 Introduction to Human Service Studies Fall. 3 credits. Hours to be arranged. Staff.

The major topics dealt with, though not necessarily in a set order, are program evaluation and evaluative research, program planning and development, and higher education in human services. Emphasis is placed on current issues and related lines of research in each topic area, and particularly in interrelationships among the areas.

650 Teaching Human Services in Higher Education Fall. 3 credits. S-U grades optional.

M W 11:15, plus 1 hour to be arranged. M. Minot

Basic strategies for planning and implementing instruction in human services in higher education—for example, in-service, training programs, and two-
community education. Students may develop or cycle are examined. Biological factors, interpersonal factors, and historical events are examined in relationship to adult development. Opportunity for an empirical investigation of an adult population is provided. Implications from theories and student-collected data are examined in relation to the provision of human services programs.

652 Preparing Professionals in the Human Services
Spring. 3 credits. S-U grades optional.
MWF 11:15. M. Minot.
The student analyzes and concepts that underlie professional practice and continuing professional education for volunteers, paraprofessionals, and professionals in the human services (for example, adult and continuing education, health, home economics, and social work education). A variety of preservice and in-service programs will be analyzed in terms of goals, means of implementation, and evaluation. Factors that influence programs are examined, including educational setting, licensure, accreditation, legislation, evaluation, and performance. Students have opportunities to participate in educational programs in human service professions and community education. Students may develop or modify a model for providing professional education at the preservice or in-service levels.

653 Consulting and Supervisory Roles in Human Services
Spring. 3 credits. S-U grades optional.
MWF 10:10. L. Street.
Analysis of theories and practices of consulting and supervision and their application in higher education and in various agencies at the national, state, and local levels. Students make observations and apply consulting and supervisory skills in settings related to their professional goals.

654 Administration of Human Service Programs in Higher Education
Spring. 3 credits. S-U grades optional.
T R 2:30-3:45. W. Trochin.
Introduction to the theory of research design and its application, both national and international. Topics include research design methods; basic principles of instrument design; and methods of data collection, including interviewing strategies, testing, self-report, observation and content analysis, and data coding. Attention is given to issues such as ethical and managerial concerns that arise in applied settings.

691 Program Evaluation and Research Design
Spring. 3 credits.
This course explores research design and its application to the evaluation of human service programs. Topics include validity, reliability, scaling methods; basic principles of instrument design; and methods of data collection, including interviewing strategies, testing, self-report, observation and content analysis, and data coding. Attention is given to issues such as ethical and managerial concerns that arise in applied settings.

691 Program Evaluation and Research Design
Spring. 3 credits.
This course explores research design and its application to the evaluation of human service programs. Topics include validity, reliability, scaling methods; basic principles of instrument design; and methods of data collection, including interviewing strategies, testing, self-report, observation and content analysis, and data coding. Attention is given to issues such as ethical and managerial concerns that arise in applied settings.

692 Program Evaluation in Theory and Practice
Fall, spring. 6 credits.
Prerequisites: ECO 693 or equivalent.
This course is designed to influence policy and program decisions. The discussion of secondary analysis includes attention to designs for aggregating data versus findings; acquiring, documenting, and manipulating data sets; and the development of program evaluation archives.

693 Strategies for Policy and Program Evaluation
Fall. 3 credits. Prerequisites: HSS 690 and 694 or equivalent.
This course examines methods of analysis that are designed to influence policy and program decisions. Cases that are reviewed represent qualitative and quantitative research, historical research, cost accounting and administrative review, peer review, adversary proceedings, and legislative analysis. Perspectives for understanding the pros and cons of each approach are drawn from the following topics: history of the independence of social science and public policy, influence of various institutional settings on the performance of policy and program analysis, and the use and impact of policy and program analysis.

704-705 Internship in Human Service Studies
Fall, spring, or summer. 1-15 credits. S-U grades optional.
Intended for students with competence in program planning and program evaluation (equivalent to at least one course of the HSS 660 series and three of the HSS 690 series) plus statistics through multiple regression. The seminar focuses on analysis and appraisal of current literature on program evaluation and research, with emphasis on design and measurement concepts. Attention is given to two or more service areas (education, health, social welfare) and to applications across these areas.

899 Master's Thesis and Research
Fall and spring. Credit to be arranged. Prerequisite: permission of the chairperson of the graduate committee and the instructor. S-U grades optional. Hours to be arranged. Department graduate faculty.

999 Doctoral Thesis and Research
Fall and spring. Credit to be arranged. Prerequisite: permission of the chairperson of the graduate committee and the instructor. S-U grades optional. Hours to be arranged. Department graduate faculty.
507–508 Professional Improvement I and II Fall, spring, or summer. Variable credit. Enrollment is determined by various factors, including the nature of content, funding, resources, facilities, and instructor. S-U grades optional.经开区 for extramural (evening) and off-campus instruction. May be repeated with the permission of the instructor. A series of special-problem seminars, classes, and activities designed for professional and continuing education of practitioners in helping professions, such as home economics teachers, social workers, public health planners, and adult educators. Specific content of each course varies with group being served but includes work and class time appropriate to number of credits.

529 Research Design and Analysis Summer. 3 credits. Registration through the Division of Extramural Courses only. Hours to be arranged. Staff. Students should develop skill in analyzing and evaluating research reports. Readings, exercises, and periodic assignments focus on stating hypotheses, designing studies to test hypotheses, measuring variables, and interpreting findings.

537 Social Welfare as a Social Institution Fall. 3 credits. Registration through the Division of Extramural Courses only. Hours to be arranged. Staff. A philosophical and historical introduction to social welfare services. The course reviews the social contexts from which programs and the profession of social work have evolved. It discusses the political and ideological processes through which public policy is formed and how policies are translated into social programs. Basic issues in welfare are discussed in the context of present program design, public concerns, and the interrelationships and support of services in the community.

546 Ecological Determinants of Behavior Summer. 3 credits. Registration through the Division of Extramural Courses only. Hours to be arranged. Prof. Grote. An introductory course concerning the identification of some major determinants of human behavior and their interaction. Students examine (through readings, papers, and discussion) different “ecological perspectives” of behavior and attempt to integrate these perspectives into a human services framework. For example, the implications of an ecological perspective for the planning and delivery of services are emphasized.

574 Program Development in Social Services Spring. 3 credits. Registration through the Division of Extramural Courses only. Hours to be arranged. Prof. Hopp. Deals with program development in the fields in which students are or will be working.

575 Organization and Structure for Delivery of Social Services Spring. 3 credits. Registration through the Division of Extramural Courses only. Hours to be arranged. Staff. A framework for assessing and understanding the range of issues posed in the current organization and delivery of various social services. Concepts of social policy analysis are used to evaluate different social service systems, new models of service delivery being developed, and proposals for change being made at national, state, and local levels. Students should have some form of field or work experience in human services prior to or concurrent with this course.

580 Principles and Practice of Public Health I Fall. 4 credits. S-U grades optional. MWF 10:10. J. Ford, I. Lazar. Attention is given to assumptions and concepts that underlie the social regulation for health. Review of human behavior in the social environment are presented in relation to health and disease, and the rationale for various public health policies and programs. Case studies are used to apply principles and concepts from readings and lectures.

581 Principles and Practice of Public Health II Spring. 4 credits. S-U grades optional. MWF 10:10. J. Ford, I. Lazar. Analysis of strategies to improve the organization and delivery of public health services. Methods of accomplishing behavioral and organizational change to improve health, and implications for health planning, administration, and program evaluation are explored. Case studies are used to apply principles and concepts from readings and lectures.

Nutritional Sciences Courses

See course descriptions under the Division of Nutritional Sciences, pp. 315–319.

Faculty Roster

Allen, Josephine A., Ph.D., U. of Michigan. Asst. Prof., Human Service Studies
Anderson, Carol L., Ph.D., Iowa State U. Assoc. Prof., Human Development and Family Studies
Babcock, Robert J., Ed.D., Cornell U. Assoc. Prof., Human Service Studies
Baird, Donald J., Ph.D., Indiana U. Assoc. Prof., Human Service Studies
Bassecues, Michael A., Ph.D., Harvard U. Asst. Prof., Human Development and Family Studies
Bates, Helen T., Ph.D., Cornell U. Prof., Human Development and Family Studies
Becker, Franklin D., Ph.D., U. of California at Davis. Assoc. Prof., Design and Environmental Analysis
Biedendorf, Heinz B., Ph.D., U. of Innsbruck (Austria). Prof., Consumer Economics and Housing

New York State School of Industrial and Labor Relations

Administration
Charles M. Rehmus, dean
Lois S. Gray, associate dean, extension and public affairs
Robert E. Doherty, associate dean, academic affairs
Frank B. Miller, director, Office of Resident Instruction
Shirley Harper, librarian
Ronald G. Ehrenberg, director, research
Frances Benson, director, publications
George M. Calvert, director of budget
Lawrence K. Williams, graduate field representative
Donald E. Cullen, editor, Industrial and Labor Relations

The School
The School of Industrial and Labor Relations at Cornell (ILR) is a small school within a large university, and it tries to maintain the small-college atmosphere that would be expected of an institution that has about six hundred undergraduates and approximately one hundred graduate students.

The school's home is a unified complex of classroom buildings, library, and administrative and faculty offices clustered around two courtyards. Daily classroom activities and other school events provide many opportunities for ILR students and faculty to interact. At the same time, students are members of the larger Cornell community and participate in its programs.

Almost half of the school's typical freshman class comes from the greater New York City area. Another 30 percent live in other parts of New York State. Students from other states and a few from foreign countries make up the rest of the class. Enrollment of women has been increasing in recent years, and recent entering classes have been almost 50 percent women.

Students enrolled in the School of Industrial and Labor Relations at Cornell may take a substantial number of courses in the other six undergraduate colleges and schools of the University, including the College of Arts and Sciences. Cornell students have access to all of the libraries and other University facilities.

The school operates in four areas: (1) undergraduate and graduate resident instruction, (2) extension and public service, (3) research, and (4) publications. It provides instruction to young people on campus who are preparing for careers in the field, as well as to men and women already engaged in industrial relations activities and the general public through its Extension and Public Service Division.

The school's Conference Center, part of the extension division, initiates and hosts conferences covering the full scope of industrial and labor relations. The center provides continuing education and information to practitioners and scholars.

The Research Division develops materials for resident and extension teaching and originates studies in industrial and labor relations. The Publications Division publishes and distributes the research results.

Departments of Instruction
Courses in the school are organized into six departments:
- Collective Bargaining, Labor Law, and Labor History: studies the history of the labor movement and collective bargaining in the United States, as well as the role of government in labor relations.
- Economic and Social Statistics: includes the principles of statistical reasoning, statistical methods, and the application of statistical tools of analysis.
- International and Comparative Labor Relations: concerned with industrial and labor relations developments in other countries, both industrialized and less developed.
- Labor Economics: deals with analysis of the labor force, labor markets, wages and related terms of employment, income distribution, unemployment, health and safety in industry, and retirement.
- Organizational Behavior: investigates human behavior in organizations through psychology and sociology. Courses treat individual human behavior, organizations in society, and industrial society.
- Personal and Human Resource Studies: examines the efforts of work organizations to recruit, train, compensate, and manage their members, as well as public policy and programs concerning employability, employment, and income of workers.

A full list of required and elective courses is available from the Office of Resident Instruction, 101 Ives Hall.

Resident Instruction
This division conducts the on-campus programs leading to the degrees of Bachelor of Science, Master of Industrial and Labor Relations, Master of Science, and Doctor of Philosophy from Cornell.

Office of Resident Instruction
Staff members from the Office of Resident Instruction, 101 Ives Hall, work closely with faculty and faculty committees to administer degree programs for the school. The Office's responsibilities include the admission and orienting of new students, maintaining students' personal and academic records, administering the faculty advisory system and academic standards, counseling students on personal and academic problems, and administering the school's financial aid programs. The Office also provides a career counseling service and works closely with seniors who are planning graduate study.

Counseling and Advising
As entering freshmen, students will be assigned a counselor in the Office of Resident Instruction for orientation, academic advising, and counseling throughout the first year. (Transfer students are assigned counselors only for their first term.)

At the end of the first year (or term), each student will be assigned a faculty adviser. All teaching faculty members serve as advisers, and students' preferences for advisers are followed whenever possible.

Minority Students
Cornell University administers a variety of special opportunity programs designed to provide financial assistance and other forms of assistance to minority students and low-income students meeting program guidelines. The purpose of these special programs is to aid in increasing representation of state residents from minority groups historically underrepresented in higher education.

Study Options
Several study options are open to ILR undergraduates, making it possible to tailor a program to fit specific needs.

One such option is the five-year ILR master's degree. With early planning, some students may earn the M.S. degree in the fifth year. Using another option, some ILR students arrange for dual registration in Cornell's Graduate School of Business and Public Administration (B&PA), earning their bachelor's degree in ILR and a master's degree in B&PA after five years of study.

Some students elect to spend a semester in New York City, Albany, or Washington, D.C., with a chance to observe actual labor problem solving, or as much as a year of study at a foreign university. Others opt for internships that give them practical field experience, such as a summer in New York City's Office of Cooperative Bargaining or a term doing research for the New York State Senate Committee on Labor, in Albany.

For more information, see Special Academic Programs, which follows the next section.

A number of ILR courses deal directly with today's problems and involve fieldwork in the Ithaca area, elsewhere in New York State, and even in foreign countries. These courses take some students to the state legislature in Albany or to community action groups. Others may work in prisons, institutions, or school districts.

The ILR program allows juniors and seniors who want to conduct their own research to receive course credit for individually directed studies if the program is supervised by a faculty member.

Study In Absentia
Students who want to study at another institution for a semester or for a year and receive credit toward their undergraduate degree may petition to study in absentia. This permits students to study at a foreign university or at another American school that offers a program unavailable at Cornell. Eligibility requires good standing and approval of study plans by the director of resident instruction. Course work taken in absentia is usually not evaluated for transfer credit until the work has been completed and the student has returned to Cornell. Students then submit a course syllabus and other evidence of content to the chairman of the department that might have offered the respective course, or to a counselor in the Office of Resident Instruction if the course is more appropriate as an elective.

Leave of Absence or Withdrawal
If a student desires to withdraw or to take a leave of absence from the University, an interview should be scheduled with a counselor in the Office of Resident Instruction. Counselors will assist students in petitioning for a leave of absence.

Requirements for Graduation
To earn the Cornell Bachelor of Science degree in industrial and labor relations, the student needs to successfully complete 120 credits. Normally, this requires eight terms, although some students finish their studies in a shorter time.

Participation is also available to those residing outside New York State. For details, prospective students should consult the section Minority and Special Opportunity Programs in Introducing Cornell or contact the Office of Admissions.
Package 300 Industrial and Labor Relations

Required Courses
(51 credits)
The current curriculum prescribes the courses and subjects listed in the table below to be taken in the terms indicated during the freshman, sophomore, and junior years. In the senior year, all courses will be electives.

Scheduling and Attendance

Schedule Changes
Occasionally it may be necessary for a student to request changes in his or her course schedule either before a term begins or during the semester. Such requests must be directed to the Office of Resident Instruction in order to avoid a failing grade or possible loss of academic credit.

Class Attendance
It is each student’s responsibility to attend all scheduled classes unless approved excuses have been given by the faculty. In some courses an instructor may permit a maximum number of class absences without a grade penalty or dismissal from the course. An approved explanation for absence from class occasionally may be granted in advance of the expected absence by the Office of Resident Instruction. An approved absence may be warranted by:
1) participation in authorized University activities such as athletic events, dramatic productions, or debates;
2) medical problems supported by record of clinic or honorary treatment;
3) serious illness or death in immediate family;
4) other circumstances beyond the student’s control.
A request for approval of an absence should, when possible, be made to the Office of Resident Instruction before the date of expected absence. A reported and approved explanation of absence does not relieve a student from fulfillment of academic requirements during the period of absence. The course instructor has the authority to determine what work must be completed. The office can only confirm the explanation for absence. Students should inform the Office of Resident Instruction of any problems they have meeting course requirements.

Academic Standing and Grades

Academic Integrity
In 1977 the faculty of the School of Industrial and Labor Relations approved a revised code of academic integrity. This code, while based on the Cornell University code, varies somewhat. Copies are available from the Office of Resident Instruction, 101 Ives Hall.

Dean’s List
A Dean’s List is compiled for each of the four undergraduate classes each semester on the seventh day following receipt of final grades from the registrar. To be eligible for the Dean’s List, a student must meet all of the following criteria as of that date:
1) to establish good standing after a semester on warning;
2) to maintain an average of 3.2 or better and rank in the top 20 percent of the class;
3) to achieve good standing after being on warning for more than one semester if there has been significant improvement even though the cumulative average is still below 1.7;

S-U Grading Policy
An undergraduate may register to receive a final grade of S (Satisfactory) or U (Unsatisfactory) in courses that offer this option—in either the school or in other divisions of the University—subject to the following conditions.
1) The S-U option may be used in L&LR and in out-of-college course electives only, not in directed studies.
2) Students are limited to registering in two S-U courses a term.
3) S-U registration is limited to 4 credits for each course.
4) Students registering for S-U grades must be in good standing.
5) Students must fulfill the graduation requirement of 105 letter-graded courses.
ILR faculty members assign a grade of U for any grade below C- and a grade of S for any grade of C- or better. A grade of U is considered equal to an F in determining a student’s academic standing although it is not included in the cumulative average.
No change of grading (from letter to S-U or from S-U to letter) may be made after the first three weeks of class. There are no exceptions to this restriction, and appeals will not be accepted.

Incomplete Grades
An Incomplete (INC) is a grade assigned when the course has not been completed for reasons that are acceptable to the instructor. It is understood that the work may be completed later and credit given. The instructor may grant an Incomplete grade for a limited number of clearly valid reasons, but only to students with substantial equity in a course. A firm and definite agreement on the conditions under which it may be made up must be made with the instructor. The school’s policy allows a maximum of two full terms of residence for removal of an Incomplete. Incompletes not made up within this time automatically become an F.

Special Academic Programs
In order to meet the special academic objectives of some students, the school’s faculty has established several special academic programs. For additional information, students should contact a counselor in the Office of Resident Instruction. Counselors will explore the program with students to help them decide if it suits their interests.

Dual Registration in Business and Public Administration
Dual informal registration in the School of Business and Public Administration (B&PA) leads to a Bachelor of Science degree in industrial and labor relations and a master’s degree in business and public...
administration after five years of study and is open to students who meet the requirements of the Graduate School of Business and Public Administration.

Early planning by each student, preferably in the sophomore year, is desirable to ensure that B&PA expectations and the ILR curriculum requirements are fulfilled. Students interested in the very limited concentrated study in an area of specialization in the school for a Master of Science degree.

Students considering this program should consult a counselor in the Office of Resident Instruction after their freshman year.

Semester off Campus

For the past few years the semester-off-campus program has provided students with a vivid understanding of problems in labor and industrial relations through observation and participation in "real-life" labor-problem solving. A small number of selected students spend a term of the junior year in Albany, New York City, or Washington, D.C., in close contact with practitioners. Their activities include independent research under direction of ILR faculty and seminars on field work experience with employers, labor organizations, and government agencies. More information about this program is available from the Office of Resident Instruction.

Junior Year Abroad

A few students each year are granted permission to register in absentia and continue their studies at a foreign university. Although the school does not have a fixed program for foreign study, students who have studied abroad generally receive some credit for their course work and have found it a very rewarding experience. Students may attend a foreign university of their choosing, but guidance in finding and selecting programs is available from the Office of Resident Instruction and from the Career Center, 14 East Avenue.

Collective Bargaining, Labor Law, and Labor History

100 History of Industrial Relations in the United States Fall or spring. 3 credits.

C. Daniel, G. Korman, J. Morris, N. Salvatore.

This review of the history of industrial relations in the United States emphasizes developments in the twentieth century. The course concentrates on the American worker, both union and nonunion, labor movements, and the environmental forces that have shaped industrial relations in the United States. Readings are selected from scholarly accounts and original sources.

101 Special Studies in the History of Industrial Relations in the United States Fall or spring. 3 credits.

C. Daniel, G. Korman, J. Morris.

Several instructors offer undergraduate classes, each on a particular aspect of the history of industrial relations in the United States. Students choose among classes that may vary from year to year and cover topics such as industrial relations in the Age of Jackson and in other periods of American history such as the Gilded Age, the two World Wars, or the Great Depression. The relation of industry and organized labor in politics, and radicalism and dissent in the American labor movement.

200 Collective Bargaining Fall or spring. 3 credits.

R. Burton, C. Daniel, D. Lipsky, L. Mishel, P. Ross, R. Seeber.

A comprehensive study of collective bargaining: the negotiation and scope of contracts; the day-to-day administration of contracts; the major substantive issues in bargaining, including their implication for public policy; and the problem of dealing with industrial conflict.

201 Labor Relations Law and Legislation Fall or spring. 3 credits.

M. Gold, J. Gross, K. Hanslowe, R. Lieberwitz.

A survey of the law governing labor relations. The legal framework in which the collective bargaining relationship is established and takes place is analyzed. Problems of the administration and enforcement of collective agreements are considered, as are problems of protecting individual employees. A review of the major collective relations context. Also serves as an introduction to the legal system and method, and to legal and constitutional problems of governmental regulation of industrial and labor relations.

301 Labor Union Administration Fall. 3 credits.

Prerequisites: ILR 100 and 201.

G. Brooks, C. Daniel, R. Seeber.

A review of the operations of American unions, including a general theoretical framework, but with major emphasis on practical operating experience. Topics include the formal government of unions, organizational or institutional purposes and objectives and how these are achieved; underlying structure and relationship among members, locals, and national organizations; the performance of the primary functions of organizing, negotiating, contract administration; and the effect of the Landrum-Griffin Act.

303 Seminar in the Social History of American Workers Fall. 4 credits.

Limited to upperclass students who have demonstrated their ability to undertake independent work and who have received permission of the instructor.

G. Korman.

An examination of a different subject each year.

304 Seminar in the History, Administration, and Theories of Industrial Relations in the United States Fall or spring. 4 credits.

Prerequisite: permission of instructor.

C. Daniel, G. Korman, J. Morris.

Designed to explore the social, economic, and political background of industrial relations in the history of the United States. Examine a different subject each year.

305 Labor in Industrializing America: 1865–1920 Fall. 3 credits.

Prerequisite: ILR 100 and 201.

N. Salvatore.

Examines the experience of working people in the years between the Civil War and World War I. It will explore both the ways in which the American worker is organized, diverse cultures, ethnic and racial traditions, and political activities—and the dramatic changes in industry that restructured American life during this period.

306 Research Seminar in the American Labor Movement and Politics Fall or spring. 3 credits.

Prerequisite: ILR 101. Limited to upperclass students who have demonstrated ability to undertake independent work and who have received permission of the instructor.

J. Morris.

Students choose a research topic, using any disciplinary approach (such as law, history, behavioral or political science), and study the subject matter in the area.

Group meetings are devoted to (1) discussion in depth of special problems such as compulsory membership and union political structure; (2) exchange of research problems and reports. Some time normally devoted to group meetings is scheduled for individual consultations.

307 Industrial Relations Biographies Fall. 4 credits.

Limited to juniors and seniors. Prerequisite: permission of instructor.

J. Morris.

A study of American industrial relations history through the lives of some of the outstanding people who have helped make it—men and women of business, government, and the law, as well as leaders of labor and their allies among the intellectuals. While economic forces, institutional developments, and social values are important in shaping history, so also is the role of individual personality. Readings and discussions focus on biographies and autobiographies, supplemented in some cases with tapes and films. There will be written assignments, but emphasis will be on the weekly discussion.

380 Famous Trials in American Labor History Spring. 4 credits.

Open to sophomores, juniors, and seniors.

G. Korman.

This course in comparative history examines the complex experiences of the Yiddish-speaking immigrant workers and their families. A special subject of interest is the extraordinary history of the Jewish working classes between 1924 and 1948.

400 Union Organizing Spring (meetings twice a week for seven weeks). 2 credits.

D. Cullen, R. Donovan.

This course explores various aspects of unions' attempts to organize workers: why some workers join unions and others do not; the techniques used by both unions and employers during organizing campaigns, and the present law of organizing and proposed amendments to that law. Includes an examination and a research paper.

401 Collective Bargaining Structures Fall 3 credits.

Prerequisite: ILR 200.

D. Lipsky.

An examination of the conduct of collective bargaining, with emphasis on the size and scope of the bargaining unit and the union's role in collective negotiations. The relation between bargaining structure and product market structure, public policy, and union structure is studied. Industry and case studies of various bargaining structures, including pattern bargaining, coalition bargaining, and multiemployer bargaining are used to illustrate
043 The Law of Workers' Compensation 
Fall (seven weeks only), 2 credits.
J. Burton
A survey of legal aspects of workers' compensation, the program that provides cash benefits, medical care, and rehabilitation services to workers disabled by work-related injuries and diseases.

046 History of the Black Worker in the United States 
Fall, 3 credits. Prerequisite: I&LR 100.
J. Gross
Intended to introduce the student to the history of the black worker in the United States through a review and analysis of the existing literature of black labor history and through source documents from the National Archives. Focus is on the center around the black worker in agriculture, industry, and government; black worker migrations; black workers and organized labor; and black workers, discrimination, and the law.

407 Contemporary Trade Union Movement 
Spring, 3 credits. Prerequisites: I&LR 100 or 502 or permission of instructor.
C. Daniel
An examination of the contemporary history, administration, policies, and problems of American trade unions. Each semester the course focuses on particular aspects of the labor movement.

495 Honors Program 
Fall and spring (yearlong course). 3 credits each term. Admission to the I&LR Honors Program may be obtained under the following circumstances: (a) students must be in the upper 20 percent of their class at the end of their junior year; (b) an honors project, entailing research leading to completion of a thesis, must be proposed to an I&LR faculty member who agrees to act as thesis supervisor; (c) the project, endorsed by the proposed faculty sponsor, is submitted to the Committee on Academic Standards and Scholarships. Accepted students embark on a two-semester sequence. The first semester consists of determining a research design, familiarization with germane scholarly literature, and preliminary data collection. The second semester consists of the data collection and preparation of the honors thesis. At the end of the second semester, the candidate is examined orally on the completed thesis by a committee consisting of the thesis supervisor, a second faculty member designated by the appropriate department chairperson, and a representative of the Academic Standards Committee.

498 Internship 
Fall or spring, 4-9 credits.
Designed to grant credit for individual research under the direction of a faculty member by mature upperclass undergraduates who have been selected for an internship. All requests for permission to register for 498 must be approved by the faculty member who will supervise the project and the chairman of the faculty member's academic department before submission for approval by the Committee on Academic Standards and Scholarship.

499 Directed Studies 
Fall or spring, 3 credits.
For individual research, conducted under the direction of a member of the faculty, in a special area of labor relations not covered by regular course offerings. Registration is normally limited to seniors who have demonstrated ability to undertake independent work. Eligible students should consult a counselor in the Resident Instruction at the time of course registration to arrange for formal submission of their projects for approval by the Academic Standards Committee.

500 Collective Bargaining 
Fall or spring, 3 credits. Open only to graduate students. It is recommended that I&LR 501, Labor Relations Law and Legislation, be taken prior to or concurrently with 500.
M. Gold, J. Gross, K. Hanslove, R. Liebertwitz.
A comprehensive study of collective bargaining, with special emphasis on philosophy, structure, process of negotiations, and administration of agreements. Attention is also given to problems of handling and settling industrial controversy; the various substantive issues, and important developments and trends in collective bargaining.

501 Labor Relations Law and Legislation 
Fall or spring, 3 credits.
M. Gold, J. Gross, K. Hanslove, R. Liebertwitz.
A survey and analysis of the labor relations law that examines the extent to which the law protects and encourages fair dealing by employers in the labor market. The legal framework within which the collective bargaining takes place is considered and analyzed. Problems of the administration and effectiveness of laws are considered, as are attempts to protect the individual member-employee rights with the union.

502 Labor Union History and Administration 
Fall or spring, 3 credits.
C. Daniel, G. Korman, J. Morris.
A presentation of the history of labor in America with emphasis on post-Civil War trade union development. Includes an analysis of the structure and functions of the various units of labor organization ranging from the national federation to the local union, and some consideration of special problems and activities such as democracy in trade unions, and health and welfare plans, as well as of various types of unions, such as those in construction, maritime trades, entertainment, transportation, and basic industry.

600 Advanced Seminar in Labor Arbitration 
Spring, 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: I&LR 502 or equivalent and permission of instructor.
J. Gross, K. Hanslove.
An advanced seminar in labor arbitration emphasizing the practical aspects of current labor arbitration techniques and problems. Subjects considered range from laboratory exercises in the presentation of an arbitration case, the preparation of prehearing and posthearing briefs, and the writing of an arbitration opinion and award, to the investigation and evaluation of the experience of labor arbitrators, with selected case problems arising in state and federal employment and public education as well as in the private sector.

601 Integration of Industrial Relations Theories 
Fall or spring, 3 credits. Open to second-year graduate students and seniors.
An exploration of the similarities and differences among the (1) normative premises, (2) theoretical frameworks, (3) substantive issues, and (4) methodological approaches found in the various areas of study in industrial relations. The areas studied include (1) collective bargaining and union-management relations, (2) organizational behavior and personnel, and (3) labor economics and manpower policy. An effort is made to explore the potential for integration among these various areas by discussing some issues or problems that cut across the traditional lines of study.

602 Arbitration 
Fall or spring, 4 credits. Limited to 21 students. Prerequisites: undergraduates, I&LR 200; graduate students, I&LR 500.
J. Gross, C. Rehmus.
A study of the place and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of an arbitration hearing, and the preparation of an arbitration opinion.

603 Governmental Adjustment of Labor Disputes 
Fall or spring, 4 credits. Prerequisites: undergraduates, I&LR 200; graduate students, I&LR 500.
D. Cullen.
An examination of the various governmental techniques for dealing with labor disputes in both the private and public sectors, including mediation, fact-finding arbitration (both voluntary and compulsory), the use of injunctions, and seizure. The course also examines the application of these techniques under the Railway Labor Act, Taft-Hartley Act, and various state acts.

604 Readings in the Literature of American Radicalism and Dissent 
Fall or spring, 3 credits. Limited to seniors and graduate students. Each term, concentration is on a different historical aspect of American radicalism and dissent. Some examples of areas and writers who might be selected for study are agrarian reform—Thomas Skidmore, George Henry Evans, and Ignatius Donnelly; anarchism—Josiah Warren, William D. Haywood, Emma Goldman, and Paul Goodman; communism—John Reed, Jay Lovestone, and William Z. Foster; economic dissent—Henry George, Thorstein Veblen, and Francis Everett Townsend, equal rights for blacks and black nationalism—William E. B. DuBois and Marcus Garvey.

605 Readings in the History of Industrial Relations in the United States 
Fall, 3 credits. Limited to seniors and graduate students. Prerequisites: seniors, I&LR 100 and 101; graduate students, I&LR 502.
C. Daniel, G. Korman, J. Morris.
A seminar covering, intensively and in historical sequence, key documents, studies, legislative investigations, and memoirs concerning American industrial relations systems. Primarily designed to aid students in orienting themselves systematically and thoroughly in the field. Among the authors and reports covered are E. P. Thompson, John R. Commons, Norman Ware, Lloyd Ulman, the Abram Hewitt hearings, the Henry W. Blair hearings, the United States Industrial Commission, Philip Taft, Paul F. Brissenden, and the United States Commission on Industrial Relations.

606 Theories of Industrial Relations Systems 
Fall or spring, 3 credits. Limited to seniors and graduate students. Prerequisites: seniors, I&LR 100 and 101; graduate students, I&LR 502.
C. Daniel, G. Korman, J. Morris.
An examination of the leading theories concerning the origins, forms, organization, administration, aims, functions, and methods of industrial relations systems. Among the theories studied are those formulated by Karl Marx, Mikhail Bakunin, Georges Sorel, Vladimir Lenin, Lujo Bretoni, Beatrice and Sidney Webb, Herbert Croly, Antonio Gramsci, Selig Perlman, Frank Tannenbaum, the Guild Socialists, Karl Polanyi, Clark Kerr, Frederick Harbison, John Dunlop, and Charles A. Myers.

607 Arbitration and Public Policy 
Spring, 3 credits. Limited to 10 I&LR students and 10 law students. Prerequisite: permission of instructor.
J. Gross, K. Hanslove.
The impact of law and public policy on the arbitration of labor disputes in both the private and public sectors. Some of the topics covered include the law of arbitration, the scope of judicial review, the interaction between Title VII and arbitration, and individual rights to due process in the handling of grievances. Students prepare briefs, argue cases, and write awards. As opportunity permits, students are invited to attend arbitration hearings and to write mock awards. Each student also writes a research paper on a topic within the general scope of the course and presents it in summary form to members of the seminar for criticism and evaluation.
Fall or spring. 3 credits. Prerequisites: undergraduates, I&LR 201; graduate students, I&LR 502.

682 Seminar in Labor Relations Law and Legislation Fall or spring. 3 credits. Limited enrollment. Prerequisite: permission of instructor.

683 Special Topics in the History, Administration, and Theories of Industrial Relations Fall or spring. 3 credits. Prerequisites: undergraduates, I&LR 100 and 101; graduate students, I&LR 502. M. Gold, C. Daniel, G. Korman, J. Morris, N. Salvador.

684 Employment Discrimination and the Law Fall or spring. 4 credits. Prerequisite: I&LR 201 or 501 or equivalent. M. Gold.

685 Collective Bargaining in Public Education Spring. 3 credits. Limited enrollment. Prerequisite: permission of the instructor.

686 Collective Bargaining in the Public Sector Fall or spring. 3 credits. Prerequisites: undergraduates, I&LR 200 and 201; graduate students, I&LR 500 and 501. J. Burton, R. Donovan, P. Ross.

687 Current Issues in Collective Bargaining Fall or spring. 3 or 4 credits. Limited to 25 students. Prerequisite: I&LR 200 or 201.

688 Labor Education Spring. 3 credits. Limited to 15 students. A. Nash.

690 Workshop in Collective Bargaining, Labor Law, and Labor History Fall and spring. 2 credits. Enrollments limited to M.S. and Ph.D. candidates in the department. S-U grades only.

701 Theory and Research in Collective Bargaining Fall or spring. 3 credits. Open to graduate students who have had I&LR 500 and 723 or their equivalents. Recommended: a statistics course beyond the level of I&LR 510.

703 Research Seminar in Public Sector Collective Bargaining Fall or spring. 1-3 credits. Prerequisites: basic familiarity with statistical analysis (correlational and multivariate techniques) and interest in theoretical and empirical research on issues related to public sector labor relations. P. Ross.

705 Economic and Social Statistics 303 Fall or spring. 1-3 credits.

Economic and Social Statistics P. McCarthy, chairman; I. Blumen, I. Francis, P. Veilman.

210 Statistics (Statistical Reasoning) Fall or spring. 3 credits. An introduction to the basic concepts of statistics: description of frequency distribution (averages, dispersion, and simple correlation) and introduction to statistical inference. Prerequisite to certain of the specialized courses on applications of statistics offered in various departments.

211 Economics and Social Statistics Spring. 3 credits. Prerequisite: I&LR 210. A continuation of I&LR 210. Application of statistical techniques to the quantitative aspects of social studies. Students are taught to use the Minitab statistics package and use the computer throughout the course. Topics include statistical description and inference, multiple regression and correlation, index numbers, elements of time series analysis, and the design of sample surveys.
310 Design of Sample Surveys  
Spring. 3 credits.  
Prerequisite: one term of statistics.  
Application of statistical methods to the sampling of human populations. A thorough treatment of the concepts and problems of sample design with respect to cost, procedures of estimation, and measurement of sampling error. Analysis of nonsampling errors and their effects on survey results (for example, interviewer bias and response error). Illustrative materials are drawn from such fields as market research and attitude and opinion research.

311 Statistics II  
Fall. 4 credits.  
Prerequisite: I&LR 210 or permission of instructor.  
An intermediate, nonmathematical statistics course emphasizing the concepts associated with statistical methods. Includes a treatment of estimation and tests of hypotheses with reasons for choice of various methods and models. Application to problems involving percentages, means, variances, and correlation coefficients with an introduction to nonparametric methods, analysis of variance, and multiple regression and correlation.

410 Techniques of Multivariate Analysis  
Fall. 3 credits.  
Prerequisite: I&LR 311.  
The techniques of multivariate statistical analysis, the associated assumptions, the rationale for choices among techniques, and illustrative applications. Some matrix algebra and related mathematics are introduced. Includes regression, correlation, principle components, multivariate tests on means, variances and covariances, relations between sets of variates and discriminatory analysis.

411 Statistical Analysis of Qualitative Data  
Spring. 3 credits.  
Prerequisite: I&LR 311. I. Blumen.  
An advanced undergraduate and beginning graduate course. Includes investigation of association between qualitative variates, paired comparisons, rank-order methods, and other nonparametric statistical techniques, including those related to chi-squared.

499 Directed Studies  
For course description, see p. 302.

510 Introductory Statistics for the Social Sciences  
Fall or spring. 3 credits.  
A nonmathematical course for graduate students in the social sciences without previous training in statistical method. Emphasis is on discussion of general or specialized aspects of statistical analysis and on initiative in selecting and applying statistical methods to research problems. The subjects ordinarily covered include frequency distributions, regression and correlation analysis, and selected topics from the area of statistical inference.

610 Seminar in Modern Data Analysis  
Fall. 3 credits.  
Prerequisite: I&LR 311 or equivalent. Not offered 1982–83. P. Wellman.  
An advanced survey of modern data analysis methods. Topics include exploratory data analysis, robust methods, regression methods, and diagnostics. Extensive outside readings cover recent and historical work. Participants should have some knowledge of multiple regression, including the use of matrices (Statistics and Biometry 416 may be taken concurrently), as well as some experience using a computer.

711 Seminar in Statistical Methods  
Spring. 3 credits. I. Francis.  
The philosophical problems of drawing inferences from observational data and the use of computer programs in the statistical analysis of behavioral social science data. Exact contents may vary from term to term. A detailed description is available before registration.

712 Theory of Sampling  
Fall. 3 credits.  
Prerequisite: calculus and at least one semester of mathematical statistics.  
A companion course to I&LR 310, Design of Sample Surveys, stressing the development of the fundamentals of sampling theory. Attention is paid to recent progress in the field. Occasional illustrative material is given to indicate the application of the theory.

799 Directed Studies  
For course description, see p. 303.

International and Comparative Labor Relations

J. Windmuller, chairman; M. G. Clark, G. Fields, W. Galenson

[330 Comparative Industrial Relations Systems I  
Fall. 3 credits (in some cases, 1 additional credit may be arranged with the instructor). Open to juniors and seniors. J. Windmuller.  
An introductory course concerned with the contemporary structure, institutional arrangements, and philosophy of the labor relations systems of several countries in advanced stages of industrialization. Countries to be examined include Great Britain, France, Germany, Denmark, and collective bargaining. The course will also include a review of relevant international organizations.

331 Comparative Industrial Relations Systems II  
Spring. 3 credits (in some cases, 1 additional credit may be arranged with the instructor). Open to juniors and seniors. J. Windmuller.  
A study of the industrial relations systems of less-developed countries and non-Western countries in various stages of economic development and in various political contexts, including Japan, the Soviet Union, Yugoslavia, India, and several others. Emphasis on the role of government, trade unions, and collective bargaining. The course will also include a review of relevant international organizations.

332 Labor in Developing Economies  
Spring. 3 credits. G. Fields.  
The economic problems of labor in less-developed nations. Among the subjects included are determinants of income and wage structures in less-developed countries; labor demand and unemployment; labor supply and migration; human resource policy; and development strategy and employment growth.

430 European Labor History  
Fall. 3 credits. J. Windmuller.  
The development of trade unions in European countries, especially Great Britain, France, and Germany, between 1850 and 1950. Patterns of union organization, political party—trade union links, the growth of industrial relations systems, and the evolution of public policies toward labor are emphasized.

499 Directed Studies  
For course description, see p. 302.

530 Comparative Industrial Relations Systems I  
Fall. 3 credits. J. Windmuller.  
Students in this course attend the lectures in I&LR 330 (see description for I&LR 330). If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in I&LR 331 and related topics.

531 Comparative Industrial Relations Systems II  
Spring. 3 credits. J. Windmuller.  
Students in this course will attend the lectures in I&LR 331 (see description for I&LR 331). If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in I&LR 331 and related topics.

532 Labor in Developing Economies  
Spring. 3 credits. G. Fields.  
Students in this course attend the lectures in I&LR 332 (see description for I&LR 332). If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in I&LR 332 and additional topics.

630 Seminar in International and Comparative Labor Relations  
Spring. 3 credits. Prerequisite: I&LR 330 or 331, 530 or 531, or permission of instructor. Intended for students with some background in international and comparative labor relations. J. Windmuller.  
An opportunity for reading and research on one or two central themes. Topics in recent years have included the labor aspects of the multinational corporation, worker participation in management, international labor movements, and American labor in world affairs.

799 Directed Studies  
For course description, see p. 303.

Labor Economics

140 Development of Economic Institutions  
Fall or spring. 3 credits. Prerequisite for non-I&LR students: permission of instructor. G. Boyer.  
Designed to give the student an understanding of the historical development of our economic institutions and the nature of the problems incident to economic change and development as part of the background for understanding and analysis of important present-day issues. Attention is focused on the agricultural, commercial, and industrial revolutions, tracing their development from their beginnings in Western Europe to the present.

240 Economics of Wages and Employment  
Fall or spring. 3 credits. Prerequisites: Economics 101–102 or equivalent. An introduction to the characteristics of the labor market and to analysis of wage and employment problems. Among topics studied are the composition of the labor force, job-seeking and employment practices, methods of wage determinations, theories of wages and employment, economic effects of unions, the nature and causes of unemployment, and programs to combat joblessness and poverty.

340 Economic Security  
Fall or spring. 3 credits. Staff.  
History, philosophies, and the economic and social effects of social security measures. Analysis of programs offering protection against economic loss due to industrial accident, temporary and permanent disability, illness, old age, premature death, and unemployment, as well as private and voluntary efforts to provide security, and the problems of integrating public and private programs. An examination is made of proposals for amending or modifying economic security measures, including guaranteed income proposals.
4 credits. Prerequisites: I&LR 240 or Economics 311, and background in statistics through regression analysis, or permission of the instructor.

R. Ehrenberg

An advanced course dealing with the theory and empirical analysis of labor markets and their applications to policy issues. The specific topics covered vary. The course is designed to increase students’ competence in applying microeconomic theory and econometrics to policy issues. Each student completes an econometric research project as part of the course.

344 Comparative Economic Systems: Soviet Russia Fall. 4 credits.
G. Clark

A comparative analysis of the principles, structure, and performance of the economy of Soviet Russia. Special attention is devoted to industry and labor.

346 Economics of Collective Bargaining Fall. 3 credits.
T. Woodruff

Economic aspects of the negotiation, terms, and effects of union-management agreements at the individual firm, industry, regional, and national levels. Topics examined include forces influencing contract demands and terms; employer adaptation to higher wages and benefits; interindustry differences in competitiveness, firm size, and markets; regional location of industry; international competition; government regulations, labor supply; inflation, recession, and unemployment.

440 Health, Welfare, and Pension Plans Spring. 3 credits. Open to juniors, seniors, and graduate students.
O. Mitchell

An analysis and appraisal of private health, welfare, and pension plans. Consideration of the origin and development of employer, union, and joint programs; a critical examination of the financing, administration, and general effectiveness of the plans.

441 Income Distribution Spring. 3 credits. Open to upperclass and graduate students.
R. Hutchens

Explores income distribution in the United States and the world. Topics to be covered include functional and size distributions of income, wage structure, income-generating functions and theories, discrimination, poverty, public policy and income distribution, international comparisons, and changing income distribution and growth.

446 Seminar on Employment Policies and Problems of the College Educated Fall. 3 credits.
R. Aronson

A study of the labor market behavior, institutions and public policies relating to the college-trained persons, especially those of the technological and human services professions. The roles of the universities, government, and professional societies in determining the development, utilization, and compensation of these occupations is investigated. Topics or occupations selected for more intensive study are chosen according to individual interest.

498 Internship Fall or spring. 4-9 credits.
For course description, see p. 302.

499 Directed Studies
For course description, see p. 302.

541 Social Security and Protective Labor Legislation Spring. 3 credits. Normally required of graduate students majoring in or minoring in labor economics and income security and required of M.I.L.R. candidates.

Staff

The fundamental aspects of employee protection and income security. Emphasis is on state and federal minimum wage and hour laws, antidiscrimination legislation, employee benefit programs, social insurance, and public welfare programs. The underlying causes of the legislation, the legislative history, the administrative problems and procedures, and the social and economic impact of the legislation is studied.

[441 Comparative Economic Systems: Soviet Russia Fall or spring. 3 credits. Prerequisite: I&LR 344. G. Clark

Preparation and discussion of individual papers on selected topics concerning the Soviet economy.]

642 Work and Welfare: Interactions between Cash Transfer Programs and the Labor Market Fall. 3 credits. Prerequisite: some familiarity with microeconomics.
R. Hutchens

Emphasizes policy issues in analyzing the relationship between the labor market and cash transfer programs such as social security, public assistance, and unemployment and wages in determining the level and distribution of cash transfers. Investigates the connection between cash transfers and labor supply. Topics include determinants of cash transfer demand and supply; the negative income tax experiments, and program incentives for withdrawal from the labor force (for example, incentives for early retirement implicit in old age insurance). A paper on a specific program is required.

643 Special Topics in Labor Economics Fall or spring. 3 credits.

Staff

Devoted to new policy issues and to recent literature in the field. The specific content and emphasis varies in response to the interests of the faculty member teaching the course.

644 The Economics of Occupational Safety and Health Fall. 3 credits.
R. Smith

The course analyzes the problem of occupational injuries and illnesses in the United States. The first section concentrates on legal requirements, judicial interpretations, and legal implications of the Occupational Safety and Health Act, then shifts to such questions as the need for, and appropriate goals of, the act; the stringency of safety standards considered in a benefit-cost framework, the difficulties in enforcing the act; and estimates of the impact of the act.

645 Economics of the American System of Private Enterprise (also Economics 355/555) Fall. 4 credits.
R. Frank

A critical examination of the private sector of the United States economy; its history, some leading current relevant issues, and its relation to the theoretical and philosophical interpretations of the market economy.

647 Evaluation of Social Programs Spring. 4 credits.
R. Ehrenberg

An introduction to the methodologies used by economists to evaluate the impacts of social action programs and legislation. General evaluation methodology, cost-benefit analysis, and econometrics are discussed. Case study applications are considered to illustrate the uses of these techniques, to acquaint the student with major current government programs and legislation, and to estimate these programs’ economic impacts. Throughout, the primary analytic framework used by the instructor is microeconomics.

648 Economics of the American System of Private Enterprise (also Economics 355/555) Spring. 4 credits.
R. Frank

A continuation of I&LR 645, although 645 is not a prerequisite to 648.

649 Human Capital, Wages, and Discrimination Spring. 3 credits.
R. Butler

Uses modern microeconomic theory to look at the causes as well as the consequences of skills acquisition for individuals. This investigation of investment in "human capital" begins by looking at life-cycle models of earnings in which the demand for, and effects of, education, on-the-job training, and health care are derived. A large portion of the course will discuss the roles that changing levels of educational opportunity and market discrimination have played in explaining the recent changes in the labor market status of females and minorities.

744 Seminar in Labor Economics Fall, 3 credits.
I&LR 744 and 745 constitute the Ph.D. level sequence in labor economics.
R. Ehrenberg

Reading and discussion of selected topics in labor economics. Applications of economic theory and econometrics to the labor market and human resource areas.

745 Seminar in Labor Economics (also Economics 642) Spring. 3 credits.
R. Butler

Reading and discussion of selected topics in labor economics in the fields of theory, institutions, and policy.

798 Internship
For course description, see p. 303.

799 Directed Studies
For course description, see p. 303.

940 Workshop in Labor Economics Fall or spring. 3 credits. Intended for Ph.D. students who have started to write their dissertations. Focus is on the formulation, design, and execution of dissertations. Preliminary plans and portions of completed work are presented for discussion.

Organizational Behavior

120 Society, Industry, and the Individual I Fall. 3 credits.
S. Bacharach

The relationship between industry and the economy as a whole and its implications for other social institutions in American society (including stratification, politics, and American values) is discussed. The nature of industrial organizations and of complex organizations in general, emphasizing authority relations, goals, the division of labor, and bureaucracy.
321 Society, Industry, and the Individual II  
Spring. 3 credits.  
S. Kirmeyer.  
Deals with the relationship between the individual and the organization and such basic psychological processes as need satisfaction, perception, attitude formation, and decision making. The individual is described as a worker, as a member of a formal and informal group. Within this area, particular emphasis is placed on leadership, problem solving, and conflict resolution.

221 Social Issues and Social Theory in Industrial Society  
Spring. 3 credits.  
A survey of the literature on organization-environment and interorganizational relationships.

222 Studies in Organizational Behavior: Regulating the Corporation  
Fall. 3 credits.  
R. Stern.  
The course will examine public and private power from an organizational perspective. The resource-dependence approach to organization-environment relations provides a framework for interpreting government attempts at the regulation of corporate behavior. Topics cover the structure and functioning of government regulatory agencies and corporate responses to regulation, including corporate strategy, changes in professional practice, and the role of interest groups. Research and case materials focus on the implementation of environmental protection, occupational health and safety, equal opportunity, antitrust, and rate-setting regulations.

320 The Psychology of Industrial Engineering  
Fall and spring. 4 credits.  
T. Hammel.  
A study of the human factors in the industrial engineering of work, work places, tools, and machinery. The course examines the aspects of individual and social psychology that operate in the work setting and that should be taken into account in the design of jobs. These include limitations of the human sensory system; individual difference in skills, abilities, motives, and needs; group dynamics; intrinsic motivation; job satisfaction; and change in occupations.

321 Stress at Work  
Fall and spring. 4 credits.  
S. Kirmeyer.  
Explores the impact of the social psychological demands of work environments on employee stress. Among the topics to be discussed are: (1) conceptual models of stress and coping; (2) social, situational, and personal factors mediating the effects of stressors; and (3) adaptive coping processes. Readings will focus on the person-environment fit in the work setting, and social support networks, as well as on environmental stressors such as noise, high density, job structure, and unemployment. Specific attention will be given to the stressors faced by employees in service occupations.

322 Comparative Theories of Organizational Behavior and Social Character  
Fall. 3 credits.  
L. Gruenfeld.  
A comparative social-psychological approach is used to examine theories of work, authority, conflict, and change in employment organizations.

323 Introduction to the Study of Attitudes  
Fall. 4 credits. Open to juniors and seniors.  
T. Hammel.  
Designed to acquaint the student with what is known about (1) origins of human attitudes, (2) the determinants of attitude change, and (3) the measurement of attitude differences. Studies employing clinical, experimental, and survey techniques are discussed. Each student designs, executes, and analyzes his or her own research study.

324 Organizations and Deviant Behavior  
Spring. 3 credits. Limited to 40 students. Prerequisite: one or more courses in both sociology and psychology.

H. Trice.  
Focus is on the relationship between organizations and deviant behavior. Covers (1) the nature and etiology of psychiatric disorders; particularly schizophrenia, the psychopaths, and psychosomatic disorders; (2) organizational factors related to these disorders and to the more general phenomena of role conflict and stress; (3) an examination of alcoholism as a social pathology, in terms of personality characteristics and precipitating organizational factors; (4) evaluation of organizational responses to deviance; (5) the nature of self-herp organizations such as Alcoholics Anonymous; and (6) the structure and functioning of the mental hospital.

325 Organizations and Social Inequality  
Spring. 4 credits.  
Examines the central role that organizations in industrial societies play in allocating income, status, and other resources to individuals. Marxist conceptions of class and Weberian concepts of job authority will be examined to see what additional power they add to the explanation of social inequality, particularly in regard to income attainment. As the center of unit of conflict, the factory will be organizations, a historical section will be included that deals with the evolution of current control and compensation structures in large-scale organizations.

326 Sociology of Occupations  
Fall. 3 credits. Prerequisite: one or more courses in sociology.

H. Trice.  
Focuses on (1) the changing character of American occupations within the context of social change; (2) occupational status—differences in income, prestige, and power, and the resultant general phenomenon of social stratification; (3) vertical and horizontal occupational mobility; (4) recruitment and socialization into occupational roles; (5) the process of professionalization; and (6) companionship of personnel within and across occupational patterns of other occupations. A major sociological theme is the relationship between occupational structure and workplace structure.

327 Psychology of Industrial Conflict  
Fall. 4 credits. Staff.  
An application of frustration theory to the analysis of conflict and stress in organizations and society. Comparisons are made between industrial relations, role relations, international relations, and other settings. Readings include behavioral research findings from the area of conflict resolution, and studies of the effects of policy and professional organizations. Relevant contributions from experimental, social, and clinical psychology are also considered.

328 Cooperation, Competition, and Conflict Resolution  
Spring. 4 credits. Prerequisite: two courses in social psychology or equivalent.

An examination of empirical research relating to the resolution of interpersonal, intergroup, and intercultural conflict. Specific attention is devoted to studying factors that contribute to the development of cooperative or competitive bonds between parties to a conflict. The following topics are studied: the availability and use of threat; the credibility, intensity, and costs of threat; fractioning and escalating conflict; Personality and situational factors that regulate conflict intensification are stressed.

329 Sociological Analysis of Organizations  
Fall. 3 credits. Prerequisites: 1&LR 120 and 121 or equivalent.

Staff.  
Introduces students to the basic issues involved in the sociological analysis of organizations. It traces theoretical organization from Max Weber to the most recent research. Among the themes to be discussed are: the internal structure of organizations; communication in organizations; decentralization and organizational change; organizational technology, and organizational environment.

370 The Study of Work Motivation  
Fall. 4 credits. Open to juniors and seniors with permission of instructor.

T. Hammel.  
Designed to acquaint the student with the basic concepts and theories of human motivation, with implications for organizational change and job design. Focus is on theories of worker motivation and on research approaches and results as they apply to individuals and groups in formal organizations. Readings are predominantly from the field of organizational psychology, supplemented by relevant contributions from experimental, social, and clinical psychology. Each student will design, execute, and analyze a research study of his or her own.

371 Individual Differences and Organizational Behavior  
Fall. 4 credits. There are no formal prerequisites for this course; some acquaintance with the substance and methods of behavioral or social psychology will be helpful.

L. Gruenfeld.  
This course considers several related theories of personality relevant to an understanding of behavior in and about organizations. The emphasis is on comparative approaches to work cultures and corresponding social character types. A unit on the assessment of personality and a strategy for verification of theories of personality are presented to highlight research implications relevant to motivation, leadership styles, conflict, and stress in organizations.

373 Organizational Behavior Simulations  
Fall, weeks 1–7. 2 credits. Prerequisite: 1&LR 120 and 121 or equivalent.

R. Flammer.  
Basic principles of organizational behavior are studied through readings and participation in two simulation games. The first game, The Organizational Game: Design, Change, and Development, by Miles and Randolph, simulates an organizational organization. While the second, The Fuzzy Game, by Paton and Lockett, simulates a cooperative. Organizational design, decision making, and conflict are the central topics of discussion. The contrasting bases of power in the two organizations permits the study of the assumption underlying organization structure and process.

420 Group Processes  
Fall. 4 credits.

L. Gruenfeld, N. Rosen.  
Several conceptual and methodological approaches are applied to the observation of worker behavior in groups. Students observe, analyze, and quantify behavior in ongoing groups. Emphasis is on systematic observation of interpersonal behavior in open field groups, rather than contrived experimental groups.

422 Groups in Work Organizations  
Fall. 4 credits. Enrollment limited. Prerequisite: permission of instructor.

N. Rosen.  
This is an applied social psychology course that emphasizes the building, maintenance, and renewal of purposive groups working in formal organizations. The course deals with models and variables that interact with group cohesion and performance. Structural, environmental, task, motivational, and interpersonal variables are considered. This is not intended as a sensitivity training laboratory; the course work is substantive and includes observation and analysis of live work groups in the field.

423 Evaluation of Social Action Programs  
Fall. 3 credits.

H. Trice.  
A consideration of the principles and strategies involved in evaluation research; experimental research designs, process evaluation, and adaptations of cost benefits and cost efficiency to determine the extent to which intervention programs in fields such as training and therapy accomplish their goals. The adaptation of these strategies to
large social contexts such as child guidance clinics, mental health clinics, and programs in the poverty areas such as Head Start are considered. Fieldwork and emphasizes assessment of program implementation.

424 Study of Public Sector Bureaucracy
Spring. 3 credits. Prerequisite: permission of instructor.
S. Bacharach
Field research in public sector organizations such as a school bureaucracy or a social welfare bureaucracy. Students conduct a major study into which they integrate themes from organizational theory. Theoretical issues such as decentralization, participation, and communication are discussed in the seminar.

425 Sociology of Industrial Conflict
Spring. 4 credits.
R. Stern
The focus is on the variety of theoretical and empirical evidence available concerning social, economic, and political causes of industrial conflict. The manifestations of conflict such as strikes, labor turnover, absenteeism, and sabotage, and the influence on the environments in which they occur is emphasized.

426 Theories of Industrial Society
Fall. 4 credits. Prerequisite: I&LR 120 and permission of instructor.
S. Bacharach
Concentrates primarily on the works of Weber and Marx, and will consist of readings in the original texts.

427 The Professions: Organization and Control
Fall. 4 credits.
R. Stern
The professions (including medicine, law, and several others) are the cases used in this course to examine issues of occupational organization and control. Professional associations attempt to set standards of ethics and practice, regulate educational programs, maintain specific images, and control the supply of entrants to professions. How do such associations function, and how successful is their attempt at regulation of professional conduct? How might the potential transformation of some professional associations into union-style organizations be interpreted? The course is designed in the context of the role of professions in contemporary society.

473 Ecological Psychology: Behavior-Setting Analysis within the Organizational Context
Fall. 3 credits.
S. Kirmeyer
The origins, methods, and central concerns of ecological psychology. Ecological psychology is one of the areas of specialization in psychology that has developed a theoretical framework and research technique for the study of behavior in everyday environments. Methods used to develop observation records as well as techniques used to divide the behavior stream into structural units will be examined. The primary focus of the course will be the more recent concerns of ecological psychology, namely, the study of community and organizational behavior settings. Assigned reading will provide an overview of the theory of behavior settings, the methods used to identify and describe settings, as well as practical applications in organizational psychology. Behavior-setting theory will be used as a point of departure in examining selected topics in organizational psychology; these include person-environment fit in the work setting, the impact of organizational size of social climate, work-life quality and job enrichment programs, and overload stress and staff "burn-out" in service settings.

475 Organizational and Political Behavior in School Districts
Fall. 4 credits. Enrolment limited. Prerequisite: permission of instructor.
S. Bacharach
This course is intended to provide students with research experience through the study of the administrative and governance processes in school districts. The student will be required to work with school district and union personnel while investigating the following areas: (a) structure and process of decision making in urban and rural school districts, (b) organizational conflict as reflected in school board meetings, (c) the variations in, and effect of, leadership style as evidenced by different superintendents' advisory techniques, (d) the collective bargaining process as reflected in both contracts and actual negotiations, and (e) the effect of the Taylor Law on the structure and process of decision making in school districts, (f) the effects of administrative law on conflict in school districts. Students will be responsible for the collection of data and the presentation of a final report on their project.

476 Unions and Public Policy in School Districts
Spring. 4 credits. Enrollment limited. Prerequisite: permission of instructor.
S. Bacharach
A continuation of I&LR 475, but 475 is not a prerequisite. This course is strictly a research field seminar. Students will be required to work with school districts and union personnel while investigating the following areas: (a) labor contracts with school districts, (b) relations between teachers' unions, school boards, and superintendents, (c) teacher unions' involvement with school district policies.

478 Applied Topics in Organizational Behavior
Fall. 4 credits. Prerequisite: two courses in organizational behavior beyond the 100 level.
L. Williams
Reading and classroom discussion will be devoted to each of three topics. The topics are industrial gerontology, with a particular focus on retirement, technology and the office, and gender and personality as organizational variables. Readings will be primarily from journal articles. Students will have a research task for each topic.

495 Honors Program
Fall and spring (yearlong course). 3 credits each term.
For course description, see p. 302.

498 Internship
Fall or spring. 4-9 credits.
For course description, see p. 302.

499 Directed Studies
For course description, see p. 302.

520 Organizational Behavior I
Fall. 3 credits.
S. Bacharach
Survey of concepts, theories, and research from the fields of organizational and social psychology as these relate to the behavior of individuals and groups in organizations. Job attitudes, motivation, performance, leadership and power, group formation, perception, and organizational climate. A preliminary course for advanced work in organizational behavior.

521 Organizational Behavior II
Spring. 3 credits.
S. Bacharach
Formal organizations are studied from the perspectives of classical organizational theory, human relations theory, and comparative and cross-cultural analysis. Contemporary theories and quantitative approaches to organizational structure are also considered in some detail. Intended to be preliminary to more intensive work in organizational behavior.

620 Theories of Organizational Change, Innovation, and Evaluation
Fall. 4 credits.
Prerequisite: two organizational behavior courses at the 300 level, or advanced courses in sociology or psychology.
H. Trice
This seminar examines the dynamics of individual, structural, and environmental factors operating in organizational change in general, and in the implementation and use of innovations within formal organizations in particular. The role of evaluative research in assessing the effectiveness of such innovations is emphasized. The course also includes an exploration of the implications of organizational effectiveness on innovations. Readings are interdisciplinary and include sociology, psychology, and political science.

623 Theories of Industrial Society
Spring. 4 credits. Prerequisite: permission of instructor.
S. Bacharach
This course will concentrate on technology, bureaucracy, and the state, with a specific focus on alienation.

625 Labor and Monopoly Capital: The Growth of Large United States Firms in the Past Century
Spring. For course only for 7 weeks. 2 credits.
This critical review of two recent books with very different explanations for the rise of large, hierarchically differentiated corporations in the United States: Harry Braverman, Labor and Monopoly Capital, and Alfred D. Chandler, The Visible Hand. These books are supplemented by articles on patterns of industrialization and internal structural transformation of large firms in the United States economy.

627 Leadership in Organizations
Spring. 3 credits. Prerequisite: two organizational behavior courses at the 300 level, or advanced courses in sociology or psychology.
N. Rosen
An examination of theories and research findings from the behavioral sciences that are relevant to leadership and the influence process in groups and organizations. Person-situation factors, intergroup processes, interpersonal perception, as well as motivation to lead and to follow will be discussed. The implications for leadership training, organization development, and action research are explored.

628 Cross-Cultural Studies of Organizational Behavior
Fall or spring. 3 credits. Designed for graduate students interested in research and supervision of organizational behavior courses at the 300 level, or advanced courses in sociology or psychology.
L. Gruenfeld
How organizational behavior is affected by age (generational), sex, social class, and cultural variables. Both theoretical and research-related issues pertaining to these variables are explored to illustrate the social, psychological, and cultural explanations for age differences in job satisfaction and performance. What can be inferred from studies that ignore age (sex, social class, and cultural) differences? What are the causes and patterns, both subjective and objective, for age and other kinds of discrimination.

629 Personality in Organization
Fall and spring. 4 credits. Prerequisite: I&LR 520 or equivalent.
S. Kirmeyer
The aim of this course is to train students in the skills required to use observational methods. The topics to be covered are (1) reasons for choosing an observational method, (2) specific techniques used to study nonverbal communication, verbal interaction, and motor activity patterns, and (3) the steps involved in collecting and analyzing observational data.

670 Sociological Study of Power
Fall. 3 credits.
S. Bacharach
The empirical, conceptual, and theoretical issues involved in the study of power. Power is analyzed within the context of an interaction paradigm, and thus, while the major emphasis of this course is on
the examination of power dispersion in organizations and communities, relevant social-psychological literature is also drawn upon. Among the various works to be considered are those of Gansberg, Blau, and Dahl.

671 Theories for Social and Organizational Change Fall. 4 credits. Permission of instructor. Preference will be given to students who have had field experience in research or action projects, with a wide range of experience from rural communities in developing countries to industrial organizations in highly industrialized societies. W. Whyte.

Focuses on social theory in search of a framework guiding actions designed to effect changes in organizations or communities. Members of the seminar will be working on a book being written by the instructor. Each student will be responsible for preparing a critique of a particular chapter and of the research literature which would tend either to confirm or to challenge the interpretations or conclusions presented in that chapter. An oral report and a term paper will be required.

672 Urban Politics and Public Policy Fall. 3 credits. S. Bacharach.

The relationship between community processes and structures and public policy outputs. Focus is on such issues as the limitations of the classic elitist-pluralist debate and the recent controversy concerning centralization or decentralization of local government and the delivery of social services. Treatment of these stresses the value of applying sociological theories and questions of public policy. A primary concern is the integration of organizational and community theory.

673 Cross-Cultural Explorations of Individual Differences Fall. 3 credits.

A data-bank analysis of the relationship between socioeconomic status, socialization values, ethnicity, and various indices of individual differences such as interpersonal trust, propensity to take risks, self-concept, cognitive style, and job preferences.

674 Social Regulation and Control of Institutions Spring; course meets for only 7 weeks. 2 credits. Prerequisites: two organizational behavior courses at the 300 level, or advanced courses in sociology or psychology. R. Stern.

Interorganizational relations are examined in terms of networks of control agents and target objects. The dynamics of control relationships based on political bargaining, the distribution of power, economic rewards and costs, and historical circumstances are examined in the context of their evolution through organizational adaptation to the environment. Subject matter includes organizational change and application of a control perspective to the institutions of American business, government regulations, athletics, and education.

677 Seminar in Field Research Spring. 4 credits. Enrollment limited. Prerequisite: permission of instructor. H. Trice.

Recent research efforts are examined and the dynamic nature of the research process is emphasized. The realities of field research are explored, including problems of gaining and sustaining rapport, the initial development of research interviews and observation data, and their conversion to quantitative instruments. Participants to share in the exploration of appropriate theories and concepts, and the possibility of actual field participation in an ongoing research project is explored.

722 Theories of Organizational Behavior Fall. 3 credits. Staff.

A seminar of current topics in organizational psychology. Discussions based on current research and theoretical innovations in the field.

723 Behavioral Research Theory, Strategy, and Methods I Fall. 4 credits. Designed to meet the needs of M.S. and Ph.D. candidates majoring in organizational behavior, but other graduate students may enroll.

L. Williams.

Material studied in ILR 723 and 724 includes (1) theoretical, conceptual, and ethical questions; (2) survey research and attitude-scaling procedures, (3) laboratory research methods; (4) participant observation and interview methods; (5) use of documents and qualitative data analysis. Provides students with important philosophical background for doing research and exposes them to a well-balanced, interdisciplinary set of quantitative and qualitative research tools.

724 Behavioral Research Theory, Strategy, and Methods II Spring. Variable credit. Prerequisite: permission of instructor. Must be taken in sequence with ILR 723 except by petition. Designed to meet the needs of M.S. and Ph.D. candidates majoring in organizational behavior, but other graduate students may enroll.

Staff. See ILR 723 for course description.

725 Analysis of Published Research in Organizational Behavior Fall. 3 credits. Prerequisites: ILR 520–521 or equivalent.

Staff. An advanced research methods course that critically examines published research papers in the field of organizational behavior in terms of research design and method as well as theory.

726 Organizational Behavior III Spring. 3 credits. Prerequisite: ILR 520–521 or equivalent.

Staff. A team-taught comparison of different disciplinary approaches to organizational analysis and models. Emphasis is on integrating different disciplinary approaches to selected organizational phenomena such as change and innovation, decision making and information processing, reward structures, or conflict resolution.

727 Work and Industrial Conflict Spring, weeks 7–14. 2 credits. R. Stern.

A concentrated examination of the sociology of industrial conflict. The seminar focuses on classic formulations of conflict theory in sociology, then the social, political, and economic causes of industrial conflict. Forms of conflict to be studied include strikes, turnover, absenteeism, and sabotage. Some discussion of the implications of various types of worker management of firms for industrial conflict will be included.

728 Seminar on Work Motivation Spring. 2 or 4 credits. Prerequisite: ILR 520–521. T. Hammer.

Two independent but sequence-connected minicourses.

(1) Theories of Work Motivation: 7 weeks, 2 credits.

This course will provide an overview of basic concepts of human motivations for theory and research. Intended to provide a basic understanding of theoretical issues involved in work motivation and knowledge of basic research approaches as these apply to individuals and groups in formal organizations.

(2) Seminar on Job Design: 7 weeks, 2 credits.

In the seminar, students will examine the design of jobs and the role of the supervisor in labor market restructuring. The course will cover early theories and research in job design from scientific management and later developments, with particular attention paid to the recent emphasis on job design through job enlargement and job enrichment.

798 Internship Fall and spring. 3 credits. Open only to ILR students. Non-ILR students may take ILR 151.

Staff. An introduction to the personnel function and the management of human resources from an institutional perspective. Topics include human resource decisions dealing with the roles of personnel, human resource, planning, recruitment, selection, induction and orientation, performance appraisal, talent identification, career planning, training, compensation, and organizational development. Emphasis is on (a) problem-solving and decision-making approaches; (b) operational methods, technologies, and practices; (c) application of relevant behavioral science theory and research; and (d) legislation and other environmental constraints having an important bearing on the "effective utilization of human resources" by an enterprise.

360 Human Resource Economics and Public Policy Fall and spring. 3 credits. Open to sophomores, juniors, and seniors. V. Briggs.

A review of contemporary labor market trends and theories pertaining to labor market intervention through public policy measures. Changes in the "older" programs of apprenticeship, vocational education, and vocational rehabilitation, as well as the "new" programs of the "post-CETA era" are studied. Special policy issues pertaining to youth, rural workers, welfare reform, public service employment, and worker relocation will be examined. Comparison will also be made with European initiatives.

361 Effective Supervision Fall. 3 credits. Prerequisite: ILR 260 or equivalent. W. Wasmuth.

This course covers twenty-five major topics that make a critical difference in the life of a newly appointed or experienced supervisor. Theoretical and real-life case examples are provided from office, factory, union, nonunion, large, and small organizations and cover technical, psychological, social, and political issues at the supervisory level.

363 Techniques and Theories of Training in Organizations Fall. 3 credits.

A course directed toward (1) examination of basic training needs of individuals and groups; (2) a review of the methods available for use in organizational training.
sector, and legislation affecting employee-employer relations and economic development will be reviewed. Students will be assigned individual research topics that will be discussed in the seminar and developed into a term paper.

366 Woman at Work Fall or spring. 4 credits. Prerequisite: I&LR 260 or equivalent.
F. Miller.
Various aspects of female occupational roles in twentieth-century United States: Historical, social, and legal factors that influence women's choice of careers, work socialization and training, and subsequent labor-market experience are considered. Working women's entry-level jobs, opportunities for advancement, and income are compared to men's.

Fall or spring. 3 credits. Open to I&LR students participating in Washington, D.C., internship. S. Levitan.
The seminar will examine labor market developments and their measurements, with emphasis on current social strategies to ameliorate social problems. The systematic relationships between the elements of various programs, their purposes, the institutional structures designed to carry them out, and the clients they were designed to serve will be explored. Topics stressed will relate to current national issues and priorities. Students will engage in individual projects on topics approved by the instructor.

467 Job Creation: Policy Emergence and Current Issues
Fall. 3 credits. Prerequisite: I&LR 360 or equivalent.
V. Briggs.
The evolution of public policy initiatives designed explicitly to create jobs. Most of the attention is given to developments in the United States, but related efforts in other nations will also be examined. The reasons why job creation was a late addition to human resource policy are explored. Special attention is given to the associated policy issues; among these are targeting, substitution, job restructuring, union attitudes, and participation of community-based institutions.

468 Immigration and the American Labor Force
Spring. 3 credits. Prerequisite: I&LR 360 or equivalent.
V. Briggs.
The role that immigration has played as a source of human resource development in the United States. The primary focus is on developments since the Immigration Act of 1965. In addition to legal immigration, the topic of illegal immigration and its effects are also examined. Public policy aspects of the issue are explored in depth.

495 Honors Program
Fall and spring (yearlong course). 3 credits each term.
For course description, see p. 302.

498 Internship
Fall or spring. 4–6 credits.
For course description, see p. 302.

499 Directed Studies
For course description, see p. 302.

560 Personnel Management
Fall and spring. 3 credits.
Staff.
A survey course covering the major areas of the management of human behavior in work organizations. Consideration is given to such aspects of personnel work as job attitudes, motivation, human resource planning, recruitment and selection, training, management development, organization development, and compensation. Emphasis is on the application of theory and research to the solution of personnel problems.

563 Personnel and Human Resource Management in the Eighties
Fall. 3 credits. Limited to 25 students. Prerequisite: seniors and graduate students with permission of instructor.
R. Risley.
Seminar will be concerned with those areas of personnel and human resource management that leading practitioners believe will be of increased importance or will have significant change during the coming decade. Twelve outstanding leaders from the practitioner area will serve as guest seminar leaders during the term. Students will be required to do background reading for each topic, as well as the advanced material prepared by the guest leader. Students should be prepared to be active participants in the seminar discussions and to have completed any advance assignments suggested by the guest seminar leader.

569 Career Planning and Development
Fall. 3 credits. Prerequisite: I&LR 260 or equivalent.
R. Eder, F. Foltman.
Consideration of career planning and development from both the organizational and individual perspectives.

570 Seminar in Personnel or Human Resource Management
Fall and spring. 3 credits.
Staff.
A "floating" seminar designed to give faculty and students an opportunity to pursue specific topics in detail, with an emphasis on theory and research. Topics vary from semester to semester. Interested students should consult current course announcements for details.

582 Management Training Simulation: Public Policy Issues in Social Agencies
Spring. 3 credits. Prerequisite: I&LR 260 or equivalent.
W. Wasmuth.
Techniques of simulation are applied to a vocational rehabilitation facility, a community hospital, and a hotel banquet operation. Although much of the material relates to health services management, simulation as an approach to training managers has wider and growing importance to all types of organizations. Students are provided with realistic problem-solving situations involving boards of directors, community resources, public policy issues, state and federal agencies, labor unions, and changing economic conditions.

662 Seminar in Organizational Communication
Spring. 3 credits. Permission of instructor.
W. Frank.
An analysis and exploration of the training and retraining function as applied in business, government, and industrial organizations. Consideration is given to learning theory as well as to the concept framework and practical approaches to which learning activities are developed at the workplace at all levels.

677 Managers and Managing
Fall. 3 credits. Prerequisite: I&LR 260.
F. Foltman.
A review of the operations of business and industrial organizations, including an emphasis on selected classical approaches to management theory, appointment, identification of management potential, careers and succession processes, managerial skills and responsibilities, management practices such as planning and direction, organization, communication, control, reward systems, management problems; emerging approaches and current issues in management. Particular emphasis is given to the responsibilities and practices of management for effective employment of human resources in contemporary conditions.

690 Administration of Compensation
Fall and spring. 4 credits. Prerequisite: I&LR 260 or equivalent.
The development and administration of wage and salary programs. Major emphasis is given to the role of compensation in attracting, retaining, and motivating employees. Topics investigated include motivation theory, factors influencing compensation levels; job evaluation, forms of compensation, including incentive plans and fringe benefits, special issues of managerial compensation, and problems of compensation control.

691 Human Resource Planning
Spring. 4 credits.
Prerequisites: I&LR 260 or equivalent and one course in statistics.
L. Dyer, G. Milkovich.
The process of human resource personnel planning as practiced by public and private employers. Included are topics such as forecasting human resource needs, programming, techniques to meet forecasted needs, and methods of controlling an organization's supply of human resources. The seminar is organized around a computer simulation game in which students make policy and program decisions for a fictional organization. Decisions are evaluated on the basis of their contributions to the organization's human resource and profit objectives.

693 Design and Administration of Training Programs
Spring. 3 credits. Prerequisite: I&LR 260 or equivalent.
F. Foltman, W. Frank.
An analysis and exploration of the training and retraining function as applied in business, government, and industrial organizations. Consideration is given to learning theory as well as to the concept framework and practical approaches to which learning activities are developed at the workplace at all levels.

700 Seminar in Personnel and Human Resource Management
Fall. 3 credits. Permission of instructor.
Staff.
Specific topics vary from semester to semester. Interested students should consult current course announcements for details.

701 Human Resource Economics and Public Policy Spring. 3 credits. V. Briggs.
A review of contemporary labor market trends and theories pertaining to labor market intervention through public policy measures. Changes in the “older” programs of apprenticeship, vocational education, and vocational rehabilitation as well as the “new” programs of the “post-CETA era” are studied. Special policy issues pertaining to youth, rural workers, welfare reform, public service employment, and worker relocation will be examined. Comparison will also be made with European initiatives.

798 Internship
For course description, see p. 303.

799 Directed Studies
For course description, see p. 303.

Interdepartmental Courses

150 Labor Problems in American Society Fall or spring. 3 credits. R. Aronson, V. Briggs, O. Mitchell.
A survey for students in other divisions of the University. An analysis of the major problems in industrial and labor relations, labor union history, organization, and operation; labor market analysis and employment practices; industrial and labor legislation and social security; personnel management and human relations in industry; collective bargaining and the settlement of industrial disputes; and the rights and responsibilities of employers and employees.

151 Personnel Management for Managers Fall and spring. 3 credits. Not open to ILR students. Staff.
A study of the personnel function in work organizations with special emphasis on the responsibilities of managers and supervisors. After reviewing evidence from behavioral science research on factors affecting work behavior, such major personnel areas as recruitment, selection, and placement; training; compensation and benefits; and discipline are considered.

ILR Extension

New York City
The following courses are open only to participants in the Extension Division in New York City. These courses are not open to undergraduate or graduate students matriculated in the Ithaca ILR programs.

260 Personnel Management Fall or spring. 3 credits.
Focuses on management of personnel in organizations. Deals with manpower planning, recruiting, selection, wage and salary administration, training, performance appraisal, organizational development, and the administration of personnel department activities. Special attention is paid to government manpower policy and its implication for personnel management.

301 Labor Union Administration Fall or spring. 3 credits.
A review of the operations of American unions, including a general theoretical framework but with major emphasis on practical operating experience. The course will cover the formal government of unions, organizational or institutional purposes and objectives and how these are achieved; underlying structure and relationship among members, locals, and national organizations; the performance of the primary functions of organizing, negotiating, contract administration; and the effect of the Landrum-Griffin Act.

326 Sociology of Occupations Fall or spring. 3 credits.
Focuses on (1) the changing character of American occupations within the context of social change; (2) occupational status—differences in income, prestige, and power and the resultant general phenomenon of social stratification; (3) vertical and horizontal occupational mobility; (4) recruitment and socialization into occupational roles; (5) the process of professionalization; and (6) comparison of personnel occupations with the career and organizational patterns of other occupations. A major sociological theme is the relationship between occupational structure and workplace structure.

346 Economics of Collective Bargaining Fall or spring. 3 credits.
Economic aspects of the negotiation, terms, and effects of union-management agreements at the individual firm, industry regional, and national levels. Topics examined include forces influencing contract demands and terms, employer adaptation to higher wages and benefits; interindustry differences in competitiveness, firm size, and markets; regional location of industry, international competition; government regulations; labor supply, inflation, recession, and unemployment.

350 History of Industrial Relations in the United States Fall or spring. 3 credits.
This review of the history of industrial relations in the United States emphasizes developments in the twentieth century. The course concentrates on the American worker, labor movements, and the environmental forces that have shaped industrial relations in the United States. Readings are selected from scholarly accounts and original sources.

351 Collective Bargaining Fall or spring. 3 credits.
A comprehensive study of collective bargaining; the negotiation and scope of contracts, the day-to-day administration of contracts, the major substantive issues in bargaining, their implication for public policy, and the problem of dealing with industrial conflict.

352 Labor Relations Law and Legislation Fall or spring. 3 credits.
A survey of the law governing labor relations. The legal framework in which the collective bargaining relationship is established and takes place is analyzed. Problems of the administration and enforcement of collective agreements are considered, as are problems of protecting individual employee rights in the collective labor relations context. Also serves as an introduction to the legal system and method, and to legal and constitutional problems of governmental regulation of industrial and labor relations.

353 Statistics (Statistical Reasoning) Fall or spring. 3 credits.
An introduction to the basic concepts of statistics: description of frequency distribution (averages, dispersion, and simple correlation) and introduction to statistical inference. Prerequisite to certain of the specialized courses on applications of statistics offered in various departments.

354 Economics of Wages and Employment Fall or spring. 3 credits. Prerequisites: Economics 101-102 or equivalent.
An introduction to the characteristics of the labor market and to analysis of wage and employment problems. Among topics studied are the composition of the labor force, job seeking and employment practices, methods of wage determination, theories of wages and employment, economic effects of unions, the nature and causes of unemployment, and programs to combat joblessness and poverty.

355 Society, Industry, and the Individual I Fall. 3 credits.
The relationship between industry and the economy as a whole and its major social institutions in American society (including stratification, politics, and American values) is discussed. The nature of industrial organizations and of composite organizations in general, emphasizing authority relations, goals, the division of labor, and bureaucracy.

356 Society, Industry, and the Individual II Spring. 3 credits.
Deals with the relationship between the individual and the organization and such basic psychological processes as need satisfaction, perception, attitude formation, and decision making. The individual is described and examined as a formal and informal group member. Within this area, particular emphasis is given on leadership, problem solving, and conflict resolution.

357 Labor Education II Spring. 3 credits.
An advanced course in the organization and administration of labor education programs. The course is divided into two parts. Part I: organization and administration of labor education programs; how to work with the union hierarchy; planning the “first” program; developing an education committee; budgeting and financing programs; managing time and dealing with job stresses; recruiting and publicizing programs; basic interpersonal relations; handling controversy in the classroom; writing reports and memos; organizing records and files; evaluating your work. Part II: development of course outlines and how to choose and use the appropriate methods and techniques for each session. Students will develop a subject-matter specialty, research materials needed, and teach the subject. Practical skills will be incorporated into the classroom work.

420 Group Processes Fall or spring. 3 credits.
An advanced undergraduate and beginning graduate course emphasizing group development. Readings and discussion are concerned with interpersonal attraction, conformity, interaction process, leadership, group effectiveness, norms, etc. Laboratory experiences in group tasks are provided.

440 Health, Welfare, and Pension Plans Fall or spring. 3 credits.
An analysis and appraisal of private health, welfare, and pension plans. A consideration of the origin and development of employer, union, and joint programs, and a critical examination of the financing, administration, and general effectiveness of the plans.

602 Arbitration Fall or spring. 3 credits.
A study of the place and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of an arbitration hearing, and the preparation of an arbitration opinion.

681 Labor Relations Law Fall or spring. 3 credits.
An advanced course in labor law, covering such topics as emergency labor disputes, legal problems of labor relations in public employment, labor and the antitrust laws, civil rights legislation, rights of individual employees and union members, and legal problems of union administration.

683 An Analysis of the Union Steward’s Role Fall or spring. 3 credits.
The course is an examination of the steward’s role in relation to the local union and to the workplace setting. Attention is directed to how industrial conflict, economics, technological constraints, social organization, and tactics and strategies of the
steward are related. Consideration is also given to
authority of the steward, to conflicting expectations
associated with the role, and to comparative studies of
stewards. In general, the steward’s role is used as a
focal point for understanding important aspects of
the workforce and the union. The student is expected
to write a research paper on a salient aspect of the
steward’s role and social structure.

584 Employment Discrimination and the Law
Fall or spring. 3 credits.
An examination of legal problems involving
employment discrimination based upon race, color,
religion, sex, national origin, or age. The impact of
developing principles of law on preemployment
inquiries and testing, seniority and promotions, and
other personnel policies, practices, and procedures
will be discussed. The prerequisites of affirmative
action under Executive Order No. 11244, as
amended, will be analyzed. Special attention will be
given to the role of state law in resolving employment
discrimination claims and the procedural framework
for raising and adjudicating such claims before
administrative agencies and the courts.

586 Collective Bargaining in the Public Sector
Fall or spring. 3 credits.
An examination of the development, practice, and
extent of collective bargaining between federal, state,
and local governments and their employees. The
course will emphasize public policy issues related
to sovereignty, unit determination, representation
procedures, and the strikes against government.

689 Labor Education Fall or spring. 3 credits.
Prerequisite: permission of instructor.
An examination will be made of labor education, its
origin, development, scope, form, functions, curricula,
goals, issues, and roles in universities, unions,
and other organizations. Attention will be
devoted to various practical aspects associated with
the administration of programs and to labor education
as an occupation. The course will involve students in
field activities in connection with current Extension
Division programs.

Faculty Roster
Annonn, Robert L. Ph.D., Princeton U. Prof., Labor Eonomics
Bacharach, Samuel, Ph.D., U. of Wisconsin. Assoc. Prof., Organizational Behavior
Blumen, Isadore, Ph.D., U. of North Carolina. Prof., Economic and Social Statistics
Boudreaux, John W., Purdue U. Asst. Prof., Personnel and Human Resource Studies
Briggs, Verno M., Jr., Ph.D., Michigan State U. Prof., Personnel and Human Resource Studies
Clark, M. Gardner, Ph.D., Harvard U. Prof., Labor Economics/International and Comparative Labor Relations
Cullen, Donald E., Ph.D., Cornell U. Prof., Collective Bargaining, Labor Law, and Labor History
Eder, Robert W., Ph.D., U of Colorado. Instructor, Personnel and Human Resource Studies

Ehrenberg, Ronald, Ph.D., Northwestern U. Prof., Labor Economics
Farley, Jennie T., Ph.D., Cornell U. Assoc. Prof., Extension

Law School

Administration

Peter W. Martin, dean of the law faculty
Robert B. Kent, associate dean for academic affairs
Albert C. Neimeth, associate dean for placement and alumni affairs
John Lee Smith, dean of students
Anne Lukingbeal, assistant dean for admissions and financial aid
Jane L. Hammond, law librarian
Daniel J. Freehling, assistant law librarian
Frances M. Bullis, director of development and public affairs

Law School

The primary function of the Law School is to prepare attorneys for both public and private practice who are equipped to render skillful professional service and who are thoroughly conscious of the important role played by the law as a means of social control. The curriculum is designed to prepare students for admission to the bar in all American states and territories.

Ordinarily a student who is admitted to the Law School must have a baccalaureate degree from an approved college or university. The course of study leading to the degree of Doctor of Law (J.D.) covers three academic years. A limited number of students will be admitted to a program of study leading to the degree of Doctor of Law (J.D.) "with specialization in international legal affairs."

There are combined graduate degree programs with the Graduate School of Business and Public Administration, the College of Arts and Sciences, the Department of City and Regional Planning, and the School of Industrial and Labor Relations, as well as a special opportunity for highly qualified undergraduates in the College of Arts and Sciences to register in the Law School during their senior year.

The graduate program of the Cornell Law School is a small one, to which only a few students are admitted each year. The LL.M. degree (Master of Laws, Legum Magister) and the J.S.D. degree (Doctor of the Science of Law, Jurisprudentiae Scientiae Doctor) are conferred. A small number of law graduates may also be admitted as special students, to pursue advanced legal studies without being degree candidates.

For further information, refer to the Announcement of the Law School, obtainable from the Director of Admissions, Myron Taylor Hall.

First-Year Courses

500 Civil Procedure
502 Constitutional Law
504 Contracts
506 Criminal Justice
508 Practice Training I
509 Practice Training II
512 Property
515 Torts

Second-Year Electives

554 Commercial Law
558 Corporations
562 Enterprise Organization
564 Evidence
567 Federal Income Taxation
569 Process of Property Transmission
571 Trusts and Estates I

Second- and Third-Year Electives

600 Administrative Law
602 Admiralty
604 American Legal History (1607–1930)
608 Antitrust Law
612 Civil Rights
613 Comparative Constitutional Law—United States and Canada
614 Comparative Law
616 Conflict of Laws
620 Criminal Procedure: Investigation
622 Debtor-Creditor Law
623 The Early Development of Anglo-American Common Law
624 Employment Discrimination and the Law
628 Environmental Law
630 Estate and Gift Taxation
631 European Regional Law and Institutions
632 Family Law
635 Federal Courts
640 International Law
642 International Taxation
645 Labor Law
650 Land-Use Planning
664 Law Practice Dynamics
666 Law, Society, and Morality
668 Lawyer as a Negotiator
670 Lawyers and Clients
674 Local Government
676 Professional Responsibility
677 Real Estate Transfer and Finance
682 Securities Regulation

685 Taxation of Corporations and Shareholders
690 Trial Advocacy
691 Trusts and Estates II

Problem Courses and Seminars

700 Advanced Antitrust Law and Policy
702 Advanced Civil Procedure
704 American Legal Theory
706 Appellate Advocacy
715 Comparative Labor Law and Social Legislation
720 Contemporary Legal Theory
725 Corporate Practice
730 Estate Planning
731 Ethics of Corporate Practice
733 Family Law Clinic
739 Freedom of Expression
740 International Business Transactions
753 Law and Medicine
757 Legal Aid I
758 Legal Aid II
760 Legal Education and the Legal Profession
766 Organized Crime Control
772 Prisoners' Legal Services Clinic I
773 Prisoners' Legal Services Clinic II
776 Problems in Legislation
778 Professional Responsibility
781 Securities Law
784 Social Security Law
786 Theories in Law, Science, and Ethics
788 Water, Waste, Toxic Materials

Younger, Judith T., J.D., New York U. Prof.
**Division of Nutritional Sciences**

**Academic Advising**

Every student majoring in nutritional sciences is assigned a faculty adviser from the division. An effort is made to match interests, and students may change advisers at any time if their goals and interests change.

Advising clinics to help students plan their programs are held each semester during course registration, and regular student-adviser conferences are required at least twice a year. The adviser not only helps students select courses, but can often suggest opportunities for individual study or experience outside the classroom.

The specific course requirements for graduation and for each major emphasis are listed in the Human Ecology Student Guide, available on request. Questions about undergraduate study should be addressed to Marjorie Devine, associate director for academic affairs, 314 Martha Van Rensselaer Hall.

**The Core Curriculum**

In their freshman and sophomore years, all undergraduates majoring in NS follow a core curriculum that builds the foundation for any aspect of advanced study in nutrition. The core curriculum includes courses in food and nutrition, laboratory skills, humanities and communications, introductory social sciences, and basic sciences. There is some choice of science courses, but all nutrition students need a good background in general and organic chemistry, biochemistry, microbiology, physiology, and mathematics.

Transfer students need to pay particular attention to the core curriculum and may need to take an extra semester to fulfill all of the basic requirements, especially in the sciences. The course NS 300, Special Studies for Undergraduates, which allows students to take "pieces" of courses, helps transfer students integrate their previous training into the requirements for the NS major without duplicating course work.

By their junior year, students start taking the more specialized courses required for the NS emphasis. They choose: foods, consumer food and nutrition, community nutrition, clinical nutrition, or nutritional biochemistry. The core curriculum ensures that they can move into any emphasis or change emphases.

**Emphases**

**Foods.** Students who elect this emphasis concentrate on basic and applied science courses, including physicochemical aspects of food and experimental methods. They study the composition and treatment of food and how these affect food quality, safety, acceptability, and nutritive value.

**Consumer food and nutrition.** This emphasis prepares students to apply the nutritional and food sciences to consumers' questions about food quality, safety, cost, and nutritive value. Course work in communications, economics, government, public policy, and marketing is added to the nutritional sciences core.

**Community nutrition.** This emphasis gives students the skills to help people translate nutrition knowledge into action. It provides a strong background in basic and nutritional sciences but also includes supporting courses in the social sciences and communications. Practical experience through supervised field study is strongly recommended.

**Clinical nutrition.** This emphasis builds on the basic science core to form a solid foundation in the biological aspects of human nutrition. The program stresses courses and laboratory work in biological science and physiology and is designed for students interested in pursuing advanced study in human nutrition or medicine.

**Nutritional biochemistry.** This science-oriented curriculum prepares students for advanced study in the nutritional and biomedical sciences. Courses and electives that will meet all five NS major emphases can fulfill the ADA's basic and specialized academic requirements as well. Students are then eligible to pursue the remaining ADA requirements after graduation: the experience component or internship required for membership and for registration, and the national certifying examination required for a registered dietitian.

Advisers in the division will help students plan their course work to meet the ADA's academic requirements and will counsel them on applying for internships. Additional information on the dietetics program at Cornell can be obtained from Rose Marie Holmes, 314 Martha Van Rensselaer Hall, and Joan M. L. Koch, 373 Martha Van Rensselaer Hall.

**Field Study Program**

Structured field experience in a community agency or health-care facility can be taken for credit in several ways: through an independent study course, as a class project, or as a summer study project. Interested students should consult Nancy Peckenpaugh, the division's field-study coordinator, or Shrinki Kumanyika, assistant professor of community nutrition.

**Independent Study**

Independent study courses (NS 400, 401, 402) can be used to obtain credit for more diverse or intensive experience than the classroom can offer, whether this involves laboratory work, library research, or field study. Any student interested in independent study...
should obtain the sponsorship of a faculty adviser and the approval of Dr. Devine, or consider applying to the honors program.

Honors Program

The honors program, leading to a B.S. degree with honors in nutritional sciences, gives official recognition to students who have demonstrated excellence in their academic work and their capacity for independent study.

In addition to fulfilling the requirements for a major emphasis in nutritional sciences, students in the honors program take courses on designing and evaluating research, complete an original piece of research, and prepare an honors thesis. The honors project may be laboratory or field research or deal with policy and program development.

For more information, contact Mary A. Morrison, honors chairperson, N-205A Martha Van Rensselaer Hall.

Courses Recommended for Nonmajors

Courses in nutritional science can strengthen programs of study in biological science, medicine, agriculture, food science, human services, and other fields.

Introductory courses in nutrition (NS 115) and food (NS 146) are open to all students, as are some special interest courses (NS 222, Maternal and Child Nutrition; NS 325, Sociocultural Aspects of Food and Nutrition; NS 346, Consumer Food Issues; and NS 457, National and International Food Economics).

Nonmajors who have taken college courses in chemistry, biological sciences, and nutritional sciences may elect advanced food and nutrition courses, with the permission of the instructor.

Graduate Programs

Graduate study is administered by the Field of Nutrition, a group of more than forty faculty members from throughout the University who have a common interest in nutritional problems. In the M.S. and Ph.D. degree programs, students may major in animal nutrition, human nutrition, international nutrition, nutritional biochemistry, foods, or general nutrition. A professional Master of Nutritional Science (M.N.S.) degree in clinical nutrition combines academic study and research on campus with clinical training at affiliated institutions in Upstate New York and New York City. Field experience is also a component of concentrations in community nutrition, public-health nutrition, and nutrition education.

The specialties and interests represented by faculty in the Field of Nutrition provide almost unlimited opportunity for graduate study. Cornell's extensive laboratory and agricultural facilities ensure that students interested in experimental nutrition have exceptional choice and thorough training. As the largest faculty in the country devoted to the study of human nutrition, the field includes specialists in biochemical, metabolic, epidemiological, and sociocultural research. Opportunities to work with community and federal agencies are available to students interested in applied nutrition and public policy, and students in international nutrition are expected to conduct their thesis research abroad.

For more information about the graduate program, write to the Graduate Study in Nutrition, available from the Graduate Faculty Representative, Field of Nutrition, Cornell University, Savage Hall, Ithaca, New York 14853.

Nutritional Sciences Courses

115 Ecology of Human Nutrition and Food Fall and spring. 3 credits. Prerequisites: fall, high school biology (juniors and seniors with advanced biological science background permission of the instructor); spring, one-semester college biology course or permission of the instructor. S-U grades optional. Cost of handouts and pamphlets, $3.

300 Special Studies for Undergraduates Fall or spring. Special arrangements to establish curriculum with the instructor. S-U grades optional.

301 (also Food Science 301) Nutritional Aspects of Raw and Processed Foods Spring. 3 credits. Prerequisite: NS 115 and organic chemistry or permission of the instructor. M W F 9:05. D. Miller.

For more information about the graduate program, write to the Graduate Study in Nutrition, available from the Graduate Faculty Representative, Field of Nutrition, Cornell University, Savage Hall, Ithaca, New York 14853.
or laboratory or studio projects. The special studies form to the associate director for academic affairs as early as possible. Within the change-of-registration period. To ensure change-of-registration period, students should submit directing the study and the associate director of student or for study on an experimental basis with a grade of "S" or "U." S-U grades optional.

For advanced, independent study by an individual student or for study on an experimental basis with a grade of "S" or "U." S-U grades optional. Recommended: a course in learning theory, and permission of the instructor. Teaching Apprenticeship Fall. 4 credits. Prerequisites: NS 331 and a human physiology course. S-U grades optional. Cost of handouts and pamphlets, $5. M W F 10:10 and F 8:30. J. Uttenmoller. Study of the physiologic and metabolic anomalies in chronic, and acute illnesses and the principles of nutritional therapy and prevention. The topics covered are diabetes mellitus, starvation, obesity, nutritional assessment, nutritional pharmacology, severe injury, infection, cancer, gastrointestinal diseases, liver disorders, renal diseases, cardiovascular diseases, and pediatrics. Original research papers, books, review papers, and publications of professional organizations are used throughout the course.

442 Diet Formulation and Analysis Fall. 2 credits. Prerequisites: NS 146, concurrent registration in NS 441 (or equivalent background in nutrition). S-U grades optional. Laboratory experiments designed to illustrate the chemical factors accounting for the color, flavor, and texture of natural and processed foods.

The relation of food quality to (a) the theological properties of food systems, (b) oxidation and reduction reactions, and (c) enzymatic and nonenzymatic browning. Covers physical and chemical factors accounting for the color, flavor, and texture of natural and processed foods.

447 Physiochemical Aspects of Food—Laboratory Fall. 1 credit. Limited to 16 students. Prerequisite: NS 446 or concurrent registration. S-U grades optional. T 1:25–4:25. G. Armbruster. Laboratory experiments designed to illustrate the effect of varying ingredients and treatment on the quality of food products. Objective testing methods are used to determine food quality characteristics.

448 Physiochemical Aspects of Food—Laboratory Fall. 1 credit. Limited to 16 students. Prerequisite: NS 446 or concurrent registration. S-U grades optional. T 1:25–4:25. G. Armbruster. Laboratory experiments designed to illustrate the effect of varying ingredients and treatment on the quality of food products. Objective testing methods are used to determine food quality characteristics.

457 National and International Food Economics Spring. 3 credits. Prerequisites: college course in economics and junior standing or permission of instructor. S-U grades optional. M W F 9:05. E. Thorbecke. Examination of individual components essential for an understanding of the United States and world food economics. Analysis of the world food economy. Review and analysis of (a) the major economic factors determining the food crop, (b) the composition of food consumption, and nutritional intake, and (b) the major economic factors affecting food production and supply. Examination and evaluation of the effect of government policies and programs in altering food consumption patterns. Principles of nutritional planning in developing countries within the context of the process of economic and social development.

488 Applied Dietetics In Foodservice Systems Fall and spring. 3 credits. Limited to 30 students. Prerequisite or corequisite: NS 378, NS 290, 291, a course in learning theory, and permission of the instructor during course registration. Admission to the foodservice program. Placement arrangements are made through the management department. Undergraduate and graduate students are placed, according to their interests and backgrounds, in community organizations and agencies that provide nutrition and food services. Placements are individually designed to enable students to apply nutrition concepts learned in the classroom. A biweekly seminar provides a basis for sharing of experiences among students and for integration of theory and practice. Students may be required to provide their own transportation to placements.

441 Nutrition and Disease Fall. 4 credits. Prerequisites: NS 331 and a human physiology course. S-U grades optional. Cost of handouts and pamphlets, $5. M W F 10:10 and F 8:30. J. Uttenmoller. Laboratory experiments designed to illustrate the chemical factors accounting for the color, flavor, and texture of natural and processed foods.

The relation of food quality to (a) the theological properties of food systems, (b) oxidation and reduction reactions, and (c) enzymatic and nonenzymatic browning. Covers physical and chemical factors accounting for the color, flavor, and texture of natural and processed foods.
Informal presentation and discussion of current topics in food and nutrition in which all members participate. Written reports on topics discussed may be requested. Delineation of honors research problems in consultation with faculty advisor.

499 Honors Problem Fall and spring. Credits to be arranged. Open only to students in the Division Honors Program.
*Hours to be arranged. Division faculty; M. Morrison, coordinator. An independent literature, lab, or field investigation. Students should plan to spend the work over two semesters.

600 Special Problems for Graduate Students Fall or spring. Credit to be arranged. Limited to graduate students recommended by their chairperson and approved by the instructor in charge. S-U grades optional.
*Hours to be arranged. Division faculty. Emphasis on independent, advanced work. Experience in research laboratories in the division may be arranged.

601–604 Advanced Nutrition Series A series of nutrition courses offered jointly by the Division of Nutritional Sciences and the Departments of Animal Science and Poultry Science. Prerequisites: courses in nutrition, physiology, and biochemistry, including intermediary metabolism, or permission of instructor.

601 (also Animal Science 601) Proteins and Amino Acids in Nutrition Fall. 2 credits. W F 11:15. R. E. Austic, M. A. Morrison. Amino acid and protein nutrition with emphasis on the dynamic aspects of protein digestion, amino acid absorption, protein synthesis, amino acid metabolism, and nitrogen excretion. Discussion includes current topics of protein and amino acid nutrition, protein-energy interrelationships, amino acid and protein requirements, bioavailability of amino acids, and evaluation of protein quality. Emphasis is on basic principles and their applications to animal and human nutrition.

602 Lipids Fall. 2 credits. T R 11:15. A. Bensadoun. Advanced course on biochemical, metabolic, and nutritional aspects of lipids. Emphasis is on critical analysis of current topics of lipid methodology, lipid absorption, lipoprotein secretion, structure, and catabolism; mechanisms of hormonal regulation of lipolysis and fatty acid synthesis, and cholesterol metabolism and atherosclerosis.

604 The Vitamins Fall. 2 credits. T R 10:10. G. F. Combs, Jr. Lectures on nutritional aspects of the vitamins, including recent developments in nutritional and biochemical interrelationships with other nutrients and metabolites.

606 Carbohydrate Chemistry Spring. 2 credits. Prerequisite: organic chemistry. Recommended: biochemistry. S-U grades optional.
*T R 11:15. B. A. Lewis. The chemistry and physiochemical properties of simple carbohydrates, polysaccharides, and their complexes with lipids, proteins, and inorganic ions. The functional role of the carbohydrates in food systems and their nutritional implications will be discussed as well as applications of carbohydrates in food processing.

611 Molecular Toxicology Spring. 2 credits. Prerequisite: full-year 400-level course in biochemistry or equivalent. S-U grades optional. Offered alternate years. Not offered 1982–83.

612 Methods of Assessing Physical Growth in Children Spring. 2 credits. Limited to graduate students and others who have permission of the instructor. S-U grades optional.
*Lec, T 1:25; labs, T R 1:25–4:25. J. Haas. A lab course to train students in methods and techniques used to assess the physical growth and development of growing children. The methods explored are those applicable for field or community studies and cover anthropometry, body composition, skeletal age, maturity indicators, physical fitness, and physiological responses to environmental stress.

613 (also Psychology 613) Obesity and the Regulation of Body Weight Spring. 3 credits. Limited to 30 students. Prerequisites: one course in psychology, one course in nutrition. Undergraduate students may register with permission of the instructor: S-U grades optional. Offered alternate years. Not offered 1982–83.
*M W F 11:15. D. Levitsky. This course is a multidisciplinary discussion of the causes, effects, and treatments of human obesity. Topics include the biopsychology of eating behavior, genetics of obesity, role of activity and energy metabolism, psychosocial determinants of obesity, anorexia nervosa, therapy, and its effectiveness, and social discrimination.

614 Topics in Maternal and Child Nutrition Fall. 2 credits. Prerequisites: NS 331, 222 or 347, BS 311, and permission of the instructor.

616 Readings in Food Fall. 2 credits. Prerequisite: organic chemistry. Recommended: biochemistry. S-U grades optional. May be repeated for credit with permission of instructor.
*M 7:30–9:30 p.m. M. Mondy. Critical review of selected topics in the current literature. Emphasis on experimental data and basic scientific principles underlying modern theory and practice relative to food quality. Training in oral and written presentations of scientific reports.

617 Teaching Seminar First half of semester during fall or spring. 1 credit. Limited to division graduate students and students who have permission of the instructor: S-U grades only.
*W 7:30–9:30 p.m. M. Devine, N. Yaghjian. A series of workshops focusing on development of teaching skills for guiding classroom learning in lecture, discussion, and lab settings. Preparation of content, presentation, and interaction techniques and evaluative methods are emphasized in relation to the student's specific teaching assignment. Videotape simulations provide opportunity for practice and analysis of teaching behaviors.

618 Teaching Experience Fall or spring. Noncredit. Limited to division graduate students and students who have permission of the instructor.
*Hours to be arranged. Division faculty. M. Devine, coordinator. Designed to provide experience in teaching nutritional sciences by direct involvement in college courses under supervision of a faculty member. The aspects of teaching and the degree of involvement vary, depending on the needs of the course and the experience of the student.

619 (also Animal Science 619) Field of Nutrition Seminar Fall or spring. Noncredit. S-U grades only.
*M 4:30. Faculty and guest lecturers. Lectures on current research in nutrition.

625 Seminar in Food Habits Research Fall. 3 credits. Limited to 12 graduate students. Prerequisite: statistics or research design course. Offered alternate years. W F 3:35–5:30. D. Sanjur. Emphasizes a critical review of the literature and development of a research proposal using sociological theories and techniques as applied to nutritional data.

626 Special Topics in Food Spring. 2 credits. Hours to be arranged. G. Armbruster and B. A. Lewis. Current research related to food is reviewed in the context of basic principles and their application to the quality of food.

627 Special Topics in Food Spring. 2 credits. Prerequisite: organic chemistry. Recommended: biochemistry. S-U grades optional. May be repeated for credit with permission of instructor.
*W 7:30–9:30 p.m. N. Mondy. Current research related to food production and processing, as well as toxicants in the food chain will be reviewed. May be repeated for credit with permission of the instructor.

630–633 Advanced Nutrition Laboratory Spring. 1–5 credits. Limited to 12 students. T R 2:15–5:15. Division faculty. Study of the anthropometric, dietary, clinical, and biochemical assessment of human nutritional status. The individual courses are taught in sequence over the entire semester. Any or all of the modules may be taken for credit.

630 Anthropometric Assessment 1 credit. Prerequisites: NS 331 or equivalent and permission of instructor.
*J. Haas. Study of methods and procedures for anthropometric, radiographic, and energetic assessment of children and adults in clinical, research, and survey settings.

631 Dietary Assessment 1 credit. Prerequisites: statistics and NS 331 or equivalent, and permission of instructor.
*D. Sanjur. Study of methods and techniques for assessing dietary intakes at the individual and household levels.

632 Clinical Assessment 1 credit. Prerequisites: NS 630, 631, 441, Biological Sciences 330 or 331, either NS 332 or Biological Sciences 430, and permission of instructor.
*V. Utermohlen and division faculty. Study of methods and techniques for clinical assessment of nutritional status and diagnosis of nutritional disorders.

633 Biochemical Assessment Weeks 9–14; interested students must enroll with the instructor during the first 2 weeks of the term. 2 credits. Prerequisites: NS 331, Biological Sciences 330 or 331, either NS 332 or Biological Sciences 430, a course in human physiology, and permission of instructor. M. N. Kazainoff and division faculty. Biochemical assessment of nutritional status. Experiments are selected to exemplify measurements of intake, use, and output of primary nutrients and their metabolites.

634 (also Biological Sciences 634) Vitamins and Coenzymes Spring. 2 credits. Prerequisites: organic chemistry 253 or 357–358 and Biological Sciences 331 or 330, or their equivalents in biochemistry. Offered alternate years. Not offered 1982–83.
D. Roe. Emphasis is given to effects of aging, particularly as these change food habits, alter digestive processes, or decrease needs of nutrient overload and nutritional deficiency are described. Nutritional assessment of elderly people is explained, together with precautions that must be taken in interviewing for consideration to geriatric nutrition as a major responsibility of nutritionists working in hospitals, extended-care facilities, and community programs. Therapeutic aims considered are the provision of nutritional rehabilitation in acute-care hospitals and specific diet therapy for chronic-disease patients. Community program objectives are discussed, including establishing and maintaining feeding programs for the elderly.

650 Clinical and Public Health Nutrition Spring. 3 credits. For graduate students with a major or minor in nutrition and undergraduate nutrition majors in their senior year. Prerequisite: NS 331 or equivalent. M W F 9:05. D. Roe.

651 Nutrition and the Chemical Environment Fall. 3 credits. Prerequisite: NS 331 or equivalent. S-U grades optional. M W F 11:15. D. Roe.

652 Nutrition Counseling Spring. Meets 2½ hours during each of the first 11 weeks of the semester. 2 credits. Limited to students in the Clinical Nutrition Program. Prerequisite: NS 441, 442, and permission of instructor. S-U grades optional.

659 (also Veterinary Medicine 759) The Nutrition and Physiology of Mineral Elements Fall. 2 credits. Prerequisites: basic physiology, and intermediate biochemistry, and general nutrition. Offered alternate years. T R 9:10-11:25. D. Levitsky.

660 Special Topics in Nutrition Fall or spring. 3 credits maximum each term. Registration by permission of the instructor. T R 9:10-11:25. D. Levitsky.

669 Field Seminar Spring; offered during January intersession or immediately following final examinations spring semester. 1 credit. Limited to 12 students. Required for graduate students in clinical nutrition. Open to other graduate students in nutrition with permission of instructor. J. Rivers, M. Devine, R. Holmes.

670 Clinical Field Studies Fall, spring, summer. 15 credits maximum. Limited to graduate students in community nutrition. Prerequisites: NS 441, 442, 650, 631, 630, 631 R, and 632. Full-time study at off-campus clinical sites. C. Lanciolui, R. Holmes, V. Uleromohn, J. Rivers.

680 International Nutrition Problems, Policy, and Programs Fall. 3 credits. Prerequisite: permission of instructor. T R 11:15-12:30. M. Latham.

686 Seminar in United States Nutritional Services and Programs Spring. 2 credits. Limited to graduate students. Prerequisites: Statistics and Biometry 602 or 604 or equivalent; NS 331, 441, 601, 603, 630, and 631, or equivalent, and permission of instructor. S-U grades optional.

690 (also Psychology 690) Seminar on Nutrition and Behavior Spring. 3 credits. Limited to 25 students. Prerequisite: a course in psychology and NS 361 and permission of the instructor. S-U grades optional. Offered alternate years. T R 10:10-11:25. D. Levitsky.

695 Seminar In International Nutrition and Development Policy Spring. 2 credits. Prerequisite: NS 680 or equivalent. S-U grades optional. Hours to be announced. M. Latham and division faculty.

699 Special Topics in International Nutrition Fall and spring. 3 credits maximum each term. Registration by permission of the instructor. International nutrition faculty.

This option is designed for the graduate student who wants to become familiar with some specific topic related to international nutrition, The course usually consists of individual tutorial study involving extensive use of existing literature. In certain semesters it may consist of a lecture or seminar course on a subject such as nutrition and parasitology or the nutritional problems of some geographic region. On occasions it may involve laboratory or field studies. Because the topics may change, this course may be repeated for credit.
One-half of meetings on general topics in toxicology, with the other half on nutrition and cancer. The toxicology seminar program will cover varied topics in biochemical, genetic, nutritional, and veterinary toxicology and includes basic research studies as well as concepts and research activities on environmental problems of a toxicological nature. The nutrition-and-cancer seminar program includes presentations by off-campus speakers addressing fundamental concepts of chemical carcinogenesis and the role of dietary and nutritional modification of the carcinogenesis process.

703 Seminar in Nutritional Science  Fall or spring. 1 credit. S-U grades only. T 12:20 or W 12:20. Division faculty.

899 Master's Thesis and Research  Fall or spring. Credit to be arranged. Prerequisite: permission of the chairperson of the graduate committee and the instructor. S-U grades optional.

999 Doctoral Thesis and Research  Fall or spring. Credit to be arranged. Prerequisite: permission of the chairperson of the graduate committee and the instructor. S-U grades optional.

Faculty Roster

Arion, William J., Ph.D., U. of N. Dakota. Prof.
Armbruster, Gertrude, Ph.D., Washington Statd U. Assoc. Prof.
Bensadoun, Andre, Ph.D., Cornell U. Prof., Nutritional Sciences/Physiology
Bisogni, Carole, Ph.D., Cornell U. Assoc. Prof.
Brink, Muriel S., M.S., Michigan State U. Assoc. Prof.
Campbell, T. Colin, Ph.D., Cornell U. Prof.
Cowell, Catherine, M.S., U. of Connecticut. Adjunct Prof.
Devine, Marjorie M., Ph.D., Cornell U. Prof.
Gillespie, Ardyth, Ph.D., Iowa State U. Asst. Prof.
Haas, Jere D., Ph.D., Pennsylvania State U. Assoc. Prof.
Habicht, Jean-Pierre, Ph.D., Massachusetts Inst. of Technology. James Jamison Professor of Nutritional Epidemiology
Kazarinoff, Michael N., Ph.D., Cornell U. Asst. Prof., Nutritional Sciences/Biochemistry, Molecular and Cell Biology
Klipstein, Ruth N., M.S., Michigan State U. Prof.
Kumanyika, Shiriki K., Ph.D., Cornell U. Asst. Prof.
Levitsky, David A., Ph.D., Rutgers U. Assoc. Prof.
Lewis, Bertha A., Ph.D., U. of Minnesota. Assoc. Prof.
Mondy, Neil I., Ph.D., Cornell U. Prof.
Morison, Mary A., Ph.D., U. of Wisconsin. Prof.
Nesheim, Malden C., Ph.D., Cornell U. Prof.
Olson, Christine M., Ph.D., U. of Wisconsin. Assoc. Prof.
Parker, Robert S., Ph.D., Oregon State University. Asst. Prof.
Riulin, Richard S., M.D., Harvard U. Adjunct Prof.
Rivers, Jerry M., Ph.D., Pennsylvania State U. Prof.
Sanjur, Diva M., Ph.D., Cornell U. Prof.
Stephenson, Lani, Ph.D., Cornell University. Visiting Asst. Prof.
Stipanuk, Martha H., Ph.D., U. of Wisconsin. Asst. Prof.
Thorbecke, Erik, Ph.D., U. of California. H.E. Babcock Professor of Economics and Food Economics
Utermohlen, Virginia, M.D., Columbia U. Assoc. Prof., Nutritional Sciences/Biochemistry, Molecular and Cell Biology
Wright, Lemuel D., Ph.D., Oregon State Coll. Prof Emeritus
Zilversmit, Donald B., Ph.D., U. of California. Prof., Nutritional Sciences/Biochemistry, Molecular and Cell Biology

Joint Appointees

Aggar, B. Jean, Visiting Asst. Prof., U.S. Plant, Soil, and Nutrition Laboratory/Nutritional Sciences
Austic, Richard E., Assoc. Prof., Poultry Science/Nutritional Sciences
Bauman, Dale, Assoc. Prof., Animal Science/ Nutritional Sciences
Combs, Gerald F., Jr. Assoc. Prof., Poultry Science/Nutritional Sciences
Krook, Lennart P., Prof., New York State College of Veterinary Medicine/Nutritional Sciences
Miller, Dennis, Asst. Prof., Food Science/Nutritional Sciences
VanCampen, Darrell R., Assoc. Prof., U.S. Plant, Soil, and Nutrition Laboratory/Nutritional Sciences
VanSoest, Peter J., Prof., Animal Science/Nutritional Sciences
Warner, Richard G., Prof., Animal Science/Nutritional Sciences
Wasserman, Robert H., Prof., New York State College of Veterinary Medicine/Nutritional Sciences
Young, Robert J., Prof., Animal Science/Nutritional Sciences
The primary objective of the Army Officer Education Program at Cornell is to develop and commission men and women who have the qualifications and potential for service as officers in the reserve and active components of the United States Army. Intermediate objectives are to provide students with an understanding of the fundamentals of responsibility, integrity, and self-discipline, as well as an appreciation of the citizen's role in national defense. The application of the decision-making process to a variety of situations is given major emphasis as a valuable aid in developing leadership potential.

The program includes specific courses in military science, more general academic subjects that assure a well-rounded education, professional training in leadership through participation in the Cadet Corps (including attendance at a six-week summer camp at an Army installation), and the opportunity to participate in a number of extracurricular activities such as those described below. The combination prepares the student for commissioning and effective performance in most of the many branches of the Army. The student develops personal performance, leadership ability, personal desires, and the needs of the Army to determine the branch of the Army in which he or she is commissioned upon graduation.

The programs of officer education allow the student to prepare for a commission as an officer in either the regular military services or the reserves of the United States. The Army, Navy, Marines, and Air Force offer such opportunities, and each service program is headed by a senior military officer who also serves as a full professor on the Cornell faculty.

**Military Science**

Lieutenant Colonel David J. Boyle, Infantry, United States Army, Professor of Military Science and Commanding Officer, United States Army ROTC Detachment

Captain James R. Patton, Adjunct General Corps, United States Army

Captain John V. Cecalupo, Infantry, United States Army

Captain Gary S. Tether, Chemical Corps, United States Army

Sergeant Major Otis M. Jackson, Corps of Engineers, United States Army

**United States Army ROTC Program**

Students in the first year of the Basic Phase take classroom courses in military science in the fall semester, for which they receive academic credit. These courses include study of the United States Constitution, the military organization for defense, principles and techniques of leadership and management, the evolution of warfare, and the nature of armed conflict in society. Students also participate in leadership modules that include rappelling, orienteering, and rifle marksmanship. They are designed to promote personal development and enrichment. While these activities do not earn academic credit, students can elect to receive physical education credit. In the spring semester the student takes a leadership module other than the one taken in the fall and can elect to receive physical education credit. Typical freshman participants in Army Officer Education are forty-eight and a half program-related hours.

During the fall of the second year, the student takes a three-credit class in military history. In the spring, the student takes a one-credit course in map reading and spends approximately two hours a week in practical leadership training as preparation for the Advanced Phase.

**Basic Phase (Mil S I and Mil S II)**

Students who are so commissioned enter the Army on commissioning and effective performance in most of the many branches of the Army. The student develops personal performance, leadership ability, personal desires, and the needs of the Army to determine the branch of the Army in which he or she is commissioned upon graduation.

**Requirements for Enrolling**

Applicants must be citizens of the United States. (Noncitizens may enroll and will receive certificates acknowledging completion of the course but do not receive commissions.)

An applicant's vision must be correctable to a minimum of 20/20 in one eye and 20/400 in the other eye. Height must be at least sixty inches for men, fifty-eight inches for women, and no more than eighty inches for men and seventy-two inches for women, although exceptions will be considered. The weight requirement varies according to height and sex. Overall sound mental and physical condition is essential, and students are required to undergo periodic physical examinations. Enrollment in the program is subject to the approval of the professor of military science.

Enrollment in specific courses by students not normally enrolled in the program must be approved by course instructors.

**Four-Year Program**

The Four-Year Program is open to students in their freshman year or, with the approval of military and University authorities, to sophomores in a five-year degree program. Veterans of the Armed Forces of the United States and students entering Cornell with AROTC credit from secondary or military schools (Junior Division AROTC) may receive advanced standing.

Under the Four-Year Program, students pursue the Basic Phase (Mil S I and II) during the first two years, and during the next two years the Advanced Phase (Mil S III and IV). A total of twelve credits of military subjects is required. In addition, a number of professional military education courses are required. These courses are in such fields as communication arts, military history, human behavior, management, and national security studies. Specific requirements are determined by the student and his or her adviser after initial enrollment. Throughout the four years, cadets spend an additional one and a half hours each week each semester in practical leadership training for which there is no academic credit. All cadets attend a six-week camp, with pay, between the junior and senior years.

**Basic Phase (Mil S I and Mil S II)**

Students in the first year of the Basic Phase take classroom courses in military science in the fall semester, for which they receive academic credit. These courses include study of the United States Constitution, the military organization for defense, principles and techniques of leadership and management, the evolution of warfare, and the nature of armed conflict in society. Students also participate in leadership modules that include rappelling, orienteering, and rifle marksmanship. They are designed to promote personal development and enrichment. While these activities do not earn academic credit, students can elect to receive physical education credit. In the spring semester the student takes a leadership module other than the one taken in the fall and can elect to receive physical education credit. Typical freshman participants in Army Officer Education are forty-eight and a half program-related hours.

During the fall of the second year, the student takes a three-credit class in military history. In the spring, the student takes a one-credit course in map reading and spends approximately two hours a week in practical leadership training as preparation for the Advanced Phase.

**Advanced Phase (Mil S III and Mil S IV)**

The Advanced Phase of the Four-Year Program is open to students who have successfully completed the Basic Phase and are accepted by the professor of military science for further enrollment. It is also open to students who have gained appropriate advanced standing through either successful completion of basic summer programs (see the description of the Two-Year Program for prior military training. Any student entering the Advanced Phase must have two years of academic work remaining at Cornell or another degree-granting institution. The student must pass all physical aptitude tests as may be prescribed. In addition, the performance and desire of each student is evaluated to determine if he or she has the potential for eventual commissioning.

When students are accepted for the Advanced Phase, they execute a written contract with the United States government. Under terms of the contract, they agree to complete the Advanced Phase and to accept a commission if tendered. Concurrently with the signing of the contract, students enlist in the United States Army Reserve for control purposes.

**Scholarships**

Scholarships are awarded on the basis of merit and are available for one, two, three, or four years. AROTC scholarships are awarded each year to outstanding Basic Camp participants and students in the freshman, sophomore, and junior classes. Applicants who are awarded scholarships continue to receive support until graduation as long as they fulfill the requirements. The active duty requirement for all scholarship students is four years.

Scholarship cadets receive funding for University tuition, required fees, required textbooks, and classroom materials for the duration of their scholarship. Basic-course scholarship cadets also receive $100 a month for up to ten months a year.

**Commissioning**

All students who successfully complete the Advanced Phase, including the advanced summer camp, are commissioned as second lieutenants in the United States Army Reserve or the Regular Army, upon graduation.

**Distinguished Military Graduates**

Selected senior cadets with high academic achievement and outstanding military qualities are designated Distinguished Military Graduates (DMG). All cadets, scholarship and nonscholarship, are eligible to compete. DMGs may be commissioned in the Regular Army rather than the Reserves, and those who are so commissioned enter the Army on the same basis as graduates of the United States Military Academy at West Point.
Service Obligations
A variety of active duty and reserve combinations are available. Nonscholarship cadets must spend either three years on active duty and three more years on Reserve status, or three to six months on active duty followed by membership in Reserve units for six years. The manpower requirements of the Army determine the proportion of officers who serve in each category. Current trends indicate that requests for active duty for three years by nonscholarship, non-Regular Army officers will be approved. However, it is a competitive process. Similarly, requests for limited active duty (three to six months for training only) are selectively approved. An officer beginning three years active duty first attends the Basic Officer Course (normally eight to twelve weeks) of the assigned branch. Upon completion of this course, the officer is assigned to a unit and location that is determined by the desires of the individual and requirements of the Army. Those officers selected for three to six months attend the Basic Officer Course, after which they are released to Reserve status. Nonscholarship cadets accepting a Regular Army commission serve a minimum of three years on active duty followed by three years in Reserve status. Every scholarship cadet (whether commissioned in the Regular Army or the Reserve) serves four years on active duty and two years on Reserve status.

Choice of Branch
Cadets in the second year of the Advanced Phase (normally the senior year) may specify the branch of the Army—such as Infantry, Corps of Engineers, Armor, Signal Corps, Artillery, Air Defense, Ordnance, Chemical, Adjutant General, Judge Advocate, General, Finance, Medical Service, Military Intelligence, Military Police—in which they prefer to serve. They are notified in the spring, before commissioning, of the branch to which they are assigned. The likelihood of appointment in a chosen branch depends upon the student’s academic and officer education performance, degree area, and the needs of the Army at that time.

Graduate Study
Active duty deferments may be granted to individuals who want to attend graduate school at their own expense after commissioned. Current policy is to approve all requests for active duty deferment for graduate school for two years (three years for law school). Requests for longer deferments will be considered on an individual basis.

Benefits
Each cadet in the Advanced Phase (Mil S III and Mil S IV) receives $100 a month for ten months a year. While attending the advanced summer camp (between the junior and senior years), each cadet receives approximately $550 and an allowance for travel to and from camp. Uniforms, textbooks, and supplies required for AROTC instruction are provided by the Army. A cadet in the Two-Year Program receives the same payments as cadets in the Advanced Phase and, in addition, receives approximately $450 and a travel allowance for basic summer camp attendance before entering the Advanced Phase.

Military Science Courses
All cadets take one course or a module or both each semester in military science. The number of hours a week spent in the classroom varies from semester to semester, as does the credit received for each course. Students in the Four-Year Program are required to take a specified number of courses in the Military Science Courses and in the Two-Year Program are required to take all of the courses listed for the junior and senior year.

Freshman Year (Mil S I)

First Year (Mil S I)

United States Organization for Defense
Fall. 1 credit. Required. Staff.

Students examine the United States defense apparatus in terms of organization, mission, personnel, and relationships among military forces and between the military forces and various branches and departments of the government. The United States Army force structure is examined at all levels. The complexities and magnitude of operating the defense organization are studied to provide a framework for subsequent instruction.

Social and Organizational Psychology
Spring. 1 credit. Required. Staff.

This course allows the student to develop a basic understanding and appreciation of the theories of social and organizational psychology and behavior as they apply to the military setting. Attention is given to leader types, the source and exercise of authority, and the impact of varying styles of leadership on motivation and organization effectiveness. The student is introduced to the concepts of integrity, ethics, and professionalism.

Sophomore Year (Mil S II)

Mil S 211 Armed Conflict and Society
Fall. 3 credits. Required. Students.

3 classes each week. Presentation by Army, Marine Corps, and Navy instructors with guest lecturers, primarily from government and history departments.

A study of modern warfare that examines the relationship of military strategy to geography, economics, sociology, technology, and national political realities and values; the evolution of warfare, including principles of war, weapons, and associated equipment; and the effects of nuclear weapons and guerrilla warfare on traditional concepts of national strategy.

Mil S 221 Mapping: Land Navigation
Spring. 1 credit. Required. Staff.

This course provides practical knowledge of the various forms of topographic representation. Students develop, interpret, and use maps in terrain association and land navigation. Knowledge of topography is complemented by an orientation on significant environmental influences from political, social, and climatic factors. Portions of the course offer practical experience in land navigation and orienteering.

Junior Year (Mil S III)

Mil S 332 Theory and Dynamics of the Military Team
Fall. 2 credits. Required. Staff.

After an initial introduction to techniques of presenting briefings, the student is provided with a broad understanding of the principles and application of teamwork in military organizations. Particular emphasis is given to leadership responsibilities of the commander as the team coordinator. Additionally, the student has an opportunity to develop an understanding of the roles and contributions of the various branches of the Army in support of the military team.

Mil S 332 Leadership in Small-Unit Operations
Spring. 2 credits. Required. Staff.

This course provides an understanding of the nature of leadership making and the practical application of leadership in the military team. Through the use of conferences and extensive practical exercises, students develop familiarity with the factors influencing the leader's decisions; the processes of planning, coordinating, and directing the operations of military units to include troop-leading procedures; and development of operation plans and orders.

Senior Year (Mil S IV)

Mil S 424 Contemporary Military Environment
Fall. 2 credits. Required. Staff.

A detailed examination of the functions and activities of military organizations, their commanders, and their staffs. Discussion focuses on students' past experiences and future expectations in examining such aspects of the military environment as the chain of command, decision making, command and staff relations actions, and the various elements of small-unit administration.

Mil S 461 Contemporary Military Environment
Spring. 2 credits. Required. Staff.

As a continuation of the material presented in Mil S 424, students examine carefully the leadership environment of an Army officer. Conferences and seminars are used to examine the techniques of effective military leadership, the sociological and psychological environment, the nature of military law and, above all, the professional ethics, responsibilities, and obligations of an Army officer.

Practical Leadership Training

All Army Officer-Education Students

All Advanced Phase AROTC students and Basic Phase students belong to a cadet organization for the purpose of participation in leadership experiences. The cadet organization meets formally for one and a half hours each week as part of the leadership laboratory program.

The rationale for the form and content of the program is the fact that continued exposure to leadership situations that are both mentally and physically challenging will develop poise and self-confidence. The practical result for the individual participant is the ability to apply intelligence and creatively the decision-making process to a variety of complex situations, while simultaneously supervising the performance of others.

Training of this nature enables students to learn how to communicate effectively with peers, subordinates, and superiors. Most importantly, the program helps instill in each participant a heightened awareness of the roles that character traits such as integrity, cooperation, devotion to duty, and professionalism play in the smooth operation of any organization.

In the leadership laboratory, all of these objectives are accomplished by emphasizing practical exercises and firsthand experience. Types of practical laboratory activities include an introduction to rifle marksmanship, mountaineering, physical training, land navigation and orienteering, signal communications, tactics, and orientation and training exercises at military installations.

As with many laboratory periods, no credit is given, and participation is required for successful completion of the AROTC program. Students register as follows.

Mil S I Leadership Laboratory
Fall
Spring

Mil S 141
Mil S 142

Mil S I cadets select either rifle marksmanship, orienteering, or rappelling. These interesting and challenging activities do not provide academic credit but may be used for physical education credit if adequate hours have been accrued.

Mil S II Leadership Laboratory
Fall
Spring

Not offered

Mil S 242
Cadets meet for two hours each week as members of the cadet organization to participate in practical leadership exercises. Types of practical activities include familiarization in rifle marksmanship, orienteering, drill and ceremonies, signal communications, physical-fitness training, and tactics and field exercises.

**Mil II - Leadership Laboratory III**
- **Fall**: Mil II 341
- **Spring**: Mil II 342

Cadets meet for one and one-half hours a week to prepare for a six-week summer camp that follows the junior year. Emphasis is on the development of individual skills in leadership techniques and practical skills. Cadets rotate among leadership positions to develop an ability to apply decision-making processes to a myriad of situations. Cadets also acquire technical expertise and proficiency in signal communications, physical fitness, drill and ceremonies, rappelling, orienteering, tactics, water survival, and other military skills.

**Mil IV - Leadership Laboratory IV**
- **Fall**: Mil IV 441
- **Spring**: Mil IV 442

Senior cadets plan and operate the leadership laboratory programs for Mil II-III cadets. The development of planning and supervisory skills is emphasized. Cadets have an opportunity to practice leadership skills developed during previous ROTC training and summer camp experiences.

**Naval Science**

Donald J. Meyer, United States Navy, Professor of Naval Science and Commanding Officer, Naval ROTC Unit

Commander, Joseph M. Quigley, United States Navy

Mayor Robert A. Packard, United States Marine Corps

Lieutenant Frederick W. Weber, United States Navy

Lieutenant Robert W. Grose, United States Navy

Lieutenant Peter J. Campbell, United States Navy

The objective of the Naval Officer Education Program is to prepare selected students for service as commissioned officers in the United States Navy or United States Marine Corps by supplementing their undergraduate education with instruction in essential concepts of naval science and fostering development in the qualities of leadership, integrity, and dedication to their country and the naval service. The program is compatible with most undergraduate major fields of study, including five-year baccalaureate degree programs.

The objective is achieved through a broad program, normally covering four years, that combines specific courses in naval science and specified academic subjects to supplement weekly laboratory sessions in which the practical aspects of naval science and leadership procedures are stressed. It also includes at least one summer-at-sea period.

**Non-naval officer education students**

Though the Navy program is designed to prepare future officers, Navy courses are open to all students at Cornell University as space limitations allow.

**Requirements for Enlistment**

An applicant for Naval ROTC at Cornell must be a citizen of the United States. Applicants must have reached their seventeenth birthday by June 30 of the entering year and be less than twenty-five years of age on June 30 of the calendar year in which they are commissioned. For women, the upper age limit may be granted on an individual basis by the Chief of Naval Personnel up to age twenty-nine on June 30 of the year in which commissioned. Applicants must also meet physical and medical requirements. Interested students should visit the Naval Officer Education unit in Barton Hall.

**Programs**

There are two types of Navy programs. They are the Scholarship Program and the College Program. They differ primarily in benefits to the student and type of commission earned.

**Scholarship Program**

The Naval Officer Education Program provides six thousand scholarships in over fifty-five universities nationwide to selected students who want to serve in the Navy or Marine Corps. Financial support is provided students during college preceding the award of the baccalaureate degree.

**Benefits**

The program provides uniforms, full tuition, most instructional fees, textbooks, nontoxic supplies, and $100 a month for a maximum of forty months. Successful completion of the Scholarship Program leads to a commission in the Regular Navy or Marine Corps. At Cornell University over 90 percent of naval students have a scholarship. In the past, of those students who have entered the Cornell program without a scholarship, more than 60 percent have been successful in obtaining one.

**Entering the Scholarship Program**

There are three ways to enter the Scholarship Program:

- First, by applying for the national competition each year. This entails filling out and sending an appropriate application, being interviewed, having a physical examination, and applying to, and being accepted by, one of the NROTC colleges or universities throughout the country.
- Second, by enrolling in the College Program at Cornell and being recommended by the professor of naval science for a scholarship after at least one year in the program.
- Third, by entering through one of the Two-Year College Programs.

**College Programs**

There are two College Programs available. Both lead to a commission in the Naval or Marine Corps Reserve and three years of active duty.

Each of these programs provides textbooks for naval professional courses, uniforms, and a subsistence allowance of $100 a month from the beginning of the junior year.

The regular College Program is three to four years long. Academic requirements for students in this program are somewhat less than those for scholarship students, as noted in the Curriculum section.

The Two-Year College Program begins the summer before the junior year, when students attend a required program with pay at the Naval Science Institute in Newport, Rhode Island.

**Summer Training**

Each summer, students in the Scholarship Program spend approximately six weeks on a Navy ship, with a naval activity anywhere in the world, for on-the-job training or sailing aboard the unit ocean-going sail-training vessel. College Program students attend at least one summer training session of the same duration between the junior and senior years. While attending summer training sessions, midshipmen are paid approximately $400 a month.

**Active Duty Requirements**

As required by Section 2107, Title 10, United States Code, selected applicants must enlist in the United States Naval Reserve for five years, pay grade E-1 (seaman recruit), prior to being appointed midshipman, USNR, and receiving compensation. Students that are disenrolled from the NROTC Navy-Marine Corps Scholarship Program for reasons beyond their control shall be discharged from their enlisted status. It should be understood that two years active enlisted service will be required of those students who default from the terms of their NROTC contract after the beginning of their junior year. Additionally, two years active enlisted service is incurred at any time for those individuals who are released from active duty specifically to participate in the NROTC scholarship program and do not complete such training.

Officers commissioned in the Regular Navy or Marine Corps serve on active duty for a minimum of four years. Those commissioned in the Naval or Marine Corps Reserve serve three years on active duty. Specialized training following commissioning adds additional active duty requirements in some cases.

**Choice of Assignment**

Graduates have an opportunity to request the duty they prefer upon graduation. These requests are given careful consideration, and every effort is made to assign the newly commissioned officer the duty of his or her choice.

Among the types of assignments are duty in nuclear power engineering for surface ships and submarines, naval aviation, and duty aboard large and small surface ships.

**Marine Corps Options**

The United States Marine Corps is an integral part of the Naval Service and is commanded by the Commandant of the Marine Corps. One-sixth of the NROTC scholarship students may be Marine selects who will be designated as Marine-option midshipmen. Upon successful completion of the program, they will be appointed second lieutenants in the United States Marine Corps.

Marine-option midshipmen will follow the same program as other NROTC midshipmen for the first two years. Beginning with the junior year, Marine-option midshipmen will be taught Marine courses by a Marine officer instructor. For the first class summer cruise (after the junior year), known as the Bulldog Cruise, Marine option students will travel to Quantico, Virginia, where they will undergo six weeks of intensive training. Upon commissioning the following year as second lieutenants, they will be assigned to the Basic School at Quantico, Virginia. After the Basic School, the Marine officer is assigned duty in a variety of occupational fields. Among the duties available are Infantry, Aviation, Artillery, Tracked Vehicles, Engineers, Communications, Electronics, Supply, Administration, and Computer Science. The officer may serve on board naval vessels or at shore installations of the Marine Corps or Navy, in this country or overseas.

The Marine Corps has a postgraduate educational system similar in objectives and organization to that of the Navy. Marine officers selected for aviation receive flight training at the Naval Air Station, Pensacola, Florida, along with their Navy counterparts.

**Curriculum**

A student has three categories of requirements to fulfill as a midshipman in the Naval Officer Education Program. The first of these requirements is a weekly naval professional laboratory each semester. The second requirement is a naval science course each semester. The last set of requirements consists of other required courses prescribed by the Navy to meet the growing need for more and better technically educated junior officers.
Naval Science Courses

All Navy and Marine midshipmen take one naval science course together each semester during their freshman and sophomore years. Navy-option students continue to take a naval science course each semester during their junior and senior years. Marine-option students are required to take only the amphibious warfare course in either their junior or senior year, depending on when the course is offered. The number of hours a week spent in the classroom varies semester to semester, as does the credit received for each course.

Freshman Year

Nav S 101 Fundamentals of Naval Science Fall. 6 credits.
One-hour lec-rec each week. Navy staff.
A study of fundamental aspects of naval science, including its conceptual contributions to sea power, factors involved in the physical development of naval forces, resources which must be managed, and prospects for the future.

Nav S 102 (also MAAE 101) Naval Ship Systems Spring. 3 credits.
Three lec-recs each week. R. L. Wehe.
An introduction to primary ship-systems and their interrelationship. Basic principles of thermodynamics, propulsion, mechanical operation, internal communications, electronics, ship structure, and other marine systems are considered.

Sophomore Year

Nav S 201 Naval Weapons Systems Fall. 3 credits. Prerequisites: Mathematics 192 or 112 and Physics 208 or 214.
Lec-recs, MWF 8-8. Navy staff.
The principles and theories used in the development of naval weapons systems are examined. Initially, extensive study is made of sensing and detection systems, especially radar and sonar, followed by discussions of ancillary systems for computing, tracking, stability, and weapons control and delivery. The latter part of the course covers the formal derivation of the fire-control problem and development of an algorithmic solution method applicable to the digital computer.

Nav S 202 Seapower—History of the Navy Spring. 2 credits.
Two seminars weekly. Navy staff.
Discussions examine the history of the Navy as a force in diplomacy. Relationships between Congress and the military for determining the national defense policy are also explored.

Junior Year (Navy)

Nav S 305 Principles of Navigation (also Agricultural Engineering 305) Spring. 4 credits.
Four classes each week (lec-rec-project work).
The course covers coordinate systems, chart projections, navigational aids, instruments, compass observations, tides and currents, and soundings. It also includes celestial navigation, time, spherical trigonometry, motion of the stars and sun, star identification, position fixing, use of the nautical almanac, electronic navigation systems, and air navigation.

Nav S 321 Naval Operations Fall. 0 credit.
One-hour class each week. Navy staff.
The course covers the application of command and control principles and the integration of sensors and weapons systems in the conduct of naval operations. Visual and electronic communications methods, data systems employment, tactical disposition of forces, and fleet logistics support are studied. Topics in shiphandling also are discussed.

Senior Year (Navy)

Nav S 431 Organizational Behavior and Small Group Problems (also Hotel Administration 414) Fall and Spring. 3 credits.
The principles and theories used in the development of naval weapons systems are examined. Initially, extensive study is made of sensing and detection systems, especially radar and sonar, followed by discussions of ancillary systems for computing, tracking, stability, and weapons control and delivery. The latter part of the course covers the formal derivation of the fire-control problem and development of an algorithmic solution method applicable to the digital computer.

Nav S 432 Naval Administration Topics Spring. 0 credit.
A variety of topics important to the naval officer for both professional and managerial development are reviewed. The material is directed at the midshipman for his own understanding of naval administration and for use in counseling his subordinates in the role of the division officer. Through the use of lectures, situation problems, and role playing, the student will learn about the various aspects of Navy management and administration.

Additional Required Course

This course may be taken at any time during a student's undergraduate academic career.

Nav S 302 Armed Conflict and Society Fall. 3 credits.
Three classes each week. Presentations by Marine Corps and Navy instructors with guest lecturers, primarily from government and history departments.
A study of modern warfare that examines the relationship of military strategy to geography, economics, sociology, technology, and national political realities and values; the evolution of warfare, including principles of war, weapons, and associated equipment; and the effects of nuclear weapons and guerrilla warfare on traditional concepts of national strategy.

Junior or Senior Year (Marines)

Nav S 311 Amphibious Warfare Spring. 3 credits.
Three lec-recs each week. Marine Corps staff.
The history of the development, theory, techniques, and conduct of amphibious operations during the twentieth century. Special emphasis will be on amphibious operations conducted in the central Pacific during World War II.

Other Required Courses

Navy Option

In order to receive commissions in the United States Navy, midshipmen must complete all the requirements for a baccalaureate degree as well as certain academic requirements specified by the Navy. Study in engineering and scientific fields is required for a majority of Navy-option scholarship students. Specifically, 80 percent of the Navy-option scholarship students are encouraged to pursue majors in engineering and approved sciences (chemistry, mathematics, physics, computer science, oceanography, operations analysis, or the physical sciences) to meet the technological requirements of the modern Navy. Other fields of study for majors leading to a baccalaureate degree and having a direct applicability to the unrestricted line are permitted with the approval of the professor of naval science. Academic majors in fields not selected as a career interest apparently antithetical to a career in the unrestricted line (for example, agronomy, art, floriculture, music, physical education, predental studies, theology, or wildlife management) are precluded for Navy-option scholarship students. Because of changing terminology for academic fields of study, it is not practical to provide a complete list of authorized and unauthorized majors. Examples of fields of academic study of interest to the Navy for educating officers of the unrestricted line are:

Asian studies
management
mathematics
oceanography
operations analysis
physical sciences
physics
public administration
Soviet studies
Latin American studies

Although there are few restrictions placed upon Navy-option College Program students (or any Marine-option students) with respect to academic majors, it is important to understand the vital need for mathematics and science majors in the modern Navy. College Program students who want to compete for a scholarship are encouraged to select majors in those fields listed above.

Other required courses depend on the commissioning program in which the Navy-option midshipmen are enrolled and are given in the following sections.

Scholarship Program Navy-option students. All Navy-option scholarship students must complete two semesters of science-level calculus (6 credits minimum) by the end of the sophomore year and two semesters of calculus-based physics (6 credits minimum) by the end of the junior year.

Scholarship Program Marine-option students. College Program students who desire entry into the Navy Option Scholarship Program should fulfill all of the requirements applicable to Navy-option scholarship students to be eligible and competitive for a Professor of Naval Science (PNS) scholarship.

Marine Option

Any Navy midshipman, in either the Scholarship Program or the College Program, who completes all of Cornell University's degree requirements in any academic major is eligible for a commission in the United States Marine Corps or United States Marine Corps Reserve. Marine-option students take the same naval science courses and naval professional laboratories as Navy-option students for the freshman and sophomore years. During the junior and senior years, Marine-option students must meet with the Marine officer instructors one hour each week and take two naval science courses. In addition, two semesters of any courses (a minimum of three hours each) in the following subject areas are required, the intent being to broaden the base of knowledge of the individual.

- History
- Economics
- Chemistry
- Oceanography
- Psychology
- Operations Analysis
- Marine Corps Administration
- Foreign Affairs
- Public Administration
- Marine Science
The specific course chosen must be approved by a Marine Officer Instructor (MOI).

The objective of the Air Force Officer Education program at Cornell is to prepare men and women for positions as officers in the United States Air Force. The program is designed to provide the student with a background of aerospace knowledge and to further develop qualities of leadership, integrity, and self-discipline. The objectives are achieved through four-year and two-year programs. These programs include specific courses in aerospace studies and practical laboratories. Entering students are assigned to one of four categories: flying (pilot-navigator), missile, engineering-science, and general service. These assignments are based on the student's preferences, qualifications, academic field of study, and the needs of the Air Force.

Requirements for Enrollment

The Air Force Officer Education program is open to any undergraduate or graduate student enrolled in any major field of study. The student's academic course of study is often a prime factor in determining the kind of career pursued in the Air Force. (See Air Force Careers below.)

Applicants must be United States citizens. Noncitizens may enroll and will receive certificates acknowledging completion of the course but cannot receive a commission.

Applicants who are interested in flying (as pilot or navigator) or missile duty should make that request known at the time they enter the program.

All applicants receive physical examinations at no cost and, to be accepted, must meet the physical requirements listed below. Though the program is designed to prepare future Air Force officers, Department of Aerospace Studies courses are open to all students at Cornell.

Physical Requirements

Every applicant must be free from any limiting physical infirmity and must have normal hearing, blood pressure, and heartbeat. Weight must be normal for height and age. Following are the additional specific requirements for nonflying categories:

Vision: bilateral distant vision without corrective lenses, at least 20/400.
Height: (for men): at least sixty but not more than eighty inches; (for women): at least fifty-eight but not more than seventy-two inches.
Allergy: no history of asthma since twelfth birthday.

Those students who are interested in qualifying for flying categories (pilot or navigator) must meet the following specific requirements:

Vision: (for pilot candidates): 20/20 bilateral near and far vision without corrective lenses; (for navigator candidates): bilateral near vision at least 20/20 without corrective lenses and bilateral far vision at least 20/70 without correction, providing it is correctible to 20/20 with lenses.

Color vision: normal.
Height: at least sixty-four but not more than seventy-six inches; sitting height not more than thirty-nine inches.
Allergy: no history of allergy or hay fever since twelfth birthday.

Aerospace Studies

The Two-Year Program consists of the basic program (first two years) and the Professional Officer Course (advanced program) during the junior and senior years. The basic program carries no military commitment and students may withdraw at any time during that period.

Basic Program

Students in the basic program take one credit of classroom work offered by the Department of Aerospace Studies each semester. During the freshman year, the role of the United States military forces in the contemporary world is examined with emphasis on human rights and the organization and mission of the United States Air Force. The functions of strategic offensive and defensive forces, general purpose forces, and aerospace support forces are covered. In the sophomore year, the history and development of military aviation and American air power are studied.

Students also spend one hour a week in a leadership laboratory, which includes classroom instruction in responsibilities and the environment of the junior officer, and instruction and practice in basic drill and ceremonies. In addition, all students participate in summer field training for four weeks between their sophomore and junior years.

Professional Officer Course

The Professional Officer Course (POC) is a two-year advanced course of instruction. Students who are accepted for the POC must have successfully completed or validated the basic course and must meet the academic and physical standards. Each cadet accepted into the POC must sign an agreement to complete the program and accept, if tendered, a commission in the Air Force Reserve upon graduation.

Classroom study in the POC requires three hours a week each semester. The junior year, cadets study Air Force leadership and management at the junior-officer level. During the senior year, cadets study the elements of national security and the place of the military in American society. Leadership laboratory requires a minimum of one hour a week in the junior and senior years. In the leadership laboratory the cadet is exposed to advanced leadership experiences and applies principles of management learned in the classroom.

Flight Instruction Program

All cadets accepted for pilot training participate, in their senior year, in the Air Force ROTC flight instruction program at the Air Force Academy. This program consists of ground school and twenty-five hours of flying training in a light aircraft. Instruction is provided by a local civilian flying school. Upon completion of the program, a cadet may continue training for a private pilot's license through the Federal Aviation Agency.

Two-Year Program

The Two-Year Program consists of the last two years (the Professional Officer Course) of the regular Four-Year Program. It is a six-week summer training course preceding enrollment. (Details of the Professional Officer Course are given above.)

The Two-Year Program is open to both male and female students with two years of academic study remaining at Cornell (graduate or undergraduate) or at schools under crosstown or consortium agreement. Applications are accepted from November through May of the year preceding the applicant's planned entry into the program. Students are then required to successfully complete a six-week summer training program at government expense.

Scholarships

The Air Force awards more than sixty-five hundred scholarships annually. Four-year AFROTC scholarships are awarded to selected high school
seniors. Three- and two-year scholarships are awarded annually on a competitive basis to students enrolled in the Air Force Officer Education Program. Applicants for the Two-Year Program are also eligible to be considered for scholarships. Financial status or the award of other scholarships does not disqualify applicants for AFROTC scholarship awards. Acceptance of an AFROTC scholarship does not commit an individual to serve any additional time on active duty with the Air Force.

The vast majority of two-, three-, and four-year scholarships are limited to students majoring in engineering, physics, mathematics, computer science, and atmospheric science. A limited number of four-year scholarships are available to those enrolled in nontellectual academic majors such as business administration, accounting, and foreign languages. Some two- and three-year scholarships are awarded to students in nontellectual academic majors who desire to become navigators or missile launch officers.

A scholarship cadet receives a $100-a-month, tax-free subsistence allowance, all tuition, fees, and reimbursement for the cost of textbooks for the duration of the scholarship.

**Feas**

A uniform deposit of $30 is required. Students are also encouraged to contribute to a Cadet Activities Fund to cover the cost of most of their social activities.

**Benefits**

All cadets in the advanced program (POC) receive a $100-a-month, nonsubsidized subsistence allowance for the academic year. During the four- or six-week summer field training (see below), each cadet receives pay equal to one-half of a second lieutenant’s salary, plus an allowance for travel to and from the field site. Most textbooks and supplies required for Department of Aerospace Studies courses are provided.

All cadets are eligible to participate in field trips made to Air Force bases throughout the country. Scholarship and advanced cadets (POC) are entitled to space-available rides on all aircraft flying within the continental United States.

**Field Training**

There are two types of field training: a four-week course for cadets in the Four-Year Program and a six-week course for Two-Year Program applicants. Students in the advanced program normally attend field training between their sophomore and junior years. Field training is hosted each summer by several active Air Force installations.

Field training is designed to stimulate the development of military leadership among students through meaningful experiences. This is accomplished through the field training curriculum and associated activities. The curriculum consists of aircraft, aircrew, and survival orientation; junior-officer training; physical training; small arms training; a social-action program; and supplemental training. Special emphasis is placed on career orientation and interaction with young officers in fields of interest to the student. The six-week field training program differs in that it has an additional sixty hours of academic course work similar to the sixty hours of course work taken by the Four-Year Program cadets during their freshman and sophomore years.

In addition to field training, Airborne Training (parachute jumping instruction) is available as an extracurricular activity to selected volunteer cadets.

**Advanced Training Program (ATP)**

This program allows selected cadets to go to active duty Air Force bases for a two- or three-week period during the summer following their junior year. As "third lieutenants," cadets receive specialized career orientation and an opportunity to experience leadership, human relations, and management challenges encountered by Air Force junior officers. Cadets also have an opportunity to become familiar with the Air Force operational mission and be given pay and allowances authorized by current directives at the time of Advanced Training attendance.

**Commissioning**

All students who successfully complete the AFROTC advanced program (POC) and who are awarded a baccalaureate degree are commissioned as second lieutenants in the Air Force Reserve.

**Air Force Careers**

Air Force policy has been to assign new officers to a career field appropriate to their educational background. Students in the engineering-scientific category may be assigned to practice in their specialty in research and development, communications, aeronautics, astronautics, design and development, the biological sciences, computer design and maintenance, meteorology, or various other engineering and scientific fields. They will work under the supervision of some of the most highly qualified people in their field and have access to the latest scientific facilities and equipment.

Any undergraduate major is suitable for those who are interested and qualified to be pilots or navigators. After completion of flying training, they are assigned primary duties flying various kinds of aircraft. Officers who elect missile duty will be sent to school for training in that field. Upon completion of school they will be assigned to one of the operational missile bases as a crew member. This type of assignment provides an officer a young officer to obtain command experience and also enjoy the extra option of enrolling in a graduate program.

Those officers graduating in the general service category can anticipate assignments in manpower management, administration, logistics, police and investigation, intelligence, personnel, transportation, information, and numerous other career fields. They will use their educational backgrounds in positions of responsibility and be given the opportunity to develop further their managerial and administrative skills.

**Service Obligations**

Second lieutenants commissioned in nonflying categories are required to serve on active duty for four years. Pilot trainees are required to serve on active duty for six years after completing flying training and receiving their aeronautical rating. Navigator trainees will serve five years after receiving their aeronautical rating. Some newly commissioned officers are allowed to postpone their active service in order to remain in college and earn advanced degrees.

**Curriculum**

Students in the Four-Year Program are required to take all the courses listed below. Students in the Two-Year Program are required to take all of the courses listed for the junior and senior years.

**Freshman Year**

**Air S 161 United States Military Forces**  Credit.

This course is a one-credit class each week. J. Palley

A study of the modern United States military forces with emphasis on the analysis of the doctrine, mission, and organization of the United States Air Force. Current factors affecting today's professional military officers are considered. Special emphasis is placed on the role of human rights in the Department of Defense. The elements of strategic offensive and defensive forces are explored.

**Sophomore Year**

**Air S 211 Development of Military Aviation** Fall. 1 Credit.

This course is a one-credit course each week. P. H. Wendzikowski.

Factors leading to the development of aviation, and the concepts and doctrine for the employment of air power are studied. Topics to be reviewed and analyzed include the history of manned flight, the effects of World War I on the uses of aviation, and the development of pre-World War II aircraft and the political struggles for an independent United States air arm. The role of air power in World War II, including strategic bombing, tactical air power, and the role of aerial superiority in warfare, is examined.

**Air S 212 American Air Power since 1947** Spring. 1 Credit.

This course is a one-credit course each week. P. H. Wendzikowski.

The employment of the Air Force since World War II in military and nonmilitary operations to support national objectives. Effects of technology on defense policy and strategy are reviewed. The part played by the air arm in activities such as the Berlin airlift and national and international relief missions is discussed. The role of air power in the Korean conflict, the Cuban crisis, and the Vietnam War are examined from the viewpoint of technology and tactical doctrine.

**Junior Year**

**Air S 331 Leadership and Communicative Skills** Fall. 3 Credits.

Two or three classes each week. M. R. McFarren. Leadership responsibilities at the junior-officer level, including the responsibility, authority, and functions of a military commander and his staff, emphasize management research and theory. Recent approaches to leadership models and the importance of communication skills in any leadership role are considered. Case-study exercises and oral and written assignments are required.

**Air S 332 Management in the Armed Forces** Spring. 3 Credits.

Two or three classes each week. M. R. McFarren. Management at the junior-officer level, including the concepts of management and decision-making process, including planning, organizing, coordinating, directing, and controlling. Evaluation processes and techniques used by management are studied. Position of management in world of power and politics, including managerial strategy and tactics, is considered. Case studies and oral and written assignments are required.

**Senior Year**

**Air S 461 Military and American Society** Fall. 3 Credits.

Two or three classes each week. P. A. Gifford. The functions and roles of the professional officer in a democratic society and how they relate to the socialization processes, prevailing public attitudes and values orientations associated with professional military service are examined. Changes within the military are analyzed, including such topics as the all-volunteer service, race relations, and the impact of women in the armed forces. The essential features of the military justice system as it functions to protect basic human rights and organizational order are reviewed. The formation and implementation of defense policy, including political, economic, and social constraints, is studied.
Air S 462  American Defense Policy  Spring  
3 credits  
Two or three classes each week. P. A. Gifford.  
The prerequisites for maintaining adequate national 
security forces are explored, and the impact of 
technological and international development upon 
strategic preparedness and the overall defense 
policy-making process is assessed. An investigation 
of basic contemporary nuclear strategy, its evolution, 
control, and future. Alternatives to nuclear war, 
including arms control, limited wars, wars of 
revolution, and insurgency, are examined.  
Governmental processes and relationships that 
determine the contemporary military environment and 
provide a perspective for the future of defense 
policy-making in the United States.  

Elective Course  

[Air S 405  Principles of Air Navigation and  
Aircraft Systems  Fall  3 credits. Not offered  
1982-83  
Two classes each week.  
Basic principles of weather elements, aerodynamics, 
aircraft systems, engine systems, and navigation 
systems. The study of these systems is integrated 
with chart projections, navigational aids, flight 
 instruments, and avionics. Use of flight computer will 
be covered. This will prepare students for FAA Private 
 Pilot Ground School Test.]  

Leadership Laboratory Courses  

All Air Force cadets spend at least one hour a week 
throughout the academic year in a leadership 
laboratory, for which no academic credit is given.  
Occasionally laboratories are held at times other than 
the normally scheduled period (such as the fall 
Veterans Day Parade and the spring Military Awards 
Ceremony). All cadets also are expected to either 
observe or participate in an evening dining-in. Cadets 
are required to meet minimum physical fitness and 
weight standards once a semester.  

Air S 141–142  Initial Military Experiences  
Introduction to the responsibilities, life, and work of an 
Air Force officer. Basic knowledge of drill and 
ceremonies, military courtesies, and the wearing of 
the uniform. Field trip to local military installation.  

Air S 241–242  Intermediate Military Experiences  
Develops skills in giving commands for drill and 
ceremonies. Introduction to Air Force base 
environment in which the USAF officer functions.  
Includes a look at career areas available based on 
academic majors. Students experience and 
participate in leadership situations through military 
drills and ceremonies.  

Air S 341–342  Junior Officer Leadership  
Cadets assume leadership responsibilities similar to 
those of a junior officer. Emphasis is on 
comprehending the importance of applying effective 
human relations in dealing with superiors, peers, and 
subordinates. Relationship between Air Force 
Specialty Codes, and academic majors. The 
importance of basic health habits to leadership.  

Air S 441  Advanced Leadership Experiences  
Command leadership in operating a military 
organization. Cadets apply effective leadership and 
managerial techniques with individuals and groups 
and participate in self-analysis of leadership and 
managerial abilities.  

Air S 442  Precommissioning Laboratory  
Factors that facilitate transition from civilian to military 
life are reviewed. The need for military security, base 
services and activities, personal finances, travel 
regulations, and social obligations are introduced.
Lynah Rink is used for classes in figure skating, hockey, and ice skating, as well as for public skating sessions during scheduled hours from late October until mid-March.

Schoellkopf Hall is used for Nautilus and weight-lifting exercises. Classes in racquetball and squash are held in the Grumman Squash Courts, and archery and professional golf instruction are offered in Bacon Cage.

Other facilities used in the program include the Oxley Polo Arena for polo and riding instruction, Moakley golf course for recreational golf, the Kite Hill indoor tennis bubble, the Tompkins County Rod and Gun Club for skeet and trapshooting, and Greek Peak, Virgil, New York, for skiing.

Schedules for all athletic facilities and building use can be obtained from the Teagle Hall and Helen Newman Hall main offices.

Use of Facilities and Equipment

In the event conflict arises about the use of department equipment or facilities, physical education classes have priority. The director or assistant director of physical education will assign priorities when necessary.

The Department of Physical Education and Athletics is not responsible for any personal items left in any of its buildings or facilities.

Equipment Issued to Students

All students taking classes for credit are entitled to use of a basket and combination lock. Baskets for men and women are available in Teagle Hall and are assigned to new students during academic registration week. Each student receives a gym uniform (socks, shorts, T-shirt, sneakers, etc.) for class when needed. Students can rent a combination lock when reporting for their swim test. Each student will provide his or her own appropriate swimwear and other necessary equipment.

Equipment Issued to Groups

Established campus groups may borrow certain sports equipment (e.g., volleyballs and nets but not poles; softball bats) from the Teagle Hall and Helen Newman Hall main offices.

The Program

Cornell is proud of its diversified physical education program—unique in its concept and tradition of excellence—that encompasses over seventy recreational activities, ranging from the aquatic depths of scuba diving to the heights of mountain climbing. It ranks among the five largest university programs in the nation.

Teaching emphasis in the program is placed on recreational activities that can be continued outside the University. Each member of the instructional staff has extensive experience and skill in the area he or she teaches, and all of the abundant facilities available to the athletic department are used as needed in the program.

This Announcement serves only as a guide. Dates, fees, and regulations stated herein are subject to change at any time. Please feel free to check any information at the physical education office in Teagle Hall.

Facilities

Teagle Hall, at the corner of Garden Avenue and Schoellkopf Drive, is the administrative headquarters for the physical education and athletics program. Department offices (telephone 256-4286) are located in the west end of the building. Teagle contains two swimming pools, crew practice tanks, a wrestling room, a fencing room, weight-lifting rooms, an open gym floor, and a steam room. Classes in basketball, fencing, karate, lacrosse, scuba diving, softball, swimming and safety, weight-lifting, and volleyball are held here. When academic classes are in session, Teagle is open from 9:00 a.m. to 11:00 p.m. Monday through Friday; 10:00 a.m. to 6:00 p.m. on Saturday; and from 6:00 p.m. on Sunday.

During the summer the building is open Monday through Friday, 8:00 a.m. to 7:00 p.m., and noon to 6:00 p.m. on Sunday.

Helen Newman Hall, situated at the end of South Balch Drive, is the headquarters for the women’s intercollegiate program (telephone 256-5133). The building contains a swimming pool, dance studios, a rifle range, sixteen bowling alleys, a large open gym floor, and a sauna room. Classes in badminton, basketball, bowling, dance, fencing, physical conditioning, rifery, swimming, tennis, and volleyball are held here. When academic classes are in session, Helen Newman is open from 8:00 a.m. to 11:00 p.m. Monday through Friday; 9:00 a.m. to 5:00 p.m. on Saturday; and 10:00 a.m. to 6:00 p.m. on Sunday. The building is open Monday through Friday only, 8:00 a.m. to 7:00 p.m.

Barton Hall, situated on Garden Avenue opposite Teagle Hall, contains a large open gym floor. Classes in badminton, first aid, hunter safety, jogging, physical fitness, volleyball, and weight control are held here.

Physical Education Requirements

All undergraduate students admitted to Cornell as freshmen must complete two terms of physical education—normally during the first two terms of attendance. In addition, the University Faculty Committee on Physical Education has established a basic swimming qualification requirement for all entering freshmen. Normally women take the test in the Helen Newman pool, and men in the Teagle pool, as part of their physical education registration process. The test consists of a continuous seventy-five-yard swim using front, back, and optional strokes. All others who have to qualify should contact the physical education office in Teagle Hall (men) or Helen Newman Hall (women) to make an appointment for the swim test. Any student who cannot pass the swim test is required to include swimming in his or her program of physical education before electives can be chosen.

Circumstances permitting exemption from, or postponement of, these requirements are outlined in the section on waiver of requirements.

Transfer Students

Students who transfer to Cornell from another college or university will be given credit for one term of physical education for every term of academic transfer credit they are granted by Cornell. Any transfer student entering Cornell as a sophomore or higher is not required to take physical education classes for credit. Transfer students subject to the credit requirement must take the swim test before signing up for an elective.

Waiver of Requirements

A waiver or postponement of physical education requirements may be granted if the student:

1. has a physical handicap or medical affliction, certified by University medical staff, that precludes participation in any physical education activity (the...
department is prepared to adapt a physical education program to the individual needs of a handicapped student whenever possible; or
2. is committed to twenty hours or more of employment per week (director of scholarship and financial aid must issue the request for exemption, certifying the necessity for such employment obligations).

Permission for postponement of, or exemption from, the physical education requirements is issued only by the University Faculty Committee on Physical Education or the director of physical education. Final authority for interpreting and ruling on requests for exemption rests with the committee.

Credit

Physical education credit is granted for:
1. satisfactory completion of a course offered through the physical education program.
2. participation on an intercollegiate team as a competitor or manager.
3. participation in the marching band.
4. participation in an athletic club or organization recognized by the director of physical education as fulfilling the purpose of the physical education requirement (application for club recognition must be submitted to the director by September 30 each year).
5. satisfactory completion of a physical education course at a recognized institution provided that (a) a written request to enroll is submitted to, and approved by, the director of physical education at Cornell and (b) a transcript of the in absentia credit is forwarded to the physical education office at Cornell.

Students receive credit for one course only per term. If a student enrolls in more than one course per term, credit will be given only for the first course the student has enrolled in, as recorded in the physical education office. A grade of incomplete received in a physical education course taken for credit must be made up before the end of the following term.

Absences

Students are allowed three absences (excused or unexcused) without penalty in each twelve-week course taken per term. Proportional adjustments will be made for courses lasting less than twelve weeks. Students are allowed to make up two unexcused absences in excess of the three allowed per term. Medical excuses do not constitute additional allowed absences; they are merely valid reasons for missing a course. Course changes made after the three-week drop-add period.

No-Credit Enrollment

No-credit enrollment is allowed, and encouraged. However, a no-credit student is required to attend a minimum of one-half of the total number of classes given in that course. Penalty for noncompliance is a $10 drop fee.

Course Fees

Information about fees associated with physical education courses is available at the time of course registration (some fees cannot be set until the course meets). Course fees are not charged to the account of a student enrolled in the University until two weeks after course registration. All fees thus charged are billed through the bursar's office. Other participants in courses involving fees usually must pay when they register. Only the person paying the fee will be allowed to use the playing time allotted by the fee.

1. the participant withdraws from the course during the designated drop-add period (the withdrawal must be made at the physical education office in Teagle Hall);
2. the participant fails to pass preliminary course requirements; or
3. the participant accumulates a significant number of medically excused absences from the course (the director or assistant director of the physical education program will make the decision in this situation).

All fees for the Greek Peak ski program are subject to the regulations of the Greek Peak ski center. Please refer to the information sheet supplied by Greek Peak at spring registration.

Courses

The courses, and fees described in this announcement are subject to change or cancellation at any time by official action of Cornell University.

Enrollment in any course is limited by the space available. Other restrictions are included in the course description. All courses are coeducational. The specific time and place of class meetings, as well as information about fees, are available at physical education course registration. Fees are billed through the Office of the Bursar. Additional course offerings may be listed at registration, since the curriculum is frequently reviewed and changed.

220 Basketball Fall and spring.
Two classes a week, Teagle Hall.
Fundamental drills in passing, shooting, and dribbling. Scrimmages each class session.

150 Bowling Fall and spring. Fee charged.
Two classes a week, Helen Newman Hall.
For the beginning and intermediate bowler. Shoe rental is included in the fee.

156 Equitation Fall and spring. Fee charged.
One class a week, Oxley Polo Arena. Class days and hours are arranged prior to registration. Instruction varies according to riding ability and experience.

171 Exercise and Figure Control Fall and spring.
Two classes a week, Helen Newman Hall.
Ways in which exercises may be used in weight control, the role of nutrition and diet in weight control, and the design of an individual exercise and running program.

172 Fitness and Conditioning Fall and spring.
Two classes a week. Helen Newman Hall and Teagle Hall.
Physical fitness program that embodies features of stretching exercises, weight lifting, and jogging. Students work on their individual training needs.

173 Juggling Fall and spring.
Two classes a week, Teagle Hall.
A program to meet the needs of each participant. Increases capacity from juggling a few hundred yards to three miles at the end of twelve weeks.

182 Judo Fall and spring.
Two classes a week, Teagle Hall.
Increases condition and suppleness. Develops skills in the two parts of judo: standing techniques (throws and trips) and mat techniques.

191 Karate Shito Ryu Fall and spring. Fee charged.
Two evening classes a week, Teagle Hall.
A beginning course taught by professional staff.

223 Basic Lacrosse Fall.
Two classes a week, Teagle Hall.
Instruction and practice in basic skills (cradling, passing, catching, goal shooting, checking) and team play.

311 Nautilus Fall and spring.
Enrollment limited to capacity of facilities. Fee charged.
Two classes a week, Teagle Hall.
Advanced weight lifting on specifically designed apparatus. There are ten stations in the room.

186 Racquetball Fall and spring. Fee charged.
Two classes a week, Teagle Hall.
Instruction at all levels. Equipment is furnished.

225 Recreational Sports and Games Fall and spring.
Two classes a week, Helen Newman Hall.
A potpourri of games that can be used in schools and camps and on playgrounds.

227 Soccer Fall.
Two classes a week, Teagle Hall.
Introduction to the game. Includes basic individual skills (passing, trapping, volleying) and team play and strategy.

226 Softball Fall.
Two classes a week, Lynah Rink.
Fundamentals of each position are taught. Bats, balls, catcher's masks, and bases are provided. Interclass team competition.

187 Squash Fall and spring. Fee charged.
Two classes a week, Teagle Hall.
Classes for all levels of play. Equipment is furnished.

188 Table Tennis and Racquet Games Fall and spring.
Two classes a week, Teagle Hall.
Table tennis, racquetball, squash, badminton, and deck tennis. Playing fundamentals, scoring, and rules are stressed. Interclass competition.

160 Tai Chi Chuan Fall and spring. Fee charged.
Two classes a week, Teagle Hall.
Tai Chi is a system of graceful, slow-movement exercises that aim at nurturing relaxation, deep breathing, and improved circulation.

330 Weight Lifting Fall and spring.
Two classes a week, Teagle Hall.
Classes include instruction in correct lifting techniques involving all muscle groups. Recreational classes are established for experienced lifters; structured classes are for novice groups.
Breathing techniques, and deep relaxation.

Aquatic Courses

110 Beginning Swimming Fall and spring. Two classes a week, Teagle Hall. Instruction and practice in basic skills leading to passing the basic swimming proficiency test.

111 Intermediate Swimming Fall and spring. Two classes a week, Helen Newman Hall and Teagle Hall. Practice and perfection of basic skills and five basic strokes.

112 Advanced Swimming Fall and spring. Two classes a week, Helen Newman Hall. Practice and perfection of the eleven basic strokes.

113 Diving Fall. Two classes a week, Helen Newman Hall. Instruction in all the basic dives, including front (pike and layout), back, and front and back somersaults.

114 Advanced Lifesaving Fall and spring. Two classes a week, Helen Newman Hall and Teagle Hall. American Red Cross senior lifesaving course. Practice and execution of survival and lifesaving skills. Certification is awarded on satisfactory completion of the course.

115 American Red Cross Water Safety Instructor Fall and spring. Prerequisite: American Red Cross advanced lifesaving certification. Two classes a week, Helen Newman Hall and Teagle Hall. Students must not miss first class. American Red Cross water safety instructor certification is awarded on satisfactory completion of the course.

116 Water Safety Instructor Refresher Course Spring. Two classes a week, Teagle Hall. Selected sessions of the basic water safety instructor course.

117 Basic Scuba Diving Fall and spring. Fee charged. Two classes a week, Teagle Hall. Beginning scuba—for general certification only. All equipment is provided for pool sessions, including tanks, regulator, snorkel, and vest.

118 Advanced Scuba Diving—National Certification Fall and spring. Hours to be arranged, Teagle Hall. Program includes skill training in a pool and open-water training in Cayuga Lake. Internationally recognized basic certification.

119 Beginning Synchronized Swimming Fall. Two-hour class one evening a week, Helen Newman Hall. Sculling stunts, including the tub, marlin, log roll, front and back tuck somersaults, and front and back pikes.

120 Advanced Synchronized Swimming Spring. Two-hour class one evening a week, Helen Newman Hall. Preparing, practicing, and presenting an aquatic show.

121 Swimming Conditioning Fall and spring. Prerequisite: good swimming ability. Two classes a week, Teagle Hall. Introduction to, and practice of, different training methods. Final objective: to swim 2,500 yards during class period.

122 Water Polo Fall and spring. Two classes a week, Teagle Hall. Ball handling, shooting, passing, basic offensive and defensive strategy, scimming.

123 Aerobic Dance Fall and spring. Fee charged. Two classes a week, Teagle Hall. A combination of class sessions and outings designed for the experienced outdoor person, whether backpacker, cyclist, or canoeist.

124 Modern Dance Fundamentals Fall and spring. Fee charged. Two classes a week, Helen Newman Hall. Development flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with rhythmic accuracy and clarity of body design. Auditions are required for admission to some advanced courses, since they require the mental and physical ability to perform more-complex phrases in various styles.

125 Intermediate Modern Dance Spring. Fee charged. Two or three classes a week, Helen Newman Hall. Interclass competition is stressed. Equipment is furnished.

126 Beginning Archery Fall and spring. Fee charged. Two classes a week, Teagle Hall. A review of basic archery skills; teaching progressions and correction of shooting errors are stressed, and aiming methods are introduced. The last four weeks are devoted to the New York State Archery Hunting Certification, awarded on successful completion of the course.

127 Intermediate Archery Fall and spring. Two classes a week, Teagle Hall. Instruction in the care of equipment; seven basic steps for shooting, scoring; practice shooting at twenty, thirty, and forty yards.

128 Advanced Archery Fall and spring. Two classes a week, Teagle Hall. A review of basic archery skills, teaching progressions and correction of shooting errors are stressed, and aiming methods are introduced. The last four weeks are devoted to the New York State Archery Hunting Certification, awarded on successful completion of the course.

129 High-Intermediate Modern Dance Fall and spring. Two classes a week, Helen Newman Hall. A simple dance program designed to keep the cardiovascular system in top shape by making the body demand increased amounts of oxygen.

130 Basic First Aid Fall and spring. Fee charged. One or two classes a week, Teagle Hall. American Red Cross standard first aid course. Certification is awarded on satisfactory completion of the course.

131 Athletic Training and Injury Fall and spring. Two-hour class one evening a week, Teagle Hall. Survey of anatomical, physiological, and psychological causes and results of athletic injuries.

132 Cardiopulmonary Resuscitation (CPR) Fall and spring. No credit. Fee charged. One class a week for four weeks, Teagle Hall. American Red Cross CPR certification is issued on satisfactory completion of the course.

133 Beginning Fencing Fall and spring. Prerequisite: Beginning Fencing. Two classes a week, Teagle Hall. Includes warm-up exercises and all basic offensive and defensive moves. Equipment is furnished.

134 Intermediate Fencing Fall and spring. Fee charged. Two classes a week, Teagle Hall. Interclass competition is stressed. Equipment is furnished.

135 Advanced Fencing Fall and spring. Fee charged. Two classes a week, Teagle Hall. Advanced players direction in their thinking, practice, and play, through a thorough understanding of fundamentals. Equipment is furnished.

136 Beginning Gymnastics Fall and spring. Students must provide their own clubs. Two classes a week, Teagle Hall. Basic instruction in tumbling, dance for gymnastics, beginning acrobatics, and their partners must sign up at course registration.

137 Intermediate Gymnastics Fall and spring. Fee charged. Two or three classes a week, Helen Newman Hall. Intermediate courses, since they require the mental and physical ability to perform more-complex phrases in various styles.

138 Recreational Golf Fall and spring. Limited to students who are experienced golfers. Fee charged. Nine holes twice a week, Mooseley golf course. Students must provide their own clubs.

139 High-Intermediate Modern Dance Fall and spring. Fee charged. Two classes a week, Helen Newman Hall. Introduction to square dancing.

140 Instruction in Golf Fall and spring. Fee charged. Two classes a week, Teagle Hall. Instruction by PGA professionals is geared to all levels of experience and ability. The objective is to give beginners enough skill to play, and to give more-advanced players direction in their thinking, practice, and play, through a thorough understanding of fundamentals. Equipment is furnished.
103 Survival Weekend Fall and spring. Fee charged.
Hours to be arranged, Teagle Hall.
Lectures and short outings lead to a full weekend in a local wilderness area, practicing outdoor survival skills.

104 Ice Climbing Spring. Limited to students experienced in mountain climbing. Prerequisite: permission of instructor. Fee charged.
Hours to be arranged, Teagle Hall.
Climbing techniques for ice surfaces. Includes outings to local parks.

105 Advanced Mountaineering Spring and fall.
Prerequisite: Basic Mountaineering. Fee charged.
Saturday outings to local parks feature advanced rock-climbing and rescue techniques.

106 Bicycle Touring and Camping Fall and spring. Fee charged.
Hours to be arranged, Teagle Hall.
Covers bicycle repair, physical conditioning, trip planning, and road safety. Classes lead to a weekend bicycle camping trip. Students must provide their own bicycles.

107 Flat-Water Canoeing Fall and spring. Fee charged.
Hours to be arranged, Teagle Hall.
Classes and local practice sessions lead to a weekend canoe trip.

108 Wilderness Travel Spring. Fee charged.
Hours to be arranged, Teagle Hall.
An intensive skills course in outdoor living. Local outings and weekends lead to a week-long trip to the Allegheny Plateau during spring break.

109 Ski Camping Spring, Open to any skier.
Prerequisite: backpacking experience, no skiing prerequisite. Coed. Fee charged.
Hours to be arranged, Teagle Hall.
Classes and local one-day outings lead to a weekend of skiing in a New York State forest area.

Hours to be arranged, Teagle Hall.
One-day outings in the Ithaca area lead to a seven-day trip to the White Mountains of New Hampshire during spring break.

Riflery

191 Riflery Fall and spring. Fee charged.
Two classes a week, Helen Newman Hall.
Instruction and practice in the techniques of target riflery from various shooting positions.

192 Skeet and Trapshooting Fall and spring. Fee charged.
Two-hour class one afternoon a week, Teagle Hall.
Includes lectures and shooting at the Tompkins County Rod and Gun Club range. Guns and shells are furnished.

194 Hunter Safety Fall and spring.
Hours to be arranged, Teagle Hall.
Instruction in hunter safety leads to New York State certification for bow and gun.

Sailing

157 Principles of Sailing Fall and spring. Fee charged.
One class a week, Teagle Hall.
Instruction in basic sailing skills and safety principles. Students sail small and large boats on Cayuga Lake, weather permitting.

158 Intermediate Sailing Fall and spring. Fee charged.
One class a week, Teagle Hall.
Instruction in more-advanced techniques for those already familiar with the basic principles of sailing.

Skating

200 Basic Skating Fall and spring. Intended for beginning to intermediate skaters. Fee charged.
Three classes a week for half a term, Lynah Rink.
Students provide their own hockey skates or rent them at Lynah Rink.

201 Beginning and Low-Intermediate Figure Skating Fall and spring. Fee charged.
Three classes a week for half a term, Lynah Rink.
Instruction and practice in basic figure skating techniques: forward and backward, crossovers, turns, and spirals. Students provide their own figure skates or rent them at Lynah Rink.

202 Intermediate and Advanced Figure Skating Fall and spring. Fee charged.
Three classes a week for half a term, Lynah Rink.
Advanced figure skating techniques. Students provide their own figure skates or rent them at Lynah Rink.

203 High-Intermediate and Advanced Figure Skating Fall and spring. Fee charged.
Three classes a week, Lynah Rink.
Advanced figure skating techniques. Students provide their own figure skates or rent them at Lynah Rink.

204 Basic Ice Hockey Fall and spring. Fee charged.
Two classes a week, Lynah Rink.
Stick handling, passing, and shooting are stressed. Students provide their own skates and sticks; all other equipment is furnished.

Skilling

153 Ski Conditioning Fall.
Two classes a week, Helen Newman Hall.
Exercises designed to increase flexibility, strength, and endurance in preparation for the ski season.

300 Downhill Skiing Spring. Fee charged.
One class a week, Teagle Hall.
Transportation, instruction, ski-lift fees, and ski time are offered in a package deal. Greek Peak personnel are present at registration to explain the program and accept fees. Bus transportation to Greek Peak is provided six afternoons a week for six weeks.

301 Cross-Country Skiing Spring. Fee charged.
Two-hour class one afternoon a week, Helen Newman Hall.
Classes designed for all levels. Covers waxing and choosing equipment.

Tennis

181 Indoor Tennis Spring. Fee charged.
Two classes a week for the entire term, Teagle Hall.
Classes for all levels of play. Emphasizes strategy for intermediate and advanced groups. Space limitation requires doubles play.
Division of Summer Session, Extramural Courses, and Related Programs

Administration
Robert D. MacDougall, dean
Charles W. Jermy, Jr., associate dean
Judith K. Eger, assistant to the dean
Robert D. MacDougall, dean

The Division
The Division of Summer Session, Extramural Courses, and Related Programs provides a wide variety of educational opportunities beyond the degree-granting programs of the University. These programs serve virtually all age groups in a great variety of formats and time frames.

Summer Session
Summer Session provides some unique and unusually attractive opportunities for study and recreation for students ranging in age from high school senior to the senior citizen. With Ithaca weather at its best, summer study makes available the extensive academic and recreational facilities of the University and the Finger Lakes region. Students may choose from a wide spectrum of courses scheduled during three-week, six-week, and eight-week sessions, as well as dozens of special programs of varied lengths. Admission is kept relatively open and simple. Classes meet daily, and because they are usually small, a close association between student and teacher is encouraged. For more information, consult the Summer Session office, B12 Ives Hall, or call 256-4987.

Cornell's Adult University
Cornell's Adult University (CAU) offers one-week, noncredit academic courses on campus during the summer and off-campus weekend seminars during the fall and spring. Though originally conceived as a program for alumni, that concept has long since been abandoned in favor of a concept of adult education. CAU is committed to the belief that learning never ends and that one of the roles of a great university is to provide a bridge between traditional, formal education and informal, noncredit studies. For more information, consult Cornell's Adult University, 626B Thurston Avenue, or call 256-6260.

Extramural Courses
The extensive credit-course offerings of the University are available to area residents on a part-time basis. Those interested may apply for admission to practically any course in the University and will be admitted if they receive the instructor’s written approval. The division also offers an Official Visitor’s Program that allows persons to attend classes in many divisions of the University on a space-available basis at a reduced charge. Visitors are required to obtain written permission of the instructor. In this program, no credit is given and no record is kept of attendance or performance. During the January intersession period the division offers credit courses primarily for undergraduates but open to anyone. Among the courses offered in recent years have been study tours to England, the Soviet Union, and Costa Rica. For further information, contact the extramural office in B12 Ives Hall or call 256-4987.

Continuing Education Information Center
The Continuing Education Information Center provides free information, counseling, and referral to man and women who have been out of school for several years and want to resume their education. Anyone who wants to take courses, begin an undergraduate or graduate degree program, or complete an unfinished degree is welcome to use the services of the center.
The center provides information on all schools and departments of the University; opportunities for part-time and full-time study; special courses, workshops, and seminars; and community resources available to older students. A small library includes information on continuing-education research, adult learning and development, educational opportunities at local institutions of higher learning, financial aid, work-study programs, and admission procedures. For further information, contact the Continuing Education Information Center, B12 Ives Hall, or call 256-4987.

Conference Services
Excellent facilities, a beautiful campus, and a conference office concerned with each group's special needs make Cornell an ideal setting for conferences and meetings. Professional groups from all over the country come to Cornell to take advantage of this special learning environment. The conference coordinator is available to answer questions, advise on creative program ideas, assist in planning, make special arrangements, secure accommodations, and handle other administrative details. Every effort is made to ensure the success of each conference.
For more information about conferences at Cornell, consult the Cornell University Conference Services, 221 E North Campus Union, or call 256-6260.

Summer Courses
The Cornell University Summer Session offers a wide variety of courses each year. Among these are a number of courses that are typically offered each summer. The list that follows includes those courses that are likely to be offered during the summer of 1983. The list is not exhaustive; many additional courses that are offered only occasionally or for the first time are not listed. For further information, contact the Summer Session office, B12 Ives Hall, or call 256-4987. The 1983 Announcement of Summer Session will be published in March.

Administration
Edward C. Melby, Jr., dean
Charles G. Rickard, associate dean for academic programs
Lennart P. Krook, associate dean for postdoctoral education
Robert B. Brown, assistant dean for administration
Richard Rostowsky, assistant dean for hospital administration
John C. Semmier, assistant dean for facilities and research administration
Roy V. Pollock, assistant dean for public relations
Ann Marcham, assistant to the dean for instructional support and special projects
Fred W. Quimby, director of laboratory animal medicine
Alexander deLahunta, medical director of the Teaching Hospital
Ralph A. Jones, assistant to the dean for public relations
Marcia James Sawyer, director of student affairs and development
Lennart P. Krook, associate dean for postdoctoral education
Howard Moraff, director of computer resources
Charles E. Short, director of continuing education
Raymond H. Cypess, director of the Diagnostic Laboratory

The College

The College of Veterinary Medicine offers a professional program that requires four years of full-time academic and clinical study of the normal and abnormal structure and function of the animal body and the diagnosis, treatment, and prevention of animal disease. Graduates of the college receive the Doctor of Veterinary Medicine (D.V.M.) degree, which is recognized by licensing boards throughout the world. Admission requirements include a minimum of three years of college work, including specific prerequisite courses and experience. In exceptional cases, outstanding students who have completed all of the prerequisites in two years of undergraduate education may be considered for admission. Applications must be filed approximately one year before the proposed matriculation date. The competition for admission is keen since there are many more qualified applicants than can be admitted.

Graduate programs in veterinary research and postdoctoral training in clinical specialties are open to Doctors of Veterinary Medicine and some highly qualified holders of baccalaureate degrees, and lead to the degree of Master of Science, Doctor of Science in Veterinary Medicine, or Doctor of Philosophy. More detailed information is contained in the Announcement of the New York State College of Veterinary Medicine, which may be obtained by writing to the college.

Anatomy

500–501 Gross Anatomy 500, fall; 501, spring
502 Developmental Anatomy and Cytology Fall
503 Histology and Organology Spring

Clinical Sciences

475 Health and Diseases of Animals Spring
546 Clinical Orientation Fall
547 Practice Management Experience at the Small Animal Hospital Spring
550 Applied Radiation Biology and Veterinary Nuclear Medicine Fall
560 Clinical Methods Fall
561–562 Obstetrics and Reproductive Diseases 561, spring; 562, fall.
563-564 Large Animal Medicine 563, fall; 564, spring
565 Large Animal Surgery Spring
566 Radiology Spring
567 Clinical Nutrition Fall
568–569 Veterinary Medical Orientation 568, fall; 569, spring.
570 Theriogenology Spring
572 Senior Seminar Fall and spring
573 Large Animal Clinic Fall
574 Large Animal Surgical Clinic Spring
575–576 Ambulatory Clinic 575, fall; 576, spring.
577 Diagnostic Services Fall
578 Anesthesiology Clinic Spring
579 General Medicine Spring
580 Radiology Clinic Spring
581 Nutrition Fall

Avian and Aquatic Animal Medicine

255 Poultry Hygiene and Disease Fall
555 Avian Diseases Spring
671 Diseases of Aquatic Animals Spring
672 Aquavet: Introduction to Aquatic Veterinary Medicine Mid-May–mid-June
673 Diseases of Aquarium Fish Spring
770 Advanced Work in Avian Diseases Fall and spring
771 Graduate Seminar in Diseases of Aquatic Animals Fall and spring
772 Advanced Work in Aquatic Animal Diseases Fall and spring

Microbiology

315 Basic Immunology, Lectures (also Biological Sciences 305) Fall
316 Basic Immunology, Laboratory (also Biological Sciences 307) Fall
317 Pathogenic Microbiology Spring
515 Veterinary Immunology Fall
516 Veterinary Bacteriology and Mycology Fall

504 Neuroanatomy Spring
505–506 Applied Anatomy 505, fall; 506, spring
600 Special Projects in Anatomy Fall and spring
601 Advanced Anatomy Fall and spring
602 Advanced Clinical Neurology Fall
Pharmacology

528 Pharmacology Spring.
529 Clinical Pharmacology Fall.
621 Toxicology Spring.
622 Special Projects in Pharmacology Fall and spring.
623 Ecology of Environmental Toxins Spring.
721 Research Fall and spring.
724 Disposition of Drugs and Poisons Spring.

Physiology

The Vertebrates (Biological Sciences 274) Spring.
Animal Reproduction and Development (Animal Sciences 220) Fall.
Techniques in Animal Handling and Surgery (Biological Sciences 309) Intersession.
Histology: The Biology of the Tissues (Biological Sciences 313) Fall.
Ecological Animal Physiology, Lectures (Biological Sciences 315) Fall.
Cellular Physiology (Biological Sciences 316) Spring.
Ecological Animal Physiology, Laboratory (Biological Sciences 317) Fall.
346 Introductory Animal Physiology, Lectures (also Biological Sciences 311) Fall.
348 Introductory Animal Physiology, Laboratory (also Biological Sciences 319) Fall.
Biological Rhythms with a Period of One Day to One Year (Biological Sciences 351) Fall.
Seminar In Anatomy and Physiology (Biological Sciences 410) Fall and spring.
Special Histology: The Biology of the Organs (Biological Sciences 412) Spring.
General Animal Physiology, Laboratory (Biological Sciences 418) Spring.
Fundamentals of Endocrinology (Animal Sciences 427) Fall.
Comparative Physiology of Reproduction of Vertebrates, Lectures (Biological Sciences 452 and Animal Sciences 452) Spring.
Comparative Physiology of Reproduction of Vertebrates, Laboratory (Biological Sciences 454 and Animal Sciences 454) Spring.
Mammalian Physiology (Biological Sciences 458) Spring.
Undergraduate Research In Biology (Biological Sciences 499) Fall and spring.
525 Cellular Mechanisms Fall.

Preventive Medicine

330 The Population Biology of Health and Disease Spring.
331 Medical Parasitology Fall.
332 Systematics and Bionomics of Animal Parasites Fall.
440 Parasitic Helminthology Spring.
510 Animal Parasitology Fall.
511 Diagnostic Parasitology Fall.
520 Preventive Medicine In Animal Health Management Spring.
545 Principles of Epidemiology Fall.
568 Veterinary Medical Orientation Fall.
660 Safety Evaluation in Public Health Spring.
662 Advanced Epidemiology Spring.
737 Advanced Work in Animal Parasitology Fall and spring.
765 Structure and Function of Protozoan Parasites Spring.
766 Graduate Research Fall, spring, and summer.
